
- EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in existing utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
  - Investment in new transmission opportunities
  - Seek rate recovery for new investments
  - Control costs & achieve timely rate relief
- Maintain credit ratings
  - BBB/Baa2/BBB

OUR STRATEGY REMAINS FOCUSED ON REGULATED OPERATIONS

AEP®

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

AEP®

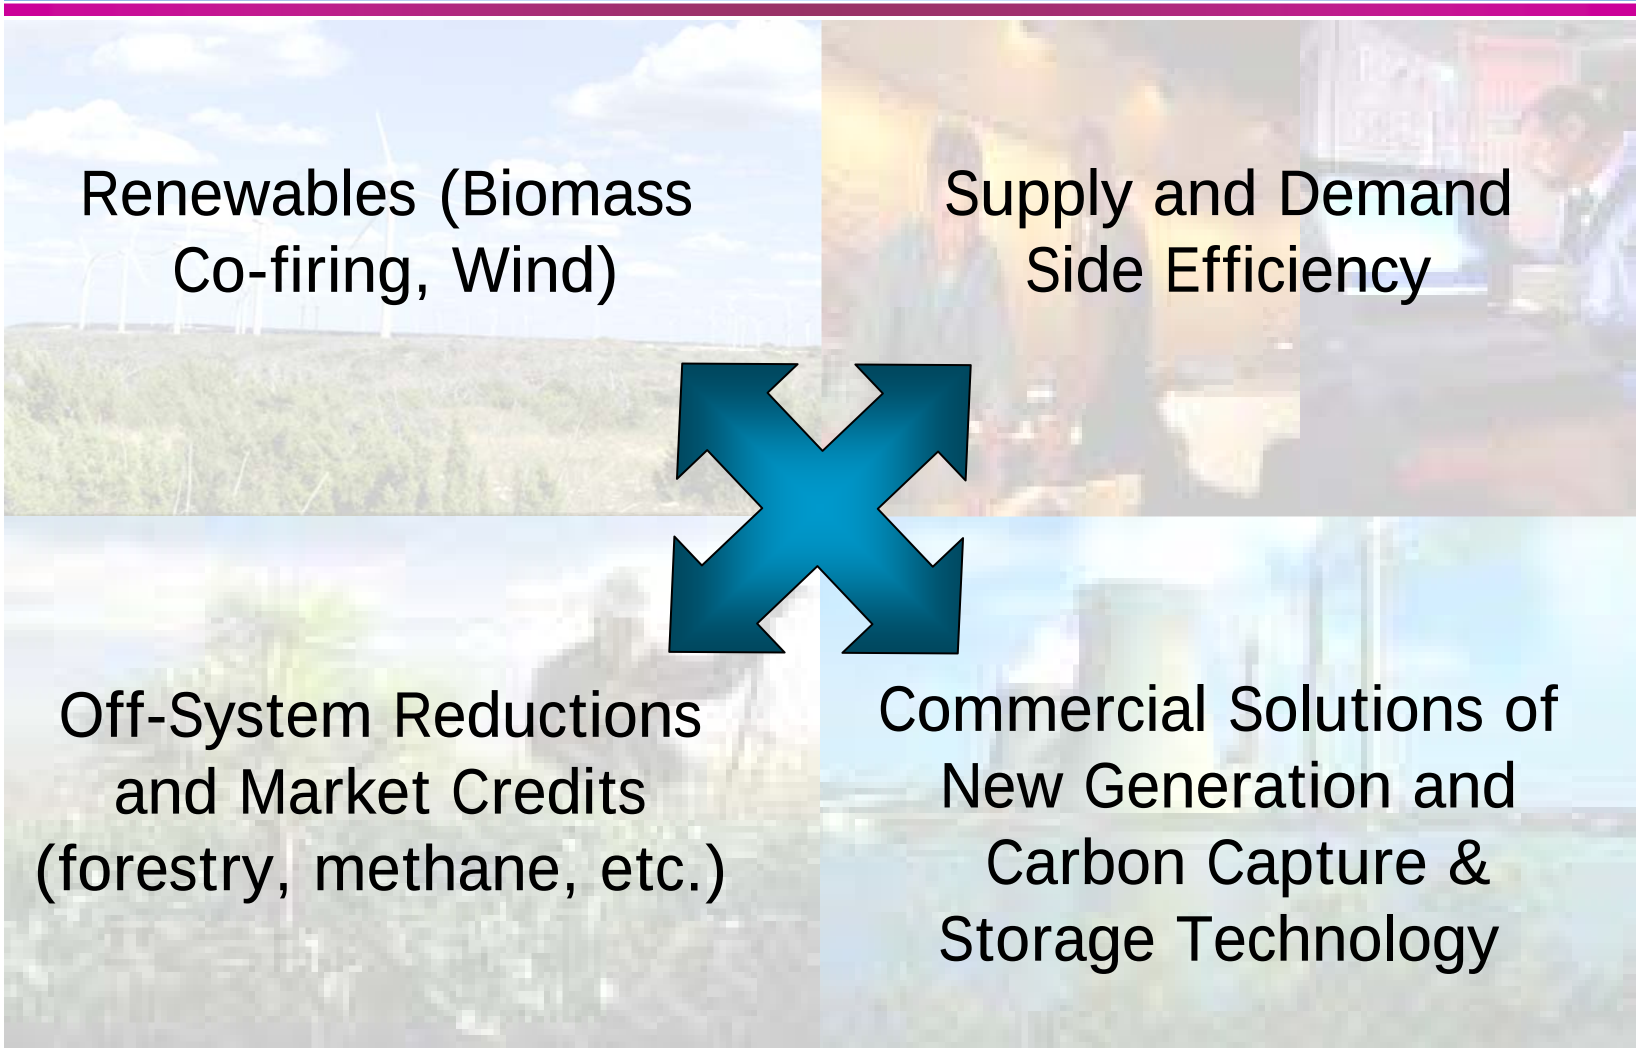
A RELIABLE & REASONABLY-PRICED ELECTRIC SUPPLY IS NECESSARY TO SUPPORT THE ECONOMIC WELL-BEING OF THE AREAS WE SERVE

AEP's Climate Strategy

- **Being proactive and engaged in the development of climate policy**
  - International Emissions Trading Association (IETA)
  - Electric Power Research Institute (EPRI)
  - Pew Center on Global Climate Change
  - e8
  - Global Roundtable on Climate Change
- **Investing in science/technology R&D**
  - FutureGen Alliance
  - US DOE research on carbon capture and sequestration at our Mountaineer Plant
  - EPRI – combustion technologies
  - MIT Energy Laboratory
  - B&W – Oxy-Fuel
- **Taking voluntary, proactive action now, demonstrating voluntary programs can work and setting policy precedents thru CCX**
  - Chicago Climate Exchange (CCX)
  - EPA Climate Leaders
  - EPA SF-6 Emission Reduction Partnership for Electric Power Systems Program
  - Asia-Pacific Partnership
  - DOE 1605B- voluntary reporting of GHGs Program
  - Business Roundtable Climate Resolve
  - Numerous forestry activities
- **Evaluating longer term investment decisions such as new generation and carbon capture and storage (e.g., IGCC, Ultra-supercritical)**

AEP MUST BE A LEADER IN ADDRESSING CLIMATE CHANGE

AEP's Long-term GHG Reduction Portfolio



AEP®

AEP IS INVESTING IN A PORTFOLIO OF GHG REDUCTION ALTERNATIVES

IGCC Overview

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called "syngas" – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2 , mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP's eastern service territory.

AEP®

AEP IS COMMITTED TO IGCC TECHNOLOGY

IGCC Technology

IGCC Permitting Process

IGCC Permitting Issues

- **Air**
  - ✓ Identify best available control technology (BACT)
  - ✓ Determine how start-up and shut-down emissions should be addressed
- **Wastewater**
  - ✓ understand nature of wastewater streams
  - ✓ Determine treatability and permitting scopes
- **US ACE (US Army Corp of Engineers**)
  - ✓ Conduct all necessary site studies per NEPA (National Environmental Policy Act) requirements (Wetlands, endangered species, archaeology)
  - ✓ Obtain permit to construct river facilities

AEP®

PERMITTING PROCESS TAKES 1 – 2 YEARS AND IS WELL UNDER WAY

Environmental Investment

AT THE CONCLUSION OF OUR CURRENT ENVIRONMENTAL RETROFIT PROGRAM, OVER 47% OF OUR COAL-FIRED GENERATION FLEET WILL BE EQUIPPED WITH SCRs AND OVER 50% WILL BE SCRUBBED (FGD). AEP's TOTAL COAL FLEET CAPACITY = 24,710 MEGAWATTS*

Plant Name	MW Capacity	SCR	Status	FGD	Status

*Excludes AEP's 44% ownership in OVEC (980 MWs of coal-fired capacity)

AEP®

Installation Of SCR And FGD Equipment Will Allow Our Coal Fleet To Remain Extremely Cost Competitive

AEP's Long-term CO_2 Reduction Commitment

Existing Programs

- Renewables
  - 800 MWs of Wind
  - 300 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

New Program Additions

- Incremental Reduction quantity: 5MM tons/yr
- Timing: Implement during 2007 to take effect/receive credits by 2011
- Methods
  - +1000 MWs of Wind PPAs – 2MM tons/yr
  - Domestic Offsets (methane) – 2MM tons/yr
  - Forestry – Tripling annual investment to increase to 0.5MM tons/yr by 2015
  - Fleet Vehicle/Aviation Offsets – 0.2MM tons/yr
  - Additional actions to include DSM and end use energy efficiency, biomass and power plant efficiency – 0.2MM tons/yr

New Technology Additions

- Commercial solutions for existing fleet
  - Chilled Ammonia
  - Oxy-Fuel

AEP IS COMMITTED TO A 5MM TON/YR REDUCTION IN CO_2 EMISSIONS WHICH OFFSETS APPROXIMATELY HALF OF THE EMISSIONS PROJECTED FROM NEW GENERATION PROJECTS PREVIOUSLY ANNOUNCED

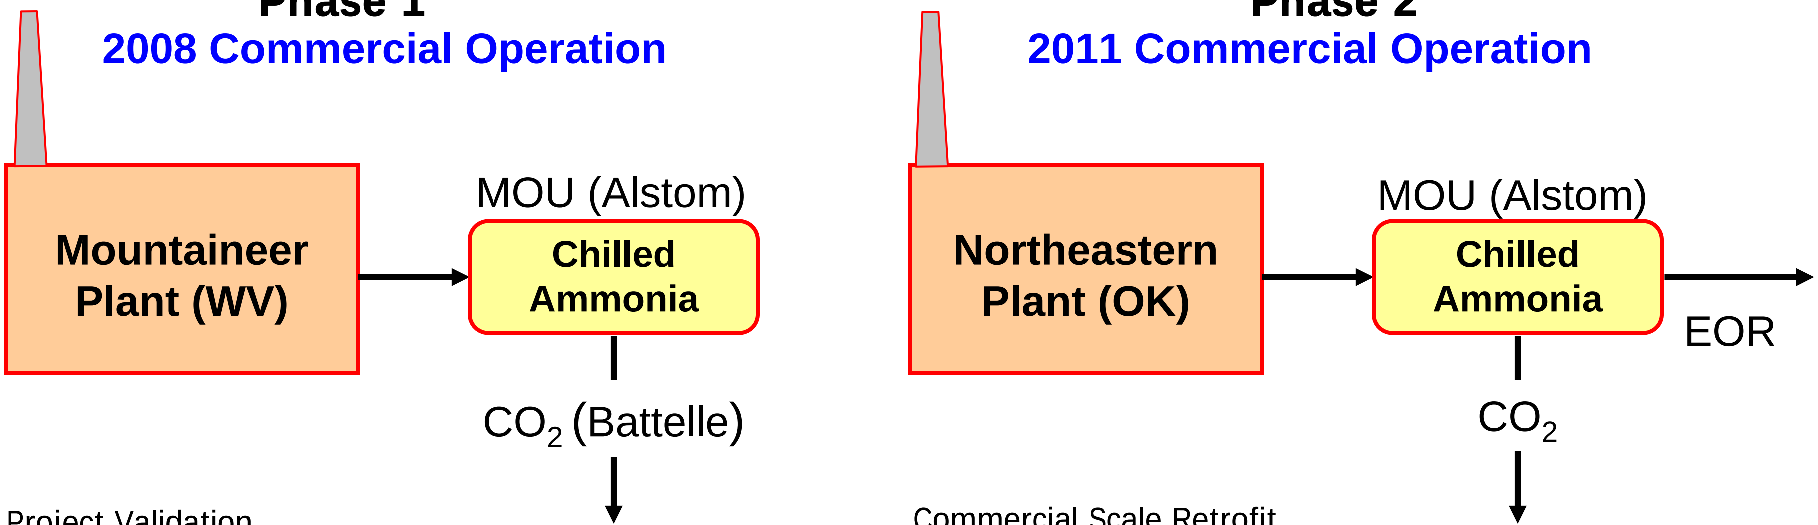
AEP®

Chilled Ammonia Process Plant Footprint

Chilled Ammonia Technology Program

Phase 1
2008 Commercial Operation

Phase 2
2011 Commercial Operation



Project Validation

- 30 MW_t (megawatts thermal) scale (a scale up of Alstom/EPRI 5 MW_t field pilot, under construction at WE Energies)
- <0.1MM tonnes CO_2 per year
- In operation 4Q 2008
- Approximate total cost \$50 – \$80M
- Using Alstom "Chilled Ammonia" Technology
- Located at the AEP Mountaineer Plant in WV
- CO_2 for geologic storage

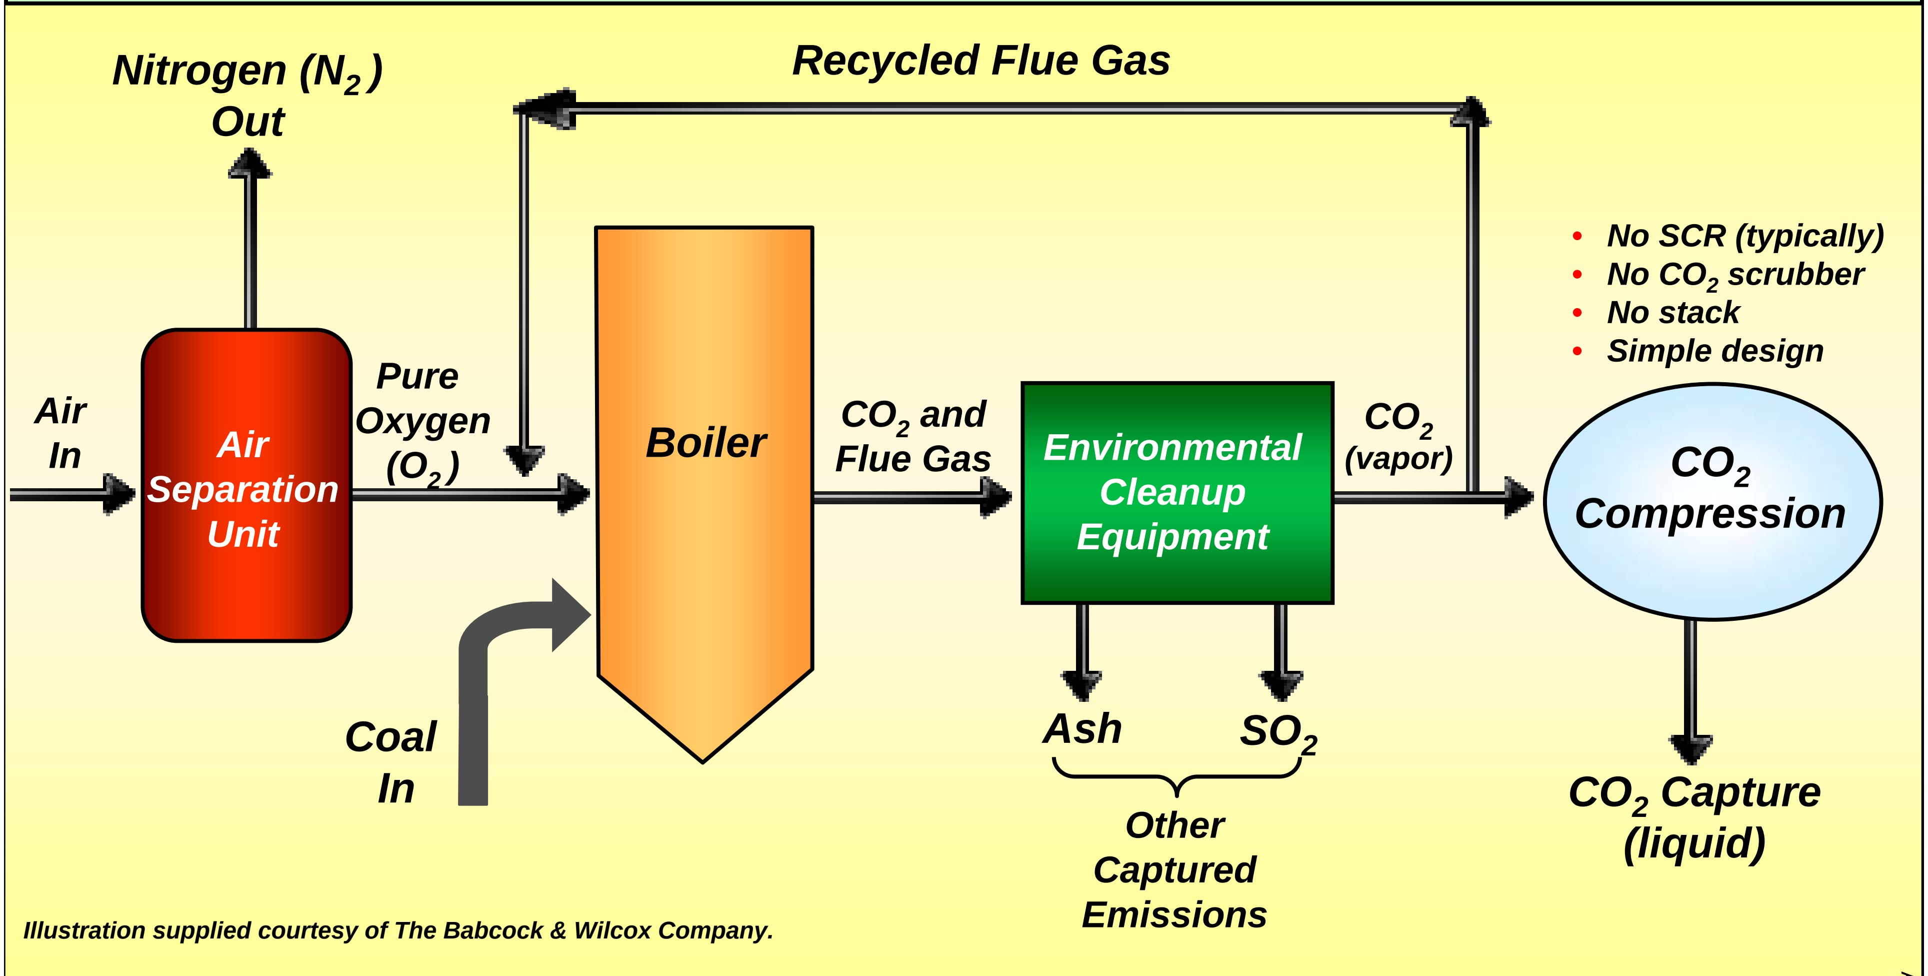
Commercial Scale Retrofit

- ~ 200 MW_e scale (megawatt electric)
- ~ 600 MW_t scale (megawatt thermal)
- ~1.5MM tonnes CO_2 per year
- In operation late 2011
- Approx. capital \$250 – \$300M (CO_2 capture & compression)
- Approx. O&M cost \$12M per year
- Energy penalty ~ 35 – 50 MW steam, 25 – 30 MW for CO_2 compression
- Retrofit SCR & Wet FGD Required: ~\$225 – \$300M (required for CO_2 capture equipment)
- Located at AEP's Northeastern Plant Unit 3 or 4 in Oklahoma
- CO_2 for Enhanced Oil Recovery (EOR) or geologic storage

AEP®

POST-COMBUSTION CARBON SOLUTION PROVIDES PURE CO_2 STREAM FOR CAPTURE

Oxy-Fuel Technology Initiative



- *No SCR (typically)*
- *No CO_2 scrubber*
- *No stack*
- *Simple design*

NEAR-ZERO EMISSIONS USING OXY-FUEL COMBUSTION TECHNOLOGY

Oxy-Fuel CO_2 Capture & Storage Project

Pilot Scale Demonstration

- 10 MW_e scale
- Teamed with B&W at its Alliance Research Center and 16 other utilities
- Demo completed 3Q 2007
- AEP funding of $50k

Commercial Scale Retrofit

- Retrofit on existing AEP sub-critical unit (several available)
- 150 – 230 MW_e scale retrofit
- 4,000 – 5,000 tons CO_2 per day
- Teamed with B&W
- AEP funding of ~ $200k – $3M for feasibility study
- Feasibility study to be completed 2Q 2008

COMBUSTION CONVERSION TECHNOLOGY FOR EXISTING COAL FLEET – LONGER LEAD TIME WITH ENHANCED VIABILITY AND LONG-TERM POTENTIAL

AEP®

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

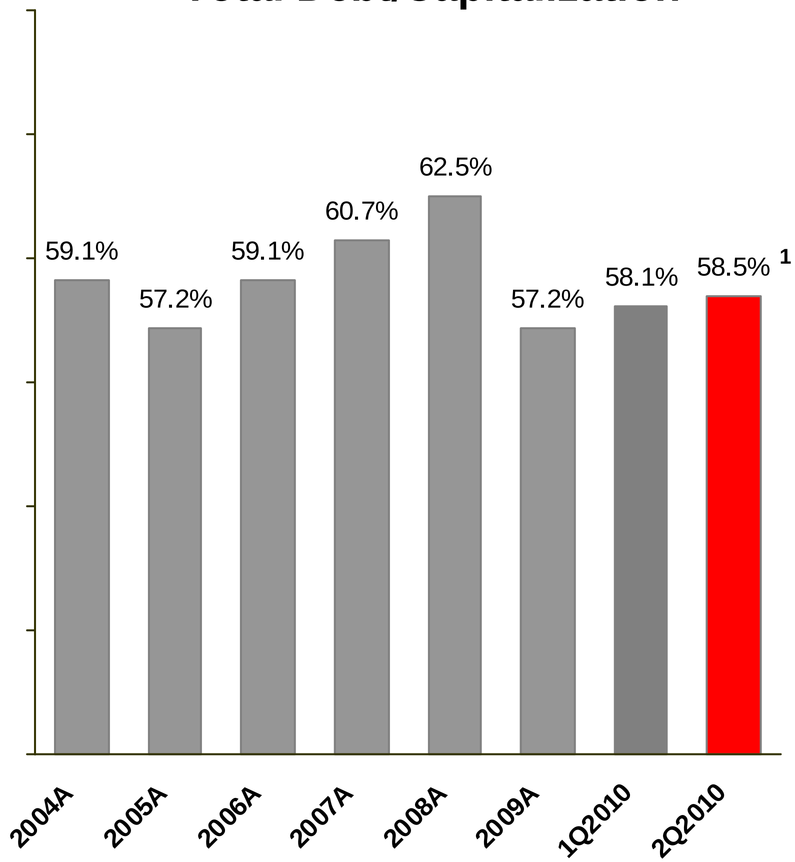
Capitalization & Liquidity

Total Debt/Capitalization



Note: Total Debt is calculated according to GAAP and includes securitized debt

1: Effective January 1, 2010 in accordance with Transfers and Servicing accounting guidance (formerly SFAS 166), factored receivables of AEP Credit of $677 million are classified as short-term debt; The 2Q2010 debt/capitalization ratio would be 57.6%, excluding AEP Credit.

Projected Fuel Mix - 2017

New Generation Projects

J. Lamar Stall Combined-Cycle Gas Plant

- J. Lamar Stall Combined-Cycle gas plant is a 508-MW unit that began commercial operations in June 2010.
  - The final estimated cost of the plant is $433 million including $49MM of AFUDC.
  - The plant is located in AEP's SWEPCo region at its existing Arsenal Hill Power Plant in Shreveport, Louisiana.
  - The plant serves the needs of customers in the Arkansas, Louisiana and Texas service territories.

- John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant. Located in AEP's SWEPCo region. AEP owns 73 percent or roughly 440 megawatts of the total unit.
  - The cost of the plant and related transmission is anticipated at $1.8 billion with AEP's share approximately $1.4 billion and will begin commercial operation in 2012.
  - The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls.
  - Various legal challenges are on-going related to the plant (see 10-Q). Recently, following the Arkansas Supreme Court decision regarding CECPN, SWEPCO filed notice to the APSC that the 88MW will now be merchant and will not be included in rate base.

John W. Turk Jr. Ultra-Supercritical Coal Plant

Carbon Capture and Storage

Carbon Capture and Storage project located at AEP's Mountaineer Plant in New Haven, WV

PHASE I – Validation

Captured CO_2 – September 2009

Injected CO_2 – October 2009

CO_2 Capture

Project employs Alstom's chilled ammonia process for post-combustion CO_2 capture.

CO_2 Storage

Compressed CO_2 is injected about 1.5 miles below the earth's surface.

PHASE I - Validation

20 MWe scale validation project designed to remove 90% of CO_2 from flue gas and store 100,000 metric tons/year. Currently in operation.

PHASE II - Commercialization

235 MWe commercial scale project designed to capture and store 1.5 million metric tons of CO_2/year. Awarded 50% US DOE funding. Commercial operation in 2015.

Transmission Investment Opportunities

- ETT: Projects in Texas ERCOT jurisdiction
  - $600MM of projects est. in service 2010-2013
  - ETT's opportunity could reach $3.0B in this decade
- Transco: Within our existing footprint
  - Provides opportunity to:
    - Develop new AEP-only projects
    - Reduce regulatory lag through FERC formula rates adjusted annually
- Joint Ventures: Outside of our footprint, via ETA or with others
  - Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
  - Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2016
  - Robust pipeline of projects up to $15B

AEP®

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

ROEs Calculated on a GAAP Basis

Jurisdictional Fuel Clause Summary

STATE	FUEL CLAUSE	ADJUSTMENT FREQUENCY
Arkansas	Yes	Monthly
Indiana	Yes	Semi-annually
Kentucky	Yes	Monthly
Louisiana	Yes	Monthly
Michigan	Yes	Annually
Ohio	No	n/a
Oklahoma	Yes	Annually
Tennessee	Yes	Monthly
Texas (SPP)	Yes	Annually
Virginia	Yes	Annually
West Virginia	Yes	Annually

Jurisdictional Off-System Sales Sharing Summary

STATE	OSS Sharing?	Detail
Arkansas	Yes, above and below base levels	Up to $758,600 annual margin, ratepayers receive 100%. From $758,601 to $1,167,078, ratepayers receive 85%. Above $1,167,078, ratepayers receive 50%.
Indiana	No	There is $17 million built into Indiana's base rates
Kentucky	Yes, above and below base levels	Sharing only occurs after annual profits exceed $24,855,326. Between that amount and $30 million, ratepayers receive 70%. Above $30 million, ratepayers receive 60%.
Louisiana	Yes, above base levels	Up to $874,000 annual margin, ratepayers receive 100%. From $874,001 to $1,314,000, ratepayers receive 85%. Above $1,314,000, ratepayers receive 50%.
Michigan	Yes	There are two jurisdictions: St Joe and Three Rivers. For St Joe, 100% of profits are shared with ratepayers. No profits are shared in Three Rivers, including base rates. St Joe represents 67% of the Michigan market.
Ohio	No	n/a
Oklahoma	Yes	75% of profits are shared with ratepayers.
Tennessee	No	n/a
Texas (SPP)	Yes	90% of profits are shared with ratepayers.
Virginia	Yes	Factored into base rates at a fixed rate. Effective 7/1/07, legislation was enacted to allow company retention of at least 25% of OSS margins. We have a filing pending before the VA SCC to initiate this sharing.
West Virginia	Yes	100% of profits passed back to ratepayers through the Expanded Net Energy Cost (ENEC) clause.

Maintain Financial Strength Of Utility Companies By Retaining And/Or Infusing Equity Capital Depending On Their Credit Ratios And Free Cash Flow

AEP®

Managing Subsidiary Cash Flows

- We monitor:
  - AEP consolidated cash requirements
  - Utility expected rates of return and potential regulatory lags
  - Amount of capital spending and internal cash needs
  - Free cash flow – cash available after construction
  - Credit ratios

- Dividends and equity:
  - We pay dividends based on free cash flow and credit metrics
  - When additional equity/cash is needed at the subsidiary level, the first option is dividend reductions, then capital infusions
  - We are currently evaluating hybrid securities as a source of equity

Our Objective Is To Maintain The Financial Strength And Capital Markets Access Of The AEP Operating Companies

AEP®

Commitment To Credit Quality

- Maintain adequate liquidity
- Target 60% consolidated AEP debt/cap ratio
- Target long term AEP dividend payout ratio range of 55-60%

(1) In September 2006, S&P upgraded AEP's consolidated business profile score from 6 to 5.

Note: All rating agencies have each company on stable outlook with the exception of Fitch, which has a negative outlook on TCC.

We Are Committed To Maintaining Our Current Credit Ratings

AEP®

Long-Term Debt Guidelines

Issuers:

- Issue at operating companies.

Size:

- Make transactions index eligible if possible.
- When possible, issue a size sufficient for competitive execution.

Maturity:

- Issue maturities for which the market has appetite.
- Achieve weighted average life targets for operating companies, generally between 10-15 years.

Timing:

- Will issue based on the timing of maturities and levels of short-term debt as driven by capital spending and operating cash flow.

AEP Texas Central Company

President and Chief Operating Officer: Charles Patton

AEP Texas Central Company (TCC)

(organized in Texas in 1945) is engaged in the transmission and sale of power to affiliated and non-affiliated entities and the distribution of electric power to approximately 738,000 retail customers through REPs in southern Texas, and (to a limited extent) in supplying and marketing electric power at wholesale to other electric utility companies and market participants. Under the Texas Act, TCC completed its exit from the generation business through the sale of all of its generation assets. At December 31, 2006, TCC had 1,224 employees. In addition to its AEP System interconnections, TCC is a member of ERCOT.

Appalachian Power

President and Chief Operating Officer:
Dana Waldo

Appalachian Power Company (APCo)

(organized in Virginia in 1926) is engaged in the generation, transmission and distribution of electric power to approximately 949,000 retail customers in the southwestern portion of Virginia and southern West Virginia, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities and other market participants. APCo covers a service territory of 19,049 square miles, and at December 31, 2006, APCo and its wholly owned subsidiaries had 2,461 employees. Among the principal industries served by APCo are coal mining, primary metals, chemicals and textile mill products. In addition to its AEP System interconnections, APCo also is interconnected with the following unaffiliated utility companies: Carolina Power & Light Company, Duke Energy Corporation and Virginia Electric and Power Company. APCo has several points of interconnection with TVA and has entered into agreements with TVA under which APCo and TVA interchange and transfer electric power over portions of their respective systems. APCo is a member of PJM.

Columbus Southern Power

President and Chief Operating Officer: Kevin Walker

Columbus Southern Power Company (CSPCo)

(organized in Ohio in 1937, the earliest direct predecessor company having been organized in 1883) is engaged in the generation, transmission and distribution of electric power to approximately 742,000 retail customers in Ohio, and in supplying and marketing electric power at wholesale to other electric utilities, municipalities and other market participants. CSPCo covers a service territory of 3,701 miles and at December 31, 2006, CSPCo had 1,233 employees. CSPCo's service area is comprised of two areas in Ohio, which include portions of twenty-five counties. One area includes the City of Columbus and the other is a predominantly rural area in south central Ohio. In addition to its AEP System interconnections, CSPCo also is interconnected with the following unaffiliated utility companies: CG&E, DP&L and Ohio Edison Company. CSPCo is a member of PJM.

PRINCIPAL INDUSTRIES SERVED:

Food processing
Chemicals

Indiana Michigan Power

President and Chief Operating Officer: Helen Murray

Indiana Michigan Power Company (I&M)

(organized in Indiana in 1925) is engaged in the generation, transmission and distribution of electric power to approximately 582,000 retail customers in northern and eastern Indiana and southwestern Michigan, and in supplying and marketing electric power at wholesale to other electric utility companies, rural electric cooperatives, municipalities and other market participants. I&M has a service territory of 4,578 square miles and at December 31, 2006, I&M had 2,643 employees. Since 1975, I&M has leased and operated the assets of the municipal system of the City of Fort Wayne, Indiana. In addition to its AEP System interconnections, I&M also is interconnected with the following unaffiliated utility companies: Central Illinois Public Service Company, CG&E, Commonwealth Edison Company, Consumers Energy Company, Illinois Power Company, Indianapolis Power & Light Company, Louisville Gas and Electric Company, Northern Indiana Public Service Company, PSI Energy Inc. and Richmond Power & Light Company. I&M is a member of PJM.

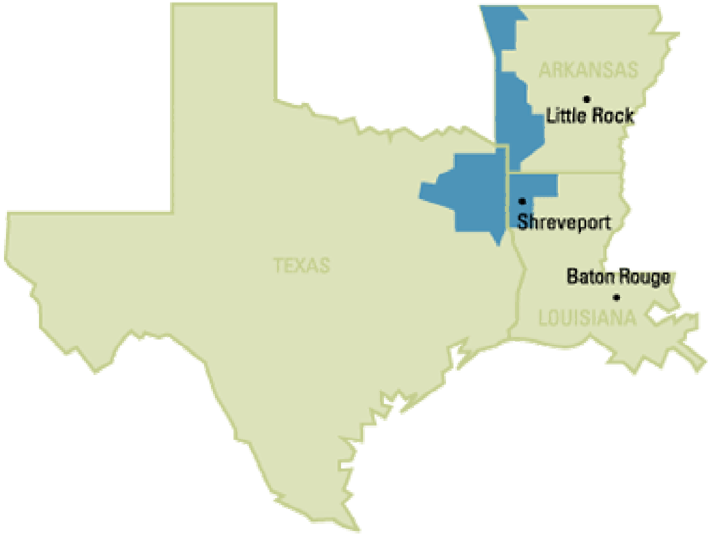
Southwestern Electric Power

President and Chief Operating Officer: Venita McCellon-Allen

Southwestern Electric Power Company (SWEPCo)

(organized in Delaware in 1912) is engaged in the generation, transmission and distribution of electric power to approximately 456,000 retail customers in northeastern Texas, northwestern Louisiana and western Arkansas, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities, rural electric cooperatives and other market participants. SWEPCo has a service territory of 25,000 square miles and at December 31, 2006, SWEPCo had 1,545 employees. The territory served by SWEPCo also includes several military installations, colleges, and universities. In addition to its AEP System interconnections, SWEPCo is also interconnected with CLECO Corp., Empire District Electric Co., Entergy Corp. and Oklahoma Gas & Electric Co. SWEPCo is a member of SPP.



Total Customers:

• **Residential**	**386,000**
• **Commercial**	**62,000**
• **Industrial**	**7,000**
• **Other**	**1,000**
Total	**456,000**

Generating Capacity	**4,637 MW**

Generating Capacity by Fuel Mix:

- **Coal/Lignite:** **58%**
- **Natural Gas:** **42%**

Transmission Miles	**3,500**
Distribution Miles	**19,300**

PRINCIPAL INDUSTRIES SERVED:

Oil and gas extraction
Paper products
Chemicals
Food processing
Primary metals

ADAPTABLE

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants including our ability to restore Indiana Michigan Power Company’s Donald C. Cook Nuclear Plant Unit 1 in a timely manner; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity and transmission lines (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary or deflationary interest rate trends; volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impacting our ability to finance new capital projects and refinance existing debt at attractive rates; the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurred cots and recovery is long and the costs are material; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

Table of Contents

AEP Highlights

Premier utility platform

- Leadership position in electric generation, transmission and distribution operations
- Cash flow, earnings and regulatory diversity with more than 5 million customers in 11 states
- $6.3 billion capital expenditure program (2009-2011) will continue to drive rate base growth

Effective regulatory relationships

- Traditional recovery mechanisms with equitable risk allocation enhance both earnings and cash flow
- Emerging energy policies play to AEP's strengths (transmission, energy efficiency, reliability)
- Constructive local relationships deliver successful regulatory outcomes

High-growth transmission business

- The leading US transmission owner, operator, and developer
- Exceptional portfolio of high-quality development projects and project partners
- Attractive ROEs, regulatory support and access to capital will drive earnings growth beyond our traditional utility footprint

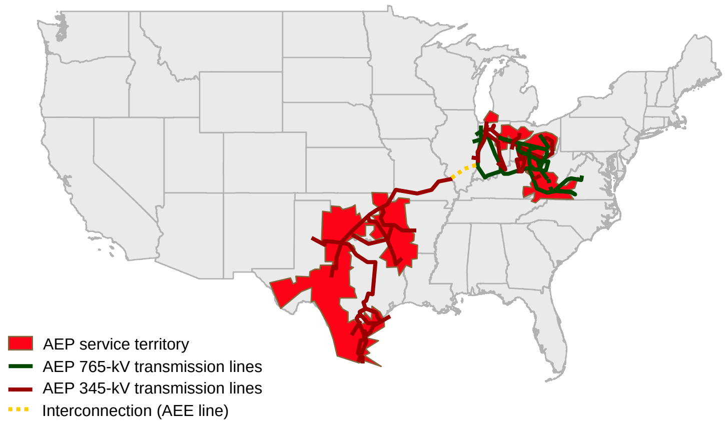
Stable financial position

- Maximization of shareholder value through regulated utility and transmission investments
- Balanced approach to cost containment and capital allocation
- Commitment to investment grade profile, prudent balance sheet, and liquidity management
- Conservative dividend payout with attractive yield

AEP AMERICAN ELECTRIC POWER

Premier Regulated Utility Platform

Overview



AEP's Leadership Position

Transmission miles[1] ('000s)		Generation owned[1] (GW)		Electric customers[1] (mm)

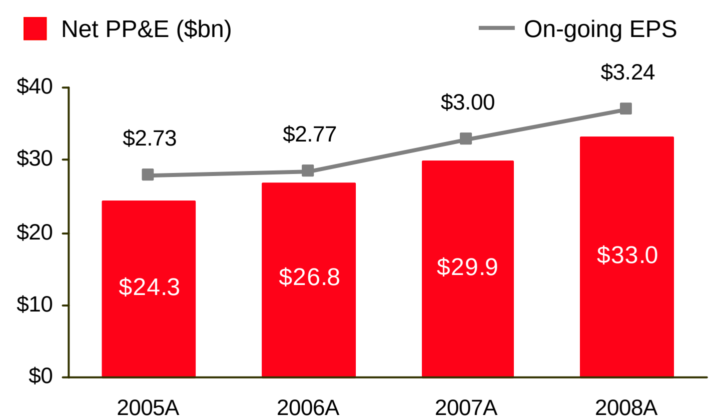
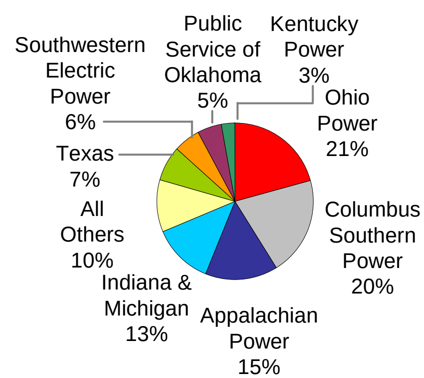
PGN	11.0	PGN	21.8	PGN	3.1

* - AEP generation includes long-term PPAs and generation under construction

Regulated Operations



- *Net PP&E CAGR of 10.7% since 2005*
- *Earnings CAGR of 5.9% since 2005*



2008 On-going Earnings = $1.3bn

- *Highly diversified regulated utility earnings contribution*

[1] *Source: Company filings*
[2] *Wholesale includes sales to municipal and cooperative power systems, other wholesale, and other retail sales*

AEP AMERICAN ELECTRIC POWER

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 8429 of 9556

Energy Policy Initiatives are Core to Our Strategy

Greenhouse Gas Reduction & Regulation

- Actively engaging in CO_2 policy debate – support cap & trade with allocated credits
- Leadership position in development of carbon capture and storage technology
- Reducing carbon footprint via offsets and other measures
- Founding member of Chicago Climate Exchange

Renewable Energy

- Develop “transmission superhighway” to facilitate renewable energy projects
- Satisfy RES requirements in our jurisdictions – currently Ohio with 25% (renewables + advanced) by 2025, Texas with ~ 5% by 2015, West Virginia with 25% (renewables + advanced) and Michigan with 10% by 2015; Voluntary goal of 12% by 2022 in Virginia
- Add 2,000MW of wind capacity via long-term PPAs – 903MW achieved to-date

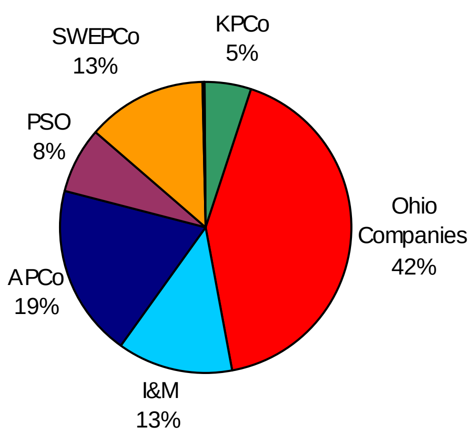
Energy Efficiency, Security & Reliability

- Develop high-voltage transmission projects to strengthen America’s power grid
- Build generation to ensure reliable supply
- Reduce 1,000MW of demand by 2012
- Reduce 2.25 million MWhs of consumption by 2012
- Diversify our fuel mix; have added 3,705MW of gas-fired capacity since 2005 and have 1,080MW under construction

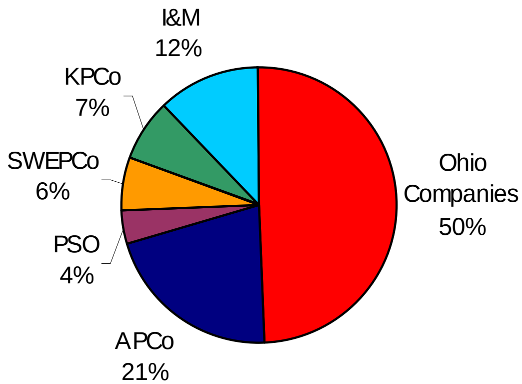
AEP AMERICAN ELECTRIC POWER

CO_2 Cost Recovery – Should Follow SO_2 & NOx

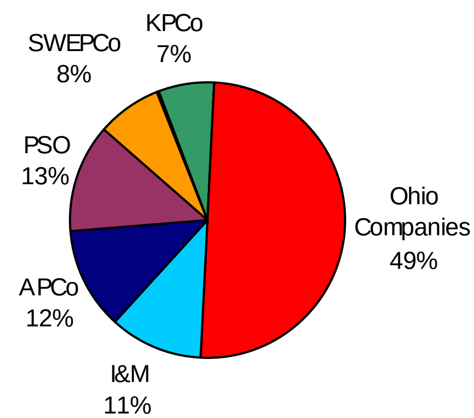
2008 AEP System CO_2 Emissions
163M tons



2008 AEP System SO_2 Emissions
637k tons



2008 AEP System NOx Emissions
248k tons

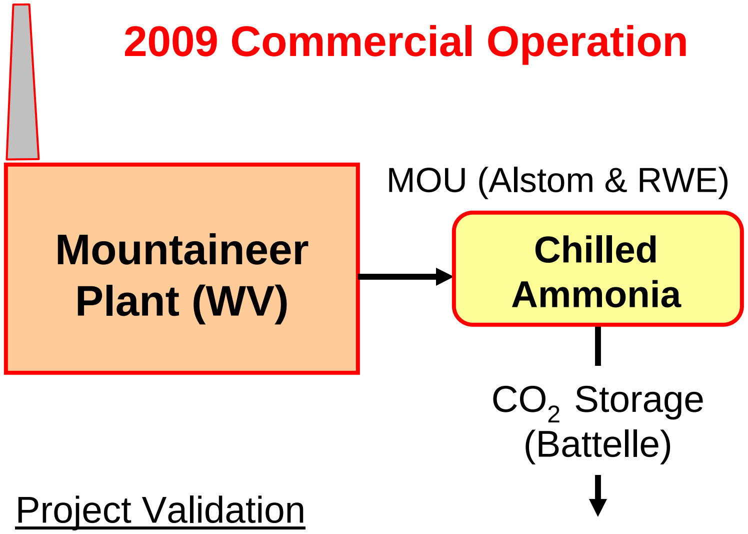


- 100% of SO_2 and NOx allowance costs currently recovered through tracker or similar mechanisms
- Prudently incurred costs associated with carbon-based taxes and other carbon-related regulations explicitly included in Ohio Fuel Adjustment Clause

AEP AMERICAN ELECTRIC POWER

Carbon Capture & Storage

2009 Commercial Operation



Project Validation

- **Alstom "Chilled Ammonia" Technology**
- **20-30 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, in operation at We Energies' Pleasant Prairie Power Plant)**
- **Located at the AEP Mountaineer Plant in WV**
- **100,000 - 300,000 tonnes CO_2 per year**
- **In operation 3Q 2009**
- **Geologic storage for CO_2**
- **Underground injection control permit received in May 2009 from WV Dept. of Environmental Protection**

Represents Post-Combustion Capture

- **Conventional or Advanced Amines; Chilled Ammonia**
  - **Amine technologies are currently available in other industrial applications**
  - **Relatively low CO_2 concentration in flue gas - more difficult to capture than other approaches**
  - **High parasitic demand**
    - **Conventional Amine ~ 25-30%**
    - **Chilled Ammonia target ~ 10-15%**

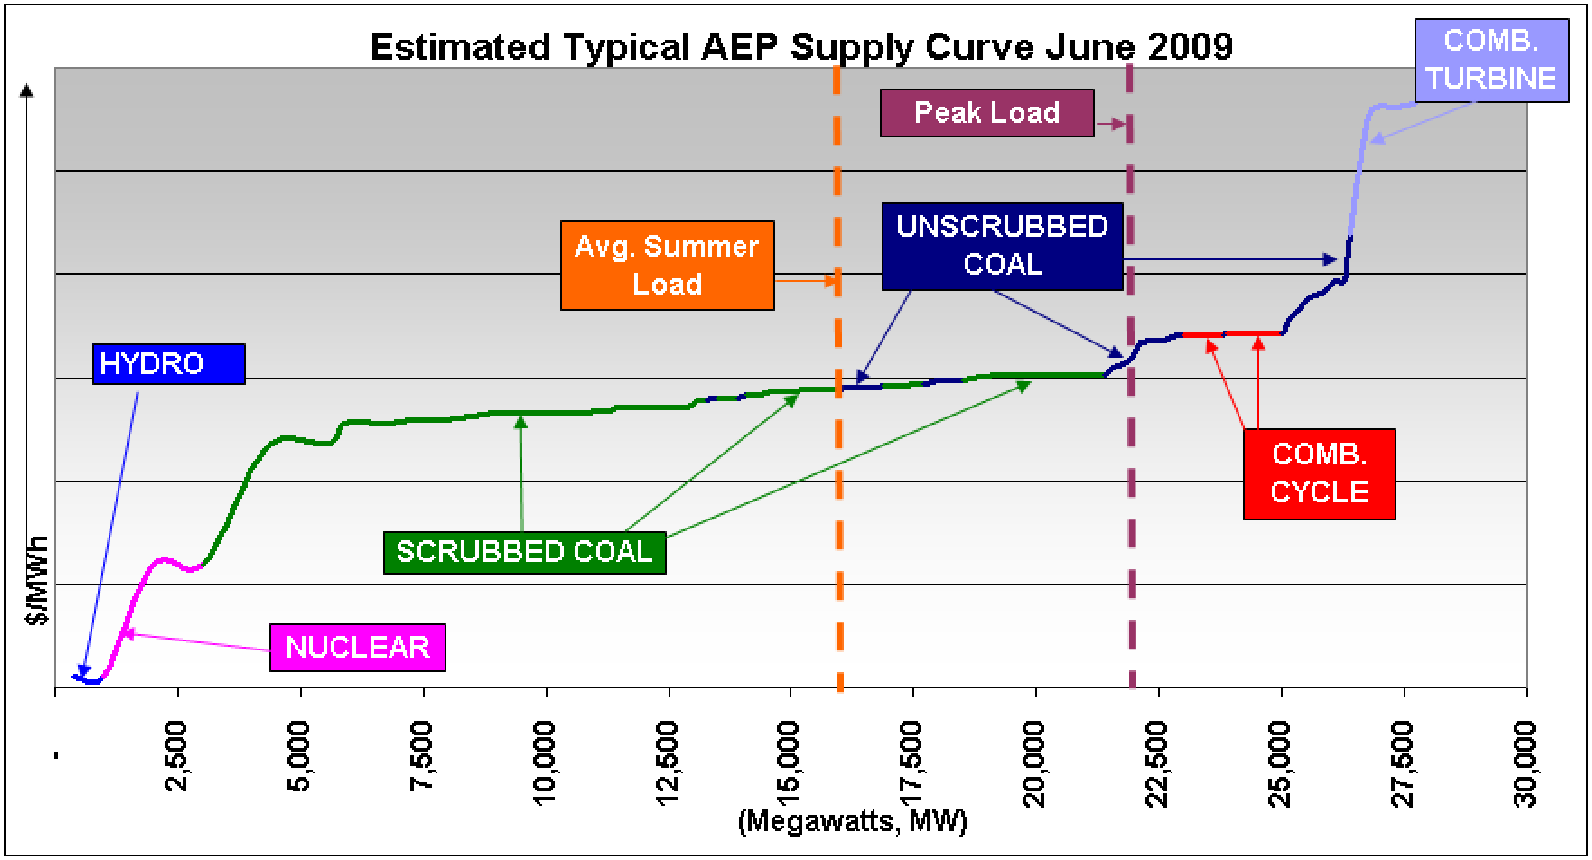
Key Issues for CCS Development in the U.S.

- **Overcoming the 'economic' hurdle**
- **High up-front capital investment**
- **Commercial demonstration at large coal-fired power plants**
- **National standards for permitting of storage reservoirs**
- **Potential institutional, legal and regulatory barriers to carbon storage**

AEP AMERICAN ELECTRIC POWER

AEP Supply Stack

- Supply stack with Cook unit 1 outage would slide the supply stack 1,009 MW to the left.
- Planned outages typically shorten supply stack in the shoulder months by several thousand megawatts.
- Shoulder periods offer the flexibility to reschedule planned outages.

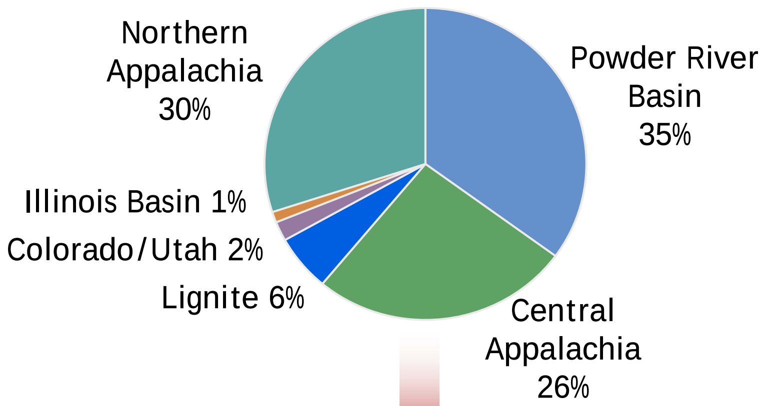


AEP AMERICAN ELECTRIC POWER

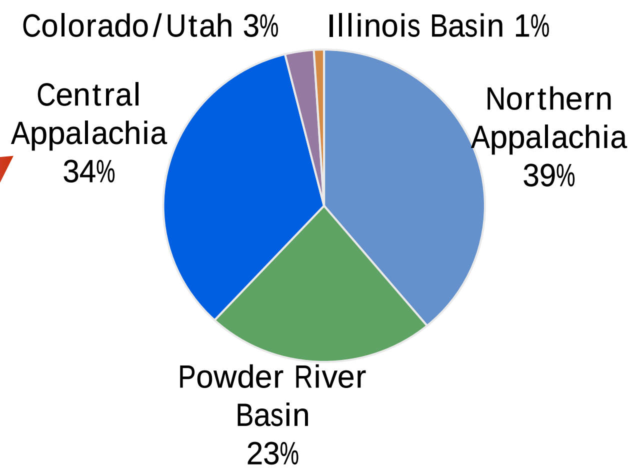
Coal Procurement - 2009 Projected

AEP burns approx. 77 million tons of coal per year

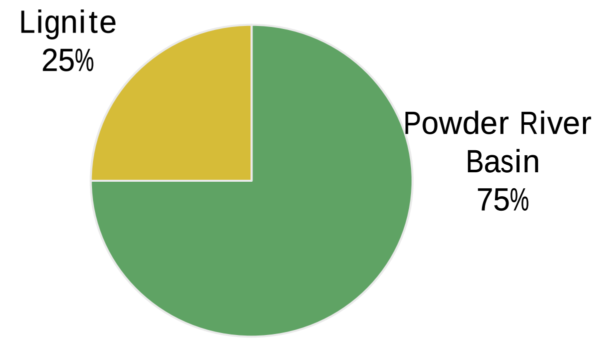
Total AEP System



AEP East



AEP West



Coal Stats:

- 100% contracted for 2009
- 94% contracted for 2010
- Avg. delivered price ~ $46.61/ton in 2008
- Approximate 10% price increase in 2009 ~ $51.00/ton

p.20

Detailed Ongoing Earnings Guidance

2008A: $3.24/share

2009E: $2.75-$3.05/share

AEP AMERICAN® ELECTRIC POWER

Overview of 2009 Guidance

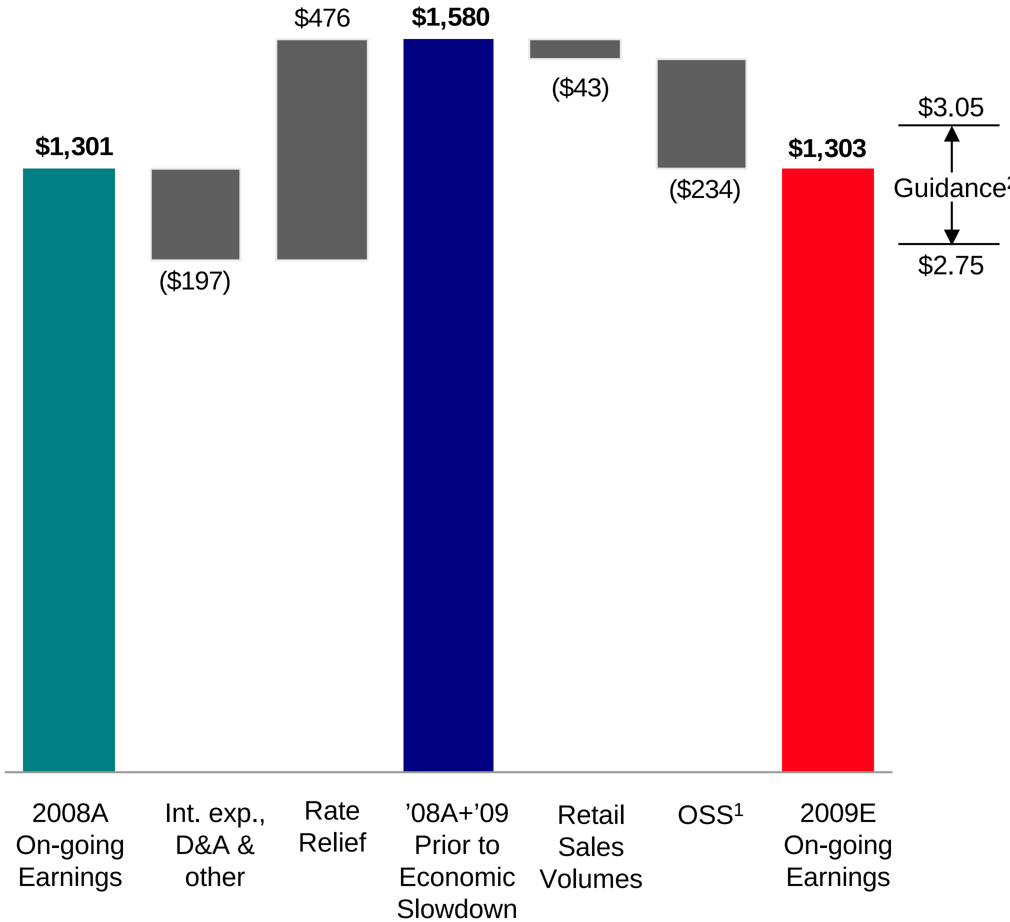
2009 Earnings Drivers:

- Positive Ohio outcome
- Rate relief - $732mm
- Economic slowdown
  - Lower OSS revenues
  - Lower loads

Long-term Earnings Drivers:

- Rate base investments
- Additional rate relief
- OSS/Retail load
- Transmission JV earnings

2008A-2009E Earnings Bridge ($mm)

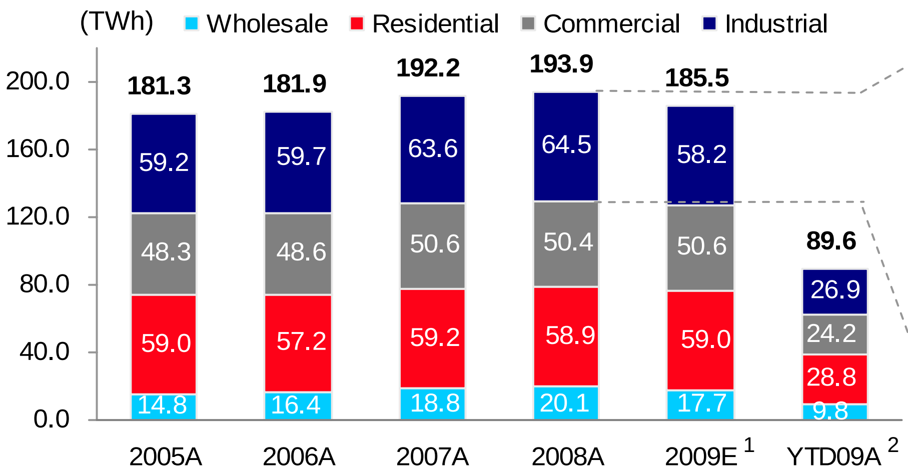


Note all items are presented after-tax
[1] Net of sharing
[2] Assumes 2009 average shares outstanding ~ 450 million

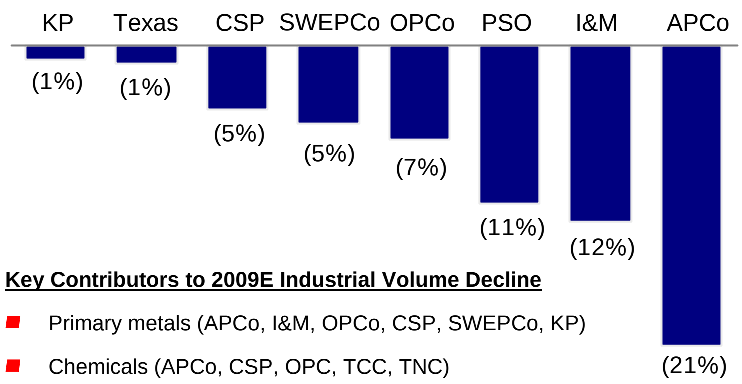
AEP AMERICAN ELECTRIC POWER

Key Drivers of 2009 Guidance: Retail Sales

Retail Load by Customer Class



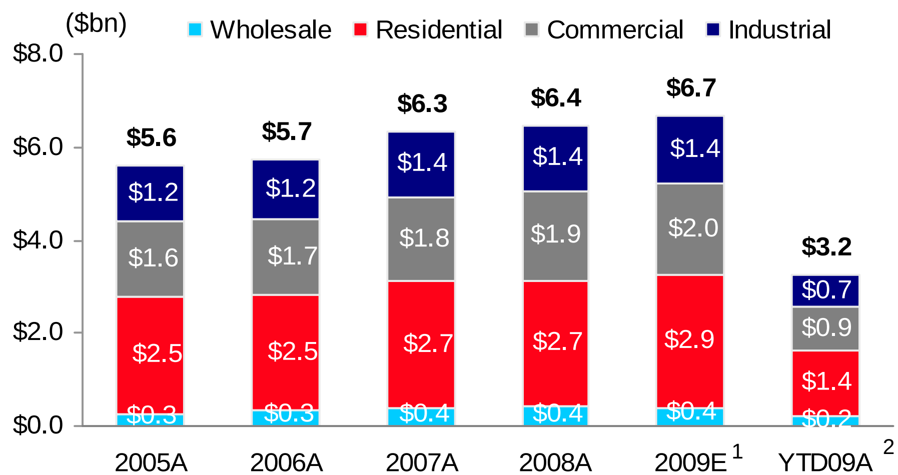
Forecast Drop in 2009 Industrial Sales

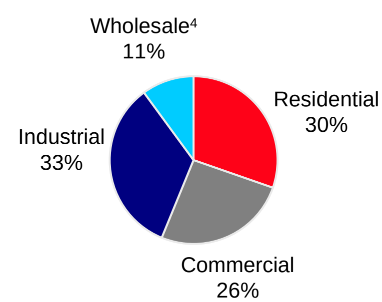


Key Contributors to 2009E Industrial Volume Decline

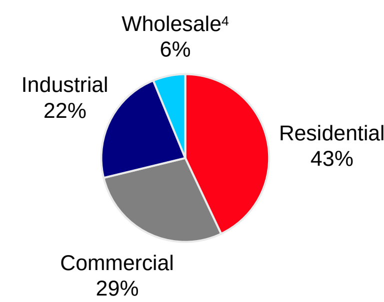
- Primary metals (APCo, I&M, OPCo, CSP, SWEPCo, KP)
- Chemicals (APCo, CSP, OPC, TCC, TNC)
- Paper (APCo, PSO, SWEPCo)
- Plastics & Rubber (APCo, CSP, OPCo, I&M)

Retail Base Revenue[3] by Customer Class





2008 Retail Load = 193.9 TWh



2008 Retail Base Revenue [3] = $6.4bn

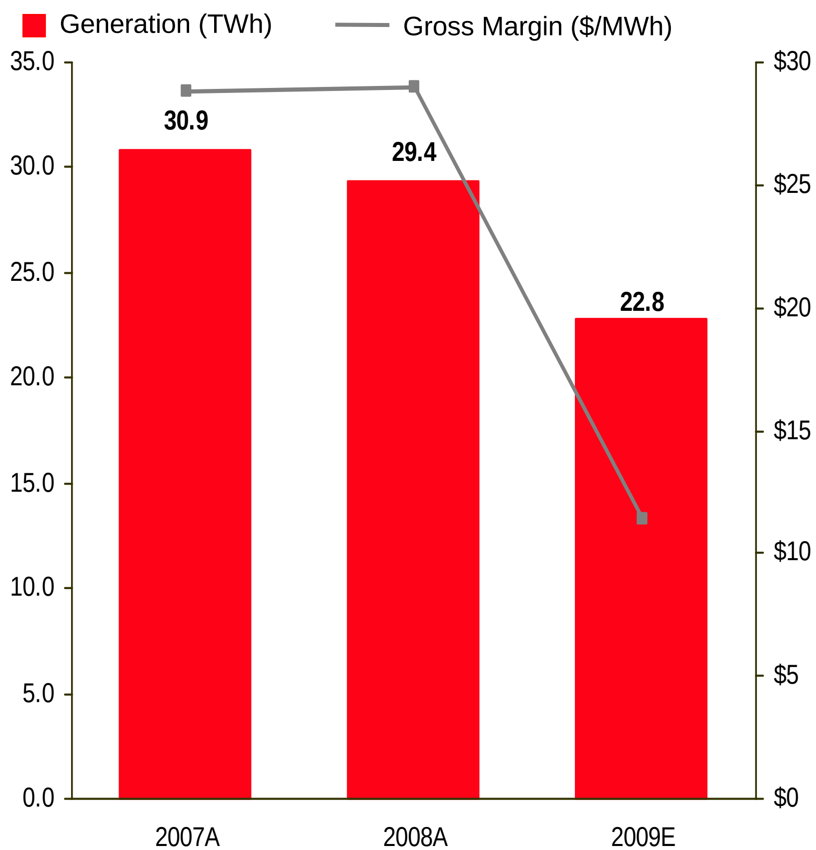
AMERICAN ELECTRIC POWER

[1] 2009E assumes normalized weather
[2] YTD09A represents actual results through June 30, 2009

[3] Excludes the impact of current year rate relief, fuel over/under recovery, PJM costs and consumables
[4] Wholesale includes sales to municipal and cooperative power systems, other wholesale, and other retail sales

Key Drivers of 2009 Guidance: Off-System Sales

Off-System Sales Metrics



$ in millions		2007A		2008A		2009E
OSS Physical Sales	$	674	$	718	$	106
Oklaunion Payment		46		45		49
Marketing/Trading		170		82		105
Pre-sharing Gross Margin	$	890	$	845	$	260

Natural Gas and Central Appalachian Coal Prices

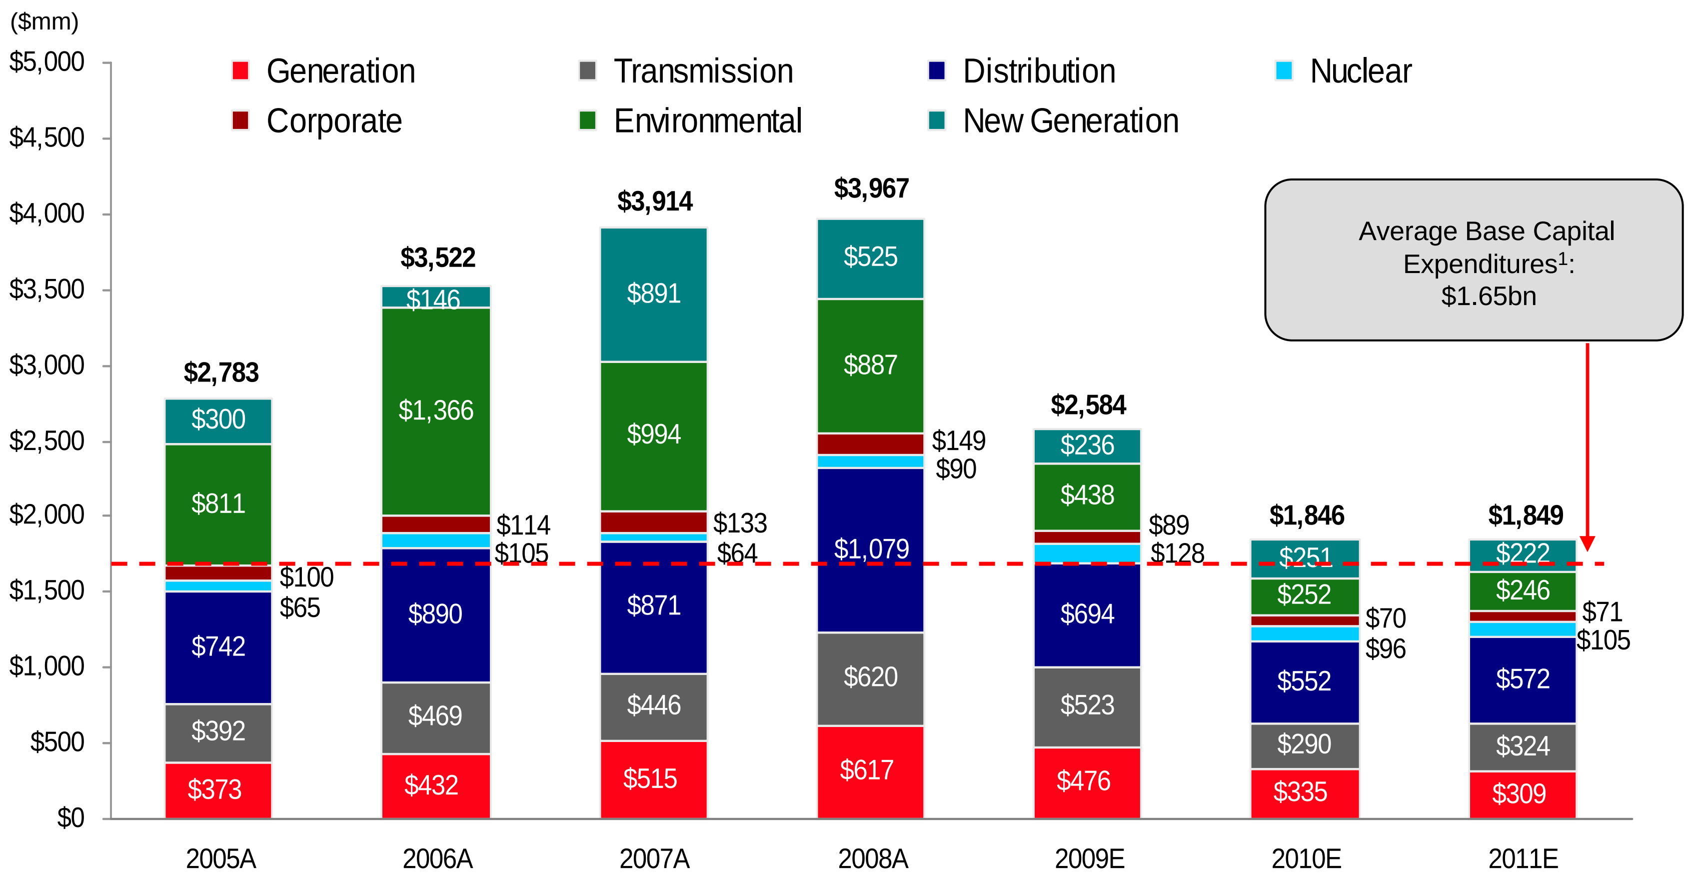
AEP AMERICAN ELECTRIC POWER

Utility Capital Expenditures Support Growth of 2 - 4%

Annual $1.8 billion capital program creates rate base growth over annual depreciation expense of $1.2 billion



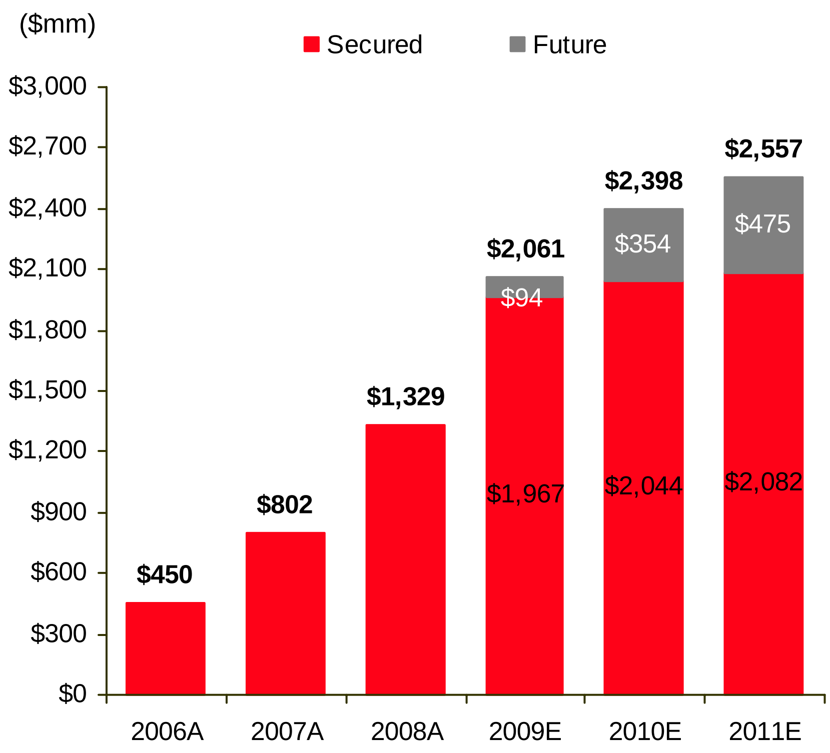
Net PP&E ($bn)	$24.3	$26.8	$29.9	$33.0	$34.5	$35.2	$35.8

Note: Capital Expenditures shown exclude AFUDC
[1] Reflects 2002-2008 average base expenditures (excluding New Generation and Environmental)

AEP AMERICAN ELECTRIC POWER

Track Record of Successful Regulatory Outcomes

Cumulative Rate Relief



Annual rate increases, $mm	$450	$352	$527	$732	$337[1]	$159[1]

[1] $77mm and $38mm was secured for 2010 and 2011, respectively, as of July 31, 2009

Our Regulatory Approach:

Maximize utility company returns:

- Successfully secured significant rate relief
- 2009 rate relief:
  - ✓ Ohio ($404MM)
  - ✓ I&M ($52MM)
  - ✓ APCo ($58MM)
  - ✓ PSO ($74MM)
- Pending rate relief including amount requested:
  - ✓ APCo WV ($20MM – in ENEC filing)
  - ✓ SWEPCo (AR) ($54MM) TX($75MM)
  - ✓ APCo VA ($169MM)
  - ✓ PSO ($30MM)
  - ✓ Others to be determined

Minimize regulatory lag:

- Active fuel adjustment clauses now in place in <u>all</u> jurisdictions
- Increased frequency of rate cases
- Employing tracking features

Strong local relationships with regulators

AEP AMERICAN ELECTRIC POWER

Summary Rate Case Information

APCo Virginia General Rate Case

On August 14, 2009 APCo filed an update to its pre-biennial base rate case, originally filed July 15, 2009 with the Virginia SCC, per the statute, for recovery of generation and distribution costs requesting an increase of $154 million. (Docket #: PUE-2009-00030) A procedural schedule is pending from the VSCC. A transmission rate adjustment clause (T-RAC) was filed in conjunction with this case as base rates will no longer include rates for transmission service (Docket #: PUE-2009-00031). APCo has requested that rates in both cases go into effect at the same time.

AEP AMERICAN® ELECTRIC POWER

Uniquely Positioned for Nationwide Grid Expansion

Active Projects:

Pioneer — **COD: 2015**

- *240 miles of 765 kV*
- *Partner: Duke Energy (50%)*
- *Estimated Cost: $1 billion*
- *ROE: 12.54%*

PATH-WV — **COD: 2014**

- *275 miles of 765 kV*
- *Partner: Allegheny Energy (50%)*
- *Estimated Cost: $1.2 billion*
- *ROE: 14.3%*

Tallgrass — **COD: 2013-14**

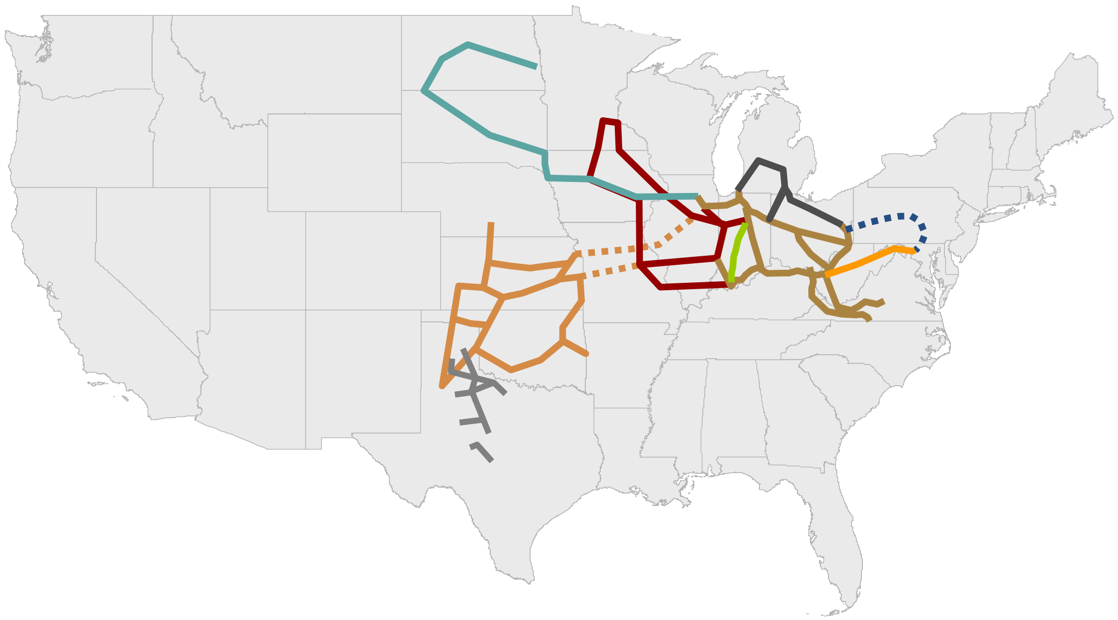
- *170 miles of 765 kV*
- *Partners: OG&E (50%) & MidAmerican Energy (25%)*
- *Estimated Cost: $500 million*
- *ROE: 12.8%*

Prairie Wind — **COD: 2013**

- *110 miles of 765 kV*
- *Partners: Westar Energy (50%) & MidAmerican Energy (25%)*
- *Estimated Cost: $400 million*
- *ROE: 12.8%*

ETT — **COD: 2013**

- *345 kV in ERCOT*
- *Partner: MidAmerican Energy (50%)*
- *Estimated Cost: $400 million*
- *ROE: 9.96%*



Future Projects:

EHV Michigan — **COD: ~2020**

- *700 miles of 765 kV*

PJM Projects

- *Enhance existing 765/345 kV*

Hartland — **COD: ~2020**

- *1000+ miles of 765 kV*

MISO Vision Plan

- *765 kV Backbone*

SPP Overlay — **COD: 2013-14**

- *765 kV Backbone*

ETT — **COD: ~2018**

- *345 kV in ERCOT*
- *Additional CREZ spend of $750-$850 million*

AEP AMERICAN ELECTRIC POWER

Note: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

Equity Contributions Enhance Earnings Growth to 4 – 8%

AEP is the leader

- Largest US transmission footprint
- Interstate EHV highway vision
- National renewables transmission strategy

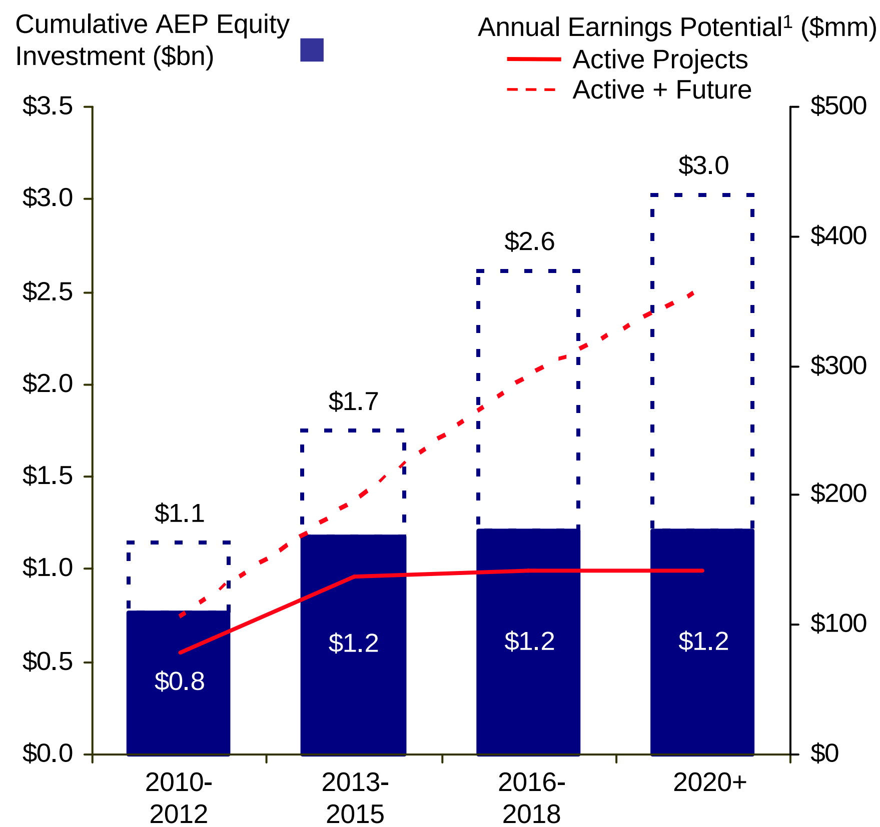
Quality projects

- 4 FERC-approved ($3.3 billion)
- Independent ERCOT transmission JV company (up to $2.6 billion)
- Robust pipeline of future 765 kV projects (up to $15 billion)

Attractive returns

- FERC incentive rates (12.5-14.3%)
- Strong cash flow with CWIP
- Long-term earnings potential of ~$140-$360 million annually[1]

Illustrative Earnings Potential of New Transmission Initiatives



[1] *Illustrative calculation assumes 50/50 debt/equity capitalization and incentive ROE of ~13.0% for FERC projects and a 60/40 debt/equity capitalization and 10.5% ROE for ERCOT projects*

AEP AMERICAN ELECTRIC POWER®

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are canceled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; volatility in the financial markets, particularly development affecting the availability of capital on reasonable terms and developments impairing our ability to refinance existing debt at attractive rates; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

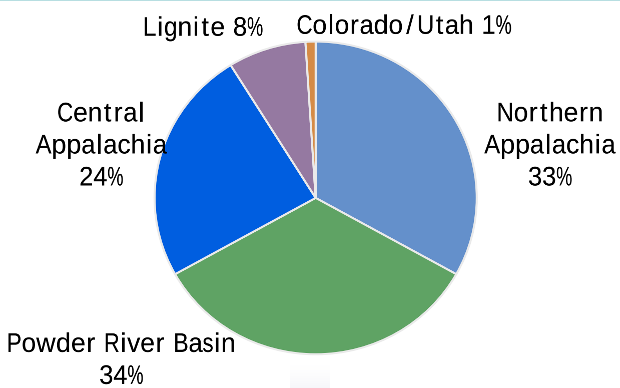
Capital Investment + Rate Relief = Earnings Growth

Coal Procurement – 2008 Projected

AEP burns approx. 76 million tons of coal per year

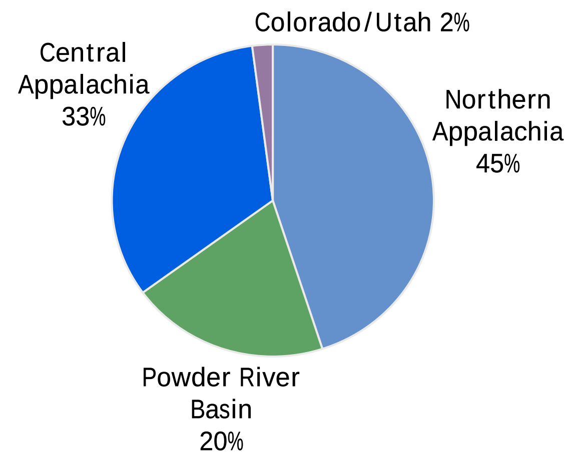
Total AEP System



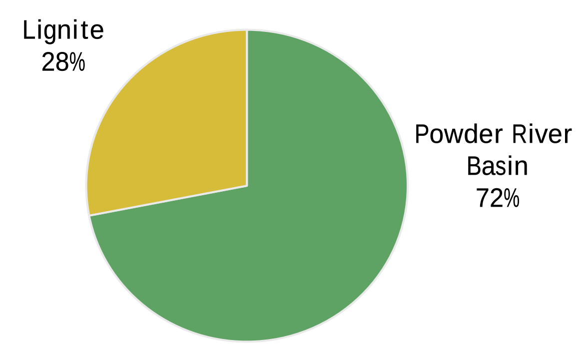
Coal Stats:

- > 95% contracted for 2008
- Avg. delivered price ~ $36.58/ton in 2007
- Approximate 20% price increase in 2008 based on 2007 actual results.

AEP East

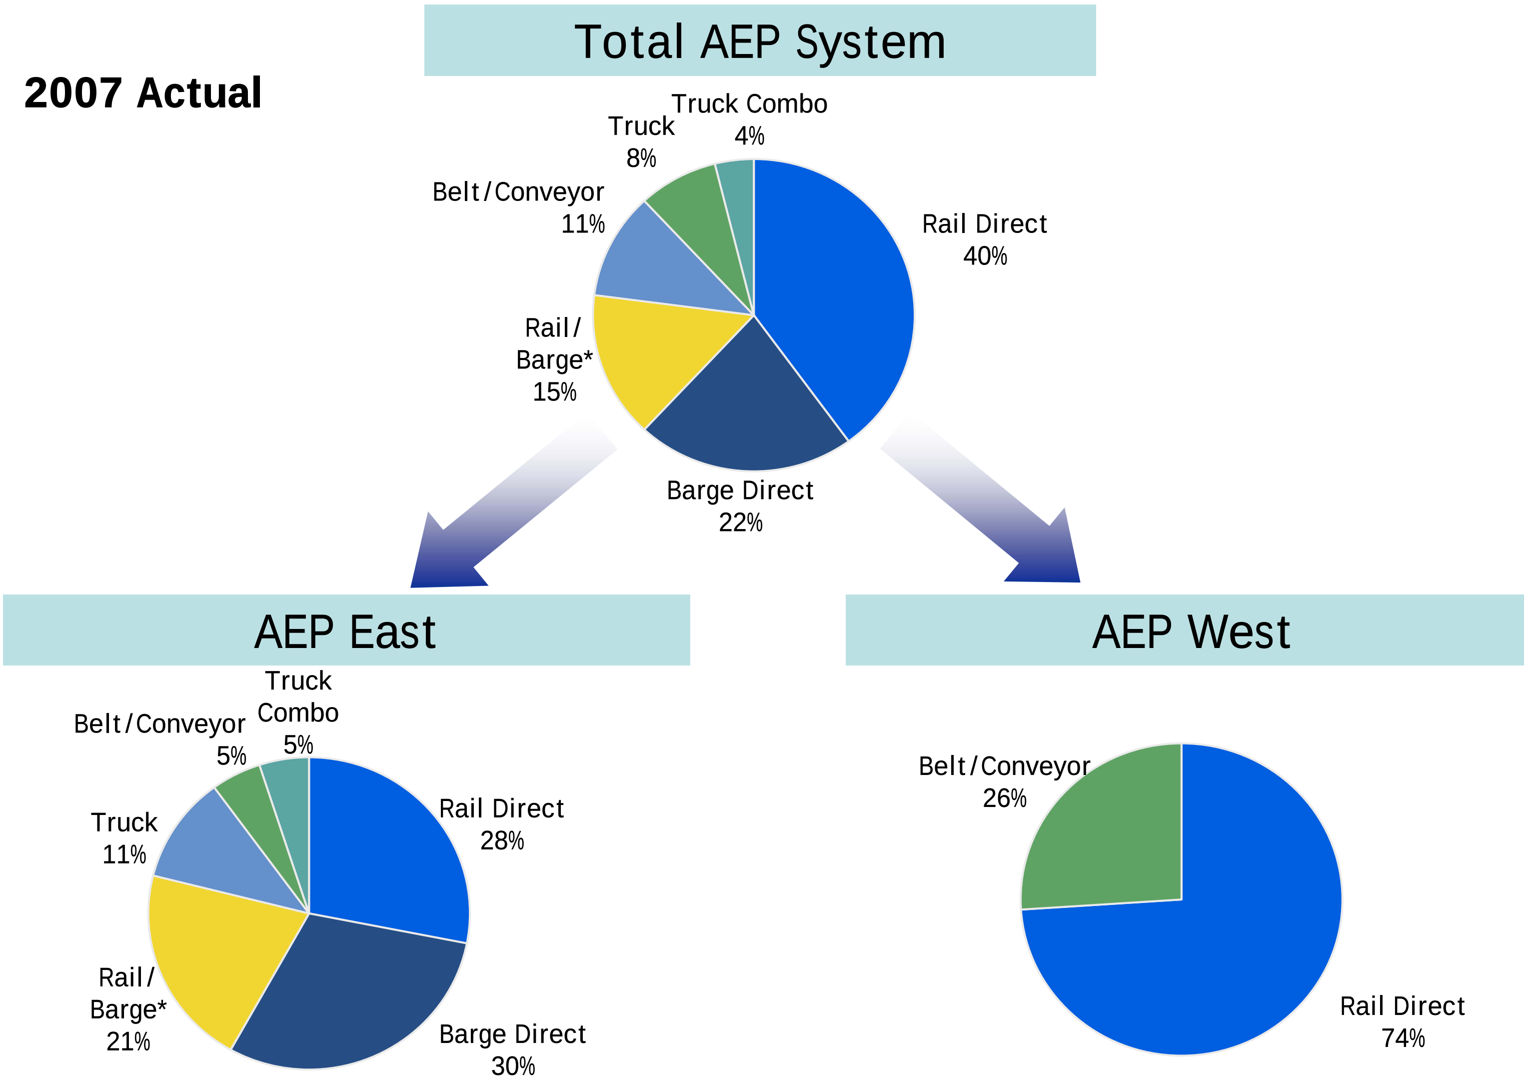


AEP West



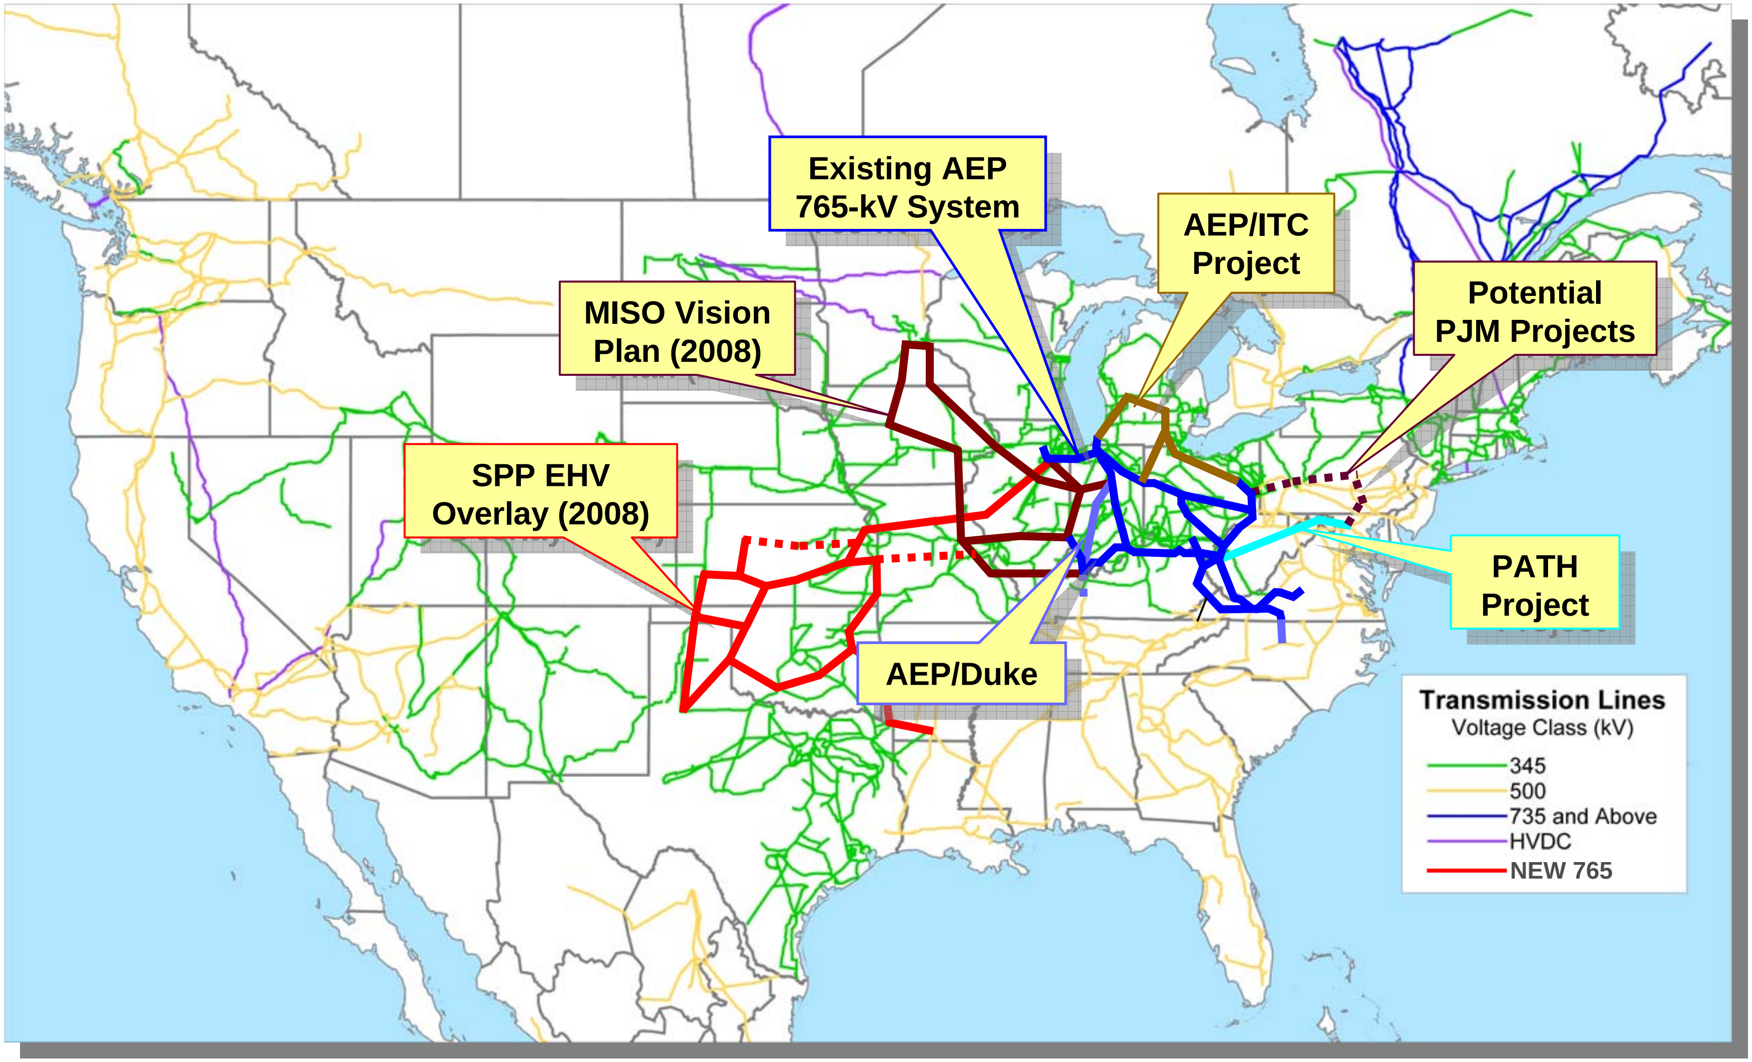
Coal Delivery

2007 Actual



* Reflects coal delivered to AEP plants transported through a combination of rail and barge

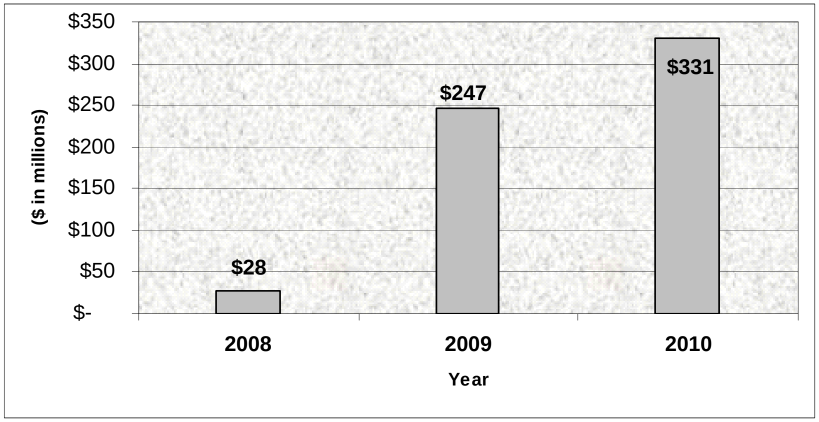
Making it Happen: EHV Projects Under Development



NOTE: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

Transmission – Investments and Earnings Contributions

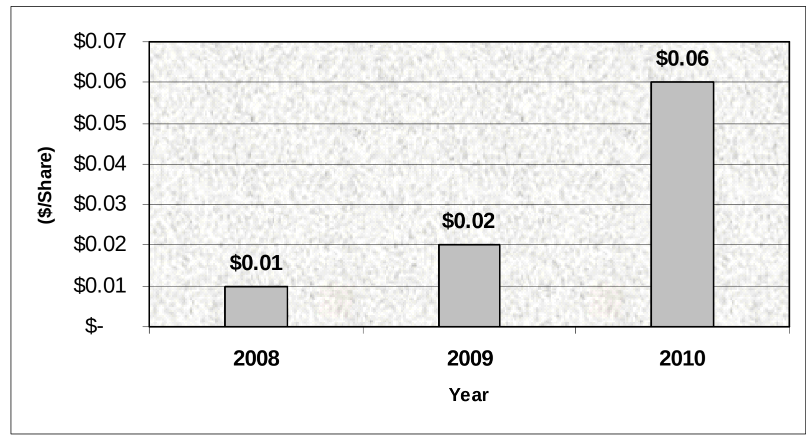
Projected Transmission Capital Spending*



* ETT and PATH joint ventures included in above projection. Amounts represent AEP's 50% share of total transmission joint venture capital expense. These amounts are excluded from AEP's base capital forecast because the joint ventures are not consolidated for financial reporting purposes. AEP will be responsible for funding 40-50% of these amounts with equity contributions, and the remainder will be financed with debt issued by the joint ventures.

ETT Electric Transmission Texas

Projected Transmission EPS Contributions*



* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

PATH Potomac-Appalachian Transmission Highline

Transmission will provide a near and long-term catalyst for earnings growth.

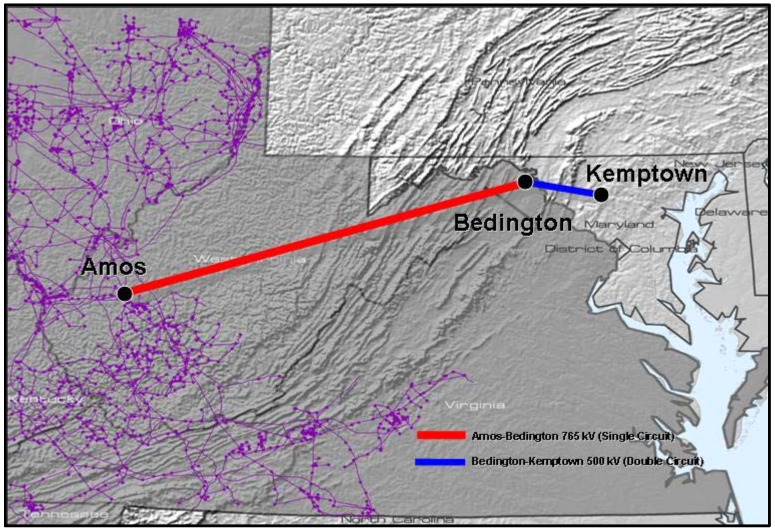
Page 8461 of 9556

I-765™ Transmission in PJM: PATH

- *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries -- to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP
    - 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
  - FERC ordered the formula rate mechanism be set for hearing, pending settlement judge procedures
- *Key Next Steps*
  - Siting Approval from WV and MD - 2010
  - Targeted Completion - 2012



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

- *Funding Plans/Transaction Structure*
  - AEP and Allegheny share ownership of Amos – Bedington line and contribute equally to this portion of the project through PATH West Virginia Transmission Company, LLC
  - AEP's investment will be held in the AEP Transmission Holding Company LLC subsidiary

PATH
Potomac-Appalachian Transmission Highline

Joint Ventures with MEHC

Electric Transmission Texas Update

- *Transaction Structure*
  - 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
  - ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
  - Services provided by AEP and investment opportunities can be offered by either partner
  - Total initial investment of $70 million before ownership division
- *Next Steps*
  - Await PUCT approval of consortium proposal, which includes ETT's portion of 710 miles of new transmission at an estimated cost of between $1.5 billion and $1.7 billion
  - Anticipate transferring some project opportunities in 2008 after regulatory approvals obtained.

Electric Transmission America Update

- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.
  - ETA recently signed agreements with Westar Energy and OGE proposing to build the first and second segments of the 765-kV Overlay Plan in SPP

I-765™ Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- *Overview*
  - Sent non-binding Letter of Commitment to SPP to construct 765-kV and 500-kV projects in SPP region consistent with SPP Overlay Study – Summer 2007
  - Updated EHV Overlay Study completed by SPP – March 2008
- *Benefits*
  - Overall reliability reinforcement with improved voltage support throughout the SPP system
  - Significantly increased transfer capability
  - Provides access to new generation resources, especially renewables
  - Allows for effective interconnections for EHV system development
- *Next Steps*
  - ETA Partnering Agreements - 2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate and Cost Allocation Filing (postage stamp) – 2009
  - Siting Approval for projects – 2009-2011
  - Estimated Completion (in segments) – 2013-2017

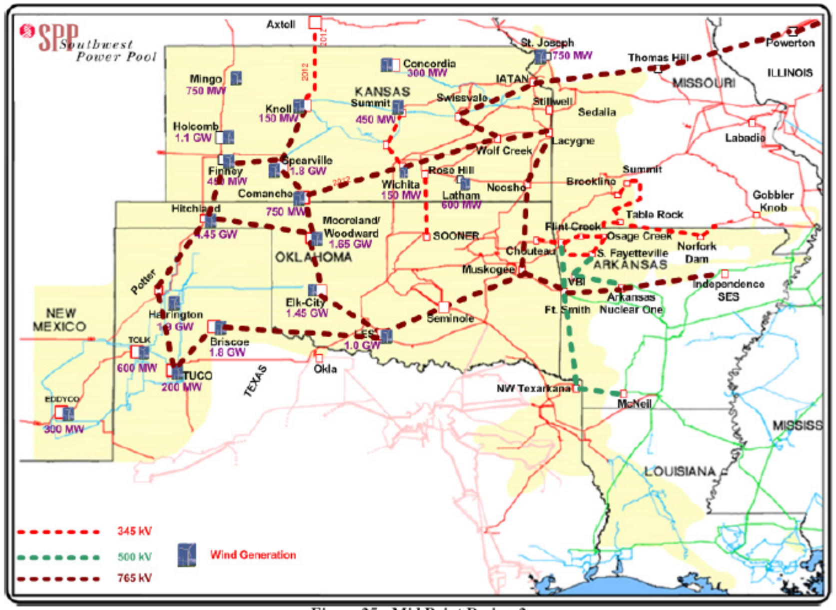


Figure 25: Mid Point Design 2

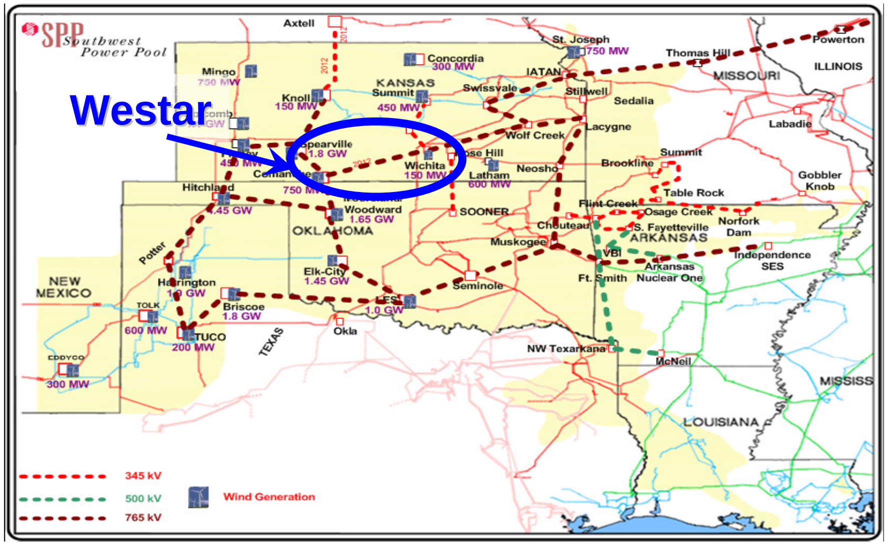
Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Prairie Wind Transmission, LLC

JV to build first segment of 765-kV transmission in SPP

- ## *Overview*
  - On May 19, 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT)
  - PWT is a 50/50 JV that is proposing to build approximately 230 miles of 765-kV lines extending from Wichita, Kan., west to a substation northeast of Dodge City, Kan., and then south to the Kansas border from Medicine Lodge, Kan.
  - The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region
  - Project is expected to cost approximately $600 million (based on SPP estimates) and be in-service by 2013
  - AEP's ownership of the joint venture is 25%
  - AEP obligations include oversight of 765-kV Engineering, 765-kV Technology and Project Management
  - Other responsibilities will be handled by the partners or outsourced
- ## *Next Steps*
  - Filed CPCN – 2Q2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate Filing (postage stamp) – Fall 2008
  - SPP Cost Allocation Filing - 2009
  - Siting Approval – 2009
  - Estimated Completion – 2013



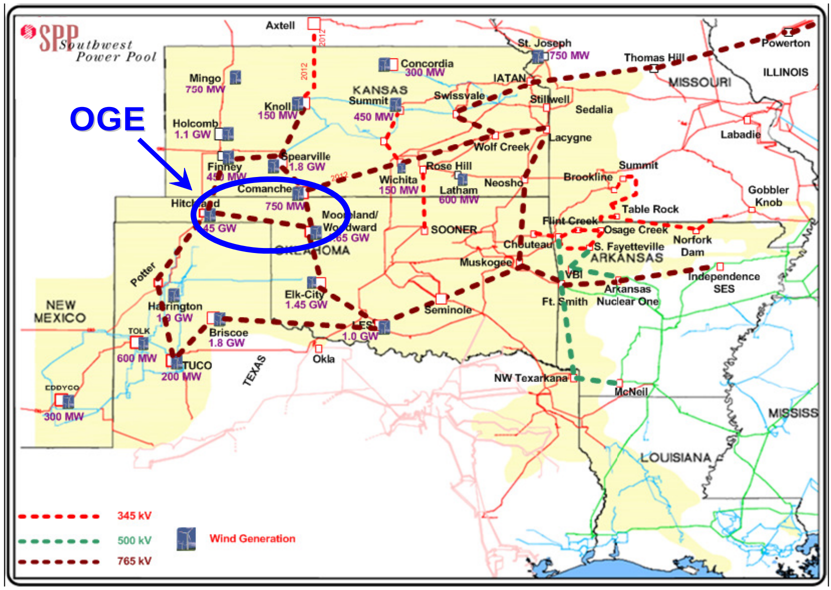
Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

ETA JV with OGE

JV to build second segment of 765-kV transmission in SPP

- ❑ *Overview*
  - ❑ On July 15, 2008, ETA signed an agreement with OGE Energy Corp. to form a joint venture
  - ❑ The JV is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines extending from the Kansas-Oklahoma border north of Woodward, OK, that will link into OGE's station at Woodward and then extend west to a new station that will be built near Guymon, OK.
  - ❑ The project will provide enhanced electricity transport in Oklahoma and support expansion of renewable electricity generation in the region
  - ❑ Project is expected to cost approximately $500 million (based on SPP estimates) and be in-service by 2013
  - ❑ AEP's ownership of the joint venture is 25%
  - ❑ AEP obligations include oversight of 765-kV Engineering, 765-kV Technology and Project Management
  - ❑ Other responsibilities will be handled by the partners or outsourced
- ❑ *Next Steps*
  - ❑ File CPCN –2008
  - ❑ SPP RTO EHV Overlay Approval – 2009
  - ❑ FERC Formula Rate – Fall 2008
  - ❑ SPP Cost Allocation Filing – 2009
  - ❑ Siting Approval – 2009
  - ❑ Estimated Completion – 2013

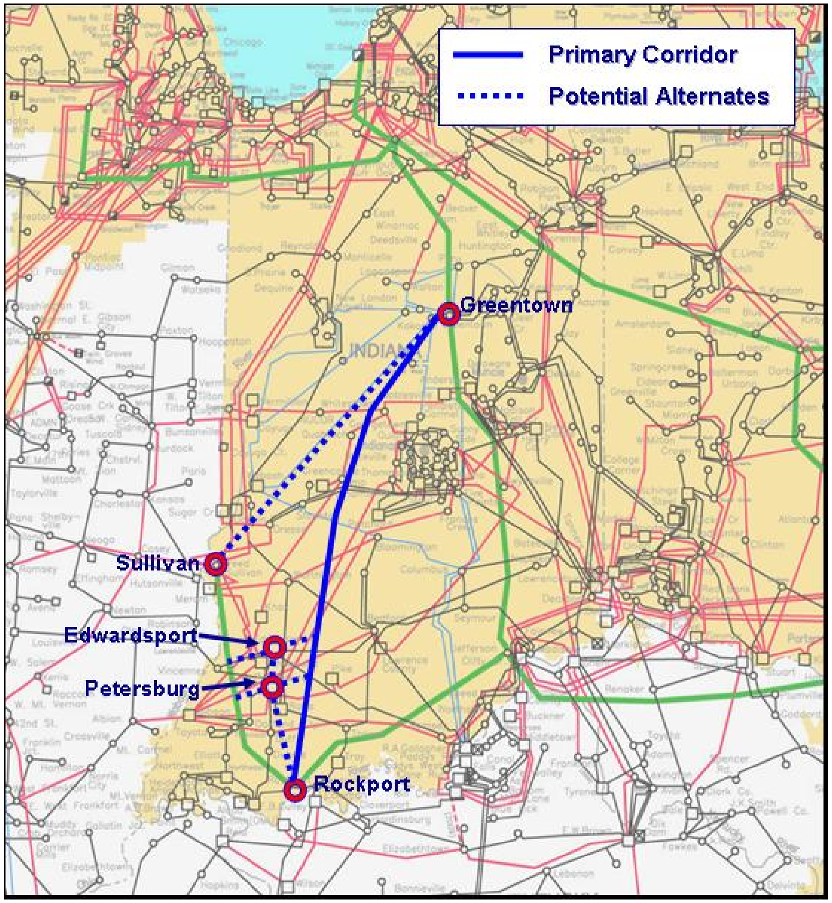


Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Pioneer Transmission, LLC

- *Overview*
  - On August 11, 2008, AEP & Duke formed a joint venture to build and own a 765-kV transmission line. Pioneer Transmission LLC is a 50/50 joint venture between the two companies.
  - The primary project involves the construction of approximately 240 miles of 765-kV lines extending from AEP's Rockport substation east of Evansville, Indiana with Duke's Greentown substation near Kokomo, Indiana.
  - Project is expected to cost approximately $1 billion, but final costs will depend on the routing of the line, equipment and commodity costs. AEP's share of the costs will be 50% of the total.
  - In-service date will be determined by the MISO and PJM planning process, with earliest possible completion in the 2014-2015 timeframe.
- *Next Steps*
  - Submit proposal to PJM & MISO for consideration in their transmission expansion plans
  - FERC filing for rate approval – 2008
  - Estimated Completion – 2014-2015



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected.

I-765TM Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

Overview

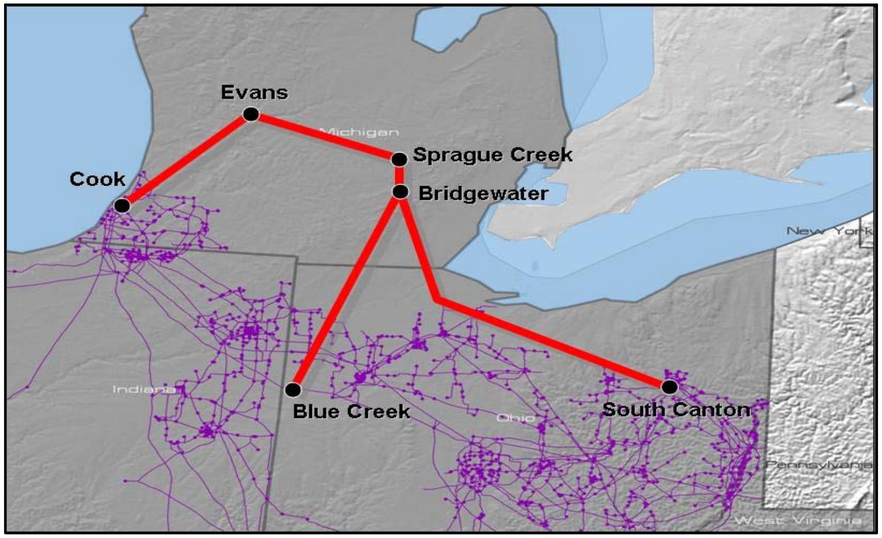
- ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
- Study was released Q3 2007
- 700 miles of 765-kV line in Ohio and Michigan
- $2.6 billion investment (before ownership division)
- AEP and ITC are in discussions to form a Joint Venture

Benefits

- Up to 5,000 MW improved transfer capability
- Reduces network line losses by 250 MW

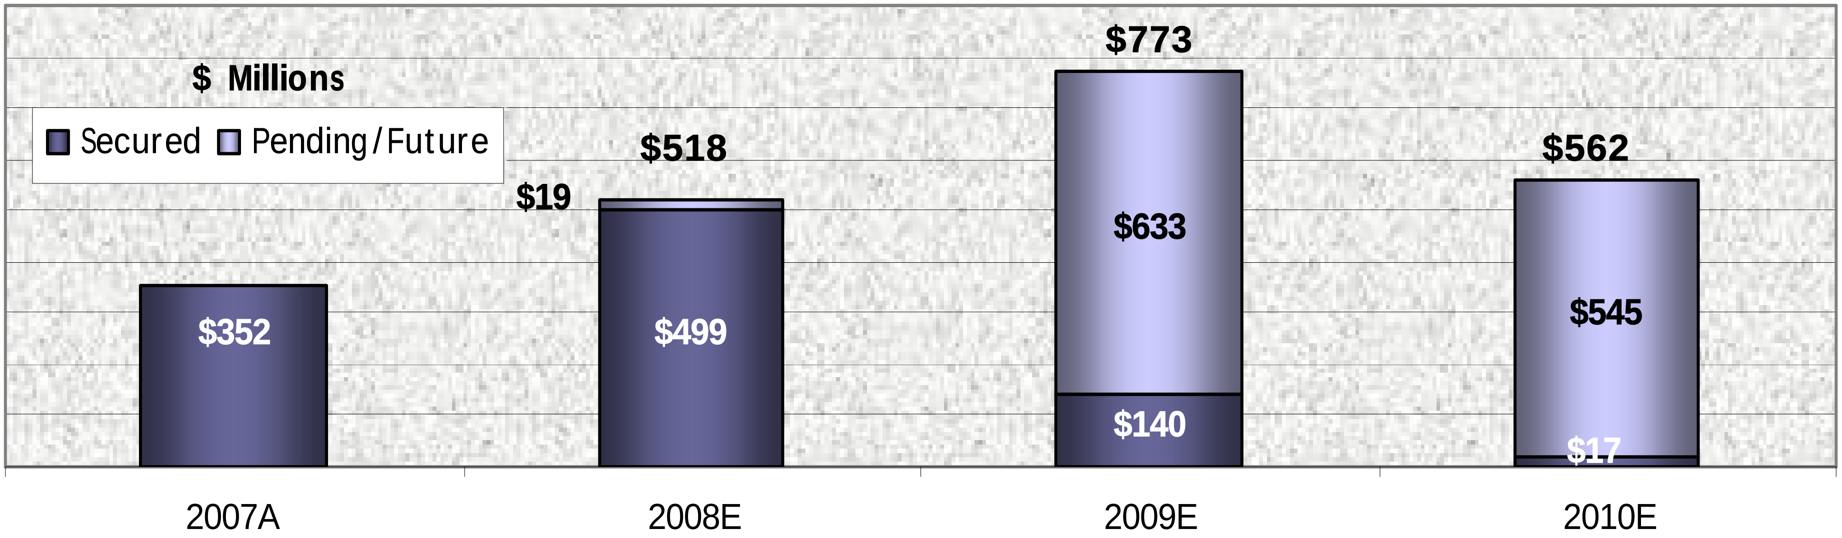
Next Steps

- Agreement on JV (AEP/ITC) - Summer 2008
- JV Formation - 2008
- MISO and PJM Review/Approval - 2009
- FERC Formula Rate & Cost Allocation Filing - 2009
- Siting Approval – 2011-2012
- Estimated Completion – 2015-2021



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Incremental Rate Relief



- 96% of 2008 Rate Relief Secured: I&M Depreciation, APCo – WV Construction Surcharge, TCC & TNC General Rate Cases, Ohio RSP (3% & 7%), PSO Peaking Generation & General Rate Case, Ohio 4% Generation Rider and Marginal Loss Recovery, APCo – Virginia Fuel Factor, 2007 TCC/TNC TCRF filings, PSO 2007 Storm Recovery, SWEPCo - LA Formula Rate Plan, KPCo Marginal Loss Recovery, TCC/TNC TCOS and Rate Case Expense Recovery.
- 2008 Pending: Virginia base case rates subject to refund ($208MM requested).
- 2009 Pending: Virginia base case ($208MM requested), Indiana base case ($129MM requested), Oklahoma base case ($132.6MM requested), Ohio ESP, other cases yet to be filed.

Secured $499MM of $518MM for 2008

AEP Ohio Electric Security Plan

- On July 31, 2008, in conjunction with the requirements of SB221, AEP Ohio filed an Electric Security Plan with the PUCO on behalf of CSPCo and OPCo.
- The filing includes the following key components:
  - Energy Efficiency and Demand Response
  - Renewable Energy
  - gridSMART℠ Phase 1
  - Distribution Reliability Enhancement
  - Economic Development
  - Provider of Last Resort
- The proposed rate plan results in an annual increase of approximately 15 percent on customers' total bills.
- The filing seeks to recover changes in fuel and environmental expenses relative to levels reflected in current rates.
- Intervenor testimony is due October 17, Staff testimony is due October 24 and the public hearing commences on November 3, 2008. We anticipate an order at the end of 2008.

Note 1: AEP Ohio requested phase-in of proposed incremental FAC expenses during the three-year ESP period. Additionally, there will be a periodic true-up of the current period actual FAC to what was recovered in rates for that period. This will produce on-going periodic under/over recoveries of FAC costs for the period that have not been estimated for 2010 or 2011.

Note 2: Represents capital carrying cost on environmental facilities not currently reflected in rates. Exhibits PJN-8 &PJN-10 provides calculation of environmental carrying cost and components of the carrying cost rate applied to the capital expenditures, respectively.

Note 3: We requested a 3% & 7% per year increase in non-FAC generation for CSP & OPCo, respectively, consistent with the RSP increases. Exhibit PJN-8 shows the capital carrying cost on incremental environmental facilities forecasted for 2009. Exhibit PJN-10 provides the calculation and components of the carrying cost rate applied to the capital expenditures.

Note 4: Represents the Provider of Last Resort charge which is addressed in the testimony of Craig Baker starting on page 25.

Note 5: Requested an annual 7% & 6.5% per year increase in Distribution for CSP & OPCo, respectively. Exhibit DMR-4 shows expected O&M & carrying charge cost of capital for reliability and in the case of CSP, gridSMART, for the 2009-2011 time period. The carrying charge costs are provided on Exhibit PJN-10.

Note 6: Represents estimated costs to provide AEP-sponsored customer demand response & energy efficiency programs. These costs are discussed in the Sloneker testimony starting on page 18.

Note 7:

	2009 CSP	2009 OPCo	2011 CSP	2011 OPCo
Expiration of Special Contract	-$22.7M	-$27.1M		
Reg Asset Surcharge	-$54.2M		22.8M	15.2M
Other	-$3.8M	$0.0M		
Total Other	-$80.7M	-$27.1M	$22.8M	$15.2M

A special contract expires 12/31/08 and the customer will go on the standard tariff.
The revenue reduction associated with the elimination of the reg asset surcharge in 2009 will be offset by the reduction in related amortization.
Other of $3.8M represents the expiration of monthly line extension surcharges.

Summary Rate Case Information

I&M Indiana General Rate Case

On January 31, 2008, I&M filed a general base rate case with the Indiana Utility Regulatory Commission (IURC) requesting an increase of $128.5 million ($82.4 million in base revenues and $46.1 million in tracker mechanisms). (Docket #: 43306). Order is expected in June 2009.

Regulatory Activity Underway

APCo-Virginia E&R Filing

On May 30, 2008, Appalachian Power filed the third tranche of E&R surcharge filings with the SCC, requesting a $66.5 MM increase for environmental and reliability costs incurred during the period October 1, 2006 through December 31, 2007, with a proposed one year recovery period commencing January 1, 2009. Respondent testimony was received August 13, Staff testimony was received August 27, Rebuttal testimony is due September 3 and a hearing will commence on September 17.

Summary of APCo's E&R filings:

E&R Tranche:	Case Number	Cost Incurred :	Recovery Period:	Amount:
I	PUE-2005-00056	7/1/2004 thru 9/30/2005	12/1/2006 thru 11/30/2007	$21.3 million
II	PUE-2007-00069	10/1/2005 thru 9/30/2006	1/1/2008 thru 12/31/2008	$48.9 million
III	PUE-2008-00045	10/1/2006 thru 12/31/2007	Proposed 1/1/09 thru 12/31/09	$66.5 million

Regulatory Activity Underway

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $140MM. Approximately $10MM of the increase relates to 3rd party and the rest, if approved, would be recovered through retail jurisdictional filings in SWEPCo and PSO, as appropriate.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to February 1, 2008, with rates subject to refund.
- Settlement discussions are currently on-going.

Regulatory Activity Underway

PJM OATT Formula Rate Filing

- On July 31, 2008, the seven AEP East companies filed with the FERC to update the Open Access Transmission Tariff (OATT) rate and implement a formula transmission rate that will be updated annually to keep rates current with transmission investment.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is \$507MM and the new revenue requirement requested is \$606MM. Approximately \$31MM of the increase relates to 3rd party and Ohio and the rest, if approved, would be recovered through retail jurisdictional filings in the other east jurisdictions.
- We requested an effective date of October 1, 2008 for the revised tariff, which the FERC may suspend for an additional five months.

Regulatory Activity Underway

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- The PSC issued its order on November 21, 2007, approving construction of the plant.
- Air permit anticipated in the third or fourth quarter of 2008. A draft air permit approval was released for public comment on August 11, 2008.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The peaking facility has been addressed and the intermediate facility is under review. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- The LPSC issued its order on April 29, 2008, approving construction of the plant.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- The PUCT issued a written order approving construction of the plant on August 12, 2008.

Regulatory Activity Underway

SWEPCo Stall Plant Filings

Arkansas

- Proceeding was suspended pending outcome in Louisiana. Now that Louisiana approval has been received, we will seek an expedited ruling from Arkansas.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The intermediate facility, known as the Stall Plant and sited in Shreveport, LA, was bifurcated from the original filing and had a procedural schedule established on January 9, 2008.
- The Louisiana PSC approved the plant on September 10, 2008.
- Air permit received on March 20, 2008.

Texas

- PUCT order approving plant was issued on March 8, 2007.

Commitment to Credit Quality

- ❑ Maintain adequate liquidity
- ❑ $150MM annually in new equity from Dividend Reinvestment and 401(k) plans
- ❑ Target 60% maximum consolidated AEP debt/cap ratio on an adjusted basis
- ❑ Target utility company capitalization structures:

Company	Target Equity Ratio
APCo	42-44%
CSP	45-47%
I&M	40-42%
KPCo	41-43%
OPCo	44-46%
PSO	43-45%
SWEPCo	43-45%
TCC	40%
TNC	40%

- ❑ Target long term dividend payout ratio range of 55-60%
- ❑ Maintain adequate coverage ratios to support current credit ratings

We are committed to maintaining our current credit ratings.

AEP AMERICAN® ELECTRIC POWER

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation in Ohio, and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Strategic Direction

- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Develop our transmission business
- Achieve adequate returns on all assets

Deliver value to investors and cost effective service to our customers

Continued Commitment To Our Core Utility Mission: Bring Reasonably Priced Electric Service To Our Customers, Thereby Strengthening Our Communities And Rewarding Our Investors

Framework For Long-Range Performance

- 2007, 2008 & 2009 Ongoing Earnings Guidance Ranges:

- EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in existing utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
  - Investment in new transmission opportunities
  - Seek rate recovery for new investments
  - Control costs & achieve timely rate relief
- Maintain credit ratings
  - BBB/Baa2/BBB

New Generation Facilities

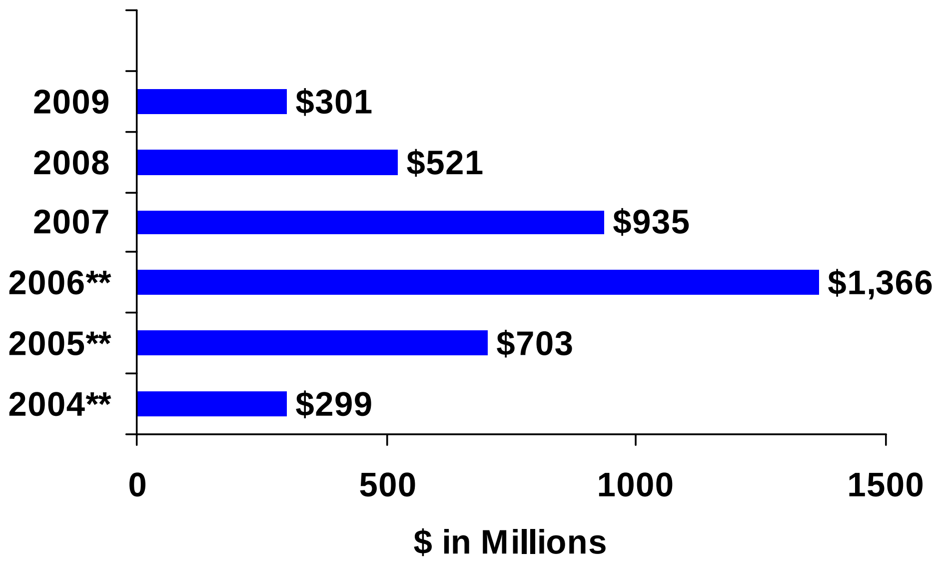
Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
SWEPCo	Mattison	Arkansas	$130 MM	Gas	Simple-cycle	340	2007
PSO	Southwestern	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
SWEPCo	Stall	Louisiana	$300 MM	Gas	Combined-cycle	480	2010
SWEPCo	Turk	Arkansas	$1.3 B[1]	Coal	Ultra-supercritical	600[1]	2011
PSO	Red Rock	Oklahoma	$1.8 B[2]	Coal	Ultra-supercritical	950[2]	2012
CSP/OP	Great Bend	Ohio	$2.23 B	Coal	IGCC	600	2012
APCo	Mountaineer	West Virginia	Under Review[3]	Coal	IGCC	600	2017

(1) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment.
(2) PSO will own 50%, or 475 megawatts, totaling approximately $900MM in capital investment.
(3) FEED (front-end engineering and design) study with GE/Bechtel is complete. Cost estimates are not yet filed with the PUCO due to the pending appeals to the Supreme Court of Ohio resulting from the PUCO's April 10, 2006 Opinion and Order.

AEP Is Meeting The Growing Electricity Needs Of Customers Through The Pursuit Of New Economic Generation Facilities

$4.1 Billion Environmental Investment

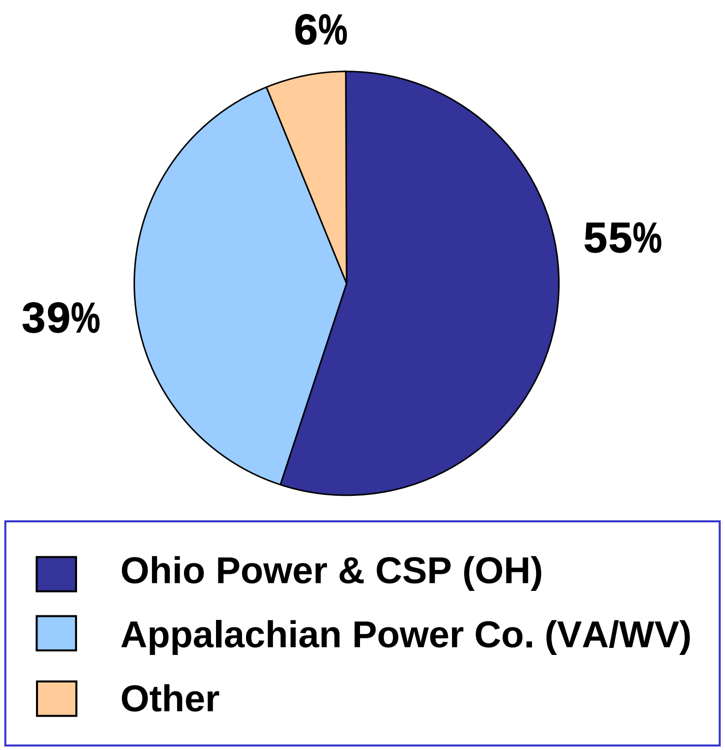
Environmental Capital Investment*



*Environmental investment for NOx, SO_2 , & Hg purposes including AFUDC

** Actual investment level in 2004, 2005 and 2006

Projected Environmental Investment Allocation



AEP®

Majority Of 2006 & 2007 Dollars Are Invested In Ohio & APCo

Integrated Gasification Combined Cycle Facilities

Front-End Engineering & Design (FEED) results complete. Results were filed in June 2007. Cost estimates in target range of 20-30% premium over new ultra-supercritical coal-fired facilities of equal capacity.

West Virginia

- Certificate of Public Convenience & Necessity filed Jan. 11, 2006
  - APCo testimony filed June 18, 2007
  - Intervenor & Staff testimony due Aug. 17, 2007
  - Hearings Sept. 10-14, 2007
  - Statutory Deadline – Dec. 2, 2007
- Air permit filed in Oct 2006 – A technical review of the application and development of a draft permit is ongoing by the WV Dept. of Environmental Protection
- Regulatory Recovery Filing
  - Filing made in June 2007 –included request for cash recovery mechanism

Ohio

- Certificate of Environmental Compatibility & Public Need filed on March 24, 2006
  - Ohio Power Siting Board approved application on March 9, 2007
- Air permit filed in Oct 2006
- Regulatory Recovery Filing
  - Phase 1 – June 2006 – PUCO approved tariff to recover pre-construction costs ($24MM) over 12-month period effective July 1, 2006
  - Phase 2 – filing likely to be withheld until resolution of Ohio Supreme Court action
  - Informational filing made on June 18, 2007 to inform PUCO of the West Virginia filing

Construction Period Of 48-50 Months Following Receipt Of Major Regulatory And Permit Approvals

Investing In IGCC

Generation Technology Comparative Statistics

US2006$	Eastern Bituminous		
	USC	**IGCC**	**NGCC**
Nominal Capacity (MW)	618	629	530
Capacity Factor (%)	85%	85%	25%
Total Plant Cost (EPC + Owner's Cost) ($/kW)	$2,152	$2,717	$572
Production Cost ($/MWh)	$22	$22	$45
Cost of Electricity, without CO_2 Capture ($/MWh)	$72	$83	$87
Estimated Cost of Electricity, with 90% CO_2 Capture ($/MWh)	$118	$108	$135

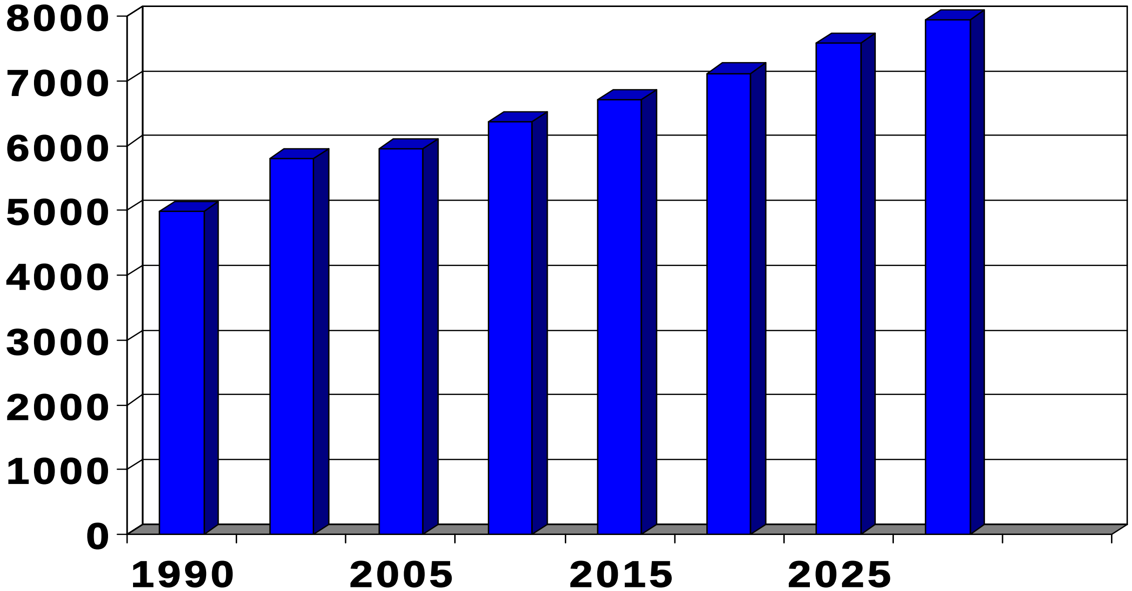
Source: Results of AEP analysis based on EPRI studies.

- Total Plant Cost (Overnight EPC 2006$s) includes the cost to engineer, procure and construct plant and owner's direct costs.
- Assumes Northern Appalachian coal price of $2.25/mmBtu for USC and IGCC and natural gas price of $6.00/mmBtu for NGCC.
- Production cost includes fuel cost plus variable operations and maintenance (VOM) cost.
- Cost of electricity represents first year estimates only in 2006$ and are based on total plant cost plus generic cost estimates for AFUDC, emission credits, infrastructure, interconnections, transmission lines and upgrades.
- Cost of electricity with CO2 capture provides pressurized CO2 at the fence line and does not include transportation, storage and monitoring costs.

AEP®

IGCC Technology Is Strategic To Keeping Coal In The Money

Investment Decisions Today Must Consider Likely Future CO_2 Emission Limits



Source: Energy Information Administration/Emissions of GHG in the United States 2005

Note: Chart above assumes no mandatory limits imposed on CO_2 emissions

- **Absent federal policies, long-term CO_2 growth is likely to be significant, driven by population and economic growth, electrification, transportation**

- **Likelihood of US GHG legislation is growing**
  - ✓ **Climate change science**
  - ✓ **Public perceptions**
  - ✓ **Political shifts in Congress**

Inclusion Of Climate Change In Investment Decisions And Taking Voluntary Actions To Reduce CO2 Footprint Will Enhance Shareholder Return Prospects

AEP®

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

AEP®

A Reliable & Reasonably-priced Electric Supply Is Necessary To Support The Economic Well-being Of The Areas We Serve

Highlights of Bingaman-Specter Proposal

"Low Carbon Economy Act of 2007"

Key Components:

- Start date for greenhouse-gas reductions is 2012
- Goals: 2006 levels by 2020; 1990 levels by 2030
- Includes a safety valve of $12 per metric ton, increasing at an annual rate of 5% above inflation
- Support for Allowance Allocations
- International Action

AEP endorses this proposal because it is manageable

AEP®

AEP's Long-term CO_2 Reduction Commitment

Existing Programs

- Renewables
  - 800 MWs of Wind
  - 300 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

New Program Additions

- Incremental Reduction quantity: 5MM tons/yr
- Timing: To take effect/receive credits by 2011
- Methods
  - +1000 MWs of Wind PPAs – 2MM tons/yr
  - Domestic Offsets (methane) – 2MM tons/yr (e.g. livestock methane deal of 0.6 MM tons/yr)
  - Forestry – Tripling annual investment to increase to 0.5MM tons/yr by 2015
  - Fleet Vehicle/Aviation Offsets – 0.2MM tons/yr
  - Additional actions to include DSM and end use energy efficiency, biomass and power plant efficiency – 0.2MM tons/yr

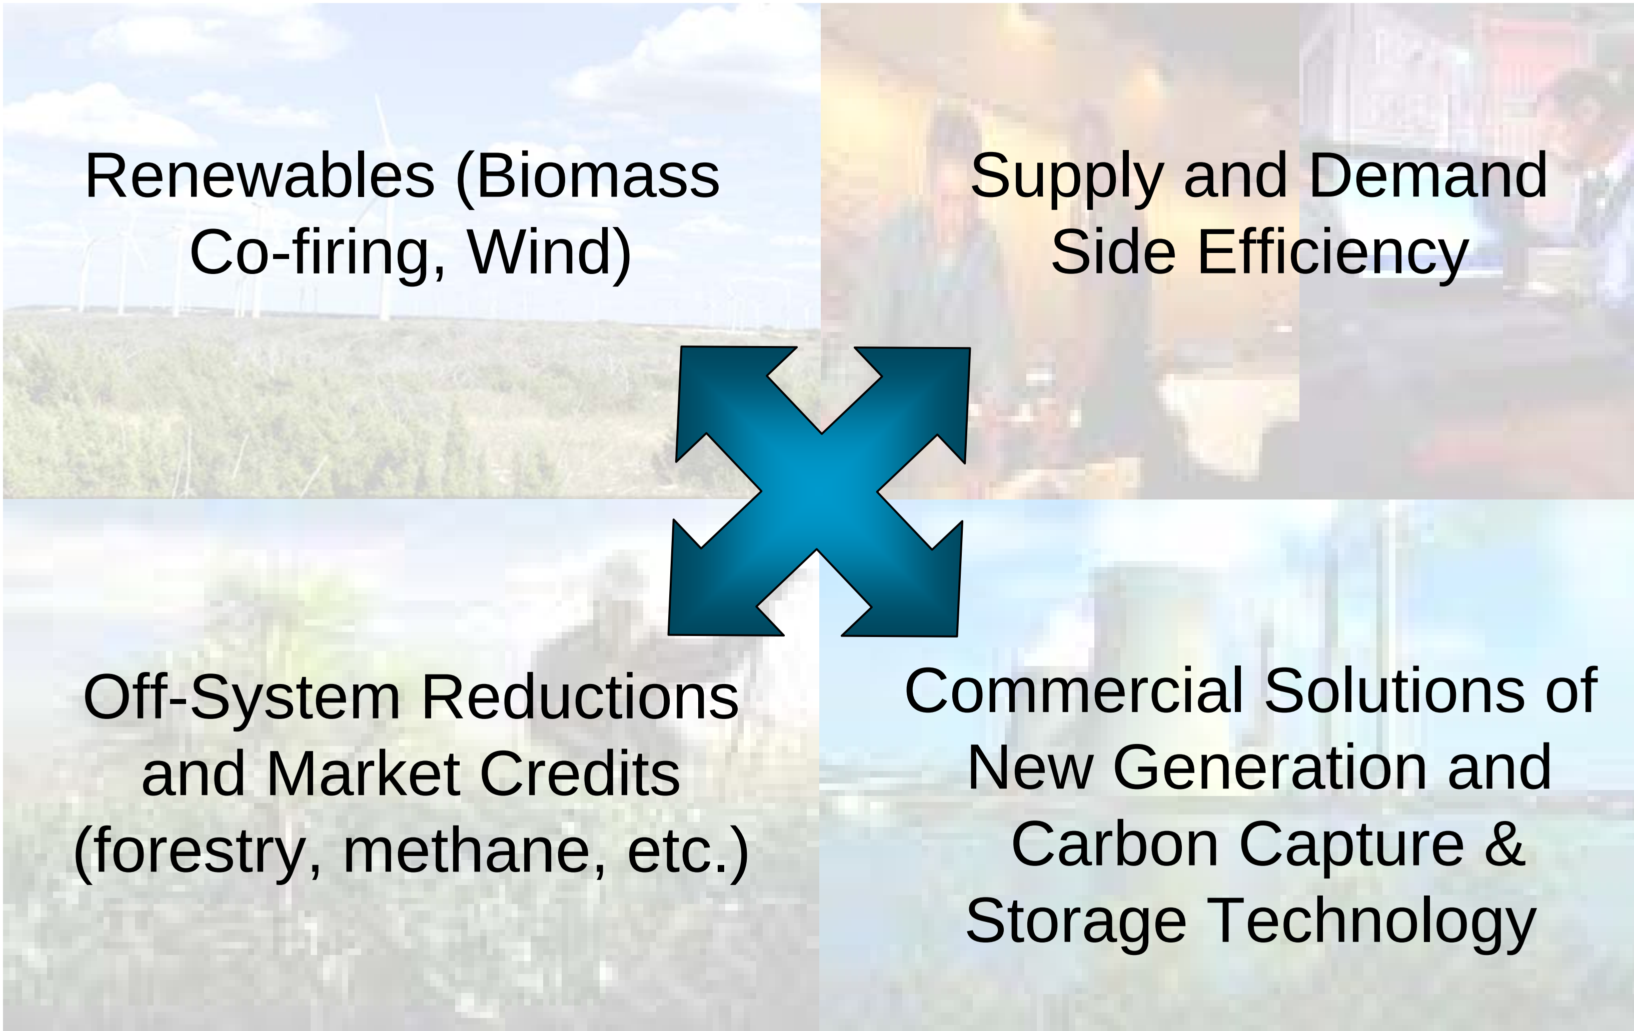
New Technology Additions

- Commercial solutions for existing fleet
  - Chilled Ammonia
  - Oxy-Fuel

AEP Is Committed To A 5mm Ton/Yr Reduction In Co_2 Emissions Which Offsets Approximately Half Of The Emissions Projected From New Generation Projects Previously Announced

AEP®

AEP's Long-term GHG Reduction Portfolio



AEP®

AEP Is Investing In A Portfolio Of GHG Reduction Alternatives

AEP and New Clean Coal Technology

Phase 1—CO2 Capture / Storage
2008 Commercial Validation

Mountaineer Plant (WV) @ 30 MW → MOU (Alstom) **Chilled Ammonia** → CO_2 (Battelle) → **0.1 MM tons CO_2 / yr**

Phase 2—CO2 Capture / Storage
2011 Commercial Operation

Northeastern Plant (OK)- 600 MW → MOU (Alstom) **Chilled Ammonia** → CO_2 EOR → **1.5 MM tons CO_2 / yr**

***FUTUREGEN** - First Near Zero Emissions Hydrogen/ Electric-AEP and Alliance members*

AEP®

Oxy-Fuel CO_2 Capture & Storage Project

Pilot Scale Demonstration

- 10 MW_e scale
- Teamed with B&W at its Alliance Research Center and 16 other utilities
- Demo completed 3Q 2007
- AEP funding of $50k

Commercial Scale Retrofit

- Retrofit on existing AEP sub-critical unit (several available)
- 150 – 230 MW_e scale retrofit
- 4,000 – 5,000 tons CO_2 per day
- Teamed with B&W
- AEP funding of ~ $200k – $3M for feasibility study
- Feasibility study to be completed in late 2008/early 2009

Combustion Conversion Technology For Existing Coal Fleet – Longer Lead Time With Enhanced Viability And Long-term Potential

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests

Transmission Investment Opportunity *

Creating a business model to manage capital requirements for enhanced returns with partners

- ~ $3 billion I-765 Project in PJM
- ~ $2 billion 765-kV study with ITC in Michigan
- ~ $3 billion project filed with SPP
- ~ $1- $7 billion in ERCOT via Electric Transmission Texas, LLC (ETT)

Assumptions	
Estimated Investment Opportunity	$15 Billion
Ownership Structure w/ Partner	50% / 50%
Debt/Equity Ratio	50% debt / 50% equity
Return on Equity	11.00%-13.00%
Potential EPS Impact (based on 396 MM shares)	$0.60+ **

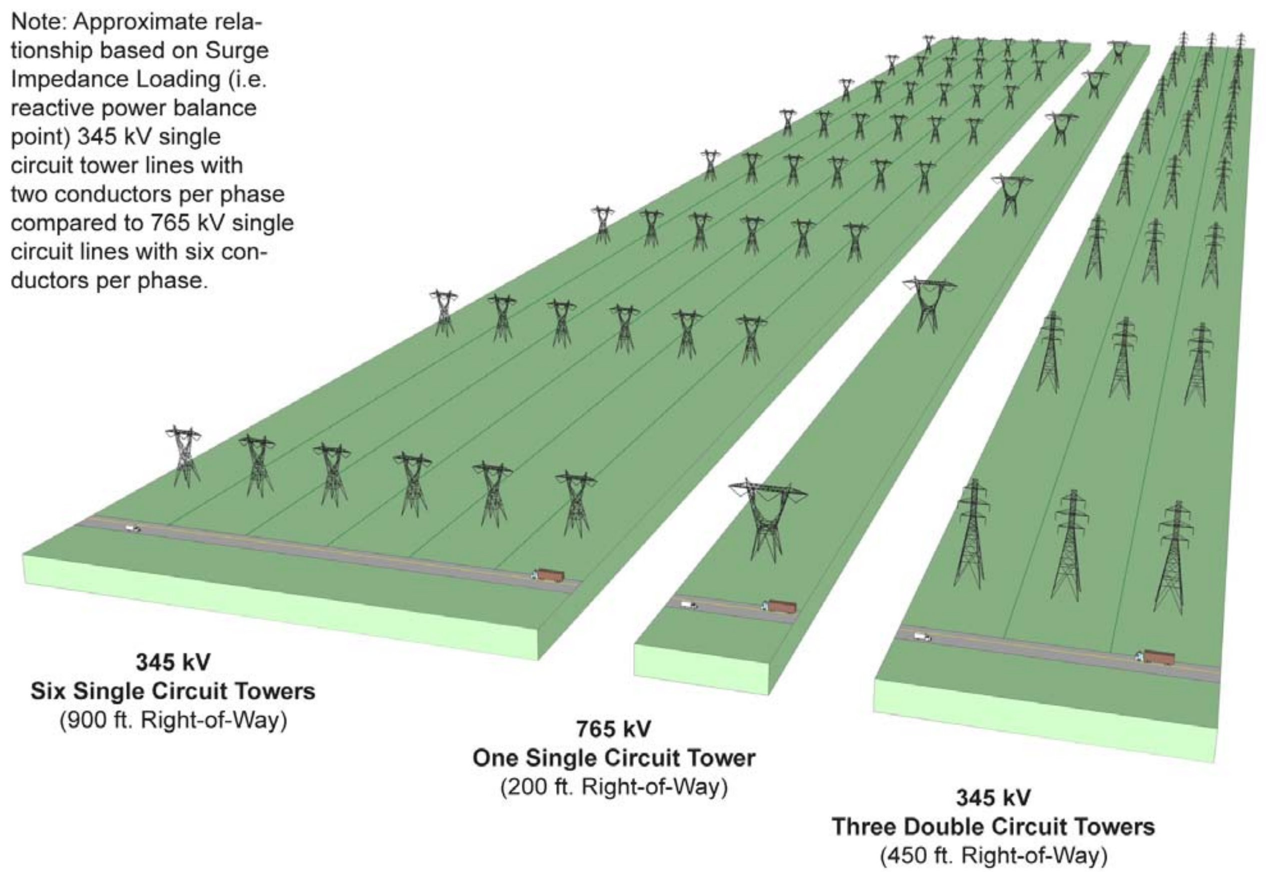
* This identified transmission opportunity is not included in current capex guidance

** Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion

AEP®

Building The Next US Interstate System For Enhanced Reliability And Market Efficiency Could Have Significant EPS Implications

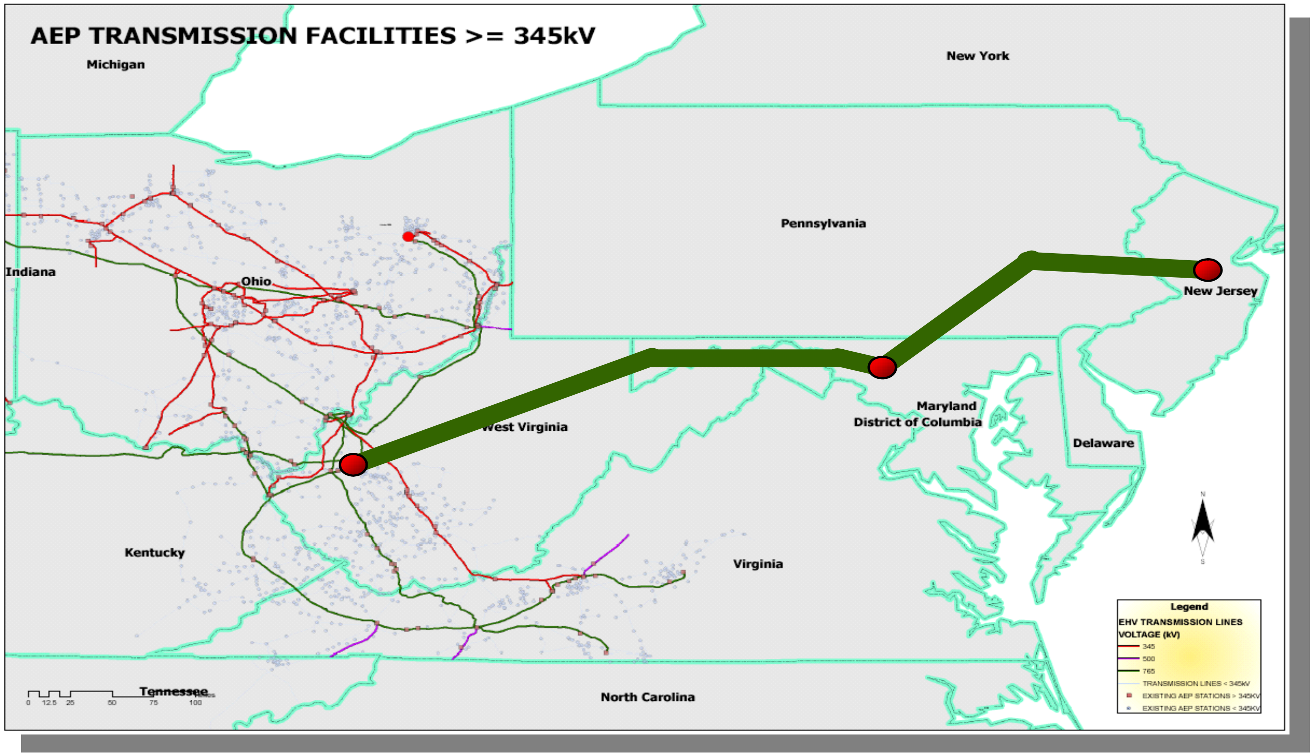
765 Right-of-Way Comparison



765-kV maximizes land use, providing the most efficient, highest capacity transmission in less right-of-way.

AEP®

765 PJM



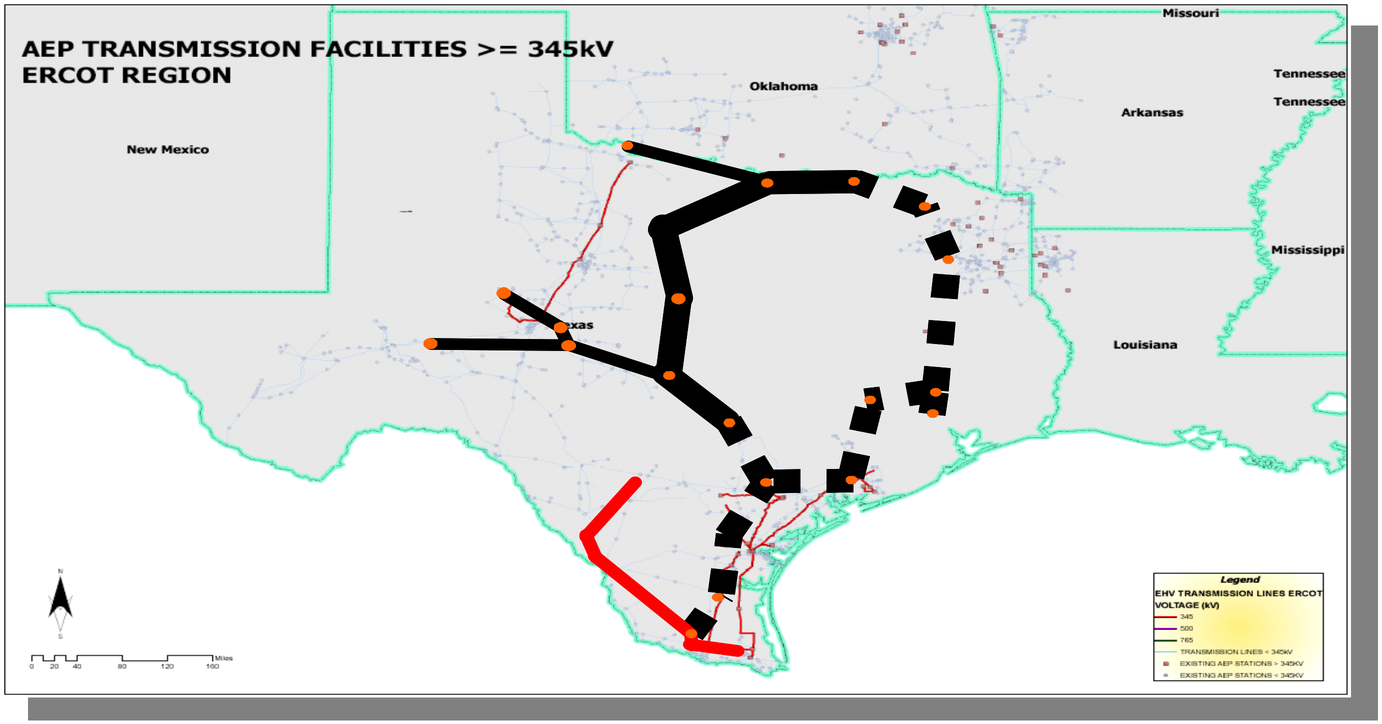
• JV with Allegheny to build a 290 mile West Virginia – Maryland line (Approved by PJM in June 2007). Total estimated cost of $1.8 billion (AEP portion appprox. $600 million). (Second leg which would continue to New Jersey still under consideration by PJM.)

• Enhances Midwest-Mid-Atlantic reliability and improves power transfer capability by 5000 MW.

• Reduces network line losses by 280 MW.

AEP®

765-ERCOT



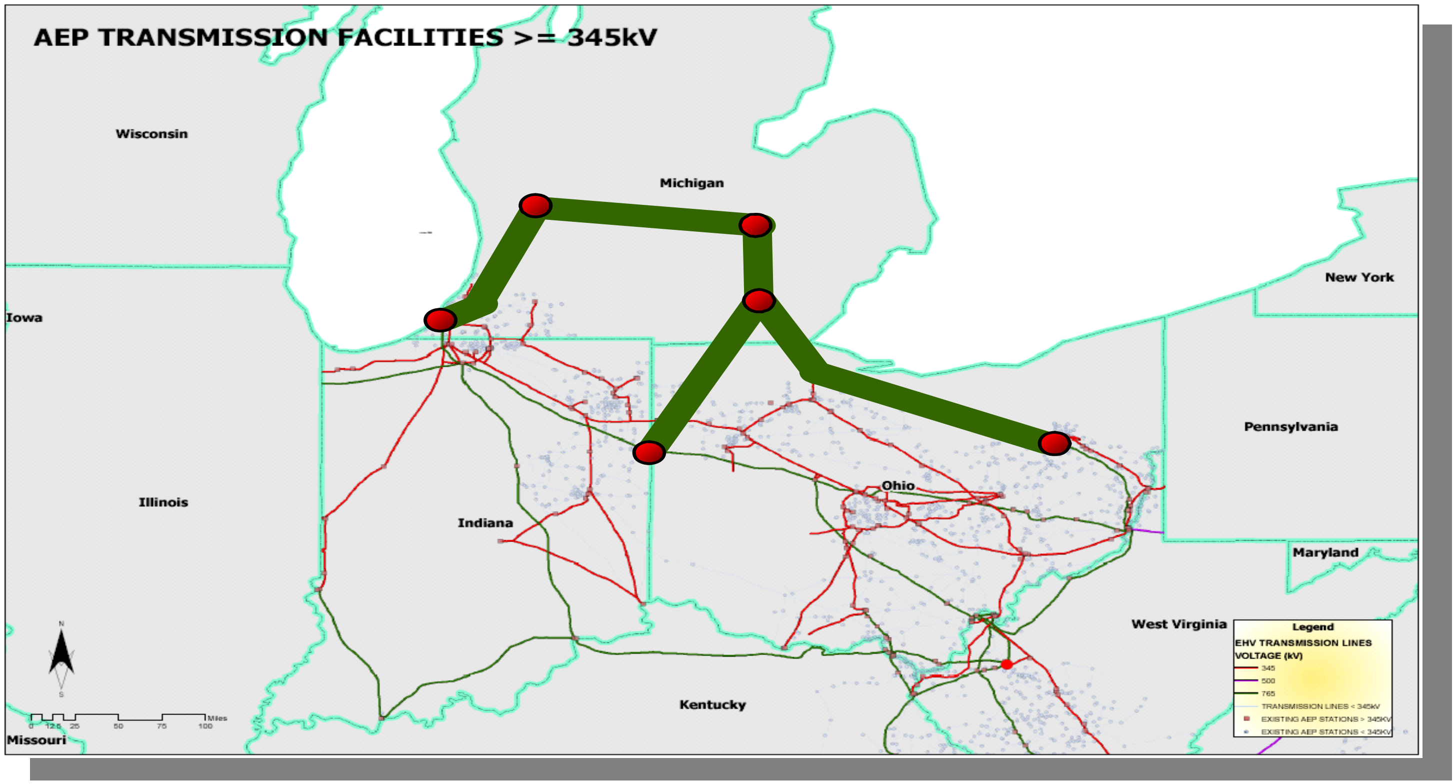
• Jointly-owned utility company (AEP and Mid American) will design, construct & operate ERCOT transmission assets.

• AEP exploring ERCOT transmission investment opportunity, including 420 miles of 765-kV initially.

• Up to 4000MW improved transfer capability.

AEP®

765-Michigan

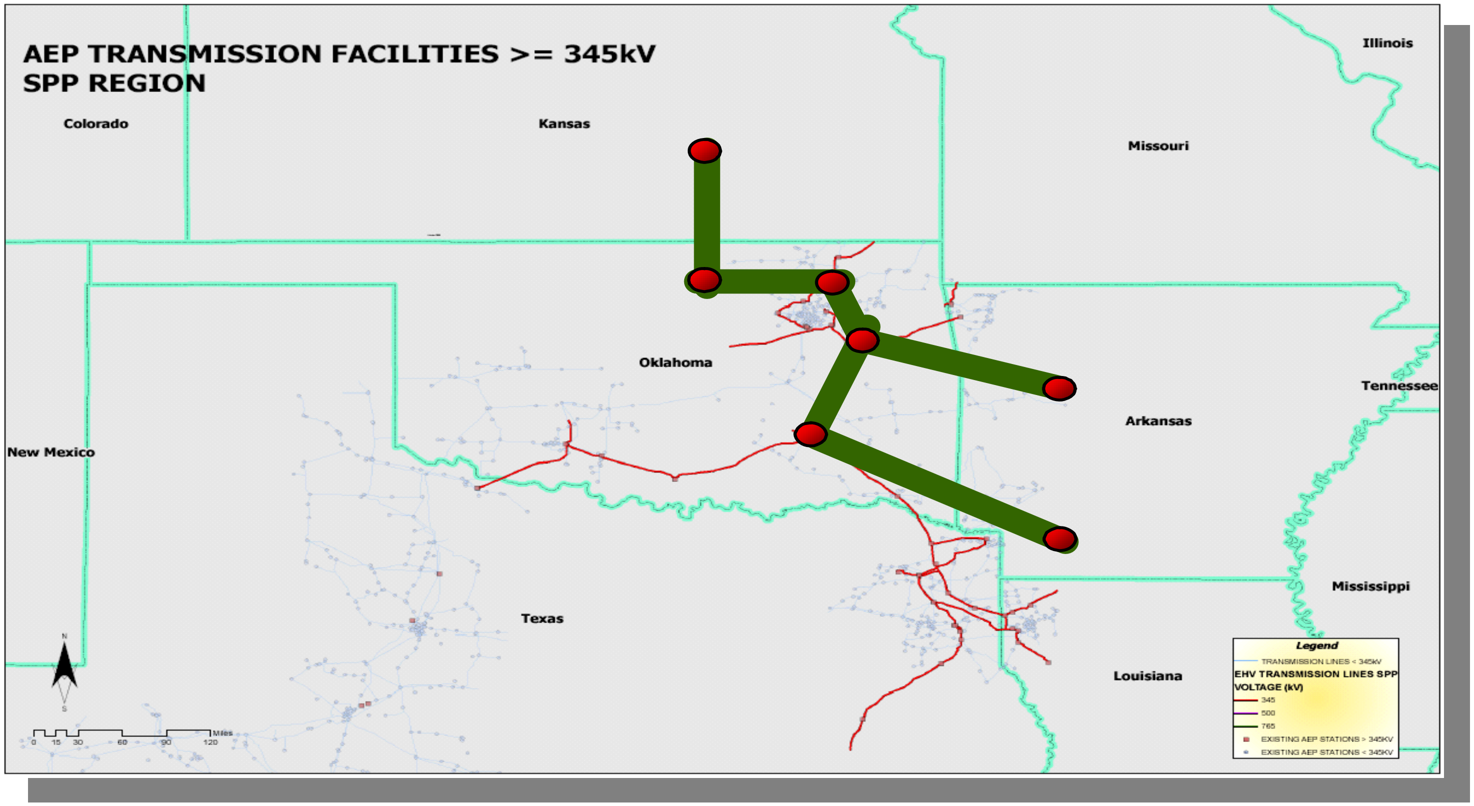


• Agreement with ITC Transmission for Michigan 765-kV to study the feasibility of 700 miles of 765-kV lines in Ohio and Michigan. Study to be completed by August 2007.

• Over 3000MW improved transfer capability.

• Reduces network line losses by 250 MW.

765-SPP



• In July '06 AEP submitted conceptual project to SPP for six 765-kV lines, 610 line miles from Arkansas to Wichita, KS, proposed construction period 2012-17.

• SPP issued EHV Overlay Study in June 2007 reviewing 345 kV, 500 kV, and 765 kV potential projects in SPP. An alternative which includes a 765-kV in Oklahoma and Kansas connecting east to PJM was chosen as the preferred alternative.

AEP®

2007 Regulatory Activity Completed

Appalachian Power – Virginia Base Rate Case

Final order approved on May 15, 2007

- ✓ **Results in $24 Million annual increase in base rates**
- ✓ **10.0% approved ROE**

Texas North Base Rate Case

Final settlement order approved on May 24, 2007

- ✓ **Results in $11.7 million increase in pre-tax earnings ($13.7 million increase in revenues offset by $2 million increase in depreciation expense)**
- ✓ **No stipulated ROE in the settlement. For AFUDC purposes, Texas North will utilize the ROE that comes out of the Texas Central rate case.**

Appalachian Power – West Virginia Expanded Net Energy Cost (ENEC) Filing

Final settlement order approved on June 22, 2007

- ✓ **Results in $85.5 million net increase in revenues effective July 1, 2007**
  - ✓ **$54.8 million covers increased costs related to coal and purchased power**
  - ✓ **$28.5 million covers environmental construction costs, primarily related to installation of scrubbers**
  - ✓ **Remainder ($2.2 million) recovers first year costs of rehabilitating four small electric utilities acquired as of July 1**

Indiana Michigan Power – Indiana Depreciation Study

Interim settlement order approved on June 13, 2007

- ✓ **Allowed a change in depreciation rates effective July 1, 2007, resulting in a pretax earnings increase of approximately $69 million per year**
- ✓ **Stipulated a $5 million credit to customers in the next fuel adjustment clause proceeding**
- ✓ **Required I&M to file a rate petition on or before July 1. Petition was filed on June 19.**

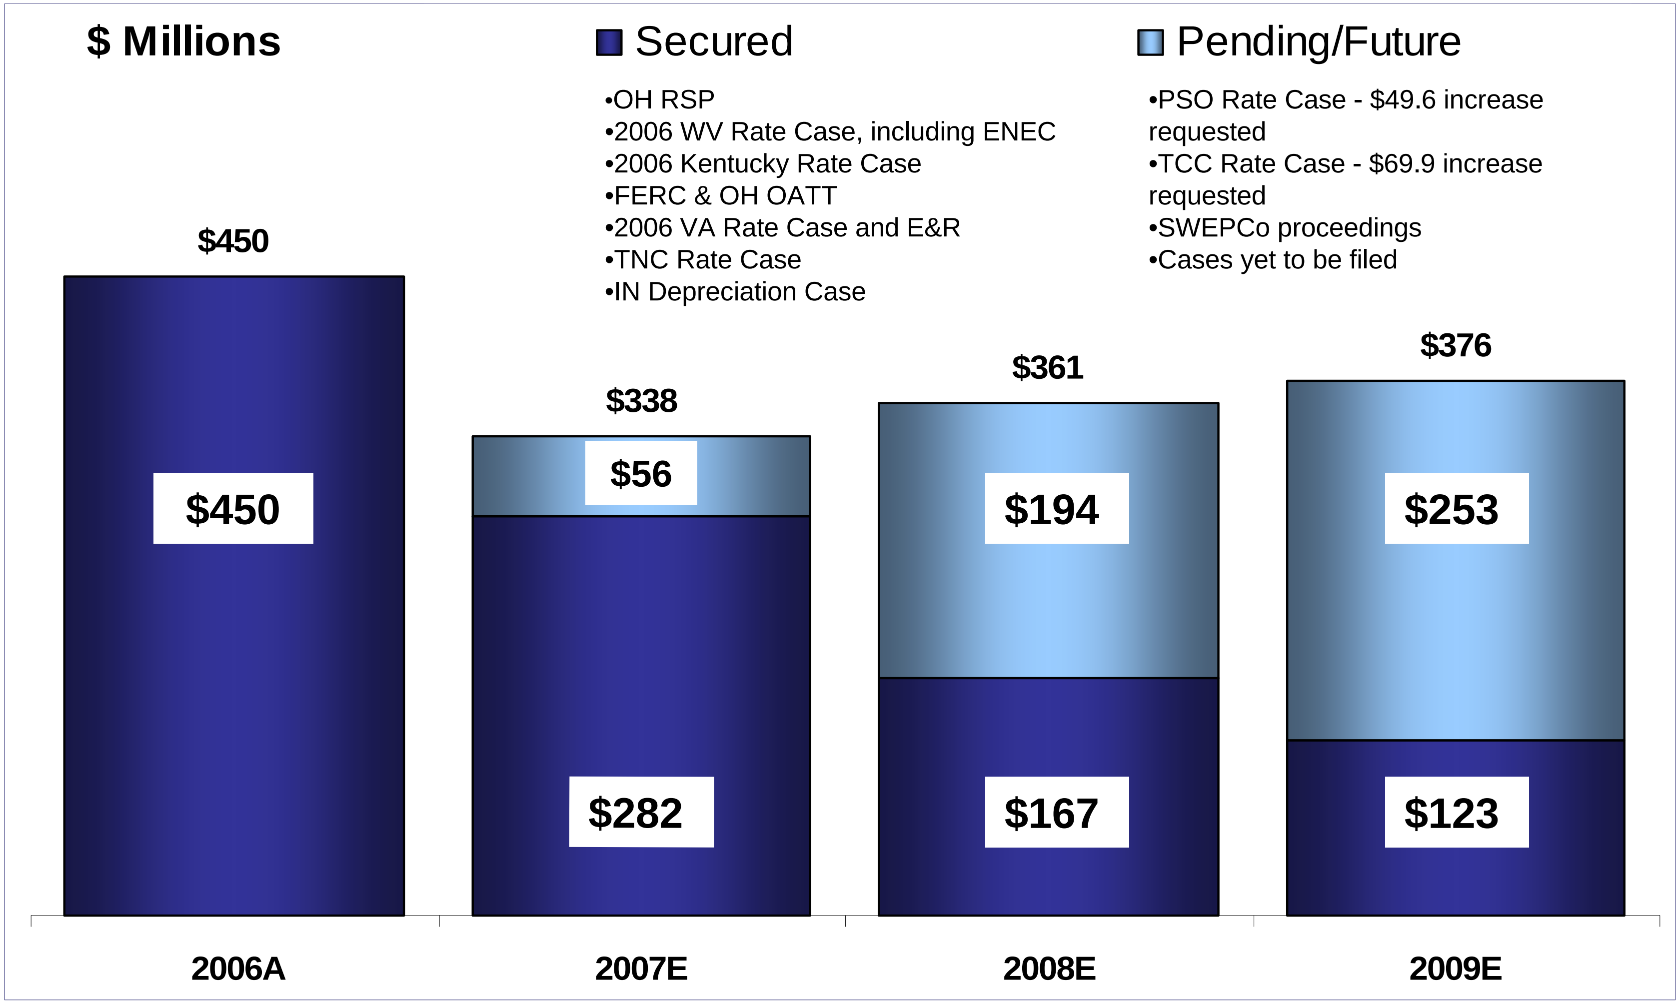
Incremental Rate Relief Composition



Rate Relief Is A Critical Element To AEP's Financial Success

Regulatory Activity Underway

AEP Texas Central Company General Rate Case

On November 9, 2006, TCC & TNC filed applications with the PUCT to raise base rates they charge to Retail Electric Providers (REP) serving end-use electricity customers in their service territories. On April 3, 2007, TCC and TNC submitted revised rate increase requests of $69.9MM and $22MM, respectively. Requested increases include the expiration of merger-related billing credits that have been in place since 2000, totaling $20MM and $6.2MM for TCC and TNC, respectively. (TCC Docket #33309, TNC Docket #33310). TNC reached settlement on May 4, 2007 for a $13.7MM increase in revenues and a $2MM increase in depreciation, resulting in an annual increase of $11.7MM. The settlement was approved by the PUCT on May 24, 2007.

Procedural Schedule

March 13, 2007	Intervenor testimony
March 23, 2007	Staff testimony
April 3, 2007	Rebuttal testimony
April 12, 2007	Hearings
May 14, 2007	Rates effective under bond, subject to refund

PSO General Rate Case

On November 21, 2006, Public Service Oklahoma filed an application with the Oklahoma Corporation Commission to increase base rates by $49.6 million to recovery investments already made and costs incurred. The request represents a 4% overall increase (including fuel). The filing also includes a proposal to adopt an annually adjusted rate mechanism, which includes a return on CWIP. The formula rate would adjust rates, up or down, if PSO earns above or below an approved bandwidth around the authorized ROE. (Case #200600285)

Pro-forma Capital Structure – Company Position (Test Year ended 6/30/06)

	% of Capitalization	Cost Rate	Weighted Cost

June 13, 2007	Oral closing arguments
July 2007	Final order expected

July 6, 2007—implemented interim rates of $8.6MM for a key provision on which there seemed to be agreement.

AEP®

Regulatory Activity Underway

AEP Ohio Application For 4% Provision On Generation Rate

- On Jan. 23, 2007, CSP and OP filed an application at the PUCO to recover 2007 costs associated with additional generation-related expenditures the companies are encountering related to environmental, security and other new generation-related costs pursuant to the RSP.
- CSP and OP are requesting to implement the provision to recover $24.5MM and $8.2MM, respectively, from May 2007 through December 2007.
- Staff & Intervenor testimony filed May 11, 2007; Staff recommended a $15MM increase at CSP and a $3.7MM increase at OP; OCC recommended a $19.9MM increase for CSP and a $3.7MM increase for OP.
- Hearings were held in May and June and we expect an order in September or October 2007.
- Because there was no specific action by the PUCO within the required time frame, we were allowed to implement these increases, subject to refund, in May 2007.

I&M Indiana Rate Petition

- On June 19, 2007, I&M filed a petition with the Indiana Utility Regulatory Commission for authority to increase its rates and charges for electric utility service and to establish and implement rate adjustment mechanisms to track certain matters.
- Requested trackers relate to reliability enhancement, demand-side management/energy efficiency programs, off-system sales margins, PJM, environmental compliance and capacity equalization settlement.
- I&M requested a test year of the twelve months ended September 30, 2007 but it is up to the IURC to determine the test year to be used.
- I&M will file its revenue requirement in approximately 2-3 months after the end of the stipulated test year.

AEP®

Regulatory Activity Underway

Electric Transmission Texas (ETT) Rate Filing

- Jan. 22, 2007 – ETT filed with the PUCT for approval to operate as an electric transmission utility in Texas and to establish initial rates for ETT.
  - Requested capital structure of 60% debt / 40% equity; requested ROE of 11.25%.
  - Intervenor testimony filed June 8, 2007; Staff testimony filed June 18, 2007; Staff recommended a 10.50% ROE – 10.0% with a 50 bps addition for start-up risk; Hearings are scheduled for July 16-19, 2007.
  - An order is expected in the third quarter of 2007 and operations are expected to commence in the 2nd half of 2007. Upon receipt of approvals, AEP and MidAmerican will each own a 50% interest in the joint venture.

Seams Elimination Cost Adjustment Revenues

- August 2006 – ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
  - Up to $96MM of SECA revenues could be disallowed, net of unused provisions.
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both.
- Exceptions to initial decision filed Sept. 11, 2006; Replies to exceptions filed Oct. 11, 2006; Order expected by the Commission in 2007.

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission serves over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1st.
- The current revenue requirement is $88.7MM and the new total revenue requirement requested is $161MM.
- We requested an effective date of September 1, 2007 for the revised tariff and FERC can suspend for an additional five months, which would push the effective date to February 1, 2008.

AEP®

Regulatory Activity Underway

West Virginia Mountaineer IGCC Filing

- Testimony filed on June 18, 2007 in support of APCo's application for a Certificate of Public Convenience and Necessity to construct a 600MW IGCC plant in WV at a cost of approximately $2.23 billion.
  - Testimony includes a proposal for the Commission to approve a cost recovery mechanism through the existing Expanded Net Energy Cost (ENEC) mechanism. The filing is not a formal proposal to adjust rates.
  - Actual requests for increased rates will be included in future filings, once construction of the plant has commenced and actual Construction Work In Progress data is known.
- Public hearings are scheduled for September 10-14, 2007 with an order on or before December 2, 2007.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- Oral arguments regarding this matter are scheduled on the Ohio Supreme Court's agenda for October 9, 2007.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.

AEP®

Regulatory Activity Underway

Oklahoma Red Rock Generating Facility

- Testimony filed on February 1, 2006 in support of PSO's application for a determination that additional baseload electric generating capacity will be used and useful.
- The Oklahoma Corporation Commission consolidated this cause with Oklahoma Gas and Electric's application for an order granting pre-approval to construct Red Rock Generating Facility and authorize a recovery rider.
- Initial staff and intervenor testimony agrees that PSO needs baseload capacity and staff recommends that the OCC find Red Rock used and useful. The biggest challenges related to the RFP process and the debt equivalence issue in evaluating the PPA bids.
- Hearings for the Used and Useful Determination commenced July 9, 2007.
- Hearings for OG&E's cost recovery commence July 19, 2007.

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- Depending on contested issues, public hearings will begin either July 19, 2007 or August 9, 2007.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to Purchase, Operate, Own and Install Peaking, Intermediate and Baseload Generating Facilities. Peaking and intermediate facilities have been addressed. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- Public hearings are scheduled for September 11-14, 2007.

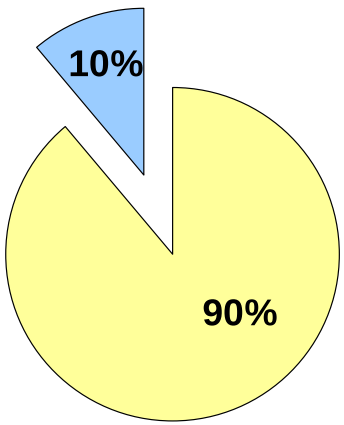
Installation Of SCR And FGD Equipment Will Allow Our Coal Fleet To Remain Extremely Cost Competitive

Materials and Vendors – AEP's Advantage

Environmental Program Costs:
Active/Firm Costs to Remaining Estimated Costs



Actuals To Date & Firm Costs
Remaining Estimated Costs*

* Primarily labor and activated carbon injection systems

SCR Technology

- Removes 90 – 93% of NOx emissions
- Requires ~ 1% use of auxiliary power
- **AEP Capital Cost ~ $121/kw avg.**

Combination of SCR & FGD technology results in co-benefit of Hg removal ~80% removal efficiency

FGD Technology

- Removes 95 – 98% of SO_2 emissions
- Requires ~1.5% to 3.0% use of auxiliary power
- **AEP Capital Cost ~ $250/kw avg.**

AEP Benefits From First-mover Advantage Through Lower Contracted Pricing and Reduced Market Escalation Exposure

New Gas-Fired Generation Facilities

SWEPCo

- Mattison Plant (Tontitown, AR)
  - Certificate of Need filings (LA, AR, TX) were approved in all 3 states
  - Air permit filed and approved in February 2007
  - Units 3 and 4 online July 12, 2007; Units 1 and 2 online by December, 2007
- Stall Plant (Arsenal Hill, LA)
  - Certificate of Need filings (LA, AR, TX)
    - TX settled in Feb 2007
    - AR & LA decisions expected by year-end 2007
  - Air permit filed on April 27, 2007 – expecting approval by March 2008
  - Commercial operation date in 2010

PSO

Southwestern & Riverside Additions

- Air permit received March 22, 2007
- Commercial operation date of December 2007
- Regulatory Recovery
  - Settlement and final order in the Lawton Cogen case authorizes costs for Southwestern and Riverside peakers to be recovered through a rider mechanism beginning as early as June 2008 based on the Commercial Operation date

2007-2009 Projected Capital Expenditures

	2007	2008	2009

Stall	$82MM	$126MM	$64MM
Southwestern	$36MM	$3MM	-
Riverside	$35MM	$2MM	-

SWEPCo's and PSO's Short-Term and Intermediate Power Needs Will Be Met With Newly Constructed Gas-Fired Facilities

AEP®

New Ultra-Supercritical Coal Facilities

SWEPCo	PSO

Turk Plant (Fulton, AR)

- Certificate of Need approvals (LA, AR, TX) expected by September/October 2007
- Air permit approval expected in August 2007
- Regulatory Recovery
  - Recovery of carrying cost requested in LA Certificate of Need filing – Hearings scheduled for September 2007
  - AR and TX rate recovery will be addressed in separate filings
- Approximately 85-90% of costs are firm
  - EPC contract for balance of plant work awarded in May 2007
  - Contracts for turbine, boiler, and environmental control equipment awarded in 2006

Red Rock Generating Facility (Red Rock, OK)

- Used and useful determination filed in February 2006 – Hearings commenced July 9, 2007 and approval is expected by September 2007
- Air permit approval expected in August 2007
- Regulatory Recovery
  - Order expected in PSO rate filing in July 2007 – filing included request for CWIP treatment for new projects
- Original cost estimate of $1.8 billion – revised cost estimate expected in the third quarter of 2007

	2007	2008	2009
Turk Plant	$211MM	$230MM	$243MM
Red Rock Generating Facility	$54MM	$120MM	$236MM

Ultra-Supercritical Coal-Fired Generation Is The Most Economical Choice For New Baseload Plants In AEP's Western Service Territory

July 16-17, 2007

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation in Ohio, and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

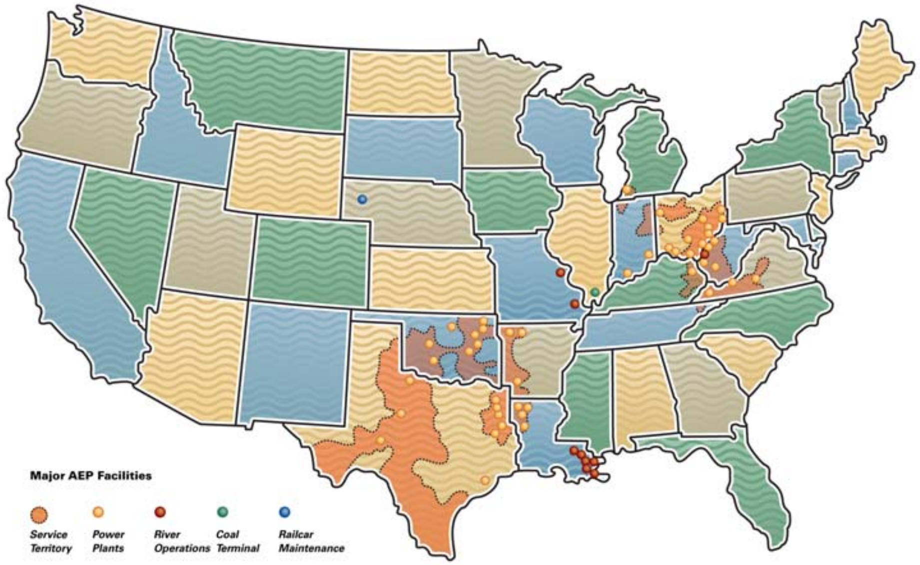
Strength & Scale in Assets & Operations

AEP®

- 5.1 million customers in 11 states
- Industry-leading size and scale of assets:

Asset	Size	Industry Rank
Domestic Generation	~38,400 MW	# 2
Transmission	~39,000 miles	# 1
Distribution	~208,000 miles	# 1

Source: Company research & Resource Data International Platts, PowerDat 2005



- Coal & transportation assets
  - Control over 8,000 railcars
  - Own/lease and operate over 2,600 barges & 51 towboats
  - Coal handling terminal with 20 million tons of capacity
- 20,000 employees

AEP Generation Portfolio				
Coal	Gas	Nuclear	Hydro	Wind
67%	24%	6%	2%	1%

AEP Enjoys Significant Presence Throughout The Energy Value Chain

Strategic Direction

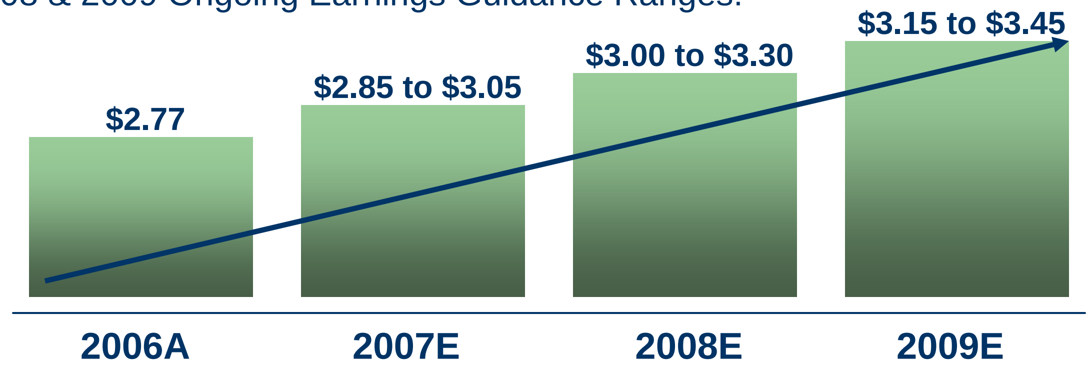
- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Develop our transmission business
- Achieve adequate returns on all assets

Deliver value to investors and cost effective service to our customers

Continued Commitment To Our Core Utility Mission: Bring Reasonably Priced Electric Service To Our Customers, Thereby Strengthening Our Communities And Rewarding Our Investors

Framework For Long-Range Performance

- 2007, 2008 & 2009 Ongoing Earnings Guidance Ranges:



- EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in existing utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
  - Investment in new transmission opportunities
  - Seek rate recovery for new investments
  - Control costs & achieve timely rate relief
- Maintain credit ratings
  - BBB/Baa2/BBB

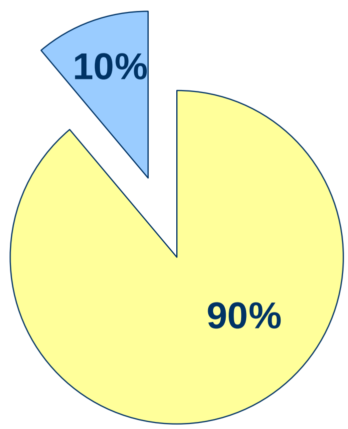
*Excludes AEP's 44% ownership in OVEC (980 MWs of coal-fired capacity)

Installation Of SCR And FGD Equipment Will Allow Our Coal Fleet To Remain Extremely Cost Competitive

Materials and Vendors – AEP's Advantage

Environmental Program Costs:
Active/Firm Costs to Remaining Estimated Costs



- Actuals To Date & Firm Costs
- Remaining Estimated Costs*

* Primarily labor and activated carbon injection systems

SCR Technology

- Removes 90 – 93% of NOx emissions
- Requires ~ 1% use of auxiliary power
- **AEP Capital Cost ~ $121/kw avg.**

Combination of SCR & FGD technology results in co-benefit of Hg removal ~80% removal efficiency

FGD Technology

- Removes 95 – 98% of SO_2 emissions
- Requires ~1.5% to 3.0% use of auxiliary power
- **AEP Capital Cost ~ $250/kw avg.**

AEP Benefits From First-mover Advantage Through Lower Contracted Pricing and Reduced Market Escalation Exposure

Purchased Generation

Waterford

– 821 MW combined-cycle gas plant
– $220MM purchase price
– Columbus Southern Power completed purchase on Sept. 28, 2005

Ceredo

– 505 MW simple-cycle gas plant
– $100MM purchase price
– APCo completed purchase on Dec. 15, 2005

2,946 MW of gas-fired generation added since 2005

Darby

– 480 MW simple-cycle gas plant
– $102MM purchase price
– Columbus Southern Power completed purchase on April 25, 2007

Lawrenceburg

– 1140 MW combined-cycle gas plant
– $325MM purchase price
– AEG completed purchase on May 16, 2007

Additional Gas-fired Generation Allows Us To Meet The Growing Needs Of Our Customers And Provides The Company With Greater Fuel Flexibility

New Generation Facilities

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
SWEPCo	Mattison	Arkansas	$130 MM	Gas	Simple-cycle	340	2007/2008
PSO	Southwestern	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
SWEPCo	Stall	Louisiana	$300 MM	Gas	Combined-cycle	480	2010
SWEPCo	Turk	Arkansas	$1.3 B[1]	Coal	Ultra-supercritical	600[1]	2011
PSO	Red Rock	Oklahoma	$1.8 B[2]	Coal	Ultra-supercritical	950[2]	2012
CSP/OP	Great Bend	Ohio	$2.23 B	Coal	IGCC	600	2012
APCo	Mountaineer	West Virginia	Under Review[3]	Coal	IGCC	600	2017

(1) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment.
(2) PSO will own 50%, or 475 megawatts, totaling approximately $900MM in capital investment.
(3) FEED (front-end engineering and design) study with GE/Bechtel is complete. Cost estimates are not yet filed with the PUCO due to the pending appeals to the Supreme Court of Ohio resulting from the PUCO's April 10, 2006 Opinion and Order.

AEP Is Meeting The Growing Electricity Needs Of Customers Through The Pursuit Of New Economic Generation Facilities

New Gas-Fired Generation Facilities

SWEPCo

- Mattison Plant (Tontitown, AR)
  - Certificate of Need filings (LA, AR, TX) were approved in all 3 states
  - Air permit filed and approved in February 2007
  - Units 3 and 4 online July 12, 2007; Units 1 and 2 online by December, 2007
- Stall Plant (Arsenal Hill, LA)
  - Certificate of Need filings (LA, AR, TX)
    - TX settled in Feb 2007
    - AR & LA decisions expected by year-end 2007
  - Air permit filed on April 27, 2007 – expecting approval by March 2008
  - Commercial operation date in 2010

PSO

Southwestern & Riverside Additions

- Air permit received March 22, 2007
- Commercial operation date of December 2007
- Regulatory Recovery
  - Settlement and final order in the Lawton Cogen case authorizes costs for Southwestern and Riverside peakers to be recovered through a rider mechanism beginning as early as June 2008 based on the Commercial Operation date

Ultra-Supercritical Coal-Fired Generation Is The Most Economical Choice For New Baseload Plants In AEP's Western Service Territory

Integrated Gasification Combined Cycle Facilities

AEP®

Front-End Engineering & Design (FEED) results complete. Results were filed in June 2007. Cost estimates in target range of 20-30% premium over new ultra-supercritical coal-fired facilities of equal capacity.

West Virginia

- Certificate of Public Convenience & Necessity filed Jan. 11, 2006
  - APCo testimony filed June 18, 2007
  - Intervenor & Staff testimony due Aug. 17, 2007
  - Hearings Sept. 10-14, 2007
  - Statutory Deadline – Dec. 2, 2007
- Air permit filed in Oct 2006 – A technical review of the application and development of a draft permit is ongoing by the WV Dept. of Environmental Protection
- Regulatory Recovery Filing
  - Filing made in June 2007 –included request for cash recovery mechanism

Ohio

- Certificate of Environmental Compatibility & Public Need filed on March 24, 2006
  - Ohio Power Siting Board approved application on March 9, 2007
- Air permit filed in Oct 2006
- Regulatory Recovery Filing
  - Phase 1 – June 2006 – PUCO approved tariff to recover pre-construction costs ($24MM) over 12-month period effective July 1, 2006
  - Phase 2 – filing likely to be withheld until resolution of Ohio Supreme Court action
  - Informational filing made on June 18, 2007 to inform PUCO of the West Virginia filing

Construction Period Of 48-50 Months Following Receipt Of Major Regulatory And Permit Approvals

Investing In IGCC

Generation Technology Comparative Statistics

US2006$	Eastern Bituminous		
	USC	**IGCC**	**NGCC**
Nominal Capacity (MW)	618	629	530
Capacity Factor (%)	85%	85%	25%
Total Plant Cost (EPC + Owner's Cost) ($/kW)	$2,152	$2,717	$572
Production Cost ($/MWh)	$22	$22	$45
Cost of Electricity, without CO_2 Capture ($/MWh)	$72	$83	$87
Estimated Cost of Electricity, with 90% CO_2 Capture ($/MWh)	$118	$108	$135

Source: Results of AEP analysis based on EPRI studies.

- Total Plant Cost (Overnight EPC 2006$s) includes the cost to engineer, procure and construct plant and owner's direct costs.
- Assumes Northern Appalachian coal price of $2.25/mmBtu for USC and IGCC and natural gas price of $6.00/mmBtu for NGCC.
- Production cost includes fuel cost plus variable operations and maintenance (VOM) cost.
- Cost of electricity represents first year estimates only in 2006$ and are based on total plant cost plus generic cost estimates for AFUDC, emission credits, infrastructure, interconnections, transmission lines and upgrades.
- Cost of electricity with CO2 capture provides pressurized CO2 at the fence line and does not include transportation, storage and monitoring costs.

IGCC Technology Is Strategic To Keeping Coal In The Money

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A Reliable & Reasonably-priced Electric Supply Is Necessary To Support The Economic Well-being Of The Areas We Serve

Highlights of Bingaman-Specter Proposal

"Low Carbon Economy Act of 2007"

Key Components:

- Start date for greenhouse-gas reductions is 2012
- Goals: 2006 levels by 2020; 1990 levels by 2030
- Includes a safety valve of $12 per metric ton, increasing at an annual rate of 5% above inflation
- Support for Allowance Allocations
- International Action

AEP endorses this proposal because it is manageable

AEP's Climate Strategy

- **Being proactive and engaged in the development of climate policy**
  - International Emissions Trading Association (IETA)
  - Electric Power Research Institute (EPRI)
  - Pew Center on Global Climate Change
  - e8
  - Global Roundtable on Climate Change
- **Investing in science/technology R&D**
  - FutureGen Alliance
  - US DOE research on carbon capture and sequestration at our Mountaineer Plant
  - EPRI – combustion technologies
  - MIT Energy Laboratory
  - B&W – Oxy-Fuel
- **Taking voluntary, proactive action now, demonstrating voluntary programs can work and setting policy precedents thru CCX**
  - Chicago Climate Exchange (CCX)
  - EPA Climate Leaders
  - EPA SF-6 Emission Reduction Partnership for Electric Power Systems Program
  - Asia-Pacific Partnership
  - DOE 1605B- voluntary reporting of GHGs Program
  - Business Roundtable Climate Resolve
  - Numerous forestry activities
- **Evaluating longer term investment decisions such as new generation and carbon capture and storage (e.g., IGCC, Ultra-supercritical)**

AEP Must Be A Leader In Addressing Climate Change

AEP's Long-term GHG Reduction Portfolio

AEP®

Renewables (Biomass Co-firing, Wind)

Supply and Demand Side Efficiency

Off-System Reductions and Market Credits (forestry, methane, etc.)

Commercial Solutions of New Generation and Carbon Capture & Storage Technology

AEP Is Investing In A Portfolio Of GHG Reduction Alternatives

AEP's Long-term CO_2 Reduction Commitment

Existing Programs

- Renewables
  - 800 MWs of Wind
  - 300 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

New Program Additions

- Incremental Reduction quantity: 5MM tons/yr
- Timing: To take effect/receive credits by 2011
- Methods
  - +1000 MWs of Wind PPAs – 2MM tons/yr
  - Domestic Offsets (methane) – 2MM tons/yr (e.g. livestock methane deal of 0.6MM tons/yr)
  - Forestry – Tripling annual investment to increase to 0.5MM tons/yr by 2015
  - Fleet Vehicle/Aviation Offsets – 0.2MM tons/yr
  - Additional actions to include DSM and end use energy efficiency, biomass and power plant efficiency – 0.2MM tons/yr

New Technology Additions

- Commercial solutions for existing fleet
  - Chilled Ammonia
  - Oxy-Fuel

AEP Is Committed To A 5mm Ton/Yr Reduction In Co_2 Emissions Which Offsets Approximately Half Of The Emissions Projected From New Generation Projects Previously Announced

Chilled Ammonia Process Plant Footprint

AEP and New Clean Coal Technology

Near-zero Emissions Using Oxy-fuel Combustion Technology

Oxy-Fuel CO_2 Capture & Storage Project

AEP®

Pilot Scale Demonstration

- 10 MW_e scale
- Teamed with B&W at its Alliance Research Center and 16 other utilities
- Demo completed 3Q 2007
- AEP funding of $50k

Commercial Scale Retrofit

- Retrofit on existing AEP sub-critical unit (several available)
- 150 – 230 MW_e scale retrofit
- 4,000 – 5,000 tons CO_2 per day
- Teamed with B&W
- AEP funding of ~ $200k – $3M for feasibility study
- Feasibility study to be completed in late 2008/early 2009

Combustion Conversion Technology For Existing Coal Fleet – Longer Lead Time With Enhanced Viability And Long-term Potential

Transmission Investment Opportunity *

AEP®

Creating a business model to manage capital requirements for enhanced returns with partners

- ~ $3 billion I-765 Project in PJM
- ~ $2 billion 765-kV study with ITC in Michigan
- ~ $3 billion project filed with SPP
- ~ $1- $7 billion in ERCOT via Electric Transmission Texas, LLC (ETT)

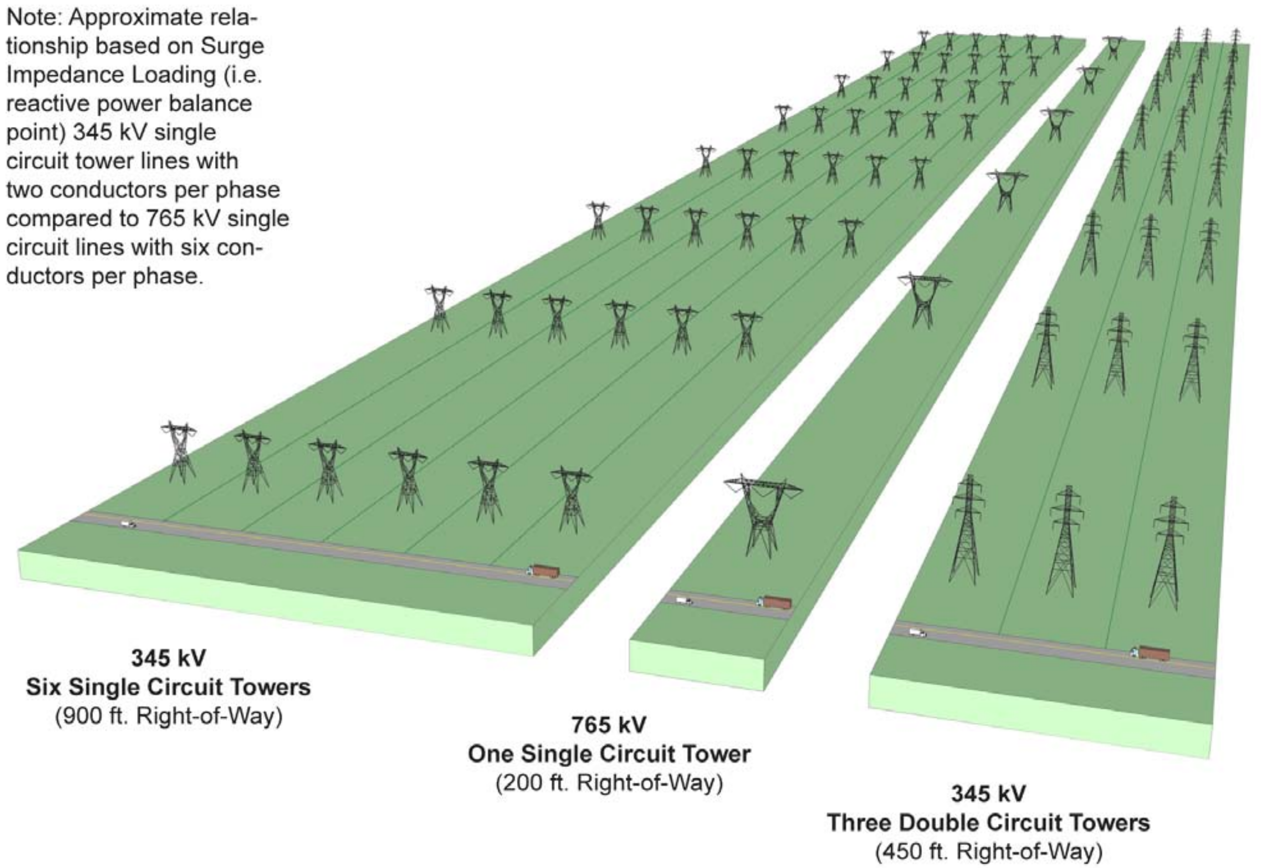
Assumptions	
Estimated Investment Opportunity	$15 Billion
Ownership Structure w/ Partner	50% / 50%
Debt/Equity Ratio	50% debt / 50% equity
Return on Equity	11.00%-13.00%
Potential EPS Impact (based on 396 MM shares)	$0.60+ **

* This identified transmission opportunity is not included in current capex guidance

** Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion

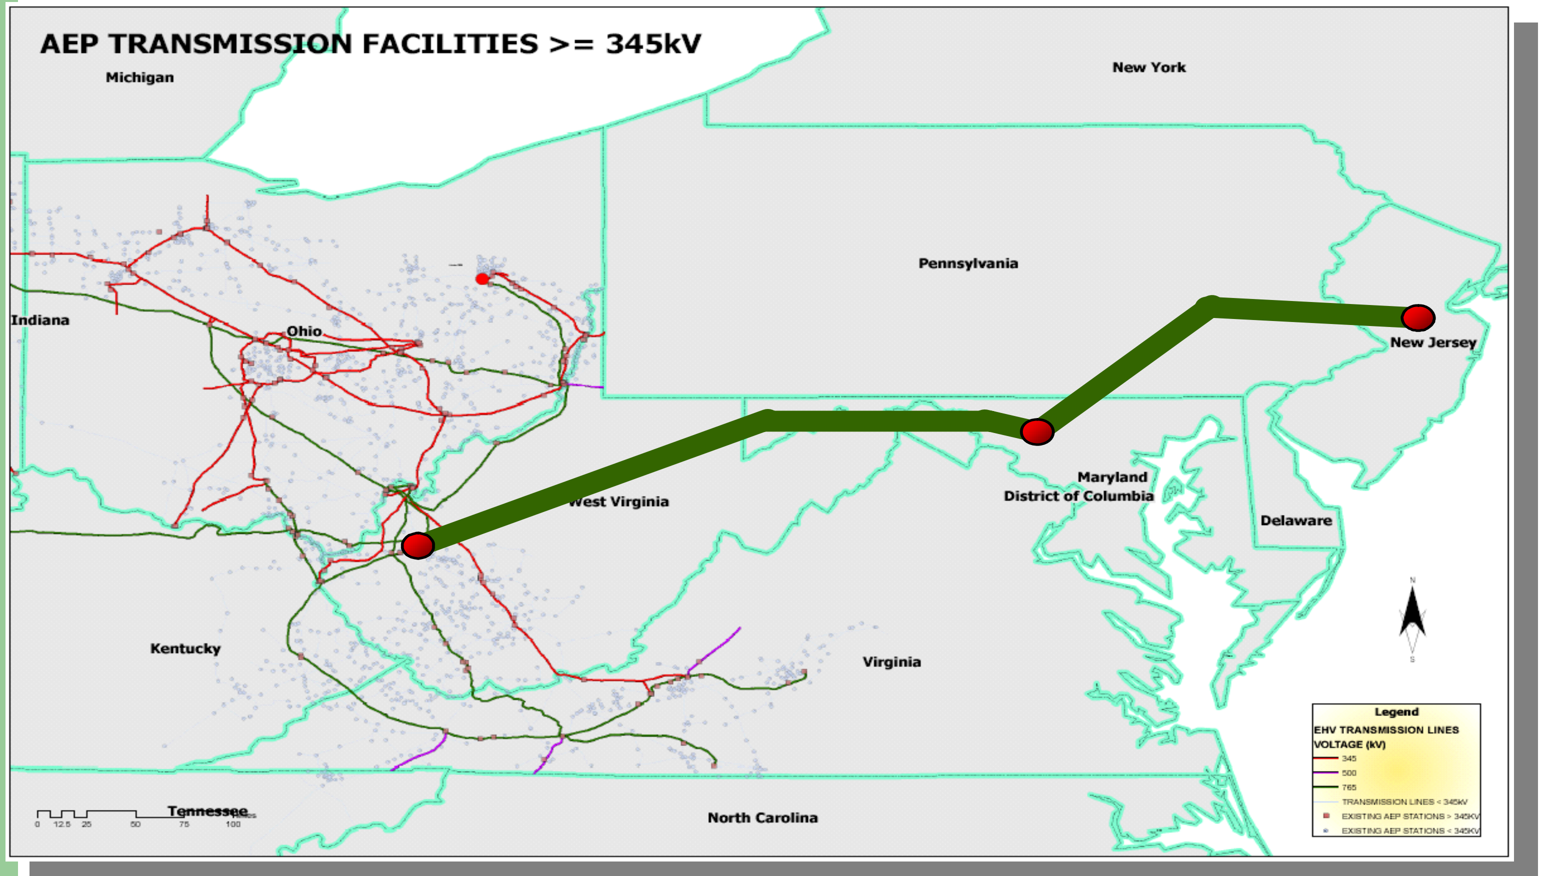
Building The Next US Interstate System For Enhanced Reliability And Market Efficiency Could Have Significant EPS Implications

765 Right-of-Way Comparison



765-kV maximizes land use, providing the most efficient, highest capacity transmission in less right-of-way.

765-kV PJM

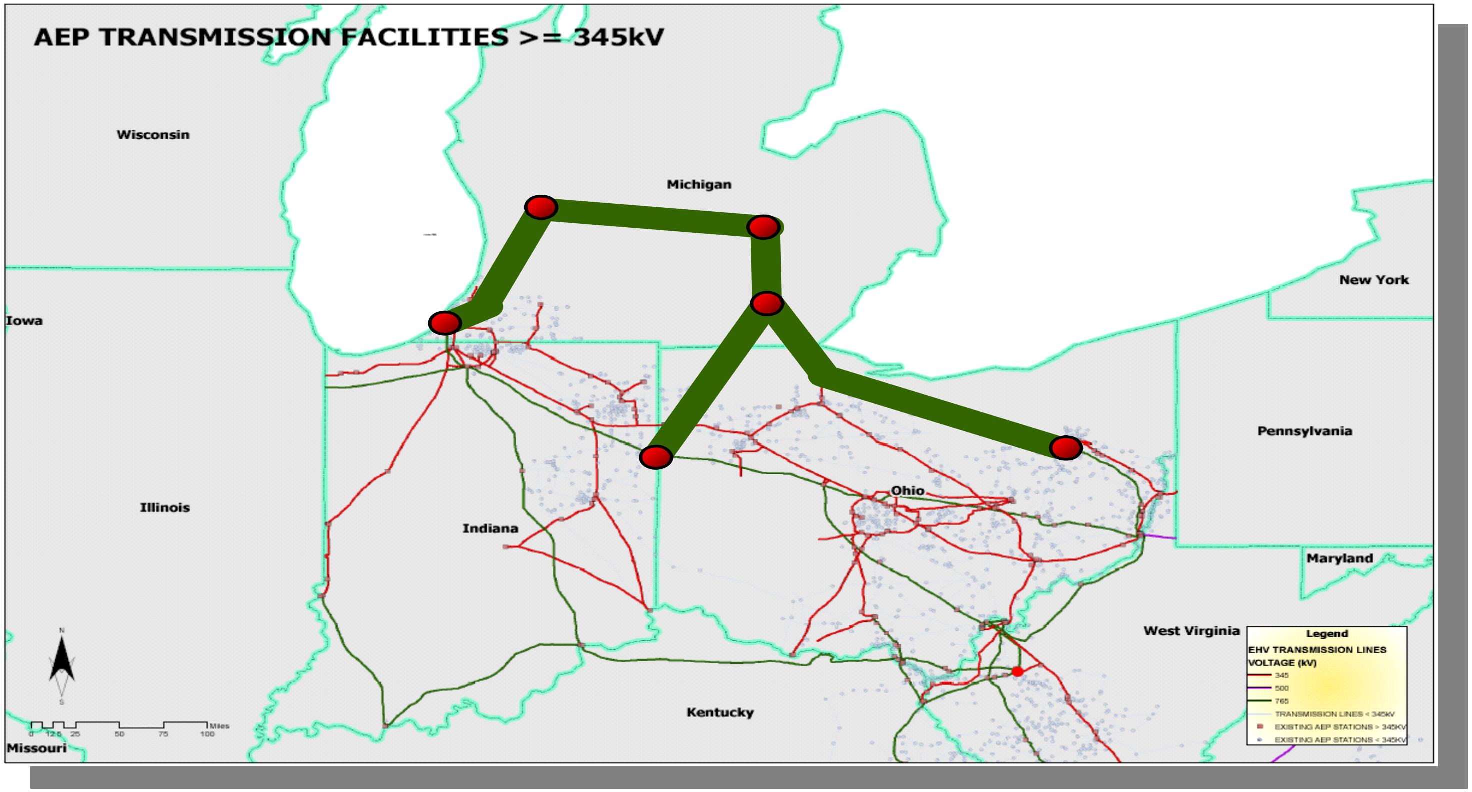


- **JV with Allegheny to build a 290 mile West Virginia – Maryland line (Approved by PJM in June 2007). Total estimated cost of $1.8 billion (AEP portion approximately $600 million). (Second leg which would continue to New Jersey still under consideration by PJM.)**

- **Enhances Midwest-Mid-Atlantic reliability and improves power transfer capability by 5000 MW.**

- **Reduces network line losses by 280 MW.**

765-kV Michigan

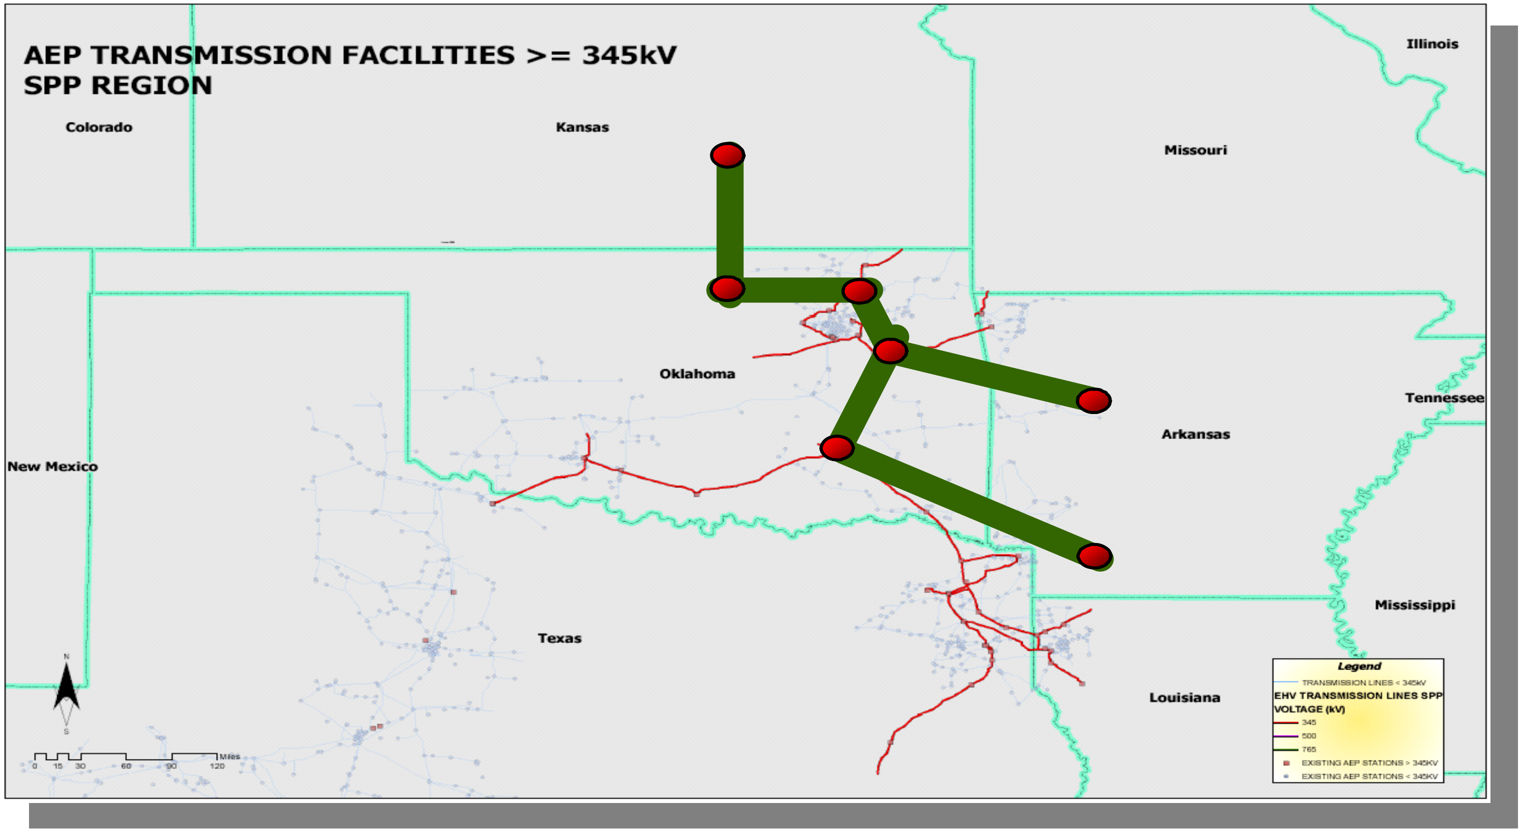


➢**Agreement with ITC Transmission for Michigan 765-kV to study the feasibility of 700 miles of 765-kV lines in Ohio and Michigan. Study to be completed by August 2007.**

➢**Over 3000MW improved transfer capability.**

➢**Reduces network line losses by 250 MW.**

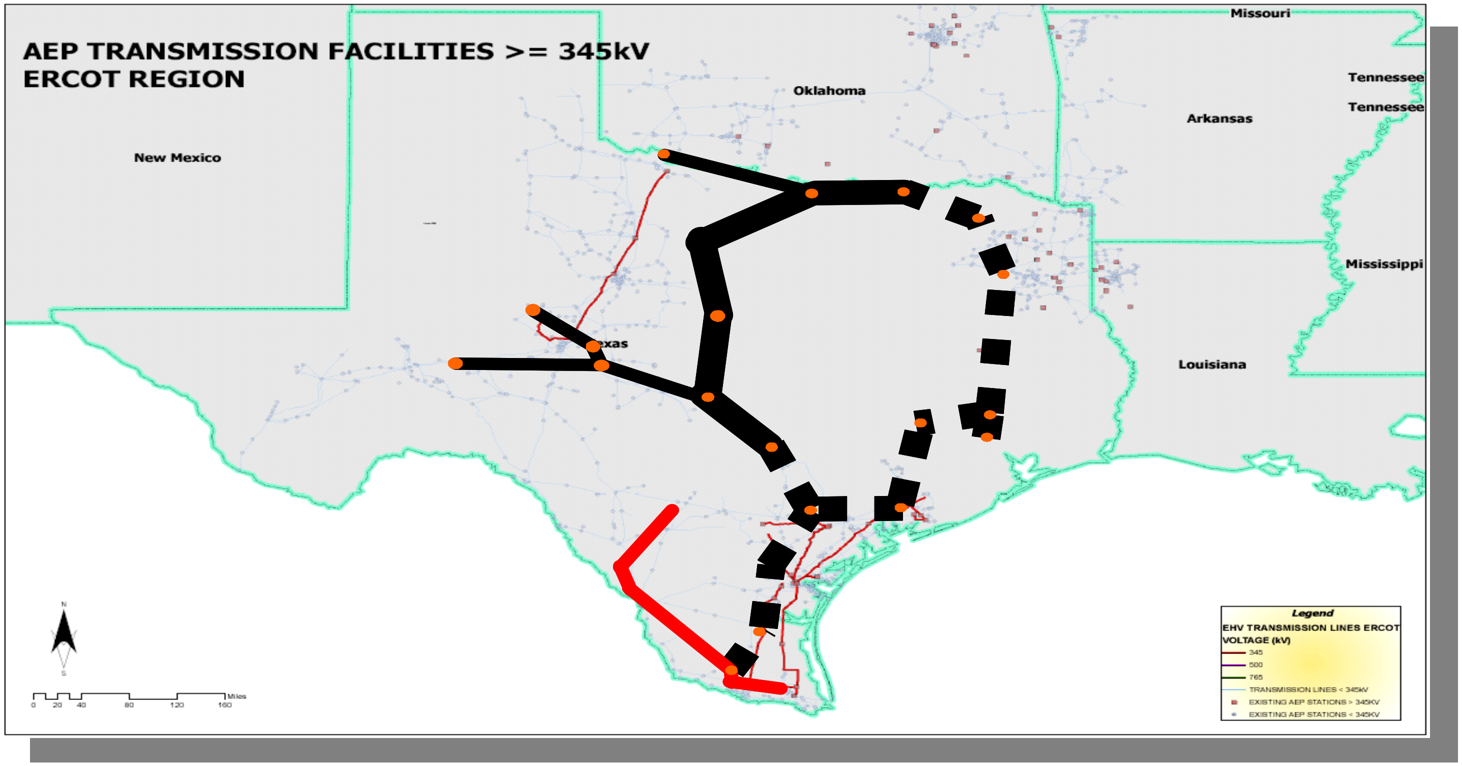
765-kV SPP



➢**In July '06 AEP submitted conceptual project to SPP for six 765-kV lines, 610 line miles from Arkansas to Wichita, KS, proposed construction period 2012-17.**

➢**SPP issued EHV Overlay Study in June 2007 reviewing 345 kV, 500 kV, and 765 kV potential projects in SPP. An alternative which includes a 765-kV in Oklahoma and Kansas connecting east to PJM was chosen as the preferred alternative.**

765-kV ERCOT



- Jointly-owned utility company (AEP and Mid American) will design, construct & operate ERCOT transmission assets
- AEP exploring 765-kV ERCOT transmission investment opportunity
- 420 line miles
- Up to 4000MW improved transfer capability

AEP

AEP Texas Central Company General Rate Case

On November 9, 2006, TCC & TNC filed applications with the PUCT to raise base rates they charge to Retail Electric Providers (REP) serving end-use electricity customers in their service territories. On April 3, 2007, TCC and TNC submitted revised rate increase requests of $69.9MM and $22MM, respectively. Requested increases include the expiration of merger-related billing credits that have been in place since 2000, totaling $20MM and $6.2MM for TCC and TNC, respectively. (TCC Docket #33309, TNC Docket #33310). TNC reached settlement on May 4, 2007 for a $13.7MM increase in revenues and a $2MM increase in depreciation, resulting in an annual increase of $11.7MM. The settlement was approved by the PUCT on May 24, 2007.

Procedural Schedule

March 13, 2007	Intervenor testimony
March 23, 2007	Staff testimony
April 3, 2007	Rebuttal testimony
April 12, 2007	Hearings
May 14, 2007	Rates effective under bond, subject to refund

Final Order expected in September-October 2007

TNC Approved Rate Base

Description	Transmission	Distribution
Total Rate Base	$ 188,152,535	$ 341,375,118

TCC Capital Structure – Company Position (Test Year ended 6/30/06)

	% of Capitalization	Cost Rate	Weighted Cost

Common Equity	40%	10.75%	4.30%
Total	100%		7.82%

TCC Rate Base – Company Position (Test Year ended 6/30/06)

Description	Transmission	Distribution
Total Rate Base	$ 588,170,858	$ 1,012,316,518

Regulatory Activity Underway

PSO General Rate Case

On November 21, 2006, Public Service Oklahoma filed an application with the Oklahoma Corporation Commission to increase base rates by $49.6 million to recovery investments already made and costs incurred. The request represents a 4% overall increase (including fuel). The filing also includes a proposal to adopt an annually adjusted rate mechanism, which includes a return on CWIP. The formula rate would adjust rates, up or down, if PSO earns above or below an approved bandwidth around the authorized ROE. (Case #200600285)

Pro-forma Capital Structure – Company Position (Test Year ended 6/30/06)

	% of Capitalization	Cost Rate	Weighted Cost
Long-Term Debt	53.55%	6.32%	3.39%
Preferred Stock	0.43%	4.02%	0.02%
Common Equity	46.02%	11.75%	5.41%
Total	100%		8.82%

Procedural Schedule

November 21, 2006	Case filed
March 20, 2007	Intervenor and staff testimony filed
April 9, 2007	Rebuttal testimony filed
May 1, 2007	Hearings to commence
May 30, 2007	ALJ report issued
June 13, 2007	Oral closing arguments
July 2007	Final order expected

Pro-forma Rate Base – Company Position (Test Year ended 6/30/06)*

($ in millions)

Rate Base	$ 1,189.4
Rate of Return	8.82%
Operating Income Requirement	$ 104.9
Pro-Forma Operating Income	$ 74.8
Difference	$ 30.1
Revenue Conversion Factor	1.65
Change in Revenues	$ 49.6

July 6, 2007—Implemented Interim rates of $8.6MM for a key provision on which there seems to be agreement.

* Figures are rounded

Regulatory Activity Underway

AEP Ohio Application For 4% Provision On Generation Rate

- On Jan. 23, 2007, CSP and OP filed an application at the PUCO to recover 2007 costs associated with additional generation-related expenditures the companies are encountering related to environmental, security and other new generation-related costs pursuant to the RSP.
- CSP and OP are requesting to implement the provision to recover $24.5MM and $8.2MM, respectively, from May 2007 through December 2007.
- Staff & Intervenor testimony filed May 11, 2007; Staff recommended a $15MM increase at CSP and a $3.7MM increase at OP; OCC recommended a $19.9MM increase for CSP and a $3.7MM increase for OP.
- Hearings were held in May and June and we expect an order in September or October 2007.
- Because there was no specific action by the PUCO within the required time frame, we were allowed to implement these increases, subject to refund, in May 2007.

I&M Indiana Rate Petition

- On June 19, 2007, I&M filed a petition with the Indiana Utility Regulatory Commission for authority to increase its rates and charges for electric utility service and to establish and implement rate adjustment mechanisms to track certain matters.
- Requested trackers relate to reliability enhancement, demand-side management/energy efficiency programs, off-system sales margins, PJM, environmental compliance and capacity equalization settlement.
- I&M requested a test year of the twelve months ended September 30, 2007 but it is up to the IURC to determine the test year to be used.
- I&M will file its revenue requirement in approximately 2-3 months after the end of the stipulated test year.

Regulatory Activity Underway

Electric Transmission Texas (ETT) Rate Filing

- Jan. 22, 2007 – ETT filed with the PUCT for approval to operate as an electric transmission utility in Texas and to establish initial rates for ETT.
  - Requested capital structure of 60% debt / 40% equity; requested ROE of 11.25%.
  - Intervenor testimony filed June 8, 2007; Staff testimony filed June 18, 2007; Staff recommended a 10.50% ROE – 10.0% with a 50 bps addition for start-up risk; Hearings are scheduled for July 16-19, 2007.
  - An order is expected in the third quarter of 2007 and operations are expected to commence in the 2nd half of 2007. Upon receipt of approvals, AEP and MidAmerican will each own a 50% interest in the joint venture.

Seams Elimination Cost Adjustment Revenues

- August 2006 – ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
  - Up to $96MM of SECA revenues could be disallowed, net of unused provisions.
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both.
- Exceptions to initial decision filed Sept. 11, 2006; Replies to exceptions filed Oct. 11, 2006; Order expected by the Commission in 2007.

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission serves over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1st.
- The current revenue requirement is $88.7MM and the new total revenue requirement requested is $161MM.
- We requested an effective date of September 1, 2007 for the revised tariff and FERC can suspend for an additional five months, which would push the effective date to February 1, 2008.

Regulatory Activity Underway

West Virginia Mountaineer IGCC Filing

- Testimony filed on June 18, 2007 in support of APCo's application for a Certificate of Public Convenience and Necessity to construct a 600MW IGCC plant in WV at a cost of approximately $2.23 billion.
  - Testimony includes a proposal for the Commission to approve a cost recovery mechanism through the existing Expanded Net Energy Cost (ENEC) mechanism. The filing is not a formal proposal to adjust rates.
  - Actual requests for increased rates will be included in future filings, once construction of the plant has commenced and actual Construction Work In Progress data is known.
- Public hearings are scheduled for September 10-14, 2007 with an order on or before December 2, 2007.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- Oral arguments regarding this matter are scheduled on the Ohio Supreme Court's agenda for October 9, 2007.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.

Regulatory Activity Underway

Oklahoma Red Rock Generating Facility

- Testimony filed on February 1, 2006 in support of PSO's application for a determination that additional baseload electric generating capacity will be used and useful.
- The Oklahoma Corporation Commission consolidated this cause with Oklahoma Gas and Electric's application for an order granting pre-approval to construct Red Rock Generating Facility and authorize a recovery rider.
- Initial staff and intervenor testimony agrees that PSO needs baseload capacity and staff recommends that the OCC find Red Rock used and useful. The biggest challenges related to the RFP process and the debt equivalence issue in evaluating the PPA bids.
- Hearings for the Used and Useful Determination commenced July 9, 2007.
- Hearings for OG&E's cost recovery commence July 19, 2007.

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- Depending on contested issues, public hearings will begin either July 19, 2007 or August 9, 2007.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to Purchase, Operate, Own and Install Peaking, Intermediate and Baseload Generating Facilities. Peaking and intermediate facilities have been addressed. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- Public hearings are scheduled for September 11-14, 2007.

2007 Regulatory Activity Completed

Appalachian Power – Virginia Base Rate Case

Final order approved on May 15, 2007

- ✓ Results in $24 Million annual increase in base rates
- ✓ 10.0% approved ROE

Texas North Base Rate Case

Final settlement order approved on May 24, 2007

- ✓ Results in $11.7 million increase in pre-tax earnings ($13.7 million increase in revenues offset by $2 million increase in depreciation expense)
- ✓ No stipulated ROE in the settlement. For AFUDC purposes, Texas North will utilize the ROE that comes out of the Texas Central rate case.

Appalachian Power – West Virginia Expanded Net Energy Cost (ENEC) Filing

Final settlement order approved on June 22, 2007

- ✓ Results in $85.5 million net increase in revenues effective July 1, 2007
  - ✓$54.8 million covers increased costs related to coal and purchased power
  - ✓$28.5 million covers environmental construction costs, primarily related to installation of scrubbers
  - ✓Remainder ($2.2 million) recovers first year costs of rehabilitating four small electric utilities acquired as of July 1

Indiana Michigan Power – Indiana Depreciation Study

Interim settlement order approved on June 13, 2007

- ✓ Allowed a change in depreciation rates effective July 1, 2007, resulting in a pretax earnings increase of approximately $69 million per year
- ✓ Stipulated a $5 million credit to customers in the next fuel adjustment clause proceeding
- ✓ Required I&M to file a rate petition on or before July 1. Petition was filed on June 19.

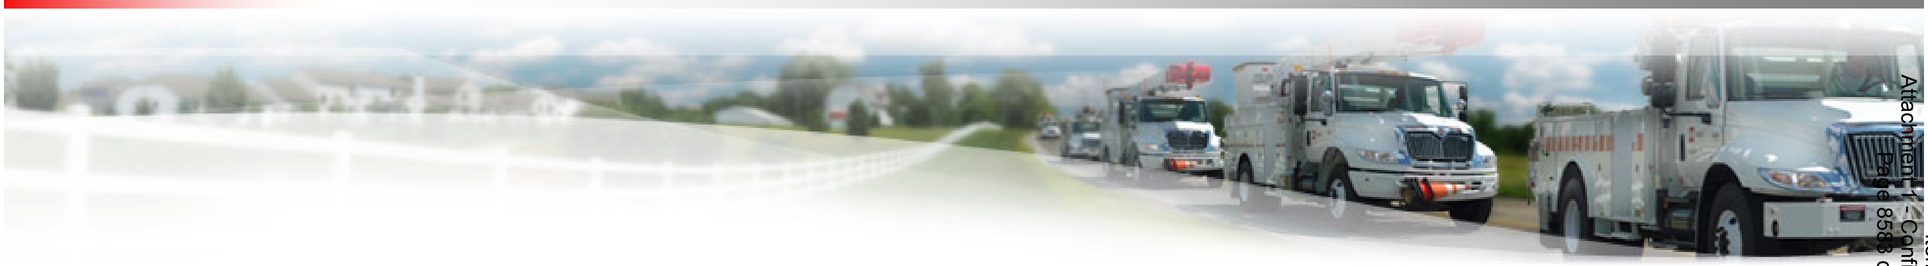
AEP AMERICAN ELECTRIC POWER®

Philadelphia Securities Association Presentation

Philadelphia, PA
August 17, 2011



"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M's Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events and our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives, evolving public perception of the risks associated with fuels used before, during and after the generation of electricity, including nuclear fuel.

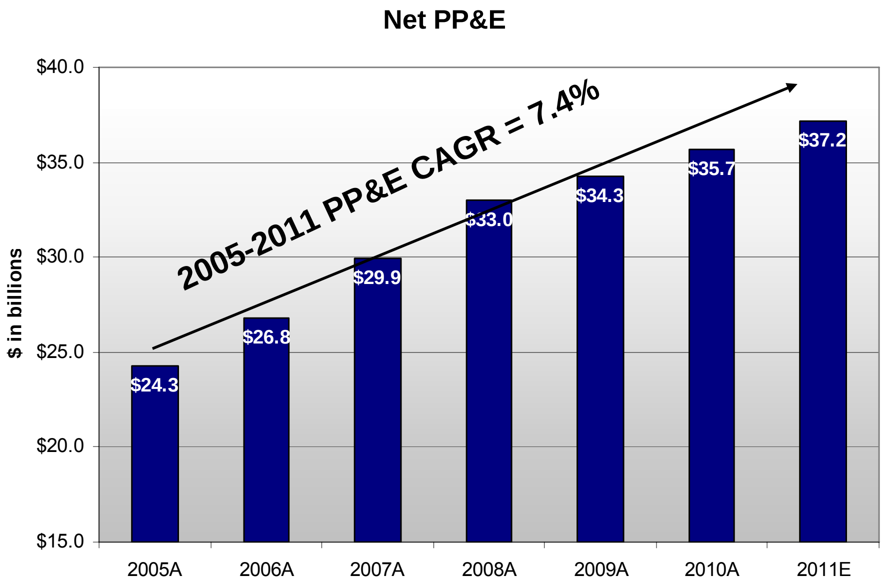
Appalachian Power (incl. TN)	1,004,000
Indiana & Michigan	582,000
Kentucky Power	174,000
Ohio & Wheeling	1,497,000
PSO (Oklahoma)	532,000
SWEPCO (AR, LA, TX)	520,000
Texas	961,000

Ratemaking Environment

Growth in Net PP&E



Growth in rate base resulting in $2.3 billion of rate relief secured from 2006 through 2010

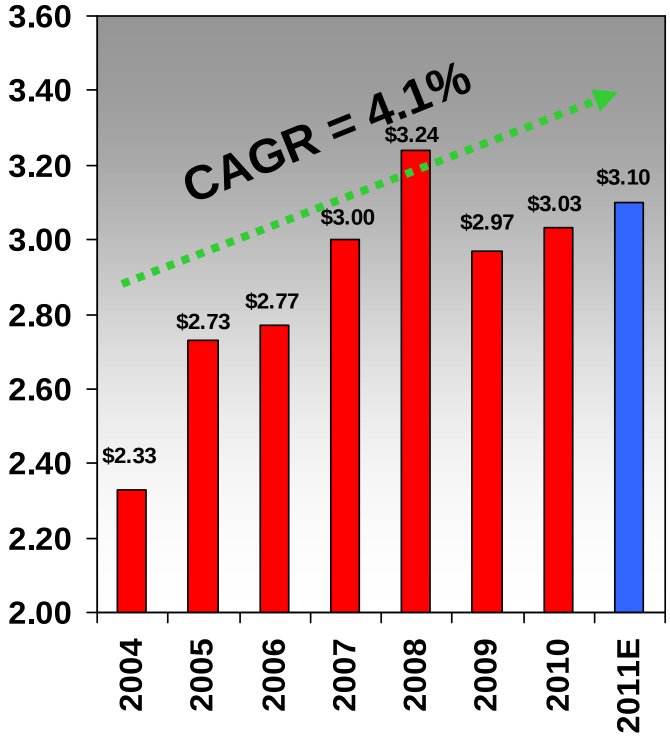
Regulatory Framework

- Base Rates
  - Recovery of capital and financing costs
  - Recovery of set level of O&M costs
- Recovery of Fuel Costs
  - Active fuel clauses in all jurisdictions
- Opportunities to Reduce Regulatory Lag
  - Contemporaneous recovery for construction costs, reliability, environmental spending, etc.
- Ohio Generation Rates set by PUCO according to SB221 (non-cost based)
  - Current generation rates set for 2009 – 2011
  - New filing currently with PUCO to set generation rates for 2012 – 2014; outcome expected in 4Q11
  - Customers have choice for generation service

Earnings and Dividends

On-Going EPS History Since 2004

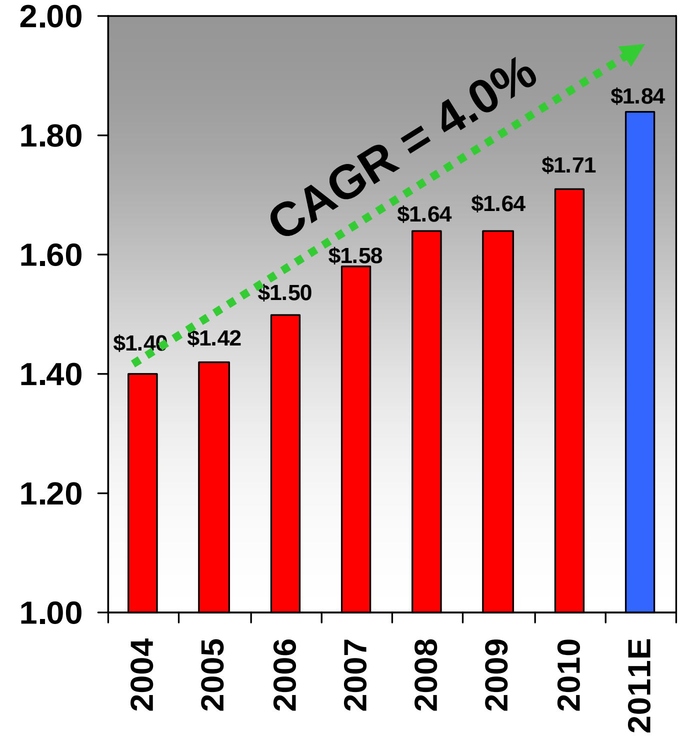
$/share



- Earnings growth largely attributed to capital investment program
- Pre-recession earnings supported by robust wholesale market activity and high power prices
- Equity offering in 2009 stabilized credit and strengthened balance sheet
- 2011 guidance range of $3.00 to $3.20 per share

Dividend History Since 2004

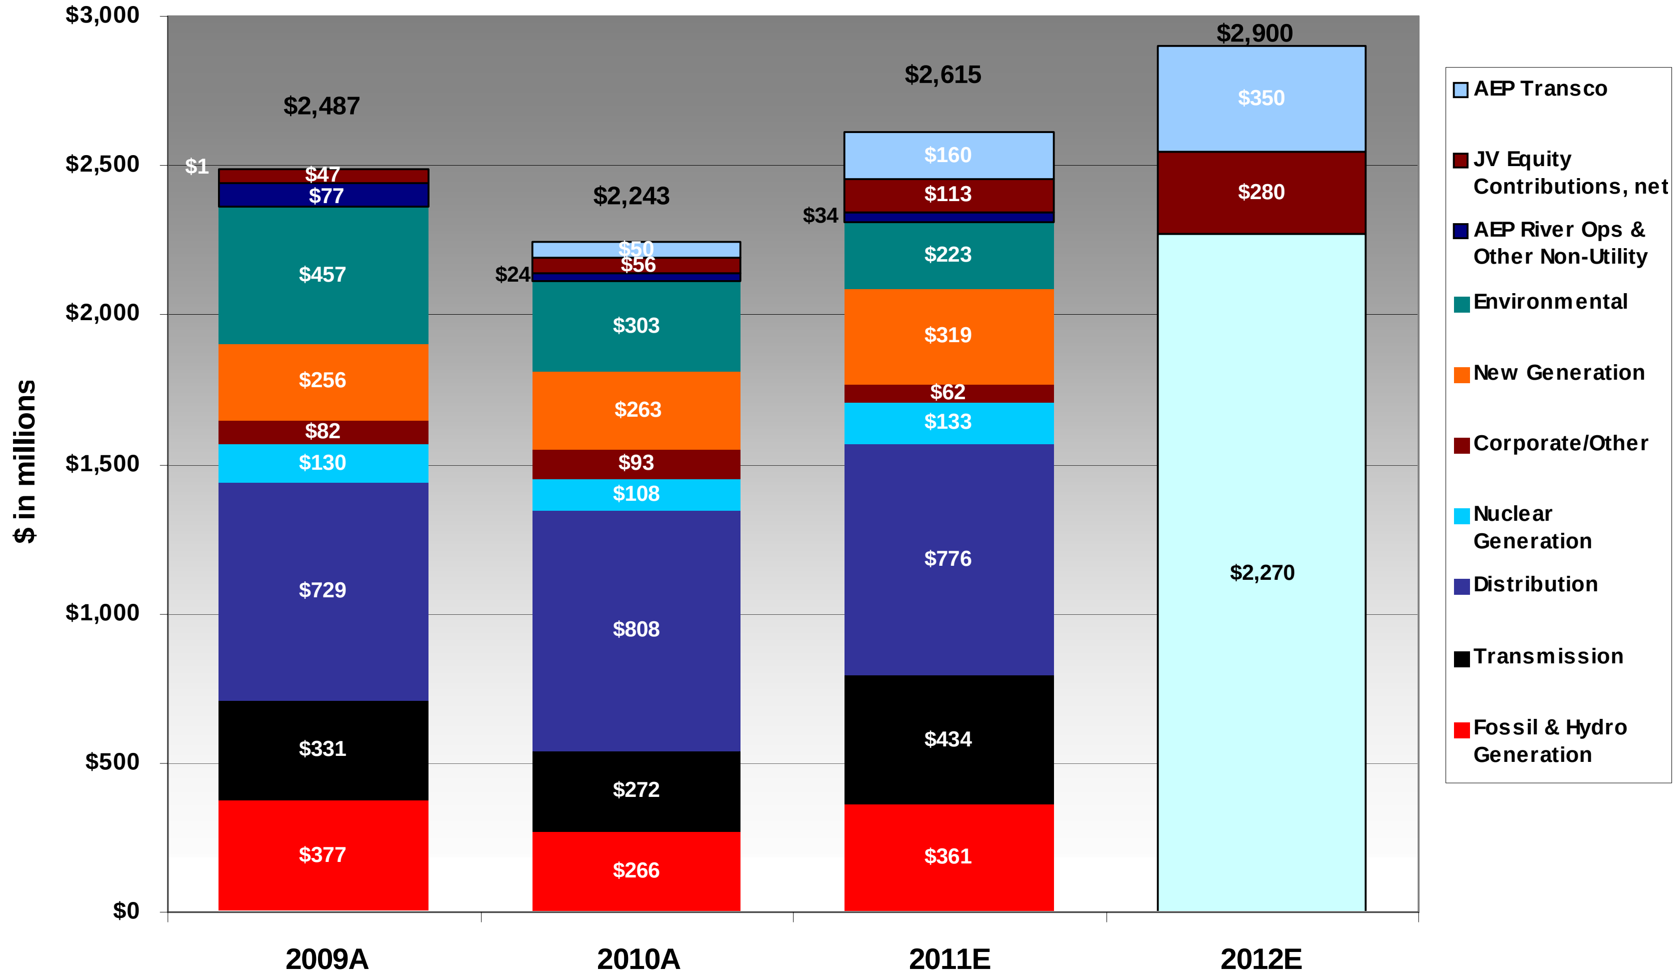
$/share



= subject to Board of Directors approval

- Quarterly dividend <u>increased 12%</u> in 2010
- <u>405th consecutive</u> quarterly dividend declared in July 2011
- 50-60% payout ratio target
- Current yield near 5%

Capital Expenditures



Investment levels greater than depreciation of $1.4B per year cause rate base growth in 2011 and 2012

(2) Gas plants are not included. Proposed 316 (b) will impact some gas facilities.

(3) Proposed Air Rules include: HAPs, CSAPR and Regional Haze Federal Implementation Plans in OK & AR.

(4) Includes NSR Compliance.

Additional Investment Opportunities

ETT Electric Transmission Texas

- **Ownership Structure:** 50/50 (AEP/MidAmerican Energy Holding Company)
- **Total Project Cost**: Over $3 Billion
- **Growing Rate Base:**
  Current rate base is $412 million; expected to grow as follows:
  2011: $482 million
  2012: $778 million
  2013: $1,352 million
- **Interim TCOS filings twice per calendar year**
- **Approved ROE:** 9.96%

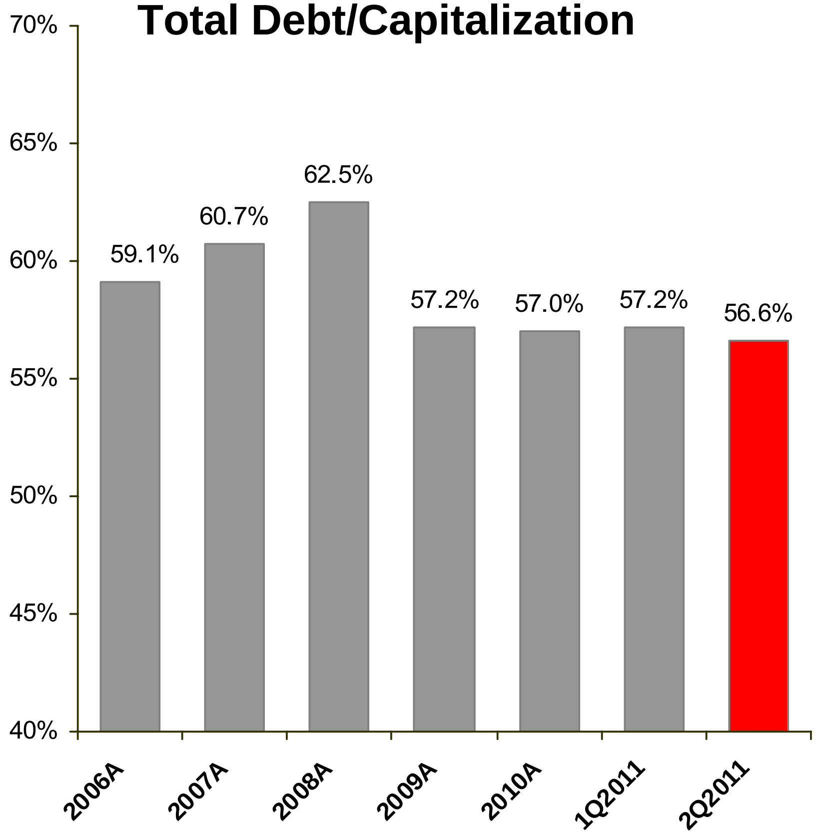
AEP Transcos

- Seven wholly-owned Transcos
- Expansion and growth within AEP's existing utility footprint
- Efficient recovery mechanism via FERC formula rates
- Forecasted capital investment of $160 million in 2011 and more than $350 million in 2012
- Approved ROE: 11.20%-11.49%

Additional joint ventures diversify AEP's investment outside the traditional footprint while providing longer-term incremental earnings.

Capitalization & Liquidity

Total Debt/Capitalization



Note: Total Debt is calculated according to GAAP and includes securitized debt

Liquidity Summary (06/30/2011)

Liquidity Summary (unaudited)		**Actual**	
($ in millions)		Amount	Maturity
Revolving Credit Facility	$	1,500	Jun-13
Revolving Credit Facility		1,454	Apr-12
Total Credit Facilities		**2,954**	
Plus			
Cash & Cash Equivalents		417	
Less			
Commercial Paper Outstanding		(944)	
Letters of credit issued		(132)	
Net available Liquidity	**$**	**2,295**	

On July 26, 2011, we renewed and upsized the facility expiring in April 2012. The new facility has a capacity of $1.75B and expires in July 2016.

We also extended and repriced the facility expiring in June 2013. That facility now expires in June 2015.

This brings our total available capacity to $3.25B.

AEP Highlights

- Large, Diverse Electric Utility
- Focus on Capital Allocation
- Strong Balance Sheet
- Growth Opportunities
- Dividend yield near 5%

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants including our ability to restore Indiana Michigan Power Company's Donald C. Cook Nuclear Plant Unit 1 in a timely manner; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity and transmission lines (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary or deflationary interest rate trends; volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impacting our ability to finance new capital projects and refinance existing debt at attractive rates; the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurred cots and recovery is long and the costs are material; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

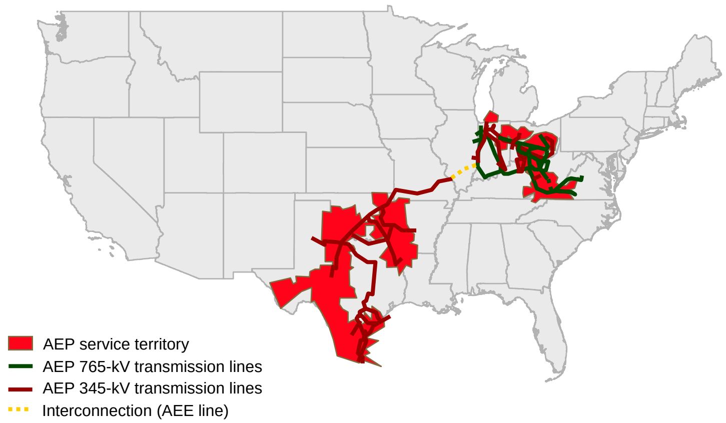
AEP AMERICAN ELECTRIC POWER

Holly Koeppel
EVP and Chief Financial Officer

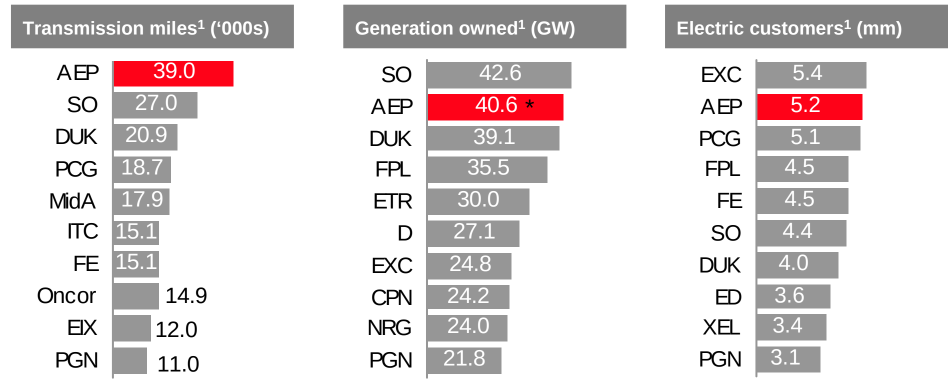
AMERICAN ELECTRIC POWER

Premier Regulated Utility Platform

Overview

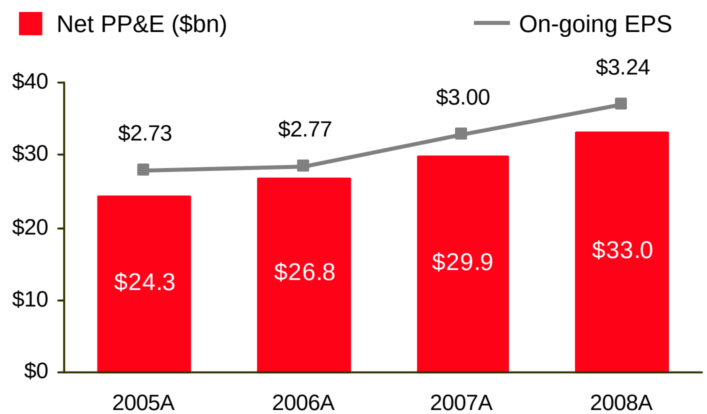


AEP's Leadership Position

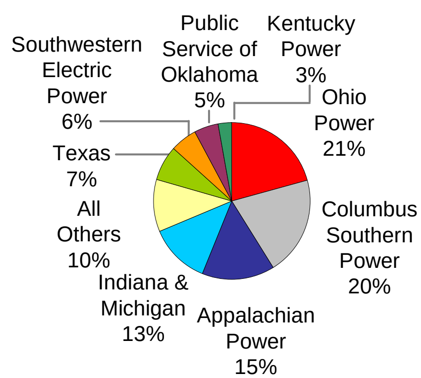


* - AEP generation includes long-term PPAs and generation under construction

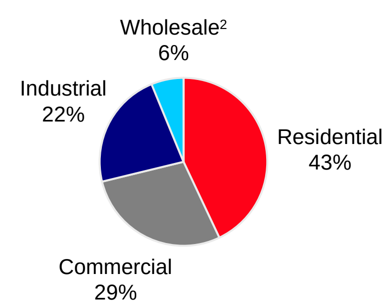
Regulated Operations



- *Net PP&E CAGR of 10.7% since 2005*
- *Earnings CAGR of 5.9% since 2005*



2008 On-going Earnings = $1.3bn



2008 Retail Base Revenue = $6.4bn

- *Highly diversified regulated utility earnings contribution*
- *Balanced customer mix*

[1] Source: Company filings
[2] Wholesale includes sales to municipal and cooperative power systems, other wholesale, and other retail sales

AEP AMERICAN ELECTRIC POWER

24

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 8599 of 9556

AEP Highlights

Premier utility platform

- Leadership position in electric generation, transmission and distribution operations
- Cash flow, earnings and regulatory diversity with more than 5 million customers in 11 states
- $6.3 billion capital expenditure program (2009-2011) will continue to drive rate base growth

Effective regulatory relationships

- Traditional recovery mechanisms with equitable risk allocation enhance both earnings and cash flow
- Emerging energy policies play to AEP's strengths (transmission, energy efficiency, reliability)
- Constructive local relationships deliver successful regulatory outcomes

High-growth transmission business

- The leading US transmission owner, operator, and developer
- Exceptional portfolio of high-quality development projects and project partners
- Attractive ROEs, regulatory support and access to capital will drive earnings growth beyond our traditional utility footprint

Stable financial position

- Maximization of shareholder value through regulated utility and transmission investments
- Balanced approach to cost containment and capital allocation
- Commitment to investment grade profile, prudent balance sheet, and liquidity management
- Conservative dividend payout with attractive yield

AEP AMERICAN ELECTRIC POWER

Energy Policy Initiatives are Core to Our Strategy

Greenhouse Gas Reduction & Regulation

- Actively engaging in CO_2 policy debate – support cap & trade with allocated credits
- Leadership position in development of carbon capture and storage technology
- Reducing carbon footprint via offsets and other measures
- Founding member of Chicago Climate Exchange

Renewable Energy

- Develop “transmission superhighway” to facilitate renewable energy projects
- Satisfy RES requirements in our jurisdictions – currently Ohio with 25% (renewables + advanced) by 2025, Texas with ~ 5% by 2015, West Virginia with 25% (renewables + advanced) and Michigan with 10% by 2015; Voluntary goal of 12% by 2022 in Virginia
- Add 2,000MW of new renewables capacity via long-term PPAs – 903MW achieved to-date

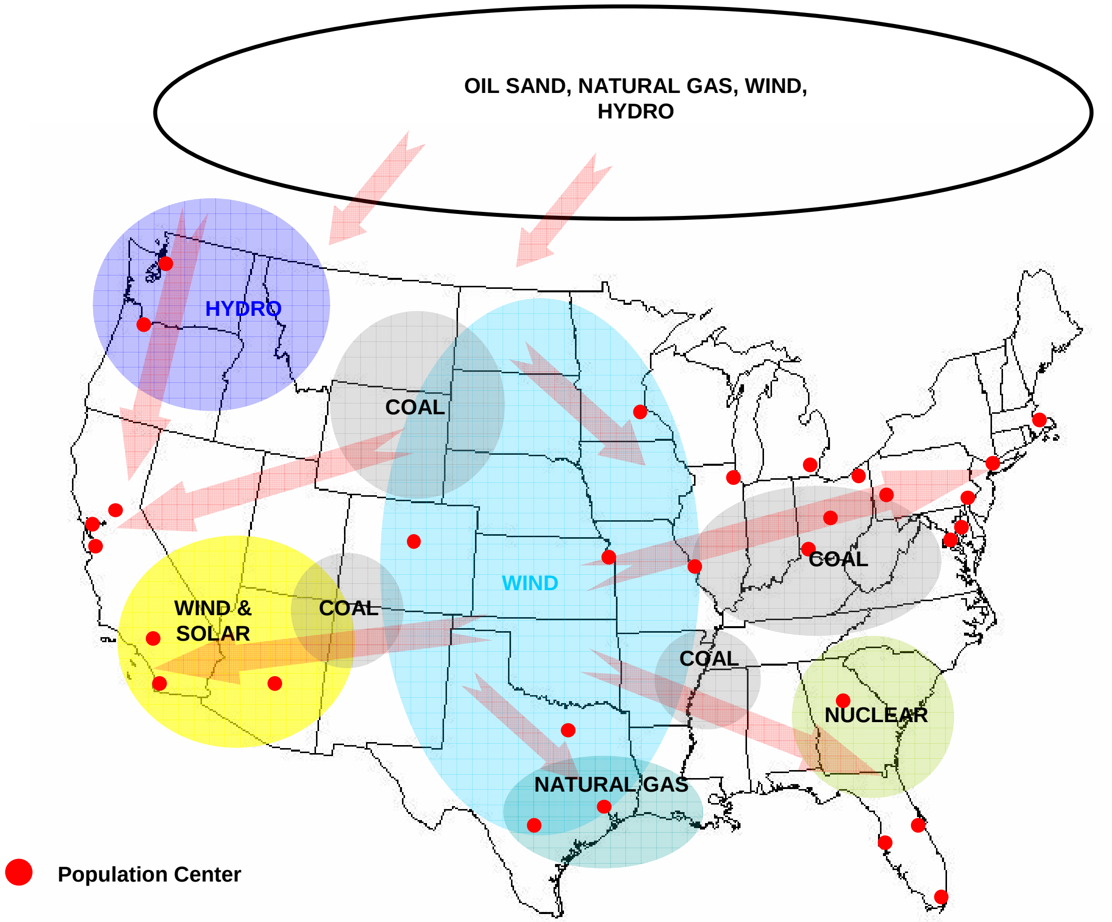
Energy Efficiency, Security & Reliability

- Develop high-voltage transmission projects to strengthen America’s power grid
- Build generation to ensure reliable supply
- Reduce 1,000MW of demand by 2012
- Reduce 2.25 million MWhs of consumption by 2012
- Diversify our fuel mix; have added 3,705MW of gas-fired capacity since 2005 and have 1,080MW under construction

AEP AMERICAN ELECTRIC POWER

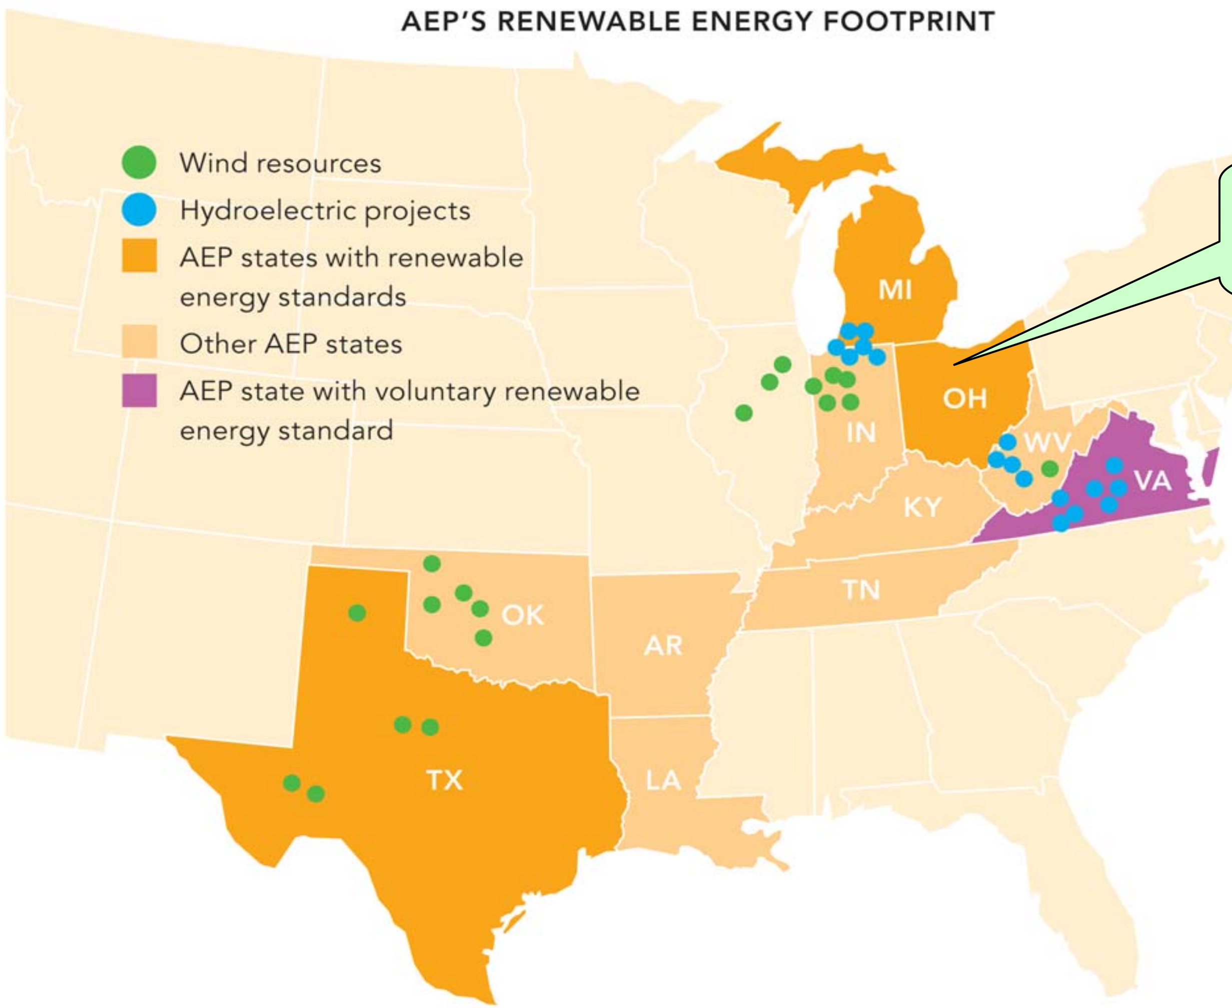
US Renewable Opportunities

- The U.S. has a large renewable resource base distant from major load centers
- State level mandates may provide some opportunity – utilities are more likely to contract with PPAs based on the current regulatory framework
- "Many of our resources, whether it's wind or sun or geothermal, they're out in rural areas…and we just don't have any infrastructure. If we're going to take this whole energy piece on the renewable side seriously ... we've got to get the transmission and infrastructure piece right" ***Utah Gov. Jon Huntsman - AP Western Governors, Utility Heads Seeks Energy Solutions July 1, 2008***



AEP AMERICAN ELECTRIC POWER

AEP Renewable Footprint



New 10 MW Solar PPA with juwi Solar Inc.

Renewables Portfolio*

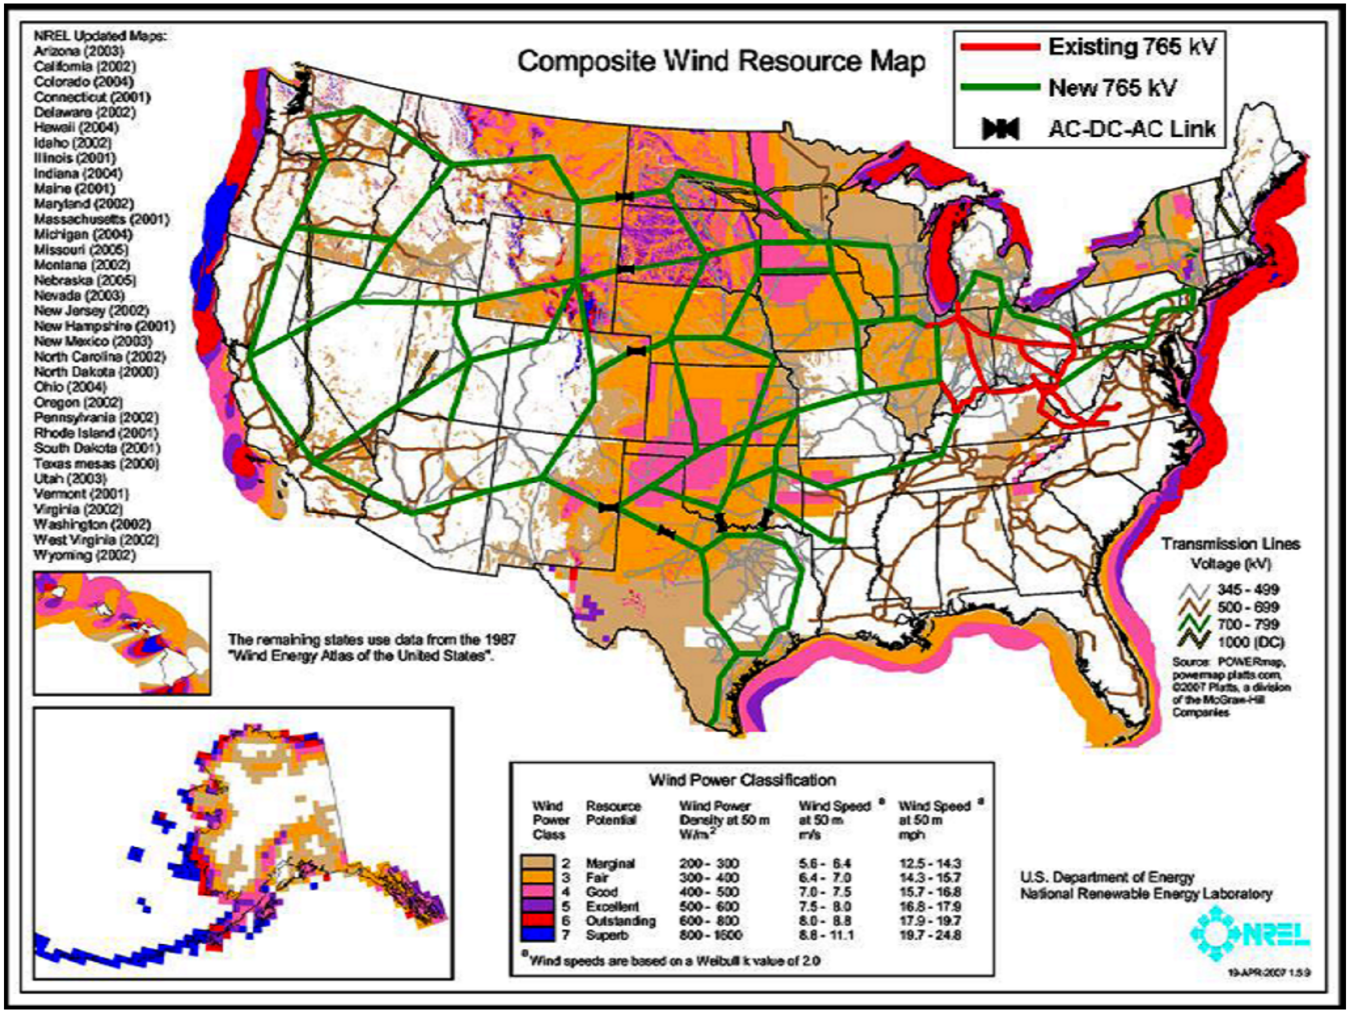
PSO – 5 PPAs	591MW
SWEPCo – 1 PPA	79MW
APCo – 4 PPAs	376MW
I&M – 2 PPAs	150MW
AEP Ohio – 2 PPAs	100MW
Total Regulated	**1,296MW**
AEPEP – owned	310MW
AEPEP – 2 PPAs	177MW
Non-regulated	**487 MW**
Hydro (run-of-river)	
Regulated – owned / PPA	**364MW**
Solar	
Regulated - PPA	**10MW**

*** Includes owned assets and long-term purchased power agreements (PPA)**

AEP AMERICAN ELECTRIC POWER

AEP's HV Transmission Vision

- 765 kV backbone system that provides cost-effective connections from areas of high wind potential to major load centers
- Approximately 19,000 miles of new 765 kV transmission lines
- Plan is estimated to cost $60 billion in 2007 dollars



Wind Power Class	Resource Potential	Wind Power Density at 50 m W/m²	Wind Speed at 50 m m/s	Wind Speed at 50 m mph
2	Marginal	200 - 300	5.6 - 6.4	12.5 - 14.3
3	Fair	300 - 400	6.4 - 7.0	14.3 - 15.7
4	Good	400 - 500	7.0 - 7.5	15.7 - 16.8
5	Excellent	500 - 600	7.5 - 8.0	16.8 - 17.9
6	Outstanding	600 - 800	8.0 - 8.8	17.9 - 19.7
7	Superb	800 - 1600	8.8 - 11.1	19.7 - 24.8

Wind speeds are based on a Weibull k value of 2.0

Uniquely Positioned for Nationwide Grid Expansion

Active Projects:

Pioneer — **COD: 2015**

- *240 miles of 765 kV*
- *Partner: Duke Energy (50%)*
- *Estimated Cost: $1 billion*
- *ROE: 12.54%*

PATH-WV — **COD: 2014**

- *275 miles of 765 kV*
- *Partner: Allegheny Energy (50%)*
- *Estimated Cost: $1.2 billion*
- *ROE: 14.3%*

Tallgrass — **COD: 2013-14**

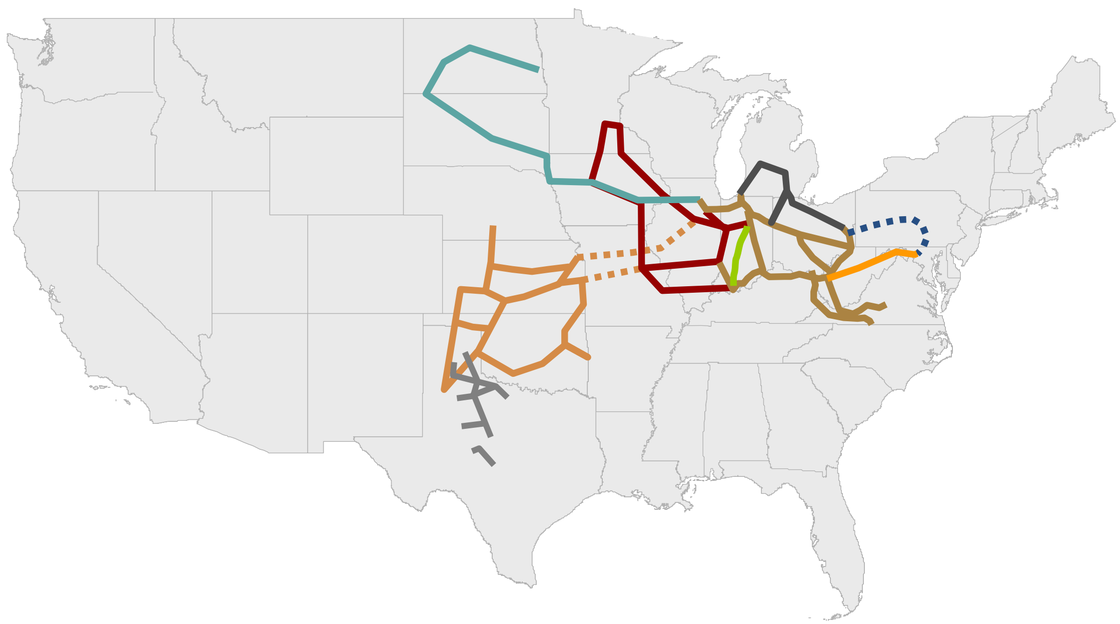
- *170 miles of 765 kV*
- *Partners: OG&E (50%) & MidAmerican Energy (25%)*
- *Estimated Cost: $500 million*
- *ROE: 12.8%*

Prairie Wind — **COD: 2013**

- *110 miles of 765 kV*
- *Partners: Westar Energy (50%) & MidAmerican Energy (25%)*
- *Estimated Cost: $400 million*
- *ROE: 12.8%*

ETT — **COD: 2013**

- *345 kV in ERCOT*
- *Partner: MidAmerican Energy (50%)*
- *Estimated Cost: $400 million*
- *ROE: 9.96%*



Future Projects:

EHV Michigan — **COD: ~2020**

- *700 miles of 765 kV*

PJM Projects

- *Enhance existing 765/345 kV*

Hartland — **COD: ~2020**

- *1000+ miles of 765 kV*

MISO Vision Plan

- *765 kV Backbone*

SPP Overlay — **COD: 2013-14**

- *765 kV Backbone*

ETT — **COD: ~2018**

- *345 kV in ERCOT*
- *Additional CREZ spend of $750-$850 million*

AEP AMERICAN® ELECTRIC POWER

Note: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

Equity Contributions Enhance Earnings Growth to 4 – 8%

AEP is the leader

- Largest US transmission footprint
- Interstate EHV highway vision
- National renewables transmission strategy

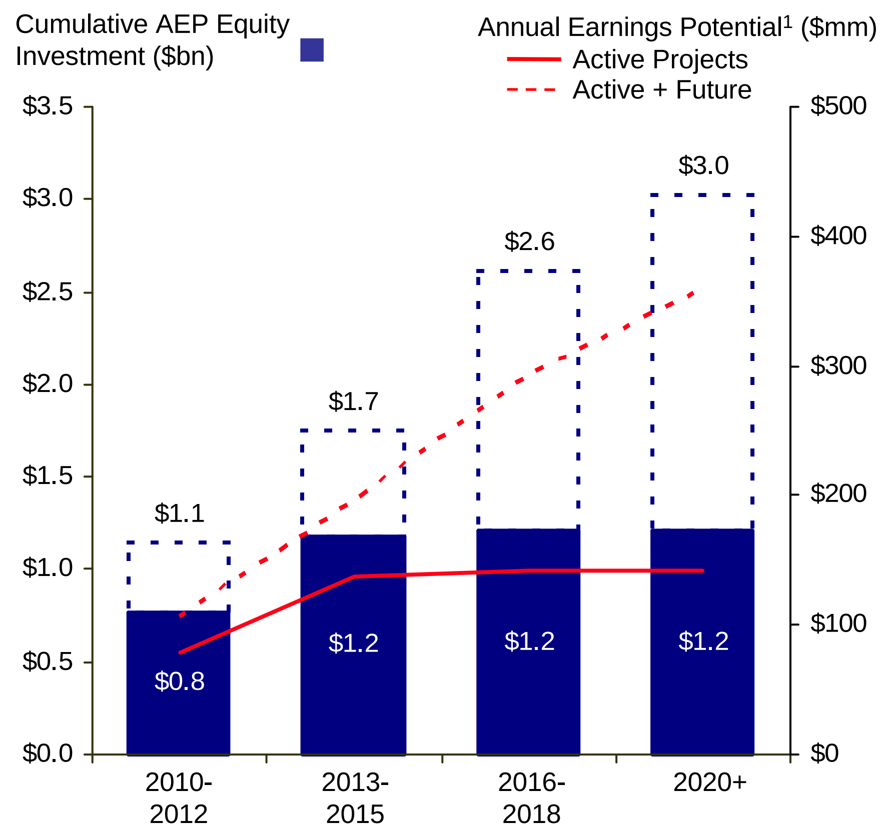
Quality projects

- 4 FERC-approved ($3.3 billion)
- Independent ERCOT transmission JV company (up to $2.6 billion)
- Robust pipeline of future 765 kV projects (up to $15 billion)

Attractive returns

- FERC incentive rates (12.5-14.3%)
- Strong cash flow with CWIP
- Long-term earnings potential of ~$140-$360 million annually[1]

Illustrative Earnings Potential of New Transmission Initiatives



[1] *Illustrative calculation assumes 50/50 debt/equity capitalization and incentive ROE of ~13.0% for FERC projects and a 60/40 debt/equity capitalization and 10.5% ROE for ERCOT projects*

AEP AMERICAN ELECTRIC POWER

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential

Policy Changes Will Clear the Way for Interconnection of Renewable Resources

- To achieve good public policy while advancing our transmission business strategy, AEP took a leadership role in national and regional public policy debates
- Emerging policies must directly support and encourage development of new transmission investment to interconnect renewable resources and meet our nation's future energy needs, since a Federal mandate to use renewable energy resources alone will not suffice
- Today, our nation lacks a workable Federal process for coordinating the development of transmission across regions and ensuring timely siting of an extra high voltage multi-state transmission system
- AEP's goal is to remove barriers to timely transmission investment through clear and improved rules that encourage transmission investment
- We are vigorously pursuing comprehensive Federal legislation to create Federal siting authority, broad cost allocation, and expedited planning
- Within the current regional framework, we are seeking to expedite planning for EHV systems and establish broad cost allocation principles within and across RTOs
- We continue to strongly support Federal incentives for capital investment in transmission infrastructure

AEP AMERICAN ELECTRIC POWER

Smart Grids Enabled with Energy Storage Can Accommodate Intermittent Renewables

- ❑ Advanced monitoring communications and control, integrated into the distribution system, is a major element of the emerging Smart Grid.

- ❑ Energy storage can decouple load from generation, as well as, accommodate the variability in customer-owned distributed generation.

- ❑ Smart Grids enhanced with broadly distributed energy storage can buffer the grid from the intermittency of supply inherent in some types of renewable generation.

  - After a successful deployment of substation NaS batteries, AEP is expanding its storage experience to a new game-changing platform, ***Community Energy Storage*** (CES).

    – ***Uses new or used batteries from electric cars***

    – ***Functions as a substation battery when aggregated***

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants including our ability to restore I&M’s Donald C. Cook Nuclear Plant Unit 1 in a timely manner, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of the recently passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events. AEP and its Registrant Subsidiaries expressly disclaim any obligation to update any forward-looking information.

Technology: Industry Leading High Voltage Transmission and gridSMART℠ Projects

Carbon Capture and Storage Project – Mountaineer Plant (WV)

765-kV Transmission Line – Wyoming-Jacksons Ferry (WV)

Transmission Investment Opportunities

ETT: Projects in Texas ERCOT jurisdiction

- $600MM of projects est. in service 2010-2013
- ETT's opportunity could reach $3.1B in the next decade

Transco: Within our existing footprint

- Provides opportunity to:
  - Develop new AEP-only projects
  - Reduce regulatory lag through FERC formula rates adjusted annually

Joint Ventures: Outside of our footprint, via ETA or with others

- Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
- Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2015
- Robust pipeline of projects up to $15B

765-kV Tower

AEP Highlights

- Premier Utility Platform
- Traditional and Effective Regulatory Relationships
- Energy Policy Initiatives Create Technology Deployment and Investment Opportunity
  - Greenhouse Gas Emissions Reductions
  - Energy Efficiency, Security and Reliability
- Strong Value Proposition

Brian Tierney, EVP and Chief Financial Officer

2010 Ongoing Earnings Guidance

AEP®

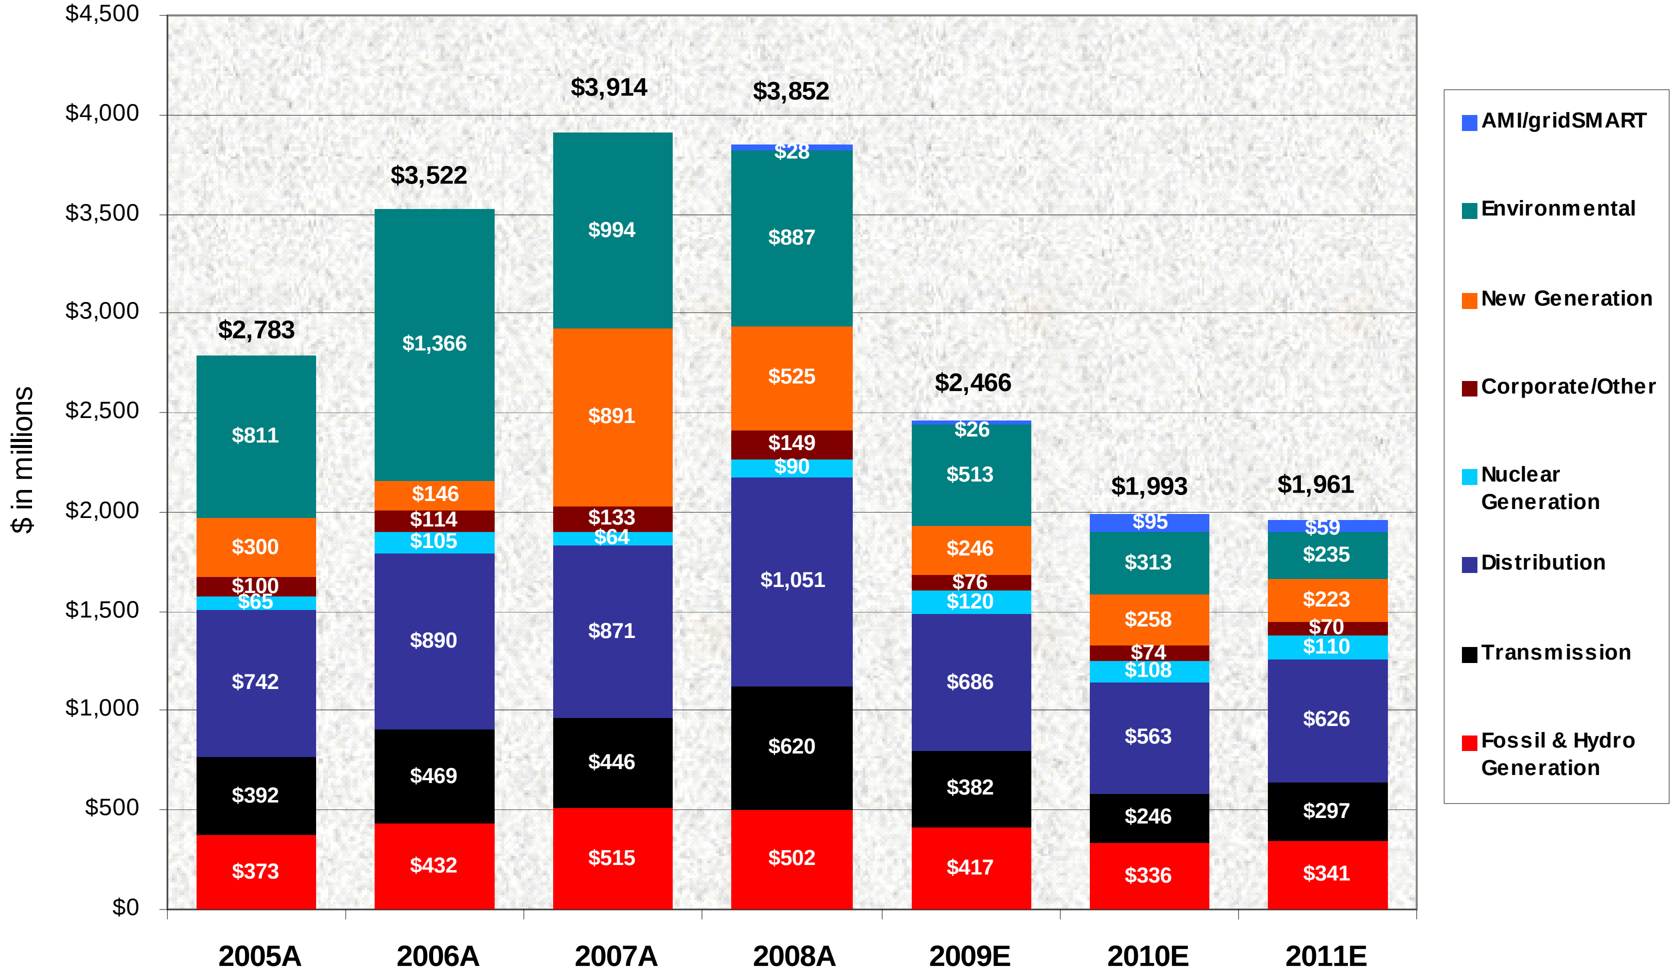
	2009E: $2.90-$3.05	2010E: $2.80-$3.20
Utility Operations	$ 2.92	$ 3.01
Transmission Operations	$ 0.01	$ 0.02
Nonutility Operations	$ 0.18	$ 0.09
Parent & Other	$(0.14)	$(0.12)

EARNINGS DRIVERS

- ↑ $317MM in rate relief
- ↑ Increase in off-system sales volumes
- ↑ Load growth

- ↓ Net increase in utility operations O&M of $72MM
- ↓ Elimination of Cook accidental outage insurance proceeds
- ↓ Increase in average shares outstanding

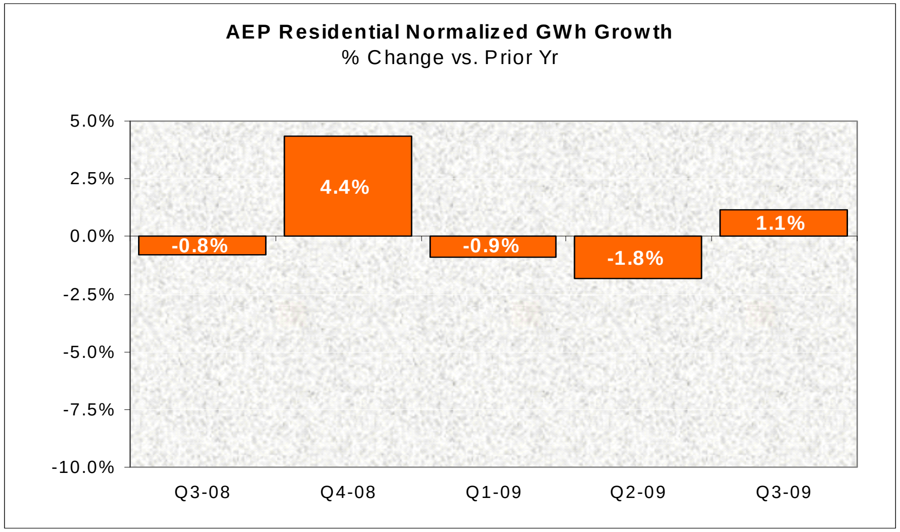
Utility Operations Capital Expenditures

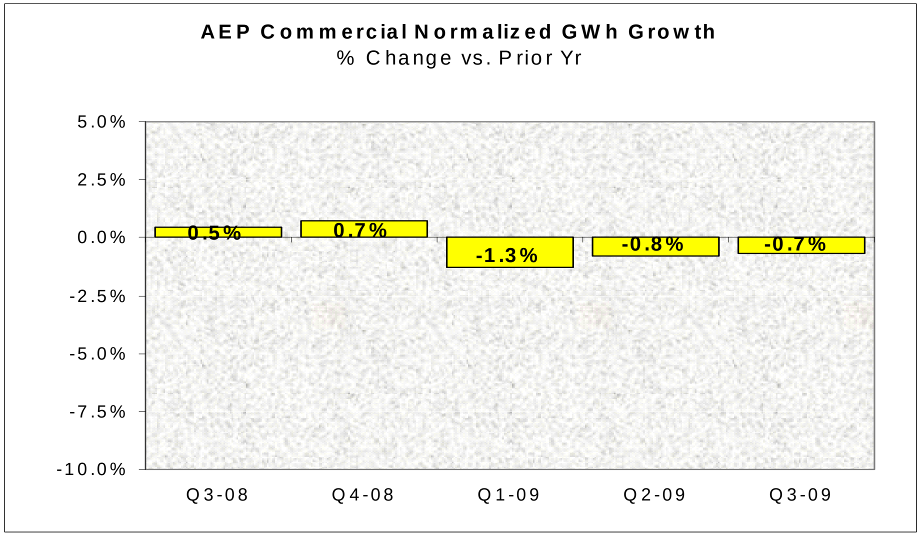


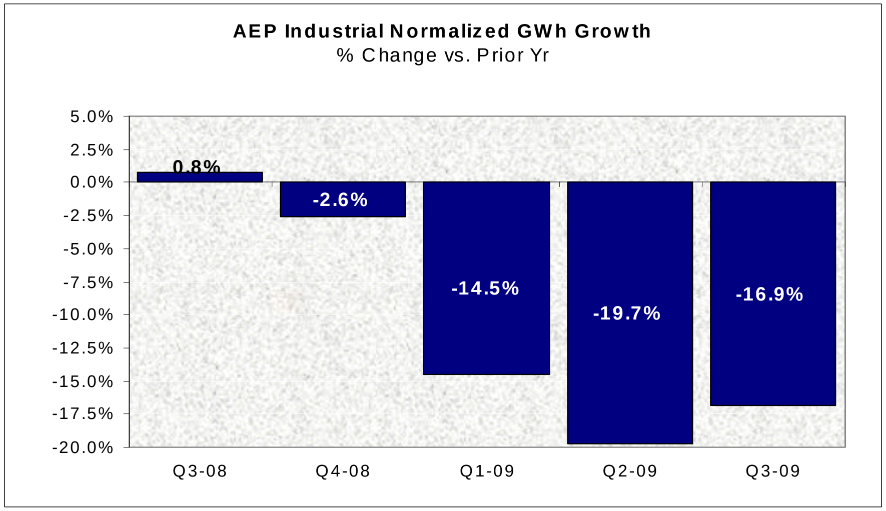
Non-Utility Operations Capital (not included above)

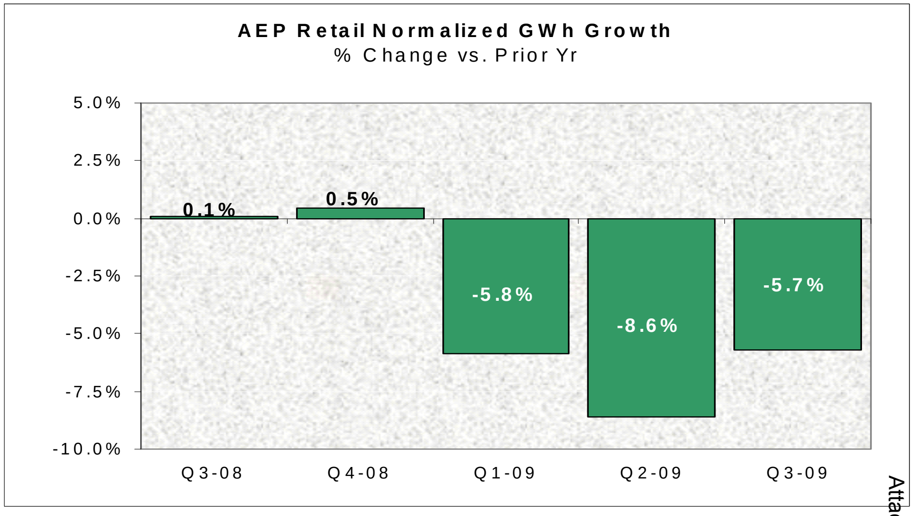
$ in millions	2008A	2009E	2010E	2011E
AEP River Operations	$115	$79	$16	$20
AEP Transco	0	0	$118	$175 - $325
Joint Venture Equity	$5	$49	$93	$155 - $355

12-Month Normalized Retail Load Trends









KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential

Dividend Overview

- We have paid 398 consecutive quarterly dividends to shareholders
- Annual Dividend - $1.64/share
  - Declared in January, April, July and October
  - Paid in March, June, September and December
- Attractive yield of 4.7% as of January 7, 2010
- Conservative target dividend payout ratio of 50 – 60%
- Dividend Reinvestment Program Available

Investment Attributes

- **Strong utility platform**
  - Consistent regulatory outcomes
  - Active fuel recovery
  - Geographic and regulatory diversity
  - Growth through capital investment

- **Total Return Opportunity**
  - Consistent dividend policy
  - Growth Opportunities

Mountaineer Plant (WV)

American Electric Power

San Francisco Road Show

Hosted by UBS Investment Bank
November 28, 2007

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

SAN FRANCISCO ROAD SHOW

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate relief or other recovery for new investments transmission service and environmental compliance); resolution of litigation (including pending Clean Air Act enforcement actions and disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements periodically issued by accounting setting bodies; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

AEP Strategy

Strategy: grow our core utility business at a consistent rate through major investment supported and funded by innovative programs for regulatory recovery as well as develop our independent, federally regulated Transmission Company for the pursuit of new major interstate projects.

Our Focus:

- Prepare for post-2008 transition in Ohio
- Invest in and evolve infrastructure to support future technology and customer needs focused on efficiency, conservation and load management
- Enhance cash flow & earnings through rate recovery mechanisms
- Take advantage of AEP's size to benefit our customers and shareholders through regulatory-supported investment

Sustained capital investment opportunities support earnings growth.

Financial Forecast Highlights

- Updated 2008 & 2009 earnings guidance ranges and introduction of 2010

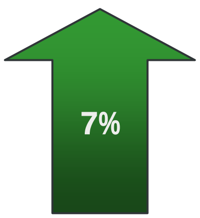
2007 Range $2.90 to $3.00	**2008 Range $3.05 to $3.25**
2009 Range $3.20 to $3.50	**2010 Range $3.45 to $3.80**

- Increased EPS growth range: 5-9% (2007-2010)
  - Disciplined investment in utility operations
  - Innovative rate recovery for new investments
  - Continued pursuit of Ohio post-2008 solution
  - Cost management
- 8-cent/share increase in annual dividend effective 4Q07 (from $1.56/share to $1.64/share annually)
- Refined capital investment forecast and introduction of 2010 level

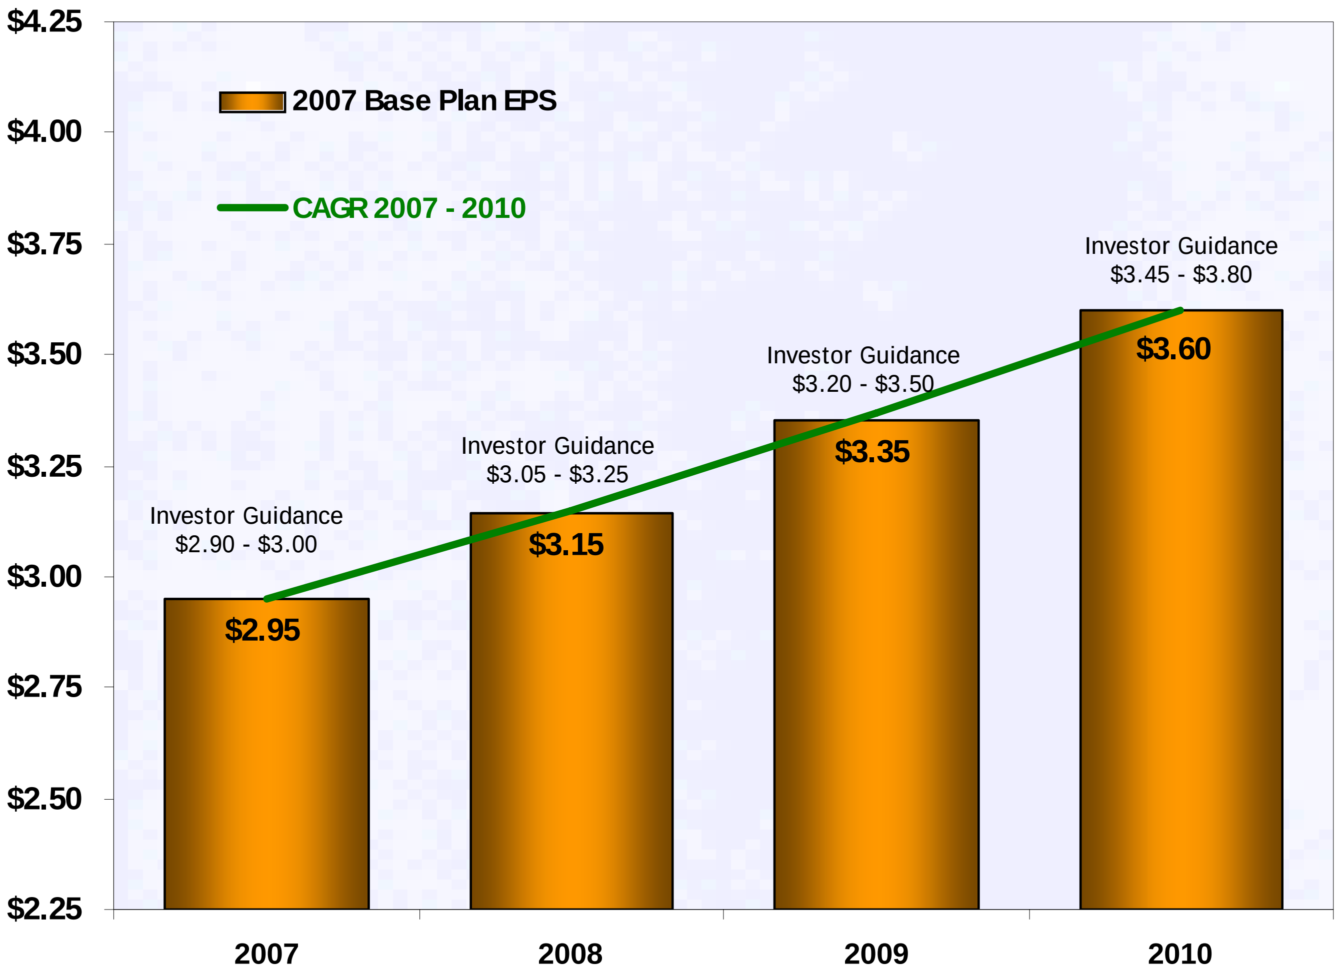
2007E: $3,962 MM	**2008E: $3,770 MM**
2009E: $3,600 MM	**2010E: $3,401 MM**

- Maintain credit ratings: BBB/Baa2/BBB

4-Year Earnings Range Forecast

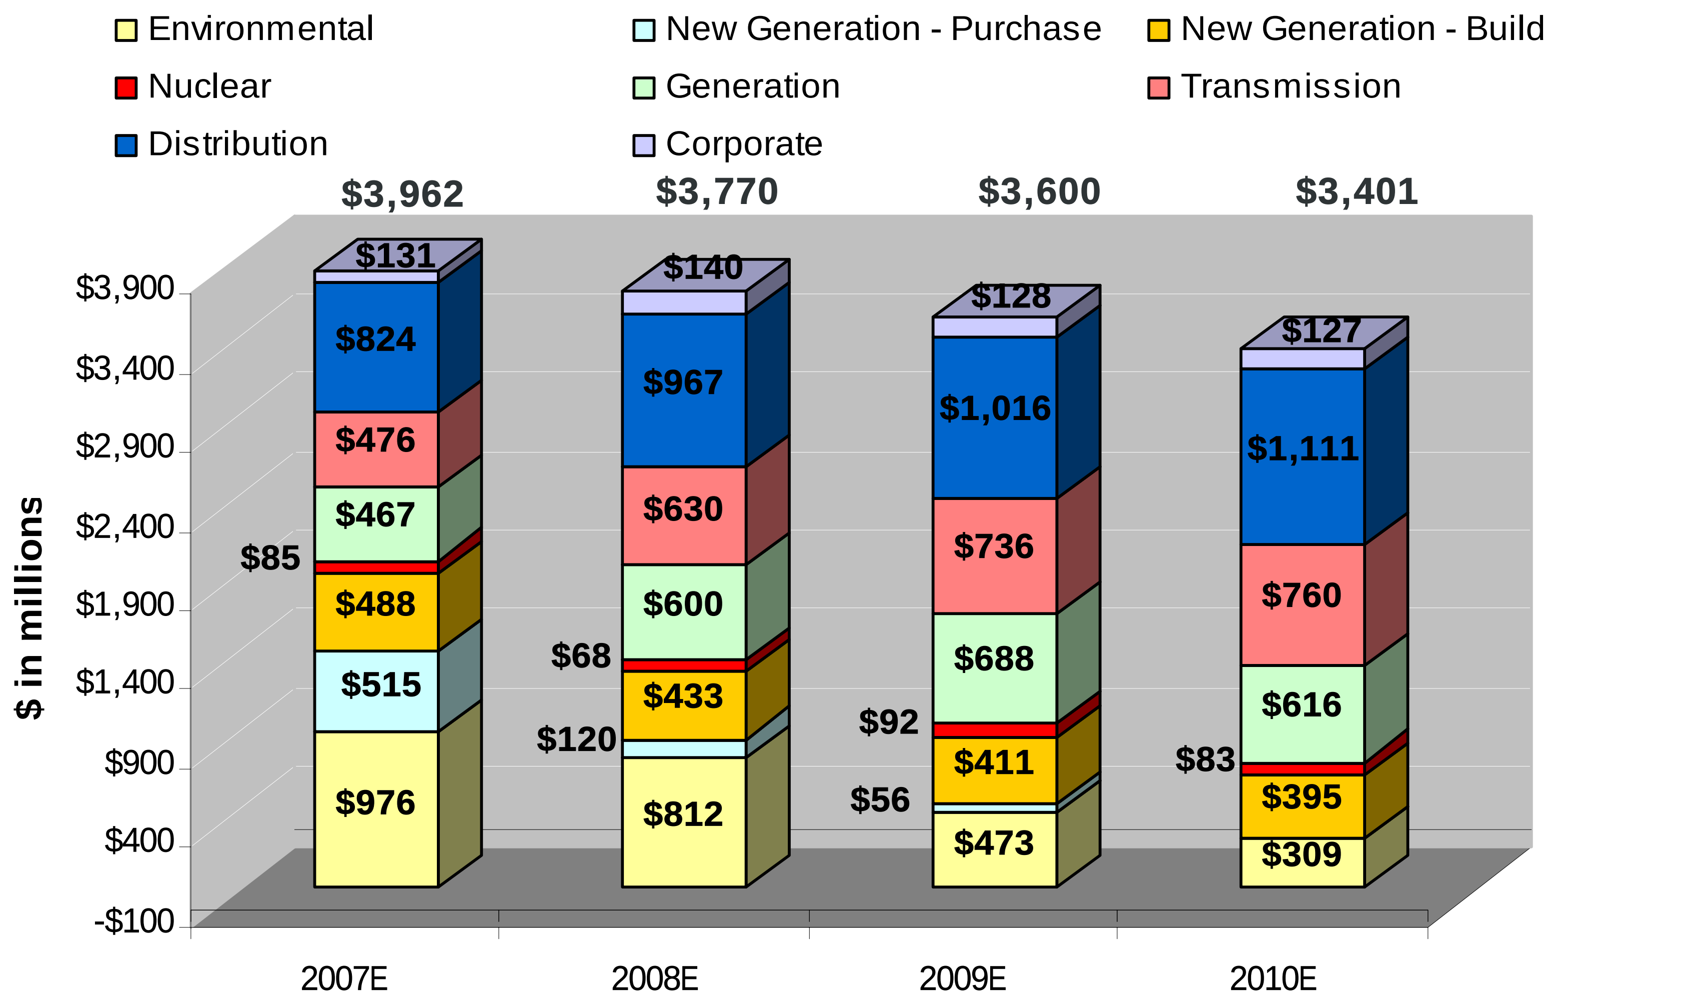


EPS 3-yr CAGR (2007-2010)



5% to 9% earnings growth and a 4Q07 dividend increase.

4-Year Capital Investment Forecast

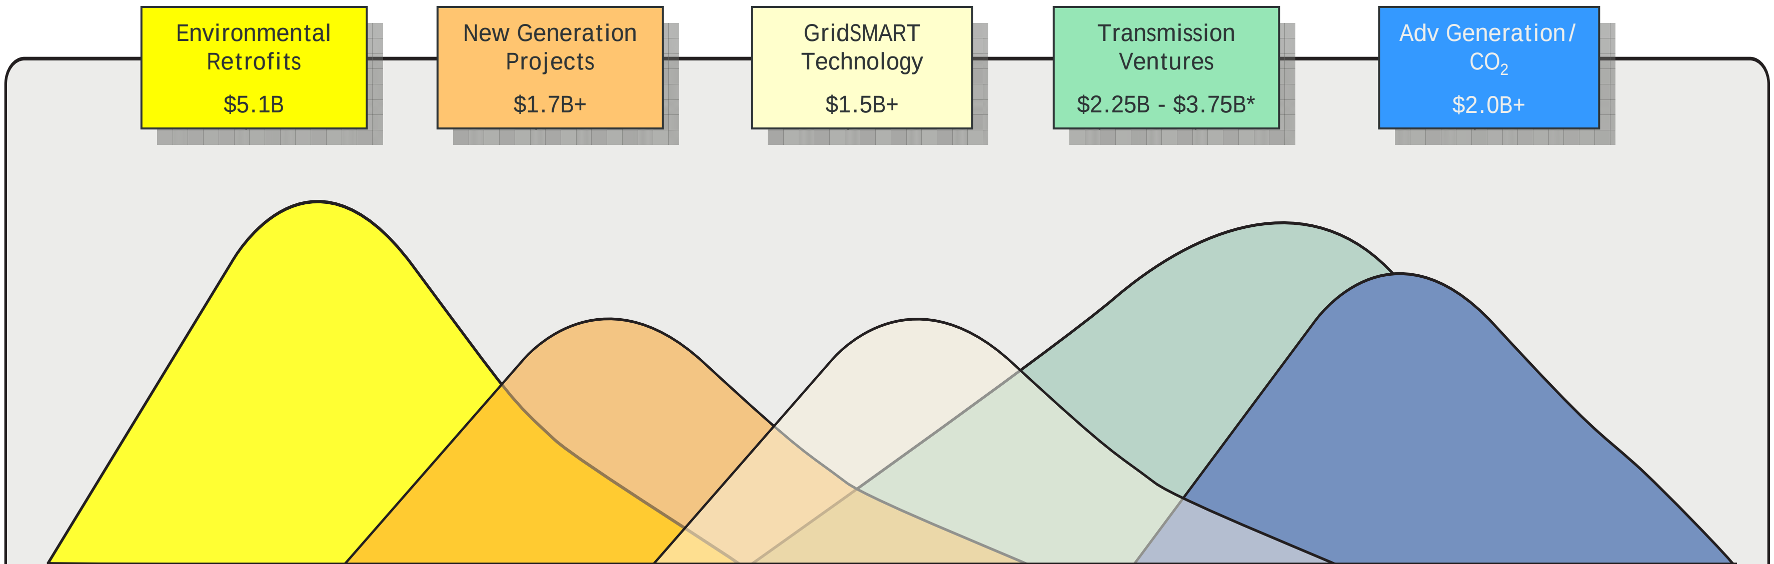


Note: amounts exclude AFUDC, $452MM related to GridSMART and $540MM related to transmission joint venture projects

Capital Investment + Rate Relief = Earnings Growth

Capital Investment Earnings Catalysts

Capital Investment – Consistent Waves of Opportunity



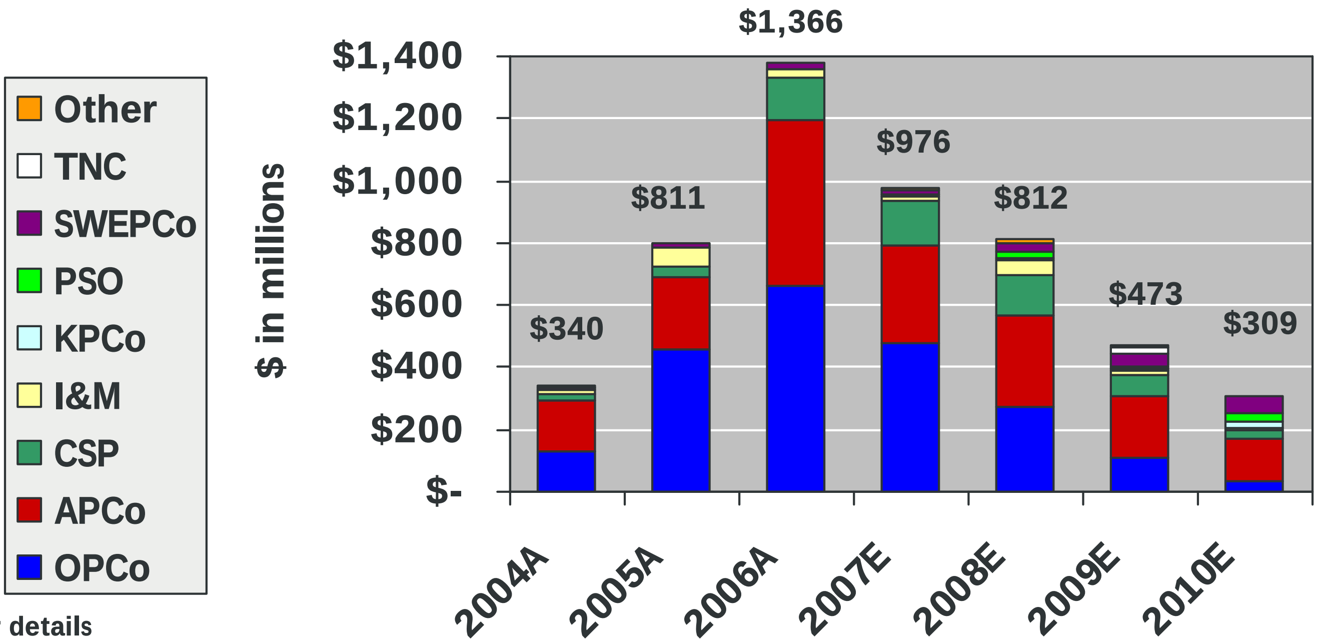
Baseline capital investment of approximately $2.5B/year for Transmission, Distribution & Generation versus annual depreciation of $1.1B/year

2005 → 2010 → 2020 →

Note: This slide represents current capital investment plans as well as future capital investment opportunities. For current capital investment guidance through 2010, please refer to page 8. *The transmission opportunity is shown utilizing anticipated JV ownership structure.

Capital investment opportunities combined with associated rate relief will drive sustainable earnings growth.

Environmental Investments Receive Timely Rate Recovery



See page 11 for details

($ in millions)	Completed (2004-2006)	Rate Recovery
AEG	$9	partial/pending

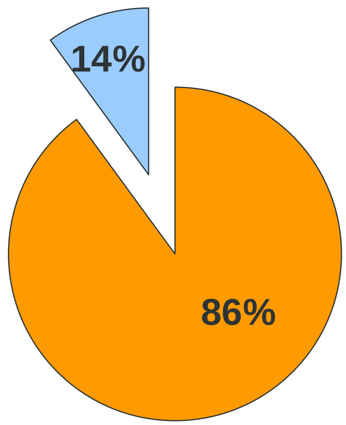
At the conclusion of our current environmental retrofit program, over 58% of our 24,630 MW coal-fired generation fleet will be equipped with SCRs and over 73% will be scrubbed (FGDs).

Materials and Vendors – AEP's Advantage

Breakdown of Environmental Compliance Program
(% of Purchased Costs)



Actuals To Date & Firm Costs
Estimated Cost Exposure*

Note: these percentages relate to the environmental program through 2010

* Primarily labor costs

SCR Technology

- Removes 85 – 93% of NOx emissions
- Requires ~ 1% use of auxiliary power
- **AEP Capital Cost ~ $121/kW avg.**

Combination of SCR & FGD technology results in co-benefit of Hg removal ~ 80% removal efficiency

FGD Technology

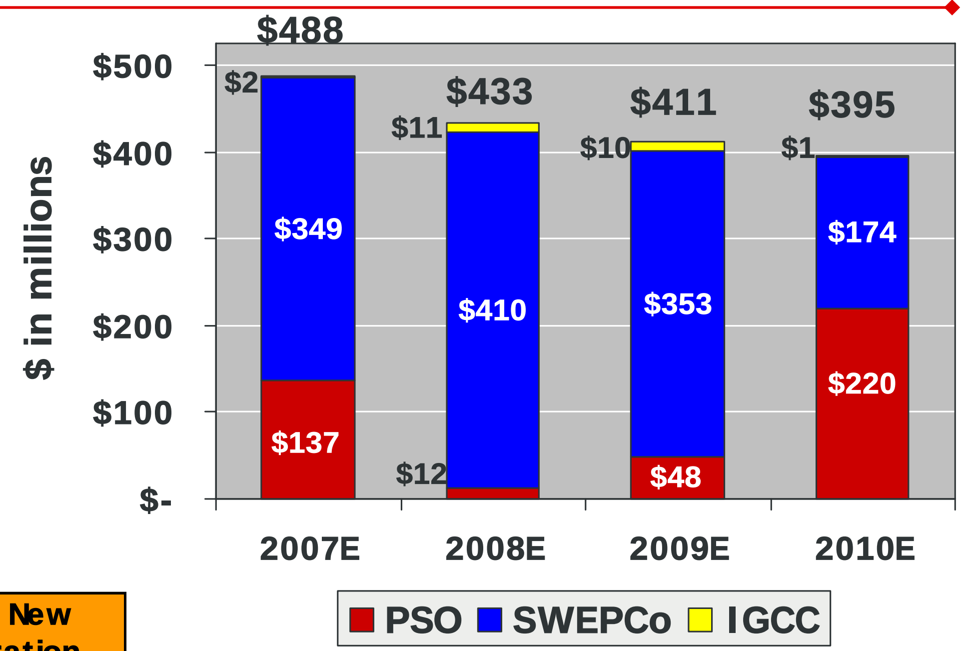
- Removes 95 – 98% of SO_2 emissions
- Requires ~1.5% to 3.0% use of auxiliary power
- **AEP Capital Cost ~ $250/kW avg.**

AEP benefits from first-mover advantage through lower contracted prices compared to industry.

New Generation Investments and Related Recovery

Secured Recovery Mechanism

- PSO Peaking Facilities Rider



($ in millions)	Projected Construction Completion	Total New Generation Investment (2007-10)
PSO - Peaking Facilities	2008	$102
PSO - Combined Cycle *	2012	$315
SWEPCo - Mattison	2007	$66
SWEPCo - Stall	2010	$422
SWEPCo - Turk	2011	$798
APCo - IGCC	tbd	$12
CSP/OPCo - IGCC	tbd	$12
Total Capex	Total Capex	$1,727

* - intended to source requirements to be met by Red Rock Plant prior to cancellation.

Additional Recovery Mechanisms Under Consideration:

- Formula based rates
- Requests for return on CWIP
- Current and future rate cases

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
SWEPCo	Mattison	Arkansas	$122 MM	Gas	Simple-cycle	340 (1)	2007
PSO	Southwestern	Oklahoma	$59 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$58 MM	Gas	Simple-cycle	170	2008
AEG	Dresden	Ohio	$265 MM	Gas	Combined-cycle	580	2010
SWEPCo	Stall	Louisiana	$375 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.3 B (2)	Coal	Ultra-supercritical	600 (3)	2011
APCo	Mountaineer	West Virginia	$2.23 B	Coal	IGCC	630	TBD
CSP/OP	Great Bend	Ohio	Under Review (3)	Coal	IGCC	630	TBD

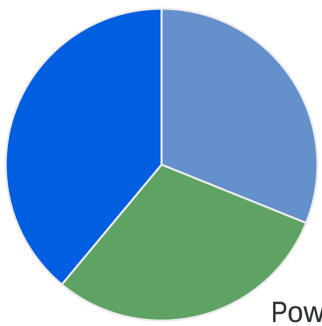
(1) 150MW declared in commercial operation on July 12, 2007.
(2) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment.
(3) FEED (front-end engineering and design) study with GE/Bechtel is complete. Cost estimates are not yet filed with the PUCO due to the pending appeals to the Supreme Court of Ohio resulting from the PUCO's April 10, 2006 Opinion and Order.

SAN FRANCISCO ROAD SHOW

Coal Procurement

AEP burns approx. 76 million tons of coal per year

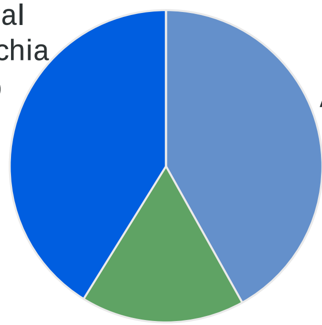
Total AEP System



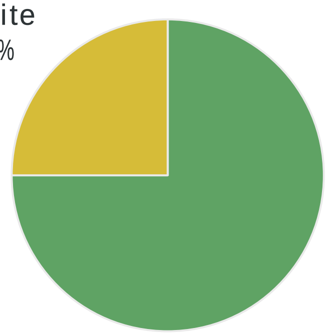
Coal Stats:

- Fully contracted for 2007; >93% for 2008
- Avg. delivered price ~ $35.10/ton in 2006
- Approximate 4-5% price increase in 2007 -- ($36.50 to $37.50/ton); 13% increase in 2008 based on anticipated 2007 actual results.
  - Addition of Mountaineer & Mitchell scrubbers allows for a greater mix of Northern Appalachian coal in 2007

AEP East



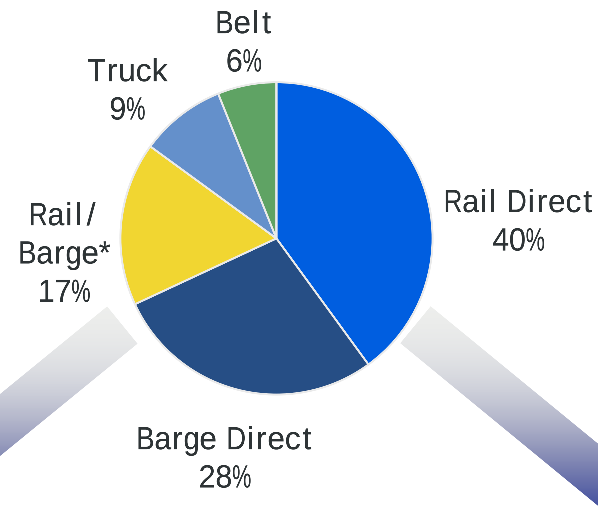
AEP West



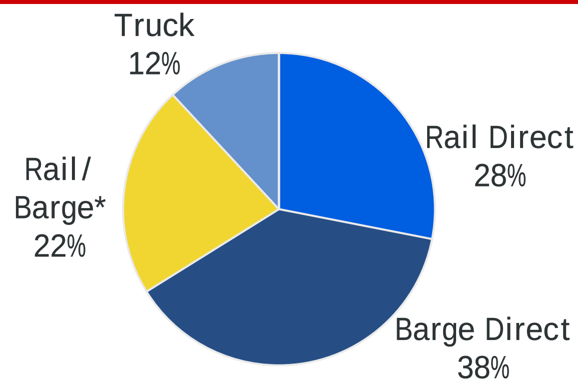
Coal Delivery

2006 Actual

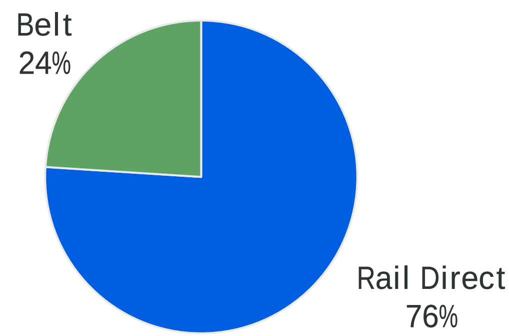
Total AEP System



AEP East



AEP West



* Reflects coal delivered to AEP plants transported through a combination of rail and barge

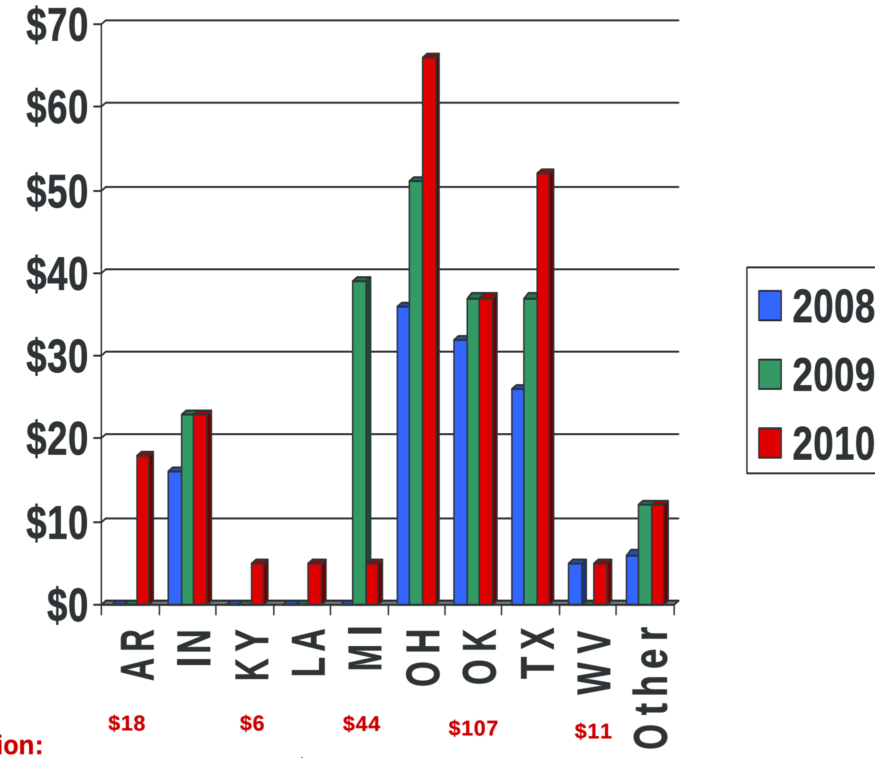
GridSMART

GridSMART: implementing AEP's vision for the distribution and customer services business in the future, including the development of new customer programs to reduce consumption and peak demand, and a plan to deploy advanced technologies.

Capital Investment, Subject to Regulatory Approval * $ in millions				
Technology	**2007**	**2008**	**2009**	**2010**
Metering & Communications	$0	$83	$138	$146
Distribution Technology Enhancements	$2	$40	$ 63	$ 82

*$452MM of the $554MM not in current forecast; spending contingent upon regulatory approval

$ in millions



3-Year Total by Jurisdiction: $18 $62 $6 $5 $44 $153 $107 $115 $11 $31

AEP will continue to be an industry leader in deploying advanced technology on a commercial scale. $554MM capital investment by 2010, subject to regulatory approval.

Contribution of Transmission Investments

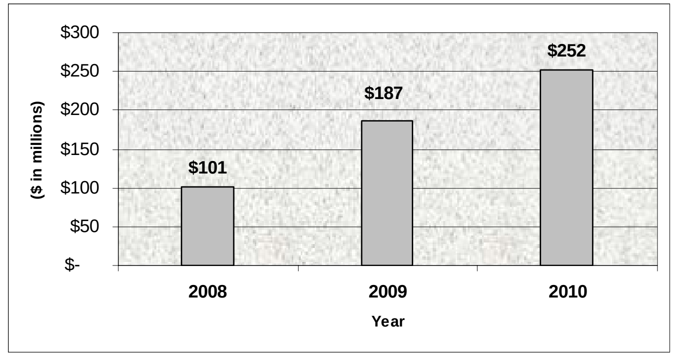
Potential Transmission Opportunities

~ $3 Billion I765™ Project in PJM
~ $2.6 Billion 765-kV study in Michigan w/ ITC
~ $3 Billion Project filed with SPP
~ $1-7 Billion in ERCOT via Electric Transmission Texas, LLC (ETT)

Assumptions

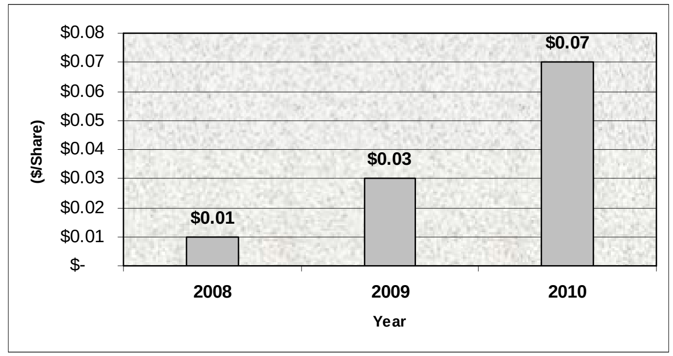
Estimated Investment Opportunity	$9 - $15 Billion
Ownership Structure w/ Partner	50% / 50%
Debt / Equity Ratio	50% debt / 50% equity
Return on Equity	11.00% - 13.00%
Potential EPS Impact (based on 402 MM shares)	$0.60 - $1.00+

Projected Transmission Capital Spending*



* ~$9-$15 billion investment opportunity not included in current capital guidance forecasts, since it will be put into a JV. ETT base case and PATH projects included in above projection.

Projected Transmission EPS Contributions*



* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

Transmission will provide a near and long term catalyst for growth.

Electric Transmission Texas (ETT)

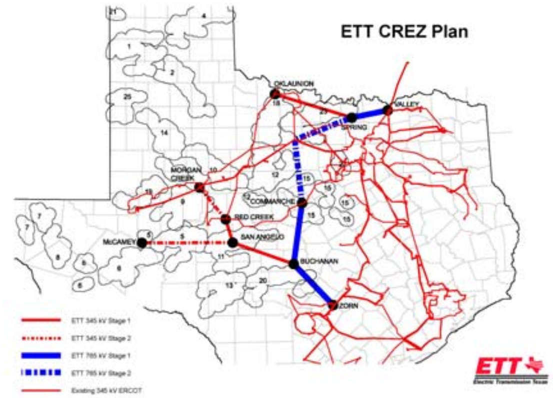
- **Electric Transmission Texas (ETT) Transaction Status**
  - Participation Agreement signed Jan. 9, 2007
  - PUCT Recently Approved:
    - ROE of 9.96%
    - Establishment of Transmission Utility Status
  - Received FERC/PUCT approvals:
    - Asset transfer for TCC to ETT

- **ETT CREZ Overview**
  - Strengthen ERCOT grid to collect and deliver wind generation to load
  - $1.5 billion investment Phase 1 – 2012 (before ownership division)
  - $1.5 billion investment Phase 2 – 2015 (before ownership division)

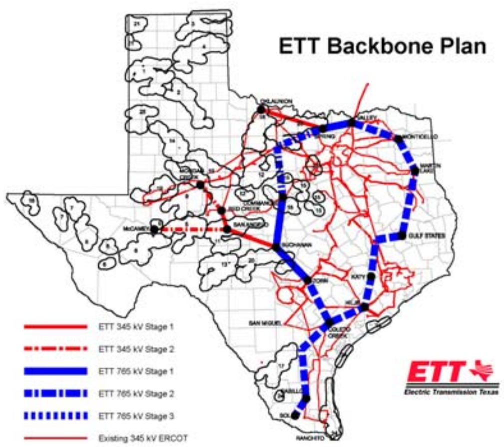
- **ETT ERCOT Backbone Proposal**
  - ETT proposal for ERCOT and PUCT to consider CREZ transmission in context of long-term vision for transmission system.
  - Current 5-year planning horizon results in higher ultimate costs, lower system efficiency.
  - Long-term 15-20 year perspective provides better plan, supports development of high voltage backbone at 765-kV.
  - $4.2 billion investment (long-term backbone).

- **Traditional ratemaking process through the PUCT will be utilized for investment cost recovery.**

ETT CREZ



ETT Backbone



KPSC Case No. 2011-00401

Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 8644 of 9556

Electric Transmission America (ETA)

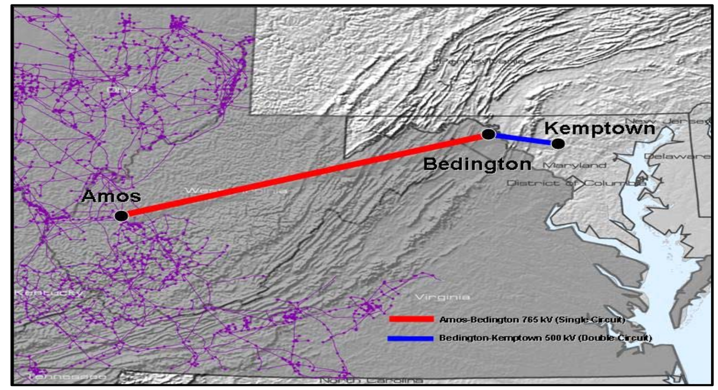
- ***Electric Transmission America (ETA)***
  - AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 Joint Venture.
  - Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
  - Projects taken on by the Joint Venture would entail transmission facilities:
    - 345-kV and above
    - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
    - Greater than $100 million
  - ETA will hope to identify and initiate the approval process for the first project during the first half of 2008.
  - ETA will look to collaborate with qualified partners in each particular region.

This JV reflects a natural progression and expansion of our partnership with MidAmerican.

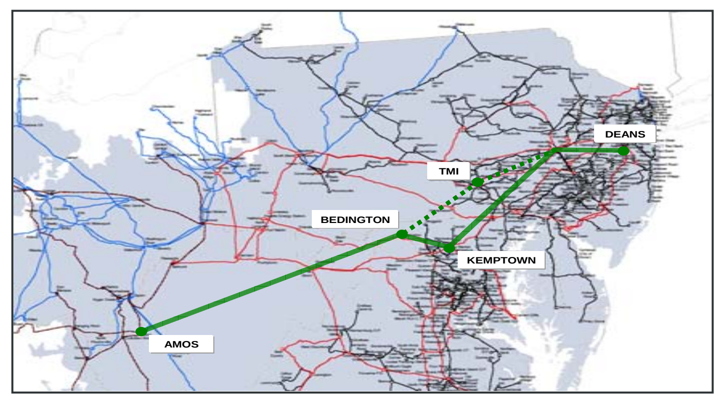
Transmission Project Updates - PJM

- *I-765 TM in PJM Phase I Update*
  - AEP and Allegheny entered into the PATH (Potomac-Appalachian Transmission Highline) JV to construct the 290 mile West Virginia-Maryland line
  - Total estimated cost of $1.8 billion
  - AEP portion approximately $600 million
  - Expected completion 2012
- *Key Next Steps*
  - Complete FERC Filing – December 2007
    - *Pursuing new project FERC incentives: cash return on CWIP, higher ROE, recovery of pre-commercial operation costs and recovery of abandonment costs.*
  - Begin Routing Study – Fall 2007
  - State Filings – Fall 2008
  - Construction – Early 2010
  - Completion – Fall 2012
- *I-765 TM in PJM Phase II Update*
  - Approximately 250 miles from West Virginia-Maryland border to Public Service Electric & Gas Deans Station in New Jersey.
  - Currently under consideration by PJM as part of Regional Transmission Expansion Plan (RTEP).
  - Based on PJM RTEP approval, AEP will seek a suitable business partner (JV partner) to complete the second leg of the original proposal.
- *Regional Rate Design will be utilized for investment cost recovery.*

Phase I in PJM



Phase II in PJM

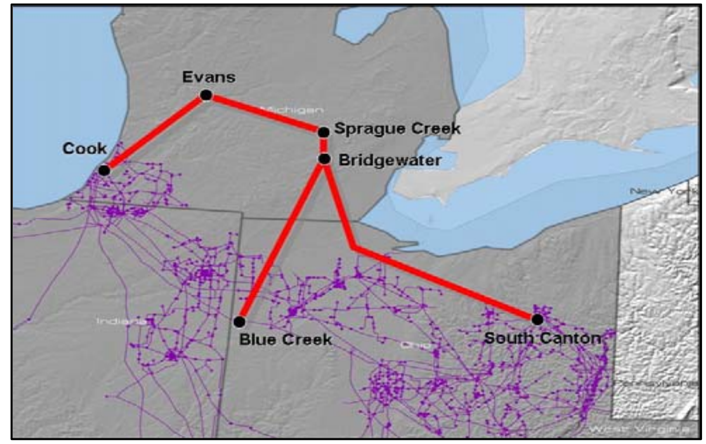


SAN FRANCISCO ROAD SHOW

Transmission Project Updates – cont’d

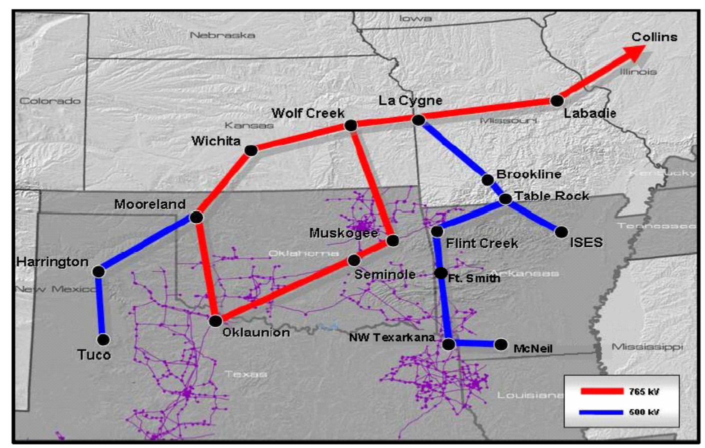
- *765 – kV in Michigan – Key Next Steps*
  - Study results shared with PJM/MISO– Summer 2007
  - Public release of study results – Fall 2007
  - Potential JV formation – Fall 2007
  - PJM/MISO approval - Summer 2008
  - FERC Filing - Fall 2008
  - Siting approval – Summer 2010
  - Estimated completion – Summer 2015

Michigan



- *765-kV in SPP – Key Next Steps*
  - Study disclosure – Fall 2007
  - JV formation (Partner-TBD) – Fall 2007
  - SPP RTO/BOD EHV Overlay approval – Summer 2009
  - SPP RTO FERC Filing – Fall 2009
  - Siting approval – Fall 2011
  - Estimated completion – Summer 2017

Southwest Power Pool



- *Regional Rate Design will be utilized for investment cost recovery.*

SAN FRANCISCO ROAD SHOW

Advanced Generation & CO_2

Near Term:

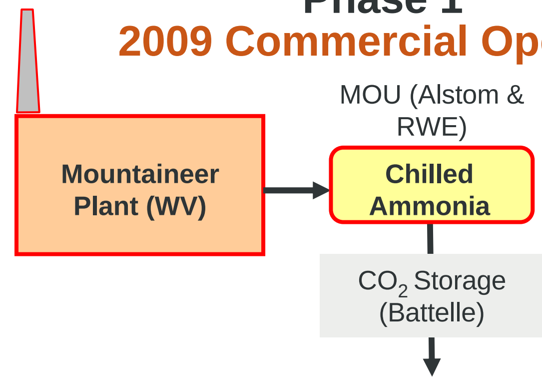
- Chilled Ammonia project at Mountaineer moving to commercial scale at the Northeastern Plant in 2012

$ in millions				
	2007	2008	2009	2010
Mountaineer Chilled Ammonia Project	$4	$56	$11	$0

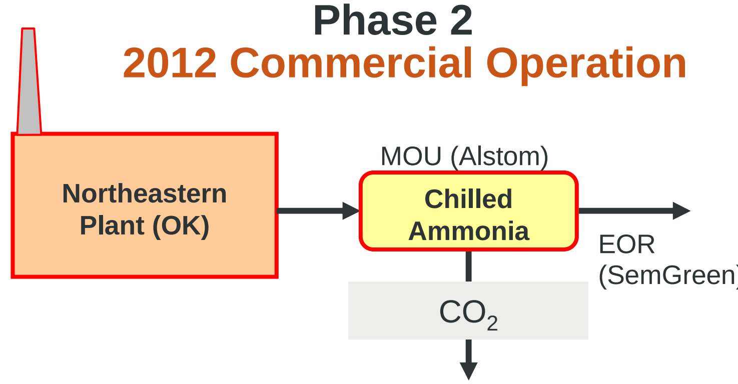
Long Term Strategy (Post 2010):

- IGCC
- Oxy Coal Technology
- Chilled Ammonia
- Nuclear COL

Phase 1
2009 Commercial Operation



Phase 2
2012 Commercial Operation



We are committed to validating and deploying technologies that ensure coal remains a viable resource for AEP and America.

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A reliable and reasonably-priced electric supply is necessary to support the economic well-being of the areas we serve.

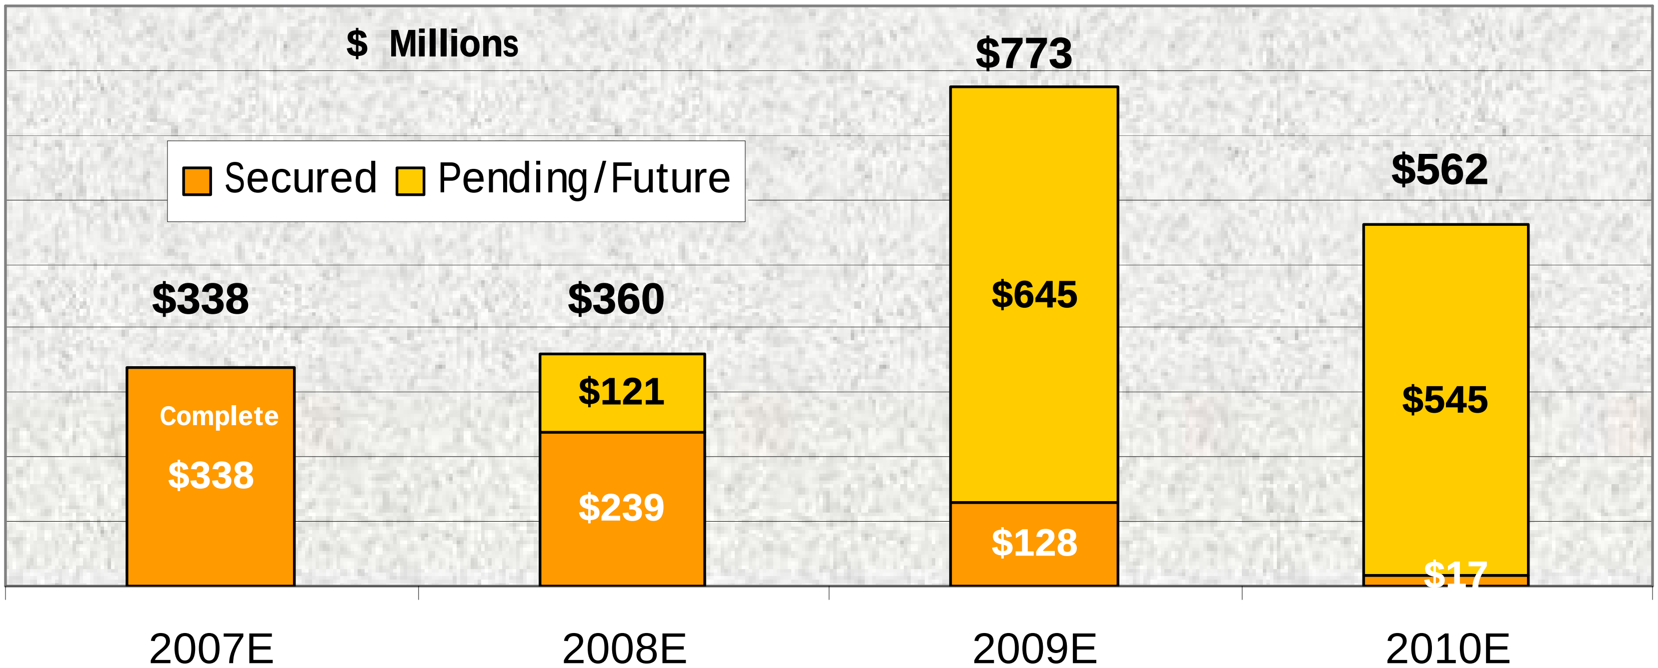
Highlights of Bingaman-Specter Proposal

"Low Carbon Economy Act of 2007"

- Key Components:
  - Start date for greenhouse-gas reductions is 2012
  - Goals: 2006 levels by 2020; 1990 levels by 2030
  - Includes a safety valve of $12 per metric ton, increasing at an annual rate of 5% above inflation
  - Support for allowance allocations
  - International action

AEP endorses this proposal because it sets reasonable and achievable reduction targets and includes the AEP-IBEW trade proposal.

Incremental Rate Relief Assumptions



2008 Secured: Ohio 3% & 7%
I&M Depreciation
APCo-WV Construction Surcharge
PSO Peaking Generation and General Rate Case
TCC and TNC General Rate Cases

2007 - 2010 projected annual rate increases of 5.5%.

Regulatory Strategy: Reduce Lag

The strategy: reduce the time between in-service dates and rate recovery

- Maximize frequency of filings
  - Seek ability to pro-forma both capital and O&M through date which rates are effective
- Single-issue cost recovery
  - Reliability
  - Vegetation
  - Environmental
- Trackers
  - Federally-approved transmission costs
  - Fuel and emissions
  - ERO compliance costs
  - Off-system sales margin sharing
- Formula rates
- Return on CWIP

Our goal is to maximize utility company cash flow and returns by minimizing regulatory lag.

Regulatory Activity Completed

Company	Case	Order Date	Dollar Amount	ROE
APCo - Virginia	Base Rate Case	May 15, 2007	$24MM increase in annual base rates	10.0%
APCo - West Virginia	ENEC Filing	June 22, 2007	$29MM increase in annual revenues	10.5%
I&M - Indiana	Depreciation Study	June 13, 2007	$69MM estimated decrease in annual depreciation expense	N/A
I&M - Michigan	Depreciation Study	September 25, 2007	$10MM estimated decrease in annual depreciation expense	N/A
CSP/OPCo	4% RSP	October 3, 2007	$23MM increase in annual generation rates	N/A
TNC	Base Rate Case	May 24, 2007	$12MM increase in annual pre-tax earnings	9.96%
TCC	Base Rate Case	October 17, 2007	$50MM increase in annual pre-tax earnings	9.96%
ETT	Utility Status/ROE	October 17, 2007	N/A	9.96%
PSO	Base Rate Case	October 9, 2007	$20MM increase in annual pre-tax earnings	10.0%

Incremental rate relief requirements for 2007 have been satisfied.

Regulatory Activity Underway

- Ohio Post 2008
- CSPCo and OPCo Filing for 4% Provision on Generation Rates
- I&M - Indiana Rate Petition
- APCo Filings – E&R and Fuel Factor Adjustments
- SPP OATT Formula Rate Filing
- PSO Storm Cost Recovery Filing
- New Generation:
  - IGCC Filing in Virginia and West Virginia for Certificate of Need and approval of a cost recovery mechanism
  - IGCC Phase 2 Filings in Ohio on Hold Pending Resolution of Supreme Court Challenge of PUCO's authority
  - SWEPCo Turk Plant Filings in Arkansas, Louisiana and Texas for Certificates of Need

Regulatory Activity Underway

Ohio Post 2008

- On August 29, 2007, the Ohio Governor submitted legislation (SB221) that would restructure the regulation of Ohio's electric industry. The bill also includes several efficiency and renewable energy standards.
- Hearings on the legislation began on September 26, 2007 in the Ohio Senate and continued through the end of October.
- On October 25, 2007, the substitute version and associated amendments were incorporated into SB221.
- Full Senate vote occurred October 31, 2007. SB221 passed 32-0.
- Presented to House Public Utilities Committee on November 7, 2007; Hearing schedule extends to the end of January 2008.

AEP Ohio Application For 4% Provision On Generation Rate

- On October 24, 2007, CSPCo and OPCo filed an application pursuant to the RSP at the PUCO to recover costs associated with additional generation-related expenditures the companies are encountering related to environmental (CAIR, CAMR and NPDES – Clean Water Act) and PJM marginal losses.
- CSPCo and OPCo are requesting to implement the provision to recover \$37.4MM and \$12.6MM, respectively, from January through December 2008. These amounts represent actual costs incurred, plus carrying costs, through October 31, 2007.

Regulatory Activity Underway

I&M Indiana Rate Petition

- On June 19, 2007, I&M filed a petition with the Indiana Utility Regulatory Commission (IURC) for authority to increase its rates and charges for electric utility service and to establish and implement rate adjustment mechanisms to track certain matters.
- Requested trackers relate to reliability enhancement, demand-side management/energy efficiency programs, off-system sales margins, PJM costs and environmental compliance.
- Parties have agreed to a historic test year ended September 30, 2007, with a rate case filing date of January 31, 2008. This schedule has been approved by the IURC.
- Hearings are expected in May 2008, and an order in the first quarter of 2009.

APCo E&R and Fuel Factor Adjustments

E&R:

- On July 16, 2007 a filing was made with the VA SCC requesting an additional $39MM be added to the current rider of $21MM. Therefore, at December 1, 2007, we will begin collecting $60MM.
- Intervenor testimony was filed on October 3, 2007, staff testimony filed on October 17, 2007, rebuttal testimony filed on October 24, 2007 and public hearings are were held on November 5 & 6, 2007.

Fuel Factor:

- On July 16, 2007, a filing was made with the VA SCC requesting the termination of the OSS base credit and reflected 75% of OSS margins as a credit to fuel expense, consistent with new Virginia legislation. Implementation of the fuel factor was approved effective September 1, 2007, subject to review/refund.
- Intervenor testimony was filed on October 5, 2007, staff testimony filed on October 15, 2007 and rebuttal testimony filed on October 22, 2007.
- Based on the addition of PJM marginal losses to the filing in October 2007, a new procedural schedule was agreed upon which stipulates staff and intervenor testimony due December 3, 2007, rebuttal testimony due December 10, 2007 and public hearings are expected to commence on December 18, 2007.

Regulatory Activity Underway

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $161MM.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extends the effective date to February 1, 2008. A request for rehearing was submitted on October 1, 2007.
- A technical conference was held on October 18, 2007. The purpose was to review and clarify the company's responses to discovery. A second technical conference was held November 6, 2007 with a settlement meeting held November 15, 2007 and another scheduled for December 4, 2007.

PSO Storm Cost Recovery Filing

- On October 24, 2007, Public Service Company of Oklahoma filed an application with the Oklahoma Corporation Commission to defer, amortize and recover costs related to a severe January 2007 winter storm. PSO requests the Commission to direct it to establish a regulatory asset of approximately $13 million reflecting the future recovery of these costs, and to amortize the regulatory asset as PSO realizes proceeds from the sale of sulfur dioxide (SO_2) emission allowances.
- Hearings are tentatively scheduled for February 27-28, 2008.

Regulatory Activity Underway

APCo Mountaineer IGCC Filing

West Virginia

- Testimony filed with the West Virginia Public Service Commission on June 18, 2007 in support of APCo's application for a Certificate of Public Convenience and Necessity to construct a 600MW IGCC plant in WV at a cost of approximately $2.23 billion.
  - Testimony includes a proposal for the Commission to approve a cost recovery mechanism through the existing Expanded Net Energy Cost (ENEC) mechanism. The filing is not a formal proposal to adjust rates.
  - Actual requests for increased rates will be included in future filings, once construction of the plant has commenced and actual Construction Work In Progress data is known.
- Staff and Intervenor testimony filed November 19, 2007.
- Public hearings are scheduled for December 10-14, 2007 with an order on or before March 7, 2008.

Virginia

- Testimony filed with the Virginia State Corporation Commission on July 16, 2007 seeking a prudence determination and approval to recover, beginning in 2009, Virginia's share of the carrying costs associated with the proposed plant.
- Public hearings are scheduled for February 12, 2008.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.
- Oral arguments regarding this matter were conducted at the Ohio Supreme Court on October 9, 2007. It is likely the court's decision will not be announced until some time in the first quarter of 2008.

Regulatory Activity Underway

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- Public hearings commenced August 20, 2007 and final briefs were filed in October 2007.
- The PSC issued its order on November 21, 2007, approving construction of the plant.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. Peaking and intermediate facilities have been addressed. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- Public hearings commenced September 11, 2007. Decision expected by year end.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- Public hearings commenced October 17, 2007. Decision expected in early 2008.

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation, including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance, resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events, our ability to recover through rates the remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives and evolving public perception of the risks associated with fuels used before, during and after generation of electricity, including nuclear fuel.

Capital Allocation

In this economic recovery cycle, capital allocation requires balance for spending that considers the obligation to serve, the ability to obtain rate increases, a balance sheet to support the plan, and the total return proposition to shareholders

- Maintenance Capital
- Capital for Growth
  - Spending in excess of depreciation levels
  - Capital allocated to higher return areas
  - Continued capital prioritization and discipline
  - Optimization of portfolio of assets
- Capital to Reduce Risk
- Return of Capital to Shareholders

Managing Operations and Investment

Challenges:

Required refinement of the operating company model and improved line-of-sight management due to economic conditions, regulatory lag, reduced rate headroom, environmental challenges and resource preferences

Actions:

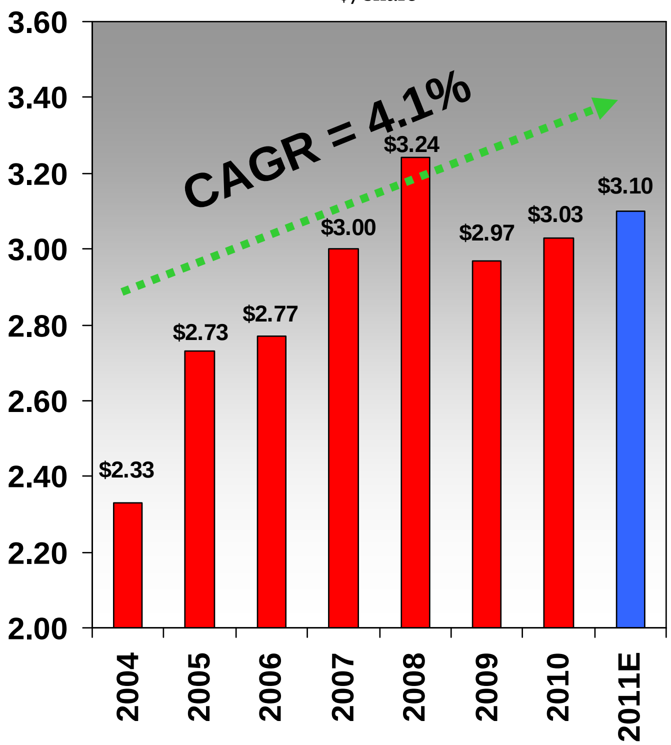
- Empower operating company employees to drive results
- Efficiently allocate capital
- Demonstrate O&M and capital expenditure discipline
- Identify asset renewal strategy for investing in traditional distribution and transmission assets that enhance reliability and customer satisfaction
- Enable long-term planning discussions with regulators and legislators

Expected Outcomes:
Optimize spending for more efficient return on investment
Improve dialogue with customers and regulators
Minimize lag in rate recovery

Earnings and Dividends

On-Going EPS History Since 2004

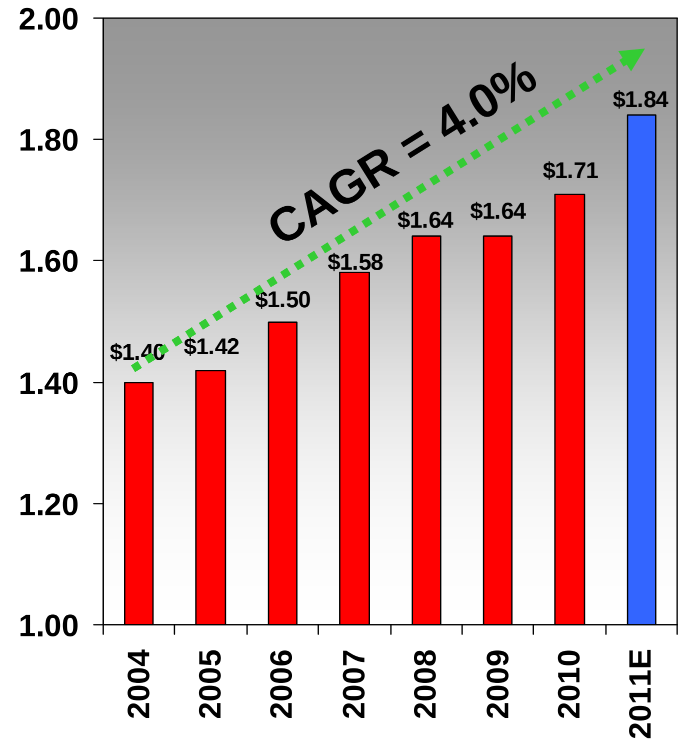
$/share



- Earnings growth largely attributed to capital investment program
- Pre-recession earnings supported by robust wholesale market activity and high power prices
- 2011 guidance range of $3.00 to $3.20 per share

Dividend History Since 2004

$/share



= subject to Board of Directors approval

- Quarterly dividend <u>increased 12%</u> in 2010
- <u>404th consecutive</u> quarterly dividend will be paid June 10, 2011
- 50-60% payout ratio target
- Current yield over 4.5%

Detailed Ongoing Earnings Guidance

2010A: $3.03

2011E: $3.00 - $3.20

Summary Rate Case Information

AEP Ohio Distribution Rate Case – Docket #351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%. A procedural schedule from the PUCO is pending.

Summary Rate Case Information

APCo Virginia Base Rate Case – Docket #PUE-2011-00037

On March 31, 2011 APCo filed an update to its pre-biennial base rate case for recovery of generation and distribution costs requesting an increase of $75 million ($126 million total increase less $51 million associated with a potential change in depreciation rates). The requested ROE is 11.65%, including a 50 basis point adder for meeting 2010 RPS goal allowed by law.

In conjunction with this case, an environmental rate adjustment clause (E-RAC), generation rate adjustment clause (G-RAC) and a renewable portfolio standard rate adjustment clause (RPS-RAC) were filed. APCo has requested that rates in the base case, E-RAC and RPS-RAC go into effect no later than 2/1/2012 and the G-RAC on 3/1/2012.

Projected Capital Structure – Company Position (12/31/10)

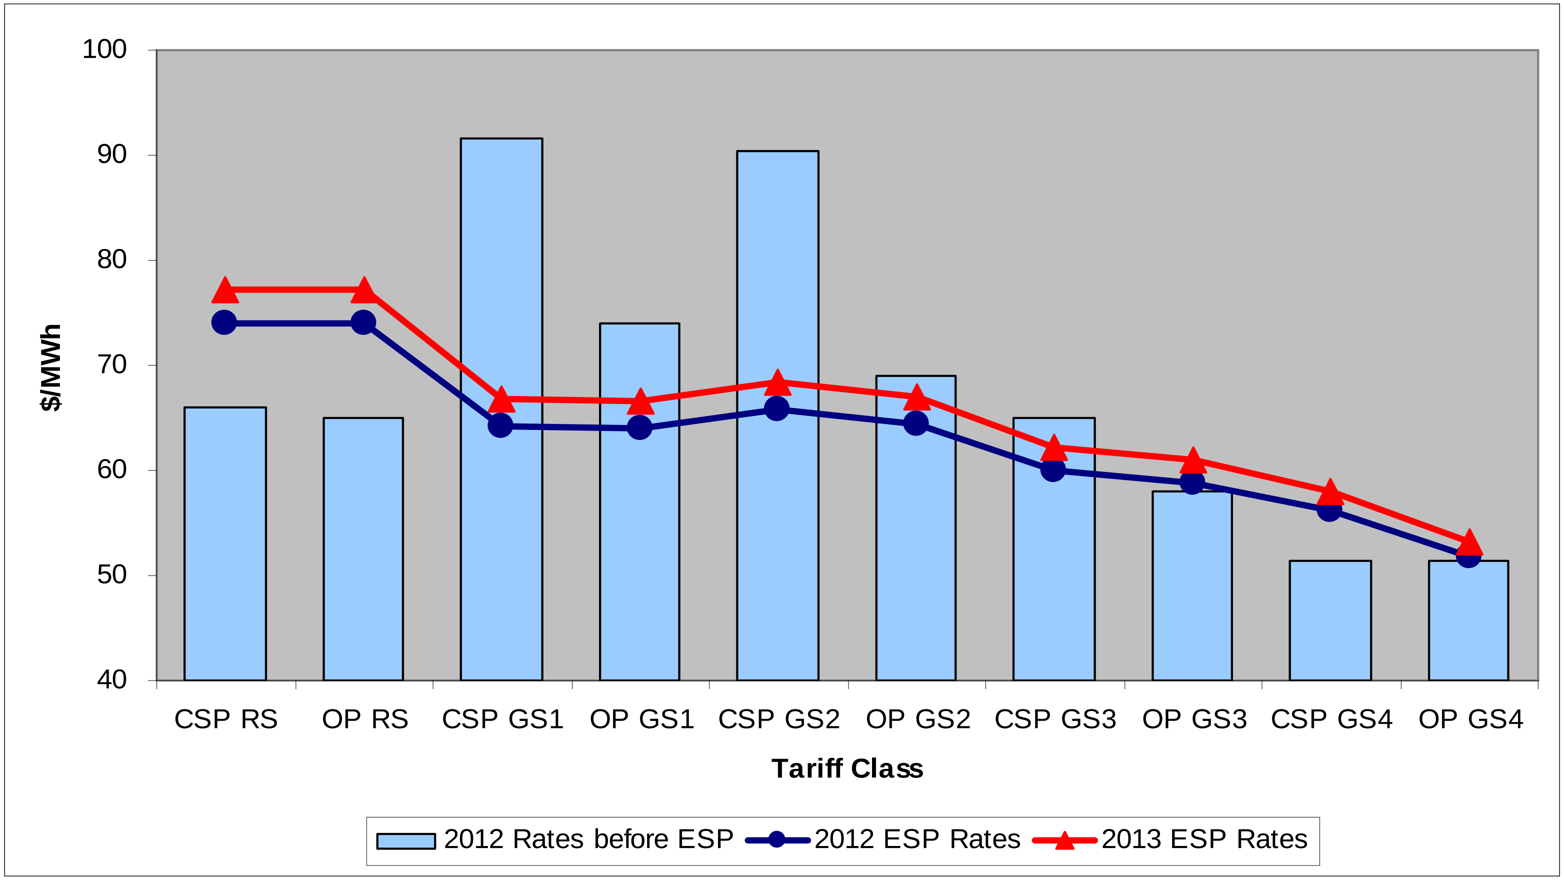
N/C* = No change from prior year

While the ESP includes a small base generation increase, the move to a market-based rate design, consistent with state policy, will result in varying impacts for different customer groups.

Price to Compare

Proposed **SSO** Rates Redesigned To Resemble Market Pricing Structures



Rates do not reflect mitigation impact of market transition rider
2012 Rates before ESP reflect current 2011 rates for generation & transmission service, adjusted to reflect full cost 2011 fuel and environmental costs.

The realignment of rates with market should provide all customers with equivalent opportunities to shop. Additionally, since the proposed design eliminates explicit demand charges, customers should be more easily able to evaluate competitive offers. To ease the rate impact that customers will experience from the realignment, we have proposed a Market Transition Rider.

Market Transition Rider – Mitigates the Initial Impact of Rate Realignment

Three-Year Market Transition Plan
Summary of AEP Ohio ESP Generation Rate Changes

CSP Current Customer Class	CSP New Customer Class	2012 Increase	2013 Increase	2014 Increase	Total Increase

AEP Ohio		1.4%	2.7%	0.0%	4.2%

Illustration of Market Transition Rider on ESP Generation Rate Increases

The Market Transition Rider is a transition rider designed to facilitate the transition from AEP Ohio's current rates to market-based SSO Generation Service rates. It is a non-bypassable rider designed to limit the first and second year changes for any customer classes to uniformly transition any above or below average changes in three steps. Any revenue shortfall that is produced by limiting the increases for certain customer classes is collected from those classes whose decreases are limited.

List of ESP Riders – Existing and Proposed

AEP®

Line	Rate Mechanism	Abbreviation	Bypassable	Distribution	Notes
1	**Current Riders**				
2	Universal Service Fund Rider	USF	--	Yes	
3	Advanced Energy Fund Rider	AEF	--	Yes	Expired 12/31/2010

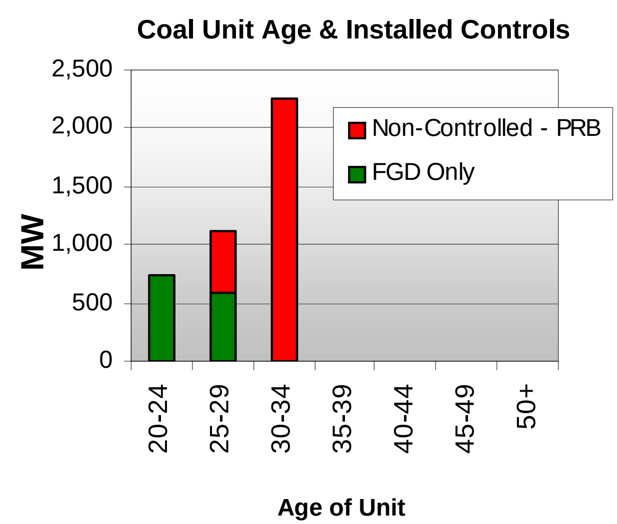
2009A - $29/ton
2010A - $29/ton
2011E - $29/ton



Turk Plant

- John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant. Located in Arkansas. SWEPCo owns 73 percent or roughly 440 megawatts of the total unit.

- The cost of the plant and related transmission is anticipated at $1.7 billion with AEP's share approximately $1.3 billion (excluding AFUDC) and will begin commercial operation in 2012.

- The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls

- $1.1 billion capitalized expenditures 3/31/11. SWEPCO's contractual commitments $260MM.

- Third party owners include: Arkansas Electric Cooperative Corp. (12%), East Texas Electric Cooperative (8%), and Oklahoma Municipal Power Authority (7%)

Pending EPA Regulations

AEP®

TRANSPORT RULE

- Proposed Transport Rule (July 2010) limits utility SO_2 and NOx emissions
- SO_2 and NOx subject to caps in 2012, with further SO_2 reductions required in most Eastern states by 2014
- Major concerns with the proposed rule:
  - Not enough time is provided for environmental control installations (i.e. FGD/SCR)
  - EPA costs of retrofitting units are grossly underestimated/ other incorrect assumptions used (though EPA has since modified some of these assumptions)
  - Rule does not account for recent improvements in air quality
  - Inability to trade and bank allowances effectively

MERCURY AND HAP MACT

- Proposed rule issued in March 2011
- Final HAP regulations must be issued by November 2011
  - Maximum Achievable Control Technology (MACT) standards for Hg, other metals, and acid gases, combustion practices for organics
- Compliance Required 3 Yrs. After Final Rule, EPA could grant a 1 year extension
- Very little flexibility in the proposal; opportunity to average across a plant and limited sub categorization
- MACT could require FGD or DSI for acid gases and/or baghouses with activated carbon injection for Hg and metals.

COAL ASH RULE

- Draft coal ash disposal rules issued in May 2010
- EPA proposed two different regulatory designations:
  - “Non-hazardous”, solid waste - action required by ~2017
  - “Special” hazardous waste - action required by ~2018-2020
- AEP supports Subtitle D Prime Option of RCRA (solid waste NOT hazardous)
- AEP capital cost of ~$4 billion (including AFUDC) for solid waste option
- “Hazardous” option could cost DOUBLE this amount

316b RULE

- EPA issued proposal March 28, 2011
- Addresses impingement and entrainment of aquatic species
- Proposes upgraded intake screens for impingement
- Suggests cooling towers as an effective technology for entrainment, but defers the decision until site-specific study is conducted
- Cost impact very uncertain at this time

The cumulative effect of the proposed rules is not achievable in the allowed timeframe.

AEP Coal Fleet Assessment

2012 – 2020

Range of Capital ($Millions) [1]

Transmission Investment Strategy

- **Near-Term Investment** – Electric Transmission Texas (ETT) secures near term investment opportunities, allowing AEP to invest in the large, growth-oriented Texas transmission market. Total capital expenditures of $3 billion with a 9.96% ROE.

- **Mid-Term Investment** – Seven wholly-owned transcos allow for expansion and growth within AEP's existing utility footprint through an efficient recovery mechanism. Will spend $160 million in 2011 and more than $350 million in 2012. ROE is in the 11.20%-11.49% range.

- **Long-Term Investment** – Joint ventures provide opportunities for longer-term growth outside of AEP's existing utility footprint with forward looking formula rates, reasonable ROEs and FERC incentives where appropriate.

Transmission has a diversified investment approach that positions it as one of the key AEP growth businesses.

Texas Transmission Growth Strategy : Near Term Investment

Ownership Structure: 50/50 (AEP/MidAmerican Energy Holding Company)

Total Project Cost: Over $3 Billion

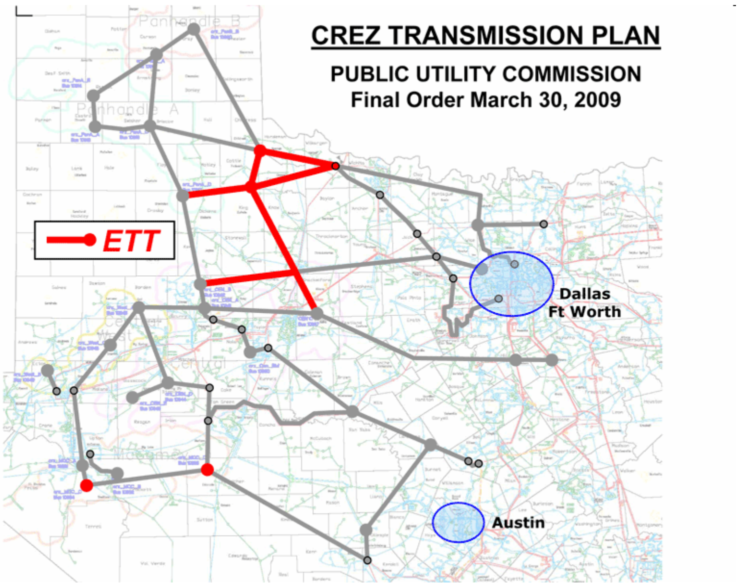
Growing Rate Base:

Current rate base is $412 million; expected to grow as follows:

- 2011: $473 million
- 2012: $778 million
- 2013: $1,352 million

Interim TCOS filings twice per calendar year

Approved ROE: 9.96%



Additional Projects in the Pipeline ~$1.6 B:

- Approximately 822 miles of lines and 28 substations with in-service dates through 2017

Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.1 B:

- Seven double-circuit 345kV transmission lines (~$750 M), eight major 345kV stations and several series compensation installations (~$350 M)
- PUCT Certificate of Convenience and Necessity (CCN) proceedings underway

Transco Update

FERC:

- April 2011 -- The Commission finds in the order that the Settlement is just and reasonable and the business plan will provide benefits to AEP operating companies and customers.
  - ROE order for East Transcos is 11.49%
  - ROE order for West Transcos is 11.20%

State Filing Status Update:

- **Ohio** – PUCO approved the Ohio Transco December 29, 2010
- **West Virginia** – Filing made January 6, 2011; Hearings in June
- **Arkansas** – Filing in Arkansas made May 6, 2011
- **Louisiana –** Expecting LA filing in 3Q 2011
- **Texas-SPP** – Expecting TX filing in mid 2011
- **Kentucky** – Filing made February 4, 2011; Informal conference with staff held March 2, 2011
- **Indiana** – Filing made March 1, 2011; Pre-hearing conference March 28, 2011
- **Virginia** – Filing withdrawn to give additional time to resolve issues with Staff
- **Michigan and Oklahoma** – Do not require state filing

$160M capital spend forecasted for 2011; $350MM for 2012

Joint Venture Strategy: Long-term

- **Strategy:** JV's secure new investment opportunities with local utilities to diversify AEP's investment outside AEP's traditional footprint while providing longer-term incremental earnings. JV projects are well-suited for FERC formula rate recovery mechanism, including potential for incentive rates.
- **Future:** Federal/regional initiatives may accelerate expansion of EHV transmission (e.g. cap-and-trade, renewable portfolio standards, inter-region wide planning). Securing first mover advantage will enable AEP to secure LT investment opportunities.
- **Future flexibility:** Passive investment opportunities can be considered and can provide entry beyond SPP/PJM/ERCOT

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; volatility in the financial markets, particularly development affecting the availability of capital on reasonable terms and developments impacting our ability to refinance existing debt at attractive rates; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas coal, nuclear fuel and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

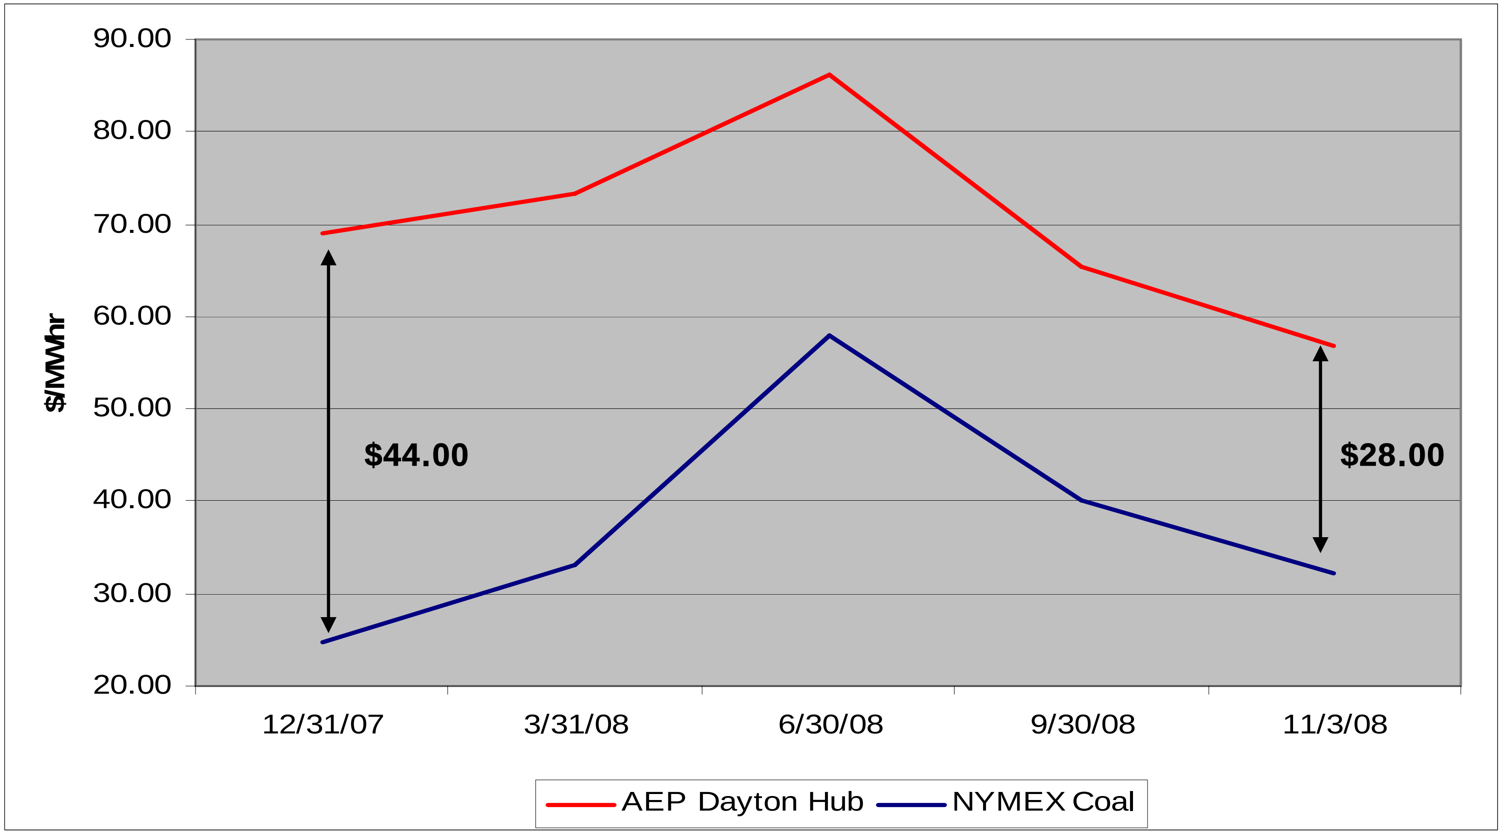
2009 guidance provides range for a reasonable Ohio outcome, holds O&M flat and reflects higher interest expense.

Dark Spread Comparison

NYMEX Coal vs. AEP-Dayton Hub Peak Electricity



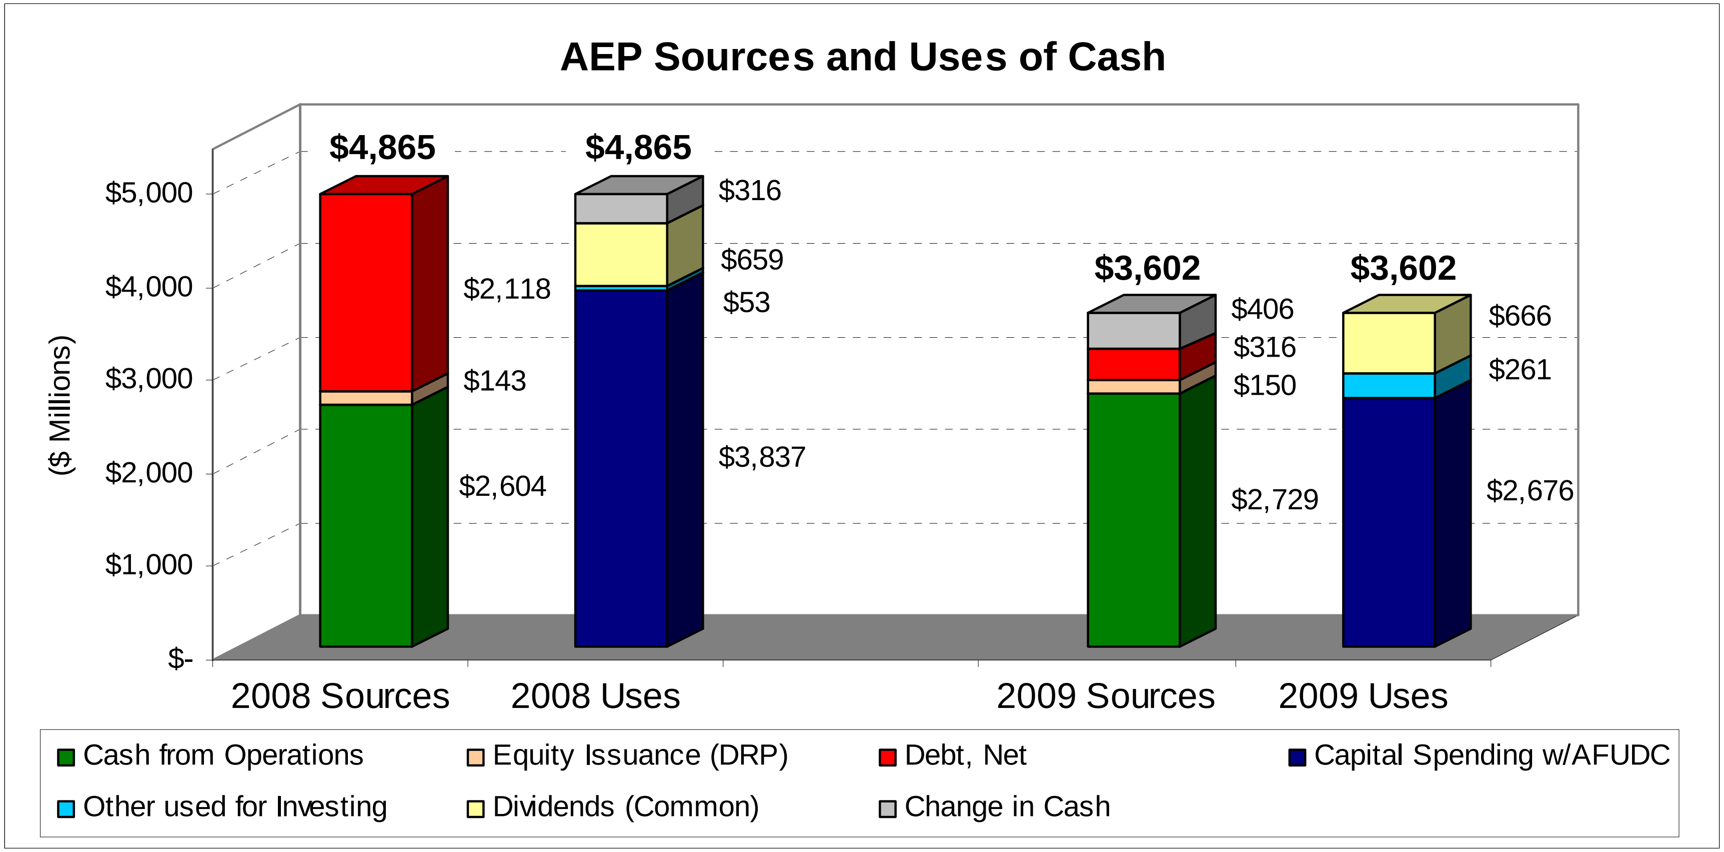
Coal Purchases:
2009: 95+%
2010: 85+%

Del. Coal Prices:
2007A: $36.58/ton
2008E: $46.82/ton

2009 estimated
increase: 12%-15%

- Coal price represents standard NYMEX contract specifications with a heat content of 12,000 Btus/lb
- 10,000 heat rate used for conversion
- Coal and peak electricity prices reflect market prices for calendar year 2009 delivery on the business dates given above

2008 & 2009 Cash Flow Forecast



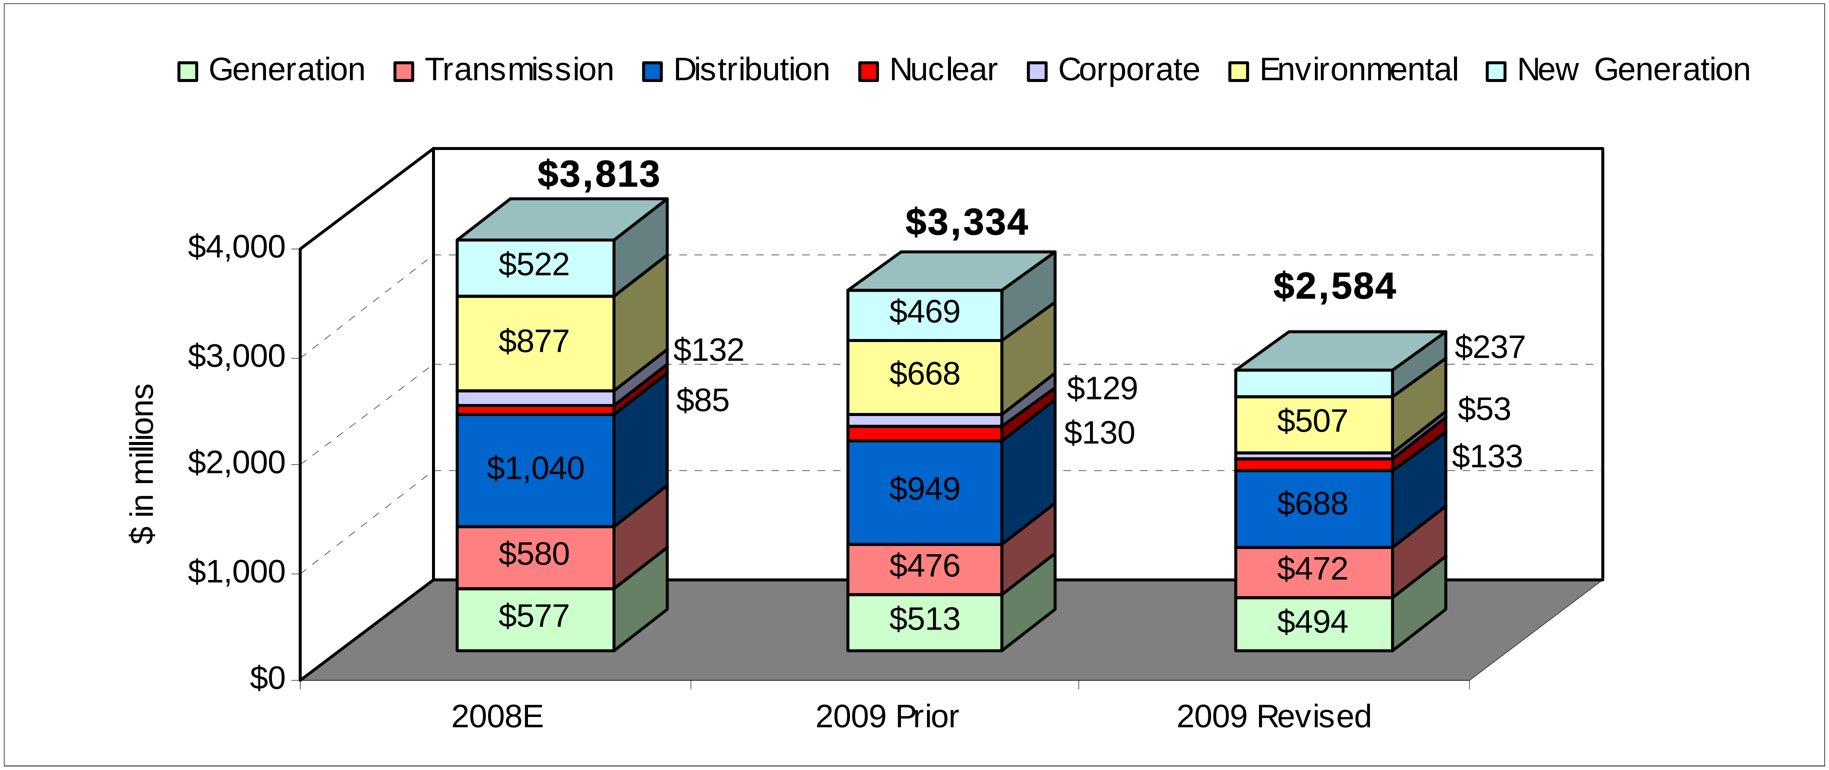
Capital spending closely matches cash flow from operations in 2009.

AMERICAN ELECTRIC POWER

STRONG
FLEXIBLE
ADAPTABLE

2008 & 2009 Capital Spending

- Capital expenditures for 2009 will be cut by $750 million from previous guidance.



The reduction in capital spending will significantly reduce our need to access capital markets in 2009.

Pension and OPEB Estimate

- The Pension plan and OPEB funds investment returns are each down about 25% YTD as of October 16, 2008. The drop in assets is mitigated slightly by a corresponding decrease in plan liability caused by a higher discount rate (from 6% to 7% for pensions and from 6.25% to 7.25% for OPEB).
- Investment losses increase plan expense for both pension and OPEB, but the investment losses are smoothed in over several years.
- OPEB contributions will increase along with OPEB expense, in accordance with agreements in most of our regulatory jurisdictions.
- As of October 16, 2008, we expect 2009 pension expense to increase $10MM over 2008 and the estimated OPEB expense to increase $30MM year over year.
- These increases are reflected in our current guidance.
- We are currently not expecting any mandatory contributions to pension in 2009.

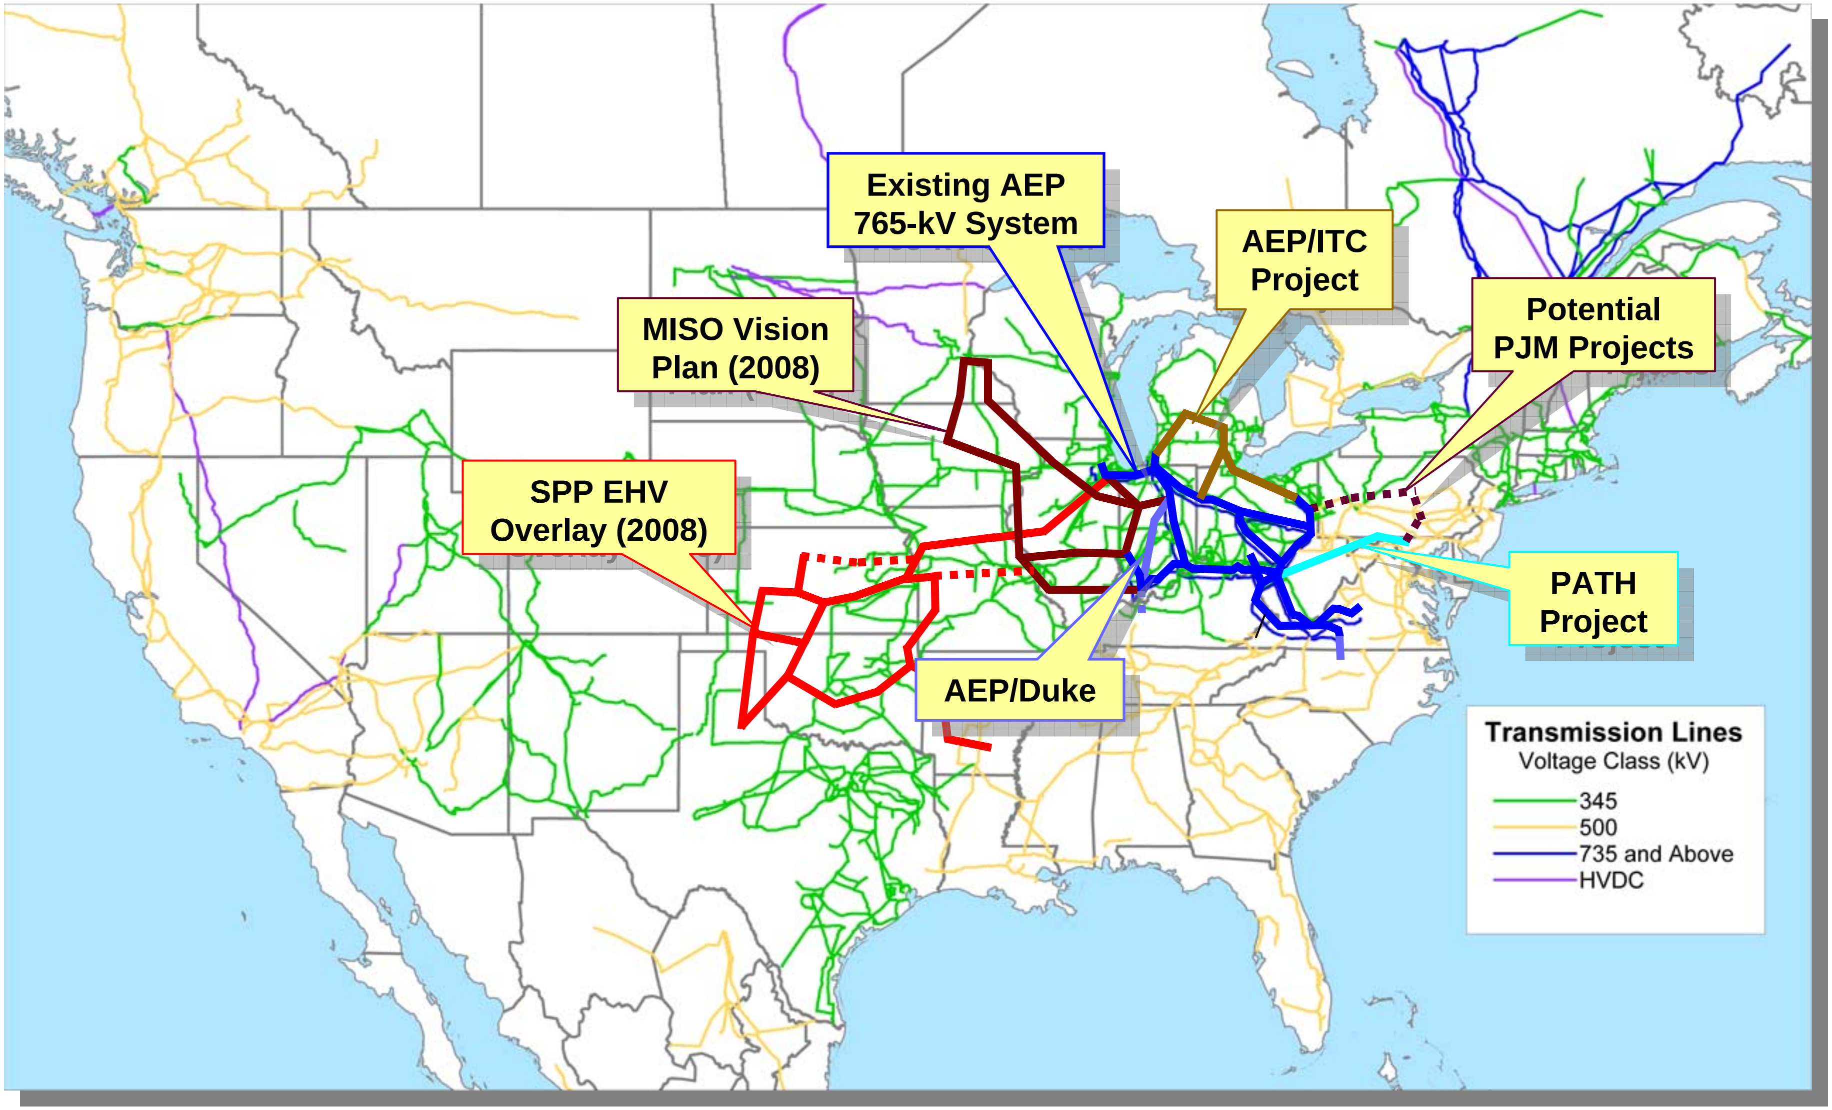
Making it Happen: EHV Projects Under Development



NOTE: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

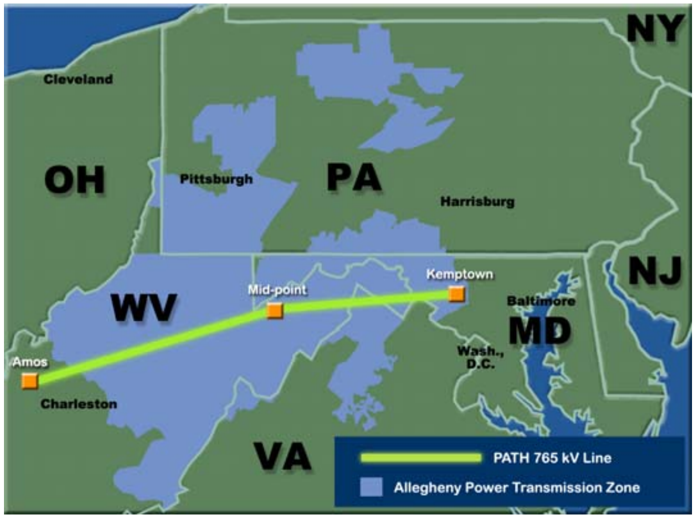
EHV Transmission in PJM: PATH

PATH Progress to Date

- PJM approved project in its Regional Transmission Expansion Plan in June 2007
- On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries
- FERC order issued on February 29, 2008 approving:
  - Cash return on CWIP and 14.3% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect, and
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
- FERC ordered the formula rate mechanism be set for hearing, pending settlement judge procedures
- In October 2008, PJM announced a reconfiguration of the PATH line which will eliminate the connection with the Bedington substation and the twin-circuit 500-kV lines from Bedington to Kemptown, and include a new mid-point substation near existing PATH alternative routes
  - The reconfiguration is a result of constraints identified as a result of comprehensive siting studies; interaction with government agencies; public input; and a desire to identify a solution that reduces line mileage and minimizes the impact on communities and the environment.
- Total estimated cost of $1.8 billion; AEP portion approximately $600 million

Key Challenges

- CPCN and Siting Approval from WV and MD



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

PATH
Potomac-Appalachian Transmission Highline

Joint Ventures with MidAmerican Energy Holdings Company

Electric Transmission Texas Update

- 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
- ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
- Services provided by AEP and investment opportunities can be offered by either partner
- Total initial investment of $70 million before ownership division
- In October 2008, the District Court found that the PUCT exceeded its authority by granting ETT a CCN. This decision is currently under appeal and ETT believes the ultimate outcome will validate its utility status.

Electric Transmission America Update

- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.
  - In 2008, ETA signed agreements with Westar Energy and OGE proposing to build the first and second segments of the 765-kV Overlay Plan in SPP

AMERICAN ELECTRIC POWER

STRONG

Texas CREZ Project

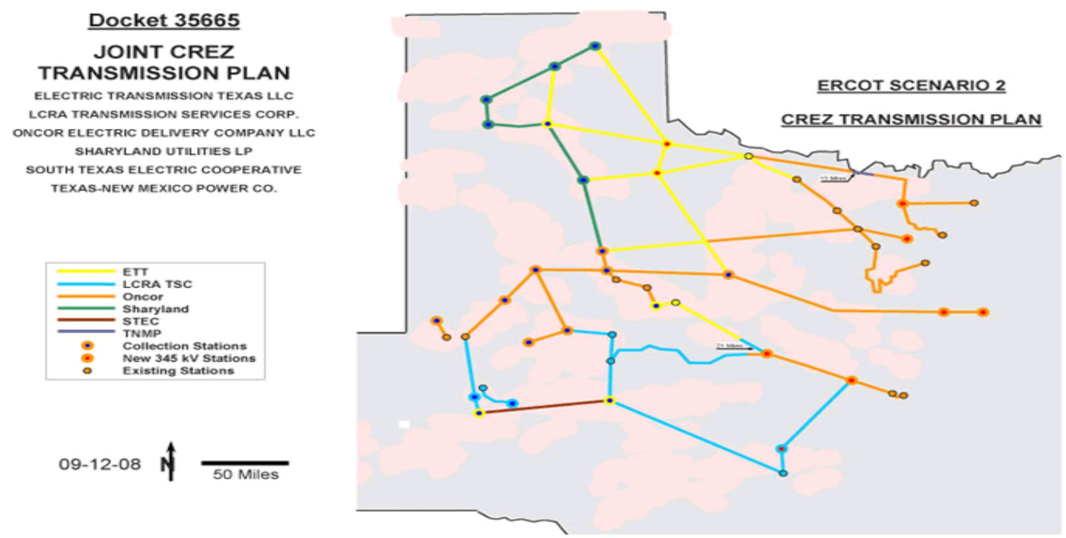
Strengthening the ERCOT grid to collect and deliver wind generation to load

❑ *Overview*

- ❑ In September 2008, ETT and a group of other Texas transmission providers filed a comprehensive plan with the PUCT for completion of the CREZ facilities approved by the Commission.
- ❑ ETT's requested share of the coordinated plan is approximately $1.5 billion. Staff testimony in October 2008 recommended ETT's share at $1.2 billion.
- ❑ The filing calls for completion of the plan by 2012.

❑ *Next Steps*

- ❑ Selection of transmission providers – 1Q 2009



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

ETT
Electric Transmission Texas

EHV Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- ***Overview***
  - Sent non-binding Letter of Commitment to SPP to construct 765-kV and 500-kV projects in SPP region consistent with SPP Overlay Study – Summer 2007
  - Updated EHV Overlay Study completed by SPP – March 2008
- ***Benefits***
  - Overall reliability reinforcement with improved voltage support throughout the SPP system
  - Significantly increased transfer capability
  - Provides access to new generation resources, especially renewables
  - Allows for effective interconnections for EHV system development

Figure 25: Mid Point Design 2

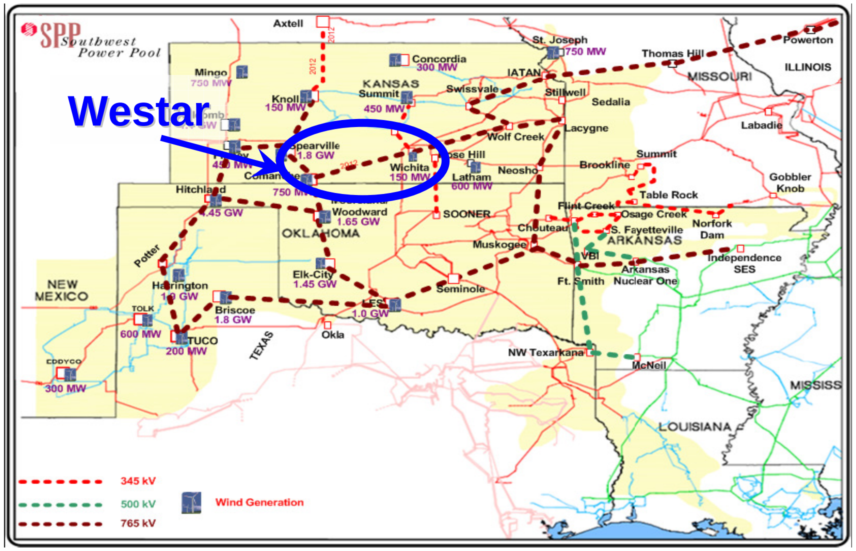
Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Prairie Wind Transmission, LLC

JV to build first segment of 765-kV transmission in SPP

- ***Overview***
  - In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
  - PWT is a 50/50 JV that is proposing to build approximately 230 miles of 765-kV lines extending from Wichita, KS, west to a substation northeast of Dodge City, KS, and then south to the Kansas border from Medicine Lodge, KS.
  - The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
  - Project is expected to cost approximately $600 million (based on SPP estimates) and be in-service by 2013.
  - AEP's ownership of the joint venture is 25%.
  - Kansas CPC filing submitted in May 2008.
  - FERC order received in December 2008:
    - Cash return on CWIP and 12.8% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PWT or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

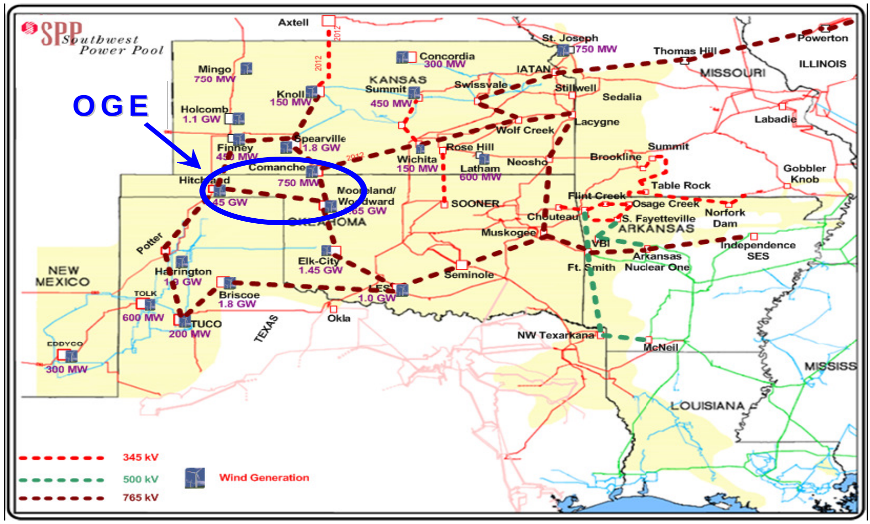
- ***Key Challenges***
  - Cost allocation which enables the development of "system solutions"
  - RTO Approval

Tallgrass Transmission, LLC

JV to build second segment of 765-kV transmission in SPP

❑ *Overview*

- ❑ In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
- ❑ TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines extending from the Kansas-Oklahoma border north of Woodward, OK, extending west into the Oklahoma panhandle to a new station that will be built near Guymon, OK.
- ❑ The project will promote wind development in the western half of Oklahoma.
- ❑ Project is expected to cost approximately $500 million and be in-service by 2013.
- ❑ AEP's ownership of the joint venture is 25%.
- ❑ Other responsibilities will be handled by the partners or outsourced.
- ❑ FERC order received in December 2008:
  - ❑ Cash return on CWIP and 12.8% incentive ROE
  - ❑ Recovery of all costs incurred prior to the time rates go into effect, and
  - ❑ Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of TG or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

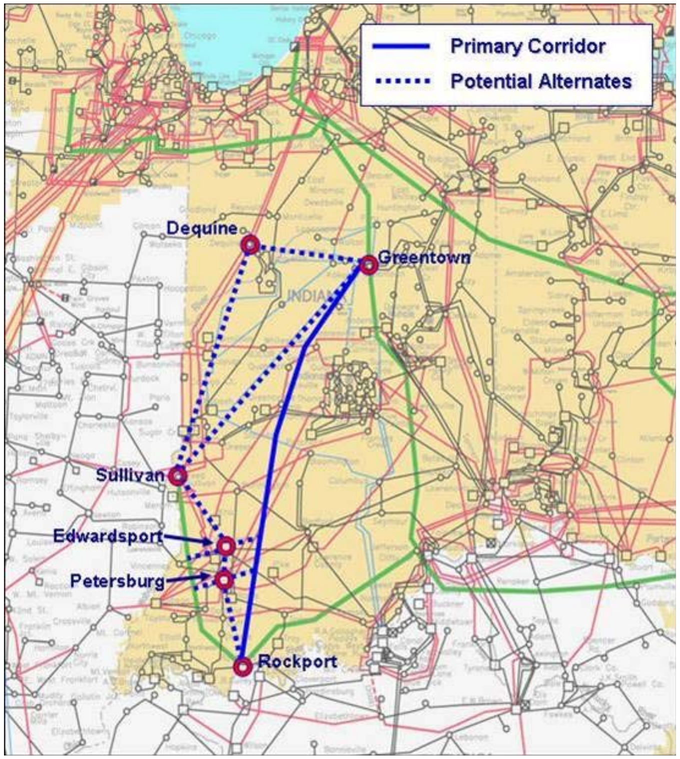
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

❑ *Key Challenges*

- ❑ Cost allocation which enables the development of "system solutions"
- ❑ RTO Approval

Pioneer Transmission, LLC

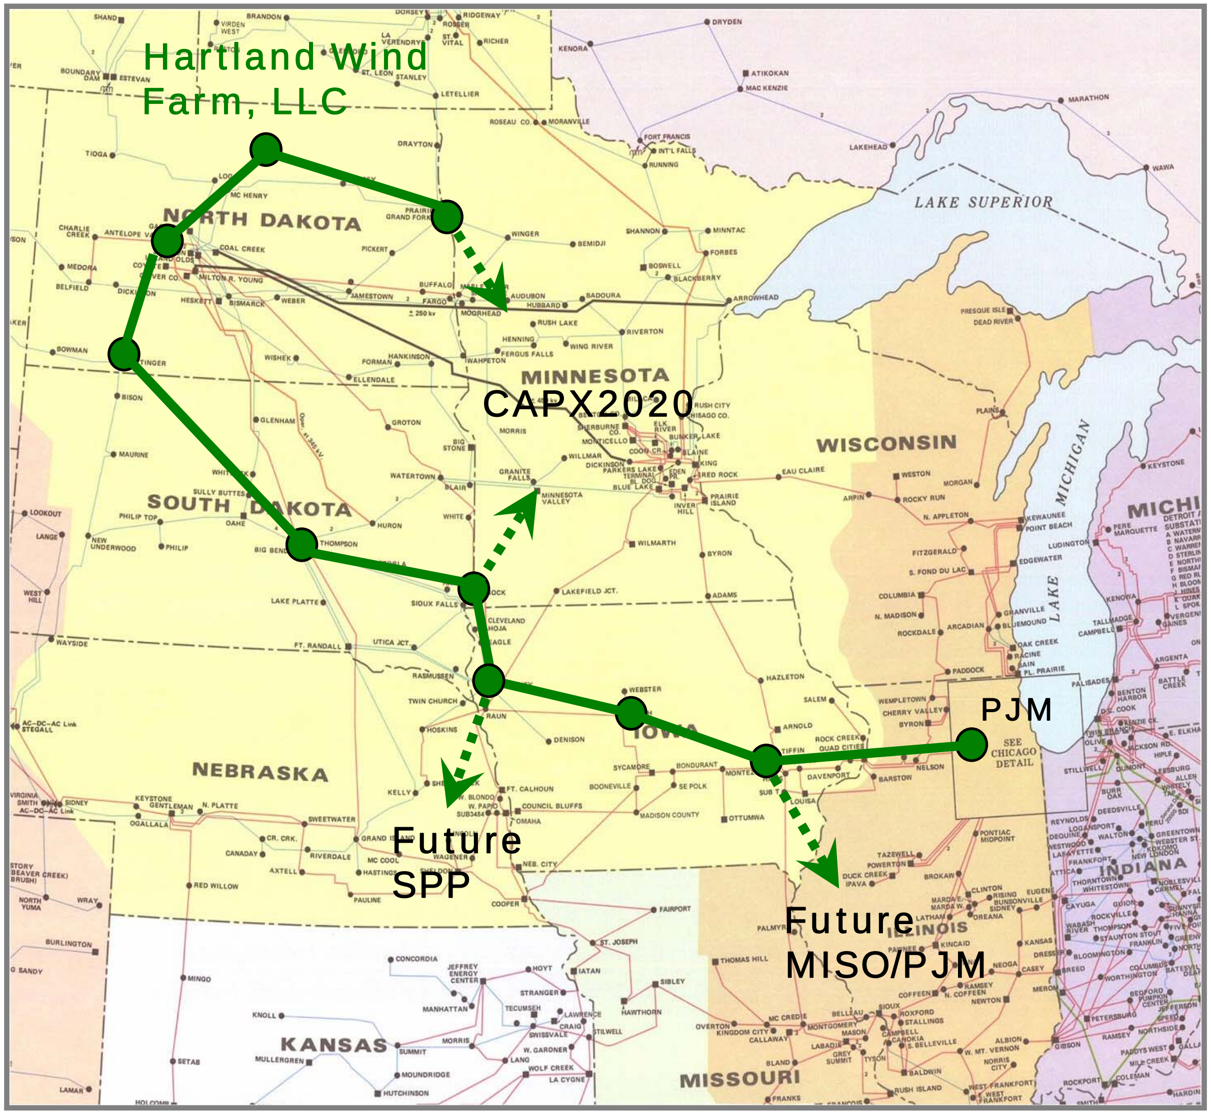
- ***Overview***
  - In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
  - PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
  - The project will improve the reliability of the nation's transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, protect national security and expand opportunities for new generation, including renewables.
  - Project is expected to cost approximately $1 billion and be in-service by 2015.
  - AEP's ownership of the joint venture is 50%.
  - Other responsibilities will be handled by the partners or outsourced.
  - FERC formula rate filing submitted in October 2008 requesting:
    - Cash return on CWIP and 13.5% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PT or its parents.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected.

- ***Key Challenges***
  - Cost allocation which enables the development of "system solutions"
  - RTO Approval
  - Siting

EHV Dakota Project – Conceptual View



- ❑ ~1,200 miles of 765-kV line
- ❑ ~10 stations
- ❑ ~$5-10 billion

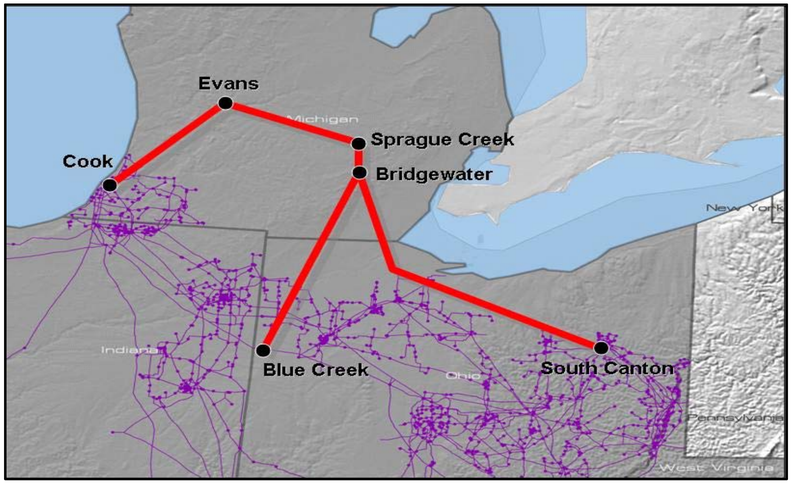
Next Steps:

- ❑ Public outreach and advocacy in the Dakotas and Iowa beginning January 2009.
- ❑ Assess project feasibility and integration with MISO long-term plans.
- ❑ Continue discussions with interested utility & renewable parties on potential partner agreements.

EHV Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- ***Overview***
  - ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
  - Study was released Q3 2007
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.6 billion investment (in 2007, before ownership division)
  - AEP and ITC are in discussions to form a Joint Venture
- ***Benefits***
  - Up to 5,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- ***Key Challenges***
  - Cost allocation which enables the development of "system solutions"
  - RTOs Approvals



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

The Next Administration—Energy and the Environment

- ❑ **Energy Legislation -- A First Priority**
  - For Electric Utilities: Federal RPS Likely

- ❑ **Climate Legislation -- Also a Priority**
  - Passage Complex

- ❑ **Further Air Emissions Requirements --SO_2, NOx, and Mercury???**

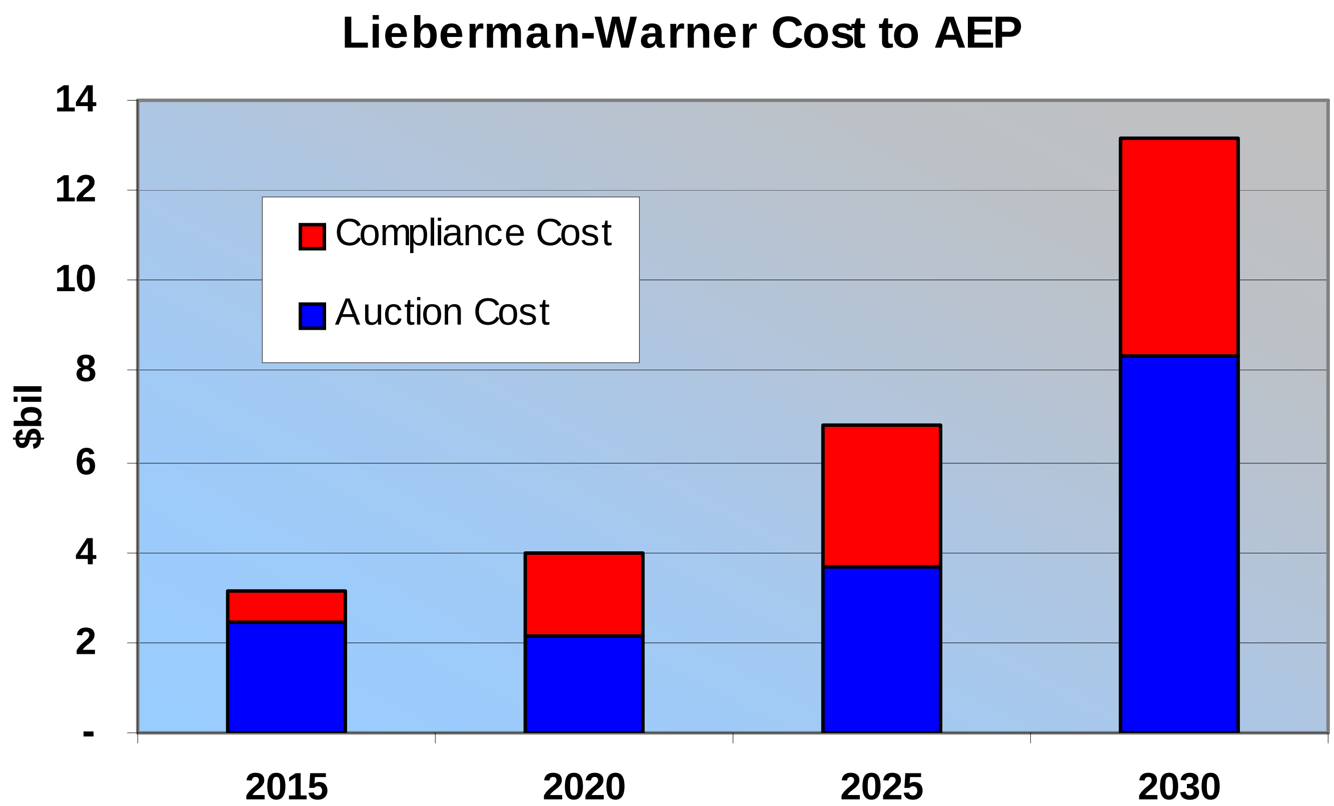
Annual AEP Cost Increases



The cost and rate impacts of Lieberman-Warner are very large, particularly due to increasing levels of auctions over time. <u>Auction purchases account for more than two-thirds of total costs.</u>

AEP AMERICAN ELECTRIC POWER

Investor Meeting

September 23, 2005

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

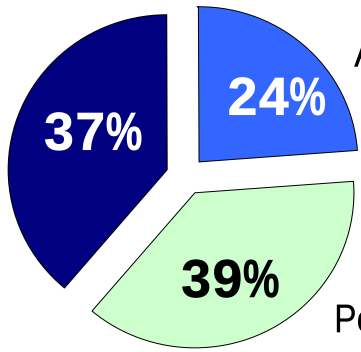
Coal Procurement

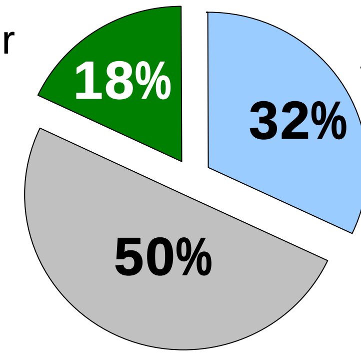
AEP SYSTEM



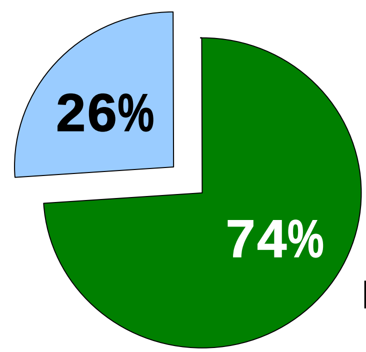
Coal Supply
(on average)

- ➢ Purchase 75 MM tons per year
- ➢ Avg. delivered price ~ $28.50/ton in 2004
- ➢ Essentially 100% purchased for 2005
- ➢ Approximately 12%-14% price increase in 2005
  - Increase being pressured by strong burn
  - PRB deliveries will impact results

EASTERN SYSTEM

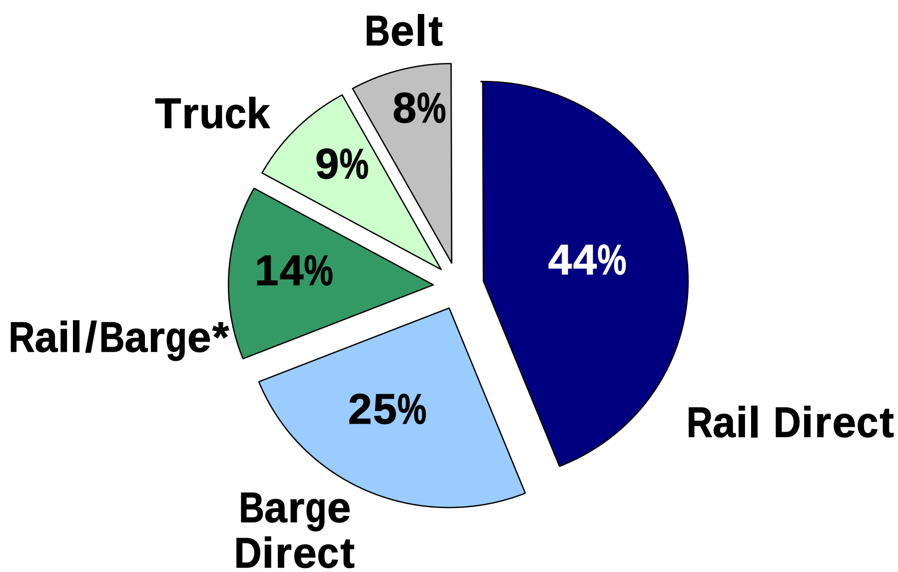


WESTERN SYSTEM

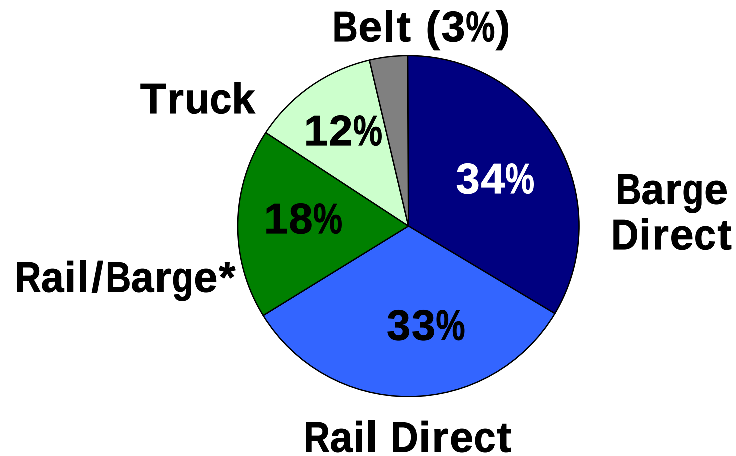


Coal Delivery Mix

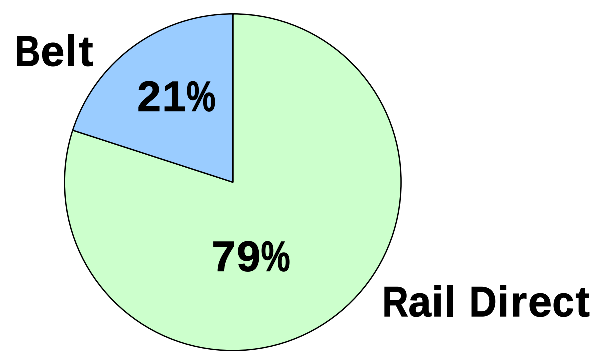
AEP SYSTEM DELIVERY MODE DIVERSITY
Jan-June 2005 Actual



EASTERN SYSTEM
Jan-June 2005 Actual



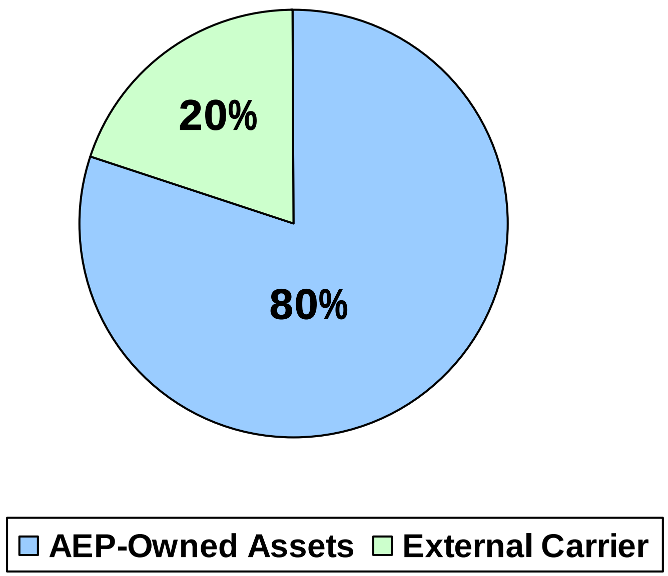
WESTERN SYSTEM
Jan-June 2005 Actual



* Coal delivered to AEP plants transported through combination of rail and barge

AEP's Coal Transportation Assets

Coal Transportation to AEP Plants*
Jan-June 2005 Actual



* Represents close approximations

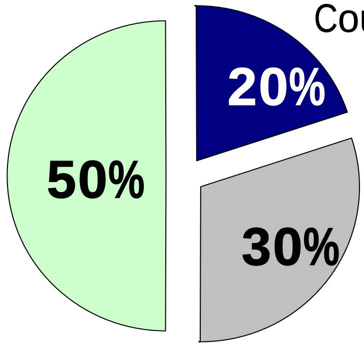
AEP's substantial coal transportation assets include:

- 7,065 railcars
- 2,230 barges
- 53 towboats
- 1 active coal handling terminal (20 million tons of annual capacity)

AEP'S TRANSPORTATION ASSETS PROVIDE FLEXIBILITY IN A CONSTRAINED DELIVERY ENVIRONMENT

Fuel Recovery

AEP SYSTEM



Fuel Cost Recovery
(on average)

- Fuel recovery varies by jurisdiction
- 70% of fuel cost is recoverable across the AEP System
- Active Fuel Clause Jurisdictions:

AEP EAST: AP-VA, I&M, KGP, KP
AEP WEST: PSO, SWEPCO

Investing in IGCC

Ohio IGCC Procedural Schedule

- **August 16, 2005: Evidentiary Hearings Concluded**
- **September 20, 2005: Initial Briefs Due**
- **October 11, 2005: Reply Briefs Due**

Generation Technology Comparative Stats

	PC	IGCC	NGCC
Nominal Capacity (MW)	600	600	530
Heat Rate (BTU/kWh)	8700	8600	7200
EPC cost* ($/kW)	1290	1350	440
Total Plant cost** ($/kW)	1490	1610	475
Variable Production cost*** ($/MWh)	15	14	38
All-In Cost of Electricity (without CO2 Capture) ($/MWh)	47	50	57
Estimated Cost of Electricity (with CO2 Capture) ($/MWh)	76	70	91

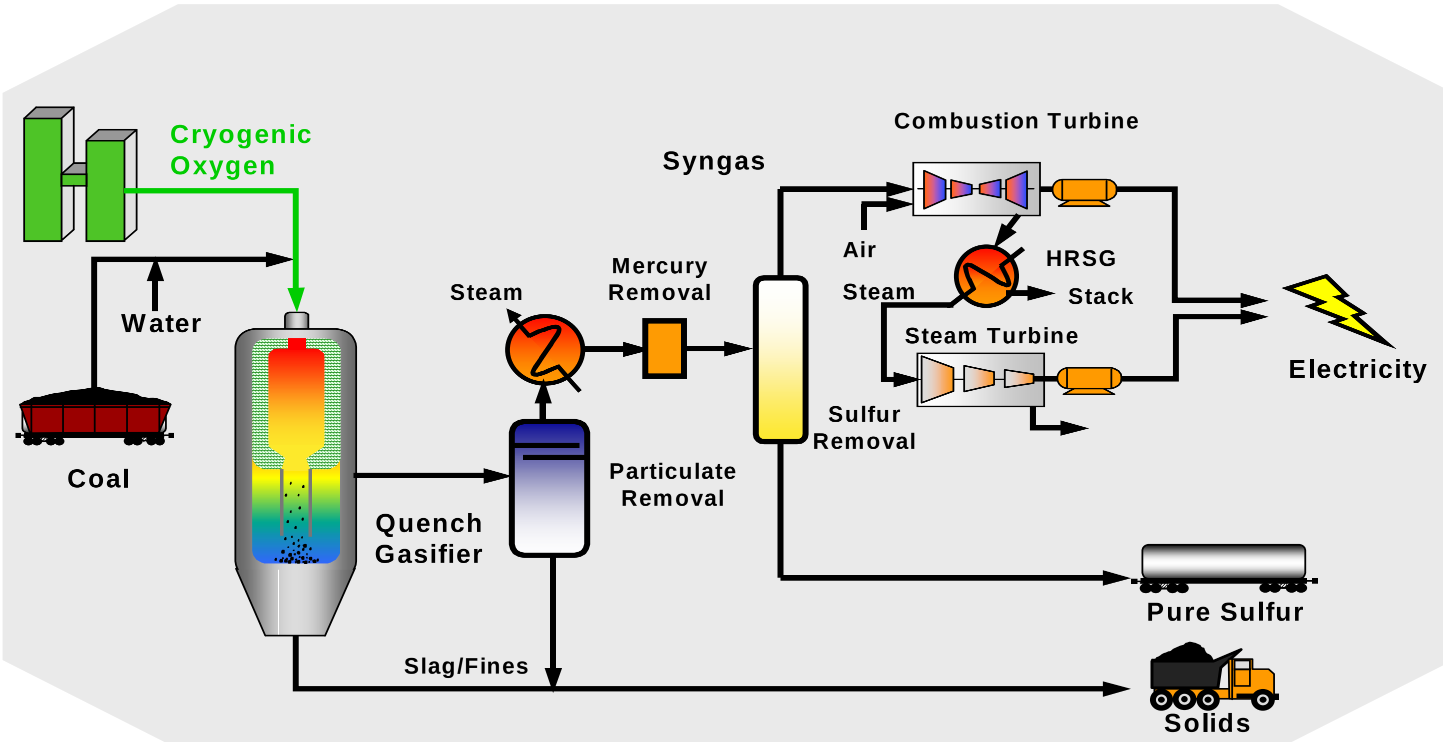
Source: Electric Power Research Institute

* EPC includes the cost to engineer, procure and construct plant.

** Total plant cost include land, overheads, AFUDC, etc.

*** Assumes Northern App Coal @ $36/ton, no emission credits and $5.00 gas

Looking to the Future - IGCC



162110 - GJS/CE-01/1-23-02

AEP has announced its intention to construct a commercial-scale Integrated Gasification Combined Cycle (IGCC) Plant by the end of the decade.

Site Selection Considerations

- Brownfield site vs. Greenfield site
- Sufficient Space
  - Flat area with adequate construction access
  - 600 acres
- Fuel delivery options
  - Rail/barge/truck
  - Up to 4 million tons/year of coal
  - Access to water
- Transmission Line Costs
  - Distance from high-voltage lines
  - Costs for grid interconnects and stability impacts

PJM EVALUATION REQUESTED FOR 3 POTENTIAL SITES

IGCC Permitting Issues

- Air – to evaluate best available control technology (BACT)
- Wastewater – to understand wastewater streams
- US COE (Corp of Engineers) – to obtain permits for construction of river facilities
- NEPA Process – (National Environmental Policy Act)– Environmental site studies addressing wetlands, endangered species, historical artifacts

PERMIT PROCESS WILL TAKE 1 - 2 YEARS

Next Steps

2005

- ➢ Secure cost recovery plan – Summer
- ➢ Finalize site selection - Fall
- ➢ Negotiate with suppliers – Throughout 2005

- ➢ 2005—2007: Obtain permits and finalize engineering and procurement

- ➢ 2008—2009: Construct and start-up plant

AEP WILL PIONEER CONSTRUCTION OF LARGEST IGCC PLANT IN THE WORLD

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 8740 of 9556

Environmental Rules

Clean Air Interstate Rule

- Rule Finalized March 2005
- CAIR designed to address the contribution of regional emissions to downwind $PM_{2.5}$ & 8-hour Ozone non-attainment
- CAIR reductions from 2003 emissions: ~73% SO_2; & ~61% NO_x
- Reductions occur in phases: Phase I (2009); Phase II (2015)
- CAIR established three Cap & Trade Programs:
  1. Annual SO_2 Trading Program
  2. Annual NO_x Trading Program
  3. Separate Ozone-Season only NO_x Trading Program

CAIR Applicability to AEP

- AEP-East States & Louisiana subject to <u>all</u> three trading programs
- Arkansas subject <u>only</u> to the Ozone-Season trading program
- Texas subject to <u>only</u> the Annual NO_x & SO_2 trading programs
- CAIR does <u>not</u> apply to Oklahoma

AEP WILL HAVE TO INSTALL ADDITIONAL SCR AND FGD SYSTEMS IN ORDER TO MEET THE EMISSION REDUCTIONS REQUIRED BY CAIR

Mercury Rule

- Rule Finalized March 2005
- Designed to reduce mercury emissions by ~70% nationwide from electric utilities
- Reductions occur in phases: Phase I (2010); Phase II (2018)
- Establishes a Cap & Trade structure to achieve mercury reductions

AEP WILL ACHIEVE SOME MERCURY REDUCTIONS AS A CO-BENEFIT OF SCR AND FGD SYSTEMS, BUT MERCURY SPECIFIC CONTROL EQUIPMENT WILL BE NEEDED ON SOME UNITS

Environmental Investment

AEP's Environmental Compliance Strategy

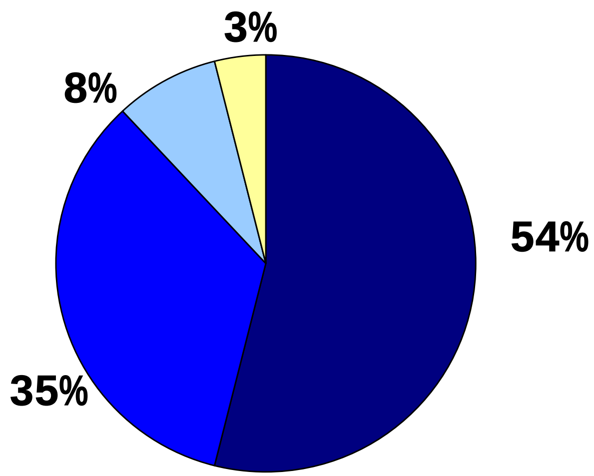
NOx and SO_2 emission reductions are part of AEP's on-going strategy to comply with the Clean Air Act, Title IV regulations, the Clean Air Interstate Rule (CAIR) and the Clean Air Mercury Rule (CAMR).

- **Much of this investment will be for:**
  - **Selective catalytic reduction (SCR) systems to reduce nitrogen oxide emissions by 90%.**
  - **Flue gas desulfurization (FGD) systems (scrubbers) to reduce sulfur dioxide emissions by 98+%.**
  - **SCR and FGD systems together offer co-benefit of mercury capture.**
  - **Sale of gypsum (by-product) avoids future landfill costs.**
  - **Provides fuel flexibility.**

Represents the best and least-cost compliance path to improve environmental performance on a fleet basis, while continuing to provide a reliable supply of power to customers at a reasonable price and a solid return for investors.

$4.1 Billion Environmental Investment: Spending by Company

Projected Environmental Investment Allocation



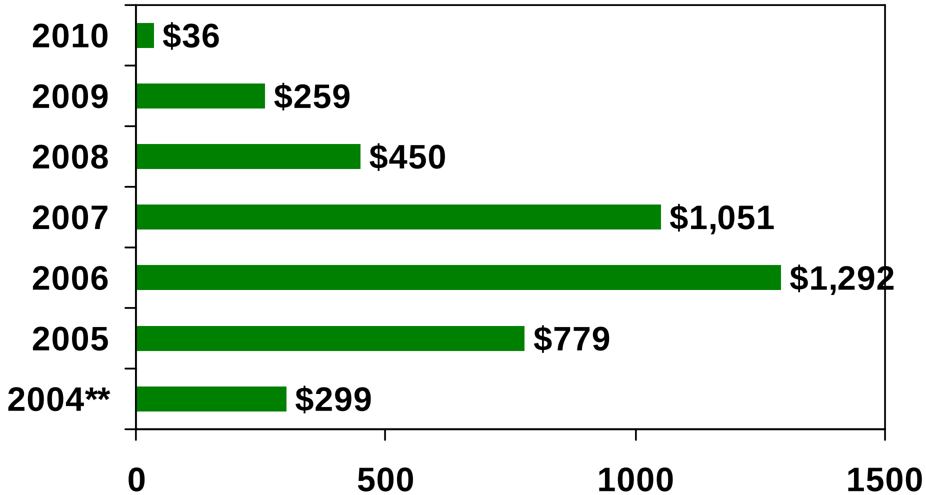
- Ohio Power & CSP (OH)
- Appalachian Power Co. (VA/WV)
- Kentucky Power Co. (KY)
- Other

Funding the Environmental Investments

- **Ohio**: 54% ($2.2 billion)
  - Approved annual increases 2006-2008
    - CSP – 3% annually
    - OP – 7% annually
- **Virginia/West Virginia**: 35% ($1.4 billion)
  - VA: Annual rate relief through Environmental & Reliability cost recovery mechanism; Two rate case opportunities through 2010
  - WV: General rate increase filed 8/26/05 including environmental, reliability & fuel recovery
- **Kentucky**: 8% ($319 million)
  - Automatic surcharge mechanism

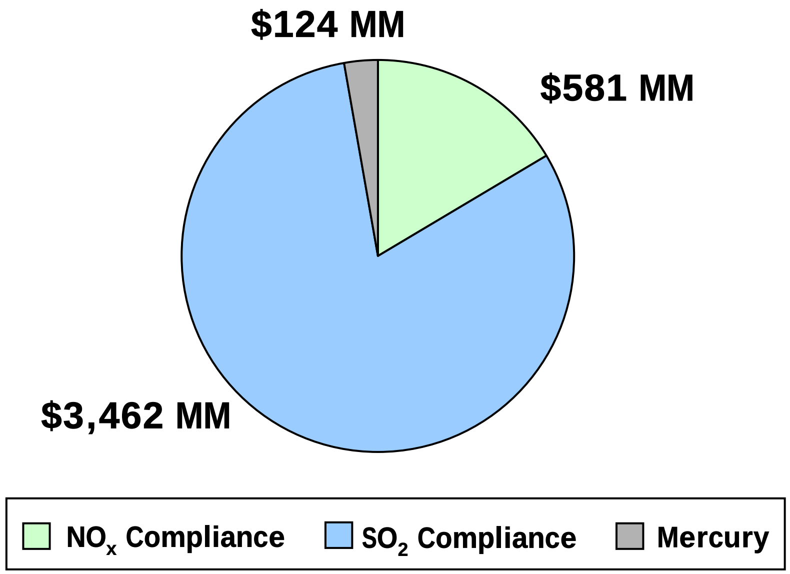
Environmental Investment: $4.1 Billion Through 2010

Environmental Capital Investment*



*Environmental investment for NOx, SO_2 , & Hg purposes
** Actual investment level in 2004

Compliance Allocation



Current Programs
$2.0 Billion:
$0.5 billion for NOx
$1.5 billion for SO_2

Future Programs
$2.1 Billion:
$1.9 billion for SO_2
$0.2 billion for Other

MAJORITY OF 2005 & 2006 DOLLARS WILL BE INVESTED IN OHIO & APCO

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests

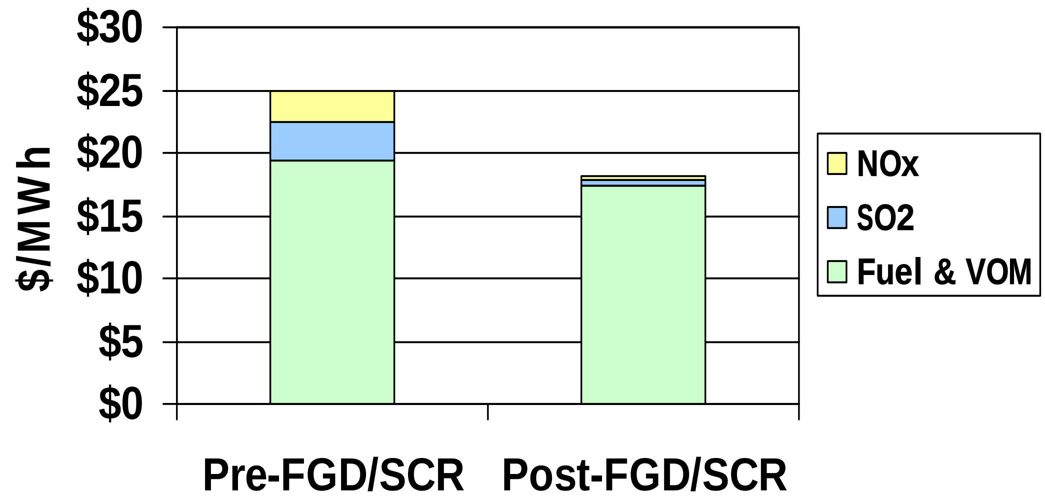
Page 8748 of 9556

Low Cost Production Supports Investment & Investment Sustains Low Cost Production

- Lowers exposure to high cost emission allowances
- Creates opportunity to burn wider variety of lower cost fuels
- Improves baseload operation (higher capacity factor, higher margin)
- All-in cost of electricity, including FGD/SCR investment, remains low

Typical Pulverized Coal Plant
Comparison of Variable Production Cost
Pre- and Post- FGD/SCR (future view)*



* Assumes annual NOx program

AEP WILL REMAIN THE LOW COST PRODUCER FOLLOWING COMPLETION OF ENVIRONMENTAL RETROFIT PROJECTS

Environmental Investment

	FGD	SCR

Completed

FGD:

Plant Name	MW Capacity

Plant Name	MW Capacity
Mitchell 1 & 2	1600
Conesville 4	339
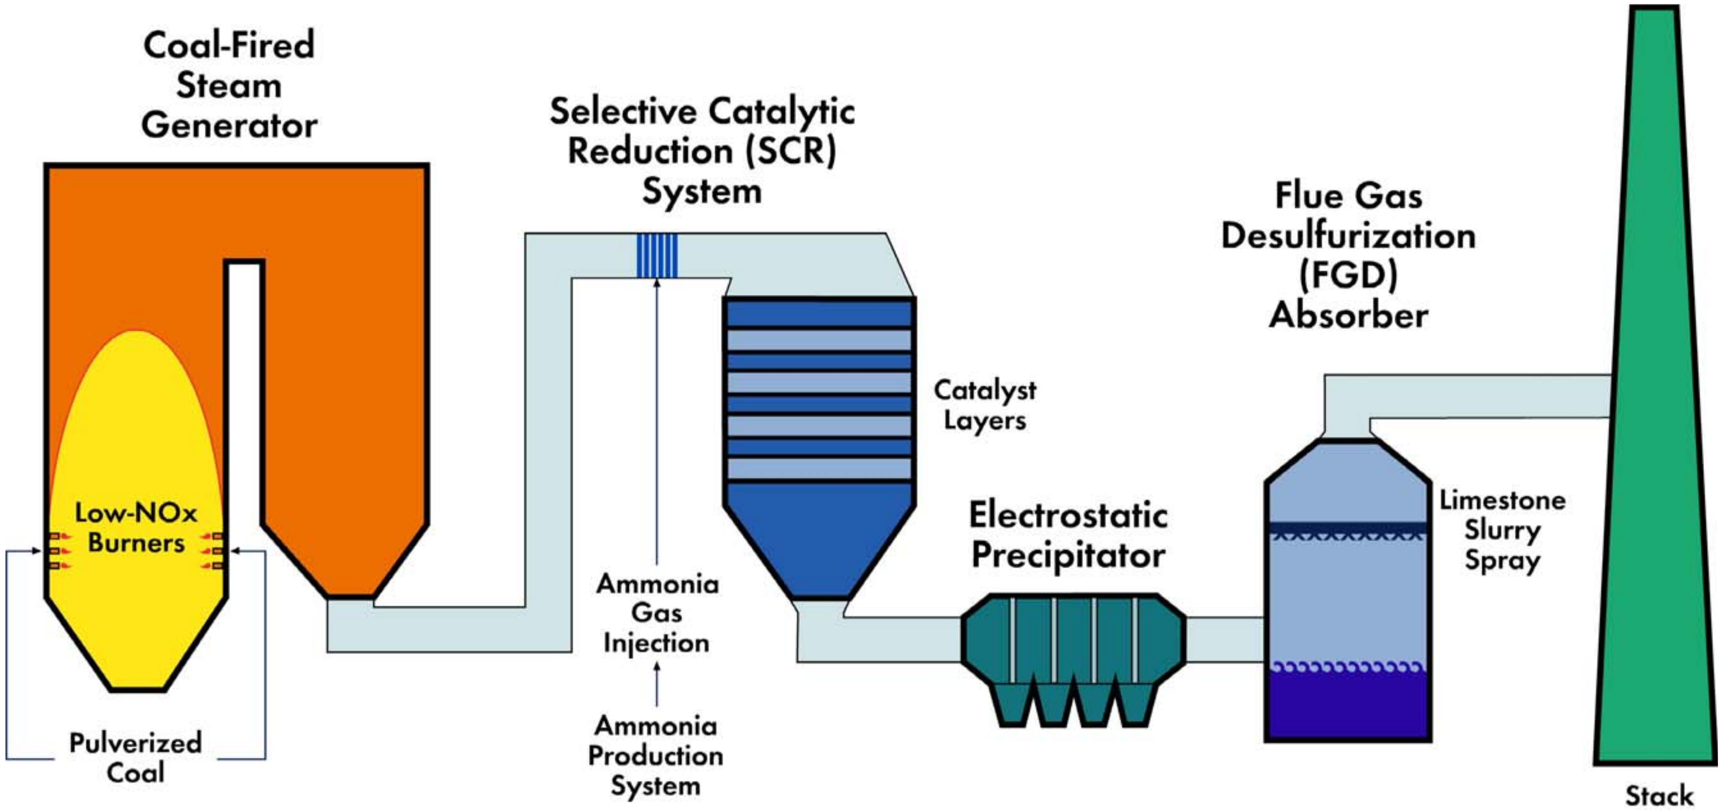
Total	**1939**

2006 - 2009

Note: MW capacity shown represents AEP's owned capacity only

The Flue Gas Stream



Materials and Vendors

Material Costs

- **The primary materials used during construction are steel and alloys, the cost of which is volatile. We closely monitor the cost of such materials and strive to proactively manage our cost exposure.**

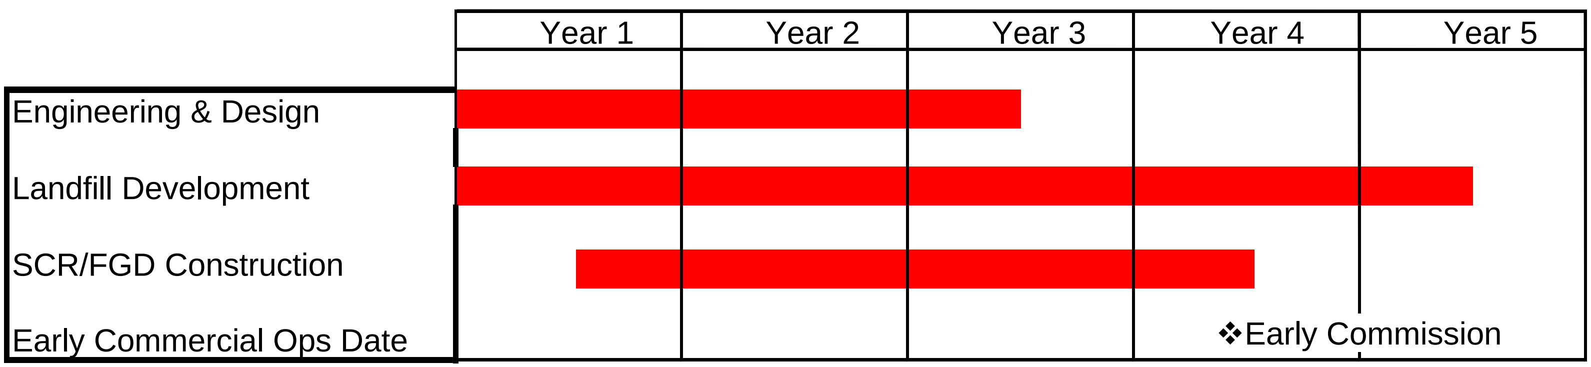
Typical Vendors

- **FGD**
  - **B&W**
  - **Alstom**
  - **B & V Chyioda**
- **SCR**
  - **Babcock-Riley Power**
- **Stack Supplier**
  - **Pullman Power Inc.**

Typical FGD/SCR Project Milestone Schedule

- **Phased Execution**
  - Lessons Learned: Focus on performance/risk management/cost
  - Phase 1 Feasibility Study, Phase 2a Conceptual design, Phase 2b Detailed design, bid Phase 3 Construction At 30 – 60 % design complete

- **Typical Plant and Landfill Schedule for Engineering, Procurement, Permitting, and Construction**
  - A new landfill requirement can be the critical path



Impact of SCR and FGD on Net Generation

- **The overall generation loss in capacity associated with SCR and FGD for the entire AEP fleet is roughly 600MW.**
- **Typically, an SCR consumes approximately 1% whereas an FGD consumes from 1.5% to 3.0% of the plant electricity output.**

PLANT MODIFICATIONS WILL MITIGATE FGD AND SCR CAPACITY CONSUMPTION

765-kV Transmission Line

345-kV Transmission Line

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms, and our ability to recover significant restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance or the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of flyash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including our dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events.

AEP AMERICAN ELECTRIC POWER®

Susan Tomasky, President AEP Transmission

A Changing Landscape

- National energy policy will inevitably drive significant changes in the nation's supply portfolio.
- A national Renewable Energy Standard and CO_2 legislation will impact all states, and the ability to effectively comply with these policies is reliant on a transmission system built to adapt to changes.
- Renewable resources pose significant operational challenges. A robust and flexible transmission system is critical to making sure those challenges do not jeopardize reliability to customers.
- Large scale "backbone" transmission takes several years to permit and construct – without transmission being built <u>first</u>, much of the planned renewable generation will not be developed.
- AEP believes that development of an interstate backbone transmission grid – analogous to the interstate highway system – is necessary to meet our nation's energy goals.

AEP AMERICAN® ELECTRIC POWER

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 8758 of 9556

Today’s Challenge

- Why Change Now?
  - Dramatic shifts in generation profile.
  - Electrically isolated large scale renewables need to be interconnected and efficiently delivered.
  - Environmental requirements are likely to force retirement of large fossil units, potentially at a magnitude never before faced in this country.
  - The search for a “bright line” between reliability and economic transmission projects is increasingly artificial.
- What Needs to Change?
  - Planning for a new energy supply paradigm.
  - Cost allocation principles to encompass a strategic expansion of transmission.
  - Siting processes which are aligned with state, regional and national energy policy objectives.
- “What got us here won’t get us there.”

AMERICAN ELECTRIC POWER

Planning & Building Smarter

- Advance a long-term, strategic "system-based" approach to transmission planning.

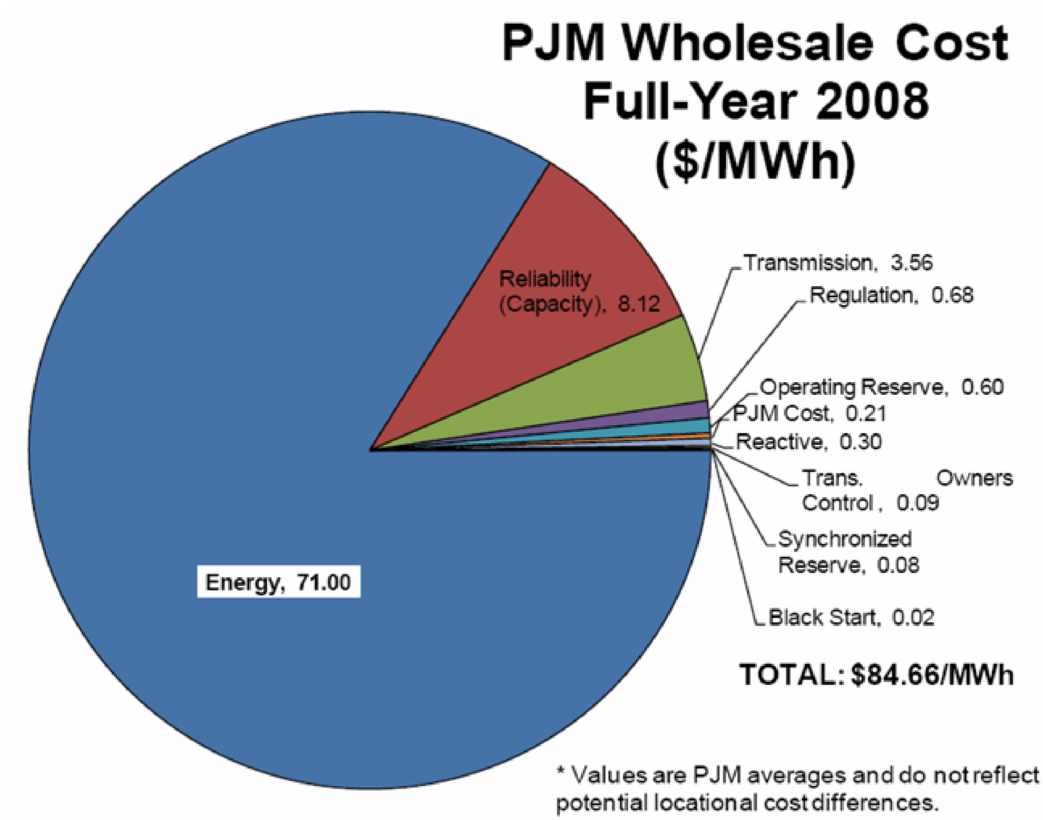
- Transmission grid should be adaptable to address:
  - Policy driven goals to interconnect and ensure efficient deliverability of renewables.
  - Facilitate the retirement of aging and expensive resources.
  - Regional availability of resources and operational requirements of the grid.

- Extra-high voltage (EHV) planning is needed both "within and between" traditional planning regions with:
  - Consistent planning criteria applied to EHV transmission.
  - Regional and inter-regional planning efforts and consensus on transmission development goals.
  - Longer time horizons to ensure development of strategic as opposed to "band-aid" solutions.

AEP AMERICAN® ELECTRIC POWER

Fair Allocation of Costs & Benefits

- Transmission represents a very small part of the customer bill.
- Substantial investments in transmission have a small impact on customer bills.
- Transmission expansion facilitates lower delivered energy costs due to:
  - Increased competition and less constrained markets.
  - Reduced energy losses.
- Studies often show transmission can pay for itself, provided costs are broadly allocated.



AMERICAN ELECTRIC POWER

Development Needs

To make significant strides in developing clean, domestic energy and reducing emissions, we as a nation need:

- National energy policy with specific goals and guidelines, particularly as it relates to renewables and CO_2.
- Federal planning authorities that can mandate RTOs, utilities, or other planning entities to develop long-term, interconnection-wide transmission plans that will facilitate national energy goals.
- Mandates to develop reasonable regional and interregional cost allocation methodologies to support EHV transmission that is in the national interest.
- Support for the siting of national-interest transmission lines where necessary.
- Benchmarks to check progress of plans and ensure timely construction.

AEP AMERICAN® ELECTRIC POWER

AEP's Transmission Investment Opportunities

- **AEP Transmission Company (Transco): Within our existing footprint**
  - Provides opportunity to:
    - Develop new AEP-only projects within AEP's footprint
    - Reduce regulatory lag through FERC formula rates adjusted annually
    - Enhance access to capital
    - First year investment opportunity--$121MM
- **Electric Transmission Texas (ETT): Projects in Texas ERCOT jurisdiction**
  - Framework in Texas allows for more expeditious siting and recovery
  - $600MM of projects est. in service 2010-2013
  - ETT's opportunity could reach $3.0B within this decade
- **Joint Ventures (JVs): Outside of our footprint, with Electric Transmission America (ETA) or others**
  - Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
  - State and future Federal RES will provide enhanced investment opportunities
  - Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2016
  - Robust pipeline of projects up to $15B

AEP AMERICAN® ELECTRIC POWER

AEP Transmission Company (Transco)

- Transco will be used to develop significant new on-system, AEP-owned investments
  - Greenfield Projects
  - Station Additions
  - System Upgrades
- Seven companies have been established under the AEP Transco holding company
- Next steps:
  - Obtain state utility status where required
    - No filing required in Michigan or Oklahoma
    - Filing made in Ohio
  - FERC tariff for Transco filed December 1, 2009 with rates effective and first projects in-service in 2010; Settlement discussions on-going
  - Seek retail tracking mechanisms at the state level (OH, LA, VA, TX-ERCOT already secured)

AEP AMERICAN® ELECTRIC POWER

Key Investment Attributes

AEP is the Leader

- Largest US transmission footprint
- Interstate EHV transmission highway vision
- National renewables transmission strategy

Quality Investments

- 4 FERC-approved ($3.3 billion)
- AEP Transco (2010 Investment: $121 million)
- Independent ERCOT transmission JV company (up to $3.0 billion)
- Robust pipeline of future high-voltage transmission projects (up to $15 billion)

Attractive Returns

- FERC incentive rates (12.5-14.3%)
- Strong cash flow with CWIP
- Robust long-term annual earnings growth potential

AEP AMERICAN® ELECTRIC POWER

Appendix

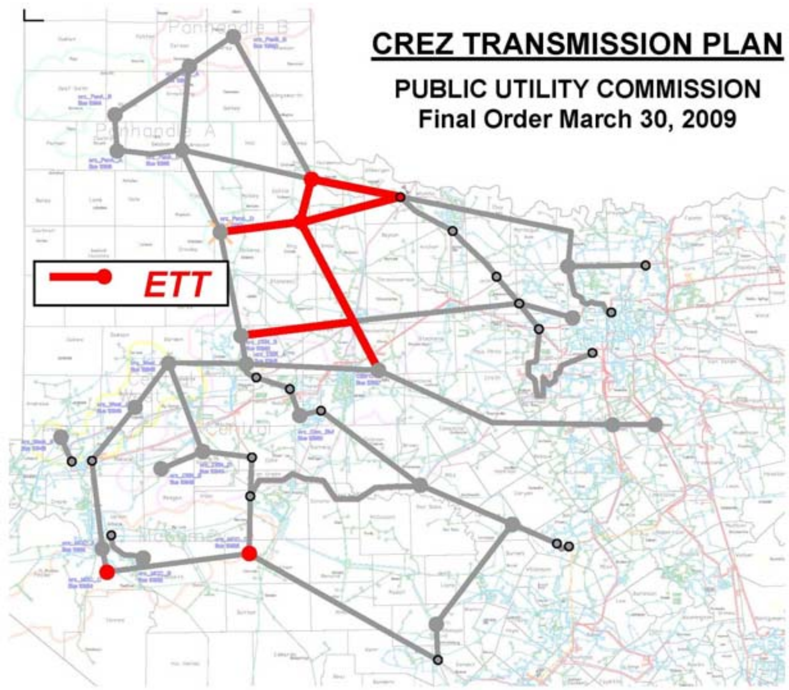
Electric Transmission Texas, LLC

Overview:

- ETT is a 50/50 JV between AEP and MidAmerican Energy Holding Company that plans to construct and operate transmission projects within ERCOT with an investment opportunity of more than $3 billion.
- Current JV rate base is $127 million with a debt to capital ratio of 60/40 and an authorized ROE of 9.96%.

- **Opportunities:**
  - Projects in service 2010-2017: $1.4 billion
  - CREZ projects in service 2012-2013: $1.1 billion
  - Other projects pending transfer in service 2010-2013: $600 million

- **Next Steps:**
  - Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in 2010.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

ETT Electric Transmission Texas

AEP AMERICAN ELECTRIC POWER

EHV Transmission in PJM: PATH

Project Description: 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

Overview:

- FERC order issued on February 29, 2008 approving:
  - Cash return on CWIP and 14.3% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents
  - Rates went into effect March 1, 2008
- Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million.
- Estimated completion date: 2014+, pending outcome of the 2010 PJM Regional Transmission Expansion Plan (2010 RTEP).

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

- Obtaining a CPCN in West Virginia, Virginia and Maryland. CPCN applications in West Virginia and Maryland are pending because their procedural schedule allows the consideration of the 2010 RTEP. A new application in Virginia is expected in the third quarter of 2010 after consideration of the 2010 RTEP.

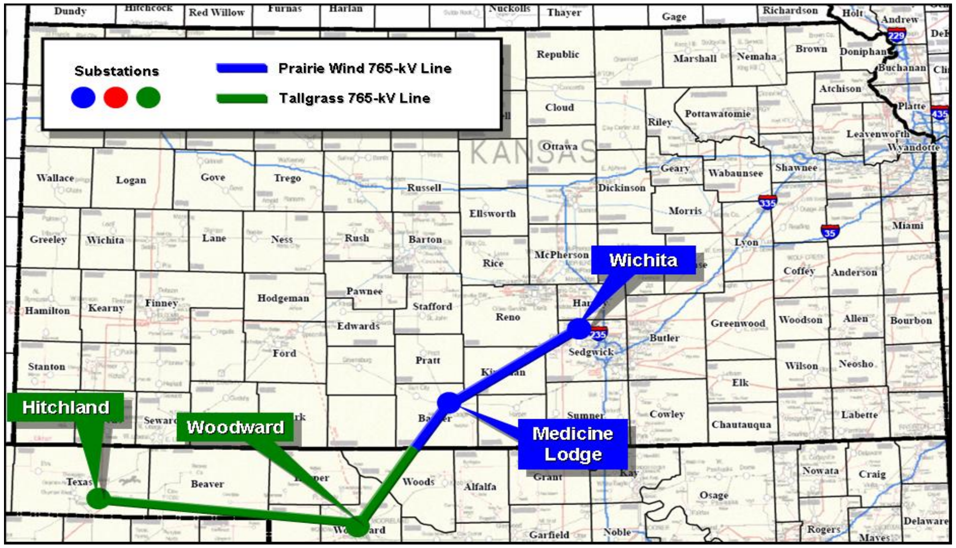
PATH
Potomac-Appalachian Transmission Highline

AEP AMERICAN® ELECTRIC POWER

Prairie Wind Transmission, LLC

Overview:

- In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
- PWT is a 50/50 JV that is proposing to build approximately 110 miles of 765-kV lines extending from Wichita, KS.
- The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
- The project is expected to cost approximately $400 million and be in-service by 2013-2014 and was approved by the KCC on July 24, 2009.
- AEP’s ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

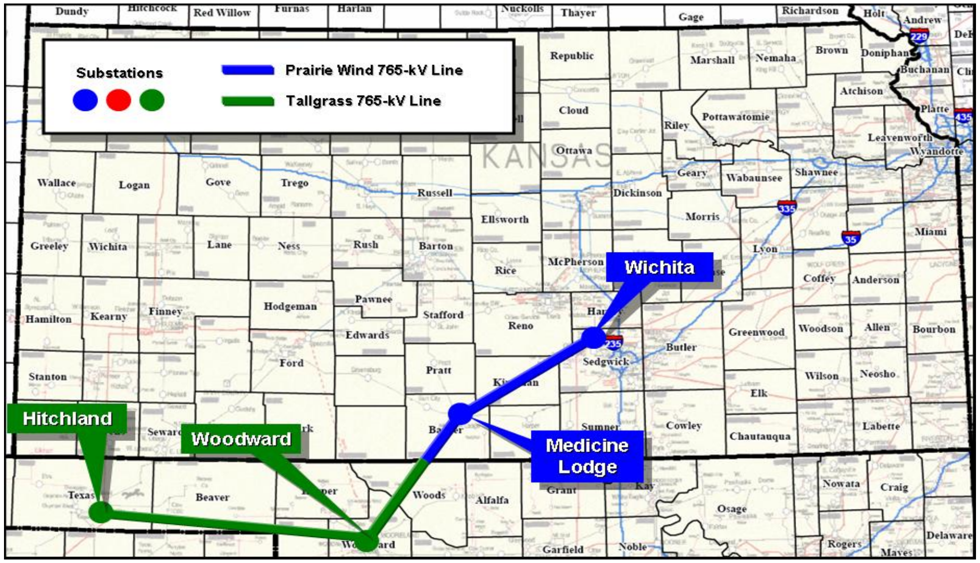
- RTO Approval
- Siting

AEP AMERICAN ELECTRIC POWER®

Tallgrass Transmission, LLC

Overview:

- In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
- TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines in Oklahoma.
- The project will promote wind development in the western half of Oklahoma.
- Project is expected to cost approximately $500 million and be in-service by 2013-2014.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

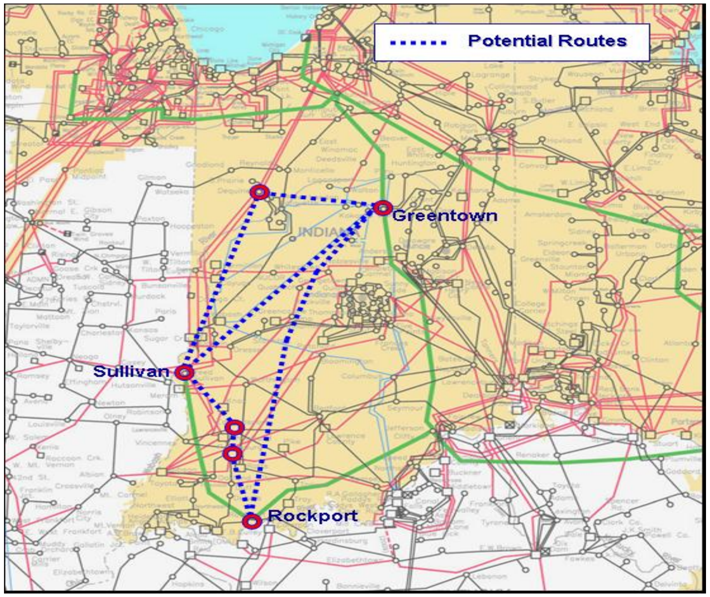
- RTO Approval
- Siting

AEP AMERICAN ELECTRIC POWER

Pioneer Transmission, LLC

Overview:

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
- The project will improve the reliability of the nation's transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, protect national security and expand opportunities for new generation, including renewables.
- The project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP's ownership of the joint venture is 50%.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

- RTO Approval (PJM & MISO)
- Cost allocation which enables the development of "system solutions"
- Siting

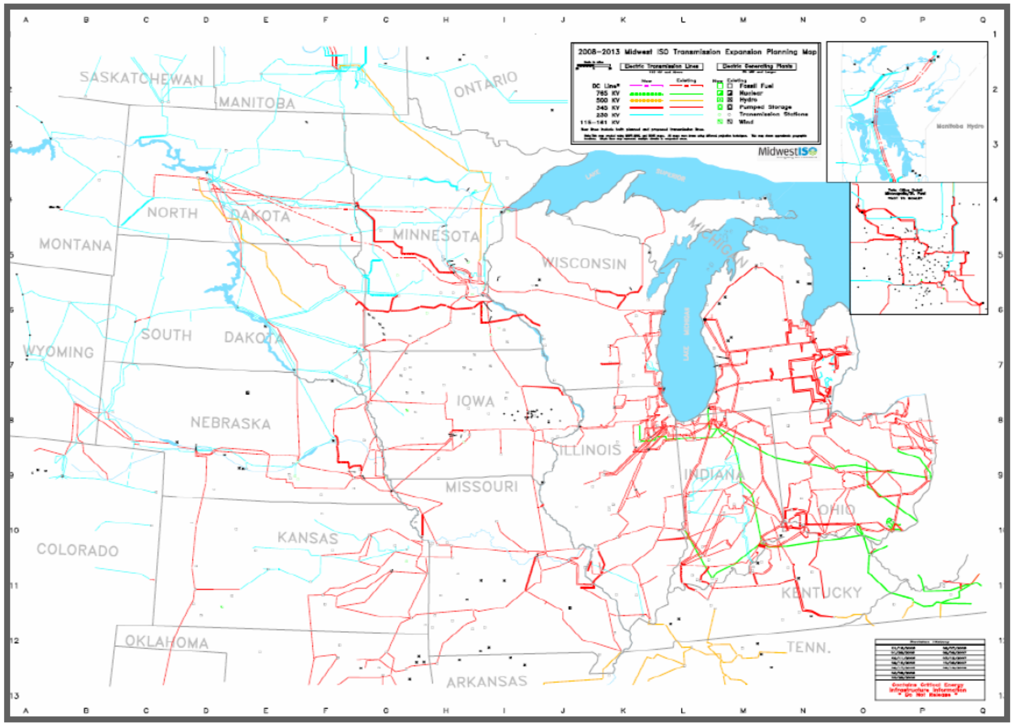
AEP AMERICAN® ELECTRIC POWER

Upper Midwest EHV Development—SMART Study

Project Description: a comprehensive study of the transmission needed in the Upper Midwest to support renewable energy development and transporting that energy to consumers throughout the study area. The SMART Study will develop EHV overlay alternative that ensures reliable service for sponsors' communities, is environmentally friendly, and supports national energy policy.

Overview:

- SMARTransmission Study announced August 2009
- Sponsors of the Study include ETA, Exelon, ATC, Northwestern, MidAmerican Energy Company, and Xcel
- Study due to be completed end of 2Q2010 and will include "overlay" options and quantification of economic benefits



Primary Focus Areas: North Dakota – South Dakota – Iowa – Nebraska – Indiana – Ohio – Illinois – Minnesota – Wisconsin – Michigan

Next Steps:

- Investment structure
- Obtaining cost allocation between states, PJM, and MISO
- RTO technical approvals
- Favorable 205 Order including incentives

Settlement on file relates to SWEPCO Texas rate case

AEP AMERICAN ELECTRIC POWER

Summary Rate Case Information

SWEPCO Texas General Rate Case – Docket #37364

On August 28, 2009, SWEPCO filed a base rate case with the Public Utility Commission of Texas requesting an increase of $75 million to cover costs related to the construction of the Stall and Turk plants as well as enhanced distribution reliability spending. A settlement was filed in March 2010 resulting in a revenue increase of $25MM, an ROE of 10.33%, reduced depreciation expense of $17MM and expiration of merger credits of $7MM. An order is expected in mid-April 2010.

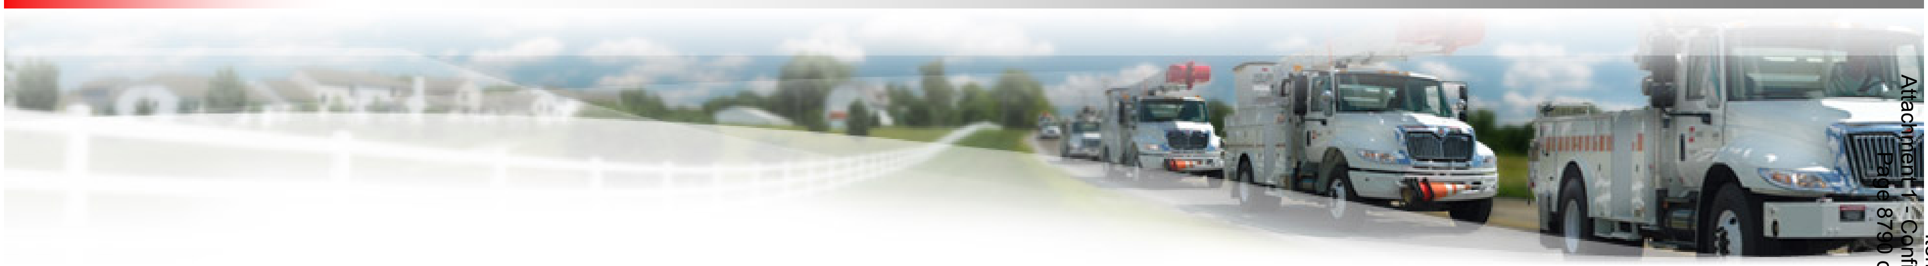
Soleil Securities Diversified Utility & Energy Conference

New York, NY
April 6, 2011



"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M's Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclea fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events and our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives.

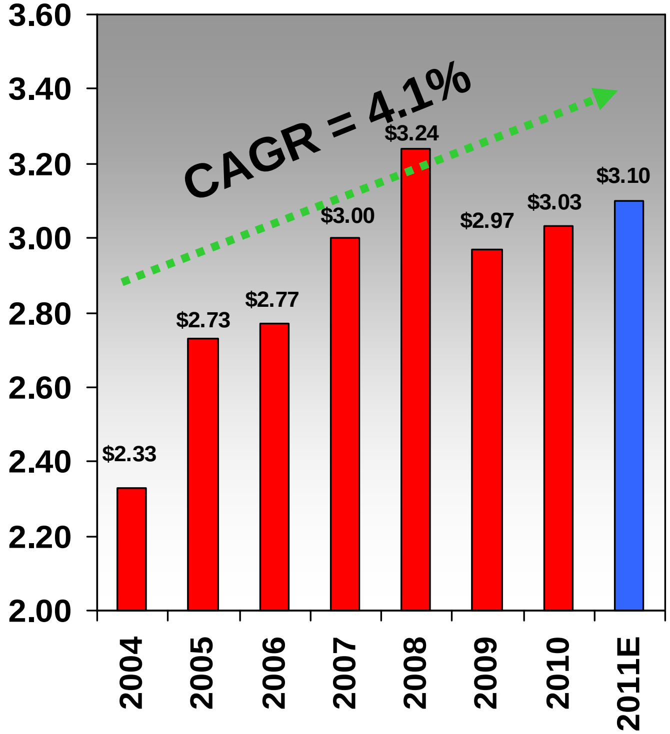
Earnings and Dividends

On-Going EPS History Since 2004

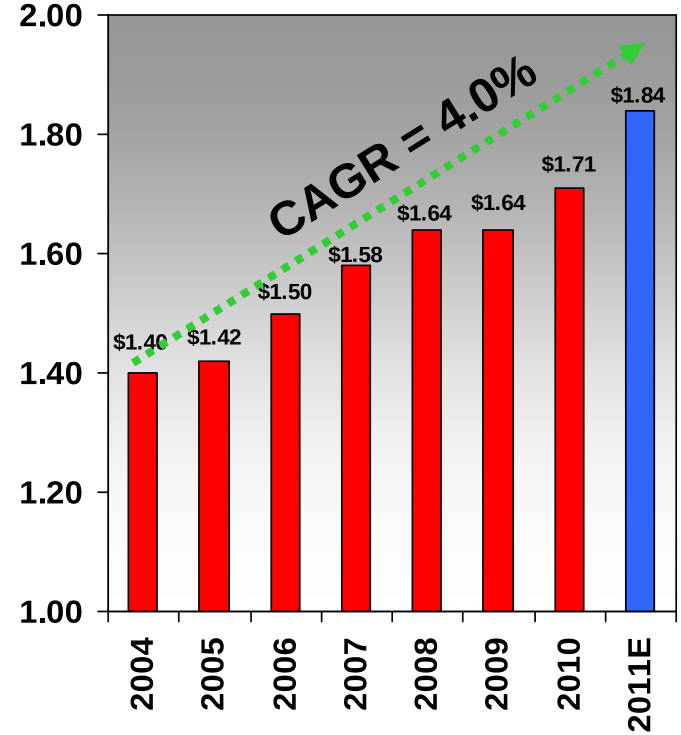
$/share



- Earnings growth largely attributed to capital investment program
- Pre-recession earnings supported by robust wholesale market activity and high power prices
- Equity offering in 2009 stabilized credit and strengthened balance sheet
- 2011 guidance range of $3.00 to $3.20 per share

Dividend History Since 2004

$/share



= subject to Board of Directors approval

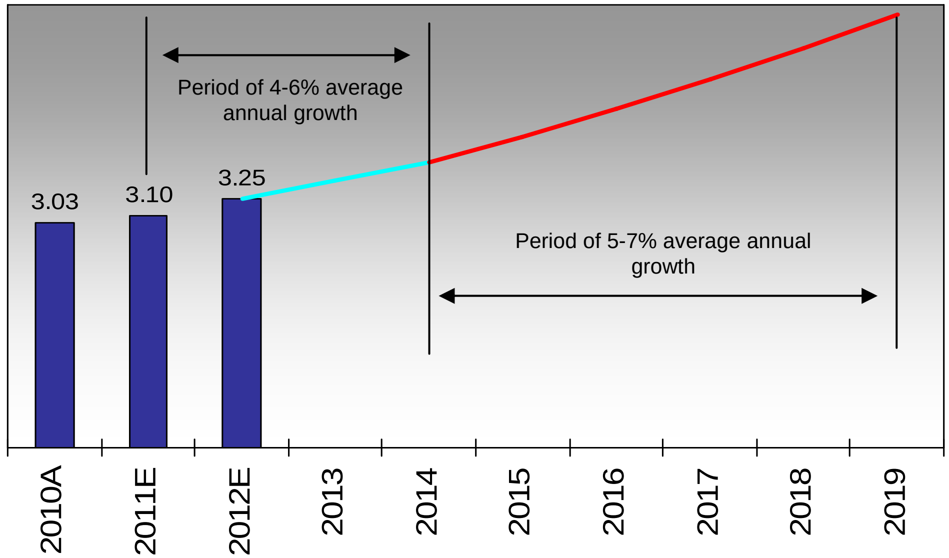
- Quarterly dividend <u>increased 12%</u> in 2010
- <u>403rd consecutive</u> quarterly dividend paid March 10, 2011
- 50-60% payout ratio target
- Current yield over 5%

Long-term EPS Growth Rate

- 4-6% EPS growth 2012-14
  - Average annual capital spend between $2.9-3.4B
    - Utility platform replacement capital of about $1.4B (annual depreciation)
    - Growth in rate base of $1.5-2.0B per year, allocated between utility platform and transmission projects
  - Average ROE of 10.5 - 11%
  - Slow, steady recovery in economy

- 5-7% EPS growth post 2014
  - Base utility platform capital including generation transformation
  - Higher allocation of discretionary capital going to opportunities in the transmission development pipeline
  - Higher overall blended ROE opportunity
  - Robust economic growth

Average Annual EPS Growth defined over two periods



7

Detailed Ongoing Earnings Guidance

2010A: $3.03

2011E: $3.00 - $3.20

Pending EPA Regulations

TRANSPORT RULE

- Proposed Transport Rule (July 2010) limits utility SO_2 and NOx emissions
- SO_2 and NOx subject to caps in 2012, with further SO_2 reductions required in most Eastern states by 2014
- Major concerns with the proposed rule:
  - Not enough time is provided for environmental control installations (i.e. FGD/SCR)
  - EPA costs of retrofitting units are grossly underestimated/ other incorrect assumptions used (though EPA has since modified some of these assumptions)
  - Rule does not account for recent improvements in air quality
  - Inability to trade and bank allowances effectively

MERCURY AND HAP MACT

- Proposed rule issued in March 2011
- Final HAP regulations must be issued by November 2011
  - Maximum Achievable Control Technology (MACT) standards for Hg, other metals, and acid gases, combustion practices for organics
- Compliance Required 3 Yrs. After Final Rule, EPA could grant a 1 year extension
- Very little flexibility in the proposal; opportunity to average across a plant and limited sub categorization
- MACT could require FGD or DSI for acid gases and/or baghouses with activated carbon injection for Hg and metals.

COAL ASH RULE

- Draft coal ash disposal rules issued in May 2010
- EPA proposed two different regulatory designations:
  - “Non-hazardous”, solid waste - action required by ~2017
  - “Special” hazardous waste - action required by ~2018-2020
- AEP supports Subtitle D Prime Option of RCRA (solid waste NOT hazardous)
- AEP capital cost of ~$4 billion for solid waste option
- “Hazardous” option could cost DOUBLE this amount

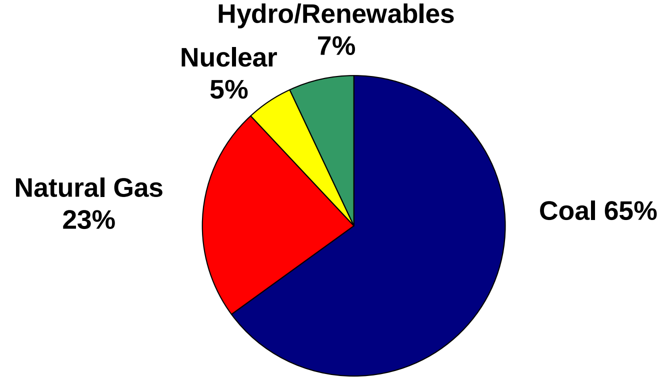
316b RULE

- EPA issued proposal March 28
- Addresses impingement and entrainment of aquatic species
- Proposes upgraded intake screens for impingement
- Suggests cooling towers as an effective technology for entrainment, but defers the decision until site-specific study is conducted
- Cost impact very uncertain at this time

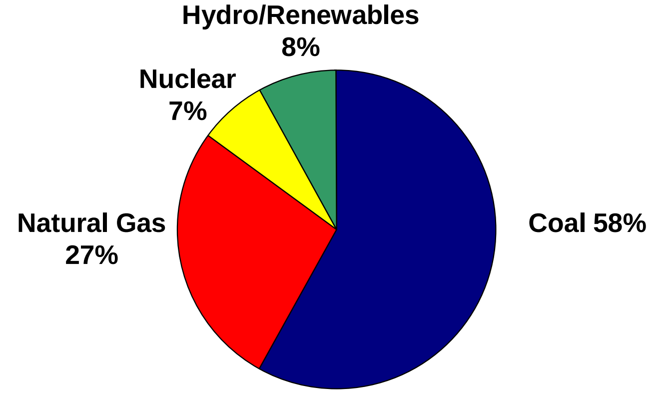
The cumulative effect of the proposed rules is not achievable in the allowed timeframe.

Continued Investment in Utility Platform

- Plan for old, small coal units
  - Initially operate seasonally
  - Transition towards retirement
  - Regulatory plan for recovery
- Continue evaluation of "partially exposed" units for additional controls
- Add non-coal capacity when needed
  - Dresden NGCC (under construction)
  - New NGCC at existing site
  - Cook plant uprate (under study)
  - Renewables
- Deploy technology as appropriate
  - Continue pursuit of CCS technology
  - Energy storage technologies
  - gridSMART®



Capacity - 2010



Projected Capacity - 2017

Rate Changes

Pending/future rate cases includes amounts from the Ohio environmental filing and cases yet to be filed

Summary Rate Case Information

AEP Ohio Distribution Rate Case – Docket #351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%. A procedural schedule from the PUCO is pending.

Actual Capital Structure – Company Position – 08/31/10

Summary Rate Case Information

APCo Virginia Base Rate Case – Docket #PUE-2011-00037

On March 31, 2011 APCo filed an update to its pre-biennial base rate case for recovery of generation and distribution costs requesting an increase of $75 million ($126 million total increase less $51 million associated with a potential change in depreciation rates). A procedural schedule is pending from the VSCC.

In conjunction with this case, an environmental rate adjustment clause (E-RAC), generation rate adjustment clause (G-RAC) and a renewable portfolio standard rate adjustment clause (RPS-RAC) were filed. APCo has requested that rates in the base case, E-RAC and RPS-RAC go into effect no later than 2/1/2012 and the G-RAC on 3/1/2012.

Projected Capital Structure – Company Position (12/31/10)

AEP Ohio ESP Filing – Core Policy Issues

AEP®

Investment in Ohio

Supports economic development and essential tax base

Fundamental barriers must be addressed to attract investment for Environmental Compliance and New Generation

Jobs in Ohio

Jobs are a key component of growth potential in Ohio

Without regulatory assurances over time we could see loss of direct & indirect jobs related to power generation, and business relocations to surrounding states

Energy Security

Secure, reliable and predictable electricity supply is basis for sustained investment and employment in Ohio

Volatility in power prices can lead to major loss of economic activity over time

Primary objective of ESP: Stabilize rates and support economic development in the state of Ohio

Merged AEP Ohio

Single merged AEP Ohio company presumed with supporting information on an individual OP/CSP basis

Rate Redesign

Generation rates redesigned to resemble market pricing structures

29-Month ESP Period

ESP period Jan 1, 2012 through May 31,2014 (May 31 date aligns with PJM annual planning cycle)

Alternative Long Term Option

Alternative longer-term price certainty option offered for qualifying commercial & industrial customers

Ohio Growth Fund

Creation of significant private sector economic development to attract investment and job growth in AEP Ohio service territory

Distribution Components Included

Inclusion of certain distribution components while pursuing a parallel distribution base rate case

Summary of ESP Filing - Continued

- Pre-tax earnings impact from proposed ESP (excluding potential earnings impact from trackers)
  - **Net base $54MM or 1.4% in year 1 (2012)**
  - **Net base $106MM or 2.7% in year 2 (2013)**

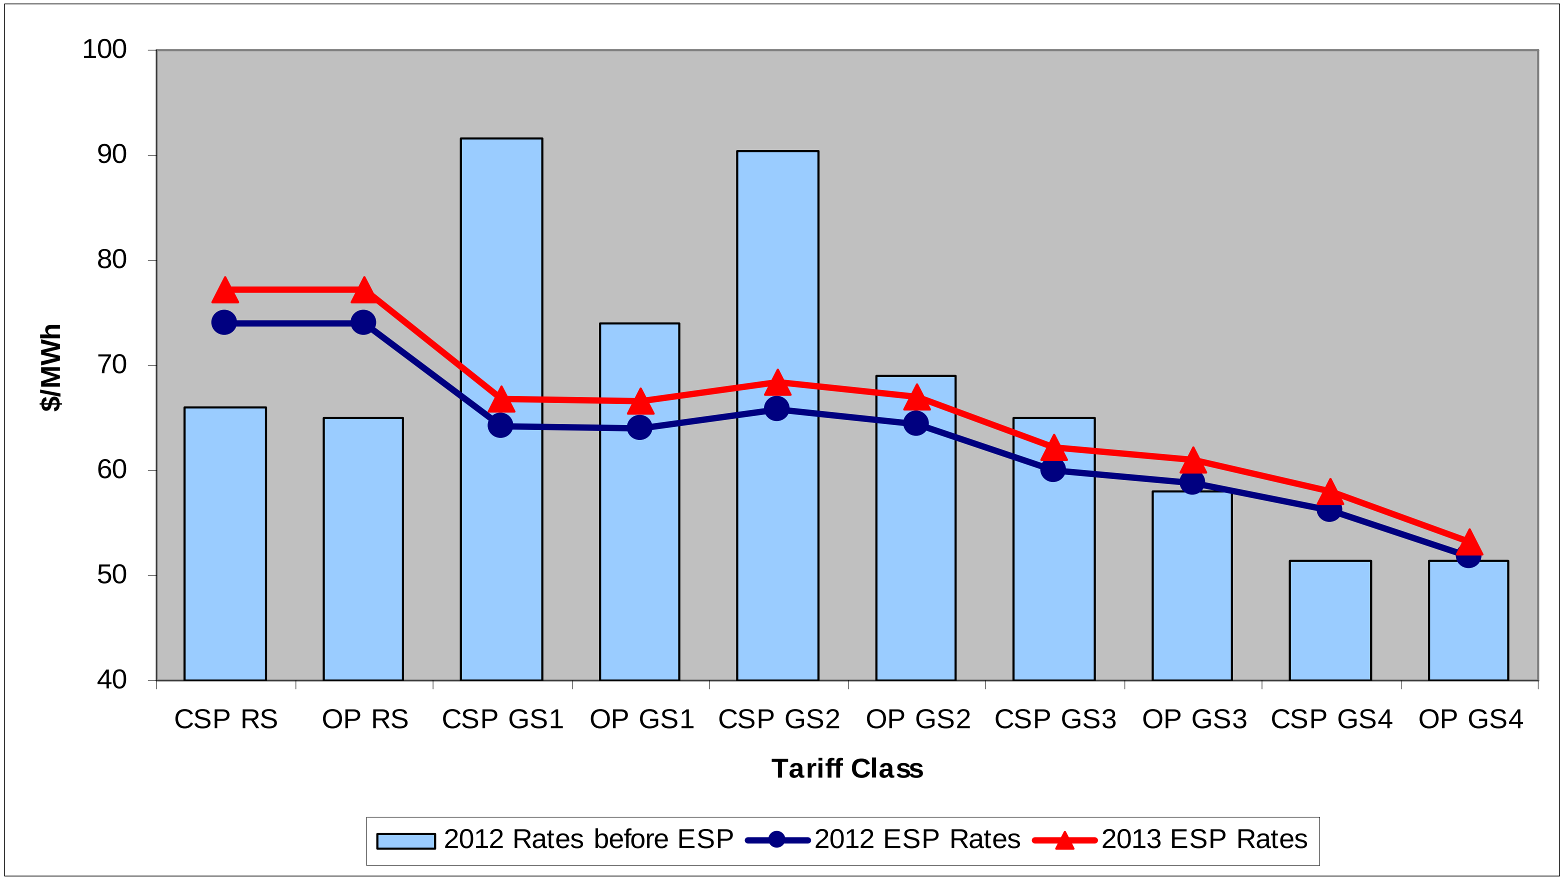
	2012			2013			2014		
	Revenue	$/MWh	%	Revenue	$/MWh	%	Revenue	$/MWh	%
Proposed ESP Changes									
Base Generation	**$65MM**	**$1.50**	**1.7%**	**$106MM**	**$2.43**	**2.7%**	**N/C***	**N/C***	**N/C***
POLR	**($11MM)**	**($0.23)**	**(0.3%)**	**N/C***	**N/C***	**N/C***	**N/C***	**N/C***	**N/C***
FAC Actual Recovery 2012-2014	**Actual**			**Actual**			**Actual**		

N/C* = No change from prior year

While the ESP includes a small base generation increase, the move to a market-based rate design, consistent with state policy, will result in varying impacts for different customer groups.

Price to Compare

Proposed **SSO** Rates Redesigned To Resemble Market Pricing Structures



Rates do not reflect mitigation impact of market transition rider
2012 Rates before ESP reflect current 2011 rates for generation & transmission service, adjusted to reflect full cost 2011 fuel and environmental costs.

The realignment of rates with market should provide all customers with equivalent opportunities to shop. Additionally, since the proposed design eliminates explicit demand charges, customers should be more easily able to evaluate competitive offers. To ease the rate impact that customers will experience from the realignment, we have proposed a Market Transition Rider.

Market Transition Rider – Mitigates the Initial Impact of Rate Realignment

AEP®

Three-Year Market Transition Plan
Summary of AEP Ohio ESP Generation Rate Changes

CSP Current Customer Class	CSP New Customer Class	2012 Increase	2013 Increase	2014 Increase	Total Increase

AEP Ohio		1.4%	2.7%	0.0%	4.2%

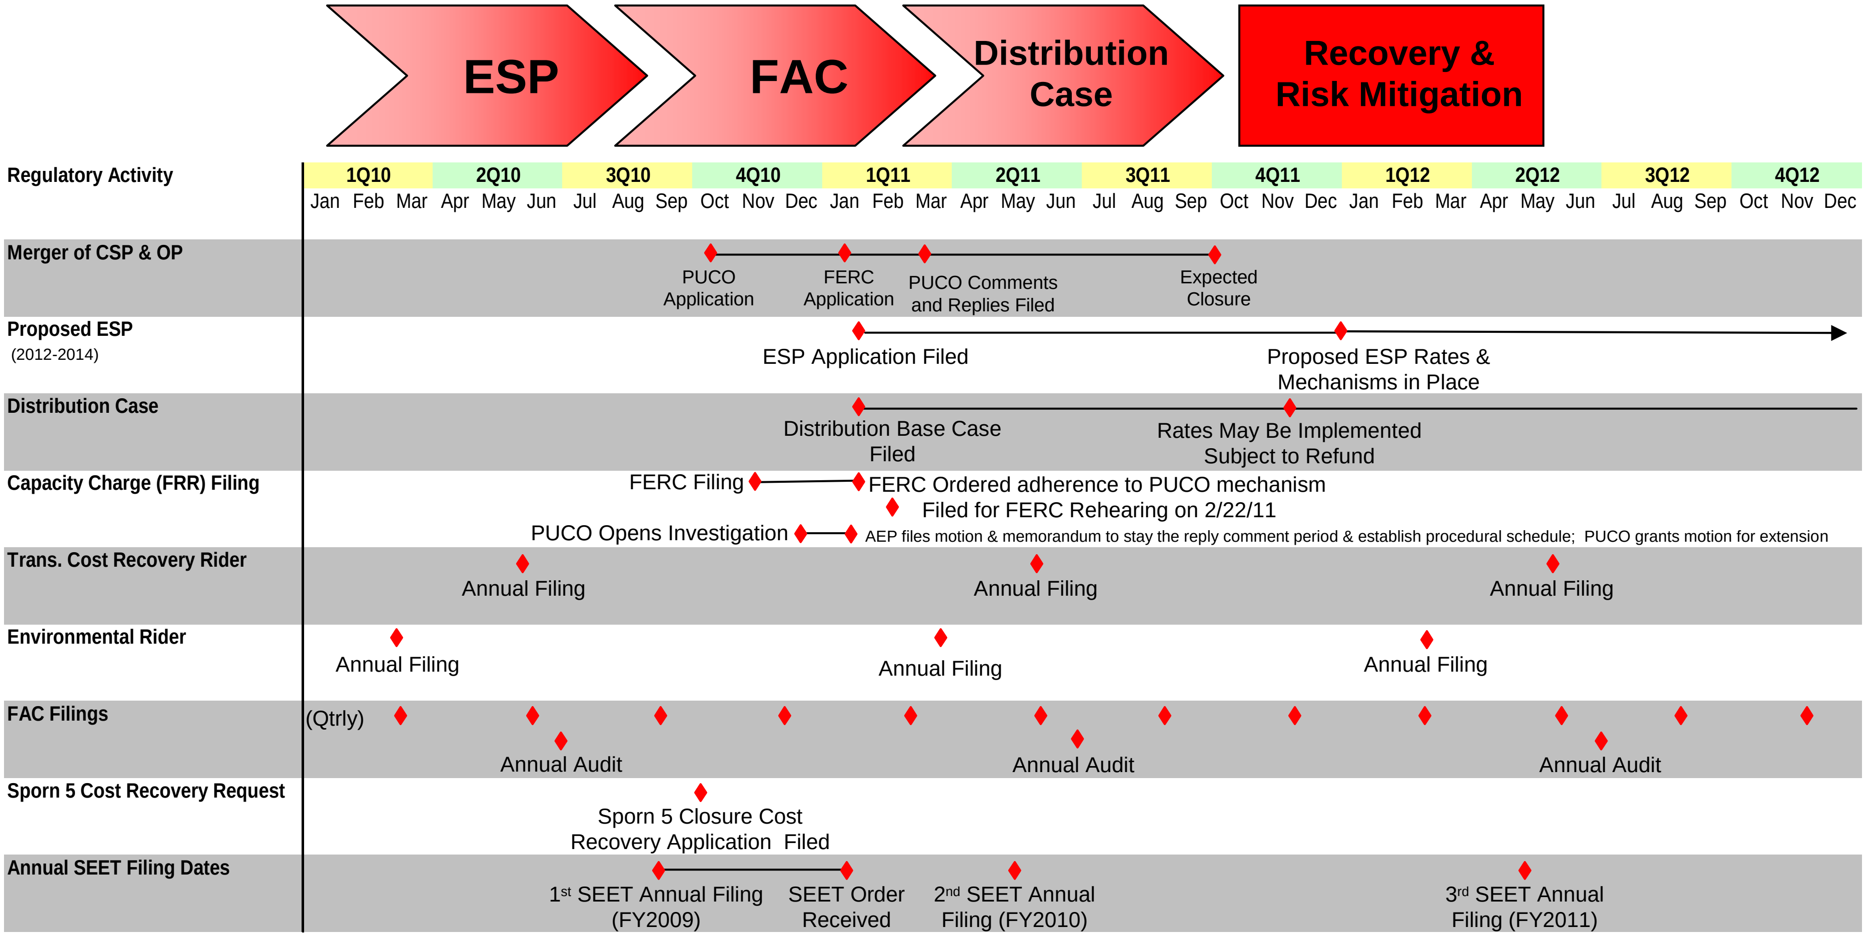
Illustration of Market Transition Rider on ESP Generation Rate Increases

The Market Transition Rider is a transition rider designed to facilitate the transition from AEP Ohio's current rates to market-based SSO Generation Service rates. It is a non-bypassable rider designed to limit the first and second year changes for any customer classes to uniformly transition any above or below average changes in three steps. Any revenue shortfall that is produced by limiting the increases for certain customer classes is collected from those classes whose decreases are limited.

List of ESP Riders – Existing and Proposed

Line	Rate Mechanism	Abbreviation	Bypassable	Distribution	Notes
1	**Current Riders**				
2	Universal Service Fund Rider	USF	--	Yes	
3	Advanced Energy Fund Rider	AEF	--	Yes	Expired 12/31/2010
4	kWh Tax Rider	kWh Tax	--		May be self-assessed under specific terms
5	Provider of Last Resort Charge	POLR	No		Option to avoid under specific terms
6	Monongahela Power Litigation Termination Rider	Mon Power	--	Yes	Expires once amount collected
7	Transmission Cost Recovery Rider	TCRR	Yes		
8	Fuel Adjustment Clause Rider	FAC	Yes		
9	Energy Efficiency and Peak Demand Reduction Cost Recovery Rider	EE/PDR	--	Yes	
10	Economic Development Cost Recovery Rider	EDR	--	Yes	
11	Enhanced Service Reliability Rider	ESRR	--	Yes	
12	gridSMART® Rider	gridSMART®	--	Yes	
13	Environmental Investment Carrying Cost Rider	EICCR	No		the current bypassable rider is proposed to be nonbypassable in the new ESP
14					
15	**Proposed Riders**				
16	Standard Offer Generation Service Rider	GSR	Yes		Relocation of base generation rates
17	Generation Resource Rider	GRR	No		Capital/solar investment
18	Alternative Energy Rider	AER	Yes		Relocation of RECs from FAC
19	Phase-In Recovery Rider	PIRR	--	Yes	Previous ESP deferrals, possibility of securitization
20	Distribution Investment Rider	DIR	--	Yes	
21	Market Transition Rider	MTR	--	Yes	
22	Generation NERC Compliance Cost Recovery Rider	NERCR	No		
23	Facility Closure Cost Recovery Rider	FCCR	No		
24	Carbon Capture and Sequestration Rider	CCSR	No		
25					
26	**Other Provisions**				
27	Green Power Portfolio Rider	GPPR	--		Voluntary
28	Rate Security Rider	RSR	--		Voluntary
29	Plug-In Electric Vehicle Tariff / Costs	PEV	--	Yes	Voluntary, Deferral of Costs
30	Emergency Curtailable Service Rider	ECS	--		Voluntary, pending
31	Storm Damage Recovery Mechanism		--	Yes	Reconciliation of storm experience to funding level
32	Pool Termination or Modification Provision		Yes		
33	PIPP Uncollectibles	PIPP	--	Yes	

Ohio Timeline



AEP Ohio's long-term strategy is designed to produce rate relief for items currently known as well as anticipated future items. The filings and riders we seek today are designed to be broad and flexible enough to accommodate a variety of circumstances, because it is impossible to know all variables and specific items for which we will desire to seek rate relief or what regulatory circumstances will prevail at the time.

Transmission Investment Strategy

- **Near-Term Investment** – Electric Transmission Texas (ETT) secures near term investment opportunities, allowing AEP to invest in the large, growth-oriented Texas transmission market. Total project cost of $3 billion with a 9.96% ROE.

- **Mid-Term Investment** – Seven wholly-owned transcos allow for expansion and growth within AEP's existing utility footprint through an efficient recovery mechanism. Will spend $160 million in 2011 and more than $350 million in 2012. Expected ROE is in the 11.20%-11.49% range.

- **Long-Term Investment** – Joint ventures provide opportunities for longer-term growth outside of AEP's existing utility footprint with forward looking formula rates, higher ROEs and FERC incentives, and mitigated risk profiles.

Transmission has a diversified investment approach that positions it as one of the key AEP growth businesses.

Texas Transmission Growth Strategy : Near Term Investment

Ownership Structure: 50/50 (AEP/MidAmerican Energy Holding Company)

Total Project Cost: Over $3 Billion

Growing Rate Base:

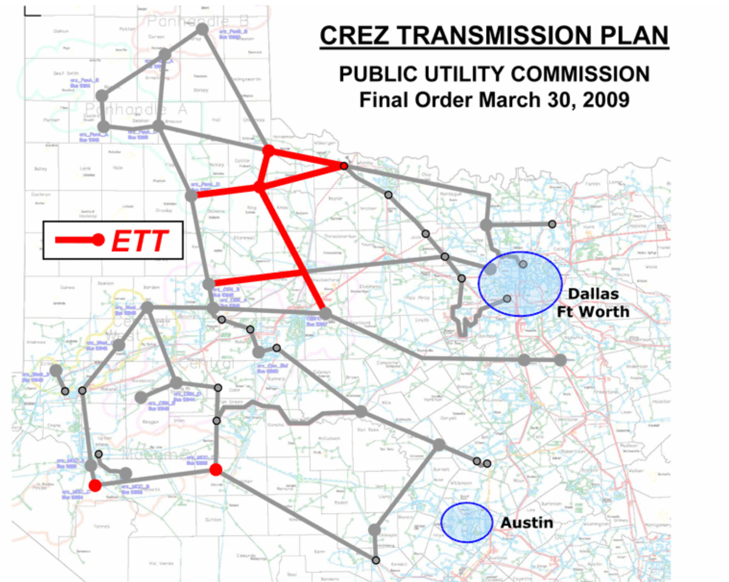
Current rate base is $412 million; expected to grow as follows:

2011: $473 million
2012: $778 million
2013: $1,352 million

ETT Electric Transmission Texas

Interim TCOS filings twice per calendar year

Approved ROE: 9.96%



- **Additional Projects in the Pipeline ~$1.6 B:**
  – Approximately 822 miles of lines and 28 substations with in-service dates through 2017

- **Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.1 B:**
  – Seven double-circuit 345kV transmission lines (~$750 M), eight major 345kV stations and several series compensation installations (~$350 M)
  – PUCT Certificate of Convenience and Necessity (CCN) proceedings underway

Transco Update

Filing Status Update:

- ***Ohio*** *(filed and approved)* – PUCO approved the Ohio Transco December 29, 2010
- ***West Virginia*** *(filed)* – Procedural schedule is set, with company testimony filed January 6; Intervenor's testimony is due April 6 and rebuttal is due April 20; Hearings in June
- ***Arkansas and Louisiana*** – Filing date in Arkansas likely early 2011
- ***Texas-SPP*** – Expecting TX filing in mid 2011
- ***Kentucky*** – Filing made February 4, 2011; Informal conference with staff held March 2, 2011
- ***Indiana*** – Filing made March 1, 2011; Pre-hearing conference March 28, 2011
- ***Virginia*** *(withdrawn)* – Filing withdrawn to give additional time to resolve issues with Staff
- ***Michigan and Oklahoma*** – Do not require state filing

$160M capital spend forecasted for 2011

Joint Venture Strategy: Long-term

- **Strategy**: JV's secure new investment opportunities with local utilities to diversify AEP's investment outside AEP's traditional footprint while providing longer-term incremental earnings**.** JV projects are well-suited for FERC formula rate recovery mechanism, including potential for incentive rates.
- **Future:** Federal/regional initiatives may accelerate expansion of EHV transmission (e.g. cap-and-trade, renewable portfolio standards, inter-region wide planning). Securing first mover advantage will enable AEP to secure LT investment opportunities.
- **Future flexibility**: Passive investment opportunities can be considered and can provide entry beyond SPP/PJM/ERCOT

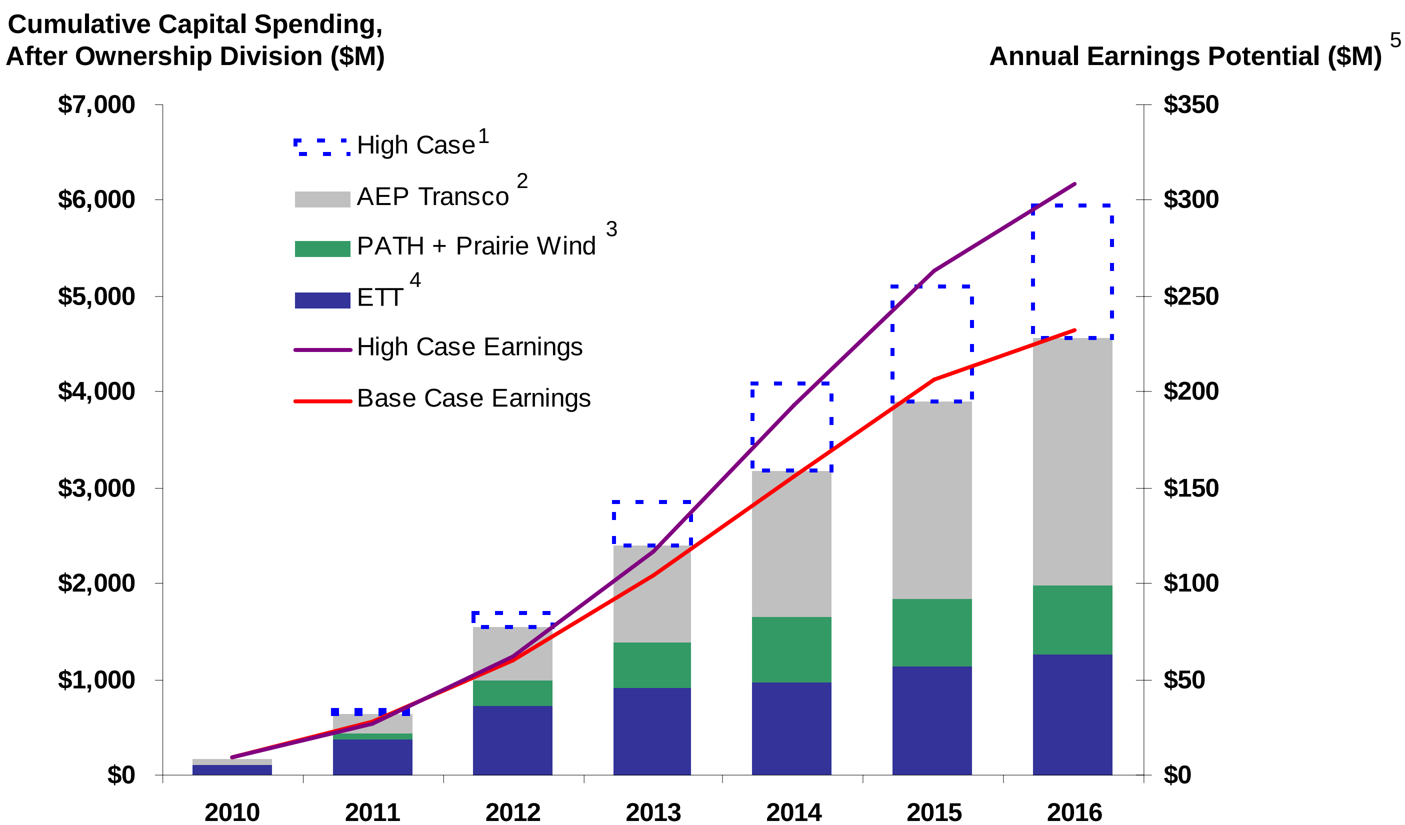
Transmission (Transco/JV's) – Capital/Earnings Profile

Transco and JV's have the potential to significantly add earnings growth to AEP.



[1] High Case includes: Pioneer (50% ownership), Prairie Wind at 765kV (25% ownership), Tallgrass at 765kv (25% ownership) and other future opportunities

[2] AEP Transco (100% ownership) includes spending in OH, MI & OK only through 2011 and in other jurisdictions for 2012 and beyond

[3] PATH (50% ownership) assumes an in-service date of 2015 and Prairie Wind (25% ownership) assumed at 345kV

[4] ETT (50% ownership) includes CREZ and additional projects

[5] Projection of earnings potential at the transmission holding company level assuming 50/50 debt/equity capitalization and ROE of 12-13% for FERC projects; 60/40 debt/equity capitalization and 10.25% ROE (2011 forward) for ERCOT projects; and 50/50 debt/equity capitalization and ROE of 11.2-11.49% for Transco projects

AEP AMERICAN ELECTRIC POWER®

Spring EEI Investor Conference

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation, including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance, resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events, our ability to recover through rates the remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives and evolving public perception of the risks associated with fuels used before, during and after generation of electricity, including nuclear fuel.

AEP Ohio Distribution Rate Case – Docket #351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%. A procedural schedule from the PUCO is pending.

Summary Rate Case Information

APCo Virginia Base Rate Case – Docket #PUE-2011-00037

On March 31, 2011 APCo filed an update to its pre-biennial base rate case for recovery of generation and distribution costs requesting an increase of $75 million ($126 million total increase less $51 million associated with a potential change in depreciation rates). The requested ROE is 11.65%, including a 50 basis point adder for meeting 2010 RPS goal allowed by law.

In conjunction with this case, an environmental rate adjustment clause (E-RAC), generation rate adjustment clause (G-RAC) and a renewable portfolio standard rate adjustment clause (RPS-RAC) were filed. APCo has requested that rates in the base case, E-RAC and RPS-RAC go into effect no later than 2/1/2012 and the G-RAC on 3/1/2012.

Projected Capital Structure – Company Position (12/31/10)

	% of Capitalization	Cost Rate	Weighted Return
Short-Term Debt	3.76%	0.33%	0.01%

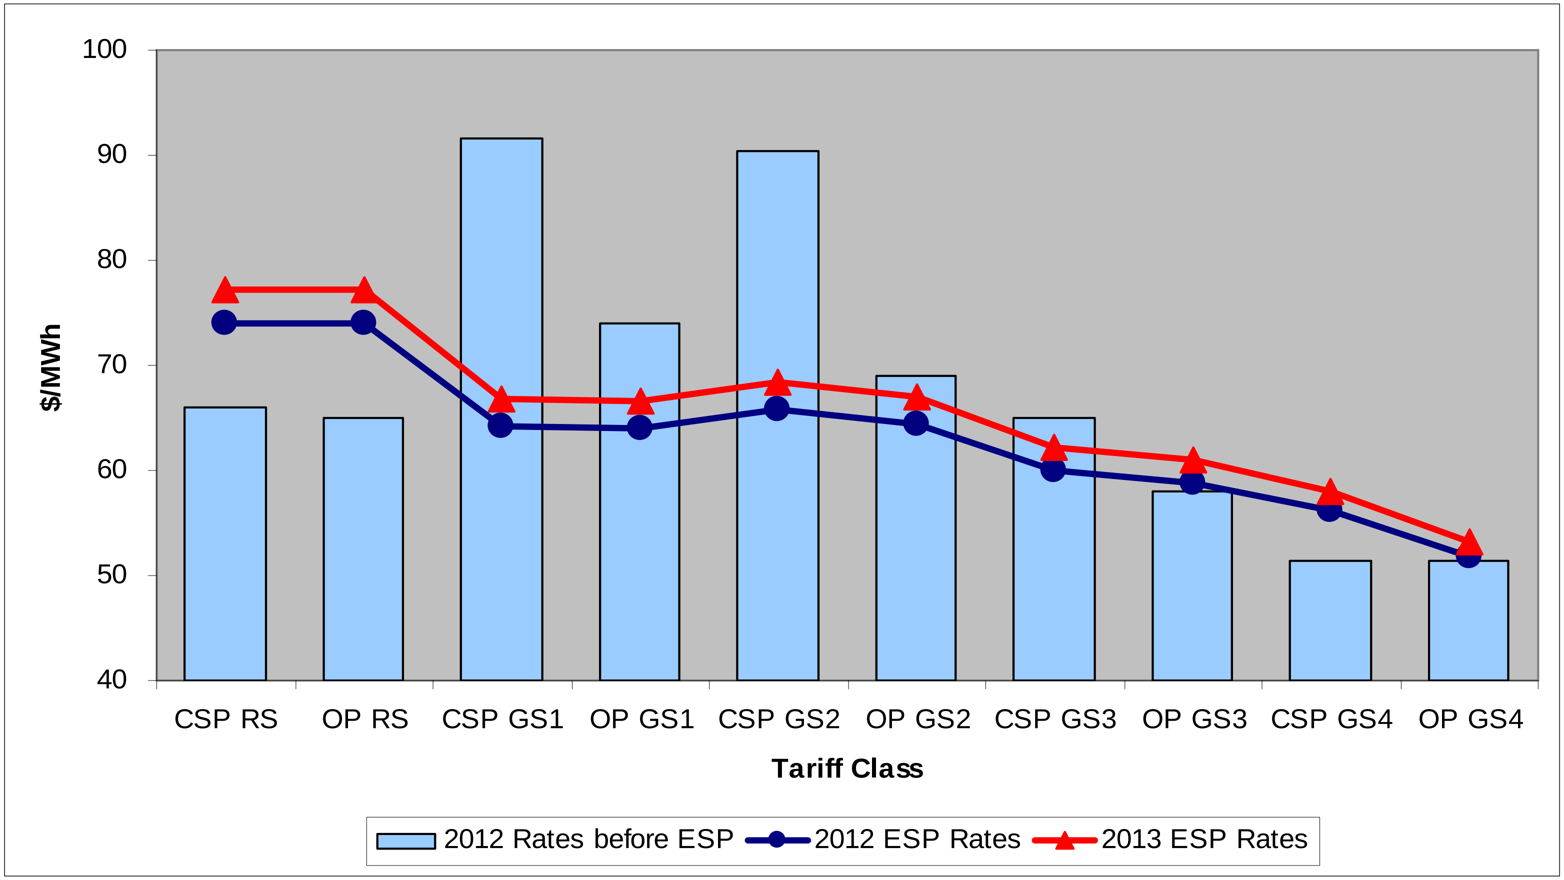
FAC Actual Recovery 2012-2014	**Actual**			**Actual**			**Actual**		

N/C* = No change from prior year

While the ESP includes a small base generation increase, the move to a market-based rate design, consistent with state policy, will result in varying impacts for different customer groups.

Price to Compare

Proposed **SSO** Rates Redesigned To Resemble Market Pricing Structures



Rates do not reflect mitigation impact of market transition rider
2012 Rates before ESP reflect current 2011 rates for generation & transmission service, adjusted to reflect full cost 2011 fuel and environmental costs.

The realignment of rates with market should provide all customers with equivalent opportunities to shop. Additionally, since the proposed design eliminates explicit demand charges, customers should be more easily able to evaluate competitive offers. To ease the rate impact that customers will experience from the realignment, we have proposed a Market Transition Rider.

Market Transition Rider – Mitigates the Initial Impact of Rate Realignment

Three-Year Market Transition Plan
Summary of AEP Ohio ESP Generation Rate Changes

CSP Current Customer Class	CSP New Customer Class	2012 Increase	2013 Increase	2014 Increase	Total Increase

Illustration of Market Transition Rider on ESP Generation Rate Increases

The Market Transition Rider is a transition rider designed to facilitate the transition from AEP Ohio's current rates to market-based SSO Generation Service rates. It is a non-bypassable rider designed to limit the first and second year changes for any customer classes to uniformly transition any above or below average changes in three steps. Any revenue shortfall that is produced by limiting the increases for certain customer classes is collected from those classes whose decreases are limited.

List of ESP Riders – Existing and Proposed

Line	Rate Mechanism	Abbreviation	Bypassable	Distribution	Notes
1	**Current Riders**				
2	Universal Service Fund Rider	USF	--	Yes	
3	Advanced Energy Fund Rider	AEF	--	Yes	Expired 12/31/2010
4	kWh Tax Rider	kWh Tax	--		May be self-assessed under specific terms
5	Provider of Last Resort Charge	POLR	No		Option to avoid under specific terms
6	Monongahela Power Litigation Termination Rider	Mon Power	--	Yes	Expires once amount collected
7	Transmission Cost Recovery Rider	TCRR	Yes		
8	Fuel Adjustment Clause Rider	FAC	Yes		
9	Energy Efficiency and Peak Demand Reduction Cost Recovery Rider	EE/PDR	--	Yes	
10	Economic Development Cost Recovery Rider	EDR	--	Yes	
11	Enhanced Service Reliability Rider	ESRR	--	Yes	
12	gridSMART® Rider	gridSMART®	--	Yes	
13	Environmental Investment Carrying Cost Rider	EICCR	No		the current bypassable rider is proposed to be nonbypassable in the new ESP
14					
15	**Proposed Riders**				
16	Standard Offer Generation Service Rider	GSR	Yes		Relocation of base generation rates
17	Generation Resource Rider	GRR	No		Capital/solar investment
18	Alternative Energy Rider	AER	Yes		Relocation of RECs from FAC
19	Phase-In Recovery Rider	PIRR	--	Yes	Previous ESP deferrals, possibility of securitization
20	Distribution Investment Rider	DIR	--	Yes	
21	Market Transition Rider	MTR	--	Yes	
22	Generation NERC Compliance Cost Recovery Rider	NERCR	No		
23	Facility Closure Cost Recovery Rider	FCCR	No		
24	Carbon Capture and Sequestration Rider	CCSR	No		
25					
26	**Other Provisions**				
27	Green Power Portfolio Rider	GPPR	--		Voluntary
28	Rate Security Rider	RSR	--		Voluntary
29	Plug-In Electric Vehicle Tariff / Costs	PEV	--	Yes	Voluntary, Deferral of Costs
30	Emergency Curtailable Service Rider	ECS	--		Voluntary, pending
31	Storm Damage Recovery Mechanism		--	Yes	Reconciliation of storm experience to funding level
32	Pool Termination or Modification Provision		Yes		
33	PIPP Uncollectibles	PIPP	--	Yes

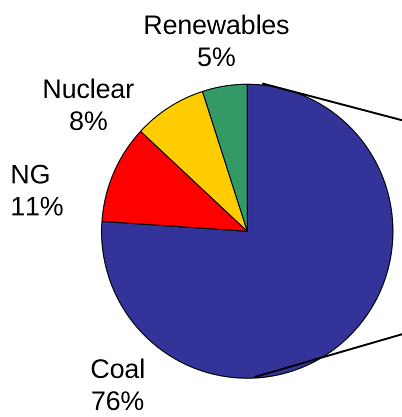
AEP Generation Capacity

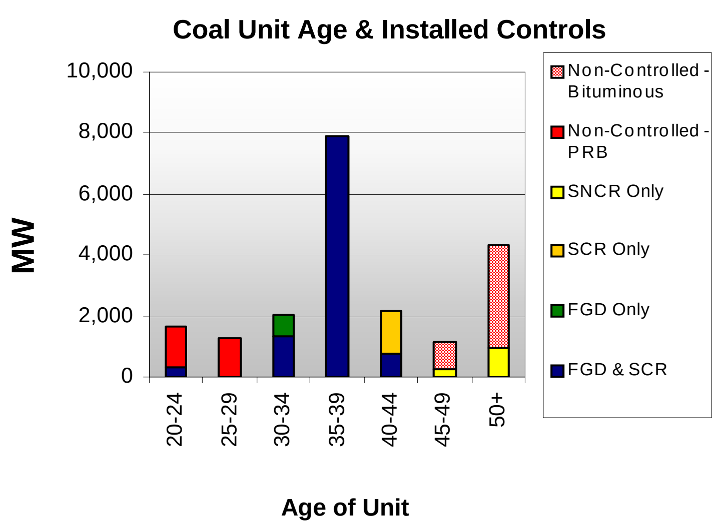
East Capacity – 27,253 MW
AEP Ohio, APCo, I&M, AEG, KPCo, Wind, Solar, Hydro



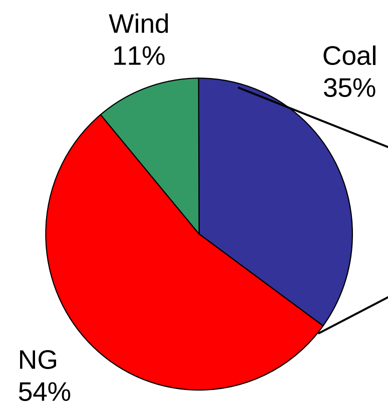
Coal Source

NAPP	46%
CAPP	30%
PRB	22%
Others	2%

Avg. Delivered Cost
2009A - $56/ton
2010A - $52/ton
2011E - $51/ton



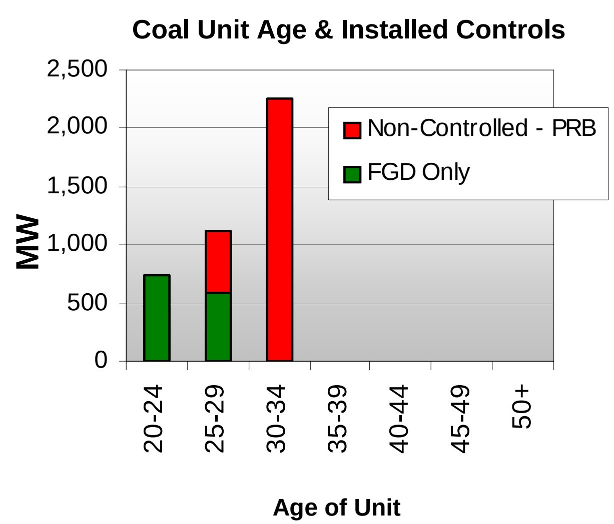
West Capacity – 11,677 MW
PSO, SWEPCO, TNC, Wind



Coal Source

PRB	75%
Lignite	25%

Avg. Delivered Cost
2009A - $29/ton
2010A - $29/ton
2011E - $29/ton



Turk Plant

- John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant. Located in Arkansas. SWEPCo owns 73 percent or roughly 440 megawatts of the total unit.

- The cost of the plant and related transmission is anticipated at $1.7 billion with AEP's share approximately $1.3 billion (excluding AFUDC) and will begin commercial operation in 2012.

- The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls

- $1.1 billion capitalized expenditures 3/31/11. SWEPCO's contractual commitments $260MM.

- Third party owners include: Arkansas Electric Cooperative Corp. (12%), East Texas Electric Cooperative (8%), and Oklahoma Municipal Power Authority (7%)

Pending EPA Regulations

TRANSPORT RULE

- Proposed Transport Rule (July 2010) limits utility SO_2 and NOx emissions
- SO_2 and NOx subject to caps in 2012, with further SO_2 reductions required in most Eastern states by 2014
- Major concerns with the proposed rule:
  - Not enough time is provided for environmental control installations (i.e. FGD/SCR)
  - EPA costs of retrofitting units are grossly underestimated/ other incorrect assumptions used (though EPA has since modified some of these assumptions)
  - Rule does not account for recent improvements in air quality
  - Inability to trade and bank allowances effectively

MERCURY AND HAP MACT

- Proposed rule issued in March 2011
- Final HAP regulations must be issued by November 2011
  - Maximum Achievable Control Technology (MACT) standards for Hg, other metals, and acid gases, combustion practices for organics
- Compliance Required 3 Yrs. After Final Rule, EPA could grant a 1 year extension
- Very little flexibility in the proposal; opportunity to average across a plant and limited sub categorization
- MACT could require FGD or DSI for acid gases and/or baghouses with activated carbon injection for Hg and metals.

COAL ASH RULE

- Draft coal ash disposal rules issued in May 2010
- EPA proposed two different regulatory designations:
  - “Non-hazardous”, solid waste - action required by ~2017
  - “Special” hazardous waste - action required by ~2018-2020
- AEP supports Subtitle D Prime Option of RCRA (solid waste NOT hazardous)
- AEP capital cost of ~$4 billion (including AFUDC) for solid waste option
- “Hazardous” option could cost DOUBLE this amount

316b RULE

- EPA issued proposal March 28, 2011
- Addresses impingement and entrainment of aquatic species
- Proposes upgraded intake screens for impingement
- Suggests cooling towers as an effective technology for entrainment, but defers the decision until site-specific study is conducted
- Cost impact very uncertain at this time

The cumulative effect of the proposed rules is not achievable in the allowed timeframe.

AEP Coal Fleet Assessment

Transmission Investment Strategy

- **Near-Term Investment** – Electric Transmission Texas (ETT) secures near term investment opportunities, allowing AEP to invest in the large, growth-oriented Texas transmission market. Total capital expenditures of $3 billion with a 9.96% ROE.

- **Mid-Term Investment** – Seven wholly-owned transcos allow for expansion and growth within AEP's existing utility footprint through an efficient recovery mechanism. Will spend $160 million in 2011 and more than $350 million in 2012. ROE is in the 11.20%-11.49% range.

- **Long-Term Investment** – Joint ventures provide opportunities for longer-term growth outside of AEP's existing utility footprint with forward looking formula rates, reasonable ROEs and FERC incentives where appropriate.

Transmission has a diversified investment approach that positions it as one of the key AEP growth businesses.

Texas Transmission Growth Strategy : Near Term Investment

Ownership Structure: 50/50 (AEP/MidAmerican Energy Holding Company)

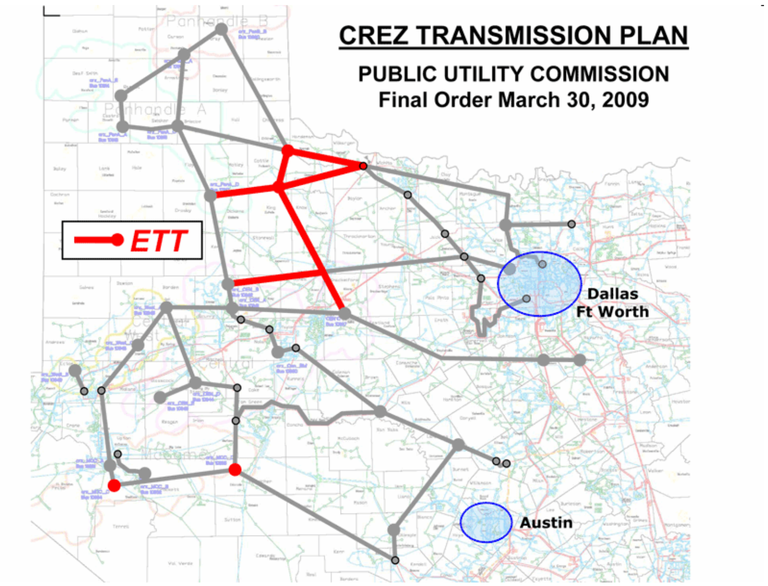
Total Project Cost: Over $3 Billion

Growing Rate Base:
Current rate base is $412 million; expected to grow as follows:
2011: $473 million
2012: $778 million
2013: $1,352 million

ETT Electric Transmission Texas

Interim TCOS filings twice per calendar year

Approved ROE: 9.96%



- **<u>Additional Projects in the Pipeline ~$1.6 B:</u>**
  - Approximately 822 miles of lines and 28 substations with in-service dates through 2017

- **<u>Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.1 B:</u>**
  - Seven double-circuit 345kV transmission lines (~$750 M), eight major 345kV stations and several series compensation installations (~$350 M)
  - PUCT Certificate of Convenience and Necessity (CCN) proceedings underway

Transco Update

FERC:

- April 2011 -- The Commission finds in the order that the Settlement is just and reasonable and the business plan will provide benefits to AEP operating companies and customers.
  - ROE order for East Transcos is 11.49%
  - ROE order for West Transcos is 11.20%

State Filing Status Update:

- **Ohio** – PUCO approved the Ohio Transco December 29, 2010
- **West Virginia** – Filing made January 6, 2011; Hearings in June
- **Arkansas** – Filing in Arkansas made May 6, 2011
- **Louisiana –** Expecting LA filing in 3Q 2011
- **Texas-SPP** – Expecting TX filing in mid 2011
- **Kentucky** – Filing made February 4, 2011; Informal conference with staff held March 2, 2011
- **Indiana** – Filing made March 1, 2011; Pre-hearing conference March 28, 2011
- **Virginia** – Filing withdrawn to give additional time to resolve issues with Staff
- **Michigan and Oklahoma** – Do not require state filing

$160M capital spend forecasted for 2011; $350MM for 2012

Joint Venture Strategy: Long-term

- **Strategy**: JV's secure new investment opportunities with local utilities to diversify AEP's investment outside AEP's traditional footprint while providing longer-term incremental earnings. JV projects are well-suited for FERC formula rate recovery mechanism, including potential for incentive rates.
- **Future:** Federal/regional initiatives may accelerate expansion of EHV transmission (e.g. cap-and-trade, renewable portfolio standards, inter-region wide planning). Securing first mover advantage will enable AEP to secure LT investment opportunities.
- **Future flexibility**: Passive investment opportunities can be considered and can provide entry beyond SPP/PJM/ERCOT

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms and our ability to recover significant restoration costs through applicable rate activities, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through rates, insurance or warranty, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances that could impact the continued operation of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of the recently passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events. AEP and its Registrant Subsidiaries expressly disclaim any obligation to update any forward-looking information.

Carbon Legislation Update

American Power Act of 2010 (Kerry-Lieberman) compared to H. R. 2454 (Waxman-Markey):

- **Positive Highlights:**
  - Significantly higher electric utility allowance allocation
  - More generous CCS bonus allowances
  - Program start date pushed out to 2013
  - Sound domestic offsets provisions
  - Price collar should help eliminate high price spikes
- **Problem Areas/Key Areas for Improvement:**
  - Removal of key EPA preemption language on CO_2 could lead to duplicative CO_2 regulatory measures
  - More restrictive international offsets provisions could drive up compliance costs
  - Early action credit is very limited
  - Market trading provisions are overly restrictive

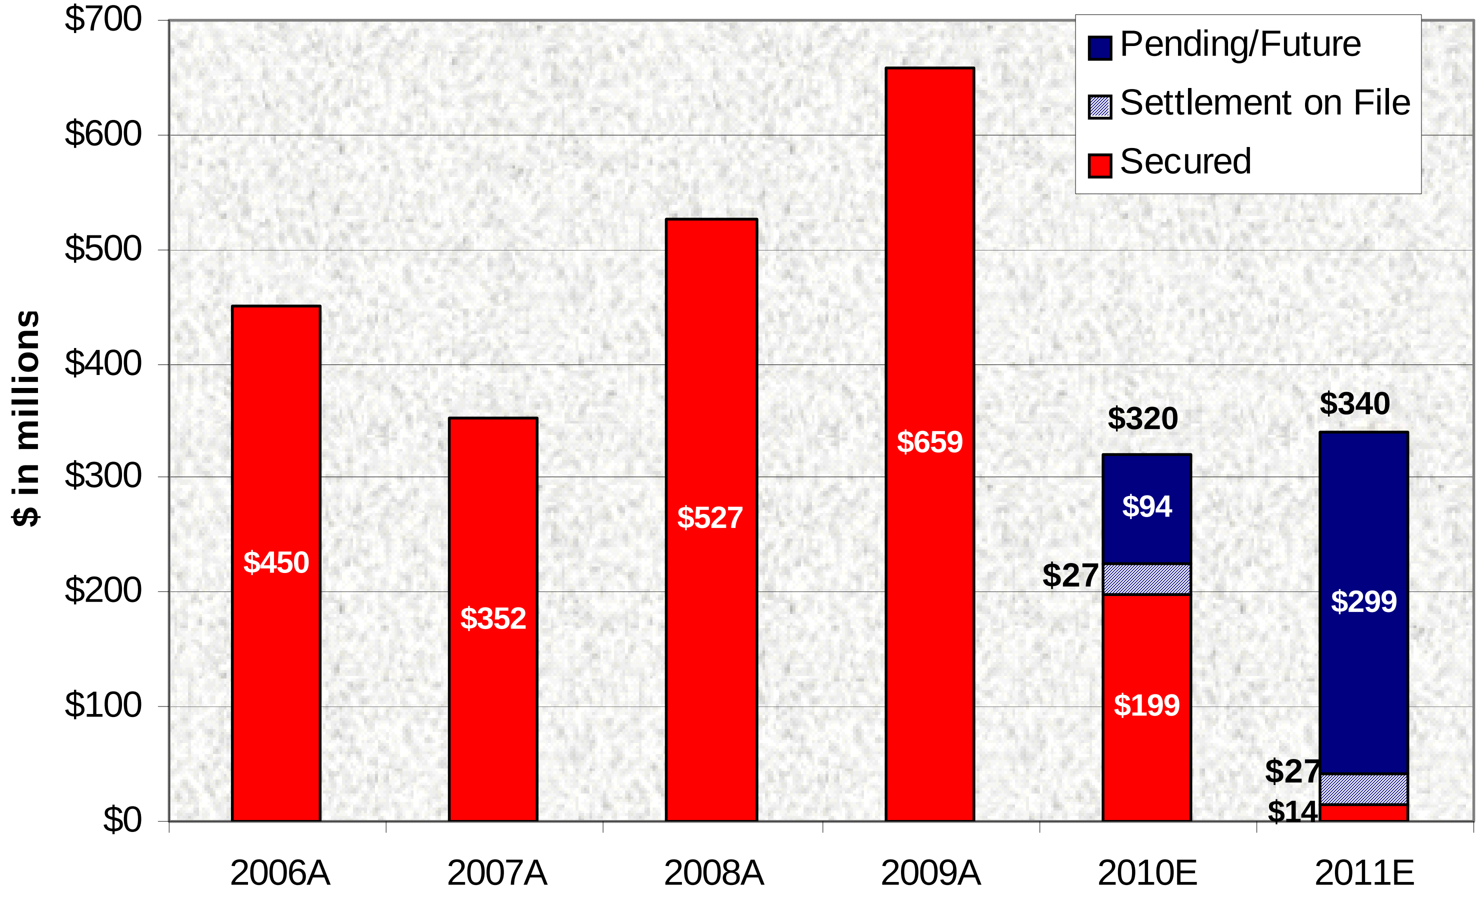
Traditional Rate Making Environment



Note: Rate relief in this chart excludes revenues with offsetting costs

Active or pending rate cases include Michigan, Virginia, West Virginia and others yet to be filed

Settlement on File represents the Kentucky rate case

Growth in rate base resulted in $2 billion of rate relief secured from 2006 through 2009

Summary Rate Case Information

APCo Virginia General Rate Case – Docket #PUE-2009-00030

On August 14, 2009, APCo filed an update to its pre-biennial base rate case, originally filed July 15, 2009 with the Virginia SCC, per the statute, for recovery of generation and distribution costs requesting an increase of $154 million. Hearings began on March 30, 2010 and an order is due no later than July 15, 2010.

Proposed Capital Structure – Company Position (12/31/08)

	% of Capitalization	Cost Rate	Weighted Return
Short-Term Debt	3.135%	3.906%	0.12%
Long-Term Debt	54.815%	6.065%	3.32%

Summary Rate Case Information

Kentucky General Rate Case – Docket #2009-00459

On December 29, 2009, KPCo filed a base rate case with the Kentucky Public Service Commission requesting an increase of $123.6 million to cover costs related to enhanced distribution reliability spending, depreciation of capital investments, investments in renewable energy and participation in PJM. A settlement agreement was filed with the KPSC on May 20, 2010, with a $64 million base rate increase, which includes $10 million on reliability spending at an ROE of 10.5%. Commission approval is pending.

Proposed Capital Structure – Company Position (9/30/09)

	% of Capitalization	Cost Rate	Weighted Return
Short-Term Debt	-2.17%	2.29%	-0.05%

Total Required Rate Relief	$	123.6

Summary Rate Case Information

I&M Michigan General Rate Case – Docket #U-16180

On January 27, 2010, I&M filed a base rate case with the Michigan Public Service Commission requesting an increase of $62.5 million to cover increased costs related to distribution O&M, taxes, interest and employee related expenses. I&M also requested new tracker mechanisms for enhanced distribution reliability spending, energy efficiency, investments in generation and participation in PJM. The requested ROE is 11.75%. An order is expected in early 2011.

Forecasted Capital Structure – Company Position (12/31/10)

	% of Capitalization	Cost Rate	Weighted Return

Summary Rate Case Information

APCo West Virginia General Rate Case – Docket #10-0699-E-42T

On May 14, 2010, APCo filed a base rate case with the West Virginia Public Service Commission requesting a net increase of $155.5 million, comprised of a $223.8 million base rate increase and a $68.3 million decrease in the construction surcharge. The filing related to capital investments made and to recover increased costs. In addition, APCo requested to establish a separate transmission tracker related to PJM charges. The requested ROE is 11.75%. A procedural schedule is pending from the WVPSC. An order is expected in March 2011.

Actual Capital Structure – Company Position (12/31/09)

	% of Capitalization	Cost Rate	Weighted Return
Short-Term Debt	3.66%	0.89%	0.03%
Long-Term Debt	53.42%	6.04%	3.23%

Total Revenue Requirement	$	223.8
Elimination of Construction Surcharge	$	(68.3)
	$	155.5

Transmission Investment Opportunities

- ETT: Projects in Texas ERCOT jurisdiction
  - $600MM of projects est. in service 2010-2013
  - ETT's opportunity could reach $3.0B in this decade
- Transco: Within our existing footprint
  - Provides opportunity to:
    - Develop new AEP-only projects
    - Reduce regulatory lag through FERC formula rates adjusted annually
- Joint Ventures: Outside of our footprint, via ETA or with others
  - Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
  - Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2015
  - Robust pipeline of projects up to $15B

765-kV Tower

Making it Happen: EHV Projects Under Development

SPP

Prairie Wind — COD: 2013-14

- *110 miles of 765 kV*
- *Partners: Westar (50%) & Electric Transmission America (50%)*
- *Estimated Cost: $400 million*
- *ROE: 12.8%*

Tallgrass — COD: 2013-14

- *170 miles of 765 kV*
- *Partners: OG&E (50%) & Electric Transmission America (50%)*
- *Estimated Cost: $500 million*
- *ROE: 12.8%*

ERCOT

ETT — COD: 2010-2017

- *345 kV ERCOT Expansion*
- *Partner: MidAmerican Energy (50%)*
- *Estimated Cost: $1.4 billion*
- *ROE: 9.96%*

PJM

PATH-WV — COD: 2014

- *275 miles of 765 kV*
- *Partner: Allegheny Energy (50%)*
- *Estimated Cost: $1.2 billion*
- *ROE: 14.3%*

PJM/MISO

Pioneer — COD: 2015

- *Additional CREZ spend of ~ $1.1 billion (COD 2012-2013, subject to a 6-month routing approval)*
- *Other Projects Pending Transfer of ~ $600 million (COD 2010-2013)*

PJM Expansion

- *Regional Expansion of 765 kV, 500 kV and 345 kV systems*

EHV Michigan/Ohio

- *700 miles of Proposed 765 kV*

SPP | **ERCOT** | **PJM** | **PJM/MISO**

Electric Transmission Texas, LLC

Overview:

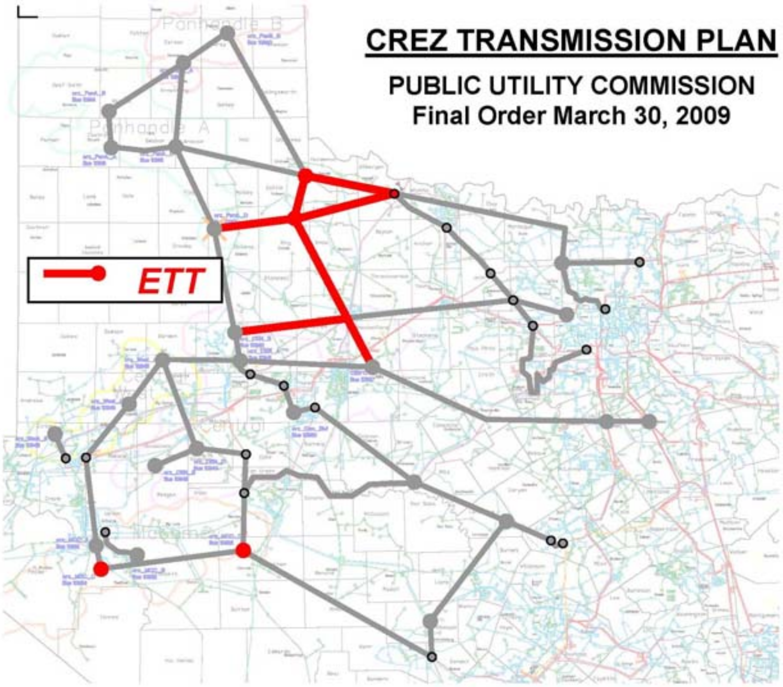
- ETT is a 50/50 JV between AEP and MidAmerican Energy Holding Company that plans to construct and operate transmission projects within ERCOT with an investment opportunity of more than $3 billion.
- Current JV rate base is $127 million with an additional $262 million requested in the current ITCOS filing, resulting in a total anticipated rate base of $389 million; debt to capital ratio of 60/40 and an authorized ROE of 9.96%.

Opportunities:

- Projects in service 2010-2018: $1.4 billion
- CREZ projects in service 2012-2013: $1.1 billion
- Other projects representing recent and pending transfers in service 2010-2014: approaching $600 million

Next Steps:

- Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in 2010.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Electric Transmission Texas

EHV Transmission in PJM: PATH

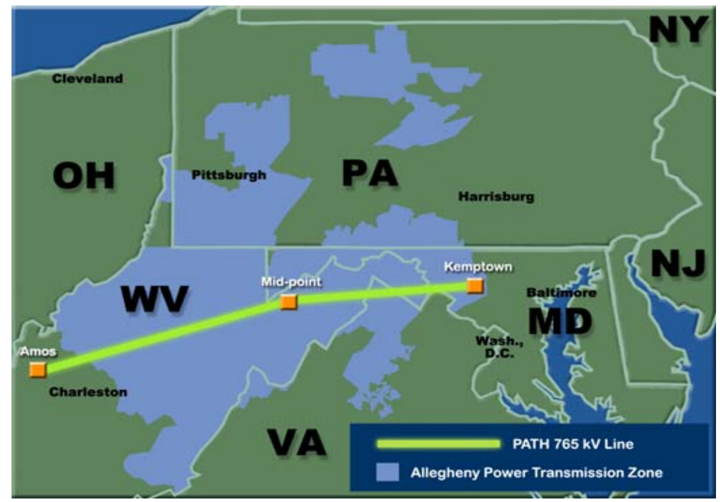
Project Description: 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

Overview:

- FERC order issued on February 29, 2008 approving:
  - Cash return on CWIP and 14.3% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents
  - Rates went into effect March 1, 2008
- Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million.
  - A budget reforecast effort is currently underway. Total project cost will likely increase due to delays in the original 2012 in-service date.
- Estimated completion date: 2014+, pending outcome of the 2010 PJM Regional Transmission Expansion Plan (2010 RTEP).

Key Challenges:

- Obtaining a CPCN in West Virginia, Virginia and Maryland. CPCN applications in West Virginia and Maryland are pending because their procedural schedule allows the consideration of the 2010 RTEP. A new application in Virginia is expected in the third quarter of 2010 after consideration of the 2010 RTEP.



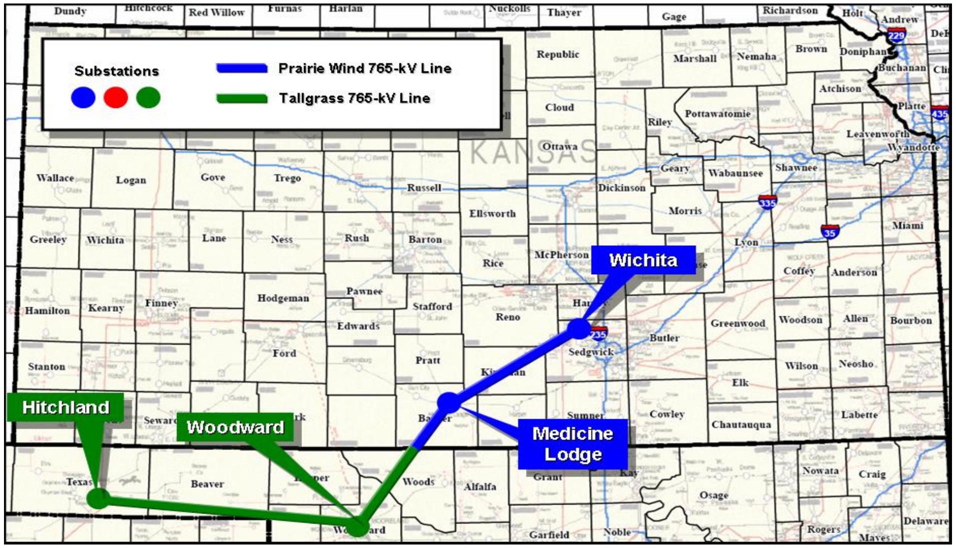
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Potomac-Appalachian Transmission Highline

Prairie Wind Transmission, LLC

Overview:

- In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
- PWT is a 50/50 JV that is proposing to build approximately 110 miles of 765-kV lines extending from Wichita, KS.
- The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
- The project is expected to cost approximately $400 million and be in-service by 2013-2014 and was approved by the KCC on July 24, 2009.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned
- Project was approved as SPP Priority Project in April 2010
  - NTC anticipated to be received summer 2010. Currently pending approval of SPP cost allocation methodology at FERC.
  - Currently approved at 345 kV. Cost at 345 kV estimated to be $165 mm. May revert to 765 kV depending on results of SPP ITP study.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

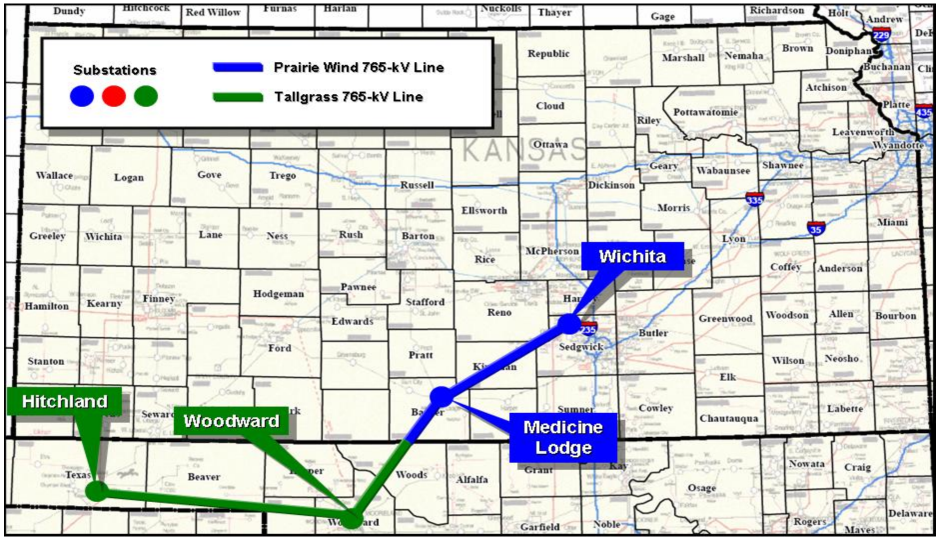
Key Challenges:

- Siting

Tallgrass Transmission, LLC

Overview:

- In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
- TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines in Oklahoma.
- The project will promote wind development in the western half of Oklahoma.
- Project is expected to cost approximately $500 million and be in-service by 2013-2014.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned
- Project was approved as SPP Priority Project in April 2010
  - NTC anticipated to be received summer 2010. Currently pending approval of SPP cost allocation methodology at FERC.
  - Currently approved at 345 kV. Cost at 345 kV estimated to be $350 mm. May revert to 765 kV depending on results of SPP ITP study.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

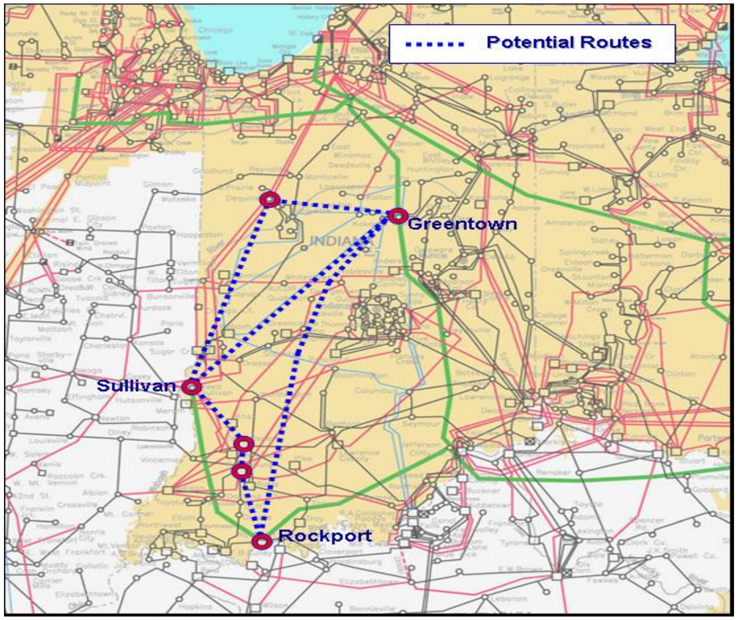
Key Challenges:

- Siting

Pioneer Transmission, LLC

Overview:

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
- The project will improve the reliability of the transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, and expand opportunities for new generation, including renewables.
- The project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP's ownership of the joint venture is 50%.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

- RTO Approval (PJM & MISO)
- Cost allocation which enables the development of "system solutions"
- Siting

Upper Midwest EHV Development—SMART Study

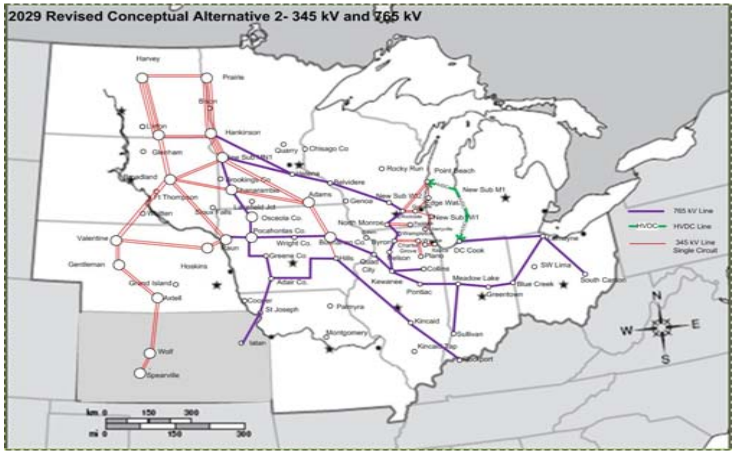
Project Description: a comprehensive study of the transmission needed in the Upper Midwest to support renewable energy development and transporting that energy to consumers throughout the study area. The SMART Study will develop EHV overlay alternatives that ensure reliable service for sponsors' communities, is environmentally friendly, and supports national energy policy.

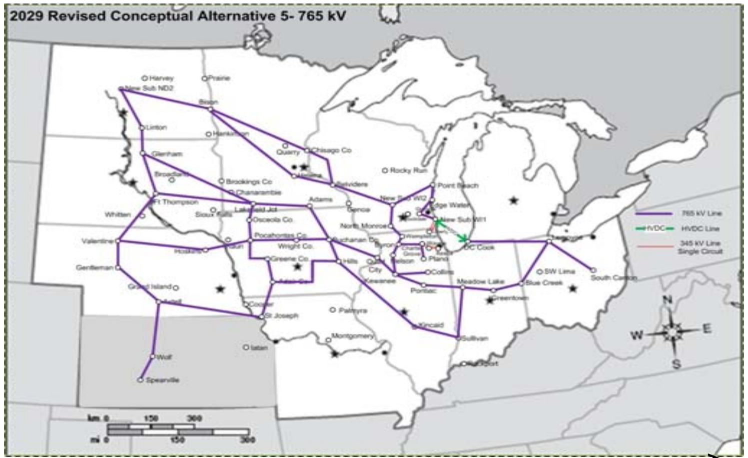
Overview:

- SMARTransmission Study announced August 2009
- Primary Focus Areas: North Dakota, South Dakota, Iowa, Nebraska, Indiana, Ohio, Illinois, Minnesota, Wisconsin, Michigan
- Study Sponsors include: ETA, Exelon, ATC, Northwestern, MidAmerican Energy Company, and Xcel
- Phase 1 completed April 30
- Phase 2 anticipated completion: June 30
  - Studying two alternatives in Phase 2. One combination 345 kV / 765 kV. One primarily 765 kV.

Next Steps:

- Investment structure
- Obtaining cost allocation between states, PJM, and MISO
- RTO technical approvals
- Favorable 205 Order including incentives

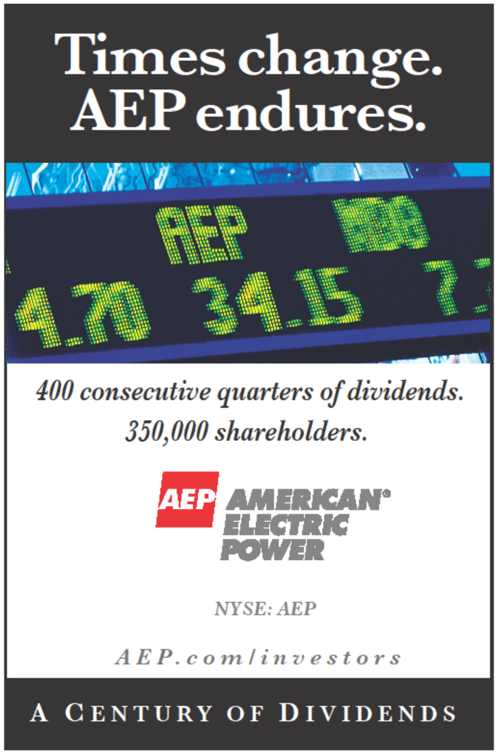




The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Value Proposition

- **Current Yield Opportunity of 5.0%[1]**
  - June 10th – 400th consecutive quarterly dividend was paid to shareholders
  - 50-60% payout ratio targeted
  - Dividend increased 2.44% on April 27th
- **Earnings Growth Prospects**
  - Investment in utility platform greater than depreciation level (2 - 4%)
  - With transmission opportunities (4 - 8%)



Attractive total return potential

[1] yield percentage based on AEP closing price of $33.68 on 06/16/2010

Spring EEI Investor Conference

Waldorf-Astoria
New York, NY
May 19, 2005

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Fuel, Emissions & Logistics
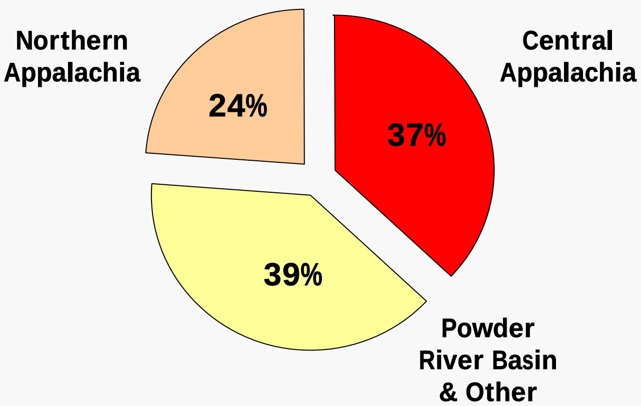
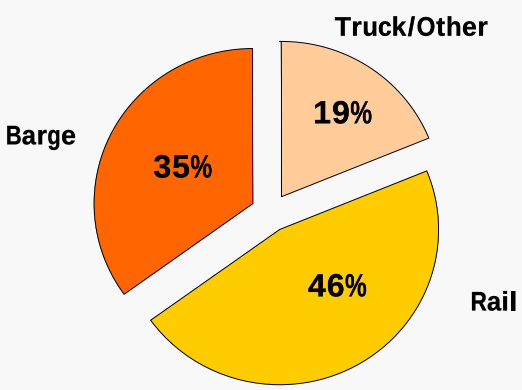
Chuck Zebula, SVP

Fuel, Emissions & Logistics

FUEL BASIN DIVERSITY
73 million tons



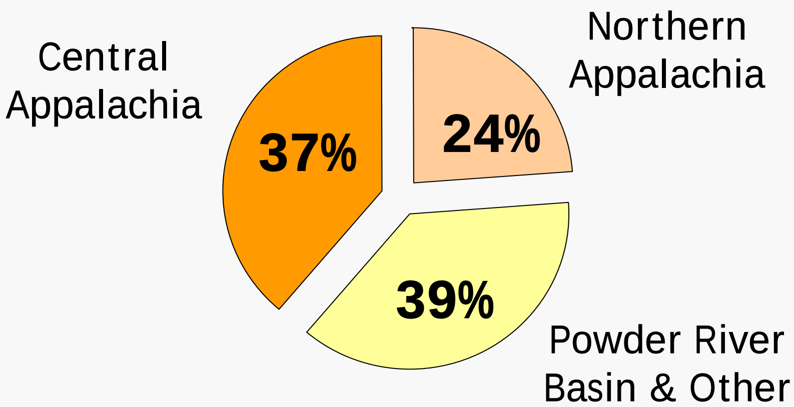
DELIVERY MODE DIVERSITY
25 GW coal capacity



- All fossil fuel activities including procurement, transportation, inventory, QA/QC, measurement, and coal trading;
- Market-based emission and renewable credit activities;
- Barge transportation, terminal, and railcar maintenance businesses;
- Procures all bulk consumables for use in combustion/emission removal;
- Optimizes all by-products of production including ash and gypsum;

Coal Procurement

AEP SYSTEM

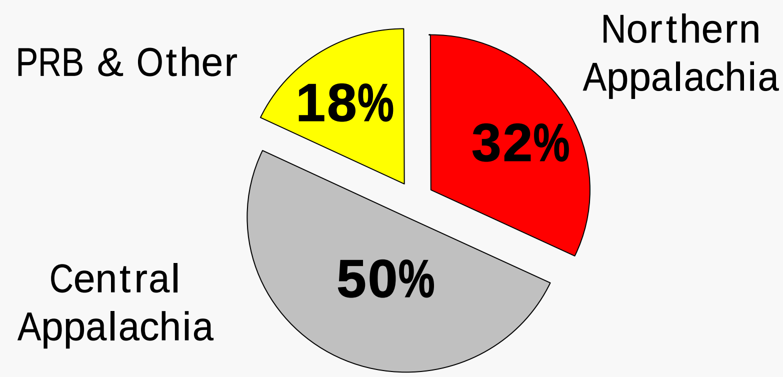


Coal Supply

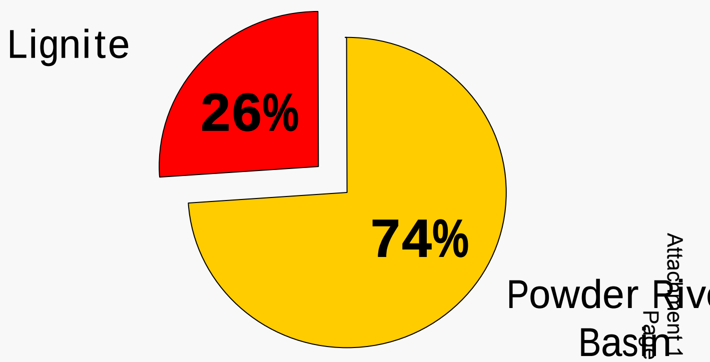
(on average)

- Purchase 75 MM tons per year
- Avg. delivered price ~ $28.50/ton in 2004
- Essentially 100% purchased for 2005
- Approximately 10% price increase in 2005

EASTERN SYSTEM

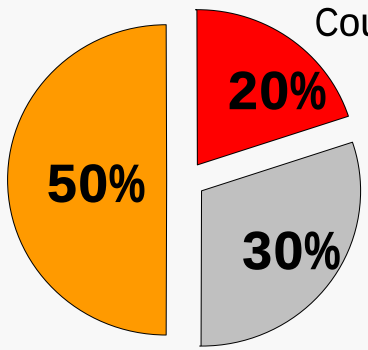


WESTERN SYSTEM



Fuel Recovery

AEP SYSTEM



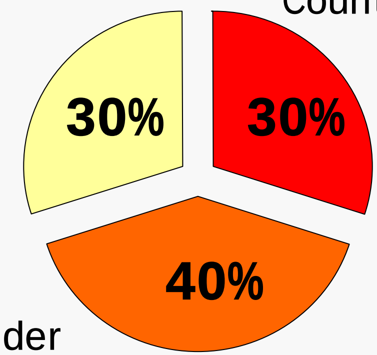
Fuel Cost Recovery

(on average)

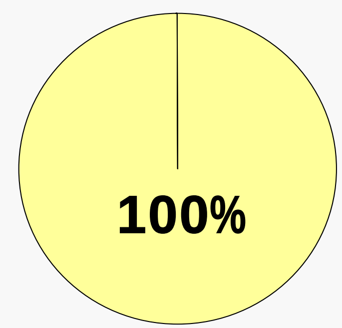
- ➢Fuel recovery varies by jurisdiction
- ➢70% of fuel cost is recoverable across the AEP System
- ➢Active Fuel Clause Jurisdictions:

AEP EAST: AP-VA, I&M, KGP, KP
AEP WEST: PSO, SWEPCO

EASTERN SYSTEM

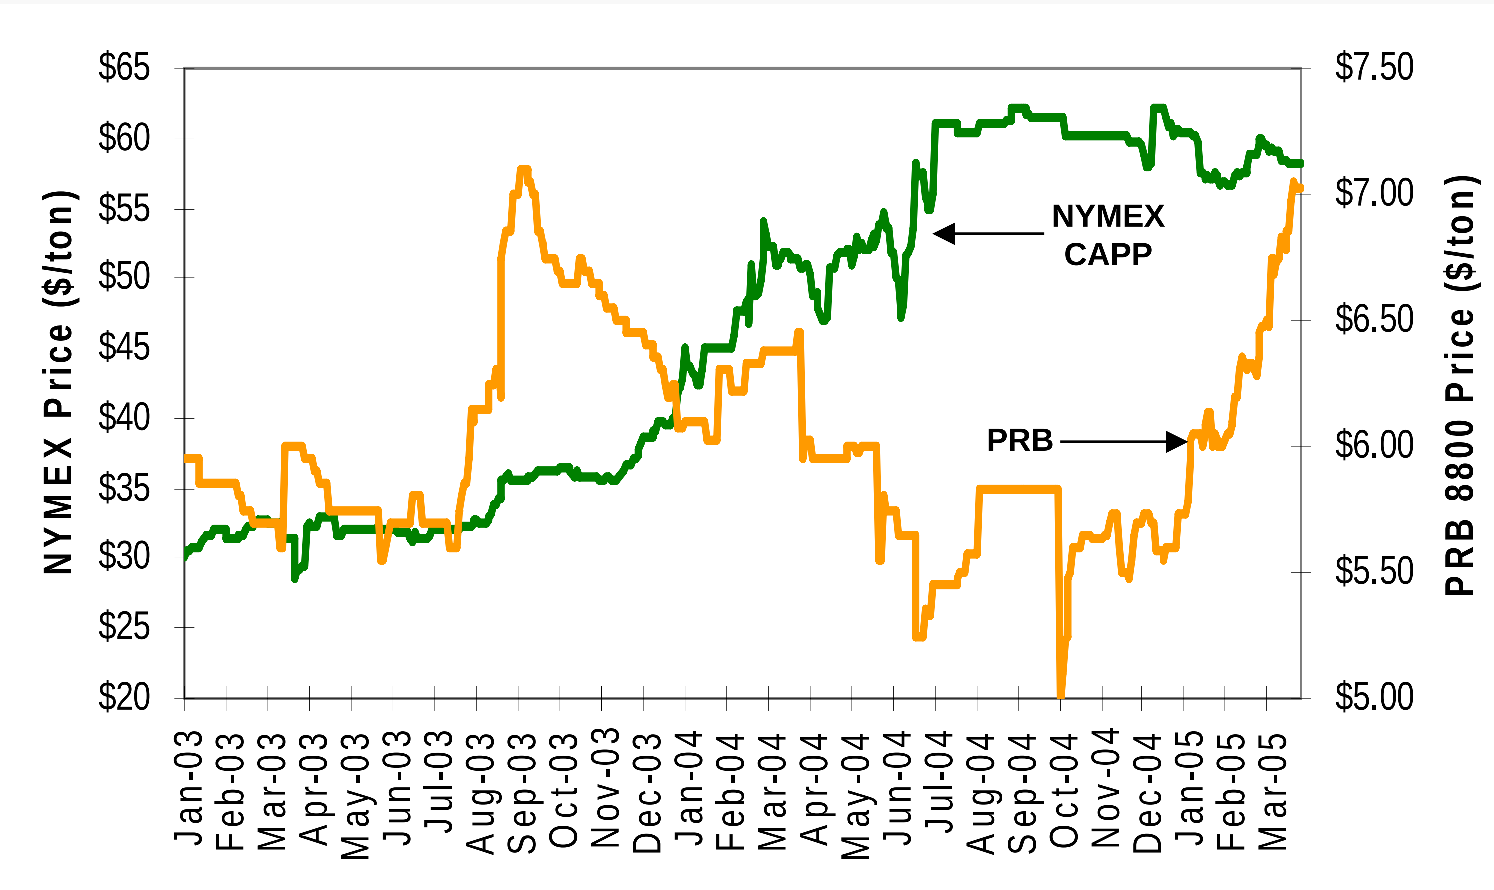


WESTERN SYSTEM



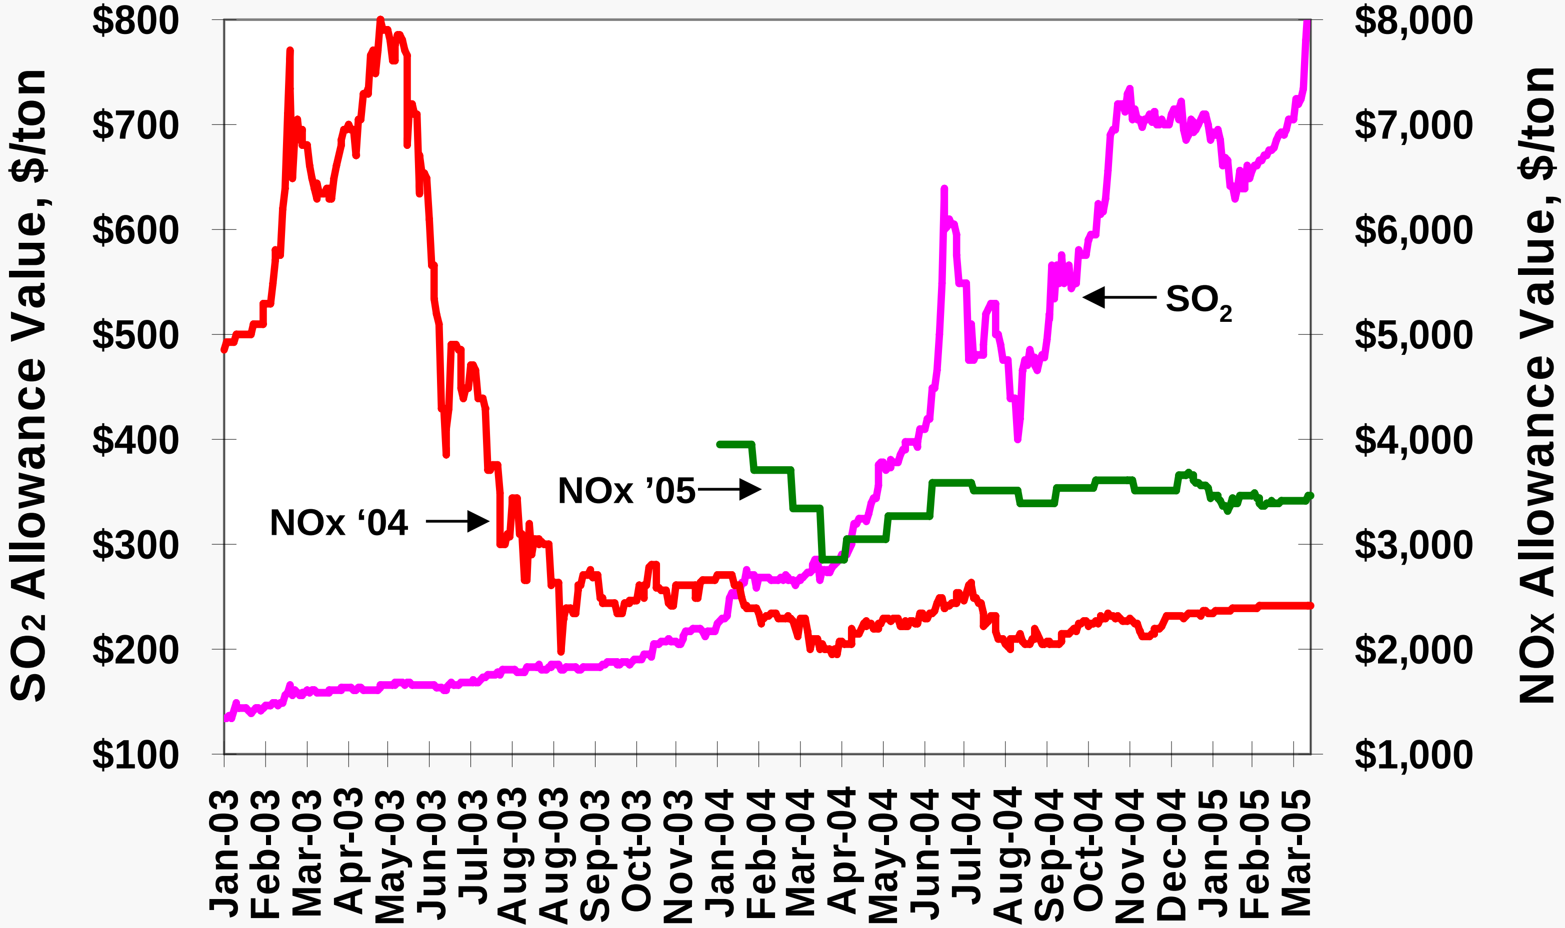
Coal Markets

The tale of two markets - one with labor, permitting and capacity constraints (CAPP) and the other with transportation bottlenecks and limited "immediate" substitution capability (PRB) but gaining strength



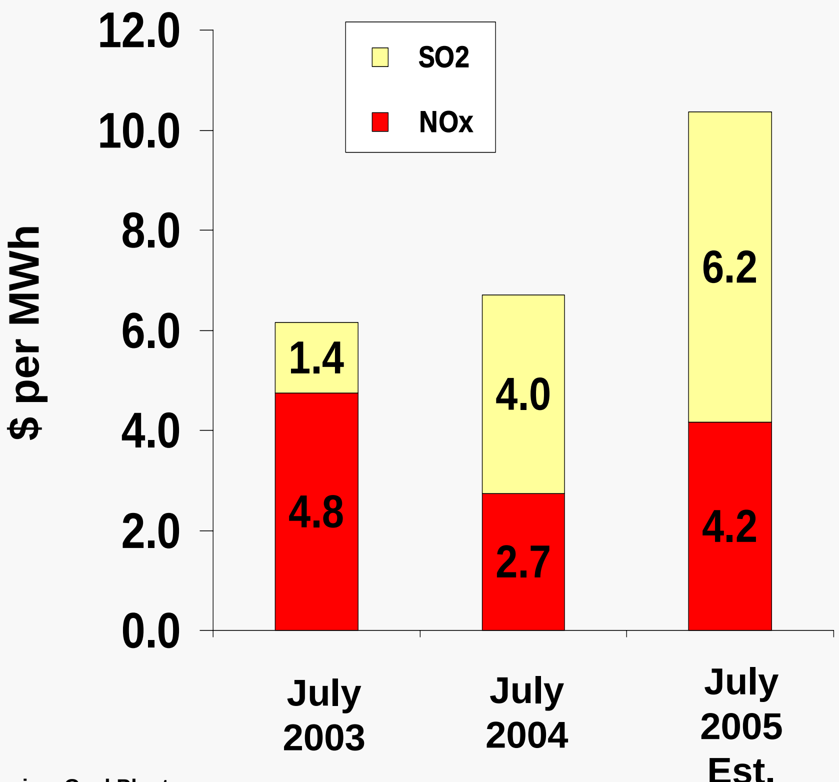
Emission Allowance Prices

Allowance prices for SO_2 and NOx have been extremely volatile since the beginning of 2003



Market Value vs. Inventory Cost

Profile of Uncontrolled Power Plant exposed to Market Value of Emission Credits



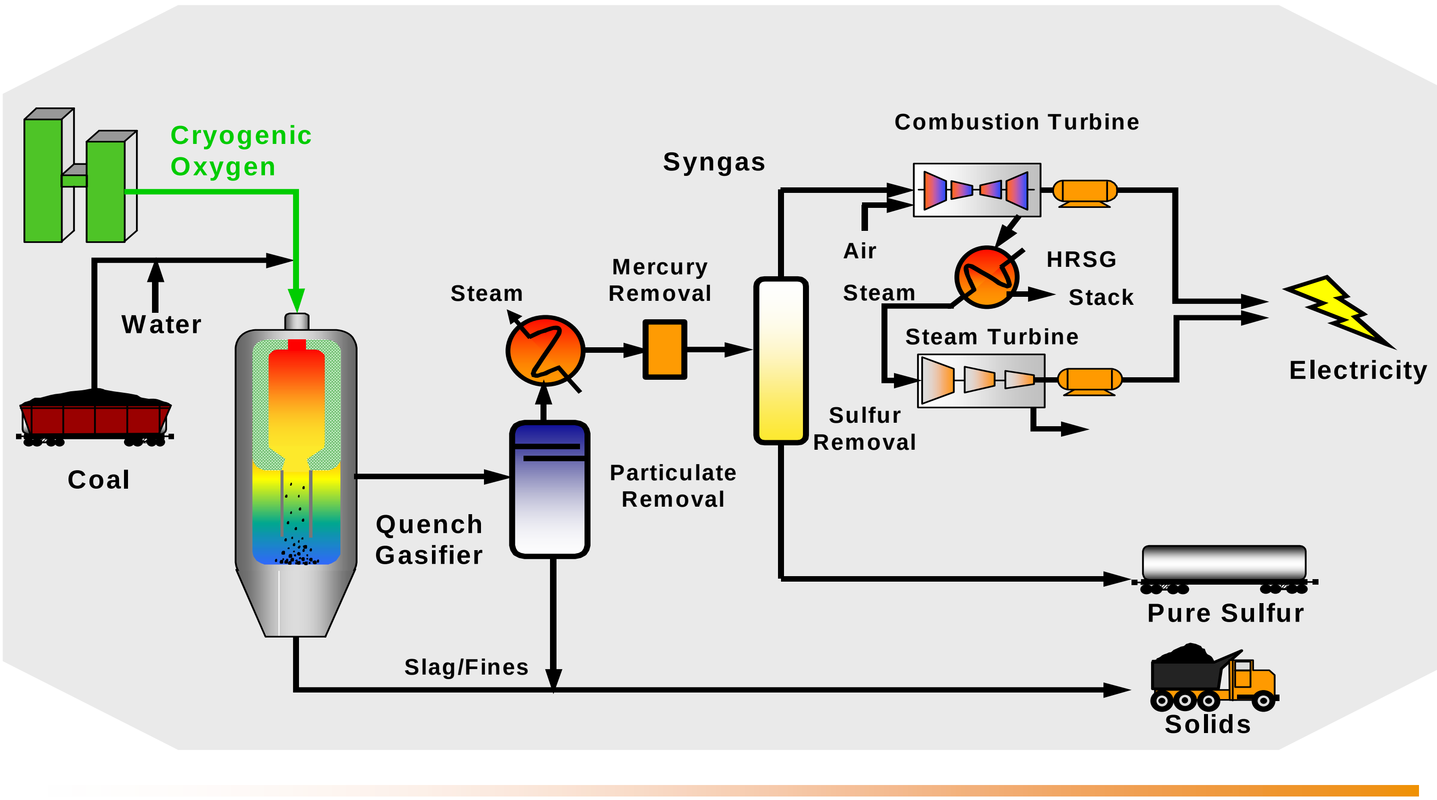
Basis – Coal Plant
9.5 MMBtu/MWh Heat Rate
0.25 lbs NOx/mmBtu
1.67 lbs SO_2/mmBtu

AEP has managed its exposure to rising emission allowance costs

- Inventory cost of emission credits is low
- Effective hedging program for SO_2 allowances
- Effective capital implementation in the NOx SIP Call ($1.3 B)
- Exposure in future years reduced by $3.7 B capital program and current inventory of allowances

Investing in IGCC

Looking to the Future - IGCC



AEP has announced its intention to construct a commercial-scale Integrated Gasification Combined Cycle (IGCC) Plant by the end of the decade.

Investing in IGCC

	PC	IGCC	NGCC
Nominal Capacity (MW)	600	600	530
Heat Rate (BTU/kWh)	8700	8600	7200
EPC cost* ($/kW)	1290	1350	440
Total Plant cost** ($/kW)	1490	1610	475
Variable Production cost*** ($/MWh)	15	14	38
All-In Cost of Electricity (without CO2 Capture) ($/MWh)	47	50	57
Estimated Cost of Electricity (with CO2 Capture) ($/MWh)	76	70	91

Source: Electric Power Research Institute

* EPC includes the cost to engineer, procure and construct plant.
** Total plant cost include land, overheads, AFUDC, etc.
*** Assumes Northern App Coal @ $36/ton, no emission credits and $5.00 gas

Site Selection Considerations

- Brownfield site vs. Greenfield site
- Sufficient Space
  - Flat area with adequate construction access
  - 600 acres
- Fuel delivery options
  - Rail/barge/truck
  - Up to 4 million tons/year of coal
  - Access to water
- Transmission Line Costs
  - Distance from high-voltage lines
  - Costs for grid interconnects and stability impacts

PJM EVALUATION REQUESTED FOR 3 POTENTIAL SITES

IGCC Permitting Issues

- **Air** – to evaluate best available control technology (BACT)
- **Wastewater** – to understand wastewater streams
- **US COE** (Corp of Engineers) – to obtain permits for construction of river facilities
- **NEPA Process** – (National Environmental Policy Act)– Environmental site studies addressing wetlands, endangered species, historical artifacts

PERMIT PROCESS WILL TAKE 1 - 2 YEARS

Next Steps

2005

- ➢ Secure cost recovery plan – Summer
- ➢ Finalize site selection - Fall
- ➢ Negotiate with suppliers – Throughout 2005

- ➢ 2005—2007: Obtain permits and finalize engineering and procurement

- ➢ 2008—2009: Construct and start-up plant

AEP WILL PIONEER CONSTRUCTION OF LARGEST IGCC PLANT IN THE WORLD

Environmental

Clean Air Interstate Rule

- Rule Finalized March 2005
- CAIR designed to address the contribution of regional emissions to downwind $PM_{2.5}$ & 8-hour Ozone non-attainment
- CAIR reductions from 2003 emissions: ~73% SO_2; & ~61% NO_x
- Reductions occur in phases: Phase I (2009); Phase II (2015)
- CAIR established three Cap & Trade Programs:
  1. Annual SO_2 Trading Program
  2. Annual NO_x Trading Program
  3. Separate Ozone-Season only NO_x Trading Program

CAIR Applicability to AEP

- AEP-East States & Louisiana subject to all three trading programs
- Arkansas subject only to the Ozone-Season trading program
- Texas subject to only the Annual NO_x & SO_2 trading programs
- CAIR does not apply to Oklahoma

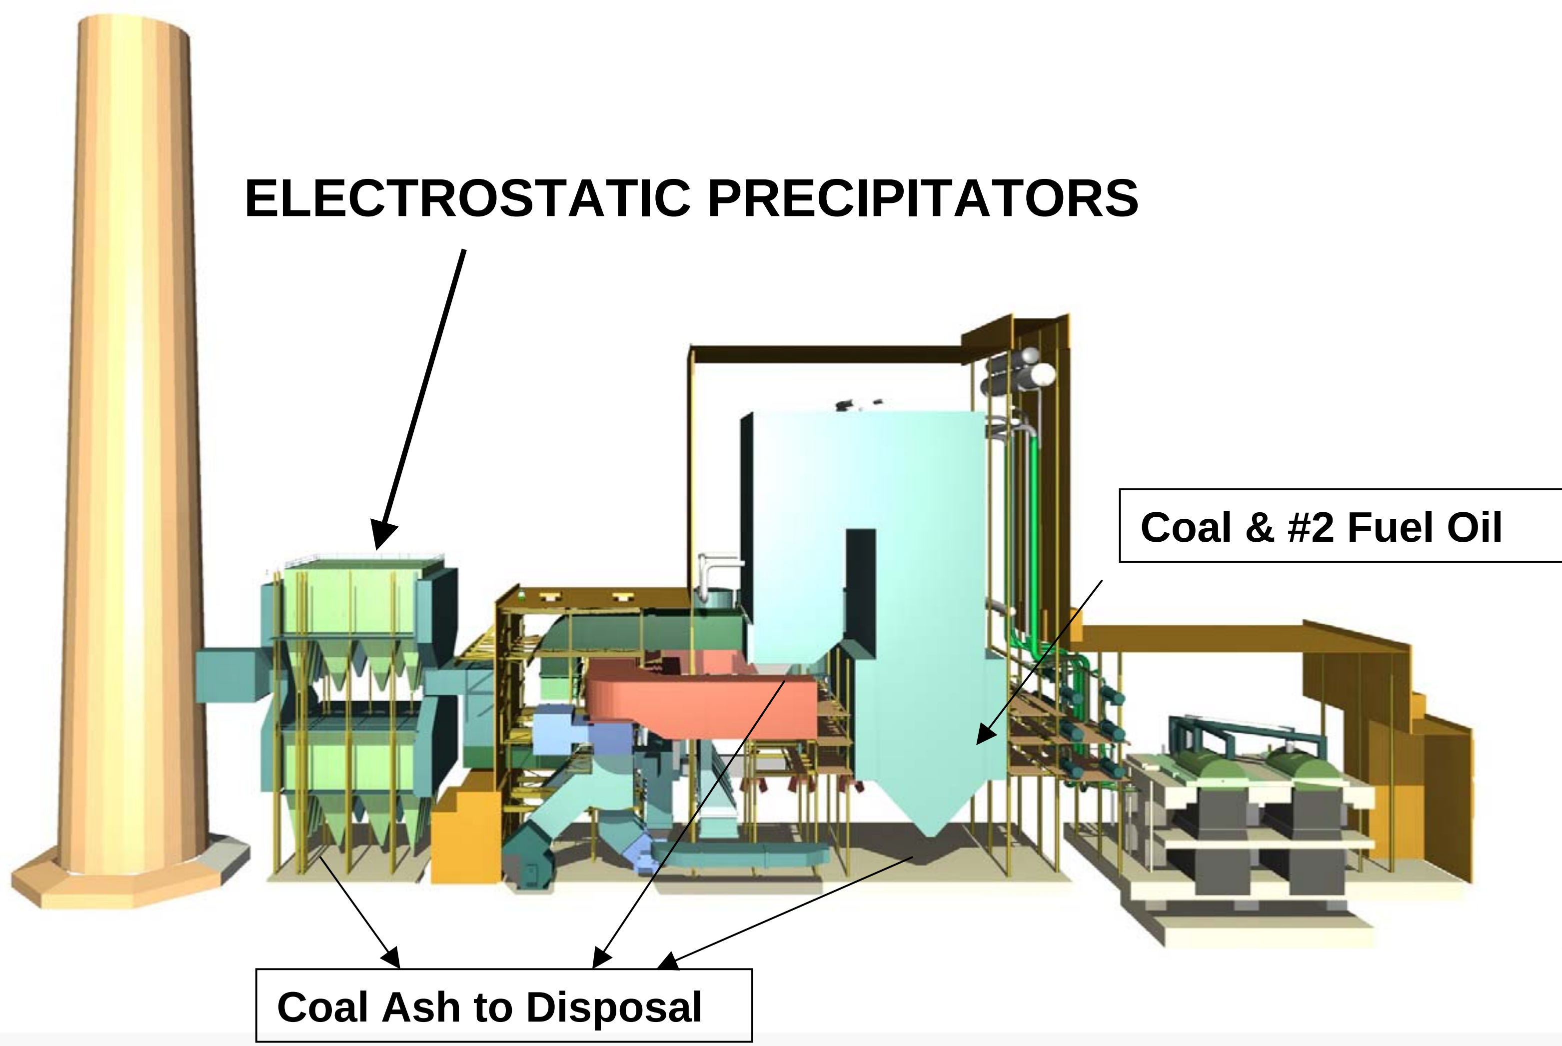
AEP WILL HAVE TO INSTALL ADDITIONAL SCR AND FGD SYSTEMS IN ORDER TO MEET THE EMISSION REDUCTIONS REQUIRED BY CAIR

Mercury Rule

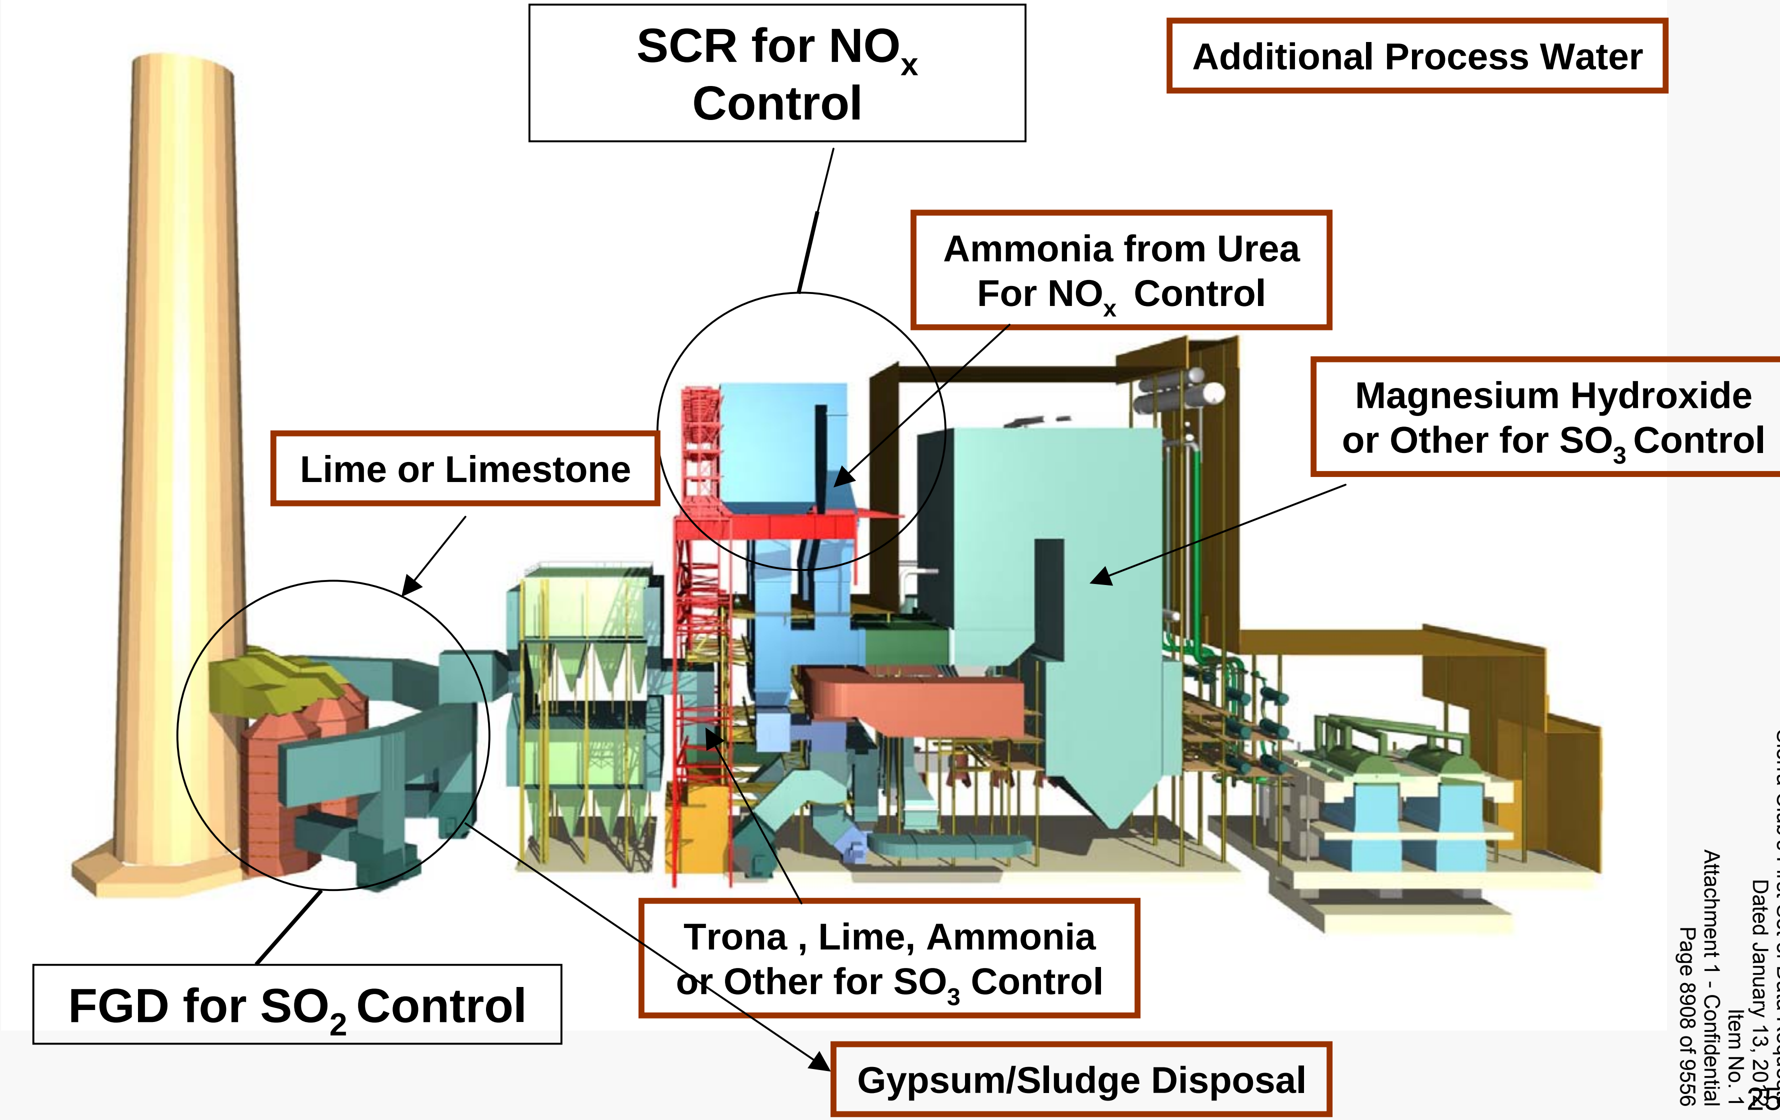
- Rule Finalized March 2005
- Designed to reduce mercury emissions by ~70% nationwide from electric utilities
- Reductions occur in phases: Phase I (2010); Phase II (2018)
- Establishes a Cap & Trade structure to achieve mercury reductions

AEP WILL ACHIEVE SOME MERCURY REDUCTIONS AS A CO-BENEFIT OF SCR AND FGD SYSTEMS, BUT MERCURY SPECIFIC CONTROL EQUIPMENT WILL BE NEEDED ON SOME UNITS

Pulverized Coal Unit as Built in 1970s

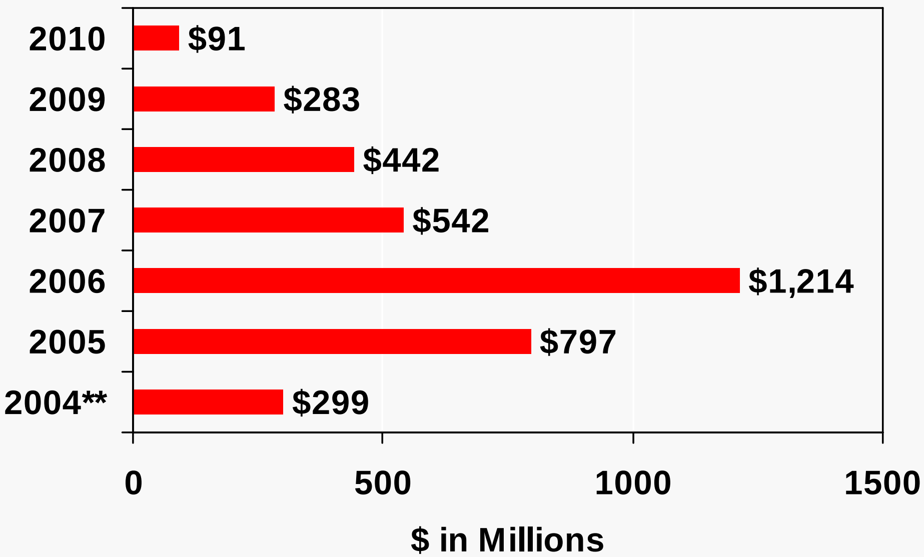


Pulverized Coal Unit Today Showing Retrofits & New Feedstock(s)

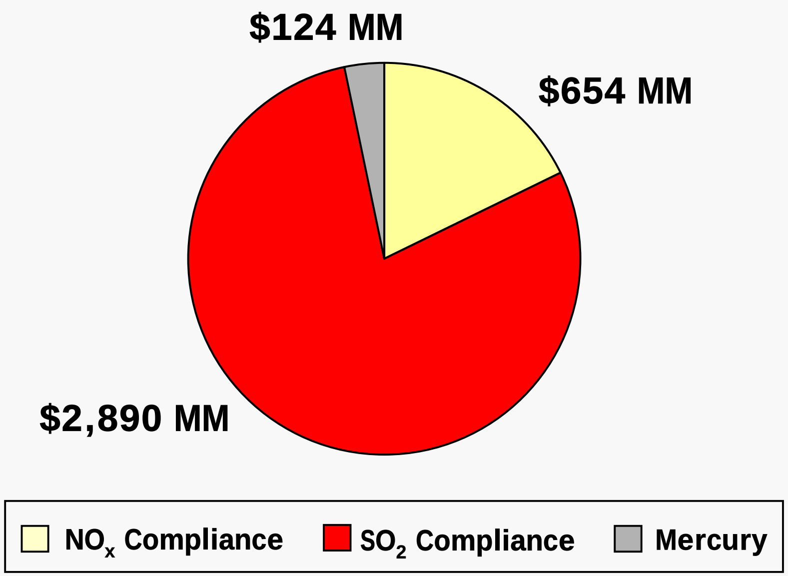


Environmental Investment: $3.7 Billion Through 2010

Environmental Capital Investment*



Compliance Allocation



*Environmental investment for NOx, SO_2 , & Hg purposes
** Actual investment level in 2004

Current Programs

$1.9 Billion:

$0.6 billion for NOx

$1.2 billion for SO_2

Future Programs

$1.8 Billion:

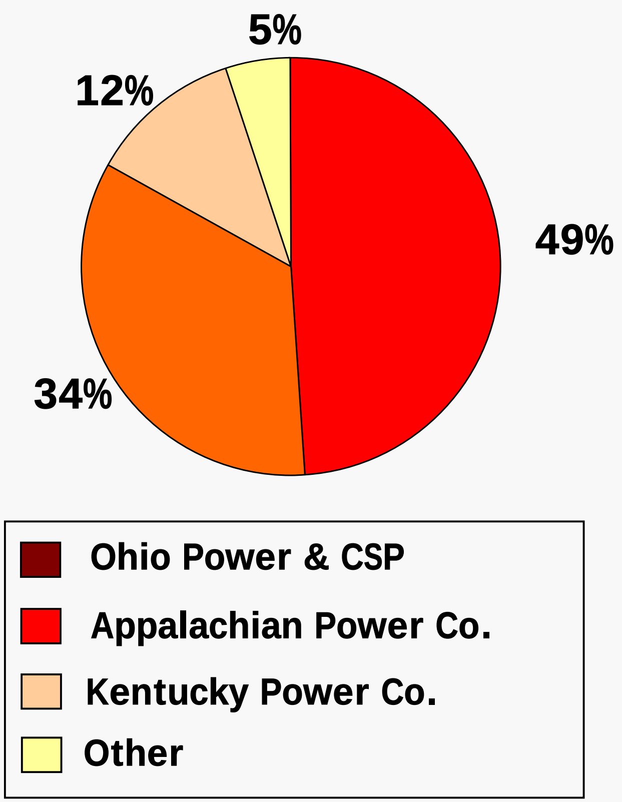
$1.7 billion for SO_2

$0.1 billion for Other

MAJORITY OF 2005 & 2006 DOLLARS WILL BE INVESTED IN OHIO & APCO

Environmental Spending by Company

Projected Environmental Investment Allocation



Funding the Environmental Investments

- **Ohio**: 49% ($1.8 billion)
  - Rate stabilization plan annual increases at CSP – 3% and OP – 7% beginning in 2006 through 2008
- **Virginia/West Virginia**: 34% ($1.2 billion)
  - VA: Environmental cost recovery mechanism/two rate case opportunities through 2010
  - WV: General rate case filing
- **Kentucky**: 12% ($433 million)
  - Surcharge mechanism

Environmental Investment

Regulatory Overview

Managing the Regulatory Process

- **Current Regulatory Activity**
  - TCC Wires Rate Case
  - TCC Stranded Cost Recovery
  - Louisiana Rate Review
  - FERC Transmission Rate Case
- **Planned Regulatory Activity (2005-2007)**
  - General Rate Cases in all AEP East jurisdictions to seek recovery of investment:
    - IN, KY, MI, TN, VA, WV

BRING CASH IN THE DOOR TO COVER CAPITAL EXPENDITURES & GROW EARNINGS THROUGH ADDITIONS TO THE ASSET BASE

Components of TCC's Net True-up Regulatory Asset

	31-Mar-05	31-Dec-04
	(in millions)	
Stranded Generation Plant Costs	$ 898	$ 897
Net Generation-related Regulatory Asset	249	249
Unrefunded Excess Earnings	(6)	(10)
Net Stranded Generation Costs	1141	1136
Carrying Costs on Stranded Generation Plant Costs	205	225
Net Stranded Generation Costs Designated for Securitization	1346	1361
Wholesale Capacity Auction True-up	483	483
Carrying Costs on Wholesale Capacity Auction True-up	91	77
Retail Clawback	(61)	(61)
Deferred Over-recovered Fuel Balance	(215)	(212)
Net Other Recoverable True-up Amounts	298	287
Total Recorded Net True-up Regulatory Asset	$ 1,644	$ 1,648

Carrying charge calculated using pre-tax cost of capital of 11.79%

Debt Component: 8.12% - $296 million recognized as income thru 3/31/05

Equity Component: $154 million to be recognized in income as collected

CARRYING CHARGES FOR 2005 EXPECTED TO BE $87 MILLION

Regulatory Matrix – East

Ohio (Restructured)
- Unbundled rates for default customers frozen until 12/31/2005
- Pursuant to RSP Plan approved by PUCO 1-26-05:
  - Distribution rates in effect at December 31, 2005 are frozen, with certain exceptions, until the end of 2008.
  - Institute for 2006-2008 a non-bypassable distribution rider for provider of last resort (POLR) costs.
  - CSP ”G” rates to increase 3% per year (2006-2008).
  - OP “G” rates to increase 7% per year (2006-2008).
  - Transmission rates can upon filing reflect change in RTO costs.
- No active fuel clause
- Application for IGCC plant recovery filed on 3-18-05, hearings scheduled to begin 8-8-05.

Virginia (Restructured)
- Capped rates for default customers frozen through end of 2010
- Capped rates can be adjusted by two rate cases prior to the end of 2010 and incremental environmental and reliability cost recovery mechanisms
- Active annual fuel clause

West Virginia (Regulated)
- Base rates not frozen
- Annual ENEC proceedings have been suspended, the factor is currently fixed at pre-2000 levels.
- No active fuel clause

Indiana (Regulated)
- Subject to IURC order approving a settlement agreement, base rates are frozen and fuel cost recovery factors are capped at increasing rates through June 30, 2007.

Kentucky (Regulated)
- Base rates not frozen
- Fuel clause, adjusted monthly
- Environmental surcharge costs are adjusted monthly for approved environmental compliance plan
- Rockport Unit Power Supply Agreement extension through 12-07-2022 was approved by FERC & KPSC in December 2004

Michigan (Restructured, but Regulated)
- Base rates not frozen.
- Active annual fuel clause.

Tennessee (Regulated)
- Base rates not frozen
- Automatic fuel clause, adjusted monthly

Regulatory Matrix - West

Texas (Regulated)
- SWEPCO-Texas retail competition delayed until at least 2007
- Bi-annual fuel clause adjustment opportunity

Texas (Restructured)
- TCC stranded cost true-up filing in first half of 2005. TCC wires rate case order expected in June 2005.
- TCC final fuel reconciliation (July 98-Dec. 01) decision issued in April 2005. TCC will appeal decision.
- TNC true-up order approved in April 2005 (retail clawback and fuel over-recovery only). No adjustments to revised amounts filed by TNC.
- TNC final fuel reconciliation (July 00-Dec. 01). Final order received October 18, 2004. Appeals filed in state and federal courts in Dec. 2004.

Oklahoma (Regulated)
- General rate case filed Oct. 31, 2003
  - On 5-2-05 the OCC issued an order approving a settlement agreement which included a $6.9 million annual revenue reduction, offset by changed depreciation rates and deferral recoveries, changed the fuel clause from a quarterly to annual factor, and made permanent an $11.8 million annual system reliability rider.
- 2001 Fuel review case
  - Hearings expected in August 2005. Scope expanded to cover 2002-2004 margin allocation issue.
- 2003 Fuel review case
- Likely to include motions to expand scope to include prudence review

Louisiana (Regulated)
- Base rates capped through June 15, 2005
- Currently under a merger required financial review
- Fuel clause, adjusted monthly

Arkansas (Regulated)
- Base rates not frozen
- Fuel clause, adjusted annually

Ohio Rate Stabilization Plan Recap

Summary of Impact (Columbus Southern Power & Ohio Power):

	Revenues				Incremental Cash			
Rate Stabilization Plan	**2005**	**2006**	**2007**	**2008**	**2005**	**2006**	**2007**	**2008**
Escalation of Generation Rate	0	83	173	271	0	83	173	271
POLR Rider/Recovery of RTO Costs**	21	0	0	0	0	7	7	7
POLR Rider/Return on Environmental Additions	44	26	26	26	0	41	41	40
Total RSP Impact	**65**	**109**	**199**	**297**	**0**	**131**	**221**	**318**
Pre-Existing Electric Transition Plan								
Elimination of 5% Residential Generation Credit*	0	25	25	26	0	25	25	26
Recovery of RTO costs**	0	29	29	29	0	29	29	29
Total ETP Impact	**0**	**54**	**54**	**55**	**0**	**54**	**54**	**55**

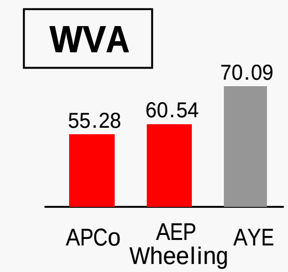
* Elimination of 5% credit is per Statute, and part of pre-existing ETP, not the RSP

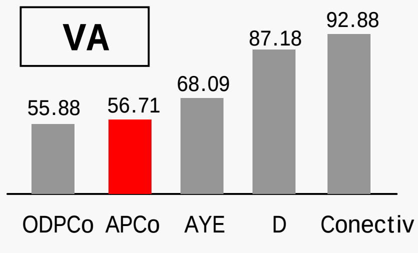
** Recovery of administrative RTO costs, net congestion fees and ancillary services permitted in pre-existing ETP, but the RSP allows for recovery of 2005 costs as well

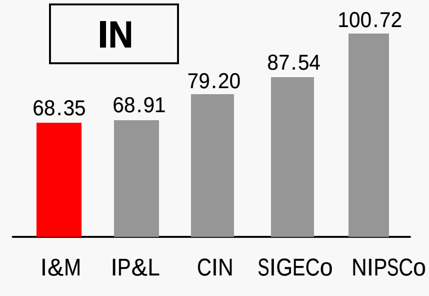
AEP WILL STILL HAVE AMONG THE LOWEST RETAIL RATES IN OHIO

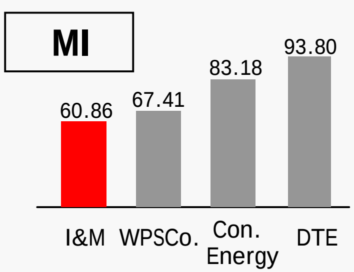
AEP: The Low Cost Provider

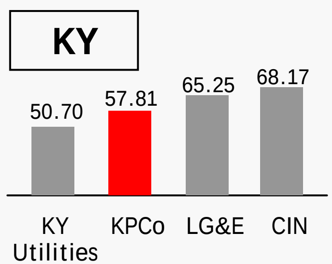
Regulated Rates

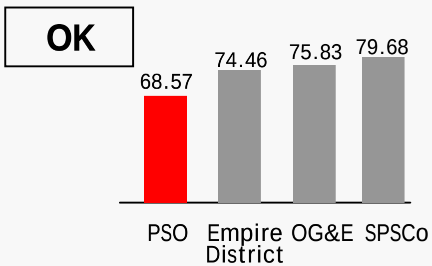


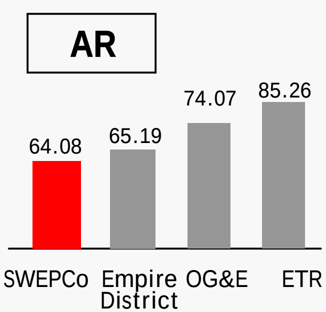


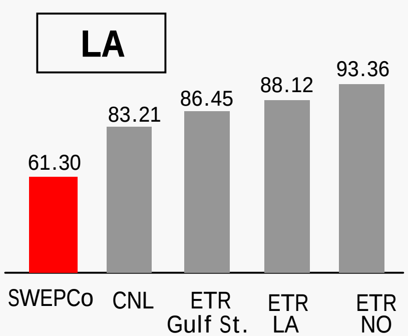


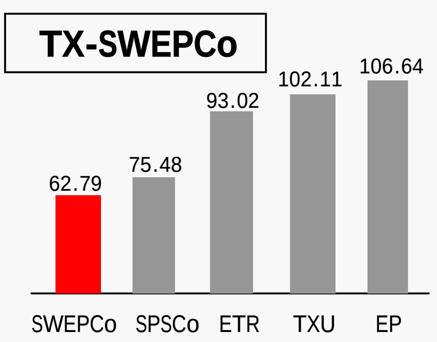






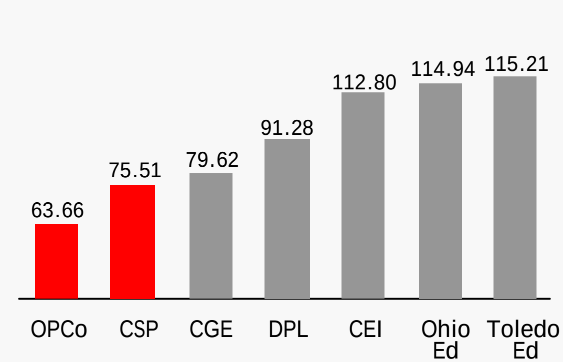






Note: Rate amounts reflect bundled residential rates and are expressed in $/MWh. The source for the shown rate amounts (excluding wholesale) is the EEI Typical Bills and Average Rates Report.

Unregulated Rates



OH (POLR bundled residential rates)

Wholesale

Fossil fleet variable cost of production:

- Today: $16-$18/MWh
- Tomorrow: $18-$21/MWh
  - Post-environmental retrofit installation

SPRING EEI INVESTOR CONFERENCE

WALDORF=ASTORIA
NEW YORK, NY

MAY 24-25, 2006

A Century of Firsts

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

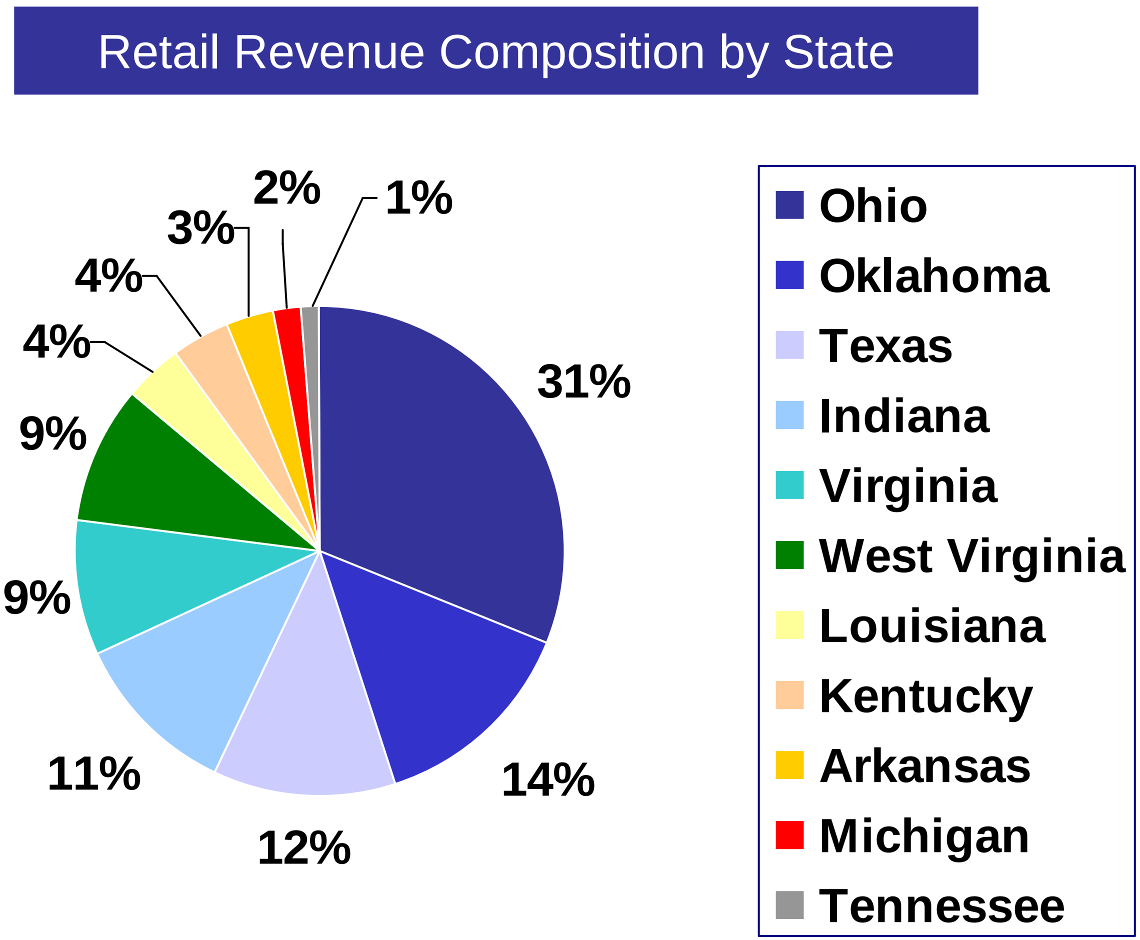
2004	62.06%
2005	62.53%

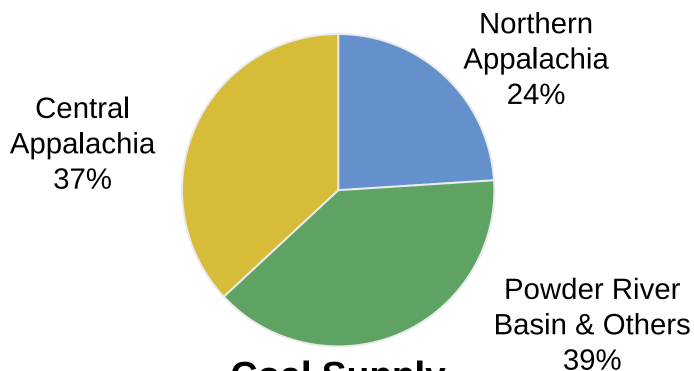
2005 Retail Revenue



Fuel

Coal Procurement

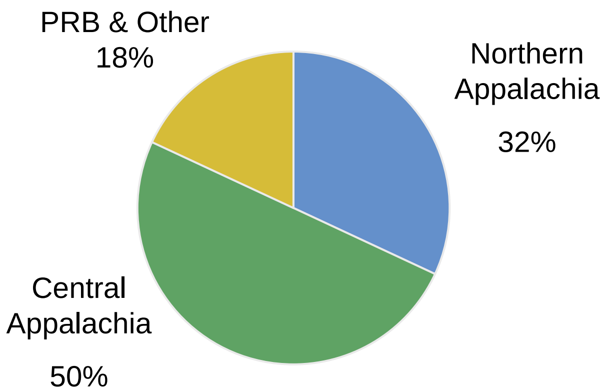
Total AEP System



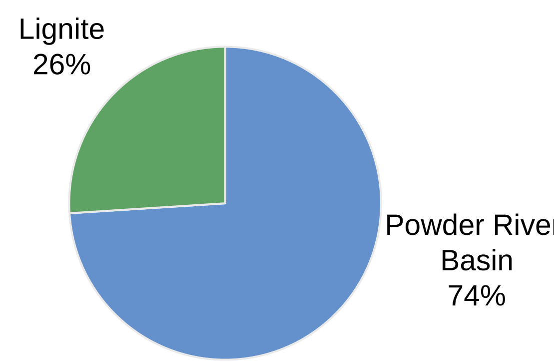
Coal Supply
(on average)

- Purchase 75 MM tons per year
- Avg. delivered price ~ $32.52/ton in 2005
- Fully contracted for 2006; 90%+ contracted for 2007
- Approximate 11%-13% price increase in 2006
  - Rising costs at Eastern mines & safety issues
  - High SO2 Allowance prices drive low sulfur coal prices

AEP Eastern System

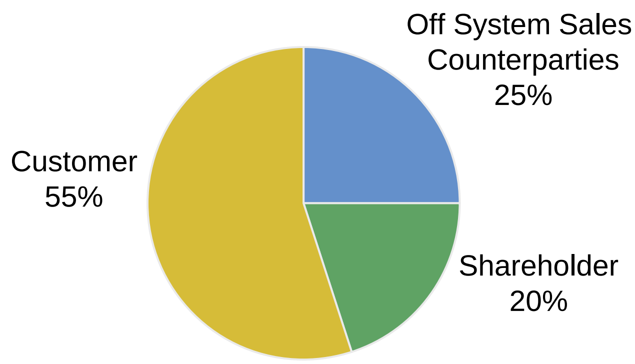


AEP Western System



Fuel Recovery

AEP System



Fuel Cost Recovery (on average)

- Fuel recovery varies by jurisdiction
- 80% of fuel cost is recoverable across the AEP System
- Active Fuel Clause Jurisdictions:
  - AEP EAST: APCo, I&M, KPCo, KGP, WP
  - AEP WEST: PSO, SWEPCO

Note: Fuel recovery percentages are based on estimates for 2006 fiscal year

Jurisdictional Fuel Clause Summary

STATE	FUEL CLAUSE	ADJUSTMENT FREQUENCY
Arkansas	Yes	Monthly
Indiana	Yes	Capped at increasing rates through June 30, 2007
Kentucky	Yes	Monthly
Louisiana	Yes	Monthly
Michigan	Yes	Annually
Ohio	No	Although there is no recovery mechanism in Ohio, the RSP provides for a 3% (CSP) and 7% (OP) increase in generation rates annually, which includes fuel beginning January 2006 and extending through December 2008.
Oklahoma	Yes	Annually
Tennessee	Yes	Monthly
Texas (SPP)	Yes	Annually
Virginia	Yes	Annually
West Virginia	Yes	Annual ENEC currently suspended. On Jan 6, 2006, WVPSC approved deferral accounting for ENEC to begin July 1, 2006 and new rates to be effective July 28, 2006.

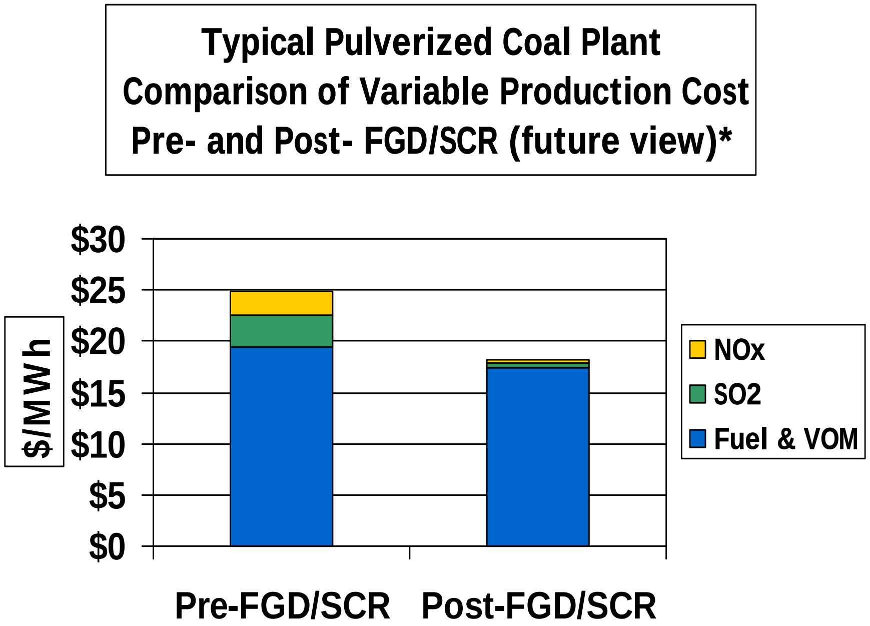
INSTALLATION OF SCR AND FGD WILL ALLOW OUR COAL FLEET TO REMAIN EXTREMELY COST COMPETITIVE

Low Cost Production Supports Investment & Investment Sustains Low Cost Production

- Lowers exposure to high cost emission allowances
- Creates opportunity to burn wider variety of lower cost fuels
- Improves baseload operation (higher capacity factor, higher margin)
- All-in cost of electricity, including FGD/SCR investment, remains low



* Assumes annual NOx program

AEP WILL REMAIN THE LOW COST PRODUCER FOLLOWING COMPLETION OF ENVIRONMENTAL RETROFIT PROJECTS

Investing in IGCC

Integrated Gasification Combined Cycle

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called “syngas” – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

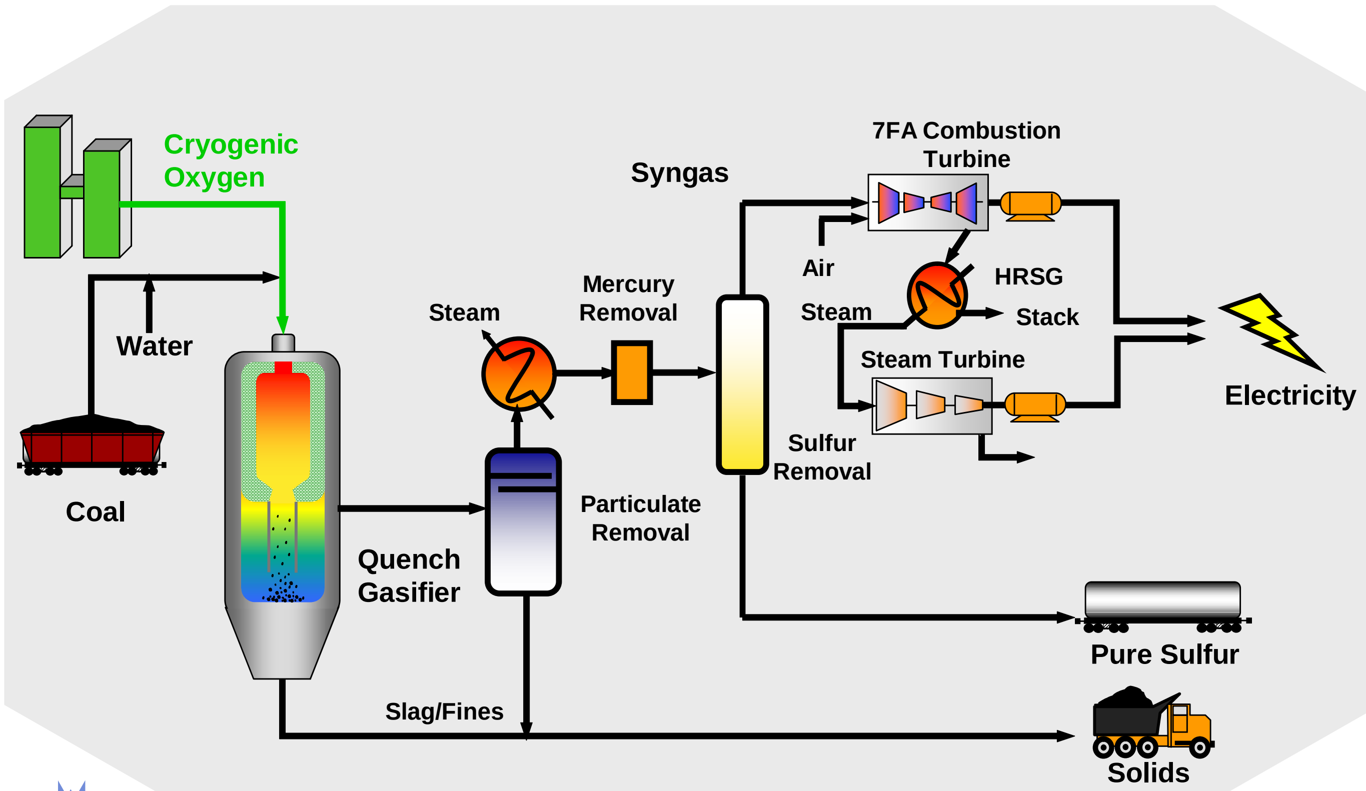
Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2, mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP’s eastern service territory.

AEP is currently working with a technology provider to develop a firm price for an IGCC facility to be built in our eastern service region. This price will be available in 2006. AEP intends to seek regulatory recovery approvals in advance of building the plant.

Looking To The Future - IGCC



162110 - GJS/CE-01/1-23-02

AEP HAS ANNOUNCED ITS INTENTION TO CONSTRUCT A COMMERCIAL-SCALE INTEGRATED GASIFICATION COMBINED CYCLE (IGCC) PLANT BY THE END OF THE DECADE

Investing In IGCC

Generation Technology Comparative Statistics

	PC	IGCC	NGCC
Nominal Capacity (MW)	**600**	**600**	**600**
Heat Rate (Btu/kWh)	**8700**	**8600**	**7200**

Estimated Cost of Electricity, with CO2 Capture ($/MWh)	**94**	**87**	**137**

Source: Results of AEP analysis based on EPRI studies

- Total Plant Cost (2005$'s) includes the cost to **E**ngineer, **P**rocure and **C**onstruct plant and owner's direct costs; does not include interconnections, transmission lines, transmission upgrades, contingency or AFUDC.
- Assumes Northern Appalachian Coal price of $1.60 /mmBtu for PC and IGCC, and natural gas price of $7.00/mmBtu for NGCC.
- Assumes 85% capacity factor for PC and IGCC, 25% for NGCC.
- Production Cost includes Fuel Cost and Variable Operations & Maintenance (VOM) cost.
- Cost of Electricity based on EPC cost, does not include the cost of Emission Credits.
- Cost of Electricity with CO2 capture does not include sequestration cost.

IGCC TECHNOLOGY IS STRATEGIC TO KEEPING COAL IN THE MONEY

Regulatory Overview

Regulatory Activity Underway

- TCC Request for Securitization of Stranded Costs
- Ohio Companies filing for pass through of FERC OATT changes
- Indiana Depreciation Petition
- APCo General Rate Case Filing in Virginia
- APCo Filing for Recovery of E&R Costs in Virginia
- APCo & WPCo Base Rate & Expanded Net Energy Cost (ENEC) Filing in West Virginia – Settlement Pending
- IGCC – Received Rate Authorization of Pre-Construction Costs

YEAR-TO-DATE, SECURED $350 MILLION OF THE $500 MILLION RATE RECOVERY ASSUMED IN 2006 EARNINGS GUIDANCE RANGE

Texas Regulatory Activity

TCC Stranded Cost Recovery Case

- February 16, 2006 – PUCT final order provides for net true-up of $1.475 billion
- March 3, 2006 – Requested approval of financing order to issue $1.8 billion in low-cost securitization bonds
  - Final order expected in June or July 2006
  - September 2006 - Issuance of securitization bonds if no appeal

<u>Procedural Schedule for TCC Securitization</u>

- ✓ April 17, 2006 – Intervenors File Testimony
- ✓ April 24, 2006 – Staff Files Testimony
- ✓ April 27, 2006 – TCC Files Rebuttal Testimony
- ✓ May 25-26, 2006 – Hearing On Merits

- May/June 2006 – Request approval for CTC to address other true-up items
  - Expected $491 million credit to customers
  - Sept 2006 – CTC to be implemented

Regulatory Activity Underway

Ohio Companies Pass through of FERC OATT Changes

Filed Feb 3, 2006 - Seeking authority to pass through to customers the changes in the FERC OATT related to the elimination of the SECA revenues and the costs associated with the Wyoming-Jacksons Ferry transmission line

Indiana Depreciation Filing

December 1, 2005 – I&M filed petition with the IURC for accounting authorization to revise the depreciation rates applicable to its electric utility plant in service

- Based on a 2004 depreciation study, I&M recommends a decrease in annual depreciation expense of approximately $45 Million on an after-tax Indiana jurisdictional basis.
- Procedural schedule has been set with final order expected in third quarter 2006

Regulatory Activity Underway

Appalachian Power - Virginia E&R & General Rate Case Activity

Virginia E & R Cost Recovery Factor - Filed July 1, 2005 – Originally filed for recovery of $62.1 Million in new Environmental & Reliability costs

- Oct 14, 2005 – SCC ruled VA law does not allow recovery of prospective costs - $48.6 Million
- Nov 14, 2005 - APCo filed supplemental direct testimony which included updated actual E&R costs incurred through Sept. 30, 2005 of $21.1 million

Virginia General Rate Case Filing – Filed May 4, 2006 – Seeking $225.8MM increase in base rates, partially offset by a proposed credit to reflect sharing of $27.3MM in margins from off system sales (OSS), resulting in a net annual increase of $198.5MM.

Appalachian Power & Wheeling Power – West Virginia Base Rate Case & ENEC Reactivation

Filed April 24, 2006 – Joint Settlement Agreement

- Estimated overall impact of revenue increases to be phased-in through 2009:
  - $129 Million
  - 16% Increase
- Provides for timely recovery of Wyoming-Jacksons Ferry 765kV line and Mountaineer & Amos FGDs

Phased-In Settlement Agreement Increases:

- ✓ July 28, 2006 - $61 Million*
- ✓ July 1, 2007 - $36 Million**
- ✓ July 1, 2008 - $14 Million**
- ✓ July 1, 2009 - $18 Million**

*Excludes ENEC over-recovery negative surcharge ($17 million) -- surcharge does not have an earnings impact

** Estimated

Settlement Details

✓Increase effective July 28, 2006:

($18MM)	Base Rates
$56MM	ENEC
<u>$23MM</u>	WJF & FGD investment @ 12/31/05
$61MM	Gross revenue increase
<u>($17MM)</u>	ENEC over-recovery negative surcharge
$44MM	Net increase effective 7/28/06

✓ Phased-in revenue increases annually on July 1, 2007 – 2009 provides for timely recovery of FGD project balances at 12/31 of prior year

IGCC Regulatory Activity

Ohio - Cost Recovery Filing

Phase 1 – PUCO AUTHORIZED

- Effective during 2006
- Seeks recovery of initial costs, including those already incurred, such as site engineering and various other engineering services
- Approximately $23.7 Million

Phase 2

- Effective 2007- mid 2010 (Construction Phase)
- Seeks recovery of carrying costs associated with plant construction

Phase 3

- Effective mid 2010 (Commercial Operation begins)
- Seeks recovery of projected $1.174 Billion cost of plant over its operating life

Ohio Next Steps

2006:

- Secure cost recovery plan
  - April 10, 2006 – PUCO authorized implementation of Phase 1 Rates
  - Phase 2 & 3 ruling – Post October 2006 – following completion of FEED study
- Finalize site selection
- Negotiate with suppliers

2006—2007:

- Obtain permits and finalize engineering and procurement

2007—2010:

- Construct and start-up plant

West Virginia IGCC Activity

On January 11, 2006, Appalachian Power Co. filed a Certificate of Public Convenience and Necessity seeking authority to construct a 600-MW IGCC facility in West Virginia.

SEEKING AUTHORITY FOR THREE PHASE RECOVERY APPROACH IN OHIO

Regulatory Activity Completed

Ohio – Rate Stabilization Plan (2006 – 2008)

- Annual 3% and 7% generation rate increases at CSP & OP, respectively
- POLR rate rider for environmental additions
- Ability to request additional 4% annual increase in generation rate
- Elimination of 5% residential generation credit (stipulated in the pre-existing Electric Transition Plan of 2000)

AEP East FERC Transmission Case

December 20, 2005 – FERC approved settlement allowing wholesale transmission rates to increase

- Results in $22 Million net revenue increase in 2006 from wholesale transmission

SWEPCo Fuel Factor/Surcharge Filing

January 12, 2006 – Settlement approved by PUCT

- Fuel factor will increase SWEPCo's annual Texas retail fuel-related revenues by approximately $46 Million.
- Interim surcharge will collect the under-recovery amount of $44 Million, including interest

Appalachian Power- Virginia Fuel Factor Increase

- $57.7 Million increase in fuel factor approved on January 20, 2006

Kentucky Base Rate Case

Final order approved on March 14, 2006

- $41 million annual increase in base rates
- To be effective March 30, 2006

Capital Investment

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 8964 of 9556

Summary of Major 2006 Financial Performance Drivers

- Load Growth of 2.5%
- $500MM rate recovery assured or in progress
- Rising fuel costs of 11-13%
- Higher planned outages, increased retail load and sale of TCC generation to impact off system sales
- Decline in utility O&M
- Parent Company improvement (debt & interest expense reduction)

TRADITIONAL UTILITY FACTORS WILL DRIVE 2006 PERFORMANCE

2006 Key Operating Company Highlights

Dependent on Actual Capital Investment

Company	Projected Capital Expenditures	(in millions) Projected Issuances	Target Equity Ratio
APCO	$943	$500 - $600 (completed*)	42-45%
CSP	$343	$100 - $150	44-48%
I&M	$311	$400 - $500	38-42% (a)
KPCo	$100	$50 - $75	42-45%
OPCo	$1,070	$450 - $550	44-48%
PSO	$279	$150 - $200	44-48%
SWEPCo	$288	$100 - $150	44-48%
TCC (b)	$278	$0	40%
TNC	$73	$0	40%

*Issuances completed in 2006 totaling $550 Million

(a) Ratios include impact of Rockport 2 lease.

(b) Excludes impact of securitization.

MAINTAIN FINANCIAL STRENGTH OF SUBS BY RETAINING AND/OR INFUSING EQUITY CAPITAL DEPENDING ON THEIR CREDIT RATIOS AND FREE CASH FLOW

Long-Term Debt Guidelines

Issuers:

- Issue at operating companies.

Size:

- Make transactions index eligible if possible.
- When possible, issue a size sufficient for competitive execution.

Maturity:

- Issue maturities for which the market has appetite.
- Achieve weighted average life targets for operating companies, generally between 10-15 years.

Timing:

- Will issue based on the timing of maturities and levels of short-term debt as driven by capital spending and operating cash flow.

Long-Term Debt Maturity Profile[1]

Year	2006[2]	2007	2008
AEP Service Corporation	$ 2,000,000[3]	$ 2,000,000[3]	$ 34,000,000

What AEP Offers

Utility Operations: The Platform for Growth & Financial Strength

1. Strength and scale in assets and operations
2. Focused utility business model
3. Earnings growth driven by native load & capital investment
4. Pioneering advanced technologies in the sector
5. Solid liquidity position and stable credit profile
6. Attractive dividend yield in excess of 4%

Summary Rate Case Information

West Virginia Base Case Rate Filing

On August 26, 2005, Appalachian Power Co. and Wheeling Power Co. filed an application with the West Virginia Public Service Commission (WVPSC) to increase electric rates and charges, a request for the reactivation and modification of the expanded net energy cost mechanism (ENEC), a proposal for the disposition of Appalachian Power Company's ENEC over-recovery balance, a request for implementation of a System Reliability Tracker mechanism, and a request for waiver of certain provisions of the Commission's Rules. APCo filed supplemental testimony on January 18, 2006 to reflect Ceredo plant purchase and other miscellaneous items resulting in a revised revenue requirement of $171 Million. On April 24th, APCo and Wheeling Power, together with the PSC staff and the Consumer Advocate in WV, filed a joint settlement agreement in the companies' rate case. The agreement provides for an initial $44 million increase in revenues, effective July 28, 2006. The initial increase consists of a $56 million increase for fuel and purchased power expenses, and $23 million for recovery of WJF transmission line costs and environmental investments to date. These increases are partially offset by an $18 million base rate reduction and a $17 million credit to customers for previously over-recovered fuel costs. (Docket #: 05-1278-E-PC-PW-42T)

Summary Rate Case Information

Virginia E&R Factor Filing

On July 1, 2005, Appalachian Power Co. filed a request with the Virginia SCC to recover incremental actual and projected costs for environmental compliance and T&D System reliability in the amount of $62.1MM. The SCC has ruled that under applicable VA law, it does not have authority to approve the recovery of projected E&R costs before their actual incurrence and adjudication. APCo filed supplemental direct testimony which included actual costs incurred for E&R thru September 30, 2005 of $21.1 million. Hearings concluded in March. Briefs were filed in early April. We are awaiting a Commission order. Docket # PUE-2005-00056

Capital Structure – Company vs. Staff

Capital Structure	**Company Position** (filed 7/1/05)	**Staff Position** (filed 1/11/06)
Long-Term Debt	53.43%	51.50%

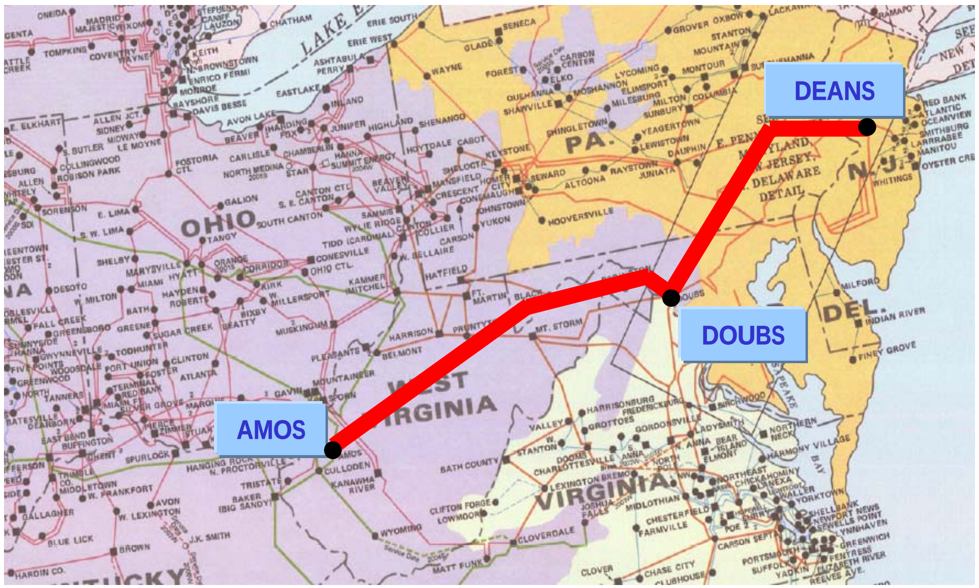
AEP Interstate Project



Map of the Proposed AEP Interstate Project 765 kV Transmission Line (Line route is conceptual and subject to change in regulatory and PJM Regional Transmission Expansion Plan processes)

- Line connects AEP's Amos 765 kV station to Allegheny Power's Doubs 500 kV station in Maryland, and terminates at PSEG's Deans 500 kV station in New Jersey
- Total line length is approximately 550 miles
- Will improve power transfer capability from the Midwest to the Mid-Atlantic by 5,000 MW
- Expected to cost $3 billion (subject to change based on a detailed investigation)
- Not yet determined which other non-AEP companies may be interested in participating
- Any financing activity relating to this project would be structured to allow AEP to meet its consolidated debt-to-cap target of approximately 60% and maintain its BBB credit rating
- Project expected to be in service in 2014

AEP AMERICAN® ELECTRIC POWER

SunTrust Investor Luncheon

New York, NY
June 16, 2011

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation, including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance, resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events, our ability to recover through rates the remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives and evolving public perception of the risks associated with fuels used before, during and after generation of electricity, including nuclear fuel.

Summary Rate Case Information

AEP Ohio Distribution Rate Case – Docket #351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%. A procedural schedule from the PUCO is pending.

Summary Rate Case Information

APCo Virginia Base Rate Case – Docket #PUE-2011-00037

On March 31, 2011 APCo filed an update to its pre-biennial base rate case for recovery of generation and distribution costs requesting an increase of $75 million ($126 million total increase less $51 million associated with a potential change in depreciation rates). The requested ROE is 11.65%, including a 50 basis point adder for meeting 2010 RPS goal allowed by law.

In conjunction with this case, an environmental rate adjustment clause (E-RAC), generation rate adjustment clause (G-RAC) and a renewable portfolio standard rate adjustment clause (RPS-RAC) were filed. APCo has requested that rates in the base case, E-RAC and RPS-RAC go into effect no later than 2/1/2012 and the G-RAC on 3/1/2012.

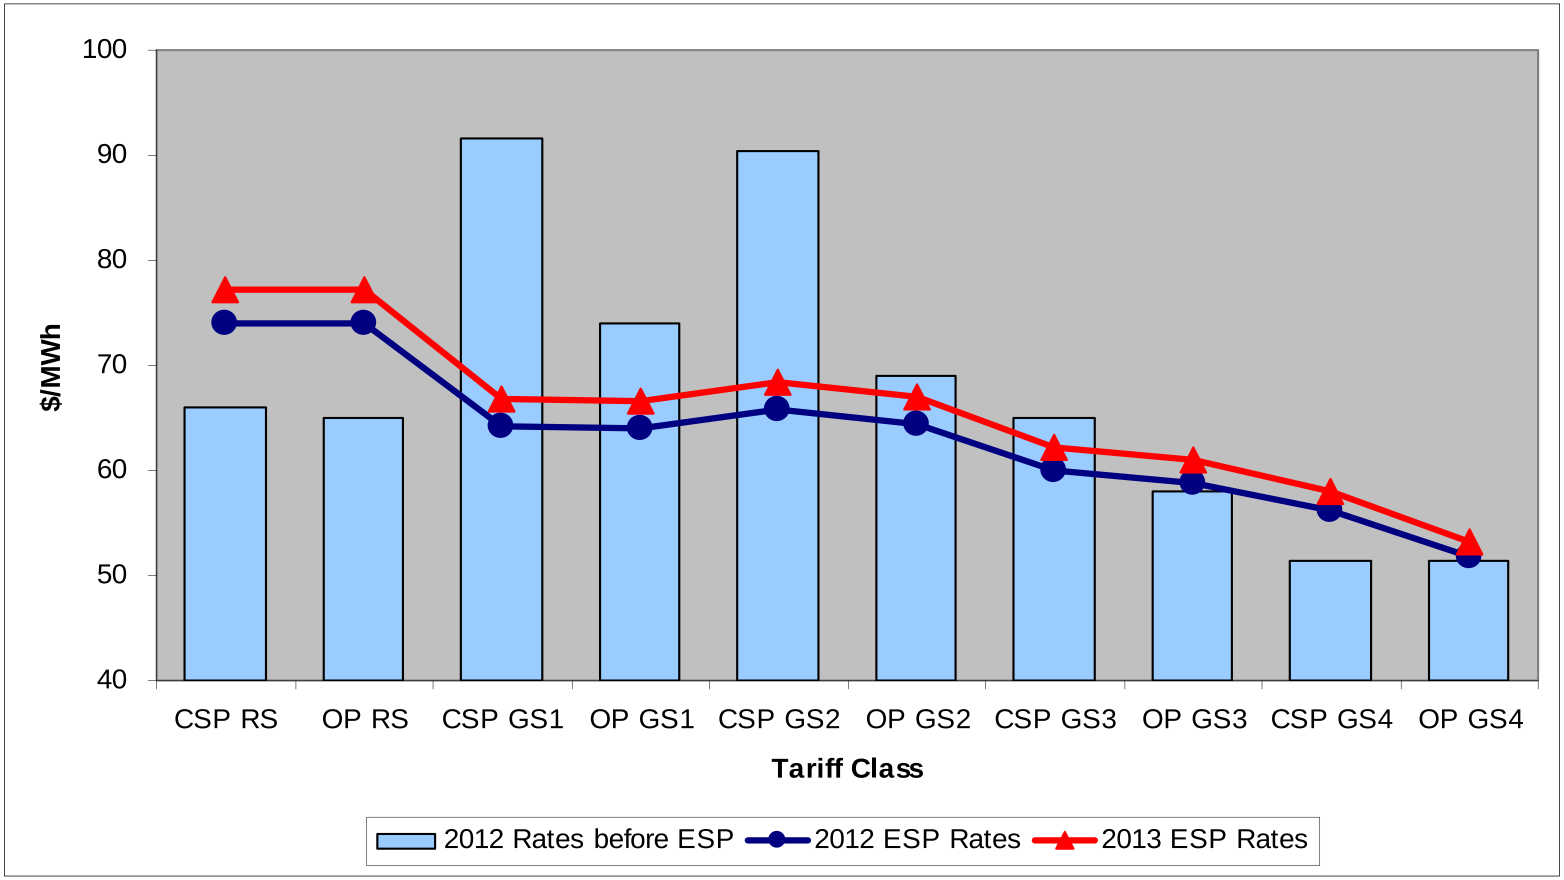
While the ESP includes a small base generation increase, the move to a market-based rate design, consistent with state policy, will result in varying impacts for different customer groups.

Price to Compare

Proposed **SSO** Rates Redesigned To Resemble Market Pricing Structures



Rates do not reflect mitigation impact of market transition rider
2012 Rates before ESP reflect current 2011 rates for generation & transmission service, adjusted to reflect full cost 2011 fuel and environmental costs.

The realignment of rates with market should provide all customers with equivalent opportunities to shop. Additionally, since the proposed design eliminates explicit demand charges, customers should be more easily able to evaluate competitive offers. To ease the rate impact that customers will experience from the realignment, we have proposed a Market Transition Rider.

Market Transition Rider – Mitigates the Initial Impact of Rate Realignment

Illustration of Market Transition Rider on ESP Generation Rate Increases

Three-Year Market Transition Plan
Summary of AEP Ohio ESP Generation Rate Changes

The Market Transition Rider is a transition rider designed to facilitate the transition from AEP Ohio's current rates to market-based SSO Generation Service rates. It is a non-bypassable rider designed to limit the first and second year changes for any customer classes to uniformly transition any above or below average changes in three steps. Any revenue shortfall that is produced by limiting the increases for certain customer classes is collected from those classes whose decreases are limited.

List of ESP Riders – Existing and Proposed

Line	Rate Mechanism	Abbreviation	Bypassable	Distribution	Notes
1	**Current Riders**				
2	Universal Service Fund Rider	USF	--	Yes	
3	Advanced Energy Fund Rider	AEF	--	Yes	Expired 12/31/2010

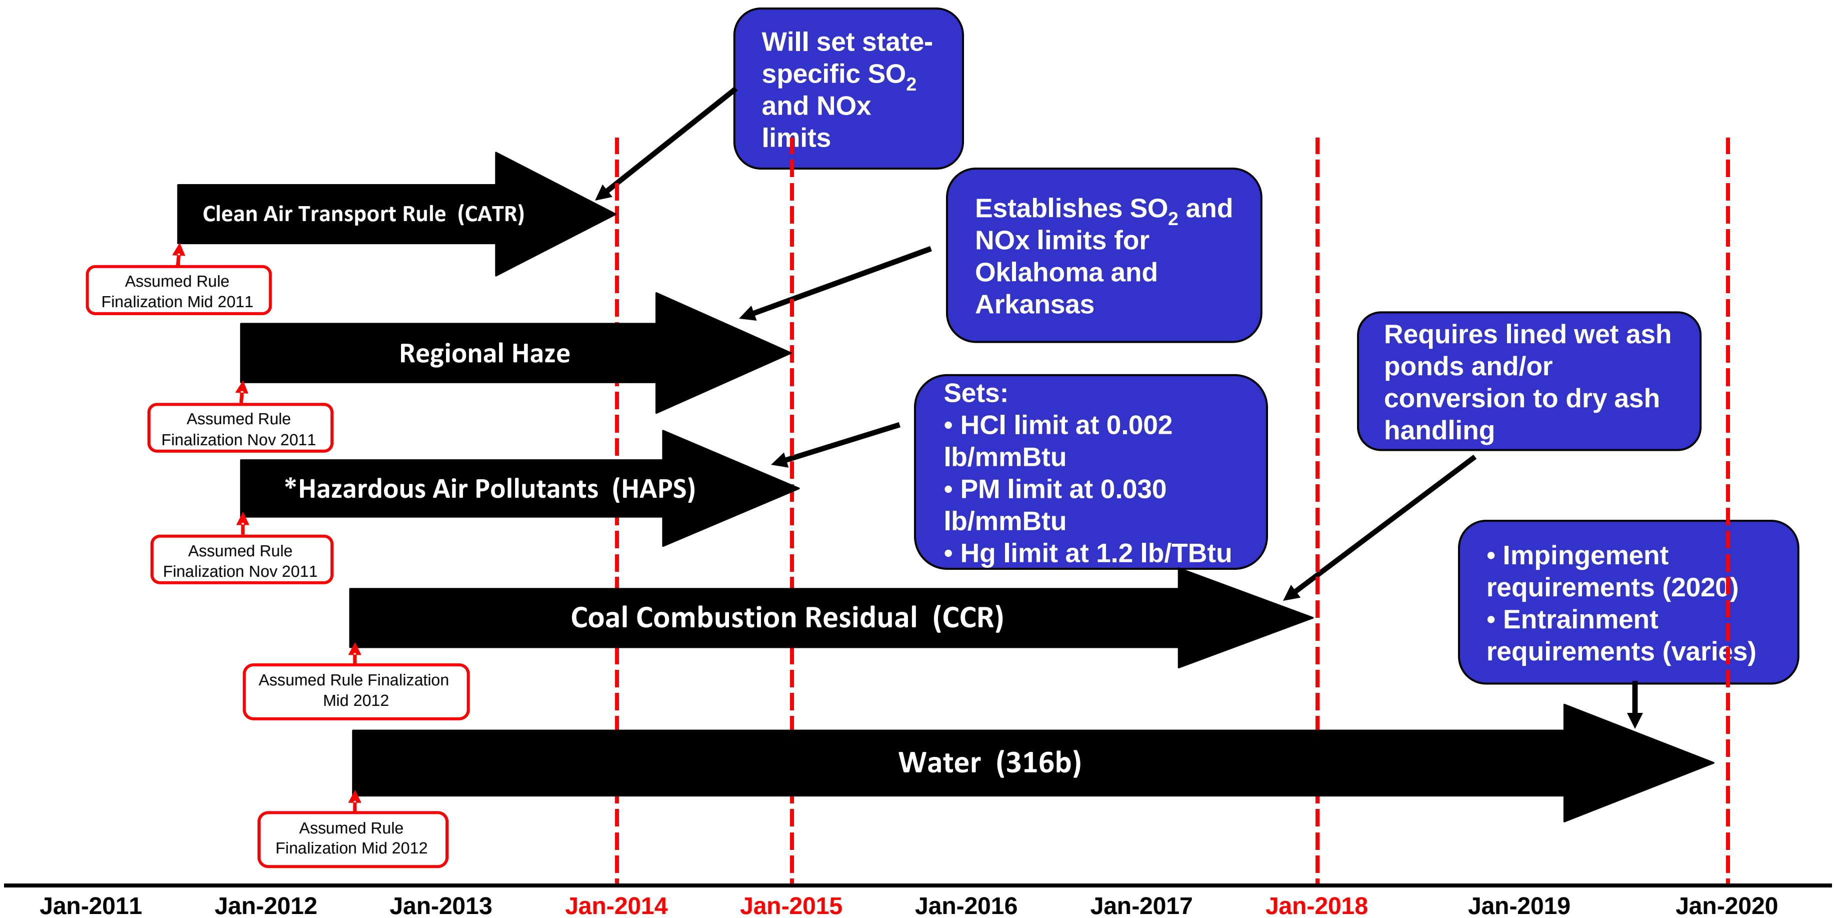
Turk Plant

- John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant. Located in Arkansas. SWEPCo owns 73 percent or roughly 440 megawatts of the total unit.
- The cost of the plant and related transmission is anticipated at $1.7 billion with AEP's share approximately $1.3 billion (excluding AFUDC) and will begin commercial operation in 2012.
- The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls

- $1.1 billion capitalized expenditures 3/31/11. SWEPCO's contractual commitments $260MM.
- Third party owners include: Arkansas Electric Cooperative Corp. (12%), East Texas Electric Cooperative (8%), and Oklahoma Municipal Power Authority (7%)

Anticipated environmental regulations and compliance deadlines



* Units that will be retrofit are eligible for a one year compliance extension from the EPA

Retrofits/New Generation

- The tables below represent our estimated $6 - $8 billion capital investment from 2012 to 2020 for environmental retrofits on 10,500 MW and new/refueled generation of 2,152 MW. The below costs include management estimates for compliance with CATR, HAPs MACT, CCR and 316(b) regulations as currently proposed.

Plant	MW	Type of retrofit	Low Cost Estimate 2012-2020 ($MM)	High Cost Estimate 2012-2020 ($MM)	
Conesville 5	400	SCR, DSI			
Conesville 6	400	SCR, DSI

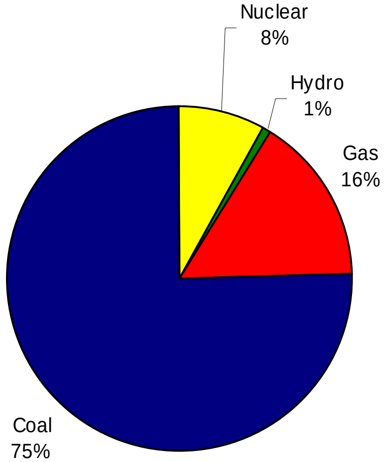
	Total MW	**1,078**	
SWEPCO	Welsh 2	**528**	2014
	Total MW	**528**	
	Grand Total	**5,856**	

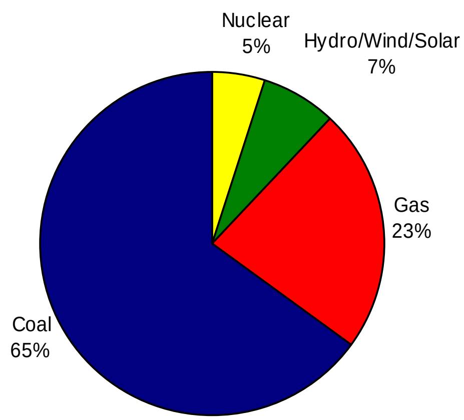
- Capacity reduction caused by retirements will create grid reliability issues particularly in the 2014-2016 time frame
- Net impact could be approx. 600 fewer jobs at AEP as well as indirect job losses affecting local vendors, contractors and service providers
- Annual lost wages of approximately $40 million
- Tax payments could decline by more than $30 million

Generation Transformation

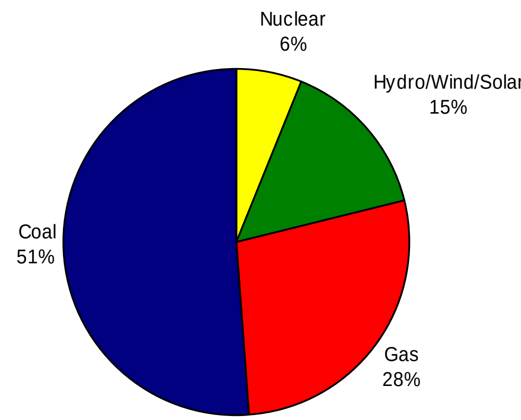
1990 AEP Generating Capacity by Fuel
37,428 total MW's



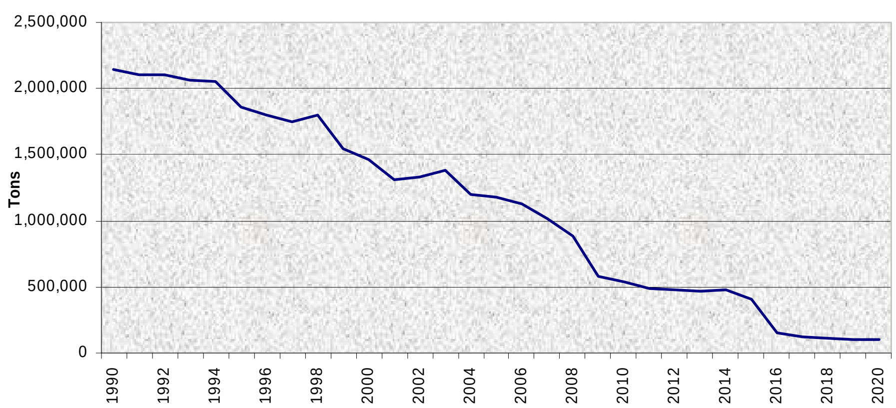
2010 AEP Generating Capacity by Fuel
39,910 total MW's



2020 AEP Generating Capacity by Fuel
37,707 total MW's



Total System NOx & SO2 (actual through 2010 and forecasted based on proposed EPA regulations)



- $7.2 billion capital invested from 1990-2010 to reduce emissions approximately 1.7 million tons
- Estimated $6-$8 billion additional capital investment from 2012-2020 for further reductions of approximately 440,000 tons

Transmission Investment Strategy

- **Near-Term Investment** – Electric Transmission Texas (ETT) secures near term investment opportunities, allowing AEP to invest in the large, growth-oriented Texas transmission market. Total capital expenditures of $3 billion with a 9.96% ROE.

- **Mid-Term Investment** – Seven wholly-owned transcos allow for expansion and growth within AEP's existing utility footprint through an efficient recovery mechanism. Will spend $160 million in 2011 and more than $350 million in 2012. ROE is in the 11.20%-11.49% range.

- **Long-Term Investment** – Joint ventures provide opportunities for longer-term growth outside of AEP's existing utility footprint with forward looking formula rates, reasonable ROEs and FERC incentives where appropriate.

Transmission has a diversified investment approach that positions it as one of the key AEP growth businesses.

Texas Transmission Growth Strategy : Near Term Investment

Ownership Structure: 50/50 (AEP/MidAmerican Energy Holding Company)

Total Project Cost: Over $3 Billion

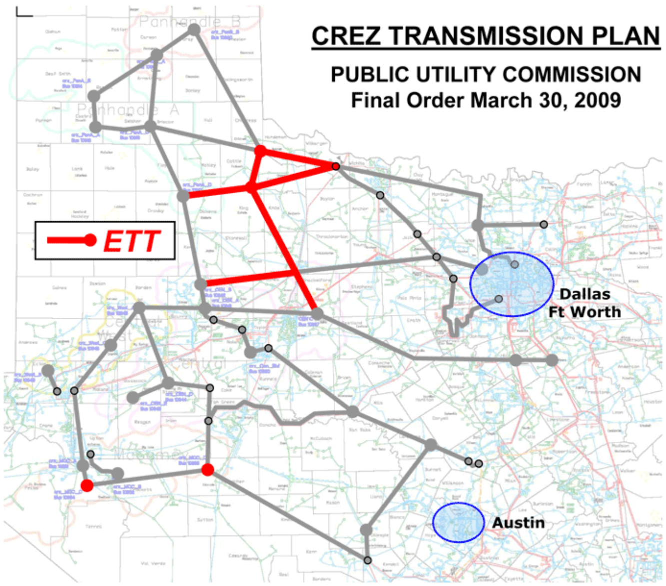
Growing Rate Base:

Current rate base is $412 million; expected to grow as follows:

2011: $473 million
2012: $778 million
2013: $1,352 million

Interim TCOS filings twice per calendar year

Approved ROE: 9.96%



- **Additional Projects in the Pipeline ~$1.6 B:**
  - Approximately 822 miles of lines and 28 substations with in-service dates through 2017

- **Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.1 B:**
  - Seven double-circuit 345kV transmission lines (~$750 M), eight major 345kV stations and several series compensation installations (~$350 M)
  - PUCT Certificate of Convenience and Necessity (CCN) proceedings underway

Transco Update

FERC:

- April 2011 -- The Commission finds in the order that the Settlement is just and reasonable and the business plan will provide benefits to AEP operating companies and customers.
  - ROE order for East Transcos is 11.49%
  - ROE order for West Transcos is 11.20%

State Filing Status Update:

- **Ohio** – PUCO approved the Ohio Transco December 29, 2010
- **West Virginia** – Filing made January 6, 2011; Hearings in June
- **Arkansas** – Filing in Arkansas made May 6, 2011
- **Louisiana –** Expecting LA filing in 3Q 2011
- **Texas-SPP** – Expecting TX filing in mid 2011
- **Kentucky** – Filing made February 4, 2011; Informal conference with staff held March 2, 2011
- **Indiana** – Filing made March 1, 2011; Pre-hearing conference March 28, 2011
- **Virginia** – Filing withdrawn to give additional time to resolve issues with Staff
- **Michigan and Oklahoma** – Do not require state filing

$160M capital spend forecasted for 2011; $350MM for 2012

Joint Venture Strategy: Long-term

- **Strategy**: JV's secure new investment opportunities with local utilities to diversify AEP's investment outside AEP's traditional footprint while providing longer-term incremental earnings**.** JV projects are well-suited for FERC formula rate recovery mechanism, including potential for incentive rates.
- **Future:** Federal/regional initiatives may accelerate expansion of EHV transmission (e.g. cap-and-trade, renewable portfolio standards, inter-region wide planning). Securing first mover advantage will enable AEP to secure LT investment opportunities.
- **Future flexibility**: Passive investment opportunities can be considered and can provide entry beyond SPP/PJM/ERCOT

A Century of Firsts

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

2006 Revised Capital Investment Forecast

Capital Investment Forecast

excluding AFUDC

New Build Generation & Ongoing Infrastructure Replacement investment can be throttled

	2006	2007	2008
New Build Generation	$191	$611	$1,174
Ongoing Infrastructure Replacement & Economically Justified	$1,381	$1,473	$1,203
Mandated T&D	$650	$615	$625
Environmental Compliance	$1,441	$912	$536

Note: Capital forecasts do not include amounts for AEP Interstate Project.

2006 TOTAL CAPITAL INVESTMENT LEVEL HAS BEEN REDUCED BY $60MM TO $3.663 BILLION

New Generation

IGCC

- June 2006 – PUCO approved tariff to recover Phase 1 pre-construction costs ($24MM) over 12-month period effective July 1, 2006
- Expect to obtain permits and finalize engineering by 2007
- Construction of 600 MW facility to begin in 2007

SWEPCO

- On May 31, 2006 SWEPCo announced plans to build $1.4 billion of new generation
- Expected generation build includes a simple-cycle gas turbine totaling up to 480 MW, combined-cycle gas plant totaling 480 MW and a new base load coal- or lignite fueled plant
- Commercial operation dates between 2008 and 2011

PSO RFPs

- 2H05 - Submitted RFPs for up to 1100 MW of peaking and baseload capacity in aggregate
- March 2006 - Two peaking RFPs totaling 340 MW awarded; commercial operation 2008
- July 2006 - Entered into JVA with OG&E to build 950 MW coal-fueled unit with goal to use ultra-supercritical technology – PSO will own 50% or 425 MW; commercial operation 2011

p.

2006 Capital Investment Funding Revised

	Actual		Projection		
	2004	**2005**	**2006**	**2007**	**2008**
Planned Capital Investment					
Committed Construction Expenditures	$ (1,671)	$ (2,499)	$ (2,091)	$ (1,261)	$ (950)
Discretionary Cap Ex Predicated on Rate Recovery &/or Avail. Cash	n/a	n/a	$ (1,572)	$ (2,350)	$ (2,588)
Total Capital Expenditures	$ (1,671)	$ (2,499)	$ (3,663)	$ (3,611)	$ (3,538)
Dividend on Common	$ (555)	$ (553)	$ (582)	$ (586)	$ (589)
Cash Sources					
Cash from Operations *	$ 2,632	$ 1,877	$ 1,736	$ 2,403	$ 2,565
Proceeds from Sale of Assets	$ 1,357	$ 1,246	$ 111	$ 43	$ -
Common Stock Issued (Dividend Reinvestment Plan)	$ 17	$ (25)	$ 6	$ 80	$ 80
Change in Debt, Net	$ (2,238)	$ (91)	$ 663	$ 1,758	$ 1,648
TCC securitization bond issuance	$ -	$ -	$ 1,705		
Other	$ -	$ 126	$ (117)	$ (147)	$ (166)
Cash Sources Less Capital Expenditures, Dividends & Other	$ (458)	$ 81	$ (141)	$ (60)	$ -
Ending Cash Balance	$ 320	$ 401	$ 260	$ 200	$ 200

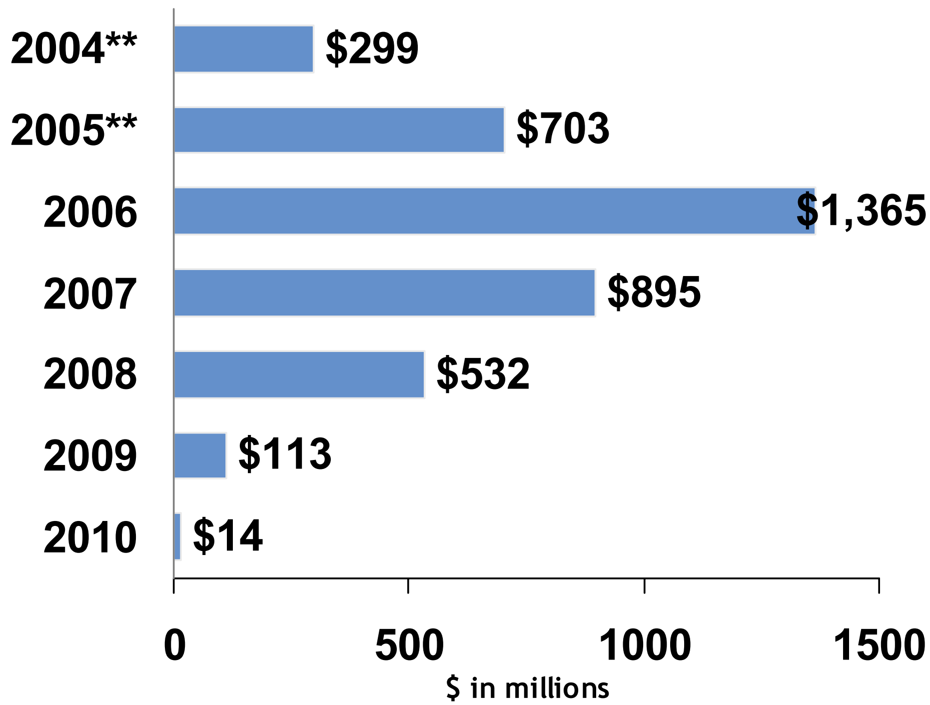
* Cash Flow from Operations assumes full rate recovery on capital expenditures.

2006 TOTAL CAPITAL INVESTMENT LEVEL HAS BEEN REDUCED BY $60MM TO $3.663 BILLION

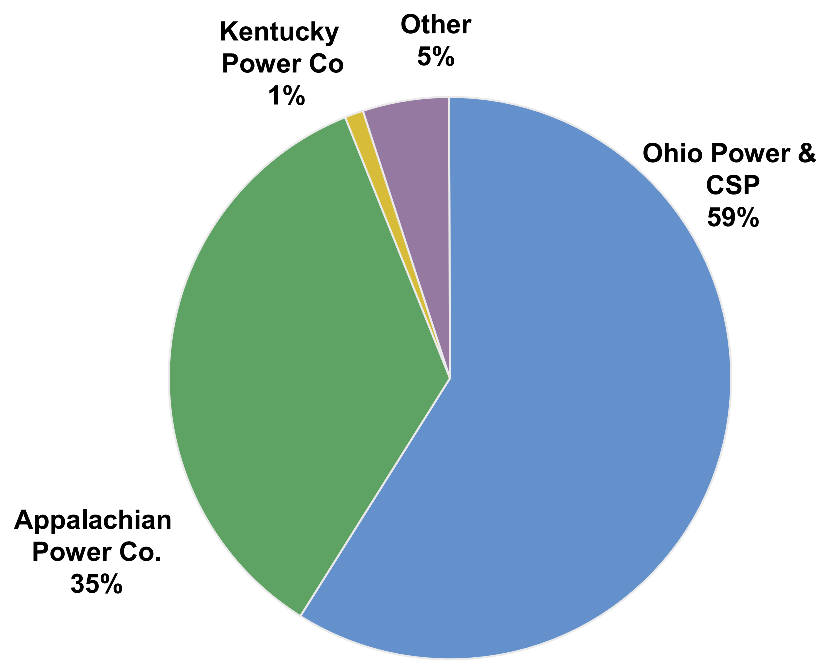
Note: For analysis purposes, certain financial statement amounts have been reclassified for this effect on the earnings presentation.

Environmental Investment: $3.9 Billion Through 2010

Environmental Capital Investment*



Projected Environmental Investment Allocation



*Environmental investment for NOx, SO_2 , & Hg purposes including AFUDC

** Actual investment level in 2004 and 2005

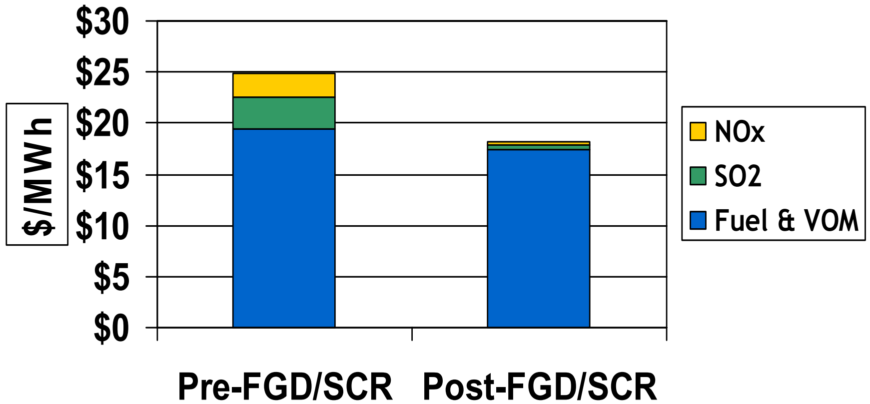
($3.9 billion figure reflects delay of Big Sandy 2 investment)

Majority of 2006 & 2007 dollars will be invested in Ohio & APCo

Low Cost Production Supports Investment & Investment Sustains Low Cost Production

- Lowers exposure to high cost emission allowances
- Creates opportunity to burn wider variety of lower cost fuels
- Improves baseload operation (higher capacity factor, higher margin)
- All-in cost of electricity, including FGD/SCR investment, remains low

Typical Pulverized Coal Plant
Comparison of Variable Production Cost
Pre- and Post- FGD/SCR (future view)*



* Assumes annual NOx program

AEP will remain the low cost producer following completion of environmental retrofit projects

Regulatory Activity Underway

- TCC Securitization of Stranded Costs
- Indiana Depreciation Petition
- APCo General Rate Case Filing in Virginia
- APCo Filing for Recovery of E&R Costs in Virginia
- IGCC – Received Rate Authorization of Pre-Construction Costs
- FERC Regional Rate Design

YEAR-TO-DATE, SECURED $415 MILLION OF THE $500 MILLION RATE RECOVERY ASSUMED IN 2006 EARNINGS GUIDANCE RANGE

Texas Regulatory Activity

TCC Stranded Cost Recovery Case

- April 4, 2006 – Final order, following rehearing, which provides for net true-up of $1.475 billion
- March 3, 2006 – Requested approval of financing order to issue $1.8 billion in low-cost securitization bonds
- May 22, 2006 – Settlement agreement filed with PUCT in securitization proceeding
  - Securitization financing order received June 20
  - Issuance of securitization bonds expected late 3Q06

Securitization Order:

- Securitization amount of $1.697 billion plus estimated bond issuance costs ($23 million resulting in $1.72 billion requested to be securitized)
- Securitization order not appealable
- $315 million cost-of-money benefit for ADFIT to be included in CTC
- The treatment of EDFIT and ADITC ($61 million in total) as a reduction to the securitized amount

- June 2006 – Requested approval for CTC to address other true-up items
  - Requested $355 million net credit to customers over 8 years
    - $475 million gross CTC refund proposed, offset by $7 million in rate case expense recovery
    - Requested portion be deferred, pending the outcome of 2 contingent federal matters
      - $16 million of FERC jurisdictional fuel over-recoveries
      - $97 million related to ADITC and EDFIT
  - Hearings set for Sept 2006

Regulatory Activity Underway

Indiana Depreciation Filing

December 1, 2005 – I&M filed petition with the IURC for accounting authorization to revise the depreciation rates applicable to its electric utility plant in service

- Based on a 2004 depreciation study, I&M recommends a decrease in annual depreciation expense of approximately $45 Million on an after-tax Indiana jurisdictional basis.
- Hearings have been held with final order expected in third quarter 2006

Appalachian Power - Virginia E&R & General Rate Case Activity

Virginia E & R Cost Recovery Factor - Filed July 1, 2005 – Originally filed for recovery of $62.1 Million in new Environmental & Reliability costs

- Oct 14, 2005 – SCC ruled VA law does not allow recovery of prospective costs - $48.6 Million
- Nov 14, 2005 - APCo filed supplemental direct testimony which included updated actual E&R costs incurred through Sept. 30, 2005 of $21.1 million
- Hearings held, awaiting Commission Order

Virginia General Rate Case Filing – Filed May 4, 2006 – Seeking $225.8MM increase in base rates, partially offset by a proposed credit to reflect sharing of $27.3MM in margins from off system sales (OSS), resulting in a net annual increase of $198.5MM.

- May 30, 2006 – SCC suspended the effective date of the rates until 10/2/06, upon which, the full rate increase requested by APCO-VA will be implemented, subject to refund.

Procedural Schedule

Oct 4, 2006	Intervenor testimony due
Oct 24, 2006	SCC Staff testimony due
Nov 9, 2006	Company to file rebuttal testimony
Dec 6, 2006	Evidentiary Hearings to commence

IGCC Regulatory Activity

Ohio - Cost Recovery Filing

Phase 1 – PUCO AUTHORIZED

- Effective during 2006
- Seeks recovery of initial costs, including those already incurred, such as site engineering and various other engineering services
- Approximately $23.7 Million

Phase 2

- Effective 2007- mid 2010 (Construction Phase)
- Seeks recovery of carrying costs associated with plant construction

Phase 3

- Effective mid 2010 (Commercial Operation begins)
- Seeks recovery of projected $1.174 Billion cost of plant over its operating life

Ohio Next Steps

2006:

- Secure cost recovery plan
  - April 10, 2006 – PUCO authorized implementation of Phase 1 Rates
  - Phase 2 & 3 ruling – Post October 2006 – following completion of FEED study
- Finalize site selection
- Negotiate with suppliers

2006—2007:

- Obtain permits and finalize engineering and procurement

West Virginia IGCC Activity

On January 11, 2006, Appalachian Power Co. filed a Certificate of Public Convenience and Necessity seeking authority to construct a 600-MW IGCC facility in West Virginia.

SEEKING AUTHORITY FOR THREE PHASE RECOVERY APPROACH IN OHIO

Regulatory Activity Underway

FERC Regional Rate Design

- At our urging, the FERC instituted an investigation of PJM's zonal rate regime
  - Present regime may need to be replaced
  - Consider establishing regional rates that would compensate AEP, among others, for the regional transmission service proved by high voltage facilities they own that benefit customers throughout PJM
- July 13, 2006 ALJ rendered initial decision finding:
  - License Plate rates for existing facilities <u>are not</u> just and reasonable, and must be replaced (effective April 1, 2006 when SECA ended)
  - Staff's proposal for a "Postage Stamp" rate phased in so as to limit increases in any one pricing zone to 10% per year is best choice for replacing current rates
  - Staff's proposed rate design would produce slightly more net revenue for AEP than the original AEP/Allegheny Power proposal, when fully effective
- •Next Steps
  - Briefs on Exceptions to the initial decision by all parties
  - Order by the Commission late 2006/early 2007

Regulatory Activity Completed

Ohio – Rate Stabilization Plan (2006 – 2008)

- Annual 3% and 7% generation rate increases at CSP & OP, respectively
- POLR rate rider for environmental additions
- Ability to request additional 4% annual increase in generation rate, for certain specific incremental costs
- Elimination of 5% residential generation credit (stipulated in the pre-existing Electric Transition Plan of 2000)

AEP East FERC Transmission Case

December 20, 2005 – FERC approved settlement allowing wholesale transmission rates to increase

- Results in $22 million net revenue increase in 2006 from wholesale transmission

Ohio Companies Pass Through of FERC OATT Changes

May 26, 2006 – PUCO approved a final order allowing for adjustment of the transmission component of standard service tariffs to FERC-approved rates

- Transmission rate adjustment results in additional annual revenues of approximately $89 million ($63 million in 2006)

SWEPCo Fuel Factor/Surcharge Filing

January 12, 2006 – Settlement approved by PUCT

- Fuel factor will increase SWEPCo's annual Texas retail fuel-related revenues by approximately $46 million
- Interim surcharge will collect the under-recovery amount of $44 million, including interest

Appalachian Power- Virginia Fuel Factor Increase

- $57.7 million increase in fuel factor approved on January 20, 2006

Kentucky Base Rate Case

Final order approved on March 14, 2006

- $41 million annual increase in base rates
- Rates effective March 30, 2006

Regulatory Activity Completed

APCo & WPCo West Virginia Rate Case

Settlement approved July 2006

- $44MM initial overall increase in rates effective July 28, 2006 comprised of:
  - $56MM increase in ENEC for fuel & purchased power expenses;
  - $23MM special construction surcharge providing recovery of the costs of scrubbers and the Wyoming-Jacksons Ferry (WJF) 765kV line;
  - $18MM general base rate reduction based on ROE of 10.5%, of which $9MM relates to a reduction in depreciation expense (affects cash flows but not earnings);
  - $17MM credit to refund a portion of deferred prior over-recoveries of ENEC costs of $51MM, currently recorded in regulatory liabilities; therefore, this item impacts cash flows bus has not effect on earnings;
- Agreement also provides a surcharge mechanism that allows APCo and WPCo to adjust their rates annually for the timely recovery in each of the next three years of the incremental cost of ongoing environmental investments and the costs of WJF
- Reinstatement of the ENEC mechanism effective July 1, 2006

Steve Smith
Senior Vice President & Treasurer

Forecasted Capital Expenditures

Company	2006	2007	2008
AEP SYSTEM*	**$3,663,500**	**$3,611,400**	**$3,537,700**
AEGCo	$12,100	$30,000	$39,700
APCo	$928,300	$691,500	$751,700

(1) Excludes tax exempt bond remarketings and securitization bonds.
(2) Includes sinking fund payments, where applicable.
(3) Maturities remaining as of June 30, 2006.

2006 Key Operating Company Highlights

(in millions)

Dependent on Actual Capital Investment

Company	Projected Capital Expenditures	Projected Issuances	Target Equity Ratio
APCO	$943	$500 - $600 *	42-45%
CSP	$343	$0	44-48%
I&M	$311	$400 - $500	38-42% (a)
KPCo	$100	$0	42-45%
OPCo	$1,070	$350 - $400	44-48%
PSO	$279	$150 - $200	44-48%
SWEPCo	$288	$150 - $200	44-48%
TCC (b)	$278	$0	40%
TNC	$73	$0	40%

* Issuances include potential new money tax-exempt issuances

(a) Ratios include impact of Rockport 2 lease.

(b) Excludes impact of securitization.

Maintain financial strength of subs by retaining and/or infusing equity capital depending on their credit ratios and free cash flow

Long-Term Debt Guidelines

Issuers:

- Issue at operating companies.

Size:

- Make transactions index eligible if possible.
- When possible, issue a size sufficient for competitive execution.

Maturity:

- Issue maturities for which the market has appetite.
- Achieve weighted average life targets for operating companies, generally between 10-15 years.

Timing:

- Will issue based on the timing of maturities and levels of short-term debt as driven by capital spending and operating cash flow.

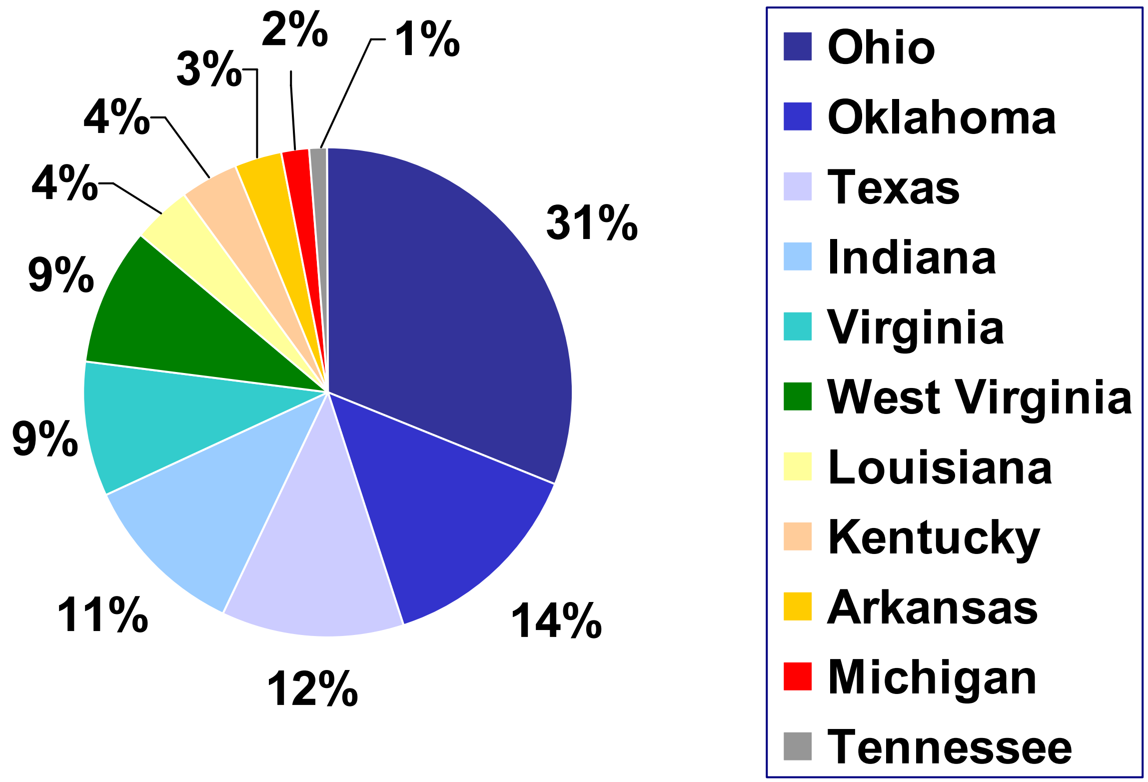
2005	62.53%

2005 Retail Revenue

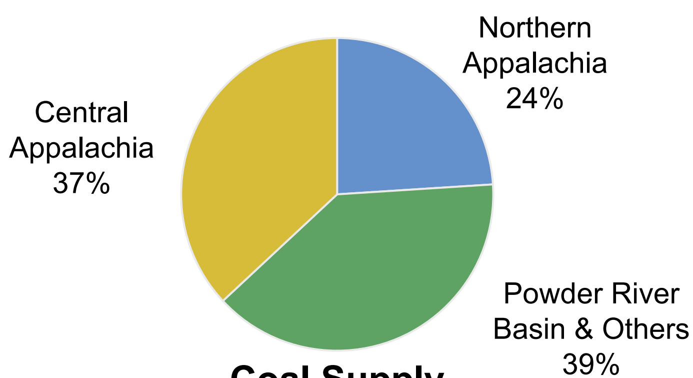
Retail Revenue Composition by State



Fuel

Coal Procurement

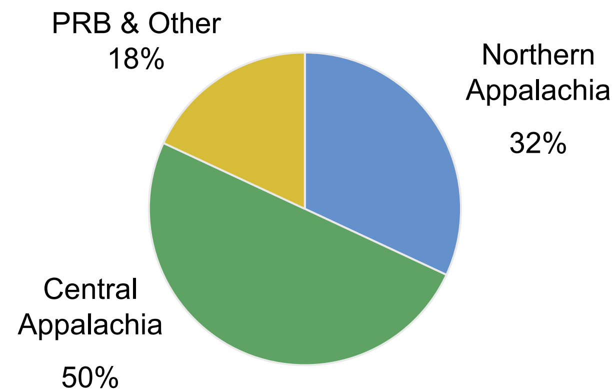
Total AEP System



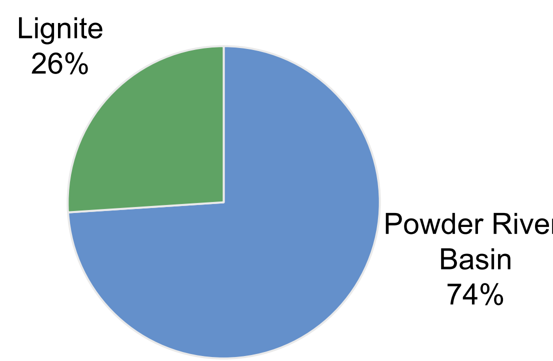
Coal Supply (on average)

- Purchase approximately 75 MM tons per year
- Avg. delivered price ~ $32.52/ton in 2005
- Fully contracted for 2006; 95%+ contracted for 2007
- Approximate 11%-13% price increase in 2006
  - Rising costs at Eastern mines & safety issues
  - High SO2 Allowance prices drive low sulfur coal prices

AEP Eastern System

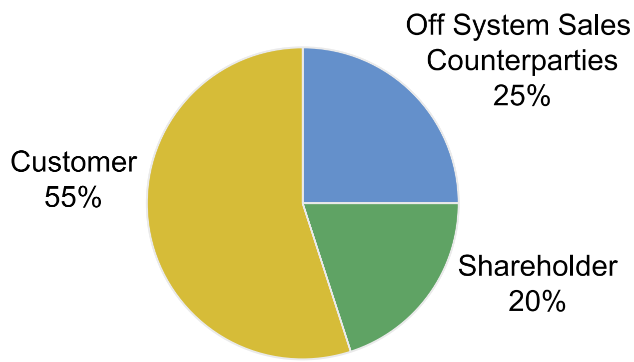


AEP Western System



Fuel Recovery

AEP System



Fuel Cost Recovery
(on average)

- Fuel recovery varies by jurisdiction
- 80% of fuel cost is recoverable across the AEP System
- Active Fuel Clause Jurisdictions:
  - AEP EAST: APCo, I&M, KPCo, KGP, WP
  - AEP WEST: PSO, SWEPCO

Note: Fuel recovery percentages are based on estimates for 2006 fiscal year

Jurisdictional Fuel Clause Summary

STATE	FUEL CLAUSE	ADJUSTMENT FREQUENCY
Arkansas	Yes	Annually
Indiana	Yes	Capped at increasing rates through June 30, 2007
Kentucky	Yes	Monthly
Louisiana	Yes	Monthly
Michigan	Yes	Annually
Ohio	No	Although there is no recovery mechanism in Ohio, the RSP provides for a 3% (CSP) and 7% (OP) increase in generation rates annually, which includes fuel beginning January 2006 and extending through December 2008.
Oklahoma	Yes	Annually
Tennessee	Yes	Monthly
Texas (SPP)	Yes	Semi-annually
Virginia	Yes	Annually
West Virginia	Yes	Anually; Deferral accounting for ENEC began July 1, 2006 and new rates became effective July 28, 2006.

Coal Delivery

Total AEP System

DELIVERY MODE DIVERSITY
2005 Actual

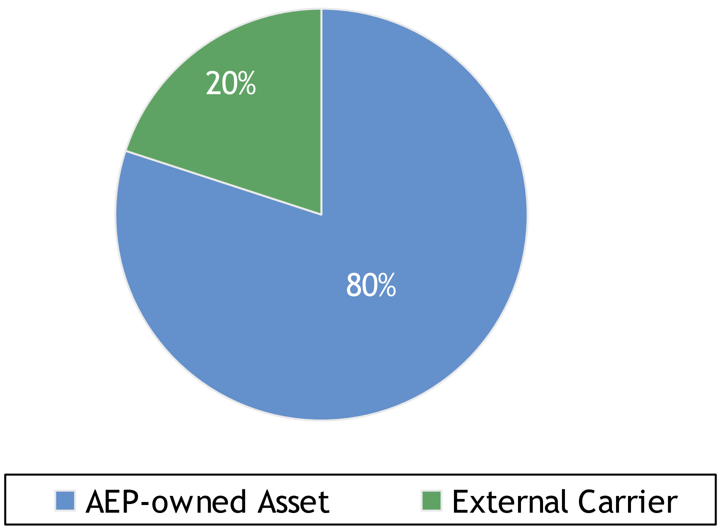
Coal Transportation to AEP Plants*

2005 Actual



* Represents close approximations

AEP's substantial coal transportation assets include:

- 7,065 railcars
- 2,318 barges
- 53 towboats
- 1 active coal handling terminal (20 million tons of annual capacity)

AEP'S TRANSPORTATION ASSETS PROVIDE FLEXIBILITY IN A CONSTRAINED DELIVERY ENVIRONMENT

Environmental

AEP's Environmental Compliance Strategy

NOx and SO_2 emission reductions are part of AEP's on-going strategy to comply with the Clean Air Act, Title IV regulations, the Clean Air Interstate Rule (CAIR) and the Clean Air Mercury Rule (CAMR).

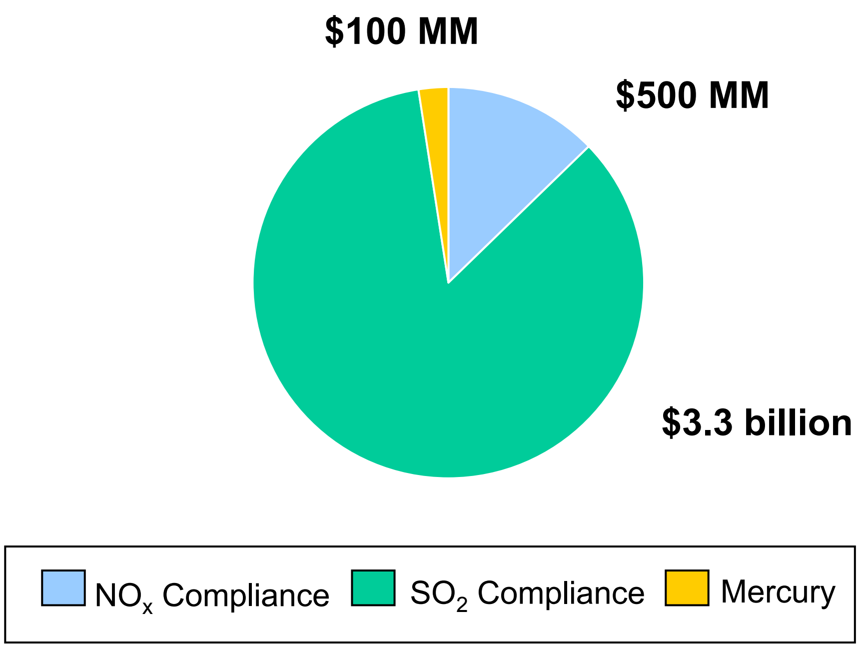
Much of this investment will position AEP to accomplish the following:

- Reduce nitrogen oxide emissions by 90% through installation of Selective Catalytic Reduction (SCR) systems
- Reduce sulfur dioxide emissions by 95% to 98%+ through installation of Flue Gas Desulfurization (FGD) systems (scrubbers)
- Realize co-benefit of mercury capture offered through SCR and FGD systems together
- Avoid future landfill costs through sale of gypsum (by-product) & build where landfill costs are lower
- Realize benefits achieved through fuel flexibility

Represents the best and least-cost compliance path to improve environmental performance on a fleet basis, while continuing to provide a reliable supply of power to customers at a reasonable price and a solid return for investors.

Environmental Compliance Investment

Compliance Allocation



Current Programs

$2.0 Billion:

$0.5 Billion for NOx

$1.5 Billion for SO_2

INSTALLATION OF SCR AND FGD WILL ALLOW OUR COAL FLEET TO REMAIN EXTREMELY COST COMPETITIVE

Cost of Control Technology

AEP's compliance plan largely relies on SCR & FGD technology to meet the requirements of CAIR and CAMR. AEP also deployed other combustion related controls, such as low NOx burners and optimized boiler controls throughout the system.

Conventional Technology

	SCR	**FGD**
AEP Capital Cost	~$121/kW avg.	~$250/kW avg.
Pollutant(s)	NO_x	SO_2 (& Hg as co-benefit)
Removal Efficiency	85 to 93%	95%-98% (&~80%)
Aux. Power	Approx. 1%	1.5% to 3.0%

Investing in IGCC

Integrated Gasification Combined Cycle

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called "syngas" – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2, mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP's eastern service territory.

AEP is currently working with a technology provider to develop a firm price for an IGCC facility to be built in our eastern service region. This price will be available in 2006.   AEP intends to seek regulatory recovery approvals in advance of building the plant.

Looking To The Future - IGCC

AEP HAS ANNOUNCED ITS INTENTION TO CONSTRUCT A COMMERCIAL-SCALE INTEGRATED GASIFICATION COMBINED CYCLE (IGCC) PLANT BY THE END OF THE DECADE

Generation Technology Comparative Stats

	PC	IGCC	NGCC
Nominal Capacity (MW)	600	600	600
Heat Rate (Btu/kWh)	8700	8600	7200
Total Plant Cost (EPC) ($/kW)	1700	1900	480
Production Cost ($/MWh)	17	16	57
Cost of Electricity, without CO2 Capture ($/MWh)	58	63	90
Estimated Cost of Electricity, with CO2 Capture ($/MWh)	94	87	137

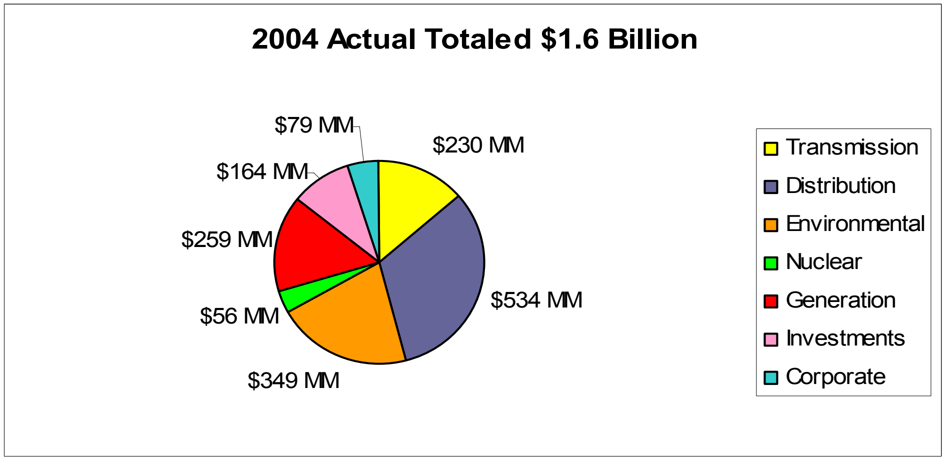
Source: Results of AEP analysis based on EPRI studies

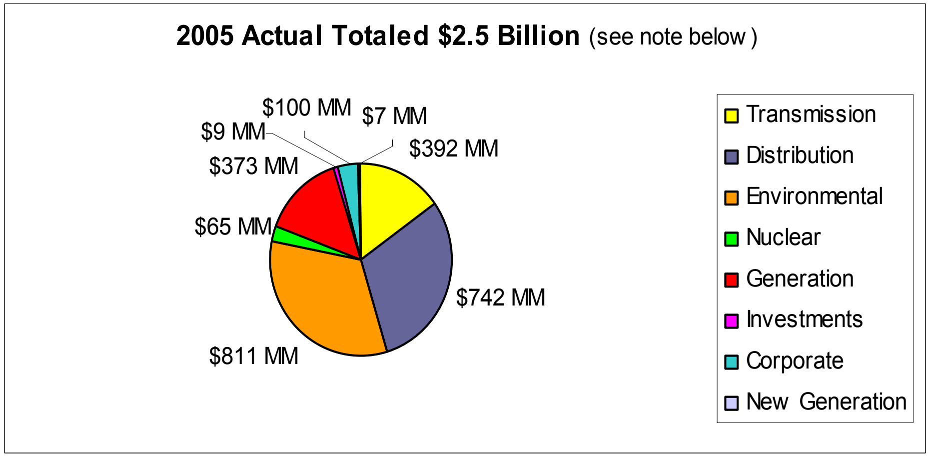
- Total Plant Cost (2005$'s) includes the cost to **E**ngineer, **P**rocure and **C**onstruct plant and owner's direct costs; does not include interconnections, transmission lines, transmission upgrades, contingency or AFUDC.
- Assumes Northern Appalachian Coal price of $1.60 /mmBtu for PC and IGCC, and natural gas price of $7.00/mmBtu for NGCC.
- Assumes 85% capacity factor for PC and IGCC, 25% for NGCC.
- Production Cost includes Fuel Cost and Variable Operations & Maintenance (VOM) cost.
- Cost of Electricity based on EPC cost, does not include the cost of Emission Credits.
- Cost of Electricity with CO2 capture does not include sequestration cost.

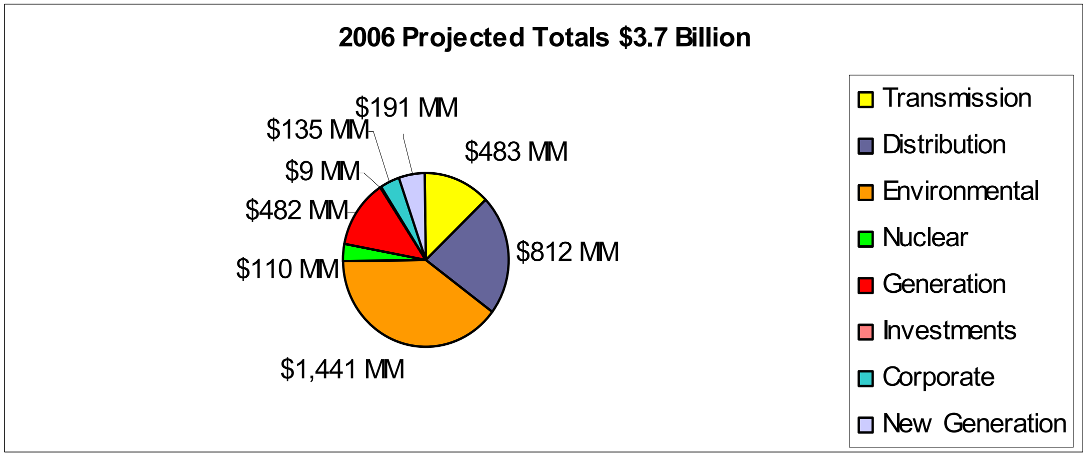
IGCC TECHNOLOGY IS STRATEGIC TO KEEPING COAL IN THE MONEY

Capital Investment

Capital Investment 2004 - 2006







Notes: 2005 Statement of Cash Flows shows $2.402B which reflects difference in accruals from 2004 to 2005.

Figures exclude AFUDC.

Finance

2006 Guidance: $2.65 to $2.80 Per Share

American Electric Power
Financial Results for 2005 Actual vs. 2006 Forecast

		2005 Actual			2006 Forecast		
		Performance Driver	($ millions)	EPS	Performance Driver	($ millions)	EPS
	UTILITY OPERATIONS:

What AEP Offers

Utility Operations: The Platform for Growth & Financial Strength

1. Strength and scale in assets and operations
2. Focused utility business model
3. Earnings growth driven by native load & capital investment
4. Pioneering advanced technologies in the sector
5. Solid liquidity position and stable credit profile
6. Attractive dividend yield in excess of 4%

Completed APCo West Virginia Rate Case

Appalachian Power & Wheeling Power – West Virginia Base Rate Case & ENEC Reactivation

Filed April 24, 2006 – Joint Settlement Agreement

- Estimated overall impact of revenue increases to be phased-in through 2009:
  - $129 Million
  - 16% Increase
- Provides for timely recovery of Wyoming-Jacksons Ferry 765kV line and Mountaineer & Amos FGDs
- Settlement Agreement approved July 26

Phased-In Increases:

- ✓ July 28, 2006 - $61 Million*
- ✓ July 1, 2007 - $36 Million**
- ✓ July 1, 2008 - $14 Million**
- ✓ July 1, 2009 - $18 Million**

* Excludes ENEC over-recovery negative surcharge ($17 million) -- surcharge does not have an earnings impact

** Estimated

Approved Settlement Details

- ✓ Increase effective July 28, 2006:

($18MM)	Base Rates
$56MM	ENEC
$23MM	WJF & FGD investment @ 12/31/05
$61MM	Gross revenue increase
($17MM)	ENEC over-recovery negative surcharge
$44MM	Net increase effective 7/28/06

- ✓ Phased-in revenue increases annually on July 1, 2007 – 2009 provides for timely recovery of FGD project balances at 12/31 of prior year

Summary Rate Case Information

Virginia E&R Factor Filing

On July 1, 2005, Appalachian Power Co. filed a request with the Virginia SCC to recover incremental actual and projected costs for environmental compliance and T&D System reliability in the amount of $62.1MM. The SCC has ruled that under applicable VA law, it does not have authority to approve the recovery of projected E&R costs before their actual incurrence and adjudication. APCo filed supplemental direct testimony which included actual costs incurred for E&R thru September 30, 2005 of $21.1 million. Hearings concluded in March. Briefs were filed in early April. We are awaiting a Commission order. Docket # PUE-2005-00056

Capital Structure – Company vs. Staff

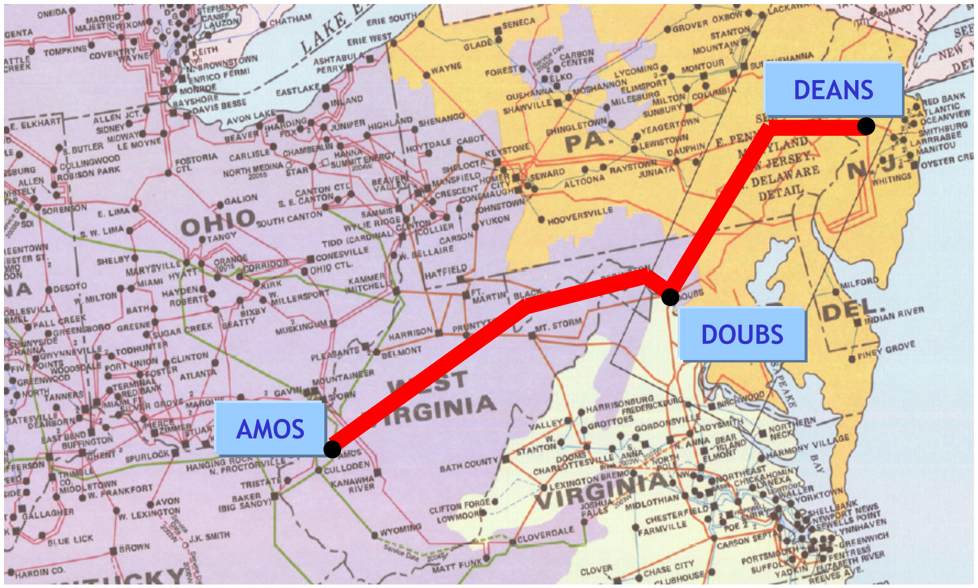
Capital Structure	Company Position (filed 7/1/05)	Staff Position (filed 1/11/06)
Long-Term Debt	53.43%	51.50%
Short-Term Debt	2.67%	2.20%
Preferred Stock	0.54%	0.53%
Common Equity	42.65%	45.16%
ITC	0.71%	0.61%
Total	**100.00%**	**100.00%**
Recommended ROE	**10.85%**	**9.80%**

Revenue Requirement – Company vs. Staff*

Revenue Requirement	Company Position (filed 11/14/05)	Staff Position (filed 1/11/06)
Environmental	13.3	8.2
Transmission	6.1	8.8
Distribution	1.7	2.6
Total	**$21.1MM**	**$19.6MM**

* Difference in positions does not reflect the relative earnings impact and is not necessarily a reflection of the ultimate outcome of the case.

AEP Interstate Project



Map of the Proposed AEP Interstate Project 765 kV Transmission Line (Line route is conceptual and subject to change in regulatory and PJM Regional Transmission Expansion Plan processes)

- Line connects AEP's Amos 765 kV station to Allegheny Power's Doubs 500 kV station in Maryland, and terminates at PSEG's Deans 500 kV station in New Jersey
- Total line length is approximately 550 miles
- Will improve power transfer capability from the Midwest to the Mid-Atlantic by 5,000 MW
- Expected to cost $3 billion (subject to change based on a detailed investigation)
- Not yet determined which other non-AEP companies may be interested in participating
- Any financing activity relating to this project would be structured to allow AEP to meet its consolidated debt-to-cap target of approximately 60% and maintain its BBB credit rating
- Project expected to be in service in 2014

OPERATING COMPANY DETAIL

AEP Texas Central Company

President and Chief Operating Officer: Charles Patton

AEP Texas Central Company (TCC)

(organized in Texas in 1945) is engaged in the generation (to an extremely limited extent), transmission and sale of power to affiliated and non-affiliated entities and the distribution of electric power to approximately 729,000 retail customers through REPs in southern Texas, and (to a limited extent) in supplying and marketing electric power at wholesale to other electric utility companies and market participants. Under the Texas Act, TCC is completing the final stage of exiting the generation business and has already sold most of its generation assets, including STP. At December 31, 2005, TCC had 1,160 employees. In addition to its AEP System interconnections, TCC is a member of ERCOT.

As of 12/31/2005

Total Customers:
(Based on electric meters)

• **Residential**	**620,000**
• **Commercial**	**103,000**
• **Industrial**	**6,000**
Total	**729,000**

Generating Capacity	**54 MW***
Generating Capacity by Fuel Mix:	
• **Coal:**	**100%**
Transmission Miles	**5,000**
Distribution Miles	**28,000**

*** Includes TCC's 54-MW share of the Oklaunion plant**

Principal industries served:

Oil and gas extraction
Food processing
Apparel
Metal refining
Chemical and petroleum refining
Plastics
Machinery equipment

Commissioners

Number: **3**	Appointed/Elected: **Appointed**	Term: **6 years**	Political Makeup: R:3

Qualifications for Commissioners

To be eligible for appointment, a commissioner must be: (1) a qualified voter; (2) a citizen of the United States; and (3) a representative of the general public. Chairman appointed by the Governor.

Commissioners

Paul Hudson, Chairman (Rep.), since August 2003; current term expires August 2009. Served as policy director in governor's office. Worked at PUCT as advisor and senior economic analyst. Served on National Governor's Association Task Force on Electric Infrastructure; Western Governor's Association Working Group on Cross Border Energy Issues. Master's degree from Arizona State.

Barry T. Smitherman, Commissioner (Rep.), since April 2004; current term expires August 2007. Attorney; Assistant DA; 16 years as a public finance investment banker. Law degree from the University of Texas School of Law, Master's in public administration from Harvard University.

Julie Parsley, Commissioner (Rep.), since November 2002; current term expires August 2011. Lawyer, private practice. Served as Solicitor General of Texas with Office of Attorney General. Also served as Deputy Solicitor General. Received law degree from Texas Tech University.

Appalachian Power

President and Chief Operating Officer: Dana Waldo

Appalachian Power Company (APCo)

(organized in Virginia in 1926) is engaged in the generation, transmission and distribution of electric power to approximately 942,000 retail customers in the southwestern portion of Virginia and southern West Virginia, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities and other market participants. APCo covers a service territory of 19,049 square miles, and at December 31, 2005, APCo and its wholly owned subsidiaries had 2,408 employees. Among the principal industries served by APCo are coal mining, primary metals, chemicals and textile mill products. In addition to its AEP System interconnections, APCo also is interconnected with the following unaffiliated utility companies: Carolina Power & Light Company, Duke Energy Corporation and Virginia Electric and Power Company. APCo has several points of interconnection with TVA and has entered into agreements with TVA under which APCo and TVA interchange and transfer electric power over portions of their respective systems. APCo is a member of PJM.

Principal industries served:

Coal mining
Primary metals
Chemicals
Textile mill products

Commissioners

Number: 3	**Appointed/Elected:** Appointed	**Term:** 6 years	**Political Makeup R:** 1 **D:** 2

Qualifications for Commissioners

The West Virginia Public Service Commission (WVPSC) consists of three members, appointed by the Governor, with the advice and consent of the senate. No more than two members of the commission may belong to the same political party. The Commissioners serve six year staggered terms, with one term expiring as of July 1 of each odd numbered year. One Commissioner is designated as Chairman of the Commission by the Governor. The Chairman serves as the chief fiscal officer of the Commission.

Commissioners

Edward H. Staats, (Dem.), since 2003, term expires June 2009. Former Chief of Operations in the Governor's office.

R. Michael Shaw, Commissioner (Rep.), since mid 2003, term expires June 2007. Attorney, former state legislator.

Jon W. McKinney, Chairman (Dem.), since 2005, term expires June, 2011. Formerly served as plant manager of Flexsys' Nitro, W Va operations, chairman of Chemical Industry Committee for W Va, board member of W Va Chamber of Commerce, W Va Manufacturer's Association, Chemical Alliance Zone, W Va Roundtable & Thomas Memorial Hospital.

Virginia State Corporation Commission

AEP Regulated Electric Utilities

Appalachian Power Co.

Commissioners

Number: 3	**Appointed/Elected**: Elected	**Term:** 6 years	**Political Makeup: R:** 2 **D:** 1

Qualifications for Commissioners

The Virginia State Corporation Commission (VSCC) is composed of three members elected by the General Assembly. Commissioners are elected to serve six-year terms, staggered in two year increments. The chair rotates annually among the three commissioners on February 1.

Commissioners

Theodore V. Morrison, Jr, (Dem.), since 1989; current term expires 2008. Member of the Virginia House of Delegates from 1968 to 1988. Member of Virginia Code Commission from 1974 and served as chairman from 1984 to 1988. Lawyer, private practice. Law degree from Emory University.

Mark C. Christie (Rep.), since 2004; current term expires February 2010. Current Chairman. Attorney, counsel to the Speaker of the House

Judith Williams Jagdmann, (Rep.), since 2006, current term expires 2012. Law degree from T.C. Williams School of Law. Prior to being elected to the Commission, she served as 43rd Attorney General for the Commonwealth of Virginia. Prior to work in Attorney in the Office of Attorney General, served 13 years as counsel to the SCC.

Columbus Southern Power

President and Chief Operating Officer: Kevin Walker

Columbus Southern Power Company (CSPCo)

(organized in Ohio in 1937, the earliest direct predecessor company having been organized in 1883) is engaged in the generation, transmission and distribution of electric power to approximately 710,000 retail customers in Ohio, and in supplying and marketing electric power at wholesale to other electric utilities, municipalities and other market participants. CSP Co covers a service territory of 3,701 miles and at December 31, 2005, CSPCo had 1,178 employees. CSPCo's service area is comprised of two areas in Ohio, which include portions of twenty-five counties. One area includes the City of Columbus and the other is a predominantly rural area in south central Ohio. In addition to its AEP System interconnections, CSPCo also is interconnected with the following unaffiliated utility companies: CG&E, DP&L and Ohio Edison Company. CSPCo is a member of PJM. Pursuant to an acquisition that closed on December 31, 2005, CSPCo purchased the electric utility operations of Monongahela Power Company in Ohio. As a result, in January 2006 approximately 29,000 customers in six southeastern Ohio counties, together with the transmission and distribution used to serve such customers, were added to CSPCo's service territory.

As of 12/31/2005

Commissioners

Number: 5	**Appointed/Elected**: Appointed	**Term:** 5 years	**Political Makeup: R:** 3 **D:** 0 **I:** 2

Qualifications for Commissioners

Five members, appointed by the governor and confirmed by the state senate; five year, staggered terms, full-time positions, commissioners shall be selected from the lists of qualified persons submitted to the governor by the PUC nominating council. Not more than three of the members of the PUCO shall be members of the same political party. The governor appoints one of the five as president, who serves at the pleasure of the governor until a successor has been designated.

Commissioners

Alan R. Schriber, Ph.D., Chairman, (Ind.), since 1999. Term expires April 2009. Economics professor, president of a radio broadcasting company, investment advisor. Previously served as commissioner on the PUCO from 1983-1989. Member NARUC Telecommunications Committee.

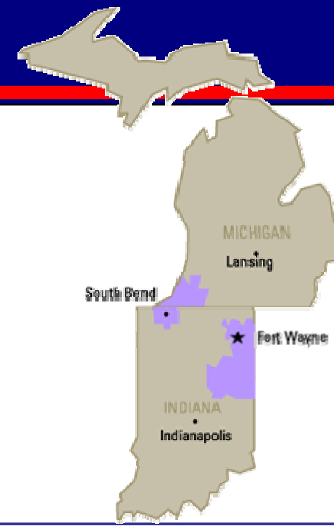
Ronda Hartman Fergus, Commissioner, (Rep.), since 1995, reappointed in 2000 & 2005. Term expires April 2010. Lawyer, Ohio State; previously served on the PUCO staff as an administrative law judge in the Legal Department. Later served as the chief of Telecommunications, Water and Sewer Section of the Legal Department, and then chief of the Telecommunications Technical Staff.

Judy A. Jones, Commissioner, (Rep.), since 1997, reappointed in 2002. Term expires April 2007. Masters degree in Biological Chemistry, Univ. of Michigan. Member NARUC Committee on Electricity, Clean Coal Technology Work Group and vice-chair of its International Relations Comm, member of the National Coal Council, and a government member of the North American Electric Reliability Council.

Donald L. Mason, Commissioner, (Rep.), since 1998, reappointed in 2003. Term expires April 2008. Lawyer, former chief of the Division of Oil and Gas at the Ohio Department of Natural Resources. He serves as chair of the NARUC Gas Committee and the NARUC Ad Hoc Committee on Electric Restructuring and Critical Infrastructure.

Clarence D. Rogers, Commissioner, (Ind.), since 2001, term expires April 2006. Lawyer, former executive deputy general manager Cleveland Regional Transit Authority, two terms as commissioner of the Ohio Turnpike Commission, assistant US Attorney, private practice as litigator.

Indiana Michigan Power



President and Chief Operating Officer:
Marsha Ryan

Indiana Michigan Power Company (I&M)

(organized in Indiana in 1925) is engaged in the generation, transmission and distribution of electric power to approximately 581,000 retail customers in northern and eastern Indiana and southwestern Michigan, and in supplying and marketing electric power at wholesale to other electric utility companies, rural electric cooperatives, municipalities and other market participants. I&M has a service territory of 4,578 square miles and at December 31, 2005, I&M had 2,633 employees. Since 1975, I&M has leased and operated the assets of the municipal system of the City of Fort Wayne, Indiana. In addition to its AEP System interconnections, I&M also is interconnected with the following unaffiliated utility companies: Central Illinois Public Service Company, CG&E, Commonwealth Edison Company, Consumers Energy Company, Illinois Power Company, Indianapolis Power & Light Company, Louisville Gas and Electric Company, Northern Indiana Public Service Company, PSI Energy Inc. and Richmond Power & Light Company. I&M is a member of PJM.

Principal industries served:
Primary metals
Transportation equipment
Electrical and electronic machinery
Fabricated metal products
Rubber and miscellaneous plastic products
Chemicals and allied products

Regulatory Information

Indiana Utility Regulatory Commission

AEP Regulated Electric Utilities

Indiana Michigan Power Co.

Number: 5	**Appointed/Elected:** Appointed	**Term:** 4 years	**Political Makeup: R** 3 **D:** 2

<u>Qualifications for Commissioners</u>

Five members, appointed by the Governor from among persons nominated by a legislatively mandated utility commission nominating committee; four year, staggered terms, full time positions. Not more than three of the members of the IURC be members of the same political party. At lease one of the commissioners must be an attorney qualified to practice law before the Indiana Supreme Court. The governor appoints one of the five as chairman. Republican Mitch Daniels was elected Governor on November 2, 2004.

<u>Commissioners</u>

David L. Hardy, Chairman (Rep.), since September 2005, current term will expire April 2006. Commissioner Hardy is an attorney who has worked in private practice since 1997. Areas of expertise include: negotiation, contracts, litigation, finance and administration. He has 35 years regulatory experience at the state and federal levels.

Larry S. Landis, Commissioner (Rep.), since December 2002, current term ends January 2008. Former president of a marketing and advertising agency, VP Corporate Advertising, Bank One, Indiana. Bachelor's degrees in political science and economics.

David W. Hadley, Commissioner (Dem.), since 2000; Executive officer for Indiana AFL CIO, former legislative affairs representative for United Mine Workers of America, coal miner, former high school social studies teacher. Master's degree in secondary education.

Greg Server, Commissioner (Rep.), since September 2005, current term ends in April 2009. Former state senator since 1981 and before that served in the Indiana House or Representatives from 1972 to 1980. Served as chair of senate commerce committee, which handled IURC and utility industry legislation. Served as Director of Administration for the Evansville Water and Sewer Utility.

David E. Ziegner, Commissioner (Dem.), since 1990, current term ends April 2007. Lawyer, staff attorney for Legislative Services Agency, General Council for IURC. Member, NARUC Committee on Electricity. Law degree from the Indiana University School of Law in Indianapolis.

Regulatory Information

Michigan Public Service Commission

AEP Regulated Electric Utilities

Indiana Michigan Power Co.

Number: 3	**Appointed/Elected:** Appointed	**Term:** 6 years	**Political Makeup:** :1 **D:** 2

<u>Qualifications for Commissioners</u>

The Michigan Public Service Commission (MPSC) is composed of three members appointed by the Governor with the advice and consent of the Senate. Commissioners are appointed to serve staggered six year terms. No more than two commissioners may represent the same political party. One commissioner is designated as chairman by the Governor.

<u>Commissioners</u>

<u>J. Peter Lark, Chair, (Dem)</u> since July 2003: current term expires July 2009. Lawyer, assistant Attorney General in charge of special litigation division, former assistant prosecuting attorney.

<u>Laura Chappelle, Commissioner, (Rep.)</u> since 2001: current term expires July 2007. Lawyer, former deputy legal advisor to the Governor, regulatory affairs advisor to Michigan House Republicans, assistant prosecuting attorney.

<u>Monica Martinez, Commissioner, (Dem)</u> since 2005, current term expires July 2011. Former Deputy Director of the Governor's Legislative Affairs Division where she served as the Governor's principal lobbyist. Previous to this she served as an analyst for the Senate Democratic Office, where she specialized in technology and energy, human services and family law policy issues.

Kentucky Power

President and Chief Operating Officer: Tim Mosher

Kentucky Power Company (KPCo)

(organized in Kentucky in 1919) is engaged in the generation, transmission and distribution of electric power to approximately 176,000 retail customers in an area in eastern Kentucky, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities and other market participants. KPCo encompasses a service territory of 4,813 square miles and at December 31, 2005, KPCo had 454 employees. In addition to its AEP System interconnections, KPCo also is interconnected with the following unaffiliated utility companies: Kentucky Utilities Company and East Kentucky Power Cooperative Inc. KPCo is also interconnected with TVA. KPCo is a member of PJM.

Regulatory Information

Oklahoma Corporation Commission

AEP Regulated Electric Utilities

Public Service Company of Oklahoma

Commissioners

Number: **3**	**Appointed / Elected:** Elected	Term**: 6 years**	Political Makeup: **R: 3**

Qualifications for Commissioners

The Oklahoma Corporation Commission (OCC) is composed of three commissioners who are elected by state-wide vote. Commissioners serve staggered six-year terms so one commissioner vacancy occurs every two years. The election pattern was established when the Commission was created by the state constitution.

Commissioners

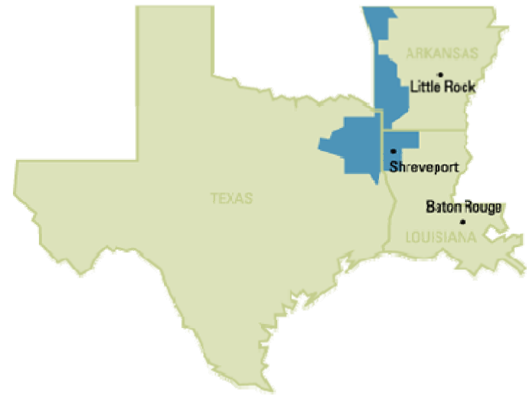
Jeff Cloud, Chairman (Rep.), since 2002; current term ends January 2009. Member, NARUC. Served as U.S. Congressman's District Director. Served as the Oklahoma City Mayor's Chief of staff. Law degree from Oklahoma City University.

Denise A. Bode, Vice-Chairman (Rep.), since 1997; current term ends January 2011. Member, NARUC. Former president of the Independent Petroleum Association of America (IPAA). Graduated with a bachelor's degree in political science from the University of Oklahoma. Founding partner of a Washington D.C. firm. Law degree from George Mason University and a master's of law in taxation from Georgetown University.

Bob Anthony, Commissioner (Rep.), since 1989; current term expires January 2007. Member, NARUC. Served on the boards of the Oklahoma State, Oklahoma City, and South Oklahoma City chambers of commerce. Earned a M.Sc. from the London School of Economics, a M.A. from Yale University, and an M.P.A. from the Kennedy School of Government at Harvard University.

Southwestern Electric Power

President and Chief Operating Officer: Nick Akins



Southwestern Electric Power Company (SWEPCo)

(organized in Delaware in 1912) is engaged in the generation, transmission and distribution of electric power to approximately 450,000 retail customers in northeastern Texas, northwestern Louisiana and western Arkansas, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities, rural electric cooperatives and other market participants. SWEPCo has a service territory of 25,000 square miles and at December 31, 2005, SWEPCo had 1,498 employees. The territory served by SWEPCo also includes several military installations, colleges, and universities. In addition to its AEP System interconnections, SWEPCo is also interconnected with CLECO Corp., Empire District Electric Co., Entergy Corp. and Oklahoma Gas & Electric Co. SWEPCo is a member of SPP.

As of 12/31/2005

Total Customers:

• **Residential**	**381,000**
• **Commercial**	**61,000**
• **Industrial**	**7,000**
• **Other**	**<u>1,000</u>**
Total	**450,000**

Generating Capacity **4,487 MW**

Generating Capacity by Fuel Mix:

- **Coal/Lignite:** **60%**
- **Natural Gas:** **40%**

Transmission Miles	**3,500**
Distribution Miles	**19,300**

Principal industries served:

Natural gas and oil production
Petroleum refining
Manufacturing of pulp and paper
Chemicals
Food processing
Metal refining.

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events and our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives, evolving public perception of the risks associated with fuels used before, during and after the generation of electricity, including nuclear fuel.

Summary Rate Case Information

APCo Virginia Base Rate Case - Docket #PUE-2011-00037

On March 31,2011 APCo filed an update to its pre-biennial base rate case for recovery of generation and distribution costs requesting an increase of $75 million ($126 million total increase less $51 million deferral of depreciation increase). (Docket #:) A procedural schedule is pending from the VSCC.

In conjunction with this case, an environmental rate adjustment clause (E-RAC), generation rate adjustment clause (G-RAC) and a renewable portfolio standard rate adjustment clause (RPS-RAC) were filed . APCo has requested that rates in the base case, E-RAC and RPS-RAC go into effect on 2/1/2012 and the G-RAC on 3/1/2012.

I&M Michigan Base Rate Case (Docket# U-16801)

On July 1, 2011 I&M filed a base rate case with the Michigan Public Service Commission requesting an increase of $24.5 million. Rates proposed in this filing are based on projected 2012 cost of service and will not go into effect until 2012, therefore rates will reflect a current cost of service. This filing includes revised depreciation rates to include additions since the last approved depreciation study as well as accelerated retirement of Tanners Creek Units1, 2 and 3. The requested ROE is 11.15%. In accordance with Michigan law I&M intends to implement rates, subject to refund, on January 1, 2012. An order is expected by mid-year 2012.

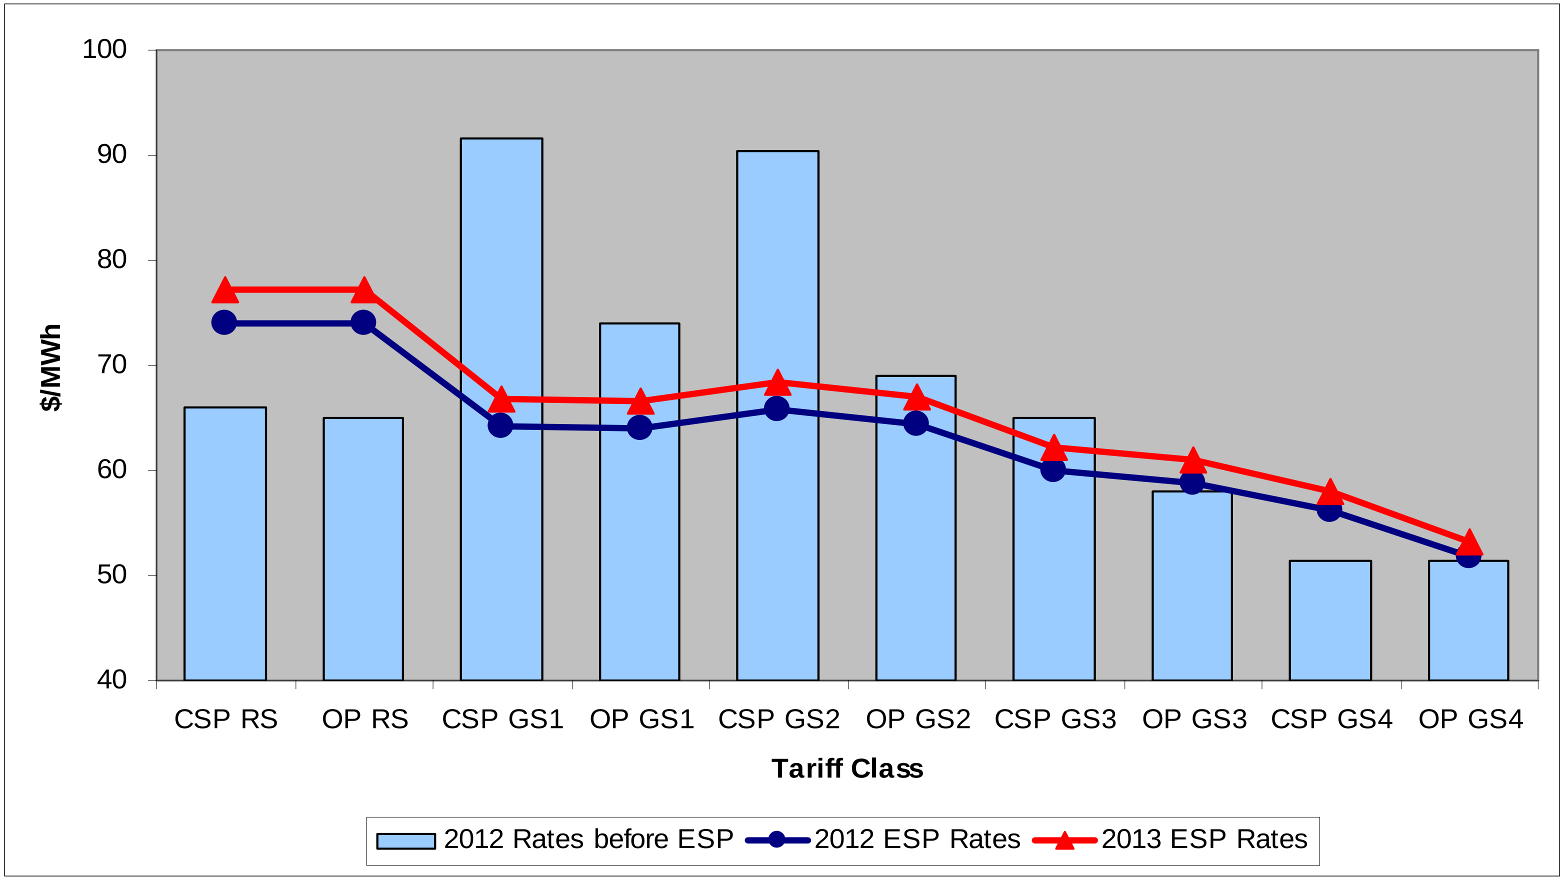
While the ESP includes a small base generation increase, the move to a market-based rate design, consistent with state policy, will result in varying impacts for different customer groups.

Price to Compare

Proposed **SSO** Rates Redesigned To Resemble Market Pricing Structures



Rates do not reflect mitigation impact of market transition rider
2012 Rates before ESP reflect current 2011 rates for generation & transmission service, adjusted to reflect full cost 2011 fuel and environmental costs.

The realignment of rates with market should provide all customers with equivalent opportunities to shop. Additionally, since the proposed design eliminates explicit demand charges, customers should be more easily able to evaluate competitive offers. To ease the rate impact that customers will experience from the realignment, we have proposed a Market Transition Rider.

Market Transition Rider – Mitigates the Initial Impact of Rate Realignment

Illustration of Market Transition Rider on ESP Generation Rate Increases

Three-Year Market Transition Plan
Summary of AEP Ohio ESP Generation Rate Changes

CSP Current Customer Class	CSP New Customer Class	2012 Increase	2013 Increase	2014 Increase	Total Increase
Residential	Residential	5.0%	3.9%	1.0%	10.2%
GS1	GS Non-Demand	(6.4%)	(5.2%)	(7.8%)	(18.1%)
GS2		(5.3%)	(5.5%)	(8.2%)	(17.8%)
GS3	GS Demand	(0.3%)	1.0%	(1.8%)	(1.2%)
GS4/IRP		2.3%	7.7%	4.7%	15.3%
Total CSP		**2.2%**	**2.7%**	**0.0%**	**5.0%**

AEP Ohio		1.4%	2.7%	0.0%	4.2%

The Market Transition Rider is a transition rider designed to facilitate the transition from AEP Ohio's current rates to market-based SSO Generation Service rates. It is a non-bypassable rider designed to limit the first and second year changes for any customer classes to uniformly transition any above or below average changes in three steps. Any revenue shortfall that is produced by limiting the increases for certain customer classes is collected from those classes whose decreases are limited.

List of ESP Riders – Existing and Proposed

Line	Rate Mechanism	Abbreviation	Bypassable	Distribution	Notes
1	**Current Riders**				
2	Universal Service Fund Rider	USF	--	Yes	
3	Advanced Energy Fund Rider	AEF	--	Yes	Expired 12/31/2010
4	kWh Tax Rider	kWh Tax	--		May be self-assessed under specific terms
5	Provider of Last Resort Charge	POLR	No		Option to avoid under specific terms
6	Monongahela Power Litigation Termination Rider	Mon Power	--	Yes	Expires once amount collected
7	Transmission Cost Recovery Rider	TCRR	Yes		
8	Fuel Adjustment Clause Rider	FAC	Yes		
9	Energy Efficiency and Peak Demand Reduction Cost Recovery Rider	EE/PDR	--	Yes	
10	Economic Development Cost Recovery Rider	EDR	--	Yes	
11	Enhanced Service Reliability Rider	ESRR	--	Yes	
12	gridSMART® Rider	gridSMART®	--	Yes	
13	Environmental Investment Carrying Cost Rider	EICCR	No		the current bypassable rider is proposed to be nonbypassable in the new ESP
14					
15	**Proposed Riders**				
16	Standard Offer Generation Service Rider	GSR	Yes		Relocation of base generation rates
17	Generation Resource Rider	GRR	No		Capital/solar investment
18	Alternative Energy Rider	AER	Yes		Relocation of RECs from FAC
19	Phase-In Recovery Rider	PIRR	--	Yes	Previous ESP deferrals, possibility of securitization
20	Distribution Investment Rider	DIR	--	Yes	
21	Market Transition Rider	MTR	--	Yes	
22	Generation NERC Compliance Cost Recovery Rider	NERCR	No		
23	Facility Closure Cost Recovery Rider	FCCR	No		
24	Carbon Capture and Sequestration Rider	CCSR	No		
25					
26	**Other Provisions**				
27	Green Power Portfolio Rider	GPPR	--		Voluntary
28	Rate Security Rider	RSR	--		Voluntary
29	Plug-In Electric Vehicle Tariff / Costs	PEV	--	Yes	Voluntary, Deferral of Costs
30	Emergency Curtailable Service Rider	ECS	--		Voluntary, pending
31	Storm Damage Recovery Mechanism		--	Yes	Reconciliation of storm experience to funding level
32	Pool Termination or Modification Provision		Yes		
33	PIPP Uncollectibles	PIPP	--	Yes	

AEP Generation Capacity

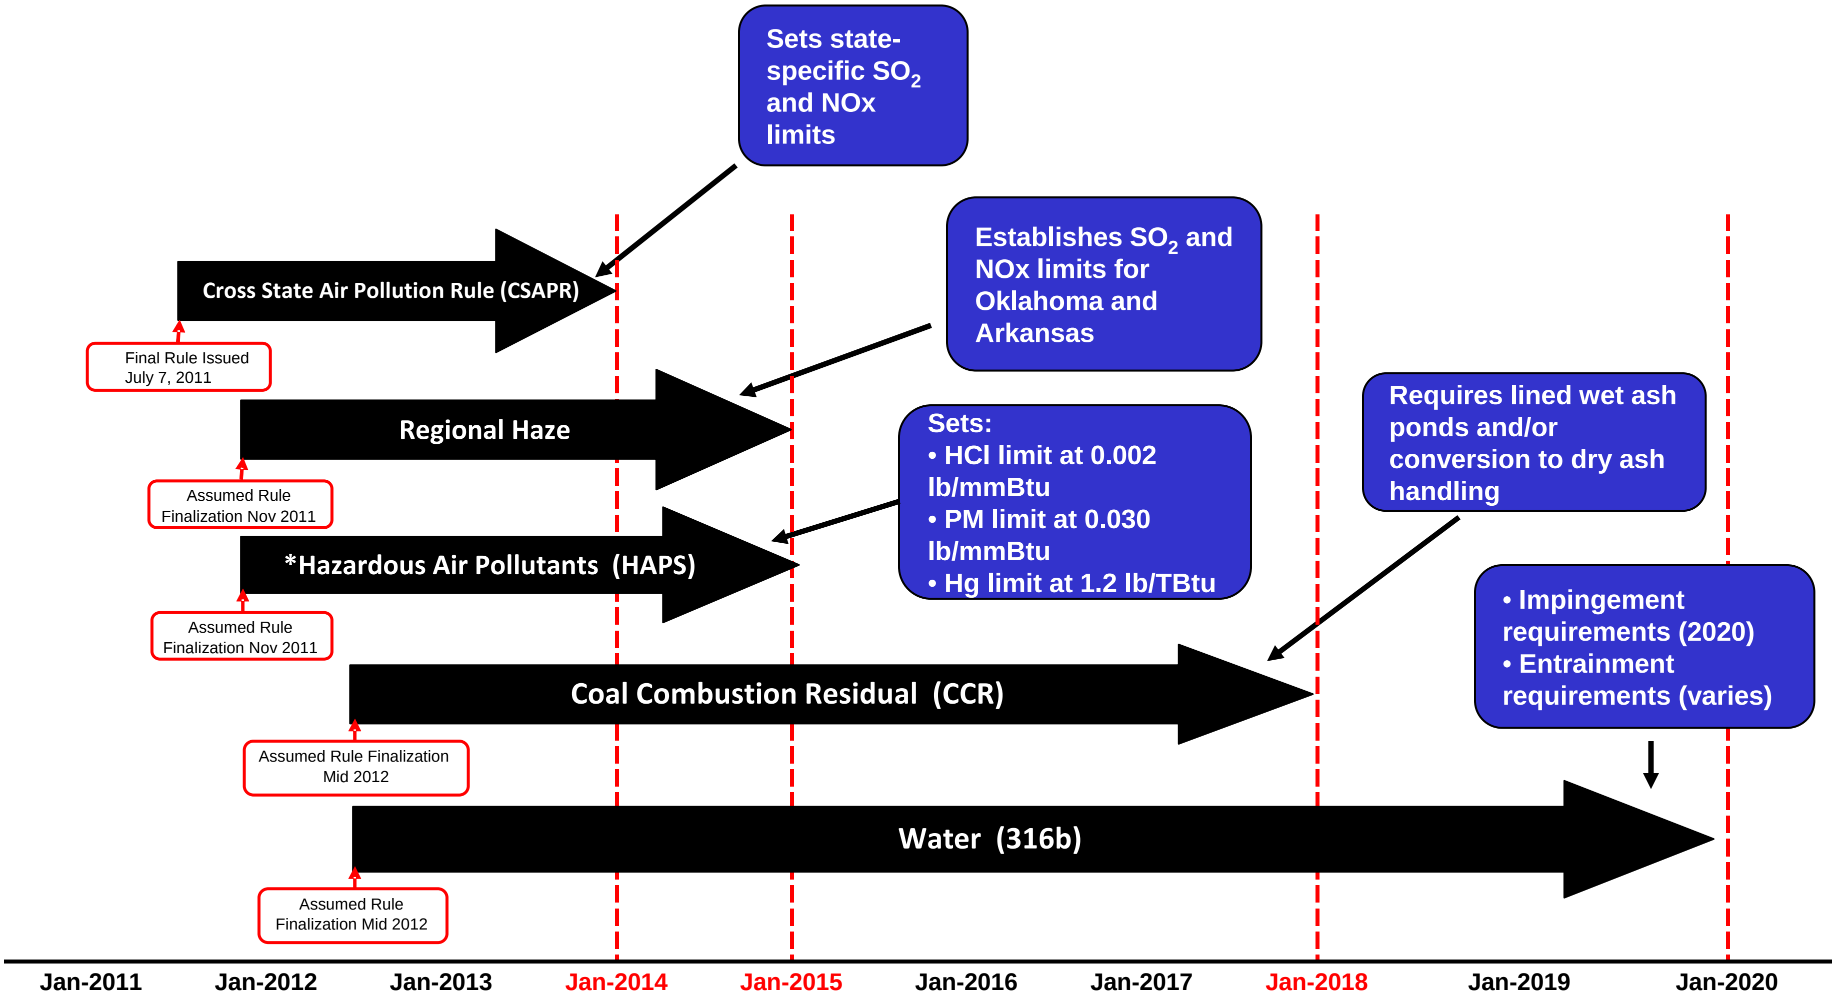
Anticipated environmental regulations and compliance deadlines



* Units that will be retrofit are eligible for a one year compliance extension from the EPA

Retrofits/New Generation

- The tables below represent our estimated $6 - $8 billion capital investment from 2012 to 2020 for environmental retrofits on 10,500 MW and new/refueled generation of 2,152 MW. The below costs include management estimates for compliance with CSAPR, HAPs MACT, CCR and 316(b) regulations as currently proposed.

Operating Company	Plant	MW	Type of retrofit	Low Cost Estimate 2012-2020 ($MM)	High Cost Estimate 2012-2020 ($MM)	
AEP Ohio	Conesville 5	400	SCR, DSI			
	Conesville 6	400	SCR, DSI			
	Muskingum River 5	510	Refuel with Natural Gas			
	Gavin 1	1320	FGD upgrade			
	Gavin 2	1320	FGD upgrade			
	Zimmer 1	330	FGD upgrade			
	Total MW	**4,280**	**Total Expected Cost**	**2,100**	**2,800**	*
APCO	Clinch River 1	211	Refuel with Natural Gas			
	Clinch River 2	211	Refuel with Natural Gas			
	Dresden	580	New Natural Gas			
	Total MW	**1,002**	**Total Expected Cost**	**580**	**765**	**
I&M	Rockport 1	1320	FGD, SCR			
	Rockport 2	1320	FGD, SCR			
	Tanners Creek 4	500	DSI, ACI			
	Total MW	**3,140**	**Total Expected Cost**	**1,240**	**1,670**	***
KPCO	Big Sandy 1	640	New Natural Gas			
	Total MW	**640**	**Total Expected Cost**		**525**	

*Assumes regulatory cost recovery for environmental investments including refuel are non-bypassable surcharges as proposed in the 2012 - 2014 ESP

** Total capital invested is expected to be $366 million for the Dresden plant once completed; $343 million of which is forecasted to be spent prior to 2012.

*** Includes AEG portion of costs related to Rockport upgrade

Operating Company	Plant	MW	Type of retrofit	Low Cost Estimate 2012-2020 ($MM)	High Cost Estimate 2012-2020 ($MM)
PSO	Northeastern 3	470	FGD, ACI, Baghouse

			Total Expected Cost	**900**	**1,200**
TNC	Oklaunion	377	FGD upgrade, ACI		
	Total MW	**377**	**Total Expected Cost**	**80**	**100**

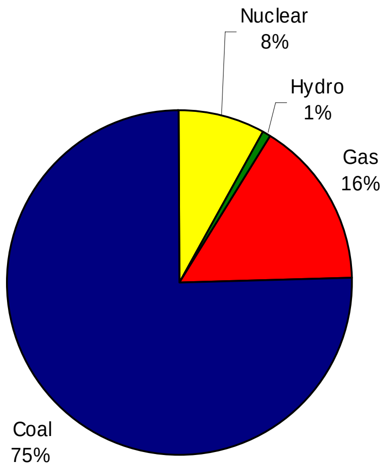
Retirements

Operating Company	Plant	MW	Expected Retirement
AEP Ohio	Sporn 5	450	2011
	Conesville 3	165	2012
	Muskingum River 1-4	840	2014
	Picway 5	100	2014
	Sporn 2-4	300	2014
	Kammer 1-3	630	2014
	Beckjord	53	2014
	Total MW	**2,538**	
APCO	Glen Lyn 5	95	2014
	Glen Lyn 6	240	2014
	Clinch River 3	235	2014
	Sporn 1	150	2014
	Sporn 3	150	2014
	Kanawha River 1	200	2014
	Kanawha River 2	200	2014
	Total MW	**1,270**	
I&M	Tanners Creek 1	145	2014
	Tanners Creek 2	145	2014
	Tanners Creek 3	205	2014
	Total MW	**495**	
KPCo	Big Sandy 1	278	2014
	Big Sandy 2	800	2014
	Total MW	**1,078**	
SWEPCO	Welsh 2	**528**	2014
	Total MW	**528**	
	Grand Total	**5,909**	

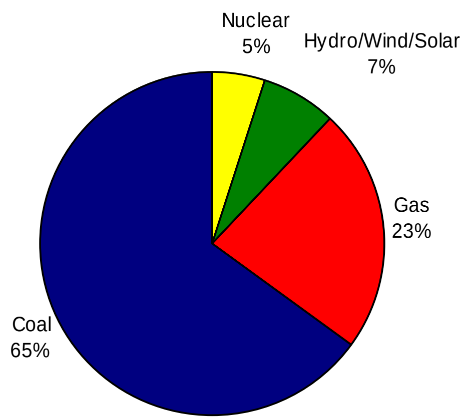
- Capacity reduction caused by retirements will create grid reliability issues particularly in the 2014-2016 time frame
- Net impact could be approx. 600 fewer jobs at AEP as well as indirect job losses affecting local vendors, contractors and service providers
- Annual lost wages of approximately $40 million
- Tax payments could decline by more than $30 million

Generation Transformation

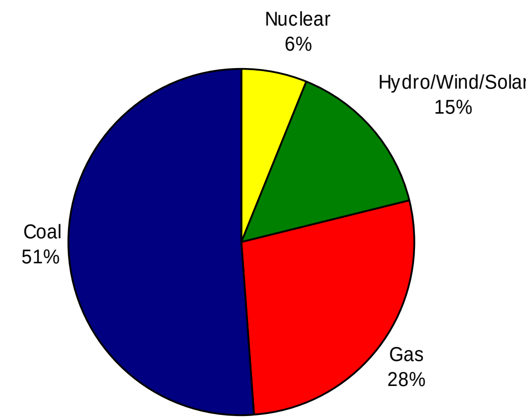
1990 AEP Generating Capacity by Fuel
37,428 total MW's



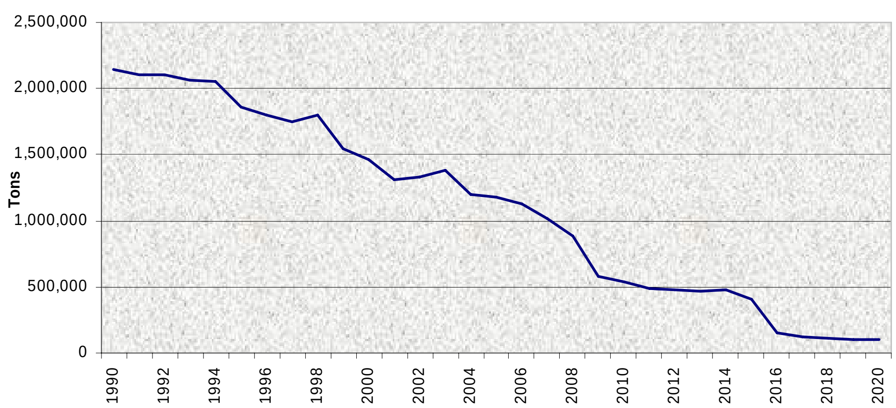
2010 AEP Generating Capacity by Fuel
39,910 total MW's



2020 AEP Generating Capacity by Fuel
37,707 total MW's



Total System NOx & SO2 (actual through 2010 and forecasted based on proposed EPA regulations)



- $7.2 billion capital invested from 1990-2010 to reduce emissions approximately 1.7 million tons
- Estimated $6-$8 billion additional capital investment from 2012-2020 for further reductions of approximately 440,000 tons

Transmission Investment Strategy

- **Near-Term Investment** – Electric Transmission Texas (ETT) secures near term investment opportunities, allowing AEP to invest in the large, growth-oriented Texas transmission market. Total capital expenditures of $3 billion with a 9.96% ROE.

- **Mid-Term Investment** – Seven wholly-owned transcos allow for expansion and growth within AEP's existing utility footprint through an efficient recovery mechanism. Will spend $160 million in 2011 and more than $350 million in 2012. ROE is in the 11.20%-11.49% range.

- **Long-Term Investment** – Joint ventures provide opportunities for longer-term growth outside of AEP's existing utility footprint with forward looking formula rates, reasonable ROEs and FERC incentives where appropriate.

Transmission has a diversified investment approach that positions it as one of the key AEP growth businesses.

Texas Transmission Growth Strategy : Near Term Investment

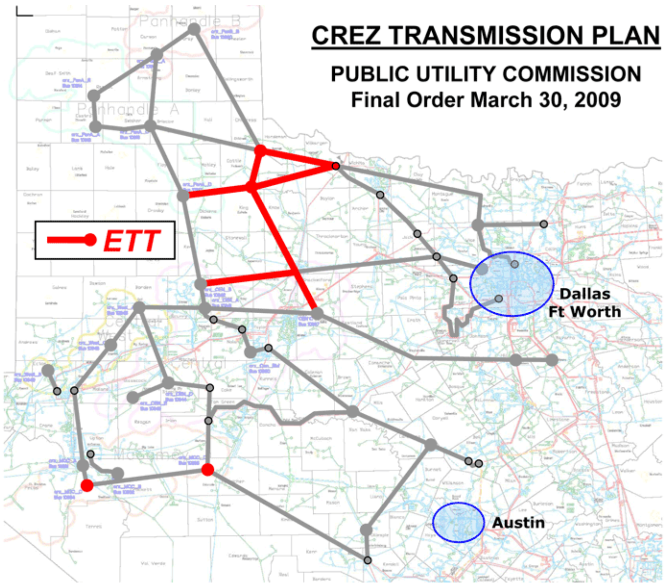
Ownership Structure: 50/50 (AEP/MidAmerican Energy Holding Company)

Total Project Cost: Over $3 Billion

Growing Rate Base:
Current rate base is $412 million; expected to grow as follows:
2011: $473 million
2012: $778 million
2013: $1,352 million

Interim TCOS filings twice per calendar year

Approved ROE: 9.96%



- **Additional Projects in the Pipeline ~$1.6 B:**
  - Approximately 822 miles of lines and 28 substations with in-service dates through 2017

- **Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.1 B:**
  - Seven double-circuit 345kV transmission lines (~$750 M), eight major 345kV stations and several series compensation installations (~$350 M)
  - PUCT Certificate of Convenience and Necessity (CCN) proceedings underway

Joint Venture Strategy: Long-term

- **Strategy**: JV's secure new investment opportunities with local utilities to diversify AEP's investment outside AEP's traditional footprint while providing longer-term incremental earnings**.** JV projects are well-suited for FERC formula rate recovery mechanism, including potential for incentive rates.

- **Future:** Federal/regional initiatives may accelerate expansion of EHV transmission (e.g. cap-and-trade, renewable portfolio standards, inter-region wide planning). Securing first mover advantage will enable AEP to secure LT investment opportunities.

- **Future flexibility**: Passive investment opportunities can be considered and can provide entry beyond SPP/PJM/ERCOT

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants including our ability to restore Indiana Michigan Power Company’s Donald C. Cook Nuclear Plant Unit 1 in a timely manner; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity and transmission lines (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary or deflationary interest rate trends; volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impacting our ability to finance new capital projects and refinance existing debt at attractive rates; the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurred cots and recovery is long and the costs are material; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

Table of Contents

AEP AMERICAN ELECTRIC POWER

AEP Highlights

Premier utility platform

- Leadership position in electric generation, transmission and distribution operations
- Cash flow, earnings and regulatory diversity with more than 5 million customers in 11 states
- $6.3 billion capital expenditure program (2009-2011) will continue to drive rate base growth

Effective regulatory relationships

- Traditional recovery mechanisms with equitable risk allocation enhance both earnings and cash flow
- Emerging energy policies play to AEP's strengths (transmission, energy efficiency, reliability)
- Constructive local relationships deliver successful regulatory outcomes

High-growth transmission business

- The leading US transmission owner, operator, and developer
- Exceptional portfolio of high-quality development projects and project partners
- Attractive ROEs, regulatory support and access to capital will drive earnings growth beyond our traditional utility footprint

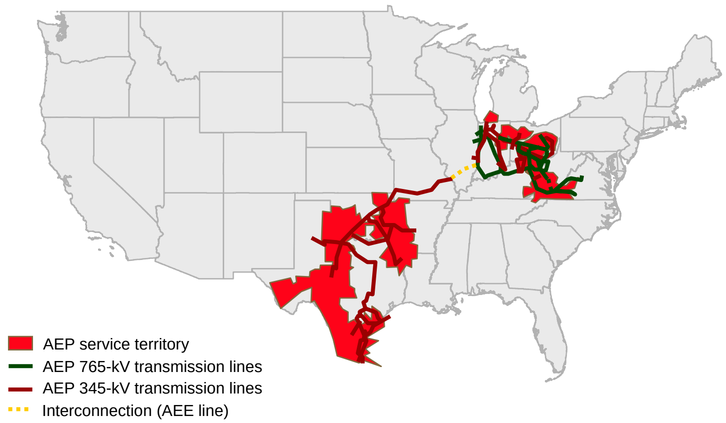
Stable financial position

- Maximization of shareholder value through regulated utility and transmission investments
- Balanced approach to cost containment and capital allocation
- Commitment to investment grade profile, prudent balance sheet, and liquidity management
- Conservative dividend payout with attractive yield

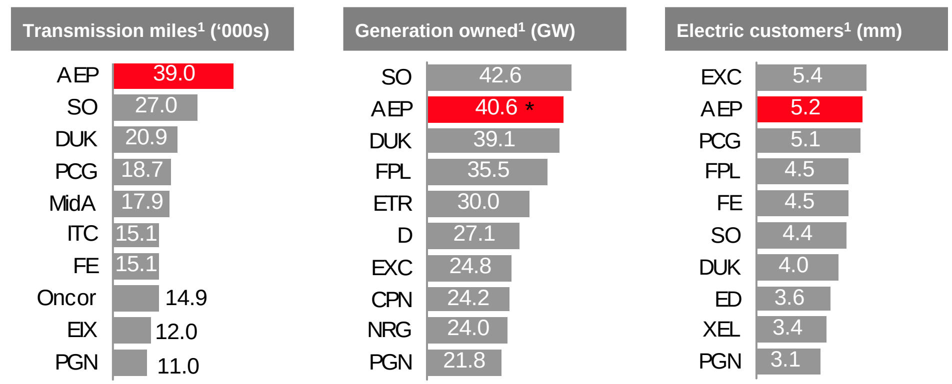
AEP AMERICAN ELECTRIC POWER

Premier Regulated Utility Platform

Overview

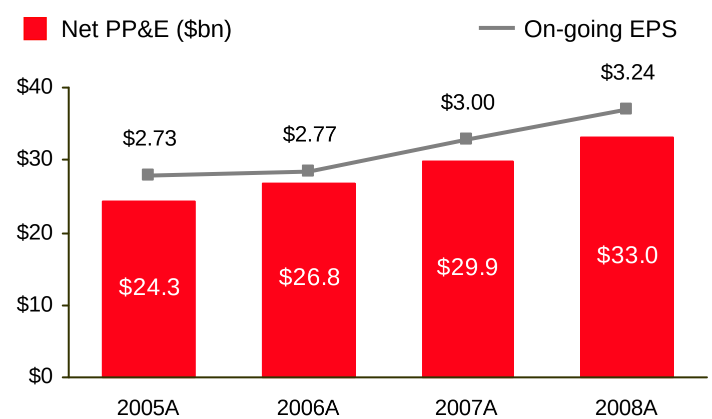


AEP's Leadership Position

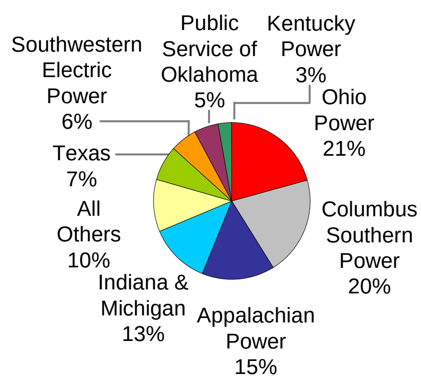


* - AEP generation includes long-term PPAs and generation under construction

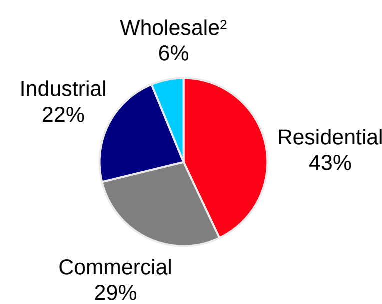
Regulated Operations



- *Net PP&E CAGR of 10.7% since 2005*
- *Earnings CAGR of 5.9% since 2005*



2008 On-going Earnings = $1.3bn



2008 Retail Base Revenue = $6.4bn

- *Highly diversified regulated utility earnings contribution*
- *Balanced customer mix*

¹ *Source: Company filings*
² *Wholesale includes sales to municipal and cooperative power systems, other wholesale, and other retail sales*

AMERICAN ELECTRIC POWER

Energy Policy Initiatives are Core to Our Strategy

Greenhouse Gas Reduction & Regulation

- Actively engaging in CO_2 policy debate – support cap & trade with allocated credits
- Leadership position in development of carbon capture and storage technology
- Reducing carbon footprint via offsets and other measures
- Founding member of Chicago Climate Exchange

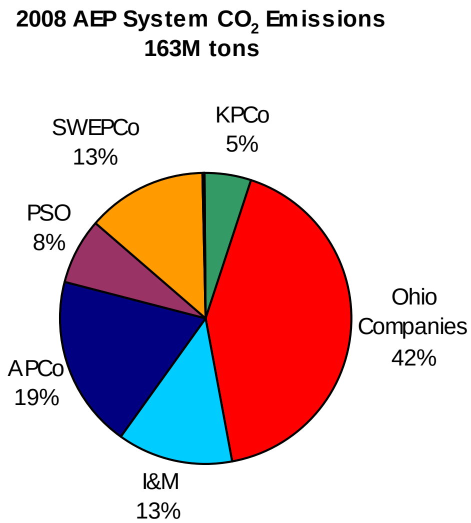
Renewable Energy

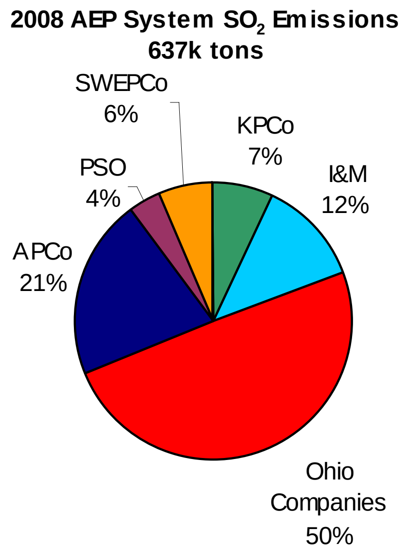
- Develop “transmission superhighway” to facilitate renewable energy projects
- Satisfy RES requirements in our jurisdictions – currently Ohio with 25% (renewables + advanced) by 2025, Texas with ~ 5% by 2015, West Virginia with 25% (renewables + advanced) and Michigan with 10% by 2015; Voluntary goal of 12% by 2022 in Virginia
- Add 2,000MW of wind capacity via long-term PPAs – 903MW achieved to-date

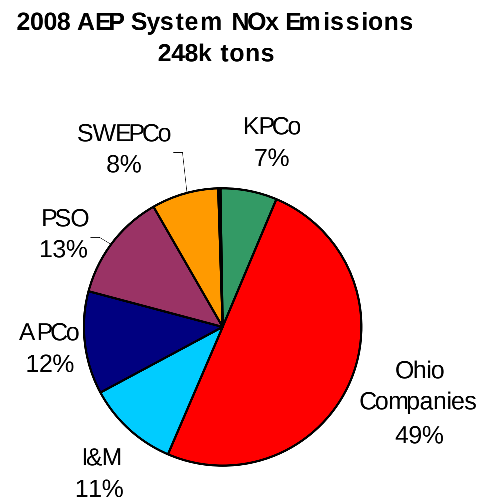
Energy Efficiency, Security & Reliability

- Develop high-voltage transmission projects to strengthen America’s power grid
- Build generation to ensure reliable supply
- Reduce 1,000MW of demand by 2012
- Reduce 2.25 million MWhs of consumption by 2012
- Diversify our fuel mix; have added 3,705MW of gas-fired capacity since 2005 and have 1,080MW under construction

CO_2 Cost Recovery – Should Follow SO_2 & NOx





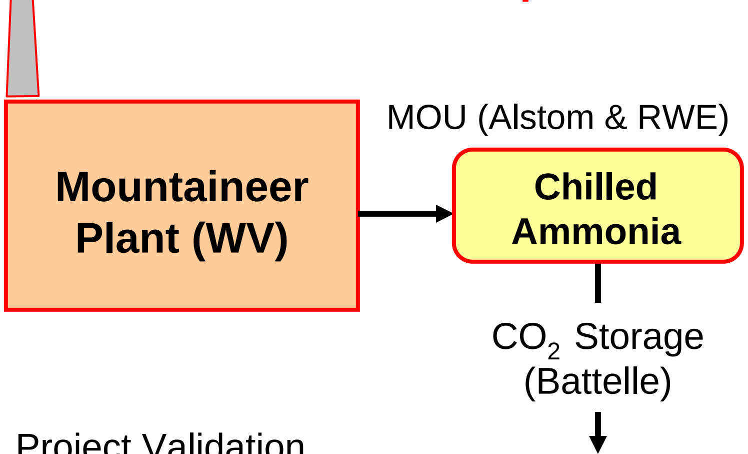


- 100% of SO_2 and NOx allowance costs currently recovered through tracker or similar mechanisms
- Prudently incurred costs associated with carbon-based taxes and other carbon-related regulations explicitly included in Ohio Fuel Adjustment Clause

AEP AMERICAN ELECTRIC POWER

Carbon Capture & Storage

2009 Commercial Operation



Project Validation

- Alstom "Chilled Ammonia" Technology
- 20-30 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, in operation at We Energies' Pleasant Prairie Power Plant)
- Located at the AEP Mountaineer Plant in WV
- 100,000 - 300,000 tonnes CO_2 per year
- In operation 3Q 2009
- Geologic storage for CO_2
- Underground injection control permit received in May 2009 from WV Dept. of Environmental Protection

Represents Post-Combustion Capture

- **Conventional or Advanced Amines; Chilled Ammonia**
  - Amine technologies are currently available in other industrial applications
  - Relatively low CO_2 concentration in flue gas - more difficult to capture than other approaches
  - High parasitic demand
    - Conventional Amine ~ 25-30%
    - Chilled Ammonia target ~ 10-15%

Key Issues for CCS Development in the U.S.

- Overcoming the 'economic' hurdle
- High up-front capital investment
- Commercial demonstration at large coal-fired power plants
- National standards for permitting of storage reservoirs
- Potential institutional, legal and regulatory barriers to carbon storage

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
AEG	Dresden	Ohio	$322 MM	Gas	Combined-cycle	580	2013
SWEPCo	Stall	Louisiana	$385 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.6 B (1)	Coal	Ultra-supercritical	600 (1)	2012

(1) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $1.2 billion in capital investment.

- Turk – In June 2009, the Arkansas Court of Appeals overturned APSC decision granting CECPN & AEP filed appeal to Supreme Court. Air permit appeal hearings were held in June 2009 and a decision is expected by year end. Construction continues.
- Stall – Construction continues.
- Dresden – Construction suspended due to shifts in capital spending. Commercial operation date has been projected for 2013 (previously 2010).

AEP AMERICAN ELECTRIC POWER

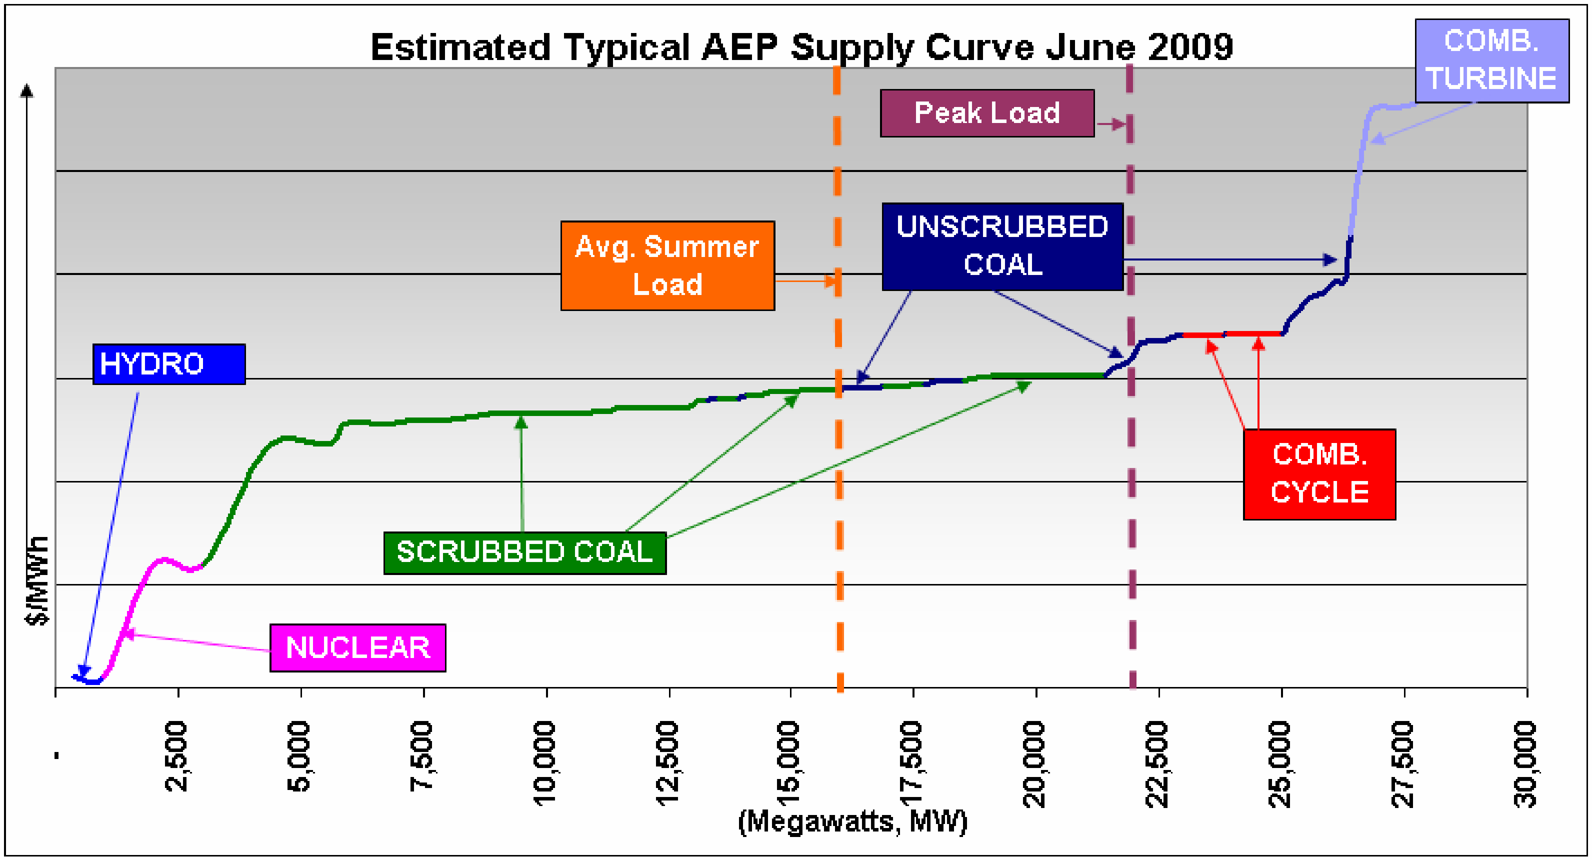
DC Cook Unit 1 Update

- Previously identified technical challenges have solutions
  - Low pressure turbine rotors have been straightened
  - Foundation repair work is in progress and is the critical path
  - Generator and high pressure turbine repair work supports the critical path
- The unit is scheduled to return to service in the fourth quarter of 2009
  - The unit will operate without the last stage blades at 30 MW (summer) to 100 MW (winter) reduced capacity
- Root cause: “A blade-rotor system design that failed to provide adequate stress margin”
  - The root cause also found no operational or installation issues
- The replacement rotors are scheduled for installation in the spring of 2011
  - Different design with several years of fault-free commercial operation.
- We continue to receive $3.5MM per week from the accidental outage policy
  - Insurance proceeds are reflected as other operating revenue; During 2009 YTD, approximately 40% of the insurance payments ($40MM) were used to offset increased fuel costs to customers

AEP AMERICAN ELECTRIC POWER

AEP Supply Stack

- Supply stack with Cook unit 1 outage would slide the supply stack 1,009 MW to the left.
- Planned outages typically shorten supply stack in the shoulder months by several thousand megawatts.
- Shoulder periods offer the flexibility to reschedule planned outages.

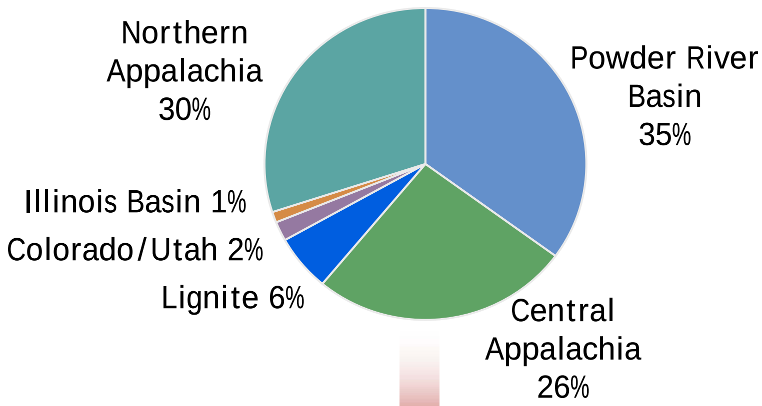


AEP AMERICAN ELECTRIC POWER

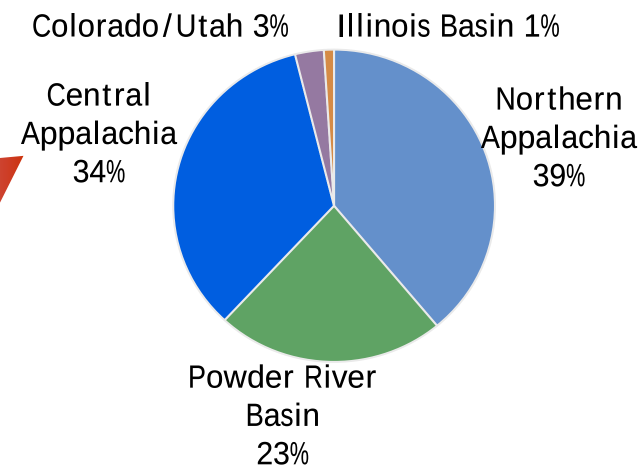
Coal Procurement - 2009 Projected

AEP burns approx. 77 million tons of coal per year

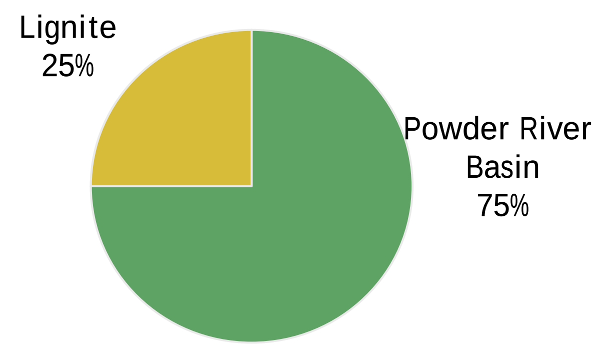
Total AEP System



AEP East



AEP West



Coal Stats:

- 100% contracted for 2009
- 94% contracted for 2010
- Avg. delivered price ~ $46.61/ton in 2008
- Approximate 10% price increase in 2009 ~ $51.00/ton

Overview of 2009 Guidance

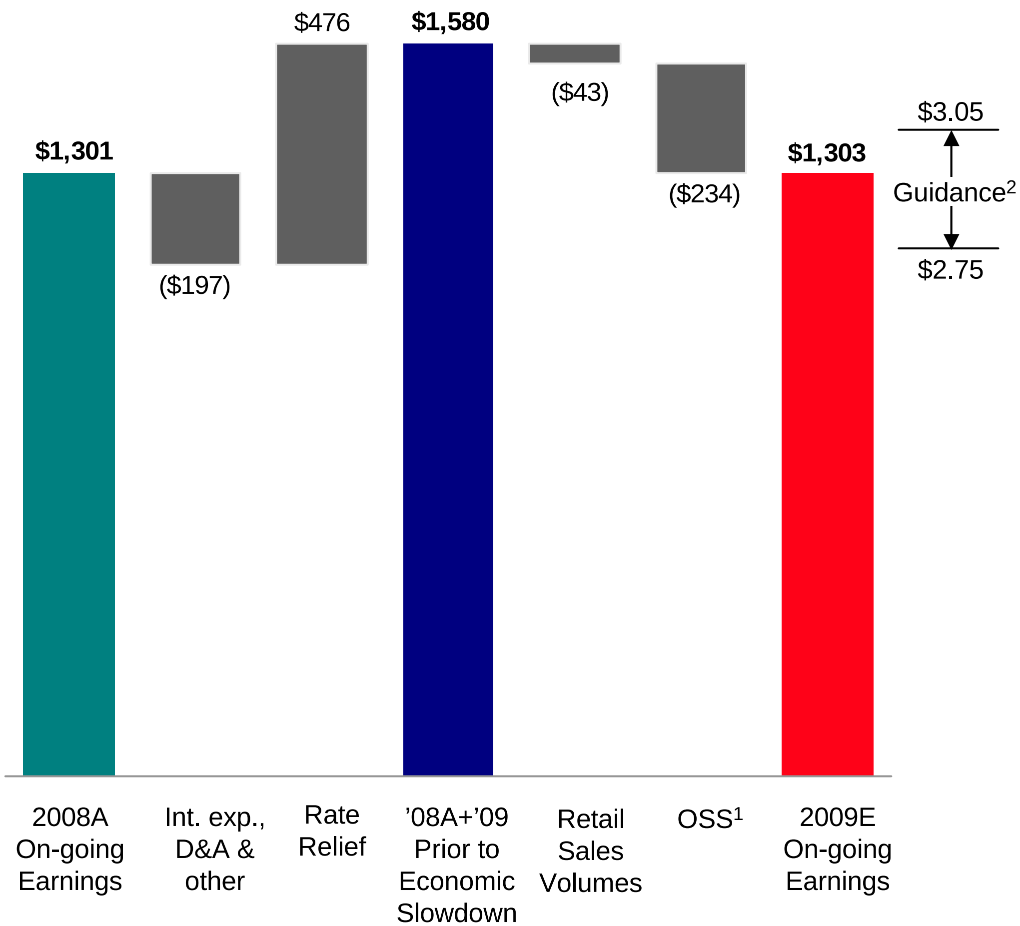
2009 Earnings Drivers:

- Positive Ohio outcome
- Rate relief - $732mm
- Economic slowdown
  - Lower OSS revenues
  - Lower loads

Long-term Earnings Drivers:

- Rate base investments
- Additional rate relief
- OSS/Retail load
- Transmission JV earnings

2008A-2009E Earnings Bridge ($mm)



Note all items are presented after-tax

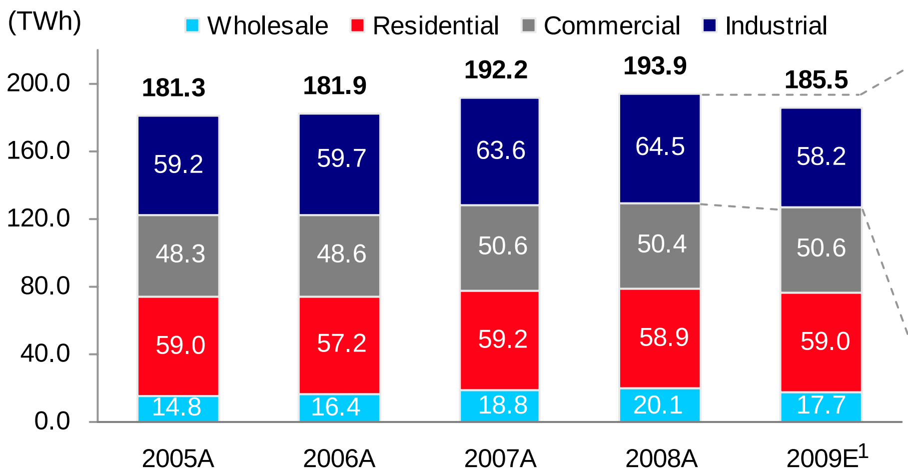
[1] Net of sharing

[2] Assumes 2009 average shares outstanding ~ 450 million

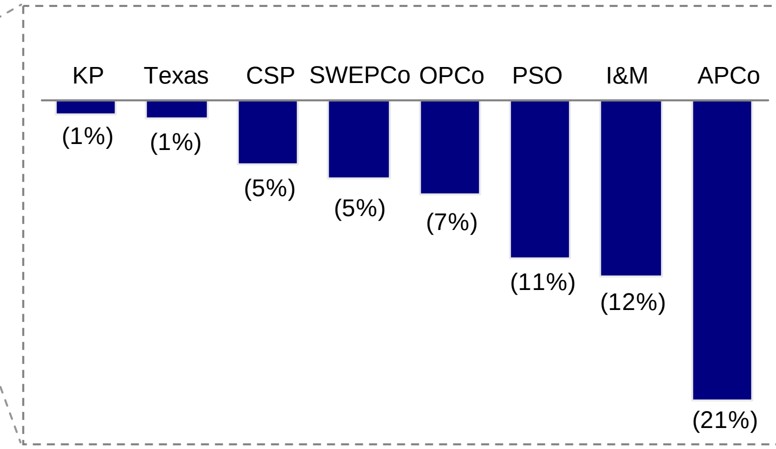
AEP AMERICAN ELECTRIC POWER

Key Drivers of 2009 Guidance: Retail Sales

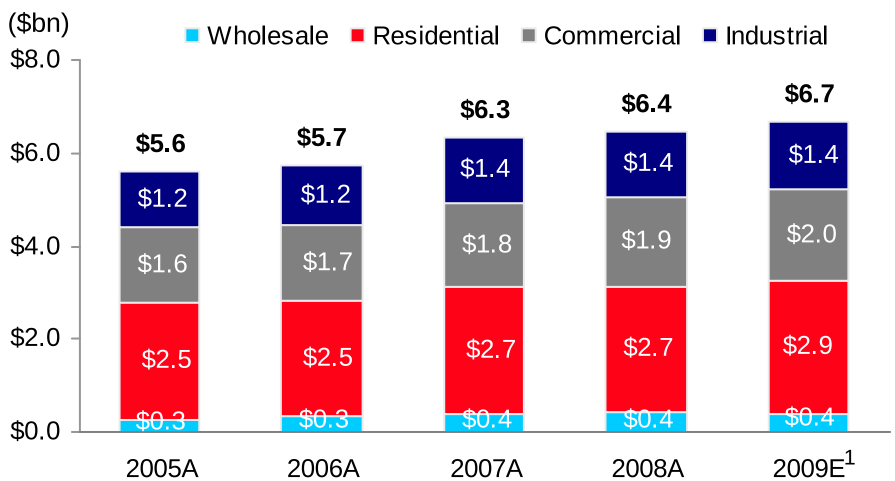
Retail Load by Customer Class



Forecast Drop in 2009 Industrial Sales



Retail Base Revenue[2] by Customer Class



Key Contributors to 2009E Industrial Volume Decline

- Primary metals (APCo, I&M, OPCo, CSP, SWEPCo, KP)
- Basic industries (I&M)
- Paper (PSO, SWEPCo)
- Oil & Gas extraction (PSO, SWEPCo)

[1] 2009E assumes normalized weather
[2] Excludes the impact of current year rate relief, fuel over/under recovery, PJM costs and consumables

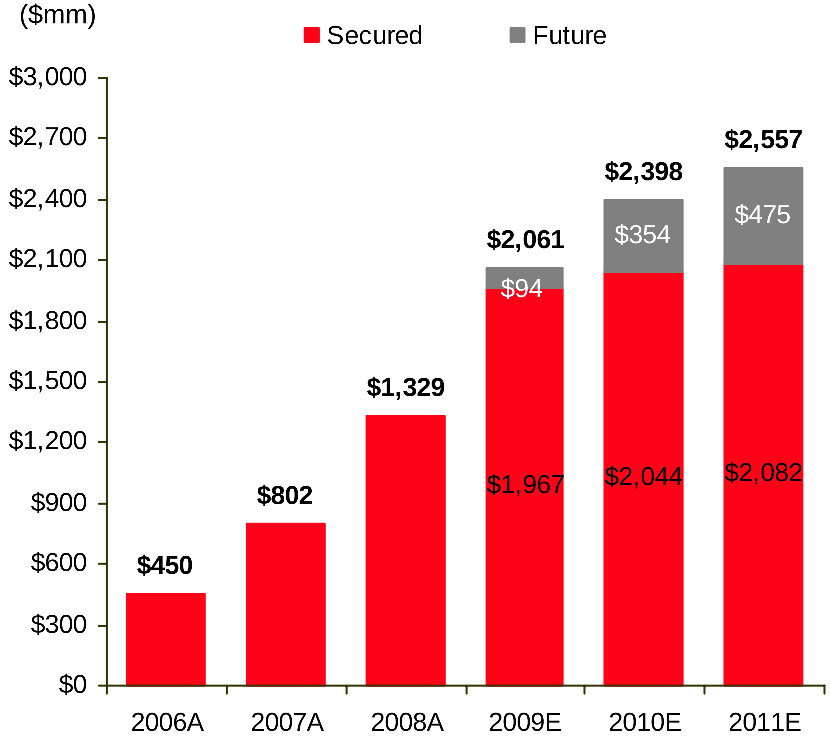
Jurisdictional Off-System Sales Sharing Summary

STATE	OSS Sharing?	Detail
Arkansas	Yes, above and below base levels	Up to $758,600 annual margin, ratepayers receive 100%. From $758,601 to $1,167,078, ratepayers receive 85%. Above $1,167,078, ratepayers receive 50%.
Indiana	Yes	There is $37.5 million built into Indiana's base rates. Above $37.5 million, ratepayers received 50%
Kentucky	Yes, above and below base levels	Sharing occurs above and below levels included in base rates of $24,855,326. Between $0 and $30 million, ratepayers receive 70%. Above $30 million, ratepayers receive 60%.
Louisiana	Yes, above base levels	Up to $874,000 annual margin, ratepayers receive 100%. From $874,001 to $1,314,000, ratepayers receive 85%. Above $1,314,000, ratepayers receive 50%.
Michigan	Yes	There are two jurisdictions: St Joe and Three Rivers. For St Joe, 100% of profits are shared with ratepayers. No profits are shared in Three Rivers, including base rates. St Joe represents 66% of the Michigan market.
Ohio	No	n/a
Oklahoma	Yes	75% of profits are shared with ratepayers.
Tennessee	No	n/a
Texas (SPP)	Yes	90% of profits are shared with ratepayers.
Virginia	Yes	75% of profits are shared with ratepayers.
West Virginia	Yes	100% of profits passed back to ratepayers through the Expanded Net Energy Cost (ENEC) clause.

AEP AMERICAN ELECTRIC POWER

Track Record of Successful Regulatory Outcomes

Cumulative Rate Relief



Annual rate increases, $mm	$450	$352	$527	$732	$337[1]	$159[1]

[1] $77mm and $38mm was secured for 2010 and 2011, respectively, as of July 31, 2009

Our Regulatory Approach:

Maximize utility company returns:

- Successfully secured significant rate relief
- 2009 rate relief:
  - ✓ Ohio ($404MM)
  - ✓ I&M ($52MM)
  - ✓ APCo ($58MM)
  - ✓ PSO ($74MM)
- Pending rate relief including amount requested:
  - ✓ APCo WV ($20MM – in ENEC filing)
  - ✓ SWEPCo ($56MM)
  - ✓ APCo VA ($169MM)
  - ✓ Others to be determined

Minimize regulatory lag:

- Active fuel adjustment clauses now in place in <u>all</u> jurisdictions
- Increased frequency of rate cases
- Employing tracking features

Strong local relationships with regulators

AEP AMERICAN ELECTRIC POWER

Summary Rate Case Information

APCo Virginia General Rate Case

On July 15, 2009 APCo filed a pre-biennial base rate case with the Virginia SCC, per the statute, for recovery of generation and distribution costs requesting an increase of $169.2 million. (Docket #: PUE-2009-00030) A procedural schedule is pending from the VSCC. A transmission rate adjustment clause (T-RAC) was filed in conjunction with this case as base rates will no longer include rates for transmission service (Docket #: PUE-2009-00031). APCo has requested that rates in both cases go into effect at the same time.

Projected Capital Structure – Company Position* (11/30/10)

	% of Capitalization	Cost Rate	Weighted Return
Short-Term Debt	0.015%	1.365%	0.00%

AEP AMERICAN ELECTRIC POWER

Pension and OPEB Estimate

- Our pension plan and OPEB funds investment returns were each down about 24% in 2008.
- Discount rates are assumed to be 6.0% for pension and 6.1% for OPEB.
- Investment losses increase plan expense for both pension and OPEB, but the investment losses are smoothed in over several years.
- We expect 2009 pension and OPEB expense to increase $104MM from 2008 to 2009 (pre-tax and pre-capitalization).
- OPEB contributions will increase along with OPEB expense, in accordance with agreements in most of our regulatory jurisdictions.
- We do not expect any mandatory contributions to pension in 2009. Pension trust contributions are estimated to be $475MM in 2010 and $283MM in 2011.

AEP AMERICAN ELECTRIC POWER

Uniquely Positioned for Nationwide Grid Expansion

Active Projects:

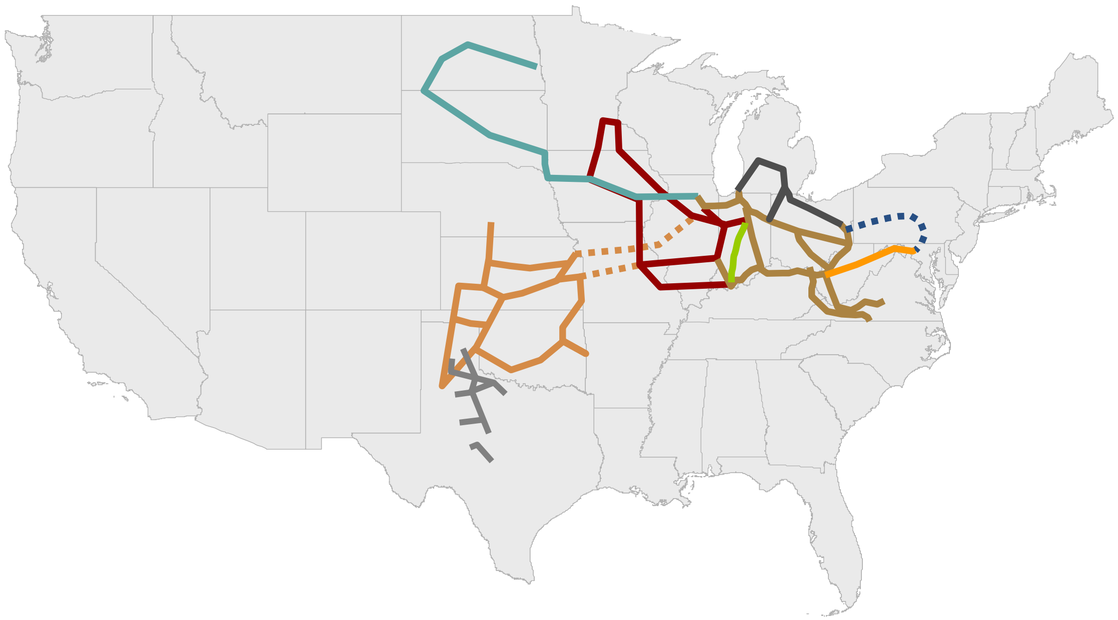
Pioneer — **COD: 2015**
- 240 miles of 765 kV
- Partner: Duke Energy (50%)
- Estimated Cost: $1 billion
- ROE: 12.54%

PATH-WV — **COD: 2014**
- 275 miles of 765 kV
- Partner: Allegheny Energy (50%)
- Estimated Cost: $1.2 billion
- ROE: 14.3%

Tallgrass — **COD: 2013-14**
- 170 miles of 765 kV
- Partners: OG&E (50%) & MidAmerican Energy (25%)
- Estimated Cost: $500 million
- ROE: 12.8%

Prairie Wind — **COD: 2013**
- 110 miles of 765 kV
- Partners: Westar Energy (50%) & MidAmerican Energy (25%)
- Estimated Cost: $400 million
- ROE: 12.8%

ETT — **COD: 2013**
- 345 kV in ERCOT
- Partner: MidAmerican Energy (50%)
- Estimated Cost: $400 million
- ROE: 9.96%



Future Projects:

EHV Michigan — **COD: ~2020**
- 700 miles of 765 kV

PJM Projects
- Enhance existing 765/345 kV

Hartland — **COD: ~2020**
- 1000+ miles of 765 kV

MISO Vision Plan
- 765 kV Backbone

SPP Overlay — **COD: 2013-14**
- 765 kV Backbone

ETT — **COD: ~2018**
- 345 kV in ERCOT
- Additional CREZ spend of $750-$850 million

AEP AMERICAN ELECTRIC POWER

Note: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

Equity Contributions Enhance Earnings Growth to 4 – 8%

AEP is the leader

- Largest US transmission footprint
- Interstate EHV highway vision
- National renewables transmission strategy

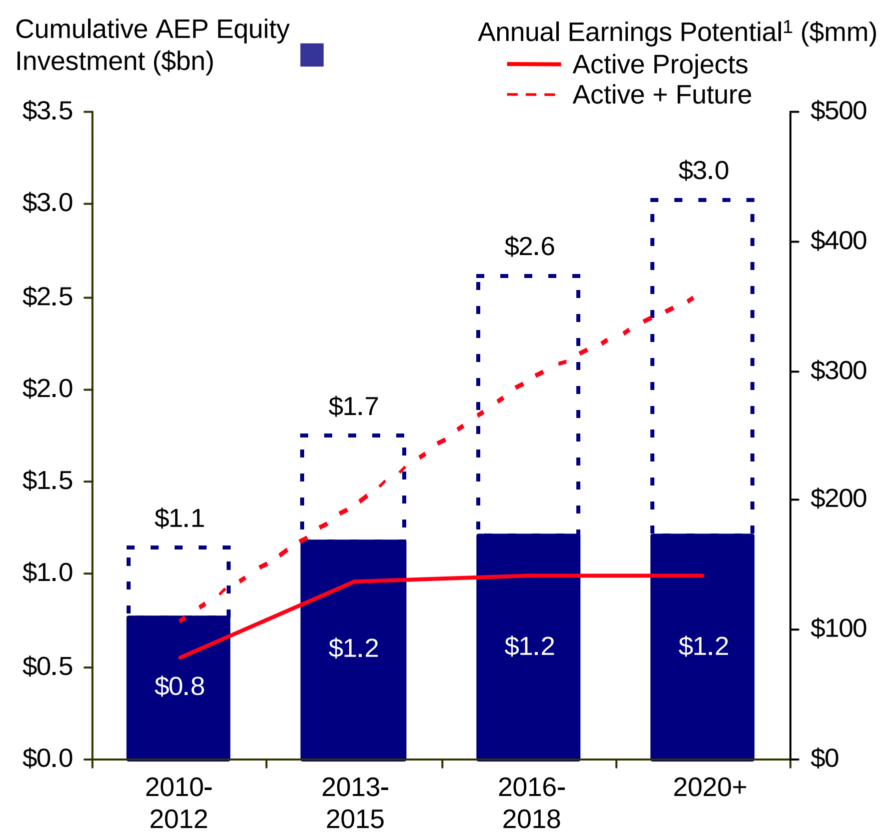
Quality projects

- 4 FERC-approved ($3.3 billion)
- Independent ERCOT transmission JV company (up to $2.6 billion)
- Robust pipeline of future 765 kV projects (up to $15 billion)

Attractive returns

- FERC incentive rates (12.5-14.3%)
- Strong cash flow with CWIP
- Long-term earnings potential of ~$140-$360 million annually[1]

Illustrative Earnings Potential of New Transmission Initiatives



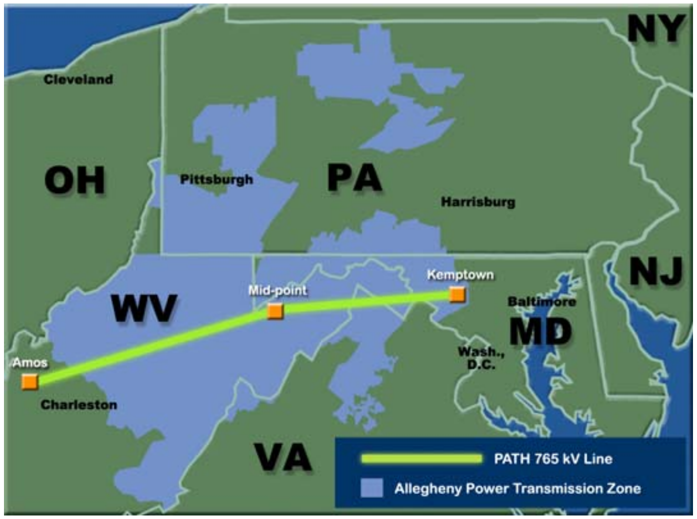
[1] *Illustrative calculation assumes 50/50 debt/equity capitalization and incentive ROE of ~13.0% for FERC projects and a 60/40 debt/equity capitalization and 10.5% ROE for ERCOT projects*

AEP AMERICAN ELECTRIC POWER

EHV Transmission in PJM: PATH

<u>Project Description:</u> 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

- **Near Term Risks**
  - Obtaining a CPCN in West Virginia or costly concessions with WV to receive the CPCN; CPCN filing made May 15, 2009
- **Pertinent Data**
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP and 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
    - Rates went into effect March 1, 2008; current annual revenue requirement is $15MM effective 1/1/09
  - Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million
  - Estimated completion date: 2014



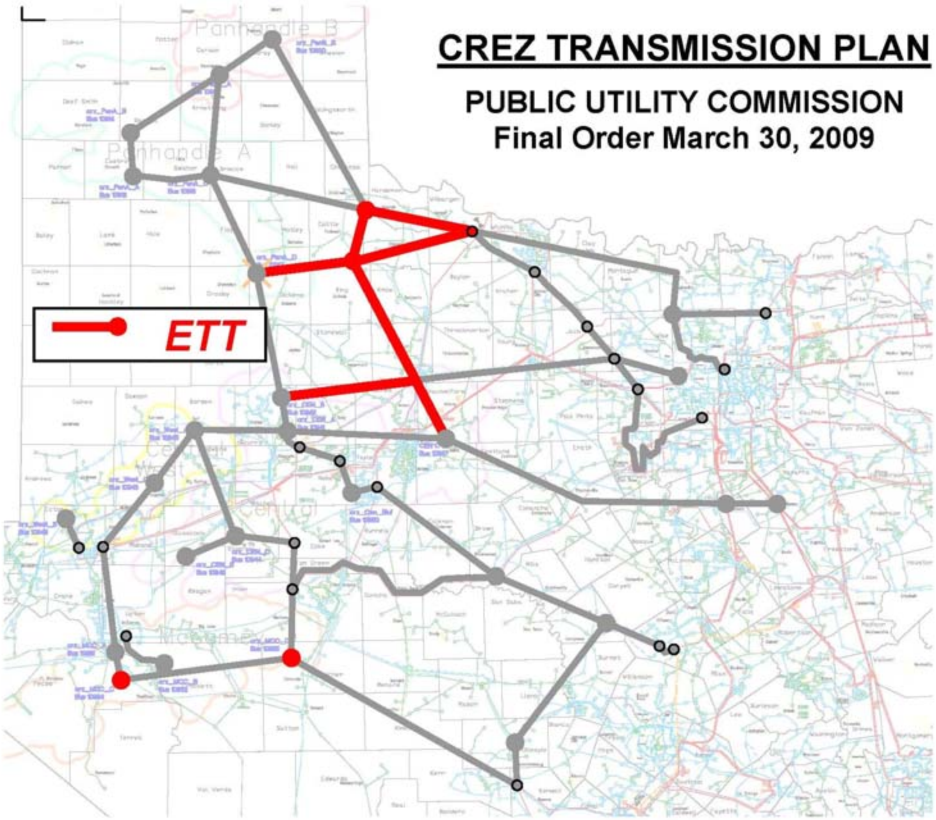
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP AMERICAN ELECTRIC POWER

Texas CREZ Project

Strengthening the ERCOT grid to collect and deliver wind generation to load

- ***Status:***
  - On February 26, 2009, PUCT ordered its staff to stage the development of CREZ transmission lines.
  - Staging to occur in separate docket and consider timing of wind projects and congestion.
  - PUCT established 2 categories based on priorities. ETT has no first priority lines.
  - PUCT issued a final order assigning transmission service providers on March 30, 2009.
  - ETT's share of CREZ investment is approx. $840MM of $4.9B total.
  - The filing calls for completion of the plan by 2013.
- ***Next Steps***
  - Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in 2010.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

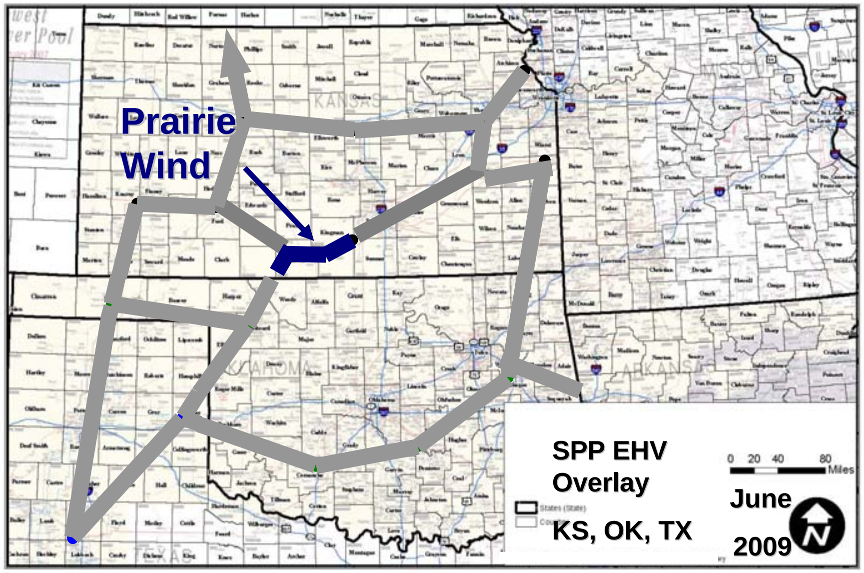
Electric Transmission Texas

AMERICAN ELECTRIC POWER

Prairie Wind Transmission, LLC

JV to build first segment of 765-kV transmission in SPP

- ***Overview***
  - In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
  - Following a settlement agreement with ITC on June 1, 2009 both entities agreed to split the mileage and costs of building the 765-kv transmission superhighway. The newly revised project is expected to cost approximately $400 million and in-service by 2013. Settlement was approved by the KCC on July 24, 2009.
  - PWT is a 50/50 JV that is proposing to build approximately 110 miles of 765-kV lines extending from Wichita, KS, west to a substation near Medicine Lodge, KS, and then south to the Kansas border from Medicine Lodge, KS.
  - The original proposed mileage prior to settlement was approximately 230 miles.
  - The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
  - AEP's ownership of the joint venture is 25%.
  - FERC order received in December 2008:
    - Cash return on CWIP and 12.8% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PWT or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

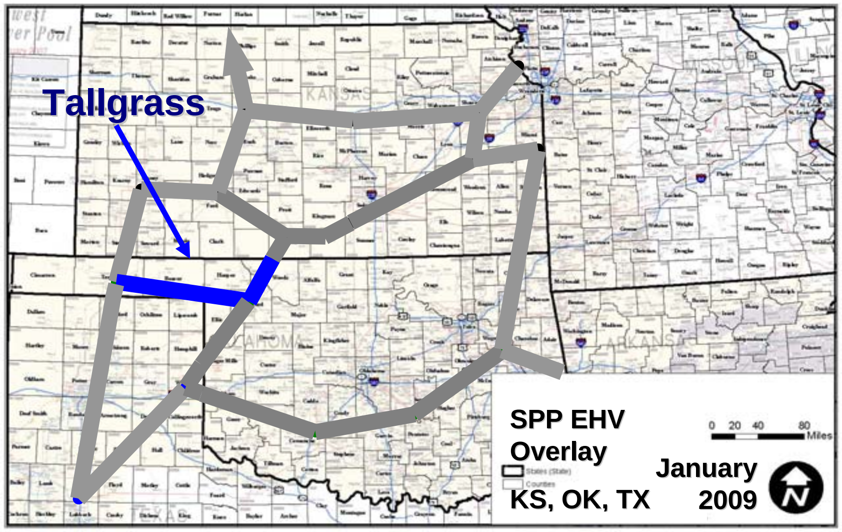
- ***Key Challenges***
  - Regional Cost allocation which enables the development of "system solutions"
  - RTO Approval

AEP AMERICAN ELECTRIC POWER

Tallgrass Transmission, LLC

JV to build second segment of 765-kV transmission in SPP

- ***Overview***
  - In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
  - TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines extending from the Kansas-Oklahoma border north of Woodward, OK, extending west into the Oklahoma panhandle to a new station that will be built near Guymon, OK.
  - The project will promote wind development in the western half of Oklahoma.
  - Project is expected to cost approximately $500 million and be in-service by 2013.
  - AEP's ownership of the joint venture is 25%.
  - Other responsibilities will be handled by the partners or outsourced.
  - FERC order received in December 2008:
    - ❑ Cash return on CWIP and 12.8% incentive ROE
    - ❑ Recovery of all costs incurred prior to the time rates go into effect, and
    - ❑ Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of TG or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

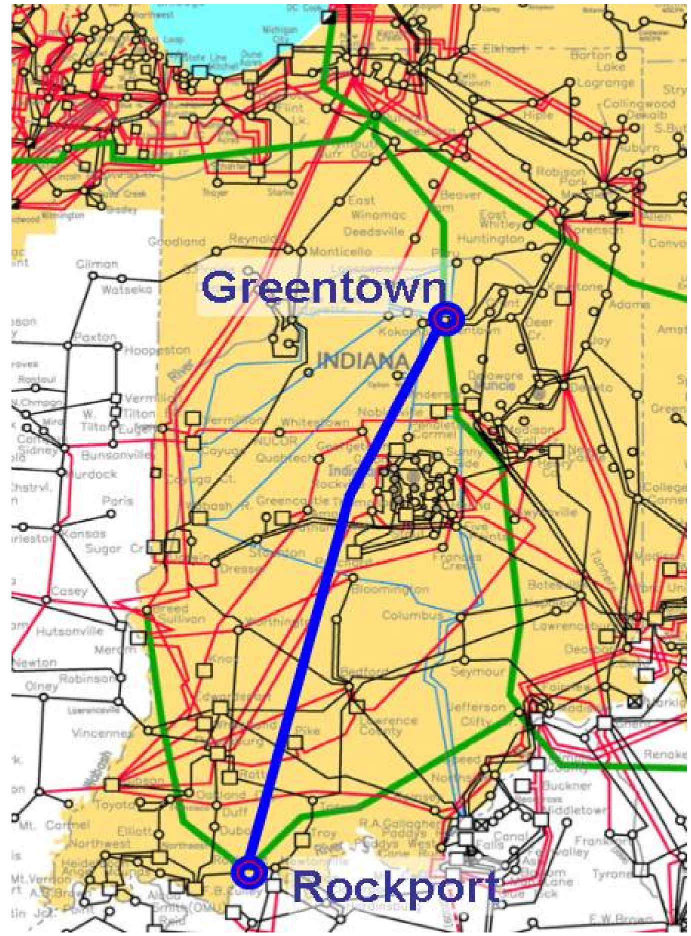
- ***Key Challenges***
  - Cost allocation which enables the development of "system solutions"
  - RTO Approval

AEP AMERICAN ELECTRIC POWER

Pioneer Transmission LLC

Overview

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
- The project will improve the reliability of the nation's transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, protect national security and expand opportunities for new generation, including renewables.
- Project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP's ownership of the joint venture is 50%.
- Other responsibilities will be handled by the partners or outsourced.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect, and
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PT or its parents.
  - Certain formula rate issues were set for hearing



Key Challenges

- Cost allocation which enables the development of "system solutions"
- RTO Approval - touches two RTOs – PJM & MISO
- Siting

AEP AMERICAN ELECTRIC POWER

Hartland Wind Concept EHV Development in Upper-Midwest

Project Description: 1000+ miles of 765-kV transmission linking Upper Midwest generation sources with the existing EHV infrastructure in the Chicago area expected to cost $5-$10 billion over a 10 year period.

- **Near Term Risks**
  - Technical feasibility study
  - Identification of willing and able partners
  - Obtaining cost allocation between states, PJM, and MISO
  - RTO Technical Approvals
  - Favorable 205 Order including 679 incentives
- **Mitigation**
  - Target the identified need for the project and its ability to provide access for wind energy to load centers
  - Collaboration in regulatory process for regional cost allocation between MISO, PJM, and Midwest Governors Association
  - Prepare comprehensive regulatory filing, including incentives

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP AMERICAN ELECTRIC POWER

UBS Conference
New York

February 16, 2006

A Century of Firsts

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Framework for 2006

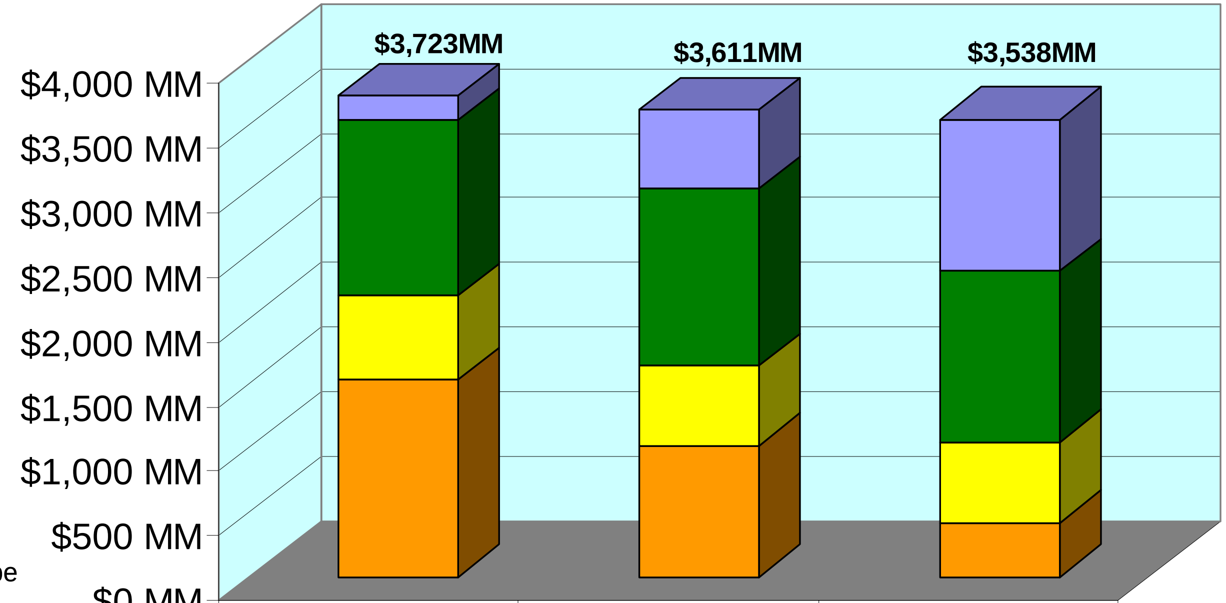
- 2006 Earnings Guidance Range: $2.50 to $2.70
- Controlled investment in utility operations
  - Reliability
  - Environmental
- Seek rate recovery for new investments
- Control costs

COMPANY'S STRATEGY REMAINS FOCUSED ON UTILITY OPERATIONS

Revised Capital Investment Forecast

Capital Investment Forecast

excluding AFUDC



New Build Generation & Ongoing Infrastructure Replacement investment can be throttled

	2006	2007	2008
New Build Generation	$191	$611	$1,174
Ongoing Infrastructure Replacement & Economically Justified	$1,351	$1,367	$1,319
Mandated T&D	$650	$615	$625
Environmental Compliance	$1,531	$1,018	$420

Note: Capital forecasts do not include amounts for AEP Interstate Project.

MUCH OF CAPITAL INVESTMENT IS ADJUSTABLE

Capital Investment Funding

($ in millions)	Actual 2004	Actual 2005	Projection 2006	Projection 2007	Projection 2008
Planned Capital Investment, excluding AFUDC					
Committed Construction Expenditures *	$ (1,671)	$ (2,499)	$ (2,181)	$ (1,633)	$ (1,045)
Discretionary Cap Ex Predicated on Rate Recovery &/or Avail. Cash	n/a	n/a	$ (1,542)	$ (1,978)	$ (2,493)
Total Capital Expenditures, excluding AFUDC	$ (1,671)	$ (2,499)	$ (3,723)	$ (3,611)	$ (3,538)
Dividend on Common	$ (555)	$ (554)	$ (583)	$ (586)	$ (589)
Cash Sources					
Cash from Operations **	$ 2,632	$ 1,795	$ 1,945	$ 2,434	$ 2,590
Proceeds from Sale of Assets	$ 1,314	$ 1,294	$ 28	$ 43	$ -
Common Stock Issued (Dividend Reinvestment Plan)	$ 17	$ (24)	$ -	$ 80	$ 80
Change in Debt, Net	$ (2,238)	$ (91)	$ 2,434	$ 1,661	$ 1,623
Other	$ 43	$ 160	$ (177)	$ (147)	$ (166)
Cash Sources Less Capital Expenditures, Dividends & Other	$ (458)	$ 81	$ (75)	$ (126)	$ -
Ending Cash Balance	$ 320	$ 401	$ 326	$ 200	$ 200

* Statement of Cash Flows shows $2.402B for 2005 and $1.637 for 2004 which reflects difference in accruals from previous year.

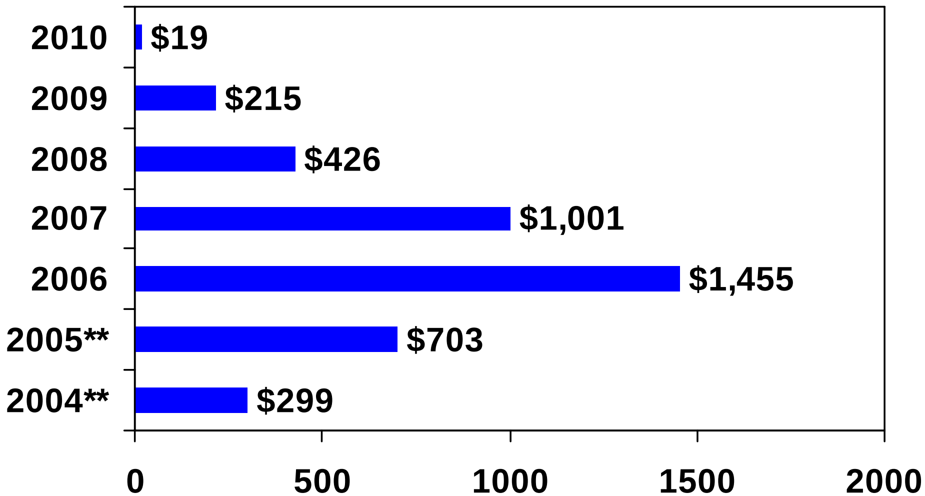
* * Cash Flow from Operations assumes full rate recovery on capital expenditures.

Note: Capital forecasts do not include amounts for AEP Interstate Project. Totals may not foot due to rounding.

REGULATORY RECOVERY WILL DRIVE CAPITAL INVESTMENT THROTTLE

$4.1 Billion Environmental Investment

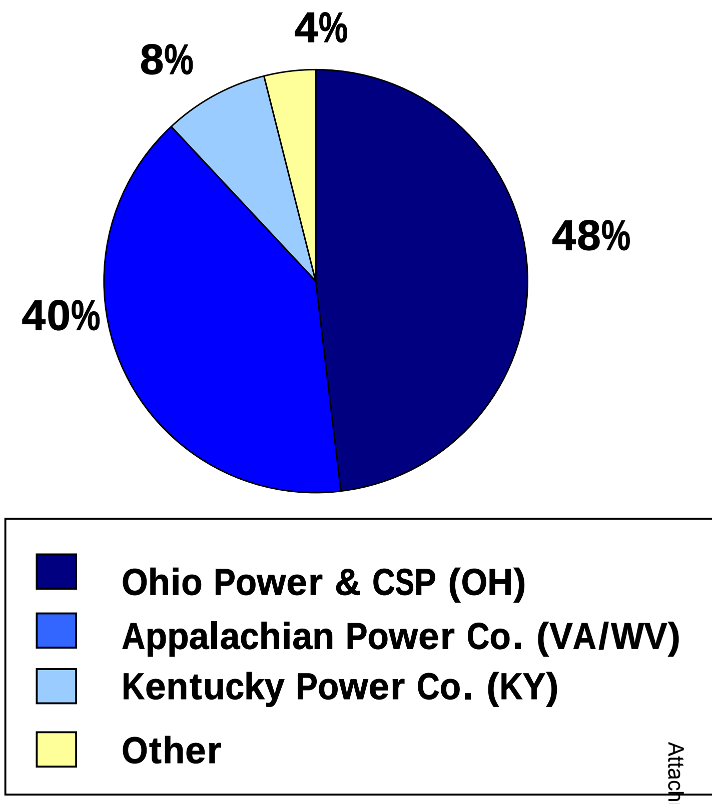
Environmental Capital Investment*



*Environmental investment for NOx, SO_2 , & Hg purposes including AFUDC

** Actual investment level in 2004 and 2005

Projected Environmental Investment Allocation

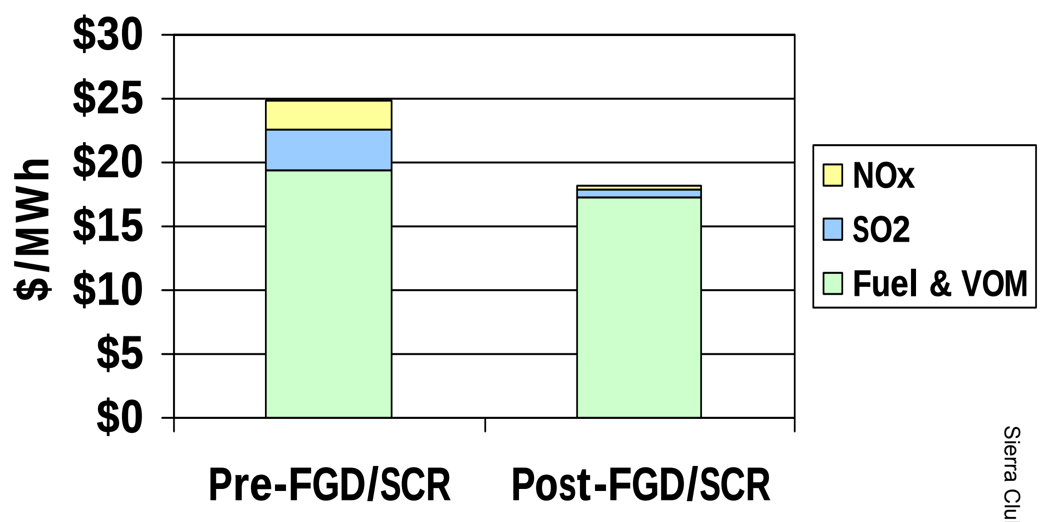


MAJORITY OF 2006 & 2007 DOLLARS WILL BE INVESTED IN OHIO & APCO

Low Cost Production Supports Investment & Investment Sustains Low Cost Production

- Lowers exposure to high cost emission allowances
- Creates opportunity to burn wider variety of lower cost fuels
- Improves baseload operation (higher capacity factor, higher margin)
- All-in cost of electricity, including FGD/SCR investment, remains low

Typical Pulverized Coal Plant
Comparison of Variable Production Cost
Pre- and Post- FGD/SCR (future view)*



* Assumes annual NOx program

AEP WILL REMAIN THE LOW COST PRODUCER FOLLOWING COMPLETION OF ENVIRONMENTAL RETROFIT PROJECTS

Regulatory Activity Underway

- ✓ TCC Stranded Cost Recovery True-up Filing
- ✓ Ohio Companies filing for pass through of FERC OATT changes
- ✓ APCo Filing for Recovery of E&R Costs in Virginia
- ✓ APCo & WPCo Base Rate & Expanded Net Energy Cost (ENEC) Filing in West Virginia
- ✓ Kentucky Base Rate Filing – Settlement Pending
- ✓ Indiana Depreciation Petition
- ✓ IGCC

LEVEL OF CAPITAL INVESTMENT WILL BE ADJUSTED BASED ON RATE RECOVERY AND/OR CASH GENERATION

Regulatory Activity Underway

TCC Stranded Cost Recovery Case

- Seeking approval of true-up balances
  - ✓ February 6, 2006 – PUCT Draft order provides for net true-up of $1.475 billion
- February 2006 - Final written order expected, if not extended
  - ✓ Feb/Mar 2006 - Request for securitization
    - ➢ 4Q06 - Issuance of securitization bonds if no appeal
  - ✓ Mar/Apr 2006 – Request approval for CTC to collect other true-up items
    - ➢ Jan 2007 – CTC charge to be implemented

Ohio Companies Pass through of FERC OATT Changes

Filed Feb 3, 2006 - Seeking authority to pass through to customers the changes in the FERC OATT related to the elimination of the SECA revenues and the costs associated with the Wyoming-Jacksons Ferry transmission line

Regulatory Activity Underway

Appalachian Power – Virginia E & R Cost Recovery Factor

Filed July 1, 2005 - Seeking recovery of $62.1 Million in new Environmental & Reliability costs

- ✓ Oct 14, 2005 – SCC ruled VA law does not allow recovery of prospective costs - $48.6 Million
- ✓ Nov 14, 2005 - APCo filed supplemental direct testimony which included updated actual E&R costs incurred through Sept. 30, 2005 of $21.1 million
- ✓ Public hearings are scheduled to begin February 27, 2006

Appalachian Power & Wheeling Power – West Virginia Base Rate Case & ENEC Reactivation

Filed August 26, 2005 – Seeking $183 Million increase in revenues for increasing costs for coal, purchased power and environmental improvement construction projects

- ✓ APCo filed supplemental testimony on January 18, 2006 to reflect Ceredo plant purchase and other miscellaneous items resulting in a revised revenue requirement of $171 Million.

Proposed Phase-in over 4 years

- ✓ June 23, 2006 – $74 Million
- ✓ June 23, 2006 – $9 Million
- ✓ Jan 1, 2007 – $43 Million
- ✓ Jan 1, 2008 – $8 Million
- ✓ Jan 1, 2009 – $37 Million

Procedural Schedule

- ✓ March 8, 2006 – Staff and Intervenors Testimony
- ✓ March 16, 2006 – Rebuttal & Cross-rebuttal
- ✓ April 18 - 21, 2006 – Evidentiary Hearings
- ✓ Initial Briefs – 20 days after receipt of transcripts
- ✓ Reply Briefs – 10 days after initial briefs
- ✓ July 28, 2006 – Statutory deadline for an order

Regulatory Activity Underway

AEP®

Kentucky Base Rate Case

Filed Sept 26, 2005 – Seeking recovery of increasing costs associated with providing safe and reliable electric service

- ✓ Parties to the case reached a settlement on Feb 6, 2006
  - ✓ $41 million annual increase in base rates
  - ✓ To be effective March 30, 2006
- ✓ Settlement was presented to the Commission at a public hearing on Feb 7, 2006
- ✓ Final order expected in March 2006

Indiana Depreciation Filing

December 1, 2005 – I&M filed petition with the IURC for accounting authorization to revise the depreciation rates applicable to its electric utility plant in service

- ✓ Based on a 2004 depreciation study, I&M recommends a decrease in annual depreciation expense of approximately $45 Million on an after-tax Indiana jurisdictional basis.
- ✓ Procedural schedule has been set with final order expected in June 2006

IGCC Regulatory Activity

AEP®

Ohio - Cost Recovery Filing

<u>Phase 1</u>

- ✓ Effective during 2006
- ✓ Seeks recovery of initial costs, including those already incurred, such as site engineering and various other engineering services
- ✓ Approximately $23.7 Million

<u>Phase 2</u>

- ✓ Effective 2007 - mid 2010 (Construction Phase)
- ✓ Seeks recovery of carrying costs associated with plant construction

<u>Phase 3</u>

- ✓ Effective mid 2010 (Commercial Operation begins)
- ✓ Seeks recovery of projected $1.174 Billion cost of plant over its operating life.

Ohio - Next Steps

2006:

- ✓ Secure cost recovery plan
  - Final PUCO Order expected in 1Q06
- ✓ Finalize site selection
- ✓ Negotiate with suppliers

2006—2007:

- ✓ Obtain permits and finalize engineering and procurement

2007—2010:

- ✓ Construct and start-up plant

<u>West Virginia IGCC Activity</u>

On January 11, 2006, Appalachian Power Co. filed a Certificate of Public Convenience and Necessity seeking authority to construct a 600-MW IGCC facility in West Virginia.

SEEKING AUTHORITY FOR THREE PHASE RECOVERY APPROACH IN OHIO

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 9199 of 9556

Regulatory Activity Completed

Ohio - Rate Stabilization Plan

- ✓ Generation rate increases implemented January 1, 2006

AEP East FERC Transmission Case

December 20, 2005 – FERC approved settlement allowing wholesale transmission rates to increase

- ✓ Results in $22 Million net revenue in 2006 from wholesale transmission

Appalachian Power- Virginia Fuel Factor Increase

- ✓ $57.7 Million increase in fuel factor approved on January 20, 2006

SWEPCo Fuel Factor/Surcharge Filing

January 12, 2006 – Settlement approved by PUCT

- ✓ Fuel factor will increase SWEPCo's annual Texas retail fuel-related revenues by approximately $46 Million.
- ✓ Interim surcharge will collect the under-recovery amount of $44 Million, including interest.

PROGRESS IS BEING MADE ON THE REGULATORY FRONT

What AEP Offers

- Strength and scale in assets & operations
- Focused utility model
- Earnings growth driven by native load & capital investment
- Attractive dividend yield in excess of 4%
- Stable credit profile

INSTALLATION OF SCR AND FGD WILL ALLOW OUR COAL FLEET TO REMAIN EXTREMELY COST COMPETITIVE

Integrated Gasification Combined Cycle

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called "syngas" – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

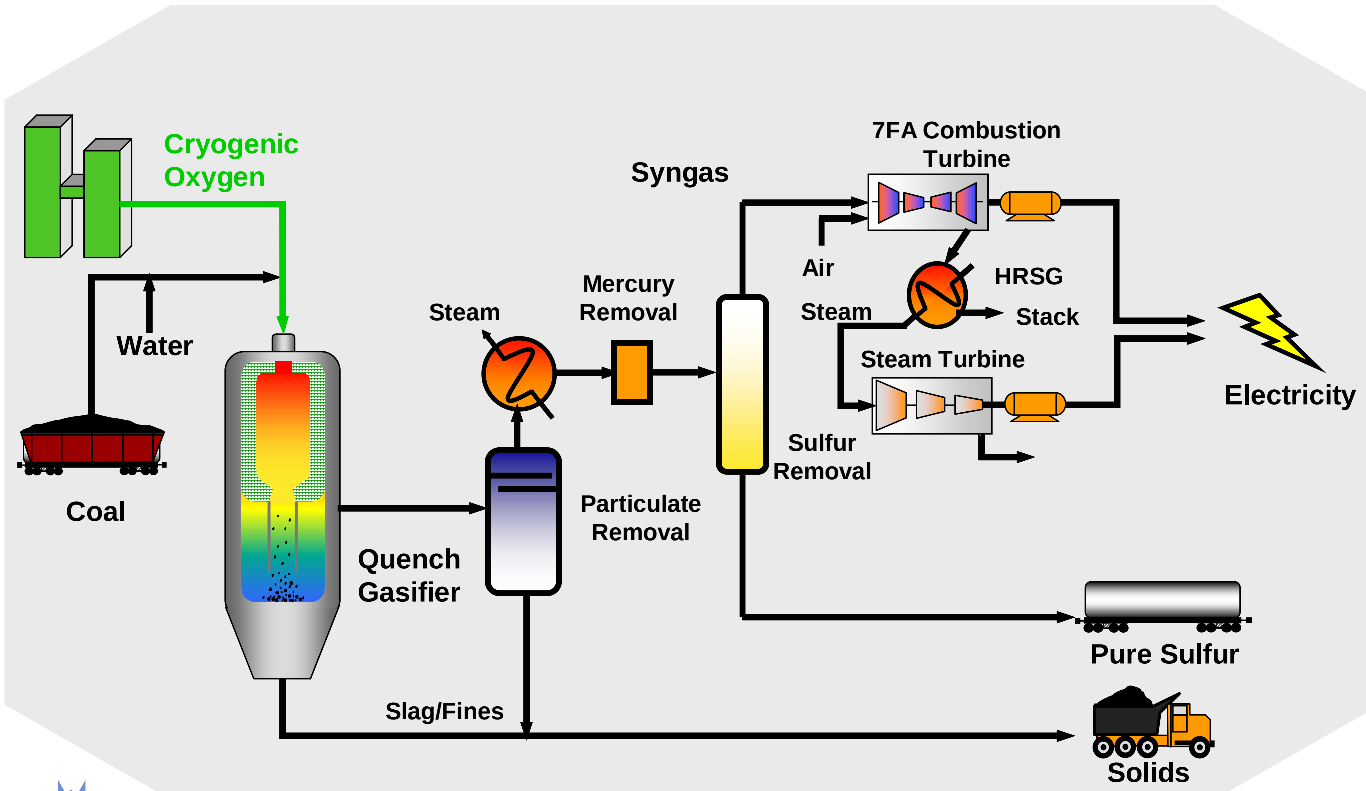
Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2, mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP's eastern service territory.

AEP is currently working with a technology provider to develop a firm price for an IGCC facility to be built in our eastern service region. This price will be available in 2006. AEP intends to seek regulatory recovery approvals in advance of building the plant.

Looking To The Future - IGCC



162110 - GJS/CE-01/1-23-02

AEP HAS ANNOUNCED ITS INTENTION TO CONSTRUCT A COMMERCIAL-SCALE INTEGRATED GASIFICATION COMBINED CYCLE (IGCC) PLANT BY THE END OF THE DECADE

Investing In IGCC

Generation Technology Comparative Statistics

	PC	IGCC	NGCC

Heat Rate (Btu/kWh)	8700	8600	7200
Total Plant Cost (EPC) ($/kW)	1700	1900	480
Production Cost ($/MWh)	17	16	57
Cost of Electricity, without CO2 Capture ($/MWh)	58	63	90
Estimated Cost of Electricity, with CO2 Capture ($/MWh)	94	87	137

- Source: Results of AEP analysis based on EPRI studies.
- Total Plant Cost (2005$'s) includes the cost to **E**ngineer, **P**rocure and **C**onstruct plant and owner's direct costs; does not include interconnections, transmission lines, transmission upgrades, contingency or AFUDC.
- Assumes Northern Appalachian Coal price of $1.60 /mmBtu for PC and IGCC, and natural gas price of $7.00/mmBtu for NGCC.
- Assumes 85% capacity factor for PC and IGCC, 25% for NGCC.
- Production Cost includes Fuel Cost and Variable Operations & Maintenance (VOM) cost.
- Cost of Electricity based on EPC cost, does not include the cost of Emission Credits.
- Cost of Electricity with CO2 capture does not include sequestration cost.

IGCC TECHNOLOGY IS STRATEGIC TO KEEPING COAL IN THE MONEY

Summary Rate Case Information

West Virginia Base Case Rate Filing

On August 26, 2005, Appalachian Power Co. and Wheeling Power Co. filed an application with the West Virginia Public Service Commission (WVPSC) to increase electric rates and charges, a request for the reactivation and modification of the expanded net energy cost mechanism (ENEC), a proposal for the disposition of Appalachian Power Company's ENEC over-recovery balance, a request for implementation of a System Reliability Tracker mechanism, and a request for waiver of certain provisions of the Commission's Rules. APCo filed supplemental testimony on January 18, 2006 to reflect Ceredo plant purchase and other miscellaneous items resulting in a revised revenue requirement of $171 Million. (Docket #: 05-1278-E-PC-PW-42T)

March 29, 2006	Company Rebuttal Testimony
April 18-21, 2006	Hearings

- Initial briefs due 20 days after receiving hearing transcript
- Reply briefs due 10 days after initial briefs

Statutory Deadline: July 28, 2006

* Procedural schedule subject to modification until order is issued.

Summary Rate Case Information

AEP®

Virginia E&R Factor Filing

On July 1, 2005, Appalachian Power Co. filed a request with the Virginia SCC to recover incremental actual and projected costs for environmental compliance and T&D System reliability in the amount of $62.1MM. The SCC has ruled that under applicable VA law, it does not have authority to approve the recovery of projected E&R costs before their actual incurrence and adjudication. APCo filed supplemental direct testimony which included actual costs incurred for E&R thru September 30, 2005 of $21.1 million. Docket # PUE-2005-00056

Capital Structure – Company vs. Staff

Capital Structure	**Company Position** (filed 7/1/05)	**Staff Position** (filed 1/11/06)

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms, and our ability to recover significant restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants, our ability to recover I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance or the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of flyash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including our dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events.

Transmission Investment Opportunities

ETT: Projects in Texas ERCOT jurisdiction

- $600MM of projects est. in service 2010-2013
- ETT's opportunity could reach $3.0B in this decade

Transco: Within our existing footprint

- Provides opportunity to:
  - Develop new AEP-only projects
  - Reduce regulatory lag through FERC formula rates adjusted annually

Joint Ventures: Outside of our footprint, via ETA or with others

- Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
- Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2015
- Robust pipeline of projects up to $15B

AEP AMERICAN® ELECTRIC POWER

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential

Electric Transmission Texas, LLC

Overview:

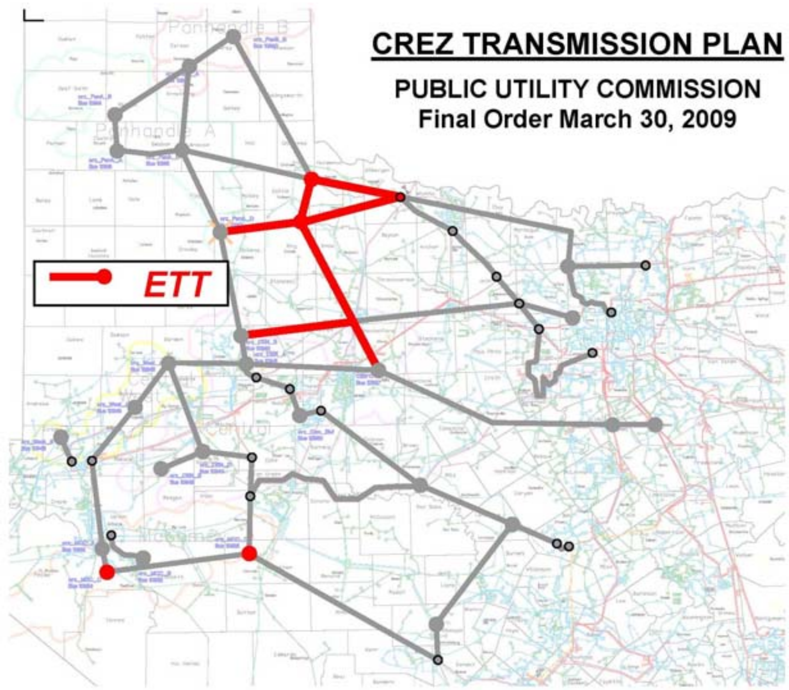
- ETT is a 50/50 JV between AEP and MidAmerican Energy Holding Company that plans to construct and operate transmission projects within ERCOT with an investment opportunity of more than $3 billion.
- Current JV rate base is $127 million with a debt to capital ratio of 60/40 and an authorized ROE of 9.96%.

Opportunities:

- Projects in service 2010-2017: $1.4 billion
- CREZ projects in service 2012-2013: $1.1 billion
- Other projects pending transfer in service 2010-2013: $600 million

Next Steps:

- Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in 2010.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

ETT
Electric Transmission Texas

AEP AMERICAN® ELECTRIC POWER

EHV Transmission in PJM: PATH

Project Description: 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

Overview:

- FERC order issued on February 29, 2008 approving:
  - Cash return on CWIP and 14.3% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents
  - Rates went into effect March 1, 2008
- Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million.
- Estimated completion date: 2014+, pending outcome of the 2010 PJM Regional Transmission Expansion Plan (2010 RTEP).

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

- Obtaining a CPCN in West Virginia, Virginia and Maryland. CPCN applications in West Virginia and Maryland are pending because their procedural schedule allows the consideration of the 2010 RTEP. A new application in Virginia is expected in the third quarter of 2010 after consideration of the 2010 RTEP.

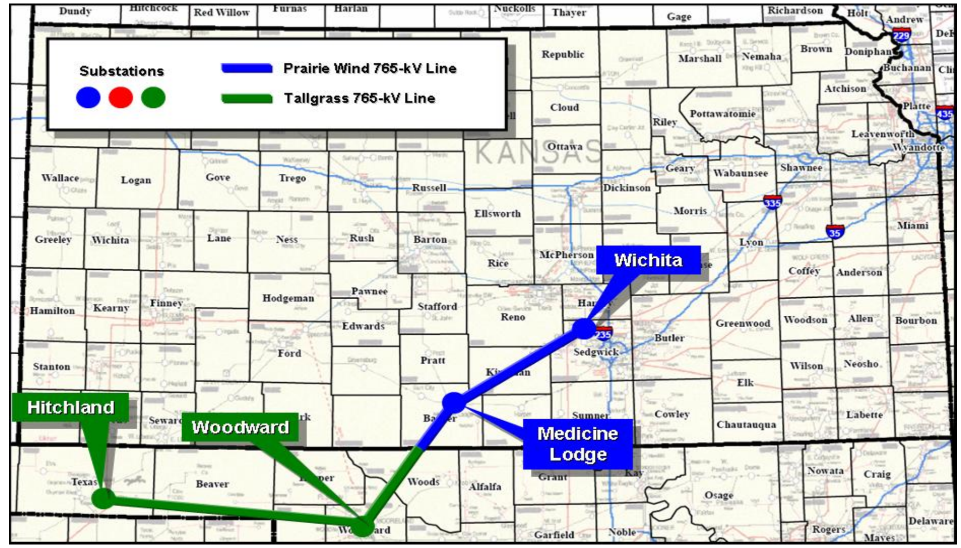
PATH
Potomac-Appalachian Transmission Highline

AEP AMERICAN ELECTRIC POWER®

Prairie Wind Transmission, LLC

Overview:

- In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
- PWT is a 50/50 JV that is proposing to build approximately 110 miles of 765-kV lines extending from Wichita, KS.
- The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
- The project is expected to cost approximately $400 million and be in-service by 2013 and was approved by the KCC on July 24, 2009.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

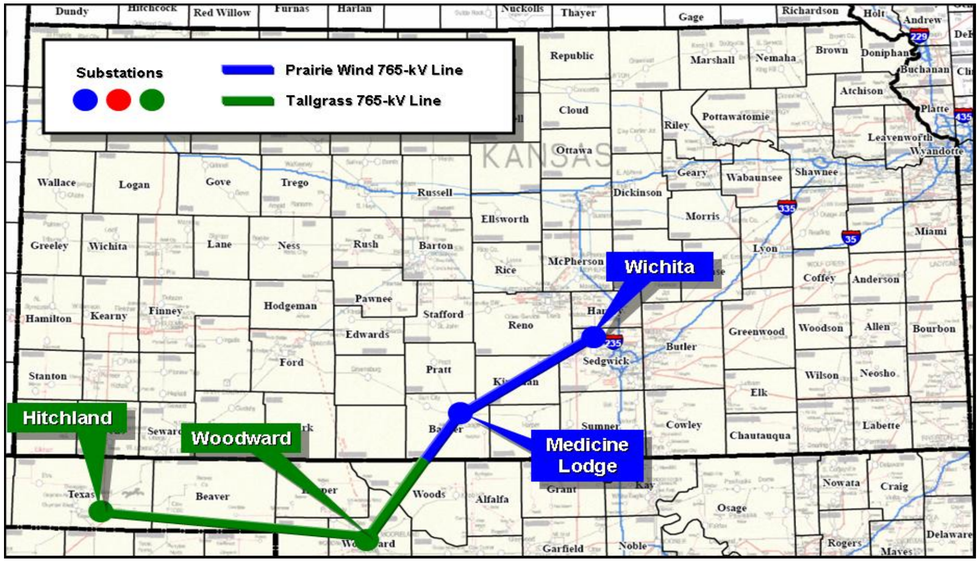
- RTO Approval
- Siting

AEP AMERICAN ELECTRIC POWER®

Tallgrass Transmission, LLC

Overview:

- In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
- TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines in Oklahoma
- The project will promote wind development in the western half of Oklahoma.
- Project is expected to cost approximately $500 million and be in-service by 2013-14.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

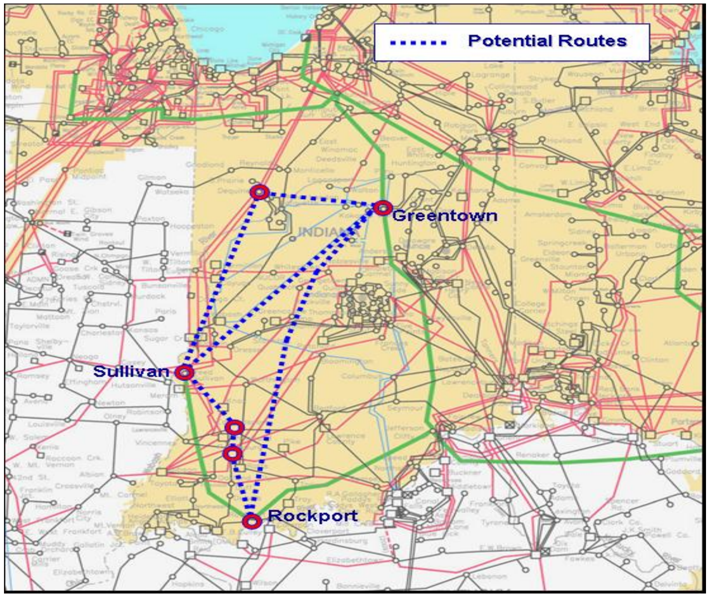
Key Challenges:

- RTO Approval
- Siting

Pioneer Transmission, LLC

Overview:

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP’s Rockport Station to Duke’s Greentown station in Indiana.
- The project will improve the reliability of the nation's transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, protect national security and expand opportunities for new generation, including renewables.
- The project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP’s ownership of the joint venture is 50%.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

- RTO Approval (PJM & MISO)
- Cost allocation which enables the development of “system solutions”
- Siting

AEP AMERICAN® ELECTRIC POWER

Upper Midwest EHV Development—SMART Study

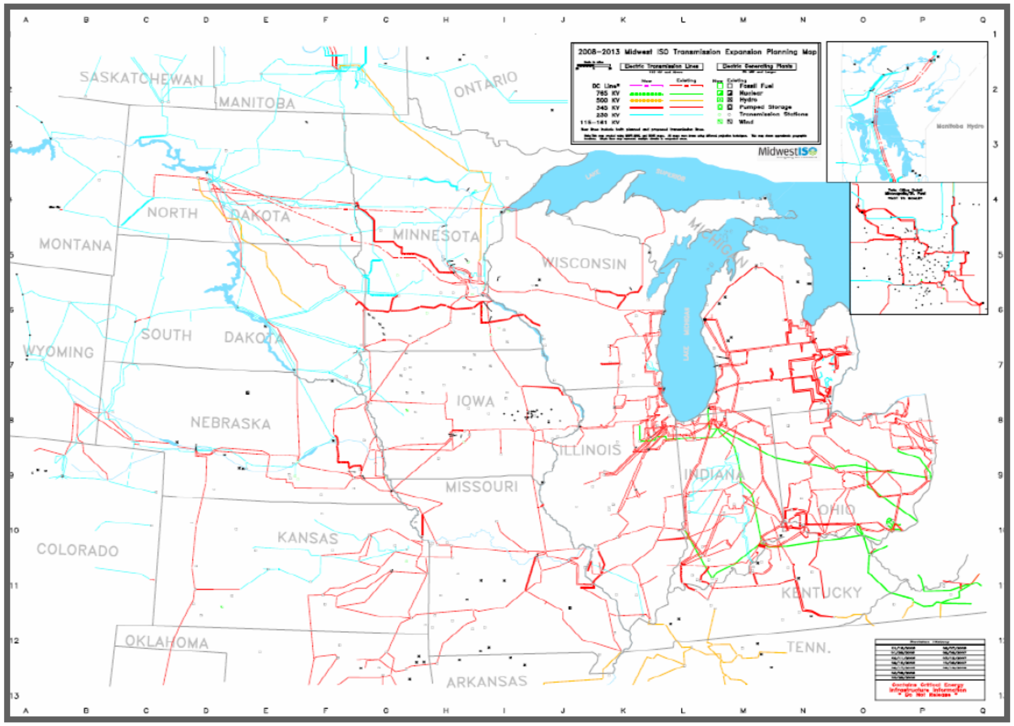
Project Description: a comprehensive study of the transmission needed in the Upper Midwest to support renewable energy development and transporting that energy to consumers throughout the study area. The SMART Study will develop EHV overlay alternative that ensures reliable service for sponsors' communities, is environmentally friendly, and supports national energy policy.

Overview:

- SMARTransmission Study announced August 2009
- Sponsors of the Study include ETA, Exelon, ATC, Northwestern, MidAmerican Energy Company, and Xcel
- Study due to be completed end of 2nd Qtr 2010 and will include "overlay" options and quantification of economic benefits

Next Steps:

- Investment structure
- Obtaining cost allocation between states, PJM, and MISO
- RTO technical approvals
- Favorable 205 Order including incentives



Primary Focus Areas: North Dakota – South Dakota – Iowa – Nebraska – Indiana – Ohio – Illinois – Minnesota – Wisconsin – Michigan

Mitigation:

- Collaborative approach involving impacted utilities, RTOs, commissions and others

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

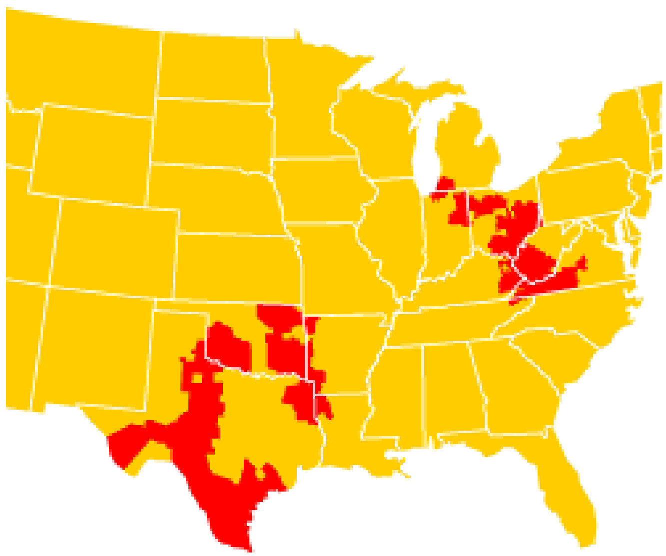
Serving electric customers in 11 states



AEP Fast Facts

5.3 million customers
39 GW of generation capacity
39,000 miles of transmission lines

$17.7B Market Capitalization
BBB/Baa2/BBB credit rating

Capital Allocation

In this economic recovery cycle, capital allocation requires balance for spending that considers the obligation to serve, the ability to obtain rate increases, a balance sheet to support the plan, and the total return proposition to shareholders

- Capital for Growth
  - Capital budget of $2.6B for 2011
  - Capital budget plan of $2.9B for 2012
- Return of Capital to Shareholders
  - 12% increase in quarterly dividend in 2010
  - Future dividend increases will grow with earnings
- Capital to Reduce Risk
  - Voluntarily funded pension $500M in 2010
  - Allocating an additional $150M of funding for pension in 2011

Managing Operations and Investment

Challenges:

Required refinement of the operating company model and improved line-of-sight management due to decreased load growth, regulatory lag, reduced rate headroom, and environmental challenges

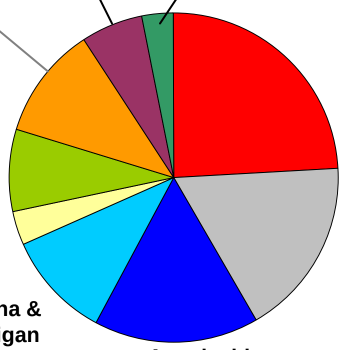
Actions:

- Empower operating company employees to drive results
- Efficiently allocate capital
- Demonstrate O&M and capital expenditure discipline
- Identify asset renewal strategy for investing in traditional distribution and transmission assets that enhance reliability and customer satisfaction
- Enable long-term planning discussions with regulators and legislators

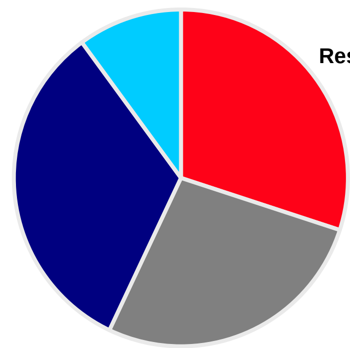
Expected Outcomes:
Optimize spending for more efficient return on investment
Improve dialogue with customers and regulators
Minimize lag in rate recovery

Highly Diversified Regulated Utility Platform

2010 On-Going Earnings Contribution



2010 Retail Load



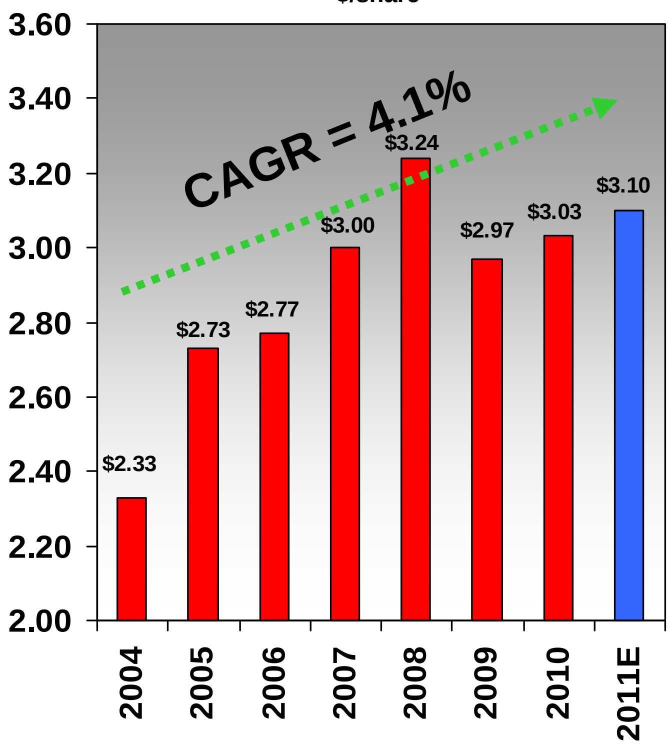
* *Wholesale includes sales to municipal and cooperative power systems, other wholesale, and other retail sales*

Region	# of customers
Appalachian Power (incl. TN)	1,004,000
Indiana & Michigan	582,000
Kentucky Power	174,000
Ohio & Wheeling	1,497,000
PSO (Oklahoma)	532,000
SWEPCO (AR, LA, TX)	520,000
Texas	961,000

Earnings and Dividends

On-Going EPS History Since 2004

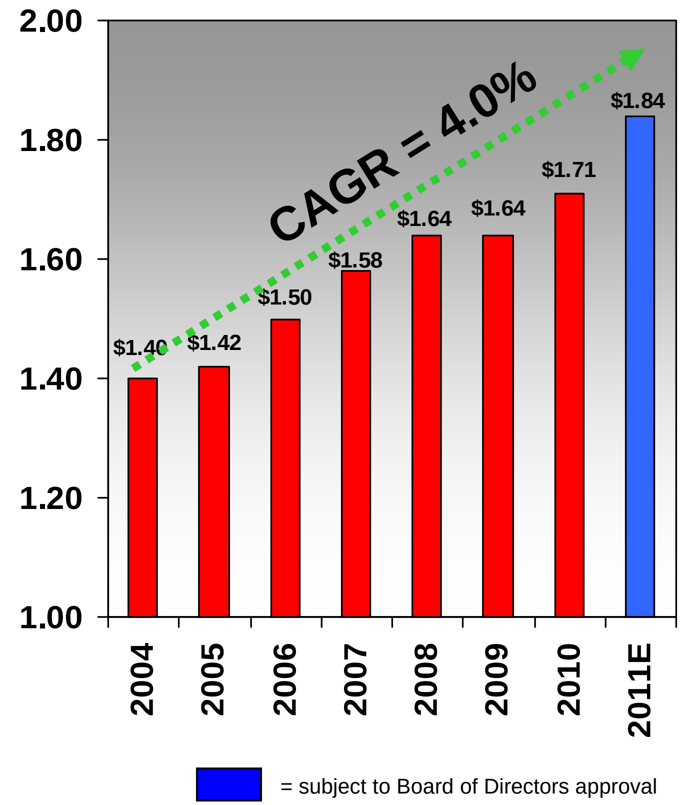
$/share



- Earnings growth largely attributed to capital investment program
- Pre-recession earnings supported by robust wholesale market activity and high power prices
- Equity offering in 2009 stabilized credit and strengthened balance sheet
- 2011 guidance range of $3.00 to $3.20 per share

Dividend History Since 2004

$/share

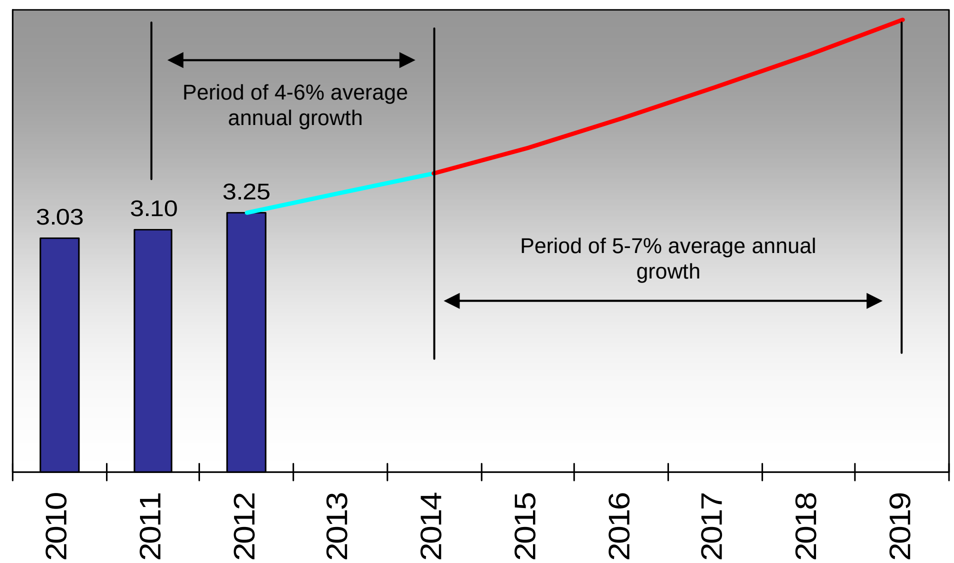


- Dividend increased 12% in 2010
- 403rd consecutive quarterly dividend declared in January 2011
- 50-60% payout ratio target
- Current yield over 5%

Long-term EPS Growth Rate

- 4-6% EPS growth 2012-14
  - Average annual capital spend between $2.9-3.4B
    - Utility platform replacement capital of about $1.4B (annual depreciation)
    - Growth in rate base of $1.5-2.0B per year, allocated between utility platform and transmission projects
  - Blended ROE of 10.5 - 11%
  - Slow, steady recovery in economy
- 5-7% EPS growth post 2014
  - Base utility platform capital including generation transformation
  - Higher allocation of discretionary capital going to opportunities in the transmission development pipeline
  - Higher overall blended ROE opportunity
  - Robust economic growth

Average Annual EPS Growth defined over two periods



Summary Rate Case Information

APCo West Virginia General Rate Case – Docket #10-0699-E-42T

On May 14, 2010, APCo filed a base rate case with the West Virginia Public Service Commission requesting a net increase of $155.5 million, comprised of a $223.8 million base rate increase and a $68.3 million decrease in the construction surcharge. The filing related to capital investments made and to recover increased costs. In addition, APCo requested to establish a separate transmission tracker related to PJM charges. The requested ROE was 11.75%. A settlement is on file which stipulates a rate increase of $60MM and the ability to defer $18MM of storm damage expenses. An order is expected by the end of March 2011.

Actual Capital Structure – Company Position (@12/31/09)

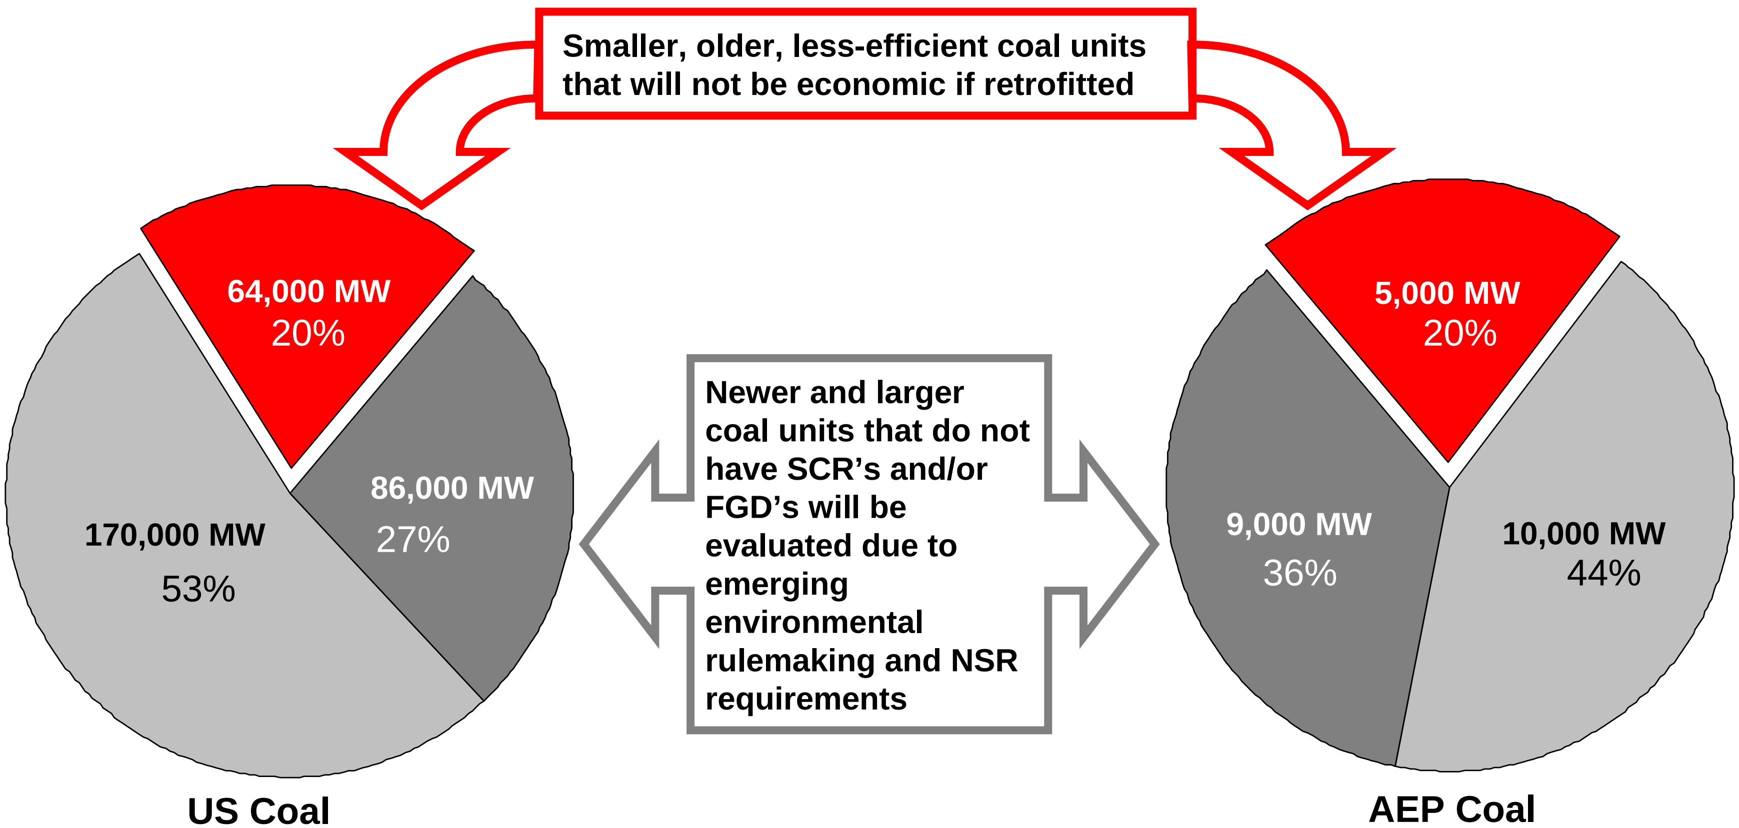
Continual Evaluation is Required

"Fully-Exposed"	"Partially-Exposed"	"Least-Exposed"
Probable Retirement	*Evaluating potential retirement*	*Not likely to be retired*

CCS Candidates

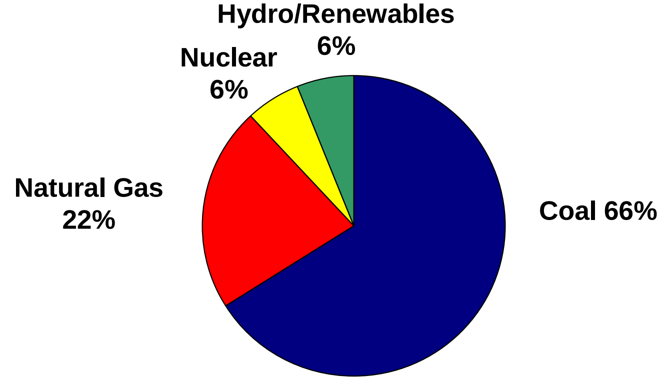


Nearly 50% of U.S. coal plants are exposed

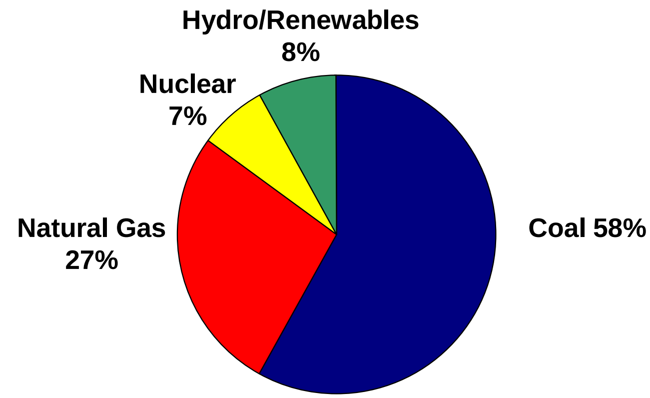
Continued Investment in Utility Platform

AEP®

- Plan for old, small coal units
  - Initially operate seasonally
  - Transition towards retirement
  - Regulatory plan for recovery
- Continue evaluation of “partially exposed” units for additional controls
- Add non-coal capacity when needed
  - Dresden NGCC (partially complete)
  - New NGCC at existing site
  - Cook plant uprate (under study)
  - Renewables
- Deploy technology as appropriate
  - Continue pursuit of CCS technology
  - Energy storage technologies
  - gridSMART®



Capacity - 2009



Projected Capacity - 2017

AEP Ohio ESP Filing – Core Policy Issues

AEP®

Investment in Ohio

Supports economic development and essential tax base

Fundamental barriers must be addressed to attract investment for Environmental Compliance and New Generation

Jobs in Ohio

Jobs are a key component of growth potential in Ohio

Without regulatory assurances over time we could see loss of direct & indirect jobs related to power generation, and business relocations to surrounding states

Energy Security

Secure, reliable and predictable electricity supply is basis for sustained investment and employment in Ohio

Volatility in power prices can lead to major loss of economic activity over time

Primary objective of ESP: Stabilize rates and support economic development in the state of Ohio

Merged AEP Ohio

Single merged AEP Ohio company presumed with supporting information on an individual OP/CSP basis

Rate Redesign

Generation rates redesigned to resemble market pricing structures

29-Month ESP Period

ESP period Jan 1, 2012 through May 31,2014 (May 31 date aligns with PJM annual planning cycle)

Alternative Long Term Option

Alternative longer-term price certainty option offered for qualifying commercial & industrial customers

Ohio Growth Fund

Creation of significant private sector economic development to attract investment and job growth in AEP Ohio service territory

Distribution Components Included

Inclusion of certain distribution components while pursuing a parallel distribution base rate case

Summary of ESP Filing - Continued

- Pre-tax earnings impact from proposed ESP (excluding potential earnings impact from trackers)
  - **Net base $54MM or 1.4% in year 1 (2012)**
  - **Net base $106MM or 2.7% in year 2 (2013)**

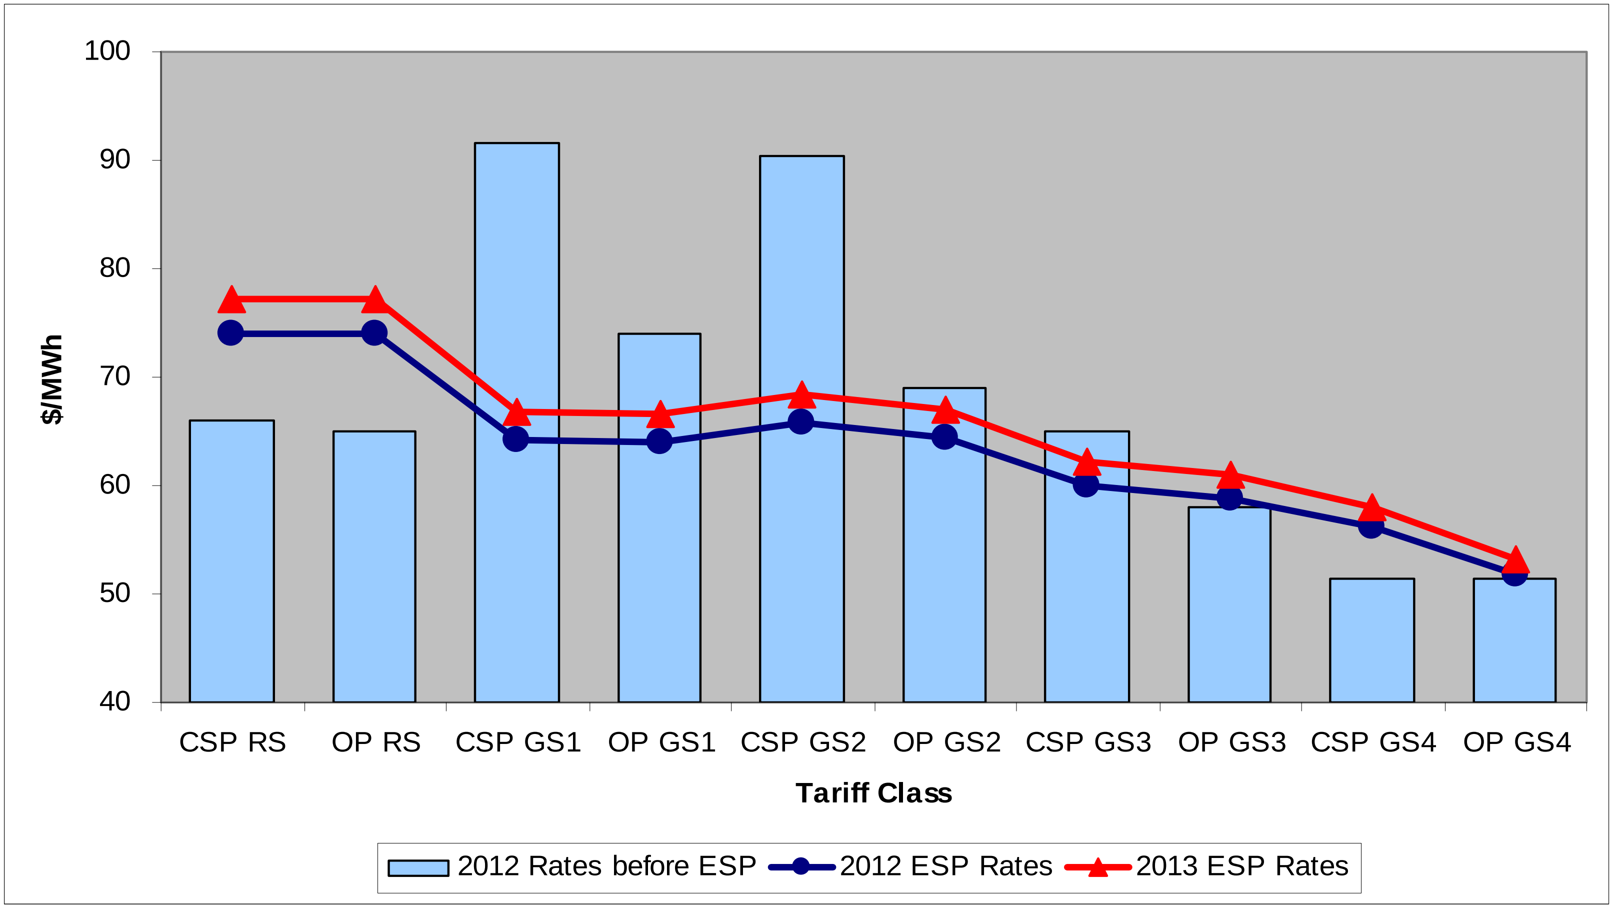
FAC Actual Recovery 2012-2014	**Actual**			**Actual**			**Actual**		

N/C* = No change from prior year

While the ESP includes a small base generation increase, the move to a market-based rate design, consistent with state policy, will result in varying impacts for different customer groups.

Price to Compare

Proposed **SSO** Rates Redesigned To Resemble Market Pricing Structures



Rates do not reflect mitigation impact of market transition rider
2012 Rates before ESP reflect current 2011 rates for generation & transmission service, adjusted to reflect full cost 2011 fuel and environmental costs.

The realignment of rates with market should provide all customers with equivalent opportunities to shop. Additionally, since the proposed design eliminates explicit demand charges, customers should be more easily able to evaluate competitive offers. To ease the rate impact that customers will experience from the realignment, we have proposed a Market Transition Rider.

Market Transition Rider – Mitigates the Initial Impact of Rate Realignment

Three-Year Market Transition Plan
Summary of AEP Ohio ESP Generation Rate Changes

CSP Current Customer Class	CSP New Customer Class	2012 Increase	2013 Increase	2014 Increase	Total Increase
Residential	Residential	5.0%	3.9%	1.0%	10.2%
GS1	GS Non-Demand	(6.4%)	(5.2%)	(7.8%)	(18.1%)
GS2		(5.3%)	(5.5%)	(8.2%)	(17.8%)
GS3	GS Demand	(0.3%)	1.0%	(1.8%)	(1.2%)
GS4/IRP		2.3%	7.7%	4.7%	15.3%
Total CSP		**2.2%**	**2.7%**	**0.0%**	**5.0%**

OPCo Current Customer Class	OPCo New Customer Class	2012 Increase	2013 Increase	2014 Increase	Total Increase
Residential	Residential	6.0%	3.1%	0.3%	9.7%
GS1	GS Non-Demand	1.5%	(3.3%)	(6.1%)	(7.8%)
GS2		0.1%	(0.7%)	(3.5%)	(4.1%)
GS3	GS Demand	(0.7%)	2.8%	(0.0%)	2.0%
GS4/IRP		(6.6%)	5.8%	3.0%	1.7%
Total OPCo		**0.4%**	**2.7%**	**0.0%**	**3.1%**
AEP Ohio		1.4%	2.7%	0.0%	4.2%

Illustration of Market Transition Rider on ESP Generation Rate Increases

The Market Transition Rider is a transition rider designed to facilitate the transition from AEP Ohio's current rates to market-based SSO Generation Service rates. It is a non-bypassable rider designed to limit the first and second year changes for any customer classes to uniformly transition any above or below average changes in three steps. Any revenue shortfall that is produced by limiting the increases for certain customer classes is collected from those classes whose decreases are limited.

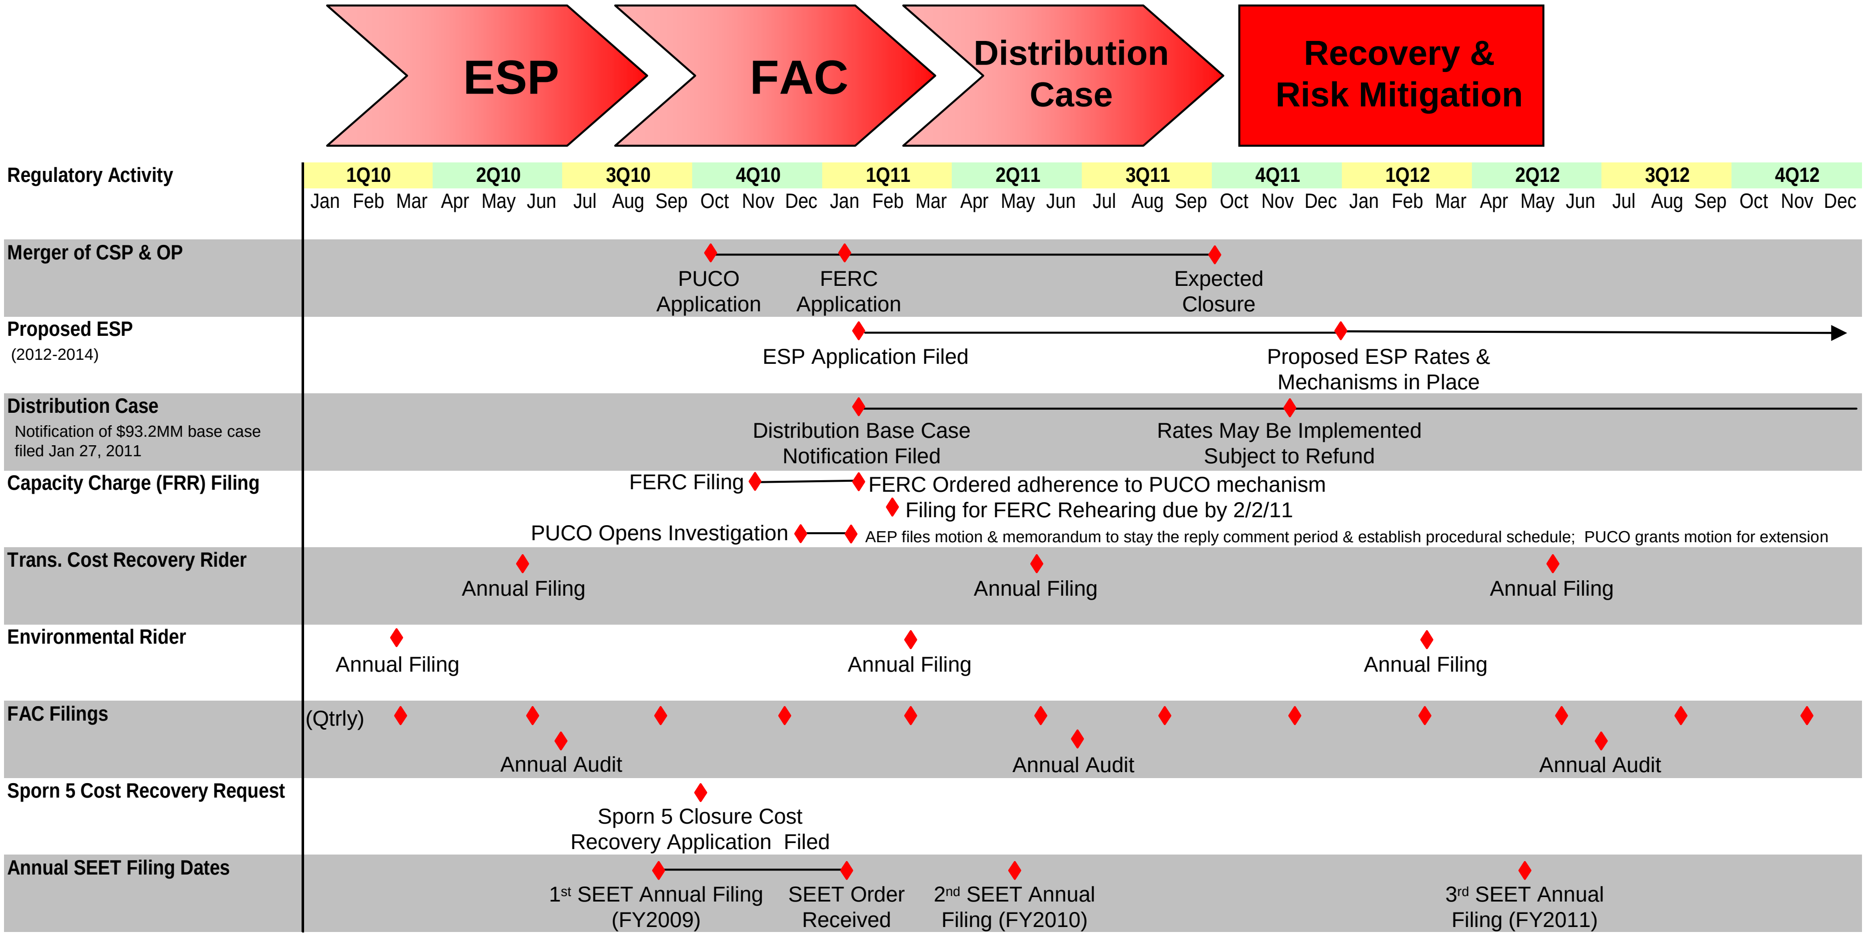
List of ESP Riders – Existing and Proposed

Line	Rate Mechanism	Abbreviation	Bypassable	Distribution	Notes
1	**Current Riders**				
2	Universal Service Fund Rider	USF	--	Yes	
3	Advanced Energy Fund Rider	AEF	--	Yes	Expired 12/31/2010
4	kWh Tax Rider	kWh Tax	--		May be self-assessed under specific terms
5	Provider of Last Resort Charge	POLR	No		Option to avoid under specific terms
6	Monongahela Power Litigation Termination Rider	Mon Power	--	Yes	Expires once amount collected
7	Transmission Cost Recovery Rider	TCRR	Yes		
8	Fuel Adjustment Clause Rider	FAC	Yes		
9	Energy Efficiency and Peak Demand Reduction Cost Recovery Rider	EE/PDR	--	Yes	
10	Economic Development Cost Recovery Rider	EDR	--	Yes	
11	Enhanced Service Reliability Rider	ESRR	--	Yes	
12	gridSMART® Rider	gridSMART®	--	Yes	
13	Environmental Investment Carrying Cost Rider	EICCR	No		the current bypassable rider is proposed to be nonbypassable in the new ESP
14					
15	**Proposed Riders**				
16	Standard Offer Generation Service Rider	GSR	Yes		Relocation of base generation rates
17	Generation Resource Rider	GRR	No		Capital/solar investment
18	Alternative Energy Rider	AER	Yes		Relocation of RECs from FAC
19	Phase-In Recovery Rider	PIRR	--	Yes	Previous ESP deferrals, possibility of securitization
20	Distribution Investment Rider	DIR	--	Yes	
21	Market Transition Rider	MTR	--	Yes	
22	Generation NERC Compliance Cost Recovery Rider	NERCR	No		
23	Facility Closure Cost Recovery Rider	FCCR	No		
24	Carbon Capture and Sequestration Rider	CCSR	No		
25					
26	**Other Provisions**				
27	Green Power Portfolio Rider	GPPR	--		Voluntary
28	Rate Security Rider	RSR	--		Voluntary
29	Plug-In Electric Vehicle Tariff / Costs	PEV	--	Yes	Voluntary, Deferral of Costs
30	Emergency Curtailable Service Rider	ECS	--		Voluntary, pending
31	Storm Damage Recovery Mechanism		--	Yes	Reconciliation of storm experience to funding level
32	Pool Termination or Modification Provision		Yes		
33	PIPP Uncollectibles	PIPP	--	Yes	

Ohio Timeline



AEP Ohio's long-term strategy is designed to produce rate relief for items currently known as well as anticipated future items. The filings and riders we seek today are designed to be broad and flexible enough to accommodate a variety of circumstances, because it is impossible to know all variables and specific items for which we will desire to seek rate relief or what regulatory circumstances will prevail at the time.

December Utilities Week Handout

November 29 - December 1, 2005

New York, NY

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Investing in IGCC

Integration Gasification Combined Cycle

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called “syngas” – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

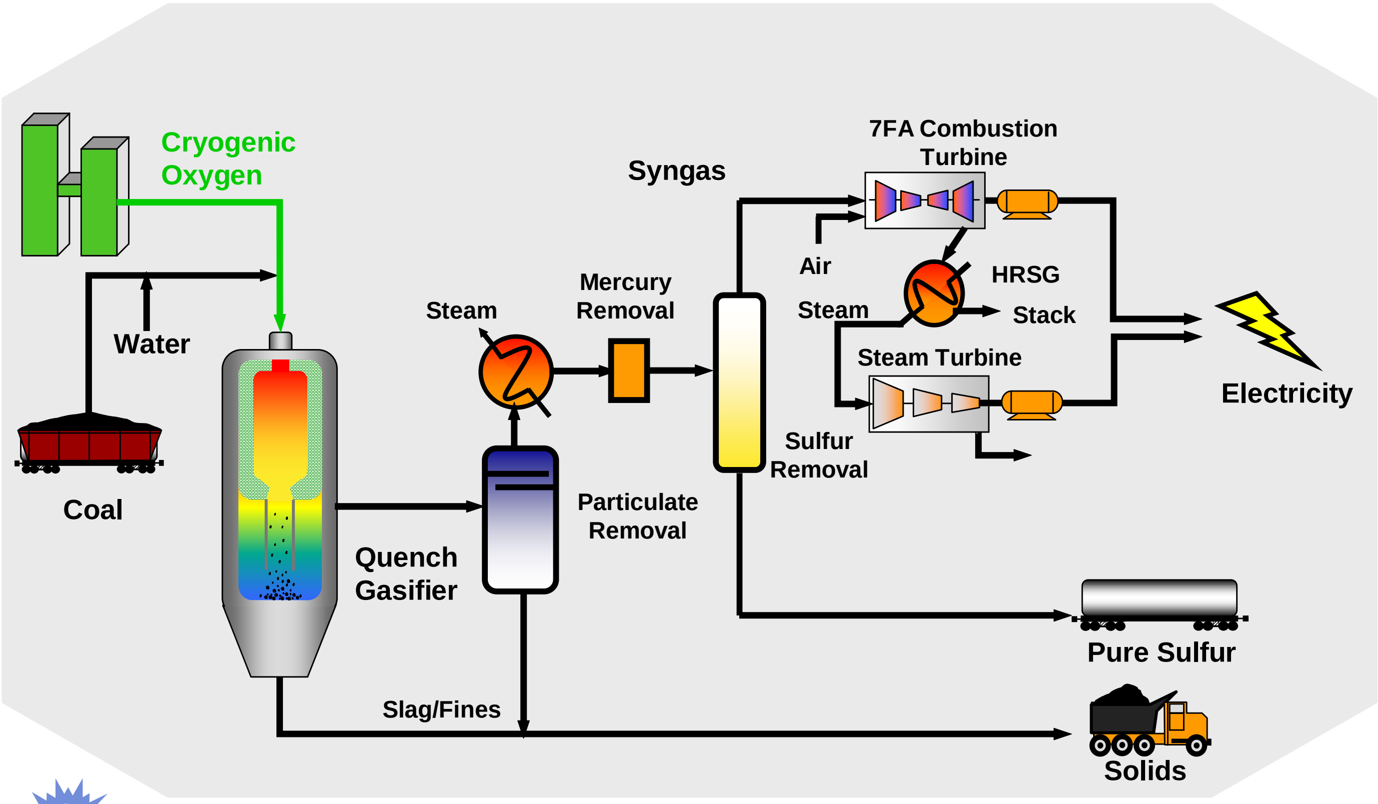
Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2, mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP’s eastern service territory.

AEP is currently working with a technology provider to develop a firm price for an IGCC facility to be built in our eastern service region. This price will be available in 2006. AEP intends to seek regulatory recovery approvals in advance of building the plant.

Looking to the Future - IGCC



162110 - GJS/CE-01/1-23-02

AEP HAS ANNOUNCED ITS INTENTION TO CONSTRUCT A COMMERCIAL-SCALE INTEGRATED GASIFICATION COMBINED CYCLE (IGCC) PLANT BY THE END OF THE DECADE

Investing in IGCC

Generation Technology Comparative Statistics

	PC	IGCC	NGCC
Nominal Capacity (MW)	**600**	**600**	**600**
Heat Rate (Btu/kWh)	**8690**	**8700**	**7200**
Total Plant Cost ($/kW)	**1290**	**1550**	**440**
Fuel cost ($/MWh)	**14**	**14**	**53**
Cost of Electricity (without CO2 Capture) ($/MWh)	**52**	**56**	**75**
Estimated Cost of Electricity (with CO2 Capture) ($/MWh)	**96**	**79**	**143**

- Source: Results of AEP analysis based on EPRI studies.
- Total Plant Cost includes the cost to engineer, procure and construct plant. It does not include escalation, owner's costs, transmission upgrades, or AFUDC.
- Assumes Northern Appalachian Coal price of $36/ton for PC and IGCC and natural gas price of $7.34/mmBtu for NGCC.
- Assumes 85% capacity factor for PC and IGCC, 40% for NGCC.

IGCC TECHNOLOGY IS STRATEGIC TO KEEPING COAL IN THE MONEY

IGCC Recovery Application Filed with PUCO

Cost Recovery

Phase 1

- ✓ Effective during 2006
- ✓ Seeks recovery of initial costs, including those already incurred, such as site engineering and various other engineering services
- ✓ Approximately $23.7 Million

Phase 2

- ✓ Effective 2007- mid 2010 (Construction Phase)
- ✓ Seeks recovery of carrying costs associated with plant construction

Phase 3

- ✓ Effective mid 2010 (Commercial Operation begins)
- ✓ Seeks recovery of projected $1.174 Billion cost of plant over its operating life.

Next Steps

2005:

- ✓ Secure cost recovery plan
  - ➢ Final PUCO Order expected by end of 2005 for Ohio IGCC filing
- ✓ Finalize site selection
- ✓ Negotiate with suppliers

2005—2007:

- ✓ Obtain permits and finalize engineering and procurement

2007—2010:

- ✓ Construct and start-up plant

Regulatory Overview

Regulatory Activity Underway

AEP AMERICAN ELECTRIC POWER

- ✓ TCC Stranded Cost Recovery True-up Filing
- ✓ FERC Transmission Case
- ✓ APCo Filing for Recovery of E&R Costs in Virginia & Fuel Clause Increase
- ✓ APCo & WPCo Base Rate & Expanded Net Energy Clause (ENEC) Filing in West Virginia
- ✓ Kentucky Base Rate Filing
- ✓ SWEPCo - Texas Fuel Factor/Surcharge Filing
- ✓ IGCC

LEVEL OF CAPITAL INVESTMENT WILL BE ADJUSTED BASED ON RATE RECOVERY AND/OR CASH GENERATION

Regulatory Activity Underway

AEP AMERICAN ELECTRIC POWER

TCC Stranded Cost Recovery Case

- Seeking approval of true-up balances
  - ✓ $2 Billion in stranded costs and associated carrying costs
  - ✓ $400 Million in other true-up amounts including carrying costs
- Dec 2005/Jan 2006 - Final order expected, if not extended
  - ✓ Jan/Feb 2006 - Request for securitization
    - ➢ Sept 2006 - Issuance of securitization bonds if no appeal
  - ✓ Mar/April 2006 – Request approval for CTC to collect other true-up items
    - ➢ Jan 2007 – CTC charge to be implemented

AEP East FERC Transmission Case

Nov 7, 2005 - Announced Settlement agreement – Subject to FERC approval

- Results in $22 Million net revenue in 2006 from wholesale transmission

Regulatory Activity Underway

<u>Appalachian Power- Virginia Fuel Factor Increase</u>

Filed Oct 21, 2005 - Annual revenue increase of $57.7 Million

- ✓ Jan 1, 2006 - Interim fuel rate increase effective, subject to refund
- ✓ Jan 12, 2006 - Public hearing

<u>Appalachian Power – Virginia E & R Cost Recovery Factor</u>

Filed July 1, 2005 - Seeking recovery of $62.1 Million in new Environmental & Reliability costs

- ✓ Oct 14 – SCC ruled VA law does not allow recovery of prospective costs - $48.6 Million
- ✓ Nov 14 - APCo filed supplemental direct testimony which included updated actual E&R costs incurred of $21.1 million
- ✓ Public hearing set for February 7, 2006

Regulatory Activity Underway

AEP AMERICAN ELECTRIC POWER

Appalachian Power & Wheeling Power – West Virginia Base Rate Case & ENEC Reactivation

Filed August 26, 2005 – Seeking $183 Million increase in revenues for increasing costs for coal, purchased power and environmental improvement construction projects

Proposed Phase-in over 4 years

- ✓ June 23, 2006 – $82 Million
- ✓ July 1, 2006 – $9 Million
- ✓ Jan 1, 2007 – $44 Million
- ✓ Jan 1, 2008 – $10 Million
- ✓ Jan 1, 2009 – $38 Million

Procedural Schedule

- ✓ Feb 2, 2006 – Staff & Intervenors testimony
- ✓ Feb 22, 2006 – Rebuttal & Cross-rebuttal
- ✓ Feb 28 – Mar 3, 2006 – Evidentiary Hearing
- ✓ Initial Briefs – 20 days after receipt of transcripts
- ✓ Reply Briefs – 10 days after initial briefs
- ✓ June 23, 2006 – Statutory deadline for an order

Regulatory Activity Underway

AEP AMERICAN ELECTRIC POWER

Kentucky Base Rate Case

Filed Sept 26, 2005 – Seeking recovery of increasing costs associated with providing safe and reliable electric service

- ✓ Seek increase of $64.8 Million over existing rates
- ✓ Procedural schedule (subject to change)
  - ✓ Nov 29, 2005 through January 27, 2006 – Data Requests and Responses
  - ✓ Jan 9, 2006 – Intervenor Testimony
  - ✓ Feb 2, 2006 – KPC Rebuttal Testimony
  - ✓ To be Scheduled – Public Hearing and Briefs

SWEPCo Fuel Factor/Surcharge Filing

Filed Nov 7, 2005

- ✓ Annual revenue increase of $48.6 million per year to go into effect the first billing cycle in January, subject to future reconciliation
- ✓ Plus $46.4 million surcharge for a twelve-month period of Feb 2006 through Jan 2007, subject to future reconciliation

Regulatory Overview – East Companies

AEP AMERICAN ELECTRIC POWER

Ohio (Restructured)

- Unbundled rates for default customers frozen until 12/31/2005
- Pursuant to RSP Plan approved by PUCO 1-26-05:
  - Distribution rates in effect at December 31, 2005 are frozen, with certain exceptions, until the end of 2008.
  - Institute for 2006-2008 a non-bypassable distribution rider for provider of last resort (POLR) costs.
  - CSP "G" rates to increase 3% per year (2006-2008).
  - OP "G" rates to increase 7% per year (2006-2008).
  - Transmission rates can upon filing reflect change in RTO costs.
- No active fuel clause
- Application for IGCC plant recovery filed on 3-18-05. Hearings and briefs are done. Awaiting a PUCO order.
- On 11-9-05 the PUCO ordered CSP's acquisition of Mon Power's Ohio service territory effective 1-1-06.

West Virginia (Regulated)

- Base rates not frozen
- No active fuel clause
- Annual ENEC proceedings have been suspended, the factor is currently fixed at pre-2000 levels.
- On 8-26-05 AP & WP filed with the WVPSC for a $183 million revenue increase to be phased in over a four-year period beginning in mid 2006. The filing consists of a general rate case, reinstatement of the ENEC, to implement scheduled incremental rate increases for major clean air & transmission investments, and the implementation of a system reliability tracker mechanism.
- On 8-31-05 AP and Reliant jointly filed with the WVA PSC for approval to purchase the Ceredo generating station.

Virginia (Restructured)

- Capped rates for default customers frozen through end of 2010
- Capped rates can be adjusted by two rate cases prior to the end of 2010 and incremental environmental and reliability cost recovery mechanisms
- Active annual fuel clause; filed 10-21-05 for annual increase of $57.7 million.
- On 7-1-05 AP filed a request with the Virginia Commission seeking to recover incremental costs for environmental compliance and T&D System reliability (E&R) of $62.1 million based on actual costs through early 2005 and projected costs through June 2006. In an order dated 10-14-05, the Commission denied the Company's request for interim rate treatment and ruled that the Company may only seek to include actually incurred costs (i.e., no projected future costs) in the E & R cost recovery filing. The Company filed supplemental direct testimony on 11-14-05, which included updated incremental costs through 9-30-05 of $21.1 million. On 11-7-05 the SCC Staff filed a Motion In Limine to Dismiss Application in Part indicating that they did not believe the SCC had jurisdiction over transmission rates and therefore could not order a change to the transmission rate. We filed our response on 11-16-05. The Commission has scheduled hearings to begin 2-7-06.

Kentucky (Regulated)

- Fuel clause, adjusted monthly
- Environmental surcharge costs are adjusted monthly for approved environmental compliance plan
- On 9-26-05 the Company filed a base rate case requesting a $64.8 million annual increase. The Company expects the effective date to be approximately 4-1-06.

Michigan (Restructured, but Regulated)

- Base rates not frozen.
- Active annual fuel clause.

Indiana (Regulated)

Base rates are frozen and fuel cost recovery factors are capped at increasing rates through June 30, 2007.

Tennessee (Regulated)

- Base rates not frozen
- Automatic fuel clause, adjusted monthly

Regulatory Overview – West Companies

AEP AMERICAN ELECTRIC POWER

Texas (Regulated)
- SWEPCO Texas retail competition delayed until at least 2007. PUC Chairman believes the precursors for full and open competition are not yet in place and will not exist prior to 2009. The Chairman committed to the Texas Legislature that the commission would consider maintaining the current status of competition in the SWEPCO Texas (and SPP portion of TNC) areas in future proceedings.
- Bi-annual fuel clause adjustment opportunity, filed 11-7-05 for annual increase of $48.6 million plus a one-year surcharge of $46.4 million.

Texas ERCOT Area (Restructured)
- TCC stranded cost true-up filing in May 2005. ($2.4 billion true-up amount requested). Hearings concluded 10-4-05. TCC anticipates a Commission ruling in December 2005 or January 2006.
- The results of TNC's true-up case were filed in TNC's Competition Transition Charge (CTC) proceeding in August 2005, which was abated in November 2005 pending resolution of the PUCT's ruling regarding off-system sales margins (see below).
- TNC final fuel reconciliation (July 00-Dec. 01). Final order received 10-18-04. Texas District Court affirmed PUC on 9-9-05. TNC will appeal. On 9-29-05, the U.S. District Court precluding the PUCT from enforcing their ruling regarding the allocation of off-system sales margins.

Oklahoma (Regulated)
- On 6-3-05 PSO file to increase its Reliability Enhancement Plan annual spending to a $27.21 million level (up $15.4 million) pending OCC approval. Staff submitted testimony supporting an annual cap of $23.68 million up from the $11.81 million cap currently in place. The ALJ has recommended approval of the Staff proposed rider cap. The ALJ recommendation also allows for the recovery of return, depreciation, taxes, etc. associated with converting overhead distribution lines to underground. It is now pending a Commission decision.
- Annual Fuel Clause
- 2001 Fuel review case

  •Hearings scheduled for Sept. 2005 have now been continued to a later date to be determined. Scope expanded to cover 2002-2004 margin allocation issue. Intervenors have submitted testimony which would substantially off-set the recovery of PSO's $42 million Internal Cost Reconstruction (ICR) error.
- 2003 Fuel review case

  Scope has been expanded to include a prudence review.
- 2004 Fuel review case

  Staff has now filed for a review of PSO's 2004 fuel costs.

Louisiana (Regulated)
- Base rates not frozen
- Currently under a merger required financial review
- Fuel clause, adjusted monthly

Arkansas (Regulated)
- Base rates not frozen
- Fuel clause, adjusted annually

Finance

Summary of Major 2006 Earnings Drivers

AEP AMERICAN ELECTRIC POWER

- Load growth of 2.5%
- $300MM new rate recovery in progress
- Rising fuel costs of 10-12%
- Higher planned outages, increased retail load, & sale of TCC generation to impact off system sales
- Decline in utility operations O&M
- Parent Company improvement

Utilities Week Investor Meeting Handout

New York

November 29-30, 2011

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M's Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance, resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and the expected legal separation and transition to market for generation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives, evolving public perception of the risks associated with fuels used before, during and after the generation of electricity, including nuclear fuel and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events.

TCC Remand Case – PUCT Docket No. 39722

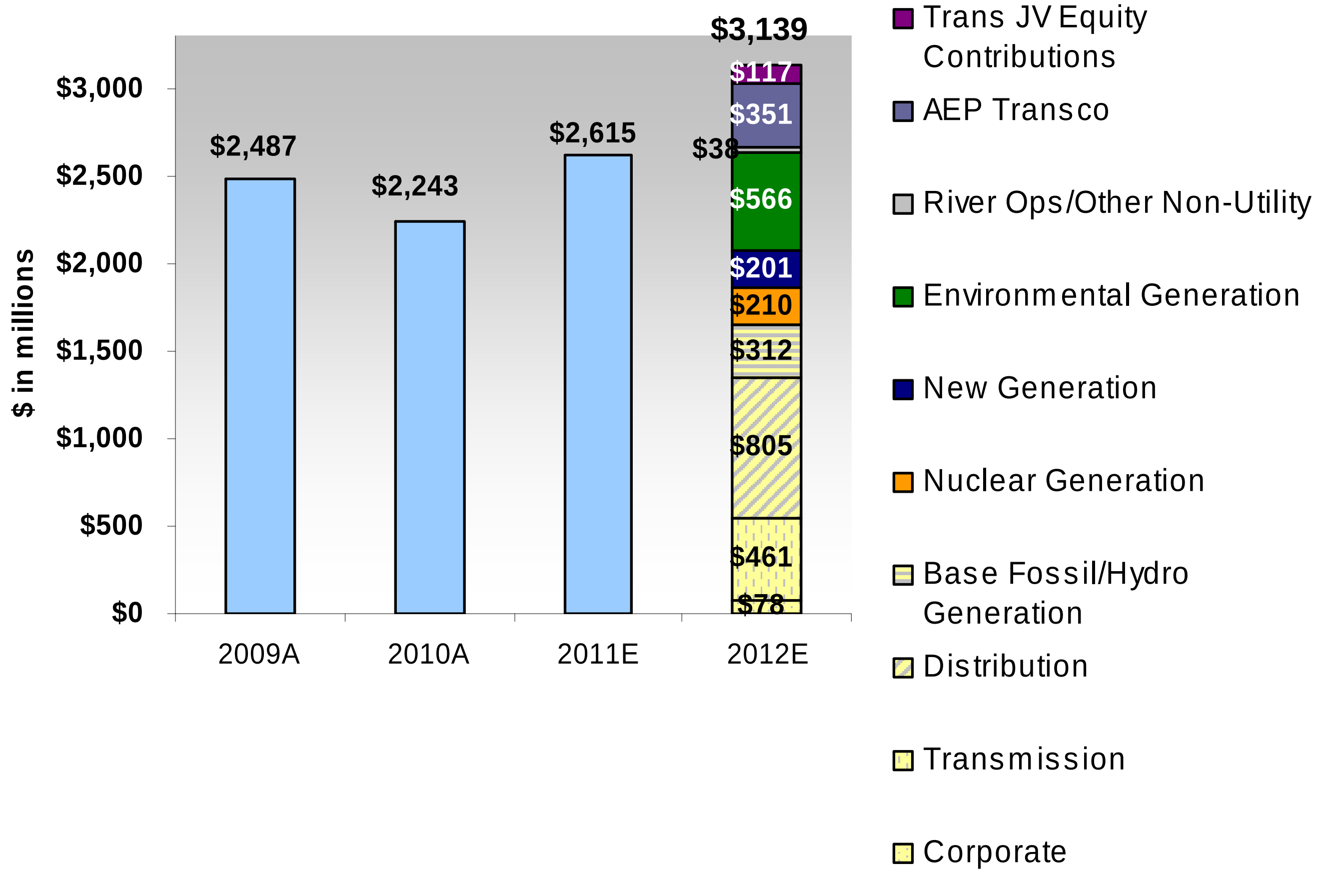
- In July 2011, the Supreme Court of Texas reversed the PUCT's decision of the disallowance of capacity auction costs. This opened the docket for TCC to file on October 10, 2011, an application to confirm the capacity auction true-up balance.
- Based on the Commission's Preliminary Order in the case, the capacity auction true-up balance would be approximately $817M inclusive of a carrying charge rate of 7.47%(based on ruling that modified the rate in 2007).
- The regulatory hearing is scheduled to take place November 29-30, 2011, but settlement is likely. A filing for a securitization order will occur soon after an order is issued on the remand case. TCC expects to issue the securitization bonds in the first quarter of 2012.
- TCC recorded a $425MM net-of-tax favorable special item related to this case in 3Q2011, ($421MM principal & $234MM interest, less related taxes). AEP also recorded $28MM on-going interest YTD in 3Q2011.
- Upon securitization, TCC will begin recognizing the equity component of the carrying cost prorated over the life of the securitization bonds (estimated to be $116MM, based on the PUCT preliminary order).
- Filing also seeks order to resolve tax normalization issues.

Pension and OPEB Estimate

- Investment returns for our pension plan remain slightly positive for the year despite volatility in the market, OPEB funds are slightly negative year to date.
- With very low short term interest rates, it is beneficial to pre-fund a portion of the required contributions to the plan.
- After making a discretionary contribution of $300 million by year end, cash contributions to the pension will total $450 million for 2011.
- We do not expect any required cash contributions to the pension for 2012, although we may make additional discretionary contributions.
- We expect combined pension and OPEB expense to increase $88M from 2011 to 2012 ($62MM O&M, pre-tax and $26MM capitalized).
- Discount rates are 5.05% for pension and 5.25% for OPEB for 2011, and are currently estimated to be 4.35% and 4.60% for 2012 and beyond.
- Estimates for expense and contribution figures are very sensitive to changes in interest rates and investment returns between now and year-end.

Capital Allocation

2012 AEP System Capital $3.1B



Major projects include: Turk Plant, Reliability upgrades, ETT contributions and Transco growth

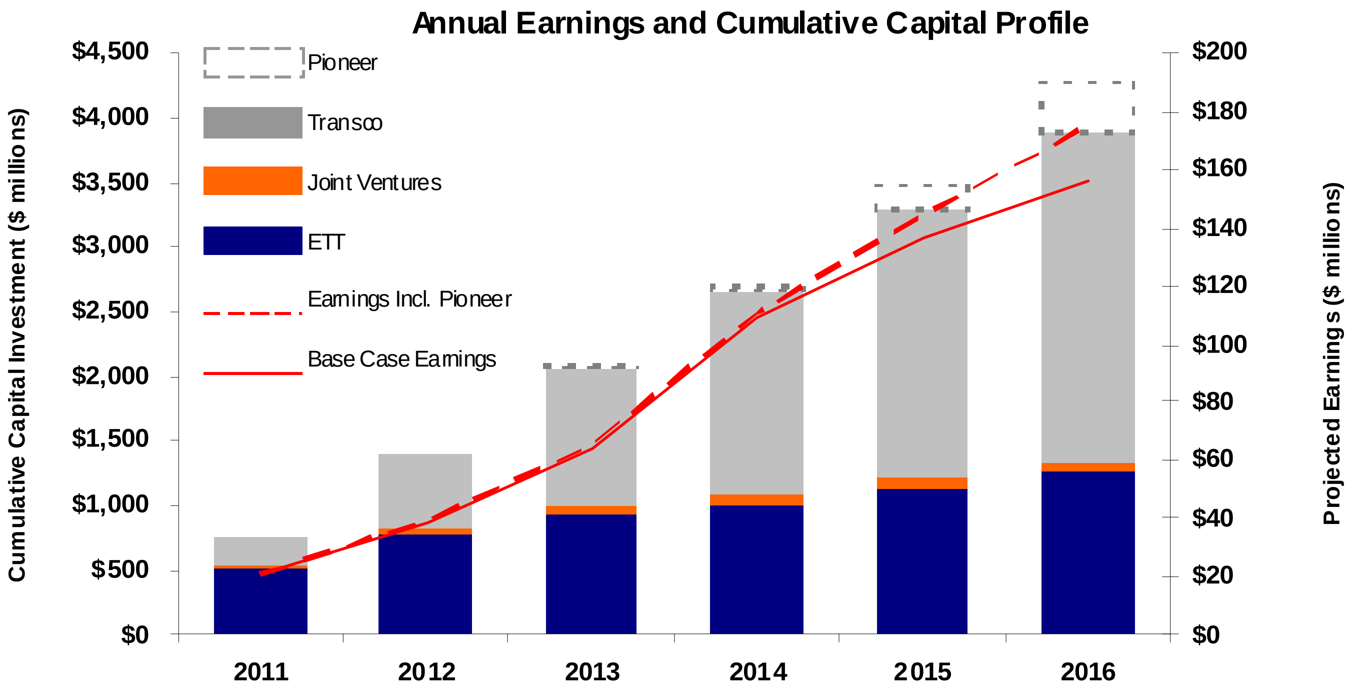
Transmission Earnings & Capital Profile



[1] High Case includes AEP's share of Pioneer (50% ownership)

[2] Transco base case includes approximately $21MM in 2012 capital spend that is dependent upon state approval of Arkansas and Kentucky

[3] Joint Ventures include: PATH (50% ownership) assuming an ongoing suspension and Prairie Wind (25% ownership) assuming construction at 345kV

[4] ETT (50% ownership) includes CREZ and additional projects

[5] Projection of earnings potential at the transmission holding company level assuming 50/50 debt/equity capitalization and ROE of 11-13% for FERC projects; 60/40 debt/equity capitalization and 9.96% ROE (through 2013) and 55/45 debt/equity capitalization and 10% ROE (2014 forward) for ERCOT projects; and 50/50 debt/equity capitalization and ROE of 11.2-11.49% for Transco projects

Transmission Investment Opportunities

Electric Transmission Texas

- **Ownership Structure:** 50/50 (AEP/MidAmerican Energy Holding Company)
- **Total Project Cost**: Over $3 Billion
- **Growing Rate Base:**
  Current rate base is $482 million; expected to grow as follows:
  - 2011: $495 million
  - 2012: $750 million
  - 2013: $1,200 million
- **Interim TCOS filings twice per calendar year**
- **Approved ROE:** 9.96%

AEP Transcos

- Seven wholly-owned Transcos
- Expansion and growth within AEP's existing utility footprint
- Efficient recovery mechanism via FERC formula rates
- Forecasted capital investment of $210 million in 2011 and more than $350 million in 2012
- Approved ROE: 11.20%-11.49%

ROE Optimization

AEP®

ROE by Jurisdiction		
Jurisdiction	Authorized ROE	Sep 2011 Proforma ROE*

* Twelve Month Rolling Proforma Recurring ROE

- Strong overall system ROE with current rate cases on file for under earning utilities
- Continue to strengthen local relationships
- Concurrent recovery mechanisms
- Operating Company model refinement
  - Investment Review Committee
  - Advanced planning discussions with stakeholders

Ohio ESP Settlement

AEP®

Gradual Transition to Market and Regulatory Stability in Ohio

- **Parties to the Settlement** - Signed by more than 20 organizations representing customers, competitive retail electricity suppliers, environmental groups, communities and other key stakeholders
- **Cases included in Settlement** - 2012 Electric Security Plan, Capacity Charges, Merger
- **Generation** - Corporate separation of Ohio generation assets targeted by May 2013 and transition all of Ohio generation supply to market by mid-2015; the company may pursue recovery of Pool modification costs once they exceed $50 million
- **Transition to market** - company will make a specific percentage of the Ohio retail load open to competitive retail suppliers at the RPM price for a three-year period. The remaining capacity that switches will be priced at $255/MW-day
  - Year one (2012), approximately 20 percent will be available
  - Year two (2013), approximately 30 percent will be available
  - Year three (2014 through May 2015), approximately 40 percent will be made available.
  - Standard service offer price beginning in June 2015 will be determined through auctions involving multiple suppliers of generation service. Auctions will begin as early as September 2013.
- **Fuel Adjustment Clause** - continues through May 31, 2015; parties to support legislation for securitization of fuel deferrals
- **Nonbypassable Generation Resource Rider** – allows the distribution company to recover costs related to building new generating assets dedicated solely to Ohio customers. Project-related costs will be presented in future PUCO cases.
- **Distribution Investment Rider** – Costs associated with new distribution investment to maintain and improve reliability will be recovered under this rider with an ROE of 10.5% based on a capital structure of 47% debt/53% equity. In its first year (2012) the rider will be capped at $86 million. An additional $18 million will be added in 2013 and an additional $20 million in 2014.
- **SEET ROE threshold of 13.5%**.

Summary Rate Case Information

AEP®

AEP Ohio Distribution Rate Case – Docket #11-351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%.

APCo Virginia Base Rate Case – Docket #PUE-2011-00037

On March 31,2011 APCo filed an update to its pre-biennial base rate case for recovery of generation and distribution costs requesting an increase of $75 million ($126 million total increase less $51 million deferral of depreciation increase).

In conjunction with this case, an environmental rate adjustment clause (E-RAC), a generation rate adjustment clause (G-RAC) and a renewable portfolio standard rate adjustment clause (RPS-RAC) were filed. APCo has requested that rates in the base case, E-RAC and RPS-RAC go into effect on 2/1/2012 and the G-RAC on 3/1/2012.

I&M Michigan Base Rate Case – Docket # U-16801

On July 1, 2011 I&M filed a base rate case with the Michigan Public Service Commission requesting an increase of $24.5 million. Rates proposed in this filing are based on projected 2012 cost of service and will not go into effect until 2012, therefore rates will reflect a current cost of service. This filing includes revised depreciation rates to include additions since the last approved depreciation study as well as accelerated retirement of Tanners Creek Units 1, 2 and 3. The requested ROE is 11.15%. In accordance with Michigan law I&M requested to implement rates, subject to refund, on January 1, 2012. An order is expected by mid-year 2012.

Projected Capital Structure – Company Position (12/31/12)

Summary Rate Case Information

I&M Indiana Base Rate Case Cause #44075

On September 23, 2011 I&M filed a base rate case with the Indiana Utility Regulatory Commission requesting an increase of $148.7 million ($178.4 million in base revenues offset by $29.7 million in proposed changes to the OSS, PJM and CCT riders). Rates proposed in this filing are based on a historical 03/31/2011 cost of service and will not go into effect until an order is issued. The requested ROE is 11.15%. An order is expected by the end of 2012 or early 2013.

New Generation – Turk Plant

John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant, located in AEP's SWEPCO region. AEP owns 73 percent or roughly 440 megawatts of the total unit.

- The cost of the plant and related transmission is anticipated at $1.8 billion with AEP's share approximately $1.4 billion and will begin commercial operation in the fourth quarter of 2012.

- The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls.

- Third party owners include: Arkansas Electric Cooperative Corp. (12%), East Texas Electric Cooperative (8%), and Oklahoma Municipal Power Authority (7%).

- Various legal challenges are on-going related to the plant (see 10-Q).

(1) The impact of all rules continues to be under review. Project scope and technical assessments are ongoing. Any change in scope will impact the capital cost ranges.

(2) Gas plants are not included in MW. Proposed 316 (b) will impact some gas facilities.

(3) Air Rules include: CSAPR as finalized and HAPs and Regional Haze Federal Implementation Plans in OK & AR, as proposed.

(4) Includes NSR Compliance.

(5) Includes Big Sandy Unit 2, which remains fully exposed but, pending regulatory approval, will be scrubbed rather than replaced with new natural gas generation.

Retrofits/New Generation

- The tables below represent our estimated $6 - $8 billion capital investment from 2012 to 2020 for environmental retrofits on 10,500 MW and new/refueled generation of 2,152 MW. The below costs include management estimates for compliance with CSAPR, HAPs MACT, CCR and 316(b) regulations as currently proposed.

Operating Company	Plant	MW	Type of retrofit	Low Cost Estimate 2012-2020 ($MM)	High Cost Estimate 2012-2020 ($MM)

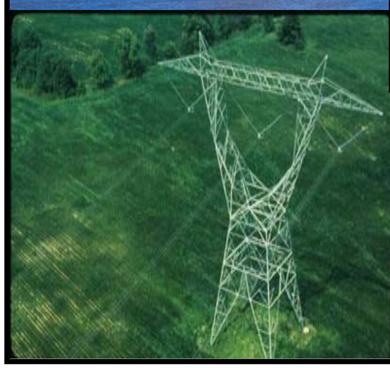
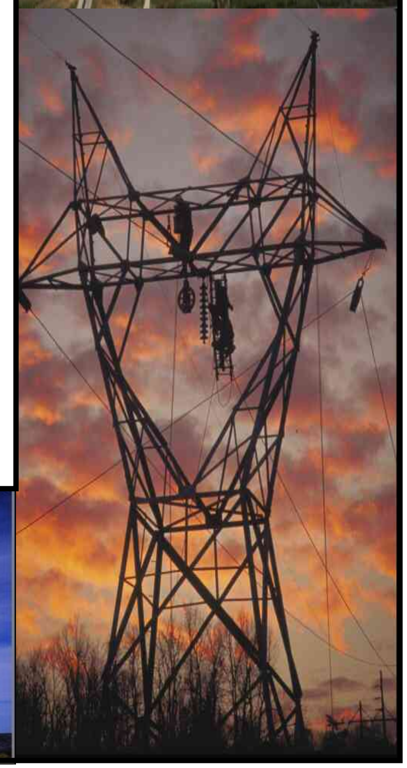
AEP AMERICAN® ELECTRIC POWER

April 18, 2008





"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; volatility in the financial markets, particularly development affecting the availability of capital on reasonable terms and developments impairing our ability to refinance existing debt at attractive rates; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation in Ohio and the allocation of costs within regional transmission organizations; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

AEP Strategy

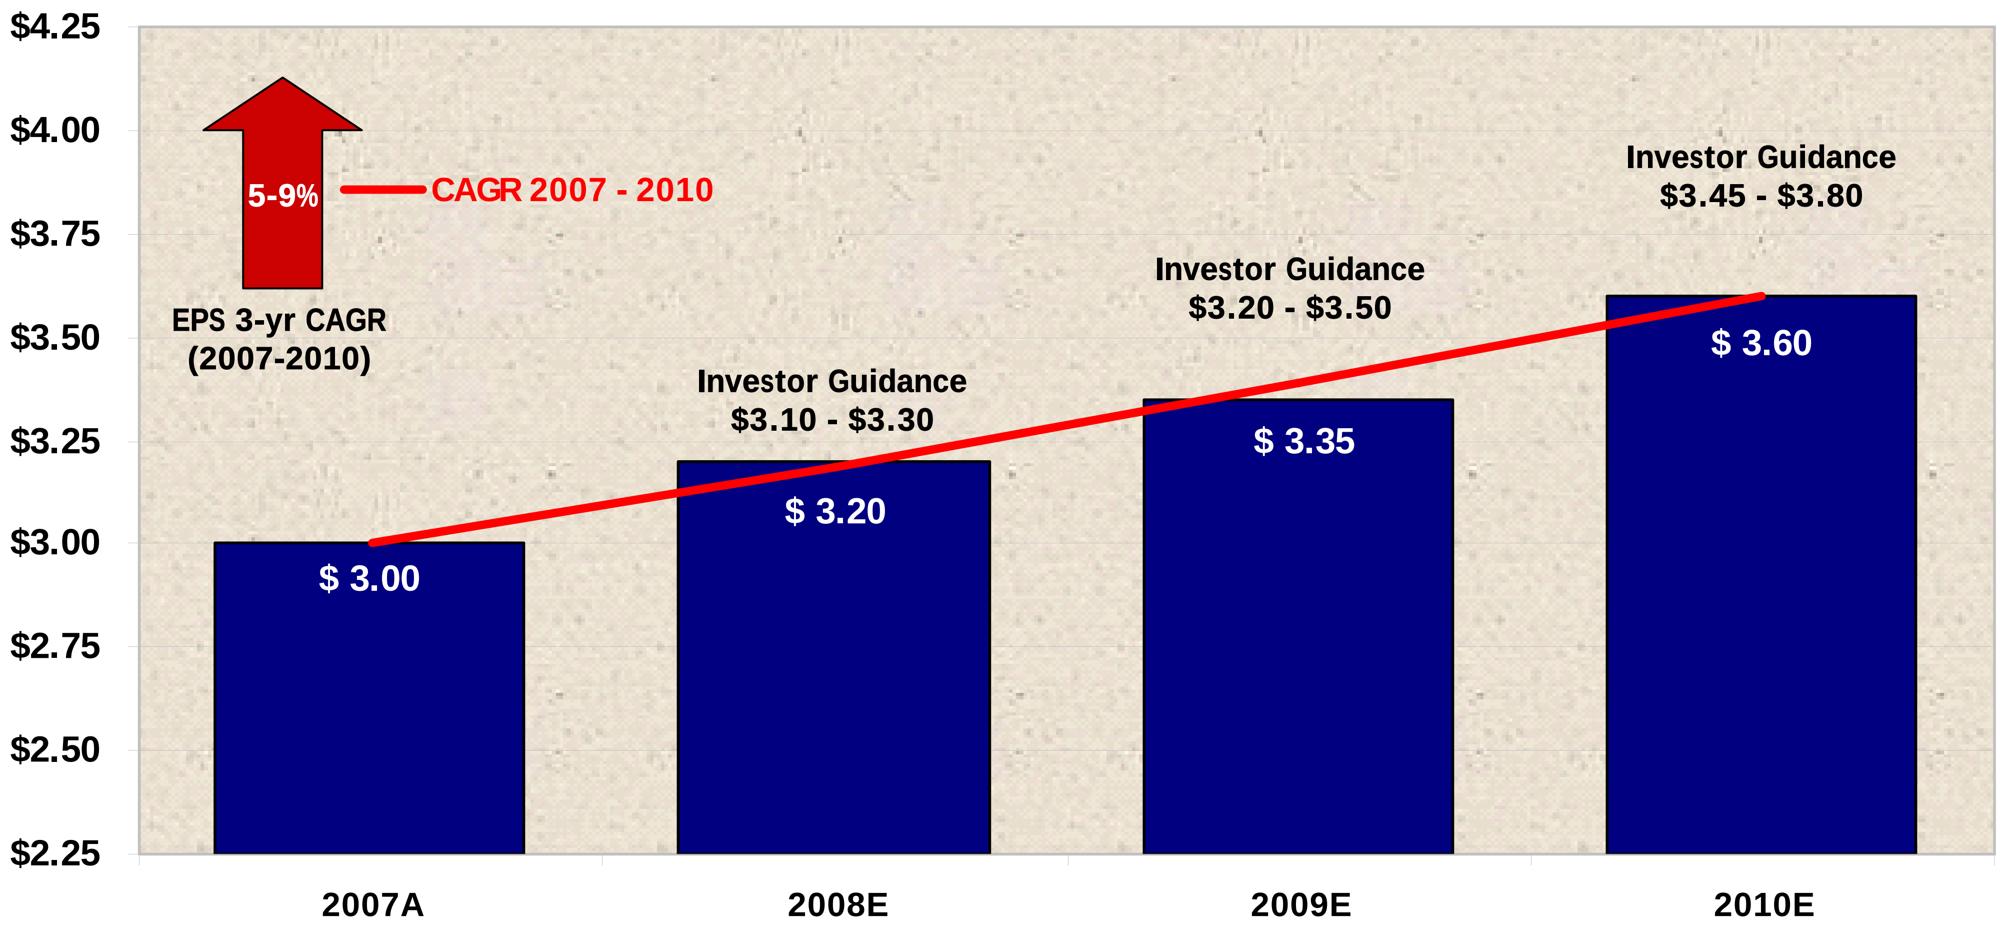
Strategy: grow our core utility business at a consistent rate through major investment supported and funded by innovative programs for regulatory recovery as well as develop our independent, federally regulated Transmission Company for the pursuit of new major interstate projects.

Our 2008 Focus:

- Prepare for post-2008 transition in Ohio
- Invest in and evolve infrastructure to support future technology and customer needs focused on efficiency, conservation and load management
- Enhance cash flow & earnings through rate recovery mechanisms
- Take advantage of AEP's size to benefit our customers and shareholders through regulatory-supported investment

Sustained capital investment opportunities support earnings growth.

4-Year Earnings Range Forecast

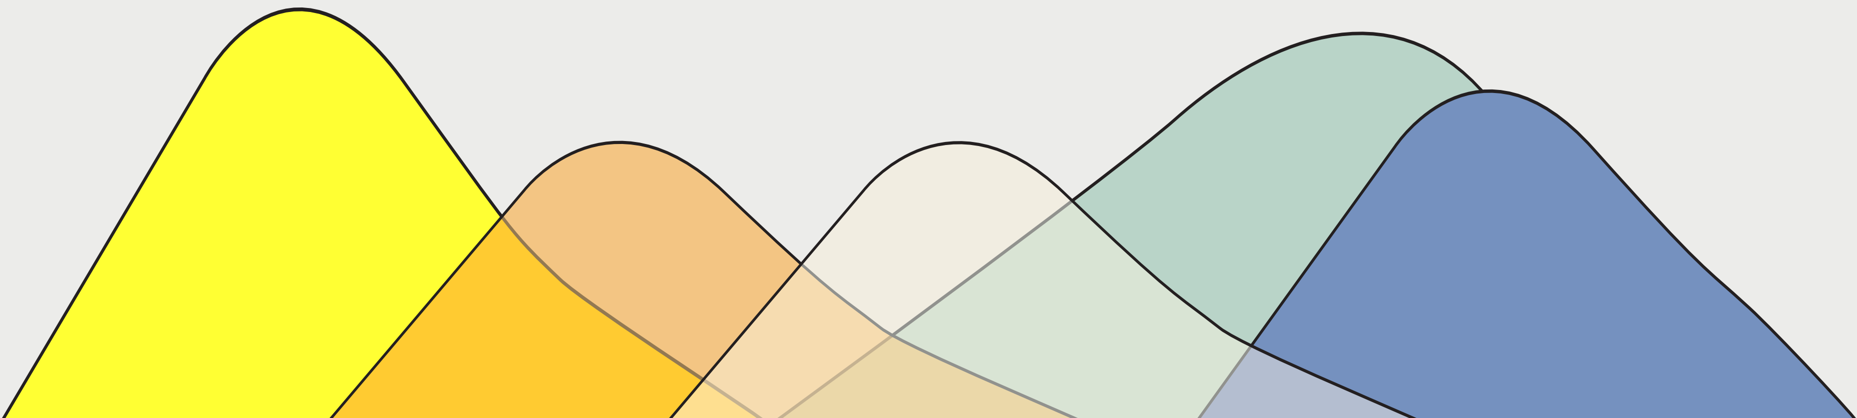


5% to 9% earnings growth

Capital Investment Earnings Catalysts

Capital Investment - Consistent Waves of Opportunity

Environmental Retrofits	New Generation Projects	GridSMART Technology	Transmission Ventures	Adv Generation/ CO_2
$5.4B	$1.3B+	$1-2B	$2.25B - $3.75B*	$2.0B+



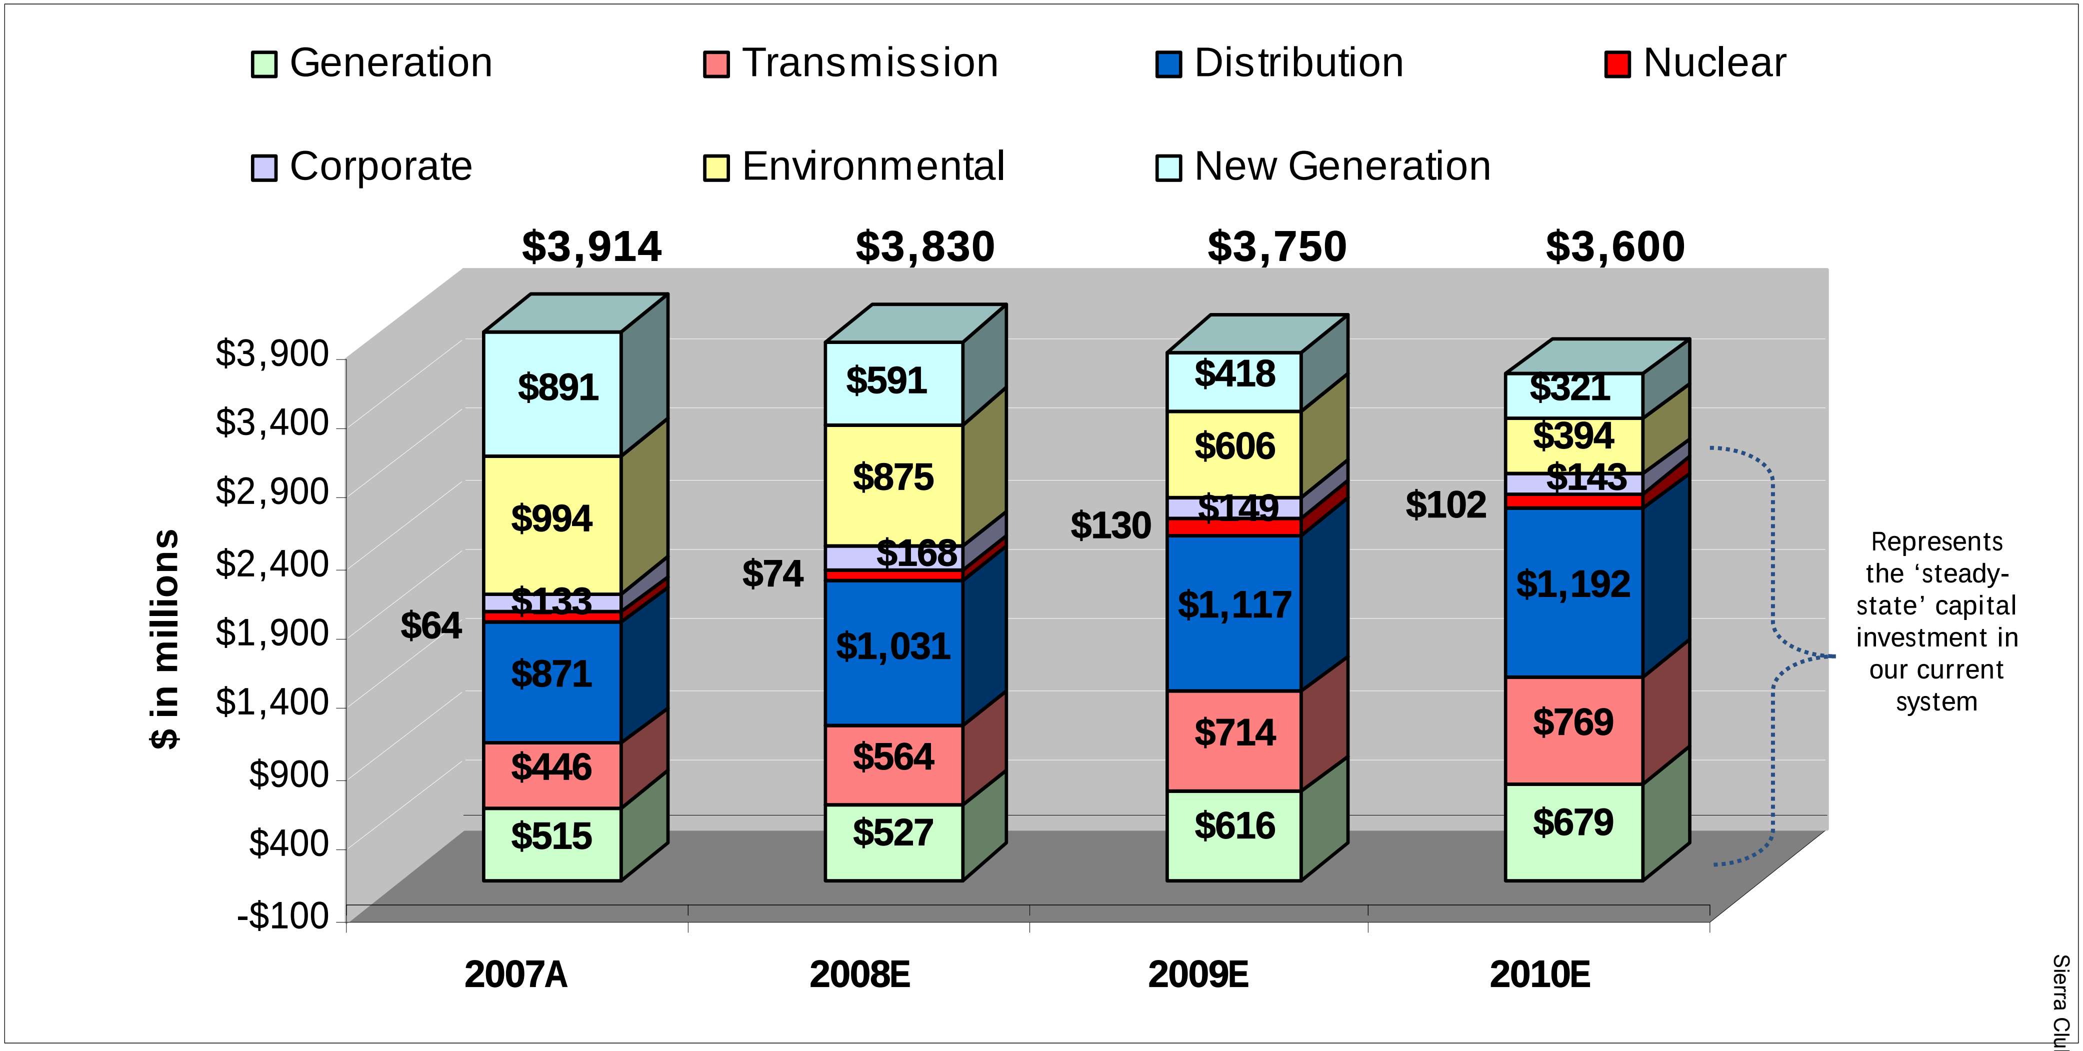
Baseline capital investment of approximately $2.5B/year for Transmission, Distribution & Generation versus annual depreciation of $1.1B/year

2005 → 2010 → 2020 →

Note: This slide represents current capital investment plans as well as future capital investment opportunities. For current capital investment guidance through 2010, please refer to page 10. *The transmission opportunity is shown utilizing anticipated JV ownership structure.

Capital investment opportunities combined with associated rate relief will drive sustainable earnings growth.

4-Year Capital Investment Forecast



Note: amounts exclude AFUDC, $472MM related to gridSMART[SM] and $566MM related to transmission joint venture projects

Capital Investment + Rate Relief = Earnings Growth

At the conclusion of our current environmental retrofit program, over 58% of our 24,630 MW coal-fired generation fleet will be equipped with SCRs and over 73% will be scrubbed (FGDs).

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
PSO	Riverside	Oklahoma	$59 MM	Gas	Simple-cycle	170	2Q 2008
AEG	Dresden	Ohio	$266 MM	Gas	Combined-cycle	580	2010
SWEPCo	Stall	Louisiana	$378 MM	Gas	Combined-cycle	480	2010
SWEPCo	Turk	Arkansas	$1.3 B (1)	Coal	Ultra-supercritical	600 (1)	2012
APCo	Mountaineer	West Virginia	$2.23 B	Coal	IGCC	629	2012
CSP/OP	Great Bend	Ohio	$2.7 B (2)	Coal	IGCC	629	tbd

(1) SWEPCo will own approximately 73%, or 438 megawatts, totaling about $950 million in capital investment.
(2) FEED (front-end engineering and design) study with GE/Bechtel is complete. Cost estimates, updated to reflect cost escalations due to revised commercial operation date of 2017, are not yet filed with the PUCO due to the current Supreme Court of Ohio remand to the PUCO of the PUCO's April 10, 2006 Opinion and Order.

AEP is meeting the growing electricity needs of customers through the pursuit of new economic generation facilities.

gridSMART^{SM}

gridSMART^{SM}: implementing AEP's vision for the distribution and customer services business in the future, including the development of new customer programs to reduce consumption and peak demand, and a plan to deploy advanced technologies.

- **Enables customers to better manage energy**
- **Improves service to our customers by enhancing customer choice and customer control**
- **Improves efficiency**
- **Integrates distributed energy resources into our grid**
- **Transforms the way we do business**

Capital Investment, Subject to Regulatory Approval *
$ in millions

Technology	2008	2009	2010
Metering & Communications	$83	$138	$146
Distribution Technology Enhancements	$40	$ 63	$ 82

*$472MM of the $552MM not in current forecast; spending contingent upon regulatory approval

AEP will continue to be an industry leader in deploying advanced technology on a commercial scale. $552MM capital investment by 2010, subject to regulatory approval

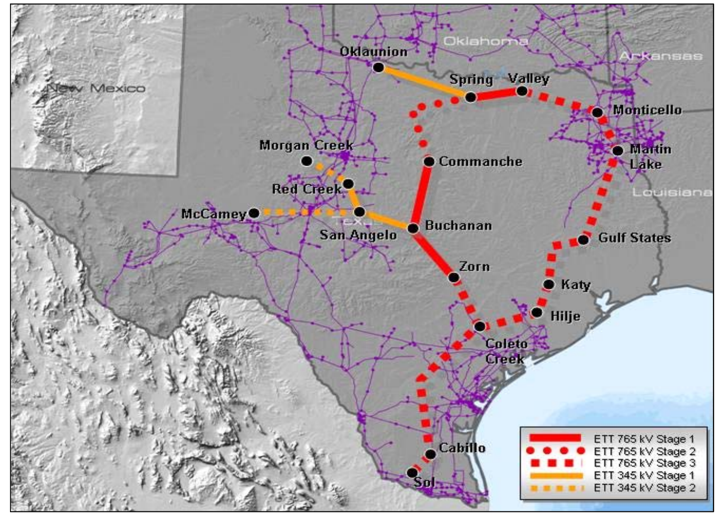
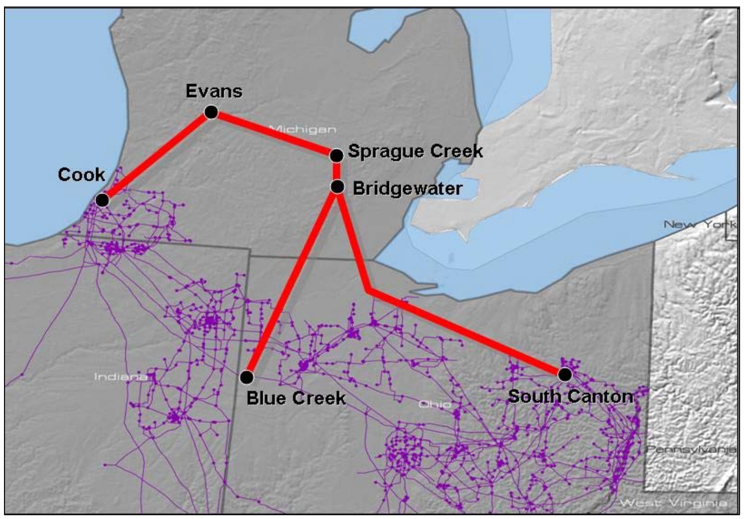
PATH Project (PJM)



ETT Proposal (ERCOT)



AEP-ITC Michigan Proposal (PJM/MISO)

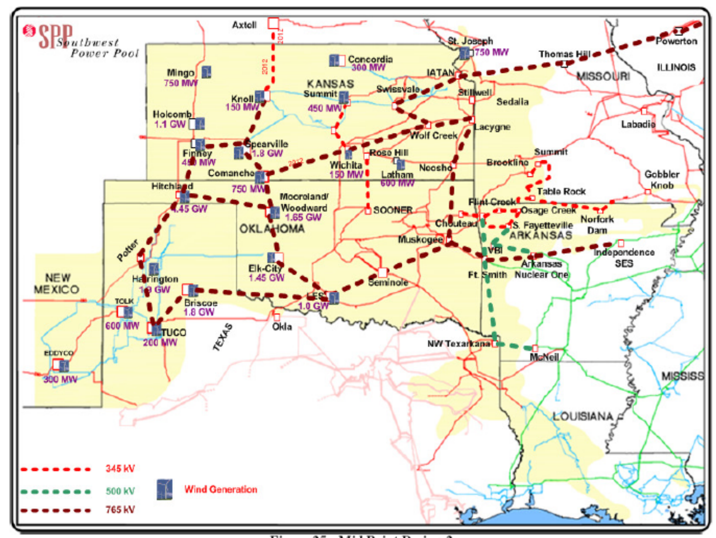


Figure 25: Mid Point Design 2

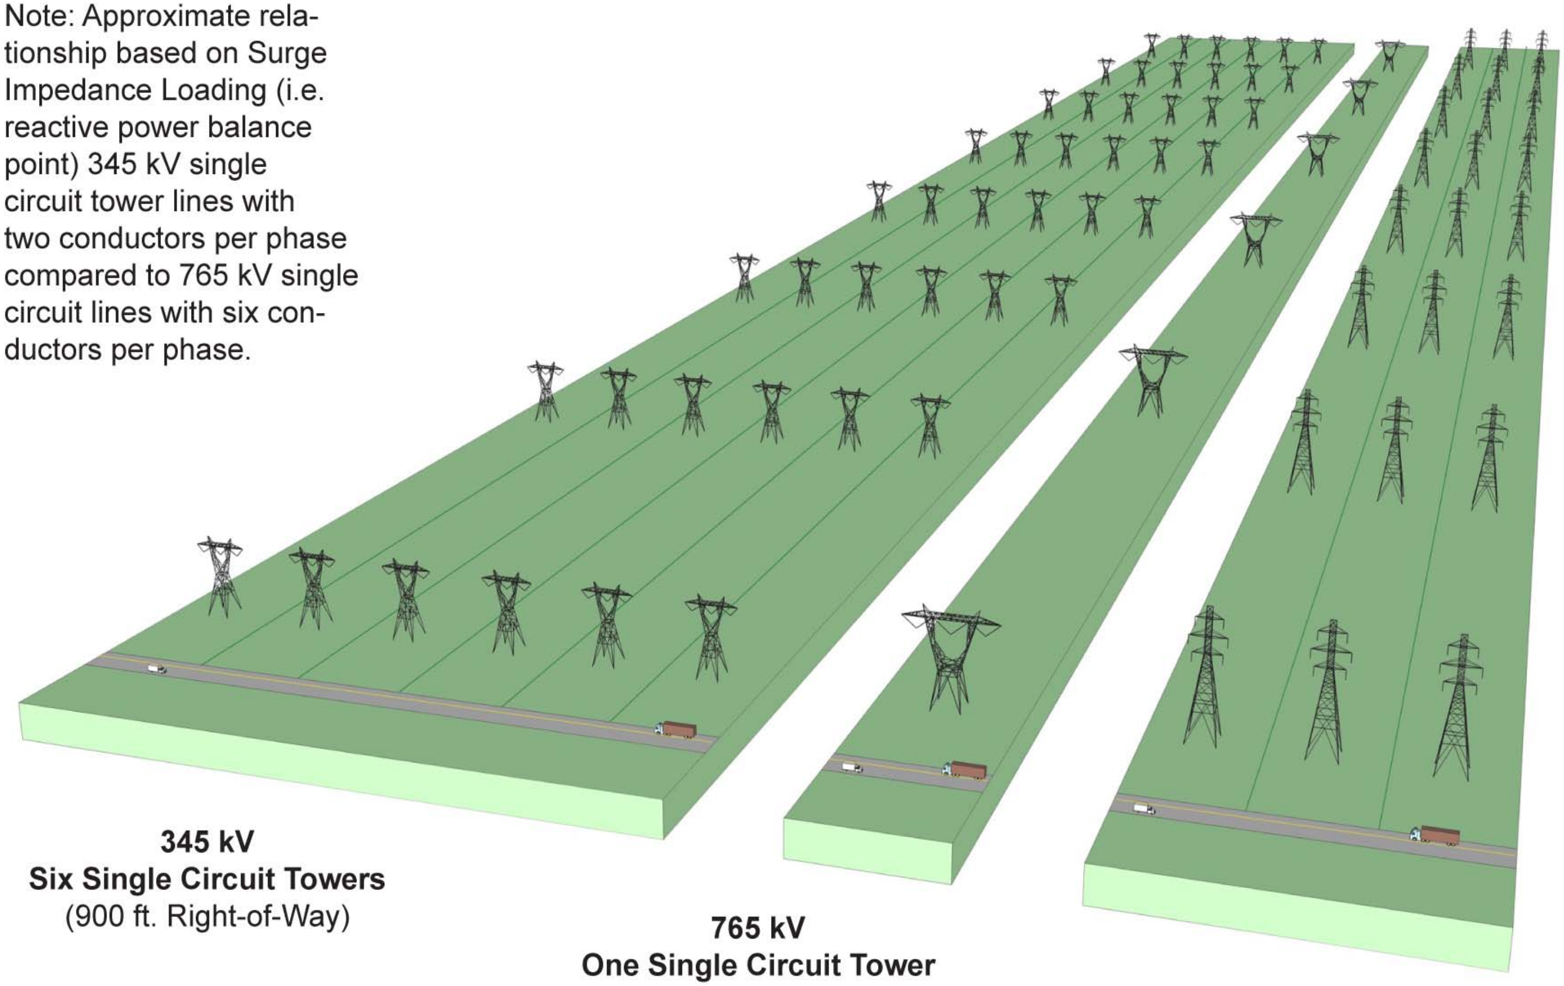
SPP Overlay Study – Mid Design 2

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 9363 of 9556

765 Right-of-Way Comparison

Note: Approximate relationship based on Surge Impedance Loading (i.e. reactive power balance point) 345 kV single circuit tower lines with two conductors per phase compared to 765 kV single circuit lines with six conductors per phase.



345 kV
Six Single Circuit Towers
(900 ft. Right-of-Way)

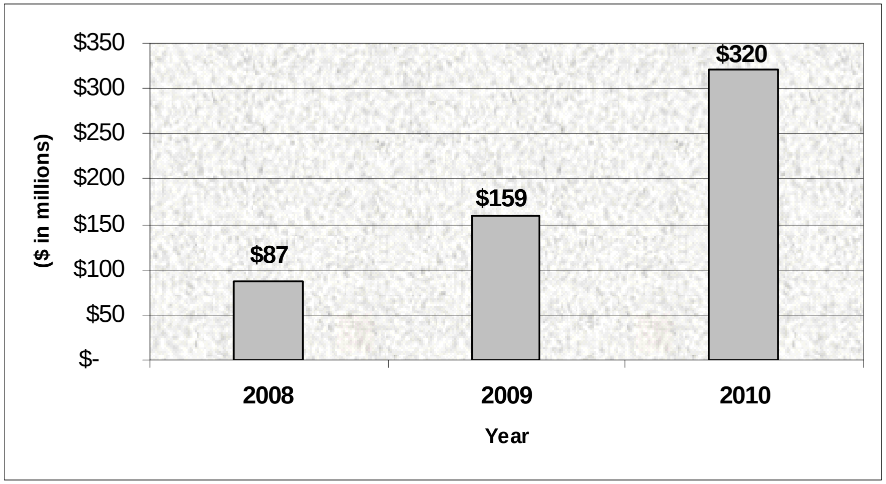
765 kV
One Single Circuit Tower
(200 ft. Right-of-Way)

345 kV
Three Double Circuit Towers
(450 ft. Right-of-Way)

From a siting standpoint, 765-kV is more efficient in terms of economies of scale and right-of-way than lower capacity lines.

Transmission - Investments and Earnings Contributions

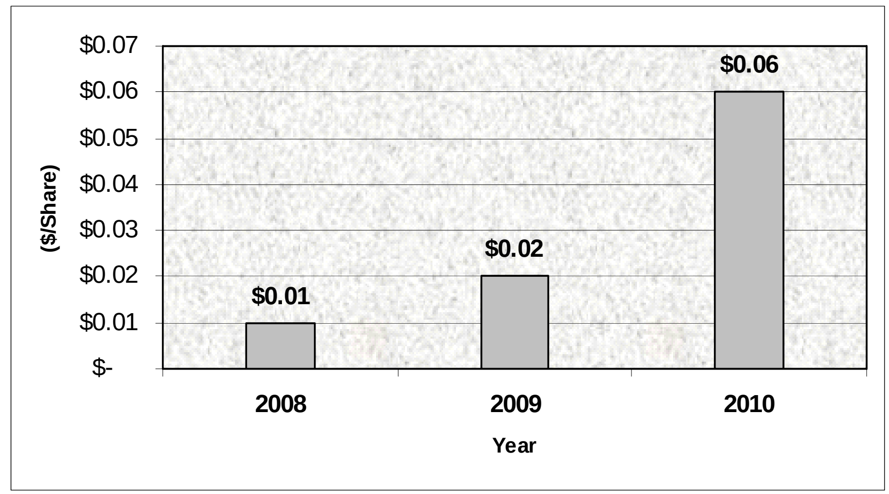
Projected Transmission Capital Spending*



* ETT and PATH joint ventures included in above projection. Amounts represent AEP's 50% share of total transmission joint venture capital expense. These amounts are excluded from AEP's base capital forecast because the joint ventures are not consolidated for financial reporting purposes. AEP will be responsible for funding 40-50% of these amounts with equity contributions, and the remainder will be financed with debt issued by the joint ventures.

Electric Transmission Texas

Projected Transmission EPS Contributions*



* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

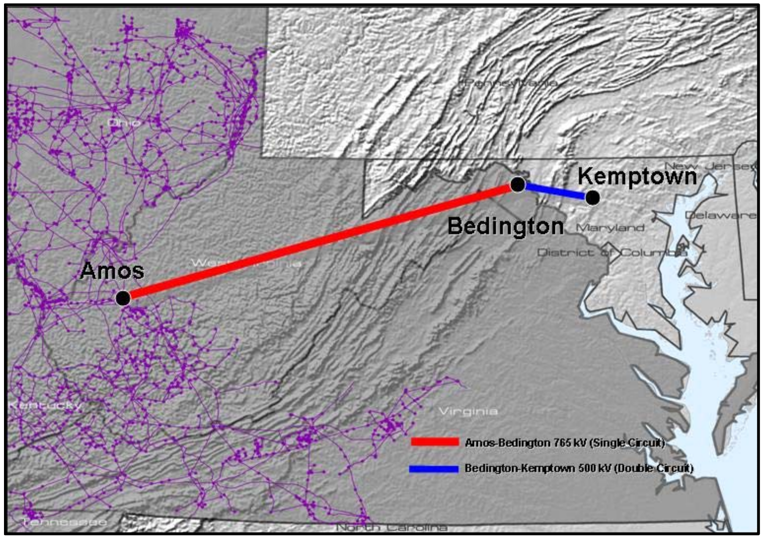
Potomac-Appalachian Transmission Highline

Transmission will provide a near and long term catalyst for growth.

I-765™ Transmission in PJM: PATH

Execution in Action

- *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries -- to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP
    - 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
  - FERC ordered the formula rate mechanism be set for hearing, pending settlement judge procedures
- *Funding Plans/Transaction Structure*
  - AEP and Allegheny share ownership of Amos – Bedington line and contribute equally to this portion of the project through PATH West Virginia Transmission Company, LLC
  - AEP's investment will be held in the AEP Transmission Holding Company LLC subsidiary
- *Key Next Steps*
  - Siting Approval from WV and MD – 2010
  - Targeted Completion – 2012



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

PATH
Potomac-Appalachian Transmission Highline

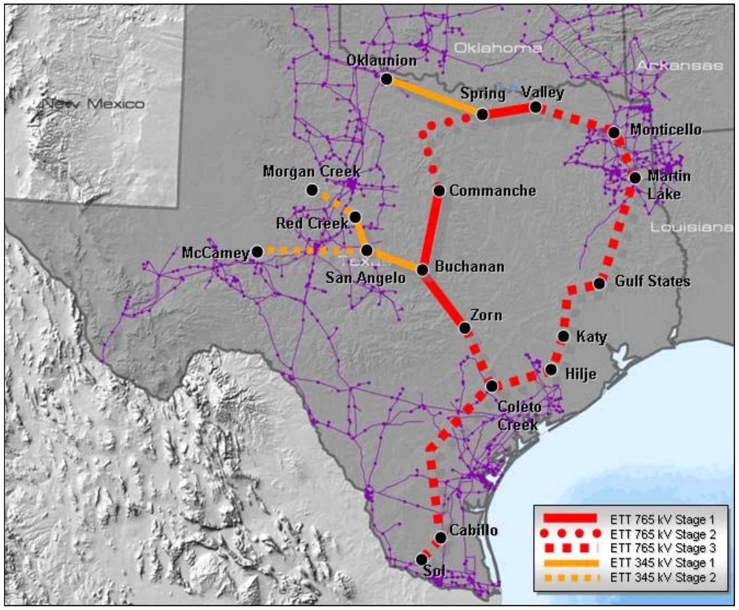
I-765™ Transmission in Texas (ETT)

Electric Transmission Texas Update

- *Transaction Structure*
  - 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
  - ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
  - Services provided by AEP and investment opportunities can be offered by either partner

- *Next Steps*
  - ETT project opportunities to be evaluated on a case by case basis
  - Anticipate offering projects in Q2 2008

- *ETT ERCOT Backbone Proposal*
  - ETT proposal for ERCOT and PUCT to consider CREZ transmission in context of long-term vision for transmission system.
  - Current 5-year planning horizon results in higher ultimate costs, lower system efficiency.
  - Long-term 15-20 year perspective provides better plan, supports development of high voltage backbone at 765-kV.
  - $4.2 billion investment (long-term backbone).*



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

* Before ownership division.

Electric Transmission America (ETA)

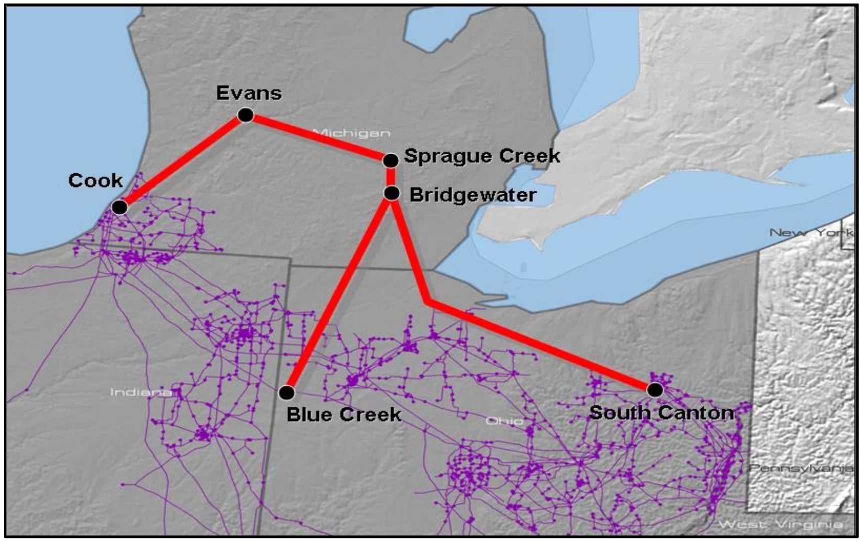
- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.

ETA reflects a natural progression and expansion of AEP's partnership with MidAmerican.

I-765™ Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
  - Study was released Q3 2007
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.6 billion investment (before ownership division)
  - AEP and ITC are in discussions to form a Joint Venture
- *Benefits*
  - Up to 5,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- *Next Steps*
  - Agreement on JV (AEP/ITC) - Summer 2008
  - JV Formation - 2008
  - MISO and PJM Review/Approval - 2009
  - FERC Formula Rate and Cost Allocation Filing - Fall 2009
  - Siting Approval – 2011-2012
  - Estimated Completion –2015-2021



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

I-765^{TM} Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- ***Overview***
  - Sent non-binding Letter of Commitment to SPP to construct 765-kV and 500-kV projects in SPP region consistent with SPP Overlay Study – Summer 2007
  - Updated EHV Overlay Study completed by SPP – March 2008
- ***Benefits***
  - Overall reliability reinforcement with improved voltage support throughout the SPP system
  - Significantly increased transfer capability
  - Provides access to new generation resources, especially renewables
  - Allows for effective interconnections for EHV system development
- ***Next Steps***
  - ETA Partnering Agreements - 2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate and Cost Allocation Filing (postage stamp) – 2009
  - Siting Approval for projects – 2009-2011
  - Estimated Completion (in segments) – 2012-2017

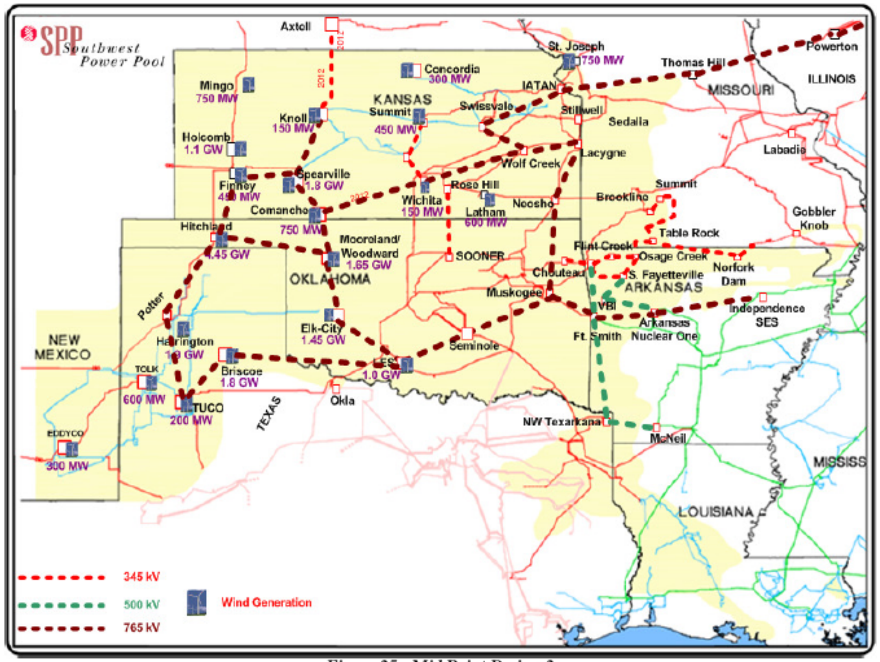


Figure 25: Mid Point Design 2

Total SPP 765-kV Overlay estimated to cost approximately $5 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A reliable and reasonably-priced electric supply is necessary to support the economic well-being of the areas we serve.

Highlights of Bingaman-Specter Proposal

"Low Carbon Economy Act of 2007"

Key Components:

- Start date for greenhouse-gas reductions is 2012
- Goals: 2006 levels by 2020; 1990 levels by 2030
- Includes a safety valve of $12 per metric ton, increasing at an annual rate of 5% above inflation
- Support for allowance allocations
- International action

AEP endorses this proposal because it sets reasonable and achievable reduction targets and includes the AEP-IBEW trade proposal.

Advanced Generation & CO_2

Near Term:

- Chilled Ammonia project at Mountaineer moving to commercial scale at the Northeastern Plant in 2012

$ in millions				
		2008	2009	2010
Mountaineer Chilled Ammonia Project		$30	$39	$0

Long Term Strategy (Post-2010):

- IGCC
- Chilled Ammonia
- Oxy Coal Technology
- Nuclear COL

We are committed to validating and deploying technologies that ensure coal remains a viable resource for AEP and America.

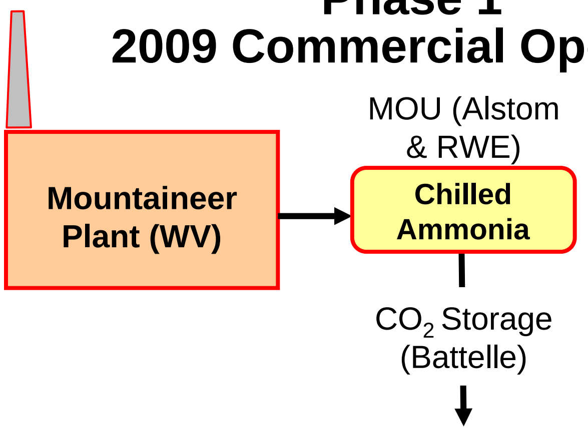
AEP's Carbon Capture & Storage Initiative

In March 2007, AEP announced a major new carbon capture and storage initiative:

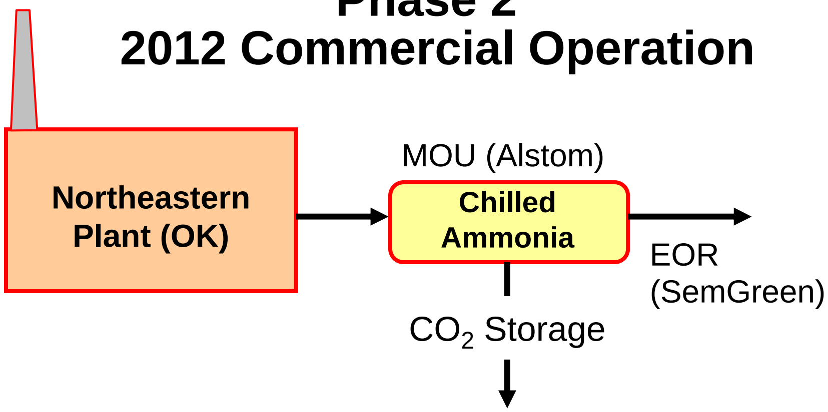
Chilled Ammonia CCS--We will install carbon capture on two coal-fired power plants, the first commercial use of technologies to significantly reduce carbon dioxide emissions from existing plants.

- **The first carbon capture project, at the Mountaineer plant in West Virginia, is expected to complete its product validation phase in 2009.**
- **The second, at the Northeastern plant in Oklahoma, will begin commercial operation in 2012.**

Phase 1
2009 Commercial Operation



Phase 2
2012 Commercial Operation



CO_2 Capture Techniques

Post-Combustion Capture

- Conventional or Advanced Amines, Chilled Ammonia
  - Amine technologies commercially available in other industrial applications
  - Relatively low CO_2 concentration in flue gas – More difficult to capture than other approaches
  - High parasitic demand
    - Conventional Amine ~25-30%, Chilled Ammonia target ~10-15%
  - Amines require **<u>very</u>** clean flue gas

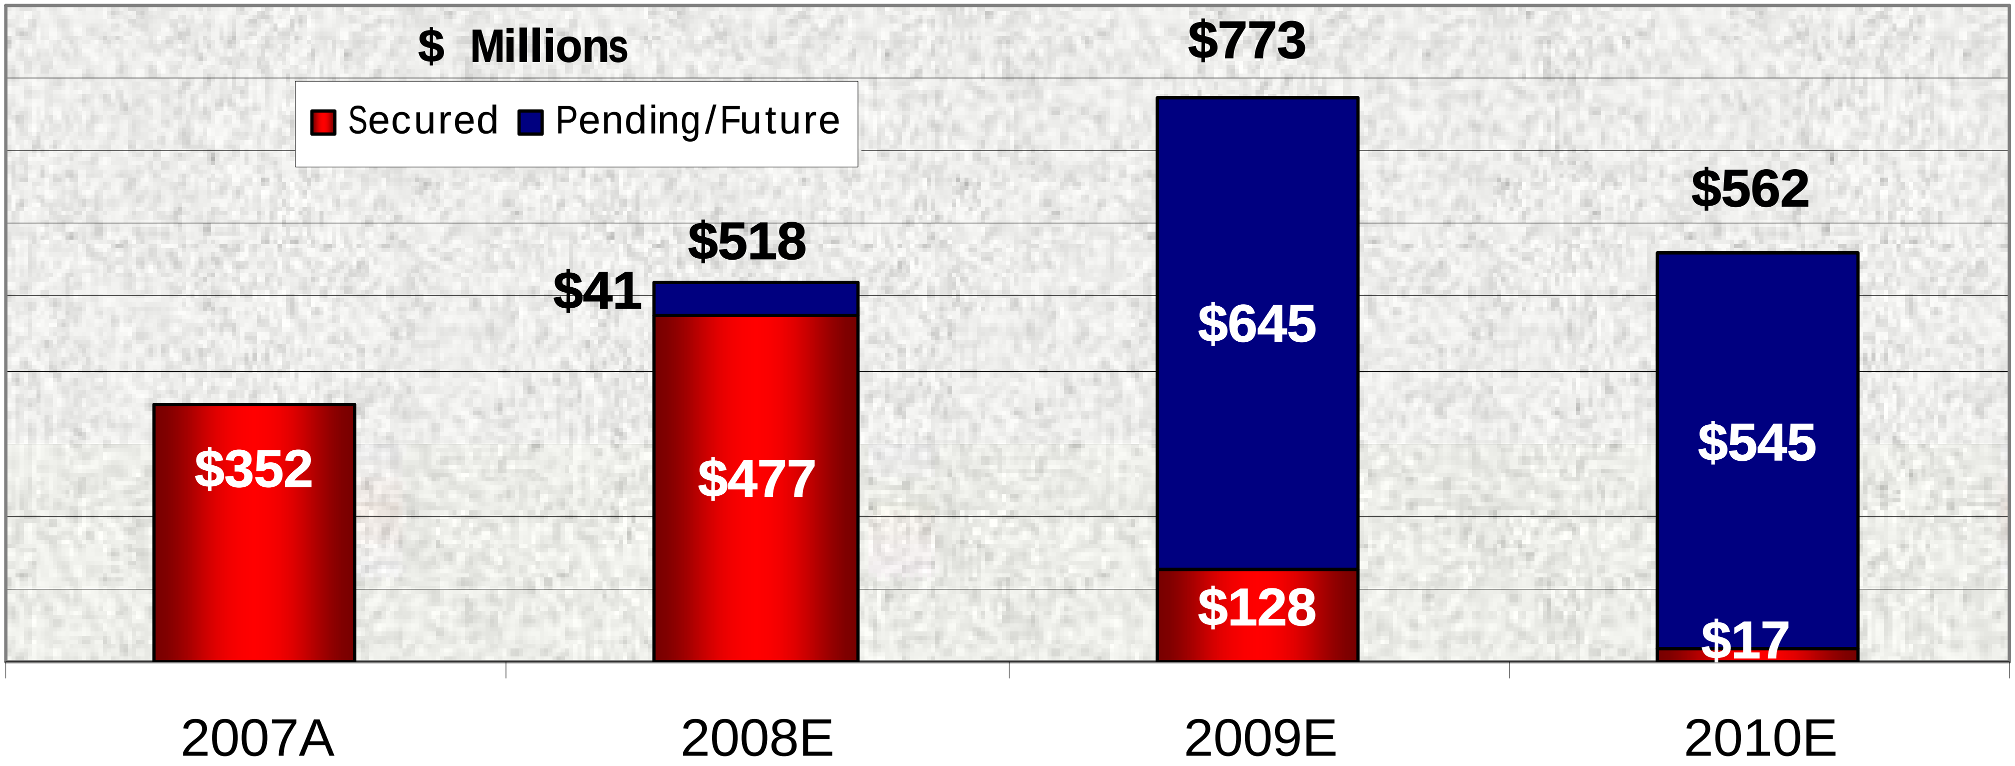
Modified-Combustion Capture

- Oxy-Coal
  - Technology not yet proven at commercial scale
  - Creates stream of very high CO_2 concentration
  - High parasitic demand, >25%

Pre-Combustion Capture

- IGCC with Water-Gas Shift
  - Most of the processes commercially available in other industrial applications
    - Have never been integrated together
  - Turbine modified for H_2-based fuel, which has not yet been proven at commercial scale
  - Creates stream of very high CO_2 concentration
  - Parasitic demand (~20%) for CO_2 capture - lower than amine or oxy-coal

Incremental Rate Relief Assumptions

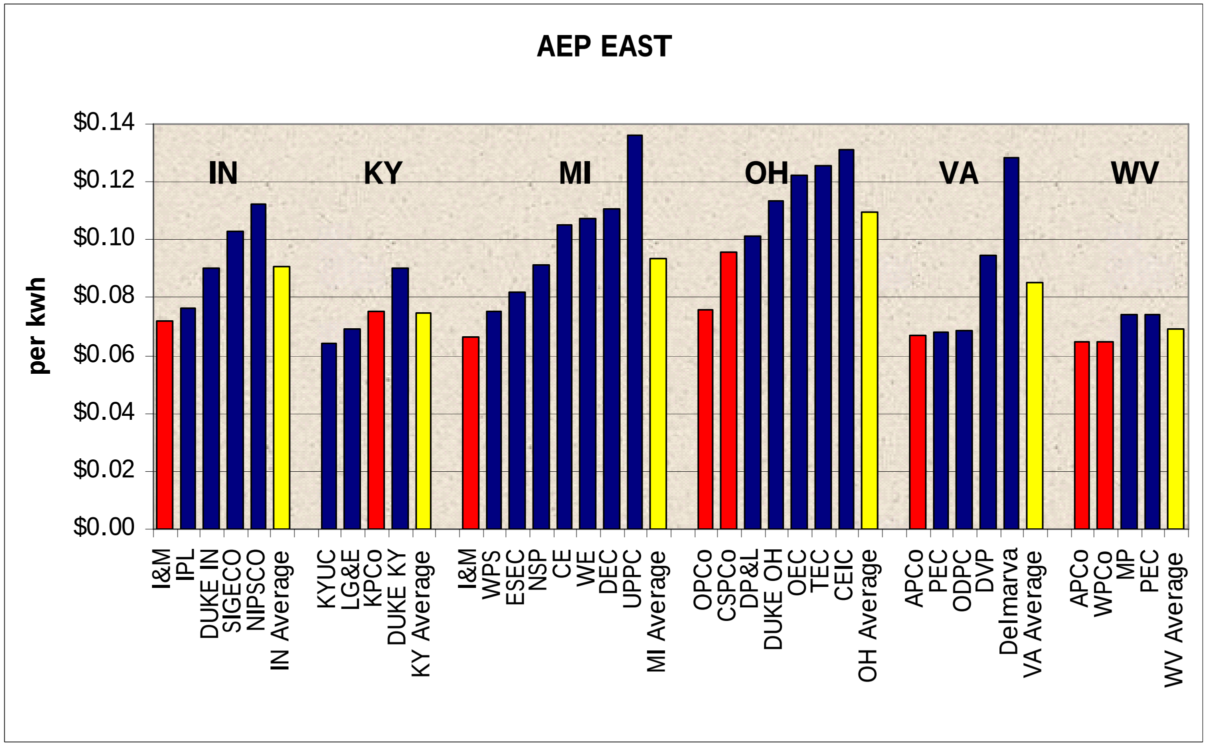


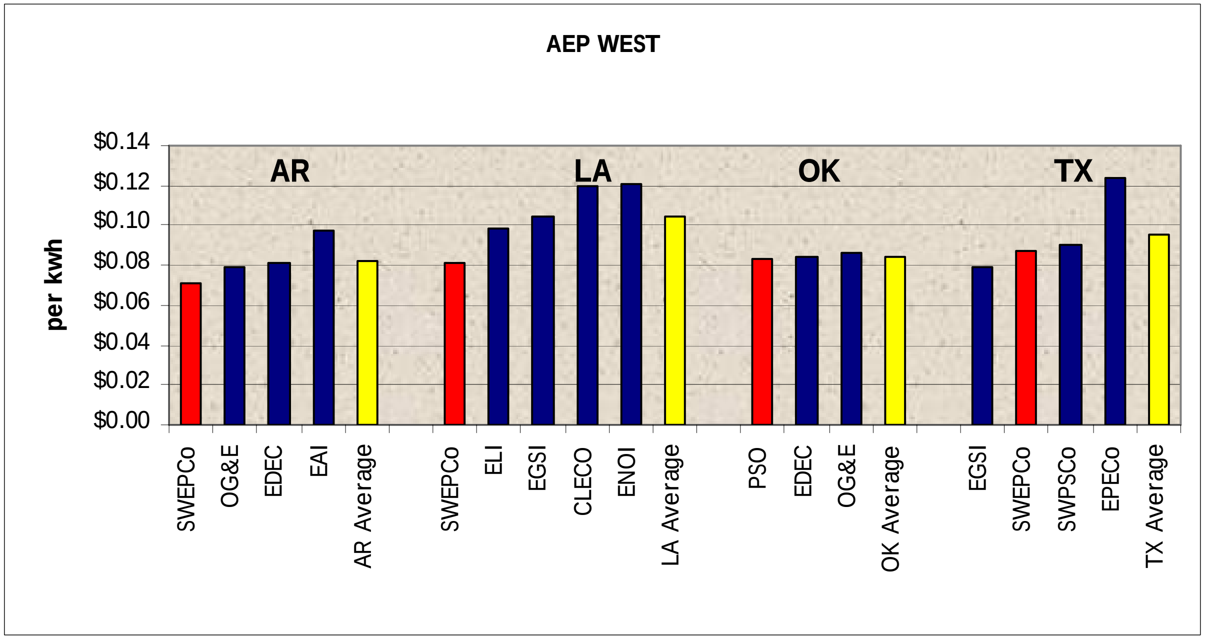
- **92% of 2008 Rate Relief Secured: I&M Depreciation, APCo – WV Surcharge, TCC & TNC General Rate Cases, Ohio RSP (3% & 7%), PSO Peaking Generation & General Rate Case, Ohio 4% Generation Rider and Marginal Loss Recovery, APCo - Virginia Fuel Factor, 2007 TCC/TNC TCRF filings, PSO 2007 Storm Recovery.**

- **2008 Pending: SWEPCo – LA Financial Review, 2008 TCC/TNC TCRF filings, other cases yet to be filed.**

Our goal is to maximize utility company cash flow and returns by minimizing regulatory lag.

AEP Provides Low Cost Electric Service





Residential Average rates for 1,000 kWh - 12 months ended 7/01/2007

Source: Summer 2007 EEI Typical Bills and Average Rates Report

AEP's low cost provider status in most of its jurisdictions will allow AEP's pricing to remain competitive following anticipated rate increases

Page 9377 of 9556

2008 Regulatory Activity Completed

- AEP-Ohio Application for 4% Provision on Generation Rate
- APCo (Virginia) Fuel Factor Filing (including 75%/25% Off-System Sales Sharing)
- PSO Storm Cost Recovery Filing
- New Generation:
    - IGCC Filing in West Virginia - Certificate of Public Convenience and Necessity and approval of a cost recovery mechanism
    - SWEPCo Turk Plant Filing in Louisiana – construction approval

Regulatory Activity Underway

- I&M - Indiana Base Rate Case
- PSO Red Rock Generating Facility Cost Recovery Filing
- SPP OATT Formula Rate Filing
- New Generation:
  - IGCC Filing in Virginia - approval of a cost recovery mechanism
  - IGCC Phase 2 Filings in Ohio - on hold pending resolution of Supreme Court remand to PUCO
  - SWEPCo Turk Plant Filing in Texas
  - SWEPCo Stall Plant Filings in Louisiana and Arkansas

Summary Rate Case Information

I&M Indiana General Rate Case

On January 31, 2008, I&M filed a general base rate case with the Indiana Utility Regulatory Commission (IURC) requesting an increase of $128.5 million ($82.4 million in base revenues and $46.1 million in tracker mechanisms). (Docket #: 43306).

Projected Capital Structure - Company Position (9/30/07)

	% of Capitalization	Cost Rate	Weighted Cost
Long-Term Debt	43.53%	5.98%	2.60%

Regulatory Activity Underway

PSO Red Rock Generating Facility Recovery Filing

- On December 28, 2007, PSO filed an application with the Oklahoma Corporation Commission to defer, amortize and recover costs related to the Red Rock Generating Facility, which was denied construction and recovery pre-approval in October 2007.
- On March 13, 2008, PSO signed a settlement agreement with various parties regarding recovery of costs incurred in the Red Rock project. The agreement provides for recovery from customers of 50% of the costs ($10.5MM). The settlement agreement has not yet been approved by the OCC.

Regulatory Activity Underway

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $140MM. Approximately $10MM of the increase relates to 3rd party and the rest, if approved, would be recovered through retail jurisdictional filings in SWEPCo and PSO, as appropriate.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to February 1, 2008, with rates subject to refund.
- Settlement discussions are currently on-going.

Regulatory Activity Underway

APCo Mountaineer IGCC Filing

Virginia

- Testimony filed with the Virginia State Corporation Commission on July 16, 2007 seeking a prudence determination and approval to recover, beginning in 2009, Virginia's share of the carrying costs associated with the proposed plant.
- We received an order on April 14, 2008, denying our request. We will petition for rehearing.

West Virginia

- Air permit anticipated in the third or fourth quarter of 2008.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.
- In March 2008, the Ohio Supreme Court remanded the original order back to the PUCO, giving the PUCO the opportunity to supplement the record. No refund of Phase I costs was mandated by the Supreme Court in its decision.
- We now await further clarity from the PUCO on the remanded issues as well as the outcome of current legislative discussions in Ohio regarding the post-2008 landscape for generation in Ohio.

Regulatory Activity Underway

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- The PSC issued its order on November 21, 2007, approving construction of the plant.
- Air permit anticipated in the third or fourth quarter of 2008.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The peaking facility has been addressed and the intermediate facility is under review. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- The LPSC issued its order on March 19, 2008, approving construction of the plant.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- Public hearings commenced October 17, 2007. On January 17, 2008, the ALJ recommended the PUCT deny the request. The commissioners have requested another hearing where they can directly cross examine some of the witnesses. The additional hearing is scheduled for May 29-30, 2008.

Regulatory Activity Underway

SWEPCo Stall Plant Filings

Arkansas

- Proceeding is currently suspended pending outcome in Louisiana.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The intermediate facility, known as the Stall Plant and sited in Shreveport, LA, was bifurcated from the original filing and had a procedural schedule established on January 9, 2008.
- Staff and intervenor testimony was completed on February 15, 2008, rebuttal testimony was due February 29, 2008 and hearings were held in April 2008. Staff testimony was favorable.
- Air permit received on March 20, 2008.

Texas

- PUCT order approving plant was issued on March 8, 2007.

Approved Rate Bases and ROEs

Jurisdiction	Rate Base	Approved ROE	Effective Date
APCo - Virginia	$2,022MM	10.00%	10/2/2006

* - 2007 actual amount includes distressed generation purchases of $512 million

Capital investment is funded from cash from operations and debt issuances.

Commitment to Credit Quality

- Maintain adequate liquidity
- $150MM annually in new equity from Dividend Reinvestment and 401(k) plans
- Target 60% maximum consolidated AEP debt/cap ratio on an adjusted basis
- Target utility company capitalization structures:

Company	Target Equity Ratio
APCo	42-44%
CSP	45-47%
I&M	40-42%
KPCo	41-43%
OPCo	44-46%
PSO	43-45%
SWEPCo	43-45%
TCC	40%
TNC	40%

- Target long term dividend payout ratio range of 55-60%
- Maintain adequate coverage ratios to support current credit ratings

We are committed to maintaining our current credit ratings.

Sustainable Business Model

- *Strength and scale in assets & operations*
- *Continued innovation and deployment of leading technology advancements*
- *Sustainable earnings growth through near and long term capital investment opportunities*
- *Comprehensive regulatory strategy focused on maximization of cash flow and return through minimized regulatory lag*
- *Strong dividend yield with respect to peers*
- *Balance sheet and credit profile stability*

AMERICAN ELECTRIC POWER, INC.

Wall Street Analyst Forum – August 16, 2007

ENERGY – EXPERIENCE - HISTORY

AMERICAN ELECTRIC

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Michael G. Morris –
Chairman, President & CEO

Near Term Investor Communication Activities

- September 26, 2007 – Merrill Lynch 2007 Power & Gas Leaders Conference, NYC
- October 4, 2007 – Strategic Direction: Financial Analyst/Investor Conference, NYC
- October 11, 2007 – Dublin Investor Meetings
- October 25, 2007 – 3Q07 Earnings Call

*Note: these activities represent upcoming Mike Morris attended events and are not all encompassing for AEP scheduled/attended events.

Agenda

- AEP Footprint/Strategic Direction
- Transmission Opportunities/Advantages
- Transmission Legislation
- Investment Strategies
- Ongoing Transmission Initiatives & Updates
  - PJM I765 TM
  - Michigan
  - Southwestern Power Pool
  - Electric Transmission Texas LLC

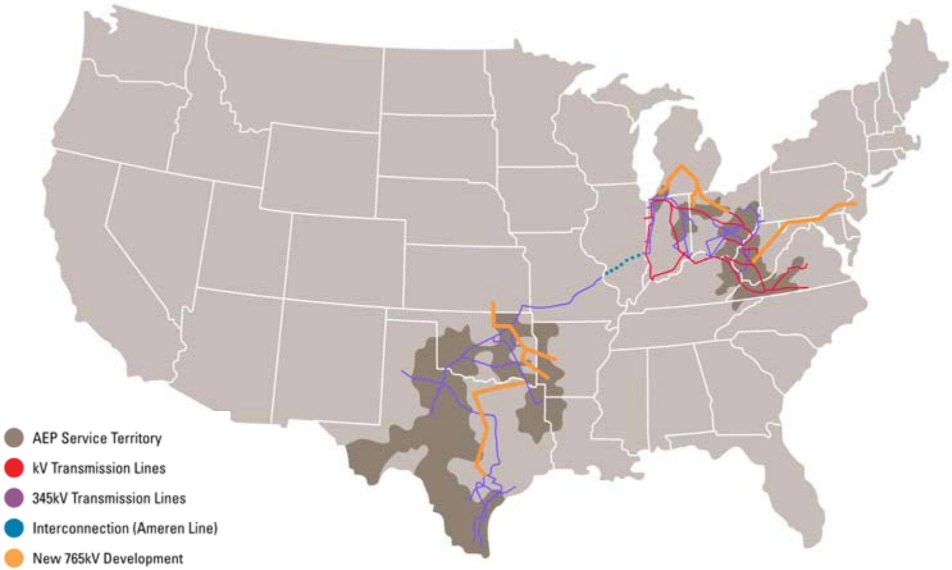
The AEP Footprint

Strength & Scale in Assets & Operations

- 5.1 million customers in 11 states
- Industry-leading size and scale of assets:

Asset	Size	Industry Rank
Domestic Generation	~38,400 MW	#2
Transmission	~39,000 miles	#1
Distribution	~208,000 miles	#1

- Coal & transportation assets:
  - Control over 8,000 railcars
  - Own/lease and operate over 2,600 barges & 51 towboats
  - Coal handling terminal with 20 million tons of capacity



AEP Generation Portfolio				
Coal	Gas	Nuclear	Hydro	Wind
67%	24%	6%	2%	1%

AEP enjoys significant presence throughout the energy value chain

AEP Strategic Direction

Delivering Value to Investors and Cost Effective Service to our Customers

- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- **GROW OUR TRANSMISSION BUSINESS**
- Achieve adequate returns on all assets

Our Core Utility Mission: Bring Reasonably Priced Electric Service To Our Customers, Thereby Strengthening Our Communities And Rewarding Our Investors

Significant Opportunity for Investment

The current U.S. transmission system cannot support the demand of tomorrow's energy supply needs

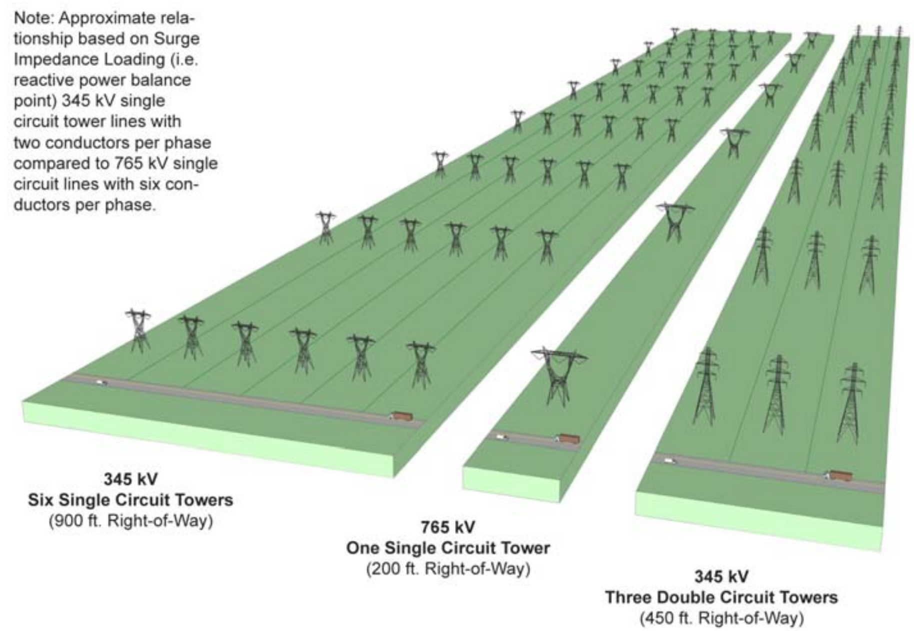
- Investment in transmission has lagged load growth
- Transmission congestion equates to increased costs to customers
- Large-scale wind generation in remote areas requires a high-capacity transmission system for efficient energy movement to load centers

Key Advantages of 765-kV

Advanced Technology

- Advanced six-conductor bundles for higher capacity, lower line losses and reduced noise
- Fiber-optic shield wires for better protection and control
- Wide-area monitoring, control, and remote diagnostics
- Independent-phase operation for improved line performance
- Line design and right-of-way usage for least environmental impact

Environmental Stewardship



765-kV maximizes land use thus providing more capacity in less right of way

Key Legislation Supporting Transmission Growth

Federal & State Support

- **Federal Actions (FERC Order 679):**
  - Return on equity at the high end of the zone of reasonableness
  - Return on CWIP
  - Return on premium for acquired assets
  - Full recovery of construction costs and costs of cancelled or abandoned facilities due to factors beyond the Utility's control
- **State Actions:**
  - Regional planning-supporting role in RTO area
  - Siting-first course of action
  - Wholesale transmission pricing-provides regional benefits
  - Retail cost recovery

AEP supports a national interstate grid - our core transmission strength

AEP Transmission Key Investment Strategies

AEP is well positioned to be a key player in the development of tomorrow's interstate transmission system

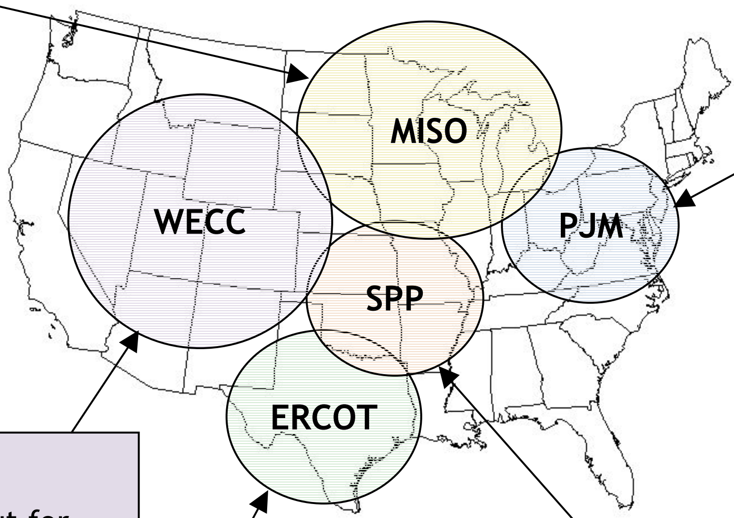
- Leverage our extra-high voltage (EHV) expertise and existing infrastructure
- Maximize optionality for shareholders
- Advocate regulation for interstate transmission
- Collaborate with qualified partners
- Continue our present top-tier performance in safety, health, operations, reliability

Transmission Investment Opportunities

Investigation of opportunities needs to be mindful of regional drivers

MISO

ITC 765-kV project may be test case for cross-border cost recovery and seams issues



PJM

Congestion will be reduced and reliability will be increased

WESTERN STATES

Opportunity for 765-kV build-out for long-haul transportation from remote resources to load

ERCOT

Load growth and access to wind resources driving transmission investment

SPP

Regional rate design under development to encourage investment and accommodate new generation sources

Transmission ~ $9-$15 Billion Opportunity

Creating a business model to manage capital requirements for enhanced returns with partners

Potential Opportunities

~ $3 Billion I765™ Project in PJM
~ $2 Billion 765-kV study in Michigan w/ ITC
~ $3 Billion Project filed with SPP
~ $1-7 Billion in ERCOT via Electric Transmission Texas, LLC (ETT)

1) ~$9-$15 billion investment opportunity not included in current capital guidance forecasts

2) Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

Assumptions

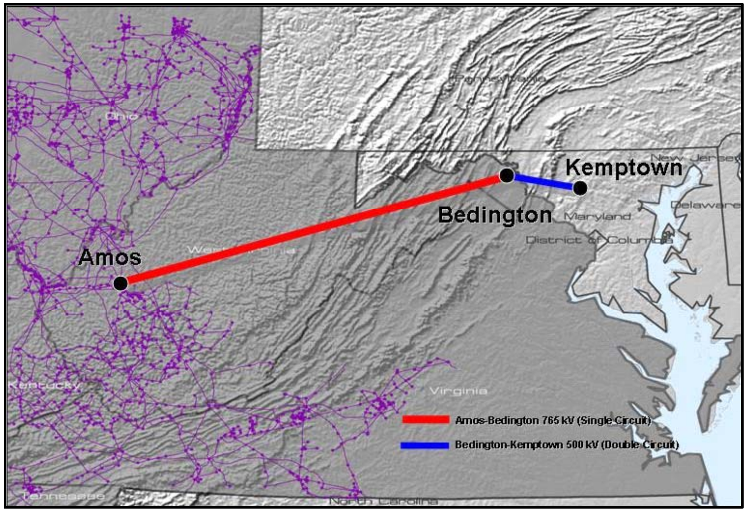
Estimated Investment Opportunity	$9 - $15 Billion
Ownership Structure w/ Partner	50% / 50%
Debt / Equity Ratio	50% debt / 50% equity
Return on Equity	11.00% - 13.00%
Potential EPS Impact (based on 396 MM shares)	$1.00+

Building the next US interstate system for enhanced reliability and market efficiency

PJM I-765$_{TM}$

Execution in Action

- **_Overview_**
  - $3 billion investment (before ownership division)
  - 550 line miles
  - 5000MW improved transfer capability
  - To be completed in 2 phases (1st phase PJM approved)

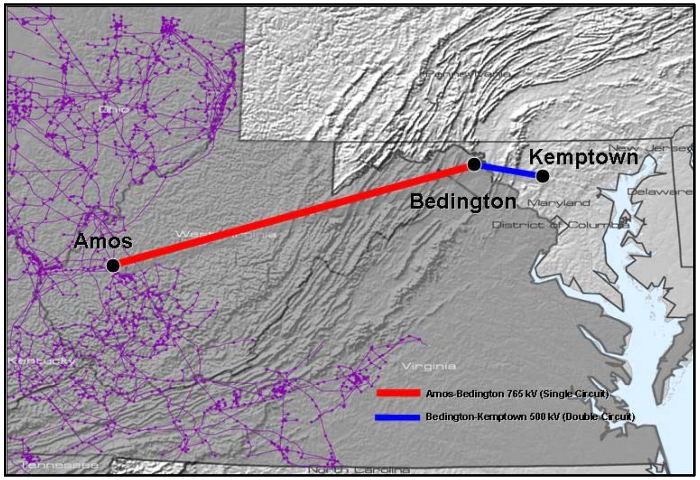


- **_Benefits_**
  - Improves eastern grid reliability
  - Improves market efficiency with reduced congestion
  - Reduces consumer cost $1B (est.) annually in the east
  - Reduces network line losses by 280 MW at peak
  - Provides AEP rate base opportunity for transmission investment with ROE upside & other FERC incentives
  - Provides off-system sales and siting opportunity for AEP and other low-cost mid-western generation
- **_Phase I Progress to Date_**
  - AEP and Allegheny entered into a MOU to construct the 290 mile West Virginia-Maryland line
  - Total estimated cost of $1.8 billion
  - AEP portion approximately $600 million
  - Expected completion 2012

PJM I-765$_{TM}$ Phase I cont'd

Execution in Action

- **_Funding Plans/Transaction Structure_**
  - Forming a joint venture with Allegheny Energy for 250 miles of the proposed 550 mile project
  - JV portion of the I-765$_{TM}$ Interstate Project approved by PJM in its Regional Transmission Expansion Plan in June 2007
  - Equity – 50% AEP / 50% Allegheny
  - AEP's 50% investment will be held at the AEP Transmission Holding Company LLC subsidiary
  - Operations to commence in the second half of 2007
  - I-765$_{TM}$ Interstate Project included in the DOE's draft National Interest Electric Transmission Corridor issued in April 2007



- **_Key Regulatory Activity Completed_**
  - FERC declaratory order approved July 2006
  - PJM approved plan June 2007

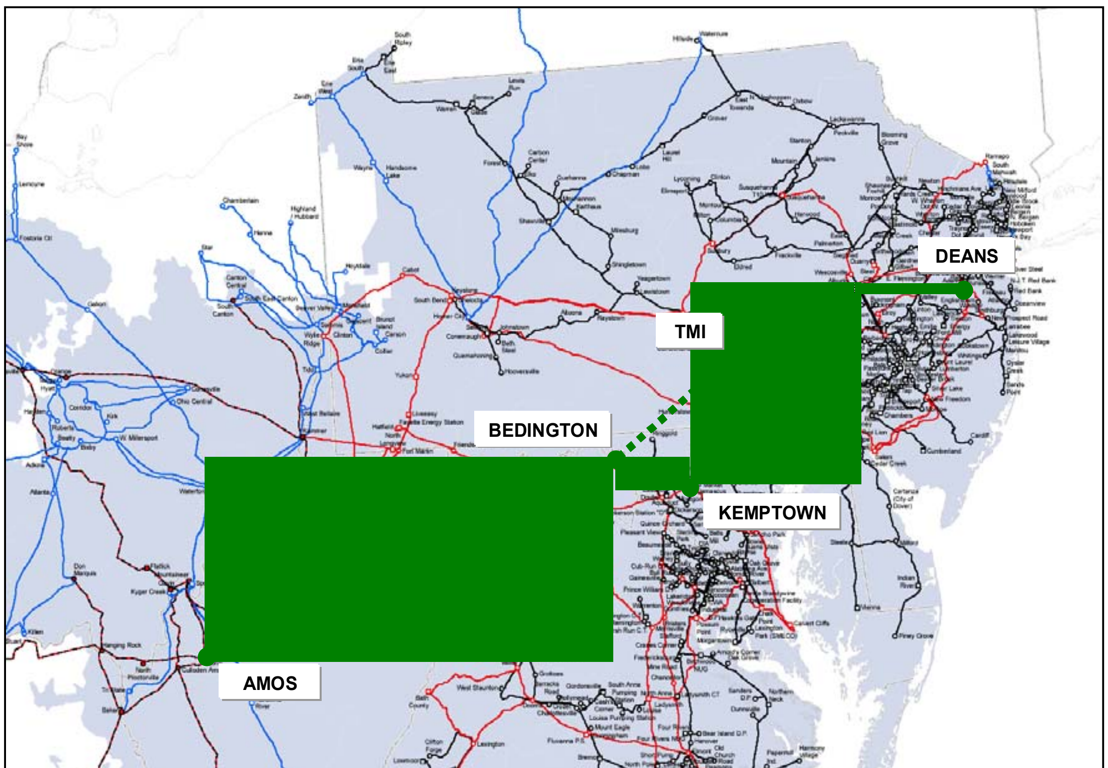
- **_Key Next Steps_**
  - Complete JV negotiations – Fall 2007
  - Complete FERC Filing – Fall 2007
    - *Pursuing new project FERC incentives: cash return on CWIP, higher ROE, recovery of pre-commercial operation costs and recovery of abandonment costs.*
  - Siting Approved – Fall 2009
  - Completion – Fall 2012

AEP AMERICAN

PJM I-765™ Phase II (Bedington-Deans)

Second phase of original AEP 550-mile I-765 proposal

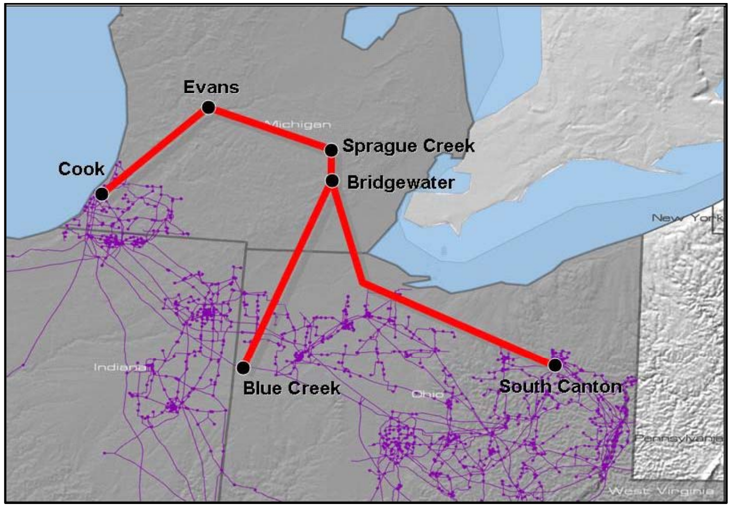
- Approximately 250 miles from West Virginia-Maryland border to Public Service Electric & Gas Deans Station in New Jersey.
- Currently under consideration by PJM as part of Regional Transmission Expansion Plan (RTEP).
- Based on PJM RTEP approval, AEP will seek a suitable business partner (JV partner) to complete the second leg of the original proposal.



765-kV in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- ***Overview***
  - Agreement with ITC Transmission for 765-kV study
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.0 billion investment (before ownership division)



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

- ***Benefits***
  - 3,000 MW improved transfer capability
  - Reduces network line losses by 250 MW

- ***Next Steps***
  - PJM/MISO filing – Summer 2007
  - Release of study results – Fall 2007
  - JV formation – Fall 2007
  - PJM.MISO approval - Summer 2008
  - FERC Filing - Fall 2008
  - Siting approval – Summer 2010
  - Estimated completion – Summer 2013

KPSC Case No. 2011-00401

Page 9407 of 9556

765-kV in SPP

Significant opportunity for 765-kV transmission in SPP

Overview

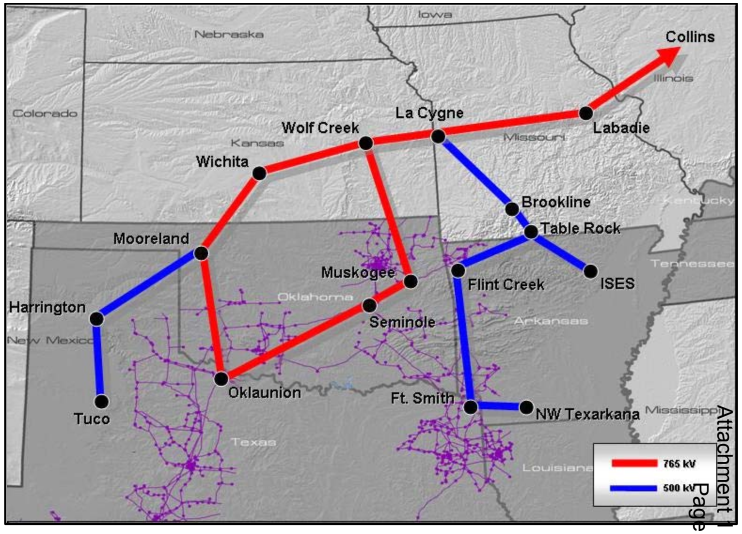
- July 2006 AEP submitted conceptual project for six 765-kV lines
- Proposed 765-kV Kansas / Oklahoma / Arkansas connecting to MISO/PJM
- 610 miles from Kansas to Arkansas
- $3.0 billion investment (before ownership division)
- Proposed 2012-2017 construction period
- SPP proposes 765-kV in Texas / Oklahoma / Kansas / Missouri connecting to MISO/PJM
- SPP also proposes 500-kV in Texas / Oklahoma / Arkansas / Missouri

Benefits

- 4,000 MVA capability

Next Steps

- Study disclosure – Fall 2007
- JV formation (Partner-TBD) – Fall 2007
- SPP RTO/BOD EHV Overlay approval – Summer 2009
- SPP RTO FERC Filing – Fall 2009
- Siting approval – Fall 2011
- Estimated completion – Summer 2017



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AMERICAN ELECTRIC POWER: ENERGY – EXPERIENCE - HISTORY

KPSC Case No. 2011-00401

ETT Status Update

ETT: Delivering Power for Texas' Future

- ***Transaction Structure***
  - 50/50 joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC.
  - ETT capital structure is 60% debt / 40% equity (PUCT requirement).
  - Executive manager provided by AEP; business manager provided by MidAmerican.
  - Investment opportunities can be offered by either partner and accepted or rejected by ETT.

- ***Transaction Status***
  - Formation documents finalized and Participation Agreement signed Jan. 9, 2007.
  - Texas regulatory filing on Jan. 22, 2007.
    - Requested utility status, transfer of initial assets, establishment of TCOS transmission recovery mechanism.
    - Hearings conducted July 16-17, 2007, commission order expected in September 2007.
  - FERC approval for asset transfer received April 20, 2007.
  - Closing deadline of Nov. 1, 2007 can be extended by mutual agreement.

Benefits & Attraction of Texas Transco JV

JV Benefits	ERCOT Attraction

- Opportunity to grow ERCOT interest in a timely, resource-efficient manner
- Maximization of asset value
- Formation of strategic relationship that could permit growth beyond current footprint

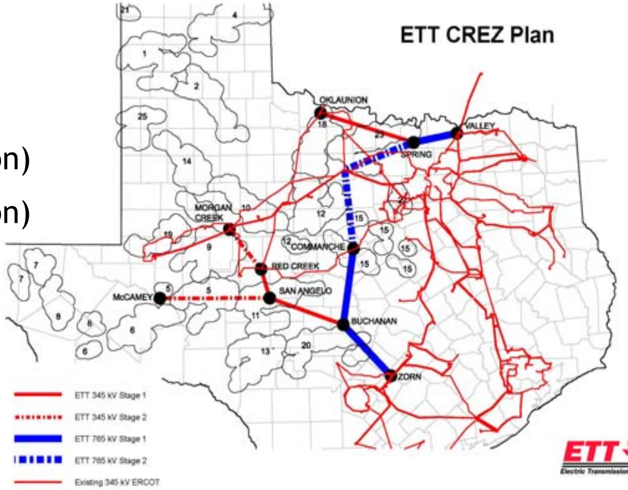
- Growing electric demand
- State's commitment to:
  - Wind generation
  - Promotion of merchant generation
  - Relief of congestion
  - Facilitation of transmission planning in support of the Texas competitive market

AEP is uniquely positioned to develop substantial transmission to capture the benefits of load growth

CREZ & Backbone Opportunities

Harnessing the Wind: Competitive Renewable Energy Zones offer unique opportunities to showcase ETT

- **ETT CREZ Overview**
  - Strengthen ERCOT grid to collect and deliver wind generation to load
  - Build transmission in the most cost effective manner, addressing:
    - Future generation development
    - Load growth pockets
    - Market efficiency (reduce congestion)
    - Competitive wholesale markets
    - Economic growth
  - $1.5 billion investment Phase 1 – 2012 (before ownership division)
  - $1.5 billion investment Phase 2 – 2015 (before ownership division)



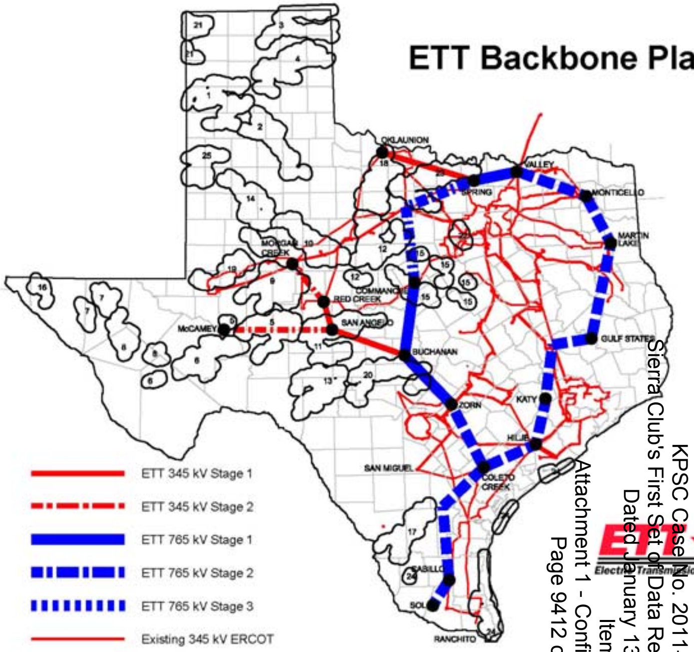
- **CREZ Approval Stages as outlined by the PUCT**
  - Stage 1 – Final order designating power regions – August 2007
  - Stage 2 – CREZ Transmission Optimization Study – January 2008
  - Stage 3 – PUCT selection of transmission construction designees – February 2008
  - Stage 4 – CCN development and submission – February 2009
  - Stage 5 – CCN approval – August 2009
  - Stage 6 – Construction (TBD)

CREZ & Backbone Opportunities - cont'd

Harnessing the Wind: Competitive Renewable Energy Zones offer unique opportunities to showcase ETT

ETT ERCOT Backbone Proposal

- ETT proposal for ERCOT and PUCT to consider CREZ transmission in context of long-term vision for transmission system.
- Current 5-year planning horizon results in higher ultimate costs, lower system efficiency.
- Long-term 15-20 year perspective provides better plan, supports development of high voltage backbone at 765-kV.
- $4.2 billion investment (long-term backbone).



Summary

The AEP Advantage: Proven Experience

- **AEP will continue to:**
  - Support the development of a federally regulated (FERC) high voltage, interstate transmission grid, which will:
    - Improve reliability and efficiency of interstate transmission
    - Enhance market competition, and optimal economic dispatch
    - Reduce the need for additional generation across an expanded market area.
  - Work with partners to accelerate development opportunities and provide shareholder value.
  - Engage regulators to ensure rapid deployment of appropriate technological solutions and associated cost recovery.

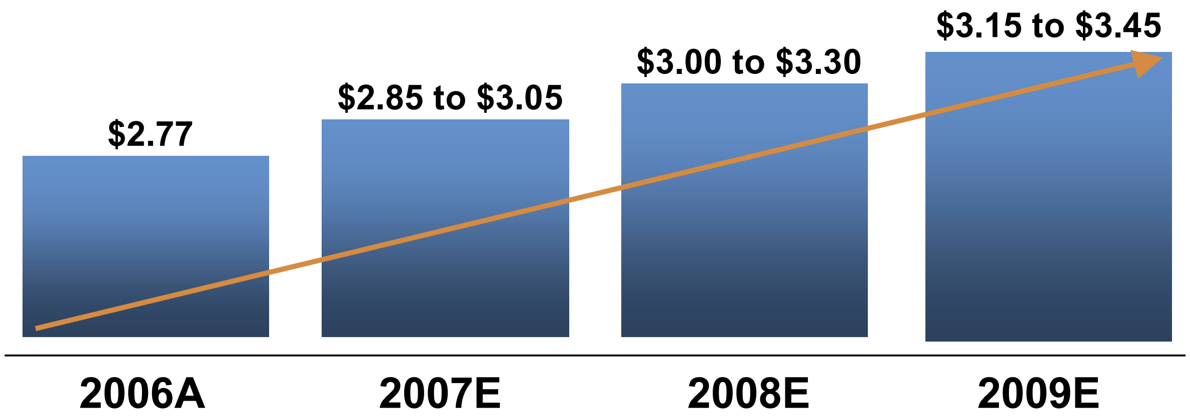
Questions

AEP AMERICAN®

Appendix

Long Range Performance - Consistent and Predictable Growth

2007, 2008 & 2009 Ongoing Earnings Guidance Ranges: 5-7% Annual Growth



- Continued disciplined investment in existing utility operations:
  - Reliability
  - Environmental
  - New Generation & Distribution Infrastructure
- Investment in new transmission opportunities
- New investment coupled with rate recovery
- Continued cost control
- Timely Rate Relief
- Maintain Credit Ratings
  - BBB/Baa2/BBB

Future Earnings Growth Driven by Native Load Growth and Substantial Utility Investment Opportunity Focused On Regulated Operations

Summary of 5-7% Long-Range Growth Components

Energy sales growth of 1.5%

Rate base investment

- Generation plant purchases & build
- Transmission – interstate & intrastate
- Distribution
- Reliability

Transmission company

Commercial operations

Regulatory strategy

- Achieve timely returns
- Seek cash returns on investment during construction
- Create & secure innovative rate plans
  - Pursue post-2008 solution in Ohio
  - Expand use of trackers
  - Formula rates

New Generation and Transmission Projects Largely Reflect Upside to the Long-Range Earnings Growth Targets of 5-7%

Utility Investment Drives Growth

Capital Investment Forecast (2007-2009)

($ in millions)	2007	2008	2009	Total (2007-09)
Environmental	$935	$521	$301	**$1,757**
New Generation - Purchase	$118	$0	$0	**$528** *
New Generation - Build	$474	$485	$573	**$1,532**
Nuclear	$50	$57	$60	**$167**
Generation	$456	$417	$327	**$1,200**
Transmission	$496	$521	$583	**$1,600**
Distribution	$848	$915	$1,016	**$2,779**
Corporate	$165	$110	$114	**$389**
Total Capex	**$3,542**	**$3,026**	**$2,974**	**$9,952**

Add: Lawrenceburg Plant Purchase	$325
Add: Dresden Plant Purchase	$85
2007 Including Lawrenceburg & Dresden	**$3,952**

Note: Excludes AFUDC and recently announced CO_2 and transmission projects

* Includes Lawrenceburg purchase of $325MM and Dresden purchase of $85MMin 2007

Growth investment to be funded by cash from operations via rate relief and debt issuances

At the conclusion of our current environmental retrofit program, over 47% of our coal-fired generation fleet will be equipped with SCRs and over 50% will be scrubbed (FGD). AEP's total coal fleet capacity = 24,710 megawatts*

*Excludes AEP's 44% ownership in OVEC (980 MWs of coal-fired capacity)

Purchased Generation

Waterford

821 MW combined-cycle gas plant
- $220MM purchase price
- Columbus Southern Power completed purchase on Sept. 28, 2005
- $268/kW

Ceredo

505 MW simple-cycle gas plant
- $100MM purchase price
- APCo completed purchase on Dec. 15, 2005
- $198/kW

2,946 MW of gas-fired generation added since 2005

Darby

- 480 MW simple-cycle gas plant
- $102MM purchase price
- Columbus Southern Power completed purchase on April 25, 2007
- $227/kW

Lawrenceburg

- 1140 MW combined-cycle gas plant
- $325MM purchase price
- AEG completed purchase on May 16, 2007
- $295/kW

Additional gas-fired generation allows us to meet the growing needs of our customers and provides the company with greater fuel flexibility

New Generation Facilities

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Dat (Projected)
SWEPCo	Mattison	Arkansas	$130 MM	Gas	Simple-cycle	340 (1)	2007
PSO	Southwestern	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
AEG	Dresden	Ohio	$348-406 MM (2)	Gas	Combined-cycle	580	2010
SWEPCo	Stall	Louisiana	$300 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.3 B (3)	Coal	Ultra-supercritical	600 (3)	2011
PSO	Red Rock	Oklahoma	$1.8 B (4)	Coal	Ultra-supercritical	900 (4)	2012
APCo	Mountaineer	West Virginia	$2.23 B	Coal	IGCC	630	2012
CSP/OP	Great Bend	Ohio	Under Review (5)	Coal	IGCC	630	2017

(1) 150MW were declared in commercial operation on July 12, 2007.
(2) We are currently developing contracts and estimates to complete the project. It is anticipated that the unit can be completed between $600 to $700 per kW using an "all-in" cost basis
(3) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment.
(4) PSO will own 50%, or 450 megawatts, totaling approximately $900MM in capital investment.
(5) FEED (front-end engineering and design) study with GE/Bechtel is complete. Cost estimates are not yet filed with the PUCO due to the pending appeals to the Supreme Court of Ohio resulting from the PUCO's April 10, 2006 Opinion and Order.

AEP is meeting the growing electricity needs of customers through the pursuit of new economic generation facilities

Investing In IGCC

Generation Technology Comparative Statistics

US2006$	Eastern Bituminous		NGCC
	USC	IGCC	
Nominal Capacity (MW)	618	629	530
Capacity Factor (%)	85%	85%	25%
Total Plant Cost (EPC + Owner's Cost) ($/kW)	$2,152	$2,717	$572
Production Cost ($/MWh)	$22	$22	$45
Cost of Electricity, without CO_2 Capture ($/MWh)	$72	$83	$87
Estimated Cost of Electricity, with 90% CO_2 Capture ($/MWh)	$118	$108	$135

Source: Results of AEP analysis based on EPRI studies.

- Total Plant Cost (Overnight EPC 2006$s) includes the cost to engineer, procure and construct plant and owner's direct costs.
- Assumes Northern Appalachian coal price of $2.25/mmBtu for USC and IGCC and natural gas price of $6.00/mmBtu for NGCC.
- Production cost includes fuel cost plus variable operations and maintenance (VOM) cost.
- Cost of electricity represents first year estimates only in 2006$ and are based on total plant cost plus generic cost estimates for AFUDC, emission credits, infrastructure, interconnections, transmission lines and upgrades.
- Cost of electricity with CO_2 capture provides pressurized CO_2 at the fence line and does not include transportation, storage and monitoring costs.

IGCC technology is strategic to keeping coal in the money

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A reliable and reasonably-priced electric supply is necessary to support the economic well-being of the areas we serve

Highlights of Bingaman-Specter Proposal

"Low Carbon Economy Act of 2007"

Key Components:

- Start date for greenhouse-gas reductions is 2012
- Goals: 2006 levels by 2020; 1990 levels by 2030
- Includes a safety valve of $12 per metric ton, increasing at an annual rate of 5% above inflation
- Support for allowance allocations
- International action

AEP endorses this proposal because it sets reasonable and achievable reduction targets and includes the AEP-IBEW trade proposal

AEP's Long-term CO_2 Reduction Commitment

Existing Programs

- Renewables
  - 800 MWs of Wind
  - 300 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

New Program Additions

Incremental Reduction quantity: 5MM tons/yr

Timing: To take effect/receive credits by 2011

Methods

- +1000 MWs of Wind PPAs – 2MM tons/yr
- Domestic Offsets (methane) – 2MM tons/yr (e.g., livestoc methane capture deal of 0.6MM tons/yr)
- Forestry – Tripling annual investment to increase to 0.5M tons/yr by 2015
- Fleet Vehicle/Aviation Offsets – 0.2MM tons/yr
- Additional actions to include DSM and end use energy efficiency, biomass and power plant efficiency – 0.2MM tons/yr

New Technology Additions

Commercial solutions for existing fleet

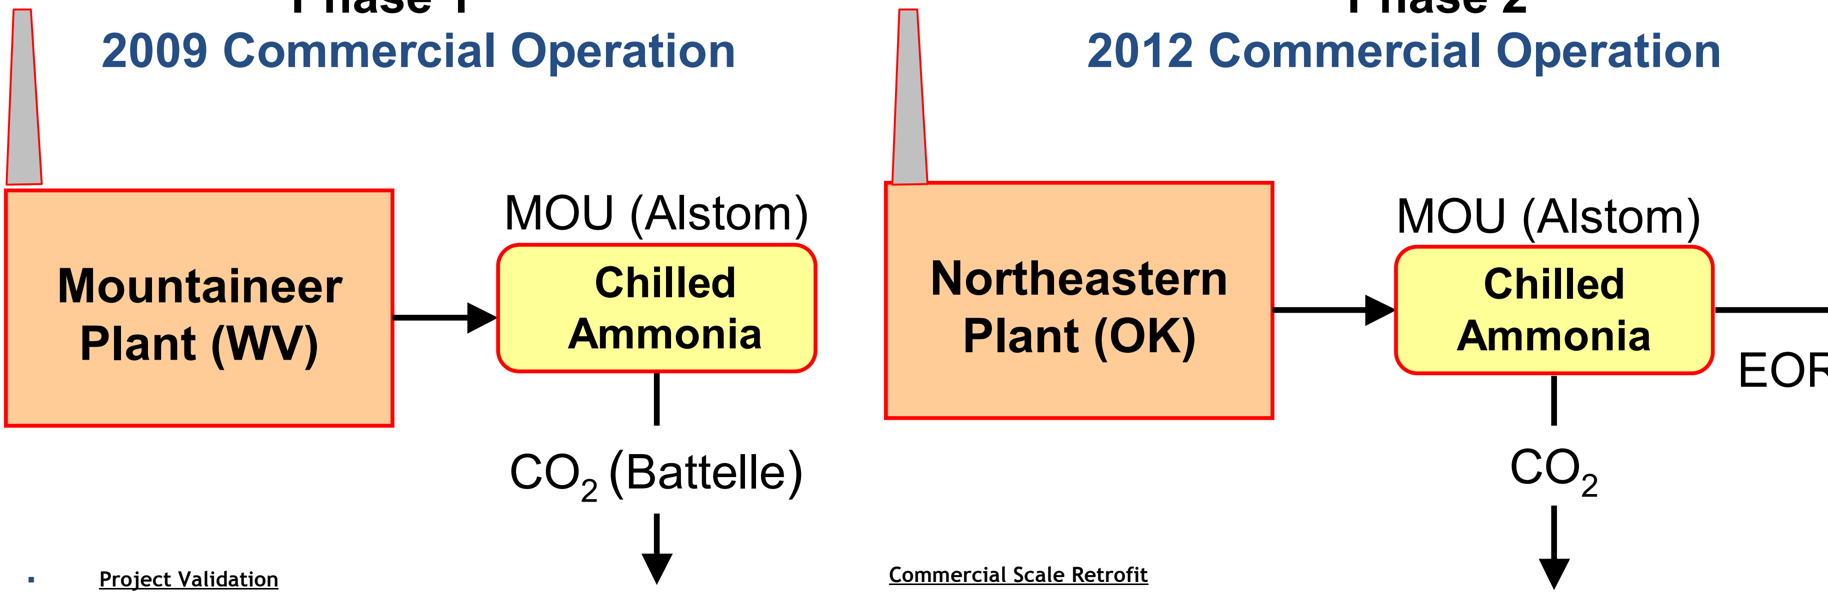
- Chilled Ammonia
- Oxy-Coal

AEP is committed to a 5mm ton/yr reduction in CO2 emissions which offsets approx half of the emissions projected from new generation projects previously announced

Chilled Ammonia Technology Program

Phase 1
2009 Commercial Operation

Phase 2
2012 Commercial Operation



- **Project Validation**
- 20 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, under construction at WE Energies)
- 100,000 – 300,000 tonnes CO_2 per year
- In operation 1Q 2009
- Approximate total cost $50 – $80M
- Using Alstom "Chilled Ammonia" Technology
- Located at the AEP Mountaineer Plant in WV
- CO_2 for geologic storage

Commercial Scale Retrofit

- ~ 200 - 300 MW_e scale (megawatt electric)
- ~ 600 MW_t scale (megawatt thermal)
- ~1.5MM tonnes CO_2 per year
- In operation late 2011
- Approx. capital $250 – $300M ($CO_2$ capture & compression)
- Approx. O&M cost $12M per year
- Energy penalty ~ 35 – 50 MW steam, 25 – 30 MW for CO_2 compression
- Retrofit Wet FGD Required: ~$225 – $300M
- Located at AEP's Northeastern Plant Unit 3 or 4 in Oklahoma
- CO_2 for Enhanced Oil Recovery (EOR)

Post-combustion carbon solution provides pure CO2 stream for capture

Oxy-Coal CO_2 Capture & Storage Project

Pilot Scale Demonstration

10 MW_e scale

Teamed with B&W at its Alliance Research Center and 16 other utilities

Demo complete 3Q 2007

AEP funding of $50k

Commercial Scale Retrofit

Retrofit on existing AEP sub-critical unit (several available)

150 – 230 MW_e scale retrofit

4,000 – 5,000 tons CO_2 per day

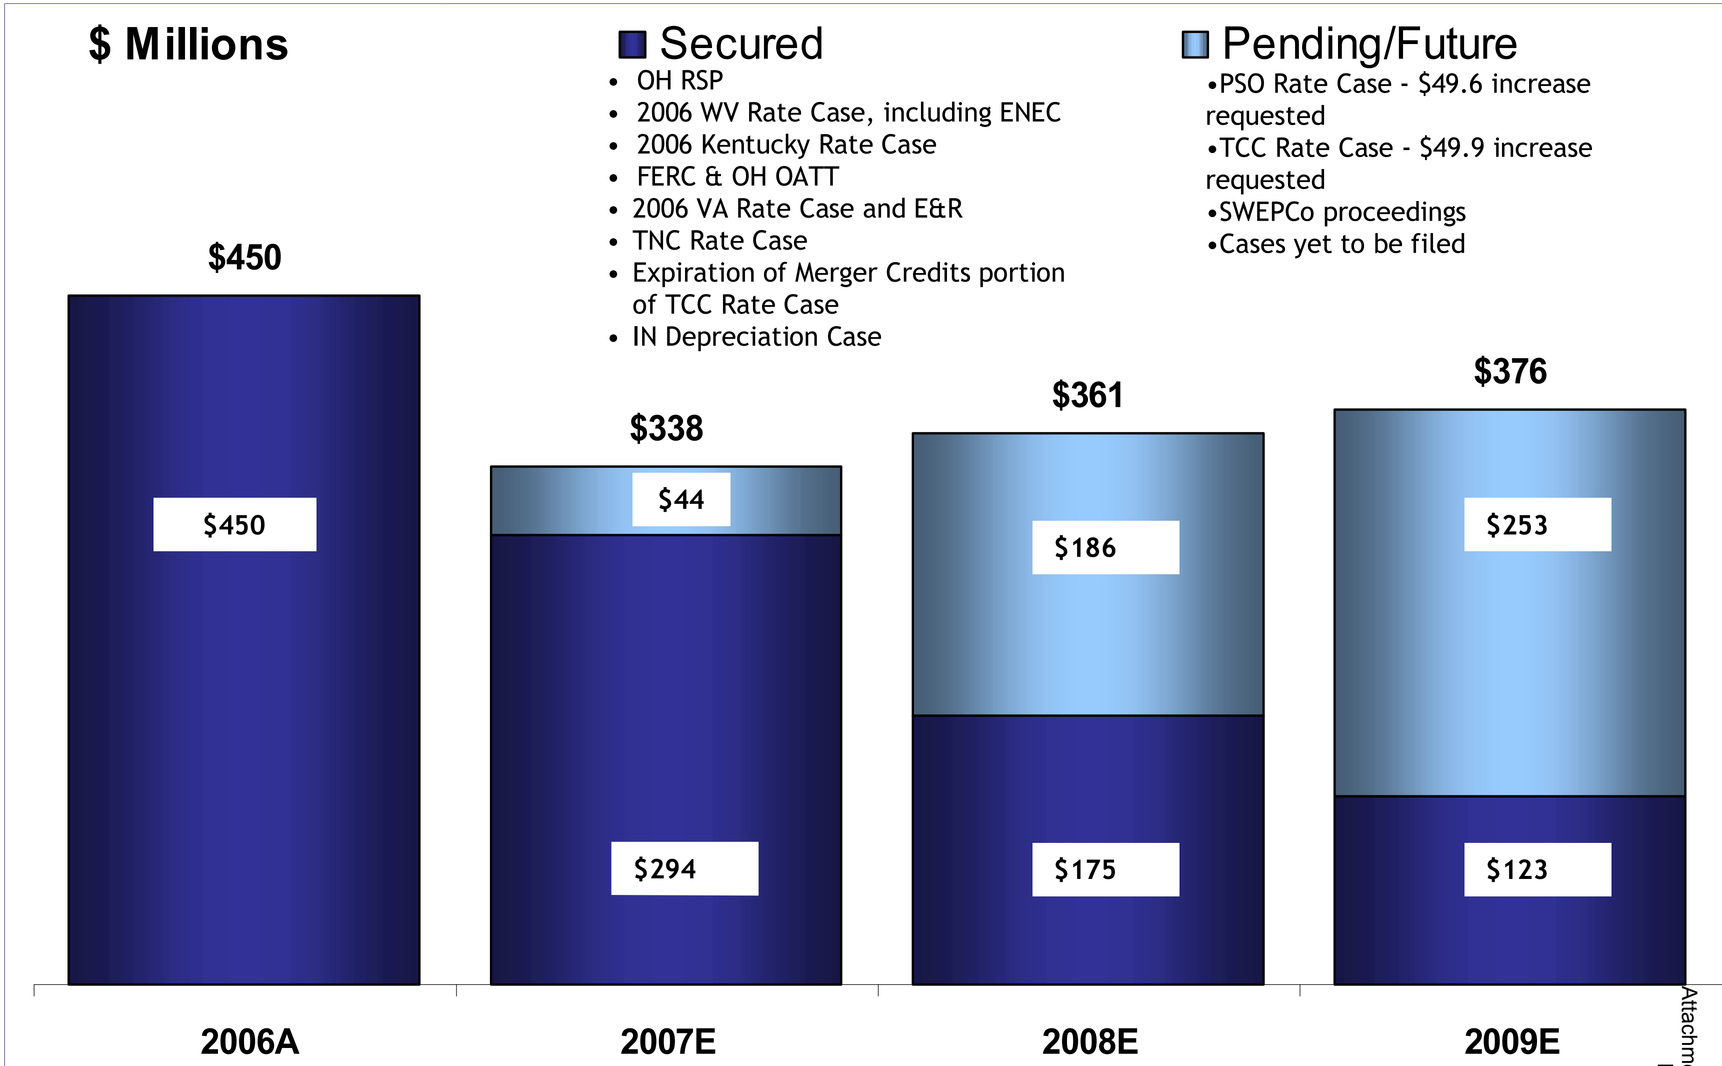
Team with B&W

AEP funding of ~ $1.5M for feasibility study

Feasibility study to be completed in late 2007/early 2008

Combustion conversion technology for existing coal fleet - longer lead time with enhanced viability and long term potential

Incremental Rate Relief Composition



Rate relief is a critical element to AEP's financial success

2007 Ongoing Guidance: $2.85 to $3.05 per share

Cash Sources Less Capital Expenditures, Dividends & Other	$ (100)	$ (96)	$ 111	$ 88
Ending Cash Balance	$ 301	$ 205	$ 316	$ 404

Projected 2007-2009 AEP Consolidated Credit Metric Ranges:

Debt to total capital (adjusted - rating agency view) range of 58% to 60%

FFO to Interest range of 3.6x to 4.0x

FFO/Total Debt range of 16% to 18%

* Cash Flow from Operations projections assume full rate recovery on capital expenditures.

Capital Investment if Funded by Cash from Operations and Debt Issuances

Why Invest in AEP?

- Strength and scale in assets & operations
- Disciplined utility model focus - investing in established utility business to drive 5-7% consistent annual earnings growth
- Annual dividend of $1.56 per share providing an above average dividend yield of 3.4%
- Positive dividend outlook
- Stable credit profile

AEP AMERICAN® ELECTRIC POWER

Wells Fargo 10th Annual Pipeline, MLP & Energy Symposium Handout

December 7, 2011

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance, resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and the expected legal separation and transition to market for generation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives, evolving public perception of the risks associated with fuels used before, during and after the generation of electricity, including nuclear fuel and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events.

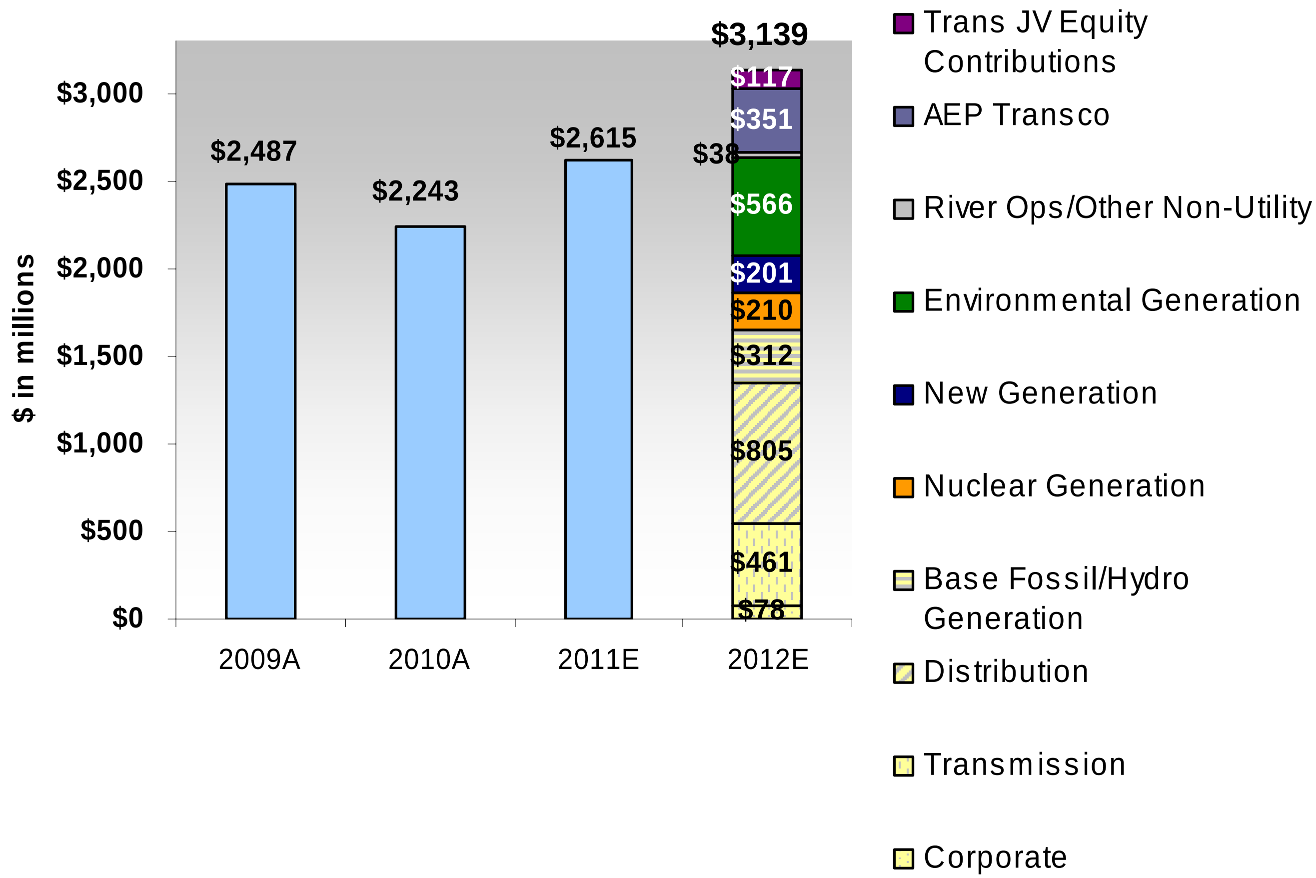
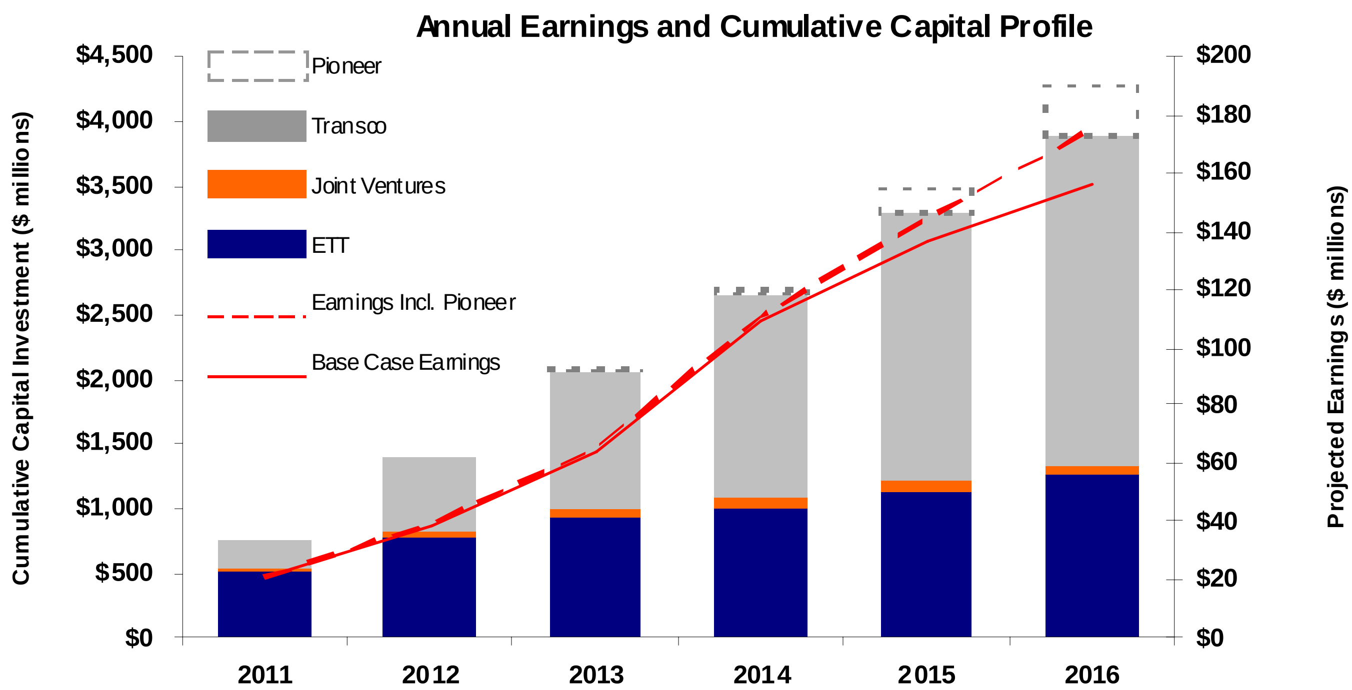
Capital Allocation

2012 AEP System Capital $3.1B



Major projects include: Turk Plant, Reliability upgrades, ETT contributions and Transco growth

Transmission Earnings & Capital Profile



[1] High Case includes AEP's share of Pioneer (50% ownership)

[2] Transco base case includes approximately $21MM in 2012 capital spend that is dependent upon state approval of Arkansas and Kentucky

[3] Joint Ventures include: PATH (50% ownership) assuming an ongoing suspension and Prairie Wind (25% ownership) assuming construction at 345kV

[4] ETT (50% ownership) includes CREZ and additional projects

[5] Projection of earnings potential at the transmission holding company level assuming 50/50 debt/equity capitalization and ROE of 11-13% for FERC projects; 60/40 debt/equity capitalization and 9.96% ROE (through 2013) and 55/45 debt/equity capitalization and 10% ROE (2014 forward) for ERCOT projects; and 50/50 debt/equity capitalization and ROE of 11.2-11.49% for Transco projects

Transmission Investment Opportunities

AEP®

ETT
Electric Transmission Texas

- **Ownership Structure:** 50/50 (AEP/MidAmerican Energy Holding Company)
- **Total Project Cost**: Over $3 Billion
- **Growing Rate Base:**
  Current rate base is $482 million; expected to grow as follows:
  2011: $495 million
  2012: $750 million
  2013: $1,200 million
- **Interim TCOS filings twice per calendar year**
- **Approved ROE:** 9.96%

AEP Transcos

- Seven wholly-owned Transcos
- Expansion and growth within AEP's existing utility footprint
- Efficient recovery mechanism via FERC formula rates
- Forecasted capital investment of $210 million in 2011 and more than $350 million in 2012
- Approved ROE: 11.20%-11.49%

ROE Optimization

ROE by Jurisdiction		
Jurisdiction	Authorized ROE	Sep 2011 Proforma ROE*
AEP Ohio	NA	13.51%
APCO – Virginia	10.53%	6.88%
APCO – West Virginia	10.00%	
Wheeling	10.00%	
I&M – Indiana	10.50%	8.24%
I&M – Michigan	10.35%	
SWEPCO – Louisiana	10.57%	10.05%
SWEPCO – Arkansas	10.25%	
SWEPCO – Texas	10.33%	
AEP Texas	9.96%	14.98%
PSO - Oklahoma	10.15%	12.36%
Kentucky	10.50%	11.08%
Overall AEP Return	**NA**	**10.90%**

* Twelve Month Rolling Proforma Recurring ROE

- Strong overall system ROE with current rate cases on file for under earning utilities
- Continue to strengthen local relationships
- Concurrent recovery mechanisms
- Operating Company model refinement
  - Investment Review Committee
  - Advanced planning discussions with stakeholders

Ohio ESP Settlement

Gradual Transition to Market and Regulatory Stability in Ohio

- **Parties to the Settlement** - Signed by more than 20 organizations representing customers, competitive retail electricity suppliers, environmental groups, communities and other key stakeholders
- **Cases included in Settlement** - 2012 Electric Security Plan, Capacity Charges, Merger
- **Generation** - Corporate separation of Ohio generation assets targeted by May 2013 and transition all of Ohio generation supply to market by mid-2015; the company may pursue recovery of Pool modification costs once they exceed $50 million
- **Transition to market** - company will make a specific percentage of the Ohio retail load open to competitive retail suppliers at the RPM price for a three-year period. The remaining capacity that switches will be priced at $255/MW-day
  - Year one (2012), approximately 20 percent will be available
  - Year two (2013), approximately 30 percent will be available
  - Year three (2014 through May 2015), approximately 40 percent will be made available.
  - Standard service offer price beginning in June 2015 will be determined through auctions involving multiple suppliers of generation service. Auctions will begin as early as September 2013.
- **Fuel Adjustment Clause** - continues through May 31, 2015; parties to support legislation for securitization of fuel deferrals
- **Nonbypassable Generation Resource Rider** – allows the distribution company to recover costs related to building new generating assets dedicated solely to Ohio customers. Project-related costs will be presented in future PUCO cases.
- **Distribution Investment Rider** – Costs associated with new distribution investment to maintain and improve reliability will be recovered under this rider with an ROE of 10.5% based on a capital structure of 47% debt/53% equity. In its first year (2012), the rider will be capped at $86 million. An additional $18 million will be added in 2013 and an additional $20 million in 2014.
- **SEET ROE threshold of 13.5%**.

Summary Rate Case Information

AEP Ohio Distribution Rate Case – Docket #11-351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%.

Summary Rate Case Information

I&M Michigan Base Rate Case – Docket # U-16801

On July 1, 2011 I&M filed a base rate case with the Michigan Public Service Commission requesting an increase of $24.5 million. Rates proposed in this filing are based on projected 2012 cost of service and will not go into effect until 2012, therefore rates will reflect a current cost of service. This filing includes revised depreciation rates to include additions since the last approved depreciation study as well as accelerated retirement of Tanners Creek Units 1, 2 and 3. The requested ROE is 11.15%. In accordance with Michigan law I&M requested to implement rates, subject to refund, on January 1, 2012. An order is expected by mid-year 2012.

Projected Capital Structure – Company Position (12/31/12)

Summary Rate Case Information

I&M Indiana Base Rate Case Cause #44075

On September 23, 2011 I&M filed a base rate case with the Indiana Utility Regulatory Commission requesting an increase of $148.7 million ($178.4 million in base revenues offset by $29.7 million in proposed changes to the OSS, PJM and CCT riders). Rates proposed in this filing are based on a historical 03/31/2011 cost of service and will not go into effect until an order is issued. The requested ROE is 11.15%. An order is expected by the end of 2012 or early 2013.

New Generation – Turk Plant

John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant, located in AEP's SWEPCO region. AEP owns 73 percent or roughly 440 megawatts of the total unit.

- The cost of the plant and related transmission is anticipated at $1.8 billion with AEP's share approximately $1.4 billion and will begin commercial operation in the fourth quarter of 2012.

- The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls.

- Third party owners include: Arkansas Electric Cooperative Corp. (12%), East Texas Electric Cooperative (8%), and Oklahoma Municipal Power Authority (7%).

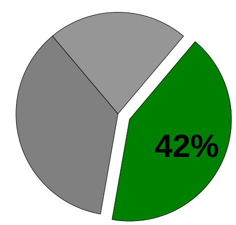
- Various legal challenges are on-going related to the plant (see 10-Q).

AEP Coal Fleet Assessment

2012 – 2020

Range of Capital ($ Millions) (1)

Least Exposed



Operating Company	MW
APCo	3,353
AEP Ohio	6,984
	10,337

Rules		Low		High
Water Rules (2)	$	15	$	20
CCR Rules	$	810	$	1,080
Air Rules (3)	$	1,425	$	1,900

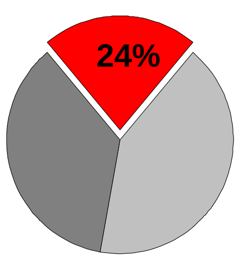
CCR Rules	$	385	$	520
Air Rules (3) (4)	$	2,680	$	3,565

Fully Exposed



Operating Company	MW
AEP Ohio	2,538
APCo	1,270
I&M	495
KPCo	1,078 (5)
SWEPCO	528
	5,909

Rules		Low		High
Water Rules (2)	$	-	$	5
CCR Rules	$	30	$	45
Air Rules (3)	$	30	$	50
Replacement Generation	$	570	$	730
Grand Total	**$**	**6,000**	**$**	**8,000**

(1) The impact of all rules continues to be under review. Project scope and technical assessments are ongoing. Any change in scope will impact the capital cost ranges.

(2) Gas plants are not included in MW. Proposed 316 (b) will impact some gas facilities.

(3) Air Rules include: CSAPR as finalized and HAPs and Regional Haze Federal Implementation Plans in OK & AR, as proposed.

(4) Includes NSR Compliance.

(5) Includes Big Sandy Unit 2, which remains fully exposed but, pending regulatory approval, will be scrubbed rather than replaced with new natural gas generation.

Retrofits/New Generation

- The tables below represent our estimated \$6 - \$8 billion capital investment from 2012 to 2020 for environmental retrofits on 10,500 MW and new/refueled generation of 2,152 MW. The below costs include management estimates for compliance with CSAPR, HAPs MACT, CCR and 316(b) regulations as currently proposed.

Operating Company	Plant	MW	Type of retrofit	Low Cost Estimate 2012-2020 ($MM)	High Cost Estimate 2012-2020 ($MM)	
AEP Ohio	Conesville 5	400	SCR, DSI			
	Conesville 6	400	SCR, DSI			
	Muskingum River 5/6*	510	Refuel/ New Natural Gas			
	Gavin 1	1,320	FGD upgrade

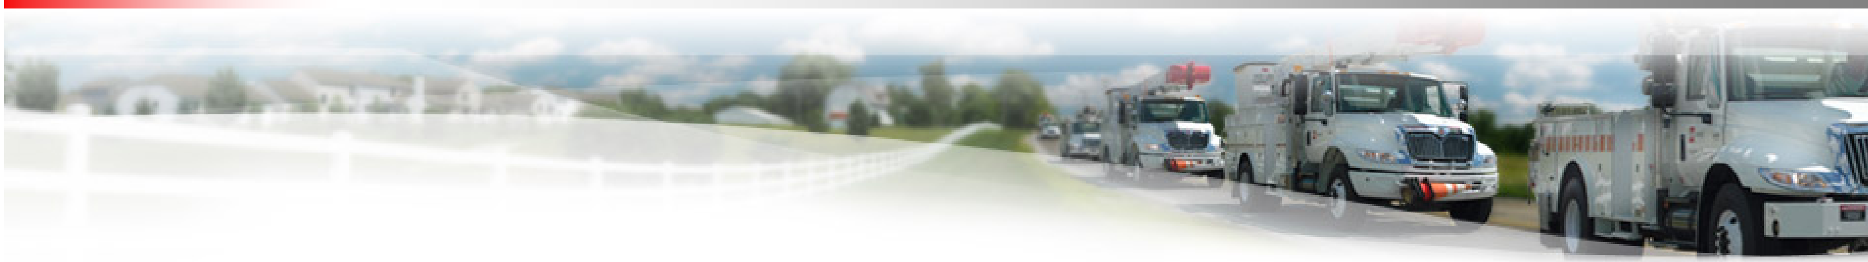
AEP AMERICAN® ELECTRIC POWER

Wells Fargo 9th Annual Pipeline, MLP & Energy Symposium

December 08, 2010
New York, NY



"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

AEP®

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

Lisa Barton – SVP Transmission Strategy & Business Development

Transmission as a Growth Engine

- Electric Transmission Texas (ETT)
  - Growing Rate Base
  - $1.1B CREZ opportunity; Received CCN approval on first CREZ line; 3 more approvals expected in 2011
  - $1.6B Non-CREZ projects in the pipeline
- AEP Transmission Company (AEP Transco)
  - Settlement filed at FERC for wholesale rates
  - $50M spend for 2010; $160M forecasted for 2011
- Progress on Joint Ventures in 2010
  - PATH
  - Prairie Wind
  - Pioneer
  - SMART Transmission study

Transmission investments present significant growth opportunities within and outside of AEP's traditional service territories

Two New Anchor Projects

ETA – AEP - Exelon: The RITE Line

Approximately 420 miles of 765 kV lines connecting AEP's 765 kV system in Indiana with Exelon's 765 kV system west of Chicago, and other Exelon substations

- Total Project Cost ~$1.6B
- Ensures reliability, renewables integration
- Bridges AEP's and Exelon's 765 kV systems
- PJM approval of seams project required
- Includes 765 kV and 345 kV voltages, and their electrical equivalents

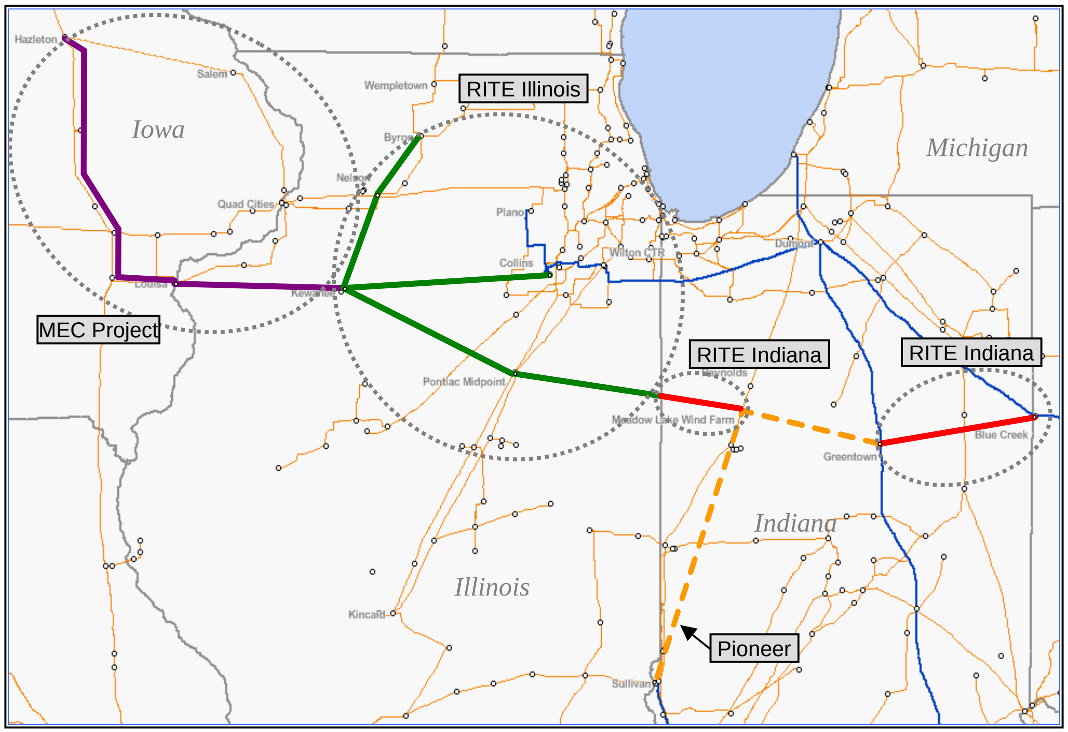
ETA – MidAmerican Energy Co: MEC Project

Approximately 180 miles of 765 kV lines connecting MEC's EHV system in eastern Iowa to proposed 765 kV expansion in western Illinois.

- Total Project Cost: ~$650M
- Project part of SMARTransmission study and Midwest ISO RGOS planning effort
- MISO approval
- Includes 765kV and 345kV voltages, and their electrical equivalents

AEP Total Investment:

~$500M



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

New Generation Projects

J. Lamar Stall Combined-Cycle Gas Plant

- J. Lamar Stall Combined-Cycle gas plant is a 508-MW unit that began commercial operations in June 2010.
  - The total projected cost of the plant is $380 million.
  - The plant is located in AEP's SWEPCo region at its existing Arsenal Hill Power Plant in Shreveport, Louisiana.
  - The plant serves the needs of customers in the Arkansas, Louisiana and Texas service territories.

- John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant. Located in AEP's SWEPCo region. AEP owns 73 percent or roughly 440 megawatts of the total unit.
  - The cost of the plant is anticipated at $1.7 billion with AEP's share approximately $1.3 billion and will begin commercial operation in 2012.
  - The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls.
  - Various legal challenges are on-going related to the plant (see 10-Q). Recently, following the Arkansas Supreme Court decision regarding CECPN, SWEPCO filed notice to the APSC that the 88MW will now be merchant and will not be included in rate base.

John W. Turk Jr. Ultra-Supercritical Coal Plant

Carbon Capture and Storage

Carbon Capture and Storage project located at AEP's Mountaineer Plant in New Haven, WV

PHASE I – Validation

Captured CO_2 – September 2009
Injected CO_2 – October 2009

CO_2 Capture

Project employs Alstom's chilled ammonia process for post-combustion CO_2 capture.

CO_2 Storage

Compressed CO_2 is injected about 1.5 miles below the earth's surface.

PHASE I - Validation

20 MWe scale validation project designed to remove 90% of CO_2 from flue gas and store 100,000 metric tons/year. Currently in operation.

PHASE II - Commercialization

235 MWe commercial scale project designed to capture and store 1.5 million metric tons of CO_2/year. Awarded 50% US DOE funding. Commercial operation in 2015.

2010 Ongoing Earnings Guidance

2009A: $2.97/share

2010E: $2.80-$3.20/share

Near-term Earnings Drivers

- **Rate recovery from returns on capital investment**
- **Load growth (and recovery)**
- **Increase in off-system sales volumes and/or prices**
- **O&M discipline and cost-cutting initiatives**

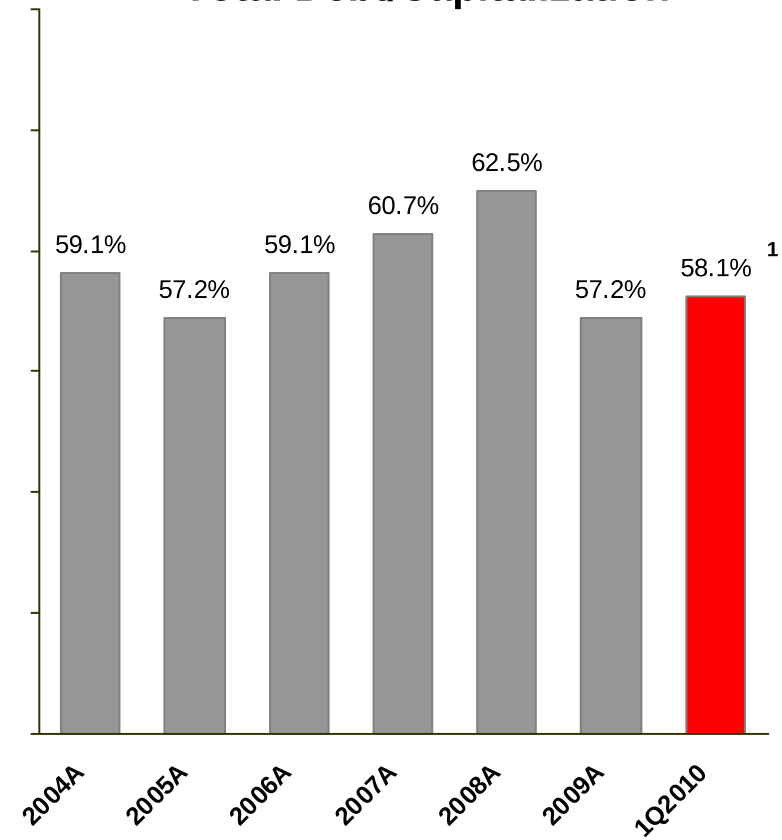
Capitalization & Liquidity

Total Debt/Capitalization



Note: Total Debt is calculated according to GAAP and includes securitized debt

[1]: Effective January 1, 2010 in accordance with Transfers and Servicing accounting guidance (formerly SFAS 166), factored receivables of AEP Credit of $651 million are classified as short-term debt; The 1Q2010 debt/capitalization ratio would be 57.3%, excluding AEP Credit.

Equity component	44.19%	
Riders requested	Numerous	

Status: Case filed on January 27, 2010. Hearings scheduled for August 9-17, 2010. Interim rates in effect July 26, 2010 ($44.3MM of original $62.4MM request). Proposal for decision expected by November 16, 2010.

Rate Case Settled

KPCo - Kentucky

	Company Filing	Staff / Intervenor Testimony
Rate increase	**$124**	$41
Rate base/investment	$995	$995
Return on equity	11.75%	10.10%
Equity component	42.91%	42.91%
Riders requested	Wind & Reliability	

Status: On May 19, a settlement agreement was filed with the KPSC providing for a $64 million annual rate increase, effective June 29, 2010. Ordered received June 28, 2010.

$441 million of total base rate increase requests on file

Summary Rate Case Information

APCo Virginia General Rate Case – Docket #PUE-2009-00030

On August 14, 2009, APCo filed an update to its pre-biennial base rate case, originally filed July 15, 2009 with the Virginia SCC, per the statute, for recovery of generation and distribution costs requesting an increase of $154 million. Hearings began on March 30, 2010 and an order is due no later than July 15, 2010.

Proposed Capital Structure – Company Position (12/31/08)

	% of Capitalization	Cost Rate	Weighted Return
Short-Term Debt	3.135%	3.906%	0.12%
Long-Term Debt	54.815%	6.065%	3.32%

*Represents Generation and Distribution Rate Base Only

Summary Rate Case Information

I&M Michigan General Rate Case – Docket #U-16180

On January 27, 2010, I&M filed a base rate case with the Michigan Public Service Commission requesting an increase of $62.5 million to cover increased costs related to distribution O&M, taxes, interest and employee related expenses. I&M also requested new tracker mechanisms for enhanced distribution reliability spending, energy efficiency, investments in generation and participation in PJM. The requested ROE is 11.75%. An order is expected in early 2011.

Forecasted Capital Structure – Company Position (12/31/10)

Summary Rate Case Information

APCo West Virginia General Rate Case – Docket #10-0699-E-42T

On May 14, 2010, APCo filed a base rate case with the West Virginia Public Service Commission requesting a net increase of $155.5 million, comprised of a $223.8 million base rate increase and a $68.3 million decrease in the construction surcharge. The filing related to capital investments made and to recover increased costs. In addition, APCo requested to establish a separate transmission tracker related to PJM charges. The requested ROE is 11.75%. An order is expected at the end of March 2011.

Actual Capital Structure – Company Position (12/31/09)

	% of Capitalization	Cost Rate	Weighted Return
Short-Term Debt	3.66%	0.89%	0.03%

Transmission Investment Opportunities

- ETT: Projects in Texas ERCOT jurisdiction
  - $600MM of projects est. in service 2010-2013
  - ETT's opportunity could reach $3.0B in this decade
- Transco: Within our existing footprint
  - Provides opportunity to:
    - Develop new AEP-only projects
    - Reduce regulatory lag through FERC formula rates adjusted annually
- Joint Ventures: Outside of our footprint, via ETA or with others
  - Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
  - Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2015
  - Robust pipeline of projects up to $15B

Electric Transmission Texas, LLC

Overview:

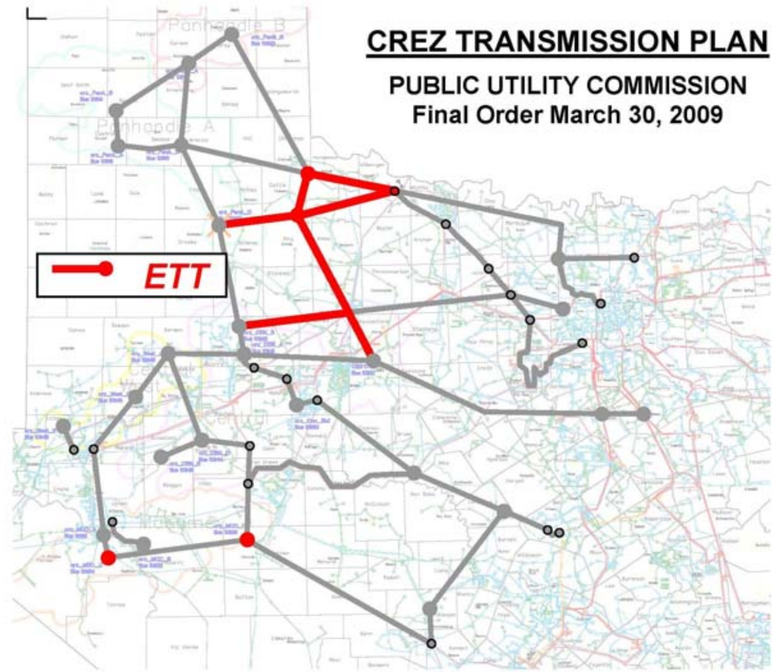
- ETT is a 50/50 JV between AEP and MidAmerican Energy Holding Company that plans to construct and operate transmission projects within ERCOT with an investment opportunity of more than $3 billion.
- Current JV rate base is $127 million with an additional $262 million requested in the current ITCOS filing, resulting in a total anticipated rate base of $389 million; debt to capital ratio of 60/40 and an authorized ROE of 9.96%.

Opportunities:

- Projects in service 2010-2018: $1.4 billion
- CREZ projects in service 2012-2013: $1.1 billion
- Other projects representing recent and pending transfers in service 2010-2014: approaching $600 million

Next Steps:

- Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in 2010.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

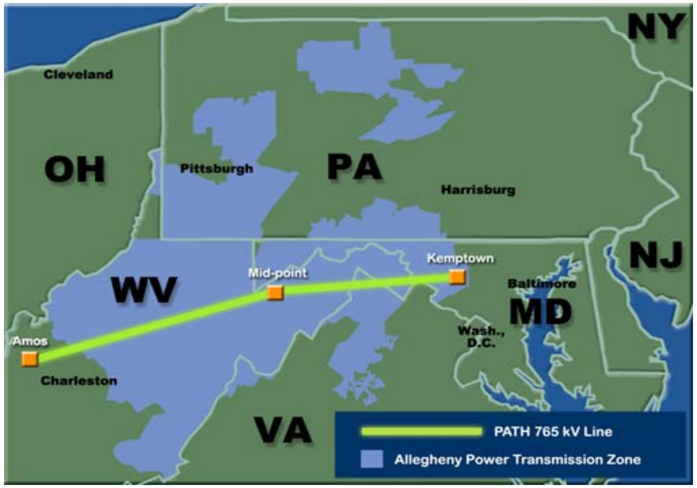
Electric Transmission Texas

EHV Transmission in PJM: PATH

Project Description: 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

Overview:

- FERC order issued on February 29, 2008 approving:
  - Cash return on CWIP and 14.3% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents
  - Rates went into effect March 1, 2008
- Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million.
  - A budget reforecast effort is currently underway. Total project cost will likely increase due to delays in the original 2012 in-service date.
- Estimated completion date: June 1, 2015, pending outcome of the 2010 PJM Regional Transmission Expansion Plan (2010 RTEP).



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

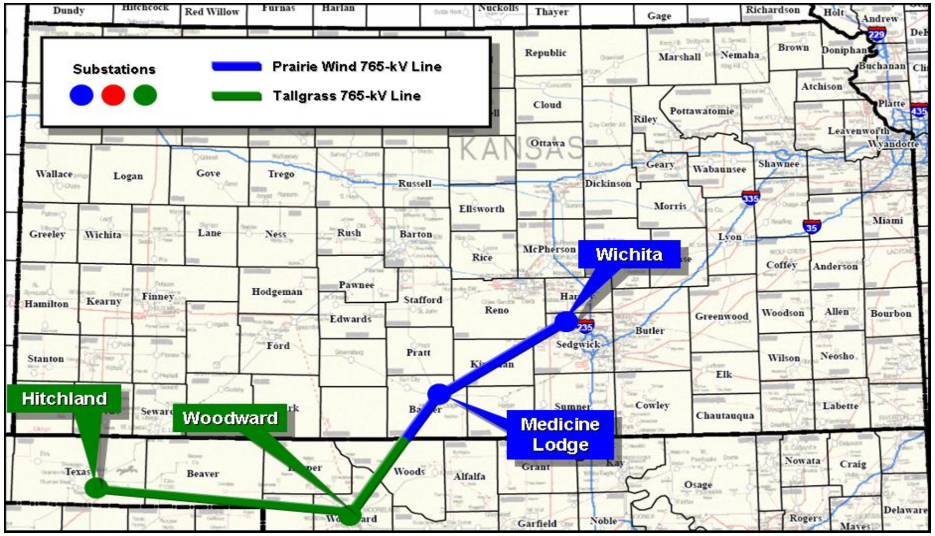
- Obtaining a CPCN in West Virginia, Virginia and Maryland. CPCN applications in West Virginia and Maryland are pending because their procedural schedule allows the consideration of the 2010 RTEP. A new application in Virginia is expected in the third quarter of 2010 after consideration of the 2010 RTEP.

PATH
Potomac-Appalachian Transmission Highline

Prairie Wind Transmission, LLC

Overview:

- In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
- PWT is a 50/50 JV that is proposing to build approximately 110 miles of 765-kV lines extending from Wichita, KS.
- The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
- The project is expected to cost approximately $400 million and be in-service by 2013-2014 and was approved by the KCC on July 24, 2009.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned
- Project was approved as SPP Priority Project in April 2010
  - Notice to construct anticipated to be received summer 2010.
  - Currently approved at 345 kV. Cost at 345 kV estimated to be $165 mm. May revert to 765 kV depending on results of SPP ITP study.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

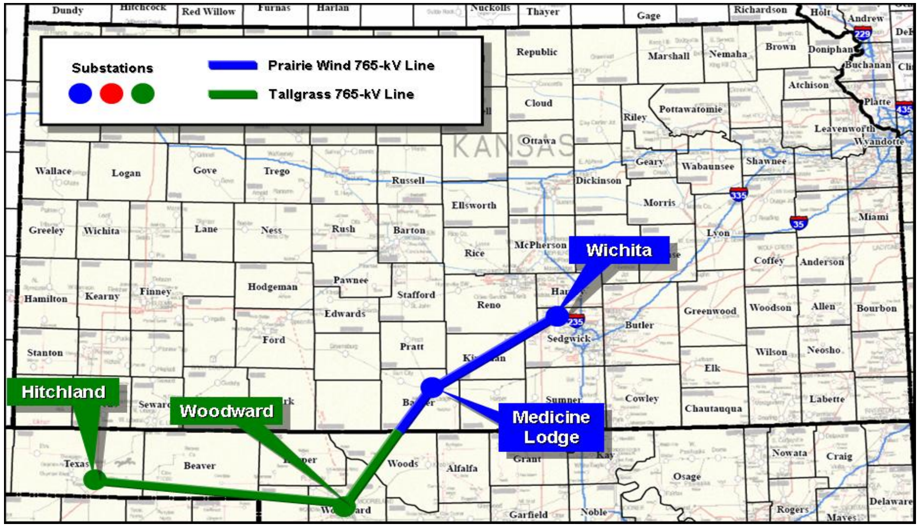
Key Challenges:

- Siting

Tallgrass Transmission, LLC

Overview:

- In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
- TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines in Oklahoma.
- The project will promote wind development in the western half of Oklahoma.
- Project is expected to cost approximately $500 million and be in-service by 2013-2014.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned
- Project was approved as SPP Priority Project in April 2010
  - Notice to construct anticipated to be received summer 2010.
  - Currently approved at 345 kV. Cost at 345 kV estimated to be $350 mm. May revert to 765 kV depending on results of SPP ITP study.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

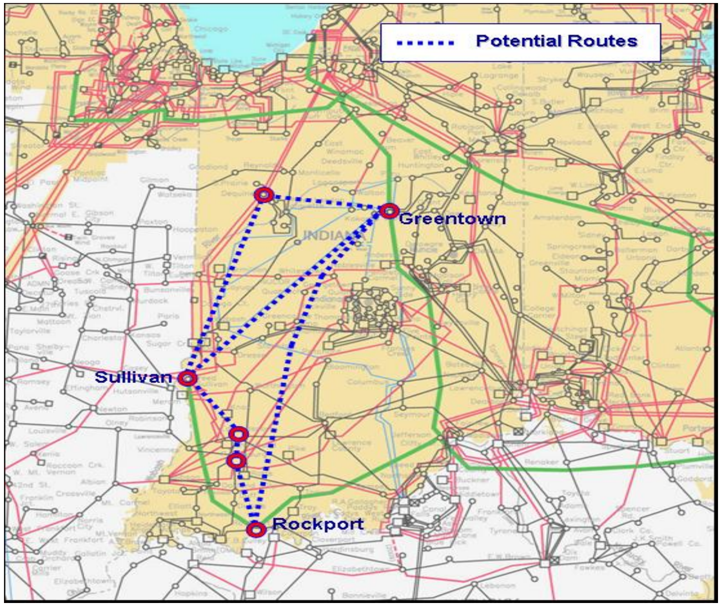
Key Challenges:

- Siting

Pioneer Transmission, LLC

Overview:

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
- The project will improve the reliability of the transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, and expand opportunities for new generation, including renewables.
- The project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP's ownership of the joint venture is 50%.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

- RTO Approval (PJM & MISO)
- Cost allocation which enables the development of "system solutions"
- Siting

Upper Midwest EHV Development—SMART Study

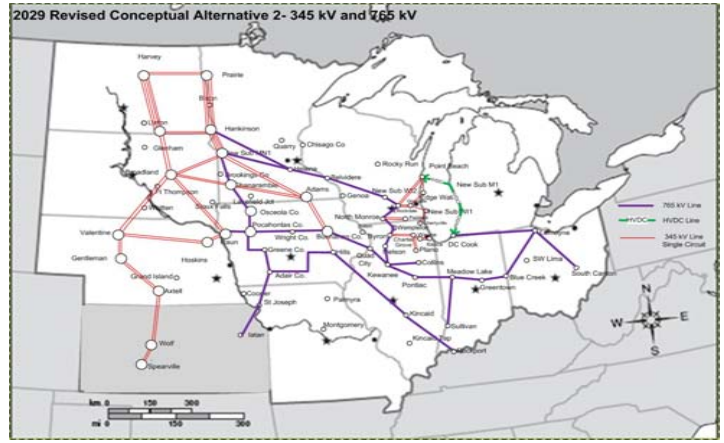
Project Description: a comprehensive study of the transmission needed in the Upper Midwest to support renewable energy development and transporting that energy to consumers throughout the study area. The SMART Study will develop EHV overlay alternatives that ensure reliable service for sponsors' communities, is environmentally friendly, and supports national energy policy.

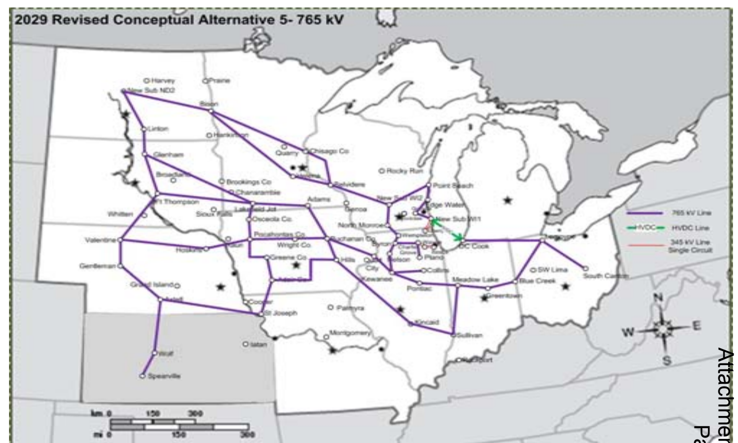
Overview:

- SMARTransmission Study announced August 2009
- Primary Focus Areas: North Dakota, South Dakota, Iowa, Nebraska, Indiana, Ohio, Illinois, Minnesota, Wisconsin, Michigan
- Study Sponsors include: ETA, Exelon, ATC, Northwestern, MidAmerican Energy Company, and Xcel
- Phase 1 completed April 30
- Phase 2 anticipated completion: June 30
  - Studying two alternatives in Phase 2. One combination 345 kV / 765 kV. One primarily 765 kV.

Next Steps:

- Investment structure
- Obtaining cost allocation between states, PJM, and MISO
- RTO technical approvals
- Favorable 205 Order including incentives

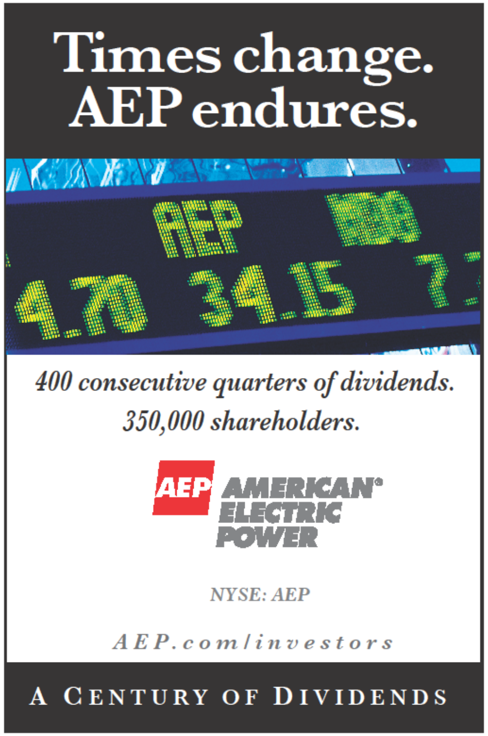




The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Value Proposition

- **Current Yield Opportunity of 5.1%[1]**
  - June 10th - 400th consecutive quarterly dividend was paid to shareholders
  - 50-60% payout ratio targeted
  - Dividend increased 2.44% on April 27th
- **Earnings Growth Prospects**
  - Investment in utility platform greater than depreciation level (2 - 4%)
  - With transmission opportunities (4 - 8%)



Attractive total return potential

[1] yield percentage based on AEP closing price of $32.99 on 06/25/2010

AEP AMERICAN® ELECTRIC POWER

December 8, 2010
New York, NY

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

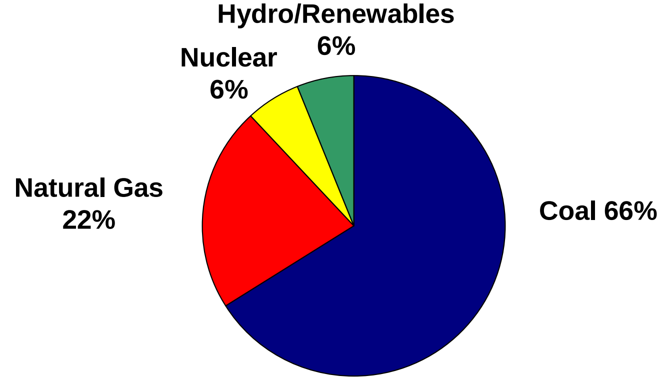
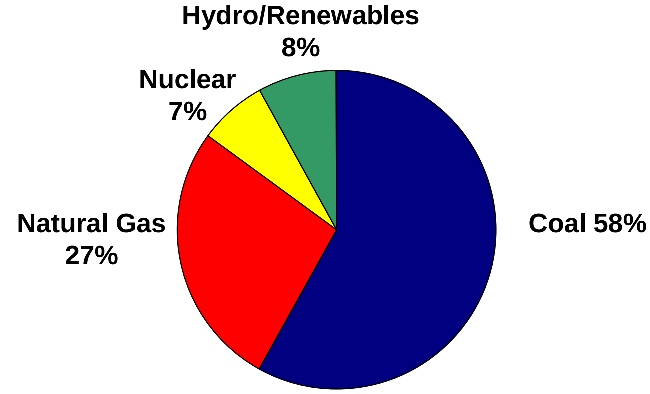
- Plan for old, small coal units
  - Initially operate seasonally
  - Transition towards retirement
  - Regulatory plan for recovery
- Continue evaluation of "partially exposed" units for additional controls
- Add non-coal capacity when needed
  - Dresden NGCC (partially complete)
  - New NGCC at existing site
  - Cook plant uprate (under study)
  - Renewables
- Deploy technology as appropriate
  - Continue pursuit of CCS technology
  - Energy storage technologies
  - gridSMART®



Capacity - 2009



Projected Capacity - 2017

Transmission as a Growth Engine

- Electric Transmission Texas (ETT)
  - Growing Rate Base
  - $1.1B CREZ opportunity; Received CCN approval on first CREZ line; 3 more approvals expected in 2011
  - $1.6B Non-CREZ projects in the pipeline
- AEP Transmission Company (AEP Transco)
  - Settlement filed at FERC for wholesale rates
  - $50M spend for 2010; $160M forecasted for 2011
- Progress on Joint Ventures in 2010
  - PATH
  - Prairie Wind
  - Pioneer
  - SMART Transmission study

Transmission investments present significant growth opportunities within and outside of AEP's traditional service territories

KPSC Case No. 2011-00401

Attachment 1 - Confidential
Page 9501 of 9556

ETT: An Operating Utility

AEP®

ETT Electric Transmission Texas

Growing Rate Base:

- Current rate base is $385 million; expected to grow as follows:
  - 2010: $405 million
  - 2011: $465 million
  - 2012: $765 million
  - 2013: $1,415 million
- Interim TCOS filings twice per calendar year

Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.1 B:

- Seven double-circuit 345kV transmission lines (~$750 M), eight major 345kV stations and several series compensation installations (~$350 M)
- PUCT Certificate of Convenience and Necessity (CCN) proceedings underway

CREZ Transmission Line	Number of miles	Estimated Cost ($M)	CCN Filing Date	CCN Decision by PUCT
Clear Crossing to Dermott	**95**	**$160**	**5/3/2010**	**Unanimously Approved 9/30/2010**
Tesla to Riley	65	$110	8/18/2010	2/15/2011
Riley to Edith Clarke to Cottonwood	115	$199	9/8/2010	3/8/2011
Tesla to Edith Clarke to Clear Crossing to West Shackelford	145	$280	Anticipated 10/20/2010	4/20/2011

Additional Projects in the Pipeline ~$1.6 B:

- Approximately 822 miles of lines and 28 substations with in-service dates through 2017

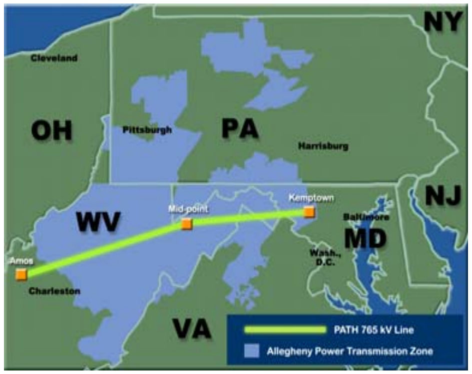
AEP Transco was established in 2010

- Formula rate settlement filed with FERC in September; awaiting final order
  - ROE: 11.49% in PJM and 11.2% in SPP
- $50 M invested in three states in 2010 (OH, MI & OK)
  - Ohio application for public utility status pending; approval expected in 2010
  - Oklahoma and Michigan did not require filings
- “Baseline” capital spending targets for OH, MI & OK
  - $160 M for 2011
  - $350 M for 2012
- Will pursue regulatory approvals for other states in 2011 (AR, LA, WV, VA, IN & KY)
  - Additional capital spending opportunity in these states for 2012+

Progress on Joint Ventures in 2010

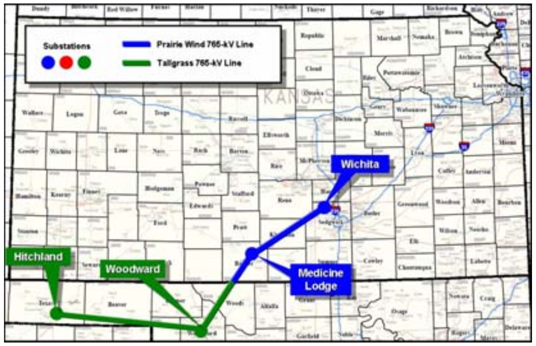
PATH:

- Re-filed for certification in VA
- Letter from PJM confirmed the 2015 in-service date
- PJM Testimony “RTEP final with respect to PATH”
- FERC approved formula rate (14.3% ROE), subject to rehearing



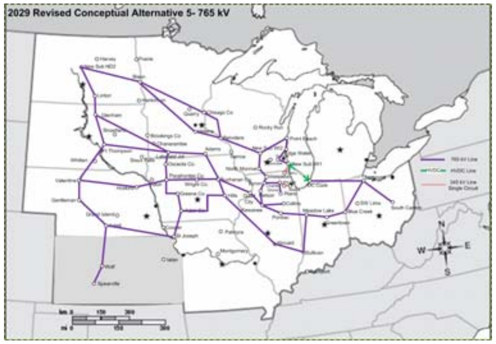
Prairie Wind:

- Approved by SPP as a Priority Project (Notice To Construct rcv’d)
- Cost allocation approved by SPP and FERC
- FERC approved formula rate (12.8% ROE)
- In-service date is 2013-2014



Pipeline of Future Projects:

- Pioneer
  - FERC approved formula rate (12.54% ROE)
  - Awaiting RTO project approval; MISO included Pioneer in its proposed EHV plan
- Tallgrass
  - Will move forward if approved at 765 kV
- Smart Transmission Study
  - Comprehensive study of the transmission needed in the Upper Midwest to support renewable energy development



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Two New Anchor Projects

ETA – AEP - Exelon: The RITE Line

Approximately 420 miles of 765 kV lines connecting AEP's 765 kV system in Indiana with Exelon's 765 kV system west of Chicago, and other Exelon substations

- Total Project Cost ~$1.6B
- Ensures reliability, renewables integration
- Bridges AEP's and Exelon's 765 kV systems
- PJM approval of seams project required
- Includes 765 kV and 345 kV voltages, and their electrical equivalents

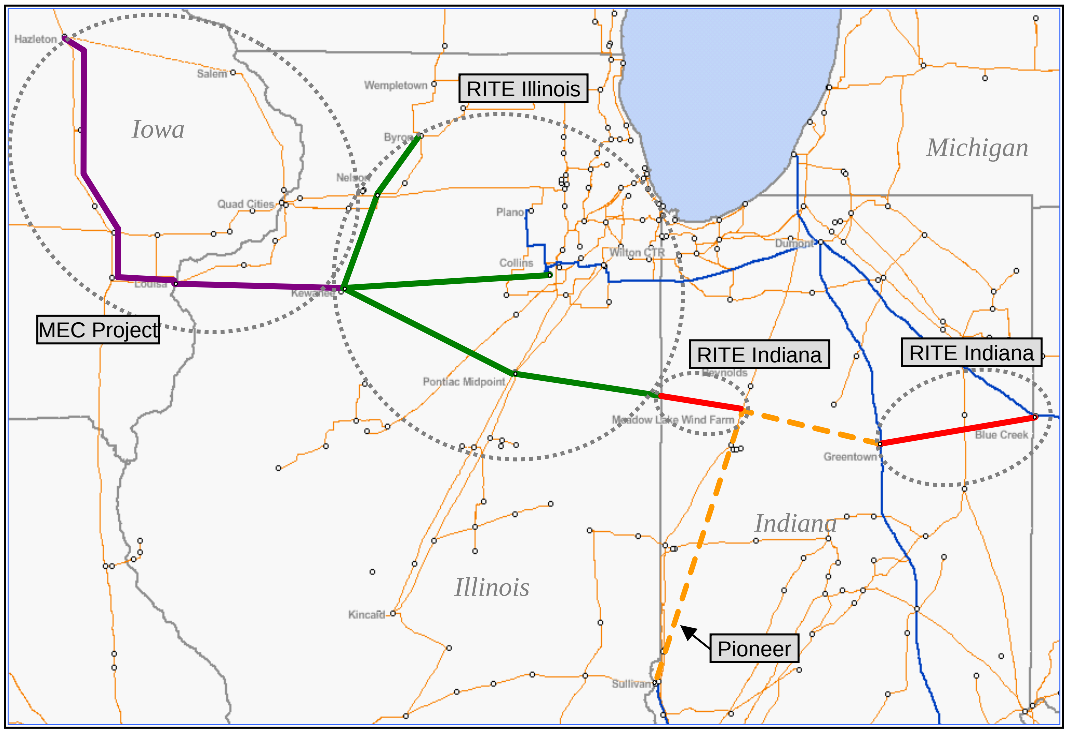
ETA – MidAmerican Energy Co: MEC Project

Approximately 180 miles of 765 kV lines connecting MEC's EHV system in eastern Iowa to proposed 765 kV expansion in western Illinois.

- Total Project Cost: ~$650M
- Project part of SMARTransmission study and Midwest ISO RGOS planning effort
- MISO approval
- Includes 765kV and 345kV voltages, and their electrical equivalents

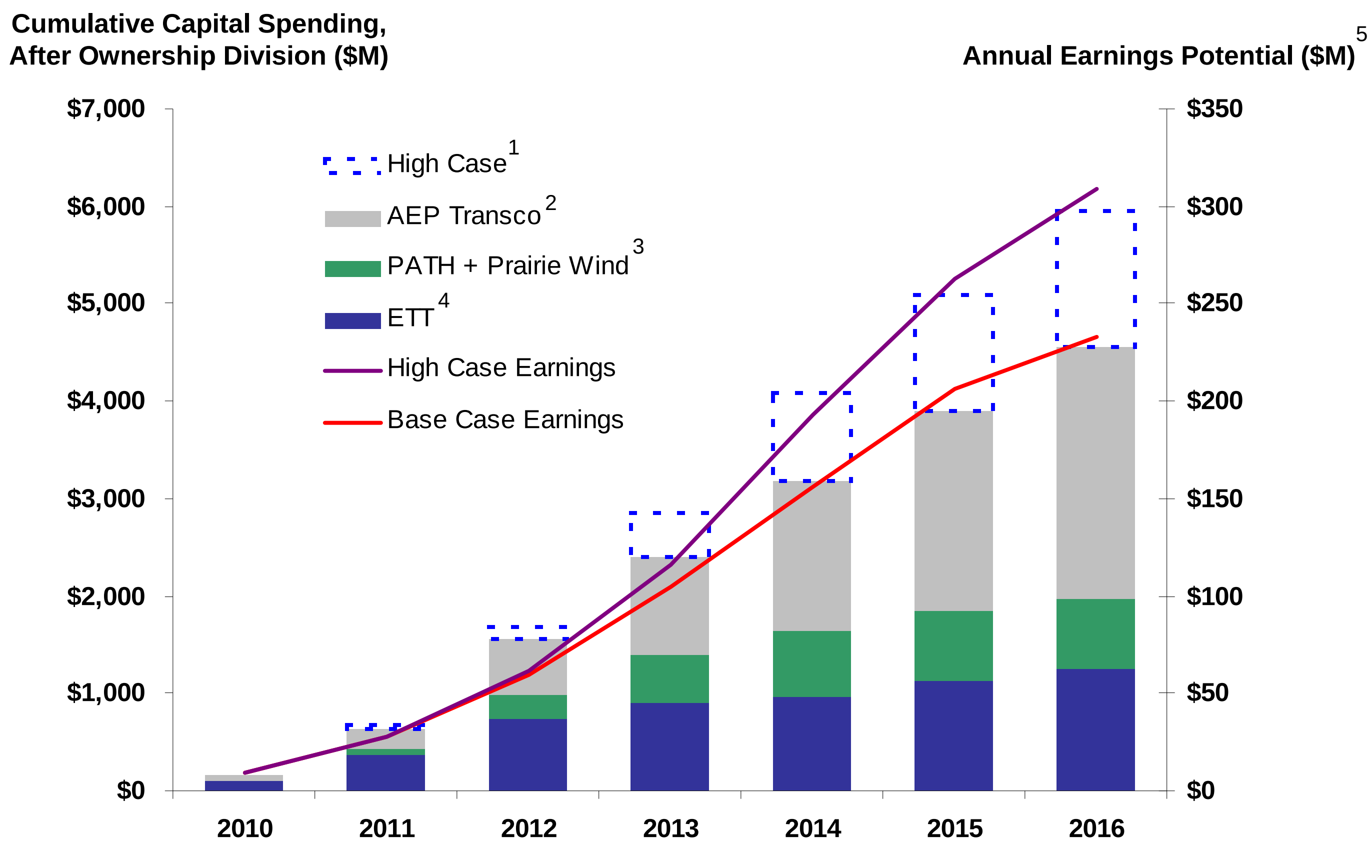
AEP Total Investment:

~$500M



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Capital Investment and Earnings Profile



[1] High Case includes: Pioneer (50% ownership), Prairie Wind at 765kV (25% ownership), Tallgrass at 765kv (25% ownership) and other future opportunities

[2] AEP Transco (100% ownership) includes spending in OH, MI & OK only through 2011 and in other jurisdictions for 2012 and beyond

[3] PATH (50% ownership) assumes an in-service date of 2015 and Prairie Wind (25% ownership) assumed at 345kV

[4] ETT (50% ownership) includes CREZ and additional projects

[5] Projection of earnings potential at the transmission holding company level assuming 50/50 debt/equity capitalization and ROE of 12-13% for FERC projects; 60/40 debt/equity capitalization and 10.25% ROE (2011 forward) for ERCOT projects; and 50/50 debt/equity capitalization and ROE of 11.2-11.49% for Transco projects

Capital Allocation

In this economic recovery cycle, capital allocation requires balance for spending that considers the obligation to serve, the ability to obtain rate increases, a balance sheet to support the plan, and the total return proposition to shareholders

- Capital for Growth
  - Increased capital budget by $150M for 2011 to $2.6B
  - Announced capital budget plan of $2.9B for 2012
- Return of Capital to Shareholders
  - 9.5% increase in quarterly dividend to $0.46/share declared by the board of directors on October 26th
  - Future dividend increases will grow with earnings
- Capital to Reduce Risk
  - Voluntarily funding pension $500M in 2010
  - Allocating an additional $150M of funding for pension in 2011

Detailed Ongoing Earnings Guidance

2010E: $2.95 - $3.05

2011E: $3.00 - $3.20

American Electric Power

Financial Results for 2011 Guidance vs 2010 Projection

		Performance Driver	2010 Projection ($ millions)	Performance Driver	2011 Guidance ($ millions)
	UTILITY OPERATIONS:

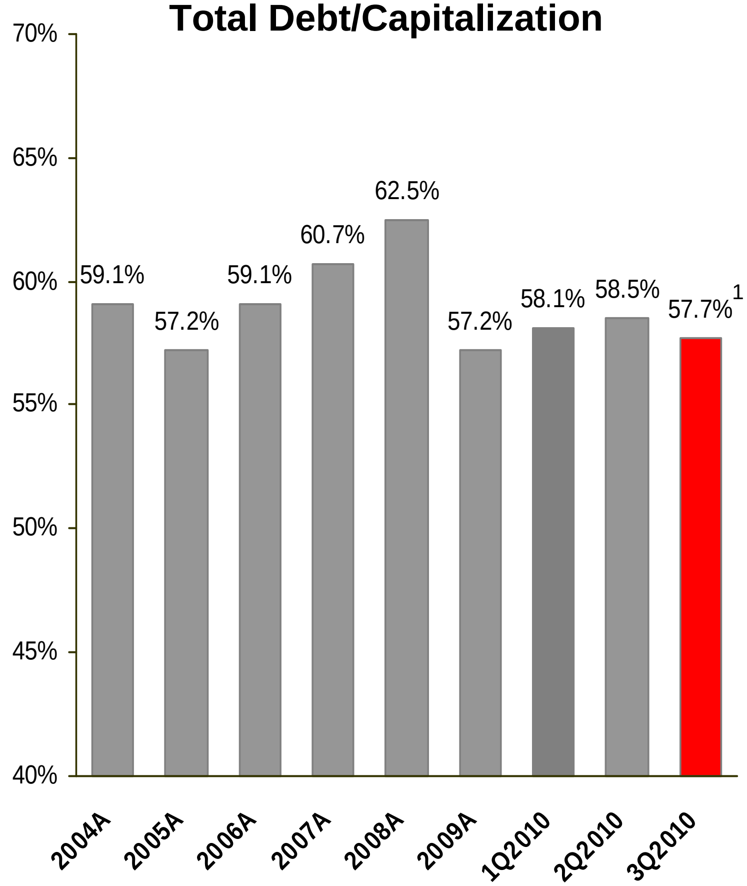
Maintaining Strong Capitalization & Liquidity

Total Debt/Capitalization



Note: Total Debt is calculated according to GAAP and includes securitized debt

1: Effective January 1, 2010 in accordance with Transfers and Servicing accounting guidance (formerly SFAS 166), factored receivables of AEP Credit of $750 million are classified as short-term debt; The 3Q2010 debt/capitalization ratio would be 56.8%, excluding AEP Credit.

Current Liquidity Summary

APCo West Virginia General Rate Case – Docket #10-0699-E-42T

On May 14, 2010, APCo filed a base rate case with the West Virginia Public Service Commission requesting a net increase of $155.5 million, comprised of a $223.8 million base rate increase and a $68.3 million decrease in the construction surcharge. The filing related to capital investments made and to recover increased costs. In addition, APCo requested to establish a separate transmission tracker related to PJM charges. The requested ROE is 11.75%. An order is expected at the end of March 2011. Staff and Intervenor testimony recommended increases in the range of $41MM--$57MM.

Actual Capital Structure – Company Position (12/31/09)

	% of Capitalization	Cost Rate	Weighted Return
Short-Term Debt	3.66%	0.89%	0.03%
Long-Term Debt	53.42%	6.04%	3.23%
Common Equity	42.64%	11.75%	5.01%
Preferred Stock	0.28%	4.35%	0.01%
Total	100.00%		8.28%

Procedural Schedule

July 23, 2010	Company testimony due

Summary Rate Case Information

PSO General Rate Case – Docket #201000050

On July 9, 2010, PSO filed a base rate case with the Oklahoma Corporation Commission requesting a net increase of $52.4 million, comprised of a $82.7 million base rate increase and a $30.3 million decrease in the capital investment rider. The requested ROE is 11.50%. A settlement agreement was filed on Nov. 19, 2010 resulting in no change to current rates and a 10.15% ROE. Hearing scheduled December 6, 2010, with rates going into effect February 2011.

Actual Capital Structure – Company Position (2/28/10)

	% of Capitalization	Cost Rate	Weighted Return
Long-Term Debt	53.86%	6.52%	3.51%
Common Equity	45.84%	11.50%	5.27%
Preferred Stock	0.30%	4.02%	0.01%
Total	100.00%		8.79%

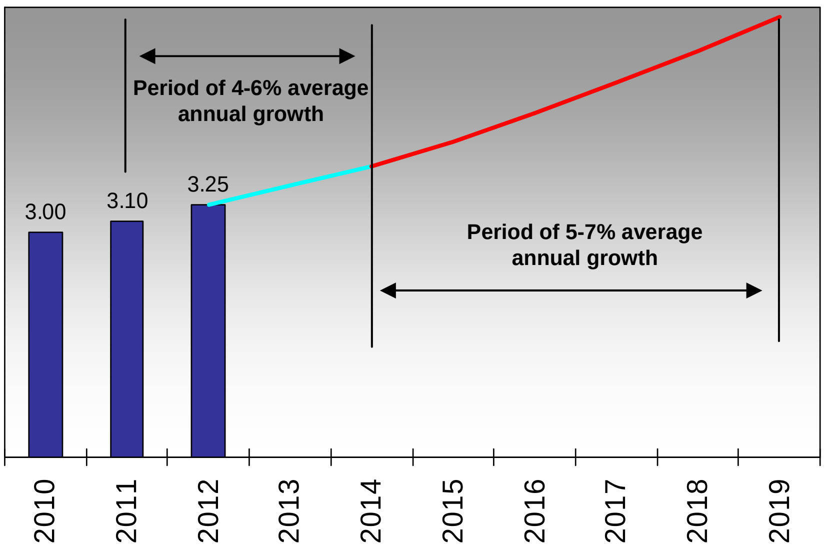
***represents a negotiated settlement

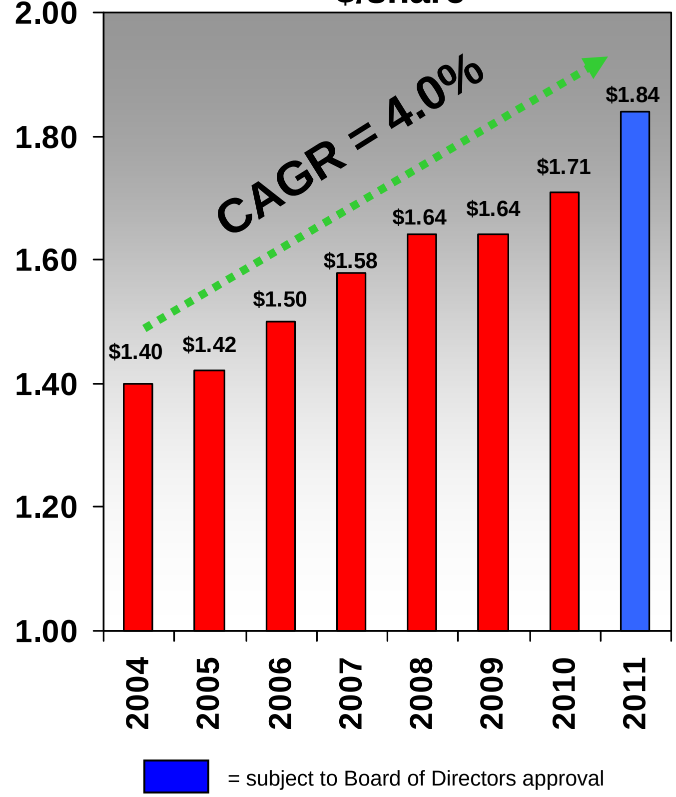
Value Proposition

Average Annual EPS Growth defined over two periods



- 4-6% EPS growth 2012-14
  - Average annual capital spend between $2.9-3.4B
  - Blended ROE of 10.5 - 11%
  - Slow, steady recovery in economy
- 5-7% EPS growth post 2014
  - Base utility platform capital plus higher allocation of discretionary capital going to opportunities in the transmission development pipeline
  - Higher overall blended ROE opportunity
  - Robust economic growth

Dividend History Since 2004 $/share



- <u>9.5% increase</u> in quarterly dividend to $0.46/share declared on October 26th
- <u>402nd consecutive</u> quarterly dividend will be paid December 10, 2010
- 50-60% payout ratio target
- Current yield about 5%

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M's Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events and our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives.

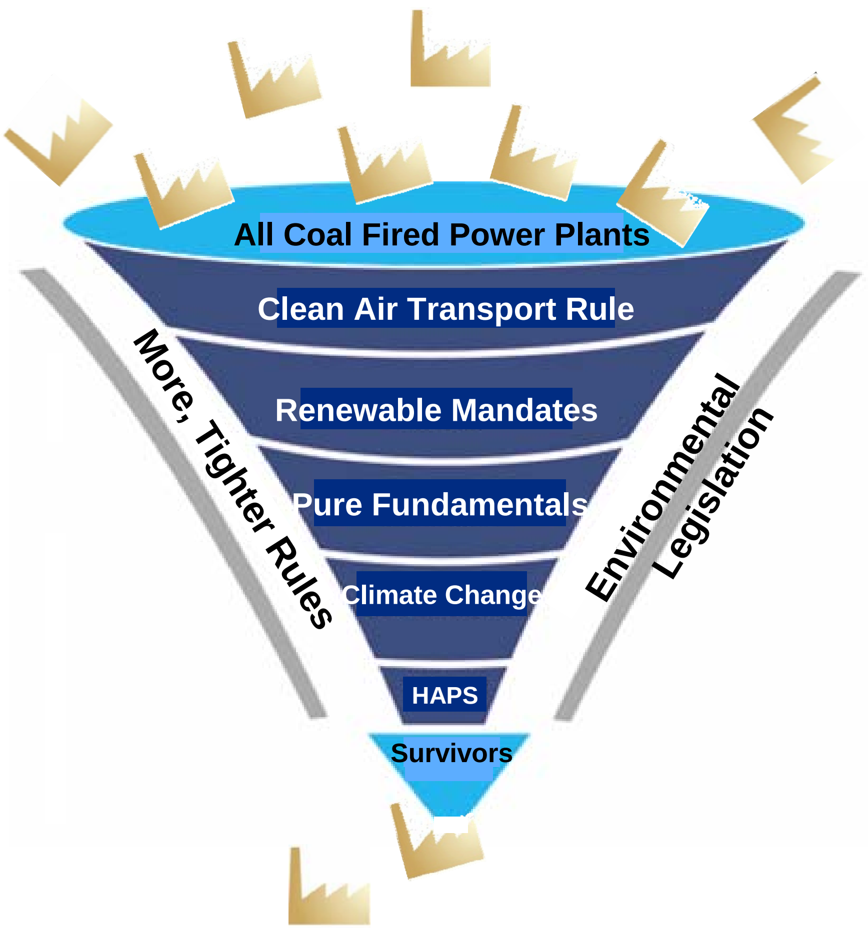
The Pressure on Coal Generation



Key EPA Actions Pending

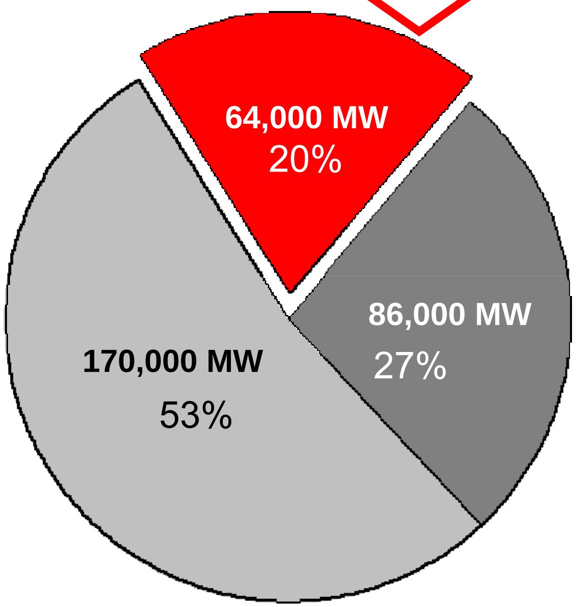
- Transport Rule – Proposed July 2010
- "Coal Ash" Rule – Proposed May 2010
- Mercury and other Hazardous Air Pollutants (HAPs) Rule – Expect Proposed Rule in March 2011
- Cooling Water Intakes – Expect Proposed Rule in Spring 2011
- Greenhouse Gas Tailoring Rule – January 2011

Continual Evaluation is Required

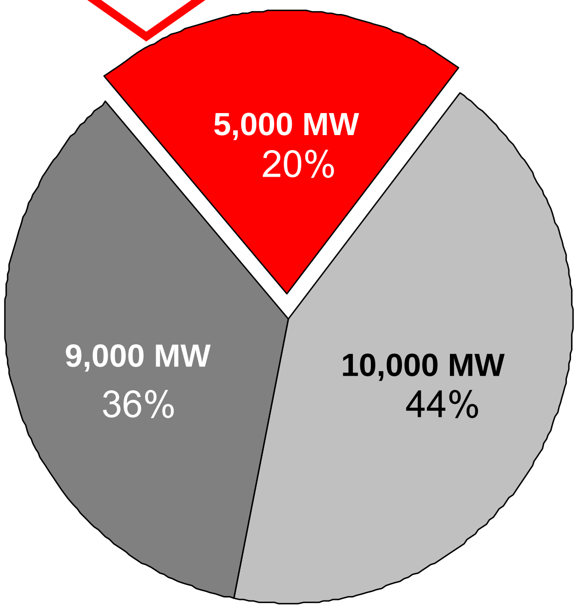
"Fully-Exposed"	"Partially-Exposed"	"Least-Exposed"
Probable Retirement	*Evaluating potential retirement*	*Not likely to be retired*

CCS Candidates

Smaller, older, less-efficient coal units that will not be economic if retrofitted



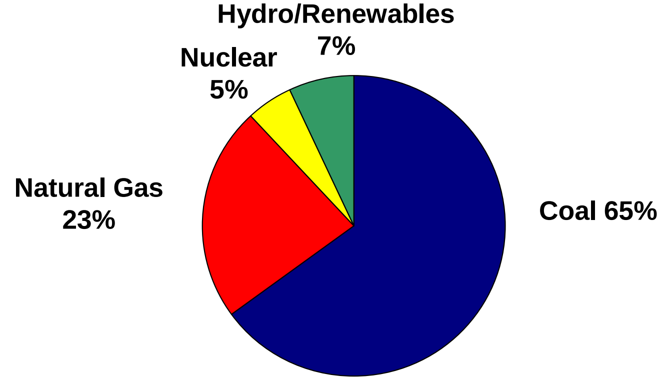
Newer and larger coal units that do not have SCR's and/or FGD's will be evaluated due to emerging environmental rulemaking and NSR requirements



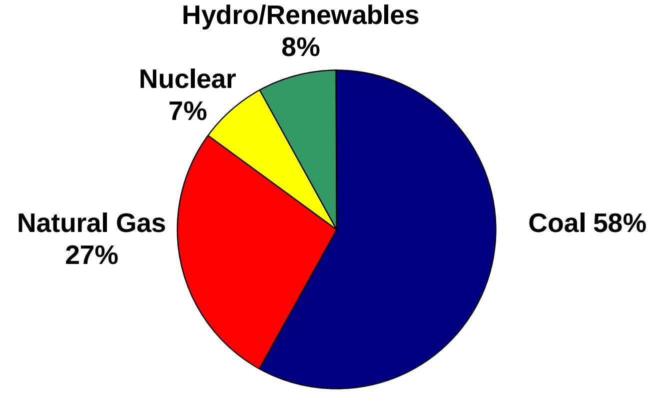
Nearly 50% of U.S. coal plants are exposed

Continued Investment in Utility Platform

- Plan for old, small coal units
  - Initially operate seasonally
  - Transition towards retirement
  - Regulatory plan for recovery
- Continue evaluation of “partially exposed” units for additional controls
- Add non-coal capacity when needed
  - Dresden NGCC (partially complete)
  - New NGCC at existing site
  - Cook plant uprate (under study)
  - Renewables
- Deploy technology as appropriate
  - Continue pursuit of CCS technology
  - Energy storage technologies
  - gridSMART®



Capacity - 2010



Projected Capacity - 2017

Transmission Investment Strategy

- **Near-Term Investment** – Electric Transmission Texas (ETT) secures near term investment opportunities, allowing AEP to invest in the large, growth-oriented Texas transmission market.
  - Total project cost: $3 billion with a 9.96% ROE
- **Mid-Term Investment** – Seven wholly-owned transcos allow for expansion and growth within AEP's existing utility footprint through an efficient recovery mechanism.
  - Will spend $160 million in 2011 and more than $350 million in 2012; Expected ROE will be in the 11.2%-11.49% range
- **Long-Term Investment** – Joint ventures provide opportunities for longer-term growth outside of AEP's existing utility footprint with forward looking formula rates, higher ROEs and FERC incentives, and mitigated risk profiles.

765-kV Tower

Joint Venture Strategy: Long-term

- **Strategy**: JV's secure new investment opportunities with local utilities to diversify AEP's investment outside AEP's traditional footprint while providing longer-term incremental earnings**.** JV projects are well-suited for FERC formula rate recovery mechanism, including potential for incentive rates.

- **Future:** Federal/regional initiatives may accelerate expansion of EHV transmission (e.g. cap-and-trade, renewable portfolio standards, inter-region wide planning). Securing first mover advantage will enable AEP to secure LT investment opportunities.

- **Future flexibility**: Passive investment opportunities can be considered and can provide entry beyond SPP/PJM/ERCOT

Fundamental barriers must be addressed to attract investment for Environmental Compliance and New Generation

Jobs in Ohio

Jobs are a key component of growth potential in Ohio

Without regulatory assurances over time we could see loss of direct & indirect jobs related to power generation, and business relocations to surrounding states

Energy Security

Secure, reliable and predictable electricity supply is basis for sustained investment and employment in Ohio

Volatility in power prices can lead to major loss of economic activity over time

Primary objective of ESP: Stabilize rates and support economic development in the state of Ohio

Merged AEP Ohio

Single merged AEP Ohio company presumed with supporting information on an individual OP/CSP basis

Rate Redesign

Generation rates redesigned to resemble market pricing structures

29-Month ESP Period

ESP period Jan 1, 2012 through May 31,2014 (May 31 date aligns with PJM annual planning cycle)

Alternative Long Term Option

Alternative longer-term price certainty option offered for qualifying commercial & industrial customers

Ohio Growth Fund

Creation of significant private sector economic development to attract investment and job growth in AEP Ohio service territory

Distribution Components Included

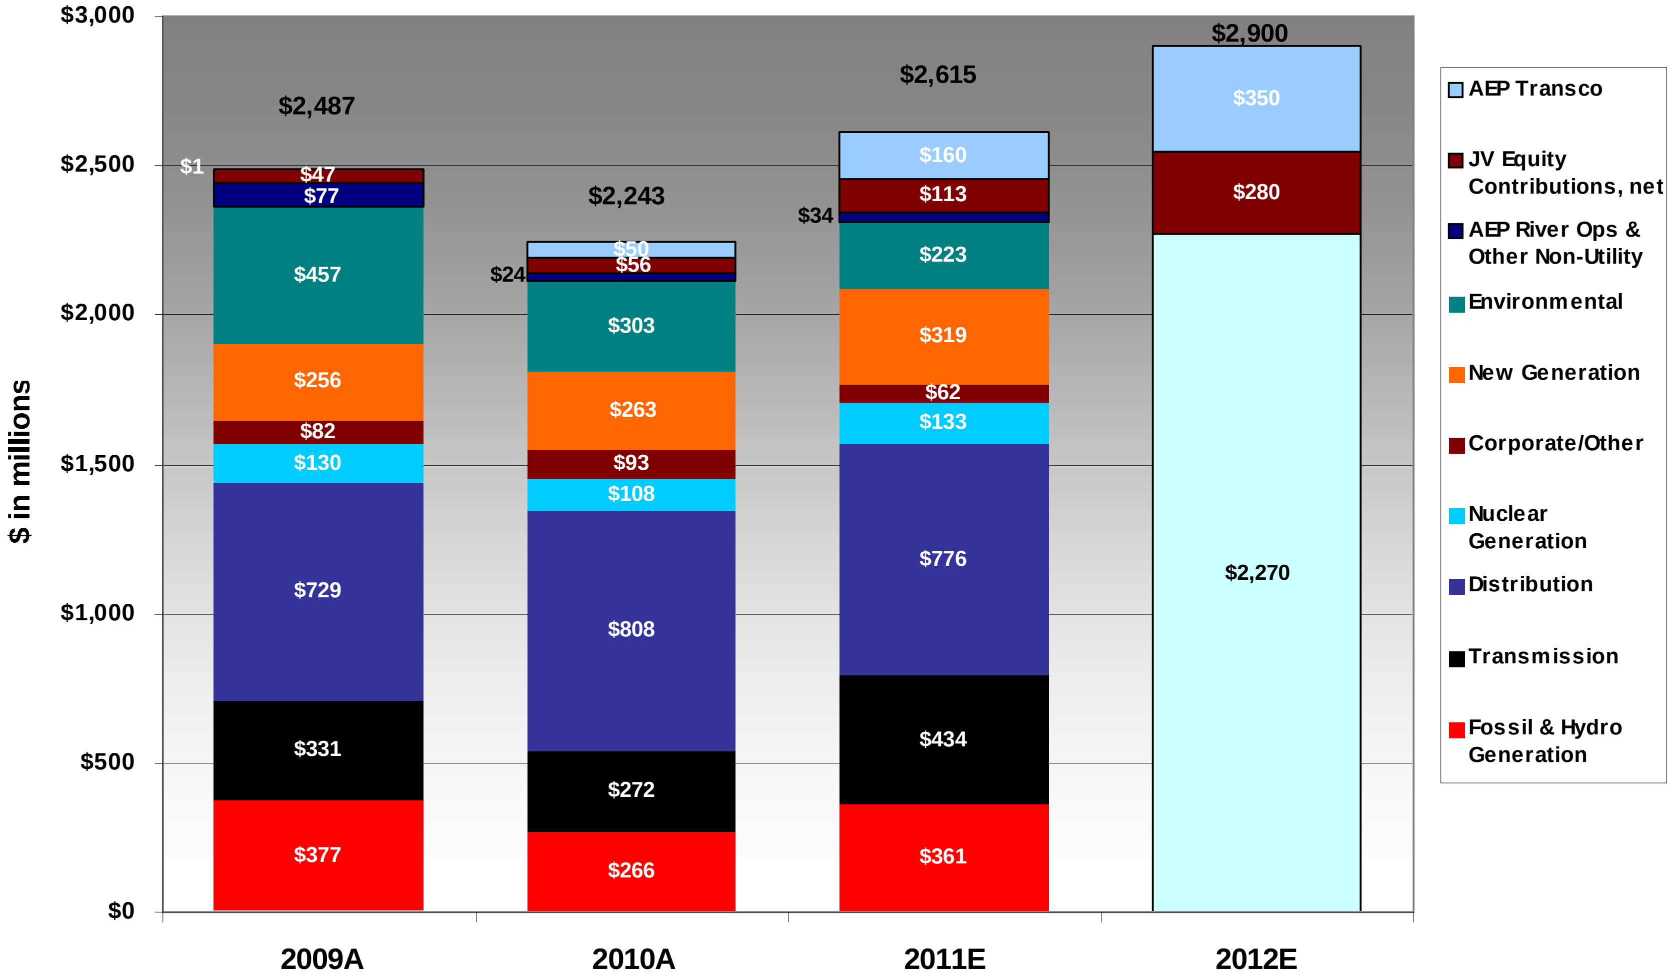
Inclusion of certain distribution components while pursuing a parallel distribution base rate case

Capital Allocation

In this economic recovery cycle, capital allocation requires balance for spending that considers the obligation to serve, the ability to obtain rate increases, a balance sheet to support the plan, and the total return proposition to shareholders

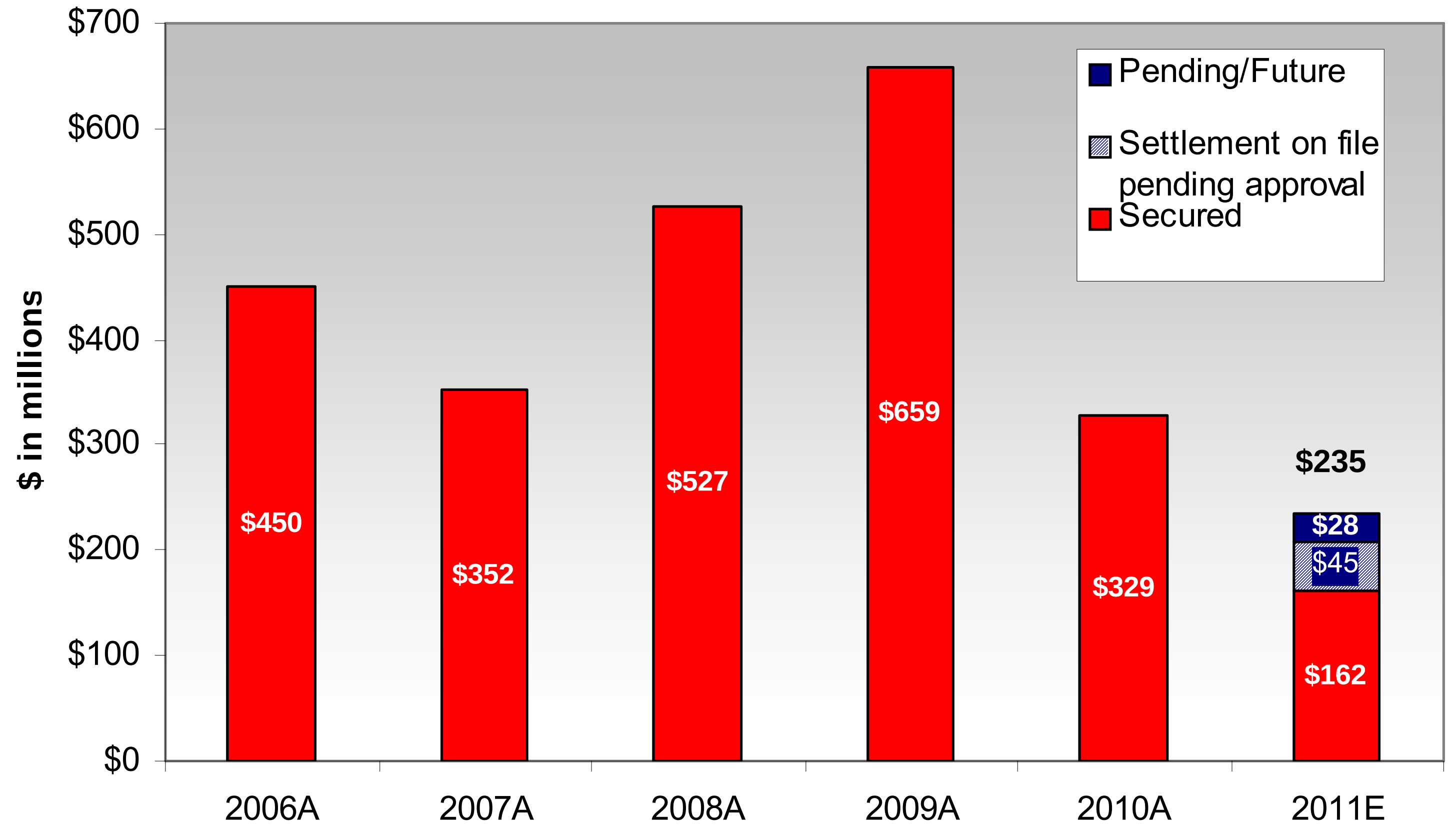
- Capital for Growth
  - Capital budget of $2.6B for 2011
  - Capital budget plan of $2.9B for 2012
- Return of Capital to Shareholders
  - 12% increase in quarterly dividend in 2010
  - Future dividend increases will grow with earnings
- Capital to Reduce Risk
  - Voluntarily funded pension $500M in 2010
  - Allocating an additional $150M of funding for pension in 2011

Capital Expenditures



Investment levels greater than depreciation of $1.4B per year cause rate base growth in 2011 and 2012

Rate Changes



Note: Rate changes in this chart exclude revenues with offsetting costs

Pending/future rate cases include cases yet to be filed

Settlement on file pending approval relates to the WV base rate case

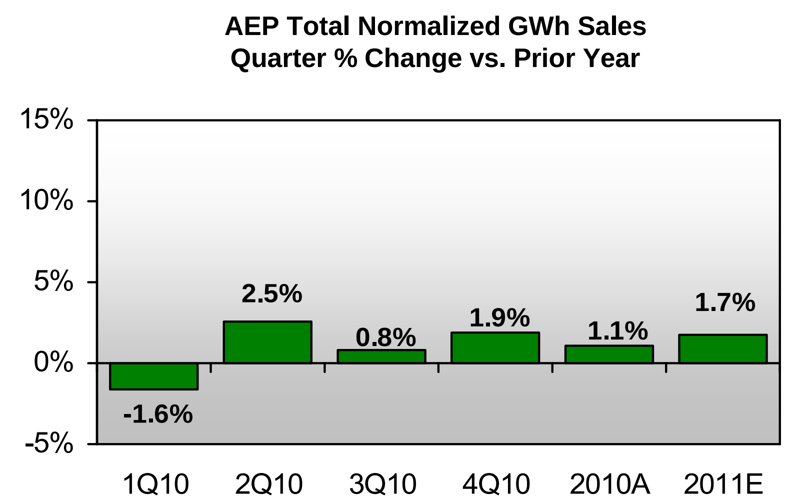
2011 Ongoing Earnings Guidance

2010A: $3.03/share

2011E: $3.00-$3.20/share

Near-Term Earnings Drivers

- Recovering economy
- Rate recovery from returns on capital investment
- Continued O&M discipline

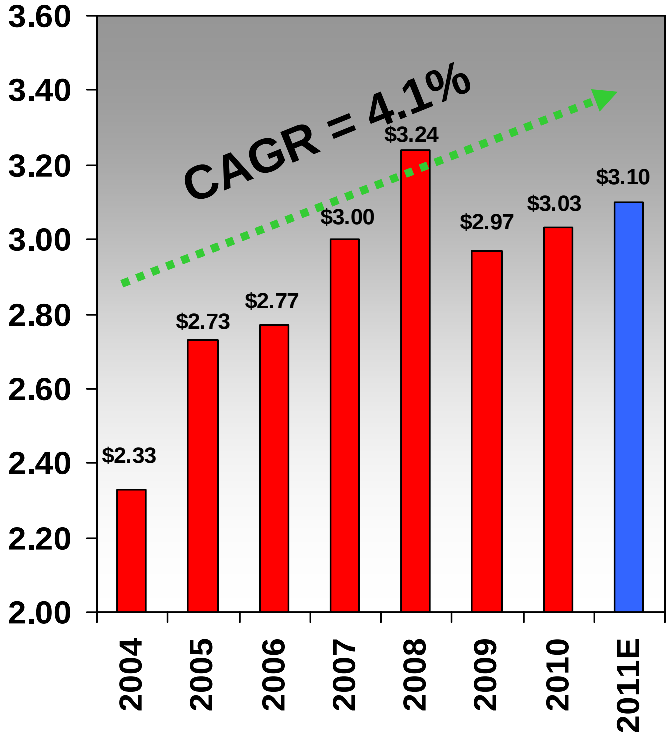


Year over Year change by segment:
Residential: 1.9%
Commercial: 0.7%
Industrial: 1.9%

Earnings and Dividends

On-Going EPS History Since 2004

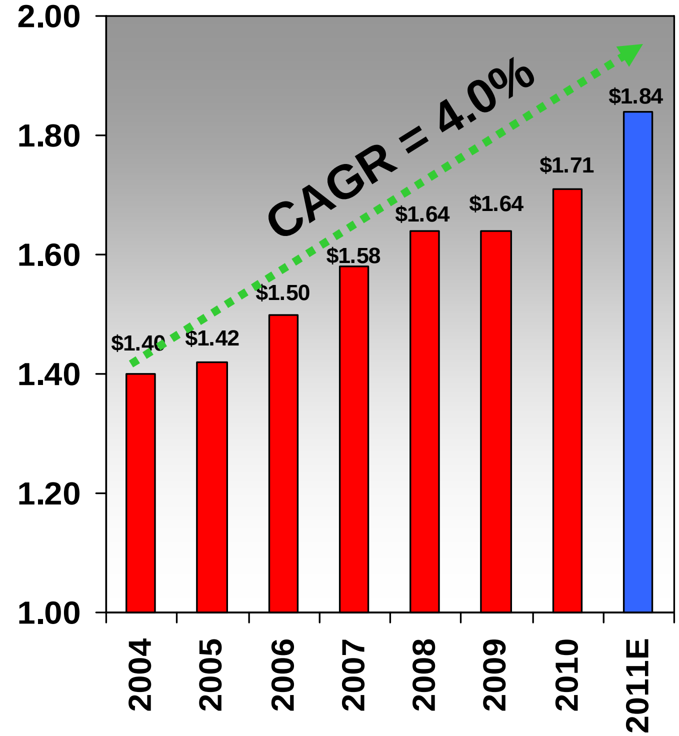
$/share



- Earnings growth largely attributed to capital investment program
- Pre-recession earnings supported by robust wholesale market activity and high power prices
- Equity offering in 2009 stabilized credit and strengthened balance sheet
- 2011 guidance range of $3.00 to $3.20 per share

Dividend History Since 2004

$/share



= subject to Board of Directors approval

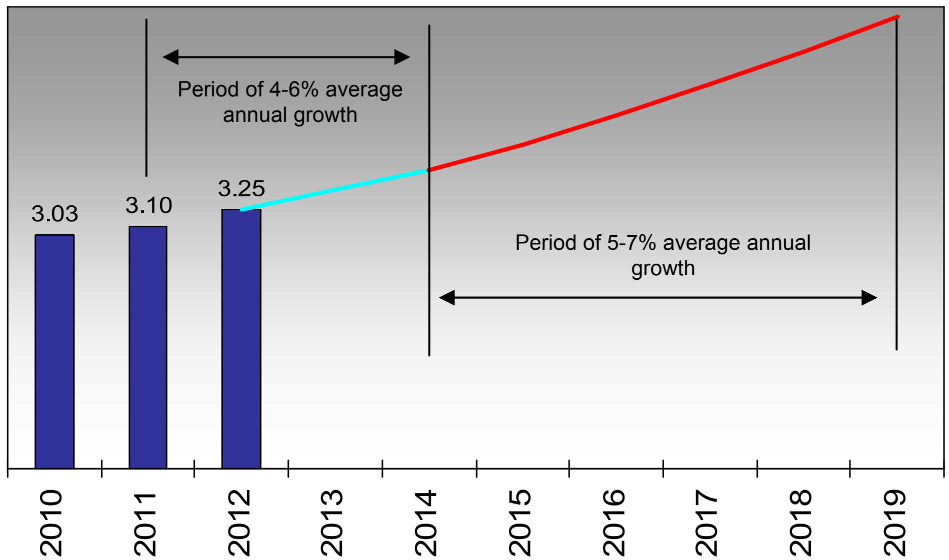
- Dividend increased 12% in 2010
- 403rd consecutive quarterly dividend paid March 10, 2011
- 50-60% payout ratio target
- Current yield over 5%

Long-term EPS Growth Rate

- 4-6% EPS growth 2012-14
  - Average annual capital spend between $2.9-3.4B
    - Utility platform replacement capital of about $1.4B (annual depreciation)
    - Growth in rate base of $1.5-2.0B per year, allocated between utility platform and transmission projects
  - Blended ROE of 10.5 - 11%
  - Slow, steady recovery in economy

- 5-7% EPS growth post 2014
  - Base utility platform capital including generation transformation
  - Higher allocation of discretionary capital going to opportunities in the transmission development pipeline
  - Higher overall blended ROE opportunity
  - Robust economic growth

Average Annual EPS Growth defined over two periods



AEP Highlights

- Regulated Electric Utility
  - Regulatory and economic diversity
  - Operating Company Model
- Focus on Capital Allocation
  - Capital for Growth
  - Return of Capital to Shareholders
- Strong Balance Sheet
  - Stable credit ratings
  - Capital plan supported by cash flow
  - Strong liquidity position
- Growth Opportunities
  - Capital for utility platform
  - Transmission projects
- Dividend yield over 5%

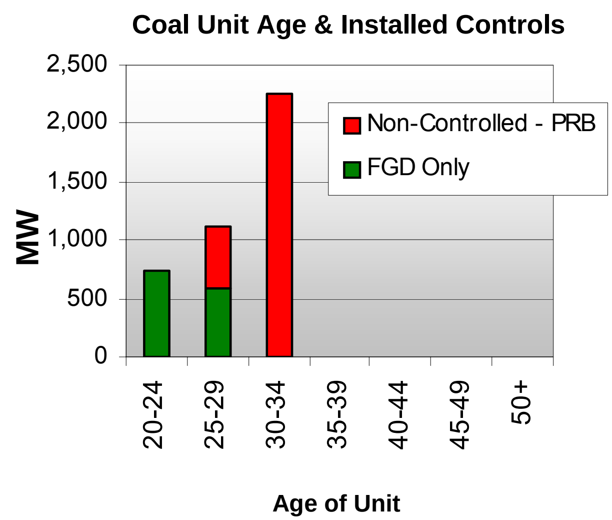
2010A - $29/ton
2011E - $29/ton



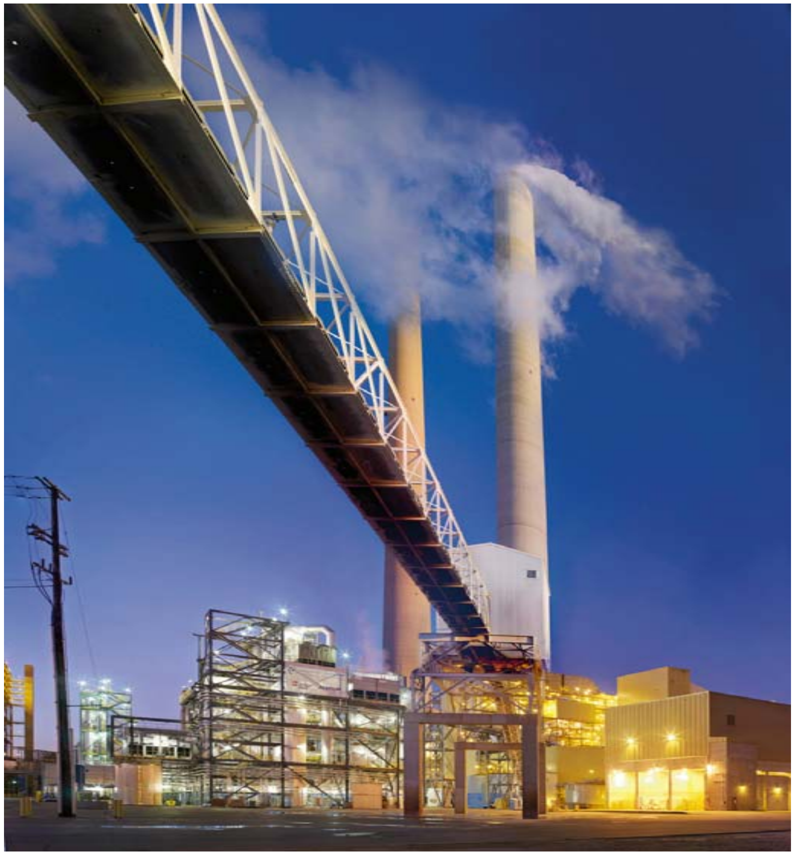
Carbon Capture and Storage

PHASE I - Validation

- World's first operating CCS facility on a coal fired power plant
- Gained competitive advantage through technology development
- Currently testing key performance parameters: auxiliary power, removal efficiency, reliability, CO_2 product quality

PHASE II - Commercialization

- Initiated in January 2010
- Designed to capture and store 1.5 million metric tons of CO_2/year
- Estimated cost of $668 million with 50% DOE funding
- Pursuing additional funding/participation
- Scheduled in service date is mid-2015
- Key activities through July 2011 include conceptual engineering, detailed cost estimate and National Environmental Policy Act process



Carbon Capture and Storage project Mountaineer Plant - New Haven, WV

AEP's "Smart Grid" Deployment – Pilot Projects

Indiana Michigan Power - South Bend Pilot (Completed – September 2010)

- 10,000 AMI meters
- Integrated Mesh communication network
- Distribution grid management – centralized & decentralized
- Consumer programs: 2-tier time-of-day rates and technology enabled direct load control using PCTs
- Customer web portal
- Initial meter data management system development

AEP Ohio– central Ohio– (2009-2013)

- Awarded US DOE Smart Demonstration Project
- 133,000 meters using integrated mesh network
- Advanced distribution grid management with volt-VAR control
- Advanced consumer programs including critical peak and real-time pricing
- Extensive consumer outreach and communication
- Innovative web portal
- Large scale distributed storage
- Concentrated PHEV implementation
- Smart appliance deployment
- Industry first smart grid cyber security center

AEP Texas – Statewide (2009-2012)

- Legislature enabled and commission directed T&D service providers to deploy advanced metering
- 970,000 meters using mesh network communications
- Enable Texas retail service providers to provide innovative pricing and in-home consumer technologies
- 10,000 in-home displays for low income customers
- Statewide portal for usage and home device provisioning

PSO– Owasso Pilot (Implement in 2011)

- 13,000 AMI meters
- AMI and distribution control communication networks
- Distribution automation
- Distribution Volt-VAR control
- High level of in-home devices – displays and PCTs
- Customer programs – time-of-day and direct load control programs
- Web portal

gridSMART® attributes from the utility side of the meter look promising; customers with low rates may not see material savings/benefits

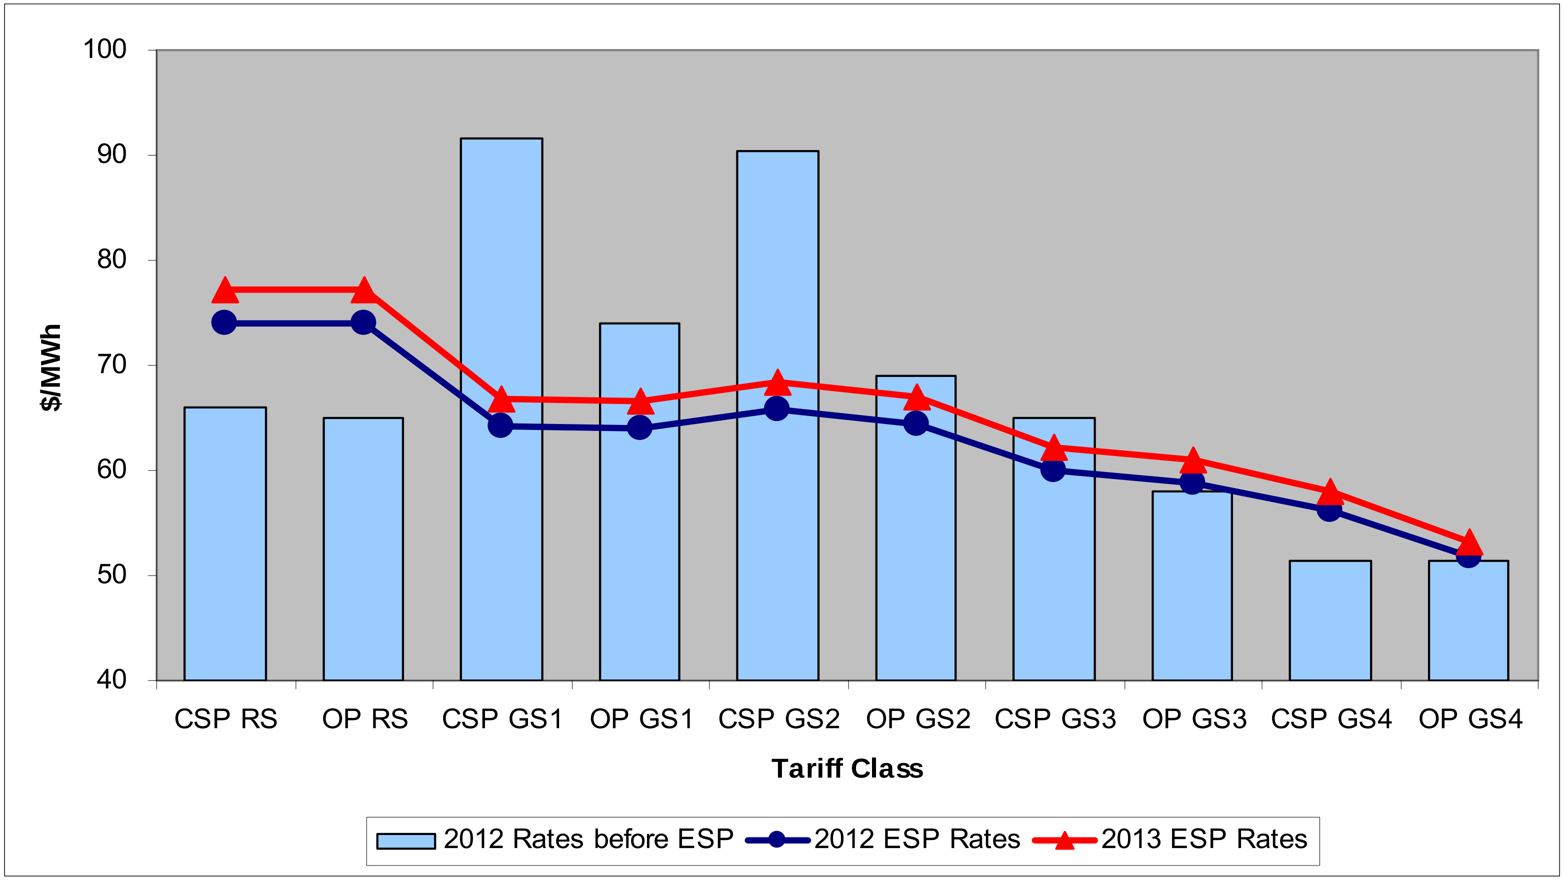
N/C* = No change from prior year

While the ESP includes a small base generation increase, the move to a market-based rate design, consistent with state policy, will result in varying impacts for different customer groups.

Price to Compare

Proposed **SSO** Rates Redesigned To Resemble Market Pricing Structures



Rates do not reflect mitigation impact of market transition rider
2012 Rates before ESP reflect current 2011 rates for generation & transmission service, adjusted to reflect full cost 2011 fuel and environmental costs.

The realignment of rates with market should provide all customers with equivalent opportunities to shop. Additionally, since the proposed design eliminates explicit demand charges, customers should be more easily able to evaluate competitive offers. To ease the rate impact that customers will experience from the realignment, we have proposed a Market Transition Rider.

Market Transition Rider – Mitigates the Initial Impact of Rate Realignment

Three-Year Market Transition Plan
Summary of AEP Ohio ESP Generation Rate Changes

Illustration of Market Transition Rider on ESP Generation Rate Increases

The Market Transition Rider is a transition rider designed to facilitate the transition from AEP Ohio's current rates to market-based SSO Generation Service rates. It is a non-bypassable rider designed to limit the first and second year changes for any customer classes to uniformly transition any above or below average changes in three steps. Any revenue shortfall that is produced by limiting the increases for certain customer classes is collected from those classes whose decreases are limited.

List of ESP Riders – Existing and Proposed

Line	Rate Mechanism	Abbreviation	Bypassable	Distribution	Notes
1	**Current Riders**				
2	Universal Service Fund Rider	USF	--	Yes	
3	Advanced Energy Fund Rider	AEF	--	Yes	Expired 12/31/2010

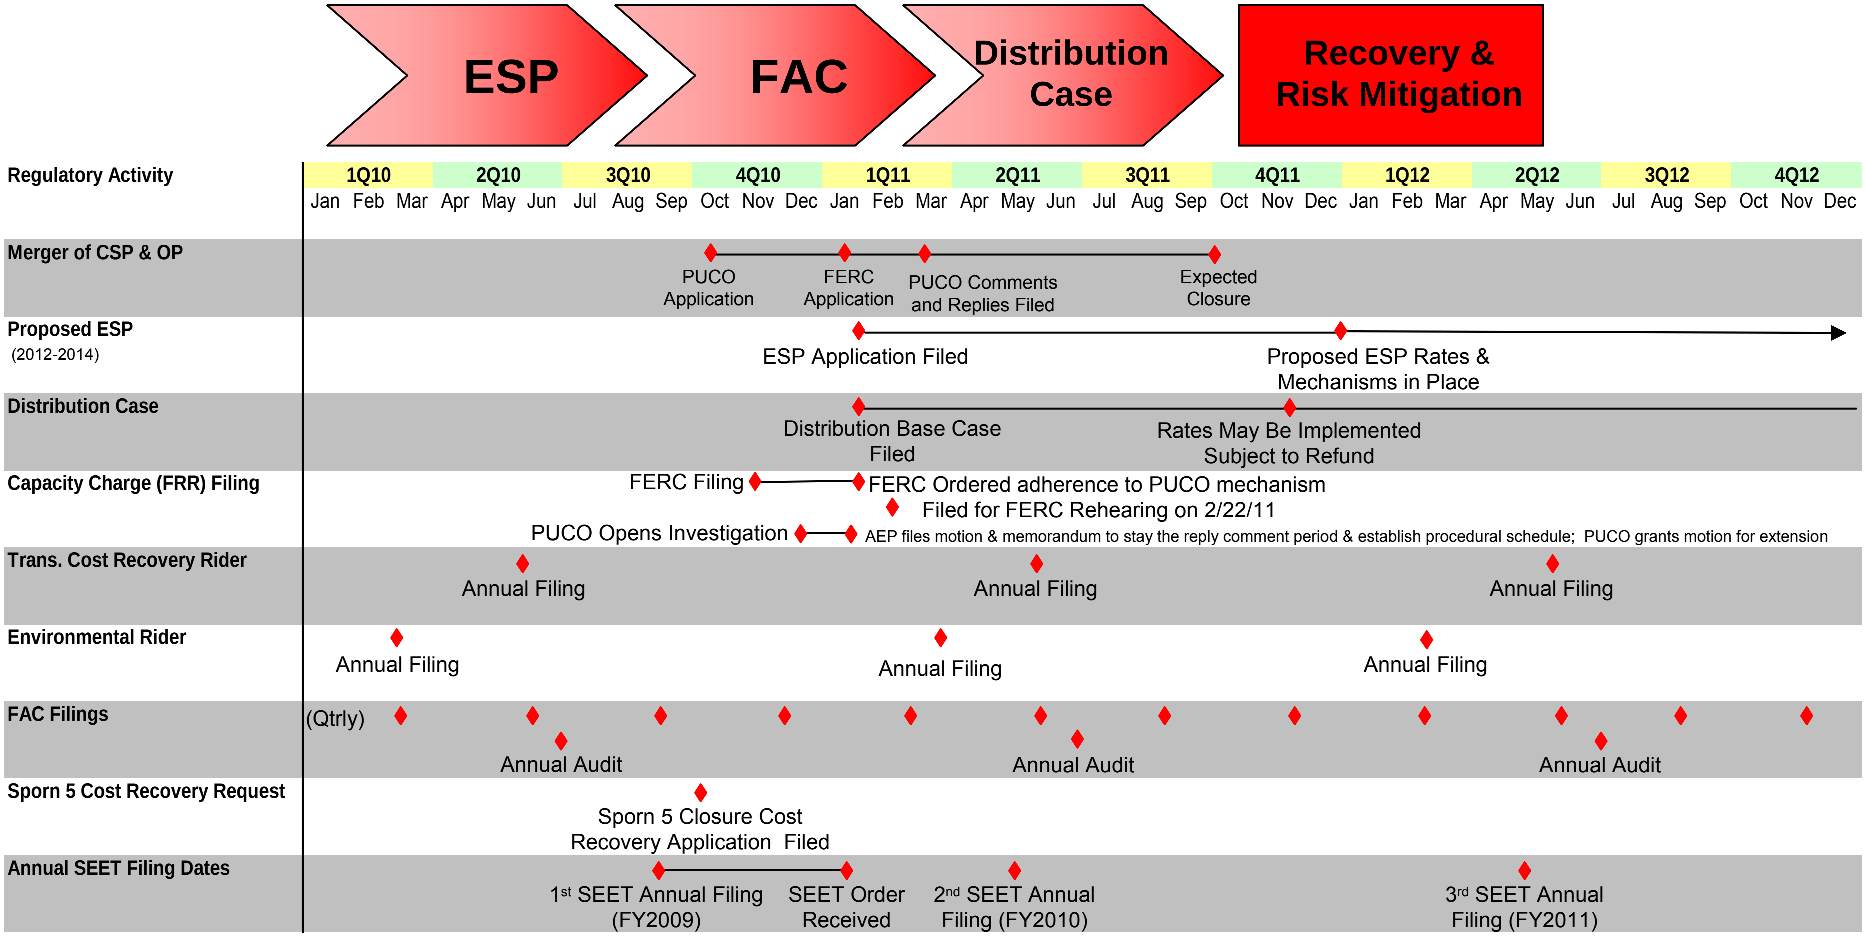
11	Enhanced Service Reliability Rider	ESRR	--	Yes	
12	gridSMART® Rider	gridSMART®	--	Yes	
13	Environmental Investment Carrying Cost Rider	EICCR	No		the current bypassable rider is proposed to be nonbypassable in the new ESP
14					
15	**Proposed Riders**				
16	Standard Offer Generation Service Rider	GSR	Yes		Relocation of base generation rates
17	Generation Resource Rider	GRR	No		Capital/solar investment
18	Alternative Energy Rider	AER	Yes		Relocation of RECs from FAC
19	Phase-In Recovery Rider	PIRR	--	Yes	Previous ESP deferrals, possibility of securitization
20	Distribution Investment Rider	DIR	--	Yes	
21	Market Transition Rider	MTR	--	Yes	
22	Generation NERC Compliance Cost Recovery Rider	NERCR	No		
23	Facility Closure Cost Recovery Rider	FCCR	No		
24	Carbon Capture and Sequestration Rider	CCSR	No		
25					
26	**Other Provisions**				
27	Green Power Portfolio Rider	GPPR	--		Voluntary
28	Rate Security Rider	RSR	--		Voluntary
29	Plug-In Electric Vehicle Tariff / Costs	PEV	--	Yes	Voluntary, Deferral of Costs
30	Emergency Curtailable Service Rider	ECS	--		Voluntary, pending
31	Storm Damage Recovery Mechanism		--	Yes	Reconciliation of storm experience to funding level
32	Pool Termination or Modification Provision		Yes		
33	PIPP Uncollectibles	PIPP	--	Yes	

Ohio Timeline



AEP Ohio's long-term strategy is designed to produce rate relief for items currently known as well as anticipated future items. The filings and riders we seek today are designed to be broad and flexible enough to accommodate a variety of circumstances, because it is impossible to know all variables and specific items for which we will desire to seek rate relief or what regulatory circumstances will prevail at the time.

Summary Rate Case Information

AEP Ohio Distribution Rate Case – Docket #351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%. A procedural schedule from the PUCO is pending.

Actual Capital Structure – Company Position – 08/31/10

Summary Rate Case Information

APCo West Virginia General Rate Case – Docket #10-0699-E-42T

On May 14, 2010, APCo filed a base rate case with the West Virginia Public Service Commission requesting a net increase of $155.5 million, comprised of a $223.8 million base rate increase and a $68.3 million decrease in the construction surcharge. The filing related to capital investments made and to recover increased costs. In addition, APCo requested to establish a separate transmission tracker related to PJM charges. The requested ROE was 11.75%. A settlement is on file which stipulates a rate increase of $60MM and the ability to defer $18MM of storm damage expenses. An order is expected by the end of March 2011.

Actual Capital Structure – Company Position (@12/31/09)

	% of Capitalization	Cost Rate	Weighted Return
