KPSC Case No. 2011-00401 Attorney General Initial Set of Data Requests Dated January 13, 2012 Item No. 1 Page 1 of 1

Kentucky Power Company

REQUEST

Please reference the McManus testimony at page 7, lines 13 through 15, wherein the following statement appears regarding the final CSPAR rule. "The assurance provisions go into effect in 2012 based on the final rule, but EPA has proposed delaying the effective year to 2014." Please update the McManus testimony if necessary as well as the application in general and any other testimonies to reflect changes, if any, the company will experience or anticipates it will experience.

RESPONSE

Since the filing of Company witness McManus's direct testimony in this proceeding, the CSAPR has been stayed by the D.C. Circuit. A court decision on the future of this rule is expected later in 2012. While it is unlikely that CSAPR will be applicable in 2012, it is possible that this rule will become effective in 2013. At this time, it is unknown what role the assurance provision will have in any future ruling. In absence of CSAPR, the company must continue to adhere to the provisions of the CAIR allowance program.

KPSC Case No. 2011-00401 Attorney General Initial Set of Data Requests Dated January 13, 2012 Item No. 2 Page 1 of 2

Kentucky Power Company

REQUEST

Please reference the McManus testimony at page 9, footnote 2. Please provide the EPA state emission budget allowance for the state of Indiana.

RESPONSE

Please see Attachment 1 of this response for the EPA emission budget allowances for the State of Indiana per the CSAPR finalized on July 6, 2011.

| State Budgets, Variability Limits, and Assurance Levels for | | | | | | |
|---|---------|---------|----------|-----------|------------|------------|

KPSC Case No. 2011-00401 Attorney General Initial Set of Data Requests Dated January 13, 2012 Item No. 3 Page 1 of 1

Kentucky Power Company

REQUEST

Please update the application and all testimonies to reflect the effect, impact, and ramifications which the 2011 promulgation of the final version of EPA's MACT rule will have upon the company.

RESPONSE

The MACT Rule was finalized by the U.S. Environmental Protection Agency (EPA) on December 16, 2011, and was renamed the Mercury Air Toxics Standards (MATS) Rule. AEP is in the process of analyzing the newly finalized rule addressing mercury and other hazardous pollutants (HAPS). The final rule varies little from the proposed rule, and based on a preliminary analysis, there will be little if any change in impact on the company from the rule. When a more thorough analysis is completed, a determination will be made of the need for an update of the application and testimonies.

KPSC Case No. 2011-00401 Attorney General Initial Set of Data Requests Dated January 13, 2012 Item No. 4 Page 1 of 1

Kentucky Power Company

REQUEST

Please reference the McManus testimony at page 14, line 17. What are the other "sources" referenced in the statement. Please describe them in detail.

RESPONSE

Under the final CSAPR, the Company may purchase additional allowances from the market to cover its emissions, assuming other allowance holders are willing to sell. "Sources" in the market include any entity that owns CSAPR allowances, and are typically utility companies that are allocated allowances from USEPA.

KPSC Case No. 2011-00401 Attorney General First Set of Data Requests Dated January 13, 2012 Item No. 5 Page 1 of 1

Kentucky Power Company

REQUEST

Please reference the McManus testimony at page 17. In the event the air permits as filed are not approved, what effect, if any, will any disapproval have on the current application pending before the PSC?

RESPONSE

In the event the air permit application, as filed for the Big Sandy Unit 2 FGD project is not approved, the Company will have to work with the Kentucky Division of Air Quality to mitigate all issues that prevented approval. Such disapproval may delay the project schedule as shown in Exhibit RLW-1 of Company witness Walton's direct testimony, and construction cannot commence until air permit application approval is received.

KPSC Case No. 2011-00401 Attorney General's Initial Set of Data Requests Dated January 13, 2012 Item No. 6 Page 1 of 1

Kentucky Power Company

REQUEST

Please reference the Munsey testimony at pages 22 and 23 where the company bases the monthly and yearly financial impact on a residential customer's bill using an average 1,000 kWh per month.

- a. What is the actual, average residential monthly use for KPCo's customers for the past five years?
- b. If it is different than 1,000 kWh per month, please provide the increase on the average residential customer's bill.

RESPONSE

a. The average residential monthly use for Kentucky's customers is listed below:

Kentucky Power Company Average Monthly Residential Usage

| <u>kWh</u> |
|------------|
| 1,436 |
| 1,435 |
| 1,407 |
| 1,523 |
| 1,376 |
| |

b. Based on the average residential customer's bill in 2011, and using the increase as filed, the average residential customer's bill would increase by \$41.72, or approximately 31.4%, in 2016. Using the adjusted increase described in the Company's response to KPSC 1-20(a), the average residential customer's bill would increase by \$39.19, or approximately 29.5%, in 2016.

WITNESS: Lila P Munsey

KPSC Case No. 2011-00401 Attorney General's Initial Set of Data Requests Dated January 13, 2012 Item No. 7 Page 1 of 1

Kentucky Power Company

REQUEST

What is the actual, average commercial monthly use for KPCo's customers for the past five years?

a. How much will the average commercial customer's bill increase?

RESPONSE

Kentucky Power Company Average Monthly Commercial Usage

| <u>Year</u> | <u>kWh</u> |
|-------------|------------|
| 2007 | 4,059 |
| 2008 | 4,005 |
| 2009 | 4,021 |
| 2010 | 4,109 |
| 2011 | 3,840 |

a. Based on the average commercial customer's bill in 2011, and using the increase as filed, the average commercial customer's bill would increase by \$118.34, or approximately 31.4%, in 2016. Using the adjusted increase described in the Company's response to KPSC 1-20(a), the average commercial customer's bill would increase by \$111.18, or approximately 29.5%, in 2016.

WITNESS: Lila P Munsey

KPSC Case No. 2011-00401 Attorney General's Initial Set of Data Requests Dated January 13, 2012 Item No. 8 Page 1 of 1

Kentucky Power Company

REQUEST

What is the actual, average industrial monthly use for KPCo's customers for the past five years?

a. How much will the average industrial customer's bill increase?

RESPONSE

Kentucky Power Company Average Monthly Industrial Usage

| <u>Year</u> | <u>kWh</u> |
|-------------|------------|
| 2007 | 184,067 |
| 2008 | 193,305 |
| 2009 | 185,809 |
| 2010 | 190,260 |
| 2011 | 192,620 |

a. Based on the average industrial customer's bill in 2011, and using the increase as filed, the average industrial customer's bill would increase by \$3,645.16, or approximately 31.4%, in 2016. Using the adjusted increase described in the Company's response to KPSC 1-20(a), the average industrial customer's bill would increase by \$3,424.59, or approximately 29.5%, in 2016.

WITNESS: Lila P Munsey

KPSC Case No. 2011-00401 Attorney General's Initial Set of Data Requests Dated January 13, 2012 Item No. 9 Page 1 of 1

Kentucky Power Company

REQUEST

Please reference the Walton testimony at page 20 at lines 7 through 12.

- a. Provide the numerical or percentage increase for the "escalation of labor and materials in the cost estimate."
- b. Does KPCo inflate construction costs to address administrative company oversight of the contract(s)? If so, by how much and does it vary by the degree of administrative work performed by KPCo?

RESPONSE

- a. During the 5-year period 2006 through 2010, the IHS CERA Cost Index data for FGD projects indicate an overall total escalation in costs of 28%, which equates to a 5.1% annual rate. It is KPCo's opinion that Utility Industry FGDs, SCRs and other environmental projects will experience a similar "boom-bust" cycle as seen in the later part of the last decade and thus, we have utilized the stated annual rate in our estimate.
- b. KPCo does not inflate construction costs to address contract administration. In the normal course of developing and then refining the overall project cost estimate, each AEP support organization, including Contract Administration, provides a forecast of the costs required to execute their specific responsibilities in support of the project.

WITNESS: Robert L Walton

KPSC Case No. 2011-00401 Attorney General's Initial Set of Data Requests Dated January 13, 2012 Item No. 10 Page 1 of 1

Kentucky Power Company

REQUEST

Does the company believe that its cost estimates of complying with the EPA regulations / laws cited in the application are excessive, when compared with the cost estimates of other utilities which generate their electricity by coal to likewise comply with the same EPA mandates? Describe the answer in detail.

RESPONSE

Although the Company is not privy to the specific costs that other utilities may actually be incurring to comply with EPA mandates, the Company does not believe its cost estimates are excessive. The results of the Company's due diligence, economic evaluation, and technical evaluation demonstrate that installing the NID system on Big Sandy Unit 2 is the lowest cost option.

WITNESS: Robert L Walton

KPSC Case No. 2011-00401 Attorney General's Initial Set of Data Requests Dated January 13, 2012 Item No. 11 Page 1 of 1

Kentucky Power Company

REQUEST

Please reference the Weaver testimony at pages 12 through 13 as well as the testimony in general. Please provide a chart or graphical depiction of the following, broken down by Phase 1 and Phase 2 of the CSAPR Rule:

- a. the estimated curtailment date(s), if any, of the Big Sandy units, with each unit listed separately, and amount of generated electricity expected to be curtailed;
- b. the amounts and expected costs of any additional power that may have to be purchased as a result of any such curtailments;
- c. the estimated impact on the bills of average residential, commercial and industrial customers, with each listed separately, including also the costs of any purchased power reflected in subpart (b), above.

RESPONSE

a. Please see the response to KPSC 1-8.

WITNESS: Robert L Walton

| | | | |

KPSC Case No. 2011-00401 Attorney General Initial Set of Data Requests Dated January 13, 2012 Item No. 12 Page 1 of 1

Kentucky Power Company

REQUEST

Please reference the application in general as it relates to using natural gas as the feedstock to power KPCo's generators. Is the company familiar with the impact on natural gas prices that occurred when electric generating utilities began using natural gas as the feedstock for peaking units in the late 1980's/early 90's? If so, what happened to that price?

RESPONSE

The company is familiar with the relationship between natural gas price and natural gas demand described as Price Elasticity; the percentage change in the quantity demanded divided by the percentage change in price. With the development of shale gas, the price elasticity of natural gas has risen to near 1.0. This would imply that a 10% increase in total natural gas demand (of which electric generation is approximately 30%), the resulting price increase would be approximately 10% (\$0.40 on \$4/mmbtu natural gas). In the late 1980's, domestic natural gas price was less elastic due to marginal supply that was generally coming from offshore Gulf of Mexico.

WITNESS: Scott C Weaver, Karl R Bletzacker

KPSC Case No. 2011-00401 Attorney Generall's Initial Set of Data Requests Dated January 13, 2012 Item No. 13 Page 1 of 1

Kentucky Power Company

REQUEST

Please reference the application in general. Did KPCo consider the availability and cost of purchased power (whether from the AEP Power Pool, or the open market) given the necessary upgrades that other electric generating utilities must initiate in order to reach compliance with the EPA regulations discussed in the company's application? If not, why not? If so, please explain in detail including any cost studies, analyses, etc.

a. If the answer to the above question is no, please explain in detail why not.

RESPONSE

Yes. The AEP Fundamental Analysis group's profiling of pricing scenarios identified under TABLE 3 (pages 28 and 29) of Mr. Weaver's testimony did reflect the prospects and implications of emerging U.S. EPA regulations including CSAPR, EGU MACT (now "MATS") as well as CCR and Clean Water Act 316(b) rulemaking. The modeling performed by this group using their proprietary tool, Aurora MP, was performed "holistically"; meaning it encompassed zonal markets across the entire U.S. Eastern Interconnect, plus ERCOT (Texas). Based on direct intelligence gathered by that group in terms of any publicly-announced, non-AEP generating unit status, assumptions were then made by Fundamental Analysis around a disposition approach (e.g. retirement, retrofitting, curtailment) for each and every fossil generating unit owned by other electric utilities and IPP's based on their adherence to the same set of rulemaking identified above.

WITNESS: Scott C Weaver and Karl R Bletzacker

KPSC Case No. 2011-00401 Attorney General Initial Set of Data Requests Dated January 13, 2012 Item No. 14 Page 1 of 1

Kentucky Power Company

REQUEST

Does KPCo believe that the actions which electric generating utilities will need to initiate in order to achieve compliance with the new or revised EPA regulations will or may threaten the reliability of the U.S. electric grid? Explain your answer in detail and provide any studies, analyses, etc.

RESPONSE

KPCo and others expressed concerns to USEPA during the rulemaking process for the CSAPR and MACT rules about the potential impacts of the accelerated implementation schedule of these rules on the reliability of the electricity grid. Copies of AEP's comments on both the CSAPR and MACT rules, and supplemental information submitted by AEP after the close of the comment period on both rules in response to further requests from USEPA are provided. In addition, AEP relied on comments submitted by EEI and others, copies of which are also provided. Certain of the studies referenced in these comments that focus on reliability impacts and construction schedule timing are also provided. Finally, SPP, PJM, and a joint group of reliability organizations submitted comments to USEPA to address these concerns. Copies of these comments to USEPA, along with other reliability related reports, are also provided in "AG 1-14 Attachment 1" through "AG 1-14 Attachment 16". The full docket for these rules, including all comments and analyses submitted to USEPA, can be located at regulations.gov.

WITNESS: John M McManus

KPSC Case No. 2011-00401 Attorney General Initial Set of Data Requests Dated January 13, 2012 Item No. 15 Page 1 of 1

Kentucky Power Company

REQUEST

Is the company familiar with Kentucky PSC precedent wherein the Commission has refused to allow regulated utilities to include within their rate base the estimated rate impact(s) of draft legislation and other potential legal requirements which the utility anticipates or believes will become likely at some future time?

a. If so, please explain why the company included pricing forecasts for CO₂ in its modeling for its decision(s) in the application.

RESPONSE

Without citation to the specific Commission decisions referenced in the data request, Kentucky Power is unable to respond with the requisite certainty to that portion of the data request asking about its "familiarity with Kentucky PSC precedent" The Company is willing to consider the applicability of any specifically identified precedent to its modeling.

a. Without regard to the Company's familiarity with the referenced precedent, it was appropriate for Kentucky Power to include pricing forecasts for CO2 in connection with the modeling performed in connection with its application. The forecasting was done in connection with the Company's efforts to determine the least-cost alternative among the four alternatives analyzed. This process is wholly separate from, and independent of, those ratemaking principles (that the data request may or may not be referencing) requiring that any adjustments to test year values be known and measurable.

KPSC Case No. 2011-00401 Attorney General's Initial Set of Data Requests Dated January 13, 2012 Item No. 16 Page 1 of 4

Kentucky Power Company

REQUEST

In the informal conference held in this matter on January 5, 2012, KPCo officials provided a discussion regarding the dry flue gas desulfurization technology known as the Alstom NID.

- a. Please provide the names of the U.S. utilities which either have or currently are using the Alstom NID technology.
- b. Please discuss in detail how the technology has been used by any utility, by name, in the U.S.
- c. Provide a comprehensive discussion regarding the due diligence, including but not limited to reliability, lifespan of the equipment deployed and O&M expenses, the company conducted regarding this technology. Include in your discussion the extent to which KPCo and AEP investigated FGD technology made by other manufacturers.
- d. In the informal conference discussed above, KPCo stated that the Alstom NID technology is used by some European utilities. Please indicate for how long this technology has been used by any such utility. Provide a comparison of expected O & M costs for the Alstom NID technology, compared with expected O & M costs incurred for other dry FGD technology which the company investigated in its due diligence. Such other technology may include dry FGD technology installed on generating units owned in whole or in part or controlled by AEP and / or its affiliates or subsidiaries, or by other utilities.
- e. Company officials stated that the Alstom NID technology would have lower installed capital costs. Provide the installed capital costs for other dry FGD technologies for which KPCO / AEP conducted its due diligence.
 - (i) What other capital costs would be associated with both the Alstom NID technology, and other dry FGD technology? Discuss in complete detail, including any studies, analyses, etc..
- f.. Company officials stated that using the Alstom NID technology would lead to greater fuel savings. Provide a discussion in this regard, and provide a model of the amount of fuel savings anticipated, together with all assumptions upon which the model is based. Please provide the model on an Excel spreadsheet with all formulae intact.
- g. In the event the Commission should approve KPCo's request for a CPCN for the Alstom

KPSC Case No. 2011-00401 Attorney General's Initial Set of Data Requests Dated January 13, 2012 Item No. 16 Page 2 of 4

NID technology, please state whether KPCo would continue to use the same or rough equivalent amounts of Kentucky coal that it currently uses for its Big Sandy-2 plant.

- h. If similar amounts of Kentucky coal are not used, please reconcile this to the goal of KRS 278.183 for Kentucky utilities to use Kentucky coal.
- i. Company officials stated that the Alstom NID technology would have a parasitic load of between 2% 3%. Please state whether this would cause the company to purchase additional power, and if so, how much, in terms of both amounts and expected costs. Additionally, please provide a comparison of the parasitic load that could be expected if dry FGD technology from other manufacturers is used in lieu of the Alstom NID.

RESPONSE

- a. Please see the response to Commission Staff's First Set of Data Requests Item No. 35(a).
- b. This technology has been mainly used to remove SO2 from the flue gas stream at coal-fired power plants in the US.
- c. Please see the responses to Commission Staff's First Set of Data Requests, Item No. 30, Attachment 1 and Item No. 35(b).
- d. This technology has been used in Europe since 1995. For O&M costs, please see the response to Commission Staff's First Set of Data Requests, Item No. 30.
- e. Please see the responses to Commission Staff's First Set of Data Requests, Item No. 30, Attachment 1, page 9.
 - (i) There are no other capital costs expected to be associated with the NID system or other dry FGD technology that were not included in the analysis.
- f. The attached file provides the KPCo fuel savings for various types of FGD technology (i.e. Wet, Dry and NID). This analysis indicates that the NID 4.5 lb coal technology produces fuel savings over the other FGD technologies.
- g. It is not yet known with certainty whether KPCo would increase or decrease its usage of Kentucky coal following the retrofit of the NID system. KPCo does currently procure low sulfur coal from sources within Kentucky. After the retrofit, KPCo will not only need to continue to procure low sulfur coal, but will also have the flexibility to procure higher sulfur coal, of which there are sources in Kentucky. The amount of Kentucky coal that KPCo uses after the NID retrofit will depend on the price of coal offered in response to future competitive solicitations by KPCo for coal to supply the Big Sandy Plant. It can be said, however, that the NID technology retrofit will not require a decrease in the use of Kentucky coal at the Big Sandy Plant.

KPSC Case No. 2011-00401 Attorney General's Initial Set of Data Requests Dated January 13, 2012 Item No. 16 Page 3 of 4

- h. See response to part (g).
- i. Please see the response to Commission Staff's First Set of Data Requests, Item No. 30, Attachment 1, page 11, which shows the required auxiliary power usage of the NID FGD as compared to other FGD technologies.

KPCo does not expect to have to purchase additional power to mitigate the parasitic load. However, it is envisioned that following the initial commissioning and operation of the DFGD system, KPCo would undertake a unit performance test for determination of the post-retrofit unit capability in order to confirm this presumption.

WITNESS: Robert L Walton

Kentucky AG Inititial Data Request Response to 16 f.

KPSC Case No. 2011-00401 Attorney General's Initial Set of Data Requests Dated January 13, 2012 Item No.18 Page 1 of 1

Kentucky Power Company

REQUEST

Please confirm that the expected life of the Alstom NID technology is approximately 30 years.

a. If the Commission should approve KPCo's petition as filed, please state how KPCo would treat the Alstom NID's remaining years of expected life, from an accounting and depreciation perspective. Include in your discussion whether KPCo's ratepayers would or could face stranded costs for the abandonment of the Alstom NID technology. Please discuss in complete detail.

RESPONSE

While the expected life may approach approximately 30 years, the design life, as stipulated within the technology specification issued to the NID technology OEM, is 25 years.

a. Kentucky's petition as filed seeks a 15-year depreciable life. The Company could be faced with stranded costs if the Big Sandy Unit 2 would need to be shut down prematurely before the full depreciation life is completed (whether its 15 years or some other value). This is why the Company asked for 15 years versus expected remaining service life to lessen the risk of stranded investment.

KPSC Case No. 2011-00401 Attorney General's Initial Set of Data Requests Dated January 13, 2012 Item No. 19 Page 1 of 1

Kentucky Power Company

REQUEST

The Company's petition states that residential ratepayers can expect a 31% increase in their ECR costs per month. Of this cost, please state whether the projected costs of decommissioning and retiring the existing precipitators is included. If not, please provide a cost estimate and a revised estimate of the impact on the monthly bills of the average residential, commercial and industrial customers over the life span of the project.

RESPONSE

The Company expects that the precipitator will not be required following the NID technology installation, and therefore would be removed as a part of this project. At this point in time, the costs of decommissioning and retiring the existing precipitators have not been estimated.

WITNESS: Robert L Walton

KPSC Case No. 2011-00401 Attorney General Initial Set of Data Requests Dated January 13, 2012 Item No. 21 Page 1 of 1

Kentucky Power Company

REQUEST

Please reference the McManus testimony, p. 12, lines 14-16, wherein he states "....the extraordinarily brief compliance window will require KPCo to operate Big Sandy Unit 2 in an uncontrolled fashion, but under a potentially constrained dispatch." Please discuss in detail what this statement means, especially regarding the terms "uncontrolled" and "constrained dispatch."

a. Please state whether this will raise any safety issues regarding the operation of Big Sandy Unit 2.

RESPONSE

Under the CSAPR, Big Sandy Unit 2 is allocated SO2 allowances that are significantly below the plant's historic annual SO2 emissions. Thus, in order to remain in compliance under CSAPR, Kentucky Power would be required to buy additional SO2 allowances from the market (assuming they would be available), and/or constrain the dispatch of the Big Sandy units (i.e., operate less) to emit less SO2. Big Sandy Unit 2 does not currently have post-combustion controls for SO2 emissions, and is thus considered "uncontrolled" for this pollutant. Because the installation of a post-combustion SO2 control system such as a scrubber takes multiple years to construct, meeting a compliance timeline of 2012, 2013 or even 2014 is physically impossible.

Please refer to responses in KPSC Staff Set 1 Nos. 5 and 6 for the relative impacts.

a. No.

WITNESS: John M McManus

Kentucky Power Company

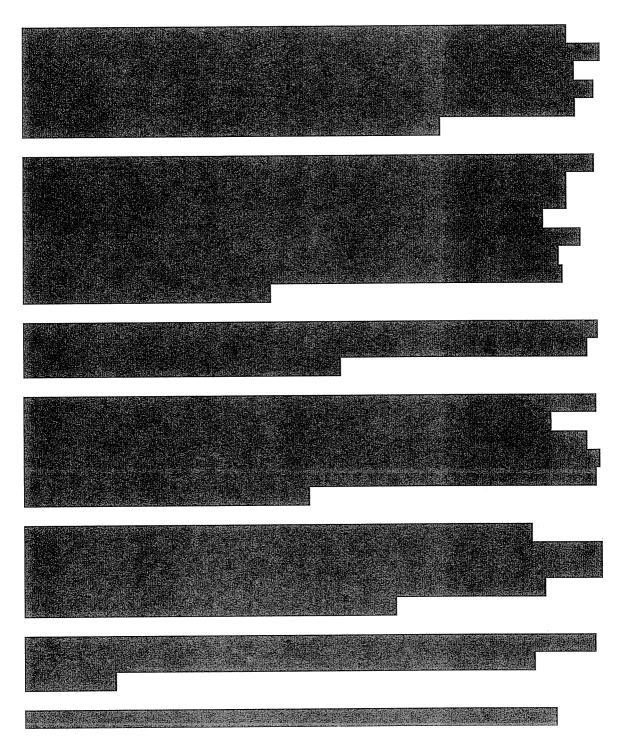

REQUEST

Please provide copies of all prospectuses for any security issuances by AEP and/or KPCo between January 1, 2009 and the present.

RESPONSE

Kentucky Power has not had any issuances since January 1, 2009, that required a prospectus. In 2009, Kentucky Power issued \$130 mm in debt through a private placement.

KPSC Case No. 2011-00401 Attorney General Initial Set of Data Requests Dated January 13, 2012 Item No. 26 Page 1 of 1

Kentucky Power Company

REQUEST

Please provide copies of credit reports for AEP and/or KPCo between January 1, 2010 and the present from the major credit rating agencies published since January 1, 2010.

RESPONSE

Kentucky Power objects to the request to the extent it seeks information regarding American Electric Power, Inc. ("AEP.") AEP is not a party to this proceeding, and is not a utility subject to the jurisdiction of the Public Service Commission of Kentucky. AEP is not obligated to assist Kentucky Power in financing the proposed environmental projects in Kentucky Power's 2011 Environmental Compliance Plan. Without waiving this objection, please see the Attachment I to this response.

Applicable Criteria

- Rating Hybrid Securities, Dec. 29, 2009
- U.S. Power and Gas Comparative Operating Risk (COR) Evaluation and Financial Guidelines, Aug. 22, 2007
- Credit Rating Guidelines for Regulated Utility Companies, July 31, 2007

Rating Rationale

- Fitch Ratings affirmed the ratings of American Electric Power Co. (AEP) on Jan. 26, 2010. AEP's ratings take into consideration the company's ownership of nine electric utility subsidiaries that provide some cash flow diversity and operate in generally balanced regulatory environments. In addition, Fitch recognizes constructive financial actions taken by management, particularly the significant reduction of capital spending in 2009 and planned capex in 2010, as well as the \$1.64 billion equity offering in April of 2009, which has preserved cash flow and liquidity at the company in a challenging economic environment.
- 2009 consolidated financial performance was generally consistent with Fitch's expectations. AEP reported \$1.36 billion of ongoing earnings, compared with \$1.30 billion for 2008. Despite a reduction in industrial load of 15.6% and demand reduction in the off-system sales market, the company was able to secure approximately \$725 million in rate increases throughout the year, primarily from Ohio, Virginia, and West Virginia. This, in combination with cost controls on operating and maintenance expenses, allowed the company to maintain credit metrics that are consistent with utility parent peers in the 'BBB' rating category, with adjusted EBITDA to interest at more than 4.0x and debt leverage, as measured by the ratio of debt to EBITDA, at 3.8x for the year ended Dec. 31, 2009. Fitch projects that credit protection measures will remain at or near current levels over the next two years, assuming reasonable outcomes in pending rate cases, recovery of recent ice storm related costs, and modest load growth as the economy improves.
- Rating concerns primarily relate to AEP's exposure to potential emissions regulations or legislation given the company's large coal-fired generation fleet, as well as weak economies in several service territories, particularly Ohio, Michigan, and Kentucky. In addition, AEP faces some regulatory uncertainty relating to the end of the current electric security plans (ESP) for the Ohio utilities (Ohio Power Co., issuer default rating [IDR] 'BBB', Stable; and Columbus Southern Power Co., IDR 'BBB+', Stable) in 2011 and other regulatory proceedings. In the near term, the Public Utilities Commission of Ohio (PUCO) has yet to determine the methodology for the Significantly Excess Earnings Test (SEET), which requires the PUCO to determine if rate adjustments included in the ESP resulted in significantly excessive earnings. An adverse ruling from the PUCO regarding earnings at the Ohio companies could place pressure on the ratings of AEP and its operating subsidiaries.

Key Rating Drivers

- Regulated operations benefit from relatively stable and predictable cash flows.
- Credit coverages consistent with the rating category and utility parent peers.
- Solid competitive operating position with ownership of low-cost, coal-fired assets.
- Balanced market structure in Ohio through year-end 2011.
- Exposure to potential emissions regulation or legislation.
- An inability to recover significant environmental compliance investments and a deterioration of regulatory relations could negatively affect ratings.

Recent Developments

Regulatory Update

Arkansas: In November 2009, the Arkansas Public Service Commission (APSC) approved a \$17.8 million base rate increase for Southwestern Electric Power Co. (SWEPCO, IDR 'BBB'; Negative Outlook), premised upon a return on equity (ROE) of 10.25%. The rate order also includes a separate generation rider of approximately \$11 million annually related to the recovery of carrying costs, depreciation, and operations and maintenance (O&M) expenses on the 508-MW natural gas-fired stall unit once it is placed into service as expected in mid-2010.

Texas: In August 2009, SWEPCO filed a rate case with the Public Utility Commission of Texas (PUCT) to increase non-fuel base rates by approximately \$75 million, including an ROE of 11.5%.

West Virginia: In September 2009, the West Virginia Public Service Commission (WVPSC) issued an order granting a \$355 million increase over a four-year phase in period for Appalachian Power Co. (APCo, IDR 'BBB-'; Stable) related to the company's expanded net energy charge (ENEC).

Cook Nuclear Power Plant

On Dec. 23, 2009, the Cook nuclear plant Unit 1 reached full power after completing testing and monitoring of the restored turbine generator system. Reactor start-up and reconnection to the transmission grid has also taken place. The 1,030-MW unit has been out of service since September 2008 when turbine vibrations damaged the turbine generator, support structure, and associated systems. Repair of the property damage and replacement of the turbine rotors and other equipment could cost up to approximately \$330 million. Management believes that the company should recover a significant portion of these costs through the turbine vendor's warranty, insurance, and regulatory mechanisms.

AEP maintains property insurance through NEIL with a \$1 million deductible. As of Sept. 30, 2009, the company recorded \$119 million in prepayments and other current assets representing recoverable amounts under the insurance policy. The company also maintains a separate accidental outage policy with NEIL whereby, after a 12-week deductible period, AEP is entitled to weekly payments of \$3.5 million for the first 52 weeks following the deductible period. After the first 52 weeks, the policy pays \$2.8 million per week of up to an additional 110 weeks. To date, AEP has recorded \$185 million in revenues.

Capital Expenditure Update

While AEP has announced reductions in capital spending for 2010, Fitch notes that capex budgets remain relatively high compared to historical levels, with \$2.0 billion forecasted in 2010 and 2011. The largest components of capex include: investments in distribution and transmission, environmental compliance costs and new generation. AEP is actively involved in several electric transmission investment initiatives, including pursuing opportunities in Texas, as well as areas in the Southwest, Midwest and on the East Coast.

New Generation

Turk Plant Update: On Jan. 22, 2010, the Arkansas Pollution Control and Ecology Commission affirmed the air permit for Turk, which was under appeal by plant opponents in June 2009. To date, SWEPCO has spent \$717 million on constructing the Turk plant, with a total projected cost of \$1.6 billion.

New Technology: Carbon Capture Storage

AEP has been selected to receive funding from the U.S. Department of Energy (DOE) through the Clean Coal Power Initiative Round 3 to pay part of the costs of installing a commercial-scale carbon dioxide (CO2) capture and storage system on its Mountaineer coal-fired power plant in West Virginia. The company will receive \$334 million to assist with the installation of a system that will use a chilled ammonia process to capture at least 90% of the CO2 from a 235-MW commercial scale portion of the plant's 1,300 MW of capacity. The system will begin commercial operation in 2015. In September 2009, the initial 20-MW demonstration capture portion of the project was placed into service, and in October 2009 the company started injecting CO2 successfully in underground storage.

AEP has also received DOE funds for an \$87 million investment in gridSMART technology.

Transmission Update

AEP is pursuing a significant number of capital intensive transmission projects. The majority of these efforts are being undertaken with utility partners in joint venture ownership structures to offset business and financial risk.

Please reference the table below for AEP's active transmission projects.

• Upper Midwest EHV Development — SMART Study: In August 2009, AEP joined several other Midwest utilities, including American Transmission Co., Exelon Corp., NorthWestern Energy, and MidAmerican Energy Co. to sponsor a comprehensive study of the transmission needed in the Upper Midwest to support renewable energy development and to transport that energy to consumers in markets to the east. The study will provide recommendations for new transmission development in the Upper Midwest, including North Dakota, South Dakota, Iowa, Indiana, Ohio, Illinois, Minnesota, and Wisconsin. The Strategic Midwest Area Transmission Study (SMARTransmission Study) is scheduled for completion at the end of the first quarter 2010.

Corporates

Potomac-Appalachian Transmission Highline (PATH) Project Postponed: In December 2009, AEP and its partner, Allegheny Energy (AYE) withdrew their applications for PATH in Virginia at the request of PJM. Due to the change in load and demand in the PJM region, the regional transmission operator is reviewing its long-term transmission needs for its footprint.

Liquidity

As of Dec. 31, 2009, AEP has sufficient liquidity to meet ongoing financial needs. The company has approximately \$3.6 billion in credit facilities, with maturities from March 2011 through April 2012. The revolving credit agreements contain a covenant that

requires AEP to maintain a debt to total capitalization ratio at or below 67.5%. As of Dec. 31, 2009, AEP has net available liquidity of \$3.4 billion, including cash on hand of \$490 million.

The utility subsidiaries have access to short-term borrowings through a cash pool managed by AEP, whereby entities with excess short-term liquidity lend to affiliates with cash needs. External financing needs of this pool are sourced directly by the parent.

Debt Maturities

AEP's debt maturities are manageable with maturing debt expected to be funded through a combination of internal cash generation and external financings as needed. AEP's parent maturities are minimal with \$490 million maturing in 2010 and \$243 million maturing in 2015.

Related Research

Applicable Criteria

- Corporate Rating Methodology, Aug. 16, 2010
- Parent and Subsidiary Rating Linkage, July 14, 2010
- Utilities Sector Notching and Recovery Ratings, March 16, 2010
- U.S. Power and Gas Comparative Operating Risk (COR) Evaluation and Financial Guidelines, Aug. 22, 2007
- Credit Rating Guidelines for Regulated Utility Companies, July 31, 2007

Rating Rationale

- Rating Affirmation: Fitch affirmed the ratings of American Electric Power Co., Inc. (AEP) on Feb. 28, 2011.
- Stable Credit Profile: AEP's ratings are supported by regulatory and geographic diversification via ownership of nine rated electric utility subsidiaries. Additionally, the company has generally balanced regulatory environments, a solid competitive position with a fleet of low-cost coal-fired assets, and a relatively low-risk strategy of investing in transmission assets.
- Consistent Credit Metrics: Consolidated credit metrics are consistent with Fitch's 'BBB' issuer default rating (IDR) guidelines. AEP's recent financial performance has been bolstered by base rate increases in Kentucky and West Virginia, favorable weather across the company's service territories, effective cost-control measures, and continued improvement in the economy, particularly in the industrial sector. AEP's ratios of EBITDA to interest and funds from operations to interest were 4.4x and 4.30x, respectively, for the year ended Dec. 31, 2010. Consolidated leverage, as measured by the ratio of debt to EBITDA, was 4.1x for the same time period. AEP has modest levels of parent debt.
- Fitch forecasts AEP's consolidated credit metrics will remain at or near current levels through 2014. This analysis takes into account previously received and planned rate increases, normalized weather, and continued economic recovery.
- Credit Concerns: Fitch is primarily concerned about AEP's exposure to emissions regulations and legislation, given the company's large coal-fired generation fleet. Additional concerns include regulatory uncertainty in Ohio regarding the pending electric security plan (ESP) filing at AEP Ohio (Columbus Southern Power [CSP], IDR 'BBB+'/Stable and Ohio Power Co. [OPC], IDR 'BBB'/Positive) and increased customer switching in CSP's commercial sector. Additional concerns include ongoing permitting litigation and merchant price risk issues surrounding Southwestern Electric Power Co.'s (SWEPCO, IDR 'BBB'/Stable) Turk coal plant construction project. The uncertainty related to the termination of the AEP East power pool is of additional concern.
- Environmental Legislation: Fitch notes that Ohio Senate Bill 221, which was enacted in May 2008, specifically provides Ohio electric utilities with the ability to recover carbon-related environmental costs, which reduces exposure to carbon in this state. However, several AEP jurisdictions, including Arkansas, Louisiana, and Oklahoma, have no automatic environmental cost recovery clause or law in place.

Key Ratings Drivers

- Diversity of regulatory jurisdictions.
- Conservative utility management strategy.
- Low parent-level debt.
- Consolidated credit metrics consistent with 'BBB' guidelines.
- Issues at the Turk coal plant.

AG's First Set of Data Requests Dated January 13, 2012 Item No. 26 Attachment 1 Page 8 of 91

Corporates

- Exposure to emissions regulations and legislation.
- ESP filing in Ohio.
- Uncertainty surrounding termination of AEP East power pool.

Recent Developments

Turk Litigation

AEP is in the midst of ongoing litigation related to Turk's air and water permits. Fitch is mostly concerned about the wetlands permit. The Sierra Club, the Audubon Society, and other parties have filed complaints with the Federal District Court, the U.S. Army Corps of Engineers, and the U.S. Department of the Interior, among others, and received a temporary restraining order and preliminary court injunction to stop the construction of Turk. The 8th Circuit Court issued a temporary injunction against Turk, which was lifted and then reinstated in December 2010. The complaints are specifically directed toward the water intake and river crossing associated with the transmission lines.

SWEPCO is reviewing alternatives to assuage these complaints and lift the injunction. On March 30, 2011, SWEPCO and the city of Hope, AR, signed a short-term agreement to provide start-up water during the construction of Turk. This agreement does not violate the federal court's preliminary injunction mentioned above. However, by drawing water from the Hope facility, SWEPCO can maintain its current construction schedule. The agreement expires on Dec. 31, 2012, and the water supplied will allow the plant to perform start-up and testing activities but will not support full operations once the unit is completed. (Please refer to the full rating report on SWEPCO, dated April 27, 2011, for further details on Turk.)

Electric Security Plan in Ohio

On Jan. 27, 2011, AEP Ohio filed a petition with the Public Utilities Commission of Ohio (PUCO) to establish a new ESP for the period of Jan. 1, 2012–May 31, 2014. In addition, the companies filed a \$93.8 million joint distribution rate case in February of this year. The PUCO is expected to rule on the ESP and distribution case no later than the fourth quarter of this year.

An additional issue that has recently arisen in Ohio is the increased customer switching in CSP's southern commercial jurisdiction. This amount was, in total, about 3% in 2010 and is expected to grow to 17% in 2011. This equates to approximately 6% of AEP Ohio's total load and 1.5% of total AEP load. However, the higher shopping levels, coupled with the three-year ESP plans, could place pressure on the operating efficiencies of the Ohio utilities over the longer term.

AEP East Power Pool

On Jan. 4, 2011, Appalachian Power Co. (APCo) made a filing with the Virginia State Corporation Commission (VSCC) that detailed the AEP East pool members' (Appalachian Power CO. [APCo], IDR 'BBB-'/Stable; Indiana Michigan Power Co. [I&M], IDR 'BBB-'/Stable; Kentucky Power Co. [KPC], IDR 'BBB-'/Stable; CSP; and OPC) intent to terminate the interconnection agreement. The pool members now have a three-year time frame in which to work out a settlement and new arrangement. The decision to evaluate the pool was initially raised by regulatory concerns, particularly from Virginia, that the current pool arrangement resulted in a lack of transparency. At this time, Fitch believes it is unlikely the new arrangements to replace the current pool will have material credit rating impacts. Fitch will continue to monitor developments.

Bonus Depreciation

AEP expects to generate about \$1.1 billion of cash through accelerated depreciation during the 2011–2013 period. Management has not specified how it intends to use the cash but has indicated it is reviewing several options, including reducing parent-level debt and/or funding pension expense and a lawsuit settlement. Fitch recognizes the temporary nature of bonus depreciation cash flows and normalizes cash flows for bonus depreciation tax deferrals in its analysis.

Transmission Update

AEP continues to view transmission investments as significant growth opportunities both within and outside of the company's traditional service territories. Currently, the strategy is based on three major platforms: Electric Transmission Texas (ETT), AEP Transmission Co. (AEP Transco), and several joint-venture projects. In Fitch's view, the transmission projects are positive to the credit profile of AEP because of the low-risk nature of the business and the above-average Federal Energy Regulatory Commission (FERC) incentive ROEs.

EIT

ETT is a joint-venture company with MidAmerican Energy Holdings Co. (MEHC, IDR 'BBB+'/Stable) that was established to fund, own, and operate electric transmission assets in the Electricity Reliability Council of Texas (ERCOT). ETT's current rate base is \$412 million. This is expected to grow as follows: \$473 million in 2011, \$778 million in 2012, and \$1.35 billion in 2013, when the first Competitive Renewable Energy Zone (CREZ) projects come online.

ETT's assigned CREZ projects are estimated to cost a total of approximately \$1.1 billion, including seven double-circuit 345-kV transmission lines (around \$750 million), eight major 345-kV stations, and several series compensation installations (about \$350 million). The Public Utilities Commission of Texas certificate of convenience and necessity (CCN) proceedings are currently underway. ETT received CCN approval on three CREZ lines, and one more is expected during the first half of 2011. There are additional projects in the pipeline of approximately \$1.6 billion, with around 822 miles of lines and 28 substations with in-service dates through 2017.

AEP Transco

In September 2010, AEP Transco filed a formula rate settlement with the FERC, requesting an ROE of 11.49% in the Pennsylvania New Jersey Maryland Interconnection (PJM) and 11.2% in the Southwest Power Pool. AEP Transco's application for public utility status was approved by the PUCO in December 2010. No filings were required in Oklahoma and Michigan. Additional AEP Transco applications are on file in West Virginia, Indiana, and Kentucky. Currently, the company has \$50 million invested in the three states with baseline capital spending targets of \$160 million in 2011 and \$350 million in 2012.

Major projects identified include a substation in Ohio (at a cost of \$250 million) and line extensions in the other states. The company will pursue regulatory approvals in other states in 2011, including Arkansas, Louisiana, West Virginia, Virginia, Indiana, and Kentucky. Fitch expects capital spending will increase commensurately in these states for 2012 and beyond as these approvals are received.

New Projects

RITELine Project

AEP, MEHC, and Exelon Corp. executed a memorandum of understanding (MOU) in October 2010 for the development of the Reliability Interregional Transmission Extension Line (RITELine) project. The proposed 765-kV transmission line extends approximately 420 miles between Illinois and Indiana. The total project cost is currently estimated to be \$1.6 billion.

AEP and MidAmerican Energy Co. (MEC, a subsidiary of MEHC) executed an MOU in October 2010 for the development of a new MEC project, a proposed 765-kV line that extends approximately 180 miles between lowa and Illinois. The estimated project cost is currently \$650 million.

Liquidity and Debt Structure

AEP has a sufficient short-term liquidity position, with approximately \$2.5 billion of net available liquidity as of Dec. 31, 2010, including \$294 million of cash on hand. The company has credit facilities totaling \$3.4 billion, of which two \$1.5 billion credit facilities support its commercial paper program. The revolving credit agreements contain a covenant that requires AEP to maintain a debt to total capitalization at or below 67.5% and expire in April 2012 and June 2013. In March 2011, AEP extinguished

its \$478 million credit facility supporting its variable-rate demand notes.

Consolidated debt maturities over the next several years are considered manageable and are as follows: \$616 million in 2011, \$540 million in 2012, and \$1.3 billion in 2013. The next parent-only maturity is in 2015, when \$243 million of senior notes becomes due. Fitch expects maturing debt to

be funded through a mix of internal cash generation and external refinancings.

AEP's 2011 capital-spending budget is approximately \$2.6 billion, with \$2.9 billion projected in 2012. Major projects and investments include transmission projects and environmental compliance. Capital-expenditure financing is anticipated to be met through a combination of internally generated cash and external debt issuances.

In issuing and maintaining its ratings, Fitch relies on factual information it receives from issuers and underwriters and from other sources Fitch believes to be credible. Fitch conducts a reasonable investigation of the factual information relied upon by it in accordance with its ratings methodology, and obtains reasonable verification of that information from independent sources, to the extent such sources are available for a given security or in a given jurisdiction. The manner of Fitch's factual investigation and the scope of the third-party verification it obtains will vary depending on the nature of the rated security and its issuer, the requirements and practices in the jurisdiction in which the rated security is offered and sold and/or the issuer is located, the availability and nature of relevant public information, access to the management of the issuer and its advisers, the availability of pre-existing third-party verifications such as audit reports, agreed-upon procedures letters, appraisals, actuarial reports, engineering reports, legal opinions and other reports provided by third parties, the availability of independent and competent third-party verification sources with respect to the particular security or in the particular jurisdiction of the issuer, and a variety of other factors. Users of Fitch's ratings should understand that neither an enhanced factual investigation nor any third-party verification can ensure that all of the information Fitch relies on in connection with a rating will be accurate and complete. Ultimately, the issuer and its advisers are responsible for the accuracy of the information they provide to Fitch and to the market in offering documents and other reports. In issuing its ratings Fitch mus

The information in this report is provided "as is" without any representation or warranty of any kind. A Fitch rating is an opinion as to the creditworthiness of a security. This opinion is based on established criteria and methodologies that Fitch is continuously evaluating and updating. Therefore, ratings are the collective work product of Fitch and no individual, or group of individuals, is solely responsible for a rating. The rating does not address the risk of loss due to risks other than credit risk, unless such risk is specifically mentioned. Fitch is not engaged in the offer or sale of any security. All Fitch reports have shared authorship. Individuals identified in a Fitch report were involved in, but are not solely responsible for, the opinions stated therein. The individuals are named for contact purposes only. A report providing a Fitch rating is neither a prospectus nor a substitute for the information assembled, verified and presented to investors by the issuer and its agents in connection with the sale of the securities. Ratings may be changed or withdrawn at anytime for any reason in the sole discretion of Fitch. Fitch does not provide investment advice of any sort. Ratings are not a recommendation to buy, sell, or hold any security. Ratings do not comment on the adequacy of market price, the suitability of any security for a particular investor, or the tax-exempt nature or taxability of payments made in respect to any security. Fitch receives fees from issuers, insurers, guarantors, other obligors, and underwriters for rating securities. Such fees generally vary from U\$\$1,000 to U\$\$5,750,000 (or the applicable currency equivalent) per issue. In certain cases, Fitch will rate all or a number of issues issued by a particular issuer, or insured or guaranteed by a particular insurer or guarantor, for a single annual fee. Such fees are expected to vary from U\$\$1,000 to U\$\$1,500,000 (or the applicable currency equivalent). The assignment, publication, or dissemination of a rating by Fitch shall not c

AG's First Set of Data Requests Dated January 13, 2012 Item No 26 Attachment 1 Page 14 of 91

American Electric Power Company

Columbus, Ohio, United States

Business Profile

American Electric Power Company, Inc. (AEP) is a large portfolio of individual electric utility companies that serve approximately 5 million retail customers across 11 states. In addition, AEP owns a sizeable barge and coal-handling business, an energy trading operation and a small wholesale generation company, which are not regulated.

Roughly 90% of AEP's consolidated financials are associated with its rate-regulated electric utility operations. These operations are primarily conducted through nine separate utility companies, of which seven are vertically integrated. Two utilities enjoy monopolistic electric transmission and distribution (T&D) only service territories in Texas.

AEP owns or leases roughly 39 GW of electric generation capacity, much of it fueled by coal. These generating assets are diversified by geographic region and regulatory jurisdiction. Approximately 87% of this generation capacity (about 34 GW) is associated with vertically-integrated electric utilities, and roughly one-third (12 GW) is associated with the Ohio-based regulated utilities. Ohio is currently under on-going legislative intervention and market restructuring and these assets could be viewed as quasi-regulated or quasi-unregulated. Roughly 13% (5 GW) is clearly non-regulated, although the capacity is essentially fully subscribed by affiliate utilities, through AEP Generating Company.

We consider AEP's utility rate base and power-generation assets as extremely important and critical for the local infrastructure, representing a broad swath of the United States extending from the upper mid-west region to south Texas. These assets face some uncertainty due to increasingly stringent environmental mandates now being developed at both state and Federal levels, which increases the risk of a major dispute regarding the intention or legal interpretation with these new policies.

This Credit Analysis provides an in-depth discussion of credit rating(s) for American Electric Power Company, Inc. and should be read in conjunction with Idoody's most recent Credit Opinion and rating information available on Moody's website.

Arkansas, Indiana, Kentucky, Louisiana, Michigan, Ohio, Oklahoma, Tennessee, Texas, Virginia and West Virginia.

² For more information about regulatory changes under way in Ohio, read our Special Comment, "Investor-Owned Electric Utilities in Ohio," February 2009.

AG's First Set of Data Requests Dated January 13, 2012 Item No 26 Attachment 1 Page 15 of 91

AEP is considered a good proxy credit for the U.S. vertically integrated electric utility sector and is viewed as being well-positioned in the Baa2 ratings category at this time, primarily due to our expectation that AEP will continue to generate cash flow that represents over 15% of its total debt. Sector wide challenges are applicable to AEP over the longer-term horizon and we incorporate a view that AEP has some time to implement corporate finance policies that support an investment grade rating.

Rating Drivers

- » Recent deterioration in financial credit metrics appears to have been reversed more quickly than we originally viewed as possible.
- » Incorporated into our Baa2 rating and stable rating outlook is an expectation that AEP will maintain key cash flow to debt metrics comfortably within the mid-teen's range over the near to intermediate term horizon.
- » Electric utility revenues and cash flow is diversified geographically and by state regulatory authorities—a credit positive—but a majority of operations focus on traditional, vertically integrated electric utility activities. As a result, AEP does not enjoy the same diversity of operations as some of its peers, such as MidAmerican or Dominion Resources.
- » Regulatory support in all jurisdictions viewed positively. In our opinion, AEP's numerous regulatory jurisdictions allow timely recovery of prudently incurred costs and investments—a critical element to both earnings growth and credit-rating stability.
- » Capital investment plans are primarily centered upon rate-base additions—generally viewed as a long-term credit positive—and recent cutbacks in investment plans are viewed more as a shortterm delay or deferral.
- » Significant coal-fired generating fleet raises risk profile because of the prospect for more stringent environmental mandates—especially regarding CO₂ emissions.
- » Liquidity profile appears adequate at this time, but sizable maturities in 2010 and 2011 including a near-term expiration of crucial credit facilities, requires maintaining good access to capital markets.
- » Corporate governance issues are modestly elevated with pending retirement of long-time CEO; internal and external search underway.

Rating Rationale

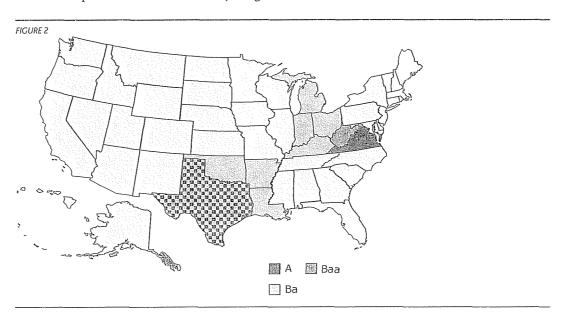

Diversity in Regulatory Jurisdictions and Service Territory

AEP is a large portfolio of individual electric utility companies that serve approximately 5 million retail customers across 11 states. In addition, AEP owns a sizeable barge and coal-handling business, which is not-regulated, along with an energy trading operation and a small wholesale generation company.

About 90% of AEP's consolidated financials are associated with rate-regulated electric utility operations. These operations are primarily conducted through nine separate utility companies, of which seven are vertically integrated.

Two vertically integrated utilities (Columbus Southern and Ohio Power) are located in Ohio, where legislative intervention associated with the traditional electric framework continues to evolve. We incorporate a view that Ohio's intervention efforts will continue, with the next round of restructuring in the 2011 – 2012 timeframe. These restructuring efforts began over a decade ago, and have been viewed as being reasonably constructive to the long-term credit quality for the utilities in that state. We incorporate a view that additional restructuring activity will also be reasonably constructive and that an adverse, contentious environment will not materialize in Ohio over the next few years.

Reference is made to our Regulated Electric and Gas rating methodology, published in August 2009. In the map below, we highlight the states where AEP maintains utility operations and how we score the Regulatory and Political Environments (Factor 1 of the ratings methodology). We note that Texas is cross-hatched between the A and Baa rating categories. This range reflects the differences we see between the pure T&D and the vertically integrated utilities in that State.

AEP's largest utility (ranked by rate base) is Appalachian Power (APCO, Baa2 senior unsecured / stable outlook). APCO's service territory is split roughly evenly between Virginia and West Virginia. Today, we consider the Virginia regulatory and political environment as being more supportive to long-term credit quality than the West Virginia jurisdiction. Nevertheless, these assessments are subject to change, and we observe that Virginia recently experienced some legislative intervention that negatively impacts APCO and that West Virginia appears to be relatively supportive of its local coal-sector industry exposure.

Two of AEP's utilities enjoy monopolistic electric transmission and distribution (T&D) only service territories in Texas (AEP Texas Central and AEP Texas North, both rated Baa2 senior unsecured / stable outlooks). The over-all business and operating risk profile of Texas-based T&D utilities are viewed as being significantly lower than the business and operating risk profiles of vertically integrated electric utilities.

We note that Texas T&D utilities do not enjoy Federal Energy Regulatory Commission (FERC) incentive rate-making structures. However, we also note that the Texas-regulatory environment provides numerous flexible rate-making provisions which serve to reduce regulatory lag.

Source: AEP

High Concentration in Carbon Fuel Remains a Major Credit Restraint

AEP owns or leases roughly 39 GW of electric generation capacity, much of it fuelled by coal. These generating assets are diversified by geographic region and regulatory jurisdiction and approximately 87% of this generation capacity (about 34 GW) is associated with vertically-integrated electric utilities.

Roughly one-third (12 GW) is associated with the Ohio-based regulated utilities, currently under ongoing legislative intervention and market restructuring noted previously, and roughly 13% (5 GW) is considered non-regulated, although the capacity is essentially fully subscribed by affiliate utilities, through AEP Generating Company.

With respect to increasingly stringent environmental regulations, including carbon dioxide emissions, we incorporate a view that some form of legislation or regulation is forthcoming, but we have very little clarity on the timing. Today, we incorporate a view that legislation will be more flexible and potentially credit friendly than pure regulations, largely due to the ability of special interests to influence the drafting of the legislation. We also believe the actual financial statement impacts associated with such legislation will take several years to fully develop after being enacted. Finally, we incorporate a view that the vast majority of costs associated with such legislation/regulations are likely to be recovered through the regulatory rate-setting process.

Our views regarding increasingly stringent environmental regulations are subject to change, as additional facts or developments emerge.

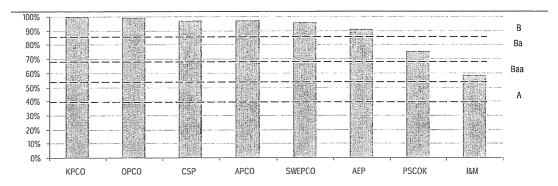

^{*}Rate base reflects amounts in the last filed rate cases

^{**}Nominal capacity; AEP total generation capacity also includes AEP Generating Co., 43.5% interest in OVEC and Wind PPA

^{** *}Production includes generation from only AEP-owned assets

AG's First Set of Data Requests Dated January 13, 2012 Item No. 26 Attachment 1 Page 20 of 91

Financial metric deterioration has been reversed

In 2009, AEP's consolidated financial credit metrics showed a marked improvement over the prior 2-years. This improvement, which occurred much faster than we originally thought possible, is primarily related to an aggressive cost reduction program and near-term capital investment reductions. In addition, AEP issued roughly \$1.6 billion of new common equity in 2009, the proceeds of which were largely invested into its various utility subsidiaries.

The ability to maintain key cash flow to debt related credit metrics in the mid-teen's range was a primary driver behind our recent rating action - when we changed AEP's rating outlook to stable from negative.

SOURCE: Moody's FM

FIGURE 4
"Parent Company Peer Group (3 Year Average)

Liquidity Profile

As of December 31, 2009, AEP had three separate credit facilities totaling \$3.6 billion; two of which are \$1.5 billion five year credit facilities expiring in March 2011 and April 2012. These facilities contain a debt to capitalization limit of 67.5%. AEP asserts that it remains in compliance. There is a \$750 million letter of credit capacity (prior to final Bank of America litigation judgment, \$600 million after) on each facility (\$1.5 billion in total, \$1.2 billion after Bank of America resolution), a \$500 million accordion feature for each facility (for a total accordion of \$1.0 billion) and a one-year extension option.

AG's First Set of Data Requests Dated January 13, 2012 Item No 26 Attachment 1 Page 22 of 91

There are no material adverse change restrictions on drawings, no litigation representation provision at the time of borrowing and a definition adjustment to exclude one of AEP's subsidiaries, AEP Texas Central, as a "significant subsidiary" to prevent cross-acceleration in the event of a default. AEP also has a \$627 million credit facility, expiring April 2011, that can be utilized for letter of credit or draws and has covenant restrictions similar to the primary 5-year facilities.

AEP has approximately \$1.7 billion of long term debt due in 2010 (of which \$700 million will mature for remainder of 2010) and \$600 million due in 2011. In the next two years, We estimate that AEP will spend approximately \$2.5 billion in capital expenditures and approximately \$800 million in dividends annually. As of year end 2009, AEP's credit facilities had approximately \$119 million utilized in support of commercial paper outstanding and roughly \$568 million of LC's posted, leaving approximately \$2.9 billion of capacity available. Combined with \$490 million of cash, total liquidity amounted to \$3.4billion.

For year 2009, AEP generated approximately \$2.7 billion in cash from operations, made approximately \$3.3 billion capital investments and paid roughly \$761 million in dividends, resulting in roughly \$1.4 billion of negative free cash flow.

| Liquidity Profile 2009 (\$Million) | | |
|------------------------------------|----------|-------------------------------|
| | | AVAILABLE CREDIT FACILITIES / |
| | CASH | MONEY POOL |
| American Electric Power Company | \$ 490.0 | \$2,894.0 |

| Southwestern Electric Power | \$1.7 | \$350.0 |

Subsidiary Rating Summary

Appalachian Power (Baa2 Sr. Unsecured / Stable Outlook)

APCo's Baa2 senior unsecured rating reflects a relatively low-risk vertically integrated electric utility company operating in states with regulatory authorities that are generally viewed as being reasonably supportive to long term credit quality. APCo is diversified between its Virginia and West Virginia jurisdictions and benefits from some consolidated financial advantages of being part of the AEP system. Furthermore, as its major spending program winds down over the next few years, we expect APCO's financial profile and balance sheet to strengthen.

Moody's note that State of Virginia lawmakers recently suspended APCO's interim rate increase due to concerns of economic difficulties. The intervention represents an industry-wide phenomenon that, if materialized, could result in an overall shift of regulatory supportiveness within the entire rate-

regulated utilities sector. Moody's will continue to follow and evaluate the situation across the country. Nevertheless, on the positive side, Moody's observe that the measure in Virginia also requires the Virginia State Corporation Commission (SCC) to issue a decision on the company's base rate case by July 15. For base cases filed after January 1, 2010, SCC is required to issue a decision within nine months.

| Selected Financial Data - Appalachian Power | | | | | | | | |
|---|-------|-------|-------|-------|-------|-------|-------|--|

Columbus Southern Power (A3 Sr. Unsecured / Stable Outlook)

CSPCo's A3 senior unsecured rating primarily reflects the relatively stable regulatory environment and reasonable recovery mechanisms provided by the Ohio Electric Security Plan (ESP) through 2011 and its strong cash flow generation. CSPCo is expected to continue producing financial credit metrics in a range that positions the credit well within the A3 rating category. The rating also considers the prospects for increasingly stringent environmental mandates, including the prospect for new regulations associated with carbon dioxide emissions.

We incorporate a view that CSPCo will maintain key cash flow to debt related financial metrics comfortably above the 20% range. Cash flow to debt metrics of roughly 25% will keep CSPCo well positioned in the A3 ratings category. Should CSPCo's metrics fall closer to the 20%, negative rating actions are more likely.

Ohio Power (Baa1 Sr. Unsecured / Stable Outlook)

OPCo's Baa1 senior unsecured rating and stable outlook reflect the relatively stable regulatory environment and reasonable recovery mechanisms provided by the approved Electric Security Plan (ESP) through 2011. The rating also takes into consideration the company's historical and projected financial profile in comparison to its peers, the severely impacted economic conditions in the service territory that OPCo operates within and its ownership by American Electric Power.

OPCo's cash flow to debt metrics are expected to remain in the high-teen's range for the near to intermediate term horizon. OPCo is much larger than its affiliate, CSPCo, and is more exposed to reduced industrial volumes due to economic pressures.

Indiana Michigan Power (Baa2 Sr. Unsecured / Stable Outlook)

I&M's Baa2 senior unsecured rating reflects the generally supportive regulatory jurisdictions in both Indiana and Michigan, a material credit positive. In addition, the rating considers the strong historical financial metrics for I&M's rating category.

The rating had been modestly constrained by I&M's sizeable capital investment program and managing the outage at its DC Cook nuclear facility. Over time, as I&M demonstrates its ability to successfully manage and operate its large nuclear plant, and assuming the key cash flow to debt metrics remain in the high-teen's range for a sustainable period of time, this utility is the most likely AEP subsidiary to justify a ratings upgrade.

Kentucky Power (Baa1 Sr. Unsecured / Stable Outlook)

KYPCo's Baa2 issuer rating primarily reflects the reasonably constructive relationship with the KPSC while constrained by its relatively large capital investment program and its single carbon fuel source. Although the company has temporarily delayed some of the investment programs in 2009 and 2010, we expect the program to resume to its full force in the next few years.

AG's First Set of Data Requests Dated January 13, 2012 Item No. 26 Attachment 1 Page 25 of 91

However, we expect increasing up-stream dividends over the next few years and free cash flow could return to a negative position over the intermediate and long term horizon. While we generally view investments in rate base positively, we would be concerned if KYPCo's spending plans result in a persistent negative free cash flow position that is primarily funded with internal or external debt. Should this situation materialize, KYPCo's financial profile could become stressed given its Baa2-rating category.

Additionally, we consider the potential for significant environmental legislation, especially related to carbon dioxide emissions, as a material risk affecting KYPCo's 100% coal-fired generating assets. Moody's incorporates a view that the timing of compliance requirements within any potential new legislation may be many years in the future and that the costs associated with any new legislation regarding emissions will generally be recovered through rates (either through existing fuel clause pass-through mechanisms or other incremental rate riders).

Southwestern Electric Power (Baa3 Sr. Unsecured / Stable Outlook)

SWEPCO's Baa3 senior unsecured rating reflects the longer-term prospects of being a relatively diversified, vertically integrated electric utility company with generally supportive political / regulatory environments. In addition, SWEPCO is benefited by its relationship with its parent, AEP, with respect to its liquidity needs. Over the longer-term, we view SWEPCO as an investment grade utility company.

Nevertheless, SWEPCO's current risk profile is extremely high, largely due to its pursuit of building a new, 600-MW coal-fired generating facility in Hempstead, Arkansas. The project is facing numerous legal challenges, which is not that unusual for projects of this type. It is unusual, in our opinion, for a utility to be as far along with construction given the amount of legal uncertainty that remain unresolved.

While a non-investment grade rating is not out of the question, at this time we incorporate a view that SWEPCO has the ability to revise its corporate and finance strategies and pursue other mitigation alternatives that are designed to protect against unexpectedly adverse events, especially with respect to its liquidity needs.

Public Service Company of Oklahoma (Baa1 Sr. Unsecured / Stable Outlook)

The Baa1 senior unsecured rating primarily considers the relatively strong financial profile of PSO. Prospectively, the rating incorporates a view that PSO will maintain a financial profile that positions the company well within its existing rating category. The rating also considers the supportive regulatory environment in Oklahoma, and we continue to view the OCC as being a long-term credit positive for PSO. The rating considers the material recessionary pressures currently being experienced in Oklahoma and the prospects for increasingly stringent environmental mandates, including the prospect for new regulations associated with carbon dioxide emissions.

AEP Texas Central (Baa2 Sr. Unsecured / Stable Outlook)

AEP TCC's Baa2 senior unsecured rating is weakly positioned within its rating category, primarily due to the very weak cash flows in relation to its total adjusted debt (both on an absolute basis and in relation to its peer comparables). Nevertheless, a lower rating is not justified at this time, in part due to the expectation that AEP TCC's financial profile will show a steady, albeit modest, improvement over time and in part due to the relatively low business and operating environment provided by the PUCT. AEP TCC (and its affiliate, AEP TNC) are not viewed as core strategic holdings for the parent, AEP, in our opinion. As a result, we believe these Texas T&D properties could be considered potential divestiture candidates.

AEP Texas Morth (Baa2 Sr. Unsecured / Stable Outlook)

Moody's views AEP TNC as being relatively well positioned within the Baa2 senior unsecured ratings category. The company, a small, relatively lower-risk transmission and distribution utility company, benefits from the Texas deregulation initiative primarily due to the absence of fuel commodity and other provider of last resort (POLR) obligations. In addition, AEP TNC benefits from the regulatory oversight provided by the PUCT, which is viewed as being relatively supportive to long term credit quality for the Texas T&D sector. AEP TNC's historical key financial credit metrics would otherwise

AG's First Set of Data Requests Dated January 13, 2012 Item No 26 Attachment 1 Page 27 of 91

indicate a higher ratings category than Baa2, but we incorporate a view that the metrics, primarily the cash flow to debt related metrics, will decline over the next few years towards the mid-teen's range from the previous 20% level. The mid-teen cash flow metrics are expected to remain in that range for the foreseeable future, which positions AEP TNC in the Baa2 ratings category. The residual ownership interest in the Oklaunion generating facility, which is unique among the rest of the Texas T&D sector, is not viewed as a material ratings constraint.

Opinion

Rating Drivers

Holding company for primarily rate-regulated utilities operating in diversified regulatory environments that provide a strong foundation to investment grade credit rating

Near-term liquidity profile appears adequate

Recent improvement to financials appear to be stabilized with mid-to high teens range cash flow metrics

Material exposure to coal-fired generation requires some repositioning of generation fleet

Ohio still a net credit positive with market restructuring in its second decade

AG's First Set of Data Requests Dated January 13, 2012 Item No. 26 Attachment 1 Page 41 of 91

Corporate Profile

American Electric Power Company, Inc. (AEP, Baa2 senior unsecured / stable outlook) is a large electric utility holding company with rate-regulated utilities operating in 11 states. AEP owns approximately 37,000 MW of generating assets, primarily coal fired. AEP is headquartered in Columbus, Ohio.

Recent Developments

On March 3, 2011, Moody's changed the rating outlook for CSPCo to negative from stable due to the proposed merger with its affiliate, Ohio Power, as combined metrics are more consistent with Ohio Power's ratings category of Baa1. In terms of timing of any ratings action, Moody's would expect to move CSPCo to a review for possible downgrade once the proposed transaction's procedural schedule is established and testimony is filed, and for any downgrade to occur once the necessary merger approvals are attained. We currently expect the merger to be completed by year-end 2011. On June 9, 2011, AEP announced an initial plan to comply with proposed clean air regulations by (i) reducing coal-fired capacity by 7,000 MW, with 6,000 MW of retirements and 1,000 MW of refueling to natural gas, (ii) building 1,200 MW of new natural gas capacity and (iii) installing emissions reduction equipment on 10,000 MW of coal-fired plants (all numbers are approximate). The cost would be \$6-8 billion over the remainder of the decade, and AEP is advocating a delayed implementation of regulation, citing the impact on jobs. Moody's expects the plan will be subject to continued negotiation with rate-makers and politicians, but in our opinion, the costs of environmental compliance will largely be recoverable in rates in regulated jurisdictions.

SUMMARY RATING RATIONALE

AEP's Baa2 senior unsecured rating considers the diversity associated with owning and operating nine rate-regulated electric utilities across 11 states. The rating also considers the consolidated financial profile of AEP, which does not maintain a material amount of parent holding company debt, a credit positive. Over the past two years, AEP's consolidated financial metrics support the Baa2 rating, with the ratio of cash flow from operations adjusted for changes in working capital (CFO pre-w/c) to debt averaging roughly 17% and debt to capitalization near 51%. The Baa2 rating also considers the increasing challenges associated with managing a large fleet of coal-fired generation assets (whose operating costs are expected to rise) and service territories experiencing sluggish recoveries from the 2008/2009 recession.

DEATAILED RATING CONSIDERATIONS

- DIVERSITY OF RATE REGULATED CASH FLOWS

AEP's businesses and assets are well diversified, although they are concentrated within the electric utility sector. AEP's utility subsidiaries are located in 11 different states, and are therefore regulated by 11 different regulatory authorities (the largest ranked by rate base being Texas, West Virginia, Virginia, Indiana and Ohio). These jurisdictions translate into good diversity in revenues (by state and operating utility), cash flows, assets, debt outstanding, customers and generation capacity. From a credit perspective, Moody's views AEP's size and diversity as a meaningful credit strengths, providing a the parent company a degree of insulation from any unexpected adverse event or other negative development occurring at one of its companies or with one of its state service territories.

- GENERALLY SUPPORTIVE REGULATORY JURISDICTIONS

AEP is exposed to 11 different state regulatory commissions that Moody's generally views favorably due to reasonably transparent rulemaking procedures and good suite of recovery mechanisms. We observe that most of these commissions are appointed (Louisiana and Oklahoma are elected); that a majority of the states did not pursue a legislatively mandated form of deregulation (with the exception of Ohio, Texas, Virginia and Michigan - although the two latter states have more recently pursued re-regulation), that fuel / purchased power costs trackers are allowed in some fashion in all states (except for Ohio, which is subject to a rate cap with a deferral mechanism) and that most have approval authorities over securities issuances and M&A change of control (except Michigan). As a portfolio, these regulatory commissions are viewed as maintaining a relatively constructive relationship with the utilities they regulate and are considered a benefit to AEP's over-all business and risk profile

- MAINTAINING FINANCIAL PROFILE KEY TO MAINTAINING RATINGS

The vast majority of AEP's revenues, earnings, cash flows and assets are related to its numerous rate-regulated electric utility subsidiaries, which we view, in general, as having a relatively low over-all business and operating risk profile. We would be concerned if AEP finds it increasingly difficult to maintain its consolidated CFO pre-w/c to debt credit metrics at a level that remains comfortably within the mid-teens range. For years ended 2010 and 2009, AEP reported a ratio of CFO pre-w/c to debt of roughly 17%, up from the approximate 14% range produced in 2008 and 2007.

Prospectively, we expect AEP to continue to exhibit stability in its financial profile, despite still lingering recessionary pressures being experienced in many of its service territories and rising costs associated with its generation fleet. We incorporate a view that AEP will continue to produce a ratio of CFO pre-w/c to debt near 17% (15% excluding the impact of bonus depreciation) over the near to intermediate term horizon.

- LARGE CAPITAL EXPENDITURE PROGRAM

Over the next few years, AEP is expecting to invest approximately \$10 billion into its infrastructure, including sizeable investments in transmission and environmental compliance. We view investments in regulated rate-base positively for the credit profile, and we incorporate a view that most regulators will provide meaningful and timely recovery for prudently incurred investments. Nevertheless, we remain cautious as to the scale and scope of capital expenditure plans of this size, due to the negative free cash flow that will be incurred over the next few years and the potential regulatory overhang associated with the ultimate impact on end-use customer rates. In our opinion, utilities that are embarking on a capital investment program of this size should also be redoubling their efforts to bolster their balance sheet and cash flow credit metrics, in an effort to create enough financial strength to weather potentially distressful environments related to uncertain economic conditions, volatility in commodity markets, regulatory changes or any other unanticipated developments.

- COAL GENERATING ASSETS REPRESENT SIGNIFICANTLY LONGER-TERM VULNERABILITY

We believe the likelihood for incremental environmental legislation and increasingly stringent mandates as representing a material risk affecting AEP's coal-fired generating assets and overall corporate strategy. However, Moody's incorporates a view that the timing of compliance

AG's First Set of Data Requests Dated January 13, 2012 Item No 26 Attachment 1 Page 42 of 91

requirements with any new laws or proposals will be incurred over many years and that the costs associated with any new legislation regarding emissions will generally be recovered through rates (either through existing fuel clause pass-through mechanisms or other incremental rate riders). As a result, recent EPA rules and proposals are not viewed as a material credit negative over the near-term horizon. Nonetheless, eventual plant closures will require replacement capacity and/or additional transmission capacity for imported power.

- OHIO REGULATORY ENVIRONMENT A NET CREDIT POSITIVE

Ohio is both a unique state from a regulatory perspective and very important to AEP. The state pursued deregulation to a point and permitted some stranded cost recovery, but also allowed utilities to remain vertically integrated and pursued a form of quasi regulation via an ongoing requirement for Electric Security Plan (ESPs, which can vary considerably from utility to utility). Although AEP's (distribution-only) rate base in Ohio is its fifth largest at approximately \$1.9 billion, the combined assets of its Ohio operating companies, at over \$13 billion, are the largest within the AEP system.

Despite the continuing uncertainty associated with a decade old restructuring initiative, we continue to view the Ohio regulatory environment as a relatively supportive and transparent jurisdiction. The PUCO provides a good suite of recovery mechanisms and flexible, company-specific restructuring frameworks for the utilities in the state, a credit positive. We consider Ohio to be a quasi-regulated environment, similar to Texas, but we note that the Ohio model is untested with respect to plant abandonments. We do not view the current round of market restructuring as a credit negative due to our view that the matter will be resolved, at a minimum, in a credit neutral basis.

Our positive views of the Ohio regulatory environment are based in part on the existing regulatory framework. For example, AEP's current ESP (expiring 12/31/2011) provides near term clarity for cost and investment recovery and allows companies to maintain reasonably good cash flows and financial profiles, in our opinion. Ohio provides fuel pass-through mechanisms, which specifically permit the recoverability of potential future carbon costs, a credit positive. In addition, special riders allow for recovery of other costs and investments such as transmission costs, future carrying cost of environmental investments incurred from 2001 through 2008, gridSmart programs and provider-of-last-resort (POLR) expenses, although some of these costs are being re-evaluated by the PUCO due to an Ohio Supreme Court remand.

Liquidity

AEP's liquidity is good. As of March 31, 2011, AEP had syndicated credit facilities totaling \$2.954 billion, expiring in April 2012 and June 2013. These facilities contain an adjusted debt to capitalization limit of 67.5%, and AEP reports that it remains in compliance, with an adjusted ratio of 53% at March 31, 2011. There is a combined \$1.35 billion of letter of credit sub-limits under the facilities, a \$500 million accordion feature for each facility (for a total accordion of \$1.0 billion). There are no material adverse change or material itigation restrictions on drawings. Default provisions exclude payment defaults and insolvency/bankruptcy of subsidiaries that are not significant subsidiaries per the SEC definition (AEP Texas Central is also effectively excluded as a significant subsidiary due to a definitional adjustment).

For year 2010, AEP generated approximately \$3.2 billion in Moody's-adjusted cash from operations, made approximately \$2.5 billion in capital investments and paid roughly \$824 million in dividends, resulting in roughly \$220 million of negative free cash flow.

Including securitization bonds, AEP has approximately \$600 million of long-term debt due in 2011, \$630 million due in 2012 and \$1.9 billion due in 2013. Over the next two years, we estimate that AEP will spend approximately \$2.9 billion annually in capital expenditures and approximately \$850 million in dividends annually. At March 31, 2011, AEP's credit facilities had approximately \$813 million utilized in support of commercial paper outstanding and \$125 million of LCs posted, leaving approximately \$2.1 billion of capacity available. Combined with \$625 million of cash, total liquidity amounted to roughly \$2.7 billion.

Structural Considerations

After considering the ratings for a number of AEP's utility operating subsidiaries, several of which are also rated in the Baa2 ratings category, there could be some structural subordination pressure for AEP to defend its Baa2 senior unsecured rating, at least over the longer-term horizon. However, we see good diversity and a low-risk business profile among its numerous operating utility subsidiaries, which should continue to mitigate this potential issue. A downgrade of Columbus Southern Power would not be considered as material enough to change our views regarding AEP's Baa2 rating at this time. Nevertheless, rating upgrades at certain other subsidiaries, including Appalachian Power and Indiana-Michigan Power (both rated Baa2 senior unsecured) would materially benefit the credit positioning of AEP.

Rating Outlook

The stable rating outlook reflects the good credit profiles of AEP's diverse portfolio of electric utility operating subsidiaries. We believe AEP will continue to demonstrate a reasonably conservative approach towards its financial policies, leading to continued improvements in its cash flow generation in relation to debt. A stronger balance sheet is viewed as a material credit positive for AEP, as it helps mitigate numerous challenges over the longer-term horizon. These challenges include managing a diverse group of service territories which are all still experiencing some severe post economic recessionary pressures, along with a sizeable coal-fired generating fleet (including one plant in advanced stages of construction) and a single nuclear generating plant.

What Could Change the Rating - Up

Ratings upgrades appear unlikely over the near term, primarily due to the rating positions of AEP's numerous subsidiary operating utilities. While the diversification of these numerous subsidiaries benefits the over-all credit profile, we observe that a majority of the utility subsidiaries appear to be well positioned within the Baa1 and Baa2 rating categories. Nevertheless, if AEP were successful in producing a stronger set of key financial credit metrics, including a ratio of CFO pre-w/c to debt near 20% on a sustainable basis, ratings could be upgraded. The recent performance of achieving almost 18 % in 2009 and 17% in 2010 (15% after adjusting for bonus depreciation) has been noted.

What Could Change the Rating - Down

AEP's ratings could be downgraded based on the structural subordination risks associated with the ratings of its subsidiaries, particularly its larger subsidiaries in Virginia and Ohio. In addition, the ratings could be downgraded if AEP were to produce financial metrics that appear too weak for its existing rating category, including a ratio of CFO pre-w/c to debt in the low teens range. The ratings could also be downgraded if AEP were to experience material set-backs with its various regulatory proceedings, or if a more contentious regulatory / political relationship materialized or if its capital investment program were financed aggressively with debt, which in turn would likely impact its consolidated cash flow generation financial metrics.

MIS, a wholly-owned credit rating agency subsidiary of Moody's Corporation ("MCO"), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MIS have, prior to assignment of any rating, agreed to pay to MIS for appraisal and rating services rendered by it fees ranging from \$1,500 to approximately \$2,500,000. MCO and MIS also maintain policies and procedures to address the independence of MIS's ratings and rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold ratings from MIS and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at www.moodys.com under the heading "Shareholder Relations — Corporate Governance — Director and Shareholder Affiliation Policy."

Any publication into Australia of this document is by MOODY'S affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657, which holds Australian Financial Services License no. 336969. This document is intended to be provided only to "wholesale clients" within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY'S that you are, or are accessing the document as a representative of, a "wholesale client" and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to "retail clients" within the meaning of section 761G of the Corporations Act 2001.

Notwithstanding the foregoing, credit ratings assigned on and after October 1, 2010 by Moody's Japan K.K. ("MJKK") are MJKK's current opinions of the relative future credit risk of entities, credit commitments, or debt or debt-like securities. In such a case, "MIS" in the foregoing statements shall be deemed to be replaced with "MJKK". MJKK is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO.

This credit rating is an opinion as to the creditworthiness or a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail investors. It would be dangerous for retail investors to make any investment decision based on this credit rating. If in doubt you should contact your financial or other professional adviser.

Other Research

• American Electric Power Co., Feb. 12, 2010

Rating Rationale

- o Fitch affirmed the ratings of Kentucky Power Co. (KPC) on Sept. 9, 2010. The Rating Outlook for the company remains Stable. KPC's ratings are supported by the company's stable utility operations and relatively constructive regulatory environment and affiliation with parent American Electric Power Co. (AEP; Fitch issuer default rating of 'BBB', with a Stable Outlook). While the utility is able to participate in the AEP power pool and AEP money pool, given AEP's highly centralized treasury and electric operations, any deterioration in the credit quality of the parent company could impair the ratings of KPC. Recent financial performance was negatively affected by lower retail and wholesale revenues, resulting in credit metrics that are currently below average for the 'BBB-' category. Fitch Ratings expects financial performance to improve following KPC's recent \$64 million rate increase, resulting in projected ratios of EBITDA to interest of more than 4.0x and FFO to interest to remain approximately 3.5x over the next several years.
- The primary rating concerns facing KPC relate to its exposure to a struggling local economy, particularly the industrial sector, which comprises 28% of revenues as well as stricter environmental legislation. Fitch expects adequate recovery of additional environmental costs through the company's environmental cost compliance (ECC) surcharge. Recovery delays or disallowances of environmental costs could place downward pressure on ratings.

Key Ratings Drivers

- Stable utility operations.
- Generally balanced regulatory environment in Kentucky.
- Affiliation with parent, AEP.
- Impact of recession on local economy, in particular the industrial customers.
- Exposure to stricter environmental legislation.

Liquidity and Debt Structure

KPC's liquidity position is solid with more than \$245 million of available capacity under the AEP money pool. Total AEP available liquidity of approximately \$2.9 billion as of June 30, 2010, including \$838 million of cash on hand. AEP's credit facilities are comprised of a \$1.454 billion facility that matures in April 2012, a \$1.5 billion facility that matures in June 2013, and a \$478 million facility that matures in April 2011. The credit agreements contain a covenant that requires AEP to maintain debt to total capitalization at or below 67.5%. KPC's next scheduled maturity of \$20 million is due in 2015.

KPC's capital spending budget through 2011 is projected to average approximately \$60 million per year. However, in 2007, the U.S. District Court approved the AEP System's consent decree with the EPA, the U.S. Department of Justice, the states, and the special interest groups that KPC's Big Sandy coal plant will be scrubbed by 2015. As such, KPC's capital spending is expected to increase starting in 2013 for this project. Funding will be met through a combination of internal cash and external debt.

In issuing and maintaining its ratings, Fitch relies on factual information it receives from issuers and underwriters and from other sources Fitch believes to be credible. Fitch conducts a reasonable investigation of the factual information relied upon by it in accordance with its ratings methodology, and obtains reasonable verification of that information from independent sources, to the extent such sources are available for a given security or in a given jurisdiction. The manner of Fitch's factual investigation and the scope of the third-party verification it obtains will vary depending on the nature of the rated security and its issuer, the requirements and practices in the jurisdiction in which the rated security is offered and sold and/or the issuer is located, the availability and nature of relevant public information, access to the management of the issuer and its advisers, the availability of pre-existing third-party verifications such as audit reports, agreed-upon procedures letters, appraisals, actuarial reports, engineering reports, legal opinions and other reports provided by third parties, the availability of independent and competent third-party verification sources with respect to the particular security or in the particular jurisdiction of the issuer, and a variety of other factors. Users of Fitch's ratings should understand that neither an enhanced factual investigation nor any third-party verification can ensure that all of the information Fitch relies on in connection with a rating will be accurate and complete. Ultimately, the issuer and its advisers are responsible for the accuracy of the information they provide to Fitch and to the market in offering documents and other reports. In issuing its ratings Fitch must

The information in this report is provided "as is" without any representation or warranty of any kind. A Fitch rating is an opinion as to the creditworthiness of a security. This opinion is based on established criteria and methodologies that Fitch is continuously evaluating and updating. Therefore, ratings are the collective work product of Fitch and no individual, or group of individuals, is solely responsible for a rating. The rating does not address the risk of loss due to risks other than credit risk, unless such risk is specifically mentioned. Fitch is not engaged in the offer or sale of any security. All Fitch reports have shared authorship. Individuals identified in a Fitch report were involved in, but are not solely responsible for, the opinions stated therein. The individuals are named for contact purposes only. A report providing a Fitch rating is neither a prospectus nor a substitute for the information assembled, verified and presented to investors by the issuer and its agents in connection with the sale of the securities. Ratings may be changed or withdrawn at anytime for any reason in the sole discretion of Fitch. Fitch does not provide investment advice of any sort. Ratings are not a recommendation to buy, sell, or hold any security. Ratings do not comment on the adequacy of market price, the suitability of any security for a particular investor, or the tax-exempt nature or taxability of payments made in respect to any security. Fitch receives fees from issuers, insurers, guarantors, other obligors, and underwriters for rating securities. Such fees generally vary from US\$1,000 to US\$750,000 (or the applicable currency equivalent) per issue. In certain cases, Fitch will rate all or a number of issues issued by a particular issuer, or insured or guaranteed by a particular insurer or guarantor, for a single annual fee. Such fees are expected to vary from US\$10,000 to US\$1,500,000 (or the applicable currency equivalent). The assignment, publication, or dissemination of a rating by Fitch shall not co

Applicable Criteria

- Corporate Rating Methodology, Aug. 16, 2010
- Parent and Subsidiary Rating Linkage, July 14, 2010
- Utilities Sector Notching and Recovery Ratings, March 16, 2010
- Credit Rating Guidelines for Regulated Utility Companies, July 31, 2007
- U.S. Power and Gas Comparative Operating Risk (COR) Evaluation and Financial Guidelines, Aug. 22, 2007

Rating Rationale

- Rating Affirmation: Fitch affirmed the ratings of Kentucky Power Co. (KPC) on Feb. 28, 2011. The Rating Outlook for the company remains Stable.
- Consistent but Pressured Credit Metrics: KPC's credit metrics are currently consistent with Fitch's 'BBB-' issuer default rating (IDR) guidelines. However, they will be pressured by debt-funded capital spending. The company posted ratios of EBITDA to interest and funds from operations interest coverage at 3.8x and 3.4x, respectively, for the year ended Dec. 31, 2010. Fitch expects future earnings to benefit from the \$64 million rate increase received in June 2010, resulting in projected EBITDA to interest coverage of approximately 4.0x.
- Environmental Compliance: KPC plans to add a scrubber to the Big Sandy unit 2 coal plant by 2015 per parent American Electric Power Co., Inc.'s (AEP, IDR 'BBB'/ Stable) agreement with the Environmental Protection Agency (EPA). Currently, the estimated cost of the project is approximately \$650 million, the financing of which will be met through a combination of internal cash and external debt. Fitch's ratings assume adequate recovery of this and additional environmental compliance costs through the environmental cost compliance (ECC) surcharge. The ECC is not an automatic passthrough. However, it allows the company to request annual recovery of environmental costs outside of a full rate case. Recovery delays or disallowances of environmental costs could place downward pressure on ratings.
- **Higher Capital Expenditures:** Fitch projects KPC's capital-spending plan to approximate \$90 million for 2011, a level higher than previous years. The higher than typical capital expenditures will result in higher debt levels. Consequently, Fitch anticipates the utility to post funds from operations (FFO) to interest coverage and debt to EBITDA of less than 3.0x and approximately 4.0x, respectively, over the next several years.
- Credit Concerns: Fitch is also concerned about KPC's exposure to a still struggling local economy, wherein the unemployment rate remains above the national average. Additionally, the industrial sector composes 36% of the utility's revenues. There is also potential the company may use capital expenditures to comply with stricter environmental regulations or change the generation mix to reduce emissions, particularly since KPC's generation is exclusively coal-fired.
- AEP East Power Pool: The recent decision to terminate the AEP East power pool within the next three years is a source of uncertainty for KPC, particularly since the company is currently short capacity and dependent on the power pool. At this time, Fitch believes it is unlikely the new arrangements to replace the current pool will have a material credit impact. Fitch will continue to monitor developments.

Key Ratings Drivers

- Stable utility operations.
- Generally balanced regulatory environment in Kentucky.
- Affiliation with parent AEP.

FitchRatings

The part of the second second

Corporates

- Exposure to struggling local economy.
- High capital spending will increase leverage.
- Exposure to emissions regulation.

Recent Developments

Proposed AEP East Power Pool Termination

On Jan. 4, 2011, KPC affiliate, Appalachian Power Co. (APCo, IDR 'BBB-'/Stable) made a filing with the Virginia State Commerce Commission (VSCC) that detailed AEP East pool members' (Indiana Michigan Power Co., KPC, Columbus Southern Power Co., and Ohio Power Co.) intent to terminate the interconnection agreement. The pool members now have a three-year time frame in which to work out a settlement. The decision to evaluate the pool was initially raised by regulatory concerns, particularly from Virginia, that the current pool arrangement resulted in a lack of transparency.

Base Rate Case

In June 2010, the Kentucky Public Service Commission (KPUC) authorized a \$63.66 million base rate increase for KPC. The increase was premised upon a 10.5% ROE and the recovery of \$23 million of deferred storm restoration expenses over five years. KPC initially filed for a \$124 million base rate increase, based on an 11.75% ROE.

Liquidity and Debt Structure

KPC has access to short-term liquidity through credit facilities at AEP. As of Dec. 31, 2011, AEP had approximately \$2.5 billion of net available liquidity, including \$294 million of cash on hand. AEP has credit facilities totaling \$3.4 billion, of which two

\$1.5 billion credit facilities support the company's commercial paper program. The revolving credit agreements contain a covenant that requires AEP to maintain a debt-to-total capitalization ratio at or below 67.5%. The facility matures in April 2012 and June 2013. In March 2011, AEP extinguished its \$478 million credit facility supporting its variable-rate demand notes.

AEP's commercial paper program is used to meet to the short-term

borrowings of its subsidiaries. The utility subsidiaries participate in a cash pool managed by AEP, whereby entities with excess short-term liquidity lend to affiliates with cash needs. External financing needs of this pool are sourced directly by the parent. As of April 1, 2011, KPC had no outstanding loans from the utility money pool. The company has a short-term borrowing limit of \$250 million. KPC's next scheduled debt maturity is in 2015 when \$20 million comes due. Fitch expects the company to pay down the 2015 maturity with internal cash.

Fitch conducts a reasonable investigation of the factual information relied upon by it in accordance with its ratings methodology, and obtains reasonable verification of that information from independent sources, to the extent such sources are available for a given security or in a given jurisdiction. The manner of Fitch's factual investigation and the scope of the third-party verification it obtains will vary depending on the nature of the rated security and its issuer, the requirements and practices in the jurisdiction in which the rated security is offered and sold and/or the issuer is located, the availability and nature of relevant public information, access to the management of the issuer and its advisers, the availability of pre-existing third-party verifications such as audit reports, agreed-upon procedures letters, appraisals, actuarial reports, engineering reports, legal opinions and other reports provided by third parties, the availability of independent and competent third-party verification sources with respect to the particular security or in the particular jurisdiction of the issuer, and a variety of other factors. Users of Fitch's ratings should understand that neither an enhanced factual investigation nor any third-party verification can ensure that all of the information Fitch relies on in connection with a rating will be accurate and complete. Ultimately, the issuer and its advisers are responsible for the accuracy of the information they pro

The information in this report is provided "as is" without any representation or warranty of any kind. A Fitch rating is an opinion as to the creditworthiness of a security. This opinion is based on established criteria and methodologies that Fitch is continuously evaluating and updating. Therefore, ratings are the collective work product of Fitch and no individual, or group of individuals, is solely responsible for a rating. The rating does not address the risk of loss due to risks other than credit risk, unless such risk is specifically mentioned. Fitch is not engaged in the offer or sale of any security. All Fitch reports have shared authorship. Individuals identified in a Fitch report were involved in, but are not solely responsible for, the opinions stated therein. The individuals are named for contact purposes only. A report providing a Fitch rating is neither a prospectus or a substitute for the information assembled, verified and presented to investors by the issuer and its agents in connection with the sale of the securities. Ratings may be changed or withdrawn at anytime for any reason in the sole discretion of Fitch. Fitch does not provide investment advice of any sort. Ratings are not a recommendation to buy, sell, or hold any security. Ratings do not comment on the adequacy of market price, the suitability of any security for a particular investor, or the tax-exempt nature or taxability of payments made in respect to any security. Fitch receives fees from issuers, insurers, guarantors, other obligors, and underwriters for rating securities. Such fees generally vary from US\$1,000 to US\$1,500,000 (or the applicable currency equivalent) per issue. In certain cases, Fitch will rate all or a number of issues issued by a particular issuer, or insured or guaranteed by a particular insurer or guarantor, for a single annual fee. Such fees are expected to vary from US\$1,000 to US\$1,500,000 (or the applicable currency equivalent). The assignment, publication, or dissemination of a rating by Fitch shall not co

Rating Drivers

Constructive regulatory environment viewed positively

Key financial metrics are weak

Sizeable capital expenditures could pressure rating

AG's First Set of Data Requests Dated January 13, 2012 Item No. 26 Attachment 1 Page 53 of 91

100% coal generation modestly constrains rating and requires prudent management of increasingly stringent environmental mandates

Acute economic recessionary pressures only somewhat mitigated with business plan

Corporate Profile

Kentucky Power Company (KYPCo, Baa2 senior unsecured) is a vertically integrated electric utility company and is a wholly owned subsidiary of American Electric Power Company (AEP, Baa2 senior unsecured). KYPCo's approximately \$1 billion rate base is under the jurisdiction of the Kentucky Public Service Commission (KY PSC). KYPCo owns approximately 1GW of 100% coal fired generating capacity.

Recent Developments

On Dec. 29, 2009, KYPCo filed with the KYPSC for a \$123.6 million (24.3%) electric rate increase premised upon an 11.75% ROE on a year-end rate base valued at \$1.012 billion for a test year ended Sept. 30, 2009. A final PSC decision is expected in October 2010.

In August 2009, KYPCo filed with KYPSC seeking authorization to defer approximately \$10 million of incremental storm restoration expenses for review and recovery in the next base rate proceeding. The requested deferral of the \$10 million is in additional to the annual \$2 million of storm-related operation and maintenance expense included in current base rates.

SUMMARY RATING RATIONALE

KYPCo's Baa2 issuer rating primarily reflects the reasonably constructive relationship with the KPSC, and the potential rating constraints as a result of its current capital spending plan, single fuel source and the economic stress within the region it operates.

DETAILED RATING CONSIDERATIONS

CONSTRUCTIVE REGULATORY ENVIRONMENT A CREDIT POSITIVE

Moody's views the regulatory environment in Kentucky as reasonably supportive to long-term credit stability, a material credit positive. KYPCo is primarily regulated by the Kentucky Public Service Commission (KYPSC) which we consider a constructive jurisdiction. KYPCo has a rate base of approximately \$1 billion and an authorized return on equity of 10.5%, which was established in March 2006. KYPCo currently has a monthly fuel clause tracker (a credit positive), and environmental surcharge rider, among other recovery mechanisms (i.e., demand side management and system sales riders). Prospectively, we expect the on-going rate case will likely to be resolved in a way that is positive to its credit quality.

MAINTAINING STABLE FINANCIAL CREDIT METRICS KEY TO RATING

KYPCo's key financial credit metrics are weak for its Baa2 senior unsecured rating category. For the last 5 year, 3 year and twelve month period ended September 2009, KYPCo's ratio of cash from operations pre working capital adjustments (CFO pre-w/c) to debt averaged about 14.2%, 13.7% and 12.4%, respectively. The ratio of CFO pre-w/c interest coverage averaged 3.4x, 3.3x and 2.6x, respectively for the same periods. We observe that several winter storms occurred in 2009 increasing operation and maintenance expenses.

CAPITAL EXPENDITURE PROGRAM COULD PRESSURE RATINGS OVER THE LONG TERM

KYPCo's cumulative long-term capital investment program is large given its size. Although the company has temporarily delayed some of the investment programs in 2009 and likely in 2010, we expect the program to resume to its full force in the next few years. KYPCo received approximately \$30 million in equity contributions from its parent AEP in April 2009. However, we expect increasing up-stream dividends in the next few years and free cash flow will return to negative over the intermediate and long term horizon. While we generally view investments in rate base positively, we would be concerned if KYPCo's spending plans result in a persistent negative free cash flow position that will be primarily funded with internal or external debt. Should this situation materialize, KYPCo's financial profile could become stressed given its Baa2-rating category.

ACUTE ECONOMIC RECESSIONARY PRESSURES REPRESENT A RISK GIVEN LARGE INDUSTRIAL LOADS

The State of Kentucky is considered to be in a deep protracted recession, in part due to its heavy exposure to the automotive manufacturing industry. Approximately 50% of KYPCo's volume sales in 2008 were industrial. Among the top 10 industrial customers, KYPCo's second largest customer has a primary presence in automotive industry. The

AG's First Set of Data Requests Dated January 13, 2012 Item No. 26 Attachment 1 Page 54 of 91

other 9 are mostly involved in coal refining and mining which is less cyclical, but also facing pressures.

100% COAL GENERATING ASSETS VULENERABLE TO SIGNIOFICANT ENVIRONMENTAL LEGISLATION

We observe the potential for significant environmental legislation, especially related to carbon dioxide emissions, as a material risk affecting KYPCo's 100% coal-fired generating assets. Moody's incorporates a view that the timing of compliance requirements within any potential new legislation may be many years in the future and that the costs associated with any new legislation regarding emissions will generally be recovered through rates (either through existing fuel clause pass-through mechanisms or other incremental rate riders).

Liquidity

KYPCo participates in the AEP Utility Money Pool, which provides access to the parent company's liquidity up to \$250 million. As of September 30, 2009, there were no borrowings under the money pool by KYPCo.

As of September 30, 2009, AEP had three separate credit facilities totaling \$3.6 billion; two of which are \$1.5 billion five year credit facilities - expiring in March 2011 and April 2012. These facilities contain a debt to capitalization limit of 67.5%. AEP asserts that it remains in compliance. There is a \$750 million letter of credit capacity (prior to final Bank of America litigation judgment, \$600 million after) on each facility (\$1.5 billion in total, \$1.2 billion after Bank of America resolution), a \$500 million accordion feature for each facility (for a total accordion of \$1.0 billion) and a one-year extension option.

There are no material adverse change restrictions on drawings, no litigation representation provision at the time of borrowing and a definition adjustment to exclude one of AEP's subsidiaries, AEP Texas Central, as a "significant subsidiary" to prevent cross-acceleration in the event of a default. AEP also has a \$627 million credit facility, expiring April 2011, that can be utilized for letter of credit or draws and has covenant restrictions similar to the primary 5-year facilities.

AEP has approximately \$1.7 billion of long term debt that will mature in 2010. We estimate that AEP will spend approximately \$2.5 billion in capital expenditures and approximately \$800 million in dividends over the next twelve months. As of September 30, 2009, AEP's credit facilities had approximately \$347 million utilized in support of commercial paper outstanding and roughly \$470 million of LC's posted, leaving approximately \$2.8 billion of capacity available. Combined with \$877 million of cash, total liquidity amounted to \$3.6 billion.

Over the twelve months ended September 2009, KYPCo generated approximately \$36 million of cash from operations, invested approximately \$90 million in capital expenditures, made a \$20 million upstream dividend payment and received \$30 equity contribution from its parent, AEP, resulting in approximately \$44 million of negative free cash flow. KYPCo has no significant debt maturities until September 2017.

Rating Outlook

The stable rating outlook for KYPCo is primarily based on our expectation that the company will continue to maintain a reasonably constructive relationship with the KYPSC, be prudent in meeting its infrastructure spending plans, attain reasonably good recovery on a timely basis and improve its key financial credit metrics that justify the rating.

What Could Change the Rating - Up

Rating upgrades appear unlikely over the near to intermediate term horizon, primarily due to our expectation that KYCo's financial profile will not be in a position to exhibit the improvements necessary to justify a Baa1-rating category. This is partly due to our understanding of KYCo's longer term capital investment and financing plans. However, KYCo could be considered for a ratings upgrade if it were to achieve key financial credit metrics, including a ratio of CFO pre w/c plus interest divided by interest of approximately 5x and CFO pre w/c to debt of approximately 20% on a sustainable basis.

What Could Change the Rating - Down

Ratings could be downgraded if the regulatory environment took a more adversarial tone, its capital expenditure program requires substantial amount of debt financing or if the key financial credit metrics exhibit a prolonged deterioration. These metrics would include a ratio of CFO pre w/c plus interest divided by interest of below 3.0x or CFO pre w/c to debt closer to the low-teens.

Opinion

Rating Drivers

Constructive regulatory environment viewed positively

Key financial metrics are weak but expected to stabilize

100% coal generation constrains rating and requires prudent management of increasingly stringent environmental mandates

Recessionary pressures relieved by recovery in coal industry

Corporate Profile

Kentucky Power Company (KYPCo, Baa2 senior unsecured) is a vertically integrated electric utility company and is a wholly owned subsidiary of American Electric Power Company (AEP, Baa2 senior unsecured). KYPCo's approximately \$1 billion rate base is under the jurisdiction of the Kentucky Public Service Commission (KY PSC). KYPCo owns approximately 1.1GW of 100% coal fired generating capacity.

Recent Developments

In June 2010, KYPSC issued an order approving KYPCo's \$64 million rate case settlement agreement which also include \$23 million of deferred storm restoration expenses over five years. The residential per-kilowatt-hour charge will increase from 7.19 cents to 8.59 cents. This order concluded a base rate case filed in December, 2009 when KYPCo requested a \$123.6 million (24.3%) electric rate increase premised upon an 11.75% ROE on a year-end rate base valued at \$1.012 billion for a test year ended Sept. 30, 2009. New rates became effective July 2010.

AG's First Set of Data Requests Dated January 13, 2012 Item No. 26 Attachment 1 Page 58 of 91

SUMMARY RATING RATIONALE

KYPCo's Baa2 issuer rating primarily reflects the reasonably constructive relationship with the KPSC, and the potential rating constraints as a result of its coal-dependent generation profile and relatively weak financial metrics. The ratings also considers the signs of recovery for KYPCo's primary industrial customer group amid the economic stress within the region it operates.

DETAILED RATING CONSIDERATIONS

CONSTRUCTIVE REGULATORY ENVIRONMENT A CREDIT POSITIVE

Moody's views the regulatory environment in Kentucky as reasonably supportive to long-term credit stability, a material credit positive. KYPCo is primarily regulated by the Kentucky Public Service Commission (KYPSC) which we consider a constructive jurisdiction. KYPCo has a rate base of approximately \$1 billion and an authorized return on equity of 10.5%, which was established in June 2010. KYPCo currently has a monthly fuel clause tracker, and environmental surcharge rider, among other recovery mechanisms (i.e., demand side management and system sales riders).

MAINTAINING STABLE FINANCIAL CREDIT METRICS KEY TO RATING

KYPCo's key financial credit metrics are somewhat weak for its Baa2 senior unsecured rating category. For the last 5 year, 3 year and twelve month period ended September 2010, KYPCo's ratio of cash from operations pre working capital adjustments (CFO pre-w/c) to debt averaged about 14.4%, 14.1% and 12.7%, respectively. The ratio of CFO pre-w/c interest coverage averaged 3.4x, 3.3x and 3.0x, respectively for the same periods. In the near to intermediate term, we expect the financial metrics to stabilize or slightly improve as a result of the return of the industrial load (discussed below) and reduced capital spending.

CAPITAL EXPENDITURE PROGRAM COULD PRESSURE RATINGS OVER THE LONG TERM

KYPCo's cumulative long-term capital investment program is large given its size. Although the company has temporarily delayed some of the investment programs in 2009, 2010 and likely 2011, we expect the program to resume to its full force in the next few years. KYPCo received approximately \$30 million in equity contributions from its parent AEP in April 2009. However, we expect increasing up-stream dividends in the next few years and free cash flow to return to negative over the intermediate and long term horizon. While we generally view investments in rate base positively, we would be concerned if KYPCo's spending plans result in a persistent negative free cash flow position that will be primarily funded with internal or external debt. Should this situation materialize, KYPCo's financial profile could become stressed given its Baa2-rating category.

INDUSTRIAL LOAD EXPECTED TO BENEFIT FROM COAL INDUSTRY RECOVERY

Among KYPCo's top ten industrial customers, 6 are involved in coal mining and production. According to Moody's coal industry outlook report, strong coal demand in Asia draw on U.S. supplies and maintain reasonable profit margin for U.S. coal producers, offsetting subdued U.S. demand. We expect the recovery in the coal industry to stablize in the next several years thereby likely improving KYPCo's financial results.

100% COAL GENERATING ASSETS VULENERABLE TO SIGNIFICANT ENVIRONMENTAL MANDATES

We observe the potential for significant environmental regulations or legislation, especially related to carbon dioxide emissions, as a material risk affecting KYPCo's 100% coal-fired generating assets. The timing of compliance requirements could be expedited by the EPA's rule making process. Nevertheless, in the near to intermediate term, we expect the costs associated with any new rule-making regarding emissions to generally be recovered through rates (either through existing fuel clause pass-through mechanisms or other incremental rate riders).

Liquidity

KYPCo participates in the AEP Utility Money Pool, which provides access to the parent company's liquidity .

AEP has two separate credit facilities that total approximately \$3.0 billion. One is a \$1.5 billion facility expiring June 2013 (entered in June 2010) replacing the original \$1.5 billion expiring in March 2011. The other is an amended \$1.454 billion facility expiring in April 2012. These facilities contain a debt to capitalization limit of 67.5%. AEP asserts that it remains in compliance. There is a \$600 million and \$750 million letter of credit capacity on the 2013 facility and the 2012 facility, respectively, and a \$500 million accordion feature and a one-year extension option on each facility. There are no material adverse change restrictions on drawings, no litigation representation provision at the time of borrowing and a definition adjustment to exclude one of AEP's subsidiaries, AEP Texas Central, as a "significant subsidiary" to prevent cross-acceleration in the event of a default. On June 28, 2010, AEP reduced its separate three year \$627 million LC facility to \$478 million due in April 2011 which has similar terms as the two primary facilities mentioned above. In total, AEP has committed credit facilities of \$3.432billion.

As of September 30, 2010, the credit facilities had \$713 million utilized in supporting issued commercial paper and roughly \$602 million of LC's posted, leaving approximately \$2.2 billion of capacity available. Combined with \$1billion of cash on hand, total liquidity amounted to \$3.2billion

AEP has approximately \$616 million and \$565 million of long term debt that will mature in 2011 and 2012 respectively. AEP has announced that it will spend approximately \$2.6 billion in capital expenditures in 2011 and \$2.9 billion in 2012. We estimate that approximately \$800 to \$900 million in dividends per year will be distributed in the next two years.

KYPCo has access to up to \$250 million in the AEP Utility Money Pool. As of September 30, 2010, there were no borrowings under the money pool by KYPCo.

Over the twelve months ended September 2010, KYPCo generated approximately \$130 million of cash from operations, invested approximately \$53 million in capital expenditures, made \$21 million upstream dividend payment, resulting in approximately \$56 million of positive free cash flow. KYPCo has no debt maturities until September 2017 when \$325 million senior notes are due. We expect KYPCo to remain cash flow positive in 2011 as the capital expenditure continues to be modest.

Rating Outlook

The stable rating outlook for KYPCo is primarily based on our expectation that the company will continue to maintain a reasonably constructive

AG's First Set of Data Requests Dated January 13, 2012 Item No. 26 Attachment 1 Page 59 of 91

relationship with the KYPSC, be prudent in meeting its infrastructure spending plans, attain reasonably good recovery on a timely basis and improve its key financial credit metrics that justify the rating.

What Could Change the Rating - Up

Rating upgrades appear unlikely over the near to intermediate term horizon, primarily due to our expectation that KYCo's financial profile will not be in a position to exhibit the improvements necessary to justify a Baa1-rating category. This is partly due to our understanding of KYCo's longer term capital investment and financing plans. However, KYCo could be considered for a ratings upgrade if it were to achieve key financial credit metrics, including a ratio of CFO pre w/c plus interest divided by interest of approximately 5x and CFO pre w/c to debt of approximately 20% on a sustainable basis.

What Could Change the Rating - Down

Ratings could be downgraded if the regulatory environment took a more adversarial tone, its capital expenditure program requires substantial amount of debt financing or if the key financial credit metrics exhibit a prolonged deterioration. These metrics would include a ratio of CFO pre w/c plus interest divided by interest of below 3.0x or CFO pre w/c to debt closer to the low-teens over an extended period.

MIS, a wholly-owned credit rating agency subsidiary of Moody's Corporation ("MCO"), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MIS have, prior to assignment of any rating, agreed to pay to MIS for appraisal and rating services rendered by it fees ranging from \$1,500 to approximately \$2,500,000. MCO and MIS also maintain policies and procedures to address the independence of MIS's ratings and rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold ratings from MIS and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at www.moodys.com under the heading "Shareholder Relations — Corporate Governance — Director and Shareholder Affiliation Policy."

Any publication into Australia of this document is by MOODYS affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657, which holds Australian Financial Services License no. 336969. This document is intended to be provided only to "wholesale clients" within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODYS that you are, or are accessing the document as a representative of, a "wholesale client" and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to "retail clients" within the meaning of section 761G of the Corporations Act 2001.

Notwithstanding the foregoing, credit ratings assigned on and after October 1, 2010 by Moody's Japan K.K. ("MJKK") are MJKK's current opinions of the relative future credit risk of entities, credit commitments, or debt or debt-like securities. In such a case, "MIS" in the foregoing statements shall be deemed to be replaced with "MJKK". MJKK is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO.

This credit rating is an opinion as to the creditworthiness or a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail investors. It would be dangerous for retail investors to make any investment decision based on this credit rating. If in doubt you should contact your financial or other professional adviser.

Rationale

Outlook

Related Criteria And Research

Summary:

American Electric Power Co. Inc.

Credit Rating: BBB/Stable/A-2

Rationale

The ratings on American Electric Power Co. Inc. (AEP) reflect its consolidated credit profile that includes regulated and non-regulated operations. The company's business risk profile is considered excellent and its financial risk profile is considered aggressive. Columbus, Ohio-based AEP has \$18.7 billion of outstanding debt including junior subordinated notes and securitized debt.

The excellent business profile primarily reflects AEP's status as a large public utility holding company that owns regulated electric utility subsidiaries operating in 11 states in the Midwest and Southwest. The company operates as low-risk transmission and distribution wires-only businesses in regions of Texas; fully integrated regulated utilities in places such as Indiana and West Virginia; and, higher-risk hybrid utilities in Ohio. Although a portion of generation assets reside outside rate base, most of the consolidated generating capacity is under stabilizing regulatory oversight. The company's generating and transmission facilities are interconnected, and their operations are coordinated as an integrated electric utility system.

Electric utility operations are slightly above average, characterized by competitive rates, good reliability, a strong collection of low-cost, coal-fired generation in the eastern part of the system, and mostly supportive regulatory relationships. Service territories vary widely, ranging from manufacturing and rural areas with lower growth economies, to higher-growth, service-oriented economies like Columbus, Ohio, that are more stable. The diversity in markets and in regulation somewhat elevates credit quality, but managing the complex variety of regulatory environments can be challenging and requires constant vigilance. This is evident in Arkansas where the company is building the Turk coal unit and continues to have multiple legal challenges around the construction of the unit. Over the longer term, with roughly 25,000 MW of coal-fired generation, material compliance costs related to multiple forthcoming and pending emissions rules could pressure credit quality. Although the majority of the generation portfolio is coal based, there are 9,000 MW of natural gas and 2,200 MW of nuclear generation too.

The company's unregulated operations consist mostly of a large portfolio of domestic unregulated electric generating plants, mainly in Ohio, that primarily serve AEP's retail utility customers and continue to remain quasi-regulated. AEP's long track record of solid operating performance is expected to continue and improve under the unregulated business operations. Stricter environmental laws and regulation will place financial stress and erode the fleet's competitiveness, but are not expected to completely eliminate the advantages of AEP's coal-fired plants. AEP has indicated that it may ultimately retire a significant amount of coal-fired assets and 1,925 MW of coal-fired units in the eastern system were placed in an extended startup mode. Although AEP's Ohio-based generation accounts for only a modest portion of the company's credit profile, any strategic move that quickly leads to a greater reliance on wholesale market prices to generate cash and earnings from that fleet would increase business risk that could ultimately weaken credit quality without stronger financial measures.

We consider AEP's financial risk profile as 'aggressive'. This reflects a large capital spending program and financial measures inline for the rating. The company's considerable capital expenditures are needed to fund its

AG's First Set of Data Requests
Dated January 13, 2012
Item No. 26
Attachment 1
Page 63 of 91
Summary: American Electric Power Co. Inc.

environmental-compliance programs for stricter air-quality standards and for new generation and transmission. The elevated spending levels could result in negative free cash flow for several years, and will likely require vigilant cost recovery to maintain operating cash flow. For 12 months ended Sept. 30, 2010, funds from operations (FFO) to total debt was about 15%, total debt to total capital was around 61%, and debt to EBITDA was 5x. The ratios are in line for the rating. FFO interest coverage was 3.5x, net cash flow (FFO post dividends) to capital expenditures exceeded 1x and the dividend payout ratio was 62%. Adjustments reflect capital and operating leases, and pension-related items, intermediate equity treatment of the junior subordinated notes, and securitized debt. Given AEP's business risks, sustainable financial expectations are for debt leverage to be under 60% and FFO to debt to approach 20% in order to comfortably maintain the current ratings.

Short-term credit factors

AEP's short-term rating is 'A-2'. Liquidity is 'adequate' under Standard & Poor's liquidity methodology, which categorizes liquidity in five standard descriptors, and this supports AEP's 'BBB' issuer credit rating. Projected sources of liquidity, mainly operating cash flow and available bank lines, exceed projected uses largely for necessary capital expenditures, debt maturities, and common dividends, by more than 1.2x. Furthermore, AEP has the ability to absorb high-impact, low-probability events with limited need for refinancing; flexibility to lower capital spending; sound bank relationships; solid standing in credit markets, and generally prudent risk management. As of Sept. 30, 2010, the company had cash of \$1.4 billion and 62% availability under its \$3.4 billion of credit facilities after excluding outstanding commercial paper and letters of credit. These facilities consist of a \$1.45 billion expiring April 2012, \$1.5 billion expiring June 2013, and \$478 million expiring April 2011. The company currently maintains liquidity that more than adequately addresses potential collateral calls under a stressed scenario comprised of a negative credit event and an adverse movement in commodity prices. Long-term debt maturities are manageable in 2011 (\$616 million) and 2012 (\$565 million) but, in 2013, there may be refinancing risk with \$1.64 billion maturing.

Outlook

The stable outlook for AEP and its subsidiaries assumes timely recovery of rate base investments for environmental compliance, system reliability, and continued strategic emphasis on regulated operations. Maintaining the company's balance sheet and other key credit measures will be necessary for continued ratings stability. Our base forecast includes adjusted FFO to total debt of at least 15%, debt to EBITDA under 5x, and debt leverage to total capital of no more than 60%, all consistent with our expectations for the 'BBB' rating. We could revise the outlook to negative and subsequently lower ratings if financial measures do not remain at our expected levels on a sustained basis because construction projects are not completed on time and budget, a series of harmful regulatory decisions impede the company's recovery of capital expenditures and other costs, or the company funds itself in a less creditworthy manner. We could revise the outlook to positive and ratings could subsequently be raised with greater certainty regarding business risks and financial measures exceed our base line forecast, including FFO to total debt in excess of 20%, debt to EBITDA below 4x, and debt to total capital under 55%.

BBB/Stable/--

Kentucky Power Co.

Major Rating Factors

Strengths:

- Steady utility operating cash flow;
- Part of a large, diverse regulated electric utility operation; and
- · Parent's low-cost generation asset portfolio.

Weaknesses:

- Parent's marketing operations, though small, detract from credit profile;
- Parent exposure to pending environmental regulations could pressure financial measures; and
- · Aggressive consolidated debt leverage.

Rationale

The ratings on Kentucky Power Co. are based on the consolidated credit profile of its parent American Electric Power Co. Inc. (AEP), which includes regulated and unregulated operations. Kentucky Power's business risk profile is considered as 'excellent' and its financial risk profile as 'aggressive'. Kentucky Power is a vertically-integrated fully-regulated electric utility that serves eastern Kentucky. It participates in the AEP Power Pool, sharing the revenues and costs of pool sales to utilities and power marketers, and also sells directly at wholesale to municipalities. Operations are integrated with the AEP East system. Columbus, Ohio-based AEP has \$18.7 billion of outstanding debt of which Kentucky Power comprises \$550 million.

AEP has an 'excellent' business risk profile that primarily reflects its status as a large public utility holding company that owns regulated electric utility subsidiaries operating in 11 states in the Midwest and Southwest. The company operates as low-risk transmission and distribution wires-only businesses in regions of Texas; fully integrated regulated utilities in places such as Indiana and West Virginia; and, higher-risk hybrid utilities in Ohio. Although a portion of generation assets reside outside rate base, most of the consolidated generating capacity is under stabilizing regulatory oversight. The company's generating and transmission facilities are interconnected, and their operations are coordinated as an integrated electric utility system.

Electric utility operations are slightly above average, characterized by competitive rates, good reliability, a strong collection of low-cost, coal-fired generation in the eastern part of the system, and mostly supportive regulatory relationships. Service territories vary widely, ranging from manufacturing and rural areas with lower growth economies, to higher-growth, service-oriented economies like Columbus, Ohio, that are more stable. The diversity in markets and in regulation somewhat elevates credit quality, but managing the complex variety of regulatory environments can be challenging and requires constant vigilance. This is evident in Arkansas where the company is building the Turk coal unit and continues to have multiple legal challenges around the construction of the unit. Over the longer term, with roughly 25,000 MW of coal-fired generation, material compliance costs related to multiple forthcoming and pending emissions rules could pressure credit quality. Although the majority of the generation portfolio is coal based, there are 9,000 MW of natural gas and 2,200 MW of nuclear generation too.

The company's unregulated operations consist mostly of a large portfolio of domestic unregulated electric generating

AG's First Set of Data Requests Dated January 13, 2012 Item No. 26 Attachment 1 Page 68 of 91

Kentucky Power Co.

plants, mainly in Ohio, that primarily serve AEP's retail utility customers and continue to remain quasi-regulated. AEP's long track record of solid operating performance is expected to continue and improve under the unregulated business operations. Stricter environmental laws and regulation will place financial stress and erode the fleet's competitiveness, but are not expected to completely eliminate the advantages of AEP's coal-fired plants. AEP has indicated that it may ultimately retire a significant amount of coal-fired assets and 1,925 MW of coal-fired units in the eastern system were placed in an extended startup mode. Although AEP's Ohio-based generation accounts for only a modest portion of the company's credit profile, any strategic move that quickly leads to a greater reliance on wholesale market prices to generate cash and earnings from that fleet would increase business risk that could ultimately weaken credit quality without stronger financial measures.

Kentucky Power's financial risk profile reflects AEP's consolidated financial risk profile, which is considered as 'aggressive'. This includes a large capital spending program and financial measures inline for the rating. The company's considerable capital expenditures are needed to fund its environmental-compliance programs for stricter air-quality standards and for new generation and transmission. The elevated spending levels could result in negative free cash flow for several years, and will likely require vigilant cost recovery to maintain operating cash flow. For 12 months ended Sept. 30, 2010, funds from operations (FFO) to total debt was about 15%, total debt to total capital was around 61%, and debt to EBITDA was 5x. The ratios are in line for the rating. FFO interest coverage was 3.5x, net cash flow (FFO post dividends) to capital expenditures exceeded 1x and the dividend payout ratio was 62%. Adjustments reflect capital and operating leases, and pension-related items, intermediate equity treatment of the junior subordinated notes, and securitized debt. Given AEP's business risks, sustainable financial expectations are for debt leverage to be under 60% and FFO to debt to approach 20% in order to comfortably maintain the current ratings.

Short-term credit factors

The company's liquidity is dependent on and managed by its parent AEP. We consider AEP's liquidity as 'adequate' under Standard & Poor's liquidity methodology, which categorizes liquidity in five standard descriptors, and this supports AEP's 'BBB' issuer credit rating. Projected sources of liquidity, mainly operating cash flow and available bank lines, exceed projected uses largely for necessary capital expenditures, debt maturities, and common dividends, by more than 1.2x. Furthermore, AEP has the ability to absorb high-impact, low-probability events with limited need for refinancing; flexibility to lower capital spending; sound bank relationships; solid standing in credit markets, and generally prudent risk management. As of Sept. 30, 2010, the company had cash of \$1.4 billion and 62% availability under its \$3.4 billion of credit facilities after excluding outstanding commercial paper and letters of credit. These facilities consist of a \$1.45 billion expiring April 2012, \$1.5 billion expiring June 2013, and \$478 million expiring April 2011. The company currently maintains liquidity that more than adequately addresses potential collateral calls under a stressed scenario comprised of a negative credit event and an adverse movement in commodity prices. Long-term debt maturities are manageable in 2011 (\$616 million) and 2012 (\$565 million) but, in 2013, there may be refinancing risk with \$1.64 billion maturing.

Outlook

The stable outlook for AEP and its subsidiaries assumes timely recovery of rate base investments for environmental compliance, system reliability, and continued strategic emphasis on regulated operations. Maintaining the company's balance sheet and other key credit measures will be necessary for continued ratings stability. Our base forecast includes adjusted FFO to total debt of at least 15%, debt to EBITDA under 5x, and debt leverage to total

4 96.0354

Kentucky Power Co.

capital of no more than 60%, all consistent with our expectations for the 'BBB' rating. We could revise the outlook to negative and subsequently lower ratings if financial measures do not remain at our expected levels on a sustained basis because construction projects are not completed on time and budget, a series of harmful regulatory decisions impede the company's recovery of capital expenditures and other costs, or the company funds itself in a less creditworthy manner. We could revise the outlook to positive and ratings could subsequently be raised with greater certainty regarding business risks and financial measures exceed our base line forecast, including FFO to total debt in excess of 20%, debt to EBITDA below 4x, and debt to total capital under 55%.

*Kentucky Power Co. reported amounts shown are taken from the company's financial statements but might include adjustments made by data providers or reclassifications made by Standard & Poor's analysts. Please note that two reported amounts (operating income before D&A and cash flow from operations) are used to derive more than one Standard & Poor's-adjusted amount (operating income before D&A and EBITDA, and cash flow from operations and funds from operations, respectively). Consequently, the first section in some tables may feature duplicate descriptions and amounts.

American Electric Power Co. Inc.

Major Rating Factors

Strengths:

- Mostly steady operating cash flow from regulated utilities;
- Large and diverse customer base;
- · Geographic diversity; and
- · Low-cost generation fleet.

Weaknesses:

- Exposure to environmental regulations could pressure financial measures;
- Marketing operations weaken creditworthiness; and
- Increased unregulated generation may pressure business profile.

Corgocite Gradic Lating BBB/Stable/A-2

Rationale

Standard & Poor's Ratings Services' ratings on American Electric Power Co. Inc. (AEP) reflect its consolidated credit profile, which includes regulated and unregulated operations. We consider the company's business risk profile excellent and its financial risk profile aggressive. (For more on business risk and financial risk, see "Business Risk/Financial Risk Matrix Expanded," published on May 27, 2009, on RatingsDirect.)

The excellent business profile primarily reflects AEP's status as a large public utility holding company that owns regulated electric utility subsidiaries operating in 11 states in the Midwest and Southwest. The company operates low-risk transmission and distribution wires-only businesses in Texas; fully integrated regulated utilities in states such as Indiana and West Virginia; and higher-risk hybrid utilities in Ohio. Although a portion of generation assets are outside the rate base, most of the consolidated generating capacity is under stabilizing regulatory oversight. The company's generating and transmission facilities are interconnected, and its operations are coordinated as an integrated electric utility system.

Electric utility operations are slightly above average, characterized by competitive rates, good reliability, a strong collection of low-cost, coal-fired generation in the eastern part of the system, and mostly supportive regulatory relationships. Service territories vary widely, ranging from manufacturing and rural areas with lower-growth economies to higher-growth, service-oriented economies, like in the Columbus, Ohio, metropolitan area, that are more stable. The diversity in markets and in regulation somewhat elevates credit quality, but managing the complex variety of regulatory environments can be challenging and requires constant vigilance. This is evident in Arkansas, where the company is continuing to build the Turk coal unit while multiple legal challenges are pending, including litigation in connection with the unit's water intake. Over the longer term, with roughly 25,000 megawatts (MW) of coal-fired generation, including those in Ohio, material compliance costs related to numerous environmental rules could pressure credit quality. In addition to these coal assets, there are 9,000 MW of gas generation and 2,200 MW of nuclear.

The company's unregulated operations consist mostly of a large portfolio of quasi-regulated electric generating plants, mainly in Ohio, that have been primarily serving AEP's retail utility customers. We expect AEP's long track

971 13764

AG's First Set of Data Requests
Dated January 13, 2012
Item No. 26
Attachment 1
Page 76 of 91
American Electric Power Co. Inc.

record of solid operating performance in its unregulated business operations to continue. Stricter environmental regulation will place financial stress on the company and erode the fleet's competitiveness, but we don't expect these pressures to completely eliminate the advantages of AEP's coal fleet. AEP has indicated that it will retire 5,109 MW of coal-fired assets and retrofit part of the fleet with pollution control equipment. Although AEP's Ohio-based generation accounts for only a portion of the company's credit profile, absent more robust financial measures, a strategic shift to a greater reliance on wholesale market prices to generate cash would increase business risk and could ultimately weaken credit quality.

We consider AEP's financial risk profile to be aggressive. This assessment reflects financial measures that are in line with the rating, along with large capital expenditures. The company's considerable capital spending is mostly for environmental compliance programs and for new generation and transmission. The elevated spending levels and dividend payments could result in negative discretionary cash flow for several years, and will require vigilant cost recovery to maintain cash flow measures. For the 12 months ended Sept. 30, 2011, funds from operations (FFO) to total debt was 21%, total debt to total capital was around 58%, and debt to EBITDA was 4.3x. The ratios are in line with the rating. Discretionary cash flow is positive and net cash flow (FFO after dividends) to capital expenditures exceeded 130%. FFO interest coverage was 4.5x and the dividend payout ratio was a manageable 58%. Adjustments include capital and operating leases, pension-related items, intermediate equity treatment of the junior subordinated notes, and securitized debt.

Liquidity

The short-term rating on AEP is 'A-2'. We consider AEP's liquidity adequate under Standard & Poor's liquidity methodology. (We categorize liquidity in five standard descriptors. See "Liquidity Descriptors For Global Corporate Issuers," published on Sept. 28, 2011.) We base our liquidity assessment on the following factors and assumptions:

- We expect AEP's liquidity sources over the next 12 months, including cash, FFO, and credit facility availability, to exceed uses by 1.2x. Uses include necessary capital spending, working capital, debt maturities, and shareholder distributions.
- Debt maturities are manageable over the next 12 months.
- We believe liquidity sources would exceed uses even if EBITDA declined 15%.
- In our assessment, AEP has good relationships with its banks, and has a good standing in the credit markets, having successfully issued debt during the recent credit crisis.

In our analysis of liquidity over the next 12 months, we assume \$7.2 billion of liquidity sources, consisting of FFO and credit facility availability. We estimate liquidity uses of \$4.9 billion for capital spending, maturing debt, working capital, and shareholder distributions.

AEP's credit agreements include a financial covenant requiring that debt to total capitalization be no greater than 67.5%. As of Sept. 30, 2011, the company was in compliance with the covenant at 50.3%.

Debt maturities are manageable through 2016. Excluding amortizing AEP Texas Central securitization bonds, \$690 million is due in 2012, \$1.4 billion in 2013, \$1 billion in 2014, \$1.3 billion in 2015, and \$500 million in 2016. We expect that the company will refinance a majority of the maturing debt.

Outlook

The stable outlook for the ratings on AEP and its subsidiaries assumes timely recovery of rate base investments for environmental compliance, system reliability, and continued strategic emphasis on regulated operations. Our base forecast includes adjusted FFO to total debt of at least 15%, debt to EBITDA under 5x, and debt leverage to total capital of no more than 60%, all of which are consistent with our expectations for the 'BBB' rating. We could lower the ratings if financial measures fall short of our base forecast on a sustained basis to adjusted FFO to total debt below 12%, debt to EBITDA over 5.2x, and debt leverage over 62%. We could raise the ratings if there is greater certainty regarding business risks and if financial measures exceed our baseline forecast, including FFO to total debt in excess of 20%, debt to EBITDA below 4x, and debt to total capital under 55%.

Major Rating Factors

Rationale

Outlook

Related Criteria And Research

Major Rating Factors

Strengths:

- Steady utility operating cash flow;
- Part of a electric utility company that is geographically diverse and has a large customer base; and
- · Low-cost generation fleet.

Weaknesses:

- Financial measures could be pressured from exposure to environmental regulations;
- Marketing operations weaken creditworthiness; and
- Increased unregulated generation may pressure business profile.

Rationale

Standard & Poor's Ratings Services' ratings on Kentucky Power Co. are based on the consolidated credit profile of parent American Electric Power Co. Inc. (AEP), which includes regulated and unregulated operations. We consider Kentucky Power's business risk profile excellent and financial risk profile aggressive. It is a vertically integrated, fully regulated electric utility that serves eastern Kentucky. The utility participates in the AEP Power Pool, sharing the revenues and costs of pool sales to utilities and power marketers, and also sells directly at wholesale to municipalities and electric cooperatives. Operations are integrated with the AEP East system. We consider AEP's business risk profile excellent and its financial risk profile aggressive. (For more on business risk and financial risk, see "Business Risk/Financial Risk Matrix Expanded," published on May 27, 2009, on RatingsDirect.)

The excellent consolidated business profile primarily reflects AEP's status as a large public utility holding company that owns regulated electric utility subsidiaries operating in 11 states in the Midwest and Southwest. The company operates low-risk transmission and distribution wires-only businesses in Texas; fully integrated regulated utilities in states such as Indiana and West Virginia; and higher-risk hybrid utilities in Ohio. Although a portion of generation assets are outside the rate base, most of the consolidated generating capacity is under stabilizing regulatory oversight. The company's generating and transmission facilities are interconnected, and its operations are coordinated as an integrated electric utility system.

Electric utility operations are slightly above average, characterized by competitive rates, good reliability, a strong collection of low-cost, coal-fired generation in the eastern part of the system, and mostly supportive regulatory relationships. Service territories vary widely, ranging from manufacturing and rural areas with lower-growth economies to higher-growth, service-oriented economies, like the Columbus, Ohio, metropolitan area, that are more stable. The diversity in markets and in regulation somewhat elevates credit quality, but managing the complex variety of regulatory environments can be challenging and requires constant vigilance. This is evident in Arkansas, where the company is continuing to build the Turk coal unit while multiple legal challenges are pending, including litigation in connection with the unit's water intake. Over the longer term, with roughly 25,000 megawatts (MW) of coal-fired generation, including those in Ohio, material compliance costs related to numerous environmental rules could pressure credit quality. In addition to these coal assets, there are 9,000 MW of gas generation and 2,200 MW

AG's First Set of Data Requests Dated January 13, 2012 Item No. 26 Attachment 1 Page 85 of 91

Kentucky Power Co.

of nuclear.

The company's unregulated operations consist mostly of a large portfolio of quasi-regulated electric generating plants, mainly in Ohio, that have been primarily serving AEP's retail utility customers. We expect AEP's long track record of solid operating performance in its unregulated business operations to continue. Stricter environmental regulation will place financial stress on the company and erode the fleet's competitiveness, but we don't expect these pressures to completely eliminate the advantages of AEP's coal fleet. AEP has indicated that it will retire 5,109 MW of coal-fired assets and retrofit part of the fleet with pollution control equipment. Although AEP's Ohio-based generation accounts for only a portion of the company's credit profile, absent more robust financial measures, a strategic shift to a greater reliance on wholesale market prices to generate cash would increase business risk and could ultimately weaken credit quality.

Kentucky Power's financial risk profile reflects AEP's consolidated financial risk profile, which we consider aggressive. This assessment reflects financial measures that are in line with the rating, along with large capital expenditures. The company's considerable capital spending is mostly for environmental compliance programs and for new generation and transmission. The elevated spending levels and dividend payments could result in negative discretionary cash flow for several years, and will require vigilant cost recovery to maintain cash flow measures. For the 12 months ended Sept. 30, 2011, funds from operations (FFO) to total debt was 21%, total debt to total capital was around 58%, and debt to EBITDA was 4.3x. The ratios are in line with the rating. Discretionary cash flow is positive and net cash flow (FFO after dividends) to capital expenditures exceeded 130%. FFO interest coverage was 4.5x and the dividend payout ratio was a manageable 58%. Adjustments include capital and operating leases, pension-related items, intermediate equity treatment of the junior subordinated notes, and securitized debt.

Liquidity

The company's liquidity depends on and is managed by parent AEP. We consider AEP's liquidity adequate under Standard & Poor's liquidity methodology. (We categorize liquidity in five standard descriptors. See "Liquidity Descriptors For Global Corporate Issuers," published on Sept. 28, 2011.) We base our liquidity assessment on the following factors and assumptions:

- We expect AEP's liquidity sources over the next 12 months, including cash, FFO, and credit facility availability, to exceed uses by 1.2x. Uses include necessary capital spending, working capital, debt maturities, and shareholder distributions.
- Debt maturities are manageable over the next 12 months.
- We believe liquidity sources would exceed uses even if EBITDA declined 15%.
- In our assessment, AEP has good relationships with its banks, and has a good standing in the credit markets, having successfully issued debt during the recent credit crisis.

In our analysis of liquidity over the next 12 months, we assume \$7.2 billion of liquidity sources, consisting of FFO and credit facility availability. We estimate liquidity uses of \$4.9 billion for capital spending, maturing debt, working capital, and shareholder distributions.

AEP's credit agreements include a financial covenant requiring that debt to total capitalization be no greater than 67.5%. As of Sept. 30, 2011, the company was in compliance with the covenant at 50.3%.

Debt maturities are manageable through 2016. Excluding amortizing AEP Texas Central securitization bonds, \$690 million is due in 2012, \$1.4 billion in 2013, \$1 billion in 2014, \$1.3 billion in 2015, and \$500 million in 2016. We

expect that the company will refinance a majority of the maturing debt.

Outlook

The stable outlook for the ratings on AEP and its subsidiaries assumes timely recovery of rate base investments for environmental compliance, system reliability, and continued strategic emphasis on regulated operations. Our base forecast includes adjusted FFO to total debt of at least 15%, debt to EBITDA under 5x, and debt leverage to total capital of no more than 60%, all of which are consistent with our expectations for the 'BBB' rating. We could lower the ratings if financial measures fall short of our base forecast on a sustained basis to adjusted FFO to total debt below 12%, debt to EBITDA over 5.2x, and debt leverage over 62%. We could raise the ratings if there is greater certainty regarding business risks and if financial measures exceed our baseline forecast, including FFO to total debt in excess of 20%, debt to EBITDA below 4x, and debt to total capital under 55%.

KPSC Case No. 2011-00401 Attorney General's Initial Set of Data Requests Dated January 13, 2012 Item No. 27 Page 1 of 1

Kentucky Power Company

REQUEST

Please provide the corporate credit and bond ratings assigned to AEP and/or KPCo since the year 2005 by S&P, Moody's, and Fitch. For any change in the credit and/or bond rating, please provide a copy of the associated report.

RESPONSE

Kentucky Power objects to the request to the extent it seeks information regarding American Electric Power, Inc. ("AEP.") AEP is not a party to this proceeding, and is not a utility subject to the jurisdiction of the Public Service Commission of Kentucky. AEP is not obligated to assist Kentucky Power in financing the proposed environmental projects in Kentucky Power's 2011 Environmental Compliance Plan. Without waiving this objection, please see the following:

WITNESS: Ranie K Wohnhas

KPSC Case No. 2011-00401 Attorney General's Initial Set of Data Requests Dated January 13, 2012 Item No. 28 Page 1 of 1

Kentucky Power Company

REQUEST

Please provide a copy of: (1) the documents detailing the revenue requirement associated with KPCo's Environmental Compliance Plan ("ECP"). The summary should include the annual amounts of eligible plant, depreciation, ECP rate base, rate of return, operating expenses, the composite tax rate and adjustment factor, and overall revenue requirements; (2) the summary components of the annual rate of return, including the capital structure, debt cost rates, and equity cost rate; (3) the summary components of the annual composite tax rate; and (4) the data and work papers in (1), (2), and (3) in both hard copy and electronic (Microsoft Excel) formats, with all data and formulas intact.

RESPONSE

Using the adjusted average increase of 29.49% described in the Company's response to KPSC 1-20(a), Attachment 1, the following Exhibits LPM-1 through 14 with workpapers are attached.

Please see enclosed CD for the excel file with formulas intact and unprotected.

WITNESS: Lila P Munsey

KPSC Case NO. 2011-00401 Attorney General's Initial Set of Data Requests Dated January 13, 2012 Item No. 29 Page 1 of 1

Kentucky Power Company

REQUEST

Please provide the breakdown in the expected return on pension plan assets for AEP and/or KPCo. Specifically, please provide the expected return on different assets classes (bonds, US stocks, international stocks, etc) used in determining the expected return on plan assets. Please provide all associated source documents and work papers.

RESPONSE

The source of the information was from the 2010 10K (provided as an attachment in response to AG 1-31) since the 2011 version has not yet been released. Page 31 of 2010 10-K is the source document.

The pension plan assets had an assumed rate of return of 7.75% for 2011. The breakdown by asset class for the total pension portfolio is as follows:

| Marketable Equities | 9.00% |
|----------------------|--------|
| Real Estate | 7.60% |
| Fixed Income | 5.75% |
| Private Equity | 10.50% |
| Cash and Equivalents | 3.00% |

It should be noted that the returns assumed are for large portfolios consisting of many securities. Assumptions used for any specific security or any given company would have a different risk profile than the portfolio and, thus, would have a different expected return.

The portfolio of marketable equities consists of stocks from firms with different capital sizes in many different industries and markets, both domestic and international.

Fixed income assumption is for a portfolio of long duration bonds consisting of a mixture of US Treasury securities, US government backed Agency securities, and corporate bonds. Cash and equivalents is assumed to be US Treasury securities, high-grade commercial paper, short-duration corporate securities, bank notes, and other types of high-quality liquid instruments.

Kentucky Power Company

REQUEST

Please provide the KPCo's authorized and earned return on common equity over the past five years. Please show the figures used in calculating the earned return on common equity for each year, including all adjustments to net income and/or common equity. Please provide copies of all associated work papers and source documents. Please provide copies of the source documents, work papers, and data in both hard copy and electronic (Microsoft Excel) formats, with all data and formulas intact.

RESPONSE

Please see Attachments 1 and 2 to this response. Excel files with formulas intact are on the enclosed CD.

Note 1 - Settled Case No. 2005-00341. No ROE was agreed to by the parties or authorized by the Commission.

KPSC Case No. 2011-00401 Attorney General's Initial Set of Data Requests Dated January 13, 2012 Item No. 31 Page 1 of 1

Kentucky Power Company

REQUEST

Please provide copies of the financial statements (balance sheet, income statement, statement of cash flows, and the notes to the financial statements) for AEP and/or KPCo for the past two years. Please provide copies of the financial statements in both hard copy and electronic (Microsoft Excel) formats, with all data and formulas intact.

RESPONSE

Kentucky Power objects to the request to the extent it seeks information regarding American Electric Power, Inc. ("AEP.") AEP is not a party to this proceeding, and is not a utility subject to the jurisdiction of the Public Service Commission of Kentucky. AEP is not obligated to assist Kentucky Power in financing the proposed environmental projects in Kentucky Power's 2011 Environmental Compliance Plan. Without waiving this objection, please see the files on the enclosed CD. For the 4thQ 2009 and the 1stQ and 2ndQ of 2010, the Company's electronic format was in Microsoft Word.

WITNESS: Ranie K Wohnhas

KPSC Case No. 2011-00401 Attorney General's Initial Set of Data Requests Dated January 13, 2012 Item No. 32 Page 1 of 19

Kentucky Power Company

REQUEST

Please provide: (1) all data, work papers, and source documents, and calculations used in developing KPCo's capital structure used in determination of an overall rate of return in the ECP; (2) all details, including calculations, related to all adjustments made to the December 31, 2010 capital structure; and (3) the data and work papers in (1) and (2) in both hard copy and electronic (Microsoft Excel) formats, with all data and formulas intact.

RESPONSE

KPCo used the capital structure and rate of return in the ECP that was approved by the KPSC in the last Environmental Surcharge review, Case No. 2010-00318, dated September 7, 2010.

Kentucky Power's calculated weighted average cost of capital for environmental surcharge purposes was 8.03%. Please refer to Page 2 of 19 of the attachment for support of the calculation.

The return on common equity of 10.50% was used as ordered in Case No. 2009-00316, as noted on Page 18 of 19 of the attachment.

Please see enclosed CD for the excel file with formulas intact and unprotected.

WITNESS: Lila P Munsey

KPSC Case No. 2011-00401 Attorney General's Initial Set of Data Requests Dated January 13, 2012 Item No. 33 Page 1 of 1

Kentucky Power Company

REQUEST

Please provide (1) all data, work papers, and source documents, and calculations used in developing KPCo's short-term cost rate in the ECP; (2) indicate the cost of short-term debt on a monthly basis; (3) show all calculations involved in the calculation of the short-term debt cost rate; (4) provide copies of all loan documents and lending agreements associated with either inter-company and/or financial institution short-term debt; and (5) provide the data and work papers in (1) - (4), in both hard copy and electronic (Microsoft Excel) formats, with all data and formulas intact.

RESPONSE

Please see attachments to the Company's response to AG Item No. 32 and Item No. 34 for all supporting documents to satisfy this request.

The attachment to Item No. 32 provides all work papers, source documents, and calculations used to develop KPCo's short-term cost rate in the ECP. Please see CD enclosed with Item No. 32 for the excel file with formulas intact and unprotected.

The attachments to Item No. 34 provide the loan documents and lending agreements associated with the short-term debt.

WITNESS: Lila P Munsey

KPSC Case No. 2011-00401 Attorney General's Initial Set of Data Requests Dated January 13, 2012 Item No. 34 Page 1 of 1

Kentucky Power Company

REQUEST

Please provide (1) all data, work papers, and source documents, and calculations used in developing KPCo's long-term cost rate in the ECP; (2) all details, including calculations, amortization tables, and work sheets, related to the amounts for unamortized debt issuance balance and unamortized premium/discount and issuance expenses; and (3) details of the term loan and senior notes, including (a) issuance date, (b) debt amounts, (c) copies of lending agreements and provisions, (d) copies of all documentation that indicate the pricing and interest rate on the term loan and senior notes, and (e) all information available on underwriter, underwriting spread, SEC filings, loan placement documents, and/or other information and source documents; and (4) provide the data and work papers in (1) - (3), in both hard copy and electronic (Microsoft Excel) formats, with all data and formulas intact.

RESPONSE

The attachment to the Company's response to AG Item No. 32 provides all work papers, source documents, and calculations used to develop KPCo's long-term cost rate in the ECP. Please see CD enclosed with Item No. 32 for the excel file with formulas intact and unprotected to the extent the information exists in that form.

Please see the attachments to this response for lending agreements, provisions, and other related documentation.
