Recent Achievements

- Completed $1.7 Billion AEP Texas Central Company securitization in October 2006
- Completed sale of Dow Plaquemine for $64 million and announced sale of Sweeny plant for $80 million
- Continue to execute regulatory plans
  - Achieved to date $337M of the $338M Rate Recovery in 2007 guidance
- Continue to plan for the I-765™ transmission line and ETT Joint Venture
- Completed the plant acquisitions of Darby (480 MW) in April 2007, Lawrenceburg (1,140 MW) in May of 2007 and announced acquisition of Dresden (580 MW) in August 2007
- Settled PSO Lawton litigation for payments of $35 million with an 8.25% carrying charge to be collected from customers
- Transition to market prices in Ohio now being pursued

Continuing to execute on our strategies

Kentucky Power Regulatory Environment

Key Strategic Initiatives
- Plan for potential 2008 rate case.

Rate Case Activity
- Last formal rate case was approved March 31, 2006 providing for $41 million in new revenue.
- Rate cases are normally driven by a deterioration of earnings caused mainly by large construction projects and significant increases in O&M expenses.
- An environmental surcharge rate filing was approved January 24, 2007 allowing for recovery of KPCo's portion of the environmental spend at companies surplus in AEP's east generation pool.
- Our next base rate could be as early as 2008 with a test year ending 12/31/07.
- KPCo currently has a fuel clause, a system sales tracker, a DSM rider and an environmental surcharge rider. In our settlement agreement in the 2006 base rate case, the intervenors and especially the Attorney General, made it clear they would not support any new riders.

Regulatory Issues
- The Commission continues to reject informal visits as an outcome of the AG's allegation of ex-parte communications.

Financial Snapshot – Return on Equity	
Authorized ROE	10.5%, 2006

Regulatory Toolbox
Environmental Surcharge: allowed recovery of environmental costs at Big Sandy and share of environmental costs incurred from AEP Power Pool capacity settlements.
System Sales Tracker: Monthly
DSM Adjustment Clause: Monthly
Fuel Adjustment Clause: Monthly
Off-System Sales Sharing: Yes, above and below base levels. Sharing above annual profits of approx. $25 million. Between that amount and $30 million, ratepayers receive 70%; above $30 million, 60%.

Jurisdictional Filing Requirements	
Time limitations between cases	None
Timing of rates in effect subject to refund	None, rates suspended for 6 months
Approximate time to order from filing date	6 months
Alternative forms of rate making	Environmental surcharge

AFUDC vs. Return on CWIP
Revenue requirement is calculated on capitalization versus rate base which includes CWIP; however, there is an AFUDC offset which partially negates the cash return effect of CWIP.

AEP AMERICAN ELECTRIC POWER

AEP Financial Overview

- Holly Koeppel – EVP & Chief Financial Officer

AEP Financial Accomplishments

Since we last gathered . . .

- AEP has issued $1.8B in long-term debt to date resulting in approximately $815M after maturities, redemptions, and amortized principal.

- AEP Increased Liquidity by successfully executing a new $1B bank facility comprised of a 364-day LOC facility ($350M) and a 3-year LOC facility ($650M)

- EPA New Source Review (NSR), settlement included a civil fine of $15M, environmental mitigation of $24M, and AEP will provide $36M for environmental projects coordinated with the federal government

- Successfully managing the auction rate security challenge…

    - At the end of the 2nd quarter, AEP has shed approximately $1.2B of its $1.5B Auction Rate Security portfolio from the end of 2007.

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests

Page 16 of 9556

2008 Financial Plan Highlights

2008 Plan

- ❑ Reduced capital expenditures by approximately $1 billion over the same forecast period (2008-2012) since the 2007 October Update
- ❑ Be poised to respond to an Ohio order late in the year to achieve earnings target
- ❑ Delay the IGCC until late next decade due to judicial challenge, regulatory uncertainty, alternative technology options including nuclear, and the potential for a reduction in demand
- ❑ Continue our environmental program and new generation projects planned for SWEPCO (Stall and Turk plants) and APCo (completion of Dresden plant)
- ❑ Refine our capital allocation at the operating companies to achieve optimal credit metrics and ROE targets
- ❑ Sustain generation plant availability to continue to participate in wholesale power markets
- ❑ Still evaluating the impact of a Federal Appeals Court ruling to vacate and remand the entire Clean Air Interstate Rule (CAIR)

We are committed to achieving the long-term growth associated with this 2008 Plan and will aggressively pursue further value enhancement opportunities.

Kentucky Power Company Highlights

Regulatory Update

- Kentucky Power's next base rate case could be as early as 2010 with a test year ending 03/31/09
- KPCo currently has a fuel clause, a system sales tracker, a DSM rider and an environmental surcharge rider.

Big Sandy Construction Update

- Scrubber construction to commence in 2011

gridSMART

- Deployed "drive by" AMR for 140,000 residential meters in 2006. Plan to replace all meters with AMI technology in 2012.
- Existing Programs:
  - Existing Demand Side Management/Energy Efficiency (DSM/EE) programs cost $750,000 per year and receive favorable recovery.
  - Programs are focused on low income weatherization and heat pump programs for mobile homes.
  - Since 1996, the KPCo programs have achieved an estimated 4,329 kW summer demand reduction, 19,863 kW winter demand reduction and a 411,212 MWh reduction.

Kentucky Power (KPCo)

President: Timothy Mosher

Status of Regulation: Regulated/Bundled Rates

Overview: Organized in Kentucky in 1919, KPCo encompasses a service territory of 4,813 square miles and at December 31, 2007, KPCo had 471 employees. Among the principal industries served are petroleum refining, coal mining, primary metals, chemicals, and electronic/gas/sanitary services. KPCo is a member of PJM.

Load Growth:

	5 Year CAGR
Residential	0.1%
Commercial	1.3%
Industrial	1.0%
TOTAL	**0.8%**

Generating Capacity:	**1,060MW**
Through 2022, 15% of Rockport	**390MW**
Generating Capacity by Fuel Mix:	
•Coal:	**100%**
Transmission:	**1,235 Miles**
Distribution:	**9,848 Miles**
Customers:	**175,000**

Kentucky Power Financial Summary

- ❑ Total Operating Revenues increase by $164M through the planning horizon

- ❑ Total Equity increases from $418M at the end of 2008 to $722M by the end of 2013

- ❑ Approximate Long-Term Debt issuance of $400M thru the financial planning horizon; Debt retirements total approximately $30M

- ❑ Emission allowance purchases reducing cash flow; however, they are fully recoverable per Kentucky's environmental tracker. This will be revised as CAIR rule rejection impact is known.

Regulatory Environment - KPCo

Key Strategic Initiatives

- Plan for potential 2010 rate case.

Rate Case Activity

- Last formal rate case was approved March 31, 2006 providing for $41 million in new revenue.
- Rate cases are normally driven by a deterioration of earnings caused mainly by large construction projects and significant increases in O&M expenses.
- An environmental surcharge rate filing was approved January 24, 2007 allowing for recovery of KPCo's portion of the environmental spend at companies surplus in AEP's east generation pool.
- Our next base rate could be as early as 2010 with a test year ending 03/31/09.
- KPCo currently has a fuel clause, a system sales tracker, a DSM rider and an environmental surcharge rider. In our settlement agreement in the 2006 base rate case, the intervenors and especially the Attorney General, made it clear they would not support any new riders.

Overall Regulatory Commission Environment

- The Commission does monitor SAIFI and CAIDI and requires an annual filing in April.
- Kentucky has a fair relationship with the State Commission regarding reliability due mainly to an open Management Audit that began in 2002. Of 23 specific issues, 5 still require annual filings.

Regulatory Issues

- This Commission has 3 commissioners, 2 of whom are brand new.
- The Commission closely scrutinizes informal visits as an outcome of the AG's allegation of ex-parte communications.

Financial Snapshot - Return on Equity	
Authorized ROE	❑ 10.5%, 2006

Regulatory Toolbox

AMERICAN ELECTRIC POWER

Fitch Ratings

Spring 2009 Ratings Update

May 13, 2009

AEP AMERICAN ELECTRIC POWER

STRONG
FLEXIBLE
ADAPTABLE

AEP - Risk Reduction

Reasons for raising equity

- Gross proceeds of $1.69 billion to rebalance capitalization
- Liquidity position now stands at $3.5 billion which is more than sufficient for 2009/2010 maturities
- Commitment to BBB credit profile, prudent balance sheet, and liquidity management

Reduced regulatory risk

- Traditional recovery mechanisms with equitable risk allocation enhance both earnings and cash flow
- Fuel clauses are now active in all jurisdictions
- Constructive local relationships deliver successful regulatory outcomes

Stable financial position

- Balanced approach to cost containment and capital allocation
- Capital expenditures have been reduced to $1.8 billion in 2010 and 2011
- $6.3 billion capital expenditure program (2009-2011) will continue to drive rate base growth
- Reducing 2010 maturities through a tender on AEP, Inc. and expect to pre-fund Ohio Power
- Conservative dividend payout (57% vs. 68% Peer Group)

AEP is committed to a strong credit profile

- Commitment to a strong credit profile
  - Large infusion of equity to strengthen balance sheet
  - Equity contributions to subsidiary companies to stabilize credit
  - Debt levels well below 60%; stable/improving FFO/Debt metric
  - Prudent spending (CAPEX and O&M) during current economic slowdown
- Reduced risk
  - Ohio ESP decision – clarity around rate increases, fuel recovery, carbon regulation
  - Fuel clause active in all AEP jurisdictions
- Conservative liquidity management
  - Reduced reliance on short-term debt
  - Active strategy around credit line renewal
  - Pre-fund maturities; maintain cash position
- Committed to BBB rating at AEP, Inc.
  - Proactive, decisive, quick actions to support credit profile have been demonstrated

Introduction

Leadership, Management & Strategy

- Mike Morris – Chairman & CEO

Leadership, Management & Strategy

Integrate Corporate Sustainability, Business Strategy & Daily Decision Making

- Put people first.
  - Health & safety of our employees and contractors.
  - Welfare of the communities in which we operate.
- Emphasize the importance of safety & environmental sustainability.
- AEP as a leader in corporate sustainability.
- Help customers understand the true value of electricity.
- Offer ways to encourage energy efficiency.
- Give customers greater control over use & cost.
- Obtain adequate & timely recover of AEP's costs while earning a reasonable return for shareholders.

Sustainability requires a strong and committed leadership team willing to be aggressive and take prudent risks to maintain AEP's role as an industry leader, meet the needs of our customers, deliver value to our shareholders and meet our sustainability vision.

AEP Financial Overview

AEP Financial Accomplishments

Since we last gathered . . .

- AEP has issued \$1.8B in long-term debt to date resulting in approximately \$815M after maturities, redemptions, and amortized principal.

- AEP Increased Liquidity by successfully executing a new \$1B bank facility comprised of a 364-day LOC facility (\$350M) and a 3-year LOC facility (\$650M)

- EPA New Source Review (NSR), settlement included a civil fine of \$15M, environmental mitigation of \$24M, and AEP will provide \$36M for environmental projects coordinated with the federal government

- Successfully managing the auction rate security challenge…

  - At the end of the 2nd quarter, AEP has shed approximately \$1.2B of its \$1.5B Auction Rate Security portfolio from the end of 2007.

2008 Financial Plan Highlights

2008 Plan

- Reduced capital expenditures by approximately $1 billion over the same forecast period (2008-2012) since the 2007 October Update
- Be poised to respond to an Ohio order late in the year to achieve earnings target
- Delay the IGCC until late next decade due to judicial challenge, regulatory uncertainty, alternative technology options including nuclear, and the potential for a reduction in demand
- Continue our environmental program and new generation projects planned for SWEPCO (Stall and Turk plants) and APCo (completion of Dresden plant)
- Refine our capital allocation at the operating companies to achieve optimal credit metrics and ROE targets
- Sustain generation plant availability to continue to participate in wholesale power markets
- Still evaluating the impact of a Federal Appeals Court ruling to vacate and remand the entire Clean Air Interstate Rule (CAIR)

We are committed to achieving the long-term growth associated with this 2008 Plan and will aggressively pursue further value enhancement opportunities.

AEP Forecast Assumptions & Credit Ratios

Financing Assumptions

- ❑ Maintain $100M cash balance
- ❑ 40% minimum common equity
- ❑ Target 50% minimum common equity at Ohio companies
- ❑ $315M of Hybrid Capital issued in 2008 at AEP Inc. (Basket C/Intermediate 50% Equity treatment)
- ❑ $150M in new equity each year from Dividend Reinvestment Plan
- ❑ Quarterly dividend raised $0.02 in 4th Quarter of each year ($0.08 annually)
- ❑ Average Short-Term debt rate from 2008 to 2013 is 4.42%
- ❑ Average Long-Term debt from 2008 thru 2013 is 7.00%

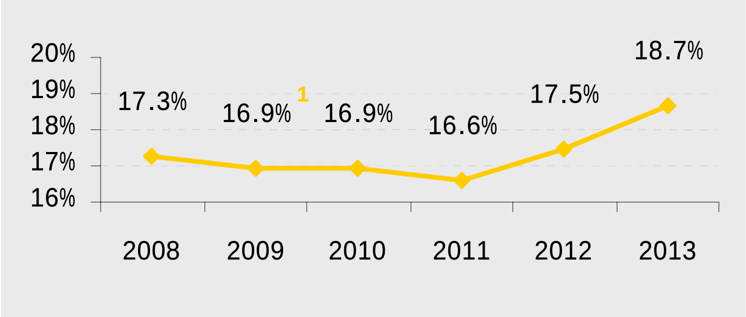
FFO to Total Debt



Total Debt to Total Capitalization

Regulatory Environment - KPCo

Key Strategic Initiatives
- Plan for potential 2010 rate case.

Rate Case Activity
- Last formal rate case was approved March 31, 2006 providing for $41 million in new revenue.
- Rate cases are normally driven by a deterioration of earnings caused mainly by large construction projects and significant increases in O&M expenses.
- An environmental surcharge rate filing was approved January 24, 2007 allowing for recovery of KPCo's portion of the environmental spend at companies surplus in AEP's east generation pool.
- Our next base rate could be as early as 2010 with a test year ending 03/31/09.
- KPCo currently has a fuel clause, a system sales tracker, a DSM rider and an environmental surcharge rider. In our settlement agreement in the 2006 base rate case, the intervenors and especially the Attorney General, made it clear they would not support any new riders.

Overall Regulatory Commission Environment
- The Commission does monitor SAIFI and CAIDI and requires an annual filing in April.
- Kentucky has a fair relationship with the State Commission regarding reliability due mainly to an open Management Audit that began in 2002. Of 23 specific issues, 5 still require annual filings.

Regulatory Issues
- This Commission has 3 commissioners, 2 of whom are brand new.
- The Commission closely scrutinizes informal visits as an outcome of the AG's allegation of ex-parte communications.

Financial Snapshot - Return on Equity	
Authorized ROE	❑ 10.5%, 2006

Regulatory Toolbox
Environmental Surcharge: allowed recovery of environmental costs at Big Sandy and share of environmental costs incurred from AEP Power Pool capacity settlements.
System Sales Tracker: Monthly
DSM Adjustment Clause: Monthly
Fuel Adjustment Clause: Monthly
Off-System Sales Sharing: Yes, above and below base levels. Sharing above annual profits of approx. $25 million. Between that amount and $30 million, ratepayers receive 70%; above $30 million, 60%.

Jurisdictional Filing Requirements	
Time limitations between cases	❑ None
Timing of rates in effect subject to refund	❑ None, rates suspended for 6 months
Approximate time to order from filing date	❑ 6 months
Alternative forms of rate making	❑ Environmental surcharge

AFUDC vs. Return on CWIP
Revenue requirement is calculated on capitalization versus rate base which includes CWIP; however, there is an AFUDC offset which partially negates the cash return effect of CWIP.

Moody's Investors Service

Spring 2009 Ratings Update

April 23, 2009

AEP AMERICAN ELECTRIC POWER

STRONG
FLEXIBLE
ADAPTABLE

AEP - Risk Reduction

Reasons for raising equity

- Gross proceeds of $1.69 billion to rebalance capitalization
- Liquidity position now stands at $3.5 billion which is more than sufficient for 2009/2010 maturities
- Commitment to Baa2 credit profile, prudent balance sheet, and liquidity management

Reduced regulatory risk

- Traditional recovery mechanisms with equitable risk allocation enhance both earnings and cash flow
- Fuel clauses are now active in all jurisdictions
- Constructive local relationships deliver successful regulatory outcomes

Stable financial position

- Balanced approach to cost containment and capital allocation
- Capital expenditures have been reduced to $1.8 billion in 2010 and 2011
- $6.3 billion capital expenditure program (2009-2011) will continue to drive rate base growth
- Reducing 2010 maturities through a tender on AEP, Inc. and expect to pre-fund Ohio Power
- Conservative dividend payout (57% vs. 68% Peer Group)

AEP is committed to a strong credit profile

- Commitment to a strong credit profile
  - Large infusion of equity to strengthen balance sheet
  - Equity contributions to subsidiary companies to stabilize credit
  - Debt levels well below 60%; stable/improving FFO/Debt metric
  - Prudent spending (CAPEX and O&M) during current economic slowdown
- Reduced risk
  - Ohio ESP decision – clarity around rate increases, fuel recovery, carbon regulation
  - Fuel clause active in all AEP jurisdictions
- Conservative liquidity management
  - Reduced reliance on short-term debt
  - Active strategy around credit line renewal
  - Pre-fund maturities; maintain cash position
- Committed to Baa2 rating at AEP, Inc.
  - Structural relationship of subsidiaries – Ohio Power (Baa1), SWEPCO (Baa1)
  - Proactive, decisive, quick actions to support credit profile have been demonstrated

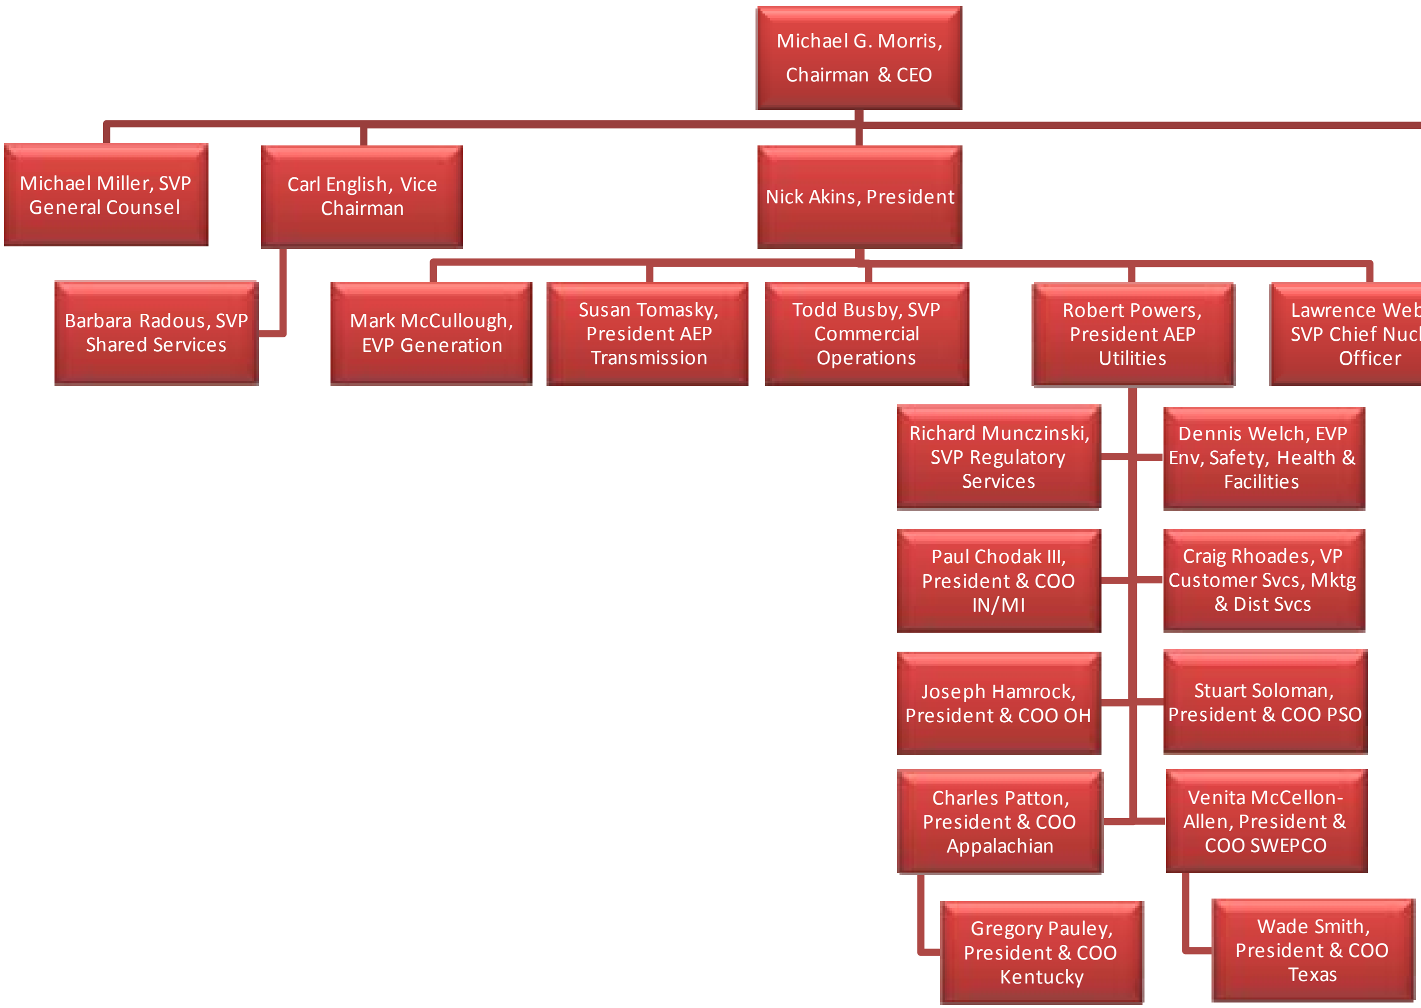
Management Organization Chart



Nick Akins Biography

Nicholas K. Akins

Nick Akins is President of American Electric Power, responsible for AEP's utilities, transmission, generation, commercial operations and OVEC/IKEC organizations.

From 2006 to 2010, Akins was executive vice president - Generation, responsible for all generation activities of AEP's approximately 40,000 MW of generation resources. This includes the engineering, construction, and operations of fossil and hydro generation, nuclear generation, fuels procurement, emission, and logistics, and other resource initiatives such as new generation, environmental retrofits, and carbon capture and storage. Akins was also responsible for the commercial operations, marketing and trading functions for the company.

Previously, he was president and chief operating officer for Southwestern Electric Power Company, serving approximately 439,000 customers in Louisiana, Arkansas and northeast Texas. Named to this position in 2004, he had authority for distribution operations and a wide range of customer and regulatory relationships.

Prior to this, Akins was vice president - energy marketing services, responsible for directing the activities of Market Development, including the transmission marketing and services functions, Energy Delivery External Affairs including community affairs, economic development, advocacy for regulatory and legislative positions within Energy Delivery. Additional responsibilities included the development and implementation of strategies for energy delivery related to AEP's entry into regional transmission organizations.

Akins was also vice president - industry restructuring for AEP responsible for enterprise-wide program management for restructuring initiatives in preparation for customer choice in AEP's various jurisdictions.
Previous to Central and South West Corp.'s (CSW) merger with AEP, he served in various director and manager roles within CSW and its operating companies involving mergers and acquisitions, industry restructuring, fuels, system dispatch operations and system planning.

He received a bachelor's degree in 1982 in electrical engineering from Louisiana Tech University in Ruston and a master's degree in electrical engineering in 1986 from Louisiana Tech. He has completed executive management programs at Louisiana State University, the University of Idaho and the Reactor Technology Course for Utility Executives at the Massachusetts Institute of Technology.

Akins is a registered professional engineer in Texas. He currently serves as the chairman of the Coal Utilization Research Council (CURC), and on the boards of the Electric Power Research Institute (EPRI), the Mid-Ohio Food Bank and the Greater Columbus Arts Council. He also serves on several subsidiary boards of AEP.

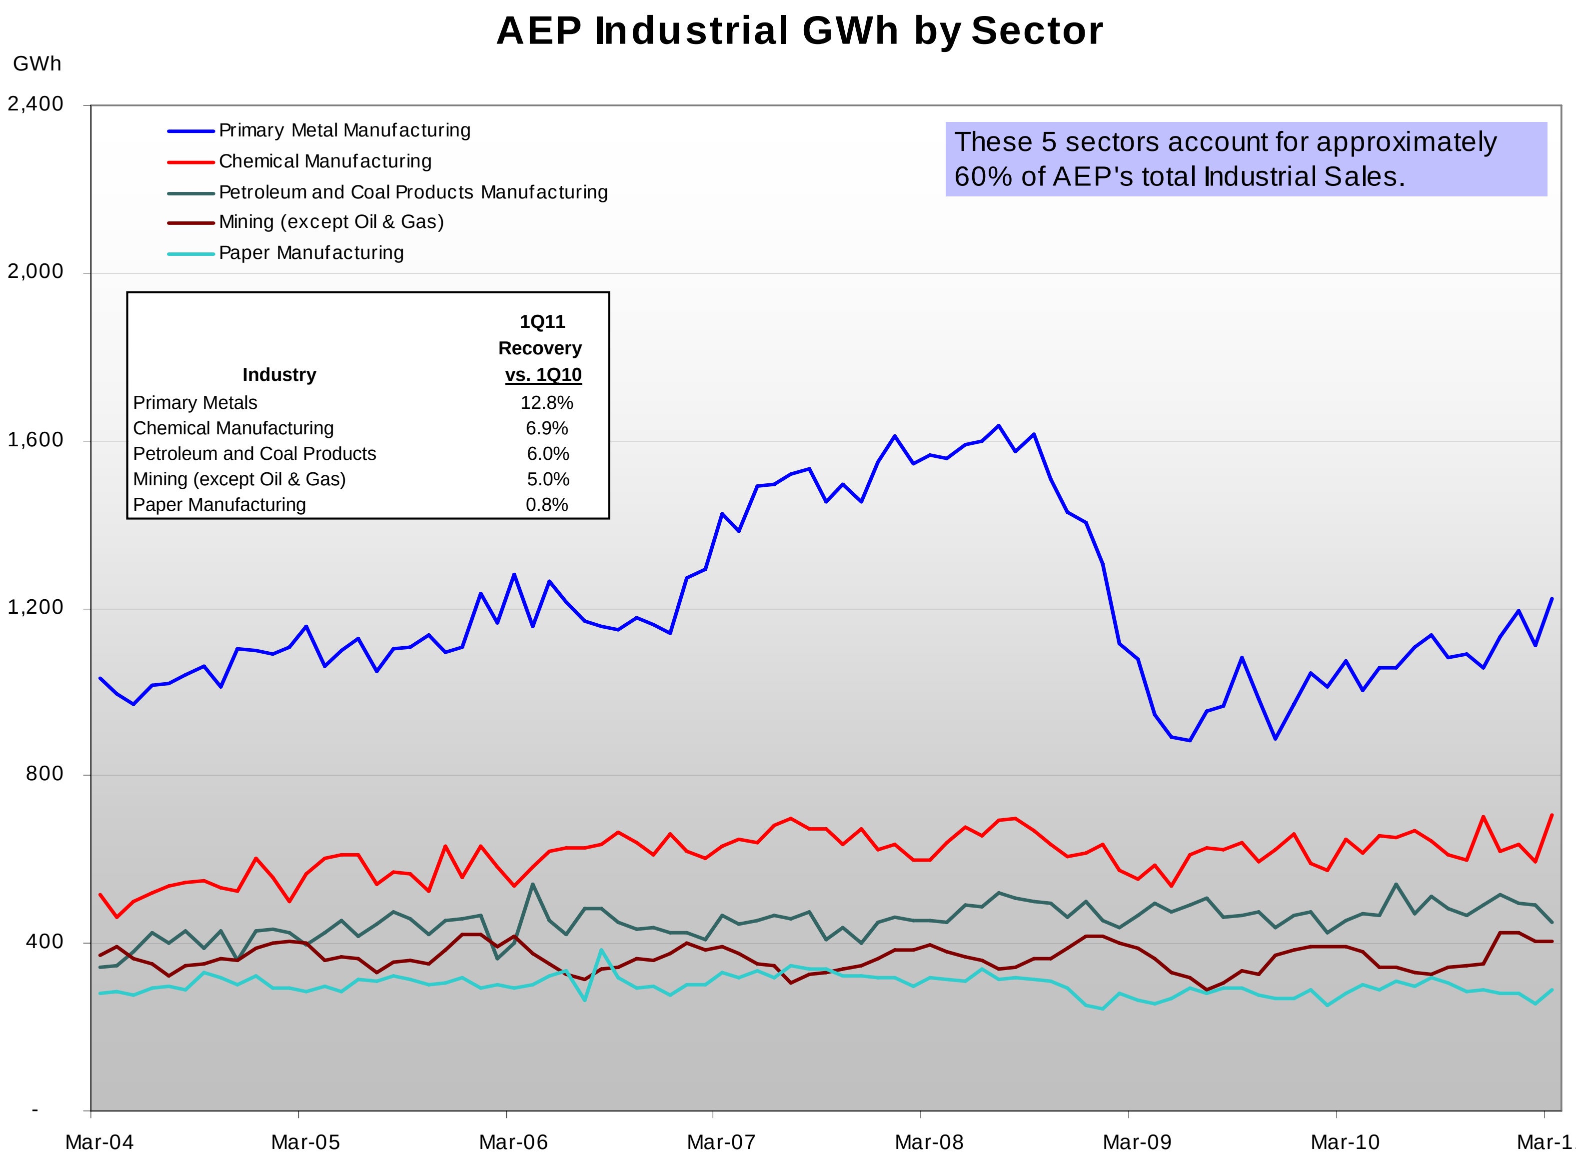
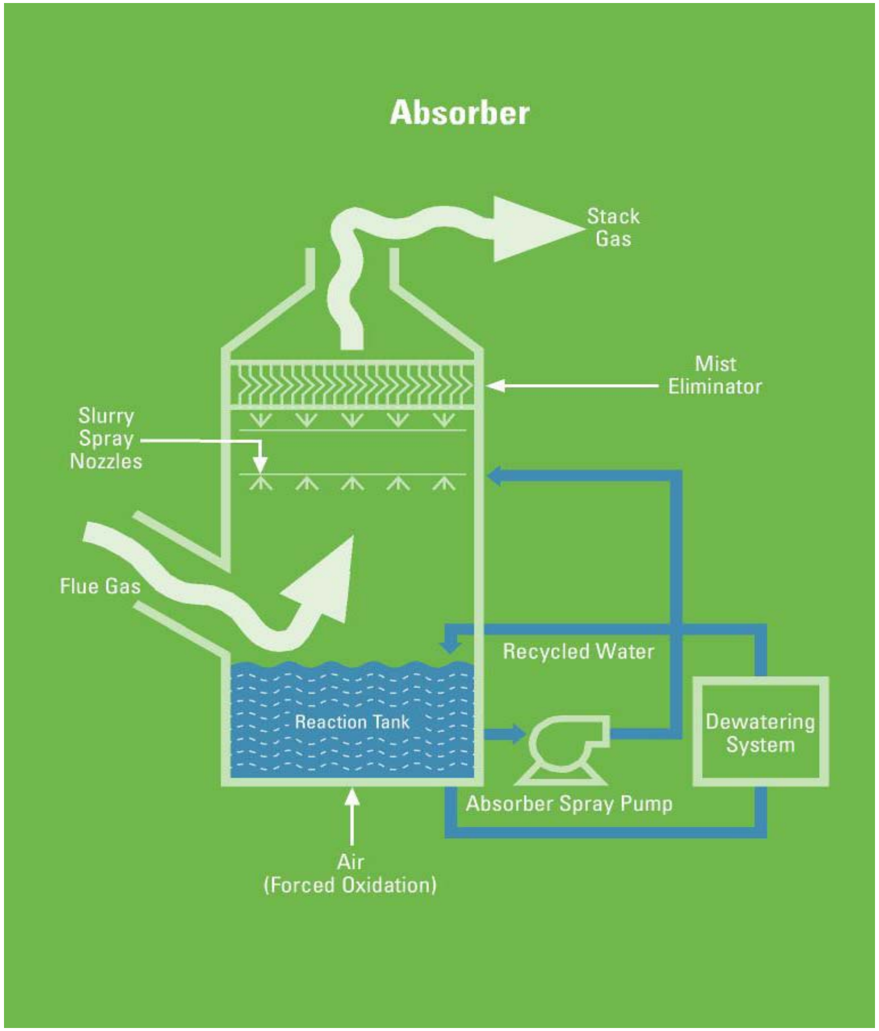
Industrial Sales Volumes



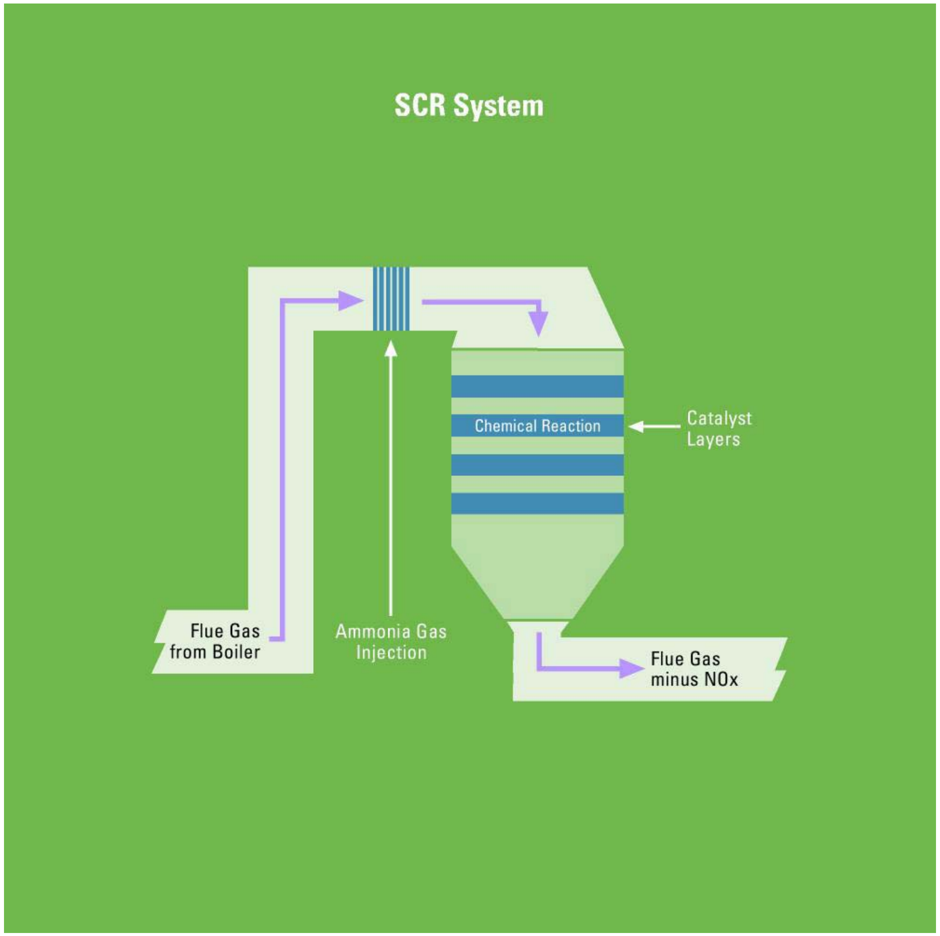
Industry	1Q11 Recovery vs. 1Q10
Primary Metals	12.8%
Chemical Manufacturing	6.9%
Petroleum and Coal Products	6.0%
Mining (except Oil & Gas)	5.0%
Paper Manufacturing	0.8%

How an FGD Works



- Limestone is fed from the silo and crushed in the ball mill
- Crushed limestone is mixed with water to form a slurry
- Exhaust gas is routed through absorber vessels where it is sprayed with the slurry
- SO_2 reacts with the slurry and forms calcium sulfate or gypsum
- The calcium sulfate falls to the lower part of the vessel
- Blowers inject air to force oxidation of the product
- Hydroclones wring out much of the water to produce gypsum: the water is re-circulated

How an SCR Works



- Urea, a harmless compound often used as fertilizer, is mixed with water
- Steam is used to drive the ammonia gas from the urea mixture
- The ammonia gas is piped into the flue gas ahead of the SCR
- The ammonia reacts with the flue gas as it passes over the catalyst, forming nitrogen gas and water vapor
- The harmless nitrogen and water vapor are released into the atmosphere

Standard and Poor's Ratings Update

June 6, 2005

Confidential

Recent Achievements

- Improved balance sheet
  - Reduced total debt ratio from 63.5% in 2003 to 57.9% in 2004 on a credit adjusted basis
- Successfully reduced trading risks
  - Total trading volume down by 71% in 2004 vs. 2002
  - Transitional trading book rolling off
    - $35 mm net fair value, and $32 mm will roll off by year-end 2005
  - Average VaR down by 64%
    - From $10.2 mm in 2002 to $4 mm in 2004
- Asset sale execution near completion
  - Closed $2.8 billion in asset sales through May 2005
- Maintained strong liquidity profile of $3.5 billion
  - Well above minimum thresholds for liquidity
- Operating Company Reorganization
  - Distribution and Customer Service operations reorganized into seven regional utility divisions in June 2004

AEP RISK PROFILE HAS IMPROVED DRAMATICALLY

Kentucky Power

- Kentucky Power's business profile rating of '5' does not reflect current operating environment
  - Environmental surcharge legislation in place which allows recovery of retail portion of environmental expenditures
  - Current application with KPSC to recover pool-related environmental costs
  - Rockport Unit Power Supply Agreement extended through end of 2022
  - KPSC is supportive of the Company

Standard & Poor's 2006 Ratings Update

August 2006

Confidential

Recent Achievements

- Reached settlement on Texas securitization amount. Planning to issue securitization bonds in September 2006 of $1.7 billion.
- Purchased Waterford (821 MW) and Ceredo (505 MW) natural gas plants for attractive prices
- Currently secured $415 million of $500 million in rate recovery assumed in 2006 earnings guidance
- Completed & dedicated Wyoming-Jacksons Ferry 765-kV line
- Received approval from PUCO to proceed with first phase of IGCC construction and recover costs
- Fully funded pension plan

Recent Achievements

- Completed international non-core asset divestiture program
- Increased liquidity resources via upsizing revolving credit facilities to $3.0 billion and improving terms
- Closed 8 bond transactions totaling $2,270 million of senior unsecured notes over the past year. All deals were oversubscribed and most priced favorably to similarly rated peers at issuance.
- AEP's Business Profile risk has decreased dramatically over the last several years as a result of our focus on our core utility business

STANDARD & POOR'S

2008 RATINGS UPDATE

1 Riverside Plaza
Columbus, Ohio
July 31, 2008

AEP AMERICAN ELECTRIC POWER

Introduction

Leadership, Management & Strategy

- Mike Morris – Chairman & CEO

Leadership, Management & Strategy

Integrate Corporate Sustainability, Business Strategy & Daily Decision Making

- Put people first.
  - Health & safety of our employees and contractors.
  - Welfare of the communities in which we operate.
- Emphasize the importance of safety & environmental sustainability.
- AEP as a leader in corporate sustainability.
- Help customers understand the true value of electricity.
- Offer ways to encourage energy efficiency.
- Give customers greater control over use & cost.
- Obtain adequate & timely recover of AEP's costs while earning a reasonable return for shareholders.

Sustainability requires a strong and committed leadership team willing to be aggressive and take prudent risks to maintain AEP's role as an industry leader, meet the needs of our customers, deliver value to our shareholders and meet our sustainability vision.

AEP Financial Overview

- Holly Koeppel – EVP and Chief Financial Officer

AEP Financial Accomplishments

Since we last gathered . . .

- AEP has issued $1.8B in long-term debt to date resulting in approximately $815M after maturities, redemptions, and amortized principal.

- AEP Increased Liquidity by successfully executing a new $1B bank facility comprised of a 364-day LOC facility ($350M) and a 3-year LOC facility ($650M)

- EPA New Source Review (NSR), settlement included a civil fine of $15M, environmental mitigation of $24M, and AEP will provide $36M for environmental projects coordinated with the federal government

- Successfully managing the auction rate security challenge…

  - At the end of the 2nd quarter, AEP has shed approximately $1.2B of its $1.5B Auction Rate Security portfolio from the end of 2007.

2008 Financial Plan Highlights

2008 Plan

- Reduced capital expenditures by approximately $1 billion over the same forecast period (2008-2012) since the 2007 October Update
- Be poised to respond to an Ohio order late in the year to achieve earnings target
- Delay the IGCC until late next decade due to judicial challenge, regulatory uncertainty, alternative technology options including nuclear, and the potential for a reduction in demand
- Continue our environmental program and new generation projects planned for SWEPCO (Stall and Turk plants) and APCo (completion of Dresden plant)
- Refine our capital allocation at the operating companies to achieve optimal credit metrics and ROE targets
- Sustain generation plant availability to continue to participate in wholesale power markets
- Still evaluating the impact of a Federal Appeals Court ruling to vacate and remand the entire Clean Air Interstate Rule (CAIR)

We are committed to achieving the long-term growth associated with this 2008 Plan and will aggressively pursue further value enhancement opportunities.

Kentucky Power Company Highlights

Regulatory Update

- Kentucky Power's next base rate case could be as early as 2010 with a test year ending 03/31/09
- KPCo currently has a fuel clause, a system sales tracker, a DSM rider and an environmental surcharge rider.

Big Sandy Construction Update

- Scrubber construction to commence in 2011

gridSMART

- Deployed "drive by" AMR for 140,000 residential meters in 2006. Plan to replace all meters with AMI technology in 2012.
- Existing Programs:
  - Existing Demand Side Management/Energy Efficiency (DSM/EE) programs cost $750,000 per year and receive favorable recovery.
  - Programs are focused on low income weatherization and heat pump programs for mobile homes.
  - Since 1996, the KPCo programs have achieved an estimated 4,329 kW summer demand reduction, 19,863 kW winter demand reduction and a 411,212 MWh reduction.

Kentucky Power (KPCo)

President: Timothy Mosher

Status of Regulation: Regulated/Bundled Rates

Overview: Organized in Kentucky in 1919, KPCo encompasses a service territory of 4,813 square miles and at December 31, 2007, KPCo had 471 employees. Among the principal industries served are petroleum refining, coal mining, primary metals, chemicals, and electronic/gas/sanitary services. KPCo is a member of PJM.

Load Growth:

	5 Year CAGR
Residential	0.1%
Commercial	1.3%
Industrial	1.0%
TOTAL	**0.8%**

Generating Capacity:	**1,060MW**
Through 2022, 15% of Rockport	**390MW**

Generating Capacity by Fuel Mix:

- **Coal: 100%**

Transmission:	**1,235 Miles**
Distribution:	**9,848 Miles**
Customers:	**175,000**

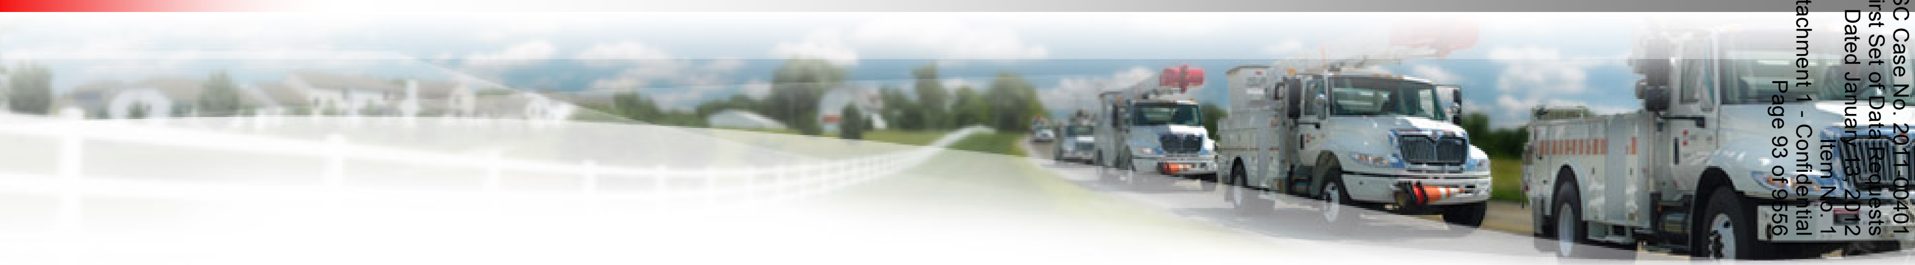
Standard & Poor's Meeting

November 16, 2010
New York, NY



Update on 2010 Priorities

2010 +

- Navigate through ongoing economic conditions
- Maintain capital spending and balance sheet discipline
- Continue delivering successful regulatory outcomes

✓ Capital spending plan on target for $2.2B in 2010
✓ Stable credit outlook
✓ Labor and non-labor O&M cuts of $150M
✓ Reasonable rate case outcomes in VA, KY, MI, TX
✓ Exceeded rate relief goal of $320M for 2010
✓ Filed SEET in Ohio
✓ Implemented enhanced operating company model
✓ Narrowing 2010 guidance to $2.95 to $3.05/share

- Participate in policy making at both the state and federal levels, particularly related to environmental/climate and transmission issues
- Invest in the next generation of energy infrastructure: high voltage transmission, CCS, gridSMART®

✓ Active in legislative efforts for cap & trade bills
✓ Vocal in transmission policy efforts
✓ ETT and Transco efforts moving forward
✓ Success with Mountaineer CCS project
✓ 4 gridSMART® pilots underway

Capital Expenditures

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

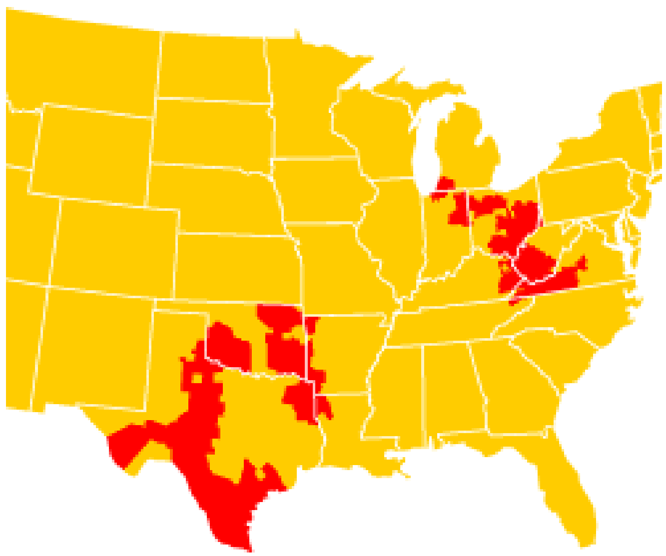
Serving electric customers in 11 states



AEP Fast Facts

5.3 million customers
39 GW of generation capacity
39,000 miles of transmission lines

$17.7B Market Capitalization
BBB/Baa2/BBB credit rating

Capital Allocation

In this economic recovery cycle, capital allocation requires balance for spending that considers the obligation to serve, the ability to obtain rate increases, a balance sheet to support the plan, and the total return proposition to shareholders

- Capital for Growth
  - Capital budget of $2.6B for 2011
  - Capital budget plan of $2.9B for 2012
- Return of Capital to Shareholders
  - 12% increase in quarterly dividend in 2010
  - Future dividend increases will grow with earnings
- Capital to Reduce Risk
  - Voluntarily funded pension $500M in 2010
  - Allocating an additional $150M of funding for pension in 2011

Managing Operations and Investment

Challenges:

Required refinement of the operating company model and improved line-of-sight management due to decreased load growth, regulatory lag, reduced rate headroom, and environmental challenges

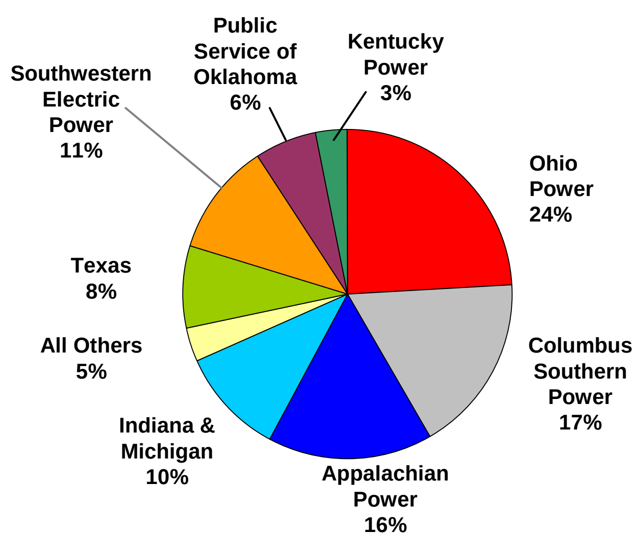
Actions:

- Empower operating company employees to drive results
- Efficiently allocate capital
- Demonstrate O&M and capital expenditure discipline
- Identify asset renewal strategy for investing in traditional distribution and transmission assets that enhance reliability and customer satisfaction
- Enable long-term planning discussions with regulators and legislators

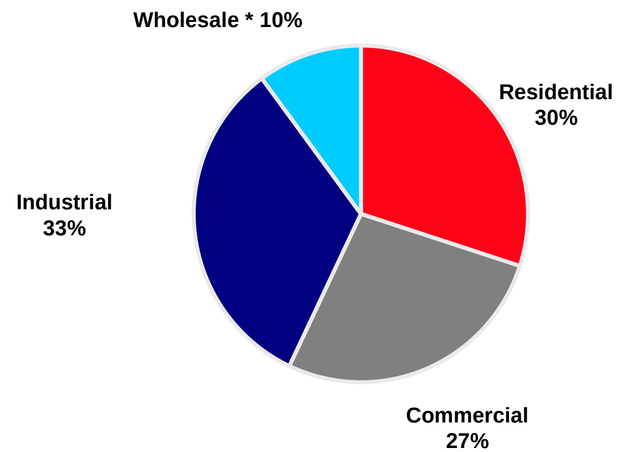
Expected Outcomes:
Optimize spending for more efficient return on investment
Improve dialogue with customers and regulators
Minimize lag in rate recovery

Highly Diversified Regulated Utility Platform

2010 On-Going Earnings Contribution



2010 Retail Load



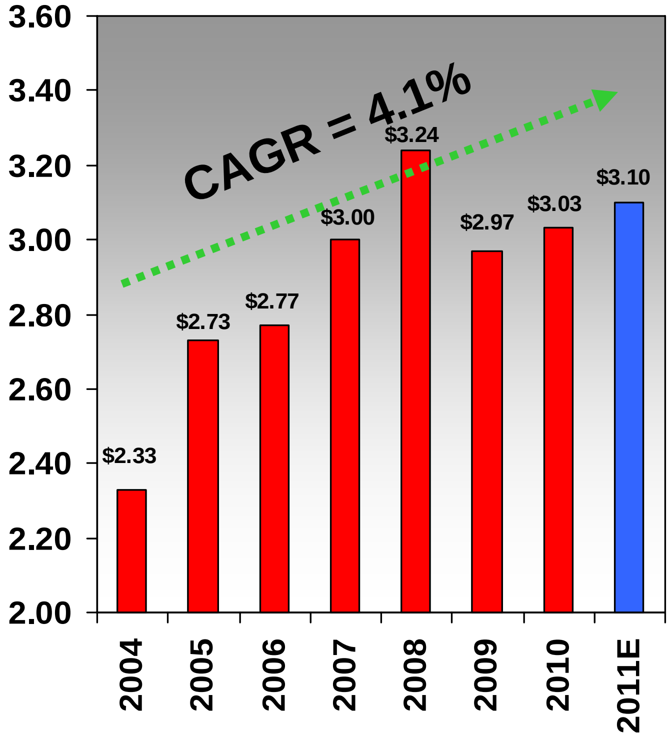
** Wholesale includes sales to municipal and cooperative power systems, other wholesale, and other retail sales*

Region	# of customers
Appalachian Power (incl. TN)	1,004,000
Indiana & Michigan	582,000
Kentucky Power	174,000
Ohio & Wheeling	1,497,000
PSO (Oklahoma)	532,000
SWEPCO (AR, LA, TX)	520,000
Texas	961,000

Earnings and Dividends

On-Going EPS History Since 2004

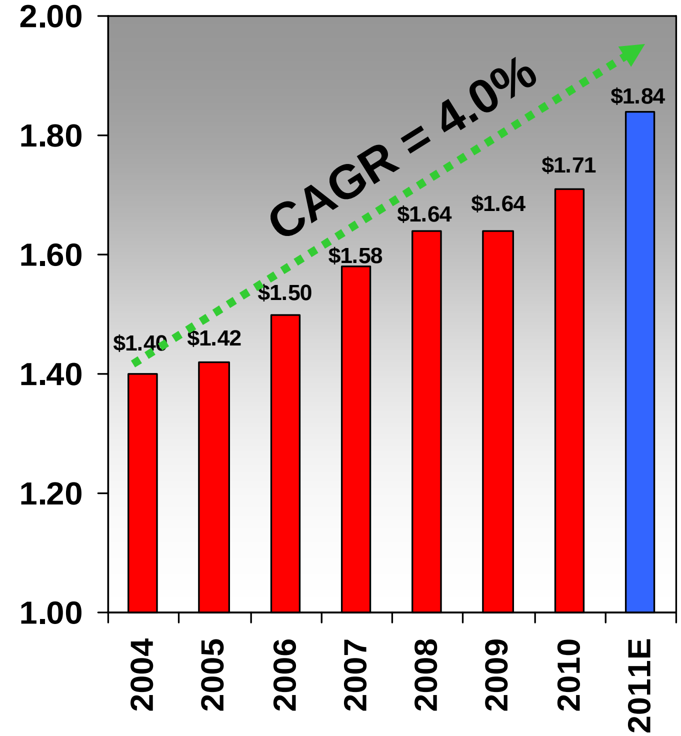
$/share



- Earnings growth largely attributed to capital investment program
- Pre-recession earnings supported by robust wholesale market activity and high power prices
- Equity offering in 2009 stabilized credit and strengthened balance sheet
- 2011 guidance range of $3.00 to $3.20 per share

Dividend History Since 2004

$/share



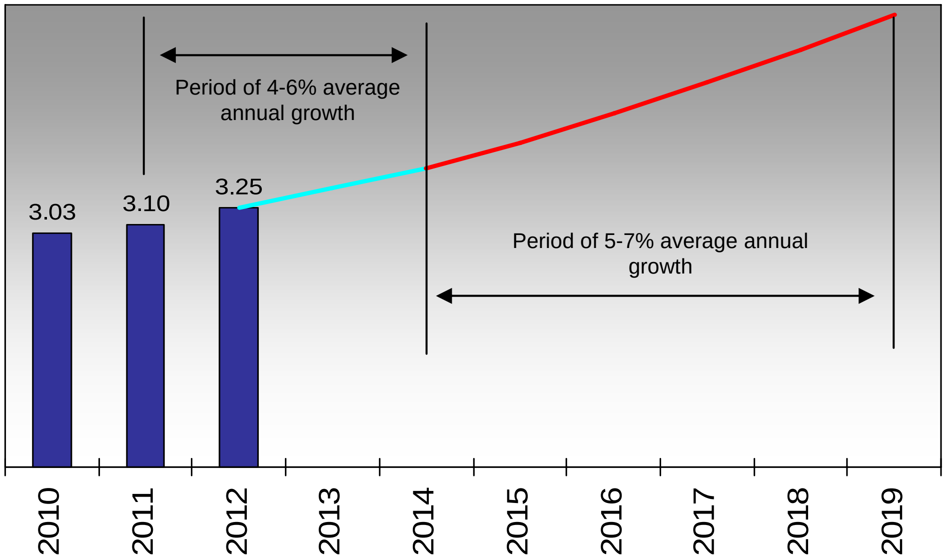
= subject to Board of Directors approval

- Dividend increased 12% in 2010
- 403rd consecutive quarterly dividend declared in January 2011
- 50-60% payout ratio target
- Current yield over 5%

Long-term EPS Growth Rate

- 4-6% EPS growth 2012-14
  - Average annual capital spend between $2.9-3.4B
    - Utility platform replacement capital of about $1.4B (annual depreciation)
    - Growth in rate base of $1.5-2.0B per year, allocated between utility platform and transmission projects
  - Blended ROE of 10.5 - 11%
  - Slow, steady recovery in economy
- 5-7% EPS growth post 2014
  - Base utility platform capital including generation transformation
  - Higher allocation of discretionary capital going to opportunities in the transmission development pipeline
  - Higher overall blended ROE opportunity
  - Robust economic growth

Average Annual EPS Growth defined over two periods



AEP Ohio ESP Filing – Core Policy Issues

Investment in Ohio

Supports economic development and essential tax base

Fundamental barriers must be addressed to attract investment for Environmental Compliance and New Generation

Jobs in Ohio

Jobs are a key component of growth potential in Ohio

Without regulatory assurances over time we could see loss of direct & indirect jobs related to power generation, and business relocations to surrounding states

Energy Security

Secure, reliable and predictable electricity supply is basis for sustained investment and employment in Ohio

Volatility in power prices can lead to major loss of economic activity over time

Primary objective of ESP: Stabilize rates and support economic development in the state of Ohio

Merged AEP Ohio

Single merged AEP Ohio company presumed with supporting information on an individual OP/CSP basis

Rate Redesign

Generation rates redesigned to resemble market pricing structures

29-Month ESP Period

ESP period Jan 1, 2012 through May 31,2014 (May 31 date aligns with PJM annual planning cycle)

Alternative Long Term Option

Alternative longer-term price certainty option offered for qualifying commercial & industrial customers

Ohio Growth Fund

Creation of significant private sector economic development to attract investment and job growth in AEP Ohio service territory

Distribution Components Included

Inclusion of certain distribution components while pursuing a parallel distribution base rate case

KPSC Case No. 2011-00401

Summary Rate Case Information

APCo West Virginia General Rate Case – Docket #10-0699-E-42T

On May 14, 2010, APCo filed a base rate case with the West Virginia Public Service Commission requesting a net increase of $155.5 million, comprised of a $223.8 million base rate increase and a $68.3 million decrease in the construction surcharge. The filing related to capital investments made and to recover increased costs. In addition, APCo requested to establish a separate transmission tracker related to PJM charges. The requested ROE was 11.75%. A settlement is on file which stipulates a rate increase of $60MM and the ability to defer $18MM of storm damage expenses. An order is expected by the end of March 2011.

Actual Capital Structure – Company Position (@12/31/09)

	% of Capitalization	Cost Rate	Weighted Return

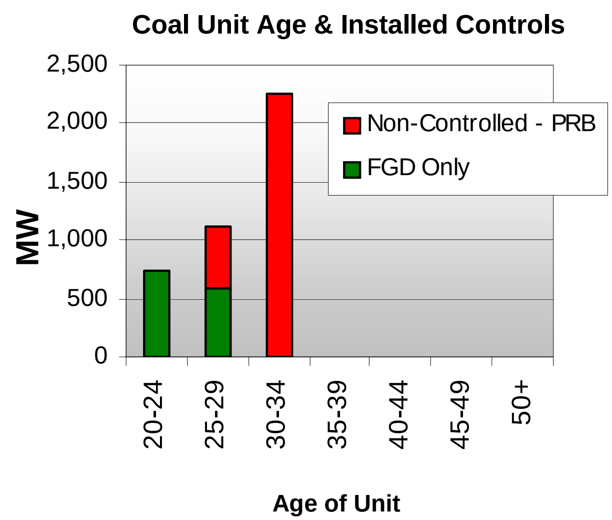
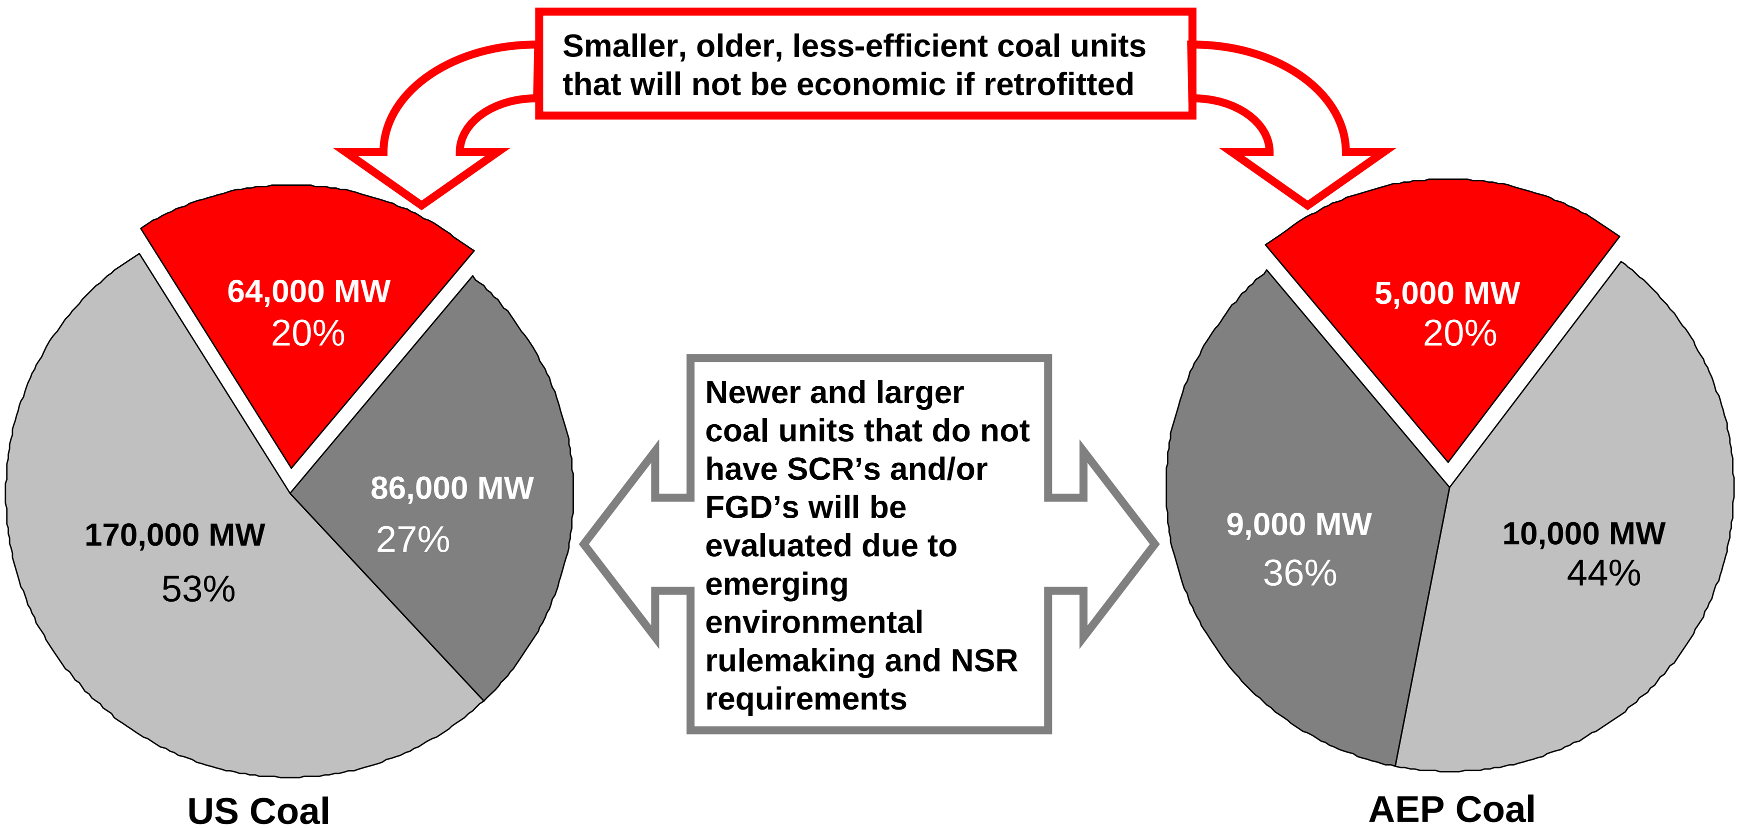
2011E - $29/ton



Continual Evaluation is Required

"Fully-Exposed"	"Partially-Exposed"	"Least-Exposed"
Probable Retirement	*Evaluating potential retirement*	*Not likely to be retired*

CCS Candidates

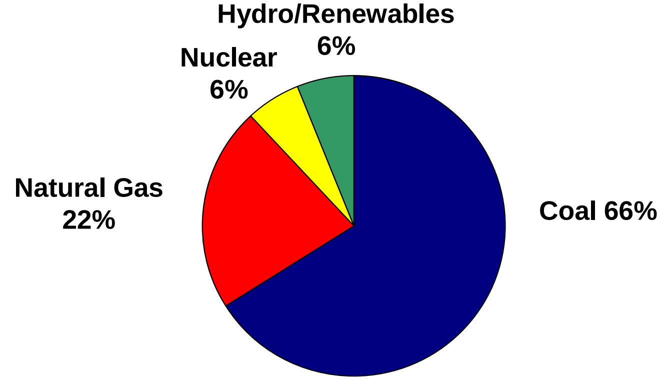


Nearly 50% of U.S. coal plants are exposed

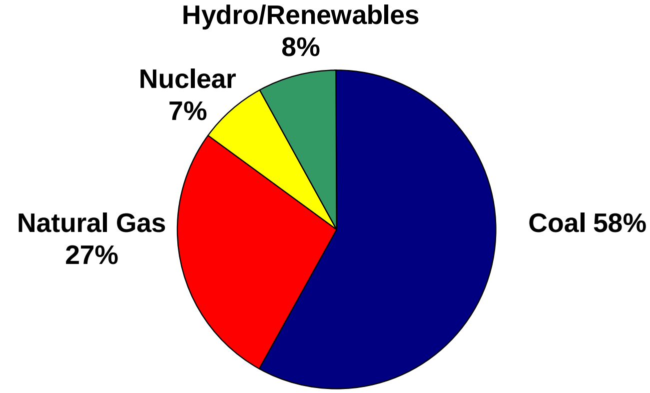
Continued Investment in Utility Platform

AEP®

- Plan for old, small coal units
  - Initially operate seasonally
  - Transition towards retirement
  - Regulatory plan for recovery
- Continue evaluation of "partially exposed" units for additional controls
- Add non-coal capacity when needed
  - Dresden NGCC (partially complete)
  - New NGCC at existing site
  - Cook plant uprate (under study)
  - Renewables
- Deploy technology as appropriate
  - Continue pursuit of CCS technology
  - Energy storage technologies
  - gridSMART®



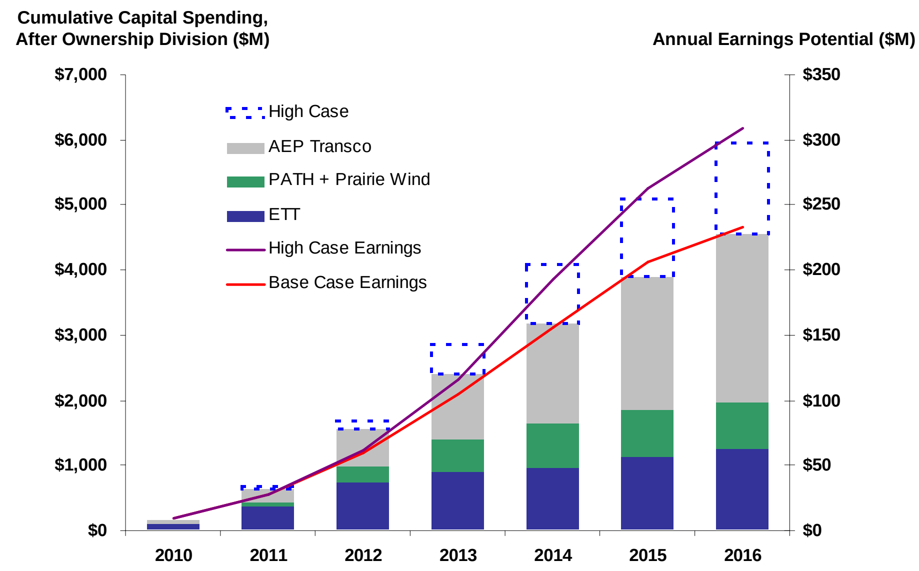
Capacity - 2009



Projected Capacity - 2017

Transmission as a Growth Engine

- Electric Transmission Texas (ETT)
  - Growing Rate Base
  - $1.1B CREZ opportunity; Received CCN approval on one CREZ line; 3 more approvals expected in 2011
  - $1.6B Non-CREZ projects in the pipeline
- AEP Transmission Company (AEP Transco)
  - Settlement filed at FERC for wholesale rates
  - $50M spend for 2010; $160M forecasted for 2011
- Progress on Joint Ventures in 2010
  - PATH
  - Prairie Wind
  - Pioneer
  - SMART Transmission study



[1] High Case includes: Pioneer (50% ownership), Prairie Wind at 765kV (25% ownership), Tallgrass at 765kV (25% ownership), ETA-Exelon (25% ownership) and other future opportunities

[2] AEP Transco (100% ownership) includes spending in OH, MI & OK only through 2011 and in other jurisdictions for 2012 and beyond

[3] PATH (50% ownership) assumes an in-service date of 2015 and Prairie Wind (25% ownership) assumed at 345kV

[4] ETT (50% ownership) includes CREZ and additional projects

[5] Projection of earnings potential at the transmission holding company level assuming 50/50 debt/equity capitalization and ROE of 12-13% for FERC projects; 60/40 debt/equity capitalization and 10.25% ROE (2011 forward) for ERCOT projects; and 50/50 debt/equity capitalization and ROE of 11.2-11.49% for Transco projects

Transmission investments present significant growth opportunities within and outside of AEP's traditional service territories

AEP Transco was established in 2010

- Formula rate settlement filed with FERC in September; awaiting final order
  - ROE: 11.49% in PJM and 11.2% in SPP
- $50 M invested in three states in 2010 (OH, MI & OK)
  - **Ohio application was approved by PUCO on December 29, 2010**
  - Oklahoma and Michigan did not require filings
- “Baseline” capital spending targets for OH, MI & OK
  - $160 M for 2011
  - $350 M for 2012
- Pursuing regulatory approvals for other states in 2011 (AR, LA, WV, VA, IN & KY)
  - Additional capital spending opportunity in these states for 2012+

ETT: An Operating Utility

Growing Rate Base:

- Current rate base is $385 million; expected to grow as follows:
  - 2010: $405 million
  - 2011: $465 million
  - 2012: $765 million
  - 2013: $1,415 million
- Interim TCOS filings twice per calendar year

Electric Transmission Texas

Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.1 B:

- Seven double-circuit 345kV transmission lines (~$750 M), eight major 345kV stations and several series compensation installations (~$350 M)
- PUCT Certificate of Convenience and Necessity (CCN) proceedings underway

CREZ Transmission Line	Number of miles	Estimated Cost ($M)	CCN Filing Date	CCN Decision by PUCT
Clear Crossing to Dermott	**95**	**$160**	**5/3/2010**	**Unanimously Approved 9/30/2010**
Tesla to Riley	65	$110	8/18/2010	2/15/2011
Riley to Edith Clarke to Cottonwood	115	$199	9/8/2010	3/8/2011
Tesla to Edith Clarke to Clear Crossing to West Shackelford	145	$280	10/20/2010	4/20/2011

Additional Projects in the Pipeline ~$1.6 B:

- Approximately 822 miles of lines and 28 substations with in-service dates through 2017

Prairie Wind Transmission, LLC

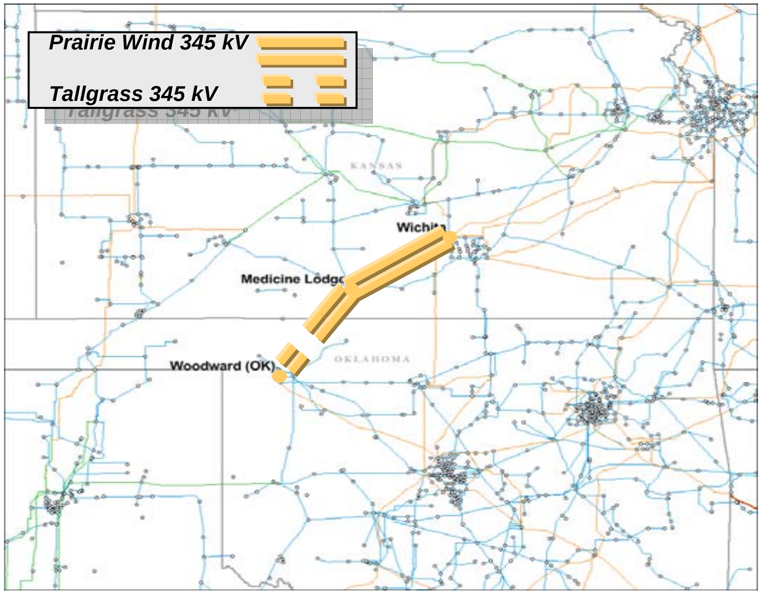
<u>Project Description</u>: 110 miles of EHV transmission lines extending from Wichita, KS to the KS/OK border

Overview:

- The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
- The project is expected to cost $225 million and be in-service by 2013-2014
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned
- Project was approved as SPP Priority Project in April 2010
  - NTC was issued to Westar July 2010. Currently working on a novation of the NTC to Prairie Wind. As a Transmission Owner, Prairie Wind will be entitled to collect revenue upon the novation of the Notice to Construct.
  - Currently approved at 345 kV.

Key Challenges:

- Siting and Routing



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

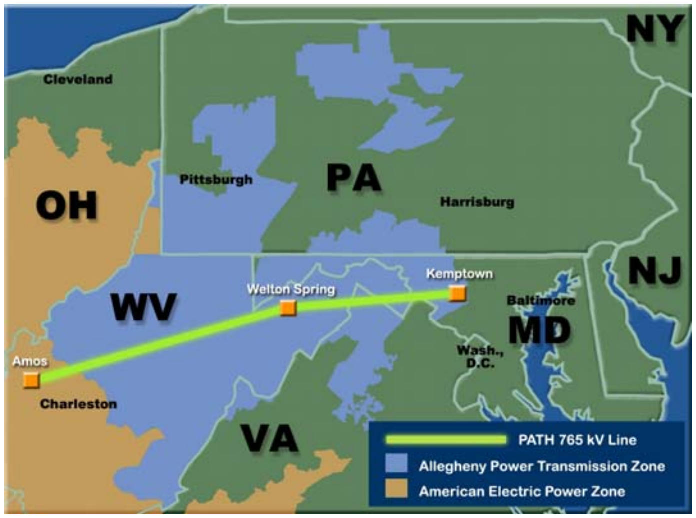
Prairie Wind Transmission
A joint venture between Westar Energy and ETA

Update on PATH, LLC

Project Description: 276 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new Welton Spring substation in Hardy County, WV, ending at a new substation near Kemptown, MD.

Overview:

- FERC order issued on February 29, 2008 approving:
  - Cash return on CWIP and 14.3% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents
  - Rates went into effect March 1, 2008
- FERC order issued on November 19, 2010 set the 14.3% ROE for hearing
- Total estimated cost of entire line is $2.1 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.4 billion. AEP share is approximately $700 million
- Estimated completion date: June 1, 2015



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

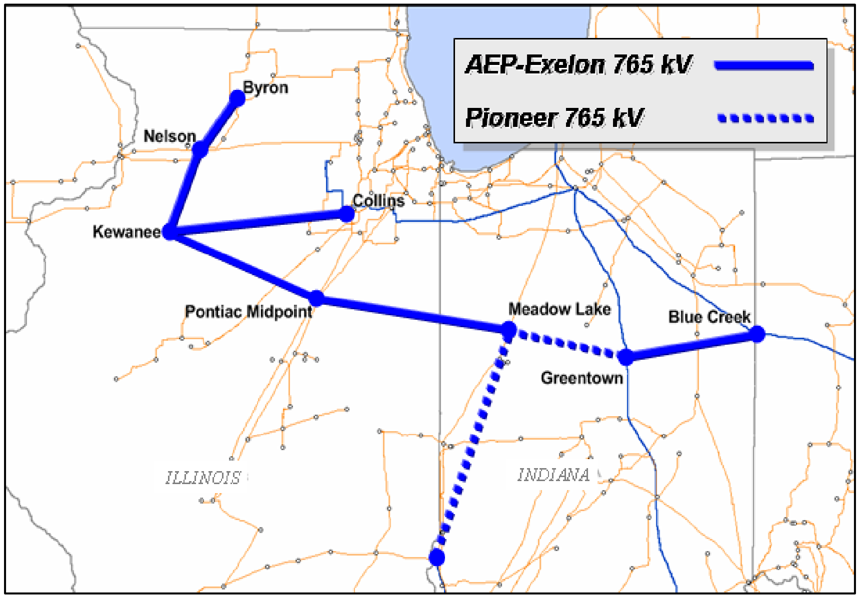
Key Challenges:

- Obtaining a CPCN in West Virginia, Virginia, and Maryland
  - CPCN applications are filed and accepted in all three states
  - PJM released a draft 2011 Load Forecast that could affect the required in-service date for PATH
  - PATH filed motions in all three states in December 2010 for a delay in the procedural schedule to allow for the filing of supplemental need testimony to reflect the 2011 PJM Load Forecast

PATH
Potomac-Appalachian Transmission Highline

RITELine Project

- AEP, ETA and Exelon Corporation executed a Memorandum of Understanding on October 26, 2010 for the development of the Reliability Interregional Transmission Extension Line (“RITELine”) project

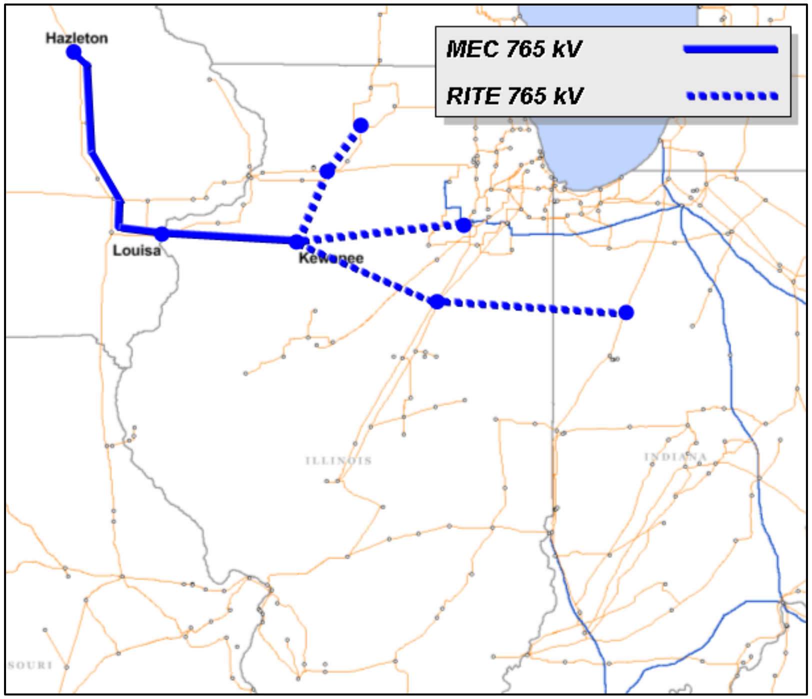


The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

- Estimated Project Cost: $1.6 billion
- 765 kV transmission line (or a designated lower-voltage solution such as double-circuit 345 kV line)
- Extends approximately 420 miles from the Byron Substation in Illinois to the Blue Creek substation at the Ohio/Indiana border and from Kewanee to the Collins Substation in Illinois

MEC Project

- ETA and MidAmerican Energy Company executed a Memorandum of Understanding on October 28, 2010 for the development of the MEC project



- Estimated Project Cost: $650 million
- 765 kV transmission line (or a designated lower-voltage solution such as double-circuit 345 kV)
- Extends approximately 180 miles from the Kewanee Substation in Illinois to the Louisa substation in Iowa and northwest to the Hazelton substation

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

Joe Hamrock – President AEP Ohio

Rich Munczinski – SVP Regulatory Services

AEP Ohio ESP Filing – Core Policy Issues

Investment in Ohio

Supports economic development and essential tax base

Fundamental barriers must be addressed to attract investment for Environmental Compliance and New Generation

Jobs in Ohio

Jobs are a key component of growth potential in Ohio

Without regulatory assurances over time we could see loss of direct & indirect jobs related to power generation, and business relocations to surrounding states

Energy Security

Secure, reliable and predictable electricity supply is basis for sustained investment and employment in Ohio

Volatility in power prices can lead to major loss of economic activity over time

Primary objective of ESP: Stabilize rates and support economic development in the state of Ohio

Merged AEP Ohio

Single merged AEP Ohio company presumed with supporting information on an individual OP/CSP basis

Rate Redesign

Generation rates redesigned to resemble market pricing structures

29-Month ESP Period

ESP period Jan 1, 2012 through May 31,2014 (May 31 date aligns with PJM annual planning cycle)

Alternative Long Term Option

Alternative longer-term price certainty option offered for qualifying commercial & industrial customers

Ohio Growth Fund

Creation of significant private sector economic development to attract investment and job growth in AEP Ohio service territory

Distribution Components Included

Inclusion of certain distribution components while pursuing a parallel distribution base rate case

Summary of ESP Filing - Continued

- Pre-tax earnings impact from proposed ESP (excluding potential earnings impact from trackers)
  - **Net base $54MM or 1.4% in year 1 (2012)**
  - **Net base $106MM or 2.7% in year 2 (2013)**

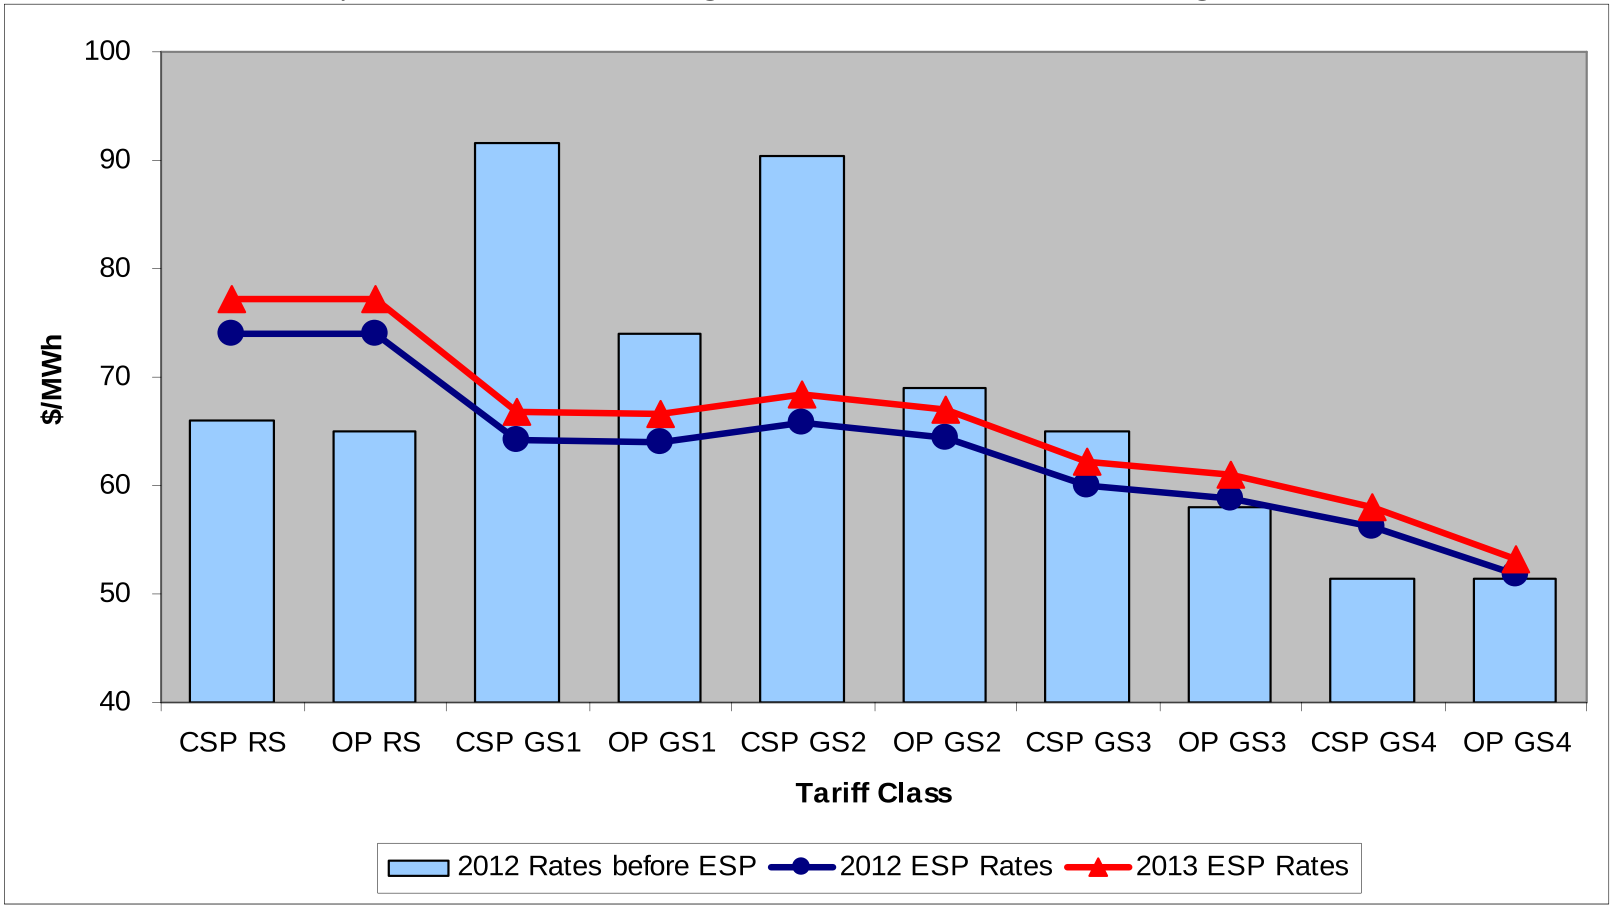
	2012			2013			2014		
	Revenue	$/MWh	%	Revenue	$/MWh	%	Revenue	$/MWh	%
Proposed ESP Changes									
Base Generation	**$65MM**	**$1.50**	**1.7%**	**$106MM**	**$2.43**	**2.7%**	**N/C***	**N/C***	**N/C***
POLR	**($11MM)**	**($0.23)**	**(0.3%)**	**N/C***	**N/C***	**N/C***	**N/C***	**N/C***	**N/C***
FAC Actual Recovery 2012-2014	**Actual**			**Actual**			**Actual**		

N/C* = No change from prior year

While the ESP includes a small base generation increase, the move to a market-based rate design, consistent with state policy, will result in varying impacts for different customer groups.

Price to Compare

Proposed **SSO** Rates Redesigned To Resemble Market Pricing Structures



Rates do not reflect mitigation impact of market transition rider
2012 Rates before ESP reflect current 2011 rates for generation & transmission service, adjusted to reflect full cost 2011 fuel and environmental costs.

The realignment of rates with market should provide all customers with equivalent opportunities to shop. Additionally, since the proposed design eliminates explicit demand charges, customers should be more easily able to evaluate competitive offers. To ease the rate impact that customers will experience from the realignment, we have proposed a Market Transition Rider.

Market Transition Rider – Mitigates the Initial Impact of Rate Realignment

Three-Year Market Transition Plan
Summary of AEP Ohio ESP Generation Rate Changes

CSP Current Customer Class	CSP New Customer Class	2012 Increase	2013 Increase	2014 Increase	Total Increase

AEP Ohio		1.4%	2.7%	0.0%	4.2%

Illustration of Market Transition Rider on ESP Generation Rate Increases

The Market Transition Rider is a transition rider designed to facilitate the transition from AEP Ohio's current rates to market-based SSO Generation Service rates. It is a non-bypassable rider designed to limit the first and second year changes for any customer classes to uniformly transition any above or below average changes in three steps. Any revenue shortfall that is produced by limiting the increases for certain customer classes is collected from those classes whose decreases are limited.

List of ESP Riders – Existing and Proposed

Line	Rate Mechanism	Abbreviation	Bypassable	Distribution	Notes
1	**Current Riders**				
2	Universal Service Fund Rider	USF	--	Yes	
3	Advanced Energy Fund Rider	AEF	--	Yes	Expired 12/31/2010
4	kWh Tax Rider	kWh Tax	--		May be self-assessed under specific terms
5	Provider of Last Resort Charge	POLR	No		Option to avoid under specific terms
6	Monongahela Power Litigation Termination Rider	Mon Power	--	Yes	Expires once amount collected
7	Transmission Cost Recovery Rider	TCRR	Yes		
8	Fuel Adjustment Clause Rider	FAC	Yes		
9	Energy Efficiency and Peak Demand Reduction Cost Recovery Rider	EE/PDR	--	Yes	
10	Economic Development Cost Recovery Rider	EDR	--	Yes	
11	Enhanced Service Reliability Rider	ESRR	--	Yes	
12	gridSMART® Rider	gridSMART®	--	Yes	
13	Environmental Investment Carrying Cost Rider	EICCR	No		the current bypassable rider is proposed to be nonbypassable in the new ESP
14					
15	**Proposed Riders**				
16	Standard Offer Generation Service Rider	GSR	Yes		Relocation of base generation rates
17	Generation Resource Rider	GRR	No		Capital/solar investment
18	Alternative Energy Rider	AER	Yes		Relocation of RECs from FAC
19	Phase-In Recovery Rider	PIRR	--	Yes	Previous ESP deferrals, possibility of securitization
20	Distribution Investment Rider	DIR	--	Yes	
21	Market Transition Rider	MTR	--	Yes	
22	Generation NERC Compliance Cost Recovery Rider	NERCR	No		
23	Facility Closure Cost Recovery Rider	FCCR	No		
24	Carbon Capture and Sequestration Rider	CCSR	No		
25					
26	**Other Provisions**				
27	Green Power Portfolio Rider	GPPR	--		Voluntary
28	Rate Security Rider	RSR	--		Voluntary
29	Plug-In Electric Vehicle Tariff / Costs	PEV	--	Yes	Voluntary, Deferral of Costs
30	Emergency Curtailable Service Rider	ECS	--		Voluntary, pending
31	Storm Damage Recovery Mechanism		--	Yes	Reconciliation of storm experience to funding level
32	Pool Termination or Modification Provision		Yes		
33	PIPP Uncollectibles	PIPP	--	Yes

AEP Ohio's long-term strategy is designed to produce rate relief for items currently known as well as anticipated future items. The filings and riders we seek today are designed to be broad and flexible enough to accommodate a variety of circumstances, because it is impossible to know all variables and specific items for which we will desire to seek rate relief or what regulatory circumstances will prevail at the time.

Summary Rate Case Information

AEP Ohio Distribution Rate Case – Docket #351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%. A procedural schedule from the PUCO is pending.

Actual Capital Structure – Company Position – 08/31/10

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events and our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives.

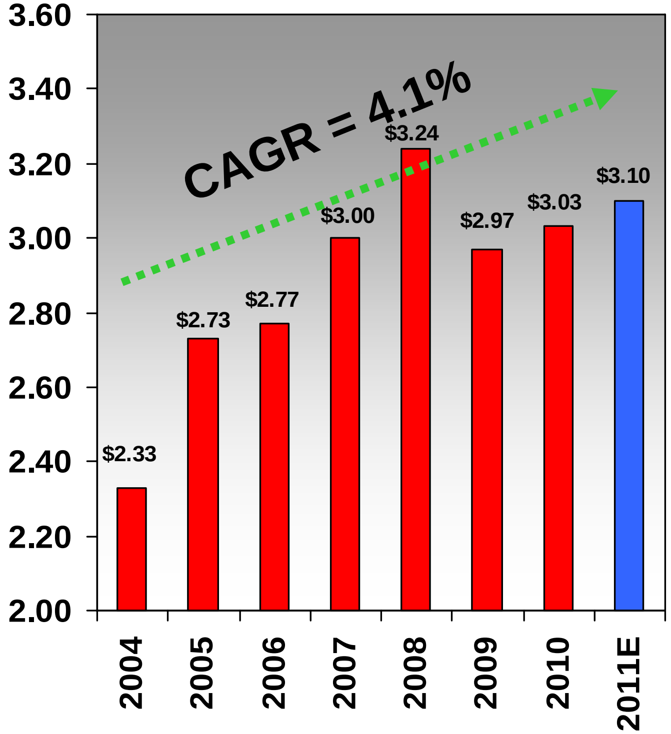
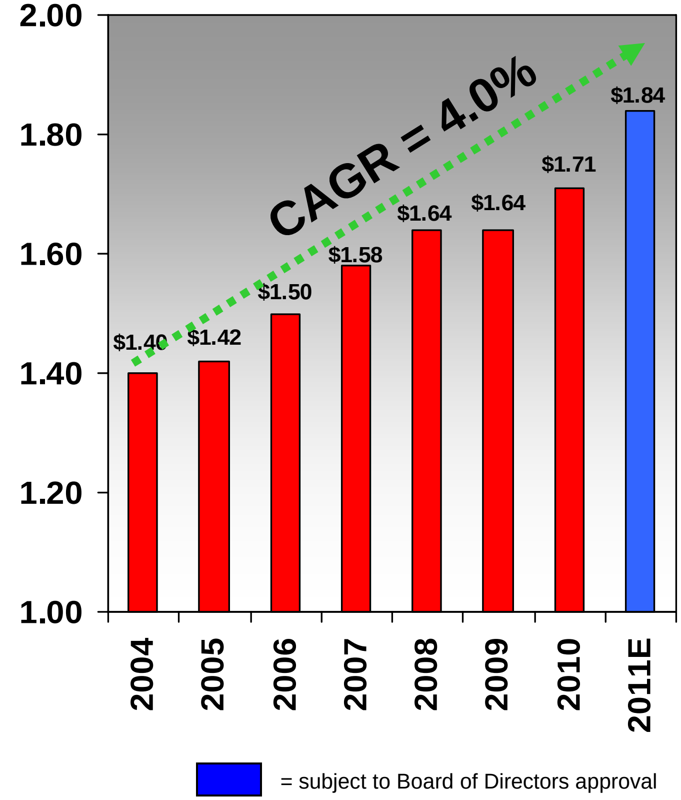
Earnings and Dividends

On-Going EPS History Since 2004



- Earnings growth largely attributed to capital investment program
- Pre-recession earnings supported by robust wholesale market activity and high power prices
- Equity offering in 2009 stabilized credit and strengthened balance sheet
- 2011 guidance range of $3.00 to $3.20 per share

Dividend History Since 2004

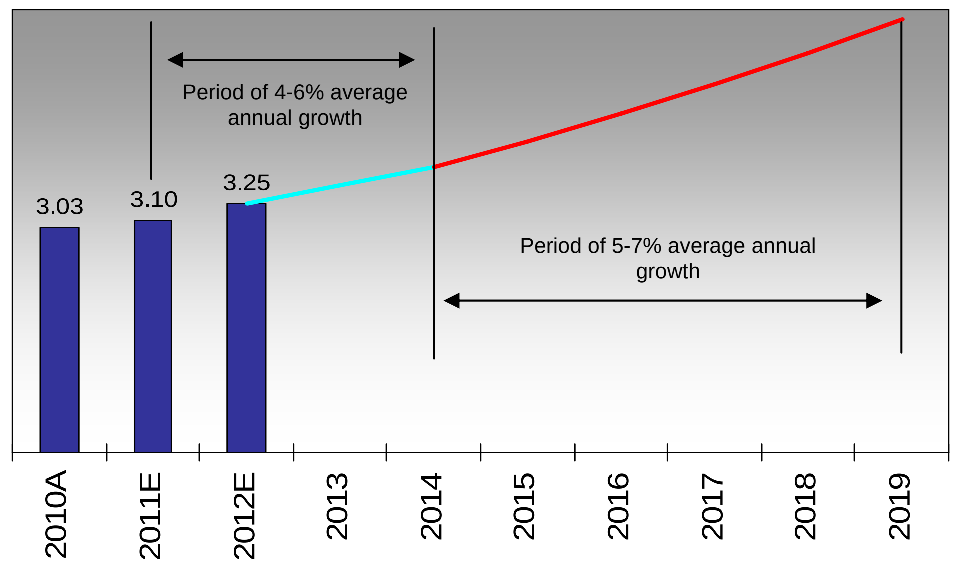


- Quarterly dividend <u>increased 12%</u> in 2010
- <u>403rd consecutive</u> quarterly dividend paid March 10, 2011
- 50-60% payout ratio target
- Current yield over 5%

Long-term EPS Growth Rate

- 4-6% EPS growth 2012-14
  - Average annual capital spend between $2.9-3.4B
    - Utility platform replacement capital of about $1.4B (annual depreciation)
    - Growth in rate base of $1.5-2.0B per year, allocated between utility platform and transmission projects
  - Average ROE of 10.5 - 11%
  - Slow, steady recovery in economy
- 5-7% EPS growth post 2014
  - Base utility platform capital including generation transformation
  - Higher allocation of discretionary capital going to opportunities in the transmission development pipeline
  - Higher overall blended ROE opportunity
  - Robust economic growth

Average Annual EPS Growth defined over two periods



Detailed Ongoing Earnings Guidance

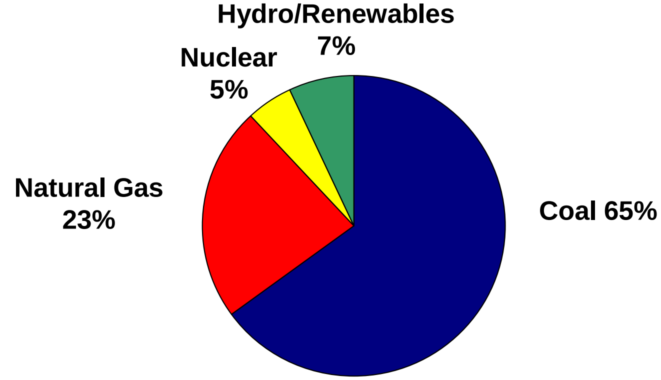
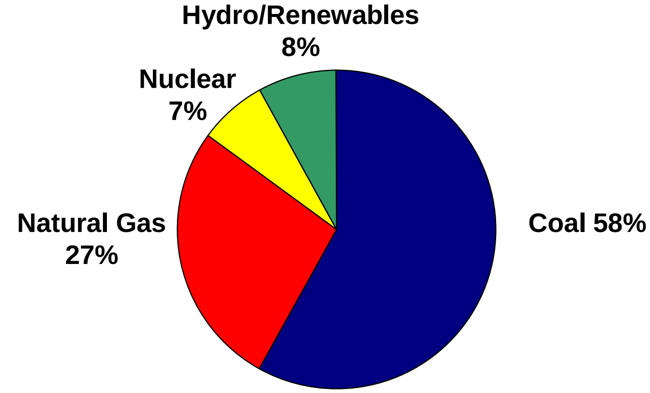
Continued Investment in Utility Platform

- Plan for old, small coal units
  - Initially operate seasonally
  - Transition towards retirement
  - Regulatory plan for recovery
- Continue evaluation of “partially exposed” units for additional controls
- Add non-coal capacity when needed
  - Dresden NGCC (under construction)
  - New NGCC at existing site
  - Cook plant uprate (under study)
  - Renewables
- Deploy technology as appropriate
  - Continue pursuit of CCS technology
  - Energy storage technologies
  - gridSMART®



Capacity - 2010



Projected Capacity - 2017

Summary Rate Case Information

APCo West Virginia General Rate Case – Docket #10-0699-E-42T

On May 14, 2010, APCo filed a base rate case with the West Virginia Public Service Commission requesting a net increase of $155.5 million, comprised of a $223.8 million base rate increase and a $68.3 million decrease in the construction surcharge. The filing related to capital investments made and to recover increased costs. In addition, APCo requested to establish a separate transmission tracker related to PJM charges. The requested ROE was 11.75%. A settlement is on file which stipulates a rate increase of $60MM and the ability to defer $18MM of storm damage expenses. An order is expected by the end of March 2011.

Actual Capital Structure – Company Position (@12/31/09)

Summary Rate Case Information

AEP Ohio Distribution Rate Case – Docket #351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%. A procedural schedule from the PUCO is pending.

Actual Capital Structure – Company Position – 08/31/10

AEP Ohio ESP Filing – Core Policy Issues

AEP®

Investment in Ohio

Supports economic development and essential tax base

Fundamental barriers must be addressed to attract investment for Environmental Compliance and New Generation

Jobs in Ohio

Jobs are a key component of growth potential in Ohio

Without regulatory assurances over time we could see loss of direct & indirect jobs related to power generation, and business relocations to surrounding states

Energy Security

Secure, reliable and predictable electricity supply is basis for sustained investment and employment in Ohio

Volatility in power prices can lead to major loss of economic activity over time

Primary objective of ESP: Stabilize rates and support economic development in the state of Ohio

Merged AEP Ohio

Single merged AEP Ohio company presumed with supporting information on an individual OP/CSP basis

Rate Redesign

Generation rates redesigned to resemble market pricing structures

29-Month ESP Period

ESP period Jan 1, 2012 through May 31,2014 (May 31 date aligns with PJM annual planning cycle)

Alternative Long Term Option

Alternative longer-term price certainty option offered for qualifying commercial & industrial customers

Ohio Growth Fund

Creation of significant private sector economic development to attract investment and job growth in AEP Ohio service territory

Distribution Components Included

Inclusion of certain distribution components while pursuing a parallel distribution base rate case

Summary of ESP Filing - Continued

- Pre-tax earnings impact from proposed ESP (excluding potential earnings impact from trackers)
  - **Net base $54MM or 1.4% in year 1 (2012)**
  - **Net base $106MM or 2.7% in year 2 (2013)**

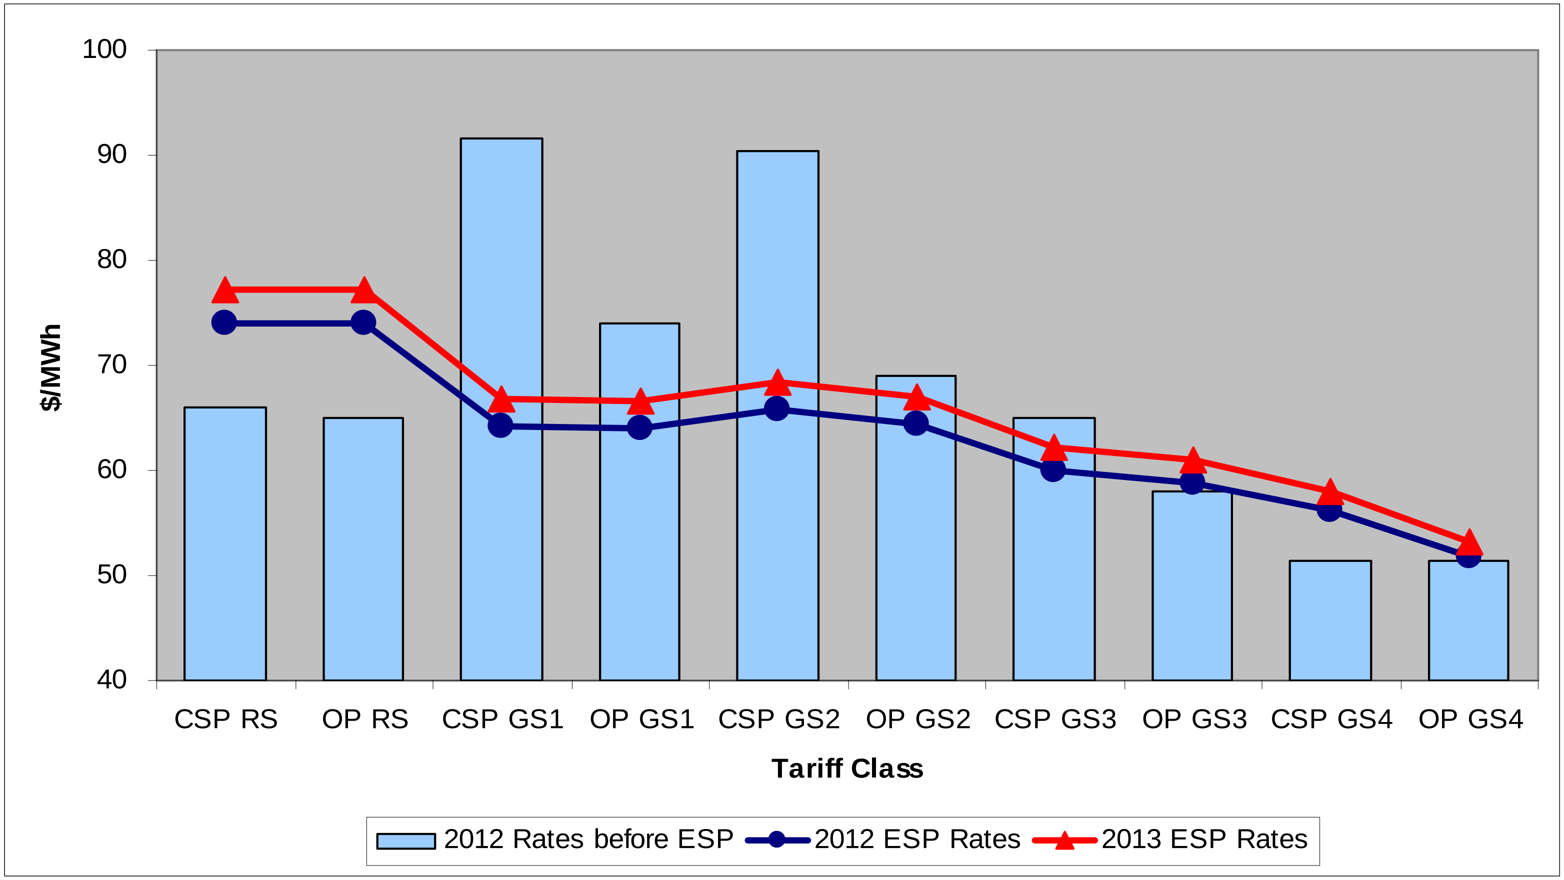
	2012			2013			2014		
	Revenue	**$/MWh**	**%**	**Revenue**	**$/MWh**	**%**	**Revenue**	**$/MWh**	**%**
Proposed ESP Changes									
Base Generation	**$65MM**	**$1.50**	**1.7%**	**$106MM**	**$2.43**	**2.7%**	**N/C***	**N/C***	**N/C***
POLR	**($11MM)**	**($0.23)**	**(0.3%)**	**N/C***	**N/C***	**N/C***	**N/C***	**N/C***	**N/C***
FAC Actual Recovery 2012-2014	**Actual**			**Actual**			**Actual**		

N/C* = No change from prior year

While the ESP includes a small base generation increase, the move to a market-based rate design, consistent with state policy, will result in varying impacts for different customer groups.

Price to Compare

Proposed **SSO** Rates Redesigned To Resemble Market Pricing Structures



Rates do not reflect mitigation impact of market transition rider
2012 Rates before ESP reflect current 2011 rates for generation & transmission service, adjusted to reflect full cost 2011 fuel and environmental costs.

The realignment of rates with market should provide all customers with equivalent opportunities to shop. Additionally, since the proposed design eliminates explicit demand charges, customers should be more easily able to evaluate competitive offers. To ease the rate impact that customers will experience from the realignment, we have proposed a Market Transition Rider.

Market Transition Rider – Mitigates the Initial Impact of Rate Realignment

Three-Year Market Transition Plan
Summary of AEP Ohio ESP Generation Rate Changes

CSP Current Customer Class	CSP New Customer Class	2012 Increase	2013 Increase	2014 Increase	Total Increase

AEP Ohio		1.4%	2.7%	0.0%	4.2%

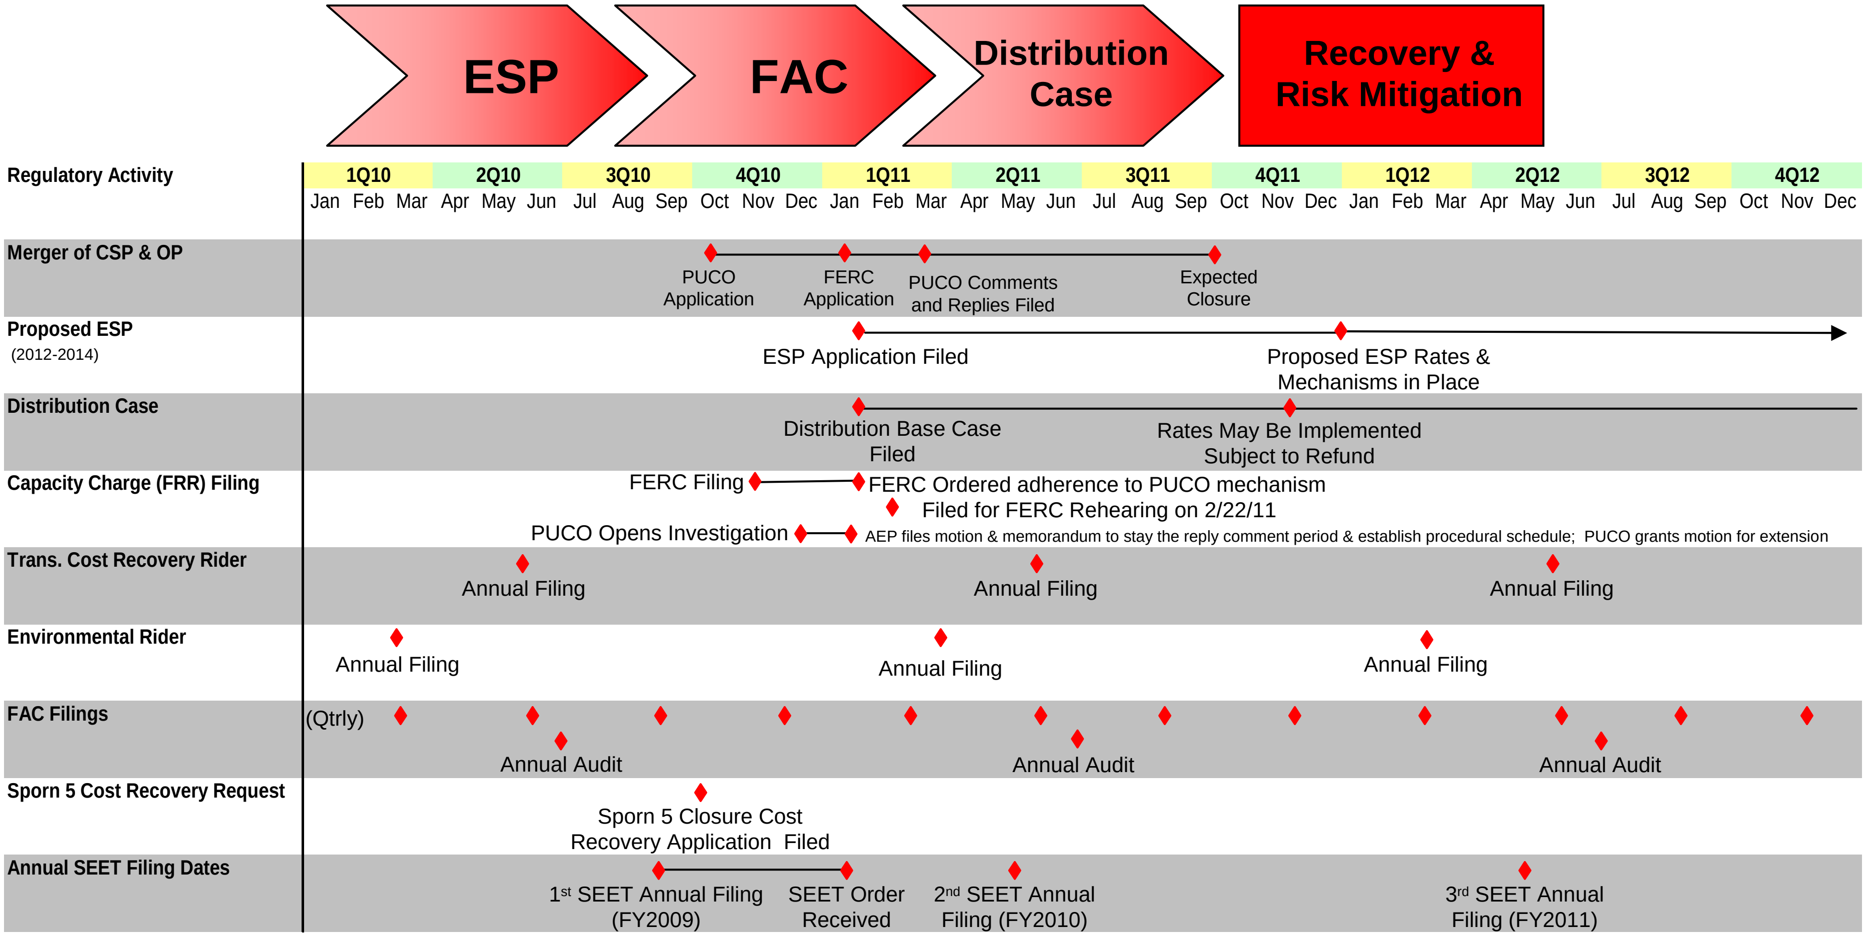
Illustration of Market Transition Rider on ESP Generation Rate Increases

The Market Transition Rider is a transition rider designed to facilitate the transition from AEP Ohio's current rates to market-based SSO Generation Service rates. It is a non-bypassable rider designed to limit the first and second year changes for any customer classes to uniformly transition any above or below average changes in three steps. Any revenue shortfall that is produced by limiting the increases for certain customer classes is collected from those classes whose decreases are limited.

List of ESP Riders – Existing and Proposed

Line	Rate Mechanism	Abbreviation	Bypassable	Distribution	Notes
1	**Current Riders**				
2	Universal Service Fund Rider	USF	--	Yes	
3	Advanced Energy Fund Rider	AEF	--	Yes	Expired 12/31/2010
4	kWh Tax Rider	kWh Tax	--		May be self-assessed under specific terms
5	Provider of Last Resort Charge	POLR	No		Option to avoid under specific terms
6	Monongahela Power Litigation Termination Rider	Mon Power	--	Yes	Expires once amount collected
7	Transmission Cost Recovery Rider	TCRR	Yes		
8	Fuel Adjustment Clause Rider	FAC	Yes		
9	Energy Efficiency and Peak Demand Reduction Cost Recovery Rider	EE/PDR	--	Yes	
10	Economic Development Cost Recovery Rider	EDR	--	Yes	
11	Enhanced Service Reliability Rider	ESRR	--	Yes	
12	gridSMART® Rider	gridSMART®	--	Yes	
13	Environmental Investment Carrying Cost Rider	EICCR	No		the current bypassable rider is proposed to be nonbypassable in the new ESP
14					
15	**Proposed Riders**				
16	Standard Offer Generation Service Rider	GSR	Yes		Relocation of base generation rates
17	Generation Resource Rider	GRR	No		Capital/solar investment
18	Alternative Energy Rider	AER	Yes		Relocation of RECs from FAC
19	Phase-In Recovery Rider	PIRR	--	Yes	Previous ESP deferrals, possibility of securitization
20	Distribution Investment Rider	DIR	--	Yes	
21	Market Transition Rider	MTR	--	Yes	
22	Generation NERC Compliance Cost Recovery Rider	NERCR	No		
23	Facility Closure Cost Recovery Rider	FCCR	No		
24	Carbon Capture and Sequestration Rider	CCSR	No		
25					
26	**Other Provisions**				
27	Green Power Portfolio Rider	GPPR	--		Voluntary
28	Rate Security Rider	RSR	--		Voluntary
29	Plug-In Electric Vehicle Tariff / Costs	PEV	--	Yes	Voluntary, Deferral of Costs
30	Emergency Curtailable Service Rider	ECS	--		Voluntary, pending
31	Storm Damage Recovery Mechanism		--	Yes	Reconciliation of storm experience to funding level
32	Pool Termination or Modification Provision		Yes		
33	PIPP Uncollectibles	PIPP	--	Yes	

Ohio Timeline



AEP Ohio's long-term strategy is designed to produce rate relief for items currently known as well as anticipated future items. The filings and riders we seek today are designed to be broad and flexible enough to accommodate a variety of circumstances, because it is impossible to know all variables and specific items for which we will desire to seek rate relief or what regulatory circumstances will prevail at the time.

Transmission Investment Strategy

- **Near-Term Investment** – Electric Transmission Texas (ETT) secures near term investment opportunities, allowing AEP to invest in the large, growth-oriented Texas transmission market. Total project cost of $3 billion with a 9.96% ROE.

- **Mid-Term Investment** – Seven wholly-owned transcos allow for expansion and growth within AEP's existing utility footprint through an efficient recovery mechanism. Will spend $160 million in 2011 and more than $350 million in 2012. Expected ROE is in the 11.20%-11.49% range.

- **Long-Term Investment** – Joint ventures provide opportunities for longer-term growth outside of AEP's existing utility footprint with forward looking formula rates, higher ROEs and FERC incentives, and mitigated risk profiles.

Transmission has a diversified investment approach that positions it as one of the key AEP growth businesses.

Texas Transmission Growth Strategy : Near Term Investment

Ownership Structure: 50/50 (AEP/MidAmerican Energy Holding Company)

Total Project Cost: Over $3 Billion

Growing Rate Base:

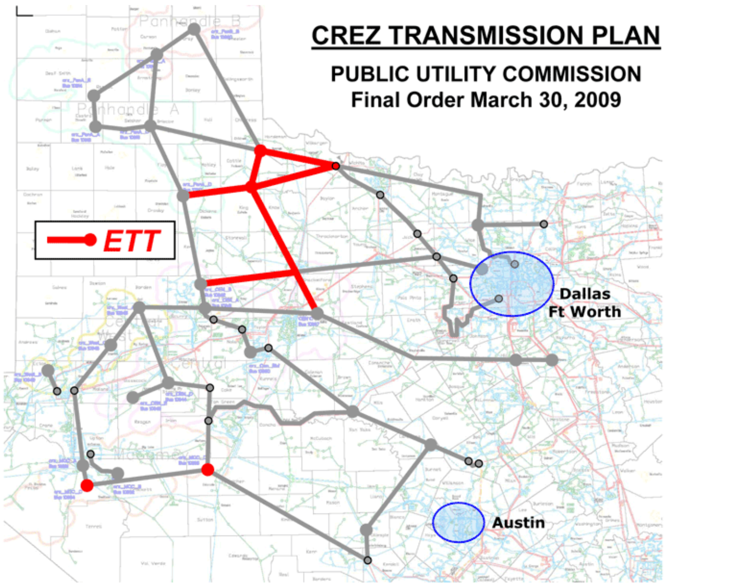
Current rate base is $412 million; expected to grow as follows:

2011: $473 million
2012: $778 million
2013: $1,352 million

ETT
Electric Transmission Texas

Interim TCOS filings twice per calendar year

Approved ROE: 9.96%



- **Additional Projects in the Pipeline ~$1.6 B:**
  – Approximately 822 miles of lines and 28 substations with in-service dates through 2017

- **Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.1 B:**
  – Seven double-circuit 345kV transmission lines (~$750 M), eight major 345kV stations and several series compensation installations (~$350 M)
  – PUCT Certificate of Convenience and Necessity (CCN) proceedings underway

Transco Update

AEP®

Filing Status Update:

- ***Ohio** (filed and approved)* – PUCO approved the Ohio Transco December 29, 2010
- ***West Virginia** (filed)* – Procedural schedule is set, with company testimony filed January 6; Intervenor's testimony is due April 6 and rebuttal is due April 20; Hearings in June
- ***Arkansas and Louisiana*** – Filing date in Arkansas likely early 2011
- ***Texas-SPP*** – Expecting TX filing in mid 2011
- ***Kentucky*** – Filing made February 4, 2011; Informal conference with staff held March 2, 2011
- ***Indiana*** – Filing made March 1, 2011; Pre-hearing conference March 28, 2011
- ***Virginia** (withdrawn)* – Filing withdrawn to give additional time to resolve issues with Staff
- ***Michigan and Oklahoma*** – Do not require state filing

$160M capital spend forecasted for 2011

Joint Venture Strategy: Long-term

- **Strategy**: JV's secure new investment opportunities with local utilities to diversify AEP's investment outside AEP's traditional footprint while providing longer-term incremental earnings**.** JV projects are well-suited for FERC formula rate recovery mechanism, including potential for incentive rates.

- **Future:** Federal/regional initiatives may accelerate expansion of EHV transmission (e.g. cap-and-trade, renewable portfolio standards, inter-region wide planning). Securing first mover advantage will enable AEP to secure LT investment opportunities.

- **Future flexibility**: Passive investment opportunities can be considered and can provide entry beyond SPP/PJM/ERCOT

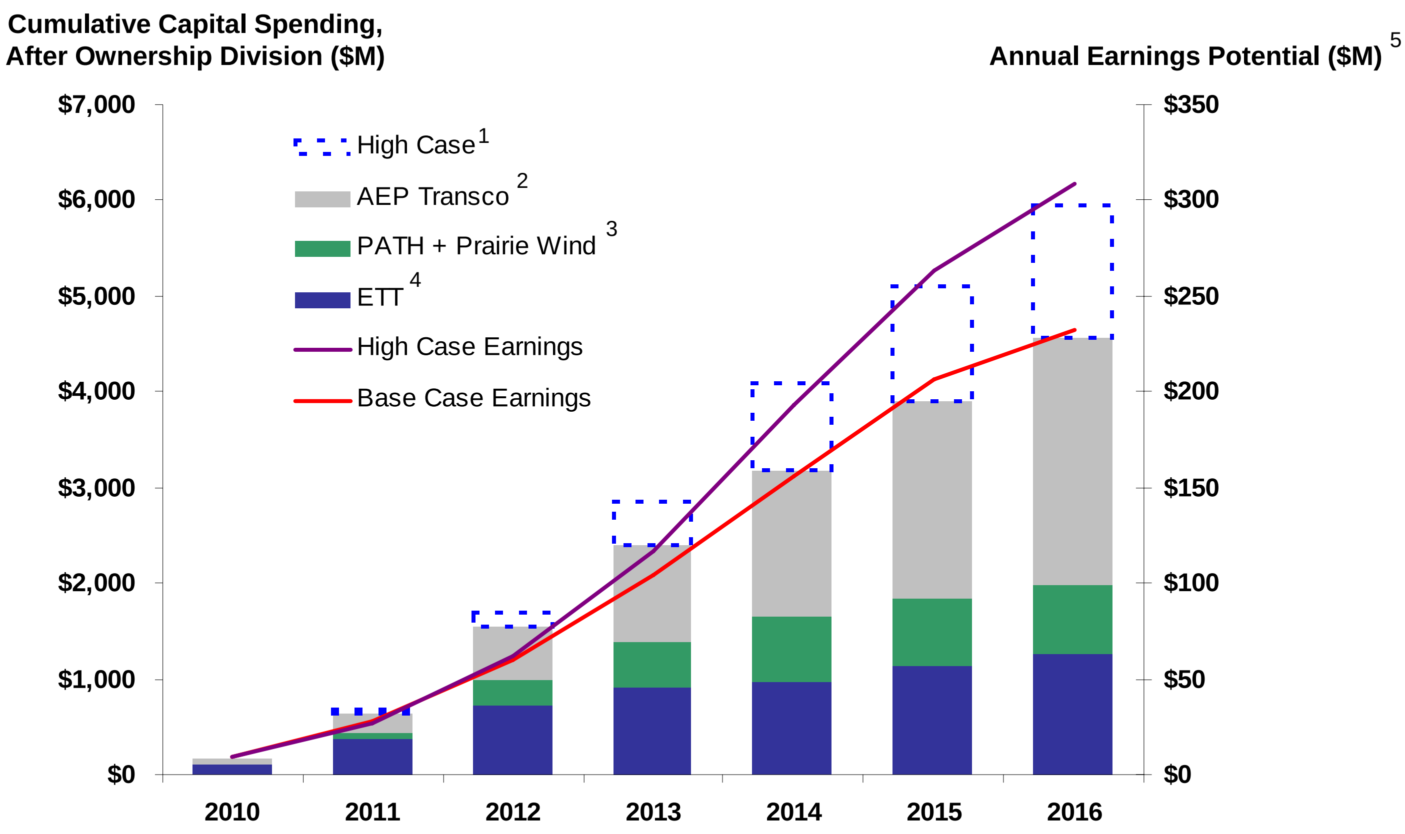
Transmission (Transco/JV's) – Capital/Earnings Profile

Transco and JV's have the potential to significantly add earnings growth to AEP.



[1] High Case includes: Pioneer (50% ownership), Prairie Wind at 765kV (25% ownership), Tallgrass at 765kv (25% ownership) and other future opportunities

[2] AEP Transco (100% ownership) includes spending in OH, MI & OK only through 2011 and in other jurisdictions for 2012 and beyond

[3] PATH (50% ownership) assumes an in-service date of 2015 and Prairie Wind (25% ownership) assumed at 345kV

[4] ETT (50% ownership) includes CREZ and additional projects

[5] Projection of earnings potential at the transmission holding company level assuming 50/50 debt/equity capitalization and ROE of 12-13% for FERC projects; 60/40 debt/equity capitalization and 10.25% ROE (2011 forward) for ERCOT projects; and 50/50 debt/equity capitalization and ROE of 11.2-11.49% for Transco projects

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events and our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives.

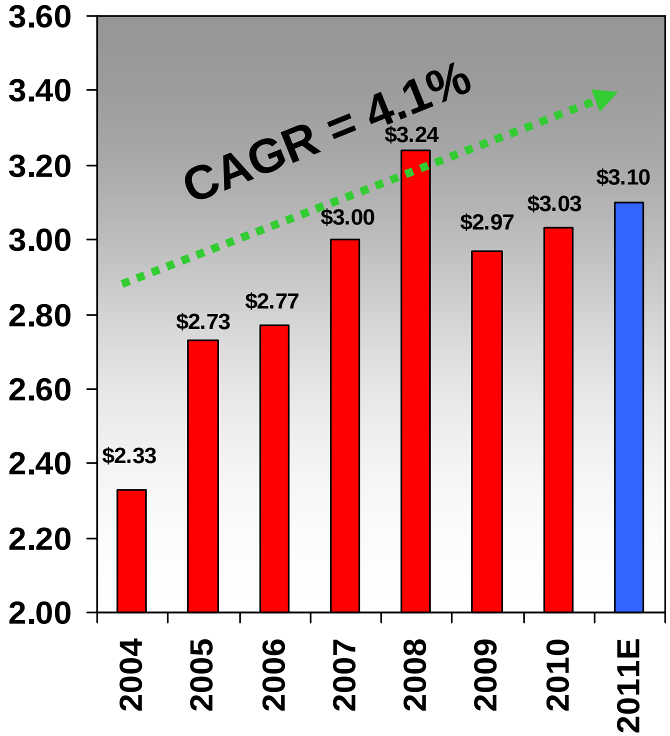
Earnings and Dividends

AEP®

On-Going EPS History Since 2004

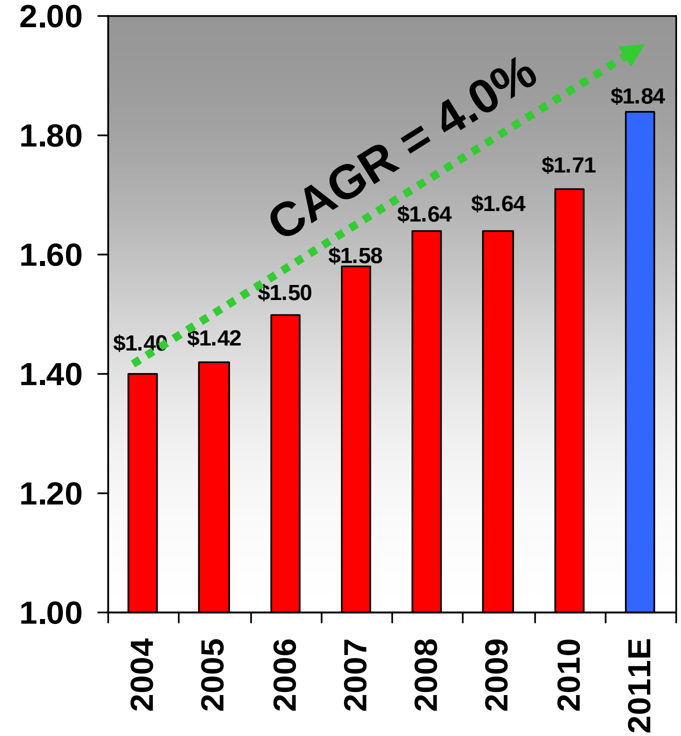
$/share



- Earnings growth largely attributed to capital investment program
- Pre-recession earnings supported by robust wholesale market activity and high power prices
- Equity offering in 2009 stabilized credit and strengthened balance sheet
- 2011 guidance range of $3.00 to $3.20 per share

Dividend History Since 2004

$/share



= subject to Board of Directors approval

- Quarterly dividend <u>increased 12%</u> in 2010
- <u>403rd consecutive</u> quarterly dividend paid March 10, 2011
- 50-60% payout ratio target
- Current yield over 5%

Long-term EPS Growth Rate

- 4-6% EPS growth 2012-14
  - Average annual capital spend between $2.9-3.4B
    - Utility platform replacement capital of about $1.4B (annual depreciation)
    - Growth in rate base of $1.5-2.0B per year, allocated between utility platform and transmission projects
  - Average ROE of 10.5 - 11%
  - Slow, steady recovery in economy
- 5-7% EPS growth post 2014
  - Base utility platform capital including generation transformation
  - Higher allocation of discretionary capital going to opportunities in the transmission development pipeline
  - Higher overall blended ROE opportunity
  - Robust economic growth

Average Annual EPS Growth defined over two periods

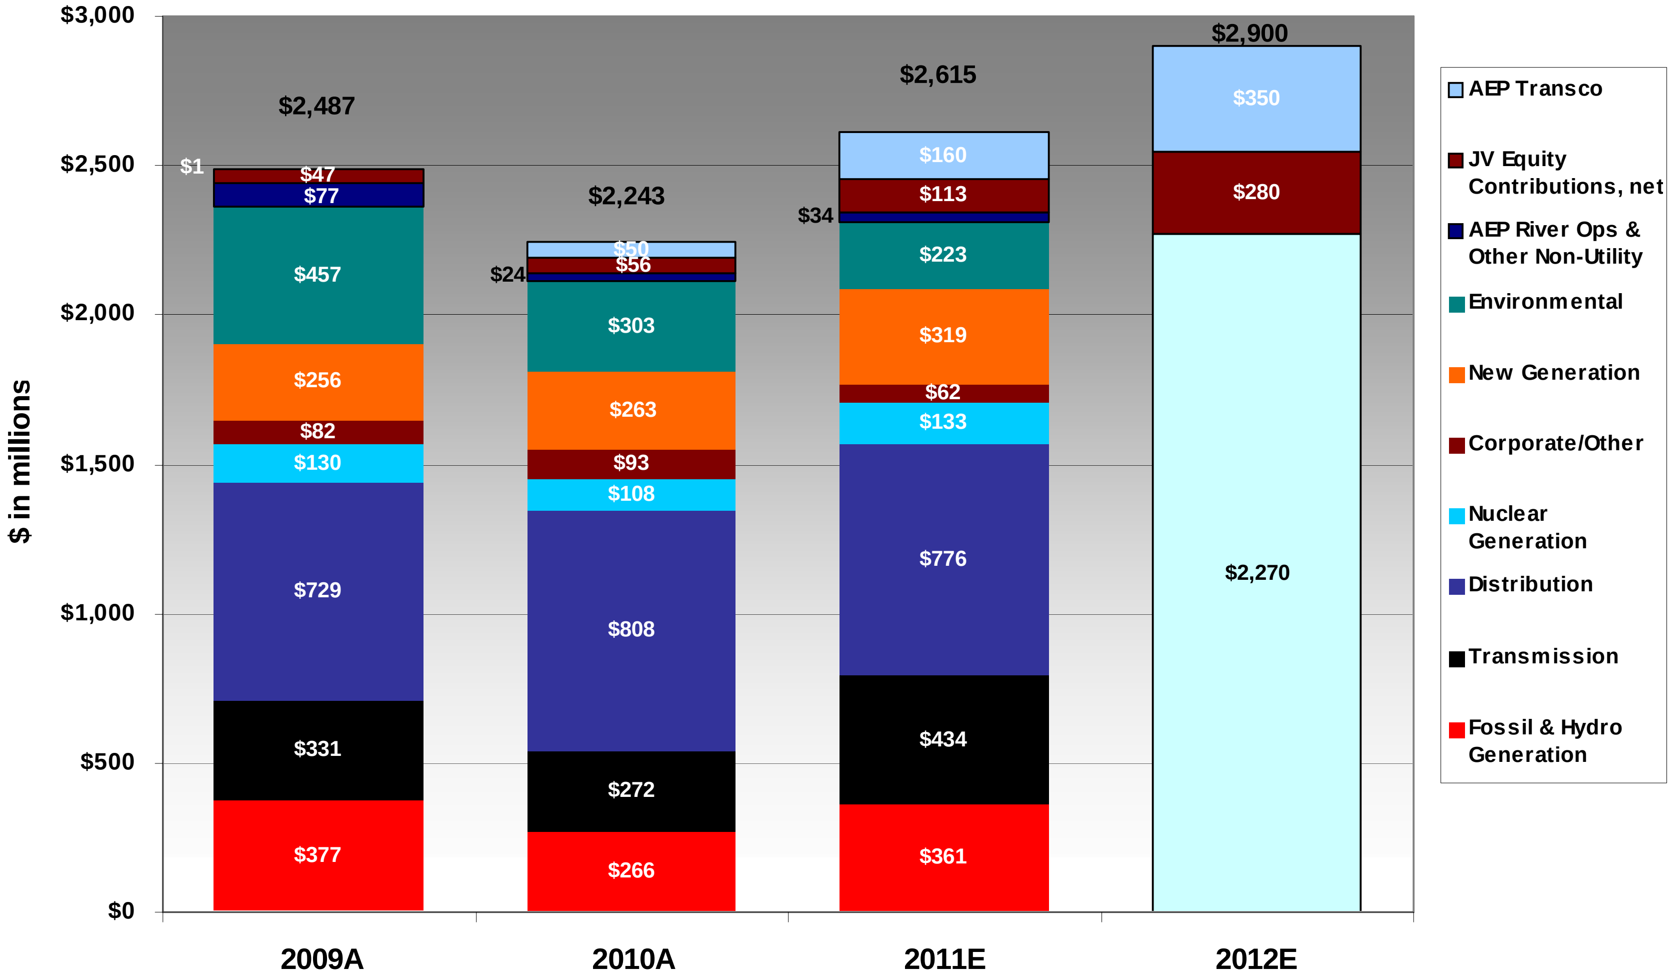
Note: Total Debt is calculated according to GAAP and includes securitized debt

[1]: Effective January 1, 2010 in accordance with Transfers and Servicing accounting guidance (formerly SFAS 166), factored receivables of AEP Credit of $750 million are classified as short-term debt; The 4Q2010 debt/capitalization ratio would be 56.1%, excluding AEP Credit.

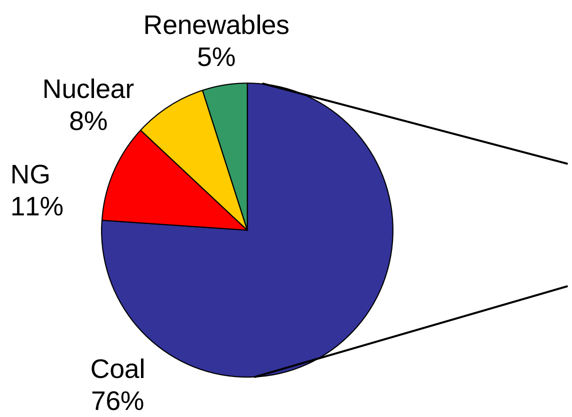
Capital Expenditures



Investment levels greater than depreciation of $1.4B per year cause rate base growth in 2011 and 2012

AEP Generation Capacity

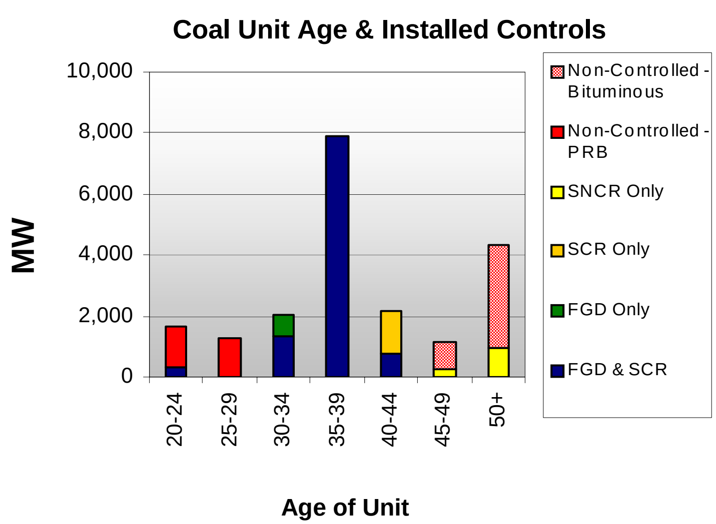
East Capacity – 27,253 MW
AEP Ohio, APCo, I&M, AEG, KPCo, Wind, Solar, Hydro



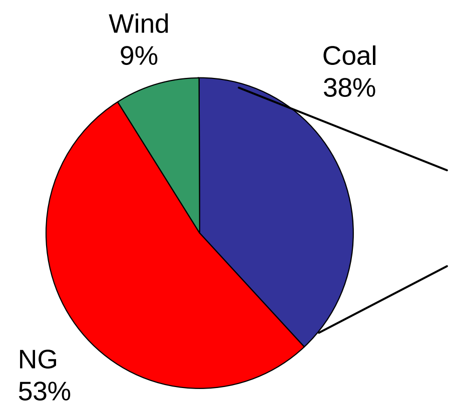
Coal Source

NAPP	46%
CAPP	30%
PRB	22%
Others	2%

Avg. Delivered Cost
2009A - $56/ton
2010A - $52/ton
2011E - $51/ton



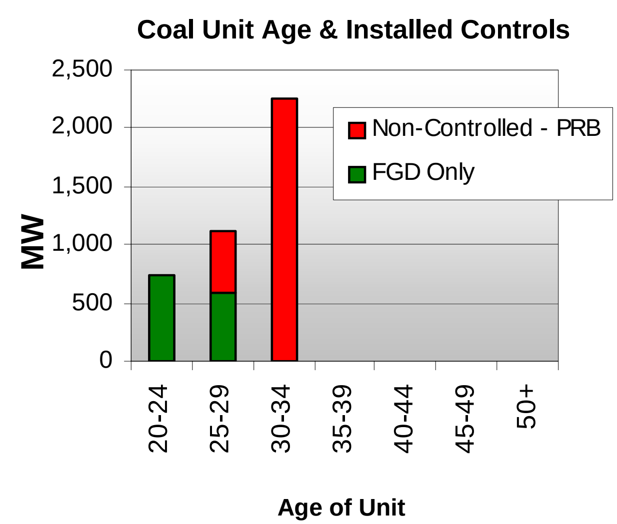
West Capacity – 11,677 MW
PSO, SWEPCO, TNC, Wind



Coal Source

PRB	75%
Lignite	25%

Avg. Delivered Cost
2009A - $29/ton
2010A - $29/ton
2011E - $29/ton

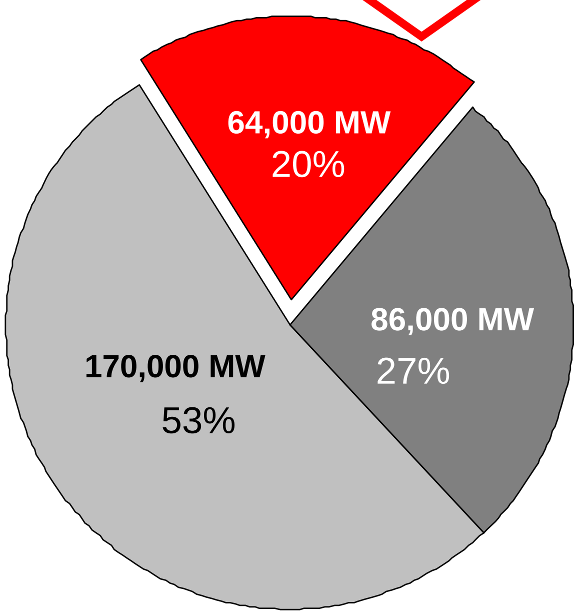


Continual Evaluation is Required

"Fully-Exposed"	"Partially-Exposed"	"Least-Exposed"
Probable Retirement	*Evaluating potential retirement*	*Not likely to be retired*

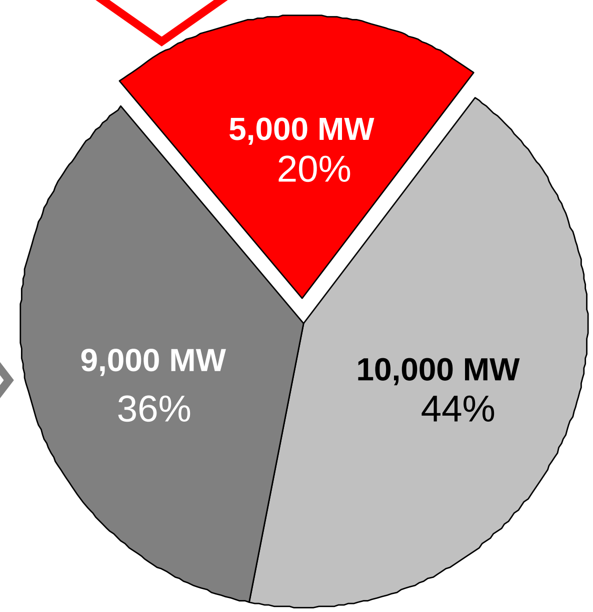
CCS Candidates

Smaller, older, less-efficient coal units that will not be economic if retrofitted



US Coal

Newer and larger coal units that do not have SCR's and/or FGD's will be evaluated due to emerging environmental rulemaking and NSR requirements



AEP Coal

Nearly 50% of U.S. coal plants are exposed

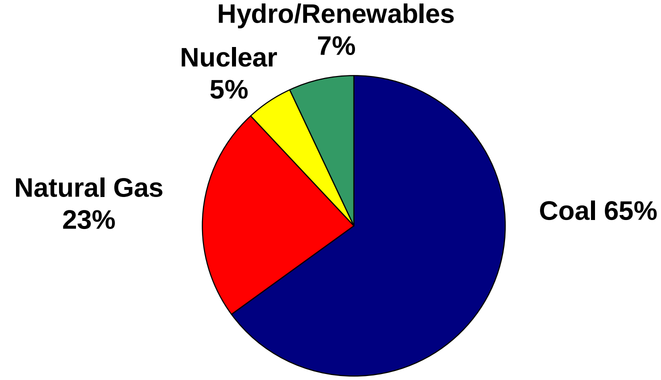
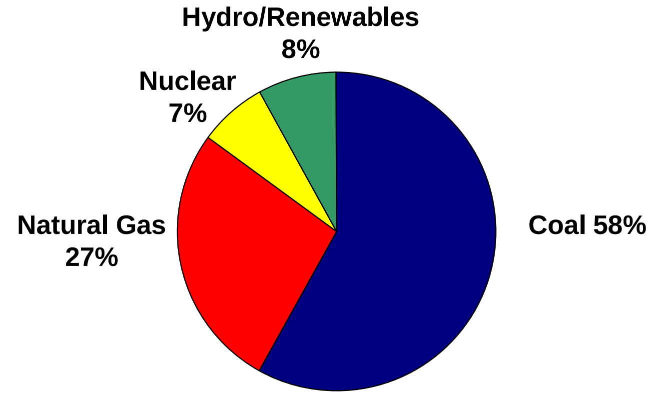
Continued Investment in Utility Platform

- Plan for old, small coal units
  - Initially operate seasonally
  - Transition towards retirement
  - Regulatory plan for recovery
- Continue evaluation of “partially exposed” units for additional controls
- Add non-coal capacity when needed
  - Dresden NGCC (under construction)
  - New NGCC at existing site
  - Cook plant uprate (under study)
  - Renewables
- Deploy technology as appropriate
  - Continue pursuit of CCS technology
  - Energy storage technologies
  - gridSMART®

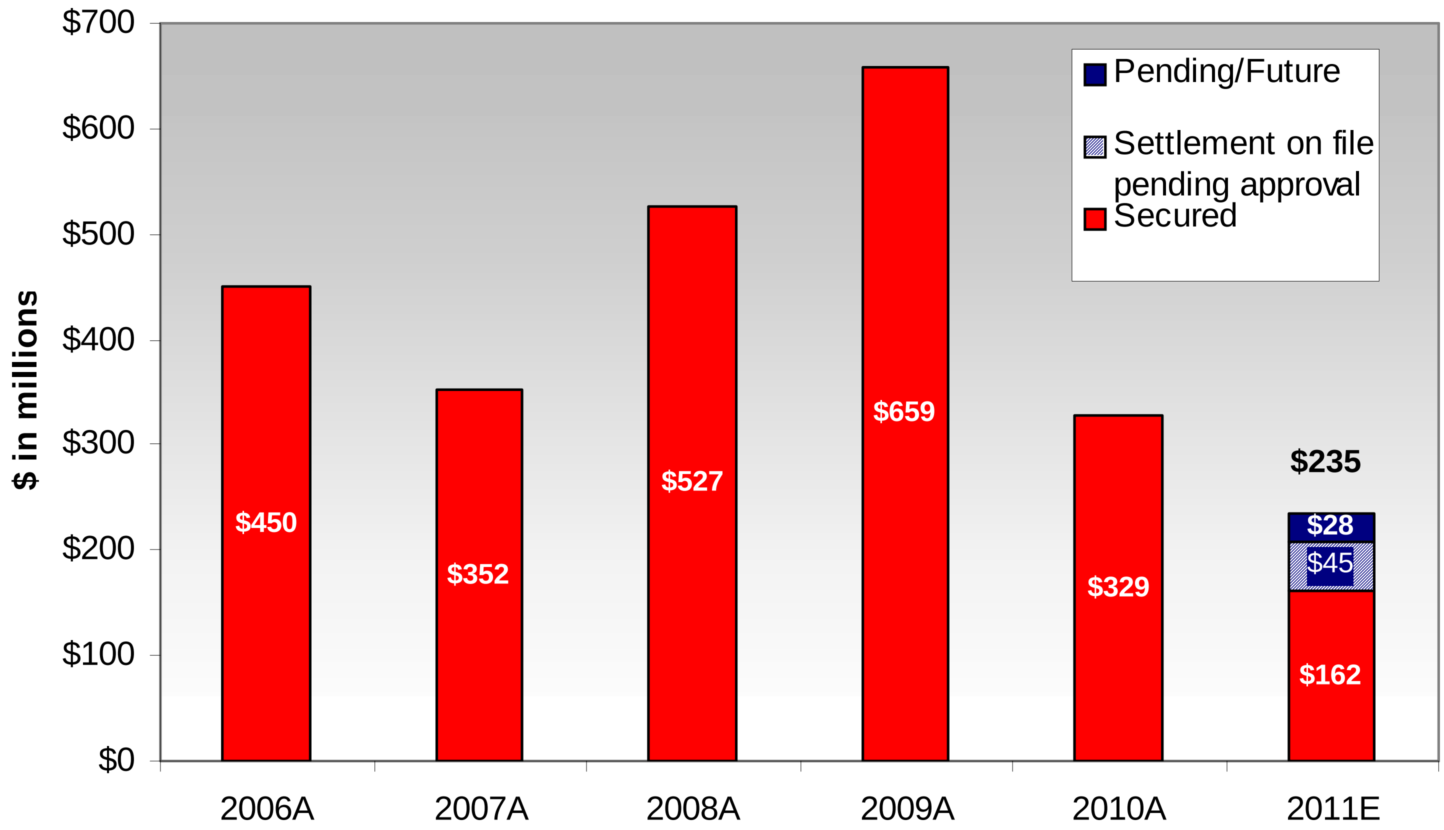


Capacity - 2010



Projected Capacity - 2017

Rate Changes



Note: Rate changes in this chart exclude revenues with offsetting costs

Pending/future rate cases include cases yet to be filed

Settlement on file pending approval relates to the WV base rate case

Summary Rate Case Information

APCo West Virginia General Rate Case – Docket #10-0699-E-42T

On May 14, 2010, APCo filed a base rate case with the West Virginia Public Service Commission requesting a net increase of $155.5 million, comprised of a $223.8 million base rate increase and a $68.3 million decrease in the construction surcharge. The filing related to capital investments made and to recover increased costs. In addition, APCo requested to establish a separate transmission tracker related to PJM charges. The requested ROE was 11.75%. A settlement is on file which stipulates a rate increase of $60MM and the ability to defer $18MM of storm damage expenses. An order is expected by the end of March 2011.

Summary Rate Case Information

AEP Ohio Distribution Rate Case – Docket #351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%. A procedural schedule from the PUCO is pending.

AEP Ohio ESP Filing – Core Policy Issues

AEP®

Investment in Ohio

Supports economic development and essential tax base

Fundamental barriers must be addressed to attract investment for Environmental Compliance and New Generation

Jobs in Ohio

Jobs are a key component of growth potential in Ohio

Without regulatory assurances over time we could see loss of direct & indirect jobs related to power generation, and business relocations to surrounding states

Energy Security

Secure, reliable and predictable electricity supply is basis for sustained investment and employment in Ohio

Volatility in power prices can lead to major loss of economic activity over time

Primary objective of ESP: Stabilize rates and support economic development in the state of Ohio

Merged AEP Ohio

Single merged AEP Ohio company presumed with supporting information on an individual OP/CSP basis

Rate Redesign

Generation rates redesigned to resemble market pricing structures

29-Month ESP Period

ESP period Jan 1, 2012 through May 31,2014 (May 31 date aligns with PJM annual planning cycle)

Alternative Long Term Option

Alternative longer-term price certainty option offered for qualifying commercial & industrial customers

Ohio Growth Fund

Creation of significant private sector economic development to attract investment and job growth in AEP Ohio service territory

Distribution Components Included

Inclusion of certain distribution components while pursuing a parallel distribution base rate case

Summary of ESP Filing - Continued

- Pre-tax earnings impact from proposed ESP (excluding potential earnings impact from trackers)
  - **Net base $54MM or 1.4% in year 1 (2012)**
  - **Net base $106MM or 2.7% in year 2 (2013)**

	2012			2013			2014		
	Revenue	**$/MWh**	**%**	**Revenue**	**$/MWh**	**%**	**Revenue**	**$/MWh**	**%**
Proposed ESP Changes									
Base Generation	**$65MM**	**$1.50**	**1.7%**	**$106MM**	**$2.43**	**2.7%**	**N/C***	**N/C***	**N/C***
POLR	**($11MM)**	**($0.23)**	**(0.3%)**	**N/C***	**N/C***	**N/C***	**N/C***	**N/C***	**N/C***
FAC Actual Recovery 2012-2014	**Actual**			**Actual**			**Actual**		

N/C* = No change from prior year

While the ESP includes a small base generation increase, the move to a market-based rate design, consistent with state policy, will result in varying impacts for different customer groups.

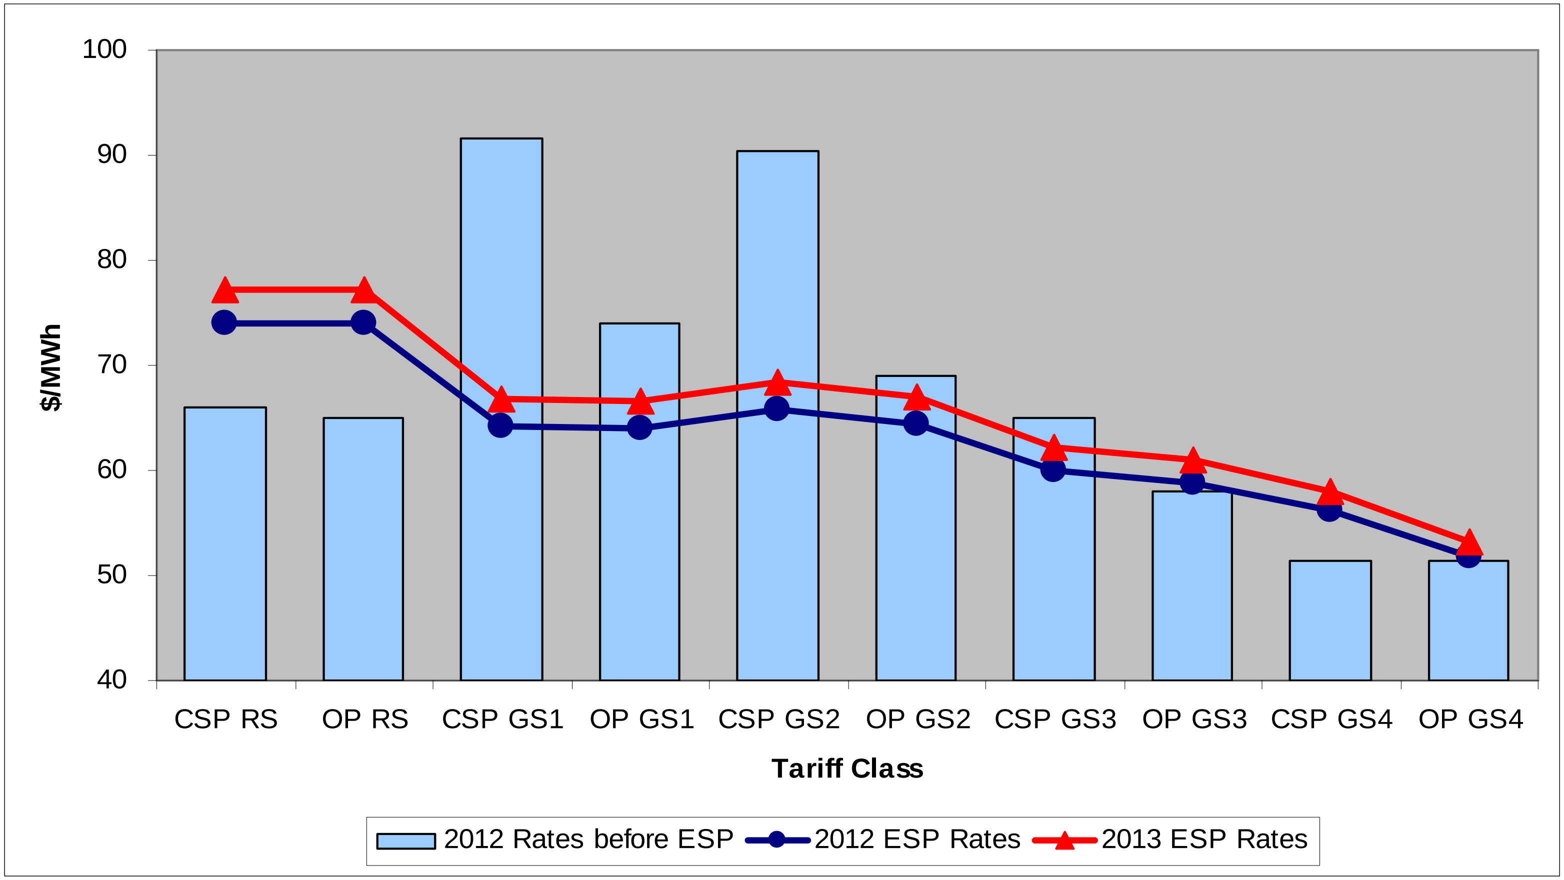
Page 195 of 9556

Price to Compare

Proposed **SSO** Rates Redesigned To Resemble Market Pricing Structures



Rates do not reflect mitigation impact of market transition rider
2012 Rates before ESP reflect current 2011 rates for generation & transmission service, adjusted to reflect full cost 2011 fuel and environmental costs.

The realignment of rates with market should provide all customers with equivalent opportunities to shop. Additionally, since the proposed design eliminates explicit demand charges, customers should be more easily able to evaluate competitive offers. To ease the rate impact that customers will experience from the realignment, we have proposed a Market Transition Rider.

Market Transition Rider – Mitigates the Initial Impact of Rate Realignment

Three-Year Market Transition Plan
Summary of AEP Ohio ESP Generation Rate Changes

CSP Current Customer Class	CSP New Customer Class	2012 Increase	2013 Increase	2014 Increase	Total Increase

AEP Ohio		1.4%	2.7%	0.0%	4.2%

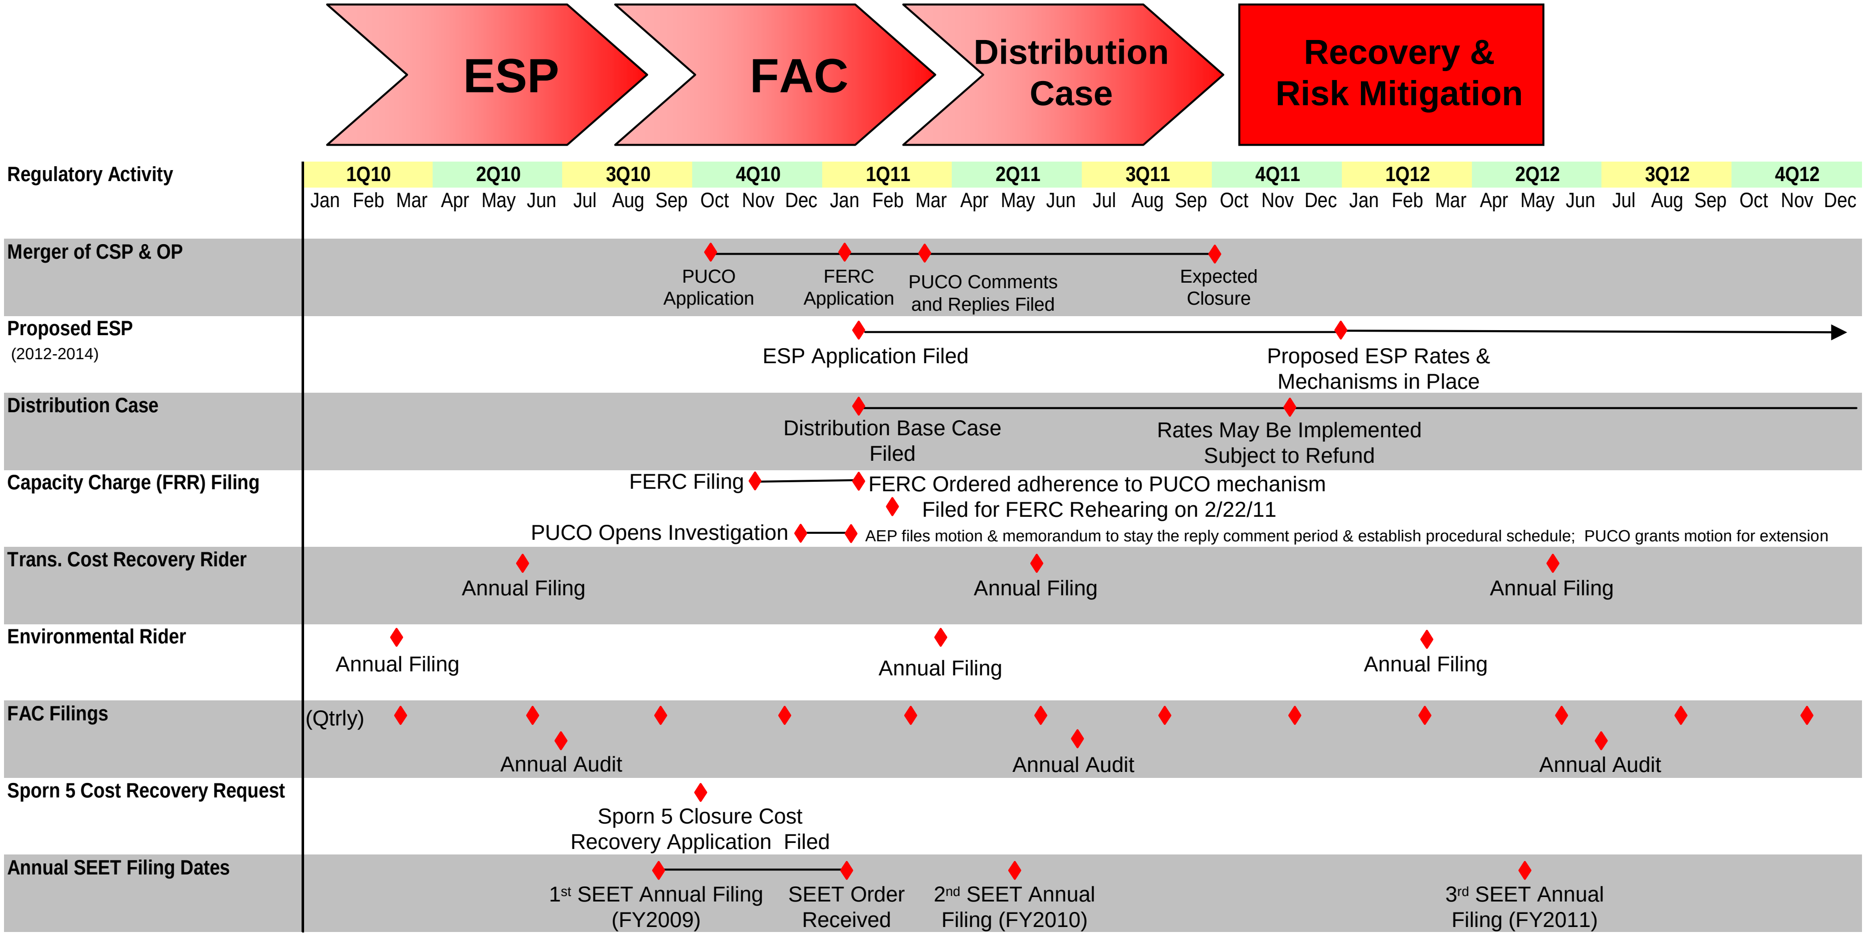
Illustration of Market Transition Rider on ESP Generation Rate Increases

The Market Transition Rider is a transition rider designed to facilitate the transition from AEP Ohio's current rates to market-based SSO Generation Service rates. It is a non-bypassable rider designed to limit the first and second year changes for any customer classes to uniformly transition any above or below average changes in three steps. Any revenue shortfall that is produced by limiting the increases for certain customer classes is collected from those classes whose decreases are limited.

List of ESP Riders – Existing and Proposed

Line	Rate Mechanism	Abbreviation	Bypassable	Distribution	Notes
1	**Current Riders**				
2	Universal Service Fund Rider	USF	--	Yes	
3	Advanced Energy Fund Rider	AEF	--	Yes	Expired 12/31/2010
4	kWh Tax Rider	kWh Tax	--		May be self-assessed under specific terms
5	Provider of Last Resort Charge	POLR	No		Option to avoid under specific terms
6	Monongahela Power Litigation Termination Rider	Mon Power	--	Yes	Expires once amount collected
7	Transmission Cost Recovery Rider	TCRR	Yes		
8	Fuel Adjustment Clause Rider	FAC	Yes		
9	Energy Efficiency and Peak Demand Reduction Cost Recovery Rider	EE/PDR	--	Yes	
10	Economic Development Cost Recovery Rider	EDR	--	Yes	
11	Enhanced Service Reliability Rider	ESRR	--	Yes	
12	gridSMART® Rider	gridSMART®	--	Yes	
13	Environmental Investment Carrying Cost Rider	EICCR	No		the current bypassable rider is proposed to be nonbypassable in the new ESP
14					
15	**Proposed Riders**				
16	Standard Offer Generation Service Rider	GSR	Yes		Relocation of base generation rates
17	Generation Resource Rider	GRR	No		Capital/solar investment
18	Alternative Energy Rider	AER	Yes		Relocation of RECs from FAC
19	Phase-In Recovery Rider	PIRR	--	Yes	Previous ESP deferrals, possibility of securitization
20	Distribution Investment Rider	DIR	--	Yes	
21	Market Transition Rider	MTR	--	Yes	
22	Generation NERC Compliance Cost Recovery Rider	NERCR	No		
23	Facility Closure Cost Recovery Rider	FCCR	No		
24	Carbon Capture and Sequestration Rider	CCSR	No		
25					
26	**Other Provisions**				
27	Green Power Portfolio Rider	GPPR	--		Voluntary
28	Rate Security Rider	RSR	--		Voluntary
29	Plug-In Electric Vehicle Tariff / Costs	PEV	--	Yes	Voluntary, Deferral of Costs
30	Emergency Curtailable Service Rider	ECS	--		Voluntary, pending
31	Storm Damage Recovery Mechanism		--	Yes	Reconciliation of storm experience to funding level
32	Pool Termination or Modification Provision		Yes		
33	PIPP Uncollectibles	PIPP	--	Yes	

Ohio Timeline



AEP Ohio's long-term strategy is designed to produce rate relief for items currently known as well as anticipated future items. The filings and riders we seek today are designed to be broad and flexible enough to accommodate a variety of circumstances, because it is impossible to know all variables and specific items for which we will desire to seek rate relief or what regulatory circumstances will prevail at the time.

Transmission Investment Strategy

- **Near-Term Investment** – Electric Transmission Texas (ETT) secures near term investment opportunities, allowing AEP to invest in the large, growth-oriented Texas transmission market. Total project cost of $3 billion with a 9.96% ROE.

- **Mid-Term Investment** – Seven wholly-owned transcos allow for expansion and growth within AEP's existing utility footprint through an efficient recovery mechanism. Will spend $160 million in 2011 and more than $350 million in 2012. Expected ROE is in the 11.20%-11.49% range.

- **Long-Term Investment** – Joint ventures provide opportunities for longer-term growth outside of AEP's existing utility footprint with forward looking formula rates, higher ROEs and FERC incentives, and mitigated risk profiles.

Transmission has a diversified investment approach that positions it as one of the key AEP growth businesses.

Texas Transmission Growth Strategy : Near Term Investment

Ownership Structure: 50/50 (AEP/MidAmerican Energy Holding Company)

Total Project Cost: Over $3 Billion

Growing Rate Base:

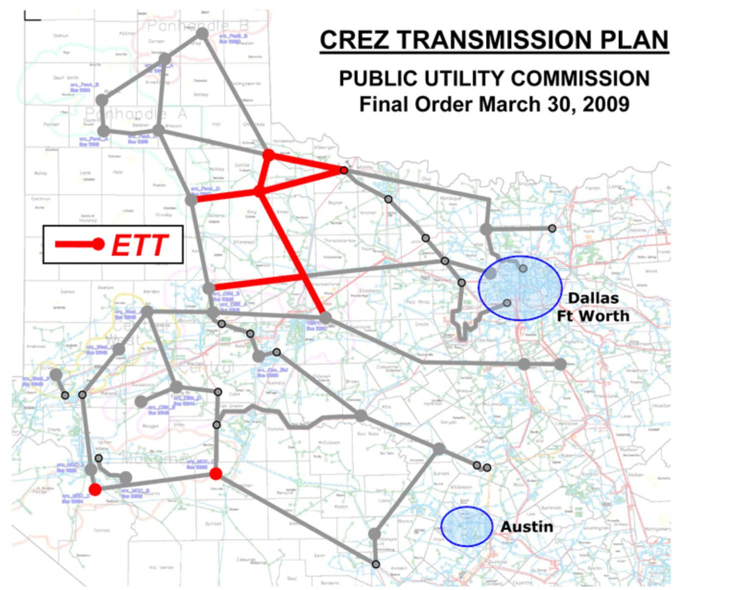
Current rate base is $412 million; expected to grow as follows:

2011: $473 million
2012: $778 million
2013: $1,352 million

ETT Electric Transmission Texas

Interim TCOS filings twice per calendar year

Approved ROE: 9.96%



- **<u>Additional Projects in the Pipeline ~$1.6 B:</u>**
  - Approximately 822 miles of lines and 28 substations with in-service dates through 2017

- **<u>Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.1 B:</u>**
  - Seven double-circuit 345kV transmission lines (~$750 M), eight major 345kV stations and several series compensation installations (~$350 M)
  - PUCT Certificate of Convenience and Necessity (CCN) proceedings underway

Transco Update

Filing Status Update:

- ***Ohio*** *(filed and approved)* – PUCO approved the Ohio Transco December 29, 2010
- ***West Virginia*** *(filed)* – Procedural schedule is set, with company testimony filed January 6; Intervenor's testimony is due April 6 and rebuttal is due April 20; Hearings in June
- ***Arkansas and Louisiana*** – Filing date in Arkansas likely early 2011
- ***Texas-SPP*** – Expecting TX filing in mid 2011
- ***Kentucky*** – Filing made February 4, 2011; Informal conference with staff held March 2, 2011
- ***Indiana*** – Filing made March 1, 2011; Pre-hearing conference March 28, 2011
- ***Virginia*** *(withdrawn)* – Filing withdrawn to give additional time to resolve issues with Staff
- ***Michigan and Oklahoma*** – Do not require state filing

$160M capital spend forecasted for 2011

Joint Venture Strategy: Long-term

- **Strategy**: JV's secure new investment opportunities with local utilities to diversify AEP's investment outside AEP's traditional footprint while providing longer-term incremental earnings**.** JV projects are well-suited for FERC formula rate recovery mechanism, including potential for incentive rates.

- **Future:** Federal/regional initiatives may accelerate expansion of EHV transmission (e.g. cap-and-trade, renewable portfolio standards, inter-region wide planning). Securing first mover advantage will enable AEP to secure LT investment opportunities.

- **Future flexibility**: Passive investment opportunities can be considered and can provide entry beyond SPP/PJM/ERCOT

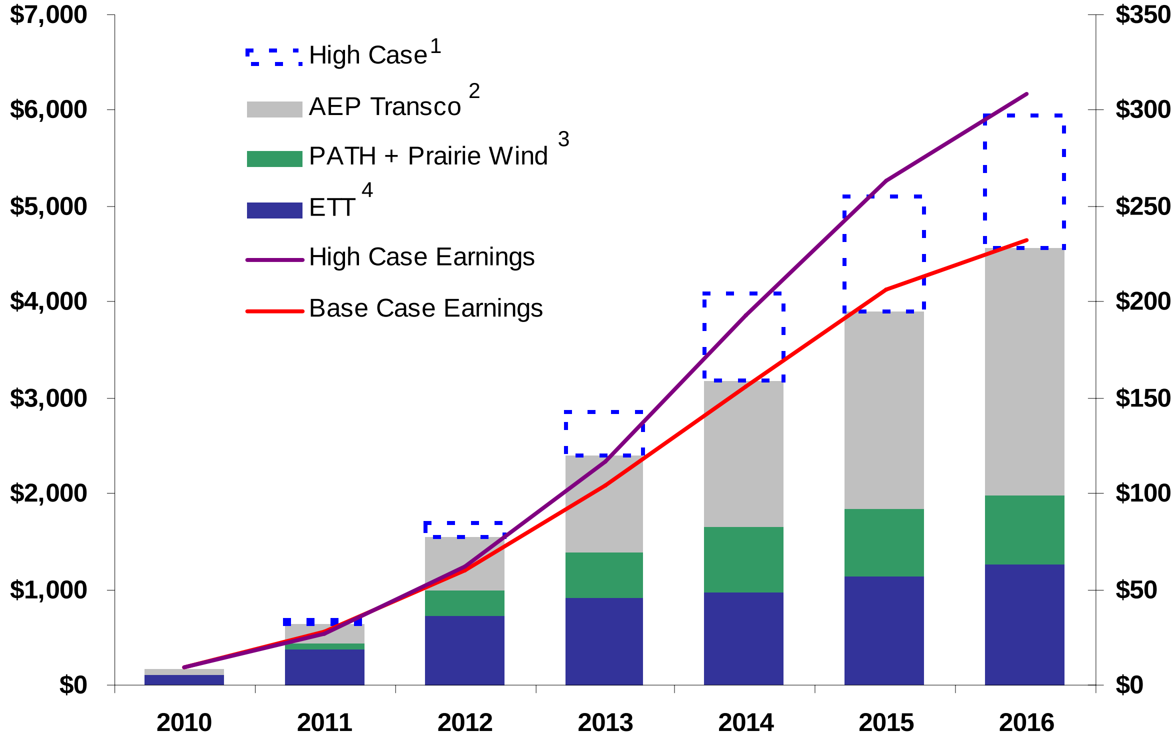
Transmission (Transco/JV's) – Capital/Earnings Profile

Transco and JV's have the potential to significantly add earnings growth to AEP.

Cumulative Capital Spending, After Ownership Division ($M)

Annual Earnings Potential ($M) [5]



1 High Case includes: Pioneer (50% ownership), Prairie Wind at 765kV (25% ownership), Tallgrass at 765kv (25% ownership) and other future opportunities

2 AEP Transco (100% ownership) includes spending in OH, MI & OK only through 2011 and in other jurisdictions for 2012 and beyond

3 PATH (50% ownership) assumes an in-service date of 2015 and Prairie Wind (25% ownership) assumed at 345kV

4 ETT (50% ownership) includes CREZ and additional projects

5 Projection of earnings potential at the transmission holding company level assuming 50/50 debt/equity capitalization and ROE of 12-13% for FERC projects; 60/40 debt/equity capitalization and 10.25% ROE (2011 forward) for ERCOT projects; and 50/50 debt/equity capitalization and ROE of 11.2-11.49% for Transco projects

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants including our ability to restore Indiana Michigan Power Company's Donald C. Cook Nuclear Plant Unit 1 in a timely manner; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity and transmission lines (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary or deflationary interest rate trends; volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impacting our ability to finance new capital projects and refinance existing debt at attractive rates; the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurred cots and recovery is long and the costs are material; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

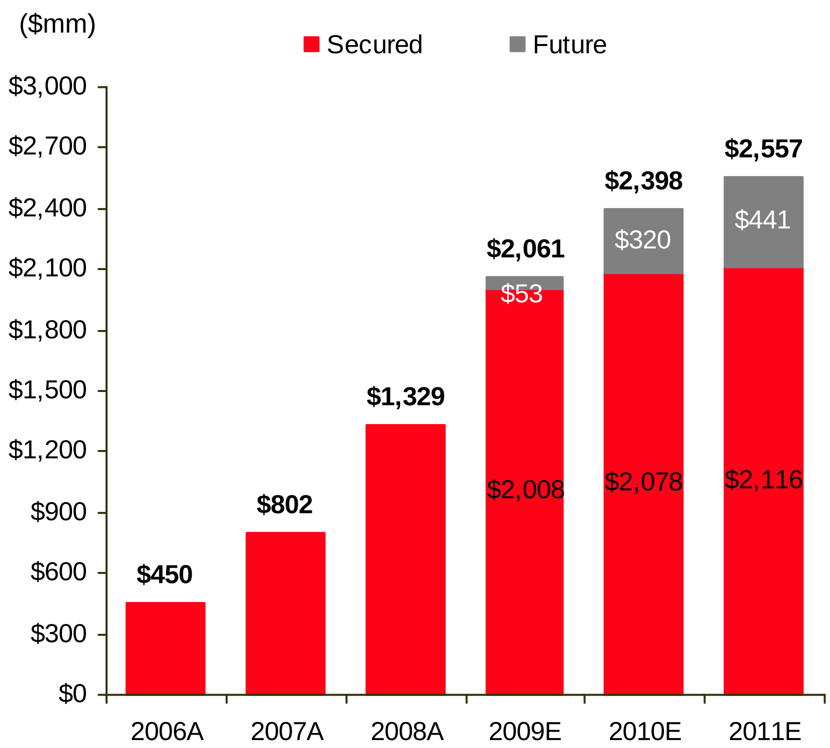
AEP AMERICAN ELECTRIC POWER

Track Record of Successful Regulatory Outcomes

Cumulative Rate Relief



Annual rate increases, $mm	$450	$352	$527	$732	$337[1]	$159[1]

[1] $70mm and $38mm was secured for 2010 and 2011, respectively, as of March 31, 2009

Our Regulatory Approach:

Maximize utility company returns:

- Successfully secured significant rate relief
- 2009 rate relief:
  - ✓ Ohio ($455MM)
  - ✓ I&M ($52MM)
  - ✓ APCo ($58MM)
  - ✓ PSO ($74MM)
- Pending rate relief including amount requested:
  - ✓ APCo WV ($25MM – in ENEC filing)
  - ✓ SWEPCo ($56MM)
  - ✓ Texas ($7MM)
- Anticipated filings:
  - APCo VA and others to be determined

Minimize regulatory lag:

- Active fuel adjustment clauses now in place in <u>all</u> jurisdictions
- Increased frequency of rate cases
- Employing tracking features

Strong local relationships with regulators

- Revenue increases:

	2009	2010	2011
OPCo	8%	7%	8%
CSPCo	7%	6%	6%

- Fuel recovery mechanism
  - Any under-recoveries earn WACC similar to plant investment
  - Deferred fuel balances at end of ESP are amortized and recovered 2012-2018
  - Recovery of future costs of carbon regulation explicitly included in FAC
- Opportunity for distribution rate cases

Summary Rate Case Information

SWEPCo Arkansas General Rate Case

On February 19, 2009 SWEPCo filed a general base rate case with the Arkansas Public Service Commission (APSC) requesting an increase of $53.9 million. (Docket #:09-008-U). An order is expected in December 2009.

Projected Capital Structure – Company Position (12/31/08)

	% of Capitalization	Cost Rate	Weighted Return
Long-Term Debt	41.73%	6.61%	2.76%
Preferred Stock	0.12%	4.87%	0.01%
Common Equity	35.68%	11.50%	4.10%
Other Items	22.47%	various	0.13%
Total	100%		7.00%

Procedural Schedule

6/26/2009	Staff and intervenor testimony due
7/24/2009	Rebuttal testimony due
8/18/2009	Staff and intervenor rebuttal testimony due
8/25/2009	Surrebuttal testimony due
10/20/2009	Public hearing commences

Required Rate Relief – Company Position (12/31/08)

($ in millions)

Adjusted Rate Base	$	608.9	*
Required Rate of Return		7.00%	
Required Operating Income	$	42.6	
Adjusted Operating Income	$	27.3	
Difference	$	15.3	
Revenue Conversion Factor		1.65	
Revenue Deficiency	$	25.2	
Generation Recovery Rider	$	28.7	
Total Required Rate Relief	$	53.9	

*Rate base as of December 31, 2008, updated for known and measurable changes through December 31, 2009.

AEP AMERICAN ELECTRIC POWER

Energy Policy Initiatives are Core to Our Strategy

Greenhouse Gas Reduction & Regulation

- Actively engaging in CO_2 policy debate – support cap & trade with <u>allocated</u> credits
- Leadership position in development of carbon capture and storage technology
- Reducing carbon footprint via offsets and other measures
- Founding member of Chicago Climate Exchange

Renewable Energy

- Develop "transmission superhighway" to facilitate renewable energy projects
- Satisfy RES requirements in our jurisdictions
- Add 2,000MW of wind capacity via long-term PPAs – 903MW achieved to-date

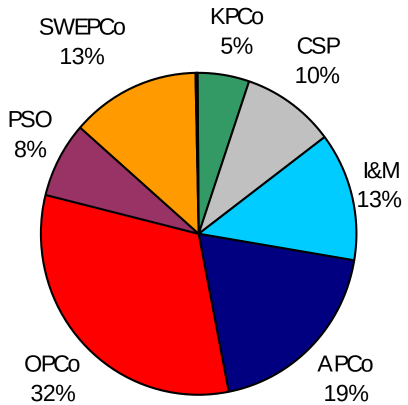
Energy Efficiency, Security & Reliability

- Develop high-voltage transmission projects to strengthen America's power grid
- Build generation to ensure reliable supply
- Reduce 1,000MW of demand by 2012
- Reduce 2.25 million MWhs of consumption by 2012
- Diversify our fuel mix; have added 3,705MW of gas-fired capacity since 2005 and have 1,080MW under construction

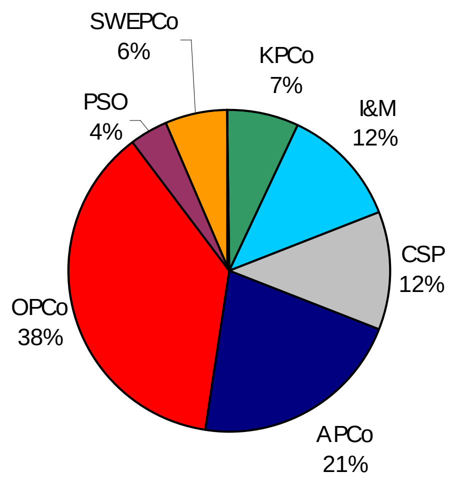
AEP AMERICAN ELECTRIC POWER

CO_2 Cost Recovery – Should Follow SO_2 & NOx

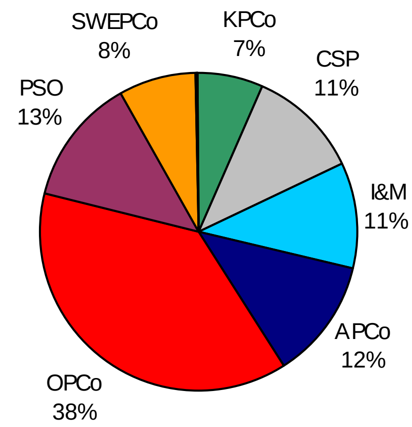
2008 AEP System CO_2 Emissions
163M tons



2008 AEP System SO_2 Emissions
637k tons



2008 AEP System NOx Emissions
248k tons



- 100% of SO_2 and NOx allowance costs currently recovered through tracker or similar mechanisms
- Prudently incurred costs associated with carbon-based taxes and other carbon-related regulations explicitly included in Ohio Fuel Adjustment Clause

AEP AMERICAN ELECTRIC POWER

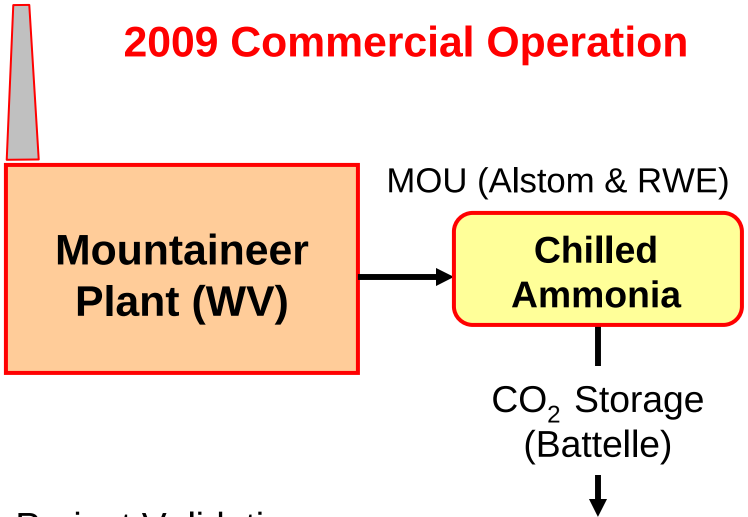
AEP AMERICAN ELECTRIC POWER

Carbon Capture & Storage

2009 Commercial Operation



<u>Project Validation</u>

- **Alstom "Chilled Ammonia" Technology**
- **20-30 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, under construction at WE Energies)**
- **Located at the AEP Mountaineer Plant in WV**
- **100,000 - 300,000 tonnes CO_2 per year**
- **In operation 3Q 2009**
- **Geologic storage for CO_2**

<u>Represents Post-Combustion Capture</u>

- **Conventional or Advanced Amines; Chilled Ammonia**
  - **Amine technologies are currently available in other industrial applications**
  - **Relatively low CO_2 concentration in flue gas - more difficult to capture than other approaches**
  - **High parasitic demand**
    - **Conventional Amine ~ 25-30%**
    - **Chilled Ammonia target ~ 10-15%**

<u>Key Issues for CCS Development in the U.S.</u>

- **Overcoming the 'economic' hurdle**
- **High up-front capital investment**
- **Commercial demonstration at large coal-fired power plants**
- **National standards for permitting of storage reservoirs**
- **Potential institutional, legal and regulatory barriers to carbon storage**

AEP AMERICAN ELECTRIC POWER

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
AEG	Dresden	Ohio	$322 MM	Gas	Combined-cycle	580	2013
SWEPCo	Stall	Louisiana	$385 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.6 B (1)	Coal	Ultra-supercritical	600 (1)	2012

(1) SWEPCo will own approximately 73%, or 438 megawatts, totaling about $1.2 billion in capital investment.

- Turk – AEP self-reported impacts to jurisdictional wetlands in March 2009. Work continues outside the jurisdictional areas. Hearing on the air permit appeal is scheduled for June 2009.
- Stall – Construction continues.
- Dresden – Construction suspended due to shifts in capital spending. Commercial operation date has been projected for 2013 (previously 2010).

DC Cook Unit 1 Update

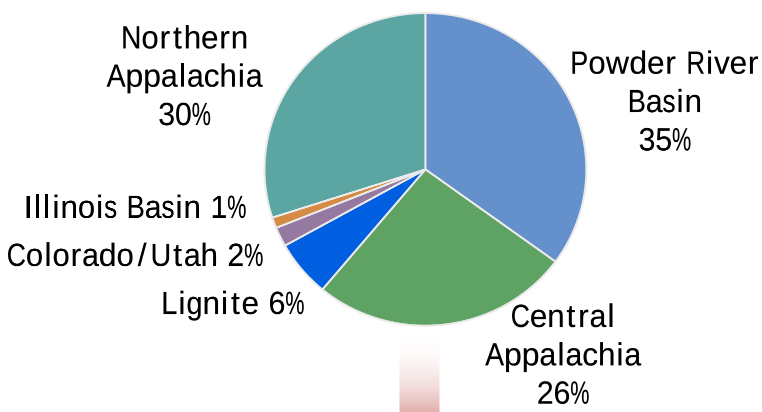
- Previously identified technical challenges have solutions
  - Low pressure turbine rotors have been straightened
  - Foundation repair work is in progress and is the critical path
  - Generator and high pressure turbine repair work supports the critical path
- The unit is scheduled to return to service in the fourth quarter of 2009
  - The unit will operate without the last stage blades at 30 MW (summer) to 100 MW (winter) reduced capacity
- Root cause: “A blade-rotor system design that failed to provide adequate stress margin”
  - The root cause also found no operational or installation issues
- The replacement rotors are scheduled for installation in the spring of 2011
  - Different design with several years of fault-free commercial operation.
- We continue to receive $3.5MM per week from the accidental outage policy
  - Insurance proceeds are reflected as other operating revenue; During 1Q09, approximately 40% of the insurance payments ($20MM) were used to offset increased fuel costs to customers

AEP AMERICAN ELECTRIC POWER

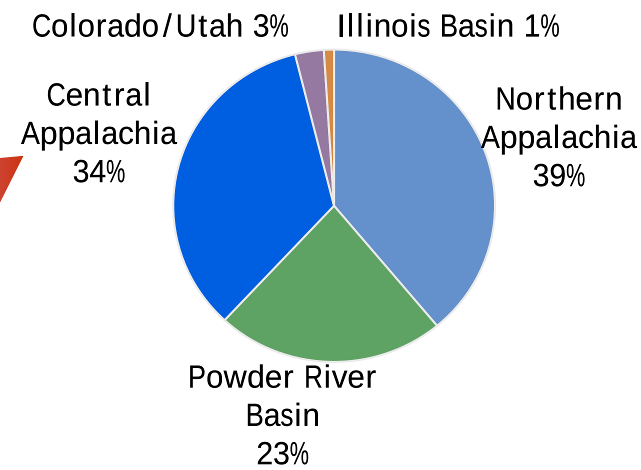
Coal Procurement - 2009 Projected

AEP burns approx. 77 million tons of coal per year

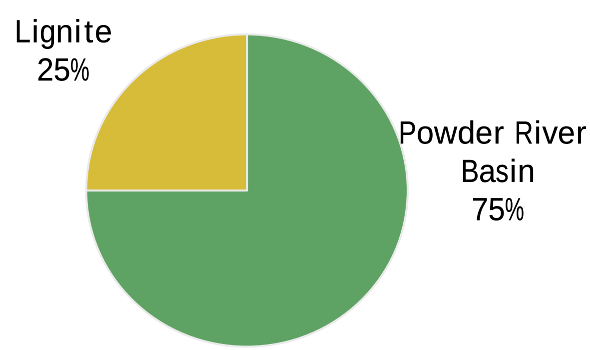
Total AEP System



AEP East



AEP West



Coal Stats:

- 98% contracted for 2009
- Avg. delivered price ~ $46.61/ton in 2008
- Approximate 12% price increase in 2009 ~ $52.00/ton

AEP AMERICAN ELECTRIC POWER

p.14

Uniquely Positioned for Nationwide Grid Expansion

Active Projects:

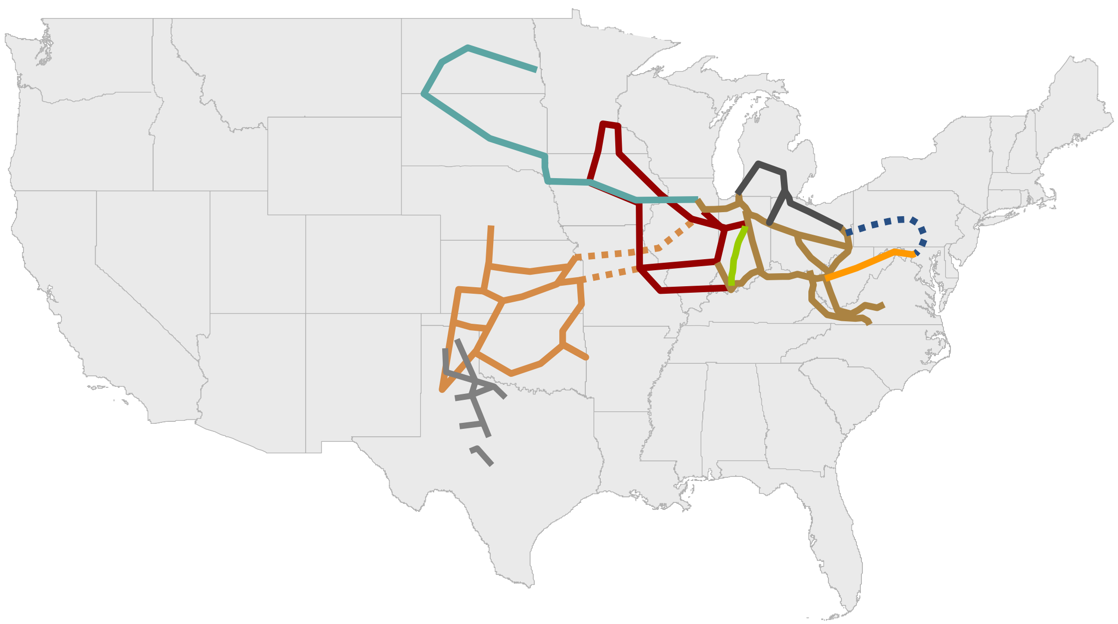
Pioneer	COD: 2015
240 miles of 765 kV	
Partner: Duke Energy (50%)	
Estimated Cost: $1 billion	
ROE: 12.54%	

PATH-WV	COD: 2014
275 miles of 765 kV	
Partner: Allegheny Energy (50%)	
Estimated Cost: $1.2 billion	
ROE: 14.3%	

Tallgrass	COD: 2013-14
170 miles of 765 kV	
Partners: OG&E (50%) & MidAmerican Energy (25%)	
Estimated Cost: $500 million	
ROE: 12.8%	

Prairie Wind	COD: 2013-14
230 miles of 765 kV	
Partners: Westar Energy (50%) & MidAmerican Energy (25%)	
Estimated Cost: $600 million	
ROE: 12.8%	

ETT	COD: 2013
345 kV in ERCOT	
Partner: MidAmerican Energy (50%)	
Estimated Cost: $400 million	
ROE: 9.96%	



Future Projects:

EHV Michigan	COD: ~2020
700 miles of 765 kV	
Partner: ITC	

PJM Projects	
Enhance existing 765/345 kV	

Hartland	COD: ~2020

Partner: Hartland Wind LLC	

MISO Vision Plan	
765 kV Backbone	

SPP Overlay	COD: 2013-14
765 kV Backbone	

ETT	COD: ~2018
345 kV in ERCOT	
Additional CREZ spend of $750-$850 million	

AEP AMERICAN ELECTRIC POWER

Note: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

Equity Contributions Enhance Earnings Growth to 4 – 8%

AEP is the leader

- Largest US transmission footprint
- Interstate EHV highway vision
- National renewables transmission strategy

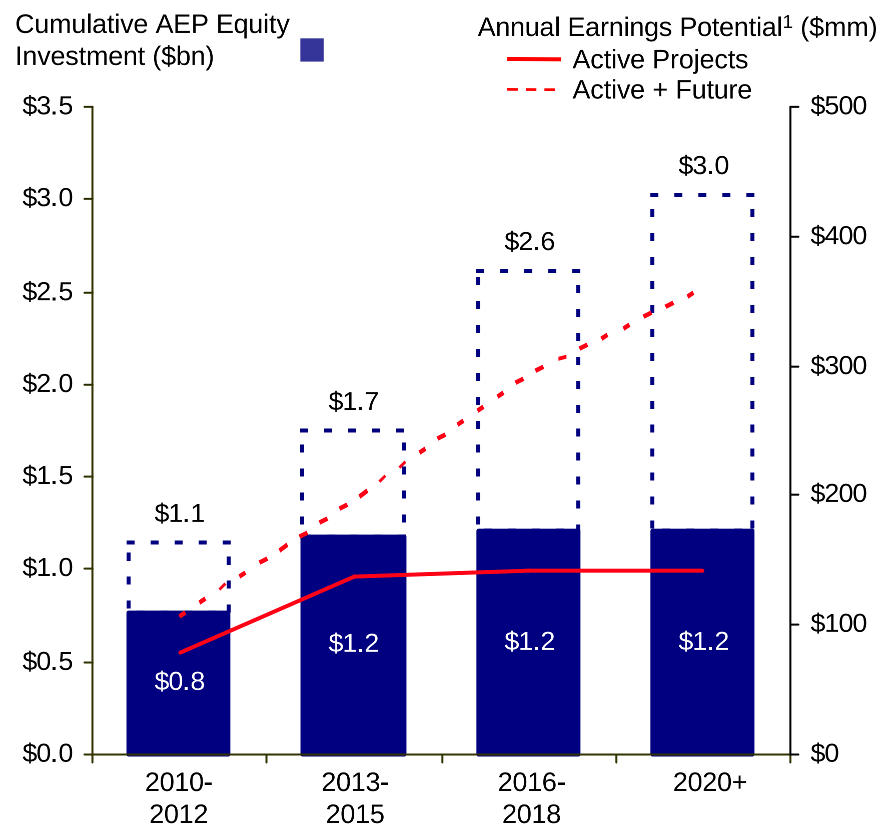
Quality projects

- 4 FERC-approved ($3.3 billion)
- Independent ERCOT transmission JV company (up to $2.6 billion)
- Robust pipeline of future 765 kV projects (up to $15 billion)

Attractive returns

- FERC incentive rates (12.5-14.3%)
- Strong cash flow with CWIP
- Long-term earnings potential of ~$140-$360 million annually[1]

Illustrative Earnings Potential of New Transmission Initiatives



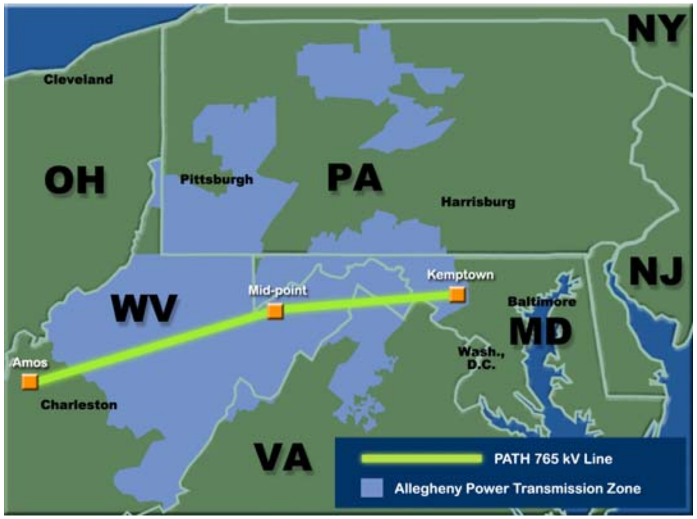
[1] *Illustrative calculation assumes 50/50 debt/equity capitalization and incentive ROE of ~13.0% for FERC projects and a 60/40 debt/equity capitalization and 10.5% ROE for ERCOT projects*

AEP AMERICAN ELECTRIC POWER

EHV Transmission in PJM: PATH

Project Description: 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

- **Near Term Risks**
  - Obtaining a CPCN in West Virginia or costly concessions with WV to receive the CPCN
- **Pertinent Data**
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP and 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
    - Rates went into effect March 1, 2008; current annual revenue requirement is $15MM effective 1/1/09
  - Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million
  - Estimated completion date: 2014



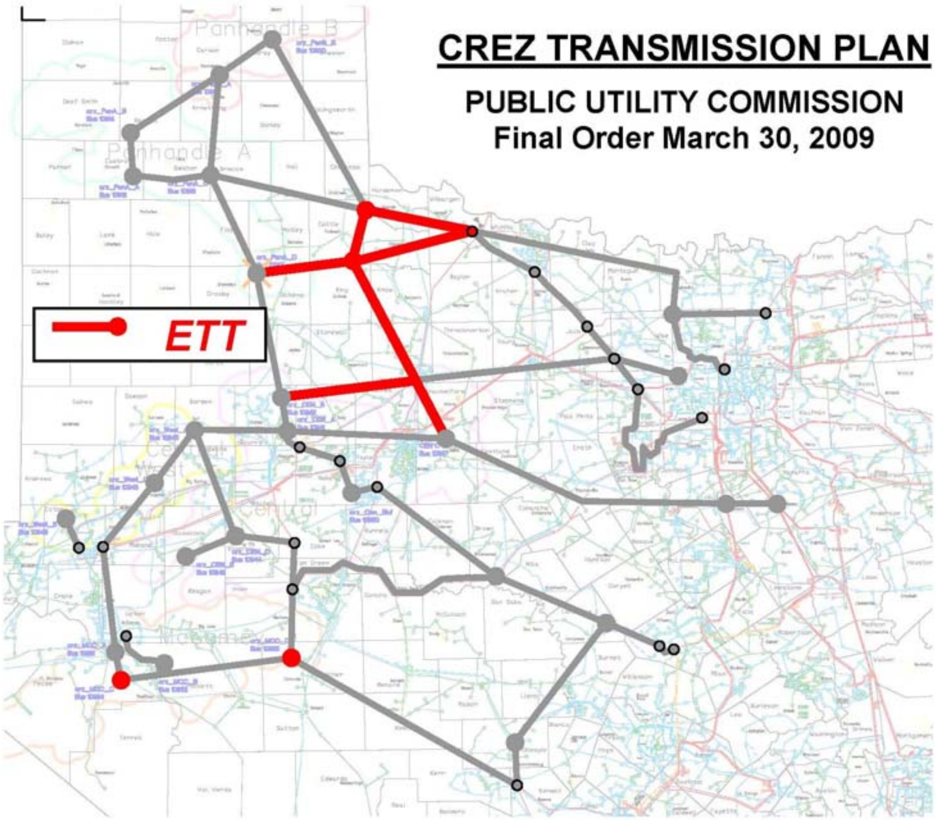
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AMERICAN ELECTRIC POWER

Texas CREZ Project

Strengthening the ERCOT grid to collect and deliver wind generation to load

- ***Status:***
  - On February 26, 2009, PUCT ordered its staff to stage the development of CREZ transmission lines.
  - Staging to occur in separate docket and consider timing of wind projects and congestion.
  - PUCT established 2 categories based on priorities. ETT has no first priority lines.
  - PUCT issued a final order assigning transmission service providers on March 30, 2009.
  - ETT's share of CREZ investment is approx. $840MM of $4.9B total.
  - The filing calls for completion of the plan by 2013.
- ***Next Steps***
  - Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in early 2010.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

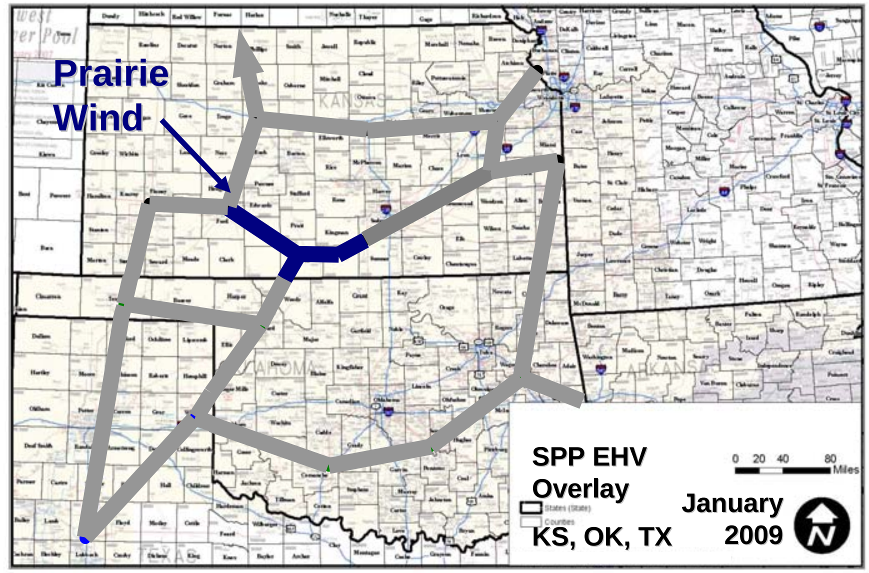
AEP AMERICAN ELECTRIC POWER

Electric Transmission Texas

Prairie Wind Transmission, LLC

JV to build first segment of 765-kV transmission in SPP

- ***Overview***
  - In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
  - PWT is a 50/50 JV that is proposing to build approximately 230 miles of 765-kV lines extending from Wichita, KS, west to a substation northeast of Dodge City, KS, and then south to the Kansas border from Medicine Lodge, KS.
  - The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
  - Project is expected to cost approximately $600 million (based on SPP estimates) and be in-service by 2013.
  - AEP's ownership of the joint venture is 25%.
  - Kansas CPC filing submitted in May 2008.
  - FERC order received in December 2008:
    - Cash return on CWIP and 12.8% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PWT or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

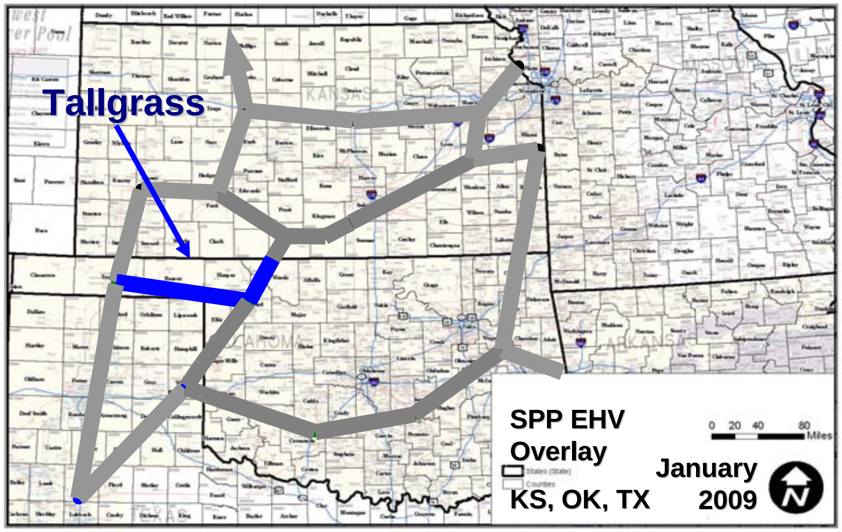
- ***Key Challenges***
  - Cost allocation which enables the development of "system solutions"
  - RTO Approval
  - Competing ITC Great Plains project

Tallgrass Transmission, LLC

JV to build second segment of 765-kV transmission in SPP

Overview

- In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
- TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines extending from the Kansas-Oklahoma border north of Woodward, OK, extending west into the Oklahoma panhandle to a new station that will be built near Guymon, OK.
- The project will promote wind development in the western half of Oklahoma.
- Project is expected to cost approximately $500 million and be in-service by 2013.
- AEP's ownership of the joint venture is 25%.
- Other responsibilities will be handled by the partners or outsourced.
- FERC order received in December 2008:
  - ❑ Cash return on CWIP and 12.8% incentive ROE
  - ❑ Recovery of all costs incurred prior to the time rates go into effect, and
  - ❑ Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of TG or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges

- Cost allocation which enables the development of "system solutions"
- RTO Approval

AMERICAN ELECTRIC POWER

Pioneer Transmission LLC

Overview

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
- The project will improve the reliability of the nation's transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, protect national security and expand opportunities for new generation, including renewables.
- Project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP's ownership of the joint venture is 50%.
- Other responsibilities will be handled by the partners or outsourced.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect, and
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PT or its parents.
  - Certain formula rate issues were set for hearing

Key Challenges

- Cost allocation which enables the development of "system solutions"
- RTO Approval - touches two RTOs – PJM & MISO
- Siting

AEP AMERICAN ELECTRIC POWER

Hartland Wind Concept EHV Development in Upper-Midwest

Project Description: 1000+ miles of 765-kV transmission linking Upper Midwest generation sources with the existing EHV infrastructure in the Chicago area expected to cost $5-$10 billion over a 10 year period.

- **Near Term Risks**
  - Technical feasibility study
  - Identification of willing and able partners
  - Obtaining cost allocation between states, PJM, and MISO
  - RTO Technical Approvals
  - Favorable 205 Order including 679 incentives
- **Mitigation**
  - Target the identified need for the project and its ability to provide access for wind energy to load centers
  - Collaboration in regulatory process for regional cost allocation between MISO, PJM, and Midwest Governors Association
  - Prepare comprehensive regulatory filing, including incentives

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP AMERICAN ELECTRIC POWER

Detailed Ongoing Earnings Guidance

2008A: $3.24/share

2009E: $2.75-$3.05/share

American Electric Power

AEP AMERICAN ELECTRIC POWER

AEP is a Compelling Investment

- Market leading assets and operations
- Attractive pipeline of growth capital opportunities
- Successful regulatory management supports earnings continuity
- Strengthened balance sheet, liquidity and credit profile
- Diversified earnings growth and attractive dividend

Norges Bank Office Visit
June 5, 2008

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate relief or other recovery for new investments, transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements periodically issued by accounting setting bodies; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

AMERICAN ELECTRIC POWER

Legislative Proposals Evaluated

Senate Bills Analyzed

- *Two bills within the Senate were analyzed:*
  - *Lieberman-Warner (L-W) - leading bill; may be voted on in June 2008*
  - *Bingaman-Specter (B-S) - introduced June 2007; "moderate" alternative to L-W*

- *Each bill is built on a similar platform:*
  - *Cap-and-Trade program covering multiple GHGs*
  - *Significant auction of allowances (increasing over time) to fund technology development, low-income price relief and other initiatives*
  - *Financial incentives and bonus allowances for Carbon Capture and Sequestration (CCS)*
  - *Include AEP-IBEW language on international linkage*

- *AEP publicly supports the Bingaman-Specter bill.*

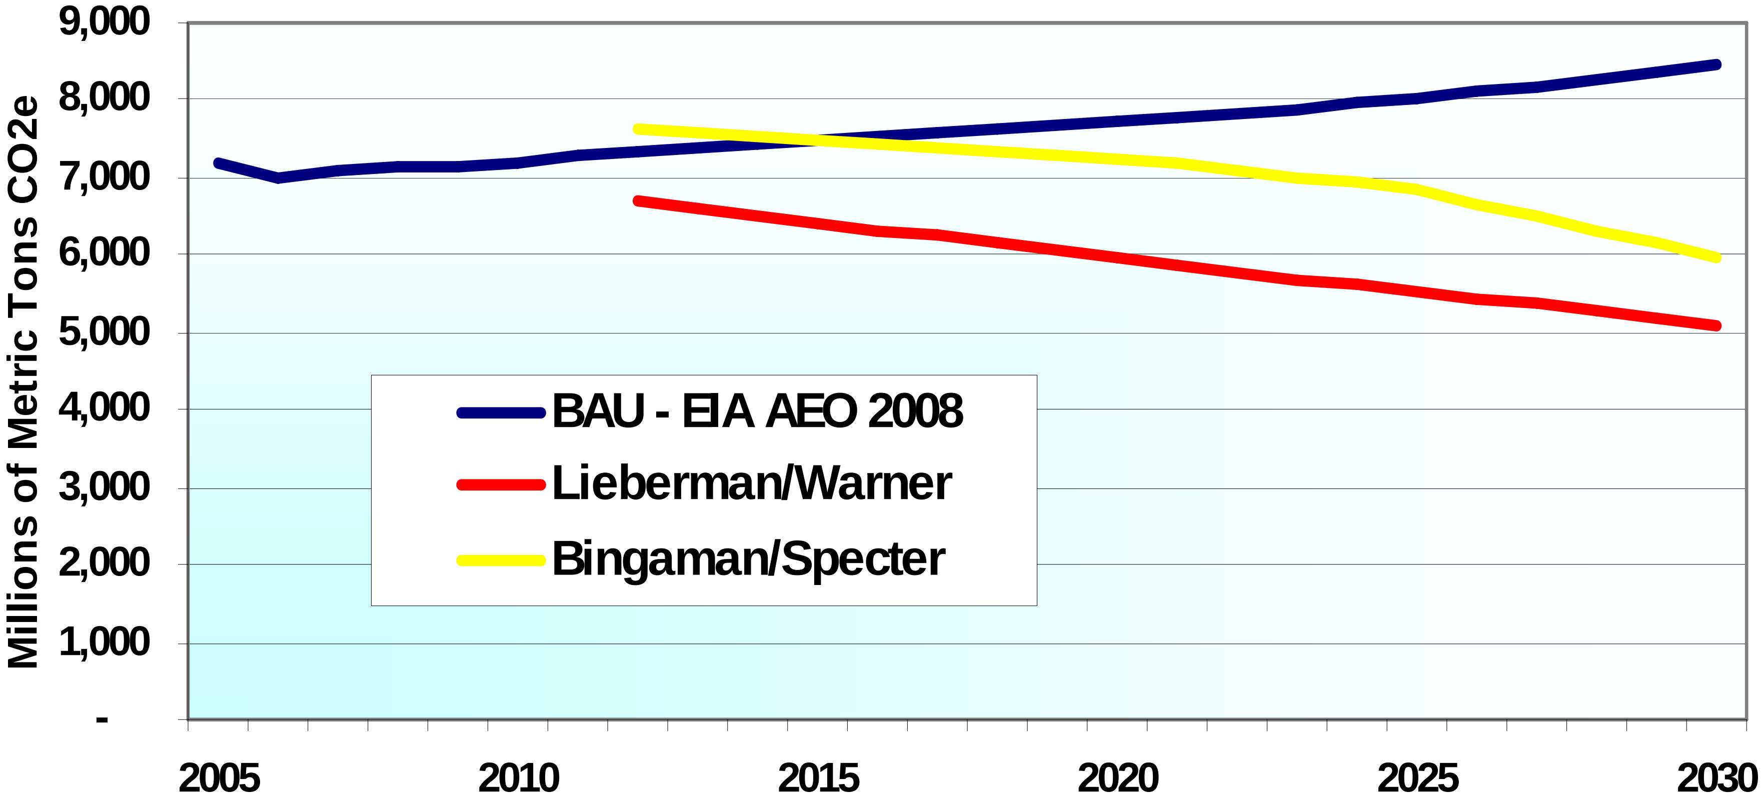
Bill Comparison

Key Provisions for AEP

	Bingaman-Specter (S. 1766) "The Low Carbon Economy Act of 2007"	Lieberman-Warner (S. 2191) "America's Climate Security Act of 2007"
GHG Emission Cap Levels	2012: 2012 levels (28% above 1990 levels) 2020: 2006 levels (17% above 1990 levels) 2030: cap equal to 1990 levels	2012: 2005 levels (16% above 1990 levels) 2020: 1990 levels 2030: 22% reduction from 1990 levels
Cost Containment	"Safety Valve" allowances can be bought at $12 per metric ton of CO_2 in 2012, rising annually by 5% in real terms.	No "Safety Valve." Regulated cos. can "borrow." "Carbon Market Efficiency Board" created to ensure efficient allowance market.
Offsets	Unlimited use of domestic offsets. Allows President to establish program for international offset development.	Domestic offsets limited to 15% of compliance obligation. No international offsets unless developing countries cap emissions (unlikely).
CCS Bonus Allowances	CCS (Carbon Capture and Sequestration) receive bonus allowances.	CCS (Carbon Capture and Sequestration) receive bonus allowances.
Allowance Allocation (AEP Share)	2012: 76% of AEP share of cap "allocated" 2020: 64% of AEP share of cap "allocated" 2030: 36% of AEP share of cap "allocated"	2012: 62% of AEP share of cap "allocated" 2020: 54% of AEP share of cap "allocated" 2030: 18%of AEP share of cap "allocated"

AEP AMERICAN ELECTRIC POWER

US GHG Emissions & Caps



AEP AMERICAN ELECTRIC POWER

Summary Findings

Modeling and Major Assumptions

- ***AEP utilized its proprietary Multi-Emissions Compliance Optimization (MECO) model to analyze the impacts of the two bills on AEP's emissions, costs and compliance investments between 2008-2030.***
- ***This model incorporates a wide variety of technology choices and off-system GHG reduction options in determining a least cost path in meeting the CO_2 reduction requirements of the bills. Major assumptions for fuel, capital and O&M costs for technology choices, and electricity demand is based on AEP's current Integrated Resource Plan (IRP).***
- ***Major assumptions specific to the bills include:***
  - ***Annual emission caps (based on AEP's pro-rata share of required reductions).***
  - ***Offsets (though no international offsets effectively allowed in Lieberman-Warner).***
  - ***Allocation of "free" allowances and CCS Bonus Allowances (based on bill specifics). The balance of allowances needed to meet the emission caps were assumed to be bought from the auction at estimated market prices.***
- ***Overall, AEP was assumed to be able to aggressively:***
  1. ***Deploy new CCS technology***
  2. ***Add large amounts of new wind and biomass***
  3. ***Develop offset projects at "cost" in meeting the caps***

For additional information on compliance options and major assumptions please refer to Caveats and Uncertainties on page 24.

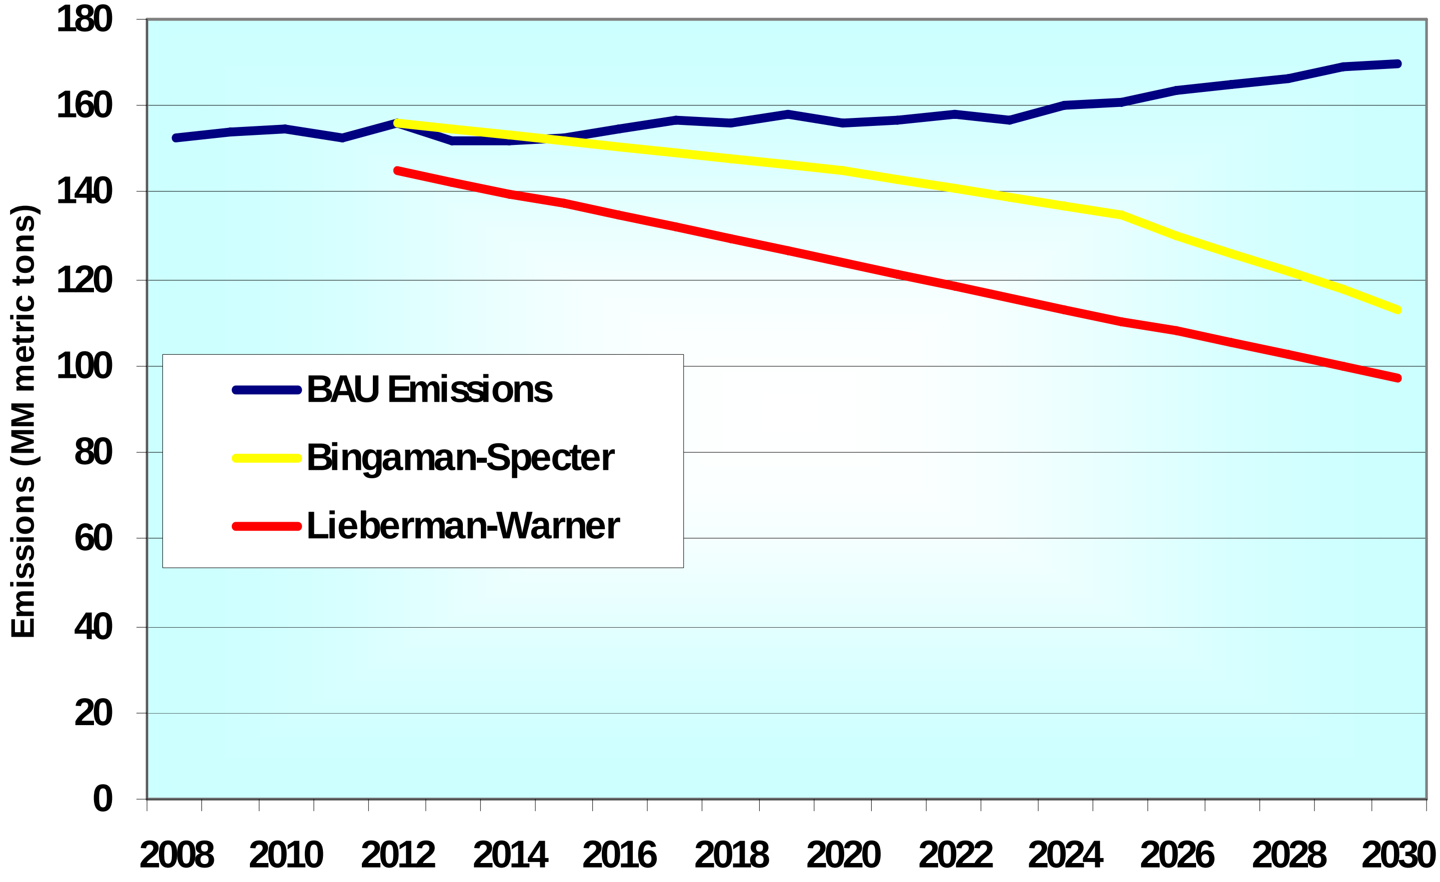
AEP AMERICAN ELECTRIC POWER

Summary Findings

- ***L-W requires AEP to reduce its CO_2 by 32 MM Tons (or more than 20%) by 2020. By 2030, reductions total 70 MM Tons or almost 50% below projected levels. In contrast, B-S requires about half the reductions as L-W during 2012-2030.***
- ***L-W is expected to cost more than double B-S given earlier and larger GHG reductions. Total NPV costs of L-W = $27 Billion; B-S = $10 Billion.***
- ***L-W will cost almost $4 billion annually by 2020 and more than $12 billion/yr by 2030. AEP customers will pay 24% more in electric rates by 2020, and 58% more by 2030. This will increase a typical residential bill by more than $800 per year.***
- ***Coal with CCS is projected to play a large role in abating emissions under either bill. By 2020, in both bills, AEP is projected to install 3 GW (5 large projects) of CCS. By 2030, 7.5 GW (about 12 large projects) are projected to be installed under L-W.***
- ***<u>About two-thirds</u> of the costs and rate impacts of the bills are due to projected allowances purchases from the auction, NOT from compliance investments. A sensible allocation program that provides allocations to utilities instead of auctions would avoid these unnecessary rate impacts.***

AEP AMERICAN® ELECTRIC POWER

AEP CO_2 Emissions & Caps



AEP AMERICAN® ELECTRIC POWER

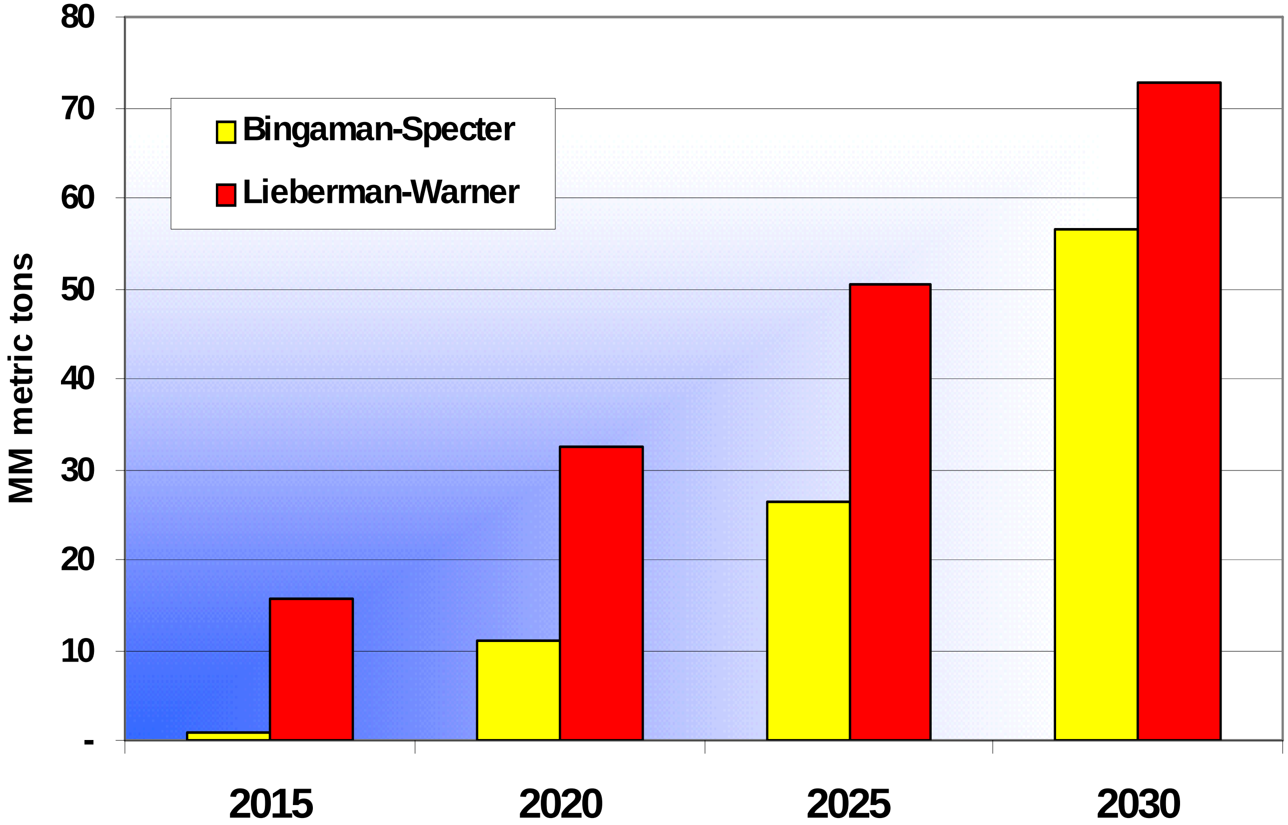
AEP CO_2 Emissions

- ***Despite continuing growth in demand for electric services, AEP's projected BAU emissions growth (e.g. without legislation) remains relatively flat between now and 2020. This reflects:***
  - ***End use energy efficiency due to AEP's gridSMART[SM] program and Federal standards under the most recent Energy Bill reducing system electricity demand growth to only ~0.8 % per year by 2020.***
  - ***Planned retirements of a number of older, less efficient coal fired units (5 GW or ~20% of AEP's total coal) between 2010 and 2023.***
  - ***AEP's voluntary commitment to reduce its CO_2 emissions by 5 MM Tons per year by 2011. This includes addition of 1000 MW of wind, continuing improvement in supply efficiency, emission offset projects and forestry.***

AEP AMERICAN® ELECTRIC POWER

AEP Annual Emission Reductions

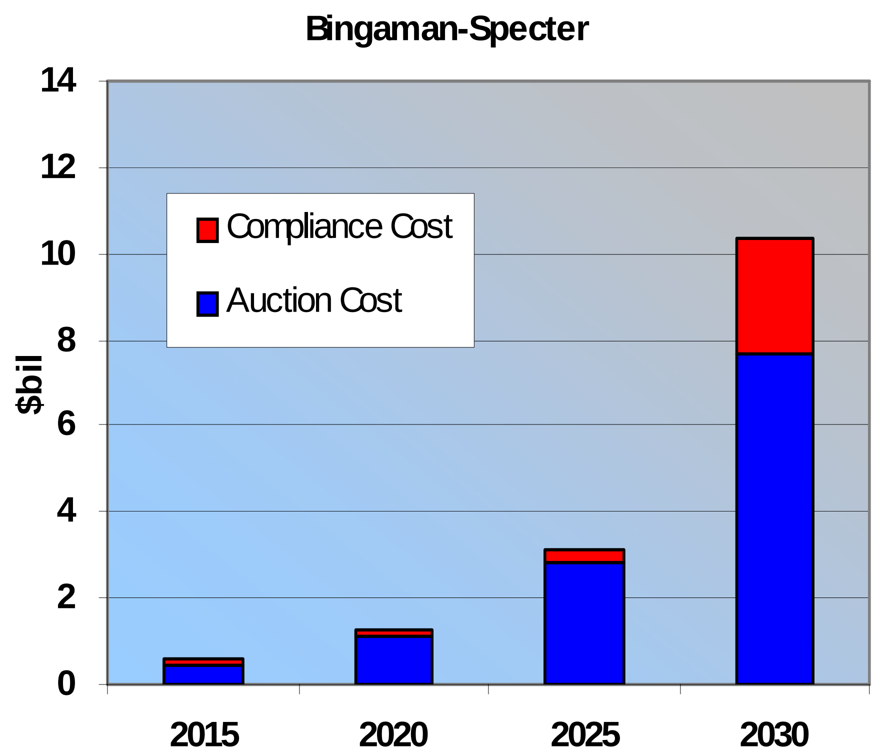
Based on current BAU projections

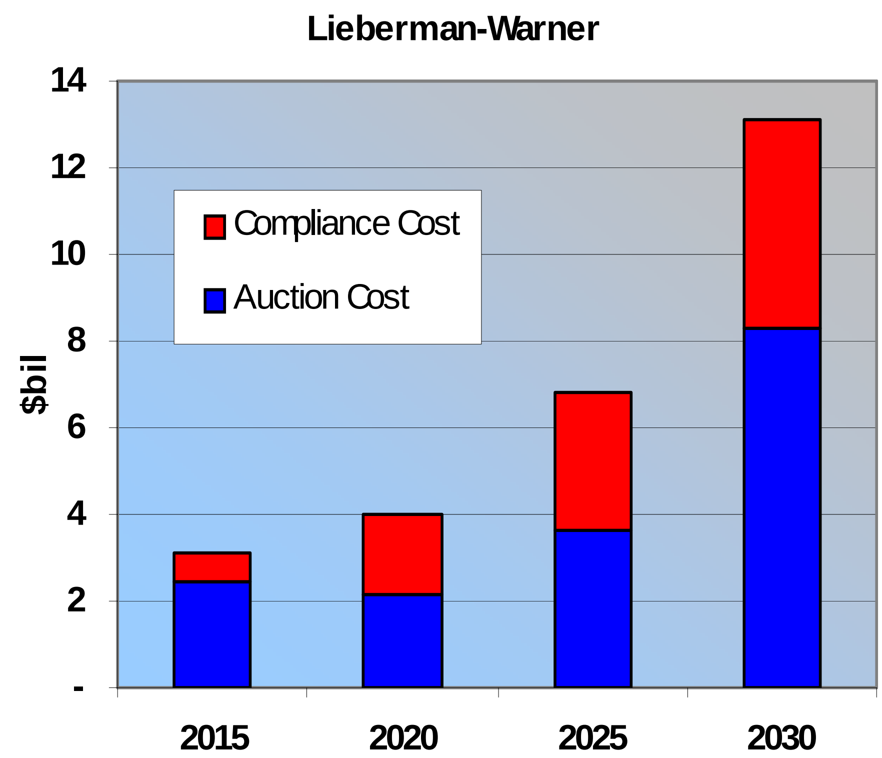


AEP is required to reduce emissions more substantially and sooner under L-W than B-S, with three times the reductions in 2020 and twice the reductions in 2025.

AEP AMERICAN ELECTRIC POWER

Annual AEP Cost Increases

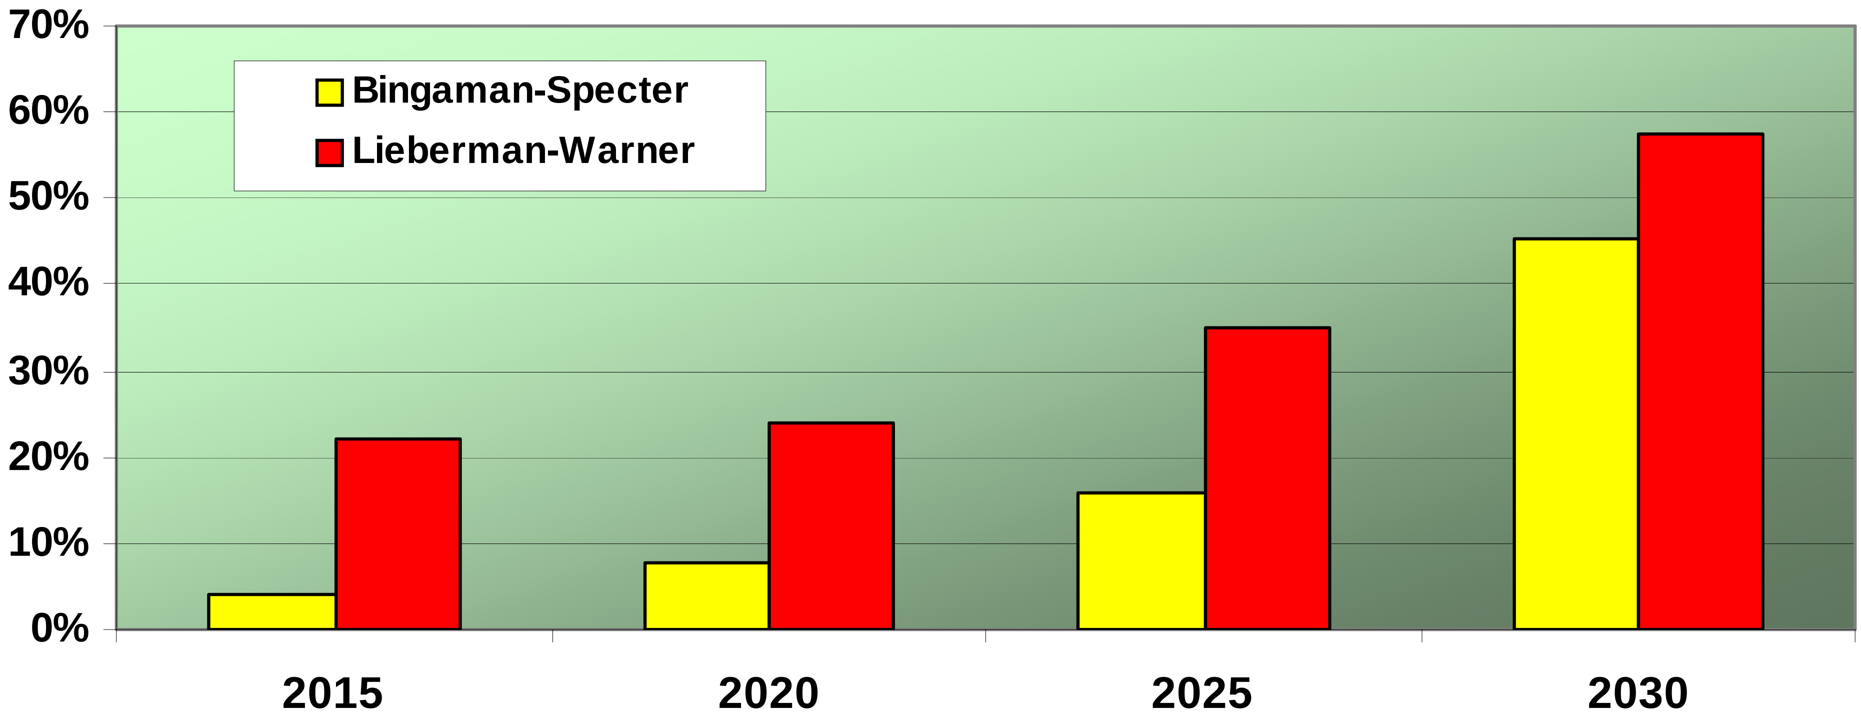




Consistent with the greater CO_2 reductions, the cost impacts of Lieberman-Warner are much greater, particularly during 2015-2025 than Bingaman-Specter. Auction purchases account for more than two-thirds of total costs.

AEP Average "Levelized" Rate Increase

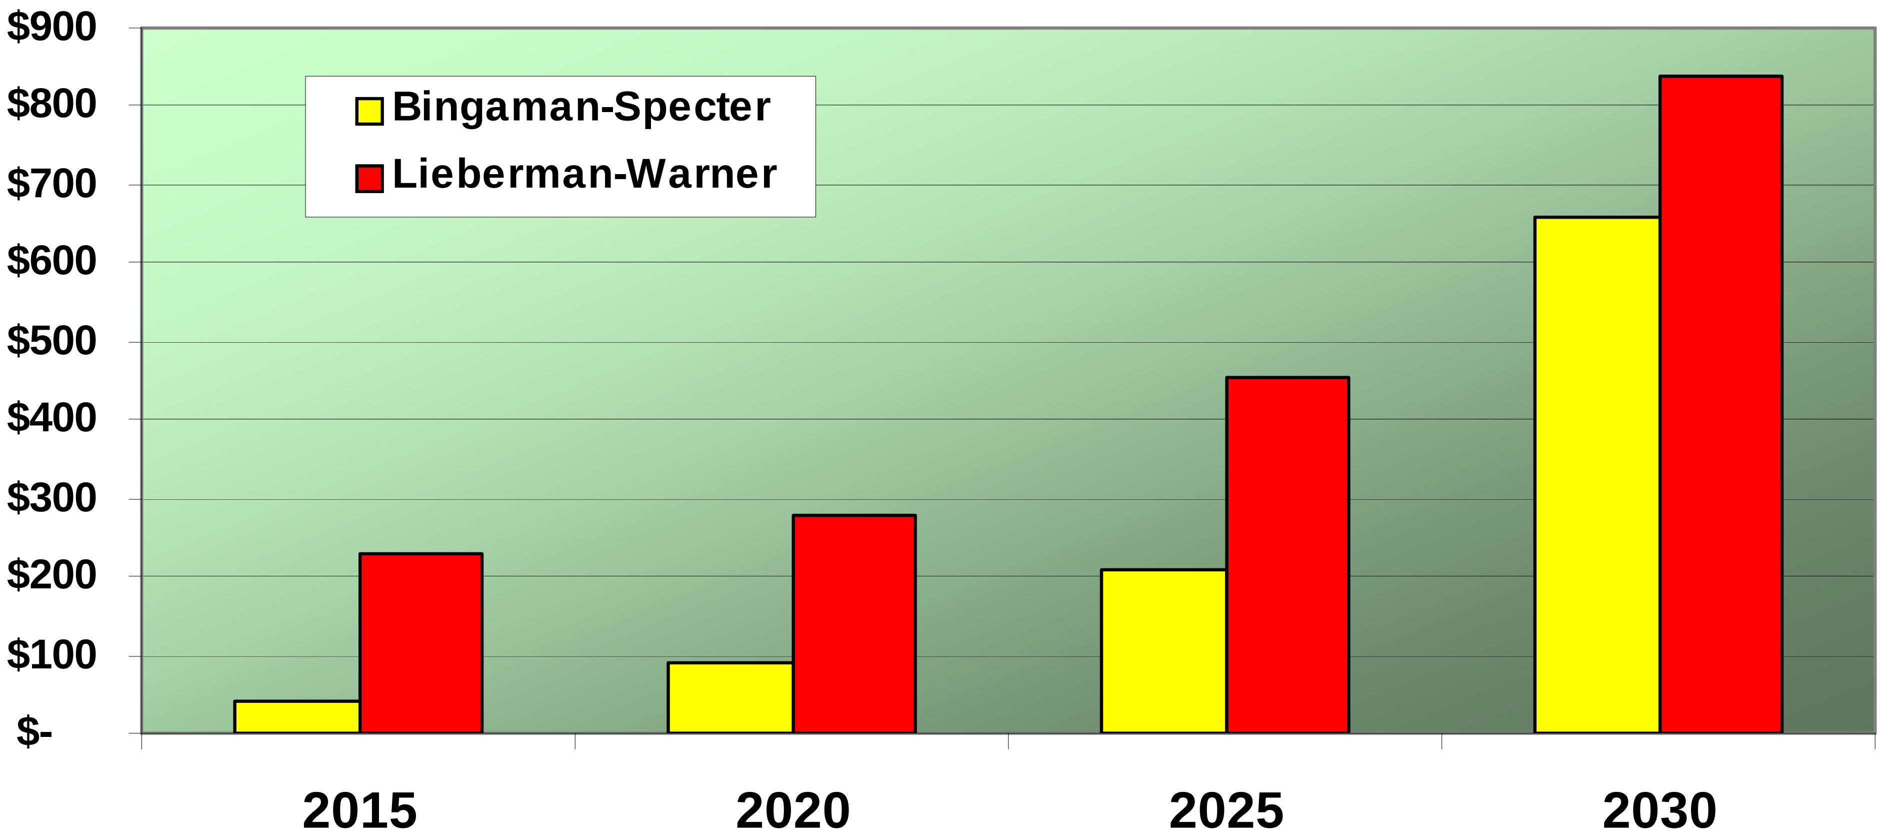
(Average across all customer classes)



Electricity rate impacts are directly proportional to AEP's compliance costs and purchases from allowance auctions (shown on p. 17). Because auction costs dominate total costs, rate increases would be much lower with a large "no-cost" allocation of allowances.

AEP AMERICAN® ELECTRIC POWER

Annual Cost Per Residential Customer*



Assumes average monthly usage of 1,000 kWh

AEP AMERICAN ELECTRIC POWER

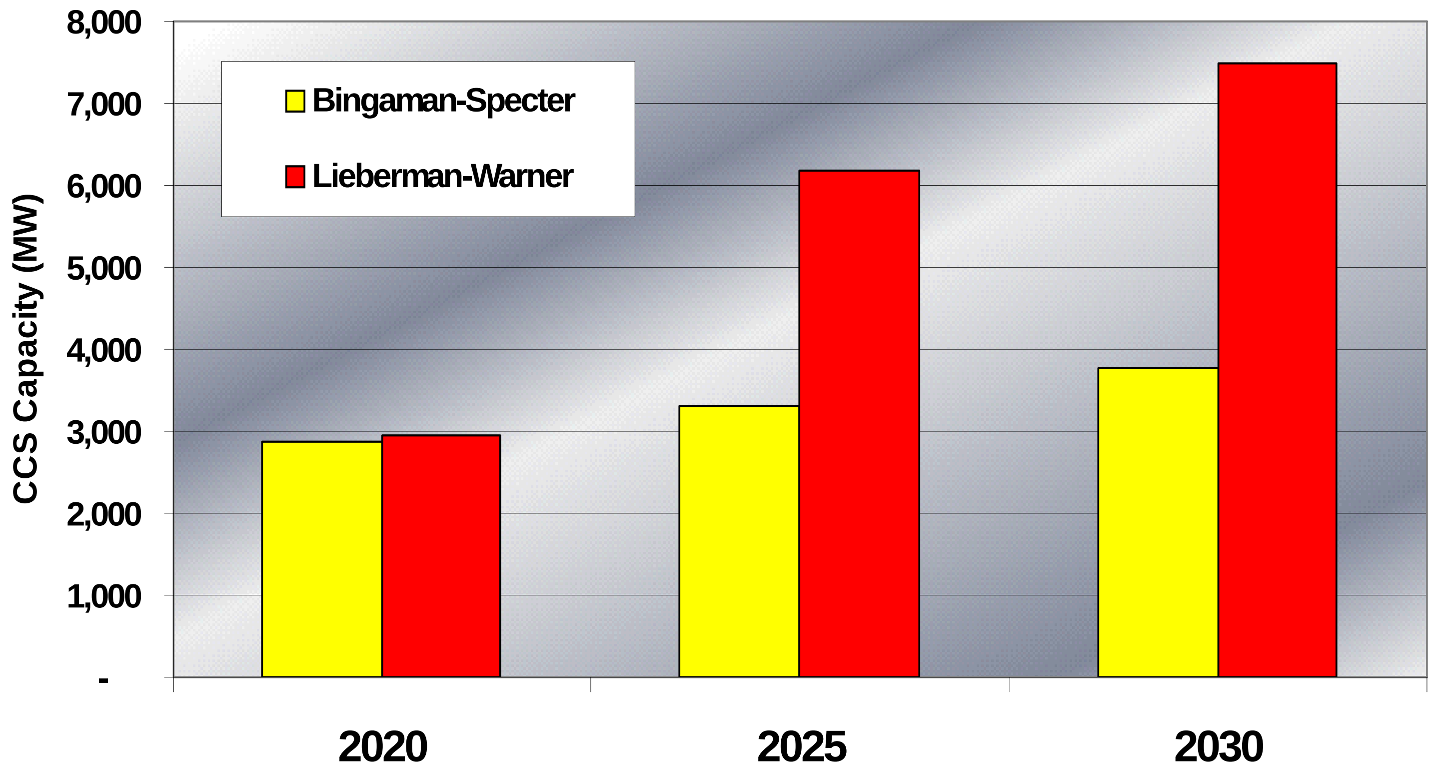
Low and Zero CO_2 Technology Deployment

	Bingaman-Specter (MW)		Lieberman-Warner (MW)	
	2020	2030	2020	2030
CCS	2,900	3,800	2,900	7,500
New Nuclear	-	-	-	1,700
Wind*	1,800	4,800	4,800	4,800
New Biomass	-	500	-	800
Biomass Cofiring	-	600	1,100	2,200

***Total includes both existing and planned AEP-owned generation and wind purchase power agreements (PPAs).**

AEP AMERICAN ELECTRIC POWER

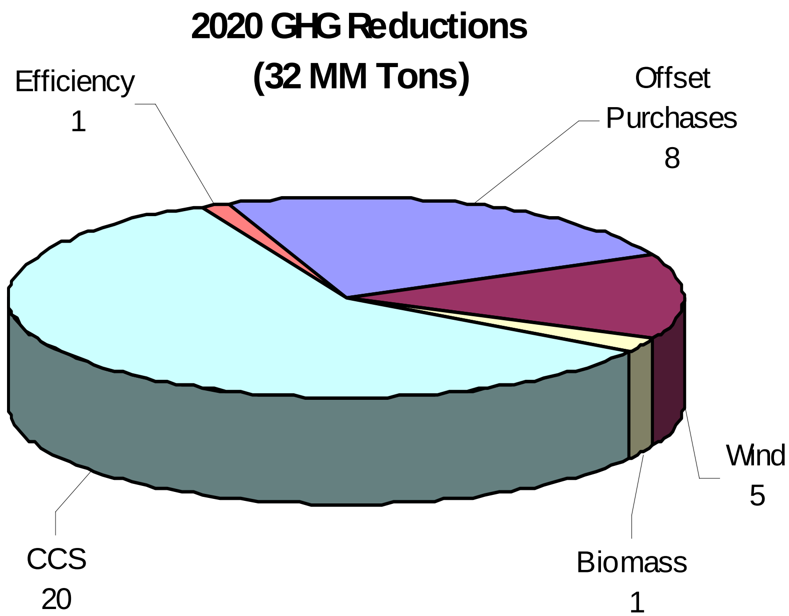
Projected CCS Installations

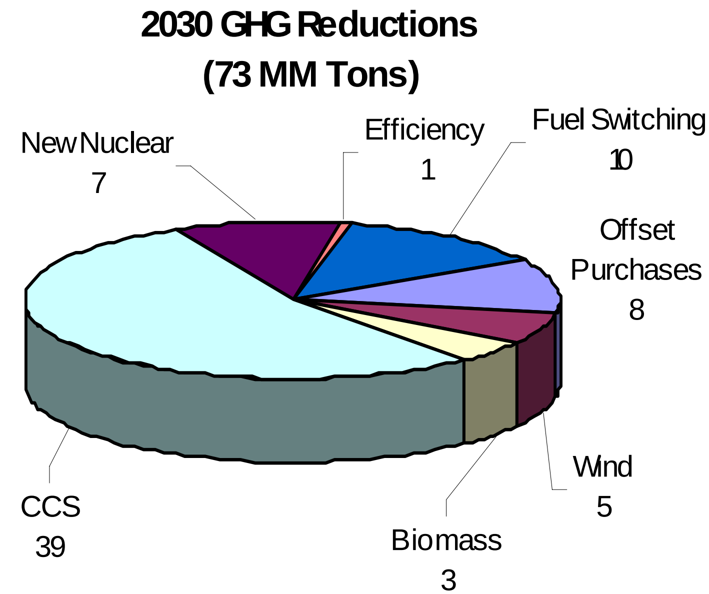


- ***Early CCS driven by CCS bonus allowances but limited by constraints on number of projects that can be put in-service.***
- ***Later CCS retrofits in L-W driven solely by need for very substantial emission reductions.***

AEP AMERICAN® ELECTRIC POWER

CO_2 Compliance Under Lieberman-Warner



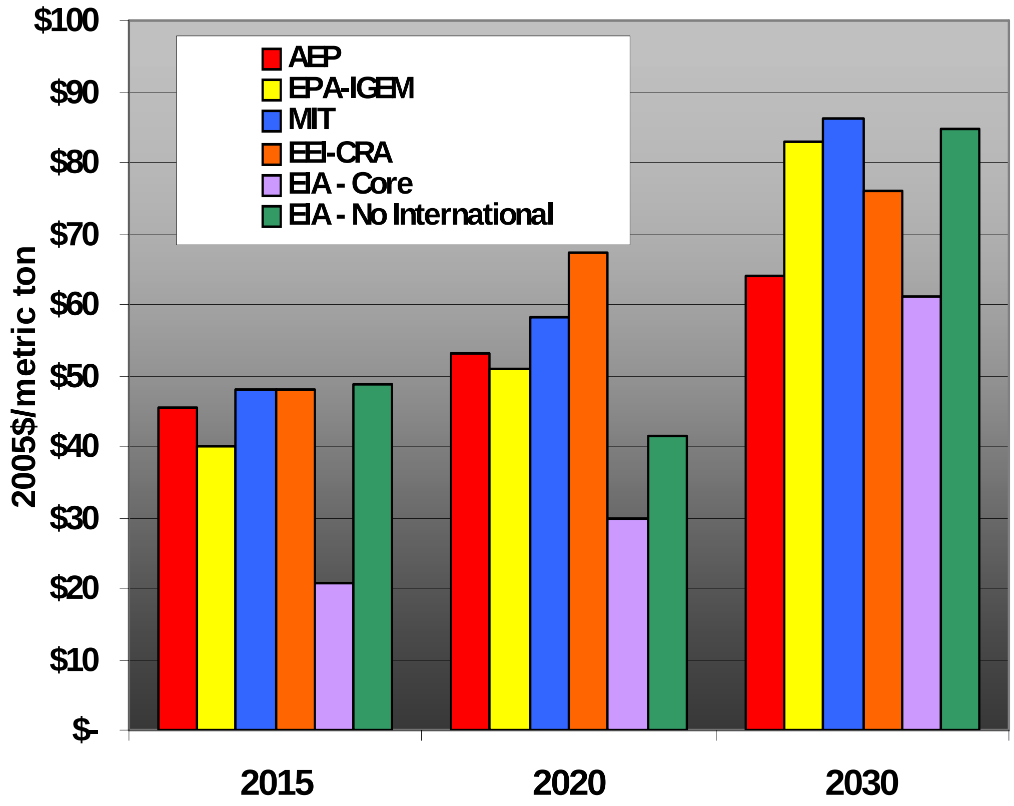


- ***A mix of technologies is needed to meet reductions targets through 2020. However, most of the reductions come from CCS given the bonus allowance incentives and the bill's limitations on offsets.***
- ***Post-2020, most of the additional reductions come from additional CCS. New nuclear, additional dedicated biomass plants, and greater use of natural gas account for the remainder of the increase.***

AEP AMERICAN ELECTRIC POWER

AEP Analysis Comparison w/ Other Studies

- *AEP price forecast is within the range of most other forecasts, though MIT and CRA-EEI studies are higher.*
- *EIA "core" case is generally considered unrealistically low as it includes very large amounts of international offsets (not allowed in L-W) and huge amounts of new nuclear.*
- *If market prices are in fact higher, AEP might reduce more, avoiding some auction purchases, though with higher auction prices, AEP costs and rate impacts would be higher.*
- *There is SUBSTANTIAL uncertainty in the costs and price projections in these studies.*



AEP AMERICAN ELECTRIC POWER

Caveats and Uncertainties

- *The analysis assumes that CCS technology can be aggressively deployed by 2015-2020. To the extent, regulatory, financial and institutional obstacles prevent this from occurring, costs would be substantially higher than reported herein.*
- *AEP is assumed to receive CCS bonus allowances for all CCS technology installed. However, the total amount of bonuses are limited in L-W, so allowances received will hinge on the actions of other electric companies. Sensitivity analysis was conducted with and without the inclusion of the bonus allowances.*
- *The analysis incorporates the impacts of energy efficiency given increasing electricity prices. However, this impact is difficult to project given the interplay between price-induced AEP system reductions and possible increased or decreased demands from wholesale markets. Further, CO_2 policies could accelerate electrification of the US economy as industries and transportation move away from fossil fuels and towards electro-technologies (such as PHEV).*
- *Allowance market prices will affect electricity rate impacts and auction costs substantially. To the extent prices are higher (as in the MIT and CRA studies), costs and rate impacts for AEP under L-W would be greater.*
- *The analysis examines the 2008-2030 period. To the extent impacts were modeled over a longer horizon (e.g. thru 2050), they would tend to increase near term GHG reductions as allowances are banked to meet more stringent targets after 2030. This would result in much higher cost impacts during 2012-30 period.*

AEP AMERICAN® ELECTRIC POWER

AEP Leadership in Technology: IGCC and USC

<u>NEW ADVANCED GENERATION</u>

***IGCC** -- AEP first to announce plans to build two 600+ MW IGCC commercial size facilities in US (OH and WV) by next decade*

***USC** -- AEP will be first to employ new generation ultra-supercritical (steam temperatures >1100^{o}F) coal plant in U.S (AR)*

AEP AMERICAN® ELECTRIC POWER

CO_2 Capture Techniques

- Post-Combustion Capture
  - ***Conventional or Advanced Amines, Chilled Ammonia***
    - ***Amine technologies commercially available in other industrial applications***
    - ***Relatively low CO_2 concentration in flue gas – More difficult to capture than other approaches***
    - ***High parasitic demand***
      - ***Conventional Amine ~25-30%, Chilled Ammonia target ~10-15%***
    - ***Amines require very clean flue gas***

- Modified-Combustion Capture
  - ***Oxy-Coal***
    - ***Technology not yet proven at commercial scale***
    - ***Creates stream of very high CO_2 concentration***
    - ***High parasitic demand, >25%***

- Pre-Combustion Capture
  - ***IGCC with Water-Gas Shift***
    - ***Most of the processes commercially available in other industrial applications***
      - ***Have never been integrated together***
    - ***Turbine modified for H_2-based fuel, which has not yet been proven at commercial scale***
    - ***Creates stream of very high CO_2 concentration***
    - ***Parasitic demand (~20%) for CO_2 capture - lower than amine or oxy-coal***

AEP AMERICAN ELECTRIC POWER

AEP's Carbon Capture & Storage Initiative

- *In March 2007, AEP announced a major new carbon capture and storage initiative:*
  - *Chilled Ammonia CCS--We will install carbon capture on two coal-fired power plants, the first commercial use of technologies to significantly reduce carbon dioxide emissions from existing plants.*
    - *The first carbon capture project, at the Mountaineer plant in West Virginia, is expected to complete its product validation phase in 2009.*
    - *The second, at the Northeastern plant in Oklahoma, will begin commercial operation in 2012.*

AEP AMERICAN ELECTRIC POWER®

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate relief or other recovery for new investments, transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements periodically issued by accounting setting bodies; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

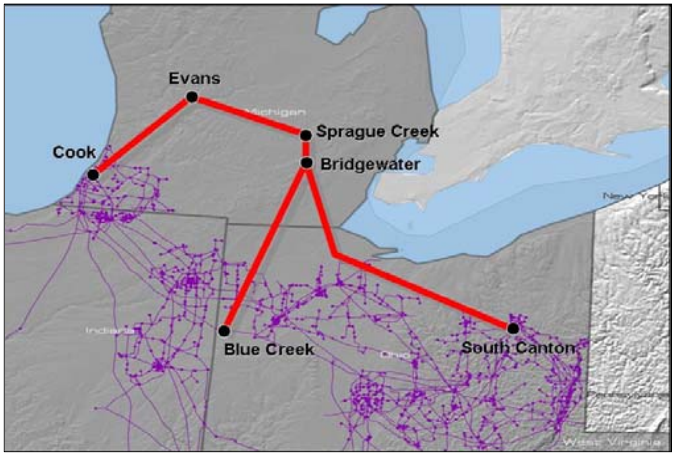
Electric Transmission Texas

ETT (ERCOT)



AEP-ITC Michigan Proposal (PJM/MISO)

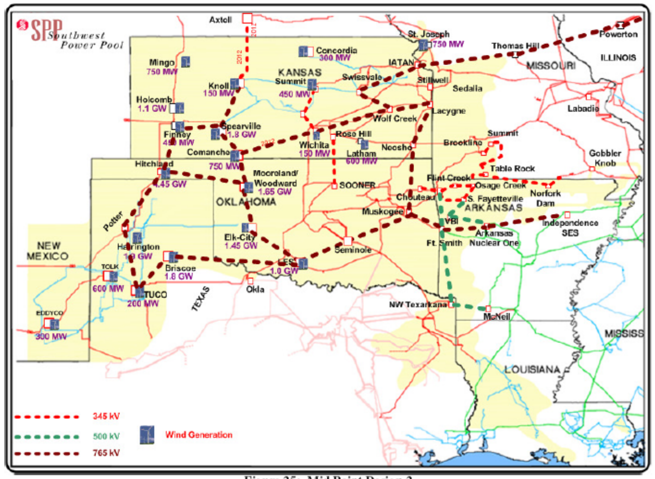


Figure 25: Mid Point Design 2

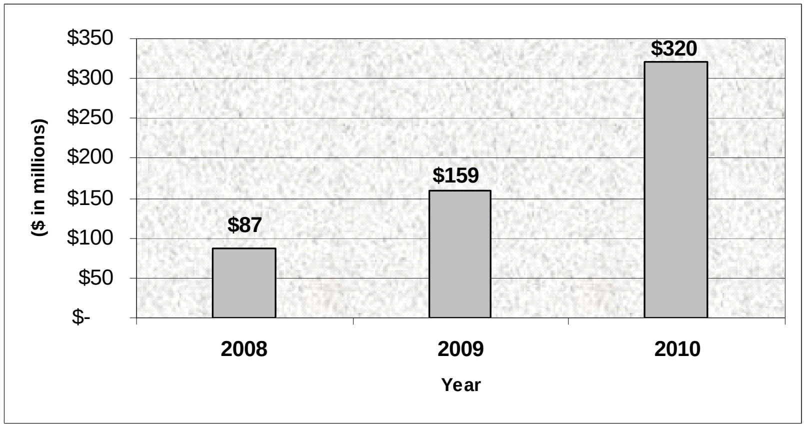
SPP Overlay Study – Mid Design 2

AEP

Transmission – Investments and Earnings Contributions

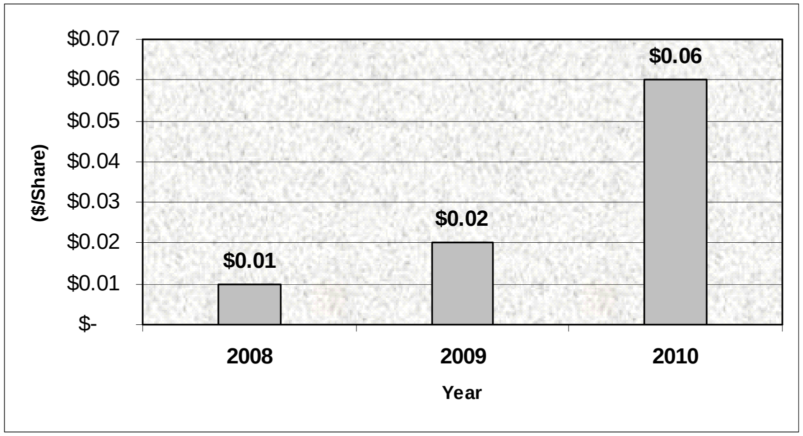
Projected Transmission Capital Spending*



* ETT and PATH joint ventures included in above projection. Amounts represent AEP's 50% share of total transmission joint venture capital expense. These amounts are excluded from AEP's base capital forecast because the joint ventures are not consolidated for financial reporting purposes. AEP will be responsible for funding 40-50% of these amounts with equity contributions, and the remainder will be financed with debt issued by the joint ventures.

Electric Transmission Texas

Projected Transmission EPS Contributions*



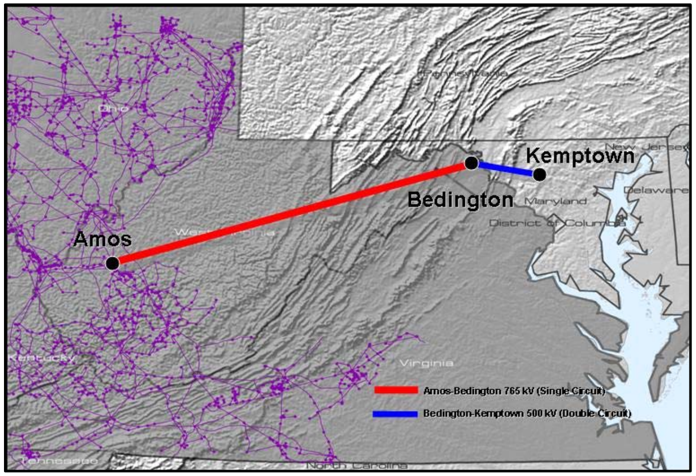
* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

Potomac-Appalachian Transmission Highline

Transmission will provide a near and long term catalyst for growth.

I-765™ Transmission in PJM: PATH

- *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries -- to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP
    - 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
  - FERC ordered the formula rate mechanism be set for hearing, pending settlement judge procedures



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

- *Funding Plans/Transaction Structure*
  - AEP and Allegheny share ownership of Amos – Bedington line and contribute equally to this portion of the project through PATH West Virginia Transmission Company, LLC
  - AEP's investment will be held in the AEP Transmission Holding Company LLC subsidiary

PATH
Potomac-Appalachian Transmission Highline

- *Key Next Steps*
  - Siting Approval from WV and MD – 2010
  - Targeted Completion – 2012

Joint Ventures with MEHC

Electric Transmission Texas Update

- *Transaction Structure*
  - 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
  - ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
  - Services provided by AEP and investment opportunities can be offered by either partner
  - Total initial investment of $70 million before ownership division
- *Next Steps*
  - ETT project opportunities to be evaluated on a case by case basis
  - Anticipate transferring some project opportunities in 2008 after regulatory approvals obtained.

Electric Transmission America Update

- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.
- To that end, ETA recently signed an agreement with Westar forming Prairie Wind Transmission, LLC proposing to build the first segment of the 765-kv Overlay Plan in SPP

AEP®

I-765™ Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- ### *Overview*
  - Sent non-binding Letter of Commitment to SPP to construct 765-kV and 500-kV projects in SPP region consistent with SPP Overlay Study – Summer 2007
  - Updated EHV Overlay Study completed by SPP – March 2008
- ### *Benefits*
  - Overall reliability reinforcement with improved voltage support throughout the SPP system
  - Significantly increased transfer capability
  - Provides access to new generation resources, especially renewables
  - Allows for effective interconnections for EHV system development
- ### *Next Steps*
  - ETA Partnering Agreements - 2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate and Cost Allocation Filing (postage stamp) – 2009
  - Siting Approval for projects – 2009-2011
  - Estimated Completion (in segments) – 2013-2017

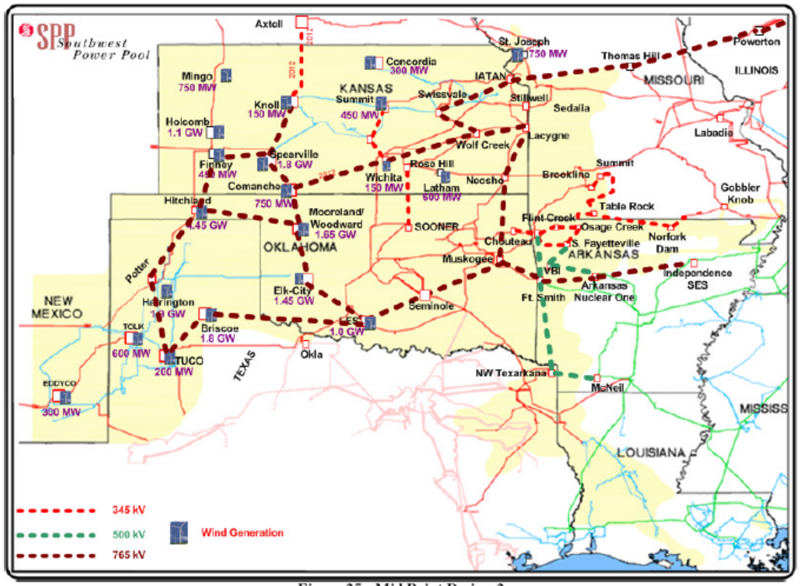


Figure 25: Mid Point Design 2

Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

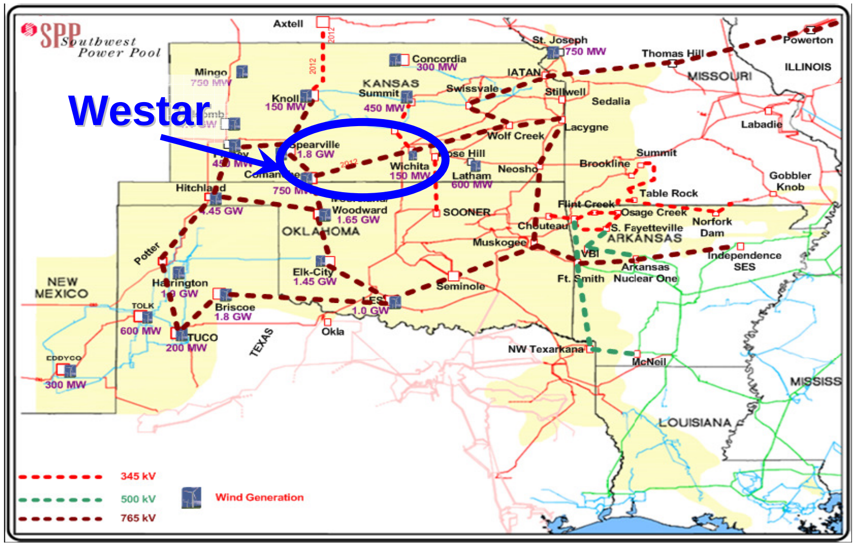
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP®

Prairie Wind Transmission, LLC

JV to build first segment of 765-kV transmission in SPP

- *Overview*
  - On May 19, 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT)
  - PWT is a 50/50 JV that is proposing to build approximately 230 miles of 765-kV lines extending from Wichita, Kan., west to a substation northeast of Dodge City, Kan., and then south to the Kansas border from Medicine Lodge, Kan.
  - The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region
  - Project is expected to cost approximately $600 million (based on SPP estimates) and be in-service by 2013
  - AEP's ownership of the joint venture is 25%
  - AEP obligations include oversight of 765-kV Engineering, 765-kV Technology and Project Management
  - Other responsibilities will be handled by the partners or outsourced
- *Next Steps*
  - File CPCN –2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate and Cost Allocation Filing (postage stamp) – 2009
  - Siting Approval – 2009
  - Estimated Completion – 2013



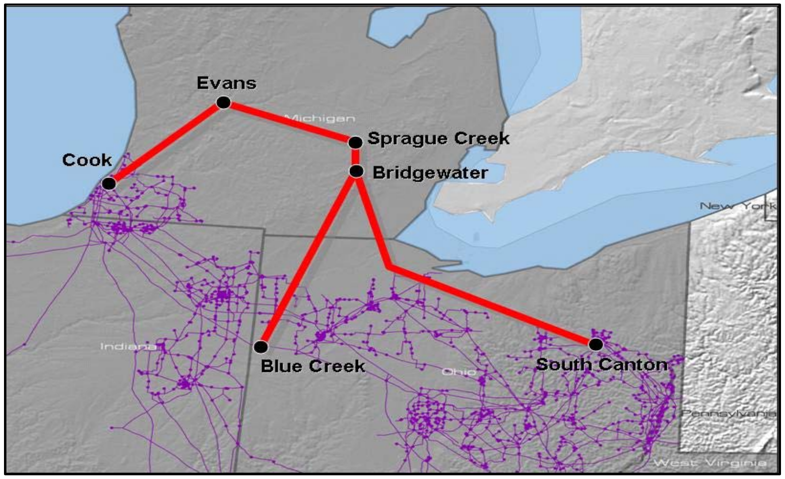
Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

I-765™ Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
  - Study was released Q3 2007
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.6 billion investment (before ownership division)
  - AEP and ITC are in discussions to form a Joint Venture
- *Benefits*
  - Up to 5,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- *Next Steps*
  - Agreement on JV (AEP/ITC) - Summer 2008
  - JV Formation - 2008
  - MISO and PJM Review/Approval - 2009
  - FERC Formula Rate and Cost Allocation Filing - Fall 2009
  - Siting Approval – 2011-2012
  - Estimated Completion –2015-2021



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AMERICAN ELECTRIC POWER

Table of Contents

AEP Highlights

Premier utility platform

- Leadership position in electric generation, transmission and distribution operations
- Cash flow, earnings and regulatory diversity with more than 5 million customers in 11 states
- $6.3 billion capital expenditure program (2009-2011) will continue to drive rate base growth

Effective regulatory relationships

- Traditional recovery mechanisms with equitable risk allocation enhance both earnings and cash flow
- Emerging energy policies play to AEP's strengths (transmission, energy efficiency, reliability)
- Constructive local relationships deliver successful regulatory outcomes

High-growth transmission business

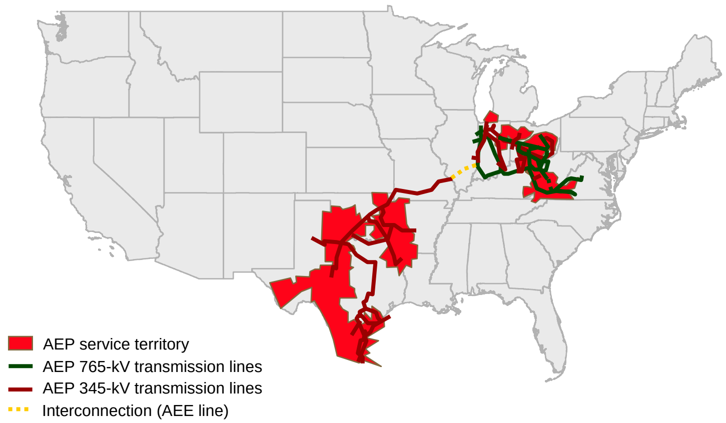
- The leading US transmission owner, operator, and developer
- Exceptional portfolio of high-quality development projects and project partners
- Attractive ROEs, regulatory support and access to capital will drive earnings growth beyond our traditional utility footprint

Stable financial position

- Maximization of shareholder value through regulated utility and transmission investments
- Balanced approach to cost containment and capital allocation
- Commitment to investment grade profile, prudent balance sheet, and liquidity management
- Conservative dividend payout with attractive yield

Premier Regulated Utility Platform

Overview



AEP's Leadership Position

Transmission miles[1] ('000s)		Generation owned[1] (GW)		Electric customers[1] (mm)	
AEP	39.0	SO	42.6	EXC	5.4
SO	27.0	AEP	40.6 *	AEP	5.2
DUK	20.9	DUK	39.1	PCG	5.1
PCG	18.7	FPL	35.5	FPL	4.5
MidA	17.9	ETR	30.0	FE	4.5

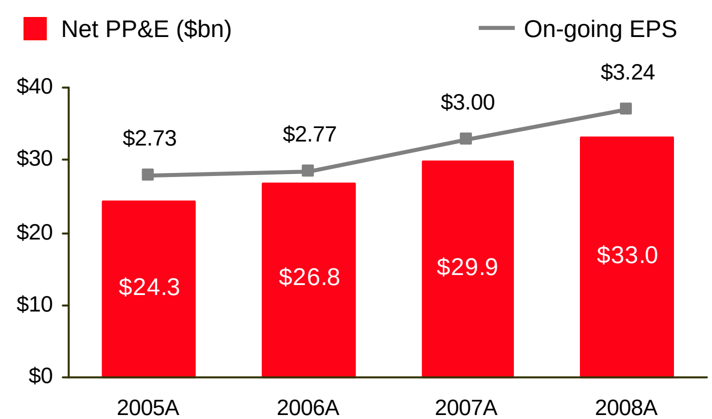
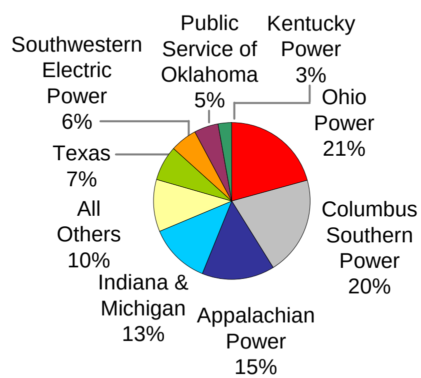
FE	15.1	EXC	24.8	DUK	4.0
Oncor	14.9	CPN	24.2	ED	3.6
EIX	12.0	NRG	24.0	XEL	3.4
PGN	11.0	PGN	21.8	PGN	3.1

* - AEP generation includes long-term PPAs and generation under construction

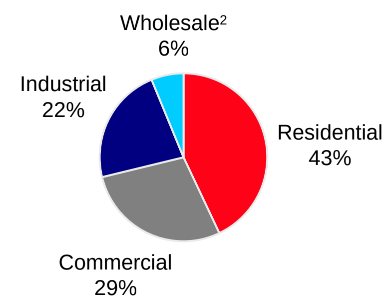
Regulated Operations



- Net PP&E CAGR of 10.7% since 2005
- Earnings CAGR of 5.9% since 2005



2008 On-going Earnings = $1.3bn



2008 Retail Base Revenue = $6.4bn

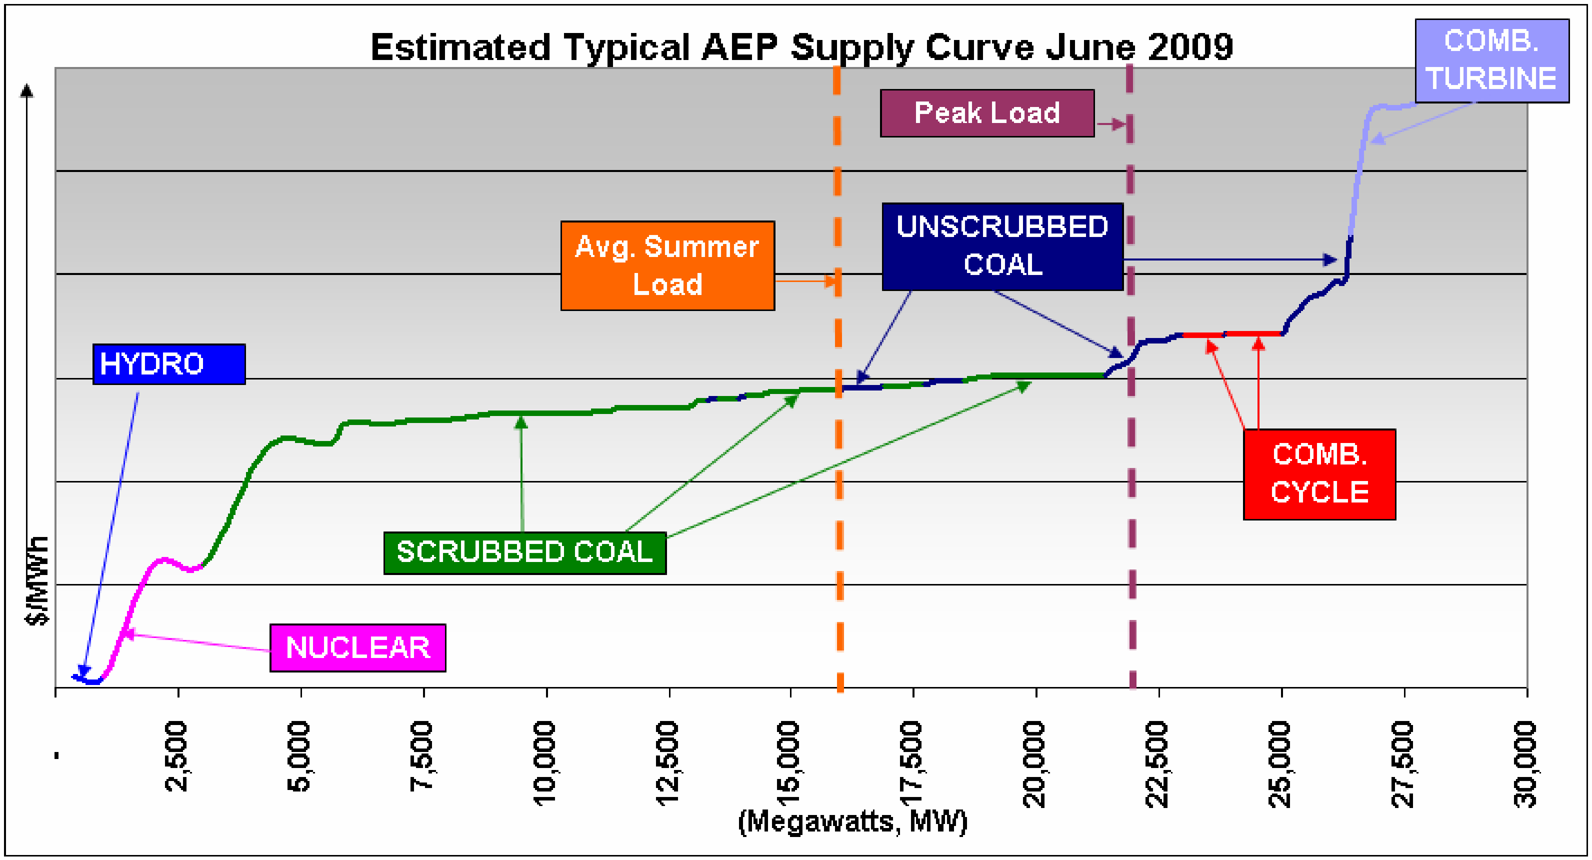
- *Highly diversified regulated utility earnings contribution*
- *Balanced customer mix*

[1] Source: Company filings
[2] Wholesale includes sales to municipal and cooperative power systems, other wholesale, and other retail sales

AEP AMERICAN ELECTRIC POWER

AEP Supply Stack

- Supply stack with Cook unit 1 outage would slide the supply stack 1,009 MW to the left.
- Planned outages typically shorten supply stack in the shoulder months by several thousand megawatts.
- Shoulder periods offer the flexibility to reschedule planned outages.



AEP AMERICAN® ELECTRIC POWER

Energy Policy Initiatives are Core to Our Strategy

Greenhouse Gas Reduction & Regulation

- Actively engaging in CO_2 policy debate – support cap & trade with <u>allocated</u> credits
- Leadership position in development of carbon capture and storage technology
- Reducing carbon footprint via offsets and other measures
- Founding member of Chicago Climate Exchange

Renewable Energy

- Develop “transmission superhighway” to facilitate renewable energy projects
- Satisfy RES requirements in our jurisdictions
- Add 2,000MW of wind capacity via long-term PPAs – 903MW achieved to-date

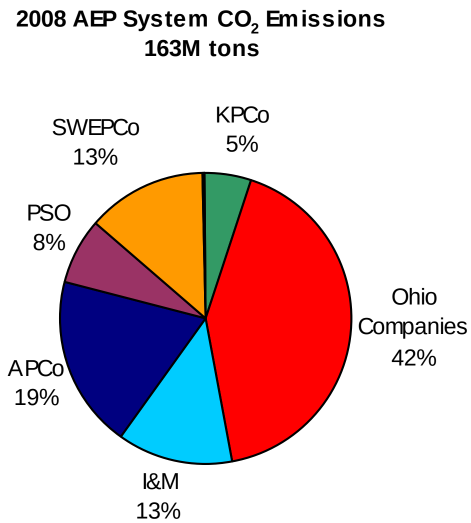
---

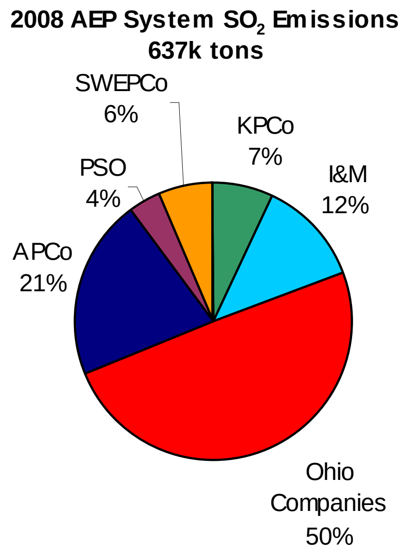
Energy Efficiency, Security & Reliability

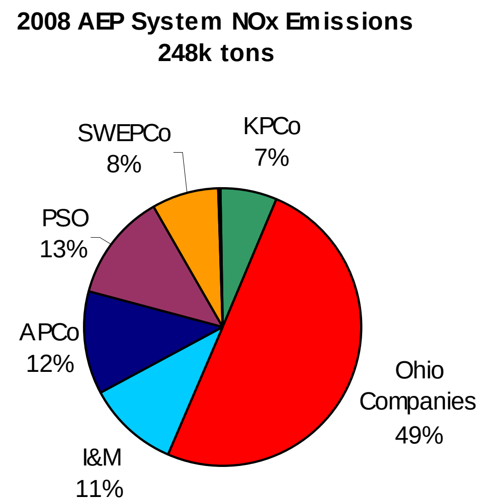
- Develop high-voltage transmission projects to strengthen America’s power grid
- Build generation to ensure reliable supply
- Reduce 1,000MW of demand by 2012
- Reduce 2.25 million MWhs of consumption by 2012
- Diversify our fuel mix; have added 3,705MW of gas-fired capacity since 2005 and have 1,080MW under construction

---

CO_2 Cost Recovery – Should Follow SO_2 & NOx







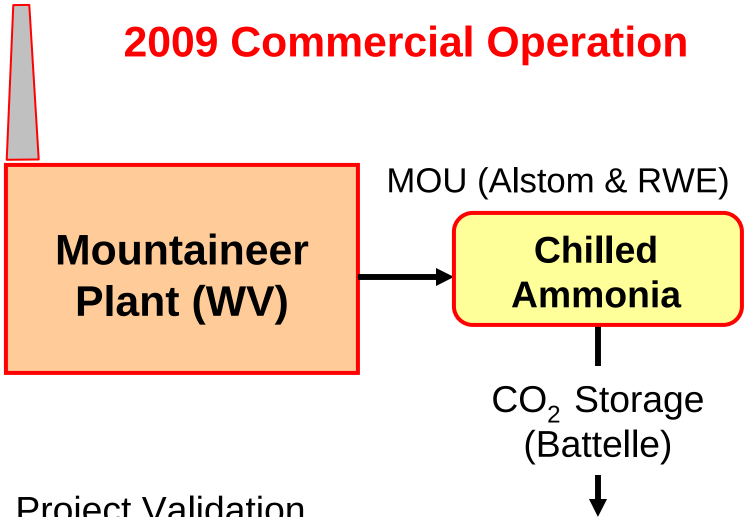
- 100% of SO_2 and NOx allowance costs currently recovered through tracker or similar mechanisms
- Prudently incurred costs associated with carbon-based taxes and other carbon-related regulations explicitly included in Ohio Fuel Adjustment Clause

AMERICAN ELECTRIC POWER

12

Carbon Capture & Storage

2009 Commercial Operation



<u>Project Validation</u>

- **Alstom "Chilled Ammonia" Technology**
- **20-30 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, in operation at We Energies' Pleasant Prairie Power Plant)**
- **Located at the AEP Mountaineer Plant in WV**
- **100,000 - 300,000 tonnes CO_2 per year**
- **In operation 3Q 2009**
- **Geologic storage for CO_2**
- **Underground injection control permit received in May 2009 from WV Dept. of Environmental Protection**

<u>Represents Post-Combustion Capture</u>

- **Conventional or Advanced Amines; Chilled Ammonia**
  - **Amine technologies are currently available in other industrial applications**
  - **Relatively low CO_2 concentration in flue gas - more difficult to capture than other approaches**
  - **High parasitic demand**
    - **Conventional Amine ~ 25-30%**
    - **Chilled Ammonia target ~ 10-15%**

<u>Key Issues for CCS Development in the U.S.</u>

- **Overcoming the 'economic' hurdle**
- **High up-front capital investment**
- **Commercial demonstration at large coal-fired power plants**
- **National standards for permitting of storage reservoirs**
- **Potential institutional, legal and regulatory barriers to carbon storage**

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
AEG	Dresden	Ohio	$322 MM	Gas	Combined-cycle	580	2013
SWEPCo	Stall	Louisiana	$385 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.6 B (1)	Coal	Ultra-supercritical	600 (1)	2012

(1) SWEPCo will own approximately 73%, or 438 megawatts, totaling about $1.2 billion in capital investment.

- Turk – AEP self-reported impacts to jurisdictional wetlands in March 2009. Work continues outside the jurisdictional areas. Hearing on the air permit appeal is scheduled for June 2009.
- Stall – Construction continues.
- Dresden – Construction suspended due to shifts in capital spending. Commercial operation date has been projected for 2013 (previously 2010).

AEP AMERICAN ELECTRIC POWER

DC Cook Unit 1 Update

- Previously identified technical challenges have solutions
  - Low pressure turbine rotors have been straightened
  - Foundation repair work is in progress and is the critical path
  - Generator and high pressure turbine repair work supports the critical path

- The unit is scheduled to return to service in the fourth quarter of 2009
  - The unit will operate without the last stage blades at 30 MW (summer) to 100 MW (winter) reduced capacity

- Root cause: “A blade-rotor system design that failed to provide adequate stress margin”
  - The root cause also found no operational or installation issues

- The replacement rotors are scheduled for installation in the spring of 2011
  - Different design with several years of fault-free commercial operation.

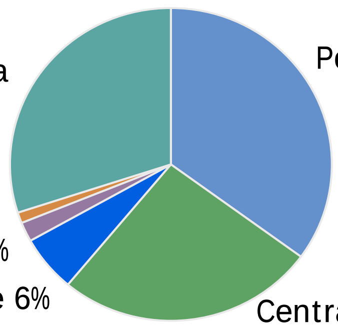
- We continue to receive $3.5MM per week from the accidental outage policy
  - Insurance proceeds are reflected as other operating revenue; During 1Q09, approximately 40% of the insurance payments ($20MM) were used to offset increased fuel costs to customers

AEP AMERICAN ELECTRIC POWER

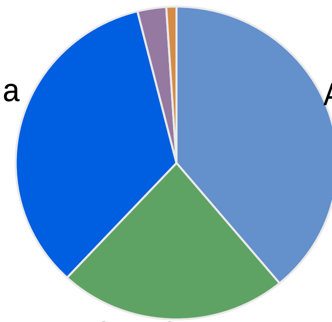
Coal Procurement - 2009 Projected

AEP burns approx. 77 million tons of coal per year

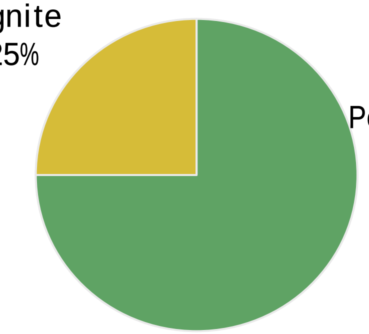
Total AEP System



AEP East



AEP West



Coal Stats:

- 98% contracted for 2009
- Avg. delivered price ~ $46.61/ton in 2008
- Approximate 12% price increase in 2009 ~ $52.00/ton

AEP AMERICAN ELECTRIC POWER

Overview of 2009 Guidance

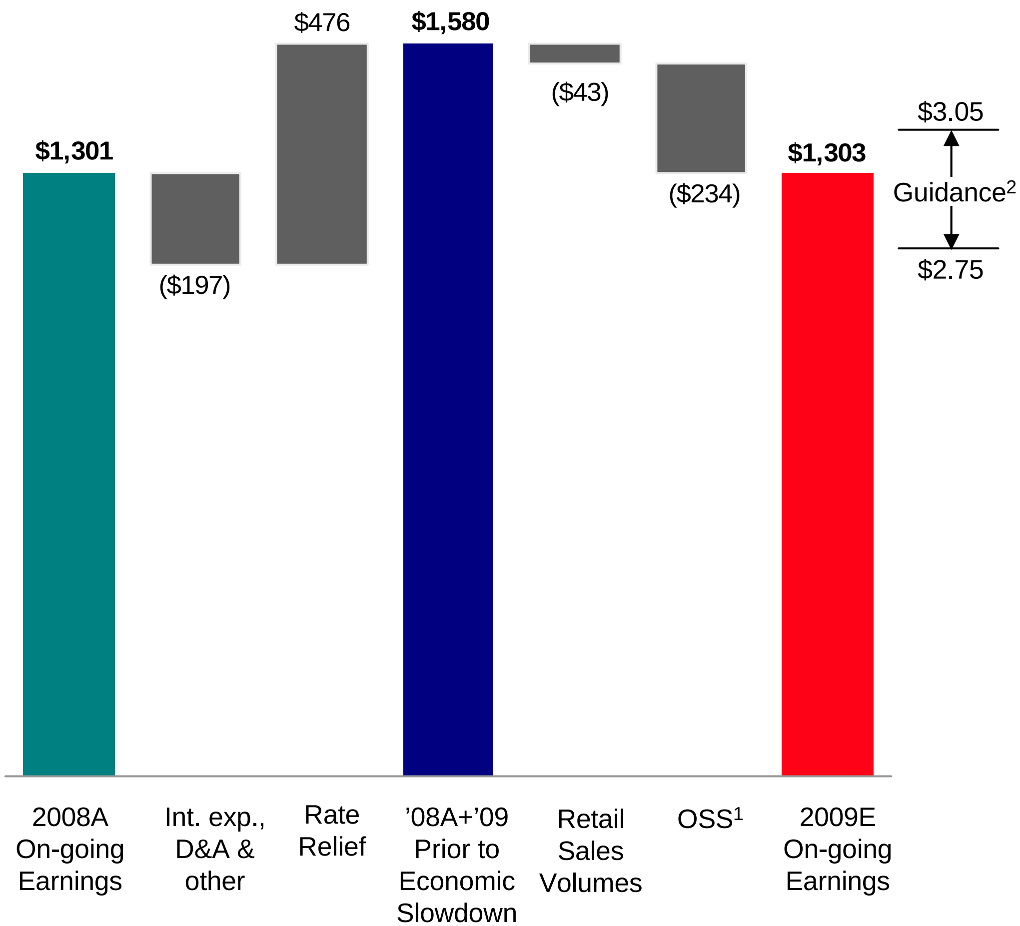
2009 Earnings Drivers:

- Positive Ohio outcome
- Rate relief - $732mm
- Economic slowdown
  - Lower OSS revenues
  - Lower loads

Long-term Earnings Drivers:

- Rate base investments
- Additional rate relief
- OSS/Retail load
- Transmission JV earnings

2008A-2009E Earnings Bridge ($mm)



Note all items are presented after-tax

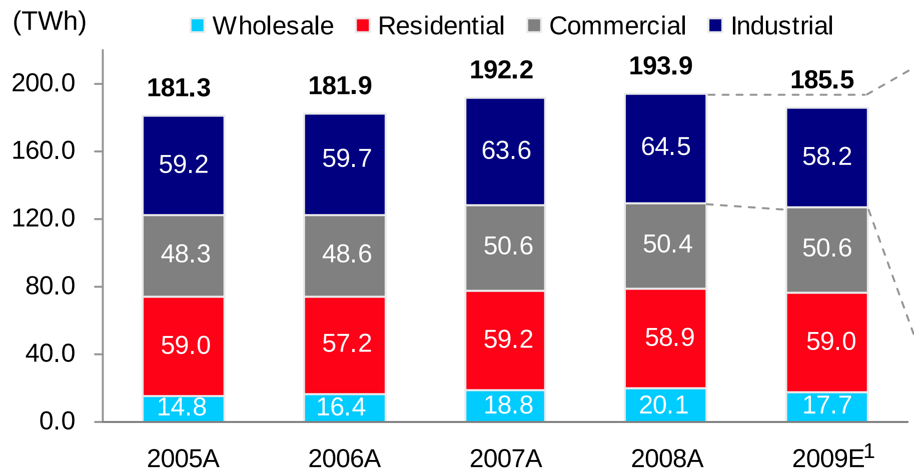
[1] Net of sharing

[2] Assumes 2009 average shares outstanding ~ 450 million

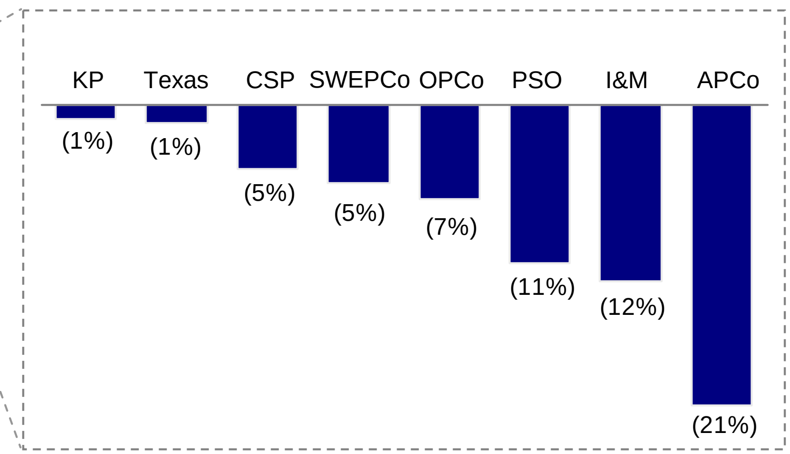
AEP AMERICAN ELECTRIC POWER

Key Drivers of Revised 2009 Guidance: Retail Sales

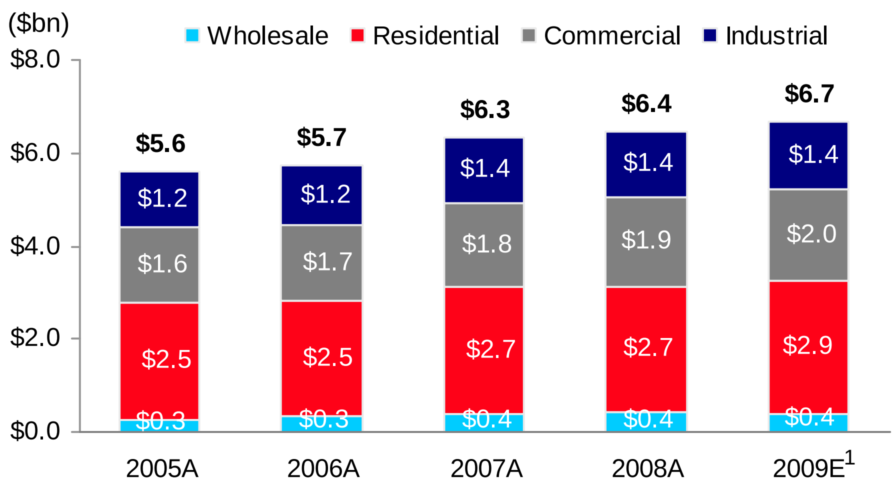
Retail Load by Customer Class



Forecast Drop in 2009 Industrial Sales



Retail Base Revenue[2] by Customer Class



Key Contributors to 2009E Industrial Volume Decline

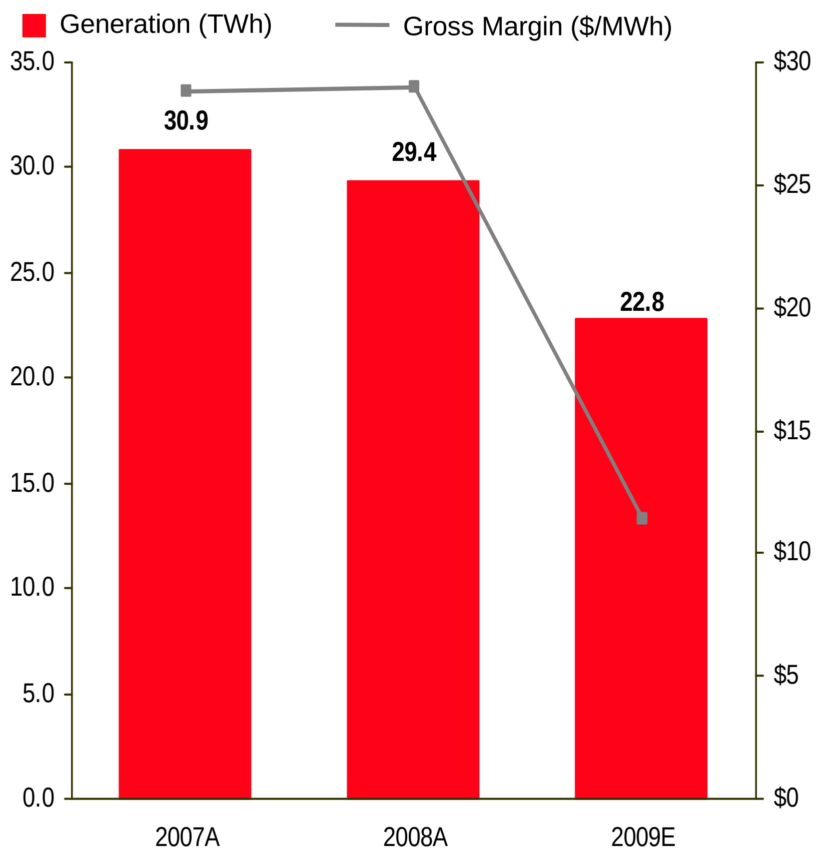
- Primary metals (APCo, I&M, OPCo, CSP, SWEPCo, KP)
- Basic industries (I&M)
- Paper (PSO, SWEPCo)
- Oil & Gas extraction (PSO, SWEPCo)

AEP AMERICAN ELECTRIC POWER

[1] 2009E assumes normalized weather
[2] Excludes the impact of current year rate relief, fuel over/under recovery, PJM costs and consumables

Key Drivers of Revised 2009 Guidance: Off-System Sales

Off-System Sales Metrics



$ in millions		2007A		2008A		2009E

AEP AMERICAN ELECTRIC POWER

Jurisdictional Off-System Sales Sharing Summary

STATE	OSS Sharing?	Detail
Arkansas	Yes, above and below base levels	Up to $758,600 annual margin, ratepayers receive 100%. From $758,601 to $1,167,078, ratepayers receive 85%. Above $1,167,078, ratepayers receive 50%.
Indiana	Yes	There is $37.5 million built into Indiana's base rates. Above $37.5 million, ratepayers received 50%
Kentucky	Yes, above and below base levels	Sharing occurs above and below levels included in base rates of $24,855,326. Between $0 and $30 million, ratepayers receive 70%. Above $30 million, ratepayers receive 60%.
Louisiana	Yes, above base levels	Up to $874,000 annual margin, ratepayers receive 100%. From $874,001 to $1,314,000, ratepayers receive 85%. Above $1,314,000, ratepayers receive 50%.
Michigan	Yes	There are two jurisdictions: St Joe and Three Rivers. For St Joe, 100% of profits are shared with ratepayers. No profits are shared in Three Rivers, including base rates. St Joe represents 66% of the Michigan market.
Ohio	No	n/a
Oklahoma	Yes	75% of profits are shared with ratepayers.
Tennessee	No	n/a
Texas (SPP)	Yes	90% of profits are shared with ratepayers.
Virginia	Yes	75% of profits are shared with ratepayers.
West Virginia	Yes	100% of profits passed back to ratepayers through the Expanded Net Energy Cost (ENEC) clause.

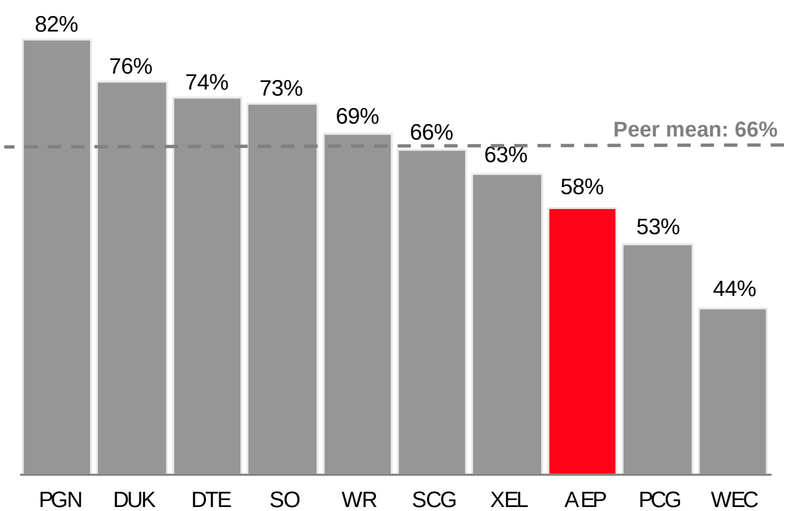
Dividend Overview

- We have paid 395 consecutive quarterly dividends to shareholders
- Dividend - $1.64/share
- Attractive yield
- Target dividend payout ratio of 50 – 60%

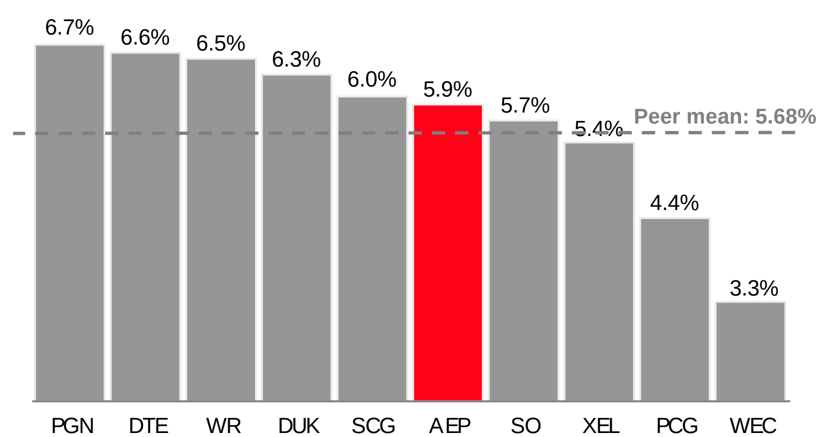
Payout Ratio vs. Integrated Electric Peers



Note: Payout ratio equals the indicated dividend rate annualized divided by First Call 2009 consensus estimate

Source: Bloomberg & First Call earnings estimates as of 6/12/09

Dividend Yield vs. Integrated Electric Peers



Note: Dividend yield equals the indicated dividend rate annualized divided by the share price

Source: ThomsonONE as of 6/12/09

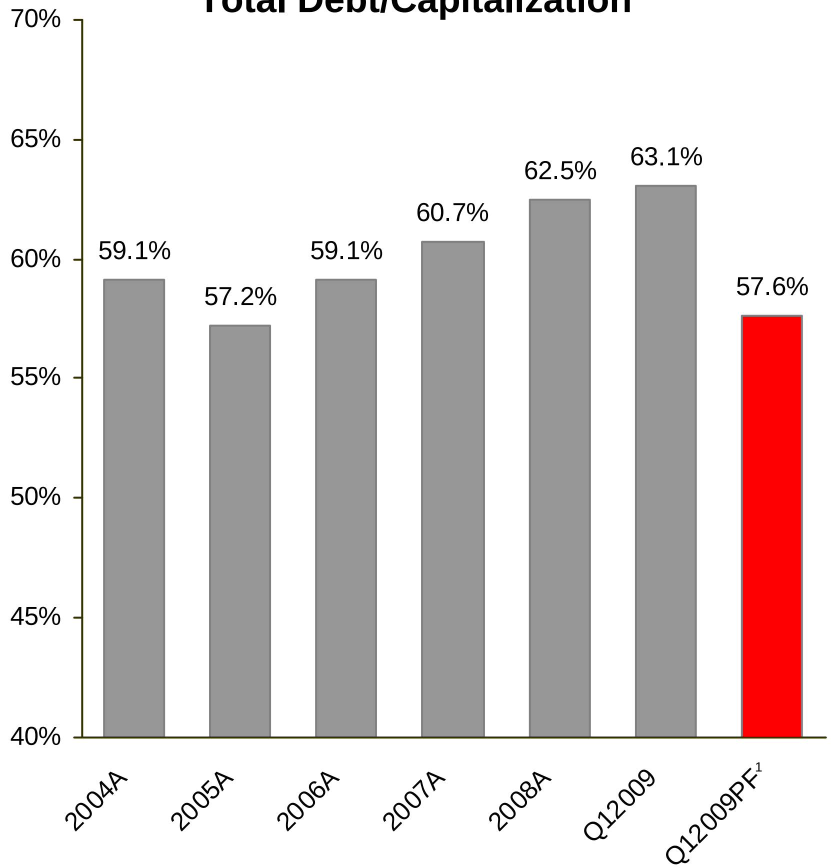
AEP AMERICAN ELECTRIC POWER

Pension and OPEB Estimate

- Our pension plan and OPEB funds investment returns were each down about 24% in 2008.
- Discount rates are assumed to be 6.0% for pension and 6.1% for OPEB.
- Investment losses increase plan expense for both pension and OPEB, but the investment losses are smoothed in over several years.
- We expect 2009 pension and OPEB expense to increase $104MM from 2008 to 2009 (pre-tax and pre-capitalization).
- OPEB contributions will increase along with OPEB expense, in accordance with agreements in most of our regulatory jurisdictions.
- We do not expect any mandatory contributions to pension in 2009. Pension trust contributions are estimated to be $475MM in 2010 and $283MM in 2011.

Maintaining Strong Capitalization & Liquidity

Total Debt/Capitalization



Note: Total Debt is calculated according to GAAP and includes securitized debt
[1] Pro forma assumes proceeds from the equity offering were used to reduce debt

Current Liquidity Summary

- Liquidity provided by 27 banks
- Our largest lender accounts for less than 10% of bank commitments

AEP AMERICAN ELECTRIC POWER

Uniquely Positioned for Nationwide Grid Expansion

Active Projects:

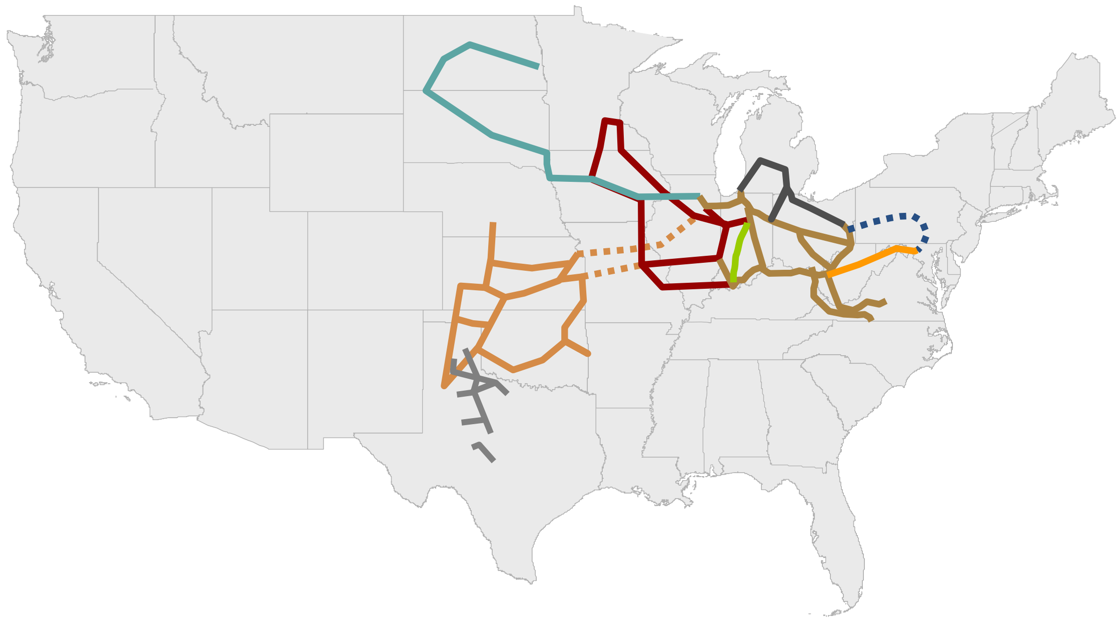
Pioneer COD: 2015
- 240 miles of 765 kV
- Partner: Duke Energy (50%)
- Estimated Cost: $1 billion
- ROE: 12.54%

PATH-WV COD: 2014
- 275 miles of 765 kV
- Partner: Allegheny Energy (50%)
- Estimated Cost: $1.2 billion
- ROE: 14.3%

Tallgrass COD: 2013-14
- 170 miles of 765 kV
- Partners: OG&E (50%) & MidAmerican Energy (25%)
- Estimated Cost: $500 million
- ROE: 12.8%

Prairie Wind COD: 2013
- 110 miles of 765 kV
- Partners: Westar Energy (50%) & MidAmerican Energy (25%)
- Estimated Cost: $400 million
- ROE: 12.8%

ETT COD: 2013
- 345 kV in ERCOT
- Partner: MidAmerican Energy (50%)
- Estimated Cost: $400 million
- ROE: 9.96%



Future Projects:

EHV Michigan COD: ~2020
- 700 miles of 765 kV

PJM Projects
- Enhance existing 765/345 kV

Hartland COD: ~2020
- 1000+ miles of 765 kV

MISO Vision Plan
- 765 kV Backbone

SPP Overlay COD: 2013-14
- 765 kV Backbone

ETT COD: ~2018
- 345 kV in ERCOT
- Additional CREZ spend of $750-$850 million

AEP AMERICAN ELECTRIC POWER

Note: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

Equity Contributions Enhance Earnings Growth to 4 – 8%

AEP is the leader

- Largest US transmission footprint
- Interstate EHV highway vision
- National renewables transmission strategy

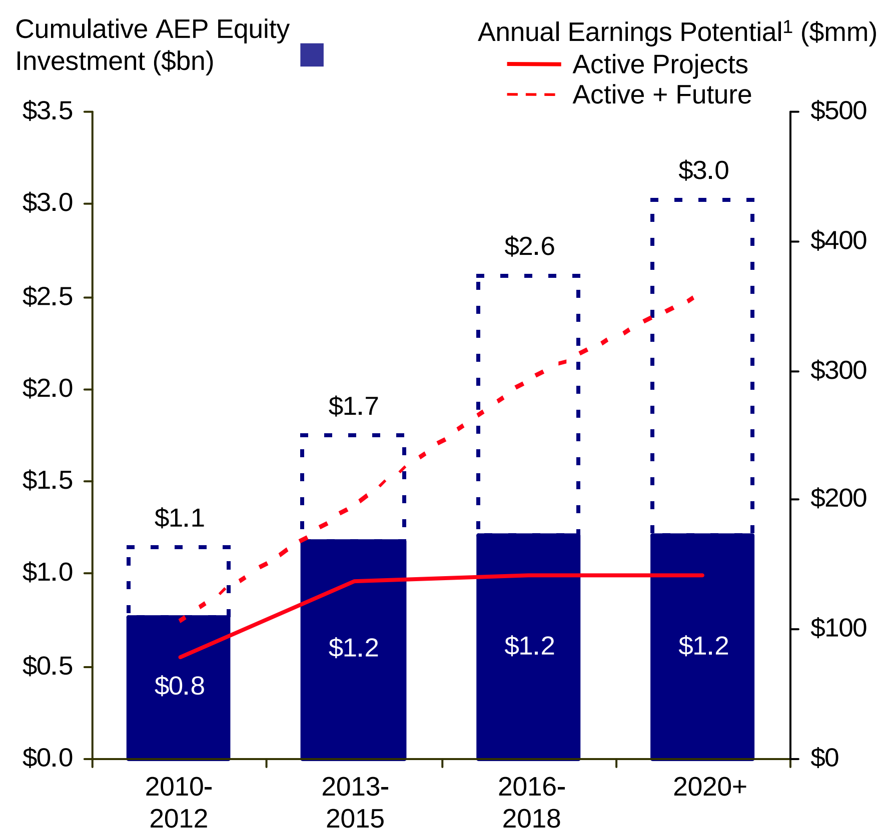
Quality projects

- 4 FERC-approved ($3.3 billion)
- Independent ERCOT transmission JV company (up to $2.6 billion)
- Robust pipeline of future 765 kV projects (up to $15 billion)

Attractive returns

- FERC incentive rates (12.5-14.3%)
- Strong cash flow with CWIP
- Long-term earnings potential of ~$140-$360 million annually[1]

Illustrative Earnings Potential of New Transmission Initiatives



[1] Illustrative calculation assumes 50/50 debt/equity capitalization and incentive ROE of ~13.0% for FERC projects and a 60/40 debt/equity capitalization and 10.5% ROE for ERCOT projects

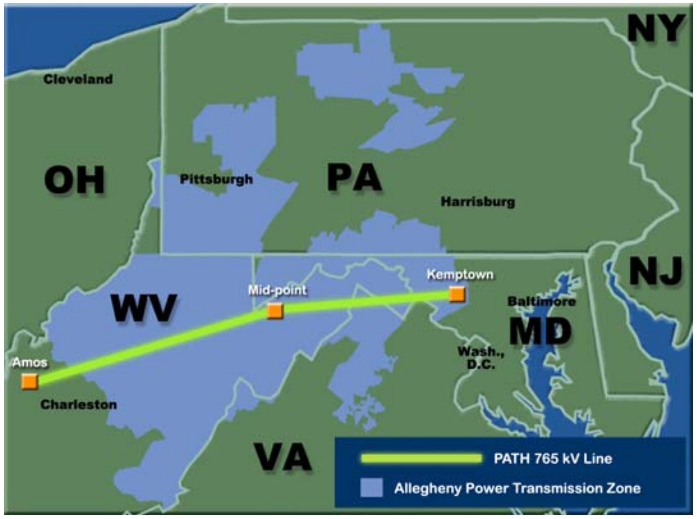
AEP AMERICAN ELECTRIC POWER

p.28

EHV Transmission in PJM: PATH

<u>Project Description:</u> 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

- **Near Term Risks**
  - Obtaining a CPCN in West Virginia or costly concessions with WV to receive the CPCN; CPCN filing made May 15, 2009
- **Pertinent Data**
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP and 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
    - Rates went into effect March 1, 2008; current annual revenue requirement is $15MM effective 1/1/09
  - Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million
  - Estimated completion date: 2014



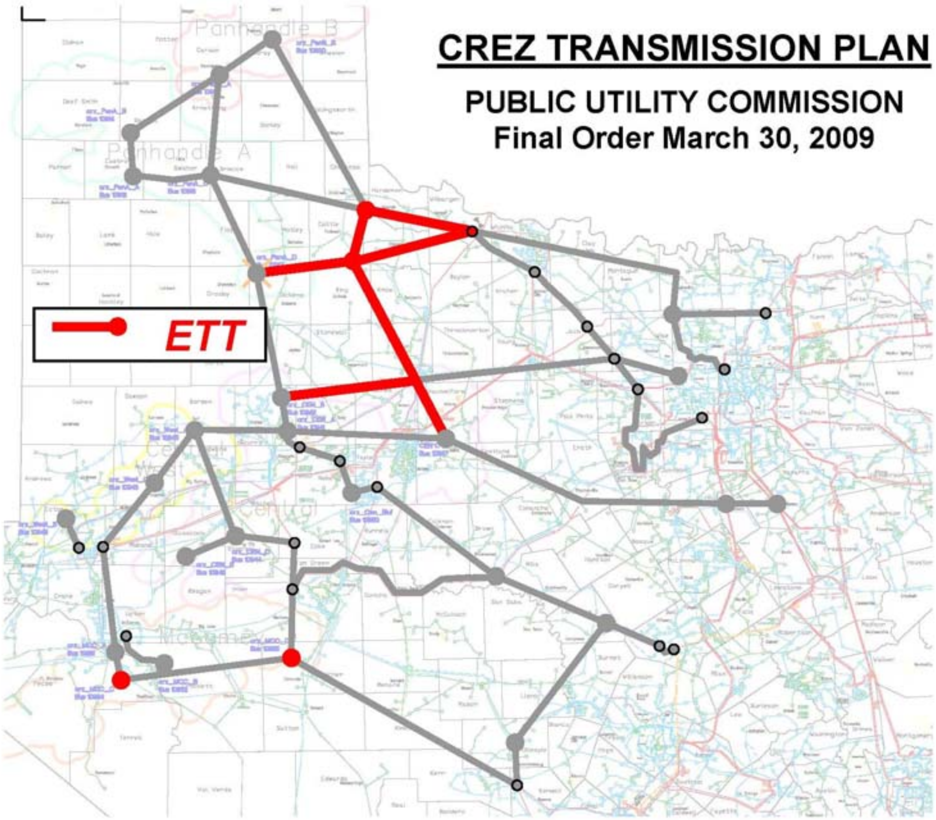
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AMERICAN ELECTRIC POWER

Texas CREZ Project

Strengthening the ERCOT grid to collect and deliver wind generation to load

- ***Status:***
  - On February 26, 2009, PUCT ordered its staff to stage the development of CREZ transmission lines.
  - Staging to occur in separate docket and consider timing of wind projects and congestion.
  - PUCT established 2 categories based on priorities. ETT has no first priority lines.
  - PUCT issued a final order assigning transmission service providers on March 30, 2009.
  - ETT's share of CREZ investment is approx. $840MM of $4.9B total.
  - The filing calls for completion of the plan by 2013.
- ***Next Steps***
  - Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in early 2010.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

ETT Electric Transmission Texas

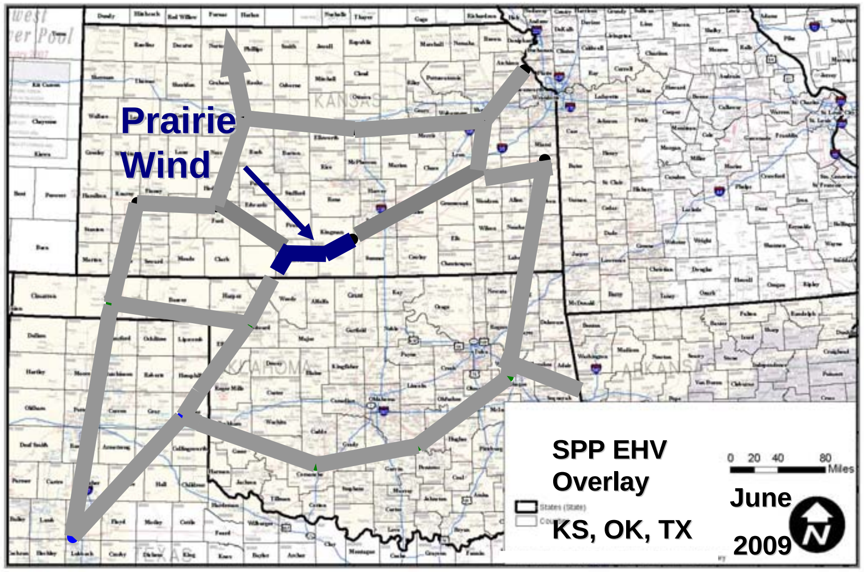
AEP AMERICAN ELECTRIC POWER

p.81

Prairie Wind Transmission, LLC

JV to build first segment of 765-kV transmission in SPP

- ***Overview***
  - In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
  - Following a settlement agreement with ITC on June 1, 2009 both entities agreed to split the mileage and costs of building the 765-kv transmission superhighway. The newly revised project is expected to cost approximately $400 million and in-service by 2013. Settlement approval by the KCC is still pending.
  - PWT is a 50/50 JV that is proposing to build approximately 110 miles of 765-kV lines extending from Wichita, KS, west to a substation near Medicine Lodge, KS, and then south to the Kansas border from Medicine Lodge, KS.
  - The original proposed mileage prior to settlement was approximately 230 miles.
  - The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
  - AEP's ownership of the joint venture is 25%.
  - FERC order received in December 2008:
    - ❑ Cash return on CWIP and 12.8% incentive ROE
    - ❑ Recovery of all costs incurred prior to the time rates go into effect, and
    - ❑ Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PWT or its parents.



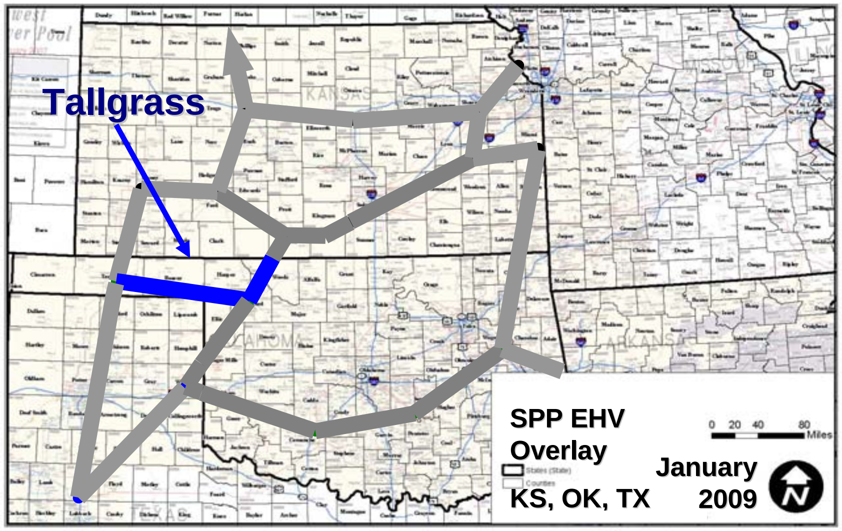
Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

- ***Key Challenges***
  - Regional Cost allocation which enables the development of "system solutions"
  - RTO Approval

Tallgrass Transmission, LLC

JV to build second segment of 765-kV transmission in SPP

- ***Overview***
  - In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
  - TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines extending from the Kansas-Oklahoma border north of Woodward, OK, extending west into the Oklahoma panhandle to a new station that will be built near Guymon, OK.
  - The project will promote wind development in the western half of Oklahoma.
  - Project is expected to cost approximately $500 million and be in-service by 2013.
  - AEP's ownership of the joint venture is 25%.
  - Other responsibilities will be handled by the partners or outsourced.
  - FERC order received in December 2008:
    - Cash return on CWIP and 12.8% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of TG or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

- ***Key Challenges***
  - Cost allocation which enables the development of "system solutions"
  - RTO Approval

Pioneer Transmission LLC

Overview

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
- The project will improve the reliability of the nation's transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, protect national security and expand opportunities for new generation, including renewables.
- Project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP's ownership of the joint venture is 50%.
- Other responsibilities will be handled by the partners or outsourced.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect, and
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PT or its parents.
  - Certain formula rate issues were set for hearing

Key Challenges

- Cost allocation which enables the development of "system solutions"
- RTO Approval - touches two RTOs – PJM & MISO
- Siting

AEP AMERICAN® ELECTRIC POWER

Hartland Wind Concept EHV Development in Upper-Midwest

Project Description: 1000+ miles of 765-kV transmission linking Upper Midwest generation sources with the existing EHV infrastructure in the Chicago area expected to cost $5-$10 billion over a 10 year period.

- **Near Term Risks**
  - Technical feasibility study
  - Identification of willing and able partners
  - Obtaining cost allocation between states, PJM, and MISO
  - RTO Technical Approvals
  - Favorable 205 Order including 679 incentives
- **Mitigation**
  - Target the identified need for the project and its ability to provide access for wind energy to load centers
  - Collaboration in regulatory process for regional cost allocation between MISO, PJM, and Midwest Governors Association
  - Prepare comprehensive regulatory filing, including incentives

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation, including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance, resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events, our ability to recover through rates the remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives and evolving public perception of the risks associated with fuels used before, during and after generation of electricity, including nuclear fuel.

AEP Ohio Distribution Rate Case – Docket #351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%. A procedural schedule from the PUCO is pending.

Summary Rate Case Information

APCo Virginia Base Rate Case – Docket #PUE-2011-00037

On March 31, 2011 APCo filed an update to its pre-biennial base rate case for recovery of generation and distribution costs requesting an increase of $75 million ($126 million total increase less $51 million associated with a potential change in depreciation rates). The requested ROE is 11.65%, including a 50 basis point adder for meeting 2010 RPS goal allowed by law.

In conjunction with this case, an environmental rate adjustment clause (E-RAC), generation rate adjustment clause (G-RAC) and a renewable portfolio standard rate adjustment clause (RPS-RAC) were filed. APCo has requested that rates in the base case, E-RAC and RPS-RAC go into effect no later than 2/1/2012 and the G-RAC on 3/1/2012.

Projected Capital Structure – Company Position (12/31/10)

Summary Rate Case Information

I&M Michigan Base Rate Case (Docket# U-16801)

On July 1, 2011 I&M filed a base rate case with the Michigan Public Service Commission requesting an increase of $24.5 million. Rates proposed in this filing are based on projected 2012 cost of service and will not go into effect until 2012, therefore rates will reflect a current cost of service. This filing includes revised depreciation rates to include additions since the last approved depreciation study as well as accelerated retirement of Tanners Creek Units1, 2 and 3. The requested ROE is 11.15%. An order is expected by mid-year 2012.

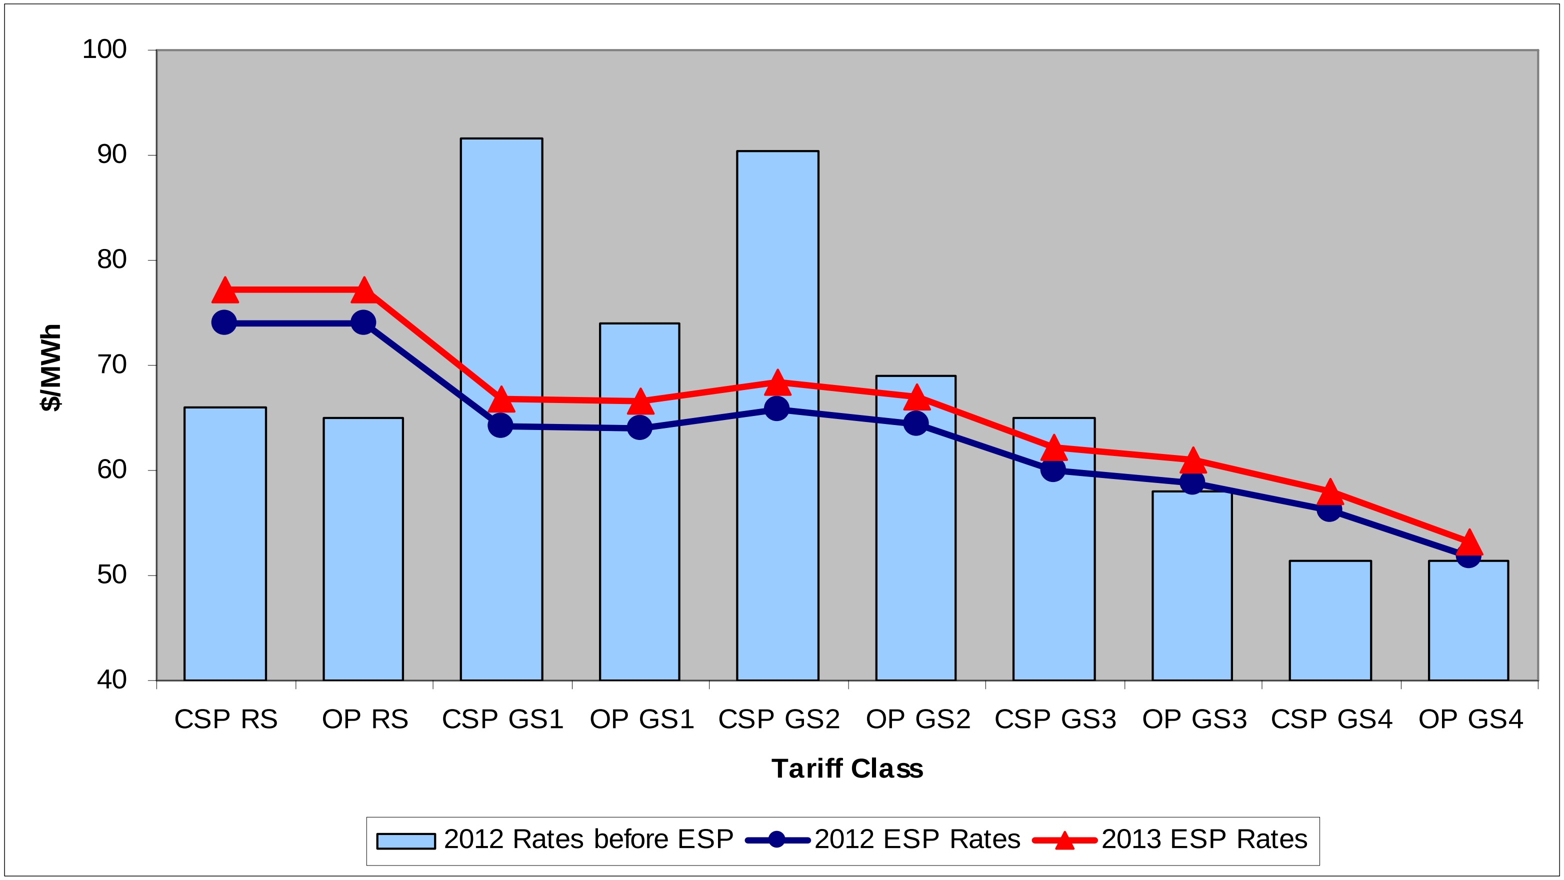
N/C* = No change from prior year

While the ESP includes a small base generation increase, the move to a market-based rate design, consistent with state policy, will result in varying impacts for different customer groups.

Price to Compare

Proposed **SSO** Rates Redesigned To Resemble Market Pricing Structures



Rates do not reflect mitigation impact of market transition rider
2012 Rates before ESP reflect current 2011 rates for generation & transmission service, adjusted to reflect full cost 2011 fuel and environmental costs.

The realignment of rates with market should provide all customers with equivalent opportunities to shop. Additionally, since the proposed design eliminates explicit demand charges, customers should be more easily able to evaluate competitive offers. To ease the rate impact that customers will experience from the realignment, we have proposed a Market Transition Rider.

Market Transition Rider – Mitigates the Initial Impact of Rate Realignment

Illustration of Market Transition Rider on ESP Generation Rate Increases

Three-Year Market Transition Plan
Summary of AEP Ohio ESP Generation Rate Changes

CSP Current Customer Class	CSP New Customer Class	2012 Increase	2013 Increase	2014 Increase	Total Increase

AEP Ohio		1.4%	2.7%	0.0%	4.2%

The Market Transition Rider is a transition rider designed to facilitate the transition from AEP Ohio's current rates to market-based SSO Generation Service rates. It is a non-bypassable rider designed to limit the first and second year changes for any customer classes to uniformly transition any above or below average changes in three steps. Any revenue shortfall that is produced by limiting the increases for certain customer classes is collected from those classes whose decreases are limited.

List of ESP Riders – Existing and Proposed

Line	Rate Mechanism	Abbreviation	Bypassable	Distribution	Notes
1	**Current Riders**				
2	Universal Service Fund Rider	USF	--	Yes	
3	Advanced Energy Fund Rider	AEF	--	Yes	Expired 12/31/2010

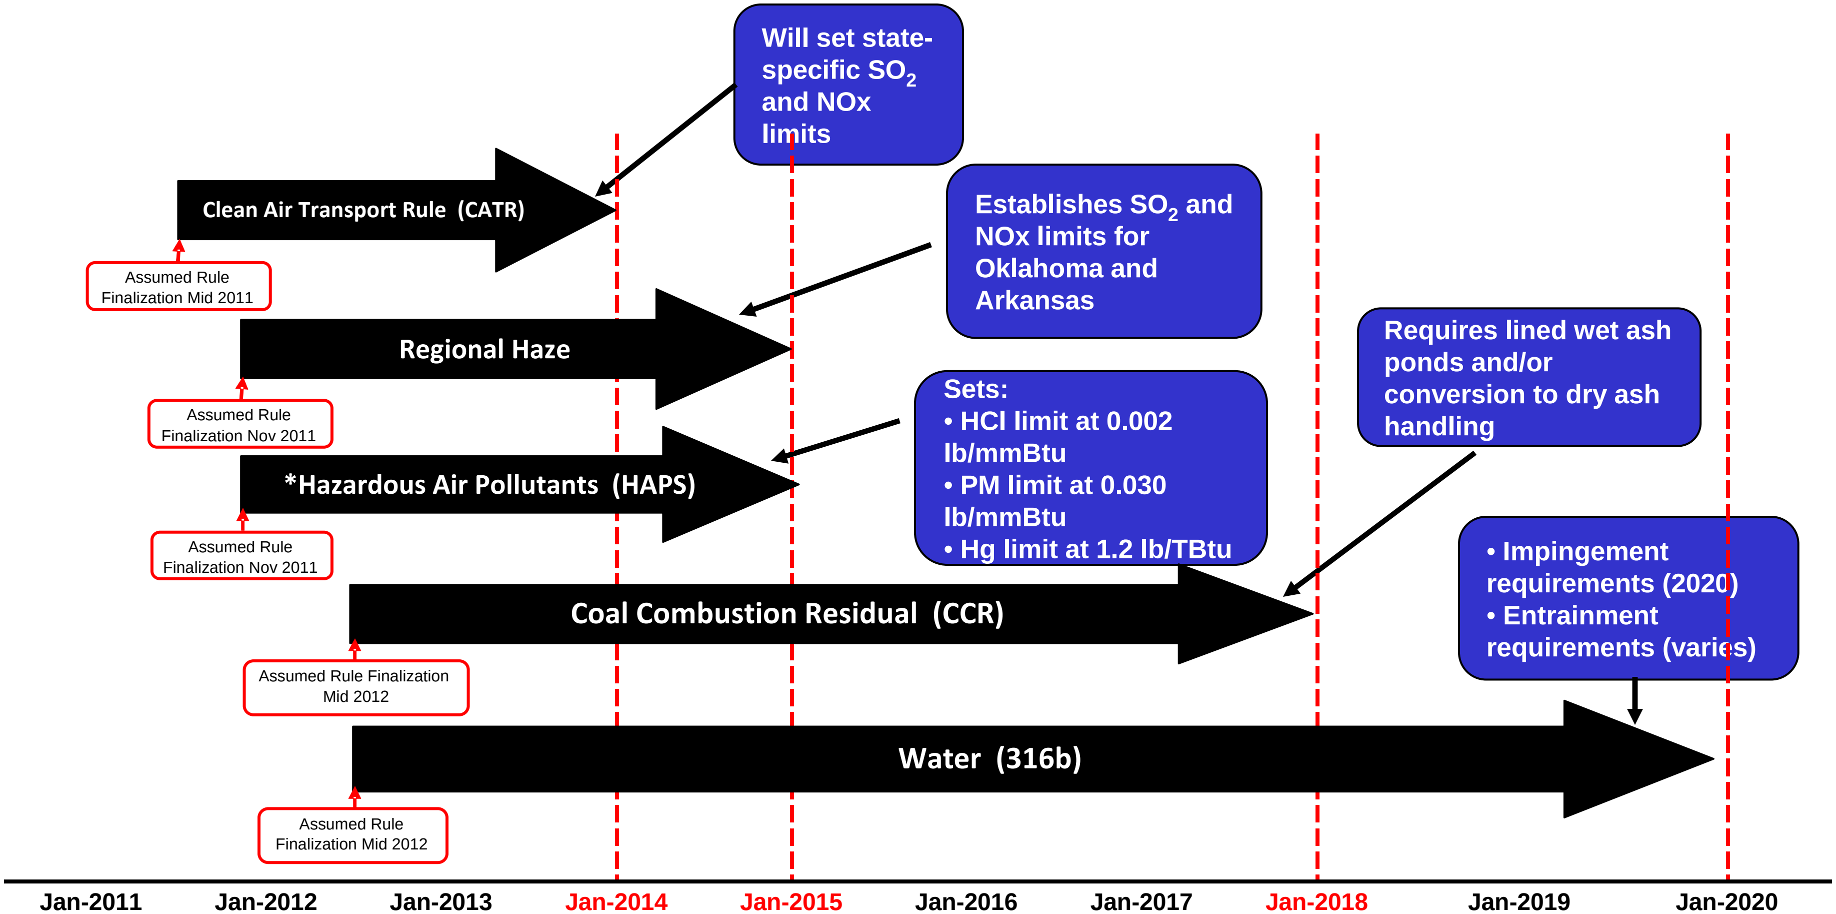
33	PIPP Uncollectibles	PIPP	--	Yes	

Anticipated environmental regulations and compliance deadlines



* **Units that will be retrofit are eligible for a one year compliance extension from the EPA**

Retrofits/New Generation

AEP®

- The tables below represent our estimated \$6 - \$8 billion capital investment from 2012 to 2020 for environmental retrofits on 10,500 MW and new/refueled generation of 2,152 MW. The below costs include management estimates for compliance with CATR, HAPs MACT, CCR and 316(b) regulations as currently proposed.

Plant	MW	Type of retrofit	Low Cost Estimate 2012-2020 ($MM)	High Cost Estimate 2012-2020 ($MM)	
Conesville 5	400	SCR, DSI			
Conesville 6	400	SCR, DSI			
Muskingum River 5	510	Refuel with Natural Gas			
Gavin 1	1320	FGD upgrade			
Gavin 2	1320	FGD upgrade			
Zimmer 1	330	FGD upgrade			
Total Expected Cost			**2,100**	**2,800**	*
Clinch River 1	211	Refuel with Natural Gas			
Clinch River 2	211	Refuel with Natural Gas			
Dresden	580	New Natural Gas			
Total Expected Cost			**580**	**765**	**
Rockport 1	1320	FGD, SCR			
Rockport 2	1320	FGD, SCR			
Tanners Creek 4	500	DSI, ACI			
Total Expected Cost			**1,240**	**1,670**	***
Big Sandy 1	640	New Natural Gas			
Total Expected Cost			**400**	**525**	

*Assumes regulatory cost recovery for environmental investments including refuel are non-bypassable surcharges as proposed in the 2012 - 2014 ESP

** Total capital invested is expected to be \$366 million for the Dresden plant once completed; \$343 million of which is forecasted to be spent prior to 2012.

*** Includes AEG portion of costs related to Rockport upgrade

Operating Company	Plant	MW	Type of retrofit	Low Cost Estimate 2012-2020 ($MM)	High Cost Estimate 2012-2020 ($MM)

	Grand Total	**5,856**	

- Capacity reduction caused by retirements will create grid reliability issues particularly in the 2014-2016 time frame
- Net impact could be approx. 600 fewer jobs at AEP as well as indirect job losses affecting local vendors, contractors and service providers
- Annual lost wages of approximately $40 million
- Tax payments could decline by more than $30 million

Transmission Investment Strategy

- **Near-Term Investment** – Electric Transmission Texas (ETT) secures near term investment opportunities, allowing AEP to invest in the large, growth-oriented Texas transmission market. Total capital expenditures of $3 billion with a 9.96% ROE.

- **Mid-Term Investment** – Seven wholly-owned transcos allow for expansion and growth within AEP's existing utility footprint through an efficient recovery mechanism. Will spend $160 million in 2011 and more than $350 million in 2012. ROE is in the 11.20%-11.49% range.

- **Long-Term Investment** – Joint ventures provide opportunities for longer-term growth outside of AEP's existing utility footprint with forward looking formula rates, reasonable ROEs and FERC incentives where appropriate.

Transmission has a diversified investment approach that positions it as one of the key AEP growth businesses.

Texas Transmission Growth Strategy : Near Term Investment

Ownership Structure: 50/50 (AEP/MidAmerican Energy Holding Company)

Total Project Cost: Over $3 Billion

Growing Rate Base:

Current rate base is $412 million; expected to grow as follows:

2011: $473 million

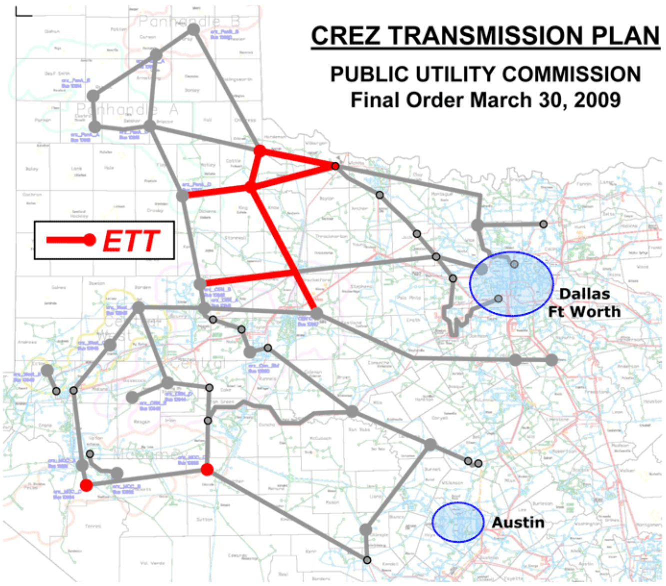
2012: $778 million

2013: $1,352 million

Electric Transmission Texas

Interim TCOS filings twice per calendar year

Approved ROE: 9.96%



- **Additional Projects in the Pipeline ~$1.6 B:**
  - Approximately 822 miles of lines and 28 substations with in-service dates through 2017

- **Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.1 B:**
  - Seven double-circuit 345kV transmission lines (~$750 M), eight major 345kV stations and several series compensation installations (~$350 M)
  - PUCT Certificate of Convenience and Necessity (CCN) proceedings underway

Joint Venture Strategy: Long-term

- **Strategy**: JV's secure new investment opportunities with local utilities to diversify AEP's investment outside AEP's traditional footprint while providing longer-term incremental earnings**.** JV projects are well-suited for FERC formula rate recovery mechanism, including potential for incentive rates.
- **Future:** Federal/regional initiatives may accelerate expansion of EHV transmission (e.g. cap-and-trade, renewable portfolio standards, inter-region wide planning). Securing first mover advantage will enable AEP to secure LT investment opportunities.
- **Future flexibility:** Passive investment opportunities can be considered and can provide entry beyond SPP/PJM/ERCOT

ADAPTABLE

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants including our ability to restore Indiana Michigan Power Company’s Donald C. Cook Nuclear Plant Unit 1 in a timely manner; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity and transmission lines (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary or deflationary interest rate trends; volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impacting our ability to finance new capital projects and refinance existing debt at attractive rates; the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurred cots and recovery is long and the costs are material; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

Table of Contents

AEP Highlights

Premier utility platform

- Leadership position in electric generation, transmission and distribution operations
- Cash flow, earnings and regulatory diversity with more than 5 million customers in 11 states
- $6.3 billion capital expenditure program (2009-2011) will continue to drive rate base growth

Effective regulatory relationships

- Traditional recovery mechanisms with equitable risk allocation enhance both earnings and cash flow
- Emerging energy policies play to AEP's strengths (transmission, energy efficiency, reliability)
- Constructive local relationships deliver successful regulatory outcomes

High-growth transmission business

- The leading US transmission owner, operator, and developer
- Exceptional portfolio of high-quality development projects and project partners
- Attractive ROEs, regulatory support and access to capital will drive earnings growth beyond our traditional utility footprint

Stable financial position

- Maximization of shareholder value through regulated utility and transmission investments
- Balanced approach to cost containment and capital allocation
- Commitment to investment grade profile, prudent balance sheet, and liquidity management
- Conservative dividend payout with attractive yield

AMERICAN ELECTRIC POWER

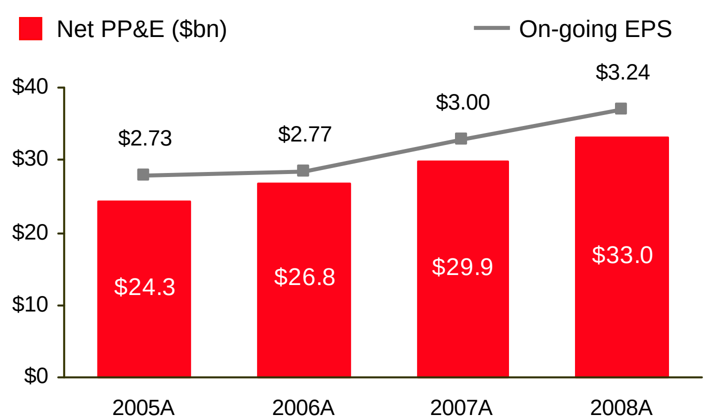
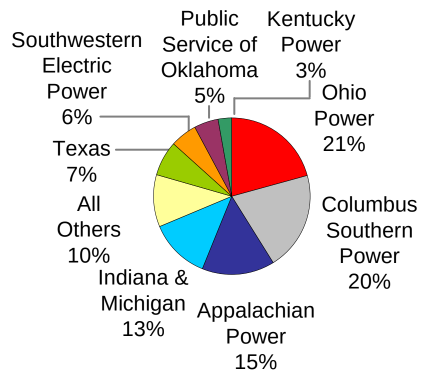
* - AEP generation includes long-term PPAs and generation under construction

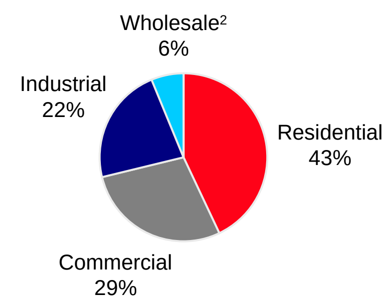
Regulated Operations



- *Net PP&E CAGR of 10.7% since 2005*
- *Earnings CAGR of 5.9% since 2005*



2008 On-going Earnings = $1.3bn



2008 Retail Base Revenue = $6.4bn

- *Highly diversified regulated utility earnings contribution*
- *Balanced customer mix*

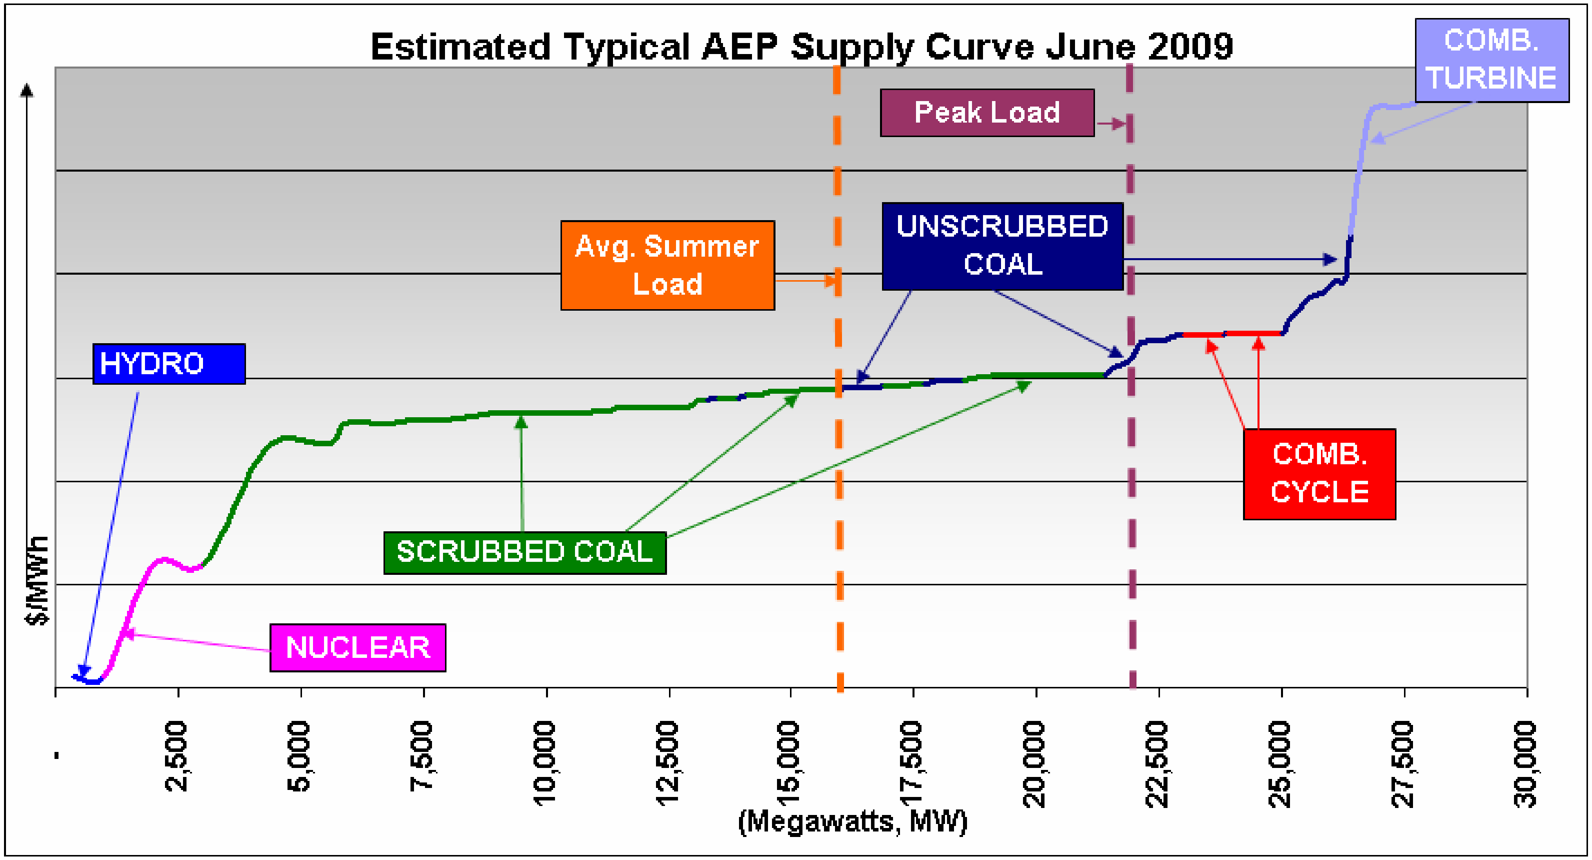
[1] *Source: Company filings*
[2] *Wholesale includes sales to municipal and cooperative power systems, other wholesale, and other retail sales*

AEP AMERICAN ELECTRIC POWER

1

AEP Supply Stack

- Supply stack with Cook unit 1 outage would slide the supply stack 1,009 MW to the left.
- Planned outages typically shorten supply stack in the shoulder months by several thousand megawatts.
- Shoulder periods offer the flexibility to reschedule planned outages.



Energy Policy Initiatives are Core to Our Strategy

Greenhouse Gas Reduction & Regulation

- Actively engaging in CO_2 policy debate – support cap & trade with <u>allocated</u> credits
- Leadership position in development of carbon capture and storage technology
- Reducing carbon footprint via offsets and other measures
- Founding member of Chicago Climate Exchange

Renewable Energy

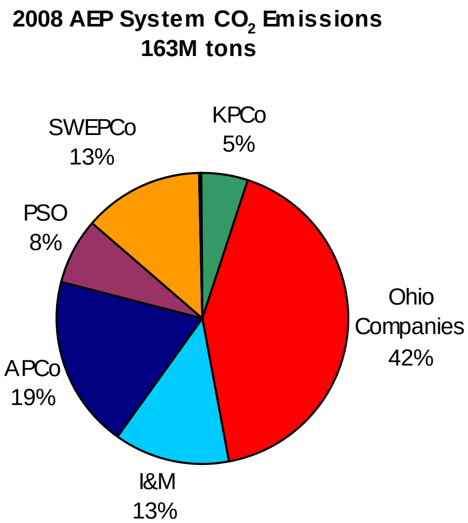
- Develop “transmission superhighway” to facilitate renewable energy projects
- Satisfy RES requirements in our jurisdictions
- Add 2,000MW of wind capacity via long-term PPAs – 903MW achieved to-date

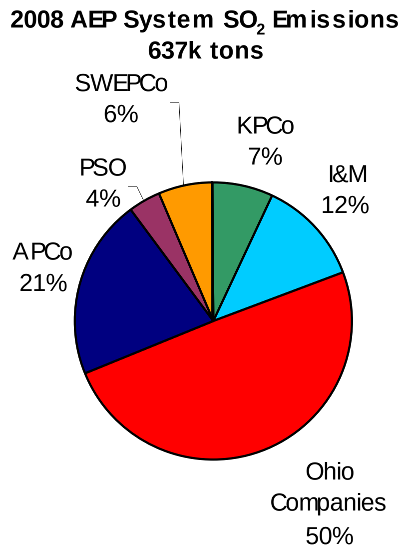
Energy Efficiency, Security & Reliability

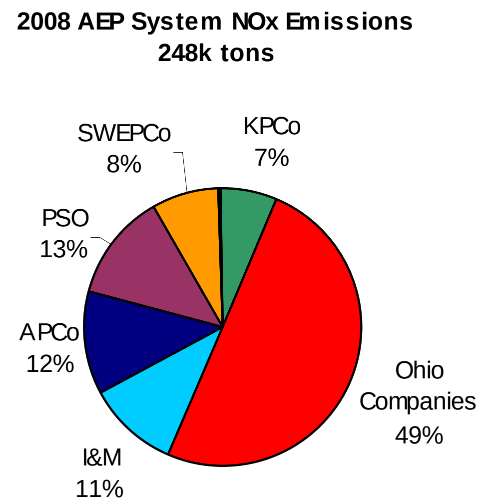
- Develop high-voltage transmission projects to strengthen America’s power grid
- Build generation to ensure reliable supply
- Reduce 1,000MW of demand by 2012
- Reduce 2.25 million MWhs of consumption by 2012
- Diversify our fuel mix; have added 3,705MW of gas-fired capacity since 2005 and have 1,080MW under construction

AEP AMERICAN ELECTRIC POWER

CO_2 Cost Recovery – Should Follow SO_2 & NOx

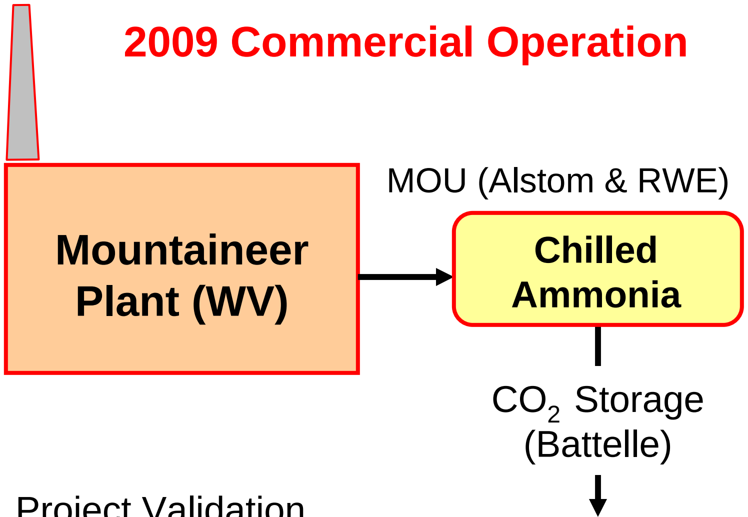






- 100% of SO_2 and NOx allowance costs currently recovered through tracker or similar mechanisms
- Prudently incurred costs associated with carbon-based taxes and other carbon-related regulations explicitly included in Ohio Fuel Adjustment Clause

Carbon Capture & Storage



Project Validation

- Alstom "Chilled Ammonia" Technology
- 20-30 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, in operation at We Energies' Pleasant Prairie Power Plant)
- Located at the AEP Mountaineer Plant in WV
- 100,000 - 300,000 tonnes CO_2 per year
- In operation 3Q 2009
- Geologic storage for CO_2
- Underground injection control permit received in May 2009 from WV Dept. of Environmental Protection

Represents Post-Combustion Capture

- Conventional or Advanced Amines; Chilled Ammonia
  - Amine technologies are currently available in other industrial applications
  - Relatively low CO_2 concentration in flue gas - more difficult to capture than other approaches
  - High parasitic demand
    - Conventional Amine ~ 25-30%
    - Chilled Ammonia target ~ 10-15%

Key Issues for CCS Development in the U.S.

- Overcoming the 'economic' hurdle
- High up-front capital investment
- Commercial demonstration at large coal-fired power plants
- National standards for permitting of storage reservoirs
- Potential institutional, legal and regulatory barriers to carbon storage

AEP AMERICAN ELECTRIC POWER

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
AEG	Dresden	Ohio	$322 MM	Gas	Combined-cycle	580	2013
SWEPCo	Stall	Louisiana	$385 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.6 B [(1)]	Coal	Ultra-supercritical	600 [(1)]	2012

(1) SWEPCo will own approximately 73%, or 438 megawatts, totaling about $1.2 billion in capital investment.

- Turk – Arkansas Court of Appeals overturned APSC decision granting CECPN & AEP filed appeal to Supreme Court. Air permit appeal hearings were held in June, and decision expected by year end. Construction continues.
- Stall – Construction continues.
- Dresden – Construction suspended due to shifts in capital spending. Commercial operation date has been projected for 2013 (previously 2010).

DC Cook Unit 1 Update

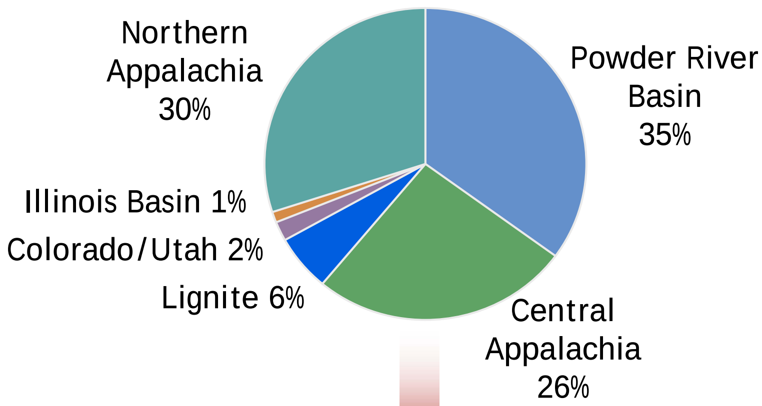
- Previously identified technical challenges have solutions
  - Low pressure turbine rotors have been straightened
  - Foundation repair work is in progress and is the critical path
  - Generator and high pressure turbine repair work supports the critical path
- The unit is scheduled to return to service in the fourth quarter of 2009
  - The unit will operate without the last stage blades at 30 MW (summer) to 100 MW (winter) reduced capacity
- Root cause: “A blade-rotor system design that failed to provide adequate stress margin”
  - The root cause also found no operational or installation issues
- The replacement rotors are scheduled for installation in the spring of 2011
  - Different design with several years of fault-free commercial operation.
- We continue to receive $3.5MM per week from the accidental outage policy
  - Insurance proceeds are reflected as other operating revenue; During 1Q09, approximately 40% of the insurance payments ($20MM) were used to offset increased fuel costs to customers

AMERICAN ELECTRIC POWER

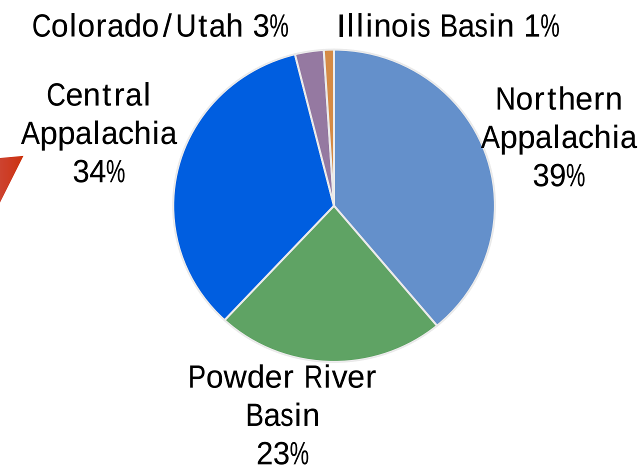
Coal Procurement - 2009 Projected

AEP burns approx. 77 million tons of coal per year

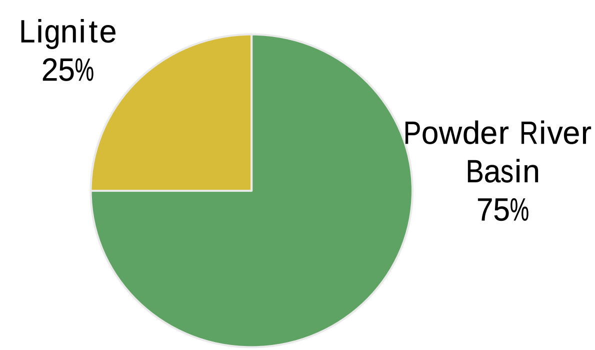
Total AEP System



AEP East



AEP West



Coal Stats:

- 98% contracted for 2009
- Avg. delivered price ~ $46.61/ton in 2008
- Approximate 12% price increase in 2009 ~ $52.00/ton

AEP AMERICAN ELECTRIC POWER

Overview of 2009 Guidance

2009 Earnings Drivers:

- Positive Ohio outcome
- Rate relief - $732mm
- Economic slowdown
  - Lower OSS revenues
  - Lower loads

Long-term Earnings Drivers:

- Rate base investments
- Additional rate relief
- OSS/Retail load
- Transmission JV earnings

2008A-2009E Earnings Bridge ($mm)

Jurisdictional Off-System Sales Sharing Summary

STATE	OSS Sharing?	Detail
Arkansas	Yes, above and below base levels	Up to $758,600 annual margin, ratepayers receive 100%. From $758,601 to $1,167,078, ratepayers receive 85%. Above $1,167,078, ratepayers receive 50%.
Indiana	Yes	There is $37.5 million built into Indiana's base rates. Above $37.5 million, ratepayers received 50%
Kentucky	Yes, above and below base levels	Sharing occurs above and below levels included in base rates of $24,855,326. Between $0 and $30 million, ratepayers receive 70%. Above $30 million, ratepayers receive 60%.
Louisiana	Yes, above base levels	Up to $874,000 annual margin, ratepayers receive 100%. From $874,001 to $1,314,000, ratepayers receive 85%. Above $1,314,000, ratepayers receive 50%.
Michigan	Yes	There are two jurisdictions: St Joe and Three Rivers. For St Joe, 100% of profits are shared with ratepayers. No profits are shared in Three Rivers, including base rates. St Joe represents 66% of the Michigan market.
Ohio	No	n/a
Oklahoma	Yes	75% of profits are shared with ratepayers.
Tennessee	No	n/a
Texas (SPP)	Yes	90% of profits are shared with ratepayers.
Virginia	Yes	75% of profits are shared with ratepayers.
West Virginia	Yes	100% of profits passed back to ratepayers through the Expanded Net Energy Cost (ENEC) clause.

AEP AMERICAN ELECTRIC POWER

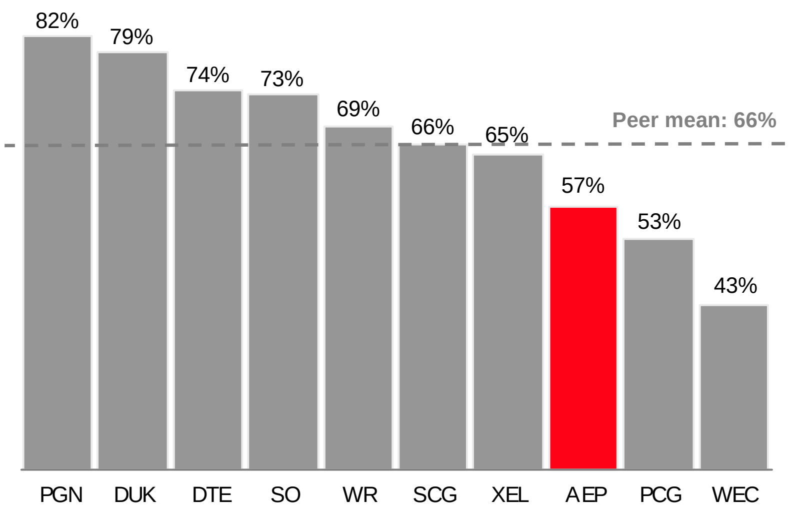
Dividend Overview

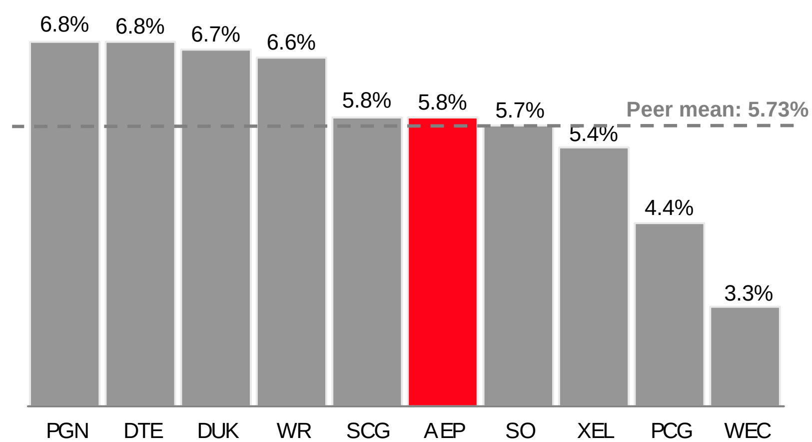
- We have paid 396 consecutive quarterly dividends to shareholders
- Dividend - $1.64/share
- Attractive yield
- Target dividend payout ratio of 50 – 60%

Payout Ratio vs. Integrated Electric Peers



Note: Payout ratio equals the indicated dividend rate annualized divided by First Call 2009 consensus estimate
Source: Bloomberg & First Call earnings estimates as of 7/8/09

Dividend Yield vs. Integrated Electric Peers



Note: Dividend yield equals the indicated dividend rate annualized divided by the share price
Source: ThomsonONE as of 7/8/09

AEP AMERICAN ELECTRIC POWER

Pension and OPEB Estimate

- Our pension plan and OPEB funds investment returns were each down about 24% in 2008.
- Discount rates are assumed to be 6.0% for pension and 6.1% for OPEB.
- Investment losses increase plan expense for both pension and OPEB, but the investment losses are smoothed in over several years.
- We expect 2009 pension and OPEB expense to increase $104MM from 2008 to 2009 (pre-tax and pre-capitalization).
- OPEB contributions will increase along with OPEB expense, in accordance with agreements in most of our regulatory jurisdictions.
- We do not expect any mandatory contributions to pension in 2009. Pension trust contributions are estimated to be $475MM in 2010 and $283MM in 2011.

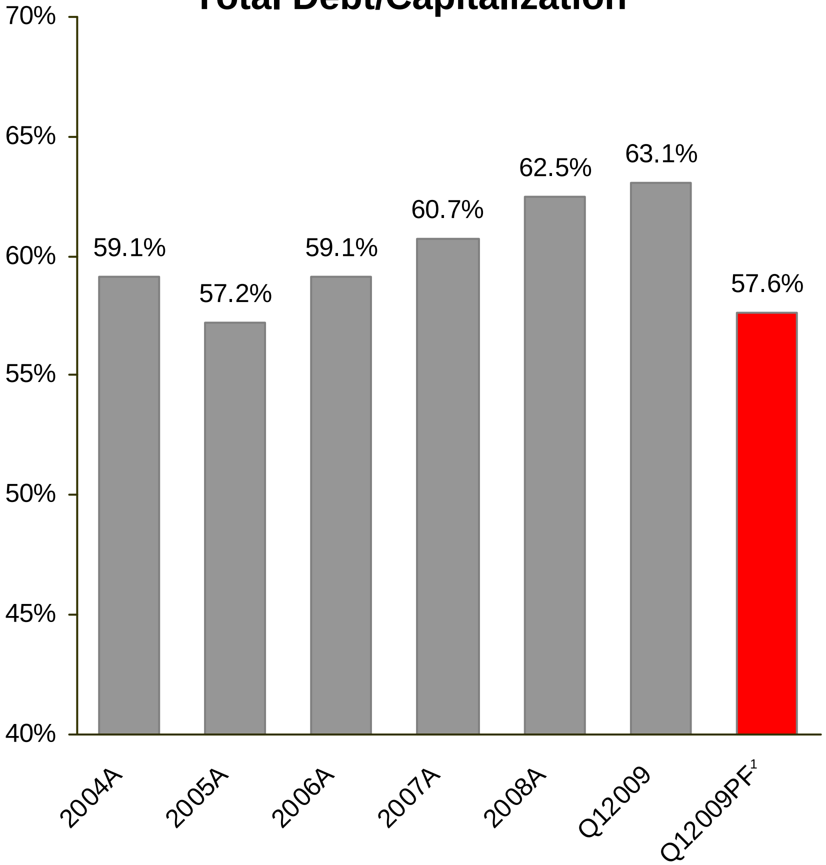
Maintaining Strong Capitalization & Liquidity

Total Debt/Capitalization



Note: Total Debt is calculated according to GAAP and includes securitized debt
[1] Pro forma assumes proceeds from the equity offering were used to reduce debt

Current Liquidity Summary

- Liquidity provided by 27 banks
- Our largest lender accounts for less than 10% of bank commitments

($mm)	04/20/2009	Maturity
Revolving credit facility	$1,500	March 2011
Revolving credit facility	1,454	April 2012
Revolving credit facility	627	April 2011
Total Credit Facilities	**$3,581**	
Plus: AEP, Inc. cash and investments	1,135	
Less: Draw on credit facilities	(969)[1]	
Less: Letters of credit issued	(492)	
Net Available Liquidity	**$3,255**	

AEP AMERICAN ELECTRIC POWER

Uniquely Positioned for Nationwide Grid Expansion

Active Projects:

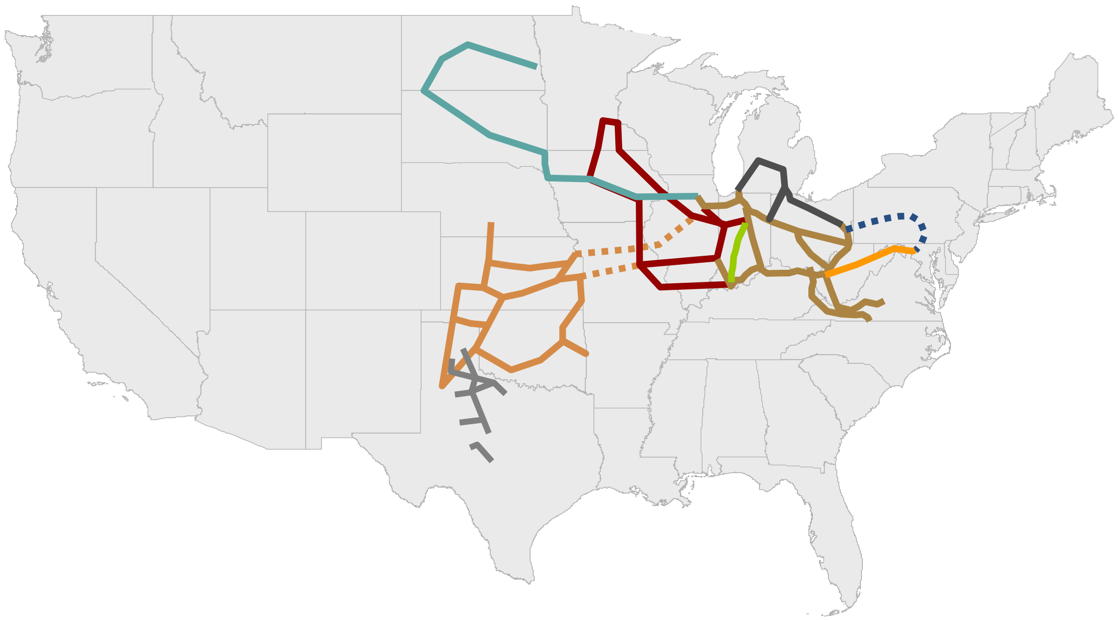
Pioneer — **COD: 2015**
- 240 miles of 765 kV
- Partner: Duke Energy (50%)
- Estimated Cost: $1 billion
- ROE: 12.54%

PATH-WV — **COD: 2014**
- 275 miles of 765 kV
- Partner: Allegheny Energy (50%)
- Estimated Cost: $1.2 billion
- ROE: 14.3%

Tallgrass — **COD: 2013-14**
- 170 miles of 765 kV
- Partners: OG&E (50%) & MidAmerican Energy (25%)
- Estimated Cost: $500 million
- ROE: 12.8%

Prairie Wind — **COD: 2013**
- 110 miles of 765 kV
- Partners: Westar Energy (50%) & MidAmerican Energy (25%)
- Estimated Cost: $400 million
- ROE: 12.8%

ETT — **COD: 2013**
- 345 kV in ERCOT
- Partner: MidAmerican Energy (50%)
- Estimated Cost: $400 million
- ROE: 9.96%



Future Projects:

EHV Michigan — **COD: ~2020**
- 700 miles of 765 kV

PJM Projects
- Enhance existing 765/345 kV

Hartland — **COD: ~2020**
- 1000+ miles of 765 kV

MISO Vision Plan
- 765 kV Backbone

SPP Overlay — **COD: 2013-14**
- 765 kV Backbone

ETT — **COD: ~2018**
- 345 kV in ERCOT
- Additional CREZ spend of $750-$850 million

AEP AMERICAN ELECTRIC POWER

Note: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

Equity Contributions Enhance Earnings Growth to 4 – 8%

AEP is the leader

- Largest US transmission footprint
- Interstate EHV highway vision
- National renewables transmission strategy

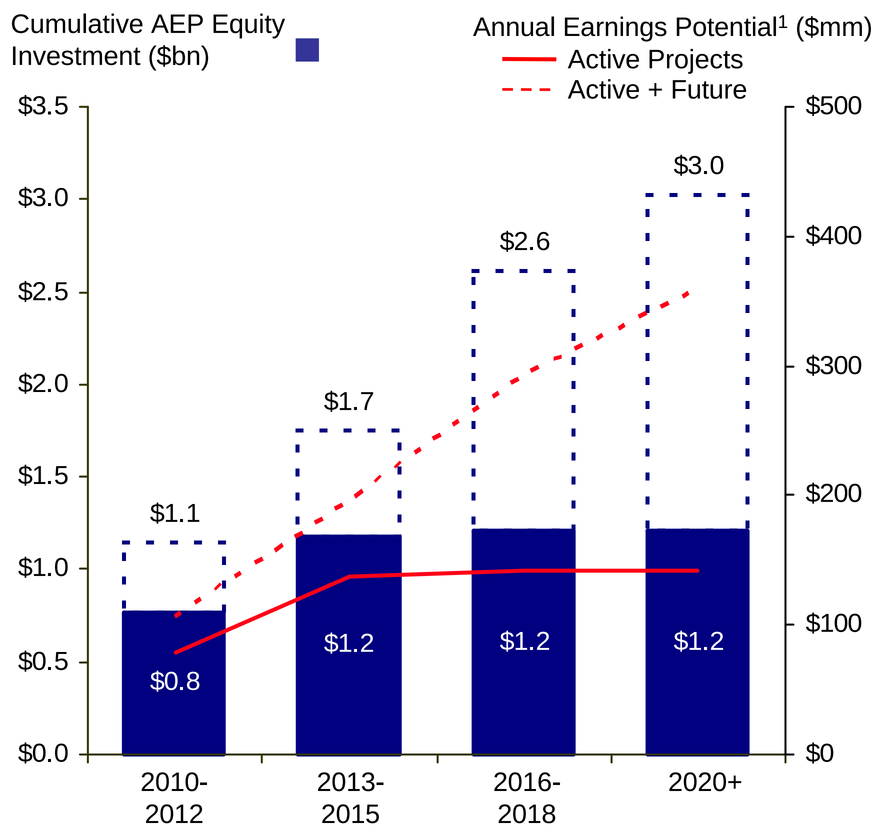
Quality projects

- 4 FERC-approved ($3.3 billion)
- Independent ERCOT transmission JV company (up to $2.6 billion)
- Robust pipeline of future 765 kV projects (up to $15 billion)

Attractive returns

- FERC incentive rates (12.5-14.3%)
- Strong cash flow with CWIP
- Long-term earnings potential of ~$140-$360 million annually[1]

Illustrative Earnings Potential of New Transmission Initiatives

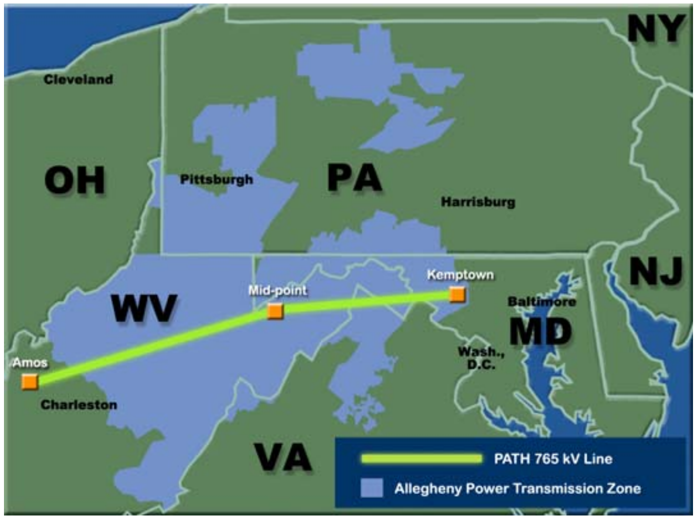


[1] *Illustrative calculation assumes 50/50 debt/equity capitalization and incentive ROE of ~13.0% for FERC projects and a 60/40 debt/equity capitalization and 10.5% ROE for ERCOT projects*

EHV Transmission in PJM: PATH

Project Description: 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

- **Near Term Risks**
  - Obtaining a CPCN in West Virginia or costly concessions with WV to receive the CPCN; CPCN filing made May 15, 2009
- **Pertinent Data**
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP and 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
    - Rates went into effect March 1, 2008; current annual revenue requirement is $15MM effective 1/1/09
  - Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million
  - Estimated completion date: 2014



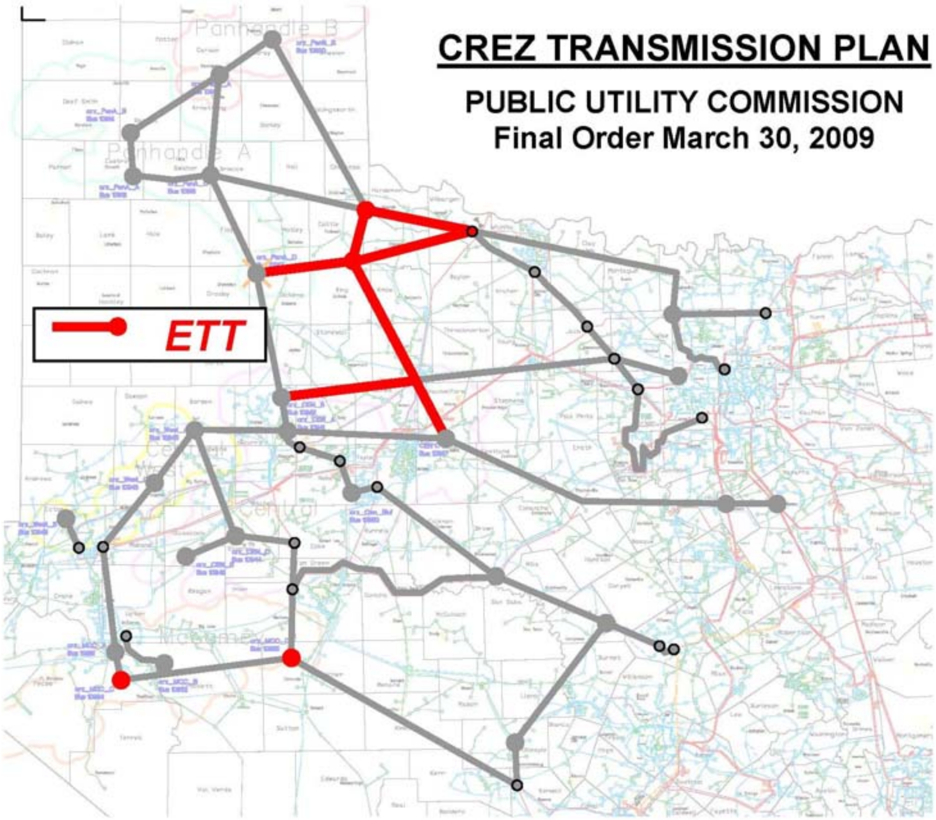
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP AMERICAN ELECTRIC POWER

Texas CREZ Project

Strengthening the ERCOT grid to collect and deliver wind generation to load

- ***Status:***
  - On February 26, 2009, PUCT ordered its staff to stage the development of CREZ transmission lines.
  - Staging to occur in separate docket and consider timing of wind projects and congestion.
  - PUCT established 2 categories based on priorities. ETT has no first priority lines.
  - PUCT issued a final order assigning transmission service providers on March 30, 2009.
  - ETT's share of CREZ investment is approx. $840MM of $4.9B total.
  - The filing calls for completion of the plan by 2013.
- ***Next Steps***
  - Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in early 2010.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

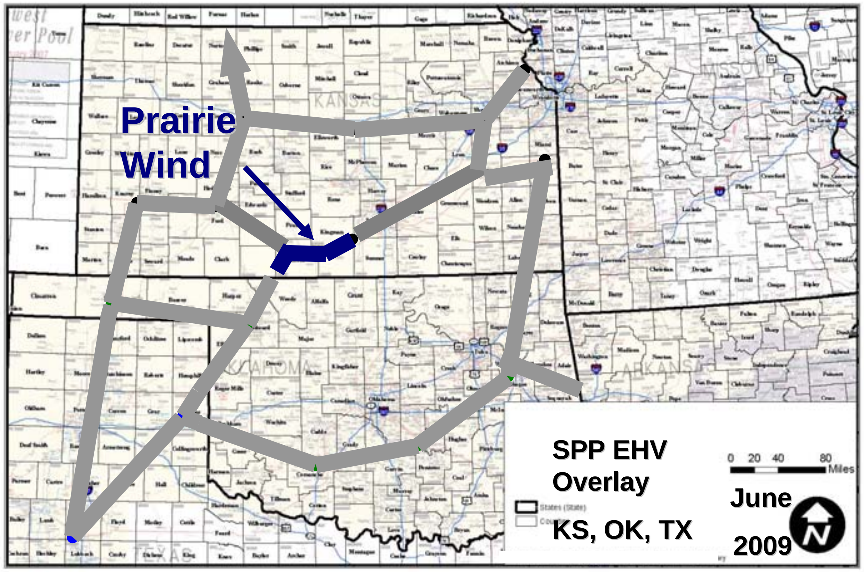
Electric Transmission Texas

AEP AMERICAN ELECTRIC POWER

Prairie Wind Transmission, LLC

JV to build first segment of 765-kV transmission in SPP

- ***Overview***
  - In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
  - Following a settlement agreement with ITC on June 1, 2009 both entities agreed to split the mileage and costs of building the 765-kv transmission superhighway. The newly revised project is expected to cost approximately $400 million and in-service by 2013. Settlement approval by the KCC is still pending.
  - PWT is a 50/50 JV that is proposing to build approximately 110 miles of 765-kV lines extending from Wichita, KS, west to a substation near Medicine Lodge, KS, and then south to the Kansas border from Medicine Lodge, KS.
  - The original proposed mileage prior to settlement was approximately 230 miles.
  - The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
  - AEP's ownership of the joint venture is 25%.
  - FERC order received in December 2008:
    - ❑ Cash return on CWIP and 12.8% incentive ROE
    - ❑ Recovery of all costs incurred prior to the time rates go into effect, and
    - ❑ Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PWT or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

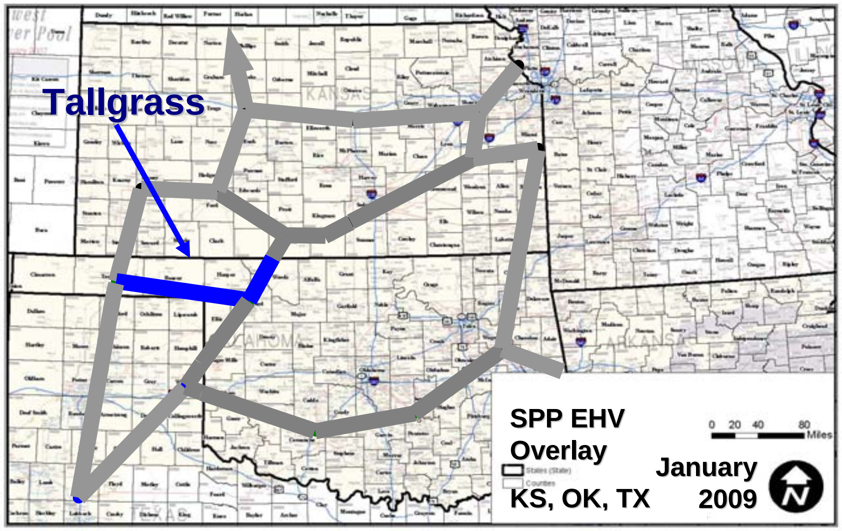
- ***Key Challenges***
  - Regional Cost allocation which enables the development of "system solutions"
  - RTO Approval

AEP AMERICAN ELECTRIC POWER

Tallgrass Transmission, LLC

JV to build second segment of 765-kV transmission in SPP

- ***Overview***
  - In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
  - TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines extending from the Kansas-Oklahoma border north of Woodward, OK, extending west into the Oklahoma panhandle to a new station that will be built near Guymon, OK.
  - The project will promote wind development in the western half of Oklahoma.
  - Project is expected to cost approximately $500 million and be in-service by 2013.
  - AEP's ownership of the joint venture is 25%.
  - Other responsibilities will be handled by the partners or outsourced.
  - FERC order received in December 2008:
    - Cash return on CWIP and 12.8% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of TG or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

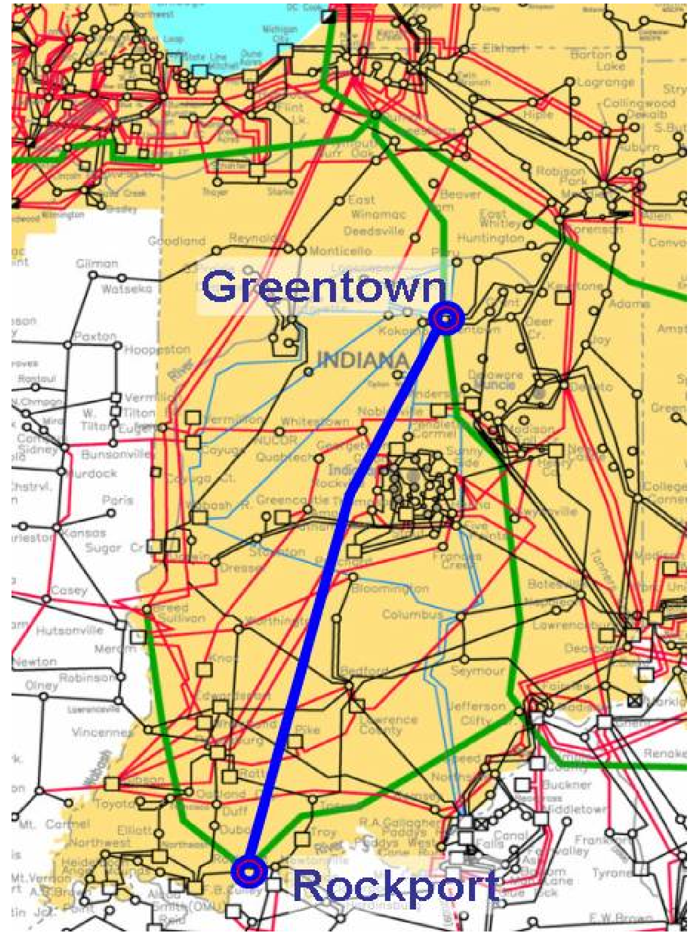
- ***Key Challenges***
  - Cost allocation which enables the development of "system solutions"
  - RTO Approval

AEP AMERICAN ELECTRIC POWER

Pioneer Transmission LLC

Overview

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
- The project will improve the reliability of the nation's transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, protect national security and expand opportunities for new generation, including renewables.
- Project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP's ownership of the joint venture is 50%.
- Other responsibilities will be handled by the partners or outsourced.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect, and
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PT or its parents.
  - Certain formula rate issues were set for hearing



Key Challenges

- Cost allocation which enables the development of "system solutions"
- RTO Approval - touches two RTOs – PJM & MISO
- Siting

AEP AMERICAN ELECTRIC POWER

Hartland Wind Concept EHV Development in Upper-Midwest

<u>Project Description:</u> 1000+ miles of 765-kV transmission linking Upper Midwest generation sources with the existing EHV infrastructure in the Chicago area expected to cost \$5-\$10 billion over a 10 year period.

- **Near Term Risks**
  - Technical feasibility study
  - Identification of willing and able partners
  - Obtaining cost allocation between states, PJM, and MISO
  - RTO Technical Approvals
  - Favorable 205 Order including 679 incentives
- **Mitigation**
  - Target the identified need for the project and its ability to provide access for wind energy to load centers
  - Collaboration in regulatory process for regional cost allocation between MISO, PJM, and Midwest Governors Association
  - Prepare comprehensive regulatory filing, including incentives

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Strategic Direction

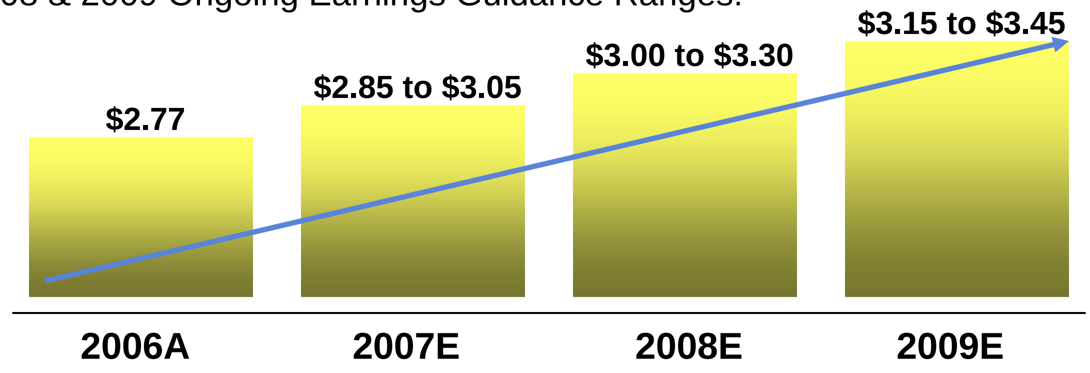
- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Develop our transmission business
- Achieve adequate returns on all assets

Deliver value to investors and cost effective service to our customers

Continued Commitment To Our Core Utility Mission: Bring Reasonably Priced Electric Service To Our Customers, Thereby Strengthening Our Communities And Rewarding Our Investors

Framework For Long-Range Performance

- 2007, 2008 & 2009 Ongoing Earnings Guidance Ranges:



- EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in existing utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
  - Investment in new transmission opportunities
  - Seek rate recovery for new investments
  - Control costs & achieve timely rate relief
- Maintain credit ratings
  - BBB/Baa2/BBB

Future Earnings Growth Driven by Native Load Growth and Substantial Utility Investment Opportunity Focused On Regulated Operations

AEP ®

Summary of 5-7% Long-Range Growth Components

- ✓ Energy sales growth of 1.5%
- ✓ Rate base investment
  - Generation plant purchases & build
  - Transmission – interstate & intrastate
  - Distribution
  - Reliability
- ✓ Transmission company
- ✓ Commercial operations
- ✓ Regulatory strategy
  - Achieve timely returns
  - Seek cash returns on investment during construction
  - Create & secure innovative rate plans
    - Pursue post-2008 solution in Ohio
    - Expand use of trackers
    - Formula rates

AEP®

New Generation And Transmission Projects Largely Reflect Upside To The Long-Range Earnings Growth Target Of 5-7%

AEP OHIO – Post-2008

- Continued dialogue with fellow utilities
- Potential proposal from the governor's office sometime this summer
- Potential legislation crafted late 2007/early 2008
- The price of electricity in Ohio is going up to be more reflective of what is happening in the markets
- 'Stair-step' in a rate increase that is bigger than the current RSPs of 3% and 7%
- We will pursue recording the shortfall between the stair-step level and market prices as a regulatory asset – along with securitization at a legislative level

It Is Our Hope That We Can Craft A Reasonable Compromise That Will Allow Us To Achieve At Or Near Market Prices Without Causing Rate Shock To Our Customers And The Ohio Economy

AEP®

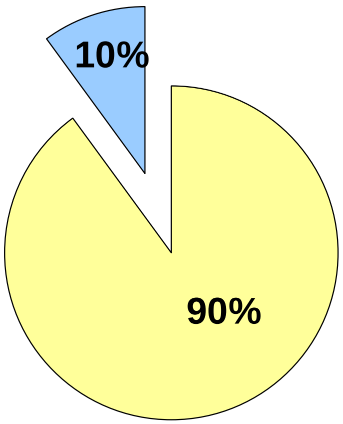
AT THE CONCLUSION OF OUR CURRENT ENVIRONMENTAL RETROFIT PROGRAM, OVER 47% OF OUR COAL-FIRED GENERATION FLEET WILL BE EQUIPPED WITH SCRs AND OVER 50% WILL BE SCRUBBED (FGD). AEP's TOTAL COAL FLEET CAPACITY = 24,710 MEGAWATTS*

*Excludes AEP's 44% ownership in OVEC (980 MWs of coal-fired capacity)

AEP®

Materials and Vendors – AEP's Advantage

Environmental Program Costs:
Active/Firm Costs to Remaining Estimated Costs



- Actuals To Date & Firm Costs
- Remaining Estimated Costs*

* Primarily labor and activated carbon injection systems

Typical Vendors Include:

- B&W/Alstom – FGD Spray Tower
- B&V/Chyioda – FGD Jet Bubbling Reactor
- Pullman Power – Stack Supplier
- Babcock Power – SCR
- Black & Veatch – Architect/Engineering
- Sargent & Lundy – Architect/Engineering

SCR Technology

- Removes 90 – 93% of NOx emissions
- Requires ~ 1% use of auxiliary power
- **AEP Capital Cost ~ $121/kW avg.**

Combination of SCR & FGD technology results in co-benefit of Hg removal ~80% removal efficiency

FGD Technology

- Removes 95 – 98% of SO_2 emissions
- Requires ~1.5% to 3.0% use of auxiliary power
- **AEP Capital Cost ~ $250/kW avg.**

AEP ®

AEP Benefits From First-mover Advantage Through Lower Contracted Pricing and Reduced Market Escalation Exposure

Additional Gas-fired Generation Allows Us To Meet The Growing Needs Of Our Customers And Provides The Company With Greater Fuel Flexibility

New Generation Facilities

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
SWEPCo	Mattison	Arkansas	$130 MM	Gas	Simple-cycle	340 (1)	2007
PSO	Southwestern	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
SWEPCo	Stall	Louisiana	$300 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.3 B (2)	Coal	Ultra-supercritical	600 (2)	2011
PSO	Red Rock	Oklahoma	$1.8 B (3)	Coal	Ultra-supercritical	900 (3)	2012
APCo	Mountaineer	West Virginia	$2.23 B	Coal	IGCC	630	2012
CSP/OP	Great Bend	Ohio	Under Review (4)	Coal	IGCC	630	2017

(1) 150MW were declared in commerical operation on July 12, 2007.
(2) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment.
(3) PSO will own 50%, or 450 megawatts, totaling approximately $900MM in capital investment.
(4) FEED (front-end engineering and design) study with GE/Bechtel is complete. Cost estimates are not yet filed with the PUCO due to the pending appeals to the Supreme Court of Ohio resulting from the PUCO's April 10, 2006 Opinion and Order.

AEP®

AEP Is Meeting The Growing Electricity Needs Of Customers Through The Pursuit Of New Economic Generation Facilities

New Gas-Fired Generation Facilities

SWEPCo

- Mattison Plant (Tontitown, AR)
  - Certificate of Need filings (LA, AR, TX) were approved in all 3 states
  - Air permit received in February 2007
  - Units 3 and 4 (150 MW) online on July 12, 2007; Units 1 and 2 online by January 2008
- Stall Plant (Arsenal Hill, LA)
  - Certificate of Need filings (LA, AR, TX)
    - TX settled in Feb 2007
    - AR & LA decisions expected by year-end 2007
  - Air permit filed on April 27, 2007 – expecting approval by March 2008
  - Commercial operation date in 2010

PSO

Southwestern & Riverside Additions

- Air permit received March 22, 2007
- Commercial operation date of December 2007
- Regulatory Recovery
  - Settlement and final order in the Lawton Cogen case authorizes recovery of costs for Southwestern and Riverside peakers through a rider mechanism beginning as early as June 2008 based on the Commercial Operation date

2007-2009 Projected Capital Expenditures

	2007	2008	2009
Mattison	$56MM	$4MM	-
Stall	$82MM	$126MM	$64MM
Southwestern	$36MM	$3MM	-
Riverside	$35MM	$2MM	-

SWEPCo's and PSO's Short-Term and Intermediate Power Needs Will Be Met With Newly Constructed Gas-Fired Facilities

New Ultra-Supercritical Coal Facilities

SWEPCo

Turk Plant (Fulton, AR)

- Certificate of Need approvals (LA, AR, TX) expected by September/October 2007
- Air permit approval expected in August 2007
- Regulatory Recovery
  - Recovery of carrying cost requested in LA Certificate of Need filing – Hearings scheduled for September 2007
  - AR and TX rate recovery will be addressed in separate filings
- Approximately 85-90% of costs are firm
  - EPC contract for balance of plant work awarded in May 2007
  - Contracts for turbine, boiler, and environmental control equipment awarded in 2006

PSO

Red Rock Generating Facility (Red Rock, OK)

- Used and Useful Determination filed in February 2006 – Hearings concluded July 31, 2007 and order is expected in September 2007
- Air permit approval expected in October 2007
- Regulatory Recovery
  - Order expected in PSO rate case filing in July 2007 – filing included request for CWIP treatment for new projects
- Original cost estimate of $1.8 billion – revised cost estimate expected in the third quarter of 2007

2007-2009 Projected Capital Expenditures

	2007	2008	2009
Turk Plant	$211MM	$230MM	$243MM
Red Rock Generating Facility	$54MM	$120MM	$236MM

Ultra-Supercritical Coal-Fired Generation Is The Most Economical Choice For New Baseload Plants In AEP's Western Service Territory

Integrated Gasification Combined Cycle Facilities

Front-End Engineering & Design (FEED) results complete. Results were filed in June 2007. Cost estimates in target range of 20-30% premium over new ultra-supercritical coal-fired facilities of equal capacity.

West Virginia

- **Certificate of Public Convenience & Necessity filed Jan. 11, 2006**
  - APCo testimony filed June 18, 2007
  - Intervenor & Staff testimony due Nov. 19, 2007
  - Hearings Dec. 10-14, 2007
  - Statutory Deadline – Mar. 7, 2008
- **Air permit filed in Oct 2006**
  - A technical review of the application and development of a draft permit is ongoing by the WV Dept. of Environmental Protection
- **Regulatory Recovery**
  - Filing made in June 2007 –included request for cash recovery mechanism

Ohio

- **Certificate of Environmental Compatibility & Public Need filed March 24, 2006**
  - Ohio Power Siting Board certificate issued in April 2007
- **Air permit filed in Oct 2006**
- **Regulatory Recovery**
  - Phase 1 – June 2006 – PUCO approved tariff to recover pre-construction costs ($24MM) over 12-month period effective July 1, 2006
  - Phase 2 – filing likely to be withheld until resolution of Ohio Supreme Court action
  - Informational filing made on June 18, 2007 to inform PUCO of the West Virginia filing

Construction Period Of 48-50 Months Following Receipt Of Major Regulatory And Permit Approvals

Investing In IGCC

Generation Technology Comparative Statistics

US2006$	Eastern Bituminous		
	USC	**IGCC**	**NGCC**
Nominal Capacity (MW)	618	629	530
Capacity Factor (%)	85%	85%	25%
Total Plant Cost (EPC + Owner's Cost) ($/kW)	$2,152	$2,717	$572
Production Cost ($/MWh)	$22	$22	$45
Cost of Electricity, without CO_2 Capture ($/MWh)	$72	$83	$87
Estimated Cost of Electricity, with 90% CO_2 Capture ($/MWh)	$118	$108	$135

Source: Results of AEP analysis based on EPRI studies.

- Total Plant Cost (Overnight EPC 2006$s) includes the cost to engineer, procure and construct plant and owner's direct costs.
- Assumes Northern Appalachian coal price of $2.25/mmBtu for USC and IGCC and natural gas price of $6.00/mmBtu for NGCC.
- Production cost includes fuel cost plus variable operations and maintenance (VOM) cost.
- Cost of electricity represents first year estimates only in 2006$ and are based on total plant cost plus generic cost estimates for AFUDC, emission credits, infrastructure, interconnections, transmission lines and upgrades.
- Cost of electricity with CO_2 capture provides pressurized CO_2 at the fence line and does not include transportation, storage and monitoring costs.

AEP®

IGCC Technology Is Strategic To Keeping Coal In The Money

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A Reliable & Reasonably-priced Electric Supply Is Necessary To Support The Economic Well-being Of The Areas We Serve

Highlights of Bingaman-Specter Proposal

"Low Carbon Economy Act of 2007"

Key Components:

- Start date for greenhouse-gas reductions is 2012
- Goals: 2006 levels by 2020; 1990 levels by 2030
- Includes a safety valve of $12 per metric ton, increasing at an annual rate of 5% above inflation
- Support for allowance allocations
- International action

AEP Endorses this Proposal Because It Sets Reasonable And Achievable Reduction Targets and Includes the AEP-IBEW Trade Proposal

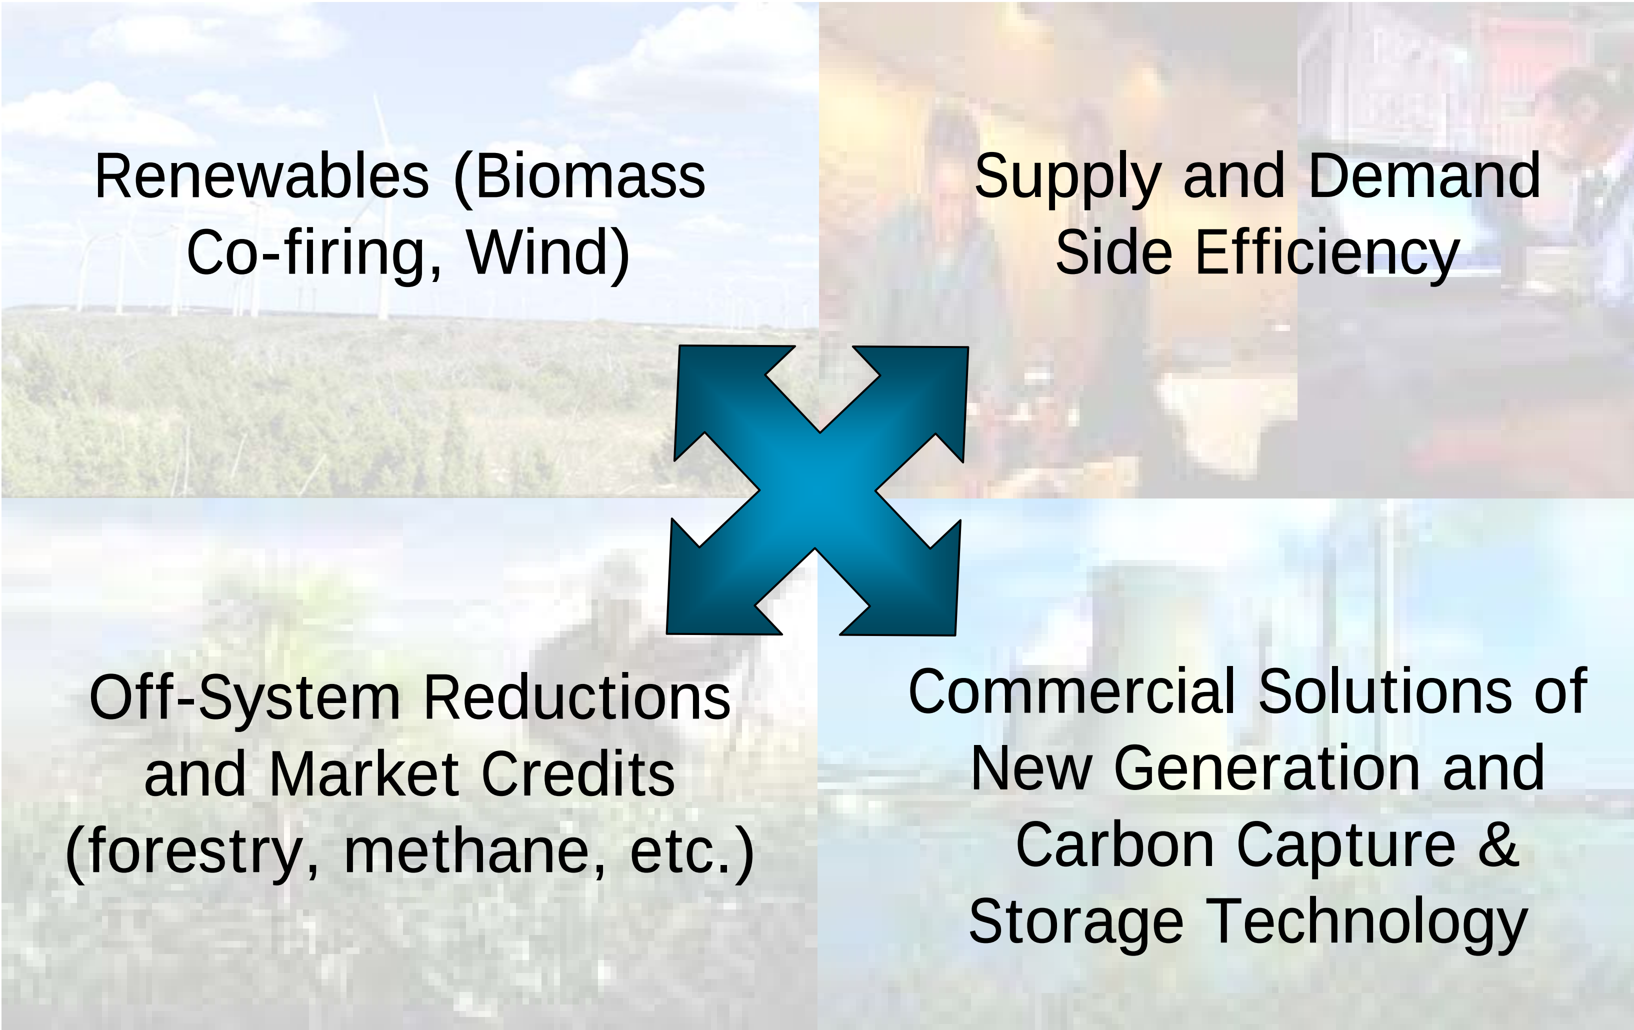
KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 387 of 9556

AEP's Climate Strategy

- **Being proactive and engaged in the development of climate policy**
  - International Emissions Trading Association (IETA)
  - Electric Power Research Institute (EPRI)
  - Pew Center on Global Climate Change
  - e8
  - Global Roundtable on Climate Change
- **Investing in science/technology R&D**
  - FutureGen Alliance
  - US DOE research on carbon capture and sequestration at our Mountaineer Plant
  - EPRI – combustion technologies
  - MIT Energy Laboratory
  - B&W – Oxy-Coal
- **Taking voluntary, proactive action now, demonstrating voluntary programs can work and setting policy precedents thru CCX**
  - Chicago Climate Exchange (CCX)
  - EPA Climate Leaders
  - EPA SF-6 Emission Reduction Partnership for Electric Power Systems Program
  - Asia-Pacific Partnership
  - DOE 1605B- voluntary reporting of GHGs Program
  - Business Roundtable Climate Resolve
  - Numerous forestry activities
- **Evaluating longer term investment decisions such as new generation and carbon capture and storage (e.g., IGCC, Ultra-supercritical)**

AEP Must Be A Leader In Addressing Climate Change

AEP's Long-term GHG Reduction Portfolio



AEP Is Investing In A Portfolio Of GHG Reduction Alternatives

AEP®

AEP's Long-term CO_2 Reduction Commitment

Existing Programs

- Renewables
  - 800 MWs of Wind
  - 300 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

New Program Additions

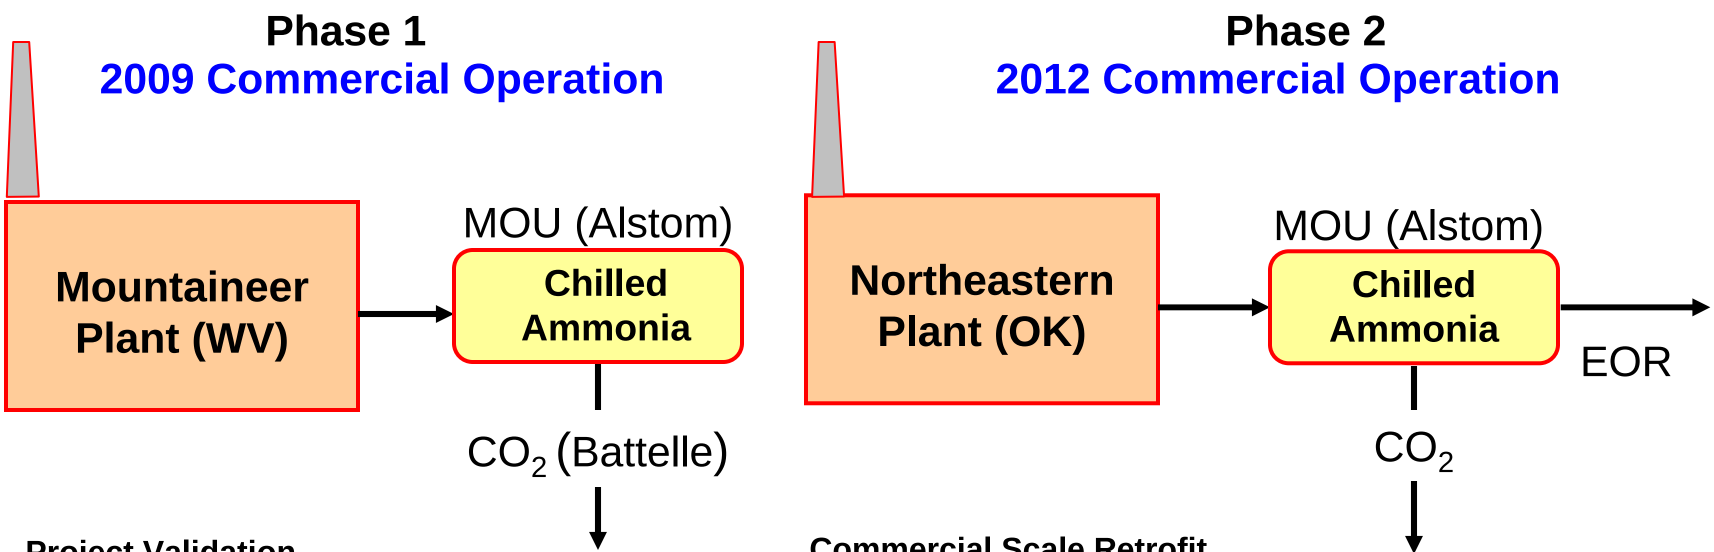
- Incremental Reduction quantity: 5MM tons/yr
- Timing: To take effect/receive credits by 2011
- Methods
  - +1000 MWs of Wind PPAs – 2MM tons/yr
  - Domestic Offsets (methane) – 2MM tons/yr (e.g., livestock methane capture deal of 0.6MM tons/yr)
  - Forestry – Tripling annual investment to increase to 0.5MM tons/yr by 2015
  - Fleet Vehicle/Aviation Offsets – 0.2MM tons/yr
  - Additional actions to include DSM and end use energy efficiency, biomass and power plant efficiency – 0.2MM tons/yr

New Technology Additions

- Commercial solutions for existing fleet
  - Chilled Ammonia
  - Oxy-Coal

AEP Is Committed To A 5mm Ton/Yr Reduction In Co_2 Emissions Which Offsets Approximately Half Of The Emissions Projected From New Generation Projects Previously Announced

Chilled Ammonia Technology Program



Project Validation

- 20 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, under construction at WE Energies)
- 100,000 – 300,000 tonnes CO_2 per year
- In operation 1Q 2009
- Approximate total cost \$50 – \$80M
- Using Alstom "Chilled Ammonia" Technology
- Located at the AEP Mountaineer Plant in WV
- CO_2 for geologic storage

Commercial Scale Retrofit

- ~ 200 - 300 MW_e scale (megawatt electric)
- ~ 600 MW_t scale (megawatt thermal)
- ~1.5MM tonnes CO_2 per year
- In operation late 2011
- Approx. capital \$250 – \$300M (CO_2 capture & compression)
- Approx. O&M cost \$12M per year
- Energy penalty ~ 35 – 50 MW steam, 25 – 30 MW for CO_2 compression
- Retrofit Wet FGD Required: ~\$225 – \$300M
- Located at AEP's Northeastern Plant Unit 3 or 4 in Oklahoma
- CO_2 for Enhanced Oil Recovery (EOR)

Post-combustion Carbon Solution Provides Pure CO_2 Stream For Capture

Oxy-Coal CO_2 Capture & Storage Project

Pilot Scale Demonstration

- 10 MW_e scale
- Teamed with B&W at its Alliance Research Center and 16 other utilities
- Demo complete 3Q 2007
- AEP funding of $50k

Commercial Scale Retrofit

- Retrofit on existing AEP sub-critical unit (several available)
- 150 – 230 MW_e scale retrofit
- 4,000 – 5,000 tons CO_2 per day
- Team with B&W
- AEP funding of ~ $1.5M for feasibility study
- Feasibility study to be completed in late 2007/early 2008

Combustion Conversion Technology For Existing Coal Fleet – Longer Lead Time With Enhanced Viability And Long-term Potential

Transmission Investment Opportunity *

Creating a business model to manage capital requirements for enhanced returns with partners

- **~ $3 billion I-765 Project in PJM**
- **~ $2 billion 765-kV study with ITC in Michigan**
- **~ $3 billion project filed with SPP**
- **~ $1- $7 billion in ERCOT via Electric Transmission Texas, LLC (ETT)**

Assumptions	
Estimated Investment Opportunity	$15 Billion
Ownership Structure w/ Partner	50% / 50%
Debt/Equity Ratio	50% debt / 50% equity
Return on Equity	11.00%-13.00%
Potential EPS Impact (based on 396 MM shares)	$1.00+ **

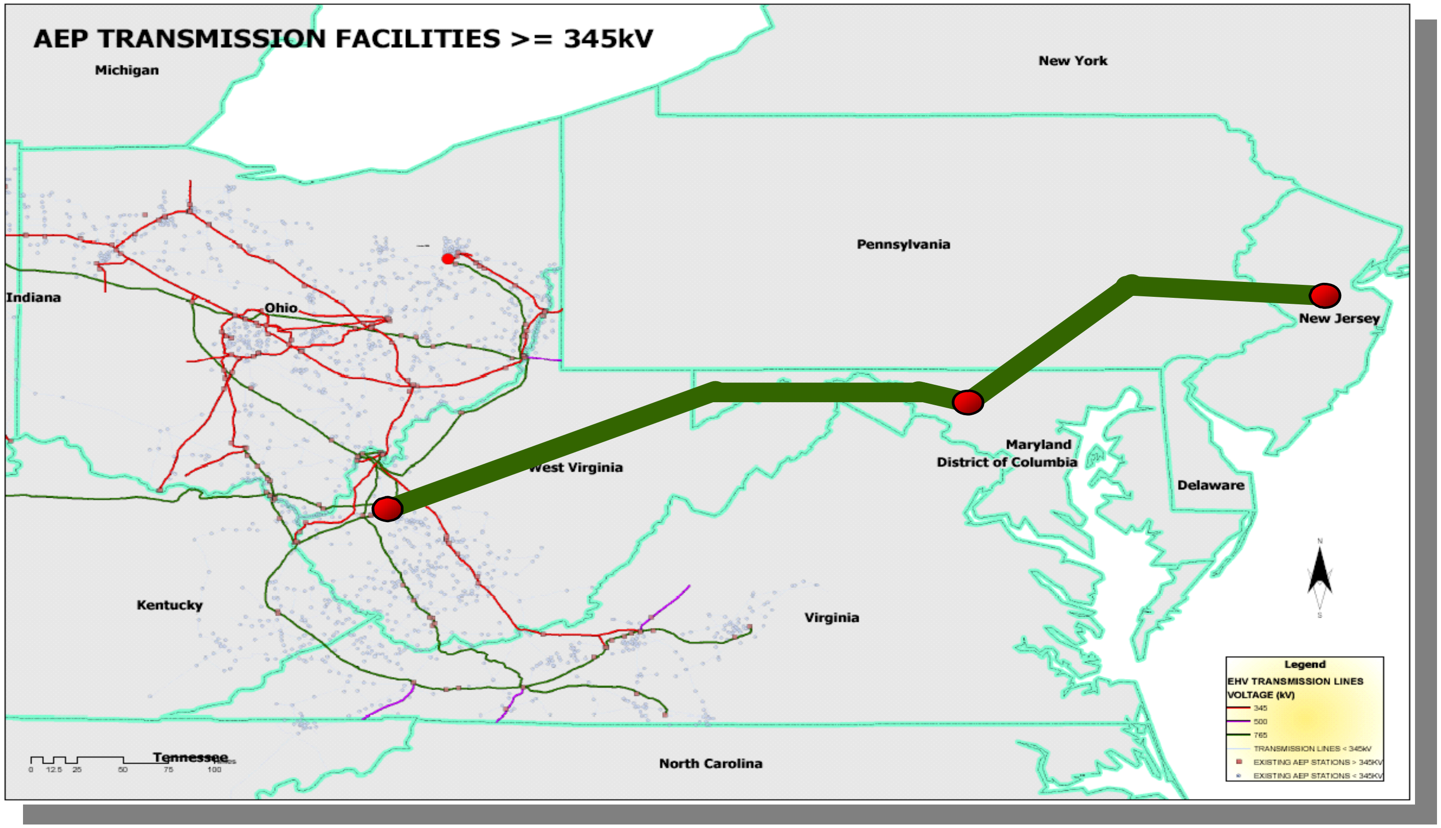
* This identified transmission opportunity is not included in current capex guidance

** Ultimate earnings contribution and timing dependent on ownership structure, capitalization, ROE and date assets are put in-service

AEP®

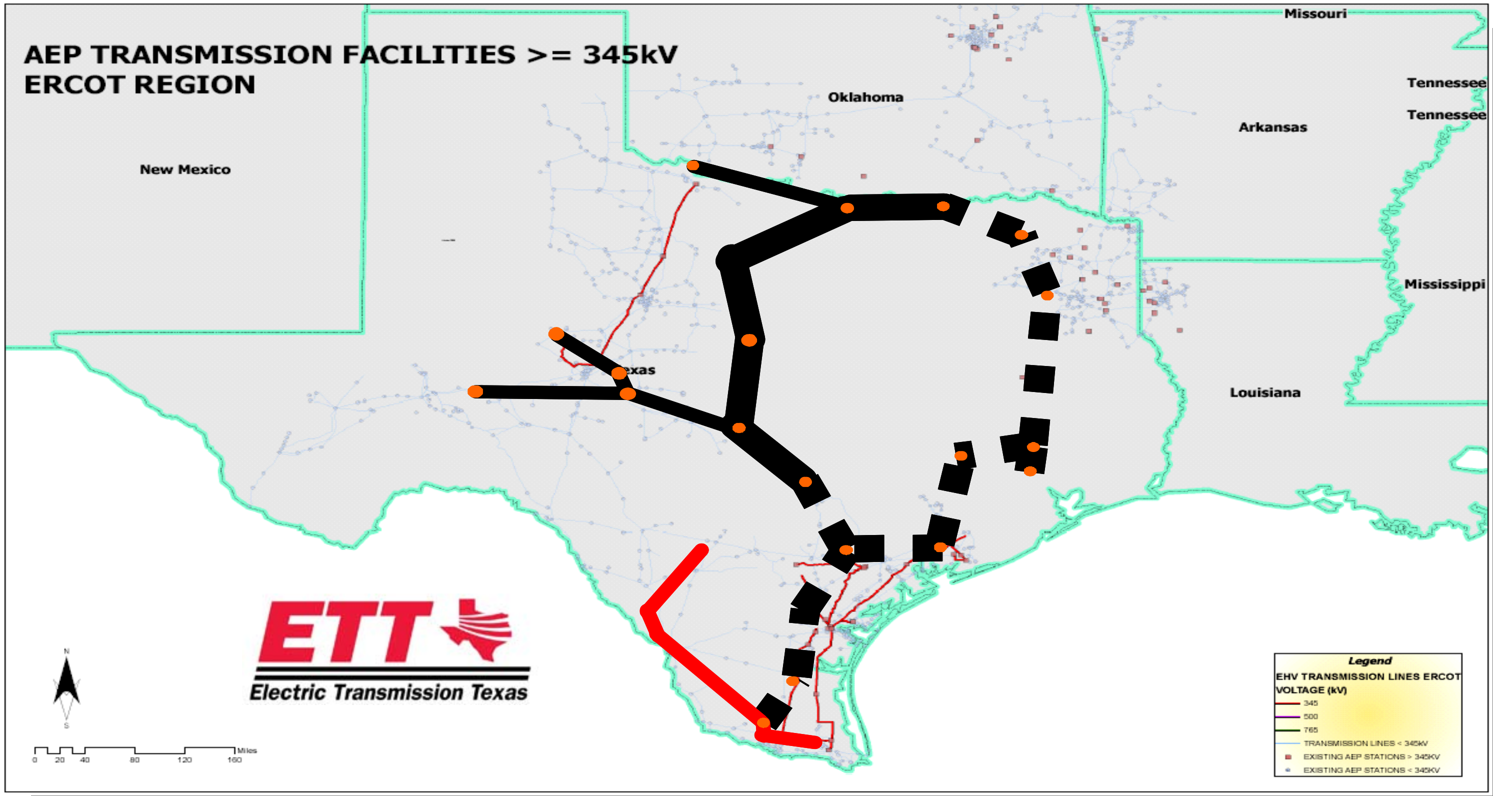
Building The Next US Interstate System For Enhanced Reliability And Market Efficiency Could Have Significant EPS Implications

765-PJM



- JV with Allegheny to build a 290 mile West Virginia – Maryland line (Approved by PJM in June 2007). Total estimated cost of $1.8 billion (AEP portion appprox. $600 million). (Second leg which would continue to New Jersey still under consideration by PJM.)
- Enhances Midwest-Mid-Atlantic reliability and improves power transfer capability by 5000 MW.
- Reduces network line losses by 280 MW.

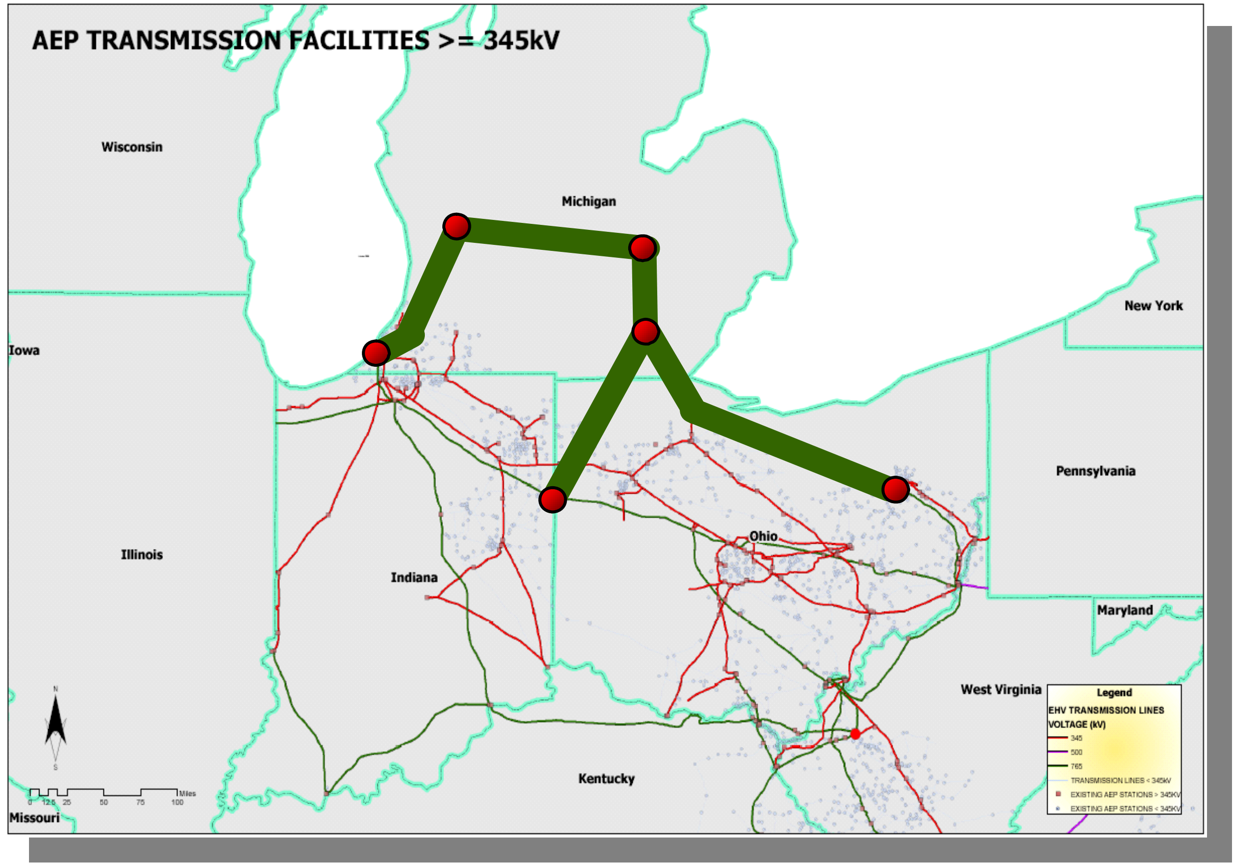
765-ERCOT



- Jointly-owned utility company (AEP and Mid American) will design, construct & operate ERCOT transmission assets.
- AEP exploring ERCOT transmission investment opportunity, including 420 miles of 765-kV initially.
- Up to 4000MW improved transfer capability.

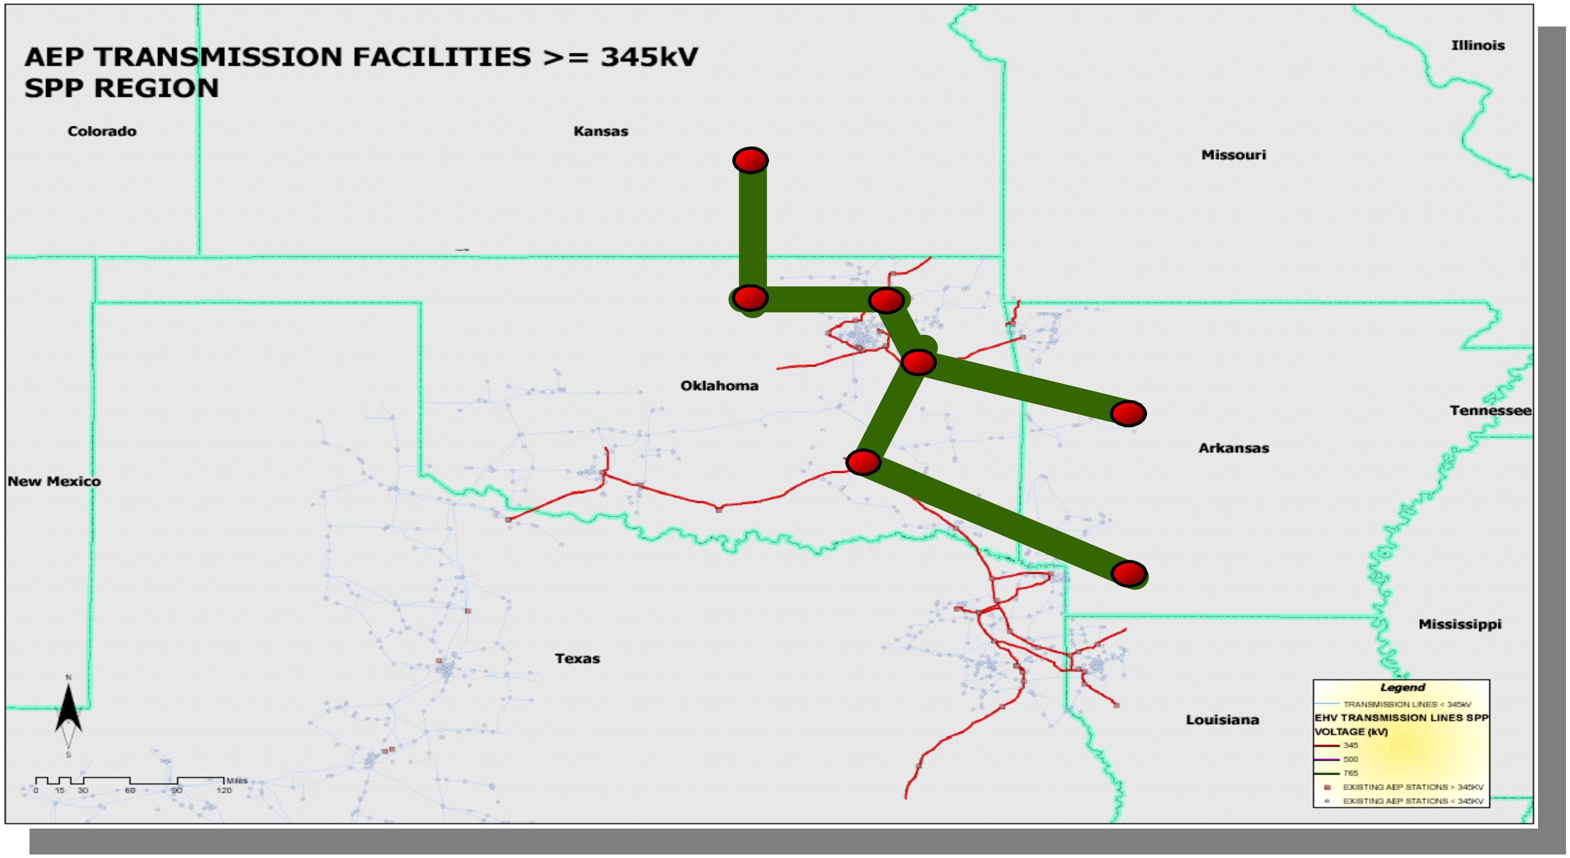
AEP®

765-Michigan



- Agreement with ITC Transmission for Michigan 765-kV to study the feasibility of 700 miles of 765-kV lines in Ohio and Michigan. Completed study should be available in the third quarter of 2007.
- Over 3000MW improved transfer capability.
- Reduces network line losses by 250 MW.

765-SPP



- In July 2006, AEP submitted a conceptual project to SPP for six 765-kV lines, 610 line miles from Arkansas to Wichita, KS, with a proposed construction period of 2012-17.
- SPP issued its EHV Overlay Study in June 2007 reviewing 345 kV, 500 kV, and 765 kV potential projects in SPP. An alternative, which includes a 765-kV line in Oklahoma and Kansas connecting the east to PJM, was chosen as the preferred alternative.

AEP®

New Transmission Investment Funding Plans

- Electric Transmission Texas LLC
  - **40% equity / 60% debt capital structure requested at the PUCT follows Texas' precedent for T&D companies' filings**
  - **Equity – 50% AEP / 50% MidAmerican Energy**
  - **AEP's 50% investment will be held at the AEP Utilities, Inc. subsidiary**
  - **Debt – Initially bank financing**
  - **Initial funding in 3Q07 after regulatory approvals**

- AEP I-765$_{TM}$ Interstate Project
  - **Forming a joint venture with Allegheny Energy for 250 miles of the proposed 550 mile project**
  - **JV portion of the I-765$_{TM}$ Interstate Project approved by PJM in its Regional Transmission Expansion Plan in June 2007**
  - **Equity – 50% AEP / 50% Allegheny**
  - **AEP's 50% investment will be held at the AEP Transmission Holding Company LLC subsidiary**
  - **Operations to commence in the second half of 2007**
  - **I-765$_{TM}$ Interstate Project included in the DOE's draft National Interest Electric Transmission Corridor issued in April 2007**

- Other Transmission Projects
  - **Equity percentage of capital structure will target FERC precedents**
  - **Equity ownership percentage will vary by project**
  - **Will seek FERC transmission incentives:**
    - **Incentive ROE**
    - **Return on CWIP**
    - **Abandonment recovery**
    - **Expensing pre-construction expenses**

Incremental Rate Relief Composition

$ Millions

Rate Relief Is A Critical Element To AEP's Financial Success

2007 Regulatory Activity Completed

Appalachian Power – Virginia Base Rate Case

Final order approved on May 15, 2007

- ✓ Results in $24 Million annual increase in base rates
- ✓ 10.0% approved ROE

Texas North Base Rate Case

Final settlement order approved on May 24, 2007

- ✓ Results in $11.7 million increase in pre-tax earnings ($13.7 million increase in revenues offset by $2 million increase in depreciation expense)
- ✓ No stipulated ROE in the settlement. For AFUDC purposes, Texas North will utilize the ROE that comes out of the Texas Central rate case.

Appalachian Power – West Virginia Expanded Net Energy Cost (ENEC) Filing

Final settlement order approved on June 22, 2007

- ✓ Results in $85.5 million net increase in revenues effective July 1, 2007
  - ✓$54.8 million covers increased costs related to coal and purchased power
  - ✓$28.5 million covers environmental construction costs, primarily related to installation of scrubbers
  - ✓Remainder ($2.2 million) recovers first year costs of rehabilitating four small electric utilities acquired as of July 1

Indiana Michigan Power – Indiana Depreciation Study

Interim settlement order approved on June 13, 2007

- ✓ Allowed a change in depreciation rates effective July 1, 2007, resulting in a pretax earnings increase of approximately $69 million per year
- ✓ Stipulated a $5 million credit to customers in the next fuel adjustment clause proceeding
- ✓ Required I&M to file a rate petition on or before July 1. Petition was filed on June 19.

In Hand to Date - $294MM of the $338MM Rate Recovery in 2007 Guidance

AEP®

Level Of Capital Investment Will Be Adjusted Based On Rate Recovery And/Or Cash Generation

Regulatory Activity Underway

AEP Texas Central Company General Rate Case

On November 9, 2006, TCC & TNC filed applications with the PUCT to raise base rates they charge to Retail Electric Providers (REP) serving end-use electricity customers in their service territories. On April 3, 2007, TCC and TNC submitted revised rate increase requests of $69.9MM and $22MM, respectively. Requested increases include the expiration of merger-related billing credits that have been in place since 2000, totaling $20MM and $6.2MM for TCC and TNC, respectively. (TCC Docket #33309, TNC Docket #33310). TNC reached settlement on May 4, 2007 for a $13.7MM increase in revenues and a $2MM increase in depreciation, resulting in an annual increase of $11.7MM. The settlement was approved by the PUCT on May 24, 2007. The expiration of the merger credits for TCC was approved by the PUCT in June 2007.

Procedural Schedule

March 13, 2007	Intervenor testimony
March 23, 2007	Staff testimony
April 3, 2007	Rebuttal testimony
April 12, 2007	Hearings
May 14, 2007	Rates effective under bond, subject to refund

Final Order expected in September-October 2007

TNC Approved Rate Base

Description	Transmission	Distribution
Total Rate Base	$ 188,152,535	$ 341,375,118

Regulatory Activity Underway

PSO General Rate Case

On November 21, 2006, Public Service Oklahoma filed an application with the Oklahoma Corporation Commission to increase base rates by $49.6 million to recovery investments already made and costs incurred. The request represents a 4% overall increase (including fuel). The filing also includes a proposal to adopt an annually adjusted rate mechanism, which includes a return on CWIP. The formula rate would adjust rates, up or down, if PSO earns above or below an approved bandwidth around the authorized ROE. (Case #200600285)

Pro-forma Capital Structure – Company Position (Test Year ended 6/30/06)

	% of Capitalization	Cost Rate	Weighted Cost
Long-Term Debt	53.55%	6.32%	3.39%
Preferred Stock	0.43%	4.02%	0.02%
Common Equity	46.02%	11.75%	5.41%
Total	100%		8.82%

Pro-forma Rate Base – Company Position (Test Year ended 6/30/06)*

($ in millions)

Rate Base	$ 1,189.4
Rate of Return	8.82%
Operating Income Requirement	$ 104.9

May 30, 2007	ALJ report issued
June 13, 2007	Oral closing arguments
August 2007	Final order expected

AEP®

* Figures are rounded

Regulatory Activity Underway

AEP Ohio Application For 4% Provision On Generation Rate

- On Jan. 23, 2007, CSP and OP filed an application at the PUCO to recover 2007 costs associated with additional generation-related expenditures the companies are encountering related to environmental, security and other new generation-related costs pursuant to the RSP.
- CSP and OP are requesting to implement the provision to recover $24.5MM and $8.2MM, respectively, from May 2007 through December 2007.
- Staff & Intervenor testimony filed May 11, 2007; Staff recommended a $15MM increase at CSP and a $3.7MM increase at OP; OCC recommended a $19.9MM increase for CSP and a $3.7MM increase for OP.
- Hearings were held in May and June and we expect an order in September or October 2007.
- Because there was no specific action by the PUCO within the required time frame, we were allowed to implement these increases, subject to refund, in May 2007.

I&M Indiana Rate Petition

- On June 19, 2007, I&M filed a petition with the Indiana Utility Regulatory Commission (IURC) for authority to increase its rates and charges for electric utility service and to establish and implement rate adjustment mechanisms to track certain matters.
- Requested trackers relate to reliability enhancement, demand-side management/energy efficiency programs, off-system sales margins, PJM, environmental compliance and capacity equalization settlement.
- Parties have agreed to a historic test year ended September 30, 2007, with a rate case filing date of January 31, 2008. This schedule is subject to IURC approval.

AEP®

Regulatory Activity Underway

Electric Transmission Texas (ETT) Rate Filing

- Jan. 22, 2007 – ETT filed with the Public Utility Commission of Texas for approval to operate as an electric transmission utility in Texas and to establish initial rates for ETT.
  - Requested capital structure of 60% debt / 40% equity; requested ROE of 11.25%.
  - Intervenor testimony filed June 8, 2007; Staff testimony filed June 18, 2007; Staff recommended a 10.50% ROE – 10.0% with a 50 bps addition for start-up risk; Hearings were held July 16 and 17, 2007.
  - An order is expected in the third quarter of 2007 and operations are expected to commence in the 2nd half of 2007. Upon receipt of approvals, AEP and MidAmerican will each own a 50% interest in the joint venture.

Seams Elimination Cost Adjustment Revenues

- August 2006 – ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
  - Up to $96MM of SECA revenues could be disallowed, net of unused provisions.
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both.
- Exceptions to initial decision filed Sept. 11, 2006; Replies to exceptions filed Oct. 11, 2006; Order expected by the Commission in 2007.

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission serves over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1st.
- The current revenue requirement is $88.7MM and the new total revenue requirement requested is $161MM.
- We requested an effective date of September 1, 2007 for the revised tariff and FERC can suspend for an additional five months, which would push the effective date to February 1, 2008.

AEP®

Regulatory Activity Underway

APCo Mountaineer IGCC Filing

West Virginia

- Testimony filed with the West Virginia Public Service Commission on June 18, 2007 in support of APCo's application for a Certificate of Public Convenience and Necessity to construct a 600MW IGCC plant in WV at a cost of approximately $2.23 billion.
  - Testimony includes a proposal for the Commission to approve a cost recovery mechanism through the existing Expanded Net Energy Cost (ENEC) mechanism. The filing is not a formal proposal to adjust rates.
  - Actual requests for increased rates will be included in future filings, once construction of the plant has commenced and actual Construction Work In Progress data is known.
- Public hearings are scheduled for December 10-14, 2007 with an order on or before March 7, 2008.

Virginia

- Testimony filed with the Virginia State Corporation Commission on July 16, 2007 seeking a prudence determination and approval to recover, beginning in 2009, Virginia's share of the carrying costs associated with the proposed plant.
- No procedural schedule has been set but Virginia legislation requires a decision within nine months.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- Oral arguments regarding this matter are scheduled on the Ohio Supreme Court's agenda for October 9, 2007.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.

AEP®

Regulatory Activity Underway

Oklahoma Red Rock Generating Facility

- Testimony filed on February 1, 2006 in support of PSO's application for a determination that additional baseload electric generating capacity will be used and useful.
- The Oklahoma Corporation Commission consolidated this cause with Oklahoma Gas and Electric's application for an order granting pre-approval to construct Red Rock Generating Facility and authorize a recovery rider.
- Initial staff and intervenor testimony agrees that PSO needs baseload capacity and staff recommends that the OCC find Red Rock used and useful. The biggest challenges related to the RFP process and the debt equivalence issue in evaluating the PPA bids.
- Hearings for PSO's Used and Useful Determination and OG&E's cost recovery were held July 9-31, 2007.
- We await an ALJ report in August 2007.

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- Public hearings will begin August 9, 2007.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to Purchase, Operate, Own and Install Peaking, Intermediate and Baseload Generating Facilities. Peaking and intermediate facilities have been addressed. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- Public hearings are scheduled for September 11-14, 2007.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- Public hearings are scheduled for September 27-28, 2007.

Commitment To Credit Quality

- Maintain adequate liquidity
- Target 60% consolidated AEP debt/cap ratio
- Target long term AEP dividend payout ratio range of 55-60%

Current Ratings for AEP, Inc. & Subsidiaries

	Moody's	S&P		Fitch
Company	Senior Unsecured	Business Profile	Senior Unsecured	Senior Unsecured
AEP, Inc. [1]	Baa2	5	BBB	BBB
AEP, Inc. Short Term Rating	P2	N/A	A2	F2

Ending Cash Balance	$ 301	$ 205	$ 316	$ 404

Projected 2007-2009 AEP Consolidated Credit Metric Ranges:

Debt to total capital (adjusted - rating agency view) range of 58% to 60%

FFO to Interest range of 3.6x to 4.0x

FFO/Total Debt range of 16% to 18%

* Cash Flow from Operations projections assume full rate recovery on capital expenditures.

AEP®

Capital Investment Is Funded By Cash From Operations And Debt Issuances

Why Invest in AEP?

- Strength and scale in assets & operations
- Disciplined utility model focus - investing in established utility business to drive 5-7% consistent annual earnings growth
- Annual dividend of $1.56 per share providing an above average dividend yield of 3.4%
- Positive dividend outlook
- Stable credit profile

AEP AMERICAN® ELECTRIC POWER

STRONG
FLEXIBLE
ADAPTABLE

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants including our ability to restore Indiana Michigan Power Company's Donald C. Cook Nuclear Plant Unit 1 in a timely manner; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity and transmission lines (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary or deflationary interest rate trends; volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impacting our ability to finance new capital projects and refinance existing debt at attractive rates; the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurred cots and recovery is long and the costs are material; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

Table of Contents

AEP AMERICAN ELECTRIC POWER

AEP Highlights

Premier utility platform

- Leadership position in electric generation, transmission and distribution operations
- Cash flow, earnings and regulatory diversity with more than 5 million customers in 11 states
- $6.3 billion capital expenditure program (2009-2011) will continue to drive rate base growth

Effective regulatory relationships

- Traditional recovery mechanisms with equitable risk allocation enhance both earnings and cash flow
- Emerging energy policies play to AEP's strengths (transmission, energy efficiency, reliability)
- Constructive local relationships deliver successful regulatory outcomes

High-growth transmission business

- The leading US transmission owner, operator, and developer
- Exceptional portfolio of high-quality development projects and project partners
- Attractive ROEs, regulatory support and access to capital will drive earnings growth beyond our traditional utility footprint

Stable financial position

- Maximization of shareholder value through regulated utility and transmission investments
- Balanced approach to cost containment and capital allocation
- Commitment to investment grade profile, prudent balance sheet, and liquidity management
- Conservative dividend payout with attractive yield

AEP AMERICAN ELECTRIC POWER

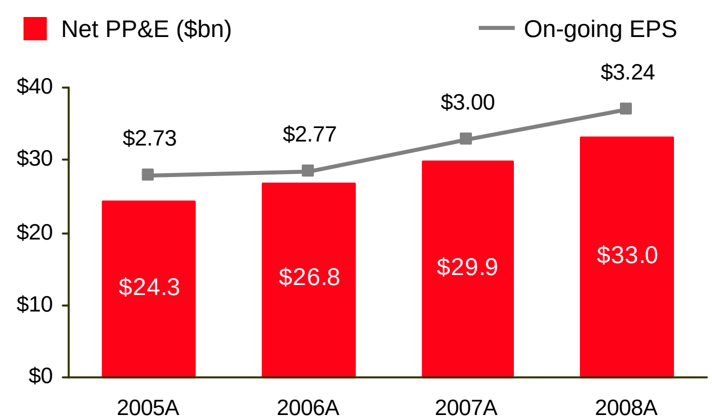
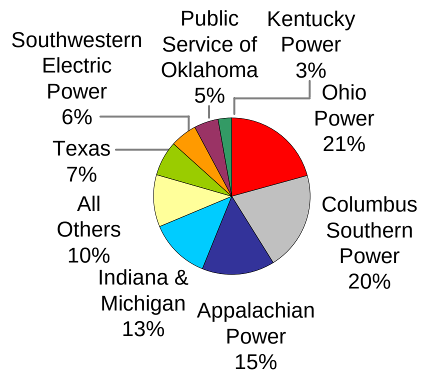
* - AEP generation includes long-term PPAs and generation under construction

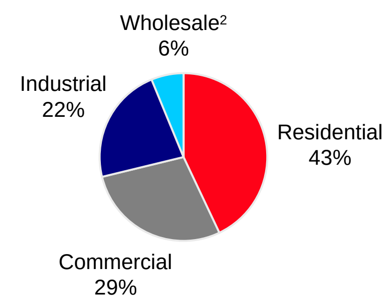
Regulated Operations



- Net PP&E CAGR of 10.7% since 2005
- Earnings CAGR of 5.9% since 2005



2008 On-going Earnings = $1.3bn



2008 Retail Base Revenue = $6.4bn

- Highly diversified regulated utility earnings contribution
- Balanced customer mix

[1] Source: Company filings
[2] Wholesale includes sales to municipal and cooperative power systems, other wholesale, and other retail sales

AEP AMERICAN ELECTRIC POWER

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential

Energy Policy Initiatives are Core to Our Strategy

Greenhouse Gas Reduction & Regulation

- Actively engaging in CO_2 policy debate – support cap & trade with <u>allocated</u> credits
- Leadership position in development of carbon capture and storage technology
- Reducing carbon footprint via offsets and other measures
- Founding member of Chicago Climate Exchange

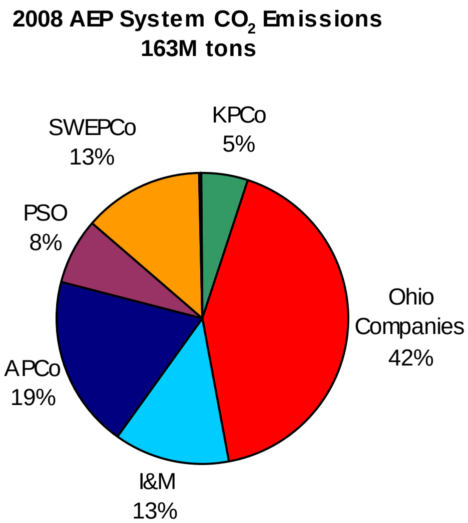
Renewable Energy

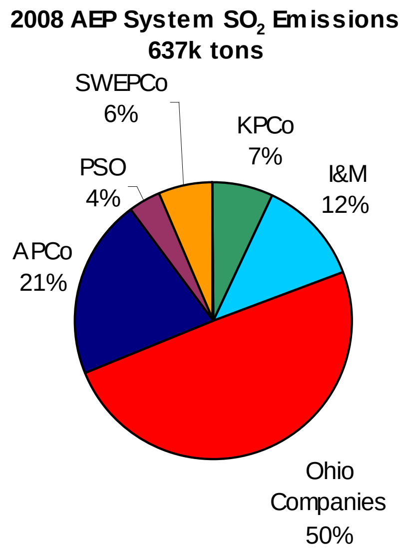
- Develop “transmission superhighway” to facilitate renewable energy projects
- Satisfy RES requirements in our jurisdictions – currently Ohio with 25% (renewables + advanced) by 2025, Texas with ~ 5% by 2015, West Virginia with 25% (renewables + advanced) and Michigan with 10% by 2015; Voluntary goal of 12% by 2022 in Virginia
- Add 2,000MW of wind capacity via long-term PPAs – 903MW achieved to-date

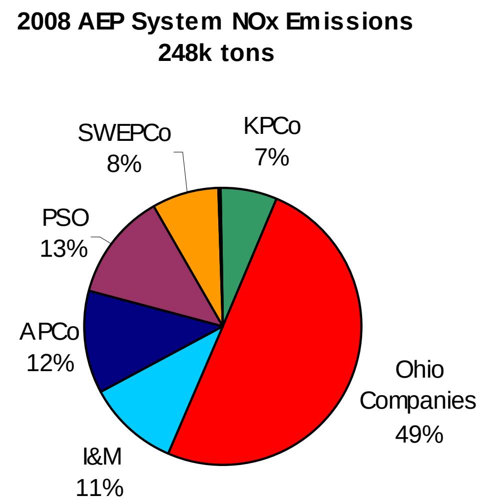
Energy Efficiency, Security & Reliability

- Develop high-voltage transmission projects to strengthen America’s power grid
- Build generation to ensure reliable supply
- Reduce 1,000MW of demand by 2012
- Reduce 2.25 million MWhs of consumption by 2012
- Diversify our fuel mix; have added 3,705MW of gas-fired capacity since 2005 and have 1,080MW under construction

CO_2 Cost Recovery – Should Follow SO_2 & NOx





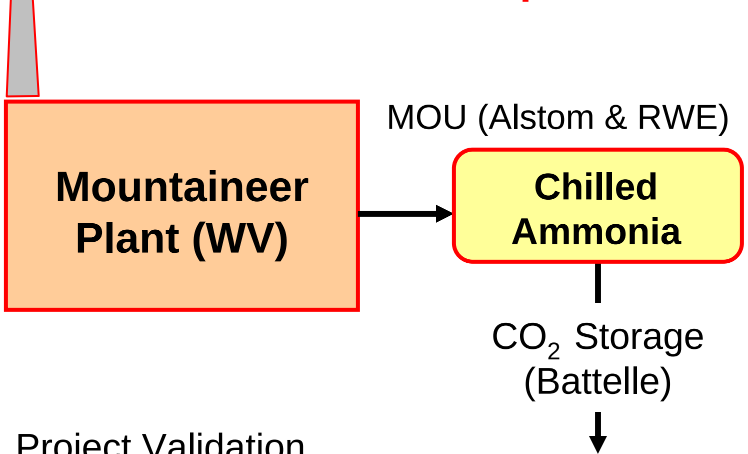


- 100% of SO_2 and NOx allowance costs currently recovered through tracker or similar mechanisms
- Prudently incurred costs associated with carbon-based taxes and other carbon-related regulations explicitly included in Ohio Fuel Adjustment Clause

AEP AMERICAN ELECTRIC POWER

Carbon Capture & Storage

2009 Commercial Operation



Project Validation

- Alstom "Chilled Ammonia" Technology
- 20-30 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, in operation at We Energies' Pleasant Prairie Power Plant)
- Located at the AEP Mountaineer Plant in WV
- 100,000 - 300,000 tonnes CO_2 per year
- In operation 3Q 2009
- Geologic storage for CO_2
- Underground injection control permit received in May 2009 from WV Dept. of Environmental Protection

Represents Post-Combustion Capture

- Conventional or Advanced Amines; Chilled Ammonia
  - Amine technologies are currently available in other industrial applications
  - Relatively low CO_2 concentration in flue gas - more difficult to capture than other approaches
  - High parasitic demand
    - Conventional Amine ~ 25-30%
    - Chilled Ammonia target ~ 10-15%

Key Issues for CCS Development in the U.S.

- Overcoming the 'economic' hurdle
- High up-front capital investment
- Commercial demonstration at large coal-fired power plants
- National standards for permitting of storage reservoirs
- Potential institutional, legal and regulatory barriers to carbon storage

AMERICAN ELECTRIC POWER

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
AEG	Dresden	Ohio	$322 MM	Gas	Combined-cycle	580	2013
SWEPCo	Stall	Louisiana	$385 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.6 B (1)	Coal	Ultra-supercritical	600 (1)	2012

(1) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $1.2 billion in capital investment.

- Turk – In June 2009, the Arkansas Court of Appeals overturned APSC decision granting CECPN & AEP filed appeal to Supreme Court. Air permit appeal hearings were held in June 2009 and a decision is expected by year end. Construction continues.
- Stall – Construction continues.
- Dresden – Construction suspended due to shifts in capital spending. Commercial operation date has been projected for 2013 (previously 2010).

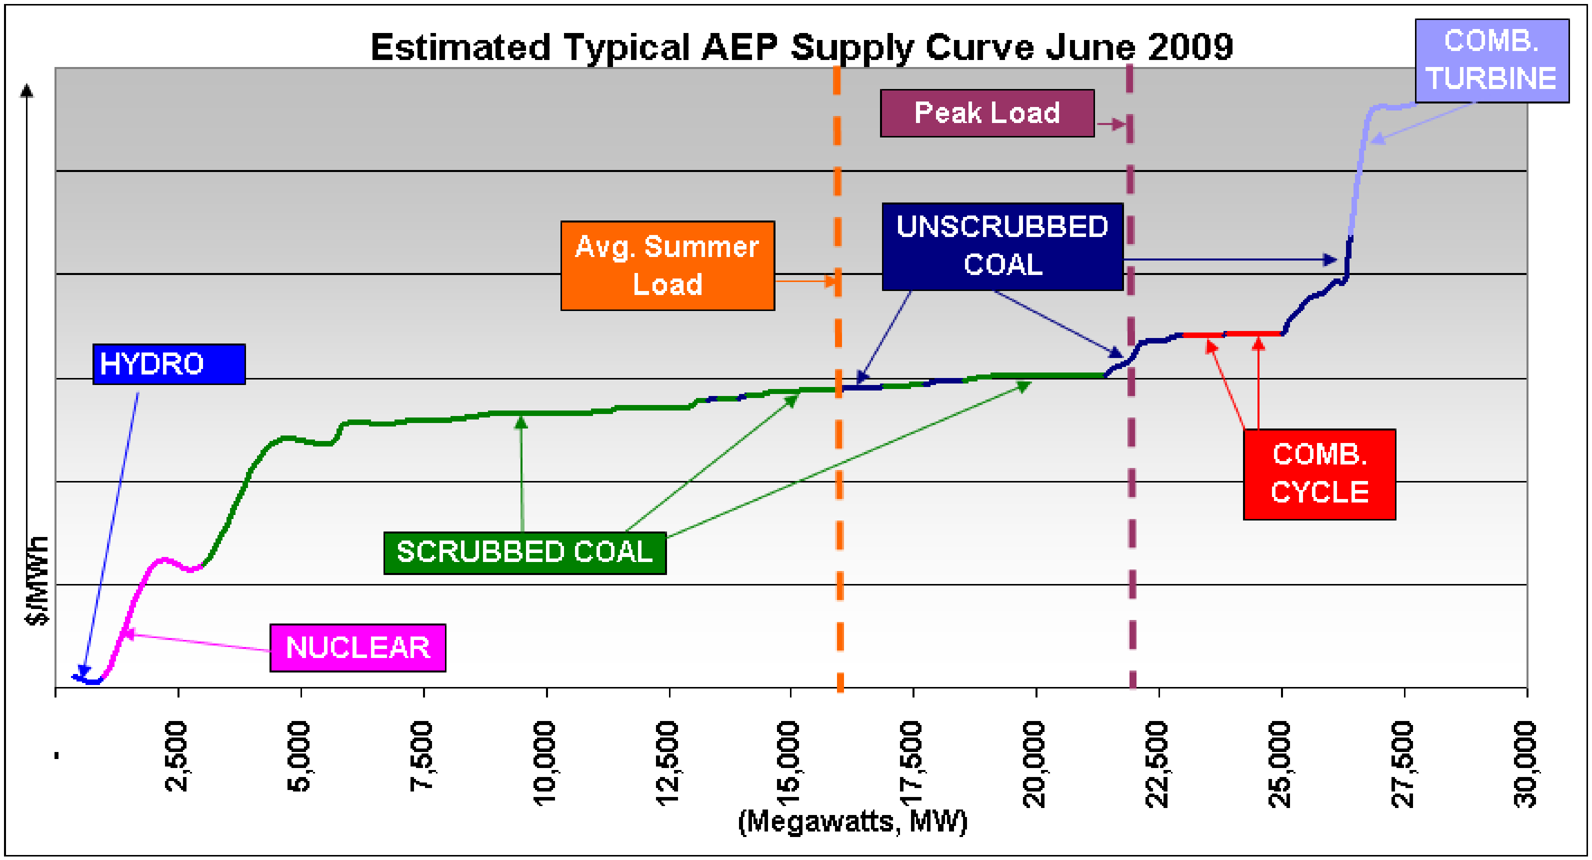
DC Cook Unit 1 Update

- Previously identified technical challenges have solutions
  - Low pressure turbine rotors have been straightened
  - Foundation repair work is in progress and is the critical path
  - Generator and high pressure turbine repair work supports the critical path
- The unit is scheduled to return to service in the fourth quarter of 2009
  - The unit will operate without the last stage blades at 30 MW (summer) to 100 MW (winter) reduced capacity
- Root cause: “A blade-rotor system design that failed to provide adequate stress margin”
  - The root cause also found no operational or installation issues
- The replacement rotors are scheduled for installation in the spring of 2011
  - Different design with several years of fault-free commercial operation.
- We continue to receive $3.5MM per week from the accidental outage policy
  - Insurance proceeds are reflected as other operating revenue; During 2009 YTD, approximately 40% of the insurance payments ($40MM) were used to offset increased fuel costs to customers

AEP AMERICAN ELECTRIC POWER

AEP Supply Stack

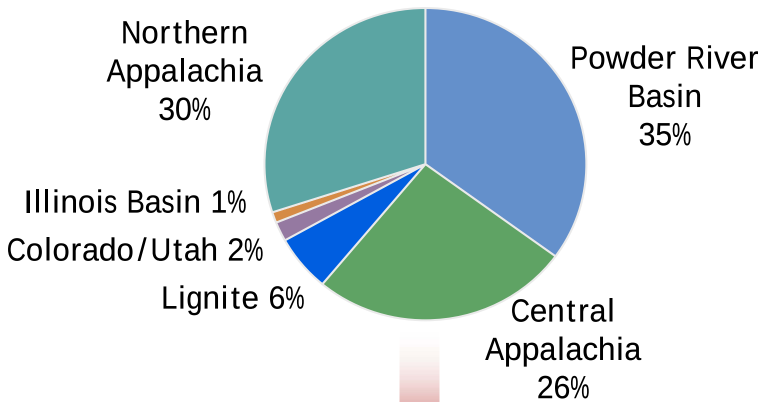
- Supply stack with Cook unit 1 outage would slide the supply stack 1,009 MW to the left.
- Planned outages typically shorten supply stack in the shoulder months by several thousand megawatts.
- Shoulder periods offer the flexibility to reschedule planned outages.



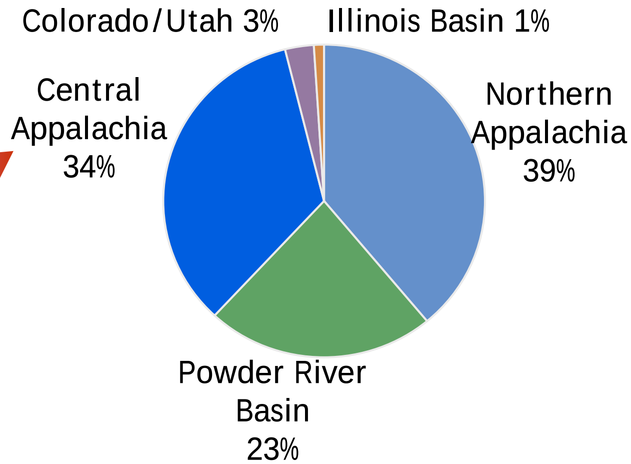
Coal Procurement - 2009 Projected

AEP burns approx. 77 million tons of coal per year

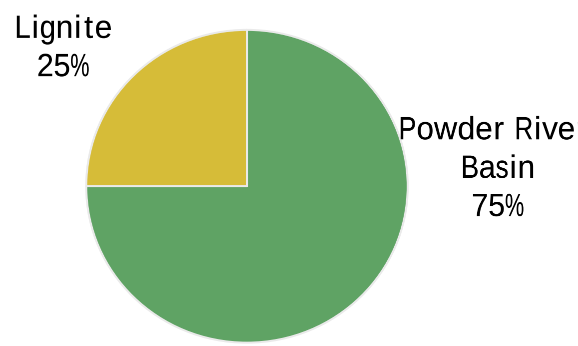
Total AEP System



AEP East



AEP West



Coal Stats:

- 100% contracted for 2009
- 94% contracted for 2010
- Avg. delivered price ~ $46.61/ton in 2008
- Approximate 10% price increase in 2009 ~ $51.00/ton

AEP AMERICAN ELECTRIC POWER

Overview of 2009 Guidance

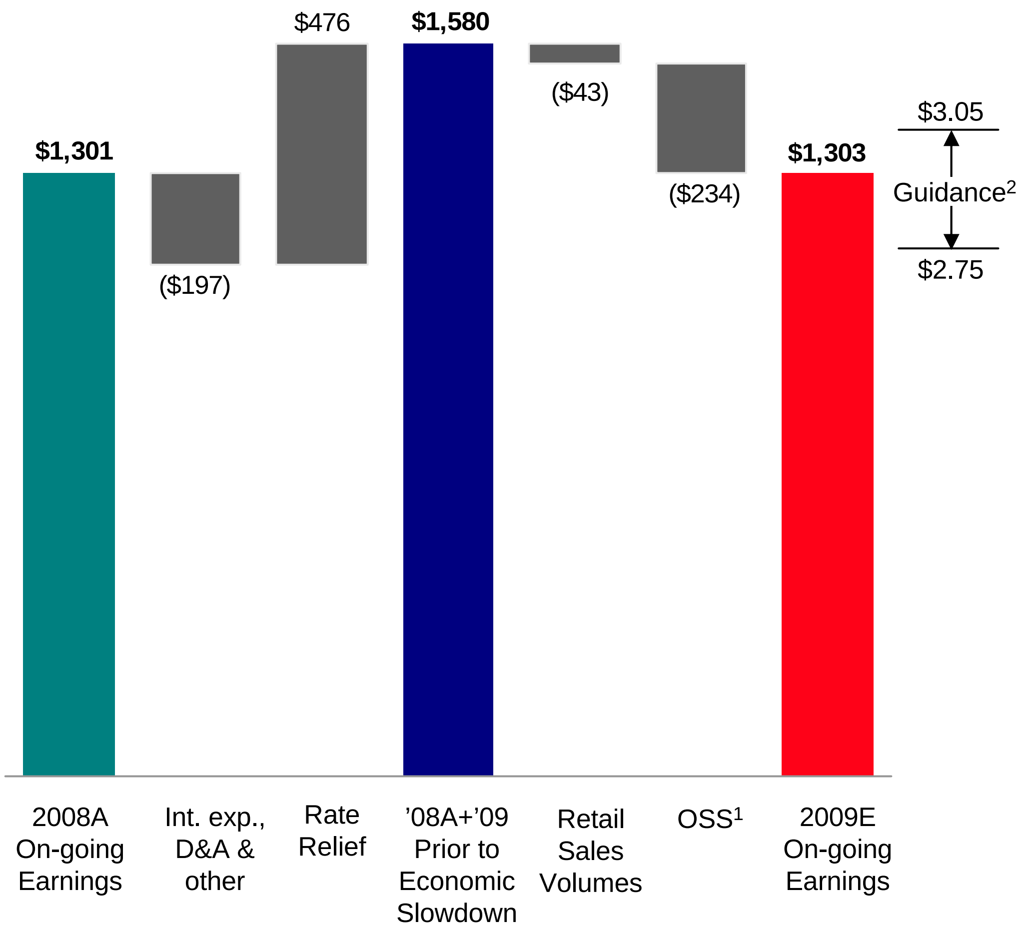
2009 Earnings Drivers:

- Positive Ohio outcome
- Rate relief - $732mm
- Economic slowdown
  - Lower OSS revenues
  - Lower loads

Long-term Earnings Drivers:

- Rate base investments
- Additional rate relief
- OSS/Retail load
- Transmission JV earnings

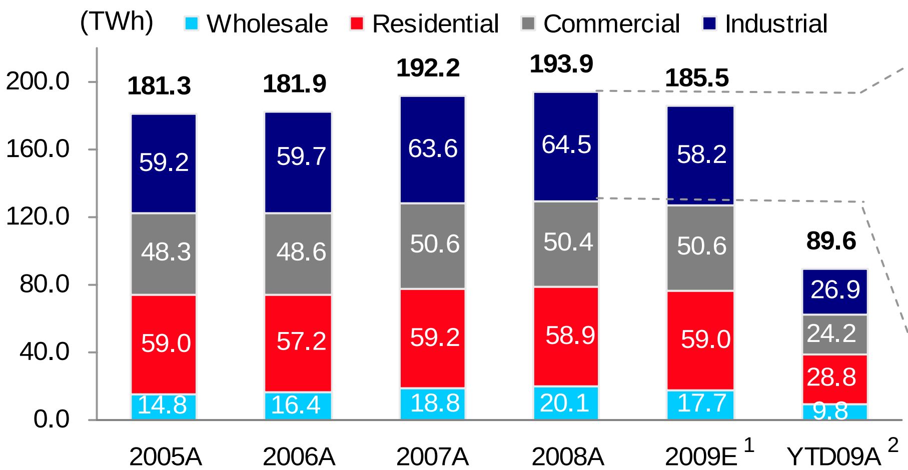
2008A-2009E Earnings Bridge ($mm)



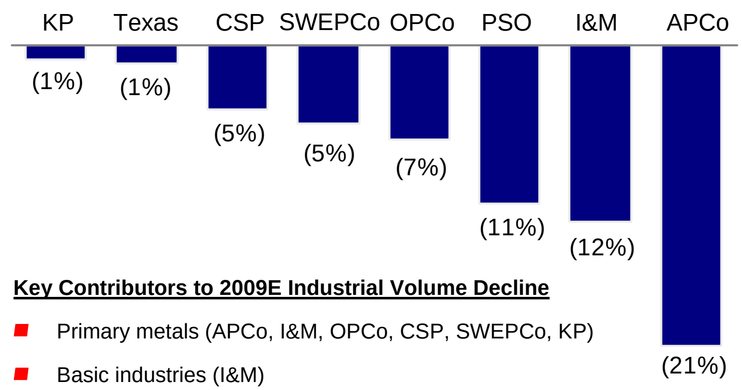
Note all items are presented after-tax
[1] Net of sharing
[2] Assumes 2009 average shares outstanding ~ 450 million

Key Drivers of 2009 Guidance: Retail Sales

Retail Load by Customer Class



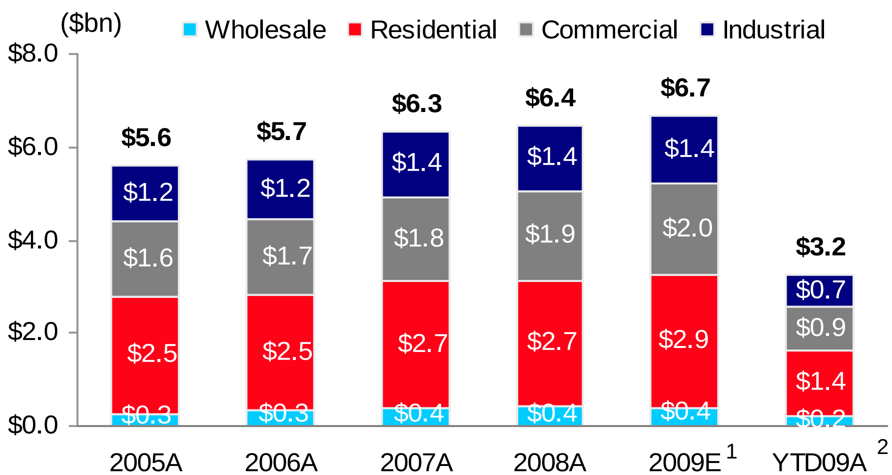
Forecast Drop in 2009 Industrial Sales

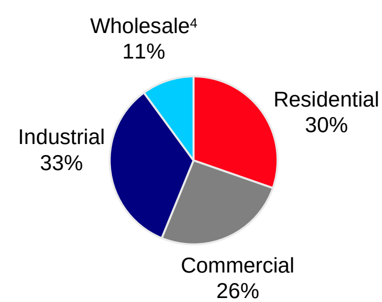


Key Contributors to 2009E Industrial Volume Decline

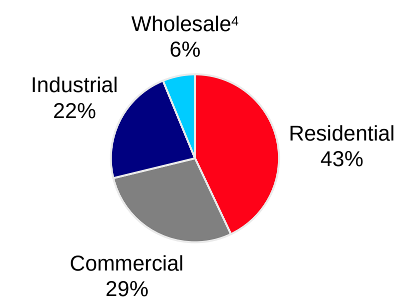
- Primary metals (APCo, I&M, OPCo, CSP, SWEPCo, KP)
- Basic industries (I&M)
- Paper (PSO, SWEPCo)
- Oil & Gas extraction (PSO, SWEPCo)

Retail Base Revenue[3] by Customer Class





2008 Retail Load = 193.9 TWh



2008 Retail Base Revenue [3] = $6.4bn

[1] 2009E assumes normalized weather
[2] YTD09A represents actual results through June 30, 2009

[3] Excludes the impact of current year rate relief, fuel over/under recovery, PJM costs and consumables
[4] Wholesale includes sales to municipal and cooperative power systems, other wholesale, and other retail sales

AEP AMERICAN ELECTRIC POWER

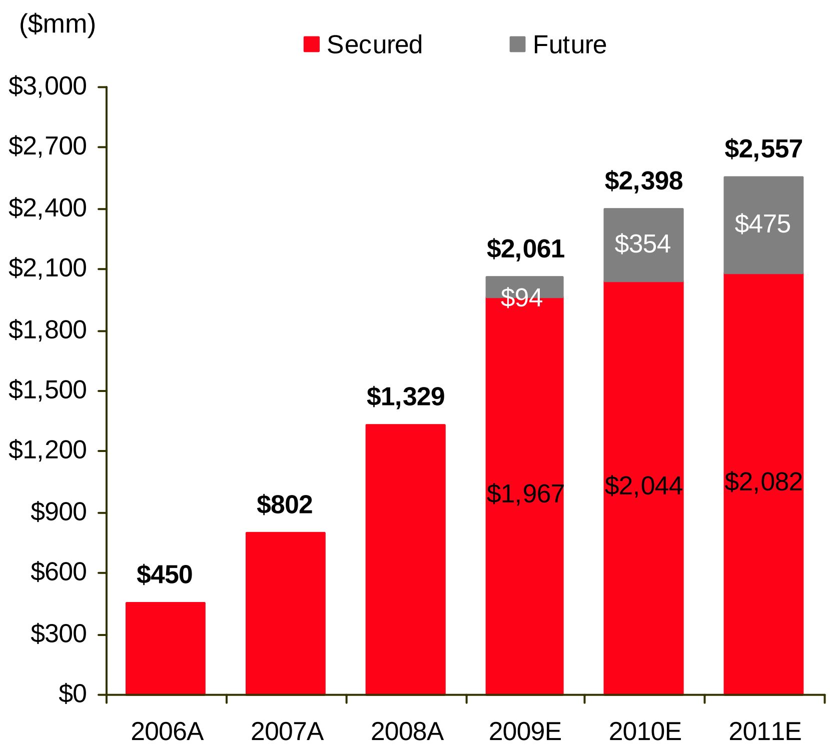
Jurisdictional Off-System Sales Sharing Summary

STATE	OSS Sharing?	Detail
Arkansas	Yes, above and below base levels	Up to $758,600 annual margin, ratepayers receive 100%. From $758,601 to $1,167,078, ratepayers receive 85%. Above $1,167,078, ratepayers receive 50%.
Indiana	Yes	There is $37.5 million built into Indiana's base rates. Above $37.5 million, ratepayers received 50%
Kentucky	Yes, above and below base levels	Sharing occurs above and below levels included in base rates of $24,855,326. Between $0 and $30 million, ratepayers receive 70%. Above $30 million, ratepayers receive 60%.
Louisiana	Yes, above base levels	Up to $874,000 annual margin, ratepayers receive 100%. From $874,001 to $1,314,000, ratepayers receive 85%. Above $1,314,000, ratepayers receive 50%.
Michigan	Yes	There are two jurisdictions: St Joe and Three Rivers. For St Joe, 100% of profits are shared with ratepayers. No profits are shared in Three Rivers, including base rates. St Joe represents 66% of the Michigan market.
Ohio	No	n/a
Oklahoma	Yes	75% of profits are shared with ratepayers.
Tennessee	No	n/a
Texas (SPP)	Yes	90% of profits are shared with ratepayers.
Virginia	Yes	75% of profits are shared with ratepayers.
West Virginia	Yes	100% of profits passed back to ratepayers through the Expanded Net Energy Cost (ENEC) clause.

AMERICAN ELECTRIC POWER

Track Record of Successful Regulatory Outcomes

Cumulative Rate Relief



Annual rate increases, $mm	$450	$352	$527	$732	$337[1]	$159[1]

[1] $77mm and $38mm was secured for 2010 and 2011, respectively, as of July 31, 2009

Our Regulatory Approach:

Maximize utility company returns:

- Successfully secured significant rate relief
- 2009 rate relief:
  - ✓ Ohio ($404MM)
  - ✓ I&M ($52MM)
  - ✓ APCo ($58MM)
  - ✓ PSO ($74MM)
- Pending rate relief including amount requested:
  - ✓ APCo WV ($20MM – in ENEC filing)
  - ✓ SWEPCo ($56MM)
  - ✓ APCo VA ($169MM)
  - ✓ Others to be determined

Minimize regulatory lag:

- Active fuel adjustment clauses now in place in <u>all</u> jurisdictions
- Increased frequency of rate cases
- Employing tracking features

Strong local relationships with regulators

AEP AMERICAN ELECTRIC POWER

AMERICAN ELECTRIC POWER

Summary Rate Case Information

APCo Virginia General Rate Case

On July 15, 2009 APCo filed a pre-biennial base rate case with the Virginia SCC, per the statute, for recovery of generation and distribution costs requesting an increase of $169.2 million. (Docket #: PUE-2009-00030) A procedural schedule is pending from the VSCC. A transmission rate adjustment clause (T-RAC) was filed in conjunction with this case as base rates will no longer include rates for transmission service (Docket #: PUE-2009-00031). APCo has requested that rates in both cases go into effect at the same time.

Projected Capital Structure – Company Position* (11/30/10)

	% of Capitalization	Cost Rate	Weighted Return
Short-Term Debt	0.015%	1.365%	0.00%
Long-Term Debt	56.007%	6.383%	3.57%

AEP AMERICAN ELECTRIC POWER

Pension and OPEB Estimate

- Our pension plan and OPEB funds investment returns were each down about 24% in 2008.
- Discount rates are assumed to be 6.0% for pension and 6.1% for OPEB.
- Investment losses increase plan expense for both pension and OPEB, but the investment losses are smoothed in over several years.
- We expect 2009 pension and OPEB expense to increase $104MM from 2008 to 2009 (pre-tax and pre-capitalization).
- OPEB contributions will increase along with OPEB expense, in accordance with agreements in most of our regulatory jurisdictions.
- We do not expect any mandatory contributions to pension in 2009. Pension trust contributions are estimated to be $475MM in 2010 and $283MM in 2011.

Uniquely Positioned for Nationwide Grid Expansion

Active Projects:

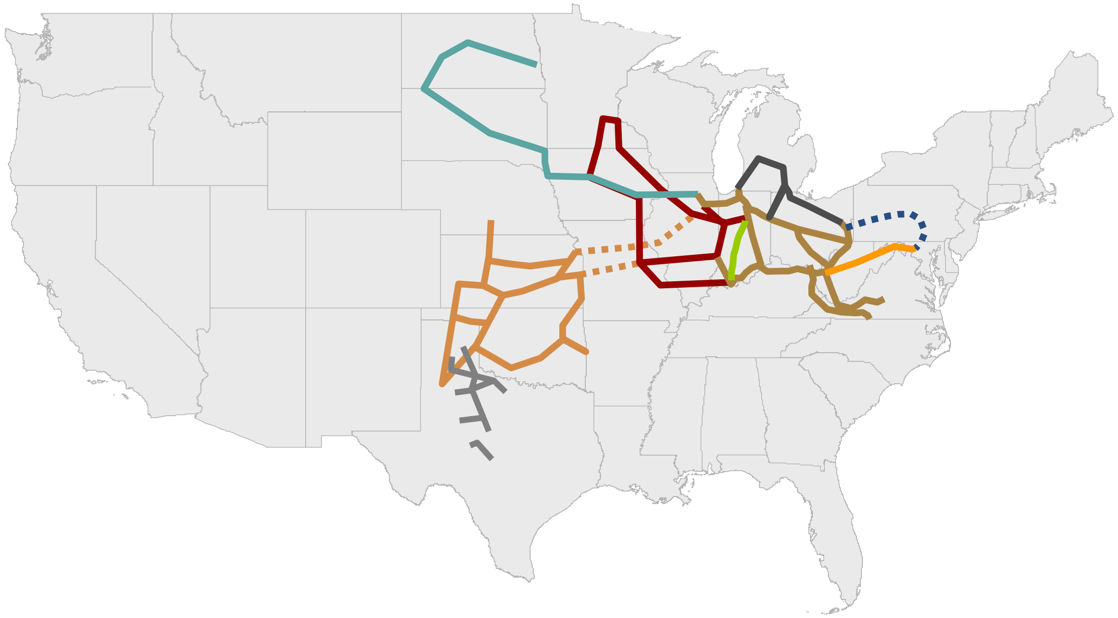
Pioneer	COD: 2015
■ 240 miles of 765 kV	
■ Partner: Duke Energy (50%)	
■ Estimated Cost: $1 billion	
■ ROE: 12.54%	

PATH-WV	COD: 2014
■ 275 miles of 765 kV	
■ Partner: Allegheny Energy (50%)	
■ Estimated Cost: $1.2 billion	
■ ROE: 14.3%	

Tallgrass	COD: 2013-14
■ 170 miles of 765 kV	
■ Partners: OG&E (50%) & MidAmerican Energy (25%)	
■ Estimated Cost: $500 million	
■ ROE: 12.8%	

Prairie Wind	COD: 2013
■ 110 miles of 765 kV	
■ Partners: Westar Energy (50%) & MidAmerican Energy (25%)	
■ Estimated Cost: $400 million	
■ ROE: 12.8%	

ETT	COD: 2013
■ 345 kV in ERCOT	
■ Partner: MidAmerican Energy (50%)	
■ Estimated Cost: $400 million	
■ ROE: 9.96%	



Future Projects:

EHV Michigan	COD: ~2020
■ 700 miles of 765 kV	

PJM Projects	
■ Enhance existing 765/345 kV	

Hartland	COD: ~2020
■ 1000+ miles of 765 kV	

MISO Vision Plan	
■ 765 kV Backbone	

SPP Overlay	COD: 2013-14
■ 765 kV Backbone	

ETT	COD: ~2018
■ 345 kV in ERCOT	
■ Additional CREZ spend of $750-$850 million	

AEP AMERICAN ELECTRIC POWER

Note: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

Equity Contributions Enhance Earnings Growth to 4 – 8%

AEP is the leader

- Largest US transmission footprint
- Interstate EHV highway vision
- National renewables transmission strategy

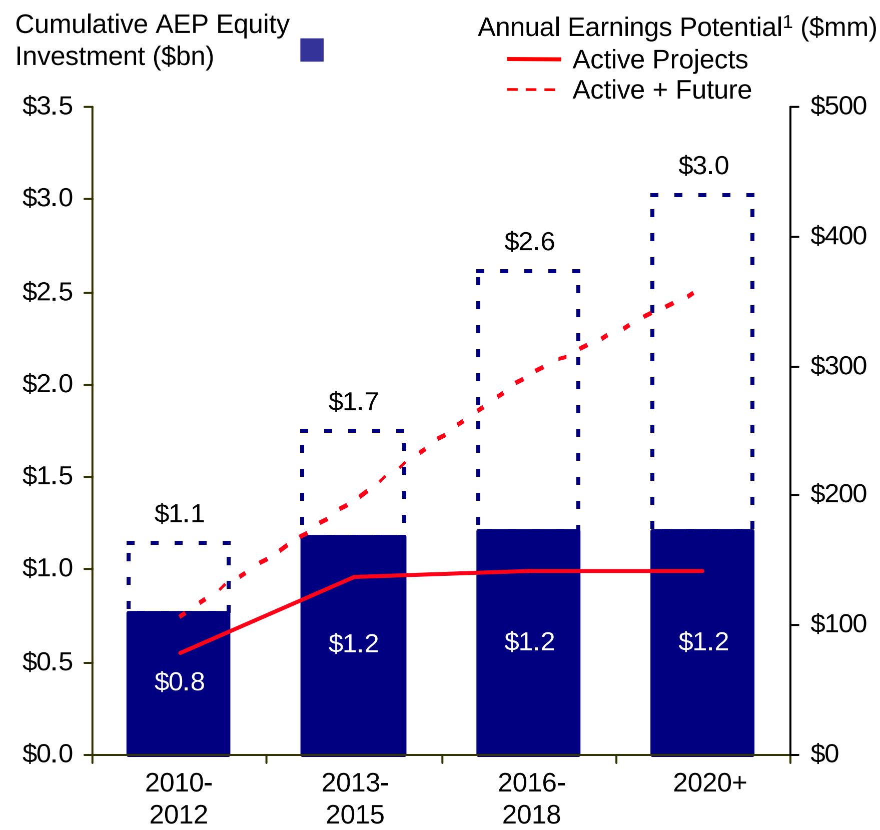
Quality projects

- 4 FERC-approved ($3.3 billion)
- Independent ERCOT transmission JV company (up to $2.6 billion)
- Robust pipeline of future 765 kV projects (up to $15 billion)

Attractive returns

- FERC incentive rates (12.5-14.3%)
- Strong cash flow with CWIP
- Long-term earnings potential of ~$140-$360 million annually[1]

Illustrative Earnings Potential of New Transmission Initiatives



[1] *Illustrative calculation assumes 50/50 debt/equity capitalization and incentive ROE of ~13.0% for FERC projects and a 60/40 debt/equity capitalization and 10.5% ROE for ERCOT projects*

AEP AMERICAN ELECTRIC POWER

EHV Transmission in PJM: PATH

<u>Project Description:</u> 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

- **Near Term Risks**
  - Obtaining a CPCN in West Virginia or costly concessions with WV to receive the CPCN; CPCN filing made May 15, 2009
- **Pertinent Data**
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP and 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
    - Rates went into effect March 1, 2008; current annual revenue requirement is $15MM effective 1/1/09
  - Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million
  - Estimated completion date: 2014

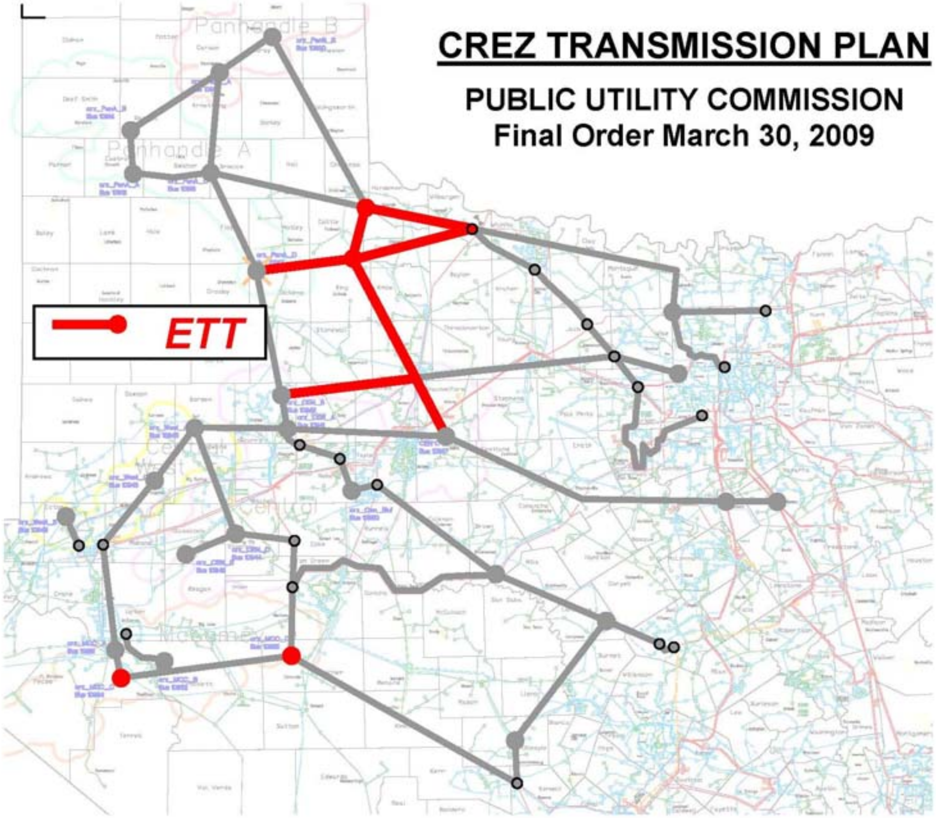
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP AMERICAN ELECTRIC POWER

Texas CREZ Project

Strengthening the ERCOT grid to collect and deliver wind generation to load

- ***Status:***
  - On February 26, 2009, PUCT ordered its staff to stage the development of CREZ transmission lines.
  - Staging to occur in separate docket and consider timing of wind projects and congestion.
  - PUCT established 2 categories based on priorities. ETT has no first priority lines.
  - PUCT issued a final order assigning transmission service providers on March 30, 2009.
  - ETT's share of CREZ investment is approx. $840MM of $4.9B total.
  - The filing calls for completion of the plan by 2013.
- ***Next Steps***
  - Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in 2010.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

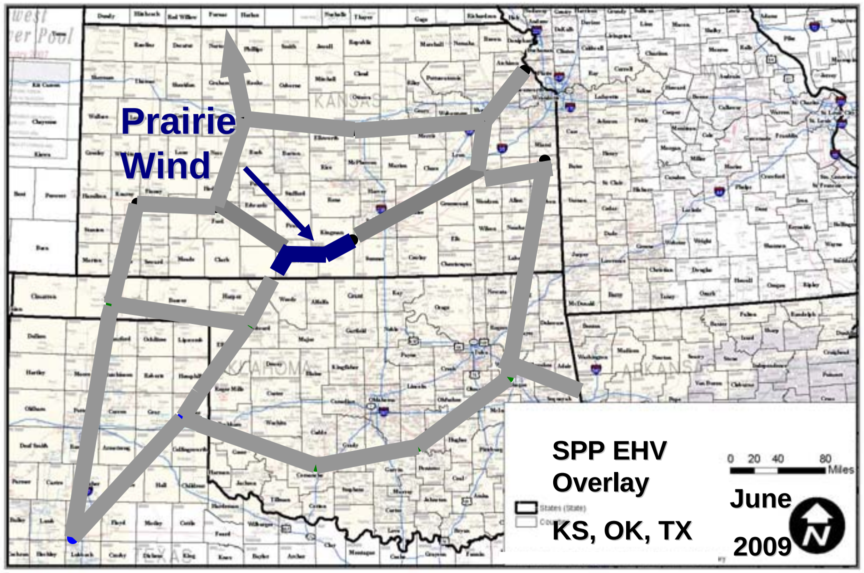
AEP AMERICAN ELECTRIC POWER

ETT Electric Transmission Texas

Prairie Wind Transmission, LLC

JV to build first segment of 765-kV transmission in SPP

- ***Overview***
  - In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
  - Following a settlement agreement with ITC on June 1, 2009 both entities agreed to split the mileage and costs of building the 765-kv transmission superhighway. The newly revised project is expected to cost approximately $400 million and in-service by 2013. Settlement was approved by the KCC on July 24, 2009.
  - PWT is a 50/50 JV that is proposing to build approximately 110 miles of 765-kV lines extending from Wichita, KS, west to a substation near Medicine Lodge, KS, and then south to the Kansas border from Medicine Lodge, KS.
  - The original proposed mileage prior to settlement was approximately 230 miles.
  - The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
  - AEP's ownership of the joint venture is 25%.
  - FERC order received in December 2008:
    - ❑ Cash return on CWIP and 12.8% incentive ROE
    - ❑ Recovery of all costs incurred prior to the time rates go into effect, and
    - ❑ Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PWT or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

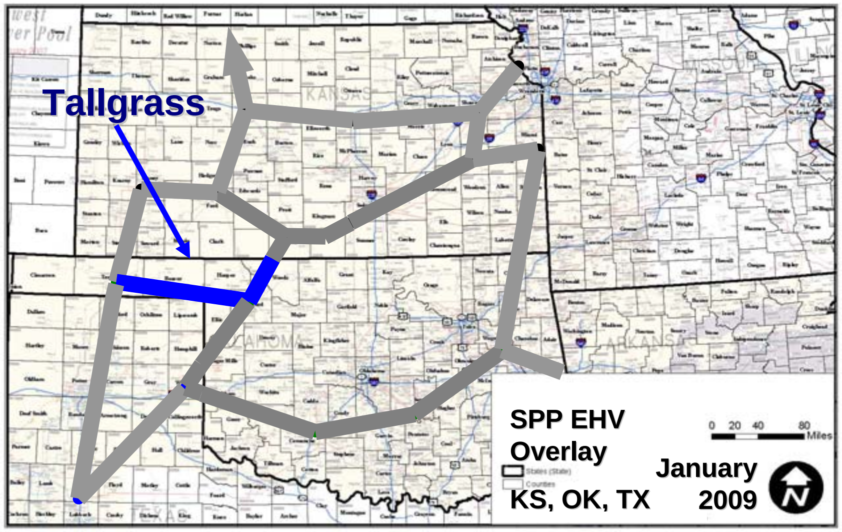
- ***Key Challenges***
  - Regional Cost allocation which enables the development of "system solutions"
  - RTO Approval

AEP AMERICAN ELECTRIC POWER

Tallgrass Transmission, LLC

JV to build second segment of 765-kV transmission in SPP

- ***Overview***
  - In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
  - TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines extending from the Kansas-Oklahoma border north of Woodward, OK, extending west into the Oklahoma panhandle to a new station that will be built near Guymon, OK.
  - The project will promote wind development in the western half of Oklahoma.
  - Project is expected to cost approximately $500 million and be in-service by 2013.
  - AEP's ownership of the joint venture is 25%.
  - Other responsibilities will be handled by the partners or outsourced.
  - FERC order received in December 2008:
    - Cash return on CWIP and 12.8% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of TG or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

- ***Key Challenges***
  - Cost allocation which enables the development of "system solutions"
  - RTO Approval

AEP AMERICAN ELECTRIC POWER

Pioneer Transmission LLC

Overview

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
- The project will improve the reliability of the nation's transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, protect national security and expand opportunities for new generation, including renewables.
- Project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP's ownership of the joint venture is 50%.
- Other responsibilities will be handled by the partners or outsourced.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect, and
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PT or its parents.
  - Certain formula rate issues were set for hearing

Key Challenges

- Cost allocation which enables the development of "system solutions"
- RTO Approval - touches two RTOs – PJM & MISO
- Siting

AEP AMERICAN ELECTRIC POWER

Hartland Wind Concept EHV Development in Upper-Midwest

Project Description: 1000+ miles of 765-kV transmission linking Upper Midwest generation sources with the existing EHV infrastructure in the Chicago area expected to cost $5-$10 billion over a 10 year period.

- **Near Term Risks**
  - Technical feasibility study
  - Identification of willing and able partners
  - Obtaining cost allocation between states, PJM, and MISO
  - RTO Technical Approvals
  - Favorable 205 Order including 679 incentives
- **Mitigation**
  - Target the identified need for the project and its ability to provide access for wind energy to load centers
  - Collaboration in regulatory process for regional cost allocation between MISO, PJM, and Midwest Governors Association
  - Prepare comprehensive regulatory filing, including incentives

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP®

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

AEP Enjoys Significant Presence Throughout The Energy Value Chain

Strategic Direction

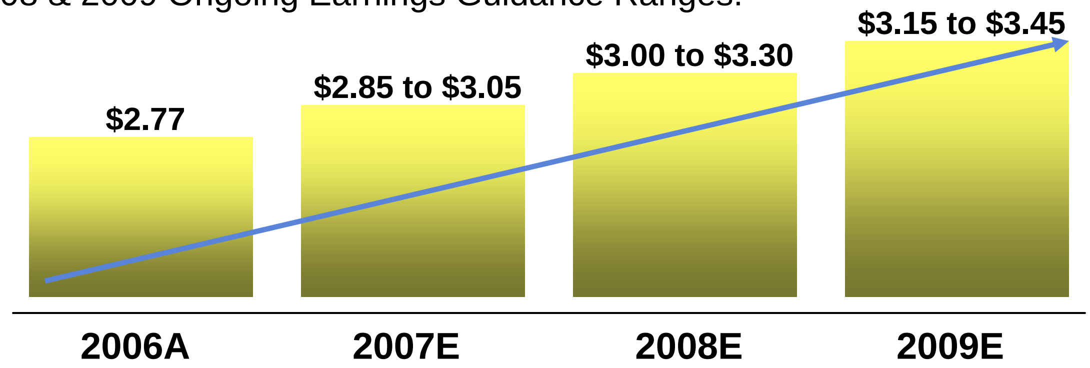
- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Develop our transmission business
- Achieve adequate returns on all assets

Deliver value to investors and cost effective service to our customers

Continued Commitment To Our Core Utility Mission: Bring Reasonably Priced Electric Service To Our Customers, Thereby Strengthening Our Communities And Rewarding Our Investors

Framework For Long-Range Performance

- 2007, 2008 & 2009 Ongoing Earnings Guidance Ranges:



- EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in existing utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
  - Investment in new transmission opportunities
  - Seek rate recovery for new investments
  - Control costs & achieve timely rate relief
- Maintain credit ratings
  - BBB/Baa2/BBB

Future Earnings Growth Driven by Native Load Growth and Substantial Utility Investment Opportunity Focused On Regulated Operations

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 456 of 9556

Summary of 5-7% Long-Range Growth Components

- Energy sales growth of 1.5%
- Rate base investment
  - Generation plant purchases & build
  - Transmission – interstate & intrastate
  - Distribution
  - Reliability
- Transmission company
- Commercial operations
- Regulatory strategy
  - Achieve timely returns
  - Seek cash returns on investment during construction
  - Create & secure innovative rate plans
    - Pursue post-2008 solution in Ohio
    - Expand use of trackers
    - Formula rates

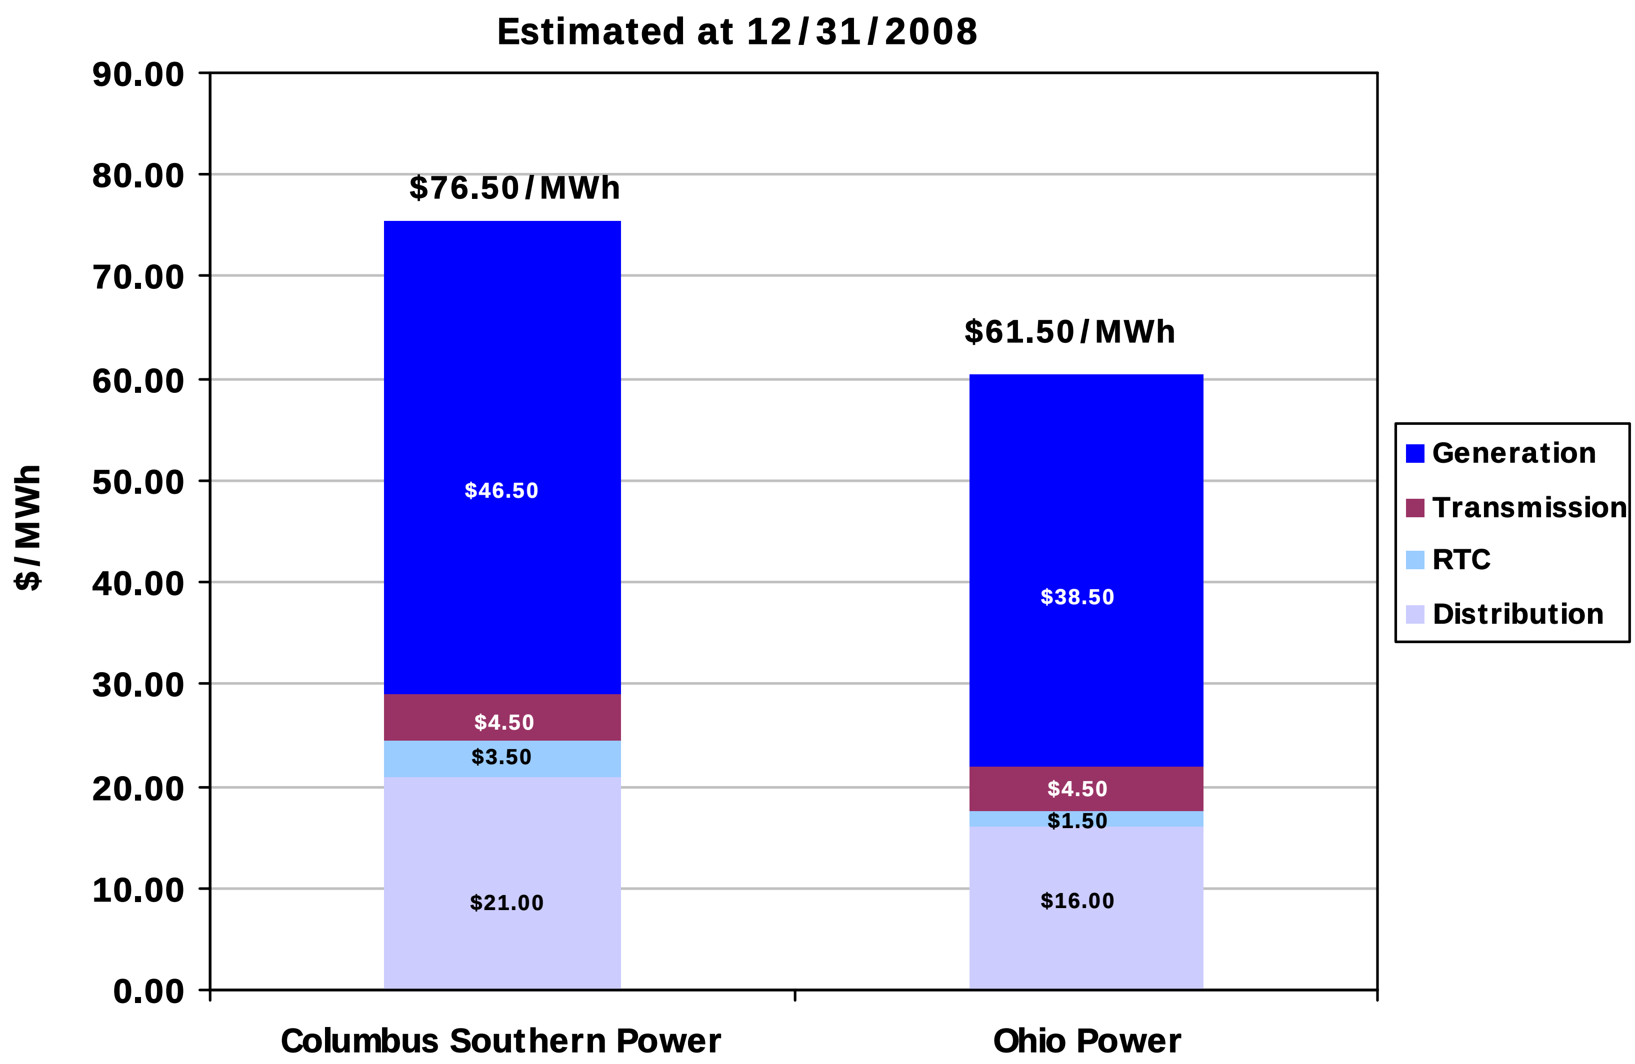
New Generation And Transmission Projects Largely Reflect Upside To The Long-Range Earnings Growth Target Of 5-7%

AEP OHIO – Post-2008

- Continued dialogue with fellow utilities
- Potential proposal from the governor’s office sometime this summer
- Potential legislation crafted late 2007/early 2008
- The price of electricity in Ohio is going up to be more reflective of what is happening in the markets
- ‘Stair-step’ in a rate increase that is bigger than the current RSPs of 3% and 7%
- We will pursue recording the shortfall between the stair-step level and market prices as a regulatory asset – along with securitization at a legislative level

It Is Our Hope That We Can Craft A Reasonable Compromise That Will Allow Us To Achieve At Or Near Market Prices Without Causing Rate Shock To Our Customers And The Ohio Economy

Average Unbundled AEP Ohio Rates



Utility Investment Drives Growth

Capital Investment Forecast (2007-2009)

($ in millions)	2007	2008	2009	Total (2007-09)
Environmental	$935	$521	$301	**$1,757**

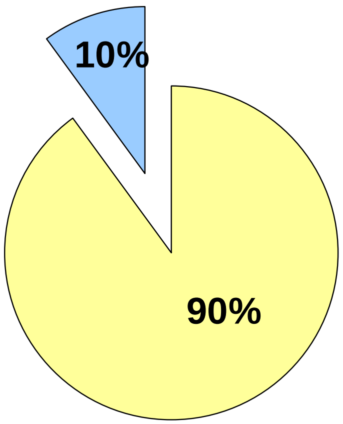
AT THE CONCLUSION OF OUR CURRENT ENVIRONMENTAL RETROFIT PROGRAM, OVER 47% OF OUR COAL-FIRED GENERATION FLEET WILL BE EQUIPPED WITH SCRs AND OVER 50% WILL BE SCRUBBED (FGD). AEP's TOTAL COAL FLEET CAPACITY = 24,710 MEGAWATTS*

*Excludes AEP's 44% ownership in OVEC (980 MWs of coal-fired capacity)

AEP®

Materials and Vendors – AEP's Advantage

Environmental Program Costs:
Active/Firm Costs to Remaining Estimated Costs



Actuals To Date & Firm Costs

Remaining Estimated Costs*

* Primarily labor and activated carbon injection systems

Typical Vendors Include:

•B&W/Alstom – FGD Spray Tower
•B&V/Chyioda – FGD Jet Bubbling Reactor
•Pullman Power – Stack Supplier
•Babcock Power – SCR
•Black & Veatch – Architect/Engineering
•Sargent & Lundy – Architect/Engineering

SCR Technology

- Removes 90 – 93% of NOx emissions
- Requires ~ 1% use of auxiliary power
- **AEP Capital Cost ~ $121/kW avg.**

Combination of SCR & FGD technology results in co-benefit of Hg removal ~80% removal efficiency

FGD Technology

- Removes 95 – 98% of SO_2 emissions
- Requires ~1.5% to 3.0% use of auxiliary power
- **AEP Capital Cost ~ $250/kW avg.**

AEP®

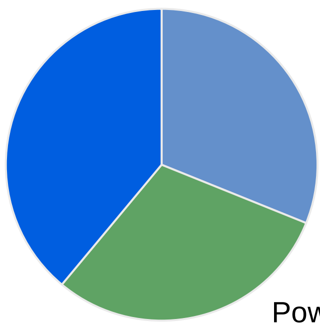
AEP®

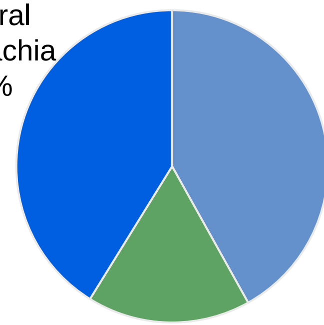
Coal Procurement – 2007 Projected

AEP purchases approx. 76 million tons of coal per year

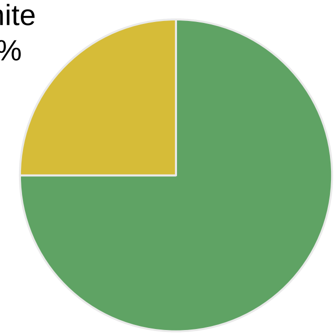
Total AEP System



AEP East



AEP West



Coal Stats:

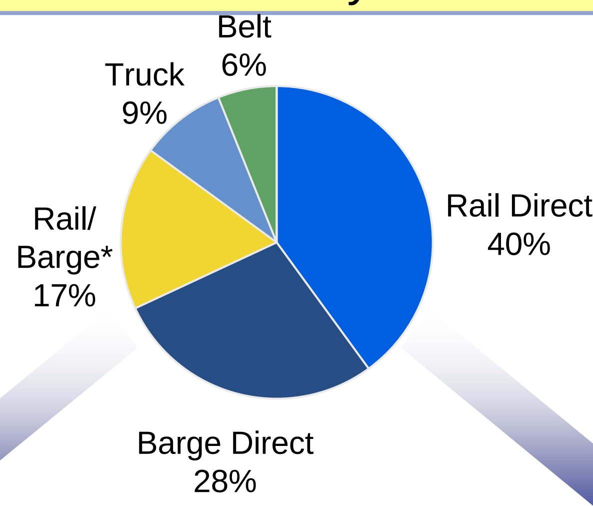
- 95% contracted for 2007
- Avg. delivered price ~ $35.10/ton in 2006
- Approximate 4-6% price increase in 2007 -- ($36.50 to $37.50/ton)
  - Addition of Mountaineer & Mitchell scrubbers allows for a greater mix of Northern Appalachian coal in 2007

AEP®

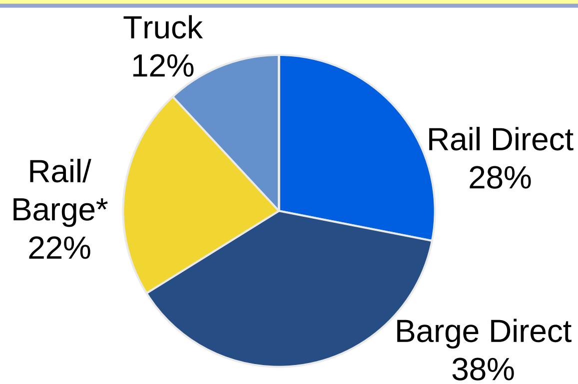
Coal Delivery

2006 Actual

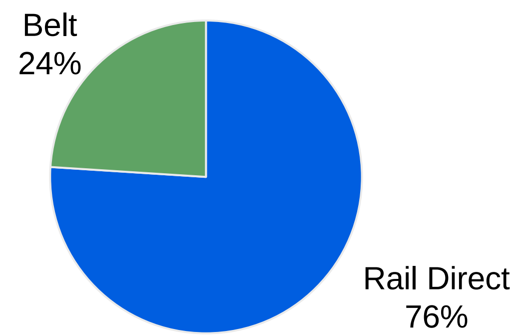
Total AEP System



AEP East



AEP West



* Reflects coal delivered to AEP plants transported through a combination of rail and barge

Purchased Generation

Waterford

– 821 MW combined-cycle gas plant
– $220MM purchase price
– Columbus Southern Power completed purchase on Sept. 28, 2005

Ceredo

– 505 MW simple-cycle gas plant
– $100MM purchase price
– APCo completed purchase on Dec. 15, 2005

2,946 MW of gas-fired generation added since 2005

Darby

– 480 MW simple-cycle gas plant
– $102MM purchase price
– Columbus Southern Power completed purchase on April 25, 2007

Lawrenceburg

– 1140 MW combined-cycle gas plant
– $325MM purchase price
– AEG completed purchase on May 16, 2007

AEP®

Additional Gas-fired Generation Allows Us To Meet The Growing Needs Of Our Customers And Provides The Company With Greater Fuel Flexibility

New Generation Facilities

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
SWEPCo	Mattison	Arkansas	$130 MM	Gas	Simple-cycle	340 [(1)]	2007
PSO	Southwestern	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
SWEPCo	Stall	Louisiana	$300 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.3 B [(2)]	Coal	Ultra-supercritical	600 [(2)]	2011
PSO	Red Rock	Oklahoma	$1.8 B [(3)]	Coal	Ultra-supercritical	900 [(3)]	2012
APCo	Mountaineer	West Virginia	$2.23 B	Coal	IGCC	630	2012
CSP/OP	Great Bend	Ohio	Under Review [(4)]	Coal	IGCC	630	2017

(1) 150MW were declared in commerical operation on July 12, 2007.
(2) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment.
(3) PSO will own 50%, or 450 megawatts, totaling approximately $900MM in capital investment.
(4) FEED (front-end engineering and design) study with GE/Bechtel is complete. Cost estimates are not yet filed with the PUCO due to the pending appeals to the Supreme Court of Ohio resulting from the PUCO's April 10, 2006 Opinion and Order.

AEP Is Meeting The Growing Electricity Needs Of Customers Through The Pursuit Of New Economic Generation Facilities

New Gas-Fired Generation Facilities

SWEPCo

- Mattison Plant (Tontitown, AR)
  - Certificate of Need filings (LA, AR, TX) were approved in all 3 states
  - Air permit received in February 2007
  - Units 3 and 4 (150 MW) online on July 12, 2007; Units 1 and 2 online by January 2008
- Stall Plant (Arsenal Hill, LA)
  - Certificate of Need filings (LA, AR, TX)
    - TX settled in Feb 2007
    - AR & LA decisions expected by year-end 2007
  - Air permit filed on April 27, 2007 – expecting approval by March 2008
  - Commercial operation date in 2010

PSO

Southwestern & Riverside Additions

- Air permit received March 22, 2007
- Commercial operation date of December 2007
- Regulatory Recovery
  - Settlement and final order in the Lawton Cogen case authorizes recovery of costs for Southwestern and Riverside peakers through a rider mechanism beginning as early as June 2008 based on the Commercial Operation date

2007-2009 Projected Capital Expenditures

	2007	2008	2009
Mattison	$56MM	$4MM	-
Stall	$82MM	$126MM	$64MM
Southwestern	$36MM	$3MM	-
Riverside	$35MM	$2MM	-

SWEPCo's and PSO's Short-Term and Intermediate Power Needs Will Be Met With Newly Constructed Gas-Fired Facilities

AEP ®

New Ultra-Supercritical Coal Facilities

SWEPCo

Turk Plant (Fulton, AR)

- Certificate of Need approvals (LA, AR, TX) expected by September/October 2007
- Air permit approval expected in August 2007
- Regulatory Recovery
  - Recovery of carrying cost requested in LA Certificate of Need filing – Hearings scheduled for September 2007
  - AR and TX rate recovery will be addressed in separate filings
- Approximately 85-90% of costs are firm
  - EPC contract for balance of plant work awarded in May 2007
  - Contracts for turbine, boiler, and environmental control equipment awarded in 2006

PSO

Red Rock Generating Facility (Red Rock, OK)

- Used and Useful Determination filed in February 2006 – Hearings concluded July 31, 2007 and order is expected in September 2007
- Air permit approval expected in October 2007
- Regulatory Recovery
  - Order expected in PSO rate case filing in July 2007 – filing included request for CWIP treatment for new projects
- Original cost estimate of $1.8 billion – revised cost estimate expected in the third quarter of 2007

2007-2009 Projected Capital Expenditures

	2007	2008	2009
Turk Plant	$211MM	$230MM	$243MM
Red Rock Generating Facility	$54MM	$120MM	$236MM

Ultra-Supercritical Coal-Fired Generation Is The Most Economical Choice For New Baseload Plants In AEP's Western Service Territory

Integrated Gasification Combined Cycle Facilities

Front-End Engineering & Design (FEED) results complete. Results were filed in June 2007. Cost estimates in target range of 20-30% premium over new ultra-supercritical coal-fired facilities of equal capacity.

West Virginia

- **Certificate of Public Convenience & Necessity filed Jan. 11, 2006**
  - APCo testimony filed June 18, 2007
  - Intervenor & Staff testimony due Nov. 19, 2007
  - Hearings Dec. 10-14, 2007
  - Statutory Deadline – Mar. 7, 2008
- **Air permit filed in Oct 2006**
  - A technical review of the application and development of a draft permit is ongoing by the WV Dept. of Environmental Protection
- **Regulatory Recovery**
  - Filing made in June 2007 –included request for cash recovery mechanism

Ohio

- **Certificate of Environmental Compatibility & Public Need filed March 24, 2006**
  - Ohio Power Siting Board certificate issued in April 2007
- **Air permit filed in Oct 2006**
- **Regulatory Recovery**
  - Phase 1 – June 2006 – PUCO approved tariff to recover pre-construction costs ($24MM) over 12-month period effective July 1, 2006
  - Phase 2 – filing likely to be withheld until resolution of Ohio Supreme Court action
  - Informational filing made on June 18, 2007 to inform PUCO of the West Virginia filing

AEP®

Construction Period Of 48-50 Months Following Receipt Of Major Regulatory And Permit Approvals

Investing In IGCC

Generation Technology Comparative Statistics

US2006$	Eastern Bituminous		
	USC	**IGCC**	**NGCC**
Nominal Capacity (MW)	618	629	530
Capacity Factor (%)	85%	85%	25%
Total Plant Cost (EPC + Owner's Cost) ($/kW)	$2,152	$2,717	$572
Production Cost ($/MWh)	$22	$22	$45
Cost of Electricity, without CO_2 Capture ($/MWh)	$72	$83	$87
Estimated Cost of Electricity, with 90% CO_2 Capture ($/MWh)	$118	$108	$135

Source: Results of AEP analysis based on EPRI studies.

- Total Plant Cost (Overnight EPC 2006$s) includes the cost to engineer, procure and construct plant and owner's direct costs.
- Assumes Northern Appalachian coal price of $2.25/mmBtu for USC and IGCC and natural gas price of $6.00/mmBtu for NGCC.
- Production cost includes fuel cost plus variable operations and maintenance (VOM) cost.
- Cost of electricity represents first year estimates only in 2006$ and are based on total plant cost plus generic cost estimates for AFUDC, emission credits, infrastructure, interconnections, transmission lines and upgrades.
- Cost of electricity with CO_2 capture provides pressurized CO_2 at the fence line and does not include transportation, storage and monitoring costs.

AEP®

IGCC Technology Is Strategic To Keeping Coal In The Money

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

Highlights of Bingaman-Specter Proposal

“Low Carbon Economy Act of 2007”

Key Components:

- Start date for greenhouse-gas reductions is 2012
- Goals: 2006 levels by 2020; 1990 levels by 2030
- Includes a safety valve of $12 per metric ton, increasing at an annual rate of 5% above inflation
- Support for allowance allocations
- International action

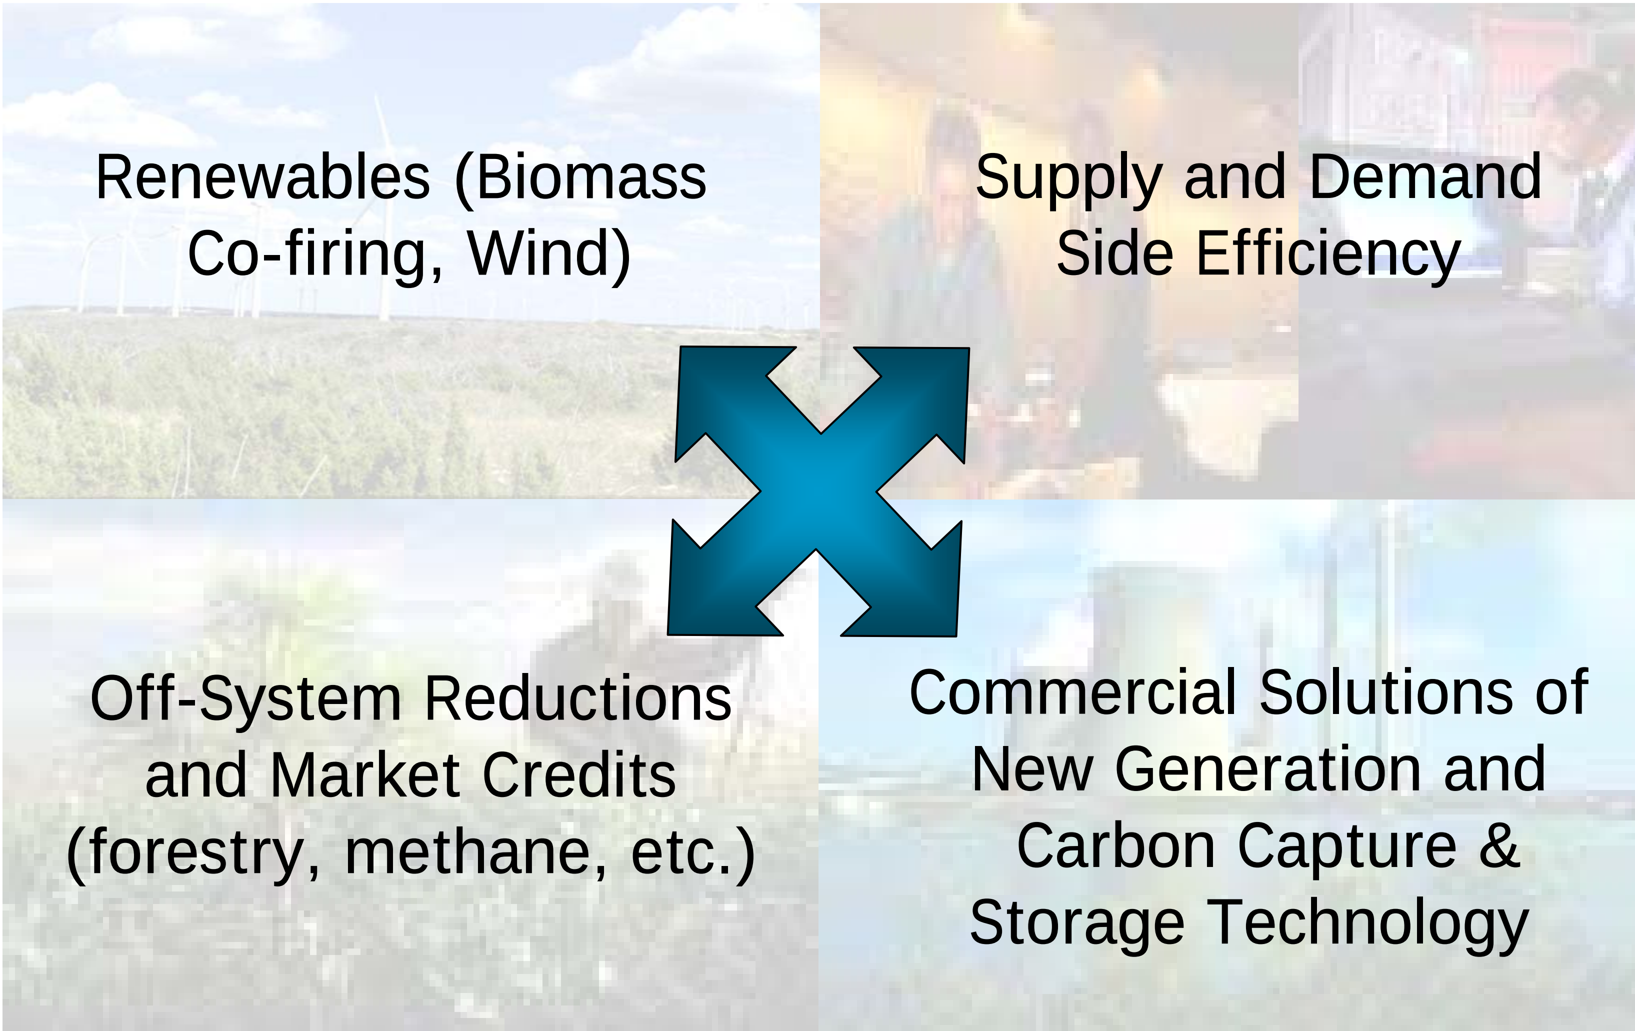
AEP Endorses this Proposal Because It Sets Reasonable And Achievable Reduction Targets and Includes the AEP-IBEW Trade Proposal

AEP's Climate Strategy

- **Being proactive and engaged in the development of climate policy**
  - International Emissions Trading Association (IETA)
  - Electric Power Research Institute (EPRI)
  - Pew Center on Global Climate Change
  - e8
  - Global Roundtable on Climate Change
- **Investing in science/technology R&D**
  - FutureGen Alliance
  - US DOE research on carbon capture and sequestration at our Mountaineer Plant
  - EPRI – combustion technologies
  - MIT Energy Laboratory
  - B&W – Oxy-Coal
- **Taking voluntary, proactive action now, demonstrating voluntary programs can work and setting policy precedents thru CCX**
  - Chicago Climate Exchange (CCX)
  - EPA Climate Leaders
  - EPA SF-6 Emission Reduction Partnership for Electric Power Systems Program
  - Asia-Pacific Partnership
  - DOE 1605B- voluntary reporting of GHGs Program
  - Business Roundtable Climate Resolve
  - Numerous forestry activities
- **Evaluating longer term investment decisions such as new generation and carbon capture and storage (e.g., IGCC, Ultra-supercritical)**

AEP Must Be A Leader In Addressing Climate Change

AEP's Long-term GHG Reduction Portfolio



AEP Is Investing In A Portfolio Of GHG Reduction Alternatives

AEP®

AEP's Long-term CO_2 Reduction Commitment

Existing Programs

- Renewables
  - 800 MWs of Wind
  - 300 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

New Program Additions

- Incremental Reduction quantity: 5MM tons/yr
- Timing: To take effect/receive credits by 2011
- Methods
  - +1000 MWs of Wind PPAs – 2MM tons/yr
  - Domestic Offsets (methane) – 2MM tons/yr (e.g., livestock methane capture deal of 0.6MM tons/yr)
  - Forestry – Tripling annual investment to increase to 0.5MM tons/yr by 2015
  - Fleet Vehicle/Aviation Offsets – 0.2MM tons/yr
  - Additional actions to include DSM and end use energy efficiency, biomass and power plant efficiency – 0.2MM tons/yr

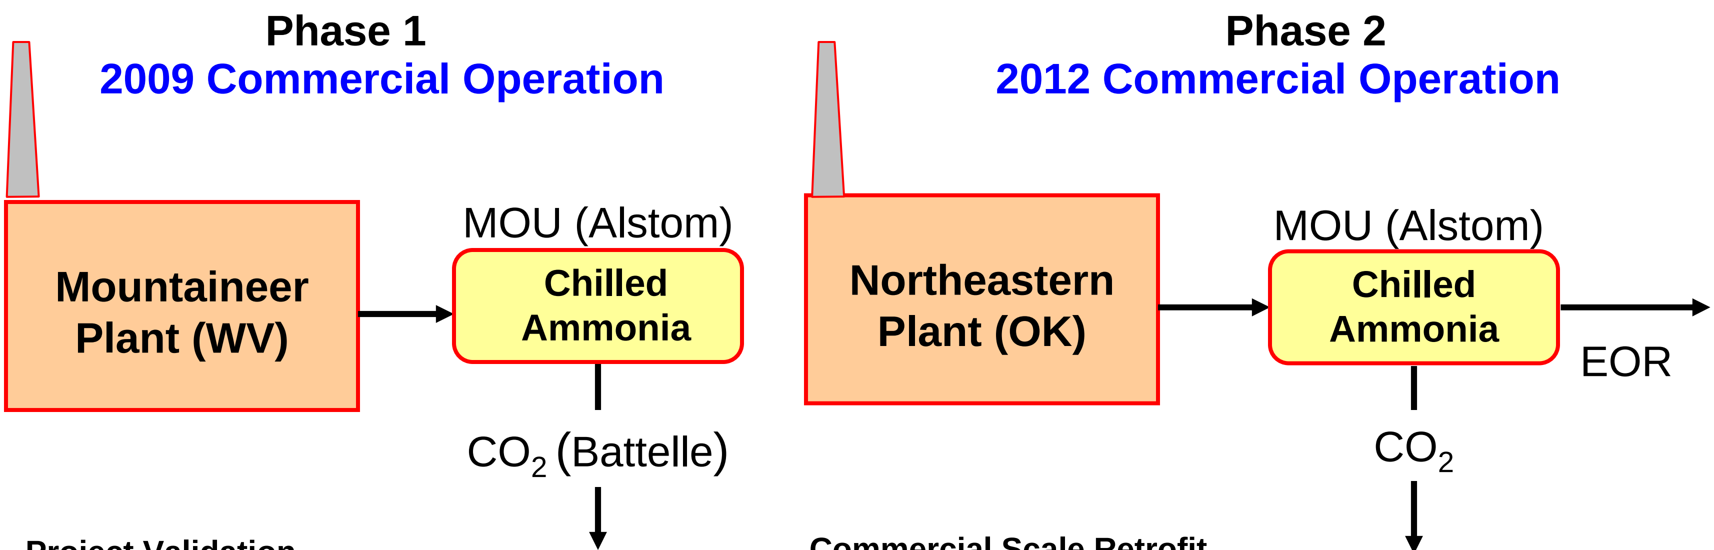
New Technology Additions

- Commercial solutions for existing fleet
  - Chilled Ammonia
  - Oxy-Coal

AEP Is Committed To A 5mm Ton/Yr Reduction In Co_2 Emissions Which Offsets Approximately Half Of The Emissions Projected From New Generation Projects Previously Announced

AEP®

Chilled Ammonia Technology Program



Project Validation

- 20 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, under construction at WE Energies)
- 100,000 – 300,000 tonnes CO_2 per year
- In operation 1Q 2009
- Approximate total cost \$50 – \$80M
- Using Alstom "Chilled Ammonia" Technology
- Located at the AEP Mountaineer Plant in WV
- CO_2 for geologic storage

Commercial Scale Retrofit

- ~ 200 - 300 MW_e scale (megawatt electric)
- ~ 600 MW_t scale (megawatt thermal)
- ~1.5MM tonnes CO_2 per year
- In operation late 2011
- Approx. capital \$250 – \$300M (CO_2 capture & compression)
- Approx. O&M cost \$12M per year
- Energy penalty ~ 35 – 50 MW steam, 25 – 30 MW for CO_2 compression
- Retrofit Wet FGD Required: ~\$225 – \$300M
- Located at AEP's Northeastern Plant Unit 3 or 4 in Oklahoma
- CO_2 for Enhanced Oil Recovery (EOR)

AEP®

Post-combustion Carbon Solution Provides Pure CO_2 Stream For Capture

7

Oxy-Coal CO_2 Capture & Storage Project

Pilot Scale Demonstration

- 10 MW_e scale
- Teamed with B&W at its Alliance Research Center and 16 other utilities
- Demo complete 3Q 2007
- AEP funding of $50k

Commercial Scale Retrofit

- Retrofit on existing AEP sub-critical unit (several available)
- 150 – 230 MW_e scale retrofit
- 4,000 – 5,000 tons CO_2 per day
- Team with B&W
- AEP funding of ~ $1.5M for feasibility study
- Feasibility study to be completed in late 2007/early 2008

AEP®

Combustion Conversion Technology For Existing Coal Fleet – Longer Lead Time With Enhanced Viability And Long-term Potential

Transmission Investment Opportunity *

Creating a business model to manage capital requirements for enhanced returns with partners

- ~ $3 billion I-765 Project in PJM
- ~ $2 billion 765-kV study with ITC in Michigan
- ~ $3 billion project filed with SPP
- ~ $1- $7 billion in ERCOT via Electric Transmission Texas, LLC (ETT)

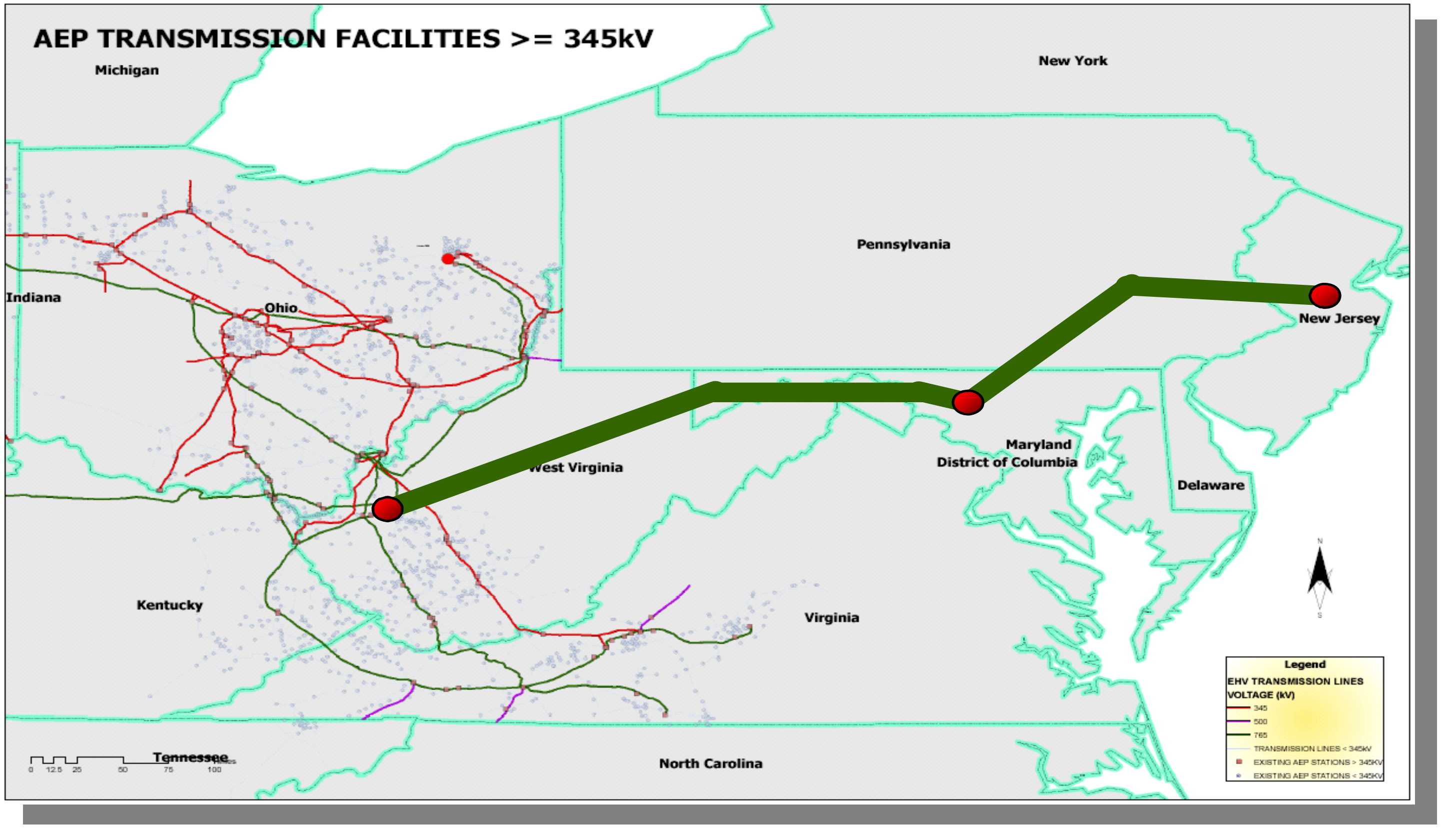
Assumptions	
Estimated Investment Opportunity	$15 Billion
Ownership Structure w/ Partner	50% / 50%
Debt/Equity Ratio	50% debt / 50% equity
Return on Equity	11.00%-13.00%
Potential EPS Impact (based on 396 MM shares)	$1.00+ **

* This identified transmission opportunity is not included in current capex guidance

** Ultimate earnings contribution and timing dependent on ownership structure, capitalization, ROE and date assets are put in-service

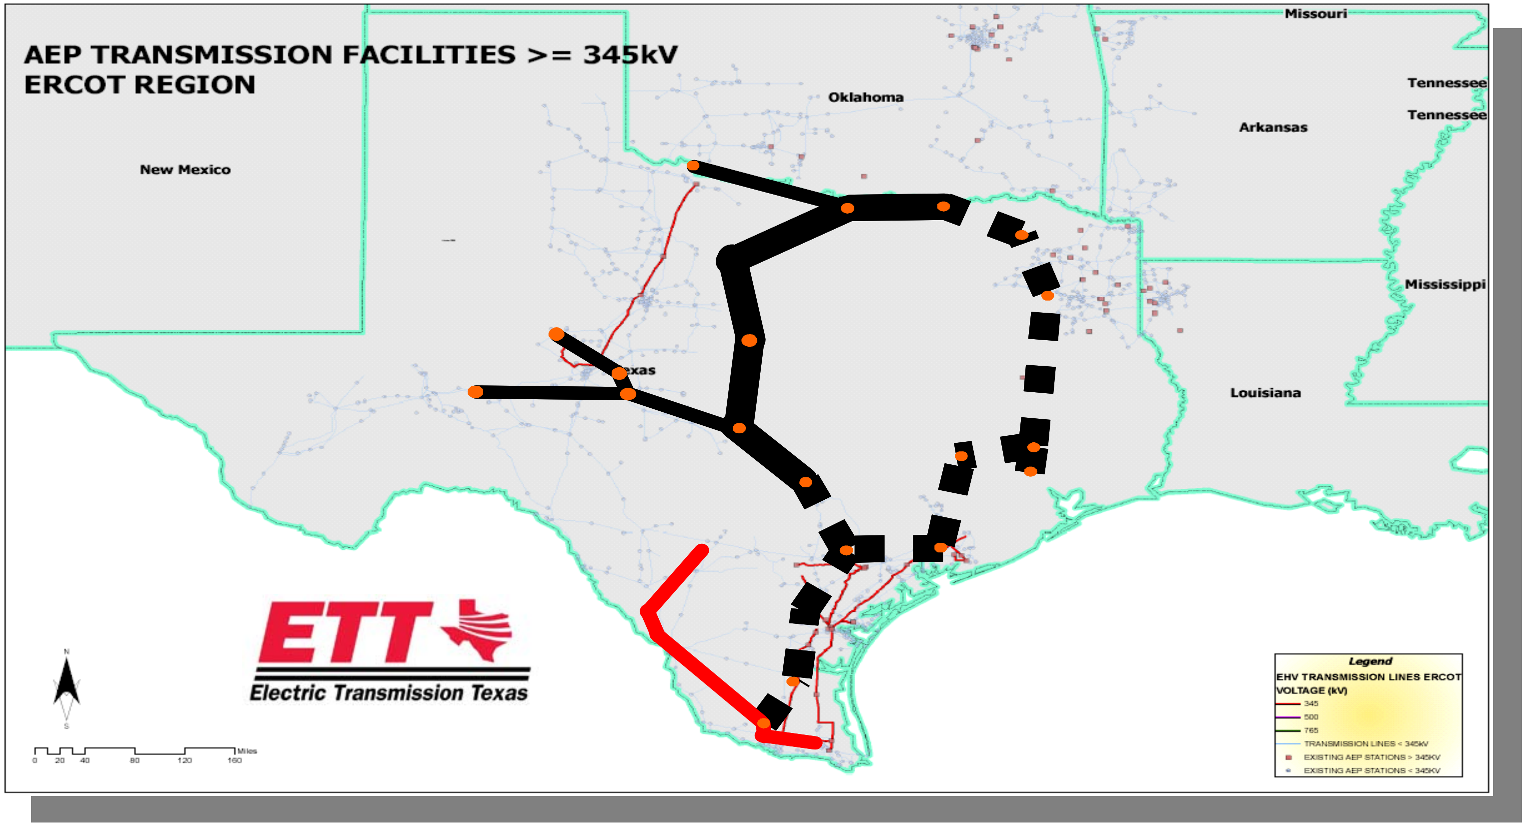
Building The Next US Interstate System For Enhanced Reliability And Market Efficiency Could Have Significant EPS Implications

765-PJM



- JV with Allegheny to build a 290 mile West Virginia – Maryland line (Approved by PJM in June 2007). Total estimated cost of $1.8 billion (AEP portion appprox. $600 million). (Second leg which would continue to New Jersey still under consideration by PJM.)
- Enhances Midwest-Mid-Atlantic reliability and improves power transfer capability by 5000 MW.
- Reduces network line losses by 280 MW.

765-ERCOT



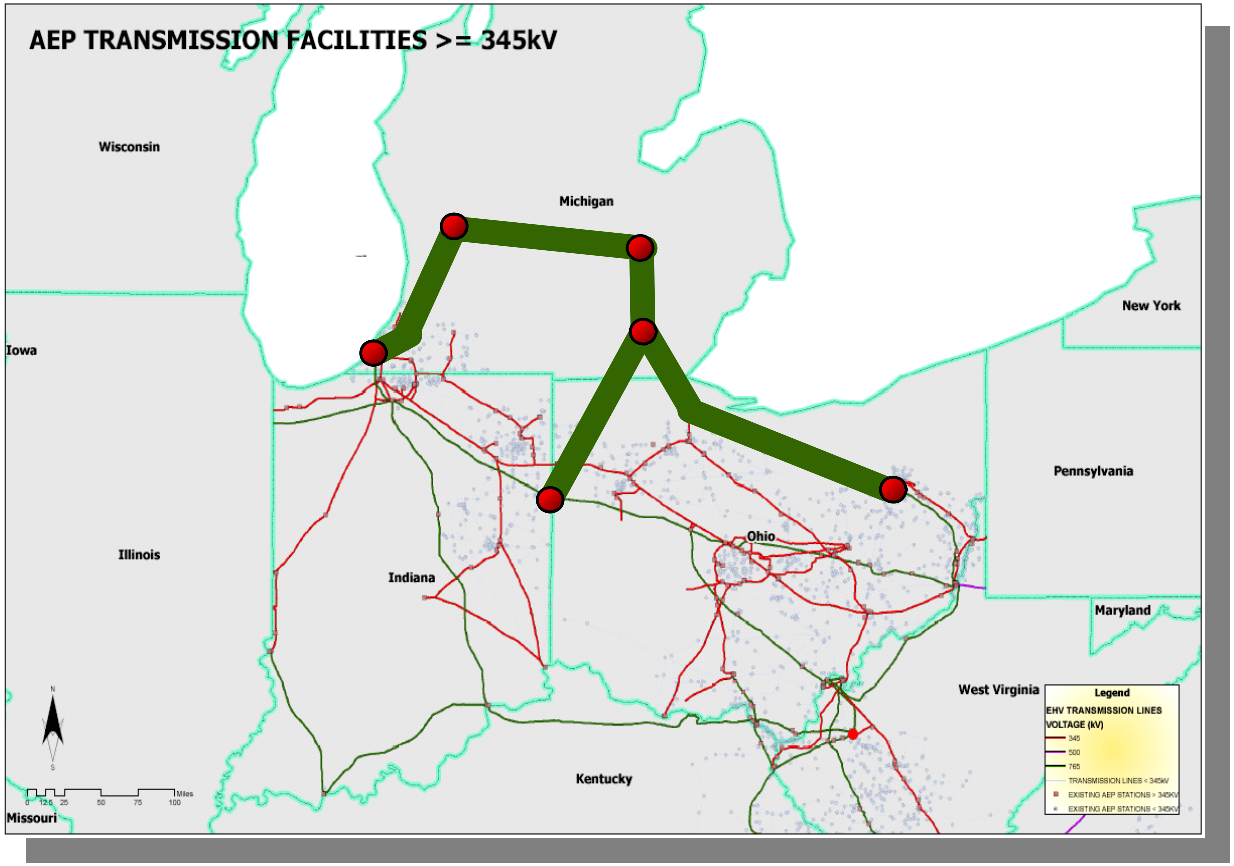
- Jointly-owned utility company (AEP and Mid American) will design, construct & operate ERCOT transmission assets.
- AEP exploring ERCOT transmission investment opportunity, including 420 miles of 765-kV initially.
- Up to 4000MW improved transfer capability.

AEP®

31

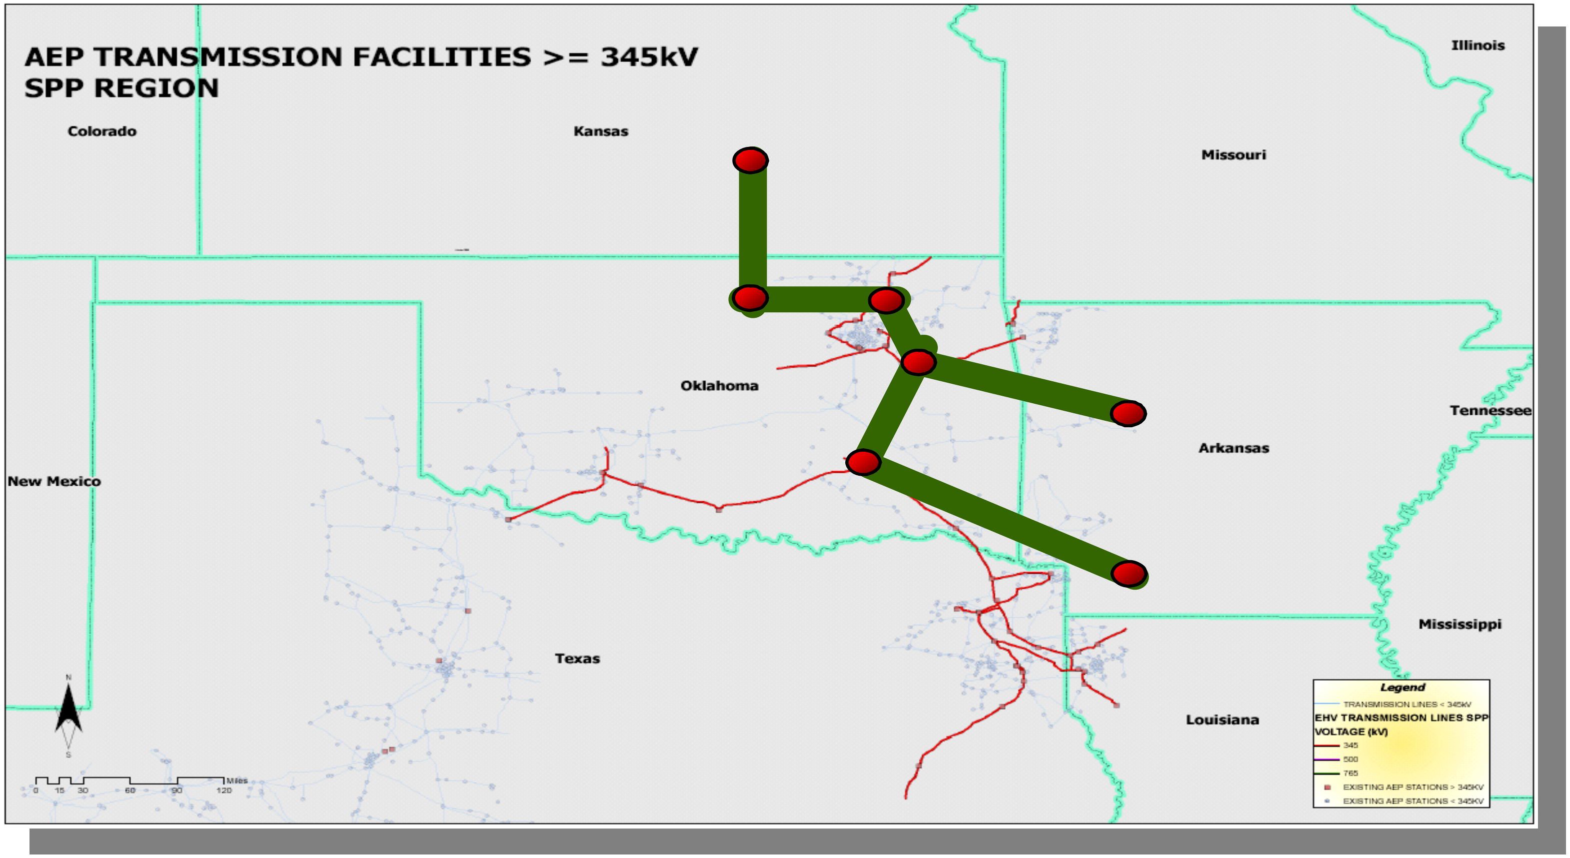
KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 482 of 9556

765-Michigan



- Agreement with ITC Transmission for Michigan 765-kV to study the feasibility of 700 miles of 765-kV lines in Ohio and Michigan. Completed study should be available in the third quarter of 2007.
- Over 3000MW improved transfer capability.
- Reduces network line losses by 250 MW.

765-SPP



- In July 2006, AEP submitted a conceptual project to SPP for six 765-kV lines, 610 line miles from Arkansas to Wichita, KS, with a proposed construction period of 2012-17.
- SPP issued its EHV Overlay Study in June 2007 reviewing 345 kV, 500 kV, and 765 kV potential projects in SPP. An alternative, which includes a 765-kV line in Oklahoma and Kansas connecting the east to PJM, was chosen as the preferred alternative.

AEP®

New Transmission Investment Funding Plans

- Electric Transmission Texas LLC
  - **40% equity / 60% debt capital structure requested at the PUCT follows Texas' precedent for T&D companies' filings**
  - **Equity – 50% AEP / 50% MidAmerican Energy**
  - **AEP's 50% investment will be held at the AEP Utilities, Inc. subsidiary**
  - **Debt – Initially bank financing**
  - **Initial funding in 3Q07 after regulatory approvals**

- AEP I-765$_{TM}$ Interstate Project
  - **Forming a joint venture with Allegheny Energy for 250 miles of the proposed 550 mile project**
  - **JV portion of the I-765$_{TM}$ Interstate Project approved by PJM in its Regional Transmission Expansion Plan in June 2007**
  - **Equity – 50% AEP / 50% Allegheny**
  - **AEP's 50% investment will be held at the AEP Transmission Holding Company LLC subsidiary**
  - **Operations to commence in the second half of 2007**
  - **I-765$_{TM}$ Interstate Project included in the DOE's draft National Interest Electric Transmission Corridor issued in April 2007**

- Other Transmission Projects
  - **Equity percentage of capital structure will target FERC precedents**
  - **Equity ownership percentage will vary by project**
  - **Will seek FERC transmission incentives:**
    - **Incentive ROE**
    - **Return on CWIP**
    - **Abandonment recovery**
    - **Expensing pre-construction expenses**

Item No. 1
Attachment 1 - Confidential
Page 486 of 9556

2007 Regulatory Activity Completed

Appalachian Power – Virginia Base Rate Case

Final order approved on May 15, 2007

- ✓ Results in $24 Million annual increase in base rates
- ✓ 10.0% approved ROE

Texas North Base Rate Case

Final settlement order approved on May 24, 2007

- ✓ Results in $11.7 million increase in pre-tax earnings ($13.7 million increase in revenues offset by $2 million increase in depreciation expense)
- ✓ No stipulated ROE in the settlement. For AFUDC purposes, Texas North will utilize the ROE that comes out of the Texas Central rate case.

Appalachian Power – West Virginia Expanded Net Energy Cost (ENEC) Filing

Final settlement order approved on June 22, 2007

- ✓ Results in $85.5 million net increase in revenues effective July 1, 2007
  - ✓$54.8 million covers increased costs related to coal and purchased power
  - ✓$28.5 million covers environmental construction costs, primarily related to installation of scrubbers
  - ✓Remainder ($2.2 million) recovers first year costs of rehabilitating four small electric utilities acquired as of July 1

Indiana Michigan Power – Indiana Depreciation Study

Interim settlement order approved on June 13, 2007

- ✓ Allowed a change in depreciation rates effective July 1, 2007, resulting in a pretax earnings increase of approximately $69 million per year
- ✓ Stipulated a $5 million credit to customers in the next fuel adjustment clause proceeding
- ✓ Required I&M to file a rate petition on or before July 1. Petition was filed on June 19.

AEP Texas Central Company General Rate Case

On November 9, 2006, TCC & TNC filed applications with the PUCT to raise base rates they charge to Retail Electric Providers (REP) serving end-use electricity customers in their service territories. On April 3, 2007, TCC and TNC submitted revised rate increase requests of $69.9MM and $22MM, respectively. Requested increases include the expiration of merger-related billing credits that have been in place since 2000, totaling $20MM and $6.2MM for TCC and TNC, respectively. (TCC Docket #33309, TNC Docket #33310). TNC reached settlement on May 4, 2007 for a $13.7MM increase in revenues and a $2MM increase in depreciation, resulting in an annual increase of $11.7MM. The settlement was approved by the PUCT on May 24, 2007. The expiration of the merger credits for TCC was approved by the PUCT in June 2007.

Procedural Schedule

March 13, 2007	Intervenor testimony
March 23, 2007	Staff testimony
April 3, 2007	Rebuttal testimony
April 12, 2007	Hearings
May 14, 2007	Rates effective under bond, subject to refund

Final Order expected in September-October 2007

TCC Capital Structure – Company Position (Test Year ended 6/30/06)

PSO General Rate Case

On November 21, 2006, Public Service Oklahoma filed an application with the Oklahoma Corporation Commission to increase base rates by $49.6 million to recovery investments already made and costs incurred. The request represents a 4% overall increase (including fuel). The filing also includes a proposal to adopt an annually adjusted rate mechanism, which includes a return on CWIP. The formula rate would adjust rates, up or down, if PSO earns above or below an approved bandwidth around the authorized ROE. (Case #200600285)

Pro-forma Capital Structure – Company Position (Test Year ended 6/30/06)

	% of Capitalization	Cost Rate	Weighted Cost

May 30, 2007	ALJ report issued
June 13, 2007	Oral closing arguments
August 2007	Final order expected

Regulatory Activity Underway

AEP Ohio Application For 4% Provision On Generation Rate

- On Jan. 23, 2007, CSP and OP filed an application at the PUCO to recover 2007 costs associated with additional generation-related expenditures the companies are encountering related to environmental, security and other new generation-related costs pursuant to the RSP.
- CSP and OP are requesting to implement the provision to recover $24.5MM and $8.2MM, respectively, from May 2007 through December 2007.
- Staff & Intervenor testimony filed May 11, 2007; Staff recommended a $15MM increase at CSP and a $3.7MM increase at OP; OCC recommended a $19.9MM increase for CSP and a $3.7MM increase for OP.
- Hearings were held in May and June and we expect an order in September or October 2007.
- Because there was no specific action by the PUCO within the required time frame, we were allowed to implement these increases, subject to refund, in May 2007.

I&M Indiana Rate Petition

- On June 19, 2007, I&M filed a petition with the Indiana Utility Regulatory Commission (IURC) for authority to increase its rates and charges for electric utility service and to establish and implement rate adjustment mechanisms to track certain matters.
- Requested trackers relate to reliability enhancement, demand-side management/energy efficiency programs, off-system sales margins, PJM, environmental compliance and capacity equalization settlement.
- Parties have agreed to a historic test year ended September 30, 2007, with a rate case filing date of January 31, 2008. This schedule is subject to IURC approval.

AEP®

Regulatory Activity Underway

Electric Transmission Texas (ETT) Rate Filing

- Jan. 22, 2007 – ETT filed with the Public Utility Commission of Texas for approval to operate as an electric transmission utility in Texas and to establish initial rates for ETT.
  - Requested capital structure of 60% debt / 40% equity; requested ROE of 11.25%.
  - Intervenor testimony filed June 8, 2007; Staff testimony filed June 18, 2007; Staff recommended a 10.50% ROE – 10.0% with a 50 bps addition for start-up risk; Hearings were held July 16 and 17, 2007.
  - An order is expected in the third quarter of 2007 and operations are expected to commence in the 2nd half of 2007. Upon receipt of approvals, AEP and MidAmerican will each own a 50% interest in the joint venture.

Seams Elimination Cost Adjustment Revenues

- August 2006 – ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
  - Up to $96MM of SECA revenues could be disallowed, net of unused provisions.
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both.
- Exceptions to initial decision filed Sept. 11, 2006; Replies to exceptions filed Oct. 11, 2006; Order expected by the Commission in 2007.

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission serves over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1st.
- The current revenue requirement is $88.7MM and the new total revenue requirement requested is $161MM.
- We requested an effective date of September 1, 2007 for the revised tariff and FERC can suspend for an additional five months, which would push the effective date to February 1, 2008.

Regulatory Activity Underway

APCo Mountaineer IGCC Filing

West Virginia

- Testimony filed with the West Virginia Public Service Commission on June 18, 2007 in support of APCo's application for a Certificate of Public Convenience and Necessity to construct a 600MW IGCC plant in WV at a cost of approximately $2.23 billion.
  - Testimony includes a proposal for the Commission to approve a cost recovery mechanism through the existing Expanded Net Energy Cost (ENEC) mechanism. The filing is not a formal proposal to adjust rates.
  - Actual requests for increased rates will be included in future filings, once construction of the plant has commenced and actual Construction Work In Progress data is known.
- Public hearings are scheduled for December 10-14, 2007 with an order on or before March 7, 2008.

Virginia

- Testimony filed with the Virginia State Corporation Commission on July 16, 2007 seeking a prudence determination and approval to recover, beginning in 2009, Virginia's share of the carrying costs associated with the proposed plant.
- No procedural schedule has been set but Virginia legislation requires a decision within nine months.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- Oral arguments regarding this matter are scheduled on the Ohio Supreme Court's agenda for October 9, 2007.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.

AEP ®

Regulatory Activity Underway

Oklahoma Red Rock Generating Facility

- Testimony filed on February 1, 2006 in support of PSO's application for a determination that additional baseload electric generating capacity will be used and useful.
- The Oklahoma Corporation Commission consolidated this cause with Oklahoma Gas and Electric's application for an order granting pre-approval to construct Red Rock Generating Facility and authorize a recovery rider.
- Initial staff and intervenor testimony agrees that PSO needs baseload capacity and staff recommends that the OCC find Red Rock used and useful. The biggest challenges related to the RFP process and the debt equivalence issue in evaluating the PPA bids.
- Hearings for PSO's Used and Useful Determination and OG&E's cost recovery were held July 9-31, 2007.
- We await an ALJ report in August 2007.

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- Public hearings will begin August 9, 2007.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to Purchase, Operate, Own and Install Peaking, Intermediate and Baseload Generating Facilities. Peaking and intermediate facilities have been addressed. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- Public hearings are scheduled for September 11-14, 2007.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- Public hearings are scheduled for September 27-28, 2007.

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M's Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events and our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives, evolving public perception of the risks associated with fuels used before, during and after the generation of electricity, including nuclear fuel.

Commercial Paper Outstanding		(944)	
Letters of credit issued		(132)	
Net available Liquidity	**$**	**2,295**	

On July 26, 2011, we renewed and upsized the facility expiring in April 2012. The new facility has a capacity of $1.75B and expires in July 2016.

We also extended and repriced the facility expiring in June 2013. That facility now expires in June 2015.

This brings our total available capacity to $3.25B.

Rate Changes

AEP Ohio Distribution Rate Case – Docket #11-351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%. A procedural schedule from the PUCO is pending.

APCo Virginia Base Rate Case – Docket #PUE-2011-00037

On March 31,2011 APCo filed an update to its pre-biennial base rate case for recovery of generation and distribution costs requesting an increase of $75 million ($126 million total increase less $51 million deferral of depreciation increase). (Docket #:) A procedural schedule is pending from the VSCC.

In conjunction with this case, an environmental rate adjustment clause (E-RAC), generation rate adjustment clause (G-RAC) and a renewable portfolio standard rate adjustment clause (RPS-RAC) were filed . APCo has requested that rates in the base case, E-RAC and RPS-RAC go into effect on 2/1/2012 and the G-RAC on 3/1/2012.

I&M Michigan Base Rate Case – Docket # U-16801

On July 1, 2011 I&M filed a base rate case with the Michigan Public Service Commission requesting an increase of $24.5 million. Rates proposed in this filing are based on projected 2012 cost of service and will not go into effect until 2012, therefore rates will reflect a current cost of service. This filing includes revised depreciation rates to include additions since the last approved depreciation study as well as accelerated retirement of Tanners Creek Units1, 2 and 3. The requested ROE is 11.15%. In accordance with Michigan law I&M intends to implement rates, subject to refund, on January 1, 2012. An order is expected by mid-year 2012.

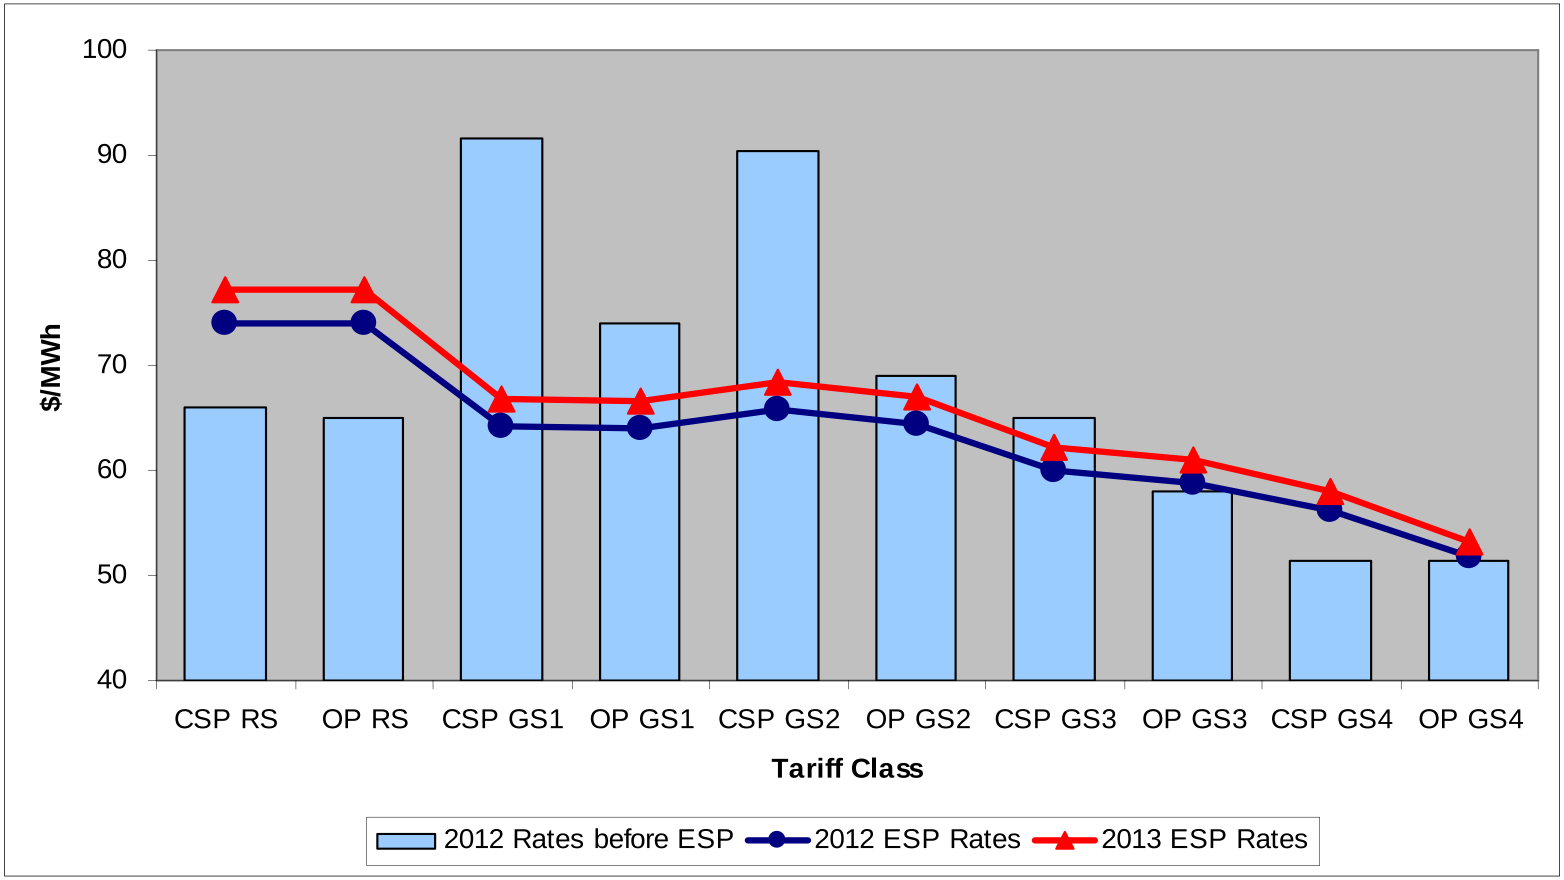
N/C* = No change from prior year

While the ESP includes a small base generation increase, the move to a market-based rate design, consistent with state policy, will result in varying impacts for different customer groups.

Price to Compare

Proposed **SSO** Rates Redesigned To Resemble Market Pricing Structures



Rates do not reflect mitigation impact of market transition rider
2012 Rates before ESP reflect current 2011 rates for generation & transmission service, adjusted to reflect full cost 2011 fuel and environmental costs.

The realignment of rates with market should provide all customers with equivalent opportunities to shop. Additionally, since the proposed design eliminates explicit demand charges, customers should be more easily able to evaluate competitive offers. To ease the rate impact that customers will experience from the realignment, we have proposed a Market Transition Rider.

Market Transition Rider – Mitigates the Initial Impact of Rate Realignment

Three-Year Market Transition Plan

Illustration of Market Transition Rider on ESP Generation Rate Increases

The Market Transition Rider is a transition rider designed to facilitate the transition from AEP Ohio's current rates to market-based SSO Generation Service rates. It is a non-bypassable rider designed to limit the first and second year changes for any customer classes to uniformly transition any above or below average changes in three steps. Any revenue shortfall that is produced by limiting the increases for certain customer classes is collected from those classes whose decreases are limited.

List of ESP Riders – Existing and Proposed

Line	Rate Mechanism	Abbreviation	Bypassable	Distribution	Notes
1	**Current Riders**				
2	Universal Service Fund Rider	USF	--	Yes	
3	Advanced Energy Fund Rider	AEF	--	Yes	Expired 12/31/2010

Turk Plant

- John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant. Located in Arkansas. SWEPCo owns 73 percent or roughly 440 megawatts of the total unit.

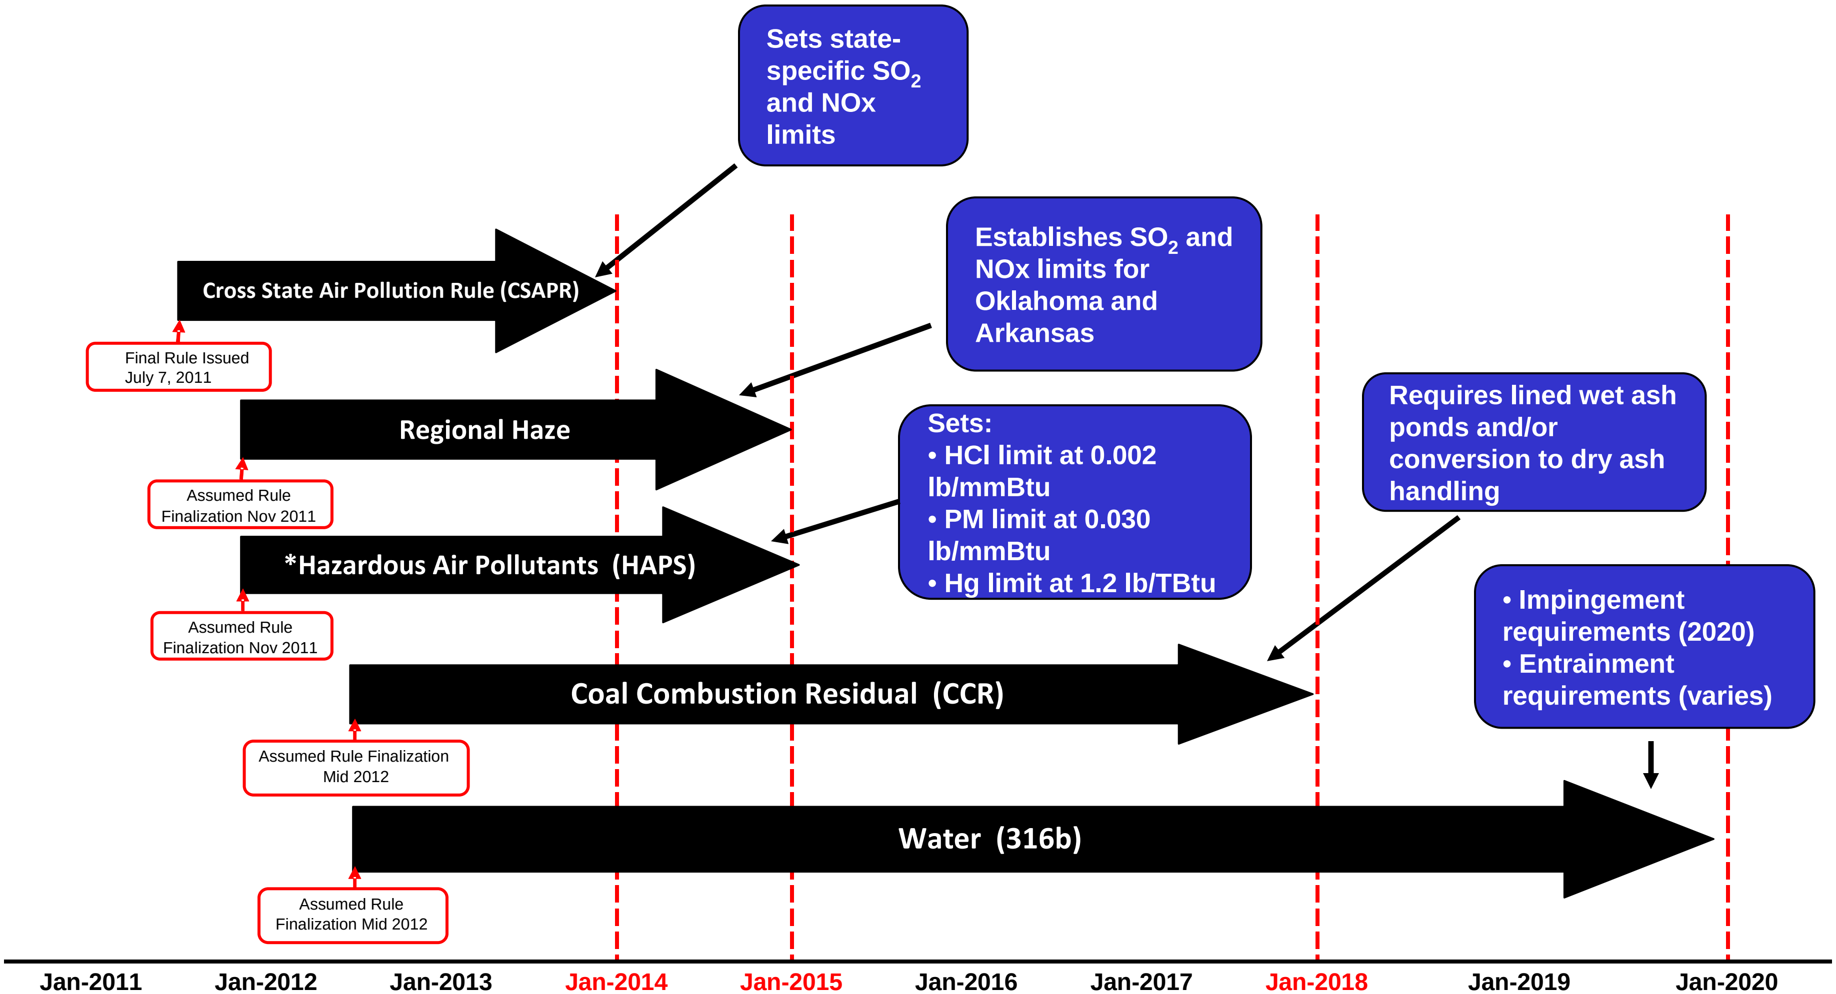
- Third party owners include: Arkansas Electric Cooperative Corp. (12%), East Texas Electric Cooperative (8%), and Oklahoma Municipal Power Authority (7%)

- The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls

- The cost of the plant and related transmission is anticipated at $1.8 billion with AEP’s share approximately $1.4 billion (excluding AFUDC) and will begin commercial operation in 4Q2012.

- $1.2 billion capitalized expenditures through 6/30/11. SWEPCO’s contractual commitments $157MM.

Anticipated environmental regulations and compliance deadlines



* Units that will be retrofit are eligible for a one year compliance extension from the EPA

Retrofits/New Generation

- The tables below represent our estimated $6 - $8 billion capital investment from 2012 to 2020 for environmental retrofits on 10,500 MW and new/refueled generation of 2,152 MW. The below costs include management estimates for compliance with CSAPR, HAPs MACT, CCR and 316(b) regulations as currently proposed.

Operating Company	Plant	MW	Type of retrofit	Low Cost Estimate 2012-2020 ($MM)	High Cost Estimate 2012-2020 ($MM)	
AEP Ohio	Conesville 5	400	SCR, DSI

Transmission Investment Strategy

- **Near-Term Investment** – Electric Transmission Texas (ETT) secures near term investment opportunities, allowing AEP to invest in the large, growth-oriented Texas transmission market. Total capital expenditures of $3 billion with a 9.96% ROE.

- **Mid-Term Investment** – Seven wholly-owned transcos allow for expansion and growth within AEP's existing utility footprint through an efficient recovery mechanism. Will spend $160 million in 2011 and more than $350 million in 2012. ROE is in the 11.20%-11.49% range.

- **Long-Term Investment** – Joint ventures provide opportunities for longer-term growth outside of AEP's existing utility footprint with forward looking formula rates, reasonable ROEs and FERC incentives where appropriate.

Transmission has a diversified investment approach that positions it as one of the key AEP growth businesses.

Texas Transmission Growth Strategy : Near Term Investment

Ownership Structure: 50/50 (AEP/MidAmerican Energy Holding Company)

Total Project Cost: Over $3 Billion

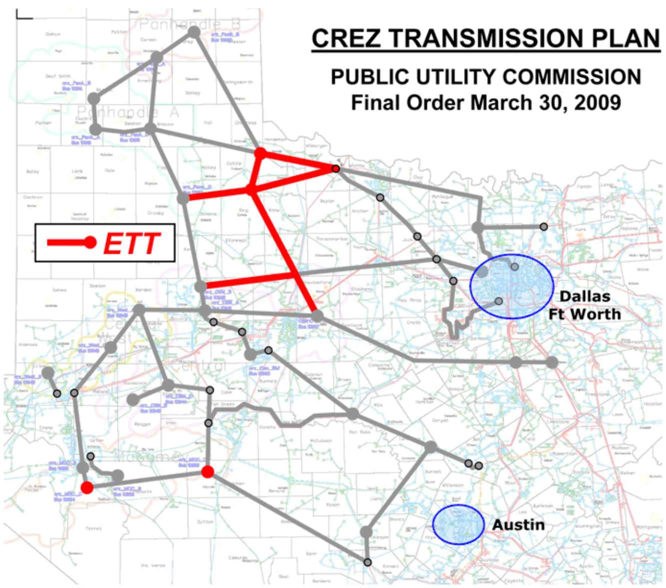
Growing Rate Base:

Current rate base is $412 million; expected to grow as follows:

2011: $482 million
2012: $778 million
2013: $1,352 million

Interim TCOS filings twice per calendar year

Approved ROE: 9.96%



- **Additional Projects in the Pipeline ~$1.6 B:**
  - Approximately 822 miles of lines and 28 substations with in-service dates through 2017

- **Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.1 B:**
  - Seven double-circuit 345kV transmission lines (~$750 M), eight major 345kV stations and several series compensation installations (~$350 M)
  - PUCT Certificate of Convenience and Necessity (CCN) proceedings underway

Joint Venture Strategy: Long-term

- **Strategy**: JV's secure new investment opportunities with local utilities to diversify AEP's investment outside AEP's traditional footprint while providing longer-term incremental earnings**.** JV projects are well-suited for FERC formula rate recovery mechanism, including potential for incentive rates.
- **Future:** Federal/regional initiatives may accelerate expansion of EHV transmission (e.g. cap-and-trade, renewable portfolio standards, inter-region wide planning). Securing first mover advantage will enable AEP to secure LT investment opportunities.
- **Future flexibility**: Passive investment opportunities can be considered and can provide entry beyond SPP/PJM/ERCOT

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

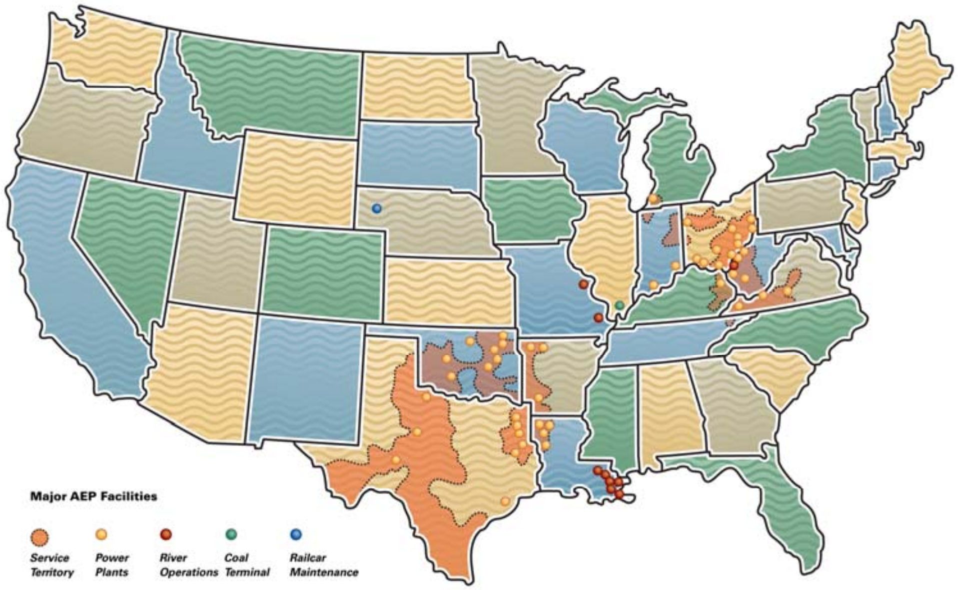
Strength & Scale in Assets & Operations

- 5.1 million customers in 11 states
- Industry-leading size and scale of assets:

Asset	Size	Industry Rank
Domestic Generation	~38,400 MW	# 2
Transmission	~39,000 miles	# 1
Distribution	~208,000 miles	# 1

Source: Company research & Resource Data International Platts, PowerDat 2005

- Coal & transportation assets
  - Control over 8,000 railcars
  - Own/lease and operate over 2,600 barges & 51 towboats
  - Coal handling terminal with 20 million tons of capacity
- 20,000 employees



AEP Generation Portfolio				
Coal	Gas	Nuclear	Hydro	Wind
67%	24%	6%	2%	1%

AEP Enjoys Significant Presence Throughout The Energy Value Chain

Strategic Direction

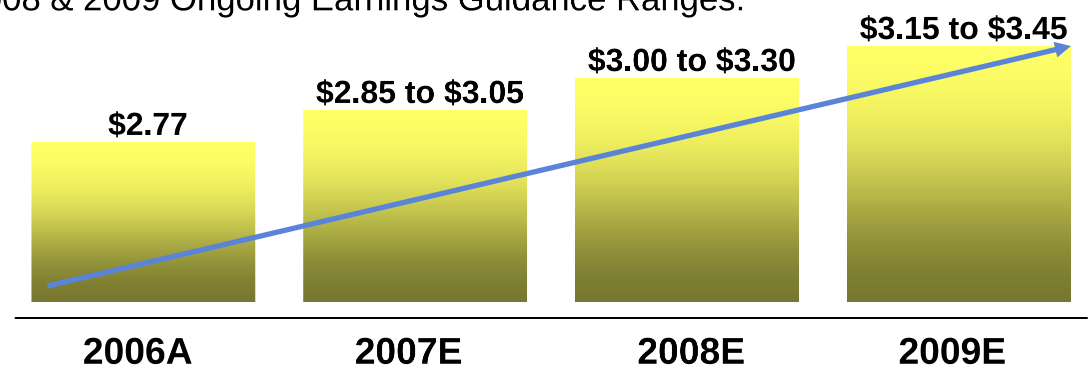
- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Develop our transmission business
- Achieve adequate returns on all assets

Deliver value to investors and cost effective service to our customers

Continued Commitment To Our Core Utility Mission: Bring Reasonably Priced Electric Service To Our Customers, Thereby Strengthening Our Communities And Rewarding Our Investors

Framework For Long-Range Performance

- 2007, 2008 & 2009 Ongoing Earnings Guidance Ranges:



- EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in existing utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
  - Investment in new transmission opportunities
  - Seek rate recovery for new investments
  - Control costs & achieve timely rate relief
- Maintain credit ratings
  - BBB/Baa2/BBB

AEP®

Future Earnings Growth Driven by Native Load Growth and Substantial Utility Investment Opportunity Focused On Regulated Operations

Summary of 5-7% Long-Range Growth Components

- Energy sales growth of 1.5%
- Rate base investment
  - Generation plant purchases & build
  - Transmission – interstate & intrastate
  - Distribution
  - Reliability
- Transmission company
- Commercial operations
- Regulatory strategy
  - Achieve timely returns
  - Seek cash returns on investment during construction
  - Create & secure innovative rate plans
    - Pursue post-2008 solution in Ohio
    - Expand use of trackers
    - Formula rates

AEP®

New Generation And Transmission Projects Largely Reflect Upside To The Long-Range Earnings Growth Target Of 5-7%

6

Utility Investment Drives Growth

Capital Investment Forecast (2007-2009)

($ in millions)	2007	2008	2009	Total (2007-09)
Environmental	$935	$521	$301	**$1,757**
New Generation - Purchase	$118	$0	$0	**$528***
New Generation - Build	$474	$485	$573	**$1,532**
Nuclear	$50	$57	$60	**$167**
Generation	$456	$417	$327	**$1,200**
Transmission	$496	$521	$583	**$1,600**
Distribution	$848	$915	$1,016	**$2,779**
Corporate	$165	$110	$114	**$389**
Total Capex	**$3,542**	**$3,026**	**$2,974**	**$9,952**

Add: Lawrenceburg Plant Purchase	$325
Add: Dresden	$85
2007 Including Lawrenceburg	**$3,952**

Note: Excludes AFUDC and previously announced CO_2 and transmission projects

*Includes Lawrenceburg and Dresden purchases in 2007

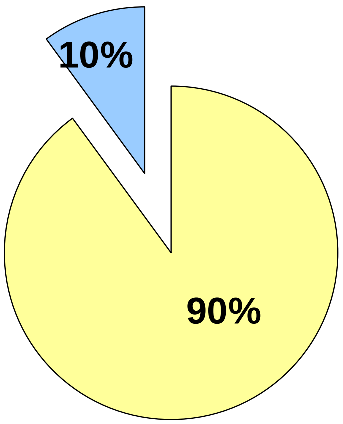
AT THE CONCLUSION OF OUR CURRENT ENVIRONMENTAL RETROFIT PROGRAM, OVER 47% OF OUR COAL-FIRED GENERATION FLEET WILL BE EQUIPPED WITH SCRs AND OVER 50% WILL BE SCRUBBED (FGD). AEP's TOTAL COAL FLEET CAPACITY = 24,710 MEGAWATTS*

*Excludes AEP's 44% ownership in OVEC (980 MWs of coal-fired capacity)

Materials and Vendors – AEP's Advantage

Environmental Program Costs:
Active/Firm Costs to Remaining Estimated Costs



Actuals To Date & Firm Costs

Remaining Estimated Costs*

* Primarily labor and activated carbon injection systems

Typical Vendors Include:

- B&W/Alstom – FGD Spray Tower
- B&V/Chyioda – FGD Jet Bubbling Reactor
- Pullman Power – Stack Supplier
- Babcock Power – SCR
- Black & Veatch – Architect/Engineering
- Sargent & Lundy – Architect/Engineering

First-Mover Advantage:

- By locking in our environmental program costs in the early portion of this decade, AEP has a clear 'first-mover' advantage
- AEP capital costs for a scrubber average approximately $250/kW
- We have since seen a 30-60% increase in material costs and a 15% increase in labor rates
- An FGD system for a nominal 600MW plant in 2005 $ was approximately $225/kW and in 2007 $ is $320/kW

AEP Customers and Shareholders Benefit From First-mover Advantage Through Lower Contracted Pricing and Reduced Market Escalation Exposure

AEP®

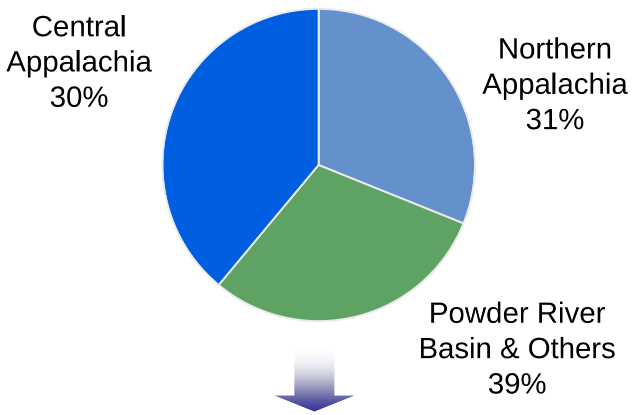
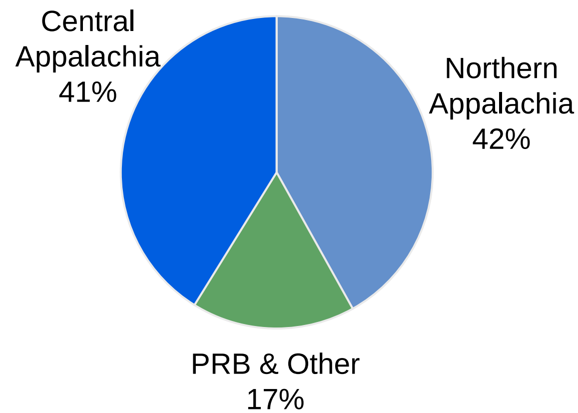
Coal Procurement – 2007 Projected

AEP purchases approx. 76 million tons of coal per year

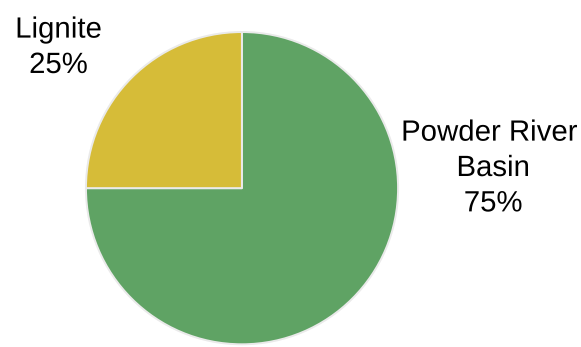
Total AEP System



AEP East



AEP West



Coal Stats:

- 95% contracted for 2007
- Avg. delivered price ~ $35.10/ton in 2006
- Approximate 4-6% price increase in 2007 -- ($36.50 to $37.50/ton)
  - Addition of Mountaineer & Mitchell scrubbers allows for a greater mix of Northern Appalachian coal in 2007

AEP®

Purchased Generation

Waterford

- –821 MW combined-cycle gas plant
- –$220MM purchase price
- –Columbus Southern Power completed purchase on September 28, 2005
- –$268/kW

Lawrenceburg

- –1140 MW combined-cycle gas plant
- –$325MM purchase price
- –AEG completed purchase on May 16, 2007
- –$295/kW

2,946 MW of gas-fired generation added since 2005

Darby

- –480 MW simple-cycle gas plant
- –$102MM purchase price
- –Columbus Southern Power completed purchase on April 25, 2007
- –$227/kW

Ceredo

- –505 MW simple-cycle gas plant
- –$100MM purchase price
- –APCo completed purchase on December 15, 2005
- –$198/kW

AEP®

Additional Gas-fired Generation Allows Us To Meet The Growing Needs Of Our Customers And Provides The Company With Greater Fuel Flexibility

3

New Generation Facilities

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
SWEPCo	Mattison	Arkansas	$130 MM	Gas	Simple-cycle	340 (1)	2007
PSO	Southwestern	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
AEG	Dresden	Ohio	$348-406 MM (2)	Gas	Combined-cycle	580	2010
SWEPCo	Stall	Louisiana	$300 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.3 B (3)	Coal	Ultra-supercritical	600 (3)	2011
APCo	Mountaineer	West Virginia	$2.23 B	Coal	IGCC	630	2012
CSP/OP	Great Bend	Ohio	Under Review (4)	Coal	IGCC	630	2017

(1) 150MW declared in commercial operation on July 12, 2007.
(2) We are currently developing contracts and estimates to complete the project. It is anticipated that the unit can be completed between $600 to $700 per kW using an "all-in" cost basis.
(3) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment.
(4) FEED (front-end engineering and design) study with GE/Bechtel is complete. Cost estimates are not yet filed with the PUCO due to the pending appeals to the Supreme Court of Ohio resulting from the PUCO's April 10, 2006 Opinion and Order.

AEP®

AEP Is Meeting The Growing Electricity Needs Of Customers Through The Pursuit Of New Economic Generation Facilities

New Gas-Fired Generation Facilities

SWEPCo

- Mattison Plant (Tontitown, AR)
  - Certificate of Need filings (LA, AR, TX) were approved in all 3 states
  - Air permit received in February 2007
  - Units 3 and 4 (150 MW) online on July 12, 2007; Units 1 and 2 online by January 2008
- Stall Plant (Arsenal Hill, LA)
  - Certificate of Need filings (LA, AR, TX)
    - TX settled in Feb 2007
    - AR & LA decisions expected by year-end 2007
  - Air permit filed on April 27, 2007 – expecting approval by March 2008
  - Commercial operation date in 2010

PSO

Southwestern & Riverside Additions

- Air permit received March 22, 2007
- Commercial operation date of December 2007
- Regulatory Recovery
  - Settlement and final order in the Lawton Cogen case authorizes recovery of costs for Southwestern and Riverside peakers through a rider mechanism beginning as early as June 2008 based on the Commercial Operation date

2007-2009 Projected Capital Expenditures

	2007	2008	2009
Mattison	$56MM	$4MM	-
Stall	$82MM	$126MM	$64MM
Southwestern	$36MM	$3MM	-
Riverside	$35MM	$2MM	-

SWEPCo's and PSO's Short-Term and Intermediate Power Needs Will Be Met With Newly Constructed Gas-Fired Facilities

AEP®

New Ultra-Supercritical Coal Facility

SWEPCo

Turk Plant (Fulton, AR)

- Certificate of Need approvals (LA, AR, TX) expected in the fourth quarter of 2007
- Air permit approval expected in Fall 2007
- Regulatory Recovery
  - Recovery of carrying cost requested in LA Certificate of Need filing – Hearings commenced September 11, 2007
  - AR and TX rate recovery will be addressed in separate filings
- Approximately 85-90% of costs are firm
  - EPC contract for balance of plant work awarded in May 2007
  - Contracts for turbine, boiler, and environmental control equipment awarded in 2006

2007-2009 Projected Capital Expenditures

	2007	2008	2009
Turk Plant	$211MM	$230MM	$243MM

Ultra-Supercritical Coal-Fired Generation Is The Most Economical Choice For New Baseload Plants In AEP's Western Service Territory

Integrated Gasification Combined Cycle Facilities

Front-End Engineering & Design (FEED) results complete. Results were filed in June 2007. Cost estimates in target range of 20-30% premium over new ultra-supercritical coal-fired facilities of equal capacity.

West Virginia

- **Certificate of Public Convenience & Necessity filed Jan. 11, 2006**
  - APCo testimony filed June 18, 2007
  - Intervenor & Staff testimony due Nov. 19, 2007
  - Hearings Dec. 10-14, 2007
  - Statutory Deadline – Mar. 7, 2008
- **Air permit filed in Oct 2006**
  - A technical review of the application and development of a draft permit is ongoing by the WV Dept. of Environmental Protection
- **Regulatory Recovery**
  - West Virginia filing made in June 2007 – included request for cash recovery mechanism
  - Virginia filing made in July 2007 requesting cash recovery mechanism

Ohio

- **Certificate of Environmental Compatibility & Public Need filed March 24, 2006**
  - Ohio Power Siting Board certificate issued in April 2007
- **Air permit filed in Oct 2006**
- **Regulatory Recovery**
  - Phase 1 – June 2006 – PUCO approved tariff to recover pre-construction costs ($24MM) over 12-month period effective July 1, 2006
  - Phase 2 – filing likely to be withheld until resolution of Ohio Supreme Court action
  - Informational filing made on June 18, 2007 to inform PUCO of the West Virginia filing

Construction Period Of 48-50 Months Following Receipt Of Major Regulatory And Permit Approvals

Investing In IGCC

Generation Technology Comparative Statistics

US2006$	Eastern Bituminous		
	USC	**IGCC**	**NGCC**
Nominal Capacity (MW)	618	629	530
Capacity Factor (%)	85%	85%	25%
Total Plant Cost (EPC + Owner's Cost) ($/kW)	$2,152	$2,717	$572
Production Cost ($/MWh)	$22	$22	$45
Cost of Electricity, without CO_2 Capture ($/MWh)	$72	$83	$87
Estimated Cost of Electricity, with 90% CO_2 Capture ($/MWh)	$118	$108	$135

Source: Results of AEP analysis based on EPRI studies.

- Total Plant Cost (Overnight EPC 2006$s) includes the cost to engineer, procure and construct plant and owner's direct costs.
- Assumes Northern Appalachian coal price of $2.25/mmBtu for USC and IGCC and natural gas price of $6.00/mmBtu for NGCC.
- Production cost includes fuel cost plus variable operations and maintenance (VOM) cost.
- Cost of electricity represents first year estimates only in 2006$ and are based on total plant cost plus generic cost estimates for AFUDC, emission credits, infrastructure, interconnections, transmission lines and upgrades.
- Cost of electricity with CO_2 capture provides pressurized CO_2 at the fence line and does not include transportation, storage and monitoring costs.

IGCC Technology Is Strategic To Keeping Coal In The Money

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A Reliable & Reasonably-priced Electric Supply Is Necessary To Support The Economic Well-being Of The Areas We Serve

Highlights of Bingaman-Specter Proposal

"Low Carbon Economy Act of 2007"

Key Components:

- Start date for greenhouse-gas reductions is 2012
- Goals: 2006 levels by 2020; 1990 levels by 2030
- Includes a safety valve of $12 per metric ton, increasing at an annual rate of 5% above inflation
- Support for allowance allocations
- International action

AEP Endorses this Proposal Because It Sets Reasonable And Achievable Reduction Targets and Includes the AEP-IBEW Trade Proposal

AEP's Climate Strategy

- **Being proactive and engaged in the development of climate policy**
  - International Emissions Trading Association (IETA)
  - Electric Power Research Institute (EPRI)
  - Pew Center on Global Climate Change
  - e8
  - Global Roundtable on Climate Change
- **Investing in science/technology R&D**
  - FutureGen Alliance
  - US DOE research on carbon capture and sequestration at our Mountaineer Plant
  - EPRI – combustion technologies
  - MIT Energy Laboratory
  - B&W – Oxy-Coal
- **Taking voluntary, proactive action now, demonstrating voluntary programs can work and setting policy precedents thru CCX**
  - Chicago Climate Exchange (CCX)
  - EPA Climate Leaders
  - EPA SF-6 Emission Reduction Partnership for Electric Power Systems Program
  - Asia-Pacific Partnership
  - DOE 1605B- voluntary reporting of GHGs Program
  - Business Roundtable Climate Resolve
  - Numerous forestry activities
- **Evaluating longer term investment decisions such as new generation and carbon capture and storage (e.g., IGCC, Ultra-supercritical)**

AEP Must Be A Leader In Addressing Climate Change

AEP's Long-term GHG Reduction Portfolio

Renewables (Biomass Co-firing, Wind)

Supply and Demand Side Efficiency

Off-System Reductions and Market Credits (forestry, methane, etc.)

Commercial Solutions of New Generation and Carbon Capture & Storage Technology

AEP Is Investing In A Portfolio Of GHG Reduction Alternatives

AEP®

AEP's Long-term CO_2 Reduction Commitment

Existing Programs

- Renewables
  - 800 MWs of Wind
  - 300 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

New Program Additions

- Incremental Reduction quantity: 5MM tons/yr
- Timing: To take effect/receive credits by 2011
- Methods
  - +1000 MWs of Wind PPAs – 2MM tons/yr
  - Domestic Offsets (methane) – 2MM tons/yr (e.g., livestock methane capture deal of 0.6MM tons/yr)
  - Forestry – Tripling annual investment to increase to 0.5MM tons/yr by 2015
  - Fleet Vehicle/Aviation Offsets – 0.2MM tons/yr
  - Additional actions to include DSM and end use energy efficiency, biomass and power plant efficiency – 0.2MM tons/yr

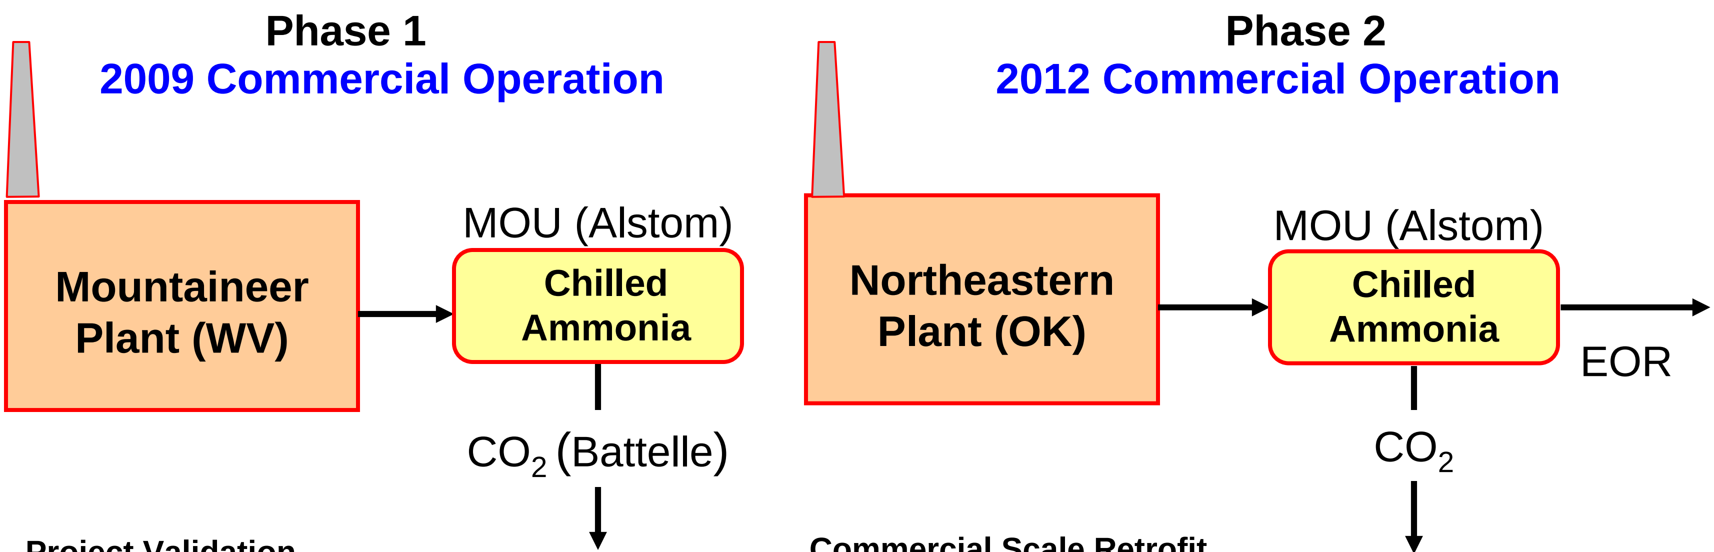
New Technology Additions

- New Technology Generation – IGCC and USC
- Commercial solutions for existing fleet
  - Chilled Ammonia
  - Oxy-Coal

AEP Is Committed To A 5mm Ton/Yr Reduction In Co_2 Emissions Which Offsets Approximately Half Of The Emissions Projected From New Generation Projects Previously Announced

AEP®

Chilled Ammonia Technology Program



Project Validation

- 20 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, under construction at WE Energies)
- 100,000 – 300,000 tonnes CO_2 per year
- In operation 1Q 2009
- Approximate total cost \$50 – \$80M
- Using Alstom “Chilled Ammonia” Technology
- Located at the AEP Mountaineer Plant in WV
- CO_2 for geologic storage

Commercial Scale Retrofit

- ~ 200 - 300 MW_e scale (megawatt electric)
- ~ 600 MW_t scale (megawatt thermal)
- ~1.5MM tonnes CO_2 per year
- In operation late 2011
- Approx. capital \$250 – \$300M (CO_2 capture & compression)
- Approx. O&M cost \$12M per year
- Energy penalty ~ 35 – 50 MW steam, 25 – 30 MW for CO_2 compression
- Retrofit Wet FGD Required: ~\$225 – \$300M
- Located at AEP’s Northeastern Plant Unit 3 or 4 in Oklahoma
- CO_2 for Enhanced Oil Recovery (EOR)

AEP®

Post-combustion Carbon Solution Provides Pure CO_2 Stream For Capture

Oxy-Coal CO_2 Capture & Storage Project

Pilot Scale Demonstration

- 10 MW_e scale
- Teamed with B&W at its Alliance Research Center and 16 other utilities
- Demo complete 3Q 2007
- AEP funding of $50k

Commercial Scale Retrofit

- Retrofit on existing AEP sub-critical unit (several available)
- 150 – 230 MW_e scale retrofit
- 4,000 – 5,000 tons CO_2 per day
- Team with B&W
- AEP funding of ~ $1.5M for feasibility study
- Feasibility study to be completed in late 2007/early 2008

Combustion Conversion Technology For Existing Coal Fleet – Longer Lead Time With Enhanced Viability And Long-term Potential

AEP®

Transmission ~ $9-$15 Billion Opportunity

Creating a business model to manage capital requirements for enhanced returns with partners

Potential Opportunities
~ $3 Billion I-765™ Project in PJM
~ $2.6 Billion 765-kV Project in Michigan with ITC
~ $3 Billion Project filed with SPP
~ $1-7 Billion in ERCOT via Electric Transmission Texas, LLC (ETT)

Assumptions	
Estimated Investment Opportunity	$9 - $15 Billion
Ownership Structure w/ Partner	50% / 50%
Debt / Equity Ratio	50% debt / 50% equity
Return on Equity	11.00% - 13.00%
Potential EPS Impact (based on 396 MM shares)	$1.00+

1) ~$9-$15 billion investment opportunity not included in current capital guidance forecasts

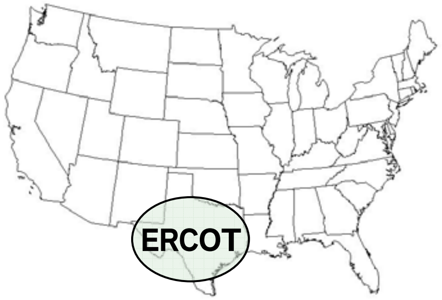
2) Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

Building the next US interstate system for enhanced reliability and market efficiency.

Electric Transmission Texas (ETT) Status Update

ETT: Delivering power for Texas' future

- *Transaction Structure*
  - 50/50 joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC.
  - ETT capital structure is 60% debt / 40% equity (PUCT requirement).
  - Executive manager provided by AEP.
  - Investment opportunities can be offered by either partner.



- *Transaction Status*
  - Participation Agreement signed Jan. 9, 2007.
  - Texas regulatory filing on Jan. 22, 2007.
    - Requested utility status, transfer of initial assets, establishment of TCOS transmission recovery mechanism.
    - Hearings conducted July 16-17, 2007, commission order expected in October 2007.
  - FERC approval for asset transfer received April 20, 2007.
  - Closing deadline of Nov. 1, 2007 can be extended by mutual agreement.

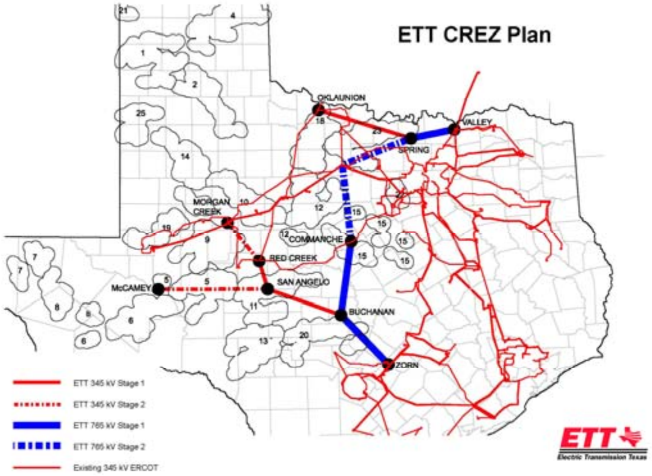
AEP®

CREZ & Backbone Opportunities

Harnessing the Wind: Competitive Renewable Energy Zones offer unique opportunities to showcase ETT

- **ETT CREZ Overview**
  - Strengthen ERCOT grid to collect and deliver wind generation to load
  - Build transmission in the most cost effective manner, addressing:
    - Future generation development
    - Load growth pockets
    - Market efficiency (reduce congestion)
    - Competitive wholesale markets
    - Economic growth
  - $1.5 billion investment Phase 1 – 2012*
  - $1.5 billion investment Phase 2 – 2015*

  * Before ownership division.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

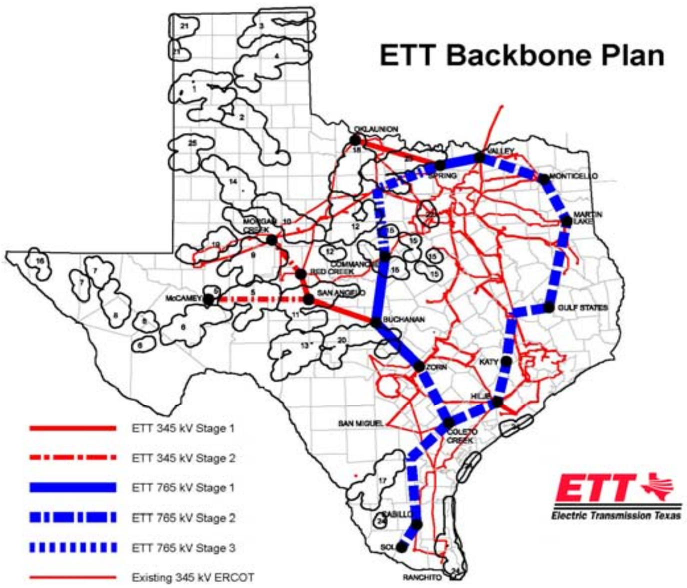
- **CREZ Approval Stages as outlined by the PUCT**
  - Stage 1 – Final order designating power regions – August 2007
  - Stage 2 – CREZ Transmission Optimization Study – January 2008
  - Stage 3 – PUCT selection of transmission construction designees – February 2008
  - Stage 4 – CCN development and submission – February 2009
  - Stage 5 – CCN approval – August 2009
  - Stage 6 – Construction (TBD)

AEP®

CREZ & Backbone Opportunities – cont'd

Harnessing the Wind: Competitive Renewable Energy Zones offer unique opportunities to showcase ETT

- **ETT ERCOT Backbone Proposal**
  - ETT proposal for ERCOT and PUCT to consider CREZ transmission in context of long-term vision for transmission system.
  - Current 5-year planning horizon results in higher ultimate costs, lower system efficiency.
  - Long-term 15-20 year perspective provides better plan, supports development of high voltage backbone at 765-kV.
  - $4.2 billion investment (long-term backbone).



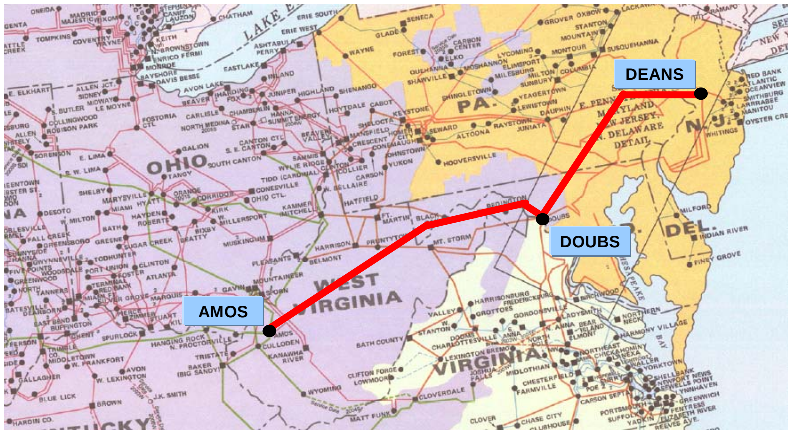
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP®

PJM I-765™ Original Proposal

Execution in Action

- *Overview*
  - $3 billion investment (before ownership division)
  - 550 line miles
  - 5000MW improved transfer capability
  - To be completed in 2 phases (1st phase PJM approved)
  - FERC declaratory order approved July 2006
- *Benefits*
  - Improves eastern grid reliability
  - Improves market efficiency with reduced congestion
  - Reduces consumer cost $1B (est.) annually in the east
  - Reduces network line losses by 280 MW at peak
  - Provides AEP rate base opportunity for transmission investment with ROE upside & other FERC incentives
  - Provides off-system sales and siting opportunity for AEP and other low-cost mid-western generation



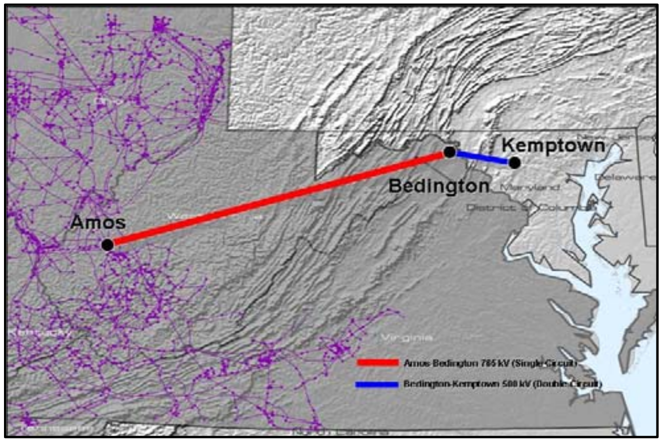
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP®

PATH

Execution in Action

- *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture (Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries) to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
- *Funding Plans/Transaction Structure*
  - AEP and Allegheny share control of Amos – Bedington line and contribute equally to this portion of the project
  - AEP's investment will be held in the AEP Transmission Holding Company LLC subsidiary
  - I-765™ Interstate Project included in the DOE's draft National Interest Electric Transmission Corridor (draft) issued in April 2007
- *Key Regulatory Activity Completed*
  - PJM approved plan June 2007
- *Key Next Steps*
  - PATH to Complete FERC Filing – Fall 2007
    - *Pursuing new project FERC incentives: cash return on CWIP, higher ROE, recovery of pre-commercial operation costs and recovery of abandonment costs.*
  - Siting Approval – Fall 2009
  - Targeted Completion – 2012

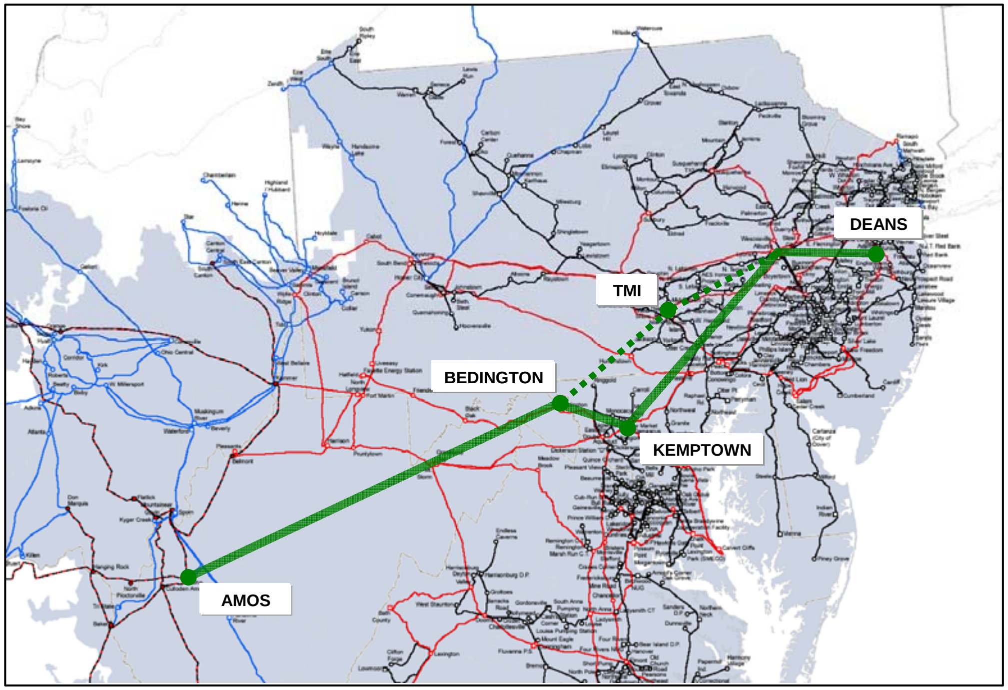


The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

PJM I-765™

Second phase of original AEP 550-mile I-765 proposal

- Approximately 250 miles from West Virginia-Maryland border to Public Service Electric & Gas Deans Station in New Jersey.
- Currently under consideration by PJM as part of Regional Transmission Expansion Plan (RTEP).
- Based on PJM RTEP approval, AEP will seek a suitable business partner (JV partner) to complete the second leg of the original proposal.



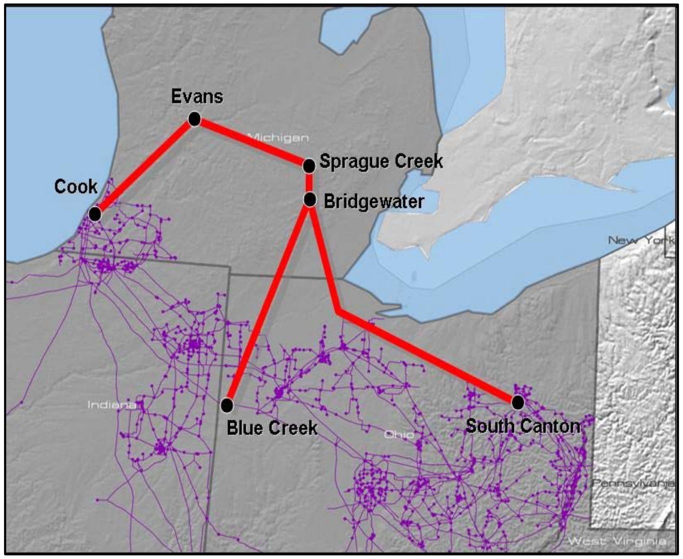
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP®

Michigan I-765™

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - Agreement with ITC Transmission for 765-kV study
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.6 billion investment (before ownership division)
  - PJM/MISO notified of results of technical study- Summer 2007
  - Public release of study- September 2007
  - AEP and ITC are in discussions to form a Joint Venture
- *Benefits*
  - Up to 5000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- *Next Steps*
  - JV formation – 2007
  - MISO and PJM review/approval – Winter 2008
  - FERC Filing - Fall 2008
  - Siting approval – Fall 2010
  - Estimated completion – Fall 2015

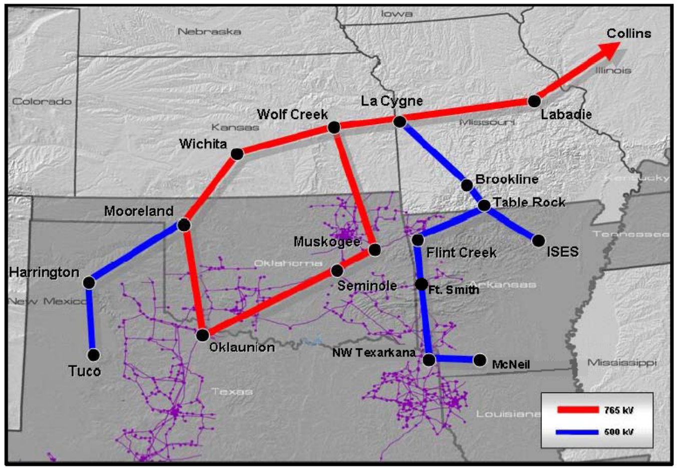


The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

SPP I-765™

Significant opportunity for 765-kV transmission in SPP

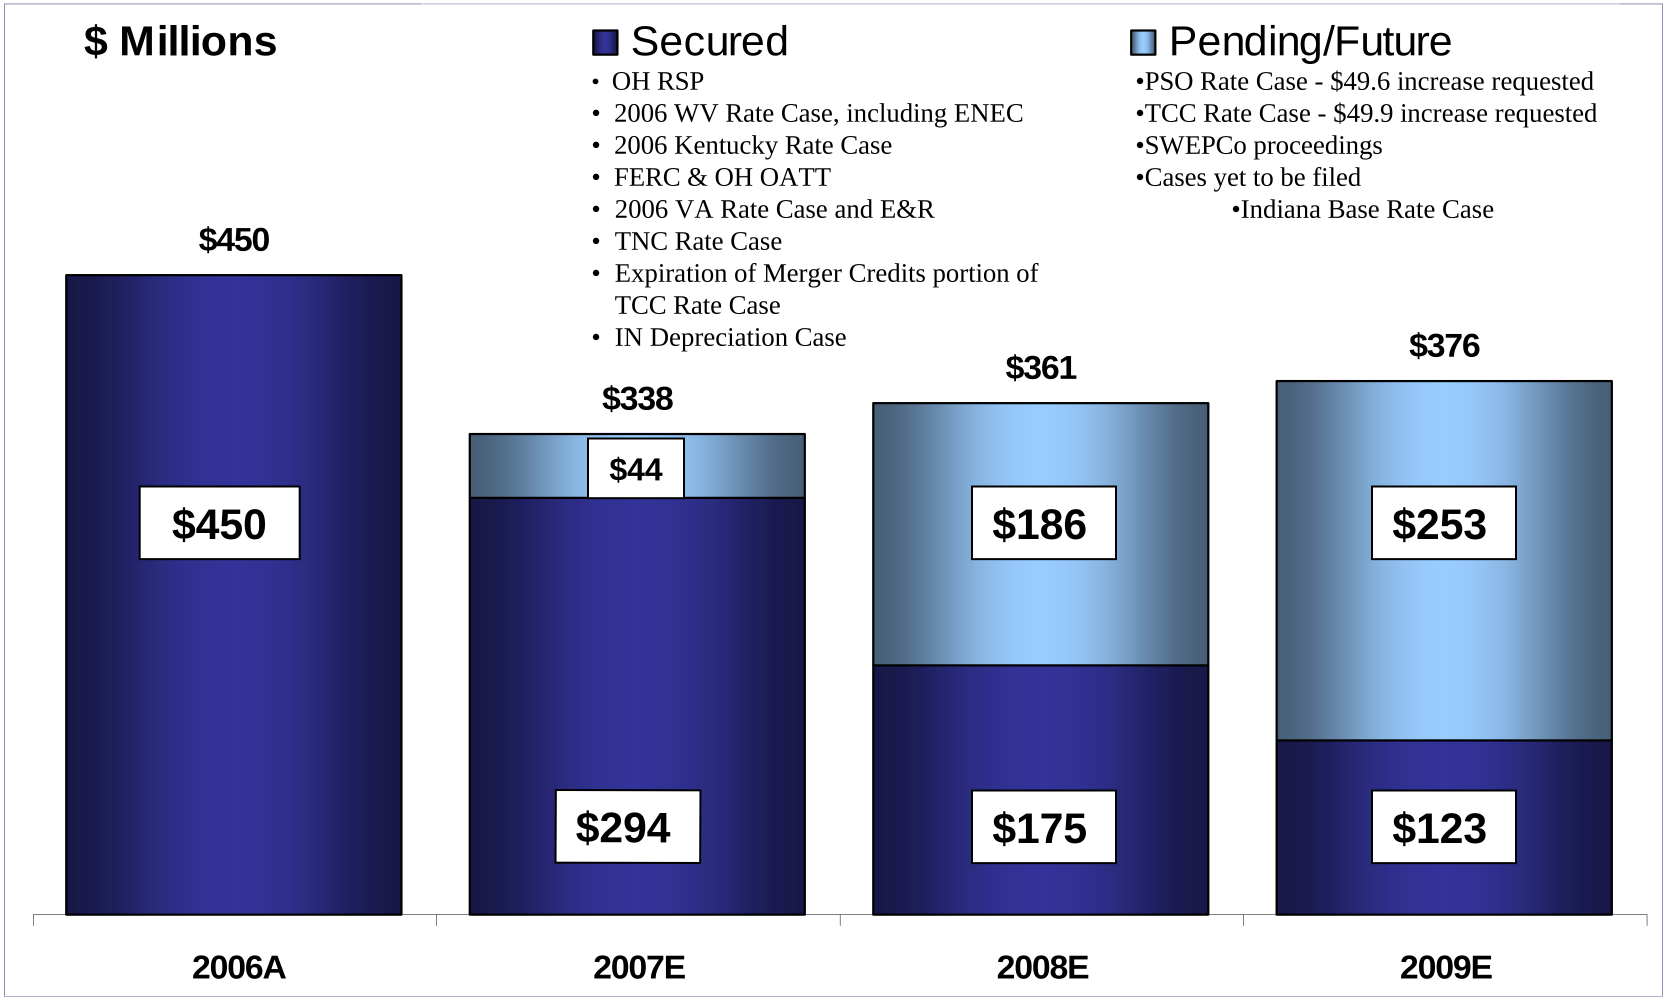
- *Overview*
  - July 2006 AEP submitted conceptual project for six 765-kV lines
  - Proposed 765-kV Kansas / Oklahoma / Arkansas connecting to MISO/PJM
  - 610 miles from Kansas to Arkansas
  - $3.0 billion investment (before ownership division)
  - Proposed 2012-2017 construction period
  - SPP proposes 765-kV in Texas / Oklahoma / Kansas / Missouri connecting to MISO/PJM
  - SPP also proposes 500-kV in Texas / Oklahoma / Arkansas / Missouri
- *Benefits*
  - 4000 MW improved transfer capability
- *Next Steps*
  - Study disclosure – Fall 2007
  - JV formation (Partner-TBD) – Fall 2007
  - SPP RTO/BOD EHV Overlay approval – Summer 2009
  - SPP RTO FERC Filing – Fall 2009
  - Siting approval – Fall 2011
  - Estimated completion – Summer 2017



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP®

Incremental Rate Relief Composition



Rate Relief Is A Critical Element To AEP's Financial Success

2007 Regulatory Activity Completed

Appalachian Power - Virginia Base Rate Case

Final order approved on May 15, 2007

- ✓ Results in $24 Million annual increase in base rates
- ✓ 10.0% approved ROE

Texas North Base Rate Case

Final settlement order approved on May 24, 2007

- ✓ Results in $11.7 million increase in pre-tax earnings ($13.7 million increase in revenues offset by $2 million increase in depreciation expense)
- ✓ No stipulated ROE in the settlement. For AFUDC purposes, Texas North will utilize the ROE that comes out of the Texas Central rate case.

Appalachian Power - West Virginia Expanded Net Energy Cost (ENEC) Filing

Final settlement order approved on June 22, 2007

- ✓ Results in $85.5 million net increase in revenues effective July 1, 2007
  - ✓ $54.8 million covers increased costs related to coal and purchased power
  - ✓ $28.5 million covers environmental construction costs, primarily related to installation of scrubbers
  - ✓ Remainder ($2.2 million) recovers first year costs of rehabilitating four small electric utilities acquired as of July 1

Indiana Michigan Power - Indiana Depreciation Study

Interim settlement order approved on June 13, 2007

- ✓ Allowed a change in depreciation rates effective July 1, 2007, resulting in a pretax earnings increase of approximately $69 million per year
- ✓ Stipulated a $5 million credit to customers in the next fuel adjustment clause proceeding
- ✓ Required I&M to file a rate petition on or before July 1. Petition was filed on June 19.

In Hand to Date - $294MM of the $338MM Rate Recovery in 2007 Guidance

Level Of Capital Investment Will Be Adjusted Based On Rate Recovery And/Or Cash Generation

Regulatory Activity Underway

AEP Texas Central Company General Rate Case

On November 9, 2006, TCC & TNC filed applications with the PUCT to raise base rates they charge to Retail Electric Providers (REP) serving end-use electricity customers in their service territories. On April 3, 2007, TCC and TNC submitted revised rate increase requests of $69.9MM and $22MM, respectively. Requested increases include the expiration of merger-related billing credits that have been in place since 2000, totaling $20MM and $6.2MM for TCC and TNC, respectively. (TCC Docket #33309, TNC Docket #33310). TNC reached settlement on May 4, 2007 for a $13.7MM increase in revenues and a $2MM increase in depreciation, resulting in an annual increase of $11.7MM. The settlement was approved by the PUCT on May 24, 2007. The expiration of the merger credits for TCC was approved by the PUCT in June 2007.

PSO General Rate Case

On November 21, 2006, Public Service Oklahoma filed an application with the Oklahoma Corporation Commission to increase base rates by $49.6 million to recovery investments already made and costs incurred. The request represents a 4% overall increase (including fuel). The filing also includes a proposal to adopt an annually adjusted rate mechanism, which includes a return on CWIP. The formula rate would adjust rates, up or down, if PSO earns above or below an approved bandwidth around the authorized ROE. (Case #200600285)

Pro-forma Capital Structure – Company Position (Test Year ended 6/30/06)

March 20, 2007	Intervenor and staff testimony filed
April 9, 2007	Rebuttal testimony filed
May 1, 2007	Hearings to commence
May 30, 2007	ALJ report issued
June 13, 2007	Oral closing arguments
September 2007	Final order expected

Regulatory Activity Underway

AEP Ohio Application For 4% Provision On Generation Rate

- On Jan. 23, 2007, CSP and OP filed an application at the PUCO to recover 2007 costs associated with additional generation-related expenditures the companies are encountering related to environmental, security and other new generation-related costs pursuant to the RSP.
- CSP and OP are requesting to implement the provision to recover $24.5MM and $8.2MM, respectively, from May 2007 through December 2007.
- Staff & Intervenor testimony filed May 11, 2007; Staff recommended a $15MM increase at CSP and a $3.7MM increase at OP; OCC recommended a $19.9MM increase for CSP and a $3.7MM increase for OP.
- Hearings were held in May and June and we expect an order in September or October 2007.
- Because there was no specific action by the PUCO within the required time frame, we were allowed to implement these increases, subject to refund, in May 2007.

I&M Indiana Rate Petition

- On June 19, 2007, I&M filed a petition with the Indiana Utility Regulatory Commission (IURC) for authority to increase its rates and charges for electric utility service and to establish and implement rate adjustment mechanisms to track certain matters.
- Requested trackers relate to reliability enhancement, demand-side management/energy efficiency programs, off-system sales margins, PJM, environmental compliance and capacity equalization settlement.
- Parties have agreed to a historic test year ended September 30, 2007, with a rate case filing date of January 31, 2008. This schedule has been approved by the IURC.

Regulatory Activity Underway

Electric Transmission Texas (ETT) Rate Filing

- Jan. 22, 2007 – ETT filed with the Public Utility Commission of Texas for approval to operate as an electric transmission utility in Texas and to establish initial rates for ETT.
  - Requested capital structure of 60% debt / 40% equity; requested ROE of 11.25%.
  - Intervenor testimony filed June 8, 2007; Staff testimony filed June 18, 2007; Staff recommended a 10.50% ROE – 10.0% with a 50 bps addition for start-up risk; Hearings were held July 16 and 17, 2007.
  - An order is expected in the 4th quarter of 2007 and operations are expected to commence in the 2nd half of 2007. Upon receipt of approvals, AEP and MidAmerican will each own a 50% interest in the joint venture.

Seams Elimination Cost Adjustment Revenues

- August 2006 – ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
  - Up to $96MM of SECA revenues could be disallowed, net of unused provisions.
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both.
- Exceptions to initial decision filed Sept. 11, 2006; Replies to exceptions filed Oct. 11, 2006; Order expected by the Commission in 2007.

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission serves over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1st.
- The current revenue requirement is $88.7MM and the new total revenue requirement requested is $161MM.
- We requested an effective date of September 1, 2007 for the revised tariff , which the FERC suspended for an additional five months, which extends the effective date to February 1, 2008.

Regulatory Activity Underway

APCo Mountaineer IGCC Filing

West Virginia

- Testimony filed with the West Virginia Public Service Commission on June 18, 2007 in support of APCo's application for a Certificate of Public Convenience and Necessity to construct a 600MW IGCC plant in WV at a cost of approximately $2.23 billion.
  - Testimony includes a proposal for the Commission to approve a cost recovery mechanism through the existing Expanded Net Energy Cost (ENEC) mechanism. The filing is not a formal proposal to adjust rates.
  - Actual requests for increased rates will be included in future filings, once construction of the plant has commenced and actual Construction Work In Progress data is known.
- Public hearings are scheduled for December 10-14, 2007 with an order on or before March 7, 2008.

Virginia

- Testimony filed with the Virginia State Corporation Commission on July 16, 2007 seeking a prudence determination and approval to recover, beginning in 2009, Virginia's share of the carrying costs associated with the proposed plant.
- Public hearings are scheduled for February 12, 2007.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- Oral arguments regarding this matter are scheduled on the Ohio Supreme Court's agenda for October 9, 2007.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.

Regulatory Activity Underway

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- Public hearings commenced August 20, 2007. Decision expected by year end.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to Purchase, Operate, Own and Install Peaking, Intermediate and Baseload Generating Facilities. Peaking and intermediate facilities have been addressed. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- Public hearings commenced September 11, 2007. Decision expected by year end.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- Public hearings are scheduled for October 17, 2007. Decision expected by year end.

Commitment To Credit Quality

- Maintain adequate liquidity
- Target 60% consolidated AEP debt/cap ratio
- Target long term AEP dividend payout ratio range of 55-60%

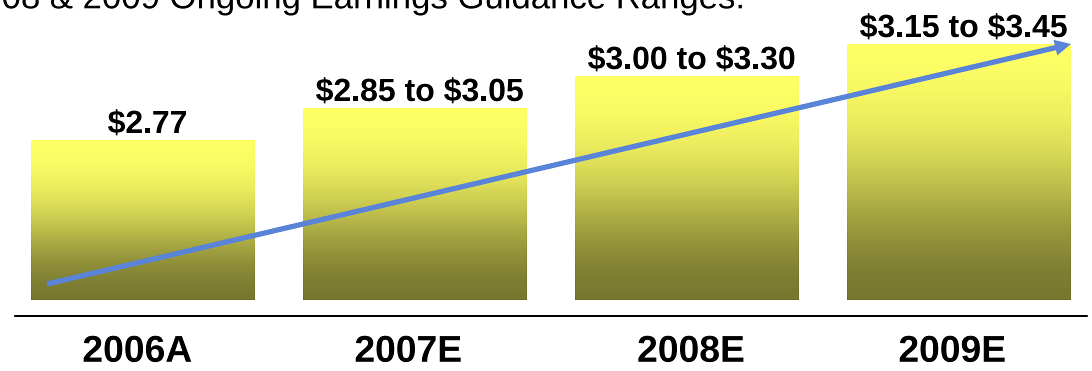
Continued Commitment To Our Core Utility Mission: Bring Reasonably Priced Electric Service To Our Customers, Thereby Strengthening Our Communities And Rewarding Our Investors

Framework For Long-Range Performance

- 2007, 2008 & 2009 Ongoing Earnings Guidance Ranges:



- EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in existing utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
  - Investment in new transmission opportunities
  - Seek rate recovery for new investments
  - Control costs & achieve timely rate relief
- Maintain credit ratings
  - BBB/Baa2/BBB

Future Earnings Growth Driven by Native Load Growth and Substantial Utility Investment Opportunity Focused On Regulated Operations

AEP ®

45

Summary of 5-7% Long-Range Growth Components

- ✓ Energy sales growth of 1.5%
- ✓ Rate base investment
  - Generation plant purchases & build
  - Transmission – interstate & intrastate
  - Distribution
  - Reliability
- ✓ Transmission company
- ✓ Commercial operations
- ✓ Regulatory strategy
  - Achieve timely returns
  - Seek cash returns on investment during construction
  - Create & secure innovative rate plans
    - Pursue post-2008 solution in Ohio
    - Expand use of trackers
    - Formula rates

AEP®

New Generation And Transmission Projects Largely Reflect Upside To The Long-Range Earnings Growth Target Of 5-7%

Utility Investment Drives Growth

Capital Investment Forecast (2007-2009)

($ in millions)	2007	2008	2009	Total (2007-09)
Environmental	$935	$521	$301	**$1,757**
New Generation - Purchase	$118	$0	$0	**$528***
New Generation - Build	$474	$485	$573	**$1,532**
Nuclear	$50	$57	$60	**$167**
Generation	$456	$417	$327	**$1,200**
Transmission	$496	$521	$583	**$1,600**
Distribution	$848	$915	$1,016	**$2,779**
Corporate	$165	$110	$114	**$389**
Total Capex	**$3,542**	**$3,026**	**$2,974**	**$9,952**

Add: Lawrenceburg Plant Purchase	$325
Add: Dresden	$85
2007 Including Lawrenceburg	**$3,952**

Note: Excludes AFUDC and previously announced CO_2 and transmission projects

*Includes Lawrenceburg and Dresden purchases in 2007

Growth Investment To Be Funded By Cash From Operations Via Rate Relief And Debt Issuances

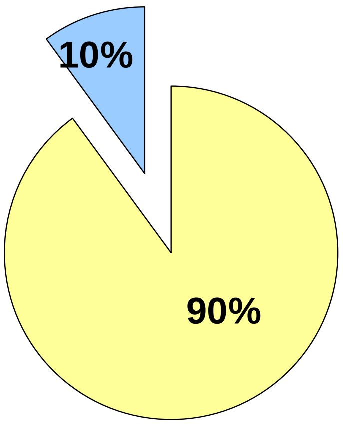
AT THE CONCLUSION OF OUR CURRENT ENVIRONMENTAL RETROFIT PROGRAM, OVER 47% OF OUR COAL-FIRED GENERATION FLEET WILL BE EQUIPPED WITH SCRs AND OVER 50% WILL BE SCRUBBED (FGD). AEP's TOTAL COAL FLEET CAPACITY = 24,710 MEGAWATTS*

*Excludes AEP's 44% ownership in OVEC (980 MWs of coal-fired capacity)

AEP®

Materials and Vendors – AEP's Advantage

Environmental Program Costs:
Active/Firm Costs to Remaining Estimated Costs



Actuals To Date & Firm Costs

Remaining Estimated Costs*

* Primarily labor and activated carbon injection systems

Typical Vendors Include:

- B&W/Alstom – FGD Spray Tower
- B&V/Chyioda – FGD Jet Bubbling Reactor
- Pullman Power – Stack Supplier
- Babcock Power – SCR
- Black & Veatch – Architect/Engineering
- Sargent & Lundy – Architect/Engineering

First-Mover Advantage:

- By locking in our environmental program costs in the early portion of this decade, AEP has a clear 'first-mover' advantage
- AEP capital costs for a scrubber average approximately $250/kW
- We have since seen a 30-60% increase in material costs and a 15% increase in labor rates
- An FGD system for a nominal 600MW plant in 2005 $ was approximately $225/kW and in 2007 $ is $320/kW

AEP Customers and Shareholders Benefit From First-mover Advantage Through Lower Contracted Pricing and Reduced Market Escalation Exposure

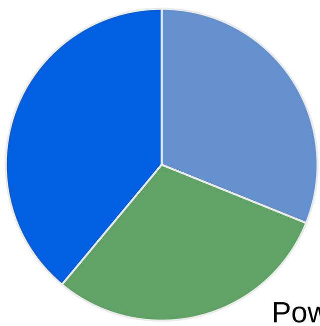
Coal Procurement – 2007 Projected

AEP purchases approx. 76 million tons of coal per year

Total AEP System



Coal Stats:

- 95% contracted for 2007
- Avg. delivered price ~ $35.10/ton in 2006
- Approximate 4-6% price increase in 2007 -- ($36.50 to $37.50/ton)
  - Addition of Mountaineer & Mitchell scrubbers allows for a greater mix of Northern Appalachian coal in 2007

AEP East

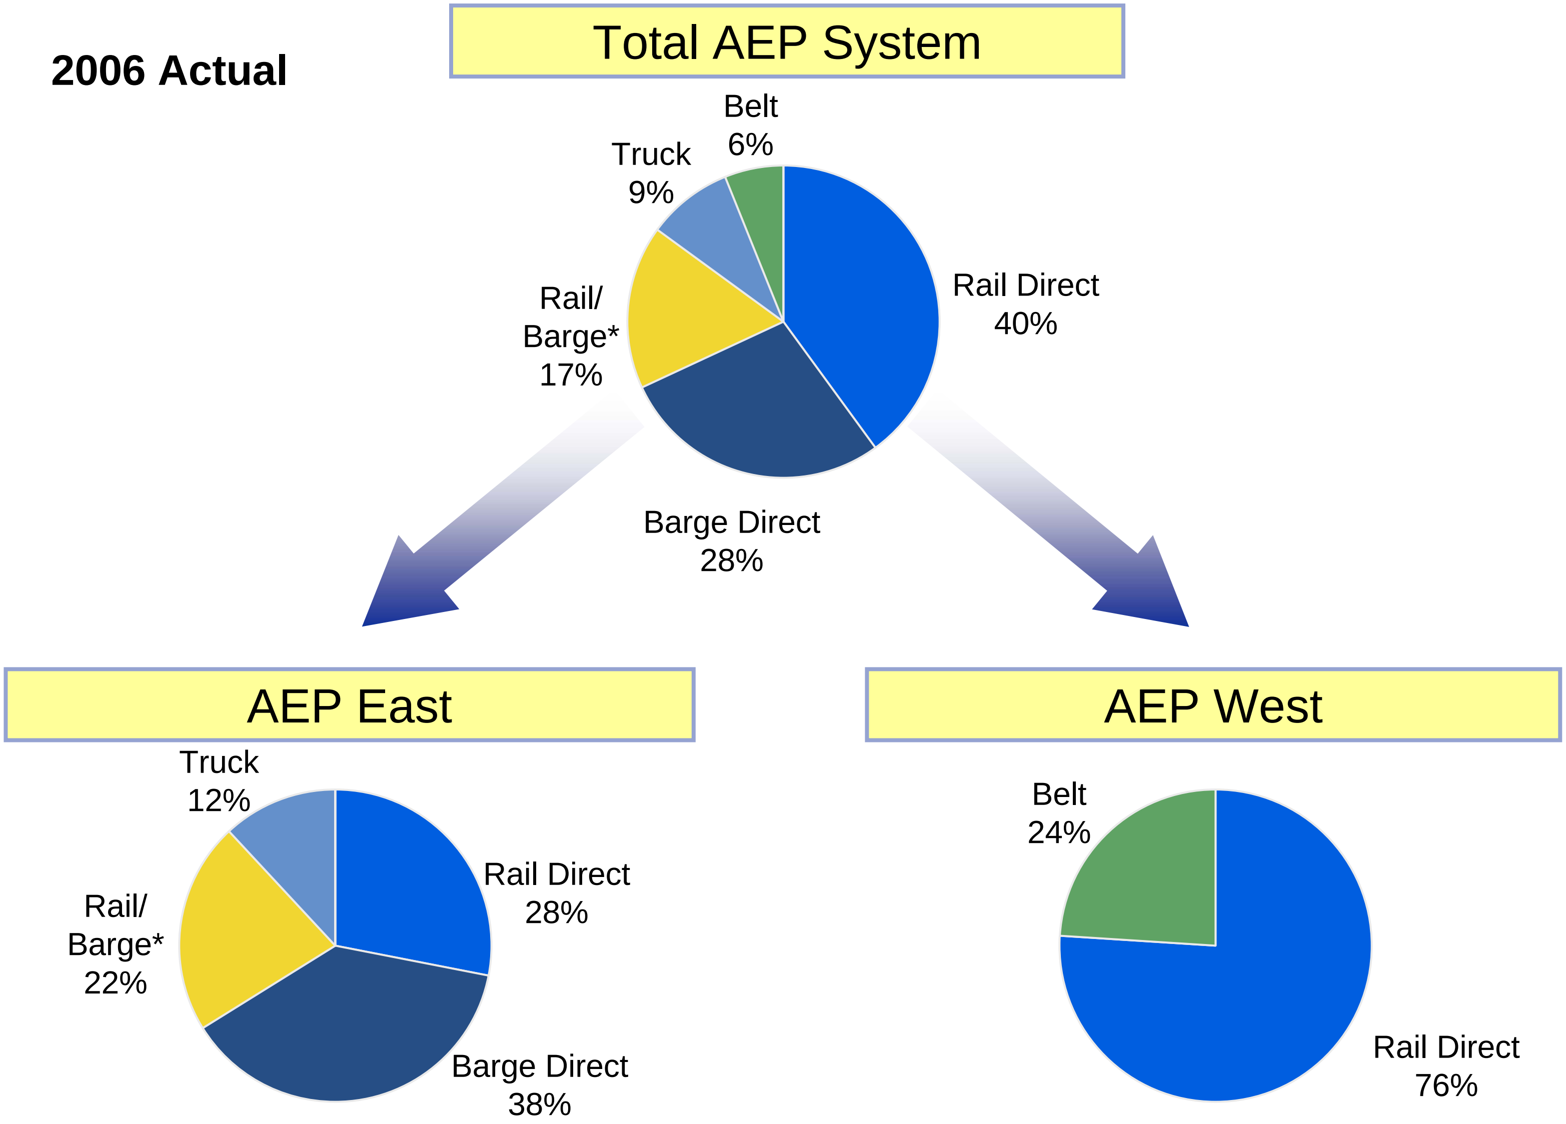
AEP®

Coal Delivery

2006 Actual



* Reflects coal delivered to AEP plants transported through a combination of rail and barge

Purchased Generation

Waterford

- 821 MW combined-cycle gas plant
- $220MM purchase price
- Columbus Southern Power completed purchase on September 28, 2005
- $268/kW

Lawrenceburg

- 1140 MW combined-cycle gas plant
- $325MM purchase price
- AEG completed purchase on May 16, 2007
- $295/kW

2,946 MW of gas-fired generation added since 2005

Darby

- 480 MW simple-cycle gas plant
- $102MM purchase price
- Columbus Southern Power completed purchase on April 25, 2007
- $227/kW

Ceredo

- 505 MW simple-cycle gas plant
- $100MM purchase price
- APCo completed purchase on December 15, 2005
- $198/kW

AEP®

Additional Gas-fired Generation Allows Us To Meet The Growing Needs Of Our Customers And Provides The Company With Greater Fuel Flexibility

New Generation Facilities

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
SWEPCo	Mattison	Arkansas	$130 MM	Gas	Simple-cycle	340 (1)	2007
PSO	Southwestern	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
AEG	Dresden	Ohio	$348-406 MM (2)	Gas	Combined-cycle	580	2010
SWEPCo	Stall	Louisiana	$300 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.3 B (3)	Coal	Ultra-supercritical	600 (3)	2011
APCo	Mountaineer	West Virginia	$2.23 B	Coal	IGCC	630	2012
CSP/OP	Great Bend	Ohio	Under Review (4)	Coal	IGCC	630	2017

(1) 150MW declared in commercial operation on July 12, 2007.
(2) We are currently developing contracts and estimates to complete the project. It is anticipated that the unit can be completed between $600 to $700 per kW using an "all-in" cost basis.
(3) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment.
(4) FEED (front-end engineering and design) study with GE/Bechtel is complete. Cost estimates are not yet filed with the PUCO due to the pending appeals to the Supreme Court of Ohio resulting from the PUCO's April 10, 2006 Opinion and Order.

AEP ®

AEP Is Meeting The Growing Electricity Needs Of Customers Through The Pursuit Of New Economic Generation Facilities

New Gas-Fired Generation Facilities

SWEPCo

- Mattison Plant (Tontitown, AR)
  - Certificate of Need filings (LA, AR, TX) were approved in all 3 states
  - Air permit received in February 2007
  - Units 3 and 4 (150 MW) online on July 12, 2007; Units 1 and 2 online by January 2008
- Stall Plant (Arsenal Hill, LA)
  - Certificate of Need filings (LA, AR, TX)
    - TX settled in Feb 2007
    - AR & LA decisions expected by year-end 2007
  - Air permit filed on April 27, 2007 – expecting approval by March 2008
  - Commercial operation date in 2010

PSO

Southwestern & Riverside Additions

- Air permit received March 22, 2007
- Commercial operation date of December 2007
- Regulatory Recovery
  - Settlement and final order in the Lawton Cogen case authorizes recovery of costs for Southwestern and Riverside peakers through a rider mechanism beginning as early as June 2008 based on the Commercial Operation date

2007-2009 Projected Capital Expenditures

	2007	2008	2009
Mattison	$56MM	$4MM	-
Stall	$82MM	$126MM	$64MM
Southwestern	$36MM	$3MM	-
Riverside	$35MM	$2MM	-

SWEPCo's and PSO's Short-Term and Intermediate Power Needs Will Be Met With Newly Constructed Gas-Fired Facilities

New Ultra-Supercritical Coal Facility

SWEPCo

Turk Plant (Fulton, AR)

- Certificate of Need approvals (LA, AR, TX) expected in the fourth quarter of 2007
- Air permit approval expected in Fall 2007
- Regulatory Recovery
  - Recovery of carrying cost requested in LA Certificate of Need filing – Hearings commenced September 11, 2007
  - AR and TX rate recovery will be addressed in separate filings
- Approximately 85-90% of costs are firm
  - EPC contract for balance of plant work awarded in May 2007
  - Contracts for turbine, boiler, and environmental control equipment awarded in 2006

2007-2009 Projected Capital Expenditures

	2007	2008	2009
Turk Plant	$211MM	$230MM	$243MM

AEP®

Ultra-Supercritical Coal-Fired Generation Is The Most Economical Choice For New Baseload Plants In AEP's Western Service Territory

Integrated Gasification Combined Cycle Facilities

Front-End Engineering & Design (FEED) results complete. Results were filed in June 2007. Cost estimates in target range of 20-30% premium over new ultra-supercritical coal-fired facilities of equal capacity.

West Virginia

- **Certificate of Public Convenience & Necessity filed Jan. 11, 2006**
  - APCo testimony filed June 18, 2007
  - Intervenor & Staff testimony due Nov. 19, 2007
  - Hearings Dec. 10-14, 2007
  - Statutory Deadline – Mar. 7, 2008
- **Air permit filed in Oct 2006**
  - A technical review of the application and development of a draft permit is ongoing by the WV Dept. of Environmental Protection
- **Regulatory Recovery**
  - West Virginia filing made in June 2007 – included request for cash recovery mechanism
  - Virginia filing made in July 2007 requesting cash recovery mechanism

Ohio

- **Certificate of Environmental Compatibility & Public Need filed March 24, 2006**
  - Ohio Power Siting Board certificate issued in April 2007
- **Air permit filed in Oct 2006**
- **Regulatory Recovery**
  - Phase 1 – June 2006 – PUCO approved tariff to recover pre-construction costs ($24MM) over 12-month period effective July 1, 2006
  - Phase 2 – filing likely to be withheld until resolution of Ohio Supreme Court action
  - Informational filing made on June 18, 2007 to inform PUCO of the West Virginia filing

AEP®

Construction Period Of 48-50 Months Following Receipt Of Major Regulatory And Permit Approvals

7

Investing In IGCC

Generation Technology Comparative Statistics

US2006$	Eastern Bituminous		
	USC	**IGCC**	**NGCC**
Nominal Capacity (MW)	618	629	530
Capacity Factor (%)	85%	85%	25%
Total Plant Cost (EPC + Owner's Cost) ($/kW)	$2,152	$2,717	$572
Production Cost ($/MWh)	$22	$22	$45
Cost of Electricity, without CO_2 Capture ($/MWh)	$72	$83	$87
Estimated Cost of Electricity, with 90% CO_2 Capture ($/MWh)	$118	$108	$135

Source: Results of AEP analysis based on EPRI studies.

- Total Plant Cost (Overnight EPC 2006$s) includes the cost to engineer, procure and construct plant and owner's direct costs.
- Assumes Northern Appalachian coal price of $2.25/mmBtu for USC and IGCC and natural gas price of $6.00/mmBtu for NGCC.
- Production cost includes fuel cost plus variable operations and maintenance (VOM) cost.
- Cost of electricity represents first year estimates only in 2006$ and are based on total plant cost plus generic cost estimates for AFUDC, emission credits, infrastructure, interconnections, transmission lines and upgrades.
- Cost of electricity with CO_2 capture provides pressurized CO_2 at the fence line and does not include transportation, storage and monitoring costs.

AEP®

IGCC Technology Is Strategic To Keeping Coal In The Money

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

AEP®

A Reliable & Reasonably-priced Electric Supply Is Necessary To Support The Economic Well-being Of The Areas We Serve

Highlights of Bingaman-Specter Proposal

"Low Carbon Economy Act of 2007"

Key Components:

- Start date for greenhouse-gas reductions is 2012
- Goals: 2006 levels by 2020; 1990 levels by 2030
- Includes a safety valve of $12 per metric ton, increasing at an annual rate of 5% above inflation
- Support for allowance allocations
- International action

AEP Endorses this Proposal Because It Sets Reasonable And Achievable Reduction Targets and Includes the AEP-IBEW Trade Proposal

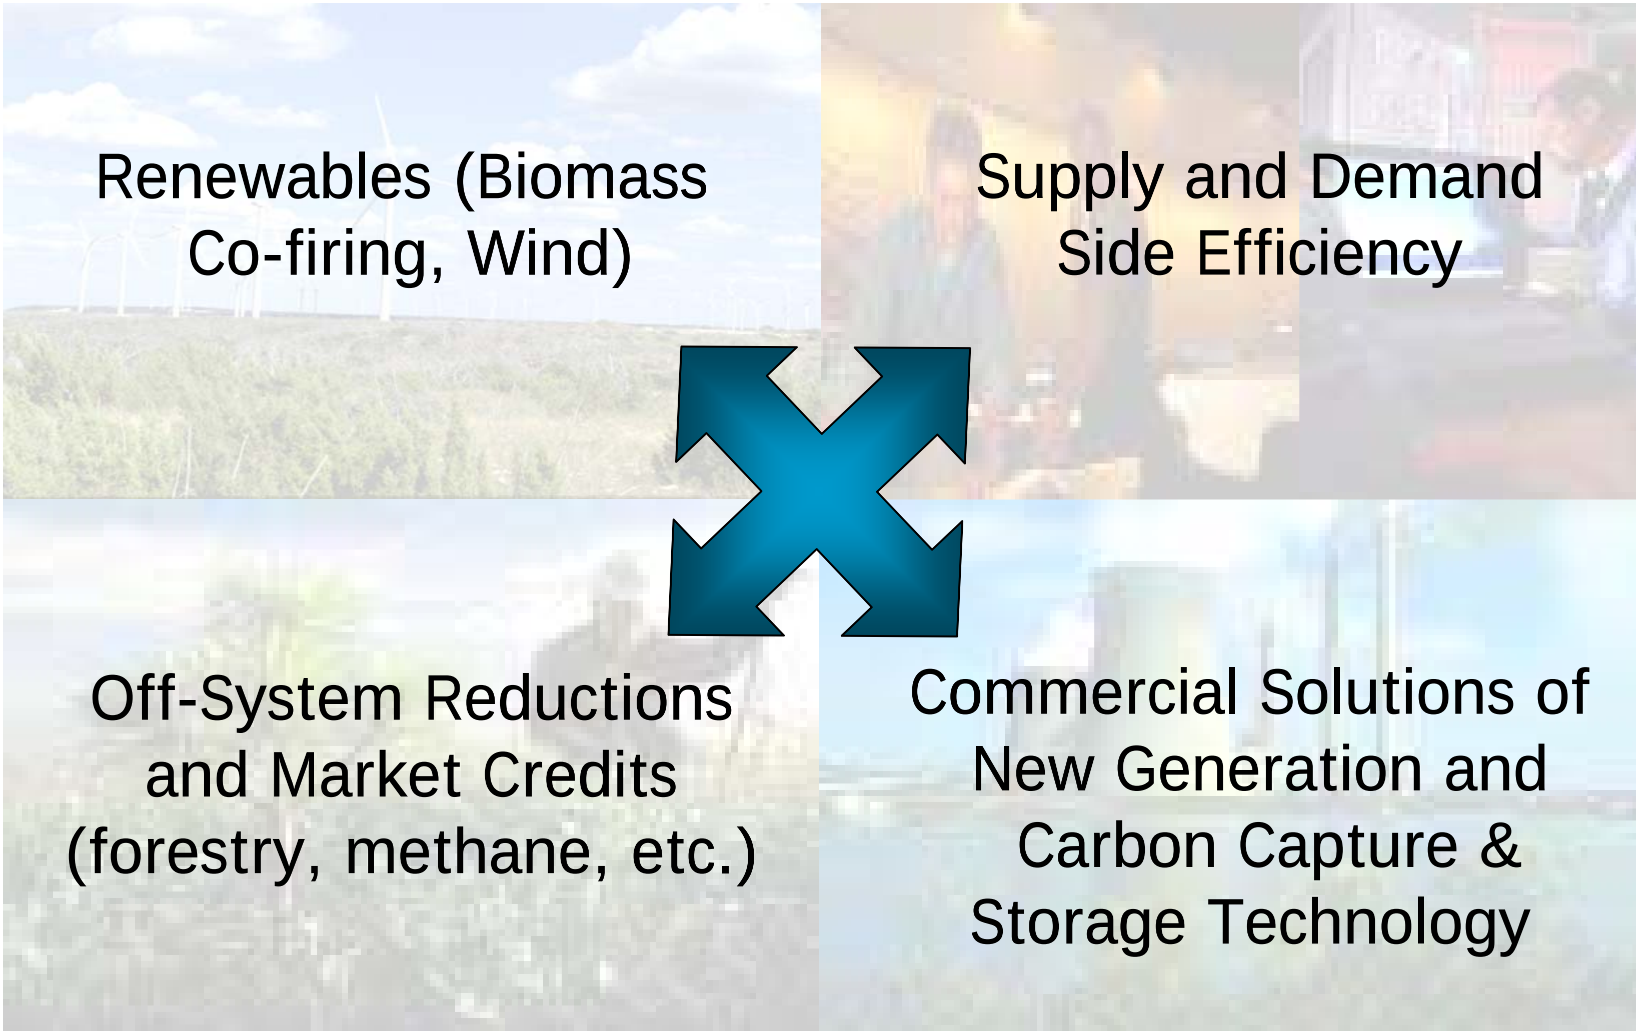
AEP®

AEP's Climate Strategy

- **Being proactive and engaged in the development of climate policy**
  - International Emissions Trading Association (IETA)
  - Electric Power Research Institute (EPRI)
  - Pew Center on Global Climate Change
  - e8
  - Global Roundtable on Climate Change
- **Investing in science/technology R&D**
  - FutureGen Alliance
  - US DOE research on carbon capture and sequestration at our Mountaineer Plant
  - EPRI – combustion technologies
  - MIT Energy Laboratory
  - B&W – Oxy-Coal
- **Taking voluntary, proactive action now, demonstrating voluntary programs can work and setting policy precedents thru CCX**
  - Chicago Climate Exchange (CCX)
  - EPA Climate Leaders
  - EPA SF-6 Emission Reduction Partnership for Electric Power Systems Program
  - Asia-Pacific Partnership
  - DOE 1605B- voluntary reporting of GHGs Program
  - Business Roundtable Climate Resolve
  - Numerous forestry activities
- **Evaluating longer term investment decisions such as new generation and carbon capture and storage (e.g., IGCC, Ultra-supercritical)**

AEP Must Be A Leader In Addressing Climate Change

AEP's Long-term GHG Reduction Portfolio



AEP Is Investing In A Portfolio Of GHG Reduction Alternatives

AEP®

AEP's Long-term CO_2 Reduction Commitment

Existing Programs

- Renewables
  - 800 MWs of Wind
  - 300 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

New Program Additions

- Incremental Reduction quantity: 5MM tons/yr
- Timing: To take effect/receive credits by 2011
- Methods
  - +1000 MWs of Wind PPAs – 2MM tons/yr
  - Domestic Offsets (methane) – 2MM tons/yr (e.g., livestock methane capture deal of 0.6MM tons/yr)
  - Forestry – Tripling annual investment to increase to 0.5MM tons/yr by 2015
  - Fleet Vehicle/Aviation Offsets – 0.2MM tons/yr
  - Additional actions to include DSM and end use energy efficiency, biomass and power plant efficiency – 0.2MM tons/yr

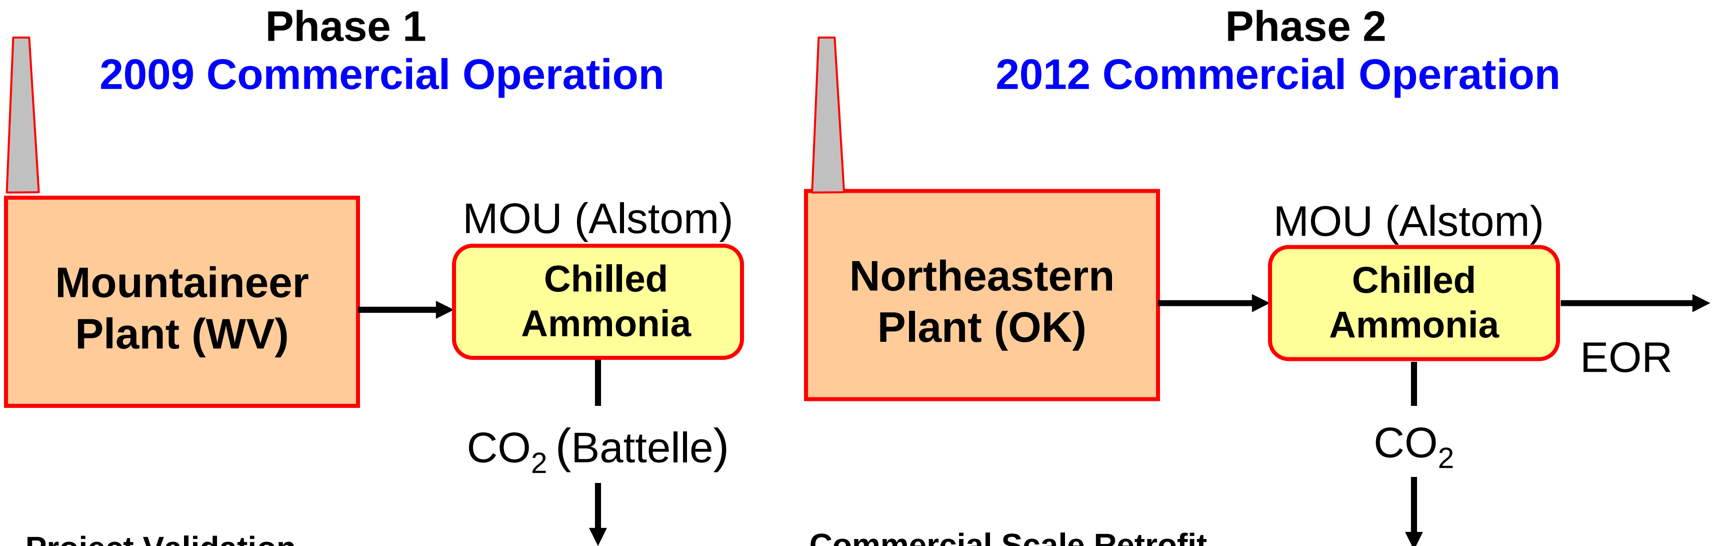
New Technology Additions

- New Technology Generation – IGCC and USC
- Commercial solutions for existing fleet
  - Chilled Ammonia
  - Oxy-Coal

AEP Is Committed To A 5mm Ton/Yr Reduction In Co_2 Emissions Which Offsets Approximately Half Of The Emissions Projected From New Generation Projects Previously Announced

AEP®

Chilled Ammonia Technology Program



Project Validation

- 20 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, under construction at WE Energies)
- 100,000 – 300,000 tonnes CO_2 per year
- In operation 1Q 2009
- Approximate total cost \$50 – \$80M
- Using Alstom “Chilled Ammonia” Technology
- Located at the AEP Mountaineer Plant in WV
- CO_2 for geologic storage

Commercial Scale Retrofit

- ~ 200 - 300 MW_e scale (megawatt electric)
- ~ 600 MW_t scale (megawatt thermal)
- ~1.5MM tonnes CO_2 per year
- In operation late 2011
- Approx. capital \$250 – \$300M (CO_2 capture & compression)
- Approx. O&M cost \$12M per year
- Energy penalty ~ 35 – 50 MW steam, 25 – 30 MW for CO_2 compression
- Retrofit Wet FGD Required: ~\$225 – \$300M
- Located at AEP’s Northeastern Plant Unit 3 or 4 in Oklahoma
- CO_2 for Enhanced Oil Recovery (EOR)

AEP®

Post-combustion Carbon Solution Provides Pure CO_2 Stream For Capture

Oxy-Coal CO_2 Capture & Storage Project

Pilot Scale Demonstration

- 10 MW_e scale
- Teamed with B&W at its Alliance Research Center and 16 other utilities
- Demo complete 3Q 2007
- AEP funding of $50k

Commercial Scale Retrofit

- Retrofit on existing AEP sub-critical unit (several available)
- 150 – 230 MW_e scale retrofit
- 4,000 – 5,000 tons CO_2 per day
- Team with B&W
- AEP funding of ~ $1.5M for feasibility study
- Feasibility study to be completed in late 2007/early 2008

Combustion Conversion Technology For Existing Coal Fleet – Longer Lead Time With Enhanced Viability And Long-term Potential

Transmission ~ $9-$15 Billion Opportunity

Creating a business model to manage capital requirements for enhanced returns with partners

Potential Opportunities

- ~ $3 Billion I-765™ Project in PJM
- ~ $2.6 Billion 765-kV Project in Michigan with ITC
- ~ $3 Billion Project filed with SPP
- ~ $1-7 Billion in ERCOT via Electric Transmission Texas, LLC (ETT)

1) ~$9-$15 billion investment opportunity not included in current capital guidance forecasts

2) Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

Assumptions

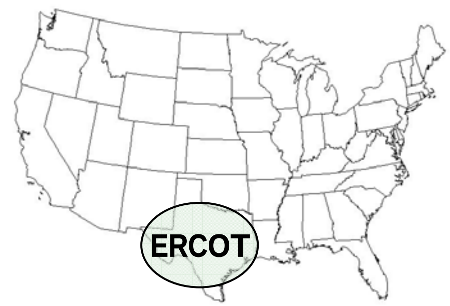
Estimated Investment Opportunity	$9 - $15 Billion
Ownership Structure w/ Partner	50% / 50%
Debt / Equity Ratio	50% debt / 50% equity
Return on Equity	11.00% - 13.00%
Potential EPS Impact (based on 396 MM shares)	$1.00+

Building the next US interstate system for enhanced reliability and market efficiency.

Electric Transmission Texas (ETT) Status Update

ETT: Delivering power for Texas' future

- *Transaction Structure*
  - 50/50 joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC.
  - ETT capital structure is 60% debt / 40% equity (PUCT requirement).
  - Executive manager provided by AEP.
  - Investment opportunities can be offered by either partner.



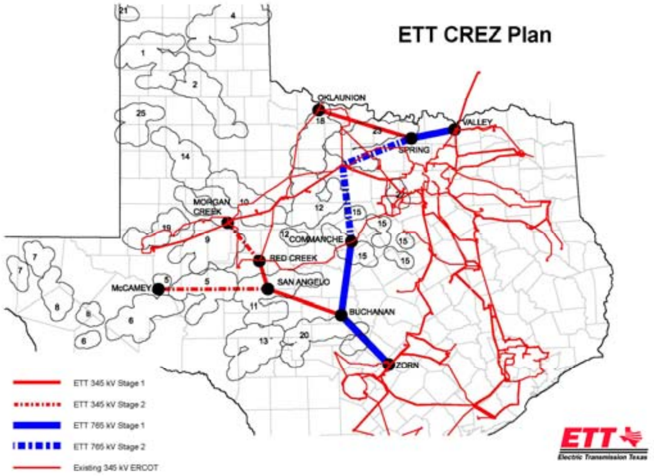
- *Transaction Status*
  - Participation Agreement signed Jan. 9, 2007.
  - Texas regulatory filing on Jan. 22, 2007.
    - Requested utility status, transfer of initial assets, establishment of TCOS transmission recovery mechanism.
    - Hearings conducted July 16-17, 2007, commission order expected in October 2007.
  - FERC approval for asset transfer received April 20, 2007.
  - Closing deadline of Nov. 1, 2007 can be extended by mutual agreement.

CREZ & Backbone Opportunities

Harnessing the Wind: Competitive Renewable Energy Zones offer unique opportunities to showcase ETT

- **ETT CREZ Overview**
  - Strengthen ERCOT grid to collect and deliver wind generation to load
  - Build transmission in the most cost effective manner, addressing:
    - Future generation development
    - Load growth pockets
    - Market efficiency (reduce congestion)
    - Competitive wholesale markets
    - Economic growth
  - $1.5 billion investment Phase 1 – 2012*
  - $1.5 billion investment Phase 2 – 2015*

  * Before ownership division.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

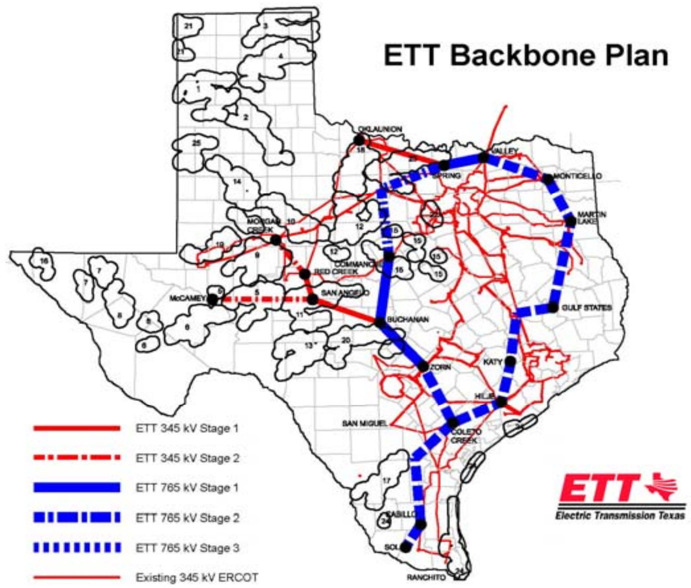
- **CREZ Approval Stages as outlined by the PUCT**
  - Stage 1 – Final order designating power regions – August 2007
  - Stage 2 – CREZ Transmission Optimization Study – January 2008
  - Stage 3 – PUCT selection of transmission construction designees – February 2008
  - Stage 4 – CCN development and submission – February 2009
  - Stage 5 – CCN approval – August 2009
  - Stage 6 – Construction (TBD)

AEP®

CREZ & Backbone Opportunities – cont'd

Harnessing the Wind: Competitive Renewable Energy Zones offer unique opportunities to showcase ETT

- **ETT ERCOT Backbone Proposal**
  - ETT proposal for ERCOT and PUCT to consider CREZ transmission in context of long-term vision for transmission system.
  - Current 5-year planning horizon results in higher ultimate costs, lower system efficiency.
  - Long-term 15-20 year perspective provides better plan, supports development of high voltage backbone at 765-kV.
  - $4.2 billion investment (long-term backbone).



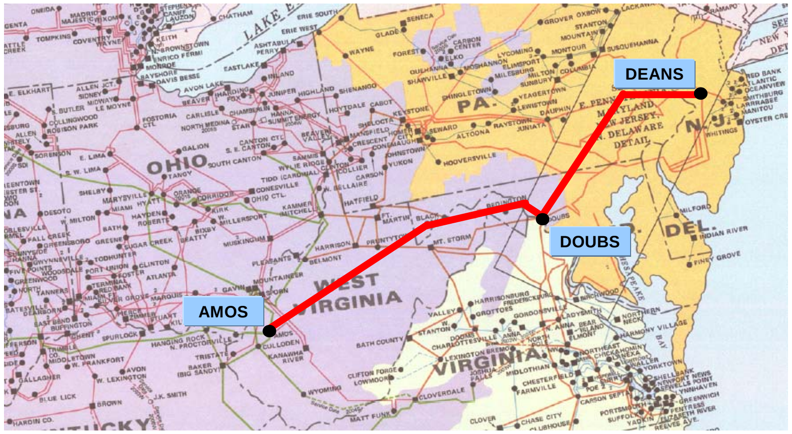
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP®

PJM I-765™ Original Proposal

Execution in Action

- *Overview*
  - $3 billion investment (before ownership division)
  - 550 line miles
  - 5000MW improved transfer capability
  - To be completed in 2 phases (1st phase PJM approved)
  - FERC declaratory order approved July 2006
- *Benefits*
  - Improves eastern grid reliability
  - Improves market efficiency with reduced congestion
  - Reduces consumer cost $1B (est.) annually in the east
  - Reduces network line losses by 280 MW at peak
  - Provides AEP rate base opportunity for transmission investment with ROE upside & other FERC incentives
  - Provides off-system sales and siting opportunity for AEP and other low-cost mid-western generation

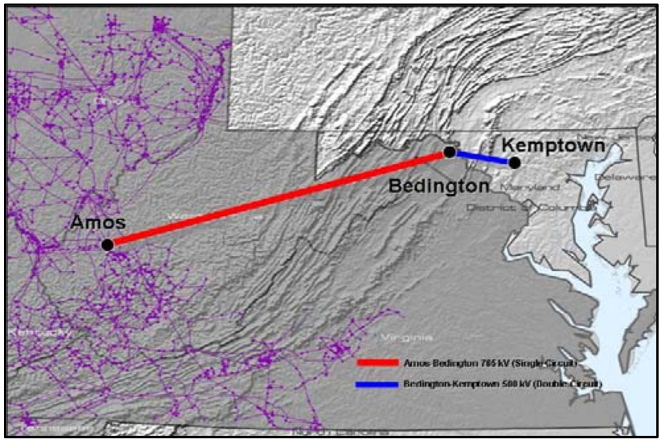


The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

PATH

Execution in Action

- ### *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture (Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries) to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
- ### *Funding Plans/Transaction Structure*
  - AEP and Allegheny share control of Amos – Bedington line and contribute equally to this portion of the project
  - AEP's investment will be held in the AEP Transmission Holding Company LLC subsidiary
  - I-765™ Interstate Project included in the DOE's draft National Interest Electric Transmission Corridor (draft) issued in April 2007
- ### *Key Regulatory Activity Completed*
  - PJM approved plan June 2007
- ### *Key Next Steps*
  - PATH to Complete FERC Filing – Fall 2007
    - *Pursuing new project FERC incentives: cash return on CWIP, higher ROE, recovery of pre-commercial operation costs and recovery of abandonment costs.*
  - Siting Approval – Fall 2009
  - Targeted Completion – 2012



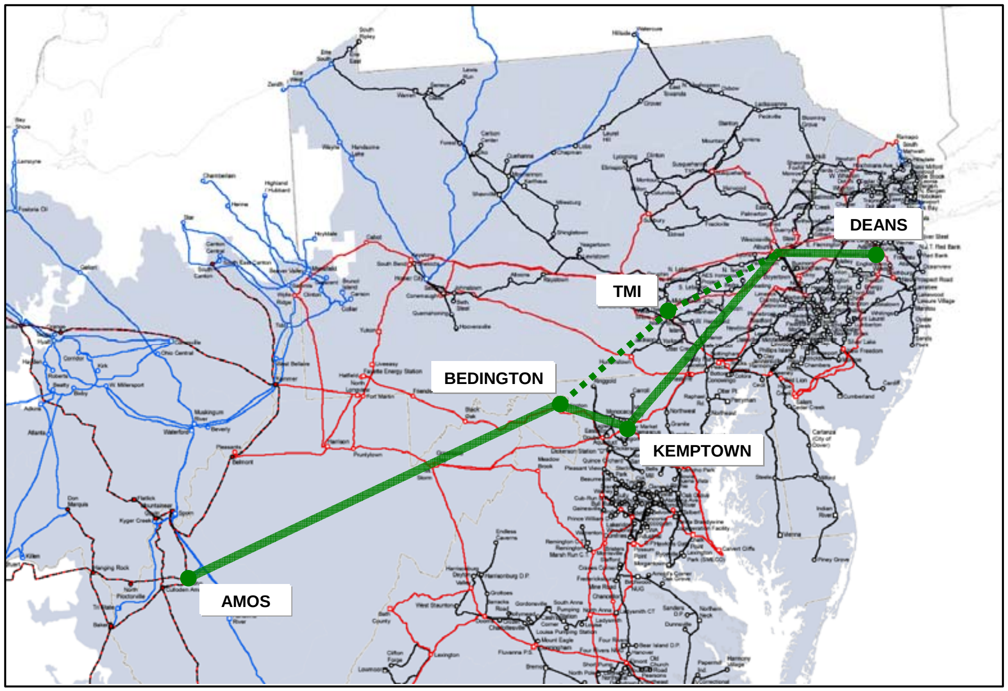
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP®

PJM I-765™

Second phase of original AEP 550-mile I-765 proposal

- Approximately 250 miles from West Virginia-Maryland border to Public Service Electric & Gas Deans Station in New Jersey.
- Currently under consideration by PJM as part of Regional Transmission Expansion Plan (RTEP).
- Based on PJM RTEP approval, AEP will seek a suitable business partner (JV partner) to complete the second leg of the original proposal.



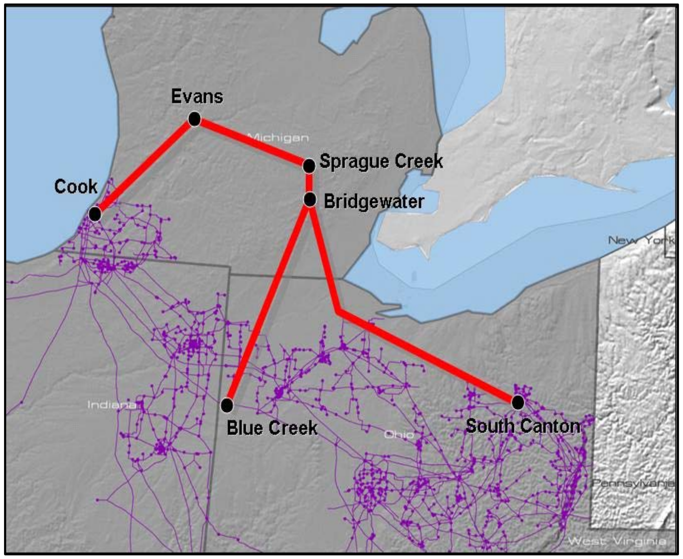
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 611 of 9556

Michigan I-765™

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - Agreement with ITC Transmission for 765-kV study
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.6 billion investment (before ownership division)
  - PJM/MISO notified of results of technical study- Summer 2007
  - Public release of study- September 2007
  - AEP and ITC are in discussions to form a Joint Venture
- *Benefits*
  - Up to 5000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- *Next Steps*
  - JV formation – 2007
  - MISO and PJM review/approval – Winter 2008
  - FERC Filing - Fall 2008
  - Siting approval – Fall 2010
  - Estimated completion – Fall 2015



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

SPP I-765™

Significant opportunity for 765-kV transmission in SPP

- *Overview*
  - July 2006 AEP submitted conceptual project for six 765-kV lines
  - Proposed 765-kV Kansas / Oklahoma / Arkansas connecting to MISO/PJM
  - 610 miles from Kansas to Arkansas
  - $3.0 billion investment (before ownership division)
  - Proposed 2012-2017 construction period
  - SPP proposes 765-kV in Texas / Oklahoma / Kansas / Missouri connecting to MISO/PJM
  - SPP also proposes 500-kV in Texas / Oklahoma / Arkansas / Missouri
- *Benefits*
  - 4000 MW improved transfer capability
- *Next Steps*

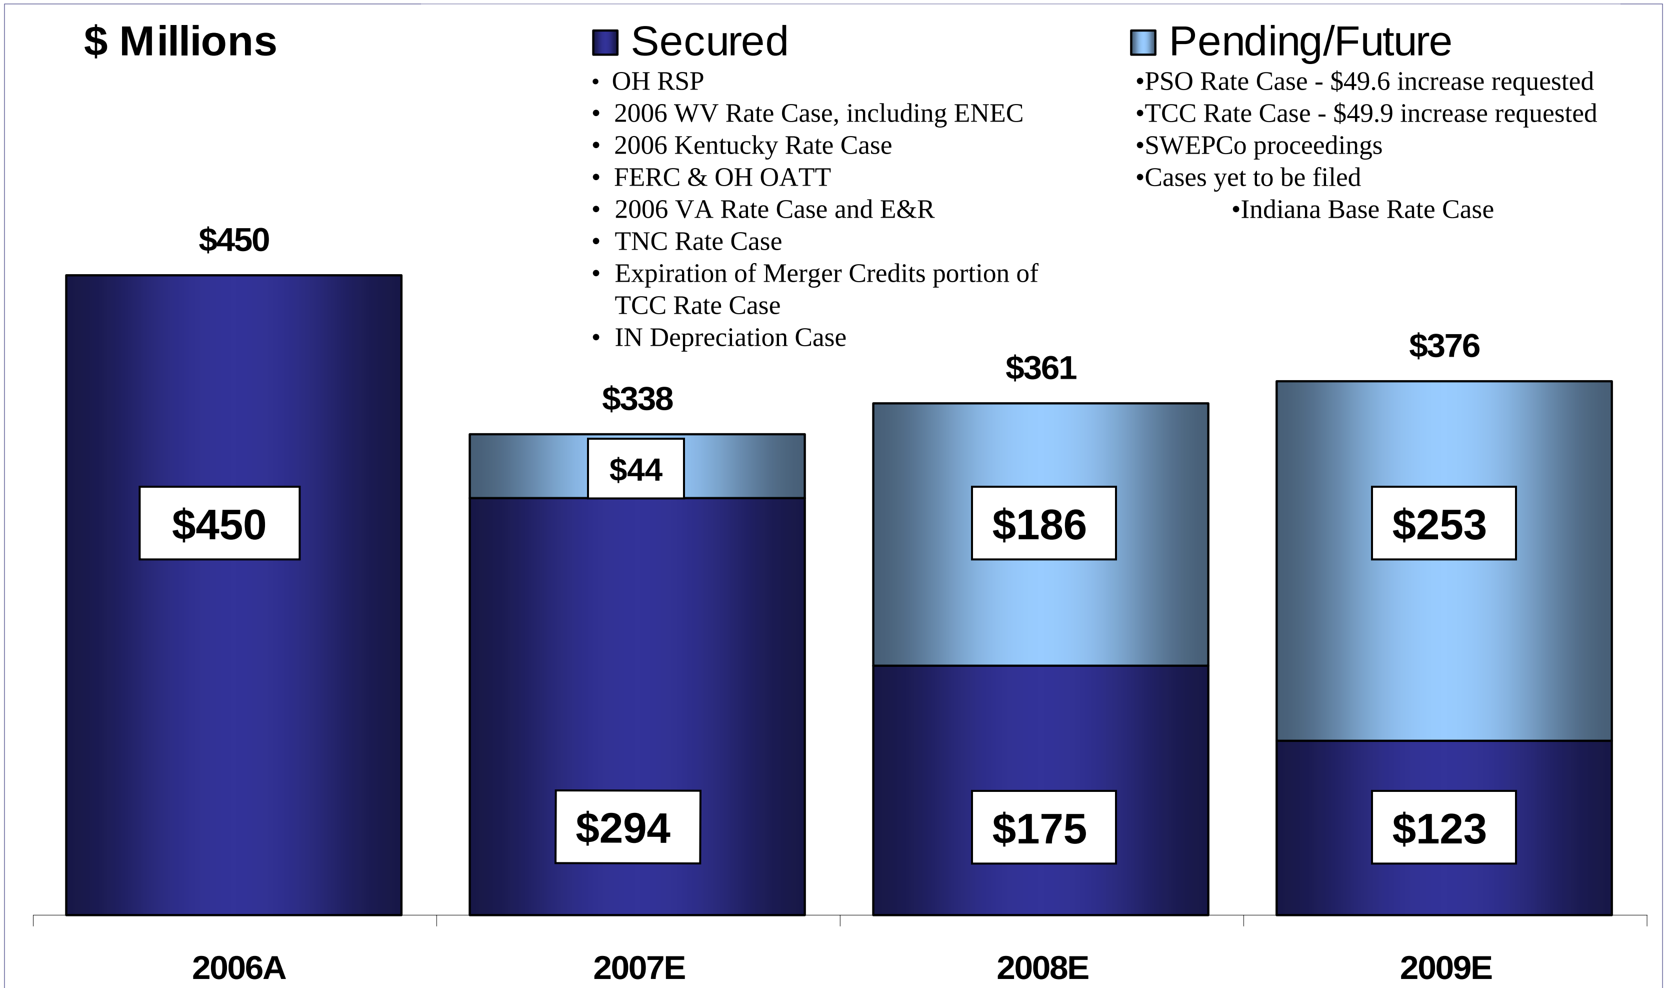
Incremental Rate Relief Composition



Rate Relief Is A Critical Element To AEP's Financial Success

2007 Regulatory Activity Completed

Appalachian Power – Virginia Base Rate Case

Final order approved on May 15, 2007

- ✓ Results in $24 Million annual increase in base rates
- ✓ 10.0% approved ROE

Texas North Base Rate Case

Final settlement order approved on May 24, 2007

- ✓ Results in $11.7 million increase in pre-tax earnings ($13.7 million increase in revenues offset by $2 million increase in depreciation expense)
- ✓ No stipulated ROE in the settlement. For AFUDC purposes, Texas North will utilize the ROE that comes out of the Texas Central rate case.

Appalachian Power – West Virginia Expanded Net Energy Cost (ENEC) Filing

Final settlement order approved on June 22, 2007

- ✓ Results in $85.5 million net increase in revenues effective July 1, 2007
  - ✓ $54.8 million covers increased costs related to coal and purchased power
  - ✓ $28.5 million covers environmental construction costs, primarily related to installation of scrubbers
  - ✓ Remainder ($2.2 million) recovers first year costs of rehabilitating four small electric utilities acquired as of July 1

Indiana Michigan Power – Indiana Depreciation Study

Interim settlement order approved on June 13, 2007

- ✓ Allowed a change in depreciation rates effective July 1, 2007, resulting in a pretax earnings increase of approximately $69 million per year
- ✓ Stipulated a $5 million credit to customers in the next fuel adjustment clause proceeding
- ✓ Required I&M to file a rate petition on or before July 1. Petition was filed on June 19.

Regulatory Activity Underway

AEP Texas Central Company General Rate Case

On November 9, 2006, TCC & TNC filed applications with the PUCT to raise base rates they charge to Retail Electric Providers (REP) serving end-use electricity customers in their service territories. On April 3, 2007, TCC and TNC submitted revised rate increase requests of $69.9MM and $22MM, respectively. Requested increases include the expiration of merger-related billing credits that have been in place since 2000, totaling $20MM and $6.2MM for TCC and TNC, respectively. (TCC Docket #33309, TNC Docket #33310). TNC reached settlement on May 4, 2007 for a $13.7MM increase in revenues and a $2MM increase in depreciation, resulting in an annual increase of $11.7MM. The settlement was approved by the PUCT on May 24, 2007. The expiration of the merger credits for TCC was approved by the PUCT in June 2007.

Procedural Schedule

Regulatory Activity Underway

PSO General Rate Case

On November 21, 2006, Public Service Oklahoma filed an application with the Oklahoma Corporation Commission to increase base rates by $49.6 million to recovery investments already made and costs incurred. The request represents a 4% overall increase (including fuel). The filing also includes a proposal to adopt an annually adjusted rate mechanism, which includes a return on CWIP. The formula rate would adjust rates, up or down, if PSO earns above or below an approved bandwidth around the authorized ROE. (Case #200600285)

Pro-forma Capital Structure – Company Position (Test Year ended 6/30/06)

	% of Capitalization	Cost Rate	Weighted Cost
Long-Term Debt	53.55%	6.32%	3.39%
Preferred Stock	0.43%	4.02%	0.02%
Common Equity	46.02%	11.75%	5.41%
Total	100%		8.82%

June 13, 2007	Oral closing arguments
September 2007	Final order expected

Regulatory Activity Underway

AEP Ohio Application For 4% Provision On Generation Rate

- On Jan. 23, 2007, CSP and OP filed an application at the PUCO to recover 2007 costs associated with additional generation-related expenditures the companies are encountering related to environmental, security and other new generation-related costs pursuant to the RSP.
- CSP and OP are requesting to implement the provision to recover $24.5MM and $8.2MM, respectively, from May 2007 through December 2007.
- Staff & Intervenor testimony filed May 11, 2007; Staff recommended a $15MM increase at CSP and a $3.7MM increase at OP; OCC recommended a $19.9MM increase for CSP and a $3.7MM increase for OP.
- Hearings were held in May and June and we expect an order in September or October 2007.
- Because there was no specific action by the PUCO within the required time frame, we were allowed to implement these increases, subject to refund, in May 2007.

I&M Indiana Rate Petition

- On June 19, 2007, I&M filed a petition with the Indiana Utility Regulatory Commission (IURC) for authority to increase its rates and charges for electric utility service and to establish and implement rate adjustment mechanisms to track certain matters.
- Requested trackers relate to reliability enhancement, demand-side management/energy efficiency programs, off-system sales margins, PJM, environmental compliance and capacity equalization settlement.
- Parties have agreed to a historic test year ended September 30, 2007, with a rate case filing date of January 31, 2008. This schedule has been approved by the IURC.

Regulatory Activity Underway

Electric Transmission Texas (ETT) Rate Filing

- Jan. 22, 2007 – ETT filed with the Public Utility Commission of Texas for approval to operate as an electric transmission utility in Texas and to establish initial rates for ETT.
  - Requested capital structure of 60% debt / 40% equity; requested ROE of 11.25%.
  - Intervenor testimony filed June 8, 2007; Staff testimony filed June 18, 2007; Staff recommended a 10.50% ROE – 10.0% with a 50 bps addition for start-up risk; Hearings were held July 16 and 17, 2007.
  - An order is expected in the 4th quarter of 2007 and operations are expected to commence in the 2nd half of 2007. Upon receipt of approvals, AEP and MidAmerican will each own a 50% interest in the joint venture.

Seams Elimination Cost Adjustment Revenues

- August 2006 – ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
  - Up to $96MM of SECA revenues could be disallowed, net of unused provisions.
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both.
- Exceptions to initial decision filed Sept. 11, 2006; Replies to exceptions filed Oct. 11, 2006; Order expected by the Commission in 2007.

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission serves over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1st.
- The current revenue requirement is $88.7MM and the new total revenue requirement requested is $161MM.
- We requested an effective date of September 1, 2007 for the revised tariff , which the FERC suspended for an additional five months, which extends the effective date to February 1, 2008.

AEP®

Regulatory Activity Underway

APCo Mountaineer IGCC Filing

West Virginia

- Testimony filed with the West Virginia Public Service Commission on June 18, 2007 in support of APCo's application for a Certificate of Public Convenience and Necessity to construct a 600MW IGCC plant in WV at a cost of approximately $2.23 billion.
  - Testimony includes a proposal for the Commission to approve a cost recovery mechanism through the existing Expanded Net Energy Cost (ENEC) mechanism. The filing is not a formal proposal to adjust rates.
  - Actual requests for increased rates will be included in future filings, once construction of the plant has commenced and actual Construction Work In Progress data is known.
- Public hearings are scheduled for December 10-14, 2007 with an order on or before March 7, 2008.

Virginia

- Testimony filed with the Virginia State Corporation Commission on July 16, 2007 seeking a prudence determination and approval to recover, beginning in 2009, Virginia's share of the carrying costs associated with the proposed plant.
- Public hearings are scheduled for February 12, 2007.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- Oral arguments regarding this matter are scheduled on the Ohio Supreme Court's agenda for October 9, 2007.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.

AEP®

Regulatory Activity Underway

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- Public hearings commenced August 20, 2007. Decision expected by year end.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to Purchase, Operate, Own and Install Peaking, Intermediate and Baseload Generating Facilities. Peaking and intermediate facilities have been addressed. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- Public hearings commenced September 11, 2007. Decision expected by year end.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- Public hearings are scheduled for October 17, 2007. Decision expected by year end.

Commitment To Credit Quality

- Maintain adequate liquidity
- Target 60% consolidated AEP debt/cap ratio
- Target long term AEP dividend payout ratio range of 55-60%

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

Transcription Investment Opportunities

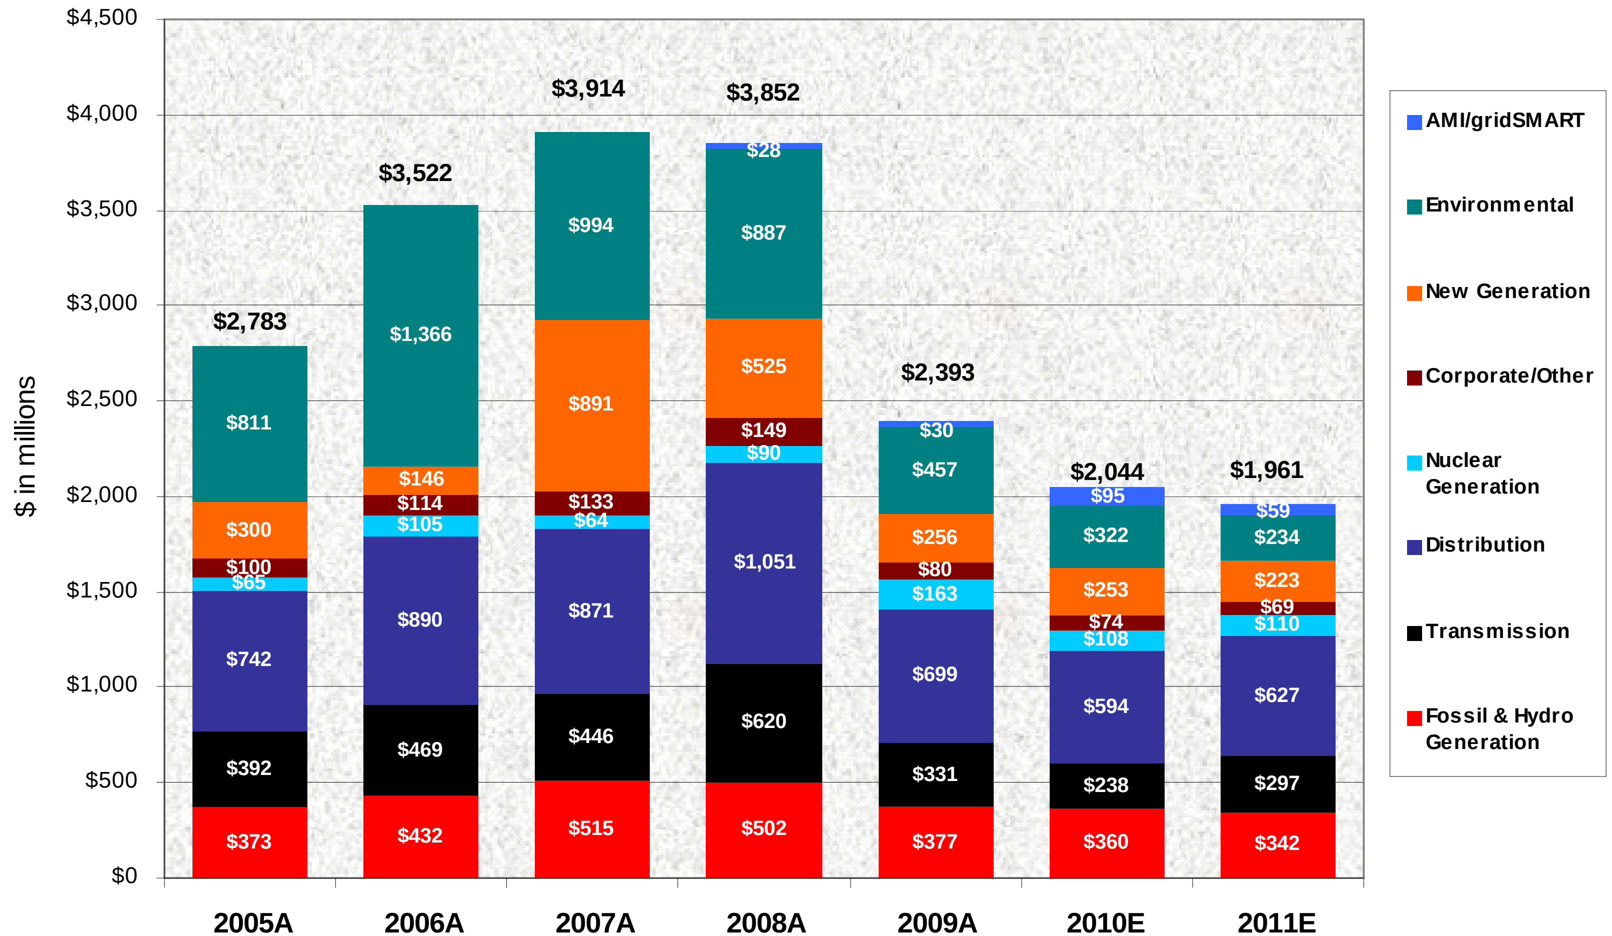
- **Electric Transmission Texas (ETT): Projects in Texas ERCOT jurisdiction**
  - Framework in Texas allows for more expeditious siting and recovery
  - In service assets $0.4 billion
  - CREZ opportunity $1.1 billion est. in service 2010-2013
  - Other ETT projects $1.6 billion est. in service 2010-2017

- **AEP Transmission Company (Transco): Within our existing footprint**
  - Develop new AEP-only projects within AEP's footprint
  - Reduce regulatory lag through FERC formula rates adjusted annually

- **Joint Ventures (JVs): Outside of our footprint, with Electric Transmission America (ETA) or others**
  - Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
  - Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2015
  - Robust pipeline of projects up to $15B

765-kV Tower

Utility Operations Capital Expenditures



Non-Utility Operations Capital (not included above)

$ in millions	2008A	2009A	2010E	2011E

Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 637 of 9556

Dividend Overview

- We paid our 401st consecutive quarterly dividend to shareholders on September 10, 2010

- Annual Dividend - $1.68/share
  - Declared in January, April, July and October
  - Paid in March, June, September and December

- Attractive yield of 4.7% as of September 22, 2010

- Conservative target dividend payout ratio of 50 – 60%

AEP Highlights

- Premier Utility Platform
- Traditional and Effective Regulatory Relationships
- Energy Policy Initiatives Create Technology Deployment and Investment Opportunity
- Strong Value and Total Return Proposition

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

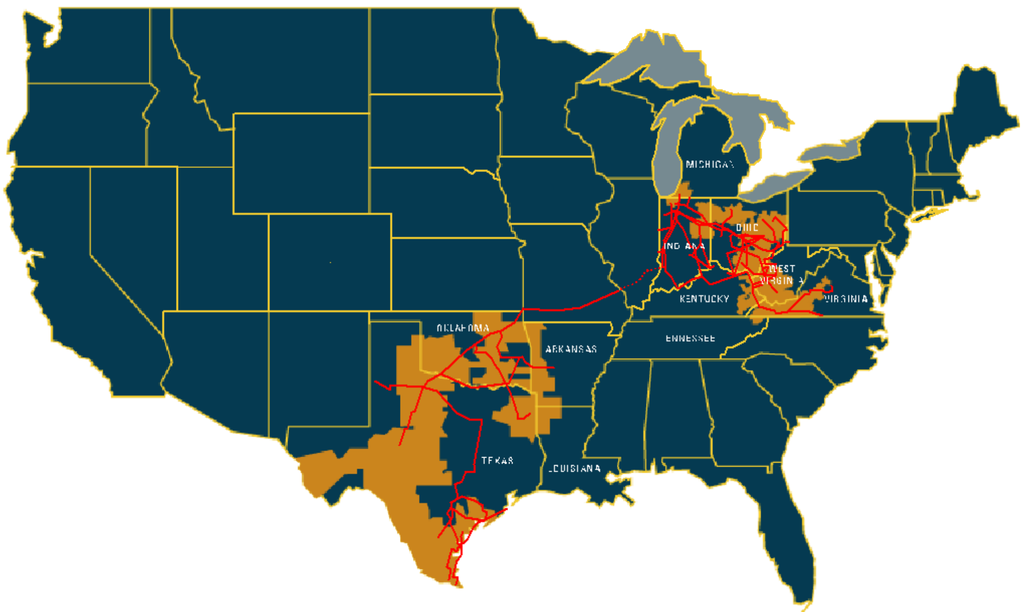
Asset Portfolio

Strength & Scale in Assets & Operations



Generation	35,500 MW capacity
Transmission	38,953 miles
Distribution	200,930 miles
Customers	5 million

FUTURE EARNINGS GROWTH DRIVEN BY NATIVE LOAD GROWTH & SUBSTANTIAL UTILITY INVESTMENT OPPORTUNITY

Generation Fleet Composition

- ➢ 35,500 MW Domestic Capacity
- ➢ 85% System Availability Factor YE 2004
- ➢ 62% System Capacity Factor YE 2004

Capacity by Fuel Mix

	Baseload	Load-Following	Peaking
PJM	24,226	0	586
ERCOT	1,089	0	0
SPP	4,828	3,516	188
Total*	**30,143**	**3,516**	**774**

* Figures do not include mothballed or decommissioned units (1,015 MW of capacity). Also excludes the Waterford and Ceredo generating facilities.

GENERATION FLEET IS SUBSTANTIAL AND LOW COST

Environmental Investment

AEP's Environmental Compliance Strategy

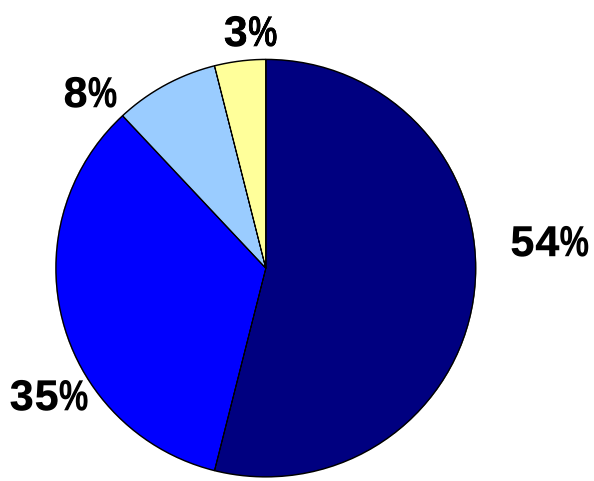
NOx and SO_2 emission reductions are part of AEP's on-going strategy to comply with the Clean Air Act, Title IV regulations, the Clean Air Interstate Rule (CAIR) and the Clean Air Mercury Rule (CAMR).

- **Much of this investment will be for:**
  - **Selective catalytic reduction (SCR) systems to reduce nitrogen oxide emissions by 90%.**
  - **Flue gas desulfurization (FGD) systems (scrubbers) to reduce sulfur dioxide emissions by 98+%.**
  - **SCR and FGD systems together offer co-benefit of mercury capture.**
  - **Sale of gypsum (by-product) avoids future landfill costs.**
  - **Provides fuel flexibility.**

Represents the best and least-cost compliance path to improve environmental performance on a fleet basis, while continuing to provide a reliable supply of power to customers at a reasonable price and a solid return for investors.

$4.1 Billion Environmental Investment: Spending by Company

Projected Environmental Investment Allocation



- Ohio Power & CSP (OH)
- Appalachian Power Co. (VA/WV)
- Kentucky Power Co. (KY)
- Other

Funding the Environmental Investments

- **Ohio**: 54% ($2.2 billion)
  - Approved annual generation increases 2006-2008
    - CSP – 3% annually
    - OP – 7% annually
- **Virginia/West Virginia**: 35% ($1.4 billion)
  - VA: Annual rate relief through Environmental & Reliability cost recovery mechanism; Two rate case opportunities through 2010
  - WV: General rate increase filed 8/26/05 including environmental, reliability & fuel recovery
- **Kentucky**: 8% ($319 million)
  - Automatic surcharge mechanism

Environmental Investment: $4.1 Billion Through 2010

Investing in IGCC

Investing in IGCC

Ohio IGCC Procedural Schedule

- **August 16, 2005: Evidentiary Hearings Concluded**
- **September 20, 2005: Initial Briefs Due**
- **October 11, 2005: Reply Briefs Due**

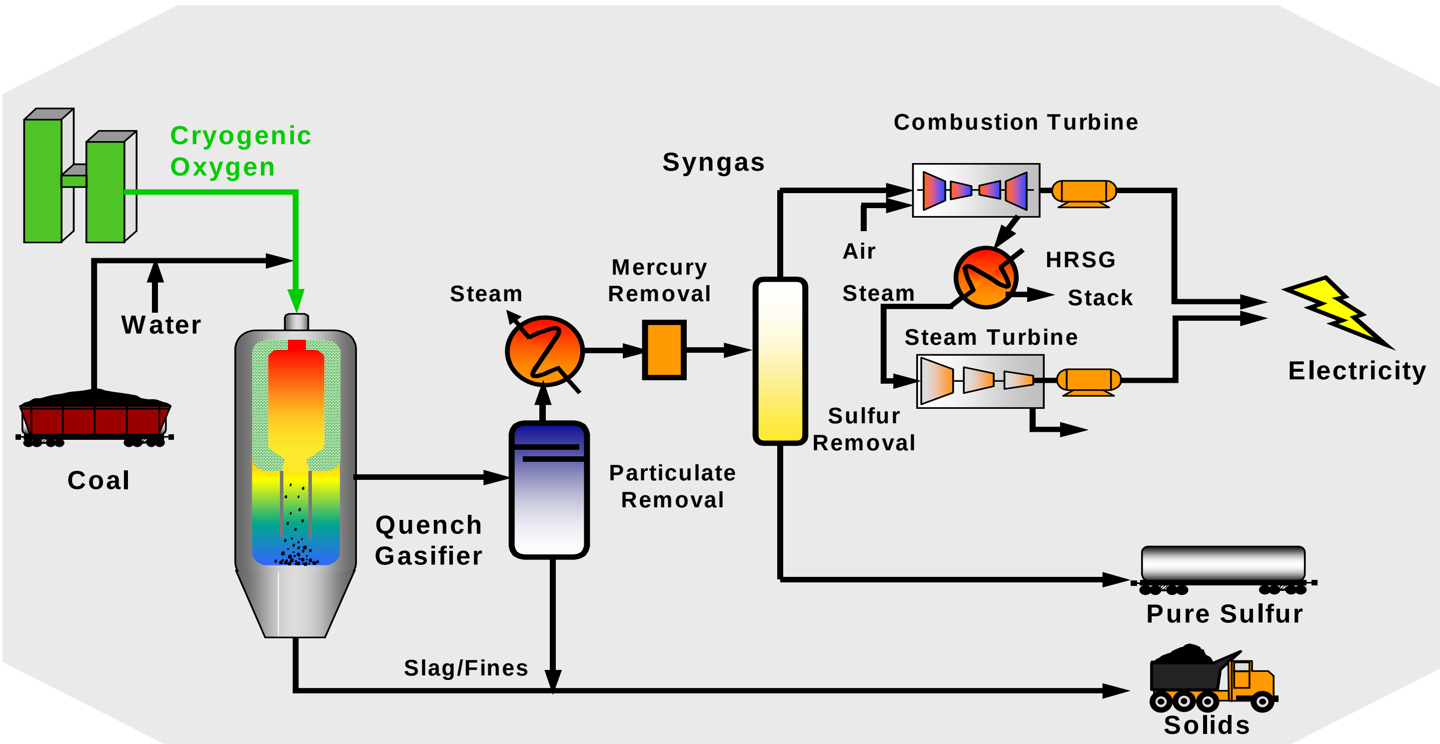
Generation Technology Comparative Stats

	PC	IGCC	NGCC
Nominal Capacity (MW)	600	600	530
Heat Rate (BTU/kWh)	8700	8600	7200
EPC cost* ($/kW)	1290	1350	440
Total Plant cost** ($/kW)	1490	1610	475
Variable Production cost*** ($/MWh)	15	14	38
All-In Cost of Electricity (without CO2 Capture) ($/MWh)	47	50	57
Estimated Cost of Electricity (with CO2 Capture) ($/MWh)	76	70	91

Source: Electric Power Research Institute

* EPC includes the cost to engineer, procure and construct plant.
** Total plant cost include land, overheads, AFUDC, etc.
*** Assumes Northern App Coal @ $36/ton, no emission credits and $5.00 gas

Looking to the Future - IGCC



162110 - GJS/CE-01/1-23-02

AEP has announced its intention to construct a commercial-scale Integrated Gasification Combined Cycle (IGCC) Plant by the end of the decade.

Site Selection Considerations

- Brownfield site vs. Greenfield site
- Sufficient Space
  - Flat area with adequate construction access
  - 600 acres
- Fuel delivery options
  - Rail/barge/truck
  - Up to 4 million tons/year of coal
  - Access to water
- Transmission Line Costs
  - Distance from high-voltage lines
  - Costs for grid interconnects and stability impacts

PJM EVALUATION REQUESTED FOR 3 POTENTIAL SITES

IGCC Permitting Issues

- Air – to evaluate best available control technology (BACT)
- Wastewater – to understand wastewater streams
- US COE (Corp of Engineers) – to obtain permits for construction of river facilities
- NEPA Process – (National Environmental Policy Act)– Environmental site studies addressing wetlands, endangered species, historical artifacts

PERMIT PROCESS WILL TAKE 1 - 2 YEARS

Next Steps

2005

- Secure cost recovery plan
- Finalize site selection
- Negotiate with suppliers

- 2005—2007: Obtain permits and finalize engineering and procurement

- 2008—2009: Construct and start-up plant

AEP WILL PIONEER CONSTRUCTION OF LARGEST IGCC PLANT IN THE WORLD

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M's Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance, resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and the expected legal separation and transition to market for generation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives, evolving public perception of the risks associated with fuels used before, during and after the generation of electricity, including nuclear fuel and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events.

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 664 of 9556

TCC Remand Case – PUCT Docket No. 39722

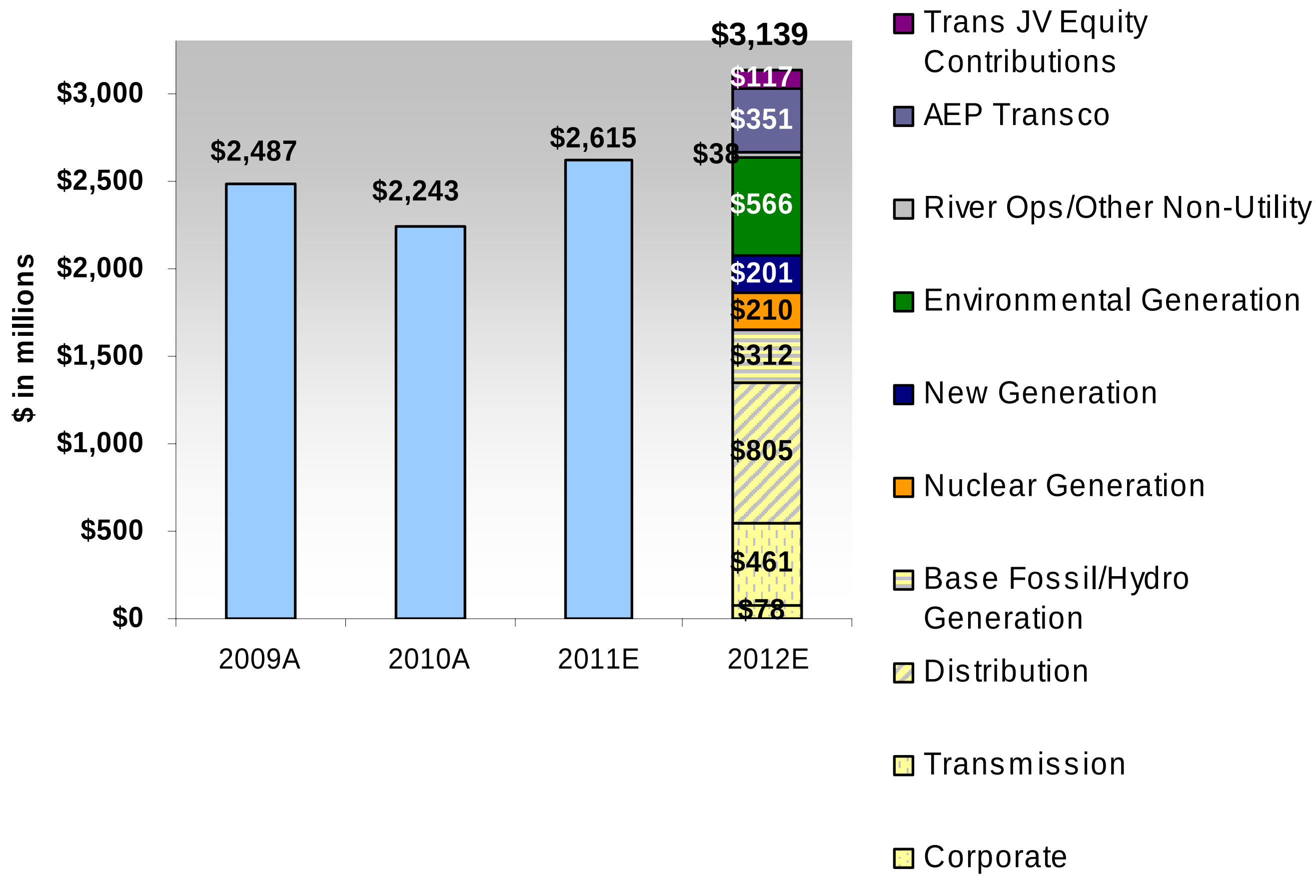
- In July 2011, the Supreme Court of Texas reversed the PUCT's decision of the disallowance of capacity auction costs. This opened the docket for TCC to file on October 10, 2011, an application to confirm the capacity auction true-up balance.
- TCC's filing requested a capacity auction true-up balance of $1.2B, which includes the capacity principal balance of $421M plus interest thru March 31, 2012. Interest is based on a carrying charge rate of 11.795%, which was the rate in effect at the time of the original PUC decision. Based on the Commission's Preliminary Order in the case, the capacity auction true-up balance would be approximately $817M inclusive of a carrying charge rate of 7.47%(based on ruling that modified the rate in 2007).
- The regulatory hearing is scheduled to take place November 29-30, 2011. A filing for a securitization order will occur soon after an order is issued on the remand case. TCC expects to issue the securitization bonds in the first quarter of 2012.
- TCC recorded a $425MM net-of-tax favorable special item related to this case in 3Q2011, ($421MM principal & $234MM interest, less related taxes). AEP also recorded $28MM on-going interest YTD in 3Q2011.
- Upon securitization, TCC will begin recognizing the equity component of the carrying cost prorated over the life of the securitization bonds (estimated to be $116MM, based on the PUCT preliminary order).
- Filing also seeks order to resolve tax normalization issues.

Pension and OPEB Estimate

- Investment returns for our pension plan remain slightly positive for the year despite volatility in the market, OPEB funds are slightly negative year to date.
- With very low short term interest rates, it is beneficial to pre-fund a portion of the required contributions to the plan.
- After making a discretionary contribution of $300 million by year end, cash contributions to the pension will total $450 million for 2011.
- We do not expect any required cash contributions to the pension for 2012, although we may make additional discretionary contributions.
- We expect combined pension and OPEB expense to increase $88M from 2011 to 2012 ($62MM O&M, pre-tax and $26MM capitalized).
- Discount rates are 5.05% for pension and 5.25% for OPEB for 2011, and are currently estimated to be 4.35% and 4.60% for 2012 and beyond.
- Estimates for expense and contribution figures are very sensitive to changes in interest rates and investment returns between now and year-end.

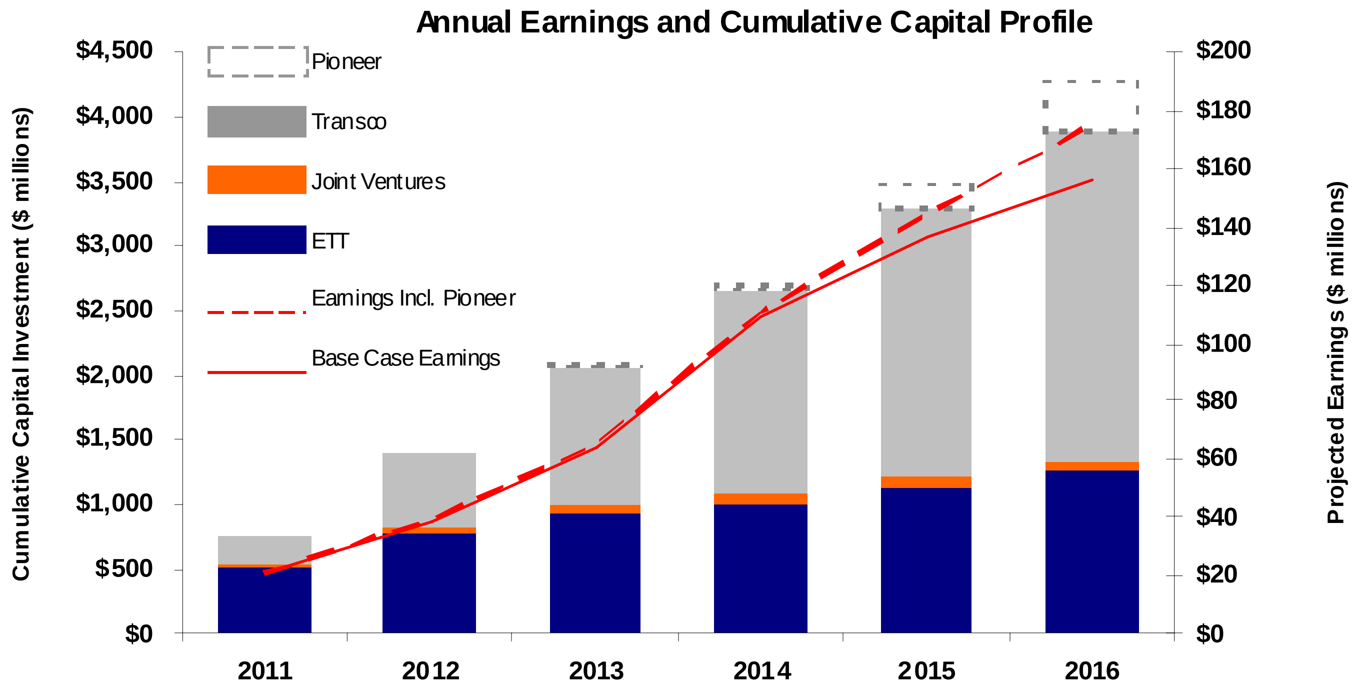
Capital Allocation

2012 AEP System Capital $3.1B



Major projects include: Turk Plant, Reliability upgrades, ETT contributions and Transco growth

Transmission Earnings & Capital Profile



[1] High Case includes AEP's share of Pioneer (50% ownership)

[2] Transco base case includes approximately $21MM in 2012 capital spend that is dependent upon state approval of Arkansas and Kentucky

[3] Joint Ventures include: PATH (50% ownership) assuming an ongoing suspension and Prairie Wind (25% ownership) assuming construction at 345kV

[4] ETT (50% ownership) includes CREZ and additional projects

[5] Projection of earnings potential at the transmission holding company level assuming 50/50 debt/equity capitalization and ROE of 11-13% for FERC projects; 60/40 debt/equity capitalization and 9.96% ROE (through 2013) and 55/45 debt/equity capitalization and 10% ROE (2014 forward) for ERCOT projects; and 50/50 debt/equity capitalization and ROE of 11.2-11.49% for Transco projects

Transmission Investment Opportunities

AEP®

ETT – Electric Transmission Texas

- **Ownership Structure:** 50/50 (AEP/MidAmerican Energy Holding Company)
- **Total Project Cost**: Over $3 Billion
- **Growing Rate Base:** Current rate base is $482 million; expected to grow as follows:
  - 2011: $495 million
  - 2012: $750 million
  - 2013: $1,200 million
- **Interim TCOS filings twice per calendar year**
- **Approved ROE:** 9.96%

AEP Transcos

- Seven wholly-owned Transcos
- Expansion and growth within AEP's existing utility footprint
- Efficient recovery mechanism via FERC formula rates
- Forecasted capital investment of $210 million in 2011 and more than $350 million in 2012
- Approved ROE: 11.20%-11.49%

ROE Optimization

ROE by Jurisdiction		
Jurisdiction	**Authorized ROE**	**Sep 2011 Proforma ROE***
AEP Ohio	NA	13.51%

Kentucky	10.50%	11.08%
Overall AEP Return	**NA**	**10.90%**

* Twelve Month Rolling Proforma Recurring ROE

- Strong overall system ROE with current rate cases on file for under earning utilities
- Continue to strengthen local relationships
- Concurrent recovery mechanisms
- Operating Company model refinement
  - Investment Review Committee
  - Advanced planning discussions with stakeholders

Ohio ESP Settlement

Gradual Transition to Market and Regulatory Stability in Ohio

- **Parties to the Settlement** - Signed by more than 20 organizations representing customers, competitive retail electricity suppliers, environmental groups, communities and other key stakeholders
- **Cases included in Settlement** - 2012 Electric Security Plan, Capacity Charges, Merger
- **Generation** - Corporate separation of Ohio generation assets targeted by May 2013 and transition all of Ohio generation supply to market by mid-2015; the company may pursue recovery of Pool modification costs once they exceed $50 million
- **Transition to market** - company will make a specific percentage of the Ohio retail load open to competitive retail suppliers at the RPM price for a three-year period. The remaining capacity that switches will be priced at $255/MW-day
  - Year one (2012), approximately 20 percent will be available
  - Year two (2013), approximately 30 percent will be available
  - Year three (2014 through May 2015), approximately 40 percent will be made available.
  - Standard service offer price beginning in June 2015 will be determined through auctions involving multiple suppliers of generation service. Auctions will begin as early as September 2013.
- **Fuel Adjustment Clause** - continues through May 31, 2015; parties to support legislation for securitization of fuel deferrals
- **Nonbypassable Generation Resource Rider** – allows the distribution company to recover costs related to building new generating assets dedicated solely to Ohio customers. Project-related costs will be presented in future PUCO cases.
- **Distribution Investment Rider** – Costs associated with new distribution investment to maintain and improve reliability will be recovered under this rider with an ROE of 10.5% based on a capital structure of 47% debt/53% equity. In its first year (2012), the rider will be capped at $86 million. An additional $18 million will be added in 2013 and an additional $20 million in 2014.
- **SEET ROE threshold of 13.5%**.

Summary Rate Case Information

AEP Ohio Distribution Rate Case – Docket #11-351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%.

APCo Virginia Base Rate Case – Docket #PUE-2011-00037

On March 31,2011 APCo filed an update to its pre-biennial base rate case for recovery of generation and distribution costs requesting an increase of $75 million ($126 million total increase less $51 million deferral of depreciation increase).

In conjunction with this case, an environmental rate adjustment clause (E-RAC), a generation rate adjustment clause (G-RAC) and a renewable portfolio standard rate adjustment clause (RPS-RAC) were filed. APCo has requested that rates in the base case, E-RAC and RPS-RAC go into effect on 2/1/2012 and the G-RAC on 3/1/2012.

I&M Michigan Base Rate Case – Docket # U-16801

On July 1, 2011 I&M filed a base rate case with the Michigan Public Service Commission requesting an increase of $24.5 million. Rates proposed in this filing are based on projected 2012 cost of service and will not go into effect until 2012, therefore rates will reflect a current cost of service. This filing includes revised depreciation rates to include additions since the last approved depreciation study as well as accelerated retirement of Tanners Creek Units 1, 2 and 3. The requested ROE is 11.15%. In accordance with Michigan law I&M intends to implement rates, subject to refund, on January 1, 2012. An order is expected by mid-year 2012.

Projected Capital Structure – Company Position (12/31/12)

	% of Capitalization	Cost Rate	Weighted Return

I&M Indiana Base Rate Case Cause #44075

On September 23, 2011 I&M filed a base rate case with the Indiana Utility Regulatory Commission requesting an increase of $148.7 million ($178.4 million in base revenues offset by $29.7 million in proposed changes to the OSS, PJM and CCT riders). Rates proposed in this filing are based on a historical 03/31/2011 cost of service and will not go into effect until an order is issued. The requested ROE is 11.15%. An order is expected by the end of 2012 or early 2013.

Historical Capital Structure – Company Position (03/31/2011)

	% of Capitalization	Cost Rate	Weighted Return

New Generation – Turk Plant

John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant, located in AEP's SWEPCO region. AEP owns 73 percent or roughly 440 megawatts of the total unit.

- The cost of the plant and related transmission is anticipated at $1.8 billion with AEP's share approximately $1.4 billion and will begin commercial operation in the fourth quarter of 2012.

- The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls.

- Third party owners include: Arkansas Electric Cooperative Corp. (12%), East Texas Electric Cooperative (8%), and Oklahoma Municipal Power Authority (7%).

- Various legal challenges are on-going related to the plant (see 10-Q).

CCR Rules	$	30	$	45
Air Rules (3)	$	30	$	50
Replacement Generation	$	570	$	730
Grand Total	**$**	**6,000**	**$**	**8,000**

(1) The impact of all rules continues to be under review. Project scope and technical assessments are ongoing. Any change in scope will impact the capital cost ranges.

(2) Gas plants are not included in MW. Proposed 316 (b) will impact some gas facilities.

(3) Air Rules include: CSAPR as finalized and HAPs and Regional Haze Federal Implementation Plans in OK & AR, as proposed.

(4) Includes NSR Compliance.

(5) Includes Big Sandy Unit 2, which remains fully exposed but, pending regulatory approval, will be scrubbed rather than replaced with new natural gas generation.

Retrofits/New Generation

- The tables below represent our estimated $6 - $8 billion capital investment from 2012 to 2020 for environmental retrofits on 10,500 MW and new/refueled generation of 2,152 MW. The below costs include management estimates for compliance with CSAPR, HAPs MACT, CCR and 316(b) regulations as currently proposed.

Operating Company	Plant	MW	Type of retrofit	Low Cost Estimate 2012-2020 ($MM)	High Cost Estimate 2012-2020 ($MM)	
AEP Ohio	Conesville 5	400	SCR, DSI			
	Conesville 6	400	SCR, DSI			
	Muskingum River 5/6*	510	Refuel/ New Natural Gas			
	Gavin 1	1,320	FGD upgrade			
	Gavin 2	1,320	FGD upgrade			
	Zimmer 1	330	FGD upgrade			
	Total MW	**4,280**	**Total Expected Cost**	**2,100**	**2,800**	**
APCO	Clinch River 1***	211	Refuel with Natural Gas			
	Clinch River 2***	211	Refuel with Natural Gas

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

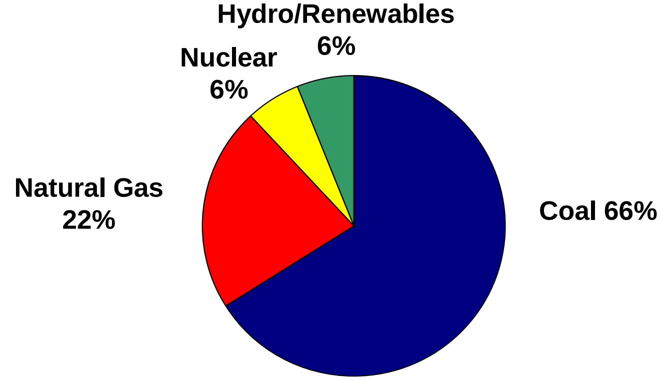
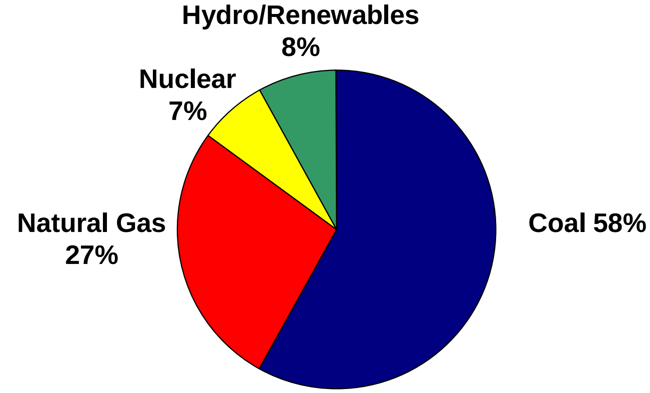
Continued Investment in Utility Platform

AEP®

- Plan for old, small coal units
  - Initially operate seasonally
  - Transition towards retirement
  - Regulatory plan for recovery
- Continue evaluation of “partially exposed” units for additional controls
- Add non-coal capacity when needed
  - Dresden NGCC (partially complete)
  - New NGCC at existing site
  - Cook plant uprate (under study)
  - Renewables
- Deploy technology as appropriate
  - Continue pursuit of CCS technology
  - Energy storage technologies
  - gridSMART®



Capacity - 2009



Projected Capacity - 2017

Transmission as a Growth Engine

AEP®

- Electric Transmission Texas (ETT)
  - Growing Rate Base
  - $1.1B CREZ opportunity; Received CCN approval on first CREZ line; 3 more approvals expected in 2011
  - $1.6B Non-CREZ projects in the pipeline
- AEP Transmission Company (AEP Transco)
  - Settlement filed at FERC for wholesale rates
  - $50M spend for 2010; $160M forecasted for 2011
- Progress on Joint Ventures in 2010
  - PATH
  - Prairie Wind
  - Pioneer
  - SMART Transmission study

ETT Electric Transmission Texas

ETA ELECTRIC TRANSMISSION AMERICA, LLC

PATH Potomac-Appalachian Transmission Highline

Prairie Wind Transmission A joint venture between Westar Energy and ETA

Transmission investments present significant growth opportunities within and outside of AEP's traditional service territories

ETT: An Operating Utility

AEP®

ETT Electric Transmission Texas

Growing Rate Base:

- Current rate base is $385 million; expected to grow as follows:
  - 2010: $405 million
  - 2011: $465 million
  - 2012: $765 million
  - 2013: $1,415 million
- Interim TCOS filings twice per calendar year

Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.1 B:

- Seven double-circuit 345kV transmission lines (~$750 M), eight major 345kV stations and several series compensation installations (~$350 M)
- PUCT Certificate of Convenience and Necessity (CCN) proceedings underway

CREZ Transmission Line	Number of miles	Estimated Cost ($M)	CCN Filing Date	CCN Decision by PUCT
Clear Crossing to Dermott	**95**	**$160**	**5/3/2010**	**Unanimously Approved 9/30/2010**
Tesla to Riley	65	$110	8/18/2010	2/15/2011
Riley to Edith Clarke to Cottonwood	115	$199	9/8/2010	3/8/2011
Tesla to Edith Clarke to Clear Crossing to West Shackelford	145	$280	Anticipated 10/20/2010	4/20/2011

Additional Projects in the Pipeline ~$1.6 B:

- Approximately 822 miles of lines and 28 substations with in-service dates through 2017

AEP Transco was established in 2010

- Formula rate settlement filed with FERC in September; awaiting final order
  - ROE: 11.49% in PJM and 11.2% in SPP
- $50 M invested in three states in 2010 (OH, MI & OK)
  - Ohio application for public utility status pending; approval expected in 2010
  - Oklahoma and Michigan did not require filings
- “Baseline” capital spending targets for OH, MI & OK
  - $160 M for 2011
  - $350 M for 2012
- Will pursue regulatory approvals for other states in 2011 (AR, LA, WV, VA, IN & KY)
  - Additional capital spending opportunity in these states for 2012+

Progress on Joint Ventures in 2010

PATH:

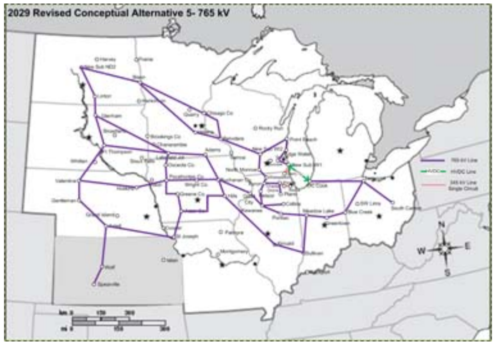
- Re-filed for certification in VA
- Letter from PJM confirmed the 2015 in-service date
- PJM Board reaffirmed need on December 1, 2010
- FERC approved formula rate (14.3% ROE), subject to rehearing

Prairie Wind:

- Approved by SPP as a Priority Project (Notice To Construct rcv'd)
- Cost allocation approved by SPP and FERC
- FERC approved formula rate (12.8% ROE)
- In-service date is 2013-2014

Pipeline of Future Projects:

- Pioneer
  - FERC approved formula rate (12.54% ROE)
  - Awaiting RTO project approval; MISO included Pioneer in its proposed EHV plan
- Tallgrass
  - Will move forward if approved at 765 kV
- Smart Transmission Study
  - Comprehensive study of the transmission needed in the Upper Midwest to support renewable energy development



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Two New Anchor Projects

ETA – MidAmerican Energy Co: MEC Project

Approximately 180 miles of 765 kV lines connecting MEC's EHV system in eastern Iowa to proposed 765 kV expansion in western Illinois.

- Total Project Cost: ~$650M
- Project part of SMARTransmission study and Midwest ISO RGOS planning effort
- MISO approval
- Includes 765kV and 345kV voltages, and their electrical equivalents

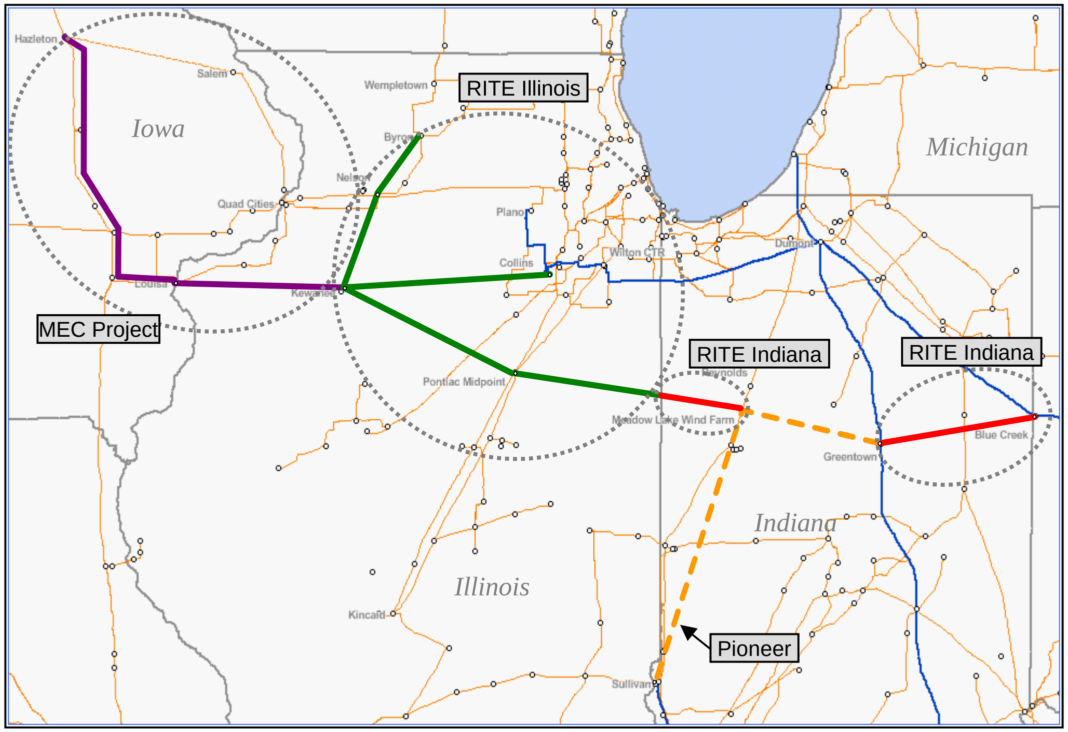
ETA – AEP - Exelon: The RITE Line

Approximately 420 miles of 765 kV lines connecting AEP's 765 kV system in Indiana with Exelon's 765 kV system west of Chicago, and other Exelon substations

- Total Project Cost ~$1.6B
- Ensures reliability, renewables integration
- Bridges AEP's and Exelon's 765 kV systems
- PJM approval of seams project required
- Includes 765 kV and 345 kV voltages, and their electrical equivalents

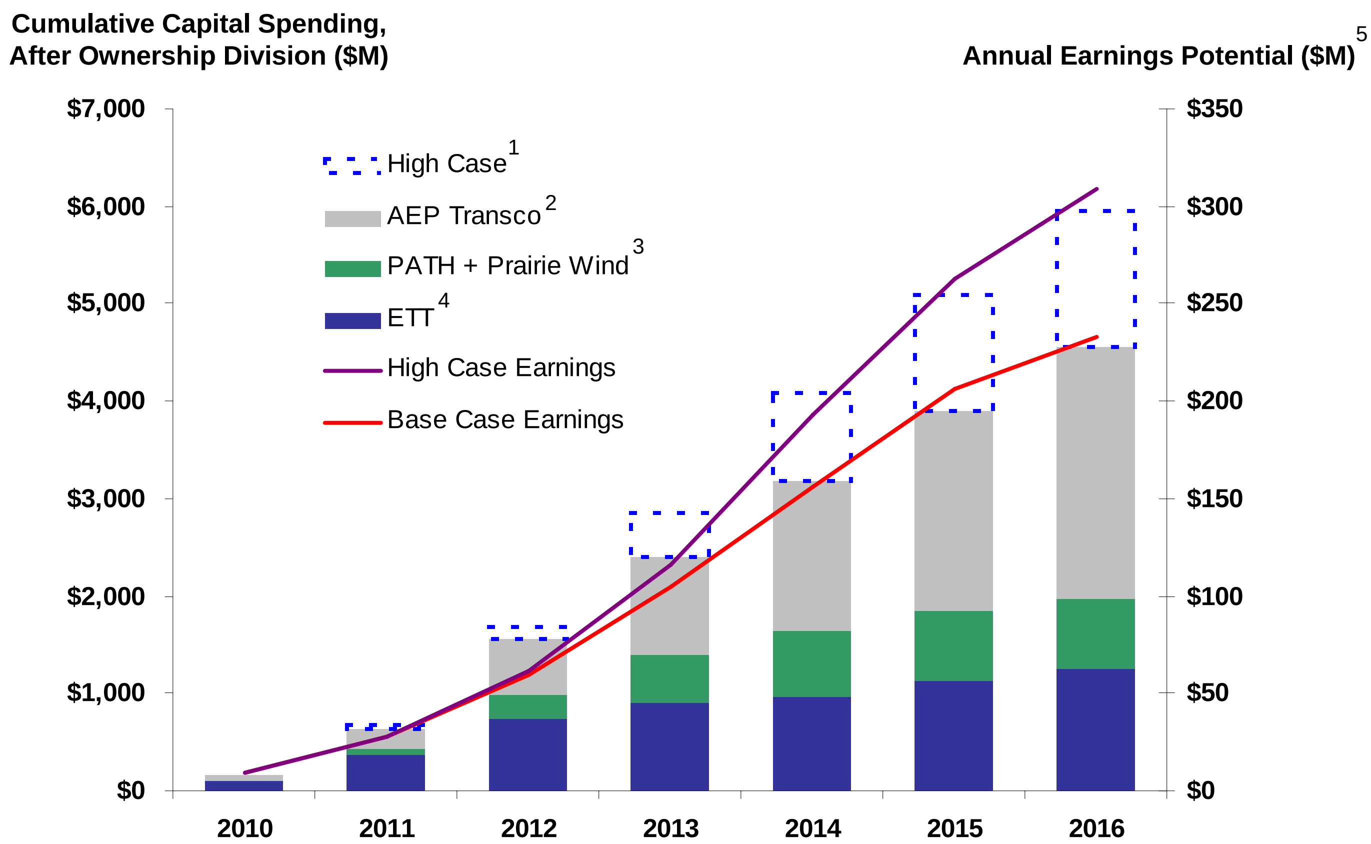
AEP Total Investment:

~$500M



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Capital Investment and Earnings Profile



[1] High Case includes: Pioneer (50% ownership), Prairie Wind at 765kV (25% ownership), Tallgrass at 765kv (25% ownership) and other future opportunities

[2] AEP Transco (100% ownership) includes spending in OH, MI & OK only through 2011 and in other jurisdictions for 2012 and beyond

[3] PATH (50% ownership) assumes an in-service date of 2015 and Prairie Wind (25% ownership) assumed at 345kV

[4] ETT (50% ownership) includes CREZ and additional projects

[5] Projection of earnings potential at the transmission holding company level assuming 50/50 debt/equity capitalization and ROE of 12-13% for FERC projects; 60/40 debt/equity capitalization and 10.25% ROE (2011 forward) for ERCOT projects; and 50/50 debt/equity capitalization and ROE of 11.2-11.49% for Transco projects

Capital Allocation

In this economic recovery cycle, capital allocation requires balance for spending that considers the obligation to serve, the ability to obtain rate increases, a balance sheet to support the plan, and the total return proposition to shareholders

Capital for Growth

- Increased capital budget by $150M for 2011 to $2.6B
- Announced capital budget plan of $2.9B for 2012

Return of Capital to Shareholders

- 9.5% increase in quarterly dividend to $0.46/share declared by the board of directors on October 26th
- Future dividend increases will grow with earnings

Capital to Reduce Risk

- Voluntarily funding pension $500M in 2010
- Allocating an additional $150M of funding for pension in 2011

Detailed Ongoing Earnings Guidance

2010E: $2.95 - $3.05

2011E: $3.00 - $3.20

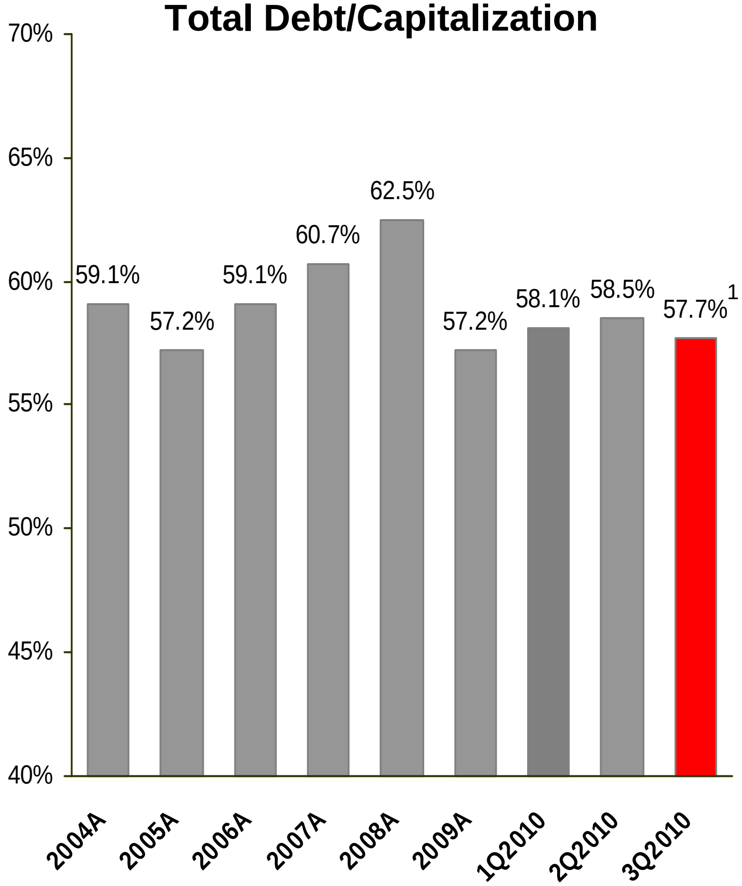
Capitalization & Liquidity

Total Debt/Capitalization



Note: Total Debt is calculated according to GAAP and includes securitized debt

1: Effective January 1, 2010 in accordance with Transfers and Servicing accounting guidance (formerly SFAS 166), factored receivables of AEP Credit of $750 million are classified as short-term debt; The 3Q2010 debt/capitalization ratio would be 56.8%, excluding AEP Credit.

Summary Rate Case Information

APCo West Virginia General Rate Case – Docket #10-0699-E-42T

On May 14, 2010, APCo filed a base rate case with the West Virginia Public Service Commission requesting a net increase of $155.5 million, comprised of a $223.8 million base rate increase and a $68.3 million decrease in the construction surcharge. The filing related to capital investments made and to recover increased costs. In addition, APCo requested to establish a separate transmission tracker related to PJM charges. The requested ROE is 11.75%. An order is expected at the end of March 2011. Staff and Intervenor testimony recommended increases in the range of $41MM--$57MM.

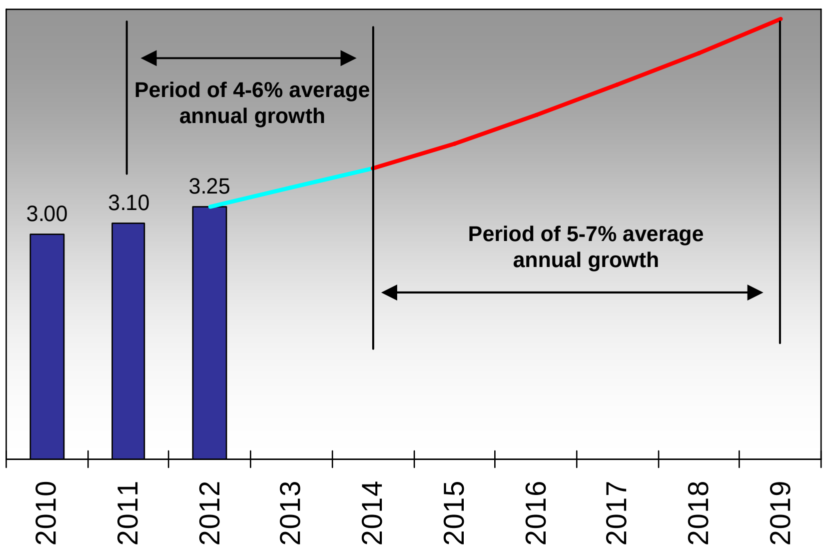
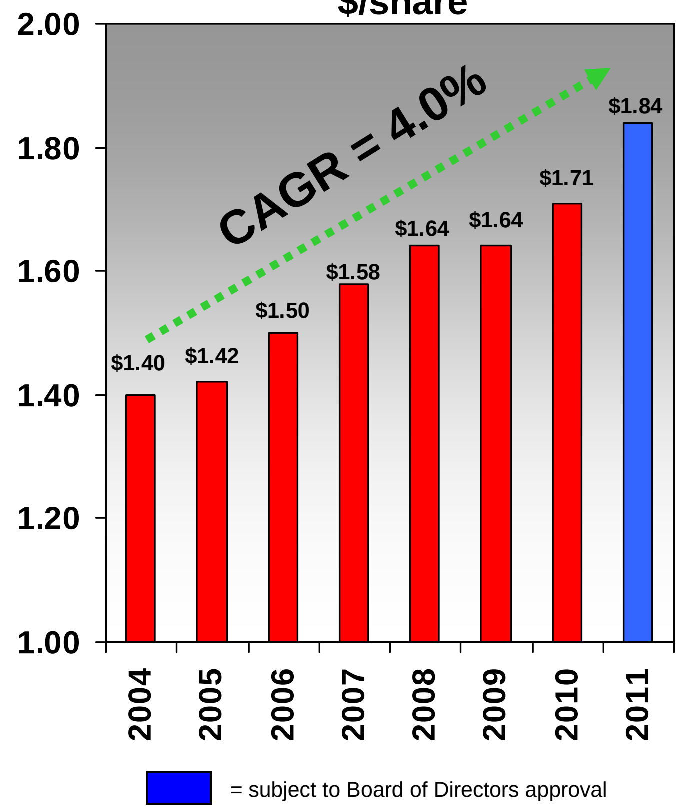
Value Proposition

Average Annual EPS Growth defined over two periods



- 4-6% EPS growth 2012-14
  - Average annual capital spend between $2.9-3.4B
  - Blended ROE of 10.5 - 11%
  - Slow, steady recovery in economy
- 5-7% EPS growth post 2014
  - Base utility platform capital plus higher allocation of discretionary capital going to opportunities in the transmission development pipeline
  - Higher overall blended ROE opportunity
  - Robust economic growth

Dividend History Since 2004
$/share



- <u>9.5% increase</u> in quarterly dividend to $0.46/share declared on October 26th
- <u>402nd consecutive</u> quarterly dividend will be paid December 10, 2010
- 50-60% payout ratio target
- Current yield about 5%

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; volatility in the financial markets, particularly development affecting the availability of capital on reasonable terms and developments impacting our ability to refinance existing debt at attractive rates; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas coal, nuclear fuel and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

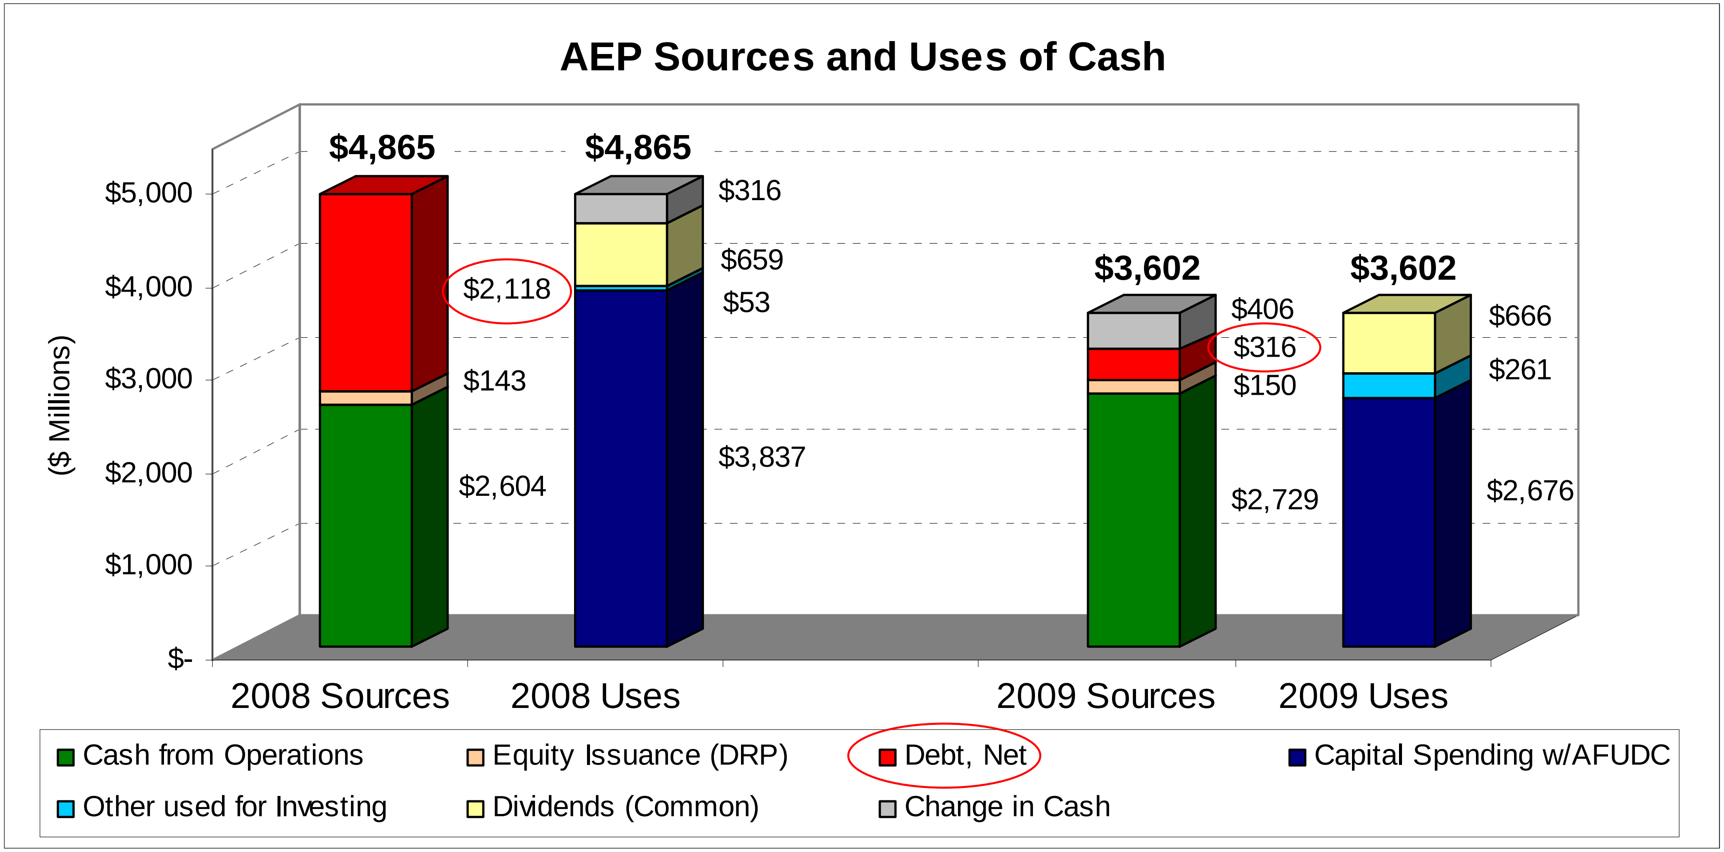
2009 guidance provides range for reasonable Ohio outcome, holds O&M flat and reflects higher interest expense.

2008 & 2009 Cash Flow Forecast



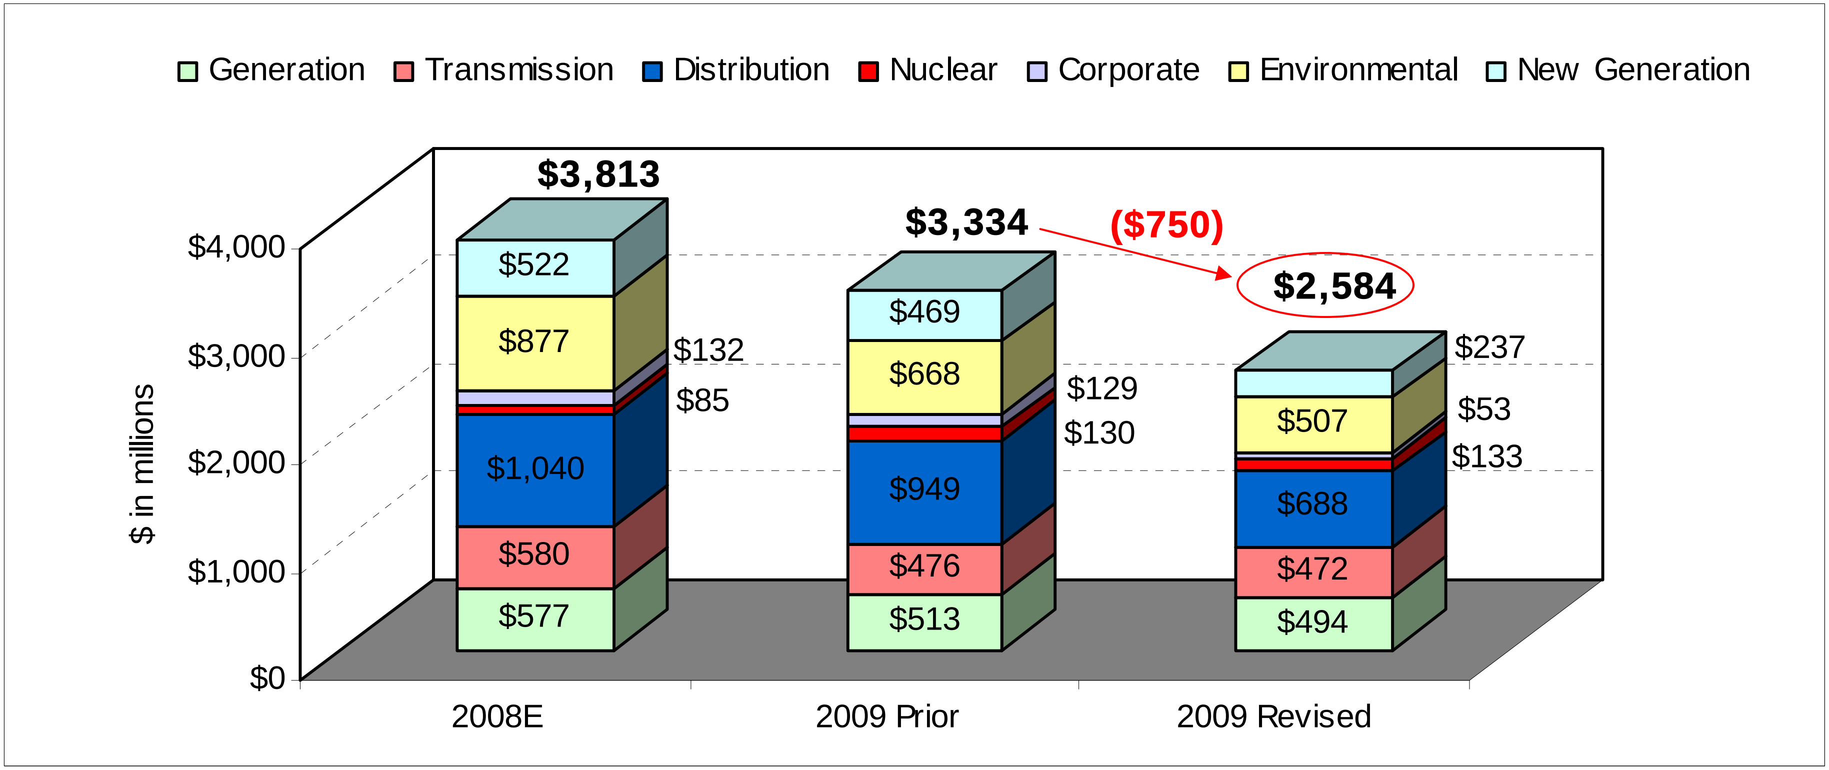
Capital spending closely matches cash flow from operations in 2009.

AMERICAN ELECTRIC POWER

STRONG
FLEXIBLE
ADAPTABLE

2008 & 2009 Capital Spending

- Capital expenditures for 2009 will be cut by $750 million from previous guidance.



The reduction in capital spending will significantly reduce our need to access capital markets in 2009.

Pension and OPEB Estimate

- The Pension plan and OPEB funds investment returns are each down about 25% YTD as of October 16, 2008. The drop in assets is mitigated slightly by a corresponding decrease in plan liability caused by a higher discount rate (from 6% to 7% for pensions and from 6.25% to 7.25% for OPEB).
- Investment losses increase plan expense for both pension and OPEB, but the investment losses are smoothed in over several years.
- OPEB contributions will increase along with OPEB expense, in accordance with agreements in most of our regulatory jurisdictions.
- As of October 16, 2008, we expect 2009 pension expense to increase $10MM over 2008 and the estimated OPEB expense to increase $30MM year over year.
- These increases are reflected in our current guidance.
- We are currently not expecting any mandatory contributions to pension in 2009.

Regulatory Activity Underway

- AEP Ohio ESP Filing
- I&M - Indiana Base Rate Case
- PSO – Oklahoma Base Rate Case
- SWEPCo Stall Plant Filings in Arkansas
- SPP OATT Formula Rate Filing
- PJM OATT Formula Rate Filing

Regulatory Activity Underway

AEP Ohio Electric Security Plan Filing

- On July 31, 2008, in conjunction with the requirements of SB221, AEP Ohio filed an Electric Security Plan with the PUCO on behalf of CSPCo and OPCo.
- The filing includes the following key components:
  - Energy Efficiency and Demand Response
  - Renewable Energy
  - gridSMART^{SM} Phase 1
  - Distribution Reliability Enhancement
  - Economic Development
  - Provider of Last Resort
- The proposed rate plan results in an annual increase of approximately 15 percent on customers' total bills.
- The filing seeks to recover changes in fuel and environmental expenses relative to levels reflected in current rates.
- Intervenor testimony was filed October 31, Staff testimony was filed November 7 and the public hearing commenced on November 17, 2008. We anticipate an order in the first quarter of 2009.

Summary Rate Case Information

I&M Indiana General Rate Case

On January 31, 2008, I&M filed a general base rate case with the Indiana Utility Regulatory Commission (IURC) requesting an increase of $125.6 million ($80.1 million in base revenues and $45.6 million in tracker mechanisms). (Docket #: 43306). Order is expected in June 2009.

SPP OATT Formula Rate Filing (Docket #:ER07-1069-000)

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $140MM. Approximately $10MM of the increase relates to 3rd party and the rest, if approved, would be recovered through retail jurisdictional filings in SWEPCo and PSO, as appropriate.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to February 1, 2008, with rates subject to refund.
- Settlement discussions are currently on-going.

Regulatory Activity Underway

PJM OATT Formula Rate Filing (Docket #:ER08-1329-000)

- On July 31, 2008, the seven AEP East companies filed with the FERC to update the Open Access Transmission Tariff (OATT) rate and implement a formula transmission rate that will be updated annually to keep rates current with transmission investment.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is \$507MM and the new revenue requirement requested is \$606MM. Approximately \$31MM of the increase relates to 3rd party and Ohio and the rest, if approved, would be recovered through retail jurisdictional filings in the other east jurisdictions.
- We requested an effective date of October 1, 2008 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to March 1, 2009, with rates subject to refund.

Regulatory Activity Underway

SWEPCo Stall Plant Filings

Arkansas

- Proceeding is pending.

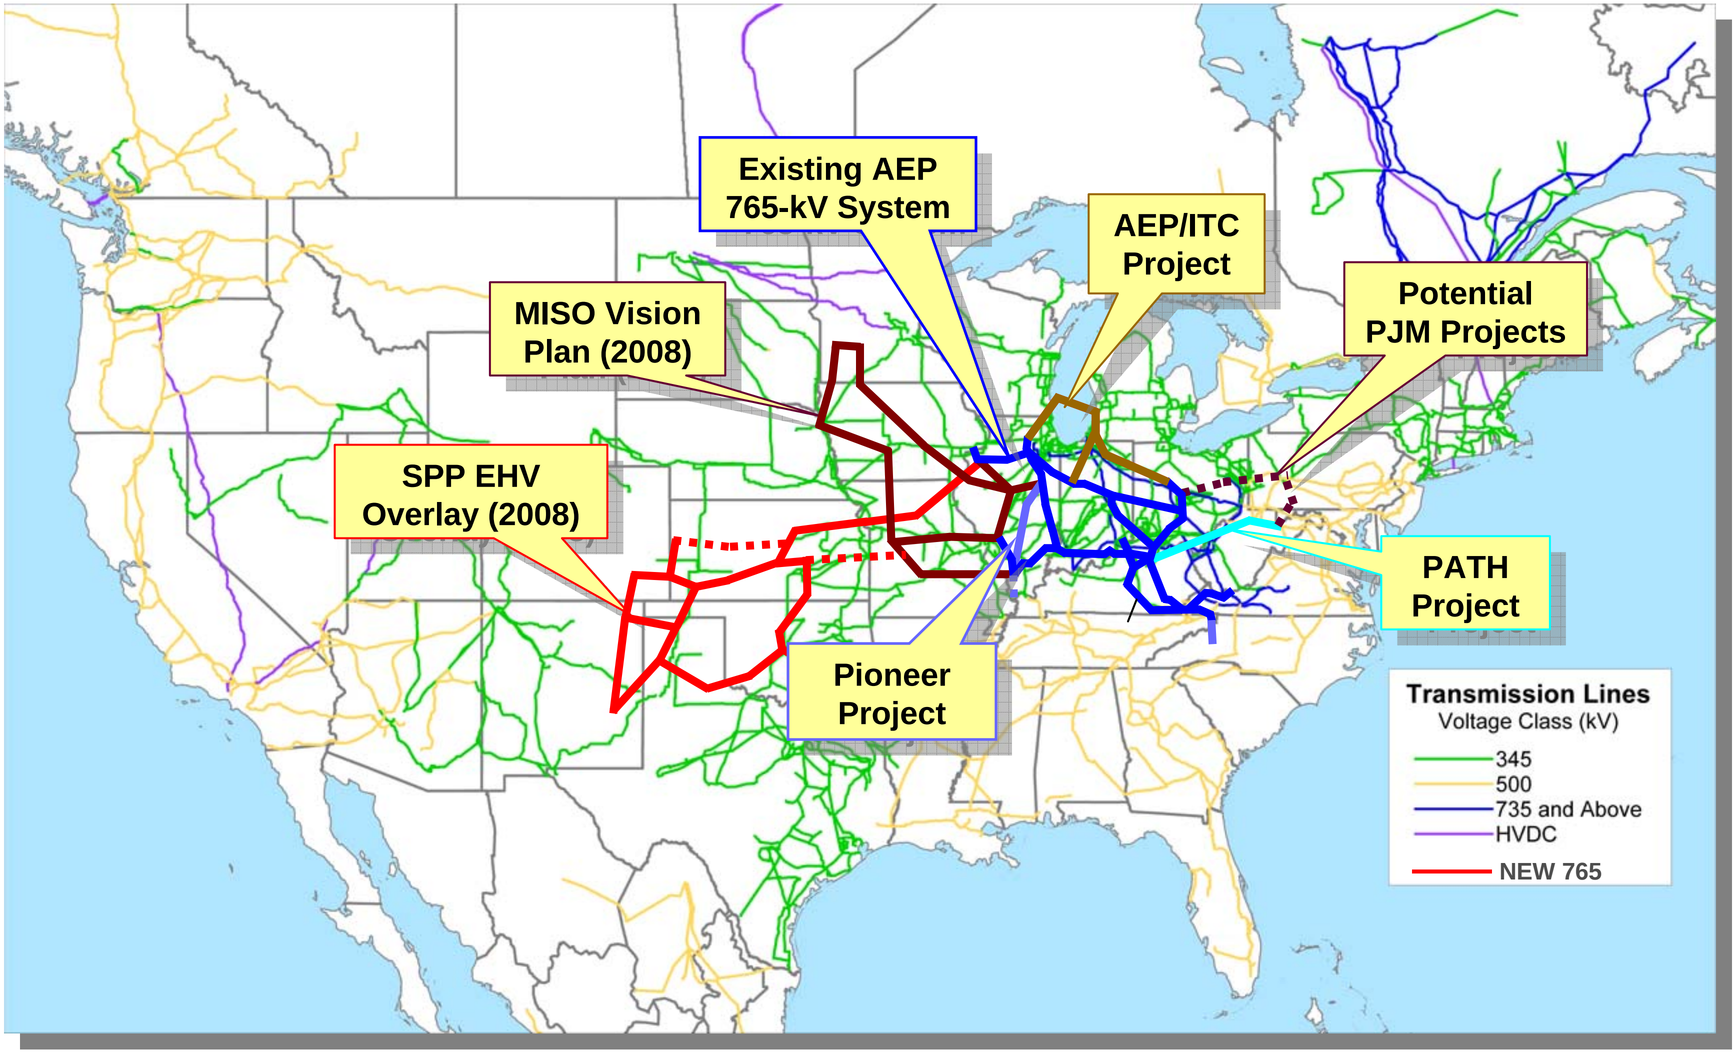
Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The intermediate facility, known as the Stall Plant and sited in Shreveport, LA, was bifurcated from the original filing and had a procedural schedule established on January 9, 2008.
- PSC approval was granted on September 10, 2008.
- Air permit received on March 20, 2008.

Texas

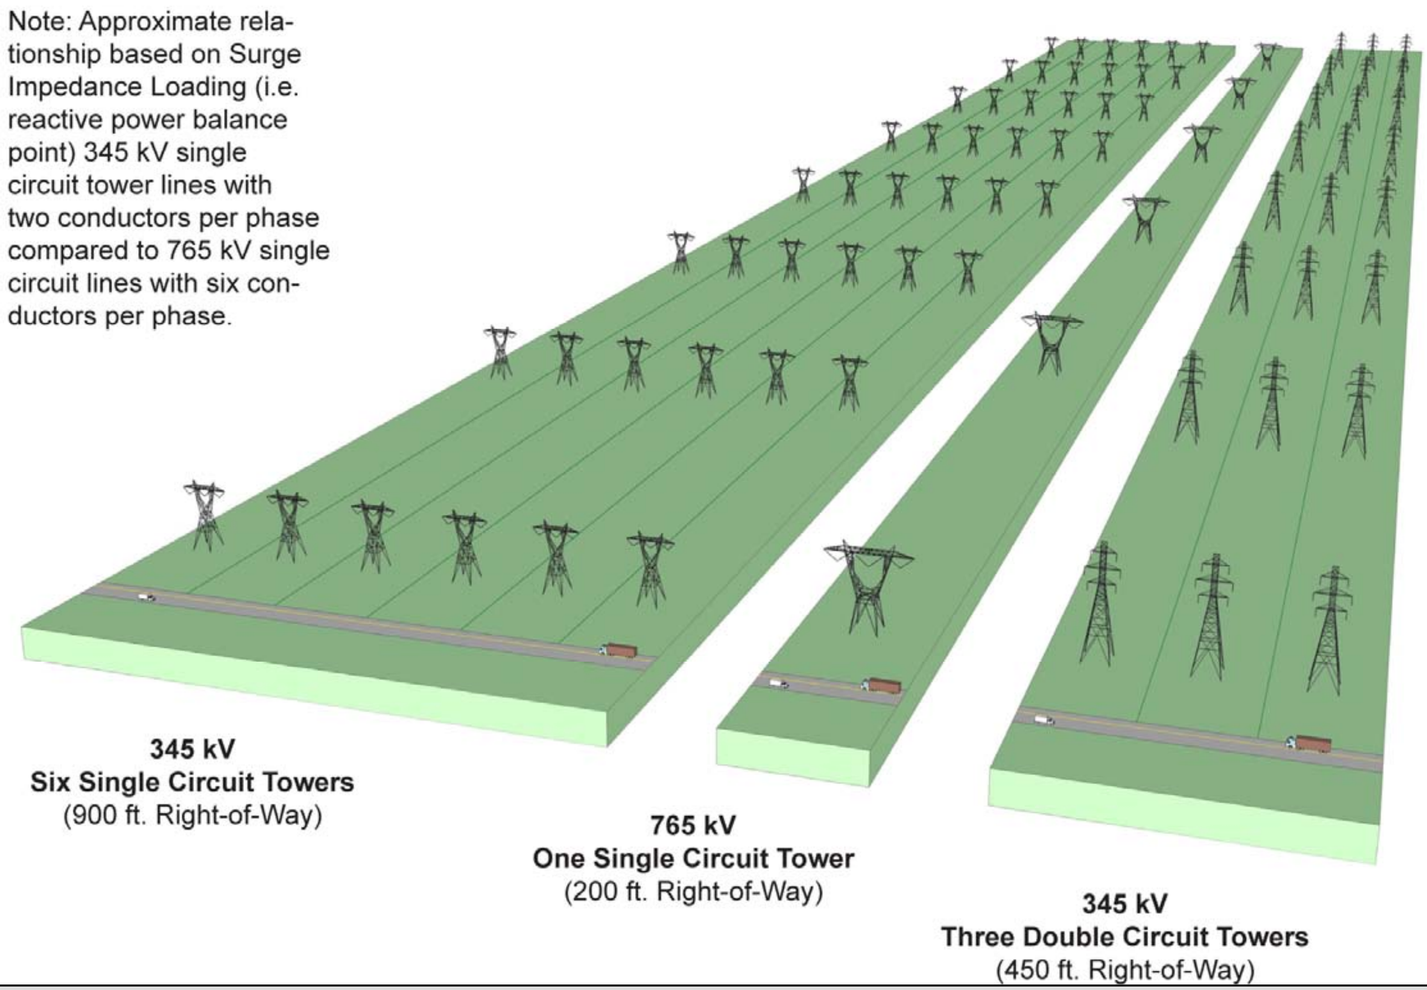
- PUCT order approving plant was issued on March 8, 2007.

Making it Happen: EHV Projects Under Development



NOTE: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

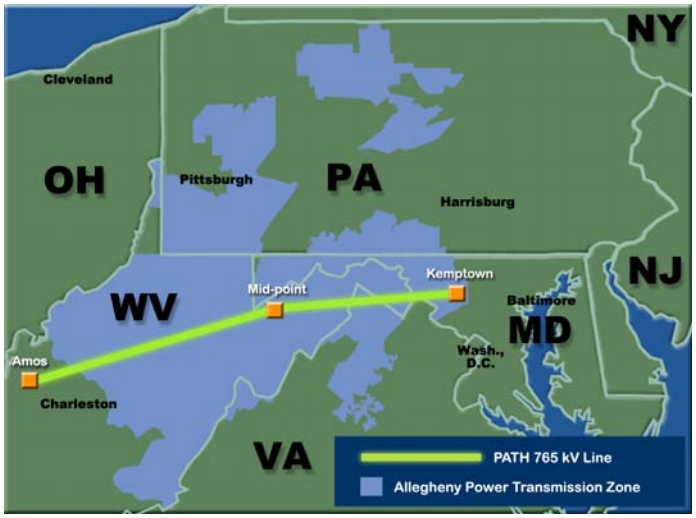
765 Right-of-Way Comparison



From a siting standpoint, 765-kV is more efficient in terms of economies of scale and right-of-way than lower capacity lines.

EHV Transmission in PJM: PATH

- ***PATH Progress to Date***
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP and 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
  - FERC ordered the formula rate mechanism be set for hearing, pending settlement judge procedures
  - In October 2008, PJM announced a reconfiguration of the PATH line which will eliminate the connection with the Bedington substation and the twin-circuit 500-kV lines from Bedington to Kemptown, and include a new mid-point substation near existing PATH alternative routes
    - The reconfiguration is a result of constraints identified as a result of comprehensive siting studies; interaction with government agencies; public input; and a desire to identify a solution that reduces line mileage and minimizes the impact on communities and the environment.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
- ***Key Challenges***
  - CPCN and Siting Approval from WV and MD



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

PATH
Potomac-Appalachian Transmission Highline

Joint Ventures with MidAmerican Energy Holdings Company

Electric Transmission Texas Update

- 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
- ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
- Services provided by AEP and investment opportunities can be offered by either partner
- Total initial investment of $70 million before ownership division
- In October 2008, the District Court found that the PUCT exceeded its authority by granting ETT a CCN. This decision is currently under appeal and ETT believes the ultimate outcome will validate its utility status.

Electric Transmission America Update

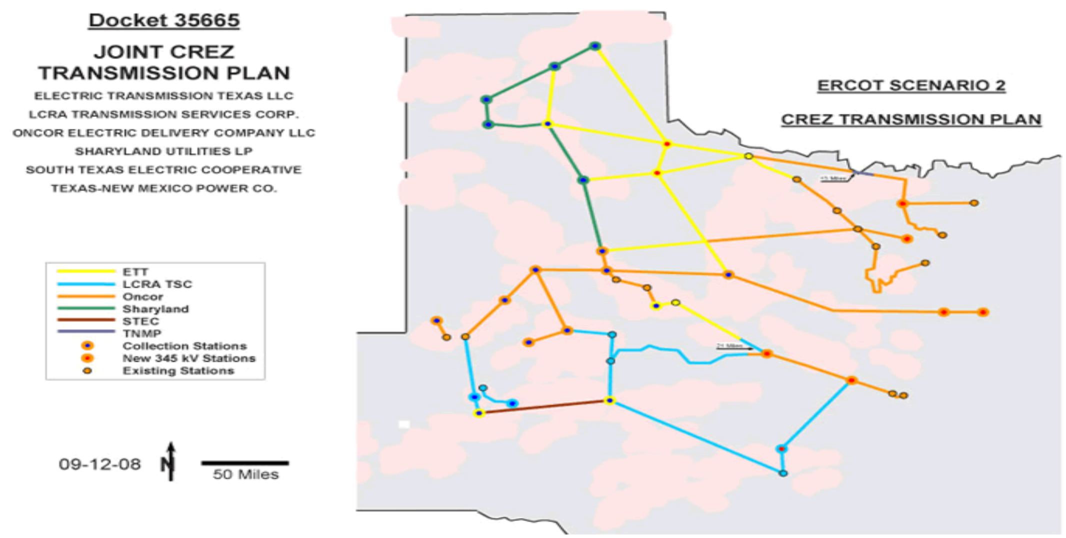
- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.
  - In 2008, ETA signed agreements with Westar Energy and OGE proposing to build the first and second segments of the 765-kV Overlay Plan in SPP

Texas CREZ Project

Strengthening the ERCOT grid to collect and deliver wind generation to load

❑ *Overview*

- ❑ In September 2008, ETT and a group of other Texas transmission providers filed a comprehensive plan with the PUCT for completion of the CREZ facilities approved by the Commission.
- ❑ ETT's requested share of the coordinated plan is approximately $1.5 billion. Staff testimony in October 2008 recommended ETT's share at $1.2 billion.
- ❑ The filing calls for completion of the plan by 2012.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

❑ *Next Steps*

- ❑ PUCT hearings – December 2008
- ❑ Selection of transmission providers – 1Q 2009

ETT
Electric Transmission Texas

EHV Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- ***Overview***
  - Sent non-binding Letter of Commitment to SPP to construct 765-kV and 500-kV projects in SPP region consistent with SPP Overlay Study – Summer 2007
  - Updated EHV Overlay Study completed by SPP – March 2008
- ***Benefits***
  - Overall reliability reinforcement with improved voltage support throughout the SPP system
  - Significantly increased transfer capability
  - Provides access to new generation resources, especially renewables
  - Allows for effective interconnections for EHV system development

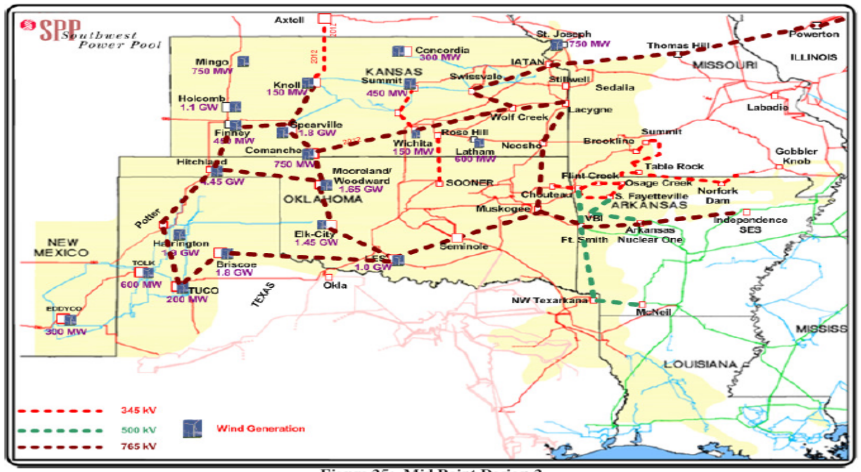


Figure 25: Mid Point Design 2

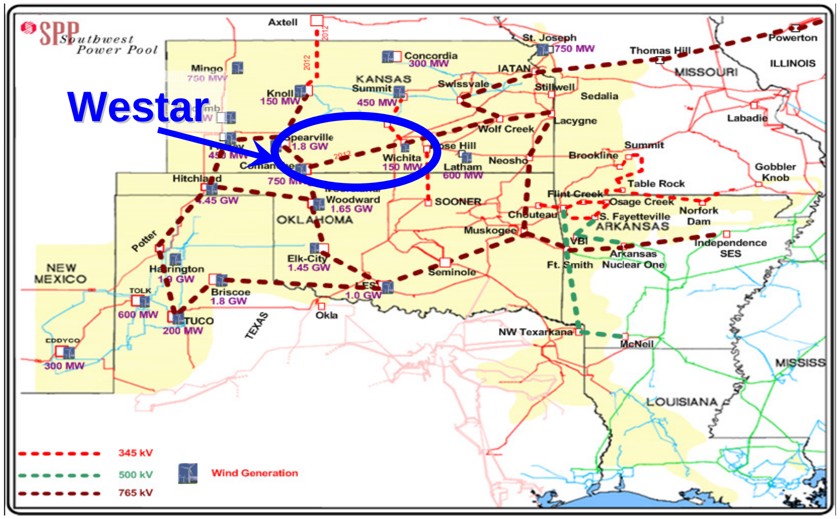
Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Prairie Wind Transmission, LLC

JV to build first segment of 765-kV transmission in SPP

- ***Overview***
  - In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
  - PWT is a 50/50 JV that is proposing to build approximately 230 miles of 765-kV lines extending from Wichita, KS, west to a substation northeast of Dodge City, KS, and then south to the Kansas border from Medicine Lodge, KS.
  - The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
  - Project is expected to cost approximately $600 million (based on SPP estimates) and be in-service by 2013.
  - AEP's ownership of the joint venture is 25%.
  - Kansas CPC filing submitted in May 2008.
  - FERC order received in December 2008 approving:
    - Cash return on CWIP and 12.8% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PWT or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

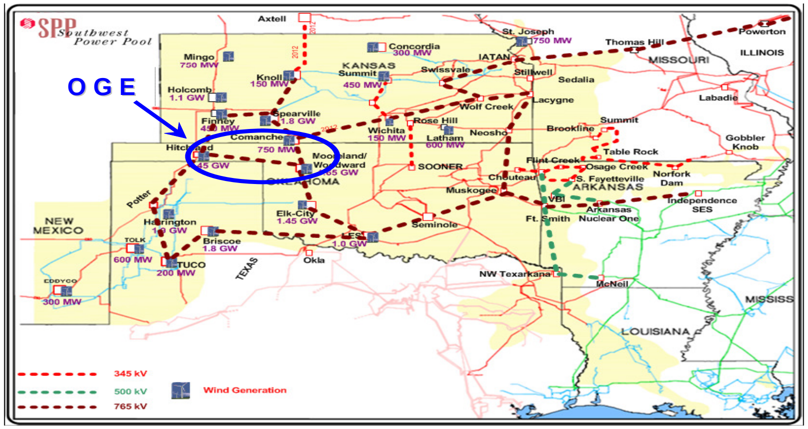
- ***Key Challenges***
  - Cost allocation which enables the development of "system solutions"
  - RTO Approval

Tallgrass Transmission, LLC

JV to build second segment of 765-kV transmission in SPP

❑ *Overview*

- ❑ In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
- ❑ TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines extending from the Kansas-Oklahoma border north of Woodward, OK, extending west into the Oklahoma panhandle to a new station that will be built near Guymon, OK.
- ❑ The project will promote wind development in the western half of Oklahoma.
- ❑ Project is expected to cost approximately $500 million and be in-service by 2013.
- ❑ AEP's ownership of the joint venture is 25%.
- ❑ Other responsibilities will be handled by the partners or outsourced.
- ❑ FERC order received in December 2008 approving:
  - ❑ Cash return on CWIP and 12.8% incentive ROE
  - ❑ Recovery of all costs incurred prior to the time rates go into effect, and
  - ❑ Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of TG or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

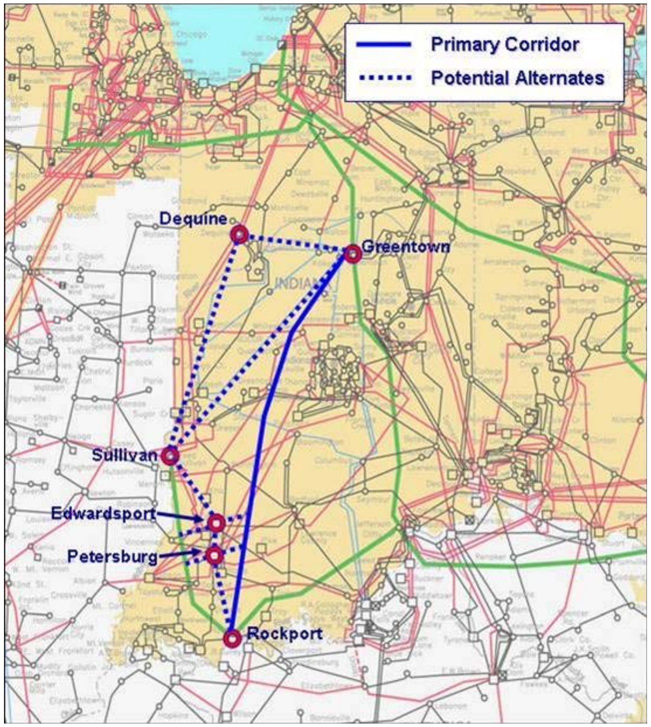
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

❑ *Key Challenges*

- ❑ Cost allocation which enables the development of "system solutions"
- ❑ RTO Approval

Pioneer Transmission, LLC

- ***Overview***
  - In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
  - PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
  - The project will improve the reliability of the nation's transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, protect national security and expand opportunities for new generation, including renewables.
  - Project is expected to cost approximately $1 billion and be in-service by 2015.
  - AEP's ownership of the joint venture is 50%.
  - Other responsibilities will be handled by the partners or outsourced.
  - FERC formula rate filing submitted in October 2008 requesting:
    - Cash return on CWIP and 13.5% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PT or its parents.



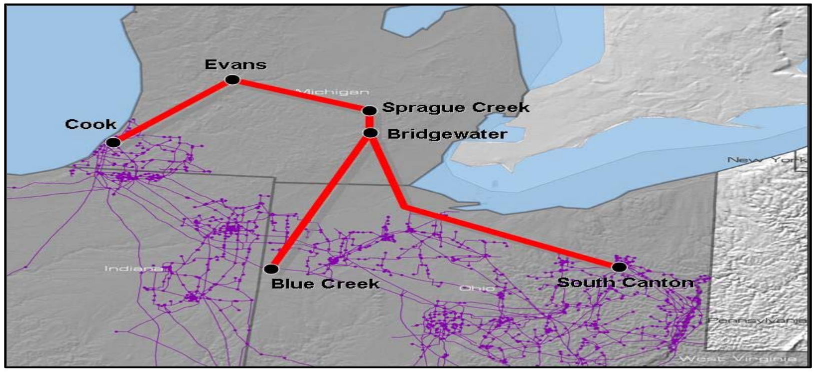
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected.

- ***Key Challenges***
  - Cost allocation which enables the development of "system solutions"
  - RTO Approval
  - Siting

EHV Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- ***Overview***
  - ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
  - Study was released Q3 2007
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.6 billion investment (in 2007$, before ownership division)
  - AEP and ITC are in discussions to form a Joint Venture
- ***Benefits***
  - Up to 5,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- ***Key Challenges***
  - Cost allocation which enables the development of "system solutions"
  - RTOs Approvals



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

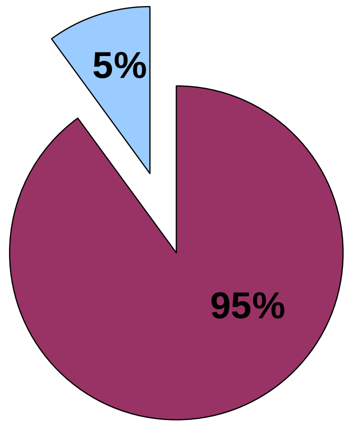
At the conclusion of our current environmental retrofit program, over 58% of our 24,646 MW coal-fired generation fleet will be equipped with SCRs and over 73% will be scrubbed (FGDs).

Materials and Vendors - AEP's Advantage

Breakdown of Environmental Compliance Program
(% of Purchased Costs)



- Actuals To Date & Firm Costs
- Estimated Cost Exposure*

Note: these percentages relate to the environmental program through 2010

* Primarily labor costs

SCR Technology

- Removes 85 – 93% of NOx emissions
- Requires ~ 1% use of auxiliary power
- **AEP Capital Cost ~ $162/kW avg.**

Combination of SCR & FGD technology results in co-benefit of Hg removal ~ 80% removal efficiency

FGD Technology

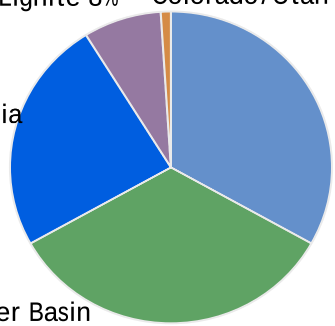
- Removes 95 – 98% of SO_2 emissions
- Requires ~1.5% to 3.0% use of auxiliary power
- **AEP Capital Cost ~ $262/kW avg.**

AEP benefits from first-mover advantage through lower contracted prices compared to industry.

Coal Procurement - 2008 Projected

AEP burns approx. 76 million tons of coal per year

Total AEP System



Coal Stats:

- 100% contracted for 2008
- Avg. delivered price ~ $36.58/ton in 2007
- Approximate 28% price increase in 2008 based on 2007 actual results.

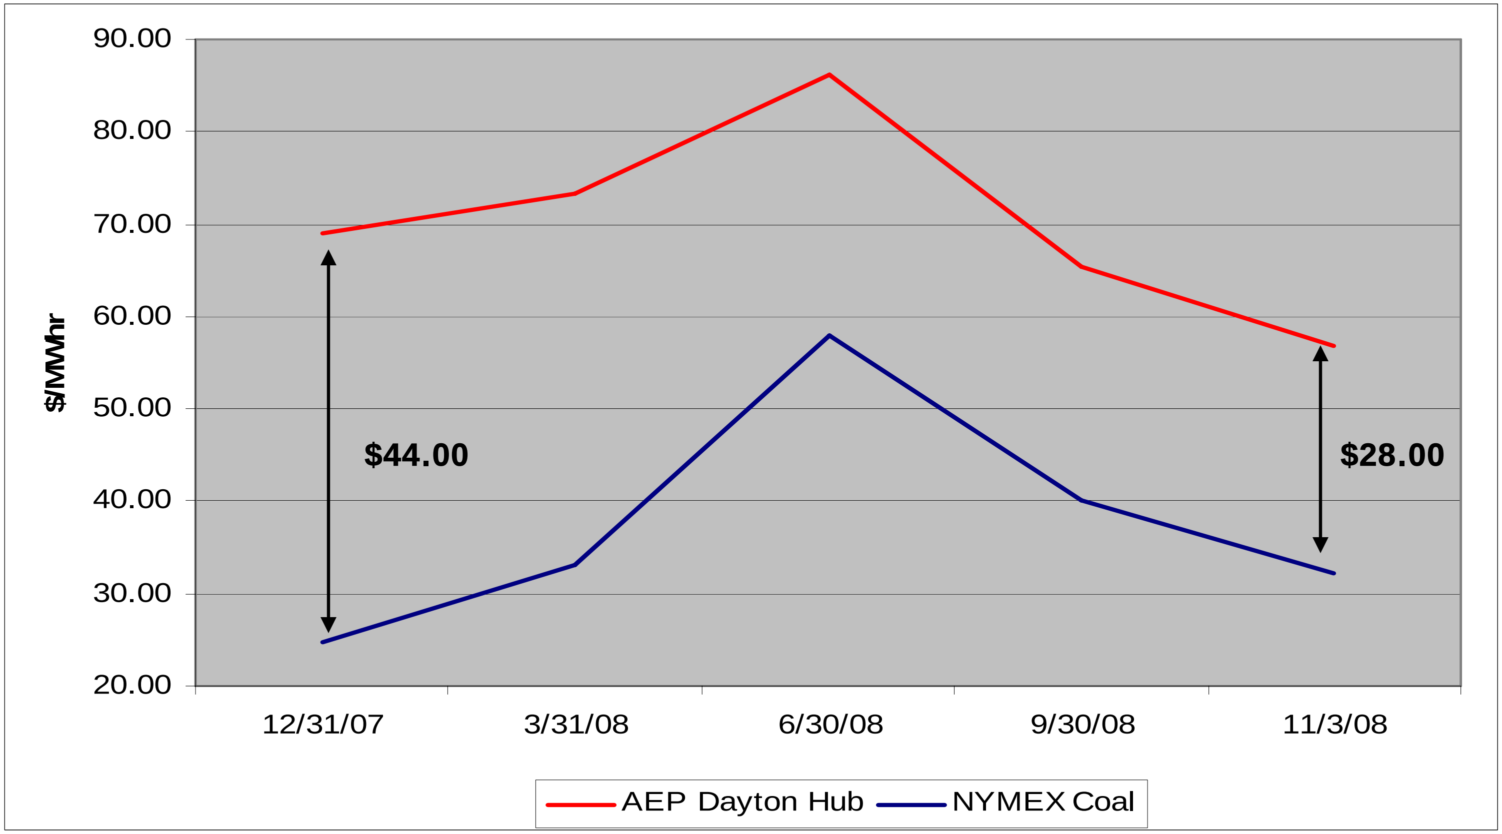
AEP River Operations

- Full-service Inland Waterways carrier
  - 2,900 hopper barges
  - 60+ towboats/20 tugs
- Tonnage & Commodity:
  - Captive: (for AEP)-37MM tons of coal;
  - Commercial: 35MM tons of coal/grain/bulk
- Gulf Operations
  - Barge cleaning and repair
  - Fleeting and shifting
  - Midstream transfers
- Operating Centers in Lakin, WV, Cape Girardeau, MO, Paducah, KY, Convent and Belle Chase, LA

Inland Waterway Routes For AEP River Operations

Dark Spread Comparison

NYMEX Coal vs. AEP-Dayton Hub Peak Electricity



Coal Purchases:
2009: 95+%
2010: 85+%

Del. Coal Prices:
2007A: $36.58/ton
2008E: $46.82/ton

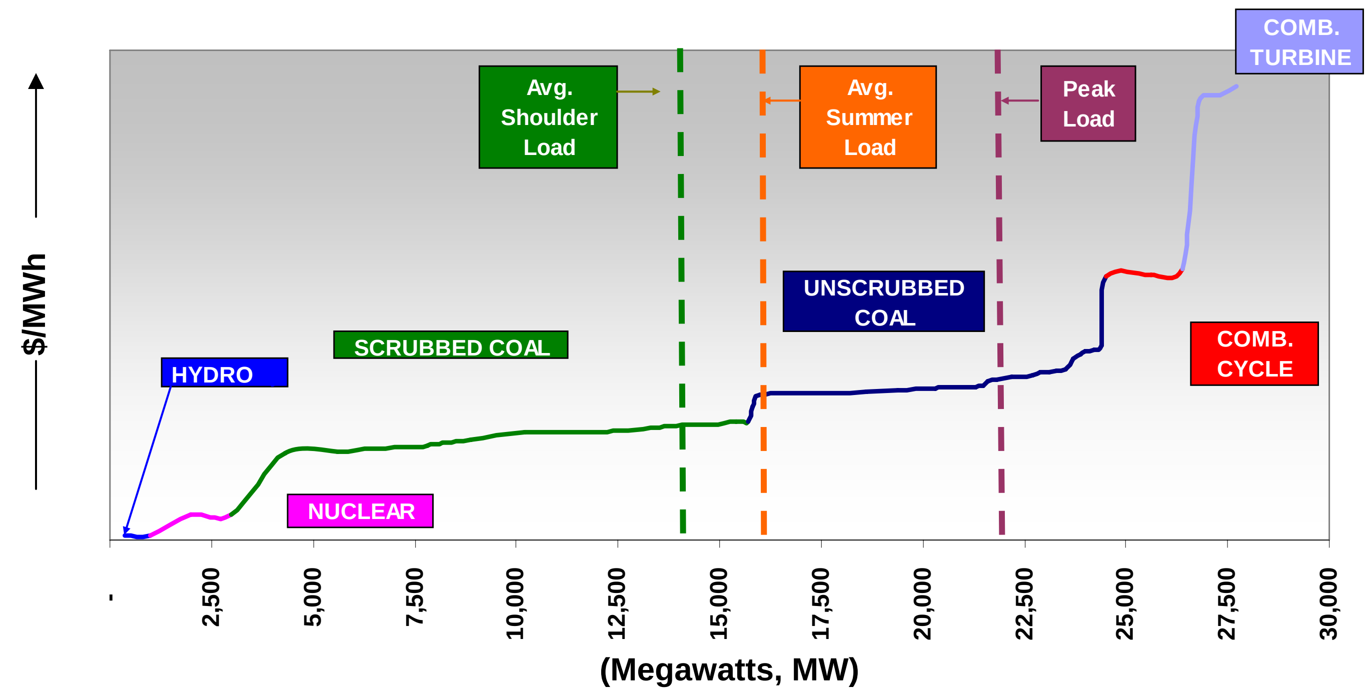
2009 estimated
increase: 12%-15%

- Coal price represents standard NYMEX contract specifications with a heat content of 12,000 Btus/lb
- 10,000 heat rate used for conversion
- Coal and peak electricity prices reflect market prices for calendar year 2009 delivery on the business dates given above

AEP Supply Stack

- Supply stack with Cook unit 1 outage would slide the supply stack 1,009 MW to the left.
- Planned outages typically shorten supply stack in the shoulder months by several thousand megawatts.
- Shoulder periods offer the flexibility to reschedule planned outages.

Typical AEP Supply Stack



With the loss of Cook 1 this fall season, a planned outage on a scrubbed coal unit was cancelled, leaving the supply stack in roughly the same position for off-system sales

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants including our ability to restore I&M’s Donald C. Cook Nuclear Plant Unit 1 in a timely manner, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of the recently passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events. AEP and its Registrant Subsidiaries expressly disclaim any obligation to update any forward-looking information.

AEP AMERICAN ELECTRIC POWER®

Table of Contents

AEP AMERICAN® ELECTRIC POWER

AEP Highlights

Premier utility platform

- Leadership position in electric generation, transmission and distribution operations
- Cash flow, earnings and regulatory diversity
- $6.4 billion utility capital expenditure program (2009-2011) will continue to drive rate base growth

Effective regulatory relationships

- Traditional recovery mechanisms with equitable risk allocation enhance both earnings and cash flow
- Emerging energy policies play to AEP's strengths (transmission, energy efficiency, reliability)
- Constructive local relationships deliver successful regulatory outcomes

High-growth transmission business

- The leading US transmission owner, operator, and developer
- Exceptional portfolio of high-quality development projects and project partners
- Attractive ROEs, regulatory support and access to capital will drive earnings growth beyond our traditional utility footprint

Stable financial position

- Maximization of shareholder value through regulated utility and transmission investments
- Balanced approach to cost containment and capital allocation
- Commitment to investment grade profile, prudent balance sheet, and liquidity management
- Conservative dividend payout with attractive yield

AMERICAN® ELECTRIC POWER

AEP Supports Climate Legislation

Key Design Elements:

- **Reductions and Timing -** Moderate with adequate lead times
- **Scope of Program -** Economy-wide w/ preemption of EPA authority to regulate CO_2 under existing Clean Air Act
- **Flexibility of the Program -** Market-based system w/ credit trading, banking, unrestricted offset use & early action credits
- **Allowance Allocation And Other Cost Issues -** Full, free allocation to electric sector and "Low" auctions
- **Technology Development/Deployment -** Bonus allowances or other support for carbon capture and storage (CCS)
- **International Linkage -** e.g. AEP-IBEW proposal on international competitiveness

AEP AMERICAN® ELECTRIC POWER

AEP's Near-Term CO_2 Reduction Commitment

Existing Programs

- Existing plant efficiency improvements
- Renewable Energy
  - 1785 MWs of Wind
  - 722 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr
  - Over 63MM trees planted through 2008
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

AEP's reductions/offsets of CO_2:
2003-2010: 48 MMT Total

New Program Additions (by 2011)

- 1000 additional MWs of Renewable through PPAs
- Domestic Offsets (methane, forestry): About 2MM tons/yr
- Fleet Vehicle/Aviation Offsets: 0.2MM tons/yr
- Additional actions: Energy efficiency and biomass: 0.3MM tons/yr

New Technology Additions

- New Generation – Ultra Super Critical
- Carbon Capture and Storage (CCS) for existing fleet
  - Chilled Ammonia

AEP's reductions/offsets of CO_2:
2011+: 5 MMT/Year
Longer Term - New Technology

AEP AMERICAN ELECTRIC POWER®

Mountaineer CCS Update

PROJECT STATUS

- September 2 – successfully captured CO_2
- October 1 - began underground injection and storage
- October 30 – facility dedicated

NEXT STEPS

- Monitor the CO_2 behavior once underground
- Assess the parasitic load impact of the equipment on the plant
- DOE funding requested for 50% of commercial phase of project ($334MM); project expected to be operational between 2012 and 2015

PROJECT DESCRIPTION

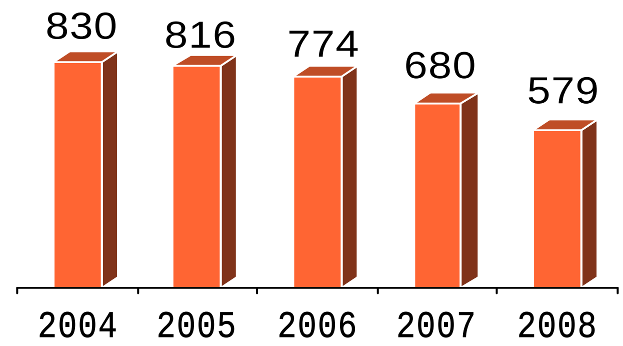
- Alstom's chilled ammonia process captures CO_2 from a 20 MWe slipstream of flue gas at AEP's Mountaineer plant located in New Haven, WV
- Captured CO_2, transformed to a semi-liquid state, is pumped into sandstone or dolomite layers approximately 1.5 miles underground. Caprock will hold the CO_2 in place permanently.

AEP AMERICAN® ELECTRIC POWER

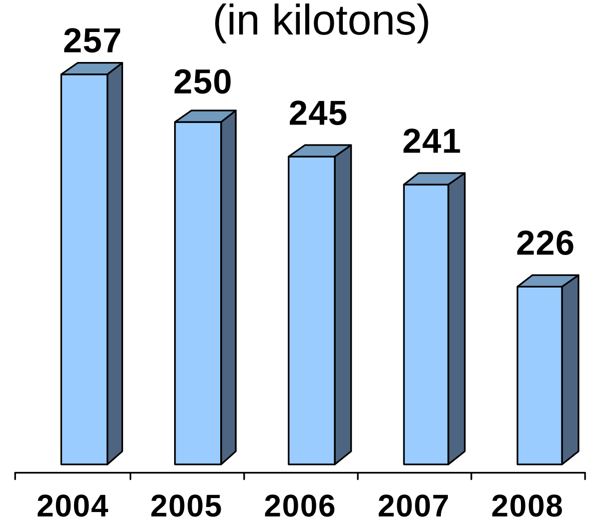
Environmental Program

- Environmental retrofits keep coal plants viable in order to take advantage of vast domestic fuel resources
- Scrubbers and SCRs reduce emissions of SO_2, NOx and Mercury
- Environmental technology installed on existing plants delays the premature retirement of those plants, thereby keeping low cost generation assets available to the market
- Since 2004, we have invested $4.4 billion in environmental retrofits to meet obligations required by environmental regulations

Annual SO_2 Emissions
(in kilotons)



Annual NOx Emissions
(in kilotons)



New Generation Projects

- John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant. Located in AEP's SWEPCo region AEP owns 73 percent or roughly 440 megawatts of the total unit.
  - The cost of the plant is anticipated at $1.6 billion with AEP's share approximately $1.2 billion and will begin commercial operation in 2012.
  - SWEPCo's share of the plant's costs will be allocated on the basis of electric load among customers in Arkansas, Louisiana and Texas.
  - The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls.

John W. Turk Jr. Ultra-Supercritical Coal Plant

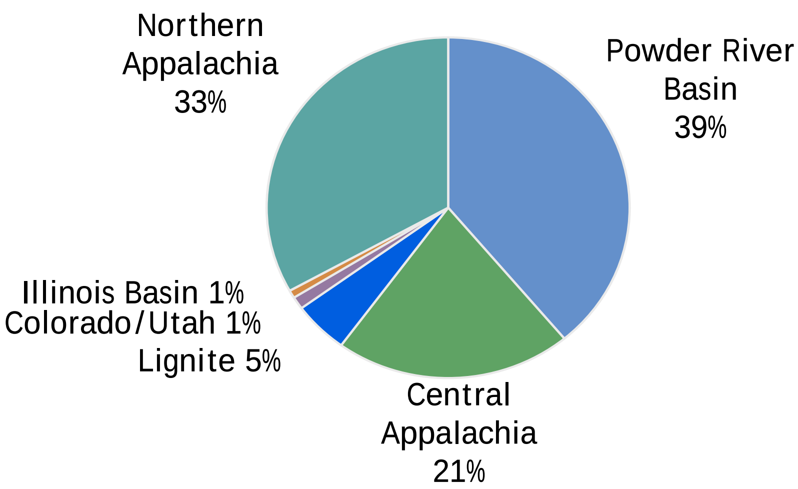
J. Lamar Stall Combined-Cycle Gas Plant

- J. Lamar Stall Combined-Cycle gas plant is a 508-MW unit scheduled for commercial operation in 2010.
  - The total projected cost of the plant is $386 million.
  - The plant is located in AEP's SWEPCo region at its existing Arsenal Hill Power Plant in Shreveport, Louisiana.
  - The plant will be used to service the needs of customers in the Arkansas, Louisiana and Texas service territories.

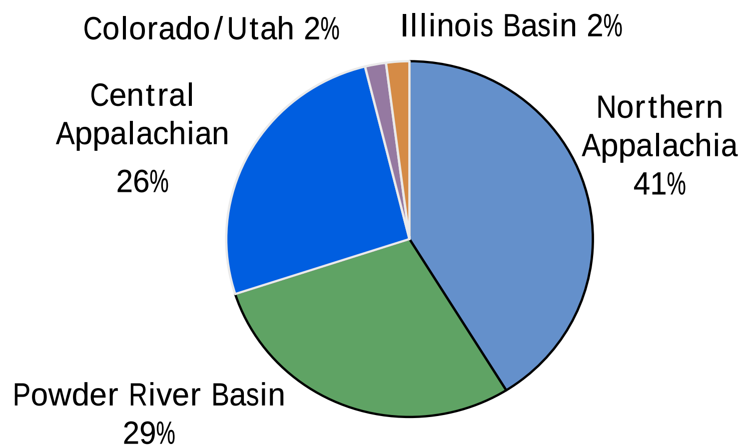
AEP AMERICAN® ELECTRIC POWER

Coal Procurement - 2010 Projected

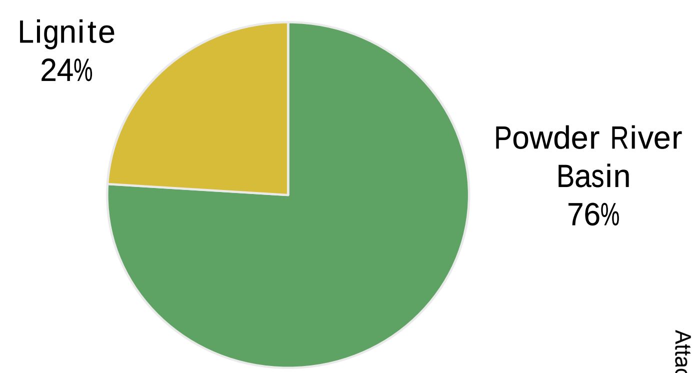
Total AEP System



AEP East



AEP West



Coal Stats:

- 100% contracted for 2009 and 98% for 2010
- Avg. delivered price ~ $47/ton in 2008
- Approximate 10% price increase in 2009 ~ $51/ton
- Approximate 10% price decrease in 2010 ~$46/ton

Summary Rate Case Information

SWEPCO Texas General Rate Case

On August 28, 2009 SWEPCO filed a base rate case with the Public Utility Commission of Texas requesting an increase of $75 million to cover costs related to the construction of the Stall and Turk plants as well as enhanced distribution reliability spending. (Docket# 37364) An order is expected in July, 2010.

Transmission Investment Opportunities

- **ETT: Projects in Texas ERCOT jurisdiction**
  - Framework in Texas allows for more expeditious siting and recovery
  - $600MM of projects est. in service 2010-2013 with $236MM spent as of 9/30/2009
  - ETT's opportunity could reach $3.1B in the next decade

- **Transco: Within our existing footprint**
  - Provides opportunity to:
    - Develop new AEP-only projects within AEP's footprint
    - Reduce regulatory lag through FERC formula rates adjusted annually
    - Enhance access to capital
    - First year investment opportunity--$118MM

- **Joint Ventures: Outside of our footprint, with ETA or others**
  - Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
  - State and future Federal RPS will provide enhanced investment opportunities
  - Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2015
  - Robust pipeline of projects up to $15B

Transco

- **Transco will be used to develop significant new on-system, AEP-owned investment**
  - Greenfield Projects
  - Station Additions
  - System Upgrades
- **Next steps:**
  - Obtain state utility status where required and join PJM and SPP as a transmission owner
  - FERC tariff for Transco filed December 1, 2009 with rates effective and first projects in service in 2010
  - Seek retail tracking mechanisms at the state level (OH, LA, VA, TX-ERCOT already secured)

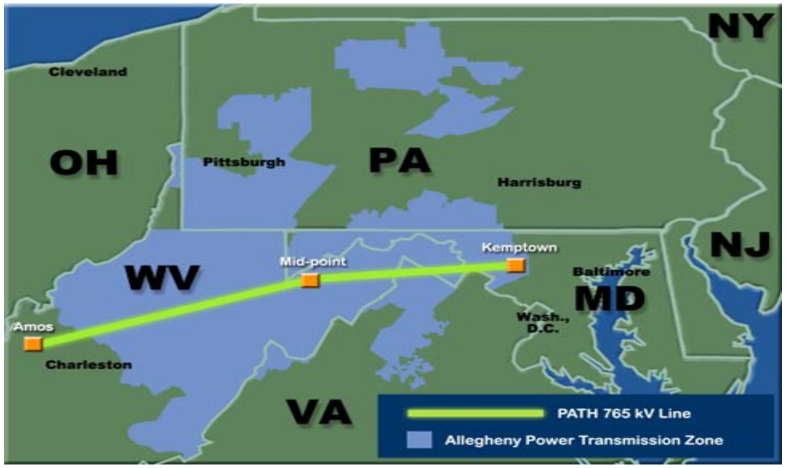
AEP AMERICAN® ELECTRIC POWER

EHV Transmission in PJM: PATH

Project Description: 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

Overview

- FERC order issued on February 29, 2008 approving:
  - Cash return on CWIP and 14.3% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect, and
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
  - Rates went into effect March 1, 2008; current annual revenue requirement is $15MM effective 1/1/09



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges

- Obtaining a CPCN in West Virginia or costly concessions with WV to receive the CPCN; CPCN filing made May 15, 2009 with a decision expected February, 2011.
- Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million
- Estimated completion date: 2014

PATH
Potomac-Appalachian Transmission Highline

AEP AMERICAN® ELECTRIC POWER

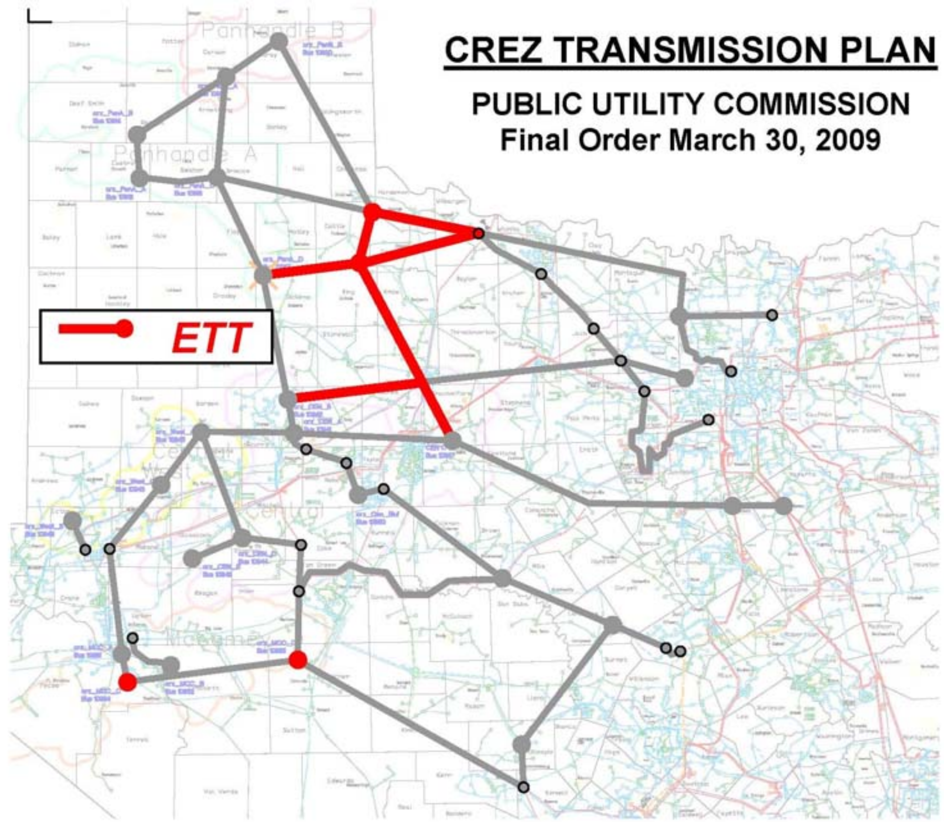
Texas CREZ Project

Overview

- On February 26, 2009, PUCT ordered its staff to stage the development of CREZ transmission lines.
- Staging to occur in separate docket and consider timing of wind projects and congestion.
- PUCT established 2 categories based on priorities. ETT has no first priority lines.
- PUCT issued a final order assigning transmission service providers on March 30, 2009.
- ETT's share of CREZ investment is approx. $840MM of $4.9B total of which AEP's ownership is 50%.
- The filing calls for completion of the plan by 2013.

Next Steps

- Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in 2010.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

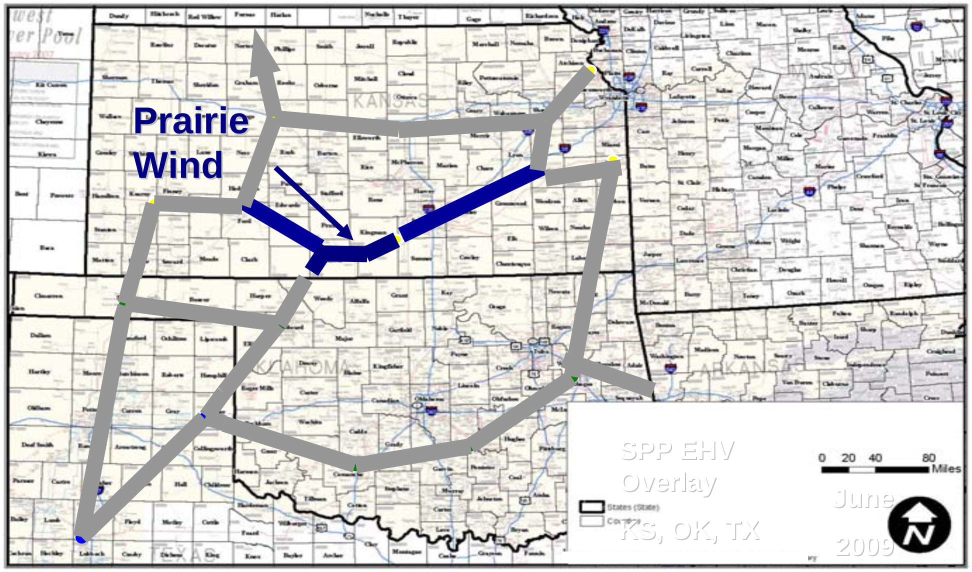
ETT
Electric Transmission Texas

AEP AMERICAN ELECTRIC POWER

Prairie Wind Transmission, LLC

Overview

- In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
- Following a settlement agreement with ITC both entities agreed to split the mileage and costs of building the 765-kV transmission superhighway. The newly revised project is expected to cost approximately $400 million and be in-service by 2013. Settlement was approved by the KCC on July 24, 2009.
- PWT is a 50/50 JV that is proposing to build approximately 110 miles of 765-kV lines extending from Wichita, KS, west to a substation near Medicine Lodge, KS, and then south to the Kansas border from Medicine Lodge, KS.
- The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect, and
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PWT or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges

- RTO Approval

AEP AMERICAN ELECTRIC POWER

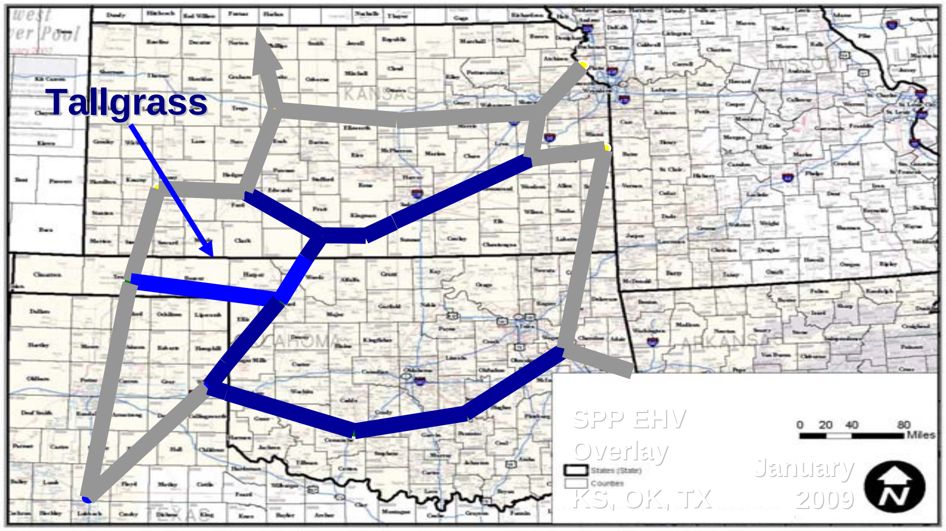
Page 769 of 9556

Tallgrass Transmission, LLC

Overview

- In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
- TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines extending from the Kansas-Oklahoma border north of Woodward, OK, extending west into the Oklahoma panhandle to a new station that will be built near Guymon, OK.
- The project will promote wind development in the western half of Oklahoma.
- Project is expected to cost approximately $500 million and be in-service by 2013-14.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect, and
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of TG or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges

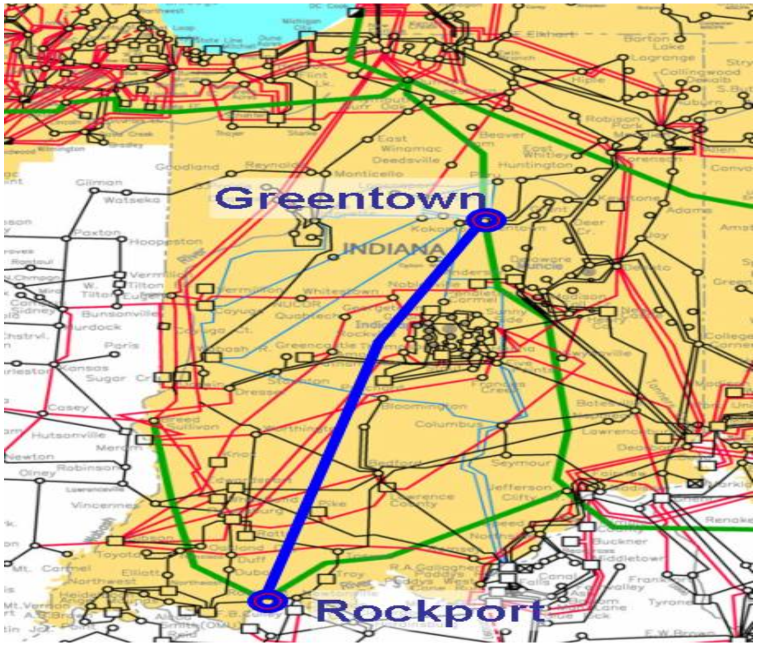
- RTO Approval

AEP AMERICAN® ELECTRIC POWER

Pioneer Transmission, LLC

Overview

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
- The project will improve the reliability of the nation's transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, protect national security and expand opportunities for new generation, including renewables.
- Project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP's ownership of the joint venture is 50%.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect, and
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PT or its parents.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges

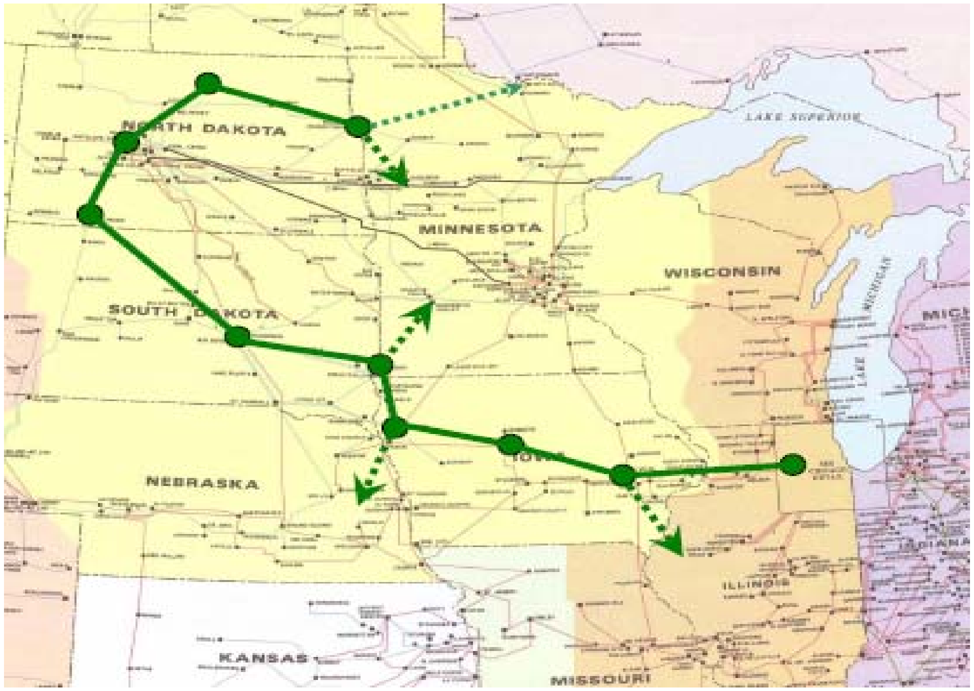
- Cost allocation which enables the development of "system solutions"
- RTO Approval - touches two RTOs – PJM & MISO
- Siting

AEP AMERICAN® ELECTRIC POWER

Upper Midwest EHV Development—SMART Study

Project Description: 1000+ miles of 765-kV transmission linking Upper Midwest generation sources with the existing EHV infrastructure in the Chicago area expected to cost $5-$10 billion over a 10 year period.

- **Announced SMARTransmission Study in August 2009.**
  - Participants include ETA, Exelon, ATC, Northwestern, MidAmerican and Xcel
  - Study due to be completed in early 2010 and will include “overlay” options and quantification of economic benefits.
- **Near Term Risks**
  - Obtaining cost allocation between states, PJM, and MISO
  - RTO Technical Approvals
  - Favorable 205 Order including incentives
- **Mitigation**
  - Collaborative approach involving impacted utilities, RTOs, commissions and others

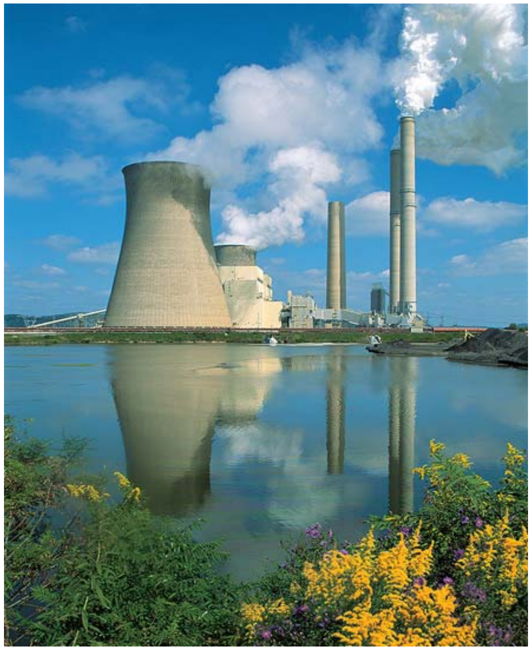


The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP AMERICAN ELECTRIC POWER

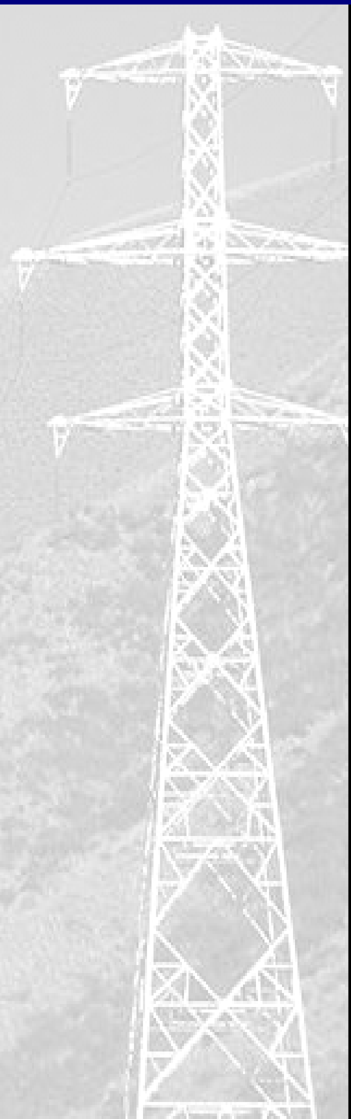
Investment Attributes

- **Strong utility platform**
  - Consistent regulatory outcomes
  - Active fuel recovery
  - Geographic and regulatory diversity
  - Growth through capital investment
- **Consistent dividend policy**
  - 50-60% payout ratio targeted
  - Nearly a century of dividend payments to shareholders
- **Growth Opportunities**
  - Investment in utility platform greater than depreciation level (2 - 4%)
  - With transmission opportunities (4 - 8%)
  - Capital investment to comply with carbon legislation



General JM Gavin Plant (OH)

AEP AMERICAN ELECTRIC POWER



1Q05 Earnings Release Presentation

April 28, 2005

"Safe Harbor" Statement Under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to control operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

1Q 2005 Performance Drivers

Weather Impact: Negative $0.02 vs. normal
Negative $0.02 vs. prior yr.

- *Decreased margins reflecting increased fuel and unfavorable weather; partially offset by growth in retail customers & industrial demand*
- *Texas Supply margins down due to divestiture of assets and the cessation of RMR and Centrica supply contracts*
- *Lower transmission revenues due to elimination of T&O rates*
- *Lower O&M expenses largely due to timing differences*
- *Decreased interest expense reflecting refinancings completed in 2004*
- *Other Income & Deductions line includes: (1) $70 MM of Centrica earnings sharing; (2) return on environmental additions in Ohio ($26 MM); and (3) carrying costs on TX stranded costs ($22 MM)*

Note: For analysis purposes, certain financial statement amounts have been reclassified for this effect on earnings presentation.

1Q06 Earnings Release Presentation

April 27, 2006

"Safe Harbor" Statement Under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

1Q 2006 Performance Drivers

Weather Impact: Negative $0.06 vs. normal
Negative $0.04 vs. prior yr.

- *Increased margins reflecting customer growth, new muni & coop power supply contracts, usage and price; Ohio RSP ($49MM); Buckeye Emissions allowances gains ($9.4MM); slightly offset by weather.*

- *Lower off system sales due to lower volumes and margins (sale of STP) and trading contribution.*

- *Increased amortization expense associated with amortization of regulatory assets primarily at the Ohio Companies .*
- *Interest expense increase due to higher debt balances and interest rates.*
- *Other Income & Deductions decline due to lower carrying costs for the Ohio companies ($19MM).*
- *Income taxes increase driven by higher pretax income.*

Beginning Cash & Cash Equivalent Balances	320	401
Ending Cash & Cash Equivalent Balances	1,261	276

1Q 2006 Cash Flow Drivers

- *Changes in working capital had a negative cash effect of $123MM primarily as a result of an increase in fuel inventories and decreased customer deposits.*
- *$71MM positive cash effect partly due to deferred fuel recovery at PSO and SWEPCo.*
- *Cash outlay of $772MM in 1Q06 for capital investment. FY 2006 guidance assumes $3.7 billion in capital investment.*
- *1Q06 primary asset sale proceeds: Centrica sharing ($70MM) and Bajio ($29MM); 1Q05 primary asset sale proceeds: HPL ($1B) & Centrica sharing ($70MM);*
- *Portion of HPL sale proceeds used to repurchase shares in 1Q05.*
- *Capex in 1Q06 was funded with short-term debt ahead of long-term debt financing.*
- *Ending cash balance for 1Q06 of $276MM. 2006 guidance assumes year-end cash balance of $326MM.*

1Q 2007 Performance Drivers

- *Retail Sales (lines 1-4):*
  - *Rate relief primarily in OH, WV, VA and KY - $93MM*
  - *Positive load growth - $34MM*
  - *Favorable weather - $40MM*
  - *Slightly offset by lower FTR income - ($27MM)*
- *Off-System Sales (line 5):*
  - *Lower margins in the East due to lower plant availability, primarily associated with scrubber tie-ins*
- *Transmission Revenue (line 6):*
  - *Lower due to absence of SECA revenues in 1Q07*
- *Other Operating Revenue (line 7):*
  - *Securitization revenue related to the October 2006 Texas securitization (offset in lines 10 and 12), partially offset by lower contribution from emission allowance sales*
- *Operations & Maintenance (line 9):*
  - *Increased due to plant outages and removal expense, storm costs and increased vegetation management*
- *Depreciation & Amortization (line 10):*
  - *Increased primarily due to increased depreciable asset base and increased amortization of regulatory assets related to the Texas securitization and the APCo E&R deferrals.*
- *Interest Expense (line 12):*
  - *Increased due to increased long term debt outstanding, including Texas securitization bonds issued in October 2006, and higher interest rates, partially offset by AFUDC-debt of $27MM in 2007 and $17MM in 2006*
- *Other Income & Deductions (line 13):*
  - *Decreased due to Centrica sharing payment of $20MM in 2007 vs. $70MM in 2006 and reduced carrying charges of $22MM primarily due to the Texas securitization in October 2006; includes AFUDC-equity of $8MM in 2007 and $6MM in 2006*
- *Income Taxes (line 14):*
  - *Down primarily due to decreased income; effective tax rate for utility operations of 33.2% in 2007 and 33.8% in 2006*

Ending Cash & Cash Equivalent Balances	276	259

1Q 2007 Cash Flow Drivers

Operating Activities

- *Changes in Working Capital largely driven by G&A-type items*

Investing Activities

- *Cash outlay of $907 million for 1Q 2007 capital investment. FY 2007 guidance assumes $3.9 billion in capital investment, including new generation purchases*
- *2007 primary asset sale proceeds: Centrica sharing ($20MM) and TCC's share of Oklaunion ($43MM); 2006 primary asset sale proceeds: Centrica sharing ($70MM) and Bajio ($29MM)*
- *Other Temporary Cash Investments were partially utilized in 1Q07 to support cash needs. The balance was unusually high at December 31, 2006 due to investments purchased with the proceeds from the Texas securitization in 4Q06*

Financing Activities

- *Common stock issuance of $54MM primarily related to the exercise of stock options during 2007*
- *Ending cash balance for Q1 2007 of $259MM. 2007 guidance assumes year-end cash balance of $205MM*

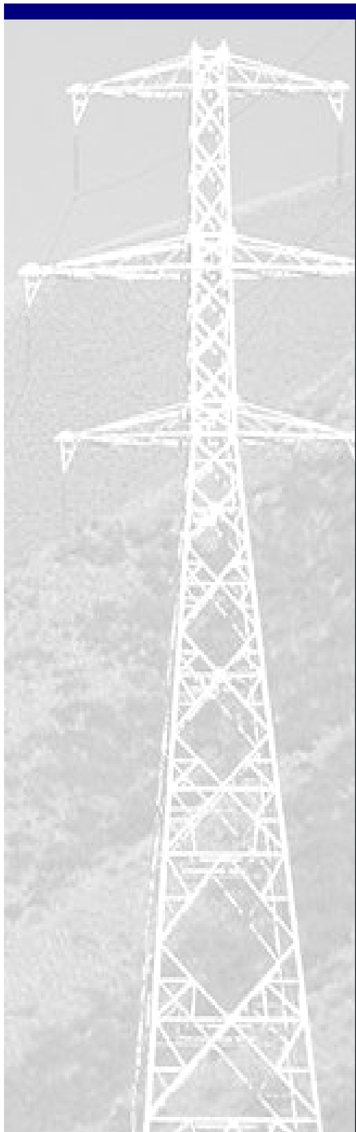
Coal	**43.84%**	**67.68%**	**42.20%**	**73.21%**	**40.48%**	**10.48%**
AEP System	**62.83%**	**62.67%**	**82.30%**	**85.28%**	**7.72%**	**6.22%**

* Super-critical includes coal units with a net maximum capacity of 450MW or greater; Sub-critical includes coal units with a net maximum capacity less than 450MW.

** East gas units are evaluated using Equivalent Forced Outage Factor. Since these units run infrequently, this factor gauges performance based on period hours instead of service hours.



1Q08 Earnings Release Presentation

April 24, 2008

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate relief or other recovery for new investments, transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements periodically issued by accounting setting bodies; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

First Quarter 2008 Highlights

- 1Q08 GAAP Earnings $1.43 per share; Ongoing Earnings $1.02 per share
- Reaffirming 2008 Ongoing Earnings Guidance Range of $3.10 to $3.30 per share
- Ohio developments
- Incremental Rate Relief - $481MM of $518MM for 2008 secured
  - Positive PSO storm settlement outcome
- New Generation
  - Turk Plant
  - IGCC
- Transmission
  - Favorable FERC order on the PATH project authorizing a 14.3% ROE

Continued track record of financial and operational excellence

1Q08 Performance Drivers:

- *Retail Sales (lines 1-4):*
  - *Minimal weather impact of $(3)MM versus prior year and $3MM versus normal; $0.00 per share vs. normal and vs. prior year*
  - *Rate relief $77MM; (APCo, Ohio RSPs, PSO & Texas Wires)*
  - *Positive load growth including new customers; $54MM*
  - *Offset by:*
    - *Unrecovered PJM marginal losses; $12MM*
    - *Increased OSS sharing; $16MM*
- *Off-System Sales (line 5):*
  - *Favorable due to higher prices and volumes, primarily due to higher plant availability in 1Q08*
- *Operations & Maintenance (line 9):*
  - *Decrease primarily attributed to PSO storm settlement booked in 1Q08, offset slightly by the Red Rock write-off*
- *Depreciation & Amortization (line 10):*
  - *Decrease primarily attributed to decreased depreciation in Indiana, Michigan, Texas, Virginia and Oklahoma related to approved rate proceedings in 2007 and lower regulatory asset amortization at the Ohio Companies*
- *Interest Expense & Preferred Dividend (line 12):*
  - *Higher due to increased long-term debt outstanding and higher interest rates on variable-rate debt*
- *Income Taxes (line 14):*
  - *Effective tax rate for utility operations was 33.6% in 2008 and 33.2% in 2007*

2008 Cash Flow

Beginning Cash & Cash Equivalent Balances	301	178
Ending Cash & Cash Equivalent Balances	**$ 259**	**$ 155**

2008 Cash Flow Drivers:

Operating Activities

- Changes in working capital largely driven by changes in accrued taxes and accounts receivable/payable.
- Changes in other assets and liabilities largely driven by changes in regulatory and other non-current assets.

Investing Activities

- Cash outlay of $778 million for 1Q08 capital investment.
- 2008 asset sale proceeds relate to miscellaneous utility property sales; 2007 asset sale proceeds relate to Centrica sharing $20MM and TCC's sale of its share of Oklaunion $46MM.
- Change in Other Temporary Cash Investments was unusually large during 1Q07 due to receipt of the Texas securitization funds in 4Q06. The 2008 activity is a more normalized amount.
- Change in Other Investing primarily relates to the purchase of nuclear fuel of $99MM in 1Q08.

Financing Activities

- 2008 common share issuances of $45MM primarily due to issuances through the dividend reinvestment program.
- Changes in long and short term debt driven by capital funding requirements.

1Q11 Earnings Release Presentation

April 21, 2011

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M's Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events and our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives..

First Quarter 2011 Highlights

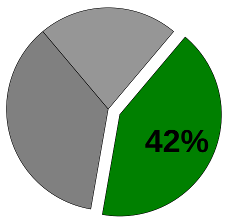
- **Financial Performance**
  - Delivered GAAP earnings of $0.73 and on-going earnings of $0.82/share
  - Reaffirming 2011 earnings guidance of $3.00 to $3.20 per share
    - Maintain 2012 point estimate of $3.25 per share
- **Regulatory Plan**
  - Rate proceedings – $200M of $235M secured (85%)
  - Ohio
- **Environmental Update**
  - Transport Rule
  - Mercury and HAP MACT
  - Coal Ash Rule
  - 316(b) Rule

AEP Coal Fleet Assessment

2012 – 2020

Range of Capital ($Millions) (1)

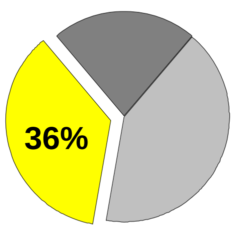
Least Exposed



Operating Company	MW
APCo	4,220
CSPCo	1,277
Ohio Power	4,820
	10,317

Proposed Rules		Low		High
Water Rules (2)	$	5	$	9
CCR Rules	$	759	$	1,122
Air Rules (3)	$	766	$	1,046

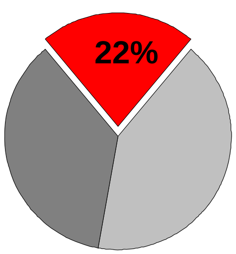
Partially Exposed



Operating Company	MW
CSPCo	803
I&M	2,600
KPCo	800
Ohio Power	585
PSO	1,025
SWEPCo	2,690
TNC	385
	8,888

Proposed Rules		Low		High (4)
Water Rules (2)	$	26	$	46
CCR Rules	$	357	$	726
Air Rules (3) (5)	$	2,225	$	6,417

Fully Exposed



Operating Company	MW
APCo	1,740
CSPCo	265
I&M	995
KPCo	260
Ohio Power	2,220
	5,480

		Low		High
Replacement Generation	$	973	$	1,807
Grand Total	**$**	**5,111**	**$**	**11,173**

(1) The impact of all proposed rules continues to be under review. Project scope and technical assessments are ongoing. Any change in scope will impact the capital cost ranges.

(2) Gas plants are not included. Proposed 316 (b) will impact some gas facilities.

(3) Proposed Air Rules include: HAPs, CATR and Regional Haze Federal Implementation Plans in OK & AR

(4) Potential replacement generation for partially exposed units is $1,700MM which could offset certain estimates in the high case shown.

(5) Includes NSR Compliance.

1Q11 Performance

AEP®

First Quarter Reconciliation

	EPS	Ongoing Earnings ($ in millions)
1Q10	$ 0.76	$365
Weather	$ (0.03)	
Retail Margin	$ (0.02)	
Non-Utility Operations, net	$ (0.01)	
Off-System Sales	$ 0.02	
Operations & Maintenance	$ 0.04	
Rate Changes	$ 0.06	
1Q11	$ 0.82	$392

1Q11 Performance Drivers

- Weather was unfavorable by $20M vs. prior year, favorable $20M vs. normal
- Retail Margin down $17M due to lower residential utilization, offset by increased industrial usage
- Non-Utility Operations/Parent decreased $4M, primarily driven by Generation and Marketing
- Off-System Sales, net of sharing, were favorable by $12M due to higher volumes and capacity payments
- O&M expense net of offsets decreased $30M primarily due to lower storm restoration expenses and cost savings initiatives
- Rate Changes net of offsets of $44M from multiple operating jurisdictions

Normalized Load Trends

Reaffirming Guidance

2011 Guidance: $3.00 - $3.20 per share

2012 Point Estimate: $3.25 per share

2011 Earnings Drivers

- Recovering Economy
- Rate changes (85% secured)
- Continued O&M discipline - decrease net of offsets
- Customer switching – Ohio
- Off-system sales

2012 Earnings Drivers

- Recovering Economy
- Rate changes: Ohio Distribution, VA and cases not yet announced
- Continued O&M discipline
- Reasonable AEP-Ohio Outcome

1Q 2011 Cash Flow Drivers:

Operating Activities

- Changes in working capital largely driven by coal inventory and accrued taxes.

Investing Activities

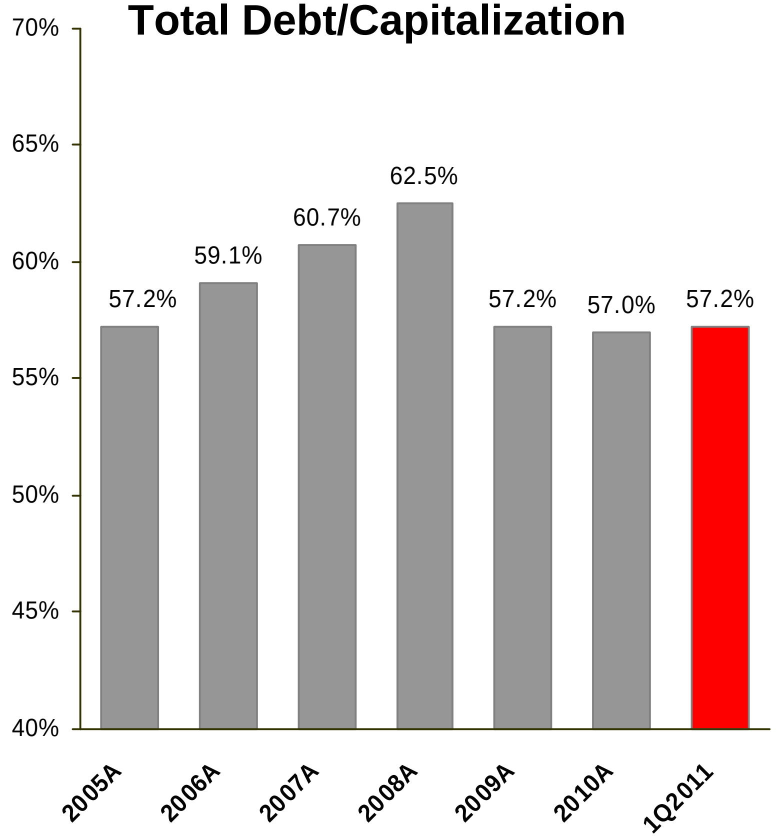
- Cash outlay for 2011 YTD capital investment.
- Asset Acquisition represents the receipt of title to the natural gas in the Bammel storage facility in conjunction with the Enron Bankruptcy settlement.

Financing Activities

- Changes in long-term debt driven by pre-funding of APCo April 2011 maturity.

Capitalization & Liquidity

Total Debt/Capitalization



Note: Total Debt is calculated according to GAAP and includes securitized debt

Current Liquidity Summary

Liquidity Summary (unaudited)	**Actual 03/31/11**

AEP AMERICAN® ELECTRIC POWER

1Q10 Earnings Release Presentation

April 29, 2010

AEP®

A CENTURY OF DIVIDENDS • 1910 - 2010

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants including our ability to restore I&M's Donald C. Cook Nuclear Plant Unit 1 in a timely manner, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of the recently passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events. AEP and its Registrant Subsidiaries expressly disclaim any obligation to update any forward-looking information.

First Quarter 2010 Highlights

- **FINANCIAL PERFORMANCE**
  - Delivered GAAP earnings of $0.72 and on-going earnings of $0.76/share
  - Reaffirming 2010 guidance of $2.80 to $3.20/share
  - Moody's rating outlook changed to 'Stable' from 'Negative'
- **CORPORATE ACTIONS**
  - Declared 400th consecutive quarterly dividend and raised dividend 2.4%
  - Released Corporate Accountability Report - first integrated sustainability and annual report in the industry
  - Cost cutting initiatives underway
- **REGULATORY UPDATE**
  - Rate proceedings – $199MM of $320MM secured for 2010
  - Ohio SEET
  - Rate cases– Virginia and Kentucky
- **TRANSMISSION UPDATE**
- **FEDERAL LEGISLATION/EPA UPDATE**

1Q10 Performance

First Quarter Reconciliation

		EPS	Ongoing Earnings ($ in millions)
1Q09	$	0.89	$360
Share Count Effect	$	(0.13)	
Rate Changes	$	0.13	
Load	$	(0.06)	
Weather	$	0.06	
OSS	$	0.02	
Other Utility Operations, net	$	(0.11)	
Non-Utility Operations/Parent	$	(0.04)	
1Q10	$	0.76	$365

1Q10 Performance Drivers

- Share count impact due to 71MM weighted average shares outstanding increase (407MM to 478MM) from equity offering and DRP
- Rate Changes of $81MM from multiple operating jurisdictions
- Load of $-36MM, primarily due to economic conditions
- Weather was favorable by $37MM vs. prior year, $40MM vs. normal
- OSS was favorable by $12MM due to enhanced generation availability and solid performance from the trading organization
- Other Utility Operations, net decreased approximately $70MM and primarily includes the absence of accidental outage insurance and higher interest expense, D&A and other taxes
- Non-utility operations decreased $14MM due to reduced deal flow in our Texas marketing business

1Q 2010 Cash Flow Drivers:

Operating Activities

- Application of new accounting guidance represents factored receivables.
- Changes in working capital largely driven by coal inventory, taxes payable and employee related expenses.

Investing Activities

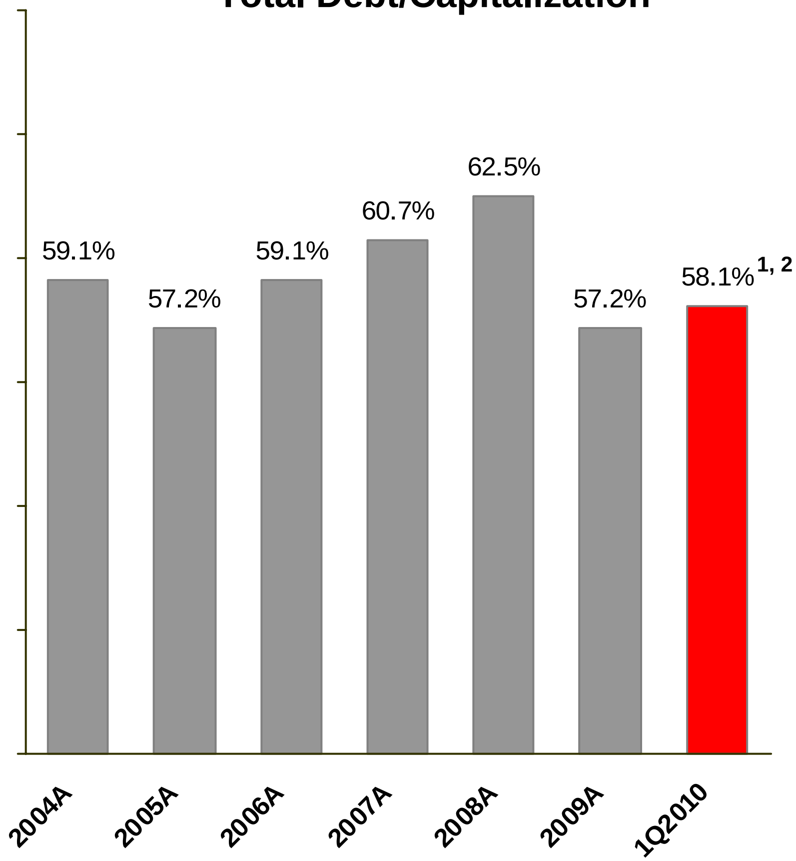
- Cash outlay for 2010 YTD capital investment.
- 2010 asset sale proceeds relate to the transfer of assets to ETT.

Financing Activities

- Changes in long-term debt driven by reduced capital funding requirements.
- Changes in short term debt relate to increased commercial paper activity.
- Application of new accounting guidance represents treatment of factored receivables as short-term debt.

Capitalization & Liquidity

Total Debt/Capitalization



Note: Total Debt is calculated according to GAAP and includes securitized debt

[1]: Effective January 1, 2010 in accordance with Transfers and Servicing accounting guidance (formerly SFAS 166), factored receivables of AEP Credit of $651 million are classified as short-term debt; The 1Q2010 debt/capitalization ratio would be 57.3%, excluding AEP Credit.

[2]: Ohio Power maturity of $400 million paid off on April 5, 2010

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Company Overview

- **AEP Company Overview**

Fall EEI 2005

Company Overview

American Electric Power Co, Inc. is one of the largest investor-owned electric public utility holding companies in the US. We provide generation, transmission and distribution services to over 5 million retail customers in eleven states (Arkansas, Indiana, Kentucky, Louisiana, Michigan, Ohio, Oklahoma, Tennessee, Texas, Virginia and West Virginia) through our electric utility operating companies.

We have seven regional operating companies for distribution and customer service operations that serve the customers of our eleven electric utility subsidiaries:

Regional Operating Companies	Electric Utility Subsidiaries
AEP Ohio	Columbus Southern Power Ohio Power Wheeling Power
AEP Texas	Texas Central Company Texas North Company
Appalachian Power	Appalachian Power Kingsport Power
Indiana Michigan Power	Indiana Michigan Power
Kentucky Power	Kentucky Power
Public Service Company of Oklahoma	Public Service Company of Oklahoma
Southwestern Electric Power Co.	Southwestern Electric Power Co.

We have a significant presence throughout the domestic energy value chain. Our US electric assets include:

- More than 36,000 megawatts of generating capacity (one of the largest US generation portfolios with a significant cost advantage in many of our market areas);
- Approximately 39,000 circuit miles of transmission lines, including 2,026 miles of 765kV lines, the backbone of the electric interconnection grid in the Eastern U.S., and
- 201,666 miles of overhead and underground distribution lines.

With our coal and transportation assets we:

- control over 7,000 railcars
- own and/or operate 2,230 hopper barges and 53 towboats
- operate one active coal-handling terminal with 20 millions tons of capacity

In addition we consume approximately 75 million tons of coal annually.

Our focus is our core domestic utility business operations. Over the past two years, we have successfully completed the planned divestiture of non-core assets with one exception, which we expect to complete in the near future:

- Mexico – Bajio Project: a 50% interest in a 600-megawatt natural gas-fired electric generation facility located near San Luis de la Pasz, Guanajuato, Mexico.

Company Overview

Business Strategy

AEP's strategy is to focus on domestic utility operations in the U.S. Our objective is to be an economical, reliable and safe provider of electric energy to the markets that we serve. We will achieve economic advantage by designing, building, improving and operating low-cost, environmentally compliant, efficient sources of power and maximizing the volumes of power delivered from these facilities. We will maintain and enhance our position as a safe and reliable provider of electric energy by making significant investments in environmental and reliability upgrades. We will seek to recover the cost of our new utility investments in a manner that results in reasonable rates for our customers while providing a fair return for our shareholders through a stable stream of cash flows, enabling us to pay dependable, competitive dividends. We will operate our competitive generating assets to maximize our productivity and profitability after meeting our native-load requirements.

In summary, our business strategy calls for us to:

Operations

- Invest in technology that improves the environment of the communities in which we operate
- Maximize the value of our transmission assets through membership in PJM, ERCOT and SPP
- Continue maintaining and improving the quality of distribution service
- Optimize generation assets by increasing availability and consequently increasing sales

Regulation

- Focus on the regulatory process to fully recover our costs and earn a fair return while providing fair and reasonable rates to our customers while fulfilling our commitment to invest in environmental projects at our generating plants and
- Recover stranded costs associated with our Texas generation assets in compliance with the law

Financial

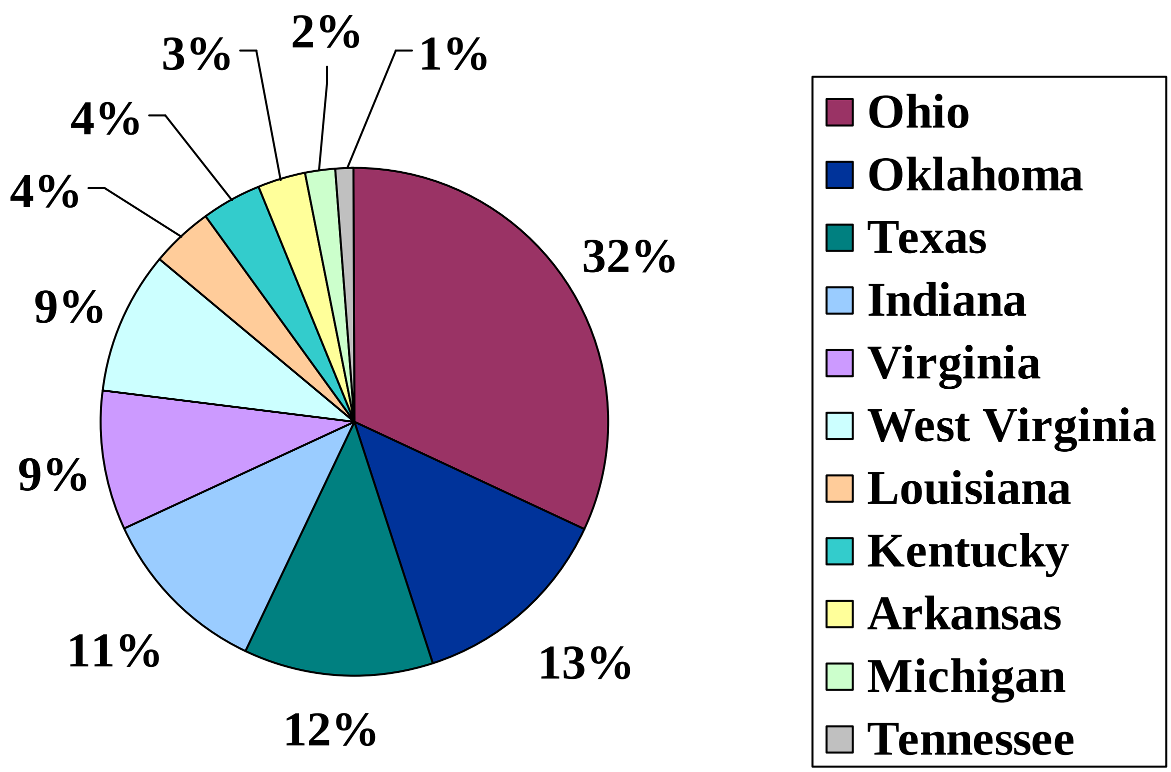
- Operate only those unregulated investments that are consistent with our energy expertise and risk tolerance and that provide reasonable prospects for a fair return and moderate growth
- Continue to improve credit quality and maintain acceptable levels of liquidity
- Achieve moderate but steady growth

2004 Retail Revenue

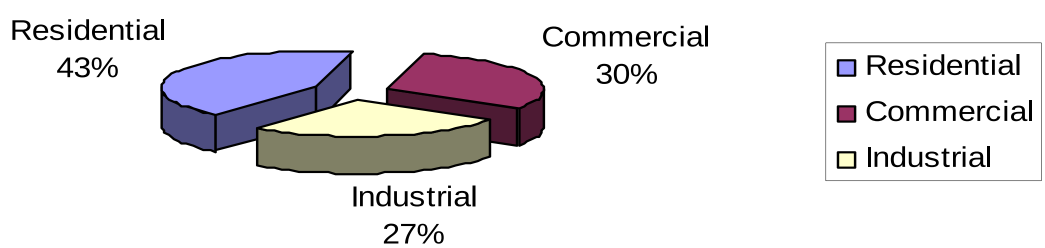
Customer Profile

AEP's service territory encompasses approximately 5 million customers in 11 states: Arkansas, Indiana, Kentucky, Louisiana, Michigan, Ohio, Oklahoma, Tennessee, Texas, Virginia and West Virginia.

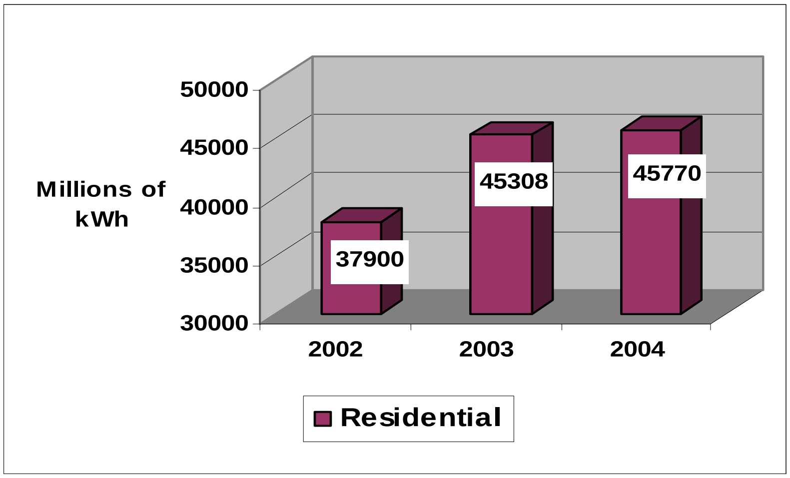
Retail Revenue Composition by State



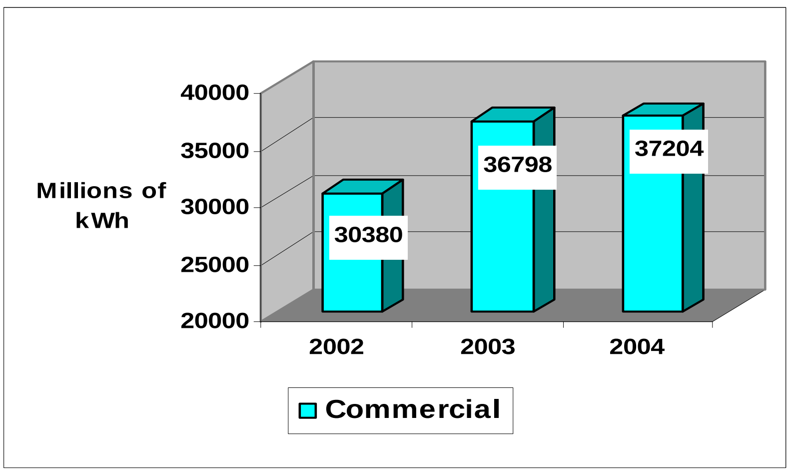
Retail Revenue Composition by Customer Class



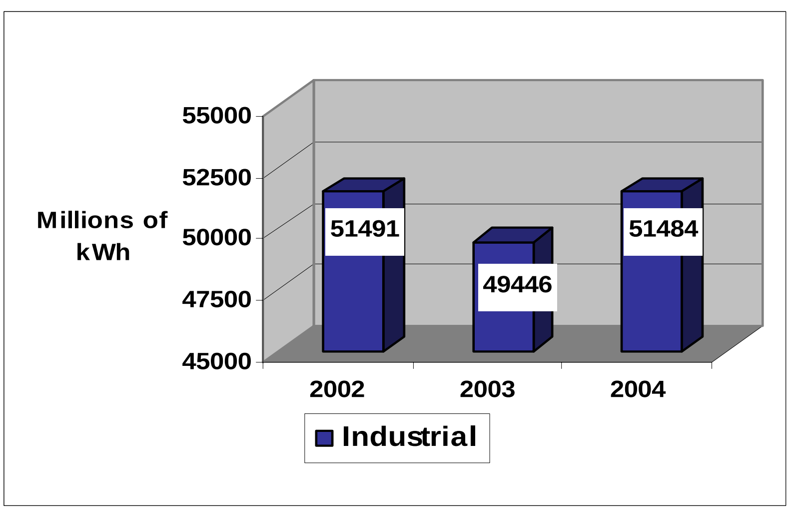
Utility Operations - Load



2 Yr. Compound Annual Load Growth at 9.9%



2 Yr. Compound Annual Load Growth at 10.7%



2 Yr. Compound Annual Load Growth Flat

Note: Figures do not include Texas Retail and Miscellaneous Other

Utility Operations

Generation

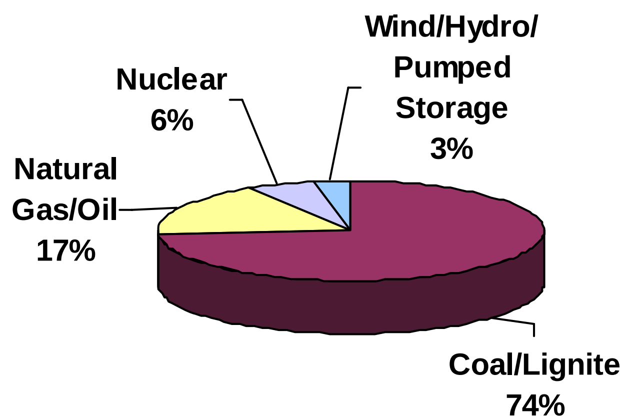
AEP has approximately 36,000 megawatts of generating capacity in 3 power pools. AEP owns all or portions of 70 major generating plants, which include coal/lignite, natural gas, nuclear, wind projects and hydroelectric facilities.

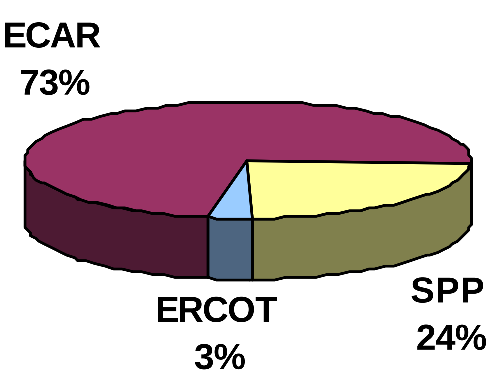
AEP operates generating capacity in its internal power pool under an economic dispatch system[1]. AEP's power pool's competitive, largely coal-based production costs are among the lowest in the nation. AEP's power production costs are also kept relatively low by its reliance primarily on fossil fuel (gas and coal), with only a small overall nuclear dependence.

As shown in the chart below, about 74% of AEP's generating capacity is coal-fired, 17% gas, 6% nuclear, with hydro, wind and pumped storage sources accounting for the balance.

AEP Capacity By Fuel Source & Region [2]

Fuel Source





Regional Presence

[1] Economic dispatch of a generating system utilizes the lowest-cost generating units to meet electric demand at any point in time.

[2] Excludes 1,015 MW of mothballed and/or decommissioned generating capacity.

AEP East Regional Utilities

AEP Ohio

President and Chief Operating Officer: Kevin Walker

Thumbnail profile and history:
AEP Ohio encompasses the AEP service territories within the state of Ohio and the Wheeling W.Va., area. AEP Ohio serves the customers of Ohio Power Company (organized in 1907) and Columbus Southern Power Company (organized in 1937) and Wheeling Power Company (organized in 1883) in northern West Virginia.

Principal industries served include metals, rubber & plastic products, stone, clay, glass & concrete products, petroleum, refining & chemicals, food processing, & paper.

AEP Ohio covers a service territory of 11,327 square miles, and currently has 1,468 employees.

Ohio Public Utilities Commission

AEP Regulated Electric Utilities

Columbus Southern Power Co.

Ohio Power Co.

Commissioners

Number: 5	**Appointed/Elected**: Appointed	**Term:** 5 years	**Political Makeup: R:** 3 **D:** 0 **I:** 2

Qualifications for Commssioners

Five members, appointed by the governor and confirmed by the state senate; five year, staggered terms, full-time positions, commissioners shall be selected from the lists of qualified persons submitted to the governor by the PUC nominating council. Not more than three of the members of the PUCO shall be members of the same political party. The governor appoints one of the five as president, who serves at the pleasure of the governor until a successor has been designated.

Commissioners

Alan R. Schriber, Ph.D., Chairman, (Ind.), since 1999. Term expires April 2009. Economics professor, president of a radio broadcasting company, investment advisor. Previously served as commissioner on the PUCO from 1983-1989. Member NARUC Telecommunications Committee.

Ronda Hartman Fergus, Commissioner, (Rep.), since 1995, reappointed in 2000. Term expires April 2005. Lawyer, Ohio State; previously served on the PUCO staff as an administrative law judge in the Legal Department. Later served as the chief of Telecommunications, Water and Sewer Section of the Legal Department, and then chief of the Telecommunications Technical Staff.

Judy A. Jones, Commissioner, (Rep.), since 1997, reappointed in 2002. Term expires April 2007. Masters degree in Biological Chemistry, Univ. of Michigan. Member NARUC Committee on Electricity, Clean Coal Technology Work Group and chair of the Fuel Source Advisory Council, member of the National Coal Council, and member of the Technical Advisory Committee of the Ohio Coal Development Office.

Donald L. Mason, Commissioner, (Rep.), since 1998, reappointed in 2003. Term expires April 2008. Lawyer, former chief of the Division of Oil and Gas at the Ohio Department of Natural Resources. He serves on the NARUC Gas Committee and the NARUC Ad Hoc Committee on Electric Restructuring.

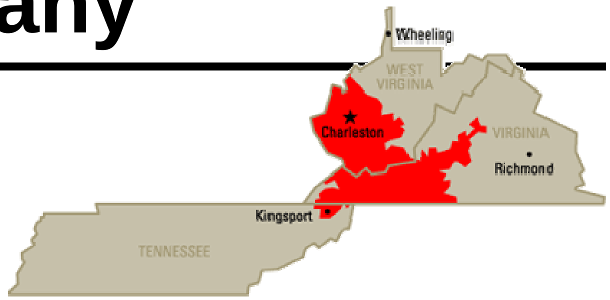
Clarence D. Rogers, Commissioner, (Ind.), since 2001, term expires April 2006. Lawyer, former executive deputy general manager Cleveland Regional Transit Authority, two terms as commissioner of the Ohio Turnpike Commission, assistant US Attorney, private practice as litigator.

AEP Regulatory Status

On January 26, 2005, the PUCO approved Rate Stabilization Plans (RSP) for CSP and OPCo (the Ohio Companies). The plans provided, among other things, for CSP and OPCo to raise their generation rates by 3% and 7% respectively, in 2006, 2007 and 2008 and provided for additional generation rate increases of up to 4% per year based on the Ohio Companies supporting the need for additional revenues. Distribution rates in effect at 12/31/05 are frozen for OPCo and CSP until 12/31/07 and 12/31/08, respectively.

Transmission rates are currently regulated by FERC as reflected in the OATT. CSP and OPCO do not have an active fuel clause (fuel costs are embedded in unbundled G rates).

Appalachian Power Company



President and Chief Operating Officer: Dana Waldo

Thumbnail profile and history: Appalachian Power (APCo), organized in 1926, is headquartered in Charleston, W.Va., and provides service to AEP customers in West Virginia, Virginia, and Tennessee. APCo also serves customers for Tennessee-based Kingsport Power Company.

Principal industries served include coal mining, primary metals, chemicals & textile mill products.

APCo currently has 2,433 employees, and covers a service territory of 19,914 square miles.

Regulatory Information

Public Service Commission of West Virginia

AEP Regulated Electric Utilities

Wheeling Power Co. **Appalachian Power Co.**

Commissioners

Number: 3	**Appointed/Elected:** Appointed	**Term:** 6 years	**Political Makeup: R**: 1 **D:** 2

<u>Qualifications for Commissioners</u>

The West Virginia Public Service Commission (WVPSC) consists of three members, appointed by the Governor, with the advice and consent of the senate. No more than two members of the commission may belong to the same political party. The Commissioners serve six year staggered terms, with one term expiring as of July 1 of each odd numbered year. One Commissioner is designated as Chairman of the Commission by the Governor. The Chairman serves as the chief fiscal officer of the Commission.

<u>Commissioners</u>

Edward H. Staats, (Dem.), since 2003, term expires June 2009. Former Chief of Operations in the Governor's office.

R. Michael Shaw, Commissioner (Rep.), since mid 2003, term expires June 2009. Attorney, former state legislator.

Jon W. McKinney, Chairman (Dem.), since 2005, term expires June, 2011. Formerly served as plant manager of Flexsys' Nitro, W Va operations, chairman of Chemical Industry Committee for W Va, board member of W Va Chamber of Commerce, W Va Manufacturer's Association, Chemical Alliance Zone, W Va Roundtable & Thomas Memorial Hospital.

AEP Regulatory Status

APCo and Wheeling Power filed a joint application on August 26, 2005 seeking increases in base rates/charges, reinstatement of a fuel clause mechanism and establishment of a T&D reliability tracker.

Regulatory Information

Virginia State Corporation Commission

AEP Regulated Electric Utilities

Appalachian Power Co.

Commissioners

Number: 3 **Appointed/Elected** Elected **Term:** 6 years **Political Makeup: R:** 2 **D:** 1

Qualifications for Commssioners

The Virginia State Corporation Commission (VSCC) is composed of three members elected by the General Assembly. Commissioners are elected to serve six-year terms, staggered in two year increments. The chair rotates annually among the three commissioners on February 1.

Commissioners

Theodore V. Morrison, Jr, (Dem.), since 1989; current term expires 2008. Member of the Virginia House of Delegates from 1968 to 1988. Member of Virginia Code Commission from 1974 and served as chairman from 1984 to 1988. Lawyer, private practice. Law degree from Emory University.

Mark C. Christie (Rep.), since 2004; current term expires February 2010. Attorney, counsel to the Speaker of the House.

Clinton Miller, (Rep.), since 1996, current term expires 2006. Law degree from Washington & Lee University Law School. Lawyer, in private practice. Served as a county Commonwealth's Attorney. Member of the Virginia House of Delegates from 1972 to 1995. Current Chairman.

AEP Regulatory Status

APCo filed an Environmental and Reliability rate case on July 1, 2005, seeking recovery of and return on incremental environmental and T&D costs.

Regulatory Information

Tennessee Regulatory Authority

AEP Regulated Electric Utilities

Kingsport Power Co.

Commissioners

Number: 4	**Appointed/Elected**: Appointed	**Term:** 6 years	**Political Makeup: R:** 1 **D:** 3

<u>Qualifications for Commssioners</u>

The Tennessee Regulatory Authority (TRA) directors are appointed, one each, by the Governor, Lieutenant Governor (as Speaker of the Senate), Speaker of the House and one joint appointment by the three together, and are confirmed by the Tennessee General Assembly. The directors are appointed for six-year terms, which all currently expire in June 2008; after 2008, terms will be staggered.

<u>Commissioners</u>

Deborah T. Tate, (Rep.), since 2002; current term expires June 2008. Attorney, juvenile and family law, probate and estate**.** Served as Director of the State and Local Policy Center at Vanderbilt University. Served as an Assistant to the Governor and a member of Senior Staff. J.D. degrees from the University of Tennessee.

Patrick Miller, (Dem.), since 2002; current term expires June 2008. Fiscal Analyst, Fiscal Review Committee. Legislative Liaison, Tennessee Supreme Court. Served as Chief of Staff to the Lt. Governor and Speaker of the Senate. J.D., Nashville School of Law.

Sara Kyle, Director (Dem.), since 1996; current term expires June 2008. Former assistant public defender until she was elected to the Memphis City Court bench. The longest serving director and only holdover from the previous Public Service Commission. Law degree from Middle Tennessee State University.

Ron Jones, Chairman, (Dem.), since 2002: current term expires June 2008. Sixteen year veteran of utility regulation, Director Jones served the first ten years with the Tennessee Public Service Commission staff and the next six with the TRA as a Senior Policy Advisor. Completed several regulatory studies programs at Michigan State University, Graduate School of Business.

AEP Regulatory Status

No deregulation legislation, no base rate freeze or cap. Tennessee has an active fuel clause.

Regulatory Information

Indiana Utility Regulatory Commission

AEP Regulated Electric Utilities

Indiana Michigan Power Co.

Commissioners

Number: 5	**Appointed/Elected:** Appointed	**Term:** 4 years	**Political Makeup: R**:3 **D:** 2

<u>Qualifications for Commissioners</u>

Five members, appointed by the Governor from among persons nominated by a legislatively mandated utility commission nominating committee; four year, staggered terms, full-time positions. Not more than three of the members of the IURC shall be members of the same political party. At lease one of the commissioners must be an attorney qualified to practice law before the Indiana Supreme Court. The governor appoints one of the five as chairman. Republican Mitch Daniels was elected Governor on November 2, 2004.

<u>Commissioners</u>

David L. Hardy, Chairman (Rep.), since September 2005, current term will expire April 2006. Commissioner Hardy is an attorney who has worked in private practice since 1997. Areas of expertise include: negotiation, contracts, litigation, finance and administration. He has 35 years regulatory experience at the state and federal levels.

Larry S. Landis, Commissioner (Rep.), since December 2002, current term ends January 2008. Former president of a marketing and advertising agency, VP Corporate Advertising, Bank One, Indiana. Bachelor's degrees in political science and economics.

David W. Hadley, Commissioner (Dem.), since 2000; current term ends January 2006. Executive officer for Indiana AFL-CIO, former legislative affairs representative for United Mine Workers of America, coal miner, former high school social studies teacher. Master's degree in secondary education.

Greg Server, Commissioner (Rep.), since September 2005, current term ends in April 2009. Former state senator since 1981 and before that served in the Indiana House or Representatives from 1972 to 1980. Served as chair of senate commerce committee, which handled IURC and utility industry legislation. Served as Director of Administration for the Evansville Water and Sewer Utility.

David E. Ziegner, Commissioner (Dem.), since 1990, current term ends April 2007. Lawyer, staff attorney for Legislative Services Agency, General Council for IURC. Member, NARUC Committee on Electricity. Law degree from the Indiana University School of Law in Indianapolis.

AEP Regulatory Status

Indiana's base rates are frozen through 6-30-07. Interim fuel factors set through June 2007. Corporate Separation Agreement settled in July 2005.

Regulatory Information

Michigan Public Service Commission

AEP Regulated Electric Utilities

Indiana Michigan Power Co.

Commissioners

Number: 3	**Appointed/Elected:** Appointed	**Term:** 6 years	**Political Makeup: R**:1 **D:** 2

<u>Qualifications for Commissioners</u>

The Michigan Public Service Commission (MPSC) is composed of three members appointed by the Governor with the advice and consent of the Senate. Commissioners are appointed to serve staggered six-year terms. No more than two commissioners may represent the same political party. One commissioner is designated as chairman by the Governor.

<u>Commissioners</u>

<u>J. Peter Lark, Chair, (Dem)</u> since July 2003: current term expires July 2009. Lawyer, assistant Attorney General in charge of special litigation division, former assistant prosecuting attorney.

<u>Laura Chappelle, Commissioner, (Rep.)</u> since 2001: current term expires July 2007. Lawyer, former deputy legal advisor to the Governor, regulatory affairs advisor to Michigan House Republicans, assistant prosecuting attorney.

<u>Monica Martinez, Commissioner, (Dem)</u> since 2005, current term expires July 2011. Former Deputy Director of the Governor's Legislative Affairs Division where she served as the Governor's principal lobbyist. Previous to this she served as an analyst for the Senate Democratic Office, where she specialized in technology and energy, human services and family law policy issues.

AEP Regulatory Status

Customer choice began 1/02. Generation was not deregulated. Retail rates were unbundled (though they continue to be regulated) to allow customers to evaluate generation costs. Michigan has an active fuel clause.

Kentucky Power

Regulatory Information

Oklahoma Corporation Commission

AEP Regulated Electric Utilities

Public Service Company of Oklahoma

Commissioners

Number: 3	**Appointed/Elected:** Elected	**Term**: 6 years	**Political Makeup:** R: 3

Qualifications for Commissioners

The Oklahoma Corporation Commission (OCC) is composed of three commissioners who are elected by state-wide vote. Commissioners serve staggered six-year terms so one commissioner vacancy occurs every two years. The election pattern was established when the Commission was created by the state constitution.

Commissioners

Jeff Cloud, Chairman (Rep.), since 2002; current term ends January 2009. Member, NARUC. Served as U.S. Congressman's District Director. Served as the Oklahoma City Mayor's Chief of staff. Law degree from Oklahoma City University.

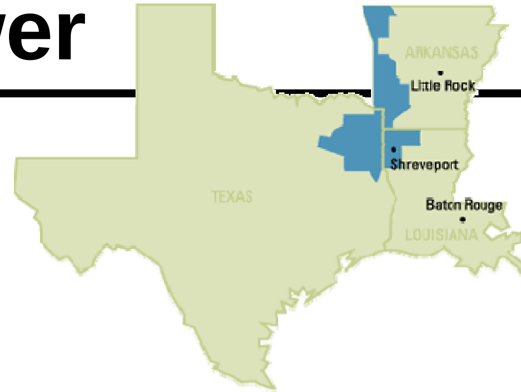
Denise A. Bode, Vice-Chairman (Rep.), since 1997; current term ends January 2011. Member, NARUC. Former president of the Independent Petroleum Association of America (IPAA). Graduated with a bachelor's degree in political science from the University of Oklahoma. Founding partner of a Washington D.C. firm. Law degree from George Mason University and a master's of law in taxation from Georgetown University.

Bob Anthony, Commissioner (Rep.), since 1989; current term expires January 2007. Member, NARUC. Served on the boards of the Oklahoma State, Oklahoma City, and South Oklahoma City chambers of commerce. Earned a M.Sc. from the London School of Economics, a M.A. from Yale University, and an M.P.A. from the Kennedy School of Government at Harvard University.

AEP Regulatory Status

As required by the OCC, PSO filed a general rate case October 31, 2003, which was settled in May 2005 and was essentially earnings neutral. Oklahoma has an active fuel clause. In December 2002, the Commission Staff filed for a fuel review. The two key issues are a prior period fuel under-recovery and the determination and allocation of trading margins. The procedural schedule is currently suspended, so no hearing date is set. Oklahoma passed then set aside deregulation legislation. It's unlikely that deregulation legislation will be enacted at any time in the foreseeable future in this state.

Southwestern Electric Power



President and Chief Operating Officer: Nick Akins

Thumbnail profile and history:
Southwestern Electric Power Company (SWEPCo), organized in 1912, is headquartered in Shreveport, La., and encompasses the AEP service territories in Louisiana, Arkansas and East Texas, which is the Texas service territory that participates in the Southwest Power Pool (SPP).

Principal industries include natural gas & oil production, petroleum refining, pulp & paper manufacturing, chemicals, food processing, & metal refining.

SWEPCo had 1,492 employees at 12/31/2004, and a service territory of 25,000 square miles.

Total Customers:	
• **Residential**	**374,000**

AEP Regulated Electric Utilities

Southwestern Electric Power Co.

Commissioners

Number: 5	**Appointed/Elected**: Elected	**Term**: 6 years	**Political Makeup**: **R**: 2 **D**: 3

<u>Qualifications for Commissioners</u>

The Louisiana Public Service Commission (LPSC) is composed of five elected members. The commissioners serve overlapping terms of six years.

<u>Commissioners</u>

Jack A. Blossman, Jr. (Rep.), since 1997; current term ends December 2008. Practicing attorney, member of NARUC Gas Committee. Board member of Parish National Bank, member, Lake Ponchartrain Basin Foundation. Juris Doctorate from Southern Law School.

James M. Field, (Rep.), since 1996; current term ends December 2006. Practicing attorney, member of Electrical Committee of NARUC. NFL contract advisor (1983-present), member, Sports Lawyers Association. Juris Doctorate from Louisiana State University.

Lambert C. Bossiere, III (Dem.), since 2005; current term ends December 2011. B.S. Business Administration from Southern University. American University of Paris – International Trade Law – Paralegal Certificate. Former First City Court Constable for the City of New Orleans.

C. Dale Sittig, (Dem.), since 1995; current term ends December 2010. Member, Louisiana House of Representatives, (1983-1995). Member, Chamber of Commerce.

Foster L. Campbell, (Dem.), since 2003; current term ends December 2008. Member, Louisiana State Senate (1976-2002). Independent insurance businessman and farmer, former school teacher and agricultural products salesman. Bachelor's degree from Northwestern State University.

AEP Regulatory Status

On October 15, 2002 SWEPCO submitted a revenue filing required by the LPSC as part of its merger order. In April 2004 SWEPCO provided a detailed financial information update for the test year ended 2003 showing a revenue deficiency of $.9 million. LPSC is in final stages of conducting depositions of Company witnesses. Louisiana has an active fuel pass-through clause.

AEP Regulated Electric Utilities

Texas Central Company
Texas North Company
Southwestern Electric Power Company

Commissioners

Number: 3	**Appointed/Elected**: Appointed	**Term**: 6 years	**Political Makeup**: **R:3**

<u>Qualifications for Commissioners</u>

To be eligible for appointment, a commissioner must be: (1) a qualified voter; (2) a citizen of the United States; and (3) a representative of the general public. Chairman appointed by the Governor.

<u>Commissioners</u>

Paul Hudson, Chairman (Rep.), since August 2003; current term expires August 2009. Served as policy director in governor’s office. Worked at PUCT as advisor and senior economic analyst. Served on National Governor’s Association Task Force on Electric Infrastructure; Western Governor’s Association Working Group on Cross Border Energy Issues. Master’s degree from Arizona State.

Barry T. Smitherman, Commissioner (Rep.), since April 2004; current term expires August 2007. Attorney; Assistant DA; 16 years as a public finance investment banker. Law degree from the University of Texas School of Law, Master’s in public administration from Harvard University.

Julie Parsley, Commissioner (Rep.), since November 2002; current term expires August 2011. Lawyer, private practice. Served as Solicitor General of Texas with Office of Attorney General. Also served as Deputy Solicitor General. Received law degree from Texas Tech University.

AEP Regulatory Status

Operations for TCC and TNC have been functionally separated. TCC is pursuing recovery of regulated assets and stranded costs pursuant to the Texas restructuring act (SB7). PUCT hearings on the TCC stranded cost true-up case were completed October 4. Announcement of a decision by commissioners is anticipated in December. TCC is seeking approval of true-up balances of approximately $2.4 billion--$2 billion in stranded costs and associated carrying costs since the start of retail choice in 2002 and approximately $400 million in other true-up amounts including carrying costs. In August, the PUCT issued a decision regarding the TCC rate case, which resulted in a net decrease of $8.8 million in base rates charged to retail electric providers and wholesale transmission customers. However, due to implementation of revised depreciation rates resulting in a lower depreciation expense of approximately $9 million a year, as well as an increase in an AEP/CSW merger-related rate rider of $7.2 million, TCC will see a positive impact of approximately $11 million in pre-tax earnings. Retail competition has been delayed by the PUCT in the Southwest Power Pool (SPP) area of Texas (including SWEPCO and TNC-SPP areas).

Regulation

- **Jurisdictional Outlook**
- **TCC Stranded Cost Recovery**

Fall EEI 2005

Regulation Update

AEP East Companies

Ohio (Restructured)
- Unbundled rates for default customers frozen until 12/31/2005
- Pursuant to RSP Plan approved by PUCO 1-26-05:
  - Distribution rates in effect at December 31, 2005 are frozen, with certain exceptions, until the end of 2008.
  - Institute for 2006-2008 a non-bypassable distribution rider for provider of last resort (POLR) costs.
  - CSP ”G” rates to increase 3% per year (2006-2008).
  - OP “G” rates to increase 7% per year (2006-2008).
  - Transmission rates can upon filing reflect change in RTO costs.
- No active fuel clause
- Application for IGCC plant recovery filed on 3-18-05. Hearings and briefs are done. Awaiting a PUCO order.
- Hearings complete on CSP’s possible acquisition of Mon Power’s Ohio service territory. Commission order pending.

West Virginia (Regulated)
- Base rates not frozen
- No active fuel clause
- Annual ENEC proceedings have been suspended, the factor is currently fixed at pre-2000 levels.
- On 8-26-05 AP & WP filed with the WVPSC for a $183 million revenue increase to be phased in over a four-year period beginning in mid 2006. The filing consists of a general rate case, reinstatement of the ENEC, to implement scheduled incremental rate increases for major clean air & transmission investments, and the implementation of a system reliability tracker mechanism.
- On 8-31-05 AP and Reliant jointly filed with the WVA PSC for approval to purchase the Ceredo generating station.

Virginia (Restructured)
- Capped rates for default customers frozen through end of 2010
- Capped rates can be adjusted by two rate cases prior to the end of 2010 and incremental environmental and reliability cost recovery mechanisms
- Active annual fuel clause
- On 7-1-05 AP filed a request with the Virginia Commission seeking to recover incremental costs for environmental compliance and T&D System reliability (E&R) of $62.1 million based on actual costs through early 2005 and projected costs through June 2006, effective on an interim basis beginning 8-1-05. In an order dated 10-14-05, the Commission denied the Company’s request for interim rate treatment and ruled that the Company may only seek to include actually incurred costs (i.e., no projected future costs) in the E & R cost recovery filing. The Commission has scheduled hearings to begin 2-7-06 .

Kentucky (Regulated)
- Fuel clause, adjusted monthly
- Environmental surcharge costs are adjusted monthly for approved environmental compliance plan
- On 9-26-05 the Company filed a base rate case requesting a $64.8 million annual increase. The Company expects the effective date to be approximately 4-1-06.

Michigan (Restructured, but Regulated)
- Base rates not frozen.
- Active annual fuel clause.

Indiana (Regulated)
- Base rates are frozen and fuel cost recovery factors are capped at increasing rates through June 30, 2007.

Tennessee (Regulated)
- Base rates not frozen
- Automatic fuel clause, adjusted monthly

Regulation Update

AEP West Companies

Texas (Regulated) • SWEPCO Texas retail competition delayed until at least 2007. PUC Chairman believes the precursors for full and open competition are not yet in place and will not exist prior to 2009. The Chairman committed to the Texas Legislature that the commission would consider maintaining the current status of competition in the SWEPCO Texas (and SPP portion of TNC) areas in future proceedings. • Bi-annual fuel clause adjustment opportunity **Texas ERCOT Area (Restructured)** • TCC stranded cost true-up filing in May 2005. ($2.4 billion true-up amount requested). Hearings concluded 10-4-05. TCC anticipates a Commission ruling in December. • TCC wires rate case PUCT approved final order on July 15. Final order results in slight rate decrease with a positive earnings impact. Rates were effective on 9-6-05. • TCC final fuel reconciliation (July 98-Dec. 01) order on rehearing is final and appeals were filed in state and federal court in August 2005. • TNC true-up order approved in May 2005 (retail clawback and fuel over-recovery only). No adjustments to revised amounts filed by TNC. The results of the true-up case were filed in TNC's Competition Transition Charge (CTC) proceeding in August 2005. • TNC final fuel reconciliation (July 00-Dec. 01). Final order received 10-18-04. District Court affirmed PUC on 9-9-05. TNC will appeal. In September 2005, the U.S. District Court enjoined the commissioners from violating federal law on its allocation of off-system sales margins.	**Oklahoma (Regulated)** • On 6-3-05 PSO file to increase its Reliability Enhancement Plan annual spending to a $27.21 million level (up $15.4 million) pending OCC approval. Staff submitted testimony supporting an annual cap of $23.68 million up from the $11.81 million cap currently in place. The ALJ has recommended approval of the Staff proposed rider cap. The ALJ recommendation also allows for the recovery of return, depreciation, taxes, etc. associated with converting overhead distribution lines to underground. It is now pending a Commission decision. • Annual Fuel Clause • 2001 Fuel review case •Hearings scheduled for Sept. 2005 have now been continued to a later date to be determined. Scope expanded to cover 2002-2004 margin allocation issue. Intervenors have submitted testimony which would substantially off-set the recovery of PSO's $42 million Internal Cost Reconstruction (ICR) error. • 2003 Fuel review case Scope has been expanded to include a prudence review. • 2004 Fuel review case Staff has now filed for a review of PSO's 2004 fuel costs.
Louisiana (Regulated) • Base rates not frozen • Currently under a merger required financial review • Fuel clause, adjusted monthly	**Arkansas (Regulated)** • Base rates not frozen • Fuel clause, adjusted annually

Components of TCC's Net True-up Regulatory Asset

	30-Sep-05	31-Dec-04
	(in millions)	
Stranded Generation Plant Costs	$ 892	$ 897
Net Generation-related Regulatory Asset	249	249
Unrefunded Excess Earnings	(49)	(10)
Net Stranded Generation Costs	1,092	1,136
Carrying Costs on Stranded Generation Plant Costs	218	225
Net Stranded Generation Costs Designated for Securitization	1,310	1,361
Wholesale Capacity Auction True-up	483	483
Carrying Costs on Wholesale Capacity Auction True-up	114	77
Retail Clawback	(61)	(61)
Deferred Over-recovered Fuel Balance	(210)	(212)
Net Other Recoverable True-up Amounts	326	287
Total Recorded Net True-up Regulatory Asset	$ 1,636	$ 1,648

- **Carrying charge calculated using pre-tax cost of capital of 11.79%**
- **Debt Component: 8.12% - $332 million recognized as income thru 9/30/05**
  - **Carrying charges for 2005 expected to be $87 million**
- **Equity Component: $177 million to be recognized in income as collected**

TCC SEEKING STRANDED COST RECOVERY OF $2.4 BILLION

Timeline For Recovery

May 27, 2005	True-up filings made with the PUCT; this a 150-day process with possible extension; filed for recovery of $2.4 billion.
Dec 2005	PUCT True-up decision, if not extended.
Jan/Feb 2006	TCC request for a financing order to enable it to securitize stranded costs.
Feb/Mar 2006	TCC request to reflect other true-up items (capacity auction true-up, final fuel balance and retail clawback amounts) in CTC (Competition Transition Charge). This must be filed within 60 days of final order and appealable order in true-up proceeding.
3Q 2006	Possible issuance of securitization bonds, if no appeal of TCC true-up order, or by unanimous agreement of all intervening parties.
4Q 2006	CTC charge approved by the PUCT (recovery of other true-up amounts begin).

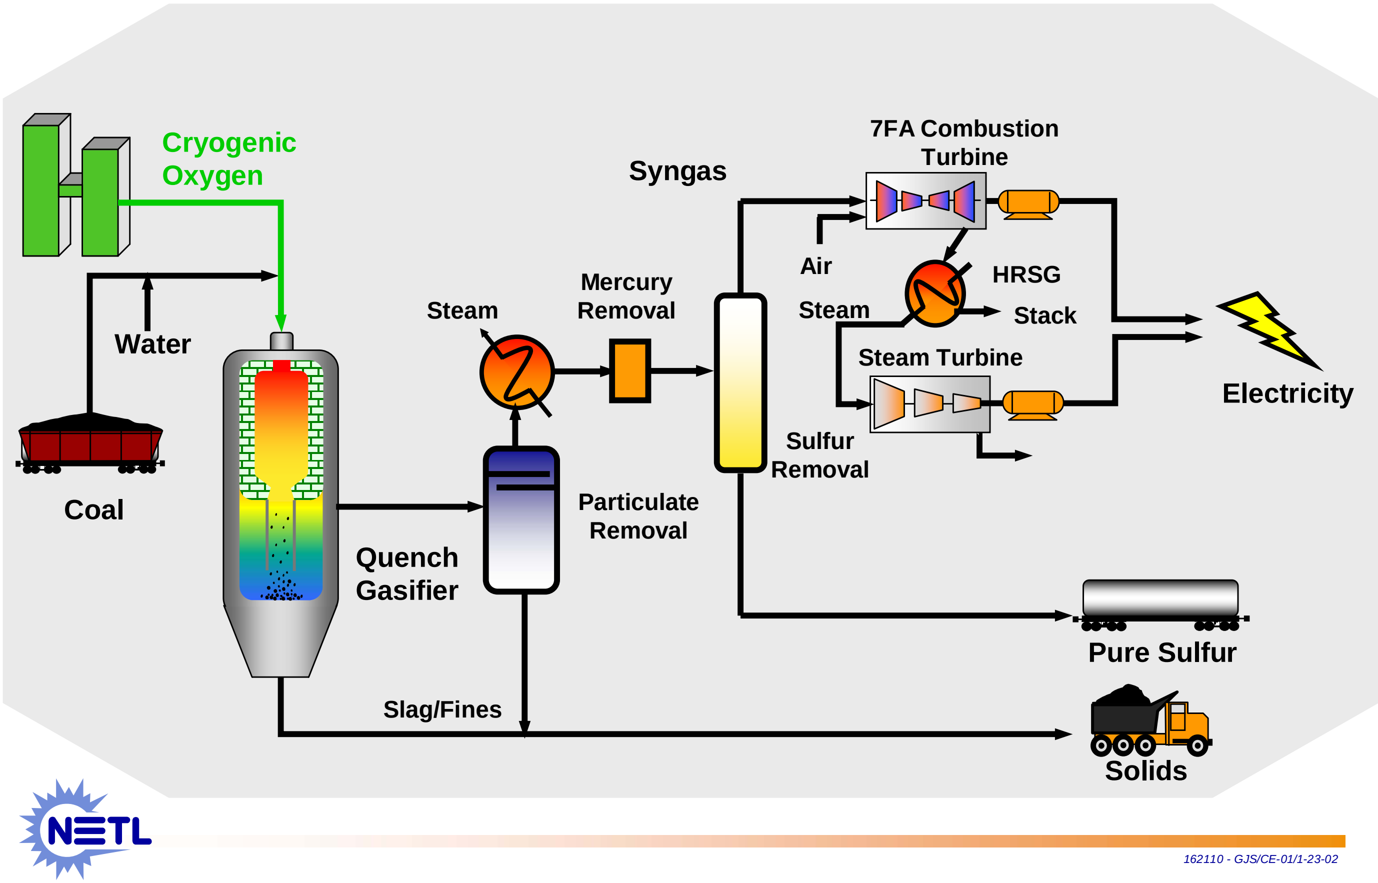
IGCC Overview

- **Investing in IGCC**

Fall EEI 2005

Looking to the Future - IGCC



AEP HAS ANNOUNCED ITS INTENTION TO CONSTRUCT A COMMERCIAL-SCALE INTEGRATED GASIFICATION COMBINED CYCLE (IGCC) PLANT BY THE END OF THE DECADE

Investing in IGCC

Generation Technology Comparative Statistics

	PC	IGCC	NGCC
Nominal Capacity (MW)	600	600	600
Heat Rate (Btu/kWh)	8690	8700	7200
Total Plant Cost ($/kW)	1290	1550	440
Fuel cost ($/MWh)	14	14	53
Cost of Electricity (without CO2 Capture) ($/MWh)	52	56	75
Estimated Cost of Electricity (with CO2 Capture) ($/MWh)	96	79	143

- Source: Results of AEP analysis based on EPRI studies.
- Total Plant Cost includes the cost to engineer, procure and construct plant. It does not include escalation, owner's costs, transmission upgrades, or AFUDC.
- Assumes Northern Appalachian Coal price of $36/ton for PC and IGCC and natural gas price of $7.34/mmBtu for NGCC.
- Assumes 85% capacity factor for PC and IGCC, 40% for NGCC.

IGCC TECHNOLOGY IS STRATEGIC TO KEEPING COAL IN THE MONEY

IGCC Siting and Permitting Process

Site Selection Considerations

- Brownfield site vs. Greenfield site
- Sufficient Space
  - Flat area with adequate construction access
  - 600 acres
- Fuel delivery options
  - Rail/barge/truck
  - Up to 4 million tons/year of coal
  - Access to water
- Transmission Line Costs
  - Distance from high-voltage lines
  - Costs for grid interconnects and stability impacts

Mason County, WV
- Adjacent to AEP's Mountaineer plant

Meigs County, OH
- In the Great Bend area

Lewis County, KY
- In the Carrs area near Vanceburg

PJM EVALUATION PERFORMED FOR 3 POTENTIAL SITES

IGCC Permitting Issues

- Air – to evaluate best available control technology (BACT)
- Wastewater – to understand wastewater streams
- US COE (Corp of Engineers) – to obtain permits for construction of river facilities
- NEPA Process – (National Environmental Policy Act) – Environmental site studies addressing wetlands, endangered species, historical artifacts

PERMIT PROCESS WILL TAKE 1 – 2 YEARS

Recovery Application Filed with PUCO

March 18, 2005: CSP and OPCO filed an application with the PUCO seeking authority to recover costs related to building and operating an IGCC plant if built in Ohio.

Initial Cost Recovery Filing

Phase 1

- Effective during 2006
- Seeks recovery of initial costs, including those already incurred, such as site engineering and various other engineering services
- Approximately $18 Million

Phase 2

- Effective 2007- mid 2010 (Construction Phase)
- Seeks recovery of carrying costs associated with plant construction
- Approximately $237.5 Million

Phase 3

- Effective mid 2010 (Commercial Operation begins)
- Seeks recovery of projected $1.033 Billion cost of plant over its operating life.

SEEKING AUTHORITY FOR THREE PHASE RECOVERY APPROACH

Next Steps

2005:

- **Secure cost recovery plan**
  - **Final Order expected by end of 2005 for Ohio IGCC filing**
- **Finalize site selection**
- **Negotiate with suppliers**

2005—2007: Obtain permits and finalize engineering and procurement

2007—2010: Construct and start-up plant

AEP WILL PIONEER CONSTRUCTION OF LARGEST IGCC PLANT IN THE WORLD

Integrated Gasification Combined Cycle

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called “syngas” – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2 , mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP’s eastern service territory.

AEP is currently working with a technology provider to develop a firm price for an IGCC facility to be built in our eastern service region. This price will be available in 2006. AEP intends to seek regulatory recovery approvals in advance of building the plant.

AMERICAN ELECTRIC POWER

NEWS from AEP

September 29, 2005

AEP selects GE and Bechtel to design clean-coal power plant

General Electric and Bechtel alliance to begin front-end engineering and design process for AEP's proposed IGCC plant

AEP has signed an agreement with GE Energy and Bechtel Corporation to begin the front-end engineering design process for a commercial-scale, integrated gasification combined cycle (IGCC) clean-coal plant in the 600-megawatt range. This will be the first such engineering and design agreement undertaken for an IGCC plant of this scale.

"We're thrilled to be moving forward with our goal of building the next generation of coal-fueled power plants that offer enhanced environmental performance. We need additional generation, and we believe an IGCC plant, over its expected lifespan, offers the right, environmentally responsible, cost-effective option for our customers," said Mike Morris, AEP's chairman, president and chief executive officer.

"At AEP, we've worked for more than a decade to help push clean-coal generation from theory to commercial viability and now to mainstream use. Our success with this project -- ramping up the technology to build the first large-scale, baseload IGCC plant in the country -- will help our industry continue to rely on our nation's vast domestic coal reserves to generate much-needed, affordable electricity with less environmental impact," Morris said.

The front-end engineering design process is a detailed process that leads to a more accurate determination of the costs for a construction project. For AEP's proposed IGCC plant, the front-end engineering design process will require 10 to 12 months. Then, based on the status of regulatory proceedings, and engineering and cost targets, AEP would hope to move forward with awarding contracts for final engineering, procurement and construction.

AEP announced Aug. 31, 2004, its intent to build approximately 1,200 megawatts of commercial-scale, baseload IGCC generation. AEP Ohio filed for cost recovery March 18, 2005, with the Public Utilities Commission of Ohio (PUCO) to build an IGCC plant in Meigs County, Ohio. AEP Ohio hopes to have a decision from the PUCO by the end of 2005. AEP is moving forward with the front-end engineering design process for the IGCC technology in order to remain on schedule to complete an IGCC plant in 2010. AEP intends to build at least another 600 megawatts of IGCC generation in its eastern operating area by 2013. A location for additional IGCC generation has not been determined.

IGCC plants turn coal into a synthesis gas and eliminate most of the sulfur dioxide, nitrogen oxides, mercury and other emissions before the gas is used to fuel a combustion turbine generator. The hot exhaust gases are then used to heat steam to drive a steam turbine generator. The technology uses less water and has lower emissions than a conventional coal-fired plant with currently required emission control equipment. Additionally, IGCC design allows for potential capture and sequestration of carbon dioxide (CO_2) at a lower cost than conventional coal-fired plants.

Environmental Overview

Fall EEI 2005

Environmental – Multi-Emissions Reductions

Coal-fired power plants continue to face a variety of environmental requirements over the next decade. Most of the regulations and potential policies are aimed at reducing air emissions, primarily nitrogen oxides (NOx), sulfur dioxide (SO_2), mercury (Hg) and carbon dioxide (CO_2). The regulations and proposals address a variety of public health and/or ecosystem issues such as acid rain, regional haze, ozone transport, fine particulates, fish contaminated with mercury, eutrophication of water bodies, and global climate change. In addition, the industry is embroiled in an enforcement initiative by the EPA, the Justice Department, and some states and environmental groups alleging that companies violated the New Source Review (NSR) and Prevention of Significant Deterioration (PSD) programs of the Clean Air Act through their power plant maintenance practices. Environmental regulations historically take a piecemeal approach to achieving air quality objectives that creates uncertainty for affected sources, results in unnecessary expenditures, lacks flexibility, often results in litigation that delays air quality improvements, and can seriously harm U.S. energy security.

Multi-Emissions Legislation: AEP continues to believe that a comprehensive, flexible, coordinated multi-emissions control strategy should be developed and implemented over the next 15-20 years for SO_2, NOx and Hg to address and resolve these air quality issues. Doing so could provide regulatory certainty to utilities for a significant period of time, lower compliance costs, accomplish air quality objectives, and maintain diversity of fuel for electricity production. In response to these pressures and motivated by a desire for regulatory certainty, the electric utility industry has been and continues to advocate enactment of federal multi-emission legislation. This is despite the aggressive reductions required under such legislation.

Early in 2005, President Bush's "Clear Skies Initiative" was reintroduced by Senators Inhofe and Voinovich as the Clear Skies bill (S-131). The bill (after initial markup) was a multi-emissions control proposal that would reduce NOx, SO_2, and Hg emissions, utilizing an emissions trading program for each pollutant. The bill requires reductions in two phases—by 2010 (2008 for NOx) about a 50% reduction in NOx and SO_2 emissions and about a 30% reduction in Hg emissions, and by 2016, 70% reductions in SO_2, NOx and Hg. In addition to significantly reducing emissions in two phases, the legislation would eliminate or modify existing Clean Air Act programs, including the NSR and PSD rules as they affect existing electric generating units. However, the bill failed to get out of Committee and further action on the legislation is unlikely. Regrettably, the legislation polarized the Congress along partisan lines and the environmental community has done an effective job of criticizing the legislation, albeit on specious grounds.

Environmental – Multi-Emissions Reductions

Multi-Emissions Regulations: During the course of 2005, EPA finalized two rules: the Clean Air Interstate Rule (CAIR), and the Clean Air Mercury Rule (CAMR). These rules would require approximately the same amount of reductions as the Clear Skies proposal in two phases: 2010 (2009 for NOx) and 2015 (2018 for Hg) also utilizing an emissions trading. While the industry and AEP are generally supportive of these regulations, they do not provide the same degree of regulatory certainty and eliminate unnecessary provisions or modify the Clean Air Act to the same degree as Clear Skies legislation.

In July 2005, EPA finalized a third rule: the Clean Air Visibility Rule (CAVR) which addresses the implementation of emission controls for SO_2 and NOx to deal with regional haze in Class I areas (e.g. national parks, forests and other pristine areas). CAVR requires Best Available Retrofit Technology (BART) – defined as scrubbers and meeting low NOx emission rates---to be required and ultimately installed at those affected facilities. EPA is urging states that are part of the CAIR region (most of the states except for the Western US) to adopt the CAIR rule as compliant with CAVR (thus not requiring BART at power plants within that state). However, in the other non-CAIR states (i.e. The West and Southwestern US) most of the currently unscrubbed coal fired plants will probably be required to install scrubbers and meet lower NOx limits.

Greenhouse Gas Policies: The President has committed the nation to reduce the greenhouse gas (GHG) intensity of the economy (GHG emissions per $ GDP) by 18% over the next ten years through voluntary programs, and called for an improved federal emissions reporting program for tracking progress toward this goal. Regional U.S. initiatives to reduce greenhouse gas emissions and specifically CO_2 emissions have also begun in states outside of AEP's service territory including the Northeastern States (i.e. the Regional Greenhouse Gas Initiative or RGGI) and the West Coast.

AEP continues to meet its voluntary greenhouse gas commitments through its participation agreement with the Chicago Climate Exchange,(as well as it participation in EPA's Climate Leaders). Under these agreements, the company has agreed to reduce its greenhouse gas emissions by 1,2, 3 and 4 percent respectively during the four year period (2003-2006) below its average emission level for 1998-2001. Recently,we agreed to extend this commitment period for further voluntary reductions during the 2007-2010 period.

Environmental Glossary

Clean Air Scientific Advisory Committee (CASAC) - Created by the Clean Air Act amendments in 1977, this committee of independent experts on air pollution reports to the U.S. Environmental Protection Agency Administrator. The committee is charged with reviewing the scientific knowledge of air pollution and its effects, without regard to costs.

Micron - One millionth of a meter. For example, human hair is about 70 microns thick. $PM_{2.5}$ is approximately 1/30th the thickness of a human hair.

National Ambient Air Quality Standards (NAAQS) - Establish maximum allowable concentrations in outdoor air for six pollutants: particulate matter, ozone, sulfur dioxide, nitrogen oxide, carbon monoxide, and lead. The Clean Air Act requires EPA to review NAAQS every five years. EPA is required to set standards "to protect public health ...allowing an adequate margin of safety."

Ozone - Ozone is a form of oxygen which is a colorless gas with a unique odor. Ozone occurs naturally in the earth's upper atmosphere where it shields against ultraviolet radiation from the sun. In the lower atmosphere, ozone is formed by the combination of nitrogen oxides and hydrocarbons in the presence of sunlight. This ozone is a major component of smog. The current NAAQS for maximum allowable ozone is 0.12 parts per million measured over a one-hour period, with three exceedances over three years permitted.

Particulate Matter - Particles of matter suspended in the atmosphere. EPA currently regulates concentrations of particulate matter that are 10 microns and smaller in diameter. The current allowable maximum concentration of particulate matter is 150 micrograms (ug) per cubic meter averaged over 24 hours. The annual average of 24 hour readings is required to be less than 50 ug/m^3.

PM_{10} - Particulate matter that is 10 microns or less in diameter.

$PM1_{2.5}$ - Particulate matter that is 2.5 microns or less in size.

Primary Particles - This is particle matter that is emitted directly into the atmosphere, including dust from construction, farming and roads, volcanic ash, sea salt, tire and brake dust, diesel soot and wood smoke. Primary particles are the dominant form of particulate matter in the West and arid Southwest. Primary particles tend to settle out of the atmosphere in a relatively short time.

Secondary Particles - These particles are formed when gases, such as sulfur oxides, nitrogen oxides and volatile organic carbon, react in the atmosphere to form solid or liquid particles of sulfates, nitrates and organic carbon particles. These particles are generally 2.5 microns and smaller in size. Secondary particles dominate in the eastern United States. Secondary particles tend to remain suspended in the atmosphere and can be transported over long distances by prevailing winds.

Precursor - The forerunners that lead to the formation of a pollutant. The precursors of ozone are nitrogen oxides and hydrocarbons, which combine in the presence of sunlight to form ozone. The precursors of fine particular matter are sulfur oxides, nitrogen oxides and volatile organic compounds which combine with ammonia in the atmosphere to form sulfate and nitrate particles.

Clean Air Interstate Rule

- Rule Finalized March 2005
- CAIR designed to address the contribution of regional emissions to downwind $PM_{2.5}$ & 8-hour Ozone non-attainment
- CAIR reductions from 2003 emissions: ~73% SO_2; & ~61% NO_x
- Reductions occur in phases: Phase I (2009); Phase II (2015)
- CAIR established three Cap & Trade Programs:
  1. Annual SO_2 Trading Program
  2. Annual NO_x Trading Program
  3. Separate Ozone-Season only NO_x Trading Program

CAIR Applicability to AEP

- AEP-East States & Louisiana subject to all three trading programs
- Arkansas subject only to the Ozone-Season trading program
- Texas subject to only the Annual NO_x & SO_2 trading programs
- CAIR does not apply to Oklahoma

AEP WILL HAVE TO INSTALL ADDITIONAL SCR AND FGD SYSTEMS IN ORDER TO MEET THE EMISSION REDUCTIONS REQUIRED BY CAIR

Mercury Rule

- Rule Finalized March 2005
- Designed to reduce mercury emissions by ~70% nationwide from electric utilities
- Reductions occur in phases: Phase I (2010); Phase II (2018)
- Establishes a Cap & Trade structure to achieve mercury reductions

AEP WILL ACHIEVE SOME MERCURY REDUCTIONS AS A CO-BENEFIT OF SCR AND FGD SYSTEMS, BUT MERCURY SPECIFIC CONTROL EQUIPMENT WILL BE NEEDED ON SOME UNITS

AEP's Environmental Compliance Strategy

NOx and SO_2 emission reductions are part of AEP's on-going strategy to comply with the Clean Air Act, Title IV regulations, the Clean Air Interstate Rule (CAIR) and the Clean Air Mercury Rule (CAMR).

Much of this investment will be for:

- **Selective catalytic reduction (SCR) systems to reduce nitrogen oxide emissions by 90%.**
- **Flue gas desulfurization (FGD) systems (scrubbers) to reduce sulfur dioxide emissions by 98+%.**
- **SCR and FGD systems together offer co-benefit of mercury capture.**
- **Sale of gypsum (by-product) avoids future landfill costs.**
- **Provides fuel flexibility.**

REPRESENTS THE BEST AND LEAST-COST COMPLIANCE PATH TO IMPROVE ENVIRONMENTAL PERFORMANCE ON A FLEET BASIS, WHILE CONTINUING TO PROVIDE A RELIABLE SUPPLY OF POWER TO CUSTOMERS AT A REASONABLE PRICE AND A SOLID RETURN FOR INVESTORS

Environmental Installations

FGD – Reduces SO_2 by 98% → **Co-Benefit Hg Capture** ← **SCR - Reduces NOx by 90%**

Completed

FGD:

Plant Name	MW Capacity

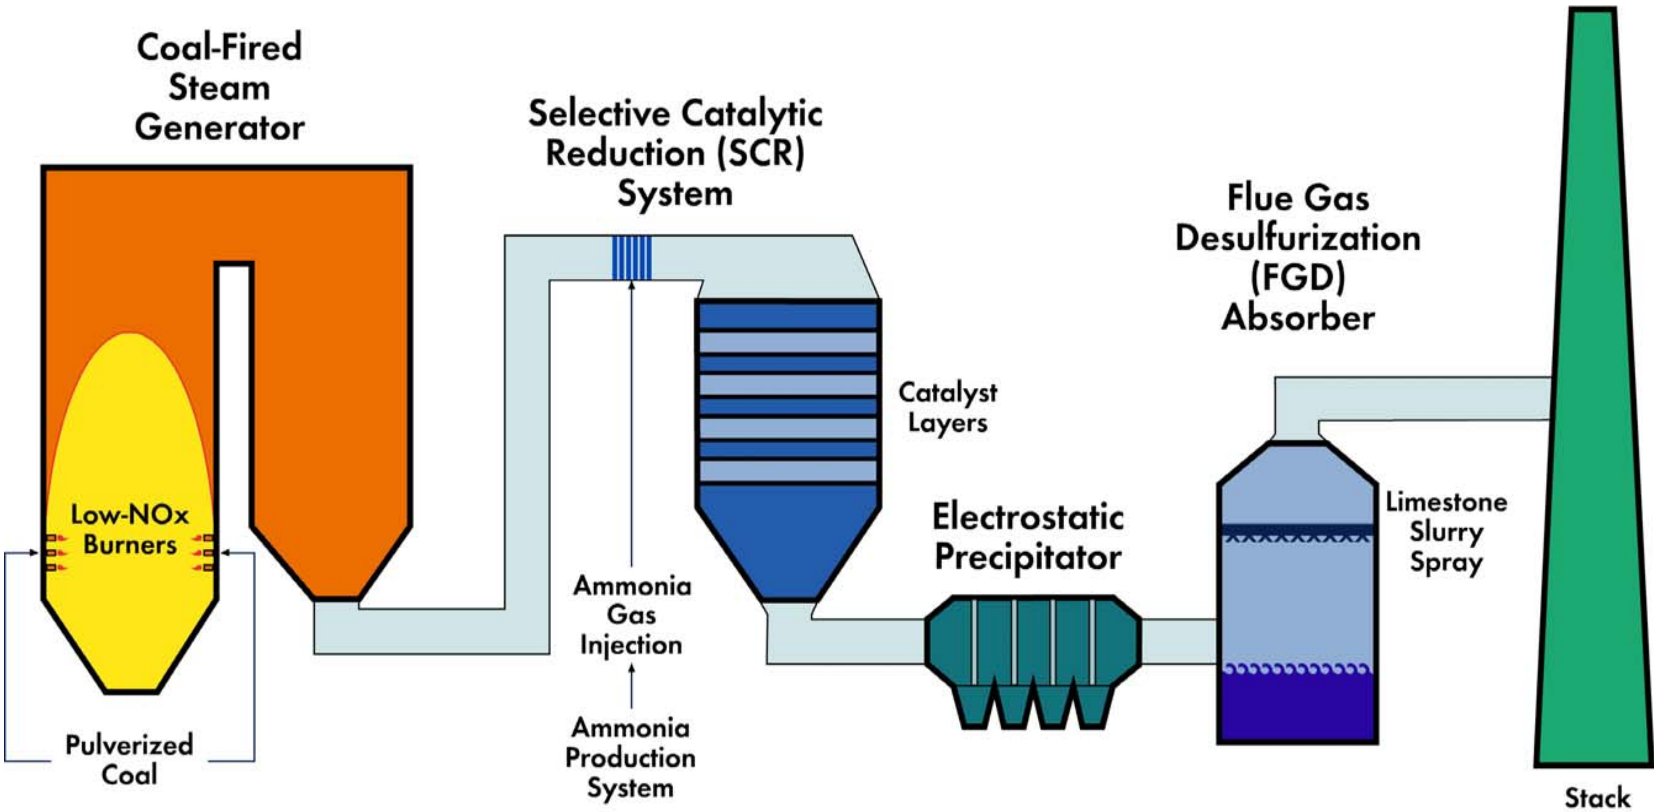
Note: MW capacity shown represents AEP's owned capacity only

INSTALLATION OF SCR AND FGD WILL ALLOW OUR COAL FLEET TO REMAIN EXTREMELY COST COMPETITIVE

The Flue Gas Stream



Flue Gas Desulfurization (FGD)

Sulfur Dioxide

The Clean Air Act Amendments of 1990 and more recently the Clean Air Interstate Rule provide flexibility for cost–effective compliance in reducing sulfur dioxide (SO_2) emission. AEP continuously evaluates the alternatives for meeting those requirements, including fuel switching at some plants and the purchase of excess allowances from other facilities.

<u>What is SO_2?</u>

- A gas that forms when the sulfur in coal is burned or oxidized,
- dissolves easily in water and water vapor in the air to form sulfates, and
- with nitrogen oxides, is a major precursor of acidic deposition (acid rain).

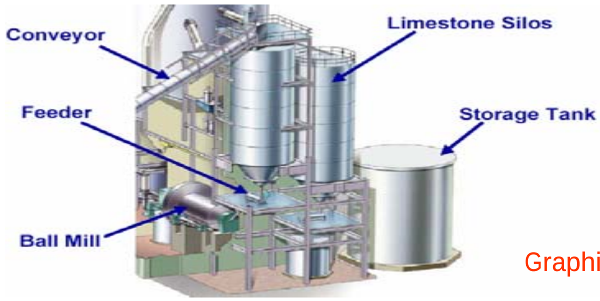
The SO_2 Solution

- AEP has initiated a program of flue gas desulfurization system installations to help it meet current and anticipated SO_2 emission standards from coal-fired power plants.
- AEP believes that installing FGD (scrubber) systems at carefully selected power plants is the best, most cost effective option for all stakeholders, while effectively providing the required environmental benefits.
- Scrubbers use mechanical and chemical processes to reduce SO_2 emissions by 98+%.

FGD Material

- Specific characteristics of FGD material vary from one installation to another.
- The FGD material from a wet scrubber system is gypsum that can be made for sale and used in drywall.
- AEP has made arrangements with BPB, a wallboard manufacturer to accept the gypsum produced at Mitchell as well as other AEP facilities.
- FGD material that is not marketed can be safely managed in landfills.
- Although this is considered a benign material, AEP will take steps to protect groundwater from leaching of the landfilled material, prevent dust and control runoff.

How an FGD Works



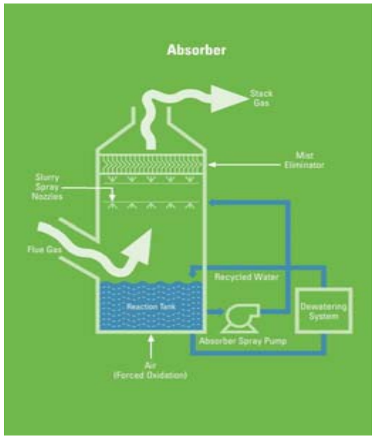
Graphic: Alstom Power, Inc.

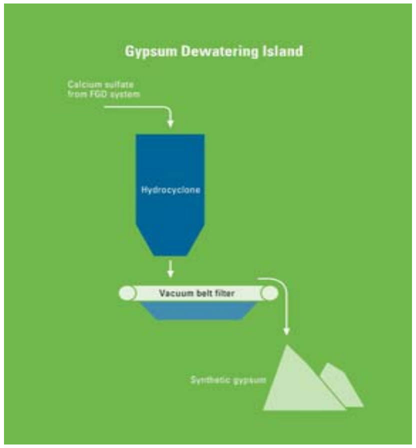
Reducing Agent Preparation

- Limestone, a plentiful supply, low cost raw material is crushed in ball mill pulverizers.
- The crushed limestone and water mix to form a slurry.

Sulfur Removal (Spray Tower)

- Exhaust gas is routed through absorber vessels where it is sprayed with the slurry.
- SO_2 reacts with the slurry and forms calcium sulfate or gypsum.
- The calcium sulfate falls to a tank in the lower part of the vessel.
- Blowers inject air to force oxidation of the product.





Dewatering

Hydrocyclones wring out much of the water to produce gypsum: the water is re-circulated.

The Plume

- Scrubbers increase the amount of water vapor emitted through the stack.
- As a result, the physical characteristics of the plume change so that it is
  - more visible,
  - less buoyant and
  - more saturated.

Selective Catalytic Reduction (SCR)

Nitrogen Oxide

U.S. EPA regulations have required many electric utilities in the United States, including AEP, to reduce nitrogen oxide (NOx) emissions.

AEP installed reduction systems prior to its compliance date and thus earned early reduction credits.

What is NOx?

- During combustion, nitrogen in coal combines at high temperatures with the nitrogen and oxygen that comprise air to form nitrogen oxides.
- When NOx combines with Volatile Organic Compounds in the presence of summer temperatures and sunlight, ozone is produced.
- Ground level ozone at levels above EPA's air quality standards can cause potential health problems for some people.

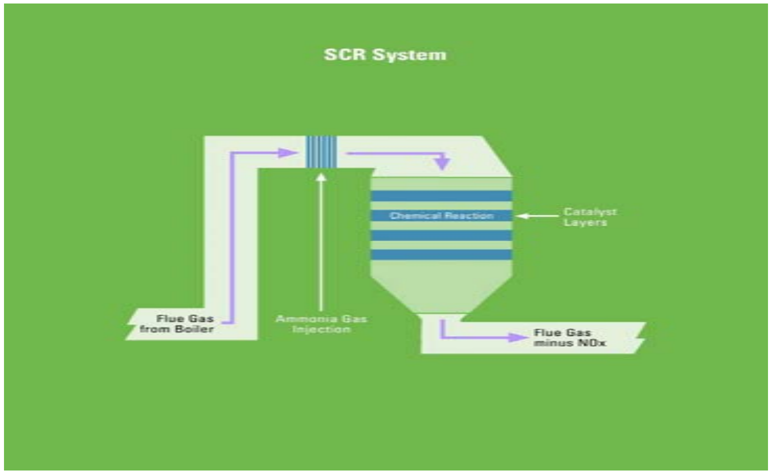
The NOx Solution

- In the 1990s, AEP invested more than $160 million to install low-NOx burners on some units.
- Low-NOx burners control the way coal is burned to reduce formation of NOx.
- Low-NOx burners on the AEP system reduced NOx emissions by approximately 30% per year below uncontrolled levels; however, these reductions are not sufficient to comply with new regulations.

What a selective catalytic reduction system (SCR) does:

- Reduces nitrogen oxide emissions by up to 90%.
- Uses ammonia as the reducing agent (re-agent) to assist the changing of chemical compounds.
- Employs a catalyst to convert NOx to nitrogen and water that are released to the atmosphere.
- Rather than transport and store anhydrous ammonia, AEP coal-fired facilities use urea to produce ammonia as needed.
- SCRs have been designed for modular construction to reduce outage time.

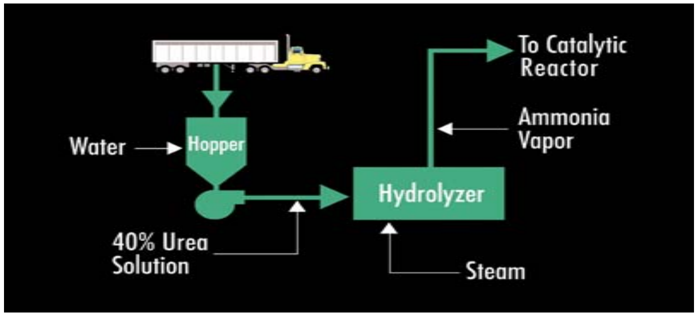
How an SCR Works



- Steam is used to drive the ammonia gas from the urea mixture.
- The ammonia gas is piped into the flue gas ahead of the SCR.

On Site Ammonia Production

- AEP helped develop the process for converting urea to ammonia.
- Anhydrous ammonia is neither transported nor stored.
- Uses urea, a stable, white granular powder under atmospheric conditions, typically used as fertilizer and not classified as toxic.



In the Reactor Vessel

- The ammonia reacts with the flue gas as it passes over the catalyst, forming nitrogen gas and water vapor.
- The harmless nitrogen and water vapor are released into the atmosphere.

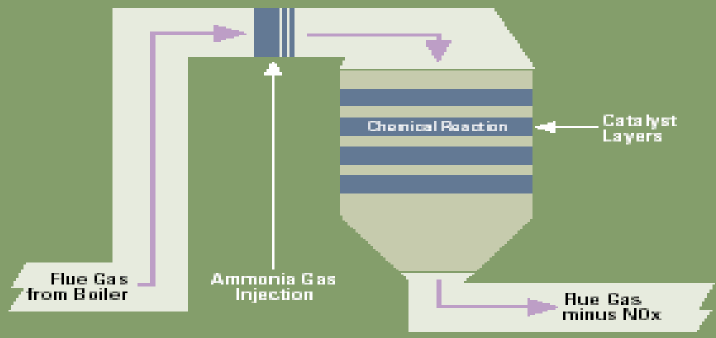
Selective Catalytic Reduction System (SCR)

How an SCR works

An SCR uses ammonia gas to create a chemical reaction that converts nitrogen oxide into nitrogen and water. Here's how:

- AEP uses urea, a harmless compound often used as fertilizer, delivered to the plant site where it is mixed with water.
- The urea mixture is then cracked by the use of steam to drive off the ammonia as a gas.
- The ammonia gas is piped into the flue gas ahead of the SCR.
- The ammonia reacts with the NOx in the flue gas as it passes over the catalyst resulting in the formation of nitrogen gas and water vapor.
- The nitrogen and water vapor are released into the atmosphere.

SCR System



What is NOx?

During combustion, nitrogen in coal and nitrogen and oxygen in air combine at high temperature to form a group of molecules: nitrogen oxides (NOx). Nitrogen oxides (NO, N2O, NO2) convert to nitric compounds when exposed to the air. These eventually can fall to earth as acid rain.

NOx has been cited as one of the precursors of ozone at ground level. When NOx combines with Volatile Organic Compounds, or VOCs, in the presence of summer temperatures and sunlight, ozone is produced. Ozone in higher levels of the atmosphere protects the earth from ultraviolet radiation. But ground-level ozone can cause regional haze and potential health problems for some people.

The U.S. Environmental Protection Agency (EPA) has adopted new regulations requiring many electric utilities in the United States, including AEP, to further reduce NOx emissions.

What an SCR does

A Selective Catalytic Reduction system (SCR) uses a chemical reaction to convert NOx back into harmless nitrogen and water vapor, reducing NOx emissions by up to 90 percent.

At the present time, SCR technology is the best available technology for making significant reductions in NOx emissions. While SCRs are rather new in the U.S., they are common in Europe.

On-site urea to ammonia

AEP's SCR units use an on-site ammonia production system for the SCRs' ammonia supply. This means that ammonia gas for SCR use is not shipped to or stored at the plant. Instead, urea is transported to and stored near the plant and is used to create ammonia gas on an as-needed basis. Under atmospheric conditions urea is a stable white, granular powder that is not classified as toxic. It is common to see this granular urea in lawn fertilizers.

SCRs at AEP

At present, AEP has installed or is installing SCR technology at more than 20 coal-fired generating units in the eastern U.S.

Facts at a glance

- SCRs reduce nitrogen oxide (NOx) emissions. Nitrogen oxides are a precursor to ozone at ground level.
- Despite increases in power generation using coal, NOx emissions have decreased 35% in the past 30 years.
- SCRs typically remove up to 90 percent of NOx emissions.

050031 4/05

AEP AMERICAN ELECTRIC POWER

Mercury

Mercury

In March 2004, the U.S. EPA issued rules requiring coal-fired power plants to reduce mercury emissions. EPA's rule caps emissions at 38 tons in 2010 and 15 tons in 2018 for overall reduction of 70%.

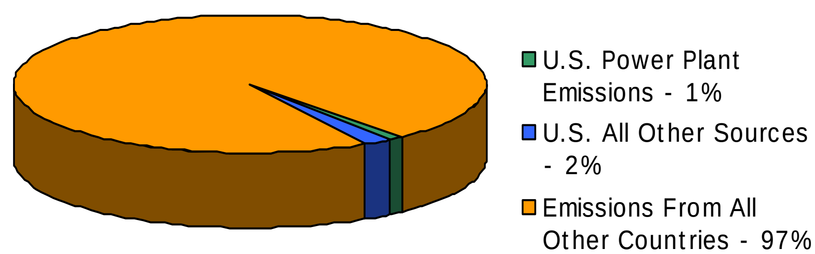
EPA also established an emission-trading program similar to that used for SO_2.

The U.S. is the first nation to regulate utility mercury emissions.

What is Mercury?

- Mercury emissions originate from numerous natural and man-made sources.
- Emissions generally remain in the atmosphere for a substantial period of time.
- More than 60% of mercury deposited in the U.S. originates outside of the country.
- U.S. power plants release less than 2% of the global total of human-caused mercury emissions and less than 1% of the total natural and human-caused mercury emissions.

1999 Global Mercury Emissions



Source: Based on Pacyna, J., Munthe J., Presentation at Workshop on Mercury, Brussels, March 29-30, 2004

The Mercury Solution

There are three forms of mercury – elemental, oxidized and particulate mercury

- **FGD systems take advantage of the high solubility of the oxidized portion of mercury and readily capture oxidized mercury.**
- **Elemental mercury passes through an FGD system uncaptured.**
- **The SCR catalyst may oxidize some or most of the elemental mercury, making it available for removal in the FGD system. As a result, the presence of an SCR can significantly increase the amount of mercury an FGD system can capture.**
- **Particulate mercury is effectively removed in existing particulate control devices. The presence of an SCR or FGD has not been shown to impact particulate mercury.**

AEP's Experience with Mercury Reduction

- AEP anticipates achieving most of its required phase-one mercury reductions through the co-benefits of installing FGD and SCR systems for SO_2 and NOx control.
- Extensive tests of the effectiveness of these combined technologies at Gavin Plant found mercury emissions reductions of 85% to 90%.
- Results could vary from plant to plant depending upon the exact characteristics of the coal being burned and other operating factors.
- These Hg emission reductions are only part of AEP's on-going strategy to comply with the EPA finalized CAMR. Other AEP facilities will be retrofit in the near future with similar SCR and/or FGD equipment to provide additional co-benefit mercury reductions. Other mercury specific control retrofits may also be needed in our environmental compliance program.

40th EEI Financial Conference

November 8, 2005

Westin Diplomat Resort & Spa

Hollywood, Florida

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Mike Morris

Chairman, President & Chief Executive Officer

Susan Tomasky

Executive Vice President & Chief Financial Officer

Framework for 2006

- 2006 Earnings Guidance Range: $2.50 to $2.70
- Controlled investment in utility operations
  - Reliability
  - Environmental
  - New Generation
- Seek rate recovery for new investments
- Control costs

COMPANY'S STRATEGY REMAINS FOCUSED ON UTILITY OPERATIONS

Dividend Action

- **Announced $0.02 increase in quarterly dividend to $0.37 per share**

- **Future dividend action**
  - Long-term payout ratio target of 60-65%
  - Dividend growth rate to parallel company's annual long-term earnings growth rate

REPRESENTS 6% INCREASE IN ANNUAL DIVIDEND

Summary of Major 2006 Earnings Drivers

- Load growth of 2.5%
- $300MM new rate recovery in progress
- Rising fuel costs of 10-12%
- Higher planned outages, increased retail load, & sale of TCC generation to impact off system sales
- Decline in utility operations O&M
- Parent Company improvement

TRADITIONAL UTILITY FACTORS WILL DRIVE 2006 EARNINGS

Regulatory Activity Underway

- TCC Stranded Cost Recovery True-up Filing Submitted
- FERC Transmission Case
- APCo Filing for Recovery of E&R Costs in Virginia & Fuel Clause Increase
- APCo & WPCo Base Rate & Fuel Clause Filing in West Virginia
- Kentucky Base Rate Filing

LEVEL OF CAPITAL INVESTMENT WILL BE ADJUSTED BASED ON RATE RECOVERY AND/OR CASH GENERATION

Table of Contents

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Company Overview

- **AEP Company Overview**

Fall EEI 2006

Company Overview

OUR FOCUS IS OUR CORE

DOMESTIC UTILITY BUSINESS OPERATIONS

American Electric Power Co, Inc. is one of the largest investor-owned electric public utility holding companies in the US. We provide generation, transmission and distribution services to over 5 million retail customers in eleven states (Arkansas, Indiana, Kentucky, Louisiana, Michigan, Ohio, Oklahoma, Tennessee, Texas, Virginia and West Virginia) through our electric utility operating companies.

We have seven regional operating companies for distribution and customer service operations that serve the customers of our eleven electric utility subsidiaries:

Regional Utility Divisions	Electric Utility Subsidiaries
AEP Ohio	Columbus Southern Power Ohio Power Wheeling Power
AEP Texas	Texas Central Company Texas North Company
Appalachian Power	Appalachian Power Kingsport Power
Indiana Michigan Power	Indiana Michigan Power
Kentucky Power	Kentucky Power
Public Service Company of Oklahoma	Public Service Company of Oklahoma
Southwestern Electric Power Co.	Southwestern Electric Power Co.

Company Overview

SIGNIFICANT PRESENCE THROUGHOUT

THE DOMESTIC VALUE CHAIN

Our US electric assets include:

- More than 36,000 megawatts of generating capacity in 3 power pools (one of the largest US generation portfolios with a significant cost advantage in many of our market areas)
- Approximately 39,000 circuit miles of transmission lines, including 2,116 miles of 765kV lines, the backbone of the electric interconnection grid in the Eastern U.S.
- 207,632 miles of overhead and underground distribution lines

With our coal and transportation assets we:

- control over 7,000 railcars
- own and/or operate over 2,300 hopper barges and 53 towboats
- operate one active coal-handling terminal with 20 millions tons of capacity

We consume approximately 75 million tons of coal annually.

Company Strategy

Business Strategy

AEP's mission is to bring comfort to our customers, support business and commerce and build strong communities. Our strategy to achieve our mission is to focus on our core utility business operations. Our objective is to be an economical, reliable and safe provider of electric energy to the markets that we serve. Our plan entails designing, building, improving and operating low cost, environmentally-compliant, efficient sources of power and maximizing the volumes of power delivered from these facilities. We intend to maintain and enhance our position as a safe and reliable provider of electric energy by making significant investments in environmental and reliability upgrades. We will seek to recover the cost of our new utility investments in a manner that results in reasonable rates for our customers while providing a fair return for our shareholders through a stable stream of cash flows, enabling us to pay dependable, competitive dividends. We operate our generating assets to maximize our productivity and profitability after meeting our native load requirements.

CONTINUED COMMITMENT TO OUR CORE UTILITY MISSION: BRING REASONABLY PRICED ELECTRIC SERVICE TO OUR CUSTOMERS, THEREBY STRENGTHENING OUR COMMUNITIES AND REWARDING OUR INVESTORS

Strategic Direction

Deliver value to our investors

- **Invest in our established utility business**
- **Achieve continued environmental improvements of existing facilities**
- **Buy or build additional generation to meet franchise service obligations**
- **Upgrade our energy delivery infrastructure**
- **Achieve adequate returns on all assets**

Utility Operations

Generation

AEP has approximately 36,000 megawatts of generating capacity in 3 power pools. AEP owns all or portions of 70 major generating plants, which include coal/lignite, natural gas, nuclear, wind projects and hydroelectric facilities.

AEP operates generating capacity in its internal power pool under an economic dispatch system[1]. AEP's power pool's competitive, largely coal-based production costs are among the lowest in the nation. AEP's power production costs are also kept relatively low by its reliance primarily on fossil fuel (gas and coal), with only a small overall nuclear dependence.

[1] Economic dispatch of a generating system utilizes the lowest-cost generating units to meet electric demand at any point in time.

Appalachian Power Company (APCo)

(organized in Virginia in 1926) is engaged in the generation, transmission and distribution of electric power to retail customers in the southwestern portion of Virginia and southern West Virginia, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities and other market participants. APCo covers a service territory of 19,049 square miles, and at December 31, 2005, APCo and its wholly owned subsidiaries had 2,408 employees. In addition to its AEP System interconnections, APCo also is interconnected with the following unaffiliated utility companies: Carolina Power & Light Company, Duke Energy Corporation and Virginia Electric and Power Company. APCo has several points of interconnection with TVA and has entered into agreements with TVA under which APCo and TVA interchange and transfer electric power over portions of their respective systems. APCo is a member of PJM.

Regulatory Information

Public Service Commission of West Virginia

AEP Regulated Electric Utilities

Appalachian Power Co.
Wheeling Power Co.

Commissioners

Number: 3	**Appointed/Elected: Appointed**	**Term: 6 Years**	**Political Makeup: R**: 1 **D:** 2
Qualifications for Commissioners The West Virginia Public Service Commission (WVPSC) consists of three members, appointed by the Governor, with the advice and consent of the senate. No more than two members of the commission may belong to the same political party. The Commissioners serve six year staggered terms, with one term expiring as of July 1 of each odd numbered year. One Commissioner is designated as Chairman of the Commission by the Governor. The Chairman serves as the chief fiscal officer of the Commission.			
Commissioners **Edward H. Staats, (Dem.),** since 2003, term expires June 2009. Former Chief of Operations in the Governor's office. Former Chief Financial Officer of the W.V. Bureau of Employment Programs. Certified Public Accountant in West Virginia and Georgia. Bachelor's degree, West Virginia University.			
R. Michael Shaw, Commissioner (Rep.), since 2003, term expires June 2007. Served on Workers' Compensation Appeals Board from 1997 to 2001. Elected to the House of Delegates in 1972, served on Judiciary Committee. Elected to Senate in 1978 to 1982 and again in 1984 to 1988. Owns law practice.			
Jon W. McKinney, Chairman (Dem.), since 2005, term expires June 2011. Formerly served as plant manager of Flexsys' Nitro, W .V. operations, chairman of Chemical Industry Committee for W.V., board member of W.V. Chamber of Commerce, W.V. Manufacturer's Association, Chemical Alliance Zone, W.V. Roundtable & Thomas Memorial Hospital.			

AEP Regulatory Status

APCo and Wheeling Power in WV provide retail electric service at bundled rates approved by the WV PSC. West Virginia has an active annual ENEC (Expanded Net Energy Cost) mechanism, which provides for a rate adjustment for fuel costs, among other items.

Regulatory Information

Virginia State Corporation Commission

AEP Regulated Electric Utilities

Appalachian Power Co.

Commissioners

Number: 3	**Appointed/Elected: Elected**	**Term: 6 Years**	**Political Makeup: R**: 2 **D:** 1

Qualifications for Commissioners

The Virginia State Corporation Commission (VSCC) is composed of three members elected by the General Assembly. Commissioners are elected to serve six-year terms, staggered in two year increments. The chair rotates annually among the three commissioners on February 1.

Commissioners

Theodore V. Morrison, Jr, (Dem.), since 1989; current term expires 2008. Member of the Virginia House of Delegates from 1968 to 1988. Member of Virginia Code Commission from 1974 and served as chairman from 1984 to 1988. Lawyer, private practice. Law degree from Emory University.

Mark C. Christie (Rep.), since 2004; current term expires 2010. Attorney, counsel to the Speaker of the House.

Judith Jagdmann, (Rep.), since 2006; current term expires 2012. Law degree from T.C. Williams School of Law at the University of Richmond. Served as Deputy Attorney General for Civil Litigation Division from 1998 to 2005. Attorney General for Commonwealth of Virginia from 2005 to 2006.

AEP Regulatory Status

APCo-VA provides retail electric service in Virginia at unbundled rates. APCO-VA's unbundled generation, transmission (which reflect FERC approved transmission rates) and distribution rates as well as its functional separation plan were approved by the VA SCC in December 2001. APCO-VA's base rates are capped at their mid-1999 levels until the end of the transition period (December 31, 2010), or sooner if the VA SCC finds that a competitive market for generation exists in Virginia. APCo-VA is permitted to seek two changes to its capped rates through December 31, 2010. In addition, APCo-VA is entitled to annual rate changes to recover the incremental costs it incurs for transmission and distribution reliability and compliance with state or federal environmental laws or regulations. APCo-VA is entitled to adjustments to fuel rates through 2010 to recover its actual fuel costs, the fuel component of its purchased power costs and certain capacity charges. APCO-VA recovers its generation capacity charges through capped base rates.

Regulatory Information

Tennessee Regulatory Authority

AEP Regulated Electric Utilities

Kingsport Power Co.

Commissioners

Number: 4	**Appointed/Elected: Appointed**	**Term: 6 Years**	**Political Makeup: I**: 1 **D:** 3

Qualifications for Commissioners

The Tennessee Regulatory Authority (TRA) directors are appointed, one each, by the Governor, Lieutenant Governor (as Speaker of the Senate), Speaker of the House and one joint appointment by the three together, and are confirmed by the Tennessee General Assembly. The directors are appointed for six-year terms, which all currently expire in June 2008; after 2008, terms will be staggered.

Commissioners

Eddie Roberson, Director (Ind.), since 2006; current term expires 2012. Former Chief of Public Services Division of PSC. Received Ph.D. in Public Administration from The Institute of Government at Tennessee State University in 1998.

Patrick Miller, Director (Dem.), since 2002; current term expires June 2008. Fiscal Analyst, Fiscal Review Committee. Legislative Liaison, Tennessee Supreme Court. Served as Chief of Staff to the Lt. Governor and Speaker of the Senate. J.D., Nashville School of Law.

Sara Kyle, Chairman (Dem.), since 1996; current term expires June 2008. Former assistant public defender until she was elected to the Memphis City Court bench. The longest serving director and only holdover from the previous Public Service Commission. Law degree from Middle Tennessee State University.

Ron Jones, Director, (Dem.), since 2002: current term expires June 2008. Sixteen year veteran of utility regulation, Director Jones served the first ten years with the Tennessee Public Service Commission staff and the next six with the TRA as a Senior Policy Advisor. Completed several regulatory studies programs at Michigan State University, Graduate School of Business. Received B.B.A. from Tennessee State University.

AEP Regulatory Status

No deregulation legislation and no base rate freeze or cap. Tennessee has an active fuel clause.

Columbus Southern Power

President and Chief Operating Officer:
Kevin Walker

Columbus Southern Power Company (CSPCo)

(organized in Ohio in 1937, the earliest direct predecessor company having been organized in 1883) is engaged in the generation, transmission and distribution of electric power to retail customers in Ohio, and in supplying and marketing electric power at wholesale to other electric utilities, municipalities and other market participants. CSPCo covers a service territory of 3,701 square miles and at December 31, 2005, CSPCo had 1,178 employees. CSPCo's service area is comprised of two areas in Ohio, which include portions of twenty-five counties. One area includes the City of Columbus and the other is a predominantly rural area in south central Ohio. In addition to its AEP System interconnections, CSPCo also is interconnected with the following unaffiliated utility companies: CG&E, DP&L and Ohio Edison Company. CSPCo is a member of PJM. Pursuant to an acquisition that closed on December 31, 2005, CSPCo purchased the electric utility operations of Monongahela Power Company in Ohio. As a result, in January 2006 approximately 29,000 customers in six southeastern Ohio counties, together with the transmission and distribution used to serve such customers, were added to CSPCo's service territory.

Principal industries served:
Food processing
Chemicals
Primary metals
Electronic machinery
Paper products

Regulatory Information

Ohio Public Utilities Commission

AEP Regulated Electric Utilities

Columbus Southern Power Co.
Ohio Power Co.

Commissioners

Number: 5	**Appointed/Elected: Appointed**	**Term: 5 Years**	**Political Makeup: R: 3 D: 0 I: 2**

Qualifications for Commissioners

Five members, appointed by the governor and confirmed by the state senate; five year, staggered terms, full-time positions, commissioners shall be selected from the lists of qualified persons submitted to the governor by the PUC nominating council. Not more than three of the members of the PUCO shall be members of the same political party. The governor appoints one of the five as president, who serves at the pleasure of the governor until a successor has been designated.

Commissioners

Alan R. Schriber, Ph.D., Chairman, (Ind.) , since 1999; term expires April 2009. Economics professor, president of a radio broadcasting company, investment advisor. Previously served as commissioner on the PUCO from 1983-1989. Member NARUC Telecommunications Committee.

Ronda Hartman Fergus, Commissioner, (Rep.) since 1995; term expires April 2010. Lawyer, Ohio State; previously served on the PUCO staff as an administrative law judge in the Legal Department. Later served as the chief of Telecommunications, Water and Sewer Section of the Legal Department, and then chief of the Telecommunications Technical Staff.

Judy A. Jones, Commissioner, (Rep.) since 1997; term expires April 2007. Masters degree in Biological Chemistry, Univ. of Michigan. Member NARUC Committee on Electricity, Clean Coal Technology Work Group and chair of the Fuel Source Advisory Council, member of the National Coal Council, and member of the Technical Advisory Committee of the Ohio Coal Development Office.

Donald L. Mason, Commissioner, (Rep.) since 1998; term expires April 2008. Lawyer, former chief of the Division of Oil and Gas at the Ohio Department of Natural Resources. He serves on the NARUC Gas Committee and the NARUC Ad Hoc Committee on Electric Restructuring.

Valerie A. Lemmie, Commissioner, (Ind.) since 2006; term expires April 2011. Master’s degree in Urban Affairs and Public Policy Planning, Washington University. Served as city manager for Cincinnati, Dayton, and Petersburg, Va. Scholar-in-residence at the Kettering Foundation.

AEP Regulatory Status

On January 26, 2005, the PUCO approved Rate Stabilization Plans (RSP) for CSP and OPCo (the Ohio Companies). The plans provided, among other things, for CSP and OPCo to raise their generation rates by 3% and 7% respectively, in 2006, 2007 and 2008 and provided for additional generation rate increases of up to 4% per year based on the Ohio Companies supporting the need for additional revenues. Distribution rates in effect at 12/31/05 are frozen for OPCo and CSP until 12/31/07 and 12/31/08, respectively. Transmission rates are currently regulated by FERC as reflected in the OATT. CSP and OPCO do not have an active fuel clause (fuel costs are embedded in unbundled G rates).

Indiana Michigan Power

President and Chief Operating Officer:
Helen Murray

Indiana Michigan Power Company (I&M)

(organized in Indiana in 1925) is engaged in the generation, transmission and distribution of electric power to retail customers in northern and eastern Indiana and southwestern Michigan, and in supplying and marketing electric power at wholesale to other electric utility companies, rural electric cooperatives, municipalities and other market participants. I&M has a service territory of 4,578 square miles and at December 31, 2005, I&M had 2,633 employees. Since 1975, I&M has leased and operated the assets of the municipal system of the City of Fort Wayne, Indiana. In addition to its AEP System interconnections, I&M also is interconnected with the following unaffiliated utility companies: Central Illinois Public Service Company, CG&E, Commonwealth Edison Company, Consumers Energy Company, Illinois Power Company, Indianapolis Power & Light Company, Louisville Gas and Electric Company, Northern Indiana Public Service Company, PSI Energy Inc. and Richmond Power & Light Company. I&M is a member of PJM.

Regulatory Information

Indiana Utility Regulatory Commission

AEP Regulated Electric Utilities

Indiana Michigan Power Co.

Commissioners

Number: 5	Appointed/Elected: Appointed	Term: 4 Years	Political Makeup: R: 3 D: 2
Qualifications for Commissioners Five members, appointed by the Governor from among persons nominated by a legislatively mandated utility commission nominating committee; four-year, staggered terms, full-time positions. Not more than three of the members of the IURC shall be members of the same political party. At least one of the commissioners must be an attorney qualified to practice law before the Indiana Supreme Court. The Governor appoints one of the five as chairman. Republican Mitch Daniels was elected Governor on November 2, 2004.			
Commissioners **David L. Hardy, Chairman (Rep.),** since 2005; current term will expire 2010. Commissioner Hardy is an attorney who has worked in private practice since 1997. Areas of expertise include negotiation, contracts, litigation, finance and administration. He has 35 years of regulatory experience at the state and federal levels.			
Larry S. Landis, Commissioner (Rep.),since 2002; current term ends 2008. Former president of a marketing and advertising agency, VP Corporate Advertising, Bank One, Indiana. Bachelor's degrees in political science and economics.			
David W. Hadley, Commissioner (Dem.), since 2000; current term ends 2010. Executive officer for Indiana AFL-CIO, former legislative affairs representative for United Mine Workers of America, coal miner, former high school social studies teacher. Master's degree in secondary education.			
Greg Server, Commissioner (Rep.),since 2005; current term ends 2009. Former state senator since 1981 and before that served in the Indiana House of Representatives from 1972 to 1980. Served as chair of senate commerce committee, which handled IURC and utility industry legislation. Served as Director of Administration for the Evansville Water and Sewer Utility.			
David E. Ziegner, Commissioner (Dem.), since 1990; current term ends 2007. Lawyer, staff attorney for Legislative Services Agency, General Council for IURC. Member, NARUC Committee on Electricity. Law degree from the Indiana University School of Law in Indianapolis.			

AEP Regulatory Status

I&M provides retail electric service in Indiana at bundled rates approved by the IURC. While rates are set on a cost-of-service basis, I&M's base rates are capped through June 30, 2007. Its fuel recovery rate is capped through that time period at a level that automatically increased in January 2006 and will do so again in January 2007.

Number: 3	**Appointed/Elected: Appointed**	**Term: 6 Years**	**Political Makeup: R: 1 D: 2**
Qualifications for Commissioners The Michigan Public Service Commission (MPSC) is composed of three members appointed by the Governor with the advice and consent of the Senate. Commissioners are appointed to serve staggered six-year terms. No more than two commissioners may represent the same political party. One commissioner is designated as chairman by the Governor.			
Commissioners **J. Peter Lark, Chairman (Dem.),** since 2003; current term expires 2009. Lawyer, assistant Attorney General in charge of special litigation division, former assistant prosecuting attorney. Law degree from Western New England College School of Law in 1976.			
Laura Chappelle, Commissioner, (Rep.) , since 2001; current term expires July 2007. Lawyer, former deputy legal advisor to the Governor, regulatory affairs advisor to Michigan House Republicans, assistant prosecuting attorney. J.D. from Thomas Cooley Law School in 1988.			
Monica Martinez, Commissioner, (Dem.), since 2005; current term expires July 2011. Former Deputy Director of the Governor's Legislative Affairs Division where she served as the Governor's principal lobbyist. Previous to this, she served as an analyst for the Senate Democratic Office, where she specialized in technology and energy, human services and family law policy issues. Bachelor's degree, University of Michigan.			

AEP Regulatory Status

Customer choice began January 2002. Generation was not deregulated. Retail rates were unbundled (though they continue to be regulated) to allow customers to evaluate generation costs. Michigan has an active fuel clause.

Kentucky Power

President and Chief Operating Officer: Tim Mosher

Kentucky Power Company (KPCo)

(organized in Kentucky in 1919) is engaged in the generation, transmission and distribution of electric power to retail customers in an area in eastern Kentucky, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities and other market participants. KPCo encompasses a service territory of 4,813 square miles and at December 31, 2005, KPCo had 454 employees. In addition to its AEP System interconnections, KPCo also is interconnected with the following unaffiliated utility companies: Kentucky Utilities Company and East Kentucky Power Cooperative Inc. KPCo is also interconnected with TVA. KPCo is a member of PJM.

Regulatory Information

Oklahoma Corporation Commission

AEP Regulated Electric Utilities

Public Service Company of Oklahoma

Commissioners

Number: 3	**Appointed/Elected: Elected**	**Term: 6 Years**	**Political Makeup: R**: 3

Qualifications for Commissioners

The Oklahoma Corporation Commission (OCC) is composed of three commissioners who are elected by state-wide vote. Commissioners serve staggered six-year terms so one commissioner vacancy occurs every two years. The election pattern was established when the Commission was created by the state constitution.

Commissioners

Jeff Cloud, Chairman (Rep.), since 2002; current term ends January 2009. Member, NARUC. Served as U.S. Congressman's District Director. Served as the Oklahoma City Mayor's Chief of staff. Law degree from Oklahoma City University.

Denise A. Bode, Vice Chairman (Rep.) since 1997; current term ends January 2011. Member, NARUC. Former president of the Independent Petroleum Association of America (IPAA). Graduated with a bachelor's degree in political science from the University of Oklahoma. Founding partner of a Washington D.C. firm. Law degree from George Mason University and a master's of law in taxation from Georgetown University.

Bob Anthony Commissioner, (Rep.), since 1989; current term expires January 2007. Member, NARUC. Served on the boards of the Oklahoma State, Oklahoma City, and South Oklahoma City chambers of commerce. Earned a M.Sc. from the London School of Economics, a M.A. from Yale University, and an M.P.A. from the Kennedy School of Government at Harvard University.

AEP Regulatory Status

PSO provides retail electric service in Oklahoma at bundled rates approved by the OCC. PSO's rates are set on a cost-of-service basis. Fuel and purchased energy costs above the amount included in base rates are recovered by applying a fuel adjustment factor to retail kilowatt-hour sales. The factor is generally adjusted annually and is based upon forecasted fuel and purchased energy costs. Over or under collections of fuel costs for prior periods are returned to or recovered from customers when new annual factors are established.

Southwestern Electric Power

President and Chief Operating Officer:
Venita McCellon-Allen

Southwestern Electric Power Company (SWEPCo)

(organized in Delaware in 1912) is engaged in the generation, transmission and distribution of electric power to retail customers in northeastern Texas, northwestern Louisiana and western Arkansas, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities, rural electric cooperatives and other market participants. SWEPCo has a service territory of 25,000 square miles and at December 31, 2005, SWEPCo had 1,498 employees. The territory served by SWEPCo also includes several military installations, colleges, and universities. In addition to its AEP System interconnections, SWEPCo is also interconnected with CLECO Corp., Empire District Electric Co., Entergy Corp. and Oklahoma Gas & Electric Co. SWEPCo is a member of SPP.

Total Customers as of 12/31/05*:

Served on National Governor's Association Task Force on Electric Infrastructure; Western Governor's Association Working Group on Cross Border Energy Issues. Master's degree from Arizona State.			

AEP Regulatory Status

Retail competition has been delayed by the PUCT in the SPP area of Texas (including SWEPCO and TNC-SPP areas). SWEPCO-TX has an active fuel pass-through clause. TCC and TNC provide retail transmission and distribution service on a cost-of-service basis at rates approved by the PUCT and wholesale transmission service under tariffs approved by the FERC consistent with PUCT rules.

AEP Texas Central Company

President and Chief Operating Officer:
Charles Patton

AEP Texas Central Company (TCC)

(organized in Texas in 1945) is engaged in the generation (to an extremely limited extent), transmission and sale of power to affiliated and non-affiliated entities and the distribution of electric power to retail customers through REPs in southern Texas, and (to a limited extent) in supplying and marketing electric power at wholesale to other electric utility companies and market participants. Under the Texas Act, TCC is completing the final stage of exiting the generation business and has already sold most of its generation assets, including STP. At December 31, 2005, TCC had 1,160 employees. In addition to its AEP System interconnections, TCC is a member of ERCOT.

Total Customers as of 12/31/05:
(Based on electric meters)

• **Residential**	**620,000**
• **Commercial**	**103,000**

Charles Patton

AEP Texas North Company (TNC)

(organized in Texas in 1927) is engaged in the generation, transmission and sale of power to affiliated and non-affiliated entities and the distribution of electric power to retail customers through REPs in west and central Texas, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities, rural electric cooperatives and other market participants. At December 31, 2005, TNC had 387 employees. The territory served by TNC also includes several military installations and correctional facilities. In addition to its AEP System interconnections, TNC is a member of ERCOT.

Total Customers as of 12/31/05:

Regulation

- **Jurisdictional Outlook**

Fall EEI 2006

Regulatory Activity Underway

Appalachian Power - Virginia E&R & General Rate Case Activity

Virginia E & R Cost Recovery Factor - Filed July 1, 2005 – Originally filed for recovery of $62.1 Million in new Environmental & Reliability costs

- Oct 14, 2005 – SCC ruled VA law does not allow recovery of prospective costs - $48.6 Million
- Nov 14, 2005 - APCo filed supplemental direct testimony which included updated actual E&R costs incurred through Sept. 30, 2005 of $21.1 million
- Hearings held, awaiting Commission Order
- Hearing Examiner's recommendation received on September 22, 2006. APCo requested recovery of actual incurred environmental compliance and T&D System reliability costs incurred during the period July 1, 2004 through September 30, 2005 of $21.1 million. The Hearing Examiner agreed with the Va SCC staff approach indicating that rates could be established on a go-forward basis in the amount of $29 million, however, since interim rates went into effect subject to refund that included a going forward level of E&R recovery, no adjustment to rates was necessary.
- The Virginia Attorney General's office, in its reply brief, indicated that they disagreed with the Hearing Examiner's interpretation of the statute. If the Virginia SCC adopts the Hearing Examiner's findings, we will appeal the decision vigorously. We believe we will ultimately prevail in this case.

Virginia General Rate Case Filing – Filed May 4, 2006 – Seeking $225.8MM increase in base rates, partially offset by a proposed credit to reflect sharing of $27.3MM in margins from off system sales (OSS), resulting in a net annual increase of $198.5MM.

- May 30, 2006 – SCC suspended the effective date of the rates until 10/2/06, at which time $198.5 million went into effect subject to refund.
- October 24, 2006 - SCC Staff filed testimony recommending a $12.7MM rate increase, which includes a 9.9% return on equity and no off-system sales margin sharing.

<u>**Procedural Schedule**</u>

Nov 9, 2006	Company to file rebuttal testimony
Dec 6, 2006	Evidentiary Hearings to commence

Regulatory Activity Underway

FERC Regional Rate Design

Regional Rate Design

- At our urging, the FERC instituted an investigation of PJM's zonal rate regime
  - Present regime may need to be replaced
  - Consider establishing regional rates that would compensate AEP, among others, for the regional transmission service proved by high voltage facilities they own that benefit customers throughout PJM
- July 2006 ALJ rendered initial decision finding:
  - License Plate rates for existing facilities are not just and reasonable, and must be replaced (effective April 1, 2006 when SECA ended)
  - Staff's proposal for a "Postage Stamp" rate phased in so as to limit increases in any one pricing zone to 10% per year is best choice for replacing current rates
  - Staff's proposed rate design would produce slightly more net revenue for AEP than the original AEP/Allegheny Power proposal, when fully effective
- Briefs on Exceptions to the initial decision by all parties filed: Order expected by the Commission late 2006/early 2007

Seams Elimination Cost Adjustment Revenues

Seams Elimination Cost Allocations (SECA) Revenues

- August 2006 ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
  - Up to $111 million SECA revenues could be disallowed, net of unused provisions
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both
- Exceptions to initial decision filed Sept. 11, & Replies to exceptions filed Oct. 11: Order expected by the Commission in early 2007

Regulatory Activity Completed

Ohio – Rate Stabilization Plan (2006 – 2008)

- Annual 3% and 7% generation rate increases at CSP & OP, respectively
- POLR rate rider for environmental additions
- Ability to request additional 4% annual increase in generation rate, for certain specific incremental costs
- Elimination of 5% residential generation credit (stipulated in the pre-existing Electric Transition Plan of 2000)

AEP East FERC Transmission Case

December 20, 2005 – FERC approved settlement allowing wholesale transmission rates to increase

- Results in $22 million net revenue increase in 2006 from wholesale transmission

Ohio Companies Pass Through of FERC OATT Changes

May 26, 2006 – PUCO approved a final order allowing for adjustment of the transmission component of standard service tariffs to FERC-approved rates

- Transmission rate adjustment results in additional annual revenues of approximately $89 million ($63 million in 2006)

SWEPCo Fuel Factor/Surcharge Filing

January 12, 2006 – Settlement approved by PUCT

- Fuel factor will increase SWEPCo's annual Texas retail fuel-related revenues by approximately $46 million
- Interim surcharge will collect the under-recovery amount of $44 million, including interest

Appalachian Power- Virginia Fuel Factor Increase

- $57.7 million increase in fuel factor approved on January 20, 2006

Kentucky Base Rate Case

Final order approved on March 14, 2006

- $41 million annual increase in base rates
- Rates effective March 30, 2006

Regulatory Activity Completed

APCo & WPCo West Virginia Rate Case

Settlement approved July 2006

- $44MM initial overall increase in rates effective July 28, 2006 comprised of:
  - $56MM increase in ENEC for fuel & purchased power expenses;
  - $23MM special construction surcharge providing recovery of the costs of scrubbers and the Wyoming-Jacksons Ferry (WJF) 765kV line;
  - $18MM general base rate reduction based on ROE of 10.5%, of which $9MM relates to a reduction in depreciation expense (affects cash flows but not earnings);
  - $17MM credit to refund a portion of deferred prior over-recoveries of ENEC costs of $51MM, currently recorded in regulatory liabilities; therefore, this item impacts cash flows but has no effect on earnings
- Agreement also provides a surcharge mechanism that allows APCo and WPCo to adjust their rates annually for the timely recovery in each of the next three years of the incremental cost of ongoing environmental investments and the costs of WJF
- Reinstatement of the ENEC mechanism effective July 1, 2006

CSP & OPCO Storm Related Service Restoration Cost Recovery

August 9, 2006 – PUCO issued ruling allowing CSP and OPCO to recover costs associated with service restoration activities during the back-to-back December 2004 and January 2005 ice storms.

- CSP Recovery - $11.9MM
- OP Recovery - $11.7MM

Rate Case Outcome Statistics

Company	Jurisdiction	Date of Final Order	Jurisdictional Rate Base ($ in MM)	ROE	Comments
APCo/WP	WV	7/26/2006	$1,658	10.50%	Settled case. Rate base, ROE and ROR per settlement agreement.
KPCo	KY	3/13/2006	$858 - Rate Base $853 - Capitalization	11.50%	Settled case. Rate base and ROE provided as filed by KPCo. Settlement agreement approved a 10.50% ROE for environmental surcharge filings. KY PSC requires use of total capitalization in rate filings.
PSO	OK	5/2/2005	$1,064	10.75%	Settled case. Rate base and ROE are estimated. A 10.75% ROE was found to be appropriate for AFUDC & affiliate transactions.
TCC	TX	8/15/2005	$862	10.125%	Settled case.

Summary Rate Case Information

Virginia E&R Factor Filing

On July 1, 2005, Appalachian Power Co. filed a request with the Virginia SCC to recover incremental actual and projected costs for environmental compliance and T&D System reliability in the amount of $62.1MM. The SCC has ruled that under applicable VA law, it does not have authority to approve the recovery of projected E&R costs before their actual incurrence and adjudication. APCo filed supplemental direct testimony which included actual costs incurred for E&R thru September 30, 2005 of $21.1 million. Hearings concluded in March. Briefs were filed in early April. We are awaiting a Commission order. The Hearing Examiner's recommendation was received on September 22, 2006. APCo requested recovery of actual incurred environmental compliance and T&D System reliability costs incurred during the period July 1, 2004 through September 30, 2005 of $21.1 million. The Hearing Examiner agreed with the Va SCC staff approach indicating that rates could be established on a go-forward basis in the amount of $29 million, however, since interim rates went into effect subject to refund that included a going forward level of E&R recovery, no adjustment to rates was necessary. We will vigorously defend our position. Comments on the recommendation were filed October 13. Docket # PUE-2005-00056

Capital Structure – Company vs. Staff

Capital Structure	Company Position (filed 7/1/05)	Staff Position (filed 1/11/06)

Common Equity	42.65%	45.16%
ITC	0.71%	0.61%
Total	**100.00%**	**100.00%**
Recommended ROE	**10.85%**	**9.80%**

Revenue Requirement – Company vs. Staff*

Revenue Requirement	Company Position (filed 11/14/05)	Staff Position (filed 1/11/06)
Environmental	13.3	8.2
Transmission	6.1	8.8
Distribution	1.7	2.6
Total	**$21.1MM**	**$19.6MM**

*Difference in positions does not reflect the relative earnings impact and is not necessarily a reflection of the ultimate outcome of the case.

Note: During the course of the hearings, Staff updated their revenue requirement recommendation to $23.6 million.

Summary Rate Case Information

Virginia Base Rate Case

On May 4, 2006, Appalachian Power Co. filed a request with the Virginia SCC to increase base rates $225.8 million partially offset by a proposed credit to reflect sharing of $27.3 million in margins from off-system sales resulting in a net annual increase of $198.5MM. On May 30, 2006, the SCC suspended the effective date of the rates until 10/2/06, at which time $198.5 million went into effect subject to refund. Intervenor testimony was filed on October 4, 2006. On October 24, 2006, the SCC Staff filed testimony recommending a $12.7MM rate increase, which includes a 9.9% return on equity and no off-system sales margin sharing. Appalachian Power will file rebuttal testimony on November 9, 2006 and Evidentiary Hearings will commence on December 6, 2006.Docket # PUE-2006-00065

Net Generation Statistics

Net Generation By Operating Company (in MWhs)

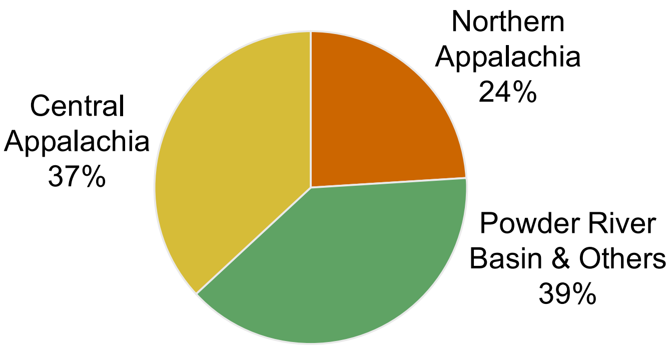
Operating Company	2004	2005
AEP Generating	8,514,555	8,969,041
Appalachain Power	29,551,752	32,949,364
Columbus Southern Power	14,049,095	14,038,045
Indiana Michigan Power	31,258,001	31,535,226
Kentucky Power	6,550,509	7,345,624
Ohio Power	52,156,944	52,080,585
Public Service of Oklahoma	12,512,501	15,375,848
Southwestern Electric Power	20,069,405	20,169,211
Texas Central Company	9,448,714	2,082,874
Texas North Company	3,263,320	2,342,693
AEP System Total Net Generation	**187,374,796**	**186,888,511**

Notes: Figures represent generation produced from AEP-owned assets only.

Coal Procurement

AEP purchases approx. 75 million tons of coal per year

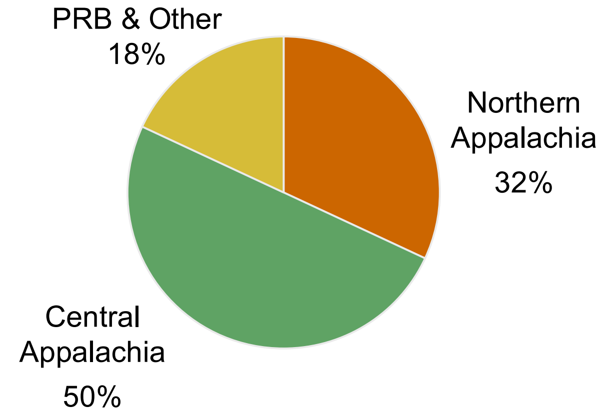
Total AEP System



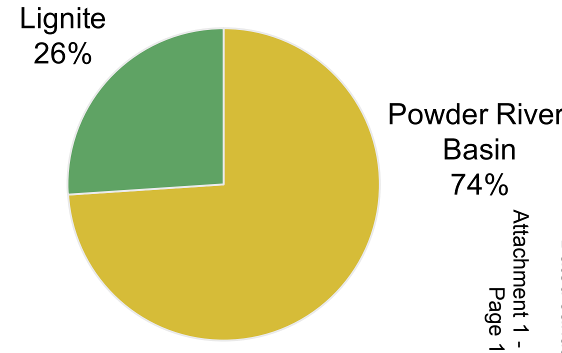
Coal Stats:

- Fully contracted for 2006; 95%+ contracted for 2007
- Avg. delivered price ~ $36.25/ton in 2006
- Approximate 6-8% price increase in 2007 -- ($38.80/ton)
  - Addition of Mountaineer & Mitchell scrubbers will allow for a greater mix of Northern Appalachian coal in 2007

AEP East



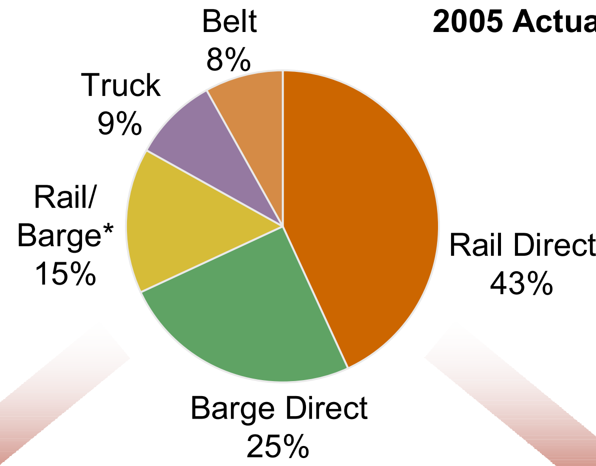
AEP West



Coal Delivery

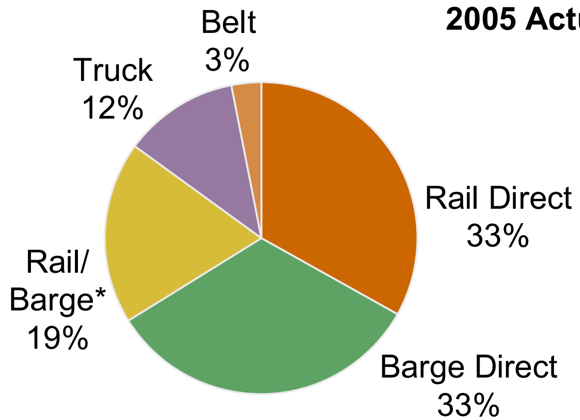
Total AEP System

2005 Actual



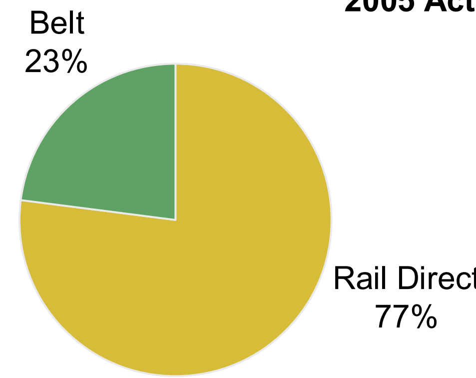
AEP East

2005 Actual



AEP West

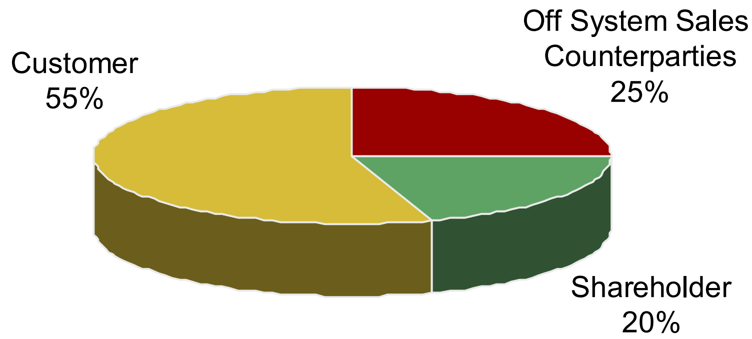
2005 Actual



* Reflects coal delivered to AEP plants transported through combination of rail and barge

Fuel Recovery

AEP System



Fuel Cost Recovery
(on average)

- **Fuel recovery varies by jurisdiction**
- **80% of fuel cost is recoverable across the AEP System**
- **Active Fuel Clause Jurisdictions:**
  - **AEP EAST: APCo, I&M, KPCo, KGP, WP**
  - **AEP WEST: PSO, SWEPCO**

Note: Fuel recovery percentages are based on estimates for 2006 fiscal year

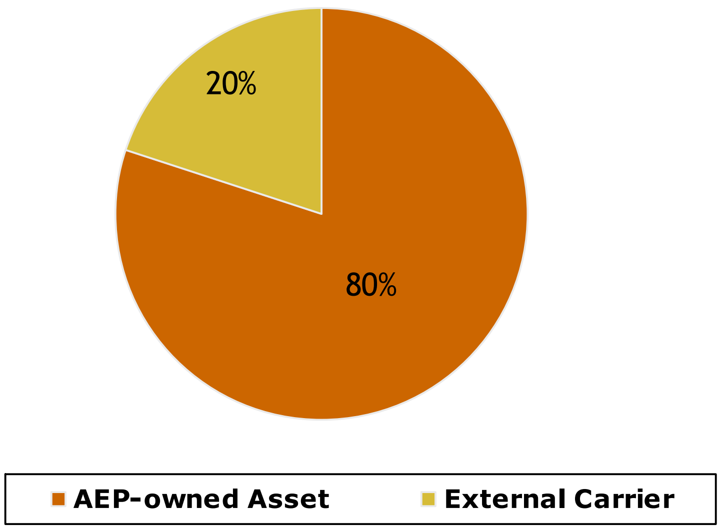
Jurisdictional Fuel Clause Summary

STATE	FUEL CLAUSE	ADJUSTMENT FREQUENCY
Arkansas	Yes	Annually
Indiana	Yes	Capped at increasing rates through June 30, 2007
Kentucky	Yes	Monthly
Louisiana	Yes	Monthly
Michigan	Yes	Annually
Ohio	No	Although there is no recovery mechanism in Ohio, the RSP provides for a 3% (CSP) and 7% (OP) increase in generation rates annually, which includes fuel beginning January 2006 and extending through December 2008.
Oklahoma	Yes	Annually
Tennessee	Yes	Monthly
Texas (SPP)	Yes	Semi-annually
Virginia	Yes	Annually
West Virginia	Yes	Annually

AEP's Coal Transportation Assets

Coal Transportation to AEP Plants*

2005 Actual



* Represents close approximations

AEP's substantial coal transportation assets include:

- 7,065 railcars
- 2,318 barges
- 53 towboats
- 1 active coal handling terminal (20 million tons of annual capacity)

AEP'S TRANSPORTATION ASSETS PROVIDE FLEXIBILITY IN A CONSTRAINED DELIVERY ENVIRONMENT

New Generation

Fall EEI 2006

New Generation

IGCC

- June 2006 – PUCO approved tariff to recover Phase 1 pre-construction costs ($24MM) over 12-month period effective July 1, 2006
- Expect to obtain permits and finalize engineering by 2007
- Construction of IGCC facilities dependent on regulatory approvals
- Certificates of Convenience and Necessity (CCN) applications filed in OH and WV and currently in process.

SWEPCO

- May 31, 2006- Announced plans to build $1.7 billion of new generation
- Expected generation build includes a simple-cycle gas turbine totaling 320 MW at Tontitown, AR and combined-cycle gas plant totaling 480 MW at Arsenal Hill
- Aug 2006 – Announced plans to build $1.3 billion 600 MW base load ultra-supercritical coal-fueled plant – expected SWEPCO investment will be approx. 75%
- Commercial operation dates between 2007 and 2011

PSO

- 2H05 - Submitted RFPs for up to 1100 MW of peaking and baseload capacity in aggregate
- March 2006 - Two peaking RFPs totaling 340 MW awarded; commercial operation 2008
- July 2006 - Entered into JVA with OG&E to build a $1.8 billion 950 MW coal-fueled unit with goal to use ultra-supercritical technology – PSO will own 50% or 425 MW; commercial operation 2011

IGCC Overview

Fall EEI 2006

Integrated Gasification Combined Cycle

AEP IS COMMITTED TO IGCC TECHNOLOGY

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called “syngas” – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2 , mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP’s eastern service territory.

AEP is currently working with a technology provider to develop a firm price for an IGCC facility to be built in our eastern service region.   AEP intends to seek regulatory recovery approvals in advance of building the plant.

Generation Technology Comparative Stats

	PC	IGCC	NGCC
Nominal Capacity (MW)	600	600	600
Heat Rate (Btu/kWh)	8700	8600	7200
Total Plant Cost (EPC) ($/kW)	1700	1900	480
Production Cost ($/MWh)	17	16	57
Cost of Electricity, without CO_2 Capture ($/MWh)	58	63	90
Estimated Cost of Electricity, with CO_2 Capture ($/MWh)	94	87	137

Source: Results of AEP analysis based on EPRI studies

- Total Plant Cost (2005$'s) includes the cost to **E**ngineer, **P**rocure and **C**onstruct plant and owner's direct costs; does not include interconnections, transmission lines, transmission upgrades, contingency or AFUDC.
- Assumes Northern Appalachian Coal price of $1.60 /mmBtu for PC and IGCC, and natural gas price of $7.00/mmBtu for NGCC.
- Assumes 85% capacity factor for PC and IGCC, 25% for NGCC.
- Production Cost includes Fuel Cost and Variable Operations & Maintenance (VOM) cost.
- Cost of Electricity based on EPC cost, does not include the cost of Emission Credits.
- Cost of Electricity with CO_2 capture does not include sequestration cost.

IGCC TECHNOLOGY IS STRATEGIC TO KEEPING COAL IN THE MONEY

IGCC Regulatory Activity

Ohio IGCC Activity

March 18, 2005: CSP and OPCO filed an application with the PUCO seeking authority to recover costs related to building and operating an IGCC plant if built in Ohio.

October 2, 2006: Filed state environmental permit application with the Ohio Environmental Protection Agency

West Virginia IGCC Activity

January 11, 2006: Appalachian Power Co. filed a Certificate of Public Convenience and Necessity seeking authority to construct a 600-MW IGCC facility in West Virginia.

October 2, 2006: Filed state environmental permit application with the West Virginia Department of Environmental Protection

AEP WILL PIONEER CONSTRUCTION OF
FIRST COMMERCIAL SCALE IGCC PLANT IN THE WORLD

IGCC Activity in Ohio

Ohio - Cost Recovery Filing

Phase 1 – PUCO AUTHORIZED

- Effective during 2006
- Seeks recovery of initial costs, including those already incurred, such as site engineering and various other engineering services
- Approximately $23.7 Million

Phase 2

- Effective 2007- mid 2012* (Construction Phase)
- Seeks recovery of carrying costs associated with plant construction

Phase 3

- Effective mid 2012* (Commercial Operation begins)
- Seeks recovery of projected $1.174 Billion cost of plant over its operating life

Ohio Next Steps

2006:

- Secure cost recovery plan
  - April 10, 2006 – PUCO authorized implementation of Phase 1 Rates
  - Phase 2 & 3 ruling – Post October 2006 filing – following completion of FEED study
- Negotiate with suppliers

2006—2007:

- Obtain permits and finalize engineering and procurement

2007—2012*:

- Design, construct and start-up plant

Construction of IGCC plant takes approximately 4 years from ground-breaking to start-up

***PROJECT TIMING DEPENDENT ON REGULATORY RECOVERY ASSURANCES**

IGCC Permitting Process

IGCC Permitting Issues

- Air – to evaluate best available control technology (BACT)
- Wastewater – to understand wastewater streams
- US COE (Corp of Engineers) – to obtain permits for construction of river facilities
- NEPA Process – (National Environmental Policy Act) – Environmental site studies addressing wetlands, endangered species, historical artifacts

PERMITTING PROCESS WILL TAKE 1 – 2 YEARS

Environmental Overview

Fall EEI 2006

Environmental – Multi-Emissions Reductions

Multi-Emissions Regulations: During the course of 2005, EPA finalized two rules: the Clean Air Interstate Rule (CAIR) and the Clean Air Mercury Rule (CAMR). These rules require SO_2, NOx and Hg reductions in two phases: 2010 (2009 for NOx) and 2015 (2018 for Hg), also utilizing an emissions trading program. AEP is already well on the way towards compliance with these provisions with a substantial number of scrubber and SCR installations recently completed or underway.

While the industry and AEP are generally supportive of these regulations, they do not provide the same degree of regulatory certainty and eliminate unnecessary provisions or modify the Clean Air Act to the same degree as new Clear Skies legislation would have provided. However, passage of comprehensive Clear Skies legislation is not likely.

In July 2005, EPA finalized a third rule: the Clean Air Visibility Rule (CAVR), which addresses the implementation of emission controls for SO_2 and NOx to deal with regional haze in Class I areas (e.g. national parks, forests and other pristine areas). CAVR requires Best Available Retrofit Technology (BART) – defined as scrubbers and meeting low NOx emission rates -- to be required and ultimately installed at those affected facilities. The EPA is urging states that are part of the CAIR region (most of the states except for the Western US) to adopt the CAIR rule as compliant with CAVR (thus not requiring BART at power plants within that state). However, in the other non-CAIR states (i.e. The West and Southwestern US), most of the currently unscrubbed coal-fired plants will probably be required to install scrubbers and meet lower NOx limits.

Finally, in September 2006 EPA issued a final rule on PM (i.e. particulate matter), which tightened the PM-2.5 (i.e. fine particle) 24-hour standard, while retaining the current annual standard for PM-2.5. Precursors of fine particulates include SO_2, NOx and a variety of carbonaceous compounds. Though CAIR is expected to lead to increasing compliance with these new and existing standards, it is uncertain whether or not EPA will decide to reduce the utility SO_2 and/or the NOx emission limits further as part of a regional strategy in the longer term for compliance.

Environmental – Multi-Emissions Reductions

Greenhouse Gas Policies: The President has committed the nation to reduce the greenhouse gas (GHG) intensity of the economy (GHG emissions per $ GDP) by 18% over the next ten years through voluntary programs, and called for an improved federal emissions reporting program for tracking progress toward this goal. Regional U.S. initiatives to reduce greenhouse gas emissions and specifically CO_2 emissions have also begun in states outside of AEP's service territory including the Northeastern States (i.e. the Regional Greenhouse Gas Initiative or RGGI) and the West Coast (specifically California). A number of federal legislative proposals have been introduced in Congress over the past couple of years, which if passed, would require mandatory US GHG reductions in the future.

AEP does not support mandatory U.S. greenhouse gas (GHG) requirements unless they are part of a new international agreement that limits GHGs in the long term among all our major trading partners including developing countries such as China and India. Nonetheless, AEP has had a GHG strategy for a number of years, acknowledging the issue, accepting the science and believing in early proactive action. Our strategy includes:

1) Being proactive in the development of greenhouse gas policy through our support and membership within a variety of organizations (e,g, EPRI, Pew Center, the Business Roundtable, e8, IETA);

2) Being a leader in the development of technology through our support of research, development and deployment of new clean coal technology such as IGCC, being a major investor in the Future Gen project (the first near zero emitting IGCC coal plant in the U.S.), and through research in carbon capture and sequestration from coal plants;

3) Taking voluntary action now through our participation in Chicago Climate Exchange (CCX) , EPA Climate Leaders and SF-6 Program, Asia-Pacific Efficiency, DOE1605B, and Business Roundtable (BRT) Climate Resolve program among other efforts. We are making voluntary GHG reductions through our participation in CCX and are currently ahead of our reduction commitments.

4) Long-term planning (post-2010) to reduce or limit GHGs through:

- IGCC and FutureGen
- Retirement of less efficient capacity
- Emission offsets (e.g., forestry, SF-6)
- Renewables (e.g. biomass co-firing, wind)

Environmental Glossary

Clean Air Scientific Advisory Committee (CASAC) - Created by the Clean Air Act amendments in 1977, this committee of independent experts on air pollution reports to the U.S. Environmental Protection Agency Administrator. The committee is charged with reviewing the scientific knowledge of air pollution and its effects, without regard to costs.

Micron - One millionth of a meter. For example, human hair is about 70 microns thick. $PM_{2.5}$ is approximately 1/30th the thickness of a human hair.

National Ambient Air Quality Standards (NAAQS) - Establish maximum allowable concentrations in outdoor air for six pollutants: particulate matter, ozone, sulfur dioxide, nitrogen oxide, carbon monoxide, and lead. The Clean Air Act requires EPA to review NAAQS every five years. EPA is required to set standards "to protect public health ...allowing an adequate margin of safety."

Ozone - Ozone is a form of oxygen which is a colorless gas with a unique odor. Ozone occurs naturally in the earth's upper atmosphere where it shields against ultraviolet radiation from the sun. In the lower atmosphere, ozone is formed by the combination of nitrogen oxides and hydrocarbons in the presence of sunlight. This ozone is a major component of smog. The current NAAQS for maximum allowable ozone is 0.12 parts per million measured over a one-hour period, with three exceedances over three years permitted.

Particulate Matter - Particles of matter suspended in the atmosphere. EPA currently regulates concentrations of particulate matter that are 10 microns and smaller in diameter. The current allowable maximum concentration of particulate matter is 150 micrograms (ug) per cubic meter averaged over 24 hours. The annual average of 24 hour readings is required to be less than 50 ug/m^3.

PM_{10} - Particulate matter that is 10 microns or less in diameter.

$PM1_{2.5}$ - Particulate matter that is 2.5 microns or less in size.

Primary Particles - This is particle matter that is emitted directly into the atmosphere, including dust from construction, farming and roads, volcanic ash, sea salt, tire and brake dust, diesel soot and wood smoke. Primary particles are the dominant form of particulate matter in the West and arid Southwest. Primary particles tend to settle out of the atmosphere in a relatively short time.

Secondary Particles - These particles are formed when gases, such as sulfur oxides, nitrogen oxides and volatile organic carbon, react in the atmosphere to form solid or liquid particles of sulfates, nitrates and organic carbon particles. These particles are generally 2.5 microns and smaller in size. Secondary particles dominate in the eastern United States. Secondary particles tend to remain suspended in the atmosphere and can be transported over long distances by prevailing winds.

Precursor - The forerunners that lead to the formation of a pollutant. The precursors of ozone are nitrogen oxides and hydrocarbons, which combine in the presence of sunlight to form ozone. The precursors of fine particular matter are sulfur oxides, nitrogen oxides and volatile organic compounds which combine with ammonia in the atmosphere to form sulfate and nitrate particles.

Clean Air Interstate Rule

- Rule Finalized March 2005
- CAIR was designed to address the contribution of regional emissions to downwind $PM_{2.5}$ & 8-hour Ozone non-attainment
- CAIR reductions from 2003-level emissions: ~73% SO_2; & ~61% NO_x
- Reductions occur in phases: Phase I (2009); Phase II (2015)
- CAIR established three Cap & Trade Programs:

1. Annual SO_2 Trading Program
2. Annual NO_x Trading Program
3. Separate Ozone-Season only NO_x Trading Program

CAIR Applicability to AEP

- AEP-East States & Louisiana subject to all three trading programs
- Arkansas subject only to the Ozone-Season trading program
- Texas subject to only the Annual NO_x & SO_2 trading programs
- CAIR does not apply to Oklahoma

Clean Air Mercury Rule

- Rule Finalized March 2005
- Designed to reduce mercury emissions by ~70% nationwide from electric utilities
- Reductions occur in phases: Phase I (2010); Phase II (2018)
- Establishes a Cap & Trade structure to achieve mercury reductions

AEP WILL ACHIEVE SOME MERCURY REDUCTION AS A CO-BENEFIT OF SCR AND FGD SYSTEMS, BUT MERCURY SPECIFIC CONTROL EQUIPMENT WILL BE NEEDED ON SOME UNITS

AEP's Environmental Compliance Strategy

NOx and SO_2 emission reductions are part of AEP's on-going strategy to comply with the Clean Air Act, Title IV regulations, the Clean Air Interstate Rule (CAIR) and the Clean Air Mercury Rule (CAMR).

Much of this investment will position AEP to accomplish the following:

- Reduce nitrogen oxide emissions by 90% through installation of Selective Catalytic Reduction (SCR) systems
- Reduce sulfur dioxide emissions by 95% to 98%+ through installation of Flue Gas Desulfurization (FGD) systems (scrubbers)
- Realize co-benefit of mercury capture offered through SCR and FGD systems together
- Avoid future landfill costs through sale of gypsum (by-product) & build where landfill costs are lower
- Realize benefits achieved through fuel flexibility

Represents the best and least-cost compliance path to improve environmental performance on a fleet basis, while continuing to provide a reliable supply of power to customers at a reasonable price and a solid return for investors.

Environmental Project Status Report

AT THE CONCLUSION OF OUR CURRENT ENVIRONMENTAL RETROFIT PROGRAM, OVER 45% OF OUR COAL-FIRED GENERATION FLEET WILL BE EQUIPPED WITH SCRs AND OVER 48% WILL BE SCRUBBED (FGD).

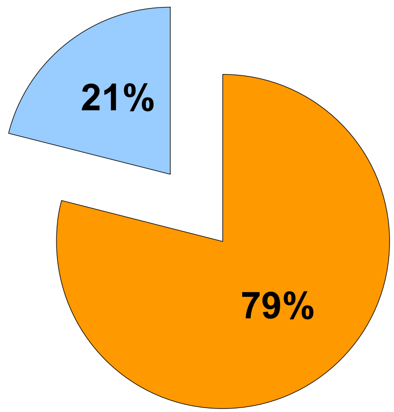
Plant Name	MW Capacity	SCR	Status	FGD	Status
Amos 1-3	2900	✓	In-service	✓	Projected 2008-09
Gavin 1 & 2	2620	✓	In-service	✓	In-service
Mitchell 1 & 2	1600	✓	Projected 2007	✓	Projected 2007
Mountaineer	1320	✓	In-service	✓	Projected 2007
Big Sandy 2	800	✓	In-service		Delayed
Conesville 5 & 6	750		N/A	✓	In-service
Stuart 1-4	620	✓	In-service	✓	Projected 2009
Cardinal 1	600	✓	In-service	✓	Projected 2007
Muskingum River 5	585	✓	In-service		Delayed
Pirkey	580		N/A	✓	In-service
Oklaunion	539*		N/A	✓	In-service
Conesville 4	339	✓	Projected 2009	✓	Projected 2009
Zimmer	330	✓	In-service	✓	In-service
Dolet Hills	262		N/A	✓	In-service

AEP's Total Coal Fleet Capacity = 25,746 MW

* Oklaunion's MW capacity represents combination of PSO, TCC & TNC ownership. TCC's 54 MW ownership of Oklaunion is currently under negotiation for sale.

Materials and Vendors – AEP's Advantage

Breakdown of Environmental Compliance Program
(% of Purchased Costs)



Actuals To Date & Firm Costs
Estimated Cost Exposure*

* Primarily labor costs

SCR Technology

- Removes 85 – 93% of NOx emissions
- Requires ~ 1% use of auxiliary power
- **AEP Capital Cost ~ $121/kw avg.**

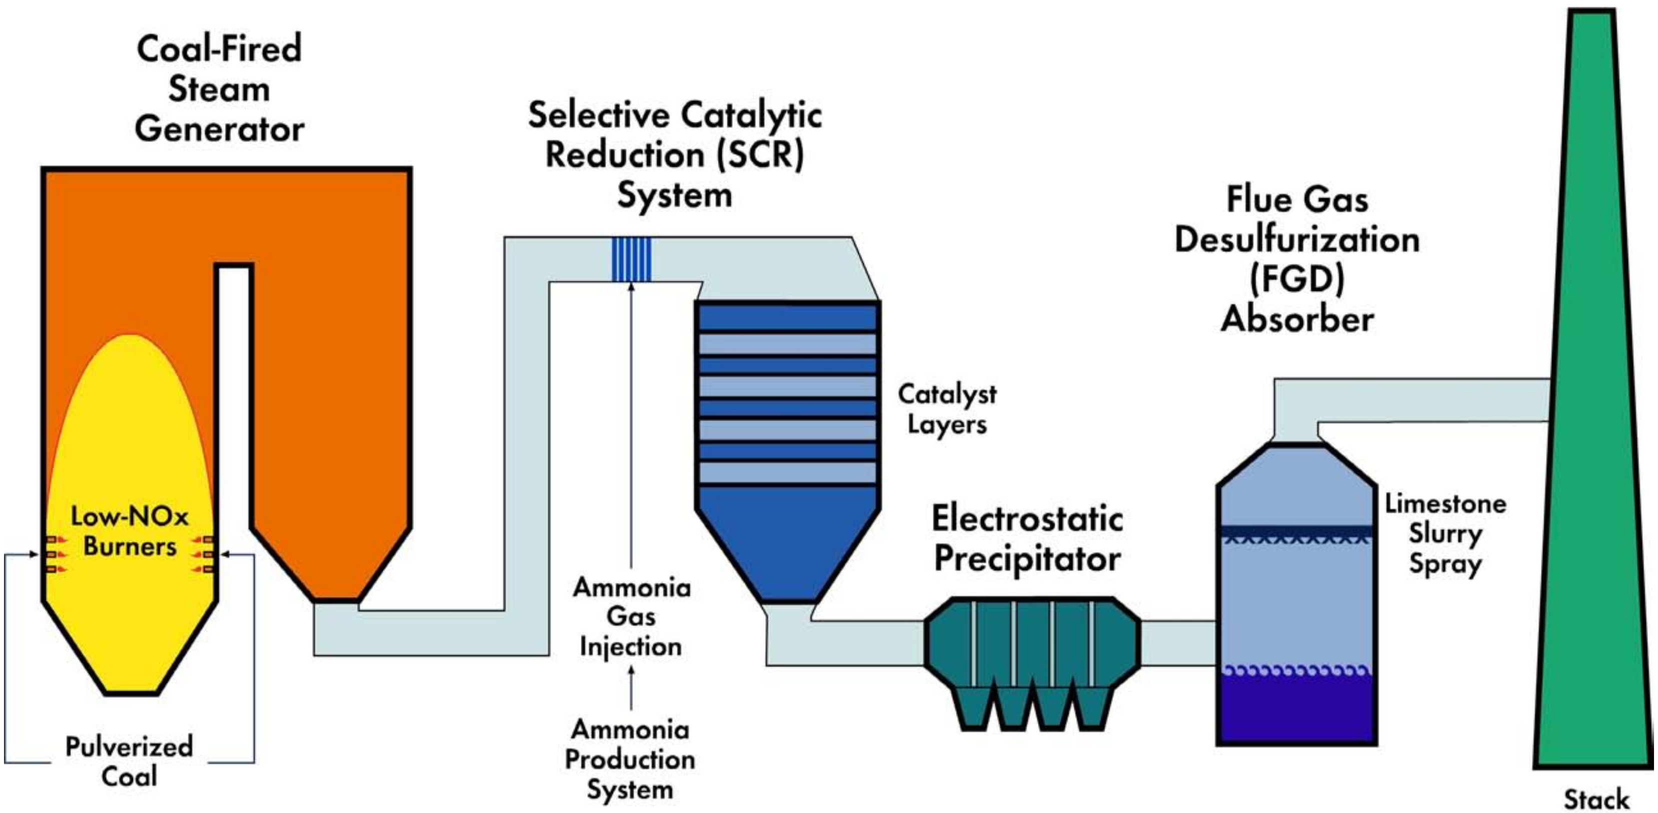
Combination of SCR & FGD technology results in co-benefit of Hg removal ~ 80% removal efficiency

FGD Technology

- Removes 95 – 98% of SO_2 emissions
- Requires ~1.5% to 3.0% use of auxiliary power
- **AEP Capital Cost ~ $250/kw avg.**

AEP BENEFITS FROM FIRST-MOVER ADVANTAGE THROUGH LOWER CONTRACTED PRICES COMPARED TO INDUSTRY

The Flue Gas Stream



Impact of SCR and FGD on Net Generation

- The overall generation loss in capacity associated with SCR and FGD for the entire AEP fleet is roughly 600MW.
- Typically, an SCR consumes approximately 1% whereas an FGD consumes from 1.5% to 3.0% of the plant electricity output.
- Plant modifications increasing unit MW ratings are being implemented as part of the retrofit program
  - For example, Mountaineer turbine valve upgrades will increase unit output by ~30 - 45 MW
  - Similar upgrades will be implemented on other units

PLANT MODIFICATIONS WILL MITIGATE FGD AND SCR CAPACITY CONSUMPTION

Typical FGD Project Milestone Schedule

- **Phased Execution**
  - Lessons Learned: Focus on performance/risk management/cost
  - Phase 1 Feasibility Study, Phase 2a Conceptual design, Phase 2b Detailed design, Phase 3 Bid Construction at 30 – 60% design complete
- **Typical Plant and Landfill Schedule for Engineering, Procurement, Permitting, and Construction**
  - A new landfill requirement can be the critical path

Projected 2006-2009 Credit Metric Ranges

Debt to book capital (adjusted - rating agency view) range of 58% to 60%

FFO to Interest range of 3.5x to 4.0x

FFO/Total Debt range of 15% to 17%

* Cash Flow from Operations assumes full rate recovery on capital expenditures.

CAPITAL INVESTMENT IS FUNDED BY CASH FROM OPERATIONS AND DEBT ISSUANCES

Note: For analysis purposes, certain financial statement amounts have been reclassified for this effect on the earnings presentation.

Framework for Long-Range Performance

- **Introduction of 2007, 2008 & 2009 Earnings Guidance Ranges:**

2007 Range $2.85 to $3.05	2008 Range $3.00 to $3.30	2009 Range $3.15 to $3.45

- **Increased EPS Growth Range: 5-7% (2006-2009)**
  - Continued disciplined investment in utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
    - AEP Transmission Company
  - Seek rate recovery for new investments
  - Control costs
- **8-cent per share increase in annual dividend effective 4Q06**
- **Maintain credit ratings**
  - BBB/Baa2/BBB

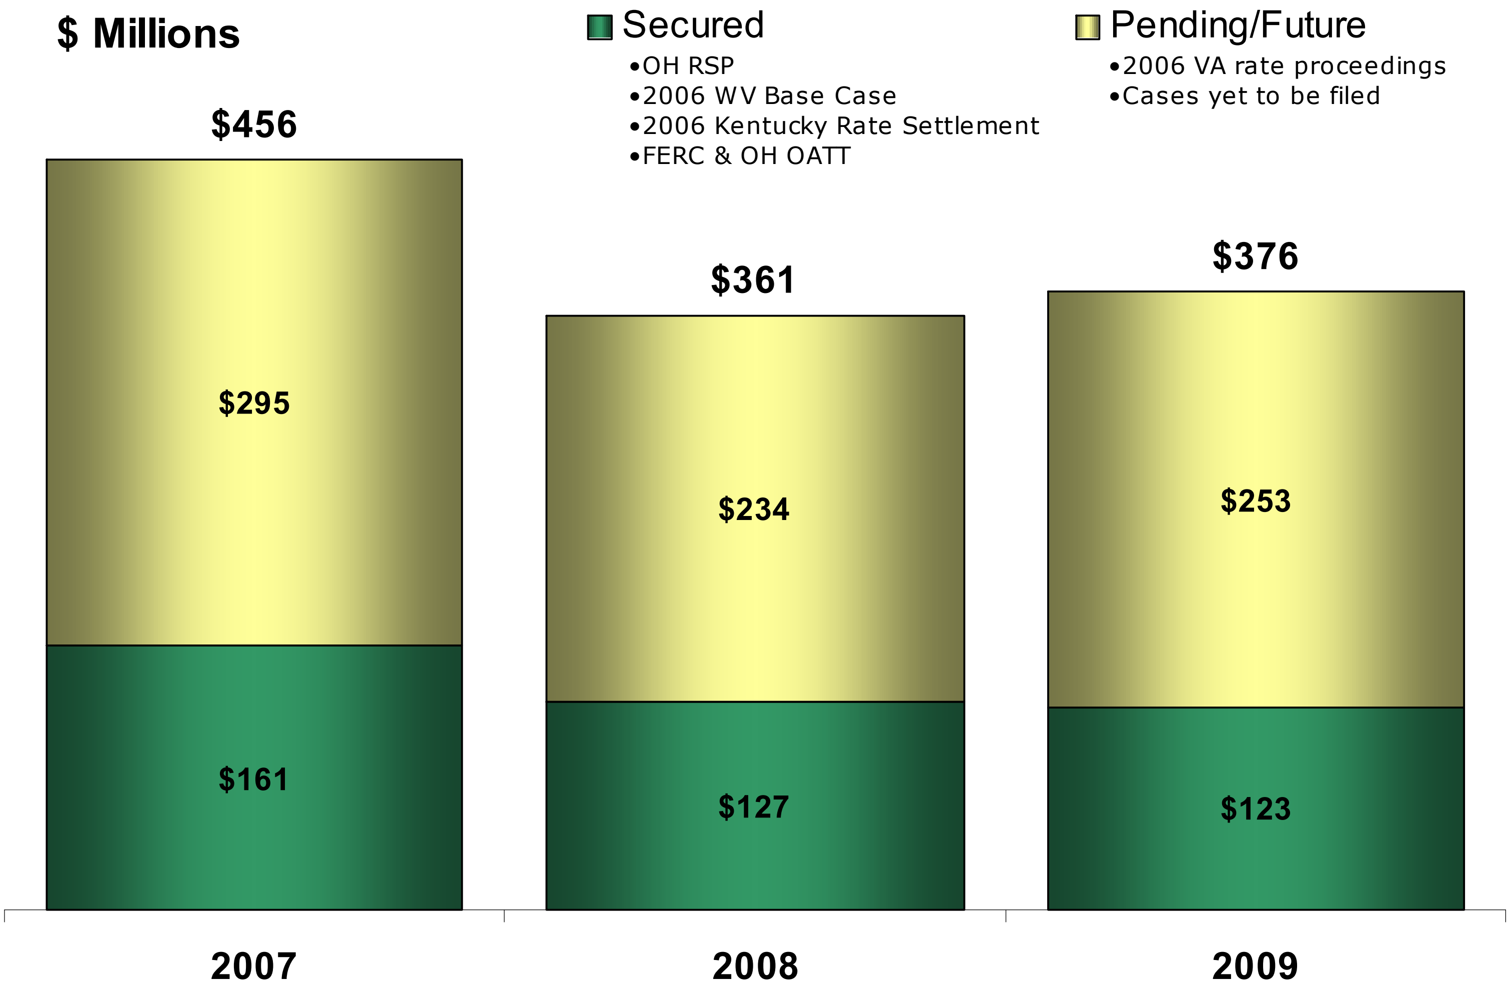
OUR STRATEGY REMAINS FOCUSED ON REGULATED OPERATIONS

Summary of 5-7% Long-Range Growth Components

- **Energy sales growth of 1.5%**
  - Predicated on AEP's ability to economically dispatch at a high load capacity
- **Rate base investment**
  - Generation Plant Purchases & Build
  - Transmission – interstate & intrastate
  - Distribution
  - Reliability
- **Transmission company**
- **Commercial operations**
- **Regulatory strategy**
  - Achieve high returns
  - Seek cash returns on investment during construction
  - Create & secure innovative rate plans
    - Pursue post-2008 solution in Ohio
    - Expand use of trackers
    - Formula rates

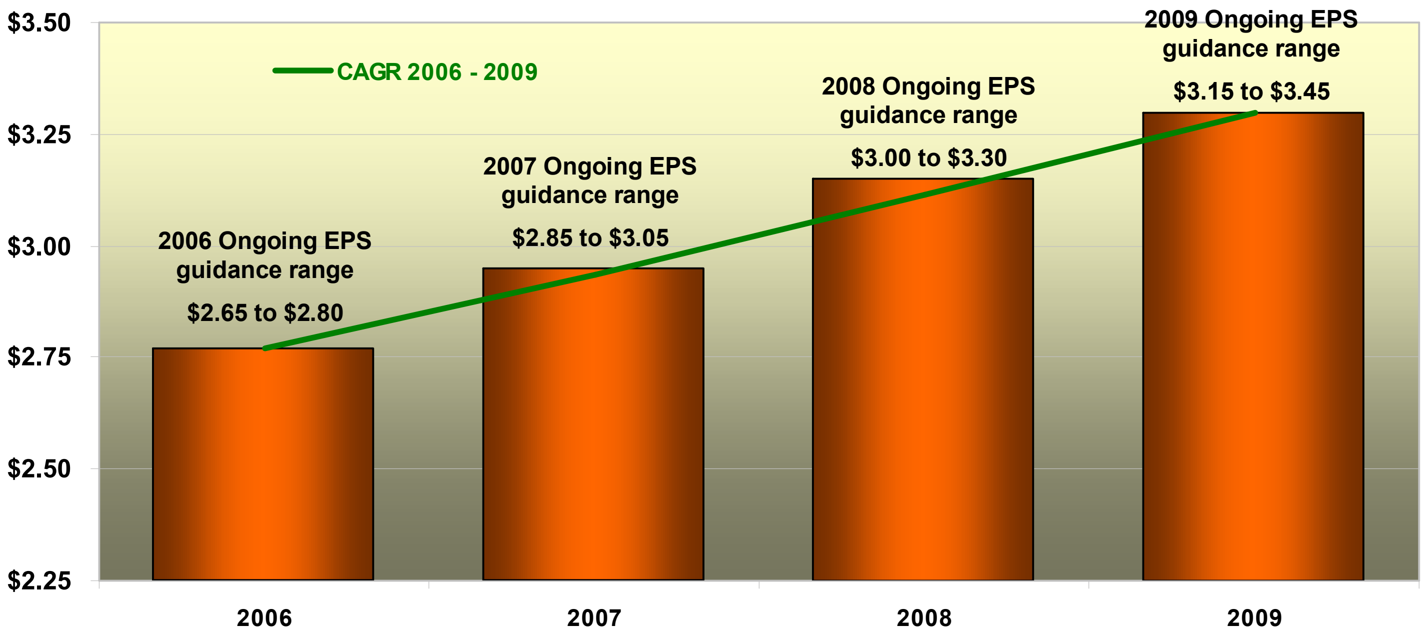
RATE BASE INVESTMENT COUPLED WITH INNOVATIVE REGULATORY PLANS WILL REDUCE LAG AND DRIVE EARNINGS GROWTH

Incremental Rate Relief Composition



RATE RELIEF IS A CRITICAL ELEMENT TO AEP'S FINANCIAL SUCCESS

Long-Range EPS Expectations



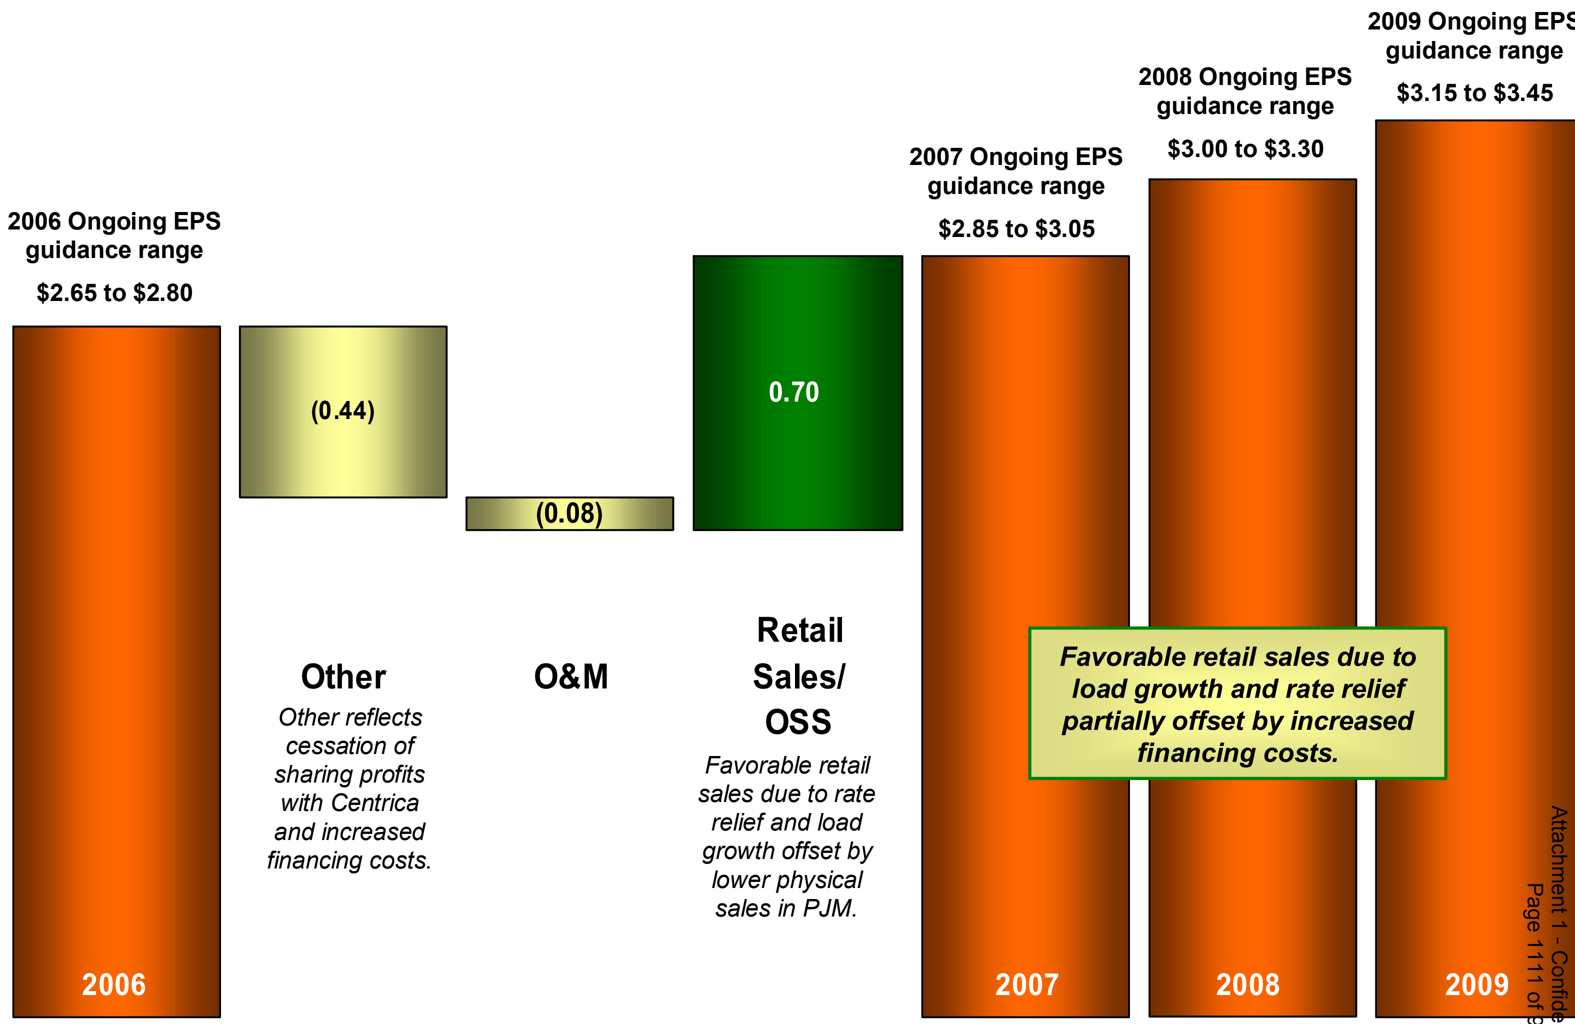
Long-Range Plan Highlights

- Committed to a 5-7% earnings growth range (2006-2009)
- 8-cent per share increase in the annual dividend commencing 4Q2006
- Continue capital investment in utility business to support earnings growth
- Fund investment program with new rate relief and debt
  - No common equity issuance (except through Dividend Reinvestment Program)
- Create joint venture to build our transmission company

COMMITTED TO 5-7% EARNINGS GROWTH

Composition of Long-Range EPS Drivers

TRADITIONAL UTILITY FACTORS WILL DRIVE EARNINGS



Earnings Guidance

2006 Ongoing Guidance: $2.65 to $2.80 Per Share
2007 Ongoing Guidance: $2.85 to $3.05 Per Share

Summary of 2007 Earnings Guidance

- Load growth of 1.5%
- Rate relief of $456MM ($161MM already secured)
- Improved performance at Investments
- Rising fuel costs of 6-8%
- Increased retail load & higher muni/co-op sales to impact off system sales contribution
- Higher financing costs
- Higher O&M (inflationary pressures)
- Lower contribution from Centrica sharing agreement

AEP AMERICAN ELECTRIC POWER®

Table of Contents

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate relief or other recovery for new investments transmission service and environmental compliance); resolution of litigation (including pending Clean Air Act enforcement actions and disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements periodically issued by accounting setting bodies; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Company Overview

OUR FOCUS IS OUR CORE

DOMESTIC UTILITY BUSINESS OPERATIONS

American Electric Power Company, Inc. is one of the largest investor-owned electric public utility holding companies in the US. We provide generation, transmission and distribution services to over 5 million retail customers in eleven states (Arkansas, Indiana, Kentucky, Louisiana, Michigan, Ohio, Oklahoma, Tennessee, Texas, Virginia and West Virginia) through our electric utility operating companies.

We have seven regional operating companies for distribution and customer service operations that serve the customers of our eleven electric utility subsidiaries:

Regional Utility Divisions	Electric Utility Subsidiaries
AEP Ohio	Columbus Southern Power Ohio Power Wheeling Power
AEP Texas	Texas Central Company Texas North Company
Appalachian Power	Appalachian Power Kingsport Power
Indiana Michigan Power	Indiana Michigan Power
Kentucky Power	Kentucky Power
Public Service Company of Oklahoma	Public Service Company of Oklahoma
Southwestern Electric Power Co.	Southwestern Electric Power Co.

Page 1146 of 9556

Company Overview

SIGNIFICANT PRESENCE THROUGHOUT THE DOMESTIC VALUE CHAIN

Our US electric assets include:

- Approximately 38,000 megawatts of generating capacity in 3 power pools (one of the largest US generation portfolios with a significant cost advantage in many of our market areas)
- Approximately 39,000 circuit miles of transmission lines, including 2,116 miles of 765kV lines, the backbone of the electric interconnection grid in the Eastern U.S.
- 210,685 miles of overhead and underground distribution lines

With our coal and transportation assets we:

- control over 8,300 railcars
- own and/or operate over 2,600 hopper barges and 51 towboats
- operate one active coal-handling terminal with 20 millions tons of capacity

We consume approximately 76 million tons of coal annually.

Company Strategy

Business Strategy

AEP's mission is to bring comfort to our customers, support business and commerce and build strong communities. Our strategy to achieve our mission is to grow our core utility business at a moderate and steady rate through major investment in our current utility business supported and funded by innovative programs for regulatory recovery as well as develop our independent, federally regulated transmission company for the pursuit of new major interstate projects. Our objective is to be an economical, reliable and safe provider of electric energy to the markets that we serve. Our plan entails designing, building, improving and operating low cost, environmentally-compliant, efficient sources of power and maximizing the volumes of power delivered from these facilities. We intend to maintain and enhance our position as a safe and reliable provider of electric energy by making significant investments in environmental and reliability upgrades. We will seek to recover the cost of our new utility investments in a manner that results in reasonable rates for our customers while providing a fair return for our shareholders through a stable stream of cash flows, enabling us to pay dependable, competitive dividends. We operate our generating assets to maximize our productivity and profitability after meeting our native load requirements.

CONTINUED COMMITMENT TO OUR CORE UTILITY MISSION: BRING REASONABLY PRICED ELECTRIC SERVICE TO OUR CUSTOMERS, THEREBY STRENGTHENING OUR COMMUNITIES AND REWARDING OUR INVESTORS

Our Focus

Deliver value to our investors

- **Prepare for transition to market in Ohio**
- **Invest in and evolve infrastructure to support future technology and customer needs focused on efficiency, conservation and load management**
- **Enhance cash flow & earnings through rate recovery mechanisms**
- **Take advantage of AEP's size to bring economic savings to our customers while continuing to enhance shareholder value through regulatory-supported investment and operational excellence**

Utility Operations

Generation

AEP has approximately 38,000 megawatts of generating capacity in 3 power pools. AEP owns all or portions of 60 major generating plants, which include coal/lignite, natural gas, nuclear, wind projects and hydroelectric facilities.

AEP operates generating capacity in its internal power pool under an economic dispatch system[1]. AEP's power pool's competitive, largely coal-based production costs are among the lowest in the nation. AEP's power production costs are also kept relatively low by its reliance primarily on fossil fuel (gas and coal), with only a small overall nuclear dependence.

[1] Economic dispatch of a generating system utilizes the lowest-cost generating units to meet electric demand at any point in time.

Appalachian Power

President and Chief Operating Officer:
Dana Waldo

Appalachian Power Company (APCo)

(organized in Virginia in 1926) is engaged in the generation, transmission and distribution of electric power to approximately 949,000 retail customers in the southwestern portion of Virginia and southern West Virginia, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities and other market participants. APCo covers a service territory of 19,049 square miles, and at December 31, 2006, APCo and its wholly owned subsidiaries had 2,461 employees. Among the principal industries served by APCo are coal mining, primary metals, chemicals and textile mill products. In addition to its AEP System interconnections, APCo also is interconnected with the following unaffiliated utility companies: Carolina Power & Light Company, Duke Energy Corporation and Virginia Electric and Power Company. APCo has several points of interconnection with TVA and has entered into agreements with TVA under which APCo and TVA interchange and transfer electric power over portions of their respective systems. APCo is a member of PJM.

PRINCIPAL INDUSTRIES SERVED:
Coal mining
Primary metals
Chemicals
Textile mill products
Paper products

Total Customers at 12/31/06:

• Residential	810,000
• Commercial	128,000

President and Chief Operating Officer: Kevin Walker

Columbus Southern Power Company (CSPCo)

(organized in Ohio in 1937, the earliest direct predecessor company having been organized in 1883) is engaged in the generation, transmission and distribution of electric power to approximately 742,000 retail customers in Ohio, and in supplying and marketing electric power at wholesale to other electric utilities, municipalities and other market participants. CSPCo covers a service territory of 3,701 miles and at December 31, 2006, CSPCo had 1,233 employees. CSPCo's service area is comprised of two areas in Ohio, which include portions of twenty-five counties. One area includes the City of Columbus and the other is a predominantly rural area in south central Ohio. In addition to its AEP System interconnections, CSPCo also is interconnected with the following unaffiliated utility companies: CG&E, DP&L and Ohio Edison Company. CSPCo is a member of PJM.

(organized in Oklahoma in 1913) is engaged in the generation, transmission and distribution of electric power to approximately 520,000 retail customers in eastern and southwestern Oklahoma, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities, rural electric cooperatives and other market participants. PSO has a service territory of 30,000 square miles and at December 31, 2006, PSO had 1,233 employees. In addition to its AEP System interconnections, PSO also is interconnected with Ameren Corporation, Empire District Electric Co., Oklahoma Gas & Electric Co., Southwestern Public Service Co. and Westar Energy Inc. PSO is a member of SPP.

PRINCIPAL INDUSTRIES SERVED:

Oil and gas extraction
Paper products
Stone, clay and glass products
Primary metals
Transportation equipment

Regulation

- Regulatory Strategy
- Regulatory Activity Underway
- Regulatory Activity Completed
- Rate Case Filing Requirements
- GridSMART Regulatory Status
- Rate Base and ROE by Operating Company
- Commission Overviews

Fall EEI 2007

Regulatory Strategy: Reduce Lag

The strategy: reduce the time between in-service dates and rate recovery

- Maximize frequency of filings
  - Seek ability to pro-forma both capital and O&M through date which rates are effective
- Single-issue cost recovery
  - Reliability
  - Vegetation
  - Environmental
- Trackers
  - Federally-approved transmission costs
  - Fuel and emissions
  - ERO compliance costs
  - Off-system sales margin sharing
- Formula rates
- Return on CWIP

Our goal is to maximize utility company cash flow and returns by minimizing regulatory lag.

Regulatory Activity Underway

- Ohio Post 2008
- CSP and OPCo Filing for 4% Provision on Generation Rates
- I&M - Indiana Rate Petition
- APCo Filings – E&R and Fuel Factor Adjustments
- SPP OATT Formula Rate Filing
- New Generation:
  - IGCC Filing in Virginia and West Virginia for Certificate of Need and approval of a cost recovery mechanism
  - IGCC Phase 2 Filings in Ohio on Hold Pending Resolution of Supreme Court Challenge of PUCO's authority
  - SWEPCo Turk Plant Filings in Arkansas, Louisiana and Texas for Certificates of Need

Regulatory Activity Underway

Ohio Post 2008

- On August 29, 2007, the Ohio Governor submitted legislation (SB221) that would restructure the regulation of Ohio's electric industry. The bill also includes several efficiency and renewable energy standards.
- Hearings on the legislation began on October 2, 2007 in the Ohio Senate and continued through the end of October.
- On October 25, 2007, the substitute version and associated amendments were incorporated into SB221.
- Full Senate vote – October 31, 2007
- Presented to House Public Utilities Committee – November 2007; Hearing schedule extends to the end of January 2008.

AEP Ohio Application For 4% Provision On Generation Rate

- On October 24, 2007, CSP and OP filed an application pursuant to the RSP at the PUCO to recover costs associated with additional generation-related expenditures the companies are encountering related to environmental (CAIR, CAMR and NPDES – Clean Water Act) and PJM marginal losses.
- CSP and OP are requesting to implement the provision to recover $35.2MM and $11.9MM, respectively, from January through December 2008.

Regulatory Activity Underway

I&M Indiana Rate Petition

- On June 19, 2007, I&M filed a petition with the Indiana Utility Regulatory Commission (IURC) for authority to increase its rates and charges for electric utility service and to establish and implement rate adjustment mechanisms to track certain matters.
- Requested trackers relate to reliability enhancement, demand-side management/energy efficiency programs, off-system sales margins, PJM costs and environmental compliance.
- Parties have agreed to a historic test year ended September 30, 2007, with a rate case filing date of January 31, 2008. This schedule has been approved by the IURC.
- Hearings are expected in May 2008, and an order in the first quarter of 2009.

APCo E&R and Fuel Factor Adjustments

E&R:

- On July 16, 2007 a filing was made with the VA SCC requesting an additional $39MM be added to the current rider of $21MM. Therefore, at December 1, 2007, we will begin collecting $60MM.
- Intervenor testimony was filed on October 3, 2007, staff testimony filed on October 17, 2007, rebuttal testimony filed on October 24, 2007 and public hearings are expected to commence on November 5, 2007.

Fuel Factor:

- On July 16, 2007, a filing was made with the VA SCC requesting the termination of the OSS base credit and reflected 75% of OSS margins as a credit to fuel expense, consistent with new Virginia legislation. Implementation of the fuel factor was approved effective September 1, 2007, subject to review/refund.
- Intervenor testimony was filed on October 5, 2007, staff testimony filed on October 15, 2007, rebuttal testimony filed on October 22, 2007 and public hearings are expected to commence on November 8, 2007.

Regulatory Activity Underway

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $161MM.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extends the effective date to February 1, 2008. A request for rehearing was submitted on October 1, 2007.
- A technical conference was held on October 18, 2007. The purpose was to review and clarify the company's responses to discovery. A second technical conference is scheduled for November 6, 2007 with settlement meetings scheduled for November 15, 2007 and December 4, 2007.

Regulatory Activity Underway

APCo Mountaineer IGCC Filing

West Virginia

- Testimony filed with the West Virginia Public Service Commission on June 18, 2007 in support of APCo's application for a Certificate of Public Convenience and Necessity to construct a 600MW IGCC plant in WV at a cost of approximately $2.23 billion.
  - Testimony includes a proposal for the Commission to approve a cost recovery mechanism through the existing Expanded Net Energy Cost (ENEC) mechanism. The filing is not a formal proposal to adjust rates.
  - Actual requests for increased rates will be included in future filings, once construction of the plant has commenced and actual Construction Work In Progress data is known.
- Staff and Intervenor testimony is scheduled for November 19, 2007.
- Public hearings are scheduled for December 10-14, 2007 with an order on or before March 7, 2008.

Virginia

- Testimony filed with the Virginia State Corporation Commission on July 16, 2007 seeking a prudence determination and approval to recover, beginning in 2009, Virginia's share of the carrying costs associated with the proposed plant.
- Public hearings are scheduled for February 12, 2007.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.
- Oral arguments regarding this matter were conducted at the Ohio Supreme Court on October 9, 2007. It is likely the court's decision will not be announced until some time in the first quarter of 2008.

Regulatory Activity Underway

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- Public hearings commenced August 20, 2007. Decision expected by year end.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. Peaking and intermediate facilities have been addressed. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- Public hearings commenced September 11, 2007. Decision expected by year end.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- Public hearings commenced October 17, 2007. Decision expected in early 2008.

Regulatory Activity Completed

Company	Case	Order Date	Dollar Amount	ROE
APCo - Virginia	Base Rate Case	May 15, 2007	$24MM increase in annual base rates	10.0%
APCo - West Virginia	ENEC Filing	June 22, 2007	$29MM increase in annaul revenues	10.5%
I&M - Indiana	Depreciation Study	June 13, 2007	$69MM estimated decrease in annual depreciation expense	N/A

Notice Period (days)	60	Varies	28	N/A	45	30	45	30	60	30	N/A
Case Components											
Test Year	Partially Projected	Historical	Forecast Optional	Historical	Forecast Optional	Partially Projected	Partially Projected	Historical	Historical	Historical	Forecast Optional
Other											
Rates Effective Subject to Refund	Yes	No	Yes	No	Yes	Yes	Yes	Yes	Yes	No	Yes
Approx # of Months after Filing to implement rates subject to refund	10	--	6	--	Varies	9	6	5	5	--	2 or 7

Note 1: One more opportunity exists for rate case opportunity between now and 12/31/08 prior to re-regulation conditions (1/1/09); however, post 1/1/09 no interim rates provided and rate cases must be filed no less than biennially; historical test year used.

Regulatory framework inherently produces recovery and return lag.

GridSMART Implementation Regulatory Status

- **Indiana**
  - As ordered by the IURC in June 2007, I&M, in collaboration with the Office of Utility Consumer Counselor, is designing and will administer a Smart Metering Pilot Program (SMPP) for approximately 10,000 customers in South Bend, Indiana. Initial meter installation occurring in 2008.
  - Involved in an open DSM/EE docket working with the other utilities in the state.
- **Michigan**
  - Initial discussions underway regarding collaboration on a demand response/smart metering program. I&M has volunteered, subject to cost recovery, to conduct a smart grid pilot for all Michigan customers (125,000) pursuant to a Commission order requesting one or more smart grid pilots be conducted.
- **Kentucky**
  - Successful demand-side management programs have been in place in Kentucky since 1996. We recently filed a proposed real-time pricing pilot for which we are waiting commission approval.
- **Ohio**
  - Recent Governor remarks and draft legislation indicates modernization of Ohio's infrastructure is a high priority and sets demand and energy efficiency goals.
  - PUCO-sponsored series of six Smart Meter Deployment Workshops currently underway.
- **Arkansas**
  - The Arkansas commission approved our 'quick-start' programs, which include education, incentive to encourage use of compact florescent lights and higher efficiency appliances, weatherization for low-income housing, an emergency load management pilot and a pay-for-performance pilot that results in a payment to customers who curtail load upon request. Cost recovery began with the first billing cycle of November 2007.
  - Further discussion have been requested by the PSC regarding the GridSMART program and other alternatives the state may wish to pursue.
- **Oklahoma**
  - The OCC issued a notice of proposed rulemaking to establish rules promoting energy efficiency and establishing demand program requirements for Oklahoma utilities. Technical conferences and hearings are scheduled during the remainder of 2007.
  - In PSO's recent base rate case, the OCC ordered that PSO file a DSM/energy efficiency plan by December 8, 2007.
- **Texas**
  - Successful demand side management and energy efficiency programs have been in place in Texas since the 1990s.
  - AEP Texas Advanced Metering Project commenced July 31, 2007, which has the goal of filing with the PUCT an advanced metering deployment plan and a related surcharge recovery proposal by March 2008.
  - PUCT has opened an energy efficiency rulemaking to address concurrent cost recovery, comprehensive potential and economic studies and the higher annual efficiency goals included in new legislation.

The pace of GridSMART implementation will be set by our regulators.

Commission Overview

Arkansas Public Service Commission

AEP Regulated Electric Utilities

Southwestern Electric Power Co.

Commissioners

Number: 2 (one vacancy)	Appointed/Elected: Appointed	Term: 6 Years	Political Makeup: R: 1 D: 1
Qualifications for Commissioners The Arkansas Public Service Commission (APSC) is composed of 3 members. The Governor appoints the Commissioners as well as the Chairman. Governor Huckabee has appointed all of the current commissioners.			
Commissioners **Paul Suskie, Chairman (Dem.),** since 2007; current term ends in 2013. Lawyer, North Little Rock, Arkansas City Attorney. Bachelor's attained at University of Central Arkansas. Juris Doctorate at University of Arkansas at Little Rock School of Law. NARUC member including Committee on Energy Resources and the Environment and Committee on Consumer Affairs.			
Daryl E. Bassett, Commissioner (Rep.), since 2003; current term ends in 2009. Former policy advisor for Governor. Governor's state budget director (2002-2003). Investment Banker for First State Investments/Merrill Lynch Fenner and Pierce (1985-1995). Bachelor's attained at Harding University (Business-Public Administration).			

AEP Regulatory Status

SWEPCo-AR provides service at regulated bundled rates in Arkansas. Arkansas has an active fuel pass-through clause. Arkansas has an OSS margin sharing mechanism and allows CWIP in rate base for a plant that is placed in service within six months after the end of the test year.

Commission Overview

Indiana Utility Regulatory Commission

AEP Regulated Electric Utilities

Indiana Michigan Power Co.

Commissioners

Number: 5	**Appointed/Elected: Appointed**	**Term: 4 Years**	**Political Makeup: R: 3 D: 2**

Qualifications for Commissioners

Five members, appointed by the Governor from among persons nominated by a legislatively mandated utility commission nominating committee; four-year, staggered terms, full-time positions. Not more than three of the members of the IURC shall be members of the same political party. At least one of the commissioners must be an attorney qualified to practice law before the Indiana Supreme Court. The Governor appoints one of the five as chairman. Republican Mitch Daniels was elected Governor on November 2, 2004.

Commissioners

David L. Hardy, Chairman (Rep.), since 2005; current term will expire April 2010. Commissioner Hardy is an attorney who has worked in private practice since 1997. Areas of expertise include negotiation, contracts, litigation, finance and administration. He has 35 years of regulatory experience at the state and federal levels. Bachelors degree and law degree from Indiana University.

Jeffrey L. Golc, Commissioner (Dem.), since 2007; current term will expire in 2009. Former public affairs manager for the Kroger Company. Previous Deputy Commissioner for the Indiana Bureau of Motor Vehicles and the Indiana Department of Workforce Development. Bachelors and Masters degrees in communications from Indiana University.

Larry S. Landis, Commissioner (Rep.), since 2002; current term ends June 2008. Former president of a marketing and communications agency, VP Corporate Advertising, American Fletcher National Bank. Bachelor's degrees in political science and economics.

Greg Server, Commissioner (Rep.), since 2005; current term ends 2009. Former state senator since 1981 and before that served in the Indiana House of Representatives from 1972 to 1980. Served as chair of Senate Commerce Committee, which handled IURC and utility industry legislation. Served as Director of Administration for the Evansville Water and Sewer Utility. Masters degrees in political science and counseling from Indiana State University.

David E. Ziegner, Commissioner (Dem.), since 1990; current term ends April 2011. Lawyer, staff attorney for Legislative Services Agency, General Counsel for IURC. Member, NARUC Committee on Electricity and Advisory Council of the Electric Power Research Institute. Law degree from the Indiana University School of Law in Indianapolis.

AEP Regulatory Status

I&M provides retail electric service in Indiana at bundled rates approved by the IURC. While rates are set on a cost-of-service basis, I&M's fuel recovery and base rates were capped through June 30, 2007. Full fuel recovery commenced July 1, 2007 and company testimony in a full base rate case will be filed no later than January 31, 2008. The rate case will include requests for rider related to DSM, environmental and RTO costs.

Commission Overview

Kentucky Public Service Commission

AEP Regulated Electric Utilities

Kentucky Power Co.

Commissioners

Number: 3	Appointed/Elected: Appointed	Term: 4 Years	Political Makeup: R: 3

Qualifications for Commissioners

Typically three members, appointed by the governor and confirmed by the state senate for four years, staggered terms, full-time positions. The governor appoints one of the three as chairman and another of the three as vice chairman to serve in the chairman's absence. Not more than two members of the KYPSC shall be of the same profession or occupation.

Commissioners

Mark Goss, Chairman (Rep.), since 2004; current term expires June 2011. Serves as member of NARUC and Chairman of the NARUC subcommittee on clean coal technology. Board member for MISO and Organization of PJM States, Inc.. Former practicing attorney in private practice. J.D. from University of Tennessee College of Law.

John W. Clay, Vice Chairman (Rep.), since 2006; current term expires June 2009. Former deputy secretary of the Kentucky Environmental and Public Protection Cabinet. Served as executive director of the Office of Alcohol Beverage Control in the Department of Public Protection. B.A. from Georgetown College. Certified Public Accountant and member of the AICPA.

Caroline Pitt Clark, Commissioner (Rep.), since 2007; current term expires June 2008. Criminal and civil attorney in private practice. Member of the Kentucky and American bar associations. Undergraduate degree in Political Science from Centre College; JD degree from the University of Kentucky College of Law.

AEP Regulatory Status

KPCo provides service at regulated bundled rates in Kentucky. Kentucky has an environmental surcharge to recover approved environmental costs and it has an active fuel clause. Kentucky also has an OSS sharing mechanism and a monthly adjustment clause in place for DSM.

Commission Overview

Louisiana Public Service Commission

AEP Regulated Electric Utilities

Southwestern Electric Power Co.

Commissioners

Number: 5	Appointed/Elected: Elected	Term: 6 Years	Political Makeup: R: 2 D: 3
Qualifications for Commissioners The Louisiana Public Service Commission (LPSC) is composed of five elected members. The commissioners serve overlapping terms of six years.			
Commissioners **Jack A. Blossman, Jr. (Rep.),** since 1997; current term ends December 2008. Practicing attorney, member of NARUC Gas Committee. Board member of Parish National Bank, member, Lake Ponchartrain Basin Foundation. Juris Doctorate from Southern Law School.			
James M. Field, (Rep.), since 1996; current term ends December 2012. Practicing attorney, member of Electrical Committee of NARUC. NFL contract advisor (1983-present), member, Sports Lawyers Association. Bachelor's and Juris Doctorate from Louisiana State University.			
Lambert C. Bossiere, III (Dem.), since 2005; current term ends December 2010. B.S. Business Administration from Southern University. American University of Paris – International Trade Law – Paralegal Certificate. Former First City Court Constable for the City of New Orleans. Member of NARUC.			
C. Dale Sittig, (Dem.), since 1995; current term ends December 2010. Member, Louisiana House of Representatives, (1983-1995). Member, Chamber of Commerce.			
Foster L. Campbell, (Dem.), since 2003; current term ends December 2008. Member, Louisiana State Senate (1976-2002). Independent insurance businessman and farmer, former school teacher and agricultural products salesman. Bachelor's degree from Northwestern State University.			

AEP Regulatory Status

SWEPCo-LA provides service at regulated bundled rates in Louisiana. Louisiana has an active fuel pass-through clause and an OSS margin sharing mechanism. Formula rate plans are permitted in Louisiana including a potential for a partial CWIP return on new generation projects.

Commission Overview

Michigan Public Service Commission

AEP Regulated Electric Utilities

Indiana Michigan Power Co.

Commissioners

Number: 3	Appointed/Elected: Appointed	Term: 6 Years	Political Makeup: D: 2 I: 1
Qualifications for Commissioners The Michigan Public Service Commission (MPSC) is composed of three members appointed by the Governor with the advice and consent of the Senate. Commissioners are appointed to serve staggered six-year terms. No more than two commissioners may represent the same political party. One commissioner is designated as chairman by the Governor.			
Commissioners **Orjiakor N. Isiogu, Chairman (Dem.),** since 2007; current term expires July 2013. Former Director of the Telecommunications Division of the MPSC. Assistant Attorney General in Michigan since 1989. Undergraduate and law degree from Wayne State University.			
Monica Martinez, Commissioner, (Dem.), since 2005; current term expires July 2011. Former Deputy Director of the Governor's Legislative Affairs Division where she served as the Governor's principal lobbyist. Previous to this, she served as an analyst for the Senate Democratic Office, where she specialized in technology and energy, human services and family law policy issues. Bachelor's degree, University of Michigan.			
Steven A. Transeth, Commissioner, (Ind.) , since 2007; current term expires July 2009. Former assistant director and legal counsel for the Michigan Legislative Service Bureau, which included drafting legislation and providing legal counsel to the Michigan Senate and House of Representatives. Lawyer, private practice and with the Ingham County Prosecuting Attorney's office.. J.D. from Thomas Cooley Law School.			

AEP Regulatory Status

Customer choice began January 2002. Generation was not deregulated. Retail rates were unbundled (though they continue to be regulated) to allow customers to evaluate generation costs. Michigan has an active fuel clause and return on CWIP can be included in base rates.

Commission Overview

Ohio Public Utilities Commission

AEP Regulated Electric Utilities

Columbus Southern Power Co.

Ohio Power Co.

Commissioners

Number: 5	Appointed/Elected: Appointed	Term: 5 Years	Political Makeup: R: 2 D: 1 I: 2

Qualifications for Commissioners

Five members, appointed by the governor and confirmed by the state senate; five year, staggered terms, full-time positions, commissioners shall be selected from the lists of qualified persons submitted to the governor by the PUC nominating council. Not more than three of the members of the PUCO shall be members of the same political party. The governor appoints one of the five as president, who serves at the pleasure of the governor until a successor has been designated.

Commissioners

Alan R. Schriber, Ph.D., Chairman, (Ind.) , since 1999; term expires April 2009. Economics professor, president of a radio broadcasting company, investment advisor. Previously served as commissioner on the PUCO from 1983-1989. Member NARUC Telecommunications Committee, National Governors' Association Electricity Task Force, Harvard Electricity Policy Group.

Ronda Hartman Fergus, Commissioner, (Rep.) since 1995; term expires April 2010. Lawyer, Ohio State; previously served on the PUCO staff as an administrative law judge in the Legal Department. Later served as the chief of Telecommunications, Water and Sewer Section of the Legal Department, and then chief of the Telecommunications Technical Staff. Member NARUC Committee on Consumer Affairs.

Paul A. Centolella, Commissioner, (Dem.) since 2007; term expires April 2012. Juris Doctor from the University of Michigan. From 1992-2007, worked as a senior economist in the Energy Solutions Group of Science Applications International Corporation. Former senior policy advisor and senior utility attorney for the Office of the Ohio Consumers' Counsel.

Donald L. Mason, Commissioner, (Rep.) since 1998; term expires April 2008. Lawyer, former chief of the Division of Oil and Gas at the Ohio Department of Natural Resources. He serves as the Chairman of the NARUC Gas Committee and serves on the NARUC Board of Directors and the NARUC Ad Hoc Committee on Electric Restructuring and Critical Infrastructure.

Valerie A. Lemmie, Commissioner, (Ind.) since 2006; term expires April 2011. Master's degree in Urban Affairs and Public Policy Planning, Washington University. Served as city manager for Cincinnati, Dayton, and Petersburg, Va. Scholar-in-residence at the Kettering Foundation. Chair of the Board of Directors of the National Academy of Public Administration.

AEP Regulatory Status

On January 26, 2005, the PUCO approved Rate Stabilization Plans (RSP) for CSP and OPCo (the Ohio Companies). The plans provided, among other things, for CSP and OPCo to raise their generation rates by 3% and 7% respectively, in 2006, 2007 and 2008 and provided for additional generation rate increases of up to 4% per year based on the Ohio Companies supporting the need for additional revenues. Distribution rates in effect at 12/31/05 are frozen for OPCo and CSP until 12/31/08. Transmission rates are currently regulated by FERC as reflected in the OATT. CSP and OPCO do not have an active fuel clause (fuel costs are embedded in unbundled G rates). Current legislative activity is underway regarding a new bill to replace Senate Bill 3, which was the original 1999 deregulation legislation.

Commission Overview

Oklahoma Corporation Commission

AEP Regulated Electric Utilities

Public Service Company of Oklahoma

Commissioners

Number: 3	Appointed/Elected: Elected	Term: 6 Years	Political Makeup: R: 2 D: 1

Qualifications for Commissioners

The Oklahoma Corporation Commission (OCC) is composed of three commissioners who are elected by state-wide vote. Commissioners serve staggered six-year terms so one commissioner vacancy occurs every two years. The election pattern was established when the Commission was created by the state constitution.

Commissioners

Jeff Cloud, Chairman (Rep.), since 2002; current term ends January 2009. Member, NARUC. Served as U.S. Congressman's District Director. Served as the Oklahoma City Mayor's Chief of staff. Law degree from Oklahoma City University.

Bob Anthony Commissioner, (Rep.), since 1989; current term expires January 2013. Member, NARUC. Served on the boards of the Oklahoma State, Oklahoma City, and South Oklahoma City chambers of commerce. Earned a M.Sc. from the London School of Economics, a M.A. from Yale University and an M.P.A. from the Kennedy School of Government at Harvard University.

Jim Roth, Commissioner, (Dem.), since 2007;appointed by the governor to fill the seat opened by the resignation of Commissioner Bode. Previously served various county governments for eight years. JD from Oklahoma City University School of Law.

AEP Regulatory Status

PSO provides retail electric service in Oklahoma at bundled rates approved by the OCC. PSO's rates are set on a cost-of-service basis. Fuel and purchased energy costs above the amount included in base rates are recovered by applying a fuel adjustment factor to retail kilowatt-hour sales. The factor is generally adjusted annually and is based upon forecasted fuel and purchased energy costs. Over or under collections of fuel costs for prior periods are returned to or recovered from customers when new annual factors are established. PSO has an OSS margin sharing mechanism and has rider mechanisms currently approved for vegetation management and the new peaking facilities expected to be in-service in December 2007.

Commission Overview

Tennessee Regulatory Authority

AEP Regulated Electric Utilities

Kingsport Power Co.

Commissioners

Number: 4	Appointed/Elected: Appointed	Term: 6 Years	Political Makeup: I: 1 D: 3
Qualifications for Commissioners The Tennessee Regulatory Authority (TRA) directors are appointed, one each, by the Governor, Lieutenant Governor (as Speaker of the Senate), Speaker of the House and one joint appointment by the three together, and are confirmed by the Tennessee General Assembly. The directors are appointed for six-year terms, which all currently expire in June 2008; after 2008, terms will be staggered.			
Commissioners **Eddie Roberson, Chairman (Ind.),** since 2006; current term expires 2012. Former Chief of Public Services Division of PSC. Received Ph.D. in Public Administration from The Institute of Government at Tennessee State University in 1998.			
Patrick Miller, Director (Dem.), since 2002; current term expires June 2008. Fiscal Analyst, Fiscal Review Committee. Legislative Liaison, Tennessee Supreme Court. Served as Chief of Staff to the Lt. Governor and Speaker of the Senate. J.D., Nashville School of Law.			
Sara Kyle, Director (Dem.), since 1996; current term expires June 2008. Former assistant public defender until she was elected to the Memphis City Court bench. The longest serving director and only holdover from the previous Public Service Commission. Law degree from Middle Tennessee State University.			
Ron Jones, Director, (Dem.), since 2002: current term expires June 2008. Sixteen year veteran of utility regulation, Director Jones served the first ten years with the Tennessee Public Service Commission staff and the next six with the TRA as a Senior Policy Advisor. Completed several regulatory studies programs at Michigan State University, Graduate School of Business. Received B.B.A. from Tennessee State University.			

AEP Regulatory Status

No deregulation legislation and no base rate freeze or cap. Tennessee has an active fuel clause.

Commission Overview

Public Utility Commission of Texas

AEP Regulated Electric Utilities

Texas Central Co.
Texas North Co.
Southwestern Electric Power Co.

Commissioners

Number: 3	Appointed/Elected: Appointed	Term: 6 Years	Political Makeup: R: 3

Qualifications for Commissioners

To be eligible for appointment, a commissioner must be: (1) a qualified voter; (2) a citizen of the United States; and (3) a representative of the general public. Chairman appointed by the Governor.

Commissioners

Barry T. Smitherman, Commissioner, (Rep.), since April 2004; current term expires August 2013. Attorney; Assistant DA; Public Finance Investment Banker. Received law degree from the University of Texas School of Law

Julie Caruthers Parsley, Commissioner (Rep.), since November 2002; current term expires August 2011. Lawyer, private practice. Served as Solicitor General of Texas with Office of Attorney General. Also served as Deputy Solicitor General. Received law degree from Texas Tech University. PUCT's SPP liaison. Member of Texas Energy Planning Council.

Paul Hudson, Chairman (Rep.), since August 2003; current term expires August 2009. Served as policy director in governor's office. Worked at PUC as advisor and senior economic analyst. Served on National Governor's Association Task Force on Electric Infrastructure; Western Governor's Association Working Group on Cross Border Energy Issues. Master's degree from Arizona State University.

AEP Regulatory Status

Retail competition has been delayed by the PUCT in the SPP area of Texas (including SWEPCO and TNC-SPP areas). SWEPCO-TX has an active fuel pass-through clause as well as OSS margin sharing. In some circumstances, CWIP is allowed in rate base.

TCC and TNC provide retail transmission and distribution service on a cost-of-service basis at rates approved by the PUCT and wholesale transmission service under tariffs approved by the FERC consistent with PUCT rules. Transmission riders provide annual recovery dependent on the level of transmission investment and ERCOT load growth rates. AFUDC is permitted in limited circumstances.

Commission Overview

Virginia State Corporation Commission

AEP Regulated Electric Utilities

Appalachian Power Co.

Commissioners

Number: 3	Appointed/Elected: Elected	Term: 6 Years	Political Makeup: R: 2 D: 1

Qualifications for Commissioners

The Virginia State Corporation Commission (VSCC) is composed of three members elected by the General Assembly. Commissioners are elected to serve six-year terms, staggered in two year increments. The chair rotates annually among the three commissioners on February 1.

Commissioners

Theodore V. Morrison, Jr, (Dem.), since 1989; current term expires 2008. Member of the Virginia House of Delegates from 1968 to 1988. Member of Virginia Code Commission from 1974 and served as chairman from 1984 to 1988. Lawyer, private practice. Law degree from Emory University.

Mark C. Christie (Rep.), since 2004; current term expires 2010. Attorney, counsel to the Speaker of the House. Lawyer, private practice. Law degree from Georgetown.

Judith Williams Jagdmann, (Rep.), since 2006; current term expires 2012. Law degree from T.C. Williams School of Law at the University of Richmond. Served as Deputy Attorney General for Civil Litigation Division from 1998 to 2005. Attorney General for Commonwealth of Virginia from 2005 to 2006.

AEP Regulatory Status

APCo-VA provides retail electric service in Virginia at unbundled rates. In 2007, the General Assembly passed legislation re-establishing retail rate regulation in the Commonwealth. The opportunity for one rate case exists before December 31, 2008. The new legislation provides for biennial rate reviews beginning in 2009, sharing of off-system sales margins at a rate of a minimum of 25% retained by the company effective July 1, 2007 and a post-2008 rider for DSM, renewable programs and new generation. APCo-VA is entitled to annual rate changes to recover the incremental costs it incurs for transmission and distribution system reliability and compliance with state or federal environmental laws or regulations (known as the E&R rider). APCo-VA is entitled to adjustments to fuel rates to recover its actual fuel costs, the fuel component of its purchased power costs and certain capacity charges.

Commission Overview

Public Service Commission of West Virginia

AEP Regulated Electric Utilities

Appalachian Power Co.

Wheeling Power Co.

Commissioners

Number: 3	Appointed/Elected: Appointed	Term: 6 Years	Political Makeup: R: 1 D: 2

Qualifications for Commissioners

The West Virginia Public Service Commission (WVPSC) consists of three members, appointed by the Governor, with the advice and consent of the senate. No more than two members of the commission may belong to the same political party. The Commissioners serve six year staggered terms, with one term expiring as of July 1 of each odd numbered year. One Commissioner is designated as Chairman of the Commission by the Governor. The Chairman serves as the chief fiscal officer of the Commission.

Commissioners

Edward H. Staats, Commissioner (Dem.), since 2003, term expires June 2009. Former Chief of Operations in the Governor's office. Former Chief Financial Officer of the Workers' Compensation Division of the W.V. Bureau of Employment Programs. Certified Public Accountant in West Virginia and Georgia. Bachelor's degree, West Virginia University.

Michael A. Albert, Chairman (Rep.), since 2007, term expires June 2013. Served as a member in the Business Law Department of Jackson Kelly. President and Chairman of the board of directors of the Kanawha County Public Library. Bachelor's degree and Doctorate of Jurisprudence, West Virginia University.

Jon W. McKinney, Commissioner (Dem.), since 2005, term expires June 2011. Currently on the board of directors of the National Association of Regulatory Utility Commissioners and second VP of the Mid-Atlantic Conference of Regulated Utilities Commissioners. Formerly served as plant manager of Flexsys' Nitro, W .V. operations, chairman of Chemical Industry Committee for W.V., board member of W.V. Chamber of Commerce, W.V. Manufacturer's Association, Chemical Alliance Zone, W.V. Roundtable, Advantage Valle, St. Francis Hospital & Thomas Memorial Hospital.

AEP Regulatory Status

APCo and Wheeling Power in WV provide retail electric service at bundled rates approved by the WV PSC. West Virginia has an active annual ENEC (Expanded Net Energy Cost) mechanism, which provides for a rate adjustment for fuel costs, among other items. West Virginia also has a special construction surcharge permitted, primarily related to environmental-related construction.

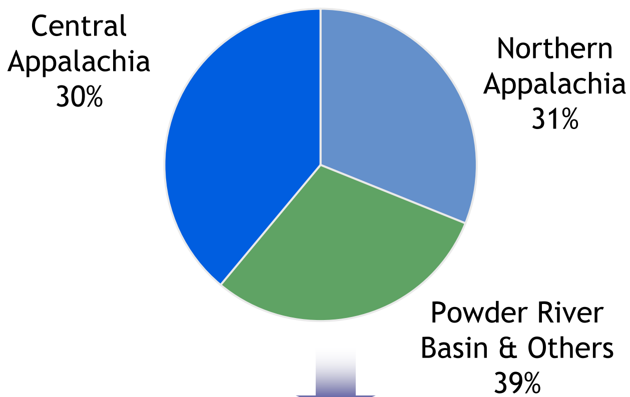
Texas North Company	2,342,693	2,160,348
AEP System Total Net Generation	186,888,511	181,939,433

Notes: Figures represent generation produced from AEP-owned assets only.

Coal Procurement

AEP burns approx. 76 million tons of coal per year

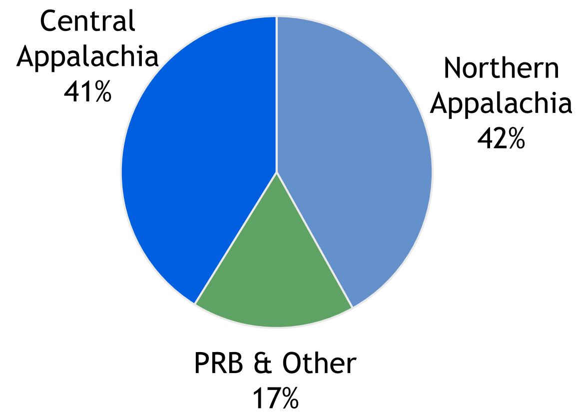
Total AEP System



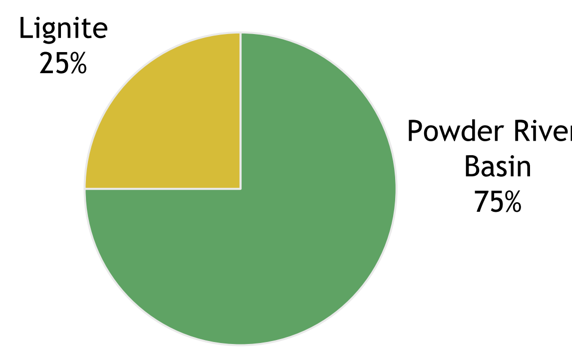
Coal Stats:

- Fully contracted for 2007; >93% for 2008
- Avg. delivered price ~ $35.10/ton in 2006
- Approximate 4-5% price increase in 2007 -- ($36.50 to $37.50/ton); 13% increase in 2008 based on anticipated 2007 actual results.
  - Addition of Mountaineer & Mitchell scrubbers allows for a greater mix of Northern Appalachian coal in 2007

AEP East

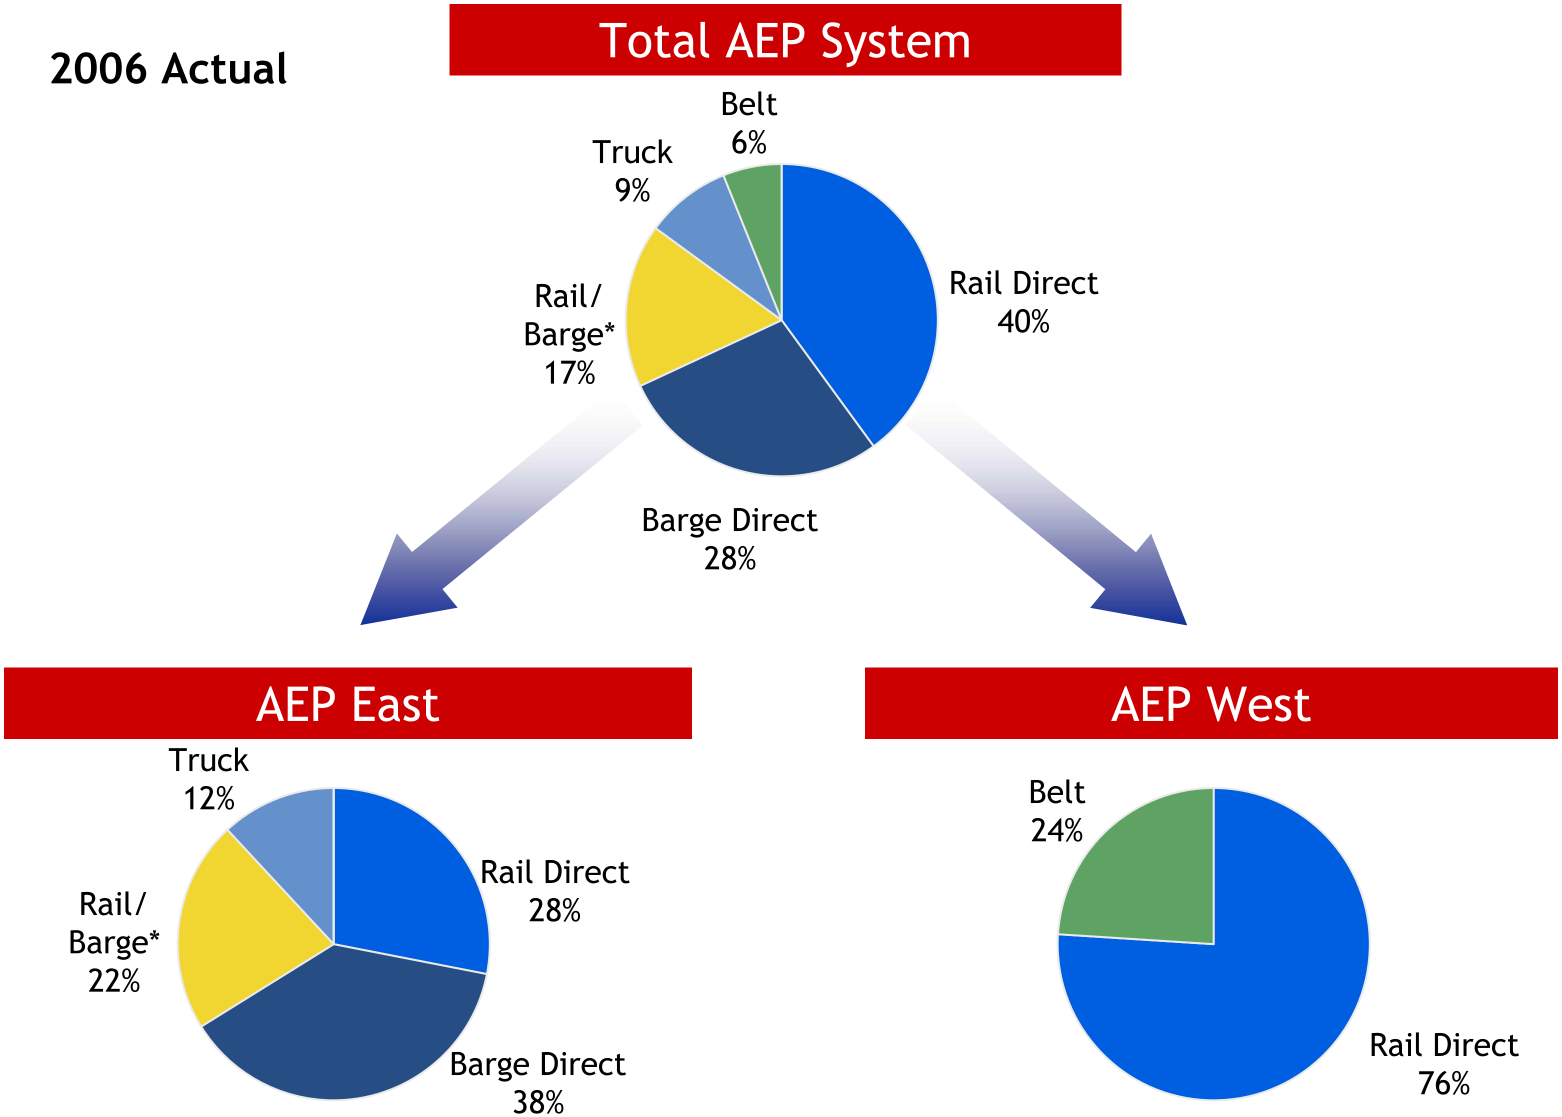


AEP West



Coal Delivery

2006 Actual

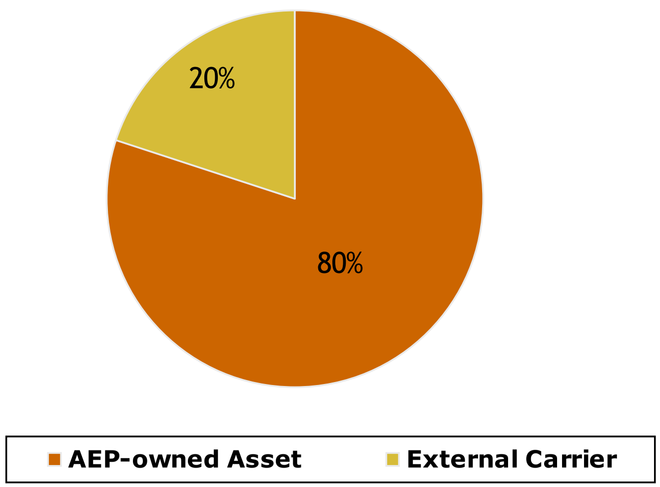


* Reflects coal delivered to AEP plants transported through a combination of rail and barge

AEP's Coal Transportation Assets

Coal Transportation to AEP Plants*

2006 Actual



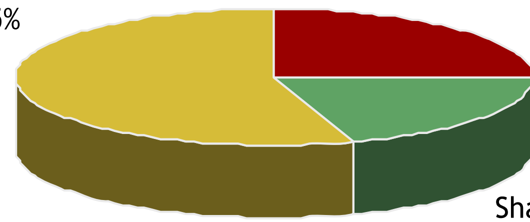
***Represents close approximations**

- Current Coal & Transportation Assets:
  - Control over 8,300 railcars
  - Own/lease and operate over 2,600 barges & 51 towboats
  - Coal handling terminal with 20 million tons of capacity

AEP's transportation assets provide flexibility in a constrained delivery environment.

Fuel Recovery

AEP System



Fuel Cost Recovery (on average)

- **Fuel recovery varies by jurisdiction**
- **80% of fuel cost is recoverable across the AEP System**
- **Active Fuel Clause Jurisdictions:**
  - **AEP EAST: APCo, I&M, KPCo, KGP, WP**
  - **AEP WEST: PSO, SWEPCO**

Note: Fuel recovery percentages are based on estimates for 2007 fiscal year

Jurisdictional Fuel Clause Summary

Jurisdiction	Active Fuel Clause	Frequency
Arkansas	Yes	Annually
Indiana	Yes	Semi-Annually
Kentucky	Yes	Monthly
Louisiana	Yes	Monthly
Michigan	Yes	Annually
Ohio	No	N/A
Oklahoma	Yes	Annually
Tennessee	Yes	Monthly
Texas (SPP)	Yes	Annually
Virginia	Yes	Annually
West Virginia	Yes	Annually

We have fuel recovery in all jurisdictions except Ohio, where it is part of the RSP 3% (CSPCo) and 7% (OPCo) increases.

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
SWEPCo	Mattison	Arkansas	$130 MM	Gas	Simple-cycle	340 (1)	2007
PSO	Southwestern	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
AEG	Dresden	Ohio	$348-406 MM (2)	Gas	Combined-cycle	580	2010
SWEPCo	Stall	Louisiana	$300 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.3 B (3)	Coal	Ultra-supercritical	600 (3)	2011
APCo	Mountaineer	West Virginia	$2.23 B	Coal	IGCC	630	2012
CSP/OP	Great Bend	Ohio	Under Review (4)	Coal	IGCC	630	2017

(1) 150MW declared in commercial operation on July 12, 2007.
(2) We are currently developing contracts and estimates to complete the project. It is anticipated that the unit can be completed between $600 to $700 per kW using an "all-in" cost basis.
(3) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment.
(4) FEED (front-end engineering and design) study with GE/Bechtel is complete. Cost estimates are not yet filed with the PUCO due to the pending appeals to the Supreme Court of Ohio resulting from the PUCO's April 10, 2006 Opinion and Order.

Integrated Gasification Combined Cycle

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called “syngas” – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2, mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP’s eastern service territory.

AEP is currently working with a technology provider to develop a firm price for an IGCC facility to be built in our eastern service region. AEP intends to seek regulatory recovery approvals in advance of building the plant.

AEP is committed to IGCC technology.

Generation Technology Comparative Stats

US2006$	Eastern Bituminous		
	USC	IGCC	NGCC
Nominal Capacity (MW)	**618**	**629**	**530**
Capacity Factor (%)	**85%**	**85%**	**25%**
Total Plant Cost (EPC + Owner's Cost) ($/kW)	**$2,152**	**$2,717**	**$572**
Production Cost ($/MWh)	**$22**	**$22**	**$45**
Cost of Electricity, without CO_2 Capture ($/MWh)	**$72**	**$83**	**$87**
Estimated Cost of Electricity, with 90% CO_2 Capture ($/MWh)	**$118**	**$108**	**$135**

Source: Results of AEP analysis based on EPRI studies.

- Total Plant Cost (Overnight EPC 2006$s) includes the cost to engineer, procure and construct plant and owner's direct costs.
- Assumes Northern Appalachian coal price of $2.25/mmBtu for USC and IGCC and natural gas price of $6.00/mmBtu for NGCC.
- Production cost includes fuel cost plus variable operations and maintenance (VOM) cost.
- Cost of electricity represents first year estimates only in 2006$ and are based on total plant cost plus generic cost estimates for AFUDC, emission credits, infrastructure, interconnections, transmission lines and upgrades.
- Cost of electricity with CO_2 capture provides pressurized CO_2 at the fence line and does not include transportation, storage and monitoring costs.

Environmental Overview

    - AEP's Position
    - CCS Projects

Fall EEI 2007

Multi-Emissions Reductions

Multi-Emissions Regulations: In 2005, the Federal EPA finalized two rules: the Clean Air Interstate Rule (CAIR) and the Clean Air Mercury Rule (CAMR). These rules require sulfur dioxide (SO_2), nitrogen oxide (NOx) and mercury (Hg) reductions in two phases: 2010 (2009 for NOx) and 2015 (2018 for Hg), also utilizing an emissions trading program. AEP is well on the way towards compliance with these provisions with a substantial number of scrubber and selective catalytic reduction (SCR) installations recently completed or underway.

In July 2005, the Federal EPA finalized a third rule: the Clean Air Visibility Rule (CAVR), which addresses the implementation of emission controls for SO_2 and NOx to deal with regional haze in Class I areas (e.g. national parks, forests and other pristine areas). CAVR requires Best Available Retrofit Technology (BART) – defined as scrubbers and meeting low NOx emission rates -- ultimately installed at those affected facilities. The EPA is urging states that are part of the CAIR region (most of the states except for the Western US) to adopt the CAIR rule as compliant with CAVR (thus not requiring BART at power plants within that state). However, in the other non-CAIR states (i.e. The West and Southwestern US), most of the currently unscrubbed coal-fired plants will probably be required to install scrubbers and meet lower NOx limits.

Finally, in September 2006 the Federal EPA issued a final rule on particulate matter (PM), which tightened the PM-2.5 (i.e. fine particle) 24-hour standard, while retaining the current annual standard for PM-2.5. Precursors of fine particulates include SO_2, NOx and a variety of carbonaceous compounds. Though CAIR is expected to lead to increasing compliance with these new and existing standards, it is uncertain whether or not the Federal EPA will decide to reduce the utility SO_2 and/or the NOx emission limits further as part of a regional strategy in the longer term for compliance.

Multi-Emissions Reductions

Greenhouse Gas Policies: The President has committed the nation to reduce the greenhouse gas (GHG) intensity of the economy (GHG emissions per $ GDP) by 18% over the next ten years through voluntary programs, and called for an improved federal emissions reporting program for tracking progress toward this goal. Regional U.S. initiatives to reduce greenhouse gas emissions and specifically CO_2 emissions have also begun in states outside of AEP's service territory including the Northeastern States (i.e. the Regional Greenhouse Gas Initiative or RGGI) and the West Coast (specifically California). A number of federal legislative proposals have been introduced in Congress over the past couple of years, which if passed, would require mandatory US GHG reductions in the future.

AEP has had a GHG strategy for a number of years, acknowledging the issue, accepting the science and believing in early proactive action. Our strategy includes:

1) Being proactive in the development of greenhouse gas policy through our support and membership within a variety of organizations (e.g., EPRI, Pew Center, the Business Roundtable, e8, IETA);

2) Being a leader in the development of technology through our support of research, development and deployment of new clean coal technology such as IGCC, being a major investor in the Future Gen project (the first near zero emitting IGCC coal plant in the U.S.), and through research in carbon capture and sequestration from coal plants;

3) Taking voluntary action now through our participation in Chicago Climate Exchange (CCX) , EPA Climate Leaders and SF-6 Program, Asia-Pacific Partnership, DOE1605B, and Business Roundtable Climate Resolve program among other efforts. We are making voluntary GHG reductions through our participation in CCX and are currently ahead of our reduction commitments.

4) Long-term planning (post-2010) to reduce or limit GHGs through:

- New generation technology including Ultra-supercritical, IGCC and FutureGen
- Commercial solutions for carbon capture and storage technology
- Emissions offsets (e.g., forestry, domestic-methane)
- Renewables (e.g., wind, biomass co-firing)
- Supply and demand side efficiency

Environmental Glossary

Clean Air Scientific Advisory Committee (CASAC) - Created by the Clean Air Act amendments in 1977, this committee of independent experts on air pollution reports to the U.S. Environmental Protection Agency Administrator. The committee is charged with reviewing the scientific knowledge of air pollution and its effects, without regard to costs.

Micron - One millionth of a meter. For example, human hair is about 70 microns thick. $PM_{2.5}$ is approximately 1/30th the thickness of a human hair.

National Ambient Air Quality Standards (NAAQS) - Establish maximum allowable concentrations in outdoor air for six pollutants: particulate matter, ozone, sulfur dioxide, nitrogen oxide, carbon monoxide, and lead. The Clean Air Act requires EPA to review NAAQS every five years. EPA is required to set standards "to protect public health ...allowing an adequate margin of safety."

Ozone - Ozone is a form of oxygen which is a colorless gas with a unique odor. Ozone occurs naturally in the earth's upper atmosphere where it shields against ultraviolet radiation from the sun. In the lower atmosphere, ozone is formed by the combination of nitrogen oxides and hydrocarbons in the presence of sunlight. This ozone is a major component of smog. The current NAAQS for maximum allowable ozone is 0.12 parts per million measured over a one-hour period, with three exceedances over three years permitted.

Particulate Matter - Particles of matter suspended in the atmosphere. EPA currently regulates concentrations of particulate matter that are 10 microns and smaller in diameter. The current allowable maximum concentration of particulate matter is 150 micrograms (ug) per cubic meter averaged over 24 hours. The annual average of 24 hour readings is required to be less than 50 ug/m^3.

PM_{10} - Particulate matter that is 10 microns or less in diameter.

$PM1_{2.5}$ - Particulate matter that is 2.5 microns or less in size.

Primary Particles - This is particle matter that is emitted directly into the atmosphere, including dust from construction, farming and roads, volcanic ash, sea salt, tire and brake dust, diesel soot and wood smoke. Primary particles are the dominant form of particulate matter in the West and arid Southwest. Primary particles tend to settle out of the atmosphere in a relatively short time.

Secondary Particles - These particles are formed when gases, such as sulfur oxides, nitrogen oxides and volatile organic carbon, react in the atmosphere to form solid or liquid particles of sulfates, nitrates and organic carbon particles. These particles are generally 2.5 microns and smaller in size. Secondary particles dominate in the eastern United States. Secondary particles tend to remain suspended in the atmosphere and can be transported over long distances by prevailing winds.

Precursor - The forerunners that lead to the formation of a pollutant. The precursors of ozone are nitrogen oxides and hydrocarbons, which combine in the presence of sunlight to form ozone. The precursors of fine particular matter are sulfur oxides, nitrogen oxides and volatile organic compounds which combine with ammonia in the atmosphere to form sulfate and nitrate particles.

Current Environmental Regulations

Clean Air Interstate Rule

- Rule finalized March 2005
- Designed to address the contribution of regional emissions to downwind $PM_{2.5}$ & 8-hour Ozone non-attainment
- Reductions from 2003-level emissions: ~73% SO_2 & ~61% NO_x
- Reductions occur in phases: Phase I (2009/2010); Phase II (2015)
- Established three cap & trade programs:

  1. Annual SO_2 Trading Program
  2. Annual NO_x Trading Program
  3. Separate Ozone-Season only NO_x Trading Program

Applicability to AEP

- AEP-East States & Louisiana subject to all three trading programs
- Arkansas subject only to the Ozone-Season trading program
- Texas subject to only the Annual NO_x & SO_2 trading programs
- CAIR does not apply to Oklahoma

Clean Air Visibility Rule

- Rule finalized March 2005
- Designed to address the Clean Air Act's best available retrofit technology (BART) requirements and applicability to plants built between 1962 and 1977 that emit more than 250 tons per year of certain pollutants
- Final rule demonstrates that CAIR will result in more visibility improvements than BART
- States are allowed to substitute CAIR requirements in their SIPs for controls that would otherwise be required by BART
- For BART-eligible facilities located in states no subject to CAIR requirements for SO_2 and NO_x, additional controls will be required

Applicability to AEP

- Requires SO_2 reductions in Oklahoma and Arkansas
- Scrubbers (FGDs) will be installed at our Northeastern and Flint Creek plants by 2015

Clean Air Mercury Rule

- Rule finalized March 2005
- Designed to reduce mercury emissions by ~70% nationwide from electric utilities
- Reductions occur in phases: Phase I (2010); Phase II (2018)
- Establishes a cap & trade structure to achieve mercury reductions

AEP will achieve significant mercury reduction as a co-benefit of SCR and FGD systems, but mercury specific control equipment will be needed on several units.

AEP's Environmental Compliance Strategy

NOx and SO_2 emission reductions are part of AEP's on-going strategy to comply with the Clean Air Act, Title IV regulations, CAIR and CAMR.

Much of this investment will position AEP to accomplish the following:

- Reduce nitrogen oxide emissions by 90% through installation of Selective Catalytic Reduction (SCR) systems
- Reduce sulfur dioxide emissions by 95% to 98%+ through installation of Flue Gas Desulfurization (FGD) systems (scrubbers)
- Realize co-benefit of mercury capture offered through SCR and FGD systems together
- Avoid future landfill costs through sale of gypsum (by-product) & build where landfill costs are lower
- Realize benefits achieved through fuel flexibility

Represents the best and least-cost compliance path to improve environmental performance on a fleet basis, while continuing to provide a reliable supply of power to customers at a reasonable price and a solid return for investors.

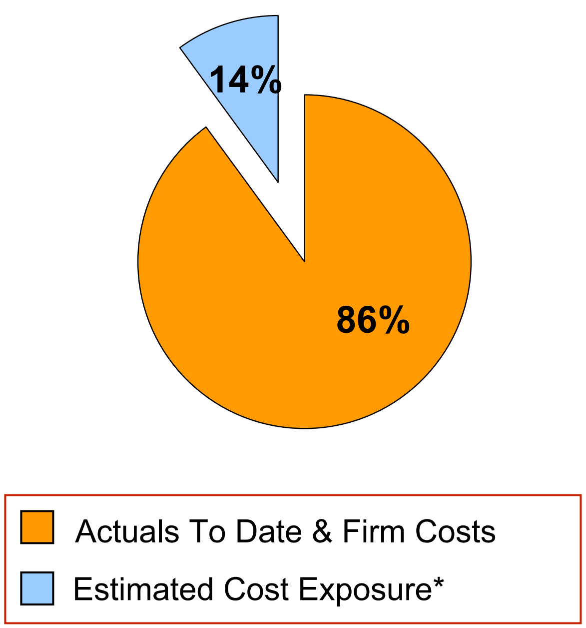
Welsh 2	528		N/A	☑	Projected 2012

At the conclusion of our current environmental retrofit program, over 58% of our 24,630 MW coal-fired generation fleet will be equipped with SCRs and over 73% will be scrubbed (FGDs).

Materials and Vendors – AEP's Advantage

Breakdown of Environmental Compliance Program
(% of Purchased Costs)



Note: these percentages relate to the environmental program through 2010

* Primarily labor costs

SCR Technology

- Removes 85 – 93% of NOx emissions
- Requires ~ 1% use of auxiliary power
- **AEP Capital Cost ~ $121/kW avg.**

Combination of SCR & FGD technology results in co-benefit of Hg removal ~ 80% removal efficiency

FGD Technology

- Removes 95 – 98% of SO_2 emissions
- Requires ~1.5% to 3.0% use of auxiliary power
- **AEP Capital Cost ~ $250/kW avg.**

AEP benefits from first-mover advantage through lower contracted prices compared to industry.

Impact of SCR and FGD on Net Generation

- The overall generation loss in capacity associated with SCR and FGD retrofit for the entire AEP fleet is roughly 600MW.
- Typically, an SCR consumes approximately 1% whereas an FGD consumes from 1.5% to 3.0% of the plant electricity output.
- Plant modifications increasing unit MW ratings are being implemented as part of the retrofit program
  - For example, Mountaineer turbine valve upgrades will increase unit output by ~30 - 45 MW
  - Similar upgrades will be implemented on other units

Plant modifications will mitigate FGD and SCR capacity consumption.

Typical FGD Project Milestone Schedule

- **Phased Execution**
  - Lessons Learned: Focus on performance/risk management/cost
  - Phase 1 Feasibility Study, Phase 2a Conceptual design, Phase 2b Detailed design, Phase 3 Bid Construction at 30 – 60% design complete
- **Typical Plant and Landfill Schedule for Engineering, Procurement, Permitting, and Construction**
  - A new landfill requirement can be the critical path

Future Potential GHG Regulations

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A reliable and reasonably-priced electric supply is necessary to support the economic well-being of the areas we serve.

Highlights of Bingaman-Specter Proposal

"Low Carbon Economy Act of 2007"

- **Key Components:**
  - **Start date for greenhouse-gas reductions is 2012**
  - **Goals: 2006 levels by 2020; 1990 levels by 2030**
  - **Includes a safety valve of $12 per metric ton, increasing at an annual rate of 5% above inflation**
  - **Support for allowance allocations**
  - **International action**

AEP endorses this proposal because it sets reasonable and achievable reduction targets and includes the AEP-IBEW trade proposal.

AEP's Long-term CO_2 Reduction Commitment

Existing Programs

- **Renewables**
  - 800 MWs of Wind
  - 300 MWs of Hydro
- **Domestic Offsets**
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - 1.2MM tons of carbon sequestered
- **International Offsets**
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- **Chicago Climate Exchange**

New Program Additions

- **Incremental Reduction quantity: 5MM tons/yr**
- **Timing: To take effect/receive credits by 2011**
- **Methods**
  - +1000 MWs of Wind PPAs – 2MM tons/yr
  - Domestic Offsets (methane) – 2MM tons/yr (e.g., livestock methane capture deal of 0.6MM tons/yr)
  - Forestry – Tripling annual investment to increase to 0.5MM tons/yr by 2015
  - Fleet Vehicle/Aviation Offsets – 0.2MM tons/yr
  - Additional actions to include DSM and end use energy efficiency, biomass and power plant efficiency – 0.2MM tons/yr

New Technology Additions

- **Commercial solutions for existing fleet**
  - Chilled Ammonia
  - Oxy-Coal

AEP is committed to a 5mm ton/yr reduction in CO_2 emissions which offsets approx half of the emissions projected from new generation projects previously announced.

Chilled Ammonia Technology Program

Phase 1
2009 Commercial Operation

Mountaineer Plant (WV) → MOU (Alstom) **Chilled Ammonia**

CO_2 Storage (Battelle)

Phase 2
2012 Commercial Operation

Northeastern Plant (OK) → MOU (Alstom) **Chilled Ammonia** → EOR MOU (SemGreen)

CO_2 Storage

Project Validation

- 20-30 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, under construction at WE Energies)
- Located at the AEP Mountaineer Plant in WV
- 100,000 – 300,000 tonnes CO_2 per year
- In operation 3Q 2009
- Approximate capture and storage cost $100 – $120M
- Alstom "Chilled Ammonia" Technology
- Geologic storage for CO_2

Commercial Scale Retrofit

- ~ 200 - 300 MW_e scale (megawatt electric)
- ~ 600 MW_t scale (megawatt thermal)
- ~1.5MM tonnes CO_2 per year
- In operation late 2012
- Approx. capital $250 – $300M ($CO_2$ capture & compression)
- Approx. O&M cost $12M per year
- Energy penalty ~ 35 – 50 MW steam, 25 – 30 MW for CO_2 compression
- Retrofit FGD Required: ~$225 – $300M
- Located at AEP's Northeastern Plant Unit 3 or 4 in Oklahoma
- CO_2 for Enhanced Oil Recovery (EOR)

Post-combustion carbon solution provides pure CO_2 stream for capture.

Oxy-Coal CO_2 Capture & Storage Project

Pilot Scale Demonstration

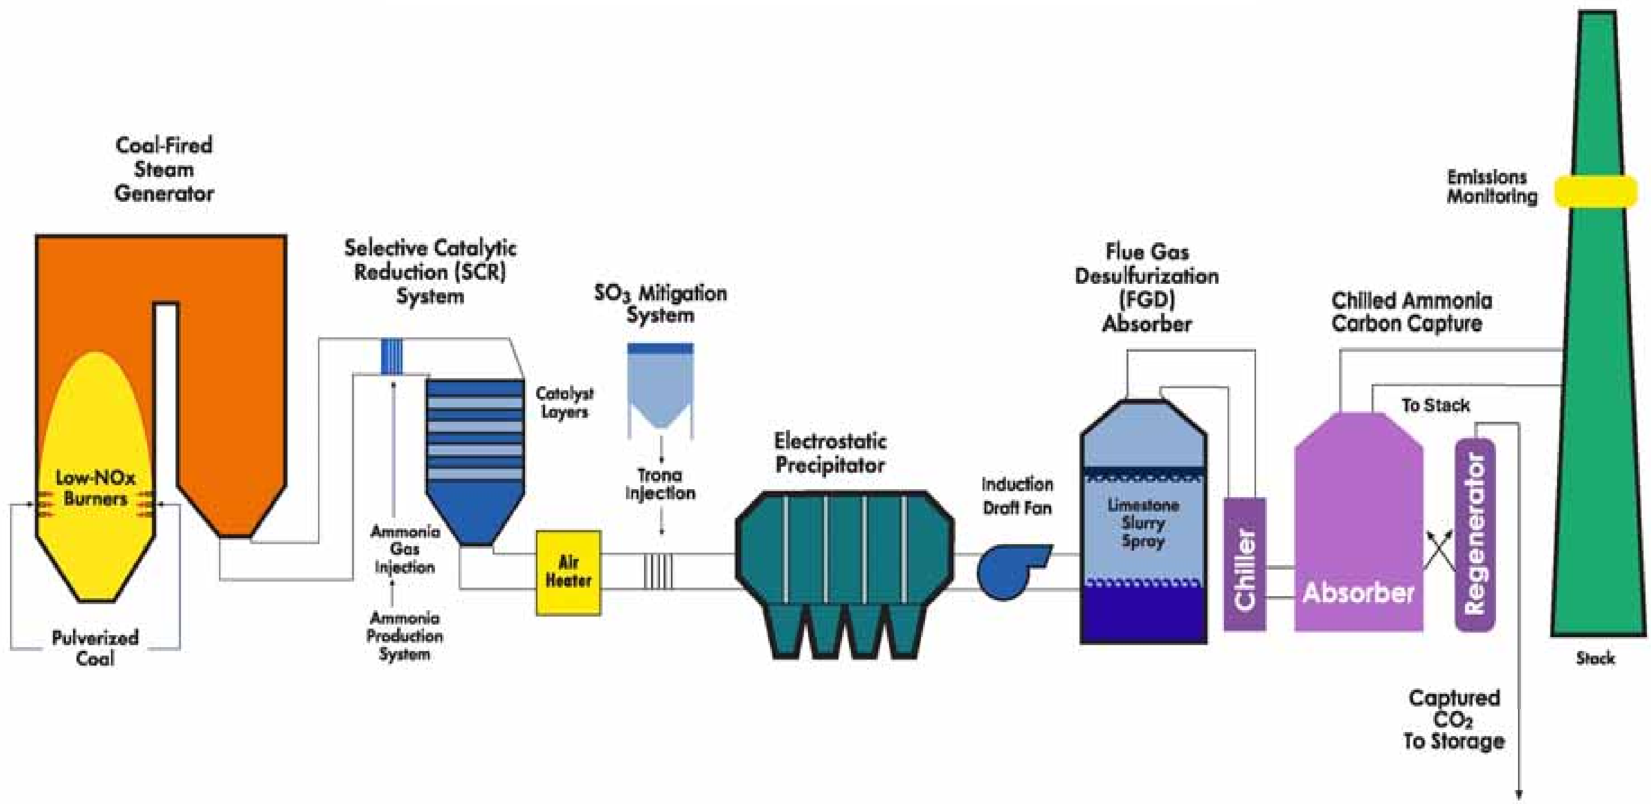
- 10 MW_e scale
- Teamed with B&W at its Alliance Research Center and 16 other utilities
- Demo complete 2007
- AEP funding of $50k

Commercial Scale Retrofit

- Retrofit on existing AEP sub-critical unit (several available)
- 150 – 230 MW_e scale retrofit
- 4,000 – 5,000 tons CO_2 per day
- Team with B&W
- AEP funding of ~ $1.5M for feasibility study
- Feasibility study to be completed in late 2007/early 2008

Combustion conversion technology for existing coal fleet - longer lead time with enhanced viability and long term potential.

Environmental Control Systems



AEP's Carbon Capture & Storage Project

CCS Clean Energy for A Clean Environment

AEP's Carbon Capture & Storage Project

Leading the Way

AEP and Carbon Capture and Storage

AEP continues its heritage of advancing technology for the electric utility industry with leading-edge carbon capture and storage initiatives.

As an industry leader in climate action, AEP recognized more than a decade ago that the emissions of its coal-fueled fleet of power plants -- including carbon, a greenhouse gas emission associated with global climate change -- would have a significant impact on the future of the company.

AEP has faced the challenge with innovative, first-of-a-kind approaches designed to allow the continued use of coal to generate electricity in a carbon-constrained world.

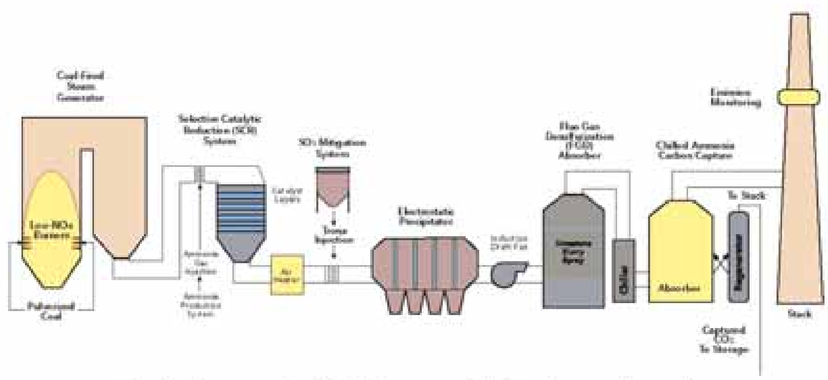
AEP and Carbon Capture and Storage

AEP's goal is to address the issue of climate change while maintaining a supply of affordable, reliable energy for customers that helps keep our economy and our nation secure and strong.

AEP will install Alstom's chilled ammonia process, a post-combustion technology, on two coal-fired power plants

- A technology validation project at Mountaineer Plant in West Virginia and
- Commercial scale installation at Northeastern Station in Oklahoma

The carbon capture project at Mountaineer Plant will be operational in early 2009. In addition, AEP will capture, compress and store underground at least 100,000 metric tons of carbon dioxide (CO_2) per year in deep geologic formations. The estimated $70 million project will operate three to five years.



CCS process occur after the flue gas exits the FGD system and before it enters the stack.

Commercial scale application of Alstom's chilled ammonia process at Northeastern will enter commercial operation in 2011. The installation will capture approximately 1.5 million metric tons of CO_2 per year. At Northeastern, AEP intends that the CO_2 will be used for enhanced oil recovery (EOR).

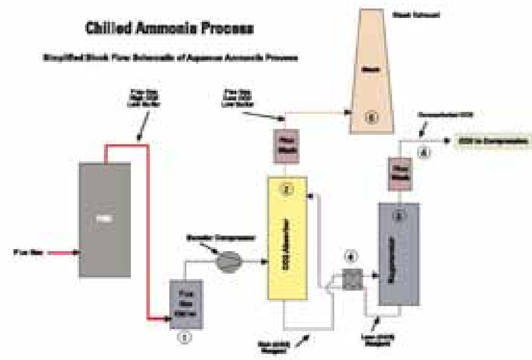
With these projects, AEP continues its leadership position with significant scale-up of technology to capture and store CO_2 emissions from a coal-fired plant.

AEP's Carbon Capture & Storage Project

Carbon Capture

With Alstom's chilled ammonia process

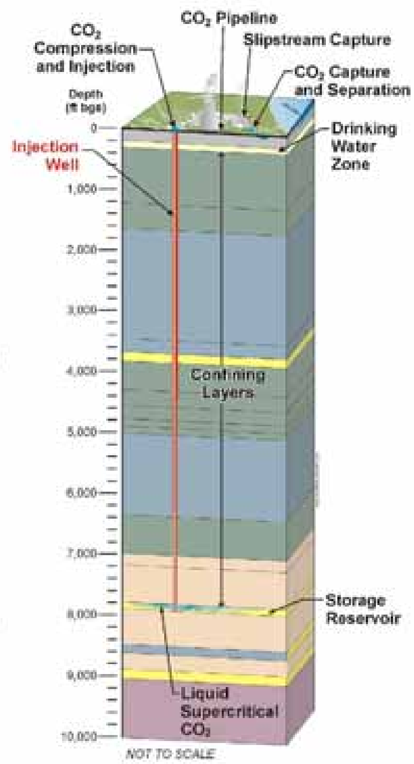
1. The flue gas is chilled to ~ 35°F
2. Ammonium carbonate absorbs CO_2 to make ammonium bicarbonate
3. Ammonium bicarbonate slurry is pumped to a regenerator for CO_2 removal, where the ammonium bicarbonate is converted back to ammonium carbonate and is reused to repeat the process.
4. Heat recovery ensures efficient operation of process.
5. The clean flue gas -- containing mainly nitrogen, excess oxygen and low concentration of CO_2 -- flows to the stack
6. CO_2 is sent to geologic storage in deep saline aquifers or EOR fields.



Carbon Storage

AEP will work with Battelle Memorial Institute to store captured carbon in deep saline aquifers on the Mountaineer Plant site. A characterization study was conducted here in 2003 - 04 and one well already exists. That study indicated that the geologic formations in this area are favorable for carbon storage.

For storage, the captured CO_2 is compressed into a liquid-like state and injected under pressure into saline aquifers in carefully chosen deep geologic formations of pourous sandstone or dolamite. The CO_2 is injected more than a mile underground and spreads through the pore space in the rock where it is effectively trapped from moving upward by layers of impermeable rock above the porous rock, much like oil and gas deposits are trapped for millions of years.



Other technologies – Oxy-coal

AEP also will conduct a retrofit feasibility study with Babcock & Wilcox of its Oxy-coal technology. Plans to retrofit an existing AEP plant for commercial-scale CO_2 capture using this pre-combustion technology will follow.

Oxy-coal combustion creates a flue gas that is primarily a concentrated stream of CO_2. In the Oxy-coal combustion process

- Combustion air is replaced with relatively pure oxygen.
- A portion of the CO_2-rich flue gas is returned to the burners, essentially substituting CO_2 for the nitrogen in the furnace.
- The fraction of the flue gas that is not re-circulated to the burners leaves the plant and is available for subsequent use or storage.
- A secondary benefit of Oxy-coal firing is the reduction of nitrogen oxide (NOx) emissions.

Transmission Initiatives

- Electric Transmission Texas
- PJM Opportunities (I-765™ & PATH)
- Michigan 765-kV Opportunities
- SPP 765-kV Opportunities
- Electric Transmission America

Fall EEI 2007

Electric Transmission Texas (ETT)

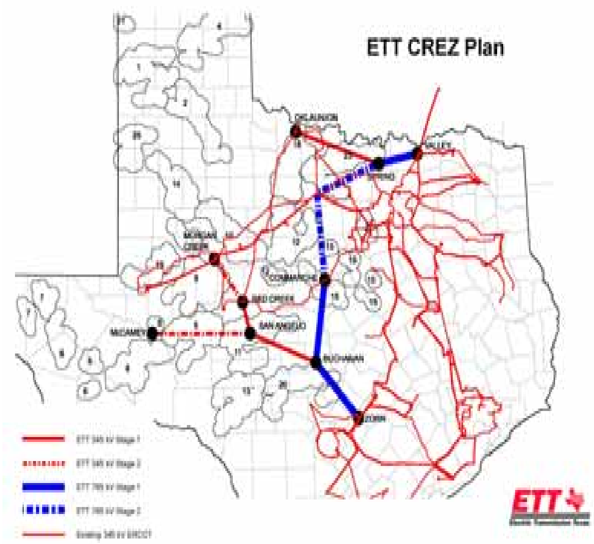
- **Electric Transmission Texas (ETT) Transaction Status**
  - Participation Agreement signed Jan. 9, 2007
  - PUCT Recently Approved:
    - ROE of 9.96%
    - Establishment of Transmission Utility Status
  - Received FERC/PUCT approvals:
    - Asset transfer for TCC to ETT

- **ETT CREZ Overview**
  - Strengthen ERCOT grid to collect and deliver wind generation to load
  - $1.5 billion investment Phase 1 – 2012 (before ownership division)
  - $1.5 billion investment Phase 2 – 2015 (before ownership division)

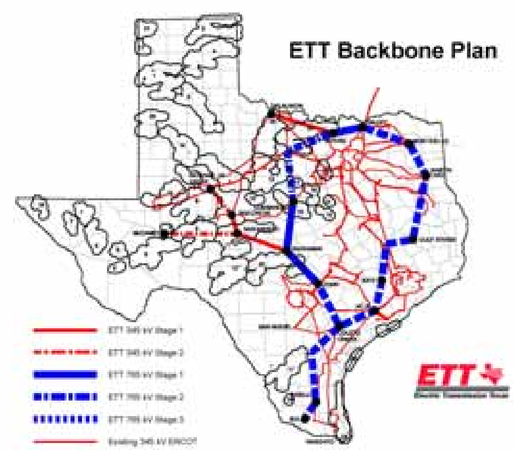
- **ETT ERCOT Backbone Proposal**
  - ETT proposal for ERCOT and PUCT to consider CREZ transmission in context of long-term vision for transmission system.
  - Current 5-year planning horizon results in higher ultimate costs, lower system efficiency.
  - Long-term 15-20 year perspective provides better plan, supports development of high voltage backbone at 765-kV.
  - $4.2 billion investment (long-term backbone).

- **Traditional ratemaking process through the PUCT will be utilized for investment cost recovery.**

ETT CREZ



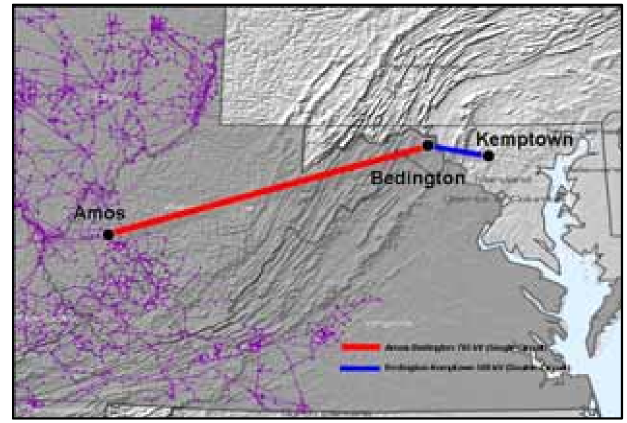
ETT Backbone



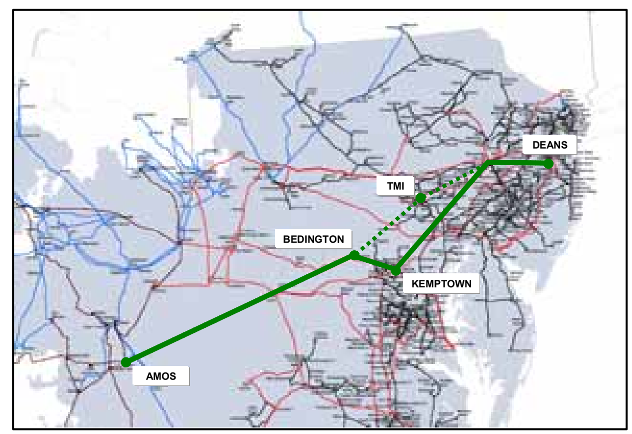
Transmission Project Updates - PJM

- ***I-765 TM in PJM Phase I Update***
  - AEP and Allegheny entered into the PATH (Potomac-Appalachian Transmission Highline) JV to construct the 290 mile West Virginia-Maryland line
  - Total estimated cost of $1.8 billion
  - AEP portion approximately $600 million
  - Expected completion 2012
- ***Key Next Steps***
  - Complete FERC Filing – Fall 2007
    - *Pursuing new project FERC incentives: cash return on CWIP, higher ROE, recovery of pre-commercial operation costs and recovery of abandonment costs.*
  - Begin Routing Study – Fall 2007
  - State Filings – Fall 2008
  - Construction – Early 2010
  - Completion – Fall 2012
- ***I-765 TM in PJM Phase II Update***
  - Approximately 250 miles from West Virginia-Maryland border to Public Service Electric & Gas Deans Station in New Jersey.
  - Currently under consideration by PJM as part of Regional Transmission Expansion Plan (RTEP).
  - Based on PJM RTEP approval, AEP will seek a suitable business partner (JV partner) to complete the second leg of the original proposal.
- ***Regional Rate Design will be utilized for investment cost recovery.***

Phase I in PJM



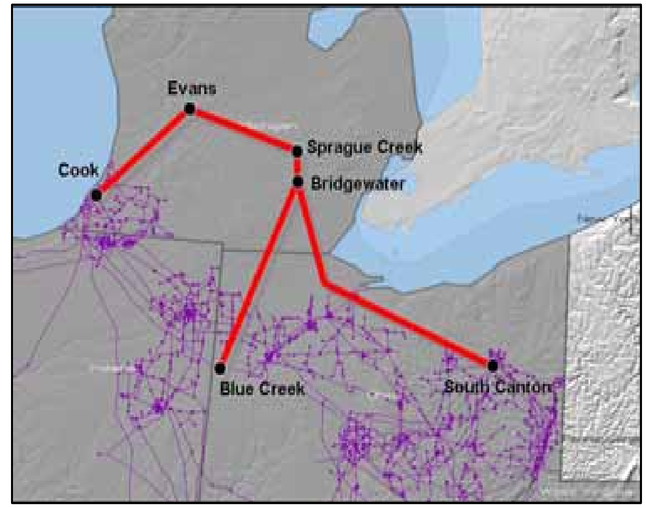
Phase II in PJM



Transmission Project Updates – cont'd

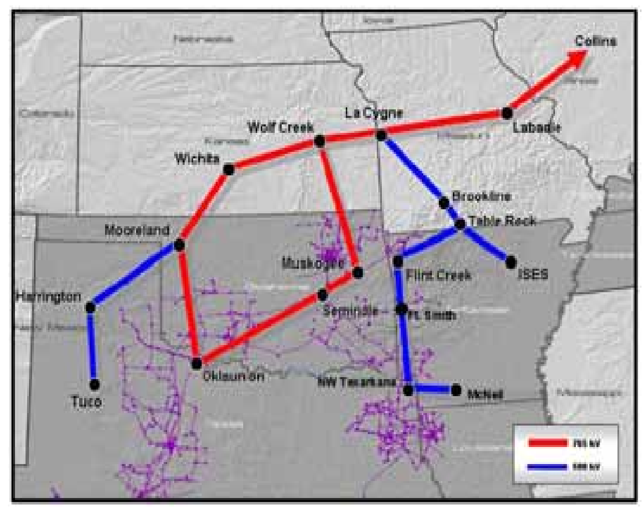
- ***765 - kV in Michigan - Key Next Steps***
  - Study results shared with PJM/MISO– Summer 2007
  - Public release of study results – Fall 2007
  - Potential JV formation – Fall 2007
  - PJM/MISO approval - Summer 2008
  - FERC Filing - Fall 2008
  - Siting approval – Summer 2010
  - Estimated completion – Summer 2015

Michigan



- ***765-kV in SPP - Key Next Steps***
  - Study disclosure – Fall 2007
  - JV formation (Partner-TBD) – Fall 2007
  - SPP RTO/BOD EHV Overlay approval – Summer 2009
  - SPP RTO FERC Filing – Fall 2009
  - Siting approval – Fall 2011
  - Estimated completion – Summer 2017

Southwest Power Pool



- ***Regional Rate Design will be utilized for investment cost recovery.***

Electric Transmission America (ETA)

- ***Electric Transmission America (ETA)***
  - AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 Joint Venture.
  - Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
  - Projects taken on by the Joint Venture would entail transmission facilities:
    - 345 kV and above
    - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
    - Greater than $100 million
  - ETA will hope to identify and initiate the approval process for the first project during the first half of 2008.
  - ETA will look to collaborate with qualified partners in each particular region.

This JV reflects a natural progression and expansion of our partnership with MidAmerican.

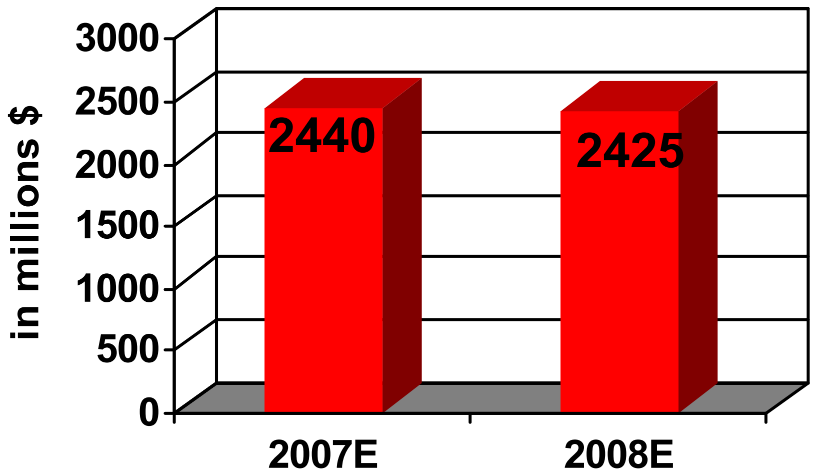
Summary of 2008 Earnings Guidance

- Load growth of 2.2%
- Rate relief of $360MM ($239MM already secured)
- Rising fuel costs of 13%
- Higher financing costs and taxes
- Lower contribution from Centrica sharing agreement

Traditional utility factors will drive earnings.

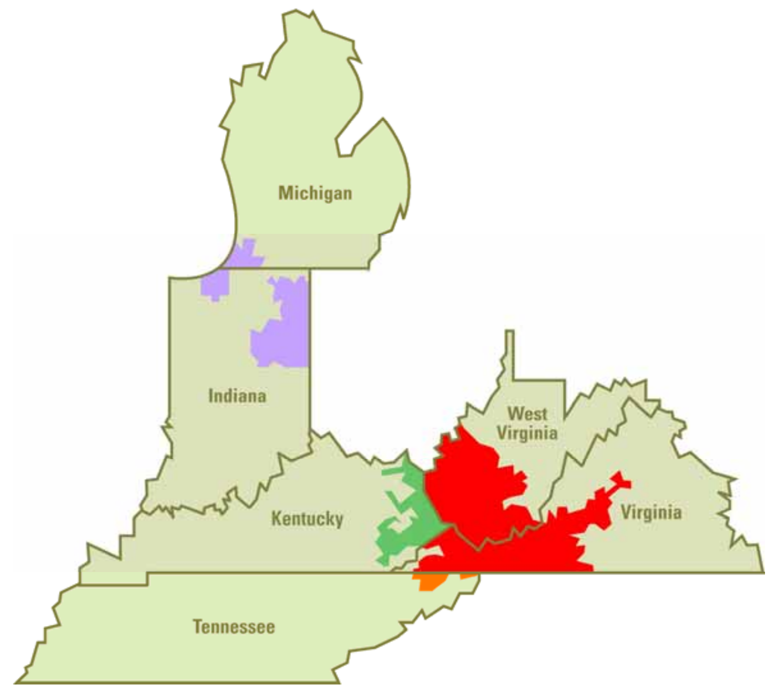
East Integrated Utilities



Earnings Drivers ($ in MM)

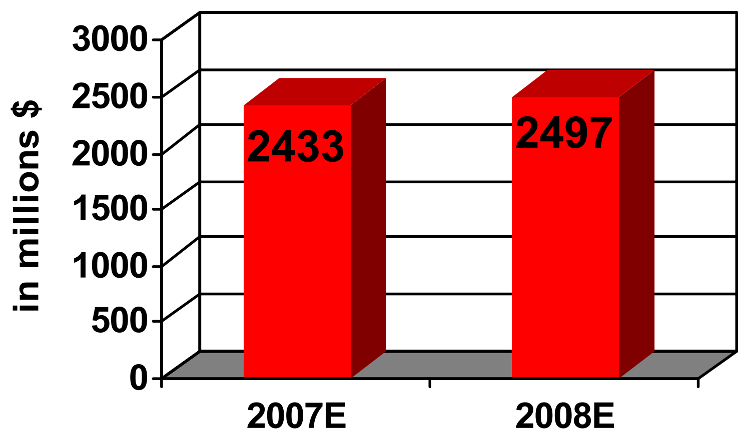
Load Growth	60
Rate Relief	93
Capacity Settlement*	(107)
Fuel	7
PJM & other variable costs	(69)

*Offset in Ohio Companies



$15 million decrease in gross margin for 2008

Ohio Companies



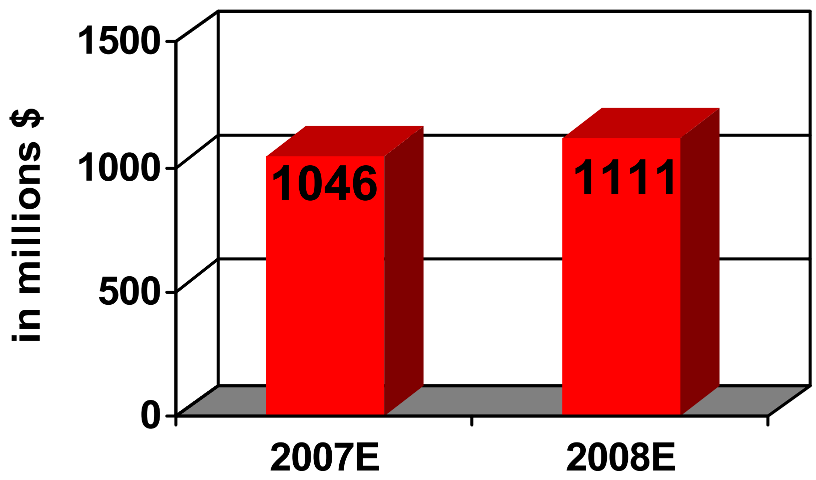
Earnings Drivers ($ in MM)

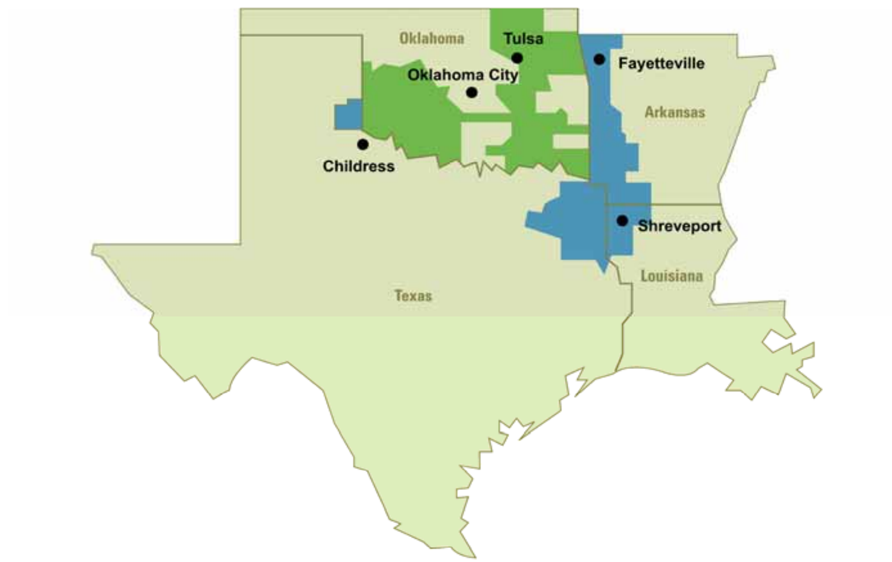
Load Growth	44
RSP Increase	120
Regulatory Asset Recovery (1)	(70)
Capacity Settlement (2)	107
Fuel	(94)
PJM & Other Variable Costs	(43)

(1) Offset in amortization - no earnings impact
(2) Offset in East Integrated Utilities

$64 million increase in gross margin for 2008

West Integrated Utilities

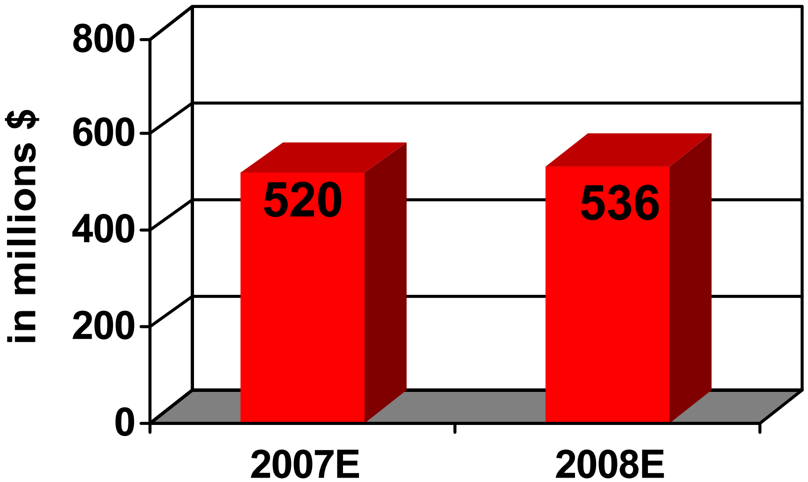


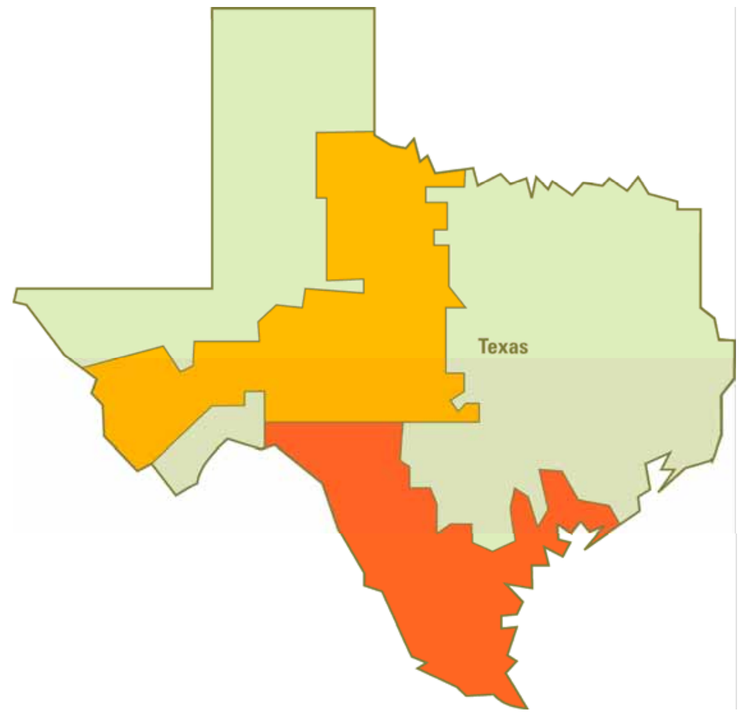


Earnings Drivers ($ in MM)	
Load Growth	22
Rate Relief	44
Other	(1)

$65 million increase in gross margin for 2008

Texas Wires



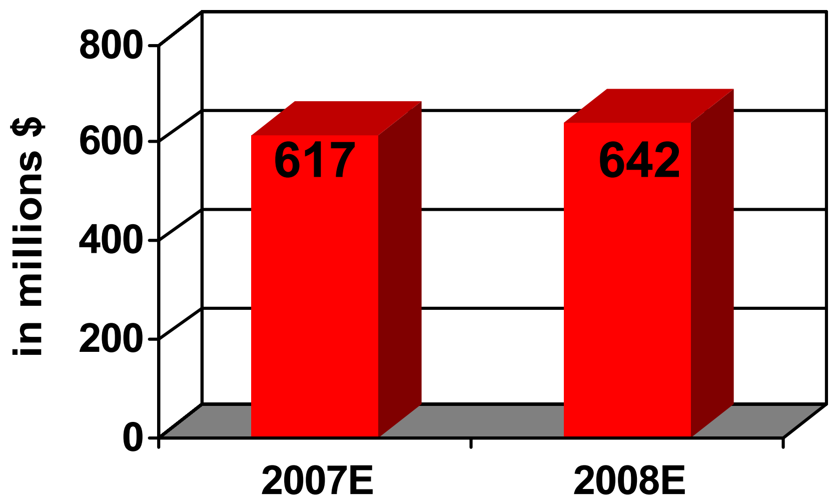


Earnings Drivers ($ in MM)

Load Growth	6
Rate Relief	10

$16 million increase in gross margin for 2008

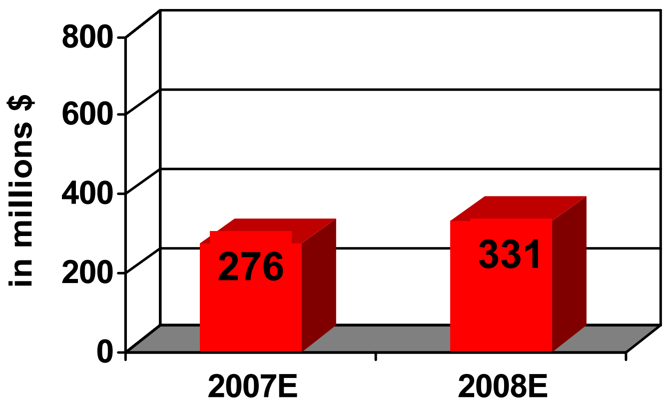
Off-System Sales



$25 million increase in gross margin for 2008, primarily driven by price assumptions

Net Transmission Revenue/Other Operating Revenue

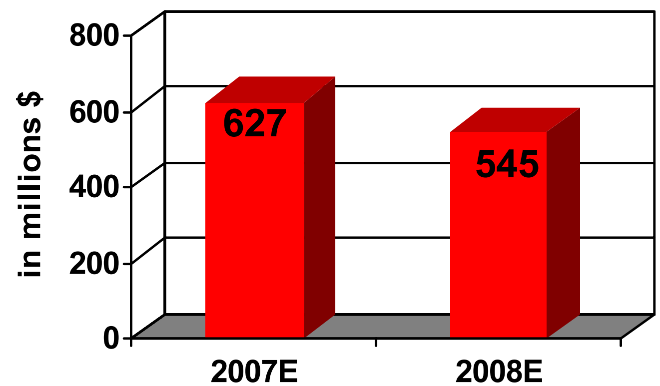
Net Transmission Revenue



Earnings Drivers ($ in MM)

PJM	11
ERCOT	24
SPP	20

Other Operating Revenue



Earnings Drivers ($ in MM)

Lower revenue from 3rd party work, offset by lower O&M	(45)
Higher eliminations due to full year of Lawrenceburg PPA, no earnings impact	(37)

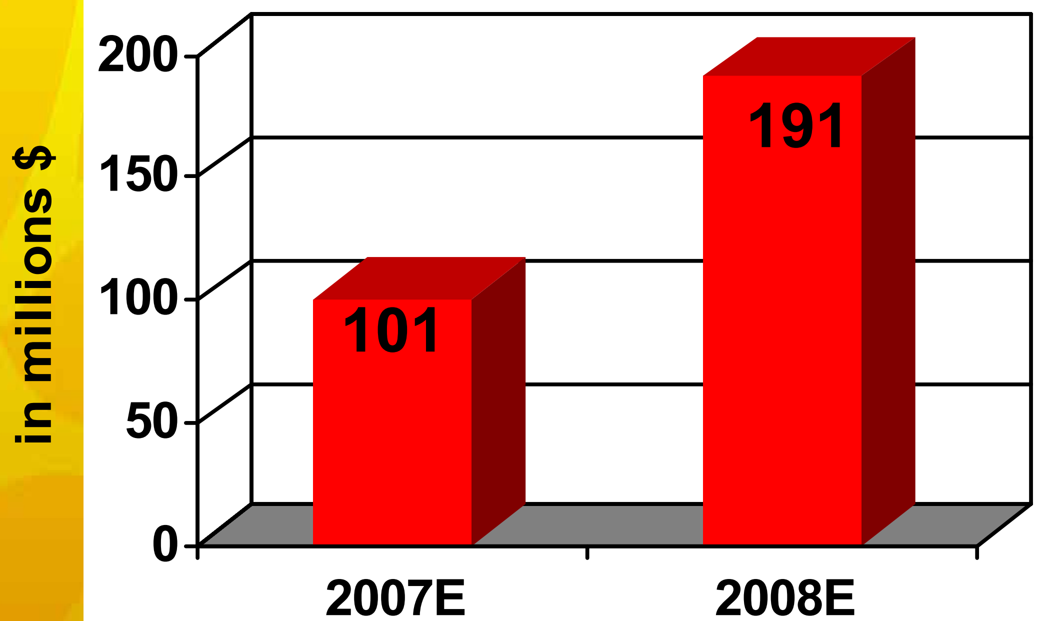
$55 million increase in Net Transmission Revenue for 2008
$82 million decrease in Other Operating Revenue for 2008

Utility Operations Segment Expense Drivers

Expense Drivers	$ in millions	
Operations & Maintenance	**25**	Continued Cost Control
Depreciation & Amortization		
Plant additions	(78)	
Change in depreciation rates	132	
Amortizations	(57)	
	(3)	IN, MI, TX and OK depreciation rate changes
Taxes		
Taxes Other than Income Taxes	(13)	
Change in Pre-Tax Income	(16)	
	(29)	Higher pre-tax income, offset by lower tax rate
Interest Expense & Pref. Dividends		
Debt (net increase)	(91)	
	(91)	Increased debt outstanding
Total	**(98)**	

$98 million increase in Utility Operations Segment expenses for 2008

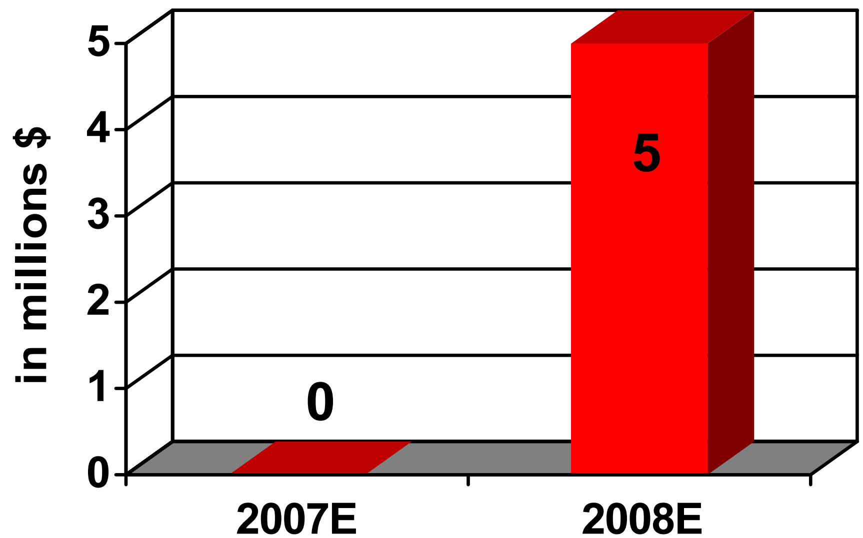
Other Income & Deductions



Earnings Drivers ($ in MM)	
APCo E&R Carrying Charges	80
Centrica Sharing	(20)
AFUDC Equity	24
Other	6

$90 million increase in other income/deduction, net for 2008

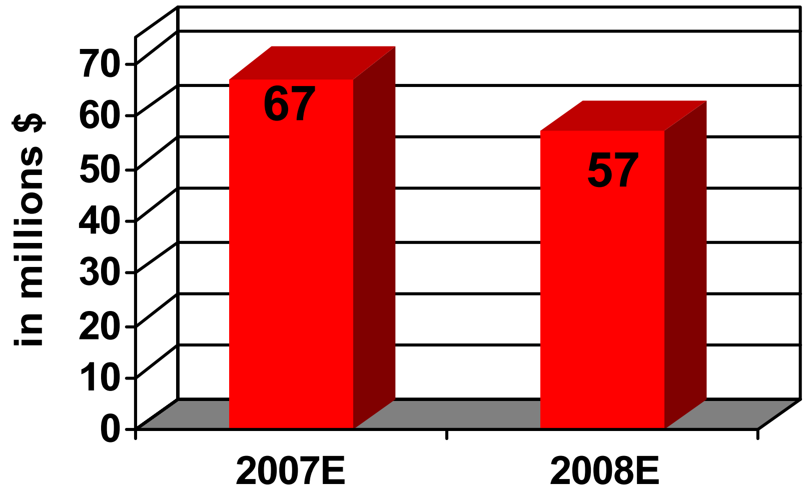
Transmission Operations



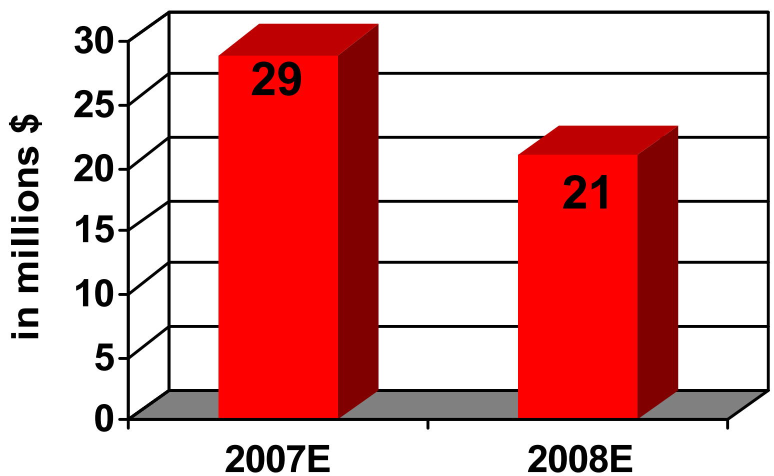
$5 million increase in equity earnings from ETT for 2008

Non-Utility Operations

MEMCO



Generation & Marketing



Earnings Drivers

MEMCO

Increasing costs

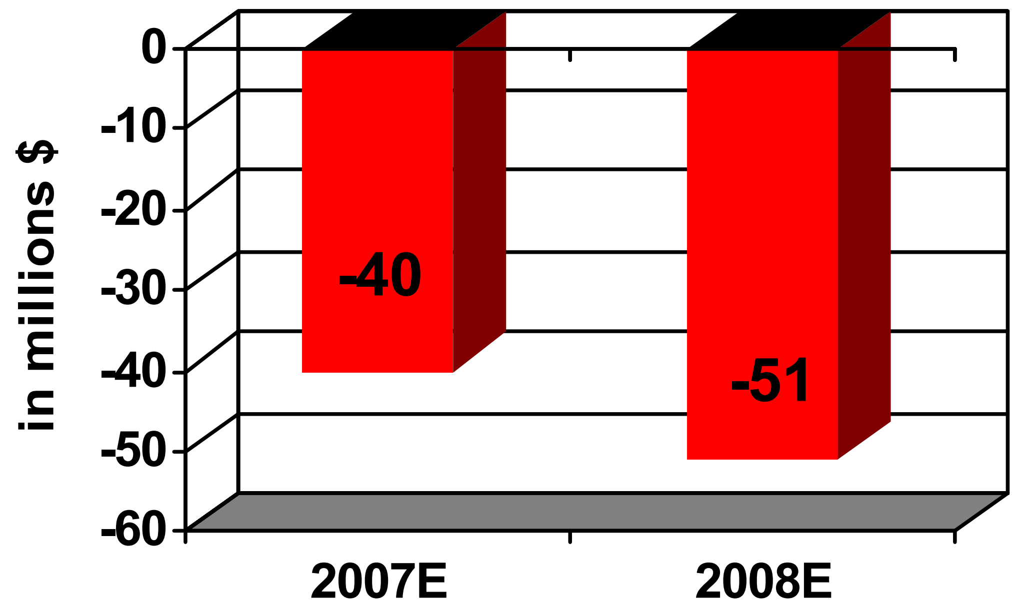
Reduced import/northbound traffic

Generation & Marketing

Divestiture of Sweeny in 4Q07

$18 million decrease in Non-Utility Operations for 2008

Parent & Other



$11 million decrease for 2008 due to increased interest expense, primarily related to the issuance of hybrid securities

Capitalization

(1) AEP Texas Central Company was downgraded and placed on negative outlook by Fitch in April 2007.

2008 Key Operating Company Highlights

Dependent on Actual Capital Investment ($ in millions)

Company	Projected Capital Expenditures	Projected Issuances (a)	Target Equity Ratio
AEP, Inc.	$0	$500-600 (b)	n/a
AEG	$138	$100-150	40%
APCo	$720	$500-600	42-44%
CSP	$393	$250-350	45-47%
I&M	$341	$0	40-42% (c)
KPCo	$122	$100-200	41-43%
OPCo	$666	$100-200	44-46%
PSO	$266	$0	43-45%
SWEPCo	$694	$300-500	43-45%
TCC	$197	$0	40% (d)
TNC	$171	$100-150	40%

(a) Includes tax-exempt issuances
(b) represents hybrid securities
(c) Ratios include impact of Rockport 2 lease
(d) Excludes impact of securitization on the equity ratio

AEP will maintain the financial strength of its subs by retaining and/or infusing equity capital depending on their credit ratios and free cash flow.

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; volatility in the financial markets, particularly development affecting the availability of capital on reasonable terms and developments impacting our ability to refinance existing debt at attractive rates; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas coal, nuclear fuel and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

Company Overview

OUR FOCUS IS OUR CORE

DOMESTIC UTILITY BUSINESS OPERATIONS

American Electric Power Company, Inc. is one of the largest investor-owned electric public utility holding companies in the US. We provide generation, transmission and distribution services to over 5 million retail customers in eleven states (Arkansas, Indiana, Kentucky, Louisiana, Michigan, Ohio, Oklahoma, Tennessee, Texas, Virginia and West Virginia) through our electric utility operating companies.

We have seven regional operating companies for distribution and customer service operations that serve the customers of our eleven electric utility subsidiaries:

Regional Utility Divisions		Electric Utility Subsidiaries
AEP Ohio	→	Columbus Southern Power Ohio Power Wheeling Power
AEP Texas	→	Texas Central Company Texas North Company
Appalachian Power	→	Appalachian Power Kingsport Power
Indiana Michigan Power	→	Indiana Michigan Power
Kentucky Power	→	Kentucky Power
Public Service Company of Oklahoma	→	Public Service Company of Oklahoma
Southwestern Electric Power Co.	→	Southwestern Electric Power Co.

Company Overview

SIGNIFICANT PRESENCE THROUGHOUT THE DOMESTIC VALUE CHAIN

Our US electric assets include:

- Almost 39,000 megawatts of generating capacity in 3 RTOs (one of the largest US generation portfolios with a significant cost advantage in many of our market areas)
- Approximately 39,000 circuit miles of transmission lines, including 2,116 miles of 765kV lines, the backbone of the electric interconnection grid in the Eastern U.S.
- 212,781 miles of overhead and underground distribution lines

With our coal and transportation assets we:

- control over 9.000 railcars
- own and/or operate over 2,900 hopper barges and 80 towboats
- operate one active coal-handling terminal with 20 millions tons of capacity

We consume approximately 76 million tons of coal annually.

Company Strategy

Business Strategy

AEP's mission is to bring comfort to our customers, support business and commerce and build strong communities. Our strategy to achieve our mission is to grow our core utility business at a moderate and steady rate through major investment in our current utility business supported and funded by innovative programs for regulatory recovery as well as develop our independent, federally regulated transmission company for the pursuit of new major interstate projects. Our objective is to be an economical, reliable and safe provider of electric energy to the markets that we serve. Our plan entails designing, building, improving and operating low cost, environmentally-compliant, efficient sources of power and maximizing the volumes of power delivered from these facilities. We intend to maintain and enhance our position as a safe and reliable provider of electric energy by making significant investments in environmental and reliability upgrades. We will seek to recover the cost of our new utility investments in a manner that results in reasonable rates for our customers while providing a fair return for our shareholders through a stable stream of cash flows, enabling us to pay dependable, competitive dividends. We operate our generating assets to maximize our productivity and profitability after meeting our native load requirements.

CONTINUED COMMITMENT TO OUR CORE UTILITY MISSION: BRING REASONABLY PRICED ELECTRIC SERVICE TO OUR CUSTOMERS, THEREBY STRENGTHENING OUR COMMUNITIES AND REWARDING OUR INVESTORS

Our Focus

Deliver value to our investors

- **Continue to invest in our core utility business to enable future earnings growth while improving both our earned and allowed ROEs across all operating companies**
- **Optimize the regulatory outcome for all operating companies**
- **Maximize the output of our generation fleet and optimize our off-system sales**
- **Continue to develop our transmission opportunities**
- **Continue active involvement in climate change policy**

Utility Operations

Generation

AEP has approximately 39,000 megawatts of generating capacity in 3 RTOs. AEP owns all or portions of 60 major generating plants, which include coal/lignite, natural gas, nuclear, wind projects and hydroelectric facilities.

AEP operates generating capacity in its internal power pool under an economic dispatch system[1]. AEP's power pool's competitive, largely coal-based production costs are among the lowest in the nation. AEP's power production costs are also kept relatively low by its reliance primarily on fossil fuel (gas and coal), with only a small overall nuclear dependence.

[1] Economic dispatch of a generating system utilizes the lowest-cost generating units to meet electric demand at any point in time.

Appalachian Power

President and Chief Operating Officer:
Dana Waldo

Appalachian Power Company (APCo)

(organized in Virginia in 1926) is engaged in the generation, transmission and distribution of electric power to approximately 956,000 retail customers in the southwestern portion of Virginia and southern West Virginia, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities and other market participants. APCo covers a service territory of 19,049 square miles, and at December 31, 2007, APCo and its wholly owned subsidiaries had 2,497 employees. Among the principal industries served by APCo are coal mining, primary metals, chemicals and textile mill products. In addition to its AEP System interconnections, APCo also is interconnected with the following unaffiliated utility companies: Carolina Power & Light Company, Duke Energy Corporation and Virginia Electric and Power Company. APCo has several points of interconnection with TVA and has entered into agreements with TVA under which APCo and TVA interchange and transfer electric power over portions of their respective systems. APCo is a member of PJM.

Columbus Southern Power

President and Chief Operating Officer: Joe Hamrock

Columbus Southern Power Company (CSPCo)

(organized in Ohio in 1937, the earliest direct predecessor company having been organized in 1883) is engaged in the generation, transmission and distribution of electric power to approximately 746,000 retail customers in Ohio, and in supplying and marketing electric power at wholesale to other electric utilities, municipalities and other market participants. CSPCo covers a service territory of 3,701 miles and at December 31, 2007, CSPCo had 1,265 employees. CSPCo's service area is comprised of two areas in Ohio, which include portions of twenty-five counties. One area includes the City of Columbus and the other is a predominantly rural area in south central Ohio. In addition to its AEP System interconnections, CSPCo also is interconnected with the following unaffiliated utility companies: Duke Energy Ohio, DP&L and Ohio Edison Company. CSPCo is a member of PJM.

Indiana Michigan Power

President and Chief Operating Officer: Helen Murray

Indiana Michigan Power Company (I&M)

(organized in Indiana in 1925) is engaged in the generation, transmission and distribution of electric power to approximately 583,000 retail customers in northern and eastern Indiana and southwestern Michigan, and in supplying and marketing electric power at wholesale to other electric utility companies, rural electric cooperatives, municipalities and other market participants. I&M has a service territory of 4,578 square miles and at December 31, 2007, I&M had 2,687 employees. Since 1975, I&M has leased and operated the assets of the municipal system of the City of Fort Wayne, Indiana. In addition to its AEP System interconnections, I&M also is interconnected with the following unaffiliated utility companies: Central Illinois Public Service Company, Duke Energy Ohio, Commonwealth Edison Company, Consumers Energy Company, Illinois Power Company, Indianapolis Power & Light Company, Louisville Gas and Electric Company, Northern Indiana Public Service Company, Duke Energy Indiana and Richmond Power & Light Company. I&M is a member of PJM.

PRINCIPAL INDUSTRIES SERVED:

Primary metals
Transportation equipment
Fabricated metal products
Rubber and miscellaneous plastic products
Chemicals and allied products

Southwestern Electric Power

President and Chief Operating Officer: Paul Chodak III

Southwestern Electric Power Company (SWEPCo)

(organized in Delaware in 1912) is engaged in the generation, transmission and distribution of electric power to approximately 467,000 retail customers in northeastern Texas, northwestern Louisiana and western Arkansas, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities, rural electric cooperatives and other market participants. SWEPCo has a service territory of 25,000 square miles and at December 31, 2007, SWEPCo had 1,578 employees. The territory served by SWEPCo also includes several military installations, colleges, and universities. SWEPCO also owns and operates a lignite coal mining operation. In addition to its AEP System interconnections, SWEPCo is also interconnected with CLECO Corp., Empire District Electric Co., Entergy Corp. and Oklahoma Gas & Electric Co. SWEPCo is a member of SPP.

Regulation

Regulation

- Regulatory Strategy
- Rate Case Filing Requirements
- Regulatory Activity Underway
- GridSMART Regulatory Status
- Rate Base and ROE by Operating Company
- Commission Overviews

Fall EEI 2008

Regulatory Strategy: Reduce Lag

The strategy: reduce the time between in-service dates and rate recovery

- Maximize frequency of filings
  - Seek ability to pro-forma both capital and O&M through date which rates are effective
- Single-issue cost recovery
  - Reliability
  - Vegetation
  - Environmental
- Trackers
  - Federally-approved transmission costs
  - Fuel and emissions
  - ERO compliance costs
  - Off-system sales margin sharing
- Formula rates
- Return on CWIP

Our goal is to maximize utility company cash flow and returns by minimizing regulatory lag.

Summary of Rate Case Filing Requirements

	Arkansas	Indiana	Kentucky	Louisiana	Michigan	Ohio	Oklahoma	Texas	Virginia	West Virginia	FERC

AEP Ohio Electric Security Plan Filing

- On July 31, 2008, in conjunction with the requirements of SB221, AEP Ohio filed an Electric Security Plan with the PUCO on behalf of CSPCo and OPCo.
- The filing includes the following key components:
  - Energy Efficiency and Demand Response
  - Renewable Energy
  - gridSMART℠ Phase 1
  - Distribution Reliability Enhancement
  - Economic Development
  - Provider of Last Resort
- The proposed rate plan results in an annual increase of approximately 15 percent on customers' total bills.
- The filing seeks to recover changes in fuel and environmental expenses relative to levels reflected in current rates.
- Intervenor testimony was filed October 31, Staff testimony was filed November 7 and the public hearing commences on November 17, 2008. We anticipate an order in the first quarter of 2009.

Summary Rate Case Information

I&M Indiana General Rate Case

On January 31, 2008, I&M filed a general base rate case with the Indiana Utility Regulatory Commission (IURC) requesting an increase of $125.6 million ($80.1 million in base revenues and $45.6 million in tracker mechanisms). (Docket #: 43306). Order is expected in June 2009.

Regulatory Activity Underway

SPP OATT Formula Rate Filing (Docket #:ER07-1069-000)

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $140MM. Approximately $10MM of the increase relates to 3rd party and the rest, if approved, would be recovered through retail jurisdictional filings in SWEPCo and PSO, as appropriate.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to February 1, 2008, with rates subject to refund.
- Settlement discussions are currently on-going.

Regulatory Activity Underway

PJM OATT Formula Rate Filing (Docket #:ER08-1329-000)

- On July 31, 2008, the seven AEP East companies filed with the FERC to update the Open Access Transmission Tariff (OATT) rate and implement a formula transmission rate that will be updated annually to keep rates current with transmission investment.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $507MM and the new revenue requirement requested is $606MM. Approximately $31MM of the increase relates to 3rd party and Ohio and the rest, if approved, would be recovered through retail jurisdictional filings in the other east jurisdictions.
- We requested an effective date of October 1, 2008 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to March 1, 2009, with rates subject to refund.

Regulatory Activity Underway

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- The PSC issued its order on November 21, 2007, approving construction of the plant.
- Air permit anticipated in the fourth quarter of 2008.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an application to purchase, operate, own and install peaking, intermediate and baseload generating facilities. The peaking facility has been addressed and the intermediate facility has been approved. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- The LPSC issued its order on April 29, 2008, approving construction of the plant.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- The PUCT issued its order approving construction of the plant on August 12, 2008, with a cost cap of $1.52 billion and a cap on carbon dioxide at $28/ton through 2030. This order is currently under appeal in Texas.

Regulatory Activity Underway

SWEPCo Stall Plant Filings

Arkansas

- ❑ Proceeding is pending.

Louisiana

- ❑ On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The intermediate facility, known as the Stall Plant and sited in Shreveport, LA, was bifurcated from the original filing and had a procedural schedule established on January 9, 2008.
- ❑ PSC approval was granted on September 10, 2008.
- ❑ Air permit received on March 20, 2008.

Texas

- ❑ PUCT order approving plant was issued on March 8, 2007.

gridSMART℠ Evolution – AEP East

	State Policy	AEP Action Plans
AEP OHIO — A unit of American Electric Power	SSB 221 provides targets and provisions for DSM/EE programs and supports infrastructure modernization.	Filed an Electric Security Plan (2008) which includes a model city pilot in NE Columbus and addresses DSM/EE programs. New 2 MW NaS battery in Bluffton will demonstrate use of storage to enhance a sub-transmission system.
AEP APPALACHIAN POWER — A unit of American Electric Power	Legislative interest in Virginia beginning to drive regulatory activity in EE/DSM.	New 2 MW NaS battery in West Virginia will test dynamic islanding – supplying electricity while disconnected from the grid. AMR investments in Virginia and West Virginia will defer new AMI for several years. EE/DSM potential study initiated.
AEP KENTUCKY POWER — A unit of American Electric Power	Kentucky's commission rules regarding DSM/EE programs are the model we seek in other states.	Existing programs are focused on low-income weatherization and heat pump programs for mobile homes with favorable recovery. AMR investment will defer new AMI for several years.
AEP INDIANA MICHIGAN POWER — A unit of American Electric Power	Pending DSM filing in Indiana; rules being finalized. EE/DSM legislative goals recently established in Michigan.	Broadly focused South Bend Pilot includes AMI, distribution automation, demand response, pre-paid meters. NaS battery installation in IN in 2008 to demonstrate storage with intermittent wind.

The eastern states are evolving in their positions regarding demand side management, energy efficiency and AMI investments.

gridSMART^{SM} Evolution – AEP West

	State Policy	AEP Action Plans
AEP TEXAS – A unit of American Electric Power	Current legislation allows concurrent cost recovery of DSM/EE programs and performance incentives for exceeding goals. Legislature expecting distribution service providers in ERCOT to file plans for smart meter deployment.	Implementing aggressive DSM/EE programs to achieve legislatively mandated targets of 15% and 20% to reduce growth in demand in 2008 & 2009 respectively. A deployment plan for smart meters was initiated as of 10/31/08.
AEP PUBLIC SERVICE COMPANY OF OKLAHOMA – A unit of American Electric Power	DSM proceedings currently underway. Heavily involved with Commission regarding rulemaking. Favorable recovery provisions proposed.	Conducting Distribution Automation pilot in South Tulsa. In process of implementing quick start DSM/EE programs.
AEP SOUTHWESTERN ELECTRIC POWER COMPANY – A unit of American Electric Power	DSM/EE program costs are recoverable thru a rider in Texas and Arkansas and base rates in Louisiana. No current statutory support for AMI outside of Texas footprint.	Implementing aggressive EE/DSM programs to achieve targets of 15% and 20% (respectively) to reduce growth in demand in 2008 & 2009 in Texas. Continue quick-start DSM/EE in Arkansas. Submitted EE Potential Study to Louisiana Commission in October 2008.

Texas currently has the most progressive legislative stance with regards to supporting AMI. PSO and SWEPCo have active DSM/EE programs with Distribution Automation pilots proposed in each state.

Commission Overview

Arkansas Public Service Commission

AEP Regulated Electric Utilities

Southwestern Electric Power Co.

Commissioners

Number: 3	**Appointed/Elected: Appointed**	**Term: 6 Years**	**Political Makeup: R: 1 D: 2**
Qualifications for Commissioners The Arkansas Public Service Commission (APSC) is composed of 3 members. The Governor appoints the Commissioners as well as the Chairman. Governor Huckabee has appointed all of the current commissioners.			
Commissioners **Paul Suskie, Chairman (Dem.),** since 2007; current term ends in 2013. Lawyer, North Little Rock, Arkansas City Attorney. Bachelor's attained at University of Central Arkansas. Juris Doctorate at University of Arkansas at Little Rock School of Law. NARUC member including Committee on Energy Resources and the Environment and Committee on Consumer Affairs.			
Daryl E. Bassett, Commissioner (Rep.), since 2003; current term ends in 2009. Former policy advisor for Governor. Governor's state budget director (2002-2003). Investment Banker for First State Investments/Merrill Lynch Fenner and Pierce (1985-1995). Bachelor's attained at Harding University (Business-Public Administration).			
Collette Honorable, Commissioner (Dem.), since 2008; current term ends in 2011. Commissioner Honorable is a member of NARUC and serves on the Electricity and Consumer Affairs Committees. She also serves on the Smart Grid Collaborative, a joint effort of NARUC and the FERC. Honorable obtained her Juris Doctorate from the University of Arkansas at Little Rock School of Law.			

AEP Regulatory Status

SWEPCo-AR provides service at regulated bundled rates in Arkansas. Arkansas has an active fuel pass-through clause. Arkansas has an OSS margin sharing mechanism and allows CWIP in rate base for a plant that is placed in service within six months after the end of the test year.

Commission Overview

Indiana Utility Regulatory Commission

AEP Regulated Electric Utilities

Indiana Michigan Power Co.

Commissioners

Number: 5	**Appointed/Elected: Appointed**	**Term: 4 Years**	**Political Makeup: R: 3 D: 2**

Qualifications for Commissioners

Five members, appointed by the Governor from among persons nominated by a legislatively mandated utility commission nominating committee; four-year, staggered terms, full-time positions. Not more than three of the members of the IURC shall be members of the same political party. At least one of the commissioners must be an attorney qualified to practice law before the Indiana Supreme Court. The Governor appoints one of the five as chairman. Republican Mitch Daniels was elected Governor on November 2, 2004.

Commissioners

David L. Hardy, Chairman (Rep.), since 2005; current term will expire April 2010. Commissioner Hardy is an attorney who has worked in private practice since 1997. Areas of expertise include negotiation, contracts, litigation, finance and administration. He has 35 years of regulatory experience at the state and federal levels. Bachelors degree and law degree from Indiana University.

Jeffrey L. Golc, Commissioner (Dem.), since 2007; current term will expire in 2009. Former public affairs manager for the Kroger Company. Previous Deputy Commissioner for the Indiana Bureau of Motor Vehicles and the Indiana Department of Workforce Development. Bachelors and Masters degrees in communications from Indiana University.

Larry S. Landis, Commissioner (Rep.), since 2002; current term ends June 2011. Former president of a marketing and communications agency, VP Corporate Advertising, American Fletcher National Bank. Bachelor's degrees in political science and economics.

Greg Server, Commissioner (Rep.), since 2005; current term ends 2009. Former state senator since 1981 and before that served in the Indiana House of Representatives from 1972 to 1980. Served as chair of Senate Commerce Committee, which handled IURC and utility industry legislation. Served as Director of Administration for the Evansville Water and Sewer Utility. Masters degrees in political science and counseling from Indiana State University.

David E. Ziegner, Commissioner (Dem.), since 1990; current term ends April 2011. Lawyer, staff attorney for Legislative Services Agency, General Counsel for IURC. Member, NARUC Committee on Electricity and Advisory Council of the Electric Power Research Institute. Law degree from the Indiana University School of Law in Indianapolis.

AEP Regulatory Status

I&M provides retail electric service in Indiana at bundled rates approved by the IURC. Rates are set on a cost-of-service basis with a fuel recovery mechanism. A current full base rate case is in process with a final order expected in the first half of 2009. The rate case includes requests for riders related to DSM, environmental, reliability, OSS and RTO costs.

Commission Overview

Kentucky Public Service Commission

AEP Regulated Electric Utilities

Kentucky Power Co.

Commissioners

Number: 3	**Appointed/Elected: Appointed**	**Term: 4 Years**	**Political Makeup: R: 2 D:1**
Qualifications for Commissioners Typically three members, appointed by the governor and confirmed by the state senate for four years, staggered terms, full-time positions. The governor appoints one of the three as chairman and another of the three as vice chairman to serve in the chairman's absence. Not more than two members of the KYPSC shall be of the same profession or occupation.			
Commissioners **David L. Armstrong, Chairman (Dem.),** since 2008; current term expires June 2011. Former practicing attorney in private practice. J.D. from University of Louisville Brandeis School of Law. Mr. Armstrong is also the former Mayor for the city of Louisville, KY (1999-2003).			
John W. Clay, Vice Chairman (Rep.), since 2006; current term expires June 2009. Former deputy secretary of the Kentucky Environmental and Public Protection Cabinet. Served as executive director of the Office of Alcohol Beverage Control in the Department of Public Protection. B.A. from Georgetown College. Certified Public Accountant and member of the AICPA.			
James W. Gardner, Commissioner (Rep.), since 2008; current term expires June 2012. Prior to joining the PSC Mr. Gardner was a partner at the law firm Henry Watz Gardner & Sellars PLLC where he specialized in bankruptcy law. JD degree from the University of Kentucky College of Law.			

AEP Regulatory Status

KPCo provides service at regulated bundled rates in Kentucky. Kentucky has an environmental surcharge to recover approved environmental costs and it has an active fuel clause. Kentucky also has an OSS sharing mechanism and a monthly adjustment clause in place for DSM.

Commission Overview

Louisiana Public Service Commission

AEP Regulated Electric Utilities

Southwestern Electric Power Co.

Commissioners

Number: 5	**Appointed/Elected: Elected**	**Term: 6 Years**	**Political Makeup: R: 2 D: 3**

Qualifications for Commissioners

The Louisiana Public Service Commission (LPSC) is composed of five elected members. The commissioners serve overlapping terms of six years.

Commissioners

Jack A. Blossman, Jr. (Rep.), since 1997; current term ends December 2008. Practicing attorney, member of NARUC Gas Committee. Board member of Parish National Bank, member, Lake Ponchartrain Basin Foundation. Juris Doctorate from Southern Law School.

Lambert C. Bossiere, III (Dem.), since 2005; current term ends December 2010. B.S. Business Administration from Southern University. American University of Paris – International Trade Law – Paralegal Certificate. Former First City Court Constable for the City of New Orleans. Member of NARUC.

Foster L. Campbell, (Dem.), since 2003; current term ends December 2008. Member, Louisiana State Senate (1976-2002). Independent insurance businessman and farmer, former school teacher and agricultural products salesman. Bachelor's degree from Northwestern State University.

James M. Field, (Rep.), since 1996; current term ends December 2012. Practicing attorney, member of Electrical Committee of NARUC. NFL contract advisor (1983-present), member, Sports Lawyers Association. Bachelor's and Juris Doctorate from Louisiana State University.

C. Dale Sittig, (Dem.), since 1995; current term ends December 2010. Member, Louisiana House of Representatives, (1983-1995). Member, Chamber of Commerce.

AEP Regulatory Status

SWEPCo-LA provides service at regulated bundled rates in Louisiana. Louisiana has an active fuel pass-through clause and an OSS margin sharing mechanism. Formula rate plans are permitted in Louisiana including a potential for a partial CWIP return on new generation projects. A formula rate plan was implemented August 1, 2008.

Commission Overview

Michigan Public Service Commission

AEP Regulated Electric Utilities

Indiana Michigan Power Co.

Commissioners

Number: 3	**Appointed/Elected: Appointed**	**Term: 6 Years**	**Political Makeup: D: 2 I: 1**

Qualifications for Commissioners

The Michigan Public Service Commission (MPSC) is composed of three members appointed by the Governor with the advice and consent of the Senate. Commissioners are appointed to serve staggered six-year terms. No more than two commissioners may represent the same political party. One commissioner is designated as chairman by the Governor.

Commissioners

Orjiakor N. Isiogu, Chairman (Dem.), since 2007; current term expires July 2013. Former Director of the Telecommunications Division of the MPSC. Assistant Attorney General in Michigan since 1989. Undergraduate and law degree from Wayne State University.

Monica Martinez, Commissioner, (Dem.), since 2005; current term expires July 2011. Former Deputy Director of the Governor's Legislative Affairs Division where she served as the Governor's principal lobbyist. Previous to this, she served as an analyst for the Senate Democratic Office, where she specialized in technology and energy, human services and family law policy issues. Bachelor's degree, University of Michigan.

Steven A. Transeth, Commissioner, (Ind.) , since 2007; current term expires July 2009. Former assistant director and legal counsel for the Michigan Legislative Service Bureau, which included drafting legislation and providing legal counsel to the Michigan Senate and House of Representatives. Lawyer, private practice and with the Ingham County Prosecuting Attorney's office.. J.D. from Thomas Cooley Law School.

AEP Regulatory Status

Customer choice began January 2002. Generation was not deregulated. Retail rates were unbundled (though they continue to be regulated) to allow customers to evaluate generation costs. Michigan has an active fuel clause and return on CWIP can be included in base rates.

Commission Overview

Ohio Public Utilities Commission

AEP Regulated Electric Utilities

Columbus Southern Power Co.

Ohio Power Co.

Commissioners

Number: 5	Appointed/Elected: Appointed	Term: 5 Years	Political Makeup: R: 1 D: 2 I: 2

Qualifications for Commissioners

Five members, appointed by the governor and confirmed by the state senate; five year, staggered terms, full-time positions, commissioners shall be selected from the lists of qualified persons submitted to the governor by the PUC nominating council. Not more than three of the members of the PUCO shall be members of the same political party. The governor appoints one of the five as president, who serves at the pleasure of the governor until a successor has been designated.

Commissioners

Alan R. Schriber, Ph.D., Chairman, (Ind.) , since 1999; term expires April 2009. Economics professor, president of a radio broadcasting company, investment advisor. Previously served as commissioner on the PUCO from 1983-1989. Member NARUC Telecommunications Committee, National Governors' Association Electricity Task Force, Harvard Electricity Policy Group.

Paul A. Centolella, Commissioner, (Dem.) since 2007; term expires April 2012. Juris Doctor from the University of Michigan. From 1992-2007, worked as a senior economist in the Energy Solutions Group of Science Applications International Corporation. Former senior policy advisor and senior utility attorney for the Office of the Ohio Consumers' Counsel.

Ronda Hartman Fergus, Commissioner, (Rep.) since 1995; term expires April 2010. Lawyer, Ohio State; previously served on the PUCO staff as an administrative law judge in the Legal Department. Later served as the chief of Telecommunications, Water and Sewer Section of the Legal Department, and then chief of the Telecommunications Technical Staff. Member NARUC Committee on Consumer Affairs.

Valerie A. Lemmie, Commissioner, (Ind.) since 2006; term expires April 2011. Master's degree in Urban Affairs and Public Policy Planning, Washington University. Served as city manager for Cincinnati, Dayton, and Petersburg, Va. Scholar-in-residence at the Kettering Foundation. Chair of the Board of Directors of the National Academy of Public Administration.

Cheryl Roberto, Commissioner, (Dem.) since 2008; term expires April 2013. Prior to joining the PUC, Roberto was director of the City of Columbus Public Utilities Department. Before entering the public sector, Commissioner Roberto worked as an assistant attorney general for the state of Ohio. Commissioner Roberto received her B.A. with honors from Kent State University and her Juris Doctorate from the Moritz College of Law at The Ohio State University.

AEP Regulatory Status

On January 26, 2005, the PUCO approved Rate Stabilization Plans (RSP) for CSP and OPCo (the Ohio Companies). The plans provided, among other things, for CSP and OPCo to raise their generation rates by 3% and 7% respectively, in 2006, 2007 and 2008 and provided for additional generation rate increases of up to 4% per year based on the Ohio Companies supporting the need for additional revenues. Distribution rates in effect at 12/31/05 are frozen for OPCo and CSP until 12/31/08. Transmission rates are currently regulated by FERC as reflected in the OATT. SB221 allows that CSP and OPCo will have active fuel clauses effective January 1, 2009. An Electric Security Plan is currently on file with the PUCO for consideration before the end of 2008. The ESP requests a 15% rate increase for all CSP and OPCo customers.

Commission Overview

Oklahoma Corporation Commission

AEP Regulated Electric Utilities

Public Service Company of Oklahoma

Commissioners

Number: 3	**Appointed/Elected: Elected**	**Term: 6 Years**	**Political Makeup: R: 2 D: 1**

Qualifications for Commissioners

The Oklahoma Corporation Commission (OCC) is composed of three commissioners who are elected by state-wide vote. Commissioners serve staggered six-year terms so one commissioner vacancy occurs every two years. The election pattern was established when the Commission was created by the state constitution.

Commissioners

Jeff Cloud, Chairman (Rep.), since 2002; current term ends January 2009. Member, NARUC. Served as U.S. Congressman's District Director. Served as the Oklahoma City Mayor's Chief of Staff. Law degree from Oklahoma City University.

Bob Anthony, Commissioner, (Rep.), since 1989; current term expires January 2013. Member, NARUC. Served on the boards of the Oklahoma State, Oklahoma City, and South Oklahoma City chambers of commerce. Earned a M.Sc. from the London School of Economics, a M.A. from Yale University and an M.P.A. from the Kennedy School of Government at Harvard University.

Jim Roth, Commissioner, (Dem.), since 2007;appointed by the governor to fill the seat opened by the resignation of Commissioner Bode; current term ends January 2011. Previously served various county governments for eight years. Juris Doctorate from Oklahoma City University School of Law.

AEP Regulatory Status

PSO provides retail electric service in Oklahoma at bundled rates approved by the OCC. PSO's rates are set on a cost-of-service basis. Fuel and purchased energy costs above the amount included in base rates are recovered by applying a fuel adjustment factor to retail kilowatt-hour sales. The factor is generally adjusted annually and is based upon forecasted fuel and purchased energy costs. Over or under collections of fuel costs for prior periods are returned to or recovered from customers when new annual factors are established. PSO has an OSS margin sharing mechanism and has rider mechanisms currently approved for vegetation management and the new peaking facilities in-service in 2008.

Commission Overview

Tennessee Regulatory Authority

AEP Regulated Electric Utilities

Kingsport Power Co.

Commissioners

Number: 4	**Appointed/Elected: Appointed**	**Term: 6 Years**	**Political Makeup: R: 1 D: 3**

Qualifications for Commissioners

The Tennessee Regulatory Authority (TRA) directors are appointed, one each, by the Governor, Lieutenant Governor (as Speaker of the Senate), Speaker of the House and one joint appointment by the three together, and are confirmed by the Tennessee General Assembly. The directors are appointed for six-year terms, which all expired in June 2008; terms are now staggered.

Commissioners

Tre Hargett, Chairman (Rep.), since 2008; current term expires 2012. Former Representative of House District 97. M.B.A. Memphis State University.

Mary W. Freeman, Director (Dem.), since 2008; current term expires June 2011. Prior legislative director for Governor Bredesen, executive assistant to State Representative Lois DeBerry. B.A. Tennessee State University.

Sara Kyle, Director (Dem.), since 1996; current term expires June 2012. Former assistant public defender until she was elected to the Memphis City Court bench. The longest serving director and only holdover from the previous Regulatory Authority. Law degree from Middle Tennessee State University.

Eddie Roberson, Ph.D, Director, (Dem.), since 2006; current term expires June 2010. Former Chief of Consumer Services Division of the Regulatory Authority; also served a year as the agency's Executive Director. Served two terms on the Chattanooga City School Board. Ph.D in Public Administration from Tennessee State University.

AEP Regulatory Status

No deregulation legislation and no base rate freeze or cap. Tennessee has an active fuel clause.

Commission Overview

Public Utility Commission of Texas

AEP Regulated Electric Utilities

Texas Central Co.
Texas North Co.
Southwestern Electric Power Co.

Commissioners

Number: 3	**Appointed/Elected: Appointed**	**Term: 6 Years**	**Political Makeup: R: 3**
Qualifications for Commissioners To be eligible for appointment, a commissioner must be: (1) a qualified voter; (2) a citizen of the United States; and (3) a representative of the general public. Chairman appointed by the Governor.			
Commissioners **Barry T. Smitherman, Chairman, (Rep.),** since April 2004; current term expires August 2013. Attorney; Assistant DA; Public Finance Investment Banker. Received law degree from the University of Texas School of Law.			
Kenneth W. Anderson, (Rep.) since September 2008; current term expires September 2011. Past Director of Governmental Appointments under Governor Perry. Prior to that Anderson served in private practice as a corporate attorney in the area of securities law and regulatory matters. He also served as a member of the Texas Securities Board from 1999-2006. Anderson holds a law degree from Southern Methodist University.			
Donna Nelson, Commissioner (Rep.), since August 2008; current term expires August 2009. Nelson served as a special assistant and advisor to Governor Perry on energy, telecommunications and cable budget and policy issues. She previously served as director of the PUC telecommunication's section and legal advisor to the PUC chairman. Nelson holds a law degree from Texas Tech University.			

AEP Regulatory Status

Retail competition has been delayed by the PUCT in the SPP area of Texas (including SWEPCO). SWEPCO-TX has an active fuel pass-through clause as well as OSS margin sharing. In some circumstances, CWIP is allowed in rate base.

TCC and TNC provide retail transmission and distribution service on a cost-of-service basis at rates approved by the PUCT and wholesale transmission service under tariffs approved by the FERC consistent with PUCT rules. Transmission riders provide annual recovery dependent on the level of transmission investment and ERCOT load growth rates. AFUDC is permitted in limited circumstances.

Commission Overview

Virginia State Corporation Commission

AEP Regulated Electric Utilities

Appalachian Power Co.

Commissioners

Number: 3	**Appointed/Elected: Elected**	**Term: 6 Years**	**Political Makeup: R: 2 D: 1**
Qualifications for Commissioners The Virginia State Corporation Commission (VSCC) is composed of three members elected by the General Assembly. Commissioners are elected to serve six-year terms, staggered in two year increments. The chair rotates annually among the three commissioners on February 1.			
Commissioners **Judith Williams Jagdmann, Chairperson, (Rep.),** since 2006; current term expires 2012. Law degree from T.C. Williams School of Law at the University of Richmond. Served as Deputy Attorney General for Civil Litigation Division from 1998 to 2005. Attorney General for Commonwealth of Virginia from 2005 to 2006.			
Mark C. Christie (Rep.), since 2004; current term expires 2010. Attorney, counsel to the Speaker of the House. Lawyer, private practice. Law degree from Georgetown.			
James C. Dimitri (Dem.), since 2008; current term expires 2014. Prior to being named Commissioner, Dimitri was in private practice in Richmond. From 1994 to 2000 he served as Senior Counsel, then General Counsel at the SCC. He was an assistant Attorney General from 1983 to 1987. Dimitri received his undergraduate degree in economics from the University of Virginia and his J.D. from the Boston University School of Law in 1976.			

AEP Regulatory Status

APCo-VA provides retail electric service in Virginia at unbundled rates. In 2007, the General Assembly passed legislation re-establishing retail rate regulation in the Commonwealth. The opportunity for one rate case exists before December 31, 2008, which was filed May 30, 2008. The new legislation provides for biennial rate reviews beginning in 2009, sharing of off-system sales margins at a rate of a minimum of 25% retained by the company effective July 1, 2007 and a post-2008 rider for DSM, renewable programs and new generation. APCo-VA is entitled to annual rate changes to recover the incremental costs it incurs for transmission and distribution system reliability and compliance with state or federal environmental laws or regulations (known as the E&R rider). APCo-VA is entitled to adjustments to fuel rates to recover its actual fuel costs, the fuel component of its purchased power costs and certain capacity charges.

Commission Overview

Public Service Commission of West Virginia

AEP Regulated Electric Utilities

Appalachian Power Co.
Wheeling Power Co.

Commissioners

Number: 3	**Appointed/Elected: Appointed**	**Term: 6 Years**	**Political Makeup: R: 1 D: 2**

Qualifications for Commissioners

The West Virginia Public Service Commission (WVPSC) consists of three members, appointed by the Governor, with the advice and consent of the senate. No more than two members of the commission may belong to the same political party. The Commissioners serve six year staggered terms, with one term expiring as of July 1 of each odd numbered year. One Commissioner is designated as Chairman of the Commission by the Governor. The Chairman serves as the chief fiscal officer of the Commission.

Commissioners

Edward H. Staats, Commissioner (Dem.), since 2003; term expires June 2009. Former Chief of Operations in the Governor's office. Former Chief Financial Officer of the Workers' Compensation Division of the W.V. Bureau of Employment Programs. Certified Public Accountant in West Virginia and Georgia. Bachelor's degree, West Virginia University.

Michael A. Albert, Chairman (Rep.), since 2007; term expires June 2013. Served as a member in the Business Law Department of Jackson Kelly. President and Chairman of the board of directors of the Kanawha County Public Library. Bachelor's degree and Doctorate of Jurisprudence, West Virginia University.

Jon W. McKinney, Commissioner (Dem.), since 2005; term expires June 2011. Currently on the board of directors of the NARUC and second VP of the Mid-Atlantic Conference of Regulated Utilities Commissioners. Formerly served as plant manager of Flexsys' Nitro, W .V. operations, chairman of Chemical Industry Committee for W.V., board member of W.V. Chamber of Commerce, W.V. Manufacturer's Association, Chemical Alliance Zone, W.V. Roundtable, Advantage Valle, St. Francis Hospital & Thomas Memorial Hospital.

AEP Regulatory Status

APCo and Wheeling Power in WV provide retail electric service at bundled rates approved by the WV PSC. West Virginia has an active annual ENEC (Expanded Net Energy Cost) mechanism, which provides for a rate adjustment for fuel costs, among other items. West Virginia also has a special construction surcharge permitted, primarily related to environmental-related construction.

Equivalent Forced Outage Factor (EFOF)	2006	2007
AEP East Gas*****	0.39%	1.23%

* Super-critical includes coal units with a net maximum capacity of 450MW or greater; sub-critical includes coal units with a net maximum capacity less than 450MW.

** Includes all AEP owned Hydro and Pumped Storage generation.

*** CF, EAF, and EFOR do not include Dolet Hills. Dolet Hills included in generation number as owned. Pirkey and Flint Creek reported as owned.

**** Oklaunion reported as owned.

***** East Gas Units evaluated using Equivalent Forced Outage Factor. Since these units are run less frequently, this factor gauges their performance based on Period Hours instead of Service Hours. EFOR uses Service Hours in the denominator, and EFOF uses Period Hours in the denominator.

Net Generation Statistics

Net Generation By Operating Company (in MWhs)

Operating Company	2006	2007
AEP Generating	10,276,134	9,027,362
Appalachian Power	31,494,581	32,588,773
Columbus Southern Power	14,134,232	15,514,495
Indiana Michigan Power	31,950,768	31,604,874
Kentucky Power	7,171,505	7,533,223
Ohio Power	49,341,134	54,155,697
Public Service of Oklahoma	15,139,848	14,439,801
Southwestern Electric Power	19,961,798	19,673,059
Texas Central Company	309,085	41,122
Texas North Company	2,160,348	2,309,566
AEP System Total Net Generation	181,939,433	186,887,972

Notes: Figures represent generation produced from AEP-owned assets only.

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date
AEG	Dresden	Ohio	$309 MM	Gas	Combined-cycle	580	2010
SWEPCo	Stall	Louisiana	$378 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.5 B (1)	Coal	Ultra-supercritical	600(1)	2012

(1) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $1,110 million in capital investment.
The increase in the cost estimate relates to cost escalations due to the delay in receipt of permits and approvals.

Environmental

AEP's Environmental Compliance Strategy

NOx and SO_2 emission reductions are part of AEP's on-going strategy to comply with the Clean Air Act, Title IV regulations and the NSR consent decree executed in October 2007.

Much of this investment will position AEP to accomplish the following:

- Reduce nitrogen oxide emissions by 90% through installation of Selective Catalytic Reduction (SCR) systems
- Reduce sulfur dioxide emissions by 95% to 98%+ through installation of Flue Gas Desulfurization (FGD) systems (scrubbers)
- Realize co-benefit of mercury capture offered through SCR and FGD systems together
- Avoid future landfill costs through sale of gypsum (by-product) & build where landfill costs are lower
- Realize benefits achieved through fuel flexibility

Represents the best and least-cost compliance path to improve environmental performance on a fleet basis, while continuing to provide a reliable supply of power to customers at a reasonable price and a solid return for investors.

Clean Air Interstate Rule

- Rule finalized March 2005
- Designed to address the contribution of regional emissions to downwind $PM_{2.5}$ & 8-hour Ozone non-attainment
- Reductions from 2003-level emissions: ~73% SO_2 & ~61% NO_x
- Reductions occur in phases: Phase I (2009/2010); Phase II (2015)
- Established three cap & trade programs:
  1. Annual SO_2 Trading Program
  2. Annual NO_x Trading Program
  3. Separate Ozone-Season only NO_x Trading Program
- On July 11, 2008 the D. C. Circuit Court issued a decision to remand and vacate CAIR, but the decision is not yet final
- EPA and others have requested rehearing, and the D. C. Circuit Court has requested further briefing on whether any party requested that the rule be vacated, and whether the rule should remain in place while EPA responds to the remand
- A final decision is expected shortly after the briefing is completed (November 2008)

Applicability to AEP

- AEP-East States & Louisiana subject to all three trading programs
- Arkansas subject only to the Ozone-Season trading program
- Texas subject to only the Annual NO_x & SO_2 trading programs
- CAIR does not apply to Oklahoma

Clean Air Visibility Rule

- Rule finalized March 2005
- Designed to address the Clean Air Act's best available retrofit technology (BART) requirements and applicability to plants built between 1962 and 1977 that emit more than 250 tons per year of certain pollutants
- Final rule demonstrates that CAIR will result in more visibility improvements than BART
- States are allowed to substitute CAIR requirements in their SIPs for controls that would otherwise be required by BART
- For BART-eligible facilities located in states not subject to CAIR requirements for SO_2 and NO_x, additional controls will be required

Applicability to AEP

- Requires SO_2 reductions in Oklahoma and Arkansas
- Scrubbers (FGDs) will be installed at our Northeastern and Flint Creek plants by 2015

Clean Air Mercury Rule

- Rule finalized March 2005
- Designed to reduce mercury emissions by ~70% nationwide from electric utilities
- Reductions occur in phases: Phase I (2010); Phase II (2018)
- Establishes a cap & trade structure to achieve mercury reductions
- On February 8, 2008 the Supreme Court issued a decision to remand and vacate CAMR

AEP will achieve significant mercury reduction as a co-benefit of SCR and FGD systems, but mercury specific control equipment will be needed on several units.

Generation - Environmental Project Status Report

Plant Name	MW Capacity	SCR	Status	FGD	Status
East Plants					
Amos 1	800	☑	In-service	☑	Projected 2010

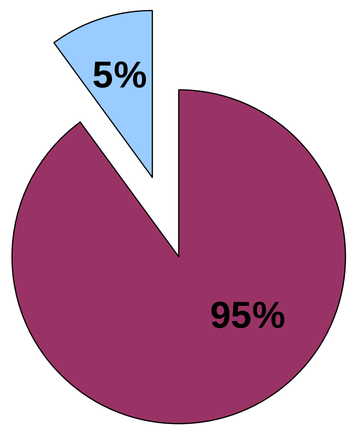
Pirkey	580		N/A	☑	Upgrade In-service
Welsh 2	528		N/A	☑	Projected 2012

At the conclusion of our current environmental retrofit program, over 58% of our 24,630 MW coal-fired generation fleet will be equipped with SCRs and over 73% will be scrubbed (FGDs).

Materials and Vendors - AEP's Advantage

Breakdown of Environmental Compliance Program
(% of Purchased Costs)



Note: these percentages relate to the environmental program through 2010

* Primarily labor costs

SCR Technology

- Removes 85 – 93% of NOx emissions
- Requires ~ 1% use of auxiliary power
- **AEP Capital Cost ~ $162/kW avg.**

Combination of SCR & FGD technology results in co-benefit of Hg removal ~ 80% removal efficiency

FGD Technology

- Removes 95 – 98% of SO_2 emissions
- Requires ~1.5% to 3.0% use of auxiliary power
- **AEP Capital Cost ~ $262/kW avg.**

AEP benefits from first-mover advantage through lower contracted prices compared to industry.

Impact of SCR and FGD on Net Generation

- The overall generation loss in capacity associated with SCR and FGD retrofit for the entire AEP fleet is roughly 600MW.
- Typically, an SCR consumes approximately 1% whereas an FGD consumes from 1.5% to 3.0% of the plant electricity output.
- Plant modifications increasing unit MW ratings are being implemented as part of the retrofit program
  - For example, Mountaineer turbine valve upgrades will increase unit output by ~30 - 45 MW
  - Similar upgrades will be implemented on other units

Plant modifications will mitigate FGD and SCR capacity consumption.

Emission Limits

In compliance with our 2007 NSR settlement, the following limits are applicable to AEP's eastern generation fleet:

Eastern System-Wide Annual Tonnage Limitations for NO_x

Calendar Year	Limitation
2009	96,000 tons
2010	92,500 tons
2011	92,500 tons
2012	85,000 tons
2013	85,000 tons
2014	85,000 tons
2015	75,000 tons
2016 and each year thereafter	72,000 tons

Eastern System-Wide Annual Tonnage Limitations for SO_2

Calendar Year	Limitation
2010	450,000 tons
2011	450,000 tons
2012	420,000 tons
2013	350,000 tons
2014	340,000 tons
2015	275,000 tons
2016	260,000 tons
2017	235,000 tons
2018	184,000 tons
2019 and each year thereafter	174,000 tons

Emissions caps do not include any of the gas-fired units, or any new units AEP might build or purchase in the east.

AEP/CertainTeed Gypsum Wallboard Initiative

- CertainTeed Gypsum opened new wallboard manufacturing plant in March of 2008 adjacent to OPCo's Mitchell plant near Moundsville, WV
- Wallboard plant utilizes the gypsum produced from both the Mitchell and Cardinal power plants.
- Gypsum is the by-product of the recently completed FGD (i.e. scrubber) process.
- Key Project Benefits
  - Environmental stewardship program which eliminates the need for an expensive gypsum landfill at Mitchell.
  - Significant capital and annual O&M savings for Ohio ratepayers.
  - Wallboard is produced using greater than 96% recycled materials (i.e. gypsum, paper).
  - Created many new good paying jobs.
  - Strong/stable counterparty – CertainTeed is the #1 producer of wallboard in the world

Future Potential Green House Gas Regulations

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A reliable and reasonably-priced electric supply is necessary to support the economic well-being of the areas we serve.

AEP's Long-term CO_2 Reduction Commitment

Existing Programs

- **Renewables**
  - 800 MWs of Wind
  - 300 MWs of Hydro
- **Domestic Offsets**
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - 1.2MM tons of carbon sequestered
- **International Offsets**
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- **Chicago Climate Exchange**

New Program Additions

- **Incremental Reduction quantity: 5MM tons/yr**
- **Timing: To take effect/receive credits by 2011**
- **Methods**
  - +1000 MWs of Wind PPAs – 2MM tons/yr
  - Domestic Offsets (methane) – 2MM tons/yr (e.g., livestock methane capture deal of 0.6MM tons/yr)
  - Forestry – Tripling annual investment to increase to 0.5MM tons/yr by 2015
  - Fleet Vehicle/Aviation Offsets – 0.2MM tons/yr
  - Additional actions to include DSM and end use energy efficiency, biomass and power plant efficiency – 0.2MM tons/yr

New Technology Additions

- **Commercial solutions for existing fleet**
  - Chilled Ammonia

AEP is committed to a 5mm ton/yr reduction in CO_2 emissions which offsets approx half of the emissions projected from new generation projects previously announced.

Chilled Ammonia Technology Program

2009 Commercial Operation

Mountaineer Plant (WV) → MOU (Alstom & RWE) → **Chilled Ammonia** → CO_2 Storage (Battelle)

Project Validation

- 20-30 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, under construction at WE Energies)
- Located at the AEP Mountaineer Plant in WV
- 100,000 – 300,000 tonnes CO_2 per year
- In operation 3Q 2009
- Alstom "Chilled Ammonia" Technology
- Geologic storage for CO_2

Represents Post-Combustion Capture

- Conventional or Advanced Amines; Chilled Ammonia
  - Amine technologies are currently commercially available in other industrial applications
  - Relatively low CO_2 concentration in flue gas – more difficult to capture than other approaches
  - High parasitic demand
    - Conventional Amine ~ 25-30%
    - Chilled Ammonia target ~ 10-15%

Post-combustion carbon solution provides pure CO_2 stream for capture.

Coal

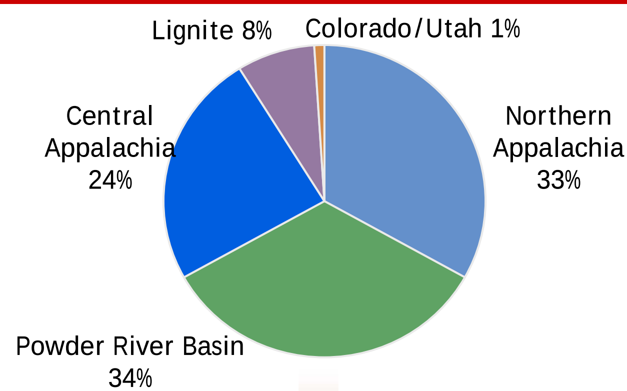
- Coal Procurement, Delivery & Transportation
- Fuel Recovery
- Coal Market Information

Fall EEI 2008

Coal Procurement – 2008 Projected

AEP burns approx. 76 million tons of coal per year

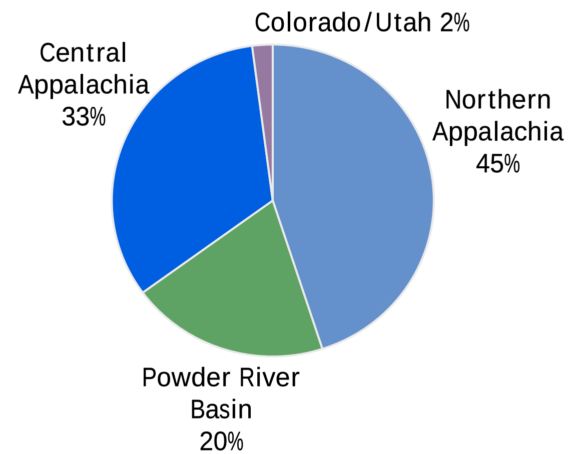
Total AEP System



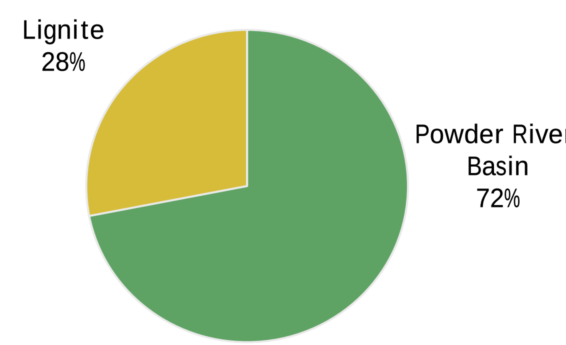
Coal Stats:

- 100% contracted for 2008
- Avg. delivered price ~ $36.58/ton in 2007
- Approximate 28% price increase in 2008 based on 2007 actual results.

AEP East



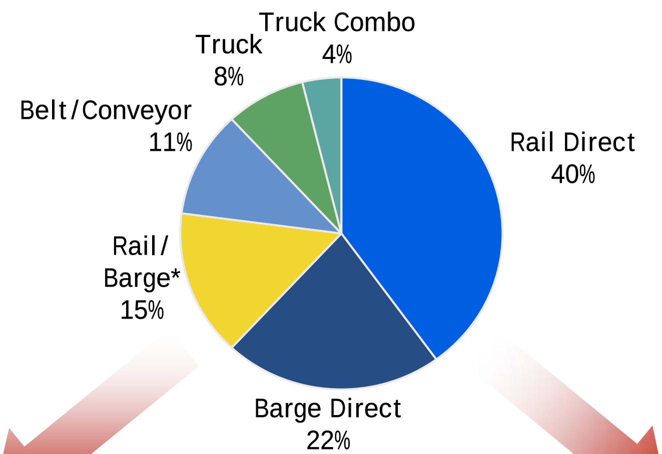
AEP West



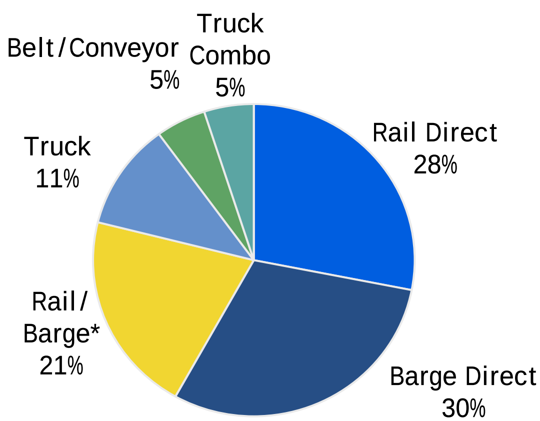
Coal Delivery

2007 Actual

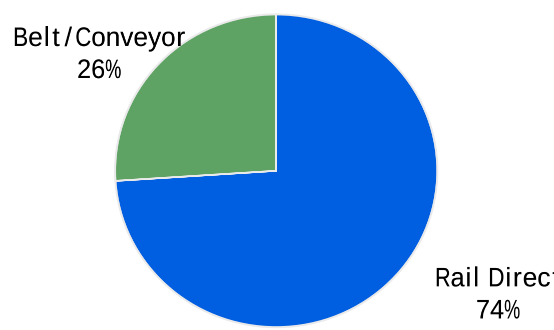
Total AEP System



AEP East



AEP West

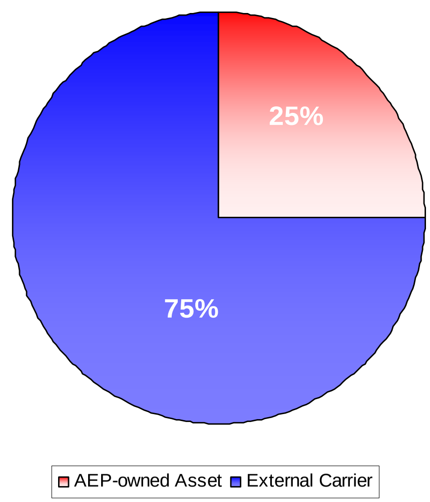


* Reflects coal delivered to AEP plants transported through a combination of rail and barge

AEP's Coal Transportation Assets

2007 Actual

Coal Transportation to AEP Plants*



***Represents close approximations**

- Current Coal & Transportation Assets:
  - Control over 9,000 railcars
  - Own/lease and operate over 2,900 barges & 80 towboats/tugs
  - Coal handling terminal with 20 million tons of capacity

AEP's transportation assets provide flexibility in a constrained delivery environment.

AEP River Operations

- Full-service Inland Waterways carrier
  - 2,900 hopper barges
  - 60+ towboats/20 tugs
- Tonnage & Commodity:
  - Captive: (for AEP)-37MM tons of coal;
  - Commercial: 35MM tons of coal/grain/bulk
- Gulf Operations

  Barge cleaning and repair

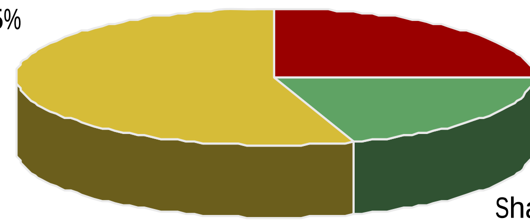
  Fleeting and shifting

  Midstream transfers
- Operating Centers in Lakin, WV, Cape Girardeau, MO, Paducah, KY, Convent and Belle Chase, LA

Inland Waterway Routes For AEP River Operations

Fuel Recovery

AEP System



Fuel Cost Recovery (on average)

- **In response to Ohio Substitute Senate Bill 221, AEP Ohio filed an Electric Security Plan that would allow recovery of fuel costs from customers who do not switch their supplier. If adopted, AEP's fuel costs will be eligible for recovery in all AEP jurisdictions beginning in 2009.**
- **80% of fuel cost is recoverable across the AEP System**
- **Active Fuel Clause Jurisdictions:**
  - **AEP EAST: APCo, I&M, KPCo, KGP, WP**
  - **AEP WEST: PSO, SWEPCO**

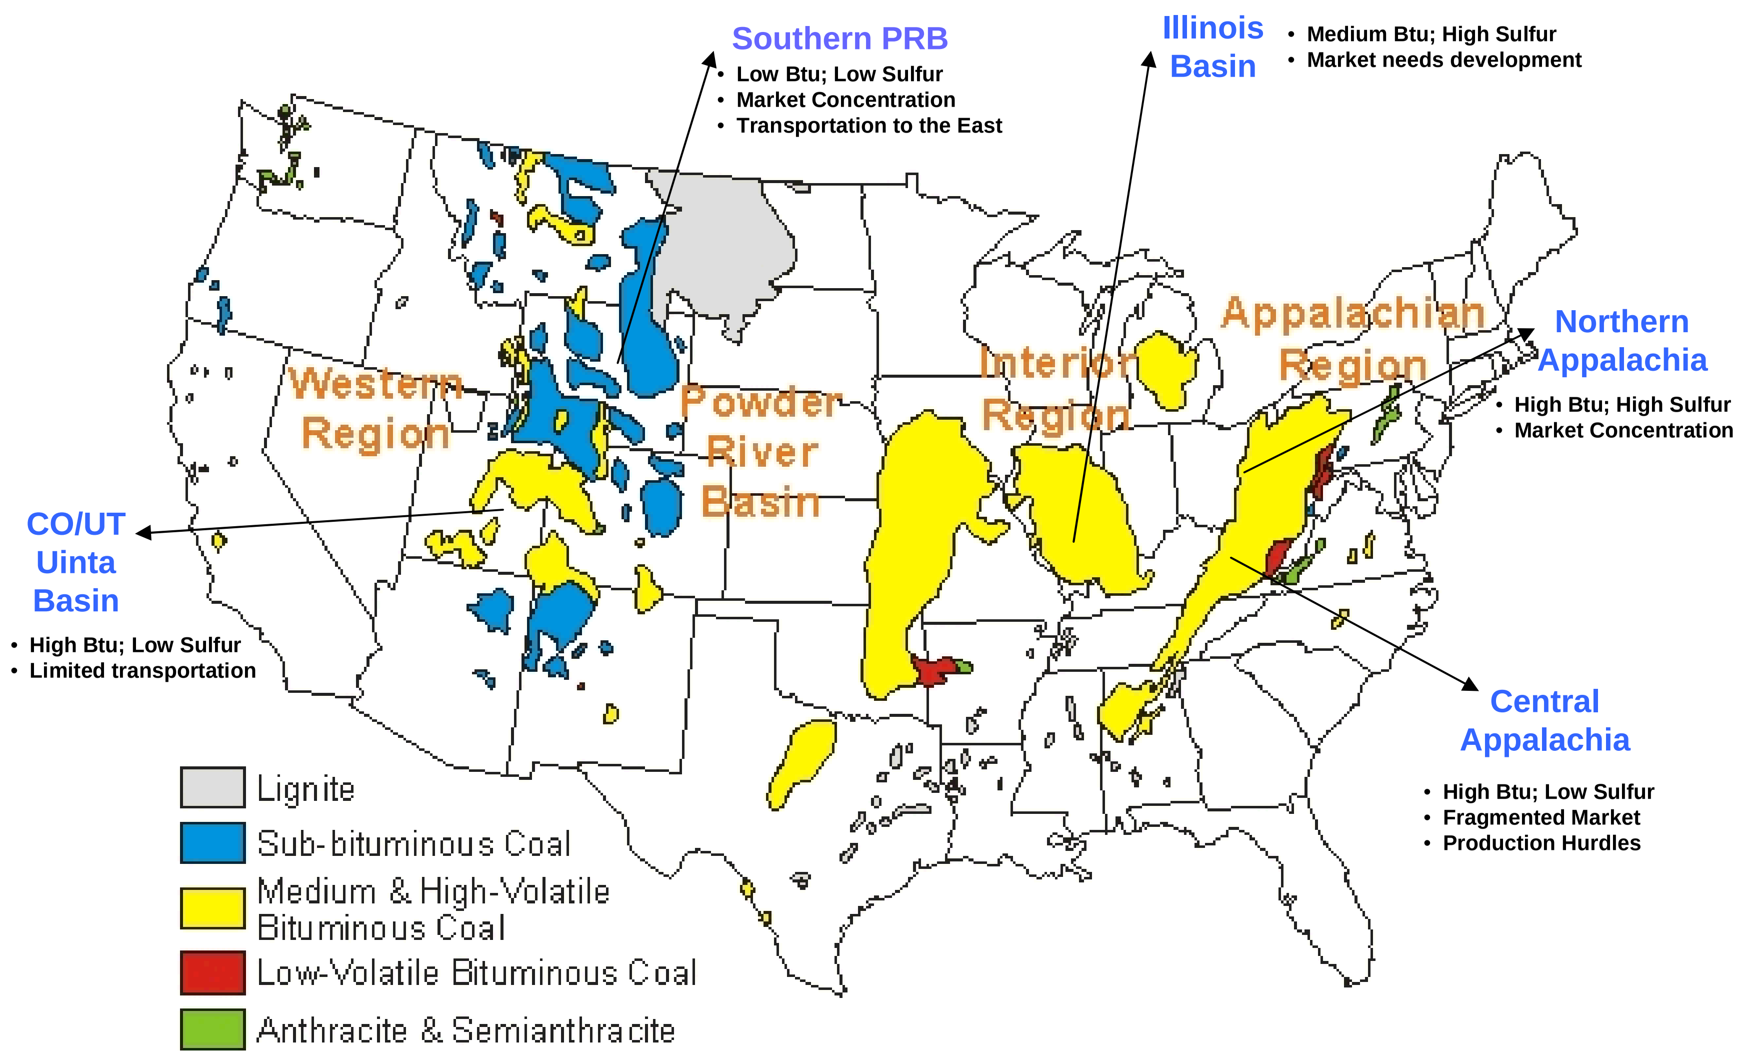
Note: Fuel recovery percentages are based on estimates for 2008 fiscal year

Jurisdictional Fuel Clause Summary

Jurisdiction	Active Fuel Clause	Frequency
Arkansas	Yes	Annually
Indiana	Yes	Semi-Annually
Kentucky	Yes	Monthly
Louisiana	Yes	Monthly
Michigan	Yes	Annually
Ohio	Effective 1/1/09	TBD
Oklahoma	Yes	Annually
Tennessee	Yes	Monthly
Texas (SPP)	Yes	Annually
Virginia	Yes	Annually
West Virginia	Yes	Annually

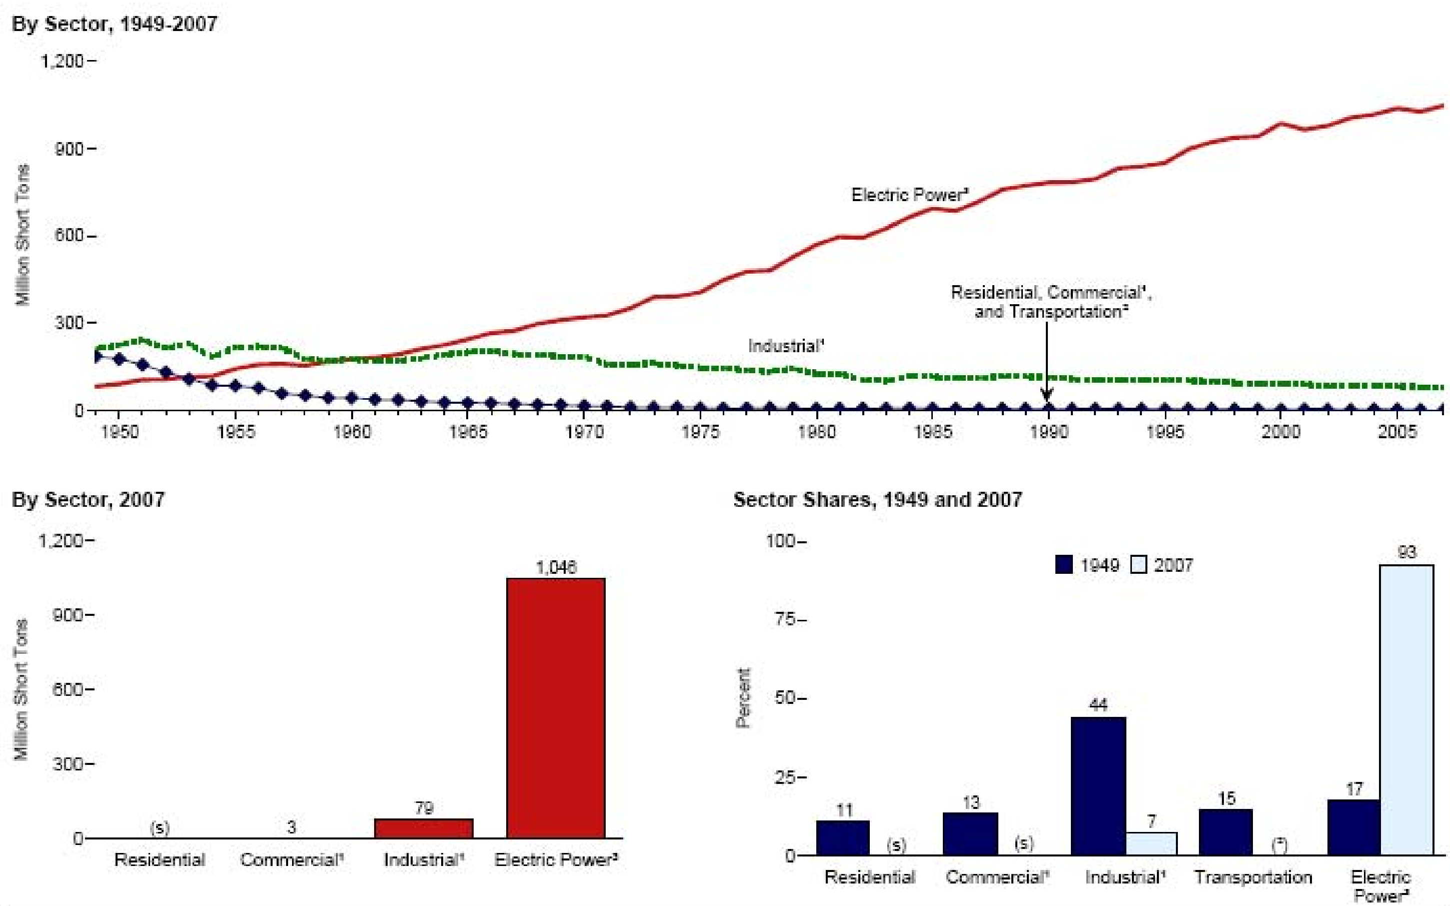
Effective January 1, 2009 we have fuel recovery in all jurisdictions.

Coal Producing Regions



Uses of Coal by Sector

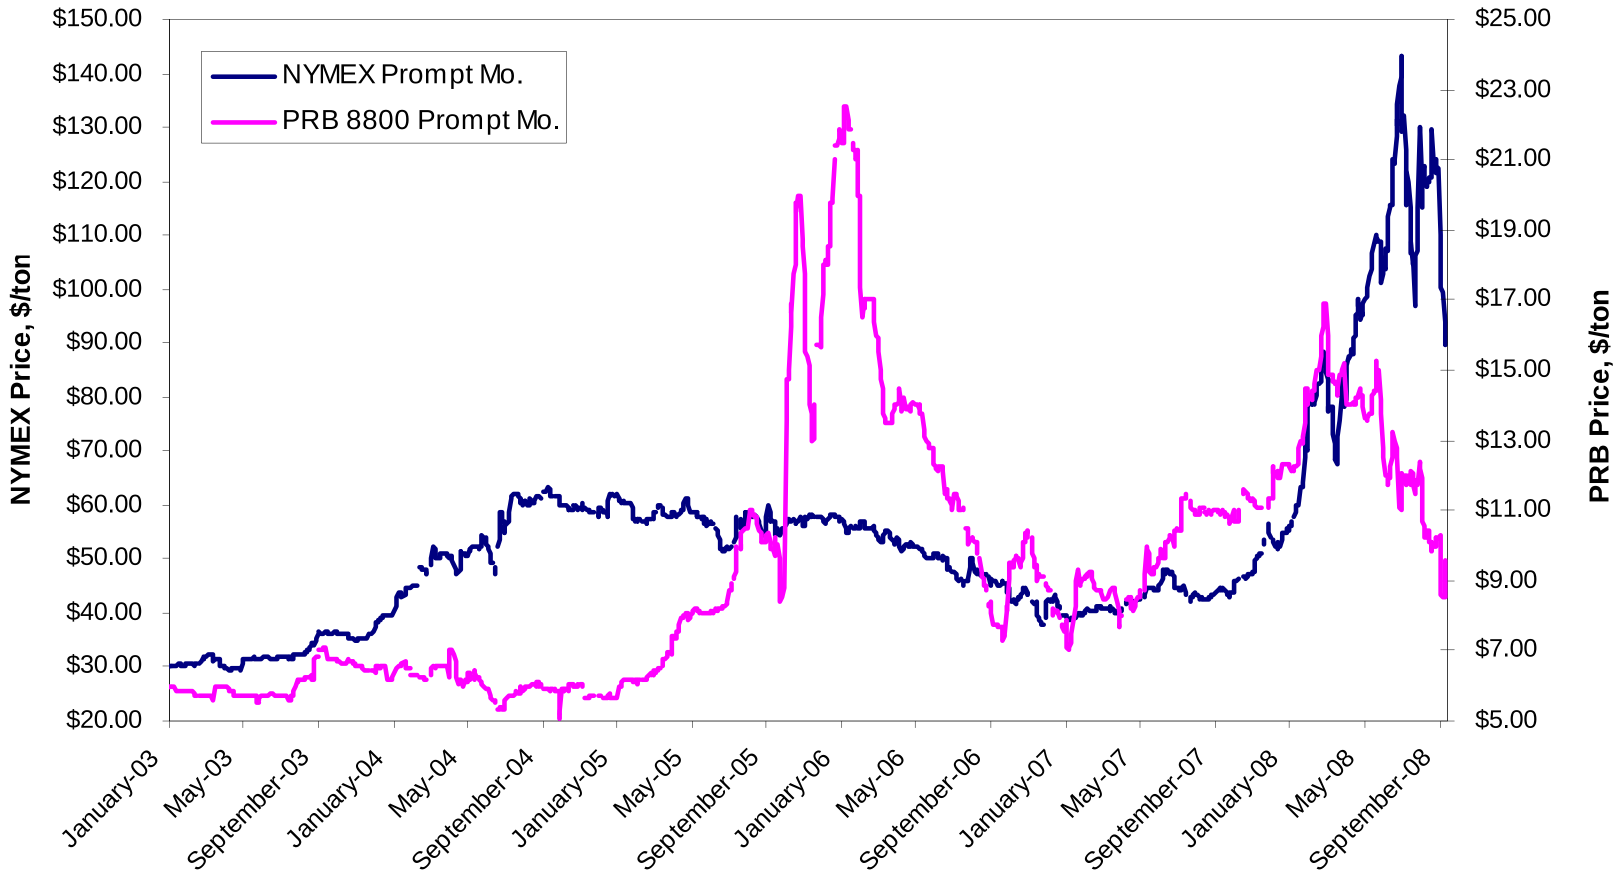
Figure 7.3 Coal Consumption by Sector



[1] Includes combined-heat-and-power (CHP) plants and a small number of electricity-only plants.
[2] For 1978 forward, small amounts of transportation sector use are included in "Industrial."
[3] Electricity-only and combined-heat-and-power (CHP) plants whose primary business is to sell electricity, or electricity and heat, to the public.
(s)=Less than 0.5.
Source: Table 7.3.

Energy Information Administration / Annual Energy Review 2007

Domestic Coal Price Markers (FOB Mine)



Domestic Coal Market

Primary drivers for increasing coal prices in the US are:

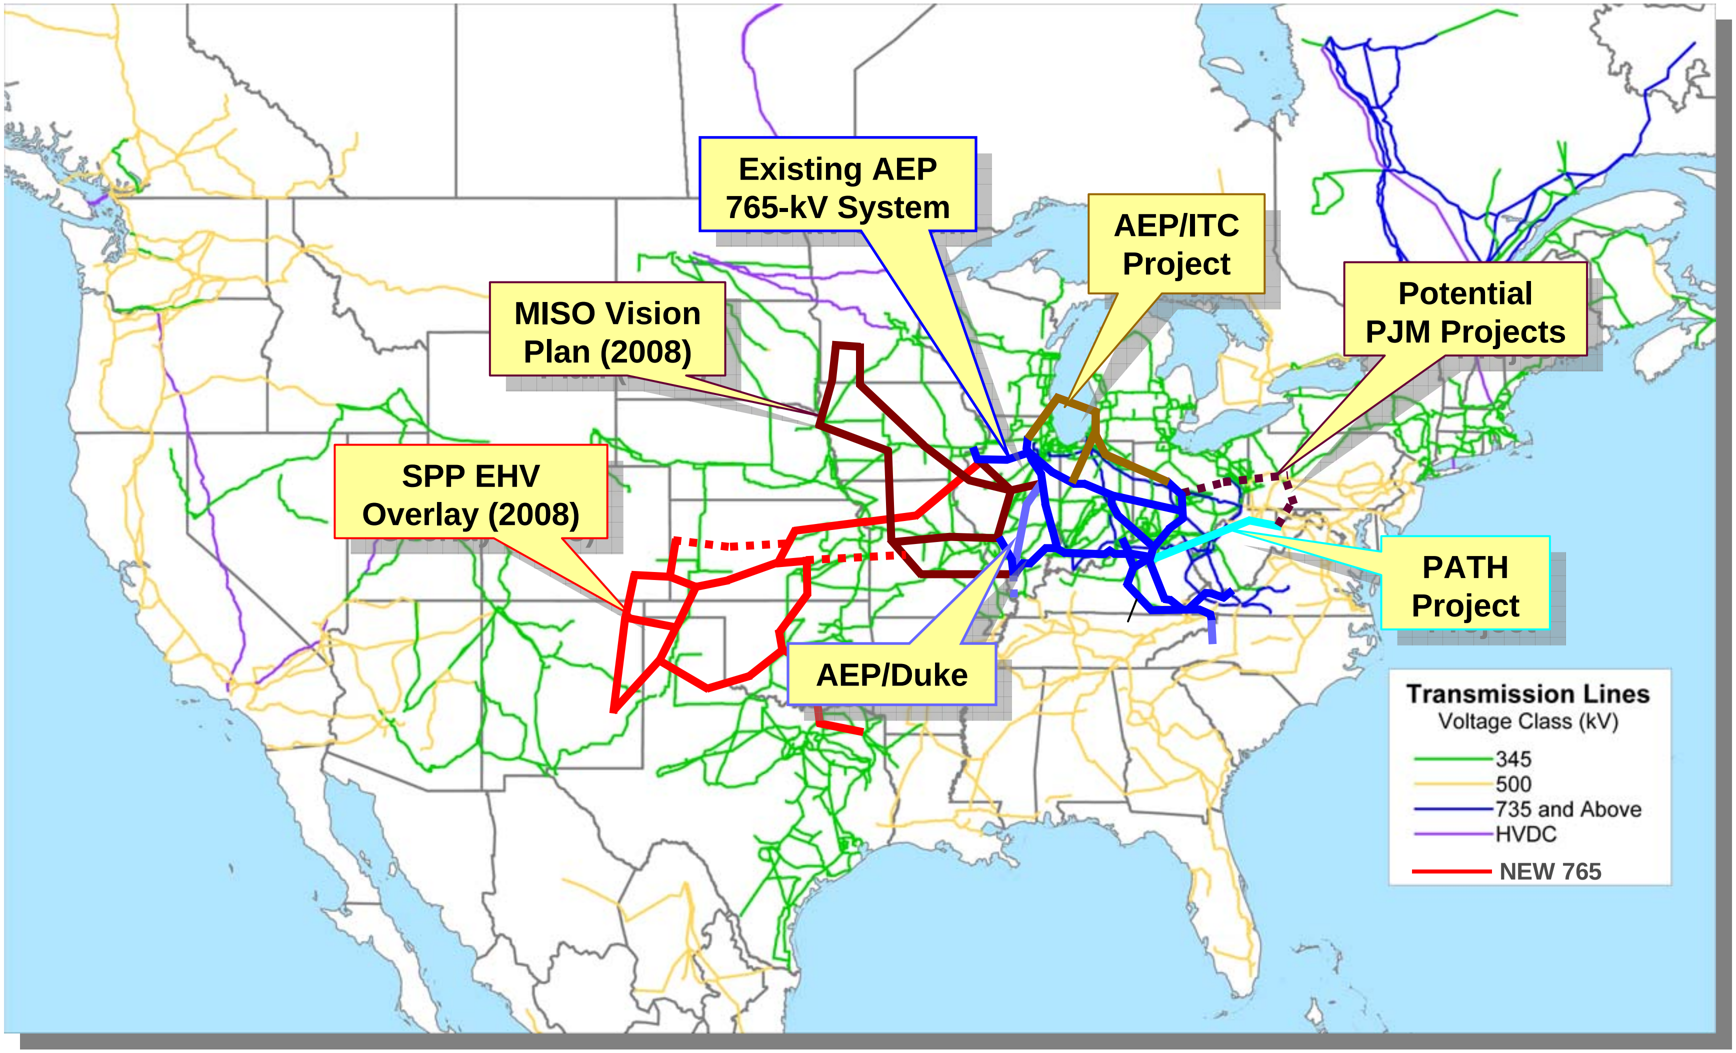
- ❑ Increase in the cost components to produce the product
- ❑ Declining productivity due to reserves, safety, etc.
- ❑ Declining eastern US coal production….particularly Central Appalachia
- ❑ Increasing global demand for coal….particularly Asia
- ❑ Inability to bring on new production quickly due to permitting and labor related issues
- ❑ High cost to mine in Central Appalachian region
- ❑ Capital required for new production
- ❑ Sustained pricing, how long?
- ❑ Increase in the international demand for US coal products
  - Dramatic increase in east coast and gulf coast US coal exports have lead to much higher priced markets in the US (82M exp; 28M imp)
  - Continued demand of metallurgical coal is drawing steam coal into the metallurgical coal market
  - Weak US Dollar

Transmission Initiatives

Transmission Initiatives

Fall EEI 2008

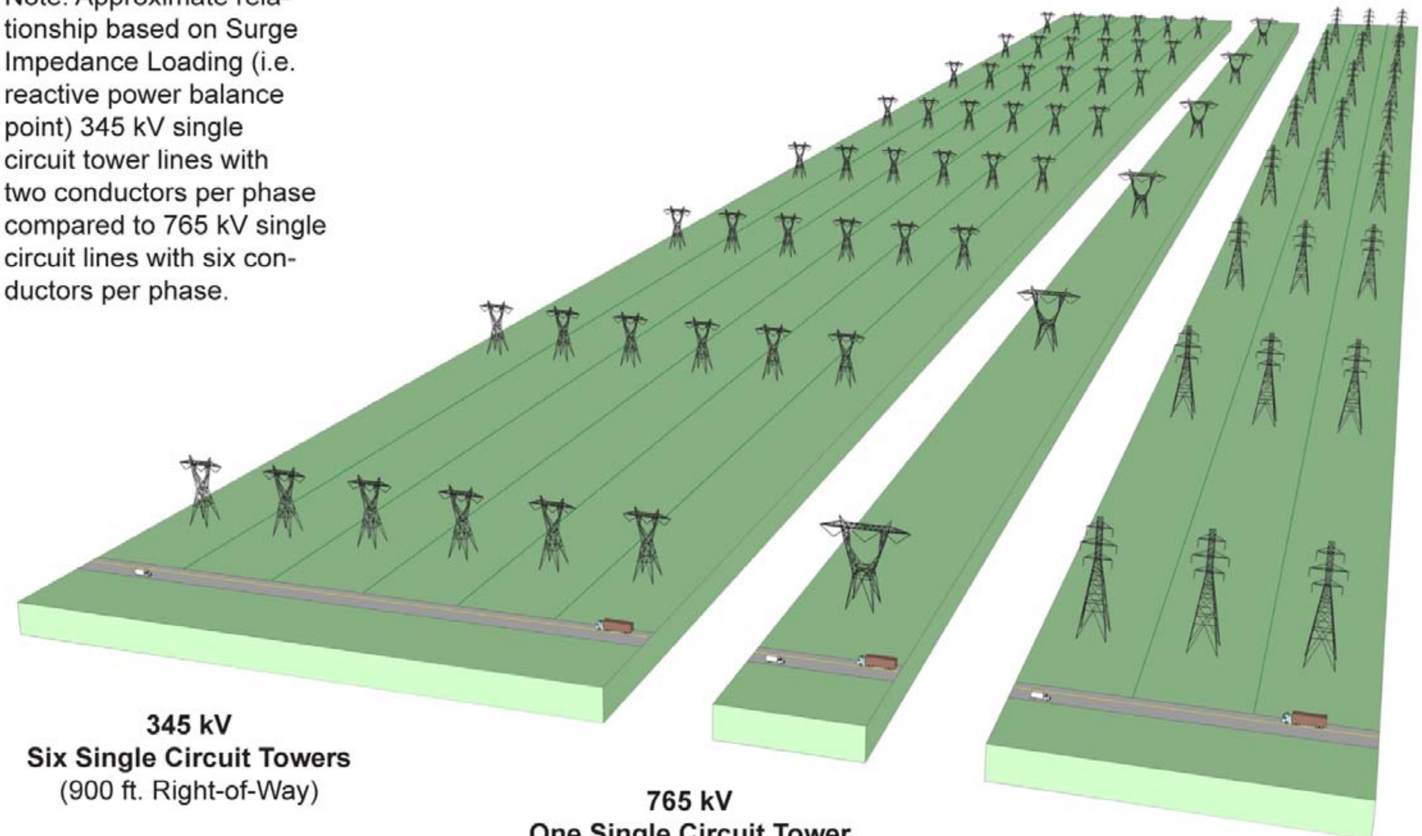
Making it Happen: EHV Projects Under Development



NOTE: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

765 Right-of-Way Comparison

Note: Approximate relationship based on Surge Impedance Loading (i.e. reactive power balance point) 345 kV single circuit tower lines with two conductors per phase compared to 765 kV single circuit lines with six conductors per phase.



345 kV
Six Single Circuit Towers
(900 ft. Right-of-Way)

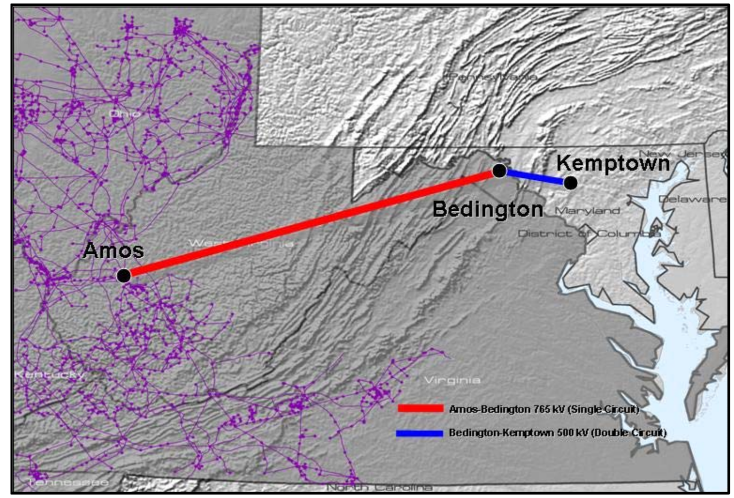
765 kV
One Single Circuit Tower
(200 ft. Right-of-Way)

345 kV
Three Double Circuit Towers
(450 ft. Right-of-Way)

From a siting standpoint, 765-kV is more efficient in terms of economies of scale and right-of-way than lower capacity lines.

EHV Transmission in PJM: PATH

- *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP and 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
  - FERC ordered the formula rate mechanism be set for hearing, pending settlement judge procedures
  - In October 2008, PJM announced a reconfiguration of the PATH line which will eliminate the connection with the Bedington substation and the twin-circuit 500-kV lines from Bedington to Kemptown, and include a new mid-point substation near existing PATH alternative routes
    - The reconfiguration is a result of constraints identified as a result of comprehensive siting studies; interaction with government agencies; public input; and a desire to identify a solution that reduces line mileage and minimizes the impact on communities and the environment.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
- *Key Challenges*
  - CPCN and Siting Approval from WV and MD



The ROW routes shown on this diagram are illustrative of the initial project approved by PJM, and not of the recently reconfigured line. As such, this map is not intended to depict the actual route that will eventually be selected.

Joint Ventures with MidAmerican Energy Holdings Company

Electric Transmission Texas Update

- 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
- ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
- Services provided by AEP and investment opportunities can be offered by either partner
- Total initial investment of $70 million before ownership division
- In October 2008, the District Court found that the PUCT exceeded its authority by granting ETT a CCN. This decision is currently under appeal and ETT believes the ultimate outcome will validate its utility status.

Electric Transmission America Update

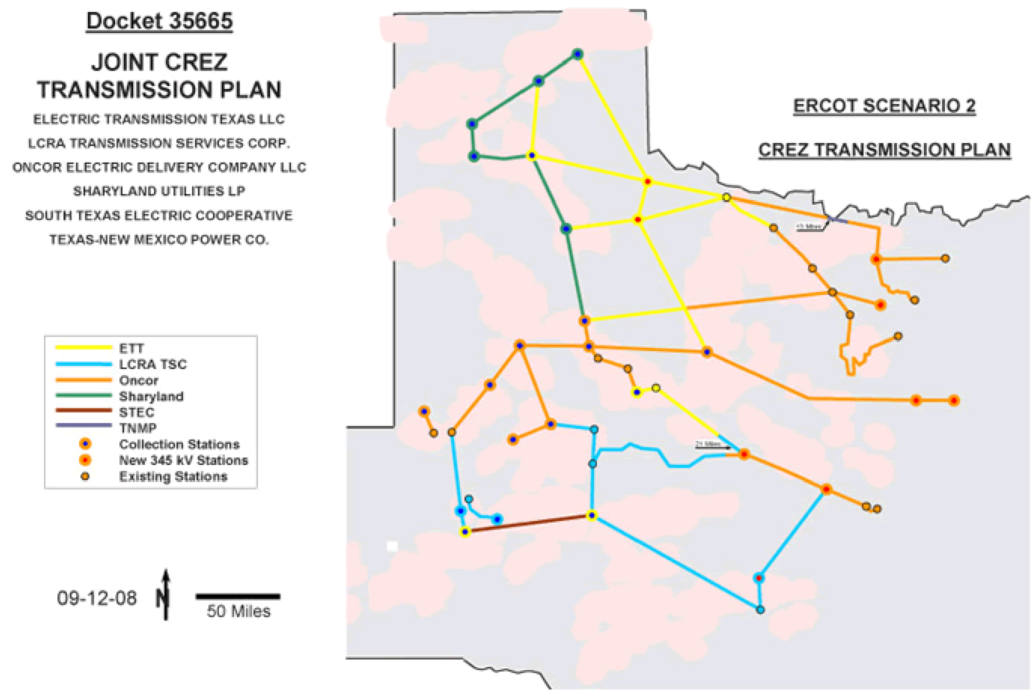
- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.
  - In 2008, ETA signed agreements with Westar Energy and OGE proposing to build the first and second segments of the 765-kV Overlay Plan in SPP

Texas CREZ Project

Strengthening the ERCOT grid to collect and deliver wind generation to load

- ❑ ***Overview***
  - ❑ In September 2008, ETT and a group of other Texas transmission providers filed a comprehensive plan with the PUCT for completion of the CREZ facilities approved by the Commission.
  - ❑ ETT's requested share of the coordinated plan is approximately $1.5 billion. Staff testimony in October 2008 recommended ETT's share at $1.2 billion.
  - ❑ The filing calls for completion of the plan by 2012.
- ❑ ***Next Steps***
  - ❑ PUCT hearings – December 2008
  - ❑ Selection of transmission providers – 1Q 2009

ETT
Electric Transmission Texas



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

EHV Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- ❑ *Overview*
  - ❑ Sent non-binding Letter of Commitment to SPP to construct 765-kV and 500-kV projects in SPP region consistent with SPP Overlay Study – Summer 2007
  - ❑ Updated EHV Overlay Study completed by SPP – March 2008
- ❑ *Benefits*
  - ❑ Overall reliability reinforcement with improved voltage support throughout the SPP system
  - ❑ Significantly increased transfer capability
  - ❑ Provides access to new generation resources, especially renewables
  - ❑ Allows for effective interconnections for EHV system development

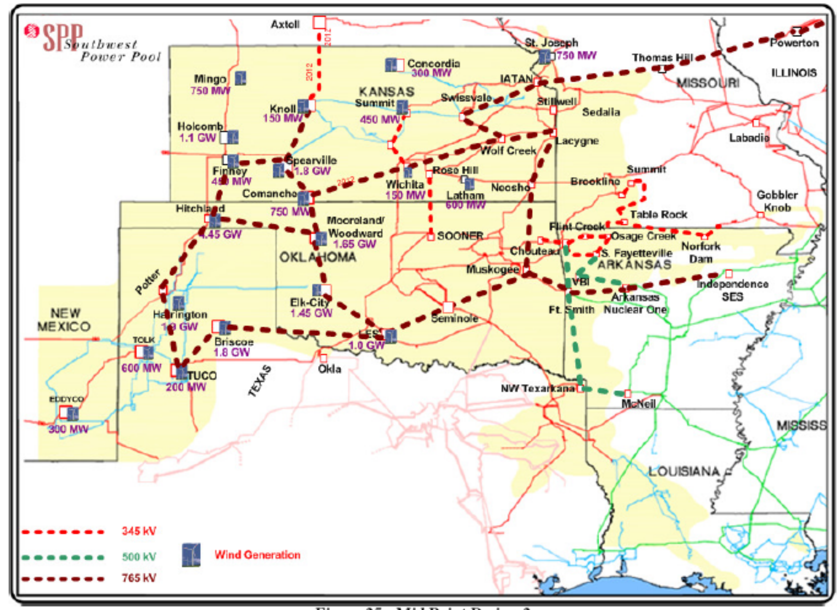


Figure 25: Mid Point Design 2

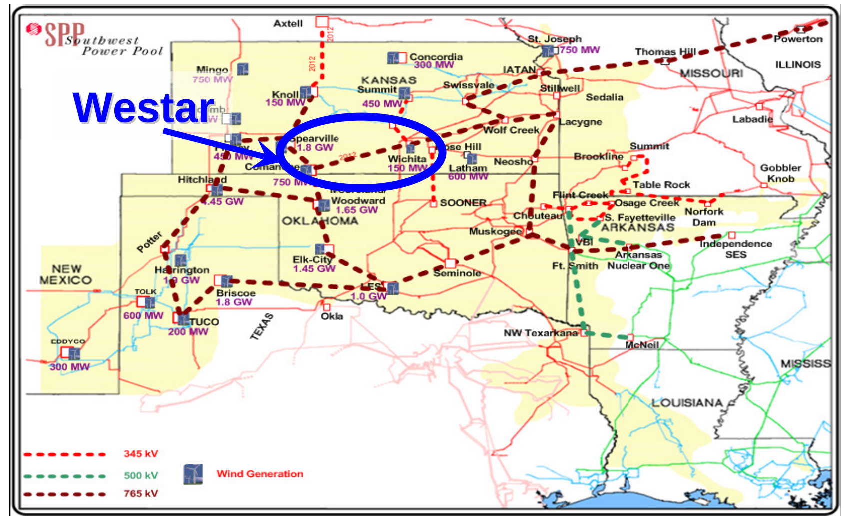
Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Prairie Wind Transmission, LLC

JV to build first segment of 765-kV transmission in SPP

- ❑ *Overview*
  - ❑ In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
  - ❑ PWT is a 50/50 JV that is proposing to build approximately 230 miles of 765-kV lines extending from Wichita, KS, west to a substation northeast of Dodge City, KS, and then south to the Kansas border from Medicine Lodge, KS.
  - ❑ The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
  - ❑ Project is expected to cost approximately $600 million (based on SPP estimates) and be in-service by 2013.
  - ❑ AEP's ownership of the joint venture is 25%.
  - ❑ Kansas CPC filing submitted in May 2008.
  - ❑ FERC formula rate filing submitted in October 2008 requesting:
    - ❑ Cash return on CWIP and 13.3% incentive ROE
    - ❑ Recovery of all costs incurred prior to the time rates go into effect, and
    - ❑ Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PWT or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

- ❑ *Key Challenges*
  - ❑ Cost allocation which enables the development of "system solutions"
  - ❑ RTO Approval

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1

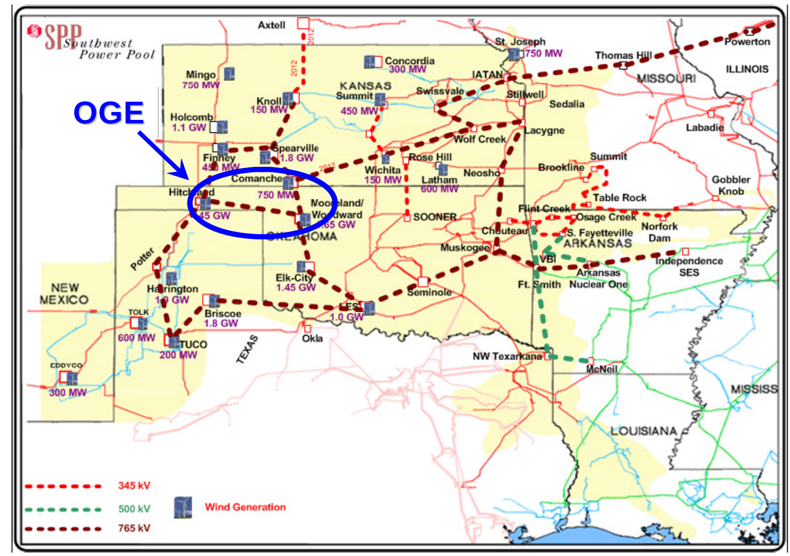
Tallgrass Transmission, LLC

JV to build second segment of 765-kV transmission in SPP

- *Overview*
  - In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
  - TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines extending from the Kansas-Oklahoma border north of Woodward, OK, extending west into the Oklahoma panhandle to a new station that will be built near Guymon, OK.
  - The project will promote wind development in the western half of Oklahoma.
  - Project is expected to cost approximately $500 million and be in-service by 2013.
  - AEP's ownership of the joint venture is 25%.
  - Other responsibilities will be handled by the partners or outsourced.
  - FERC formula rate filing submitted in October 2008:
    - Cash return on CWIP and 13.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of TG or its parents.



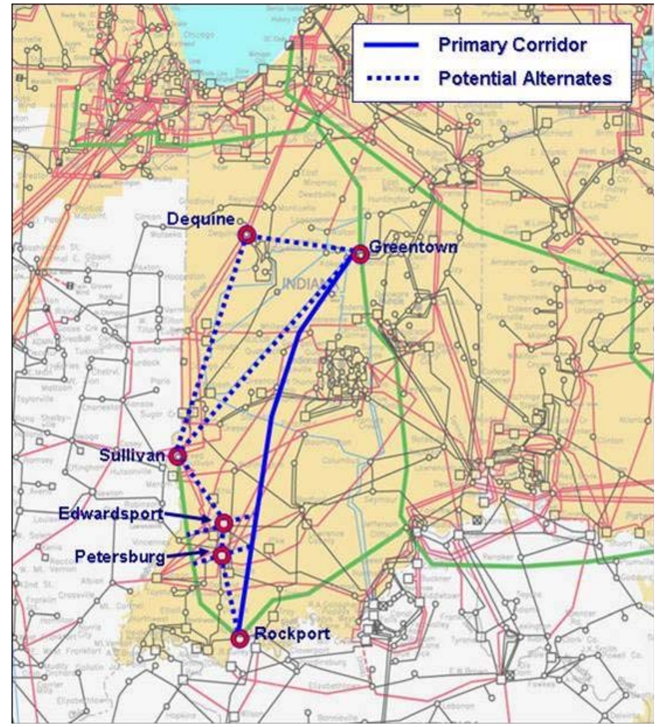
Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

- *Key Challenges*
  - Cost allocation which enables the development of "system solutions"
  - RTO Approval

Pioneer Transmission, LLC

- *Overview*
  - In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
  - PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
  - The project will improve the reliability of the nation's transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, protect national security and expand opportunities for new generation, including renewables.
  - Project is expected to cost approximately $1 billion and be in-service by 2015.
  - AEP's ownership of the joint venture is 50%.
  - Other responsibilities will be handled by the partners or outsourced.
  - FERC formula rate filing submitted in October 2008 requesting:
    - Cash return on CWIP and 13.5% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PT or its parents.



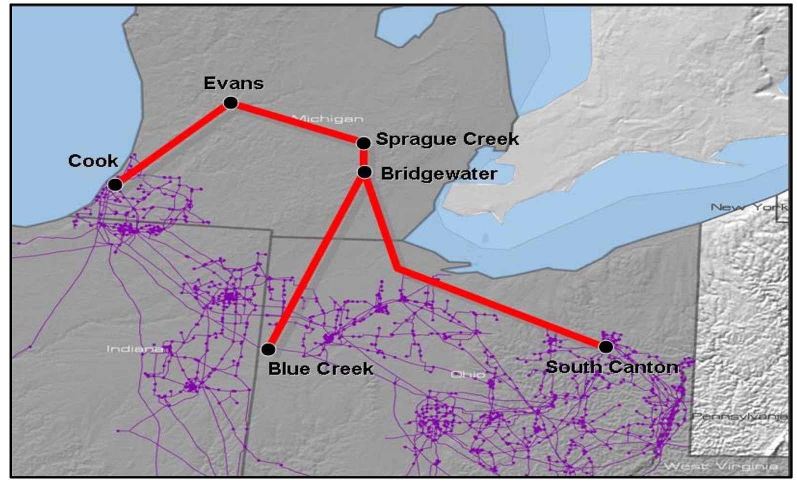
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected.

- *Key Challenges*
  - Cost allocation which enables the development of "system solutions"
  - RTO Approval
  - Siting

EHV Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
  - Study was released Q3 2007
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.6 billion investment (in 2007$, before ownership division)
  - AEP and ITC are in discussions to form a Joint Venture
- *Benefits*
  - Up to 5,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- *Key Challenges*
  - Cost allocation which enables the development of "system solutions"
  - RTOs Approvals



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; volatility in the financial markets, particularly development affecting the availability of capital on reasonable terms and developments impacting our ability to refinance existing debt at attractive rates; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas coal, nuclear fuel and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

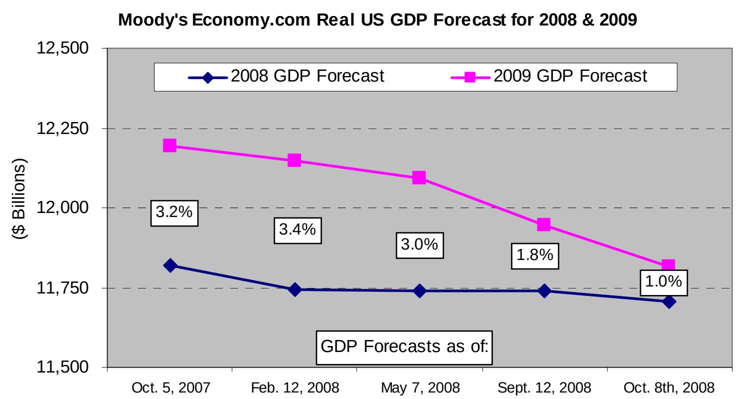
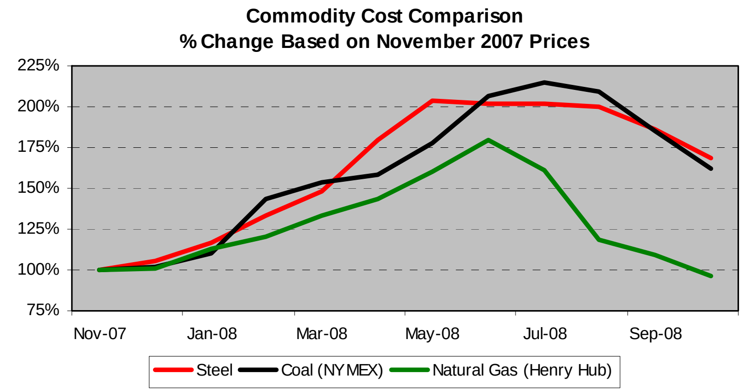
What Has Changed?

Slowed Economic Growth



Volatile Commodity Prices



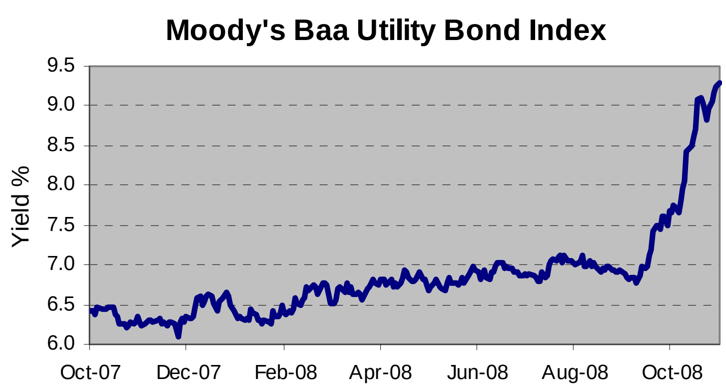
October '08 Prices

Steel: $903 / ton

Coal: $87.48 / ton

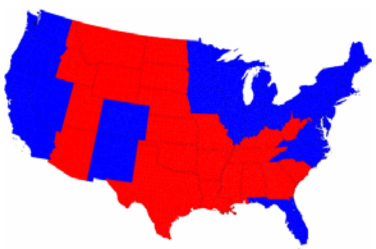
Gas: $6.75 / mmBtu

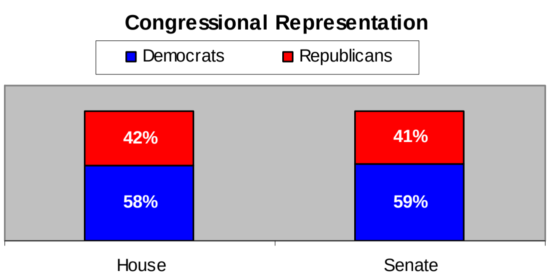
Crisis in Capital Markets



Election Results

Presidential Election Results:





In nearly every aspect, Fall 2008 has no resemblance of the conditions that surrounded AEP and the entire utility industry in Fall 2007.

Our Strategic Priorities Remain the Same

- ❑ "Keep the lights on"
  - Maintain our low-cost and reliable energy production and delivery system
  - Invest to replace aging infrastructure and ensure adequacy of capacity
  - Manage commodity costs
- ❑ Environmental priorities
  - Complete our $5.2 billion environmental controls program ($1.0 billion to be spent in 2009-2010)
  - Work to ensure a balanced and logical carbon legislation outcome
- ❑ Lead the development of America's high-voltage transmission system
- ❑ Collaborate with regulators to more closely match spending with rate recovery

AEP's strategic priorities remain the same, but the steps and timing may be different.

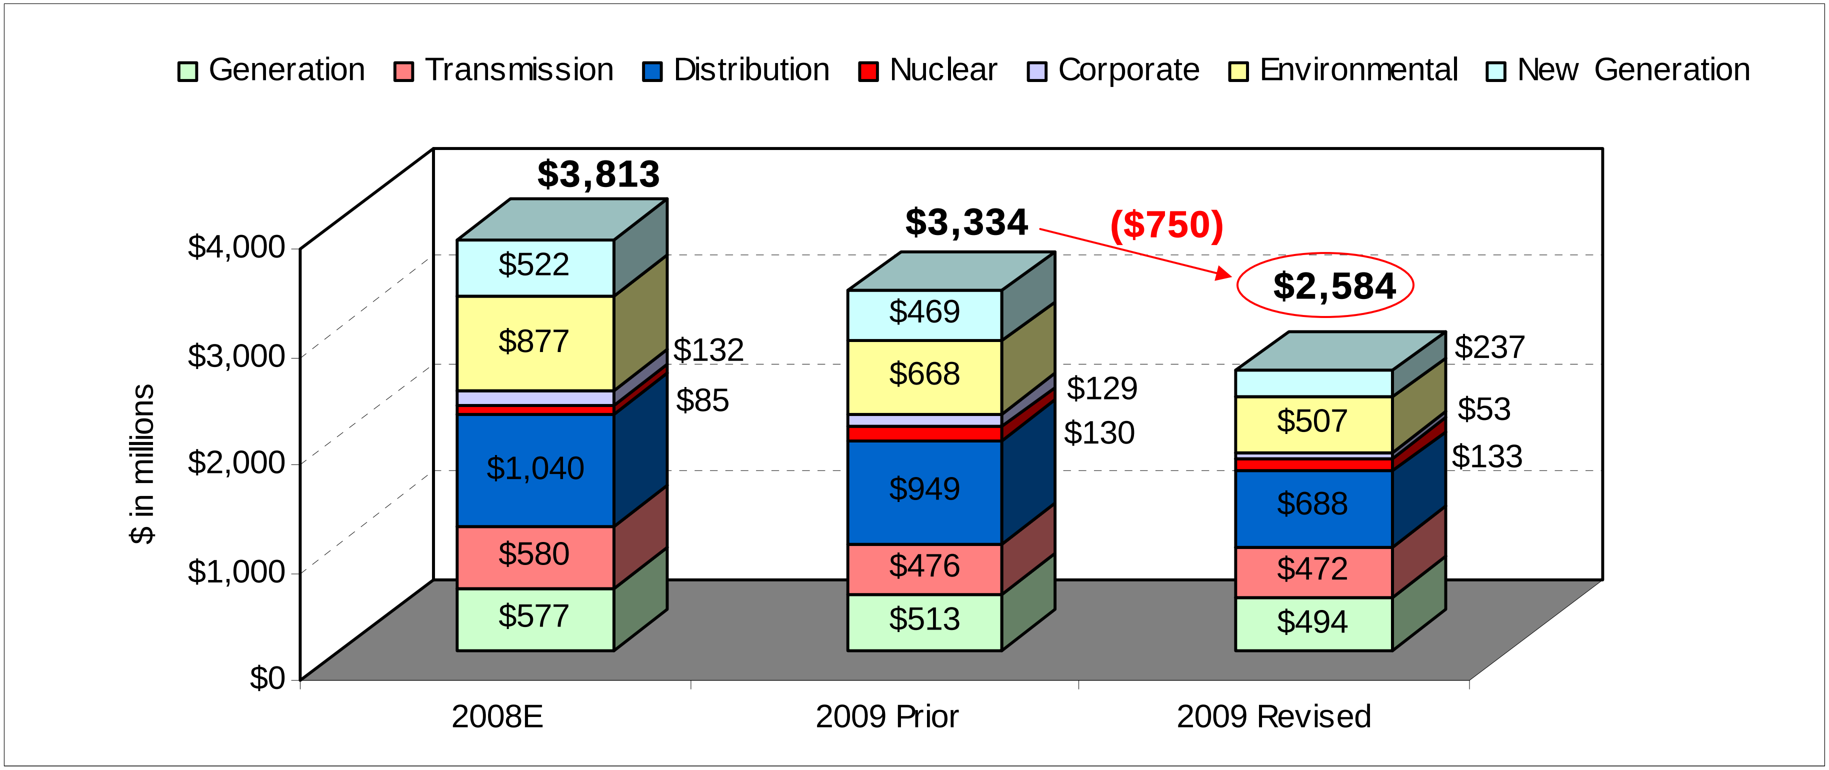
Management Priorities for 2009

- ❑ Secure rate relief in Ohio and other jurisdictions
- ❑ React to the current economic crisis
- ❑ Effectively manage our credit and liquidity
  - Cut capital budget by $750 million to $2.6 billion for 2009
  - Hold 2009 O&M spending flat at 2008 level of $3.3 billion
  - Choose opportunistic points to access capital markets and manage liquidity
- ❑ Maximize flexibility to respond to changing conditions

AEP has a strong reputation and track record for continued performance during difficult economic times.

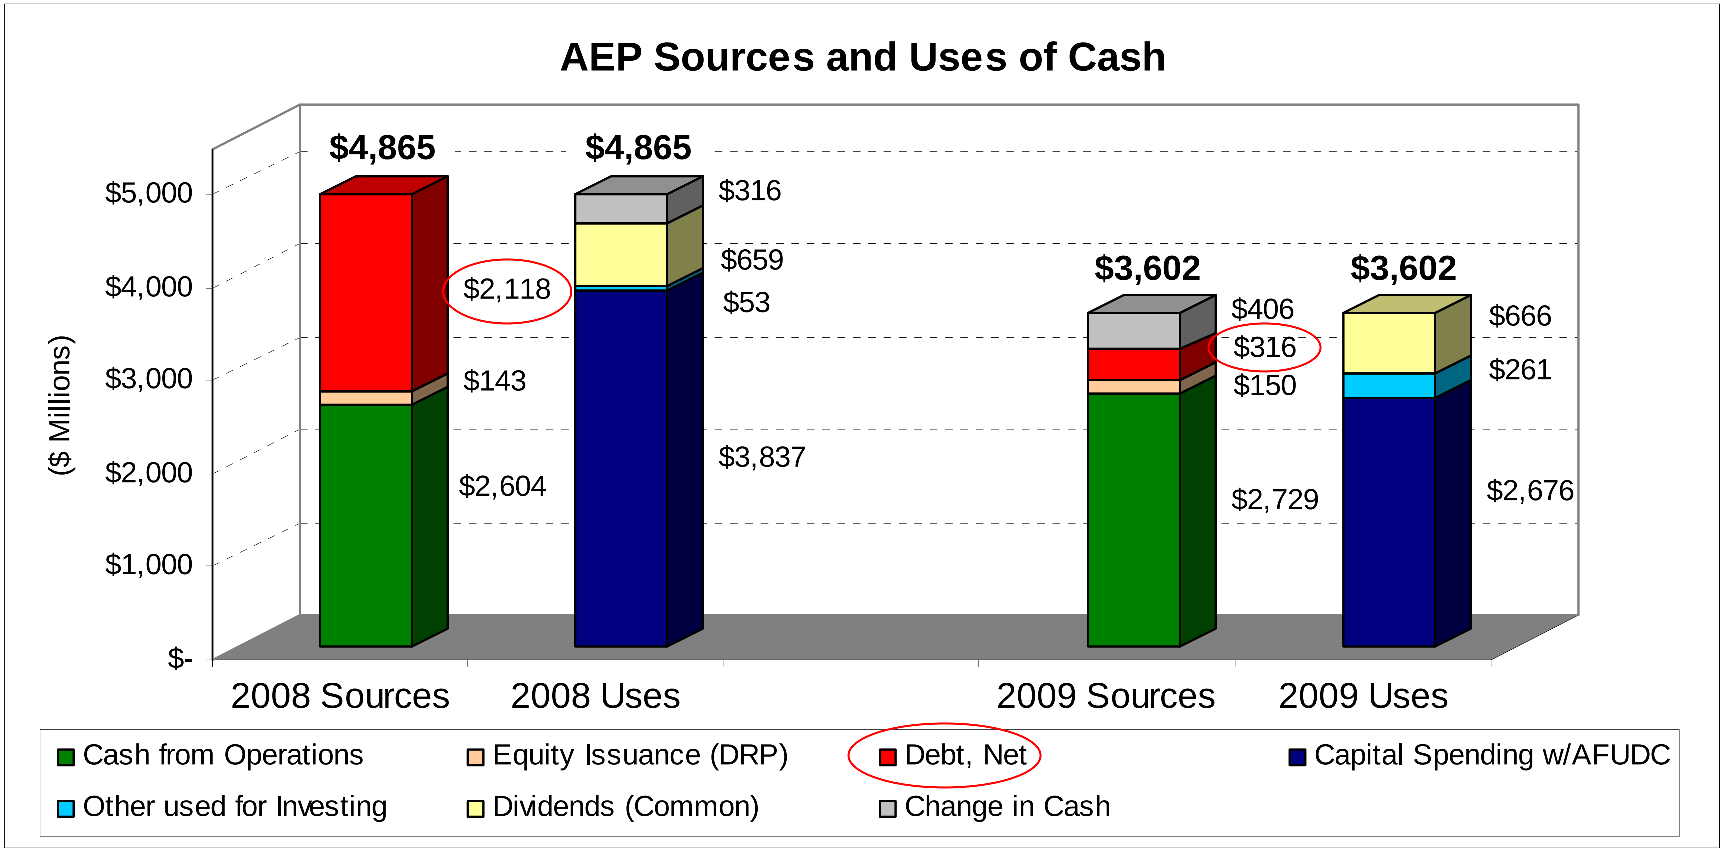
2008 & 2009 Capital Spending

- Capital expenditures for 2009 will be cut by $750 million from previous guidance.



The reduction in capital spending will significantly reduce our need to access capital markets in 2009.

2008 & 2009 Cash Flow Forecast



Capital spending closely matches cash flow from operations in 2009.

2008 & 2009 Ongoing Earnings Guidance

2008E EPS: $3.15 - $3.25

2009E EPS: $3.00 - $3.40

American Electric Power
Earnings Guidance for 2008 and 2009

	2008 Original Guidance		2009 Guidance	
	($ millions)	EPS	($ millions)	EPS
Utility Gross Margin	**8,148**		**8,433**	
Operations & Maintenance	(3,337)		(3,337)	
Interest Exp & Preferred Dividend	(839)		(929)	
All Other Expenses, net	(2,705)		(2,857)	
Utility Operations	**1,267**	**3.15**	**1,310**	**3.23**
Transmission Operations	2	0.01	5	0.01
Non-Utility Operations	77	0.19	75	0.18
Parent & Other	(61)	(0.15)	(91)	(0.22)
ON-GOING EARNINGS	**1,285**	**3.20**	**1,299**	**3.20**

2009 guidance provides range for reasonable Ohio outcome, holds O&M flat and reflects higher interest expense.

Continued Earnings Growth

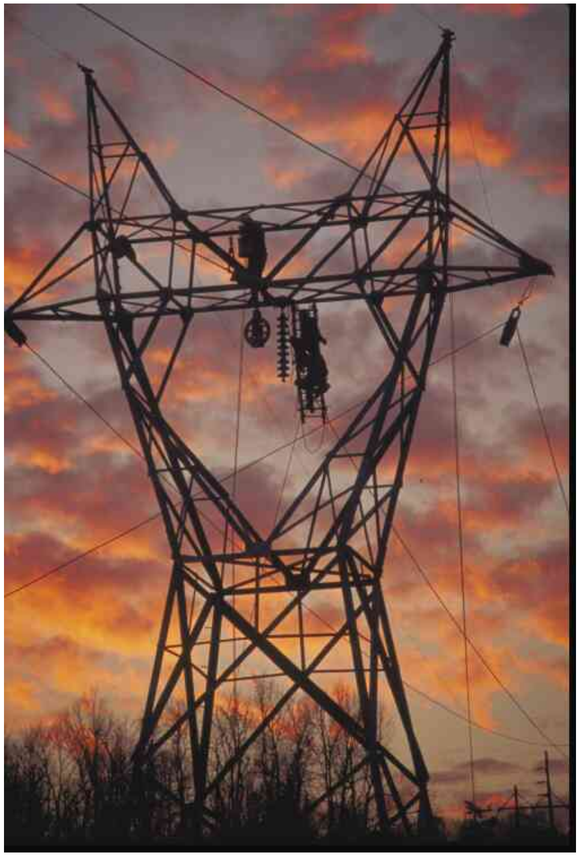
- ❑ Outcome for AEP Ohio still an important factor in determining 2009 results and beyond
- ❑ Active fuel recovery allowed in each jurisdiction
- ❑ Geographic diversity helps to mitigate the effect of the economic slowdown
- ❑ Joint venture strategy for transmission investment remains a long-term earnings growth catalyst
- ❑ Sustained capital investment in our traditional utility business aligned with regulatory return

Big Sandy Plant

Long-term earnings growth will continue at 4% to 6% per year.

Getting Ready for the Next Cycle

- ❑ Investing in the next generation of energy infrastructure
  - Approved new generation projects
  - High-voltage interstate transmission system
  - Advanced distribution infrastructure (gridSMART[SM])
- ❑ Focused on customer and regulatory relationships
- ❑ Improving financial metrics
- ❑ Committed to dividend policy consistent with past practices
- ❑ Leading the carbon policy debate



AEP is and will continue to be a financially sound, industry leader.

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants including our ability to restore I&M’s Donald C. Cook Nuclear Plant Unit 1 in a timely manner, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of the recently passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events. AEP and its Registrant Subsidiaries expressly disclaim any obligation to update any forward-looking information.

AEP AMERICAN ELECTRIC POWER®

Company Overview

Company Overview

OUR FOCUS IS OUR CORE

DOMESTIC UTILITY BUSINESS OPERATIONS

American Electric Power Company, Inc. is one of the largest investor-owned electric public utility holding companies in the US. We provide generation, transmission and distribution services to over 5 million retail customers in eleven states (Arkansas, Indiana, Kentucky, Louisiana, Michigan, Ohio, Oklahoma, Tennessee, Texas, Virginia and West Virginia) through our electric utility operating companies.

We have seven regional operating companies for distribution and customer service operations that serve the customers of our eleven electric utility subsidiaries:

Regional Utility Divisions	Electric Utility Subsidiaries
AEP Ohio	Columbus Southern Power Ohio Power Wheeling Power
AEP Texas	Texas Central Company Texas North Company
Appalachian Power	Appalachian Power Kingsport Power
Indiana Michigan Power	Indiana Michigan Power
Kentucky Power	Kentucky Power
Public Service Company of Oklahoma	Public Service Company of Oklahoma
Southwestern Electric Power Co.	Southwestern Electric Power Co.

Company Overview

SIGNIFICANT PRESENCE THROUGHOUT THE DOMESTIC VALUE CHAIN

Our US electric assets include:

- Over 39,000 megawatts of generating capacity in 3 RTOs (one of the largest US generation portfolios with a significant cost advantage in many of our market areas)
- Approximately 39,000 circuit miles of transmission lines, including 2,116 miles of 765kV lines, the backbone of the electric interconnection grid in the Eastern U.S.
- 214,062 miles of overhead and underground distribution lines

With our coal and transportation assets we:

- control over 9,000 railcars
- own and/or operate almost 3,000 hopper barges, 58 towboats and 25 harbor boats
- operate one active coal-handling terminal with 20 millions tons of capacity

Historically, AEP consumes approximately 77 million tons of coal annually.

AEP East Regional Utilities

Appalachian Power

President and Chief Operating Officer:
Dana Waldo

Appalachian Power Company (APCo)

(organized in Virginia in 1926) is engaged in the generation, transmission and distribution of electric power to approximately 962,000 retail customers in the southwestern portion of Virginia and southern West Virginia, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities and other market participants. At December 31, 2008, APCo and its wholly owned subsidiaries had 2,575 employees. Among the principal industries served by APCo are coal mining, primary metals, chemicals and textile mill products. In addition to its AEP System interconnections, APCo also is interconnected with the following unaffiliated utility companies: Carolina Power & Light Company, Duke Energy Corporation and Virginia Electric and Power Company. APCo has several points of interconnection with TVA and has entered into agreements with TVA under which APCo and TVA interchange and transfer electric power over portions of their respective systems. APCo is a member of PJM.

AEP Ohio - Columbus Southern Power

President and Chief Operating Officer: Joe Hamrock

AEP Ohio-Columbus Southern Power Company (CSPCo)

(organized in Ohio in 1937, the earliest direct predecessor company having been organized in 1883) is engaged in the generation, transmission and distribution of electric power to approximately 749,000 retail customers in Ohio, and in supplying and marketing electric power at wholesale to other electric utilities, municipalities and other market participants. At December 31, 2008, CSPCo had 1,323 employees.

CSPCo's service area is comprised of two areas in Ohio, which include portions of twenty-five counties. One area includes the City of Columbus and the other is a predominantly rural area in south central Ohio. In addition to its AEP System interconnections, CSPCo also is interconnected with the following unaffiliated utility companies: Duke Energy Ohio, DP&L and Ohio Edison Company. CSPCo is a member of PJM.

Regulation

- Regulatory Strategy
- Rate Case Filing Requirements
- Regulatory Activity Underway
- Commission Overviews
- Rate Base and ROE by Operating Company

Regulatory Strategy: Reduce Lag

- Maximize frequency of filings
  - Seek ability to pro-forma both capital and O&M through date which rates are effective
- Single-issue cost recovery
  - Reliability
  - Vegetation
  - Environmental
- Trackers/Riders/Regulatory Adjustment Clauses
  - Federally-approved transmission costs
  - Fuel and emissions
  - Energy Efficiency Programs
- Formula rates
  - Including periodic true-ups and approved earnings bands
- Future test years
- Accelerated cost recovery/depreciation/replacement cost accounting
- Pre-Approvals
- Securitization
- Return on CWIP

The strategy: reduce the time between in-service dates and rate recovery

Summary of Rate Case Filing Requirements

	Arkansas	Indiana	Kentucky	Louisiana	Michigan	Ohio	Oklahoma	Texas	Virginia	West Virginia	FERC
General											
Time Limitations Between Cases	No	Yes	No	No	No	No	No	No	Yes	No	No
Period of Limitation (months)	--	15	--	--	--	--	--	--	See note 1	--	--
Pancaking Permitted?	No	No	No	Yes	No	Limited	No	No	No	No	Yes

Prior PSC Notice Required?	Yes	Yes	Yes	No	Optional	Yes	Yes	Yes	Yes	Yes	No
Notice Period (days)	60	Varies	28	N/A	45	30	45	30	60	30	N/A
Case Components											
Test Year	Partially Projected	Historical	Forecast Optional	Historical	Forecast Optional	Partially Projected	Partially Projected	Historical	Historical	Historical	Forecast Optional
Other											
Rates Effective Subject to Refund	Yes	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes	No	Yes
Approx # of Months after Filing to implement rates subject to refund	10	--	6	12	Varies	9	6	6	5	9	2 or 7

Note 1: No interim rates provided and rate cases must be filed no less than biennially; historical test year used.

Regulatory framework inherently produces recovery and return lag.

Summary Rate Case Information

SWEPCO Arkansas General Rate Case

On February 19, 2009 SWEPCO filed a general base rate case with the Arkansas Public Service Commission (APSC) requesting an increase of $53.9 million. (Docket #:09-008-U) On September 17, 2009 SWEPCO, along with the general staff of the Arkansas PSC and State Attorney General filed a settlement agreement. The settlement requests a 10.25% ROE and a $17.8MM rate increase with a rate base of $612MM. The generation recovery rider has been amended to cover the return, depreciation and O&M expenses related to the Stall Plant once the unit is in-service.

Summary Rate Case Information

APCo Virginia General Rate Case

On August 14, 2009 APCo filed an update to its pre-biennial base rate case, originally filed July 15, 2009 with the Virginia SCC, per the statute, for recovery of generation and distribution costs requesting an increase of $154 million. (Docket #: PUE-2009-00030) A transmission rate adjustment clause (T-RAC) was filed in conjunction with this case as base rates will no longer include rates for transmission service (Docket #: PUE-2009-00031). APCo has requested that rates in both cases go into effect at the same time.

Commission Overview

Arkansas Public Service Commission

AEP Regulated Electric Utilities

Southwestern Electric Power Co.

Commissioners

Number: 3	**Appointed/Elected: Appointed**	**Term: 6 Years**	**Political Makeup: R: 1 D: 2**
Qualifications for Commissioners The Arkansas Public Service Commission (APSC) is composed of 3 members. The Governor appoints the Commissioners as well as the Chairman. Governor Huckabee has appointed all of the current commissioners.			
Commissioners **Paul Suskie, Chairman (Dem.),** since 2007; current term ends in 2013. Lawyer, North Little Rock, Arkansas City Attorney. Bachelor's attained at University of Central Arkansas. Juris Doctorate at University of Arkansas at Little Rock School of Law. NARUC member including the Committee on Consumer Affairs and Electricity Committee.			
Olan Reeves, Commissioner (Rep.), since 2009; current term ends in 2015. Chairman of the Workers' Compensation Commission from January, 2003 until January, 2009. Prior to these appointments, Commissioner Reeves was Chief Legal Counsel to the Governor from 1998-2003 and served as the State Drug Director from 1996 to 1998. Reeves received his Juris Doctorate from the University of Arkansas School of Law in Fayetteville.			
Collette Honorable, Commissioner (Dem.), since 2007; current term ends in 2011. Commissioner Honorable is a member of NARUC and serves on the Consumer Affairs and Investment Committees. She also serves on the Smart Grid Collaborative, a joint effort of NARUC and the FERC. Honorable obtained her Juris Doctorate from the University of Arkansas at Little Rock School of Law.			

AEP Regulatory Status

SWEPCo-AR provides service at regulated bundled rates in Arkansas. Arkansas has an active fuel pass-through clause. Arkansas has an OSS margin sharing mechanism and allows CWIP in rate base for a plant that is placed in service within six months after the end of the test year.

Commission Overview

Indiana Utility Regulatory Commission

AEP Regulated Electric Utilities

Indiana Michigan Power Co.

Commissioners

Number: 5	Appointed/Elected: Appointed	Term: 4 Years	Political Makeup: R: 3 D: 2

Qualifications for Commissioners

Five members, appointed by the Governor from among persons nominated by a legislatively mandated utility commission nominating committee; four-year, staggered terms, full-time positions. Not more than three of the members of the IURC shall be members of the same political party. At least one of the commissioners must be an attorney qualified to practice law before the Indiana Supreme Court. The Governor appoints one of the five as chairperson.

Commissioners

David L. Hardy, Chairman (Rep.), since 2005; current term will expire April 2010. Commissioner Hardy is an attorney who has worked in private practice since 1997. Areas of expertise include negotiation, contracts, litigation, finance and administration. He has 35 years of regulatory experience at the state and federal levels. Bachelors degree and law degree from Indiana University.

Jeffrey L. Golc, Commissioner (Dem.), since 2007; current term will expire January 2010. Former public affairs manager for the Kroger Company. Previous Deputy Commissioner for the Indiana Bureau of Motor Vehicles and the Indiana Department of Workforce Development. Bachelors and Masters degrees in communications from Indiana University.

Larry S. Landis, Commissioner (Rep.), since 2002; current term ends December 2011. Former president of a marketing and communications agency, VP Corporate Advertising, American Fletcher National Bank. Bachelor's degrees in political science and economics.

Jim Atterholt, Commissioner (Rep.), since 2009; current term ends 2014. Prior to joining the Commission, he was the State Insurance Commissioner for more than four years where he also served as a member of the Governor's Cabinet. Atterholt worked as Director of Government Affairs for AT&T--Indiana from 2003 – 2004. Atterholt holds a Bachelors degree from the University of Wisconsin.

David E. Ziegner, Commissioner (Dem.), since 1990; current term ends April 2011. Lawyer, staff attorney for Legislative Services Agency, General Counsel for IURC. Member, NARUC Committee on Electricity and chairman of the NARUC clean coal and carbon sequestration subcommittee. Law degree from the Indiana University School of Law in Indianapolis.

AEP Regulatory Status

I&M provides retail electric service in Indiana at bundled rates approved by the IURC. Rates are set on a cost-of-service basis with a fuel recovery mechanism. I&M has trackers in place for PJM expenses, OSS sharing, clean coal technology, environmental and DSM.

Commission Overview

Kentucky Public Service Commission

AEP Regulated Electric Utilities

Kentucky Power Co.

Commissioners

Number: 3	**Appointed/Elected: Appointed**	**Term: 4 Years**	**Political Makeup: R: 2 D:1**
Qualifications for Commissioners Typically three members, appointed by the governor and confirmed by the state senate for four years, staggered terms, full-time positions. The governor appoints one of the three as chairman and another of the three as vice chairman to serve in the chairman's absence. Not more than two members of the KYPSC shall be of the same profession or occupation.			
Commissioners **David L. Armstrong, Chairman (Dem.),** since 2008; current term expires June 2011. Former practicing attorney in private practice. Board member of NARUC and serves on its Electricity Committee and the Subcommittee on Clean Coal Technology. J.D. from University of Louisville Brandeis School of Law. Mr. Armstrong is also the former Mayor for the city of Louisville, KY (1999-2003).			
James W. Gardner, Vice Chairman (Rep.), since 2008; current term expires June 2012. Prior to joining the PSC Mr. Gardner was a partner at the law firm Henry Watz Gardner & Sellars PLLC where he specialized in bankruptcy law. JD degree from the University of Kentucky College of Law.			
Charles Borders, Commissioner (Rep.), since 2009; current term expires June 2013. Before joining the PSC, Commissioner Borders served in the Kentucky Senate, representing the 18th District in northeast Kentucky since 1991. He most recently chaired the Appropriations and Revenue Committee and served on the committees on Education and Health and Welfare. Borders received his Bachelors and Masters degrees from Morehead State University.			

AEP Regulatory Status

KPCo provides service at regulated bundled rates in Kentucky. Kentucky has an environmental surcharge to recover approved environmental costs and it has an active fuel clause. Kentucky also has an OSS sharing mechanism and a monthly adjustment clause in place for DSM.

Commission Overview

Louisiana Public Service Commission

AEP Regulated Electric Utilities

Southwestern Electric Power Co.

Commissioners

Number: 5	**Appointed/Elected: Elected**	**Term: 6 Years**	**Political Makeup: R: 3 D: 2**
Qualifications for Commissioners The Louisiana Public Service Commission (LPSC) is composed of five elected members. The commissioners serve overlapping terms of six years.			
Commissioners **Lambert C. Bossiere, III (Chairman) (Dem.),** since 2005; current term ends December 2010. B.S. Business Administration from Southern University. American University of Paris – International Trade Law – Paralegal Certificate. Former First City Court Constable for the City of New Orleans. Member of NARUC.			
Eric Skrmetta, (Rep.), since 2009; current term ends December 2014. Practicing Attorney since 1985. Practicing Mediator since 1989. Republican State Central Committee District 81**.** Juris Doctorate Southern University Law School.			
Foster L. Campbell, (Dem.), since 2003; current term ends December 2014. Member, Louisiana State Senate (1976-2002). Independent insurance businessman and farmer, former school teacher and agricultural products salesman. Bachelor's degree from Northwestern State University.			
James M. Field, (Rep.), since 1996; current term ends December 2012. Practicing attorney, member of Electrical Committee of NARUC. NFL contract advisor (1983-present), member, Sports Lawyers Association. Bachelor's and Juris Doctorate from Louisiana State University.			
Clyde Holloway, (Rep.), since 2009; current term ends December 2010. Elected to Congress in 1987 and served in the United States House of Representatives until 1993. In October 2006 he received an appointment by President Bush as the USDA State Director of Rural Development where he served until 2009**.**			

AEP Regulatory Status

SWEPCo-LA provides service at regulated bundled rates in Louisiana. Louisiana has an active fuel pass-through clause and an OSS margin sharing mechanism. Formula rate plans are permitted in Louisiana including a potential for a partial CWIP return on new generation projects. A formula rate plan was implemented August 1, 2008.

Commission Overview

Michigan Public Service Commission

AEP Regulated Electric Utilities

Indiana Michigan Power Co.

Commissioners

Number: 3	**Appointed/Elected: Appointed**	**Term: 6 Years**	**Political Makeup: D: 2 I: 1**
Qualifications for Commissioners The Michigan Public Service Commission (MPSC) is composed of three members appointed by the Governor with the advice and consent of the Senate. Commissioners are appointed to serve staggered six-year terms. No more than two commissioners may represent the same political party. One commissioner is designated as chairman by the Governor.			
Commissioners **Orjiakor N. Isiogu, Chairman (Dem.),** since 2007; current term expires July 2013. Former Director of the Telecommunications Division of the MPSC. Assistant Attorney General in Michigan since 1989. Undergraduate and law degree from Wayne State University.			
Monica Martinez, Commissioner, (Dem.), since 2005; current term expires July 2011. Former Deputy Director of the Governor's Legislative Affairs Division where she served as the Governor's principal lobbyist. Previous to this, she served as an analyst for the Senate Democratic Office, where she specialized in technology and energy, human services and family law policy issues. Bachelor's and Master's degrees from University of Michigan.			
Steven A. Transeth, Commissioner, (Ind.) , since 2007; current term expires July 2015. Former assistant director and legal counsel for the Michigan Legislative Service Bureau, which included drafting legislation and providing legal counsel to the Michigan Senate and House of Representatives. Lawyer, private practice and with the Ingham County Prosecuting Attorney's office. J.D. from Thomas Cooley Law School.			

AEP Regulatory Status

Customer choice began January 2002. Generation was not deregulated. Retail rates were unbundled (though they continue to be regulated) to allow customers to evaluate generation costs. In 2008, legislation was enacted to limit customer choice load to no more than 10% of the annual retail load for the preceding calendar year. Michigan has an active fuel clause and return on CWIP can be included in base rates. Michigan currently has a mandatory renewable energy standard of 10% by 2015.

Commission Overview

Ohio Public Utilities Commission

AEP Regulated Electric Utilities

Columbus Southern Power Co.

Ohio Power Co.

Commissioners

Number: 5	**Appointed/Elected: Appointed**	**Term: 5 Years**	**Political Makeup: R: 1 D: 2 I: 2**

Qualifications for Commissioners

Five members, appointed by the governor and confirmed by the state senate; five year, staggered terms, full-time positions, commissioners shall be selected from the lists of qualified persons submitted to the governor by the PUC nominating council. Not more than three of the members of the PUCO shall be members of the same political party. The governor appoints one of the five as president, who serves at the pleasure of the governor until a successor has been designated.

Commissioners

Alan R. Schriber, Ph.D., Chairman, (Ind.) , since 1999; term expires April 2014. Economics professor, president of a radio broadcasting company, investment advisor. Previously served as commissioner on the PUCO from 1983-1989. Member NARUC Telecommunications Committee, National Governors' Association Electricity Task Force, Harvard Electricity Policy Group.

Paul A. Centolella, Commissioner, (Dem.) since 2007; term expires April 2012. Juris Doctor from the University of Michigan. From 1992-2007, worked as a senior economist in the Energy Solutions Group of Science Applications International Corporation. Former senior policy advisor and senior utility attorney for the Office of the Ohio Consumers' Counsel.

Ronda Hartman Fergus, Commissioner, (Rep.) since 1995; term expires April 2010. Lawyer, Ohio State; previously served on the PUCO staff as an administrative law judge in the Legal Department. Later served as the chief of Telecommunications, Water and Sewer Section of the Legal Department, and then chief of the Telecommunications Technical Staff. Member NARUC Committee on Consumer Affairs.

Valerie A. Lemmie, Commissioner, (Ind.) since 2006; term expires April 2011. Master's degree in Urban Affairs and Public Policy Planning, Washington University. Served as city manager for Cincinnati, Dayton, and Petersburg, Va. Scholar-in-residence at the Kettering Foundation. Past President of the National Academy of Public Administration.

Cheryl Roberto, Commissioner, (Dem.) since 2008; term expires April 2013. Prior to joining the PUC, Roberto was director of the City of Columbus Public Utilities Department. Before entering the public sector, Commissioner Roberto worked as an assistant attorney general for the state of Ohio. Commissioner Roberto received her B.A. with honors from Kent State University and her Juris Doctorate from the Moritz College of Law at The Ohio State University.

AEP Regulatory Status

On March 18, 2009 the Ohio PUC approved an electric security plan allowing for revenue increases of 7% in 2009 and 6% in 2010 and 2011 for Columbus Southern Power and revenue increases of 8% in 2009, 7% in 2010 and 8% in 2011 for Ohio Power. Transmission rates are currently regulated by FERC as reflected in the OATT. SB221 allows that CSP and OPCo have active fuel clauses effective January 1, 2009. Ohio currently has a mandatory renewable energy standard of 25% by 2025.

Commission Overview

Oklahoma Corporation Commission

AEP Regulated Electric Utilities

Public Service Company of Oklahoma

Commissioners

Number: 3	Appointed/Elected: Elected	Term: 6 Years	Political Makeup: R: 2 D: 1

Qualifications for Commissioners

The Oklahoma Corporation Commission (OCC) is composed of three commissioners who are elected by state-wide vote. Commissioners serve staggered six-year terms. The election pattern was established when the Commission was created by the state constitution.

Commissioners

Bob Anthony, Chairman, (Rep.), since 1989; current term expires January 2013. Member, NARUC. Served on the boards of the Oklahoma State, Oklahoma City, and South Oklahoma City chambers of commerce. Earned an M.Sc. from the London School of Economics, an M.A. from Yale University and an M.P.A. from the Kennedy School of Government at Harvard University.

Jeff Cloud, Commissioner (Rep.), since 2002; current term ends January 2015. Member, NARUC. Served as U.S. Congressman's District Director. Served as the Oklahoma City Mayor's Chief of Staff. Law degree from Oklahoma City University.

Dana Murphy, Commissioner, (Dem.), since 2008; current term expires January 2015. Member, NARUC. Murphy's prior experience includes working as an administrative law judge at the Commission. She has more than 20 years experience in the petroleum industry including owning and operating her own private law practice and working as a geologist in the Oklahoma petroleum industry. Juris Doctorate Oklahoma City University.

AEP Regulatory Status

PSO provides retail electric service in Oklahoma at bundled rates approved by the OCC. PSO's rates are set on a cost-of-service basis. Fuel and purchased energy costs above the amount included in base rates are recovered by applying a fuel adjustment factor to retail kilowatt-hour sales. The factor is generally adjusted annually and is based upon forecasted fuel and purchased energy costs. Over or under collections of fuel costs for prior periods are returned to or recovered from customers when new annual factors are established. PSO has an OSS margin sharing mechanism.

Commission Overview

Tennessee Regulatory Authority

AEP Regulated Electric Utilities

Kingsport Power Co.

Commissioners

Number: 4	**Appointed/Elected: Appointed**	**Term: 6 Years**	**Political Makeup: R: 1 D: 3**
Qualifications for Commissioners The Tennessee Regulatory Authority (TRA) directors are appointed, one each, by the Governor, Lieutenant Governor (as Speaker of the Senate), Speaker of the House and one joint appointment by the three together, and are confirmed by the Tennessee General Assembly. The directors are appointed for six-year terms, which all expired in June 2008; terms are now staggered.			
Commissioners **Sara Kyle, Chairman (Dem.),** since 1996; current term expires June 2014. Former assistant public defender until she was elected to the Memphis City Court bench. The longest serving commissioner and only holdover from the previous Regulatory Authority. Law degree from Middle Tennessee State University.			
Mary W. Freeman, Director (Dem.), since 2008; current term expires June 2011. Prior legislative director for Governor Bredesen, executive assistant to State Representative Lois DeBerry. B.A. Tennessee State University.			
Kenneth Hill, Director (Rep.), since 2009; current term expires June 2015. At the time of his appointment to the TRA, Hill was Chief Executive Officer of AECC and served as General Manager of five radio stations reaching portions of East Tennessee and four surrounding states. Doctor of Religious Education, Andersonville Baptist Seminary.			
Eddie Roberson, Ph.D, Director, (Dem.), since 2006; current term expires June 2014. Former Chief of Consumer Services Division of the Regulatory Authority; also served a year as the agency's Executive Director. Served two terms on the Chattanooga City School Board. Ph.D in Public Administration from Tennessee State University.			

AEP Regulatory Status

No deregulation legislation and no base rate freeze or cap. Tennessee has an active fuel clause.

Commission Overview

Public Utility Commission of Texas

AEP Regulated Electric Utilities

Texas Central Co.
Texas North Co.
Southwestern Electric Power Co.

Commissioners

Number: 3	**Appointed/Elected: Appointed**	**Term: 6 Years**	**Political Makeup: R: 3**
Qualifications for Commissioners To be eligible for appointment, a commissioner must be: (1) a qualified voter; (2) a citizen of the United States; and (3) a representative of the general public. Chairman appointed by the Governor.			
Commissioners **Barry T. Smitherman, Chairman, (Rep.),** since April 2004; current term expires August 2013. Attorney; Assistant DA; Public Finance Investment Banker. Received law degree from the University of Texas School of Law.			
Kenneth W. Anderson, (Rep.) since September 2008; current term expires August 2011. Past Director of Governmental Appointments under Governor Perry. Prior to that Anderson served in private practice as a corporate attorney in the area of securities law and regulatory matters. He also served as a member of the Texas Securities Board from 1999-2006. Anderson holds a law degree from Southern Methodist University.			
Donna L. Nelson, Commissioner (Rep.), since August 2008; current term expires August 2015. Nelson served as a special assistant and advisor to Governor Perry on energy, telecommunications and cable budget and policy issues. She previously served as director of the PUC telecommunication's section and legal advisor to the PUC chairman. Nelson holds a law degree from Texas Tech University.			

AEP Regulatory Status

Retail competition has been delayed by the PUCT in the SPP area of Texas (including SWEPCO). SWEPCO-TX has an active fuel pass-through clause as well as OSS margin sharing. In some circumstances, CWIP is allowed in rate base. TCC and TNC provide retail transmission and distribution service on a cost-of-service basis at rates approved by the PUCT and wholesale transmission service under tariffs approved by the FERC consistent with PUCT rules. Transmission riders provide annual recovery dependent on the level of transmission investment and ERCOT load growth rates. AFUDC is permitted in limited circumstances.

Commission Overview

Virginia State Corporation Commission

AEP Regulated Electric Utilities

Appalachian Power Co.

Commissioners

Number: 3	**Appointed/Elected: Elected**	**Term: 6 Years**	**Political Makeup: R: 2 D: 1**
Qualifications for Commissioners The Virginia State Corporation Commission (VSCC) is composed of three members elected by the General Assembly. Commissioners are elected to serve six-year terms, staggered in two year increments. The chair rotates annually among the three commissioners on February 1.			
Commissioners **Mark C. Christie, Chairman (Rep.),** since 2004; current term expires 2010. Prior counsel to the Speaker of the House of delegates of the Virginia General Assembly. Lawyer, private practice. Law degree from Georgetown.			
Judith Williams Jagdmann, (Rep.), since 2006; current term expires 2012. Law degree from T.C. Williams School of Law at the University of Richmond. Served as Deputy Attorney General for Civil Litigation Division from 1998 to 2005. Attorney General for Commonwealth of Virginia from 2005 to 2006.			
James C. Dimitri (Dem.), since 2008; current term expires 2014. Prior to being named Commissioner, Dimitri was in private practice in Richmond. From 1994 to 2000 he served as Senior Counsel, then General Counsel at the SCC. He was an assistant Attorney General from 1983 to 1987. Dimitri received his undergraduate degree in economics from the University of Virginia and his J.D. from the Boston University School of Law.			

AEP Regulatory Status

APCo-VA provides retail electric service in Virginia at unbundled rates. In 2007, the General Assembly passed legislation re-establishing retail rate regulation in the Commonwealth. The new legislation provides for biennial rate reviews beginning in 2009, sharing of off-system sales margins at a rate of a minimum of 25% retained by the company effective July 1, 2007 and a post-2008 rider for DSM, renewable programs and new generation. APCo-VA is entitled to annual rate changes to recover the incremental costs it incurred through December 31, 2008 for transmission and distribution system reliability and compliance with state or federal environmental laws or regulations (known as the E&R rider). APCo-VA is entitled to adjustments to fuel rates to recover its actual fuel costs, the fuel component of its purchased power costs and certain capacity charges. Virginia currently has a voluntary renewable energy standard of 12% by 2022, which AEP intends to comply with.

Commission Overview

Public Service Commission of West Virginia

AEP Regulated Electric Utilities

Appalachian Power Co.

Wheeling Power Co.

Commissioners

Number: 3	Appointed/Elected: Appointed	Term: 6 Years	Political Makeup: R: 1 D: 2

Qualifications for Commissioners

The West Virginia Public Service Commission (WVPSC) consists of three members, appointed by the Governor, with the advice and consent of the senate. No more than two members of the commission may belong to the same political party. The Commissioners serve six year staggered terms, with one term expiring as of July 1 of each odd numbered year. One Commissioner is designated as Chairman of the Commission by the Governor. The Chairman serves as the chief fiscal officer of the Commission.

Commissioners

Michael A. Albert, Chairman (Rep.), since 2007; term expires June 2013. Served as a member in the Business Law Department of Jackson Kelly. President and Chairman of the board of directors of the Kanawha County Public Library. Bachelor's degree and Doctorate of Jurisprudence, West Virginia University.

Edward H. Staats, Commissioner (Dem.), since 2003; term expired June 2009 and has not yet been renewed. Former Chief of Operations in the Governor's office. Former Chief Financial Officer of the Workers' Compensation Division of the W.V. Bureau of Employment Programs. Certified Public Accountant in West Virginia and Georgia. Bachelor's degree, West Virginia University.

Jon W. McKinney, Commissioner (Dem.), since 2005; term expires June 2011. Currently on the board of directors of the NARUC and second VP of the Mid-Atlantic Conference of Regulated Utilities Commissioners. Formerly served as plant manager of Flexsys' Nitro, W .V. operations, chairman of Chemical Industry Committee for W.V., board member of W.V. Chamber of Commerce, W.V. Manufacturer's Association, Chemical Alliance Zone, W.V. Roundtable, Advantage Valle, St. Francis Hospital & Thomas Memorial Hospital.

AEP Regulatory Status

APCo and Wheeling Power in WV provide retail electric service at bundled rates approved by the WV PSC. West Virginia has an active annual ENEC (Expanded Net Energy Cost) mechanism, which provides for a rate adjustment for fuel costs, among other items. West Virginia also has a special construction surcharge permitted, primarily related to environmental-related construction. West Virginia currently has a renewable energy standard of 25% by 2015.

Commission Overview

Federal Energy Regulatory Commission

Commissioners

Number: 4	**Appointed/Elected: Appointed**	**Term: 5 Years**	**Political Makeup: R: 2 D: 2**

Qualifications for Commissioners

The Federal Energy Regulatory Commission (FERC) is composed of up to five commissioners who are appointed by the President of the United States with the advice and consent of the Senate. Commissioners serve five-year terms, and have an equal vote on regulatory matters. To avoid any undue political influence or pressure, no more than three commissioners may belong to the same political party.

Commissioners

Jon Wellinghoff, Chairman (Dem.), since 2006; term expires June 2013. Chairman Wellinghoff is an energy law specialist with more than 30 years experience in the field. Before joining FERC, he was in private practice and focused exclusively on client matters related to renewable energy, energy efficiency and distributed generation. While in the private sector, Chairman Wellinghoff represented an array of clients from federal agencies, renewable developers, and large consumers of power to energy efficient product manufacturers and clean energy advocacy organizations.

Suedeen G. Kelly, Commissioner (Dem.) since 2003; term expired June 2009. On September 21, 2009, Commissioner Kelly declined her reappointment by President Obama to a new term. She will continue to serve until the Senate confirms a replacement. Previously Kelly was a Professor of Law at the University of New Mexico School of Law, where she taught energy law, public utility regulation, administrative law and legislative process. She also worked with the law firm of Modrall, Sperling, Roehl, Harris & Sisk in Albuquerque from 2000 through 2003 and the law firm of Sheehan, Sheehan, and Stelzner from 1992 through 1999. In 2000, Ms. Kelly served as counsel to the California Independent System Operator. In 1999, she worked as a Legislative Aide to U.S. Senator Jeff Bingaman.

Phillip D. Moeller, Commissioner (Rep.), since 2006; term expires June 2010. From 1997 through 2000, Mr. Moeller served as an energy policy advisor to U.S. Senator Slade Gorton (R-Washington) where he worked on electricity policy, electric system reliability, hydropower, energy efficiency, nuclear waste, energy and water appropriations and other energy legislation. Before becoming a Commissioner, Mr. Moeller headed the Washington, D.C., office of Alliant Energy Corporation. Prior to Alliant Energy, Mr. Moeller worked in the Washington office of Calpine Corporation.

Mark Spitzer, Commissioner (Rep.), since 2006; term expires June 2011. Prior to becoming a commissioner Spitzer served as chairman of the Arizona Corporation Commission (ACC), where he focused on policies encouraging expansion of natural gas infrastructure, specifically distribution and storage; creating a demand side management policy; enhancing the ACC's renewables standard; and advancing consumer privacy concerns in telecommunications.

New Generation Projects

- John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant. Located in AEP's SWEPCo region AEP owns 73 percent or roughly 440 megawatts of the total unit.
  - The cost of the plant is anticipated at $1.6 billion with AEP's share approximately $1.2 billion and will begin commercial operation in 2012.
  - SWEPCo's share of the plant's costs will be allocated on the basis of electric load among customers in Arkansas, Louisiana and Texas.
  - The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls.

John W. Turk Jr. Ultra-Supercritical Coal Plant

J. Lamar Stall Combined-Cycle Gas Plant

- J. Lamar Stall Combined-Cycle gas plant is a 508-MW unit scheduled for commercial operation in 2010.
  - The total projected cost of the plant is $378 million.
  - The plant is located in AEP's SWEPCo region at its existing Arsenal Hill Power Plant in Shreveport, Louisiana.
  - The plant will be used to service the needs of customers in the Arkansas, Louisiana and Texas service territories.

Environmental

AEP's Environmental Compliance Strategy

NOx and SO_2 emission reductions are part of AEP's on-going strategy to comply with the Clean Air Act, Title IV regulations and the NSR consent decree executed in October 2007.

Much of this investment will position AEP to accomplish the following:

- Reduce nitrogen oxide emissions by 90% through installation of Selective Catalytic Reduction (SCR) systems
- Reduce sulfur dioxide emissions by 95% to 98%+ through installation of Flue Gas Desulfurization (FGD) systems (scrubbers)
- Realize co-benefit of mercury capture offered through SCR and FGD systems together
- Avoid future landfill costs through sale of gypsum (by-product) & build where landfill costs are lower
- Realize benefits achieved through fuel flexibility

Represents the best and least-cost compliance path to improve environmental performance on a fleet basis, while continuing to provide a reliable supply of power to customers at a reasonable price and a solid return for investors.

Emission Limits

In compliance with our 2007 NSR settlement,
the following limits are applicable to
AEP's eastern generation fleet:

Eastern System-Wide Annual Tonnage Limitations for NO_x	
Calendar Year	**Limitation**
2009	96,000 tons
2010	92,500 tons
2011	92,500 tons
2012	85,000 tons
2013	85,000 tons
2014	85,000 tons
2015	75,000 tons
2016 and each year thereafter	72,000 tons

Eastern System-Wide Annual Tonnage Limitations for SO_2	
Calendar Year	**Limitation**
2010	450,000 tons
2011	450,000 tons
2012	420,000 tons
2013	350,000 tons
2014	340,000 tons
2015	275,000 tons
2016	260,000 tons
2017	235,000 tons
2018	184,000 tons
2019 and each year thereafter	174,000 tons

Emissions caps do not include any of the gas-fired units, or any new units AEP might build or purchase in the east.

Future Potential Green House Gas Regulations

AEP Supports Reasonable Climate Legislation

Key Design Elements:

- **Reductions and Timing -** Moderate with adequate lead times
- **Scope of Program –** Economy-wide w/ preemption of EPA authority to regulate CO_2 under existing Clean Air Act
- **Flexibility of the Program –** Market-based system w/ credit trading, banking, unrestricted offset use & early action credits
- **Allowance Allocation And Other Cost Issues –** Full, free allocation to electric sector and "Low" auctions
- **Technology Development/Deployment -** Bonus allowances or other support for carbon capture and storage (CCS)
- **International Linkage -** e.g. AEP-IBEW proposal on international competitiveness

AEP supports ***The American Clean Energy and Security Act of 2009*** **introduced by Rep. Waxman and Rep. Markey**

AEP's Near-Term CO_2 Reduction Commitment

Existing Programs

- Existing plant efficiency improvements
- Renewable Energy
  - 1785 MWs of Wind
  - 722 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr
  - Over 63MM trees planted through 2008
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

New Program Additions (by 2011)

- 1000 additional MWs of Renewable through PPAs
- Domestic Offsets (methane, forestry): About 2MM tons/yr
- Fleet Vehicle/Aviation Offsets: 0.2MM tons/yr
- Additional actions: Energy efficiency and biomass: 0.3MM tons/yr

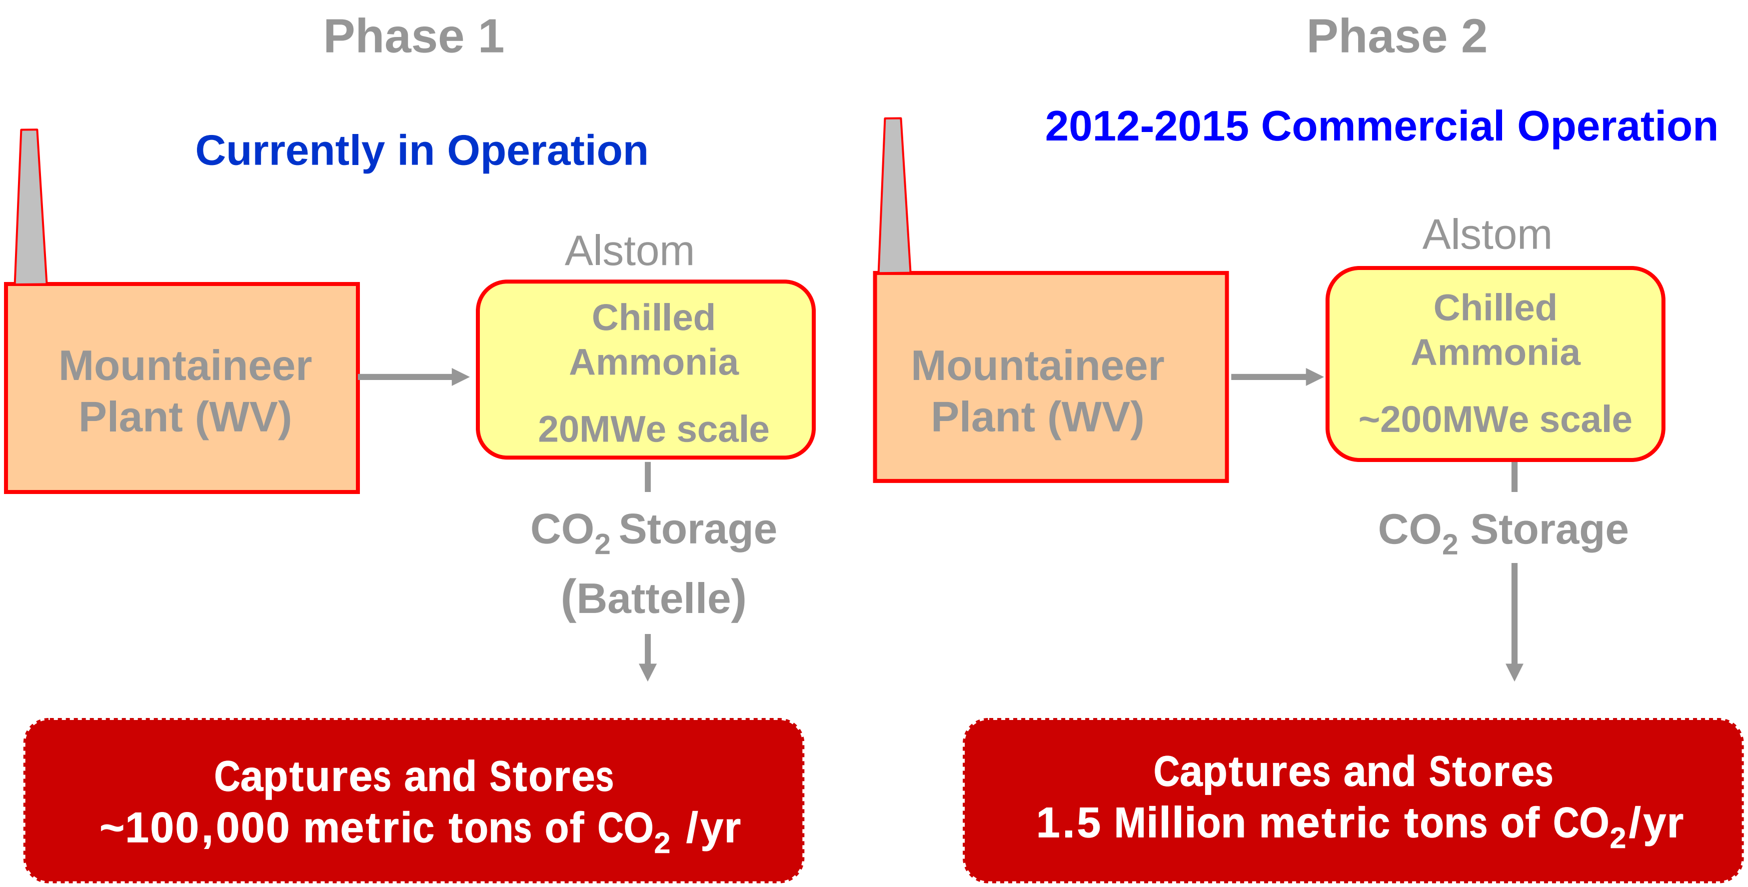
New Technology Additions

- New Generation – Ultra Super Critical
- Carbon Capture and Storage (CCS) for existing fleet
  - Chilled Ammonia

AEP's reductions/offsets of CO_2:
2003-2010: 48 MMT Total

AEP's reductions/offsets of CO_2:
2011+: 5 MMT/Year
Longer Term - New Technology

AEP Leadership in New Technology: Chilled Ammonia CCS

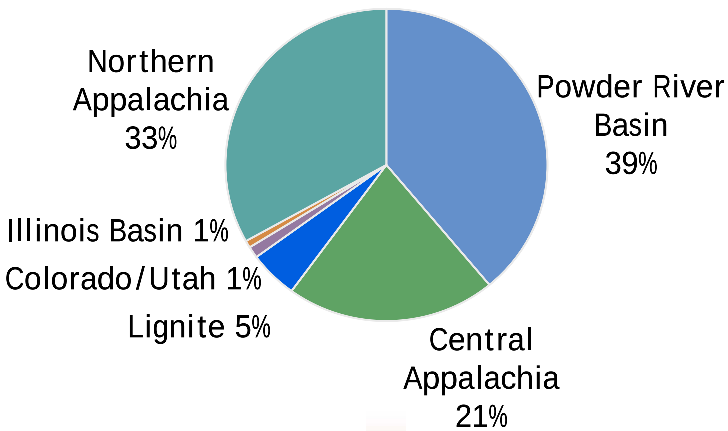


Coal

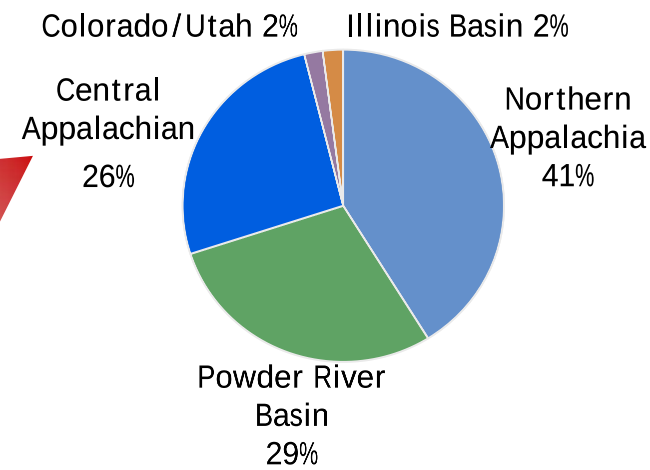
- Coal Procurement, Delivery & Transportation
- Fuel Recovery
- Coal Market Information

Coal Procurement – 2010 Projected

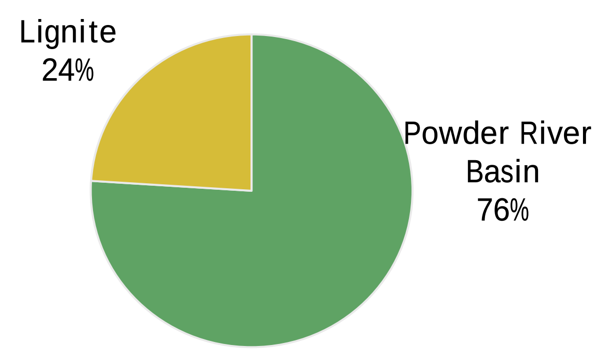
Total AEP System



AEP East



AEP West



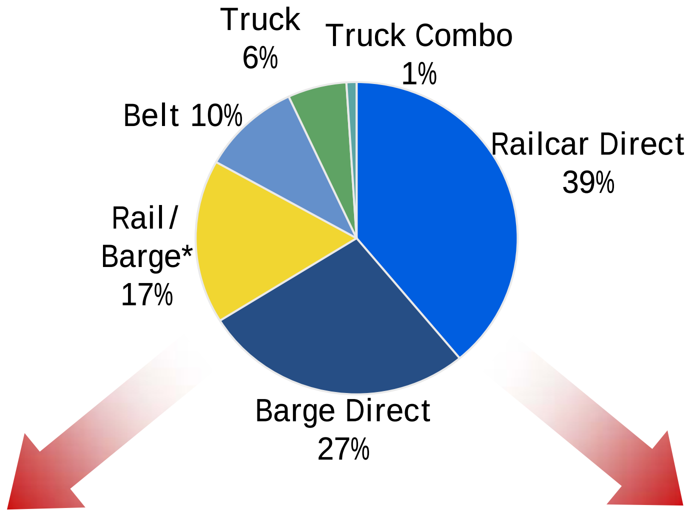
Coal Stats:

- 100% contracted for 2009 and 98% for 2010
- Avg. delivered price ~ $47/ton in 2008
- Approximate 10% price increase in 2009 ~ $51/ton
- Approximate 10% price decrease in 2010 ~$46/ton

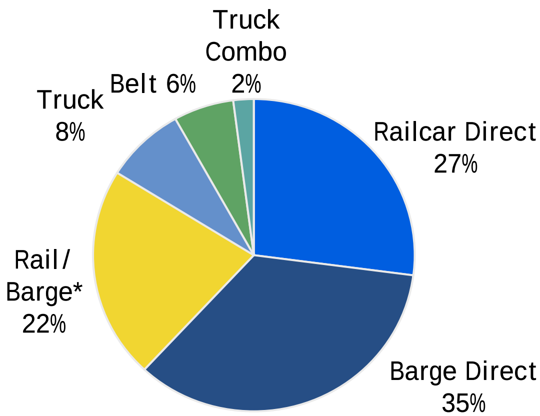
Coal Delivery

2008 Actual

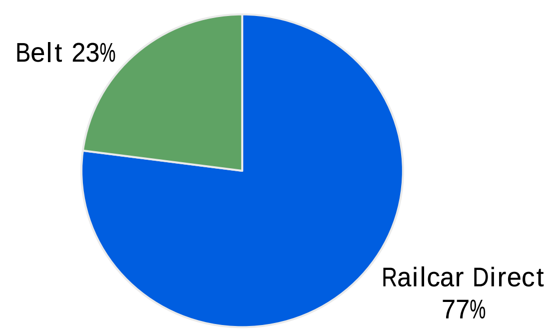
Total AEP System



AEP East



AEP West

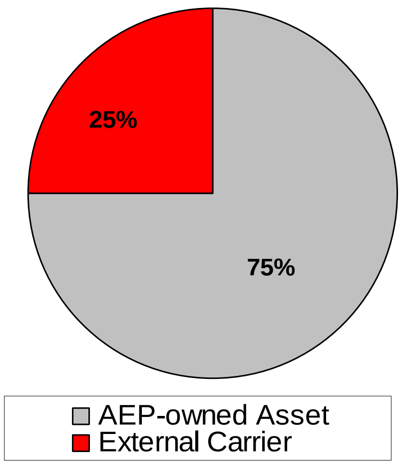


* Reflects coal delivered to AEP plants transported through a combination of rail and barge

AEP's Coal Transportation Assets

2008 Actual

Coal Transportation to AEP Plants*



***Represents close approximations**

Current Coal & Transportation Assets:

- Control over 9,000 railcars
- Own/lease and operate over 2,978
- barges & 58 towboats & 25 harbor boats
- Coal handling terminal with 20 million tons of capacity

AEP's transportation assets provide flexibility in a constrained delivery environment.

AEP River Operations

- Full-service Inland Waterways carrier
  - 2,978 hopper barges
  - 58+ towboats/25 tugs
- Tonnage & Commodity:
  - Captive: (for AEP)-37MM tons of coal;
  - Commercial: 35MM tons of coal/grain/bulk
- Gulf Operations
  - Barge cleaning and repair
  - Fleeting and shifting
  - Midstream transfers
- Operating Centers in Lakin, WV, Cape Girardeau, MO, Paducah, KY, Convent and Belle Chase, LA

Inland Waterway Routes For AEP River Operations

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012

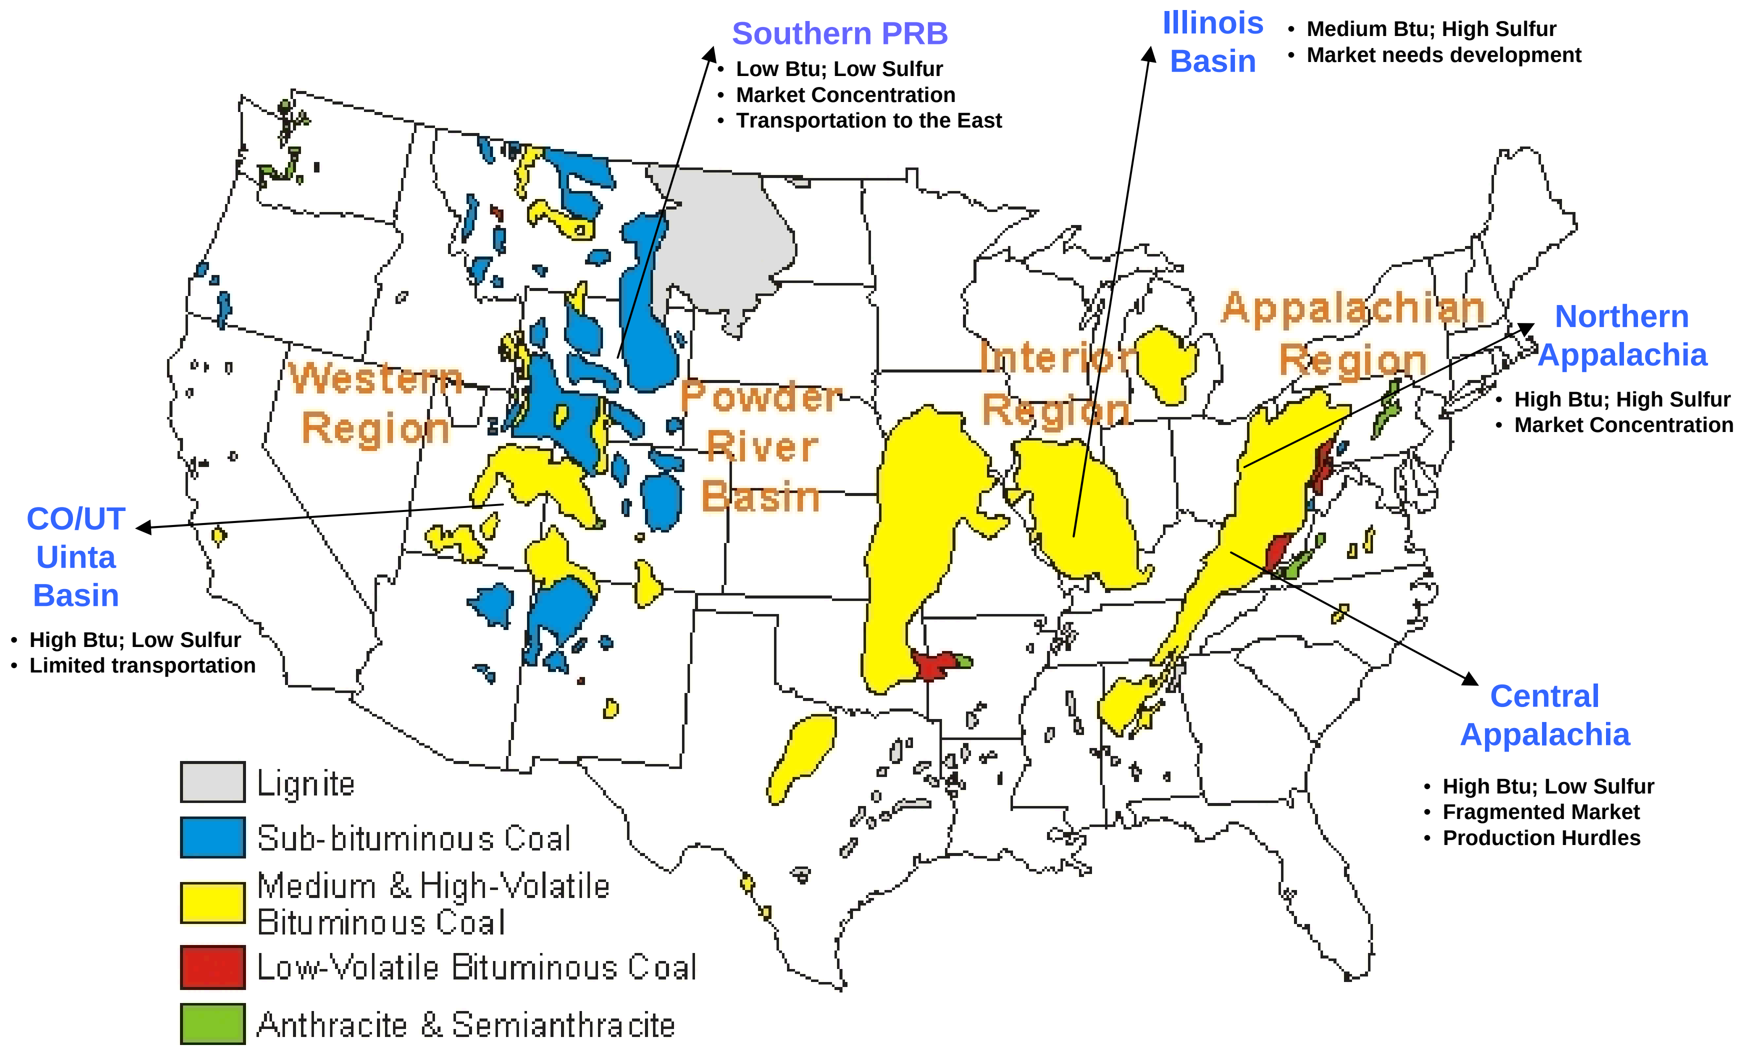
Jurisdictional Fuel Clause Summary

Jurisdiction	Active Fuel Clause	Frequency
Arkansas	Yes	Annually
Indiana	Yes	Semi-Annually
Kentucky	Yes	Monthly
Louisiana	Yes	Monthly
Michigan	Yes	Annually
Ohio	Yes	Quarterly
Oklahoma	Yes	Annually
Tennessee	Yes	Monthly
Texas (SPP)	Yes	Annually
Virginia	Yes	Annually
West Virginia	Yes	Annually

Effective January 1, 2009 we have fuel recovery in all jurisdictions.

Coal Producing Regions



Transmission Initiatives

Uniquely Positioned for Nationwide Grid Expansion

Active Projects:

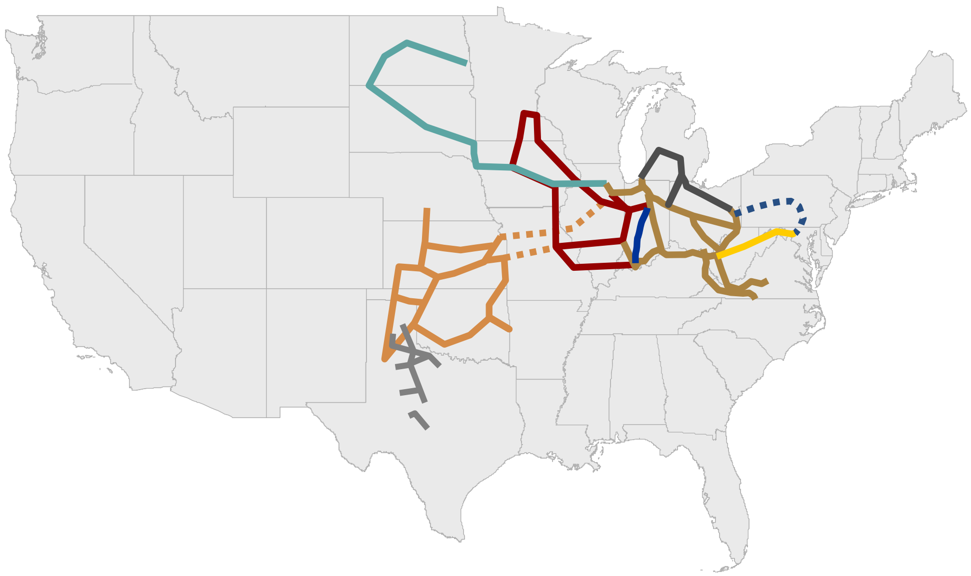
Pioneer — **COD: 2015**
- *240 miles of 765 kV*
- *Partner: Duke Energy (50%)*
- *Estimated Cost: $1 billion*
- *ROE: 12.54%*

PATH-WV — **COD: 2014**
- *275 miles of 765 kV*
- *Partner: Allegheny Energy (50%)*
- *Estimated Cost: $1.2 billion*
- *ROE: 14.3%*

Tallgrass — **COD: 2013-14**
- *170 miles of 765 kV*
- *Partners: OG&E (50%) & MidAmerican Energy (25%)*
- *Estimated Cost: $500 million*
- *ROE: 12.8%*

Prairie Wind — **COD: 2013**
- *110 miles of 765 kV*
- *Partners: Westar Energy (50%) & MidAmerican Energy (25%)*
- *Estimated Cost: $400 million*
- *ROE: 12.8%*

ETT — **COD: 2013**
- *345 kV in ERCOT*
- *Partner: MidAmerican Energy (50%)*
- *Estimated Cost: $420 million*
- *ROE: 9.96%*



Future Projects:

EHV Michigan — **COD: ~2020**
- *700 miles of 765 kV*

PJM Projects
- *Enhance existing 765/345 kV*

Hartland — **COD: ~2020**
- *1000+ miles of 765 kV*

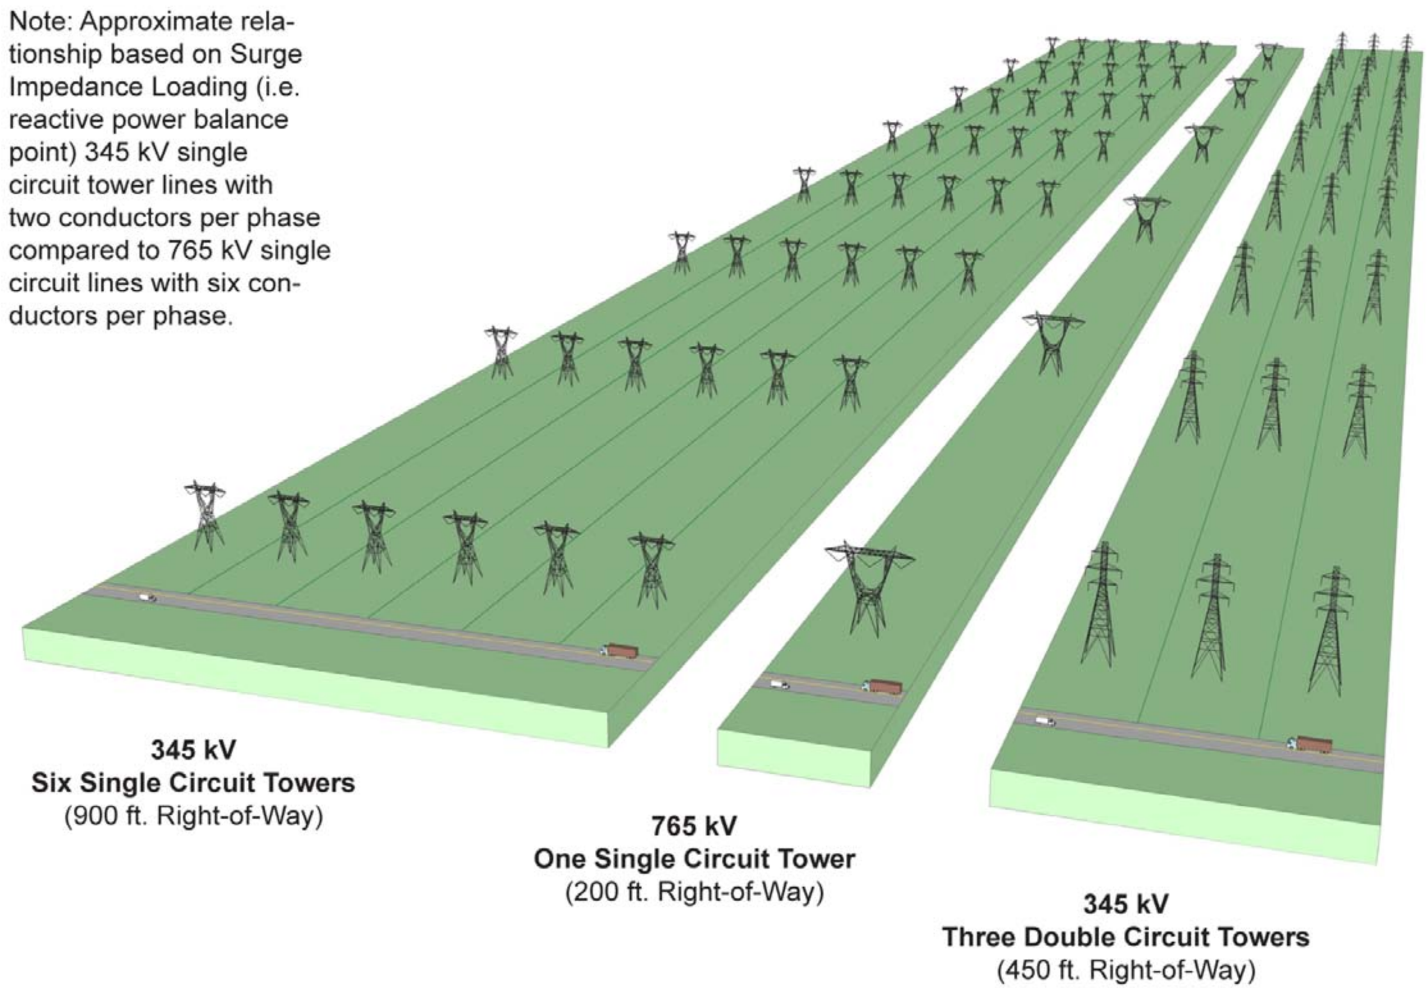
MISO Vision Plan
- *765 kV Backbone*

SPP Overlay — **COD: 2013-14**
- *765 kV Backbone*

ETT — **COD: ~2018**
- *345 kV in ERCOT*
- *Additional CREZ spend of $750-$850 million*

Note: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

765 Right-of-Way Comparison



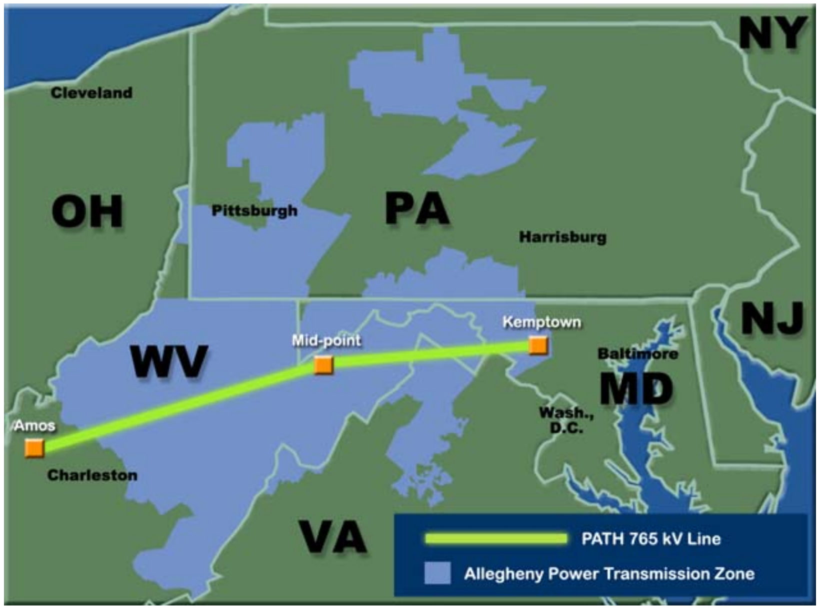
From a siting standpoint, 765-kV is more efficient in terms of economies of scale and right-of-way than lower capacity lines.

EHV Transmission in PJM: PATH

Project Description: 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

Overview

- FERC order issued on February 29, 2008 approving:
  - Cash return on CWIP and 14.3% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect, and
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
  - Rates went into effect March 1, 2008; current annual revenue requirement is $15MM effective 1/1/09



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges

- Obtaining a CPCN in West Virginia or costly concessions with WV to receive the CPCN; CPCN filing made May 15, 2009 with a decision expected June, 2010.
- Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million
- Estimated completion date: 2014

PATH
Potomac-Appalachian Transmission Highline

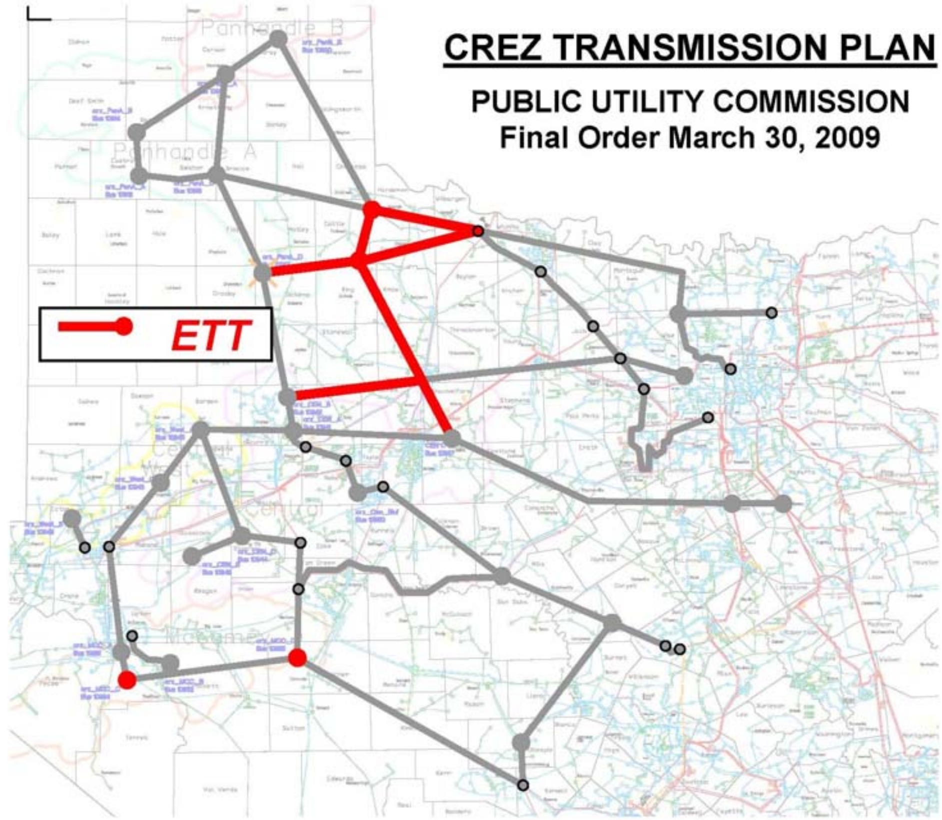
Texas CREZ Project

Status

- On February 26, 2009, PUCT ordered its staff to stage the development of CREZ transmission lines.
- Staging to occur in separate docket and consider timing of wind projects and congestion.
- PUCT established 2 categories based on priorities. ETT has no first priority lines.
- PUCT issued a final order assigning transmission service providers on March 30, 2009.
- ETT's share of CREZ investment is approx. $840MM of $4.9B total of which AEP's ownership is 50%.
- The filing calls for completion of the plan by 2013.

Next Steps

- Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in 2010.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

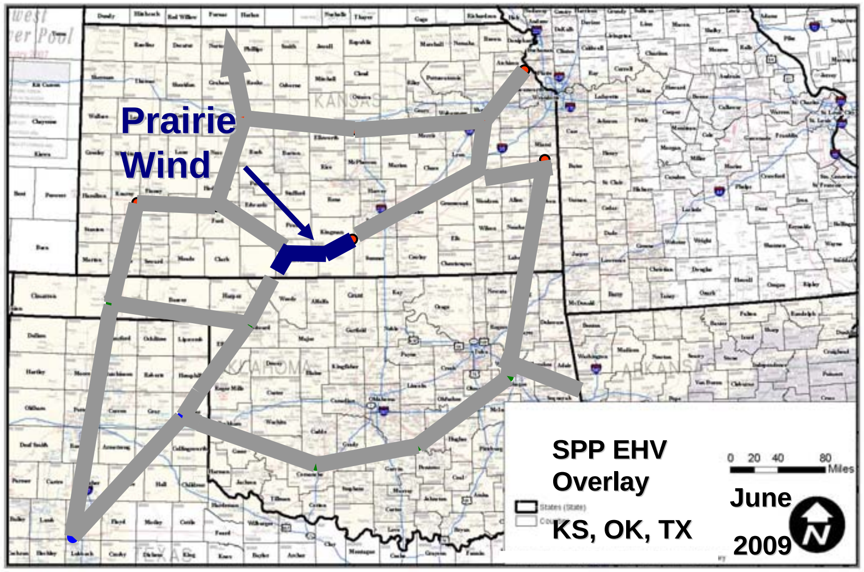
ETT Electric Transmission Texas

Prairie Wind Transmission, LLC

JV to build first segment of 765-kV transmission in SPP

Overview

- In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
- Following a settlement agreement with ITC both entities agreed to split the mileage and costs of building the 765-kV transmission superhighway. The newly revised project is expected to cost approximately $400 million and be in-service by 2013. Settlement was approved by the KCC on July 24, 2009.
- PWT is a 50/50 JV that is proposing to build approximately 110 miles of 765-kV lines extending from Wichita, KS, west to a substation near Medicine Lodge, KS, and then south to the Kansas border from Medicine Lodge, KS.
- The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
    - Cash return on CWIP and 12.8% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PWT or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges

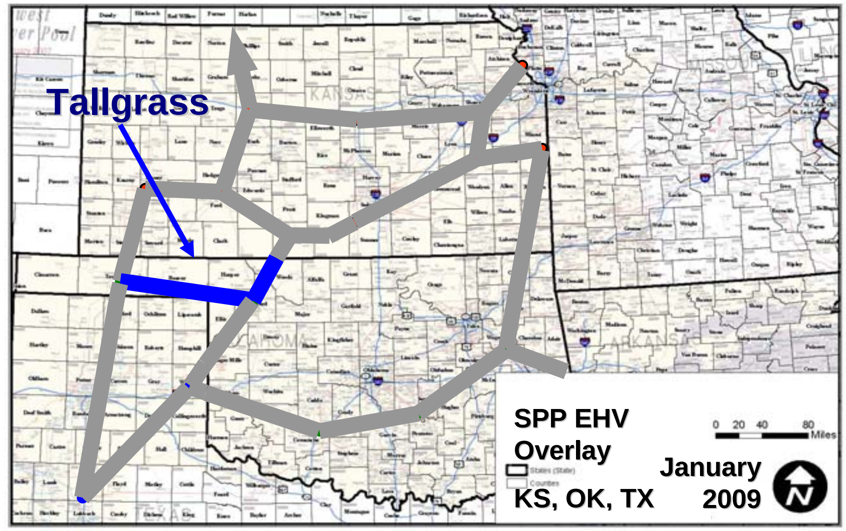
- Regional Cost allocation which enables the development of "system solutions"
- RTO Approval

Tallgrass Transmission, LLC

JV to build second segment of 765-kV transmission in SPP

Overview

- In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
- TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines extending from the Kansas-Oklahoma border north of Woodward, OK, extending west into the Oklahoma panhandle to a new station that will be built near Guymon, OK.
- The project will promote wind development in the western half of Oklahoma.
- Project is expected to cost approximately $500 million and be in-service by 2013-14.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
    - Cash return on CWIP and 12.8% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of TG or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

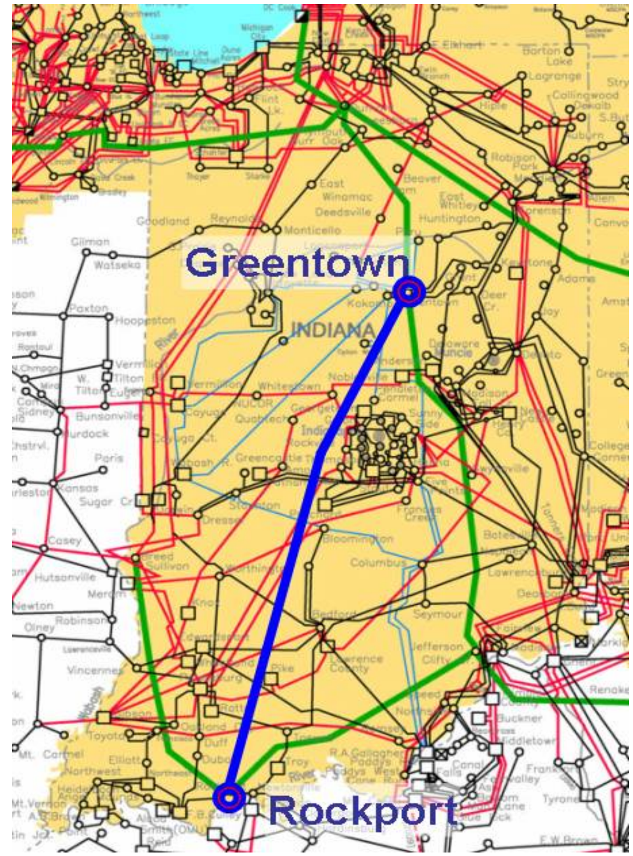
Key Challenges

- Cost allocation which enables the development of "system solutions"
- RTO Approval

Pioneer Transmission LLC

Overview

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
- The project will improve the reliability of the nation's transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, protect national security and expand opportunities for new generation, including renewables.
- Project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP's ownership of the joint venture is 50%.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect, and
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PT or its parents.



Key Challenges

- Cost allocation which enables the development of "system solutions"
- RTO Approval - touches two RTOs – PJM & MISO
- Siting

Upper Midwest EHV Development – SMART Study

Project Description: 1000+ miles of 765-kV transmission linking Upper Midwest generation sources with the existing EHV infrastructure in the Chicago area expected to cost $5-$10 billion over a 10 year period.

- **Announced SMARTransmission Study in August 2009.**
  - Participants include ETA, Exelon, ATC, Northwestern, MidAmerican and Excel
  - Study due to be completed in early 2010 and will include “overlay” options and quantification of economic benefits.
- **Near Term Risks**
  - Obtaining cost allocation between states, PJM, and MISO
  - RTO Technical Approvals
  - Favorable 205 Order including incentives
- **Mitigation**
  - Collaborative approach involving impacted utilities, RTOs, commissions and others

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP AMERICAN® ELECTRIC POWER

2010 Fact Book

45th EEI
Financial Conference
Palm Desert, CA

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

Company Overview

Company Overview

Company Overview

OUR FOCUS IS OUR CORE

DOMESTIC UTILITY BUSINESS OPERATIONS

American Electric Power Company, Inc. is one of the largest investor-owned electric public utility holding companies in the US. We provide generation, transmission and distribution services to over 5 million retail customers in eleven states (Arkansas, Indiana, Kentucky, Louisiana, Michigan, Ohio, Oklahoma, Tennessee, Texas, Virginia and West Virginia) through our electric utility operating companies.

We have seven regional operating companies for distribution and customer service operations that serve the customers of our eleven electric utility subsidiaries:

Regional Utility Divisions	**Electric Utility Subsidiaries**
AEP Ohio	Columbus Southern Power Ohio Power Wheeling Power
AEP Texas	Texas Central Company Texas North Company
Appalachian Power	Appalachian Power Kingsport Power
Indiana Michigan Power	Indiana Michigan Power
Kentucky Power	Kentucky Power
Public Service Company of Oklahoma	Public Service Company of Oklahoma
Southwestern Electric Power Co.	Southwestern Electric Power Co.

Company Overview

SIGNIFICANT PRESENCE THROUGHOUT

THE DOMESTIC VALUE CHAIN

Our US electric assets include:

- Almost 39,000 megawatts of generating capacity in 3 RTOs (one of the largest US generation portfolios with a significant cost advantage in many of our market areas)
- Approximately 39,000 circuit miles of transmission lines, including 2,116 miles of 765kV lines, the backbone of the electric interconnection grid in the Eastern U.S.
- Approximately 215,000 miles of overhead and underground distribution lines

With our coal and transportation assets we:

- control over 9,000 railcars
- own and/or operate approximately 3,000 hopper barges, 62 towboats and 27 harbor boats
- operate one active coal-handling terminal with 18 millions tons of capacity

AEP consumes approximately 70 million tons of coal annually.

Operating Company Overview

Operating Company Overview

- AEP East Regional Utilities
- AEP West Regional Utilities

AEP East Regional Utilities

Appalachian Power

President and Chief Operating Officer:
Charles Patton

Appalachian Power Company (APCo)

(organized in Virginia in 1926) is engaged in the generation, transmission and distribution of electric power to approximately 959,000 retail customers in the southwestern portion of Virginia and southern West Virginia, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities and other market participants. At December 31, 2009, APCo and its wholly owned subsidiaries had 2,577 employees. Among the principal industries served by APCo are paper and rubber products, coal mining, primary metals, textile mill products, and stone, clay and glass products. In addition to its AEP System interconnections, APCo also is interconnected with the following unaffiliated utility companies: Carolina Power & Light Company, Duke Carolina and Virginia Electric and Power Company. APCo has several points of interconnection with TVA and has entered into agreements with TVA under which APCo and TVA interchange and transfer electric power over portions of their respective systems. APCo is a member of PJM.

PRINCIPAL INDUSTRIES SERVED:
Primary Metals
Coal Mining
Chemical
Paper Products

Total Customers at 12/31/09:

Residential	**818,000**
Commercial	**130,000**
Industrial	**4,000**
Other	**7,000**
Total	**959,000**

Generating Capacity **6,287 MW**

Generating Capacity by Fuel Mix:

- **Coal: 81.0%**
- **Hydro/Pump: 10.8%**
- **Nat Gas: 8.2%**

Transmission Miles	**6,807**
Distribution Miles	**50,460**

AEP Ohio - Columbus Southern Power

President and Chief Operating Officer: Joe Hamrock

AEP Ohio-Columbus Southern Power Company (CSPCo)

(organized in Ohio in 1937, the earliest direct predecessor company having been organized in 1883) is engaged in the generation, transmission and distribution of electric power to approximately 749,000 retail customers in Ohio, and in supplying and marketing electric power at wholesale to other electric utilities, municipalities and other market participants. At December 31, 2009, CSPCo had 1,283 employees.

CSPCo's service area is comprised of two areas in Ohio, which include portions of twenty-five counties. One area includes the City of Columbus and the other is a predominantly rural area in south central Ohio. Among the principal industries services are primary metals, chemical and allied products, health services and electronic machinery. In addition to its AEP System interconnections, CSPCo also is interconnected with the following unaffiliated utility companies: Duke Energy Ohio, DP&L and Ohio Edison Company. CSPCo is a member of PJM.

Indiana Michigan Power

President and Chief Operating Officer: Paul Chodak

Indiana Michigan Power Company (I&M)

(organized in Indiana in 1925) is engaged in the generation, transmission and distribution of electric power to approximately 583,000 retail customers in northern and eastern Indiana and southwestern Michigan, and in supplying and marketing electric power at wholesale to other electric utility companies, rural electric cooperatives, municipalities and other market participants. At December 31, 2009, I&M had 3,008 employees. Since 1975, I&M has leased and operated the assets of the municipal system of the City of Fort Wayne, Indiana. This lease extends through February 2010 and its termination is currently being litigated. In addition to its AEP System interconnections, I&M is interconnected with the following unaffiliated utility companies: Central Illinois Public Service Company, Duke Ohio, Commonwealth Edison Company, Consumers Energy Company, Illinois Power Company, Indianapolis Power & Light Company, Louisville Gas and Electric Company, Northern Indiana Public Service Company, Duke Indiana and Richmond Power & Light Company. I&M is a member of PJM.

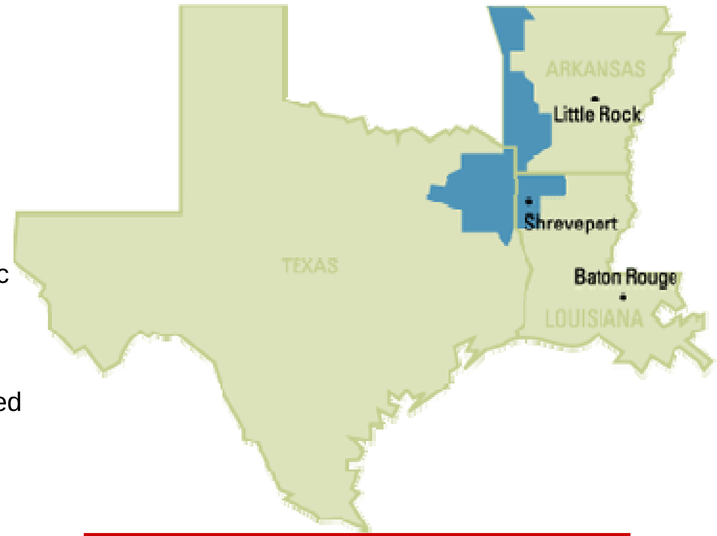
Southwestern Electric Power

President and Chief Operating Officer: Venita McCellon-Allen



Southwestern Electric Power Company (SWEPCO)

(organized in Delaware in 1912) is engaged in the generation, transmission and distribution of electric power to approximately 474,000 retail customers in northeastern Texas, northwestern Louisiana and western Arkansas, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities, rural electric cooperatives and other market participants. At December 31, 2009, SWEPCo had 1,671 employees. The territory served by SWEPCo also includes several military installations, colleges, and universities. SWEPCO also owns and operates a lignite coal mining operation. In addition to its AEP System interconnections, SWEPCo is also interconnected with CLECO Corp., Empire District Electric Co., Entergy Corp. and Oklahoma Gas & Electric Co. SWEPCo is a member of SPP.

In November 2009, SWEPCo signed a letter of intent to purchase the transmission and distribution assets and to assume certain liabilities of Valley Electric Membership Corporation (VEMCO) for approximately $96 million, subject to regulatory approval by the LPSC and the APSC. VEMCO services approximately 30,000 member customers in eight parishes south of Shreveport, Louisiana. SWEPCo expects to complete the transaction in the second quarter of 2010.

Regulation

Regulation

- Regulatory Strategy
- Rate Case Filing Requirements
- Regulatory Activity Underway
- Commission Overviews
- Approved Rate Base and ROE by Operating Company

Regulatory Strategy: Reduce Lag

- Maximize frequency of filings
  - Seek ability to pro-forma both capital and O&M through date which rates are effective
- Single-issue cost recovery
  - Reliability
  - Vegetation
  - Environmental
- Trackers/Riders/Regulatory Adjustment Clauses
  - Federally-approved transmission costs
  - Fuel and emissions
  - Energy efficiency programs
- Formula rates
  - Including periodic true-ups and approved earnings bands
- Future test years
- Accelerated cost recovery/depreciation/replacement cost accounting
- Pre-Approvals
- Securitization
- Return on CWIP

The strategy: reduce the time between in-service dates and rate recovery

Summary of Rate Case Filing Requirements

	Arkansas	Indiana	Kentucky	Louisiana	Michigan	Ohio	Oklahoma	Texas	Virginia	West Virginia	FERC
General											
Time Limitations Between Cases	No	Yes	No	No	No	No	No	No	Yes	No	No

Commission Overview

Arkansas Public Service Commission

AEP Regulated Electric Utilities

Southwestern Electric Power Co.

Commissioners

Number: 3	**Appointed/Elected: Appointed**	**Term: 6 Years**	**Political Makeup: R: 1 D: 2**

Qualifications for Commissioners

The Arkansas Public Service Commission (APSC) is composed of 3 members. The Governor appoints the Commissioners as well as the Chairman. Governor Beebe has appointed all of the current commissioners.

Commissioners

Paul Suskie, Chairman (Dem.), since 2007; current term ends in 2013. Lawyer, North Little Rock, Arkansas City Attorney. Bachelor's attained at University of Central Arkansas. Juris Doctorate at University of Arkansas at Little Rock School of Law. NARUC member including the Committee on Consumer Affairs and Electricity Committee.

Olan Reeves, Commissioner (Rep.), since 2009; current term ends in 2015. Chairman of the Workers' Compensation Commission from January, 2003 until January, 2009. Prior to these appointments, Commissioner Reeves was Chief Legal Counsel to the Governor from 1998-2003 and served as the State Drug Director from 1996 to 1998. Reeves received his Juris Doctorate from the University of Arkansas School of Law in Fayetteville.

Collette Honorable, Commissioner (Dem.), since 2007; current term ends in 2011. Commissioner Honorable is a member of NARUC and serves on the Consumer Affairs and Investment Committees. She also serves on the Smart Grid Collaborative, a joint effort of NARUC and the FERC. Honorable obtained her Juris Doctorate from the University of Arkansas at Little Rock School of Law.

AEP Regulatory Status

SWEPCo-AR provides service at regulated bundled rates in Arkansas. Arkansas has an active fuel pass-through clause. Arkansas has an OSS margin sharing mechanism and allows CWIP in rate base for a plant that is placed in service within six months after the end of the test year.

Commission Overview

Indiana Utility Regulatory Commission

AEP Regulated Electric Utilities

Indiana Michigan Power Co.

Commissioners

Number: 4	**Appointed/Elected: Appointed**	**Term: 4 Years**	**Political Makeup: R: 2 D: 2**
Qualifications for Commissioners Five members, appointed by the Governor from among persons nominated by a legislatively mandated utility commission nominating committee; four-year, staggered terms, full-time positions. Not more than three of the members of the IURC shall be members of the same political party. At least one of the commissioners must be an attorney qualified to practice law before the Indiana Supreme Court. The Governor appoints one of the five as chairperson.			
Commissioners **Jim Atterholt, Chairman (Rep.),** since 2009; current term ends 2014. Prior to joining the Commission, he was the State Insurance Commissioner for more than four years where he also served as a member of the Governor's Cabinet. Atterholt worked as Director of Government Affairs for AT&T--Indiana from 2003 – 2004. Atterholt holds a Bachelors degree from the University of Wisconsin.			
Carolene R. Mays, Commissioner (Dem.), since 2010; current term will expire December 2013. Former publisher and president of the Indianapolis Recorder Newspaper and the Indiana Minority Business Magazine. From 2002 to 2008, served in the Indiana House of Representatives and sat on the committees for Small Business and Economic Development, Ways and Means and Public Health.			
Larry S. Landis, Commissioner (Rep.), since 2002; current term ends December 2011. Former president of a marketing and communications agency, VP Corporate Advertising, American Fletcher National Bank. Bachelor's degrees in political science and economics.			
David E. Ziegner, Commissioner (Dem.), since 1990; current term ends April 2011. Lawyer, staff attorney for Legislative Services Agency, General Counsel for IURC. Member, NARUC Committee on Electricity and chairman of the NARUC clean coal and carbon sequestration subcommittee. Law degree from the Indiana University School of Law in Indianapolis.			

AEP Regulatory Status

I&M–Indiana provides retail electric service at bundled rates approved by the IURC. Rates are set on a cost-of-service basis with a fuel recovery mechanism. I&M–Indiana has trackers in place for PJM expenses, OSS sharing, clean coal technology, environmental and DSM.

Commission Overview

Kentucky Public Service Commission

AEP Regulated Electric Utilities

Kentucky Power Co.

Commissioners

Number: 3	Appointed/Elected: Appointed	Term: 4 Years	Political Makeup: R: 2 D:1
Qualifications for Commissioners Typically three members, appointed by the governor and confirmed by the state senate for four years, staggered terms, full-time positions. The governor appoints one of the three as chairman and another of the three as vice chairman to serve in the chairman's absence. Not more than two members of the KPSC shall be of the same profession or occupation.			
Commissioners **David L. Armstrong, Chairman (Dem.),** since 2008; current term expires June 2011. Former practicing attorney in private practice. Board member of NARUC and serves on its Electricity Committee and the Subcommittee on Clean Coal Technology. J.D. from University of Louisville Brandeis School of Law. Mr. Armstrong is also the former Mayor for the city of Louisville, KY (1999-2003).			
James W. Gardner, Vice Chairman (Rep.), since 2008; current term expires June 2012. Prior to joining the PSC Mr. Gardner was a partner at the law firm Henry Watz Gardner & Sellars PLLC where he specialized in bankruptcy law. JD degree from the University of Kentucky College of Law.			
Charles Borders, Commissioner (Rep.), since 2009; current term expires June 2013. Before joining the PSC, Commissioner Borders served in the Kentucky Senate, representing the 18th District in northeast Kentucky since 1991. He most recently chaired the Appropriations and Revenue Committee and served on the committees on Education and Health and Welfare. Borders received his Bachelors and Masters degrees from Morehead State University.			

AEP Regulatory Status

KPCo provides service at regulated bundled rates in Kentucky. Kentucky has an environmental surcharge to recover approved environmental costs and it has an active fuel clause. Kentucky also has an OSS sharing mechanism and a monthly adjustment clause in place for DSM.

Commission Overview

Louisiana Public Service Commission

AEP Regulated Electric Utilities

Southwestern Electric Power Co.

Commissioners

Number: 5	Appointed/Elected: Elected	Term: 6 Years	Political Makeup: R: 3 D: 2
Qualifications for Commissioners The Louisiana Public Service Commission (LPSC) is composed of five elected members. The commissioners serve overlapping terms of six years.			
Commissioners **Lambert C. Bossiere, III (Chairman) (Dem.),** since 2005; current term ends December 2010. B.S. Business Administration from Southern University. American University of Paris – International Trade Law – Paralegal Certificate. Former First City Court Constable for the City of New Orleans. Member of NARUC.			
Eric Skrmetta, (Rep.), since 2009; current term ends December 2014. Practicing Attorney since 1985. Practicing Mediator since 1989. Republican State Central Committee District 81**.** Juris Doctorate Southern University Law School.			
Foster L. Campbell, (Dem.), since 2003; current term ends December 2014. Member, Louisiana State Senate (1976-2002). Independent insurance businessman and farmer, former school teacher and agricultural products salesman. Bachelor's degree from Northwestern State University.			
James M. Field, (Rep.), since 1996; current term ends December 2012. Practicing attorney, member of Electrical Committee of NARUC. NFL contract advisor (1983-present), member, Sports Lawyers Association. Bachelor's and Juris Doctorate from Louisiana State University.			
Clyde Holloway, (Rep.), since 2009; current term ends December 2010. Elected to Congress in 1987 and served in the United States House of Representatives until 1993. In October 2006 he received an appointment by President Bush as the USDA State Director of Rural Development where he served until 2009**.**			

AEP Regulatory Status

SWEPCo-LA provides service at regulated bundled rates in Louisiana. Louisiana has an active fuel pass-through clause and an OSS margin sharing mechanism. Formula rate plans are permitted in Louisiana including a potential for a partial CWIP return on new generation projects. A formula rate plan was implemented August 1, 2008 with annual true-ups required.

Commission Overview

Michigan Public Service Commission

AEP Regulated Electric Utilities

Indiana Michigan Power Co.

Commissioners

Number: 3	**Appointed/Elected: Appointed**	**Term: 6 Years**	**Political Makeup: D: 2 I: 1**
Qualifications for Commissioners The Michigan Public Service Commission (MPSC) is composed of three members appointed by the Governor with the advice and consent of the Senate. Commissioners are appointed to serve staggered six-year terms. No more than two commissioners may represent the same political party. One commissioner is designated as chairman by the Governor.			
Commissioners **Orjiakor N. Isiogu, Chairman (Dem.),** since 2007; current term expires July 2013. Former Director of the Telecommunications Division of the MPSC. Assistant Attorney General in Michigan since 1989. Undergraduate and law degree from Wayne State University.			
Monica Martinez, Commissioner, (Dem.), since 2005; current term expires July 2011. Former Deputy Director of the Governor's Legislative Affairs Division where she served as the Governor's principal lobbyist. Previous to this, she served as an analyst for the Senate Democratic Office, where she specialized in technology and energy, human services and family law policy issues. Bachelor's and Master's degrees from University of Michigan.			
Steven A. Transeth, Commissioner, (Ind.) , since 2007; current term expires July 2015. Former assistant director and legal counsel for the Michigan Legislative Service Bureau, which included drafting legislation and providing legal counsel to the Michigan Senate and House of Representatives. Lawyer, private practice and with the Ingham County Prosecuting Attorney's office. J.D. from Thomas Cooley Law School.			

AEP Regulatory Status

Customer choice began January 2002. Generation was not deregulated. Retail rates were unbundled (though they continue to be regulated) to allow customers to evaluate generation costs. In 2008, legislation was enacted to limit customer choice load to no more than 10% of the annual retail load for the preceding calendar year. I&M-Michigan has an active fuel clause and return on CWIP can be included in base rates. Michigan currently has a mandatory renewable energy standard of 10% by 2015.

Commission Overview

Ohio Public Utilities Commission

AEP Regulated Electric Utilities

Columbus Southern Power Co.

Ohio Power Co.

Commissioners

Number: 5	Appointed/Elected: Appointed	Term: 5 Years	Political Makeup: R: 1 D: 2 I: 2

Qualifications for Commissioners

Five members, appointed by the governor and confirmed by the state senate; five year, staggered terms, full-time positions, commissioners shall be selected from the lists of qualified persons submitted to the governor by the PUC nominating council. Not more than three of the members of the PUCO shall be members of the same political party. The governor appoints one of the five as president, who serves at the pleasure of the governor until a successor has been designated.

Commissioners

Alan R. Schriber, Ph.D., Chairman, (Ind.) , since 1999; term expires April 2014. Economics professor, president of a radio broadcasting company, investment advisor. Previously served as commissioner on the PUCO from 1983-1989. Member NARUC Telecommunications Committee, National Governors' Association Electricity Task Force, Harvard Electricity Policy Group.

Paul A. Centolella, Commissioner, (Dem.) since 2007; term expires April 2012. Juris Doctorate from the University of Michigan. From 1992-2007, worked as a senior economist in the Energy Solutions Group of Science Applications International Corporation. Former senior policy advisor and senior utility attorney for the Office of the Ohio Consumers' Counsel.

Steven D. Lesser, Commissioner, (Rep.) since 2010; term expires April 2015. Juris Doctorate from Capital University; previously served as PUCO chief of staff, assistant director of the legal department, deputy director of the transportation department and administrative law judge/attorney examiner in the legal department.

Valerie A. Lemmie, Commissioner, (Ind.) since 2006; term expires April 2011. Master's degree in Urban Affairs and Public Policy Planning, Washington University. Served as city manager for Cincinnati, Dayton, and Petersburg, Va. Scholar-in-residence at the Kettering Foundation. Past President of the National Academy of Public Administration.

Cheryl Roberto, Commissioner, (Dem.) since 2008; term expires April 2013. Prior to joining the PUC, Roberto was director of the City of Columbus Public Utilities Department. Before entering the public sector, Commissioner Roberto worked as an assistant attorney general for the state of Ohio. Commissioner Roberto received her B.A. with honors from Kent State University and her Juris Doctorate from the Moritz College of Law at The Ohio State University.

AEP Regulatory Status

On March 18, 2009 the Ohio PUC approved an electric security plan allowing for revenue increases of 7% in 2009 and 6% in 2010 and 2011 for Columbus Southern Power and revenue increases of 8% in 2009, 7% in 2010 and 8% in 2011 for Ohio Power. Transmission rates are currently regulated by FERC as reflected in the OATT. SB221 allows that CSP and OPCo have active fuel clauses effective January 1, 2009. Ohio currently has a mandatory renewable energy standard of 25% by 2025.

Commission Overview

Oklahoma Corporation Commission

AEP Regulated Electric Utilities

Public Service Company of Oklahoma

Commissioners

Number: 3	**Appointed/Elected: Elected**	**Term: 6 Years**	**Political Makeup: R: 3 D: 0**
Qualifications for Commissioners The Oklahoma Corporation Commission (OCC) is composed of three commissioners who are elected by state-wide vote. Commissioners serve staggered six-year terms. The election pattern was established when the Commission was created by the state constitution.			
Commissioners **Bob Anthony, Chairman, (Rep.),** since 1989; current term expires January 2013. Member, NARUC. Served on the boards of the Oklahoma State, Oklahoma City, and South Oklahoma City chambers of commerce. Earned an M.Sc. from the London School of Economics, an M.A. from Yale University and an M.P.A. from the Kennedy School of Government at Harvard University.			
Jeff Cloud, Commissioner (Rep.), since 2002; current term ends January 2015. Member, NARUC. Served as U.S. Congressman's District Director. Served as the Oklahoma City Mayor's Chief of Staff. Law degree from Oklahoma City University.			
Dana Murphy, Commissioner, (Rep.), since 2008; current term expires January 2015. Member, NARUC. Murphy's prior experience includes working as an administrative law judge at the Commission. She has more than 20 years experience in the petroleum industry including owning and operating her own private law practice and working as a geologist in the Oklahoma petroleum industry. Juris Doctorate Oklahoma City University.			

AEP Regulatory Status

PSO provides retail electric service in Oklahoma at bundled rates approved by the OCC. PSO's rates are set on a cost-of-service basis. Fuel and purchased energy costs above the amount included in base rates are recovered by applying a fuel adjustment factor to retail kilowatt-hour sales. The factor is generally adjusted annually and is based upon forecasted fuel and purchased energy costs. Over or under collections of fuel costs for prior periods are returned to or recovered from customers when new annual factors are established. PSO has an OSS margin sharing mechanism.

Commission Overview

Tennessee Regulatory Authority

AEP Regulated Electric Utilities

Kingsport Power Co.

Commissioners

Number: 4	**Appointed/Elected: Appointed**	**Term: 6 Years**	**Political Makeup: R: 1 D: 3**

Qualifications for Commissioners

The Tennessee Regulatory Authority (TRA) directors are appointed, one each, by the Governor, Lieutenant Governor (as Speaker of the Senate), Speaker of the House and one joint appointment by the three together, and are confirmed by the Tennessee General Assembly. The directors are appointed for six and three-year staggered terms. The chairmanship rotates every year in an agreed upon decision by the directors.

Commissioners

Sara Kyle, Director (Dem.), since 1996; current term expires June 2014. Former assistant public defender until she was elected to the Memphis City Court bench. The longest serving commissioner and only holdover from the previous Regulatory Authority. Law degree from Middle Tennessee State University.

Mary W. Freeman, Chairman (Dem.), since 2008; current term expires June 2011. Prior legislative director for Governor Bredesen, executive assistant to State Representative Lois DeBerry. B.A. Tennessee State University.

Kenneth Hill, Director (Rep.), since 2009; current term expires June 2015. At the time of his appointment to the TRA, Hill was Chief Executive Officer of AECC and served as General Manager of five radio stations reaching portions of East Tennessee and four surrounding states. Doctor of Religious Education, Andersonville Baptist Seminary.

Eddie Roberson, Ph.D, Director, (Dem.), since 2006; current term expires June 2014. Former Chief of Consumer Services Division of the Regulatory Authority; also served a year as the agency's Executive Director. Served two terms on the Chattanooga City School Board. Ph.D in Public Administration from Tennessee State University.

AEP Regulatory Status

No deregulation legislation and no base rate freeze or cap. Tennessee has an active fuel clause.

Commission Overview

Public Utility Commission of Texas

AEP Regulated Electric Utilities

Texas Central Co.
Texas North Co.
Southwestern Electric Power Co.

Commissioners

Number: 3	**Appointed/Elected: Appointed**	**Term: 6 Years**	**Political Makeup: R: 3**
Qualifications for Commissioners To be eligible for appointment, a commissioner must be: (1) a qualified voter; (2) a citizen of the United States; and (3) a representative of the general public. Chairman appointed by the Governor.			
Commissioners **Barry T. Smitherman, Chairman, (Rep.),** since April 2004; current term expires August 2013. Attorney; Assistant DA; Public Finance Investment Banker. Received law degree from the University of Texas School of Law.			
Kenneth W. Anderson Jr., (Rep.) since September 2008; current term expires August 2011. Past Director of Governmental Appointments under Governor Perry. Prior to that Anderson served in private practice as a corporate attorney in the area of securities law and regulatory matters. He also served as a member of the Texas Securities Board from 1999-2006. Anderson holds a law degree from Southern Methodist University.			
Donna L. Nelson, Commissioner (Rep.), since August 2008; current term expires August 2015. Nelson served as a special assistant and advisor to Governor Perry on energy, telecommunications and cable budget and policy issues. She previously served as director of the PUC telecommunication's section and legal advisor to the PUC chairman. Nelson holds a law degree from Texas Tech University.			

AEP Regulatory Status

Retail competition has been delayed by the PUCT in the SPP area of Texas (including SWEPCO). SWEPCO-TX has an active fuel pass-through clause as well as OSS margin sharing. In some circumstances, CWIP is allowed in rate base. TCC and TNC provide retail transmission and distribution service on a cost-of-service basis at rates approved by the PUCT and wholesale transmission service under tariffs approved by the FERC consistent with PUCT rules. Transmission riders provide annual recovery dependent on the level of transmission investment and ERCOT load growth rates. AFUDC is permitted in limited circumstances.

Commission Overview

Virginia State Corporation Commission

AEP Regulated Electric Utilities

Appalachian Power Co.

Commissioners

Number: 3	**Appointed/Elected: Elected**	**Term: 6 Years**	**Political Makeup: R: 2 D: 1**
Qualifications for Commissioners The Virginia State Corporation Commission (VSCC) is composed of three members elected by the General Assembly. Commissioners are elected to serve six-year terms, staggered in two year increments. The chair rotates annually among the three commissioners on February 1.			
Commissioners **Mark C. Christie, (Rep.),** since 2004; current term expires 2016. Prior counsel to the Speaker of the House of delegates of the Virginia General Assembly. Lawyer, private practice. Law degree from Georgetown.			
Judith Williams Jagdmann, (Rep.), since 2006; current term expires 2012. Law degree from T.C. Williams School of Law at the University of Richmond. Served as Deputy Attorney General for Civil Litigation Division from 1998 to 2005. Attorney General for Commonwealth of Virginia from 2005 to 2006.			
James C. Dimitri, Chairman (Dem.), since 2008; current term expires 2014. Prior to being named Commissioner, Dimitri was in private practice in Richmond. From 1994 to 2000 he served as Senior Counsel, then General Counsel at the SCC. He was an assistant Attorney General from 1983 to 1987. Dimitri received his undergraduate degree in economics from the University of Virginia and his J.D. from the Boston University School of Law.			

AEP Regulatory Status

APCo-VA provides retail electric service in Virginia at unbundled rates. In 2007, the General Assembly passed legislation re-establishing retail rate regulation in the Commonwealth. The new legislation provides for biennial rate reviews beginning in 2009, sharing of off-system sales margins at a rate of a minimum of 25% retained by the company effective July 1, 2007 and a post-2008 rider for DSM, renewable programs and new generation. APCo-VA is entitled to adjustments to fuel rates to recover its actual fuel costs, the fuel component of its purchased power costs and certain capacity charges. Virginia currently has a voluntary renewable energy standard of 12% by 2022, which AEP intends to comply with.

Commission Overview

Public Service Commission of West Virginia

AEP Regulated Electric Utilities

Appalachian Power Co.
Wheeling Power Co.

Commissioners

Number: 3	Appointed/Elected: Appointed	Term: 6 Years	Political Makeup: R: 1 D: 2

Qualifications for Commissioners

The West Virginia Public Service Commission (WVPSC) consists of three members, appointed by the Governor, with the advice and consent of the senate. No more than two members of the commission may belong to the same political party. The Commissioners serve six year staggered terms, with one term expiring as of July 1 of each odd numbered year. One Commissioner is designated as Chairman of the Commission by the Governor. The Chairman serves as the chief fiscal officer of the Commission.

Commissioners

Michael A. Albert, Chairman (Rep.), since 2007; term expires June 2013. Served as a member in the Business Law Department of Jackson Kelly. President and Chairman of the board of directors of the Kanawha County Public Library. Bachelor's degree and Doctorate of Jurisprudence, West Virginia University.

Ryan B. Palmer, Commissioner (Dem.), since 2010; term expired June 2015. Served as Deputy General Counsel to West Virginia Governor Joe Manchin, III; as Attorney/Advisor to Commissioner Charlotte R. Lane of the United States International Trade Commission and Law Clerk to the Honorable W. Craig Broadwater of the United States District Court, Northern District of West Virginia. Bachelor's degree and Doctorate of Jurisprudence, West Virginia University.

Jon W. McKinney, Commissioner (Dem.), since 2005; term expires June 2011. Currently on the board of directors of the NARUC and second VP of the Mid-Atlantic Conference of Regulated Utilities Commissioners. Formerly served as plant manager of Flexsys' Nitro, W .V. operations, chairman of Chemical Industry Committee for W.V., board member of W.V. Chamber of Commerce, W.V. Manufacturer's Association, Chemical Alliance Zone, W.V. Roundtable, Advantage Valle, St. Francis Hospital & Thomas Memorial Hospital.

AEP Regulatory Status

APCo and Wheeling Power in WV provide retail electric service at bundled rates approved by the WV PSC. West Virginia has an active annual ENEC (Expanded Net Energy Cost) mechanism, which provides for a rate adjustment for fuel costs, among other items. West Virginia also has a special construction surcharge permitted, primarily related to environmental-related construction. West Virginia currently has a renewable energy standard of 25% by 2015.

Commission Overview

Federal Energy Regulatory Commission

Commissioners

Number: 5	Appointed/Elected: Appointed	Term: 5 Years	Political Makeup: R: 2 D: 3

Qualifications for Commissioners

The Federal Energy Regulatory Commission (FERC) is composed of up to five commissioners who are appointed by the President of the United States with the advice and consent of the Senate. Commissioners serve five-year terms, and have an equal vote on regulatory matters. To avoid any undue political influence or pressure, no more than three commissioners may belong to the same political party.

Commissioners

Jon Wellinghoff, Chairman (Dem.), since 2006; term expires June 2013. Chairman Wellinghoff is an energy law specialist with more than 30 years experience in the field. Before joining FERC, he was in private practice and focused exclusively on client matters related to renewable energy, energy efficiency and distributed generation. While in the private sector, Chairman Wellinghoff represented an array of clients from federal agencies, renewable developers, and large consumers of power to energy efficient product manufacturers and clean energy advocacy organizations.

Mark Spitzer, Commissioner (Rep.) since 2006: term expires June 2011. Prior to becoming a commissioner, Spitzer served as chairman of the Arizona Corporation Commission (ACC), where he focused on policies encouraging expansion of natural gas infrastructure, specifically distribution and storage: creating a demand side management policy: enhancing the ACC's renewables standard: and advancing consumer privacy concerns in telecommunications.

Sheryl A. LaFleur, Commissioner (Dem.) since 2010; term expires June 2014. Retired in 2007 as executive vice president and acting CEO of National Grid USA, responsible for the delivery of electricity to 3.4 million customers in the Northeast. Her previous positions at National Grid and its predecessor New England Electric System included COO, president of New England distribution and general counsel. She practiced law in Boston earlier in her career, and has been a community and nonprofit leader

John R. Norris, Commissioner (Dem.) since 2010: term expires June 2012. Most recently served as Chief of Staff to Secretary Tom Vilsack of the U.S. Department of Agriculture. Prior to joining the USDA, he served as Chairman of the Iowa Utilities Board (IUB) from 2005 to 2009. During his tenure as IUB Chairman, Commissioner Norris served on the National Association of Regulatory Utility Commissioners (NARUC) Electricity Committee and was Co-Chair of the 2009 National Electricity Delivery Forum

Phillip D. Moeller, Commissioner (Rep.), since 2006; term expires June 2015. From 1997 through 2000, Mr. Moeller served as an energy policy advisor to U.S. Senator Slade Gorton (R-Washington) where he worked on electricity policy, electric system reliability, hydropower, energy efficiency, nuclear waste, energy and water appropriations and other energy legislation. Before becoming a Commissioner, Mr. Moeller headed the Washington, D.C., office of Alliant Energy Corporation. Prior to Alliant Energy, Mr. Moeller worked in the Washington office of Calpine Corporation.

Jurisdictional Off-System Sales Sharing Summary

STATE	OSS Sharing?	Detail
Arkansas	Yes, above and below base levels	Up to $758,600 annual margin, ratepayers receive 100%. From $758,601 to $1,167,078, ratepayers receive 85%. Above $1,167,078, ratepayers receive 50%.
Indiana	Yes	There is $37.5 million built into Indiana's base rates. Above $37.5 million, ratepayers received 50%
Kentucky	Yes, above and below base levels	Sharing occurs above and below levels included in base rates of $15,290,363, ratepayers receive 60%.
Louisiana	Yes, above base levels	Up to $874,000 annual margin, ratepayers receive 100%. From $874,001 to $1,314,000, ratepayers receive 85%. Above $1,314,000, ratepayers receive 50%.
Michigan	Yes	75% of profits are shared with ratepayers.
Ohio	No	n/a
Oklahoma	Yes	75% of profits are shared with ratepayers.
Tennessee	No	n/a
Texas (SPP)	Yes	90% of profits are shared with ratepayers.
Virginia	Yes	75% of profits are shared with ratepayers.
West Virginia	Yes	100% of profits passed back to ratepayers through the Expanded Net Energy Cost (ENEC) clause.

New Generation Project – Turk Plant

- **John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant. Located in AEP's SWEPCo region. AEP owns 73 percent or roughly 440 megawatts of the total unit.**
- The cost of the plant and related transmission is anticipated at $1.8 billion with AEP's share approximately $1.4 billion and will begin commercial operation in 2012.
- The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls

- Various legal challenges are on-going related to the plant (see 10-Q). Recently, following the Arkansas Supreme Court decision regarding CECPN, SWEPCO filed notice to the APSC that the 88MW will now be merchant and will not be included in rate base.
- Third party owners include: Arkansas Electric Cooperative Corp. (12%), East Texas Electric Cooperative (8%), and Oklahoma Municipal Power Authority (7%)

Environmental

Recent and Major Upcoming EPA Actions

- **Transport Rule – Proposed July 2010**
  - Governs power plant emissions of SO_2 and NOx that affect downwind fine particle and ozone concentrations
  - 2012 program start date with stringent second phase beginning in 2014
  - Limited interstate trading and no use of previously banked SO_2 allowances from CAIR program
  - 2014 SO_2 limits in AEP-East states will require almost all coal units to be scrubbed or retired/use gas
  - AEP believes an extension of the compliance deadlines is essential to allow states to develop implementation plans and give companies time to install the retrofits needed to comply

- **"Coal Ash" Rule – Proposed May 2010**
  - EPA proposed two different regulatory designations:
    - Solid waste – action required by ~2017
    - "Special" hazardous waste - action required by ~2018-2020
  - AEP supports regulation of coal ash under the Subtitle 'D Prime' option of the RCRA
  - Cost to AEP customers estimated at $3.9 billion by 2020 to comply with Subtitle D option

- **Mercury and other Hazardous Air Pollutants (HAPs) Rule**
  - Expect proposed rule in spring 2011, finalized in late 2011; likely compliance year - 2015
  - Could require major pollution control retrofits at most U.S. coal plants (FGD, baghouses, etc.)

Cumulative effects of EPA proposed rules and carbon legislation/regulation are a major concern for utility resource planning

Environmental Project Status Report

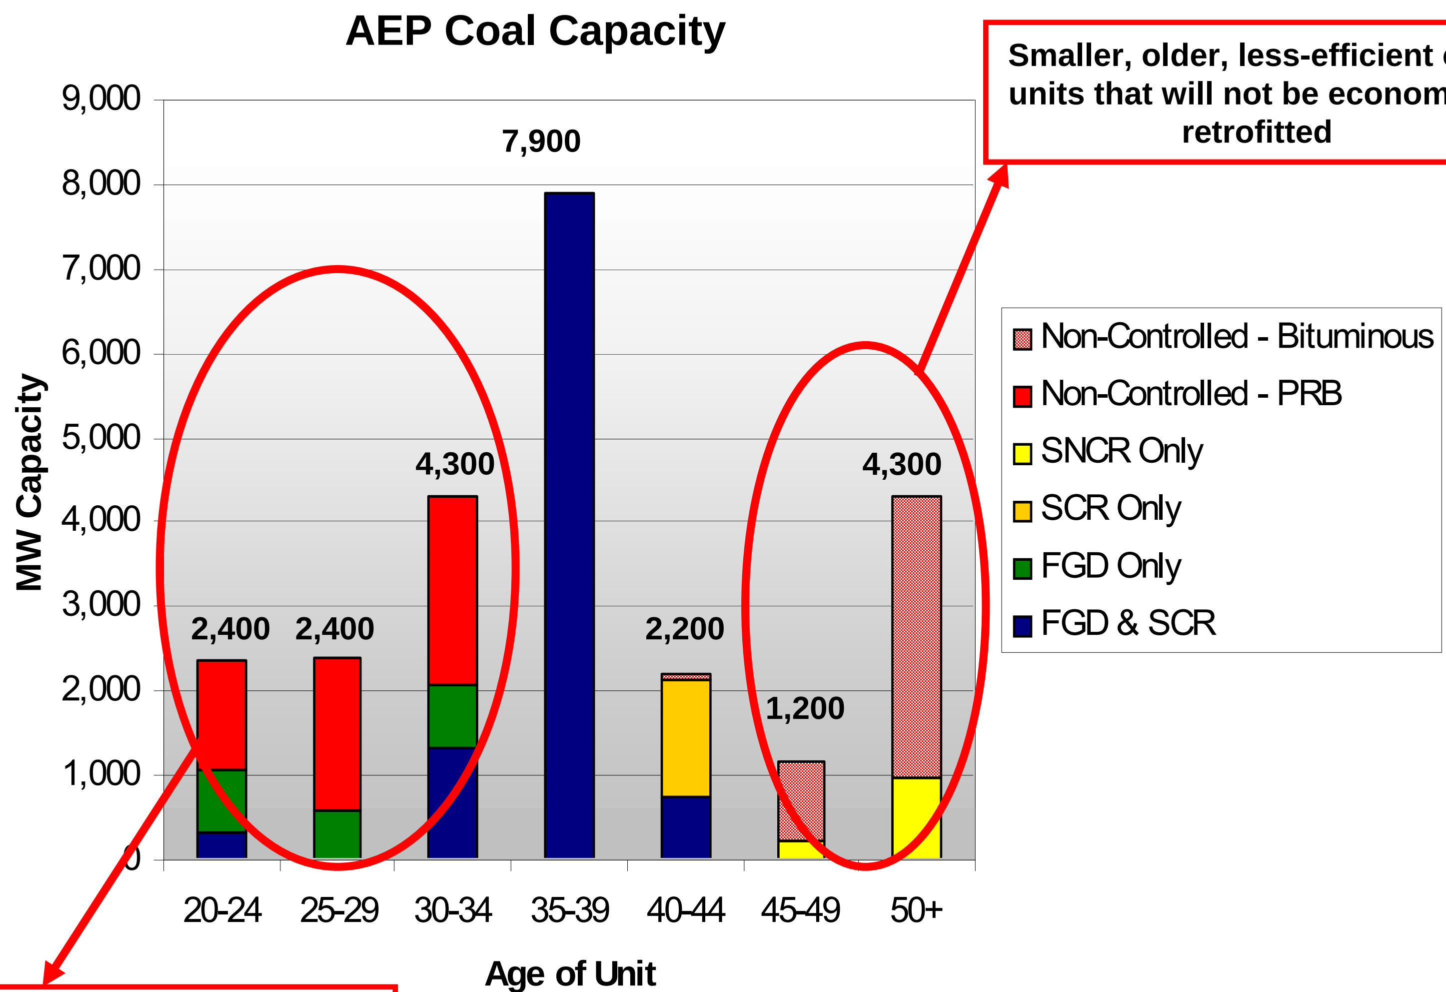
Plant Retirements are Inevitable



Smaller, older, less-efficient coal units that will not be economic if retrofitted

Newer and larger coal units that do not have SCRs and/or FGDs will be evaluated due to emerging and existing environmental requirements

Emission Limits

In compliance with our 2007 NSR settlement,
the following limits are applicable to
AEP's eastern generation fleet:

Eastern System-Wide Annual Tonnage Limitations for NO_x

Calendar Year	Limitation
2010	92,500 tons
2011	92,500 tons
2012	85,000 tons
2013	85,000 tons
2014	85,000 tons
2015	75,000 tons
2016 and each year thereafter	72,000 tons

Eastern System-Wide Annual Tonnage Limitations for SO_2

Calendar Year	Limitation
2010	450,000 tons
2011	450,000 tons
2012	420,000 tons
2013	350,000 tons
2014	340,000 tons
2015	275,000 tons
2016	260,000 tons
2017	235,000 tons
2018	184,000 tons
2019 and each year thereafter	174,000 tons

Emissions caps do not include any of the gas-fired units, or any new units AEP might build or purchase in the east.

Future Potential Green House Gas Regulations

AEP Supports Reasonable Climate Legislation

Key Design Elements:

- **Reductions and Timing -** Moderate with adequate lead times
- **Scope of Program –** Economy-wide w/ preemption of EPA authority to regulate CO_2 under existing Clean Air Act
- **Flexibility of the Program –** Market-based system w/ credit trading, banking, unrestricted offset use & early action credits
- **Allowance Allocation And Other Cost Issues –** Full, free allocation to electric sector and "Low" auctions
- **Technology Development/Deployment -** Bonus allowances or other support for carbon capture and storage (CCS)
- **International Linkage -** e.g. AEP-IBEW proposal on international competitiveness

Carbon Capture and Storage

PHASE I - Validation

- World's first operating CCS facility on a coal fired power plant
- Gained competitive advantage through technology development
- Currently testing key performance parameters: auxiliary power, removal efficiency, reliability, CO_2 product quality

PHASE II - Commercialization

- Initiated in January 2010
- Designed to capture and store 1.5 million metric tons of CO_2/year
- Estimated cost of $668 million with 50% DOE funding
- Pursuing additional funding/participation
- Scheduled in service date is mid-2015
- Key activities through July 2011 include conceptual engineering, detailed cost estimate and National Environmental Policy Act process

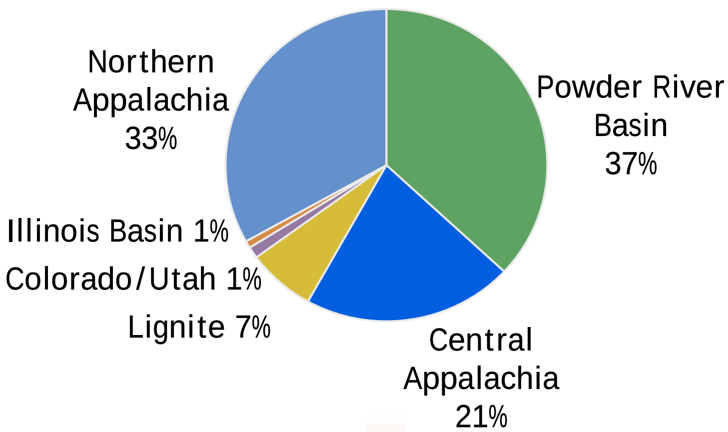
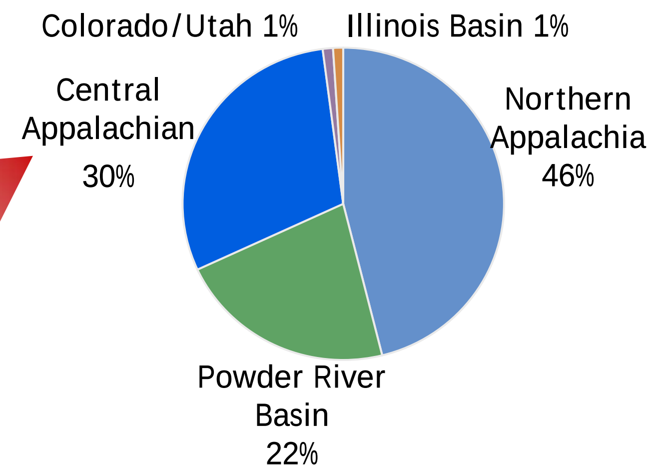
Total AEP System



AEP East



AEP West

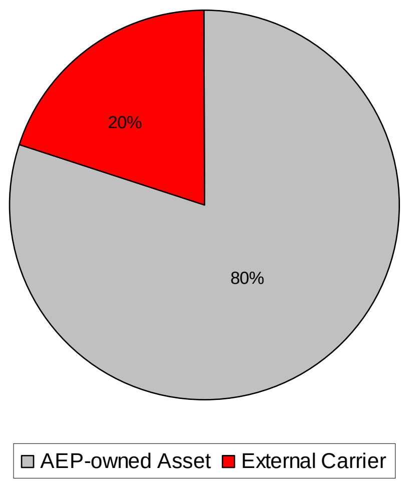
* Reflects coal delivered to AEP plants transported through a combination of rail and barge

AEP's Coal Transportation Assets

2009 Actual

Coal Transportation to AEP Plants*



***Represents close approximations**

Current Coal & Transportation Assets:

- Control over 9,000 railcars
- Own/lease and operate 3,212 barges, 62 towboats & 27 harbor boats
- Coal handling terminal with 18 million tons of capacity

AEP's transportation assets provide flexibility in a constrained delivery environment.

AEP River Operations

- Full-service Inland Waterways carrier
  - 3,212 hopper barges
  - 62 towboats and 27 tugs
- Tonnage & Commodity (2009):
  - Captive: (for AEP)-36MM tons of coal/ consumables
  - Commercial: 33MM tons of coal/grain/bulk
- Gulf Operations
  - Barge cleaning and repair
  - Fleeting and shifting
  - Midstream transfers
- Operating Centers in Lakin, WV, Paducah, KY, Convent and Belle Chase, LA

JV Strategy – Nationwide Grid Expansion

SPP

Prairie Wind — COD: 2013-14

- *75 - 110 miles of 345 kV**
- *Partners: Westar (50%) & MidAmerican Energy (25%)*
- *Estimated Cost: $162 - $225 million*
- *ROE: 12.8%*

Tallgrass — COD: 2013-14

- *170 miles of 345 kV**
- *Partners: OG&E (50%) & MidAmerican Energy (25%)*
- *Estimated Cost: $337 million*
- *ROE: 12.8%*

* May revert to 765 kV depending on 2010 SPP ITP results

ERCOT

ETT — COD: 2010-2014

- *345 kV and below CREZ & ERCOT Expansion*
- *Partner: MidAmerican Energy (50%)*
- *Total Estimated Cost: $1.1 billion*
- *ROE: 9.96%*

PJM

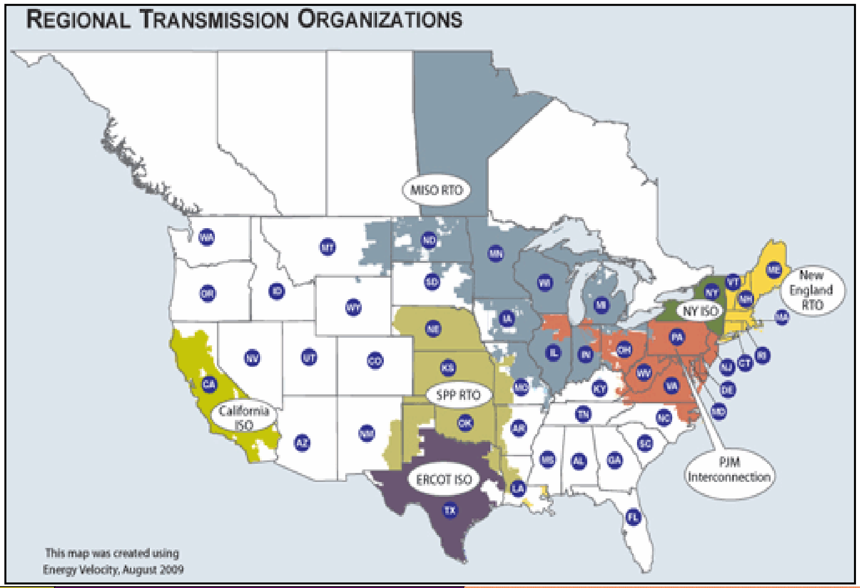
PATH-WV — COD: 2015

- *275 miles of 765 kV*
- *Partner: Allegheny Energy (50%)*
- *Estimated Cost: $1.4 billion*
- *ROE: 14.3%*

PJM/MISO

Pioneer — COD: ~2015-2017

- *Up to 240 miles of 765 kV*
- *Partner: Duke Energy (50%)*
- *Estimated Cost: up to $1 billion*
- *ROE: 12.54%*



ACTIVE PROJECTS

FUTURE DEVELOPMENT

SMARTransmission Study

  - *Total estimated cost: $1.6 billion (COD 2010-2020)*

ERCOT

PJM Expansion

- *Regional Expansion of EHV systems*

PJM

AEP Transmission Company (Transco)

- Formula rate settlement filed with FERC in September; awaiting final order
  - ROE: 11.49% in PJM and 11.2% in SPP
- $50 M invested in three states in 2010 (OH, MI & OK)
  - Ohio application for public utility status pending; approval expected in 2010
  - Oklahoma and Michigan did not require filings
- “Baseline” capital spending targets for OH, MI & OK
  - $160 M for 2011
  - $350 M for 2012
- Will pursue regulatory approvals for other states in 2011 (AR, LA, WV, VA, IN & KY)
  - Additional capital spending opportunity in these states for 2012+

765-kV Tower

Electric Transmission Texas, LLC

Overview:

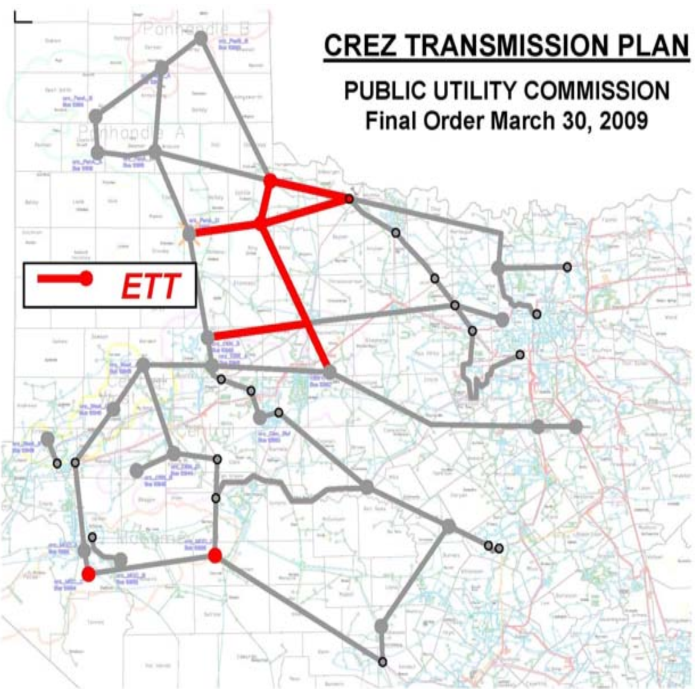
- ETT is a 50/50 JV between AEP and MidAmerican Energy Holding Company that constructs and operates transmission projects within ERCOT. Total investment opportunity of more than $3 billion.
- Current rate base of $386 million
- Debt to equity ratio of 60/40
- Authorized ROE of 9.96%.

Opportunities:

- Future CREZ projects: approx. $1.1 billion
- Other future projects: approx. $1.6 billion

Next Steps:

- Perform engineering, procurement and construction work on assigned projects
- Development of other non-CREZ projects
- Continue to operate portfolio of in-service assets



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

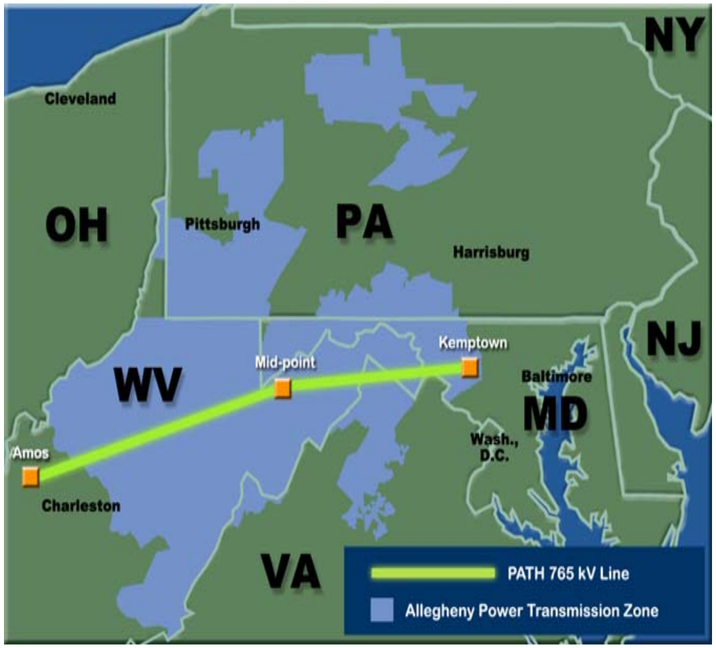
ETT Electric Transmission Texas

EHV Transmission in PJM: PATH

Project Description: 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

Overview:

- FERC order issued on February 29, 2008 approving:
  - Cash return on CWIP and 14.3% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents
  - Rates went into effect March 1, 2008
- Total estimated cost of entire line is $2.1 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.4 billion. AEP share is approximately $700 million.
- Estimated completion date: 2015.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

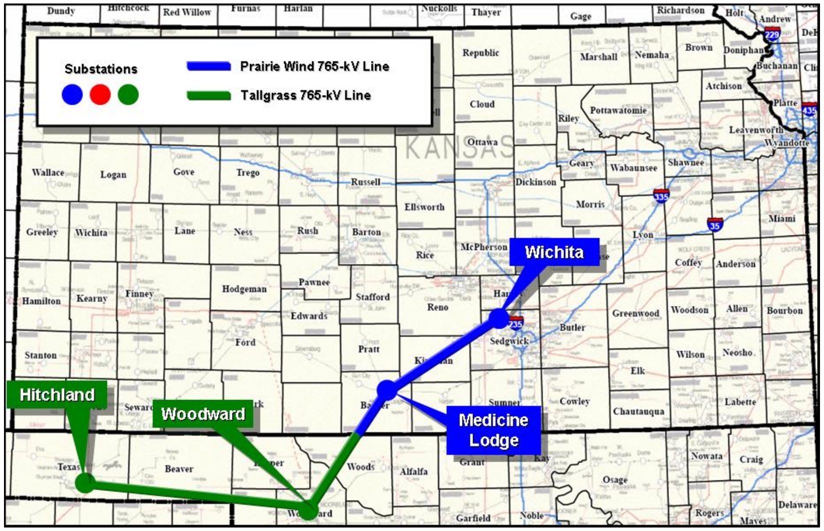
- Obtaining a CPCN in West Virginia,Virginia and Maryland.

PATH
Potomac-Appalachian Transmission Highline

Prairie Wind Transmission, LLC

Overview:

- In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
- PWT is a 50/50 JV that is proposing to build up to 110 miles of EHV lines extending from Wichita, KS.
- The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
- The project is expected to cost up to $400 million and be in-service by 2013-2014 and was approved by the KCC on July 24, 2009.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned
- Project was approved as SPP Priority Project in April 2010
  - Notice to Construct received July 2010.
  - Currently approved at 345 kV. Cost at 345 kV estimated to be up to $225 mm. May revert to 765 kV depending on results of SPP ITP study.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

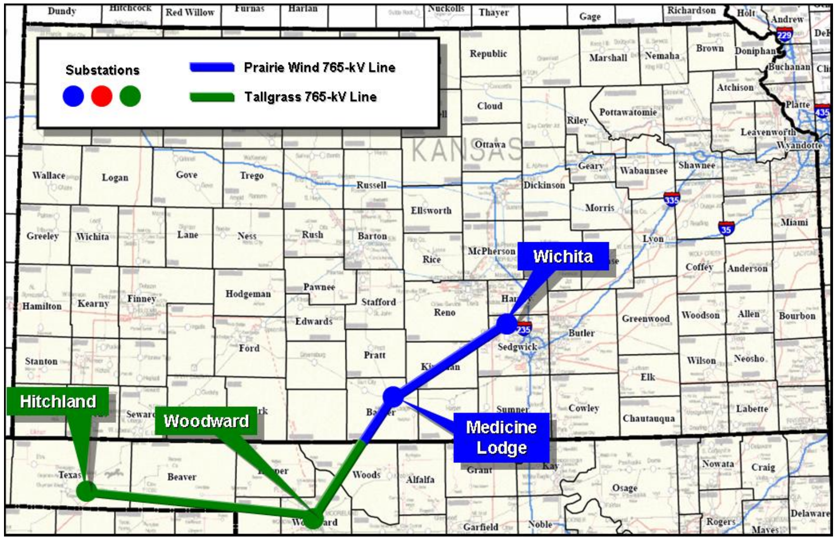
Key Challenges:

- Siting

Tallgrass Transmission, LLC

Overview:

- In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
- TG is a 50/50 JV that is proposing to build approximately 170 miles of EHV lines in Oklahoma.
- The project will promote wind development in the western half of Oklahoma.
- The project is expected to cost up to $500 million and be in-service by 2013-2014.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
    - Cash return on CWIP and 12.8% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect
    - Recovery of all prudently incurred development and construction costs if the project is abandoned
- Project was approved as SPP Priority Project in April 2010
    - Notice to Construct received July 2010.
    - Currently approved at 345 kV. Cost at 345 kV estimated to be $337 mm. May revert to 765 kV depending on results of SPP ITP study.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

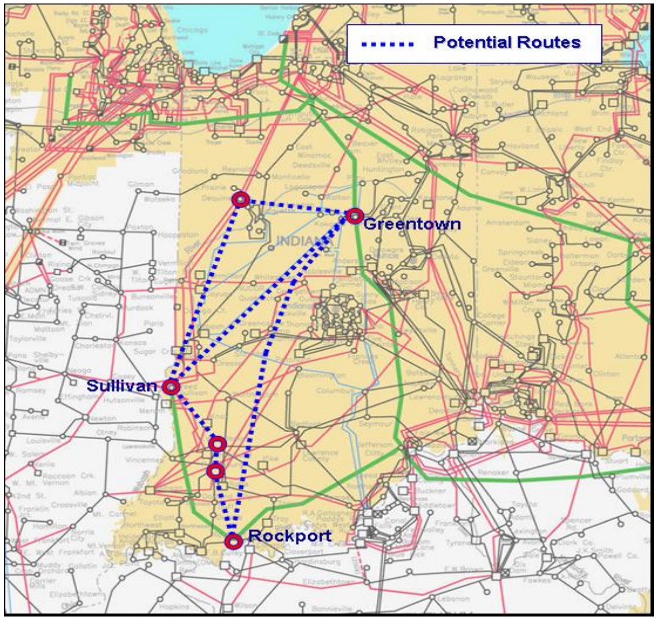
Key Challenges:

- Siting

Pioneer Transmission, LLC

Overview:

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build up to 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
- The project will improve the reliability of the transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, and expand opportunities for new generation, including renewables.
- The project is expected to cost approximately $1 billion and be in-service between 2015-2017.
- AEP's ownership of the joint venture is 50%.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

- RTO Approval (PJM & MISO)
- Cost allocation which enables the development of "system solutions"
- Siting

SMARTransmission Initiative

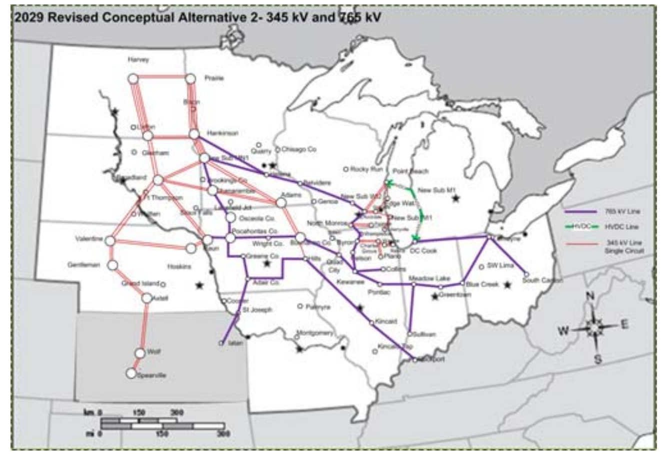
Project Description: a comprehensive study of the transmission needed in the Upper Midwest to support renewable energy development and transporting that energy to consumers throughout the study area. The SMART Study will develop EHV overlay alternatives that ensure reliable service for sponsors' communities, is environmentally friendly, and supports national energy policy.

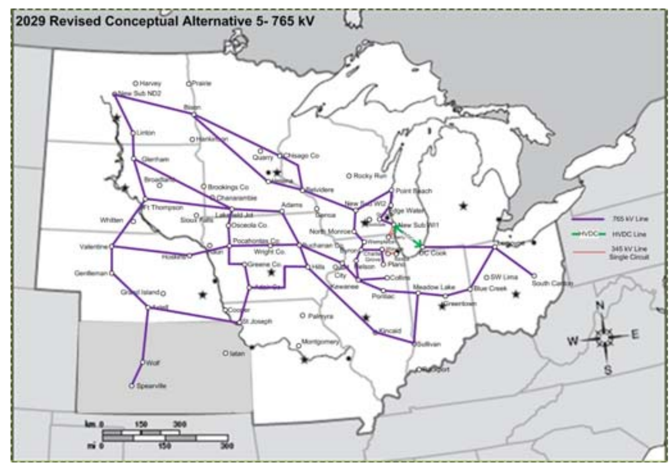
Overview:

- SMARTransmission Study announced August 2009
- Primary Focus Areas: North Dakota, South Dakota, Iowa, Nebraska, Indiana, Ohio, Illinois, Minnesota, Wisconsin, Michigan
- Study Sponsors include: ETA, Exelon, ATC, Northwestern, MidAmerican Energy Company, and Xcel
- Phase 1 (technical) completed April 2010
- Phase 2 (economic) completed October 2010
- Studied two alternatives in Phase 2; one combination 345 kV & 765 kV and one primarily 765 kV

Next Steps:

- Investment structure
- Resolution of cost allocation issues between states, PJM, and MISO
- RTO technical approvals
- Favorable FERC formula rate including incentives





The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP AMERICAN® ELECTRIC POWER

2011 Fact Book
46th EEI Financial Conference
Orlando, FL

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M's Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance, resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and the expected legal separation and transition to market for generation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives, evolving public perception of the risks associated with fuels used before, during and after the generation of electricity, including nuclear fuel and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events.

Company Overview

Company Overview

OUR FOCUS IS OUR CORE UTILITY BUSINESS OPERATIONS

Provide generation, transmission and distribution services to approximately 5.3 million customers in eleven states

Our electric assets include:

- Approximately 40,000 megawatts of generating capacity in 3 RTOs (one of the largest US generation portfolios with a significant cost advantage in many of our market areas)
- Approximately 39,000 circuit miles of transmission lines, including 2,116 miles of 765kV lines, the backbone of the electric interconnection grid in the Eastern U.S.
- Approximately 220,000 miles of overhead and underground distribution lines

With our coal and transportation assets we:

- control over 9,000 railcars
- own and/or operate approximately 3,300 hopper barges, 62 towboats and 29 harbor boats
- operate one active coal-handling terminal with 18 millions tons of capacity

AEP consumes approximately 65-70 million tons of coal annually.

- AEP West Regional Utilities

AEP East Regional Utilities

13

Appalachian Power

President and Chief Operating Officer:
Charles Patton

Since July 2010
Previously EVP – AEP Utilities West and
President & COO – AEP Texas

Appalachian Power Company (APCo)

(organized in Virginia in 1926) is engaged in the generation, transmission and distribution of electric power to approximately 957,000 retail customers in the southwestern portion of Virginia and southern West Virginia, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities and other market participants. At December 31, 2010, APCo and its wholly owned subsidiaries had 2,186 employees. In addition to its AEP System interconnections, APCo also is interconnected with the following unaffiliated utility companies: Carolina Power & Light Company, Duke Carolina and Virginia Electric and Power Company. APCo has several points of interconnection with TVA and has entered into agreements with TVA under which APCo and TVA interchange and transfer electric power over portions of their respective systems. APCo is a member of PJM.

PRINCIPAL INDUSTRIES SERVED:
Coal Mining
Primary Metals
Chemical Manufacturing
Paper Products
Pipeline Transportation

Total Customers at 12/31/10:

Residential	**814,000**
Commercial	**132,000**
Industrial	**4,000**
Other	**7,000**
Total	**957,000**

Generating Capacity **6,286 MW**

Generating Capacity by Fuel Mix:
- **Coal:** **81.0%**
- **Hydro/Pump:** **10.8%**
- **Nat Gas:** **8.2%**

Transmission Miles	**6,818**
Distribution Miles	**50,632**

AEP Ohio - Columbus Southern Power

President and Chief Operating Officer:
Joe Hamrock

Since January 2008
Previously SVP and CIO AEP Shared Services

AEP Ohio-Columbus Southern Power Company (CSPCo)

(organized in Ohio in 1937, the earliest direct predecessor company having been organized in 1883) is engaged in the generation, transmission and distribution of electric power to approximately 749,000 retail customers in Ohio, and in supplying and marketing electric power at wholesale to other electric utilities, municipalities and other market participants. At December 31, 2010, CSPCo had 1,082 employees. CSPCo's service area is comprised of two areas in Ohio, which include portions of twenty-five counties. One area includes the City of Columbus and the other is a predominantly rural area in south central Ohio. In January 2011, CSPCo and OPCo filed an application with the FERC requesting approval for CSPCo to merge into OPCo, effective in October 2011. FERC approved the merger on July 1, 2011 and a decision is pending from the PUCO. There is a stipulation on file with the PUCO in the current ESP proceeding which would approve the merger of the two companies and facilitate corporate separation of generation from transmission and distribution in order to transition generation to market in 2015. In addition to its AEP System interconnections, CSPCo also is interconnected with the following unaffiliated utility companies: Duke Energy Ohio, DP&L and Ohio Edison Company. CSPCo is a member of PJM.

AEP Ohio Distribution Rate Case – Docket #11-351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%.

Actual Capital Structure – Company Position – 08/31/10

Ohio ESP Settlement

Gradual Transition to Market and Regulatory Stability in Ohio

- **Parties to the Settlement** - Signed by more than 20 organizations representing customers, competitive retail electricity suppliers, environmental groups, communities and other key stakeholders
- **Cases included in Settlement** - 2012 Electric Security Plan, Capacity Charges, Merger
- **Generation** - Corporate separation of Ohio generation assets targeted by May 2013 and transition all of Ohio generation supply to market by mid-2015; the company may pursue recovery of Pool modification costs once they exceed $50 million
- **Transition to market** - company will make a specific percentage of the Ohio retail load open to competitive retail suppliers at the RPM price for a three-year period. The remaining capacity that switches will be priced at $255/MW-day
  - Year one (2012), approximately 20 percent will be available
  - Year two (2013), approximately 30 percent will be available
  - Year three (2014 through May 2015), approximately 40 percent will be made available.
  - Standard service offer price beginning in June 2015 will be determined through auctions involving multiple suppliers of generation service. Auctions will begin as early as September 2013.
- **Fuel Adjustment Clause** - continues through May 31, 2015; parties to support legislation for securitization of fuel deferrals
- **Nonbypassable Generation Resource Rider** – allows the distribution company to recover costs related to building new generating assets dedicated solely to Ohio customers. Project-related costs will be presented in future PUCO cases.
- **Distribution Investment Rider** – Costs associated with new distribution investment to maintain and improve reliability will be recovered under this rider with an ROE of 10.5% based on a capital structure of 47% debt/53% equity. In its first year (2012), the rider will be capped at $86 million. An additional $18 million will be added in 2013 and an additional $20 million in 2014.
- **SEET ROE threshold of 13.5%**.

Summary Rate Case Information

APCo Virginia Base Rate Case – Docket #PUE-2011-00037

On March 31,2011 APCo filed an update to its pre-biennial base rate case for recovery of generation and distribution costs requesting an increase of $75 million ($126 million total increase less $51 million deferral of depreciation increase).

In conjunction with this case, an environmental rate adjustment clause (E-RAC), a generation rate adjustment clause (G-RAC) and a renewable portfolio standard rate adjustment clause (RPS-RAC) were filed. APCo has requested that rates in the base case, E-RAC and RPS-RAC go into effect on 2/1/2012 and the G-RAC on 3/1/2012.

I&M Michigan Base Rate Case – Docket # U-16801

On July 1, 2011 I&M filed a base rate case with the Michigan Public Service Commission requesting an increase of $24.5 million. Rates proposed in this filing are based on projected 2012 cost of service and will not go into effect until 2012, therefore rates will reflect a current cost of service. This filing includes revised depreciation rates to include additions since the last approved depreciation study as well as accelerated retirement of Tanners Creek Units 1, 2 and 3. The requested ROE is 11.15%. In accordance with Michigan law I&M intends to implement rates, subject to refund, on January 1, 2012. An order is expected by mid-year 2012.

Commission Overview

Arkansas Public Service Commission

AEP Regulated Electric Utilities

Southwestern Electric Power Co.

Commissioners

Number: 3	**Appointed/Elected: Appointed**	**Term: 6 Years**	**Political Makeup: R: 1 D: 2**

Qualifications for Commissioners

The Arkansas Public Service Commission (APSC) is composed of 3 members. The Governor appoints the Commissioners as well as the Chairman. Governor Beebe has appointed all of the current commissioners.

Commissioners

Collette Honorable, Chairperson (Dem.), since 2007; current term ends in 2011. Commissioner Honorable is a member of NARUC and serves on the Consumer Affairs and Investment Committees. She also serves on the Smart Grid Collaborative, a joint effort of NARUC and the FERC. Honorable received her Juris Doctorate from the University of Arkansas at Little Rock School of Law.

Olan Reeves, Commissioner (Rep.), since 2009; current term ends in 2015. Chairman of the Workers' Compensation Commission from January, 2003 until January, 2009. Prior to these appointments, Commissioner Reeves was Chief Legal Counsel to the Governor from 1998-2003 and served as the State Drug Director from 1996 to 1998. Reeves received his Juris Doctorate from the University of Arkansas School of Law in Fayetteville.

Elana C. Wills, Commissioner (Dem.), since 2011; current term expires 2013. Served as an Associate Justice on the Arkansas Supreme Court by gubernatorial appointment from October 2008 – December 2010. Received her Juris Doctorate from the University of Arkansas School of Law in Fayetteville.

AEP Regulatory Status

SWEPCO-AR provides service at regulated bundled rates in Arkansas. Arkansas has an active fuel pass-through clause. Arkansas has an OSS margin sharing mechanism and allows CWIP in rate base for a plant that is placed in service within six months after the end of the test year.

Commission Overview

Indiana Utility Regulatory Commission

AEP Regulated Electric Utilities

Indiana Michigan Power Co.

Commissioners

Number: 5	**Appointed/Elected: Appointed**	**Term: 4 Years**	**Political Makeup: R: 3 D: 2**

Qualifications for Commissioners

Five members, appointed by the Governor from among persons nominated by a legislatively mandated utility commission nominating committee; four-year, staggered terms, full-time positions. Not more than three of the members of the IURC shall be members of the same political party. At least one of the commissioners must be an attorney qualified to practice law before the Indiana Supreme Court. The Governor appoints one of the five as chairperson.

Commissioners

Jim Atterholt, Chairman (Rep.), since 2009; current term ends April 2013. Prior to joining the Commission, he was the State Insurance Commissioner for more than four years where he also served as a member of the Governor's Cabinet. Atterholt worked as Director of Government Affairs for AT&T--Indiana from 2003 – 2004. Atterholt holds a Bachelors degree from the University of Wisconsin.

Kari A. E. Bennett, Commissioner (Rep.), since 2011;current term ends March 2014. Prior to joining the Commission, she was chief legal counsel of the Indiana Department of Natural Resources. From 2005 to 2007 she was Policy Director for Environments and Natural Resources for Indiana Governor Daniels. She graduated from Miami University of Ohio with a degree in environmental science and received her Juris Doctorate from the University of Minnesota.

Carolene R. Mays, Commissioner (Dem.), since 2010; current term ends December 2013. Former publisher and president of the Indianapolis Recorder Newspaper and the Indiana Minority Business Magazine. From 2002 to 2008, served in the Indiana House of Representatives and sat on the committees for Small Business and Economic Development, Ways and Means and Public Health.

Larry S. Landis, Commissioner (Rep.), since 2002; current term ends December 2011. Former president of a marketing and communications agency, VP Corporate Advertising, American Fletcher National Bank. Bachelor's degrees in political science and economics.

David E. Ziegner, Commissioner (Dem.), since 1990; current term ends April 2015. Lawyer, staff attorney for Legislative Services Agency, General Counsel for IURC. Member, NARUC Committee on Electricity and chairman of the NARUC clean coal and carbon sequestration subcommittee. Law degree from the Indiana University School of Law in Indianapolis.

AEP Regulatory Status

I&M–Indiana provides retail electric service at bundled rates approved by the IURC. Rates are set on a cost-of-service basis with a fuel recovery mechanism. I&M–Indiana has trackers in place for PJM expenses, OSS sharing, clean coal technology, environmental and DSM. Indiana currently has a voluntary renewable standard goal of 10% by 2025.

Commission Overview

Kentucky Public Service Commission

AEP Regulated Electric Utilities

Kentucky Power Co.

Commissioners

Number: 3	**Appointed/Elected: Appointed**	**Term: 4 Years**	**Political Makeup: R: 2 D:1**

Qualifications for Commissioners

Typically three members, appointed by the governor and confirmed by the state senate for four years, staggered terms, full-time positions. The governor appoints one of the three as chairman and another of the three as vice chairman to serve in the chairman's absence. Not more than two members of the KPSC shall be of the same profession or occupation.

Commissioners

David L. Armstrong, Chairman (Dem.), since 2008; current term expires June 2015. Former practicing attorney in private practice. Board member of NARUC and serves on its Electricity Committee and the Subcommittee on Clean Coal Technology. J.D. from University of Louisville Brandeis School of Law. Mr. Armstrong is also the former Mayor for the city of Louisville, KY (1999-2003).

James W. Gardner, Vice Chairman (Rep.), since 2008; current term expires June 2012. Prior to joining the PSC Mr. Gardner was a partner at the law firm Henry Watz Gardner & Sellars PLLC where he specialized in bankruptcy law. JD degree from the University of Kentucky College of Law.

Charles Borders, Commissioner (Rep.), since 2009; current term expires June 2013. Before joining the PSC, Commissioner Borders served in the Kentucky Senate, representing the 18th District in northeast Kentucky since 1991. He most recently chaired the Appropriations and Revenue Committee and served on the committees on Education and Health and Welfare. Borders received his Bachelors and Masters degrees from Morehead State University.

AEP Regulatory Status

KPCo provides service at regulated bundled rates in Kentucky. Kentucky has an environmental surcharge to recover approved environmental costs and it has an active fuel clause. Kentucky also has an OSS sharing mechanism and a monthly adjustment clause in place for DSM.

Commission Overview

Louisiana Public Service Commission

AEP Regulated Electric Utilities

Southwestern Electric Power Co.

Commissioners

Number: 5	Appointed/Elected: Elected	Term: 6 Years	Political Makeup: R: 3 D: 2

Qualifications for Commissioners

The Louisiana Public Service Commission (LPSC) is composed of five elected members. The commissioners serve overlapping terms of six years.

Commissioners

James M. Field, (Chairman) (Rep.), since 1996; current term ends December 2012. Practicing attorney, member of Electrical Committee of NARUC. NFL contract advisor (1983-present), member, Sports Lawyers Association. Bachelor's and Juris Doctorate from Louisiana State University.

Lambert C. Bossiere, III (Dem.), since 2005; current term ends December 2016. B.S. Business Administration from Southern University. American University of Paris – International Trade Law – Paralegal Certificate. Former First City Court Constable for the City of New Orleans. Member of NARUC.

Eric Skrmetta, (Rep.), since 2009; current term ends December 2014. Practicing Attorney since 1985. Practicing Mediator since 1989. Republican State Central Committee District 81**.** Juris Doctorate Southern University Law School.

Foster L. Campbell, (Dem.), since 2003; current term ends December 2014. Member, Louisiana State Senate (1976-2002). Independent insurance businessman and farmer, former school teacher and agricultural products salesman. Bachelor's degree from Northwestern State University.

Clyde Holloway, (Rep.), since 2009; current term ends December 2016. Elected to Congress in 1987 and served in the United States House of Representatives until 1993. In October 2006 he received an appointment by President Bush as the USDA State Director of Rural Development where he served until 2009**.**

AEP Regulatory Status

SWEPCO-LA provides service at regulated bundled rates in Louisiana. Louisiana has an active fuel pass-through clause and an OSS margin sharing mechanism. Formula rate plans are permitted in Louisiana including a potential for a partial CWIP return on new generation projects. A formula rate plan was implemented August 1, 2008 with annual true-ups required. The current FRP expired in August 2011 an the company intends to file for an extension of the plan.

Commission Overview

Michigan Public Service Commission

AEP Regulated Electric Utilities

Indiana Michigan Power Co.

Commissioners

Number: 3	**Appointed/Elected: Appointed**	**Term: 6 Years**	**Political Makeup: D: 1 I: 1 R: 1**

Qualifications for Commissioners

The Michigan Public Service Commission (MPSC) is composed of three members appointed by the Governor with the advice and consent of the Senate. Commissioners are appointed to serve staggered six-year terms. No more than two commissioners may represent the same political party. One commissioner is designated as chairman by the Governor.

Commissioners

John D. Quackenbush, Chairman (Rep), since 2011; current term expires July 2017. Former managing director and senior investment analyst at UBS Global Asset Management responsible for equity research of transportation, utilities and coal industries in the US and Canada. Undergraduate degree in business economics from Calvin College and master's degree in finance from Michigan State University.

Orjiakor N. Isiogu, Commissioner (Dem.), since 2007; current term expires July 2013. Former Director of the Telecommunications Division of the MPSC. Assistant Attorney General in Michigan since 1989. Undergraduate and law degree from Wayne State University.

Greg R. White, Commissioner, (Ind.) , since 2009; current term expires July 2015. Former legislative liaison for the MPSC and liaison for the MPSC to the Michigan Department of Energy, Labor and Economic Growth. Holds a bachelor of science from Michigan State University and master's of public administration from Grand Valley State University.

AEP Regulatory Status

Customer choice began January 2002. Generation was not deregulated. Retail rates were unbundled (though they continue to be regulated) to allow customers to evaluate generation costs. In 2008, legislation was enacted to limit customer choice load to no more than 10% of the annual retail load for the preceding calendar year. I&M-Michigan has an active fuel clause and return on CWIP can be included in base rates. Michigan currently has a mandatory renewable energy standard of 10% by 2015.

Commission Overview

Ohio Public Utilities Commission

AEP Regulated Electric Utilities

Columbus Southern Power Co.

Ohio Power Co.

Commissioners

Number: 5	Appointed/Elected: Appointed	Term: 5 Years	Political Makeup: R: 2 D: 3

Qualifications for Commissioners

Five members, appointed by the governor and confirmed by the state senate; five year, staggered terms, full-time positions, commissioners shall be selected from the lists of qualified persons submitted to the governor by the PUC nominating council. Not more than three of the members of the PUCO shall be members of the same political party. The governor appoints one of the five as chairman, who serves at the pleasure of the governor until a successor has been designated.

Commissioners

Todd A. Snitchler, Chairman, (Rep.) , since 2011; term expires April 2014. Before joining the commission was elected to two terms in the Ohio House of Representatives. Past chairman and secretary of the Lake Township Chamber of Commerce. Received his B.S. from Grove City College in history and secondary education/social science and his law degree fro the University of Akron School of Law.

Paul A. Centolella, Commissioner, (Dem.) since 2007; term expires April 2012. Juris Doctorate from the University of Michigan. From 1992-2007, worked as a senior economist in the Energy Solutions Group of Science Applications International Corporation. Former senior policy advisor and senior utility attorney for the Office of the Ohio Consumers' Counsel.

Steven D. Lesser, Commissioner, (Dem.) since 2010; term expires April 2015. Juris Doctorate from Capital University; previously served as PUCO chief of staff, assistant director of the legal department, deputy director of the transportation department and administrative law judge/attorney examiner in the legal department.

Andre T. Porter, Commissioner, (Rep.) since 2011; term expires April 2016. Former attorney at Schottenstein Zox & Dunn. Sits on Capital University Board of Trustees and previously served on the Gahanna City Council. Received his undergraduate degree from Capital University and law degree from The Ohio State University Moritz College of Law.

Cheryl Roberto, Commissioner, (Dem.) since 2008; term expires April 2013. Prior to joining the PUC, Roberto was director of the City of Columbus Public Utilities Department. Before entering the public sector, Commissioner Roberto worked as an assistant attorney general for the state of Ohio. Commissioner Roberto received her B.A. with honors from Kent State University and her Juris Doctorate from the Moritz College of Law at The Ohio State University.

AEP Regulatory Status

The currently approved electric security plan expires in December 2011. Stipulation on file with the PUCO for the pending electric security plan filing which would merge the two Ohio companies, split the companies into a wires business and a generation business and take generation to market pricing in 2015. Transmission rates are currently regulated by FERC as reflected in the OATT. SB221 allows that CSP and OPCo have active fuel clauses effective January 1, 2009. Ohio currently has a mandatory renewable energy standard of 25% by 2025.

Commission Overview

Oklahoma Corporation Commission

AEP Regulated Electric Utilities

Public Service Company of Oklahoma

Commissioners

Number: 3	**Appointed/Elected: Elected**	**Term: 6 Years**	**Political Makeup: R: 3 D: 0**

Qualifications for Commissioners

The Oklahoma Corporation Commission (OCC) is composed of three commissioners who are elected by state-wide vote. Commissioners serve staggered six-year terms. The election pattern was established when the Commission was created by the state constitution.

Commissioners

Bob Anthony, Commissioner, (Rep.), since 1989; current term expires January 2013. Member, NARUC. Served on the boards of the Oklahoma State, Oklahoma City, and South Oklahoma City chambers of commerce. Earned an M.Sc. from the London School of Economics, an M.A. from Yale University and an M.P.A. from the Kennedy School of Government at Harvard University.

Patrice Douglas, Commissioner, (Rep.), since 2011; current term ends January 2015. Served as president of SpiritBank and executive vice president of First Fidelity bank. Received her undergraduate degree from Oklahoma Christian and her juris doctorate from the University of Oklahoma.

Dana Murphy, Chairperson, (Rep.), since 2008; current term expires January 2015. Member, NARUC. Murphy's prior experience includes working as an administrative law judge at the Commission. She has more than 20 years experience in the petroleum industry including owning and operating her own private law practice and working as a geologist in the Oklahoma petroleum industry. Juris Doctorate Oklahoma City University.

AEP Regulatory Status

PSO provides retail electric service in Oklahoma at bundled rates approved by the OCC. PSO's rates are set on a cost-of-service basis. Fuel and purchased energy costs above the amount included in base rates are recovered by applying a fuel adjustment factor to retail kilowatt-hour sales. The factor is generally adjusted annually and is based upon forecasted fuel and purchased energy costs. Over or under collections of fuel costs for prior periods are returned to or recovered from customers when new annual factors are established. PSO has an OSS margin sharing mechanism. Oklahoma currently has a mandatory renewable energy standard of 15% by 2015.

Commission Overview

Tennessee Regulatory Authority

AEP Regulated Electric Utilities

Kingsport Power Co.

Commissioners

Number: 4	**Appointed/Elected: Appointed**	**Term: 6 Years**	**Political Makeup: R: 1 D: 2**

Qualifications for Commissioners

The Tennessee Regulatory Authority (TRA) directors are appointed, one each, by the Governor, Lieutenant Governor (as Speaker of the Senate), Speaker of the House and one joint appointment by the three together, and are confirmed by the Tennessee General Assembly. The directors are appointed for six and three-year staggered terms. The chairmanship rotates every year in an agreed upon decision by the directors.

Commissioners

Sara Kyle, Director (Dem.), since 1996; current term expires June 2014. Former assistant public defender until she was elected to the Memphis City Court bench. The longest serving commissioner and only holdover from the previous Regulatory Authority. Law degree from Middle Tennessee State University.

Mary W. Freeman, Director (Dem.), since 2008; current term expired June 2011. Prior legislative director for Governor Bredesen, executive assistant to State Representative Lois DeBerry. B.A. Tennessee State University.

Kenneth C. Hill, Chairman (Rep.), since 2009; current term expires June 2015. At the time of his appointment to the TRA, Hill was Chief Executive Officer of AECC and served as General Manager of five radio stations reaching portions of East Tennessee and four surrounding states. Doctor of Religious Education, Andersonville Baptist Seminary.

AEP Regulatory Status

No deregulation legislation and no base rate freeze or cap. Tennessee has an active fuel clause.

Commission Overview

Public Utility Commission of Texas

AEP Regulated Electric Utilities

AEP Texas Central Co.
AEP Texas North Co.
Southwestern Electric Power Co.

Commissioners

Number: 3	**Appointed/Elected: Appointed**	**Term: 6 Years**	**Political Makeup: R: 3 D: 0**

Qualifications for Commissioners

To be eligible for appointment, a commissioner must be: (1) a qualified voter; (2) a citizen of the United States; and (3) a representative of the general public. Chairman appointed by the Governor.

Commissioners

Donna L. Nelson, Chairman (Rep.), since August 2008; current term expires August 2015. Nelson served as a special assistant and advisor to Governor Perry on energy, telecommunications and cable budget and policy issues. She previously served as director of the PUC telecommunication's section and legal advisor to the PUC chairman. Nelson holds a law degree from Texas Tech University.

Rolando Pablos (Rep.), since 2011; current term expires August 2013. Member of the State Bar of Texas, chair of the San Antonio Free Trade Alliance and a member and past board chair of the San Antonio Hispanic Chamber of Commerce. Received a bachelor's degree from St. Mary's University MBA from the University of Texas at San Antonio, a master's degree in hospitality management from the University of Houston and a law degree from St. Mary's University School of Law.

Kenneth W. Anderson Jr., (Rep.) since September 2008; current term expires August 2017. Past Director of Governmental Appointments under Governor Perry. Prior to that Anderson served in private practice as a corporate attorney in the area of securities law and regulatory matters. He also served as a member of the Texas Securities Board from 1999-2006. Anderson holds a law degree from Southern Methodist University.

AEP Regulatory Status

Retail competition has been delayed by the PUCT in the SPP area of Texas (including SWEPCO). SWEPCO-TX has an active fuel pass-through clause as well as OSS margin sharing. In some circumstances, CWIP is allowed in rate base.

TCC and TNC provide retail transmission and distribution service on a cost-of-service basis at rates approved by the PUCT and wholesale transmission service under tariffs approved by the FERC consistent with PUCT rules. Transmission riders provide annual recovery dependent on the level of transmission investment and ERCOT load growth rates. AFUDC is permitted in limited circumstances. Texas currently has a mandatory renewable energy standard of 5% by 2015.

Commission Overview

Virginia State Corporation Commission

AEP Regulated Electric Utilities

Appalachian Power Co.

Commissioners

Number: 3	**Appointed/Elected: Elected**	**Term: 6 Years**	**Political Makeup: R: 2 D: 1**

Qualifications for Commissioners

The Virginia State Corporation Commission (VSCC) is composed of three members elected by the General Assembly. Commissioners are elected to serve six-year terms, staggered in two year increments. The chair rotates annually among the three commissioners on February 1.

Commissioners

Mark C. Christie, (Rep.), since 2004; current term expires 2016. Prior counsel to the Speaker of the House of delegates of the Virginia General Assembly. Lawyer, private practice. Law degree from Georgetown.

Judith Williams Jagdmann, Chairman, (Rep.), since 2006; current term expires 2012. Law degree from T.C. Williams School of Law at the University of Richmond. Served as Deputy Attorney General for Civil Litigation Division from 1998 to 2005. Attorney General for Commonwealth of Virginia from 2005 to 2006.

James C. Dimitri, (Dem.), since 2008; current term expires 2014. Prior to being named Commissioner, Dimitri was in private practice in Richmond. From 1994 to 2000 he served as Senior Counsel, then General Counsel at the SCC. He was an assistant Attorney General from 1983 to 1987. Dimitri received his undergraduate degree in economics from the University of Virginia and his J.D. from the Boston University School of Law.

AEP Regulatory Status

APCo-VA provides retail electric service in Virginia at unbundled rates. In 2007, the General Assembly passed legislation re-establishing retail rate regulation in the Commonwealth. The new legislation provides for biennial rate reviews beginning in 2009, sharing of off-system sales margins at a rate of a minimum of 25% retained by the company effective July 1, 2007 and a post-2008 rider for DSM, renewable programs and new generation. APCo-VA is entitled to adjustments to fuel rates to recover its actual fuel costs, the fuel component of its purchased power costs and certain capacity charges. Virginia currently has a voluntary renewable energy standard of 12% by 2022.

Commission Overview

Public Service Commission of West Virginia

AEP Regulated Electric Utilities

Appalachian Power Co.

Wheeling Power Co.

Commissioners

Number: 3	**Appointed/Elected: Appointed**	**Term: 6 Years**	**Political Makeup: R: 1 D: 2**

Qualifications for Commissioners

The West Virginia Public Service Commission (WVPSC) consists of three members, appointed by the Governor, with the advice and consent of the senate. No more than two members of the commission may belong to the same political party. The Commissioners serve six year staggered terms, with one term expiring as of July 1 of each odd numbered year. One Commissioner is designated as Chairman of the Commission by the Governor. The Chairman serves as the chief fiscal officer of the Commission.

Commissioners

Michael A. Albert, Chairman (Rep.), since 2007; term expires June 2013. Served as a member in the Business Law Department of Jackson Kelly. President and Chairman of the board of directors of the Kanawha County Public Library. Bachelor's degree and Doctorate of Jurisprudence, West Virginia University.

Ryan B. Palmer, Commissioner (Dem.), since 2010; term expired June 2015. Served as Deputy General Counsel to West Virginia Governor Joe Manchin, III; as Attorney/Advisor to Commissioner Charlotte R. Lane of the United States International Trade Commission and Law Clerk to the Honorable W. Craig Broadwater of the United States District Court, Northern District of West Virginia. Bachelor's degree and Doctorate of Jurisprudence, West Virginia University.

Jon W. McKinney, Commissioner (Dem.), since 2005; term expired June 2011. Currently on the board of directors of the NARUC and second VP of the Mid-Atlantic Conference of Regulated Utilities Commissioners. Formerly served as plant manager of Flexsys' Nitro, W .V. operations, chairman of Chemical Industry Committee for W.V., board member of W.V. Chamber of Commerce, W.V. Manufacturer's Association, Chemical Alliance Zone, W.V. Roundtable, Advantage Valle, St. Francis Hospital & Thomas Memorial Hospital.

AEP Regulatory Status

APCo and Wheeling Power in WV provide retail electric service at bundled rates approved by the WV PSC. West Virginia has an active annual ENEC (Expanded Net Energy Cost) mechanism, which provides for a rate adjustment for fuel costs, among other items. West Virginia also has a special construction surcharge permitted, primarily related to environmental-related construction. West Virginia currently has a renewable energy standard of 25% by 2015.

Commission Overview

Federal Energy Regulatory Commission

Commissioners

Number: 5	Appointed/Elected: Appointed	Term: 5 Years	Political Makeup: R: 2 D: 3

Qualifications for Commissioners

The Federal Energy Regulatory Commission (FERC) is composed of up to five commissioners who are appointed by the President of the United States with the advice and consent of the Senate. Commissioners serve five-year terms, and have an equal vote on regulatory matters. To avoid any undue political influence or pressure, no more than three commissioners may belong to the same political party.

Commissioners

Jon Wellinghoff, Chairman (Dem.), since 2006; term expires June 2013. Chairman Wellinghoff is an energy law specialist with more than 30 years experience in the field. Before joining FERC, he was in private practice and focused exclusively on client matters related to renewable energy, energy efficiency and distributed generation. While in the private sector, Chairman Wellinghoff represented an array of clients from federal agencies, renewable developers, and large consumers of power to energy efficient product manufacturers and clean energy advocacy organizations.

Marc Spitzer, Commissioner (Rep.) since 2006: term expired June 2011. Prior to becoming a commissioner, Spitzer served as chairman of the Arizona Corporation Commission (ACC), where he focused on policies encouraging expansion of natural gas infrastructure, specifically distribution and storage: creating a demand side management policy: enhancing the ACC's renewables standard: and advancing consumer privacy concerns in telecommunications.

Sheryl A. LaFleur, Commissioner (Dem.) since 2010; term expires June 2014. Retired in 2007 as executive vice president and acting CEO of National Grid USA, responsible for the delivery of electricity to 3.4 million customers in the Northeast. Her previous positions at National Grid and its predecessor New England Electric System included COO, president of New England distribution and general counsel. She practiced law in Boston earlier in her career, and has been a community and nonprofit leader

John R. Norris, Commissioner (Dem.) since 2010: term expires June 2012. Most recently served as Chief of Staff to Secretary Tom Vilsack of the U.S. Department of Agriculture. Prior to joining the USDA, he served as Chairman of the Iowa Utilities Board (IUB) from 2005 to 2009. During his tenure as IUB Chairman, Commissioner Norris served on the National Association of Regulatory Utility Commissioners (NARUC) Electricity Committee and was Co-Chair of the 2009 National Electricity Delivery Forum

Phillip D. Moeller, Commissioner (Rep.), since 2006; term expires June 2015. From 1997 through 2000, Mr. Moeller served as an energy policy advisor to U.S. Senator Slade Gorton (R-Washington) where he worked on electricity policy, electric system reliability, hydropower, energy efficiency, nuclear waste, energy and water appropriations and other energy legislation. Before becoming a Commissioner, Mr. Moeller headed the Washington, D.C., office of Alliant Energy Corporation. Prior to Alliant Energy, Mr. Moeller worked in the Washington office of Calpine Corporation.

Jurisdictional Off-System Sales Sharing Summary

STATE	OSS Sharing?	Detail
Arkansas	Yes, above and below base levels	Up to $758,600 annual margin, ratepayers receive 100%. From $758,601 to $1,167,078, ratepayers receive 85%. Above $1,167,078, ratepayers receive 50%.
Indiana*	Yes	There is $37.5 million built into Indiana's base rates. Above $37.5 million, ratepayers received 50%
Kentucky	Yes, above and below base levels	Sharing occurs above and below levels included in base rates of $15,290,363, ratepayers receive 60%.
Louisiana	Yes, above base levels	Up to $874,000 annual margin, ratepayers receive 100%. From $874,001 to $1,314,000, ratepayers receive 85%. Above $1,314,000, ratepayers receive 50%.
Michigan	Yes	75% of profits are shared with ratepayers.
Ohio	No	n/a
Oklahoma	Yes	75% of profits are shared with ratepayers.
Tennessee	No	n/a
Texas (SPP)	Yes	90% of profits are shared with ratepayers.
Virginia	Yes	75% of profits are shared with ratepayers.
West Virginia	Yes	100% of profits passed back to ratepayers through the Expanded Net Energy Cost (ENEC) clause.

*Request on file in cause 44075 to remove amounts built into base rates and to begin sharing on a 50/50 basis from the first dollar of margin.

New Generation – Turk Plant

John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant, located in AEP's SWEPCO region. AEP owns 73 percent or roughly 440 megawatts of the total unit.

- The cost of the plant and related transmission is anticipated at $1.8 billion with AEP's share approximately $1.4 billion and will begin commercial operation in the fourth quarter of 2012.
- The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls.

- Third party owners include: Arkansas Electric Cooperative Corp. (12%), East Texas Electric Cooperative (8%), and Oklahoma Municipal Power Authority (7%).
- Various legal challenges are on-going related to the plant (see 10-Q).

New Generation – Dresden Plant

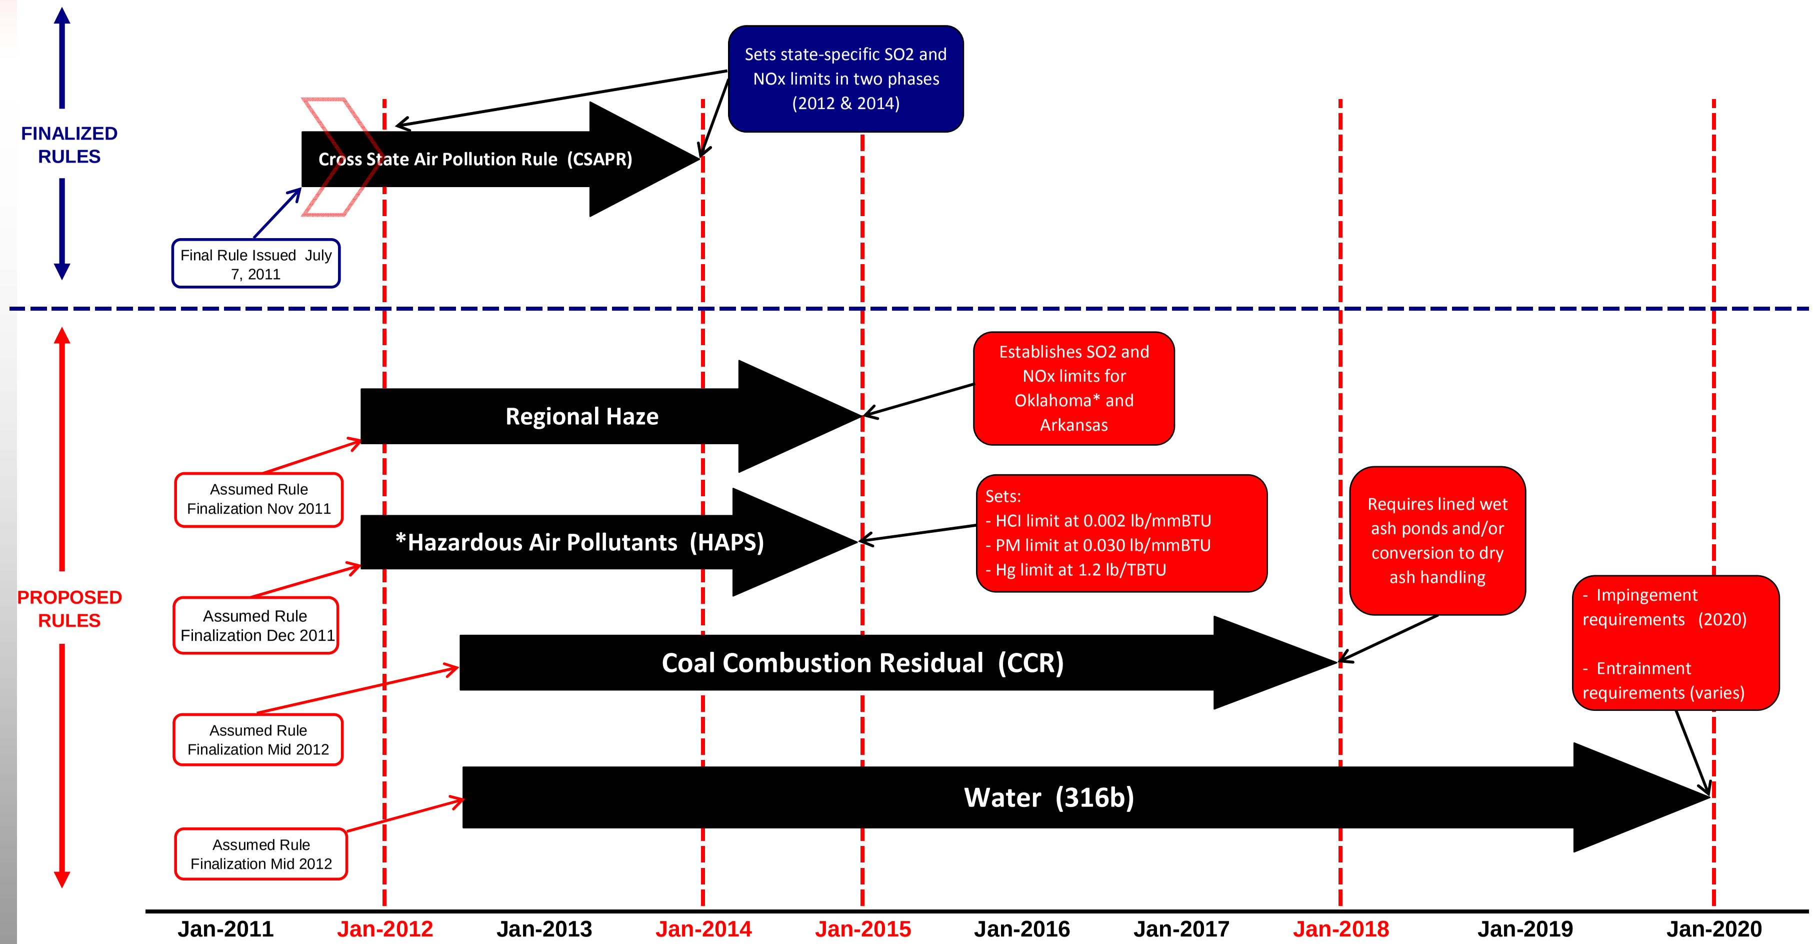
Dresden is an intermediate load 580-MW combined–cycle natural gas plant. Located in Dresden, Ohio.

- On September 19, 2007, AEG purchased the Dresden Facility from Dominion for approximately $85MM. Construction began on the Dresden plant in 2001, with major equipment necessary for its completion procured and on site.
- The plant is expected to be operational during the first quarter of 2012. When completed, the Dresden plant will be a nominal 580-megawatt natural gas-fired combined-cycle plant.

- Total capital invested is expected to be $366 million once completed.
- On February 28, 2011 in West Virginia and March 1, 2011 in Virginia, APCo filed requests to enter into affiliate transactions to transfer ownership of Dresden from AEG to APCo. The WV request was approved on June 30, 2011 and VA approved the transaction on July 20, 2011. The plant was transferred to APCo in August 2011.

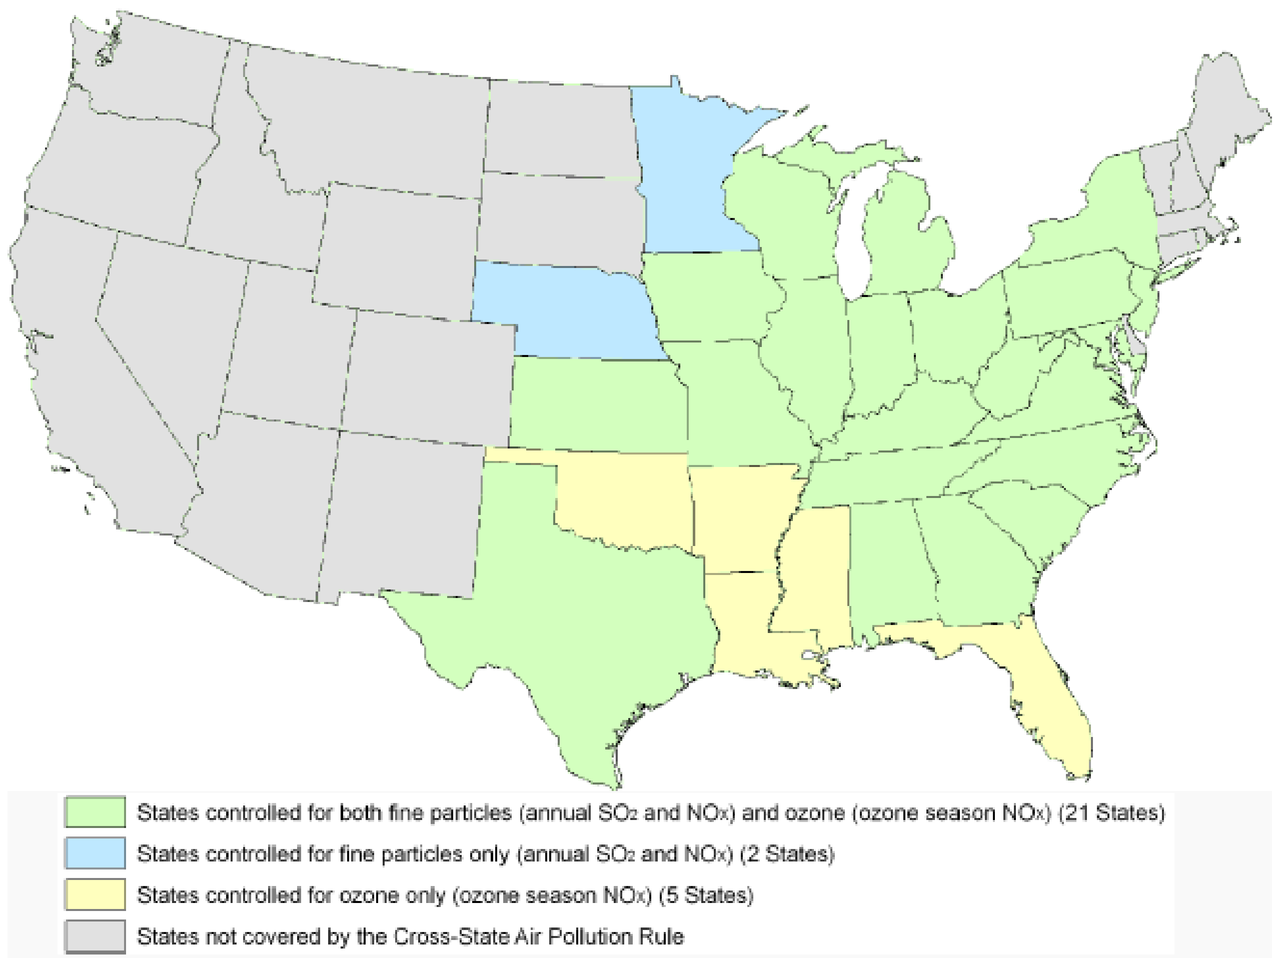
Environmental

EPA Regulatory Deadlines



* Units that will be retrofit may be eligible for a one year compliance extension from the EPA related to HAPs and the Oklahoma units may also be eligible for a one year compliance extension under Regional Haze.

CSAPR: States Covered



Coverage of states changed slightly from the proposed rule. Most notably for AEP, Texas is now included in the SO_2 program while Louisiana is not.

CSAPR: State Budgets v. Historical Emissions

AEP Coal Generating States

Amounts based on October 6, 2011 EPA technical adjustments

On average, state budgets in the finalized Cross State Air Pollution (CSAPR) rule are significantly lower in 2012 and 2014 versus the proposed rule:

- 2012 SO_2 – 13% reduction
- 2014 SO_2 – 15% reduction
- 2012 Annual NOx – 7% reduction
- 2012 Seasonal NOx – 14% reduction

Significant reductions are required as early as January 2012 in many states. 32% and 46% reductions in SO_2 are required in TX and OH, respectively, and major seasonal NOx reductions are required in OK and LA.

Amounts based on October 6, 2011 EPA technical adjustments

Key Concerns with Proposed HAPs Rule

Implementation Concerns:

- Unrealistic three year compliance schedule
- Retrofit emission controls require >3 years to complete
- Significant capital investments required
- Proposed rule effectively eliminates coal as a future generation option

Grid Reliability Concerns:

- Significant number of units offline due to retirements and retrofit project outages
- Insufficient time to accommodate new generation development

Key AEP Recommendations:

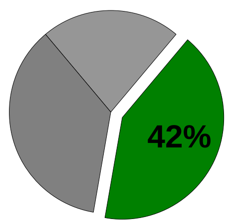
- Establish a subcategory for small, low-capacity factor units that would not have to meet the stringent limits so as to avoid premature retirements
- Utilize full range of regulatory flexibility to automatically extend compliance deadline and provide assurance at time of final rule that additional time is available

AEP Coal Fleet Assessment

2012 – 2020

Range of Capital ($ Millions) (1)

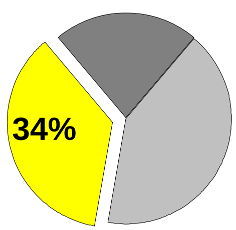
Least Exposed



Operating Company	MW
APCo	3,353
AEP Ohio	6,984
	10,337

Rules		Low		High
Water Rules (2)	$	15	$	20
CCR Rules	$	810	$	1,080
Air Rules (3)	$	1,425	$	1,900

Partially Exposed



Operating Company	MW
AEP Ohio	1,385
APCo	470

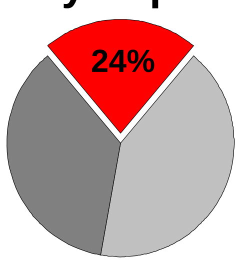
TNC	377
	8,550

Rules		Low		High
Water Rules (2)	$	55	$	85
CCR Rules	$	385	$	520
Air Rules (3) (4)	$	2,680	$	3,565

Fully Exposed



Operating Company	MW
AEP Ohio	2,538
APCo	1,270
I&M	495
KPCo	1,078(5)
SWEPCO	528
	5,909

Rules		Low		High
Water Rules (2)	$	-	$	5
CCR Rules	$	30	$	45
Air Rules (3)	$	30	$	50
Replacement Generation	$	570	$	730
Grand Total	**$**	**6,000**	**$**	**8,000**

(1) The impact of all rules continues to be under review. Project scope and technical assessments are ongoing. Any change in scope will impact the capital cost ranges.

(2) Gas plants are not included in MW. Proposed 316 (b) will impact some gas facilities.

(3) Air Rules include: CSAPR as finalized and HAPs and Regional Haze Federal Implementation Plans in OK & AR, as proposed.

(4) Includes NSR Compliance.

(5) Includes Big Sandy Unit 2, which remains fully exposed but, pending regulatory approval, will be scrubbed rather than replaced with new natural gas generation.

Retrofits/New Generation

- The tables below represent our estimated $6 - $8 billion capital investment from 2012 to 2020 for environmental retrofits on 10,500 MW and new/refueled generation of 2,152 MW. The below costs include management estimates for compliance with CSAPR, HAPs MACT, CCR and 316(b) regulations as currently proposed.

Operating Company	Plant	MW	Type of retrofit	Low Cost Estimate 2012-2020 ($MM)	High Cost Estimate 2012-2020 ($MM)	
AEP Ohio	Conesville 5	400	SCR, DSI

Emission Limits

In compliance with our 2007 NSR settlement, the following limits are applicable to AEP's eastern generation fleet:

Eastern System-Wide Annual Tonnage Limitations for NO_x

Calendar Year	Limitation
2011	92,500 tons
2012	85,000 tons
2013	85,000 tons
2014	85,000 tons
2015	75,000 tons
2016 and each year thereafter	72,000 tons

Eastern System-Wide Annual Tonnage Limitations for SO_2

Calendar Year	Limitation
2011	450,000 tons
2012	420,000 tons
2013	350,000 tons
2014	340,000 tons
2015	275,000 tons
2016	260,000 tons
2017	235,000 tons
2018	184,000 tons
2019 and each year thereafter	174,000 tons

Emissions caps do not include any of the gas-fired units, or any new units AEP might build or purchase in the east.

2010 Actual

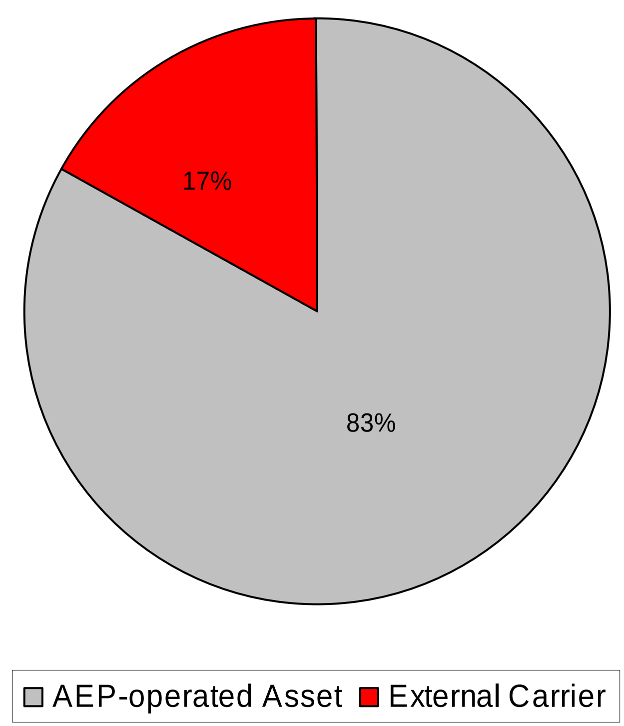
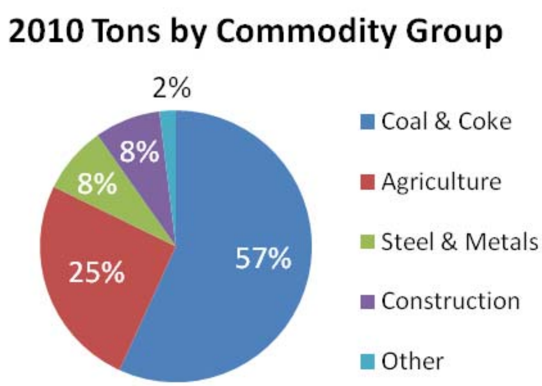
Coal Transportation to AEP Plants



AEP's transportation assets provide flexibility in a constrained delivery environment.

AEP River Operations

- Net Income
  - 2010: $37 Million
  - 2009: $47 Million
  - 2008: $55 Million
- Full-service Inland Waterways carrier
  - 3,300 hopper barges
  - 64 towboats and 26 tugs
- Tonnage & Commodity (2010):
  - Captive: (for AEP) 32MM tons of coal/ consumables
  - Commercial: 39MM tons of coal/grain/bulk
- Gulf Operations
  - Barge cleaning and repair
  - Fleeting and shifting
  - Midstream transfers
- Operating Centers in Lakin, WV, Paducah, KY, Convent and Belle Chase, LA and Mobile, AL

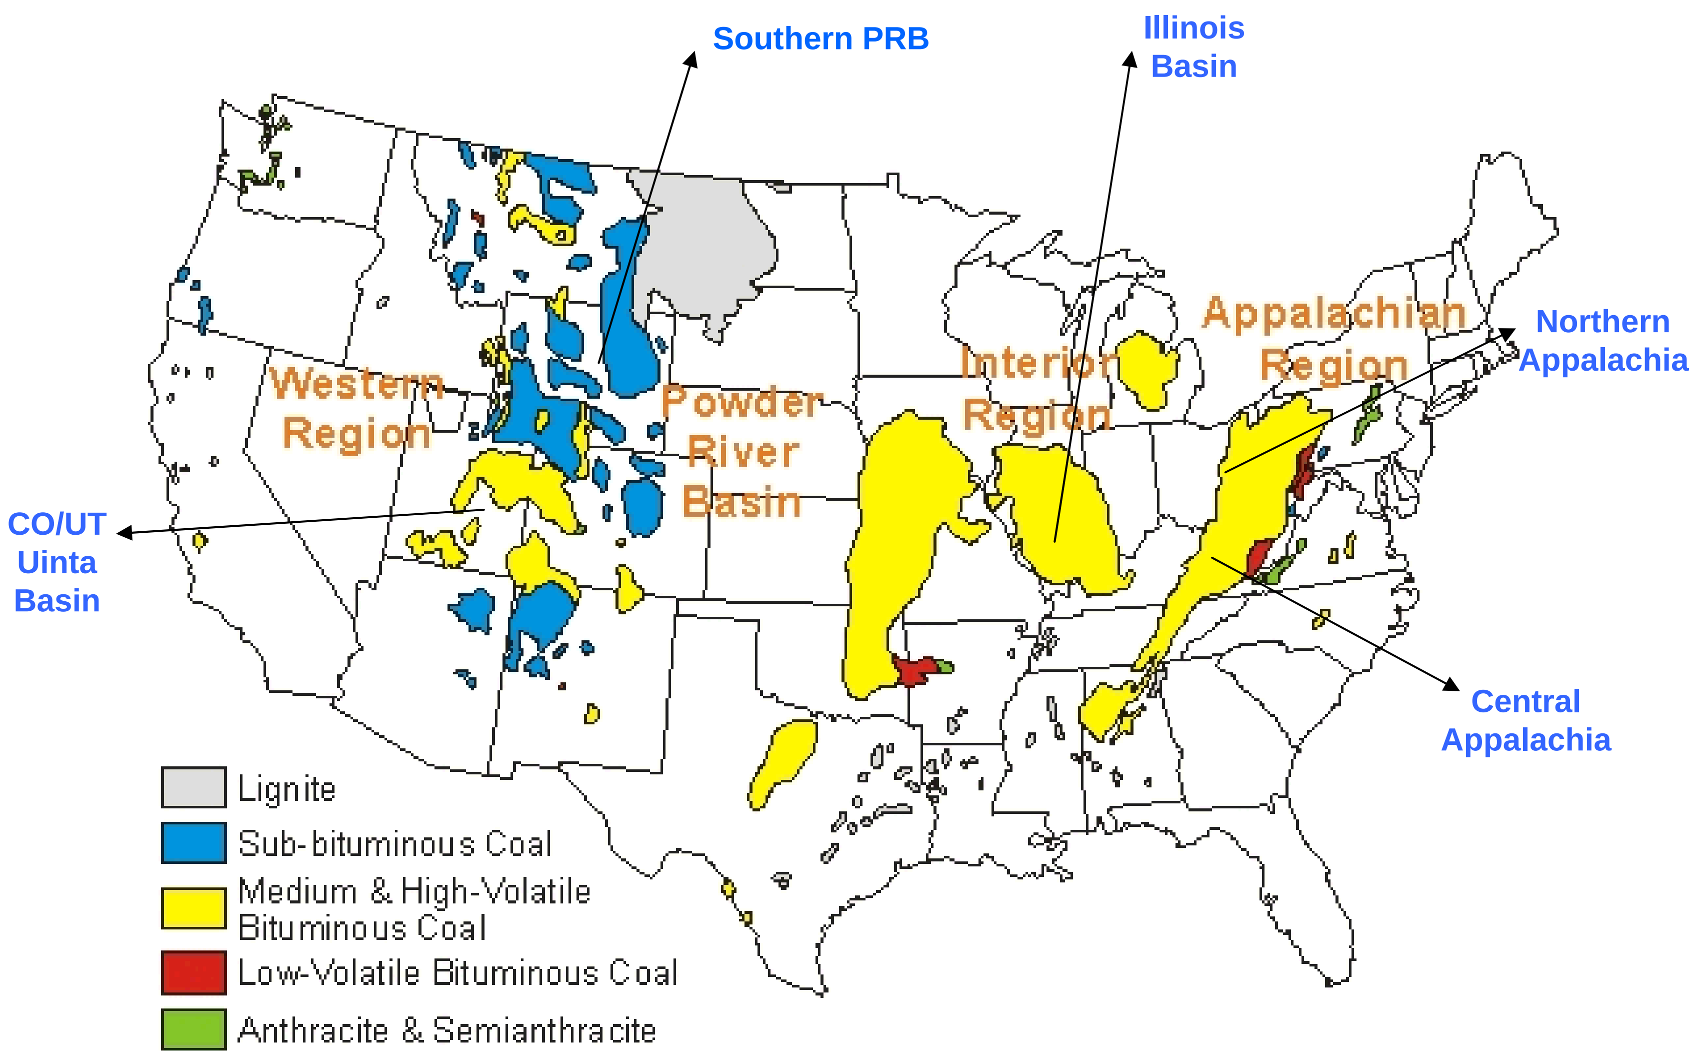


Inland Waterway Routes For AEP River Operations

Jurisdictional Fuel Clause Summary

Jurisdiction	Active Fuel Clause	Frequency
Arkansas	Yes	Annually
Indiana	Yes	Semi-Annually
Kentucky	Yes	Monthly
Louisiana	Yes	Monthly
Michigan	Yes	Annually
Ohio	Yes	Quarterly
Oklahoma	Yes	Annually
Tennessee	Yes	Monthly
Texas (SPP)	Yes	Tri-Annually
Virginia	Yes	Annually
West Virginia	Yes	Annually

Coal Producing Regions



Transmission Initiatives

AEP Transmission Company (Transco)

- FERC-approved formula rates
  - ROE: 11.49% in PJM and 11.2% in SPP
- $260 M invested in three states by the end of 2011 (OH, MI & OK)
- Baseline capital spending target for OH, MI & OK of $350M for 2012
- Pursuing regulatory approvals for other states (AR, LA, WV, VA, IN & KY)
  - Settlement filed in IN with approval expected in 2011
  - Outcomes expected in WV & KY in 2011
  - Proceedings in AR, LA and VA likely to extend into 2012
  - Additional capital spending opportunity in these states for 2012 and beyond

765-kV Tower

Electric Transmission Texas, LLC

Overview:

- ETT is a 50/50 JV owned by subsidiaries of AEP and MidAmerican Energy Holding Company that constructs and operates transmission projects within ERCOT. Total investment opportunity of more than $3 billion.
- Current rate base of $410 million
  - Potential rate base growth:

Year	Increase	Total Rate Base
2011	$72M	$482M
2012	$268M	$750M
2013	$450M	$1,200M
2014	$900M	$2,100M

- Debt to equity ratio of 60/40
- Authorized ROE of 9.96%

Current Portfolio:

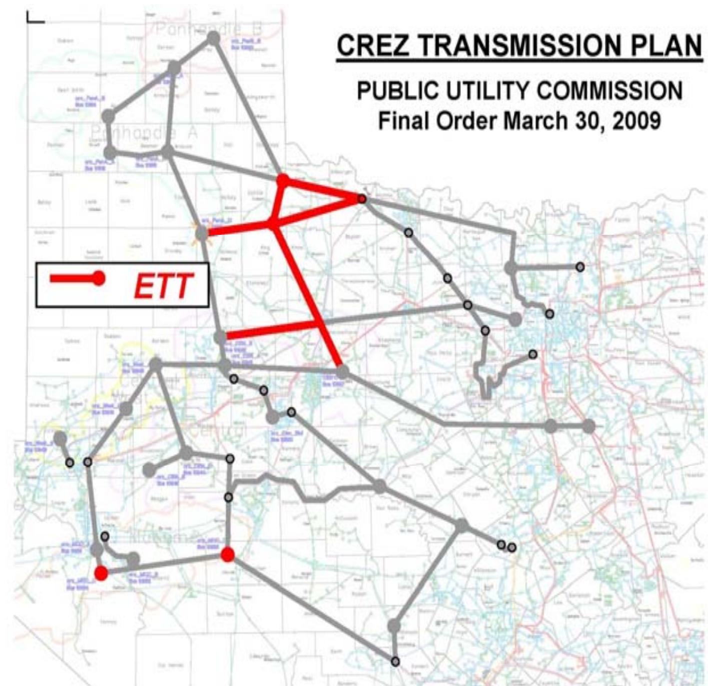
  - Plant In Service: $513M
  - CWIP: $307M

Opportunities:

- CREZ projects: approx. $1.2 billion
- Other Non-CREZ projects: approx. $1.3 billion

Next Steps:

- Perform engineering, procurement and construction work on assigned projects
- Development of other non-CREZ projects
- Continue to operate portfolio of in-service assets



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Electric Transmission Texas

Pioneer Transmission, LLC

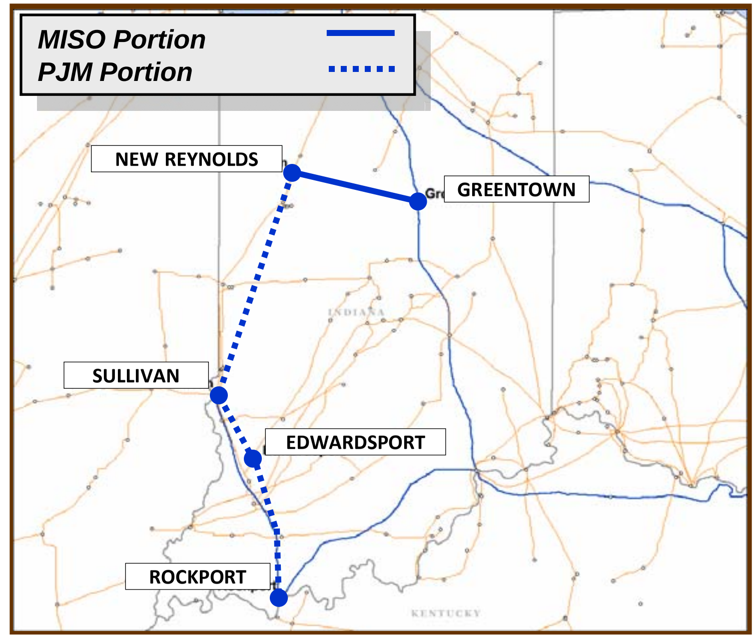
Project Description: 765 kV line extending 240 miles from Rockport (AEP) to Greentown (Duke) substation in Indiana.

Project Overview:

- 50/50 joint venture between AEP and Duke.
- LLC Agreement was executed in August 2008.
- Estimated project cost is $950 million.
- FERC 205 order issued March 2009.
  - ROE of 12.54%
  - 100% CWIP in rate base during development
  - Abandonment for prudently incurred costs
  - 50/50 hypothetical capital structure during construction
  - Establishment of deferred regulatory asset to recover pre-construction costs during the construction period
- In-service in phases between 2015-2018.

Project Status:

- It is anticipated that the Greentown to New Reynolds segment will be included in MISO's MVP portfolio that will be approved for construction by the MISO Board in December 2011.
- Pioneer is planning to file for Indiana utility status in 4Q 2011.



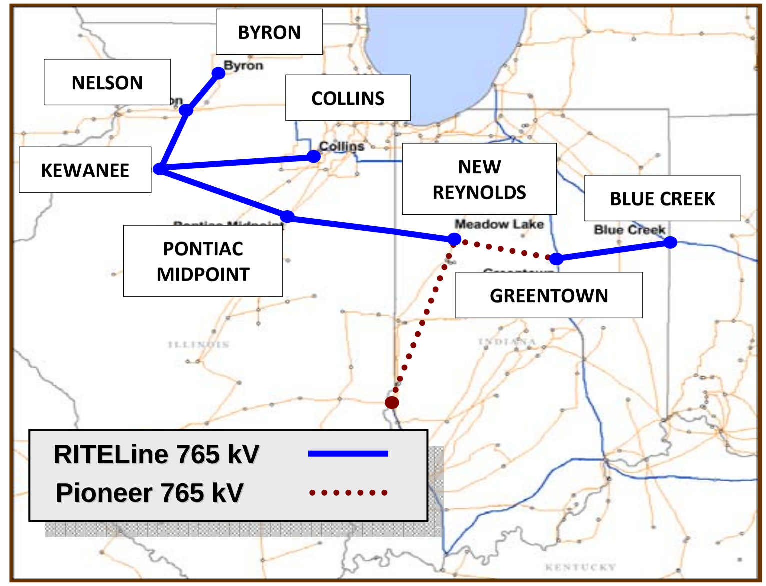
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

RITELine Transmission Development, LLC

Route Description: 765 kV line extends 420 miles from a new substation near Blue Creek on the IN/OH border west to Kewanee, IL and then north to Byron, IL. There is also a segment from Kewanee, IL to Collins, IL.

Project Overview:

- AEP and ETA executed LLC agreements with Exelon to form project companies in Illinois and Indiana in June 2011.
- Estimated project cost is $1.6 billion. The investment is shared 67% by Exelon, 22% by ETA* and 11% by AEP.
- FERC 205 order issued October 2011.
  - ROE of 11.43%
  - 100% CWIP in rate base during development
  - Abandonment for prudently incurred costs
  - 55/45 hypothetical equity to debt capital structure
  - Establishment of deferred regulatory asset to recover pre-construction costs during the construction period
- In-service in phases between 2015-2018.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Project Status:

- Continue advocacy with PJM to ensure inclusion in the 2012 - 2013 RTEP planning process

*ETA is a 50/50 Joint venture between subsidiaries of MidAmerican Energy Holding Company and AEP

Prairie Wind Transmission, LLC

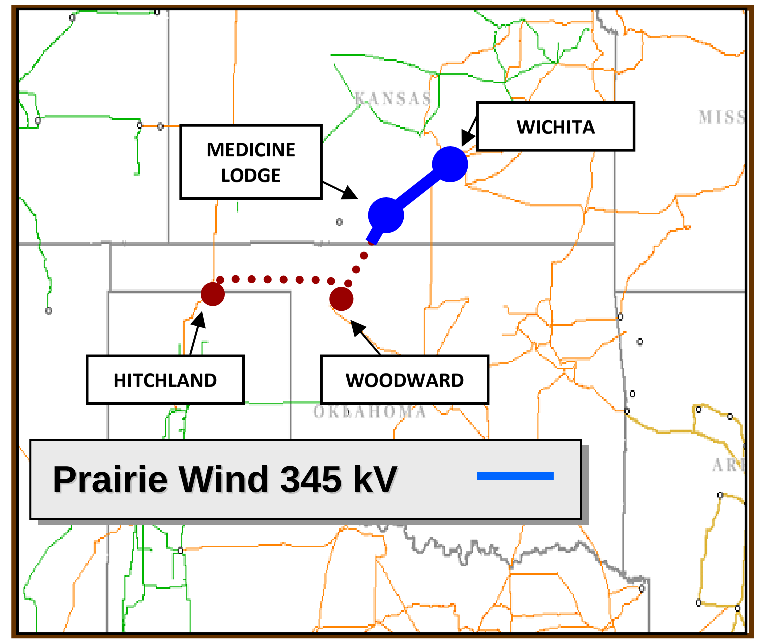
Route Description: Double circuit 345 kV line extends 110 miles from Westar's substation near Wichita to a new substation near Medicine Lodge, KS extending further south-southwest to the KS/OK border.

Project Overview:

- 50/50 joint venture between ETA and Westar Energy
- LLC agreement was executed in May 2008.
- FERC 205 order issued December 2008:
  - 12.8% incentive ROE
  - 100% CWIP in rate base during development
  - Abandonment for prudently incurred costs
  - 50/50 hypothetical capital structure during construction
  - Establishment of deferred regulatory asset to recover pre-construction costs during the construction period
- Estimated project cost is $225 million.
- In-service date is December 2014.

Project Status:

- Approved as SPP Priority Project in April 2010.
- Notice to Construct at double circuit 345 kV received July 2010
- Siting application approved in June 2011.
- Compliance filing to recover costs made in May 2011.
- Right-of-way acquisition underway.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Midwest Power Transmission, LLC

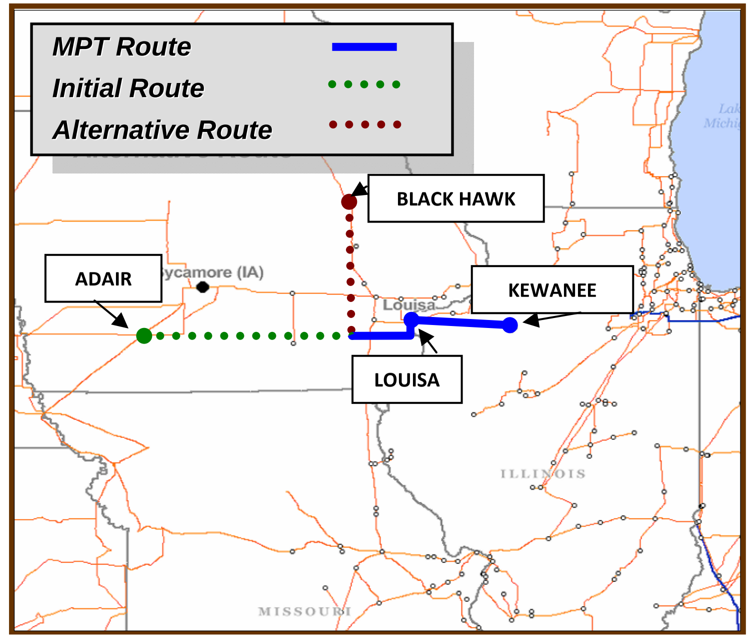
Project Description: 765 kV line extends 70 miles from Kewanee in Henry County to Louisa County in eastern Iowa. From Louisa County two routes are being considered: a route extending 195 miles to Adair County in southwestern Iowa (total of 265 miles) and an alternative route extending 165 miles to Black Hawk County in northeastern Iowa (total of 235 miles).

Project Overview:

- 50/50 joint venture between ETA and MidAmerican Energy Company.
- LLC Agreement was executed in August 2011.
- MPT line will strengthen the high voltage transmission system connecting Illinois and Iowa.
- Estimated project cost of the initial route is $865 million.
  - The estimated project cost of the alternative route is $650 million.
- In-service date is estimated to be 2019.
- FERC 205 Filing is expected in 4Q 2011.

Project Status:

- Economic and reliability transmission studies to support the FERC 205 filing are expected to be completed by 4Q 2011.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

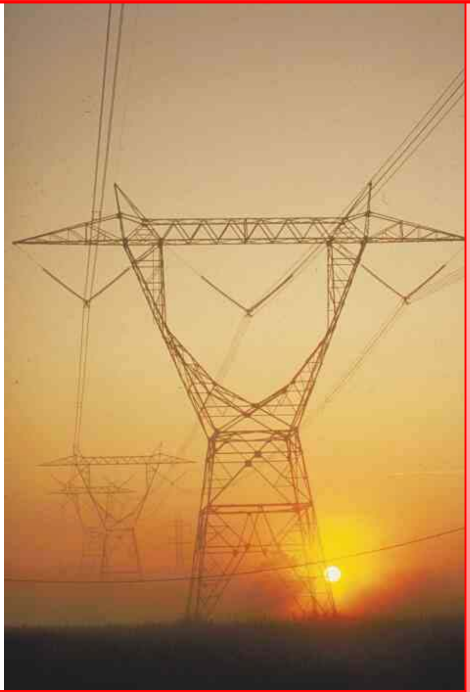
2Q07 Earnings Release Presentation

July 31, 2007



AMERICAN ELECTRIC POWER

"Safe Harbor" Statement Under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Second Quarter 2007 Highlights

- 2Q 2007 GAAP Earnings of $0.45 per share; Ongoing Earnings of $0.64 per share
- YTD 2007 GAAP Earnings of $1.13 per share; Ongoing Earnings of $1.33 per share
- Reaffirming 2007 Ongoing Earnings Guidance Range of $2.85 to $3.05 per share
- Low Carbon Economy Act of 2007
- PJM's 2008/2009 RPM Capacity Auction
- Regulatory Update
  - **Ohio**
    - Post-2008 Plan
  - **Virginia**
    - Fuel, E&R and IGCC Filings
  - **Oklahoma**
    - General Base Rate Case Order
  - **Indiana**
    - Depreciation Case and Rate Petition
  - **Transmission Project Updates**
    - Electric Transmission Texas LLC Hearings
    - PATH JV
    - Michigan 765-kV study with ITC
    - SPP Overlay Study Released
  - **Generation Project Updates**
    - IGCC Filings in West Virginia and Virginia
    - Red Rock Proceedings concluded in Oklahoma
    - Turk Plant Filings in Arkansas, Louisiana and Texas Progressing
    - Commercial Operation Declaration for Mattison Plant on July 12, 2007 – 150 MW

2Q 2007 Performance Drivers

- *Weather Impact of $26MM:*
  - *Positive $0.03 vs. normal; Positive $0.04 vs. prior year*
- *Retail Sales (lines 1-4):*
  - *Positive load growth, including new customers - $86MM*
  - *Offset by Fuel and ENEC under-recovery ($32MM)*
- *Off-System Sales (line 5):*
  - *Increased due to higher margins*
- *Transmission Revenue (line 6):*
  - *Higher due to $18MM provision booked in 2Q06 for potential SECA refunds*
- *Other Operating Revenue (line 7):*
  - *Increase related to Texas securitization revenue*
- *Operations & Maintenance (line 9):*
  - *Decreased due to favorable insurance policyholder's surplus adjustments and lower storm restoration*
- *Depreciation & Amortization (line 10):*
  - *Increased asset base and amortization related to the Texas securitization and the Ohio RSPs*
- *Interest Expense (line 12):*
  - *Increased long term debt outstanding, including Texas securitization bonds issued in October 2006*
- *Other Income & Deductions (line 13):*
  - *Reduced carrying charges of $17MM primarily due to the Texas securitization in October 2006*
- *Income Taxes (line 14):*
  - *Effective tax rate for utility operations was 30.6% in 2007 and 30.0% in 2006*

YTD 2007 Performance Drivers

- *Weather Impact of $66MM:*
  - *Positive $0.04 vs. normal; Positive $0.11 vs. prior year*
- *Retail Sales (lines 1-4):*
  - *Rate relief primarily in OH, KY and TX - $103MM*
  - *Load growth, including new customers - $120MM*
  - *Slightly offset by lower FTR income - ($48MM) and*
  - *Fuel under-recovery ($29MM)*
- *Other Operating Revenue (line 7):*
  - *Increase related to Texas securitization revenue*
- *Operations & Maintenance (line 9):*
  - *Increased due to plant outages and maintenance, storm costs and increased vegetation management*
- *Depreciation & Amortization (line 10):*
  - *Increased asset base and amortization related to the Texas securitization and the Ohio RSPs*
- *Interest Expense (line 12):*
  - *Increased long term debt outstanding, including Texas securitization bonds issued in October 2006*
- *Other Income & Deductions (line 13):*
  - *Decreased Centrica sharing contribution of $20MM in 2007 vs. $70MM in 2006 and reduced carrying charges of $39MM primarily due to the Texas securitization in October 2006*
- *Income Taxes (line 14):*
  - *Effective tax rate for utility operations was 32.0% in 2007 and 32.6% in 2006*

Ending Cash & Cash Equivalent Balances	**$ 249**	**$ 172**

YTD 2007 Cash Flow Drivers

Operating Activities

- *Changes in Working Capital largely driven by G&A-type items*

Investing Activities

- *Cash outlay of $1.8 billion for YTD 2007 capital investment.*
- *2007 primary asset sale proceeds: Centrica sharing ($20MM) and TCC's share of Oklaunion ($43MM); 2006 primary asset sale proceeds: Centrica sharing ($70MM) and Bajio ($29MM)*
- *2007 acquisitions consist of the Darby Plant for $102MM and Lawrenceburg for $325MM*
- *Other Temporary Cash Investments were partially utilized in 2007 to support cash needs. The balance was unusually high at December 31, 2006 due to investments purchased with the proceeds from the Texas securitization in 4Q06*

Financing Activities

- *Common stock issuance of $90MM primarily related to the exercise of stock options during 2007*

Ending cash balance for Q1 2007 of $259MM. 2007 guidance assumes year-end cash balance of $205MM

2Q09 Earnings Release Presentation

July 31, 2009

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants including our ability to restore Indiana Michigan Power Company's Donald C. Cook Nuclear Plant Unit 1 in a timely manner; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity and transmission lines (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary or deflationary interest rate trends; volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impacting our ability to finance new capital projects and refinance existing debt at attractive rates; the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurred cots and recovery is long and the costs are material; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

Ending Cash & Cash Equivalent Balances	**$ 218**	**$ 358**

YTD 2009 Cash Flow Drivers:

Operating Activities

- Increase in working capital largely driven by increased fuel inventories
- Changes in other assets and liabilities largely driven by changes in mark-to-market and fuel under recovery

Investing Activities

- Cash outlay of $1.5B for 2009 YTD capital investment
- 2009 asset sale proceeds primarily relate to the transfer of assets from TCC to ETT ($90MM) and the payments from the third-party owners of the Turk Plant ($104MM)
- Change in Other Investing primarily relates to the purchase of nuclear fuel of $152MM

Financing Activities

- 2009 common share issuances of $1,688MM primarily due to secondary equity offering completed in April
- Changes in short term debt relate to payments made on credit facilities from proceeds of the equity offering

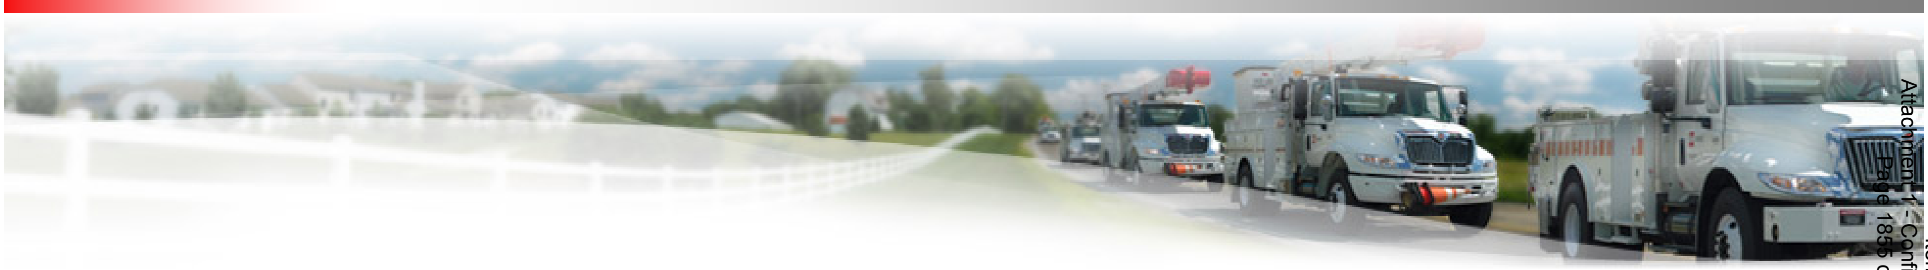
	YTD 2008			YTD 2009		
	GWh	Realization	($millions)	GWh	Realization	($millions)
OSS Physical Sales	15,800	$ 24.24	$ 383	6,214	$ 8.69	$ 54
Oklaunion Payment	-		$ 23	-		$ 26
Marketing/Trading	-		$ 58	-		$ 93
Pre-Sharing Gross Margin	15,800		$ 464	6,214		$ 173

Reduction in Pre-Sharing OSS Physical Sales primarily due to lower demand and significantly lower realized prices as a result of natural gas price contraction.

AMERICAN ELECTRIC POWER

2Q11 Earnings Release Presentation

July 29, 2011



"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M's Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events and our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives, evolving public perception of the risks associated with fuels used before, during and after the generation of electricity, including nuclear fuel..

Weather	$	0.01	
2Q11	$	0.73	$352

EPS Based on 482MM shares in Q211

2Q11 Performance Drivers

- O&M expense net of offsets increased $56M primarily due to higher storm expenses
- Other Costs increased $34M, partially due to gain on sale of ICE shares in 2Q10 and increased other taxes
- Customer Switching in Ohio up $24M
- Rate Changes net of offsets of $66M from multiple operating jurisdictions
- Off-System Sales, net of sharing, were favorable by $37M due to higher volumes and higher power prices
- Weather was favorable by $5M vs. prior year, favorable $47M vs. normal

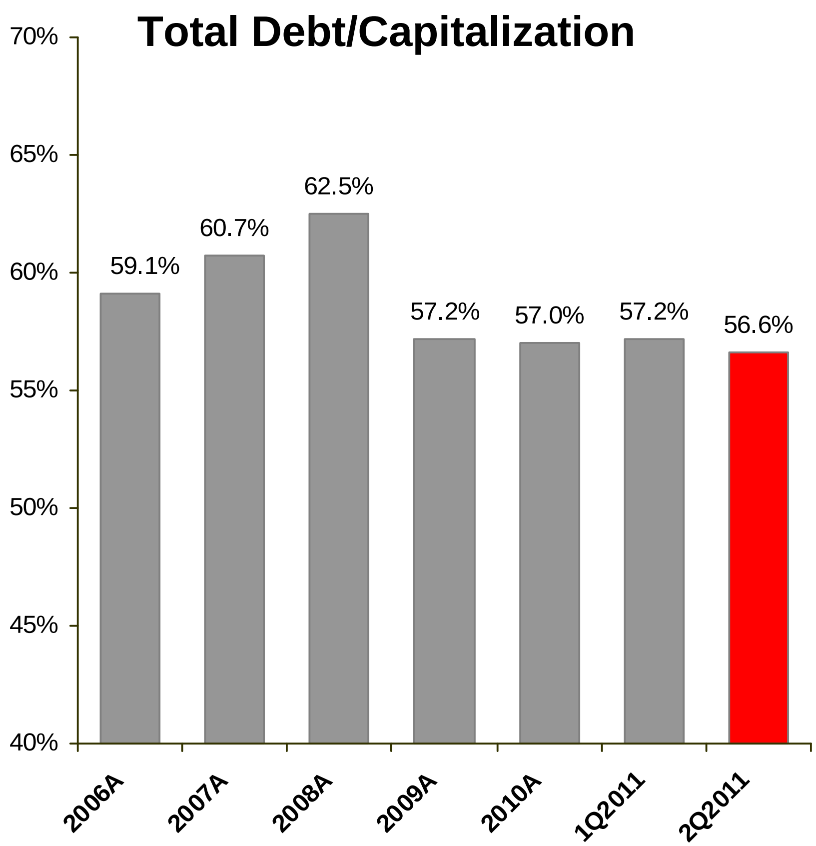
Capitalization & Liquidity



Note: Total Debt is calculated according to GAAP and includes securitized debt

Liquidity Summary (06/30/2011)

Liquidity Summary (unaudited)		**Actual**	
($ in millions)		Amount	Maturity
Revolving Credit Facility	$	1,500	Jun-13
Revolving Credit Facility		1,454	Apr-12
Total Credit Facilities		**2,954**	
Plus			
Cash & Cash Equivalents		417	
Less			
Commercial Paper Outstanding		(944)	
Letters of credit issued		(132)	
Net available Liquidity	**$**	**2,295**	

On July 26, 2011, we renewed and upsized the facility expiring in April 2012. The new facility has a capacity of $1.75B and expires in July 2016.

We also extended and repriced the facility expiring in June 2013. That facility now expires in June 2015.

This brings our total available capacity to $3.25B.

YTD 2011 Cash Flow Drivers:

Operating Activities

- Changes in working capital largely driven by coal inventory and accounts receivable/payable, net

Investing Activities

- Cash outlay for 2011 YTD capital investment.
- Asset Acquisition represents the receipt of title to the natural gas in the Bammel storage facility in conjunction with the Enron Bankruptcy settlement.

Financing Activities

- Changes in dividend payout represent 9.5% increase in the 4th quarter of 2010

Detailed Ongoing Earnings Guidance

2010A: $3.03

2011E: $3.00 - $3.20

2Q10 Earnings Release Presentation

July 30, 2010

A CENTURY OF DIVIDENDS • 1910 - 2010

"*Safe Harbor*" *Statement under the Private Securities Litigation Reform Act of 1995*

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

Second Quarter 2010 Highlights

- **FINANCIAL PERFORMANCE**
  - Delivered GAAP earnings of $0.28 per share; special items include costs associated with the cost reduction initiative ($0.39) and carbon capture & storage R&D expense ($0.07)
  - Delivered on-going earnings of $0.74/share
  - Reaffirming 2010 guidance range of $2.80 to $3.20/share
- **REGULATORY UPDATE**
  - Rate proceedings – $301MM of $320MM secured for 2010
  - Ohio SEET
  - TURK Update
- **TRANSMISSION UPDATE**
- **FEDERAL LEGISLATION/EPA UPDATE**
- **OPERATING COMPANY REFINEMENTS**

2Q10 Performance

Second Quarter Reconciliation

		EPS	Ongoing Earnings ($ in millions)
2Q09	$	0.68	$321
Share Count Effect	$	(0.01)	
Rate Changes	$	0.03	
Retail Margin	$	0.05	
Firm Wholesale Margin	$	(0.03)	
Weather	$	0.05	
OSS	$	(0.02)	
Operations & Maintenance	$	0.07	
Other Utility Operations, net	$	(0.10)	
Non-Utility Operations/Parent	$	0.02	
2Q10	$	0.74	$355

2Q10 Performance Drivers

- Rate Changes net of offsets $22MM from multiple operating jurisdictions
- Retail Margin up $33MM, primarily due to industrial recovery
- Firm Wholesale Margin down $22MM due to the loss of two large wholesale customers
- Weather was favorable by $34MM vs. prior year, $43MM vs. normal
- OSS was unfavorable by $12MM due to lower profit from trading/marketing activities.
- O&M expense net of offsets decrease of $51MM due primarily to storm cost deferral at APCo and other G&A items
- Other Utility Operations, net decreased approximately $75MM and primarily includes the absence of accidental outage insurance and higher interest expense, D&A and taxes
- Non-Utility Operations/Parent increased $12MM due to a gain on sale of remaining ICE shares

June YTD 2010 Performance

June YTD 2010 Reconciliation

		EPS	Ongoing Earnings ($ in millions)
YTD09	$	1.55	$681
Share Count Effect	$	(0.14)	
Rate Changes	$	0.17	
Retail Margin	$	0.03	
Firm Wholesale Margin	$	(0.07)	
Weather	$	0.11	
OSS	$	-	
Operations & Maintenance	$	0.10	
Other Utility Operations, net	$	(0.24)	
Non-Utility Operations/Parent	$	(0.01)	
YTD10	$	1.50	$720

YTD 2010 Performance Drivers

- Share count impact due to 39MM weighted average shares outstanding increase (440MM to 479MM) from equity offering and DRP
- Rate Changes net of offsets of $112MM from multiple operating jurisdictions
- Retail Margin up $21MM, due to recovery across all customer classes, primarily industrial
- Firm Wholesale Margin down $46MM due to the loss of two large wholesale customers
- Weather was favorable by $71MM vs. prior year, $83MM vs. normal
- OSS was flat with increased sales in the east offsetting decreased trading/marketing profits
- O&M decrease of $66MM net of offsets, primarily due to lower storm costs including the deferral of 2009 storm costs at APCo, and other G&A items
- Other Utility Operations, net decreased approximately $185MM and primarily includes the absence of accidental outage insurance related to the DC Cook nuclear plant and higher interest expense, D&A and taxes

Beginning Cash & Cash Equivalent Balances	411	490
Ending Cash & Cash Equivalent Balances	**$ 358**	**$ 838**

YTD 2010 Cash Flow Drivers:

Operating Activities

- Changes in working capital largely driven by coal inventory, taxes payable and employee related expenses.

Investing Activities

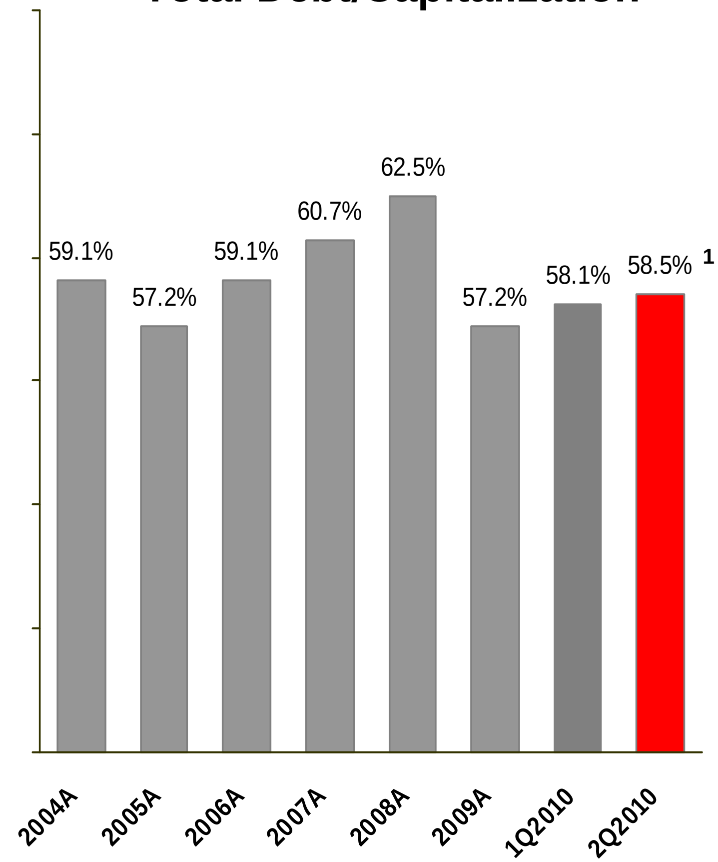
- Cash outlay for 2010 YTD capital investment.
- 2010 asset sale proceeds relate to the transfer of assets to ETT.

Financing Activities

- Changes in long-term debt driven by reduced capital funding requirements.
- Changes in short term debt relate to funding of severance activity.

Capitalization & Liquidity

Total Debt/Capitalization



Note: Total Debt is calculated according to GAAP and includes securitized debt

[1]: *Effective January 1, 2010 in accordance with Transfers and Servicing accounting guidance (formerly SFAS 166), factored receivables of AEP Credit of $677 million are classified as short-term debt; The 2Q2010 debt/capitalization ratio would be 57.6%, excluding AEP Credit.*

2Q05 Earnings Release Presentation

July 29, 2005

“Safe Harbor” Statement Under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to control operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

2Q 2005 Performance Drivers

Weather Impact: Positive $0.01 vs. normal
Positive $0.01 vs. prior yr

- *Decline at Reg Integ Utilities attributable to increased fuel costs partially offset by growth in retail customers and warmer weather; Fuel pressure at Ohio Cos. offset by cust. growth, weather & Buckeye Power emissions allowances*
- *Decrease in gross margin due to July 2004 plant divestitures and STP sale in May 2005 & expiration of Centrica supply contract*
- *Increased OSS margin due to stronger margins and increased sales volume*
- *Lower transmission revenues due to elimination of O&T rates*
- *Lower O&M expenses due to timing of maintenance projects, lower storm damage, and sale of TCC generation*
- *Decreased interest expense reflecting refinancings and lower debt balance*
- *Other Income & Deductions line includes: (1) carrying costs on OH environmental additions ($11MM) and (2) carrying costs on TX stranded costs ($20MM)*

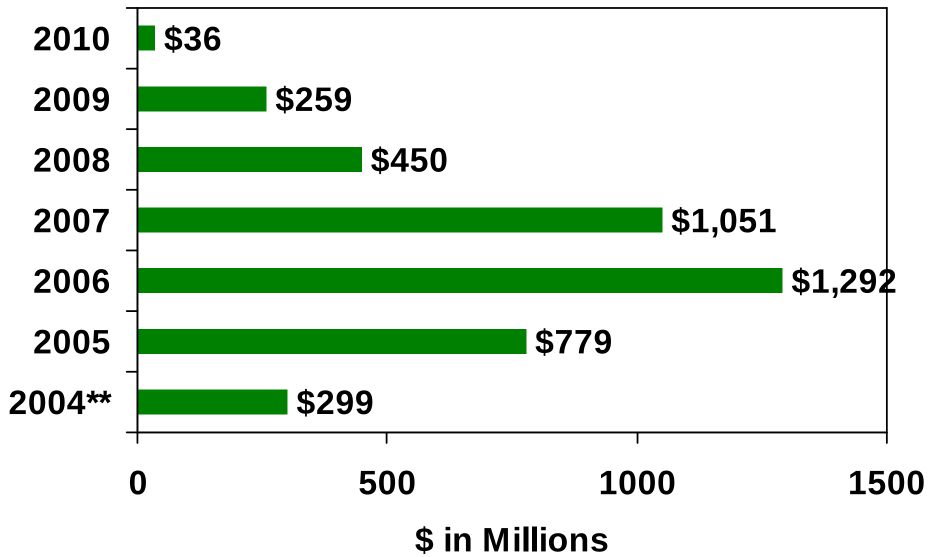
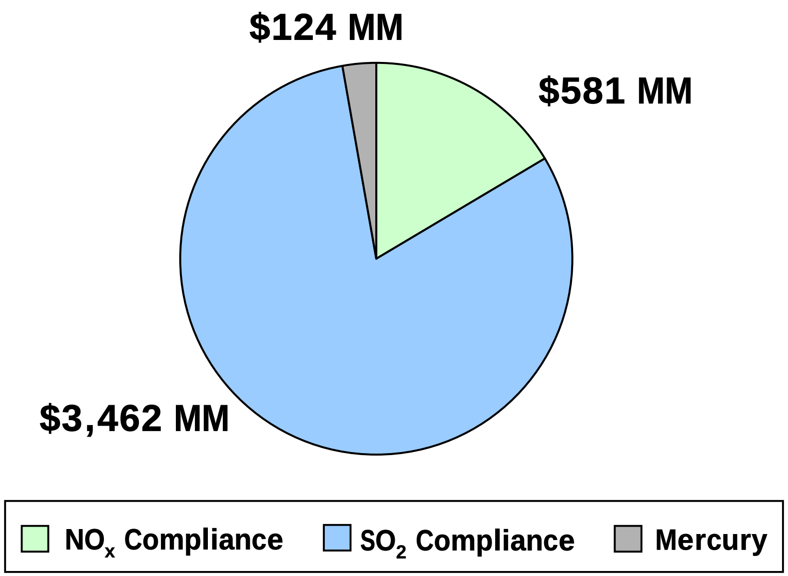
Environmental Investment: $4.1 Billion Through 2010

Environmental Capital Investment*



*Environmental investment for NOx, SO_2 , & Hg purposes
** Actual investment level in 2004

Compliance Allocation



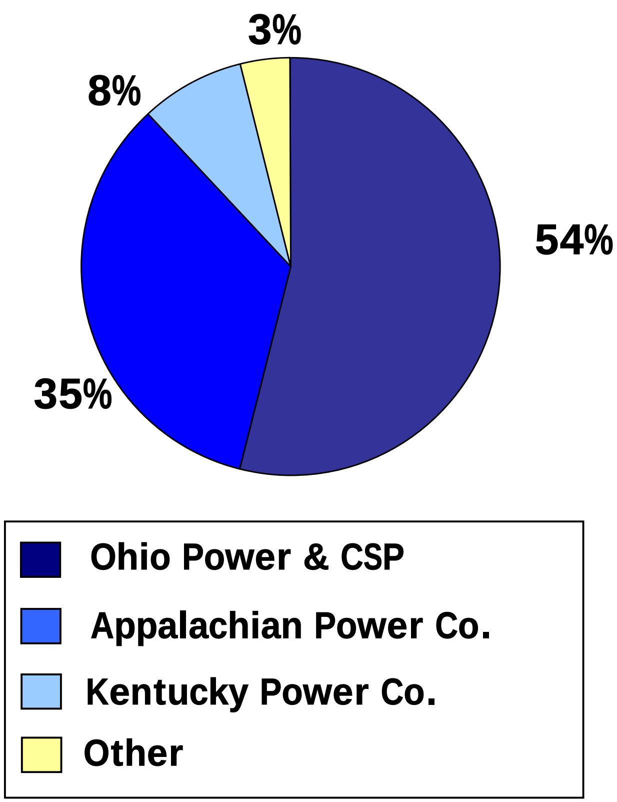
Current Programs
$2.0 Billion:
$0.5 billion for NOx
$1.5 billion for SO_2

Future Programs
$2.1 Billion:
$1.9 billion for SO_2
$0.2 billion for Other

MAJORITY OF 2005 & 2006 DOLLARS WILL BE INVESTED IN OHIO & APCO

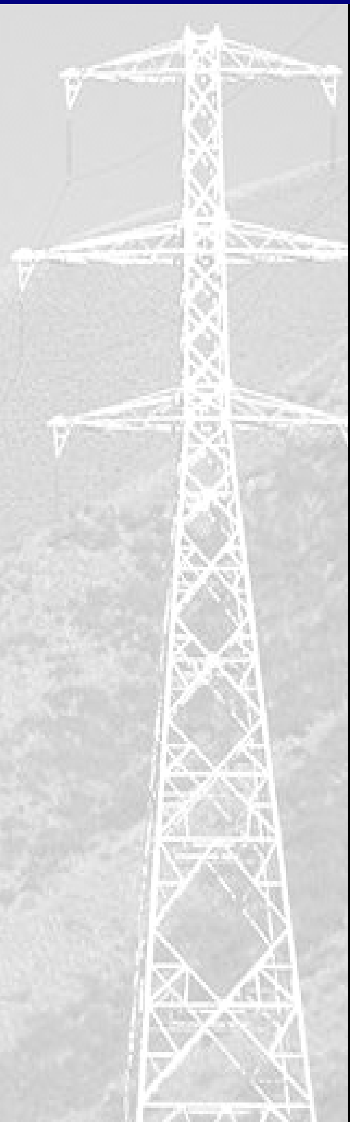
Environmental Spending by Company

Projected Environmental Investment Allocation



Funding the Environmental Investments

- **Ohio**: 54% ($2.2 billion)
  - Rate stabilization plan annual increases at CSP – 3% and OP – 7% beginning in 2006 through 2008
- **Virginia/West Virginia**: 35% ($1.4 billion)
  - VA: Environmental cost recovery mechanism/two rate case opportunities through 2010
  - WV: General rate case filing
- **Kentucky**: 8% ($319 million)
  - Surcharge mechanism



2Q06 Earnings Release Presentation

July 27, 2006

"Safe Harbor" Statement Under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

2Q 2006 Performance Drivers

Weather Impact: Negative $0.01 vs. normal
Negative $0.02 vs. prior yr.

- *Rate relief in OH, KY, and PSO was largely offset by rise in fuel costs; increased muni & co-op sales reflect strategy to remarket power supply contracts*
- *Lower OSS due to lower volumes, West margins (sale of STP), and lower trading revenues.*
- *3rd Party Transmission revenues down due to absence of SECA revenues and provision for SECA refund ($18MM)*
- *O&M expense drivers: (1) increased plant outages; (2) higher tree-trimming expenses; (3) higher A&G expenses*
- *Increased D&A due to increased amortization expense at the Ohio Companies*
- *Increase in Taxes Other than Income Taxes driven by higher property taxes*
- *Income tax decrease driven by lower pretax income*

YTD Performance Drivers

Weather Impact: Negative $0.07 vs. normal
Negative $0.06 vs. prior yr.

- *Rate Relief ($121MM), mostly Ohio RSP; Increased margins reflecting customer growth, usage and price ($71MM); New muni & coop power supply contracts ($35MM); Offset by weather ($37MM) and lower fuel margins mainly in the East ($109MM).*
- *Lower off system sales due to lower volumes and margins (sale of STP) and trading contribution*
- *Lower ECAR, SECA & ERCOT Transmission revenue and provision for SECA Refund ($18MM)*
- *O&M increase related to higher plant outages, base plant operations & increased maintenance; higher tree-trimming; Offset by lower storm restoration costs*
- *D&A increase primarily associated with higher amortization at the Ohio Companies and TCC*
- *Income taxes increase driven by higher property taxes at Ohio companies*
- *Interest expense increased due to higher LTD interest expense*
- *Other Income & Deductions declined due to lower carrying costs for the Ohio Companies*

Ending Cash & Cash Equivalent Balances	607	249

2Q 2006 Cash Flow Drivers

- *Changes in working capital had a negative cash effect of $183MM primarily as a result of an increase in fuel inventories and decreased customer deposits.*
- *$91MM positive cash effect partly due to deferred fuel recovery at PSO and SWEPCo.*
- *Cash outlay of $1.625 billion in first half 06 for capital investment. FY 2006 guidance assumes $3.663 billion in capital investment.*
- *YTD 06 primary asset sale proceeds: Centrica sharing ($70MM) and Bajio ($29MM); YTD 05 primary asset sale proceeds: HPL ($1B) & Centrica sharing ($70MM);*
- *Portion of HPL sale proceeds used to repurchase shares in 1H05.*
- *Capex in '06 was funded with short-term debt ahead of long-term debt financing.*
- *Ending cash balance for 2Q06 of $249MM. 2006 guidance assumes year-end cash balance of $260MM.*

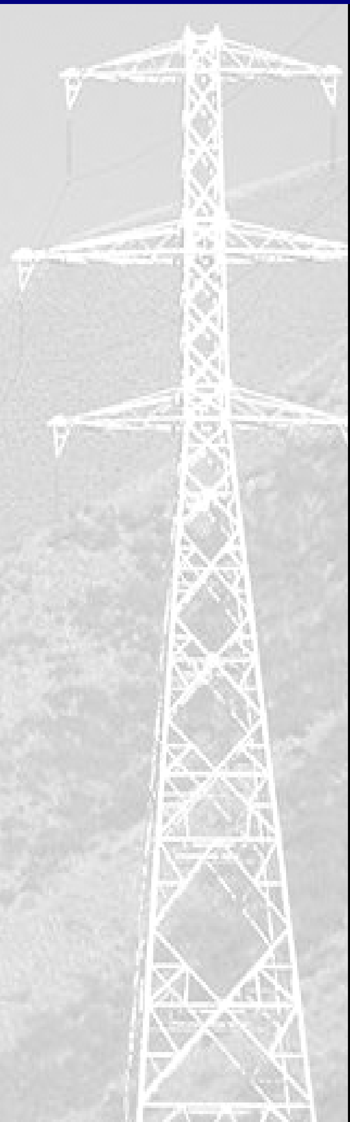
AEP AMERICAN ELECTRIC POWER



3Q05 Earnings Release Presentation

October 27, 2005

“Safe Harbor” Statement Under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to control operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

3Q 2005 Performance Drivers

Weather Impact: Positive $0.06 vs. normal
Positive $0.12 vs. prior yr

- *Increase at Reg Integ Utilities, Ohio Cos & Texas Wires driven by growth in no. of retail customers and load and warmer weather*
- *Decrease in gross margin due to July 2004 plant divestitures, STP sale in May 2005 & expiration of Centrica supply contract*
- *Increased OSS margin as a result of higher power prices*
- *Lower transmission revenues due to elimination of O&T rates*
- *Higher O&M expenses due to timing of maintenance projects, higher demand, tree trimming, etc.*
- *Property tax increases, higher revenue/kwh tax, payroll taxes and higher pretax income drove the increase in tax expense*
- *Other Income & Deductions line includes: (1) carrying costs on OH environmental additions ($10MM) and (2) carrying costs on TX stranded costs ($22MM)*

Note: For analysis purposes, certain financial statement amounts have been reclassified for this effect on earnings presentation.

16	Net Earnings Utility Operations	847	2.14	982	2.53

Note: For analysis purposes, certain financial statement amounts have been reclassified for this effect on earnings presentation.

YTD 2005 Performance Drivers

Weather Impact: Positive $0.05 vs. normal
Positive $0.11 vs. prior yr

- *Decline at Reg Integ Utilities attributable to higher fuel costs partially offset by growth in retail customers; Fuel pressure at Ohio Cos. offset by cust. growth & Buckeye Power emissions allowances*
- *Decrease in gross margin due to July 2004 plant divestitures and expiration of Centrica supply agreement*
- *Increased OSS margin due to higher power prices and slightly higher volumes*
- *Lower transmission revenues due to elimination of O&T rates*
- *O&M decrease primarily attributable to sale of TCC generation, lower operating company fringes/employee benefits, lower outside services, etc.*
- *Decreased interest expense reflecting refinancings and lower debt balance*
- *Other Income & Deductions line includes: (1) $70MM Centrica sharing mechanism; (2) carrying costs on OH environmental additions ($47MM) and (3) carrying costs on TX stranded costs ($64MM)*

3Q06 Earnings Release Presentation

October 31, 2006

"Safe Harbor" Statement Under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

A Century of Firsts

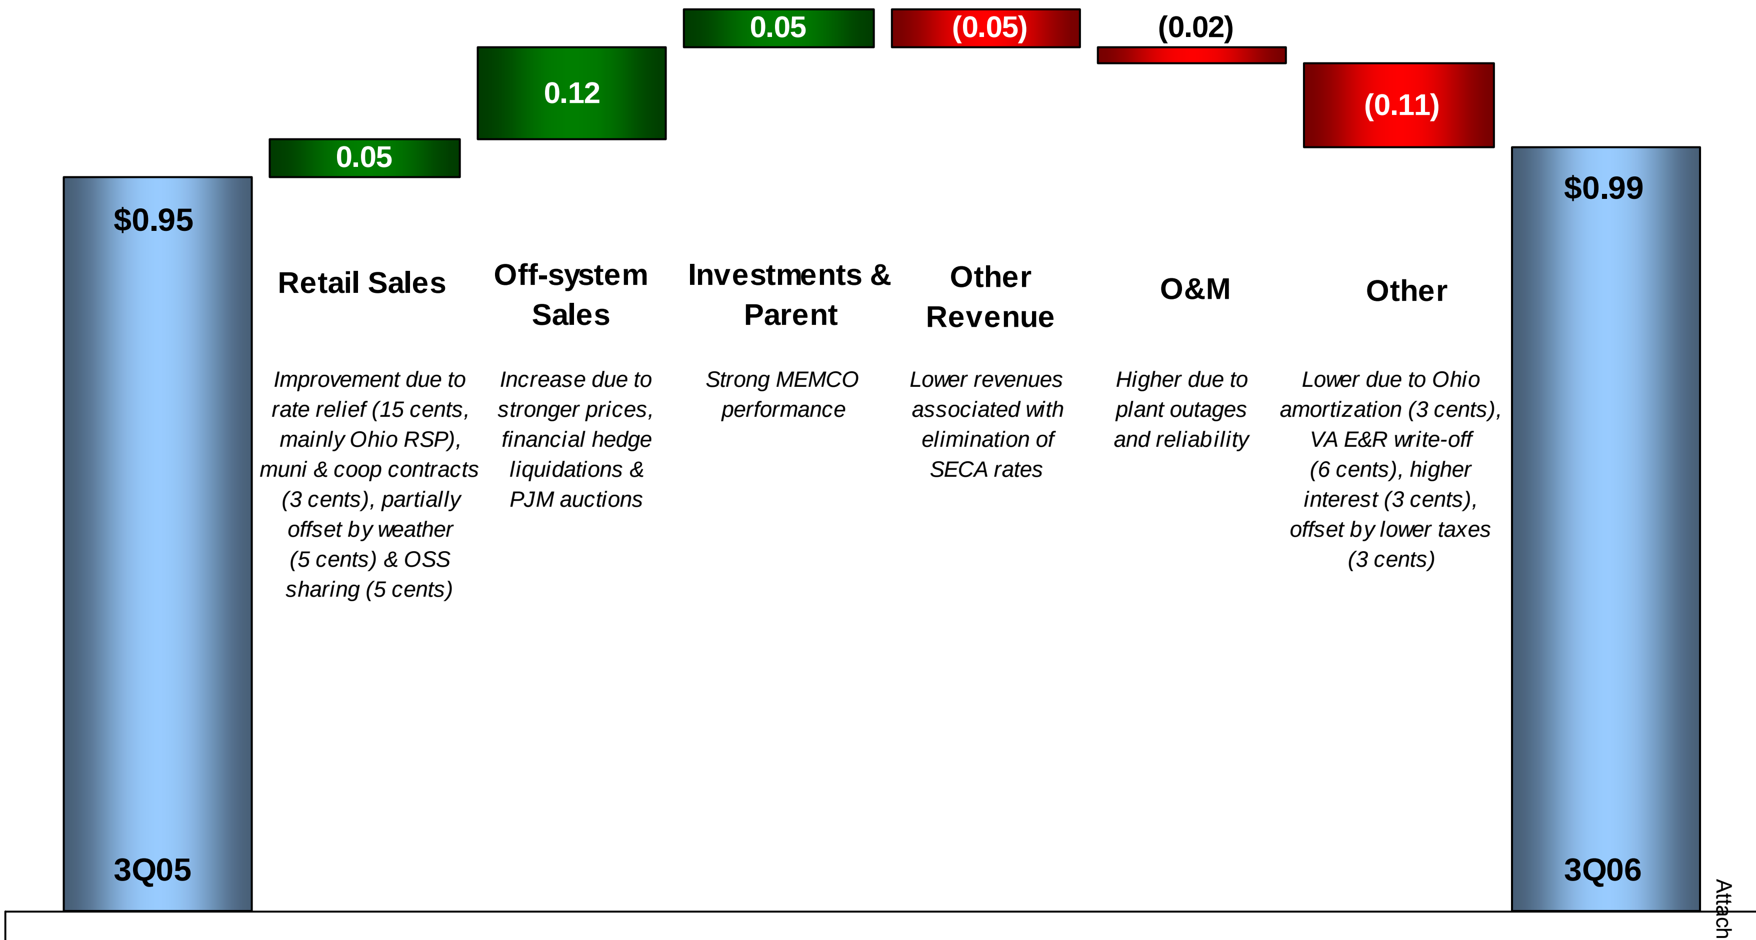
Highlights

- **3Q06 GAAP Earnings $0.67 per share, Ongoing $0.99 per share**
- **Ongoing Earnings Guidance Ranges**

2006 Range $2.65 to $2.80	**2007 Range $2.85 to $3.05**
2008 Range $3.00 to $3.30	**2009 Range $3.15 to $3.45**

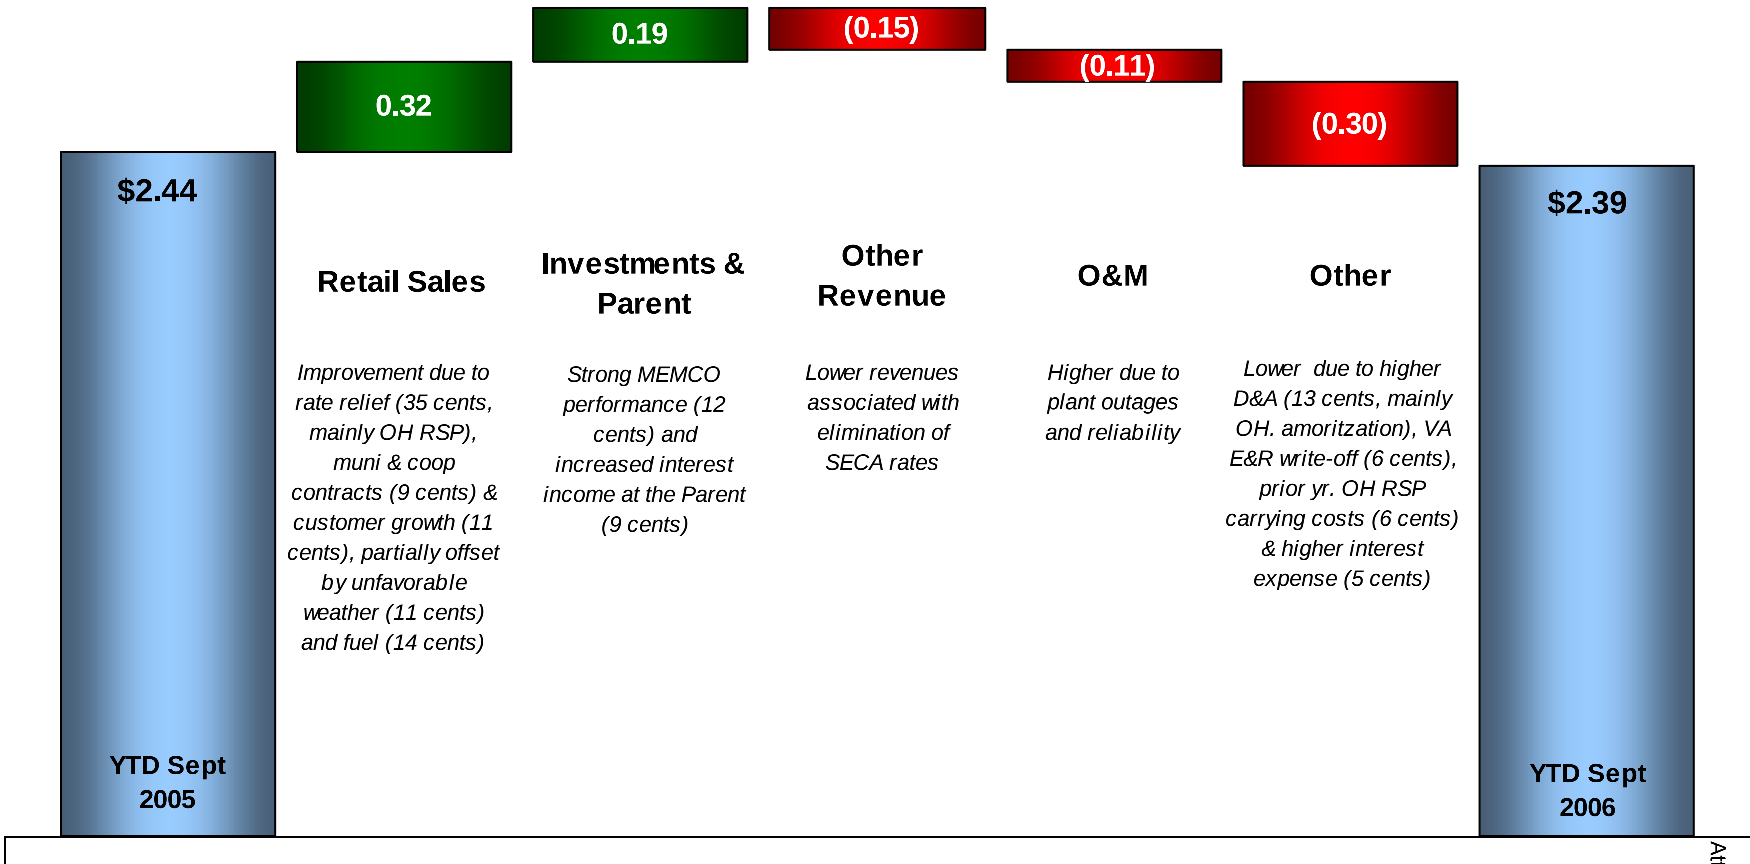
- **Increased EPS Growth Range: 5-7% (CAGR, 2006-2009)**
- **Commitment to recommend an 8-cent/share increase in annual Dividend**
  - **Board declared quarterly 2-cent increase on October 24, 2006, bringing annual dividend level to $1.56/share**
- **Regulatory Activity**
  - **Ohio: submitted RSP Competitive Bid Mechanism; Storm Damage recovery approved ($24MM);**
  - **Texas: $1.7B Securitization complete; PUCT issued ruling on $475MM CTC;**
  - **Indiana Depreciation change denied (requested $75MM);**
  - **Virginia: E&R status; Received base rate case staff testimony**

3Q06 Ongoing Earnings Performance Drivers



4-cent Improvement Driven by Rate Relief, Off-System Sales and Memco

3Q06YTD Ongoing Earnings Performance Drivers



YTD Improvement from Rate Relief, Load Growth & Memco Offset by Weather, Loss of SECA, and VA E&R Write-off

3Q 2006 Cash Flow Drivers

- *2006 Impairment relates to Dow ($136MM)*
- *$98MM positive cash effect partly due to deferred fuel recovery at PSO and SWEPCo.*
- *Cash outlay of $2.445 billion year-to-date 06 for capital investment. FY 2006 guidance assumes $3.663 billion in capital investment.*
- *YTD 06 primary asset sale proceeds: Centrica sharing ($70MM) and Bajio ($29MM); YTD 05 primary asset sale proceeds: HPL ($1B), Texas generation ($314MM) & Centrica sharing ($70MM);*
- *Ending cash balance for 3Q06 of $259MM. 2006 guidance assumes year-end cash balance of $390MM.*

3Q 2006 Performance Drivers

Weather Impact: Positive $0.01 vs. normal
Negative $0.05 vs. prior yr.

- *Rate relief primarily in OH and KY ($90MM), load growth($9MM) & addition of new muni & coop contracts ($19MM), largely offset by weather ($30MM) and OSS sharing ($33MM)*
- *Higher OSS due to strong generation unit performance in East & favorable results in PJM auction and financial hedge liquidations*
- *3rd Party Transmission revenues down due to absence of SECA revenues in 06.*
- *O&M expense drivers include increased plant outages and higher tree-trimming expenses*
- *Increased D&A due to increased amortization expense at the Ohio Companies & VA E&R write-off*
- *Lower Other Income & Deductions primarily due to write-off of Va. E&R ($27MM)*

Note: For analysis purposes, certain financial statement amounts have been reclassified for this effect on earnings presentation.

YTD Performance Drivers

Weather Impact: Negative $0.06 vs. normal
Negative $0.11 vs. prior yr.

- *Rate Relief ($210MM), mostly Ohio RSP; Increased margins reflecting customer growth, usage and price ($68MM); New muni & coop power supply contracts ($54MM); Offset by weather ($66MM) and lower fuel margins mainly in the East ($84MM).*
- *Lower ECAR (primarily due to elimination of SECA) and ERCOT Transmission revenue*
- *O&M increase related to higher plant outages, base plant operations & increased maintenance ($40MM); higher tree-trimming ($35MM); Offset by lower storm restoration costs ($23MM) & deferral of Ohio approved storm recovery costs ($24MM)*
- *D&A increase primarily associated with higher amortization at the Ohio Companies and TCC & higher depreciation expense due to E&R write-off ($12MM) & increase cap-ex*
- *Interest expense increased due to higher LTD interest expense ($55MM), offset by AFUDC*
- *Other Income & Deductions declined due to lower carrying costs for the Ohio Companies ($34MM) & write-off of VA E&R ($19MM)*
