  - ➢ Final order expected in June or July 2006
  - ➢ September 2006 - Issuance of securitization bonds if no appeal

<u>Procedural Schedule for TCC Securitization</u>

- ✓ April 17, 2006 – Intervenors Files Testimony
- ✓ April 24, 2006 – Staff File Testimony
- ✓ April 27, 2006 – TCC Files Rebuttal Testimony
- ✓ May 25-26, 2006 – Hearings On Merit

- May / June 2006 – Request approval for CTC to address other true-up items
  - ➢ Expected $475 million credit to customers
  - ➢ Sept 2006 – CTC to be implemented

Regulatory Activity Underway

A Century of Firsts

Ohio Companies Pass through of FERC OATT Changes

Filed Feb 3, 2006 - Seeking authority to pass through to customers the changes in the FERC OATT related to the elimination of the SECA revenues and the costs associated with the Wyoming-Jacksons Ferry transmission line

Indiana Depreciation Filing

December 1, 2005 – I&M filed petition with the IURC for accounting authorization to revise the depreciation rates applicable to its electric utility plant in service

- ✓ Based on a 2004 depreciation study, I&M recommends a decrease in annual depreciation expense of approximately $45 Million on an after-tax Indiana jurisdictional basis.
- ✓ Procedural schedule has been set with final order expected in third quarter 2006

Appalachian Power

Virginia E & R Cost Recovery Factor - Filed July 1, 2005 - Seeking recovery of $62.1 Million in new Environmental & Reliability costs

- ✓ Oct 14, 2005 – SCC ruled VA law does not allow recovery of prospective costs - $48.6 Million
- ✓ Nov 14, 2005 - APCo filed supplemental direct testimony which included updated actual E&R costs incurred through Sept. 30, 2005 of $21.1 million

Virginia General Rate Case – Gave notice to VA SCC on March 1, 2006 of intent to file general rate case no sooner than May 1, 2006

Regulatory Activity – Settlement Pending

A Century of Firsts

Appalachian Power & Wheeling Power – West Virginia Base Rate Case & ENEC Reactivation

Filed August 26, 2005 – Seeking $183 Million increase in revenues for increasing costs for coal, purchased power and environmental improvement construction projects

- ✓ APCo filed supplemental testimony on January 18, 2006 to reflect Ceredo plant purchase and other miscellaneous items resulting in a revised revenue requirement of $171 Million.
- ✓ APCO was granted the authority to begin deferral accounting for ENEC beginning July 1, 2006.

Filed April 25, 2006 - Joint Settlement Agreement

- ✓ Estimated Overall impact of Revenue increases to be phased-in through 2009
  - ➢ $129 Million
  - ➢ 16% Increase
- ✓ Provides for timely recovery of Wyoming-Jacksons Ferry 765 kV line and Mountaineer & Amos FGDs

Phased-In Settlement Agreement Increases

- ✓ July 28, 2006 - $61 Million*
- ✓ July 1, 2007 - $36 Million**
- ✓ July 1, 2008 - $14 Million**
- ✓ July 1, 2009 - $18 Million**

* Excludes ENEC Over-Recovery Negative Surcharge

** Estimated

Settlement Details

✓ Increase effective July 28, 2006:

($18MM)	Base Rates
$56MM	ENEC
$23MM	WJF & FGD @ 12/31/05
$61MM	Gross Revenue Increase
($17MM)	ENEC Over-Recovery Negative Surcharge
$44MM	Net Increase effective 7/28/06

✓ Phased-In Revenue Increases on July 1 in each year 2007 – 2009 provides for timely recovery of FGD project balances at 12/31 of prior year

IGCC Regulatory Activity

A Century of Firsts

Ohio - Cost Recovery Filing

Phase 1 - PUCO AUTHORIZED

- ✓ Effective during 2006
- ✓ Seeks recovery of initial costs, including those already incurred, such as site engineering and various other engineering services
- ✓ Approximately $23.7 Million

Phase 2

- ✓ Effective 2007- mid 2010 (Construction Phase)
- ✓ Seeks recovery of carrying costs associated with plant construction

Phase 3

- ✓ Effective mid 2010 (Commercial Operation begins)
- ✓ Seeks recovery of projected $1.174 Billion cost of plant over its operating life.

Ohio Next Steps

2006:

- ✓ **Secure cost recovery plan**
  - **April 10, 2006 - PUCO authorized implementation of Phase 1 Rates**
  - **Phase 2 & 3 ruling - Post October 2006 - after completion of FEED study**
- ✓ **Finalize site selection**
- ✓ **Negotiate with suppliers**

2006—2007:

- ✓ **Obtain permits and finalize engineering and procurement**

2007—2010:

- ✓ **Construct and start-up plant**

West Virginia IGCC Activity

On January 11, 2006, Appalachian Power Co. filed a Certificate of Public Convenience and Necessity seeking authority to construct a 600-MW IGCC facility in West Virginia.

SEEKING AUTHORITY FOR THREE PHASE RECOVERY APPROACH IN OHIO

Regulatory Activity Completed

A Century of Firsts

Ohio - Rate Stabilization Plan (2006 - 2008)

- ✓ Annual 3% and 7% generation rate increases at CSP & OP, respectively
- ✓ POLR rate rider for environmental additions
- ✓ Ability to request additional 4% annual increase in generation rate
- ✓ Elimination of 5% residential generation credit (stipulated in the pre-existing Electric Transition Plan of 2000)

AEP East FERC Transmission Case

December 20, 2005 – FERC approved settlement allowing wholesale transmission rates to increase

- ✓ Results in $22 Million net revenue in 2006 from wholesale transmission

SWEPCo Fuel Factor/Surcharge Filing

January 12, 2006 – Settlement approved by PUCT

- ✓ Fuel factor will increase SWEPCo's annual Texas retail fuel-related revenues by approximately $46 Million.
- ✓ Interim surcharge will collect the under-recovery amount of $44 Million, including interest.

Appalachian Power- Virginia Fuel Factor Increase

- ✓ $57.7 Million increase in fuel factor approved on January 20, 2006

Kentucky Base Rate Case

Final order approved on March 14, 2006

- ✓ $41 million annual increase in base rates
- ✓ Rates implemented March 30, 2006

In Hand to Date - $350MM of the $500MM Rate Recovery in 2006 Guidance

Summary Rate Case Information

A Century of Firsts

West Virginia Base Case Rate Filing

On August 26, 2005, Appalachian Power Co. and Wheeling Power Co. filed an application with the West Virginia Public Service Commission (WVPSC) to increase electric rates and charges, a request for the reactivation and modification of the expanded net energy cost mechanism (ENEC), a proposal for the disposition of Appalachian Power Company's ENEC over-recovery balance, a request for implementation of a System Reliability Tracker mechanism, and a request for waiver of certain provisions of the Commission's Rules. APCo filed supplemental testimony on January 18, 2006 to reflect Ceredo plant purchase and other miscellaneous items resulting in a revised revenue requirement of $171 Million. (Docket #: 05-1278-E-PC-PW-42T)

Summary Rate Case Information

A Century of Firsts

Virginia E&R Factor Filing

On July 1, 2005, Appalachian Power Co. filed a request with the Virginia SCC to recover incremental actual and projected costs for environmental compliance and T&D System reliability in the amount of $62.1MM. The SCC has ruled that under applicable VA law, it does not have authority to approve the recovery of projected E&R costs before their actual incurrence and adjudication. APCo filed supplemental direct testimony which included actual costs incurred for E&R thru September 30, 2005 of $21.1 million. Docket # PUE-2005-00056

Capital Structure – Company vs. Staff

Capital Structure	Company Position (filed 7/1/05)	Staff Position (filed 1/11/06)
Long-Term Debt	53.43%	51.50%
Short-Term Debt	2.67%	2.20%
Preferred Stock	0.54%	0.53%
Common Equity	42.65%	45.16%
ITC	0.71%	0.61%
Total	**100.00%**	**100.00%**
Recommended ROE	**10.85%**	**9.80%**

Revenue Requirement – Company vs. Staff*

Revenue Requirement	Company Position (filed 11/14/05)	Staff Position (filed 1/11/06)
Environmental	13.3	8.2
Transmission	6.1	8.8
Distribution	1.7	2.6
Total	**$21.1MM**	**$19.6MM**

* Difference in positions does not reflect the relative earnings impact and is not necessarily a reflection of the ultimate outcome of the case.

AEP AMERICAN ELECTRIC POWER

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

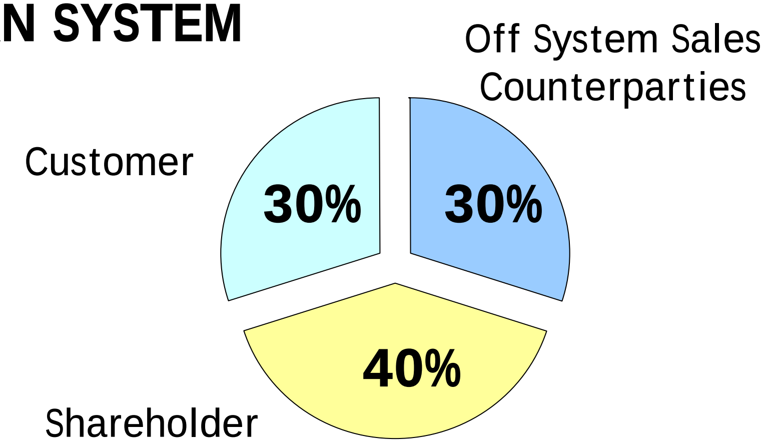
Fuel Cost Recovery
(on average)

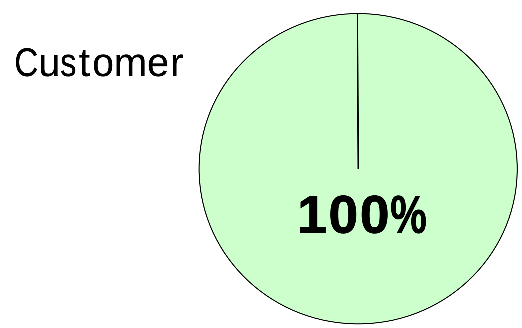
- Fuel recovery varies by jurisdiction
- 70% of fuel cost is recoverable across the AEP System
- Active Fuel Clause Jurisdictions:

AEP EAST: AP-VA, I&M, KGP, KP
AEP WEST: PSO, SWEPCO

EASTERN SYSTEM



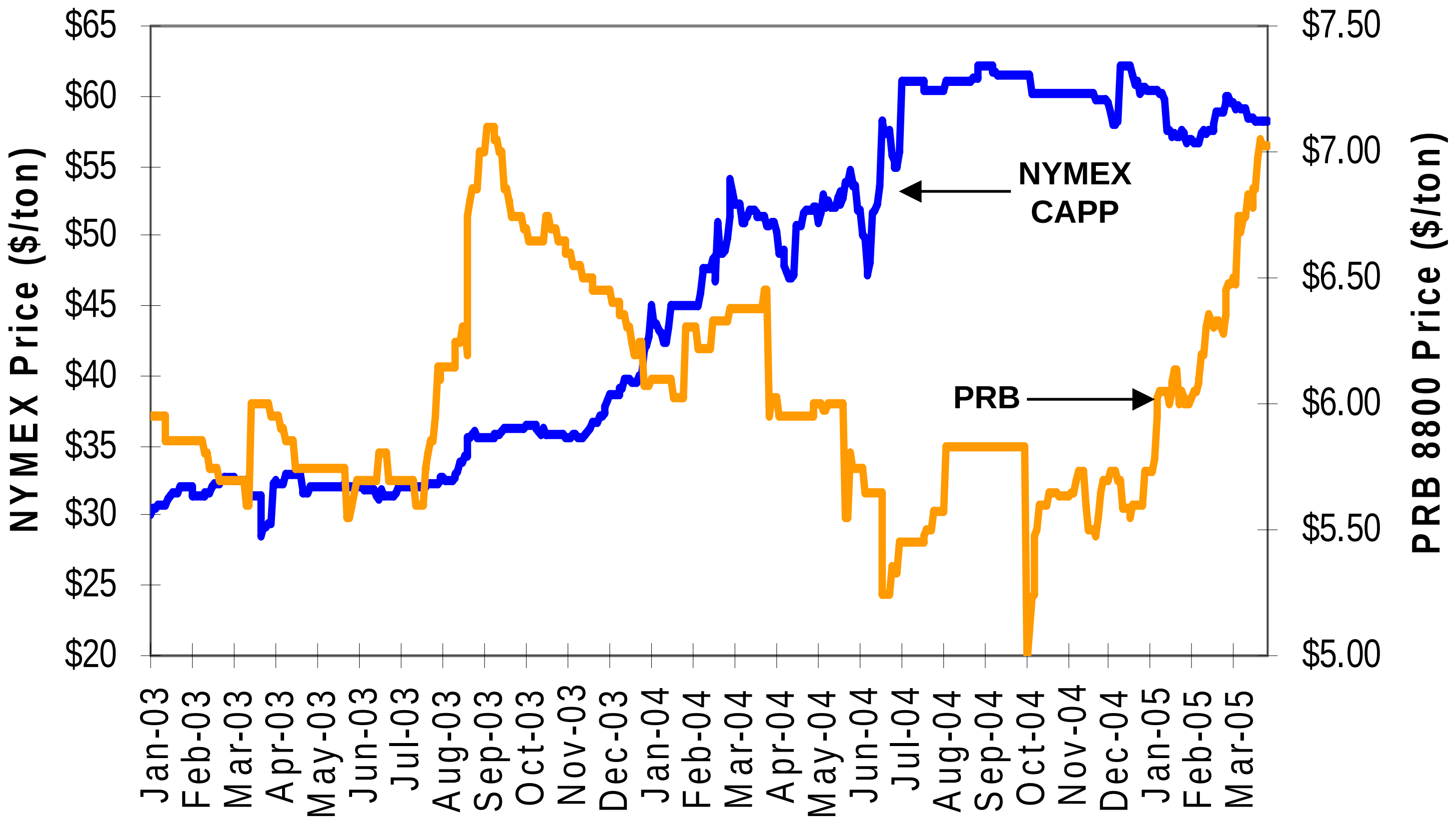
WESTERN SYSTEM



KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 4122 of 9556

Coal Markets

The tale of two markets – one with labor, permitting and capacity constraints (CAPP) and the other with transportation bottlenecks and limited "immediate" substitution capability (PRB) but gaining strength



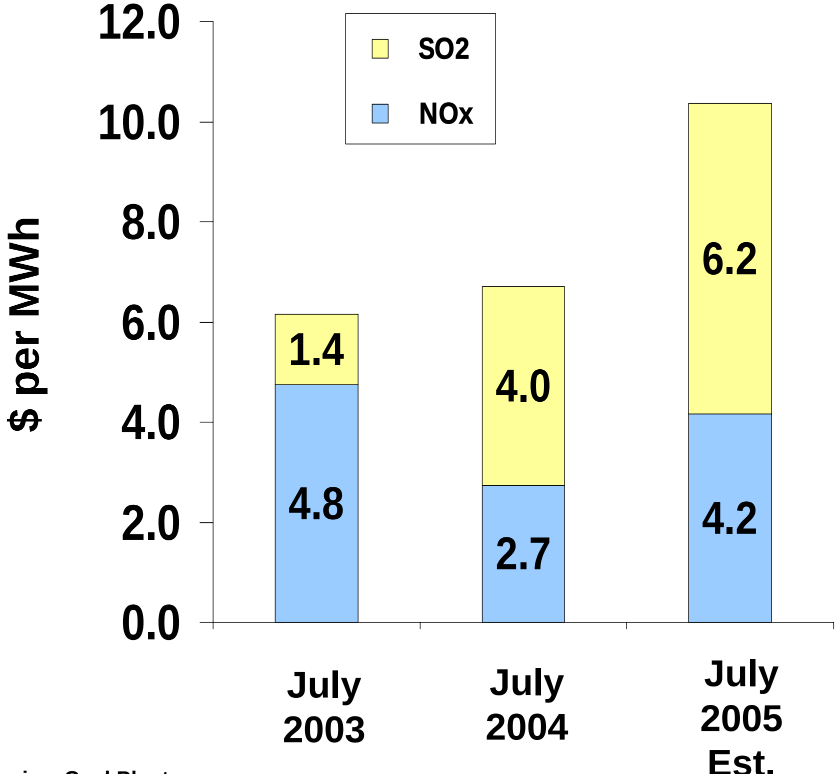
KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 4123 of 9556

Emission Allowance Prices

Allowance prices for SO_2 and NOx have been extremely volatile since the beginning of 2003

Market Value vs. Inventory Cost

Profile of Uncontrolled Power Plant exposed to Market Value of Emission Credits



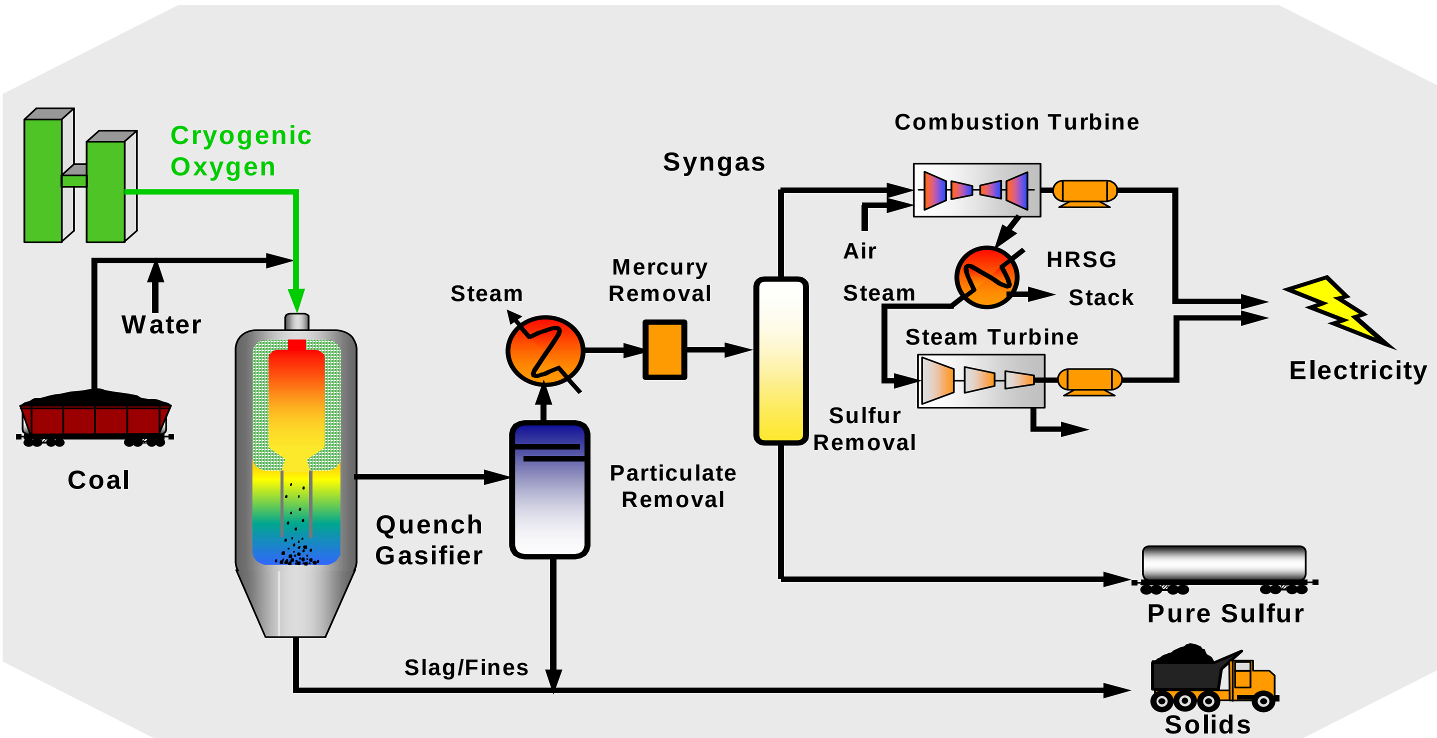
Basis – Coal Plant
9.5 MMBtu/MWh Heat Rate
0.25 lbs NOx/mmBtu
1.67 lbs SO_2/mmBtu

AEP has managed its exposure to rising emission allowance costs

- Inventory cost of emission credits is low
- Effective hedging program for SO_2 allowances
- Effective capital implementation in the NOx SIP Call ($1.3 B as of YE 2004)
- Exposure in future years reduced by $3.7 B capital program and current inventory of allowances

Investing in IGCC

Looking to the Future - IGCC



162110 - GJS/CE-01/1-23-02

AEP has announced its intention to construct a commercial-scale Integrated Gasification Combined Cycle (IGCC) Plant by the end of the decade.

Investing in IGCC

	PC	IGCC	NGCC
Nominal Capacity (MW)	600	600	530
Heat Rate (BTU/kWh)	8700	8600	7200
EPC cost* ($/kW)	1290	1350	440
Total Plant cost** ($/kW)	1490	1610	475
Variable Production cost*** ($/MWh)	15	14	38
All-In Cost of Electricity (without CO2 Capture) ($/MWh)	47	50	57
Estimated Cost of Electricity (with CO2 Capture) ($/MWh)	76	70	91

Source: Electric Power Research Institute

* EPC includes the cost to engineer, procure and construct plant.

** Total plant cost include land, overheads, AFUDC, etc.

*** Assumes Northern App Coal @ $36/ton, no emission credits and $5.00 gas

Site Selection Considerations

- Brownfield site vs. Greenfield site
- Sufficient Space
  - Flat area with adequate construction access
  - 600 acres
- Fuel delivery options
  - Rail/barge/truck
  - Up to 4 million tons/year of coal
  - Access to water
- Transmission Line Costs
  - Distance from high-voltage lines
  - Costs for grid interconnects and stability impacts

PJM EVALUATION REQUESTED FOR 3 POTENTIAL SITES

IGCC Permitting Issues

- Air – to evaluate best available control technology (BACT)
- Wastewater – to understand wastewater streams
- US COE (Corp of Engineers) – to obtain permits for construction of river facilities
- NEPA Process – (National Environmental Policy Act)– Environmental site studies addressing wetlands, endangered species, historical artifacts

PERMIT PROCESS WILL TAKE 1 - 2 YEARS

Next Steps

2005

- ➢ Secure cost recovery plan – Summer
- ➢ Finalize site selection - Fall
- ➢ Negotiate with suppliers – Throughout 2005

- ➢ 2005—2007: Obtain permits and finalize engineering and procurement

- ➢ 2008—2009: Construct and start-up plant

AEP WILL PIONEER CONSTRUCTION OF LARGEST IGCC PLANT IN THE WORLD

Environmental

Clean Air Interstate Rule

- Rule Finalized March 2005
- CAIR designed to address the contribution of regional emissions to downwind $PM_{2.5}$ & 8-hour Ozone non-attainment
- CAIR reductions from 2003 emissions: ~73% SO_2; & ~61% NO_x
- Reductions occur in phases: Phase I (2009); Phase II (2015)
- CAIR established three Cap & Trade Programs:

1. Annual SO_2 Trading Program
2. Annual NO_x Trading Program
3. Separate Ozone-Season only NO_x Trading Program

CAIR Applicability to AEP

- AEP-East States & Louisiana subject to all three trading programs
- Arkansas subject only to the Ozone-Season trading program
- Texas subject to only the Annual NO_x & SO_2 trading programs
- CAIR does not apply to Oklahoma

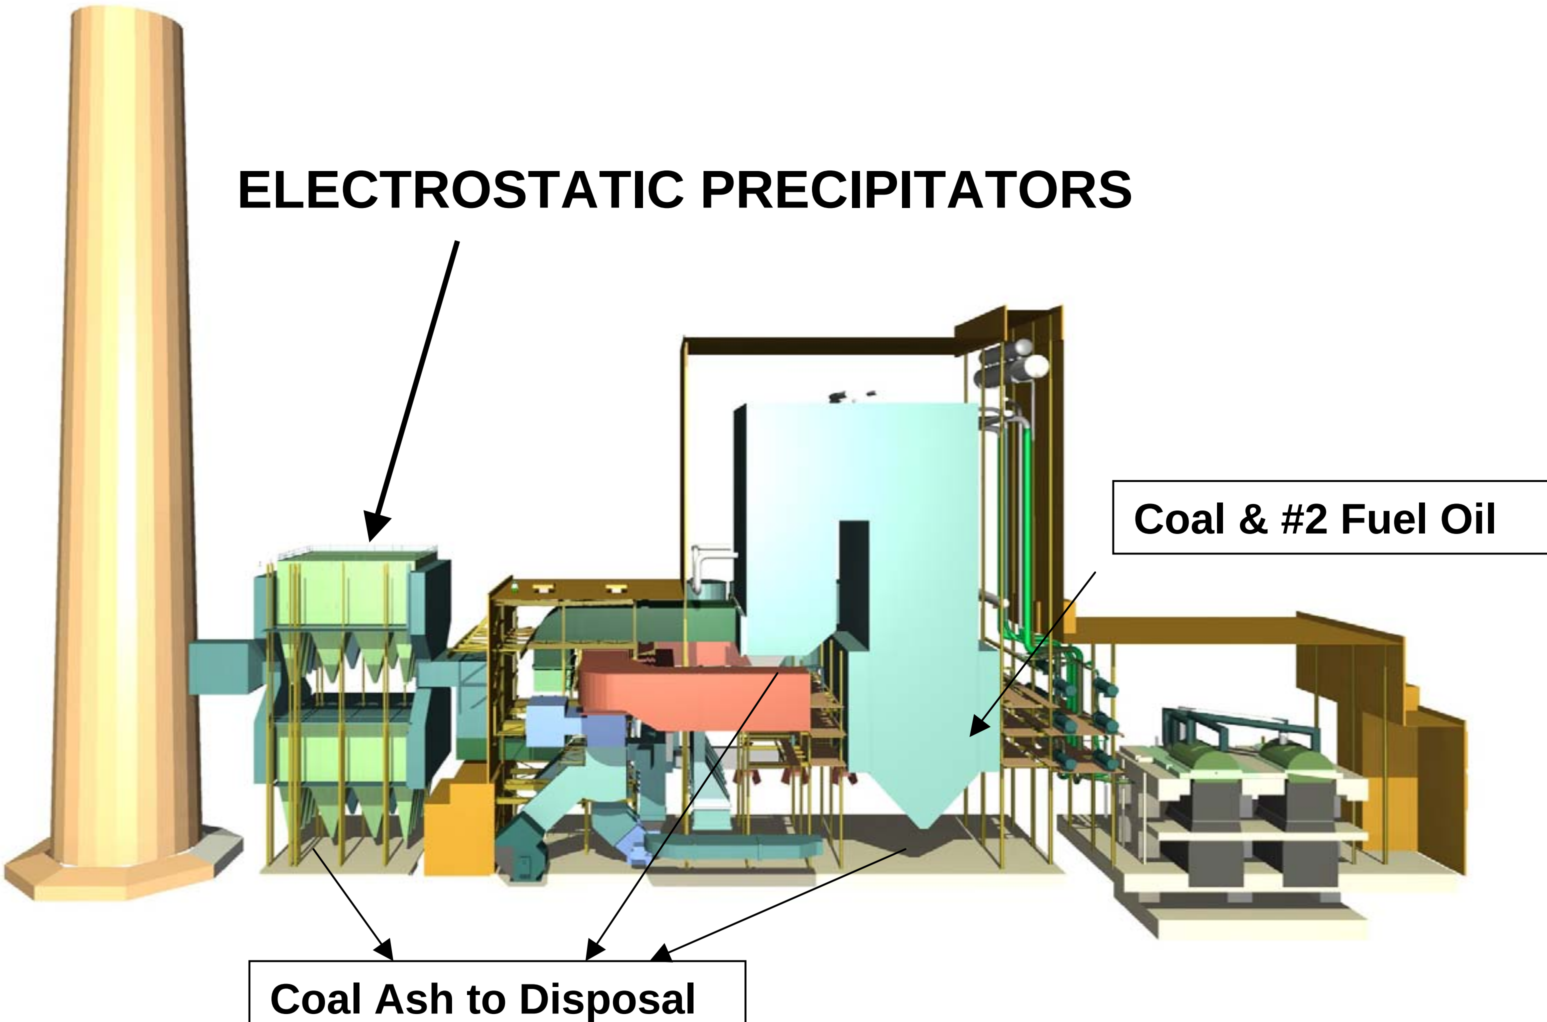
AEP WILL HAVE TO INSTALL ADDITIONAL SCR AND FGD SYSTEMS IN ORDER TO MEET THE EMISSION REDUCTIONS REQUIRED BY CAIR

Mercury Rule

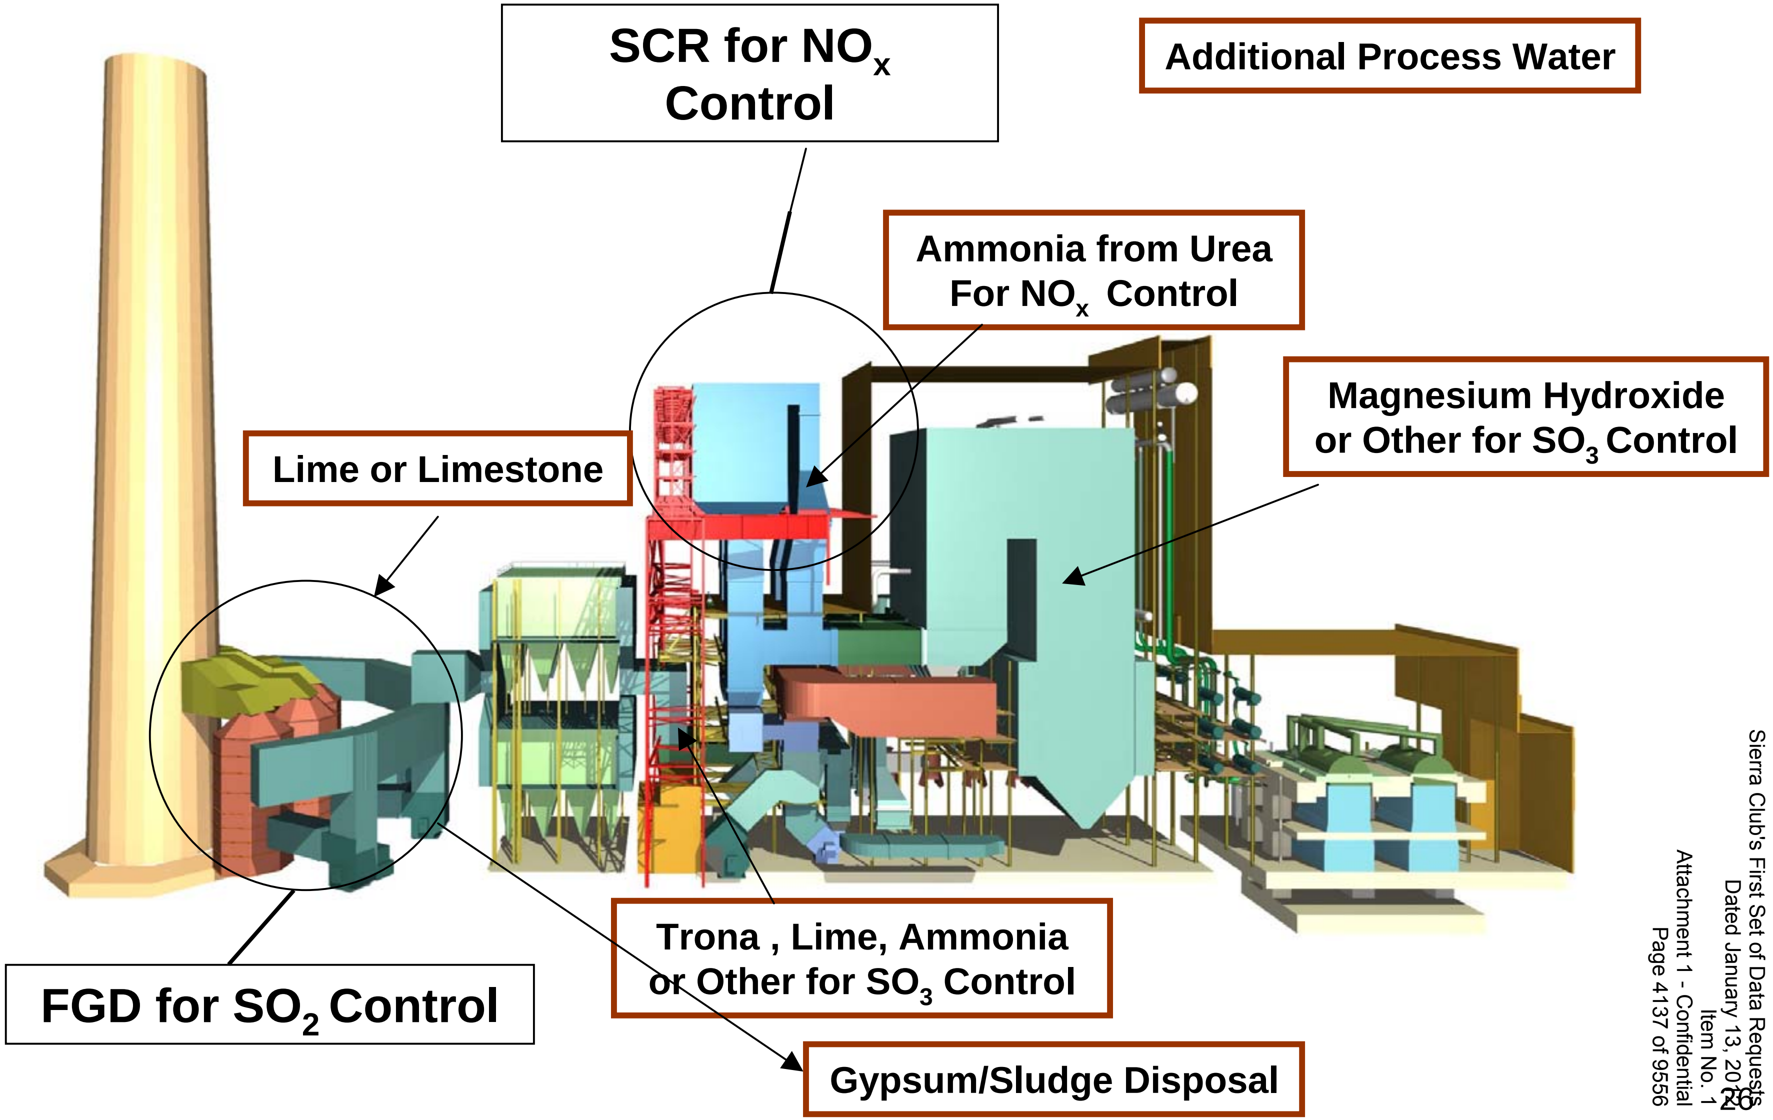
- ➢Rule Finalized March 2005
- ➢Designed to reduce mercury emissions by ~70% nationwide from electric utilities
- ➢Reductions occur in phases: Phase I (2010); Phase II (2018)
- ➢Establishes a Cap & Trade structure to achieve mercury reductions

AEP WILL ACHIEVE SOME MERCURY REDUCTIONS AS A CO-BENEFIT OF SCR AND FGD SYSTEMS, BUT MERCURY SPECIFIC CONTROL EQUIPMENT WILL BE NEEDED ON SOME UNITS

Pulverized Coal Unit as Built in 1970s

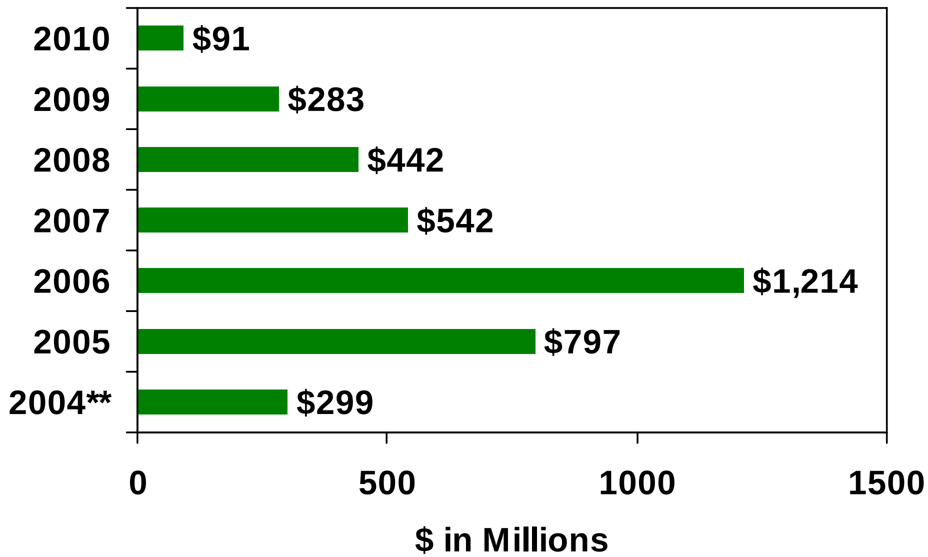


Pulverized Coal Unit Today Showing Retrofits & New Feedstock(s)



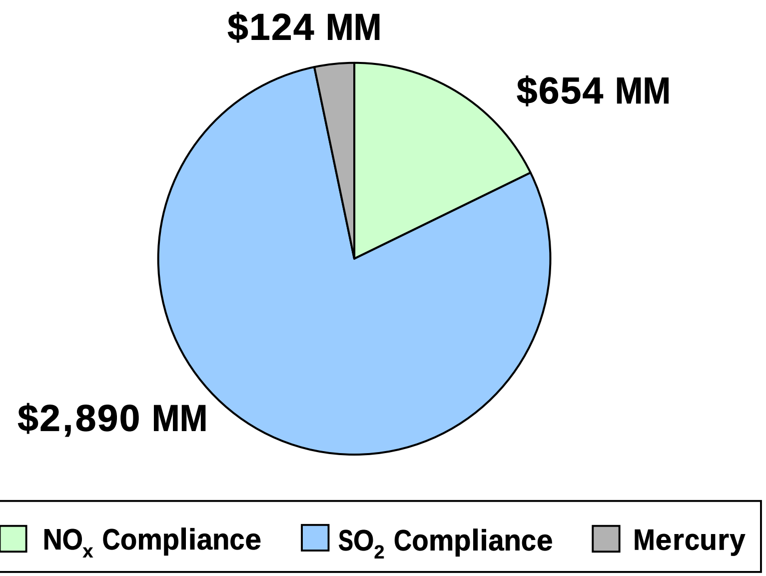
Environmental Investment: $3.7 Billion Through 2010

Environmental Capital Investment*



*Environmental investment for NOx, SO_2 , & Hg purposes
** Actual investment level in 2004

Compliance Allocation



Current Programs
$1.9 Billion:
$0.6 billion for NOx
$1.2 billion for SO_2

Future Programs
$1.8 Billion:
$1.7 billion for SO_2
$0.1 billion for Other

MAJORITY OF 2005 & 2006 DOLLARS WILL BE INVESTED IN OHIO & APCO

KPSC Case No. 2011-00401

Mitchell 1 & 2	1600
Conesville 4	339
Total	**1939**

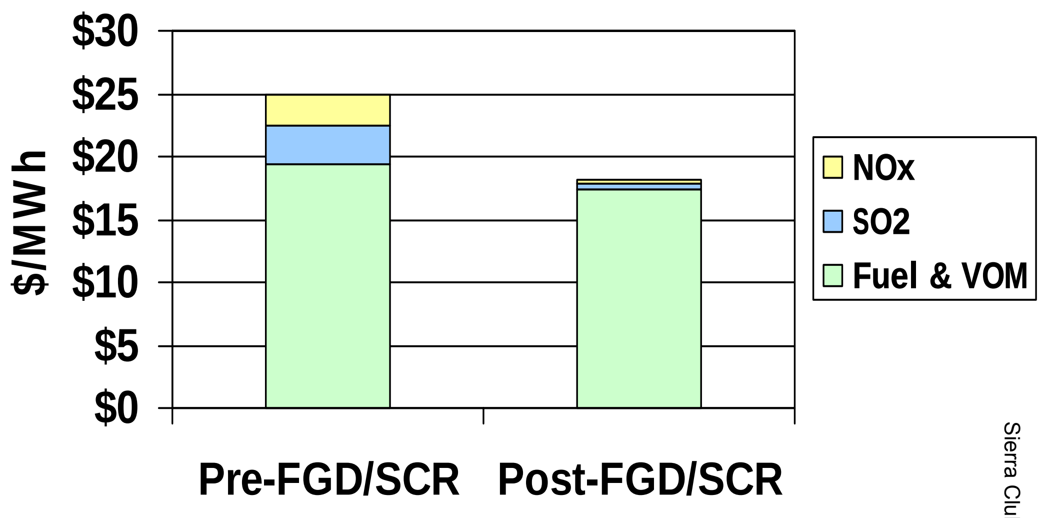
2005 - 2007

Note: MW capacity shown represents AEP's owned capacity only

Low Cost Production Supports Investment

- ➢ Lowers exposure to high cost emission allowances
- ➢ Creates opportunity to burn wider variety of lower cost fuels
- ➢ Improves baseload operation, (higher capacity factor, higher margin)
- ➢ All-in cost of electricity, including FGD/SCR investment, remains low

Typical Pulverized Coal Plant
Comparison of Variable Production Cost
Pre- and Post- FGD/SCR (future view)*



* Assumes annual NOx program

AEP WILL REMAIN THE LOW COST PRODUCER FOLLOWING COMPLETION OF ENVIRONMENTAL RETROFIT PROJECTS

Regulatory Overview

Managing the Regulatory Process

- **Current Regulatory Activity**
  - TCC Stranded Cost Recovery
  - Virginia Environmental & Reliability Factor
  - Louisiana Rate Review
  - FERC Transmission Rate Case
- **Planned Regulatory Activity (2005-2007)**
  - General Rate Cases in all AEP East jurisdictions to seek recovery of investment:
    - IN, KY, MI, TN, VA, WV

BRING CASH IN THE DOOR TO COVER CAPITAL EXPENDITURES & GROW EARNINGS THROUGH ADDITIONS TO THE ASSET BASE

Components of TCC's Net True-up Regulatory Asset

	31-Mar-05	31-Dec-04
	(in millions)	
Stranded Generation Plant Costs	$ 898	$ 897
Net Generation-related Regulatory Asset	249	249
Unrefunded Excess Earnings	(6)	(10)
Net Stranded Generation Costs	1141	1136
Carrying Costs on Stranded Generation Plant Costs	205	225
Net Stranded Generation Costs Designated for Securitization	1346	1361
Wholesale Capacity Auction True-up	483	483
Carrying Costs on Wholesale Capacity Auction True-up	91	77
Retail Clawback	(61)	(61)
Deferred Over-recovered Fuel Balance	(215)	(212)
Net Other Recoverable True-up Amounts	298	287
Total Recorded Net True-up Regulatory Asset	$ 1,644	$ 1,648

Carrying charge calculated using pre-tax cost of capital of 11.79%

Debt Component: 8.12% - $296 million recognized as income thru 3/31/05

Carrying charges for 2005 expected to be $87 million

Equity Component:$154 million to be recognized in income as collected

TCC SEEKING STRANDED COST RECOVERY OF $2.4 BILLION

Regulatory Matrix – East

Ohio (Restructured)
- Unbundled rates for default customers frozen until 12/31/2005
- Pursuant to RSP Plan approved by PUCO 1-26-05:
  - Distribution rates in effect at December 31, 2005 are frozen, with certain exceptions, until the end of 2008.
  - Institute for 2006-2008 a non-bypassable distribution rider for provider of last resort (POLR) costs.
  - CSP ”G” rates to increase 3% per year (2006-2008).
  - OP “G” rates to increase 7% per year (2006-2008).
  - Transmission rates can upon filing reflect change in RTO costs.
- No active fuel clause
- Application for IGCC plant recovery filed on 3-18-05, Hearings scheduled to begin 8-8-05.

West Virginia (Regulated)
- Base rates not frozen; No active fuel clause
- Annual ENEC proceedings have been suspended, the factor is currently fixed at pre-2000 levels.
- On 7-1-05 AP & WP provided a 30-day notice to the WVPSC of their intent to file a general rate case, reinstate the ENEC, & implement scheduled incremental rate increases for major clean air & transmission investments.

Virginia (Restructured)
- Capped rates for default customers frozen through end of 2010
- Capped rates can be adjusted by two rate cases prior to the end of 2010 and incremental environmental and reliability cost recovery mechanisms
- Active annual fuel clause
- On 7-1-05 AP filed a request with the Virginia Commission seeking to recover incremental costs for environmental compliance and T&D System reliability (E&R) of $62.1 million, effective on an interim basis beginning 8-1-05.

Kentucky (Regulated)
- Base rates not frozen
- Fuel clause, adjusted monthly
- Environmental surcharge costs are adjusted monthly for approved environmental compliance plan
- Rockport Unit Power Supply Agreement extension through 12-07-2022 was approved by FERC & KPSC in December 2004

Michigan (Restructured, but Regulated)
- Base rates not frozen.
- Active annual fuel clause.

Indiana (Regulated)
- Base rates are frozen and fuel cost recovery factors are capped at increasing rates through June 30, 2007.

Tennessee (Regulated)
- Base rates not frozen
- Automatic fuel clause, adjusted monthly

Regulatory Matrix - West

Texas (Regulated)
- SWEPCO-Texas retail competition delayed until at least 2007
- Bi-annual fuel clause adjustment opportunity

Texas (Restructured)
- TCC stranded cost true-up filing in May 2005. ($2.4 billion true-up amount requested) Hearings-late Sept.
- TCC wires rate case PUCT approved affiliate transaction settlement in June 2005. Written order expected in July 2005. Final order will result in slight rate decrease with a positive earnings impact.
- TCC final fuel reconciliation (July 98-Dec. 01) order on rehearing issued in June 2005 updating rate case expenses. TCC will appeal decision.
- TNC true-up order approved in April 2005 (retail clawback and fuel over-recovery only). No adjustments to revised amounts filed by TNC.
- TNC final fuel reconciliation (July 00-Dec. 01). Final order received October 18, 2004. Appeals filed in state and federal courts in Dec. 2004.

Oklahoma (Regulated)
- On 6-3-05 PSO file to increase its Reliability Enhancement Plan annual spending to a $27.21 million level (up $15.4 million) pending OCC approval.
- On 5-2-05 the OCC issued an order approving a settlement agreement in this general rate case which included a $6.9 million annual revenue reduction, offset by changed depreciation rates and deferral recoveries, changed the fuel clause from a quarterly to annual factor, and made permanent an $11.8 million annual system reliability rider.
- 2001 Fuel review case
  Hearings scheduled for Sept. 2005. Scope expanded to cover 2002-2004 margin allocation issue.
- 2003 Fuel review case
  Scope has been expanded to include a prudence review.

Louisiana (Regulated)
- Base rates not frozen
- Currently under a merger required financial review
- Fuel clause, adjusted monthly

Arkansas (Regulated)
- Base rates not frozen
- Fuel clause, adjusted annually

Ohio Rate Stabilization Plan Recap

Summary of Impact (Columbus Southern Power & Ohio Power):

	POLR Rider	Revenues & POLR Rider*			Incremental Cash			
Rate Stabilization Plan	**2005**	**2006**	**2007**	**2008**	**2005**	**2006**	**2007**	**2008**
Escalation of Generation Rate	0	83	173	271	0	83	173	271
POLR Rider/Recovery of RTO Costs***	21	0	0	0	0	7	7	7
POLR Rider/Return on Environmental Additions	44	26	26	26	0	41	41	40
Total RSP Impact	**65**	**109**	**199**	**297**	**0**	**131**	**221**	**318**
Pre-Existing Electric Transition Plan								
Elimination of 5% Residential Generation Credit**	0	25	25	26	0	25	25	26
Recovery of RTO costs***	0	29	29	29	0	29	29	29
Total ETP Impact	**0**	**54**	**54**	**55**	**0**	**54**	**54**	**55**

* Incremental over 2004 base year

** Elimination of 5% credit is per Statute, and part of pre-existing ETP, not the RSP

*** Recovery of administrative RTO costs, net congestion fees and ancillary services permitted in pre-existing ETP, but the RSP allows for recovery of 2005 costs as well

AEP WILL STILL HAVE AMONG THE LOWEST RETAIL RATES IN OHIO

AEP AMERICAN ELECTRIC POWER

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate relief or other recovery for new investments, transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements periodically issued by accounting setting bodies; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Table of Contents

Company Overview

- 5.2 million customers in 11 states

Industry-leading size and scale of assets:

Asset	Size	Industry Rank
Domestic Generation	~37,600 MW	# 2
Transmission	~39,000 miles	# 1
Distribution	~213,000 miles	# 1

Source: Company research

- Coal & transportation assets
  - Control over 8,400 railcars
  - Own/lease and operate over 2,650 barges & 52 towboats
  - Coal handling terminal with 20 million tons of capacity
- 20,800 employees

AEP Generation Portfolio				
Coal	Gas	Nuclear	Hydro	Wind
68%	23%	6%	2%	1%

AEP enjoys significant presence throughout the energy value chain.

AEP Strategy

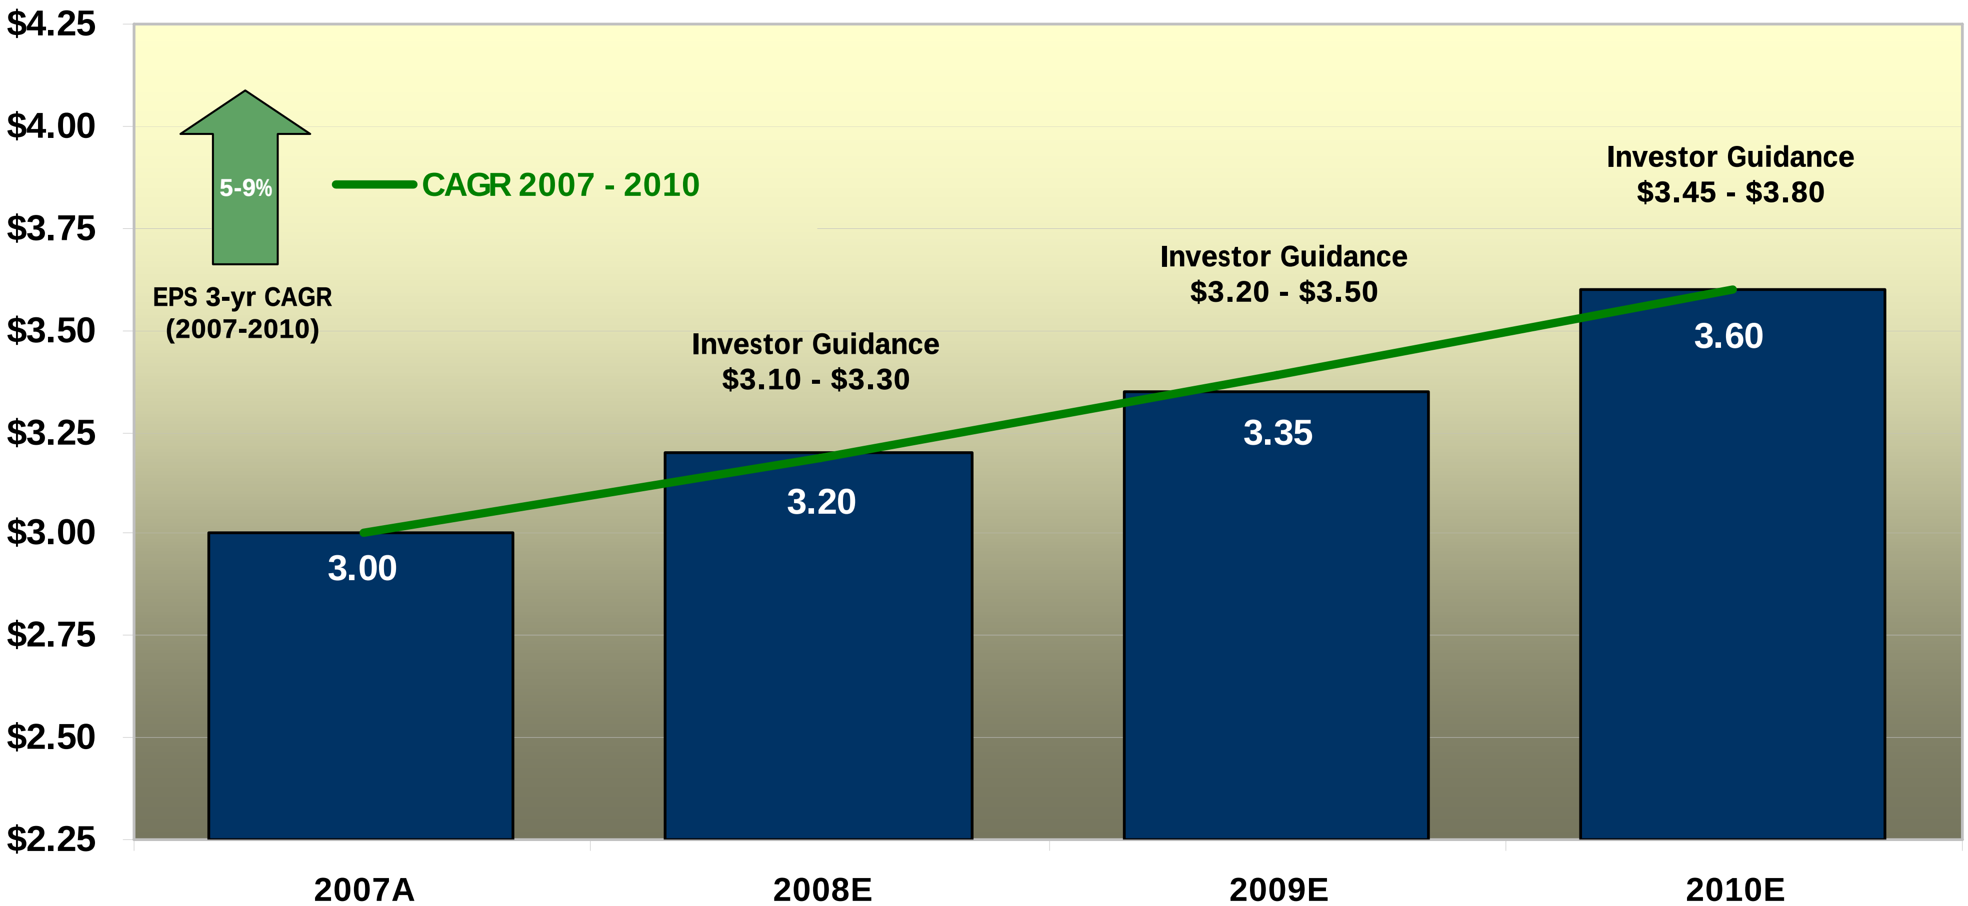
Strategy: grow our core utility business at a consistent rate trough major investment supported and funded by innovative programs for regulatory recovery as well as develop our independent, federally regulated Transmission Company for the pursuit of new major interstate projects.

Our 2008 Focus:

- Prepare for post-2008 transition in Ohio
- Invest in and evolve infrastructure to support future technology and customer needs focused on efficiency, conservation and load management
- Enhance cash flow & earnings through rate recovery mechanisms
- Take advantage of AEP's size to benefit our customers and shareholders through regulatory-supported investment

Sustained capital investment opportunities support earnings growth.

4-Year Earnings Range Forecast



5% to 9% earnings growth

Vision for Sustainability

Generation	Transmission	Distribution	Customers

			• Energy storage

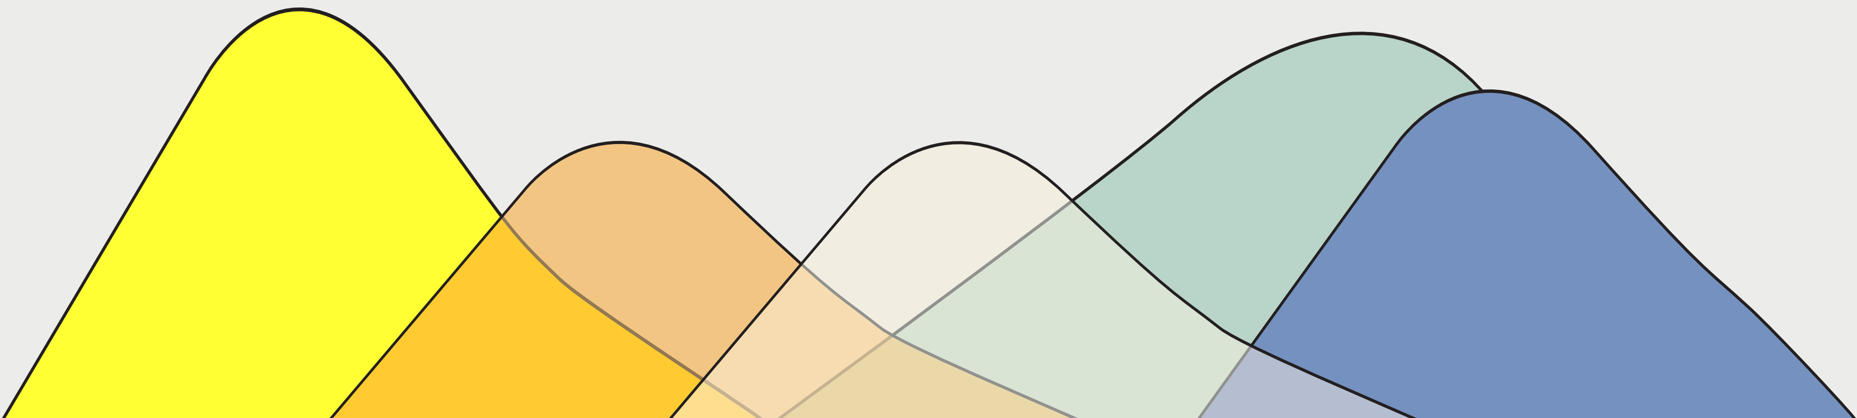
Existing generation and transmission control systems	**gridSMART**℠: bridging the gap to provide integrated two-way communications & control across the electricity value chain	Home energy automation

AEP is committed to operating responsibly, efficiently and profitably for customers, shareholders, employees and communities.

Capital Investment Earnings Catalysts

Capital Investment – Consistent Waves of Opportunity

Environmental Retrofits	New Generation Projects	GridSMART Technology	Transmission Ventures	Adv Generation/ CO_2
$5.4B	$1.3B+	$1.5B+	$2.25B - $3.75B*	$2.0B+



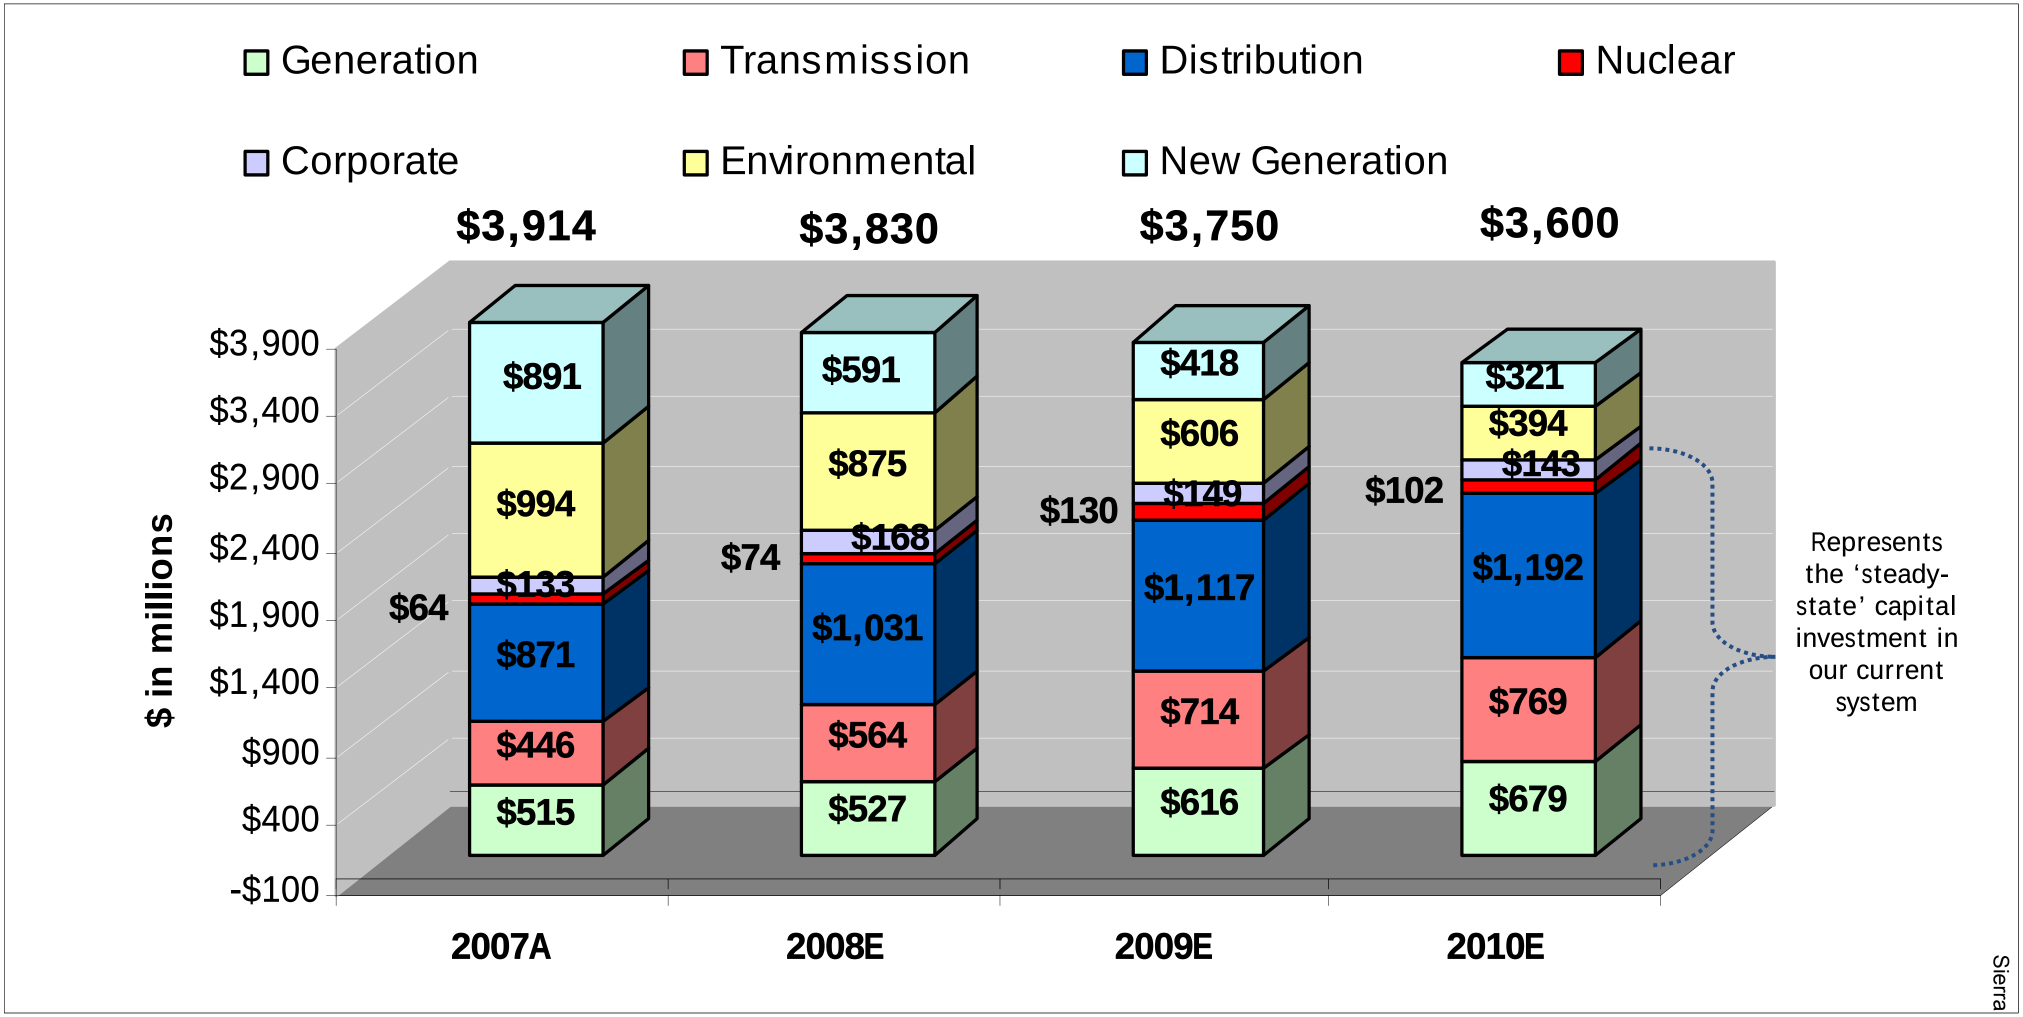
Baseline capital investment of approximately $2.5B/year for Transmission, Distribution & Generation versus annual depreciation of $1.1B/year

2005 → 2010 → 2020 →

Note: This slide represents current capital investment plans as well as future capital investment opportunities. For current capital investment guidance through 2010, please refer to page 10. *The transmission opportunity is shown utilizing anticipated JV ownership structure.

Capital investment opportunities combined with associated rate relief will drive sustainable earnings growth.

4-Year Capital Investment Forecast



Note: amounts exclude AFUDC, $472MM related to gridSMART[SM] and $566MM related to transmission joint venture projects

Capital Investment + Rate Relief = Earnings Growth

Multi-Year Capital Investment Funding Plan

$ in millions

	Actual	Projection		
	2007	**2008**	**2009**	**2010**
Planned Capital Investment (Excluding AFUDC) *	$ (3,914)	$ (3,830)	$ (3,750)	$ (3,600)
Planned Transmission Initiatives	$ -	$ (75)	$ (57)	$ (194)
Dividend on Common Stock	(630)	(659)	(664)	(669)
Cash Sources				
Cash from Operations	2,388	2,572	2,691	3,324
Proceeds from Sale of Assets	222	-	-	-
Common Stock Issued (Dividend Reinvestment Plan)	143	150	150	150
Change in Debt, Net	1,902	1,796	2,119	1,180
Other	(234)	(6)	(458)	(247)
Change in Cash	(123)	(52)	31	(56)
Ending Cash Balance	$ 178	$ 126	$ 157	$ 101

Note: For analysis purposes, certain financial statement amounts have been reclassified for this effect on the earnings presentation.

* - 2007 actual amount includes distressed generation purchases of $512 million

Capital investment is funded from cash from operations and debt issuances.

Generation - Environmental Project Status Report

Welsh 2	528		N/A	☑	Projected 2012

At the conclusion of our current environmental retrofit program, over 58% of our 24,630 MW coal-fired generation fleet will be equipped with SCRs and over 73% will be scrubbed (FGDs).

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
PSO	Southwestern	Oklahoma	$58 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$59 MM	Gas	Simple-cycle	170	2008
AEG	Dresden	Ohio	$266 MM	Gas	Combined-cycle	580	2010
SWEPCo	Stall	Louisiana	$378 MM	Gas	Combined-cycle	480	2010
SWEPCo	Turk	Arkansas	$1.3 B (1)	Coal	Ultra-supercritical	600 (1)	2012
APCo	Mountaineer	West Virginia	$2.23 B	Coal	IGCC	629	2012
CSP/OP	Great Bend	Ohio	$2.7 B(2)	Coal	IGCC	629	2017

(1) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment.

(2) Cost estimates, updated to reflect cost escalations due to revised commercial operation date of 2017, are not yet filed with the PUCO due to the pending appeals to the Supreme Court of Ohio resulting from the PUCO's April 2006 opinion and order.

Secured Recovery Mechanism:

PSO Peaking Facilities Rider

Additional Recovery Mechanisms Under Consideration:

Formula based rates

Requests for return on CWIP

Current and future rate cases

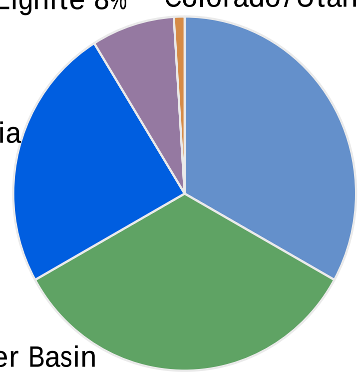
AEP is meeting the growing electricity needs of customers through the pursuit of new economic generation facilities.

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 4172 of 9556

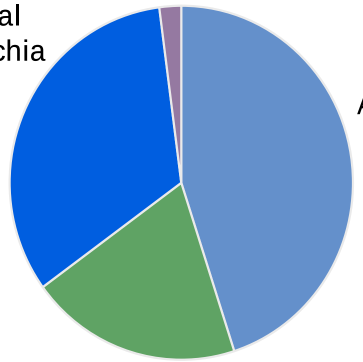
Coal Procurement - 2008 Projected

AEP burns approx. 76 million tons of coal per year

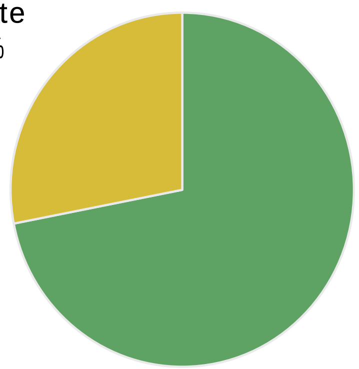
Total AEP System



AEP East



AEP West



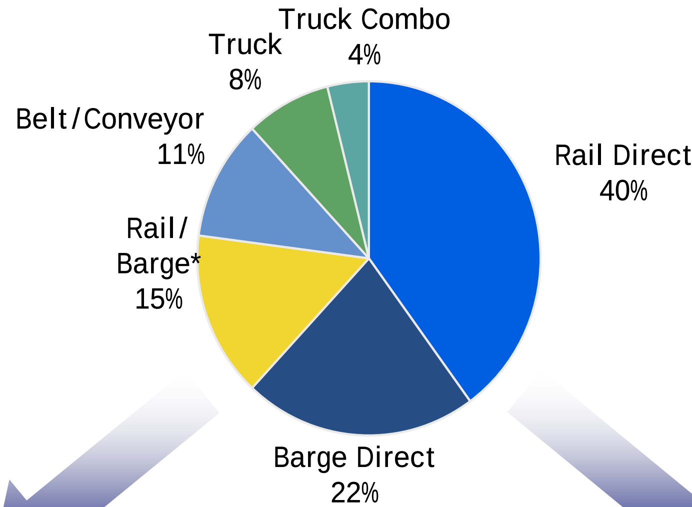
Coal Stats:

- Approximately 93% contracted for 2008
- Avg. delivered price ~ $36.58/ton in 2007
- Approximate 13% price increase in 2008 based on 2007 actual results.

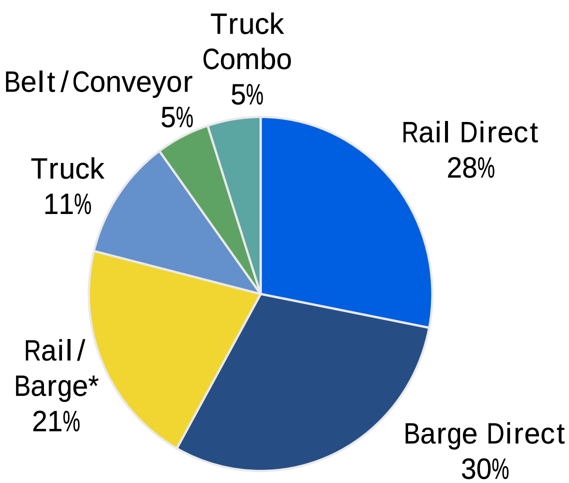
Coal Delivery

Total AEP System

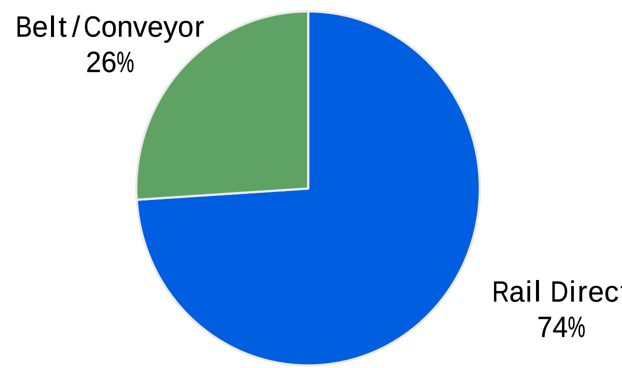
2007 Actual



AEP East



AEP West



* Reflects coal delivered to AEP plants transported through a combination of rail and barge

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A reliable and reasonably-priced electric supply is necessary to support the economic well-being of the areas we serve.

Highlights of Bingaman-Specter Proposal

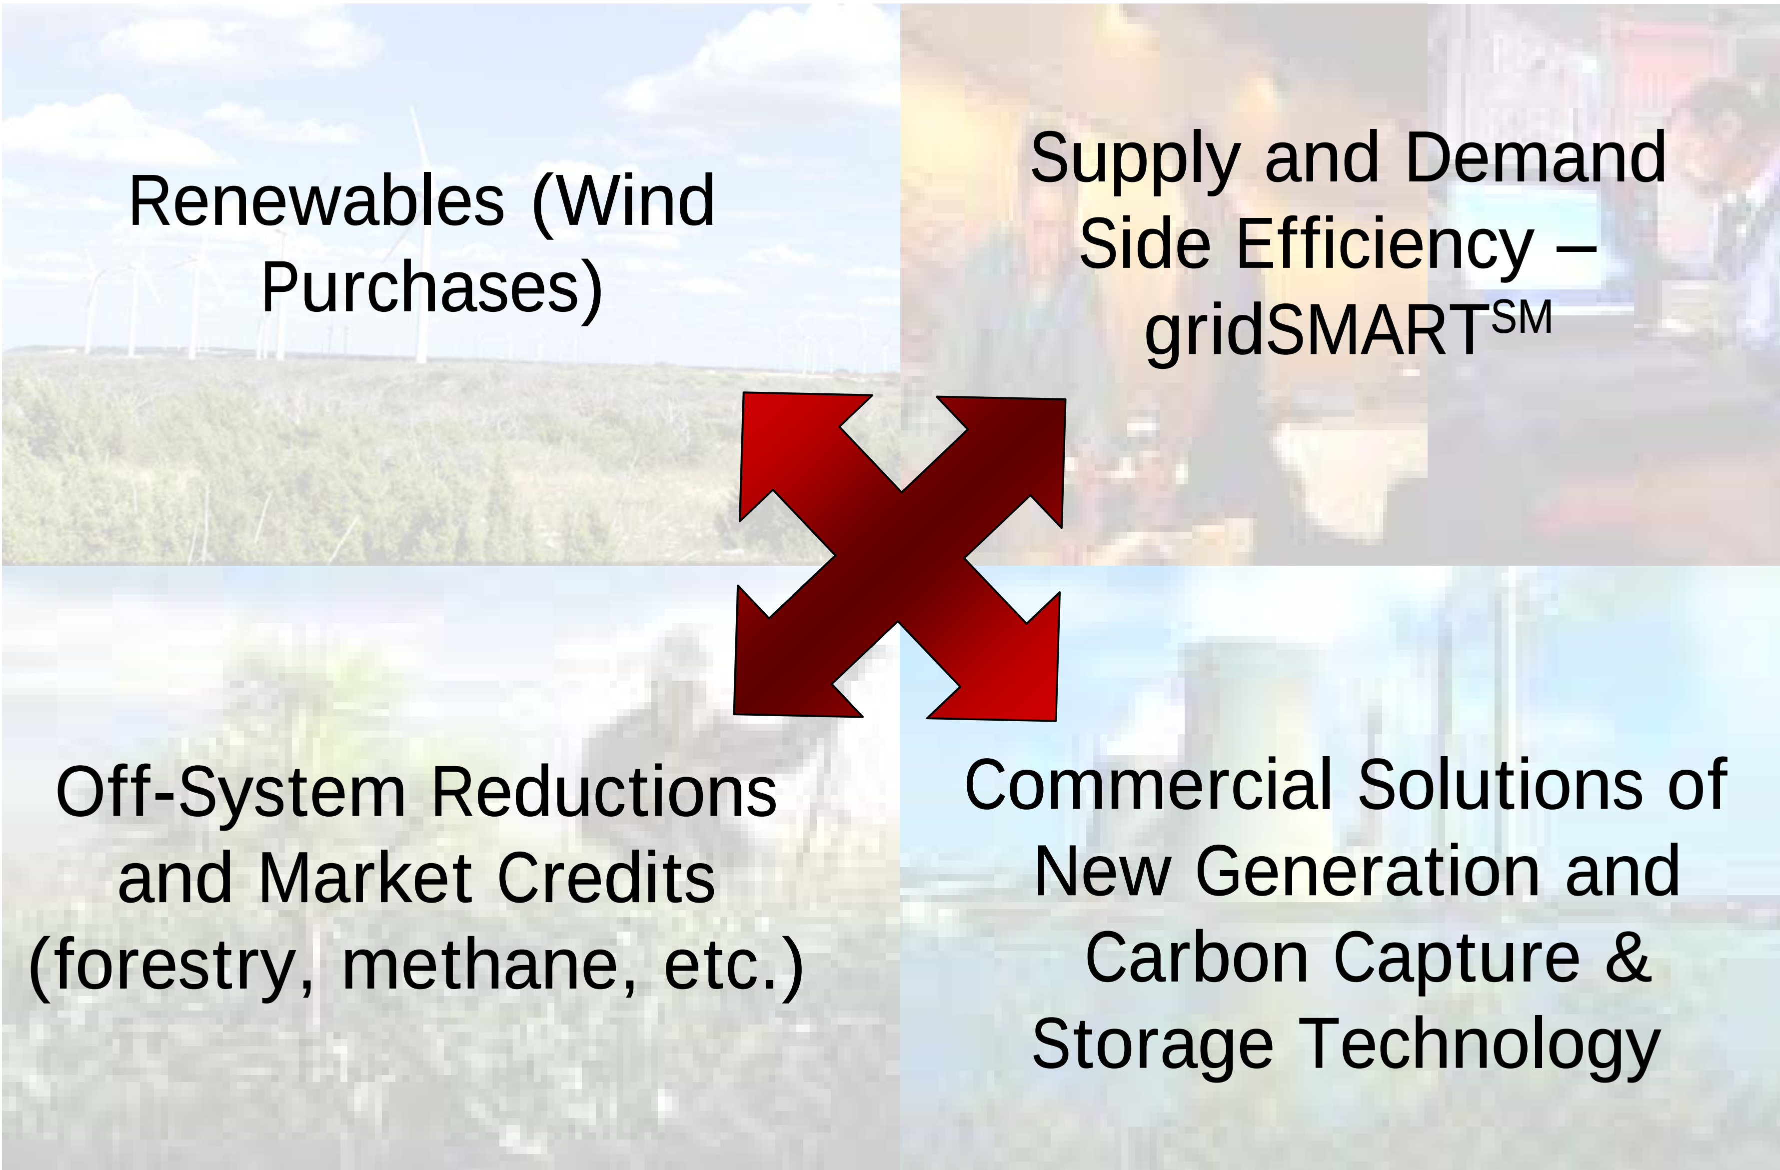
"Low Carbon Economy Act of 2007"

Key Components:

- Start date for greenhouse-gas reductions is 2012
- Goals: 2006 levels by 2020; 1990 levels by 2030
- Includes a safety valve of $12 per metric ton, increasing at an annual rate of 5% above inflation
- Support for allowance allocations
- International action

AEP endorses this proposal because it sets reasonable and achievable reduction targets and includes the AEP-IBEW trade proposal.

AEP's Long-Term GHG Reduction Portfolio



AEP is investing in a portfolio of GHG reduction alternatives.

AEP Wind Operations/Purchases

Trent Mesa (2001)

150 MW (100 - 1.5 MW turbines)
Abilene/Sweetwater, TX

Southwest Mesa (1999)

- **75 MW** (107 – 700kW turbines)
- McCarney, TX
- Power Purchaser

Desert Sky (2002)

160 MW (107 - 1.5 MW turbines)
Bakersfield, TX

Summary

•Owned/Operated 385 MW

•Wind Purchases 392 MW

•Total Existing Wind at end of 2006: 777 MW

•**New Wind Purchases in 2007: 275 MW**

AEP will acquire an additional 725 MW of new wind to attain goal of 1,000 MW by 2011.

Off-System Reductions

Existing AEP Programs:

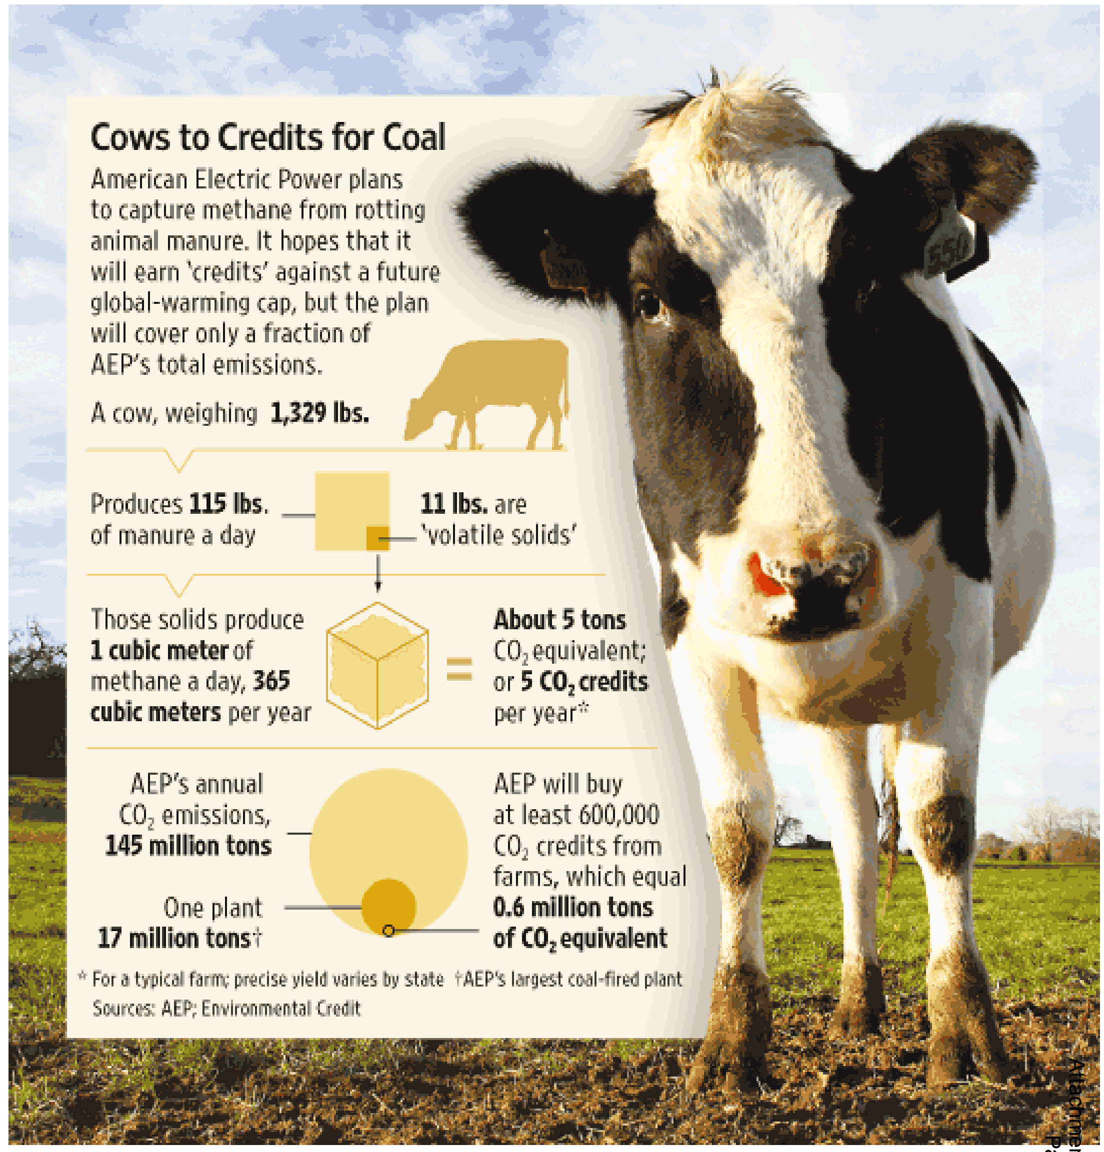
- Forestry - Domestic
  - 350,000 tons / yr
  - 63 MM trees planted
- Forestry – International
- Chicago Climate Exchange

New AEP Commitment by 2011:

- 2 M tons per year of additional CO_2 offsets

Latest Announcement:

- Methane Capture Deal with Environmental Credit Corp.
  - 600,000 CCX carbon credits per year
  - Begins 2010
  - Runs through 2017
  - 51% of credits sourced from “AEP States”



Source: Wall Street Journal June 14, 2007

Advanced Generation & CO_2

Near Term:

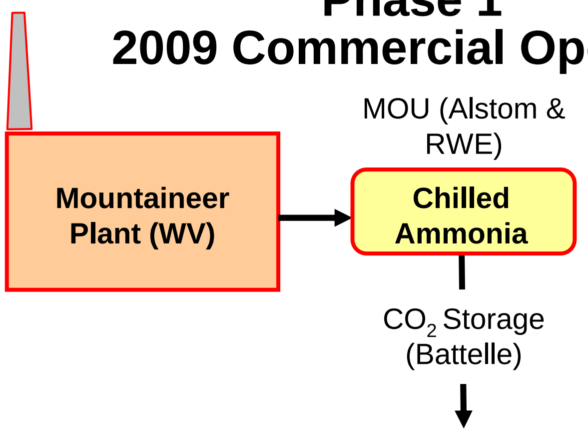
- Chilled Ammonia project at Mountaineer moving to commercial scale at the Northeastern Plant in 2012

$ in millions				
		2008	2009	2010
Mountaineer Chilled Ammonia Project		$30	$39	$0

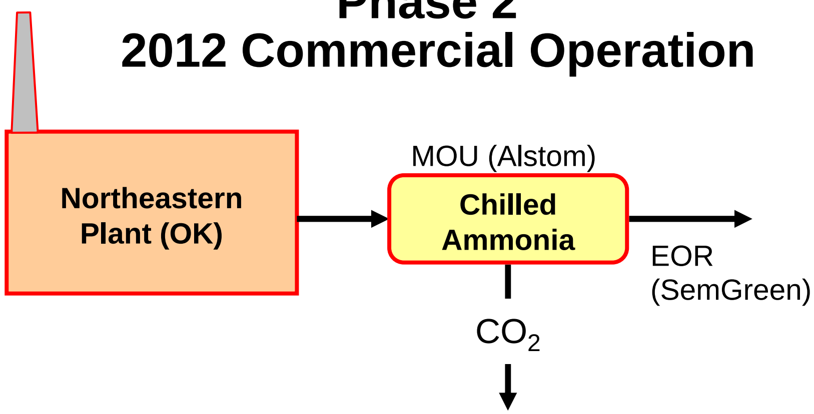
Long Term Strategy (Post-2010):

- IGCC
- Oxy Coal Technology
- Chilled Ammonia
- Nuclear COL

Phase 1
2009 Commercial Operation



Phase 2
2012 Commercial Operation



We are committed to validating and deploying technologies that ensure coal remains a viable resource for AEP and America.

AEP Leadership in Technology: IGCC and USC

NEW ADVANCED GENERATION

IGCC -- AEP first to announce plans to build two 600+ MW IGCC commercial size facilities in US (OH and WV) by next decade

USC -- AEP will be first to employ new generation ultra-supercritical (steam temperatures >1100ºF) coal plant in U.S (AR)

AEP's Carbon Capture & Storage Initiative

In March 2007, AEP announced a major new carbon capture and storage initiative:

Chilled Ammonia CCS--We will install carbon capture on two coal-fired power plants, the first commercial use of technologies to significantly reduce carbon dioxide emissions from existing plants.

- **The first carbon capture project, at the Mountaineer plant in West Virginia, is expected to complete its product validation phase in 2009.**
- **The second, at the Northeastern plant in Oklahoma, will begin commercial operation in 2012.**

Oxy-Coal--AEP will also demonstrate (10MWe) and then install oxy-coal CO_2 capture & storage at a commercial sized coal unit (about 200 MWe)—feasibility study to be completed in 2008.

CO_2 Capture Techniques

Post-Combustion Capture

- Conventional or Advanced Amines, Chilled Ammonia
  - Amine technologies commercially available in other industrial applications
  - Relatively low CO_2 concentration in flue gas – More difficult to capture than other approaches
  - High parasitic demand
    - Conventional Amine ~25-30%, Chilled Ammonia target ~10-15%
  - Amines require **very** clean flue gas

Modified-Combustion Capture

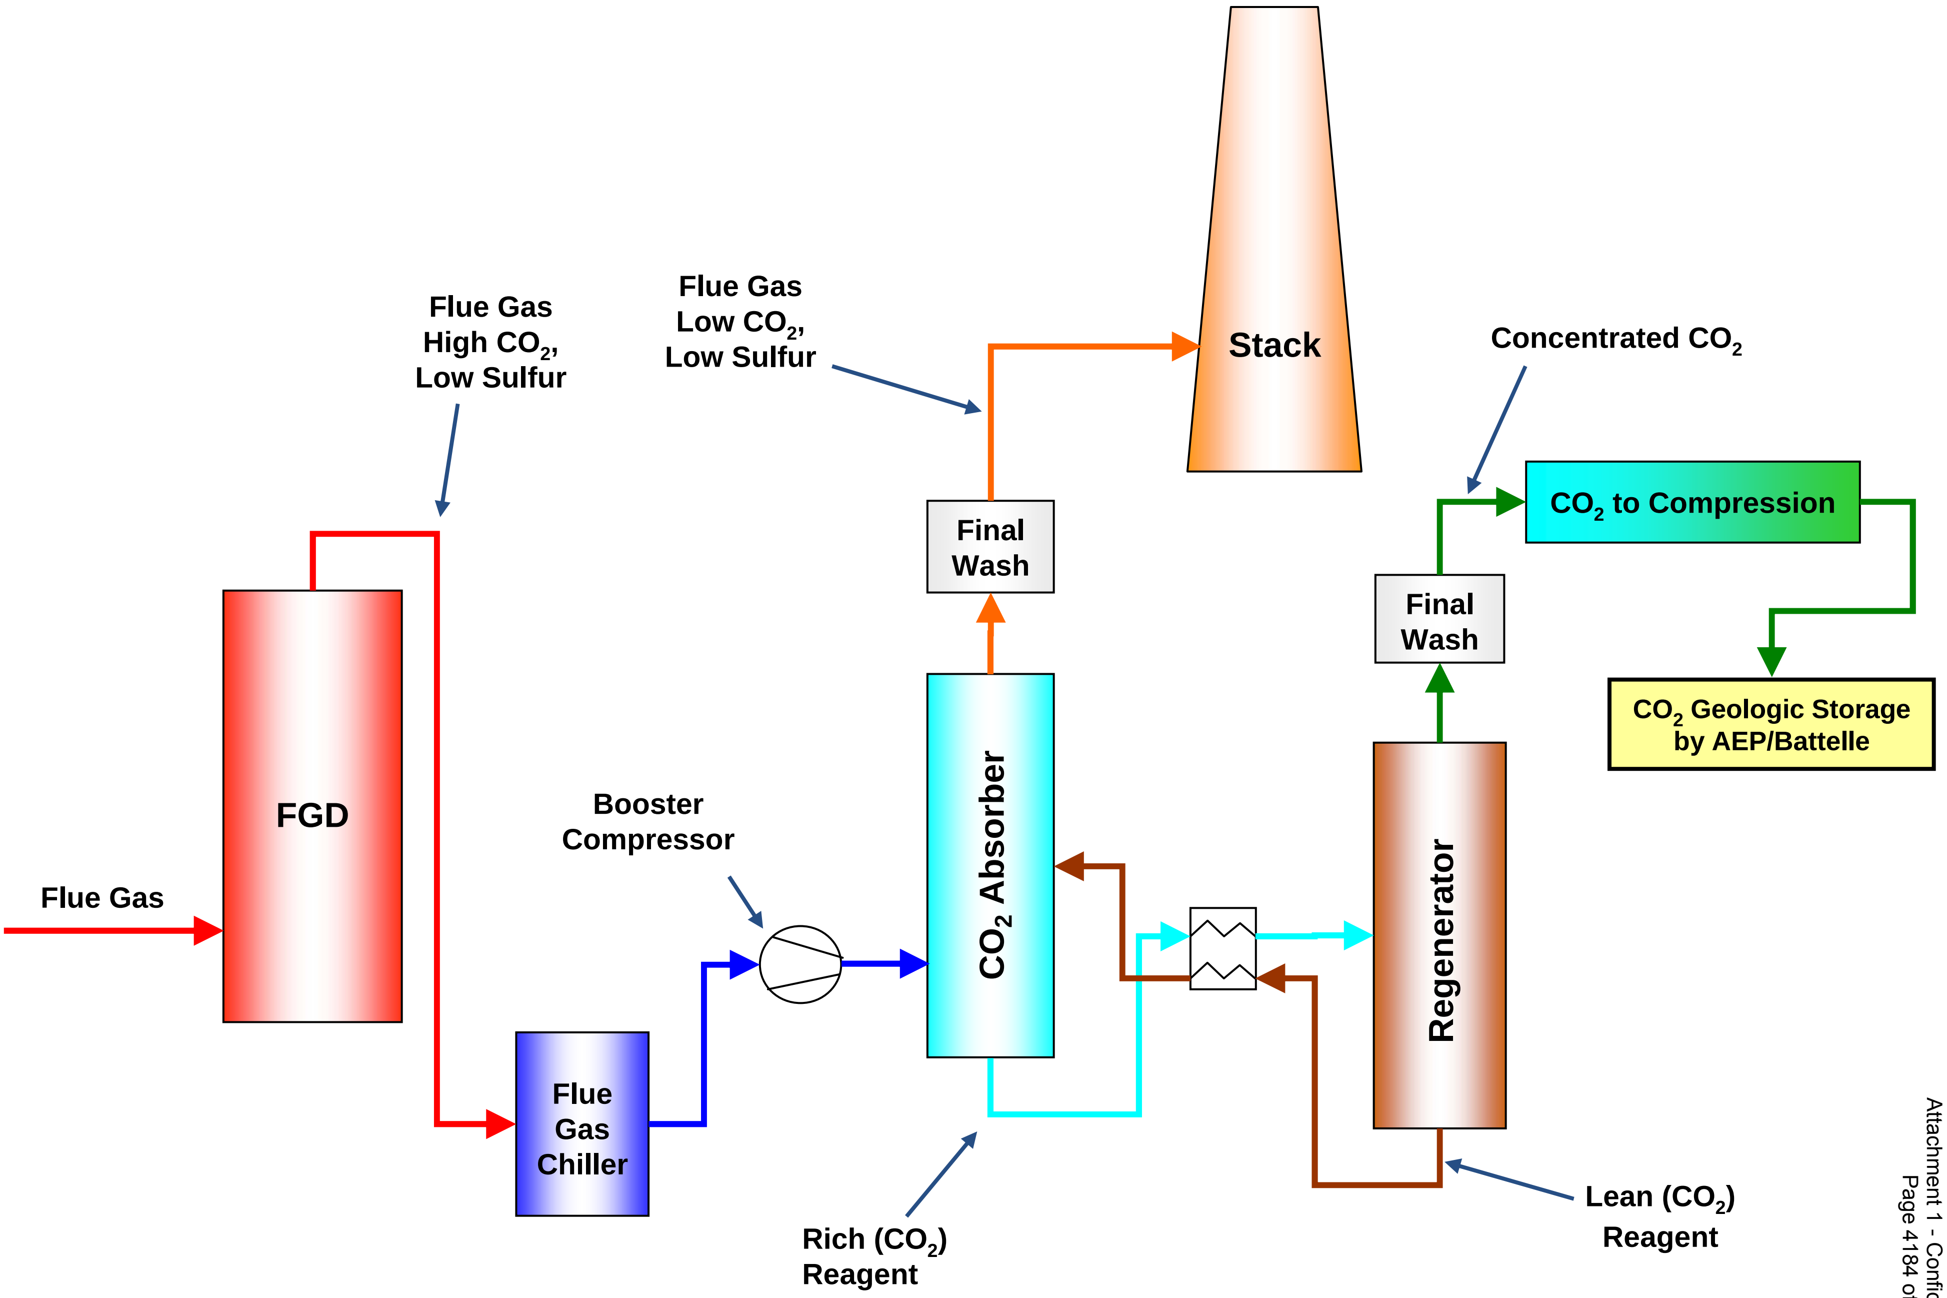
- Oxy-Coal
  - Technology not yet proven at commercial scale
  - Creates stream of very high CO_2 concentration
  - High parasitic demand, >25%

Pre-Combustion Capture

- IGCC with Water-Gas Shift
  - Most of the processes commercially available in other industrial applications
    - Have never been integrated together
  - Turbine modified for H_2-based fuel, which has not yet been proven at commercial scale
  - Creates stream of very high CO_2 concentration
  - Parasitic demand (~20%) for CO_2 capture - lower than amine or oxy-coal

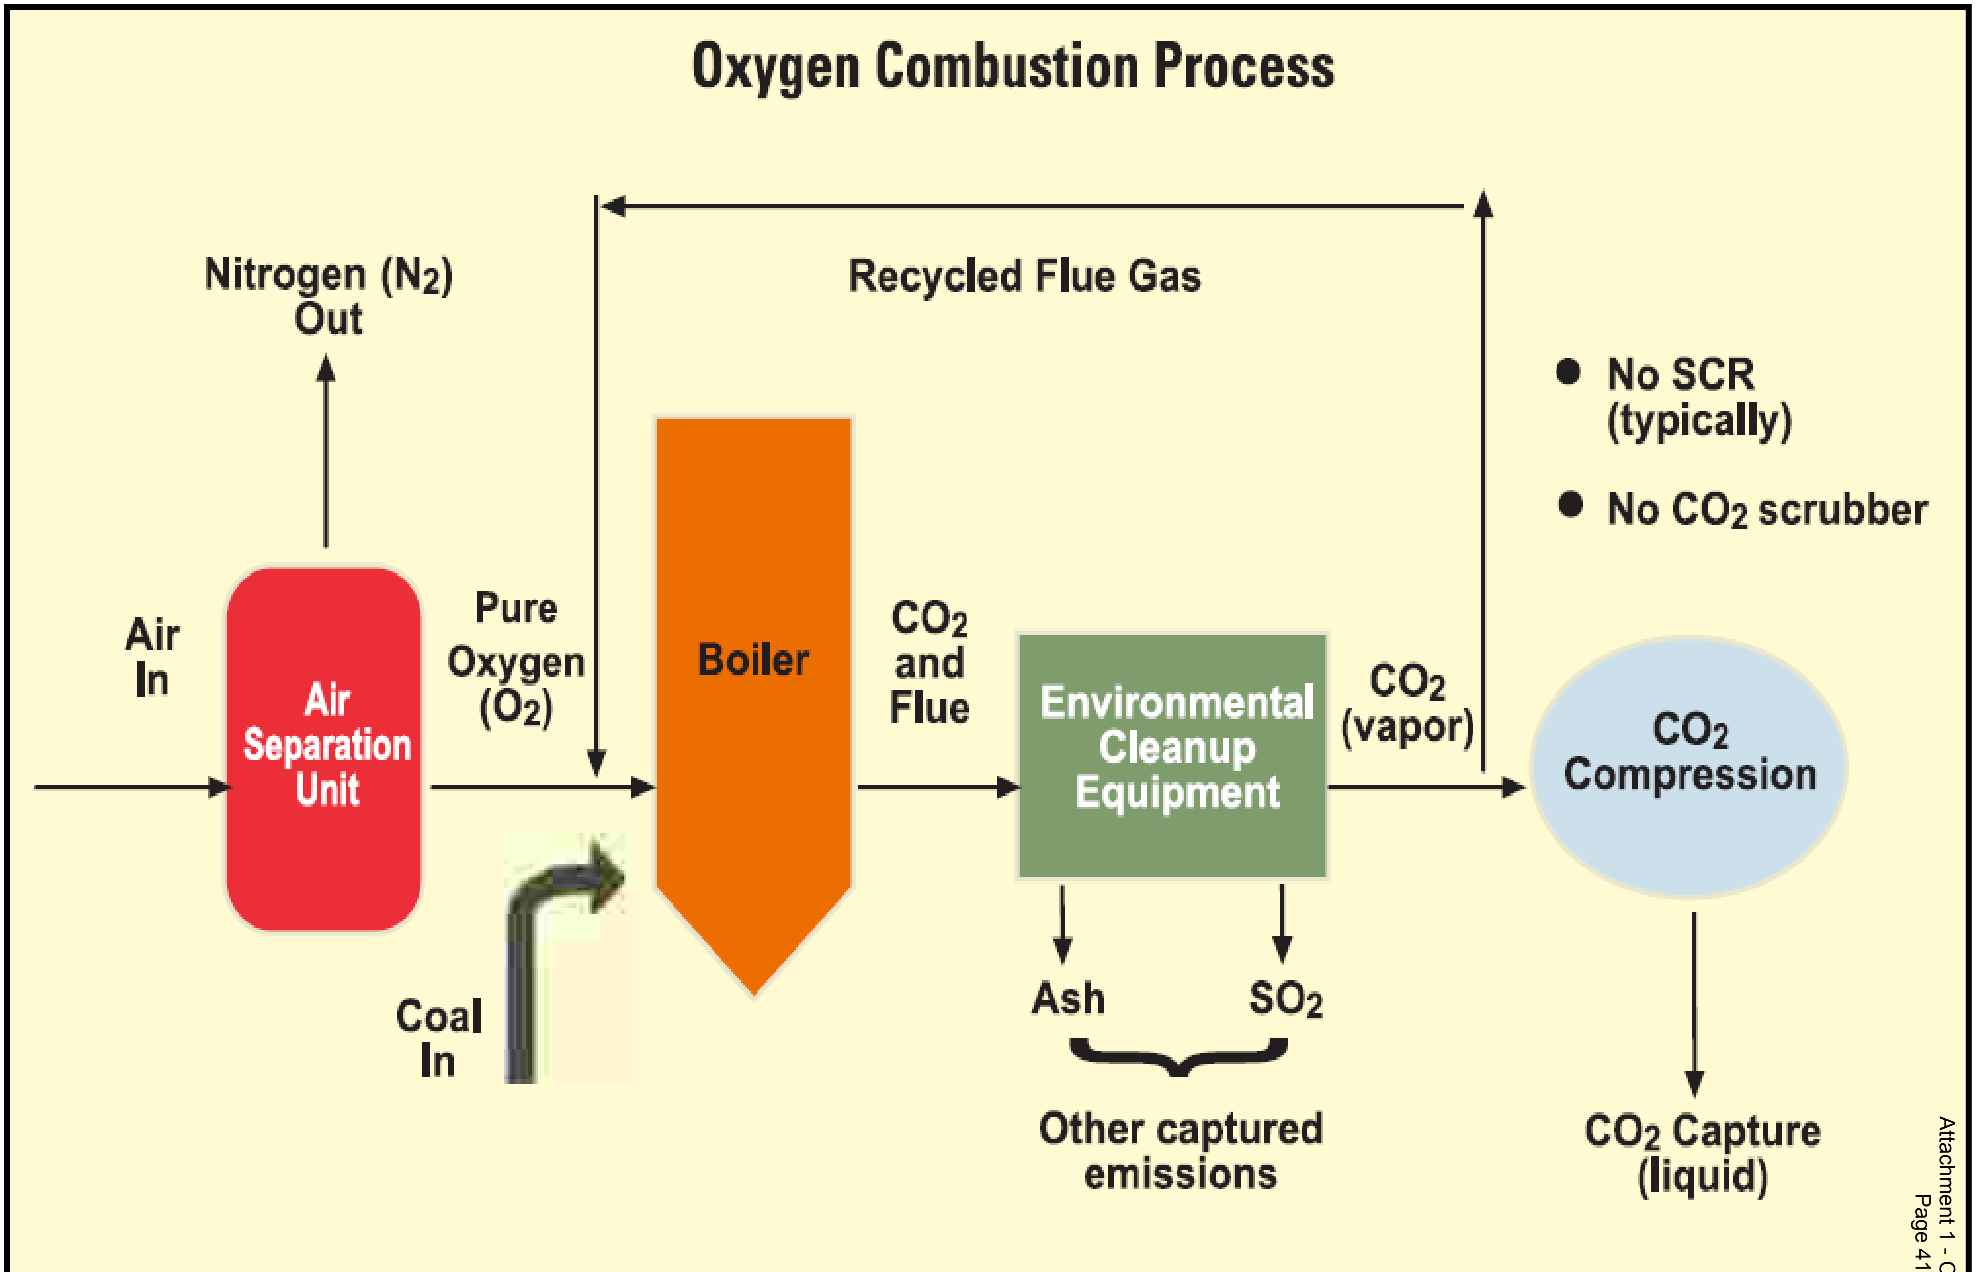
Alstom's Chilled Ammonia Process

Post-Combustion Capture

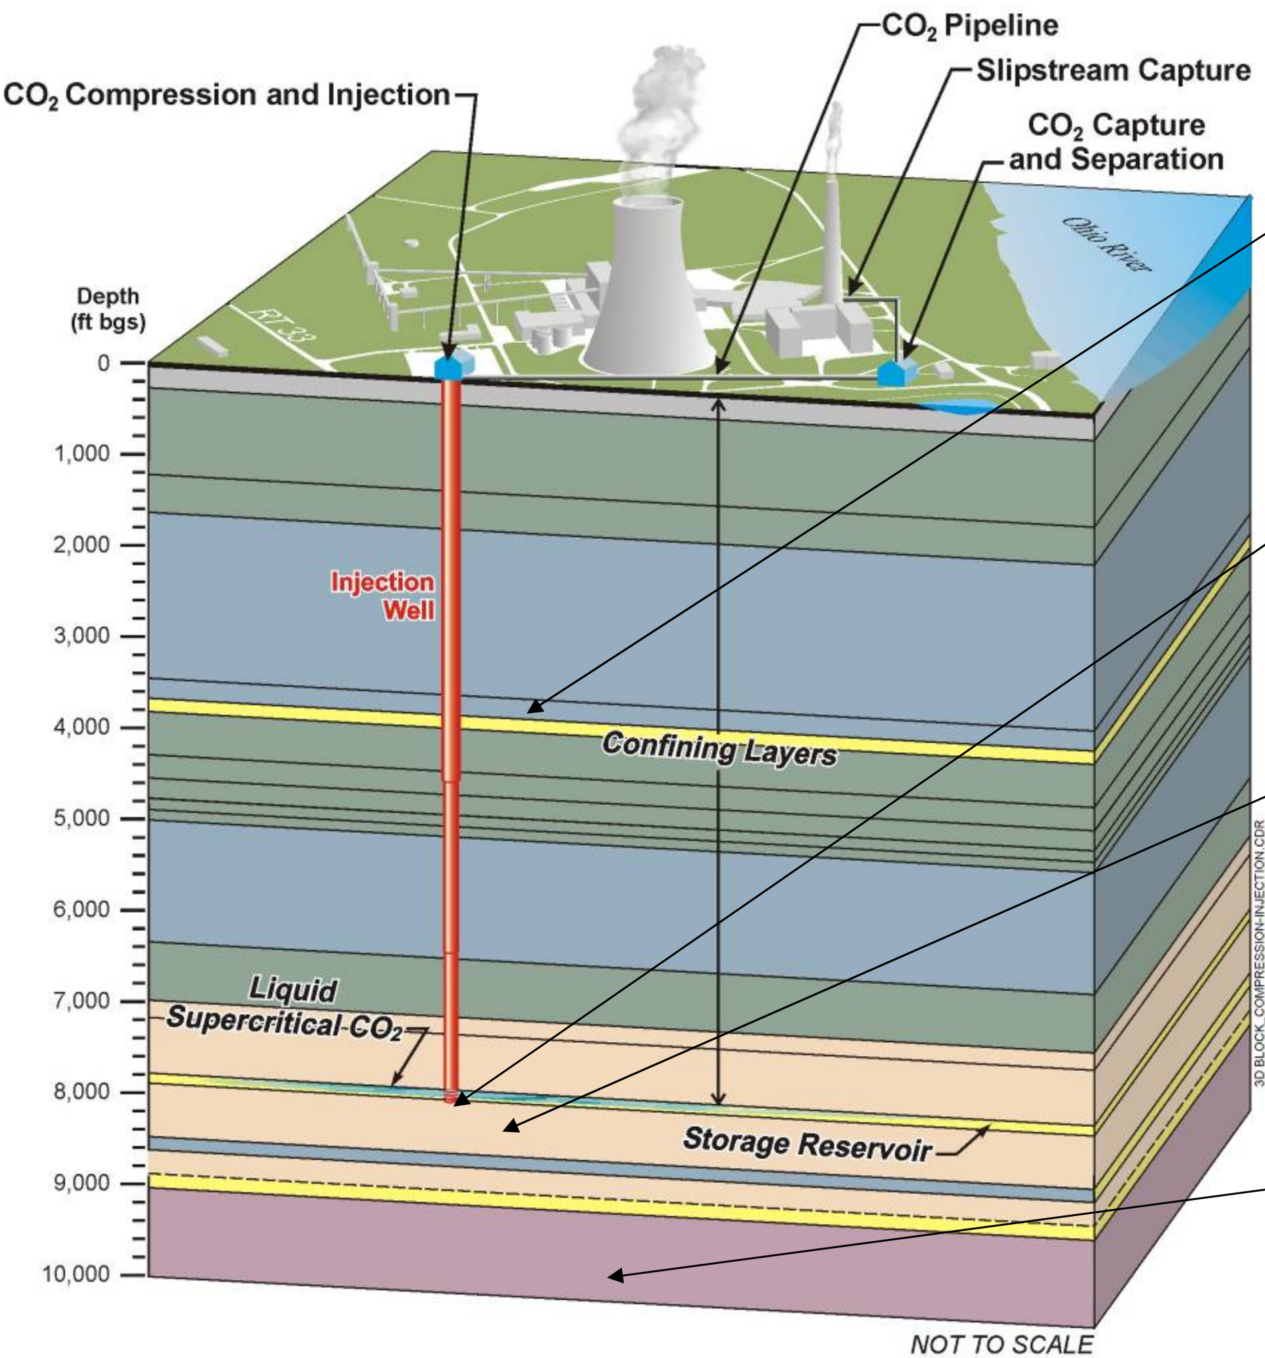


Babcock & Wilcox Oxy-Coal Process

Modified Combustion Capture



CO_2 Injectivity in the Mountaineer Area



CO_2 injection should also be possible in shallower sandstone and carbonate layers in the region

Rose Run Sandstone (~7800 feet) is a regional candidate zone in Appalachian Basin

A high permeability zone called the "B zone" within Copper Ridge Dolomite has been identified as a new injection zone in the region

Mount Simon Sandstone/Basal Sand - the most prominent reservoir in most of the Midwest but not desirable beneath Mountaineer site

Distribution - gridSMART℠

gridSMART℠: implementing AEP's vision for the distribution and customer services business in the future, including the development of new customer programs to reduce consumption and peak demand, and a plan to deploy advanced technologies.

- **Enables customers to better manage energy**
- **Improves service to our customers by enhancing customer choice and customer control**
- **Improves efficiency**
- **Integrates distributed energy resources into our grid**
- **Transforms the way we do business**

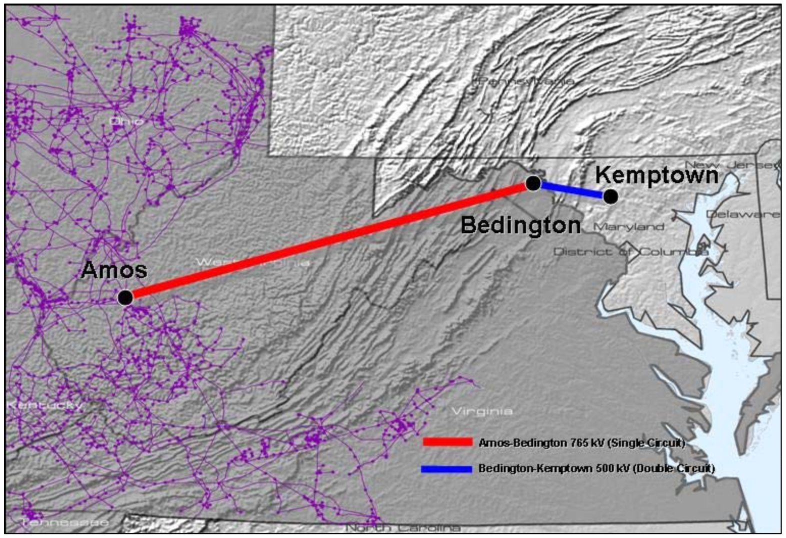
Capital Investment, Subject to Regulatory Approval * $ in millions			
Technology	**2008**	**2009**	**2010**
Metering & Communications	**$83**	**$138**	**$146**
Distribution Technology Enhancements	**$40**	**$ 63**	**$ 82**

*$472MM of the $552MM not in current forecast; spending contingent upon regulatory approval

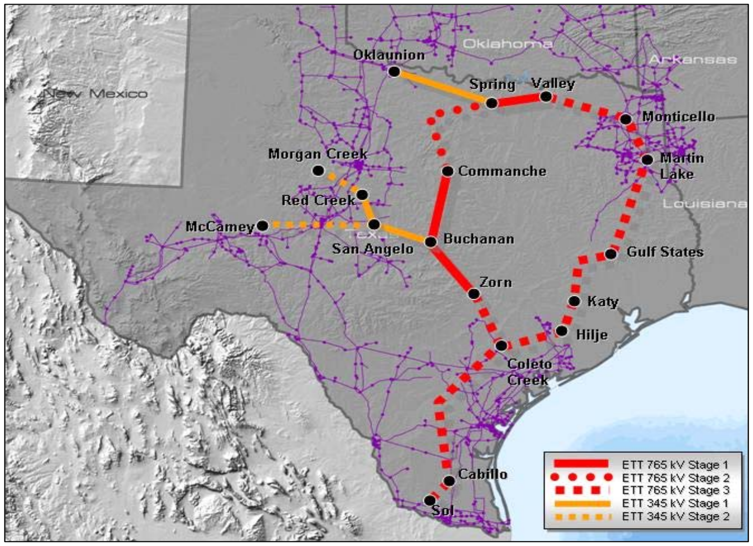
AEP will continue to be an industry leader in deploying advanced technology on a commercial scale. $552MM capital investment by 2010, subject to regulatory approval.

I-765TM Transmission: Investment Opportunities

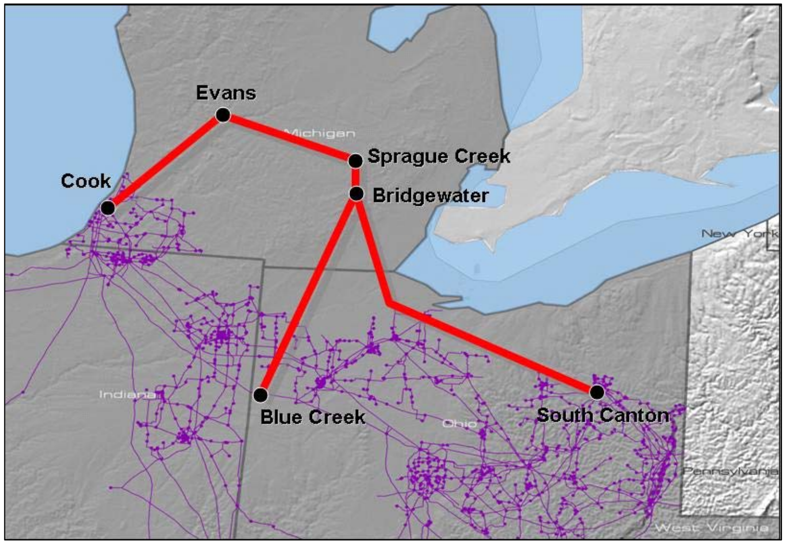
AEP is Advancing the Development of a National Interstate Today



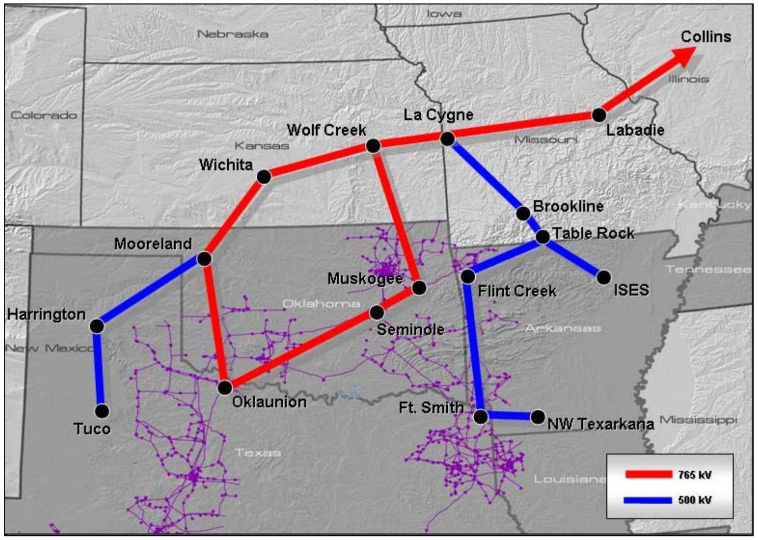
PATH Project (PJM)



ETT Proposal (ERCOT)



AEP-ITC Michigan Proposal (PJM/MISO)

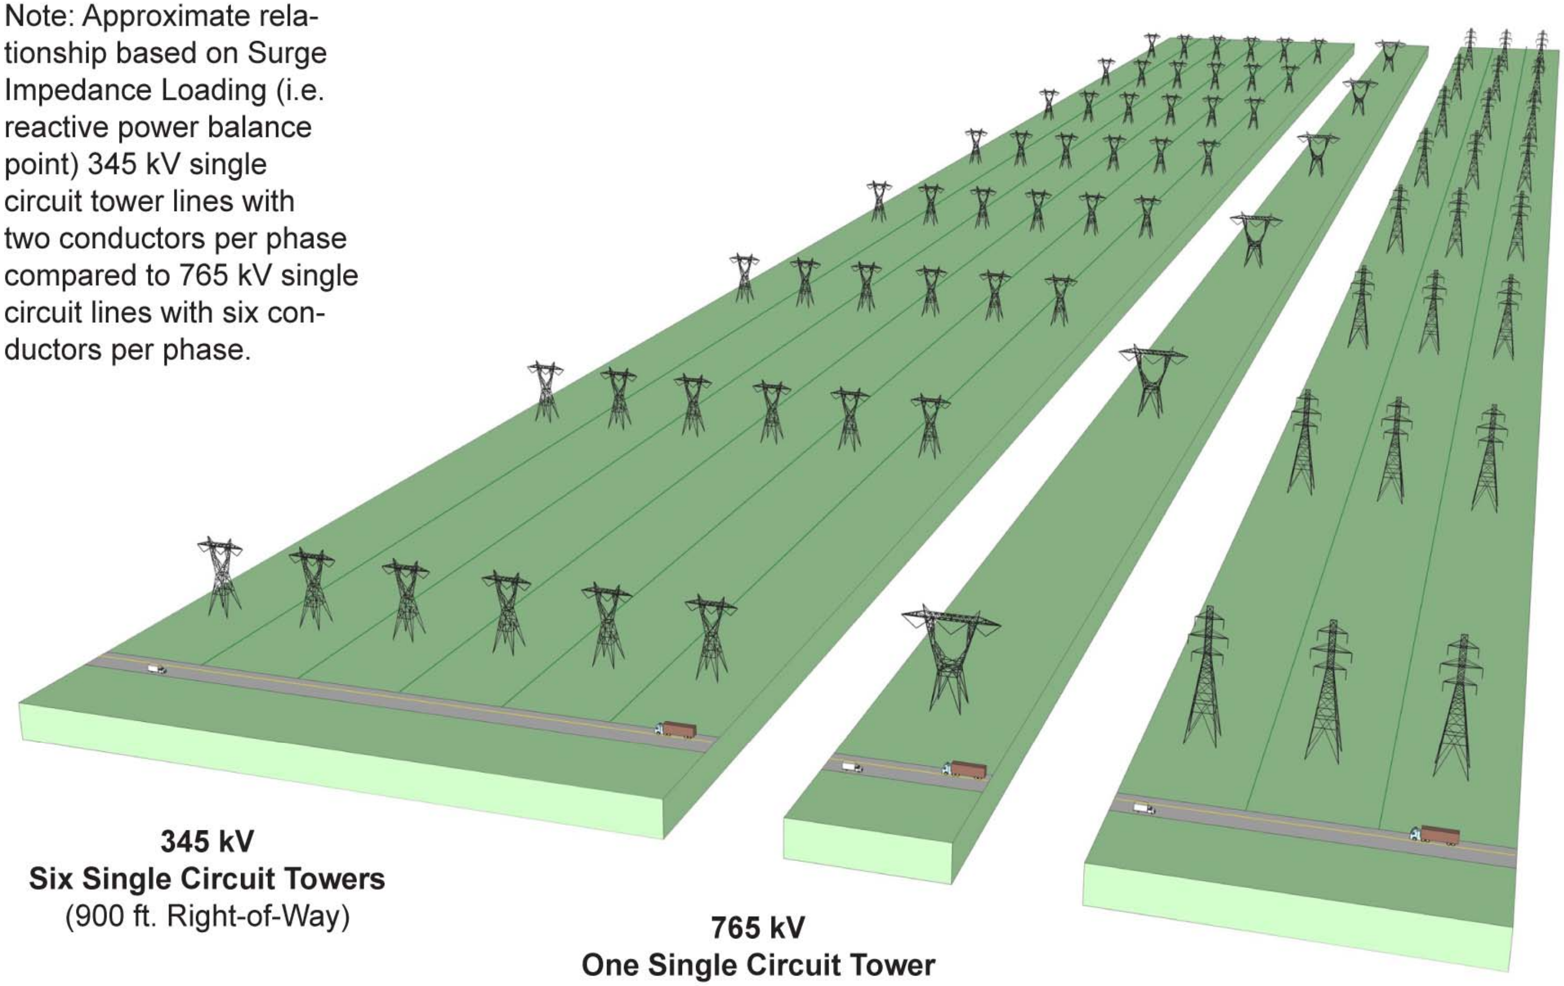


SPP Overlay Study

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 4188 of 9556

765 Right-of-Way Comparison

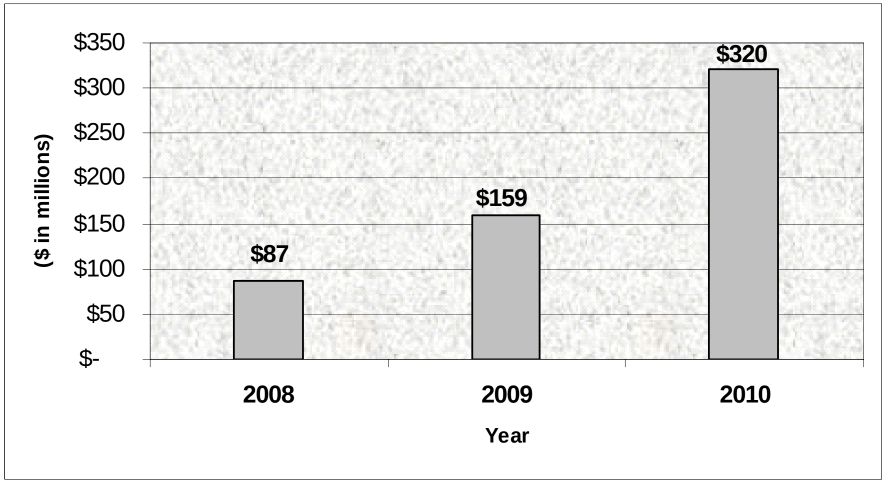
Note: Approximate relationship based on Surge Impedance Loading (i.e. reactive power balance point) 345 kV single circuit tower lines with two conductors per phase compared to 765 kV single circuit lines with six conductors per phase.



From a siting standpoint, 765-kV is more efficient in terms of economies of scale and right-of-way than lower capacity lines.

Transmission – Investments and Earnings Contributions

Projected Transmission Capital Spending*

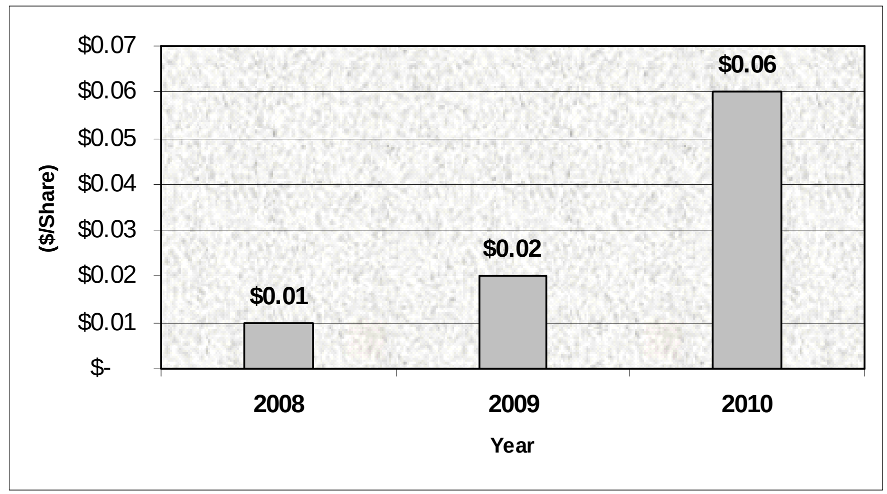


* ETT and PATH joint ventures included in above projection. Amounts represent AEP's 50% share of total transmission joint venture capital expense. These amounts are excluded from AEP's base capital forecast because the joint ventures are not consolidated for financial reporting purposes. AEP will be responsible for funding 40-50% of these amounts with equity contributions, and the remainder will be financed with debt issued by the joint ventures.

ETT
Electric Transmission Texas

PATH
Potomac-Appalachian Transmission Highline

Projected Transmission EPS Contributions*



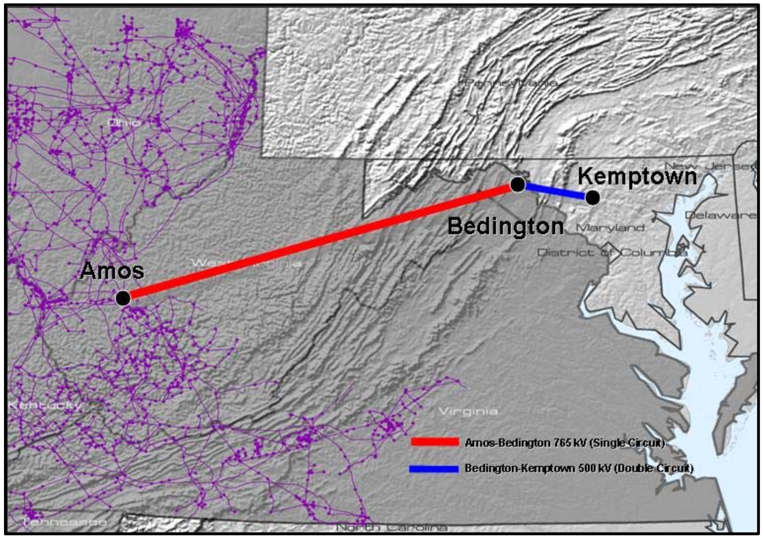
* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

Transmission will provide a near and long term catalyst for growth.

I-765^{TM} Transmission in PJM: PATH

Execution in Action

- *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries -- to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
  - Completed FERC Filing – December 2007
    - *Pursuing new project FERC incentives: cash return on CWIP, 14.3% ROE, recovery of all costs incurred prior to the time rates go into effect, and recovery of all prudently incurred development and construction costs if the project is abandoned.*
- *Funding Plans/Transaction Structure*
  - AEP and Allegheny share ownership of Amos – Bedington line and contribute equally to this portion of the project through PATH West Virginia Transmission Company, LLC
  - AEP's investment will be held in the AEP Transmission Holding Company LLC subsidiary
  - Project corridor was included in the DOE's National Interest Electric Transmission Corridor
- *Key Next Steps*
  - Siting Approval – Fall 2009
  - Targeted Completion – 2012



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

PATH
Potomac-Appalachian Transmission Highline

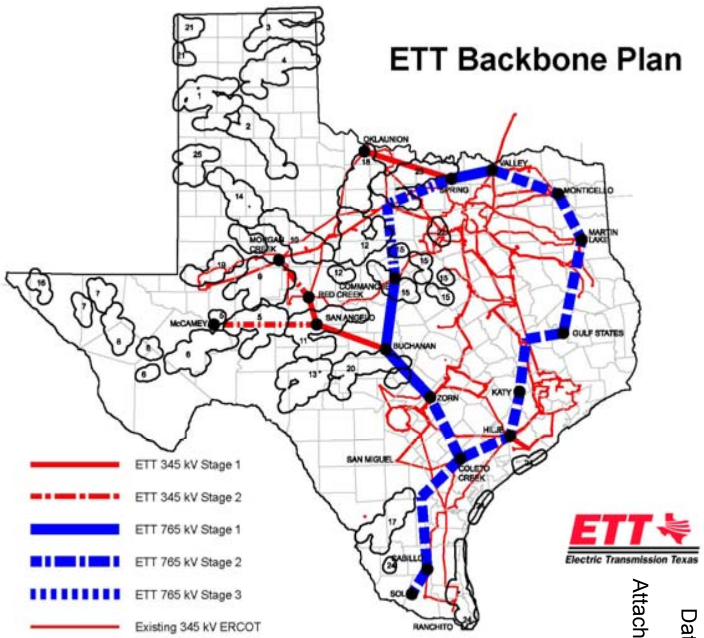
I-765™ Transmission in Texas (ETT)

Electric Transmission Texas Update

- ***Transaction Structure***
  - 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
  - ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
  - Services provided by AEP and investment opportunities can be offered by either partner

- ***Next Steps***
  - ETT project opportunities to be evaluated on a case by case basis
  - Anticipate offering projects in Q2 2008

- ***ETT ERCOT Backbone Proposal***
  - ETT proposal for ERCOT and PUCT to consider CREZ transmission in context of long-term vision for transmission system.
  - Current 5-year planning horizon results in higher ultimate costs, lower system efficiency.
  - Long-term 15-20 year perspective provides better plan, supports development of high voltage backbone at 765-kV.
  - $4.2 billion investment (long-term backbone).*



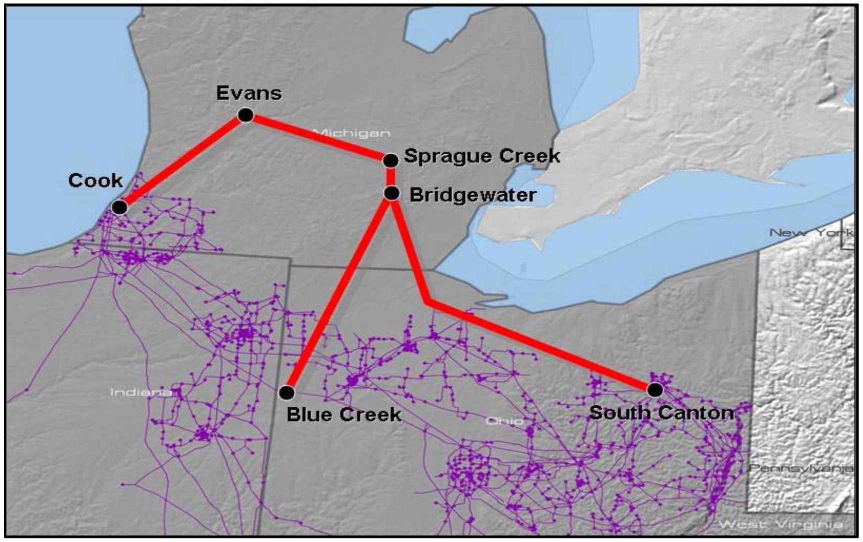
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

* Before ownership division.

I-765™ Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
  - Study was released Q3 2007
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.6 billion investment (before ownership division)
  - AEP and ITC are in discussions to form a Joint Venture
- *Benefits*
  - Up to 5,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- *Next Steps*
  - Agreement on JV (AEP/ITC) Q2 2008
  - JV Formation - 2008
  - MISO and PJM Review/Approval - 2008
  - FERC Filing - Fall 2008
  - Siting Approval – Fall 2010
  - Estimated Completion – Fall 2015

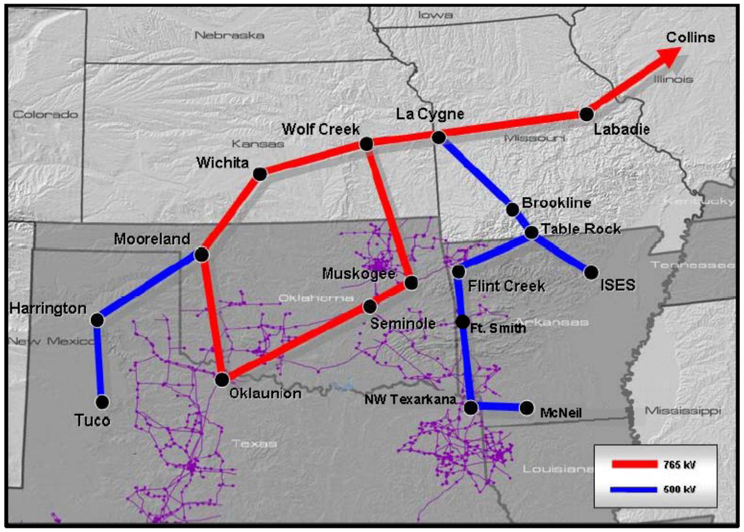


The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

I-765TM Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- *Overview*
  - July 2006 AEP submitted conceptual project for six 765-kV lines
  - Proposed 765-kV Kansas / Oklahoma / Arkansas connecting to MISO/PJM
  - 610 miles from Kansas to Arkansas
  - SPP proposes 765-kV in Texas / Oklahoma / Kansas / Missouri connecting to MISO/PJM
  - SPP also proposes 500-kV in Texas / Oklahoma / Arkansas / Missouri
  - $3.0 billion investment (before ownership division)
  - Proposed 2012-2017 construction period
- *Benefits*
  - 4,000 MW improved transfer capability
- *Next Steps*
  - Study Disclosure – Completed 2Q 2007
  - JV Formation (ETA) – Completed 3Q 2007
  - SPP 10-year Expansion Plan Issued – December 2007
  - SPP RTO/BOD EHV Overlay Approval – 2Q 2009
  - SPP RTO FERC Filing – 3Q 2009
  - Siting Approval – 3Q 2011
  - Estimated Completion – 3Q 2017



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

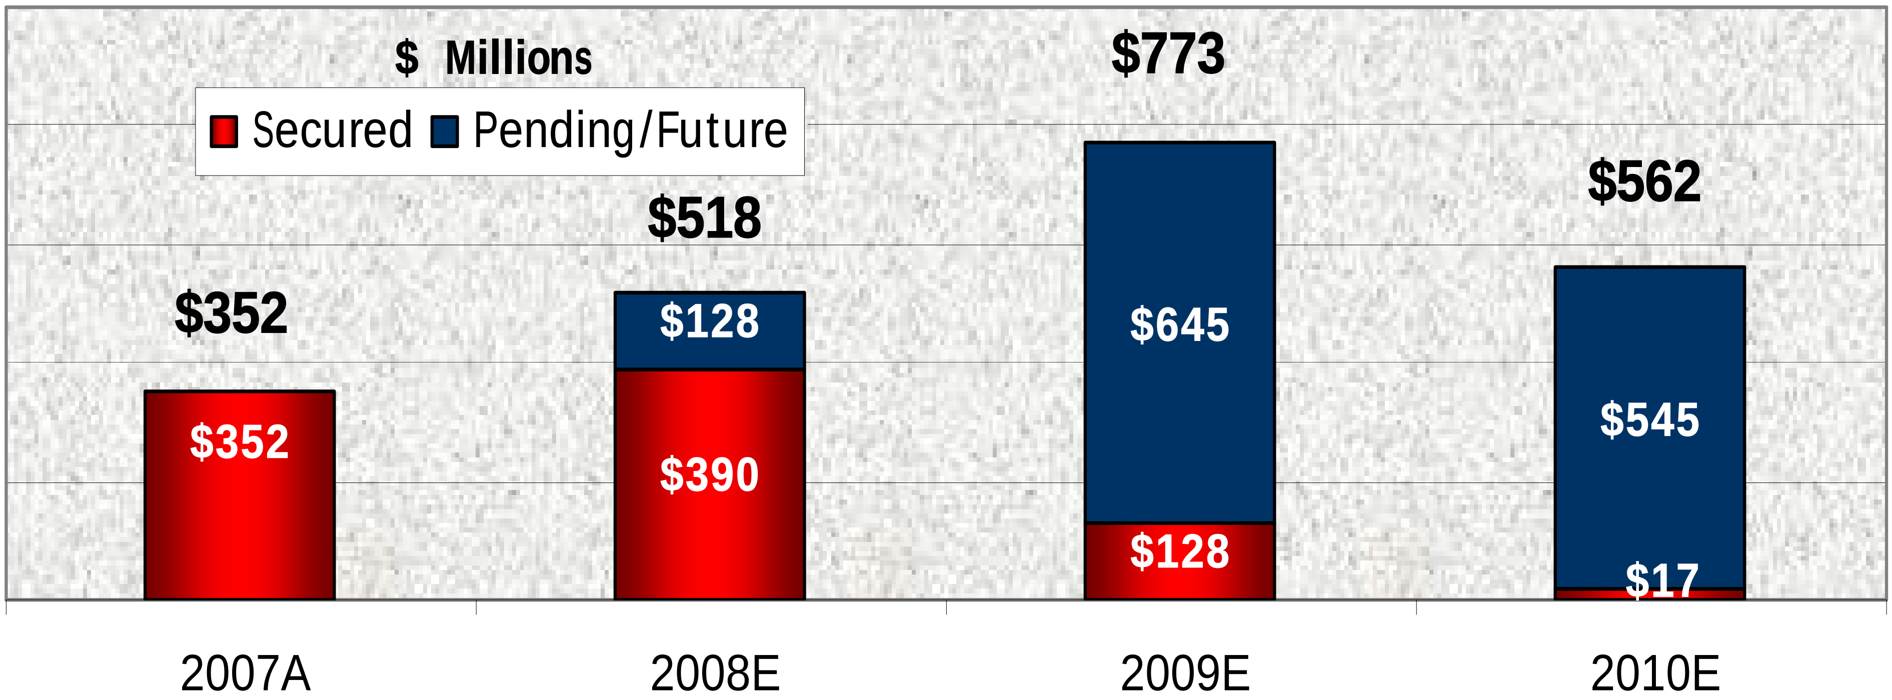
Incremental Rate Relief Assumptions



- **75% of 2008 Rate Relief Secured: I&M Depreciation, APCo - WV Surcharge, TCC & TNC General Rate Cases, Ohio RSP (3% & 7%), PSO Peaking Generation & General Rate Case, Ohio 4% Generation Rider and Marginal Loss Recovery, APCo - Virginia Fuel Factor, 2007 TCC/TNC TCRF filings.**
- **2008 Pending: PSO 2007 Ice Storm Recovery, SWEPCo - LA Financial Review, 2008 TCC/TNC TCRF filings, other cases yet to be filed.**

Our goal is to maximize utility company cash flow and returns by minimizing regulatory lag.

Regulatory Activity Underway

- Ohio Post 2008
- I&M - Indiana Base Rate Case
- PSO Storm Cost Recovery Filing
- New Generation:
  - IGCC Filing in Virginia and West Virginia for Certificate of Need and approval of a cost recovery mechanism
  - IGCC Phase 2 Filings in Ohio on Hold Pending Resolution of Supreme Court Challenge of PUCO's authority
  - SWEPCo Turk Plant Filings in Louisiana and Texas
  - SWEPCo Stall Plant Filings in Louisiana and Arkansas

2008 Projected Cash Flow

	2007 Actual	2008 Estimate
Beginning Cash Balance	$ 301	$ 178
Cash from Operations:		
Income from Continuing Operations	1,065	1,284
Depreciation and Amortization	1,513	1,484
Other	(190)	(196)
Total from Operations	2,388	2,572
Cash used for Investing:		
Construction Expenditures	(3,556)	(3,916)
Asset Sales	222	-
Distressed Generation Purchases	(512)	-
Other	(62)	(39)
Total used for Investing	(3,908)	(3,955)
Cash from Financing:		
Issuance of Common Stock, Net	143	150
Long-Term Debt Issued/(Retired), Net	1,260	1,883
Short-Term Debt Change, Net	642	(87)
Common Dividends	(630)	(659)
Other Financing Activities	(18)	44
Total from Financing	1,397	1,331
Net Change in Cash	$ (123)	$ (52)
Ending Cash Balance	$ 178	$ 126

Note: For analysis purposes, construction expenditures include AFUDC.

Commitment to Credit Quality

- Maintain adequate liquidity
- $150MM annually in new equity from Dividend Reinvestment and 401(k) plans
- Target 60% maximum consolidated AEP debt/cap ratio on an adjusted basis
- Target utility company capitalization structures:

Company	Target Equity Ratio
APCo	42-44%
CSP	45-47%
I&M	40-42%
KPCo	41-43%
OPCo	44-46%
PSO	43-45%
SWEPCo	43-45%
TCC	40%
TNC	40%

- Target long term dividend payout ratio range of 55-60%
- Maintain adequate coverage ratios to support current credit ratings

We are committed to maintaining our current credit ratings.

California Investor Meetings

Arranged by Banc of America Securities, LLC

August 16-17, 2006

AMERICAN ELECTRIC POWER • 100TH ANNIVERSARY 1906 AEP 2006

A Century of Firsts

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

- FERC Regional Rate Design

YEAR-TO-DATE, SECURED $415 MILLION OF THE $500 MILLION RATE RECOVERY ASSUMED IN 2006 EARNINGS GUIDANCE RANGE

Texas Regulatory Activity

TCC Stranded Cost Recovery Case

- April 4, 2006 – Final order, following rehearing, which provides for net true-up of $1.475 billion
- March 3, 2006 – Requested approval of financing order to issue $1.8 billion in low-cost securitization bonds
- May 22, 2006 – Settlement agreement filed with PUCT in securitization proceeding
  - Securitization financing order received June 20
  - Issuance of securitization bonds expected late 3Q06

<u>Securitization Order:</u>

- Securitization amount of $1.697 billion plus estimated bond issuance costs ($23 million resulting in $1.72 billion requested to be securitized)
- Securitization order not appealable
- $315 million cost-of-money benefit for ADFIT to be included in CTC
- The treatment of EDFIT and ADITC ($61 million in total) as a reduction to the securitized amount

- June 2006 – Requested approval for CTC to address other true-up items
  - Requested $355 million net credit to customers over 8 years
    - $475 million gross CTC refund proposed, offset by $7 million in rate case expense recovery
    - Requested portion be deferred, pending the outcome of 2 contingent federal matters
      - –$16 million of FERC jurisdictional fuel over-recoveries
      - –$97 million related to ADITC and EDFIT
  - Hearings set for Sept 2006

Regulatory Activity Underway

Indiana Depreciation Filing

December 1, 2005 – I&M filed petition with the IURC for accounting authorization to revise the depreciation rates applicable to its electric utility plant in service

- Based on a 2004 depreciation study, I&M recommends a decrease in annual depreciation expense of approximately $45 Million on an after-tax Indiana jurisdictional basis.
- Hearings have been held with final order expected in third quarter 2006

Appalachian Power - Virginia E&R & General Rate Case Activity

Virginia E & R Cost Recovery Factor - Filed July 1, 2005 – Originally filed for recovery of $62.1 million in new Environmental & Reliability costs

- Oct 14, 2005 – SCC ruled VA law does not allow recovery of prospective costs - $48.6 Million
- Nov 14, 2005 - APCo filed supplemental direct testimony which included updated actual E&R costs incurred through Sept. 30, 2005 of $21.1 million
- Hearings held, awaiting Commission Order

Virginia General Rate Case Filing – Filed May 4, 2006 – Seeking $225.8MM increase in base rates, partially offset by a proposed credit to reflect sharing of $27.3MM in margins from off system sales (OSS), resulting in a net annual increase of $198.5MM.

- May 30, 2006 – SCC suspended the effective date of the rates until 10/2/06, upon which, the full rate increase requested by APCO-VA will be implemented, subject to refund.

<u>Procedural Schedule</u>

Oct 4, 2006	Intervenor testimony due
Oct 24, 2006	SCC Staff testimony due
Nov 9, 2006	Company to file rebuttal testimony
Dec 6, 2006	Evidentiary Hearings to commence

IGCC Regulatory Activity

Ohio - Cost Recovery Filing

Phase 1 – PUCO AUTHORIZED

- Effective during 2006
- Seeks recovery of initial costs, including those already incurred, such as site engineering and various other engineering services
- Approximately $23.7 Million

Phase 2

- Effective 2007- mid 2010 (Construction Phase)
- Seeks recovery of carrying costs associated with plant construction

Phase 3

- Effective mid 2010 (Commercial Operation begins)
- Seeks recovery of projected $1.174 Billion cost of plant over its operating life

Ohio Next Steps

2006:

- Secure cost recovery plan
  - April 10, 2006 – PUCO authorized implementation of Phase 1 Rates
  - Phase 2 & 3 ruling – Post October 2006 – following completion of FEED study
- Finalize site selection
- Negotiate with suppliers

2006—2007:

- Obtain permits and finalize engineering and procurement

West Virginia IGCC Activity

On January 11, 2006, Appalachian Power Co. filed a Certificate of Public Convenience and Necessity seeking authority to construct a 600-MW IGCC facility in West Virginia.

SEEKING AUTHORITY FOR THREE PHASE RECOVERY APPROACH IN OHIO

Regulatory Activity Underway

FERC Regional Rate Design

- At our urging, the FERC instituted an investigation of PJM's zonal rate regime
  - Present regime may need to be replaced
  - Consider establishing regional rates that would compensate AEP, among others, for the regional transmission service proved by high voltage facilities they own that benefit customers throughout PJM
- July 13, 2006 ALJ rendered initial decision finding:
  - License Plate rates for existing facilities <u>are not</u> just and reasonable, and must be replaced (effective April 1, 2006 when SECA ended)
  - Staff's proposal for a "Postage Stamp" rate phased in so as to limit increases in any one pricing zone to 10% per year is best choice for replacing current rates
  - Staff's proposed rate design would produce slightly more net revenue for AEP than the original AEP/Allegheny Power proposal, when fully effective

•Next Steps
  - Briefs on Exceptions to the initial decision by all parties
  - Order by the Commission late 2006/early 2007

Regulatory Activity Completed

Ohio – Rate Stabilization Plan (2006 – 2008)

- Annual 3% and 7% generation rate increases at CSP & OP, respectively
- POLR rate rider for environmental additions
- Ability to request additional 4% annual increase in generation rate, for certain specific incremental costs
- Elimination of 5% residential generation credit (stipulated in the pre-existing Electric Transition Plan of 2000)

AEP East FERC Transmission Case

December 20, 2005 – FERC approved settlement allowing wholesale transmission rates to increase

- Results in $22 million net revenue increase in 2006 from wholesale transmission

Ohio Companies Pass Through of FERC OATT Changes

May 26, 2006 – PUCO approved a final order allowing for adjustment of the transmission component of standard service tariffs to FERC-approved rates

- Transmission rate adjustment results in additional annual revenues of approximately $89 million ($63 million in 2006)

SWEPCo Fuel Factor/Surcharge Filing

January 12, 2006 – Settlement approved by PUCT

- Fuel factor will increase SWEPCo's annual Texas retail fuel-related revenues by approximately $46 million
- Interim surcharge will collect the under-recovery amount of $44 million, including interest

Appalachian Power- Virginia Fuel Factor Increase

- $57.7 million increase in fuel factor approved on January 20, 2006

Kentucky Base Rate Case

Final order approved on March 14, 2006

- $41 million annual increase in base rates
- Rates effective March 30, 2006

Regulatory Activity Completed

APCo & WPCo West Virginia Rate Case

Settlement approved July 2006

- $44MM initial overall increase in rates effective July 28, 2006 comprised of:
  - $56MM increase in ENEC for fuel & purchased power expenses;
  - $23MM special construction surcharge providing recovery of the costs of scrubbers and the Wyoming-Jacksons Ferry (WJF) 765kV line;
  - $18MM general base rate reduction based on ROE of 10.5%, of which $9MM relates to a reduction in depreciation expense (affects cash flows but not earnings);
  - $17MM credit to refund a portion of deferred prior over-recoveries of ENEC costs of $51MM, currently recorded in regulatory liabilities; therefore, this item impacts cash flows but has no effect on earnings;
- Agreement also provides a surcharge mechanism that allows APCo and WPCo to adjust their rates annually for the timely recovery in each of the next three years of the incremental cost of ongoing environmental investments and the costs of WJF
- Reinstatement of the ENEC mechanism effective July 1, 2006

CSP & OPCO Storm Related Service Restoration Cost Recovery

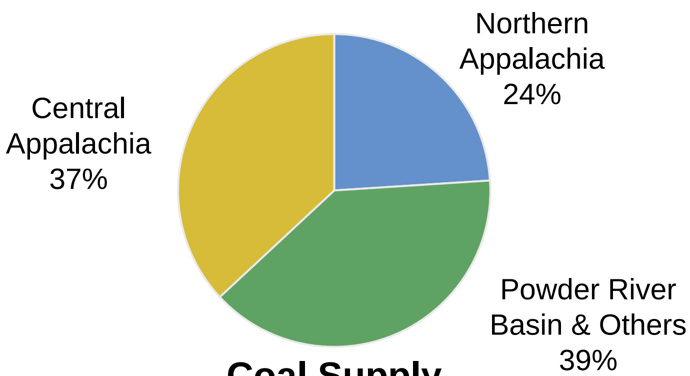
August 9, 2006 – PUCO issued ruling allowing CSP and OPCO to recover costs associated with service restoration activities during the back-to-back December 2004 and January 2005 ice storms.

- CSP Recovery - $11.9MM
- OP Recovery - $11.7MM

Fuel

Coal Procurement

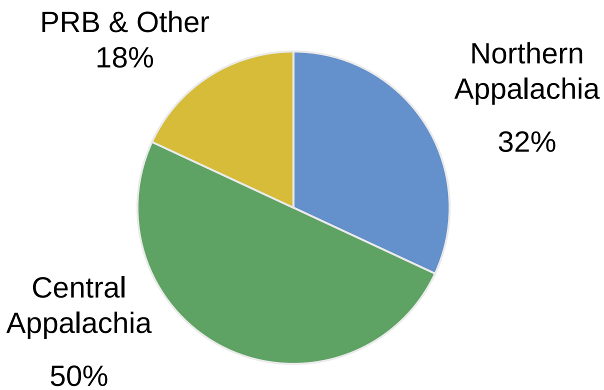
Total AEP System



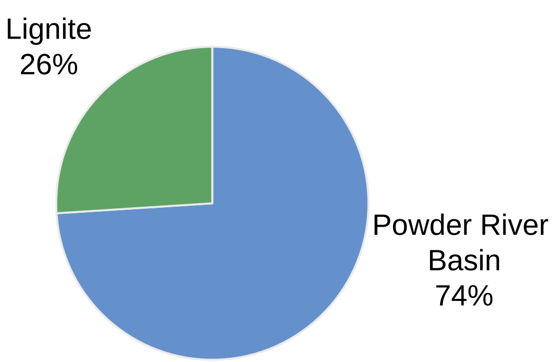
Coal Supply (on average)

- Purchase approximately 75 MM tons per year
- Avg. delivered price ~ $32.52/ton in 2005
- Fully contracted for 2006; 95%+ contracted for 2007
- Approximate 11%-13% price increase in 2006
  - Rising costs at Eastern mines & safety issues
  - High SO2 Allowance prices drive low sulfur coal prices

AEP Eastern System

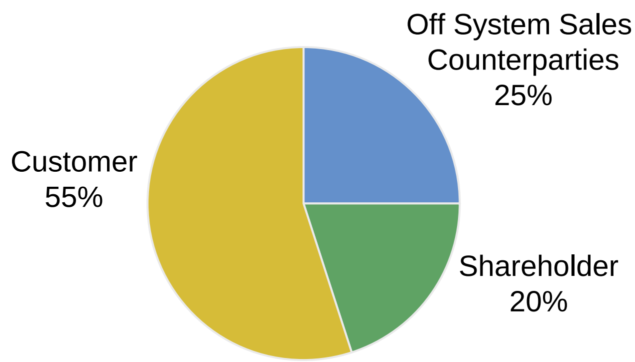


AEP Western System



Fuel Recovery

AEP System



Fuel Cost Recovery
(on average)

- Fuel recovery varies by jurisdiction
- 80% of fuel cost is recoverable across the AEP System
- Active Fuel Clause Jurisdictions:
  - AEP EAST: APCo, I&M, KPCo, KGP, WP
  - AEP WEST: PSO, SWEPCO

Note: Fuel recovery percentages are based on estimates for 2006 fiscal year

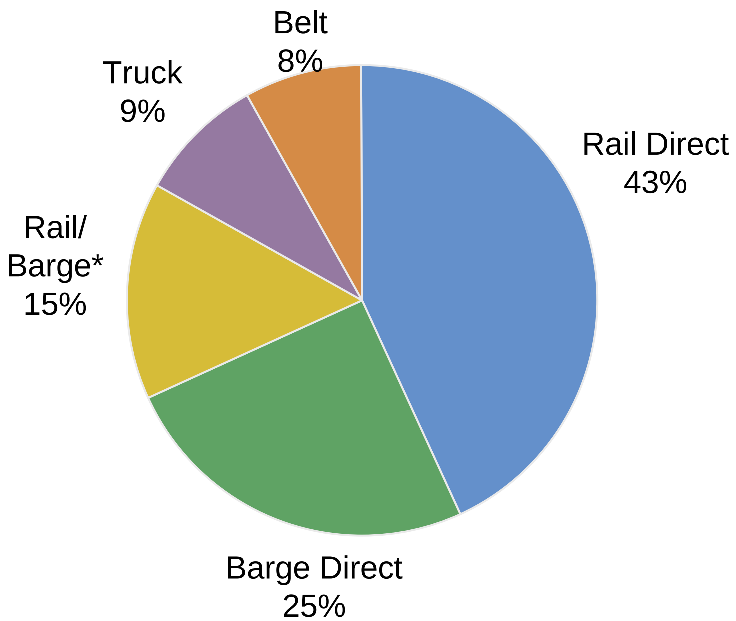
Jurisdictional Fuel Clause Summary

STATE	FUEL CLAUSE	ADJUSTMENT FREQUENCY
Arkansas	Yes	Annually
Indiana	Yes	Capped at increasing rates through June 30, 2007
Kentucky	Yes	Monthly
Louisiana	Yes	Monthly
Michigan	Yes	Annually
Ohio	No	Although there is no recovery mechanism in Ohio, the RSP provides for a 3% (CSP) and 7% (OP) increase in generation rates annually, which includes fuel beginning January 2006 and extending through December 2008.
Oklahoma	Yes	Annually
Tennessee	Yes	Monthly
Texas (SPP)	Yes	Semi-annually
Virginia	Yes	Annually
West Virginia	Yes	Annually; Deferral accounting for ENEC began July 1, 2006 and new rates became effective July 28, 2006.

Coal Delivery

Total AEP System

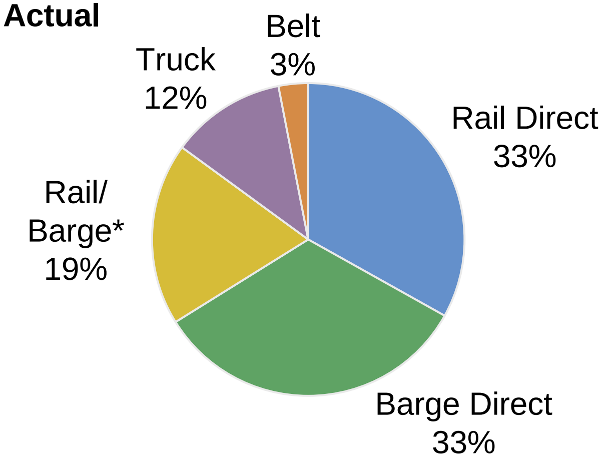
DELIVERY MODE DIVERSITY
2005 Actual



* Coal delivered to AEP plants transported through combination of rail and barge

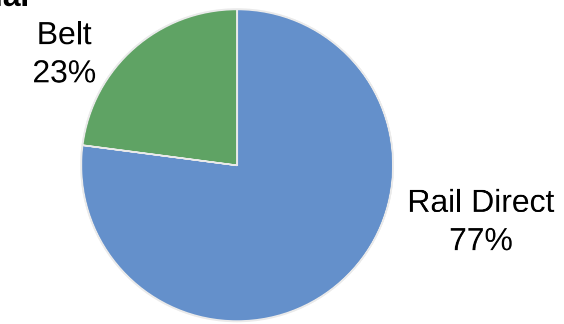
AEP Eastern System

2005 Actual



AEP Western System

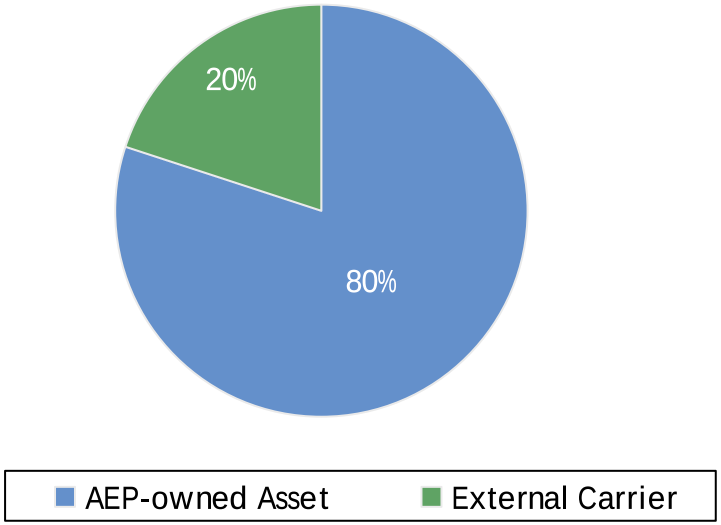
2005 Actual



AEP's Coal Transportation Assets

Coal Transportation to AEP Plants*

2005 Actual



* Represents close approximations

AEP's substantial coal transportation assets include:

- ➢7,065 railcars
- ➢2,318 barges
- ➢53 towboats
- ➢1 active coal handling terminal (20 million tons of annual capacity)

AEP'S TRANSPORTATION ASSETS PROVIDE FLEXIBILITY IN A CONSTRAINED DELIVERY ENVIRONMENT

Environmental

AEP's Environmental Compliance Strategy

NOx and SO_2 emission reductions are part of AEP's on-going strategy to comply with the Clean Air Act, Title IV regulations, the Clean Air Interstate Rule (CAIR) and the Clean Air Mercury Rule (CAMR).

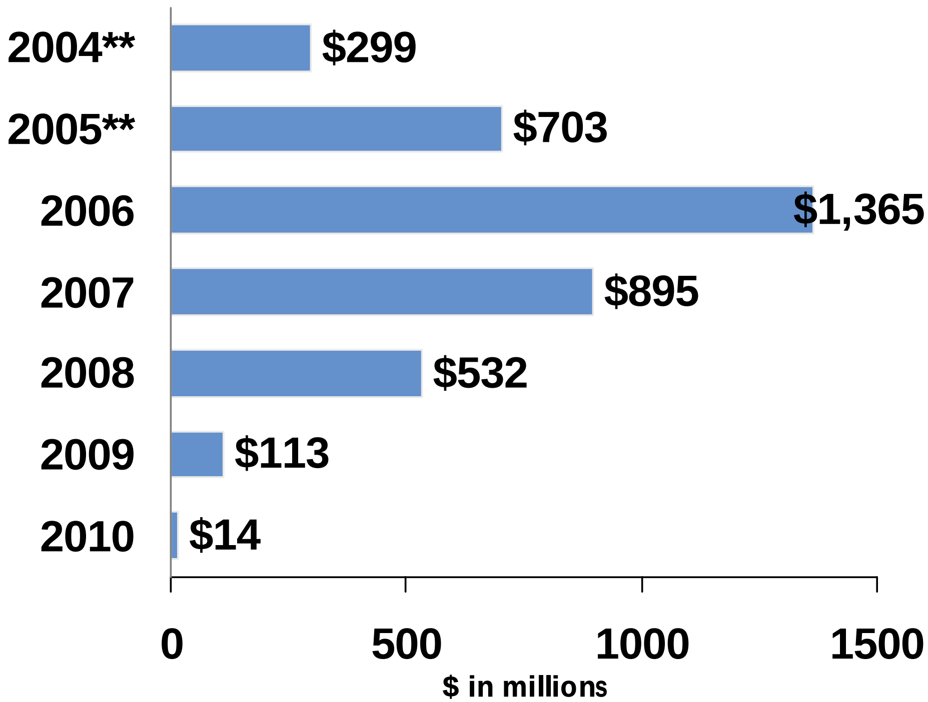
Much of this investment will position AEP to accomplish the following:

- Reduce nitrogen oxide emissions by 90% through installation of Selective Catalytic Reduction (SCR) systems
- Reduce sulfur dioxide emissions by 95% to 98%+ through installation of Flue Gas Desulfurization (FGD) systems (scrubbers)
- Realize co-benefit of mercury capture offered through SCR and FGD systems together
- Avoid future landfill costs through sale of gypsum (by-product) & build where landfill costs are lower
- Realize benefits achieved through fuel flexibility

Represents the best and least-cost compliance path to improve environmental performance on a fleet basis, while continuing to provide a reliable supply of power to customers at a reasonable price and a solid return for investors.

Environmental Investment: $3.9 Billion Through 2010

Environmental Capital Investment*

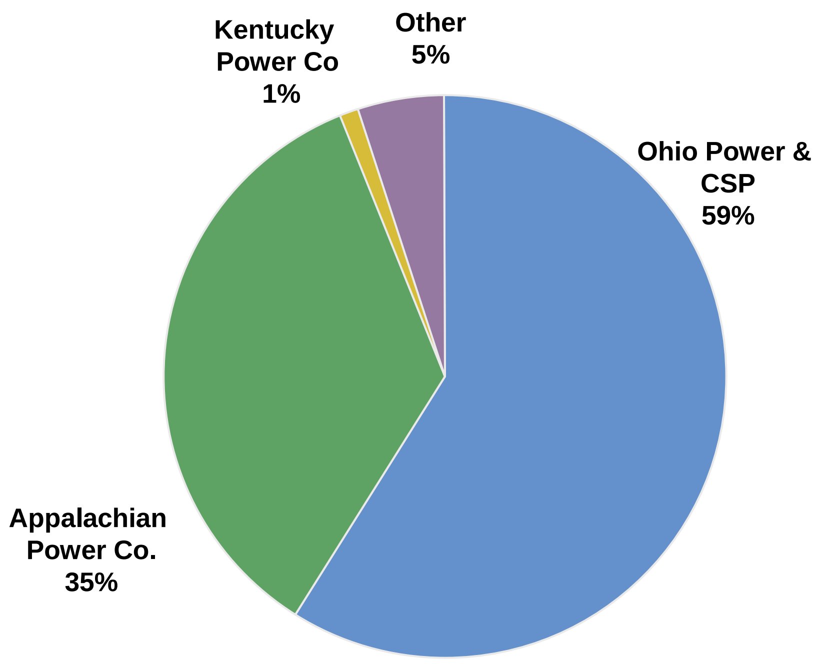


*Environmental investment for NOx, SO_2 , & Hg purposes including AFUDC

** Actual investment level in 2004 and 2005

($3.9 billion figure reflects delay of Big Sandy 2 investment)

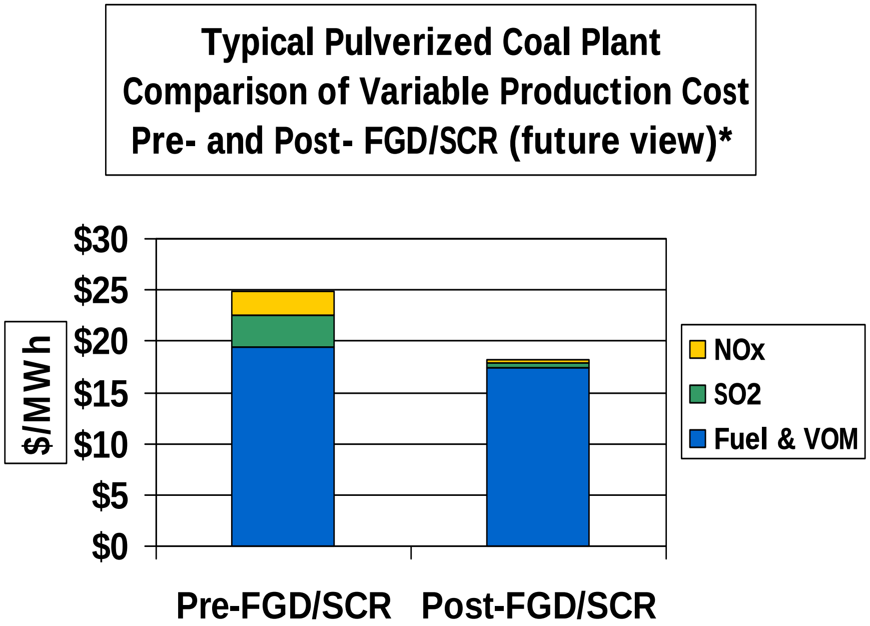
Projected Environmental Investment Allocation



Majority of 2006 & 2007 dollars will be invested in Ohio & APCo

Low Cost Production Supports Investment & Investment Sustains Low Cost Production

- Lowers exposure to high cost emission allowances
- Creates opportunity to burn wider variety of lower cost fuels
- Improves baseload operation (higher capacity factor, higher margin)
- All-in cost of electricity, including FGD/SCR investment, remains low

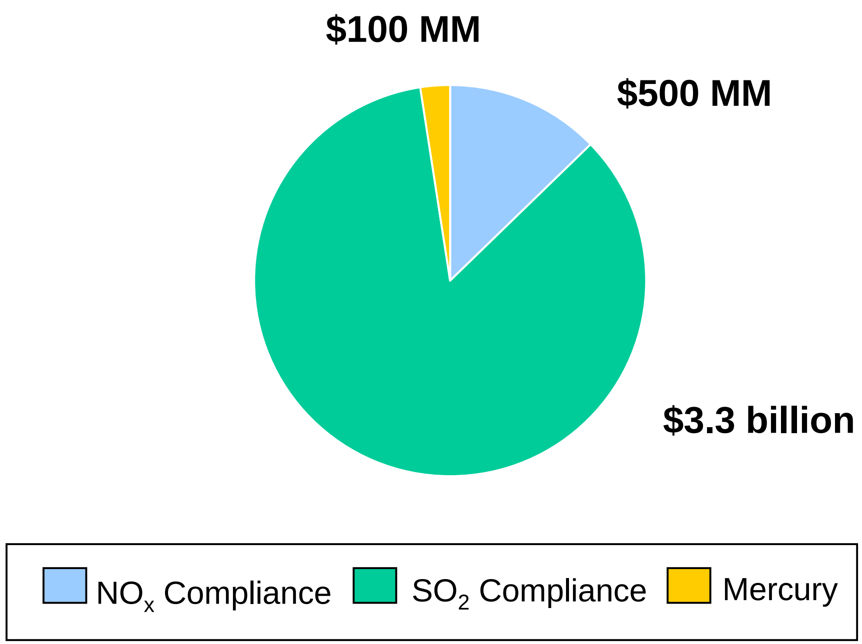


* Assumes annual NOx program

AEP will remain the low cost producer following completion of environmental retrofit projects

Environmental Compliance Investment

Compliance Allocation



Current Programs

$2.0 Billion:

$0.5 Billion for NOx

$1.5 Billion for SO_2

Future Programs

$1.9 Billion:

$1.8 Billion for SO_2

$0.1 Billion for Other

$3.9 BILLION ENVIRONMENTAL INVESTMENT PROJECTED 2004 THROUGH 2010

Note: Figures Include AFUDC; $3.9 billion figure reflects delay of Big Sandy 2 investment

Environmental Investment

FGD – Reduces SO_2 by 95% to 98% → **Co-Benefit Hg Capture** ← **SCR - Reduces NOx by 90%**

INSTALLATION OF SCR AND FGD WILL ALLOW OUR COAL FLEET TO REMAIN EXTREMELY COST COMPETITIVE

Cost of Control Technology

AEP's compliance plan largely relies on SCR & FGD technology to meet the requirements of CAIR and CAMR. AEP also deployed other combustion related controls, such as low NOx burners and optimized boiler controls throughout the system.

Conventional Technology

	SCR	**FGD**
AEP Capital Cost	~$121/kW avg.	~$250/kW avg.
Pollutant(s)	NO_x	SO_2 (& Hg as co-benefit)
Removal Efficiency	85 to 93%	95%-98% (&~80%)
Aux. Power	Approx. 1%	1.5% to 3.0%

Investing in IGCC

Integrated Gasification Combined Cycle

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called “syngas” – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

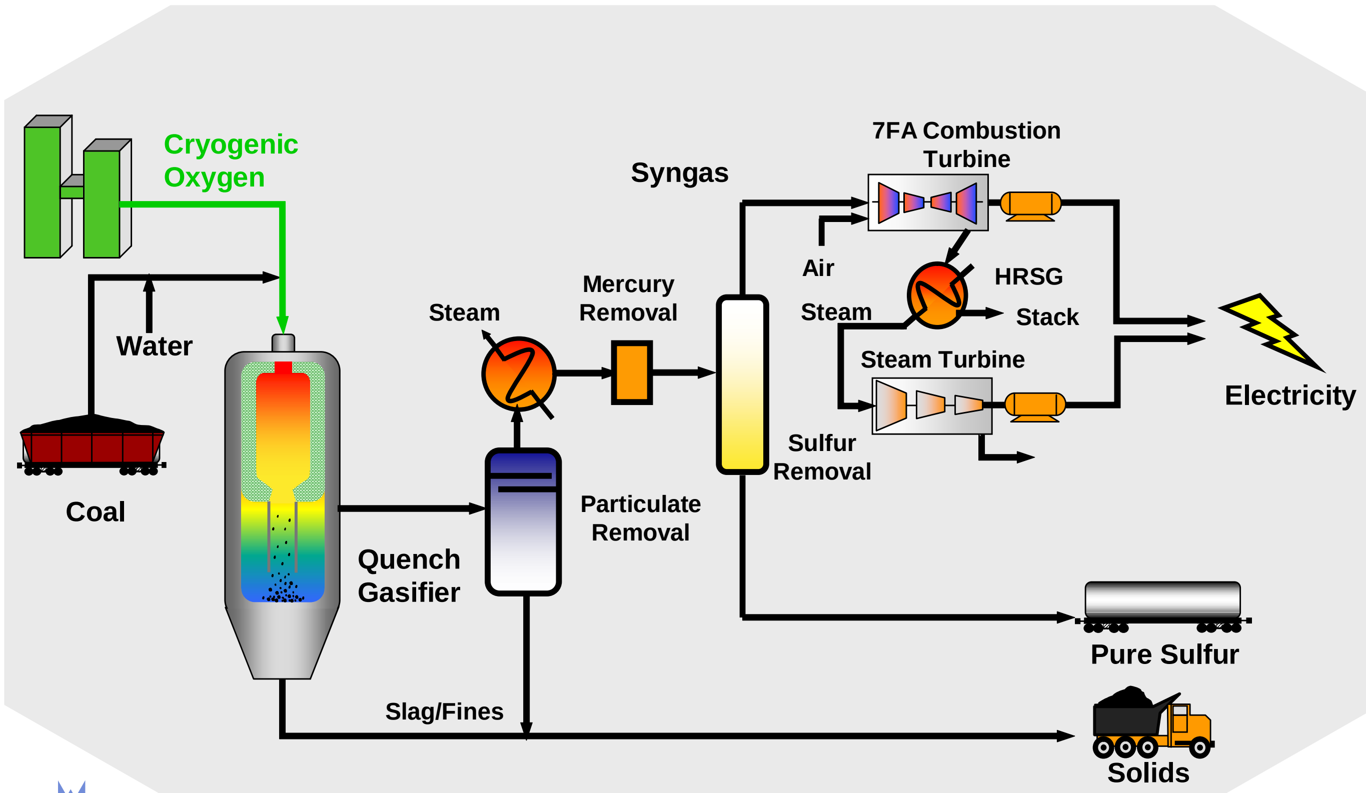
Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2 , mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP’s eastern service territory.

AEP is currently working with a technology provider to develop a firm price for an IGCC facility to be built in our eastern service region. This price will be available in 2006. AEP intends to seek regulatory recovery approvals in advance of building the plant.

Looking To The Future - IGCC



162110 - GJS/CE-01/1-23-02

AEP HAS ANNOUNCED ITS INTENTION TO CONSTRUCT A COMMERCIAL-SCALE INTEGRATED GASIFICATION COMBINED CYCLE (IGCC) PLANT BY THE END OF THE DECADE

Generation Technology Comparative Stats

	PC	IGCC	NGCC
Nominal Capacity (MW)	600	600	600
Heat Rate (Btu/kWh)	8700	8600	7200
Total Plant Cost (EPC) ($/kW)	1700	1900	480
Production Cost ($/MWh)	17	16	57
Cost of Electricity, without CO2 Capture ($/MWh)	58	63	90
Estimated Cost of Electricity, with CO2 Capture ($/MWh)	94	87	137

Source: Results of AEP analysis based on EPRI studies

- Total Plant Cost (2005$'s) includes the cost to **E**ngineer, **P**rocure and **C**onstruct plant and owner's direct costs; does not include interconnections, transmission lines, transmission upgrades, contingency or AFUDC.
- Assumes Northern Appalachian Coal price of $1.60 /mmBtu for PC and IGCC, and natural gas price of $7.00/mmBtu for NGCC.
- Assumes 85% capacity factor for PC and IGCC, 25% for NGCC.
- Production Cost includes Fuel Cost and Variable Operations & Maintenance (VOM) cost.
- Cost of Electricity based on EPC cost, does not include the cost of Emission Credits.
- Cost of Electricity with CO2 capture does not include sequestration cost.

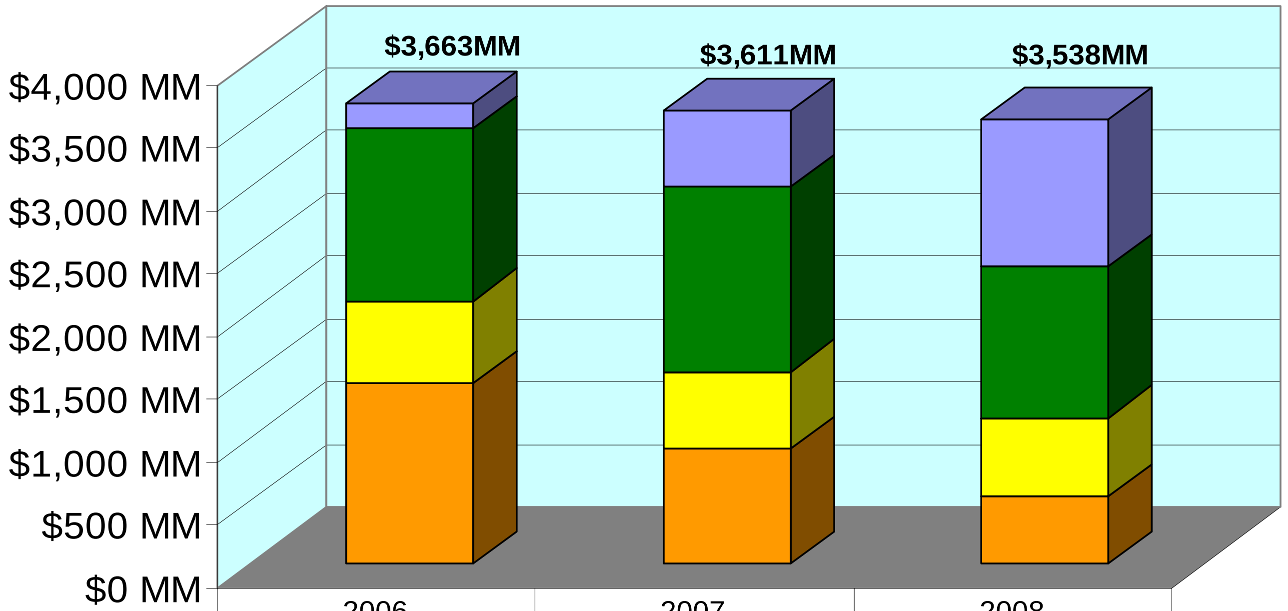
IGCC TECHNOLOGY IS STRATEGIC TO KEEPING COAL IN THE MONEY

Capital Investment

2006 Revised Capital Investment Forecast

Capital Investment Forecast

excluding AFUDC



New Build Generation & Ongoing Infrastructure Replacement investment can be throttled

	2006	2007	2008
New Build Generation	$191	$611	$1,174
Ongoing Infrastructure Replacement & Economically Justified	$1,381	$1,473	$1,203
Mandated T&D	$650	$615	$625
Environmental Compliance	$1,441	$912	$536

Note: Capital forecasts do not include amounts for AEP Interstate Project.

2006 TOTAL CAPITAL INVESTMENT LEVEL HAS BEEN REDUCED BY $60MM TO $3.663 BILLION

New Generation

IGCC

- June 2006 – PUCO approved tariff to recover Phase 1 pre-construction costs ($24MM) over 12-month period effective July 1, 2006
- Expect to obtain permits and finalize engineering by 2007
- Construction of 600 MW facility to begin in 2007

SWEPCO

- May 31, 2006- Announced plans to build $1.4 billion of new generation
- Expected generation build includes a simple-cycle gas turbine totaling up to 480 MW and combined-cycle gas plant totaling 480 MW
- Aug 2006 – Announced plans to build $1.3 billion 600 MW base load ultra-supercritical coal-fueled plant – of which SWEPCO's investment will be approx. 75%
- Commercial operation dates between 2008 and 2011

PSO RFPs

- 2H05 - Submitted RFPs for up to 1100 MW of peaking and baseload capacity in aggregate
- March 2006 - Two peaking RFPs totaling 340 MW awarded; commercial operation 2008
- July 2006 - Entered into JVA with OG&E to build 950 MW coal-fueled unit with goal to use ultra-supercritical technology – PSO will own 50% or 425 MW; commercial operation 2011

(2) Includes sinking fund payments, where applicable.
(3) Maturities remaining as of June 30, 2006.

2006 Key Operating Company Highlights

(in millions)

Dependent on Actual Capital Investment

Company	Projected Capital Expenditures	Projected Issuances	Target Equity Ratio
APCO	$943	$500 - $600 *	42-45%
CSP	$343	$0	44-48%
I&M	$311	$400 - $500	38-42% (a)
KPCo	$100	$0	42-45%
OPCo	$1,070	$350 - $400	44-48%
PSO	$279	$150 - $200	44-48%
SWEPCo	$288	$150 - $200	44-48%
TCC (b)	$278	$0	40%
TNC	$73	$0	40%

*Issuances include potential new money tax-exempt issuances

(a) Ratios include impact of Rockport 2 lease.

(b) Excludes impact of securitization.

Maintain financial strength of subs by retaining and/or infusing equity capital depending on their credit ratios and free cash flow

Long-Term Debt Guidelines

Issuers:

- Issue at operating companies.

Size:

- Make transactions index eligible if possible.
- When possible, issue a size sufficient for competitive execution.

Maturity:

- Issue maturities for which the market has appetite.
- Achieve weighted average life targets for operating companies, generally between 10-15 years.

Timing:

- Will issue based on the timing of maturities and levels of short-term debt as driven by capital spending and operating cash flow.

What AEP Offers

Utility Operations: The Platform for Growth & Financial Strength

1. Strength and scale in assets and operations
2. Focused utility business model
3. Earnings growth driven by native load & capital investment
4. Pioneering advanced technologies in the sector
5. Solid liquidity position and stable credit profile
6. Attractive dividend yield in excess of 4%

Completed APCo West Virginia Rate Case

Appalachian Power & Wheeling Power – West Virginia Base Rate Case & ENEC Reactivation

Filed April 24, 2006 – Joint Settlement Agreement

- Estimated overall impact of revenue increases to be phased-in through 2009:
  - $129 Million
  - 16% Increase
- Provides for timely recovery of Wyoming-Jacksons Ferry 765kV line and Mountaineer & Amos FGDs
- Settlement Agreement approved July 26

Phased-In Increases:

- ✓ July 28, 2006 - $61 Million*
- ✓ July 1, 2007 - $36 Million**
- ✓ July 1, 2008 - $14 Million**
- ✓ July 1, 2009 - $18 Million**

* Excludes ENEC over-recovery negative surcharge ($17 million) -- surcharge does not have an earnings impact

** Estimated

Approved Settlement Details

- ✓ Increase effective July 28, 2006:

($18MM) Base Rates

$56MM ENEC

$23MM WJF & FGD investment @ 12/31/05

$61MM Gross revenue increase

($17MM) ENEC over-recovery negative surcharge

$44MM Net increase effective 7/28/06

- ✓ Phased-in revenue increases annually on July 1, 2007 – 2009 provides for timely recovery of FGD project balances at 12/31 of prior year

Summary Rate Case Information

Virginia E&R Factor Filing

On July 1, 2005, Appalachian Power Co. filed a request with the Virginia SCC to recover incremental actual and projected costs for environmental compliance and T&D System reliability in the amount of $62.1MM. The SCC has ruled that under applicable VA law, it does not have authority to approve the recovery of projected E&R costs before their actual incurrence and adjudication. APCo filed supplemental direct testimony which included actual costs incurred for E&R thru September 30, 2005 of $21.1 million. Hearings concluded in March. Briefs were filed in early April. We are awaiting a Commission order. Docket # PUE-2005-00056

Capital Structure – Company vs. Staff

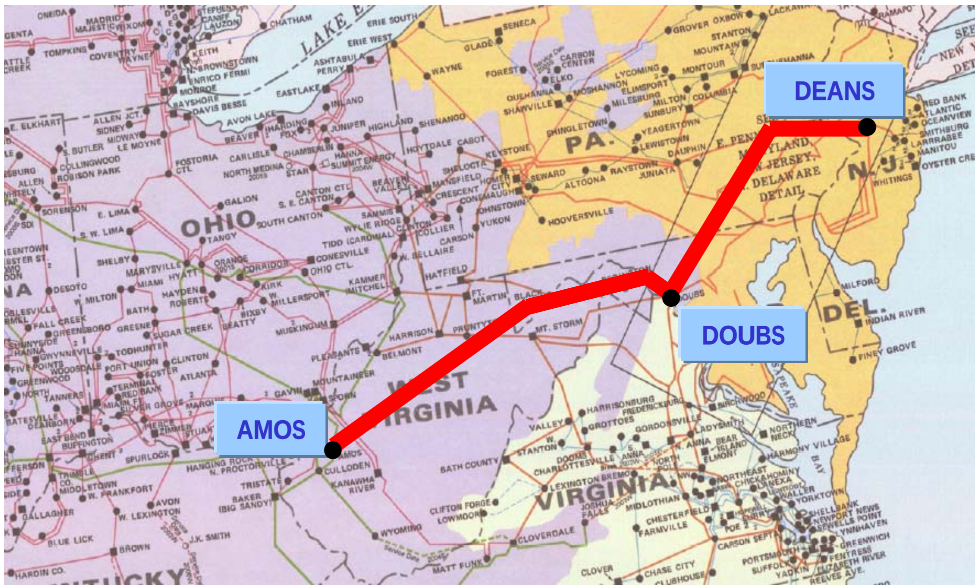
Capital Structure	Company Position (filed 7/1/05)	Staff Position (filed 1/11/06)
Long-Term Debt	53.43%	51.50%
Short-Term Debt	2.67%	2.20%
Preferred Stock	0.54%	0.53%
Common Equity	42.65%	45.16%
ITC	0.71%	0.61%
Total	**100.00%**	**100.00%**
Recommended ROE	**10.85%**	**9.80%**

Revenue Requirement – Company vs. Staff*

Revenue Requirement	Company Position (filed 11/14/05)	Staff Position (filed 1/11/06)
Environmental	13.3	8.2
Transmission	6.1	8.8
Distribution	1.7	2.6
Total	**$21.1MM**	**$19.6MM**

* Difference in positions does not reflect the relative earnings impact and is not necessarily a reflection of the ultimate outcome of the case.

AEP Interstate Project



Map of the Proposed AEP Interstate Project 765 kV Transmission Line (Line route is conceptual and subject to change in regulatory and PJM Regional Transmission Expansion Plan processes)

- Line connects AEP's Amos 765 kV station to Allegheny Power's Doubs 500 kV station in Maryland, and terminates at PSEG's Deans 500 kV station in New Jersey
- Total line length is approximately 550 miles
- Will improve power transfer capability from the Midwest to the Mid-Atlantic by 5,000 MW
- Expected to cost $3 billion (subject to change based on a detailed investigation)
- Not yet determined which other non-AEP companies may be interested in participating
- Any financing activity relating to this project would be structured to allow AEP to meet its consolidated debt-to-cap target of approximately 60% and maintain its BBB credit rating
- Project expected to be in service in 2014

OPERATING COMPANY DETAIL

AEP Texas Central Company

President and Chief Operating Officer: Charles Patton

AEP Texas Central Company (TCC)

(organized in Texas in 1945) is engaged in the generation (to an extremely limited extent), transmission and sale of power to affiliated and non-affiliated entities and the distribution of electric power to approximately 729,000 retail customers through REPs in southern Texas, and (to a limited extent) in supplying and marketing electric power at wholesale to other electric utility companies and market participants. Under the Texas Act, TCC is completing the final stage of exiting the generation business and has already sold most of its generation assets, including STP. At December 31, 2005, TCC had 1,160 employees. In addition to its AEP System interconnections, TCC is a member of ERCOT.

As of 12/31/2005

Total Customers:
(Based on electric meters)

• **Residential**	**620,000**
• **Commercial**	**103,000**
• **Industrial**	**6,000**
Total	**729,000**
Generating Capacity	**54 MW***
Generating Capacity by Fuel Mix:	
• **Coal:**	**100%**
Transmission Miles	**5,000**
Distribution Miles	**28,000**

*** Includes TCC's 54-MW share of the Oklaunion plant**

Principal industries served:

Oil and gas extraction
Food processing
Apparel
Metal refining
Chemical and petroleum refining
Plastics
Machinery equipment

AEP Regulated Electric Utilities

Texas Central Company Texas North Company Southwestern Electric Power Company

Commissioners

Number**: 3**	Appointed/Elected**: Appointed**	Term**: 6 years**	Political Makeup**:** R:3

<u>Qualifications for Commissioners</u>

To be eligible for appointment, a commissioner must be: (1) a qualified voter; (2) a citizen of the United States; and (3) a representative of the general public. Chairman appointed by the Governor.

<u>Commissioners</u>

Paul Hudson, Chairman (Rep.), since August 2003; current term expires August 2009. Served as policy director in governor's office. Worked at PUCT as advisor and senior economic analyst. Served on National Governor's Association Task Force on Electric Infrastructure; Western Governor's Association Working Group on Cross Border Energy Issues. Master's degree from Arizona State.

Barry T. Smitherman, Commissioner (Rep.), since April 2004; current term expires August 2007. Attorney; Assistant DA; 16 years as a public finance investment banker. Law degree from the University of Texas School of Law, Master's in public administration from Harvard University.

Julie Parsley, Commissioner (Rep.), since November 2002; current term expires August 2011. Lawyer, private practice. Served as Solicitor General of Texas with Office of Attorney General. Also served as Deputy Solicitor General. Received law degree from Texas Tech University.

Appalachian Power

President and Chief Operating Officer: Dana Waldo

Appalachian Power Company (APCo)

(organized in Virginia in 1926) is engaged in the generation, transmission and distribution of electric power to approximately 942,000 retail customers in the southwestern portion of Virginia and southern West Virginia, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities and other market participants. APCo covers a service territory of 19,049 square miles, and at December 31, 2005, APCo and its wholly owned subsidiaries had 2,408 employees. Among the principal industries served by APCo are coal mining, primary metals, chemicals and textile mill products. In addition to its AEP System interconnections, APCo also is interconnected with the following unaffiliated utility companies: Carolina Power & Light Company, Duke Energy Corporation and Virginia Electric and Power Company. APCo has several points of interconnection with TVA and has entered into agreements with TVA under which APCo and TVA interchange and transfer electric power over portions of their respective systems. APCo is a member of PJM.

Principal industries served:

Coal mining
Primary metals
Chemicals
Textile mill products

Public Service Commission of West Virginia

AEP Regulated Electric Utilities

Wheeling Power Co.
Appalachian Power Co.

Commissioners

Number: 3	**Appointed/Elected:** Appointed	**Term:** 6 years	**Political Makeup R:** 1 **D:** 2

Qualifications for Commissioners

The West Virginia Public Service Commission (WVPSC) consists of three members, appointed by the Governor, with the advice and consent of the senate. No more than two members of the commission may belong to the same political party. The Commissioners serve six year staggered terms, with one term expiring as of July 1 of each odd numbered year. One Commissioner is designated as Chairman of the Commission by the Governor. The Chairman serves as the chief fiscal officer of the Commission.

Commissioners

Edward H. Staats, (Dem.), since 2003, term expires June 2009. Former Chief of Operations in the Governor's office.

R. Michael Shaw, Commissioner (Rep.), since mid 2003, term expires June 2007. Attorney, former state legislator.

Jon W. McKinney, Chairman (Dem.), since 2005, term expires June, 2011. Formerly served as plant manager of Flexsys' Nitro, W Va operations, chairman of Chemical Industry Committee for W Va, board member of W Va Chamber of Commerce, W Va Manufacturer's Association, Chemical Alliance Zone, W Va Roundtable & Thomas Memorial Hospital.

Virginia State Corporation Commission

AEP Regulated Electric Utilities

Appalachian Power Co.

Commissioners

Number: 3	**Appointed/Elected**: Elected	**Term:** 6 years	**Political Makeup: R:** 2 **D:** 1

Qualifications for Commissioners

The Virginia State Corporation Commission (VSCC) is composed of three members elected by the General Assembly. Commissioners are elected to serve six-year terms, staggered in two year increments. The chair rotates annually among the three commissioners on February 1.

Commissioners

Theodore V. Morrison, Jr, (Dem.), since 1989; current term expires 2008. Member of the Virginia House of Delegates from 1968 to 1988. Member of Virginia Code Commission from 1974 and served as chairman from 1984 to 1988. Lawyer, private practice. Law degree from Emory University.

Mark C. Christie (Rep.), since 2004; current term expires February 2010. Current Chairman. Attorney, counsel to the Speaker of the House

Judith Williams Jagdmann, (Rep.), since 2006, current term expires 2012. Law degree from T.C. Williams School of Law. Prior to being elected to the Commission, she served as 43rd Attorney General for the Commonwealth of Virginia. Prior to work in Attorney in the Office of Attorney General, served 13 years as counsel to the SCC.

Columbus Southern Power

President and Chief Operating Officer: Kevin Walker

Columbus Southern Power Company (CSPCo)

(organized in Ohio in 1937, the earliest direct predecessor company having been organized in 1883) is engaged in the generation, transmission and distribution of electric power to approximately 710,000 retail customers in Ohio, and in supplying and marketing electric power at wholesale to other electric utilities, municipalities and other market participants. CSP Co covers a service territory of 3,701 miles and at December 31, 2005, CSPCo had 1,178 employees. CSPCo's service area is comprised of two areas in Ohio, which include portions of twenty-five counties. One area includes the City of Columbus and the other is a predominantly rural area in south central Ohio. In addition to its AEP System interconnections, CSPCo also is interconnected with the following unaffiliated utility companies: CG&E, DP&L and Ohio Edison Company. CSPCo is a member of PJM. Pursuant to an acquisition that closed on December 31, 2005, CSPCo purchased the electric utility operations of Monongahela Power Company in Ohio. As a result, in January 2006 approximately 29,000 customers in six southeastern Ohio counties, together with the transmission and distribution used to serve such customers, were added to CSPCo's service territory.

Commissioners

Number: 5	**Appointed/Elected**: Appointed	**Term:** 5 years	**Political Makeup: R:** 3 **D:** 0 **I:** 2

Qualifications for Commissioners

Five members, appointed by the governor and confirmed by the state senate; five year, staggered terms, full-time positions, commissioners shall be selected from the lists of qualified persons submitted to the governor by the PUC nominating council. Not more than three of the members of the PUCO shall be members of the same political party. The governor appoints one of the five as president, who serves at the pleasure of the governor until a successor has been designated.

Commissioners

Alan R. Schriber, Ph.D., Chairman, (Ind.), since 1999. Term expires April 2009. Economics professor, president of a radio broadcasting company, investment advisor. Previously served as commissioner on the PUCO from 1983-1989. Member NARUC Telecommunications Committee.

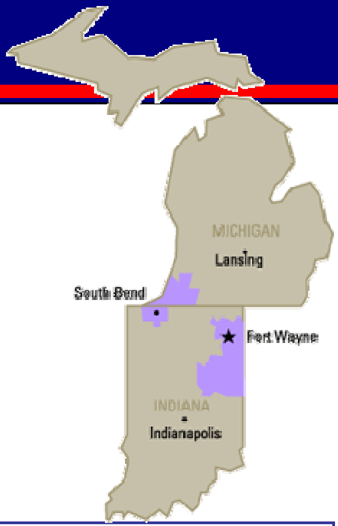
Ronda Hartman Fergus, Commissioner, (Rep.), since 1995, reappointed in 2000 & 2005. Term expires April 2010. Lawyer, Ohio State; previously served on the PUCO staff as an administrative law judge in the Legal Department. Later served as the chief of Telecommunications, Water and Sewer Section of the Legal Department, and then chief of the Telecommunications Technical Staff.

Judy A. Jones, Commissioner, (Rep.), since 1997, reappointed in 2002. Term expires April 2007. Masters degree in Biological Chemistry, Univ. of Michigan. Member NARUC Committee on Electricity, Clean Coal Technology Work Group and vice-chair of its International Relations Comm, member of the National Coal Council, and a government member of the North American Electric Reliability Council.

Donald L. Mason, Commissioner, (Rep.), since 1998, reappointed in 2003. Term expires April 2008. Lawyer, former chief of the Division of Oil and Gas at the Ohio Department of Natural Resources. He serves as chair of the NARUC Gas Committee and the NARUC Ad Hoc Committee on Electric Restructuring and Critical Infrastructure.

Clarence D. Rogers, Commissioner, (Ind.), since 2001, term expires April 2006. Lawyer, former executive deputy general manager Cleveland Regional Transit Authority, two terms as commissioner of the Ohio Turnpike Commission, assistant US Attorney, private practice as litigator.

Indiana Michigan Power



President and Chief Operating Officer:
Marsha Ryan

Indiana Michigan Power Company (I&M)

(organized in Indiana in 1925) is engaged in the generation, transmission and distribution of electric power to approximately 580,000 retail customers in northern and eastern Indiana and southwestern Michigan, and in supplying and marketing electric power at wholesale to other electric utility companies, rural electric cooperatives, municipalities and other market participants. I&M has a service territory of 8,620 square miles and at December 31, 2005, I&M had 2,633 employees. Since 1975, I&M has leased and operated the assets of the municipal system of the City of Fort Wayne, Indiana. In addition to its AEP System interconnections, I&M also is interconnected with the following unaffiliated utility companies: Central Illinois Public Service Company, CG&E, Commonwealth Edison Company, Consumers Energy Company, Illinois Power Company, Indianapolis Power & Light Company, Louisville Gas and Electric Company, Northern Indiana Public Service Company, PSI Energy Inc. and Richmond Power & Light Company. I&M is a member of PJM.

Oklahoma Corporation Commission

AEP Regulated Electric Utilities

Public Service Company of Oklahoma

Commissioners

Number: **3**	**Appointed / Elected:** Elected	Term**: 6 years**	Political Makeup: **R: 3**

Qualifications for Commissioners

The Oklahoma Corporation Commission (OCC) is composed of three commissioners who are elected by state-wide vote. Commissioners serve staggered six-year terms so one commissioner vacancy occurs every two years. The election pattern was established when the Commission was created by the state constitution.

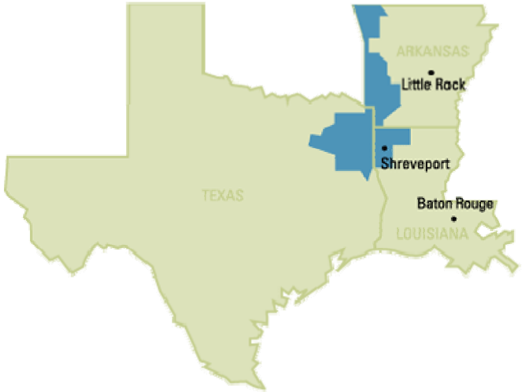
Commissioners

Jeff Cloud, Chairman (Rep.), since 2002; current term ends January 2009. Member, NARUC. Served as U.S. Congressman's District Director. Served as the Oklahoma City Mayor's Chief of staff. Law degree from Oklahoma City University.

Denise A. Bode, Vice-Chairman (Rep.), since 1997; current term ends January 2011. Member, NARUC. Former president of the Independent Petroleum Association of America (IPAA). Graduated with a bachelor's degree in political science from the University of Oklahoma. Founding partner of a Washington D.C. firm. Law degree from George Mason University and a master's of law in taxation from Georgetown University.

Bob Anthony, Commissioner (Rep.), since 1989; current term expires January 2007. Member, NARUC. Served on the boards of the Oklahoma State, Oklahoma City, and South Oklahoma City chambers of commerce. Earned a M.Sc. from the London School of Economics, a M.A. from Yale University, and an M.P.A. from the Kennedy School of Government at Harvard University.

Southwestern Electric Power



President and Chief Operating Officer: Nick Akins

Southwestern Electric Power Company (SWEPCo)

(organized in Delaware in 1912) is engaged in the generation, transmission and distribution of electric power to approximately 450,000 retail customers in northeastern Texas, northwestern Louisiana and western Arkansas, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities, rural electric cooperatives and other market participants. SWEPCo has a service territory of 25,000 square miles and at December 31, 2005, SWEPCo had 1,498 employees. The territory served by SWEPCo also includes several military installations, colleges, and universities. In addition to its AEP System interconnections, SWEPCo is also interconnected with CLECO Corp., Empire District Electric Co., Entergy Corp. and Oklahoma Gas & Electric Co. SWEPCo is a member of SPP.

As of 12/31/2005

Total Customers:

• Residential	381,000
• Commercial	61,000
• Industrial	7,000
• Other	1,000
Total	450,000

Generating Capacity **4,487 MW**

Generating Capacity by Fuel Mix:

- **Coal/Lignite: 60%**
- **Natural Gas: 40%**

Transmission Miles	3,500
Distribution Miles	19,300

Principal industries served:
Natural gas and oil production
Petroleum refining
Manufacturing of pulp and paper
Chemicals
Food processing
Metal refining.

A CENTURY OF DIVIDENDS • 1910 - 2010

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

Projected Fuel Mix - 2017

New Generation Projects

J. Lamar Stall Combined-Cycle Gas Plant

- J. Lamar Stall Combined-Cycle gas plant is a 508-MW unit that began commercial operations in June 2010.
  - The final estimated cost of the plant is $433 million including $49MM of AFUDC.
  - The plant is located in AEP's SWEPCo region at its existing Arsenal Hill Power Plant in Shreveport, Louisiana.
  - The plant serves the needs of customers in the Arkansas, Louisiana and Texas service territories.

- John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant. Located in AEP's SWEPCo region. AEP owns 73 percent or roughly 440 megawatts of the total unit.
  - The cost of the plant and related transmission is anticipated at $1.8 billion with AEP's share approximately $1.4 billion and will begin commercial operation in 2012.
  - The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls.
  - Various legal challenges are on-going related to the plant (see 10-Q). Recently, following the Arkansas Supreme Court decision regarding CECPN, SWEPCO filed notice to the APSC that the 88MW will now be merchant and will not be included in rate base.

John W. Turk Jr. Ultra-Supercritical Coal Plant

Carbon Capture and Storage

Carbon Capture and Storage project located at AEP's Mountaineer Plant in New Haven, WV

PHASE I – Validation

Captured CO_2 – September 2009

Injected CO_2 – October 2009

CO_2 Capture

Project employs Alstom's chilled ammonia process for post-combustion CO_2 capture.

CO_2 Storage

Compressed CO_2 is injected about 1.5 miles below the earth's surface.

PHASE I - Validation

20 MWe scale validation project designed to remove 90% of CO_2 from flue gas and store 100,000 metric tons/year. Currently in operation.

PHASE II - Commercialization

235 MWe commercial scale project designed to capture and store 1.5 million metric tons of CO_2/year. Awarded 50% US DOE funding. Commercial operation in 2015.

Transmission Investment Opportunities

- ETT: Projects in Texas ERCOT jurisdiction
  - $600MM of projects est. in service 2010-2013
  - ETT's opportunity could reach $3.0B in this decade
- Transco: Within our existing footprint
  - Provides opportunity to:
    - Develop new AEP-only projects
    - Reduce regulatory lag through FERC formula rates adjusted annually
- Joint Ventures: Outside of our footprint, via ETA or with others
  - Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
  - Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2015
  - Robust pipeline of projects up to $15B

765-kV Tower

Making it Happen: EHV Projects Under Development

SPP

Prairie Wind — COD: 2013-14

- 110 miles of 765 kV
- Partners: Westar (50%) & Electric Transmission America (50%)
- Estimated Cost: $400 million
- ROE: 12.8%

Tallgrass — COD: 2013-14

- 170 miles of 765 kV
- Partners: OG&E (50%) & Electric Transmission America (50%)
- Estimated Cost: $500 million
- ROE: 12.8%

ERCOT

ETT — COD: 2010-2017

- 345 kV ERCOT Expansion
- Partner: MidAmerican Energy (50%)
- Estimated Cost: $1.4 billion
- ROE: 9.96%

PATH-WV — COD: 2014

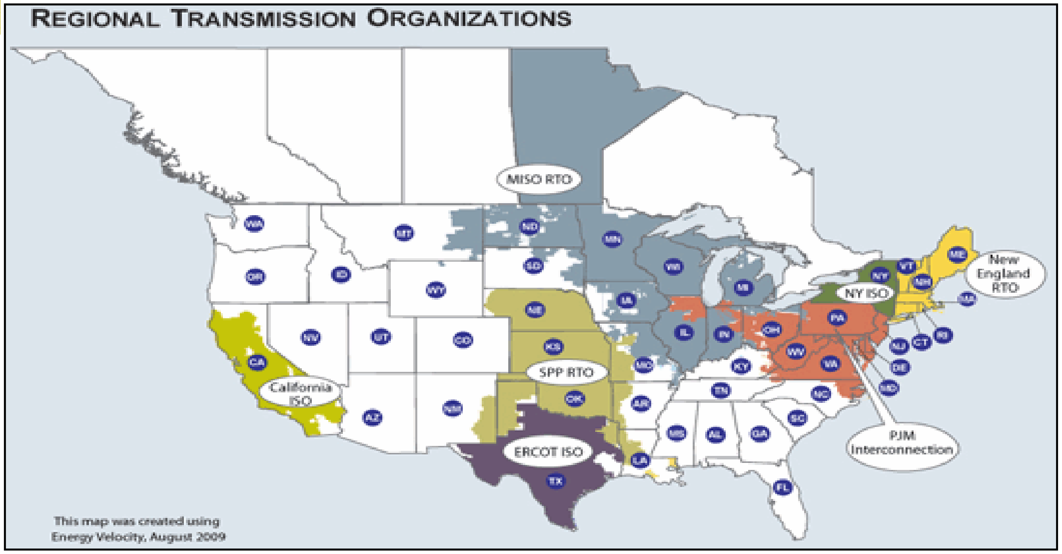
- 275 miles of 765 kV
- Partner: Allegheny Energy (50%)
- Estimated Cost: $1.4 billion
- ROE: 14.3%

PJM/MISO

Pioneer — COD: 2015

- 240 miles of 765 kV
- Partner: Duke Energy (50%)
- Estimated Cost: $1 billion
- ROE: 12.54%

ACTIVE PROJECTS



FUTURE DEVELOPMENT

SMARTransmission Study

- Interregional EHV & Wind Integration Study
- Study Sponsors: ETA, ATC, Exelon, MidAmerican Energy, Northwestern Energy, Xcel Energy

SPP EHV Overlay

- Regional Expansion of 765 kV Backbone

ETT — COD: various

- Additional CREZ spend of ~ $1.1 billion (COD 2012-2013, subject to a 6-month routing approval)
- Other Projects Pending Transfer of ~ $600 million (COD 2010-2013)

PJM Expansion

- Regional Expansion of 765 kV, 500 kV and 345 kV systems

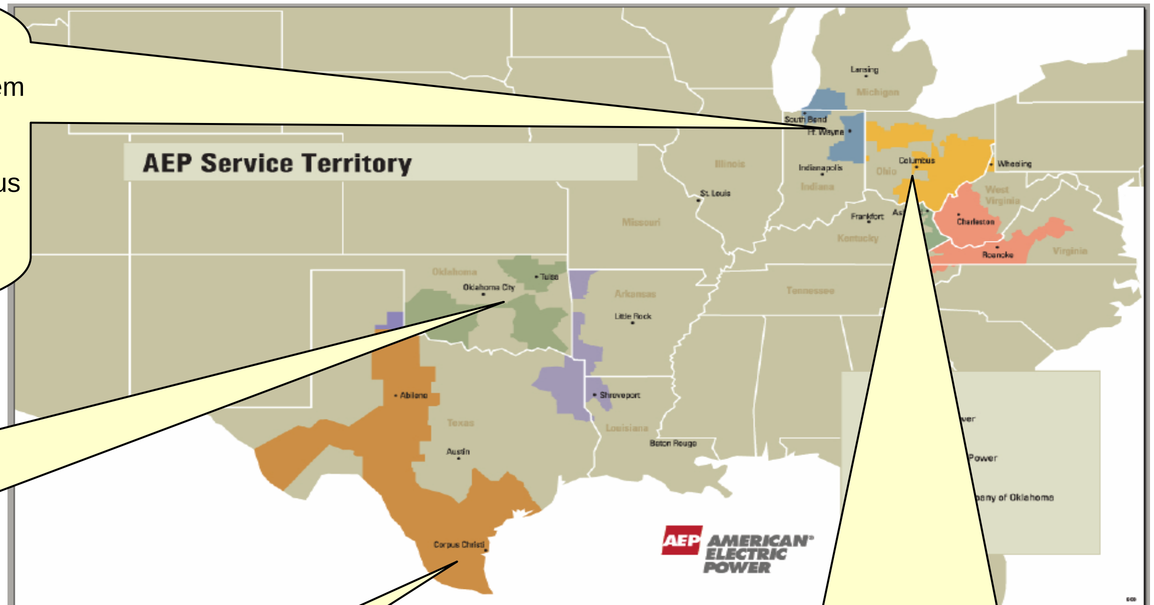
EHV Michigan/Ohio

- 700 miles of Proposed 765 kV

SPP | ERCOT | PJM | PJM/MISO

AEP's "Smart Grid" Deployment Status

Indiana Michigan Power (Completed, 12/2008)
- 10,000 AMI pilot program (GE meters, Silver Spring AMI Network)
- Distribution automation (GE ENMAC Distribution Management System and Integrated Volt-Var Control (IVVC))
- Two-tiered, two-season time-of-use tariffs with Critical Peak Pricing
- Customer web portal displaying 15-minute interval data up-to-previous day
- Field testing direct load control using Programmable communicating thermostats



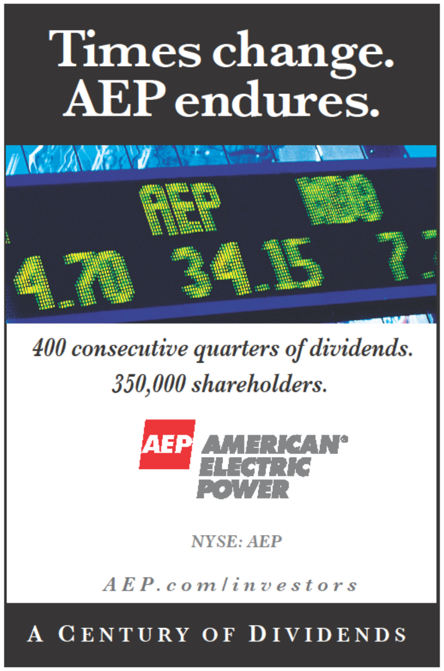
Public Service of Oklahoma (Final Planning)
- Applied for and approved for $7million low interest loan from OK Department of Commerce (ARRA source)
- Planned scope is 10,000 meters
- Increased penetration of In Home Devices for usage monitoring
- Distribution technologies include DA and IVVC

AEP Texas (underway)
- Legislature enabled and commission directing TDSPs to deploy advanced metering
- Enables REPs to innovate around electricity pricing and consumer technologies
- Filed and received approval from PUCT for 4-year deployment of 970,000 meters, $270 million project
- AEP Texas to collect a surcharge over 11 years
- Includes 10,000 in-home displays for low income customers
- Landis & Gyr Meters and AMI network

AEP Ohio (underway)
- PUCO-Approved 110,000 AMI deployment in NE Central Ohio
- Selected by DOE as a Smart Grid Demonstration Project for $75million in federal funding, 42-month deployment/evaluation
- Partnered with Battelle
- Full suite of distribution grid management technologies on over 70 distribution circuits
- Advanced technology deployment (Energy storage, PHEVs)
- Enhanced time-of-use tariffs, including a field trial of realtime pricing
- Home area networks & grid-friendly appliances

Value Proposition

- **Current Yield Opportunity of 4.7%[1]**
  - June 10th – 400th consecutive quarterly dividend was paid to shareholders
  - 50-60% payout ratio targeted
  - Dividend increased 2.44% on April 27th
- **Earnings Growth Prospects**
  - Investment in utility platform greater than depreciation level (2 - 4%)
  - With transmission opportunities (4 - 8%)



Attractive total return potential

[1] yield percentage based on AEP closing price of $36.10 on 07/29/2010

California Investor Meetings

June 27-28, 2005

AEP AMERICAN ELECTRIC POWER

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

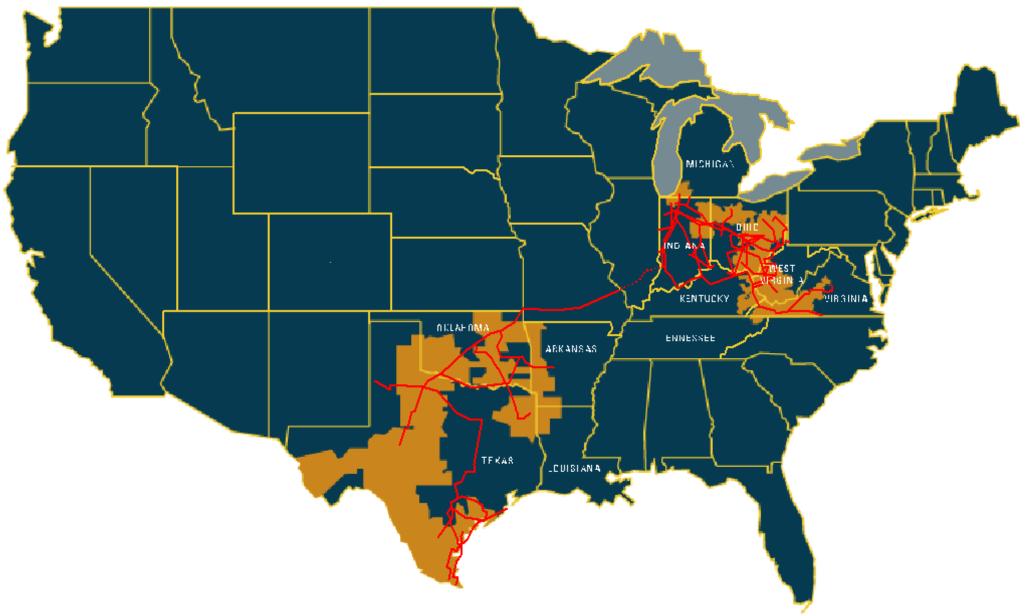
Asset Portfolio

Strength & Scale in Assets & Operations



Generation	35,500 MW capacity
Transmission	38,953 miles
Distribution	200,930 miles
Customers	5 million

FUTURE EARNINGS GROWTH DRIVEN BY NATIVE LOAD GROWTH & SUBSTANTIAL UTILITY INVESTMENT OPPORTUNITY

Generation Fleet Composition

- 35,500 MW Domestic Capacity
- 85% System Availability Factor YE 2004
- 62% System Capacity Factor YE 2004

Capacity by Fuel Mix

	Baseload	Load-Following	Peaking
PJM	24,226	0	586
ERCOT	1,089	0	0
SPP	4,828	3,516	188
Total*	**30,143**	**3,516**	**774**

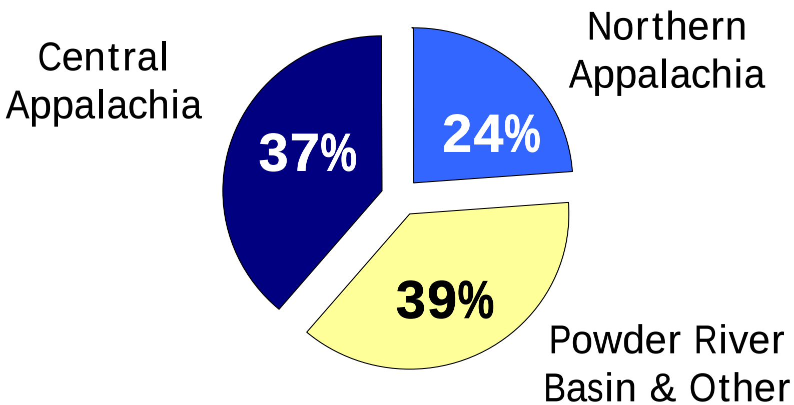
* Figures do not include mothballed or decommissioned units (1,015 MW of capacity)

GENERATION FLEET IS SUBSTANTIAL AND LOW COST

Fuel, Emissions & Logistics

Coal Procurement

AEP SYSTEM

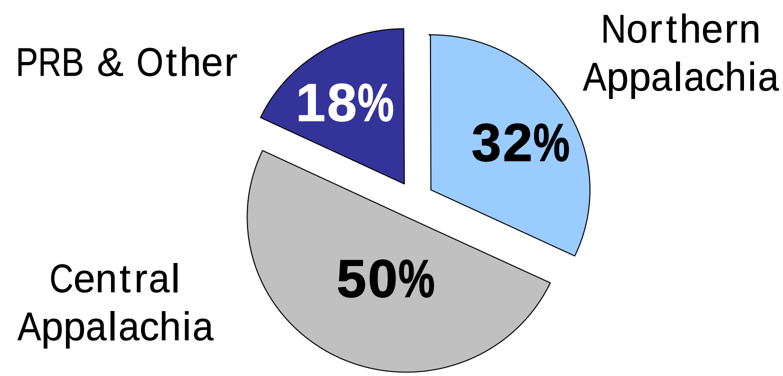


Coal Supply

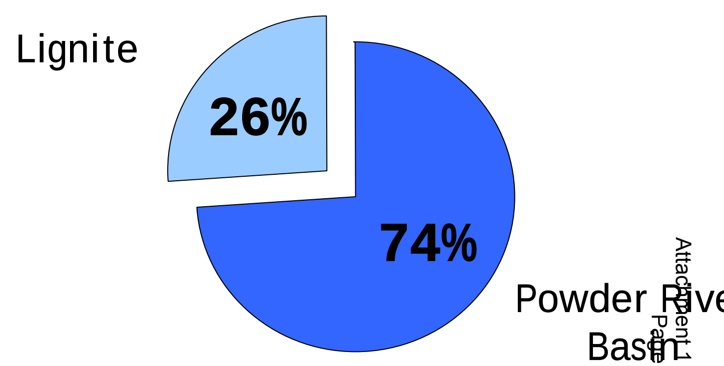
(on average)

- Purchase 75 MM tons per year
- Avg. delivered price ~ $28.50/ton in 2004
- Essentially 100% purchased for 2005
- Approximately 10% price increase in 2005

EASTERN SYSTEM

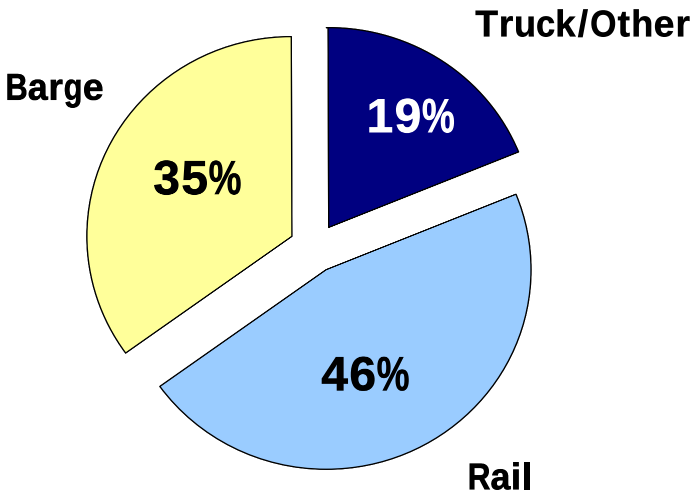


WESTERN SYSTEM



Coal Delivery Mix

DELIVERY MODE DIVERSITY
25 GW coal capacity



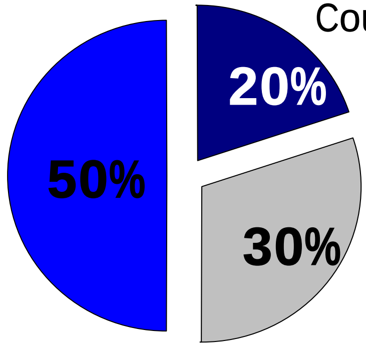
AEP's substantial coal transportation assets include:

- 7,065 railcars
- 2,230 barges
- 53 towboats
- 1 active coal handling terminal (20 million tons of annual capacity)

AEP'S TRANSPORTATION ASSETS PROVIDE FLEXIBILITY IN A CONSTRAINED DELIVERY ENVIRONMENT

Fuel Recovery

AEP SYSTEM



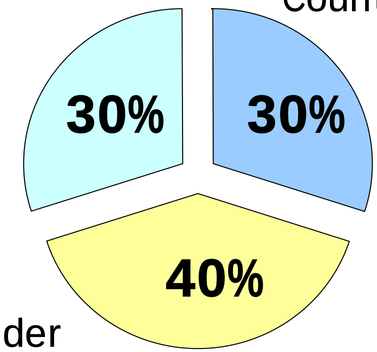
Fuel Cost Recovery

(on average)

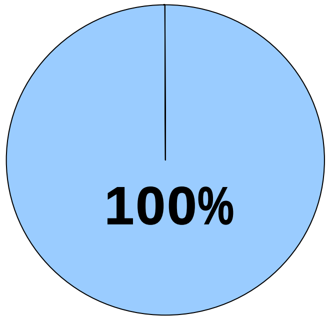
- Fuel recovery varies by jurisdiction
- 70% of fuel cost is recoverable across the AEP System
- Active Fuel Clause Jurisdictions:

AEP EAST: AP-VA, I&M, KGP, KP
AEP WEST: PSO, SWEPCO

EASTERN SYSTEM



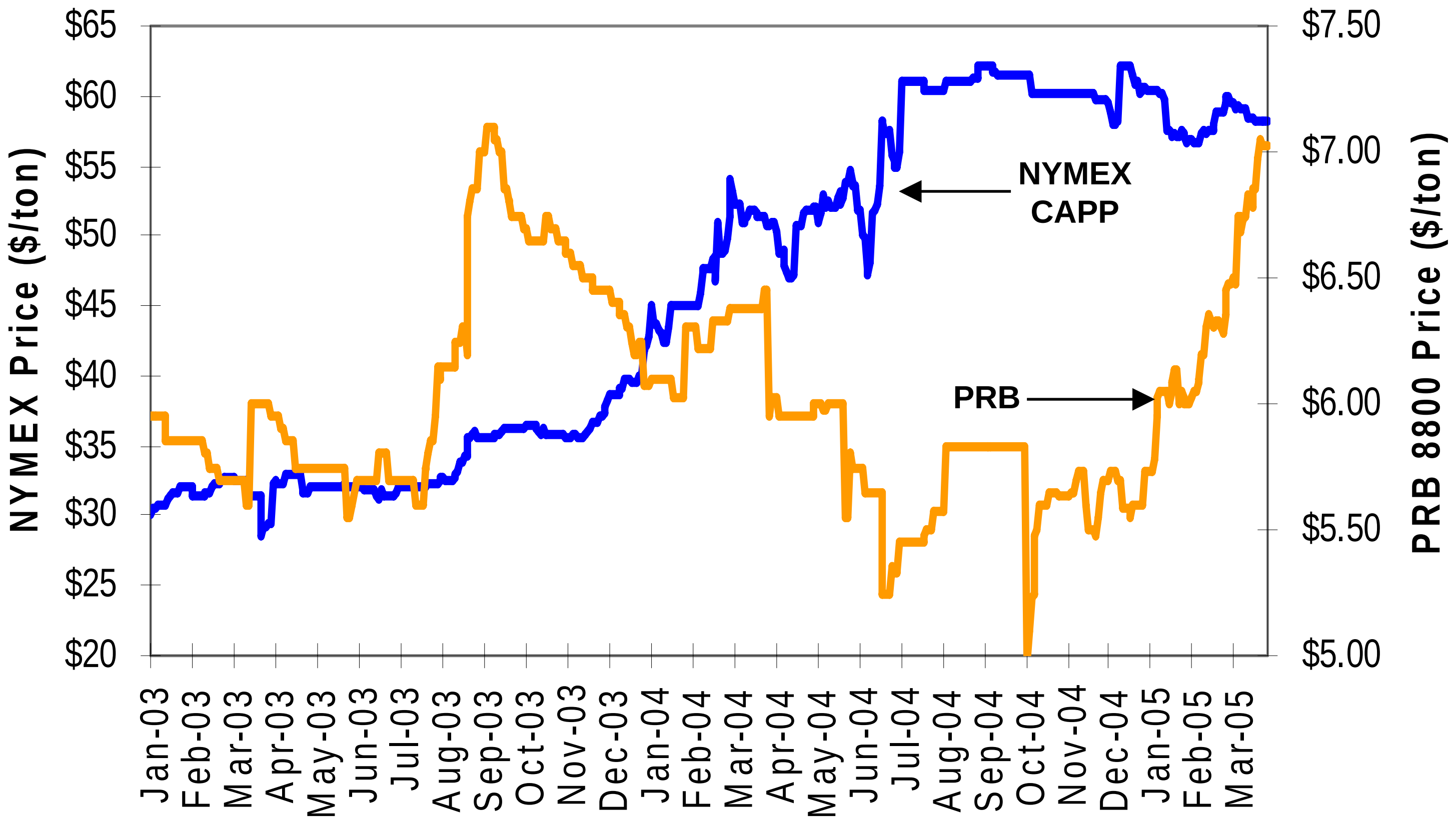
WESTERN SYSTEM



AEP®

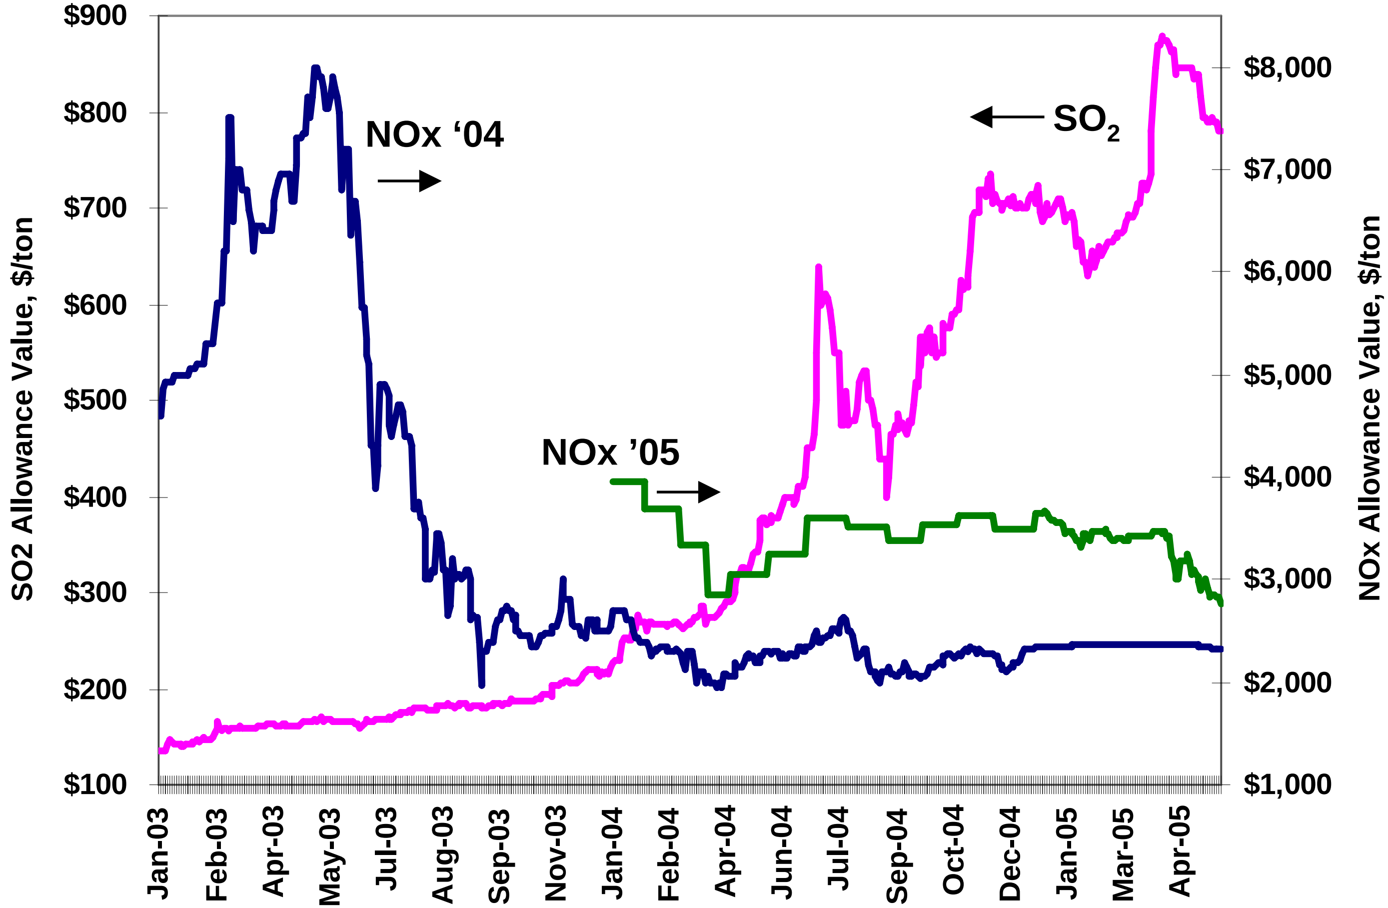
Coal Markets

The tale of two markets – one with labor, permitting and capacity constraints (CAPP) and the other with transportation bottlenecks and limited "immediate" substitution capability (PRB) but gaining strength



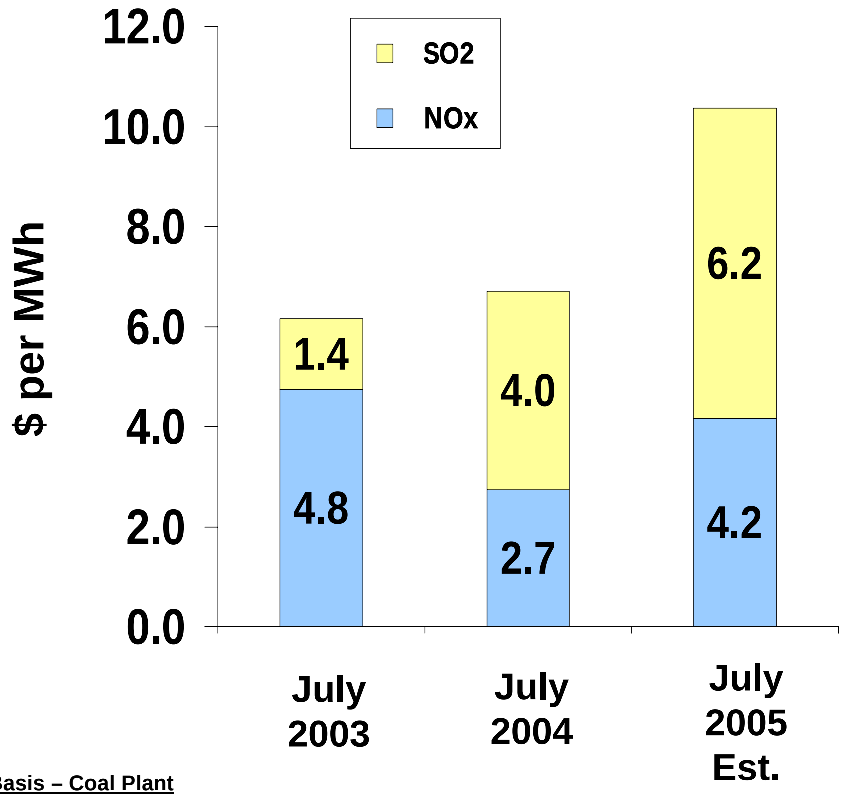
Emission Allowance Prices

Allowance prices for SO_2 and NOx have been extremely volatile since the beginning of 2003



Market Value vs. Inventory Cost

Profile of Uncontrolled Power Plant exposed to Market Value of Emission Credits



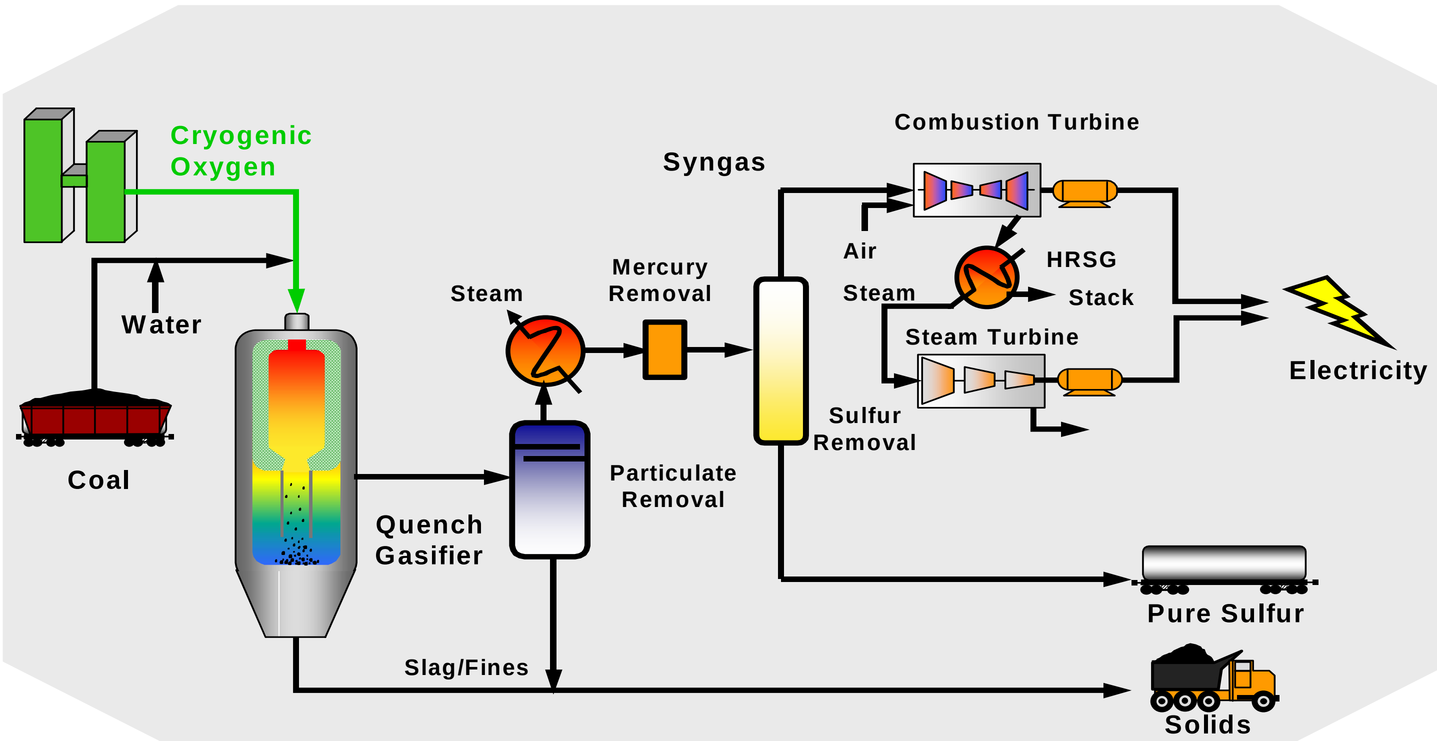
Basis – Coal Plant
9.5 MMBtu/MWh Heat Rate
0.25 lbs NOx/mmBtu
1.67 lbs SO_2/mmBtu

AEP has managed its exposure to rising emission allowance costs

- Inventory cost of emission credits is low
- Effective hedging program for SO_2 allowances
- Effective capital implementation in the NOx SIP Call ($1.3 B as of YE 2004)
- Exposure in future years reduced by $3.7 B capital program and current inventory of allowances

Investing in IGCC

Looking to the Future - IGCC



162110 - GJS/CE-01/1-23-02

AEP has announced its intention to construct a commercial-scale Integrated Gasification Combined Cycle (IGCC) Plant by the end of the decade.

Investing in IGCC

	PC	IGCC	NGCC
Nominal Capacity (MW)	600	600	530
Heat Rate (BTU/kWh)	8700	8600	7200
EPC cost* ($/kW)	1290	1350	440
Total Plant cost** ($/kW)	1490	1610	475
Variable Production cost*** ($/MWh)	15	14	38
All-In Cost of Electricity (without CO2 Capture) ($/MWh)	47	50	57
Estimated Cost of Electricity (with CO2 Capture) ($/MWh)	76	70	91

Source: Electric Power Research Institute

* EPC includes the cost to engineer, procure and construct plant.

** Total plant cost include land, overheads, AFUDC, etc.

*** Assumes Northern App Coal @ $36/ton, no emission credits and $5.00 gas

Site Selection Considerations

- Brownfield site vs. Greenfield site
- Sufficient Space
  - Flat area with adequate construction access
  - 600 acres
- Fuel delivery options
  - Rail/barge/truck
  - Up to 4 million tons/year of coal
  - Access to water
- Transmission Line Costs
  - Distance from high-voltage lines
  - Costs for grid interconnects and stability impacts

PJM EVALUATION REQUESTED FOR 3 POTENTIAL SITES

IGCC Permitting Issues

- Air – to evaluate best available control technology (BACT)
- Wastewater – to understand wastewater streams
- US COE (Corp of Engineers) – to obtain permits for construction of river facilities
- NEPA Process – (National Environmental Policy Act)– Environmental site studies addressing wetlands, endangered species, historical artifacts

PERMIT PROCESS WILL TAKE 1 - 2 YEARS

Next Steps

2005

- Secure cost recovery plan – Summer
- Finalize site selection - Fall
- Negotiate with suppliers – Throughout 2005

- 2005—2007: Obtain permits and finalize engineering and procurement

- 2008—2009: Construct and start-up plant

AEP WILL PIONEER CONSTRUCTION OF LARGEST IGCC PLANT IN THE WORLD

Environmental

Clean Air Interstate Rule

- Rule Finalized March 2005
- CAIR designed to address the contribution of regional emissions to downwind $PM_{2.5}$ & 8-hour Ozone non-attainment
- CAIR reductions from 2003 emissions: ~73% SO_2; & ~61% NO_x
- Reductions occur in phases: Phase I (2009); Phase II (2015)
- CAIR established three Cap & Trade Programs:

1. Annual SO_2 Trading Program
2. Annual NO_x Trading Program
3. Separate Ozone-Season only NO_x Trading Program

CAIR Applicability to AEP

- AEP-East States & Louisiana subject to <u>all</u> three trading programs
- Arkansas subject <u>only</u> to the Ozone-Season trading program
- Texas subject to <u>only</u> the Annual NO_x & SO_2 trading programs
- CAIR does <u>not</u> apply to Oklahoma

AEP WILL HAVE TO INSTALL ADDITIONAL SCR AND FGD SYSTEMS IN ORDER TO MEET THE EMISSION REDUCTIONS REQUIRED BY CAIR

Mercury Rule

- Rule Finalized March 2005
- Designed to reduce mercury emissions by ~70% nationwide from electric utilities
- Reductions occur in phases: Phase I (2010); Phase II (2018)
- Establishes a Cap & Trade structure to achieve mercury reductions

AEP WILL ACHIEVE SOME MERCURY REDUCTIONS AS A CO-BENEFIT OF SCR AND FGD SYSTEMS, BUT MERCURY SPECIFIC CONTROL EQUIPMENT WILL BE NEEDED ON SOME UNITS

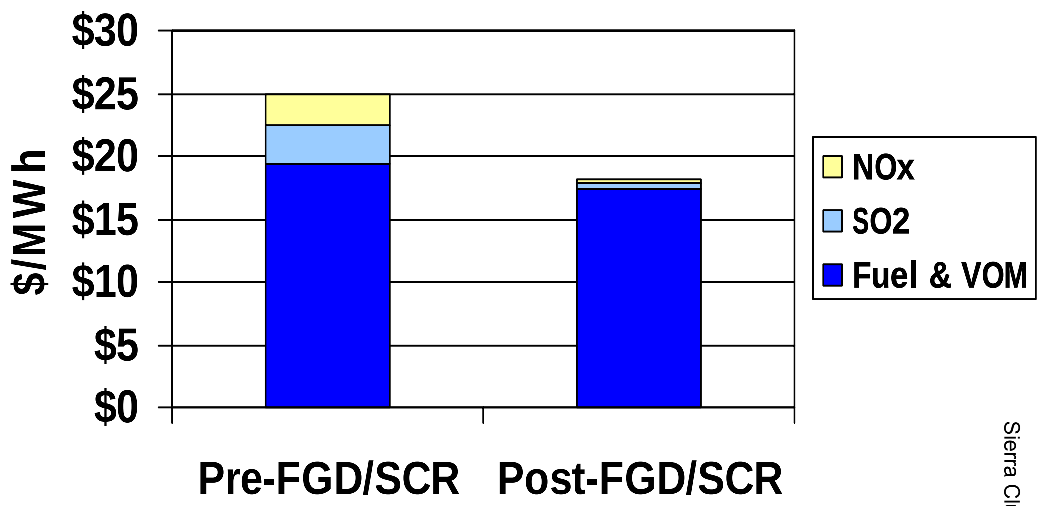
Note: MW capacity shown represents AEP's owned capacity only

Low Cost Production Supports Investment

- Lowers exposure to high cost emission allowances
- Creates opportunity to burn wider variety of lower cost fuels
- Improves baseload operation, (higher capacity factor, higher margin)
- All-in cost of electricity, including FDG/SCR investment, remains low

Typical Pulverized Coal Plant
Comparison of Variable Production Cost
Pre- and Post- FGD/SCR (future view)*



* - Assumes annual NOx program

AEP WILL REMAIN THE LOW COST PRODUCER FOLLOWING COMPLETION OF ENVIRONMENTAL RETROFIT PROJECTS

Regulatory Overview

Managing the Regulatory Process

- **Current Regulatory Activity**
  - TCC Stranded Cost Recovery
  - Louisiana Rate Review
  - FERC Transmission Rate Case
- **Planned Regulatory Activity (2005-2007)**
  - General Rate Cases in all AEP East jurisdictions to seek recovery of investment:
    - IN, KY, MI, TN, VA, WV

BRING CASH IN THE DOOR TO COVER CAPITAL EXPENDITURES & GROW EARNINGS THROUGH ADDITIONS TO THE ASSET BASE

Components of TCC's Net True-up Regulatory Asset

	31-Mar-05	31-Dec-04
	(in millions)

Total Recorded Net True-up Regulatory Asset	$ 1,644	$ 1,648

Carrying charge calculated using pre-tax cost of capital of 11.79%

Debt Component: 8.12% - $296 million recognized as income thru 3/31/05

Equity Component: $154 million to be recognized in income as collected

CARRYING CHARGES FOR 2005 EXPECTED TO BE $87 MILLION

Regulatory Matrix – East

Ohio (Restructured)
- Unbundled rates for default customers frozen until 12/31/2005
- Pursuant to RSP Plan approved by PUCO 1-26-05:
  - Distribution rates in effect at December 31, 2005 are frozen, with certain exceptions, until the end of 2008.
  - Institute for 2006-2008 a non-bypassable distribution rider for provider of last resort (POLR) costs.
  - CSP ”G” rates to increase 3% per year (2006-2008).
  - OP “G” rates to increase 7% per year (2006-2008).
  - Transmission rates can upon filing reflect change in RTO costs.
- No active fuel clause
- Application for IGCC plant recovery filed on 3-18-05, Hearings scheduled to begin 8-8-05.

Virginia (Restructured)
- Capped rates for default customers frozen through end of 2010
- Capped rates can be adjusted by two rate cases prior to the end of 2010 and incremental environmental and reliability cost recovery mechanisms
- Active annual fuel clause

West Virginia (Regulated)
- Base rates not frozen
- Annual ENEC proceedings have been suspended, the factor is currently fixed at pre-2000 levels.
- No active fuel clause

Kentucky (Regulated)
- Base rates not frozen
- Fuel clause, adjusted monthly
- Environmental surcharge costs are adjusted monthly for approved environmental compliance plan
- Rockport Unit Power Supply Agreement extension through 12-07-2022 was approved by FERC & KPSC in December 2004

Michigan (Restructured, but Regulated)
- Base rates not frozen.
- Active annual fuel clause.

Indiana (Regulated)
- Base rates are frozen and fuel cost recovery factors are capped at increasing rates through June 30, 2007.

Tennessee (Regulated)
- Base rates not frozen
- Automatic fuel clause, adjusted monthly

Regulatory Matrix - West

Texas (Regulated)
- SWEPCO-Texas retail competition delayed until at least 2007
- Bi-annual fuel clause adjustment opportunity

Texas (Restructured)
- TCC stranded cost true-up filing in May 2005. ($2.4 billion true-up amount requested) Hearing in October.
- TCC wires rate case PUCT approved affiliate transaction settlement in June 2005. Written order expected in July 2005. Final order will result in slight rate decrease with a positive earnings impact.
- TCC final fuel reconciliation (July 98-Dec. 01) order on rehearing issued in June 2005 updating rate case expenses. TCC will appeal decision.
- TNC true-up order approved in April 2005 (retail clawback and fuel over-recovery only). No adjustments to revised amounts filed by TNC.
- TNC final fuel reconciliation (July 00-Dec. 01). Final order received October 18, 2004. Appeals filed in state and federal courts in Dec. 2004.

Oklahoma (Regulated)
- On 6-3-05 PSO file to increase its Reliability Enhancement Plan annual spending to a $27.21 million level (up $15.4 million) pending OCC approval.
- On 5-2-05 the OCC issued an order approving a settlement agreement in this general rate case which included a $6.9 million annual revenue reduction, offset by changed depreciation rates and deferral recoveries, changed the fuel clause from a quarterly to annual factor, and made permanent an $11.8 million annual system reliability rider.
- 2001 Fuel review case
  Hearings scheduled for Sept. 2005. Scope expanded to cover 2002-2004 margin allocation issue.
- 2003 Fuel review case
  Scope has been expanded to include a prudence review.

Louisiana (Regulated)
- Base rates not frozen
- Currently under a merger required financial review
- Fuel clause, adjusted monthly

Arkansas (Regulated)
- Base rates not frozen
- Fuel clause, adjusted annually

Ohio Rate Stabilization Plan Recap

Summary of Impact (Columbus Southern Power & Ohio Power):

	POLR Rider	Revenues & POLR Rider*			Incremental Cash			
Rate Stabilization Plan	**2005**	**2006**	**2007**	**2008**	**2005**	**2006**	**2007**	**2008**
Escalation of Generation Rate	0	83	173	271	0	83	173	271
POLR Rider/Recovery of RTO Costs***	21	0	0	0	0	7	7	7
POLR Rider/Return on Environmental Additions	44	26	26	26	0	41	41	40
Total RSP Impact	**65**	**109**	**199**	**297**	**0**	**131**	**221**	**318**
Pre-Existing Electric Transition Plan								
Elimination of 5% Residential Generation Credit**	0	25	25	26	0	25	25	26
Recovery of RTO costs***	0	29	29	29	0	29	29	29
Total ETP Impact	**0**	**54**	**54**	**55**	**0**	**54**	**54**	**55**

* Incremental over 2004 base year

** Elimination of 5% credit is per Statute, and part of pre-existing ETP, not the RSP

*** Recovery of administrative RTO costs, net congestion fees and ancillary services permitted in pre-existing ETP, but the RSP allows for recovery of 2005 costs as well

AEP WILL STILL HAVE AMONG THE LOWEST RETAIL RATES IN OHIO

Total Capex	$2,690MM	Guidance not yet released				

Typical Investment Capitalization*	Approx. 60% debt / 40% equity
Expected Investment ROE*	11-13%

*Varies by jurisdiction

Sources of Cash

- **Cash Flow from Operations**: Continued earnings growth
- **Rate Relief**: Ohio cash rate relief begins in 2006; Rate proceedings expected in all other jurisdictions by 2007
- **Asset Sales**: HPL, STP, Oklaunion, Pacific Hydro & Bajio
- **Texas Securitization**: $1 billion plus in 2006 (Half goes to TCC debt paydown)
- **Texas Competition Transition Charge**: Approximately $190MM per year before securitization; $45MM per year after securitization
- **Debt Issuances**: Will maintain debt-to-capitalization ratio of approximately 60%

AEP HAS ADEQUATE SOURCES OF CASH FOR CAPEX PROGRAM

AEP AMERICAN ELECTRIC POWER

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

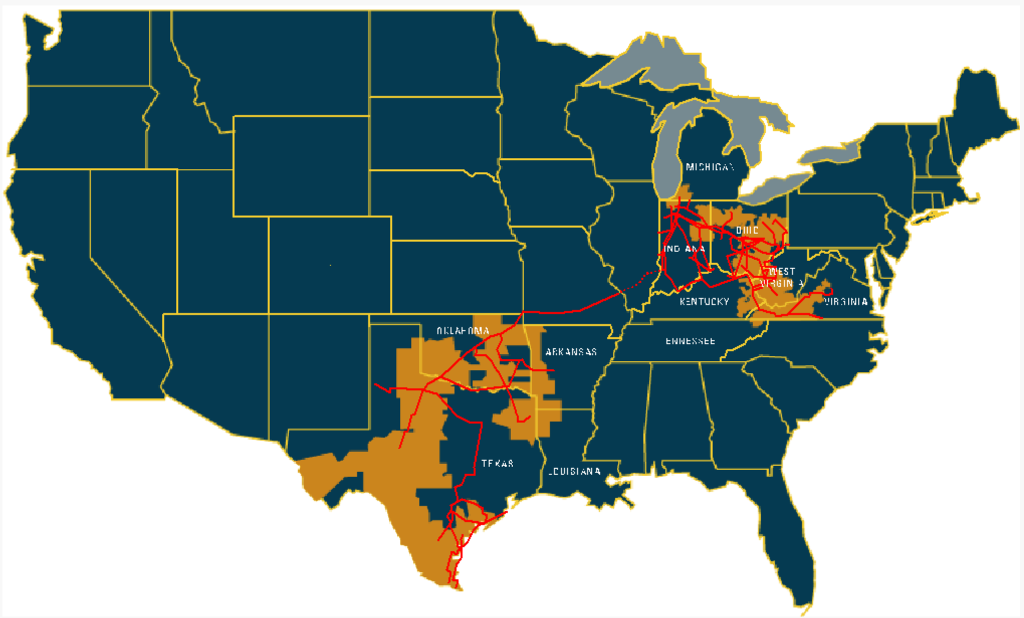
Asset Portfolio

Strength & Scale in Assets & Operations



Generation	35,500 MW capacity
Transmission	38,953 miles
Distribution	200,930 miles
Customers	5 million

FUTURE EARNINGS GROWTH DRIVEN BY NATIVE LOAD GROWTH & SUBSTANTIAL UTILITY INVESTMENT OPPORTUNITY

Generation Fleet Composition

- 35,500 MW Domestic Capacity
- 85% System Availability Factor YE 2004
- 62% System Capacity Factor YE 2004

Capacity by Fuel Mix

	Baseload	Load-Following	Peaking
PJM	24,226	0	586
ERCOT	1,089	0	0
SPP	4,828	3,516	188
Total*	**30,143**	**3,516**	**774**

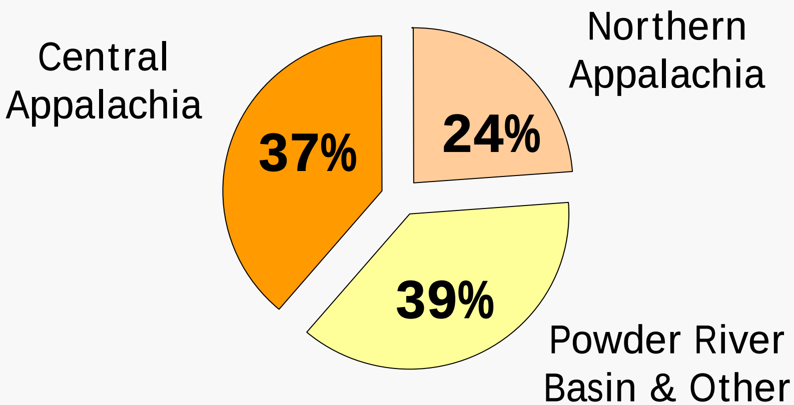
* Figures do not include mothballed or decommissioned units (1,015 MW of capacity)

GENERATION FLEET IS SUBSTANTIAL AND LOW COST

Fuel, Emissions & Logistics

Coal Procurement

AEP SYSTEM

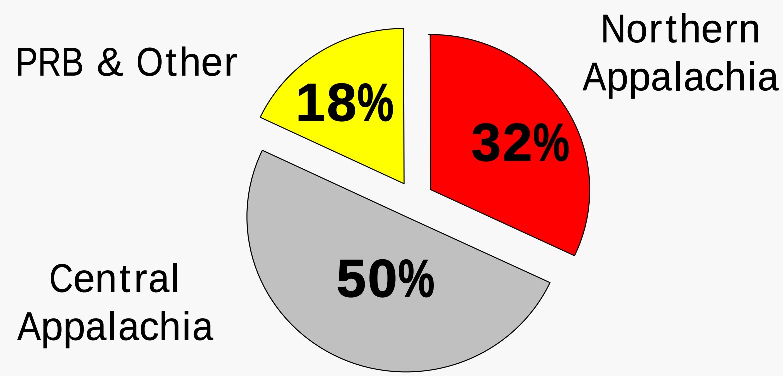


Coal Supply

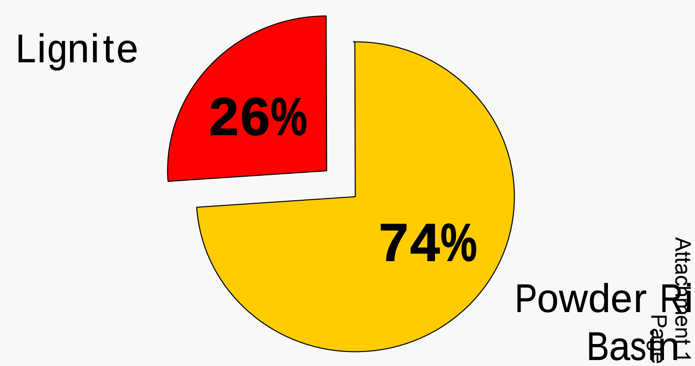
(on average)

- Purchase 75 MM tons per year
- Avg. delivered price ~ $28.50/ton in 2004
- Essentially 100% purchased for 2005
- Approximately 10% price increase in 2005

EASTERN SYSTEM

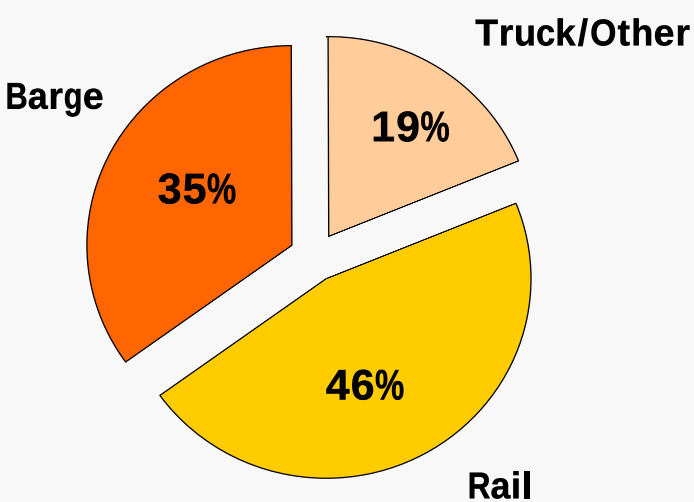


WESTERN SYSTEM



Coal Delivery Mix

DELIVERY MODE DIVERSITY
25 GW coal capacity



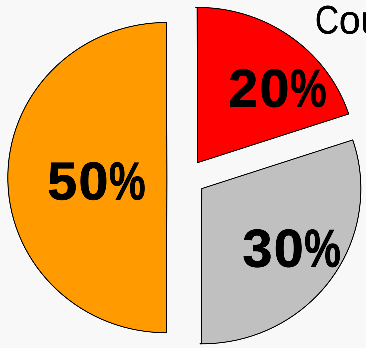
AEP's substantial coal transportation assets include:

- 7,065 railcars
- 2,230 barges
- 53 towboats
- 1 active coal handling terminal (20 million tons of annual capacity)

AEP'S TRANSPORTATION ASSETS PROVIDE FLEXIBILITY IN A CONSTRAINED DELIVERY ENVIRONMENT

Fuel Recovery

AEP SYSTEM



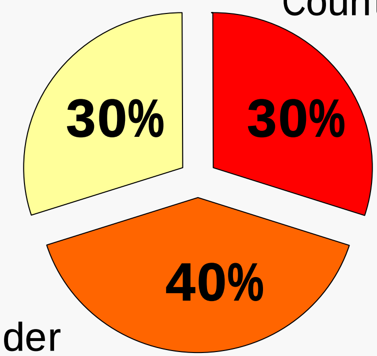
Fuel Cost Recovery

(on average)

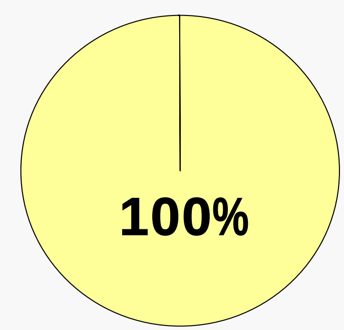
- Fuel recovery varies by jurisdiction
- 70% of fuel cost is recoverable across the AEP System
- Active Fuel Clause Jurisdictions:

AEP EAST: AP-VA, I&M, KGP, KP
AEP WEST: PSO, SWEPCO

EASTERN SYSTEM

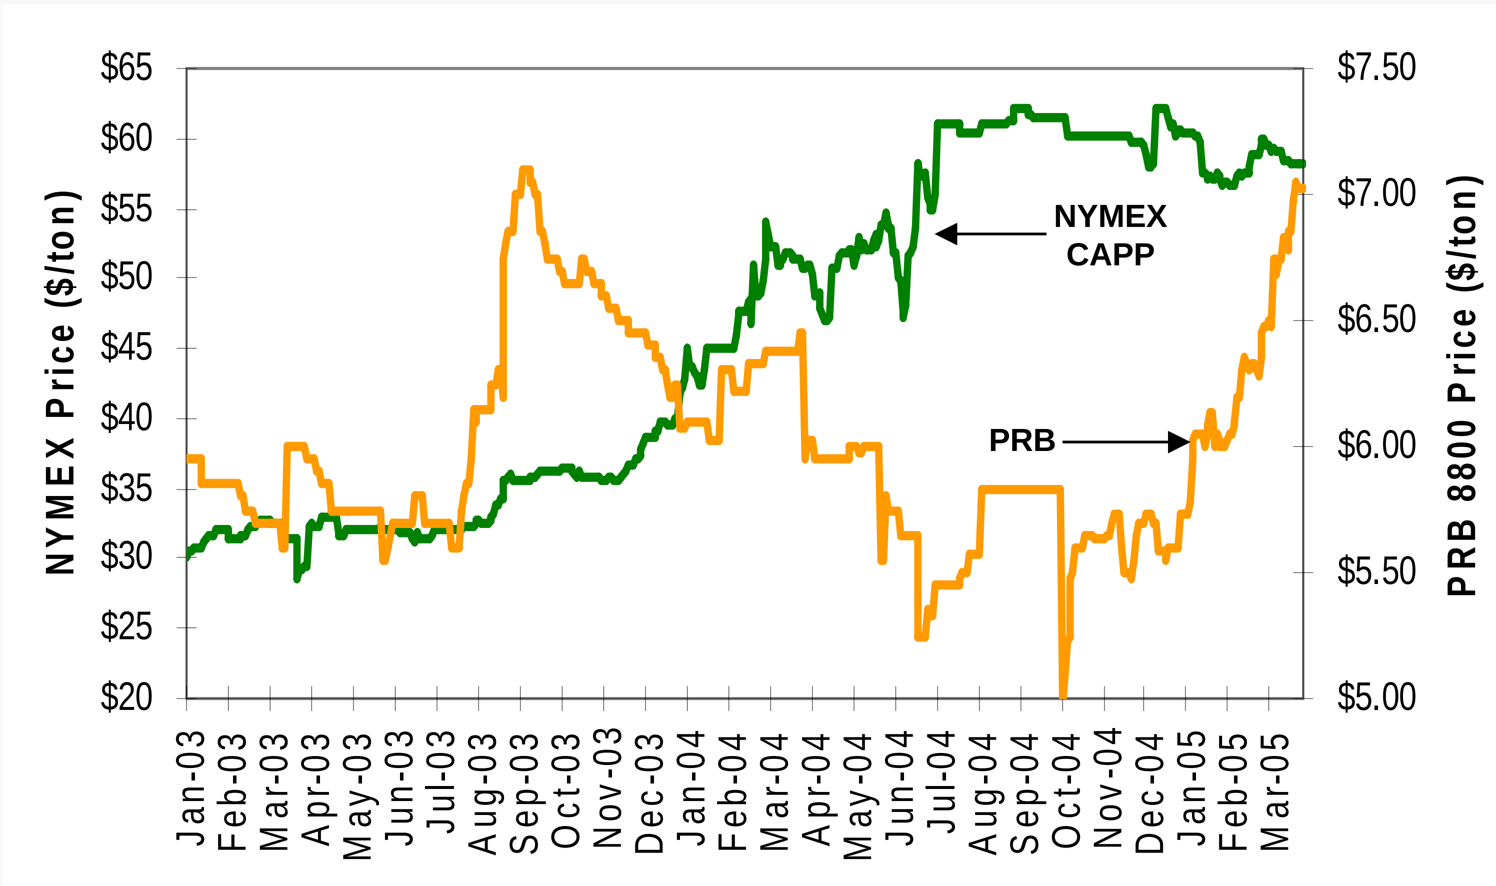


WESTERN SYSTEM



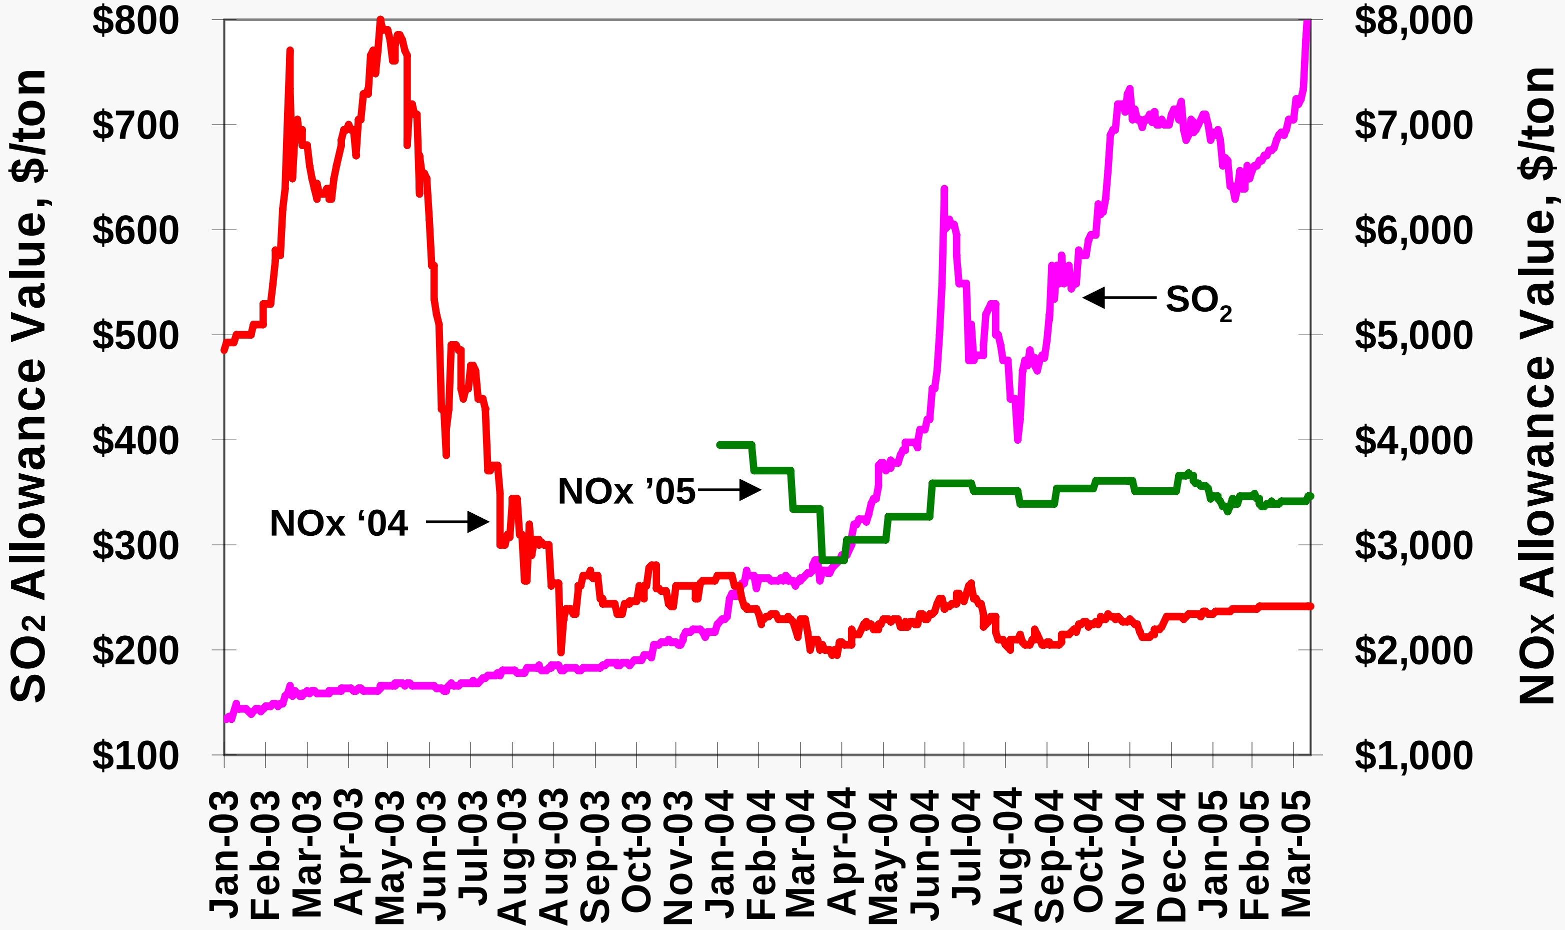
Coal Markets

The tale of two markets - one with labor, permitting and capacity constraints (CAPP) and the other with transportation bottlenecks and limited "immediate" substitution capability (PRB) but gaining strength



Emission Allowance Prices

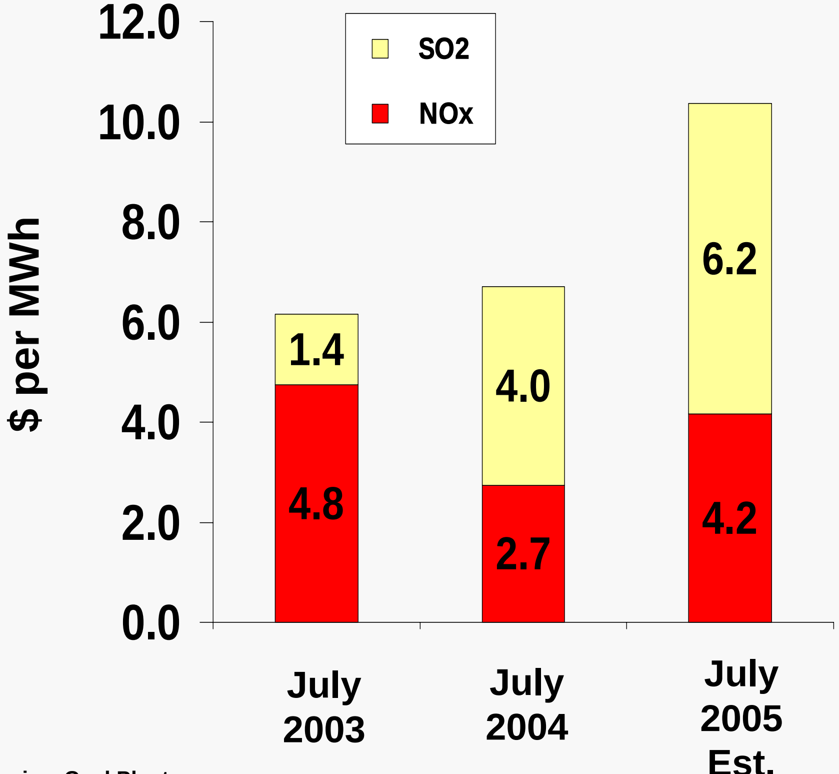
Allowance prices for SO_2 and NOx have been extremely volatile since the beginning of 2003



KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 4385 of 9556

Market Value vs. Inventory Cost

Profile of Uncontrolled Power Plant exposed to Market Value of Emission Credits



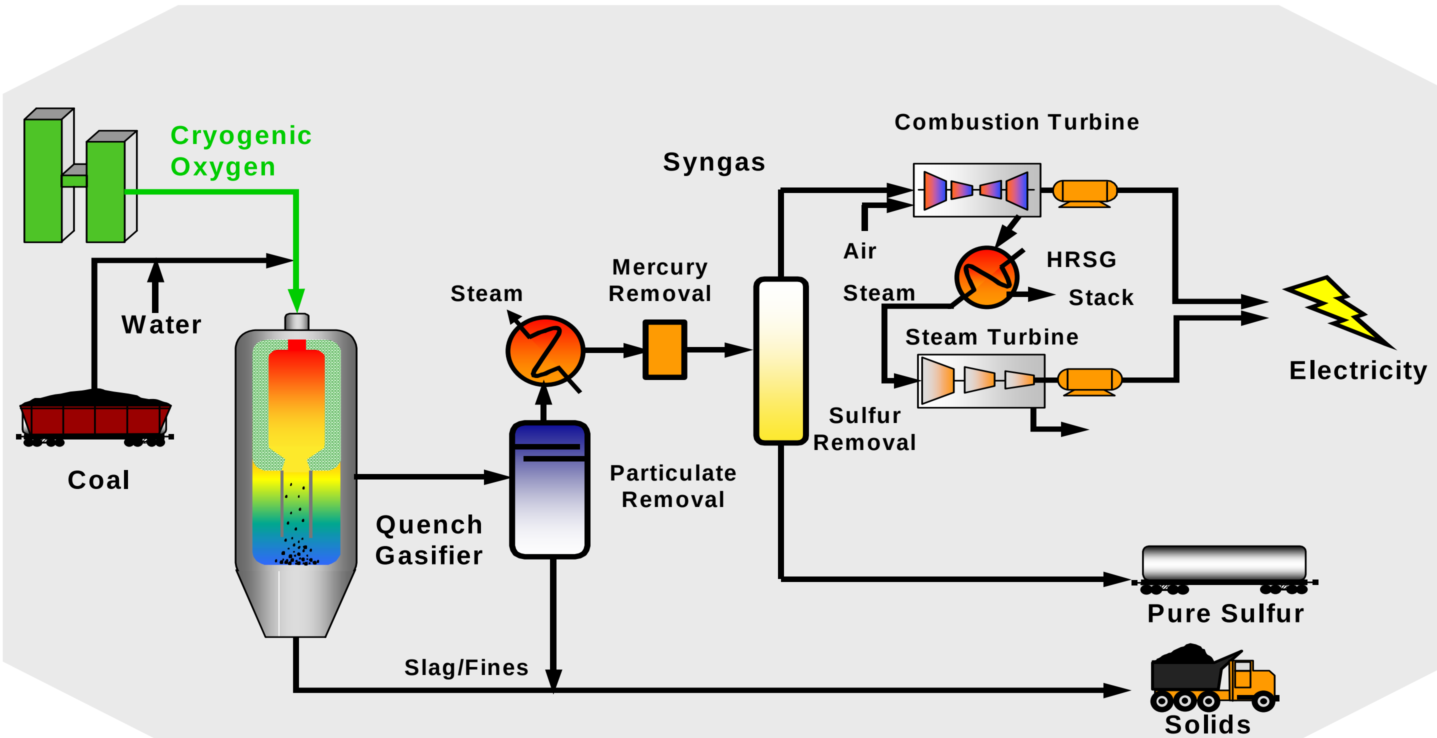
<u>Basis – Coal Plant</u>
9.5 MMBtu/MWh Heat Rate
0.25 lbs NOx/mmBtu
1.67 lbs SO_2/mmBtu

AEP has managed its exposure to rising emission allowance costs

- Inventory cost of emission credits is low
- Effective hedging program for SO_2 allowances
- Effective capital implementation in the NOx SIP Call ($1.3 B)
- Exposure in future years reduced by $3.7 B capital program and current inventory of allowances

Investing in IGCC

Looking to the Future - IGCC



162110 - GJS/CE-01/1-23-02

AEP has announced its intention to construct a commercial-scale Integrated Gasification Combined Cycle (IGCC) Plant by the end of the decade.

Investing in IGCC

	PC	IGCC	NGCC
Nominal Capacity (MW)	600	600	530
Heat Rate (BTU/kWh)	8700	8600	7200
EPC cost* ($/kW)	1290	1350	440
Total Plant cost** ($/kW)	1490	1610	475
Variable Production cost*** ($/MWh)	15	14	38
All-In Cost of Electricity (without CO2 Capture) ($/MWh)	47	50	57
Estimated Cost of Electricity (with CO2 Capture) ($/MWh)	76	70	91

Source: Electric Power Research Institute

* EPC includes the cost to engineer, procure and construct plant.

** Total plant cost include land, overheads, AFUDC, etc.

*** Assumes Northern App Coal @ $36/ton, no emission credits and $5.00 gas

Site Selection Considerations

- Brownfield site vs. Greenfield site
- Sufficient Space
  - Flat area with adequate construction access
  - 600 acres
- Fuel delivery options
  - Rail/barge/truck
  - Up to 4 million tons/year of coal
  - Access to water
- Transmission Line Costs
  - Distance from high-voltage lines
  - Costs for grid interconnects and stability impacts

PJM EVALUATION REQUESTED FOR 3 POTENTIAL SITES

IGCC Permitting Issues

- Air – to evaluate best available control technology (BACT)
- Wastewater – to understand wastewater streams
- US COE (Corp of Engineers) – to obtain permits for construction of river facilities
- NEPA Process – (National Environmental Policy Act)– Environmental site studies addressing wetlands, endangered species, historical artifacts

PERMIT PROCESS WILL TAKE 1 - 2 YEARS

Next Steps

<u>2005</u>

- Secure cost recovery plan – Summer
- Finalize site selection - Fall
- Negotiate with suppliers – Throughout 2005

- 2005—2007: Obtain permits and finalize engineering and procurement

- 2008—2009: Construct and start-up plant

AEP WILL PIONEER CONSTRUCTION OF LARGEST IGCC PLANT IN THE WORLD

Environmental

Clean Air Interstate Rule

- Rule Finalized March 2005
- CAIR designed to address the contribution of regional emissions to downwind $PM_{2.5}$ & 8-hour Ozone non-attainment
- CAIR reductions from 2003 emissions: ~73% SO_2; & ~61% NO_x
- Reductions occur in phases: Phase I (2009); Phase II (2015)
- CAIR established three Cap & Trade Programs:

1. Annual SO_2 Trading Program
2. Annual NO_x Trading Program
3. Separate Ozone-Season only NO_x Trading Program

CAIR Applicability to AEP

- AEP-East States & Louisiana subject to <u>all</u> three trading programs
- Arkansas subject <u>only</u> to the Ozone-Season trading program
- Texas subject to <u>only</u> the Annual NO_x & SO_2 trading programs
- CAIR does <u>not</u> apply to Oklahoma

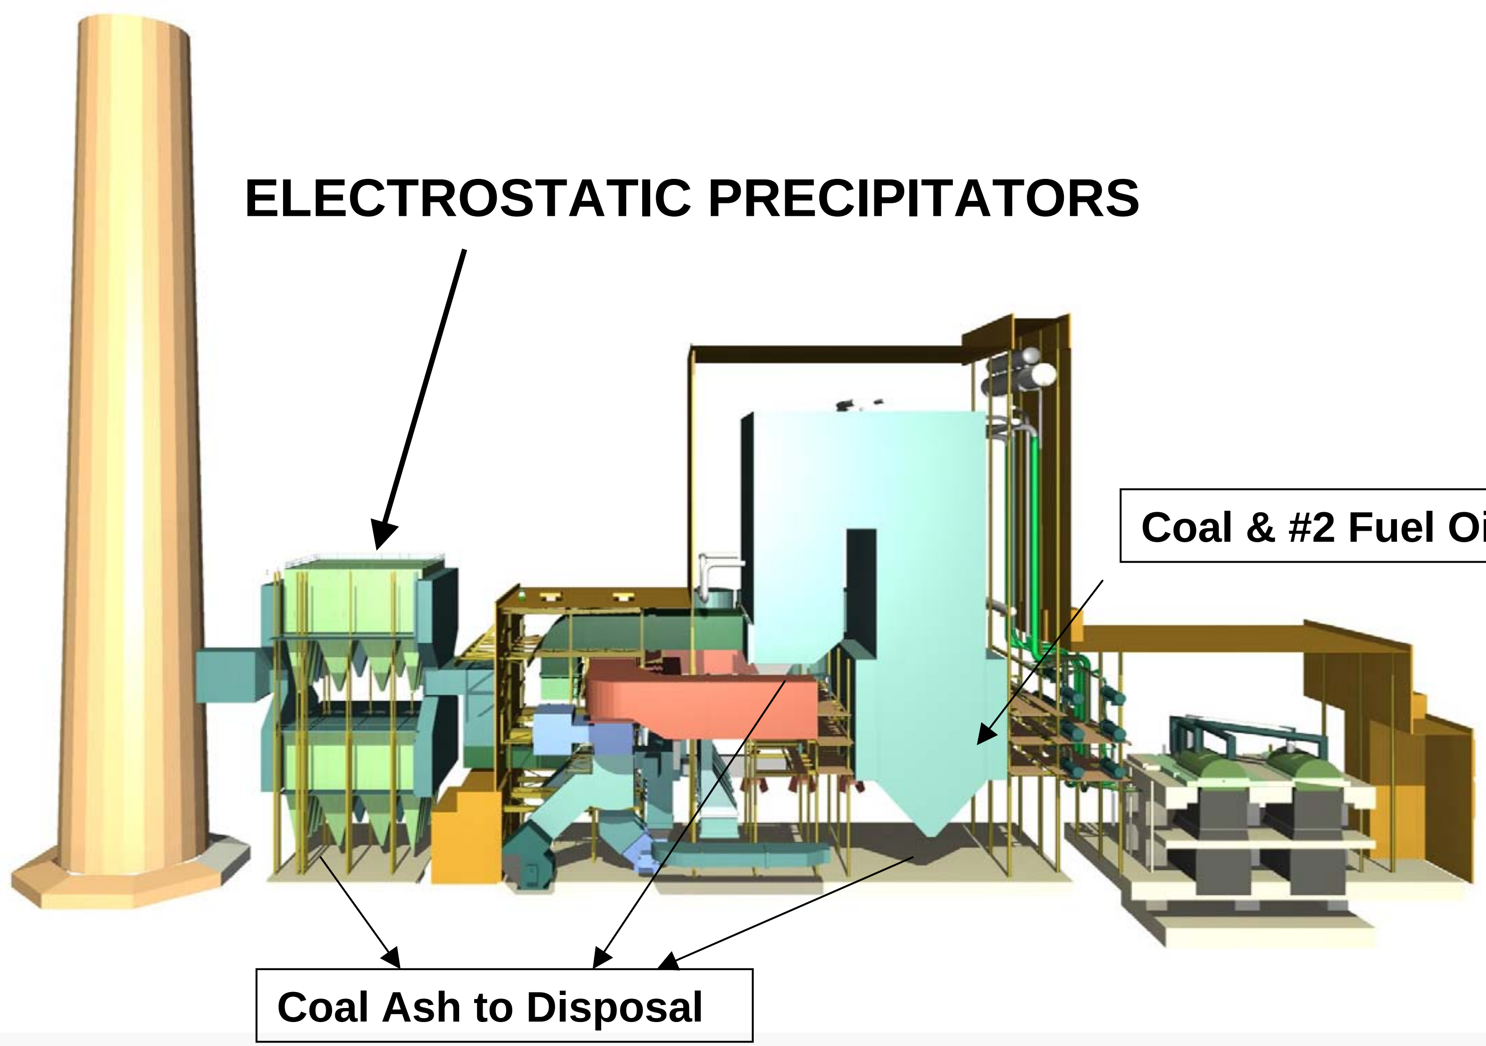
AEP WILL HAVE TO INSTALL ADDITIONAL SCR AND FGD SYSTEMS IN ORDER TO MEET THE EMISSION REDUCTIONS REQUIRED BY CAIR

Mercury Rule

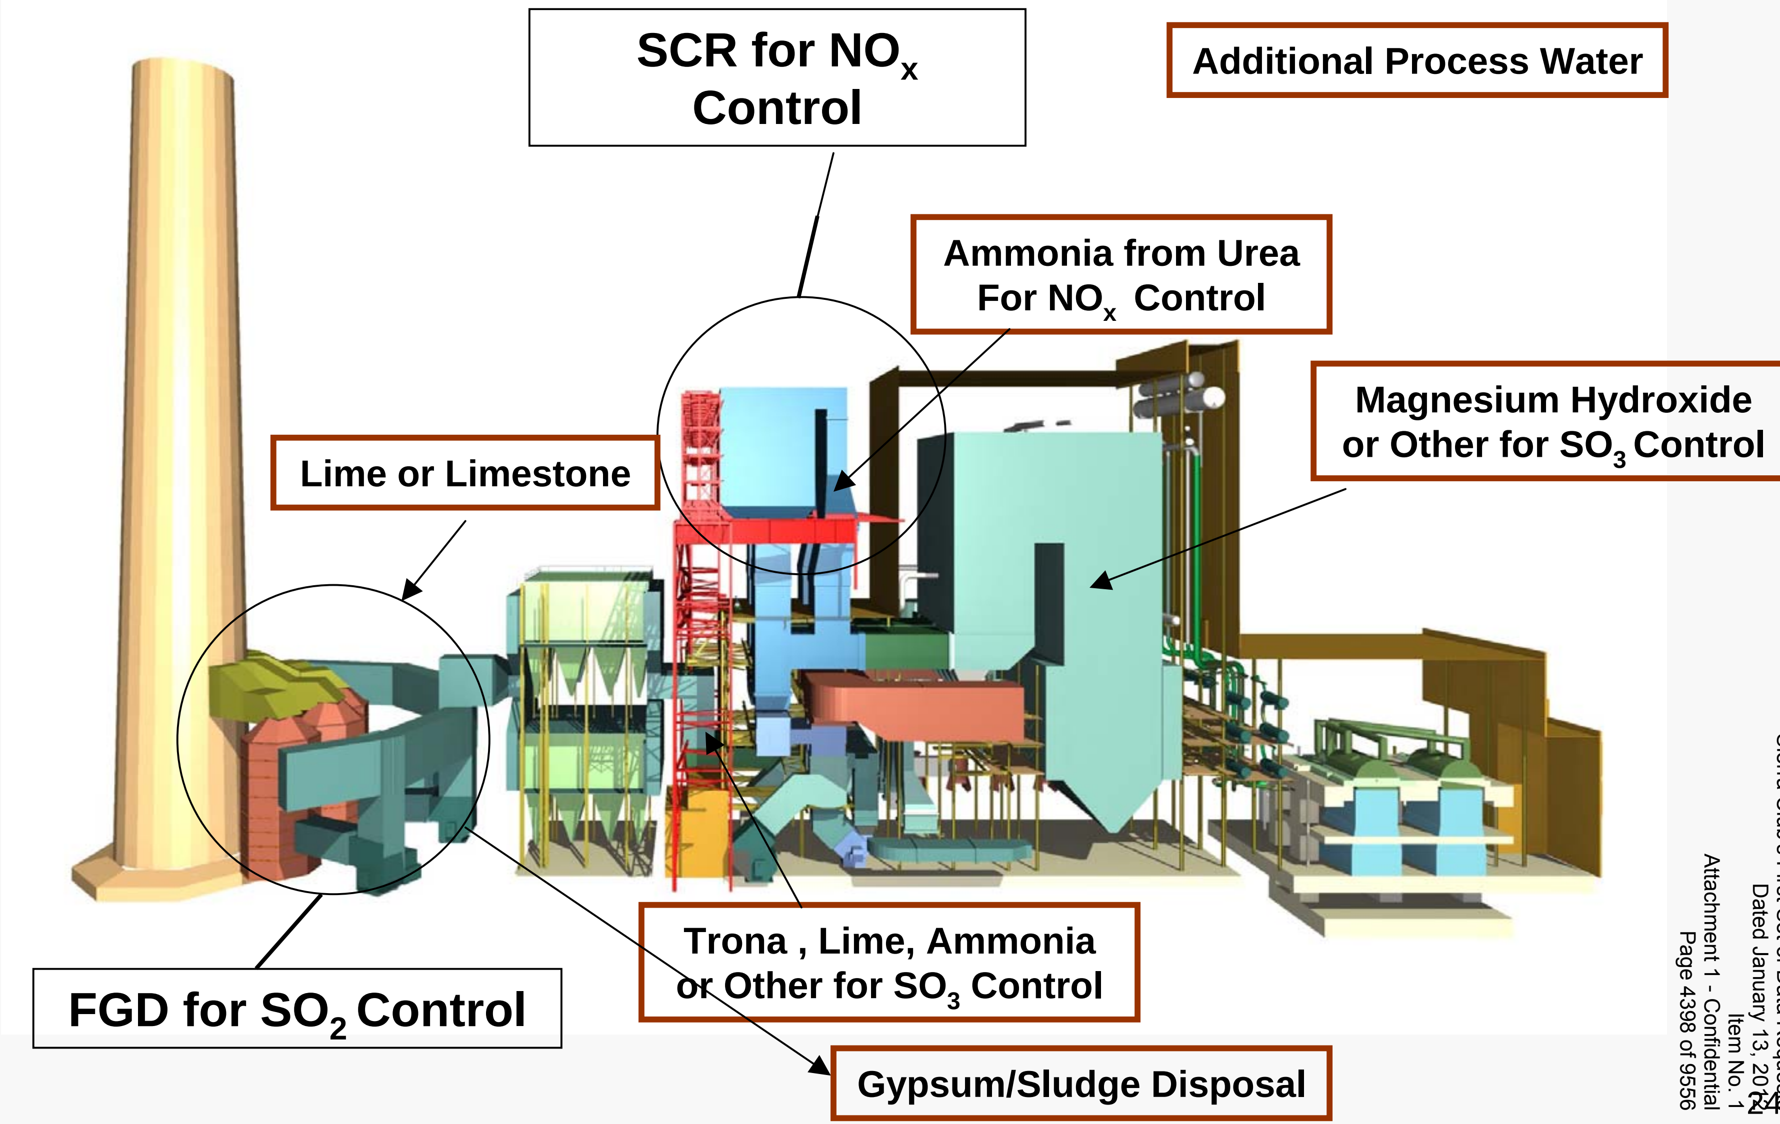
- Rule Finalized March 2005
- Designed to reduce mercury emissions by ~70% nationwide from electric utilities
- Reductions occur in phases: Phase I (2010); Phase II (2018)
- Establishes a Cap & Trade structure to achieve mercury reductions

AEP WILL ACHIEVE SOME MERCURY REDUCTIONS AS A CO-BENEFIT OF SCR AND FGD SYSTEMS, BUT MERCURY SPECIFIC CONTROL EQUIPMENT WILL BE NEEDED ON SOME UNITS

Pulverized Coal Unit as Built in 1970s



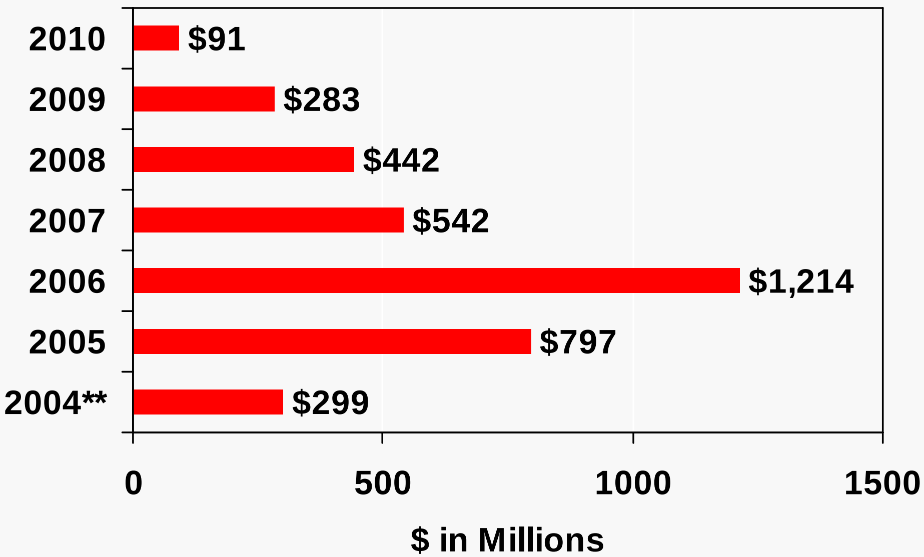
Pulverized Coal Unit Today Showing Retrofits & New Feedstock(s)



Environmental Investment: $3.7 Billion Through 2010

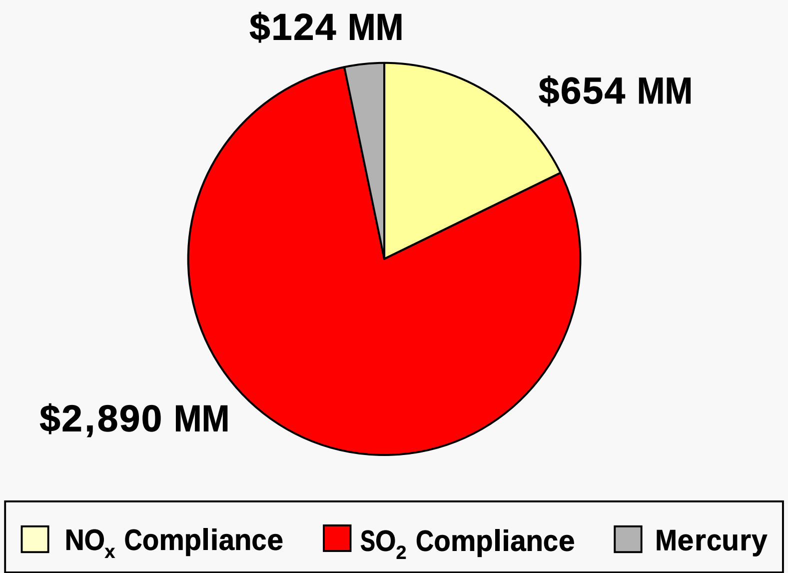
AEP®

Environmental Capital Investment*



*Environmental investment for NOx, SO_2 , & Hg purposes
** Actual investment level in 2004

Compliance Allocation



Current Programs

$1.9 Billion:

$0.6 billion for NOx

$1.2 billion for SO_2

Future Programs

$1.8 Billion:

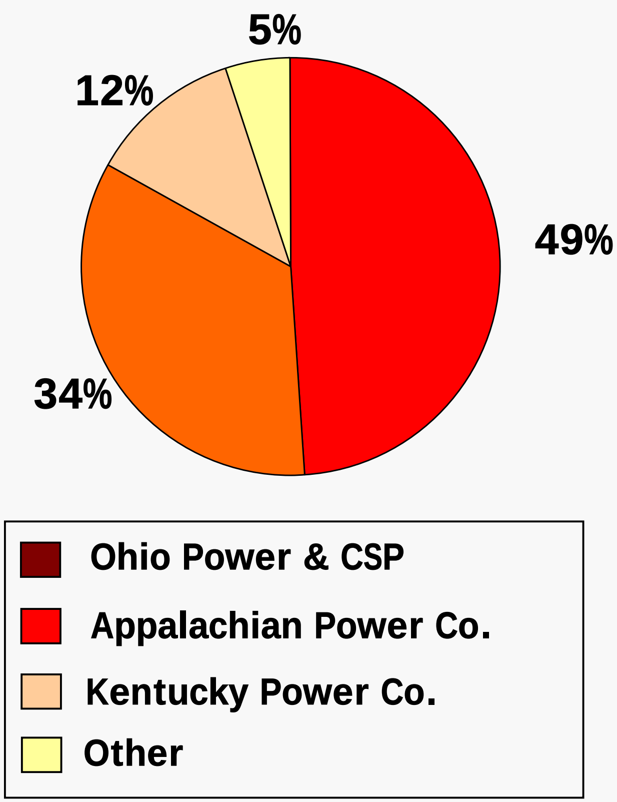
$1.7 billion for SO_2

$0.1 billion for Other

MAJORITY OF 2005 & 2006 DOLLARS WILL BE INVESTED IN OHIO & APCO

Environmental Spending by Company

Projected Environmental Investment Allocation



Funding the Environmental Investments

- **Ohio**: 49% ($1.8 billion)
  - Rate stabilization plan annual increases at CSP – 3% and OP – 7% beginning in 2006 through 2008
- **Virginia/West Virginia**: 34% ($1.2 billion)
  - VA: Environmental cost recovery mechanism/two rate case opportunities through 2010
  - WV: General rate case filing
- **Kentucky**: 12% ($433 million)
  - Surcharge mechanism

Environmental Investment

Planned or Under Construction

Plant Name	MW Capacity
Mitchell 1 & 2	1600
Conesville 4	339
Total	**1939**

2005 - 2007

Note: MW capacity shown represents AEP's owned capacity only

AVERAGE VARIABLE COSTS WILL BE $18 - $21 PER MWh POST ENVIRONMENTAL ADDITIONS

Regulatory Overview

Managing the Regulatory Process

- **Current Regulatory Activity**
  - TCC Wires Rate Case
  - TCC Stranded Cost Recovery
  - Louisiana Rate Review
  - FERC Transmission Rate Case
- **Planned Regulatory Activity (2005-2007)**
  - General Rate Cases in all AEP East jurisdictions to seek recovery of investment:
    - IN, KY, MI, TN, VA, WV

BRING CASH IN THE DOOR TO COVER CAPITAL EXPENDITURES & GROW EARNINGS THROUGH ADDITIONS TO THE ASSET BASE

Components of TCC's Net True-up Regulatory Asset

	31-Mar-05		31-Dec-04	
	(in millions)			
Stranded Generation Plant Costs	$	898	$	897
Net Generation-related Regulatory Asset		249		249
Unrefunded Excess Earnings		(6)		(10)
Net Stranded Generation Costs		1141		1136
Carrying Costs on Stranded Generation Plant Costs		205		225
Net Stranded Generation Costs Designated for Securitization		1346		1361
Wholesale Capacity Auction True-up		483		483
Carrying Costs on Wholesale Capacity Auction True-up		91		77
Retail Clawback		(61)		(61)
Deferred Over-recovered Fuel Balance		(215)		(212)
Net Other Recoverable True-up Amounts		298		287
Total Recorded Net True-up Regulatory Asset	$	1,644	$	1,648

Carrying charge calculated using pre-tax cost of capital of 11.79%

Debt Component: 8.12% - $296 million recognized as income thru 3/31/05

Equity Component: $154 million to be recognized in income as collected

CARRYING CHARGES FOR 2005 EXPECTED TO BE $87 MILLION

Regulatory Matrix - East

Ohio (Restructured)
• Unbundled rates for default customers frozen until 12/31/2005
• Pursuant to RSP Plan approved by PUCO 1-26-05:
  • Distribution rates in effect at December 31, 2005 are frozen, with certain exceptions, until the end of 2008.
  • Institute for 2006-2008 a non-bypassable distribution rider for provider of last resort (POLR) costs.
  • CSP ”G” rates to increase 3% per year (2006-2008).
  • OP “G” rates to increase 7% per year (2006-2008).
  • Transmission rates can upon filing reflect change in RTO costs.
• No active fuel clause
• Application for IGCC plant recovery filed on 3-18-05, hearings scheduled to begin 8-8-05.
	Virginia (Restructured)
	• Capped rates for default customers frozen through end of 2010
	• Capped rates can be adjusted by two rate cases prior to the end of 2010 and incremental environmental and reliability cost recovery mechanisms
	• Active annual fuel clause

West Virginia (Regulated) • Base rates not frozen • Annual ENEC proceedings have been suspended, the factor is currently fixed at pre-2000 levels. • No active fuel clause	**Indiana (Regulated)** • Subject to IURC order approving a settlement agreement, base rates are frozen and fuel cost recovery factors are capped at increasing rates through June 30, 2007.
Kentucky (Regulated) • Base rates not frozen • Fuel clause, adjusted monthly • Environmental surcharge costs are adjusted monthly for approved environmental compliance plan • Rockport Unit Power Supply Agreement extension through 12-07-2022 was approved by FERC & KPSC in December 2004	**Michigan (Restructured, but Regulated)** • Base rates not frozen. • Active annual fuel clause.
Tennessee (Regulated) • Base rates not frozen • Automatic fuel clause, adjusted monthly	

Regulatory Matrix - West

Texas (Regulated)
- SWEPCO-Texas retail competition delayed until at least 2007
- Bi-annual fuel clause adjustment opportunity

Texas (Restructured)
- TCC stranded cost true-up filing in first half of 2005. TCC wires rate case order expected in June 2005.
- TCC final fuel reconciliation (July 98-Dec. 01) decision issued in April 2005. TCC will appeal decision.
- TNC true-up order approved in April 2005 (retail clawback and fuel over-recovery only). No adjustments to revised amounts filed by TNC.
- TNC final fuel reconciliation (July 00-Dec. 01). Final order received October 18, 2004. Appeals filed in state and federal courts in Dec. 2004.

Oklahoma (Regulated)
- General rate case filed Oct. 31, 2003
    - On 5-2-05 the OCC issued an order approving a settlement agreement which included a $6.9 million annual revenue reduction, offset by changed depreciation rates and deferral recoveries, changed the fuel clause from a quarterly to annual factor, and made permanent an $11.8 million annual system reliability rider.
- 2001 Fuel review case
    - Hearings expected in August 2005. Scope expanded to cover 2002-2004 margin allocation issue.
- 2003 Fuel review case
- Likely to include motions to expand scope to include prudence review

Louisiana (Regulated)
- Base rates capped through June 15, 2005
- Currently under a merger required financial review
- Fuel clause, adjusted monthly

Arkansas (Regulated)
- Base rates not frozen
- Fuel clause, adjusted annually

Ohio Rate Stabilization Plan Recap

Summary of Impact (Columbus Southern Power & Ohio Power):

	Revenues				Incremental Cash			
Rate Stabilization Plan	**2005**	**2006**	**2007**	**2008**	**2005**	**2006**	**2007**	**2008**
Escalation of Generation Rate	0	83	173	271	0	83	173	271
POLR Rider/Recovery of RTO Costs**	21	0	0	0	0	7	7	7
POLR Rider/Return on Environmental Additions	44	26	26	26	0	41	41	40
Total RSP Impact	**65**	**109**	**199**	**297**	**0**	**131**	**221**	**318**
Pre-Existing Electric Transition Plan								
Elimination of 5% Residential Generation Credit*	0	25	25	26	0	25	25	26
Recovery of RTO costs**	0	29	29	29	0	29	29	29
Total ETP Impact	**0**	**54**	**54**	**55**	**0**	**54**	**54**	**55**

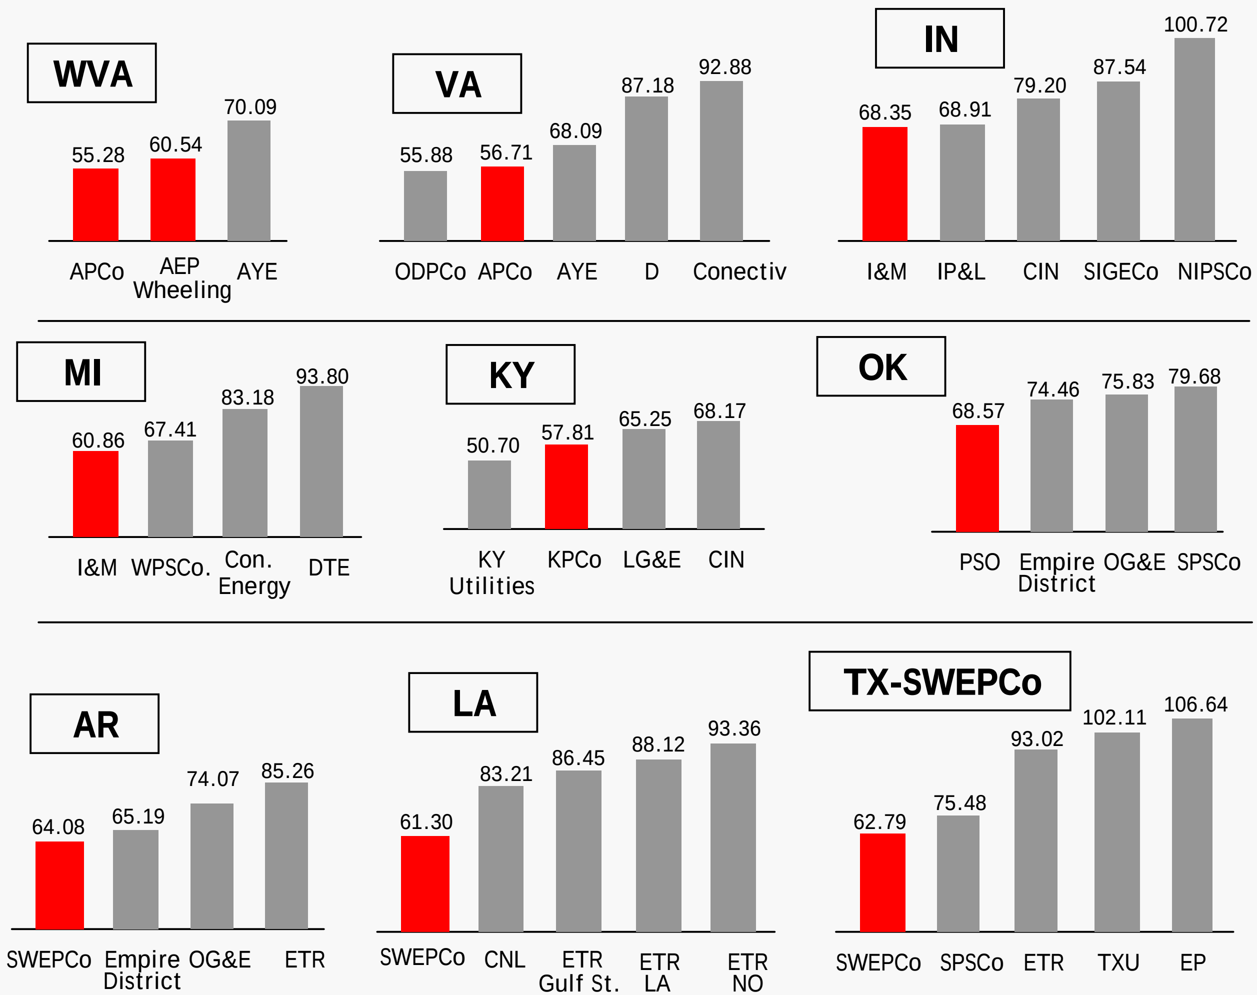
* Elimination of 5% credit is per Statute, and part of pre-existing ETP, not the RSP

** Recovery of administrative RTO costs, net congestion fees and ancillary services permitted in pre-existing ETP, but the RSP allows for recovery of 2005 costs as well

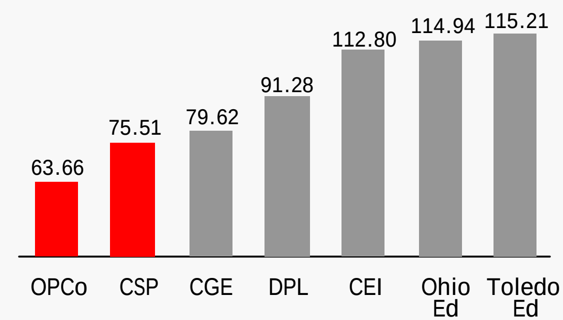
AEP WILL STILL HAVE AMONG THE LOWEST RETAIL RATES IN OHIO

AEP: The Low Cost Provider

Regulated Rates



Unregulated Rates



OH (POLR bundled residential rates)

Wholesale

Fossil fleet variable cost of production:

- Today: \$16-\$18/MWh
- Tomorrow: \$18-\$21/MWh
  - Post-environmental retrofit installation

Note: Rate amounts reflect bundled residential rates and are expressed in \$/MWh. The source for the shown rate amounts (excluding wholesale) is the EEI Typical Bills and Average Rates Report.

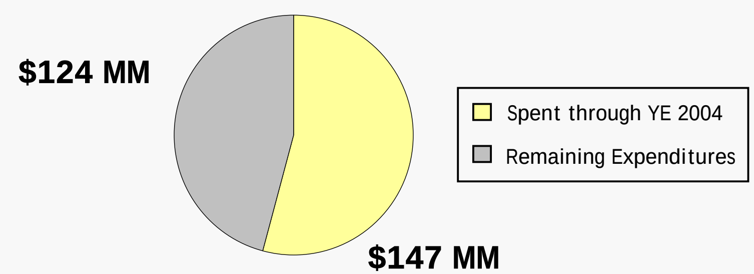
Notes:

* Represents projected capital expenditures for 2005

Major Capital Project

Wyoming/Jackson Ferry 765 kV Line



Project should increase average T&D rates from 2.0 cents to 2.04 cents/kWh

INVESTMENT IN ENERGY DELIVERY WILL CONTINUE TO BE SUBSTANTIAL

Covering Capital Expenditures

Year	2005E	2006E	2007E	2008E	2009E	2010E
Environmental Capex	$797MM	$1,214MM	$542MM	$442MM	$283MM	$91MM
Total Capex	$2,690MM	Guidance not yet released				

Typical Investment Capitalization*	Approx. 60% debt / 40% equity
Expected Investment ROE*	11-13%

*Varies by jurisdiction

Sources of Cash

- **Cash Flow from Operations**: Continued earnings growth
- **Rate Relief**: Ohio cash rate relief begins in 2006; Rate proceedings expected in all other jurisdictions by 2007
- **Asset Sales**: HPL, STP, Oklaunion, Pacific Hydro & Bajio
- **Texas Securitization**: $1 billion plus in 2006 (Half goes to TCC debt paydown)
- **Texas Competition Transition Charge**: Approximately $190MM per year before securitization; $45MM per year after securitization
- **Debt Issuances**: Will maintain debt-to-capitalization ratio of approximately 60%

AEP HAS ADEQUATE SOURCES OF CASH FOR CAPEX PROGRAM

AMERICAN ELECTRIC POWER FIXED INCOME INVESTOR MEETING

CHICAGO, IL

MAY 16, 2006

A Century of Firsts

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Capital Investment Forecast

Capital Investment Forecast

excluding AFUDC

New Build Generation & Ongoing Infrastructure Replacement investment can be throttled

	2006	2007	2008
New Build Generation	$191	$611	$1,174
Ongoing Infrastructure Replacement & Economically Justified	$1,351	$1,367	$1,319
Mandated T&D	$650	$615	$625
Environmental Compliance	$1,531	$1,018	$420

Note: Capital forecasts do not include amounts for AEP Interstate Project.

Much of capital investment is adjustable - investment level will be adjusted based on rate recovery and/or cash generation

New Generation

IGCC

- Expect to obtain permits and finalize engineering by 2007
- Construction of 600 megawatt facility to begin in 2007
- Commercial operation date expected in 2010

PSO RFPs

- Submitted RFPs totaling 900 megawatts of baseload and peaking capacity
- Two peaking RFPs totaling 340 MWs awarded
- Commercial operation dates expected in 2008 and 2011

SWEPCO RFPs

- Submitted RFPs totaling 2,100 megawatts of baseload, intermediate, and peaking capacity
- PPAs expected 2006 through 2009, with commercial operation dates expected from 2008 through 2011

Dividend on Common	$ (555)	$ (553)	$ (583)	$ (586)	$ (589)
Cash Sources					
Cash from Operations **	$ 2,632	$ 1,877	$ 1,945	$ 2,403	$ 2,565
Proceeds from Sale of Assets	$ 1,357	$ 1,246	$ 28	$ 43	$ -
Common Stock Issued (Dividend Reinvestment Plan)	$ 17	$ (25)	$ -	$ 80	$ 80
Change in Debt, Net	$ (2,238)	$ (91)	$ 630	$ 1,692	$ 1,648
TCC securitization bond issuance	$ -	$ -	$ 1,804	$ -	$ -
Other	$ -	$ 126	$ (177)	$ (147)	$ (166)
Cash Sources Less Capital Expenditures, Dividends & Other	$ (458)	$ 81	$ (75)	$ (126)	$ -
Ending Cash Balance	$ 320	$ 401	$ 326	$ 200	$ 200

* Statement of Cash Flows shows $2.404B for 2005 and $1.637 for 2004 which reflects difference in accruals from previous year

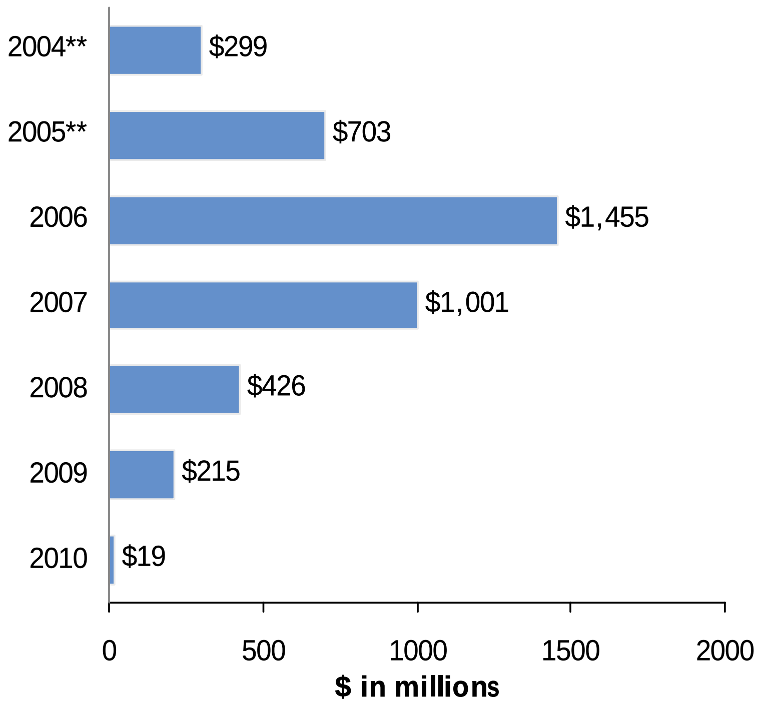
* * Cash Flow from Operations assumes full rate recovery on capital expenditures.

Note: Capital forecasts do not include amounts for AEP Interstate Project. Totals may not foot due to rounding.

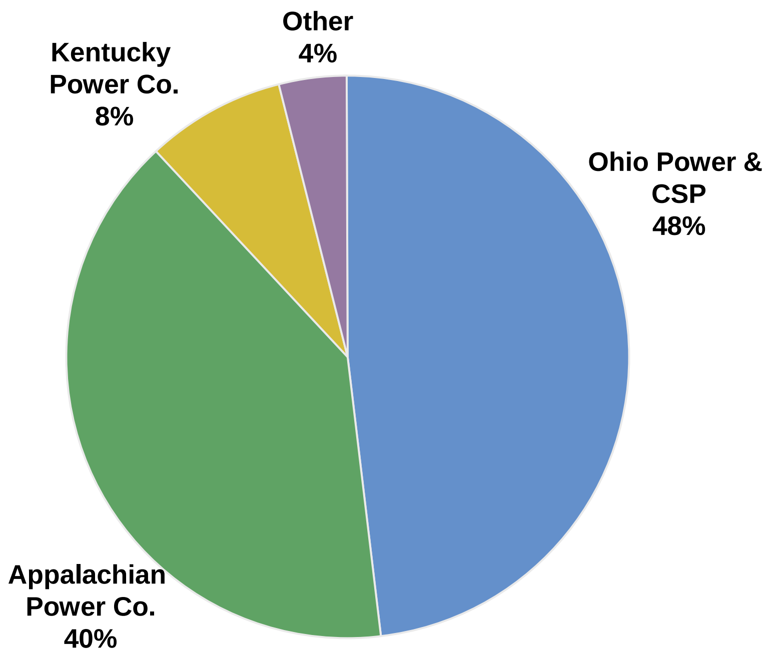
Regulatory recovery will drive capital investment throttle

$4.1 Billion Environmental Investment

Environmental Capital Investment*



Projected Environmental Investment Allocation



*Environmental investment for NOx, SO_2 , & Hg purposes including AFUDC

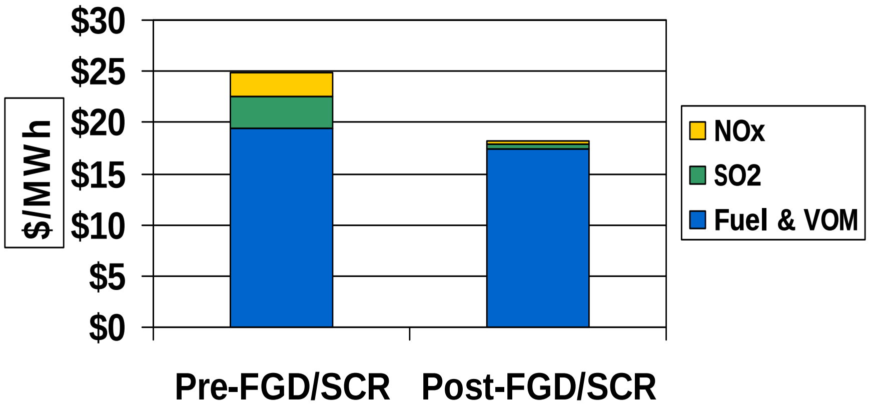
** Actual investment level in 2004 and 2005

Majority of 2006 & 2007 dollars will be invested in Ohio & ApCo

Low Cost Production Supports Investment & Investment Sustains Low Cost Production

- Lowers exposure to high cost emission allowances
- Creates opportunity to burn wider variety of lower cost fuels
- Improves baseload operation (higher capacity factor, higher margin)
- All-in cost of electricity, including FGD/SCR investment, remains low

Typical Pulverized Coal Plant
Comparison of Variable Production Cost
Pre- and Post- FGD/SCR (future view)*



* Assumes annual NOx program

AEP will remain the low cost producer following completion of environmental retrofit projects

Regulatory Activity Underway

- TCC Stranded Cost Recovery True-up Filing – Final Order Issued
- Ohio Companies filing for pass through of FERC OATT changes
- Indiana Depreciation Petition
- APCo General Rate Case Filing in Virginia
- APCo Filing for Recovery of E&R Costs in Virginia
- APCo & WPCo Base Rate & Expanded Net Energy Cost (ENEC) Filing in West Virginia – Settlement Pending
- IGCC – Received Rate Authorization of Pre-Construction Costs

Year-to-date, secured $350 million of the $500 million rate recovery assumed in 2006 earnings guidance range

Texas Regulatory Activity

TCC Stranded Cost Recovery Case

- February 16, 2006 – PUCT final order provides for net true-up of $1.475 billion
- March 3, 2006 – Requested approval of financing order to issue $1.8 billion in low-cost securitization bonds
  - Final order expected in June or July 2006
  - September 2006 - Issuance of securitization bonds if no appeal

<u>Procedural Schedule for TCC Securitization</u>

- ✓ April 17, 2006 – Intervenors File Testimony
- ✓ April 24, 2006 – Staff Files Testimony
- ✓ April 27, 2006 – TCC Files Rebuttal Testimony
- ✓ May 25-26, 2006 – Hearing On Merits

- May/June 2006 – Request approval for CTC to address other true-up items
  - Expected $491 million credit to customers
  - Sept 2006 – CTC to be implemented

Regulatory Activity Underway

Ohio Companies Pass through of FERC OATT Changes

Filed Feb 3, 2006 - Seeking authority to pass through to customers the changes in the FERC OATT related to the elimination of the SECA revenues and the costs associated with the Wyoming-Jacksons Ferry transmission line

Indiana Depreciation Filing

December 1, 2005 – I&M filed petition with the IURC for accounting authorization to revise the depreciation rates applicable to its electric utility plant in service

- Based on a 2004 depreciation study, I&M recommends a decrease in annual depreciation expense of approximately $45 Million on an after-tax Indiana jurisdictional basis.
- Procedural schedule has been set with final order expected in third quarter 2006

Regulatory Activity Underway

Appalachian Power - Virginia E&R & General Rate Case Activity

Virginia E & R Cost Recovery Factor - Filed July 1, 2005 - Seeking recovery of $62.1 Million in new Environmental & Reliability costs

- ➢ Oct 14, 2005 – SCC ruled VA law does not allow recovery of prospective costs - $48.6 Million
- ➢ Nov 14, 2005 - APCo filed supplemental direct testimony which included updated actual E&R costs incurred through Sept. 30, 2005 of $21.1 million

Virginia General Rate Case Filing – Filed May 4, 2006 – Seeking $225.8MM increase in base rates, partially offset by a proposed credit to reflect sharing of $27.3MM in margins from off system sales (OSS), resulting in a net annual increase of $198.5MM.

Appalachian Power & Wheeling Power – West Virginia Base Rate Case & ENEC Reactivation

Filed April 24, 2005 – Joint Settlement Agreement

- ➢ Estimated overall impact of revenue increases to be phased-in through 2009;
  - ➢$129 Million
  - ➢16% Increase
- ➢ Provides for timely recovery of Wyoming-Jacksons Ferry 765kV line and Mountaineer & Amos FGDs

Phased-In Settlement Agreement Increases:

- ✓July 28, 2006 - $61 Million*
- ✓ July 1, 2007 - $36 Million**
- ✓ July 1, 2008 - $14 Million**
- ✓ July 1, 2009 - $18 Million**

*Excludes ENEC over-recovery negative surcharge ($17 million) -- surcharge does not have an earnings impact

** Estimated

Settlement Details

✓Increase effective July 28, 2006:

($18MM)	Base Rates
$56MM	ENEC
<u>$23MM</u>	WJF & FGD investment @ 12/31/05
$61MM	Gross revenue increase
<u>($17MM)</u>	ENEC over-recovery negative surcharge
$44MM	Net increase effective 7/28/06

✓ Phased-in revenue increases annually on July 1, 2007 – 2009 provides for timely recovery of FGD project balances at 12/31 of prior year

IGCC Regulatory Activity

Ohio - Cost Recovery Filing

Phase 1 – PUCO AUTHORIZED

- ➢ Effective during 2006
- ➢ Seeks recovery of initial costs, including those already incurred, such as site engineering and various other engineering services
- ➢ Approximately $23.7 Million

Phase 2

- ➢ Effective 2007- mid 2010 (Construction Phase)
- ➢ Seeks recovery of carrying costs associated with plant construction

Phase 3

- ➢ Effective mid 2010 (Commercial Operation begins)
- ➢ Seeks recovery of projected $1.174 Billion cost of plant over its operating life

Ohio Next Steps

2006:

- ➢ Secure cost recovery plan
  - – April 10, 2006 – PUCO authorized implementation of Phase 1 Rates
  - – Phase 2 & 3 ruling – Post October 2006 – following completion of FEED study
- ➢ Finalize site selection
- ➢ Negotiate with suppliers

2006—2007:

- ➢ Obtain permits and finalize engineering and procurement

2007—2010:

- ➢ Construct and start-up plant

West Virginia IGCC Activity

On January 11, 2006, Appalachian Power Co. filed a Certificate of Public Convenience and Necessity seeking authority to construct a 600-MW IGCC facility in West Virginia.

Seeking authority for three phase recovery approach in Ohio

Regulatory Activity Completed

Ohio – Rate Stabilization Plan (2006 – 2008)

- Annual 3% and 7% generation rate increases at CSP & OP, respectively
- POLR rate rider for environmental additions
- Ability to request additional 4% annual increase in generation rate
- Elimination of 5% residential generation credit (stipulated in the pre-existing Electric Transition Plan of 2000)

AEP East FERC Transmission Case

December 20, 2005 – FERC approved settlement allowing wholesale transmission rates to increase

- Results in $22 Million net revenue in 2006 from wholesale transmission

SWEPCo Fuel Factor/Surcharge Filing

January 12, 2006 – Settlement approved by PUCT

- Fuel factor will increase SWEPCo's annual Texas retail fuel-related revenues by approximately $46 Million.
- Interim surcharge will collect the under-recovery amount of $44 Million, including interest

Appalachian Power- Virginia Fuel Factor Increase

- $57.7 Million increase in fuel factor approved on January 20, 2006

Kentucky Base Rate Case

Final order approved on March 14, 2006

- $41 million annual increase in base rates
- To be effective March 30, 2006

2006 Key Operating Company Highlights

(in millions)

Dependent on Actual Capital Investment

Company	Projected Capital Expenditures	Projected Issuances	Target Equity Ratio
APCO	$943	$500 - $600 (completed*)	42-45%
CSP	$343	$100 - $150	44-48%
I&M	$311	$400 - $500	38-42% (a)
KPCo	$100	$50 - $75	42-45%
OPCo	$1,070	$450 - $550	44-48%
PSO	$279	$150 - $200	44-48%
SWEPCo	$288	$100 - $150	44-48%
TCC (b)	$278	$0	40%
TNC	$73	$0	40%

*Issuances completed in 2006 totaling $550 Million

(a) Ratios include impact of Rockport 2 lease.

(b) Excludes impact of securitization.

Maintain financial strength of subs by retaining and/or infusing equity capital depending on their credit ratios and free cash flow

Long-Term Debt Guidelines

Issuers:

- Issue at operating companies.

Size:

- Make transactions index eligible if possible.
- When possible, issue a size sufficient for competitive execution.

Maturity:

- Issue maturities for which the market has appetite.
- Achieve weighted average life targets for operating companies, generally between 10-15 years.

Timing:

- Will issue based on the timing of maturities and levels of short-term debt as driven by capital spending and operating cash flow.

Summary of Major 2006 Financial Performance Drivers

- Load Growth of 2.5%
- $500MM rate recovery assured or in progress
- Rising fuel costs of 11-13%
- Higher planned outages, increased retail load and sale of TCC generation to impact off system sales
- Decline in utility O&M
- Parent Company improvement (debt & interest expense reduction)

Traditional utility factors will drive 2006 performance

2006 Earnings Guidance Range: $2.50 - $2.70

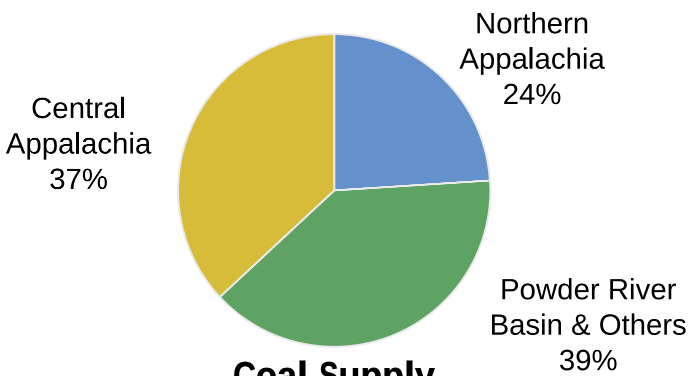
Coal Procurement

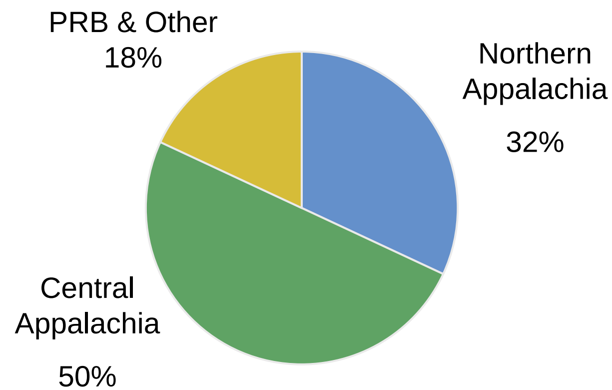
Total AEP System



Coal Supply (on average)

- Purchase 75 MM tons per year
- Avg. delivered price ~ $32.52/ton in 2005
- 95% purchased for 2006
- Approximate 11%-13% price increase in 2006
  - Rising costs at Eastern mines & safety issues
  - High SO2 Allowance prices drive low sulfur coal prices

AEP Eastern System



AEP Western System

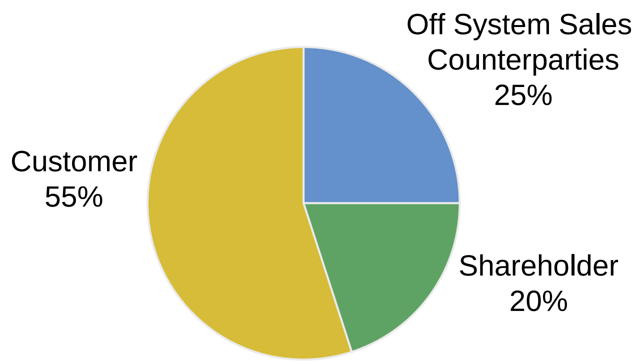
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential

Fuel Recovery

AEP System



Fuel Cost Recovery
(on average)

- Fuel recovery varies by jurisdiction
- 80% of fuel cost is recoverable across the AEP System
- Active Fuel Clause Jurisdictions:
  - AEP EAST: AP-VA, I&M - MI, KGP, KP
  - AEP WEST: PSO, SWEPCO

Note: Fuel recovery percentages are based on estimates for 2006 fiscal year

Jurisdictional Fuel Clause Summary

STATE	FUEL CLAUSE	ADJUSTMENT FREQUENCY
Arkansas	Yes	Monthly
Indiana	Yes	Capped at increasing rates through June 30, 2007
Kentucky	Yes	Monthly
Louisiana	Yes	Monthly
Michigan	Yes	Annually
Ohio	No	Although there is no recovery mechanism in Ohio, the RSP provides for a 3% (CSP) and 7% (OP) increase in generation rates annually, which includes fuel beginning January 2006 and extending through December 2008.
Oklahoma	Yes	Annually
Tennessee	Yes	Monthly
Texas (SPP)	Yes	Annually
Virginia	Yes	Annually
West Virginia	Yes	Annual ENEC currently suspended. On Jan 6, 2006, WVPSC approved deferral accounting for ENEC to begin July 1, 2006 and new rates to be effective July 28, 2006.

Summary Rate Case Information

West Virginia Base Case Rate Filing

On August 26, 2005, Appalachian Power Co. and Wheeling Power Co. filed an application with the West Virginia Public Service Commission (WVPSC) to increase electric rates and charges, a request for the reactivation and modification of the expanded net energy cost mechanism (ENEC), a proposal for the disposition of Appalachian Power Company's ENEC over-recovery balance, a request for implementation of a System Reliability Tracker mechanism, and a request for waiver of certain provisions of the Commission's Rules. APCo filed supplemental testimony on January 18, 2006 to reflect Ceredo plant purchase and other miscellaneous items resulting in a revised revenue requirement of $171 Million. On April 24th, APCo and Wheeling Power, together with the PSC staff and the Consumer Advocate in WV, filed a joint settlement agreement in the companies' rate case. The agreement provides for an initial $44 million increase in revenues, effective July 28, 2006. The initial increase consists of a $56 million increase for fuel and purchased power expenses, and $23 million for recovery of WJF transmission line costs and environmental investments to date. These increases are partially offset by an $18 million base rate reduction and a $17 million credit to customers for previously over-recovered fuel costs. (Docket #: 05-1278-E-PC-PW-42T)

Summary Rate Case Information

Virginia E&R Factor Filing

On July 1, 2005, Appalachian Power Co. filed a request with the Virginia SCC to recover incremental actual and projected costs for environmental compliance and T&D System reliability in the amount of $62.1MM. The SCC has ruled that under applicable VA law, it does not have authority to approve the recovery of projected E&R costs before their actual incurrence and adjudication. APCo filed supplemental direct testimony which included actual costs incurred for E&R thru September 30, 2005 of $21.1 million. Hearings concluded in March. Briefs were filed in early April. We are awaiting a Commission order. Docket # PUE-2005-00056

Capital Structure – Company vs. Staff

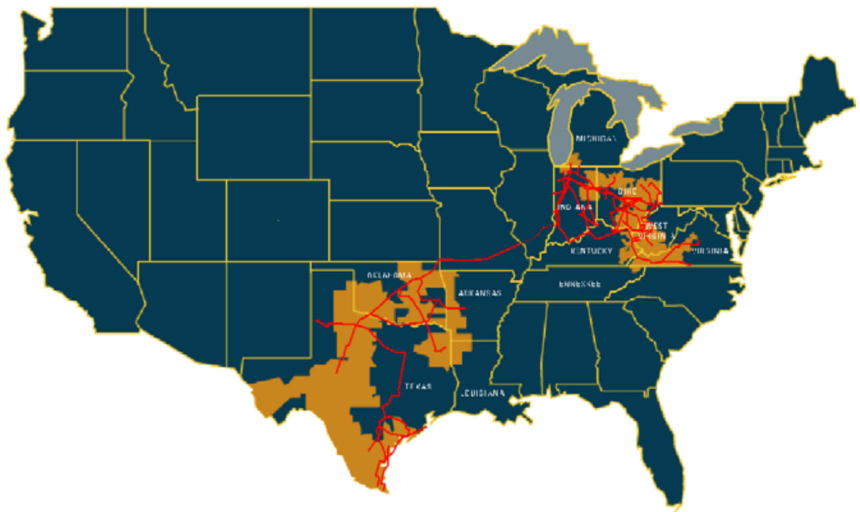
What AEP Offers

Utility Operations: The Platform for Growth & Financial Strength

1. Strength and scale in assets and operations
2. Focused utility business model
3. Earnings growth driven by native load & capital investment
4. Pioneering advanced technologies in the sector
5. Solid liquidity position and stable credit profile
6. Attractive dividend yield in excess of 4%

Strength & Scale in Assets & Operations

Utility Operations: The Platform for Growth



Generation*	**35,600 MW capacity**
Transmission	**39,000 miles**
Distribution	**205,483 miles**
Customers	**5 million**

* Figures do not include mothballed or decommissioned units (1,015 MW of capacity).

Future earnings growth driven by native load growth & substantial utility investment opportunity

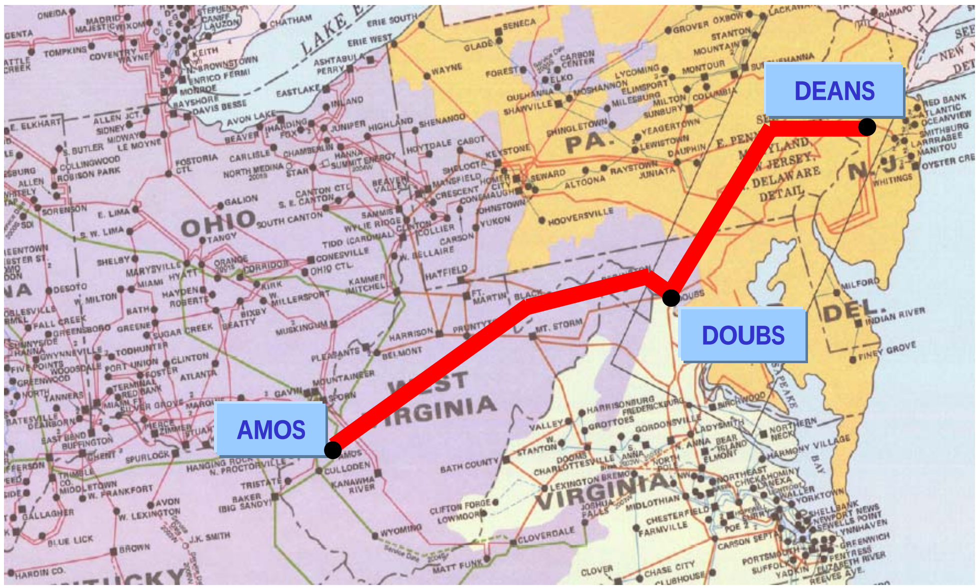
250 MW transmission line connects AEP East & AEP West territories

AEP Interstate Project



Map of the Proposed AEP Interstate Project 765 kV Transmission Line (Line route is conceptual and subject to change in regulatory and PJM Regional Transmission Expansion Plan processes)

- Line connects AEP's Amos 765 kV station to Allegheny Power's Doubs 500 kV station in Maryland, and terminates at PSEG's Deans 500 kV station in New Jersey
- Total line length is approximately 550 miles
- Will improve power transfer capability from the Midwest to the Mid-Atlantic by 5,000 MW
- Expected to cost $3 billion (subject to change based on a detailed investigation)
- Not yet determined which other non-AEP companies may be interested in participating
- Any financing activity relating to this project would be structured to allow AEP to meet its consolidated debt-to-cap target of approximately 60% and maintain its BBB credit rating
- Project expected to be in service in 2014

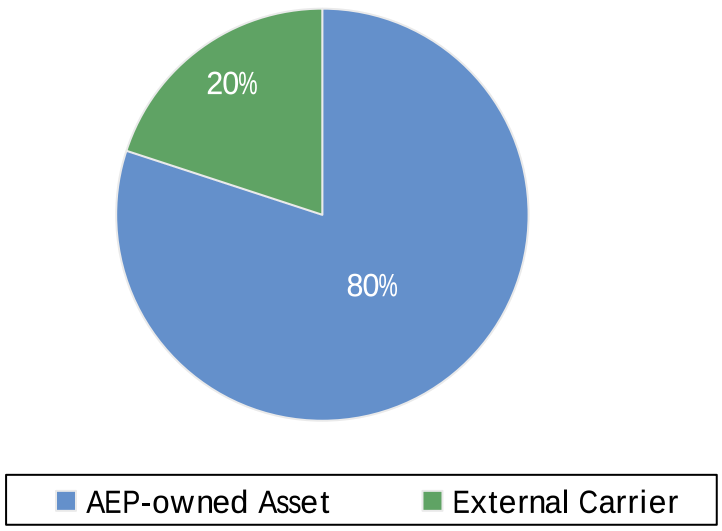
AEP's Coal Transportation Assets

Coal Transportation to AEP Plants*

2005 Actual



* Represents close approximations

AEP's substantial coal transportation assets include:

- 7,065 railcars
- 2,318 barges
- 53 towboats
- 1 active coal handling terminal (20 million tons of annual capacity)

AEP's transportation assets provide flexibility in a constrained delivery environment

Investing In IGCC

Generation Technology Comparative Statistics

	PC	IGCC	NGCC
Nominal Capacity (MW)	600	600	600
Heat Rate (Btu/kWh)	8700	8600	7200
Total Plant Cost (EPC) ($/kW)	1700	1900	480
Production Cost ($/MWh)	17	16	57
Cost of Electricity, without CO2 Capture ($/MWh)	58	63	90
Estimated Cost of Electricity, with CO2 Capture ($/MWh)	94	87	137

Source: Results of AEP analysis based on EPRI studies

- Total Plant Cost (2005$'s) includes the cost to **E**ngineer, **P**rocure and **C**onstruct plant and owner's direct costs; does not include interconnections, transmission lines, transmission upgrades, contingency or AFUDC.
- Assumes Northern Appalachian Coal price of $1.60 /mmBtu for PC and IGCC, and natural gas price of $7.00/mmBtu for NGCC.
- Assumes 85% capacity factor for PC and IGCC, 25% for NGCC.
- Production Cost includes Fuel Cost and Variable Operations & Maintenance (VOM) cost.
- Cost of Electricity based on EPC cost, does not include the cost of Emission Credits.
- Cost of Electricity with CO2 capture does not include sequestration cost.

IGCC TECHNOLOGY IS STRATEGIC TO KEEPING COAL IN THE MONEY

AEP Texas Central Company

President and Chief Operating Officer: Charles Patton

AEP Texas Central Company (TCC

organized in Texas in 1945) is engaged in the generation (to an extremely limited extent), transmission and sale of power to affiliated and non-affiliated entities and the distribution of electric power to approximately 729,000 retail customers through REPs in southern Texas, and (to a limited extent) in supplying and marketing electric power at wholesale to other electric utility companies and market participants. Under the Texas Act, TCC is completing the final stage of exiting the generation business and has already sold most of its generation assets, including STP. At December 31, 2005, TCC had 1,160 employees. In addition to its AEP System interconnections, TCC is a member of ERCOT.

Total Customers:
(Based on electric meters)

• **Residential**	**620,000**
• **Commercial**	**103,000**
• **Industrial**	**6,000**
Total	**729,000**

Generating Capacity	**54 MW***

Generating Capacity by Fuel Mix:

• **Coal: 100%**

Transmission Miles	**5,000**
Distribution Miles	**28,000**

*** Includes TCC's 54-MW share of the Oklaunion plant**

Principal industries served:

Oil and gas extraction
Food processing
Apparel
Metal refining
Chemical and petroleum refining
Plastics
Machinery equipment

Regulatory Information

Public Utility Commission of Texas (PUCT)

AEP Regulated Electric Utilities

Texas Central Company
Texas North Company
Southwestern Electric Power Company

Commissioners

Number: **3**	Appointed/Elected: **Appointed**	Term: **6 years**	Political Makeup: R:3

Qualifications for Commissioners

To be eligible for appointment, a commissioner must be: (1) a qualified voter; (2) a citizen of the United States; and (3) a representative of the general public. Chairman appointed by the Governor.

Commissioners

Paul Hudson, Chairman (Rep.), since August 2003; current term expires August 2009. Served as policy director in governor's office. Worked at PUCT as advisor and senior economic analyst. Served on National Governor's Association Task Force on Electric Infrastructure; Western Governor's Association Working Group on Cross Border Energy Issues. Master's degree from Arizona State.

Barry T. Smitherman, Commissioner (Rep.), since April 2004; current term expires August 2007. Attorney; Assistant DA; 16 years as a public finance investment banker. Law degree from the University of Texas School of Law, Master's in public administration from Harvard University.

Julie Parsley, Commissioner (Rep.), since November 2002; current term expires August 2011. Lawyer, private practice. Served as Solicitor General of Texas with Office of Attorney General. Also served as Deputy Solicitor General. Received law degree from Texas Tech University.

AEP Regulatory Status

• Operations for TCC and TNC have been functionally separated. Retail competition has been delayed by the PUCT in the Southwest Power Pool (SPP) area of Texas (including SWEPCO and TNC-SPP areas). • PUCT issued a final order in TCC stranded cost true-up case on 2-16-06, approving a true-up balance of $1.475 billion. We expect to appeal, seeking additional recovery consistent with Texas law. •TCC final fuel reconciliation (July 98-Dec 01). Final order received 6-3-05. TCC and other parties filed appeals in the District Court, which is currently in the briefing phase. TCC has also filed at the U.S. District Court to ajoin the PUCT from enforcing their ruling regarding the allocation of the off-system sales margins; a briefing and procedural schedule has not been established. • New Transmission Cost Recovery Factors (TCRF) became effective 3-1-06. The impact of the TCRF update will be $1.5 million annual increase. • TCC Rate Case. Final order received 8-15-05. TCC and other parties filed appeals in the District Court. No procedural schedule has been established. The PUCT approved recovery of $4.2 million of rate case expenses, with the distribution portion becoming effective with the April 2006 bills for a 3-year period.• TCC filed on 3-3-06 an application requesting to securitize $1.8 billion of regulatory assets, stranded costs and related carrying costs. Hearings before the Commissioners begin on May 25.

AEP Texas North Company

President and Chief Operating Officer: Charles Patton

AEP Texas North Company (TNC)

(organized in Texas in 1927) is engaged in the generation, transmission and sale of power to affiliated and non-affiliated entities and the distribution of electric power to approximately 189,000 retail customers through REPs in west and central Texas, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities, rural electric cooperatives and other market participants. At December 31, 2005, TNC had 387 employees. The territory served by TNC also includes several military installations and correctional facilities. In addition to its AEP System interconnections, TNC is a member of ERCOT.

Total Customers:
(Based on electric meters)

• **Residential**	**148,000**
• **Commercial**	**30,000**
• **Industrial**	**5,000**
Total	**183,000**

Generating Capacity	**377 MW**

(excludes 1,015 MW mothballed plants)

Generating Capacity by Fuel Mix:

- **Coal: 100%**

Transmission Miles	**4,500**
Distribution Miles	**12,000**

Principal industries served:

Agriculture and the manufacturing or processing of Cotton seed products

Oil products

Precision and consumer metal products

Meat products

Gypsum products

Commissioners

Number: 3	**Appointed/Elected:** Appointed	**Term:** 6 years	**Political Makeup: R:** 3

Qualifications for Commissioners

To be eligible for appointment, a commissioner must be: (1) a qualified voter; (2) a citizen of the United States; and (3) a representative of the general public. Chairman appointed by the Governor.

Commissioners

Paul Hudson, Chairman (Rep.), since August 2003; current term expires August 2009. Served as policy director in governor's office. Worked at PUCT as advisor and senior economic analyst. Served on National Governor's Association Task Force on Electric Infrastructure; Western Governor's Association Working Group on Cross Border Energy Issues. Master's degree from Arizona State.

Barry T. Smitherman, Commissioner (Rep.), since April 2004; current term expires August 2007. Attorney; Assistant DA; 16 years as a public finance investment banker. Law degree from the University of Texas School of Law, Master's in public administration from Harvard University.

Julie Parsley, Commissioner (Rep.), since November 2002; current term expires August 2011. Lawyer, private practice. Served as Solicitor General of Texas with Office of Attorney General. Also served as Deputy Solicitor General. Received law degree from Texas Tech University.

AEP Regulatory Status

• Operations for TCC and TNC have been functionally separated. Retail competition has been delayed by the PUCT in the Southwest Power Pool (SPP) area of Texas (including SWEPCO and TNC-SPP areas). • The results of TNC's true-up case were filed in TNC's Competition Transition Charge (CTC) proceeding in August 2005, which was abated in November 2005 pending resolution of the PUCT's ruling regarding off-system sales margins (see below). • TNC final fuel reconciliation (July 00-Dec. 01). Final order received October 18, 2004. Texas District Court affirmed PUCT on September 9, 2005. TNC and other parties filed appeals in the Court of Appeals for the Third District of Austin, Texas and briefs were submitted in early April. Parties are now awaiting an opinion from the Court. On September 29, 2005, the U.S. District Court issued a ruling precluding the PUCT from enforcing their ruling regarding the allocation of off-system sales margins. Parties have filed appeals of the U. S District Court ruling and briefs were filed on April 19, 2006.

Appalachian Power

President and Chief Operating Officer: Dana Waldo

Appalachian Power Company (APCo)

(organized in Virginia in 1926) is engaged in the generation, transmission and distribution of electric power to approximately 942,000 retail customers in the southwestern portion of Virginia and southern West Virginia, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities and other market participants. APCo covers a service territory of 19,049 square miles, and at December 31, 2005, APCo and its wholly owned subsidiaries had 2,408 employees. Among the principal industries served by APCo are coal mining, primary metals, chemicals and textile mill products. In addition to its AEP System interconnections, APCo also is interconnected with the following unaffiliated utility companies: Carolina Power & Light Company, Duke Energy Corporation and Virginia Electric and Power Company. APCo has several points of interconnection with TVA and has entered into agreements with TVA under which APCo and TVA interchange and transfer electric power over portions of their respective systems. APCo is a member of PJM.

Principal industries served:

Coal mining
Primary metals
Chemicals
Textile mill products

Commissioners

Number: 3	**Appointed/Elected:** Appointed	**Term:** 6 years	**Political Makeup R:** 1 **D:** 2

Qualifications for Commissioners

The West Virginia Public Service Commission (WVPSC) consists of three members, appointed by the Governor, with the advice and consent of the senate. No more than two members of the commission may belong to the same political party. The Commissioners serve six year staggered terms, with one term expiring as of July 1 of each odd numbered year. One Commissioner is designated as Chairman of the Commission by the Governor. The Chairman serves as the chief fiscal officer of the Commission.

Commissioners

Edward H. Staats, (Dem.), since 2003, term expires June 2009. Former Chief of Operations in the Governor's office.

R. Michael Shaw, Commissioner (Rep.), since mid 2003, term expires June 2007. Attorney, former state legislator.

Jon W. McKinney, Chairman (Dem.), since 2005, term expires June, 2011. Formerly served as plant manager of Flexsys' Nitro, W Va operations, chairman of Chemical Industry Committee for W Va, board member of W Va Chamber of Commerce, W Va Manufacturer's Association, Chemical Alliance Zone, W Va Roundtable & Thomas Memorial Hospital.

AEP Regulatory Status

• Base rates not frozen • Annual ENEC proceedings are currently suspended. • On April 21, 2006 a settlement agreement in the AP & WP base rate case proceeding was filed with the WVPSC. Terms of the settlement agreement include: reinstatement of the ENEC with deferral accounting commencing July 1, 2006; creation of a surcharge mechanism to provide for timely recovery of a return on CWIP and a return of and on plant in service related to Wyoming-Jackson's Ferry and scrubbers at Mountaineer and Amos Units 1, 2 and 3, under such mechanism a $23.21 million surcharge to be recovered in rates effective July 28, 2006; and a base rate reduction of $18.43 million effective July 28. • On January 11, 2006, APCo filed an application with the WVPSC seeking authority to construct a 600 mw IGCCC plant.

Virginia State Corporation Commission

AEP Regulated Electric Utilities

Appalachian Power Co.

Commissioners

Number: 3	**Appointed/Elected**: Elected	**Term:** 6 years	**Political Makeup: R:** 2 **D:** 1

<u>Qualifications for Commissioners</u>

The Virginia State Corporation Commission (VSCC) is composed of three members elected by the General Assembly. Commissioners are elected to serve six-year terms, staggered in two year increments. The chair rotates annually among the three commissioners on February 1.

<u>Commissioners</u>

Theodore V. Morrison, Jr, (Dem.), since 1989; current term expires 2008. Member of the Virginia House of Delegates from 1968 to 1988. Member of Virginia Code Commission from 1974 and served as chairman from 1984 to 1988. Lawyer, private practice. Law degree from Emory University.

Mark C. Christie (Rep.), since 2004; current term expires February 2010. Current Chairman. Attorney, counsel to the Speaker of the House

Judith Williams Jagdmann, (Rep.), since 2006, current term expires 2012. Law degree from T.C. Williams School of Law. Prior to being elected to the Commission, she served as 43rd Attorney General for the Commonwealth of Virginia. Prior to work in Attorney in the Office of Attorney General, served 13 years as counsel to the SCC.

AEP Regulatory Status

• Capped rates for default customers frozen through end of 2010 • Capped rates can be adjusted by two rate cases prior to the end of 2010 and incremental environmental and reliability cost recovery mechanisms • Active annual fuel clause. • On 7-1-05 AP filed a request with the Virginia Commission seeking to recover incremental actual and projected costs for environmental compliance and T&D System reliability (E&R). In an order dated 10-14-05, the Commission denied the Company's request for interim rate treatment and ruled that the Company may only seek to include actually incurred costs (i.e., no projected future costs) in the E & R cost recovery filing. The Company filed supplemental direct testimony on 11-14-05, which included updated incremental costs through 9-30-05 of $21.1 million. Hearings concluded 3-01-06. Briefs were file in early April. • On May 4, 2006, APCo filed a general rate case requesting an increase of $198.5 million ($225.8 million in base revenues offset by an off-system sales credit of $27.3 million). We are awaiting the issuance of the procedural schedule by the Commission.

Columbus Southern Power

President and Chief Operating Officer: Kevin Walker

Columbus Southern Power Company (CSPCo)

(organized in Ohio in 1937, the earliest direct predecessor company having been organized in 1883) is engaged in the generation, transmission and distribution of electric power to approximately 710,000 retail customers in Ohio, and in supplying and marketing electric power at wholesale to other electric utilities, municipalities and other market participants. CSP Co covers a service territory of 3,701 miles and at December 31, 2005, CSPCo had 1,178 employees. CSPCo's service area is comprised of two areas in Ohio, which include portions of twenty-five counties. One area includes the City of Columbus and the other is a predominantly rural area in south central Ohio. In addition to its AEP System interconnections, CSPCo also is interconnected with the following unaffiliated utility companies: CG&E, DP&L and Ohio Edison Company. CSPCo is a member of PJM. Pursuant to an acquisition that closed on December 31, 2005, CSPCo purchased the electric utility operations of Monongahela Power Company in Ohio. As a result, in January 2006 approximately 29,000 customers in six southeastern Ohio counties, together with the transmission and distribution used to serve such customers, were added to CSPCo's service territory.

Commissioners

Number: 5	**Appointed/Elected**: Appointed	**Term:** 5 years	**Political Makeup: R:** 3 **D:** 0 **I:** 2

Qualifications for Commissioners

Five members, appointed by the governor and confirmed by the state senate; five year, staggered terms, full-time positions, commissioners shall be selected from the lists of qualified persons submitted to the governor by the PUC nominating council. Not more than three of the members of the PUCO shall be members of the same political party. The governor appoints one of the five as president, who serves at the pleasure of the governor until a successor has been designated.

Commissioners

Alan R. Schriber, Ph.D., Chairman, (Ind.), since 1999. Term expires April 2009. Economics professor, president of a radio broadcasting company, investment advisor. Previously served as commissioner on the PUCO from 1983-1989. Member NARUC Telecommunications Committee.

Ronda Hartman Fergus, Commissioner, (Rep.), since 1995, reappointed in 2000 & 2005. Term expires April 2010. Lawyer, Ohio State; previously served on the PUCO staff as an administrative law judge in the Legal Department. Later served as the chief of Telecommunications,

Water and Sewer Section of the Legal Department, and then chief of the Telecommunications Technical Staff.

Judy A. Jones, Commissioner, (Rep.), since 1997, reappointed in 2002. Term expires April 2007. Masters degree in Biological Chemistry, Univ. of Michigan. Member NARUC Committee on Electricity, Clean Coal Technology Work Group and vice-chair of its International Relations Comm, member of the National Coal Council, and a government member of the North American Electric Reliability Council.

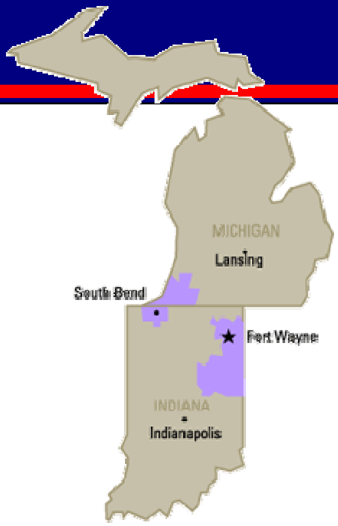
Donald L. Mason, Commissioner, (Rep.), since 1998, reappointed in 2003. Term expires April 2008. Lawyer, former chief of the Division of Oil and Gas at the Ohio Department of Natural Resources. He serves as chair of the NARUC Gas Committee and the NARUC Ad Hoc Committee on Electric Restructuring and Critical Infrastructure.

Clarence D. Rogers, Commissioner, (Ind.), since 2001, term expires April 2006. Lawyer, former executive deputy general manager Cleveland Regional Transit Authority, two terms as commissioner of the Ohio Turnpike Commission, assistant US Attorney, private practice as litigator.

AEP Regulatory Status

• Pursuant to RSP Plan approved by PUCO 1-26-05: • Distribution rates in effect at December 31, 2005 are frozen, with certain exceptions, until the end of 2008. • Institute for 2006-2008 a non-bypassable distribution rider for provider of last resort (POLR) costs. • CSP "G" rates to increase 3% per year (2006-2008). • OP "G" rates to increase 7% per year (2006-2008). • Transmission rates can upon filing reflect change in RTO costs. • No active fuel clause • Application for IGCC plant recovery filed on 3-18-05. On 4-10-06, PUCO issued the IGCC order providing for recovery of Phase 1 costs and requiring additional hearings before issuing an order on recovery of costs to be incurred in Phases 2 and 3. Companies filed compliance tariffs to implement Phase I cost recovery on April 20.• On 2-3-06, CSP and OP filed for a change to retail tariffs to reflect the increased FERC approved OATT and to defer for future recovery unrecovered transmission costs as a result of the loss of SECA revenues effective 4-1-06 if new rates do not go into effect by that time. In March, the PUCO suspended the effective date of the new rates to provide more time for review. We are awaiting an order.• On 2-6-06, the PUCO directed Staff to conduct an investigation of reliability related matters of CSP and OP. On April 17, 2006, the staff submitted a PUCO – ordered investigative report on the Ohio Companies' compliance with the Stipulation Agreement in which they asserted that the Ohio companies failed to fulfill the terms of the Stipulation Agreement and recommend various consequences for PUCO consideration. On May 3, the PUCO directed AEP to file a response to the possible consequences outlined in the Staff report within 20 days. In addition, they directed the Companies to begin to develop a plan to enhance service reliability for their consideration.

Indiana Michigan Power



President and Chief Operating Officer:
Marsha Ryan

Indiana Michigan Power Company (I&M)

(organized in Indiana in 1925) is engaged in the generation, transmission and distribution of electric power to approximately 581,000 retail customers in northern and eastern Indiana and southwestern Michigan, and in supplying and marketing electric power at wholesale to other electric utility companies, rural electric cooperatives, municipalities and other market participants. I&M has a service territory of 4,578 square miles and at December 31, 2005, I&M had 2,633 employees. Since 1975, I&M has leased and operated the assets of the municipal system of the City of Fort Wayne, Indiana. In addition to its AEP System interconnections, I&M also is interconnected with the following unaffiliated utility companies: Central Illinois Public Service Company, CG&E, Commonwealth Edison Company, Consumers Energy Company, Illinois Power Company, Indianapolis Power & Light Company, Louisville Gas and Electric Company, Northern Indiana Public Service Company, PSI Energy Inc. and Richmond Power & Light Company. Regulatory Information

Indiana Utility Regulatory Commission

AEP Regulated Electric Utilities

Indiana Michigan Power Co.

Number: 5	**Appointed/Elected:** Appointed	**Term:** 4 years	**Political Makeup: R** 3 **D:** 2

Qualifications for Commissioners

Five members, appointed by the Governor from among persons nominated by a legislatively mandated utility commission nominating committee; four year, staggered terms, full time positions. Not more than three of the members of the IURC be members of the same political party. At lease one of the commissioners must be an attorney qualified to practice law before the Indiana Supreme Court. The governor appoints one of the five as chairman. Republican Mitch Daniels was elected Governor on November 2, 2004.

Commissioners

David L. Hardy, Chairman (Rep.), since September 2005, current term will expire April 2006. Commissioner Hardy is an attorney who has worked in private practice since 1997. Areas o expertise include: negotiation, contracts, litigation, finance and administration. He has 35 years regulatory experience at the state and federal levels.

Larry S. Landis, Commissioner (Rep.), since December 2002, current term ends January 2008. Former president of a marketing and advertising agency, VP Corporate Advertising, Bank One, Indiana. Bachelor's degrees in political science and economics.

David W. Hadley, Commissioner (Dem.), since 2000; current term ends January 2006. Executive officer for Indiana AFL CIO, former legislative affairs representative for United Mine Workers of America, coal miner, former high school social studies teacher. Master's degree in secondary education.

Greg Server, Commissioner (Rep.), since September 2005, current term ends in April 2009. Former state senator since 1981 and before that served in the Indiana House or Representatives from 1972 to 1980. Served as chair of senate commerce committee, which handled IURC and utility industry legislation. Served as Director of Administration for the Evansville Water and Sewer Utility.

David E. Ziegner, Commissioner (Dem.), since 1990, current term ends April 2007. Lawyer, staff attorney for Legislative Services Agency, General Council for IURC. Member, NARUC Committee on Electricity. Law degree from the Indiana University School of Law in Indianapolis.

- Base rates are frozen and fuel cost recovery factors are capped at increasing rates through 6-30-07. • On 12/31/05 the company filed a petition with the IURC for accounting authorization to revise the depreciation rates applicable to its electric utility plant in service. This petition is not a request for a change in base rates, but for book depreciation rate decreases primarily as a result of longer depreciable property lives. Based on the depreciation study, I&M recommends a decrease in annual depreciation expense of approximately $45 million on an after-tax Indiana jurisdictional basis.
- Remaining procedural schedule has been set with an order expected in 3rd Quarter 2006.

Regulatory Information

Michigan Public Service Commission

AEP Regulated Electric Utilities

Indiana Michigan Power Co.

Number: 3	**Appointed/Elected:** Appointed	**Term:** 6 years	**Political Makeup:** :1 **D:** 2

<u>Qualifications for Commissioners</u>

The Michigan Public Service Commission (MPSC) is composed of three members appointed by the Governor with the advice and consent of the Senate. Commissioners are appointed to serve staggered six year terms. No more than two commissioners may represent the same political party. One commissioner is designated as chairman by the Governor.

<u>Commissioners</u>

<u>J. Peter Lark, Chair, (Dem)</u> since July 2003: current term expires July 2009. Lawyer, assistant Attorney General in charge of special litigation division, former assistant prosecuting attorney.

<u>Laura Chappelle, Commissioner, (Rep.)</u> since 2001: current term expires July 2007. Lawyer, former deputy legal advisor to the Governor, regulatory affairs advisor to Michigan House Republicans, assistant prosecuting attorney.

<u>Monica Martinez, Commissioner, (Dem)</u> since 2005, current term expires July 2011. Former Deputy Director of the Governor's Legislative Affairs Division where she served as the Governor's principal lobbyist. Previous to this she served as an analyst for the Senate Democratic Office, where she specialized in technology and energy, human services and family law policy issues.

AEP Regulatory Status

Customer choice began 1/02. Generation was not deregulated. Retail rates were unbundled (though they continue to be regulated) to allow customers to evaluate generation costs. Michigan has an active annual fuel clause.

Kentucky Power

President and Chief Operating Officer: Tim Mosher

Kentucky Power Company (KPCo)

(organized in Kentucky in 1919) is engaged in the generation, transmission and distribution of electric power to approximately 176,000 retail customers in an area in eastern Kentucky, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities and other market participants. KPCo encompasses a service territory of 4,813 square miles and at December 31, 2005, KPCo had 454 employees. In addition to its AEP System interconnections, KPCo also is interconnected with the following unaffiliated utility companies: Kentucky Utilities Company and East Kentucky Power Cooperative Inc. KPCo is also interconnected with TVA. KPCo is a member of PJM.

AEP Regulated Electric Utilities

Columbus Southern Power Co.
Ohio Power Co.

Commissioners

Number: 5	**Appointed/Elected**: Appointed	**Term:** 5 years	**Political Makeup: R:** 3 **D:** 0 **I:** 2

Qualifications for Commissioners

Five members, appointed by the governor and confirmed by the state senate; five year, staggered terms, full-time positions, commissioners shall be selected from the lists of qualified persons submitted to the governor by the PUC nominating council. Not more than three of the members of the PUCO shall be members of the same political party. The governor appoints one of the five as president, who serves at the pleasure of the governor until a successor has been designated.

Commissioners

Alan R. Schriber, Ph.D., Chairman, (Ind.), since 1999. Term expires April 2009. Economics professor, president of a radio broadcasting company, investment advisor. Previously served as commissioner on the PUCO from 1983-1989. Member NARUC Telecommunications Committee.

Ronda Hartman Fergus, Commissioner, (Rep.), since 1995, reappointed in 2000 & 2005. Term expires April 2010. Lawyer, Ohio State; previously served on the PUCO staff as an administrative law judge in the Legal Department. Later served as the chief of Telecommunications,

Water and Sewer Section of the Legal Department, and then chief of the Telecommunications Technical Staff.

Judy A. Jones, Commissioner, (Rep.), since 1997, reappointed in 2002. Term expires April 2007. Masters degree in Biological Chemistry, Univ. of Michigan. Member NARUC Committee on Electricity, Clean Coal Technology Work Group and vice-chair of its International Relations Comm, member of the National Coal Council, and a government member of the North American Electric Reliability Council.

Donald L. Mason, Commissioner, (Rep.), since 1998, reappointed in 2003. Term expires April 2008. Lawyer, former chief of the Division of Oil and Gas at the Ohio Department of Natural Resources. He serves as chair of the NARUC Gas Committee and the NARUC Ad Hoc Committee on Electric Restructuring and Critical Infrastructure.

Clarence D. Rogers, Commissioner, (Ind.), since 2001, term expires April 2006. Lawyer, former executive deputy general manager Cleveland Regional Transit Authority, two terms as commissioner of the Ohio Turnpike Commission, assistant US Attorney, private practice as litigator.

AEP Regulatory Status

• Pursuant to RSP Plan approved by PUCO 1-26-05: • Distribution rates in effect at December 31, 2005 are frozen, with certain exceptions, until the end of 2008. • Institute for 2006-2008 a non-bypassable distribution rider for provider of last resort (POLR) costs. • CSP "G" rates to increase 3% per year (2006-2008). • OP "G" rates to increase 7% per year (2006-2008). • Transmission rates can upon filing reflect change in RTO costs. • No active fuel clause • Application for IGCC plant recovery filed on 3-18-05. On 4-10-06, PUCO issued the IGCC order providing for recovery of Phase 1 costs and requiring additional hearings before issuing an order on recovery of costs to be incurred in Phases 2 and 3. Companies filed compliance tariffs to implement Phase I cost recovery on April 20.• On 2-3-06, CSP and OP filed for a change to retail tariffs to reflect the increased FERC approved OATT and to defer for future recovery unrecovered transmission costs as a result of the loss of SECA revenues effective 4-1-06 if new rates do not go into effect by that time. In March, the PUCO suspended the effective date of the new rates to provide more time for review. We are awaiting an order.• On 2-6-06, the PUCO directed Staff to conduct an investigation of reliability related matters of CSP and OP. On April 17, 2006, the staff submitted a PUCO – ordered investigative report on the Ohio Companies' compliance with the Stipulation Agreement in which they asserted that the Ohio companies failed to fulfill the terms of the Stipulation Agreement and recommend various consequences for PUCO consideration. On May 3, the PUCO directed AEP to file a response to the possible consequences outlined in the Staff report within 20 days. In addition, they directed the Companies to begin to develop a plan to enhance service reliability for their consideration.

Public Service Company of Oklahoma

President and Chief Operating Officer: Stuart Solomon

Public Service Company of Oklahoma (PSO)

(organized in Oklahoma in 1913) is engaged in the generation, transmission and distribution of electric power to approximately 514,000 retail customers in eastern and southwestern Oklahoma, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities, rural electric cooperatives and other market participants. PSO has a service territory of 30,000 square miles and at December 31, 2005, PSO had 1,176 employees. In addition to its AEP System interconnections, PSO also is interconnected with Ameren Corporation, Empire District Electric Co., Oklahoma Gas & Electric Co., Southwestern Public Service Co. and Westar Energy Inc. PSO is a member of SPP.

Regulatory Information

Oklahoma Corporation Commission

AEP Regulated Electric Utilities

Public Service Company of Oklahoma

Commissioners

Number: **3**	**Appointed / Elected:** Elected	Term**: 6 years**	Political Makeup: **R: 3**

<u>Qualifications for Commissioners</u>

The Oklahoma Corporation Commission (OCC) is composed of three commissioners who are elected by state-wide vote. Commissioners serve staggered six-year terms so one commissioner vacancy occurs every two years. The election pattern was established when the Commission was created by the state constitution.

<u>Commissioners</u>

Jeff Cloud, Chairman (Rep.), since 2002; current term ends January 2009. Member, NARUC. Served as U.S. Congressman's District Director. Served as the Oklahoma City Mayor's Chief of staff. Law degree from Oklahoma City University.

Denise A. Bode, Vice-Chairman (Rep.), since 1997; current term ends January 2011. Member, NARUC. Former president of the Independent Petroleum Association of America (IPAA). Graduated with a bachelor's degree in political science from the University of Oklahoma. Founding partner of a Washington D.C. firm. Law degree from George Mason University and a master's of law in taxation from Georgetown University.

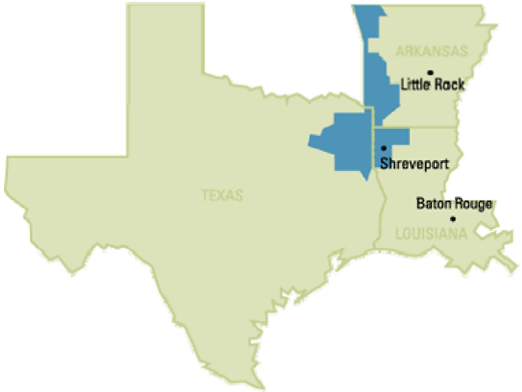
Bob Anthony, Commissioner (Rep.), since 1989; current term expires January 2007. Member, NARUC. Served on the boards of the Oklahoma State, Oklahoma City, and South Oklahoma City chambers of commerce. Earned a M.Sc. from the London School of Economics, a M.A. from Yale University, and an M.P.A. from the Kennedy School of Government at Harvard University.

AEP Regulatory Status

• 2001 Fuel review case: Hearings held 2-7 and 2-8-06. Scope expanded to cover 2002-2004 margin allocation issue.Intervenors have submitted testimony, which substantially off-set the recovery of PSO's $42 million Internal Cost Reconstruction (ICR) error. Awaiting Commission order. • 2003 Fuel review case: Scope has been expanded to include a prudence review. No procedural schedule has been set. Discovery phase has been initiated. • 2004 Fuel review case: Staff has now filed for a review of PSO's 2004 fuel costs. Hearings scheduled to begin 8-10-06. Discovery phase has been initiated. • Applications seeking a used and useful determination for up to 500 mW of peaking capacity with a commercial operation date of 2008 and up to 600 mW of base load generation with a commercial operation date of 2011 were filed with the OCC on 12-21-05 and 2-1-06, respectively. Procedural schedules have not yet been established.

Southwestern Electric Power

President and Chief Operating Officer: Nick Akins



Southwestern Electric Power Company (SWEPCo)

(organized in Delaware in 1912) is engaged in the generation, transmission and distribution of electric power to approximately 450,000 retail customers in northeastern Texas, northwestern Louisiana and western Arkansas, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities, rural electric cooperatives and other market participants. SWEPCo has a service territory of 25,000 square miles and at December 31, 2005, SWEPCo had 1,498 employees. The territory served by SWEPCo also includes several military installations, colleges, and universities. In addition to its AEP System interconnections, SWEPCo is also interconnected with CLECO Corp., Empire District Electric Co., Entergy Corp. and Oklahoma Gas & Electric Co. SWEPCo is a member of SPP.

Total Customers:

• **Residential**	**381,000**
• **Commercial**	**61,000**
• **Industrial**	**7,000**
• **Other**	**1,000**
Total	**450,000**

Generating Capacity **4,487 MW**

Generating Capacity by Fuel Mix:

- **Coal/Lignite:** **60%**
- **Natural Gas:** **40%**

Transmission Miles **3,500**

Distribution Miles **19,300**

Principal industries served:

Natural gas and oil production
Petroleum refining
Manufacturing of pulp and paper
Chemicals
Food processing
Metal refining.

Arkansas Public Service Commission

AEP Regulated Electric Utilities

Southwestern Electric Power Co.

Commissioners

Number: 3	**Appointed/Elected:** Appointed	**Term:** 6 years	**Political Makeup:** R: 3

<u>Qualifications for Commissioners</u>

The Arkansas Public Service Commission (APSC) is composed of 3 members. The Governor appoints the Commissioners as well as the Chairman. Governor Huckabee has appointed all of the current commissioners.

<u>Commissioners</u>

Sandra Hochstetter, Chairman (Rep.), since 1999; current term ends Jan 2011. Executive Director of Arkansas Public Service Commission (1999-2000). Governor's Regulatory Liaison (1999). Assistant General Counsel, Reliant Energy (1986-1998). Attained Bachelor of Arts in Social Work at University of Arkansas. Juris Doctorate at Washington University School of Law.

Randy Bynum, Commissioner (Rep.), since 2003; current term ends in 2007. Lawyer, private practice in Washington D.C. and Little Rock, Arkansas, Certified Public Accountant in Arkansas (inactive), former President of Bynum Furniture Group. Bachelor's attained at University of Arkansas. Juris Doctorate at George Washington University.

Daryl E. Bassett, Commissioner (Rep.), since 2004; current term ends in 2009. Former policy advisor for Governor. Governor's state budget director (2002-2003). Investment Banker for First State Investments/Merrill Lynch Fenner and Pierce (1985-1995). Bachelor's attained at Harding University (Business-Public Administration).

AEP Regulatory Status

Arkansas has an active fuel pass-through clause, adjusted annually. Base rates not frozen. Arkansas passed then repealed deregulation legislation.

Louisiana Public Service Commission

AEP Regulated Electric Utilities

Southwestern Electric Power Co.

Commissioners

Number: 5	**Appointed/Elected:** Elected	**Term:** 6 years	**Political Makeup: R:** 2 **D:** 3

Qualifications for Commissioners

The Louisiana Public Service Commission (LPSC) is composed of five elected members. The commissioners serve overlapping terms of six years.

Commissioners

Jack A. Blossman, Jr. (Rep.), since 1997; current term ends December 2008. Practicing attorney, member of NARUC Gas Committee. Board member of Parish National Bank, member, Lake Ponchartrain Basin Foundation. Juris Doctorate from Southern Law School.

James M. Field, (Rep.), since 1996; current term ends December 2006. Practicing attorney, member of Electrical Committee of NARUC. NFL contract advisor (1983-present), member, Sports Lawyers Association. Juris Doctorate from Louisiana State University.

Lambert C. Bossiere, III (Dem.), since 2005; current term ends December 2011. B.S. Business Administration from Southern University. American University of Paris – International Trade Law – Paralegal Certificate. Former First City Court Constable for the City of New Orleans.

C. Dale Sittig, (Dem.), since 1995; current term ends December 2010. Member, Louisiana House of Representatives, (1983-1995). Member, Chamber of Commerce.

Foster L. Campbell, (Dem.), since 2003; current term ends December 2008. Member, Louisiana State Senate (1976-2002). Independent insurance businessman and farmer, former school teacher and agricultural products salesman. Bachelor's degree from Northwestern State University.

AEP Regulatory Status

• Base rates not frozen • Currently under a merger required financial review • Fuel clause, adjusted monthly

Regulatory Information

Public Utility Commission of Texas (PUCT)

AEP Regulated Electric Utilities

Texas Central Company
Texas North Company
Southwestern Electric Power Company

Commissioners

Number: **3**	Appointed/Elected: **Appointed**	Term: **6 years**	Political Makeup: R:3

Qualifications for Commissioners

To be eligible for appointment, a commissioner must be: (1) a qualified voter; (2) a citizen of the United States; and (3) a representative of the general public. Chairman appointed by the Governor.

Commissioners

Paul Hudson, Chairman (Rep.), since August 2003; current term expires August 2009. Served as policy director in governor's office. Worked at PUCT as advisor and senior economic analyst. Served on National Governor's Association Task Force on Electric Infrastructure; Western Governor's Association Working Group on Cross Border Energy Issues. Master's degree from Arizona State.

Barry T. Smitherman, Commissioner (Rep.), since April 2004; current term expires August 2007. Attorney; Assistant DA; 16 years as a public finance investment banker. Law degree from the University of Texas School of Law, Master's in public administration from Harvard University.

Julie Parsley, Commissioner (Rep.), since November 2002; current term expires August 2011. Lawyer, private practice. Served as Solicitor General of Texas with Office of Attorney General. Also served as Deputy Solicitor General. Received law degree from Texas Tech University.

AEP Regulatory Status

- Retail competition has been delayed by the PUCT in the SPP area of Texas until at least 2007.Texas SWEPCO has an active fuel pass-through clause. On 1-12-06, PUCT approved a Settlement in the SWEPCO Fuel Factor/Surcharge filing. The stipulated fuel factors will increase SWEPCO's annual Texas retail fuel-related revenues by approximately $46 million. The interim surcharge will collect the under-recovery amount of $44 million (including interest).

AEP AMERICAN® ELECTRIC POWER

STRONG
FLEXIBLE
ADAPTABLE

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants including our ability to restore Indiana Michigan Power Company’s Donald C. Cook Nuclear Plant Unit 1 in a timely manner; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity and transmission lines (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary or deflationary interest rate trends; volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impacting our ability to finance new capital projects and refinance existing debt at attractive rates; the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurred cots and recovery is long and the costs are material; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

AEP AMERICAN ELECTRIC POWER

Table of Contents

AEP AMERICAN ELECTRIC POWER

AEP Highlights

Premier utility platform

- Leadership position in electric generation, transmission and distribution operations
- Cash flow, earnings and regulatory diversity with more than 5 million customers in 11 states
- $6.3 billion capital expenditure program (2009-2011) will continue to drive rate base growth

Effective regulatory relationships

- Traditional recovery mechanisms with equitable risk allocation enhance both earnings and cash flow
- Emerging energy policies play to AEP's strengths (transmission, energy efficiency, reliability)
- Constructive local relationships deliver successful regulatory outcomes

High-growth transmission business

- The leading US transmission owner, operator, and developer
- Exceptional portfolio of high-quality development projects and project partners
- Attractive ROEs, regulatory support and access to capital will drive earnings growth beyond our traditional utility footprint

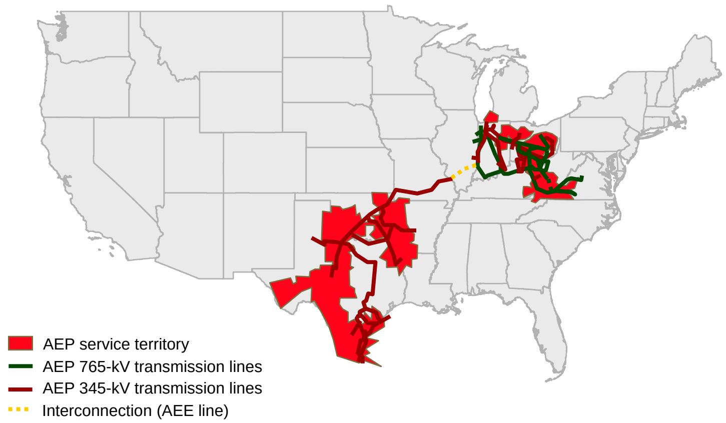
Stable financial position

- Maximization of shareholder value through regulated utility and transmission investments
- Balanced approach to cost containment and capital allocation
- Commitment to investment grade profile, prudent balance sheet, and liquidity management
- Conservative dividend payout with attractive yield

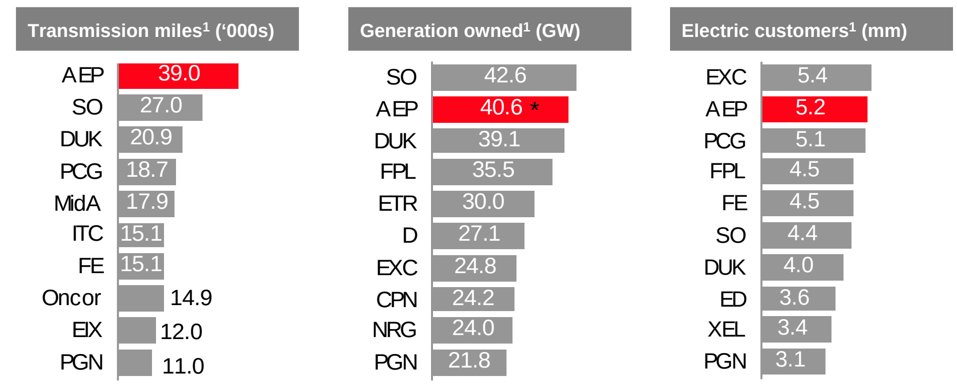
AEP AMERICAN ELECTRIC POWER

Premier Regulated Utility Platform

Overview

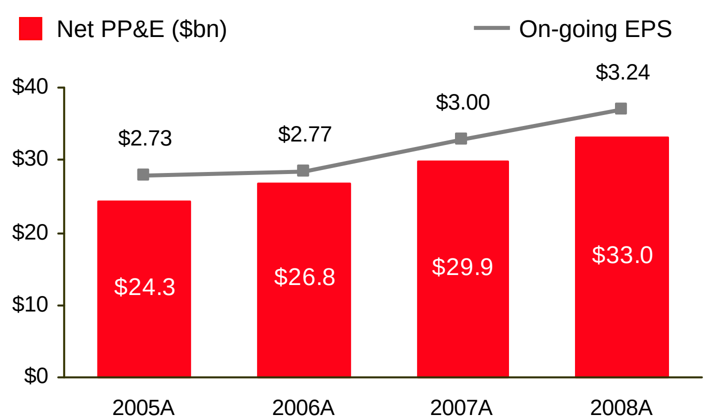


AEP's Leadership Position

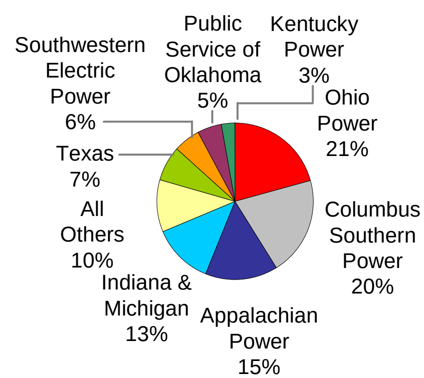


* - AEP generation includes long-term PPAs and generation under construction

Regulated Operations



- Net PP&E CAGR of 10.7% since 2005
- Earnings CAGR of 5.9% since 2005



2008 On-going Earnings = $1.3bn

- *Highly diversified regulated utility earnings contribution*

AEP AMERICAN ELECTRIC POWER

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 4516 of 9556

Energy Policy Initiatives are Core to Our Strategy

Greenhouse Gas Reduction & Regulation

- Actively engaging in CO_2 policy debate – support cap & trade with allocated credits
- Leadership position in development of carbon capture and storage technology
- Reducing carbon footprint via offsets and other measures
- Founding member of Chicago Climate Exchange

Renewable Energy

- Develop “transmission superhighway” to facilitate renewable energy projects
- Satisfy RES requirements in our jurisdictions – currently Ohio with 25% (renewables + advanced) by 2025, Texas with ~ 5% by 2015, West Virginia with 25% (renewables + advanced) and Michigan with 10% by 2015; Voluntary goal of 12% by 2022 in Virginia
- Add 2,000MW of wind capacity via long-term PPAs – 903MW achieved to-date

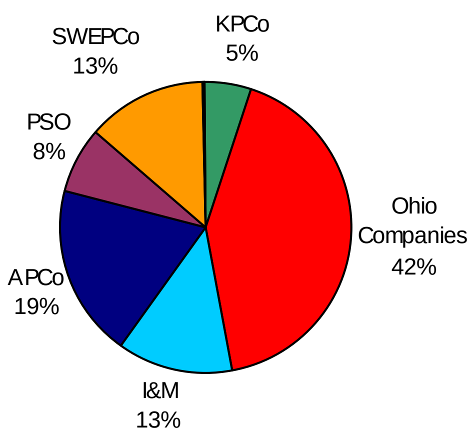
Energy Efficiency, Security & Reliability

- Develop high-voltage transmission projects to strengthen America’s power grid
- Build generation to ensure reliable supply
- Reduce 1,000MW of demand by 2012
- Reduce 2.25 million MWhs of consumption by 2012
- Diversify our fuel mix; have added 3,705MW of gas-fired capacity since 2005 and have 1,080MW under construction

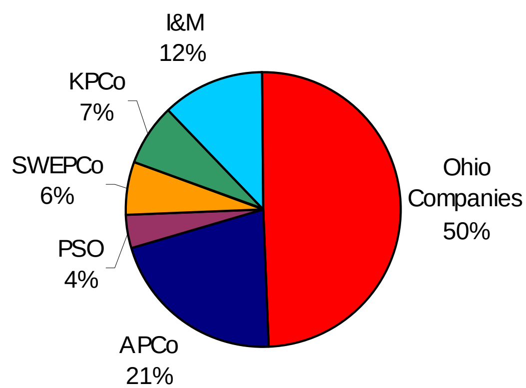
AEP AMERICAN ELECTRIC POWER

CO_2 Cost Recovery – Should Follow SO_2 & NOx

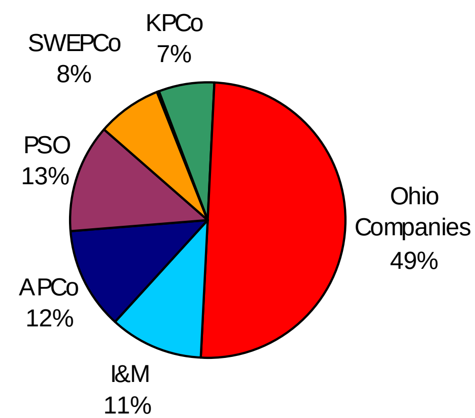
2008 AEP System CO_2 Emissions
163M tons



2008 AEP System SO_2 Emissions
637k tons



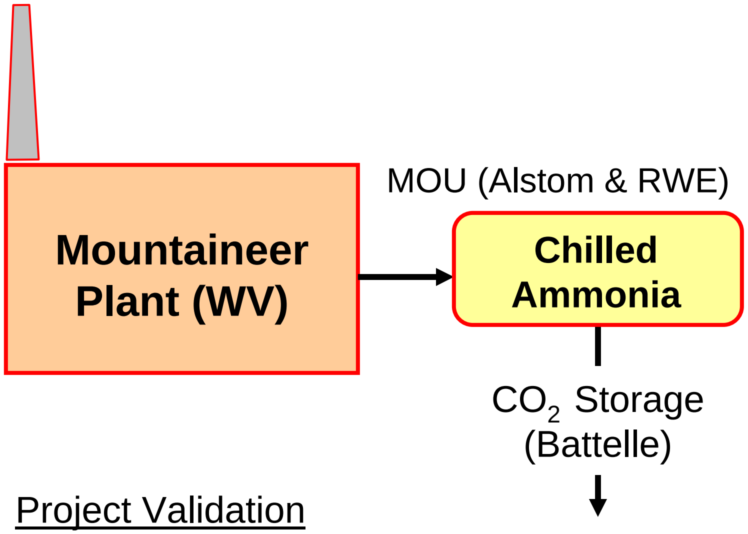
2008 AEP System NOx Emissions
248k tons



- 100% of SO_2 and NOx allowance costs currently recovered through tracker or similar mechanisms
- Prudently incurred costs associated with carbon-based taxes and other carbon-related regulations explicitly included in Ohio Fuel Adjustment Clause

17

Carbon Capture & Storage



Project Validation

- **Alstom "Chilled Ammonia" Technology**
- **20-30 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, in operation at We Energies' Pleasant Prairie Power Plant)**
- **Located at the AEP Mountaineer Plant in WV**
- **100,000 - 300,000 tonnes CO_2 per year**
- **Operations commenced September 2009**
- **Geologic storage for CO_2**
- **Underground injection control permit received in May 2009 from WV Dept. of Environmental Protection**

Represents Post-Combustion Capture

- **Conventional or Advanced Amines; Chilled Ammonia**
  - **Amine technologies are currently available in other industrial applications**
  - **Relatively low CO_2 concentration in flue gas - more difficult to capture than other approaches**
  - **High parasitic demand**
    - **Conventional Amine ~ 25-30%**
    - **Chilled Ammonia target ~ 10-15%**

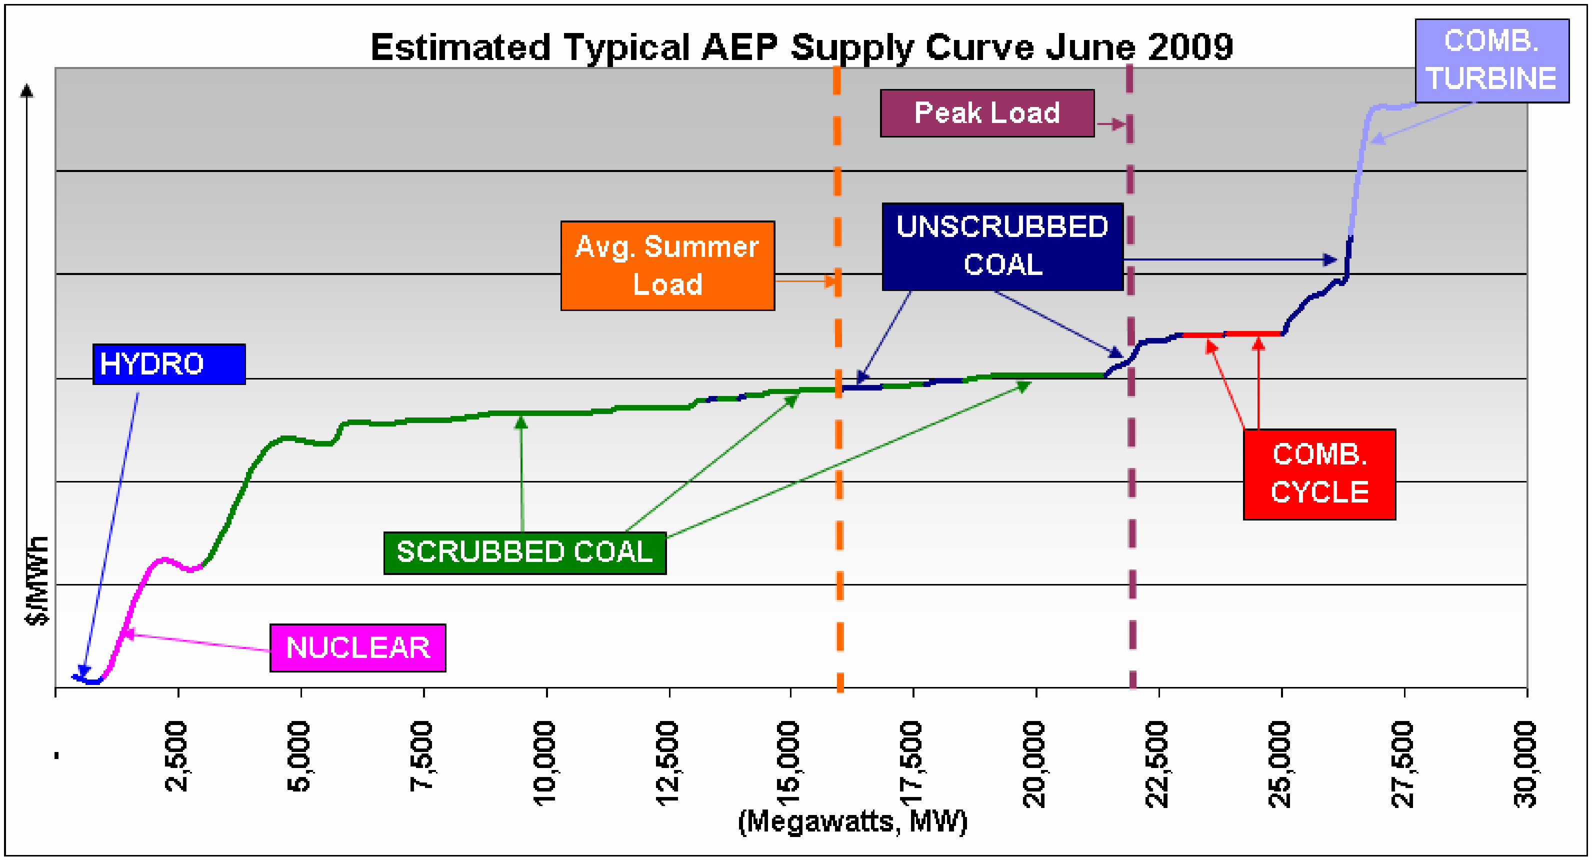
Key Issues for CCS Development in the U.S.

- **Overcoming the 'economic' hurdle**
- **High up-front capital investment**
- **Commercial demonstration at large coal-fired power plants**
- **National standards for permitting of storage reservoirs**
- **Potential institutional, legal and regulatory barriers to carbon storage**

AEP AMERICAN ELECTRIC POWER

AEP Supply Stack

- Supply stack with Cook unit 1 outage would slide the supply stack 1,009 MW to the left.
- Planned outages typically shorten supply stack in the shoulder months by several thousand megawatts.
- Shoulder periods offer the flexibility to reschedule planned outages.

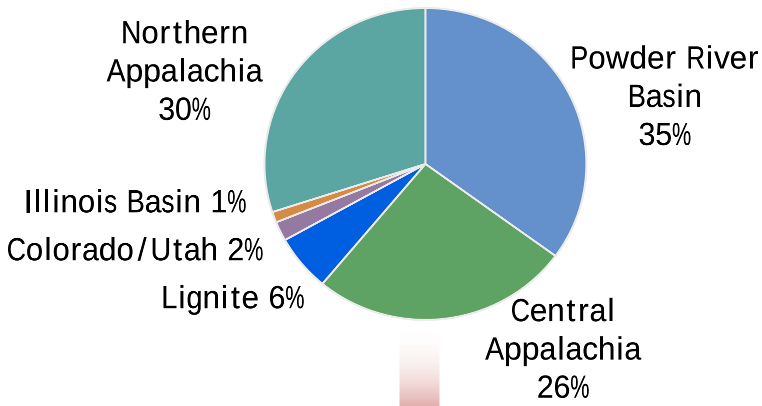


AMERICAN ELECTRIC POWER

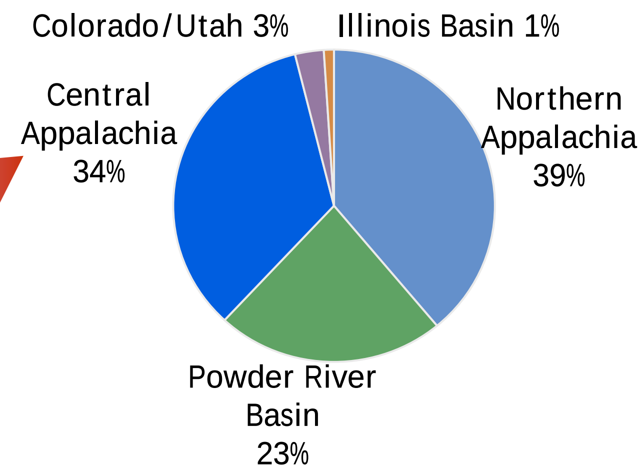
Coal Procurement - 2009 Projected

AEP burns approx. 77 million tons of coal per year

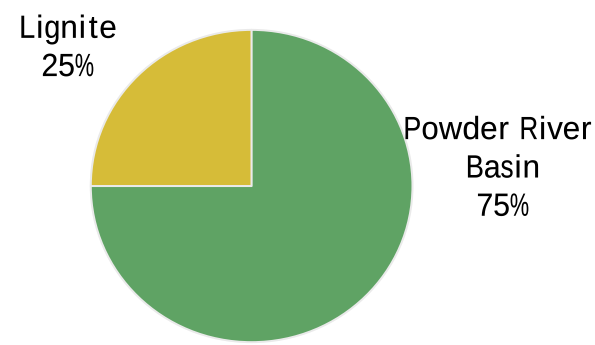
Total AEP System



AEP East



AEP West



Coal Stats:

- 100% contracted for 2009
- 94% contracted for 2010
- Avg. delivered price ~ $46.61/ton in 2008
- Approximate 10% price increase in 2009 ~ $51.00/ton

AEP AMERICAN ELECTRIC POWER

AEP AMERICAN ELECTRIC POWER

Overview of 2009 Guidance

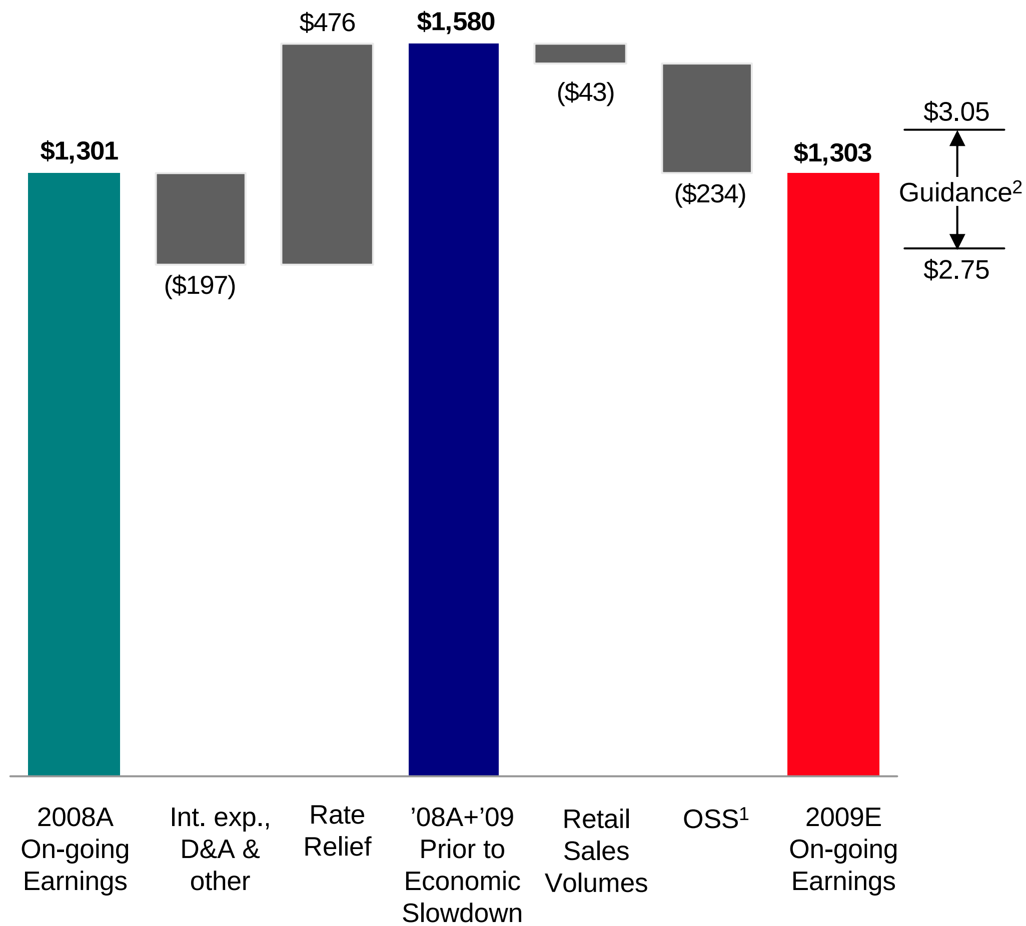
2009 Earnings Drivers:

- Positive Ohio outcome
- Rate relief - $732mm
- Economic slowdown
  - Lower OSS revenues
  - Lower loads

Long-term Earnings Drivers:

- Rate base investments
- Additional rate relief
- OSS/Retail load
- Transmission JV earnings

2008A-2009E Earnings Bridge ($mm)

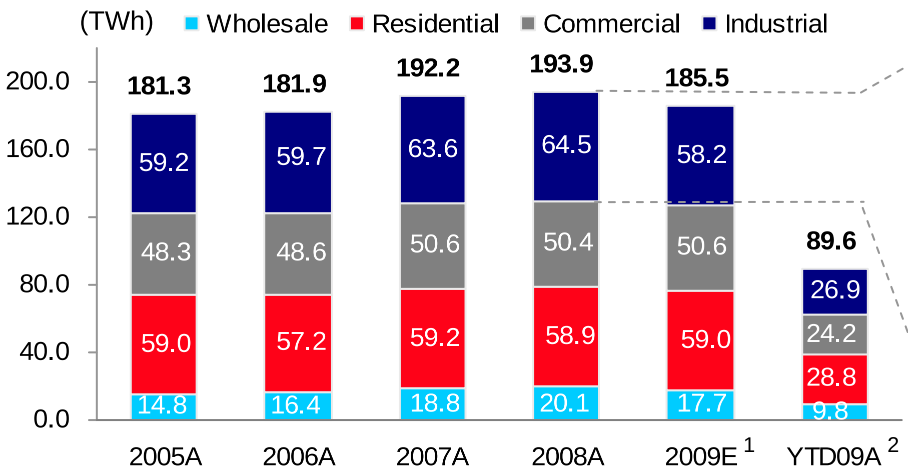


Note all items are presented after-tax
[1] Net of sharing
[2] Assumes 2009 average shares outstanding ~ 450 million

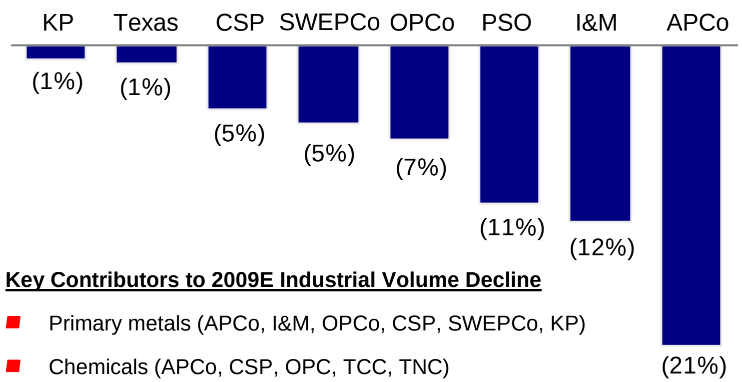
AEP AMERICAN ELECTRIC POWER

Key Drivers of 2009 Guidance: Retail Sales

Retail Load by Customer Class



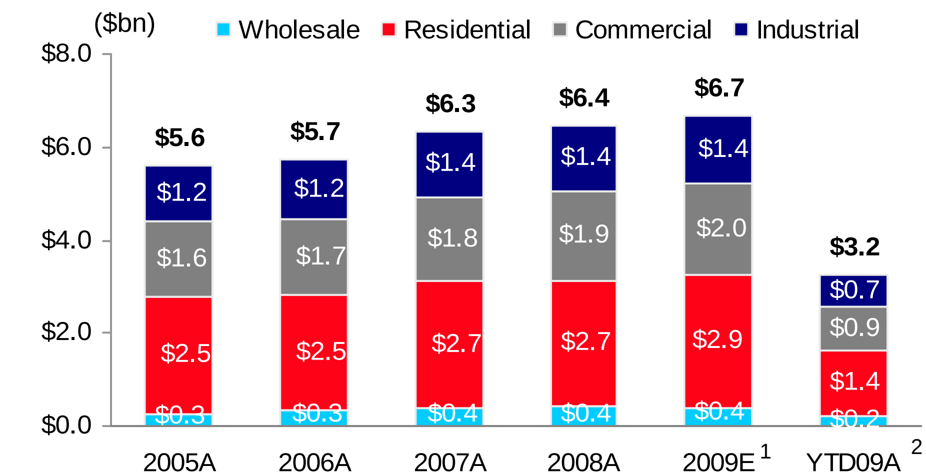
Forecast Drop in 2009 Industrial Sales

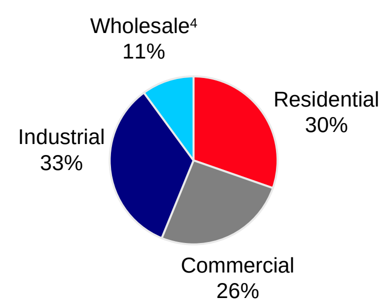


Key Contributors to 2009E Industrial Volume Decline

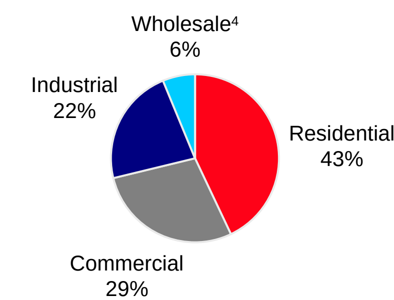
- Primary metals (APCo, I&M, OPCo, CSP, SWEPCo, KP)
- Chemicals (APCo, CSP, OPC, TCC, TNC)
- Paper (APCo, PSO, SWEPCo)
- Plastics & Rubber (APCo, CSP, OPCo, I&M)

Retail Base Revenue[3] by Customer Class





2008 Retail Load = 193.9 TWh



2008 Retail Base Revenue [3] = $6.4bn

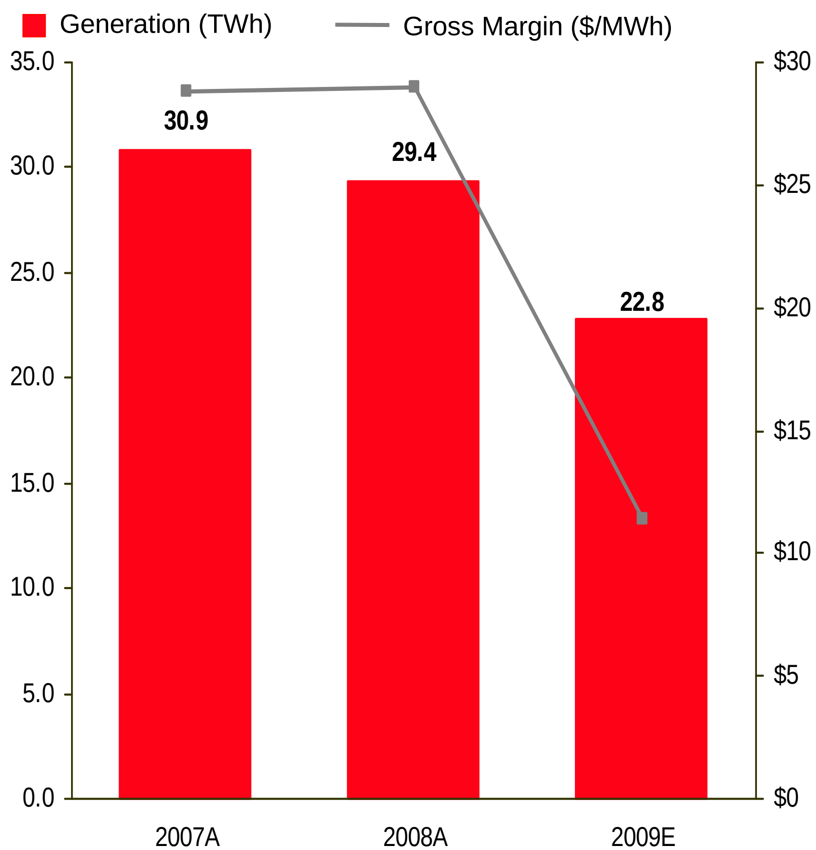
AEP AMERICAN ELECTRIC POWER

[1] 2009E assumes normalized weather
[2] YTD09A represents actual results through June 30, 2009

[3] Excludes the impact of current year rate relief, fuel over/under recovery, PJM costs and consumables
[4] Wholesale includes sales to municipal and cooperative power systems, other wholesale, and other retail sales

Key Drivers of 2009 Guidance: Off-System Sales

Off-System Sales Metrics



$ in millions		2007A		2008A		2009E
OSS Physical Sales	$	674	$	718	$	106
Oklaunion Payment		46		45		49
Marketing/Trading		170		82		105
Pre-sharing Gross Margin	$	890	$	845	$	260

Natural Gas and Central Appalachian Coal Prices

AEP AMERICAN ELECTRIC POWER

Utility Capital Expenditures Support Growth of 2 - 4%

Annual $1.8 billion capital program creates rate base growth over annual depreciation expense of $1.2 billion

	2005A	2006A	2007A	2008A	2009E	2010E	2011E
Net PP&E ($bn)	$24.3	$26.8	$29.9	$33.0	$34.5	$35.2	$35.8

Note: Capital Expenditures shown exclude AFUDC

[1] Reflects 2002-2008 average base expenditures (excluding New Generation and Environmental)

AEP AMERICAN ELECTRIC POWER

Track Record of Successful Regulatory Outcomes

Cumulative Rate Relief

	2006A	2007A	2008A	2009E	2010E	2011E
Annual rate increases, $mm	$450	$352	$527	$732	$337[1]	$159[1]

[1] $79mm and $38mm was secured for 2010 and 2011, respectively, as of August 31, 2009

Our Regulatory Approach:

Maximize utility company returns:

- Successfully secured significant rate relief
- 2009 rate relief:
  - ✓ Ohio ($404MM)
  - ✓ I&M ($52MM)
  - ✓ APCo ($58MM)
  - ✓ PSO ($74MM)
- Pending rate relief including amount requested:
  - ✓ APCo WV ($20MM – in ENEC filing)
  - ✓ APCo VA ($178MM)
  - ✓ PSO ($30MM)
  - ✓ SWEPCo AR ($54MM) TX ($75MM)
  - ✓ Others to be determined

Minimize regulatory lag:

- Active fuel adjustment clauses now in place in <u>all</u> jurisdictions
- Increased frequency of rate cases
- Employing tracking features

Strong local relationships with regulators

AEP AMERICAN ELECTRIC POWER

Overview of Ohio ESP Order

AEP OHIO - ELECTRIC SECURITY PLAN

Total Non-FAC	248.3M	131.2M	140.0M	6.2M	173.6M	3.6M	1198.7M	409.6M
Total Cash Increase	462.8M	196.8M	595.1M	234.9M	684.4M	269.4M	3263.3M	1329.5M
	Other Components		Other Components		Other Components		Other Components	
Partnership with Ohio Fund	-25.0M	-5.0M	0.0M	0.0M	0.0M	0.0M	-75.0M	-15.0M

- Revenue increases:

	2009	2010	2011
OPCo	8%	7%	8%
CSPCo	7%	6%	6%

- Fuel recovery mechanism
  - Any under-recoveries earn WACC similar to plant investment
  - Deferred fuel balances at end of ESP are amortized and recovered 2012-2018
  - Recovery of future costs of carbon regulation explicitly included in FAC

- Opportunity for distribution rate cases

AEP AMERICAN ELECTRIC POWER

Summary Rate Case Information

SWEPCo Arkansas General Rate Case

On February 19, 2009 SWEPCo filed a general base rate case with the Arkansas Public Service Commission (APSC) requesting an increase of $53.9 million. (Docket #:09-008-U) An order is expected in December 2009.

Projected Capital Structure – Company Position (12/31/08)

	% of Capitalization	Cost Rate	Weighted Return
Long-Term Debt	41.73%	6.61%	2.76%
Preferred Stock	0.12%	4.87%	0.01%
Common Equity	35.68%	11.50%	4.10%
Other Items	22.47%	various	0.13%
Total	100%		7.00%

Procedural Schedule

6/26/2009	Staff and intervenor testimony due

AEP AMERICAN ELECTRIC POWER

Summary Rate Case Information

APCo Virginia General Rate Case

On August 14, 2009 APCo filed an update to its pre-biennial base rate case, originally filed July 15, 2009 with the Virginia SCC, per the statute, for recovery of generation and distribution costs requesting an increase of $154 million. (Docket #: PUE-2009-00030) A transmission rate adjustment clause (T-RAC) was filed in conjunction with this case as base rates will no longer include rates for transmission service (Docket #: PUE-2009-00031). APCo has requested that rates in both cases go into effect at the same time.

Projected Capital Structure – Company Position (12/31/08)

	% of Capitalization	Cost Rate	Weighted Return
Short-Term Debt	3.135%	3.906%	0.12%
Long-Term Debt	54.815%	6.065%	3.32%
Preferred Stock	0.307%	4.352%	0.01%

AEP AMERICAN ELECTRIC POWER

Uniquely Positioned for Nationwide Grid Expansion

Active Projects:

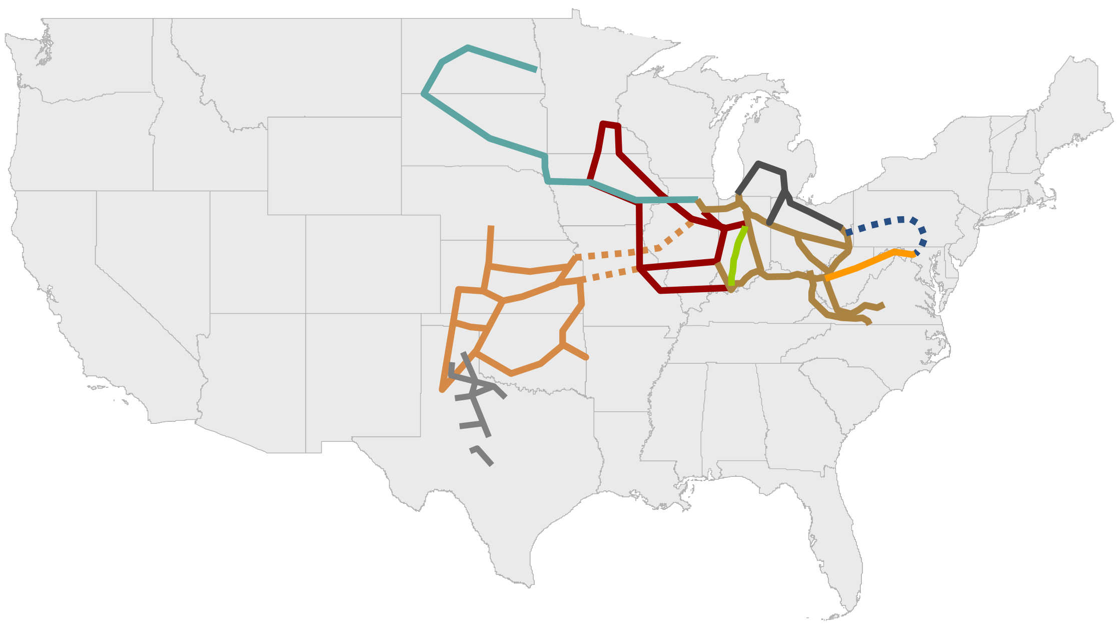
Pioneer — **COD: 2015**
- *240 miles of 765 kV*
- *Partner: Duke Energy (50%)*
- *Estimated Cost: $1 billion*
- *ROE: 12.54%*

PATH-WV — **COD: 2014**
- *275 miles of 765 kV*
- *Partner: Allegheny Energy (50%)*
- *Estimated Cost: $1.2 billion*
- *ROE: 14.3%*

Tallgrass — **COD: 2013-14**
- *170 miles of 765 kV*
- *Partners: OG&E (50%) & MidAmerican Energy (25%)*
- *Estimated Cost: $500 million*
- *ROE: 12.8%*

Prairie Wind — **COD: 2013**
- *110 miles of 765 kV*
- *Partners: Westar Energy (50%) & MidAmerican Energy (25%)*
- *Estimated Cost: $400 million*
- *ROE: 12.8%*

ETT — **COD: 2013**
- *345 kV in ERCOT*
- *Partner: MidAmerican Energy (50%)*
- *Estimated Cost: $400 million*
- *ROE: 9.96%*



Future Projects:

EHV Michigan — **COD: ~2020**
- *700 miles of 765 kV*

PJM Projects
- *Enhance existing 765/345 kV*

Hartland — **COD: ~2020**
- *1000+ miles of 765 kV*

MISO Vision Plan
- *765 kV Backbone*

SPP Overlay — **COD: 2013-14**
- *765 kV Backbone*

ETT — **COD: ~2018**
- *345 kV in ERCOT*
- *Additional CREZ spend of $750-$850 million*

AEP AMERICAN® ELECTRIC POWER

Note: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

Equity Contributions Enhance Earnings Growth to 4 – 8%

AEP is the leader

- Largest US transmission footprint
- Interstate EHV highway vision
- National renewables transmission strategy

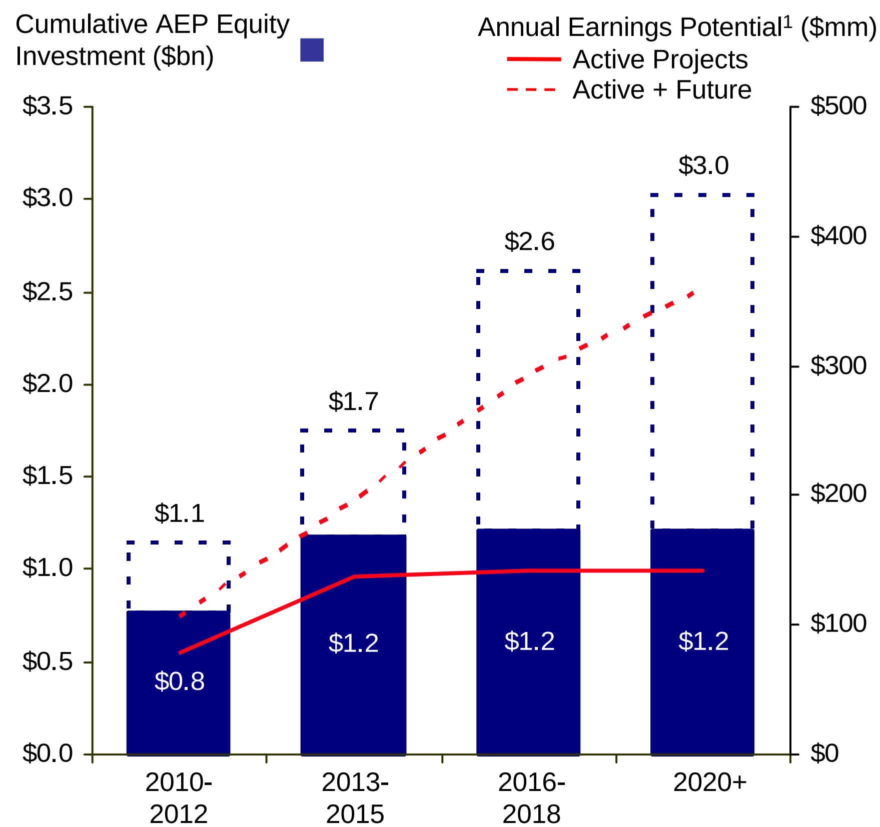
Quality projects

- 4 FERC-approved ($3.3 billion)
- Independent ERCOT transmission JV company (up to $2.6 billion)
- Robust pipeline of future 765 kV projects (up to $15 billion)

Attractive returns

- FERC incentive rates (12.5-14.3%)
- Strong cash flow with CWIP
- Long-term earnings potential of ~$140-$360 million annually[1]

Illustrative Earnings Potential of New Transmission Initiatives



[1] *Illustrative calculation assumes 50/50 debt/equity capitalization and incentive ROE of ~13.0% for FERC projects and a 60/40 debt/equity capitalization and 10.5% ROE for ERCOT projects*

Chicago Investor Meetings

June 30, 2005

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

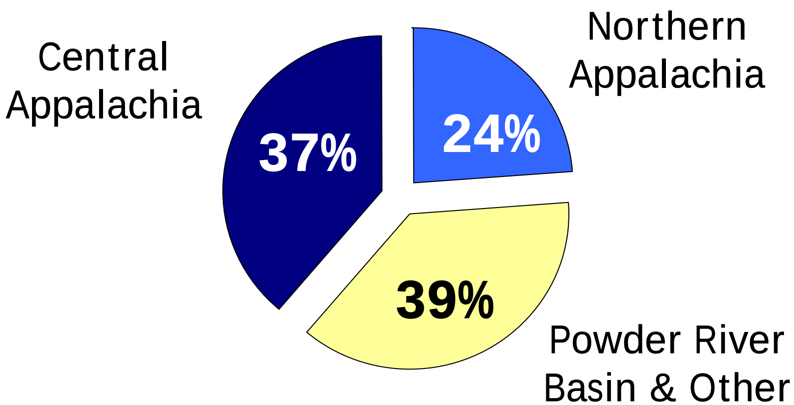
GENERATION FLEET IS SUBSTANTIAL AND LOW COST

Fuel, Emissions & Logistics

Coal Procurement

AEP SYSTEM

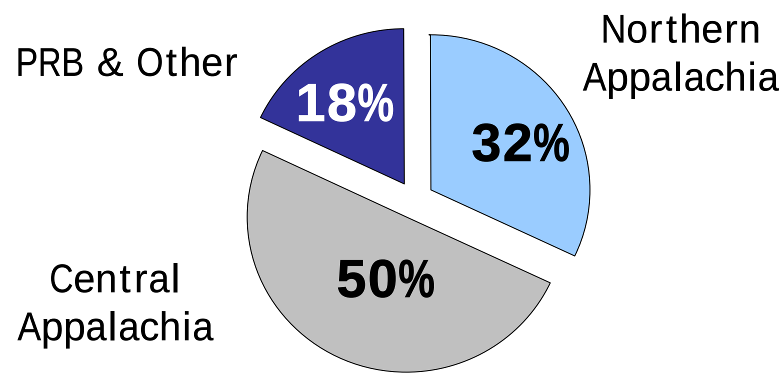


Coal Supply

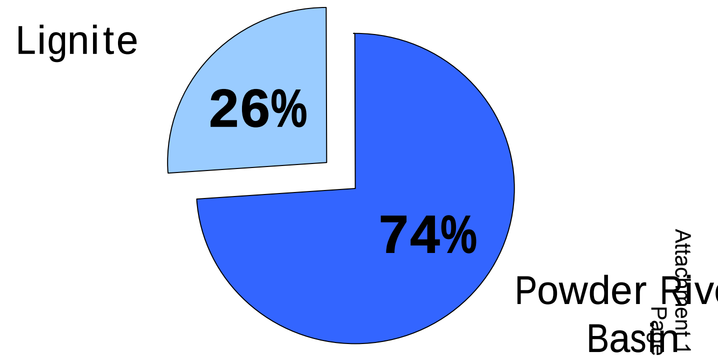
(on average)

- ➢Purchase 75 MM tons per year
- ➢Avg. delivered price ~ $28.50/ton in 2004
- ➢Essentially 100% purchased for 2005
- ➢Approximately 10% price increase in 2005

EASTERN SYSTEM

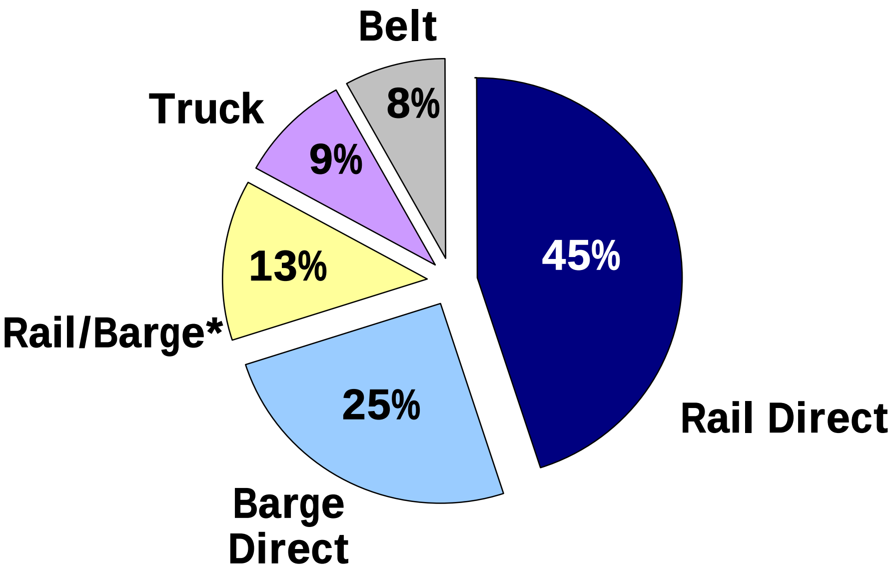


WESTERN SYSTEM

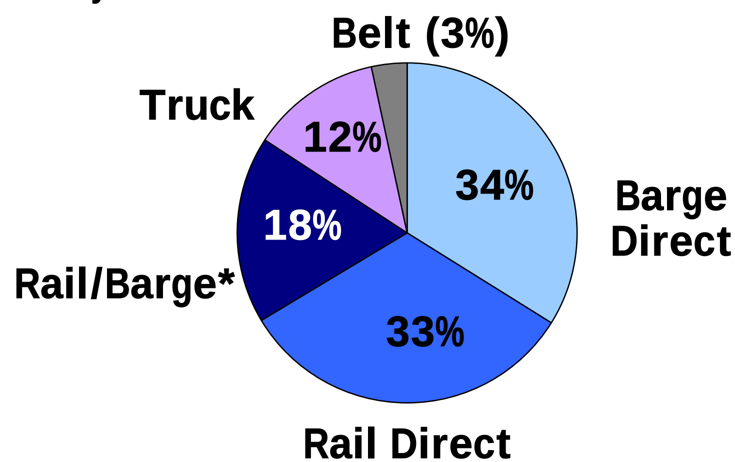


Coal Delivery Mix

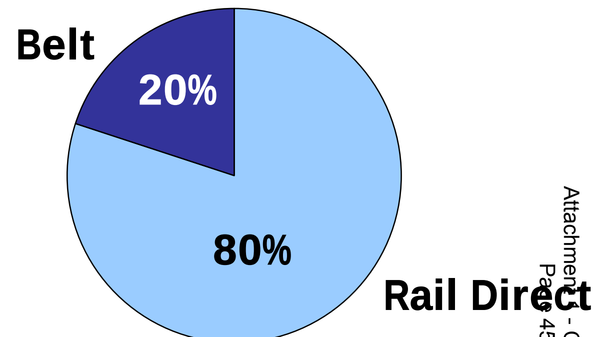
AEP SYSTEM
DELIVERY MODE DIVERSITY
Jan-May 2005 Actual



EASTERN SYSTEM
Jan-May 2005 Actual



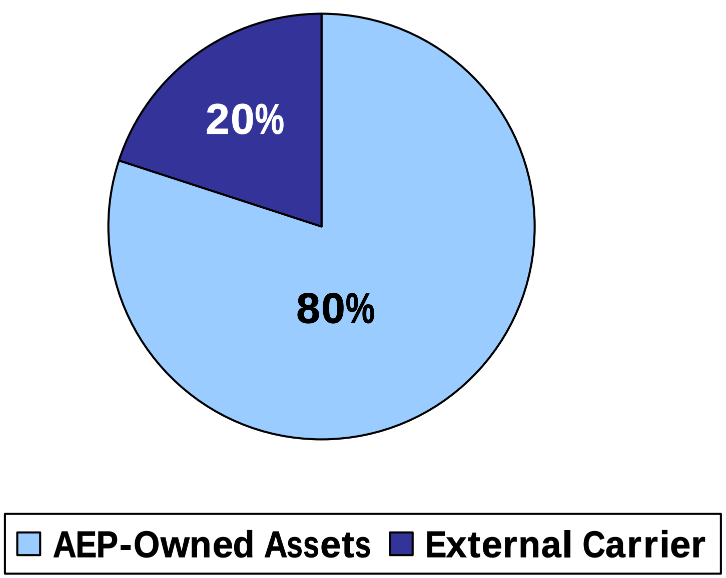
WESTERN SYSTEM
Jan-May 2005 Actual



* Coal delivered to AEP plants transported through combination of rail and barge

AEP's Coal Transportation Assets

Coal Transportation to AEP Plants*
Jan-May 2005 Actual



* Represents close approximations

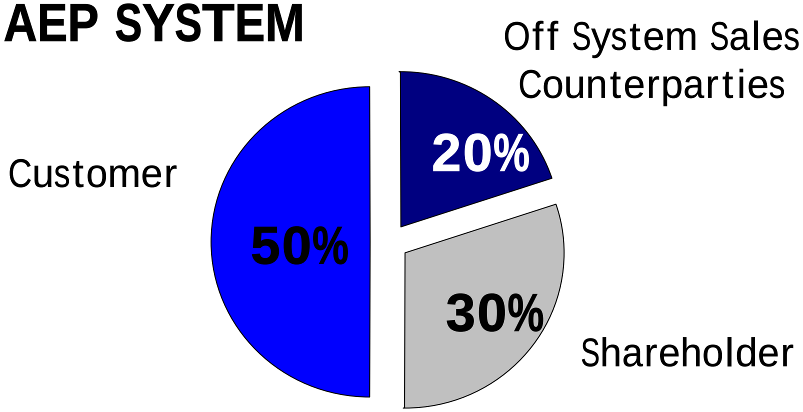
AEP's substantial coal transportation assets include:

- 7,065 railcars
- 2,230 barges
- 53 towboats
- 1 active coal handling terminal (20 million tons of annual capacity)

AEP'S TRANSPORTATION ASSETS PROVIDE FLEXIBILITY IN A CONSTRAINED DELIVERY ENVIRONMENT

Fuel Recovery

AEP SYSTEM

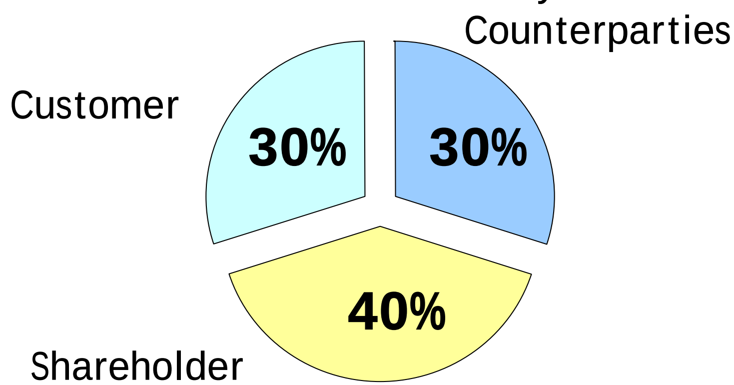


Fuel Cost Recovery
(on average)

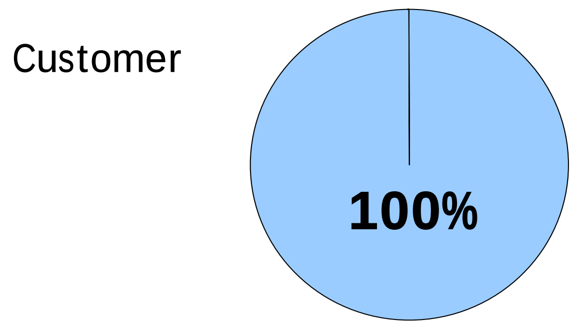
- Fuel recovery varies by jurisdiction
- 70% of fuel cost is recoverable across the AEP System
- Active Fuel Clause Jurisdictions:

AEP EAST: AP-VA, I&M, KGP, KP
AEP WEST: PSO, SWEPCO

EASTERN SYSTEM



WESTERN SYSTEM



KPSC Case No. 2011-00401

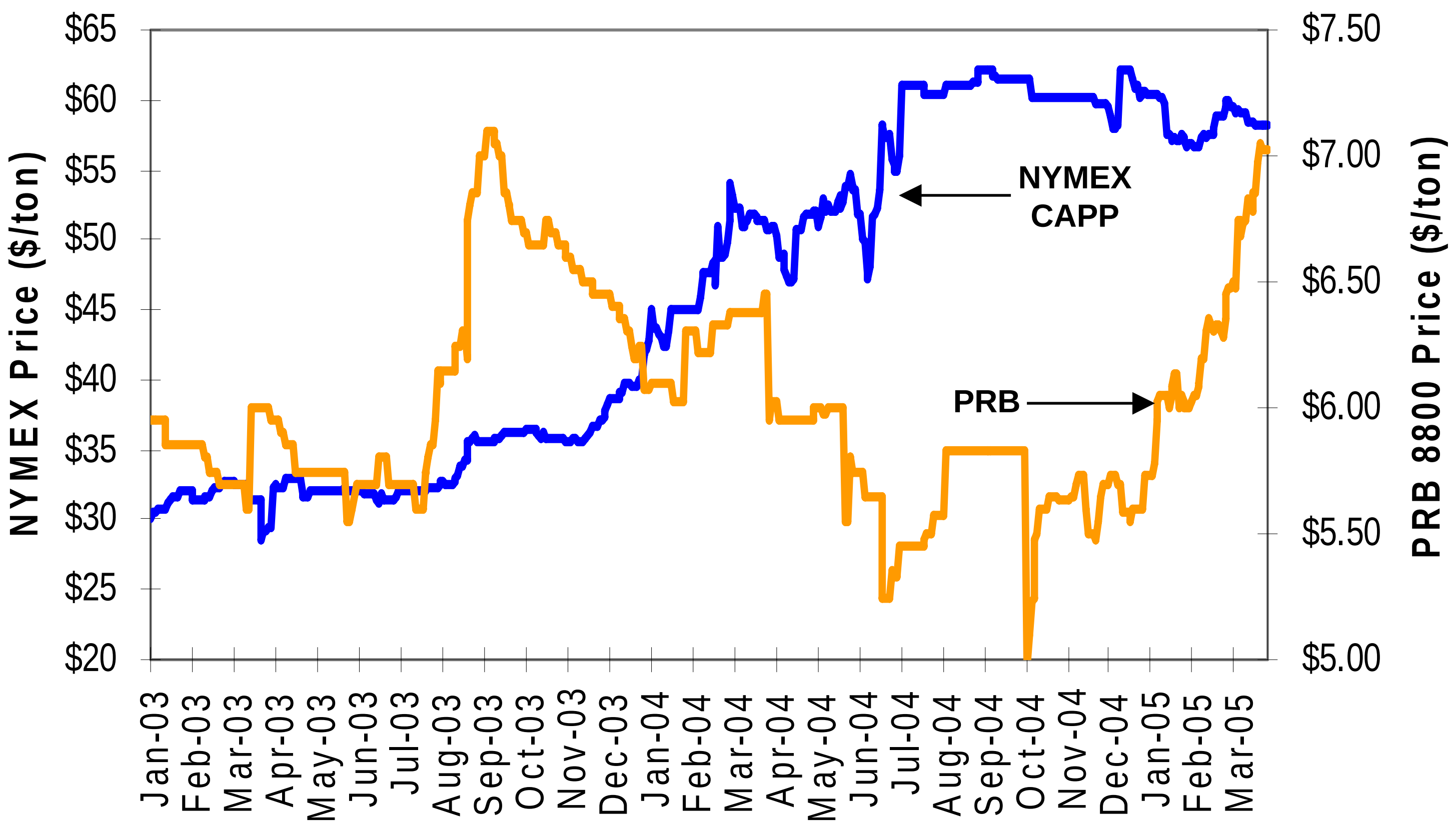
Page 4549 of 9556

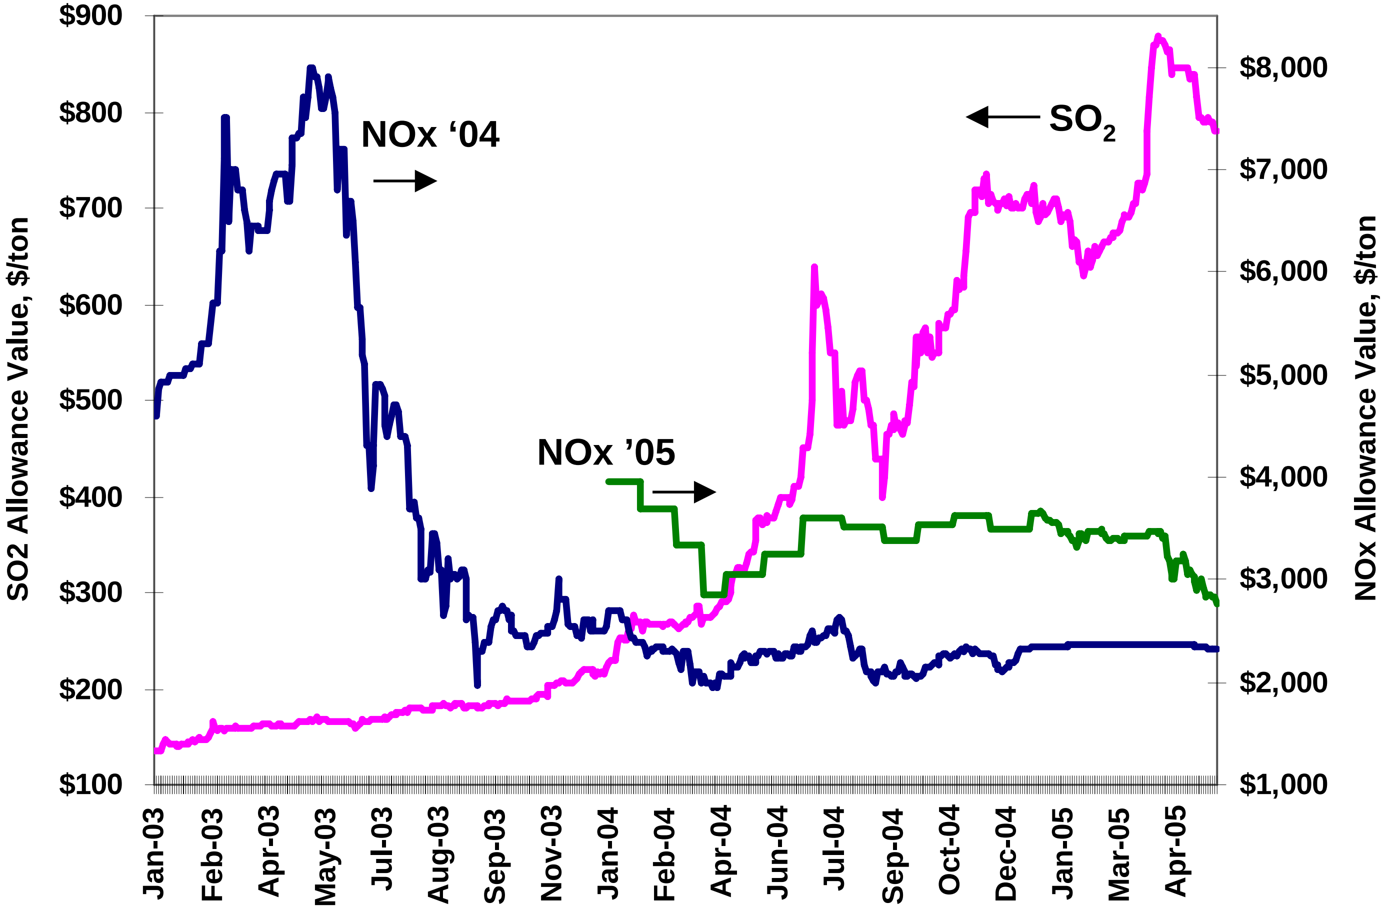
Coal Markets

The tale of two markets – one with labor, permitting and capacity constraints (CAPP) and the other with transportation bottlenecks and limited “immediate” substitution capability (PRB) but gaining strength



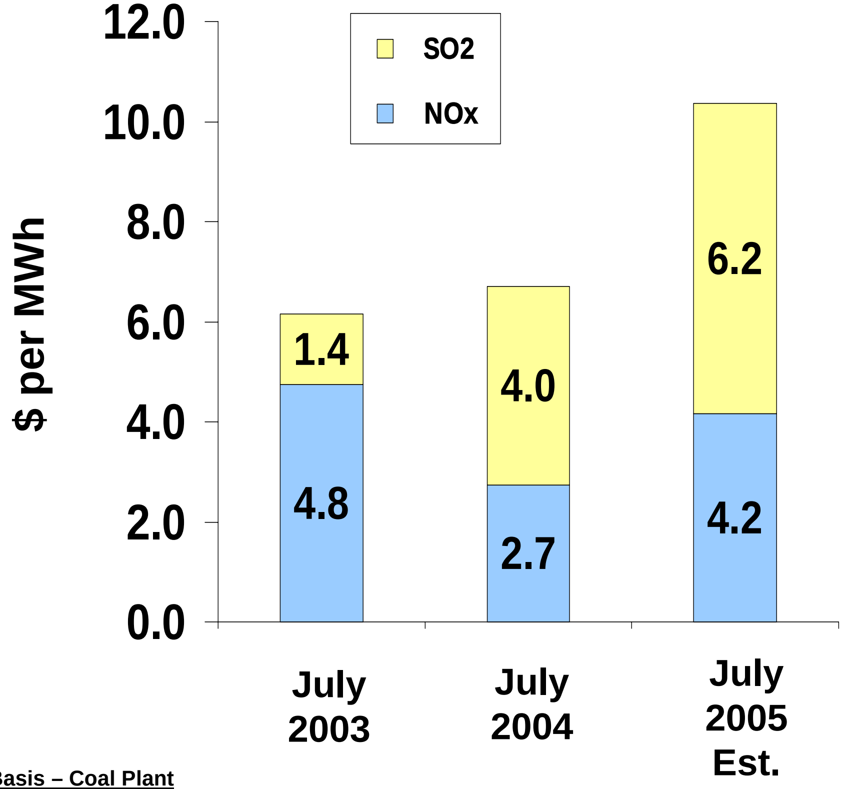
Emission Allowance Prices

Allowance prices for SO_2 and NOx have been extremely volatile since the beginning of 2003



Market Value vs. Inventory Cost

Profile of Uncontrolled Power Plant exposed to Market Value of Emission Credits



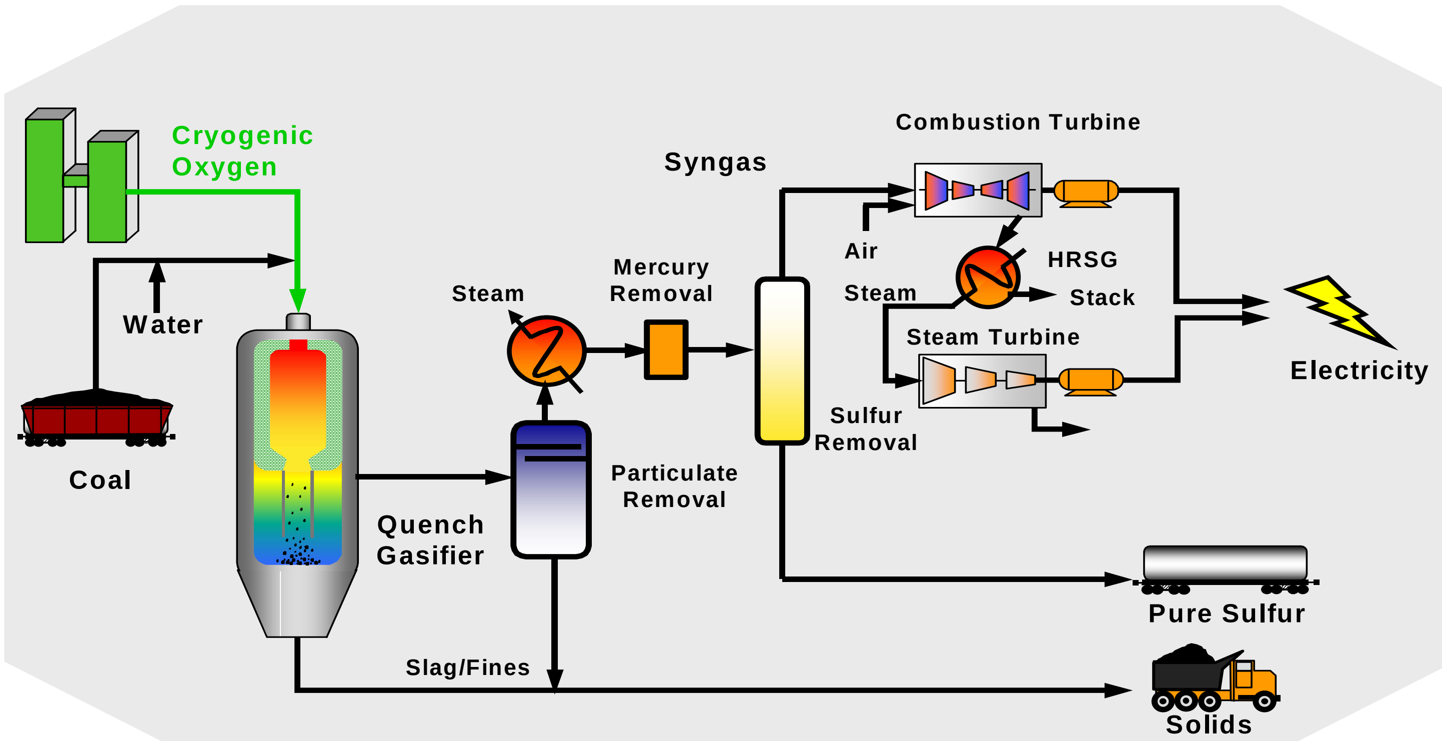
Basis – Coal Plant
9.5 MMBtu/MWh Heat Rate
0.25 lbs NOx/mmBtu
1.67 lbs SO_2/mmBtu

AEP has managed its exposure to rising emission allowance costs

- Inventory cost of emission credits is low
- Effective hedging program for SO_2 allowances
- Effective capital implementation in the NOx SIP Call ($1.3 B as of YE 2004)
- Exposure in future years reduced by $3.7 B capital program and current inventory of allowances

Investing in IGCC

Looking to the Future - IGCC



162110 - GJS/CE-01/1-23-02

AEP has announced its intention to construct a commercial-scale Integrated Gasification Combined Cycle (IGCC) Plant by the end of the decade.

Investing in IGCC

	PC	IGCC	NGCC
Nominal Capacity (MW)	600	600	530
Heat Rate (BTU/kWh)	8700	8600	7200
EPC cost* ($/kW)	1290	1350	440
Total Plant cost** ($/kW)	1490	1610	475
Variable Production cost*** ($/MWh)	15	14	38
All-In Cost of Electricity (without CO_2 Capture) ($/MWh)	47	50	57
Estimated Cost of Electricity (with CO_2 Capture) ($/MWh)	76	70	91

Source: Electric Power Research Institute

* EPC includes the cost to engineer, procure and construct plant.

** Total plant cost include land, overheads, AFUDC, etc.

*** Assumes Northern App Coal @ $36/ton, no emission credits and $5.00 gas

Site Selection Considerations

- Brownfield site vs. Greenfield site
- Sufficient Space
  - Flat area with adequate construction access
  - 600 acres
- Fuel delivery options
  - Rail/barge/truck
  - Up to 4 million tons/year of coal
  - Access to water
- Transmission Line Costs
  - Distance from high-voltage lines
  - Costs for grid interconnects and stability impacts

PJM EVALUATION REQUESTED FOR 3 POTENTIAL SITES

IGCC Permitting Issues

- Air – to evaluate best available control technology (BACT)
- Wastewater – to understand wastewater streams
- US COE (Corp of Engineers) – to obtain permits for construction of river facilities
- NEPA Process – (National Environmental Policy Act)– Environmental site studies addressing wetlands, endangered species, historical artifacts

PERMIT PROCESS WILL TAKE 1 - 2 YEARS

Next Steps

2005

- Secure cost recovery plan – Summer
- Finalize site selection - Fall
- Negotiate with suppliers – Throughout 2005

- 2005—2007: Obtain permits and finalize engineering and procurement

- 2008—2009: Construct and start-up plant

AEP WILL PIONEER CONSTRUCTION OF LARGEST IGCC PLANT IN THE WORLD

Environmental

Clean Air Interstate Rule

- Rule Finalized March 2005
- CAIR designed to address the contribution of regional emissions to downwind $PM_{2.5}$ & 8-hour Ozone non-attainment
- CAIR reductions from 2003 emissions: ~73% SO_2; & ~61% NO_x
- Reductions occur in phases: Phase I (2009); Phase II (2015)
- CAIR established three Cap & Trade Programs:

1. Annual SO_2 Trading Program
2. Annual NO_x Trading Program
3. Separate Ozone-Season only NO_x Trading Program

CAIR Applicability to AEP

- AEP-East States & Louisiana subject to all three trading programs
- Arkansas subject only to the Ozone-Season trading program
- Texas subject to only the Annual NO_x & SO_2 trading programs
- CAIR does not apply to Oklahoma

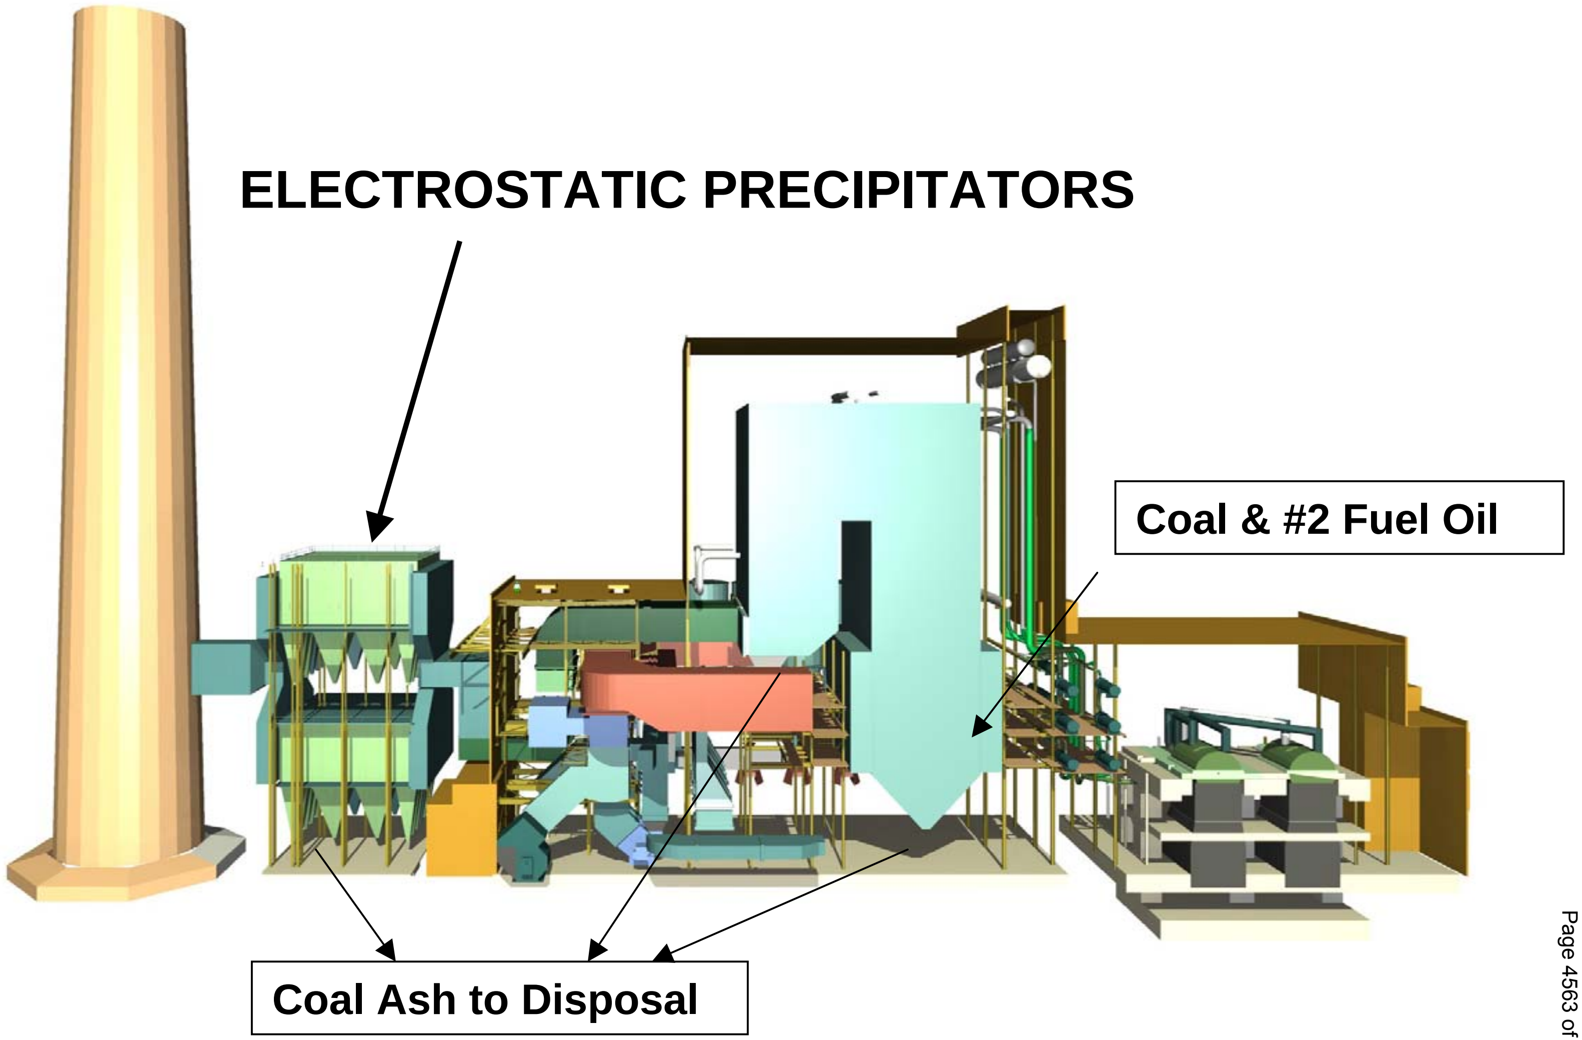
AEP WILL HAVE TO INSTALL ADDITIONAL SCR AND FGD SYSTEMS IN ORDER TO MEET THE EMISSION REDUCTIONS REQUIRED BY CAIR

Mercury Rule

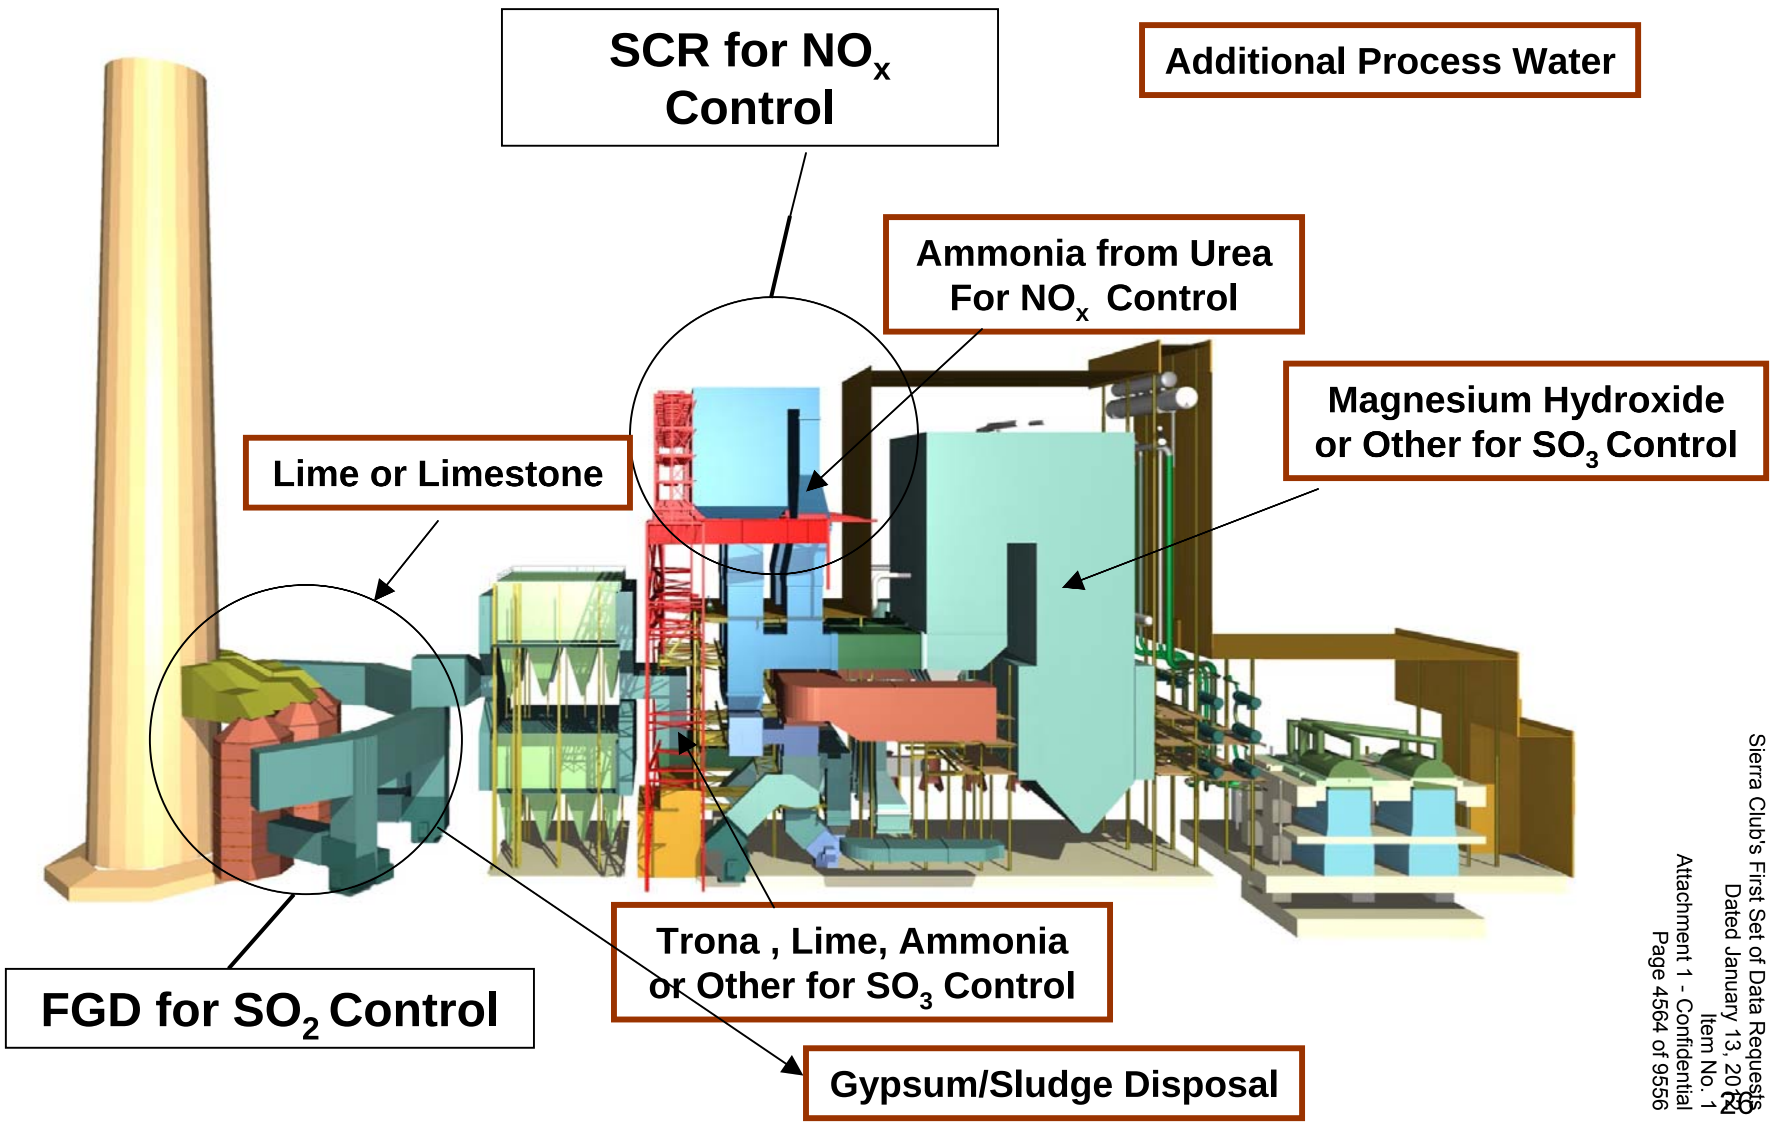
- Rule Finalized March 2005
- Designed to reduce mercury emissions by ~70% nationwide from electric utilities
- Reductions occur in phases: Phase I (2010); Phase II (2018)
- Establishes a Cap & Trade structure to achieve mercury reductions

AEP WILL ACHIEVE SOME MERCURY REDUCTIONS AS A CO-BENEFIT OF SCR AND FGD SYSTEMS, BUT MERCURY SPECIFIC CONTROL EQUIPMENT WILL BE NEEDED ON SOME UNITS

Pulverized Coal Unit as Built in 1970s

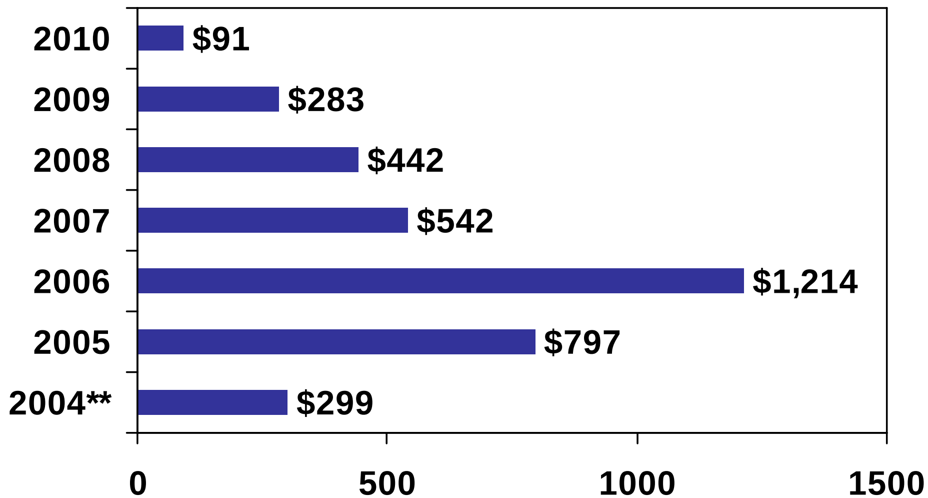


Pulverized Coal Unit Today Showing Retrofits & New Feedstock(s)



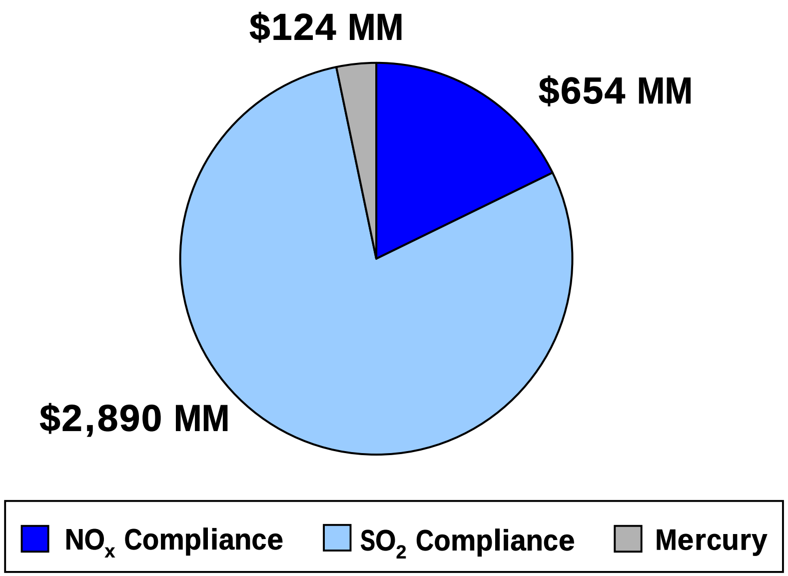
Environmental Investment: $3.7 Billion Through 2010

Environmental Capital Investment*



*Environmental investment for NOx, SO_2 , & Hg purposes
** Actual investment level in 2004

Compliance Allocation

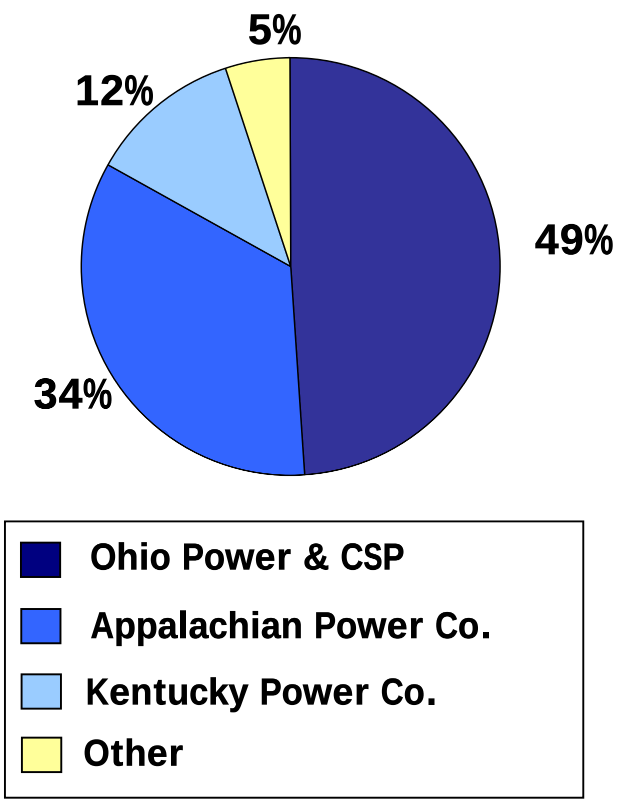


Current Programs	Future Programs
$1.9 Billion:	**$1.8 Billion:**
$0.6 billion for NOx	**$1.7 billion for SO_2**
$1.2 billion for SO_2	**$0.1 billion for Other**

MAJORITY OF 2005 & 2006 DOLLARS WILL BE INVESTED IN OHIO & APCO

Environmental Spending by Company

Projected Environmental Investment Allocation



Funding the Environmental Investments

- **Ohio**: 49% ($1.8 billion)
  - Rate stabilization plan annual increases at CSP – 3% and OP – 7% beginning in 2006 through 2008
- **Virginia/West Virginia**: 34% ($1.2 billion)
  - VA: Environmental cost recovery mechanism/two rate case opportunities through 2010
  - WV: General rate case filing
- **Kentucky**: 12% ($433 million)
  - Surcharge mechanism

Environmental Investment

Total	**1939**

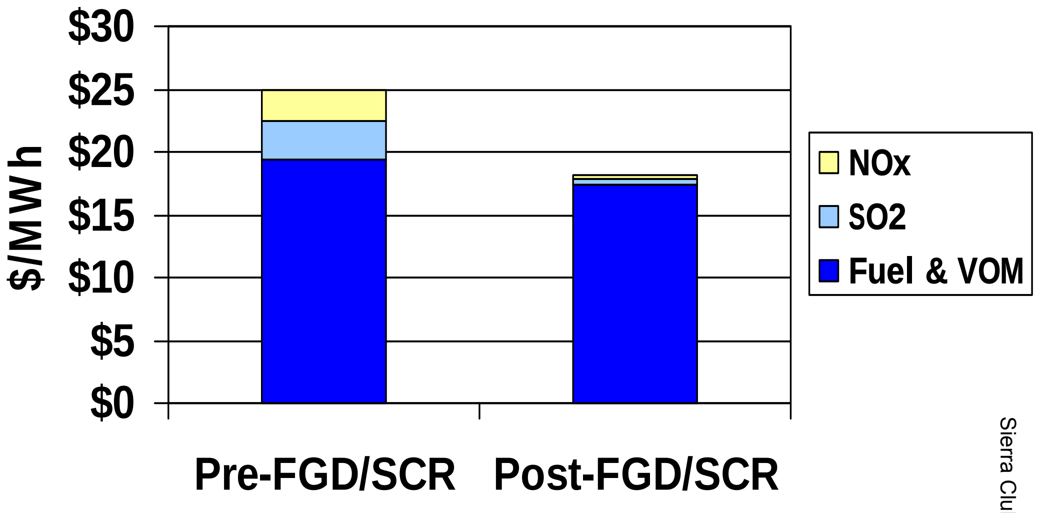
2005 - 2007

Note: MW capacity shown represents AEP's owned capacity only

Low Cost Production Supports Investment

- ➢ Lowers exposure to high cost emission allowances
- ➢ Creates opportunity to burn wider variety of lower cost fuels
- ➢ Improves baseload operation, (higher capacity factor, higher margin)
- ➢ All-in cost of electricity, including FGD/SCR investment, remains low

Typical Pulverized Coal Plant
Comparison of Variable Production Cost
Pre- and Post- FGD/SCR (future view)*



* Assumes annual NOx program

AEP WILL REMAIN THE LOW COST PRODUCER FOLLOWING COMPLETION OF ENVIRONMENTAL RETROFIT PROJECTS

Regulatory Overview

Managing the Regulatory Process

- **Current Regulatory Activity**
  - TCC Stranded Cost Recovery
  - Louisiana Rate Review
  - FERC Transmission Rate Case
- **Planned Regulatory Activity (2005-2007)**
  - General Rate Cases in all AEP East jurisdictions to seek recovery of investment:
    - IN, KY, MI, TN, VA, WV

BRING CASH IN THE DOOR TO COVER CAPITAL EXPENDITURES & GROW EARNINGS THROUGH ADDITIONS TO THE ASSET BASE

Components of TCC's Net True-up Regulatory Asset

	31-Mar-05		31-Dec-04	
	(in millions)			
Stranded Generation Plant Costs	$	898	$	897
Net Generation-related Regulatory Asset		249		249
Unrefunded Excess Earnings		(6)		(10)
Net Stranded Generation Costs		1141		1136
Carrying Costs on Stranded Generation Plant Costs		205		225
Net Stranded Generation Costs Designated for Securitization		1346		1361
Wholesale Capacity Auction True-up		483		483
Carrying Costs on Wholesale Capacity Auction True-up		91		77
Retail Clawback		(61)		(61)
Deferred Over-recovered Fuel Balance		(215)		(212)
Net Other Recoverable True-up Amounts		298		287
Total Recorded Net True-up Regulatory Asset	$	1,644	$	1,648

Carrying charge calculated using pre-tax cost of capital of 11.79%

Debt Component: 8.12% - $296 million recognized as income thru 3/31/05

Equity Component: $154 million to be recognized in income as collected

CARRYING CHARGES FOR 2005 EXPECTED TO BE $87 MILLION

Regulatory Matrix – East

Ohio (Restructured)
- Unbundled rates for default customers frozen until 12/31/2005
- Pursuant to RSP Plan approved by PUCO 1-26-05:
  - Distribution rates in effect at December 31, 2005 are frozen, with certain exceptions, until the end of 2008.
  - Institute for 2006-2008 a non-bypassable distribution rider for provider of last resort (POLR) costs.
  - CSP ”G” rates to increase 3% per year (2006-2008).
  - OP “G” rates to increase 7% per year (2006-2008).
  - Transmission rates can upon filing reflect change in RTO costs.
- No active fuel clause
- Application for IGCC plant recovery filed on 3-18-05, Hearings scheduled to begin 8-8-05.

Virginia (Restructured)
- Capped rates for default customers frozen through end of 2010
- Capped rates can be adjusted by two rate cases prior to the end of 2010 and incremental environmental and reliability cost recovery mechanisms
- Active annual fuel clause

West Virginia (Regulated)
- Base rates not frozen
- Annual ENEC proceedings have been suspended, the factor is currently fixed at pre-2000 levels.
- No active fuel clause

Kentucky (Regulated)
- Base rates not frozen
- Fuel clause, adjusted monthly
- Environmental surcharge costs are adjusted monthly for approved environmental compliance plan
- Rockport Unit Power Supply Agreement extension through 12-07-2022 was approved by FERC & KPSC in December 2004

Michigan (Restructured, but Regulated)
- Base rates not frozen.
- Active annual fuel clause.

Indiana (Regulated)
- Base rates are frozen and fuel cost recovery factors are capped at increasing rates through June 30, 2007.

Tennessee (Regulated)
- Base rates not frozen
- Automatic fuel clause, adjusted monthly

AEP®

Regulatory Matrix - West

Texas (Regulated)
- SWEPCO-Texas retail competition delayed until at least 2007
- Bi-annual fuel clause adjustment opportunity

Texas (Restructured)
- TCC stranded cost true-up filing in May 2005. ($2.4 billion true-up amount requested) Hearing in October.
- TCC wires rate case PUCT approved affiliate transaction settlement in June 2005. Written order expected in July 2005. Final order will result in slight rate decrease with a positive earnings impact.
- TCC final fuel reconciliation (July 98-Dec. 01) order on rehearing issued in June 2005 updating rate case expenses. TCC will appeal decision.
- TNC true-up order approved in April 2005 (retail clawback and fuel over-recovery only). No adjustments to revised amounts filed by TNC.
- TNC final fuel reconciliation (July 00-Dec. 01). Final order received October 18, 2004. Appeals filed in state and federal courts in Dec. 2004.

Oklahoma (Regulated)
- On 6-3-05 PSO file to increase its Reliability Enhancement Plan annual spending to a $27.21 million level (up $15.4 million) pending OCC approval.
- On 5-2-05 the OCC issued an order approving a settlement agreement in this general rate case which included a $6.9 million annual revenue reduction, offset by changed depreciation rates and deferral recoveries, changed the fuel clause from a quarterly to annual factor, and made permanent an $11.8 million annual system reliability rider.
- 2001 Fuel review case
  Hearings scheduled for Sept. 2005. Scope expanded to cover 2002-2004 margin allocation issue.
- 2003 Fuel review case
  Scope has been expanded to include a prudence review.

Louisiana (Regulated)
- Base rates not frozen
- Currently under a merger required financial review
- Fuel clause, adjusted monthly

Arkansas (Regulated)
- Base rates not frozen
- Fuel clause, adjusted annually

KPSC Case No. 2011-00401

Ohio Rate Stabilization Plan Recap

Summary of Impact (Columbus Southern Power & Ohio Power):

	POLR Rider	Revenues & POLR Rider*			Incremental Cash			
Rate Stabilization Plan	**2005**	**2006**	**2007**	**2008**	**2005**	**2006**	**2007**	**2008**
Escalation of Generation Rate	0	83	173	271	0	83	173	271
POLR Rider/Recovery of RTO Costs***	21	0	0	0	0	7	7	7
POLR Rider/Return on Environmental Additions	44	26	26	26	0	41	41	40
Total RSP Impact	**65**	**109**	**199**	**297**	**0**	**131**	**221**	**318**
Pre-Existing Electric Transition Plan								
Elimination of 5% Residential Generation Credit**	0	25	25	26	0	25	25	26
Recovery of RTO costs***	0	29	29	29	0	29	29	29
Total ETP Impact	**0**	**54**	**54**	**55**	**0**	**54**	**54**	**55**

* Incremental over 2004 base year

** Elimination of 5% credit is per Statute, and part of pre-existing ETP, not the RSP

*** Recovery of administrative RTO costs, net congestion fees and ancillary services permitted in pre-existing ETP, but the RSP allows for recovery of 2005 costs as well

AEP WILL STILL HAVE AMONG THE LOWEST RETAIL RATES IN OHIO

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation, including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance, resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events, our ability to recover through rates the remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives and evolving public perception of the risks associated with fuels used before, during and after generation of electricity, including nuclear fuel.

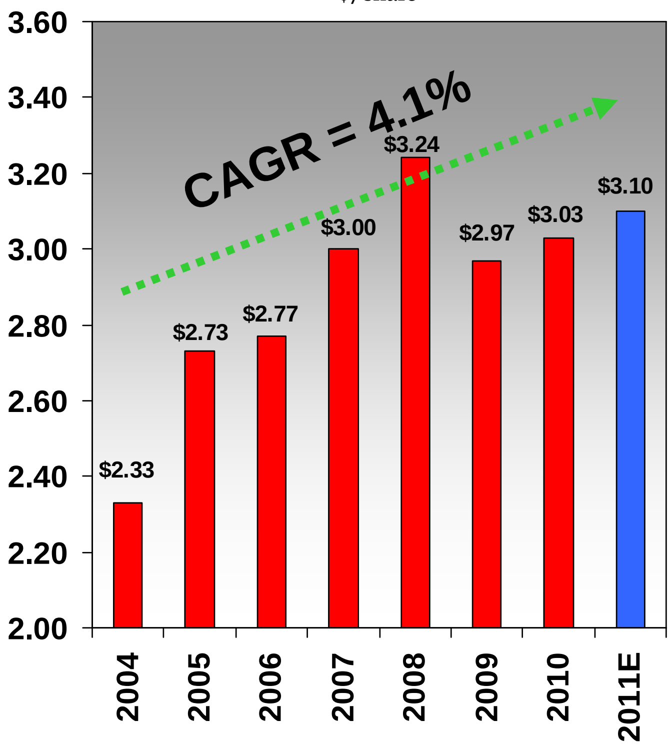
Earnings and Dividends

On-Going EPS History Since 2004

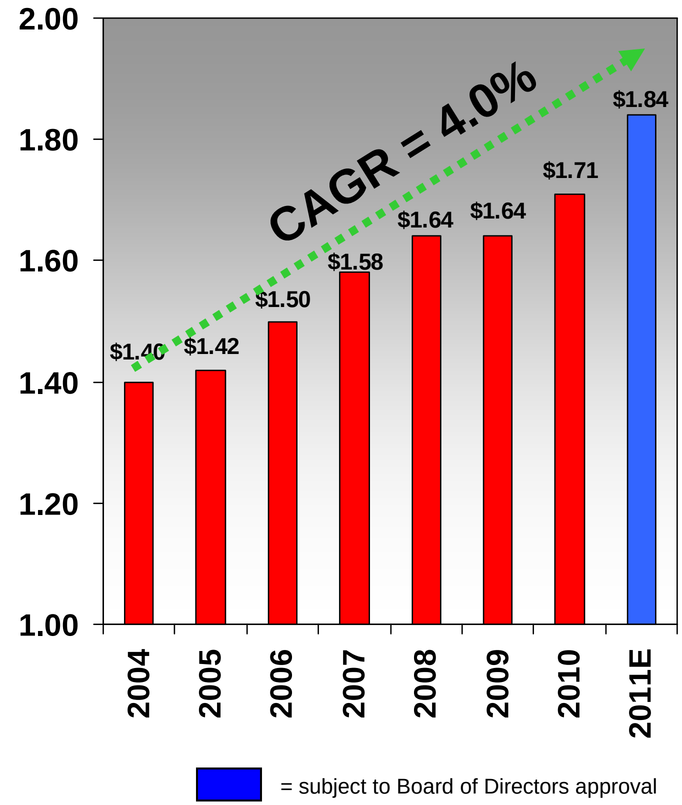
$/share



- Earnings growth largely attributed to capital investment program
- Pre-recession earnings supported by robust wholesale market activity and high power prices
- 2011 guidance range of $3.00 to $3.20 per share

Dividend History Since 2004

$/share



- Quarterly dividend <u>increased 12%</u> in 2010
- <u>404th consecutive</u> quarterly dividend will be paid June 10, 2011
- 50-60% payout ratio target
- Current yield over 4.5%

Summary Rate Case Information

AEP Ohio Distribution Rate Case – Docket #351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%. A procedural schedule from the PUCO is pending.

Summary Rate Case Information

APCo Virginia Base Rate Case – Docket #PUE-2011-00037

On March 31, 2011 APCo filed an update to its pre-biennial base rate case for recovery of generation and distribution costs requesting an increase of $75 million ($126 million total increase less $51 million associated with a potential change in depreciation rates). The requested ROE is 11.65%, including a 50 basis point adder for meeting 2010 RPS goal allowed by law.

In conjunction with this case, an environmental rate adjustment clause (E-RAC), generation rate adjustment clause (G-RAC) and a renewable portfolio standard rate adjustment clause (RPS-RAC) were filed. APCo has requested that rates in the base case, E-RAC and RPS-RAC go into effect no later than 2/1/2012 and the G-RAC on 3/1/2012.

Projected Capital Structure – Company Position (12/31/10)

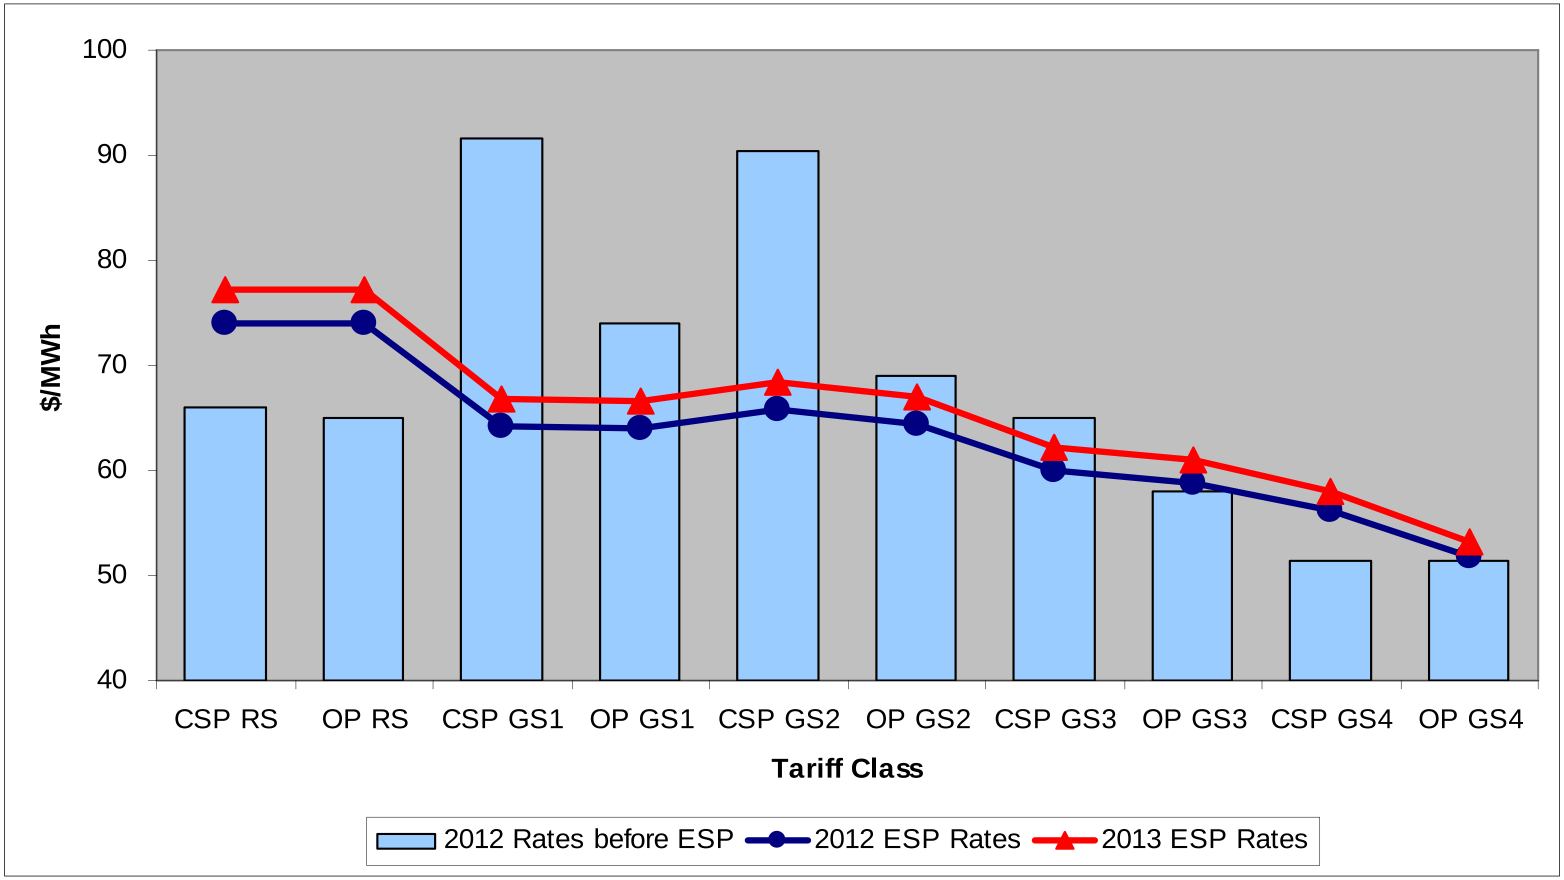
N/C* = No change from prior year

While the ESP includes a small base generation increase, the move to a market-based rate design, consistent with state policy, will result in varying impacts for different customer groups.

Price to Compare

Proposed **SSO** Rates Redesigned To Resemble Market Pricing Structures



Rates do not reflect mitigation impact of market transition rider
2012 Rates before ESP reflect current 2011 rates for generation & transmission service, adjusted to reflect full cost 2011 fuel and environmental costs.

The realignment of rates with market should provide all customers with equivalent opportunities to shop. Additionally, since the proposed design eliminates explicit demand charges, customers should be more easily able to evaluate competitive offers. To ease the rate impact that customers will experience from the realignment, we have proposed a Market Transition Rider.

Market Transition Rider – Mitigates the Initial Impact of Rate Realignment

AEP®

AEP Ohio		1.4%	2.7%	0.0%	4.2%

Illustration of Market Transition Rider on ESP Generation Rate Increases

The Market Transition Rider is a transition rider designed to facilitate the transition from AEP Ohio's current rates to market-based SSO Generation Service rates. It is a non-bypassable rider designed to limit the first and second year changes for any customer classes to uniformly transition any above or below average changes in three steps. Any revenue shortfall that is produced by limiting the increases for certain customer classes is collected from those classes whose decreases are limited.

List of ESP Riders – Existing and Proposed

Line	Rate Mechanism	Abbreviation	Bypassable	Distribution	Notes
1	**Current Riders**				
2	Universal Service Fund Rider	USF	--	Yes	
3	Advanced Energy Fund Rider	AEF	--	Yes	Expired 12/31/2010

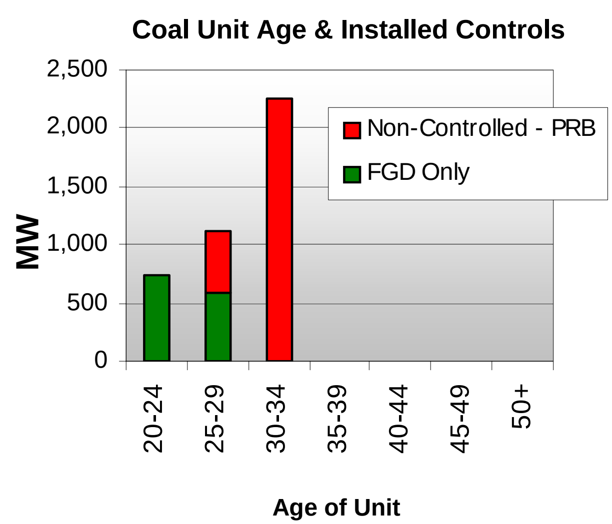
2011E - $29/ton



Turk Plant

- John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant. Located in Arkansas. SWEPCo owns 73 percent or roughly 440 megawatts of the total unit.
- The cost of the plant and related transmission is anticipated at $1.7 billion with AEP's share approximately $1.3 billion (excluding AFUDC) and will begin commercial operation in 2012.
- The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls

- $1.1 billion capitalized expenditures 3/31/11. SWEPCO's contractual commitments $260MM.
- Third party owners include: Arkansas Electric Cooperative Corp. (12%), East Texas Electric Cooperative (8%), and Oklahoma Municipal Power Authority (7%)

Pending EPA Regulations

TRANSPORT RULE

- Proposed Transport Rule (July 2010) limits utility SO_2 and NOx emissions
- SO_2 and NOx subject to caps in 2012, with further SO_2 reductions required in most Eastern states by 2014
- Major concerns with the proposed rule:
  - Not enough time is provided for environmental control installations (i.e. FGD/SCR)
  - EPA costs of retrofitting units are grossly underestimated/ other incorrect assumptions used (though EPA has since modified some of these assumptions)
  - Rule does not account for recent improvements in air quality
  - Inability to trade and bank allowances effectively

MERCURY AND HAP MACT

- Proposed rule issued in March 2011
- Final HAP regulations must be issued by November 2011
  - Maximum Achievable Control Technology (MACT) standards for Hg, other metals, and acid gases, combustion practices for organics
- Compliance Required 3 Yrs. After Final Rule, EPA could grant a 1 year extension
- Very little flexibility in the proposal; opportunity to average across a plant and limited sub categorization
- MACT could require FGD or DSI for acid gases and/or baghouses with activated carbon injection for Hg and metals.

COAL ASH RULE

- Draft coal ash disposal rules issued in May 2010
- EPA proposed two different regulatory designations:
  - “Non-hazardous”, solid waste - action required by ~2017
  - “Special” hazardous waste - action required by ~2018-2020
- AEP supports Subtitle D Prime Option of RCRA (solid waste NOT hazardous)
- AEP capital cost of ~$4 billion (including AFUDC) for solid waste option
- “Hazardous” option could cost DOUBLE this amount

316b RULE

- EPA issued proposal March 28, 2011
- Addresses impingement and entrainment of aquatic species
- Proposes upgraded intake screens for impingement
- Suggests cooling towers as an effective technology for entrainment, but defers the decision until site-specific study is conducted
- Cost impact very uncertain at this time

The cumulative effect of the proposed rules is not achievable in the allowed timeframe.

AEP Coal Fleet Assessment

2012 – 2020

Transmission Investment Strategy

- **Near-Term Investment** – Electric Transmission Texas (ETT) secures near term investment opportunities, allowing AEP to invest in the large, growth-oriented Texas transmission market. Total capital expenditures of $3 billion with a 9.96% ROE.

- **Mid-Term Investment** – Seven wholly-owned transcos allow for expansion and growth within AEP's existing utility footprint through an efficient recovery mechanism. Will spend $160 million in 2011 and more than $350 million in 2012. ROE is in the 11.20%-11.49% range.

- **Long-Term Investment** – Joint ventures provide opportunities for longer-term growth outside of AEP's existing utility footprint with forward looking formula rates, reasonable ROEs and FERC incentives where appropriate.

Transmission has a diversified investment approach that positions it as one of the key AEP growth businesses.

Texas Transmission Growth Strategy : Near Term Investment

Ownership Structure: 50/50 (AEP/MidAmerican Energy Holding Company)

Total Project Cost: Over $3 Billion

Growing Rate Base:

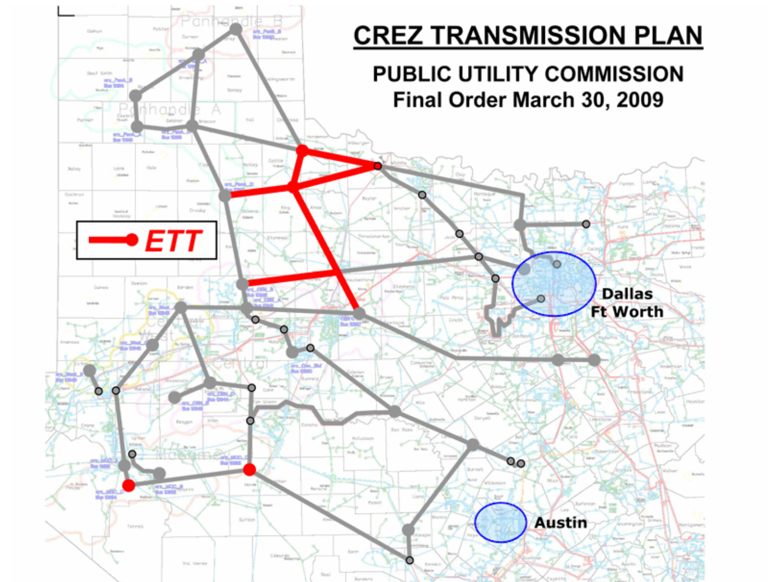
Current rate base is $412 million; expected to grow as follows:

2011: $473 million
2012: $778 million
2013: $1,352 million

Electric Transmission Texas

Interim TCOS filings twice per calendar year

Approved ROE: 9.96%



- **Additional Projects in the Pipeline ~$1.6 B:**
  - Approximately 822 miles of lines and 28 substations with in-service dates through 2017

- **Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.1 B:**
  - Seven double-circuit 345kV transmission lines (~$750 M), eight major 345kV stations and several series compensation installations (~$350 M)
  - PUCT Certificate of Convenience and Necessity (CCN) proceedings underway

Transco Update

FERC:

- April 2011 -- The Commission finds in the order that the Settlement is just and reasonable and the business plan will provide benefits to AEP operating companies and customers.
  - ROE order for East Transcos is 11.49%
  - ROE order for West Transcos is 11.20%

State Filing Status Update:

- **Ohio** – PUCO approved the Ohio Transco December 29, 2010
- **West Virginia** – Filing made January 6, 2011; Hearings in June
- **Arkansas** – Filing in Arkansas made May 6, 2011
- **Louisiana –** Expecting LA filing in 3Q 2011
- **Texas-SPP** – Expecting TX filing in mid 2011
- **Kentucky** – Filing made February 4, 2011; Informal conference with staff held March 2, 2011
- **Indiana** – Filing made March 1, 2011; Pre-hearing conference March 28, 2011
- **Virginia** – Filing withdrawn to give additional time to resolve issues with Staff
- **Michigan and Oklahoma** – Do not require state filing

$160M capital spend forecasted for 2011; $350MM for 2012

Joint Venture Strategy: Long-term

- **Strategy**: JV's secure new investment opportunities with local utilities to diversify AEP's investment outside AEP's traditional footprint while providing longer-term incremental earnings. JV projects are well-suited for FERC formula rate recovery mechanism, including potential for incentive rates.

- **Future:** Federal/regional initiatives may accelerate expansion of EHV transmission (e.g. cap-and-trade, renewable portfolio standards, inter-region wide planning). Securing first mover advantage will enable AEP to secure LT investment opportunities.

- **Future flexibility**: Passive investment opportunities can be considered and can provide entry beyond SPP/PJM/ERCOT

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms and our ability to recover significant restoration costs through applicable rate activities, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants, our ability to recover I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration costs through rates, insurance or warranty, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances that could impact the continued operation of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of the recently passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events. AEP and its Registrant Subsidiaries expressly disclaim any obligation to update any forward-looking information.

Transmission Investment Opportunities

- ETT: Projects in Texas ERCOT jurisdiction
  - $600MM of projects est. in service 2010-2013
  - ETT's opportunity could reach $3.0B in this decade
- Transco: Within our existing footprint
  - Provides opportunity to:
    - Develop new AEP-only projects
    - Reduce regulatory lag through FERC formula rates adjusted annually
- Joint Ventures: Outside of our footprint, via ETA or with others
  - Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
  - Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2015
  - Robust pipeline of projects up to $15B

765-kV Tower

Making it Happen: EHV Projects Under Development

SPP

Prairie Wind — **COD: 2013-14**

- *Other Projects Pending Transfer of ~ $600 million (COD 2010-2013)*

PJM Expansion

- *Regional Expansion of 765 kV, 500 kV and 345 kV systems*

EHV Michigan/Ohio

- *700 miles of Proposed 765 kV*

SPP **ERCOT** **PJM** **PJM/MISO**

Electric Transmission Texas, LLC

Overview:

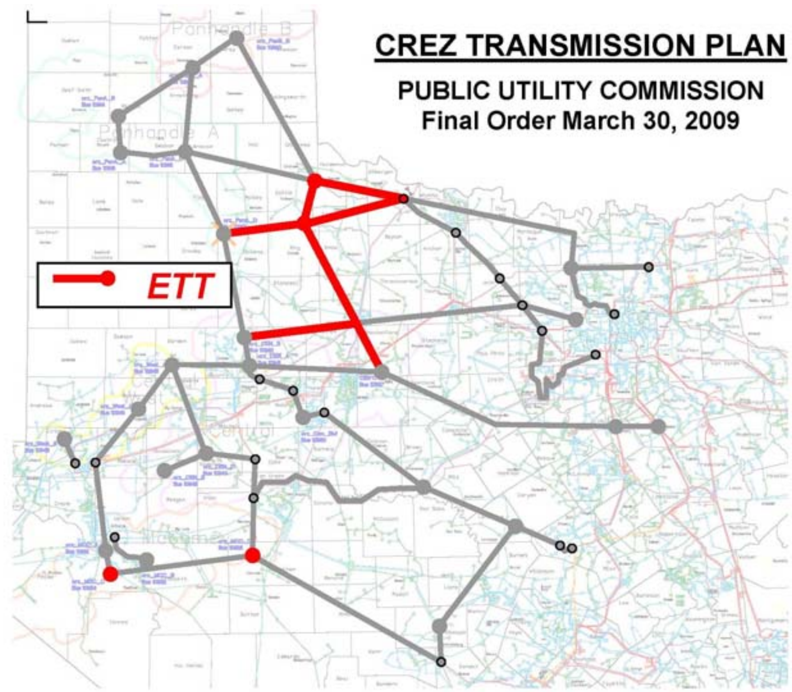
- ETT is a 50/50 JV between AEP and MidAmerican Energy Holding Company that plans to construct and operate transmission projects within ERCOT with an investment opportunity of more than $3 billion.
- Current JV rate base is $127 million with an additional $262 million requested in the current ITCOS filing, resulting in a total anticipated rate base of $389 million; debt to capital ratio of 60/40 and an authorized ROE of 9.96%.

Opportunities:

- Projects in service 2010-2018: $1.4 billion
- CREZ projects in service 2012-2013: $1.1 billion
- Other projects representing recent and pending transfers in service 2010-2014: approaching $600 million

Next Steps:

- Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in 2010.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

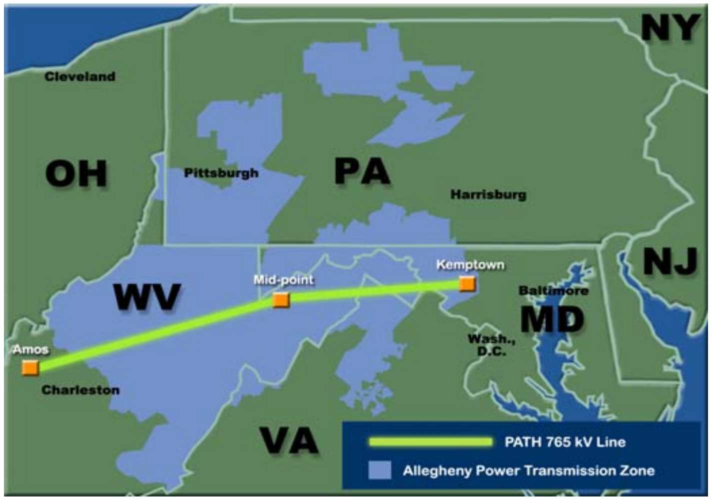
Electric Transmission Texas

EHV Transmission in PJM: PATH

Project Description: 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

Overview:

- FERC order issued on February 29, 2008 approving:
  - Cash return on CWIP and 14.3% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents
  - Rates went into effect March 1, 2008
- Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million.
  - A budget reforecast effort is currently underway. Total project cost will likely increase due to delays in the original 2012 in-service date.
- Estimated completion date: 2014+, pending outcome of the 2010 PJM Regional Transmission Expansion Plan (2010 RTEP).



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

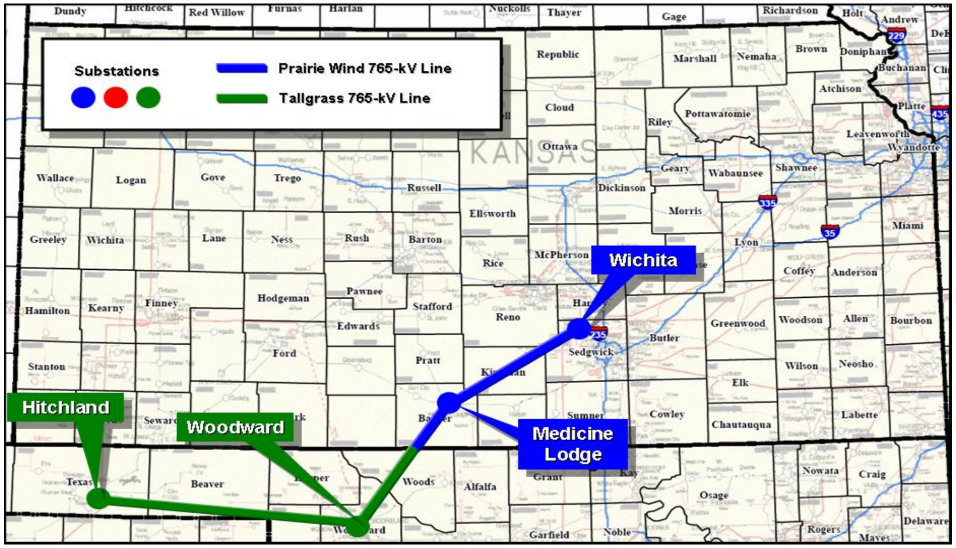
- Obtaining a CPCN in West Virginia, Virginia and Maryland. CPCN applications in West Virginia and Maryland are pending because their procedural schedule allows the consideration of the 2010 RTEP. A new application in Virginia is expected in the third quarter of 2010 after consideration of the 2010 RTEP.

PATH
Potomac-Appalachian Transmission Highline

Prairie Wind Transmission, LLC

Overview:

- In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
- PWT is a 50/50 JV that is proposing to build approximately 110 miles of 765-kV lines extending from Wichita, KS.
- The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
- The project is expected to cost approximately $400 million and be in-service by 2013-2014 and was approved by the KCC on July 24, 2009.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned
- Project was approved as SPP Priority Project in April 2010
  - NTC anticipated to be received summer 2010. Currently pending approval of SPP cost allocation methodology at FERC.
  - Currently approved at 345 kV. Cost at 345 kV estimated to be $165 mm. May revert to 765 kV depending on results of SPP ITP study.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

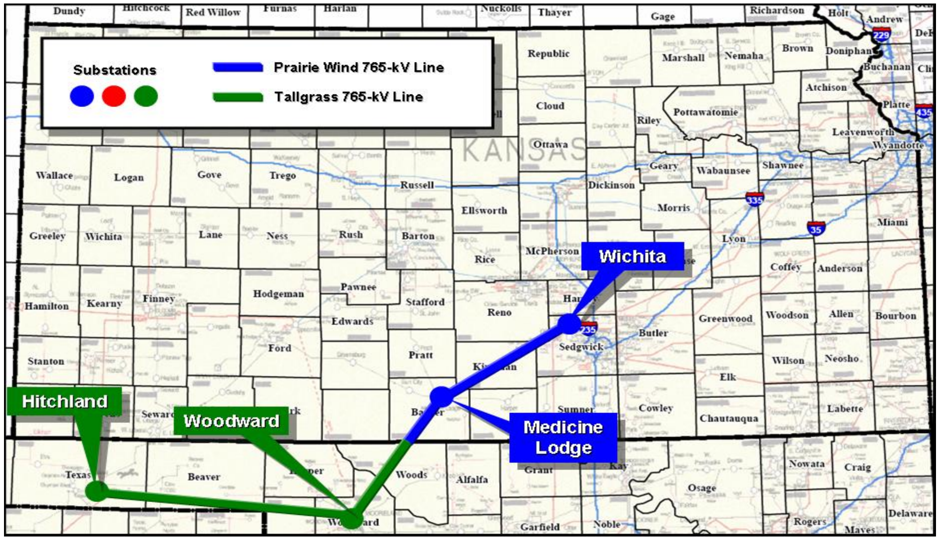
Key Challenges:

- Siting

Tallgrass Transmission, LLC

Overview:

- In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
- TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines in Oklahoma.
- The project will promote wind development in the western half of Oklahoma.
- Project is expected to cost approximately $500 million and be in-service by 2013-2014.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned
- Project was approved as SPP Priority Project in April 2010
  - NTC anticipated to be received summer 2010. Currently pending approval of SPP cost allocation methodology at FERC.
  - Currently approved at 345 kV. Cost at 345 kV estimated to be $350 mm. May revert to 765 kV depending on results of SPP ITP study.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

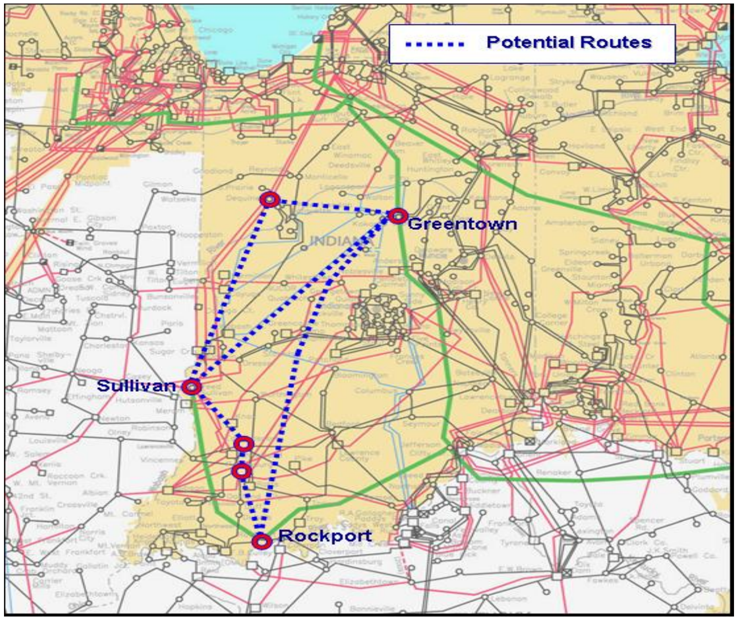
Key Challenges:

- Siting

Pioneer Transmission, LLC

Overview:

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
- The project will improve the reliability of the transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, and expand opportunities for new generation, including renewables.
- The project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP's ownership of the joint venture is 50%.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

- RTO Approval (PJM & MISO)
- Cost allocation which enables the development of "system solutions"
- Siting

Upper Midwest EHV Development—SMART Study

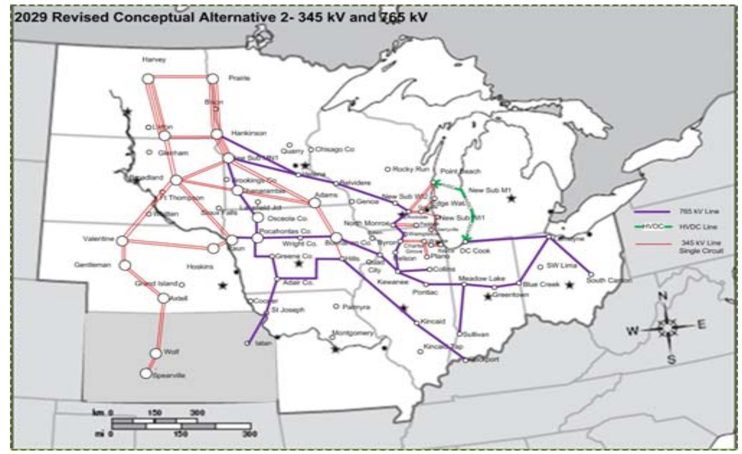
Project Description: a comprehensive study of the transmission needed in the Upper Midwest to support renewable energy development and transporting that energy to consumers throughout the study area. The SMART Study will develop EHV overlay alternatives that ensure reliable service for sponsors' communities, is environmentally friendly, and supports national energy policy.

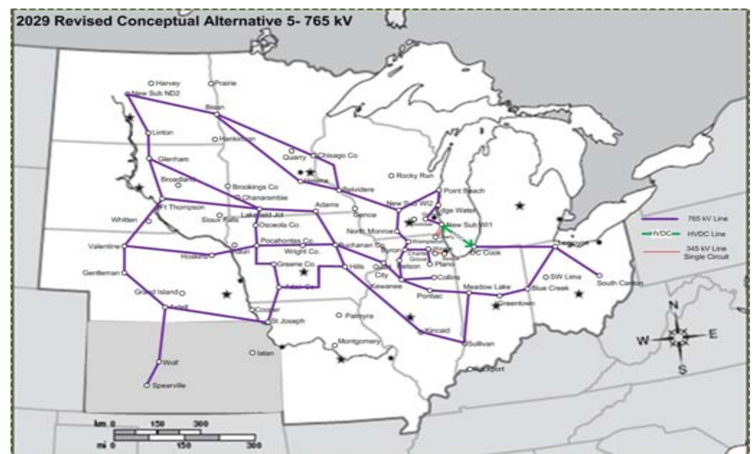
Overview:

- SMARTransmission Study announced August 2009
- Primary Focus Areas: North Dakota, South Dakota, Iowa, Nebraska, Indiana, Ohio, Illinois, Minnesota, Wisconsin, Michigan
- Study Sponsors include: ETA, Exelon, ATC, Northwestern, MidAmerican Energy Company, and Xcel
- Phase 1 completed April 30
- Phase 2 anticipated completion: June 30
  - Studying two alternatives in Phase 2. One combination 345 kV / 765 kV. One primarily 765 kV.

Next Steps:

- Investment structure
- Obtaining cost allocation between states, PJM, and MISO
- RTO technical approvals
- Favorable 205 Order including incentives





The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

2010 Ongoing Earnings Guidance

Summary Rate Case Information

I&M Michigan General Rate Case – Docket #U-16180

On January 27, 2010, I&M filed a base rate case with the Michigan Public Service Commission requesting an increase of $62.5 million to cover increased costs related to distribution O&M, taxes, interest and employee related expenses. I&M also requested new tracker mechanisms for enhanced distribution reliability spending, energy efficiency, investments in generation and participation in PJM. The requested ROE is 11.75%. An order is expected in early 2011.

Summary Rate Case Information

APCo West Virginia General Rate Case – Docket #10-0699-E-42T

On May 14, 2010, APCo filed a base rate case with the West Virginia Public Service Commission requesting a net increase of $155.5 million, comprised of a $223.8 million base rate increase and a $68.3 million decrease in the construction surcharge. The filing related to capital investments made and to recover increased costs. In addition, APCo requested to establish a separate transmission tracker related to PJM charges. The requested ROE is 11.75%. A procedural schedule is pending from the WVPSC. An order is expected in March 2011.

AEP AMERICAN® ELECTRIC POWER

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate relief or other recovery for new investments, transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements periodically issued by accounting setting bodies; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

At the conclusion of our current environmental retrofit program, over 58% of our 24,630 MW coal-fired generation fleet will be equipped with SCRs and over 73% will be scrubbed (FGDs).

AEP®

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
PSO	Riverside	Oklahoma	$59 MM	Gas	Simple-cycle	170	2Q 2008
AEG	Dresden	Ohio	$305 MM	Gas	Combined-cycle	580	2010
SWEPCo	Stall	Louisiana	$378 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.5 B (1)	Coal	Ultra-supercritical	600 (1)	2012
APCo	Mountaineer	West Virginia	$2.23 B	Coal	IGCC	629	2012
CSP/OP	Great Bend	Ohio	$2.7 B (2)	Coal	IGCC	629	2017

(1) SWEPCo will own approximately 73%, or 438 megawatts, totaling about $1,110 million in capital investment. The increase in the cost estimate relates to cost escalations due to the delay in receipt of permits and approvals.

(2) Cost estimates, updated to reflect cost escalations due to revised commercial operation date of 2017, are not yet filed with the PUCO.

AEP is meeting the growing electricity needs of customers through the pursuit of new economic generation facilities.

Distribution - gridSMART[SM]

•gridSMART[SM]: implementing AEP's vision for the distribution and customer services business in the future, including the development of new customer programs to reduce consumption and peak demand, and a plan to deploy advanced technologies.

- **Enables customers to better manage energy**
- **Improves service to our customers by enhancing customer choice and customer control**
- **Improves efficiency**
- **Integrates distributed energy resources into our grid**
- **Transforms the way we do business**

Capital Investment, Subject to Regulatory Approval *
$ in millions

AEP®

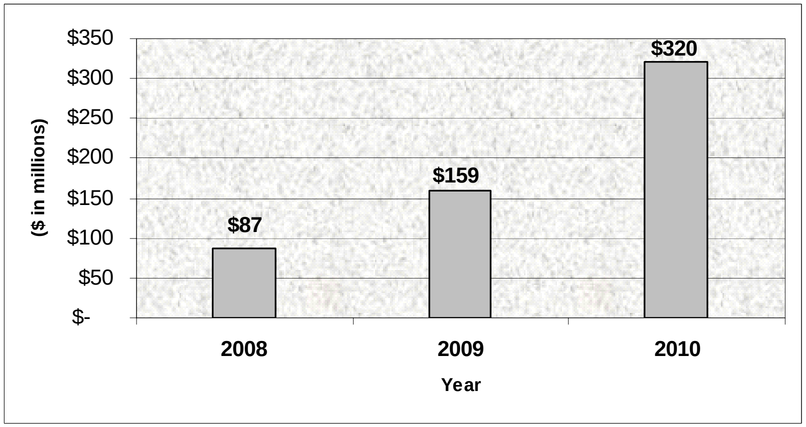
Transmission - Investments and Earnings Contributions

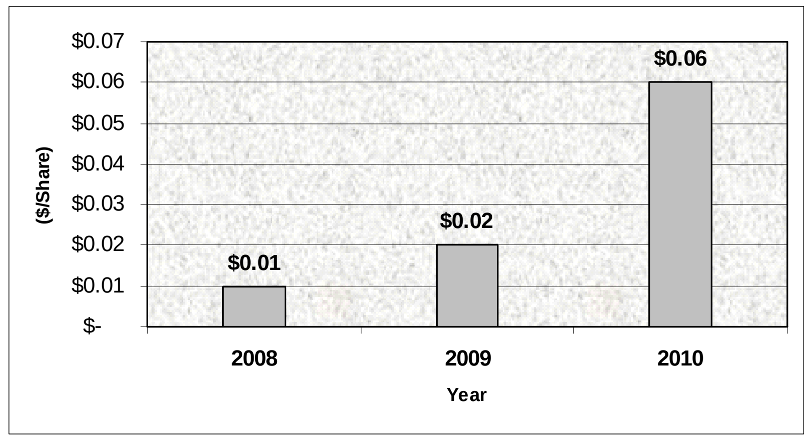
Projected Transmission Capital Spending*



* ETT and PATH joint ventures included in above projection. Amounts represent AEP's 50% share of total transmission joint venture capital expense. These amounts are excluded from AEP's base capital forecast because the joint ventures are not consolidated for financial reporting purposes. AEP will be responsible for funding 40-50% of these amounts with equity contributions, and the remainder will be financed with debt issued by the joint ventures.

ETT Electric Transmission Texas

Projected Transmission EPS Contributions*



* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

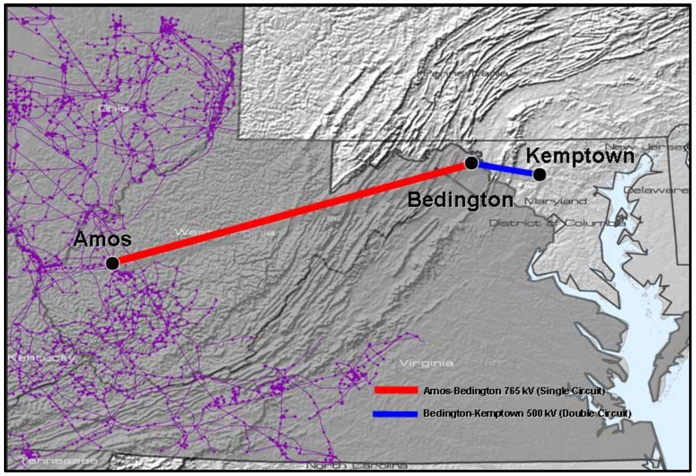
PATH Potomac-Appalachian Transmission Highline

AEP

Transmission will provide a near and long term catalyst for growth.

I-765™ Transmission in PJM: PATH

- *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries -- to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP
    - 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
  - FERC ordered the formula rate mechanism be set for hearing, pending settlement judge procedures



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

- *Funding Plans/Transaction Structure*
  - AEP and Allegheny share ownership of Amos – Bedington line and contribute equally to this portion of the project through PATH West Virginia Transmission Company, LLC
  - AEP's investment will be held in the AEP Transmission Holding Company LLC subsidiary

- *Key Next Steps*
  - Siting Approval from WV and MD – 2010
  - Targeted Completion – 2012

Joint Ventures with MEHC

Electric Transmission Texas Update

- *Transaction Structure*
  - 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
  - ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
  - Services provided by AEP and investment opportunities can be offered by either partner
  - Total initial investment of $70 million before ownership division
- *Next Steps*
  - ETT project opportunities to be evaluated on a case by case basis
  - Anticipate transferring some project opportunities in 2008 after regulatory approvals obtained.

Electric Transmission America Update

- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.
- To that end, ETA recently signed an agreement with Westar forming Prairie Wind Transmission, LLC proposing to build the first segment of the 765-kv Overlay Plan in SPP

AEP®

I-765™ Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- *Overview*
  - Sent non-binding Letter of Commitment to SPP to construct 765-kV and 500-kV projects in SPP region consistent with SPP Overlay Study – Summer 2007
  - Updated EHV Overlay Study completed by SPP – March 2008
- *Benefits*
  - Overall reliability reinforcement with improved voltage support throughout the SPP system
  - Significantly increased transfer capability
  - Provides access to new generation resources, especially renewables
  - Allows for effective interconnections for EHV system development
- *Next Steps*
  - ETA Partnering Agreements - 2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate and Cost Allocation Filing (postage stamp) – 2009
  - Siting Approval for projects – 2009-2011
  - Estimated Completion (in segments) – 2013-2017

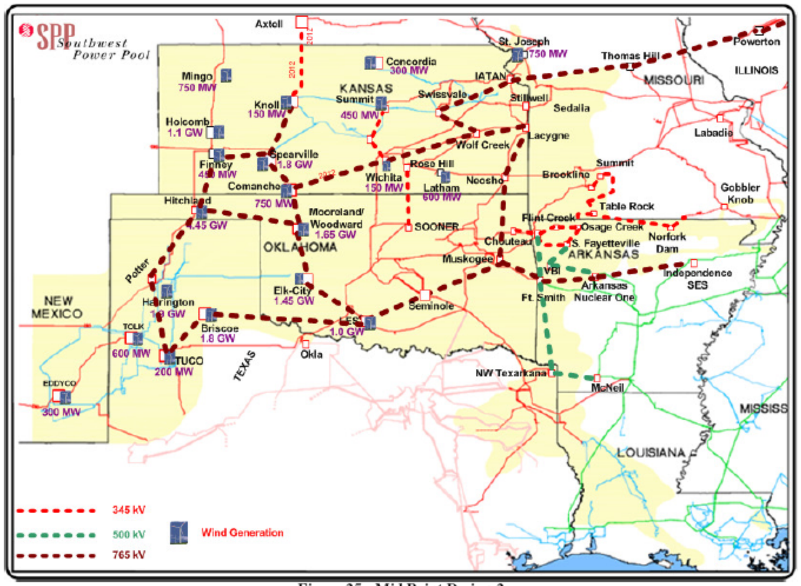


Figure 25: Mid Point Design 2

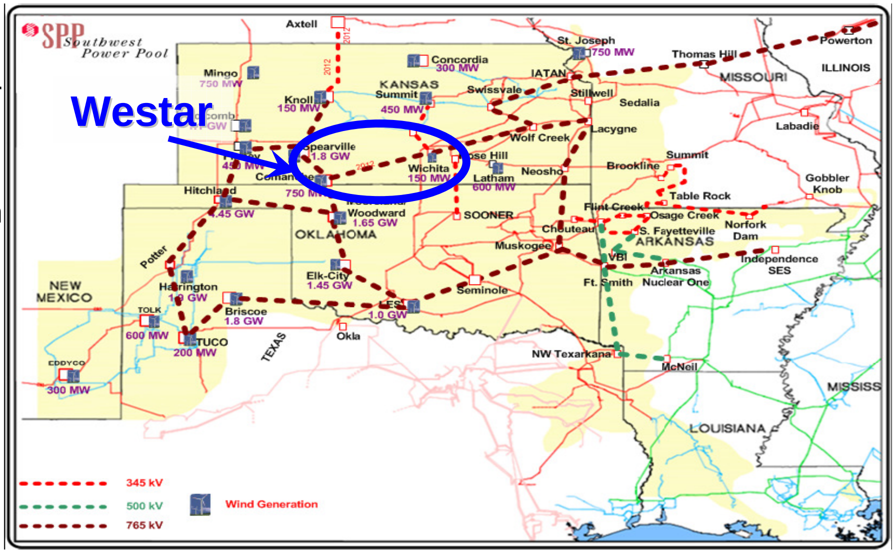
Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Prairie Wind Transmission, LLC

JV to build first segment of 765-kV transmission in SPP

- *Overview*
  - On May 19, 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT)
  - PWT is a 50/50 JV that is proposing to build approximately 230 miles of 765-kV lines extending from Wichita, Kan., west to a substation northeast of Dodge City, Kan., and then south to the Kansas border from Medicine Lodge, Kan.
  - The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region
  - Project is expected to cost approximately $600 million (based on SPP estimates) and be in-service by 2013
  - AEP's ownership of the joint venture is 25%
  - AEP obligations include oversight of 765 kV Engineering, 765 kV Technology and Project Management
  - Other responsibilities will be handled by the partners or outsourced
- *Next Steps*
  - File CPCN –2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate and Cost Allocation Filing (postage stamp) – 2009
  - Siting Approval – 2009
  - Estimated Completion – 2013



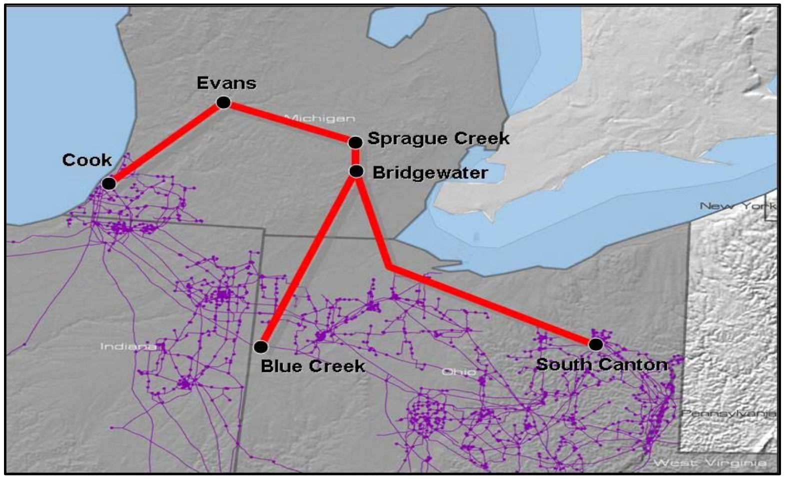
Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

I-765™ Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
  - Study was released Q3 2007
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.6 billion investment (before ownership division)
  - AEP and ITC are in discussions to form a Joint Venture
- *Benefits*
  - Up to 5,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- *Next Steps*
  - Agreement on JV (AEP/ITC) - Summer 2008
  - JV Formation - 2008
  - MISO and PJM Review/Approval - 2009
  - FERC Formula Rate and Cost Allocation Filing - Fall 2009
  - Siting Approval – 2011-2012
  - Estimated Completion –2015-2021



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A reliable and reasonably-priced electric supply is necessary to support the economic well-being of the areas we serve.

AEP®

Advanced Generation & CO_2

Near Term:

- Chilled Ammonia project at Mountaineer moving to commercial scale at the Northeastern Plant in 2012

$ in millions				
		2008	2009	2010
Mountaineer Chilled Ammonia Project		$30	$39	$0

Long Term Strategy (Post-2010):

- IGCC
- Chilled Ammonia
- Oxy Coal Technology
- Nuclear COL

We are committed to validating and deploying technologies that ensure coal remains a viable resource for AEP and America.

AEP®

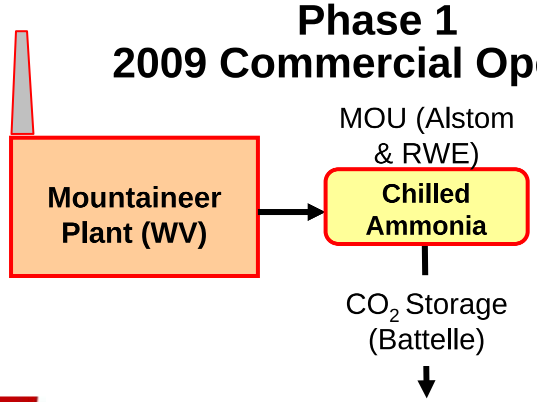
AEP's Carbon Capture & Storage Initiative

In March 2007, AEP announced a major new carbon capture and storage initiative:

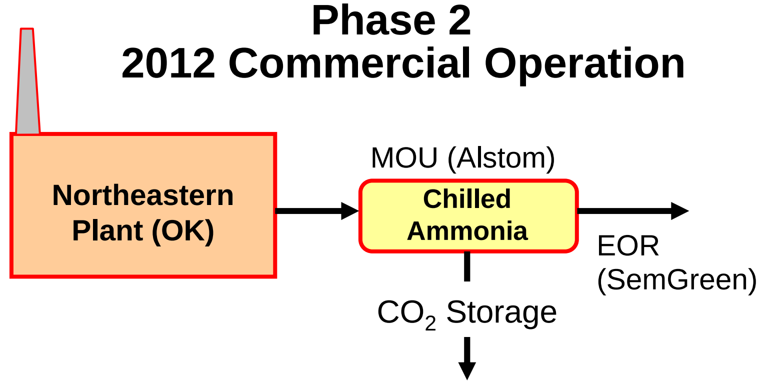
Chilled Ammonia CCS--We will install carbon capture on two coal-fired power plants, the first commercial use of technologies to significantly reduce carbon dioxide emissions from existing plants.

- **The first carbon capture project, at the Mountaineer plant in West Virginia, is expected to complete its product validation phase in 2009.**
- **The second, at the Northeastern plant in Oklahoma, will begin commercial operation in 2012.**

Phase 1
2009 Commercial Operation



Phase 2
2012 Commercial Operation



CO_2 Capture Techniques

- **Post-Combustion Capture**
  - Conventional or Advanced Amines, Chilled Ammonia
    - Amine technologies commercially available in other industrial applications
    - Relatively low CO_2 concentration in flue gas – More difficult to capture than other approaches
    - High parasitic demand
      - Conventional Amine ~25-30%, Chilled Ammonia target ~10-15%
    - Amines require **very** clean flue gas
- **Modified-Combustion Capture**
  - Oxy-Coal
    - Technology not yet proven at commercial scale
    - Creates stream of very high CO_2 concentration
    - High parasitic demand, >25%
- **Pre-Combustion Capture**
  - IGCC with Water-Gas Shift
    - Most of the processes commercially available in other industrial applications
      - Have never been integrated together
    - Turbine modified for H_2-based fuel, which has not yet been proven at commercial scale
    - Creates stream of very high CO_2 concentration
    - Parasitic demand (~20%) for CO_2 capture - lower than amine or oxy-coal

AEP®

2008 Regulatory Activity Completed

- AEP-Ohio Application for 4% Provision on Generation Rate
- APCo (Virginia) Fuel Factor Filing (including 75%/25% Off-System Sales Sharing)
- PSO Storm Cost Recovery

Appalachian Power-Virginia E&R filing

On May 30, 2008, Appalachian Power filed the third tranche of E&R surcharge filing with the SCC, requesting a $66.5 MM increase for environmental and reliability costs incurred during the period October 1, 2006 through December 31, 2007, with a proposed one year recovery period commencing January 1, 2009.(Docket # PUE-2008-00046

Summary of APCo's E&R filings:

E&R Tranche:	Case Number	Cost Incurred:	Recovery Period:	Amount:
I	PUE-2005-00056	7/1/04 -- 9/30/05	12/1/06 --11/30/07	$21.3 MM
II	PUE-2007-00069	10/1/05 -- 9/30/06	1/1/2008 --12/31/08	$48.9 MM
III	PUE-2008-tbd	10/1/06 --12/31/07	Proposed 1/1/09-12/31/09	$66.5 MM

Regulatory Activity Underway

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $140MM. Approximately $10MM of the increase relates to 3rd party and the rest, if approved, would be recovered through retail jurisdictional filings in SWEPCo and PSO, as appropriate.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to February 1, 2008, with rates subject to refund.
- Settlement discussions are currently on-going.

Regulatory Activity Underway

APCo Mountaineer IGCC Filing

Virginia

- Testimony filed with the Virginia State Corporation Commission on July 16, 2007 seeking a prudence determination and approval to recover, beginning in 2009, Virginia's share of the carrying costs associated with the proposed plant.
- We received an order on April 14, 2008, denying our request. We petitioned for reconsideration on April 29, 2008, and on May 29, 2008 the SCC denied our request to reconsider the previous rejection. We are now reviewing various options.

West Virginia

- Air permit anticipated in the third or fourth quarter of 2008.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.
- In March 2008, the Ohio Supreme Court remanded the original order back to the PUCO, giving the PUCO the opportunity to supplement the record. No refund of Phase I costs was mandated by the Supreme Court in its decision.
- We now await further clarity from the PUCO on the remanded issues as well as resolution of pending rulemaking related to SB221 in Ohio.

Regulatory Activity Underway

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- The PSC issued its order on November 21, 2007, approving construction of the plant.
- Air permit anticipated in the third or fourth quarter of 2008.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The peaking facility has been addressed and the intermediate facility is under review. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- The LPSC issued its order on April 29, 2008, approving construction of the plant.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- Public hearings commenced October 17, 2007. On January 17, 2008, the ALJ recommended the PUCT deny the request. The commissioners have requested another hearing where they can directly cross examine some of the witnesses. The additional hearings were held May 29-30, 2008.

Regulatory Activity Underway

SWEPCo Stall Plant Filings

Arkansas

- Proceeding is currently suspended pending outcome in Louisiana.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The intermediate facility, known as the Stall Plant and sited in Shreveport, LA, was bifurcated from the original filing and had a procedural schedule established on January 9, 2008.
- Staff and intervenor testimony was completed on February 15, 2008, rebuttal testimony was due February 29, 2008 and hearings were held in April 2008. Staff testimony was favorable. An order is expected in mid-summer.
- Air permit received on March 20, 2008.

Texas

- PUCT order approving plant was issued on March 8, 2007.

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events and our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives, evolving public perception of the risks associated with fuels used before, during and after the generation of electricity, including nuclear fuel.

APCo Virginia Base Rate Case – Docket #PUE-2011-00037

On March 31,2011 APCo filed an update to its pre-biennial base rate case for recovery of generation and distribution costs requesting an increase of $75 million ($126 million total increase less $51 million deferral of depreciation increase).

In conjunction with this case, an environmental rate adjustment clause (E-RAC), a generation rate adjustment clause (G-RAC) and a renewable portfolio standard rate adjustment clause (RPS-RAC) were filed.   APCo has requested that rates in the base case, E-RAC and RPS-RAC go into effect on 2/1/2012 and the G-RAC on 3/1/2012.

Summary Rate Case Information

I&M Michigan Base Rate Case – Docket # U-16801

On July 1, 2011 I&M filed a base rate case with the Michigan Public Service Commission requesting an increase of $24.5 million. Rates proposed in this filing are based on projected 2012 cost of service and will not go into effect until 2012, therefore rates will reflect a current cost of service. This filing includes revised depreciation rates to include additions since the last approved depreciation study as well as accelerated retirement of Tanners Creek Units1, 2 and 3. The requested ROE is 11.15%. In accordance with Michigan law I&M intends to implement rates, subject to refund, on January 1, 2012. An order is expected by mid-year 2012.

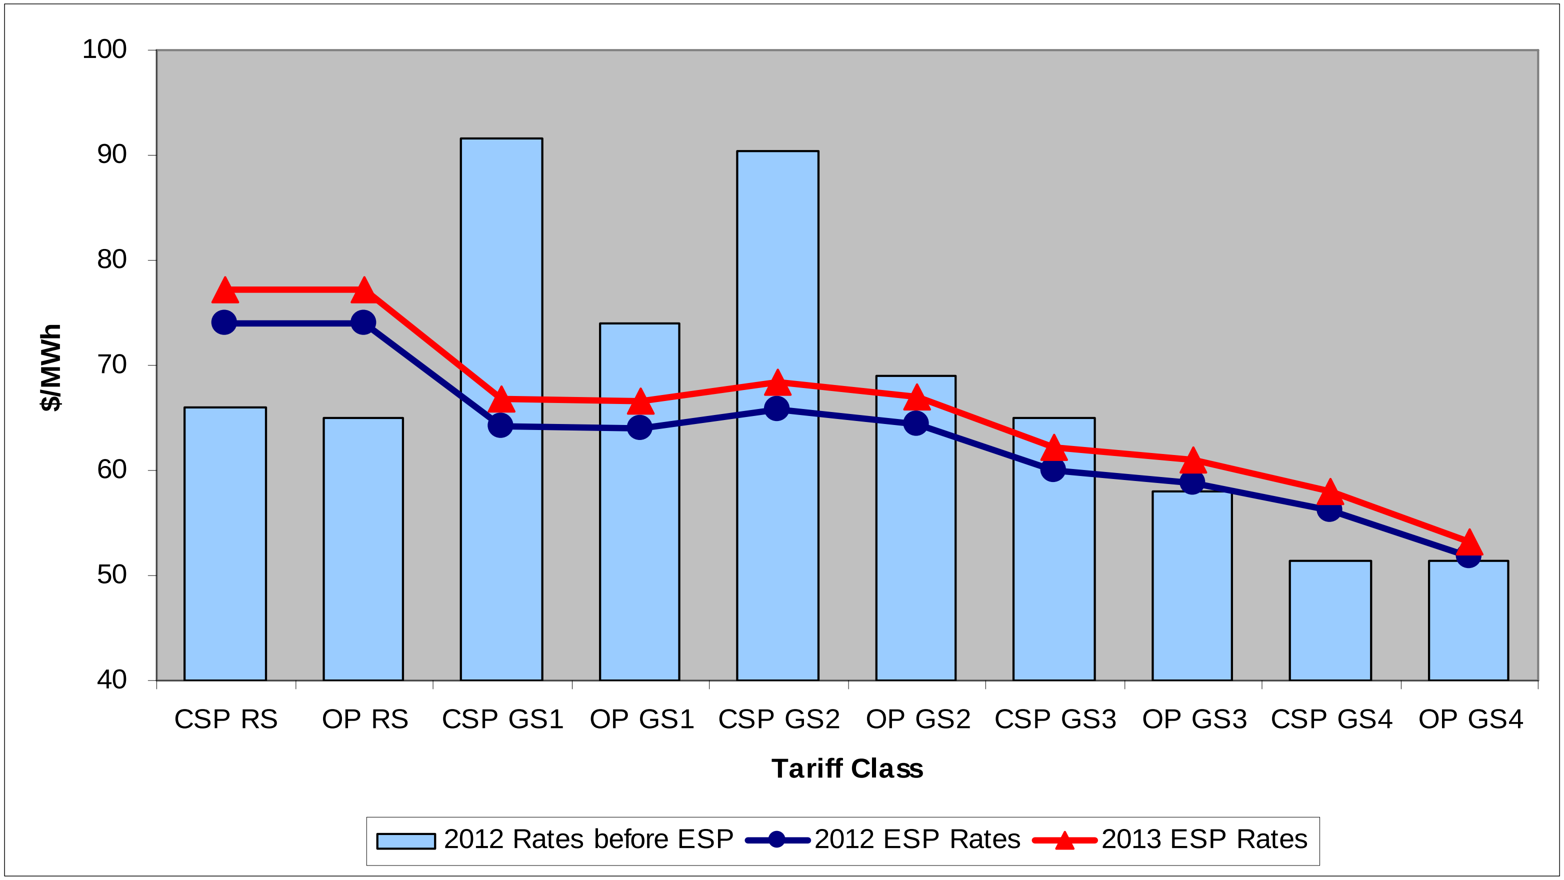
N/C* = No change from prior year

While the ESP includes a small base generation increase, the move to a market-based rate design, consistent with state policy, will result in varying impacts for different customer groups.

Price to Compare

Proposed **SSO** Rates Redesigned To Resemble Market Pricing Structures



Rates do not reflect mitigation impact of market transition rider
2012 Rates before ESP reflect current 2011 rates for generation & transmission service, adjusted to reflect full cost 2011 fuel and environmental costs.

The realignment of rates with market should provide all customers with equivalent opportunities to shop. Additionally, since the proposed design eliminates explicit demand charges, customers should be more easily able to evaluate competitive offers. To ease the rate impact that customers will experience from the realignment, we have proposed a Market Transition Rider.

Market Transition Rider – Mitigates the Initial Impact of Rate Realignment

Illustration of Market Transition Rider on ESP Generation Rate Increases

Three-Year Market Transition Plan
Summary of AEP Ohio ESP Generation Rate Changes

CSP Current Customer Class	CSP New Customer Class	2012 Increase	2013 Increase	2014 Increase	Total Increase
Residential	Residential	5.0%	3.9%	1.0%	10.2%
GS1	GS Non-Demand	(6.4%)	(5.2%)	(7.8%)	(18.1%)

Total OPCo		**0.4%**	**2.7%**	**0.0%**	**3.1%**
AEP Ohio		1.4%	2.7%	0.0%	4.2%

The Market Transition Rider is a transition rider designed to facilitate the transition from AEP Ohio's current rates to market-based SSO Generation Service rates. It is a non-bypassable rider designed to limit the first and second year changes for any customer classes to uniformly transition any above or below average changes in three steps. Any revenue shortfall that is produced by limiting the increases for certain customer classes is collected from those classes whose decreases are limited.

List of ESP Riders – Existing and Proposed

AEP®

Line	Rate Mechanism	Abbreviation	Bypassable	Distribution	Notes
1	**Current Riders**				
2	Universal Service Fund Rider	USF	--	Yes	
3	Advanced Energy Fund Rider	AEF	--	Yes	Expired 12/31/2010
4	kWh Tax Rider	kWh Tax	--		May be self-assessed under specific terms
5	Provider of Last Resort Charge	POLR	No		Option to avoid under specific terms
6	Monongahela Power Litigation Termination Rider	Mon Power	--	Yes	Expires once amount collected
7	Transmission Cost Recovery Rider	TCRR	Yes		
8	Fuel Adjustment Clause Rider	FAC	Yes		
9	Energy Efficiency and Peak Demand Reduction Cost Recovery Rider	EE/PDR	--	Yes

28	Rate Security Rider	RSR	--		Voluntary
29	Plug-In Electric Vehicle Tariff / Costs	PEV	--	Yes	Voluntary, Deferral of Costs
30	Emergency Curtailable Service Rider	ECS	--		Voluntary, pending
31	Storm Damage Recovery Mechanism		--	Yes	Reconciliation of storm experience to funding level
32	Pool Termination or Modification Provision		Yes		
33	PIPP Uncollectibles	PIPP	--	Yes	

AEP AMERICAN ELECTRIC POWER®

2010 Citi North American Credit Conference

November 17, 2010
New York, NY

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

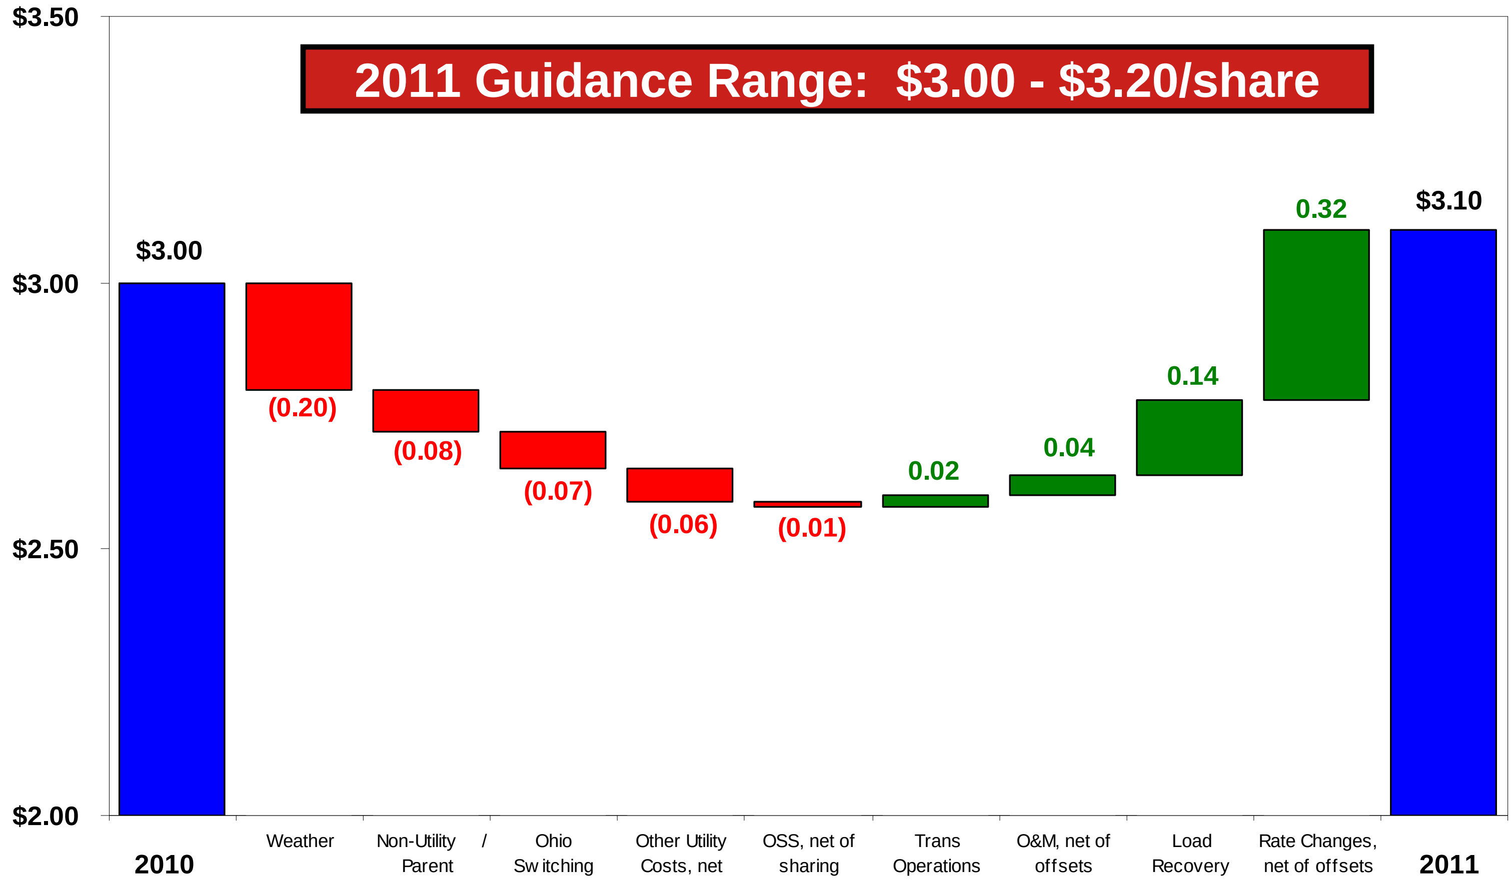
Chart represents connected load

2011 Earnings Drivers

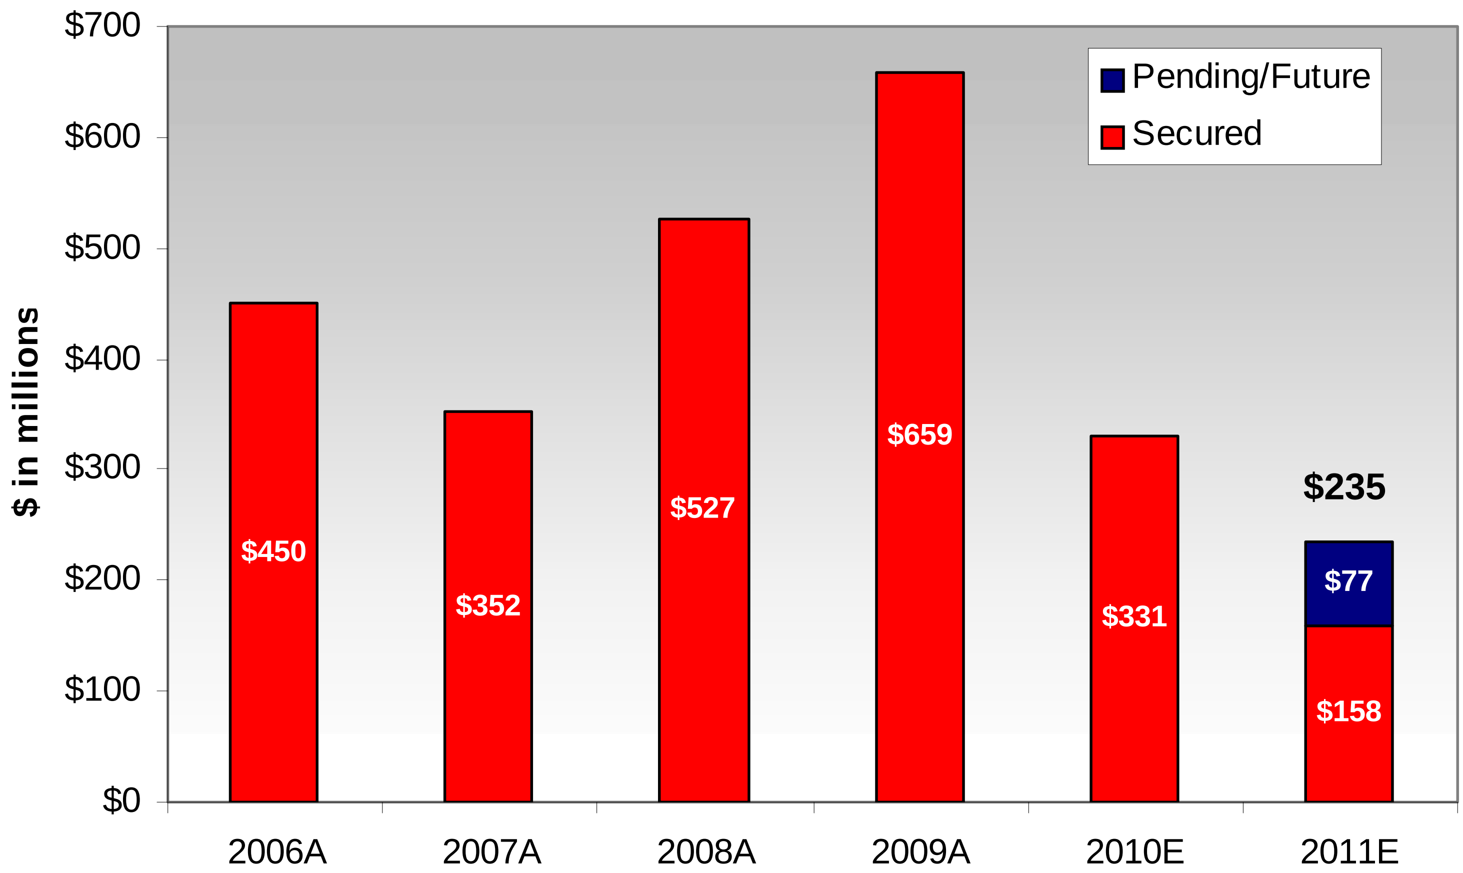


- $235M in rate changes (67% secured)
- Weather normalized load growth of 1.7%
- Transmission operations contributes $13M
- Continued discipline in O&M
- Ohio switching assumptions ($53M – 14% of CSP total load)

Note: represents incremental change from 2010 to 2011

2012 EPS Target: $3.25/share

Rate Changes



Note: Rate changes in this chart excludes revenues with offsetting costs

Active or pending rate cases include Oklahoma, West Virginia and others yet to be filed

Capital Allocation

In this economic recovery cycle, capital allocation requires balance for spending that considers the obligation to serve, the ability to obtain rate increases, a balance sheet to support the plan, and the total return proposition to shareholders

Capital for Growth

- Increased capital budget by $150M for 2011 to $2.6B
- Announced capital budget plan of $2.9B for 2012

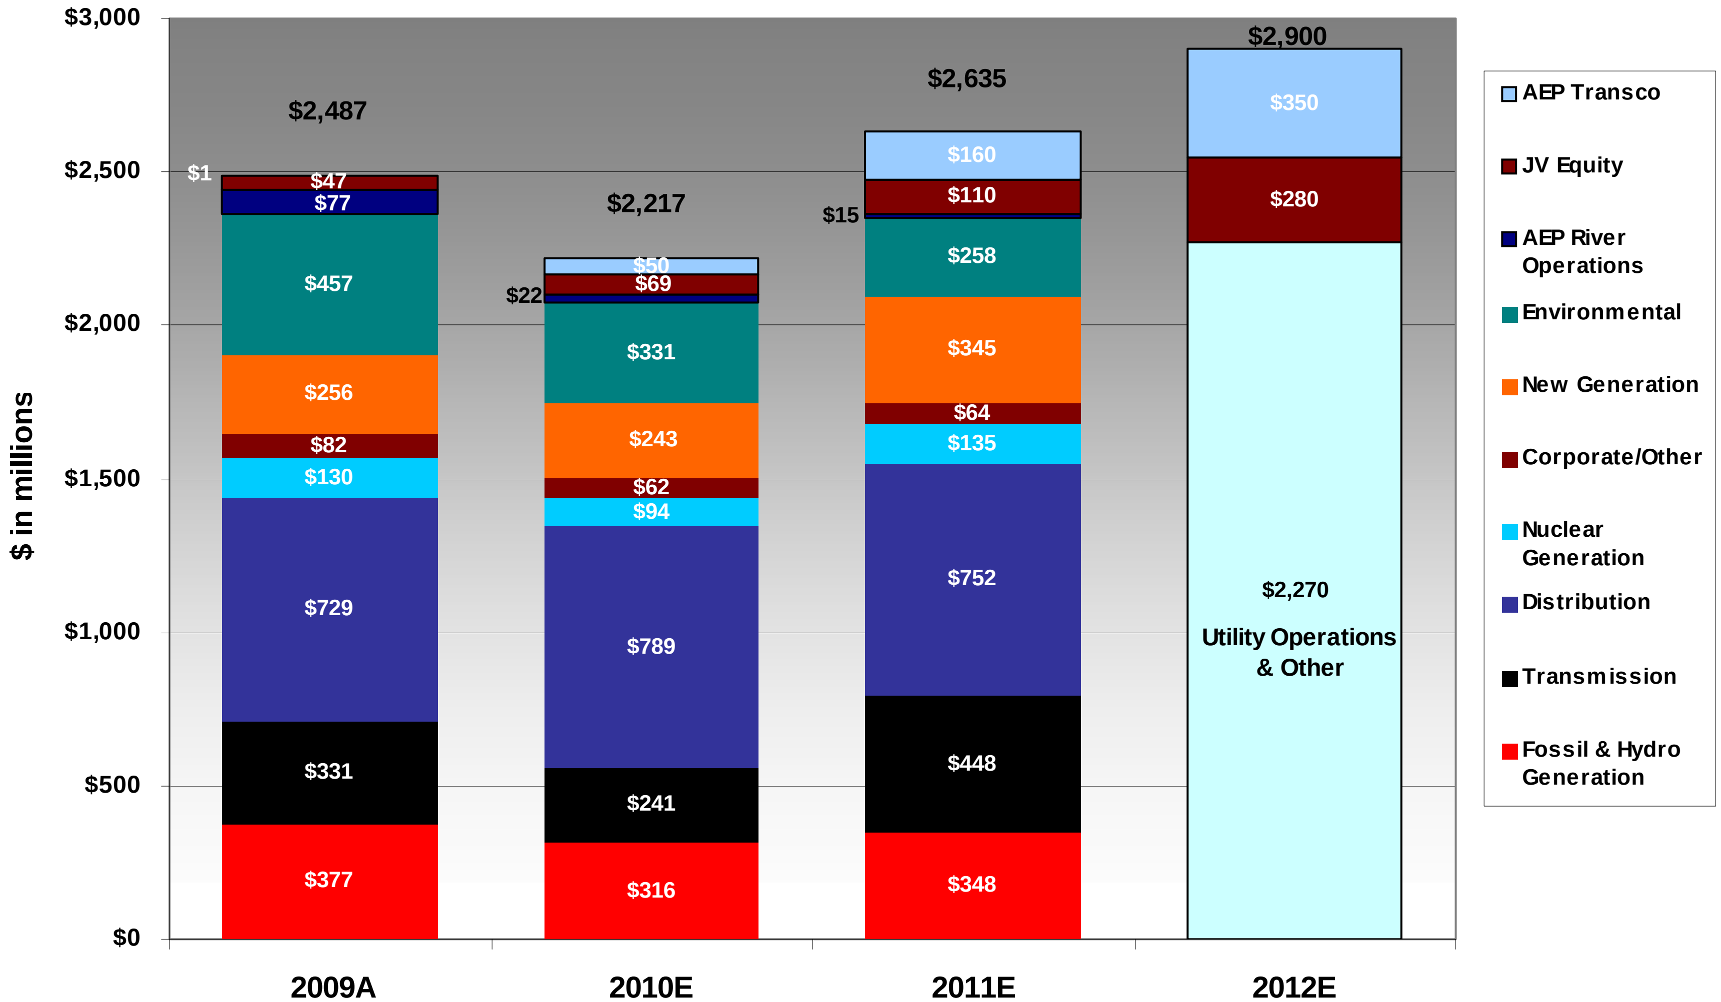
Return of Capital to Shareholders

- 9.5% increase in quarterly dividend to $0.46/share declared by the board of directors on October 26th
- Future dividend increases will grow with earnings

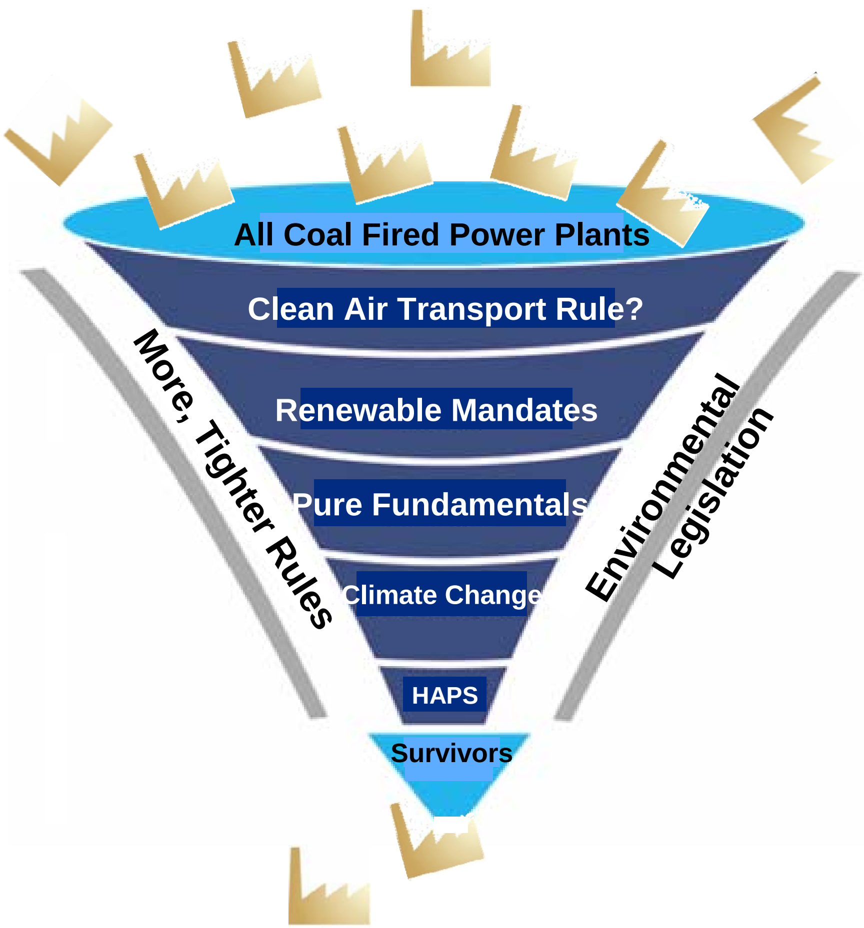
Capital to Reduce Risk

- Voluntarily funding pension $500M in 2010
- Allocating an additional $150M of funding for pension in 2011

Capital Expenditures



The Pressure on Coal Generation



Dark Spread Compression

NYMEX coal

<u>Key EPA Actions Pending</u>

- Transport Rule – Proposed July 2010
- "Coal Ash" Rule – Proposed May 2010
- Mercury and other Hazardous Air Pollutants (HAPs) Rule – Expect Proposed Rule in Spring 2011

The threshold level for coal is being defined

Transmission as a Growth Engine

AEP®

- Electric Transmission Texas (ETT)
  - Growing Rate Base
  - $1.1B CREZ opportunity; Received CCN approval on first CREZ line; 3 more approvals expected in 2011
  - $1.6B Non-CREZ projects in the pipeline
- AEP Transmission Company (AEP Transco)
  - Settlement filed at FERC for wholesale rates
  - $50M spend for 2010; $160M forecasted for 2011
- Progress on Joint Ventures in 2010
  - PATH
  - Prairie Wind
  - Pioneer
  - SMART Transmission study

ETT Electric Transmission Texas

ETA ELECTRIC TRANSMISSION AMERICA, LLC

PATH Potomac-Appalachian Transmission Highline

Prairie Wind Transmission

Transmission investments present significant growth opportunities within and outside of AEP's traditional service territories

Liquidity, Credit and Financing

- Strong liquidity position supported by core Credit Facilities
  - Two $1.5B credit lines underpin liquidity position
    - Renewed 3-year $1.5B credit line in June 2010
    - Other $1.5B facility expires in April 2012, expect to address this renewal in 2011
  - Both facilities are undrawn

- Stable credit outlook

- Financing highlights
  - Cash flow and capital spending plan keep balance sheet stable
  - Committed to solid-investment grade credit metrics (BBB/Baa2)
    - Debt-to-Capital of 55-59%
    - FFO/Debt in the mid- to high teens
  - Debt Financing
    - Maturities total $620M in 2011
    - Net debt increases about $50M

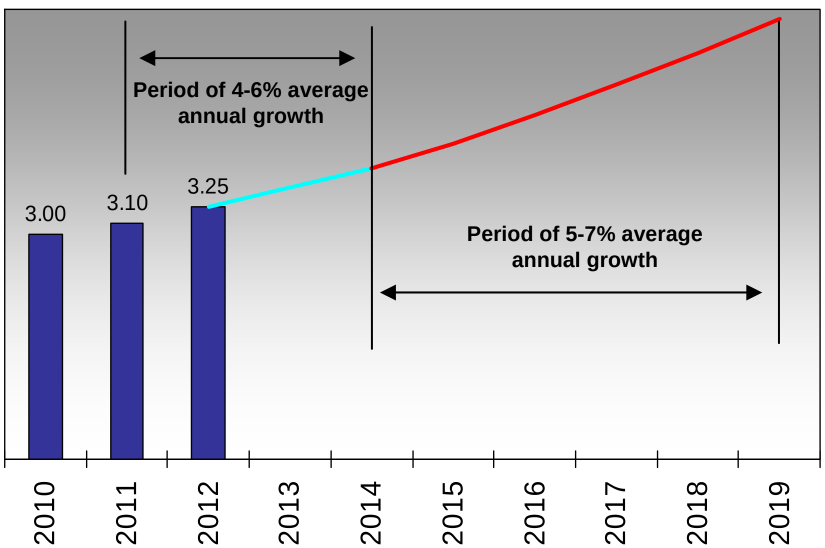
Data as of September 30, 2010

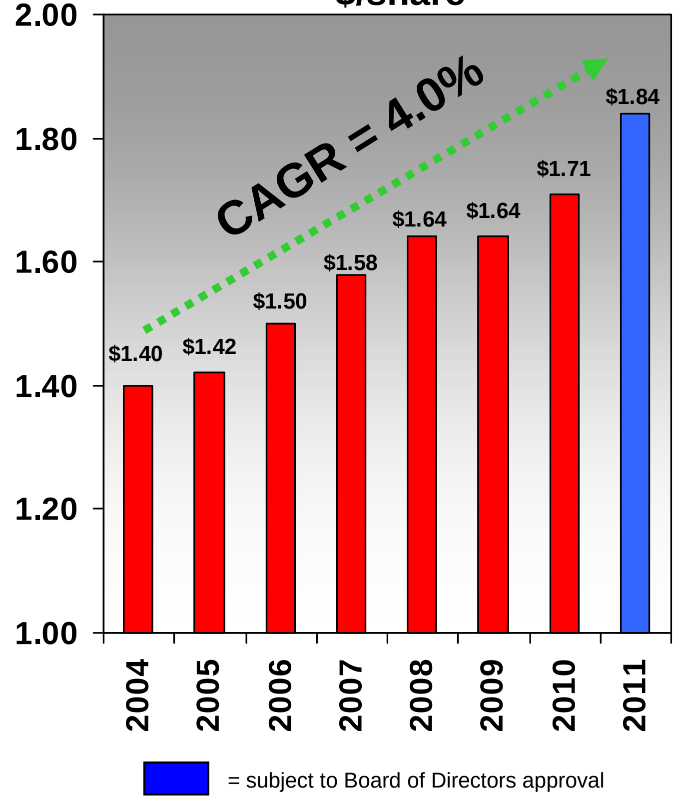
American Electric Power

Average Annual EPS Growth defined over two periods



- 4-6% EPS growth 2012-14
  - Average annual capital spend between $2.9-3.4B
  - Blended ROE of 10.5 - 11%
  - Slow, steady recovery in economy
- 5-7% EPS growth post 2014
  - Base utility platform capital plus higher allocation of discretionary capital going to opportunities in the transmission development pipeline
  - Higher overall blended ROE opportunity
  - Robust economic growth

Dividend History Since 2004 $/share



- 9.5% increase in quarterly dividend to $0.46/share declared on October 26th
- 401st consecutive quarterly dividend paid in September
- 50-60% payout ratio target
- Current yield about 5%

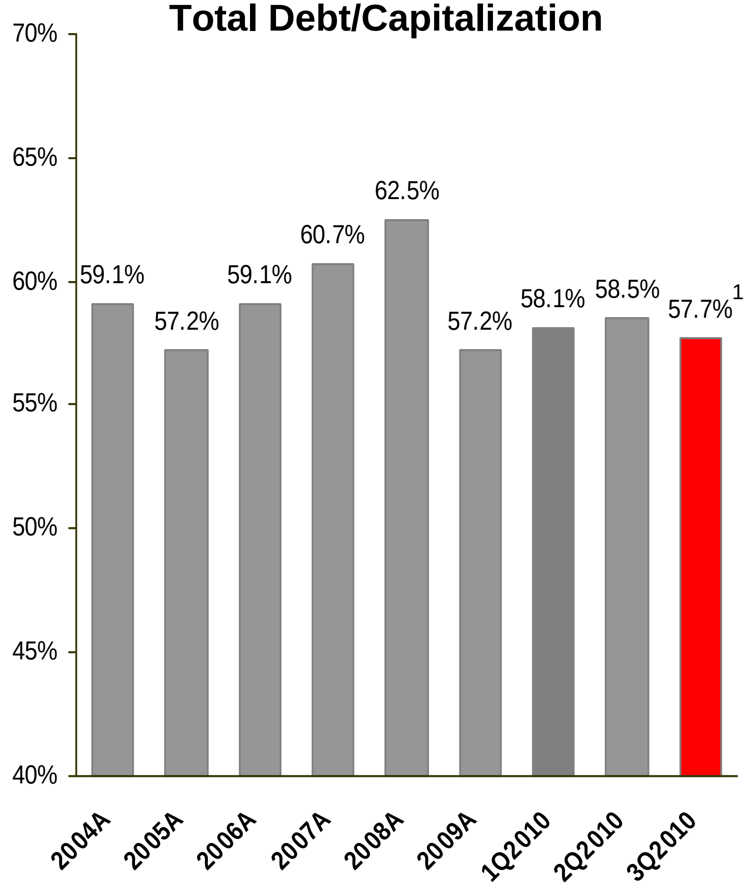
Maintaining Strong Capitalization & Liquidity

Total Debt/Capitalization



Note: Total Debt is calculated according to GAAP and includes securitized debt

1: Effective January 1, 2010 in accordance with Transfers and Servicing accounting guidance (formerly SFAS 166), factored receivables of AEP Credit of $750 million are classified as short-term debt; The 3Q2010 debt/capitalization ratio would be 56.8%, excluding AEP Credit.

Pension and OPEB Estimate

- Investment returns for our pension plan and OPEB funds are solid so far this year. Year-to-date, the pension fund is up about 8% through September, with similar gains in the OPEB funds.
- After making a discretionary contribution of $350 million in September, cash contributions to the pension will total $500 million for 2010.
- We currently would have no required cash contributions to the pension for 2011 but are allocating a voluntary contribution up to $150 million.
- We expect combined pension and OPEB expense to decrease $34M from 2010 to 2011 (pre-tax and pre-capitalization).
- Discount rates are assumed to be 5.6% for pension and 5.85% for OPEB for 2010, and 4.75% and 5.0% for 2011 and beyond.
- Estimates for expense and contribution figures are very sensitive to changes in interest rates and investment returns between now and year-end.

Summary Rate Case Information

APCo West Virginia General Rate Case – Docket #10-0699-E-42T

On May 14, 2010, APCo filed a base rate case with the West Virginia Public Service Commission requesting a net increase of $155.5 million, comprised of a $223.8 million base rate increase and a $68.3 million decrease in the construction surcharge. The filing related to capital investments made and to recover increased costs. In addition, APCo requested to establish a separate transmission tracker related to PJM charges. The requested ROE is 11.75%. An order is expected at the end of March 2011.

Actual Capital Structure – Company Position (12/31/09)

	% of Capitalization	Cost Rate	Weighted Return

PSO General Rate Case – Docket #201000050

On July 9, 2010, PSO filed a base rate case with the Oklahoma Corporation Commission requesting a net increase of $52.4 million, comprised of a $82.7 million base rate increase and a $30.3 million decrease in the capital investment rider. The requested ROE is 11.50%. Staff testimony supports a $0.3 million increase at an ROE of 10.04% and recommends continued collection of the $30.3 million capital investment rider.

Actual Capital Structure – Company Position (2/28/10)

	% of Capitalization	Cost Rate	Weighted Return
Long-Term Debt	53.86%	6.52%	3.51%
Common Equity	45.84%	11.50%	5.27%
Preferred Stock	0.30%	4.02%	0.01%
Total	100.00%		8.79%

Required Rate Relief – Company Position (2/28/10)

($ in millions)

Rate Base	$	1,687.2
Rate of Return		8.79%
Operating Income Requirement	$	148.3
Adjusted Operating Income	$	97.9
Difference	$	50.4
Revenue Conversion Factor		1.6391
Total Revenue Requirement	$	82.7
Elimination of Capital Investment Rider	$	(30.3)
	$	52.4

Procedural Schedule

October 26, 2010	Staff & Intervenor testimony due
November 16, 2010	Rebuttal testimony due
November 29, 2010	Settlement Conference
Debember 6-17, 2010	Hearing
January 5, 2011	Rates Effective, Subject to Refund

Approved Rate Bases & ROEs

Jurisdiction	Rate Base	Approved ROE	Approved Debt/Equity	Effective Date
APCo-Virginia	$2,060MM*	10.53%	58/42	8/1/2010
APCo-West Virginia	$1,656MM	10.50%	57/43	7/28/2006

AEP AMERICAN® ELECTRIC POWER

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation or regulation in Ohio and/or Virginia, and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Table of Contents

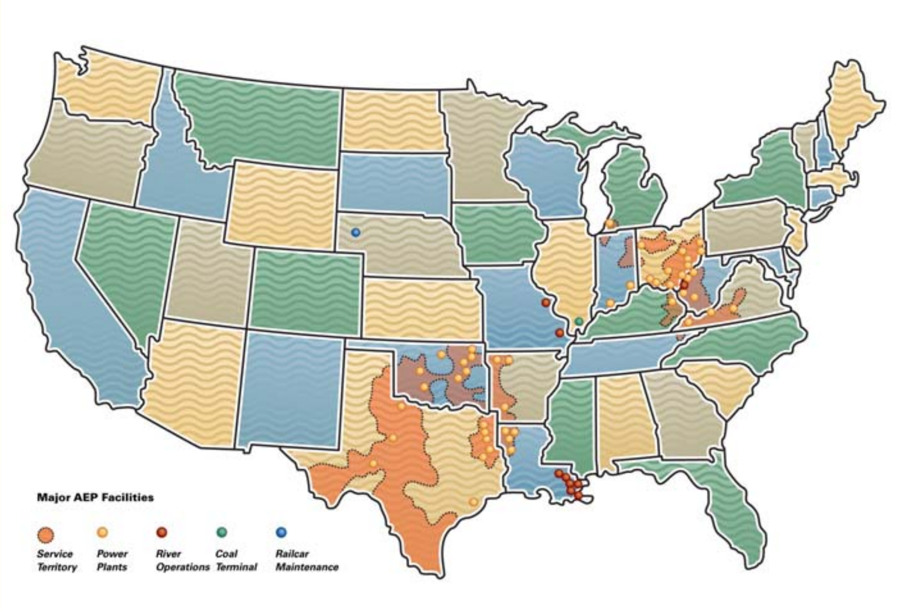
Company Overview

- 5.1 million customers in 11 states
- Industry-leading size and scale of assets:

Asset	Size	Industry Rank
Domestic Generation	~38,200 MW	# 2
Transmission	~39,000 miles	# 1
Distribution	~208,000 miles	# 1

Source: Company research & Resource Data International Platts, PowerDat 2005

- Coal & transportation assets
  - Control over 8,000 railcars
  - Own/lease and operate over 2,600 barges & 51 towboats
  - Coal handling terminal with 20 million tons of capacity
- 20,000 employees



AEP Generation Portfolio				
Coal	Gas	Nuclear	Hydro	Wind
67%	24%	6%	2%	1%

AEP Enjoys Significant Presence Throughout The Energy Value Chain

Strategic Direction

- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Develop our transmission business
- Achieve adequate returns on all assets

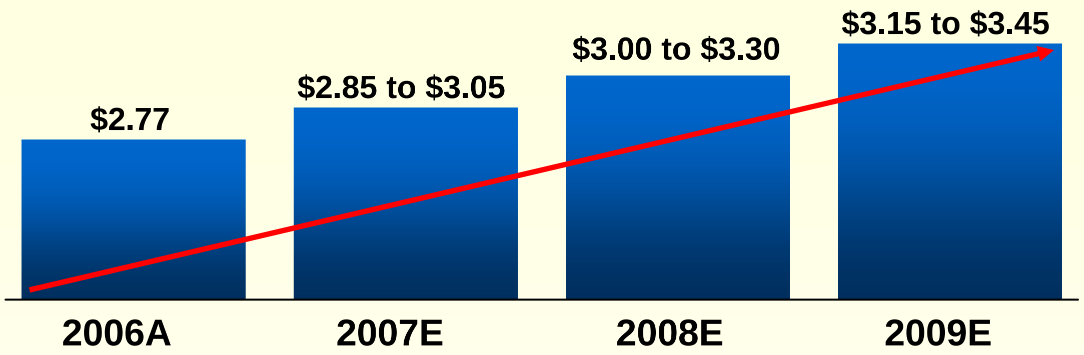
Deliver value to investors and cost effective service to our customers

Continued Commitment To Our Core Utility Mission: Bring Reasonably Priced Electric Service To Our Customers, Thereby Strengthening Our Communities And Rewarding Our Investors

AEP®

Framework For Long-Range Performance

- 2007, 2008 & 2009 Ongoing Earnings Guidance Ranges:



- EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in existing utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
  - Investment in new transmission opportunities
  - Seek rate recovery for new investments
  - Control costs & achieve timely rate relief
- Maintain credit ratings
  - BBB/Baa2/BBB

Our Strategy Remains Focused On Regulated Operations

Utility Investment Drives Growth

Capital Investment Forecast (2007-2009)

($ in millions)	2007	2008	2009	Total (2007-09)
Environmental	$935	$521	$301	**$1,757**
New Generation - Build	$474	$485	$573	**$1,532**

New Generation Facilities

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
SWEPCo	Mattison (Tontitown)	Arkansas	$130 MM	Gas	Simple-cycle	320	2007/2008
PSO	Southwestern	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
SWEPCo	Stall (Arsenal Hill)	Louisiana	$300 MM	Gas	Combined-cycle	480	2010
SWEPCo	Turk (Hempstead)	Arkansas	$1.3 B[(1)]	Coal	Ultra-supercritical	600[(1)]	2011
PSO	Red Rock	Oklahoma	$1.8 B[(2)]	Coal	Ultra-supercritical	950[(2)]	2012
CSP/OP	Great Bend	Ohio	Under Review[(3)]	Coal	IGCC	600	TBD
APCo	Mountaineer	West Virginia	Under Review[(3)]	Coal	IGCC	600	TBD

(1) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment
(2) PSO will own 50%, or 425 megawatts, totaling approximately $900MM in capital investment
(3) FEED (front-end engineering and design) study is completed. Final results will be available in June.

AEP Is Meeting The Growing Electricity Needs Of Customers Through The Pursuit Of New Economic Generation Facilities

Purchased Generation

2,946 MW of gas-fired generation added since 2005

Waterford

- 821 MW combined-cycle gas plant
- $220MM purchase price
- Columbus Southern Power completed purchase on Sept. 28, 2005

Ceredo

- 505 MW simple-cycle gas plant
- $100MM purchase price
- APCo completed purchase on Dec. 15, 2005

Darby

- 480 MW simple-cycle gas plant
- $102MM purchase price
- Columbus Southern Power completed purchase on April 25, 2007

Lawrenceburg

- 1140 MW combined-cycle gas plant
- $325MM purchase price
- AEG completed purchase on May 16, 2007

Additional Gas-fired Generation Allows Us To Meet The Growing Needs Of Our Customers And Provides The Company With Greater Fuel Flexibility

New Gas-Fired Generation Facilities

SWEPCo

- Mattison Plant (Tontitown, AR)
  - Certificate of Need filings (LA, AR, TX) were approved in all 3 states
  - Air permit filed and approved in Feb 2007
  - Units 3 and 4 online by summer peaking-season 2007; Units 1 and 2 online by Jan 2008
- Stall Plant (Arsenal Hill, LA)
  - Certificate of Need filings (LA, AR, TX)
    - TX settled in Feb 2007
    - AR & LA decisions expected by year-end 2007
  - Air permit filed on April 27, 2007 – expecting approval by Mar 2008

PSO

- Southwestern & Riverside Additions
  - Air permit received March 22, 2007
  - Commercial operation date of Dec 2007
  - Projects to be completed by Q1 2008
  - Regulatory Recovery
    - Settlement and final order in the Lawton Cogen case authorizes costs for Southwestern and Riverside peakers to be recovered through a rider mechanism beginning as early as June 2008 based on the Commercial Operation date

2007-2009 Projected Capital Expenditures

	2007	2008	2009
Mattison	$56MM	$4MM	-
Stall	$82MM	$126MM	$64MM
Southwestern	$36MM	$3MM	-
Riverside	$35MM	$2MM	-

AEP®

SWEPCo's and PSO's Short-Term and Intermediate Power Needs Will Be Met With Newly Constructed Gas-Fired Facilities

New Ultra-Supercritical Coal Facilities

SWEPCo

- Turk Plant (Fulton, AR)
  - Certificate of Need approvals (LA, AR, TX) expected by Sept 2007
  - Air permit approval expected in Aug 2007
  - Regulatory Recovery
    - Recovery of carrying cost requested in LA Certificate of Need filing – Hearings scheduled for Sept 2007
    - AR and TX rate recovery will be addressed in separate filings
  - Approximately 85-90% of costs are firm
    - EPC contract for balance of plant work awarded in May 2007
    - Contracts for turbine, boiler, and environmental control equipment awarded in 2006

PSO

- Red Rock Plant (Red Rock, OK)
  - Used and useful determination filed in Feb 2006 – approval expected by Sept 2007
  - Air permit approval expected in Aug 2007
  - Regulatory Recovery
    - Order expected in PSO rate filing by June 19, 2007 – filing includes request for CWIP treatment for new projects
  - Original cost estimate of $1.8 billion – revised cost estimate expected in July 2007

2007-2009 Projected Capital Expenditures

	2007	2008	2009
Turk Plant	$211MM	$230MM	$243MM
Red Rock Generating Facility	$54MM	$120MM	$236MM

AEP®

Ultra-Supercritical Coal-Fired Generation Is The Most Economical Choice For New Baseload Plants In AEP's Western Service Territory

Procedural Schedules and Details

- Red Rock Facility - Oklahoma
  - PSO and OG&E Cases were consolidated by the OCC
  - PSO Docket Nos. 200500516 and 200600030
  - OG&E Docket No. 200700012
  - Staff/Intervenor Testimony - received May 21
  - Rebuttal Testimony – June 18
  - Hearings re. Used and Useful Determination – July 2
  - Hearings re. OG&E Cost Recovery – July 19
  - ALJ Report – August 6
  - Order – August 21

- Turk Plant - Arkansas
  - Docket No. 06-154-U
  - Staff/Intervenor Testimony – June 29
  - Rebuttal Testimony – July 13
  - Public Hearings – July 19 or August 9

- Turk Plant - Louisiana
  - Docket No. U-29702
  - Staff/Intervenor Testimony – June 15
  - Rebuttal Testimony – July 16
  - Public Hearings – September 11-14

AEP®

Integrated Gasification Combined Cycle Facilities

Front-End Engineering & Design (FEED) results complete. Results to be filed in June 2007. Cost estimates expected to be in target range of 20-30% premium over new ultra-supercritical coal-fired facilities of equal capacity.

West Virginia

- Certificate of Public Convenience & Necessity filed Jan. 11, 2006
  - APCo testimony due June 18, 2007
  - Intervenor & Staff testimony due Aug. 17, 2007
  - Hearings Sept. 10-14, 2007
  - Statutory Deadline – Dec. 2, 2007
- Air permit filed in Oct 2006 – pre-draft report is expected in June 2007
- Regulatory Recovery Filing
  - Filing expected in June 2007 – will include request for cash recovery mechanism

Ohio

- Certificate of Environmental Compatibility & Public Need filed on March 24, 2006
  - Ohio Power Siting Board approved application on March 9, 2007
- Air permit filed in Oct 2006
- Regulatory Recovery Filing
  - Phase 1 – June 2006 – PUCO approved tariff to recover pre-construction costs ($24MM) over 12-month period effective July 1, 2006
  - Phase 2 – filing likely to be withheld until resolution of Ohio Supreme Court action

Construction Period Of 48-50 Months Following Receipt Of Major Regulatory And Permit Approvals

Transmission Investment Opportunity *

Creating a business model to manage capital requirements for enhanced returns with partners

- ~ $3 billion I-765 Project in PJM
- ~ $2 billion 765-kV study with ITC in Michigan
- ~ $3 billion project filed with SPP
- ~ $1- $7 billion in ERCOT via Electric Transmission Texas, LLC (ETT)

Assumptions	
Estimated Investment Opportunity	$15 Billion
Ownership Structure w/ Partner	50% / 50%
Debt/Equity Ratio	50% debt / 50% equity
Return on Equity	11.00%-13.00%
Potential EPS Impact (based on 396 MM shares)	$0.60+ **

* This identified transmission opportunity is not included in current capex guidance

** Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion

AEP®

Building The Next US Interstate System For Enhanced Reliability And Market Efficiency Could Have Significant EPS Implications

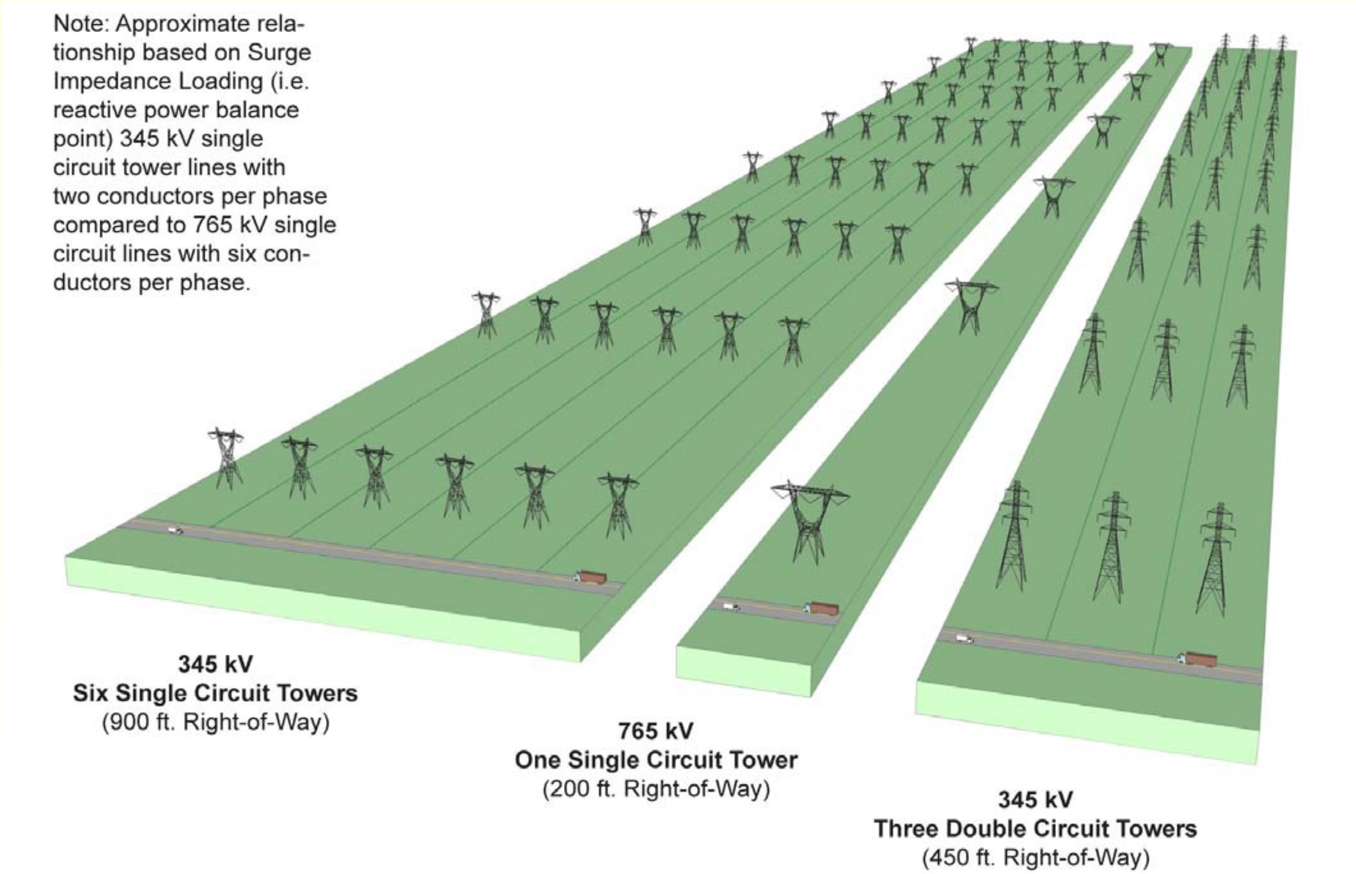
New Transmission Investment Funding Plans

- **Electric Transmission Texas LLC**
  - 40% equity / 60% debt capital structure requested at the PUCT follows Texas precedent for T&D companies' filings
  - Equity – 50% AEP / 50% MidAmerican Energy
  - AEP's 50% investment will be held at the AEP Utilities, Inc. subsidiary
  - Debt – Initially bank financing
  - Initial funding in 3Q07 after regulatory approvals

- **AEP I-765$_{\text{TM}}$ Interstate Project**
  - Forming a joint venture with Allegheny Energy for 290 miles of the proposed 550 mile project
  - Equity – 50% AEP / 50% Allegheny
  - AEP's 50% investment will be held at the AEP Transmission Holding Company LLC subsidiary
  - Operations to commence in the second half of 2007
  - Project included in the DOE's draft National Interest Electric Transmission Corridor issued in April 2007

- **Other Transmission Projects**
  - Equity percentage of capital structure will target FERC precedents
  - Equity ownership percentage will vary by project
  - Will seek FERC transmission incentives:
    - Incentive ROE
    - Return on CWIP
    - Abandonment recovery
    - Expensing pre-construction expenses

765 Right-of-Way Comparison



From a siting standpoint, 765 kV is much more efficient in terms of economies of scale and right-of-way than lower capacity lines

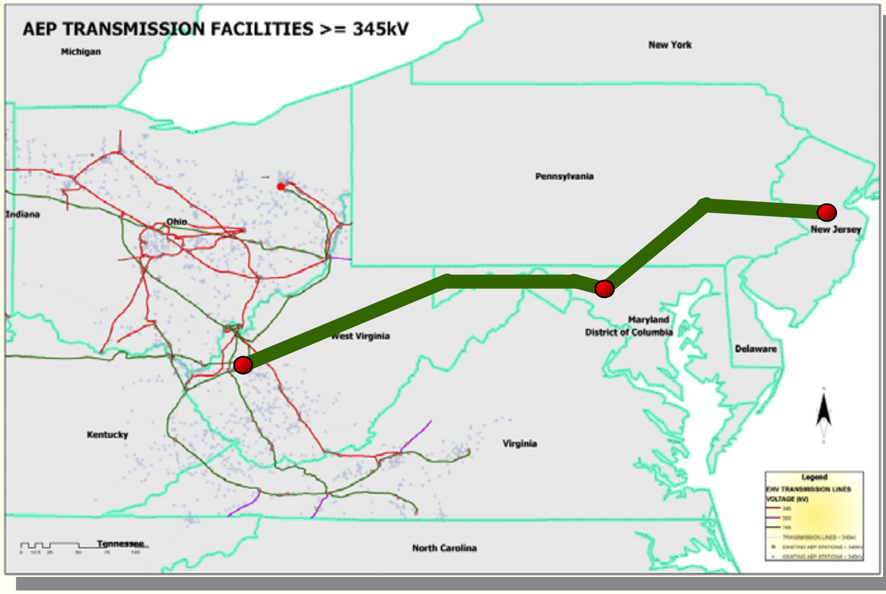
I-765$_{TM}$ PJM Transmission Project

Joint Venture with AYE

- 290 miles of the proposed 550 mile project
- Line will link AEP's Amos station in WV to AYE's proposed Kemptown station in MD with an intermediate station at AYE's Bedington station in WV
- JV project costs will encompass $1.1 billion, with each company owning 50%
- AEP's investment will total approximately $700 million, including ancillary projects
- Entire I-765$_{TM}$ project included in DOE's draft National Interest Electric Transmission Corridor
- FERC incentive rate treatment applies
- Operations to commence in the 2H07

Remaining I-765$_{TM}$ Project

- PJM is evaluating the Kemptown (MD) - Deans (NJ) line as a separate alternative



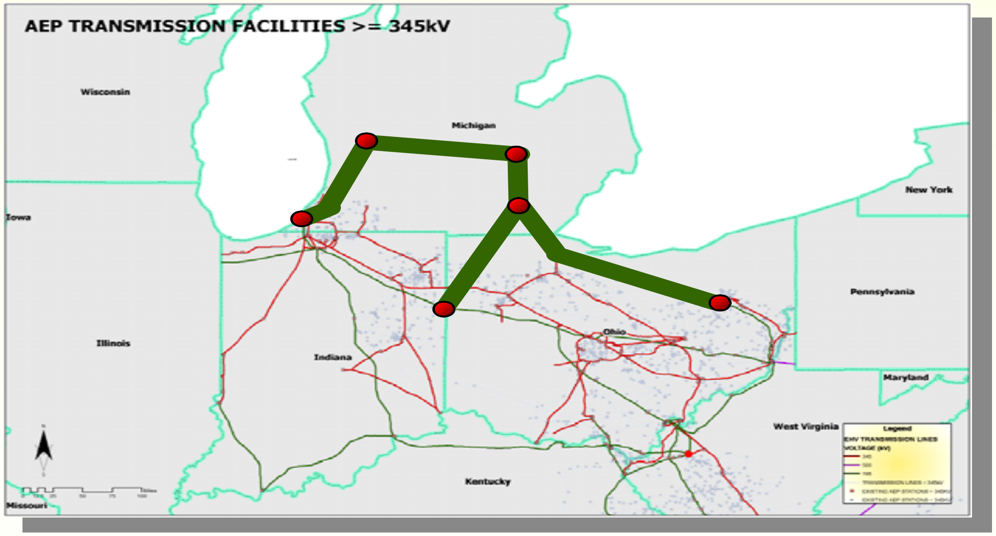
- ➢Jointly owned with Allegheny, will improve eastern grid reliability
- ➢Enhance Midwest-Mid-Atlantic power transfer capability by 5000 MW
- ➢Reduces network line losses by 280 MW at peak with heavy Midwest – Mid-Atlantic power transfers.

PJM's Targeted In-Service Date For the 290-Mile Project Is 2012

AEP®

Michigan 765kV Study

- Agreement with ITC Transmission for Michigan 765-kV study
- Estimated $2B investment potential (before ownership division)
  - 630 line miles
  - Over 5000MW improved transfer capability
  - Anticipated rate impact <1mil/kWh
- 765-kV could help alleviate constraints
- Study results anticipated in 2Q07
- We anticipate signing an MOU with ITC on joint ownership in mid-2007



AEP®

Project Construction Would Not Proceed Until Proper Regulatory Approvals Are Received And Cost Allocation Is Clarified

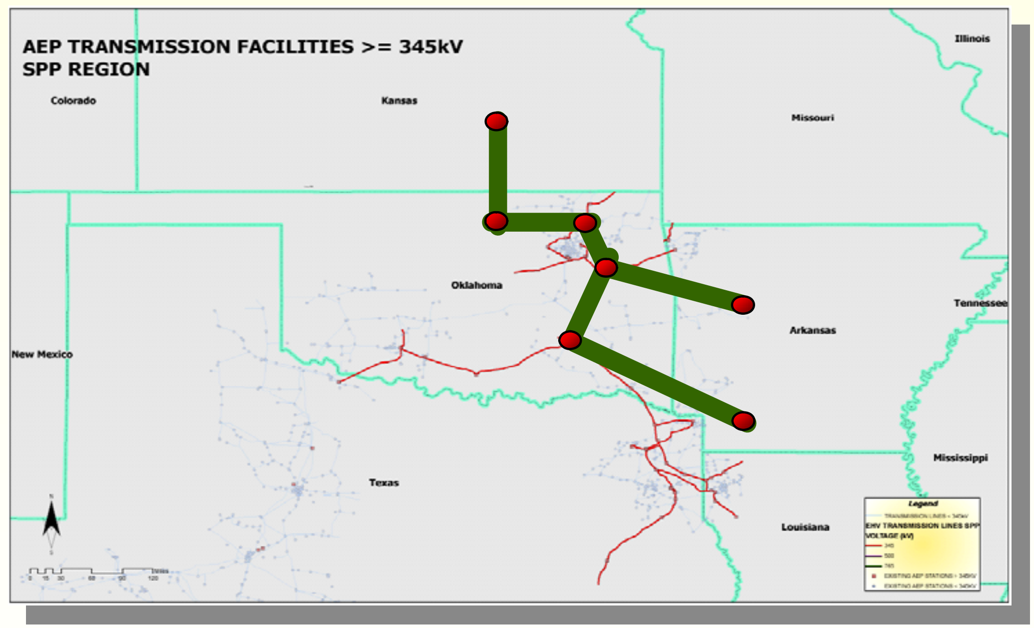
SPP Transmission Potential

- June 2006 SPP requested proposal to address congestion, reliability & access for new generation

- July 2006 AEP submitted proposal:

- Six 765-kV lines, 610 line miles from Arkansas to Wichita, Kansas, under construction 2012-2017
- Investment ~$3 billion
    - ~4000MW improved transfer capability
    - Anticipated rate impact 2mils/kWh

Next steps:
SPP issued EHV Overlay Study RFP to review 345 kV, 500 kV, and 765 kV potential projects in SPP with results expected in mid-2007



Long-term Opportunity For Large Transmission Investments to Reduce Congestion, Enhance Reliability and Access New Generation

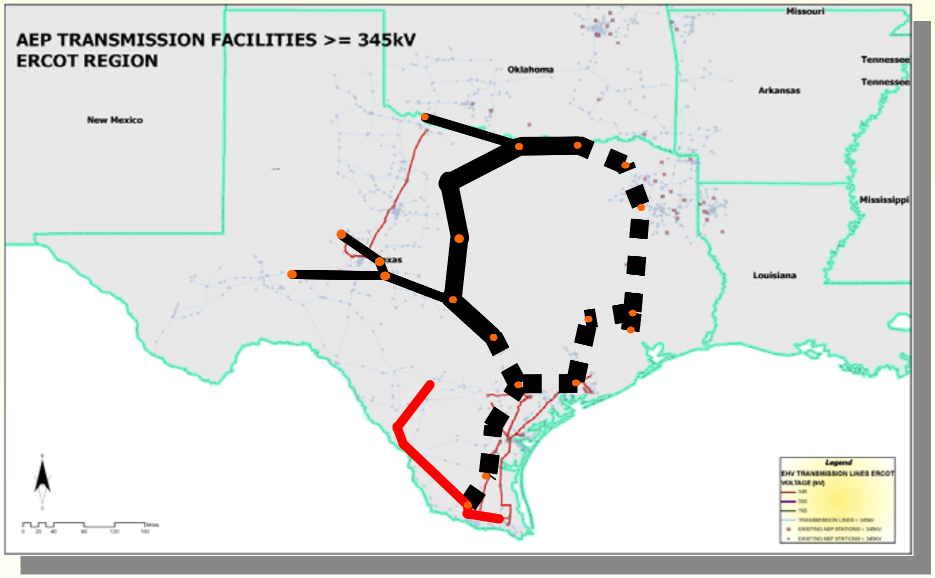
Electric Transmission Texas, LLC

Joint Venture with MidAmerican Energy

- Ownership – 50% AEP / 50% MidAmerican Energy
- 40% equity / 60% debt capital structure requested at the PUCT follows Texas precedent for T&D companies' filings
- AEP's 50% investment will be held at the AEP Utilities, Inc. subsidiary
- Hearings with PUCT to be held July 16-19, 2007
- Initial funding in 3Q07 after regulatory approvals
- Debt – Initially bank financing

Competitive Renewable Energy Zone (CREZ) docket

- In February 2007, ETT proposed the development of a long-term transmission plan for ERCOT to address the Texas legislature's CREZ initiative. The plan includes:
  - $1.5 billion for Stage I of CREZ development by 2012
  - $1.5 billion for Stage II of CREZ development by 2015
  - $4.2 billion for Stage III for completion of ERCOT transmission backbone needed for long-term



Operations of JV Could Begin As Soon As 3Q07 Upon Receipt of Regulatory Approvals

Environmental Investment

AT THE CONCLUSION OF OUR CURRENT ENVIRONMENTAL RETROFIT PROGRAM, OVER 47% OF OUR COAL-FIRED GENERATION FLEET WILL BE EQUIPPED WITH SCRs AND OVER 50% WILL BE SCRUBBED (FGD). AEP's TOTAL COAL FLEET CAPACITY = 24,710 MEGAWATTS*

Plant Name	MW Capacity	SCR	Status	FGD	Status
Amos 1-3	2900	☑	In-service	☑	Projected 2008-10
Gavin 1 & 2	2620	☑	In-service	☑	In-service
Mitchell 1	800	☑	In-service	☑	In-service

*Excludes AEP's 44% ownership in OVEC (980 MWs of coal-fired capacity)

AEP®

Installation Of SCR And FGD Equipment Will Allow Our Coal Fleet To Remain Extremely Cost Competitive

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

AEP®

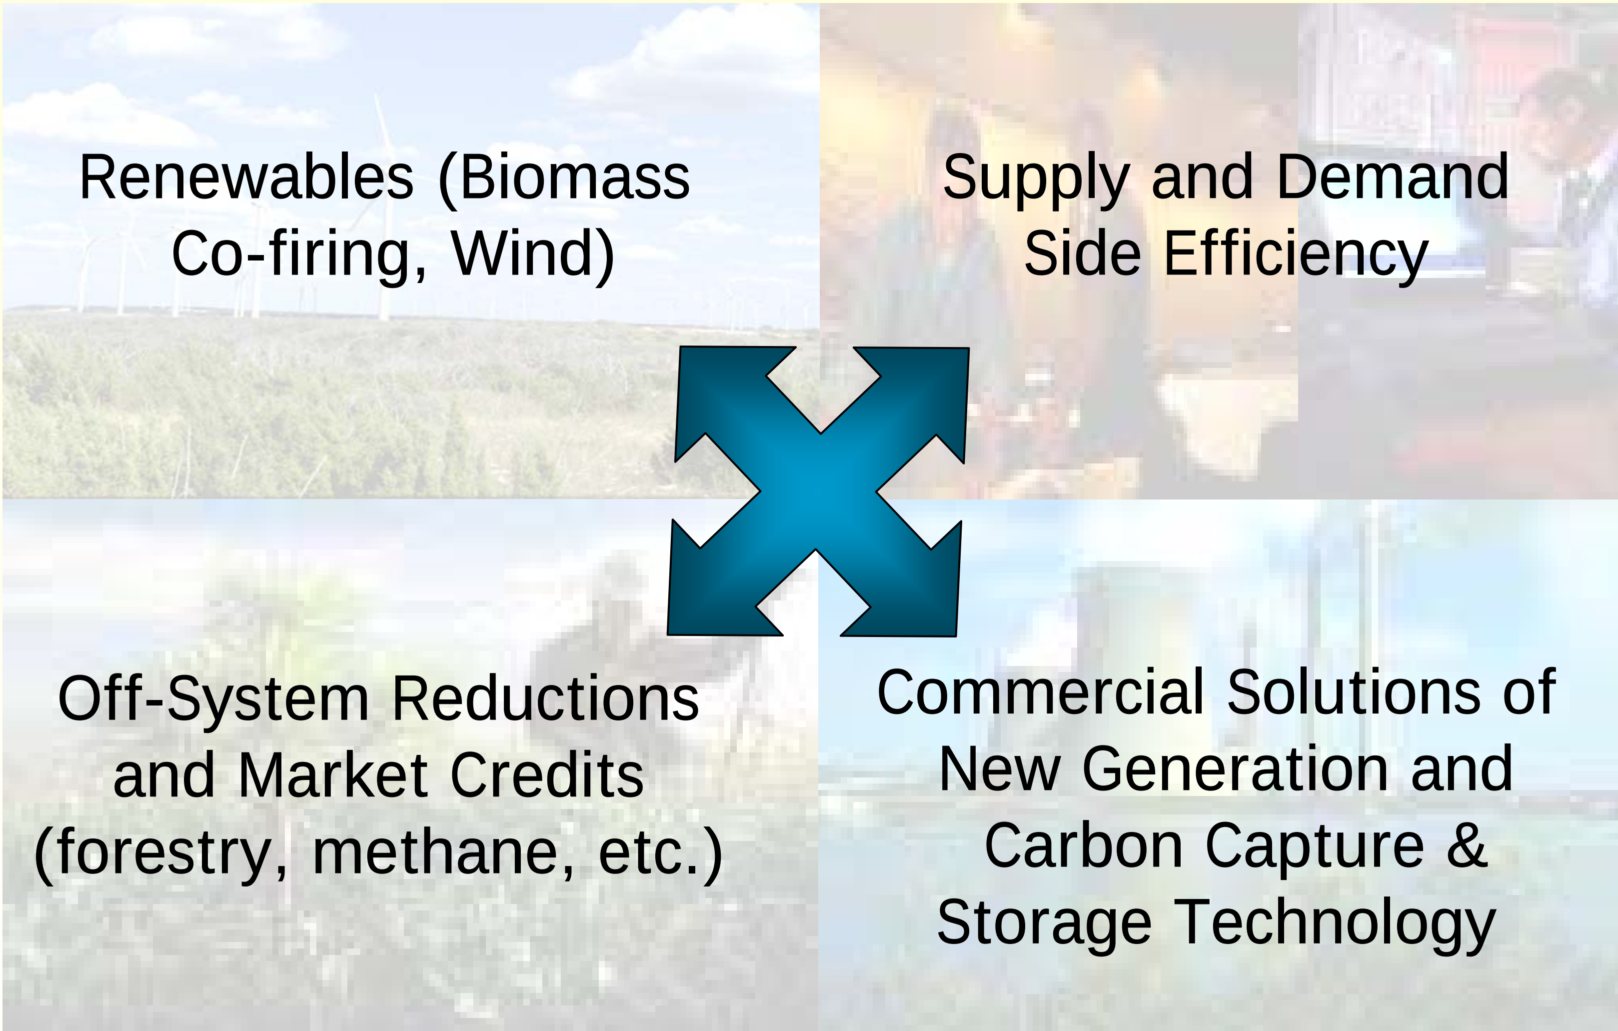
AEP Must Be A Leader In Addressing Climate Change

AEP's Long-term GHG Reduction Portfolio



AEP®

AEP Is Investing In A Portfolio Of GHG Reduction Alternatives

AEP's Long-term CO_2 Reduction Commitment

Existing Programs

- Renewables
  - 800 MWs of Wind
  - 300 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

New Program Additions

- Incremental Reduction quantity: 5MM tons/yr
- Timing: Implement during 2007 to take effect/receive credits by 2011
- Methods
  - +1000 MWs of Wind PPAs – 2MM tons/yr
  - Domestic Offsets (methane) – 2MM tons/yr
  - Forestry – Tripling annual investment to increase to 0.5MM tons/yr by 2015
  - Fleet Vehicle/Aviation Offsets – 0.2MM tons/yr
  - Additional actions to include DSM and end use energy efficiency, biomass and power plant efficiency – 0.2MM tons/yr

New Technology Additions

- Commercial solutions for existing fleet
  - Chilled Ammonia
  - Oxy-Fuel

AEP Is Committed To A 5mm Ton/Yr Reduction In Co_2 Emissions Which Offsets Approximately Half Of The Emissions Projected From New Generation Projects Previously Announced

AEP®

Chilled Ammonia Technology Program

Phase 1
2008 Commercial Operation

Mountaineer Plant (WV) → MOU (Alstom) **Chilled Ammonia** → CO_2 (Battelle)

Project Validation

- 30 MW_t (megawatts thermal) scale (a scale up of Alstom/EPRI 5 MW_t field pilot, under construction at WE Energies)
- <0.1MM tonnes CO_2 per year
- In operation 4Q 2008
- Approximate total cost $50 – $80M
- Using Alstom "Chilled Ammonia" Technology
- Located at the AEP Mountaineer Plant in WV
- CO_2 for geologic storage

Phase 2
2011 Commercial Operation

Northeastern Plant (OK) → MOU (Alstom) **Chilled Ammonia** → EOR; CO_2

Commercial Scale Retrofit

- ~ 200 MW_e scale (megawatt electric)
- ~ 600 MW_t scale (megawatt thermal)
- ~1.5MM tonnes CO_2 per year
- In operation late 2011
- Approx. capital $250 – $300M ($CO_2$ capture & compression)
- Approx. O&M cost $12M per year
- Energy penalty ~ 35 – 50 MW steam, 25 – 30 MW for CO_2 compression
- Retrofit SCR & Wet FGD Required: ~$225 – $300M (required for CO_2 capture equipment)
- Located at AEP's Northeastern Plant Unit 3 or 4 in Oklahoma
- CO_2 for Enhanced Oil Recovery (EOR) or geologic storage

AEP®

Post-combustion Carbon Solution Provides Pure Co_2 Stream For Capture

Oxy-Fuel Technology Initiative

Near-zero Emissions Using Oxy-fuel Combustion Technology

Oxy-Fuel CO_2 Capture & Storage Project

Pilot Scale Demonstration

- 10 MW_e scale
- Teamed with B&W at its Alliance Research Center and 16 other utilities
- Demo completed 3Q 2007
- AEP funding of $50k

Commercial Scale Retrofit

- Retrofit on existing AEP sub-critical unit (several available)
- 150 – 230 MW_e scale retrofit
- 4,000 – 5,000 tons CO_2 per day
- Teamed with B&W
- AEP funding of ~ $200k – $3M for feasibility study
- Feasibility study to be completed in late 2008/early 2009

Combustion Conversion Technology For Existing Coal Fleet – Longer Lead Time With Enhanced Viability And Long-term Potential

Regulatory Activity

AEP Ohio Application For 4% Provision On Generation Rate

- On Jan. 23, 2007, CSP and OP filed an application at the PUCO to recover 2007 costs associated with additional generation-related expenditures the companies are encountering related to environmental, security and other new generation-related costs pursuant to the RSP.
- CSP and OP are requesting to implement the provision to recover $24.5MM and $8.2MM, respectively, from May 2007 through December 2007.
- Staff & Intervenor testimony filed May 11, 2007; Staff recommended a $15MM increase at CSP and a $3.7MM increase at OP; OCC recommended a $19.9MM increase for CSP and a $3.7MM increase for OP.
- Evidentiary hearing commenced May 22, 2007.
- Because there was no specific action by the PUCO within the required time frame, we were allowed to implement these increases, subject to refund, in May 2007.

AEP®

Regulatory Activity

Electric Transmission Texas (ETT) Rate Filing

- Jan. 22, 2007 – ETT filed with the PUCT for approval to operate as an electric transmission utility in Texas and to establish initial rates for ETT. (Docket No. 33734)
  - Requested capital structure of 60% debt / 40% equity; requested ROE of 11.25%.
  - Intervenor testimony is due June 8, 2007. Staff testimony is due June 18, 2007. Hearings are scheduled for July 16-19, 2007. Public Hearings are July 16-19.
    - Final order and operations are expected to commence in the 2nd half of 2007. Upon receipt of approvals, AEP and MidAmerican will each own a 50% interest in the joint venture.

Seams Elimination Cost Adjustment Revenues

- August 2006 – ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
  - Up to $96MM of SECA revenues could be disallowed, net of unused provisions
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both.
- Exceptions to initial decision filed Sept. 11, 2006; Replies to exceptions filed Oct. 11, 2006; Order expected by the Commission in 2007

Summary Rate Case Information

Texas Central & Texas North Companies Wires Case

On November 9, 2006, TCC & TNC filed applications with the PUCT to raise base rates they charge to Retail Electric Providers (REP) serving end-use electricity customers in their service territories. Rate increase requests of $69.9MM and $22MM, respectively. Requested increases include the expiration of merger-related billing credits that have been in place since 2000, totaling $20MM and $6.2MM for TCC and TNC, respectively. (TCC Docket #33309, TNC Docket #33310). TNC reached settlement for $13.7MM rate increase.

Summary Rate Case Information

PSO Rate Proposal

On November 21, 2006, Public Service Oklahoma filed an application with the Oklahoma Corporation Commission to increase base rates by $49.6 million to recovery investments already made and costs incurred. The request represents a 4% overall increase (including fuel). The filing also includes a proposal to adopt an annually adjusted rate mechanism, which includes a return on CWIP. The formula rate would adjust rates, up or down, if PSO earns above or below an approved bandwidth around the authorized ROE. (Case #200600285)

Pro-forma Capital Structure – Company Position (Test Year ended 6/30/06)

	% of Capitalization	Cost Rate	Weighted Cost
Long-Term Debt	53.55%	6.32%	3.39%
Preferred Stock	0.43%	4.02%	0.02%
Common Equity	46.02%	11.75%	5.41%
Total	100%		8.82%

Pro-forma Rate Base – Company Position (Test Year ended 6/30/06)*

Rate Base	$ 1,189.4
Rate of Return	8.82%
Operating Income Requirement	$ 104.9
Pro-Forma Operating Income	$ 74.8
Difference	$ 30.1
Revenue Conversion Factor	1.65
Change in Revenues	$ 49.6

* Figures are rounded

Procedural Schedule

November 21, 2006	Case filed
March 20, 2007	Intervenor & Staff testimony
April 9, 2007	Rebuttal testimony
May 1, 2007	Hearings
June 20, 2007	Final order expected

ALJ report issued May 30, 2007, requesting revised revenue requirements based on a 10.5% ROE and other adjustments, and allowing CWIP on new projects.

Oral arguments to be presented to new Commissioner June 13.

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants including our ability to restore Indiana Michigan Power Company’s Donald C. Cook Nuclear Plant Unit 1 in a timely manner; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity and transmission lines (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary or deflationary interest rate trends; volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impacting our ability to finance new capital projects and refinance existing debt at attractive rates; the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurred cots and recovery is long and the costs are material; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

Table of Contents

AEP AMERICAN ELECTRIC POWER

AEP Highlights

Premier utility platform

- Leadership position in electric generation, transmission and distribution operations
- Cash flow, earnings and regulatory diversity with more than 5 million customers in 11 states
- $6.3 billion capital expenditure program (2009-2011) will continue to drive rate base growth

Effective regulatory relationships

- Traditional recovery mechanisms with equitable risk allocation enhance both earnings and cash flow
- Emerging energy policies play to AEP's strengths (transmission, energy efficiency, reliability)
- Constructive local relationships deliver successful regulatory outcomes

High-growth transmission business

- The leading US transmission owner, operator, and developer
- Exceptional portfolio of high-quality development projects and project partners
- Attractive ROEs, regulatory support and access to capital will drive earnings growth beyond our traditional utility footprint

Stable financial position

- Maximization of shareholder value through regulated utility and transmission investments
- Balanced approach to cost containment and capital allocation
- Commitment to investment grade profile, prudent balance sheet, and liquidity management
- Conservative dividend payout with attractive yield

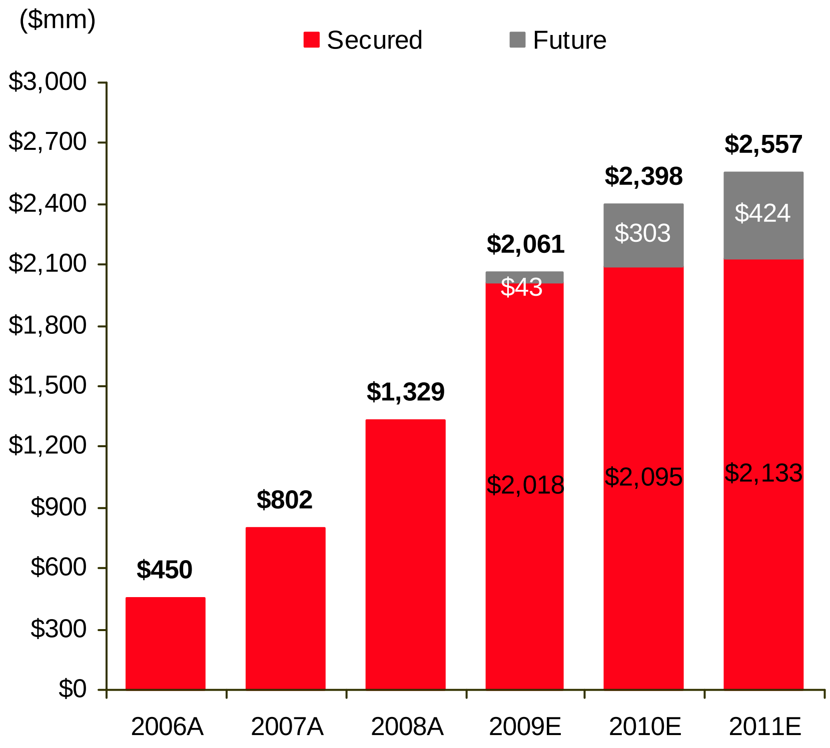
AEP AMERICAN ELECTRIC POWER

Track Record of Successful Regulatory Outcomes

Cumulative Rate Relief



Annual rate increases, $mm	$450	$352	$527	$732	$337[1]	$159[1]

[1] $77mm and $38mm was secured for 2010 and 2011, respectively, as of May 15, 2009

Our Regulatory Approach:

Maximize utility company returns:

- Successfully secured significant rate relief
- 2009 rate relief:
  - ✓ Ohio ($455MM)
  - ✓ I&M ($52MM)
  - ✓ APCo ($58MM)
  - ✓ PSO ($74MM)
- Pending rate relief including amount requested:
  - ✓ APCo WV ($25MM – in ENEC filing)
  - ✓ SWEPCo ($56MM)
- Anticipated filings:
  - APCo VA and others to be determined

Minimize regulatory lag:

- Active fuel adjustment clauses now in place in <u>all</u> jurisdictions
- Increased frequency of rate cases
- Employing tracking features

Strong local relationships with regulators

AEP AMERICAN® ELECTRIC POWER

Energy Policy Initiatives are Core to Our Strategy

Greenhouse Gas Reduction & Regulation

- Actively engaging in CO_2 policy debate – support cap & trade with allocated credits
- Leadership position in development of carbon capture and storage technology
- Reducing carbon footprint via offsets and other measures
- Founding member of Chicago Climate Exchange

Renewable Energy

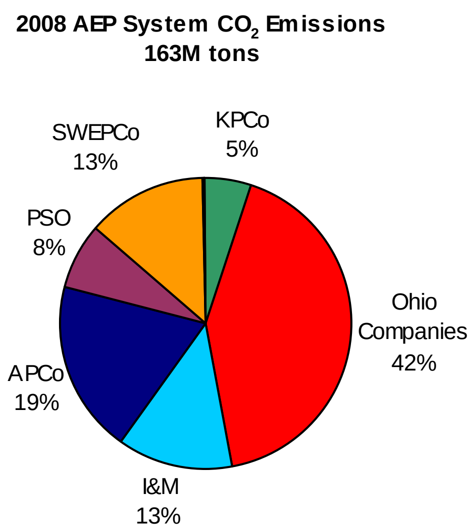
- Develop "transmission superhighway" to facilitate renewable energy projects
- Satisfy RES requirements in our jurisdictions
- Add 2,000MW of wind capacity via long-term PPAs – 903MW achieved to-date

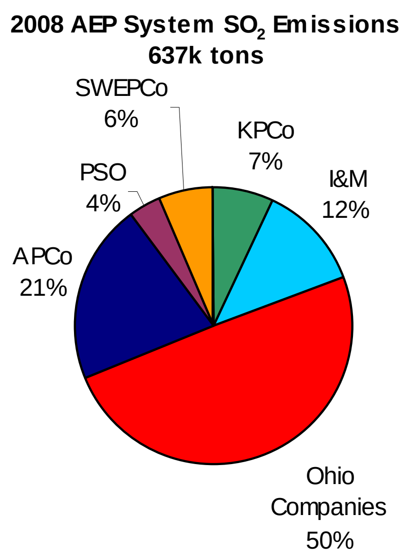
Energy Efficiency, Security & Reliability

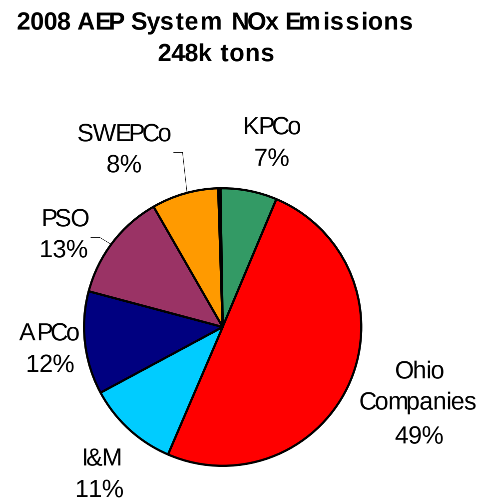
- Develop high-voltage transmission projects to strengthen America's power grid
- Build generation to ensure reliable supply
- Reduce 1,000MW of demand by 2012
- Reduce 2.25 million MWhs of consumption by 2012
- Diversify our fuel mix; have added 3,705MW of gas-fired capacity since 2005 and have 1,080MW under construction

AEP AMERICAN ELECTRIC POWER

CO_2 Cost Recovery – Should Follow SO_2 & NOx





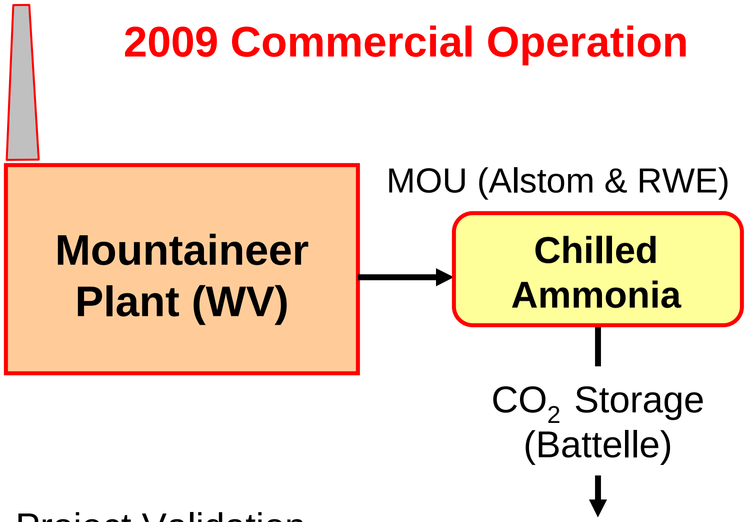


- 100% of SO_2 and NOx allowance costs currently recovered through tracker or similar mechanisms
- Prudently incurred costs associated with carbon-based taxes and other carbon-related regulations explicitly included in Ohio Fuel Adjustment Clause

AEP AMERICAN ELECTRIC POWER

Carbon Capture & Storage

2009 Commercial Operation



Project Validation

- **Alstom "Chilled Ammonia" Technology**
- **20-30 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, in operation at We Energies' Pleasant Prairie Power Plant)**
- **Located at the AEP Mountaineer Plant in WV**
- **100,000 - 300,000 tonnes CO_2 per year**
- **In operation 3Q 2009**
- **Geologic storage for CO_2**

Represents Post-Combustion Capture

- **Conventional or Advanced Amines; Chilled Ammonia**
  - **Amine technologies are currently available in other industrial applications**
  - **Relatively low CO_2 concentration in flue gas - more difficult to capture than other approaches**
  - **High parasitic demand**
    - **Conventional Amine ~ 25-30%**
    - **Chilled Ammonia target ~ 10-15%**

Key Issues for CCS Development in the U.S.

- **Overcoming the 'economic' hurdle**
- **High up-front capital investment**
- **Commercial demonstration at large coal-fired power plants**
- **National standards for permitting of storage reservoirs**
- **Potential institutional, legal and regulatory barriers to carbon storage**

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
AEG	Dresden	Ohio	$322 MM	Gas	Combined-cycle	580	2013
SWEPCo	Stall	Louisiana	$385 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.6 B (1)	Coal	Ultra-supercritical	600 (1)	2012

(1) SWEPCo will own approximately 73%, or 438 megawatts, totaling about $1.2 billion in capital investment.

- Turk – AEP self-reported impacts to jurisdictional wetlands in March 2009. Work continues outside the jurisdictional areas. Hearing on the air permit appeal is scheduled for June 2009.
- Stall – Construction continues.
- Dresden – Construction suspended due to shifts in capital spending. Commercial operation date has been projected for 2013 (previously 2010).

AEP AMERICAN® ELECTRIC POWER

DC Cook Unit 1 Update

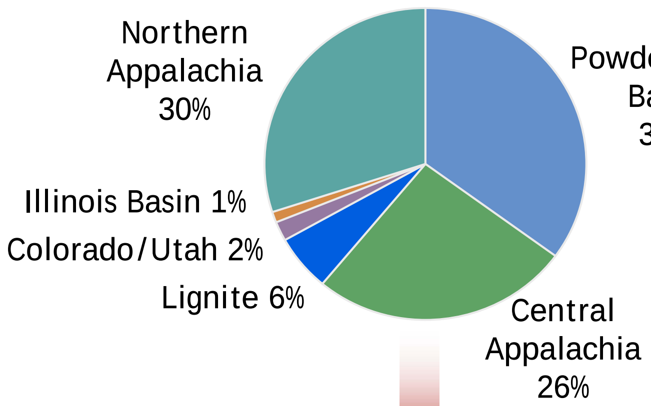
- Previously identified technical challenges have solutions
  - Low pressure turbine rotors have been straightened
  - Foundation repair work is in progress and is the critical path
  - Generator and high pressure turbine repair work supports the critical path
- The unit is scheduled to return to service in the fourth quarter of 2009
  - The unit will operate without the last stage blades at 30 MW (summer) to 100 MW (winter) reduced capacity
- Root cause: “A blade-rotor system design that failed to provide adequate stress margin”
  - The root cause also found no operational or installation issues
- The replacement rotors are scheduled for installation in the spring of 2011
  - Different design with several years of fault-free commercial operation.
- We continue to receive $3.5MM per week from the accidental outage policy
  - Insurance proceeds are reflected as other operating revenue; During 1Q09, approximately 40% of the insurance payments ($20MM) were used to offset increased fuel costs to customers

AEP AMERICAN ELECTRIC POWER

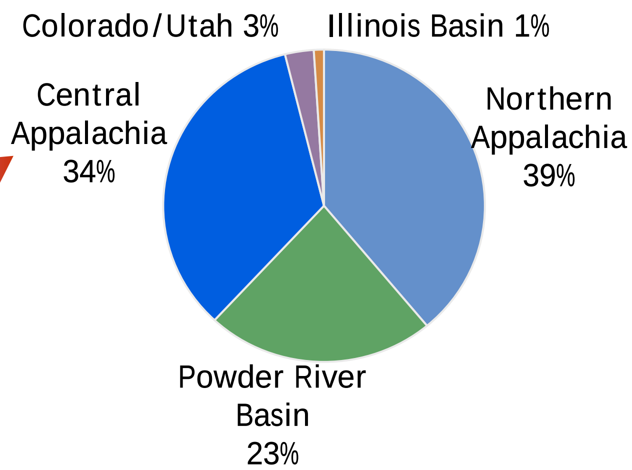
Coal Procurement - 2009 Projected

AEP burns approx. 77 million tons of coal per year

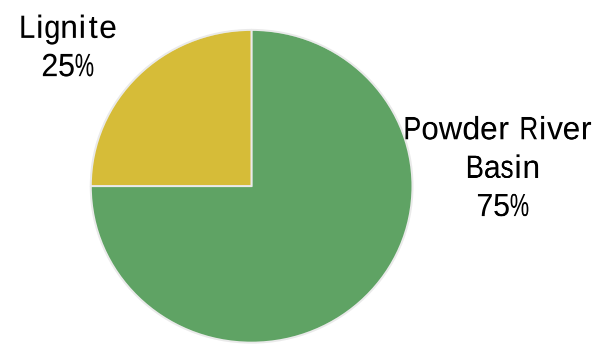
Total AEP System



AEP East



AEP West



Coal Stats:

- 98% contracted for 2009
- Avg. delivered price ~ $46.61/ton in 2008
- Approximate 12% price increase in 2009 ~ $52.00/ton

AEP AMERICAN ELECTRIC POWER

Uniquely Positioned for Nationwide Grid Expansion

Active Projects:

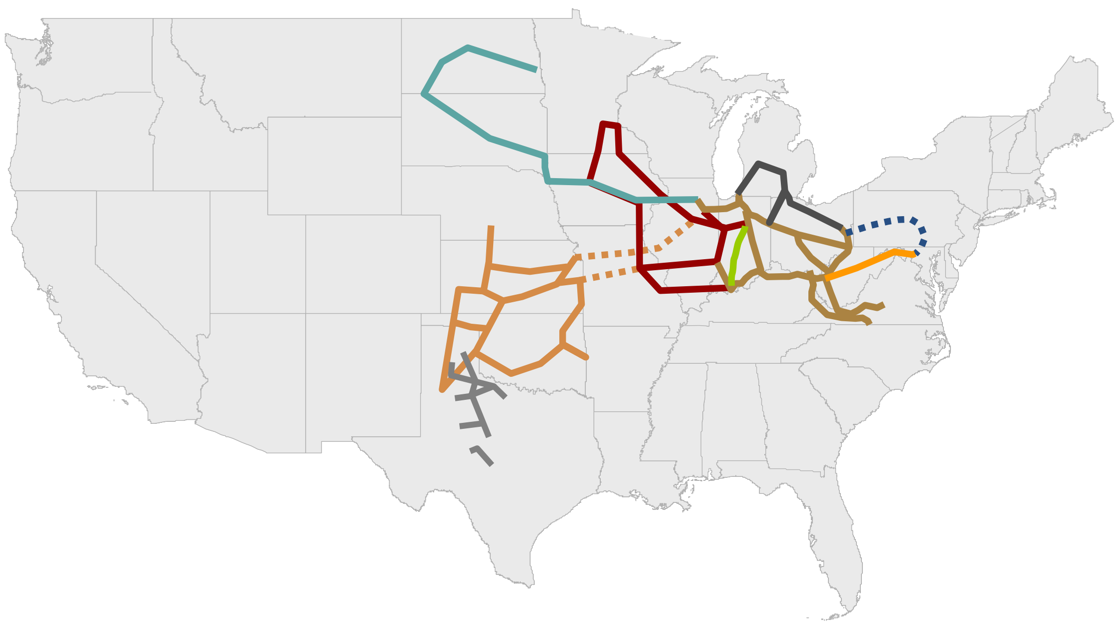
Pioneer — **COD: 2015**
- 240 miles of 765 kV
- Partner: Duke Energy (50%)
- Estimated Cost: $1 billion
- ROE: 12.54%

PATH-WV — **COD: 2014**
- 275 miles of 765 kV
- Partner: Allegheny Energy (50%)
- Estimated Cost: $1.2 billion
- ROE: 14.3%

Tallgrass — **COD: 2013-14**
- 170 miles of 765 kV
- Partners: OG&E (50%) & MidAmerican Energy (25%)
- Estimated Cost: $500 million
- ROE: 12.8%

Prairie Wind — **COD: 2013**
- 110 miles of 765 kV
- Partners: Westar Energy (50%) & MidAmerican Energy (25%)
- Estimated Cost: $400 million
- ROE: 12.8%

ETT — **COD: 2013**
- 345 kV in ERCOT
- Partner: MidAmerican Energy (50%)
- Estimated Cost: $400 million
- ROE: 9.96%



Future Projects:

EHV Michigan — **COD: ~2020**
- 700 miles of 765 kV
- Partner: ITC

PJM Projects
- Enhance existing 765/345 kV

Hartland — **COD: ~2020**
- 1000+ miles of 765 kV
- Partner: Hartland Wind LLC

MISO Vision Plan
- 765 kV Backbone

SPP Overlay — **COD: 2013-14**
- 765 kV Backbone

ETT — **COD: ~2018**
- 345 kV in ERCOT
- Additional CREZ spend of $750-$850 million

AEP AMERICAN ELECTRIC POWER

Note: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

Equity Contributions Enhance Earnings Growth to 4 – 8%

AEP is the leader

- Largest US transmission footprint
- Interstate EHV highway vision
- National renewables transmission strategy

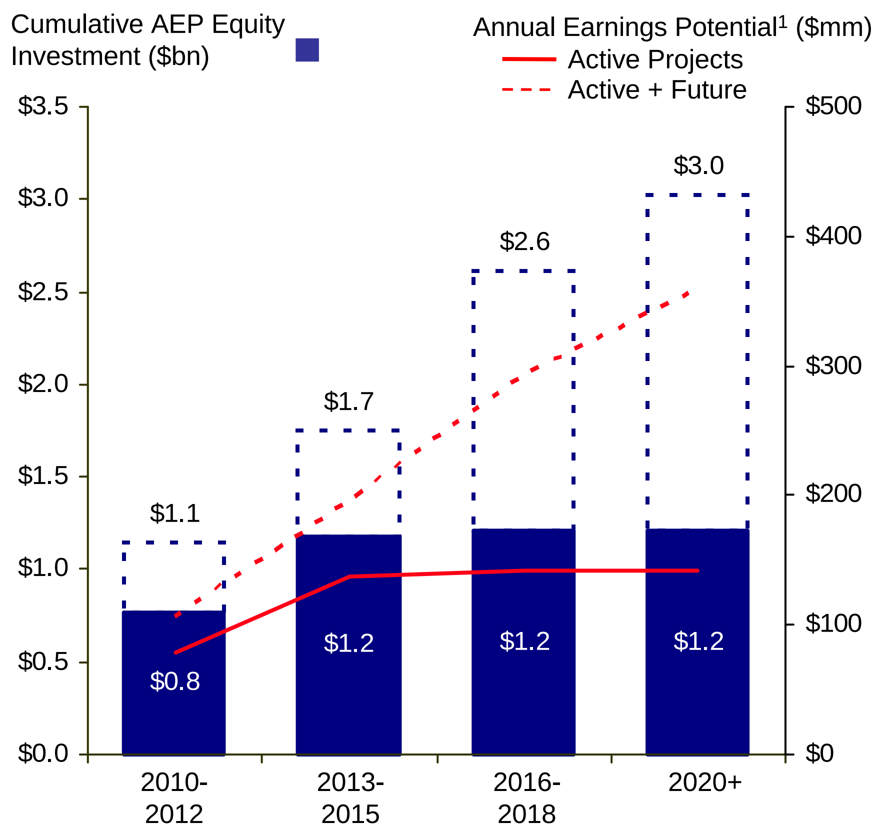
Quality projects

- 4 FERC-approved ($3.3 billion)
- Independent ERCOT transmission JV company (up to $2.6 billion)
- Robust pipeline of future 765 kV projects (up to $15 billion)

Attractive returns

- FERC incentive rates (12.5-14.3%)
- Strong cash flow with CWIP
- Long-term earnings potential of ~$140-$360 million annually[1]

Illustrative Earnings Potential of New Transmission Initiatives



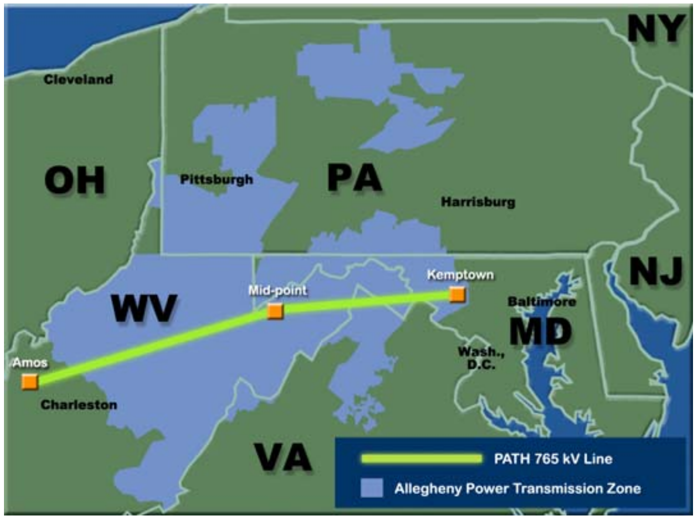
[1] *Illustrative calculation assumes 50/50 debt/equity capitalization and incentive ROE of ~13.0% for FERC projects and a 60/40 debt/equity capitalization and 10.5% ROE for ERCOT projects*

AEP AMERICAN ELECTRIC POWER

EHV Transmission in PJM: PATH

Project Description: 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

- **Near Term Risks**
  - Obtaining a CPCN in West Virginia or costly concessions with WV to receive the CPCN; CPCN filing made May 15, 2009
- **Pertinent Data**
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP and 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
    - Rates went into effect March 1, 2008; current annual revenue requirement is $15MM effective 1/1/09
  - Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million
  - Estimated completion date: 2014



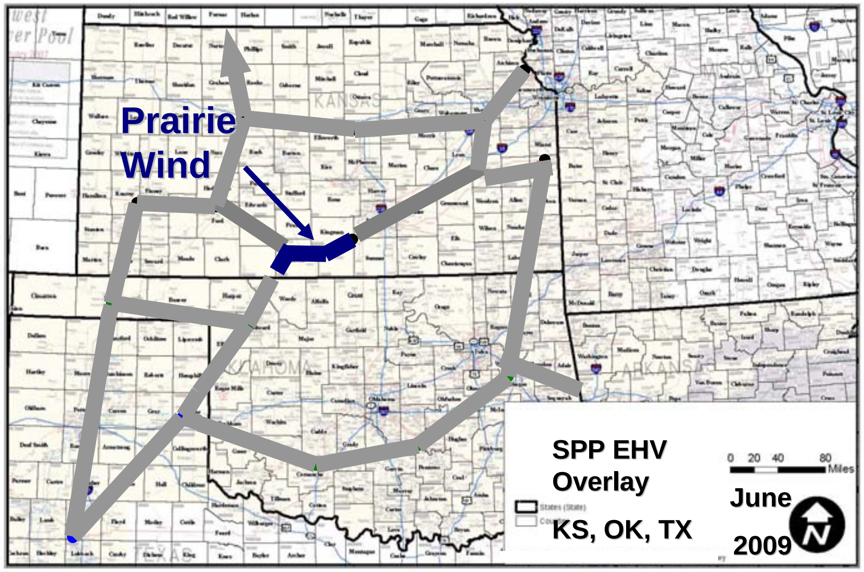
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Prairie Wind Transmission, LLC

JV to build first segment of 765-kV transmission in SPP

Overview

- In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
- Following a settlement agreement with ITC on June 1, 2009 both entities agreed to split the mileage and costs of building the 765-kv transmission superhighway. The newly revised project is expected to cost approximately $400 million and in-service by 2013. Settlement approval by the KCC is still pending.
- PWT is a 50/50 JV that is proposing to build approximately 110 miles of 765-kV lines extending from Wichita, KS, west to a substation near Medicine Lodge, KS, and then south to the Kansas border from Medicine Lodge, KS.
- The original proposed mileage prior to settlement was approximately 230 miles.
- The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect, and
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PWT or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

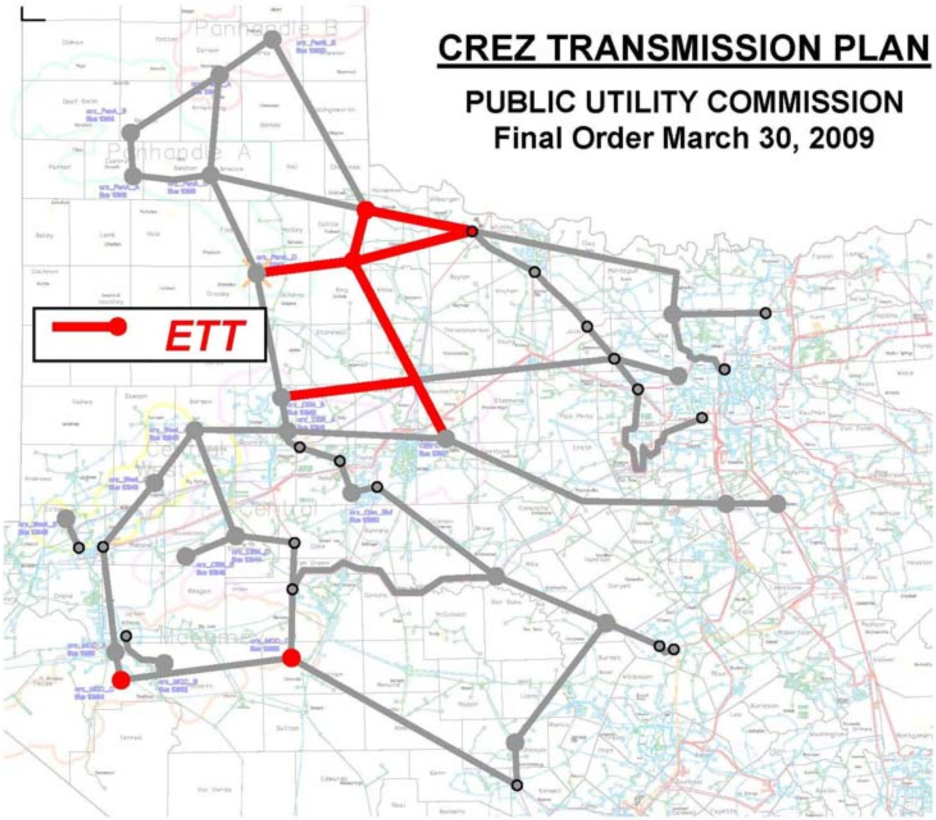
Key Challenges

- Regional Cost allocation which enables the development of "system solutions"
- RTO Approval

Texas CREZ Project

Strengthening the ERCOT grid to collect and deliver wind generation to load

- ***Status:***
  - On February 26, 2009, PUCT ordered its staff to stage the development of CREZ transmission lines.
  - Staging to occur in separate docket and consider timing of wind projects and congestion.
  - PUCT established 2 categories based on priorities. ETT has no first priority lines.
  - PUCT issued a final order assigning transmission service providers on March 30, 2009.
  - ETT's share of CREZ investment is approx. $840MM of $4.9B total.
  - The filing calls for completion of the plan by 2013.
- ***Next Steps***
  - Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in early 2010.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

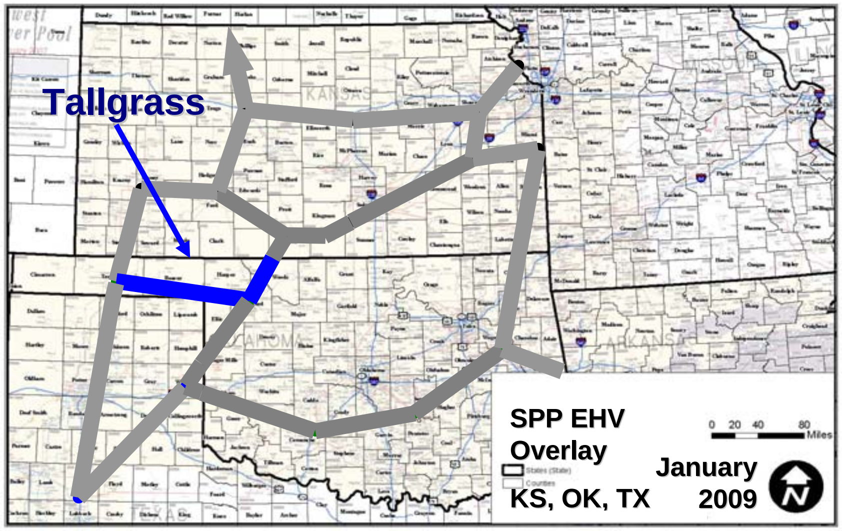
Electric Transmission Texas

AEP AMERICAN ELECTRIC POWER

Tallgrass Transmission, LLC

JV to build second segment of 765-kV transmission in SPP

- ***Overview***
  - In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
  - TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines extending from the Kansas-Oklahoma border north of Woodward, OK, extending west into the Oklahoma panhandle to a new station that will be built near Guymon, OK.
  - The project will promote wind development in the western half of Oklahoma.
  - Project is expected to cost approximately $500 million and be in-service by 2013.
  - AEP's ownership of the joint venture is 25%.
  - Other responsibilities will be handled by the partners or outsourced.
  - FERC order received in December 2008:
    - Cash return on CWIP and 12.8% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of TG or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

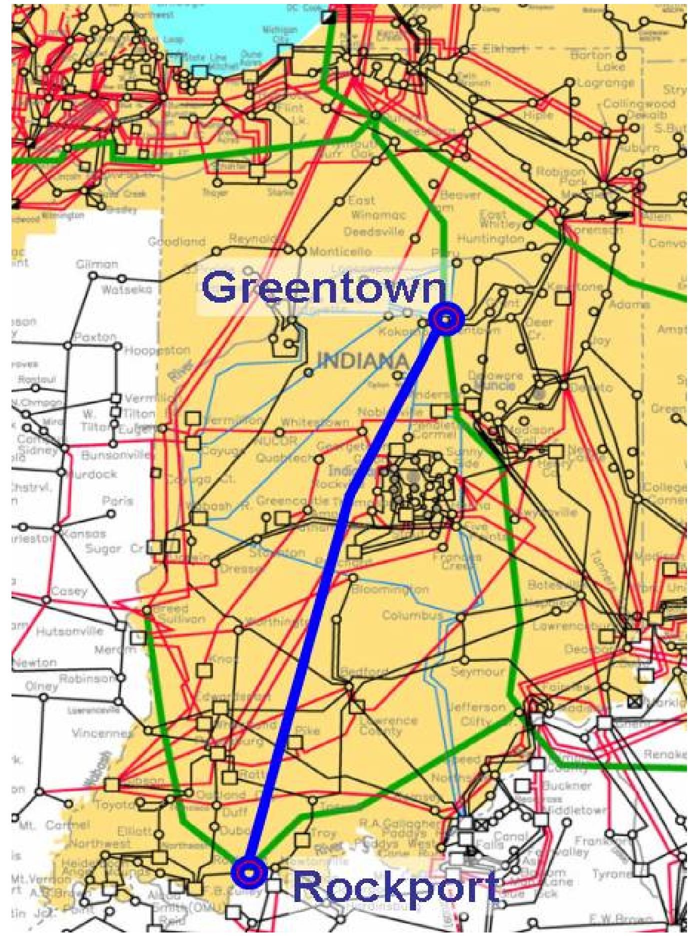
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

- ***Key Challenges***
  - Cost allocation which enables the development of "system solutions"
  - RTO Approval

AEP AMERICAN ELECTRIC POWER

Pioneer Transmission LLC

- ***Overview***
  - In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
  - PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
  - The project will improve the reliability of the nation's transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, protect national security and expand opportunities for new generation, including renewables.
  - Project is expected to cost approximately $1 billion and be in-service by 2015.
  - AEP's ownership of the joint venture is 50%.
  - Other responsibilities will be handled by the partners or outsourced.
  - FERC order received March 2009:
    - Cash return on CWIP and 12.54% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PT or its parents.
    - Certain formula rate issues were set for hearing



- ***Key Challenges***
  - Cost allocation which enables the development of "system solutions"
  - RTO Approval - touches two RTOs – PJM & MISO
  - Siting

AEP AMERICAN® ELECTRIC POWER

Hartland Wind Concept EHV Development in Upper-Midwest

Project Description: 1000+ miles of 765-kV transmission linking Upper Midwest generation sources with the existing EHV infrastructure in the Chicago area expected to cost $5-$10 billion over a 10 year period.

- **Near Term Risks**
  - Technical feasibility study
  - Identification of willing and able partners
  - Obtaining cost allocation between states, PJM, and MISO
  - RTO Technical Approvals
  - Favorable 205 Order including 679 incentives
- **Mitigation**
  - Target the identified need for the project and its ability to provide access for wind energy to load centers
  - Collaboration in regulatory process for regional cost allocation between MISO, PJM, and Midwest Governors Association
  - Prepare comprehensive regulatory filing, including incentives

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP AMERICAN ELECTRIC POWER

Detailed Ongoing Earnings Guidance

2008A: $3.24/share

2009E: $2.75-$3.05/share

American Electric Power
2008 Actual vs. 2009 Guidance

AMERICAN ELECTRIC POWER

Overview of 2009 Guidance

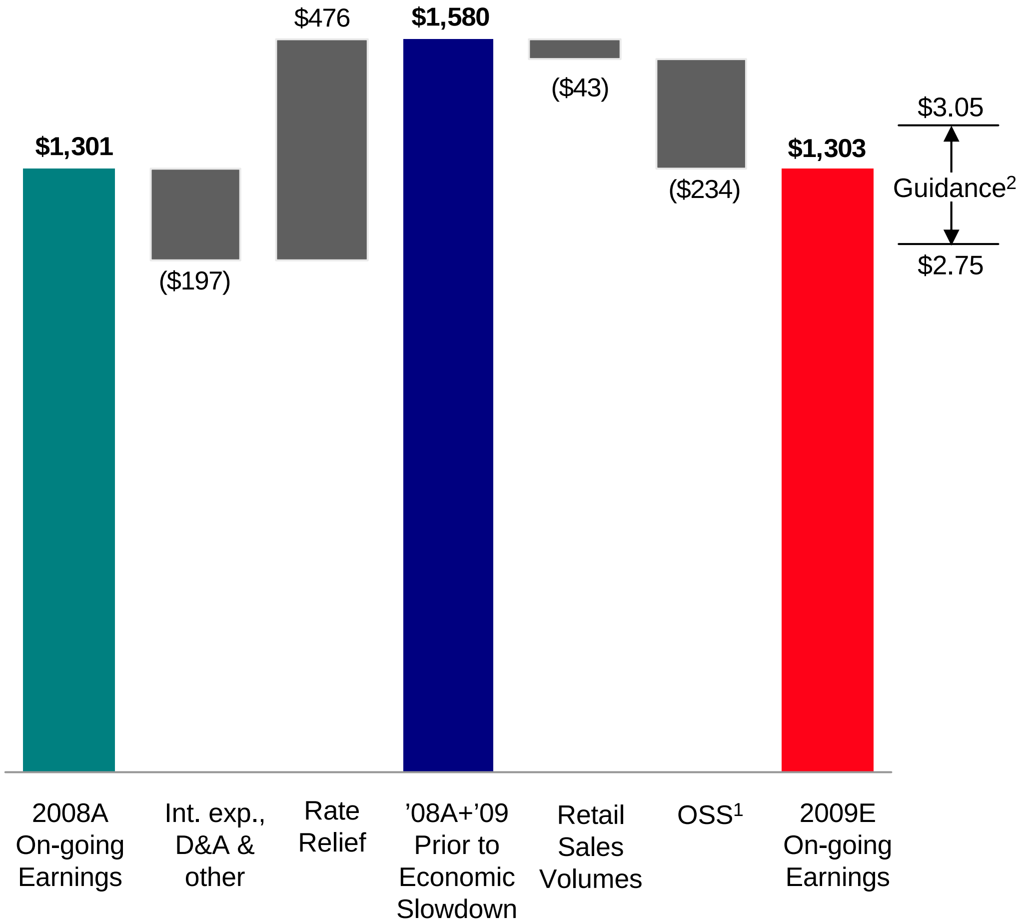
2009 Earnings Drivers:

- ⬆ Positive Ohio outcome
- ⬆ Rate relief - $732mm
- ⬇ Economic slowdown
  - — Lower OSS revenues
  - — Lower loads

Long-term Earnings Drivers:

- ⬆ Rate base investments
- ⬆ Additional rate relief
- ⬆ OSS/Retail load
- ⬆ Transmission JV earnings

2008A-2009E Earnings Bridge ($mm)



Note all items are presented after-tax

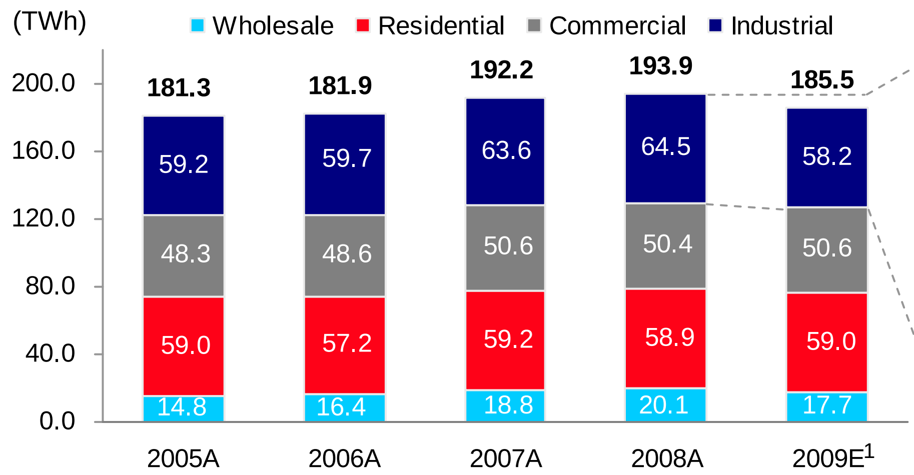
[1] Net of sharing

[2] Assumes 2009 average shares outstanding ~ 450 million

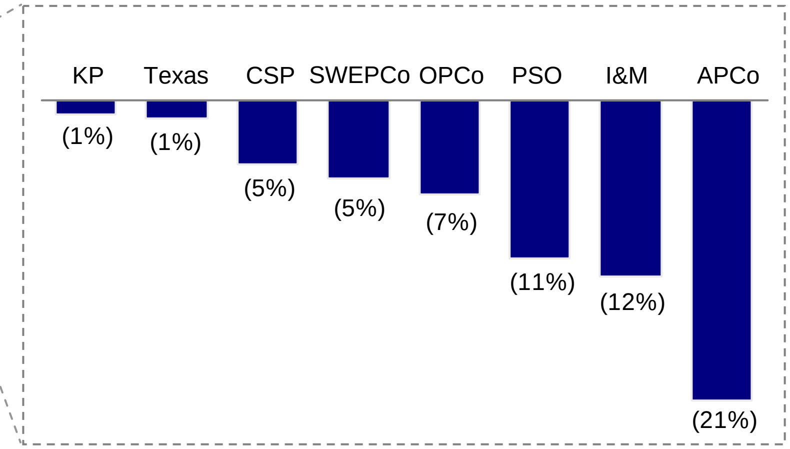
AEP AMERICAN ELECTRIC POWER

Key Drivers of Revised 2009 Guidance: Retail Sales

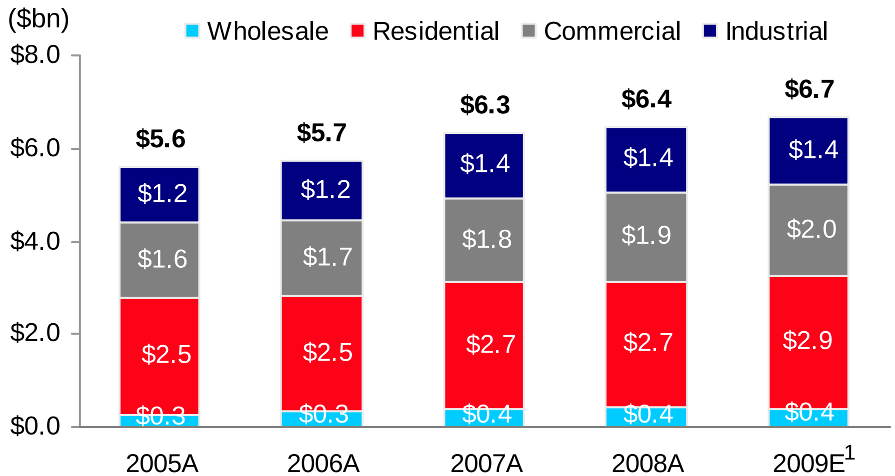
Retail Load by Customer Class



Forecast Drop in 2009 Industrial Sales



Retail Base Revenue[2] by Customer Class



Key Contributors to 2009E Industrial Volume Decline

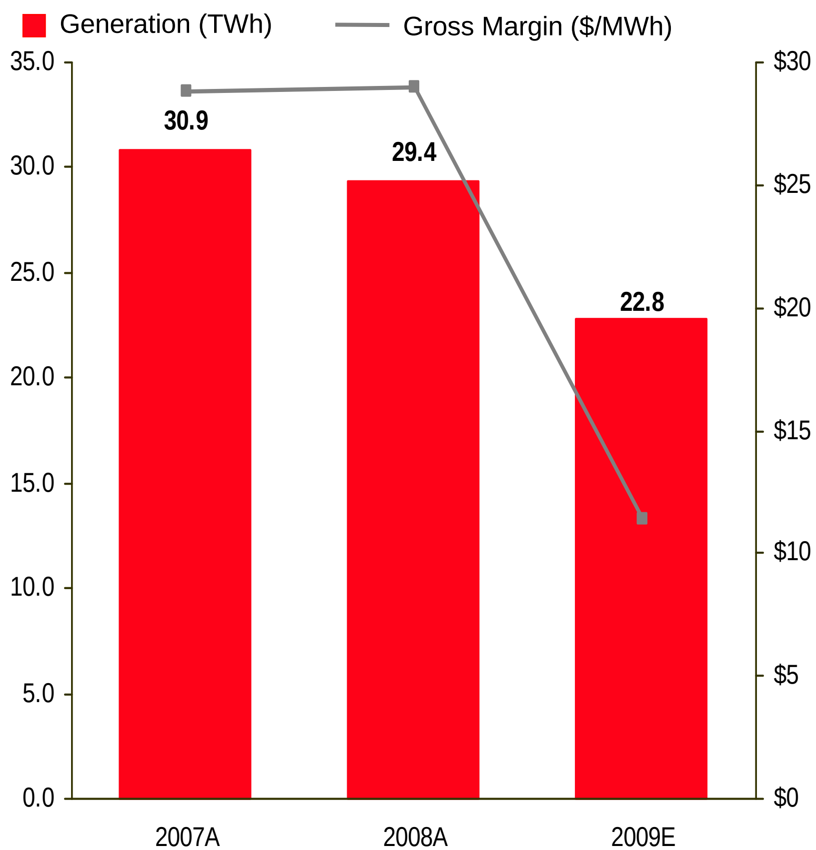
- Primary metals (APCo, I&M, OPCo, CSP, SWEPCo, KP)
- Basic industries (I&M)
- Paper (PSO, SWEPCo)
- Oil & Gas extraction (PSO, SWEPCo)

AMERICAN ELECTRIC POWER

[1] 2009E assumes normalized weather
[2] Excludes the impact of current year rate relief, fuel over/under recovery, PJM costs and consumables

Key Drivers of Revised 2009 Guidance: Off-System Sales

Off-System Sales Metrics



$ in millions		2007A		2008A		2009E

Jurisdictional Off-System Sales Sharing Summary

STATE	OSS Sharing?	Detail
Arkansas	Yes, above and below base levels	Up to $758,600 annual margin, ratepayers receive 100%. From $758,601 to $1,167,078, ratepayers receive 85%. Above $1,167,078, ratepayers receive 50%.
Indiana	Yes	There is $37.5 million built into Indiana's base rates. Above $37.5 million, ratepayers received 50%
Kentucky	Yes, above and below base levels	Sharing occurs above and below levels included in base rates of $24,855,326. Between $0 and $30 million, ratepayers receive 70%. Above $30 million, ratepayers receive 60%.
Louisiana	Yes, above base levels	Up to $874,000 annual margin, ratepayers receive 100%. From $874,001 to $1,314,000, ratepayers receive 85%. Above $1,314,000, ratepayers receive 50%.
Michigan	Yes	There are two jurisdictions: St Joe and Three Rivers. For St Joe, 100% of profits are shared with ratepayers. No profits are shared in Three Rivers, including base rates. St Joe represents 66% of the Michigan market.
Ohio	No	n/a
Oklahoma	Yes	75% of profits are shared with ratepayers.
Tennessee	No	n/a
Texas (SPP)	Yes	90% of profits are shared with ratepayers.
Virginia	Yes	75% of profits are shared with ratepayers.
West Virginia	Yes	100% of profits passed back to ratepayers through the Expanded Net Energy Cost (ENEC) clause.

AEP AMERICAN ELECTRIC POWER

Pension and OPEB Estimate

- Our pension plan and OPEB funds investment returns were each down about 24% in 2008.
- Discount rates are assumed to be 6.0% for pension and 6.1% for OPEB.
- Investment losses increase plan expense for both pension and OPEB, but the investment losses are smoothed in over several years.
- We expect 2009 pension and OPEB expense to increase $104MM from 2008 to 2009 (pre-tax and pre-capitalization).
- OPEB contributions will increase along with OPEB expense, in accordance with agreements in most of our regulatory jurisdictions.
- We do not expect any mandatory contributions to pension in 2009. Pension trust contributions are estimated to be $475MM in 2010 and $283MM in 2011.

Carbon Capture and Storage Project – Mountaineer Plant (WV)

765-kV Transmission Line – Wyoming-Jacksons Ferry (WV)

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants including our ability to restore I&M’s Donald C. Cook Nuclear Plant Unit 1 in a timely manner, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of the recently passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events. AEP and its Registrant Subsidiaries expressly disclaim any obligation to update any forward-looking information.

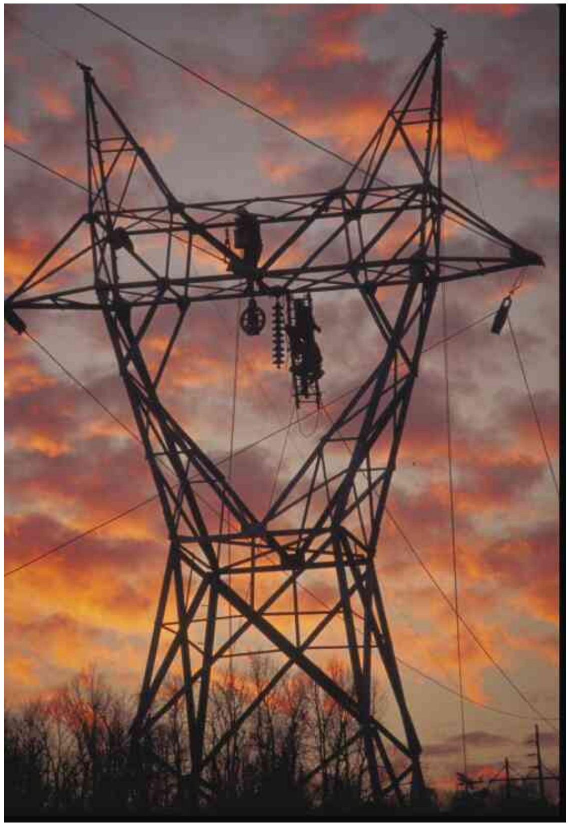
AMERICAN ELECTRIC POWER

AEP is . . .

One of the largest electricity generators in the United States, owning over 39,000 MW of generating capacity



The largest electricity transmitter in the United States, owning over 39,000 miles of transmission

The largest electricity distributor in the United States, owning and operating over 213,000 miles of distribution

AEP AMERICAN® ELECTRIC POWER

AEP Highlights

Premier utility platform

- Leadership position in electric generation, transmission and distribution operations
- Cash flow, earnings and regulatory diversity
- $6.4 billion utility capital expenditure program (2009-2011) will continue to drive rate base growth

Effective regulatory relationships

- Traditional recovery mechanisms with equitable risk allocation enhance both earnings and cash flow
- Emerging energy policies play to AEP's strengths (transmission, energy efficiency, reliability)
- Constructive local relationships deliver successful regulatory outcomes

High-growth transmission business

- The leading US transmission owner, operator, and developer
- Exceptional portfolio of high-quality development projects and project partners
- Attractive ROEs, regulatory support and access to capital will drive earnings growth beyond our traditional utility footprint

Stable financial position

- Maximization of shareholder value through regulated utility and transmission investments
- Balanced approach to cost containment and capital allocation
- Commitment to investment grade profile, prudent balance sheet, and liquidity management
- Conservative dividend payout with attractive yield

AEP AMERICAN ELECTRIC POWER®

Company Overview

- 5.2 million customers in 11 states
- 21,700 employees
- Industry-leading size and scale of assets
- 11 Operating Companies
  - Appalachian Power Co. (VA, WV)
  - Columbus Southern Power Co. (OH)
  - Indiana Michigan Power Co. (IN, MI)
  - Kentucky Power Co. (KY)
  - Kingsport Power Co. (TN)
  - Ohio Power Co. (OH)
  - Public Service Co. of Oklahoma (OK)
  - Southwestern Electric Power Co. (LA, AR, TX)
  - Texas Central Co. (TX)
  - Texas North Co. (TX)

AEP AMERICAN ELECTRIC POWER®

Transmission Investment Opportunities

- **<u>ETT</u>: Projects in Texas ERCOT jurisdiction**
  - Framework in Texas allows for more expeditious siting and recovery
  - $600MM of projects est. in service 2010-2013 with $236MM spent as of 9/30/2009
  - ETT's opportunity could reach $3.1B in the next decade

- **<u>Transco</u>: Within our existing footprint**
  - Provides opportunity to:
    - Develop new AEP-only projects within AEP's footprint
    - Reduce regulatory lag through FERC formula rates adjusted annually
    - Enhance access to capital
    - First year investment opportunity--$118MM

- **<u>Joint Ventures</u>: Outside of our footprint, with ETA or others**
  - Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
  - State and future Federal RPS will provide enhanced investment opportunities
  - Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2015
  - Robust pipeline of projects up to $15B

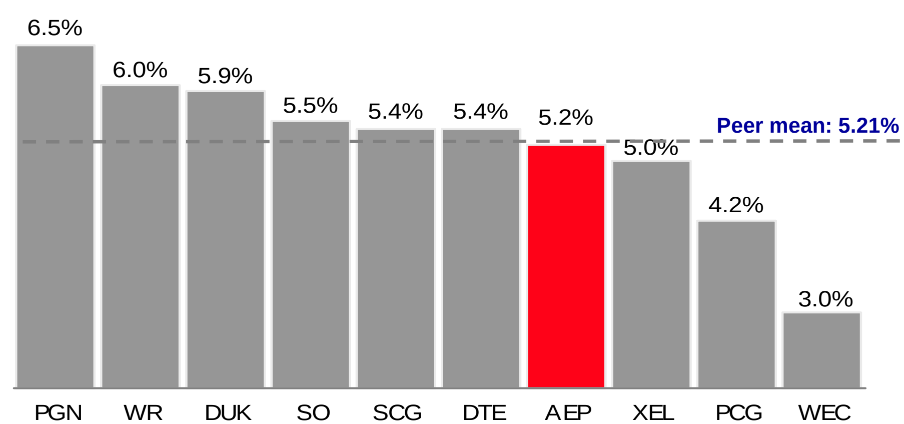
Dividend Yield vs. Integrated Electric Peers



Note: Dividend yield equals the indicated dividend rate annualized divided by the share price
Source: ThomsonONE as of 11/11/09

AEP AMERICAN® ELECTRIC POWER

AEP Supports Climate Legislation

Key Design Elements:

- **Reductions and Timing -** Moderate with adequate lead times
- **Scope of Program –** Economy-wide w/ preemption of EPA authority to regulate CO_2 under existing Clean Air Act
- **Flexibility of the Program –** Market-based system w/ credit trading, banking, unrestricted offset use & early action credits
- **Allowance Allocation And Other Cost Issues –** Full, free allocation to electric sector and “Low” auctions
- **Technology Development/Deployment -** Bonus allowances or other support for carbon capture and storage (CCS)
- **International Linkage -** e.g. AEP-IBEW proposal on international competitiveness

AEP supports *The American Clean Energy and Security Act of 2009* introduced by Rep. Waxman and Rep. Markey

AEP AMERICAN® ELECTRIC POWER

Investment Attributes

- **Strong utility platform**
  - Consistent regulatory outcomes
  - Active fuel recovery
  - Geographic and regulatory diversity
  - Growth through capital investment
- **Consistent dividend policy**
  - 50-60% payout ratio targeted
  - Nearly a century of dividend payments to shareholders
- **Growth Opportunities**
  - Investment in utility platform greater than depreciation level (2 - 4%)
  - With transmission opportunities (4 - 8%)
  - Capital investment to comply with carbon legislation

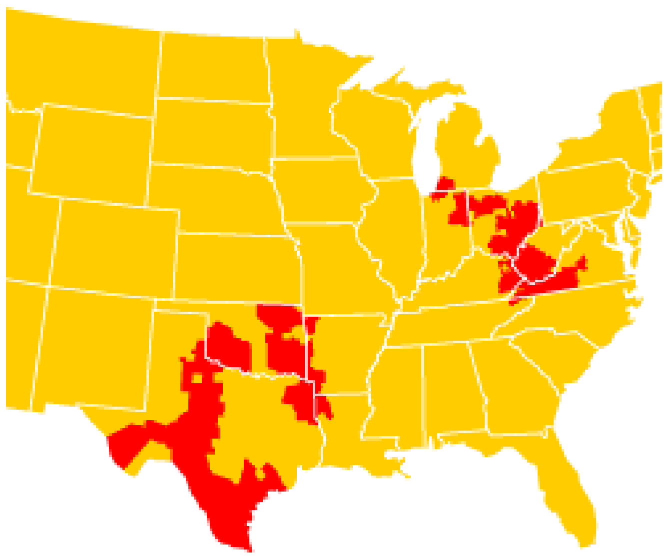
Brian X. Tierney - EVP and CFO

American Electric Power

- Regulated Electric Utility
  - Regulatory and economic diversity
  - Operating Company Model
- Focus on Capital Allocation
  - Capital for Growth
  - Return of Capital to Shareholders
  - Pension Funding
- Strong Balance Sheet
  - Stable credit ratings
  - Capital plan supported by cash flow
  - Strong liquidity position
- Growth Opportunities
  - Capital for utility platform
  - Transmission projects
- Dividend yield over 5%

Serving electric customers in 11 states

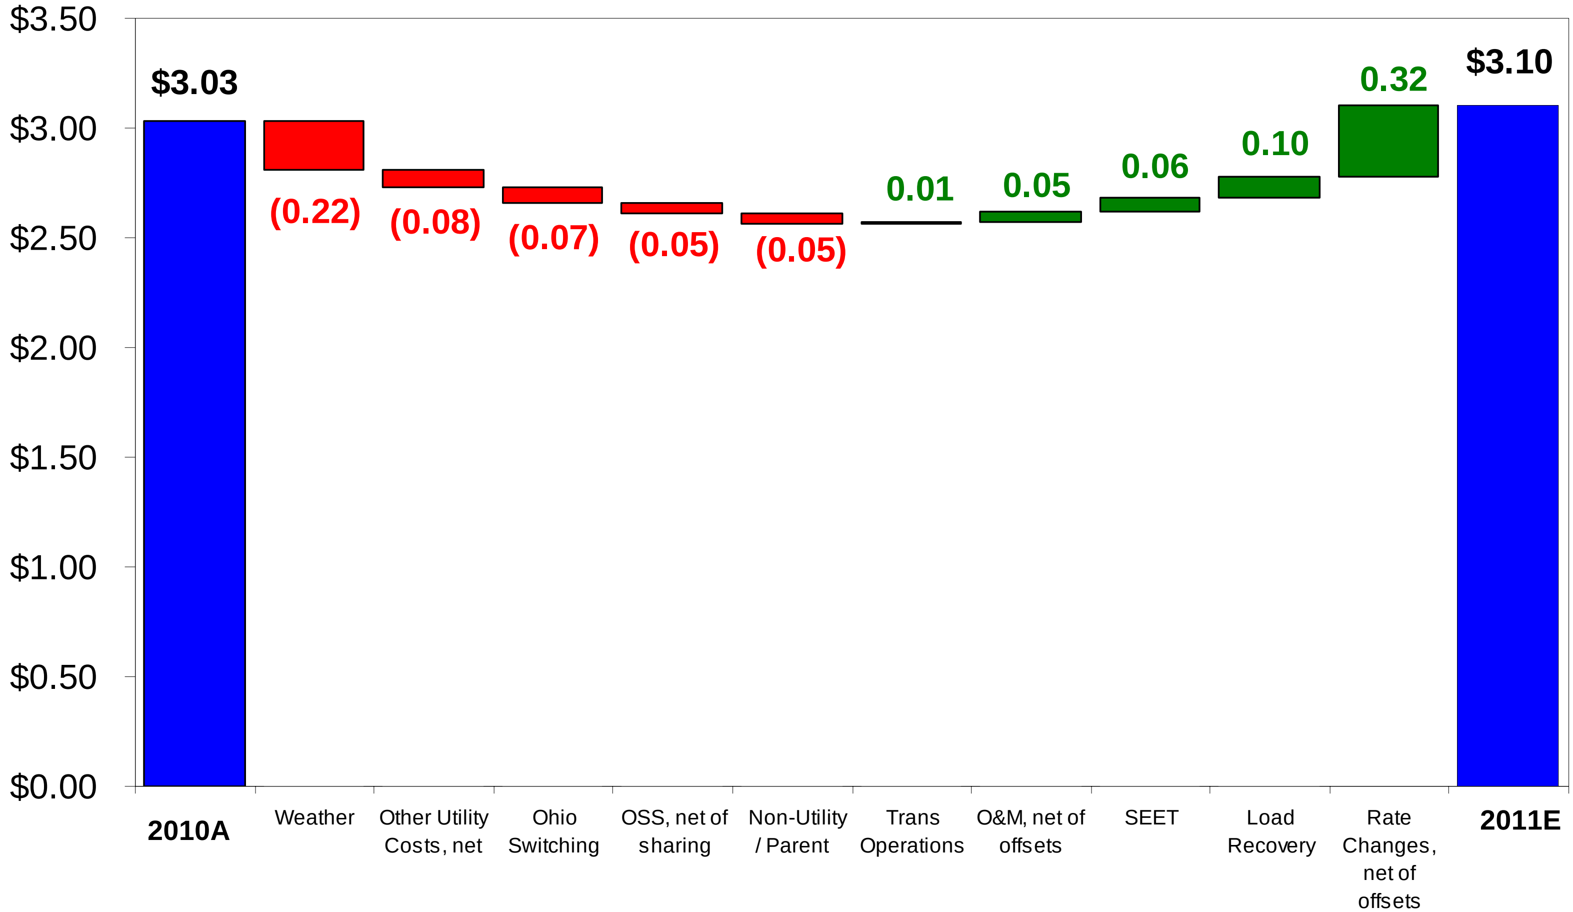


AEP Fast Facts

5.3 million customers
39 GW of generation capacity
39,000 miles of transmission lines

$17.3B Market Capitalization
BBB/Baa2/BBB credit rating

2011 Earnings Drivers



- $235M in rate changes (69% secured)
- Weather normalized load growth of 1.7%
- Continued discipline in O&M
- Ohio switching assumptions ($53M – 14% of CSP total load)

2011 Guidance Range: $3.00 - $3.20/share

2011 Guidance and Business Initiatives

2011 Guidance: $3.00 - $3.20 per share

2011 Earnings Drivers

- Recovering Economy
- Rate changes (69% secured)
- Continued O&M discipline - $34M decrease net of offsets
- Customer switching – Ohio
- 2010 SEET at Columbus Southern Power

Business Initiatives

- Operating Transcos in OH, OK and MI; filings pending in other states
- AEP Eastern System Interconnection Agreement
- Bonus Depreciation
- Capital Allocation

AEP Ohio ESP Filing – Core Policy Issues

Investment in Ohio

Supports economic development and essential tax base

Fundamental barriers must be addressed to attract investment for Environmental Compliance and New Generation

Jobs in Ohio

Jobs are a key component of growth potential in Ohio

Without regulatory assurances over time we could see loss of direct & indirect jobs related to power generation, and business relocations to surrounding states

Energy Security

Secure, reliable and predictable electricity supply is basis for sustained investment and employment in Ohio

Volatility in power prices can lead to major loss of economic activity over time

Primary objective of ESP: Stabilize rates and support economic development in the state of Ohio

Merged AEP Ohio

Single merged AEP Ohio company presumed with supporting information on an individual OP/CSP basis

Rate Redesign

Generation rates redesigned to resemble market pricing structures

29-Month ESP Period

ESP period Jan 1, 2012 through May 31,2014 (May 31 date aligns with PJM annual planning cycle)

Alternative Long Term Option

Alternative longer-term price certainty option offered for qualifying commercial & industrial customers

Ohio Growth Fund

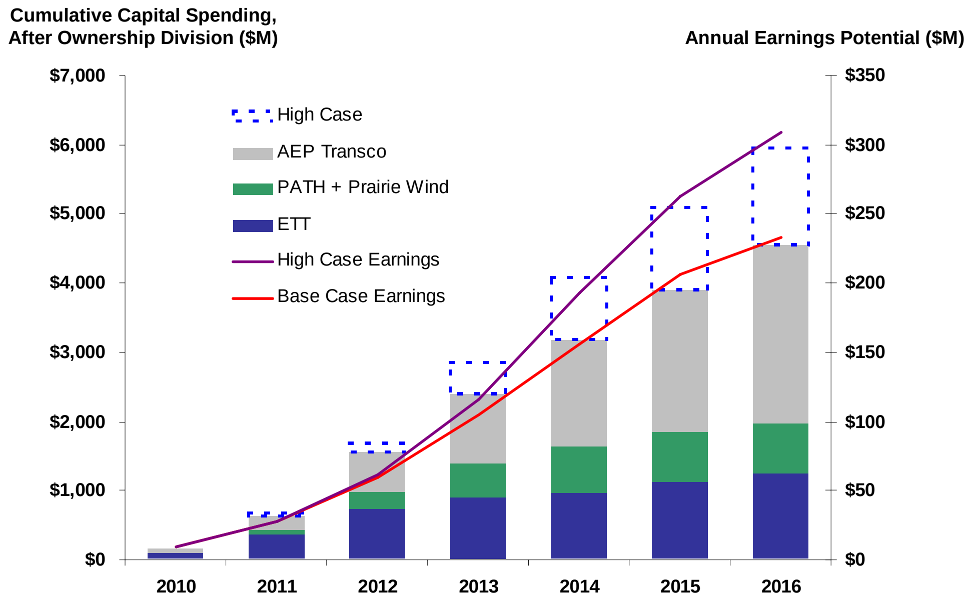
Creation of significant private sector economic development to attract investment and job growth in AEP Ohio service territory

Distribution Components Included

Inclusion of certain distribution components while pursuing a parallel distribution base rate case

Transmission as a Growth Engine

- Electric Transmission Texas (ETT)
  - Growing Rate Base
  - $1.1B CREZ opportunity; Received CCN approval on one CREZ line; 3 more approvals expected in 2011
  - $1.6B Non-CREZ projects in the pipeline
- AEP Transmission Company (AEP Transco)
  - Settlement filed at FERC for wholesale rates
  - $50M spend for 2010; $160M forecasted for 2011
- Progress on Joint Ventures in 2010
  - PATH
  - Prairie Wind
  - Pioneer
  - MEC & RITELine



[1] High Case includes: Pioneer (50% ownership), Prairie Wind at 765kV (25% ownership), Tallgrass at 765kV (25% ownership), ETA-Exelon (25% ownership) and other future opportunities

[2] AEP Transco (100% ownership) includes spending in OH, MI & OK only through 2011 and in other jurisdictions for 2012 and beyond

[3] PATH (50% ownership) assumes an in-service date of 2015 and Prairie Wind (25% ownership) assumed at 345kV

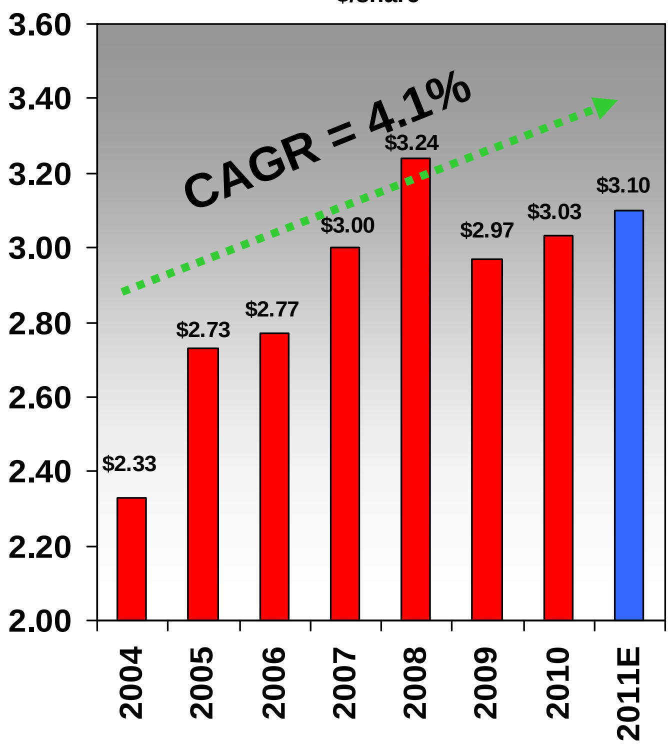
[4] ETT (50% ownership) includes CREZ and additional projects

[5] Projection of earnings potential at the transmission holding company level assuming 50/50 debt/equity capitalization and ROE of 12-13% for FERC projects; 60/40 debt/equity capitalization and 10.25% ROE (2011 forward) for ERCOT projects; and 50/50 debt/equity capitalization and ROE of 11.2-11.49% for Transco projects

Transmission investments present significant growth opportunities within and outside of AEP's traditional service territories

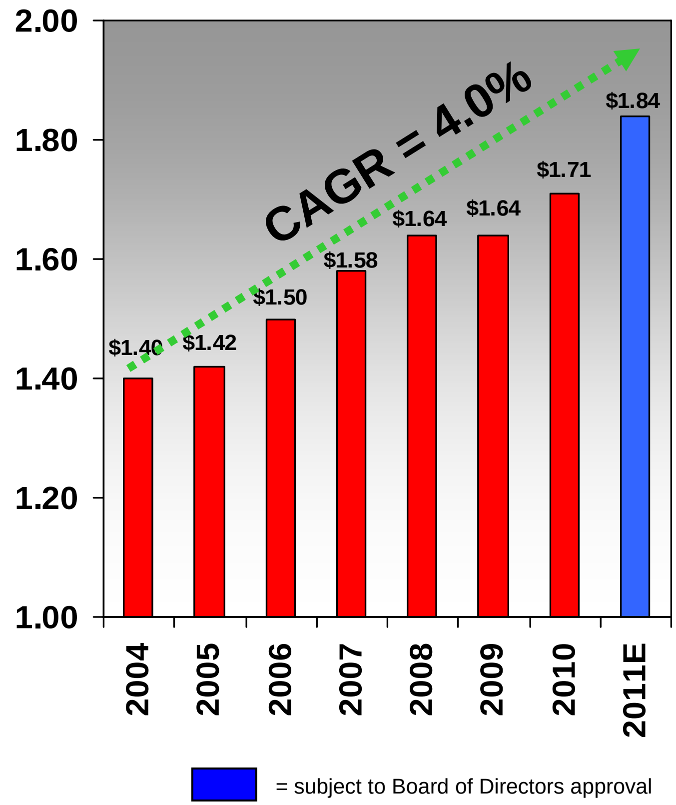
Earnings and Dividends

On-Going EPS History Since 2004



- Earnings growth largely attributed to capital investment program
- Pre-recession earnings supported by robust wholesale market activity and high power prices
- Equity offering in 2009 stabilized credit and strengthened balance sheet
- 2011 guidance range of $3.00 to $3.20 per share

Dividend History Since 2004

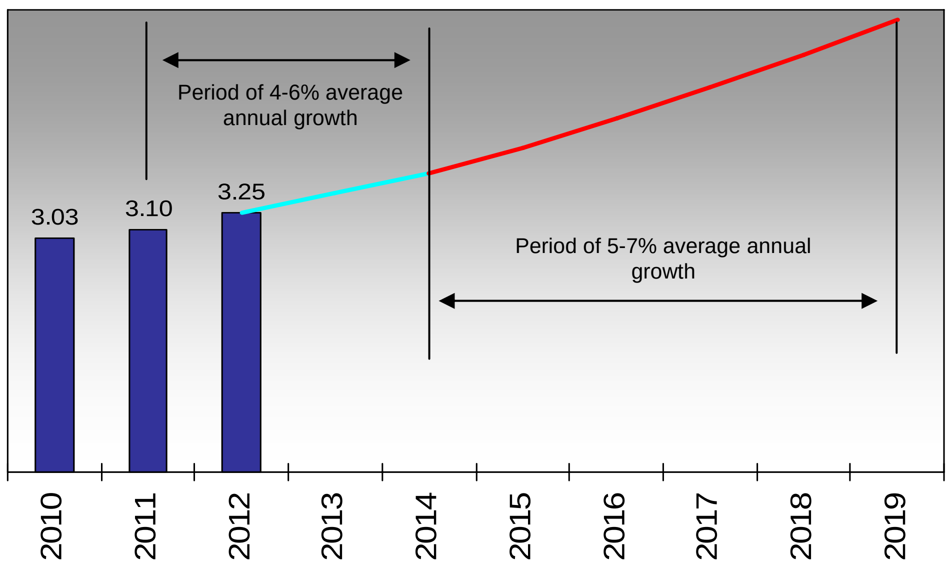


- Dividend increased 12% in 2010
- 403rd consecutive quarterly dividend declared in January 2011
- 50-60% payout ratio target
- Current yield over 5%

Long-term EPS Growth Rate

- 4-6% EPS growth 2012-14
  - Average annual capital spend between $2.9-3.4B
    - Utility platform replacement capital of about $1.4B (annual depreciation)
    - Growth in rate base of $1.5-2.0B per year, allocated between utility platform and transmission projects
  - Blended ROE of 10.5 - 11%
  - Slow, steady recovery in economy
- 5-7% EPS growth post 2014
  - Base utility platform capital including generation transformation
  - Higher allocation of discretionary capital going to opportunities in the transmission development pipeline
  - Higher overall blended ROE opportunity
  - Robust economic growth

Average Annual EPS Growth defined over two periods



AEP Highlights

- Premier Utility Platform
- Traditional and Effective Regulatory Relationships
- Energy Policy Initiatives Create Technology Deployment and Investment Opportunity
- Strong Value and Total Return Proposition

Mountaineer Plant (WV)

Susan Tomasky

President – AEP Transmission

AEP's Strategic Priorities Remain the Same

- "Keep the lights on"
  - Maintain our low-cost and reliable energy production and delivery system
  - Invest to replace aging infrastructure and ensure adequacy of capacity
  - Manage commodity costs
- Environmental priorities
  - Complete our $5.2 billion environmental controls program ($1.0 billion to be spent in 2009-2010)
  - Work to ensure a balanced and logical carbon legislation outcome
- Collaborate with regulators to more closely match spending with rate recovery
- **Lead the development of America's high-voltage transmission system**

AEP's strategic priorities remain the same, but the steps and timing may be different.

Building the Nation's Leading Interstate Electric Transmission Company

Our Goal: Contribute sustainable shareholder growth by leveraging AEP's position as the nation's leading transmission provider to become the nation's leading developer and owner of interstate transmission investment.

EXPERIENCE

- AEP is recognized as the industry leader in transmission.

PLATFORM

- AEP's asset base provides a strong starting point for new transmission investment within our footprint.

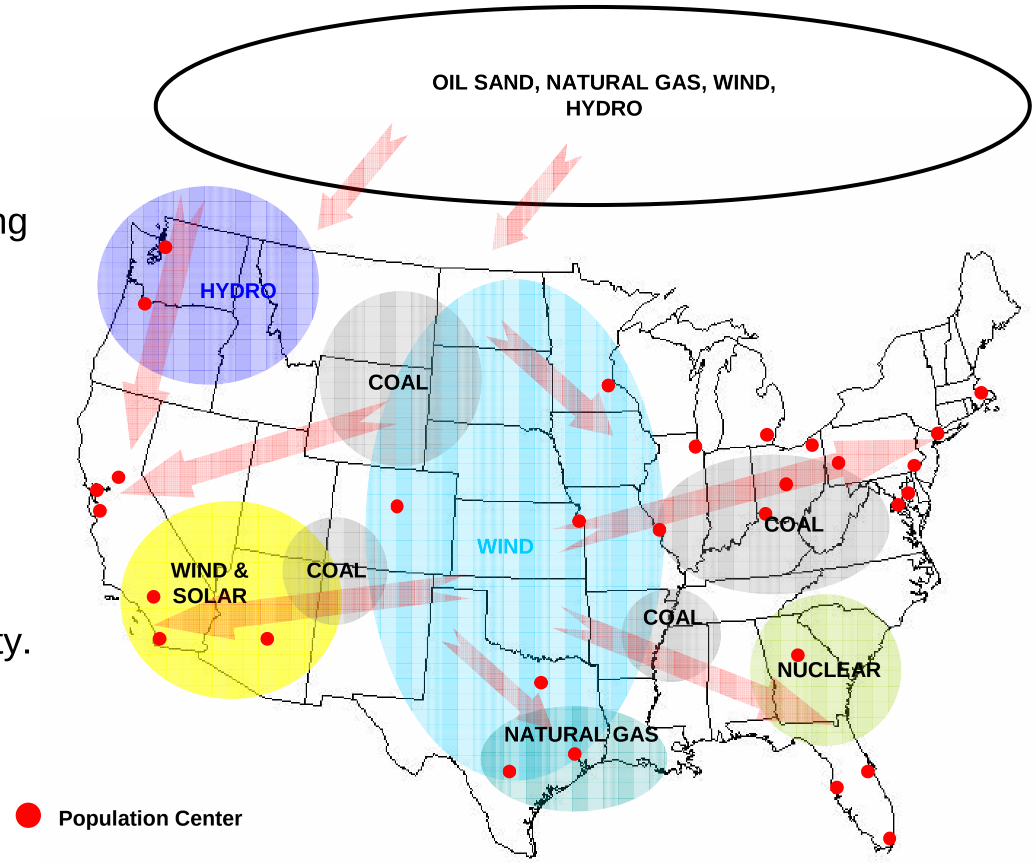
GROWTH

- AEP assets and leadership will open opportunities for significant new regional investments, beyond our traditional retail service territory boundaries.

By leveraging existing assets, expertise and leadership, AEP will grow shareholder value by creating a significant new transmission investment opportunity.

Vision of the Nation's Transmission System

- A national interstate EHV transmission grid contributes to sustainable energy development:
  - A more sustainable long term national electricity supply portfolio, including tapping extraordinary renewable energy and generation technology potential.
  - Broader impact of demand-side options and load leveling, lowering the need for new generation.
  - Strengthened national security by enhancing reliability, removing barriers to supply options and enhancing fuel diversity.
  - An alternative path to emission and CO_2 reductions.
- Economic growth remains closely tied to energy and climate related initiatives, requiring policies which understand these interdependencies.



"Many of our resources, whether it's wind or sun or geothermal, they're out in rural areas...and we just don't have any infrastructure. If we're going to take this whole energy piece on the renewable side seriously ... we've got to get the transmission and infrastructure piece right" *Utah Gov. Jon Huntsman - AP Western Governors, Utility Heads Seeks Energy Solutions July 1, 2008*

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 4860 of 9556

Improved federal and regional policies are critical to growing AEP & investment opportunities

- To advance our transmission business strategy, AEP has taken a leadership position in national and regional public policy debates
- Emerging policies must support and encourage development of new transmission investment to meet our nation's future energy needs
- AEP's goal is to remove barriers to timely transmission investment through improved and clear rules to encourage transmission investment
- We are vigorously pursuing comprehensive Federal legislation to create federal siting authority, broad cost allocation, and expedited planning
- Within the current regional framework we are seeking to expedite planning for EHV systems and establish broad cost allocation principles within and across RTOs
- We continue to strongly support Federal incentives for capital investment in transmission infrastructure

> "We need a true nationwide transmission version of our interstate highway system; a grid of extra-high voltage backbone transmission lines reaching out to remote resources and overlaying, reinforcing, and tying together the existing grid in each interconnection to an extent never before seen." *Suedeen Kelly-Commissioner FERC*

AEP is actively involved in Transmission related Energy Policy

❑ 2008 Activity

- In August, AEP testified before the U.S. Senate Committee on Energy and Natural Resources on the state of the nation's transmission grid and implementation of the 2005 Energy Policy Act
- Began related discussions with Obama transition team
- Seeded the development of third party sponsored white papers and the drafting of legislation
- Actively participated in PJM, ERCOT and SPP proceedings to advocate EHV development, address cost allocation and improve planning

❑ Planned 2009 Activity

- Help to shape Obama administration energy initiatives to eliminate barriers to transmission investment
- Continue state, federal and regional outreach relative to siting, project approval, and cost allocation
- Aggressively support comprehensive Federal siting legislation

The Business Potential

- **Faced with ever rising energy costs, aging infrastructure and emerging climate change policies; transmission development is needed more than ever before.**

- **Diversified Approach to Planned Investments:**

  - Capital investment within AEP's service territory will be significant, generally averaging between $400 to $600 million annually.

  - In the Eastern US, AEP is actively pursing development of over 1,200 miles of 765kV transmission in PJM and eastern MISO, at a total cost before ownership division of approximately $6.1 billion.

  - In the Southwest, AEP is actively pursing nearly 400 miles of 765kV transmission in SPP, at a total cost in excess of $1 billion.

  - In Texas, AEP continues to pursue EHV transmission expansion throughout the state, with a potential capital spend in excess of $2.5 billion before ownership division.

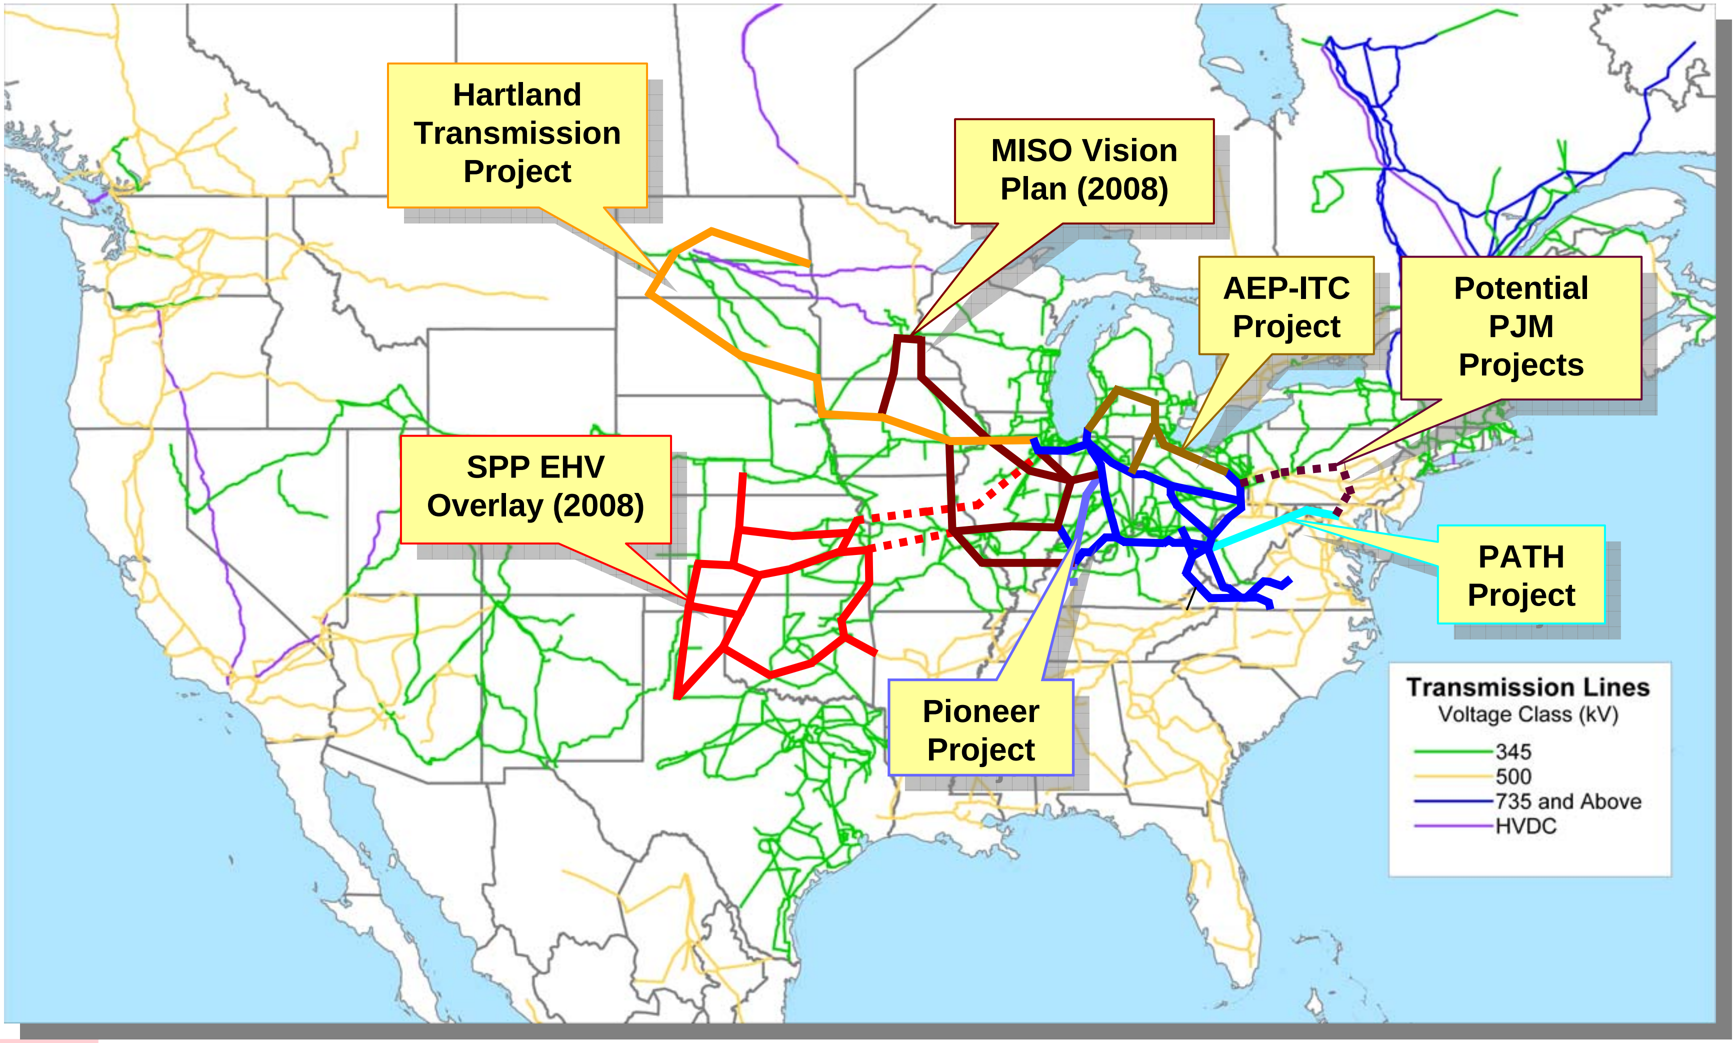
  - In the Upper-Midwest, AEP has a taken a leadership role with the announcement of over 1,000 miles of potential 765kV transmission development, at a total cost of $5 to $10 billion.

- **Challenges: Making it Happen**

EHV Transmission investments can assist in ensuring a reliable, adequate and affordable energy supply for the nation.

Making it Happen: EHV Projects Under Development

Eastern U.S. - Potential 765 kV Plans Under Development



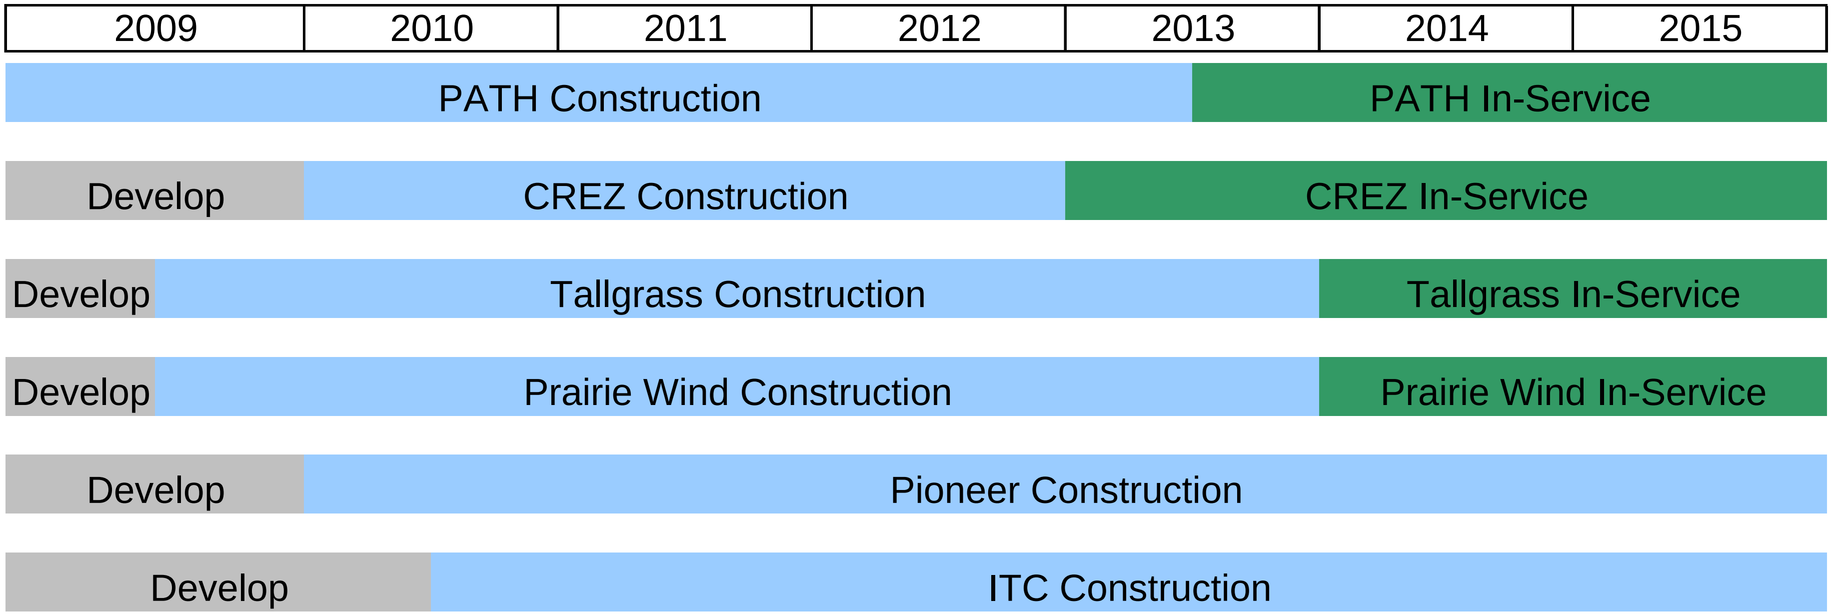
NOTE: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

Joint Venture Execution

AEP Transmission has made significant strides towards our goal of becoming the nations leading developer and owner of interstate transmission investments; Major milestones include:

PATH	- Change approved by PJM for 765kV in Maryland (instead of 500kV)
ETT	- Awaiting CREZ order from PUCT; expected in 1Q 2009
Prairie Wind	- Discussions with SPP regarding cost allocation are progressing well - Submitted CCN application for utility status in Kansas - Received FERC approval for 12.8% ROE, with potential for a 0.5% ROE technology adder.
Tallgrass	- Signed LLC agreement in July 2008 - Received FERC approval for 12.8% ROE, with potential for a 0.5% ROE technology adder.
Pioneer	- Signed LLC agreement in August 2008 - Submitted FERC 205 filing. Received deficiency letter requiring additional need studies before ruling can be made. - Joint cost allocation study with PJM and MISO ongoing.
ITC	- LLC negotiations continue for potential 765kV project in Ohio and Michigan
Hartland Wind	- Announced 765kV concept in Upper-Midwest spanning over 1,000 miles at a total cost of $5-$10 Billion over the next decade.
Other	- Discussions underway with several potential partners regarding further EHV development in Texas, Kansas, Oklahoma, New Jersey, Pennsylvania, Maryland, Arkansas, and Missouri.

Transmission Joint Venture Timeline



Development activities include formation of the Joint Venture and satisfaction of the conditions precedent, including, but not limited to, receiving a favorable FERC 205 order with appropriate incentives and intra- and inter-RTO cost allocation. Development may also include engineering, siting and the CCN process, if applicable.

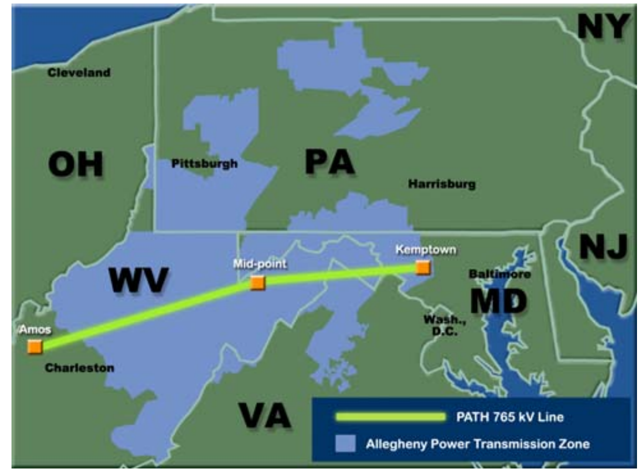
Provide a pipeline of investment opportunities that will contribute to sustainable earnings growth for AEP shareholders, regardless of the ultimate policy direction at the Federal and regional levels.

Appendix

Transmission Investments Pursued by Region: East

PATH

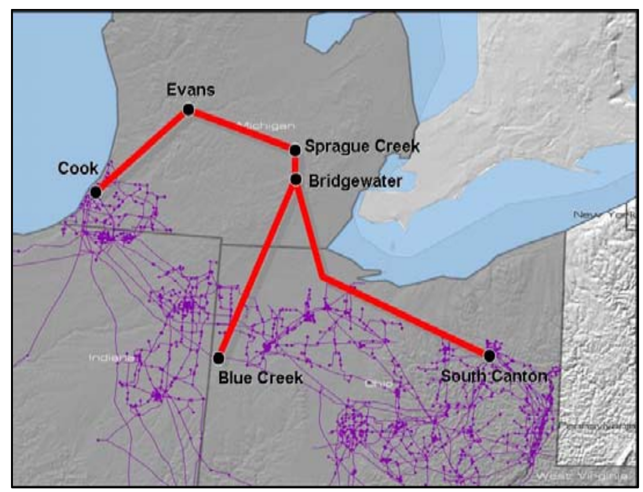
Project Description: 277 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.



- ❑ **Near Term Risks**
  - Obtaining a CPCN in West Virginia or costly concessions with WV to receive the CPCN
  - Execution risk: Schedule, budget, materials pricing, scarcity of labor, etc.
- ❑ **Mitigation**
  - FERC 205 filing, including cash return on 100% of CWIP, recovery of $6.1 million development costs, abandonment
  - Control spending through Authorization Policy and Contracting Protocols. Closely monitor execution via risk reports, variance reporting, etc.

ITC & AEP

Project Description: 700 miles of 765-kV line in OH and MI to improve transfer capability and reduce network line losses.



- ❑ **Near Term Risks**
  - Interregional cost allocation between MISO & PJM
  - RTO Technical Approvals
  - Competing ITC EHV project in SPP may hamper relationship
  - Favorable 205 Order including 679 incentives
- ❑ **Mitigation**
  - Actively participating and advocating for changes in RTO cost allocation methodologies and the cost/benefit analysis
  - Provide input to MISO's and PJM's need studies
  - Prepare a comprehensive regulatory filing, including incentives

AEP®

Transmission Investments Pursued by Region: East (cont.)

Pioneer Transmission, LLC.

Project Description: 240 mile 765-kV transmission line from AEP's Rockport Station to Duke's Greentown Station.

❑ Near Term Risks

- Interregional cost allocation between MISO & PJM
- RTO Technical Approvals
- Favorable 205 Order including 679 incentives

❑ Mitigation

- Actively participating and advocating for changes in RTO cost allocation methodologies and the cost/benefit analysis
- Interregional cost allocation between MISO & PJM
- Provide input to MISO's and PJM's need studies
- Prepare a comprehensive regulatory filings, including incentives

Current Joint Ventures with MEHC

Electric Transmission Texas Update

- *Transaction Structure*
  - 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
  - ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
  - Services provided by AEP and investment opportunities can be offered by either partner
  - Total initial investment of $70 million before ownership division
  - In October 2008, the District Court found that the PUCT exceeded its authority by granting ETT a CCN. This decision is currently under appeal and ETT believes the ultimate outcome will validate its utility status
- *Next Steps*
  - ETT project opportunities to be evaluated on a case by case basis
  - Competitive Renewable Energy Zones (CREZ) initiative is anticipated to provide ETT with an investment of approximately $1 billion over the next 5-7 years
  - Selection of transmission providers by the PUCT is scheduled for 1Q 2009

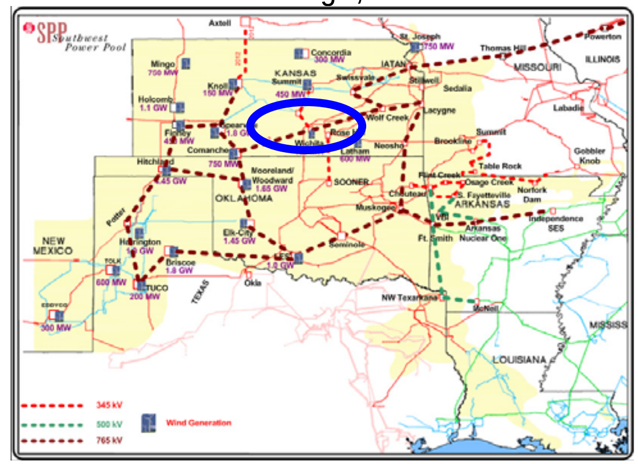
Electric Transmission America Update

- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.
- To that end, ETA recently signed agreements with Westar forming Prairie Wind Transmission LLC, and Oklahoma Gas & electric forming Tallgrass Transmission LLC, proposing to build the first and second segments of the 765-kv Overlay Plan in SPP

Transmission Investments by Region: Southwest

Prairie Wind Transmission, LLC.

Project Description: First segment of proposed SPP 765 kV Overlay Plan of 230 miles of lines extending from Wichita, Kan., west to a substation northeast of Dodge City, Kan., and then south to the Kansas border from Medicine Lodge, Kan.

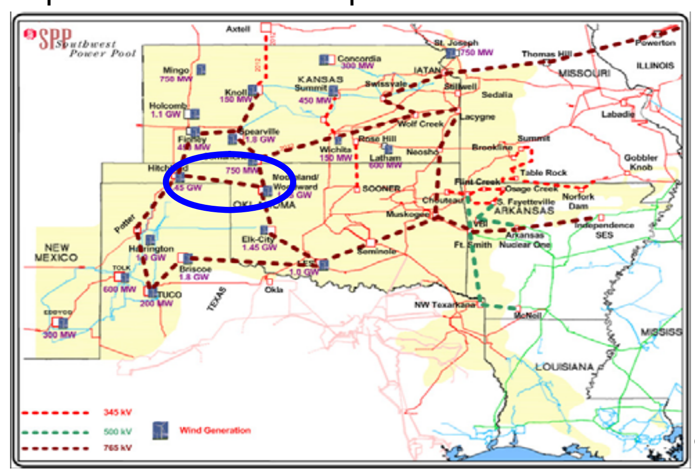


- **Near Term Risks**
  - Obtaining regional cost allocation in SPP
  - Competing ITC Great Plains project
  - Satisfy Conditions Precedent
- **Mitigation**
  - Collaboration in regulatory process for SPP regional cost allocation and technical approvals.
  - Compromise plans with competing ITC project are being pursued in collaboration with KETA and KCC.
  - AEP responsible for 25% project costs, including 3rd party expenses. AEP responsible for its internal costs prior to obtaining CPs.

ETA
ELECTRIC TRANSMISSION AMERICA, LLC

Tallgrass Transmission, LLC

Project Description: Second segment of SPP 765 kV Overlay Plan of 165 miles to promote wind development in the western half of Oklahoma.



- **Near Term Risks**
  - Obtaining regional cost allocation in SPP
  - Satisfy Conditions Precedent
- **Mitigation**
  - Collaboration in regulatory process for SPP regional cost allocation
  - Created development budget. Maintain work orders to monitor work streams and costs; Share development costs with JV partners
  - AEP only responsible for its 25% share of 3rd party expenses plus its internal costs prior to obtaining CPs

AEP®

Hartland Wind Concept EHV Development in Upper-Midwest

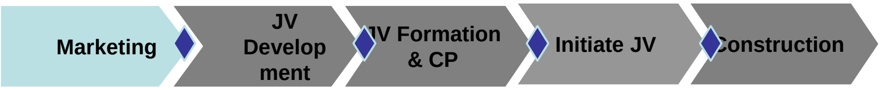
Project Description: 1000+ miles of 765-kV transmission linking Upper Midwest generation sources with the existing EHV infrastructure in the Chicago area expected to cost \$5-\$10 billion over a 10 year period.

❑ Near Term Risks

- Technical feasibility study
- Identification of willing and able partners
- Obtaining cost allocation between states, PJM, and MISO
- RTO Technical Approvals
- Favorable 205 Order including 679 incentives

❑ Mitigation

- Target the identified need for the project and its ability to provide access for wind energy to load centers
- Collaboration in regulatory process for regional cost allocation between MISO, PJM, and Midwest Governors Association
- Prepare comprehensive regulatory filing, including incentives



2008 & 2009 Ongoing Earnings Guidance

2008A EPS: $3.24

2009E EPS: $3.00 - $3.40

American Electric Power
2008 Actual vs 2009 Guidance

Letters of Credit Issued	(436)	
Net Available Liquidity	**$1,925**	

AEP's liquidity position is $1.9 billion as of December 31, 2008.

Pension and OPEB Estimate

- Our pension plan and OPEB funds investment returns were each down about 24% in 2008.
- Discount rates are assumed to be 6.0% for pension and 6.1% for OPEB.
- Investment losses increase plan expense for both pension and OPEB, but the investment losses are smoothed in over several years.
- We expect 2009 pension and OPEB expense to increase from 2008 to 2009 (pre-tax and pre-capitalization).
- OPEB contributions will increase along with OPEB expense, in accordance with agreements in most of our regulatory jurisdictions.
- We do not expect any mandatory contributions to pension in 2009.

Regulatory Activity Underway

AEP Ohio Electric Security Plan Filing

- On July 31, 2008, in conjunction with the requirements of SB221, AEP Ohio filed an Electric Security Plan with the PUCO on behalf of CSPCo and OPCo.
- The filing includes the following key components:
  - Energy Efficiency and Demand Response
  - Renewable Energy
  - gridSMART^{SM} Phase 1
  - Distribution Reliability Enhancement
  - Economic Development
  - Provider of Last Resort
- The proposed rate plan results in an annual increase of approximately 15 percent on customers' total bills.
- The filing seeks to recover changes in fuel and environmental expenses relative to levels reflected in current rates.
- Intervenor testimony was filed October 31, Staff testimony was filed November 7 and 10 and the public hearing commenced on November 17, 2008. We anticipate an order in the first quarter of 2009.

Summary Rate Case Information

I&M Indiana General Rate Case

On January 31, 2008, I&M filed a general base rate case with the Indiana Utility Regulatory Commission (IURC) requesting an increase of $125.6 million ($80.1 million in base revenues and $45.6 million in tracker mechanisms). (Docket #: 43306). In December 2008 a unanimous settlement was filed with the IURC supporting a revenue increase of $44.2MM with an ROE of 10.5%. We await an order.

Regulatory Activity Underway

SPP OATT Formula Rate Filing (Docket #:ER07-1069-000)

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is \$88.7MM and the new revenue requirement requested is \$140MM. Approximately \$10MM of the increase relates to 3rd party and the rest, if approved, would be recovered through retail jurisdictional filings in SWEPCo and PSO, as appropriate.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to February 1, 2008, with rates subject to refund.
- Settlement discussions are currently on-going.

Regulatory Activity Underway

PJM OATT Formula Rate Filing (Docket #:ER08-1329-000)

- On July 31, 2008, the seven AEP East companies filed with the FERC to update the Open Access Transmission Tariff (OATT) rate and implement a formula transmission rate that will be updated annually to keep rates current with transmission investment.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $507MM and the new revenue requirement requested is $606MM. Approximately $31MM of the increase relates to 3rd party and Ohio and the rest, if approved, would be recovered through retail jurisdictional filings in the other east jurisdictions.
- We requested an effective date of October 1, 2008 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to March 1, 2009, with rates subject to refund.

Regulatory Activity Underway

SWEPCo Stall Plant Filings

On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an application to purchase, operate, own and install peaking, intermediate and baseload generating facilities. The intermediate facility, known as the Stall Plant and sited in Shreveport, LA, was bifurcated from the original filing.

Arkansas

- ❑ Proceeding is pending. Updated cost estimates were filed in December 2008 and we await a procedural schedule from the APSC.

Louisiana

- ❑ PSC approval was granted on September 10, 2008.
- ❑ Air permit received on March 20, 2008.

Texas

- ❑ PUCT order approving plant was issued on March 8, 2007.

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants including our ability to restore I&M's Donald C. Cook Nuclear Plant Unit 1 in a timely manner, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of the recently passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events. AEP and its Registrant Subsidiaries expressly disclaim any obligation to update any forward-looking information.

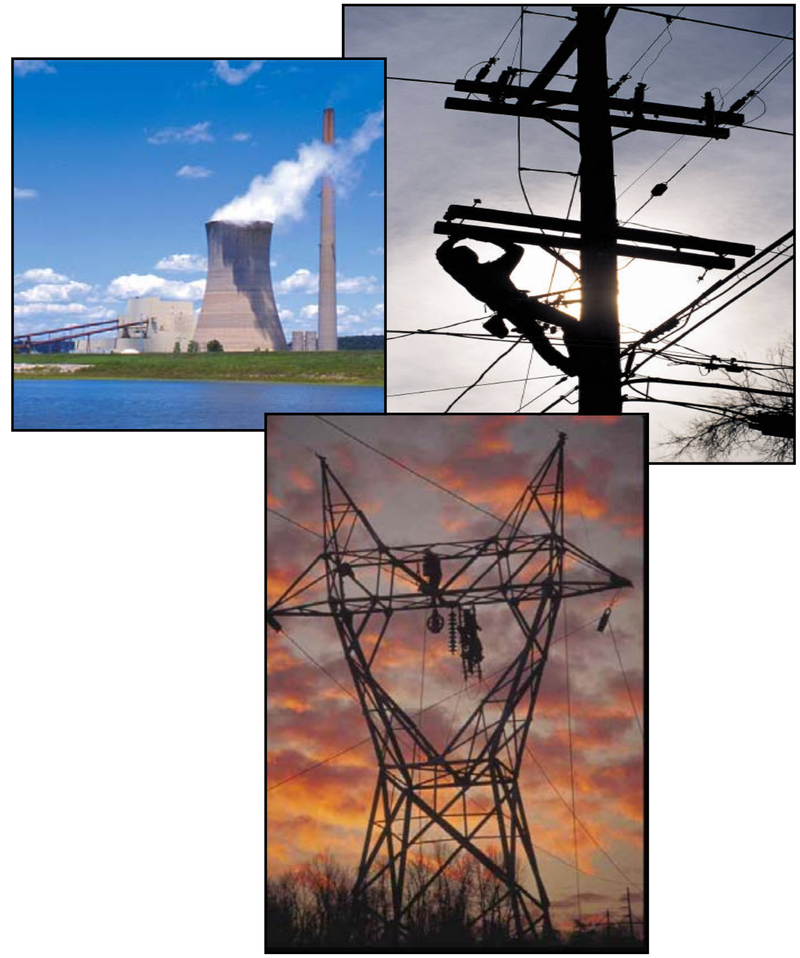
Brian X. Tierney - EVP and CFO

AEP Value Proposition



- **Regulated Utility Platform**
  - Diversified service territory
  - Successful regulatory track record
  - Value compared to regulated peer group
- **Earnings Growth Prospects**
  - Investment in utility platform greater than depreciation level (2 - 4%)
  - With transmission opportunities (4 - 8%)
- **Attractive Yield Opportunity of 4.6%**[1]
  - 50-60% payout ratio targeted
  - Nearly a century of dividend payments to shareholders

AEP AMERICAN ELECTRIC POWER®

[1] yield percentage based on AEP closing price of $35.62 on 01/25/2010

Highly Diversified Regulated Utility Platform

Serving 5.2 million customers in 11 states

2009 Earnings Contribution

Transmission Investment Opportunities

ETT: Projects in Texas ERCOT jurisdiction

- $600MM of projects est. in service 2010-2013
- ETT's opportunity could reach $3.0B in the next decade

Transco: Within our existing footprint

- Provides opportunity to:
  - Develop new AEP-only projects
  - Reduce regulatory lag through FERC formula rates adjusted annually

Joint Ventures: Outside of our footprint, via ETA or with others

- Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
- Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2015
- Robust pipeline of projects up to $15B

Additional 2010 Earnings Drivers

O&M Assumptions

- $23MM increase over 2009, net of revenue offsets
- Includes $80MM increase in employee and operational expenses

Rate Relief Assumptions

- $320MM, net of trackers
- $167MM secured
  - AR, OH, OK, VA, WV
- Active or pending rate cases include KY, MI, TX, VA, WV and others

Investment Attributes

- **Strong utility platform**
  - Consistent regulatory outcomes
  - Active fuel recovery
  - Geographic and regulatory diversity
  - Growth through capital investment
- **Consistent dividend policy**
  - 50-60% payout ratio targeted
  - Nearly a century of dividend payments to shareholders
- **Growth Opportunities**
  - Investment in utility platform greater than depreciation level (2 - 4%)
  - With transmission opportunities (4 - 8%)
  - Capital investment to comply with carbon legislation

JV Strategy – Nationwide Grid Expansion

ACTIVE PROJECTS

SPP

Prairie Wind — COD: 2013-14
- 110 miles of 765 kV
- Partners: Westar (50%) & MidAmerican Energy (50%)
- Estimated Cost: $400 million
- ROE: 12.8%

Tallgrass — COD: 2013-14
- 170 miles of 765 kV
- Partners: OG&E (50%) & MidAmerican Energy (50%)
- Estimated Cost: $500 million
- ROE: 12.8%

ERCOT

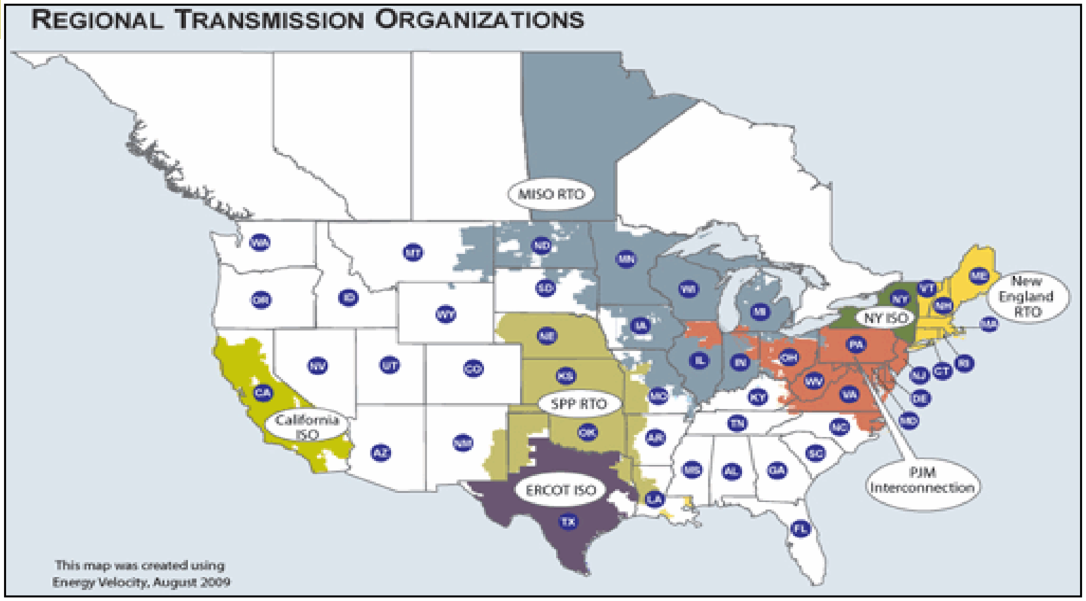
ETT — COD: 2010-2017
- 345 kV ERCOT Expansion
- Partner: MidAmerican Energy (50%)
- Estimated Cost: $1.4 billion
- ROE: 9.96%

PJM

PATH-WV — COD: 2014
- 275 miles of 765 kV
- Partner: Allegheny Energy (50%)
- Estimated Cost: $1.2 billion
- ROE: 14.3%

PJM/MISO

Pioneer — COD: 2015
- 240 miles of 765 kV
- Partner: Duke Energy (50%)
- Estimated Cost: $1 billion
- ROE: 12.54%



FUTURE DEVELOPMENT

SMARTransmission Study
- Interregional EHV & Wind Integration Study
- Partners: ATC, Exelon, MidAmerican Energy, Northwestern Energy, Xcel Energy

SPP

SPP EHV Overlay
- Regional Expansion of 765 kV Backbone

ERCOT

ETT — COD: various
- Additional CREZ spend of ~ $1.1 billion (COD 2012-2013, subject to a 6-month routing approval)
- Other Projects Pending Transfer of ~ $600 million (COD 2010-2013)

PJM

PJM Expansion
- Regional Expansion of 765 kV, 500 kV and 345 kV systems

PJM/MISO

EHV Michigan/Ohio
- 700 miles of Proposed 765 kV

AEP AMERICAN® ELECTRIC POWER

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 4913 of 9556

Electric Transmission Texas, LLC

Overview:

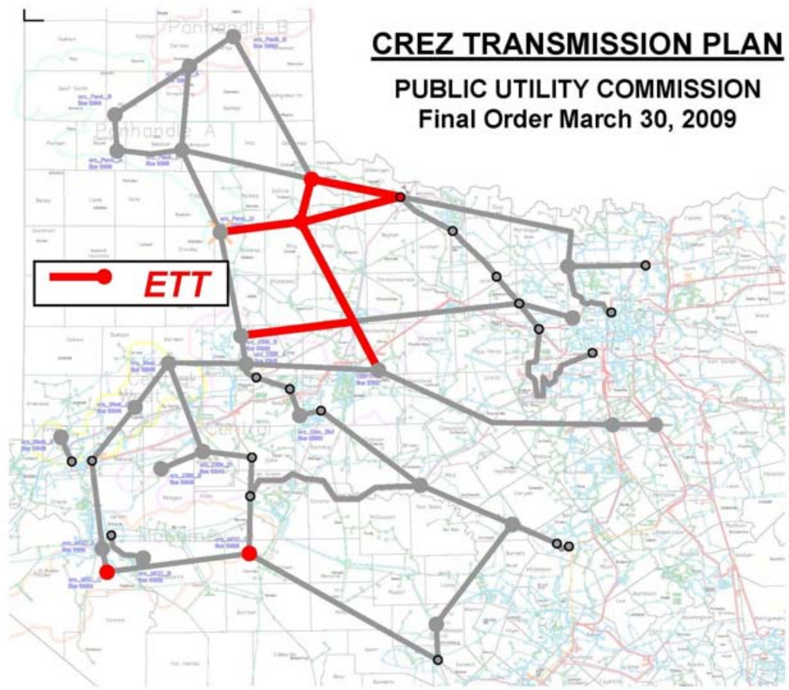
- ETT is a 50/50 JV between AEP and MidAmerican Energy Holding Company that plans to construct and operate transmission projects within ERCOT with an investment opportunity of more than $3 billion.
- Current JV rate base is $127 million with a debt to capital ratio of 60/40 and an authorized ROE of 9.96%.

Opportunities:

- Projects in service 2010-2017: $1.4 billion
- CREZ projects in service 2012-2013: $1.1 billion
- Other projects pending transfer in service 2010-2013: $600 million

Next Steps:

- Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in 2010.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Electric Transmission Texas

EHV Transmission in PJM: PATH

Project Description: 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

Overview:

- FERC order issued on February 29, 2008 approving:
  - Cash return on CWIP and 14.3% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents
  - Rates went into effect March 1, 2008
- Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million.
- Estimated completion date: 2014+, pending outcome of the 2010 PJM Regional Transmission Expansion Plan (2010 RTEP).

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

- Obtaining a CPCN in West Virginia, Virginia and Maryland. CPCN applications in West Virginia and Maryland are pending because their procedural schedule allows the consideration of the 2010 RTEP. A new application in Virginia is expected in the third quarter of 2010 after consideration of the 2010 RTEP.

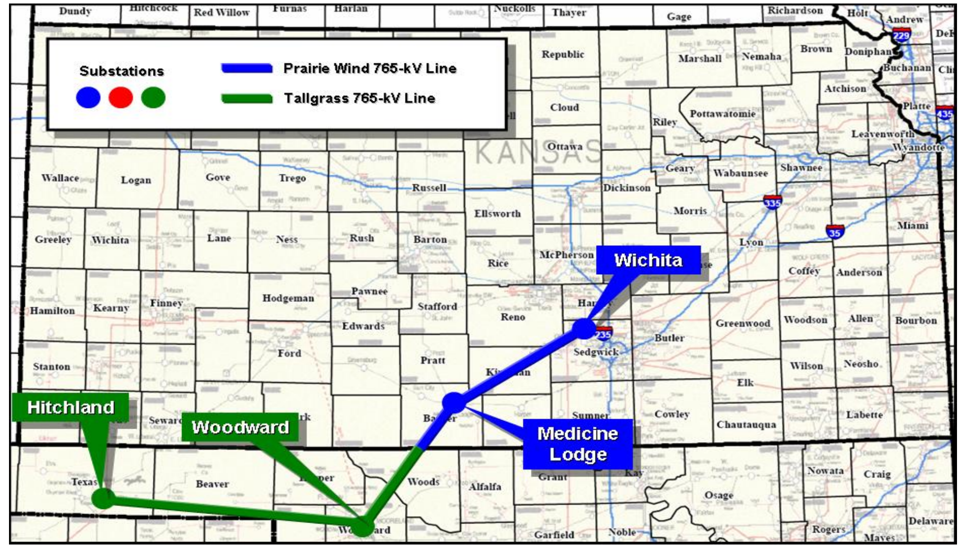
PATH
Potomac-Appalachian Transmission Highline

AEP AMERICAN® ELECTRIC POWER

Prairie Wind Transmission, LLC

Overview:

- In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
- PWT is a 50/50 JV that is proposing to build approximately 110 miles of 765-kV lines extending from Wichita, KS.
- The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
- The project is expected to cost approximately $400 million and be in-service by 2013 and was approved by the KCC on July 24, 2009.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

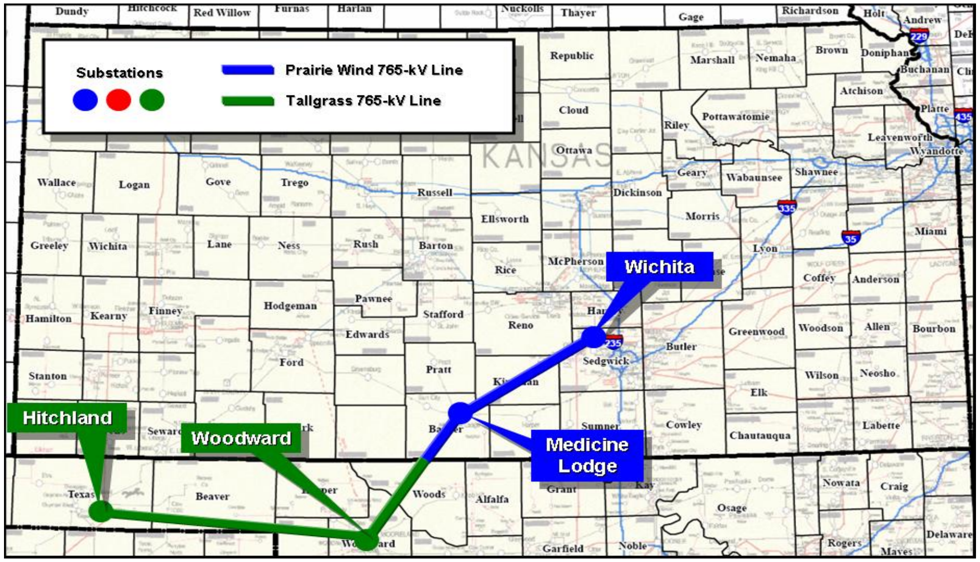
- RTO Approval
- Siting

AEP AMERICAN ELECTRIC POWER®

Tallgrass Transmission, LLC

Overview:

- In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
- TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines in Oklahoma
- The project will promote wind development in the western half of Oklahoma.
- Project is expected to cost approximately $500 million and be in-service by 2013-14.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

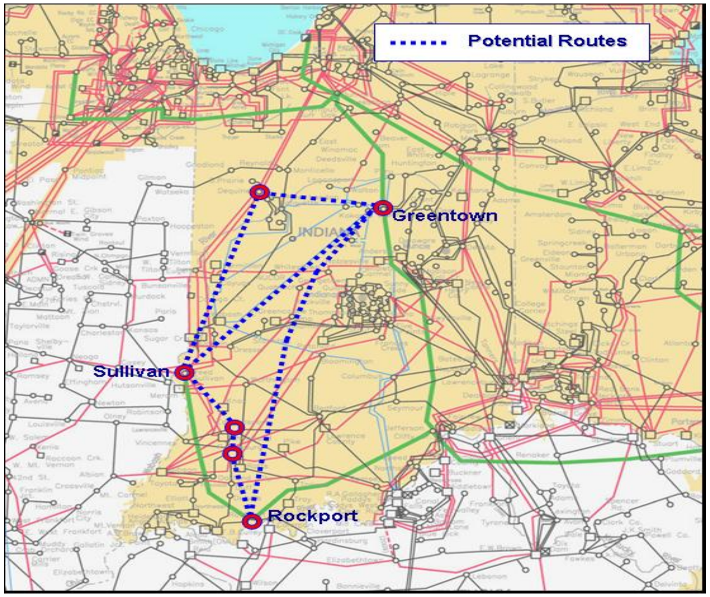
- RTO Approval
- Siting

AMERICAN ELECTRIC POWER

Pioneer Transmission, LLC

Overview:

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
- The project will improve the reliability of the nation's transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, protect national security and expand opportunities for new generation, including renewables.
- The project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP's ownership of the joint venture is 50%.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

- RTO Approval (PJM & MISO)
- Cost allocation which enables the development of "system solutions"
- Siting

AEP AMERICAN® ELECTRIC POWER

Upper Midwest EHV Development—SMART Study

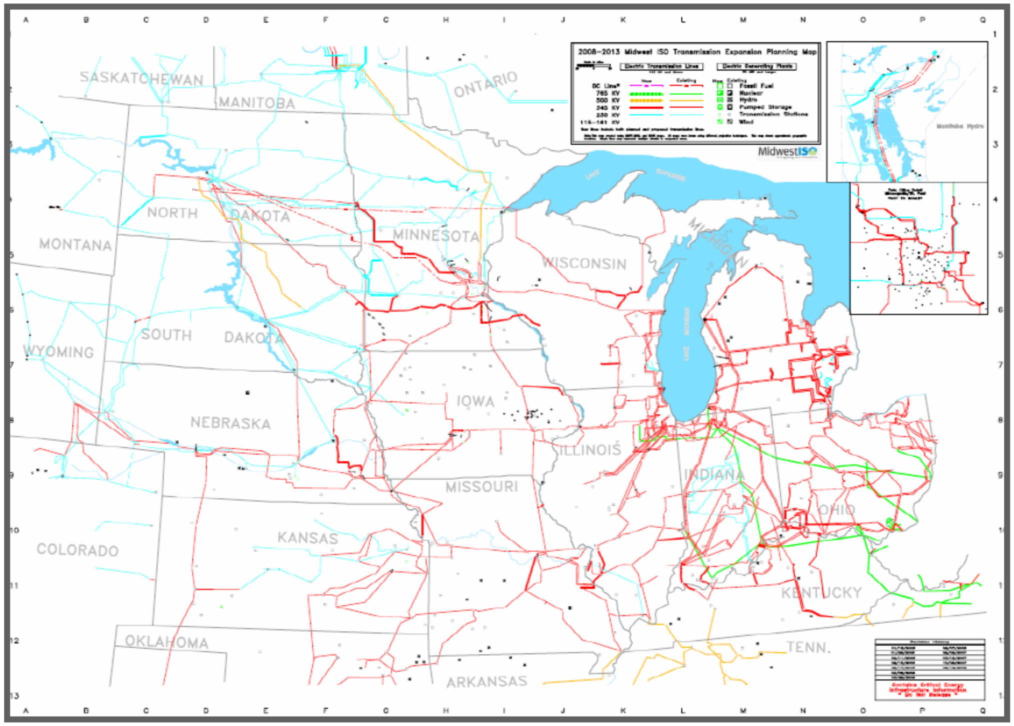
Project Description: a comprehensive study of the transmission needed in the Upper Midwest to support renewable energy development and transporting that energy to consumers throughout the study area. The SMART Study will develop EHV overlay alternative that ensures reliable service for sponsors' communities, is environmentally friendly, and supports national energy policy.

Overview:

- SMARTransmission Study announced August 2009
- Sponsors of the Study include ETA, Exelon, ATC, Northwestern, MidAmerican Energy Company, and Xcel
- Study due to be completed end of 2nd Qtr 2010 and will include "overlay" options and quantification of economic benefits

Next Steps:

- Investment structure
- Obtaining cost allocation between states, PJM, and MISO
- RTO technical approvals
- Favorable 205 Order including incentives



Primary Focus Areas: North Dakota – South Dakota – Iowa – Nebraska – Indiana – Ohio – Illinois – Minnesota – Wisconsin – Michigan

Mitigation:

- Collaborative approach involving impacted utilities, RTOs, commissions and others

Columbus, Ohio

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation or regulation in Ohio and/or Virginia, and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

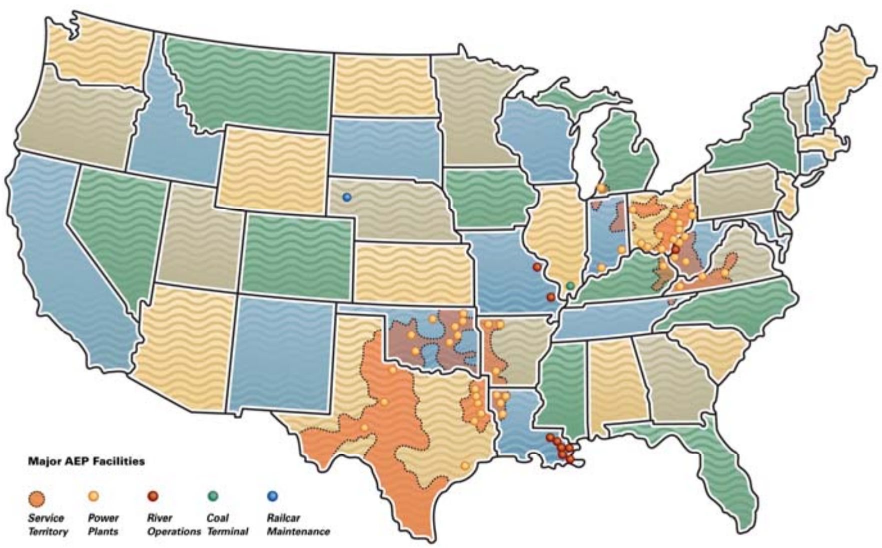
Company Overview

- 5.1 million customers in 11 states
- Industry-leading size and scale of assets:

Asset	Size	Industry Rank
Domestic Generation	~38,200 MW	# 2
Transmission	~39,000 miles	# 1
Distribution	~208,000 miles	# 1

Source: Company research & Resource Data International Platts, PowerDat 2005



- Coal & transportation assets
  - Control over 8,000 railcars
  - Own/lease and operate over 2,600 barges & 51 towboats
  - Coal handling terminal with 20 million tons of capacity
- 20,000 employees

AEP Generation Portfolio				
Coal	Gas	Nuclear	Hydro	Wind
67%	24%	6%	2%	1%

AEP ENJOYS SIGNIFICANT PRESENCE THROUGHOUT THE ENERGY VALUE CHAIN

Strategic Direction

- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Develop our transmission business
- Achieve adequate returns on all assets

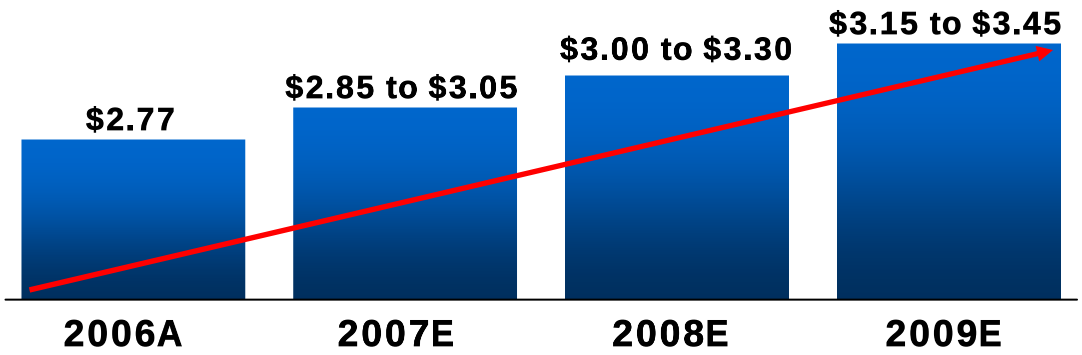
→ **Deliver value to investors and cost effective service to our customers**

CONTINUED COMMITMENT TO OUR CORE UTILITY MISSION: BRING REASONABLY PRICED ELECTRIC SERVICE TO OUR CUSTOMERS, THEREBY STRENGTHENING OUR COMMUNITIES AND REWARDING OUR INVESTORS

AEP®

Framework For Long-Range Performance

- 2007, 2008 & 2009 Ongoing Earnings Guidance Ranges:



- EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in existing utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
  - Investment in new transmission opportunities
  - Seek rate recovery for new investments
  - Control costs & achieve timely rate relief
- Maintain credit ratings
  - BBB/Baa2/BBB

AEP®

OUR STRATEGY REMAINS FOCUSED ON REGULATED OPERATIONS

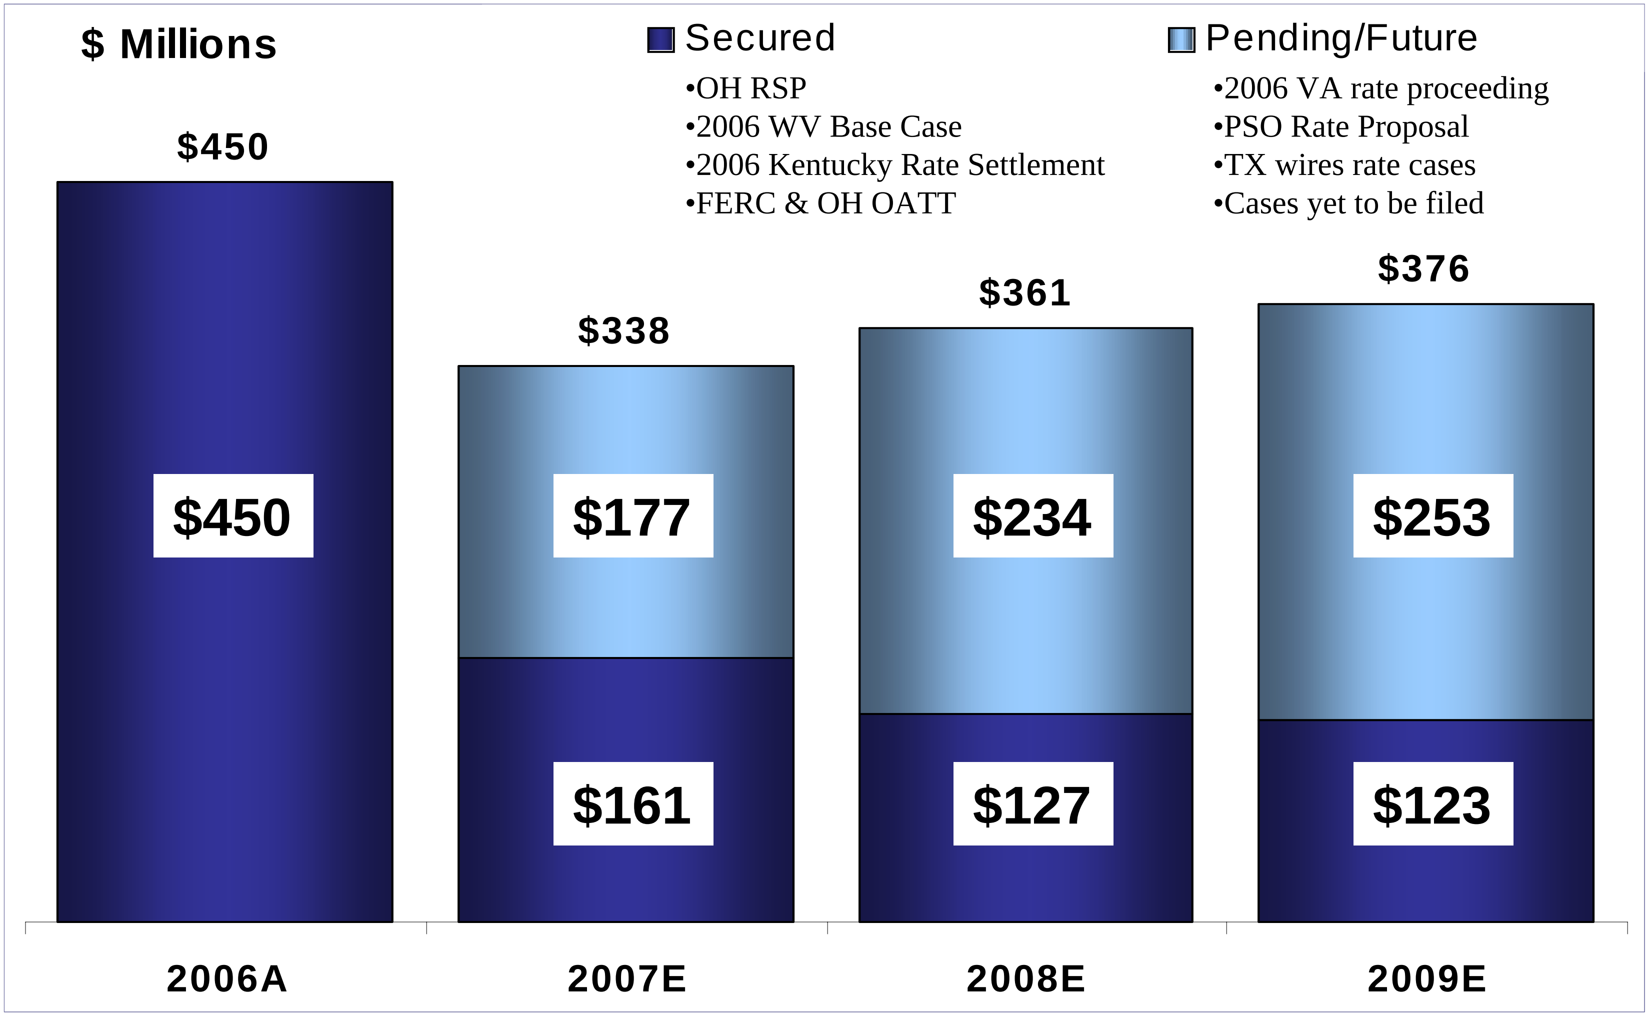
Summary of 5-7% Long-Range Growth Components

- Energy sales growth of 1.5%
- Rate base investment
  - Generation plant purchases & build
  - Transmission – interstate & intrastate
  - Distribution
  - Reliability
- Transmission company
- Commercial operations
- Regulatory strategy
  - Achieve timely returns
  - Seek cash returns on investment during construction
  - Create & secure innovative rate plans
    - Pursue post-2008 solution in Ohio
    - Expand use of trackers
    - Formula rates

RATE BASE INVESTMENT COUPLED WITH INNOVATIVE REGULATORY PLANS WILL REDUCE LAG AND DRIVE EARNINGS GROWTH

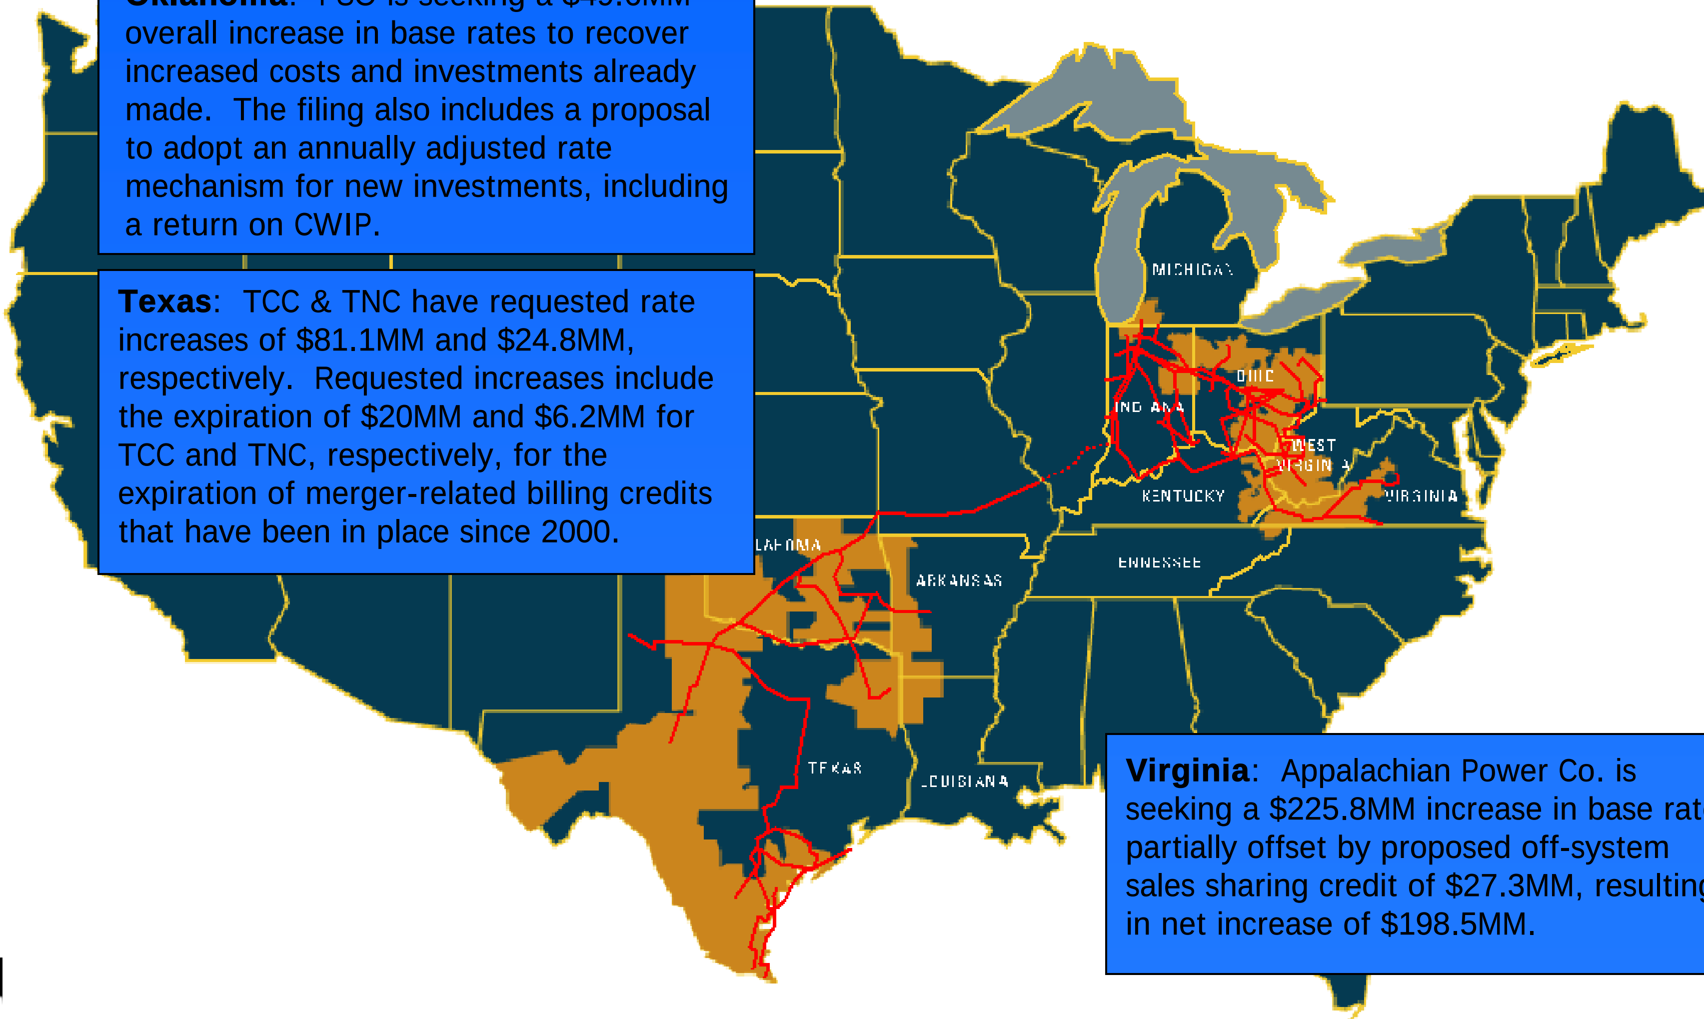
AEP®

Incremental Rate Relief Composition



RATE RELIEF IS A CRITICAL ELEMENT TO AEP'S FINANCIAL SUCCESS

Base Case Regulatory Summary



Oklahoma: PSO is seeking a $49.6MM overall increase in base rates to recover increased costs and investments already made. The filing also includes a proposal to adopt an annually adjusted rate mechanism for new investments, including a return on CWIP.

Texas: TCC & TNC have requested rate increases of $81.1MM and $24.8MM, respectively. Requested increases include the expiration of $20MM and $6.2MM for TCC and TNC, respectively, for the expiration of merger-related billing credits that have been in place since 2000.

Virginia: Appalachian Power Co. is seeking a $225.8MM increase in base rates, partially offset by proposed off-system sales sharing credit of $27.3MM, resulting in net increase of $198.5MM.

Regulatory Activity

AEP Ohio Distribution Reliability Filing

Filed Oct. 6, 2006 – AEP Ohio proposes an additional annual average investment of approximately $130MM over the next 5 years on vegetation management, equipment replacement, infrastructure upgrades & improved use of technology, to help reduce outages and improve service reliability.

- We are requesting implementation of a Reliability Cost Recovery Rider for recovery of the incremental O&M expenses and a return on and of the capital investments made under the plan. The requested ROE is 10.5%.
    - If approved, the rider would be implemented July 1, 2007 through December 31, 2008 and would be effective until new distribution rates are placed in effect. We anticipate that new base distribution rates would be effective after the expiration of the RSP on Dec. 31, 2008.
- Requested recovery amounts total $20MM in 2007 and $51MM in 2008.
- Staff testimony due April 17, 2007; Evidentiary hearing to commence April 30, 2007.

AEP Ohio Application For 4% Provision On Generation Rate

- On Jan. 23, 2007, CSP and OP filed an application at the PUCO to recover 2007 costs associated with additional generation-related expenditures the companies are encountering related to environmental, security and other new generation-related costs pursuant to the RSP.
- CSP and OP are requesting to implement the provision to recover $24.5MM and $8.2MM, respectively, from May 2007 through December 2007.
- Staff & Intervenor testimony due May 7, 2007; Evidentiary hearing to commence May 22, 2007.

AEP®

Regulatory Activity

Electric Transmission Texas (ETT) Rate Filing

- Jan. 22, 2007 – ETT filed with the PUCT for approval to operate as an electric transmission utility in Texas and to establish initial rates for ETT.
  - Requested capital structure of 60% debt / 40% equity; requested ROE of 11.25%.
  - Intervenor testimony is due May 30, 2007. Staff testimony is due June 7, 2007. Hearings are scheduled for June 26-29, 2007.
    - An order is expected Mid-2007 and operations are expected to commence in the 2nd half of 2007. Upon receipt of approvals, AEP and MidAmerican will each own a 50% interest in the joint venture.

Seams Elimination Cost Adjustment Revenues

- August 2006 – ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
  - Up to $96MM of SECA revenues could be disallowed, net of unused provisions
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both.
- Exceptions to initial decision filed Sept. 11, 2006; Replies to exceptions filed Oct. 11, 2006; Order expected by the Commission in 2007

AEP®

Regulatory Activity

FERC Regional Rate Design

- The FERC instituted an investigation of PJM's zonal rate regime
  - Present regime may need to be replaced
  - Consider establishing regional rates that would compensate AEP, among others, for the regional transmission service provided by high voltage facilities they own that benefit customers throughout PJM
- July 2006 ALJ-rendered initial decision:
  - License plate rates for existing facilities <u>are not</u> just and reasonable, and must be replaced (effective April 1, 2006, when SECA ended)
  - Staff's proposal for a "Postage Stamp" rate phased in so as to limit increases in any one pricing zone to 10% per year as the best choice for replacing current rates
  - Staff's proposed rate design would produce slightly more net revenue for AEP than the original AEP/Allegheny Power proposal, if not phased in.
  - Briefs on Exceptions to the initial decision by all parties have been filed; An order is expected by the Commission in mid-2007.

AEP®

Summary Rate Case Information

APCo Virginia General Rate Case

On May 4, 2006, Appalachian Power Co. filed a general base rate case with the Virginia State Corporation Commission (VSCC) requesting an increase of $198.5 million ($225.8 million in base revenues offset by an off-system sales credit of $27.3 million). (Docket #: PUE-2006-00065)

Projected Capital Structure – Company Position (9/30/07)

Summary Rate Case Information

PSO Rate Proposal

On November 21, 2006, Public Service Oklahoma filed an application with the Oklahoma Corporation Commission to increase base rates by $49.6 million to recovery investments already made and costs incurred. The request represents a 4% overall increase (including fuel). The filing also includes a proposal to adopt an annually adjusted rate mechanism, which includes a return on CWIP. The formula rate would adjust rates, up or down, if PSO earns above or below an approved bandwidth around the authorized ROE. (Case #200600285)

*Excludes AEP's 44% ownership in OVEC (980 MWs of coal-fired capacity)

Installation Of SCR And FGD Equipment Will Allow Our Coal Fleet To Remain Extremely Cost Competitive

Environmental Investment Forecast

- Ohio Rate Stabilization Plan
  - Annual 3% and 7% generation rate increases at CSP & OP, respectively for 2006-2008
  - Filing made on Jan. 23 for recovery of 2007 costs associated with additional generation-related expenditures, pursuant to the 4% provision of the RSP
- West Virginia Rate Settlement
  - Mechanism in place to provide for rate increases through 2009 for ongoing environmental investments
- Virginia E&R Mechanism
  - Allows APCo-VA to recover incremental environmental & reliability costs
  - Order issued Nov. 20, 2006 granting $21.4MM of recovery for costs incurred thru Sept. 30, 2005
- Kentucky Environmental Surcharge
  - Monthly surcharge mechanism allows for recovery of pollution-control projects required by the Federal Clean Air Act

Projected Environmental Investment Allocation (2006A – 2009E)

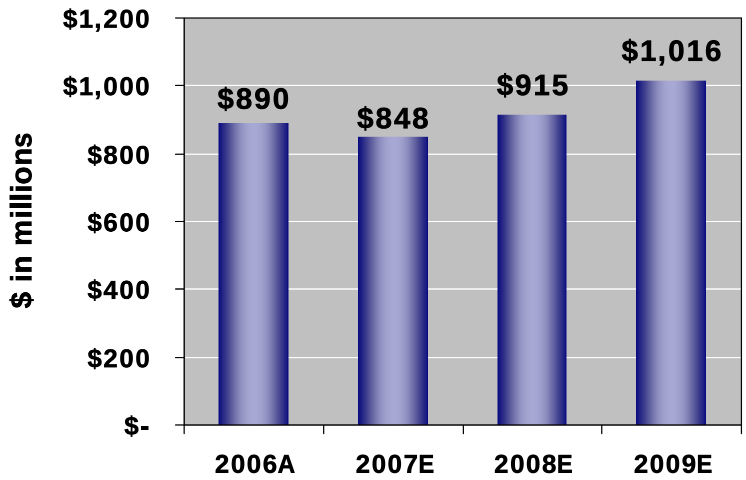
AEP Is The Leader In Transmission Expertise

Rate Relief & Enhanced Distribution Investment

- AEP Ohio Reliability Plan (Filed Oct. 6, 2006)
  - Plan will enhance distribution system reliability
  - Proposing an average annual investment of $130MM over 5-year period
- Virginia E&R Mechanism
  - Allows APCo-VA to recover incremental environmental & reliability costs
  - Order issued Nov. 20, 2006 granting $21.4MM of recovery for costs incurred thru Sept. 30, 2005
- Public Service of Oklahoma Rate Rider
  - $24MM annual vegetation management rider approved in Nov. 2005
- Texas Wires Rate Cases (Filed Nov. 9, 2006)
  - TCC & TNC seeking to increase rates for distribution & transmission services
  - Requested increases total $60.8MM and $15.9MM for TCC & TNC distribution revenues, respectively.

	2005	2006
Line Miles	201,666	207,632
Net PP&E-Distribution	$7,617MM	$8,241MM

Total Projected Distribution Investment



Rate Relief For Distribution Enhancement Will Be Sought Through Innovative Recovery Methods, Such As Rate Riders

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate relief or other recovery for new investments, transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements periodically issued by accounting setting bodies; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

AEP Addressing Industry Concerns

- Rising Commodity Costs – Fuel and Transportation
- Rising Capital Costs – Environmental Retrofit and New Generation
- Declining Reserve Margins
- Need for Additional Transmission
- Regulatory Pressures Due to Rising Rates

AEP

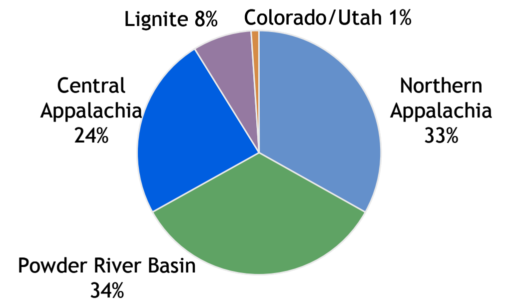
AEP is well positioned to manage each of these industry concerns.

Industry Concern: Rising Commodity Costs – Fuel and Transportation

AEP SOLUTION – FUEL PROCUREMENT STRATEGY:

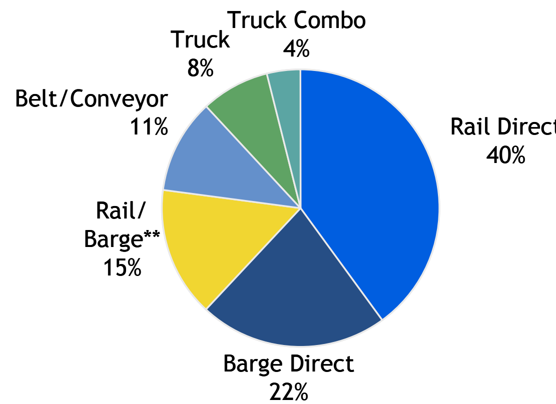
- **Portfolio of Coal Contracts**
  - Geographic and supplier diversity
  - Diversity of terms – currently ranging from 2008 to 2022
- **Portfolio of Transportation Resources**
  - 8,400 rail cars
  - 2,650 barges and 52 towboats
  - coal handling terminal-20MM tons capacity
- **Portfolio of Options to Manage the Economics of Converting BTUs to MWhs**
  - Manage emission allowance exposure
  - Blending capabilities at many plants
  - Transportation fleet to reposition coal
- **Regulatory Recovery**
  - Active fuel clauses in ten of eleven jurisdictions, with Ohio recovery beginning in 2009

AEP Supply Diversity *



* 2008 Projected

AEP Transportation Diversity *



* 2007 Actual

** Reflects coal delivered to AEP plants transported through a combination of rail and barge

AEP strategy: manage coal supply sources and transportation assets to mitigate price increases and market disruptions.

Industry Concern: Rising Capital Costs

AEP SOLUTION – Completed Environmental Retrofit

Lower Capital, Lower Operating Costs, Successful Operating Performance

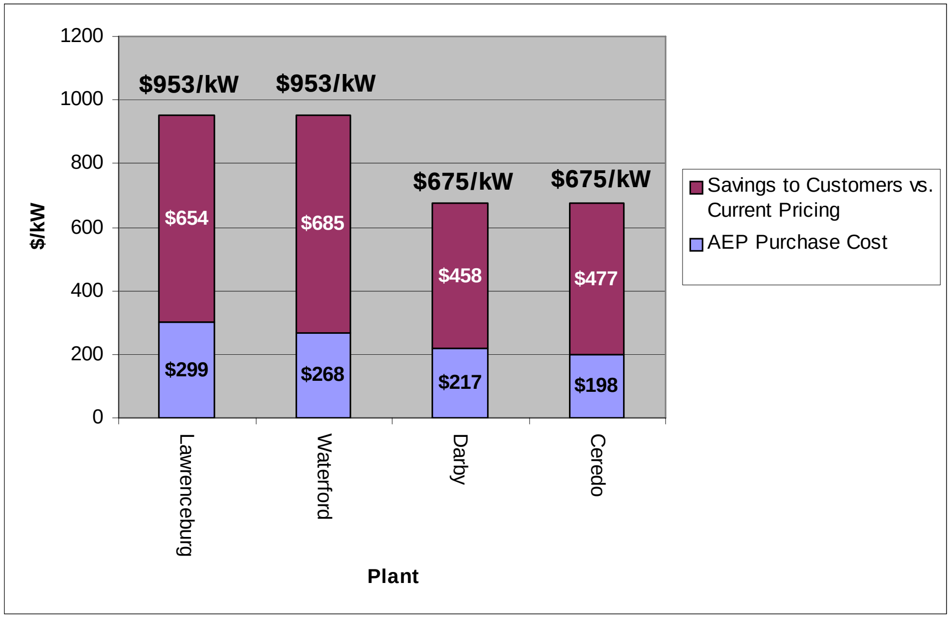
- By locking in our environmental program costs in the early portion of this decade, AEP has a clear 'first-mover' advantage
- Capital cost comparison for wet scrubber:
  - AEP average ~ $250/kW
  - 2007 pricing for a 600MW plant ~ $320/kW
  - 2012 forecast for a 600MW plant ~ $470/kW

- **11,076 MW FGDs currently in service or under construction equates to cost savings to rate payers based on 2007 $ of $775 million.**

AEP SOLUTION – Purchased Low-Cost Generation

Lower Capital, Successful Operating Performance, Delayed Need for Baseload

- Cost to replace plants in 2008 are estimated at $675/kW for simple-cycle and $953/kW for combined-cycle. Costs include as-spent direct plant costs only. Excluded are AFUDC, land, transmission and gas pipeline interconnections. This equates to cost savings to rate payers of $1.7 billion.



By moving early, AEP avoided approximately $2.5 billion of capital. Nearly all of these investments are currently reflected in rates.

AEP

Industry Concern: Declining Reserve Margins

AEP SOLUTION – Add Generation:

Harry D. Mattison Plant – commercial operations achieved in 2007

Generation:

- **Adequate reserves in East due to purchased generation (Waterford, Ceredo, Lawrenceburg &Darby)**
- **Build peaking, intermediate and baseload generation in the West**

Project Name	State	Fuel Type	Plant Type	MW Capacity	Original In Service Date	As Contracted Cost	Cost if Contracted in 2008	In Service if Contracted in 2008
Mattison	Arkansas	Gas	Simple-cycle	340	2007	$333/kW	$675/kW	2010
Stall	Louisiana	Gas	Combined-cycle	500	2010	$671/kW	$953/kW	2011
Turk	Arkansas	Coal	Ultra-supercritical	600	2011	$2,123/kW	$2,605/kW	2014

Costs include as-spent direct plant costs only. Excluded are AFUDC, land, transmission and gas pipeline interconnections.

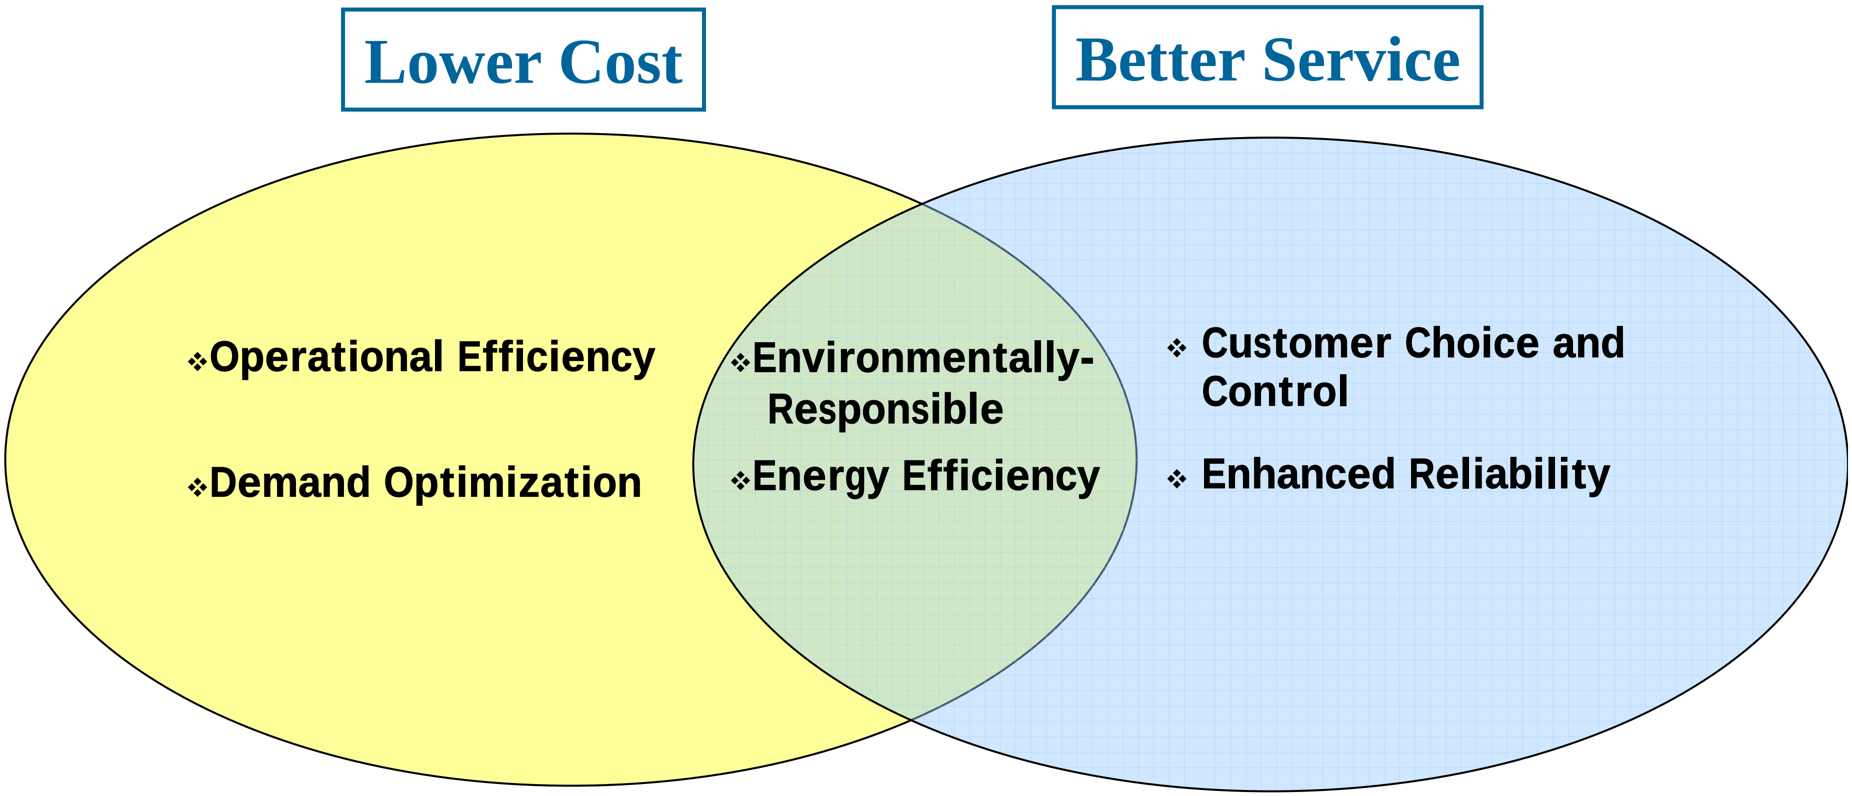
AEP's current initiatives help mitigate both the supply and demand issues facing the U.S.

AEP®

Industry Concern: Declining Reserve Margins

AEP SOLUTION – Improve Efficiency and Demand Management:

AEP's **gridSMART**^{SM} initiative will develop a deployment plan for new customer programs and advanced technologies to support pursuit of the following value propositions:

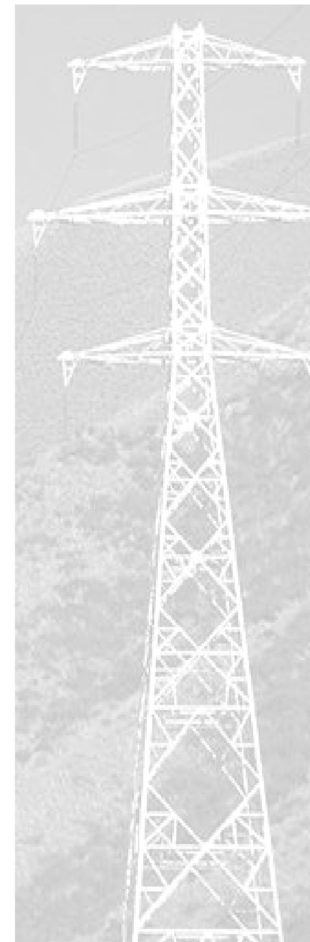


Increased efficiency reduces cost and GHG emissions. It also delays the need for new generation.

Industry Concern: Need for Additional Transmission

AEP SOLUTION:

Our status as the largest transmission owner in the U.S. affords us technical, operational and economic advantages:



- Efficient System Design - 765-kV Technology
- Advanced Technology Solutions - Laredo Variable Frequency Transformer
- Strong Supplier Relationships - Long-term Equipment and Construction Contracting
- Joint Venture Partnerships - Investment opportunities identified
  - MidAmerican Energy Holdings Company
    - Electric Transmission Texas - $1 billion - $4 billion opportunity
    - Electric Transmission America - $3 billion opportunity in SPP
      - Signed agreement with Westar forming Prairie Wind Transmission--$600MM (AEP share-25%)
  - Allegheny Energy Inc.
    - PATH - $1.8 billion opportunity

Our customers and shareholders benefit from the scope, scale and expertise of our transmission operations.

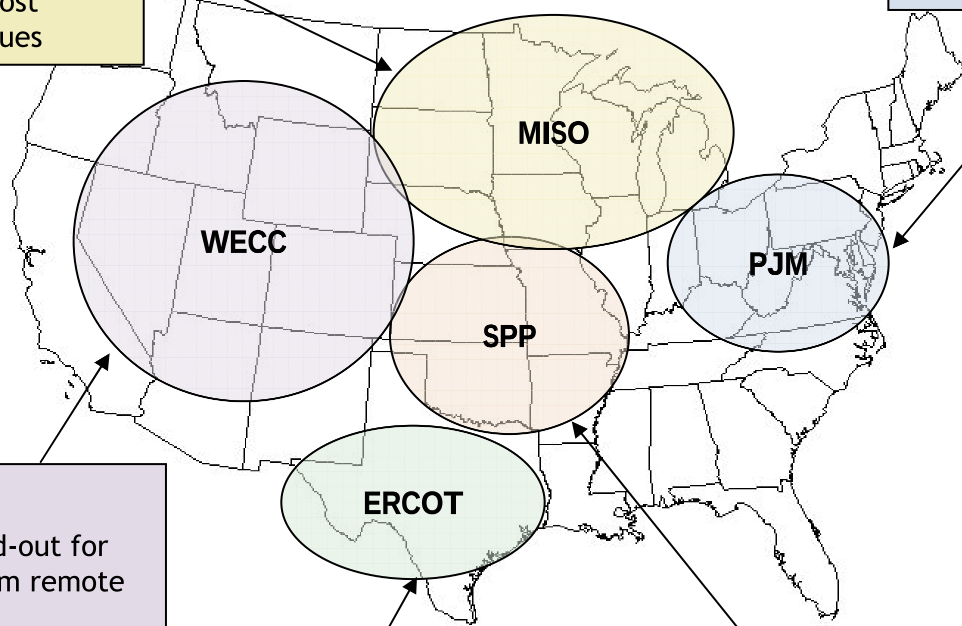
Transmission Investment Opportunities Allow Broader Market Access

MISO

ITC 765-kV project may be test case for cross-border cost recovery and seams issues

PJM

Congestion will be reduced and reliability will be increased



WESTERN STATES

Opportunity for 765-kV build-out for long-haul transportation from remote resources to load

SPP

Regional rate design under development to encourage investment and accommodate new generation sources

ERCOT

Load growth and access to wind resources driving transmission investment

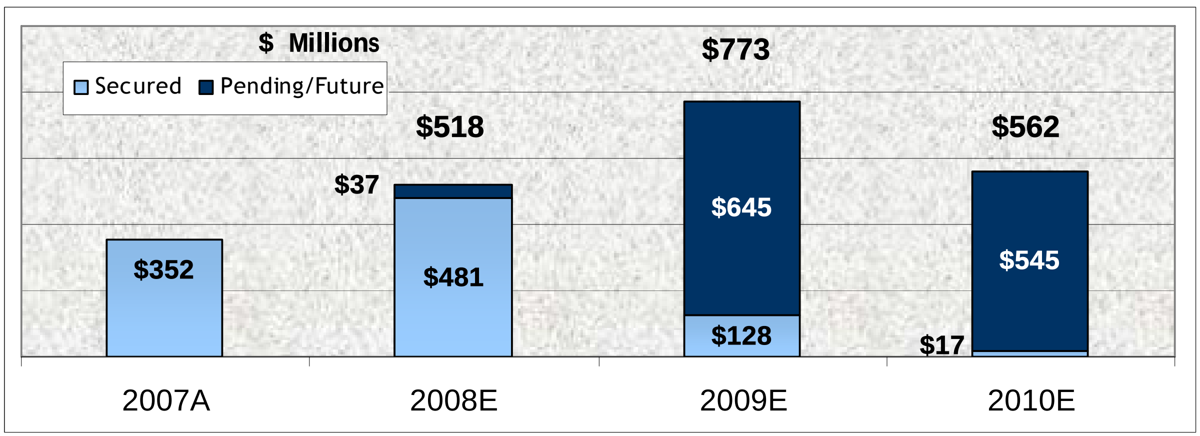
AEP's transmission initiative addresses regional supply/demand issues (congestion) and is required for more robust deployment of renewable generation sources.

AEP®

Industry Concern: Regulatory Pressures Due to Rising Rates

AEP SOLUTION:

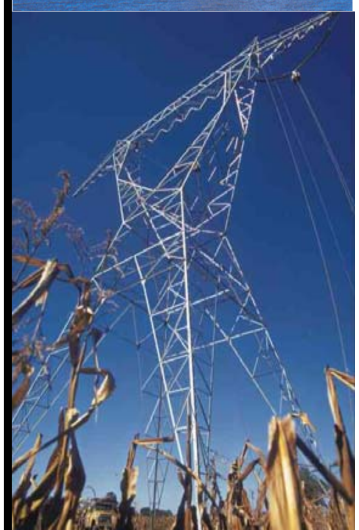
- **History of Regulatory Success/Proven Track Record**
- **Lowest Cost Provider to 93% of our customers (8 of 10 Jurisdictions)**
- **Capital Reallocation will be considered where ROE's are not sufficient**
- **gridSMART[SM] Initiative to reduce customer bills**
  - Benefit: more power to sell off-system creates increased sharing for retail customers, further reducing customer bills
- **AEP Track Record of Success – Anticipated 2007 rate relief of $338MM; Achieved $352MM; Already secured 93% of 2008 rate relief.**



Note: 2009 rate relief includes Ohio, IN, VA, OK, and miscellaneous other jurisdictions

AEP is well-positioned for continued favorable regulatory treatment.

American Electric Power - Solid Track Record of Successful Execution



- *Economies of scope and scale in assets & operations*
  - *2nd Largest Generating Fleet in the U.S. including largest supercritical units at 1300 MW*
  - *Largest Transmission and Distribution Network in the U.S.*
- *Continued innovation and first-mover deployment of leading technology advancements*
  - *Ultra-supercritical and IGCC coal generation*
  - *765-kV leadership*
  - *gridSMART^{SM} initiative*

Poised for Continued Success

Questions

Appendix

Company Overview

- 5.2 million customers in 11 states
- Industry-leading size and scale of assets:

Asset	Size	Industry Rank
Domestic Generation	~37,700 MW	# 2
Transmission	~39,000 miles	# 1
Distribution	~213,000 miles	# 1

Source: Company research

- Coal & transportation assets
  - Control over 8,400 railcars
  - Own/lease and operate over 2,650 barges & 52 towboats
  - Coal handling terminal with 20 million tons of capacity
- 20,800 employees

SWEPCo	Turk	Arkansas	\$1.5 B (1)	Coal	Ultra-supercritical	600 (1)	2012
APCo	Mountaineer	West Virginia	\$2.23 B	Coal	IGCC	629	2012
CSP/OP	Great Bend	Ohio	\$2.7 B (2)	Coal	IGCC	629	2017

(1) SWEPCo will own approximately 73%, or 438 megawatts, totaling about \$1,110 million in capital investment. The increase in the cost estimate relates to cost escalations due to the delay in receipt of permits and approvals.

(2) Cost estimates, updated to reflect cost escalations due to revised commercial operation date of 2017, are not yet filed with the PUCO.

AEP is meeting the growing electricity needs of customers through the pursuit of new economic generation facilities.

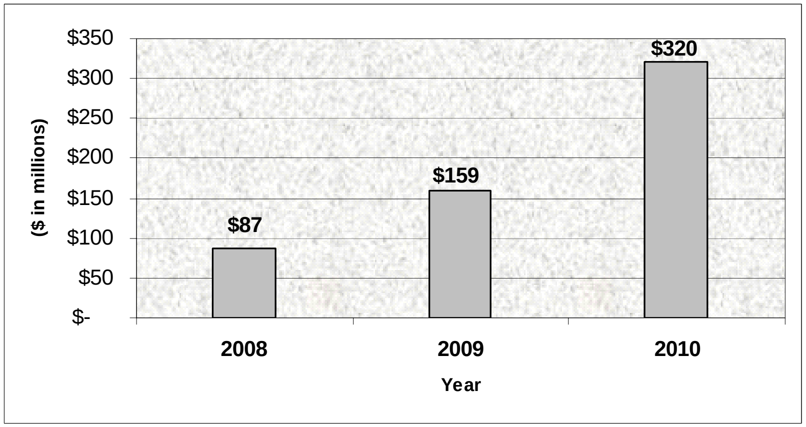
Transmission – Investments and Earnings Contributions

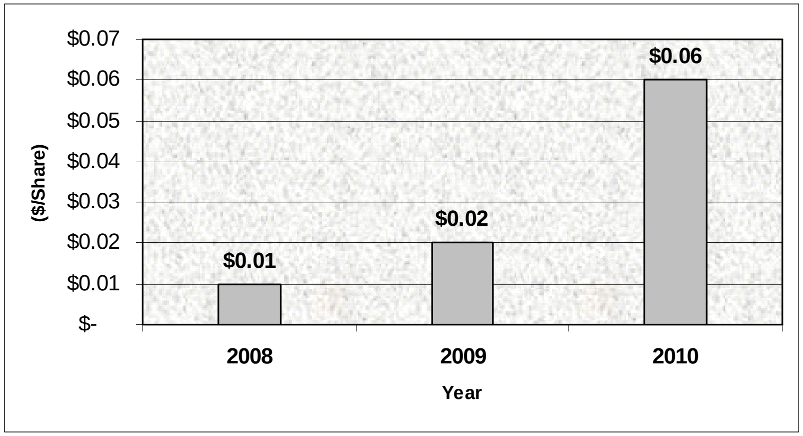
Projected Transmission Capital Spending*



* ETT and PATH joint ventures included in above projection. Amounts represent AEP's 50% share of total transmission joint venture capital expense. These amounts are excluded from AEP's base capital forecast because the joint ventures are not consolidated for financial reporting purposes. AEP will be responsible for funding 40-50% of these amounts with equity contributions, and the remainder will be financed with debt issued by the joint ventures.

ETT
Electric Transmission Texas

Projected Transmission EPS Contributions*



* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

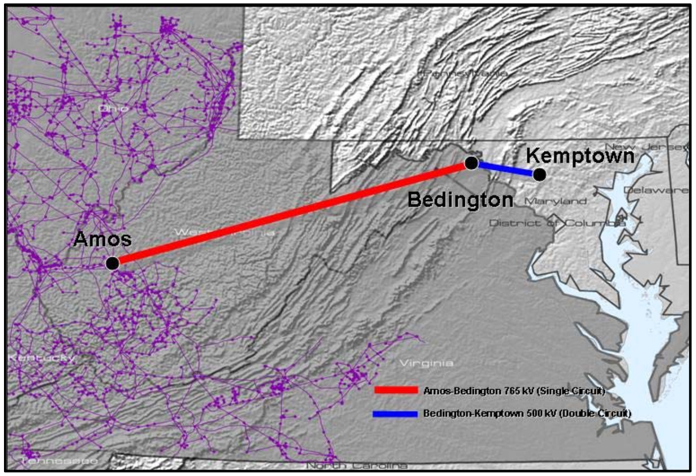
Page 4975 of 9556

I-765™ Transmission in PJM: PATH

- *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries -- to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP
    - 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
  - FERC ordered the formula rate mechanism be set for hearing, pending settlement judge procedures



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

PATH
Potomac-Appalachian Transmission Highline

- *Funding Plans/Transaction Structure*
  - AEP and Allegheny share ownership of Amos – Bedington line and contribute equally to this portion of the project through PATH West Virginia Transmission Company, LLC
  - AEP's investment will be held in the AEP Transmission Holding Company LLC subsidiary

- *Key Next Steps*
  - Siting Approval from WV and MD – 2010
  - Targeted Completion – 2012

AEP®

Joint Ventures with MEHC

Electric Transmission Texas Update

- *Transaction Structure*
  - 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
  - ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
  - Services provided by AEP and investment opportunities can be offered by either partner
  - Total initial investment of $70 million before ownership division
- *Next Steps*
  - ETT project opportunities to be evaluated on a case by case basis
  - Anticipate transferring some project opportunities in 2008 after regulatory approvals obtained.

Electric Transmission America Update

- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.
- To that end, ETA recently signed an agreement with Westar forming Prairie Wind Transmission, LLC proposing to build the first segment of the 765-kv Overlay Plan in SPP

AEP®

I-765™ Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- *Overview*
  - Sent non-binding Letter of Commitment to SPP to construct 765-kV and 500-kV projects in SPP region consistent with SPP Overlay Study – Summer 2007
  - Updated EHV Overlay Study completed by SPP – March 2008
- *Benefits*
  - Overall reliability reinforcement with improved voltage support throughout the SPP system
  - Significantly increased transfer capability
  - Provides access to new generation resources, especially renewables
  - Allows for effective interconnections for EHV system development
- *Next Steps*
  - ETA Partnering Agreements - 2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate and Cost Allocation Filing (postage stamp) – 2009
  - Siting Approval for projects – 2009-2011
  - Estimated Completion (in segments) – 2013-2017

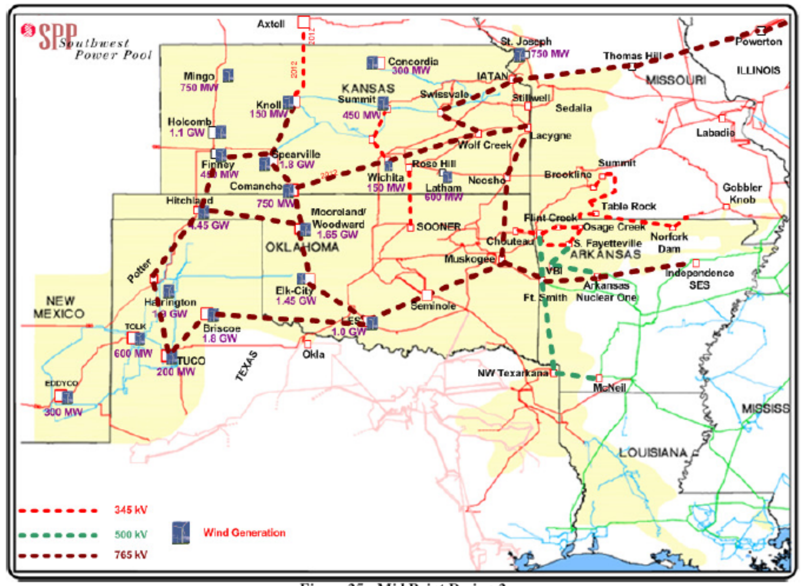


Figure 25: Mid Point Design 2

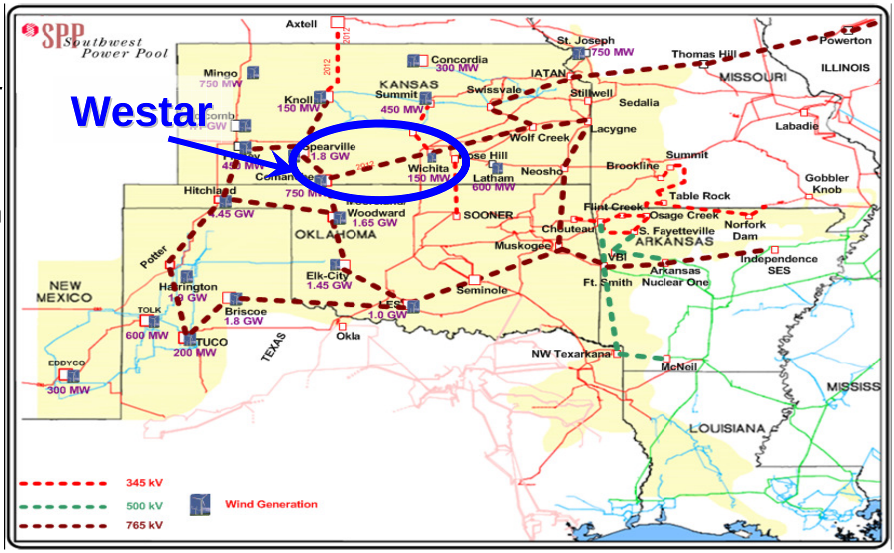
Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Prairie Wind Transmission, LLC

JV to build first segment of 765-kV transmission in SPP

- *Overview*
  - On May 19, 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT)
  - PWT is a 50/50 JV that is proposing to build approximately 230 miles of 765-kV lines extending from Wichita, Kan., west to a substation northeast of Dodge City, Kan., and then south to the Kansas border from Medicine Lodge, Kan.
  - The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region
  - Project is expected to cost approximately $600 million (based on SPP estimates) and be in-service by 2013
  - AEP's ownership of the joint venture is 25%
  - AEP obligations include oversight of 765 kV Engineering, 765 kV Technology and Project Management
  - Other responsibilities will be handled by the partners or outsourced
- *Next Steps*
  - File CPCN –2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate and Cost Allocation Filing (postage stamp) – 2009
  - Siting Approval – 2009
  - Estimated Completion – 2013



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

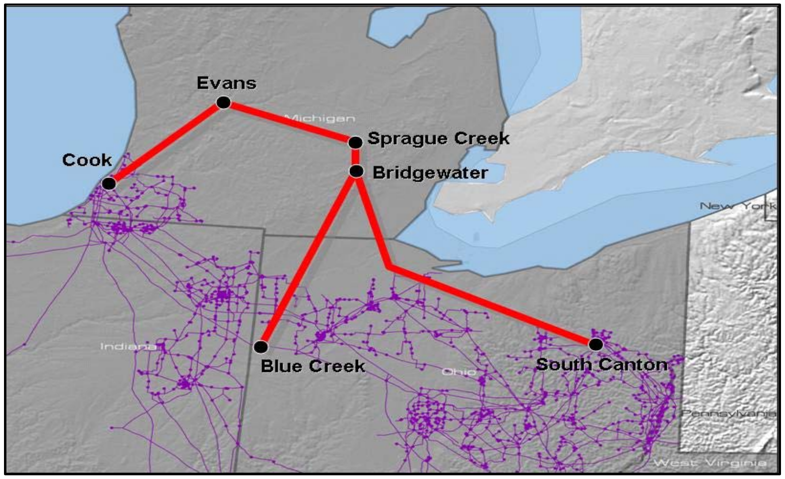
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP

I-765™ Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
  - Study was released Q3 2007
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.6 billion investment (before ownership division)
  - AEP and ITC are in discussions to form a Joint Venture
- *Benefits*
  - Up to 5,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- *Next Steps*
  - Agreement on JV (AEP/ITC) - Summer 2008
  - JV Formation - 2008
  - MISO and PJM Review/Approval - 2009
  - FERC Formula Rate and Cost Allocation Filing - Fall 2009
  - Siting Approval – 2011-2012
  - Estimated Completion –2015-2021



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP®

Regulatory Activity Underway

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $140MM. Approximately $10MM of the increase relates to 3rd party and the rest, if approved, would be recovered through retail jurisdictional filings in SWEPCo and PSO, as appropriate.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to February 1, 2008, with rates subject to refund.
- Settlement discussions are currently on-going.

AEP®

Regulatory Activity Underway

APCo Mountaineer IGCC Filing

Virginia

- Testimony filed with the Virginia State Corporation Commission on July 16, 2007 seeking a prudence determination and approval to recover, beginning in 2009, Virginia's share of the carrying costs associated with the proposed plant.
- We received an order on April 14, 2008, denying our request. We petitioned for reconsideration on April 29, 2008, and the SCC issued an order granting reconsideration on April 30, 2008.

West Virginia

- Air permit anticipated in the third or fourth quarter of 2008.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.
- In March 2008, the Ohio Supreme Court remanded the original order back to the PUCO, giving the PUCO the opportunity to supplement the record. No refund of Phase I costs was mandated by the Supreme Court in its decision.
- We now await further clarity from the PUCO on the remanded issues as well as resolution of pending rulemaking related to SB221 in Ohio.

AEP®

Regulatory Activity Underway

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- The PSC issued its order on November 21, 2007, approving construction of the plant.
- Air permit anticipated in the third or fourth quarter of 2008.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The peaking facility has been addressed and the intermediate facility is under review. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- The LPSC issued its order on April 29, 2008, approving construction of the plant.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- Public hearings commenced October 17, 2007. On January 17, 2008, the ALJ recommended the PUCT deny the request. The commissioners have requested another hearing where they can directly cross examine some of the witnesses. The additional hearing is scheduled for May 29-30, 2008.

AEP®

Regulatory Activity Underway

SWEPCo Stall Plant Filings

Arkansas

- Proceeding is currently suspended pending outcome in Louisiana.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The intermediate facility, known as the Stall Plant and sited in Shreveport, LA, was bifurcated from the original filing and had a procedural schedule established on January 9, 2008.
- Staff and intervenor testimony was completed on February 15, 2008, rebuttal testimony was due February 29, 2008 and hearings were held in April 2008. Staff testimony was favorable. An order is expected in mid-summer.
- Air permit received on March 20, 2008.

Texas

- PUCT order approving plant was issued on March 8, 2007.

AEP®

Commitment to Credit Quality

- Maintain adequate liquidity
- $150MM annually in new equity from Dividend Reinvestment and 401(k) plans
- Target 60% maximum consolidated AEP debt/cap ratio on an adjusted basis
- Target utility company capitalization structures:

Company	Target Equity Ratio
APCo	42-44%
CSP	45-47%
I&M	40-42%
KPCo	41-43%
OPCo	44-46%
PSO	43-45%
SWEPCo	43-45%
TCC	40%
TNC	40%

- Target long term dividend payout ratio range of 55-60%
- Maintain adequate coverage ratios to support current credit ratings

We are committed to maintaining our current credit ratings.

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms, and our ability to recover significant restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants, our ability to recover I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance or the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of flyash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including our dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events.

New Generation Projects

- John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant. Located in AEP's SWEPCo region AEP owns 73 percent or roughly 440 megawatts of the total unit.
  - The cost of the plant is anticipated at $1.6 billion with AEP's share approximately $1.2 billion and will begin commercial operation in 2012.
  - SWEPCo's share of the plant's costs will be allocated on the basis of electric load among customers in Arkansas, Louisiana and Texas.
  - The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls.

John W. Turk Jr. Ultra-Supercritical Coal Plant

J. Lamar Stall Combined-Cycle Gas Plant

- J. Lamar Stall Combined-Cycle gas plant is a 508-MW unit scheduled for commercial operation in 2010.
  - The total projected cost of the plant is $378 million.
  - The plant is located in AEP's SWEPCo region at its existing Arsenal Hill Power Plant in Shreveport, Louisiana.
  - The plant will be used to service the needs of customers in the Arkansas, Louisiana and Texas service territories.

Summary Rate Case Information

I&M Michigan General Rate Case – Docket #U-16180

On January 27, 2010, I&M filed a base rate case with the Michigan Public Service Commission requesting an increase of $62.5 million to cover increased costs related to distribution O&M, taxes, interest and employee related expenses. I&M also requested new tracker mechanisms for enhanced distribution reliability spending, energy efficiency, investments in generation and participation in PJM. The requested ROE is 11.75%. A procedural schedule is pending from the MPSC. An order is expected in early 2011.

AEP AMERICAN® ELECTRIC POWER

AEP Transmission Company (Transco)

- Transco will be used to develop significant new on-system, AEP-owned investments
  - Greenfield Projects
  - Station Additions
  - System Upgrades
- Seven companies have been established under the AEP Transco holding company: AEP Appalachian Transmission Company Inc., AEP West Virginia Transmission Company Inc., AEP Indiana Michigan Transmission Company Inc., AEP Kentucky Transmission Company Inc., AEP Ohio Transmission Company inc., AEP Oklahoma Transmission Company Inc., and AEP Southwestern Transmission Company Inc.
- Next steps:
  - Obtain state utility status where required
    - No filing required in Michigan or Oklahoma
    - Filing made in Ohio
  - FERC tariff for Transco filed December 1, 2009 with rates effective and first projects in-service in 2010; Settlement discussions on-going
  - Seek retail tracking mechanisms at the state level (OH, LA, VA, TX-ERCOT already secured)

AEP AMERICAN® ELECTRIC POWER

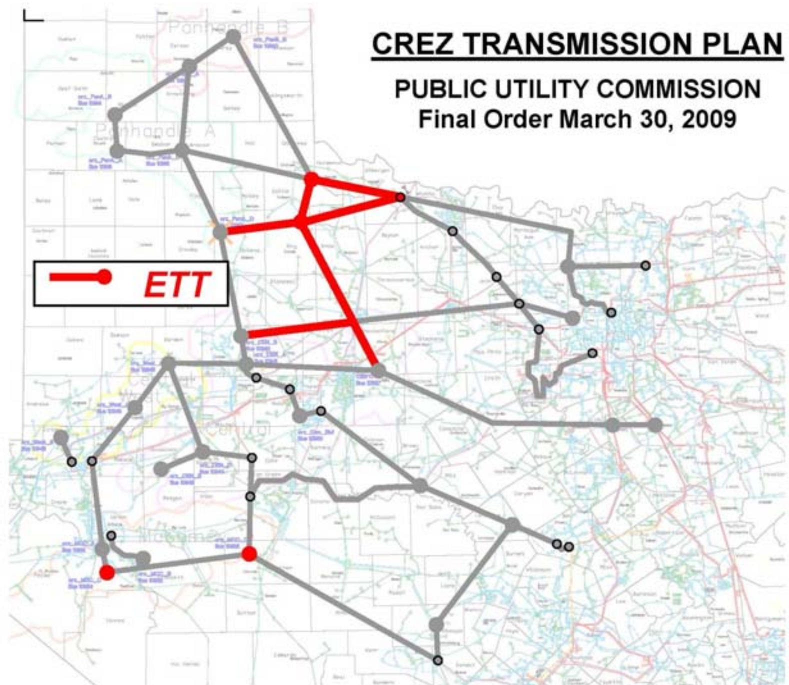
Electric Transmission Texas, LLC

Overview:

- ETT is a 50/50 JV between AEP and MidAmerican Energy Holding Company that plans to construct and operate transmission projects within ERCOT with an investment opportunity of more than $3 billion.
- Current JV rate base is $127 million with a debt to capital ratio of 60/40 and an authorized ROE of 9.96%.

- **Opportunities:**
  - Projects in service 2010-2017: $1.4 billion
  - CREZ projects in service 2012-2013: $1.1 billion
  - Other projects pending transfer in service 2010-2013: $600 million

- **Next Steps:**
  - Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in 2010.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

ETT
Electric Transmission Texas

AEP AMERICAN® ELECTRIC POWER

EHV Transmission in PJM: PATH

Project Description: 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

Overview:

- FERC order issued on February 29, 2008 approving:
  - Cash return on CWIP and 14.3% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents
  - Rates went into effect March 1, 2008
- Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million.
- Estimated completion date: 2014+, pending outcome of the 2010 PJM Regional Transmission Expansion Plan (2010 RTEP).

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

- Obtaining a CPCN in West Virginia, Virginia and Maryland. CPCN applications in West Virginia and Maryland are pending because their procedural schedule allows the consideration of the 2010 RTEP. A new application in Virginia is expected in the third quarter of 2010 after consideration of the 2010 RTEP.

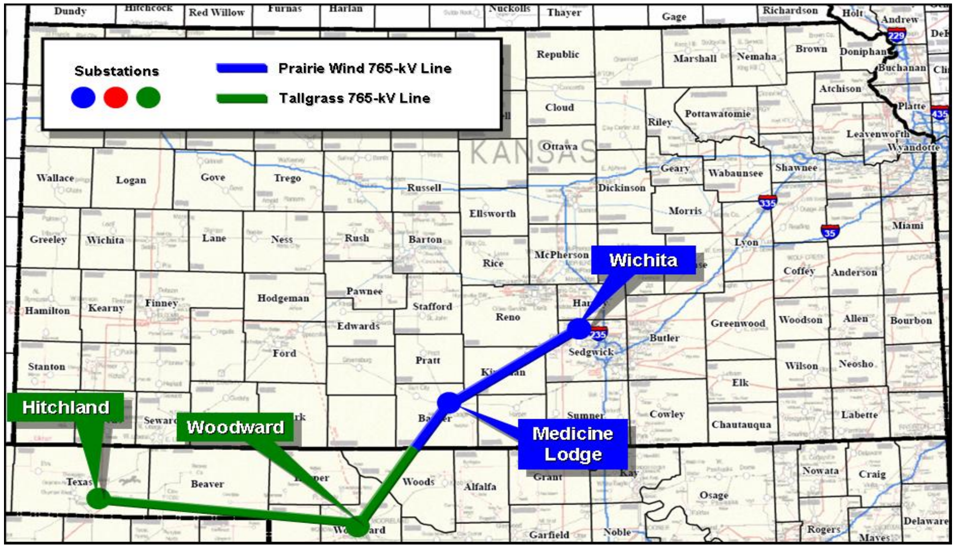
PATH
Potomac-Appalachian Transmission Highline

AEP AMERICAN® ELECTRIC POWER

Prairie Wind Transmission, LLC

Overview:

- In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
- PWT is a 50/50 JV that is proposing to build approximately 110 miles of 765-kV lines extending from Wichita, KS.
- The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
- The project is expected to cost approximately $400 million and be in-service by 2013-2014 and was approved by the KCC on July 24, 2009.
- AEP’s ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

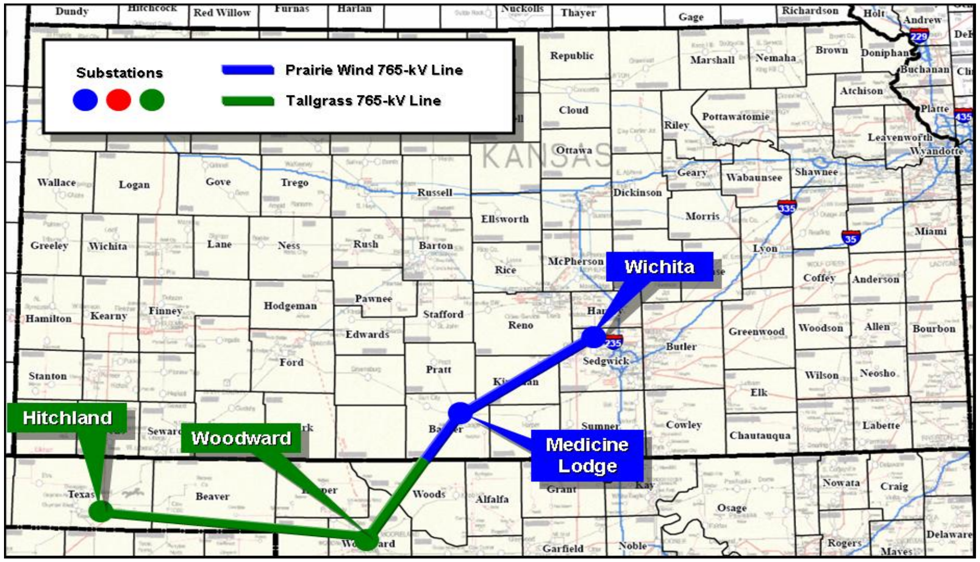
- RTO Approval
- Siting

AEP AMERICAN ELECTRIC POWER

Tallgrass Transmission, LLC

Overview:

- In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
- TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines in Oklahoma.
- The project will promote wind development in the western half of Oklahoma.
- Project is expected to cost approximately $500 million and be in-service by 2013-2014.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

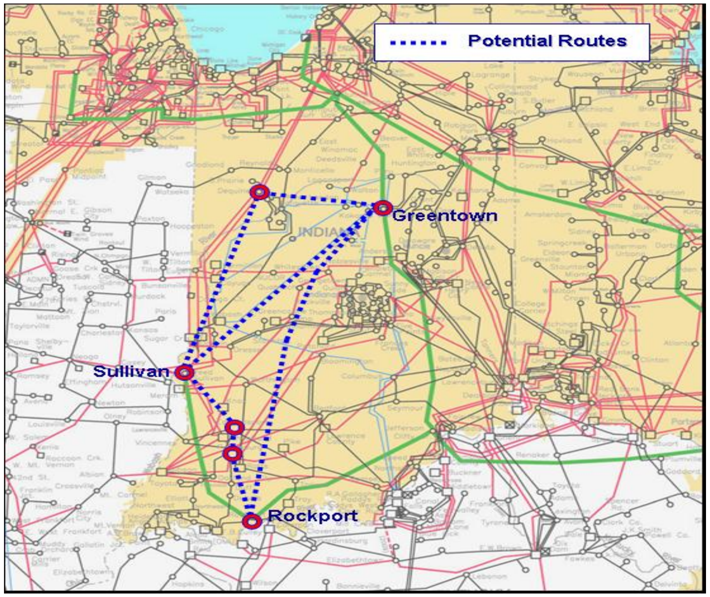
- RTO Approval
- Siting

AEP AMERICAN® ELECTRIC POWER

Pioneer Transmission, LLC

Overview:

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
- The project will improve the reliability of the nation's transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, protect national security and expand opportunities for new generation, including renewables.
- The project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP's ownership of the joint venture is 50%.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

- RTO Approval (PJM & MISO)
- Cost allocation which enables the development of "system solutions"
- Siting

AMERICAN ELECTRIC POWER

Upper Midwest EHV Development—SMART Study

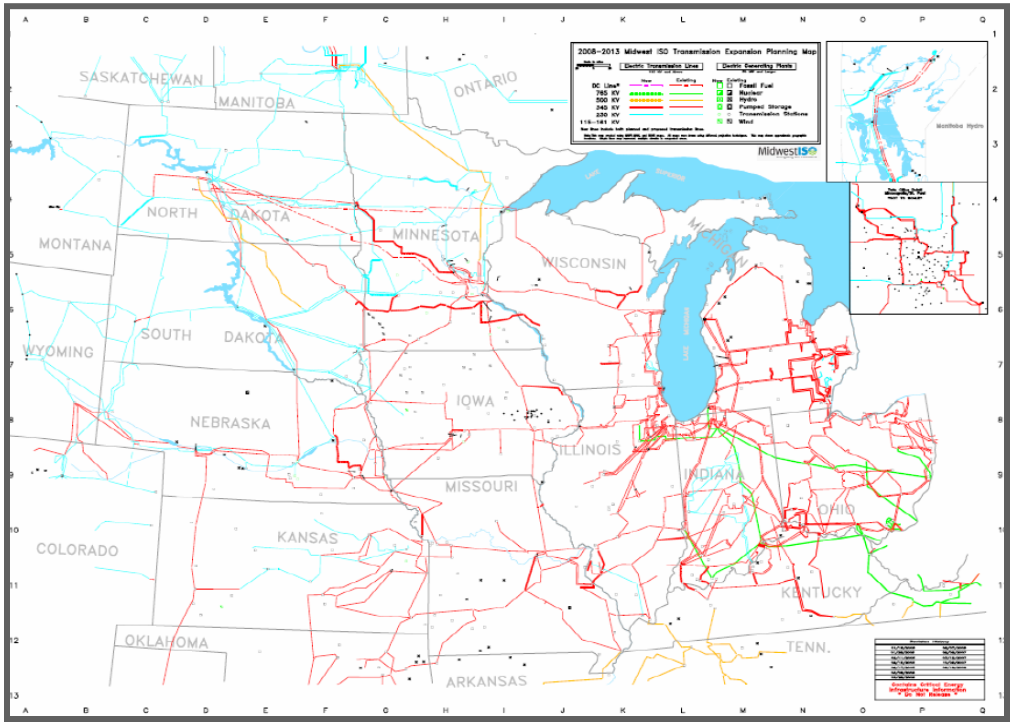
Project Description: a comprehensive study of the transmission needed in the Upper Midwest to support renewable energy development and transporting that energy to consumers throughout the study area. The SMART Study will develop EHV overlay alternative that ensures reliable service for sponsors' communities, is environmentally friendly, and supports national energy policy.

Overview:

- SMARTransmission Study announced August 2009
- Sponsors of the Study include ETA, Exelon, ATC, Northwestern, MidAmerican Energy Company, and Xcel
- Study due to be completed end of 2Q2010 and will include "overlay" options and quantification of economic benefits

Next Steps:

- Investment structure
- Obtaining cost allocation between states, PJM, and MISO
- RTO technical approvals
- Favorable 205 Order including incentives



Primary Focus Areas: North Dakota – South Dakota – Iowa – Nebraska – Indiana – Ohio – Illinois – Minnesota – Wisconsin – Michigan

AEP AMERICAN ELECTRIC POWER

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

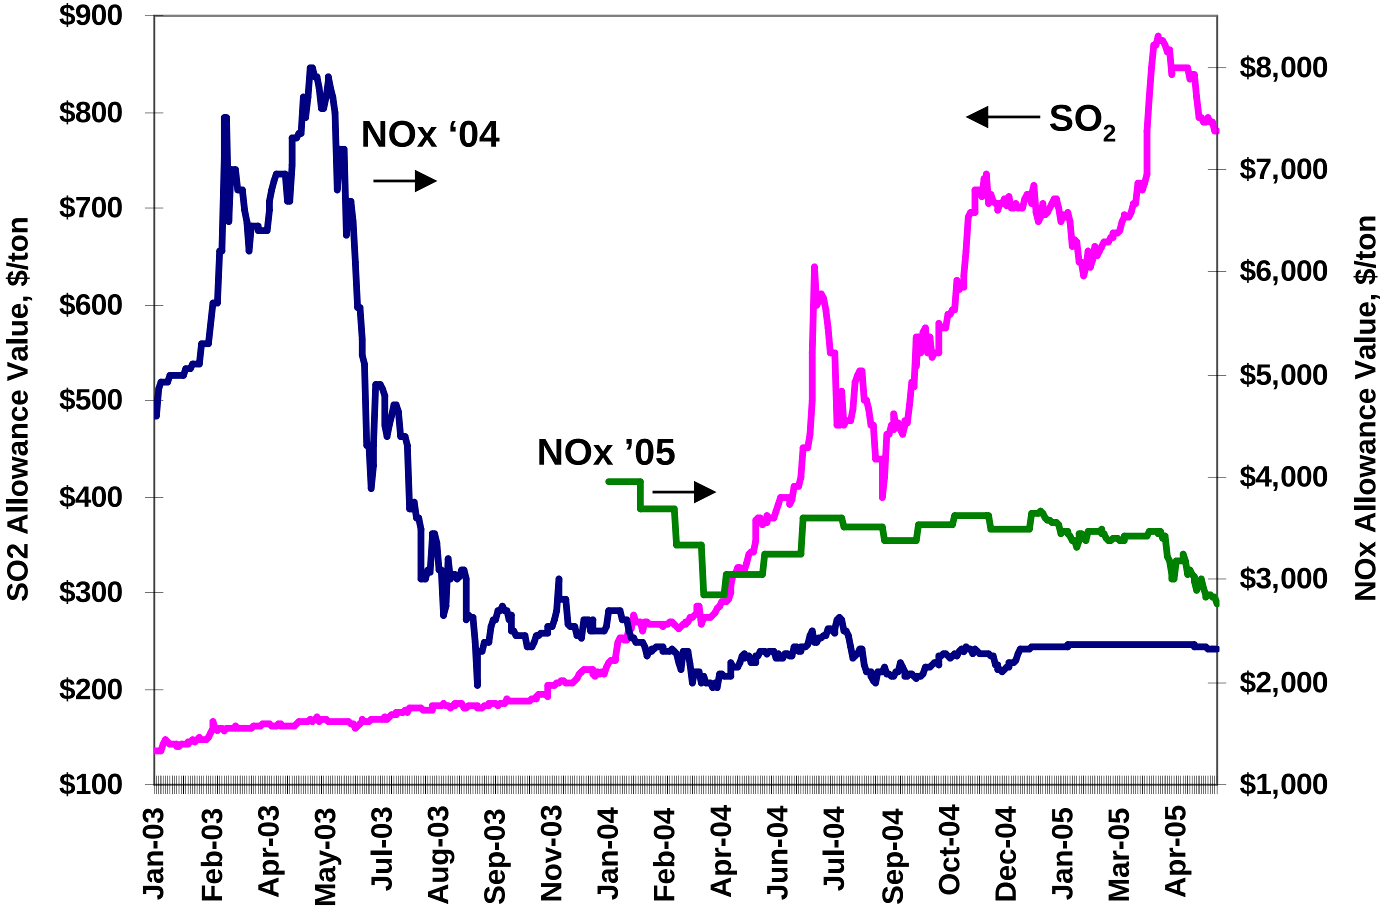
Page 5033 of 9556

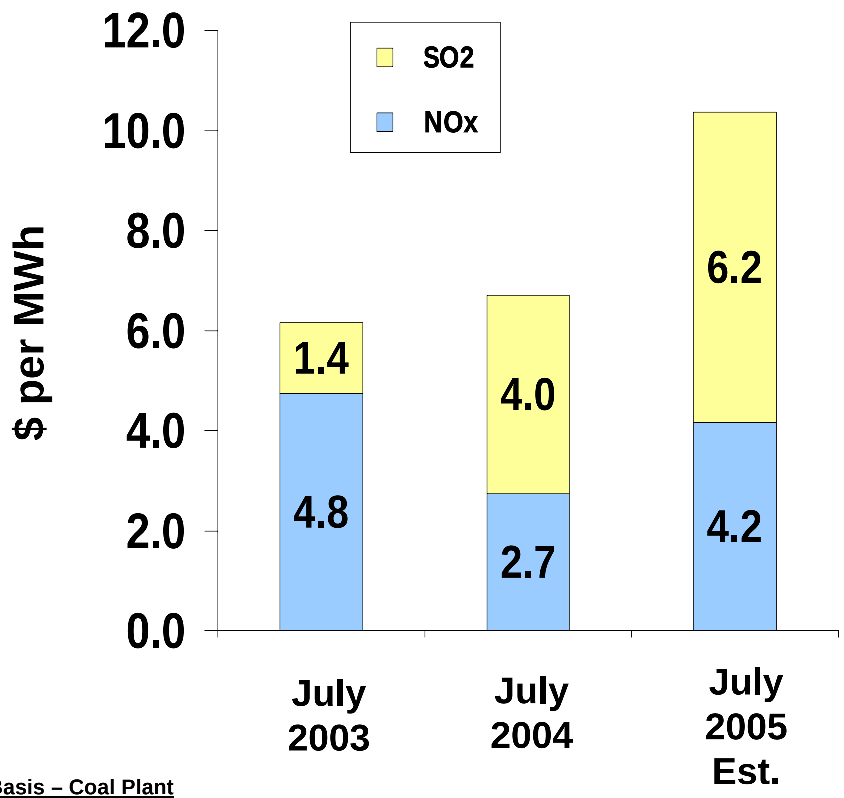
Emission Allowance Prices

Allowance prices for SO_2 and NOx have been extremely volatile since the beginning of 2003



Market Value vs. Inventory Cost

Profile of Uncontrolled Power Plant exposed to Market Value of Emission Credits



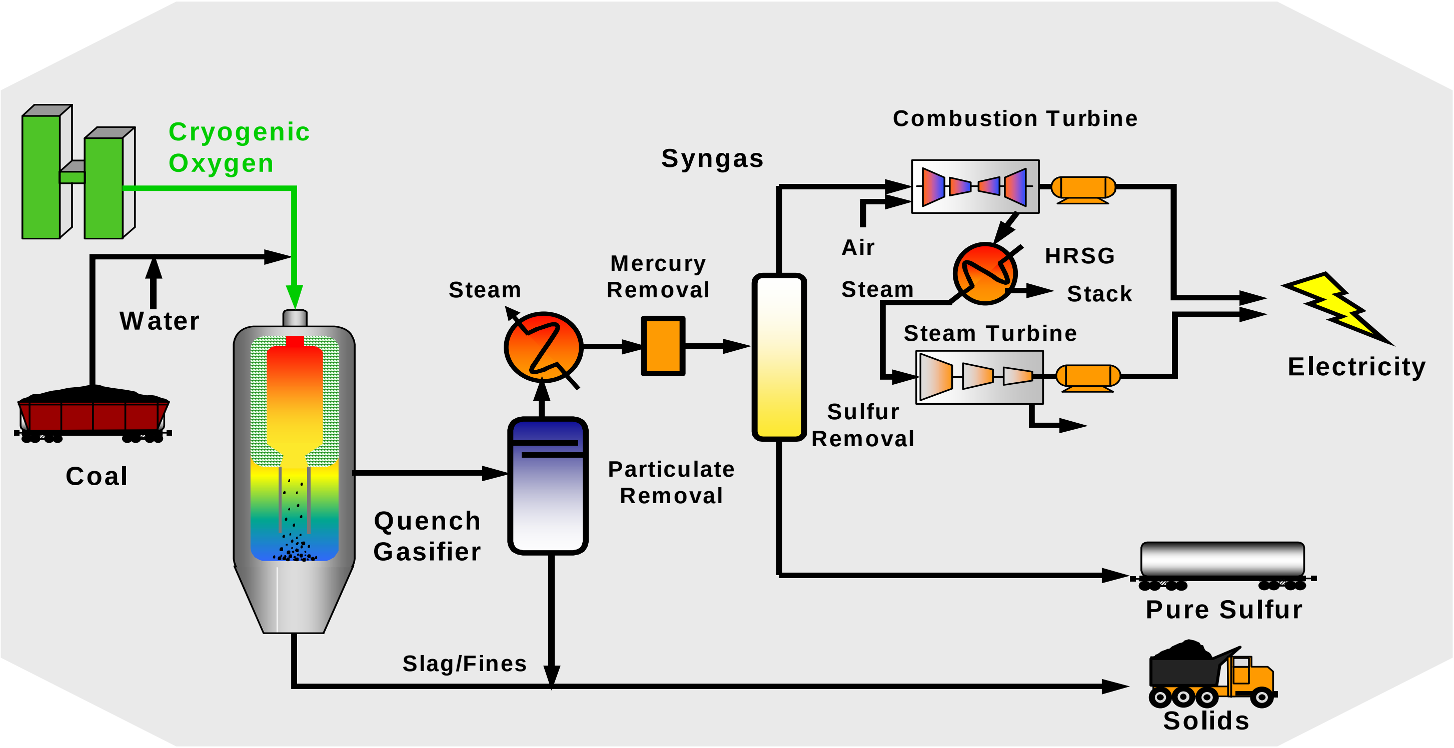
Basis – Coal Plant
9.5 MMBtu/MWh Heat Rate
0.25 lbs NOx/mmBtu
1.67 lbs SO_2/mmBtu

AEP has managed its exposure to rising emission allowance costs

- Inventory cost of emission credits is low
- Effective hedging program for SO_2 allowances
- Effective capital implementation in the NOx SIP Call ($1.3 B as of YE 2004)
- Exposure in future years reduced by $3.7 B capital program and current inventory of allowances

Investing in IGCC

Looking to the Future - IGCC



162110 - GJS/CE-01/1-23-02

AEP has announced its intention to construct a commercial-scale Integrated Gasification Combined Cycle (IGCC) Plant by the end of the decade.

AEP®

Investing in IGCC

	PC	IGCC	NGCC
Nominal Capacity (MW)	**600**	**600**	**530**
Heat Rate (BTU/kWh)	**8700**	**8600**	**7200**
EPC cost* ($/kW)	**1290**	**1350**	**440**
Total Plant cost ($/kW)**	**1490**	**1610**	**475**
Variable Production cost* ($/MWh)**	**15**	**14**	**38**
All-In Cost of Electricity (without CO2 Capture) ($/MWh)	**47**	**50**	**57**
Estimated Cost of Electricity (with CO2 Capture) ($/MWh)	**76**	**70**	**91**

Source: Electric Power Research Institute

* EPC includes the cost to engineer, procure and construct plant.

** Total plant cost include land, overheads, AFUDC, etc.

*** Assumes Northern App Coal @ $36/ton, no emission credits and $5.00 gas

Site Selection Considerations

- Brownfield site vs. Greenfield site
- Sufficient Space
  - Flat area with adequate construction access
  - 600 acres
- Fuel delivery options
  - Rail/barge/truck
  - Up to 4 million tons/year of coal
  - Access to water
- Transmission Line Costs
  - Distance from high-voltage lines
  - Costs for grid interconnects and stability impacts

PJM EVALUATION REQUESTED FOR 3 POTENTIAL SITES

IGCC Permitting Issues

- **Air** – to evaluate best available control technology (BACT)
- **Wastewater** – to understand wastewater streams
- **US COE** (Corp of Engineers) – to obtain permits for construction of river facilities
- **NEPA Process** – (National Environmental Policy Act)– Environmental site studies addressing wetlands, endangered species, historical artifacts

PERMIT PROCESS WILL TAKE 1 - 2 YEARS

Next Steps

<u>2005</u>

- Secure cost recovery plan – Summer
- Finalize site selection - Fall
- Negotiate with suppliers – Throughout 2005

- 2005—2007: Obtain permits and finalize engineering and procurement

- 2008—2009: Construct and start-up plant

AEP WILL PIONEER CONSTRUCTION OF LARGEST IGCC PLANT IN THE WORLD

Environmental

Clean Air Interstate Rule

- Rule Finalized March 2005
- CAIR designed to address the contribution of regional emissions to downwind $PM_{2.5}$ & 8-hour Ozone non-attainment
- CAIR reductions from 2003 emissions: ~73% SO_2; & ~61% NO_x
- Reductions occur in phases: Phase I (2009); Phase II (2015)
- CAIR established three Cap & Trade Programs:

1. Annual SO_2 Trading Program
2. Annual NO_x Trading Program
3. Separate Ozone-Season only NO_x Trading Program

CAIR Applicability to AEP

- AEP-East States & Louisiana subject to <u>all</u> three trading programs
- Arkansas subject <u>only</u> to the Ozone-Season trading program
- Texas subject to <u>only</u> the Annual NO_x & SO_2 trading programs
- CAIR does <u>not</u> apply to Oklahoma

AEP WILL HAVE TO INSTALL ADDITIONAL SCR AND FGD SYSTEMS IN ORDER TO MEET THE EMISSION REDUCTIONS REQUIRED BY CAIR

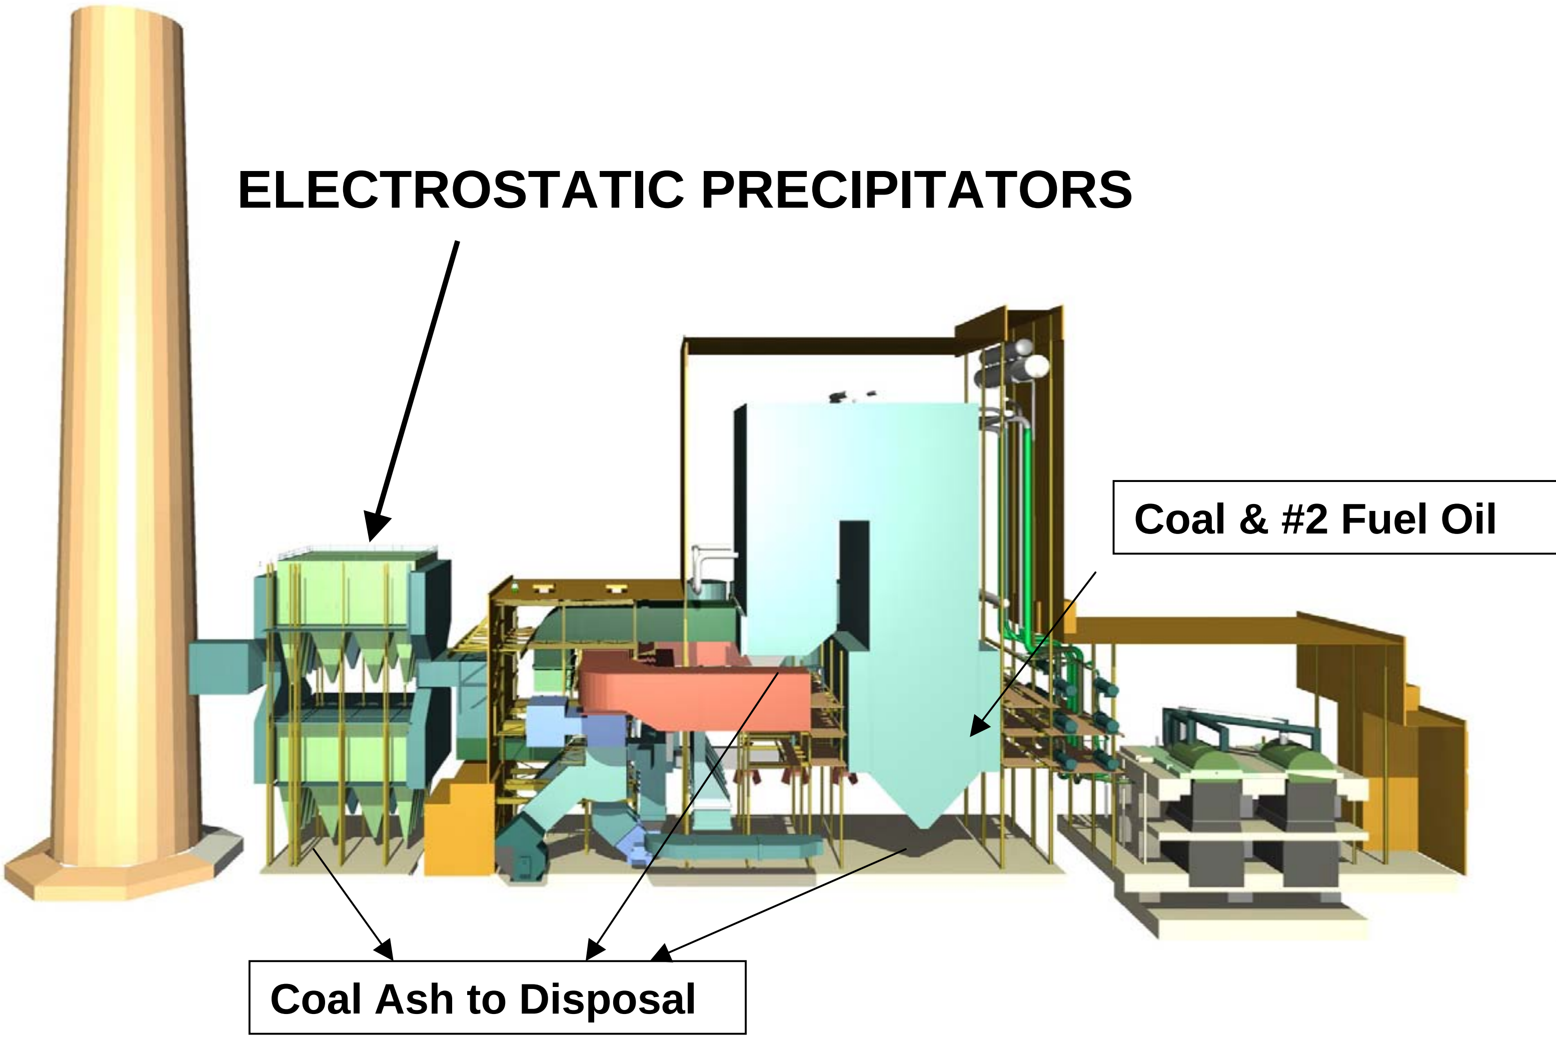
KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 5044 of 9556

Mercury Rule

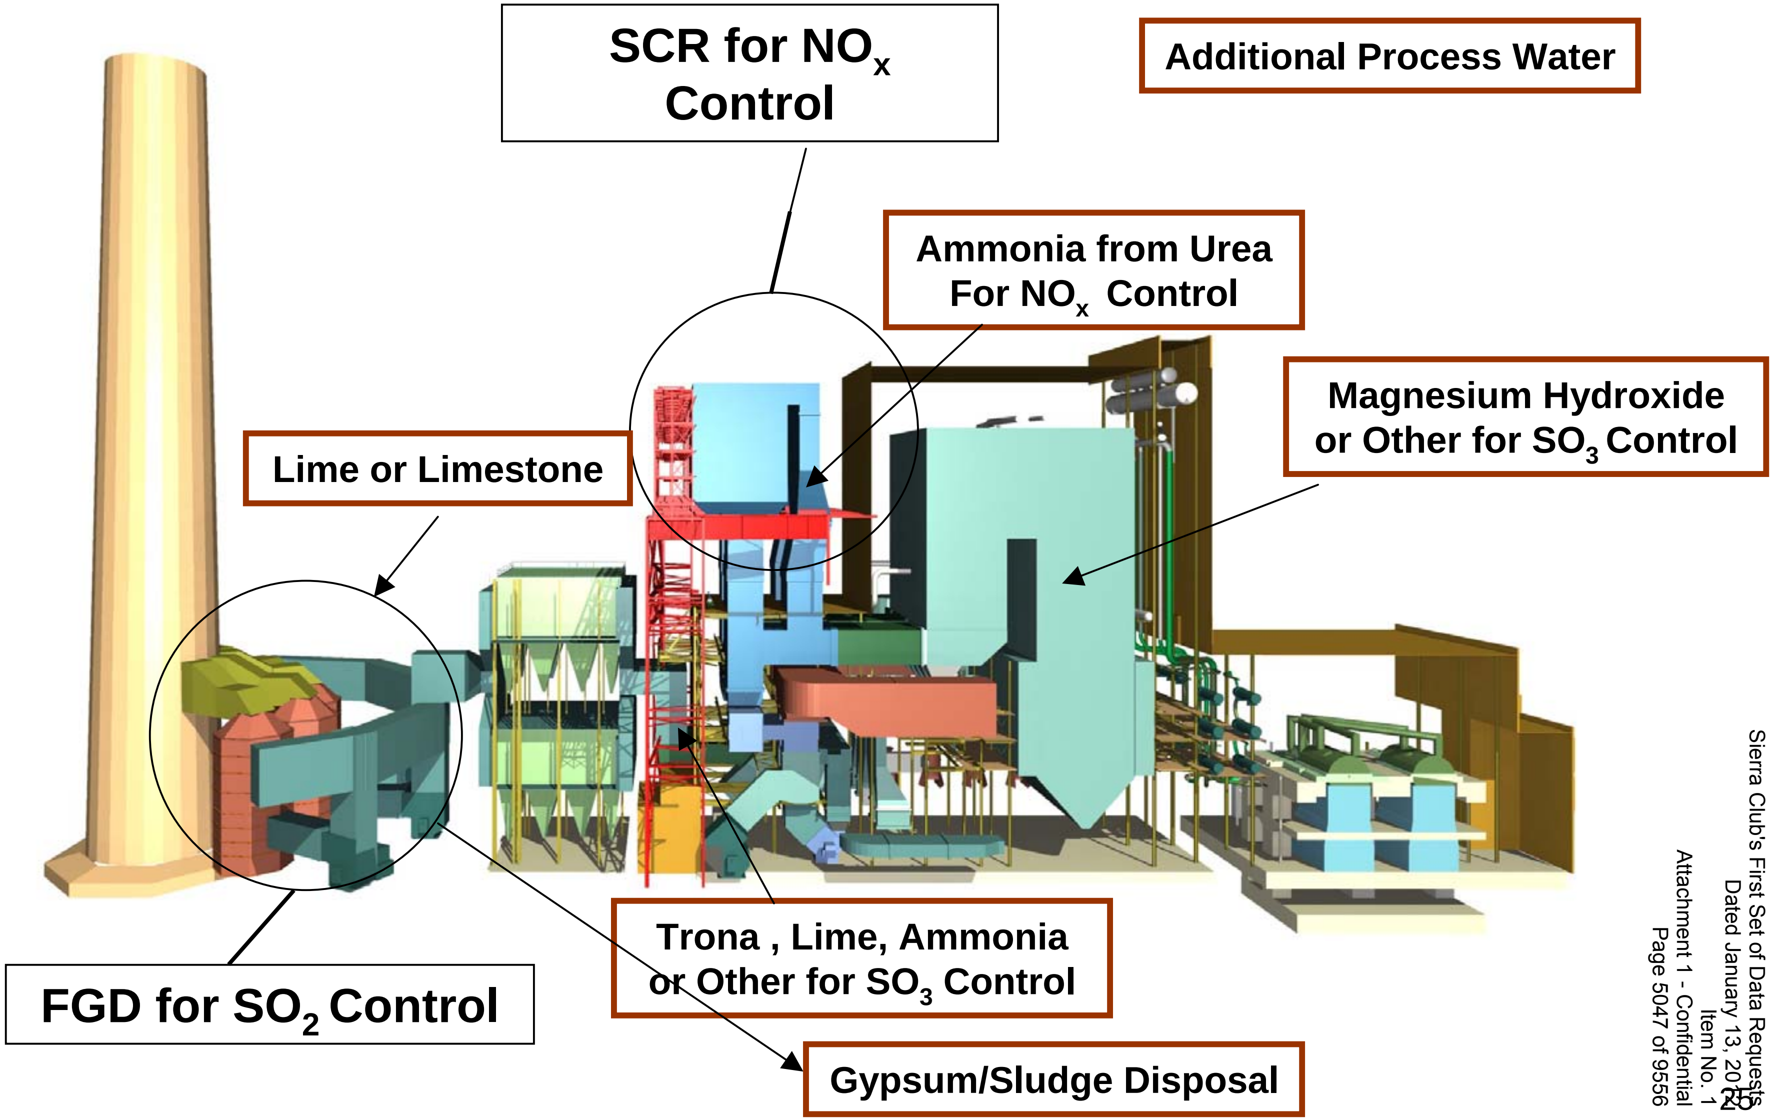
- Rule Finalized March 2005
- Designed to reduce mercury emissions by ~70% nationwide from electric utilities
- Reductions occur in phases: Phase I (2010); Phase II (2018)
- Establishes a Cap & Trade structure to achieve mercury reductions

AEP WILL ACHIEVE SOME MERCURY REDUCTIONS AS A CO-BENEFIT OF SCR AND FGD SYSTEMS, BUT MERCURY SPECIFIC CONTROL EQUIPMENT WILL BE NEEDED ON SOME UNITS

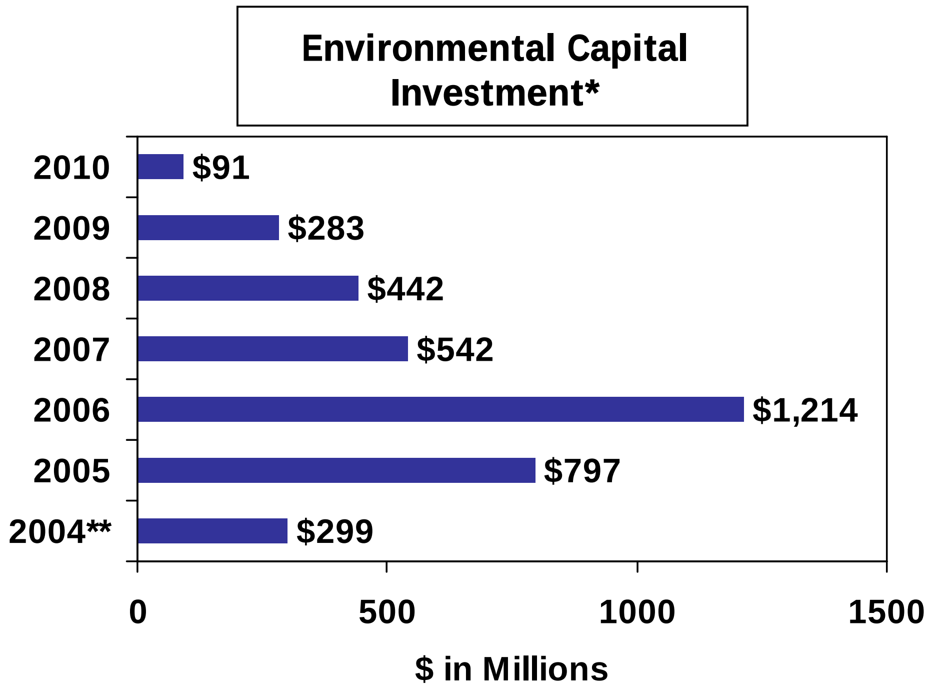
Pulverized Coal Unit as Built in 1970s



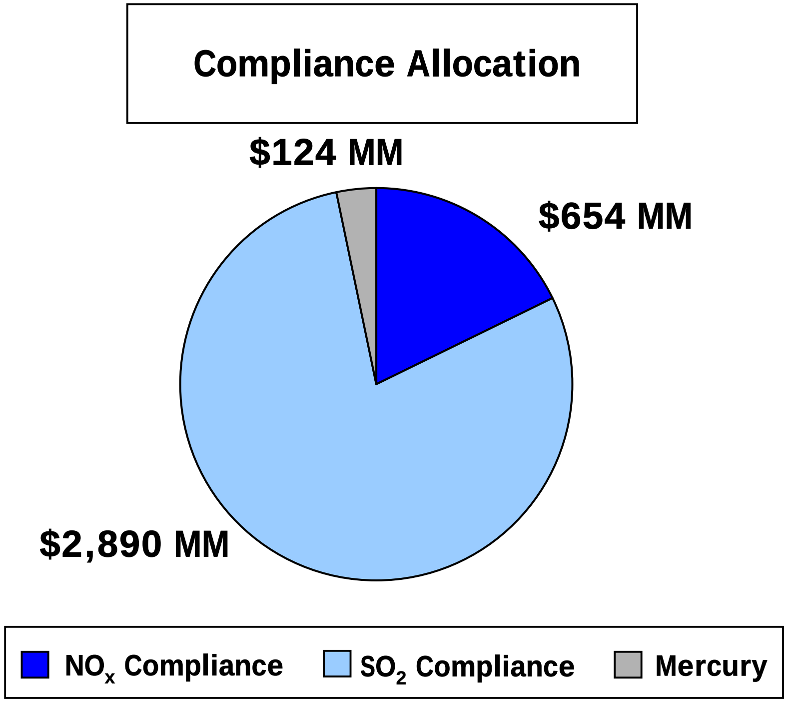
Pulverized Coal Unit Today Showing Retrofits & New Feedstock(s)



Environmental Investment: $3.7 Billion Through 2010



*Environmental investment for NOx, SO_2 , & Hg purposes
** Actual investment level in 2004



Current Programs

$1.9 Billion:

$0.6 billion for NOx

$1.2 billion for SO_2

Future Programs

$1.8 Billion:

$1.7 billion for SO_2

$0.1 billion for Other

MAJORITY OF 2005 & 2006 DOLLARS WILL BE INVESTED IN OHIO & APCO

KPSC Case No. 2011-00401

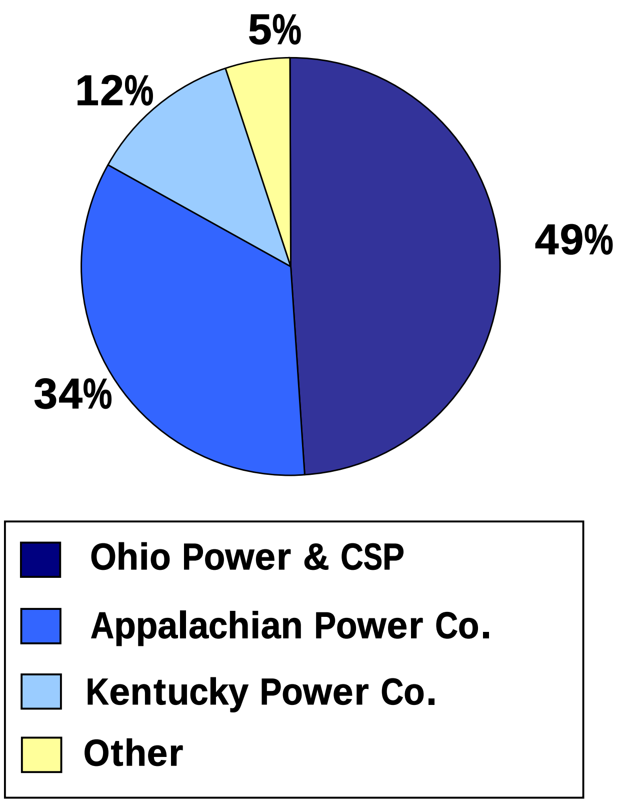
Environmental Spending by Company

Projected Environmental Investment Allocation



Funding the Environmental Investments

- **Ohio**: 49% ($1.8 billion)
  - Rate stabilization plan annual increases at CSP – 3% and OP – 7% beginning in 2006 through 2008
- **Virginia/West Virginia**: 34% ($1.2 billion)
  - VA: Environmental cost recovery mechanism/two rate case opportunities through 2010
  - WV: General rate case filing
- **Kentucky**: 12% ($433 million)
  - Surcharge mechanism

Environmental Investment

Regulatory Overview

Managing the Regulatory Process

- **Current Regulatory Activity**
  - TCC Wires Rate Case
  - TCC Stranded Cost Recovery
  - Louisiana Rate Review
  - FERC Transmission Rate Case
- **Planned Regulatory Activity (2005-2007)**
  - General Rate Cases in all AEP East jurisdictions to seek recovery of investment:
    - IN, KY, MI, TN, VA, WV

BRING CASH IN THE DOOR TO COVER CAPITAL EXPENDITURES & GROW EARNINGS THROUGH ADDITIONS TO THE ASSET BASE

Components of TCC's Net True-up Regulatory Asset

	31-Mar-05	31-Dec-04
	(in millions)	
Stranded Generation Plant Costs	$ 898	$ 897
Net Generation-related Regulatory Asset	249	249
Unrefunded Excess Earnings	(6)	(10)
Net Stranded Generation Costs	1141	1136
Carrying Costs on Stranded Generation Plant Costs	205	225
Net Stranded Generation Costs Designated for Securitization	1346	1361
Wholesale Capacity Auction True-up	483	483
Carrying Costs on Wholesale Capacity Auction True-up	91	77
Retail Clawback	(61)	(61)
Deferred Over-recovered Fuel Balance	(215)	(212)
Net Other Recoverable True-up Amounts	298	287
Total Recorded Net True-up Regulatory Asset	$ 1,644	$ 1,648

Carrying charge calculated using pre-tax cost of capital of 11.79%

Debt Component: 8.12% - $296 million recognized as income thru 3/31/05

Equity Component: $154 million to be recognized in income as collected

CARRYING CHARGES FOR 2005 EXPECTED TO BE $87 MILLION

Regulatory Matrix – East

Ohio (Restructured)
- Unbundled rates for default customers frozen until 12/31/2005
- Pursuant to RSP Plan approved by PUCO 1-26-05:
  - Distribution rates in effect at December 31, 2005 are frozen, with certain exceptions, until the end of 2008.
  - Institute for 2006-2008 a non-bypassable distribution rider for provider of last resort (POLR) costs.
  - CSP ”G” rates to increase 3% per year (2006-2008).
  - OP “G” rates to increase 7% per year (2006-2008).
  - Transmission rates can upon filing reflect change in RTO costs.
- No active fuel clause
- Application for IGCC plant recovery filed on 3-18-05, Hearings scheduled to begin 8-8-05.

West Virginia (Regulated)
- Base rates not frozen
- Annual ENEC proceedings have been suspended, the factor is currently fixed at pre-2000 levels.
- No active fuel clause

Kentucky (Regulated)
- Base rates not frozen
- Fuel clause, adjusted monthly
- Environmental surcharge costs are adjusted monthly for approved environmental compliance plan
- Rockport Unit Power Supply Agreement extension through 12-07-2022 was approved by FERC & KPSC in December 2004

Virginia (Restructured)
- Capped rates for default customers frozen through end of 2010
- Capped rates can be adjusted by two rate cases prior to the end of 2010 and incremental environmental and reliability cost recovery mechanisms
- Active annual fuel clause

Michigan (Restructured, but Regulated)
- Base rates not frozen.
- Active annual fuel clause.

Indiana (Regulated)
- Base rates are frozen and fuel cost recovery factors are capped at increasing rates through June 30, 2007.

Tennessee (Regulated)
- Base rates not frozen
- Automatic fuel clause, adjusted monthly

Regulatory Matrix - West

Texas (Regulated) • SWEPCO-Texas retail competition delayed until at least 2007 • Bi-annual fuel clause adjustment opportunity **Texas (Restructured)** • TCC stranded cost true-up filing in May 2005. ($2.4 billion true-up amount requested) • TCC wires rate case order expected in June 2005. Settlement filed addressing final issue (affiliate transactions) will result in slight rate decrease with a positive earnings impact. • TCC final fuel reconciliation (July 98-Dec. 01) order on rehearing issued in June 2005 updating rate case expenses. TCC will appeal decision. • TNC true-up order approved in April 2005 (retail clawback and fuel over-recovery only). No adjustments to revised amounts filed by TNC. • TNC final fuel reconciliation (July 00-Dec. 01). Final order received October 18, 2004. Appeals filed in state and federal courts in Dec. 2004.	**Oklahoma (Regulated)** • On 6-3-05 PSO file to increase its Reliability Enhancement Plan annual spending to a $27.21 million level (up $15.4 million) pending OCC approval. • General rate case filed Oct. 31, 2003 On 5-2-05 the OCC issued an order approving a settlement agreement which included a $6.9 million annual revenue reduction, offset by changed depreciation rates and deferral recoveries, changed the fuel clause from a quarterly to annual factor, and made permanent an $11.8 million annual system reliability rider. • 2001 Fuel review case Hearings scheduled for Sept. 2005. Scope expanded to cover 2002-2004 margin allocation issue. • 2003 Fuel review case Likely to include motions to expand scope to include prudence review
Louisiana (Regulated) • Base rates capped through June 15, 2005 • Currently under a merger required financial review • Fuel clause, adjusted monthly	**Arkansas (Regulated)** • Base rates not frozen • Fuel clause, adjusted annually

Ohio Rate Stabilization Plan Recap

Summary of Impact (Columbus Southern Power & Ohio Power):

Rate Stabilization Plan	Revenues 2005	Revenues 2006	Revenues 2007	Revenues 2008	Incremental Cash 2005	Incremental Cash 2006	Incremental Cash 2007	Incremental Cash 2008
Escalation of Generation Rate	0	83	173	271	0	83	173	271
POLR Rider/Recovery of RTO Costs**	21	0	0	0	0	7	7	7
POLR Rider/Return on Environmental Additions	44	26	26	26	0	41	41	40
Total RSP Impact	**65**	**109**	**199**	**297**	**0**	**131**	**221**	**318**
Pre-Existing Electric Transition Plan								
Elimination of 5% Residential Generation Credit*	0	25	25	26	0	25	25	26
Recovery of RTO costs**	0	29	29	29	0	29	29	29
Total ETP Impact	**0**	**54**	**54**	**55**	**0**	**54**	**54**	**55**

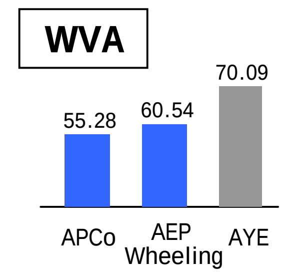
* Elimination of 5% credit is per Statute, and part of pre-existing ETP, not the RSP

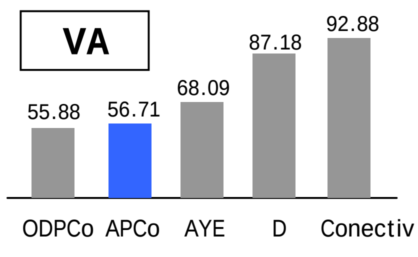
** Recovery of administrative RTO costs, net congestion fees and ancillary services permitted in pre-existing ETP, but the RSP allows for recovery of 2005 costs as well

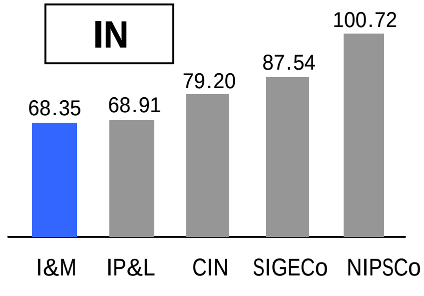
AEP WILL STILL HAVE AMONG THE LOWEST RETAIL RATES IN OHIO

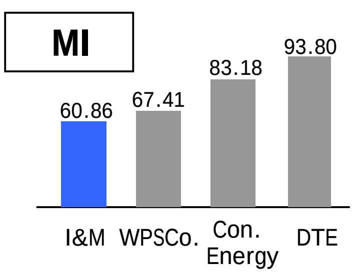
AEP: The Low Cost Provider

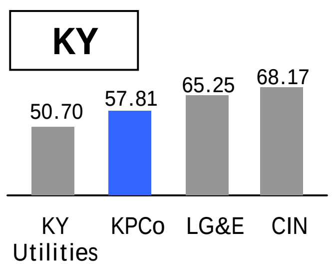
Regulated Rates

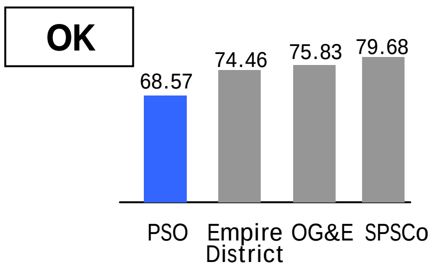


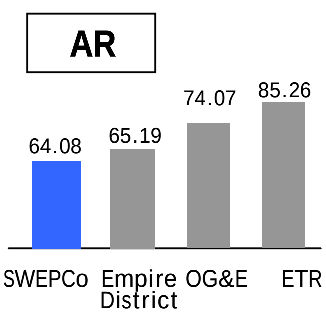


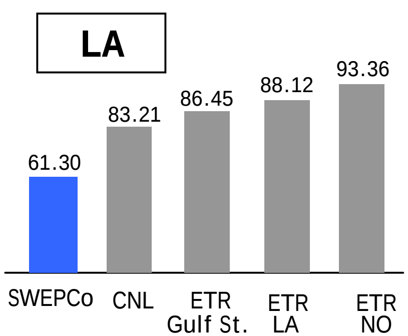


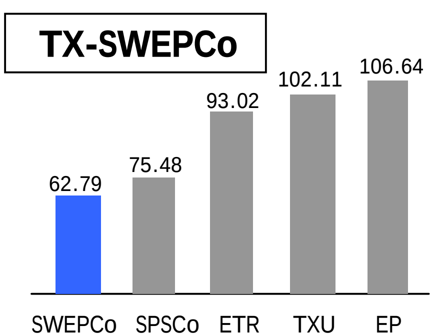




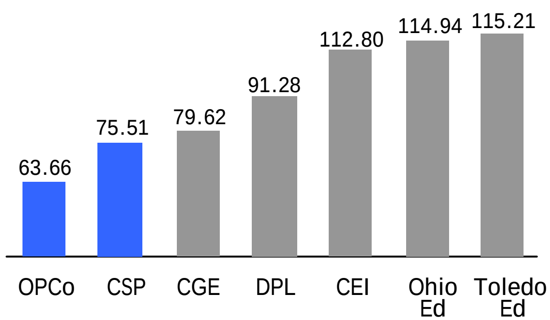








Unregulated Rates



OH (POLR bundled residential rates)

Note: Rate amounts reflect bundled residential rates and are expressed in $/MWh. The source for the shown rate amounts (excluding wholesale) is the EEI Typical Bills and Average Rates Report.

Expected Investment ROE*	11-13%

*Varies by jurisdiction

Sources of Cash

- **Cash Flow from Operations**: Continued earnings growth
- **Rate Relief**: Ohio cash rate relief begins in 2006; Rate proceedings expected in all other jurisdictions by 2007
- **Asset Sales**: HPL, STP, Oklaunion, Pacific Hydro & Bajio
- **Texas Securitization**: $1 billion plus in 2006 (Half goes to TCC debt paydown)
- **Texas Competition Transition Charge**: Approximately $190MM per year before securitization; $45MM per year after securitization
- **Debt Issuances**: Will maintain debt-to-capitalization ratio of approximately 60%

AEP HAS ADEQUATE SOURCES OF CASH FOR CAPEX PROGRAM

AEP AMERICAN ELECTRIC POWER

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants including our ability to restore Indiana Michigan Power Company's Donald C. Cook Nuclear Plant Unit 1 in a timely manner; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity and transmission lines (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary or deflationary interest rate trends; volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impacting our ability to finance new capital projects and refinance existing debt at attractive rates; the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurred cots and recovery is long and the costs are material; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

AEP AMERICAN ELECTRIC POWER

AEP Highlights

Premier regulated utility platform

- Leadership position in electric generation, transmission and distribution operations
- Cash flow, earnings and regulatory diversity with more than 5 million customers in 11 states
- $6.3 billion capital expenditure program (2009-2011) will continue to drive rate base growth

Effective regulatory relationships

- Traditional recovery mechanisms with equitable risk allocation enhance both earnings and cash flow
- Emerging energy policies play to AEP's strengths (transmission, energy efficiency, reliability)
- Constructive local relationships deliver successful regulatory outcomes

High-growth transmission business

- The leading US transmission owner, operator, and developer
- Exceptional portfolio of high-quality development projects and project partners
- Attractive ROEs, regulatory support and access to capital will drive earnings growth beyond our traditional utility footprint

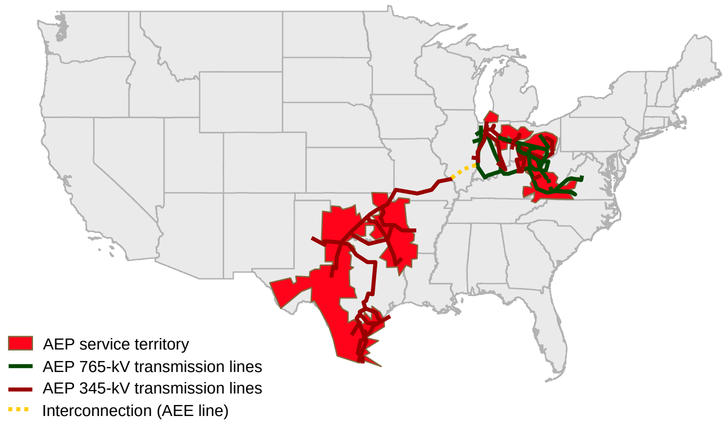
Stable financial position

- Maximization of shareholder value through regulated utility and transmission investments
- Balanced approach to cost containment and capital allocation
- Commitment to investment grade profile, prudent balance sheet, and liquidity management
- Conservative dividend payout with attractive yield

AMERICAN ELECTRIC POWER

Premier Regulated Utility Platform

Overview

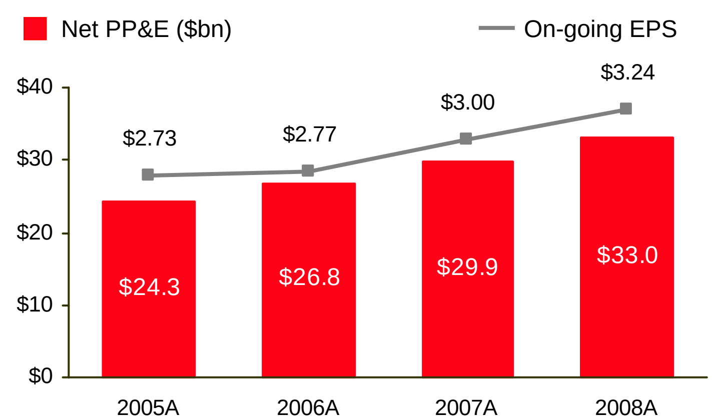


AEP's Leadership Position

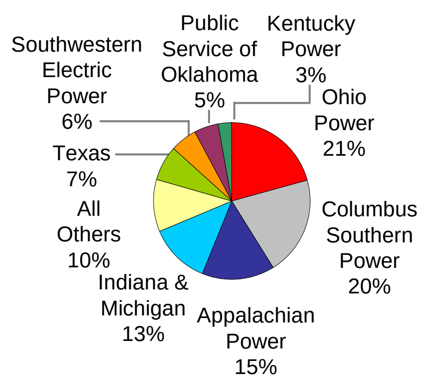
Transmission miles[1] ('000s)		Generation owned[1] (GW)		Electric customers[1] (mm)	
AEP	39.0	SO	42.6	EXC	5.4
DUK	20.9	AEP	40.6 *	AEP	5.2
PCG	18.7	DUK	39.1	PCG	5.1
MidA	17.9	FPL	35.5	FPL	4.5
ITC	15.1	ETR	30.0	FE	4.5
FE	15.1	D	27.1	SO	4.4
Oncor	14.9	EXC	24.8	DUK	4.0
EIX	12.0	CPN	24.2	ED	3.6
PGN	11.0	NRG	24.0	XEL	3.4
AEE	7.4	PGN	21.8	PGN	3.1

* - AEP generation includes long-term PPAs and generation under construction

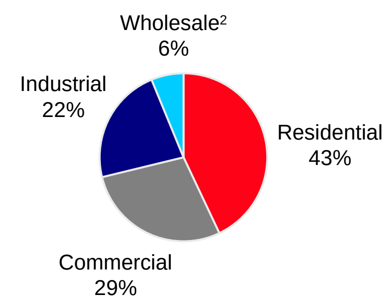
Regulated Operations



- Net PP&E CAGR of 10.7% since 2005
- Earnings CAGR of 5.9% since 2005



2008 On-going Earnings = $1.3bn



2008 Retail Base Revenue = $6.4bn

- *Highly diversified regulated utility earnings contribution*
- *Balanced customer mix*

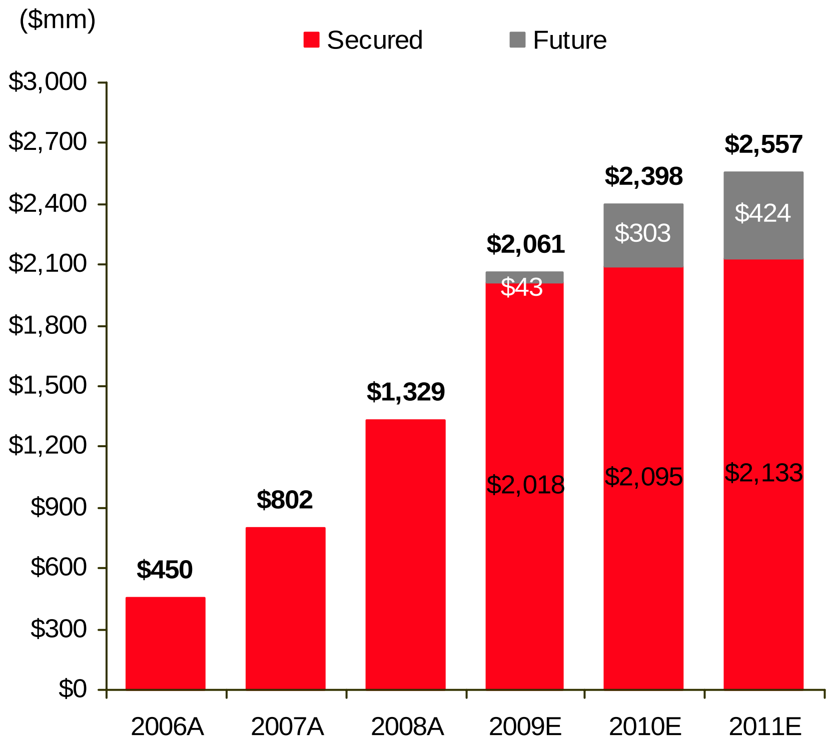
[1] *Source: Company filings*
[2] *Wholesale includes sales to municipal and cooperative power systems, other wholesale, and other retail sales*

AEP AMERICAN ELECTRIC POWER

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 5072 of 9556

Effective Regulatory Relationships Provide Successful Outcomes

Cumulative Rate Relief



Annual rate increases, $mm	$450	$352	$527	$732	$337[1]	$159[1]

[1] *$77mm and $38mm was secured for 2010 and 2011, respectively, as of May 15, 2009*

Our Regulatory Approach:

Maximize utility company returns:

- Successfully secured significant rate relief
- 2009 rate relief:
  - ✓ Ohio ($455MM)
  - ✓ I&M ($52MM)
  - ✓ APCo ($58MM)
  - ✓ PSO ($74MM)
- Pending rate relief including amount requested:
  - ✓ APCo WV ($25MM – in ENEC filing)
  - ✓ SWEPCo ($56MM)
- Anticipated filings:
  - APCo VA and others to be determined

Minimize regulatory lag:

- Active fuel adjustment clauses now in place in <u>all</u> jurisdictions
- Increased frequency of rate cases
- Employing tracking features

Strong local relationships with regulators

High Growth Transmission Business

Active Projects:

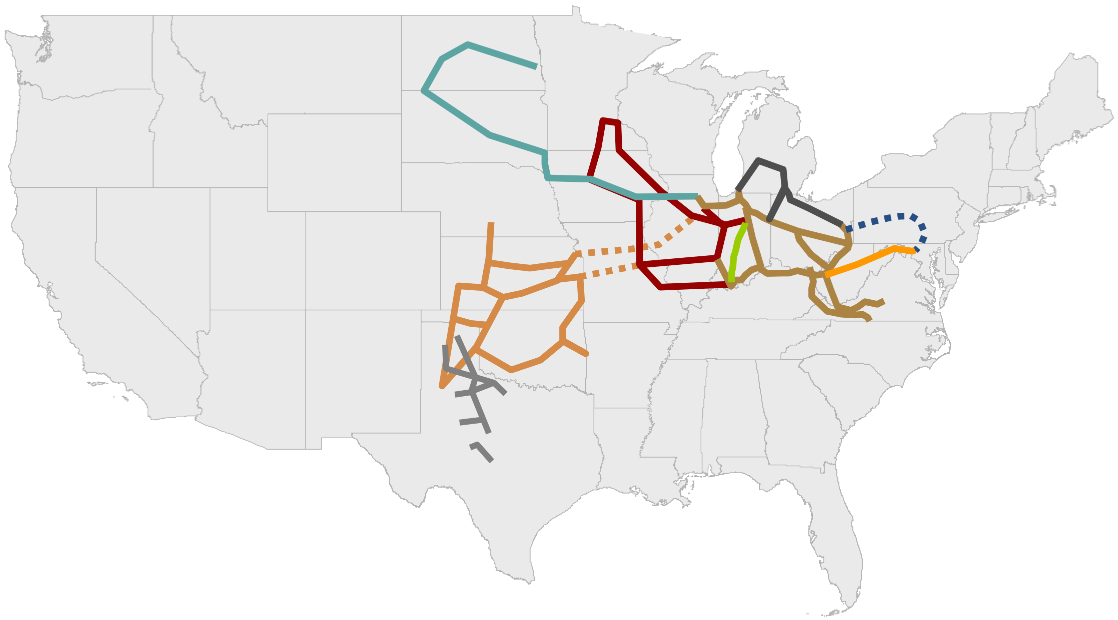
Pioneer — **COD: 2015**
- *240 miles of 765 kV*
- *Partner: Duke Energy (50%)*
- *Estimated Cost: $1 billion*
- *ROE: 12.54%*

PATH-WV — **COD: 2014**
- *244 miles of 765 kV*
- *Partner: Allegheny Energy (50%)*
- *Estimated Cost: $1.2 billion*
- *ROE: 14.3%*

Tallgrass — **COD: 2013-14**
- *170 miles of 765 kV*
- *Partners: OG&E (50%) & MidAmerican Energy (25%)*
- *Estimated Cost: $500 million*
- *ROE: 12.8%*

Prairie Wind — **COD: 2013-14**
- *230 miles of 765 kV*
- *Partners: Westar Energy (50%) & MidAmerican Energy (25%)*
- *Estimated Cost: $600 million*
- *ROE: 12.8%*

ETT — **COD: 2013**
- *345 kV in ERCOT*
- *Partner: MidAmerican Energy (50%)*
- *Estimated Cost: $400 million*
- *ROE: 9.96%*



Future Projects:

EHV Michigan — **COD: ~2020**
- *700 miles of 765 kV*
- *Partner: ITC*

PJM Projects
- *Enhance existing 765/345 kV*

Hartland — **COD: ~2020**
- *1000+ miles of 765 kV*
- *Partner: Hartland Wind LLC*

MISO Vision Plan
- *765 kV Backbone*

SPP Overlay — **COD: 2013-14**
- *765 kV Backbone*

ETT — **COD: ~2018**
- *345 kV in ERCOT*

AEP AMERICAN ELECTRIC POWER

Note: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

Equity Contributions Enhance Growth to 4 – 8%

AEP is the leader

- Largest US transmission footprint
- Interstate EHV highway vision
- National renewables transmission strategy

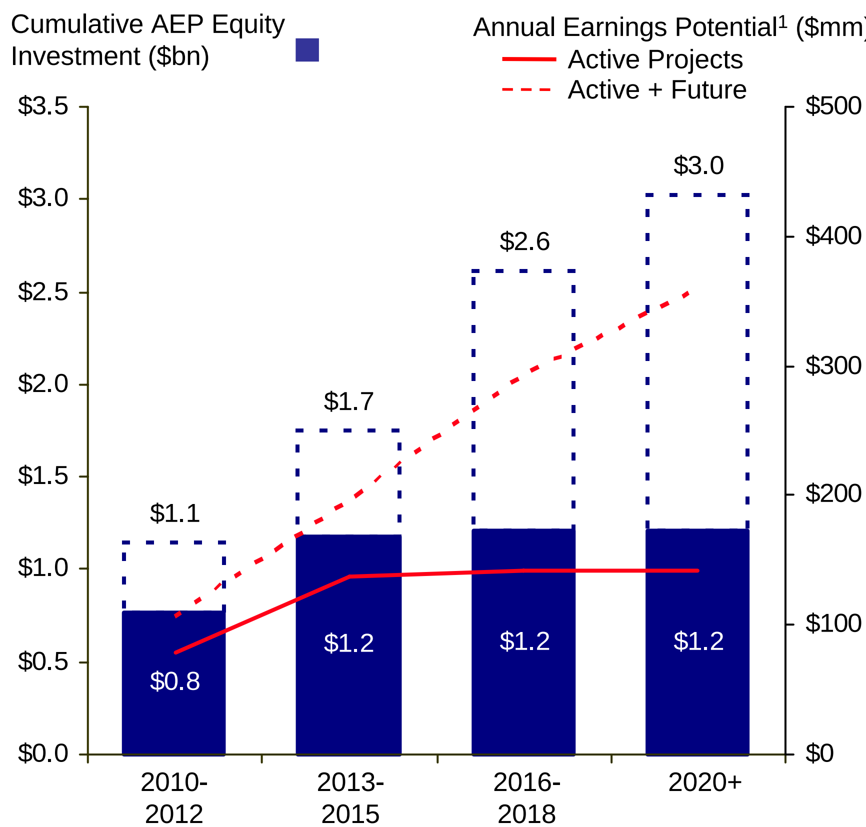
Quality projects

- 4 FERC-approved ($3.3 billion)
- Independent ERCOT transmission JV company (up to $2.6 billion)
- Robust pipeline of future 765 kV projects (up to $15 billion)

Attractive returns

- FERC incentive rates (12.5-14.3%)
- Strong cash flow with CWIP
- Long-term earnings potential of ~$140-$360 million annually[1]

Illustrative Earnings Potential of New Transmission Initiatives



[1] *Illustrative calculation assumes 50/50 debt/equity capitalization and incentive ROE of ~13.0% for FERC projects and a 60/40 debt/equity capitalization and 10.5% ROE for ERCOT projects*

AEP AMERICAN ELECTRIC POWER

Energy Policy Initiatives are Core to Our Strategy

Greenhouse Gas Reduction & Regulation

- Actively engaging in CO_2 policy debate – support cap & trade with allocated credits
- Leadership position in development of carbon capture and storage technology
- Reducing carbon footprint via offsets and other measures
- Founding member of Chicago Climate Exchange

Renewable Energy

- Develop “transmission superhighway” to facilitate renewable energy projects
- Satisfy RES requirements in our jurisdictions
- Add 2,000MW of wind capacity via long-term PPAs – 903MW achieved to-date

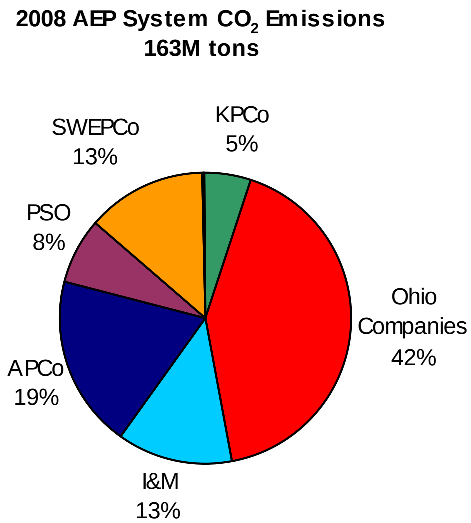
---

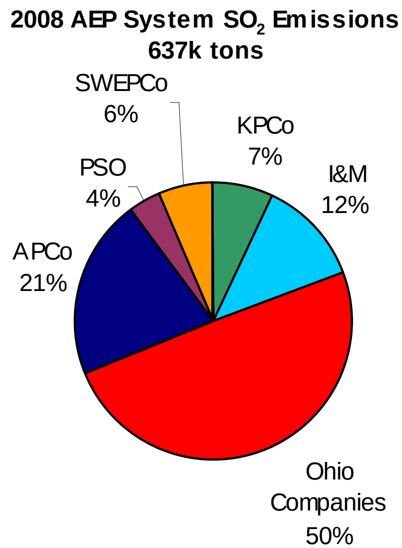
Energy Efficiency, Security & Reliability

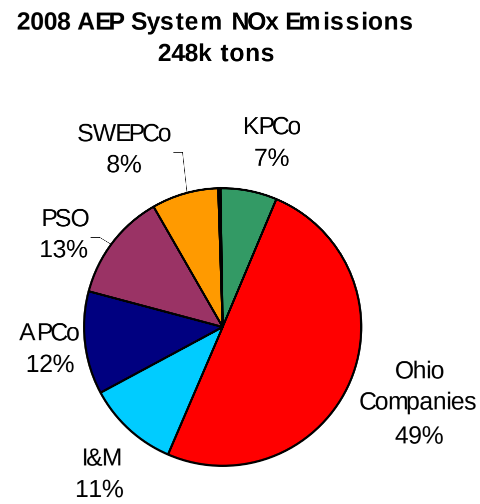
- Develop high-voltage transmission projects to strengthen America’s power grid
- Build generation to ensure reliable supply
- Reduce 1,000MW of demand by 2012
- Reduce 2.25 million MWhs of consumption by 2012
- Diversify our fuel mix; have added 3,705MW of gas-fired capacity since 2005 and have 1,080MW under construction

AEP AMERICAN ELECTRIC POWER

CO_2 Cost Recovery – Should Follow SO_2 & NOx





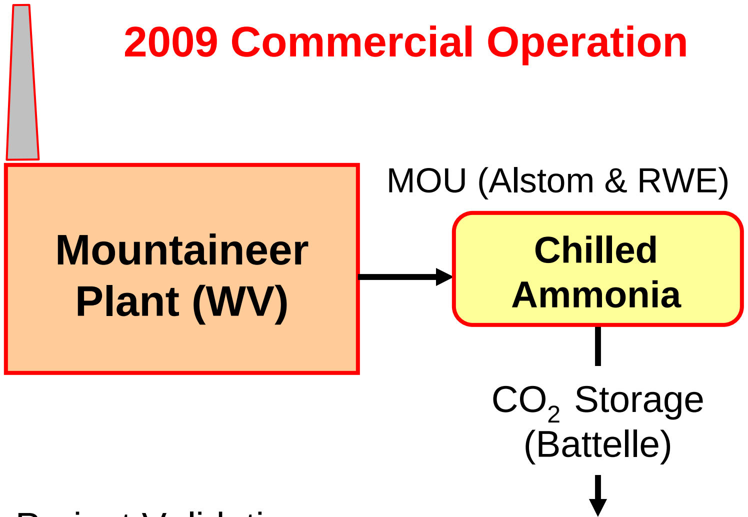


- 100% of SO_2 and NOx allowance costs currently recovered through tracker or similar mechanisms
- Prudently incurred costs associated with carbon-based taxes and other carbon-related regulations explicitly included in Ohio Fuel Adjustment Clause

AEP AMERICAN ELECTRIC POWER

Carbon Capture & Storage

2009 Commercial Operation



Project Validation

- **Alstom "Chilled Ammonia" Technology**
- **20-30 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, in operation at We Energies' Pleasant Prairie Power Plant)**
- **Located at the AEP Mountaineer Plant in WV**
- **100,000 - 300,000 tonnes CO_2 per year**
- **In operation 3Q 2009**
- **Geologic storage for CO_2**
- **Underground injection control permit received in May 2009 from WV Dept. of Environmental Protection**

Represents Post-Combustion Capture

- **Conventional or Advanced Amines; Chilled Ammonia**
  - **Amine technologies are currently available in other industrial applications**
  - **Relatively low CO_2 concentration in flue gas - more difficult to capture than other approaches**
  - **High parasitic demand**
    - **Conventional Amine ~ 25-30%**
    - **Chilled Ammonia target ~ 10-15%**

Key Issues for CCS Development in the U.S.

- **Overcoming the 'economic' hurdle**
- **High up-front capital investment**
- **Commercial demonstration at large coal-fired power plants**
- **National standards for permitting of storage reservoirs**
- **Potential institutional, legal and regulatory barriers to carbon storage**

AEP AMERICAN ELECTRIC POWER

Each operating company should be self-sustaining

Strategy:

- ❑ Each operating company is evaluated on a stand-alone basis ensuring that each company becomes self-sustaining
- ❑ Due to the patchwork nature of regulation, each operating company has its own strategies and financial implications
- ❑ Over time, each operating company should be self-sustaining. Rate relief should be increased or capital and O&M realigned to achieve our targets

Operating Company Forecast

Targets

- **Returns, Earnings & Cash Flow (ROIC, ROE, EPS, FFO, Dividend)**
- **Credit Metrics Consistent with Credit Rating**
- **Customer Bill Impact (may be a limiting factor)**
- **Meet Prudent Utility Operator Practices**

Pass

Implement Plans

Fail

Action Required
❑ Cut capital and O&M
❑ Increase cash rate relief thru new mechanisms

AEP AMERICAN ELECTRIC POWER

Overview of 2009 Guidance

2009 Earnings Drivers:

- ⬆ Positive Ohio outcome
- ⬆ Rate relief - $732mm
- ⬇ Economic slowdown
  - — Lower OSS revenues
  - — Lower loads

Long-term Earnings Drivers:

- ⬆ Rate base investments
- ⬆ Additional rate relief
- ⬆ OSS/Retail load
- ⬆ Transmission JV earnings

2008A-2009E Earnings Bridge ($mm)

AMERICAN ELECTRIC POWER

Regulatory Activity Underway

APCo-Virginia E&R Filing

On May 15, 2009, Appalachian Power filed the fourth and final tranche of E&R surcharge filings with the Virginia SCC, requesting a $41.6 MM increase for environmental and reliability costs incurred during the period January 1, 2008 through December 31, 2008, with a proposed one year recovery period commencing January 1, 2010. A procedural schedule has not yet been published by the SCC.

Summary of APCo's E&R filings:

E&R Tranche:	Case Number	Cost Incurred :	Recovery Period:	Amount:
I	PUE-2005-00056	07/01/2004 thru 09/30/2005	12/1/2006 thru 11/30/2007	$21.3 million
II	PUE-2007-00069	10/01/2005 thru 9/30/2006	1/1/2008 thru 12/31/2008	$48.9 million
III	PUE-2008- 00045	10/01/2006 thru 12/31/2007	01/01/2009 thru 12/31/2009	$60.6 million
IV	PUE-2009-00039	01/01/2008 thru 12/31/2008	Proposed 01/01/2010 thru 12/31/2010	$41.6 million

AEP AMERICAN ELECTRIC POWER

Pension and OPEB Estimate

- Our pension plan and OPEB funds investment returns were each down about 24% in 2008.
- Discount rates are assumed to be 6.0% for pension and 6.1% for OPEB.
- Investment losses increase plan expense for both pension and OPEB, but the investment losses are smoothed in over several years.
- We expect 2009 pension and OPEB expense to increase $104MM from 2008 to 2009 (pre-tax and pre-capitalization).
- OPEB contributions will increase along with OPEB expense, in accordance with agreements in most of our regulatory jurisdictions.
- We do not expect any mandatory contributions to pension in 2009. Pension trust contributions are estimated to be $475MM in 2010 and $283MM in 2011.

AEP AMERICAN ELECTRIC POWER

Capital Investment Drives Operating Company Growth

($ in millions)	2008A	2009E	2010E	Total

Note: amounts exclude AFUDC

DC Cook Unit 1 Update

- Previously identified technical challenges have solutions
  - Low pressure turbine rotors have been straightened
  - Foundation repair work is in progress and is the critical path
  - Generator and high pressure turbine repair work supports the critical path
- The unit is scheduled to return to service in the fourth quarter of 2009
  - The unit will operate without the last stage blades at 30 MW (summer) to 100 MW (winter) reduced capacity
- Root cause: "A blade-rotor system design that failed to provide adequate stress margin"
  - The root cause also found no operational or installation issues
- The replacement rotors are scheduled for installation in the spring of 2011
  - Different design with several years of fault-free commercial operation.
- We continue to receive $3.5MM per week from the accidental outage policy
  - Insurance proceeds are reflected as other operating revenue; During 1Q09, approximately 40% of the insurance payments ($20MM) were used to offset increased fuel costs to customers

AEP AMERICAN ELECTRIC POWER

Deutsche Bank 2010
Alternative Energy, Utilities & Power Conference
Washington, D.C.
May 11,2010

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms and our ability to recover significant restoration costs through applicable rate activities, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants, our ability to recover I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration costs through rates, insurance or warranty, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances that could impact the continued operation of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of the recently passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events. AEP and its Registrant Subsidiaries expressly disclaim any obligation to update any forward-looking information.

Thoughts about the Energy Policy Debate

To make significant advancement in developing clean, domestic energy and reducing emissions, we as a nation need a national energy policy with specific goals and guidelines, particularly as it relates to renewables, transmission and greenhouse gas emissions.

- **Cap and trade**
- **Incentives to develop and deploy new technologies**
- **Create timelines for emission reductions that match available technology**
- **Mandates to develop reasonable cost allocation methodologies to support EHV transmission**
- **Support for the siting of the national-interest transmission lines**

Trent Mesa Wind turbines in west Texas

AEP's Long-Term Platform

Energy policy initiatives around greenhouse gas emission reductions and energy efficiency, security and reliability create technology deployment and investment opportunity in our utility platform

Plans in Place

- 2,000 additional MW Wind PPAs by 2012
- Energy Efficiency & DSM
- Biomass Co-firing at coal-fired power plants
- New Technology Efforts
  - New Generation: ultra-supercritical coal generation in Arkansas
  - Development: carbon capture and storage (CCS) for existing fleet
- Transmission Initiatives
- Smart Grid Initiatives

A rendering of the John W. Turk, Jr. ultra-supercritical coal power plant now under construction in Arkansas

Carbon Capture and Storage

Carbon Capture and Storage project located at AEP's Mountaineer Plant in New Haven, WV

PHASE I – Validation
Captured CO_2 – September 2009
Injected CO_2 – October 2009

CO_2 Capture

Project employs Alstom's chilled ammonia process for post-combustion CO_2 capture.

CO_2 Storage

Compressed CO_2 is injected about 1.5 miles below the earth's surface.

PHASE I - Validation

20 MWe scale validation project designed to remove 90% of CO_2 from flue gas and store 100,000 metric tons/year. Currently in operation.

PHASE II - Commercialization

235 MWe commercial scale project designed to capture and store 1.5 million metric tons of CO_2/year. Awarded 50% US DOE funding. Commercial operation in 2015.

Transmission Investment Opportunities

- **AEP Transmission Company (Transco): Within our existing footprint**
  - Develop new AEP-only projects within AEP's footprint
  - Reduce regulatory lag through FERC formula rates adjusted annually
  - Enhance access to capital
  - First year investment opportunity--$121MM
- **Electric Transmission Texas (ETT): Projects in Texas ERCOT jurisdiction**
  - Framework in Texas allows for more expeditious siting and recovery
  - $600MM of projects est. in service 2010-2013
  - ETT's opportunity could reach $3.0B within this decade
- **Joint Ventures (JVs): Outside of our footprint, with Electric Transmission America (ETA) or others**
  - Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
  - State and future Federal RES will provide enhanced investment opportunities
  - Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2016
  - Robust pipeline of projects up to $15B

765-kV Tower

2010 Ongoing Earnings Guidance

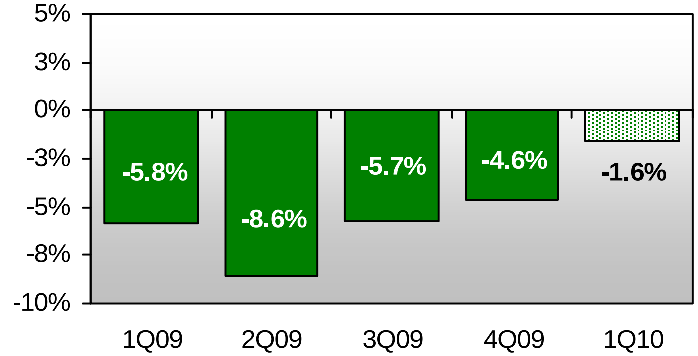
2009A: $2.97/share

2010E: $2.80-$3.20/share

Near-term Earnings Drivers

- **Rate recovery from returns on capital investment**
- **Load growth (and recovery)**
- **Increase in off-system sales volumes and/or prices**
- **O&M discipline and cost-cutting initiatives**

AEP Total Normalized GWh Sales
Quarter %Change vs. Prior Year

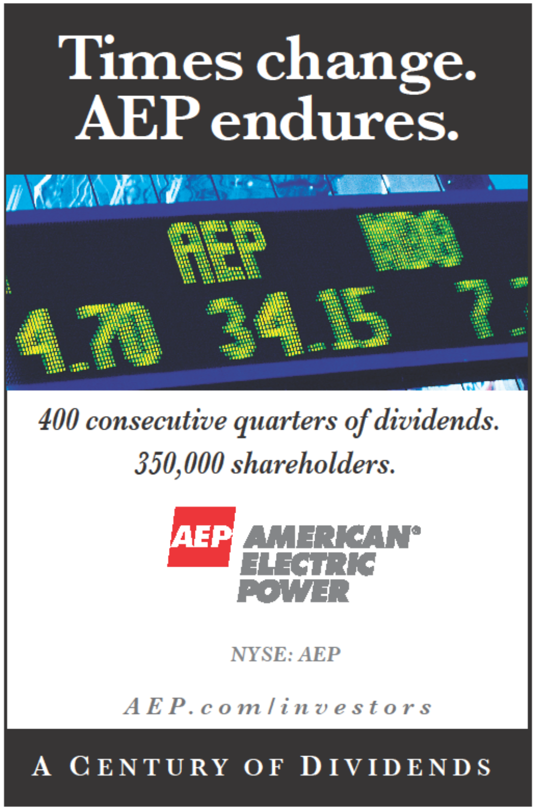


<u>Quarter over Quarter change by segment:</u>
Residential: +2.1%
Commercial: -1.6%
Industrial: -1.0%

Value Proposition

❑ Current Yield Opportunity of 5.0%[1]

- June 10th - 400th consecutive quarterly dividend will be paid to shareholders
- 50-60% payout ratio targeted
- Dividend increased 2.44% on April 27th



❑ Earnings Growth Prospects

- Investment in utility platform greater than depreciation level (2 - 4%)
- With transmission opportunities (4 - 8%)

Attractive total return potential

[1] yield percentage based on AEP closing price of $33.37 on 05/05/2010

AEP Transmission Company (Transco)

- Transco will be used to develop significant new on-system, AEP-owned investments
  - Greenfield Projects
  - Station Additions
  - System Upgrades
- Seven companies have been established under the AEP Transco holding company
- Next steps:
  - Obtain state utility status where required
    - No filing required in Michigan or Oklahoma
    - Filings made in OH, VA, WV & AR
    - Filings later in 2010 for IN, KY & LA
- FERC tariff for Transco filed December 1, 2009 with rates effective and first projects in-service in 2010; Settlement discussions on-going
- Seek retail tracking mechanisms at the state level (OH, LA, VA, TX-ERCOT already secured)

765-kV Tower

Electric Transmission Texas, LLC

Overview:

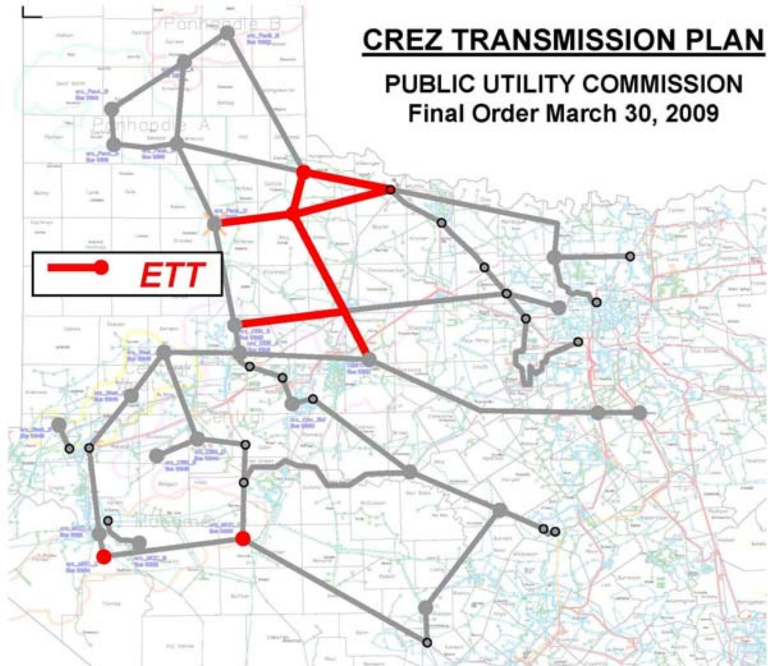
- ETT is a 50/50 JV between AEP and MidAmerican Energy Holding Company that plans to construct and operate transmission projects within ERCOT with an investment opportunity of more than $3 billion.
- Current JV rate base is $127 million with a debt to capital ratio of 60/40 and an authorized ROE of 9.96%.

Opportunities:

- Projects in service 2010-2017: $1.4 billion
- CREZ projects in service 2012-2013: $1.1 billion
- Other projects pending transfer in service 2010-2013: $600 million

Next Steps:

- Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in 2010.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

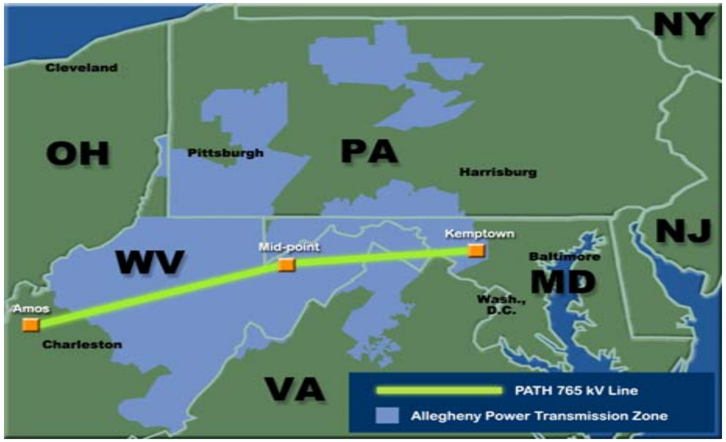
ETT
Electric Transmission Texas

EHV Transmission in PJM: PATH

Project Description: 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

Overview:

- FERC order issued on February 29, 2008 approving:
  - Cash return on CWIP and 14.3% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents
  - Rates went into effect March 1, 2008
- Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million.
- Estimated completion date: 2014+, pending outcome of the 2010 PJM Regional Transmission Expansion Plan (2010 RTEP).



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Potomac-Appalachian Transmission Highline

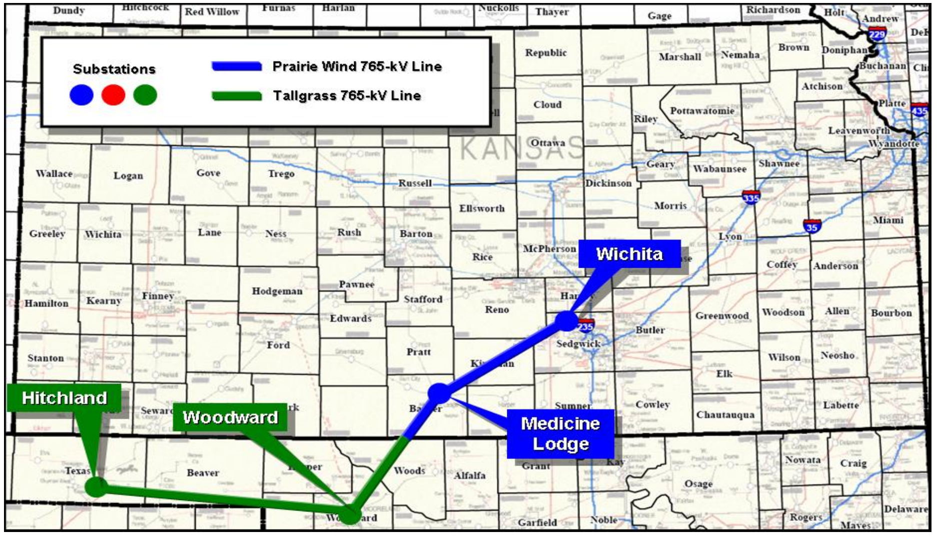
Key Challenges:

- Obtaining a CPCN in West Virginia, Virginia and Maryland. CPCN applications in West Virginia and Maryland are pending because their procedural schedule allows the consideration of the 2010 RTEP. A new application in Virginia is expected in the third quarter of 2010 after consideration of the 2010 RTEP.

Prairie Wind Transmission, LLC

Overview:

- In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
- PWT is a 50/50 JV that is proposing to build approximately 110 miles of 765-kV lines extending from Wichita, KS.
- The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
- The project is expected to cost approximately $400 million and be in-service by 2013-2014 and was approved by the KCC on July 24, 2009.
- AEP’s ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

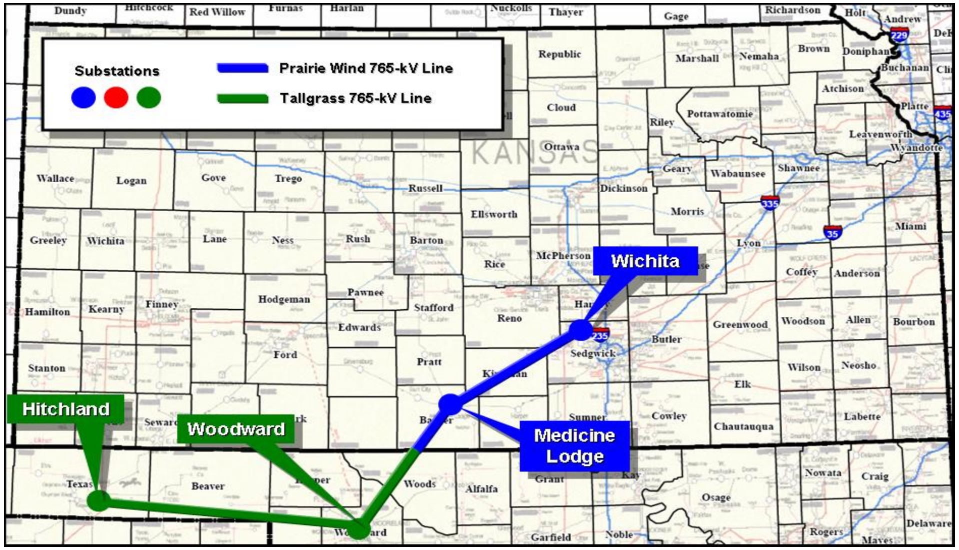
Key Challenges:

- RTO Approval
- Siting

Tallgrass Transmission, LLC

Overview:

- In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
- TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines in Oklahoma.
- The project will promote wind development in the western half of Oklahoma.
- Project is expected to cost approximately $500 million and be in-service by 2013-2014.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

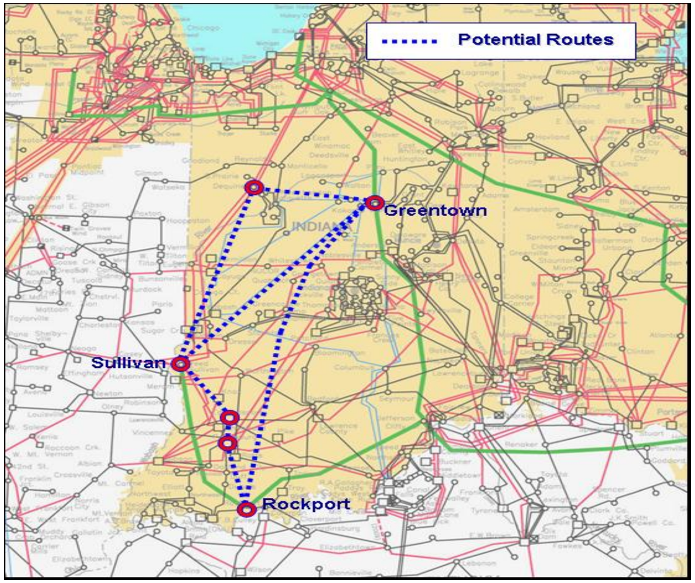
Key Challenges:

- RTO Approval
- Siting

Pioneer Transmission, LLC

Overview:

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
- The project will improve the reliability of the nation's transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, protect national security and expand opportunities for new generation, including renewables.
- The project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP's ownership of the joint venture is 50%.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

- RTO Approval (PJM & MISO)
- Cost allocation which enables the development of "system solutions"
- Siting

Summary Rate Case Information

APCo Virginia General Rate Case – Docket #PUE-2009-00030

On August 14, 2009, APCo filed an update to its pre-biennial base rate case, originally filed July 15, 2009 with the Virginia SCC, per the statute, for recovery of generation and distribution costs requesting an increase of $154 million. Hearings began on March 30, 2010 and an order is due no later than July 15, 2010.

Proposed Capital Structure – Company Position (12/31/08)

	% of Capitalization	Cost Rate	Weighted Return

Summary Rate Case Information

I&M Michigan General Rate Case – Docket #U-16180

On January 27, 2010, I&M filed a base rate case with the Michigan Public Service Commission requesting an increase of $62.5 million to cover increased costs related to distribution O&M, taxes, interest and employee related expenses. I&M also requested new tracker mechanisms for enhanced distribution reliability spending, energy efficiency, investments in generation and participation in PJM. The requested ROE is 11.75%. An order is expected in early 2011.

AEP AMERICAN® ELECTRIC POWER

Deutsche Bank Alternative Energy, Utilities & Power Conference

New York, NY
May 12, 2011

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation, including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance, resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events, our ability to recover through rates the remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives and evolving public perception of the risks associated with fuels used before, during and after generation of electricity, including nuclear fuel.

Pending EPA Regulations

AEP®

TRANSPORT RULE

- Proposed Transport Rule (July 2010) limits utility SO_2 and NOx emissions
- SO_2 and NOx subject to caps in 2012, with further SO_2 reductions required in most Eastern states by 2014
- Major concerns with the proposed rule:
  - Not enough time is provided for environmental control installations (i.e. FGD/SCR)
  - EPA costs of retrofitting units are grossly underestimated/ other incorrect assumptions used (though EPA has since modified some of these assumptions)
  - Rule does not account for recent improvements in air quality
  - Inability to trade and bank allowances effectively

MERCURY AND HAP MACT

- Proposed rule issued in March 2011
- Final HAP regulations must be issued by November 2011
  - Maximum Achievable Control Technology (MACT) standards for Hg, other metals, and acid gases, combustion practices for organics
- Compliance Required 3 Yrs. After Final Rule, EPA could grant a 1 year extension
- Very little flexibility in the proposal; opportunity to average across a plant and limited sub categorization
- MACT could require FGD or DSI for acid gases and/or baghouses with activated carbon injection for Hg and metals.

COAL ASH RULE

- Draft coal ash disposal rules issued in May 2010
- EPA proposed two different regulatory designations:
  - "Non-hazardous", solid waste - action required by ~2017
  - "Special" hazardous waste - action required by ~2018-2020
- AEP supports Subtitle D Prime Option of RCRA (solid waste NOT hazardous)
- AEP capital cost of ~$4 billion for solid waste option
- "Hazardous" option could cost DOUBLE this amount

316b RULE

- EPA issued proposal March 28
- Addresses impingement and entrainment of aquatic species
- Proposes upgraded intake screens for impingement
- Suggests cooling towers as an effective technology for entrainment, but defers the decision until site-specific study is conducted
- Cost impact very uncertain at this time

The cumulative effect of the proposed rules is not achievable in the allowed timeframe.

Anticipated EPA Timeline for Retrofits or Replacement

(1) The impact of all proposed rules continues to be under review. Project scope and technical assessments are ongoing. Any change in scope will impact the capital cost ranges.

(2) Gas plants are not included. Proposed 316 (b) will impact some gas facilities.

(3) Proposed Air Rules include: HAPs, CATR and Regional Haze Federal Implementation Plans in OK & AR

(4) Potential replacement generation for partially exposed units is $1,700MM which could offset certain estimates in the high case shown.

(5) Includes NSR Compliance.

Key Takeaways

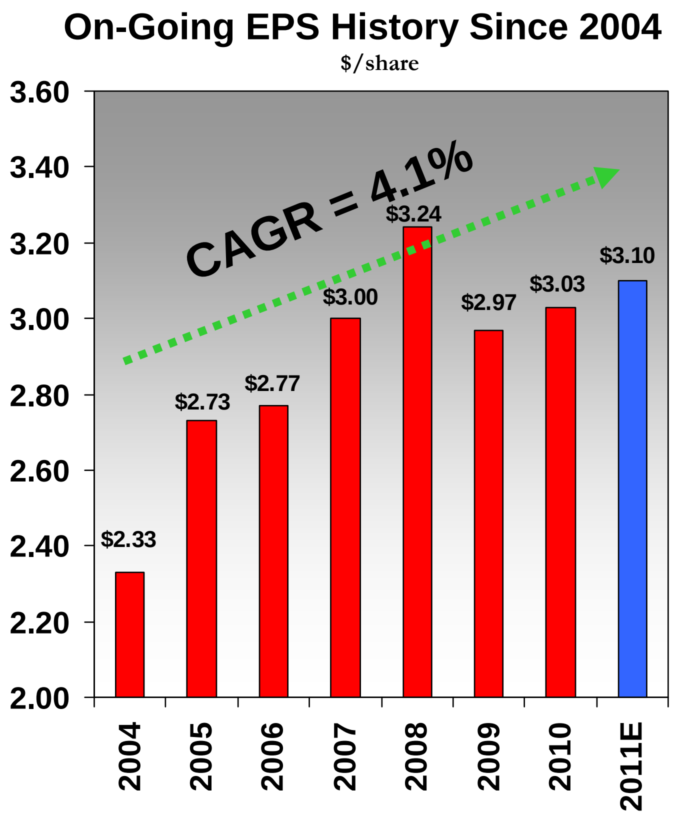
- Established track record of constructing state of the art pollution control equipment
  - 9 scrubbers on 7,900 MW's between 2003-2011(12,000+ scrubbed in total)
  - 12 SCR's on 11,000+ MW's between 2001-2011

- We are supportive of Clean Air Act, but it must be under a feasible timetable
  - Grid reliability concerns
  - Resource availability concerns

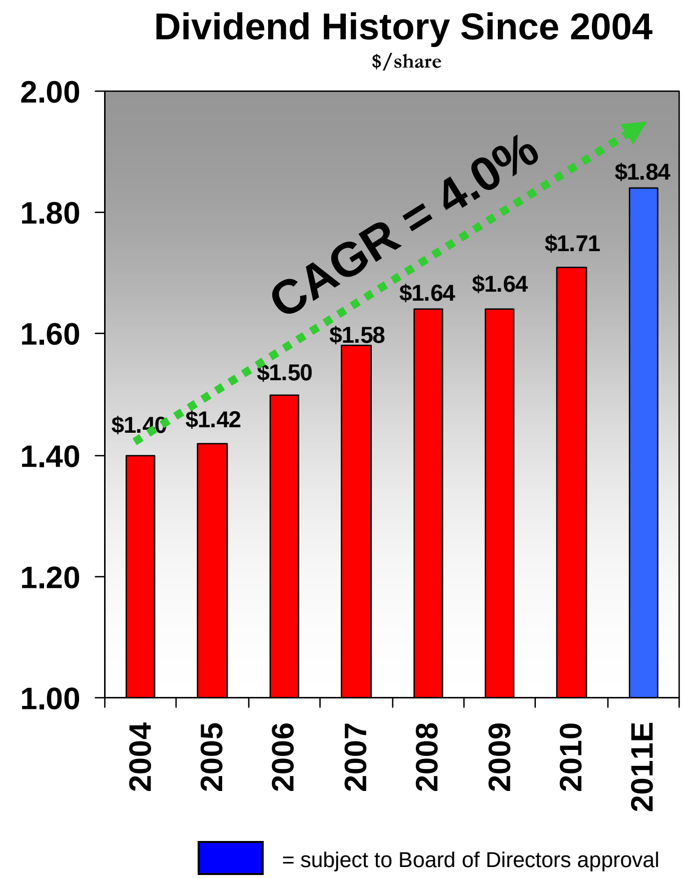
- We are analyzing all the rules together to determine most efficient compliance with the rules
  - Nearly 11,000 MW's will comply without major additions

Appendix

Earnings and Dividends



- Earnings growth largely attributed to capital investment program
- Pre-recession earnings supported by robust wholesale market activity and high power prices
- 2011 guidance range of $3.00 to $3.20 per share



- Quarterly dividend <u>increased 12%</u> in 2010
- <u>404th consecutive</u> quarterly dividend will be paid June 10, 2011
- 50-60% payout ratio target
- Current yield over 5%

Turk Plant

- John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant. Located in Arkansas. SWEPCo owns 73 percent or roughly 440 megawatts of the total unit.

- The cost of the plant and related transmission is anticipated at $1.7 billion with AEP's share approximately $1.3 billion (excluding AFUDC) and will begin commercial operation in 2012.

- The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls

- $1.1 billion capitalized expenditures 3/31/11. SWEPCO's contractual commitments $260MM.

- Third party owners include: Arkansas Electric Cooperative Corp. (12%), East Texas Electric Cooperative (8%), and Oklahoma Municipal Power Authority (7%)

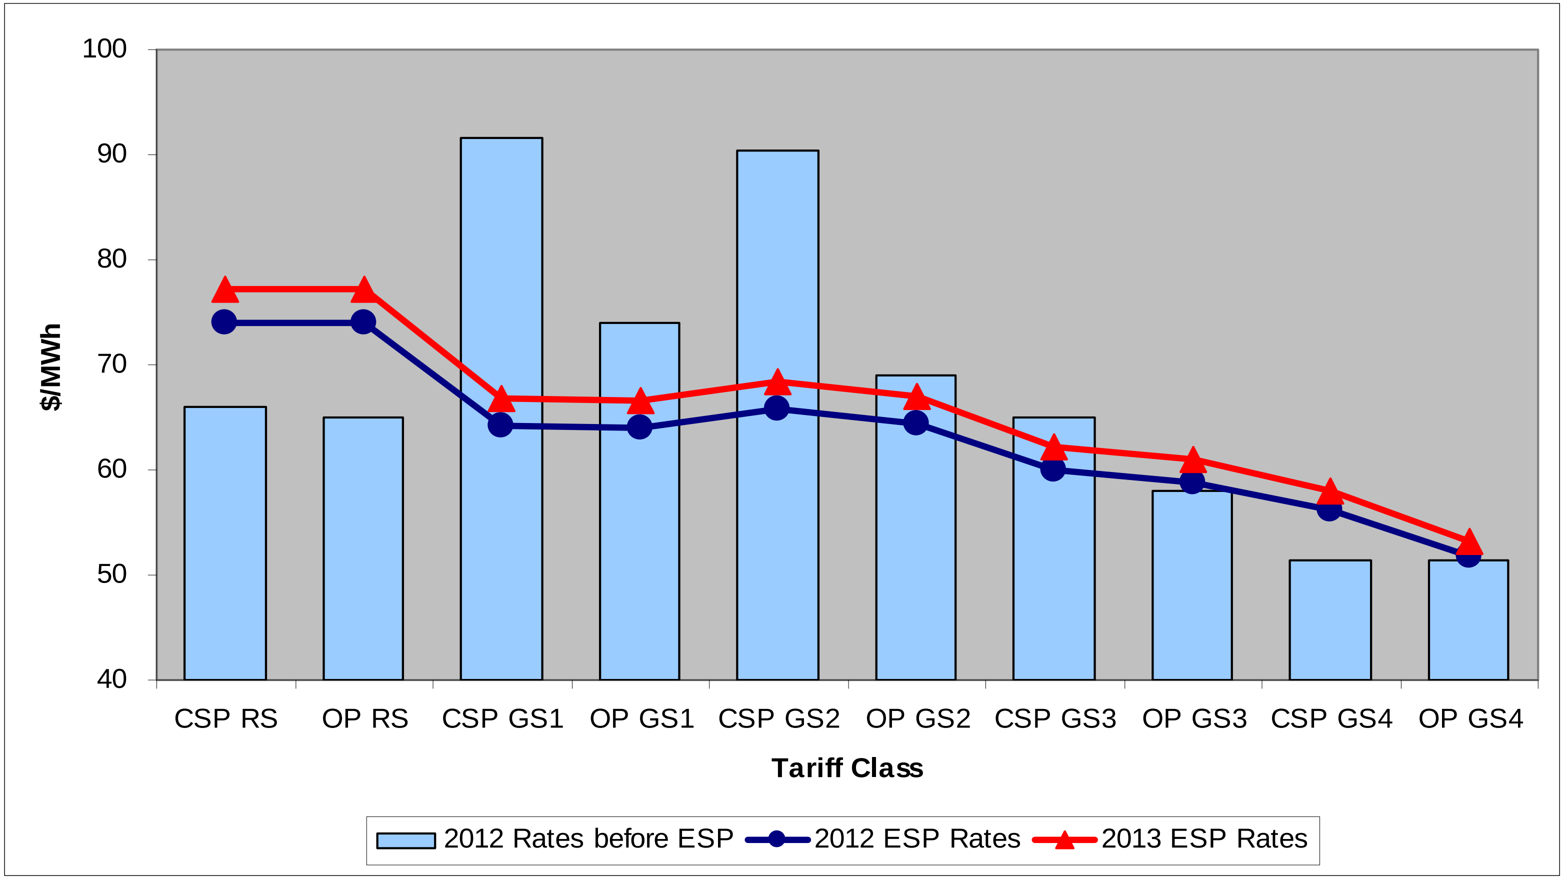
While the ESP includes a small base generation increase, the move to a market-based rate design, consistent with state policy, will result in varying impacts for different customer groups.

Price to Compare

Proposed **SSO** Rates Redesigned To Resemble Market Pricing Structures



Rates do not reflect mitigation impact of market transition rider
2012 Rates before ESP reflect current 2011 rates for generation & transmission service, adjusted to reflect full cost 2011 fuel and environmental costs.

The realignment of rates with market should provide all customers with equivalent opportunities to shop. Additionally, since the proposed design eliminates explicit demand charges, customers should be more easily able to evaluate competitive offers. To ease the rate impact that customers will experience from the realignment, we have proposed a Market Transition Rider.

Market Transition Rider – Mitigates the Initial Impact of Rate Realignment

Illustration of Market Transition Rider on ESP Generation Rate Increases

Three-Year Market Transition Plan
Summary of AEP Ohio ESP Generation Rate Changes

AEP Ohio		1.4%	2.7%	0.0%	4.2%

The Market Transition Rider is a transition rider designed to facilitate the transition from AEP Ohio's current rates to market-based SSO Generation Service rates. It is a non-bypassable rider designed to limit the first and second year changes for any customer classes to uniformly transition any above or below average changes in three steps. Any revenue shortfall that is produced by limiting the increases for certain customer classes is collected from those classes whose decreases are limited.

List of ESP Riders – Existing and Proposed

AEP Ohio Distribution Rate Case – Docket #351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%. A procedural schedule from the PUCO is pending.

AEP

APCo Virginia Base Rate Case – Docket #PUE-2011-00037

On March 31, 2011 APCo filed an update to its pre-biennial base rate case for recovery of generation and distribution costs requesting an increase of $75 million ($126 million total increase less $51 million associated with a potential change in depreciation rates). The requested ROE is 11.65%, including a .50 basis point adder for meeting 2010 RPS goal allowed by law.

In conjunction with this case, an environmental rate adjustment clause (E-RAC), generation rate adjustment clause (G-RAC) and a renewable portfolio standard rate adjustment clause (RPS-RAC) were filed. APCo has requested that rates in the base case, E-RAC and RPS-RAC go into effect no later than 2/1/2012 and the G-RAC on 3/1/2012.

Includes mandatory tenders (put bonds)

Data as of April 26, 2011

Transmission Investment Strategy

- **Near-Term Investment** – Electric Transmission Texas (ETT) secures near term investment opportunities, allowing AEP to invest in the large, growth-oriented Texas transmission market. Total capital expenditures of $3 billion with a 9.96% ROE.

- **Mid-Term Investment** – Seven wholly-owned transcos allow for expansion and growth within AEP's existing utility footprint through an efficient recovery mechanism. Will spend $160 million in 2011 and more than $350 million in 2012. Expected ROE is in the 11.20%-11.49% range.

- **Long-Term Investment** – Joint ventures provide opportunities for longer-term growth outside of AEP's existing utility footprint with forward looking formula rates, reasonable ROEs and FERC incentives where appropriate.

Transmission has a diversified investment approach that positions it as one of the key AEP growth businesses.

Texas Transmission Growth Strategy : Near Term Investment

AEP®

Ownership Structure: 50/50 (AEP/MidAmerican Energy Holding Company)

Total Project Cost: Over $3 Billion

Growing Rate Base:

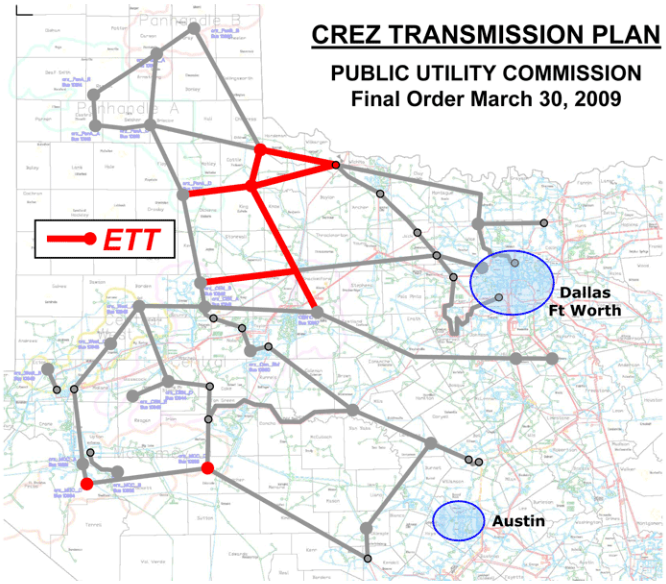
Current rate base is $412 million; expected to grow as follows:

2011: $473 million
2012: $778 million
2013: $1,352 million

ETT Electric Transmission Texas

Interim TCOS filings twice per calendar year

Approved ROE: 9.96%



- **<u>Additional Projects in the Pipeline ~$1.6 B:</u>**
  – Approximately 822 miles of lines and 28 substations with in-service dates through 2017

- **<u>Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.1 B:</u>**
  – Seven double-circuit 345kV transmission lines (~$750 M), eight major 345kV stations and several series compensation installations (~$350 M)
  – PUCT Certificate of Convenience and Necessity (CCN) proceedings underway

Transco Update

FERC:

- April 2011 -- The Commission finds in the order that the Settlement is just and reasonable and the business plan will provide benefits to AEP operating companies and customers.
  - ROE order for East Transco's is 11.49%
  - ROE order for West Transco's is 11.20%

State Filing Status Update:

- **Ohio** (filed and approved) – PUCO approved the Ohio Transco December 29, 2010
- **West Virginia** (filed) – Procedural schedule is set, with company testimony filed January 6; Intervenor's testimony is due April 6 and rebuttal is due April 20; Hearings in June
- **Arkansas and Louisiana** – Filing date in Arkansas likely early 2011
- **Texas-SPP** – Expecting TX filing in mid 2011
- **Kentucky** – Filing made February 4, 2011; Informal conference with staff held March 2, 2011
- **Indiana** – Filing made March 1, 2011; Pre-hearing conference March 28, 2011
- **Virginia** (withdrawn) – Filing withdrawn to give additional time to resolve issues with Staff
- **Michigan and Oklahoma** – Do not require state filing

$160M capital spend forecasted for 2011; $350MM for 2012

Joint Venture Strategy: Long-term

- **Strategy:** JV's secure new investment opportunities with local utilities to diversify AEP's investment outside AEP's traditional footprint while providing longer-term incremental earnings**.** JV projects are well-suited for FERC formula rate recovery mechanism, including potential for incentive rates.
- **Future:** Federal/regional initiatives may accelerate expansion of EHV transmission (e.g. cap-and-trade, renewable portfolio standards, inter-region wide planning). Securing first mover advantage will enable AEP to secure LT investment opportunities.
- **Future flexibility:** Passive investment opportunities can be considered and can provide entry beyond SPP/PJM/ERCOT

AEP AMERICAN® ELECTRIC POWER

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate relief or other recovery for new investments, transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements periodically issued by accounting setting bodies; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

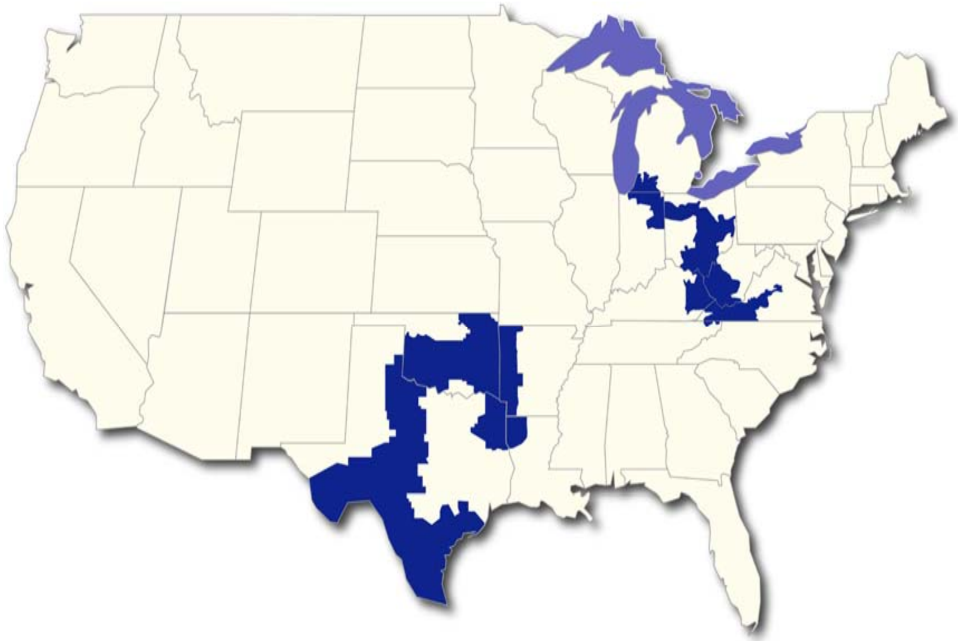
Company Overview

- 5.2 million customers in 11 states
- Industry-leading size and scale of assets:

Asset	Size	Industry Rank
Domestic Generation	~38,300 MW	# 2
Transmission	~39,000 miles	# 1
Distribution	~212,000 miles	# 1

Source: Company research

- Coal & transportation assets
  - Control over 8,400 railcars
  - Own/lease and operate over 2,650 barges & 52 towboats
  - Coal handling terminal with 20 million tons of capacity
- 20,800 employees



AEP Generation Portfolio				
Coal	Gas	Nuclear	Hydro	Wind
67%	24%	6%	2%	1%

AEP enjoys significant presence throughout the energy value chain.

AEP Strategy

Strategy: grow our core utility business at a consistent rate through major investment supported and funded by innovative programs for regulatory recovery as well as develop our independent, federally regulated Transmission Company for the pursuit of new major interstate projects.

Our 2008 Focus:

- Prepare for post-2008 transition in Ohio
- Invest in and evolve infrastructure to support future technology and customer needs focused on efficiency, conservation and load management
- Enhance cash flow & earnings through rate recovery mechanisms
- Take advantage of AEP's size to benefit our customers and shareholders through regulatory-supported investment

Sustained capital investment opportunities support earnings growth.

Vision for Sustainability

Generation	Transmission	Distribution	Customers

At the conclusion of our current environmental retrofit program, over 58% of our 24,630 MW coal-fired generation fleet will be equipped with SCRs and over 73% will be scrubbed (FGDs).

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
PSO	Southwestern	Oklahoma	$59 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$58 MM	Gas	Simple-cycle	170	2008
AEG	Dresden	Ohio	$265 MM	Gas	Combined-cycle	580	2010
SWEPCo	Stall	Louisiana	$375 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.3 B (1)	Coal	Ultra-supercritical	600 (2)	2011
APCo	Mountaineer	West Virginia	$2.23 B	Coal	IGCC	630	TBD
CSP/OP	Great Bend	Ohio	Under Review (2)	Coal	IGCC	630	TBD

(1) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment.
(2) FEED (front-end engineering and design) study with GE/Bechtel is complete. Cost estimates are not yet filed with the PUCO due to the current appeals to the Supreme Court of Ohio resulting from the PUCO's April 10, 2006 Opinion and Order.

Secured Recovery Mechanism:

PSO Peaking Facilities Rider

Additional Recovery Mechanisms Under Consideration:

Formula based rates

Requests for return on CWIP

Current and future rate cases

AEP is meeting the growing electricity needs of customers through the pursuit of new economic generation facilities.

GridSMART

GridSMART: implementing AEP's vision for the distribution and customer services business in the future, including the development of new customer programs to reduce consumption and peak demand, and a plan to deploy advanced technologies.

- Enables customers to better manage energy
- Improves service to our customers by enhancing customer choice and customer control
- Improves efficiency
- Integrates distributed energy resources into our grid
- Transforms the way we do business

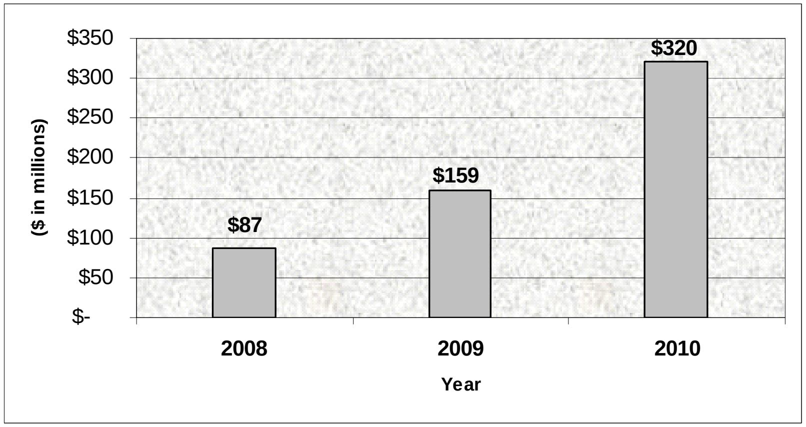
Capital Investment, Subject to Regulatory Approval * $ in millions			
Technology	2008	2009	2010
Metering & Communications	$83	$138	$146
Distribution Technology Enhancements	$40	$ 63	$ 82

*$472MM of the $552MM not in current forecast; spending contingent upon regulatory approval

AEP will continue to be an industry leader in deploying advanced technology on a commercial scale. $552MM capital investment by 2010, subject to regulatory approval.

Contribution of Transmission Investments

Projected Transmission Capital Spending*

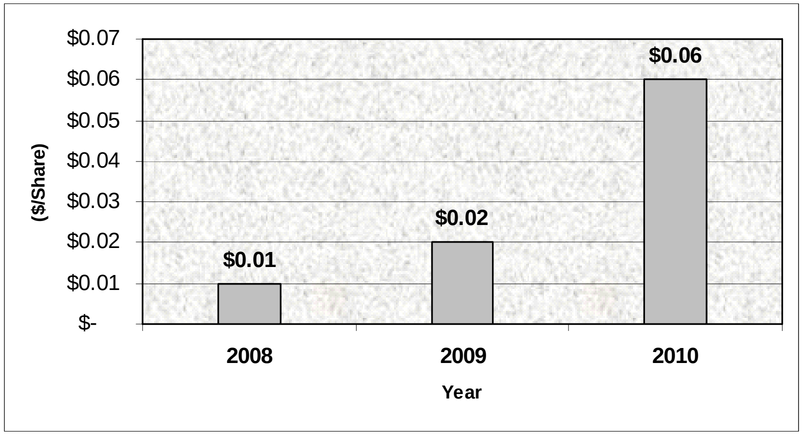


* ETT and PATH projects included in above projection.

Electric Transmission Texas

Potomac-Appalachian Transmission Highline

Projected Transmission EPS Contributions*



* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

Note: Transmission Joint Ventures are excluded from AEP's base forecast as shown on slide 8 because they are not consolidated for financial reporting. AEP will be responsible for funding 40-50% of our 50% share with our own capital, and the remainder will be financed with off-balance sheet debt.

Transmission will provide a near and long term catalyst for growth.

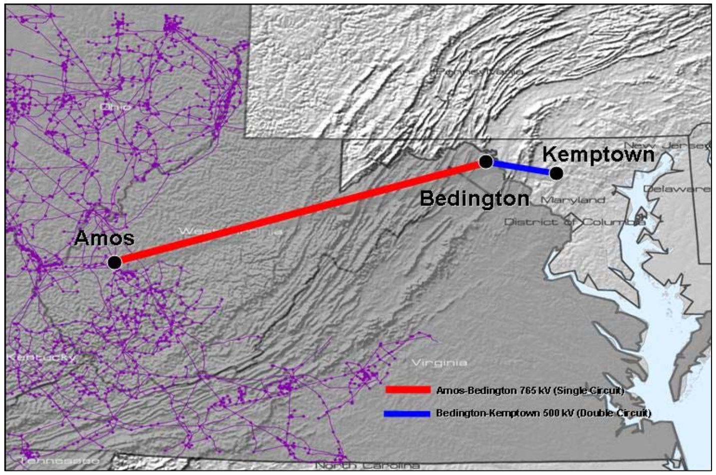
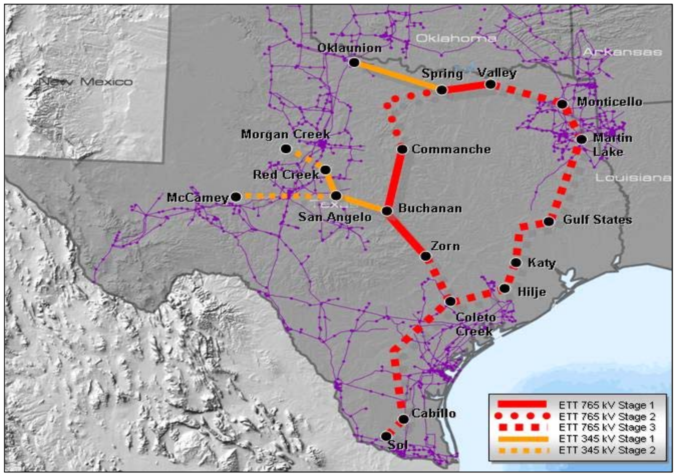
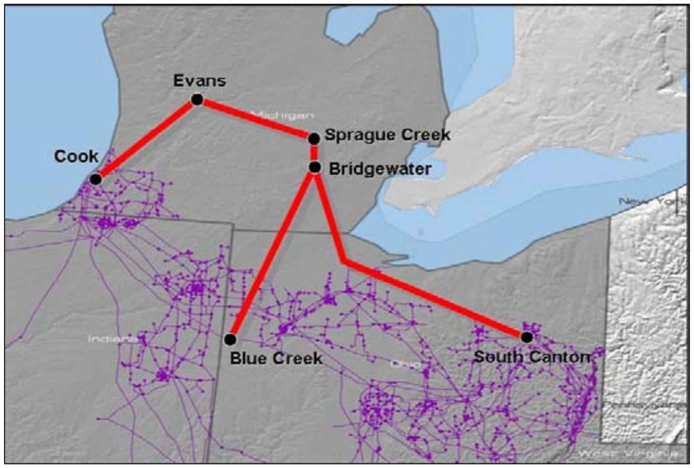
AEP is Advancing the Development of a National Interstate Today



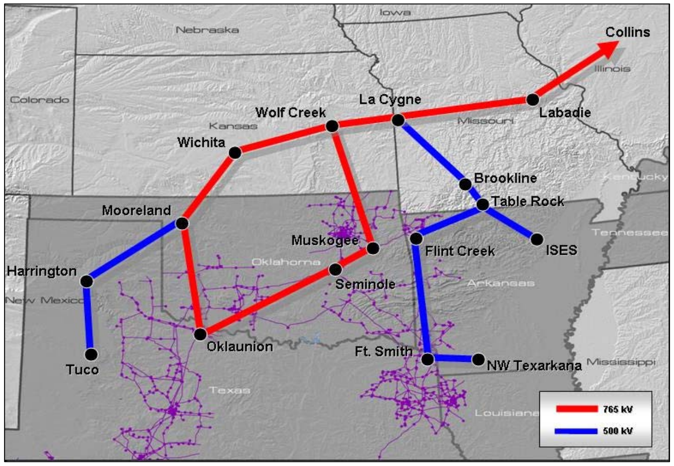
PATH Project (PJM)



ETT Proposal (ERCOT)



AEP-ITC Michigan Proposal (PJM/MISO)

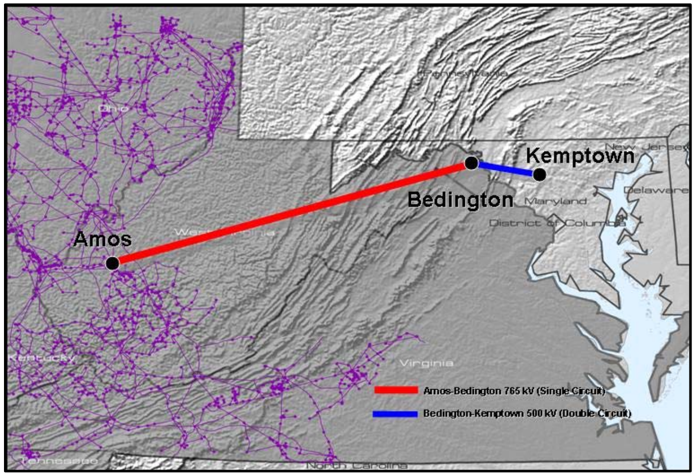


SPP Overlay Study

I-765™ Transmission in PJM: PATH

Execution in Action

- *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries -- to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
  - Completed FERC Filing – December 2007
    - *Pursuing new project FERC incentives: cash return on CWIP, 14.3% ROE, recovery of all costs incurred prior to the time rates go into effect, and recovery of all prudently incurred development and construction costs if the project is abandoned.*
- *Funding Plans/Transaction Structure*
  - AEP and Allegheny share ownership of Amos – Bedington line and contribute equally to this portion of the project through PATH West Virginia Transmission Company, LLC
  - AEP's investment will be held in the AEP Transmission Holding Company LLC subsidiary
  - Project corridor was included in the DOE's National Interest Electric Transmission Corridor
- *Key Next Steps*
  - Siting Approval – Fall 2009
  - Targeted Completion – 2012



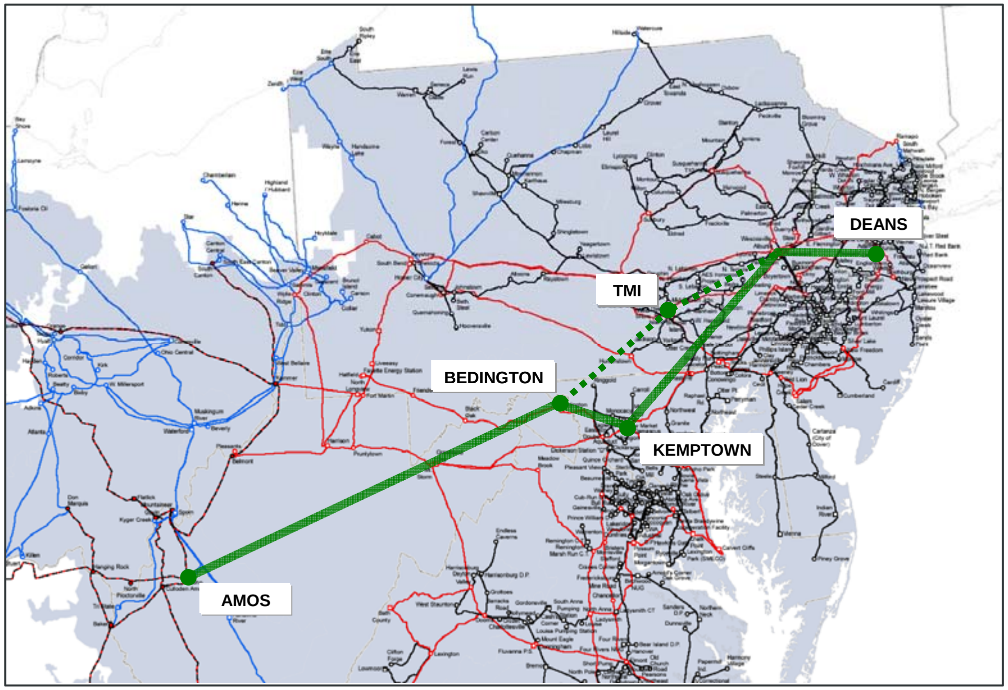
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Potomac-Appalachian Transmission Highline

I-765TM Transmission in PJM East

Second phase of original AEP 550-mile I-765 proposal

- Approximately 250 miles from West Virginia-Maryland border to Public Service Electric & Gas Deans Station in New Jersey.
- Currently under consideration by PJM as part of Regional Transmission Expansion Plan (RTEP).
- Based on PJM RTEP approval, AEP will seek a suitable business partner (JV partner) to complete the second leg of the original proposal.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

KPSC Case No. 2011-00401

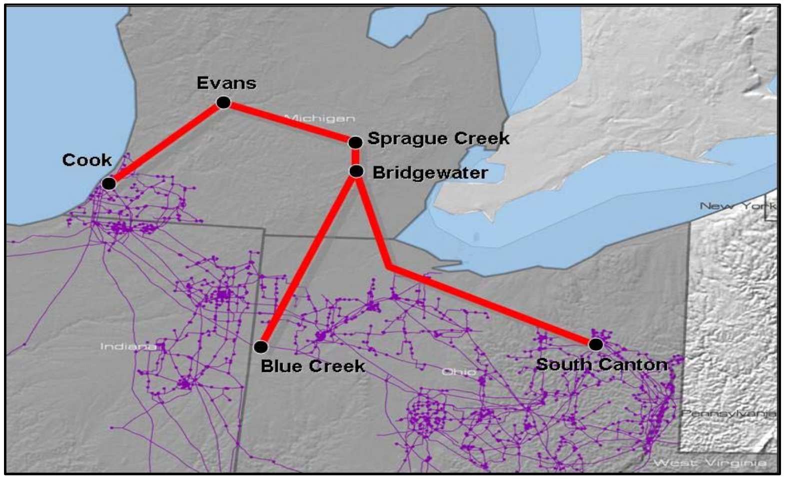
Page 5173 of 9556

I-765™ Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
  - Study was released Q3 2007
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.6 billion investment (before ownership division)
  - AEP and ITC are in discussions to form a Joint Venture
- *Benefits*
  - Up to 5,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- *Next Steps*
  - Agreement on JV (AEP/ITC) Q2 2008
  - JV Formation - 2008
  - MISO and PJM Review/Approval - 2008
  - FERC Filing - Fall 2008
  - Siting Approval – Fall 2010
  - Estimated Completion – Fall 2015

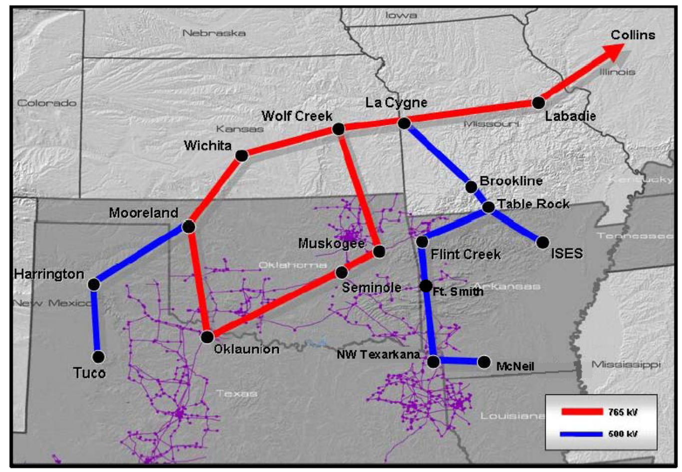


The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

I-765TM Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- *Overview*
  - July 2006 AEP submitted conceptual project for six 765-kV lines
  - Proposed 765-kV Kansas / Oklahoma / Arkansas connecting to MISO/PJM
  - 610 miles from Kansas to Arkansas
  - SPP proposes 765-kV in Texas / Oklahoma / Kansas / Missouri connecting to MISO/PJM
  - SPP also proposes 500-kV in Texas / Oklahoma / Arkansas / Missouri
  - $3.0 billion investment (before ownership division)
  - Proposed 2012-2017 construction period
- *Benefits*
  - 4,000 MW improved transfer capability
- *Next Steps*
  - Study Disclosure – Completed 2Q 2007
  - JV Formation (ETA) – Completed 3Q 2007
  - SPP 10-year Expansion Plan Issued – December 2007
  - SPP RTO/BOD EHV Overlay Approval – 2Q 2009
  - SPP RTO FERC Filing – 3Q 2009
  - Siting Approval – 3Q 2011
  - Estimated Completion – 3Q 2017



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Electric Transmission America (ETA)

- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.

ETA reflects a natural progression and expansion of AEP's partnership with MidAmerican.

I-765™ Transmission in Texas (ETT)

Electric Transmission Texas Update

- *Transaction Structure*
  - 50/50 joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
  - ETT capital structure is 60% debt / 40% equity
  - Services provided by AEP
  - Investment opportunities can be offered by either partner

- *Transaction Status*
  - PUCT Approved in 2007:
    - ROE of 9.96%
    - Establishment of Transmission Utility Status
    - Transfer of $70 million assets from AEP Texas Central to ETT
  - FERC approval for asset transfer received April 20, 2007
  - Closed JV with Mid-American Energy Holdings Company on December 21, 2007

- *Next Steps*
  - ETT project opportunities to be evaluated on a case by case basis
  - Anticipate offering projects in Q2 2008

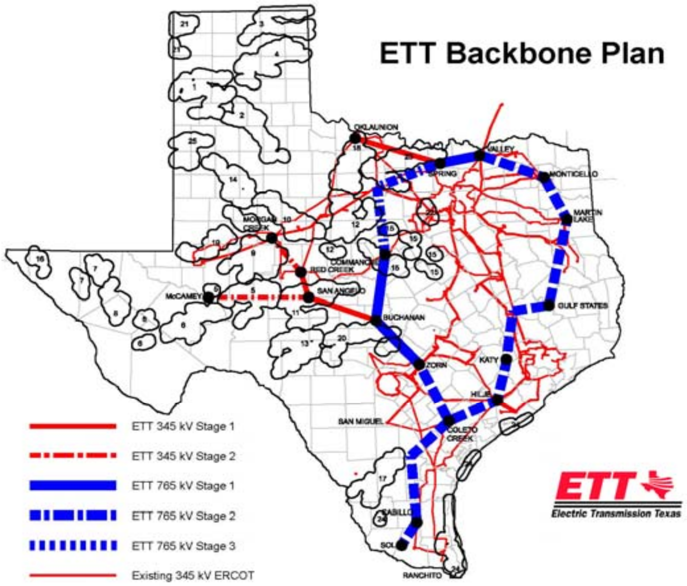
Electric Transmission Texas

CREZ & Backbone Opportunities

Harnessing the Wind: Competitive Renewable Energy Zones offer unique opportunities to showcase ETT

- **ETT CREZ Overview**
  - Strengthen ERCOT grid to harvest up to 10GW wind generation
  - Build a robust transmission system for ERCOT Texas
  - $1.5 billion investment Phase 1 – 2012*
  - $1.5 billion investment Phase 2 – 2015*

- **ETT ERCOT Backbone Proposal**
  - ETT proposal for ERCOT and PUCT to consider CREZ transmission in context of long-term vision for transmission system.
  - Current 5-year planning horizon results in higher ultimate costs, lower system efficiency.
  - Long-term 15-20 year perspective provides better plan, supports development of high voltage backbone at 765-kV.
  - $4.2 billion investment (long-term backbone).*



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

* Before ownership division.

Advanced Generation & CO_2

Near Term:

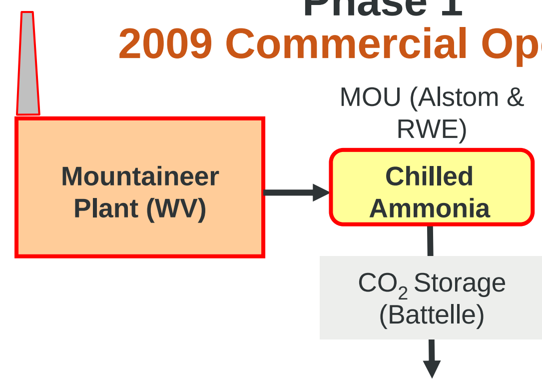
- Chilled Ammonia project at Mountaineer moving to commercial scale at the Northeastern Plant in 2012

$ in millions				
		2008	2009	2010
Mountaineer Chilled Ammonia Project		$30	$39	$0

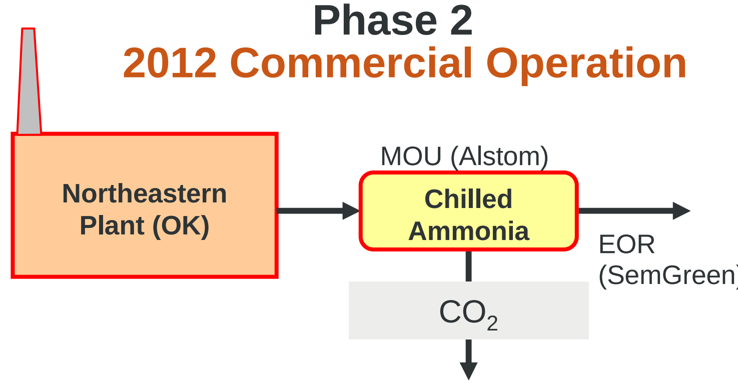
Long Term Strategy (Post-2010):

- IGCC
- Oxy Coal Technology
- Chilled Ammonia
- Nuclear COL

Phase 1
2009 Commercial Operation



Phase 2
2012 Commercial Operation



We are committed to validating and deploying technologies that ensure coal remains a viable resource for AEP and America.

Regulatory Strategy: Reduce Lag

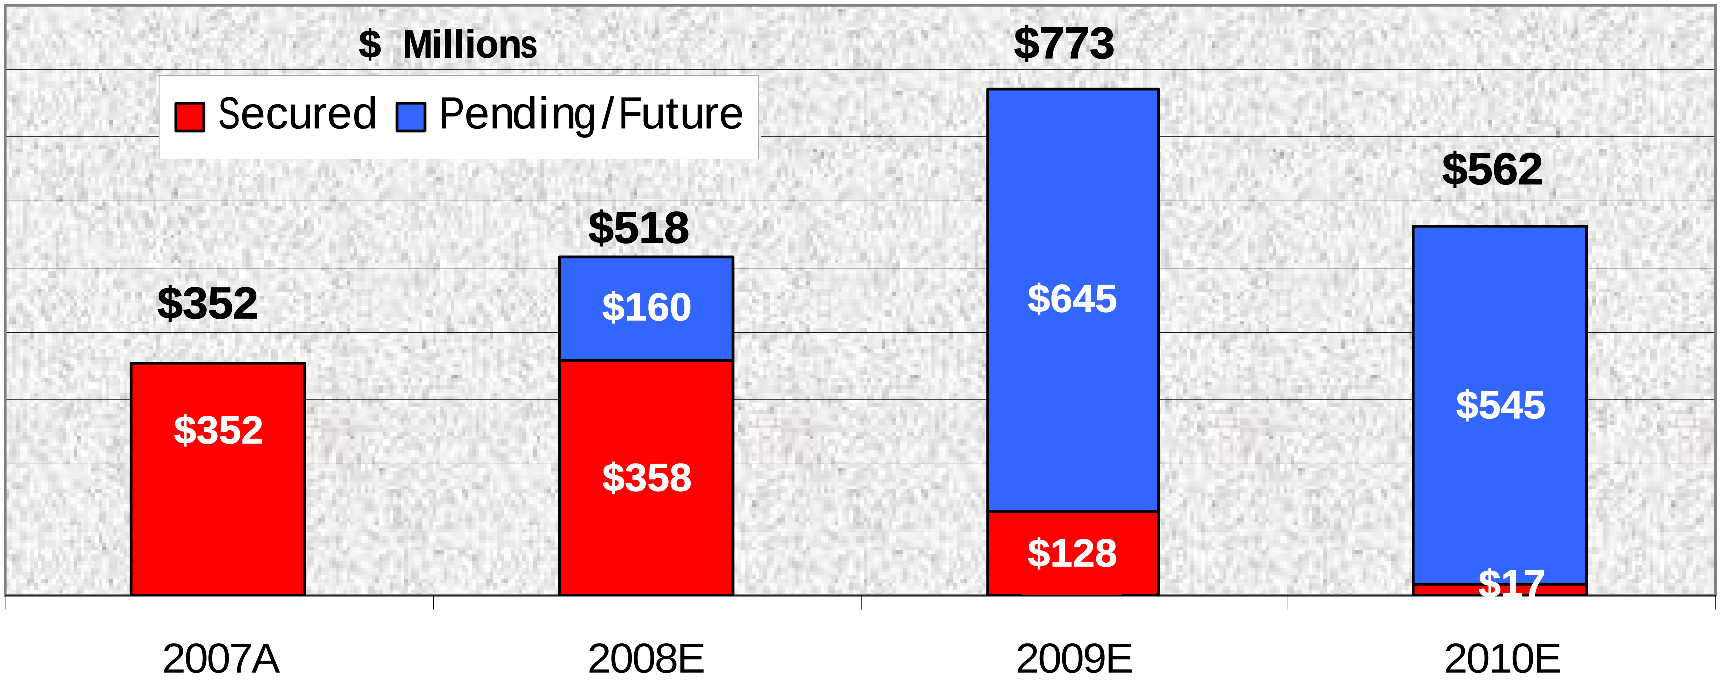
The strategy: reduce the time between in-service dates and rate recovery

- Maximize frequency of filings
  - Seek ability to pro-forma both capital and O&M through date which rates are effective
- Single-issue cost recovery
  - Reliability
  - Vegetation
  - Environmental
- Trackers
  - Federally-approved transmission costs
  - Fuel and emissions
  - ERO compliance costs
  - Off-system sales margin sharing
- Formula rates
- Return on CWIP

Our goal is to maximize utility company cash flow and returns by minimizing regulatory lag.

2008 Credit Suisse Energy Summit

Incremental Rate Relief Assumptions



- 2008 Secured: I&M Depreciation, APCo - WV Surcharge, TCC & TNC General Rate Cases, Ohio RSP (3% & 7%), PSO Peaking Generation & General Rate Case, Ohio 4% Generation Rider and Marginal Loss Recovery.
- 2008 Pending: APCo - Virginia Fuel Factor, PSO January 2007 Ice Storm Recovery, SWEPCo - LA Financial Review, other cases yet to be filed.

69% of the required 2008 rate relief already secured.

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1

Page 5181 of 9556

Regulatory Activity Underway

- Ohio Post 2008
- APCo-VA Fuel Factor Adjustment Filing
- I&M - Indiana Base Rate Case
- PSO Storm Cost Recovery Filing
- PSO Red Rock Generating Facility Cost Recovery Filing
- SPP OATT Formula Rate Filing
- New Generation:
  - IGCC Filing in Virginia and West Virginia for Certificate of Need and approval of a cost recovery mechanism
  - IGCC Phase 2 Filings in Ohio on Hold Pending Resolution of Supreme Court Challenge of PUCO’s authority
  - SWEPCo Turk Plant Filings in Louisiana and Texas
  - SWEPCo Stall Plant Filings in Louisiana and Arkansas

Sustainable Business Model

- *Strength and scale in assets & operations*
- *Continued innovation and deployment of leading technology advancements*
- *Sustainable earnings growth through near and long term capital investment opportunities*
- *Comprehensive regulatory strategy focused on maximization of cash flow and return through minimized regulatory lag*
- *Strong dividend yield with respect to peers*
- *Balance sheet and credit profile stability*

Capital Investment + Rate Relief = Earnings Growth

2008 Regulatory Activity Completed

AEP Ohio Application For 4% Provision On Generation Rate

- On January 30, 2008, a settlement agreement was approved by the PUCO allowing the generation rider to be increased to recover in 2008 an additional $28.5 million for CSPCo and $4.9 million for OPCo.
- The approved settlement also authorized the inclusion of $78 million of estimated net costs of marginal losses ($38.9 million for CSPCo and $39.2 million for OPCo) in the existing Transmission Cost Recovery Rider, with any over/under recovery of the actually incurred costs from June 2007 through December 2008 to be reflected in the 2009 TCRR recovery mechanism, including carrying charges on any such over/under recovery.

Regulatory Activity Underway

Ohio Post-2008

- On August 29, 2007, the Ohio Governor submitted legislation (SB221) that would restructure the regulation of Ohio's electric industry. The bill also includes several efficiency and renewable energy standards.
- Hearings on the legislation began on September 26, 2007 in the Ohio Senate and continued through the end of October.
- On October 25, 2007, the substitute version and associated amendments were incorporated into SB221.
- Full Senate vote occurred October 31, 2007. SB221 passed 32-0.
- Presented to House Public Utilities Committee on November 7, 2007; Hearing schedule extends to the end of January 2008 and we anticipate a signed bill in March or April of 2008.

APCo (Virginia) Fuel Factor Adjustment

- On July 16, 2007, a filing was made with the VA SCC requesting the termination of the OSS base credit and reflected 75% of OSS margins as a credit to fuel expense, consistent with new Virginia legislation. Implementation of the fuel factor was approved effective September 1, 2007, subject to review/refund.
- Intervenor testimony was filed on October 5, 2007, staff testimony filed on October 15, 2007 and rebuttal testimony filed on October 22, 2007. APCo's rebuttal testimony included adding $18.8 million to the fuel factor request related to the recovery of PJM marginal losses incurred.
- Public hearings were held on December 19, 2007. We await an order in this proceeding.

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 5190 of 9556

Regulatory Activity Underway

I&M Indiana Base Rate Case

- On June 19, 2007, I&M filed a petition with the Indiana Utility Regulatory Commission (IURC) for authority to increase its rates and charges for electric utility service and to establish and implement rate adjustment mechanisms to track certain matters.
- Requested trackers relate to reliability enhancement, demand-side management/energy efficiency programs, off-system sales margins, PJM costs and environmental compliance.
- Parties have agreed to a historic test year ended September 30, 2007, with a rate case filing date of January 31, 2008. This schedule has been approved by the IURC.
- Hearings are expected in May 2008, and an order in the first quarter of 2009.

Regulatory Activity Underway

PSO Storm Cost Recovery Filing

- On October 24, 2007, PSO filed an application with the Oklahoma Corporation Commission to defer, amortize and recover costs related to a severe January 2007 winter storm. PSO requests the Commission to direct it to establish a regulatory asset of approximately $13 million reflecting the future recovery of these costs, and to amortize the regulatory asset as PSO realizes proceeds from the sales of sulfur dioxide (SO_2) emission allowances.
- Staff and intervenor testimony was filed January 17, 2008, a settlement conference is scheduled for February 25, 2008 and hearings are scheduled for February 27 and 28, 2008.
- Staff and AG testimony was supportive of PSO's requested treatment for cost recovery.

PSO Red Rock Generating Facility Recovery Filing

- On December 28, 2007, PSO filed an application with the Oklahoma Corporation Commission to defer, amortize and recover costs related to the Red Rock Generating Facility, which was denied construction and recovery pre-approval in October 2007.
- PSO requests the Commission make a determination that the costs incurred on the Red Rock project were prudent and direct it to establish a regulatory asset of approximately $21 million reflecting the future recovery of these costs, and to amortize the regulatory asset as PSO realizes proceeds from the sales of SO_2 emission allowances.
- A procedural schedule in the case has not yet been established.

Regulatory Activity Underway

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $161MM.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to February 1, 2008, with rates subject to refund.
- Technical conferences and settlement meetings were held in October – December 2007. Settlement discussions are currently on-going.

Regulatory Activity Underway

APCo Mountaineer IGCC Filing

West Virginia

- Testimony filed with the West Virginia Public Service Commission on June 18, 2007 in support of APCo's application for a Certificate of Public Convenience and Necessity to construct a 600MW IGCC plant in WV at a cost of approximately $2.23 billion.
  - Testimony includes a proposal for the Commission to approve a cost recovery mechanism through the existing Expanded Net Energy Cost (ENEC) mechanism. The filing is not a formal proposal to adjust rates.
  - Actual requests for increased rates will be included in future filings, once construction of the plant has commenced and actual Construction Work In Progress data is known.
- Staff and Intervenor testimony was filed November 19, 2007 and hearings were held December 10-12, 2007. An order is due by March 6, 2008.

Virginia

- Testimony filed with the Virginia State Corporation Commission on July 16, 2007 seeking a prudence determination and approval to recover, beginning in 2009, Virginia's share of the carrying costs associated with the proposed plant.
- Intervenor testimony was received December 10, 2007 and Staff testimony was received on January 18, 2008. Public hearings are scheduled for February 12, 2008.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.
- Oral arguments regarding this matter were conducted at the Ohio Supreme Court on October 9, 2007. It is likely the court's decision will not be announced until some time in the first quarter of 2008.

Regulatory Activity Underway

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- The PSC issued its order on November 21, 2007, approving construction of the plant.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The peaking facility has been addressed and the intermediate facility is under review. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- Public hearings commenced September 11, 2007. Decision expected in the first quarter of 2008.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- Public hearings commenced October 17, 2007. Decision expected in the first quarter of 2008.

Regulatory Activity Underway

SWEPCo Stall Plant Filings

Arkansas

- Proceeding is currently suspended pending outcome in Louisiana.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The intermediate facility, known as the Stall Plant and sited in Shreveport, LA, was bifurcated from the original filing and had a procedural schedule established on January 9, 2008.
- Staff and intervenor testimony is due February 15, 2008, rebuttal testimony is due February 29, 2008 and hearings will commence on April 7, 2008.

Texas

- PUCT order approving plant was issued on March 8, 2007.

Rate Base & December 2007 Earned ROEs

Deutsche Bank Securities Investor Meeting

"Ohio Utility Field Trip"

August 13, 2008

Columbus, Oh

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are canceled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; volatility in the financial markets, particularly development affecting the availability of capital on reasonable terms and developments impairing our ability to refinance existing debt at attractive rates; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

	Carrying Charges on Dfd Fuel	**6.2M**	**16.7M**	**TBD**	**TBD**	**TBD**	**TBD**	Exhibit LVA-1
Note 8	**Economic Development**	**25.0M**	**0.0M**	**25.0M**	**0.0M**	**25.0M**	**0.0M**	JH Test P16

Note 1: AEP Ohio requested a phase-in of proposed incremental FAC expenses during the three-year ESP period.Additionally, there will be a periodic true-up of the current period actual FAC to what was recovered in rates for that period. This will produce on-going periodic under/over recoveries of FAC costs for the period that have not been estimated for 2010 or 2011.

Note 2: Represents capital carrying cost on environmental facilities not currently reflected in rates. Exhibits PJN-8 & PJN-10 provides calculation of the environmental carrying cost and components of the carrying cost rate applied to the capital expenditures, respectively.

Note 3: We requested a 3% & 7% per year increase in non-FAC generation for CSP & OPCo, respectively, consistent with the RSP increases. Exhibit PJN-8 shows capital carrying cost on incremental environmental facilities forecasted for 2009. Exhibit PJN-10 provides the calculation and components of the carrying cost rate applied to the capital expenditures.

Note 4: Represents the Provider of Last Resort charge which is addressed in the testimony of Craig Baker starting on page 25.

Note 5: We requested an annual 7% & 6.5% per year increase in Distribution for CSP and OPCo, respectively. Exhibit DMR-4 shows both expected O&M & carrying charge cost of capital for reliability and in the case of CSP, gridSMART, for the 2009-2011 time period. The carrying charge costs are provided on Exhibit PJN-10.

Note 6: Represents estimated costs to provide AEP-sponsored customer demand response and energy efficiency programs. These costs are discussed in the Sloneker testimony starting on page 18.

Note 7:

	2009 CSP	2009 OPCo	2011 CSP	2011 OPCo
Expiration of Special Contract	-$22.7M	-$27.1M		
Reg Asset Surcharge	-$54.2M		22.8M	15.2M
Other	-$3.8M	$0.0M		
Total Other	**-$80.7M**	**-$27.1M**	**$22.8M**	**$15.2M**

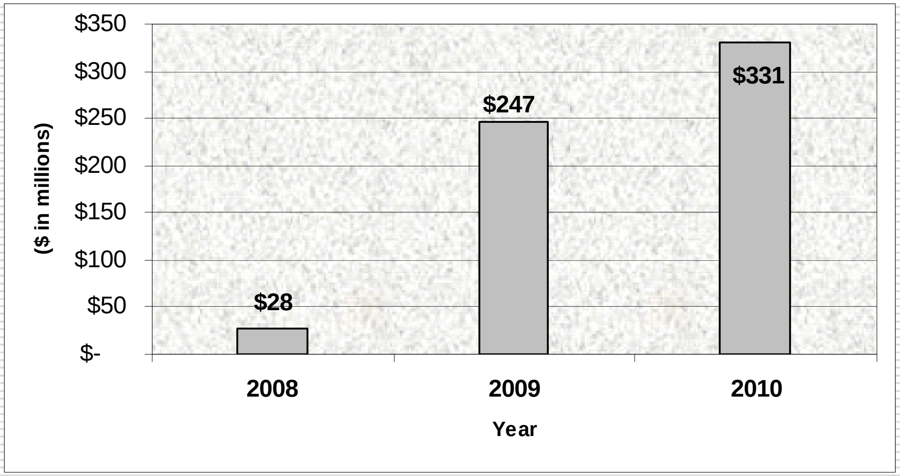
A special contract expires 12/31/08 and the customer will go on the standard tariff.
The revenue reduction associated with the elimination of the reg asset surcharge in 2009 will be offset by the reduction in related amortization.
Other of $3.8M represents the expiration of monthly line extension surcharges.

In 2011 we have requested the authority to start amortizing deferrals previously approved by the PUCO, including customer choice (ETP and RSP cases), among others.

Note 8: $25 million will be provided annually by AEP Ohio to a "Partnership with Ohio" fund created by AEP Ohio for low-income assistance and economic development.

Transmission – Investments and Earnings Contributions

Projected Transmission Capital Spending*

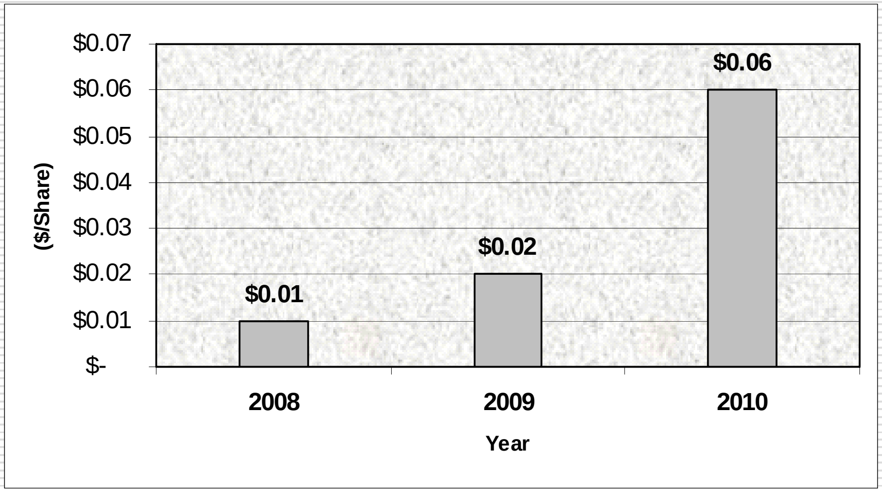


* ETT and PATH joint ventures included in above projection. Amounts represent AEP's 50% share of total transmission joint venture capital expense. These amounts are excluded from AEP's base capital forecast because the joint ventures are not consolidated for financial reporting purposes. AEP will be responsible for funding 40-50% of these amounts with equity contributions, and the remainder will be financed with debt issued by the joint ventures.

ETT
Electric Transmission Texas

PATH
Potomac-Appalachian Transmission Highline

Projected Transmission EPS Contributions*



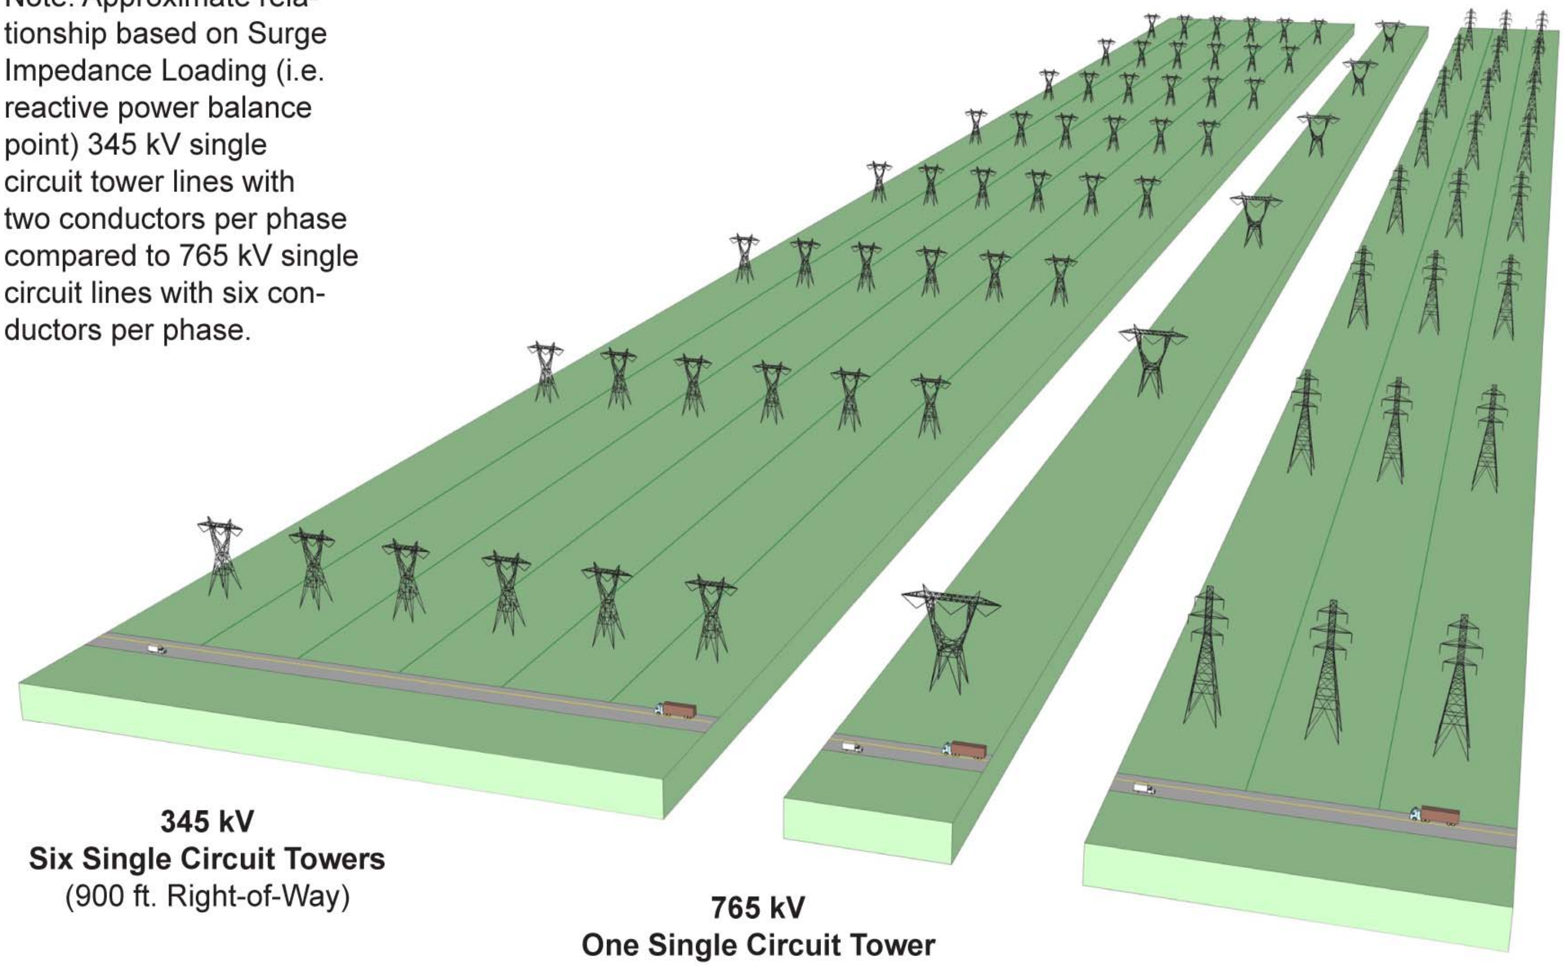
* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

AEP®

Transmission will provide a near and long term catalyst for growth.

765 Right-of-Way Comparison

Note: Approximate relationship based on Surge Impedance Loading (i.e. reactive power balance point) 345 kV single circuit tower lines with two conductors per phase compared to 765 kV single circuit lines with six conductors per phase.



345 kV
Six Single Circuit Towers
(900 ft. Right-of-Way)

765 kV
One Single Circuit Tower
(200 ft. Right-of-Way)

345 kV
Three Double Circuit Towers
(450 ft. Right-of-Way)

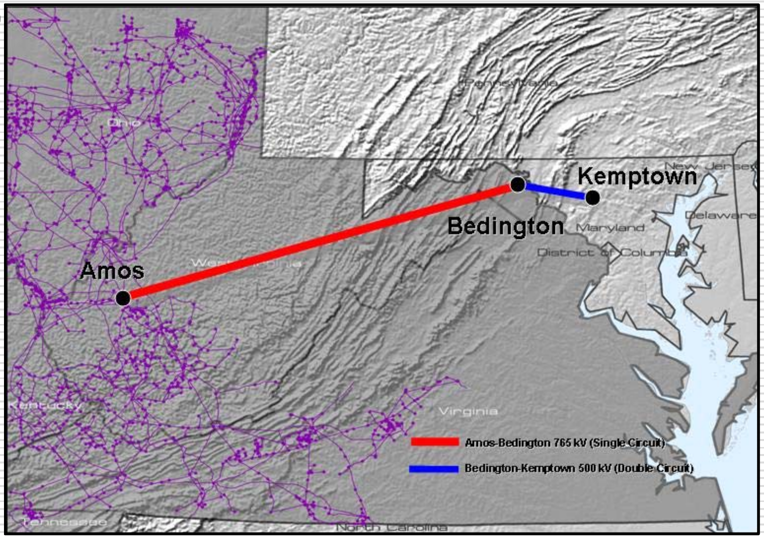
From a siting standpoint, 765-kV is more efficient in terms of economies of scale and right-of-way than lower capacity lines.

AEP®

I-765™ Transmission in PJM: PATH

- *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries -- to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP
    - 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
  - FERC ordered the formula rate mechanism be set for hearing, pending settlement judge procedures

- *Key Next Steps*
  - Siting Approval from WV and MD - 2010
  - Targeted Completion - 2012



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

- *Funding Plans/Transaction Structure*
  - AEP and Allegheny share ownership of Amos – Bedington line and contribute equally to this portion of the project through PATH West Virginia Transmission Company, LLC
  - AEP's investment will be held in the AEP Transmission Holding Company LLC subsidiary

Potomac-Appalachian Transmission Highline

AEP®

Joint Ventures with MEHC

Electric Transmission Texas Update

- *Transaction Structure*
  - 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
  - ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
  - Services provided by AEP and investment opportunities can be offered by either partner
  - Total initial investment of $70 million before ownership division
- *Next Steps*
  - Await PUCT approval of consortium proposal, which includes ETT's portion of 710 miles of new transmission at an estimated cost of between $1.5 billion and $1.7 billion
  - Anticipate transferring some project opportunities in 2008 after regulatory approvals obtained.

Electric Transmission America Update

- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.
  - ETA recently signed agreements with Westar Energy and OGE proposing to build the first and second segments of the 765-kV Overlay Plan in SPP

AEP®

I-765™ Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- ***Overview***
  - Sent non-binding Letter of Commitment to SPP to construct 765-kV and 500-kV projects in SPP region consistent with SPP Overlay Study – Summer 2007
  - Updated EHV Overlay Study completed by SPP – March 2008
- ***Benefits***
  - Overall reliability reinforcement with improved voltage support throughout the SPP system
  - Significantly increased transfer capability
  - Provides access to new generation resources, especially renewables
  - Allows for effective interconnections for EHV system development
- ***Next Steps***
  - ETA Partnering Agreements - 2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate and Cost Allocation Filing (postage stamp) – 2009
  - Siting Approval for projects – 2009-2011
  - Estimated Completion (in segments) – 2013-2017

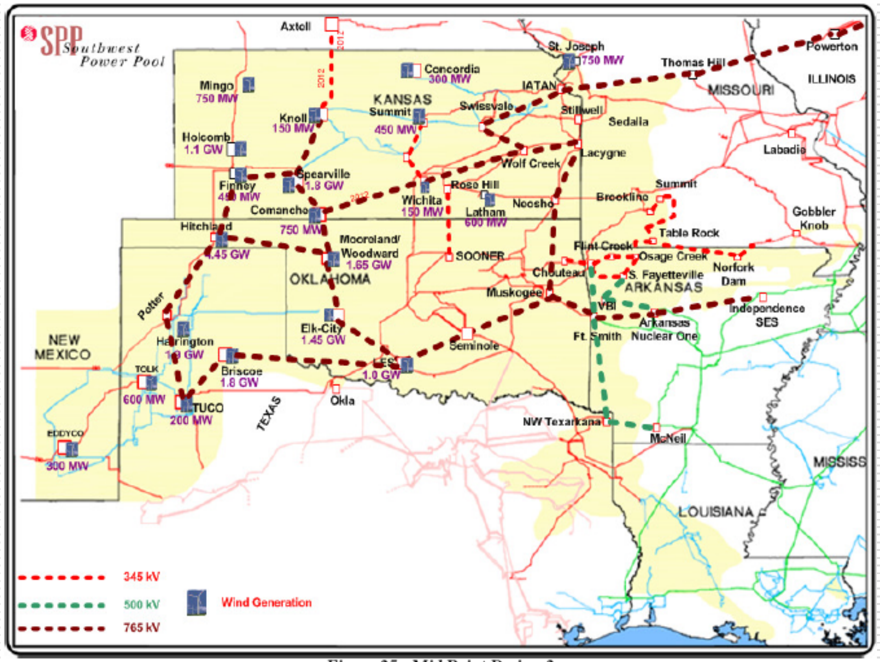


Figure 25: Mid Point Design 2

Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

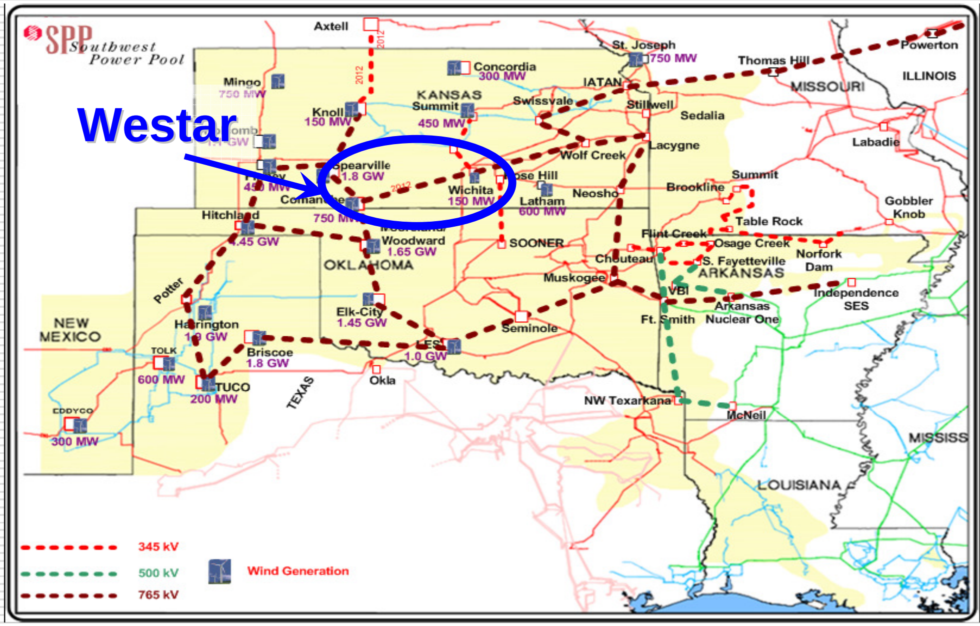
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP®

Prairie Wind Transmission, LLC

JV to build first segment of 765-kV transmission in SPP

- *Overview*
  - On May 19, 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT)
  - PWT is a 50/50 JV that is proposing to build approximately 230 miles of 765-kV lines extending from Wichita, Kan., west to a substation northeast of Dodge City, Kan., and then south to the Kansas border from Medicine Lodge, Kan.
  - The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region
  - Project is expected to cost approximately $600 million (based on SPP estimates) and be in-service by 2013
  - AEP's ownership of the joint venture is 25%
  - AEP obligations include oversight of 765-kV Engineering, 765-kV Technology and Project Management
  - Other responsibilities will be handled by the partners or outsourced
- *Next Steps*
  - File CPCN –2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate Filing (postage stamp) – 2009
  - SPP Cost Allocation Filing - 2009
  - Siting Approval – 2009
  - Estimated Completion – 2013



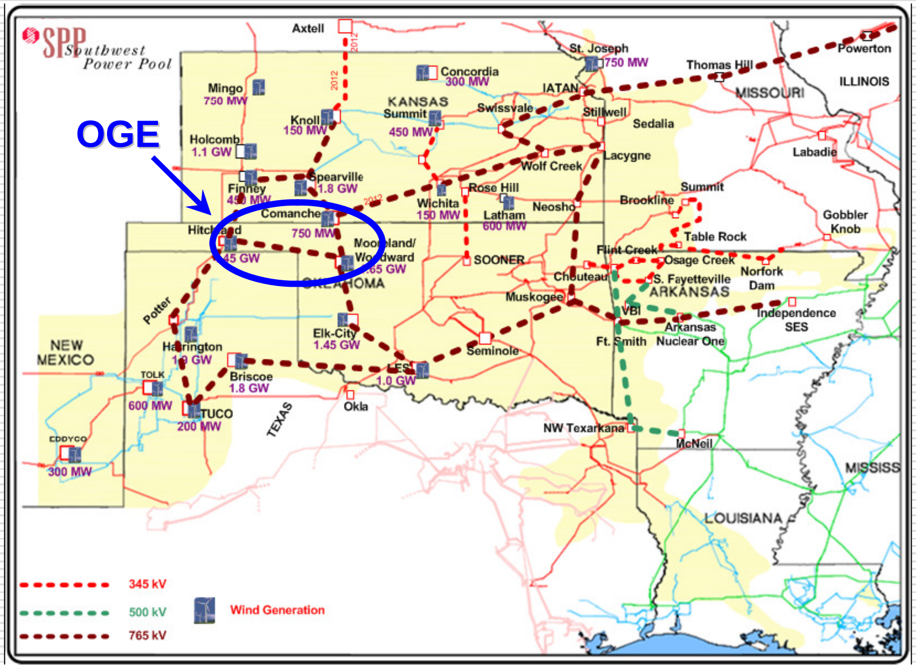
Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

ETA JV with OGE

JV to build second segment of 765-kV transmission in SPP

- *Overview*
  - On July 15, 2008, ETA signed an agreement with OGE Energy Corp. to form a joint venture
  - The JV is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines extending from the Kansas-Oklahoma border north of Woodward, OK, that will link into OGE's station at Woodward and then extend west to a new station that will be built near Guymon, OK.
  - The project will provide enhanced electricity transport in Oklahoma and support expansion of renewable electricity generation in the region
  - Project is expected to cost approximately $500 million (based on SPP estimates) and be in-service by 2013
  - AEP's ownership of the joint venture is 25%
  - AEP obligations include oversight of 765-kV Engineering, 765-kV Technology and Project Management
  - Other responsibilities will be handled by the partners or outsourced



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

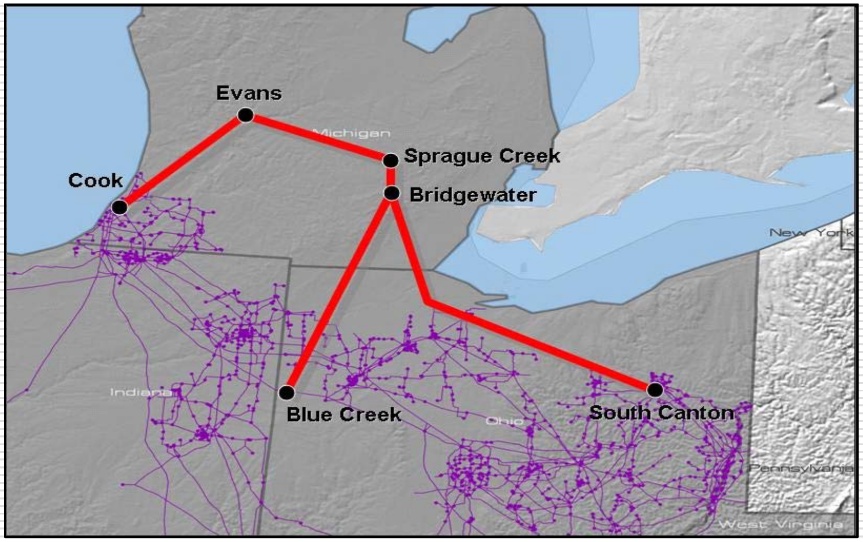
- *Next Steps*
  - File CPCN –2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate - 2009
  - SPP Cost Allocation Filing – 2009
  - Siting Approval – 2009
  - Estimated Completion – 2013

AEP®

I-765™ Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

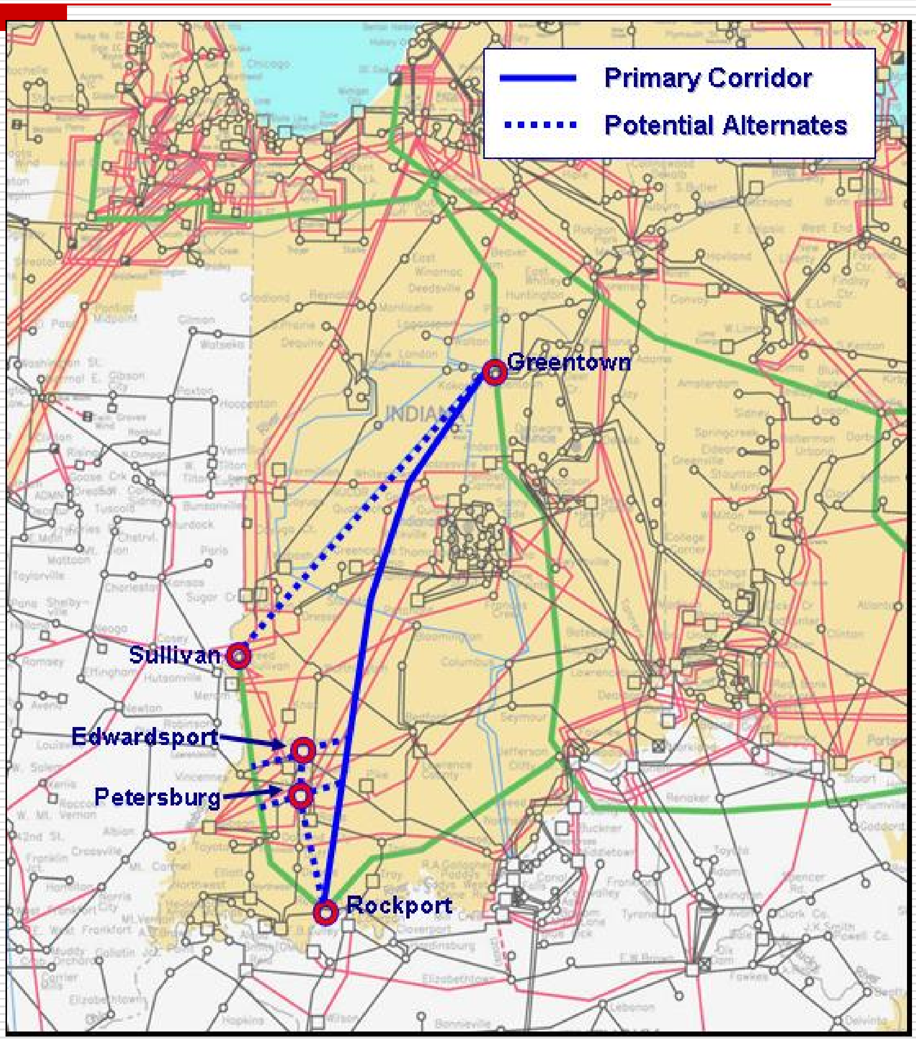
- *Overview*
  - ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
  - Study was released Q3 2007
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.6 billion investment (before ownership division)
  - AEP and ITC are in discussions to form a Joint Venture
- *Benefits*
  - Up to 5,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- *Next Steps*
  - Agreement on JV (AEP/ITC) - Summer 2008
  - JV Formation - 2008
  - MISO and PJM Review/Approval - 2009
  - FERC Formula Rate & Cost Allocation Filing - 2009
  - Siting Approval – 2011-2012
  - Estimated Completion –2015-2021



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Pioneer Transmission, LLC

- *Overview*
  - On August 11, 2008, AEP & Duke formed a joint venture to build and own a 765-kV transmission line. Pioneer Transmission LLC is a 50/50 joint venture between the two companies.
  - The primary project involves the construction of approximately 240 miles of 765-kV lines extending from AEP's Rockport substation east of Evansville, Indiana with Duke's Greentown substation near Kokomo, Indiana.
  - Project is expected to cost approximately $1 billion, but final costs will depend on th routing of the line, equipment and commodity costs. AEP's share of the costs will be 50% of the total.
  - In-service date will be determined by the MISO and PJM planning process, with earliest possible completion in the 2014-2015 timeframe.

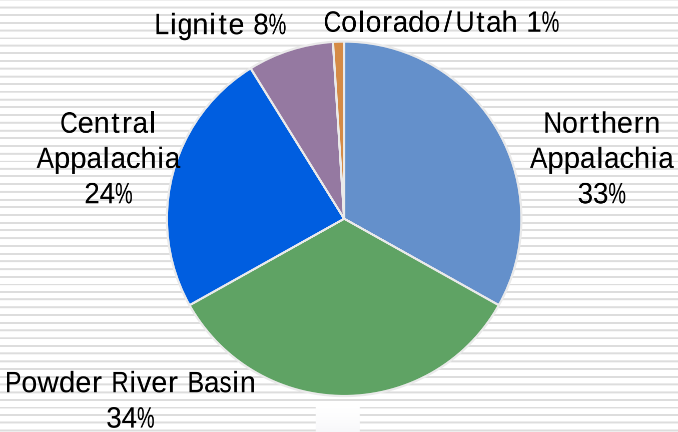


- *Next Steps*
  - Submit proposal to PJM & MISO for consideration in their transmission expansion plans
  - FERC filing for rate approval – 2008
  - Estimated Completion – 2014-2015

Coal Procurement – 2008 Projected

AEP burns approx. 76 million tons of coal per year

Total AEP System



Coal Stats:

- > 95% contracted for 2008
- Avg. delivered price ~ $36.58/ton in 2007
- Approximate 20% price increase in 2008 based on 2007 actual results.

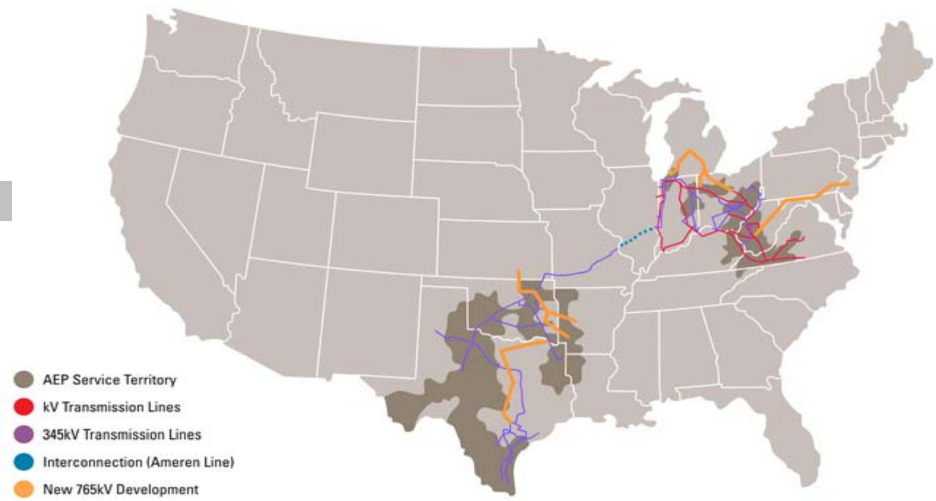
The AEP Footprint

Strength & Scale in Assets & Operations

- **5.1 million customers in 11 states**
- **Industry-leading size and scale of assets:**

Asset	Size	Industry Rank
Domestic Generation	~38,400 MW	#2
Transmission	~39,000 miles	#1
Distribution	~208,000 miles	#1

- **Coal & transportation assets:**
  - Control over 8,000 railcars
  - Own/lease and operate over 2,600 barges & 51 towboats
  - Coal handling terminal with 20 million tons of capacity



AEP Generation Portfolio				
Coal	**Gas**	**Nuclear**	**Hydro**	**Wind**
67%	24%	6%	2%	1%

AEP enjoys significant presence throughout the energy value chain.

AEP Strategy

Strategy: grow our core utility business at a consistent rate through major investment supported and funded by innovative programs for regulatory recovery as well as develop our independent, federally regulated Transmission Company for the pursuit of new major interstate projects.

Our Focus:

- Prepare for transition to market in Ohio
- Invest in and evolve infrastructure to support future technology and customer needs focused on efficiency, conservation and load management
- Enhance cash flow & earnings through rate recovery mechanisms
- Take advantage of AEP's size to bring economic savings to our customers while continuing to enhance shareholder value through regulatory-supported investment and operational excellence

Sustained capital investment opportunities support earnings growth.

2007 Delivered Results

Accomplishments:

- ✓ **Acquisition of low-cost generation to meet capacity demand**
  - Darby—480MW simple cycle ($227/kW)
  - Lawrenceburg—1,140MW combined cycle ($295/kW)
  - Dresden—580MW combined cycle (currently under construction); anticipated all-in cost $600-$700/kW
- ✓ **Brought SWEPCo's Mattison Units 3&4 (150MW) on-line July 2007 (~$380/kW)**
- ✓ **Completed installation of scrubbers at Mitchell & Mountaineer**
- ✓ **Continued progress on transmission opportunities**
  - Obtained PJM approval of Potomac-Appalachian Transmission Highline
  - Formed joint venture with Allegheny Energy to construct the PATH
  - Formed joint ventures with MidAmerican Energy for ETT & ETA
  - Completed technical study with ITC for 765-kV in Michigan and continue to investigate the feasibility of forming a joint venture to develop the project
- ✓ **Secured to-date $325MM of $338MM of 2007 rate relief projections**
- ✓ **On track to deliver 5%-7% growth rate in 2007**

AEP continues track record of capital investment, regulatory approvals and earnings growth.

Vision for Sustainability

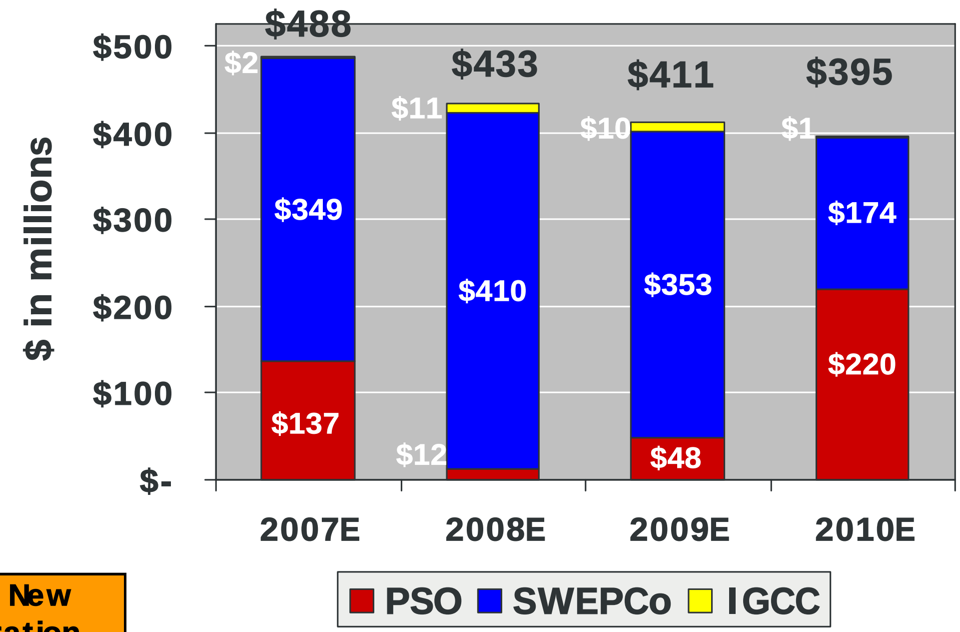
New Generation Investments and Related Recovery

Secured Recovery Mechanism

- PSO Peaking Facilities Rider



($ in millions)	Projected Construction Completion	Total New Generation Investment (2007-10)
PSO - Peaking Facilities	2008	$102
PSO - Combined Cycle *	2012	$315
SWEPCo - Mattison	2007	$66
SWEPCo - Stall	2010	$422
SWEPCo - Turk	2011	$798
APCo - IGCC	tbd	$12
CSP/OPCo - IGCC	tbd	$12
Total Capex	Total Capex	$1,727

* - intended to source requirements to be met by Red Rock Plant prior to cancellation.

Additional Recovery Mechanisms Under Consideration:

- Formula based rates
- Requests for return on CWIP
- Current and future rate cases

GridSMART

AEP Vision

- AEP is moving technology out of the laboratory and into real-world applications
- Aggressive goals:
  - 25 MW NaS battery installations by 2010
  - 1,000 MW demand reduction by 2012
  - 5 million smart meters by 2015

AEP Leadership

- **Environmental:** AEP's fleet includes hybrids
- **Efficiency and Conservation:** DOE Transformer Efficiency Initiative and participation in the Clinton Global Initiative
- **Education:** AEP Foundation's support of the National Energy Education Development (NEED) Project and Change-a-Light Program
- **Technology:** High temperature superconductors, micro grid test bed and extra-high voltage transmission advances

AEP's Collaboration with Others

- NGK (NaS battery) & Rolls Royce (fuel cells)
- Collaboration with GE to demonstrate the distribution/customer service business of the future

Modernization of our distribution infrastructure will change how we manage the flows of information and electricity across the energy value chain to optimize overall performance and prepare for the future.

AEP-GE Initiative

We will deploy smart meters, distribution automation and the associated enhanced technology resulting from the collaboration with GE in two regions by the end of 2008 -- representing approximately 200,000 customers.

By integrating customers and their end use technologies into the daily operation of the grid, we can collaborate to optimize supply and demand and improve energy efficiency and environmental sustainability.

Our agreement with GE is a winner for our customers, our shareholders and for the environment.

AEP AMERICAN ELECTRIC POWER

Working Together for a Brighter Future

imagination at work

AEP and GE will collaborate to address the full energy pathway from the power plant to the home.

GridSMART

GridSMART: implementing AEP's vision for the distribution and customer services business in the future, including the development of new customer programs to reduce consumption and peak demand, and a plan to deploy advanced technologies.

Capital Investment, Subject to Regulatory Approval * $ in millions

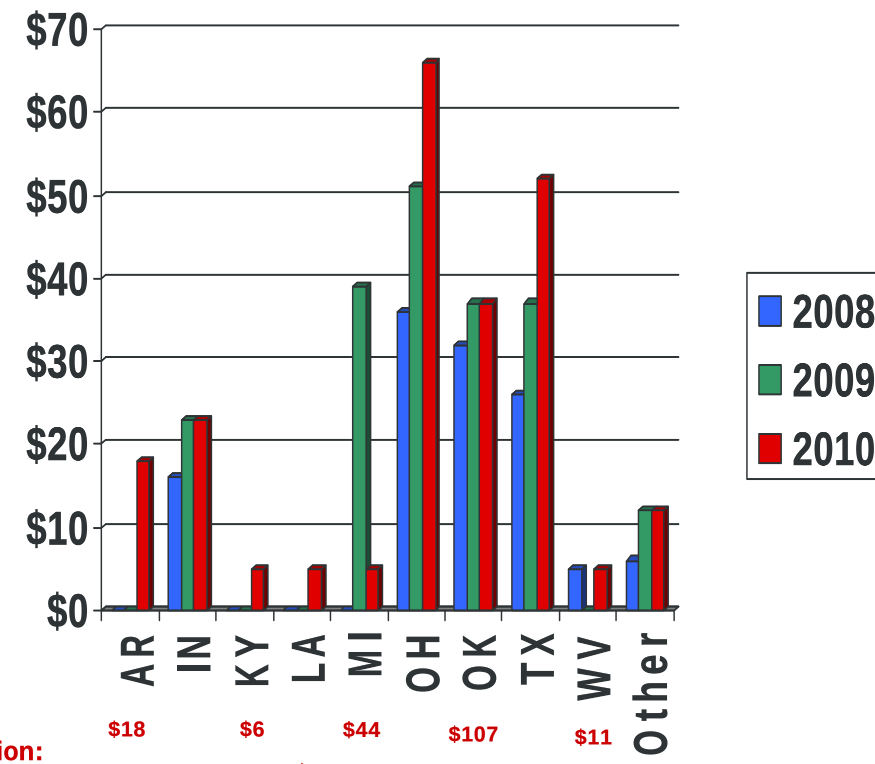
*$452MM of the $554MM not in current forecast; spending contingent upon regulatory approval

$ in millions



3-Year Total by Jurisdiction: $18 $62 $6 $5 $44 $153 $107 $115 $11 $31

AEP will continue to be an industry leader in deploying advanced technology on a commercial scale. $554MM capital investment by 2010, subject to regulatory approval.

STRATEGIC DIRECTION & FINANCIAL OUTLOOK

Contribution of Transmission Investments

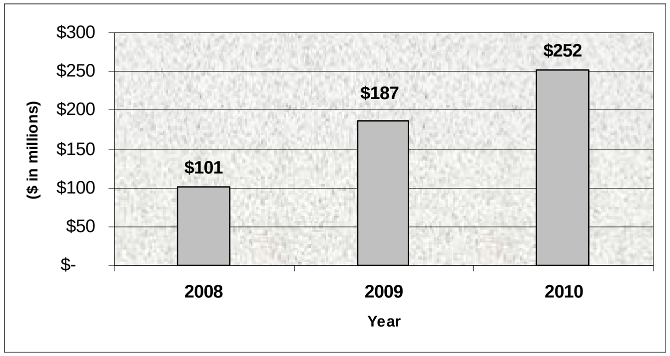
Potential Transmission Opportunities

- ~ $3 Billion I765™ Project in PJM
- ~ $2.6 Billion 765-kV study in Michigan w/ ITC
- ~ $3 Billion Project filed with SPP
- ~ $1-7 Billion in ERCOT via Electric Transmission Texas, LLC (ETT)

Assumptions

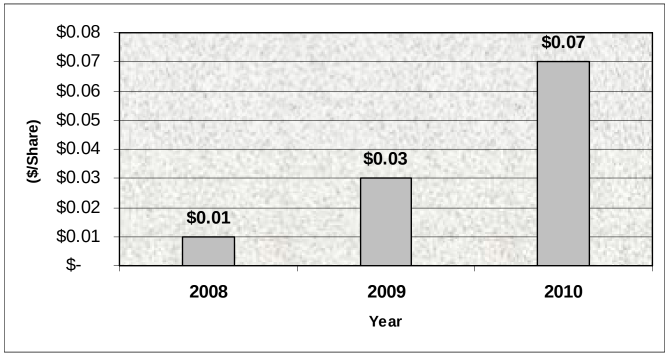
Estimated Investment Opportunity	$9 - $15 Billion
Ownership Structure w/ Partner	50% / 50%
Debt / Equity Ratio	50% debt / 50% equity
Return on Equity	11.00% - 13.00%
Potential EPS Impact (based on 402 MM shares)	$0.60 - $1.00+

Projected Transmission Capital Spending*



* ~$9-$15 billion investment opportunity not included in current capital guidance forecasts, since it will be put into a JV. ETT base case and PATH projects included in above projection.

Projected Transmission EPS Contributions*



* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

Transmission will provide a near and long term catalyst for growth.

Capital Investment + Rate Relief = Earnings Growth

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 5231 of 9556

Regulatory Strategy: Reduce Lag

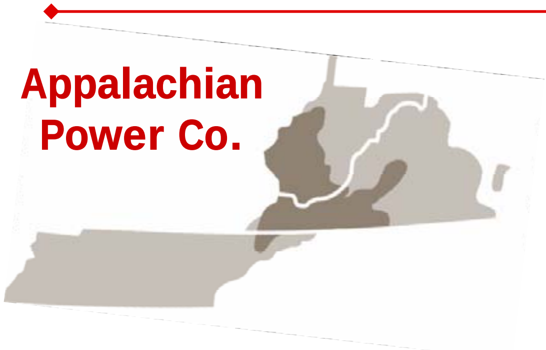
The strategy: reduce the time between in-service dates and rate recovery

- Maximize frequency of filings
  - Seek ability to pro-forma both capital and O&M through date which rates are effective
- Single-issue cost recovery
  - Reliability
  - Vegetation
  - Environmental
- Trackers
  - Federally-approved transmission costs
  - Fuel and emissions
  - ERO compliance costs
  - Off-system sales margin sharing
- Formula rates
- Return on CWIP

Our goal is to maximize utility company cash flow and returns by minimizing regulatory lag.

Regulatory Lag Reduction: East Regulated Utilities

Appalachian Power Co.



Customers: 949,000
Estimated Rate Base: $3.7B *
Estimated 2007 Earnings: $183MM

Indiana Michigan Power Co.

Customers: 582,000
Est. Rate Base: $2.1B *
Est. 2007 Earnings: $130MM

Kentucky Power Co.

Customers: 176,000
Estimated Rate Base: $.9B *
Estimated 2007 Earnings: $27MM

* See Appendix, page 43 for rate base details

Virginia
- Opportunity for one rate case exists before 12/31/08
- E&R rider
- Post 2008 rider for DSM, renewable programs & new generation
- Fuel clause
- OSS margin sharing

West Virginia
- Special construction surcharge permitted
- Fuel clause (ENEC)

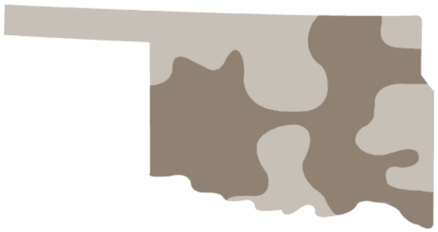
Indiana
- Riders to be requested for DSM, Environmental and RTOs
- CWIP may be approved for clean coal technology projects utilizing Indiana coal or qualified pollution control property via surcharge
- Fuel clause

Michigan
- Return on CWIP can be included in rate base
- Fuel clause

Kentucky
- Environmental surcharge
- Monthly adjustment clauses in place for DSM & fuel
- OSS margin sharing

Regulatory Lag Reduction: West Regulated Utilities

Public Service of Oklahoma

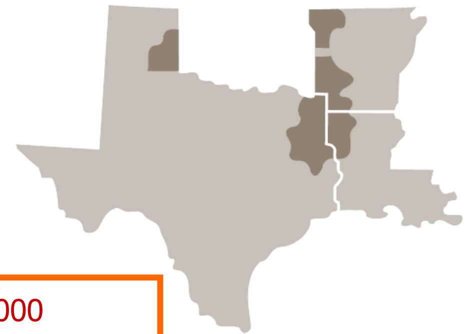


Customers: 520,000
Estimated Rate Base: $1.2B *
Estimated 2007 earnings: $35MM

* See Appendix, page 43 for rate base details

Oklahoma
- Rider mechanisms authorized for vegetation, Lawton Cogen & new peaking facilities after December 2007 in-service date
- Fuel clause
- OSS margin sharing

Southwestern Electric Power Co



Customers: 456,000
Est. Rate Base: $1.3B *
Est. 2007 earnings: $66MM

Arkansas
- CWIP permitted in rate base for plant that is placed in service within 6 months after the test year
- Fuel clause
- OSS margin sharing

Louisiana
- Formula rate plans permitted
- Fuel clause
- Seeking partial CWIP return on new generation projects
- OSS margin sharing

Texas
- CWIP allowed in rate base in some cases
- Fuel clause
- OSS margin sharing

Regulatory Lag Reduction: Texas Wires Business

AEP Texas Central Co & AEP Texas North Co

Customers: 927,000
Estimated Rate Base: $2.1B *
Estimated 2007 earnings: $73MM

* See Appendix, page 43 for rate base details

Texas

- Transmission rider provides annual recovery dependent on the level of transmission investment and ERCOT load growth rates
- AFUDC is permitted in limited circumstances

AEP Texas will synchronize general rate requests with significant rate base changes and benefit from the flexibility of periodic transmission filings.

The AEP Ohio Post-2008 Action Plan

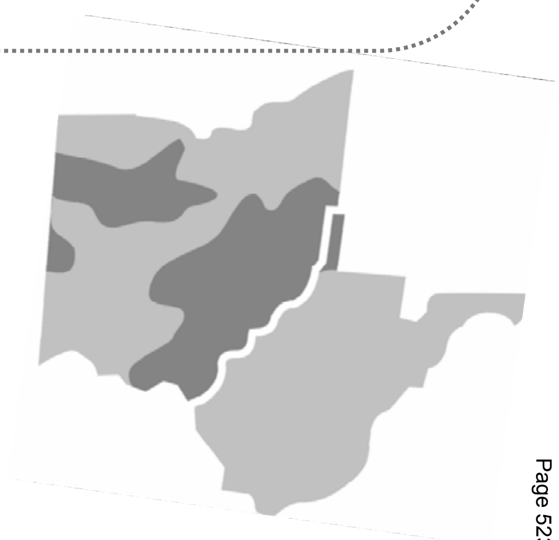
Concurrent pursuit of regulatory and legislative options

- Work for a legislative outcome that:
  - Allows for market pricing or
  - Allows for new Rate Stabilization Plans that reflect a value for generation consistent with market
- If legislation is not forthcoming, work with the PUCO Staff to develop new Rate Stabilization Plans that reflect the market value of generation

Essential elements of Post-2008 Plan

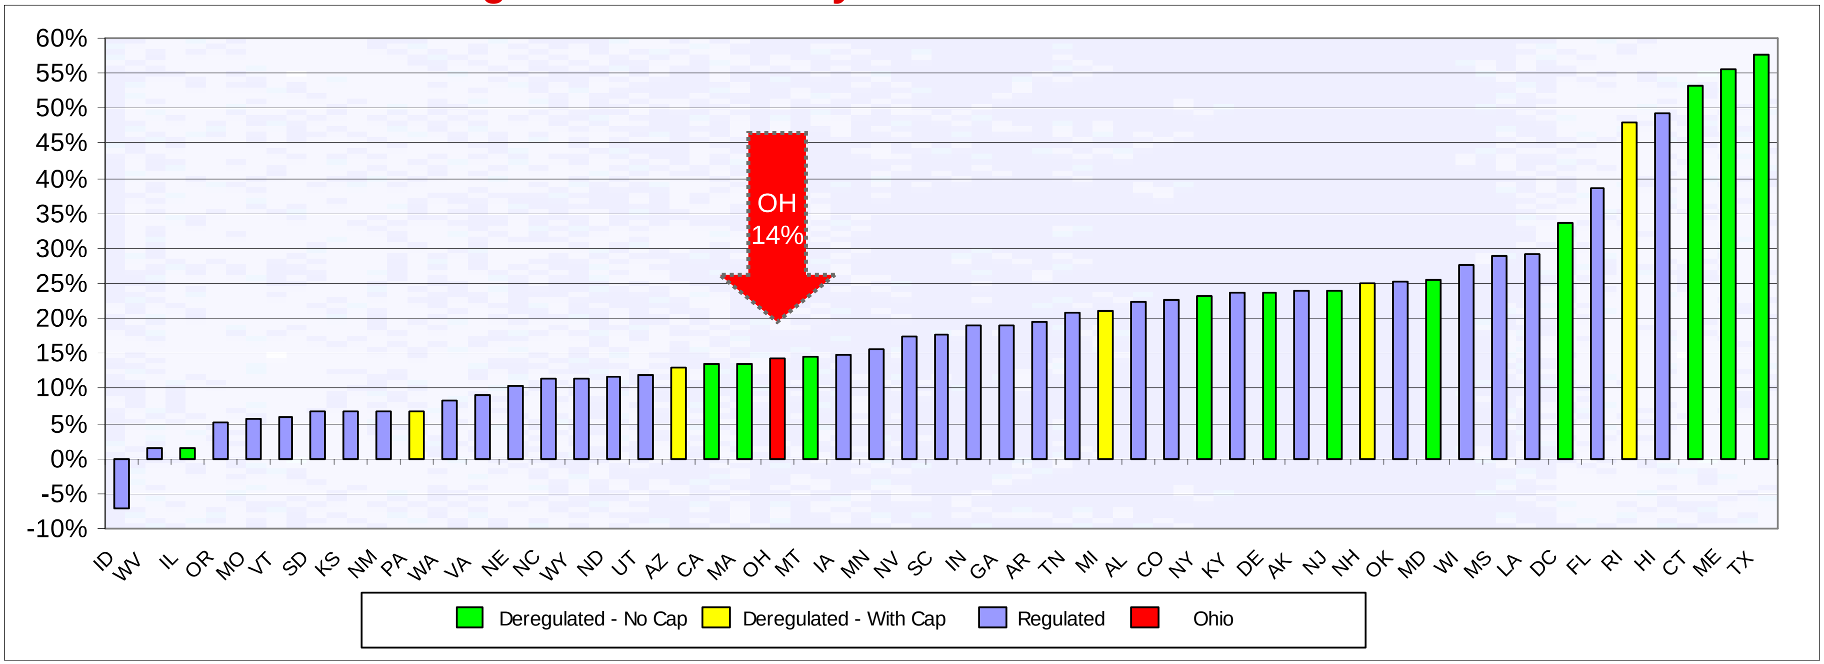
- Market-based generation pricing option
- Recovery mechanisms for new plants, fuel clause, environmental investments, GridSMART initiatives, energy efficiency projects and renewable energy investments
- Well-defined parameters for PUCO authority

Achieve a sustainable balance between shareholders and the Ohio economy.



Electricity Costs Have Increased in Both Regulated and Deregulated States

2002-2006 % Change in Electricity Prices

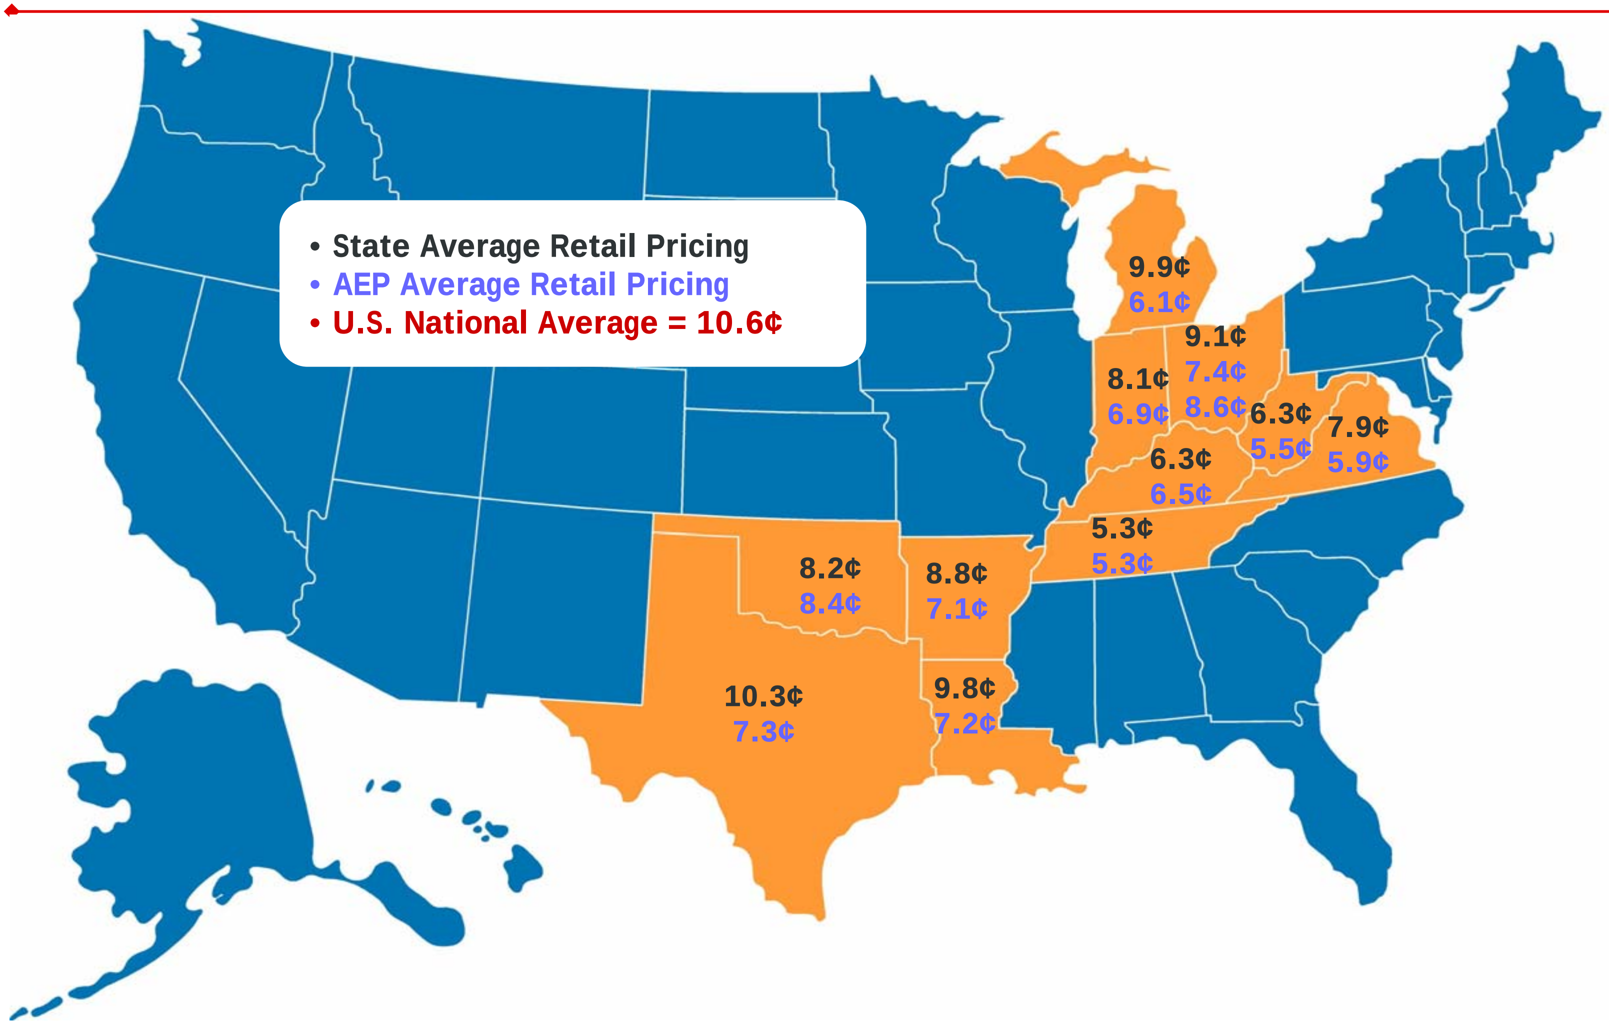


Source: USA Today, Aug. 10, 2007

- **Deregulated states median increase: 25%**
- **Regulated states average increase: 23%**
- **Ohio average increase: 14%**

Ohio increased less than the average of both regulated & deregulated states. Under any scenario, rates in Ohio will likely increase.

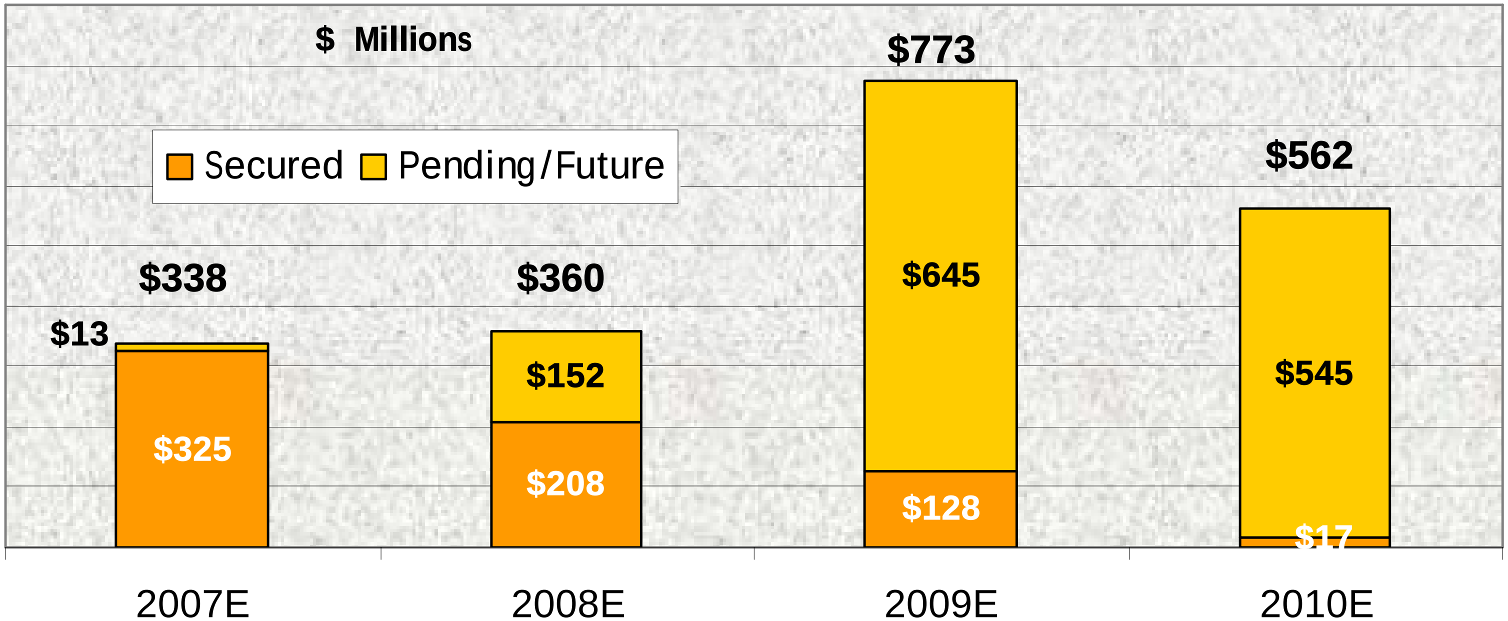
Average Retail Price of Electricity



AEP's pricing will remain competitive following anticipated rate increases.

Data source: EEI Summary of Average Realizations for the twelve months ended December 31, 2006
Ohio: OPCo = 7.4¢ / CSP = 8.6¢

Incremental Rate Relief Assumptions



2007 Pending: PSO Rate Case
TCC Rate Case
Ohio 4%

2008 Secured: Ohio 3% & 7%
I&M Depreciation
APCo-WV Construction Surcharge
PSO Peaking Generation

2007 - 2010 projected annual rate increases of 5.5%

Financial Forecast Highlights

- **Updated 2008 & 2009 earnings guidance ranges and introduction of 2010**

2007 Range $2.90 to $3.00	**2008 Range $3.05 to $3.25**
2009 Range $3.20 to $3.50	**2010 Range $3.45 to $3.80**

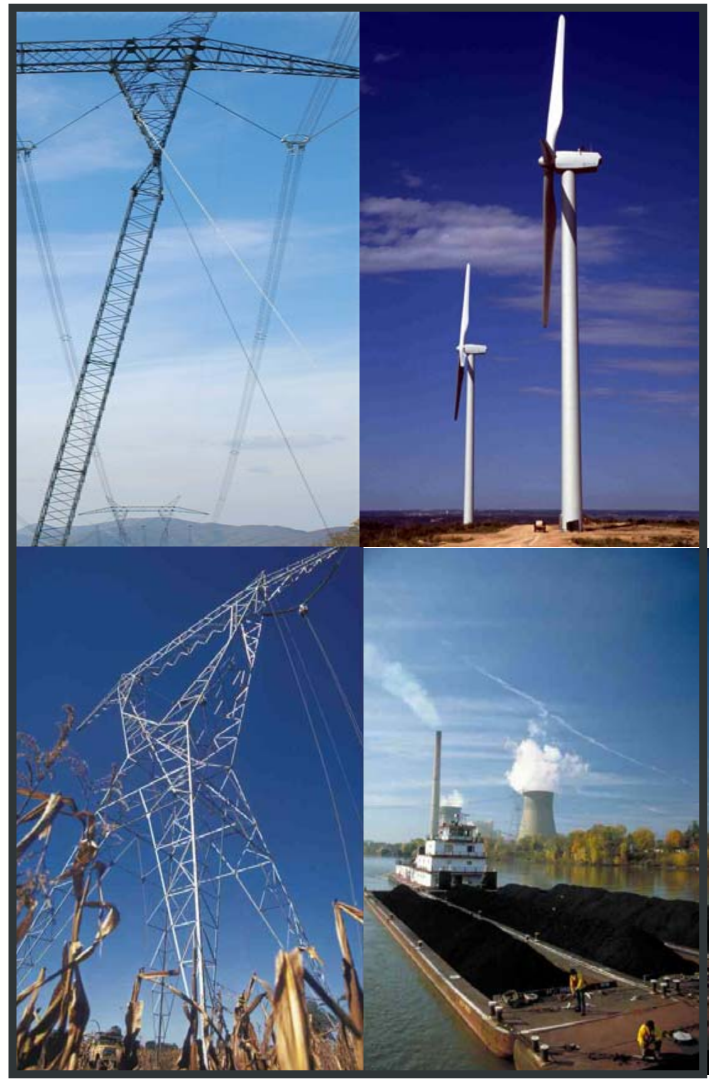
- Increased EPS growth range: 5-9% (2007-2010)
  - Disciplined investment in utility operations
  - Innovative rate recovery for new investments
  - Ohio: Continue momentum toward market
  - Cost management
- Commitment to recommend an 8-cent/share increase in annual dividend effective 4Q07 (from $1.56/share to $1.64/share annually)
- Refined capital investment forecast and introduction of 2010 level

2007E: $3,962 MM	**2008E: $3,770 MM**
2009E: $3,600 MM	**2010E: $3,401 MM**

- Maintain credit ratings: BBB/Baa2/BBB

Value Proposition

- *Strength and scale in assets & operations*
- *Continued innovation and deployment of leading technology advancements*
- *Sustainable earnings growth through near and long term capital investment opportunities*
- *Comprehensive regulatory strategy focused on maximization of cash flow and return through minimized regulatory lag*
- *Strong dividend yield with respect to peers*
- *Balance sheet and credit profile stability*



Sustainable Business Model

STRATEGIC DIRECTION & FINANCIAL OUTLOOK

Credit Quality Parameters

Forecast Parameters:

- $150MM annually in new equity from Dividend Reinvestment and 401(k) plans
- Target 60% maximum consolidated debt/cap ratio on an adjusted basis
- Target utility company capitalization structures:

Company	Target Equity Ratio
APCO	42-44%
CSP	45-47%
I&M	40-42%
KPCO	41-43%
OPCo	44-46%
PSO	43-45%
SWEPCo	43-45%
TCC	40%
TNC	40%

- Long term dividend payout ratio range of 55-60%
- Maintain adequate coverage ratios to support current credit ratings
  - FFO to Interest range of 3.7x to 4.2x
  - FFO/Total Debt range of 16% to 19%

2008 Projected Cash Flow

	2007 Estimate	2008 Estimate
Beginning Cash Balance	$ 301	$ 102

2008 Earnings Guidance

		2007 Guidance ($ millions)	2008 Guidance ($ millions)
	UTILITY OPERATIONS:		
	Gross Margin:		
1	East Regulated Integrated Utilities	2,440	2,425
2	Ohio Companies	2,433	2,497
3	West Regulated Integrated Utilities	1,046	1,111
4	Texas Wires	520	536
5	Off-System Sales	617	642
6	Transmission Revenue - 3rd Party	276	331
7	Other Operating Revenue	627	545
8	Utility Gross Margin	7,959	8,087
9	Operations & Maintenance	(3,353)	(3,328)
10	Depreciation & Amortization	(1,476)	(1,479)
11	Taxes Other than Income Taxes	(775)	(788)
12	Interest Exp & Preferred Dividend	(773)	(864)
13	Other Income & Deductions	101	191
14	Income Taxes	(566)	(582)
15	Utility Operations On-Going Earnings	1,117	1,237

Performance Drivers

Retail Sales (lines 1-4):

- Positive load growth - $132MM
- Continued rate relief - $228MM
- Offset by fuel and PJM costs - $(186)MM

Off-System Sales (line 5):

- Increase due to slightly higher margins

Transmission Revenue (line 6):

- Higher rates in ERCOT, PJM and SPP

Other Operating Revenue (line 7):

- Lower revenues from third party work, primarily offset in line 9 - O&M

Operations & Maintenance (line 9):

- Continued emphasis on cost control

Interest Expense (line 12):

- Increased long term debt outstanding

Other Income & Deductions (line 13):

- Additional 2008 APCo E&R carrying charges & AFUDC, offset by elimination of Centrica earnings sharing mechanism in 2008

Income Taxes (line 14):

- Higher pre-tax income, offset by change in effective tax rate. Effective tax rate for utility operations is 33.6% in 2007 and 32.0% in 2008.

2008 Earnings Guidance

	2007 Guidance ($ millions)	2008 Guidance ($ millions)
TRANSMISSION OPERATIONS	-	5
NON-UTILITY OPERATIONS:		
MEMCO	67	57
Generation & Marketing	29	21
Non-Utility Operations On-Going Earnings	96	78
Parent and Other On-Going Earnings	(40)	(51)

Performance Drivers

Transmission Operations:

- Equity earnings contribution from Electric Transmission Texas LLC

MEMCO:

- Decrease due to increasing costs and reduced import/northbound river traffic

Generation & Marketing:

- Decrease due to divestiture of Sweeny in 4Q07

Parent & Other:

- Increase loss due primarily to interest expense related to hybrid securities issued at the parent

Performance Sensitivities

Driver	Change	Effect
EPS Sensitivities		
Load Growth (MWh)	1%	$0.10 EPS
Utility O&M	1%	$0.05 EPS
Capital Spending	$250M	$0.03 EPS
Unit Availability	1%	$0.04 EPS
ECAR Power Price	$1/MWh	$0.04 EPS
Fuel and Purchased Power	1%	$0.03 EPS
Henry Hub Gas Price	5%	$0.07 EPS
Interest Rate (20% floating debt)	100 BPs	$0.05 EPS
Authorized ROE	**1%**	**$0.24 EPS**

Longer term performance can be substantially enhanced by achieving a higher authorized return.

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 5252 of 9556

Pace of our GridSMART Implementation Determined by Regulators

- **Arkansas** – The Arkansas commission approved our 'quick-start' programs in September 2007, which include education, incentive to encourage use of compact florescent lights and higher efficiency appliances, weatherization for low-income housing, an emergency load management pilot and a pay-for-performance pilot that results in a payment to customers who curtail load upon request. The commission's order allows implementation on or after October 1, 2007. We will now file a revised tariff, which will seek to recover costs beginning with the first billing cycle of November 2007.

- **Indiana** - As ordered by the IURC in June 2007, I&M, in collaboration with the Office of Utility Consumer Counselor, is designing and will administer a Smart Metering Pilot Program (SMPP) for approximately 10,000 customers in South Bend, Indiana.

- **Kentucky** – Successful demand-side management programs have been in place in Kentucky since 1996. We recently filed a proposed real-time pricing pilot for which we are waiting commission approval.

- **Ohio**
  - Recent Governor remarks and draft legislation indicates modernization of Ohio's infrastructure is a high priority.
  - PUCO-sponsored series of six Smart Meter Deployment Workshops currently underway.

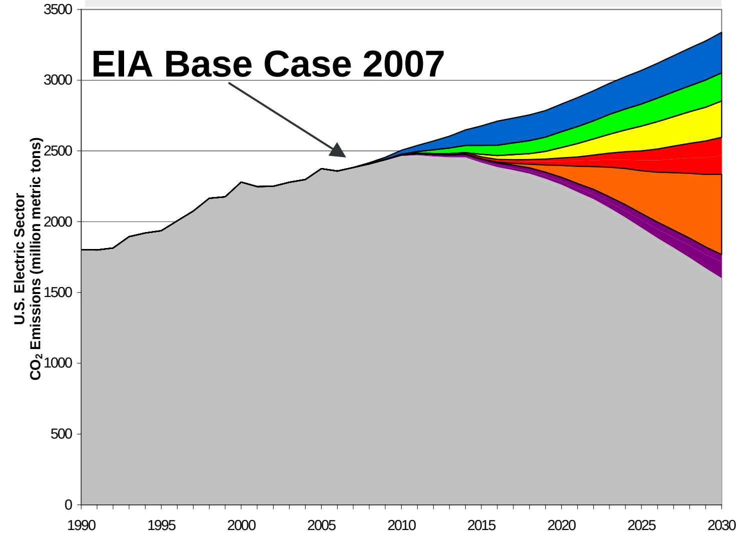
- **Texas**
  - Successful demand side management and energy efficiency programs have been in place in Texas since the 1990s.
  - Energy Efficiency Cost Recovery Rider currently under consideration by the PUCT in TCC's base rate case; if adopted in TCC's case, it will also apply to TNC.
  - AEP Texas Advanced Metering Project commenced July 31, 2007, which has the goal of filing with the PUCT an advanced metering deployment plan and a related surcharge recovery proposal by March 2008.

Distribution technologies and DSM/energy efficiency programs are an investment, which should be treated by regulators in the same manner as investments in generation and T&D

AEP is Pursuing a Portfolio of Options to Address Carbon

Technology	EIA 2007 Reference	Industry Target	AEP Plan
Efficiency	Load Growth ~ +1.5% / yr	Load Growth ~ +1.1% / yr	DSM: 1000MW reduction in demand by 2012
Renewables	30 GWe by 2030	70 GWe by 2030	Wind PPAs through 2015: 1610MW nameplate or 232MW capacity for planning purposes. Also, voluntary green energy tariffs (Ohio program starting 2007)
Nuclear Generation	12.5 GWe by 2030	64 GWe by 2030	Evaluation of Nuclear COL
Advanced Coal Generation	No Existing Plant Upgrades 40% New Plant Efficiency by 2020–2030	150 GWe Plant Upgrades 46% New Plant Efficiency by 2020; 49% in 2030	1,246MW IGCC by 2017 447MW USC Turk plant by 2011
Carbon Capture and Storage	None	Widely Deployed After 2020	Chilled Ammonia: Mountaineer 2009 & Northeastern 2012 Oxy-coal by 2020
Plug-in Hybrid Electric Vehicles	None	10% of New Vehicle Sales by 2017; +2% / yr Thereafter	Joined Electric Drive Transportation Association (EDTA) in May 2007
Distributed Energy Resources	< 0.1% of Base Load in 2030	5% of Base Load in 2030	Pursuit of NaS® Energy Storage – 25MW of storage by 2010 and 1000MW of other storage / fuel cells by 2020

Technical Potential for CO_2 Reductions - *Achieving all targets is very aggressive, but potentially feasible.*



Technology advancement is required beyond present "state of the art" to achieve 1990 CO_2 levels by 2030. AEP is investing in a portfolio of GHG reduction initiatives. Allocation of funds will shift over time depending on technology, legislation, etc.

Source: Results of AEP analysis based on EPRI studies.

- Total Plant Cost includes cost to engineer, procure and construct plus owners direct costs, AFUDC, overheads and transmission lines.
- Assumes Northern Appalachian coal price of $2.28/mmBtu (2012$) for USC & IGCC and natural gas price of $7.73/mmBtu (2012$) for NGCC.
- Production cost includes fuel plus variable operations and maintenance costs.
- Cost of electricity represents first year estimates in 2012$ and are based on total plant cost plus fuel costs, operation and maintenance costs, and emission allowance costs.
- Cost of electricity with CO_2 capture provides pressurized CO_2 at the fence line and does not include transportation, storage and monitoring costs.

Page 5258 of 9556

Electric Transmission Texas (ETT)

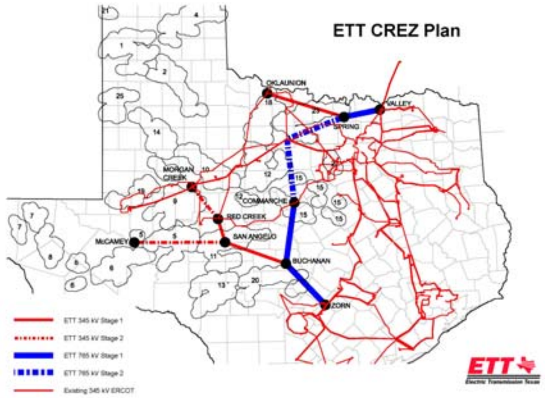
- **Electric Transmission Texas (ETT) Transaction Status**
  - Participation Agreement signed Jan. 9, 2007.
  - Texas regulatory filing on Jan. 22, 2007.
    - Requested utility status, transfer of initial assets, establishment of TCOS transmission recovery mechanism.
    - Hearings conducted July 16-17, 2007, commission order expected in the fall of 2007.
  - FERC approval for asset transfer received April 20, 2007.
  - Closing deadline of Nov. 1, 2007 can be extended by mutual agreement.

- **ETT CREZ Overview**
  - Strengthen ERCOT grid to collect and deliver wind generation to load
  - $1.5 billion investment Phase 1 – 2012 (before ownership division)
  - $1.5 billion investment Phase 2 – 2015 (before ownership division)

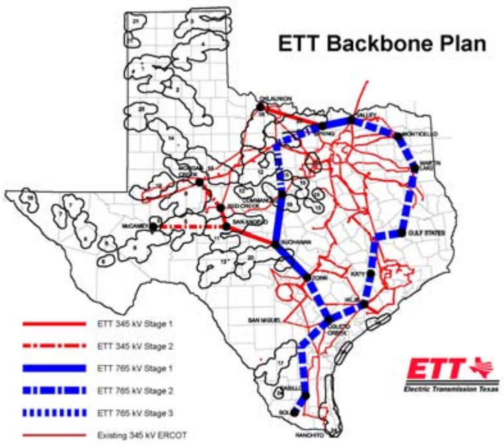
- **ETT ERCOT Backbone Proposal**
  - ETT proposal for ERCOT and PUCT to consider CREZ transmission in context of long-term vision for transmission system.
  - Current 5-year planning horizon results in higher ultimate costs, lower system efficiency.
  - Long-term 15-20 year perspective provides better plan, supports development of high voltage backbone at 765-kV.
  - $4.2 billion investment (long-term backbone).

- **Traditional ratemaking process through the PUCT will be utilized for investment cost recovery.**

ETT CREZ



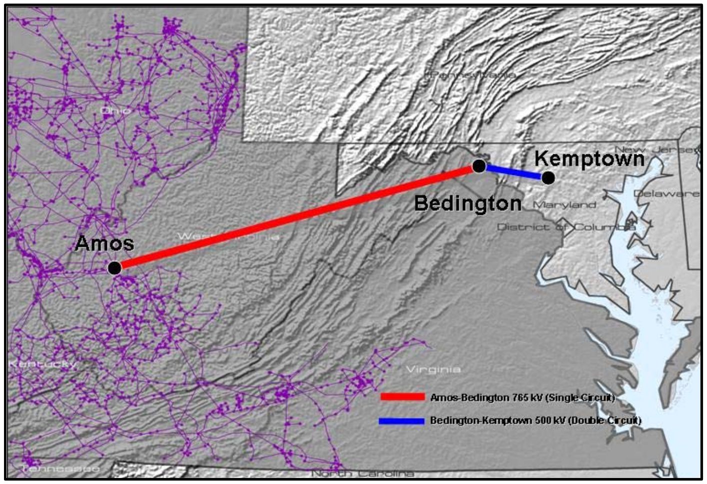
ETT Backbone



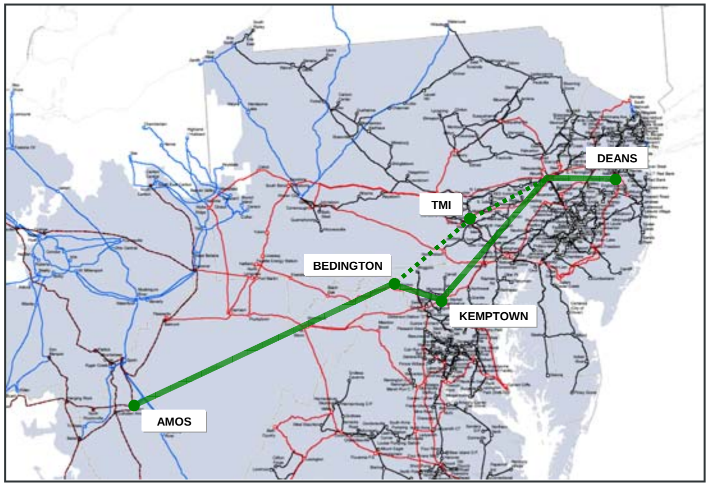
Transmission Project Updates

- ***I-765 ™ in PJM Phase I Progress to Date***
  - AEP and Allegheny entered into the PATH (Potomac-Appalachian Transmission Highline) JV to construct the 290 mile West Virginia-Maryland line
  - Total estimated cost of $1.8 billion
  - AEP portion approximately $600 million
  - Expected completion 2012
- ***Key Next Steps***
  - Complete FERC Filing – Fall 2007
    - *Pursuing new project FERC incentives: cash return on CWIP, higher ROE, recovery of pre-commercial operation costs and recovery of abandonment costs.*
  - Siting Approved – Fall 2009
  - Completion – Fall 2012
- ***PJM I-765 ™ Phase II Update***
  - Approximately 250 miles from West Virginia-Maryland border to Public Service Electric & Gas Deans Station in New Jersey.
  - Currently under consideration by PJM as part of Regional Transmission Expansion Plan (RTEP).
  - Based on PJM RTEP approval, AEP will seek a suitable business partner (JV partner) to complete the second leg of the original proposal.
- ***Regional Rate Design will be utilized for investment cost recovery.***

PJM Phase I



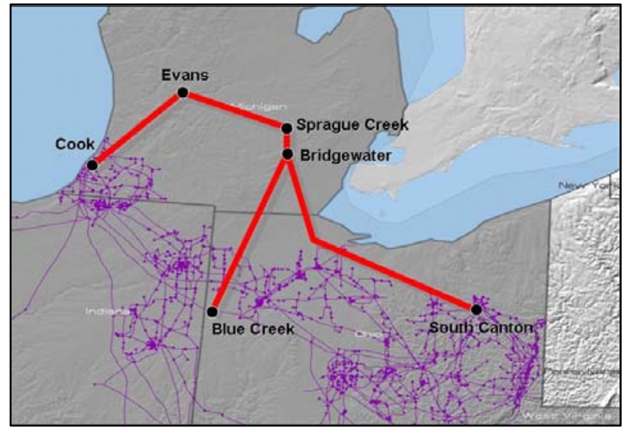
PJM Phase II



Transmission Project Updates – cont'd

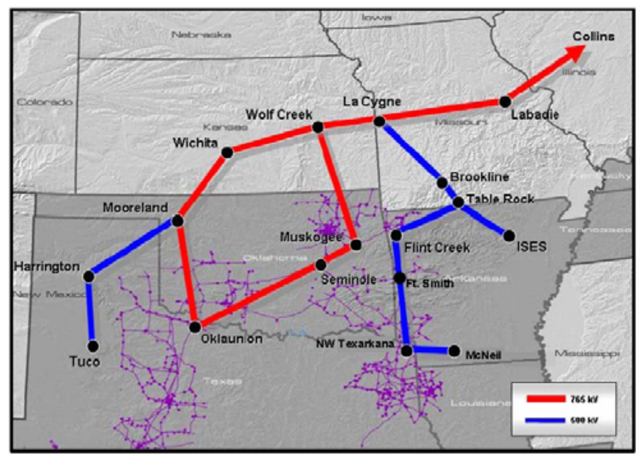
- *765 – kV in Michigan – Key Next Steps*
  - Study results shared with PJM/MISO– Summer 2007
  - Public release of study results – Fall 2007
  - Potential JV formation – Fall 2007
  - PJM/MISO approval - Summer 2008
  - FERC Filing - Fall 2008
  - Siting approval – Summer 2010
  - Estimated completion – Summer 2015

Michigan



- *765-kV in SPP – Key Next Steps*
  - Study disclosure – Fall 2007
  - JV formation (Partner-TBD) – Fall 2007
  - SPP RTO/BOD EHV Overlay approval – Summer 2009
  - SPP RTO FERC Filing – Fall 2009
  - Siting approval – Fall 2011
  - Estimated completion – Summer 2017

Southwest Power Pool



- *Regional Rate Design will be utilized for investment cost recovery.*

Electric Transmission America (ETA)

- *Electric Transmission America (ETA)*
  - AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 Joint Venture.
  - Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
  - Projects taken on by the Joint Venture would entail transmission facilities:
    - 345 kV and above
    - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
    - Greater than $100 million
  - ETA will hope to identify and initiate the approval process for the first project during the first half of 2008.
  - ETA will look to collaborate with qualified partners in each particular region.

This JV reflects a natural progression and expansion of our partnership with MidAmerican.

AEP AMERICAN® ELECTRIC POWER

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are canceled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; volatility in the financial markets, particularly development affecting the availability of capital on reasonable terms and developments impairing our ability to refinance existing debt at attractive rates; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

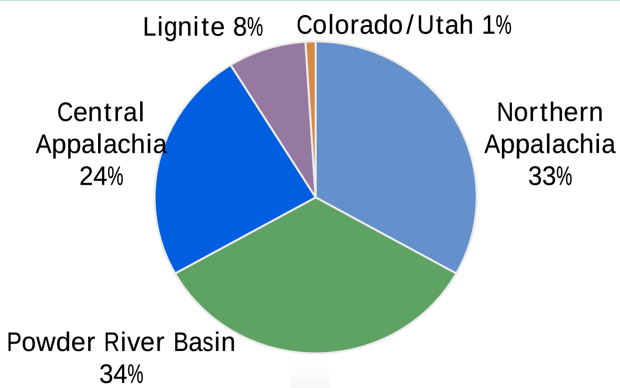
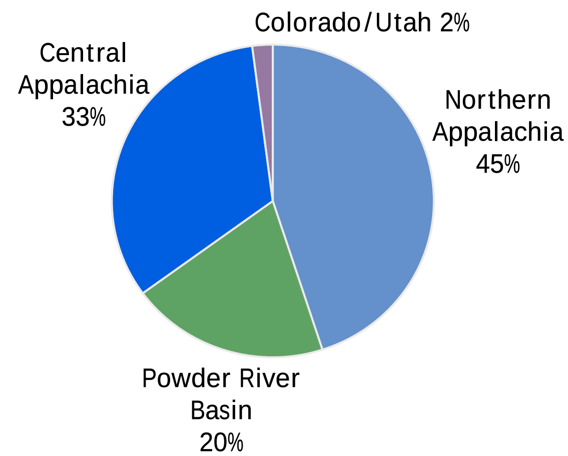
Coal Procurement – 2008 Projected

AEP burns approx. 76 million tons of coal per year

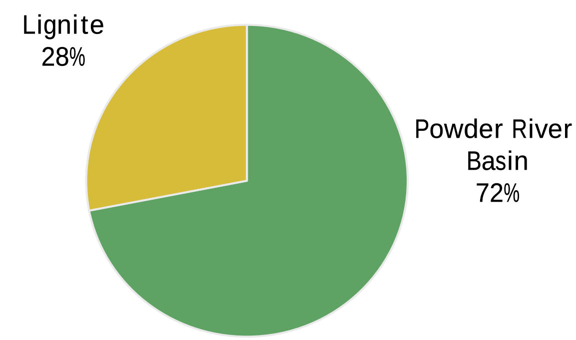
Total AEP System



AEP East



AEP West



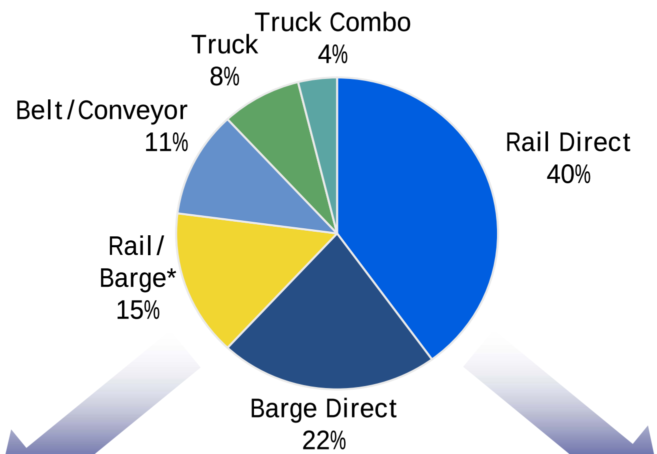
Coal Stats:

- > 95% contracted for 2008
- Avg. delivered price ~ $36.58/ton in 2007
- Approximate 20% price increase in 2008 based on 2007 actual results.

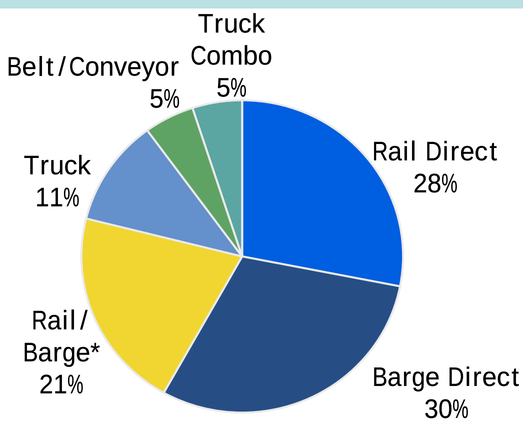
Coal Delivery

2007 Actual

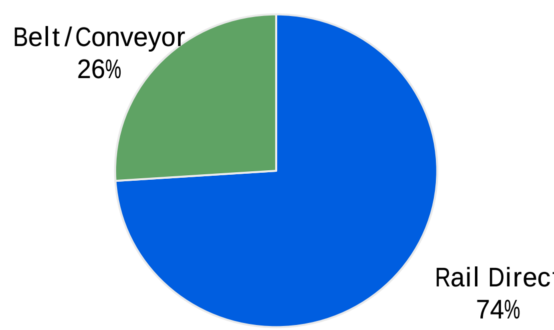
Total AEP System



AEP East

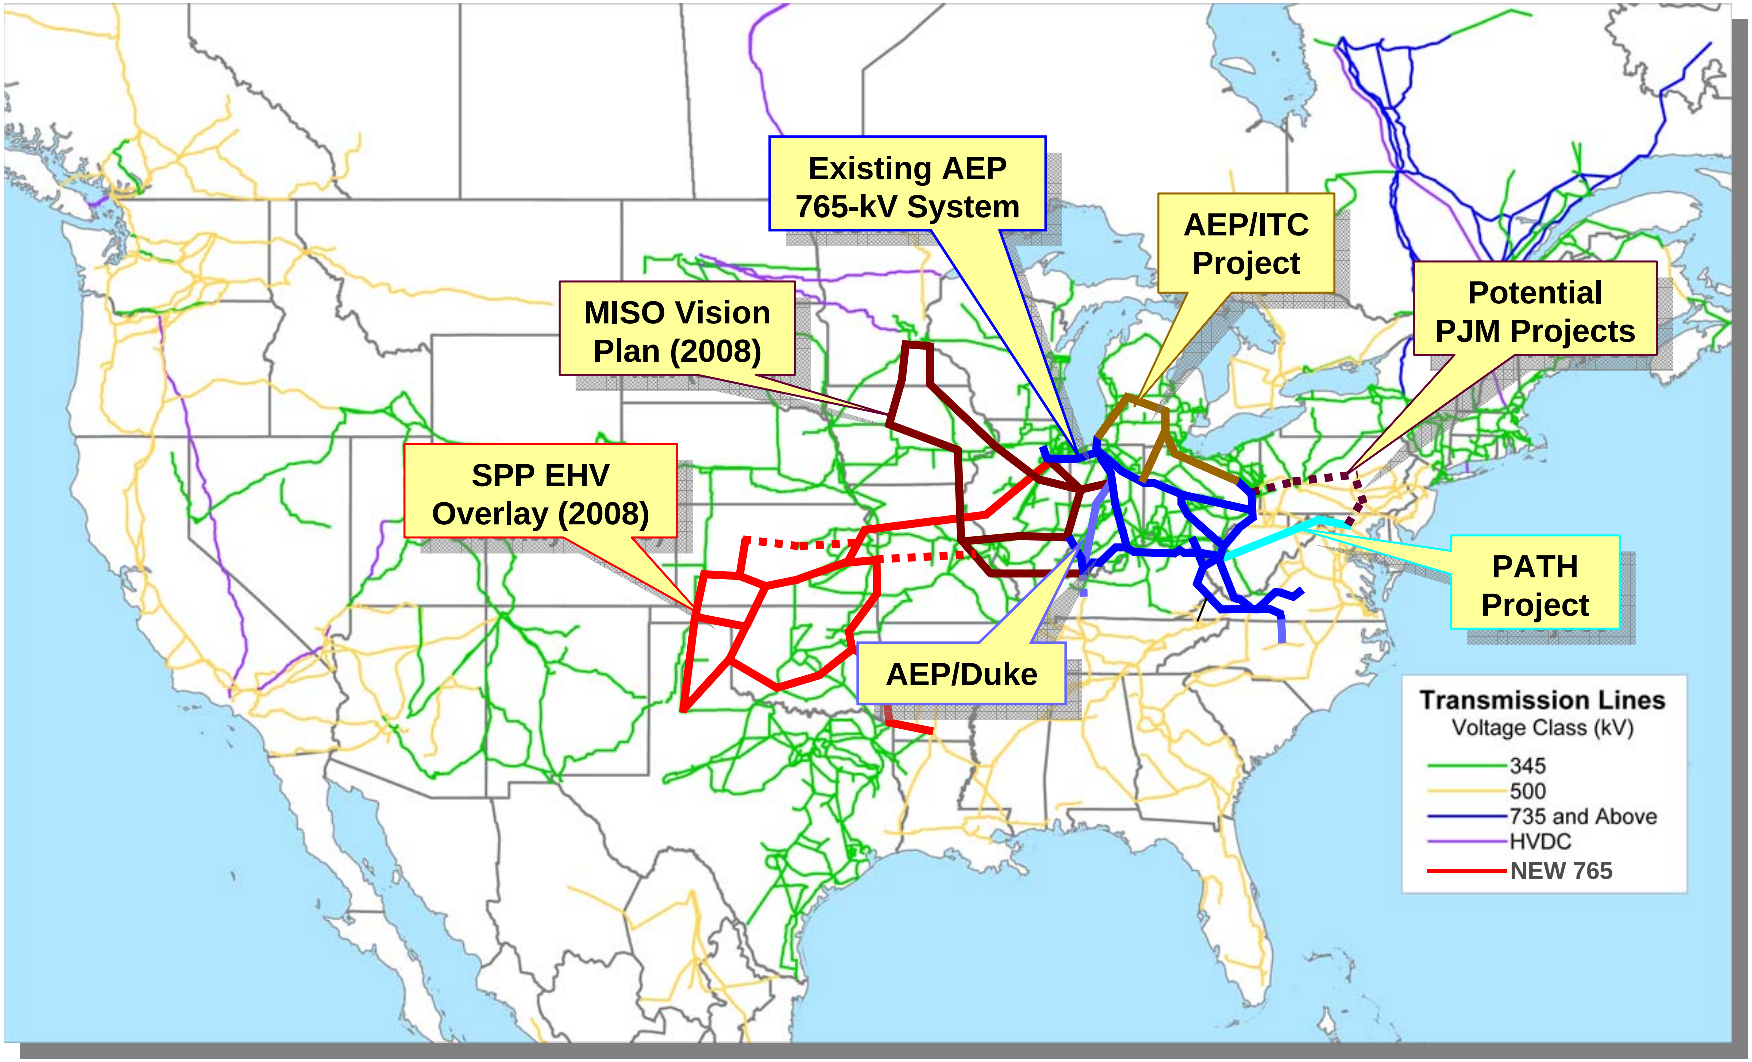


AEP West



* Reflects coal delivered to AEP plants transported through a combination of rail and barge

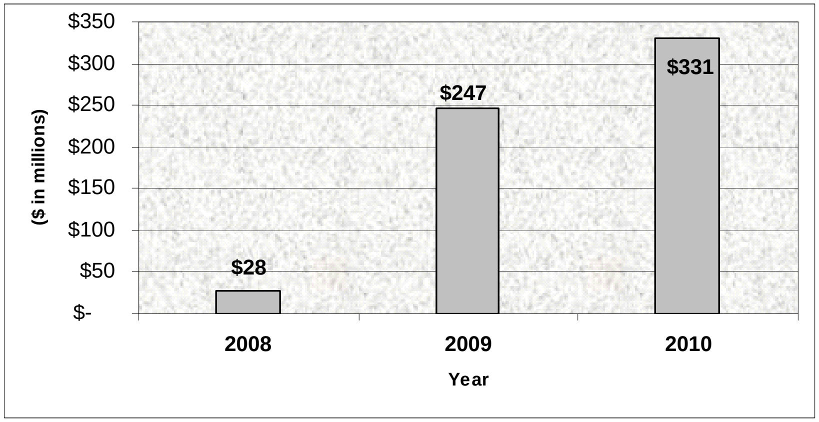
Making it Happen: EHV Projects Under Development



NOTE: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

Transmission – Investments and Earnings Contributions

Projected Transmission Capital Spending*

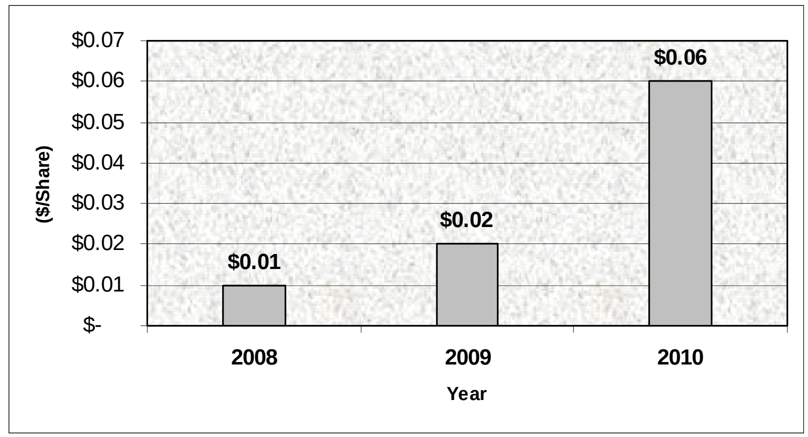


* ETT and PATH joint ventures included in above projection. Amounts represent AEP's 50% share of total transmission joint venture capital expense. These amounts are excluded from AEP's base capital forecast because the joint ventures are not consolidated for financial reporting purposes. AEP will be responsible for funding 40-50% of these amounts with equity contributions, and the remainder will be financed with debt issued by the joint ventures.

ETT
Electric Transmission Texas

PATH
Potomac-Appalachian Transmission Highline

Projected Transmission EPS Contributions*



* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

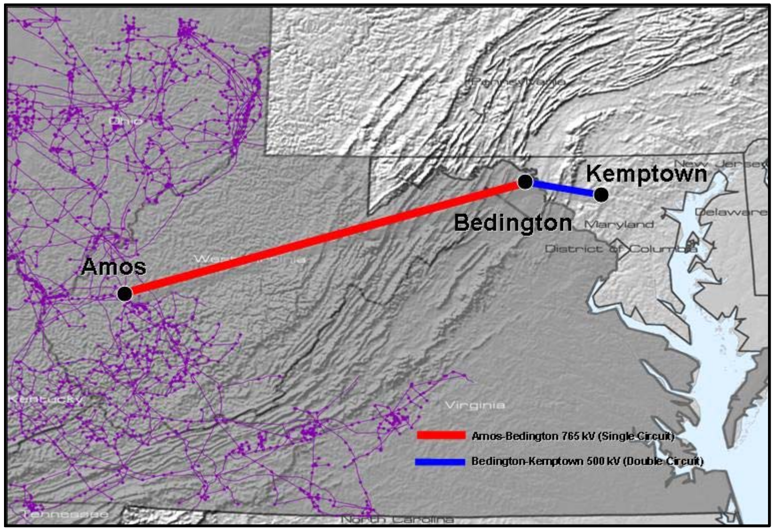
Transmission will provide a near and long-term catalyst for earnings growth.

I-765™ Transmission in PJM: PATH

- *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries -- to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP
    - 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
  - FERC ordered the formula rate mechanism be set for hearing, pending settlement judge procedures

- *Funding Plans/Transaction Structure*
  - AEP and Allegheny share ownership of Amos – Bedington line and contribute equally to this portion of the project through PATH West Virginia Transmission Company, LLC
  - AEP's investment will be held in the AEP Transmission Holding Company LLC subsidiary

- *Key Next Steps*
  - Siting Approval from WV and MD - 2010
  - Targeted Completion - 2012



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

PATH
Potomac-Appalachian Transmission Highline

Joint Ventures with MEHC

Electric Transmission Texas Update

- *Transaction Structure*
  - 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
  - ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
  - Services provided by AEP and investment opportunities can be offered by either partner
  - Total initial investment of $70 million before ownership division
- *Next Steps*
  - Await PUCT approval of consortium proposal, which includes ETT's portion of 710 miles of new transmission at an estimated cost of between $1.5 billion and $1.7 billion
  - Anticipate transferring some project opportunities in 2008 after regulatory approvals obtained.

Electric Transmission America Update

- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.
  - ETA recently signed agreements with Westar Energy and OGE proposing to build the first and second segments of the 765-kV Overlay Plan in SPP

I-765™ Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- *Overview*
  - Sent non-binding Letter of Commitment to SPP to construct 765-kV and 500-kV projects in SPP region consistent with SPP Overlay Study – Summer 2007
  - Updated EHV Overlay Study completed by SPP – March 2008
- *Benefits*
  - Overall reliability reinforcement with improved voltage support throughout the SPP system
  - Significantly increased transfer capability
  - Provides access to new generation resources, especially renewables
  - Allows for effective interconnections for EHV system development
- *Next Steps*
  - ETA Partnering Agreements - 2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate and Cost Allocation Filing (postage stamp) – 2009
  - Siting Approval for projects – 2009-2011
  - Estimated Completion (in segments) – 2013-2017

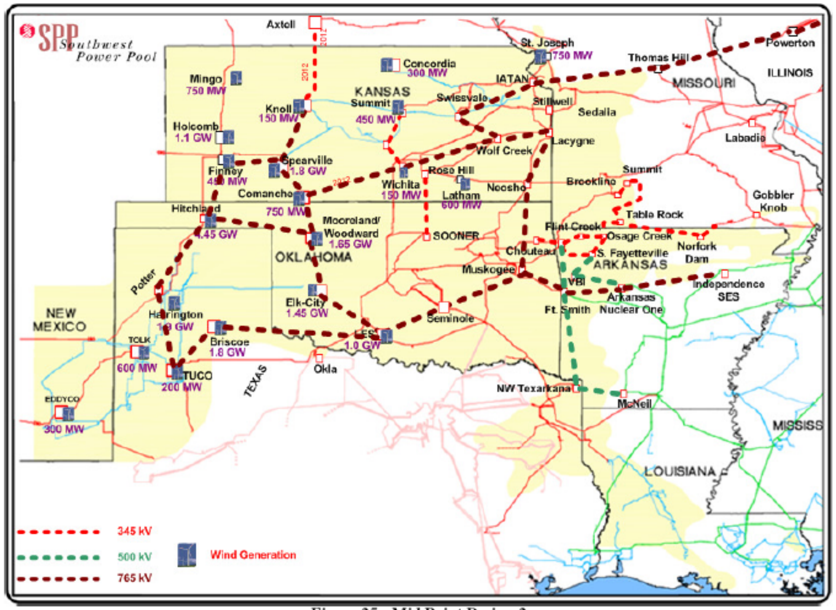


Figure 25: Mid Point Design 2

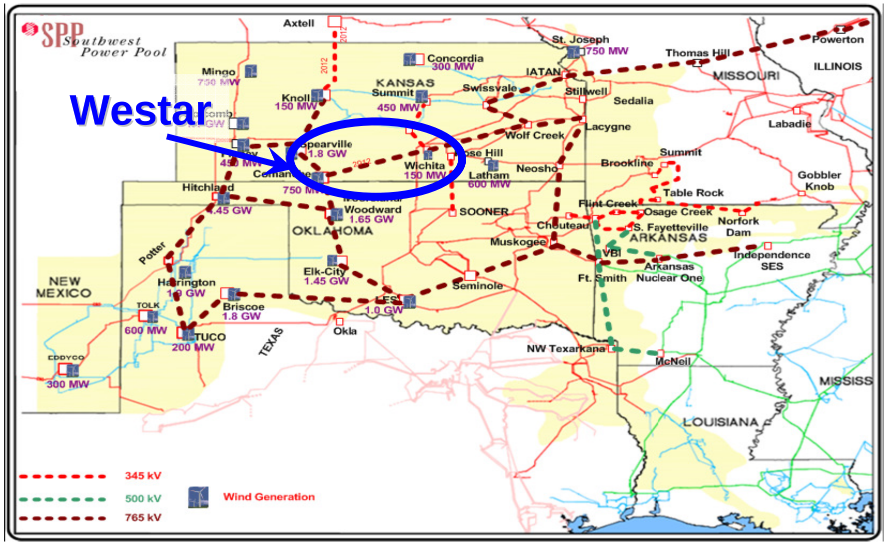
Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Prairie Wind Transmission, LLC

JV to build first segment of 765-kV transmission in SPP

- *Overview*
  - On May 19, 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT)
  - PWT is a 50/50 JV that is proposing to build approximately 230 miles of 765-kV lines extending from Wichita, Kan., west to a substation northeast of Dodge City, Kan., and then south to the Kansas border from Medicine Lodge, Kan.
  - The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region
  - Project is expected to cost approximately $600 million (based on SPP estimates) and be in-service by 2013
  - AEP's ownership of the joint venture is 25%
  - AEP obligations include oversight of 765-kV Engineering, 765-kV Technology and Project Management
  - Other responsibilities will be handled by the partners or outsourced
- *Next Steps*
  - Filed CPCN – 2Q2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate Filing (postage stamp) – Fall 2008
  - SPP Cost Allocation Filing - 2009
  - Siting Approval – 2009
  - Estimated Completion – 2013



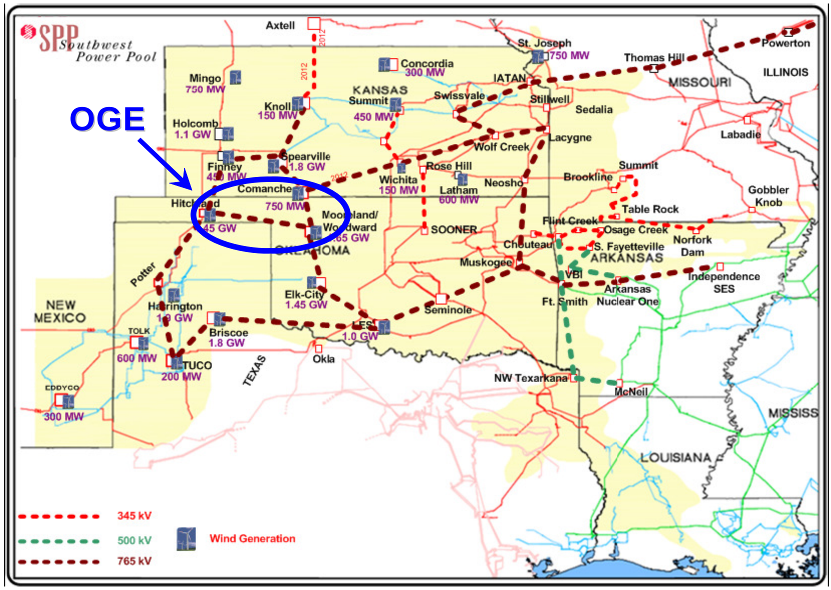
Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

ETA JV with OGE

JV to build second segment of 765-kV transmission in SPP

- **Overview**
  - On July 15, 2008, ETA signed an agreement with OGE Energy Corp. to form a joint venture
  - The JV is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines extending from the Kansas-Oklahoma border north of Woodward, OK, that will link into OGE's station at Woodward and then extend west to a new station that will be built near Guymon, OK.
  - The project will provide enhanced electricity transport in Oklahoma and support expansion of renewable electricity generation in the region
  - Project is expected to cost approximately $500 million (based on SPP estimates) and be in-service by 2013
  - AEP's ownership of the joint venture is 25%
  - AEP obligations include oversight of 765-kV Engineering, 765-kV Technology and Project Management
  - Other responsibilities will be handled by the partners or outsourced



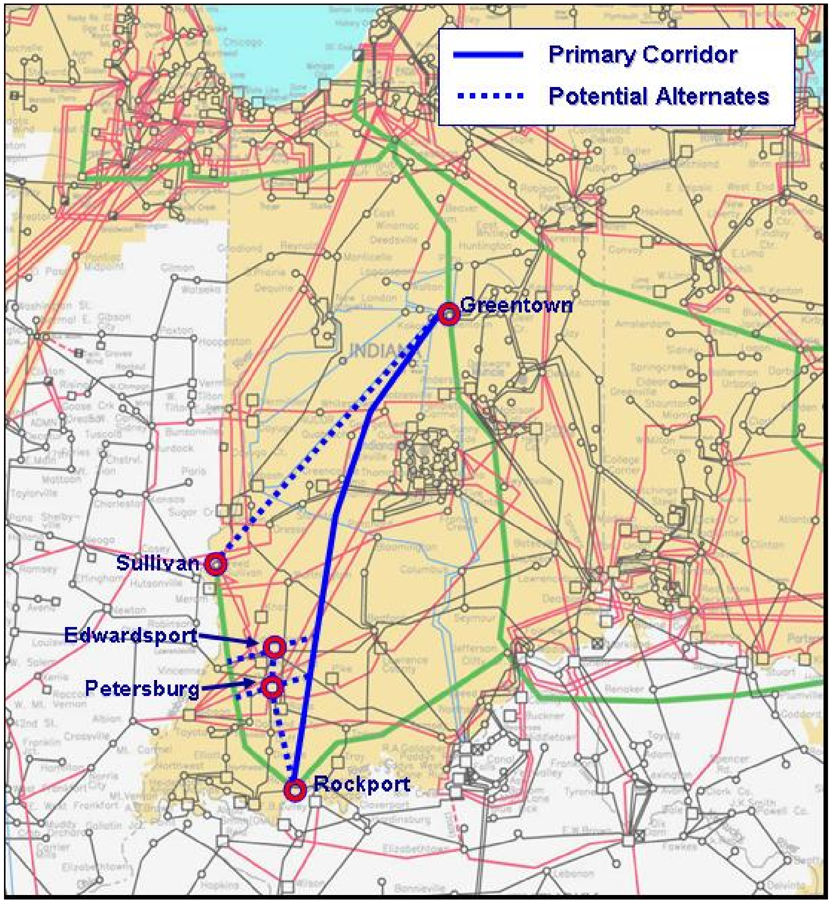
Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

- **Next Steps**
  - File CPCN –2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate – Fall 2008
  - SPP Cost Allocation Filing – 2009
  - Siting Approval – 2009
  - Estimated Completion – 2013

Pioneer Transmission, LLC

- *Overview*
  - On August 11, 2008, AEP & Duke formed a joint venture to build and own a 765-kV transmission line. Pioneer Transmission LLC is a 50/50 joint venture between the two companies.
  - The primary project involves the construction of approximately 240 miles of 765-kV lines extending from AEP's Rockport substation east of Evansville, Indiana with Duke's Greentown substation near Kokomo, Indiana.
  - Project is expected to cost approximately $1 billion, but final costs will depend on the routing of the line, equipment and commodity costs. AEP's share of the costs will be 50% of the total.
  - In-service date will be determined by the MISO and PJM planning process, with earliest possible completion in the 2014-2015 timeframe.
- *Next Steps*
  - Submit proposal to PJM & MISO for consideration in their transmission expansion plans
  - FERC filing for rate approval – 2008
  - Estimated Completion – 2014-2015



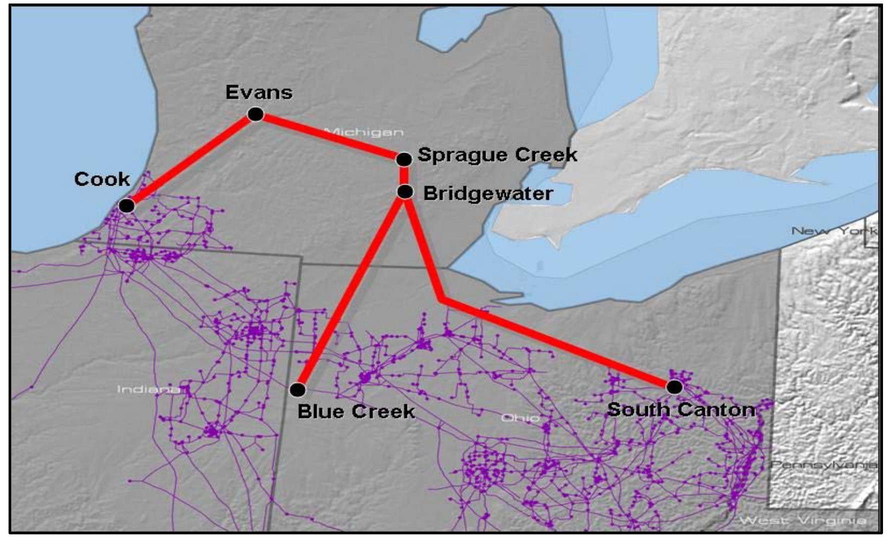
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected.

I-765™ Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

Overview

- ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
- Study was released Q3 2007
- 700 miles of 765-kV line in Ohio and Michigan
- $2.6 billion investment (before ownership division)
- AEP and ITC are in discussions to form a Joint Venture



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

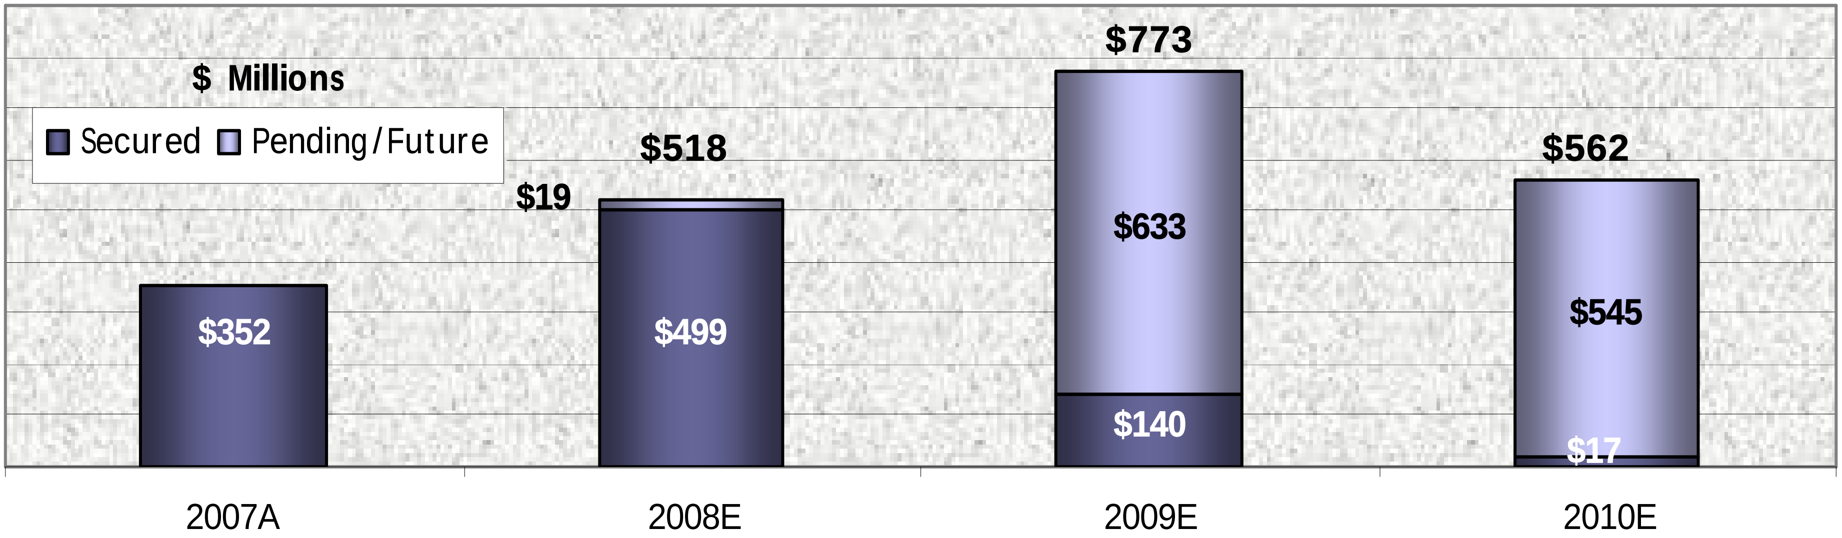
Benefits

- Up to 5,000 MW improved transfer capability
- Reduces network line losses by 250 MW

Next Steps

- Agreement on JV (AEP/ITC) - Summer 2008
- JV Formation - 2008
- MISO and PJM Review/Approval - 2009
- FERC Formula Rate & Cost Allocation Filing - 2009
- Siting Approval – 2011-2012
- Estimated Completion – 2015-2021

Incremental Rate Relief



- 96% of 2008 Rate Relief Secured: I&M Depreciation, APCo – WV Construction Surcharge, TCC & TNC General Rate Cases, Ohio RSP (3% & 7%), PSO Peaking Generation & General Rate Case, Ohio 4% Generation Rider and Marginal Loss Recovery, APCo – Virginia Fuel Factor, 2007 TCC/TNC TCRF filings, PSO 2007 Storm Recovery, SWEPCo - LA Formula Rate Plan, KPCo Marginal Loss Recovery, TCC/TNC TCOS and Rate Case Expense Recovery.

- 2008 Pending: Virginia base case rates subject to refund ($208MM requested).

- 2009 Pending: Virginia base case ($208MM requested), Indiana base case ($129MM requested), Oklahoma base case ($132.6MM requested), Ohio ESP, other cases yet to be filed.

Secured $499MM of $518MM for 2008

AEP Ohio Electric Security Plan

- On July 31, 2008, in conjunction with the requirements of SB221, AEP Ohio filed an Electric Security Plan with the PUCO on behalf of CSPCo and OPCo.
- The filing includes the following key components:
  - Energy Efficiency and Demand Response
  - Renewable Energy
  - gridSMART^{SM} Phase 1
  - Distribution Reliability Enhancement
  - Economic Development
  - Provider of Last Resort
- The proposed rate plan results in an annual increase of approximately 15 percent on customers' total bills.
- The filing seeks to recover changes in fuel and environmental expenses relative to levels reflected in current rates.
- Intervenor testimony is due October 31, Staff testimony is due November 7 and the public hearing commences on November 17, 2008. We anticipate an order at the end of 2008.

	Carrying Charges on Dfd Fuel	**6.2M**	**16.7M**	**TBD**	**TBD**	**TBD**	**TBD**	Exhibit LVA-1
Note 8	**Economic Development**	**25.0M**	**0.0M**	**25.0M**	**0.0M**	**25.0M**	**0.0M**	JH Test P16

Note 1: AEP Ohio requested phase-in of proposed incremental FAC expenses during the three-year ESP period. Additionally, there will be a periodic true-up of the current period actual FAC to what was recovered in rates for that period. This will produce on-going periodic under/over recoveries of FAC costs for the period that have not been estimated for 2010 or 2011.

Note 2: Represents capital carrying cost on environmental facilities not currently reflected in rates. Exhibits PJN-8 &PJN-10 provides calculation of environmental carrying cost and components of the carrying cost rate applied to the capital expenditures, respectively.

Note 3: We requested a 3% & 7% per year increase in non-FAC generation for CSP & OPCo, respectively, consistent with the RSP increases. Exhibit PJN-8 shows the capital carrying cost on incremental environmental facilities forecasted for 2009. Exhibit PJN-10 provides the calculation and components of the carrying cost rate applied to the capital expenditures.

Note 4: Represents the Provider of Last Resort charge which is addressed in the testimony of Craig Baker starting on page 25.

Note 5: Requested an annual 7% & 6.5% per year increase in Distribution for CSP & OPCo, respectively. Exhibit DMR-4 shows expected O&M & carrying charge cost of capital for reliability and in the case of CSP, gridSMART, for the 2009-2011 time period. The carrying charge costs are provided on Exhibit PJN-10.

Note 6: Represents estimated costs to provide AEP-sponsored customer demand response & energy efficiency programs. These costs are discussed in the Sloneker testimony starting on page 18.

Note 7:

	2009		2011	
	CSP	OPCo	CSP	OPCo
Expiration of Special Contract	-$22.7M	-$27.1M		
Reg Asset Surcharge	-$54.2M		22.8M	15.2M
Other	-$3.8M	$0.0M		
Total Other	-$80.7M	-$27.1M	$22.8M	$15.2M

A special contract expires 12/31/08 and the customer will go on the standard tariff.
The revenue reduction associated with the elimination of the reg asset surcharge in 2009 will be offset by the reduction in related amortization.
Other of $3.8M represents the expiration of monthly line extension surcharges.

Summary Rate Case Information

AEP®

I&M Indiana General Rate Case

On January 31, 2008, I&M filed a general base rate case with the Indiana Utility Regulatory Commission (IURC) requesting an increase of $128.5 million ($82.4 million in base revenues and $46.1 million in tracker mechanisms). (Docket #: 43306). Order is expected in June 2009.

APCo-Virginia E&R Filing

On May 30, 2008, Appalachian Power filed the third tranche of E&R surcharge filings with the SCC, requesting a $66.5 MM increase for environmental and reliability costs incurred during the period October 1, 2006 through December 31, 2007, with a proposed one year recovery period commencing January 1, 2009. Respondent testimony was received August 13, Staff testimony was received August 27, Rebuttal testimony is due September 3 and a hearing will commence on September 17.

Summary of APCo's E&R filings:

E&R Tranche:	Case Number	Cost Incurred :	Recovery Period:	Amount:
I	PUE-2005-00056	7/1/2004 thru 9/30/2005	12/1/2006 thru 11/30/2007	$21.3 million
II	PUE-2007-00069	10/1/2005 thru 9/30/2006	1/1/2008 thru 12/31/2008	$48.9 million
III	PUE-2008-00045	10/1/2006 thru 12/31/2007	Proposed 1/1/09 thru 12/31/09	$66.5 million

Regulatory Activity Underway

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $140MM. Approximately $10MM of the increase relates to 3rd party and the rest, if approved, would be recovered through retail jurisdictional filings in SWEPCo and PSO, as appropriate.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to February 1, 2008, with rates subject to refund.
- Settlement discussions are currently on-going.

Regulatory Activity Underway

PJM OATT Formula Rate Filing

- On July 31, 2008, the seven AEP East companies filed with the FERC to update the Open Access Transmission Tariff (OATT) rate and implement a formula transmission rate that will be updated annually to keep rates current with transmission investment.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $507MM and the new revenue requirement requested is $606MM. Approximately $31MM of the increase relates to 3rd party and Ohio and the rest, if approved, would be recovered through retail jurisdictional filings in the other east jurisdictions.
- We requested an effective date of October 1, 2008 for the revised tariff, which the FERC may suspend for an additional five months.

Regulatory Activity Underway

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- The PSC issued its order on November 21, 2007, approving construction of the plant.
- Air permit anticipated in the third or fourth quarter of 2008. A draft air permit approval was released for public comment on August 11, 2008.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The peaking facility has been addressed and the intermediate facility is under review. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- The LPSC issued its order on April 29, 2008, approving construction of the plant.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- The PUCT issued a written order approving construction of the plant on August 12, 2008.

Regulatory Activity Underway

SWEPCo Stall Plant Filings

Arkansas

- Proceeding was suspended pending outcome in Louisiana. Now that Louisiana approval has been received, we will seek an expedited ruling from Arkansas.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The intermediate facility, known as the Stall Plant and sited in Shreveport, LA, was bifurcated from the original filing and had a procedural schedule established on January 9, 2008.
- The Louisiana PSC approved the plant on September 10, 2008.
- Air permit received on March 20, 2008.

Texas

- PUCT order approving plant was issued on March 8, 2007.

Commitment to Credit Quality

- ❑ Maintain adequate liquidity
- ❑ $150MM annually in new equity from Dividend Reinvestment and 401(k) plans
- ❑ Target 60% maximum consolidated AEP debt/cap ratio on an adjusted basis
- ❑ Target utility company capitalization structures:

Company	Target Equity Ratio
APCo	42-44%
CSP	45-47%
I&M	40-42%
KPCo	41-43%
OPCo	44-46%
PSO	43-45%
SWEPCo	43-45%
TCC	40%
TNC	40%

- ❑ Target long term dividend payout ratio range of 55-60%
- ❑ Maintain adequate coverage ratios to support current credit ratings

We are committed to maintaining our current credit ratings.

Carbon Capture and Storage Project – Mountaineer Plant (WV)

765-kV Transmission Line – Wyoming-Jacksons Ferry (WV)

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants including our ability to restore I&M's Donald C. Cook Nuclear Plant Unit 1 in a timely manner, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of the recently passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events. AEP and its Registrant Subsidiaries expressly disclaim any obligation to update any forward-looking information.

Table of Contents

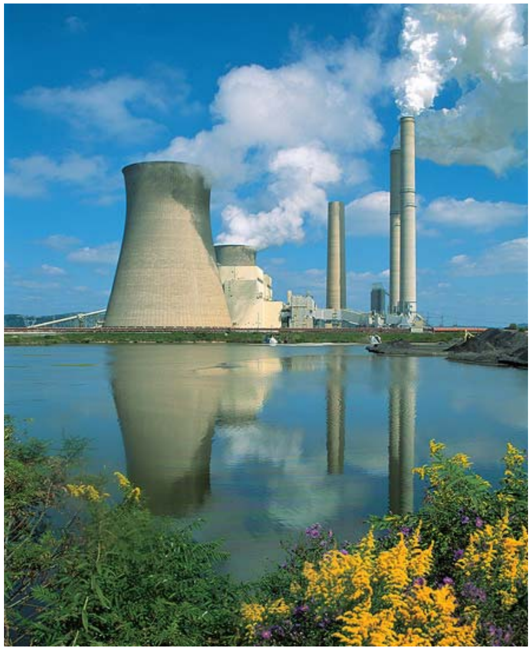
AEP AMERICAN® ELECTRIC POWER

Investment Attributes

- **Strong utility platform**
  - Consistent regulatory outcomes
  - Active fuel recovery
  - Geographic and regulatory diversity
  - Growth through capital investment

- **Consistent dividend policy**
  - 50-60% payout ratio targeted
  - Nearly a century of dividend payments to shareholders

- **Growth Opportunities**
  - Investment in utility platform greater than depreciation level (2 - 4%)
  - With transmission opportunities (4 - 8%)
  - Capital investment to comply with carbon legislation



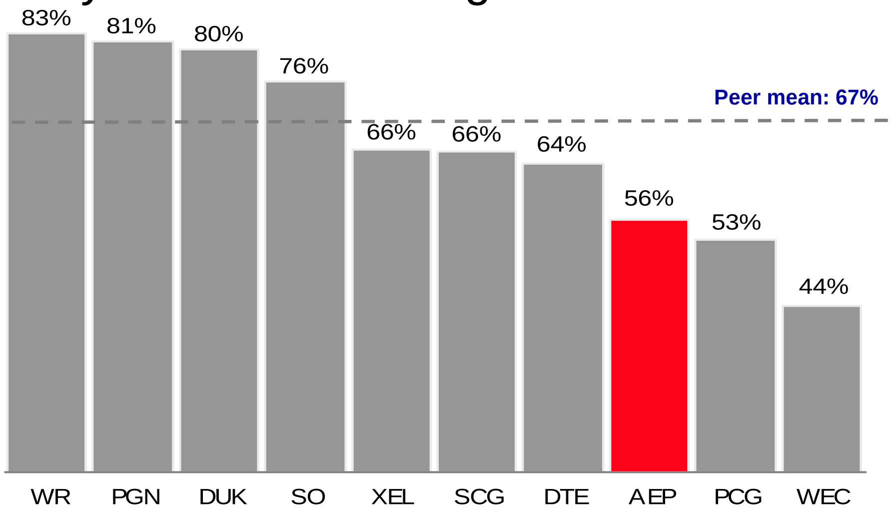
General JM Gavin Plant (OH)

AEP AMERICAN® ELECTRIC POWER

Dividend Overview

- We have paid 398 consecutive quarterly dividends to shareholders
- Dividend - $1.64/share
- Attractive yield
- Target dividend payout ratio of 50 – 60%

Payout Ratio vs. Integrated Electric Peers



Note: Payout ratio equals the indicated dividend rate annualized divided by First Call 2009 consensus estimate

AMERICAN ELECTRIC POWER

Transmission Investment Opportunities

- **<u>ETT</u>: Projects in Texas ERCOT jurisdiction**
  - Framework in Texas allows for more expeditious siting and recovery
  - $600MM of projects est. in service 2010-2013 with $236MM spent as of 9/30/2009
  - ETT's opportunity could reach $3.1B in the next decade

- **<u>Transco</u>: Within our existing footprint**
  - Provides opportunity to:
    - Develop new AEP-only projects within AEP's footprint
    - Reduce regulatory lag through FERC formula rates adjusted annually
    - Enhance access to capital
    - First year investment opportunity--$118MM

- **<u>Joint Ventures</u>: Outside of our footprint, with ETA or others**
  - Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
  - State and future Federal RPS will provide enhanced investment opportunities
  - Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2015
  - Robust pipeline of projects up to $15B

AEP AMERICAN ELECTRIC POWER®

Accomplishments and Priorities

2004 – 2009

- ✓ Returned to the operating company model to enhance our constructive local relationships
- ✓ Secured over $2B in rate relief across the AEP system with solid regulatory relationships in all eleven jurisdictions
- ✓ Designed and implemented a $5.2 billion environmental retrofit program
- ✓ Effectively managed our credit and liquidity
- ✓ Paid over $3 billion in dividends
- ✓ Safe, diverse and motivated employee culture

2010 +

- Navigate through ongoing economic conditions
- Maintain capital spending and balance sheet discipline
- Continue delivering successful regulatory outcomes
- Participate in policy making at both the federal and state levels, particularly related to environmental/climate and transmission issues
- Invest in the next generation of energy infrastructure: high-voltage transmission, CCS, gridSMART℠

AEP AMERICAN® ELECTRIC POWER

Appendix

Transco

- **Transco will be used to develop significant new on-system, AEP-owned investment**
  - Greenfield Projects
  - Station Additions
  - System Upgrades
- **Next steps:**
  - Obtain state utility status where required and join PJM and SPP as a transmission owner
  - FERC tariff for Transco filed December 1, 2009, with rates effective and first projects in service in 2010
  - Seek retail tracking mechanisms at the state level (OH, LA, VA, TX-ERCOT already secured)

PJM

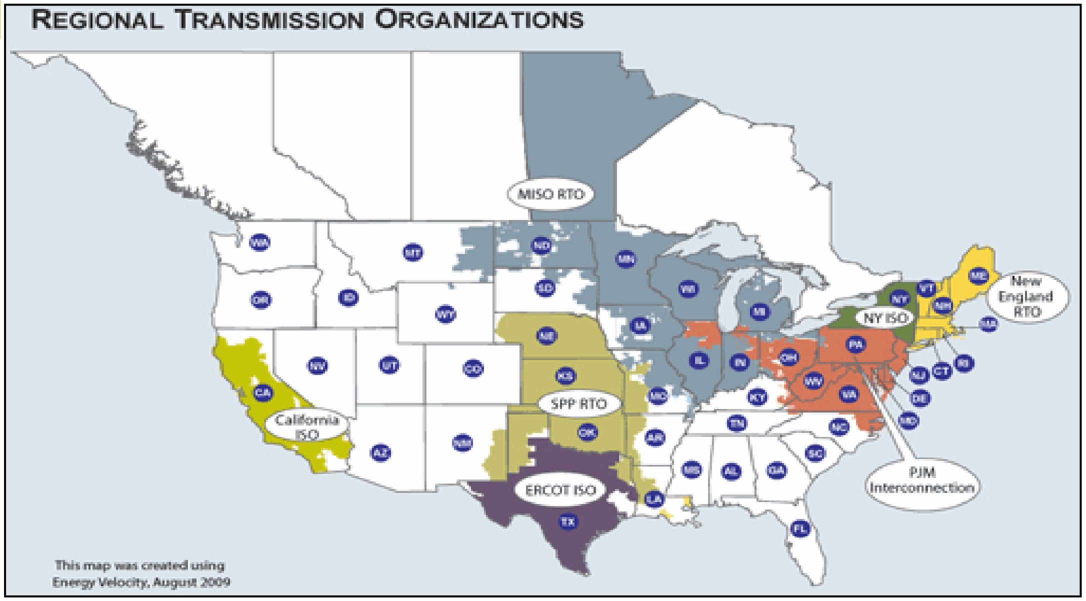
PATH-WV — COD: 2014

- *275 miles of 765 kV*
- *Partner: Allegheny Energy (50%)*
- *Estimated Cost: $1.2 billion*
- *ROE: 14.3%*

PJM/MISO

Pioneer — COD: 2015

- *240 miles of 765 kV*
- *Partner: Duke Energy (50%)*
- *Estimated Cost: $1 billion*
- *ROE: 12.54%*



ACTIVE PROJECTS

FUTURE DEVELOPMENT

SMARTransmission Study

- *Interregional EHV & Wind Integration Study*
- *Partners: ATC, Exelon, MidAmerican Energy, Northwestern Energy, Xcel Energy*

SPP EHV Overlay

- *Regional Expansion of 765 kV Backbone*

ETT — COD: various

- *Additional CREZ spend of ~ $1 billion+ (COD 2012-2013, subject to a 6-month routing approval)*
- *Other Projects Pending Transfer of ~ $1.5 billion (COD 2010-2017)*

PJM Expansion

- *Regional Expansion of 765 kV, 500 kV and 345 kV systems*

EHV Michigan/Ohio

- *700 miles of Proposed 765 kV*

SPP **ERCOT** **PJM** **PJM/MISO**

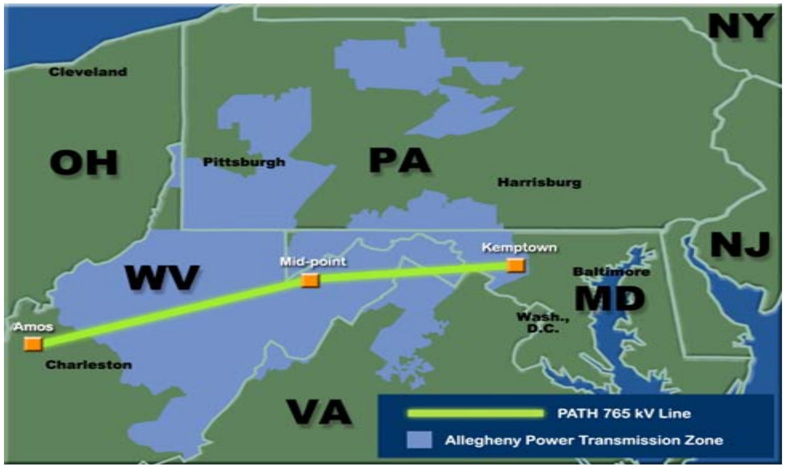
AEP AMERICAN ELECTRIC POWER®

EHV Transmission in PJM: PATH

Project Description: 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

Overview

- FERC order issued on February 29, 2008 approving:
  - Cash return on CWIP and 14.3% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect, and
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
  - Rates went into effect March 1, 2008; current annual revenue requirement is $15MM effective 1/1/09



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges

- Obtaining a CPCN in West Virginia or costly concessions with WV to receive the CPCN; CPCN filing made May 15, 2009 with a decision expected February, 2011.
- Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million
- Estimated completion date: 2014

PATH
Potomac-Appalachian Transmission Highline

AEP AMERICAN® ELECTRIC POWER

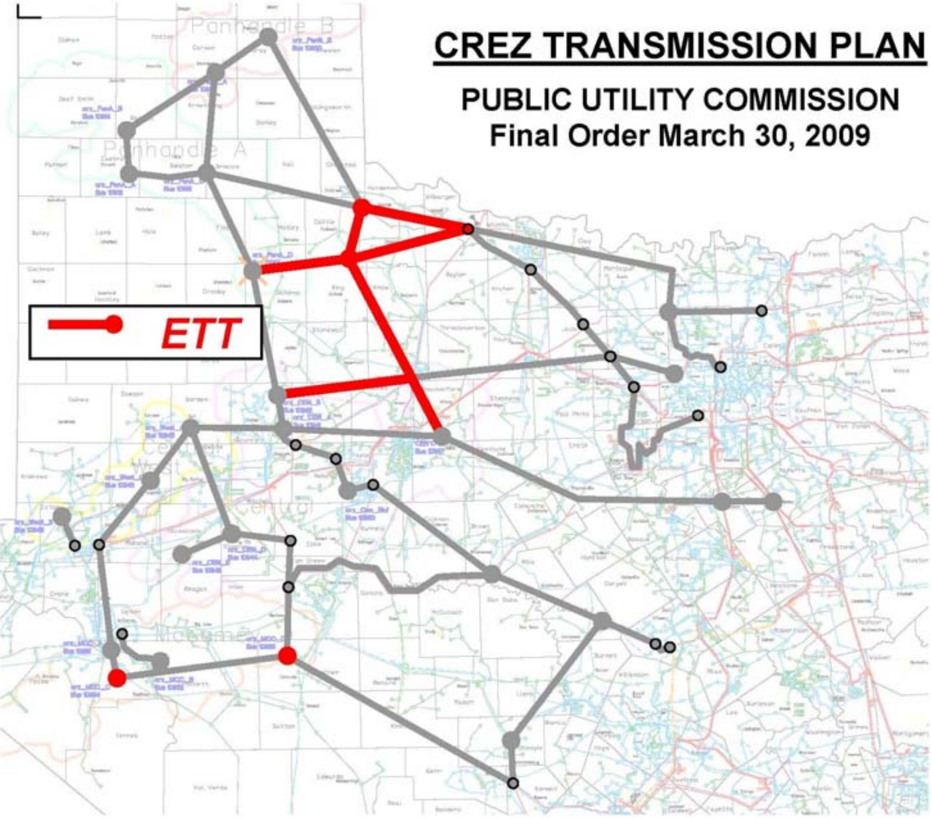
Texas CREZ Project

Overview

- On February 26, 2009, PUCT ordered its staff to stage the development of CREZ transmission lines.
- Staging to occur in separate docket and consider timing of wind projects and congestion.
- PUCT established 2 categories based on priorities. ETT has no first priority lines.
- PUCT issued a final order assigning transmission service providers on March 30, 2009.
- ETT's share of CREZ investment is approx. $840MM of $4.9B total of which AEP's ownership is 50%.
- The filing calls for completion of the plan by 2013.

Next Steps

- Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in 2010.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

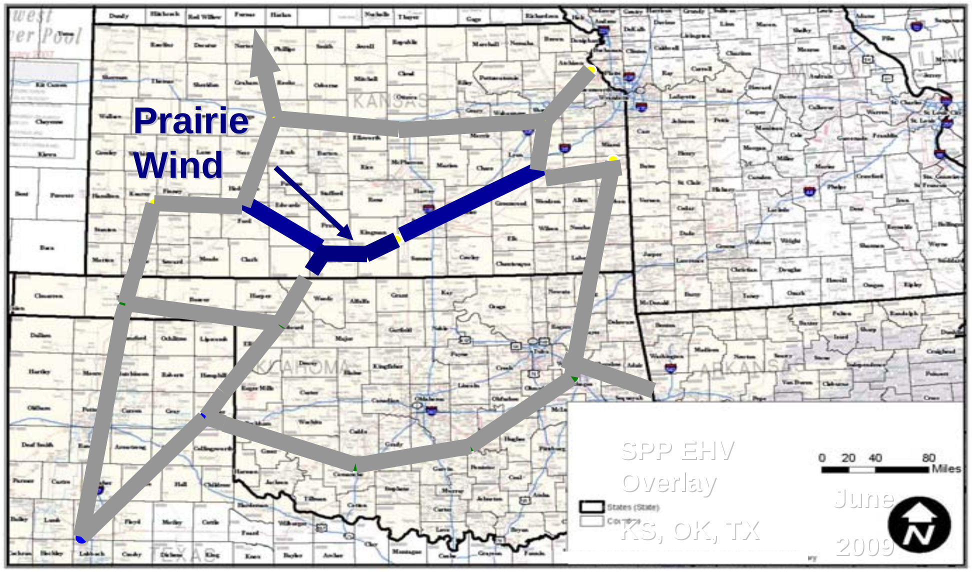
AEP AMERICAN ELECTRIC POWER®

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 5314 of 9556

Prairie Wind Transmission, LLC

Overview

- In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
- Following a settlement agreement with ITC both entities agreed to split the mileage and costs of building the 765-kV transmission superhighway. The newly revised project is expected to cost approximately $400 million and be in-service by 2013. Settlement was approved by the KCC on July 24, 2009.
- PWT is a 50/50 JV that is proposing to build approximately 110 miles of 765-kV lines extending from Wichita, KS, west to a substation near Medicine Lodge, KS, and then south to the Kansas border from Medicine Lodge, KS.
- The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect, and
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PWT or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges

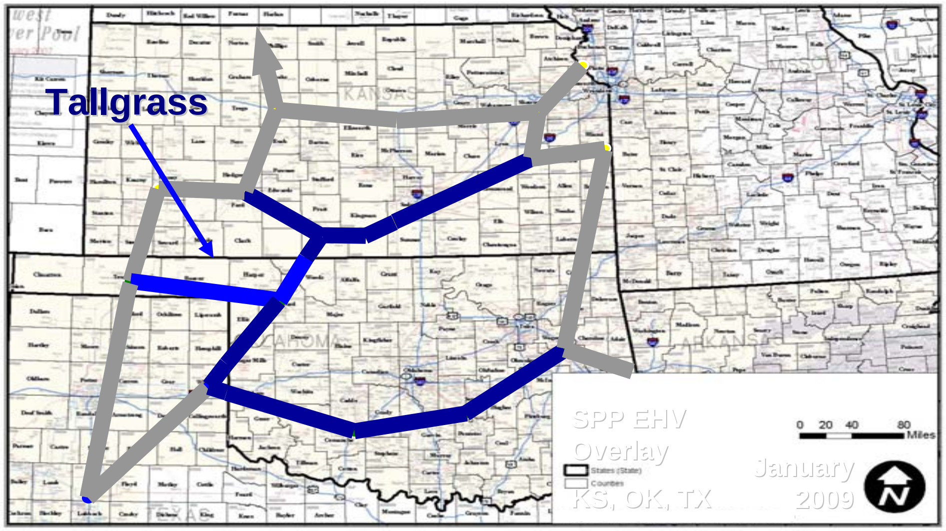
- RTO Approval

AMERICAN ELECTRIC POWER

Tallgrass Transmission, LLC

Overview

- In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
- TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines extending from the Kansas-Oklahoma border north of Woodward, OK, extending west into the Oklahoma panhandle to a new station that will be built near Guymon, OK.
- The project will promote wind development in the western half of Oklahoma.
- Project is expected to cost approximately $500 million and be in-service by 2013-14.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
    - Cash return on CWIP and 12.8% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of TG or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges

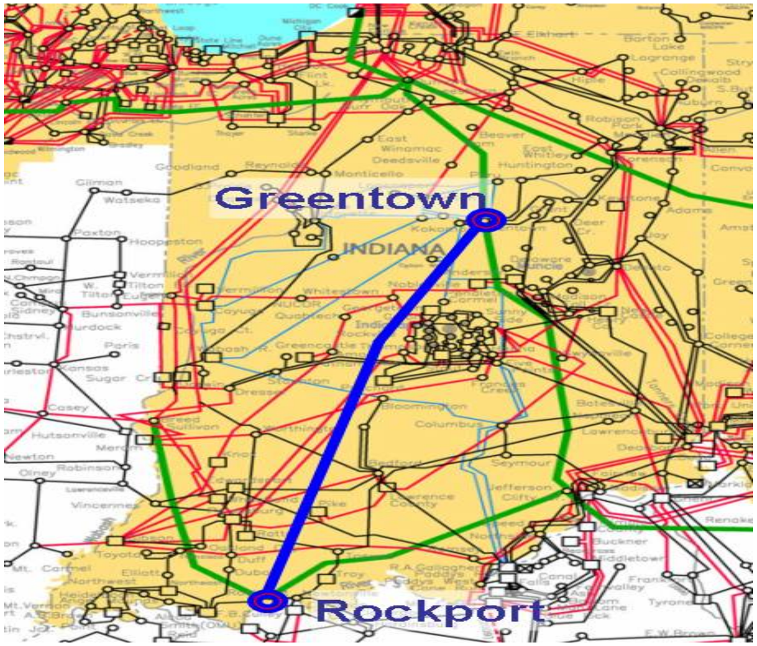
- RTO Approval

AEP AMERICAN® ELECTRIC POWER

Pioneer Transmission, LLC

Overview

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
- The project will improve the reliability of the nation's transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, protect national security and expand opportunities for new generation, including renewables.
- Project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP's ownership of the joint venture is 50%.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect, and
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PT or its parents.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges

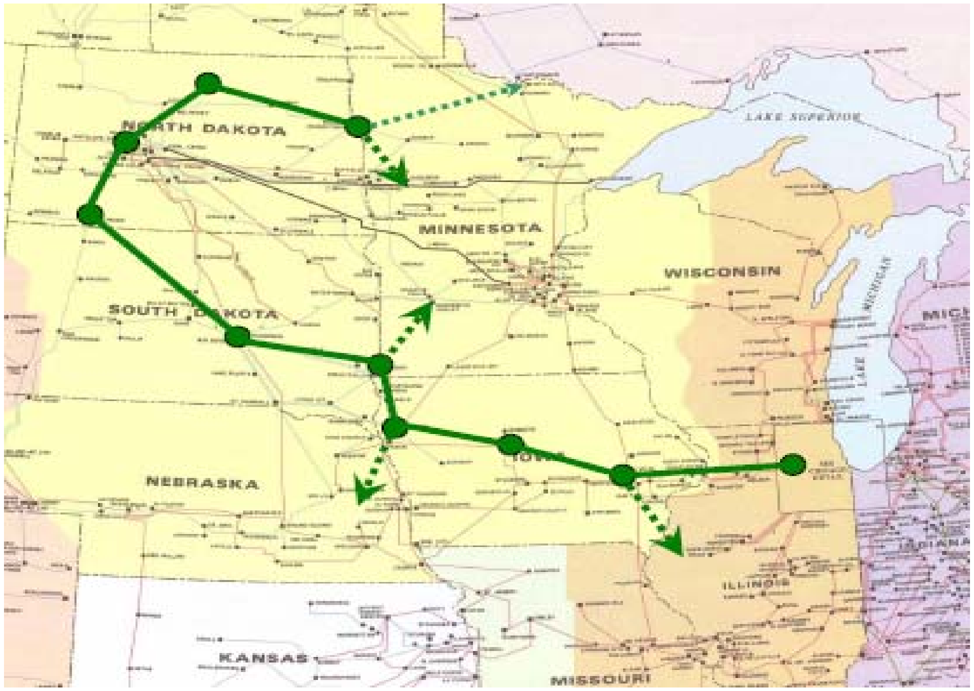
- Cost allocation which enables the development of "system solutions"
- RTO Approval - touches two RTOs – PJM & MISO
- Siting

AEP AMERICAN® ELECTRIC POWER

Upper Midwest EHV Development—SMART Study

Project Description: 1000+ miles of 765-kV transmission linking Upper Midwest generation sources with the existing EHV infrastructure in the Chicago area expected to cost $5-$10 billion over a 10 year period.

- **Announced SMARTransmission Study in August 2009.**
  - Participants include ETA, Exelon, ATC, Northwestern, MidAmerican and Xcel
  - Study due to be completed in early 2010 and will include “overlay” options and quantification of economic benefits.
- **Near Term Risks**
  - Obtaining cost allocation between states, PJM, and MISO
  - RTO Technical Approvals
  - Favorable 205 Order including incentives
- **Mitigation**
  - Collaborative approach involving impacted utilities, RTOs, commissions and others



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP AMERICAN ELECTRIC POWER

AEP Supports Climate Legislation

Key Design Elements:

- **Reductions and Timing -** Moderate with adequate lead times
- **Scope of Program -** Economy-wide w/ preemption of EPA authority to regulate CO_2 under existing Clean Air Act
- **Flexibility of the Program -** Market-based system w/ credit trading, banking, unrestricted offset use & early action credits
- **Allowance Allocation And Other Cost Issues -** Full, free allocation to electric sector and “Low” auctions
- **Technology Development/Deployment -** Bonus allowances or other support for carbon capture and storage (CCS)
- **International Linkage -** e.g. AEP-IBEW proposal on international competitiveness

AEP AMERICAN® ELECTRIC POWER

AEP's Near-Term CO_2 Reduction Commitment

Existing Programs

- Existing plant efficiency improvements
- Renewable Energy
  - 1785 MWs of Wind
  - 722 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr
  - Over 63MM trees planted through 2008
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

AEP's reductions/offsets of CO_2:
2003-2010: 48 MMT Total

New Program Additions (by 2011)

- 1000 additional MWs of Renewable through PPAs
- Domestic Offsets (methane, forestry): About 2MM tons/yr
- Fleet Vehicle/Aviation Offsets: 0.2MM tons/yr
- Additional actions: Energy efficiency and biomass: 0.3MM tons/yr

New Technology Additions

- New Generation – Ultra Super Critical
- Carbon Capture and Storage (CCS) for existing fleet
  - Chilled Ammonia

AEP's reductions/offsets of CO_2:
2011+: 5 MMT/Year
Longer Term - New Technology

Mountaineer CCS Update

PROJECT STATUS

- September 2 – successfully captured CO_2
- October 1 - began underground injection and storage
- October 30 – facility dedicated

NEXT STEPS

- Monitor the CO_2 behavior once underground
- Assess the parasitic load impact of the equipment on the plant
- DOE funding received for 50% of commercial phase of project ($334MM); project expected to be operational between 2012 and 2015

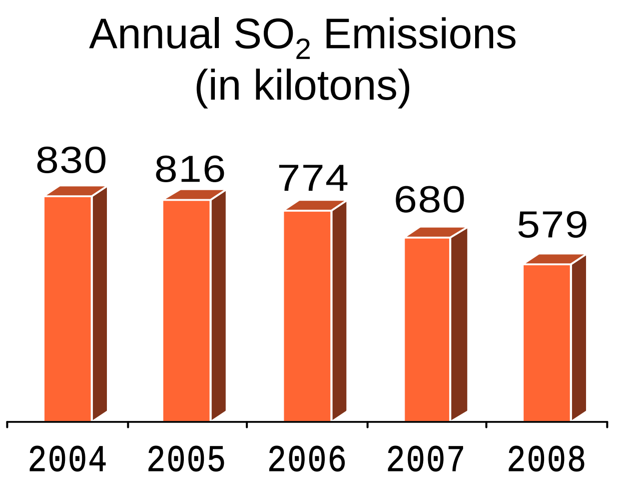
PROJECT DESCRIPTION

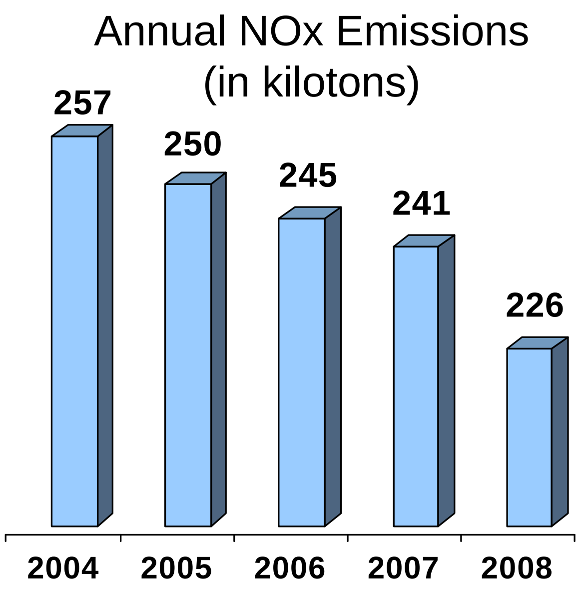
- Alstom's chilled ammonia process captures CO_2 from a 20 MWe slipstream of flue gas at AEP's Mountaineer plant located in New Haven, WV
- Captured CO_2, transformed to a semi-liquid state, is pumped into sandstone or dolomite layers approximately 1.5 miles underground. Caprock will hold the CO_2 in place permanently.

AEP AMERICAN® ELECTRIC POWER

Environmental Program

- Environmental retrofits keep coal plants viable in order to take advantage of vast domestic fuel resources
- Scrubbers and SCRs reduce emissions of SO_2, NOx and Mercury
- Environmental technology installed on existing plants delays the premature retirement of those plants, thereby keeping low cost generation assets available to the market
- Since 2004, we have invested $4.4 billion in environmental retrofits to meet obligations required by environmental regulations





AEP AMERICAN ELECTRIC POWER

New Generation Projects

- John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant. Located in AEP's SWEPCo region AEP owns 73 percent or roughly 440 megawatts of the total unit.
  - The cost of the plant is anticipated at $1.6 billion with AEP's share approximately $1.2 billion and will begin commercial operation in 2012.
  - SWEPCo's share of the plant's costs will be allocated on the basis of electric load among customers in Arkansas, Louisiana and Texas.
  - The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls.

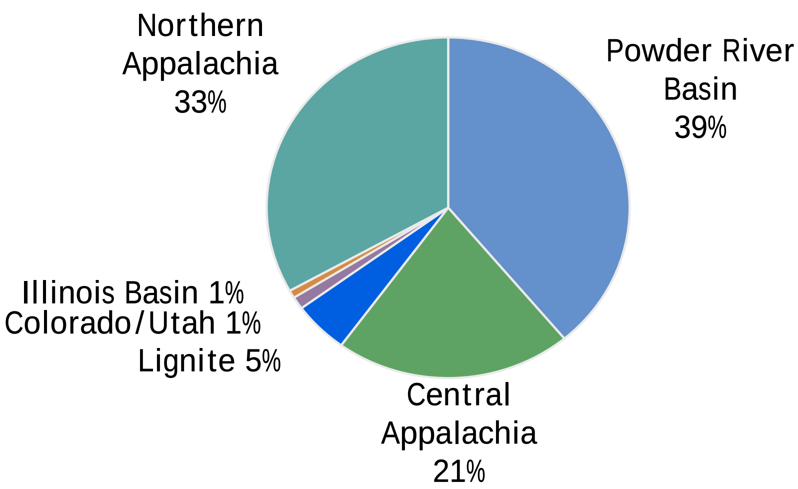
John W. Turk Jr. Ultra-Supercritical Coal Plant

J. Lamar Stall Combined-Cycle Gas Plant

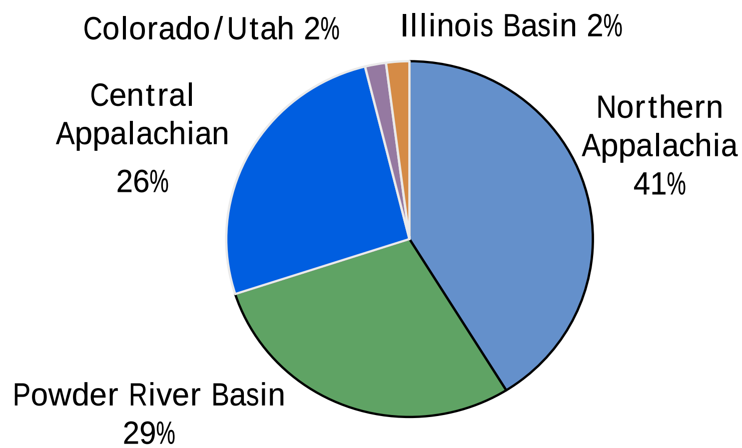
- J. Lamar Stall Combined-Cycle gas plant is a 508-MW unit scheduled for commercial operation in 2010.
  - The total projected cost of the plant is $386 million.
  - The plant is located in AEP's SWEPCo region at its existing Arsenal Hill Power Plant in Shreveport, Louisiana.
  - The plant will be used to service the needs of customers in the Arkansas, Louisiana and Texas service territories.

Coal Procurement - 2010 Projected

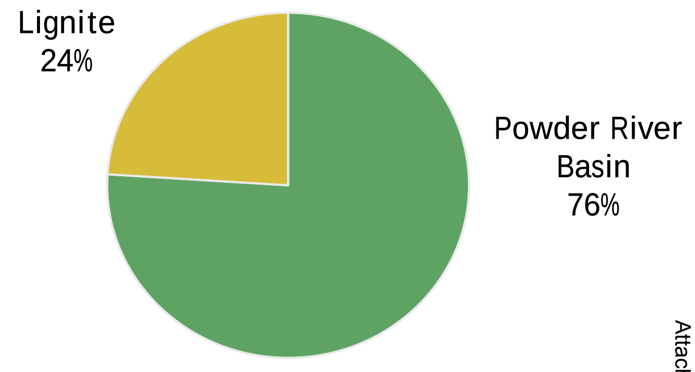
Total AEP System



AEP East



AEP West



Coal Stats:

- 100% contracted for 2009 and 98% for 2010
- Avg. delivered price ~ $47/ton in 2008
- Approximate 10% price increase in 2009 ~ $51/ton
- Approximate 10% price decrease in 2010 ~$46/ton

AEP River Operations

- Full-service Inland Waterways carrier
  - 2,978 hopper barges
  - 58+ towboats/25 tugs
- Tonnage & Commodity:
  - Captive: (for AEP)-37MM tons of coal;
  - Commercial: 35MM tons of coal/grain/bulk
- Gulf Operations
  - Barge cleaning and repair
  - Fleeting and shifting
  - Midstream transfers
- Operating Centers in Lakin, WV, Cape Girardeau, MO, Paducah, KY, Convent and Belle Chase, LA

River Operations barge

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events and our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives.

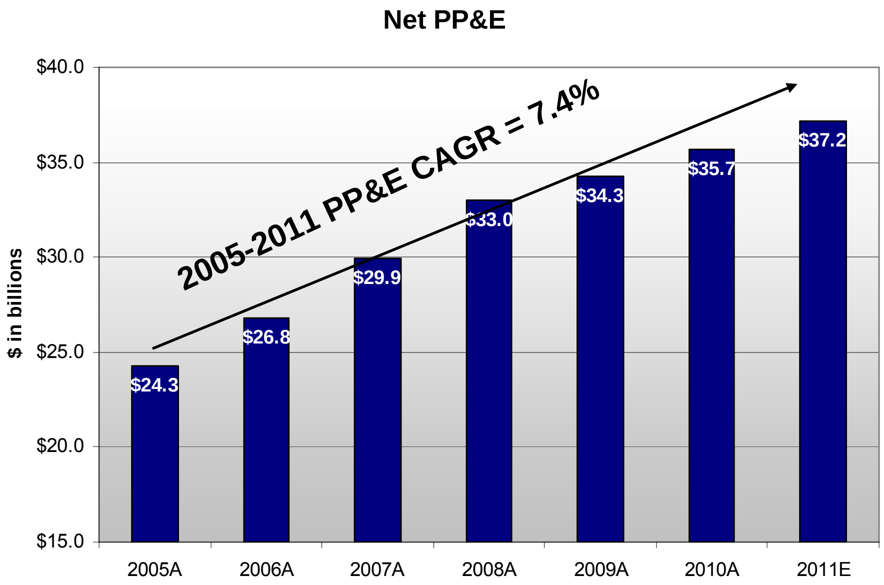
Texas	961,000

Traditional Ratemaking Environment

AEP®

Growth in Net PP&E



Growth in rate base resulting in $2.3 billion of rate relief secured from 2006 through 2010

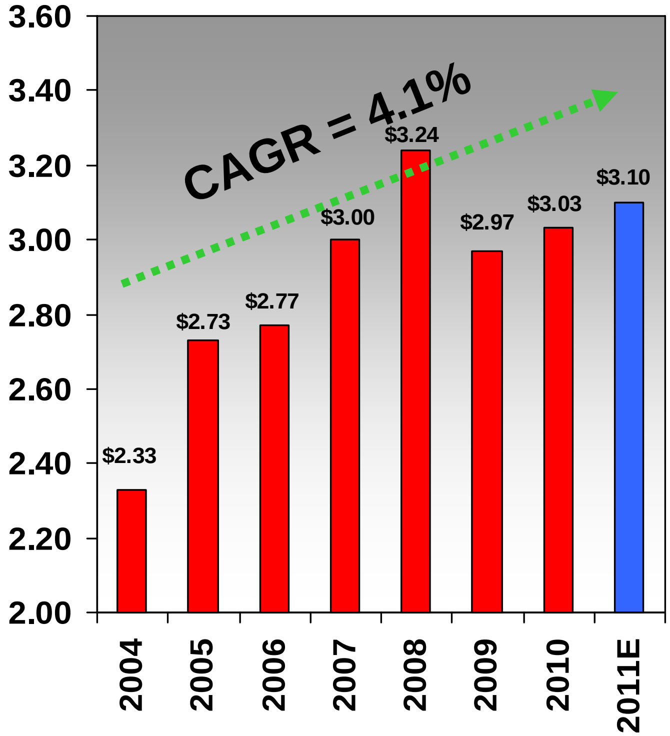
Regulatory Framework

- Base Rates
  - Recovery of capital and financing costs
  - Recovery of set level of O&M costs
- Recovery of Fuel Costs
  - Active fuel clauses in all jurisdictions
- Opportunities to Reduce Regulatory Lag
  - Contemporaneous recovery for construction costs, reliability, environmental spending, etc.
- Ohio Generation Rates set by PUCO according to SB221 (non-cost based)
  - Current generation rates set for 2009 – 2011
  - New filing currently with PUCO to set generation rates for 2012 - 2014

Earnings and Dividends

On-Going EPS History Since 2004

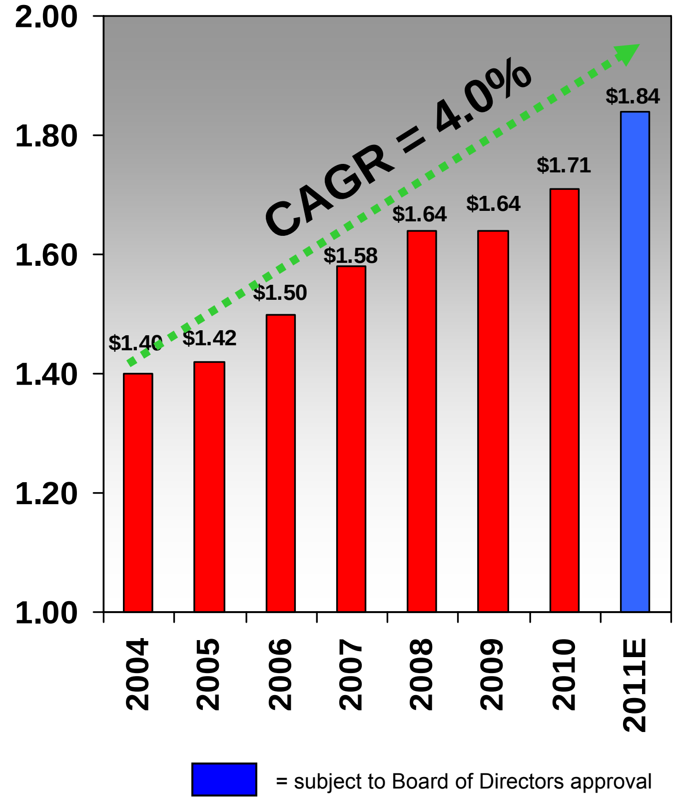
$/share



- Earnings growth largely attributed to capital investment program
- Pre-recession earnings supported by robust wholesale market activity and high power prices
- Equity offering in 2009 stabilized credit and strengthened balance sheet
- 2011 guidance range of $3.00 to $3.20 per share

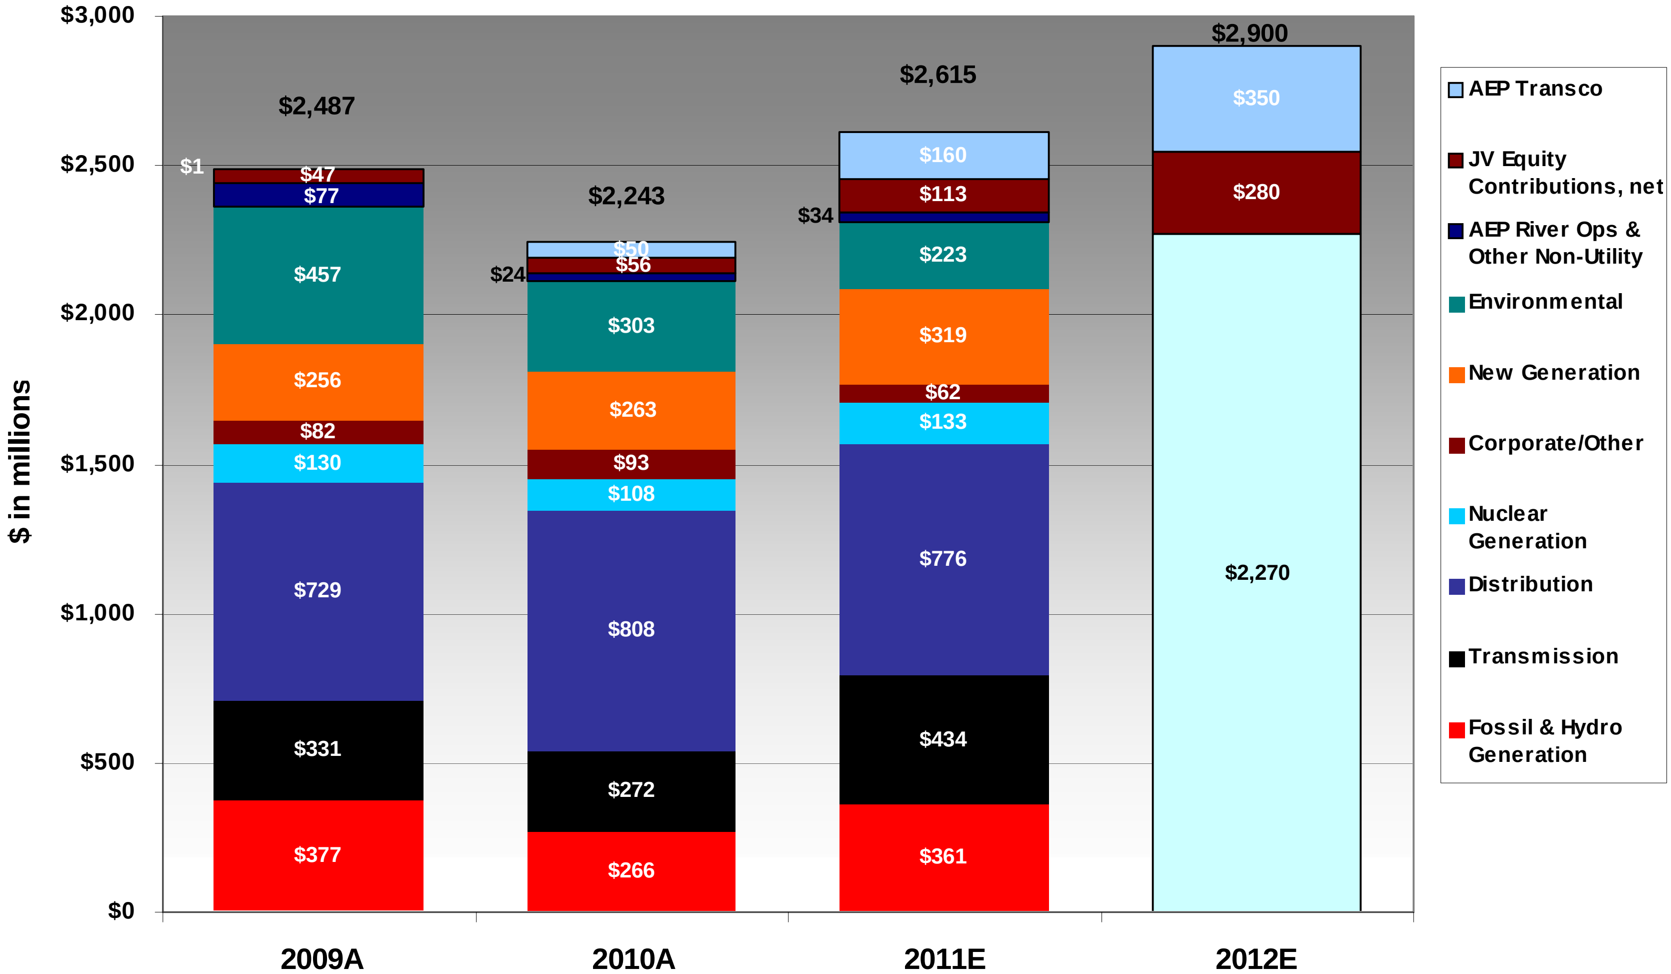
Dividend History Since 2004

$/share



- Quarterly dividend <u>increased 12%</u> in 2010
- <u>404th consecutive</u> quarterly dividend declared in April 2011
- 50-60% payout ratio target
- Current yield over 5%

Capital Expenditures



Investment levels greater than depreciation of $1.4B per year cause rate base growth in 2011 and 2012

AEP Highlights

- **Regulated Electric Utility**
  - Regulatory and economic diversity
  - Operating Company Model
- **Focus on Capital Allocation**
  - Capital for Growth
  - Return of Capital to Shareholders
- **Strong Balance Sheet**
  - Stable credit ratings
  - Capital plan supported by cash flow
  - Strong liquidity position
- **Growth Opportunities**
  - Capital for utility platform
  - Transmission projects
- **Dividend yield over 5%**

Transmission Investment Opportunities

ETT: Projects in Texas ERCOT jurisdiction

- $600MM of projects est. in service 2010-2013
- ETT's opportunity could reach $3.0B in this decade

Transco: Within our existing footprint

- Provides opportunity to:
  - Develop new AEP-only projects
  - Reduce regulatory lag through FERC formula rates adjusted annually

Joint Ventures: Outside of our footprint, via ETA or with others

- Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
- Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2015
- Robust pipeline of projects up to $15B

765-kV Tower

AEP AMERICAN ELECTRIC POWER

JV Strategy – Nationwide Grid Expansion

ACTIVE PROJECTS

SPP

Prairie Wind — COD: 2013-14
- *110 miles of 765 kV*
- *Partners: Westar (50%) & Electric Transmission America (50%)*
- *Estimated Cost: $400 million*
- *ROE: 12.8%*

Tallgrass — COD: 2013-14
- *170 miles of 765 kV*
- *Partners: OG&E (50%) & Electric Transmission America (50%)*
- *Estimated Cost: $500 million*
- *ROE: 12.8%*

ERCOT

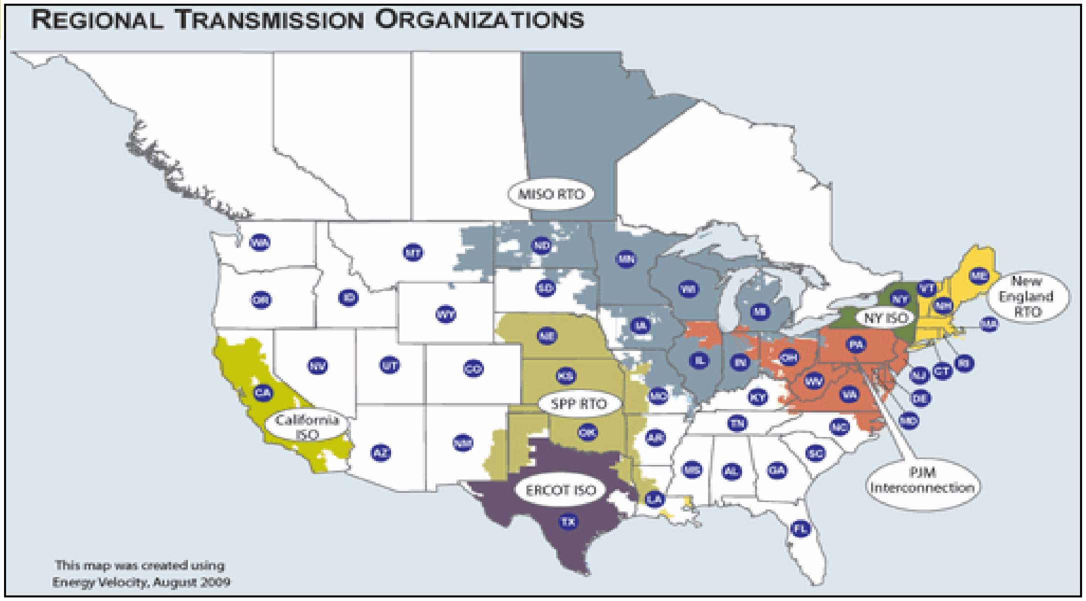
ETT — COD: 2010-2017
- *345 kV ERCOT Expansion*
- *Partner: MidAmerican Energy (50%)*
- *Estimated Cost: $1.4 billion*
- *ROE: 9.96%*

PJM

PATH-WV — COD: 2014
- *275 miles of 765 kV*
- *Partner: Allegheny Energy (50%)*
- *Estimated Cost: $1.2 billion*
- *ROE: 14.3%*

PJM/MISO

Pioneer — COD: 2015
- *240 miles of 765 kV*
- *Partner: Duke Energy (50%)*
- *Estimated Cost: $1 billion*
- *ROE: 12.54%*



FUTURE DEVELOPMENT

SMARTransmission Study
- *Interregional EHV & Wind Integration Study*
- *Partners: ATC, Exelon, MidAmerican Energy, Northwestern Energy, Xcel Energy*

SPP

SPP EHV Overlay
- *Regional Expansion of 765 kV Backbone*

ERCOT

ETT — COD: various
- *Additional CREZ spend of ~ $1.1 billion (COD 2012-2013, subject to a 6-month routing approval)*
- *Other Projects Pending Transfer of ~ $600 million (COD 2010-2013)*

PJM

PJM Expansion
- *Regional Expansion of 765 kV, 500 kV and 345 kV systems*

PJM/MISO

EHV Michigan/Ohio
- *700 miles of Proposed 765 kV*

AEP AMERICAN® ELECTRIC POWER

A Portfolio Approach: AEP's Long-Term CO_2 Reduction Commitment

Existing Programs

- Existing Plant Efficiency Gains
- Renewable Energy
  - 1400 MW wind
  - 300+ MW hydro
- Domestic Offsets
  - Over 63MM trees planted = 1.2MM tons of CO_2 uptake
- International Offsets
  - 1MM tons of forest carbon sequestered through 2009
- Chicago Climate Exchange

AEP's reductions/offsets of CO_2:

– **2003-2010: 50 MMT+ Total**

New Additions (by 2012)

- 2000 MW Wind PPAs
- Domestic Offsets
  - Methane, Forestry
- Fleet Vehicle/Aviation Offsets
- Energy Efficiency & DSM
- Biomass Co-firing
- New Technology
  - New Generation: Ultra Super Critical Coal
  - Carbon Capture and Storage (CCS) for existing fleet
    - Chilled Ammonia

AEP's reductions/offsets of CO_2:

– **2011+: 5 MMT/yr**

AMERICAN ELECTRIC POWER

AEP Leadership in New Technology: Chilled Ammonia CCS

Phase 1

Captured CO_2 first time on 09/01/09; Injected CO_2 first time on 10/1/2009

Mountaineer Plant (WV)

Chilled Ammonia

20MWe scale

(Alstom)

CO_2 Storage

(Battelle)

2 injection wells & 3 monitoring wells

Captures and Stores ~100,000 metric tons of CO_2 /yr.

Phase 2

Awarded $334MM DOE Funding; Expected Commercial Operation: 2015

Mountaineer Plant (WV)

Chilled Ammonia

~235MWe scale

(Alstom)

CO_2 Storage

Captures and Stores 1.5 Million metric tons of CO_2/yr, 1.5 miles below the surface

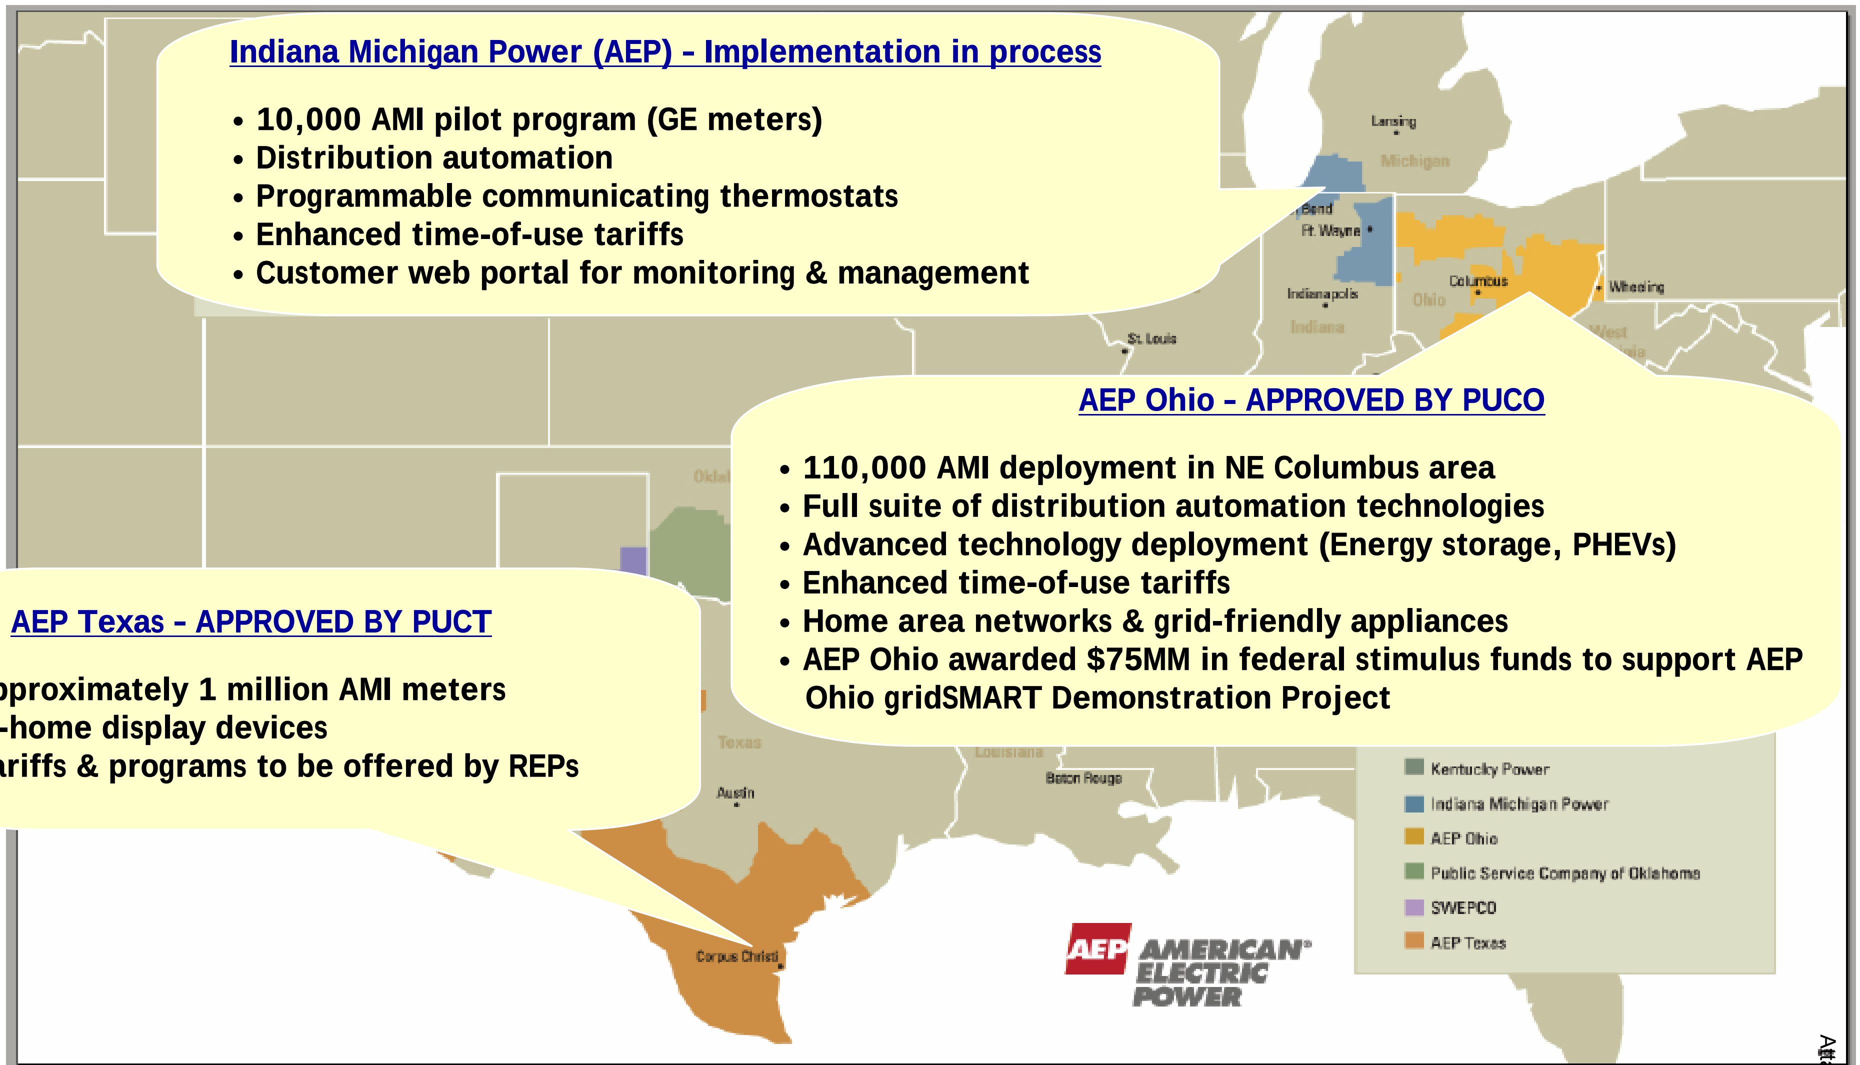
AEP gridSMART Deployment Status



Indiana Michigan Power (AEP) - Implementation in process

- 10,000 AMI pilot program (GE meters)
- Distribution automation
- Programmable communicating thermostats
- Enhanced time-of-use tariffs
- Customer web portal for monitoring & management

AEP Ohio - APPROVED BY PUCO

- 110,000 AMI deployment in NE Columbus area
- Full suite of distribution automation technologies
- Advanced technology deployment (Energy storage, PHEVs)
- Enhanced time-of-use tariffs
- Home area networks & grid-friendly appliances
- AEP Ohio awarded $75MM in federal stimulus funds to support AEP Ohio gridSMART Demonstration Project

AEP Texas - APPROVED BY PUCT

- Approximately 1 million AMI meters
- In-home display devices
- Tariffs & programs to be offered by REPs

46th EEI Financial Conference Handout

Orlando, FL
November 7-8, 2011

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance, resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and the expected legal separation and transition to market for generation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives, evolving public perception of the risks associated with fuels used before, during and after the generation of electricity, including nuclear fuel and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events.

TCC Remand Case – PUCT Docket No. 39722

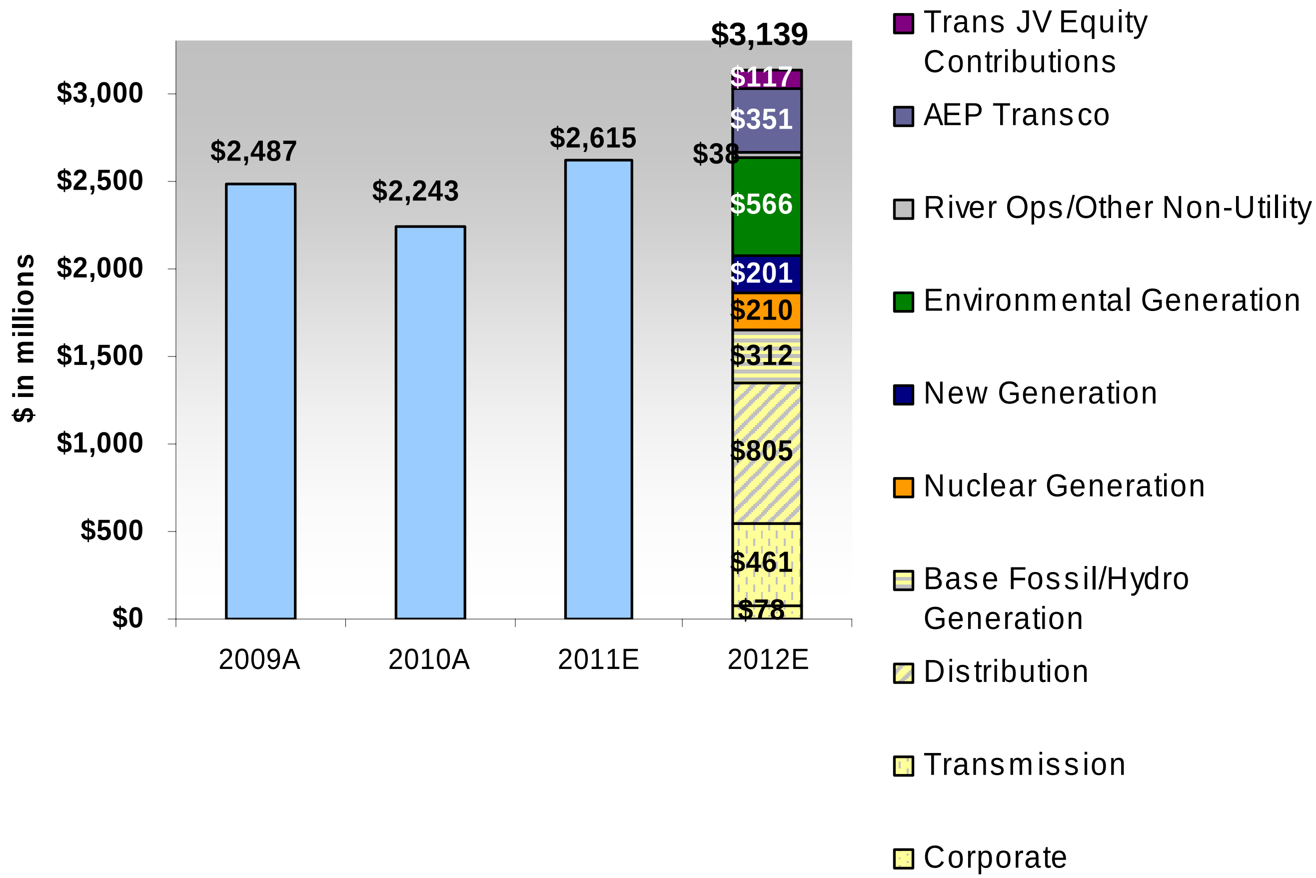
- In July 2011, the Supreme Court of Texas reversed the PUCT's decision of the disallowance of capacity auction costs. This opened the docket for TCC to file on October 10, 2011, an application to confirm the capacity auction true-up balance.
- TCC's filing requested a capacity auction true-up balance of $1.2B, which includes the capacity principal balance of $421M plus interest thru March 31, 2012. Interest is based on a carrying charge rate of 11.795%, which was the rate in effect at the time of the original PUC decision. Based on the Commission's Preliminary Order in the case, the capacity auction true-up balance would be approximately $817M inclusive of a carrying charge rate of 7.47%(based on ruling that modified the rate in 2007).
- The regulatory hearing is scheduled to take place November 29-30, 2011. A filing for a securitization order will occur soon after an order is issued on the remand case. TCC expects to issue the securitization bonds in the first quarter of 2012.
- TCC recorded a $425MM net-of-tax favorable special item related to this case in 3Q2011, ($421MM principal & $234MM interest, less related taxes). AEP also recorded $28MM on-going interest YTD in 3Q2011.
- Upon securitization, TCC will begin recognizing the equity component of the carrying cost prorated over the life of the securitization bonds (estimated to be $116MM, based on the PUCT preliminary order).
- Filing also seeks order to resolve tax normalization issues.

Pension and OPEB Estimate

- Investment returns for our pension plan remain slightly positive for the year despite volatility in the market, OPEB funds are slightly negative year to date.
- With very low short term interest rates, it is beneficial to pre-fund a portion of the required contributions to the plan.
- After making a discretionary contribution of $300 million by year end, cash contributions to the pension will total $450 million for 2011.
- We do not expect any required cash contributions to the pension for 2012, although we may make additional discretionary contributions.
- We expect combined pension and OPEB expense to increase $88M from 2011 to 2012 ($62MM O&M, pre-tax and $26MM capitalized).
- Discount rates are 5.05% for pension and 5.25% for OPEB for 2011, and are currently estimated to be 4.35% and 4.60% for 2012 and beyond.
- Estimates for expense and contribution figures are very sensitive to changes in interest rates and investment returns between now and year-end.

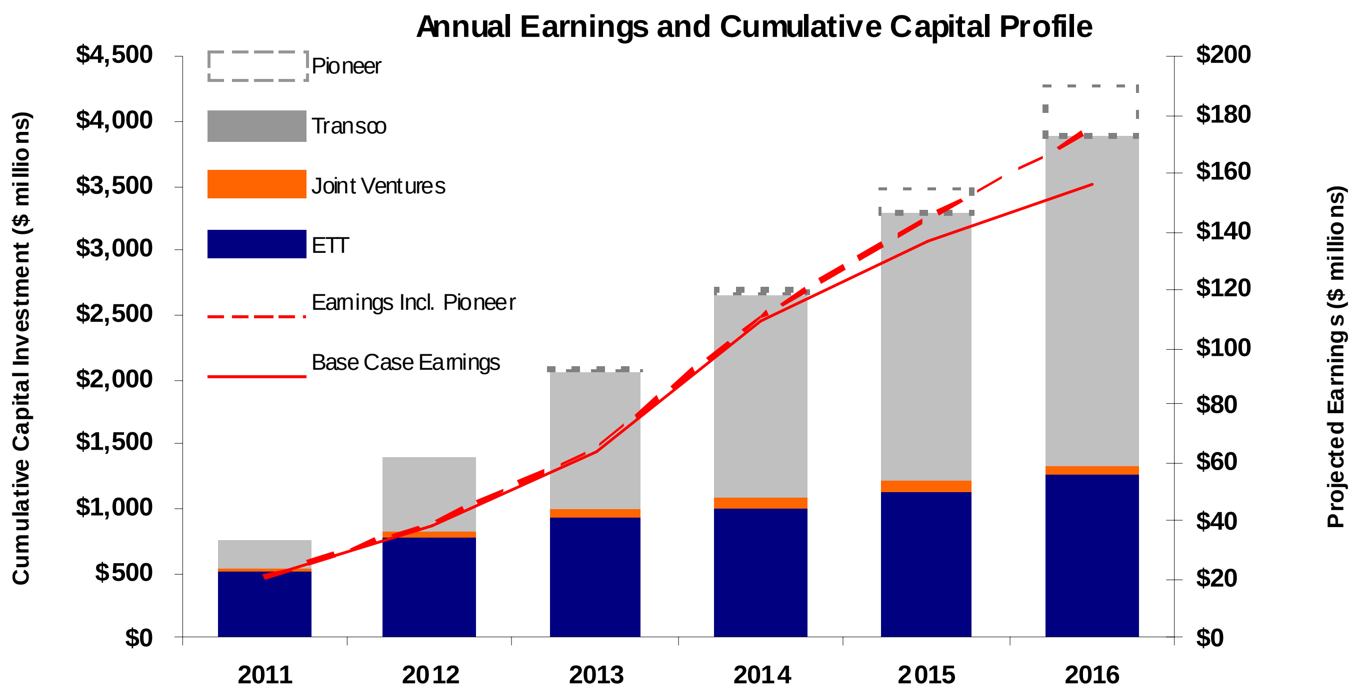
Capital Allocation

2012 AEP System Capital $3.1B



Major projects include: Turk Plant, Reliability upgrades, ETT contributions and Transco growth

Transmission Earnings & Capital Profile



[1] High Case includes AEP's share of Pioneer (50% ownership)

[2] Transco base case includes approximately $21MM in 2012 capital spend that is dependent upon state approval of Arkansas and Kentucky

[3] Joint Ventures include: PATH (50% ownership) assuming an ongoing suspension and Prairie Wind (25% ownership) assuming construction at 345kV

[4] ETT (50% ownership) includes CREZ and additional projects

[5] Projection of earnings potential at the transmission holding company level assuming 50/50 debt/equity capitalization and ROE of 11-13% for FERC projects; 60/40 debt/equity capitalization and 9.96% ROE (through 2013) and 55/45 debt/equity capitalization and 10% ROE (2014 forward) for ERCOT projects; and 50/50 debt/equity capitalization and ROE of 11.2-11.49% for Transco projects

Transmission Investment Opportunities

AEP

ETT
Electric Transmission Texas

- **Ownership Structure:** 50/50 (AEP/MidAmerican Energy Holding Company)
- **Total Project Cost**: Over $3 Billion
- **Growing Rate Base:** Current rate base is $482 million; expected to grow as follows:
  - 2011: $495 million
  - 2012: $750 million
  - 2013: $1,200 million
- **Interim TCOS filings twice per calendar year**
- **Approved ROE:** 9.96%

AEP Transcos

- Seven wholly-owned Transcos
- Expansion and growth within AEP's existing utility footprint
- Efficient recovery mechanism via FERC formula rates
- Forecasted capital investment of $210 million in 2011 and more than $350 million in 2012
- Approved ROE: 11.20%-11.49%

ROE Optimization

ROE by Jurisdiction

* Twelve Month Rolling Proforma Recurring ROE

- Strong overall system ROE with current rate cases on file for under earning utilities
- Continue to strengthen local relationships
- Concurrent recovery mechanisms
- Operating Company model refinement
  - Investment Review Committee
  - Advanced planning discussions with stakeholders

Ohio ESP Settlement

Gradual Transition to Market and Regulatory Stability in Ohio

- **Parties to the Settlement** - Signed by more than 20 organizations representing customers, competitive retail electricity suppliers, environmental groups, communities and other key stakeholders
- **Cases included in Settlement** - 2012 Electric Security Plan, Capacity Charges, Merger
- **Generation** - Corporate separation of Ohio generation assets targeted by May 2013 and transition all of Ohio generation supply to market by mid-2015; the company may pursue recovery of Pool modification costs once they exceed $50 million
- **Transition to market** - company will make a specific percentage of the Ohio retail load open to competitive retail suppliers at the RPM price for a three-year period. The remaining capacity that switches will be priced at $255/MW-day
  - Year one (2012), approximately 20 percent will be available
  - Year two (2013), approximately 30 percent will be available
  - Year three (2014 through May 2015), approximately 40 percent will be made available.
  - Standard service offer price beginning in June 2015 will be determined through auctions involving multiple suppliers of generation service. Auctions will begin as early as September 2013.
- **Fuel Adjustment Clause** - continues through May 31, 2015; parties to support legislation for securitization of fuel deferrals
- **Nonbypassable Generation Resource Rider** – allows the distribution company to recover costs related to building new generating assets dedicated solely to Ohio customers. Project-related costs will be presented in future PUCO cases.
- **Distribution Investment Rider** – Costs associated with new distribution investment to maintain and improve reliability will be recovered under this rider with an ROE of 10.5% based on a capital structure of 47% debt/53% equity. In its first year (2012), the rider will be capped at $86 million. An additional $18 million will be added in 2013 and an additional $20 million in 2014.
- **SEET ROE threshold of 13.5%**.

Summary Rate Case Information

AEP®

AEP Ohio Distribution Rate Case – Docket #11-351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%.

APCo Virginia Base Rate Case – Docket #PUE-2011-00037

On March 31,2011 APCo filed an update to its pre-biennial base rate case for recovery of generation and distribution costs requesting an increase of $75 million ($126 million total increase less $51 million deferral of depreciation increase).

In conjunction with this case, an environmental rate adjustment clause (E-RAC), a generation rate adjustment clause (G-RAC) and a renewable portfolio standard rate adjustment clause (RPS-RAC) were filed. APCo has requested that rates in the base case, E-RAC and RPS-RAC go into effect on 2/1/2012 and the G-RAC on 3/1/2012.

I&M Michigan Base Rate Case – Docket # U-16801

On July 1, 2011 I&M filed a base rate case with the Michigan Public Service Commission requesting an increase of $24.5 million. Rates proposed in this filing are based on projected 2012 cost of service and will not go into effect until 2012, therefore rates will reflect a current cost of service. This filing includes revised depreciation rates to include additions since the last approved depreciation study as well as accelerated retirement of Tanners Creek Units 1, 2 and 3. The requested ROE is 11.15%. In accordance with Michigan law I&M intends to implement rates, subject to refund, on January 1, 2012. An order is expected by mid-year 2012.

Projected Capital Structure – Company Position (12/31/12)

Summary Rate Case Information

I&M Indiana Base Rate Case Cause #44075

On September 23, 2011 I&M filed a base rate case with the Indiana Utility Regulatory Commission requesting an increase of $148.7 million ($178.4 million in base revenues offset by $29.7 million in proposed changes to the OSS, PJM and CCT riders). Rates proposed in this filing are based on a historical 03/31/2011 cost of service and will not go into effect until an order is issued. The requested ROE is 11.15%. An order is expected by the end of 2012 or early 2013.

Historical Capital Structure – Company Position (03/31/2011)

New Generation – Turk Plant

John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant, located in AEP's SWEPCO region. AEP owns 73 percent or roughly 440 megawatts of the total unit.

- The cost of the plant and related transmission is anticipated at $1.8 billion with AEP's share approximately $1.4 billion and will begin commercial operation in the fourth quarter of 2012.
- The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls.

- Third party owners include: Arkansas Electric Cooperative Corp. (12%), East Texas Electric Cooperative (8%), and Oklahoma Municipal Power Authority (7%).
- Various legal challenges are on-going related to the plant (see 10-Q).

(1) The impact of all rules continues to be under review. Project scope and technical assessments are ongoing. Any change in scope will impact the capital cost ranges.

(2) Gas plants are not included in MW. Proposed 316 (b) will impact some gas facilities.

(3) Air Rules include: CSAPR as finalized and HAPs and Regional Haze Federal Implementation Plans in OK & AR, as proposed.

(4) Includes NSR Compliance.

(5) Includes Big Sandy Unit 2, which remains fully exposed but, pending regulatory approval, will be scrubbed rather than replaced with new natural gas generation.

Retrofits/New Generation

- The tables below represent our estimated $6 - $8 billion capital investment from 2012 to 2020 for environmental retrofits on 10,500 MW and new/refueled generation of 2,152 MW. The below costs include management estimates for compliance with CSAPR, HAPs MACT, CCR and 316(b) regulations as currently proposed.

Operating Company	Plant	MW	Type of retrofit	Low Cost Estimate 2012-2020 ($MM)	High Cost Estimate 2012-2020 ($MM)	
AEP Ohio	Conesville 5	400	SCR, DSI			
	Conesville 6	400	SCR, DSI

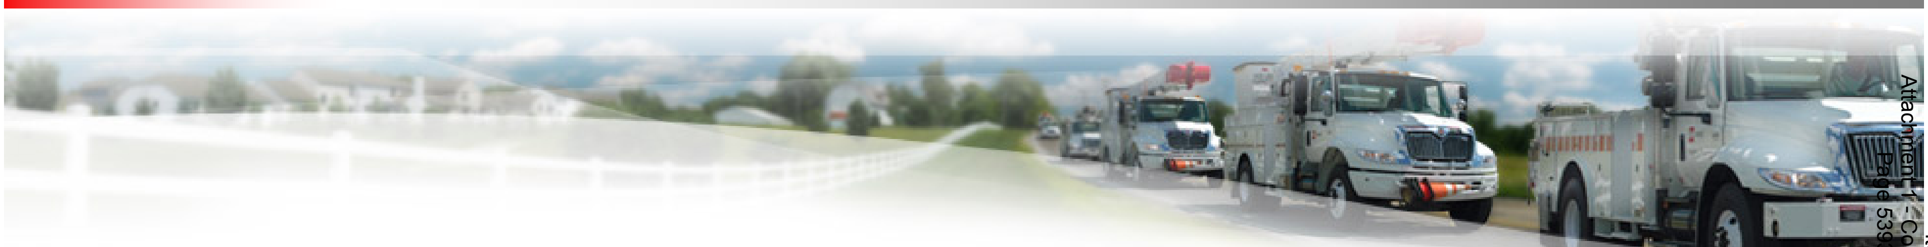
45th EEI Financial Conference Handout

November 1-2, 2010

Palm Desert, CA



"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

Liquidity and Financing

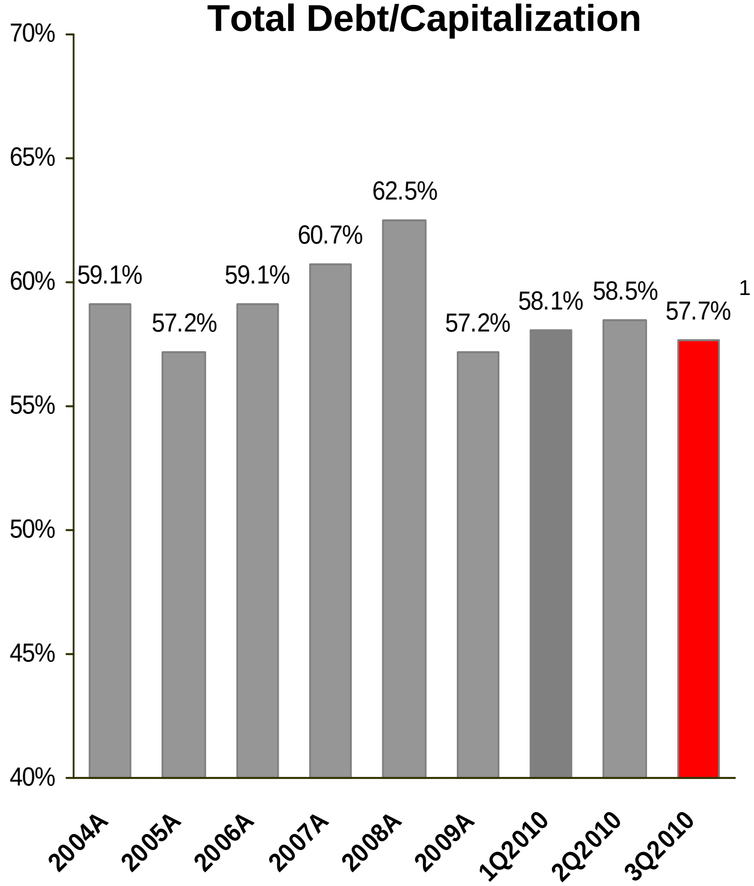
- Strong liquidity position supported by core Credit Facilities
  - Two $1.5B credit lines underpin liquidity position
    - Renewed 3-year $1.5B credit line in June 2010
    - Other $1.5B facility expires in April 2012, expect to address this renewal in 2011
  - Both facilities are undrawn

- Financing highlights
  - Cash flow and capital spending plan keep balance sheet stable
  - Committed to solid-investment grade credit metrics (BBB/Baa2)
    - Debt-to-Capital of 55-59%
    - FFO/Debt in the mid- to high teens
  - Debt Financing
    - Maturities total $620M in 2011
    - Net debt increases about $50M

Capitalization & Liquidity

AEP®

Total Debt/Capitalization



Note: Total Debt is calculated according to GAAP and includes securitized debt

1: Effective January 1, 2010 in accordance with Transfers and Servicing accounting guidance (formerly SFAS 166), factored receivables of AEP Credit of $750 million are classified as short-term debt; The 3Q2010 debt/capitalization ratio would be 56.8%, excluding AEP Credit.

Current Liquidity Summary

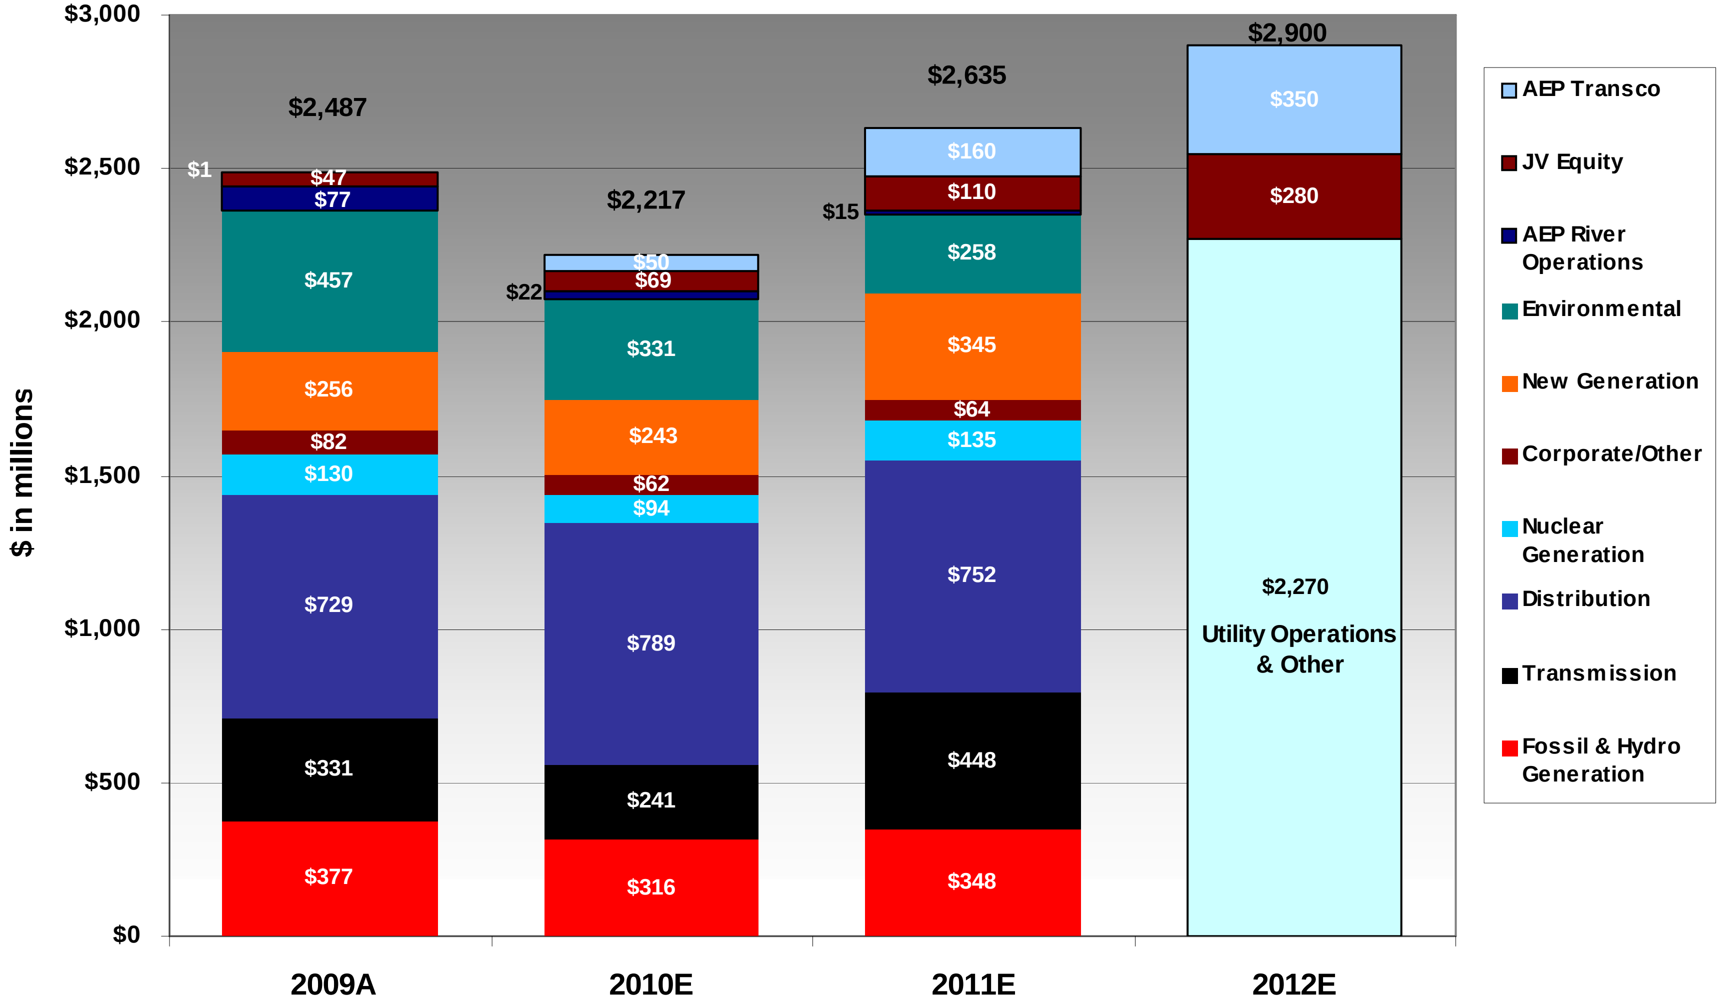
Net Available Liquidity	**$3,207**	

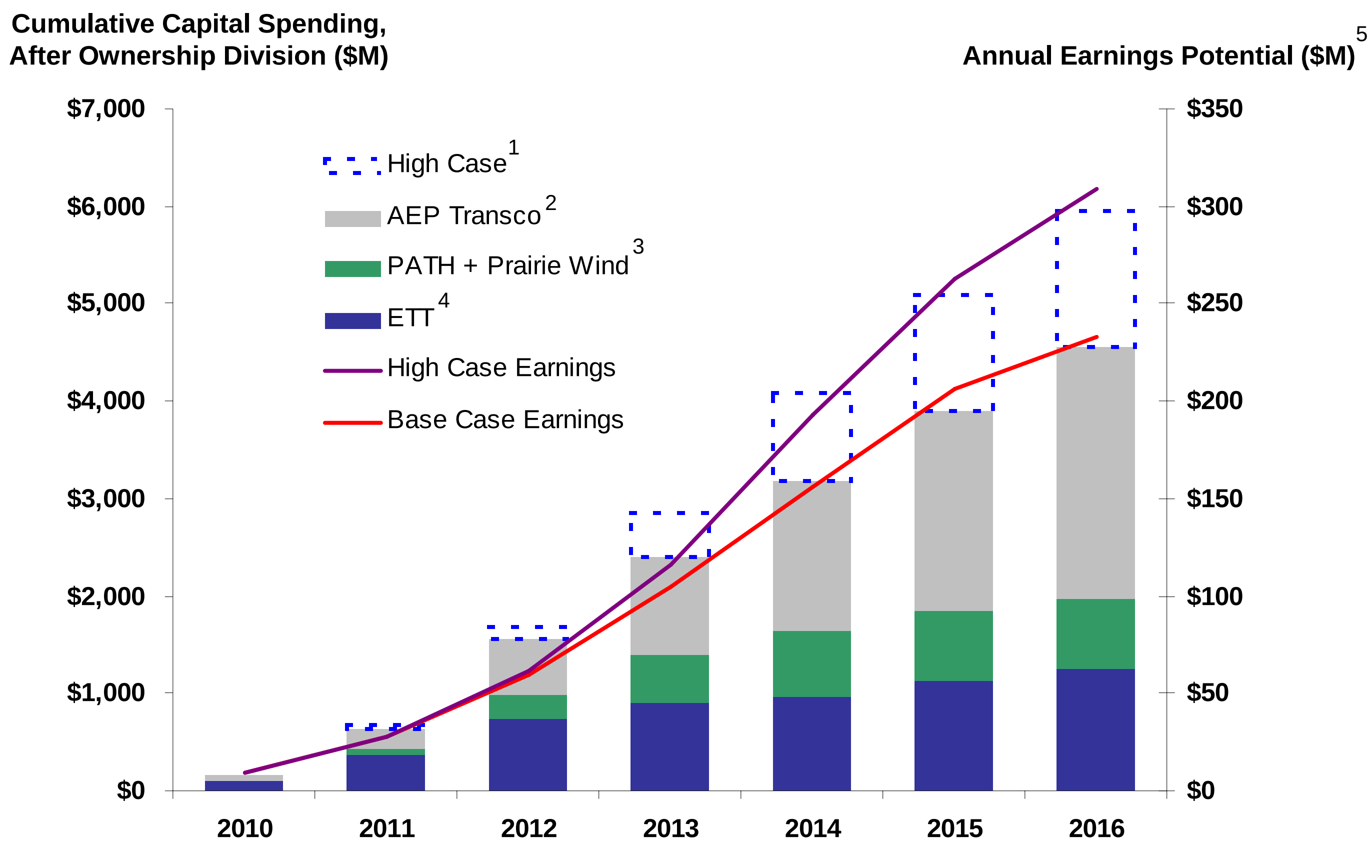
Pension and OPEB Estimate

- Investment returns for our pension plan and OPEB funds are solid so far this year. Year-to-date, the pension fund is up about 8% through September, with similar gains in the OPEB funds.
- After making a discretionary contribution of $350 million in September, cash contributions to the pension will total $500 million for 2010.
- We currently would have no required cash contributions to the pension for 2011 but are allocating a voluntary contribution up to $150 million.
- We expect combined pension and OPEB expense to decrease $34M from 2010 to 2011 (pre-tax and pre-capitalization).
- Discount rates are assumed to be 5.6% for pension and 5.85% for OPEB for 2010, and 4.75% and 5.0% for 2011 and beyond.
- Estimates for expense and contribution figures are very sensitive to changes in interest rates and investment returns between now and year-end.

Capital Expenditures



Transmission – Capital/Earnings Profile



[1] High Case includes: Pioneer (50% ownership), Prairie Wind at 765kV (25% ownership), Tallgrass at 765kV (25% ownership), ETA-Exelon (25% ownership) and other future opportunities

[2] AEP Transco (100% ownership) includes spending in OH, MI & OK only through 2011 and in other jurisdictions for 2012 and beyond

[3] PATH (50% ownership) assumes an in-service date of 2015 and Prairie Wind (25% ownership) assumed at 345kV

[4] ETT (50% ownership) includes CREZ and additional projects

[5] Projection of earnings potential at the transmission holding company level assuming 50/50 debt/equity capitalization and ROE of 12-13% for FERC projects; 60/40 debt/equity capitalization and 10.25% ROE (2011 forward) for ERCOT projects; and 50/50 debt/equity capitalization and ROE of 11.2-11.49% for Transco projects

Two New Anchor Projects

ETA – AEP - Exelon: The RITE Line
Approximately 420 miles of 765 kV lines connecting AEP's 765 kV system in Indiana with Exelon's 765 kV system west of Chicago, and other Exelon substations

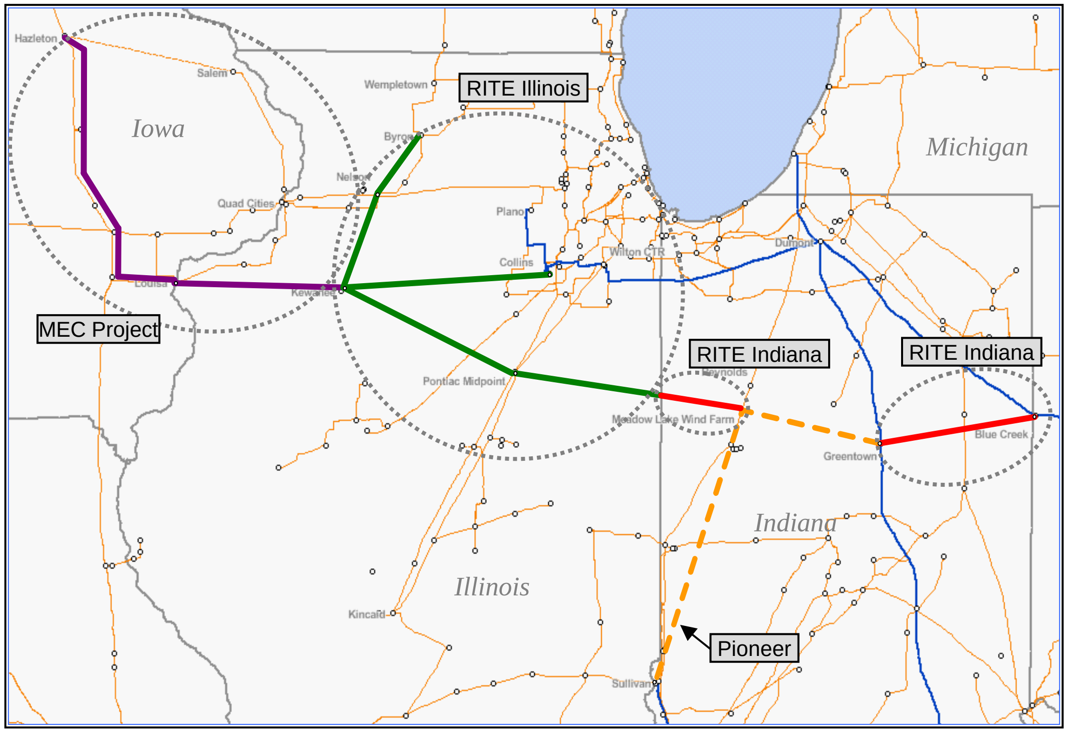
- Total Project Cost ~$1.6B
- Ensures reliability, renewables integration
- Bridges AEP's and Exelon's 765 kV systems
- PJM approval of seams project required
- Includes 765 kV and 345 kV voltages, and their electrical equivalents

ETA – MidAmerican Energy Co: MEC Project
Approximately 180 miles of 765 kV lines connecting MEC's EHV system in eastern Iowa to proposed 765 kV expansion in western Illinois.

- Total Project Cost: ~$650M
- Project part of SMARTransmission study and Midwest ISO RGOS planning effort
- MISO approval
- Includes 765kV and 345kV voltages, and their electrical equivalents

AEP Total Investment:

~$500M



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP Transco 2011 Capital Forecast

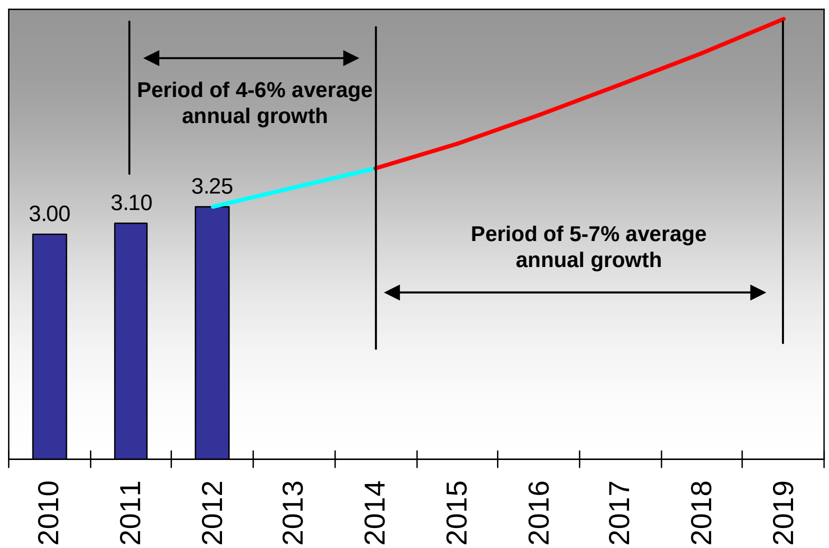
- Spending in 2011 will be focused in Ohio, Oklahoma and Michigan

2011 Transmission Company Capital Spending Forecast ($M)	2011E
AEP Ohio Transmission Company, Inc.	108
AEP Oklahoma Transmission Company, Inc.	42
AEP Indiana Michigan Transmission Company, inc.	10
Total AEP Transco	**160**

- Planned Transco projects include:
  - Replacement of 765 & 345 kV circuit breakers, autotransformers and shunt reactors
  - Ohio: Construction of a new 765/345/138 kV station (Vassell Station) near Galena, Ohio
  - Oklahoma: rebuild 30 miles of 138 kV line to provide transmission service to the City of Coffeyville, KS
  - Michigan: rebuild 6.5 mile Buchanan Hydro to Niles 69 kV transmission line in Southwestern Michigan

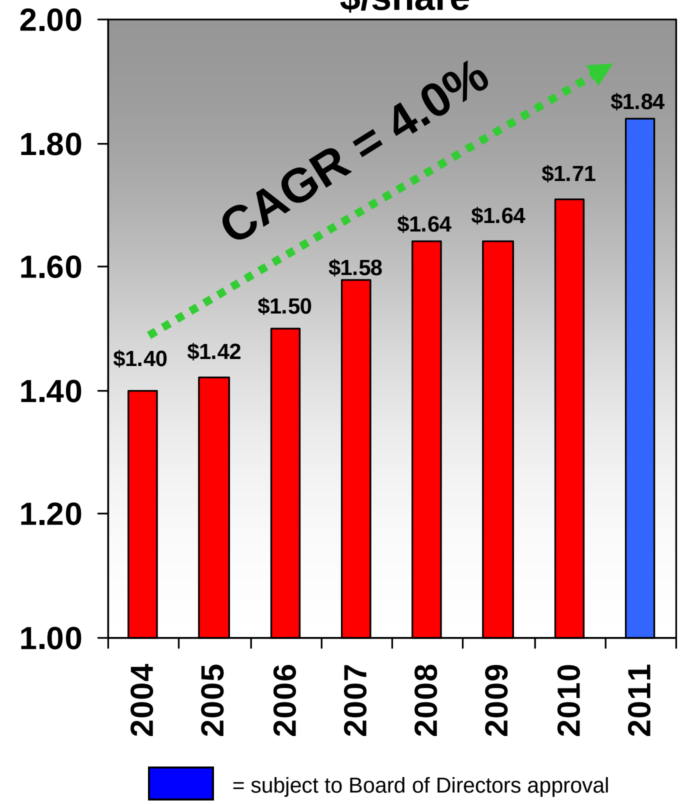
AEP – Income and Growth Opportunity

Average Annual EPS Growth defined over two periods



- 4-6% EPS growth 2012-14
  - Average annual capital spend between $2.9-3.4B
  - Blended ROE of 10.5 - 11%
  - Slow, steady recovery in economy
- 5-7% EPS growth post 2014
  - Base utility platform capital plus higher allocation of discretionary capital going to opportunities in the transmission development pipeline
  - Higher overall blended ROE opportunity
  - Robust economic growth

Dividend History Since 2004
$/share



- 9.5% increase in quarterly dividend to $0.46/share declared on October 26th
- 401st consecutive quarterly dividend paid in September
- 50-60% payout ratio target
- Current yield about 5%

AEP AMERICAN® ELECTRIC POWER

EEI International Utility Conference
March 14-16, 2010

DC Cook Nuclear Plant (Michigan)

345-kV Transmission Line

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms, and our ability to recover significant restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance or the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of flyash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including our dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events.

AEP AMERICAN® ELECTRIC POWER

AEP Value Proposition

Regulated Utility Platform

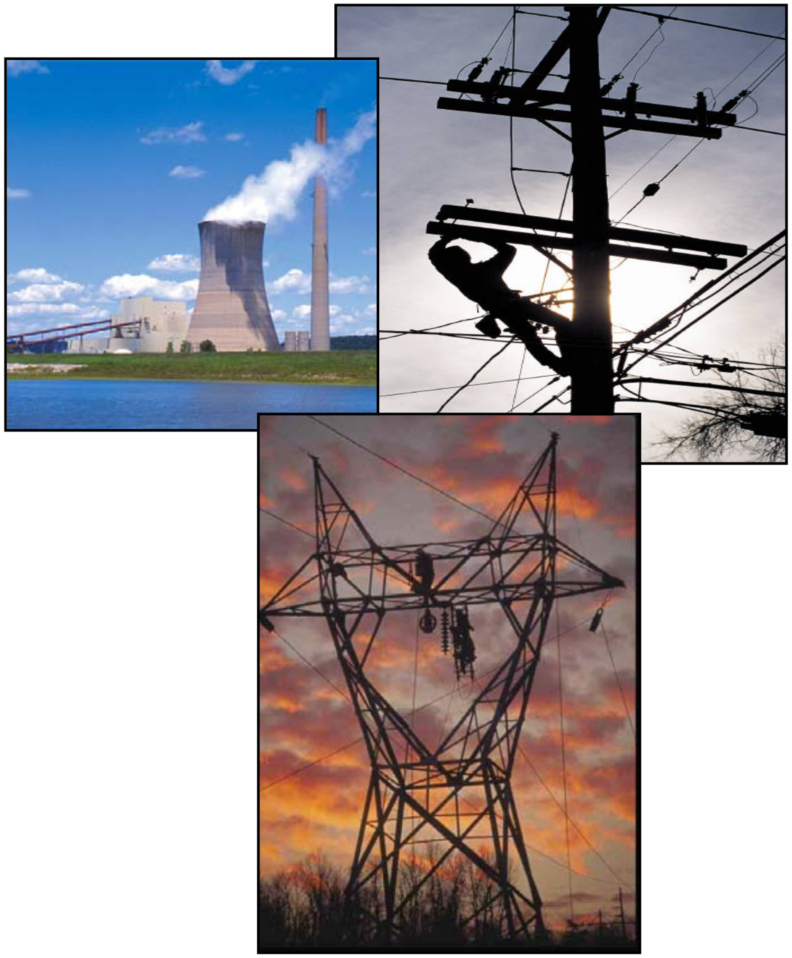
- Diversified service territory
- Successful regulatory track record
- Value compared to regulated peer group

Earnings Growth Prospects

- Investment in utility platform greater than depreciation level (2 - 4%)
- With transmission opportunities (4 - 8%)

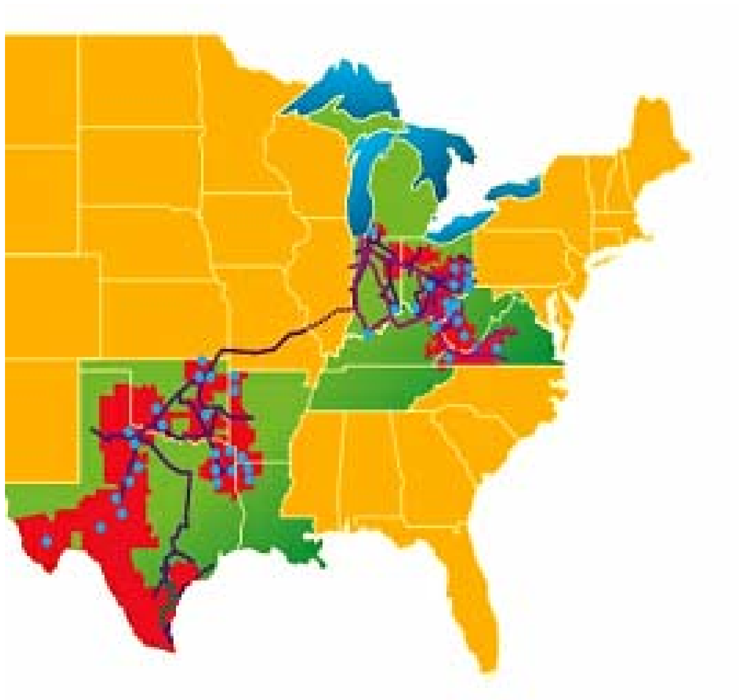
Attractive Yield Opportunity of 4.8%[1]

- 50-60% payout ratio targeted
- Nearly a century of dividend payments to shareholders



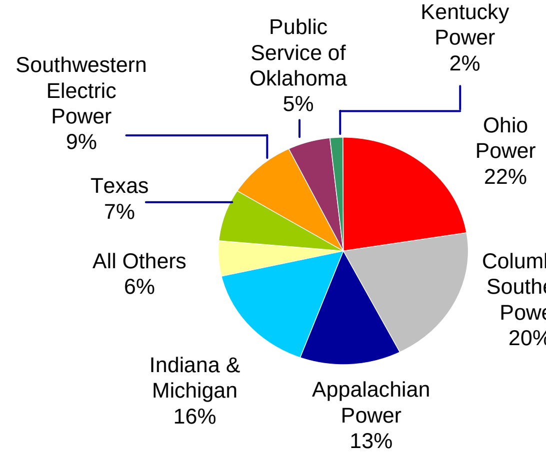
[1] yield percentage based on AEP closing price of $33.97 on 03/03/2010

Highly Diversified Regulated Utility Platform

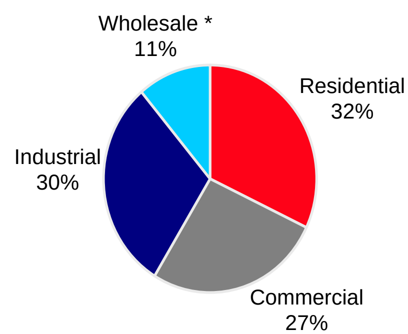


Serving 5.2 million customers in 11 states

2009 Earnings Contribution

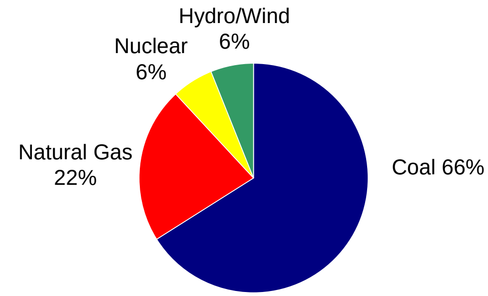


2009 Retail Load



** Wholesale includes sales to municipal and cooperative power systems, other wholesale, and other retail sales*

Fuel Mix**



** Based on Capacity

AEP AMERICAN® ELECTRIC POWER

Transmission Investment Opportunities

ETT: Projects in Texas ERCOT jurisdiction

- $600MM of projects est. in service 2010-2013
- ETT's opportunity could reach $3.0B in this decade

Transco: Within our existing footprint

- Provides opportunity to:
  - Develop new AEP-only projects
  - Reduce regulatory lag through FERC formula rates adjusted annually

Joint Ventures: Outside of our footprint, via ETA or with others

- Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
- Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2015
- Robust pipeline of projects up to $15B

765-kV Tower

AEP AMERICAN® ELECTRIC POWER

JV Strategy – Nationwide Grid Expansion

SPP

Prairie Wind — COD: 2013-14

- *110 miles of 765 kV*
- *Partners: Westar (50%) & Electric Transmission America (50%)*
- *Estimated Cost: $400 million*
- *ROE: 12.8%*

Tallgrass — COD: 2013-14

- *170 miles of 765 kV*
- *Partners: OG&E (50%) & Electric Transmission America (50%)*
- *Estimated Cost: $500 million*
- *ROE: 12.8%*

ERCOT

ETT — COD: 2010-2017

- *345 kV ERCOT Expansion*
- *Partner: MidAmerican Energy (50%)*
- *Estimated Cost: $1.4 billion*
- *ROE: 9.96%*

PJM

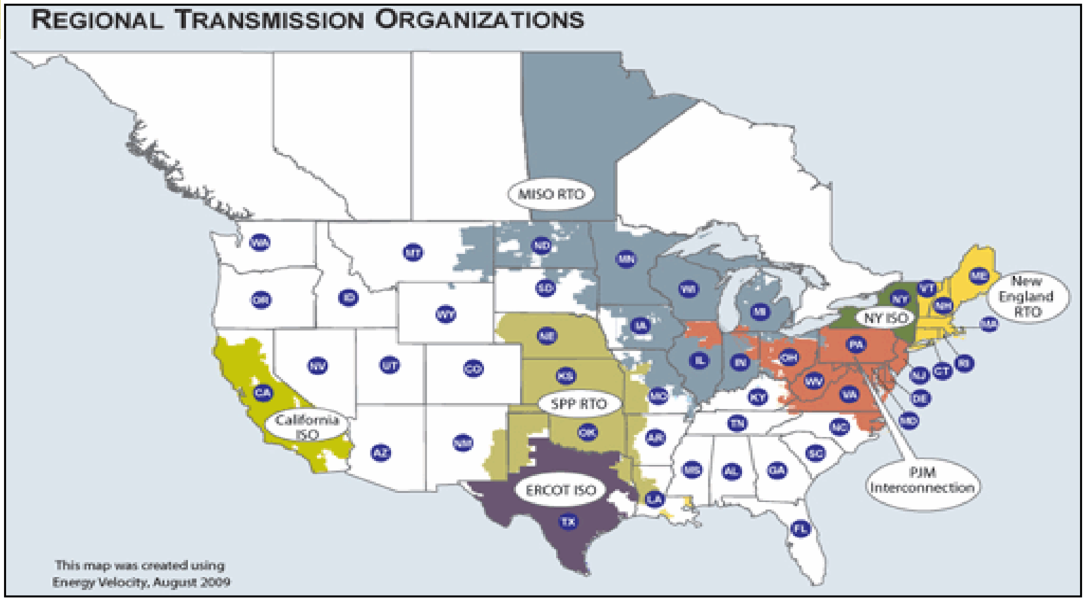
PATH-WV — COD: 2014

- *275 miles of 765 kV*
- *Partner: Allegheny Energy (50%)*
- *Estimated Cost: $1.2 billion*
- *ROE: 14.3%*

PJM/MISO

Pioneer — COD: 2015

- *240 miles of 765 kV*
- *Partner: Duke Energy (50%)*
- *Estimated Cost: $1 billion*
- *ROE: 12.54%*



ACTIVE PROJECTS

FUTURE DEVELOPMENT

SMARTransmission Study

- *Interregional EHV & Wind Integration Study*
- *Partners: ATC, Exelon, MidAmerican Energy, Northwestern Energy, Xcel Energy*

SPP EHV Overlay

- *Regional Expansion of 765 kV Backbone*

ETT — COD: various

- *Additional CREZ spend of ~ $1.1 billion (COD 2012-2013, subject to a 6-month routing approval)*
- *Other Projects Pending Transfer of ~ $600 million (COD 2010-2013)*

PJM Expansion

- *Regional Expansion of 765 kV, 500 kV and 345 kV systems*

EHV Michigan/Ohio

- *700 miles of Proposed 765 kV*

SPP — ERCOT — PJM — PJM/MISO

AEP AMERICAN® ELECTRIC POWER

A Portfolio Approach: AEP's Long-Term CO_2 Reduction Commitment

Existing Programs

- Existing Plant Efficiency Gains
- Renewable Energy
  - 1400 MW wind
  - 300+ MW hydro
- Domestic Offsets
  - Over 63MM trees planted = 1.2MM tons of CO_2 uptake
- International Offsets
  - 1MM tons of forest carbon sequestered through 2009
- Chicago Climate Exchange

AEP's reductions/offsets of CO_2:
– **2003-2010: 50 MMT+ Total**

New Additions (by 2012)

- 2000 MW Wind PPAs
- Domestic Offsets
  - Methane, Forestry
- Fleet Vehicle/Aviation Offsets
- Energy Efficiency & DSM
- Biomass Co-firing
- New Technology
  - New Generation: Ultra Super Critical Coal
  - Carbon Capture and Storage (CCS) for existing fleet
    - Chilled Ammonia

AEP's reductions/offsets of CO_2:
– **2011+: 5 MMT/yr**

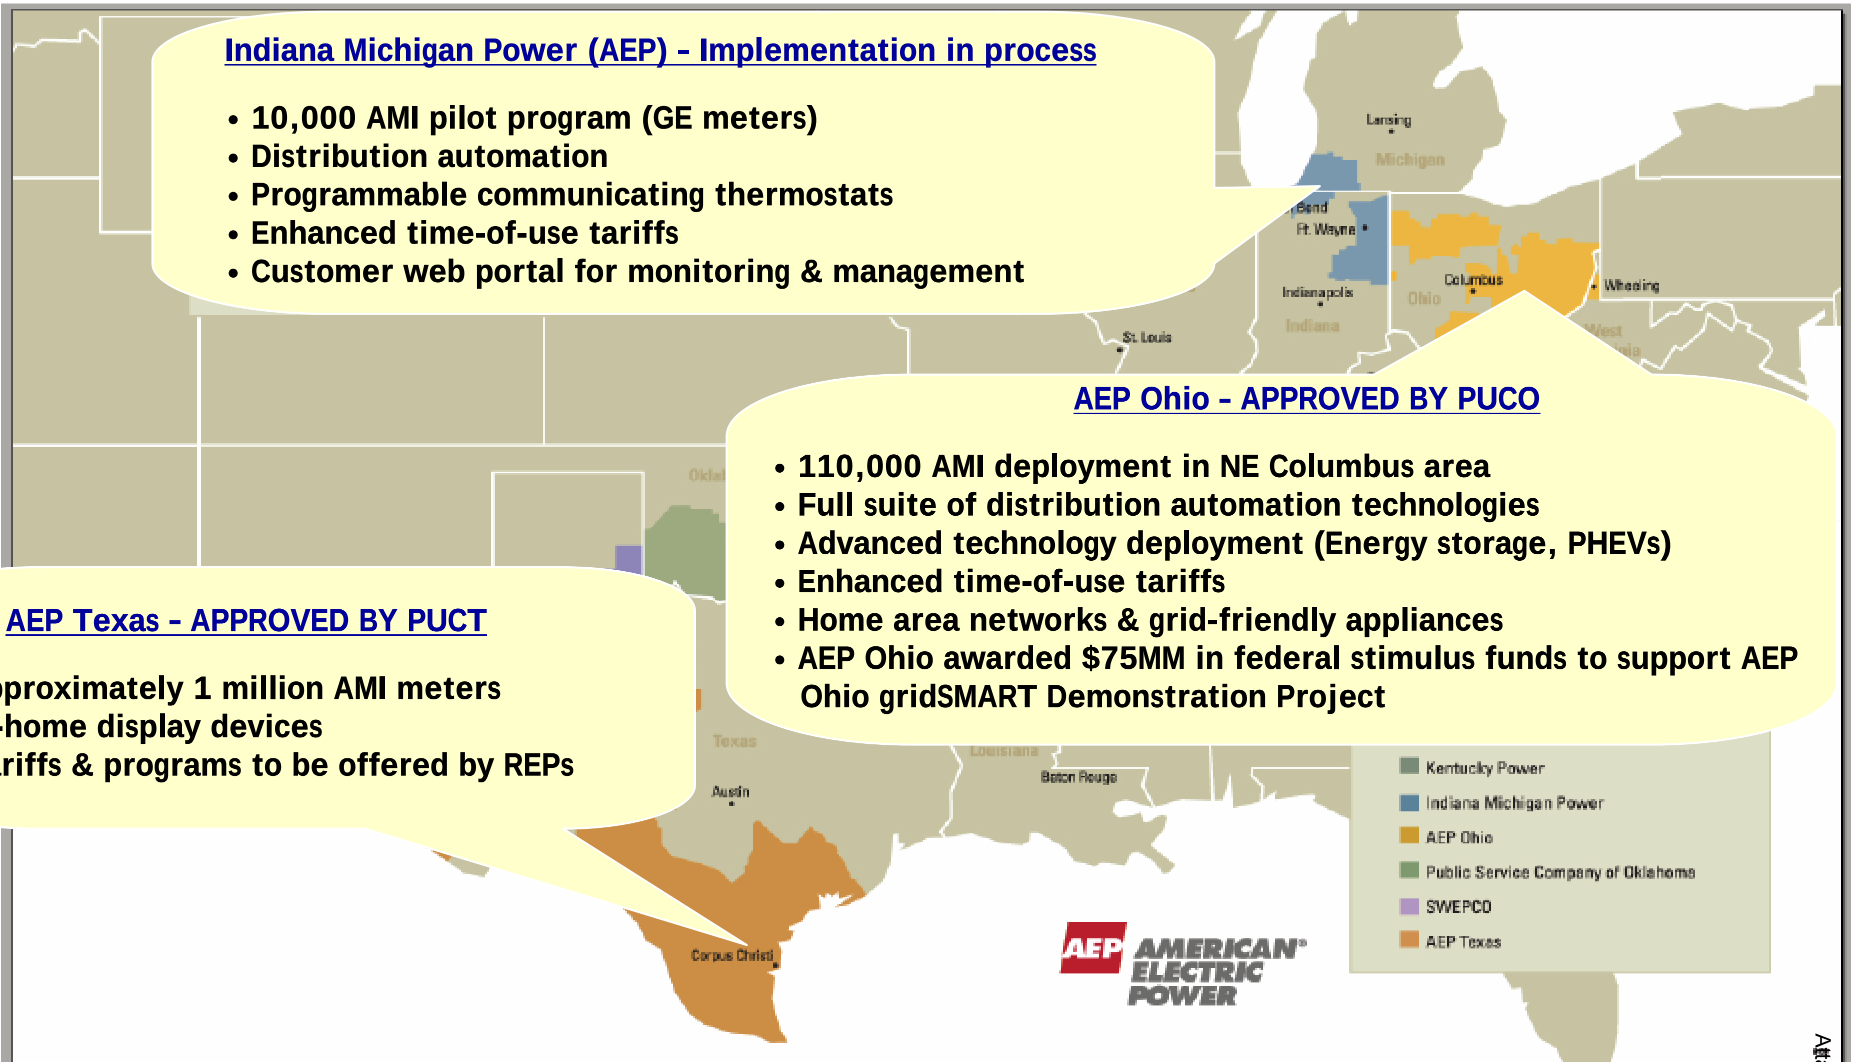
AEP gridSMART Deployment Status



Indiana Michigan Power (AEP) - Implementation in process

- 10,000 AMI pilot program (GE meters)
- Distribution automation
- Programmable communicating thermostats
- Enhanced time-of-use tariffs
- Customer web portal for monitoring & management

AEP Ohio - APPROVED BY PUCO

- 110,000 AMI deployment in NE Columbus area
- Full suite of distribution automation technologies
- Advanced technology deployment (Energy storage, PHEVs)
- Enhanced time-of-use tariffs
- Home area networks & grid-friendly appliances
- AEP Ohio awarded $75MM in federal stimulus funds to support AEP Ohio gridSMART Demonstration Project

AEP Texas - APPROVED BY PUCT

- Approximately 1 million AMI meters
- In-home display devices
- Tariffs & programs to be offered by REPs

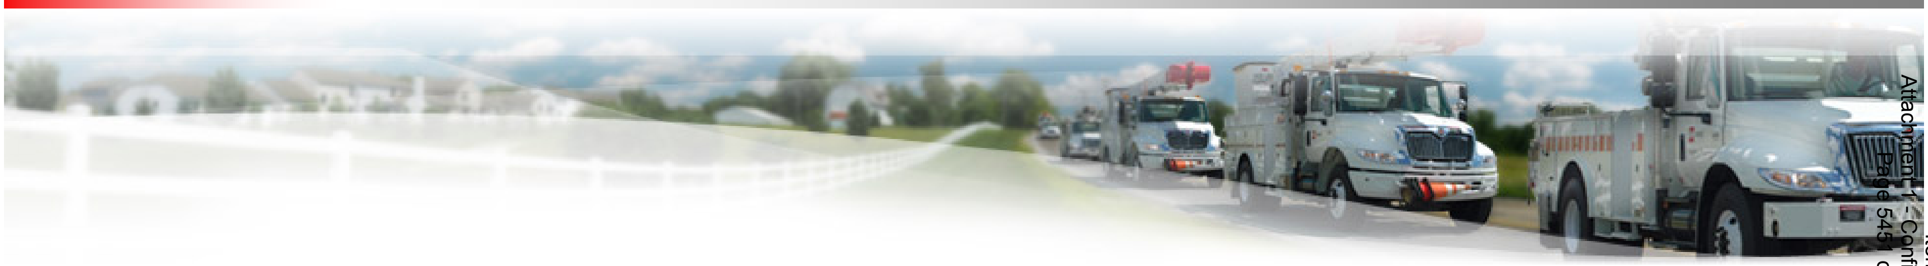
45th EEI Financial Conference

November 2, 2010
Palm Desert, CA



“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

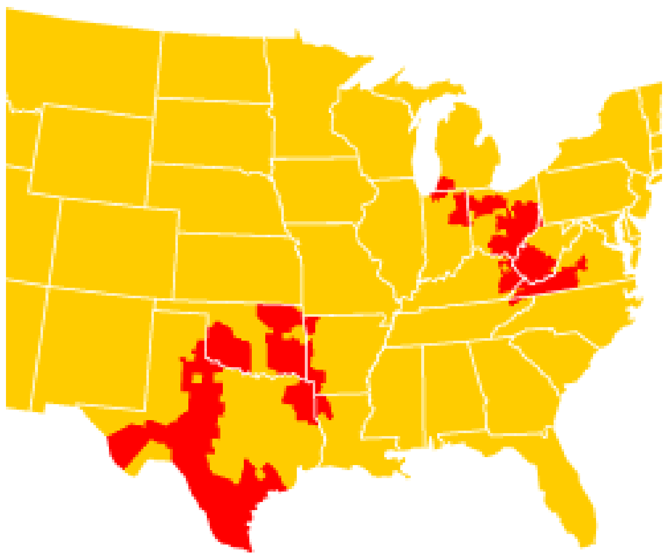
American Electric Power

- Regulated Electric Utility
  - Regulatory and economic diversity
  - Operating Company Model
- Focus on Capital Allocation
  - Capital for Growth
  - Return of Capital to Shareholders
  - Pension Funding
- Strong Balance Sheet
  - Stable credit ratings
  - Capital plan supported by cash flow
  - Strong liquidity position
- Growth Opportunities
  - Capital for utility platform
  - Transmission projects
- Dividend yield near 5%

Serving electric customers in 11 states



AEP Fast Facts

5.2 million customers
40 GW of generation capacity
39,000 miles of transmission lines

$17.5B Market Capitalization
BBB/Baa2/BBB credit rating

Capital Allocation

In this economic recovery cycle, capital allocation requires balance for spending that considers the obligation to serve, the ability to obtain rate increases, a balance sheet to support the plan, and the total return proposition to shareholders

Capital for Growth

- Increased capital budget by $150M for 2011 to $2.6B
- Announced capital budget plan of $2.9B for 2012

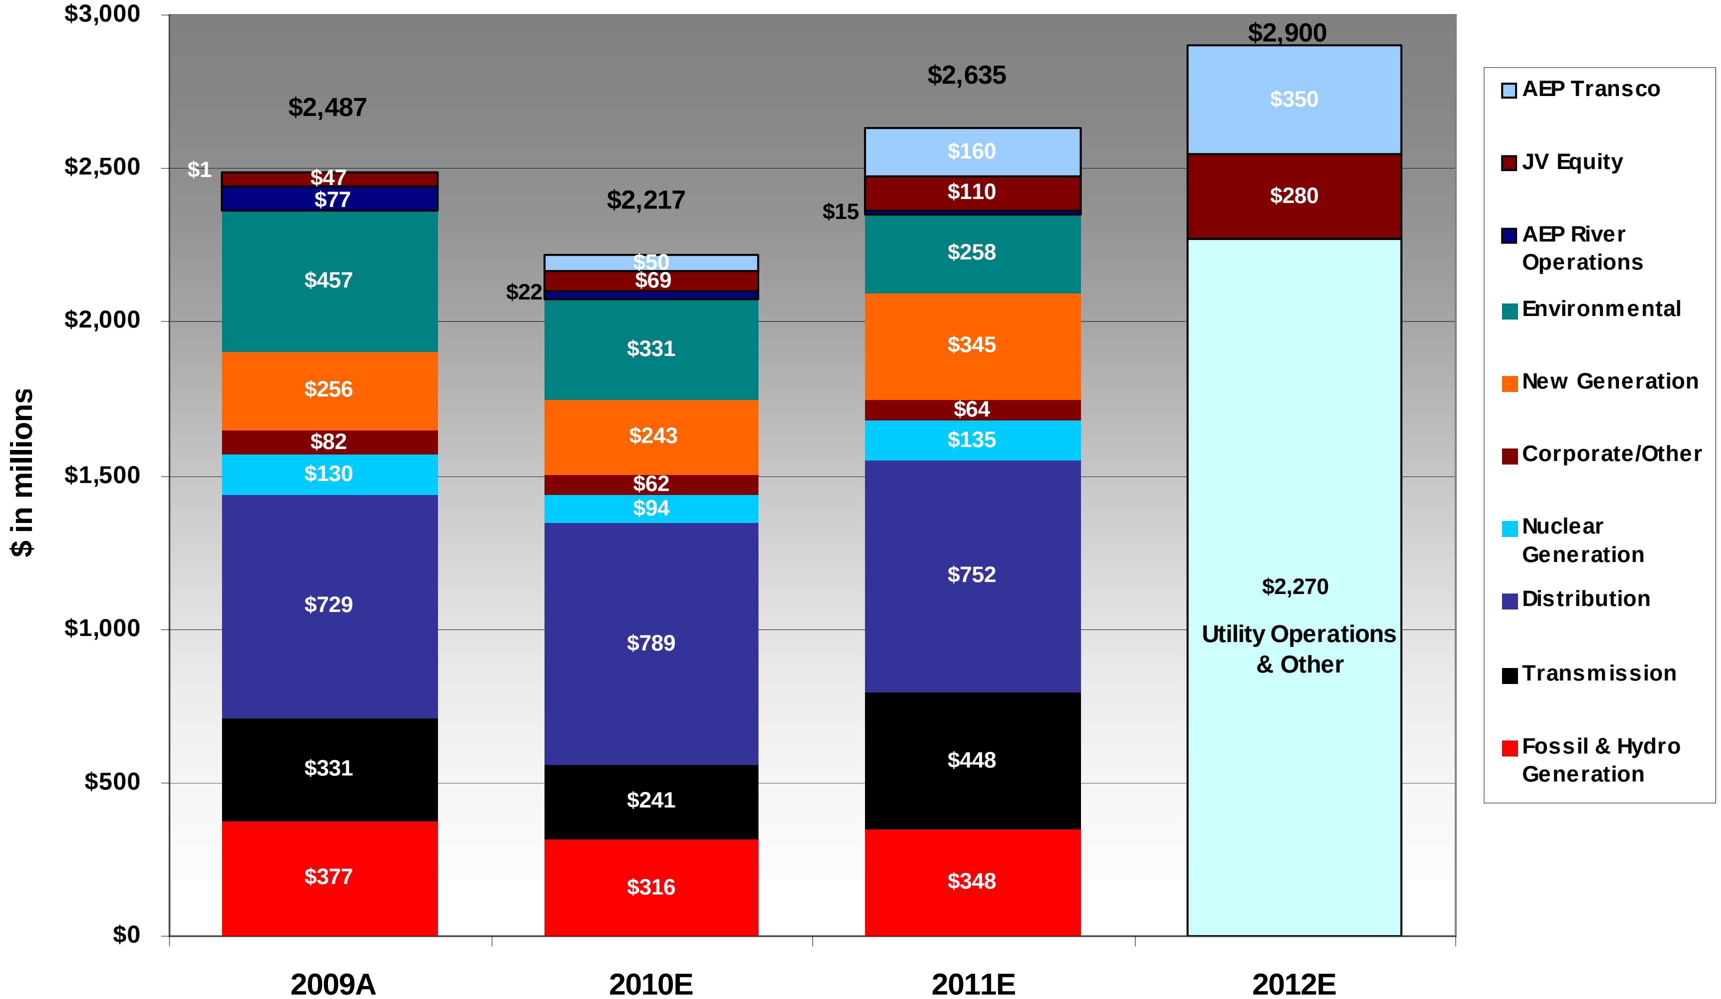
Return of Capital to Shareholders

- 9.5% increase in quarterly dividend to $0.46/share declared by the board of directors on October 26th
- Future dividend increases will grow with earnings

Capital to Reduce Risk

- Voluntarily funding pension $500M in 2010
- Allocating an additional $150M of funding for pension in 2011

Capital Expenditures



Normalized Load Trends

Transmission as a Growth Engine

- **Electric Transmission Texas (ETT)**
  - Growing Rate Base
  - $1.1B CREZ opportunity; Received CCN approval on first CREZ line; 3 more approvals expected in 2011
  - $1.6B Non-CREZ projects in the pipeline
- **AEP Transmission Company (AEP Transco)**
  - Settlement filed at FERC for wholesale rates
  - $50M spend for 2010; $160M forecasted for 2011
- **Progress on Joint Ventures in 2010**
  - PATH
  - Prairie Wind
  - Pioneer
  - SMART Transmission study

Transmission investments present significant growth opportunities within and outside of AEP's traditional service territories

Two New Anchor Projects

ETA – AEP - Exelon: The RITE Line

Approximately 420 miles of 765 kV lines connecting AEP's 765 kV system in Indiana with Exelon's 765 kV system west of Chicago, and other Exelon substations

- Total Project Cost ~$1.6B
- Ensures reliability, renewables integration
- Bridges AEP's and Exelon's 765 kV systems
- PJM approval of seams project required
- Includes 765 kV and 345 kV voltages, and their electrical equivalents

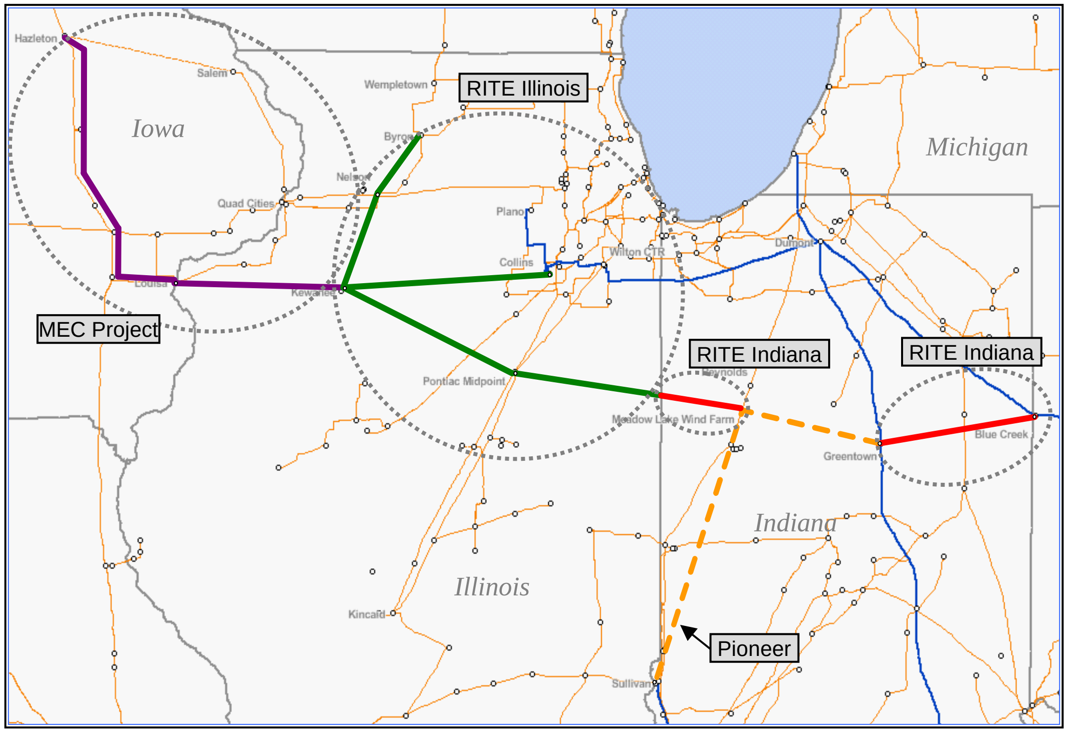
ETA – MidAmerican Energy Co: MEC Project

Approximately 180 miles of 765 kV lines connecting MEC's EHV system in eastern Iowa to proposed 765 kV expansion in western Illinois.

- Total Project Cost: ~$650M
- Project part of SMARTransmission study and Midwest ISO RGOS planning effort
- MISO approval
- Includes 765kV and 345kV voltages, and their electrical equivalents

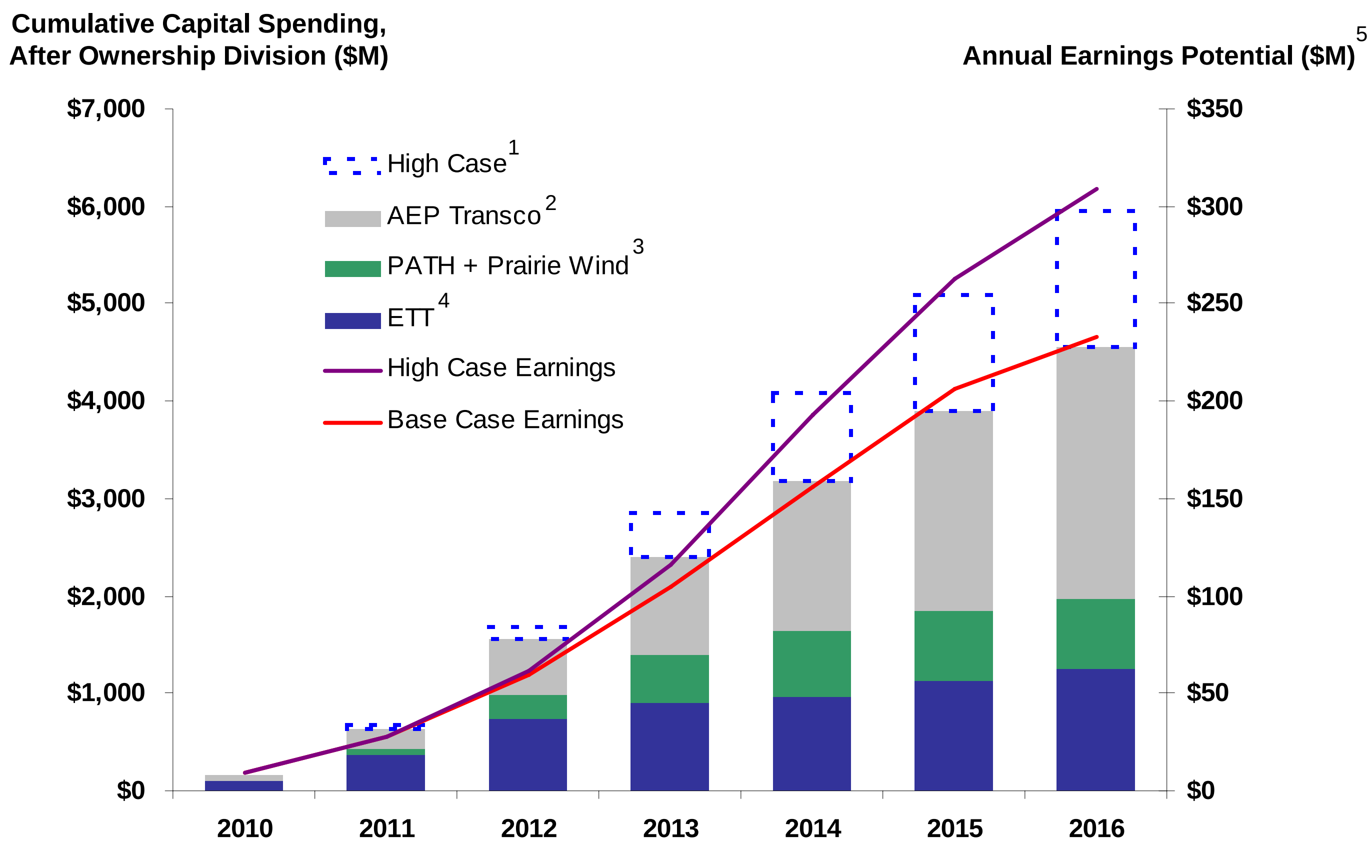
AEP Total Investment:

~$500M



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Transmission – Capital/Earnings Profile



[1] High Case includes: Pioneer (50% ownership), Prairie Wind at 765kV (25% ownership), Tallgrass at 765kV (25% ownership), ETA-Exelon (25% ownership) and other future opportunities

[2] AEP Transco (100% ownership) includes spending in OH, MI & OK only through 2011 and in other jurisdictions for 2012 and beyond

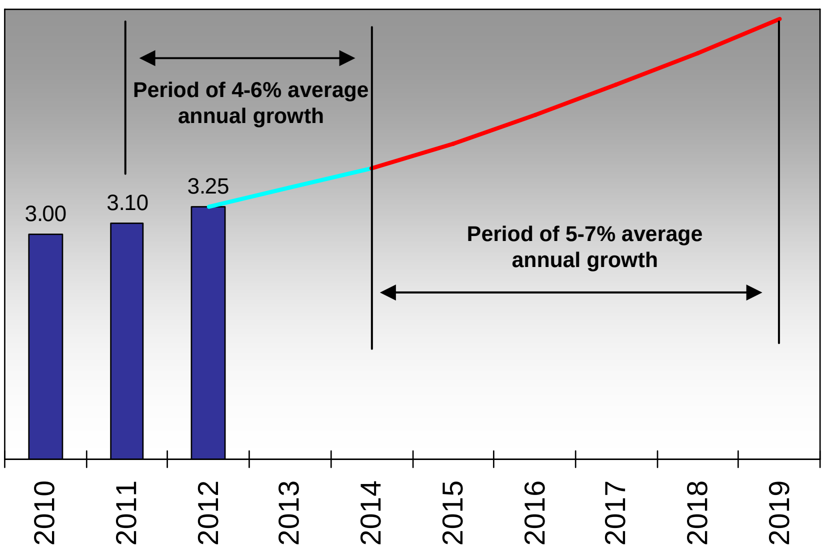
[3] PATH (50% ownership) assumes an in-service date of 2015 and Prairie Wind (25% ownership) assumed at 345kV

[4] ETT (50% ownership) includes CREZ and additional projects

[5] Projection of earnings potential at the transmission holding company level assuming 50/50 debt/equity capitalization and ROE of 12-13% for FERC projects; 60/40 debt/equity capitalization and 10.25% ROE (2011 forward) for ERCOT projects; and 50/50 debt/equity capitalization and ROE of 11.2-11.49% for Transco projects

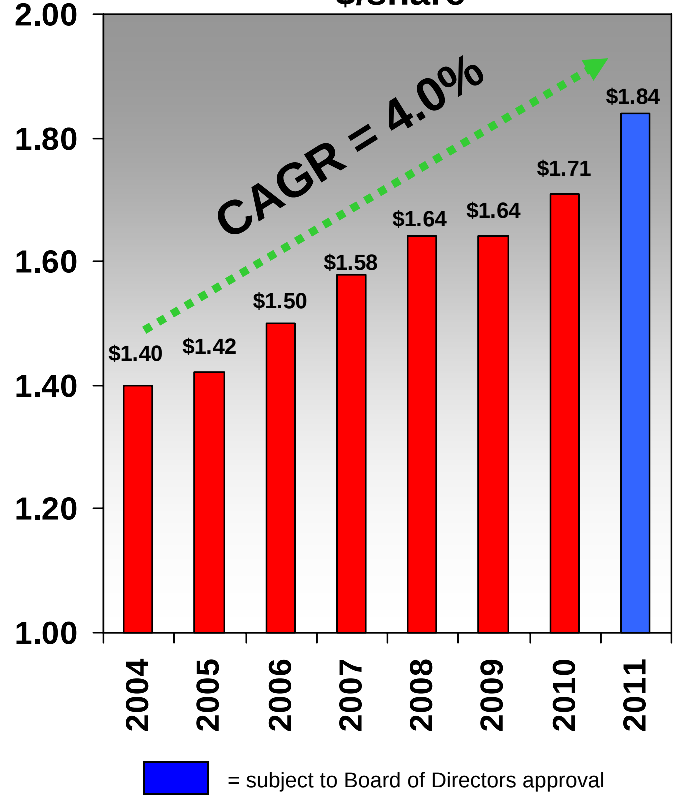
AEP – Income and Growth Opportunity

Average Annual EPS Growth defined over two periods



- 4-6% EPS growth 2012-14
  - Average annual capital spend between $2.9-3.4B
  - Blended ROE of 10.5 - 11%
  - Slow, steady recovery in economy
- 5-7% EPS growth post 2014
  - Base utility platform capital plus higher allocation of discretionary capital going to opportunities in the transmission development pipeline
  - Higher overall blended ROE opportunity
  - Robust economic growth

Dividend History Since 2004
$/share



- 9.5% increase in quarterly dividend to $0.46/share declared on October 26th
- 401st consecutive quarterly dividend paid in September
- 50-60% payout ratio target
- Current yield about 5%

AEP AMERICAN ELECTRIC POWER

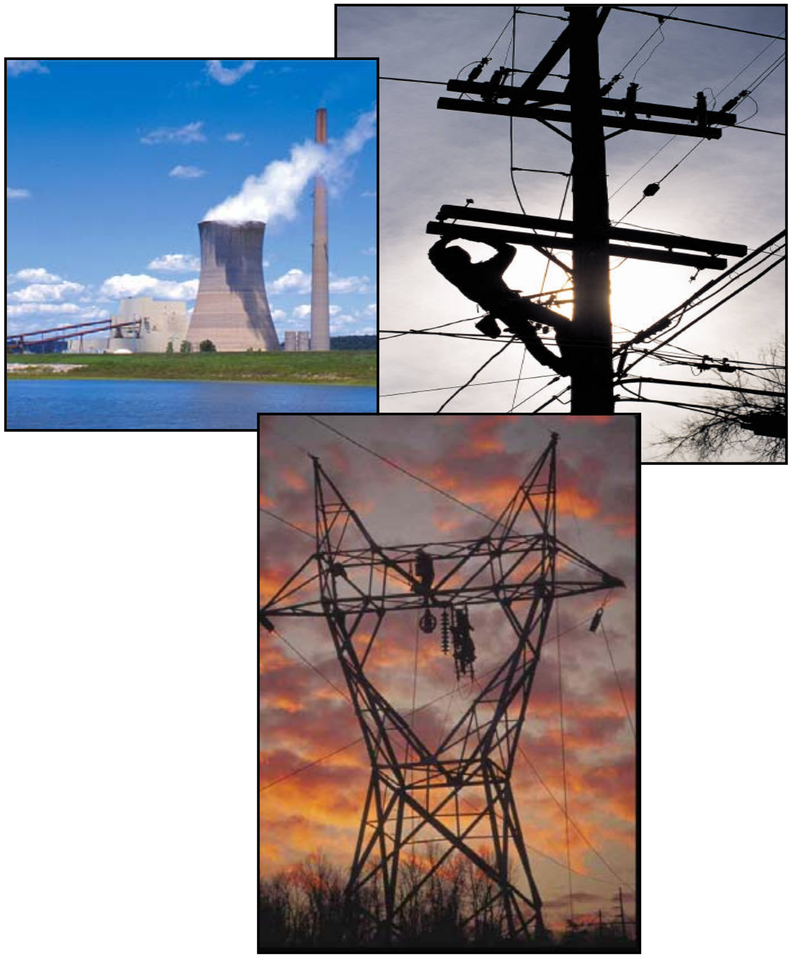
AEP Participants

Brian X. Tierney – EVP and CFO

Chuck Zebula – Treasurer & SVP Investor Relations

AEP Value Proposition

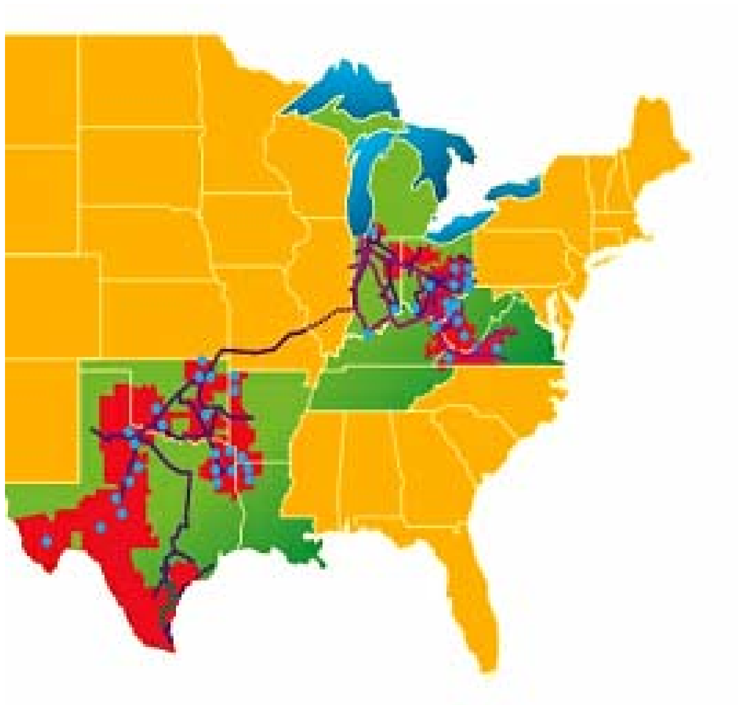
- **Regulated Utility Platform**
  - Diversified service territory
  - Successful regulatory track record
  - Value compared to regulated peer group
- **Earnings Growth Prospects**
  - Investment in utility platform greater than depreciation level (2 - 4%)
  - With transmission opportunities (4 - 8%)
- **Attractive Yield Opportunity of 4.8%[1]**
  - 50-60% payout ratio targeted
  - Nearly a century of dividend payments to shareholders



AEP AMERICAN ELECTRIC POWER

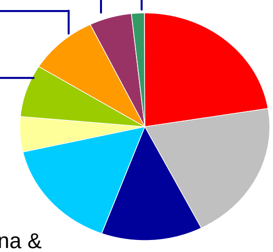
[1] yield percentage based on AEP closing price of $33.97 on 03/03/2010

Highly Diversified Regulated Utility Platform

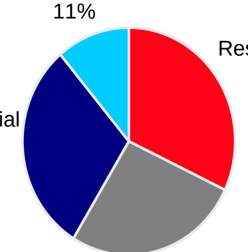


Serving 5.2 million customers in 11 states

2009 Earnings Contribution



2009 Retail Load



** Wholesale includes sales to municipal and cooperative power systems, other wholesale, and other retail sales*

Fuel Mix**

Transmission Investment Opportunities

ETT: Projects in Texas ERCOT jurisdiction

- $600MM of projects est. in service 2010-2013
- ETT's opportunity could reach $3.0B in this decade

Transco: Within our existing footprint

- Provides opportunity to:
  - Develop new AEP-only projects
  - Reduce regulatory lag through FERC formula rates adjusted annually

Joint Ventures: Outside of our footprint, via ETA or with others

- Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
- Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2015
- Robust pipeline of projects up to $15B

A Portfolio Approach: AEP's Long-Term CO_2 Reduction Commitment

Existing Programs

- Existing Plant Efficiency Gains
- Renewable Energy
  - 1400 MW wind
  - 300+ MW hydro
- Domestic Offsets
  - Over 63MM trees planted = 1.2MM tons of CO_2 uptake
- International Offsets
  - 1MM tons of forest carbon sequestered through 2009
- Chicago Climate Exchange

AEP's reductions/offsets of CO_2:
– **2003-2010: 50 MMT+ Total**

New Additions (by 2012)

- 2000 MW Wind PPAs
- Domestic Offsets
  - Methane, Forestry
- Fleet Vehicle/Aviation Offsets
- Energy Efficiency & DSM
- Biomass Co-firing
- New Technology
  - New Generation: Ultra Super Critical Coal
  - Carbon Capture and Storage (CCS) for existing fleet
    - Chilled Ammonia

AEP's reductions/offsets of CO_2:
– **2011+: 5 MMT/yr**

AEP AMERICAN ELECTRIC POWER®

European Investor Road Show

June 24 - 27, 2008

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; volatility in the financial markets, particularly development affecting the availability of capital on reasonable terms and developments impairing our ability to refinance existing debt at attractive rates; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation in Ohio and the allocation of costs within regional transmission organizations; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

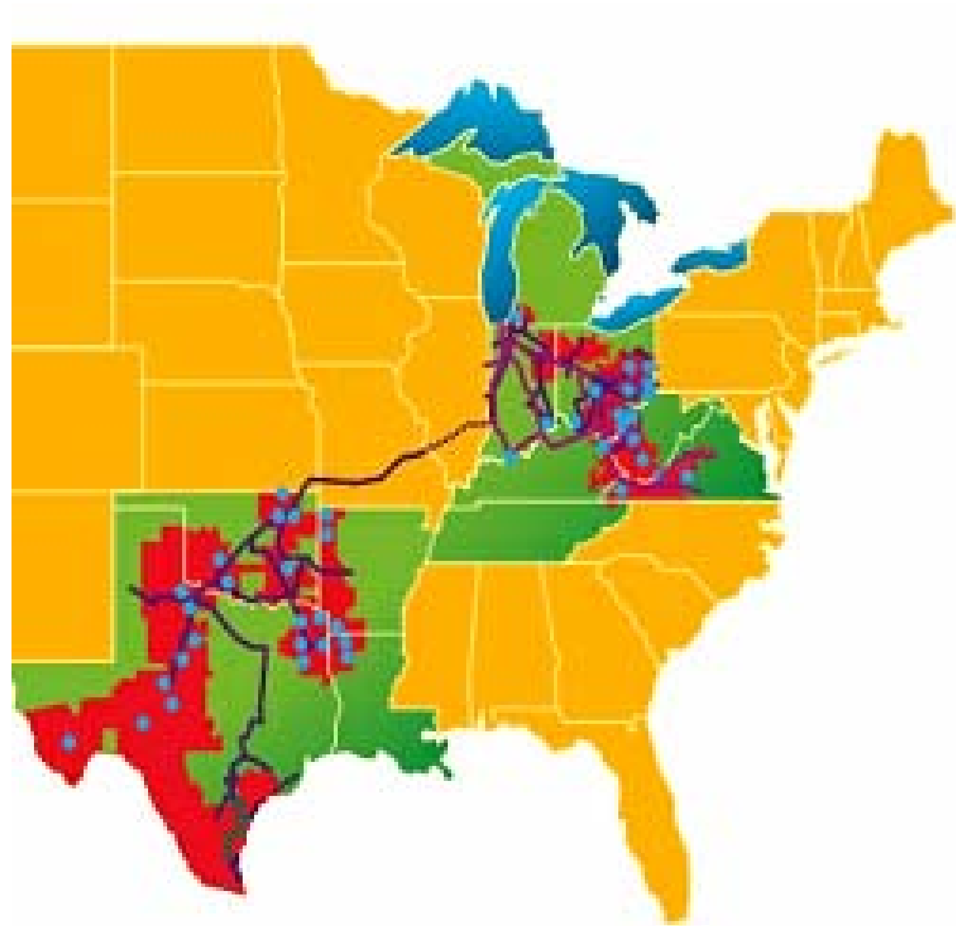
Company Overview

- 5.2 million customers in 11 states
- Industry-leading size and scale of assets:

Asset	Size	Industry Rank
Domestic Generation	~37,700 MW	# 2
Transmission	~39,000 miles	# 1
Distribution	~213,000 miles	# 1

Source: Company research

- 2007 financial statistics:
  - GAAP Net Income: $1.1B
    - 87% Regulated/13% Nonregulated
  - Assets: $40.3B
  - Adjusted Equity Ratio: 41.5%
- Current dividend - $1.64 per share annualized



AEP enjoys significant presence throughout the energy value chain.

AEP®

AEP Strategy

Strategy: grow our core utility business at a consistent 5-9% long-term rate through major regulated investment using disciplined capital allocation methods.

Our 2008 Focus:

- Prepare for post-2008 transition in Ohio
- Invest $3.8 billion in our infrastructure
- Enhance cash flow & earnings through rate recovery mechanisms

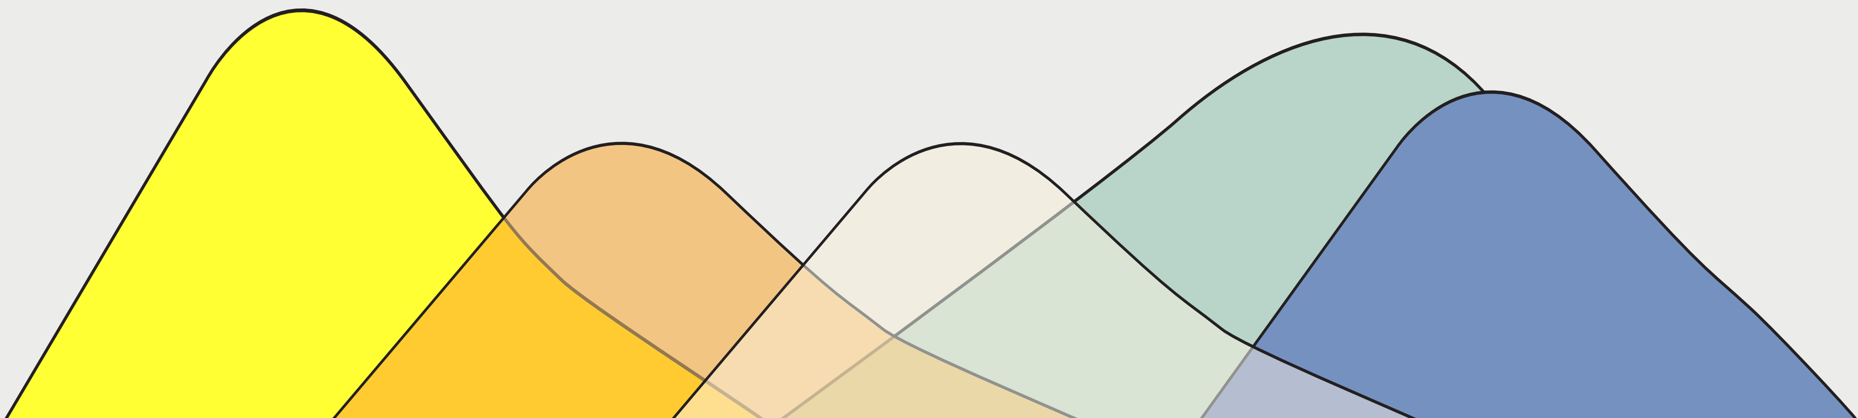
Disciplined capital investment opportunities support earnings growth.

AEP®

Capital Investment Earnings Catalysts

Capital Investment – Consistent Waves of Opportunity

Environmental Retrofits	New Generation Projects	GridSMART Technology	Transmission Ventures	Adv Generation/ CO_2
$5.4B	$2.8B	$1.5B+	$2.25B - $3.75B*	$2.0B+



Baseline capital investment of approximately $2.0B-$3.0B/year for Transmission, Distribution & Generation versus annual depreciation of $1.1B/year

2005 → 2010 → 2020 →

Note: This slide represents current capital investment plans as well as future capital investment opportunities. For current capital investment guidance through 2010, please refer to page 16. * The transmission opportunity is shown utilizing anticipated JV ownership structure.

Assuming timely regulatory recovery, baseline capital investment of $2.0B to $3.0B adds $0.09 to $0.20 annually to EPS based on a 10.5% target ROE and a 60/40 debt to capital structure

Disciplined capital investment opportunities combined with associated rate relief will drive sustainable earnings growth.

AEP®

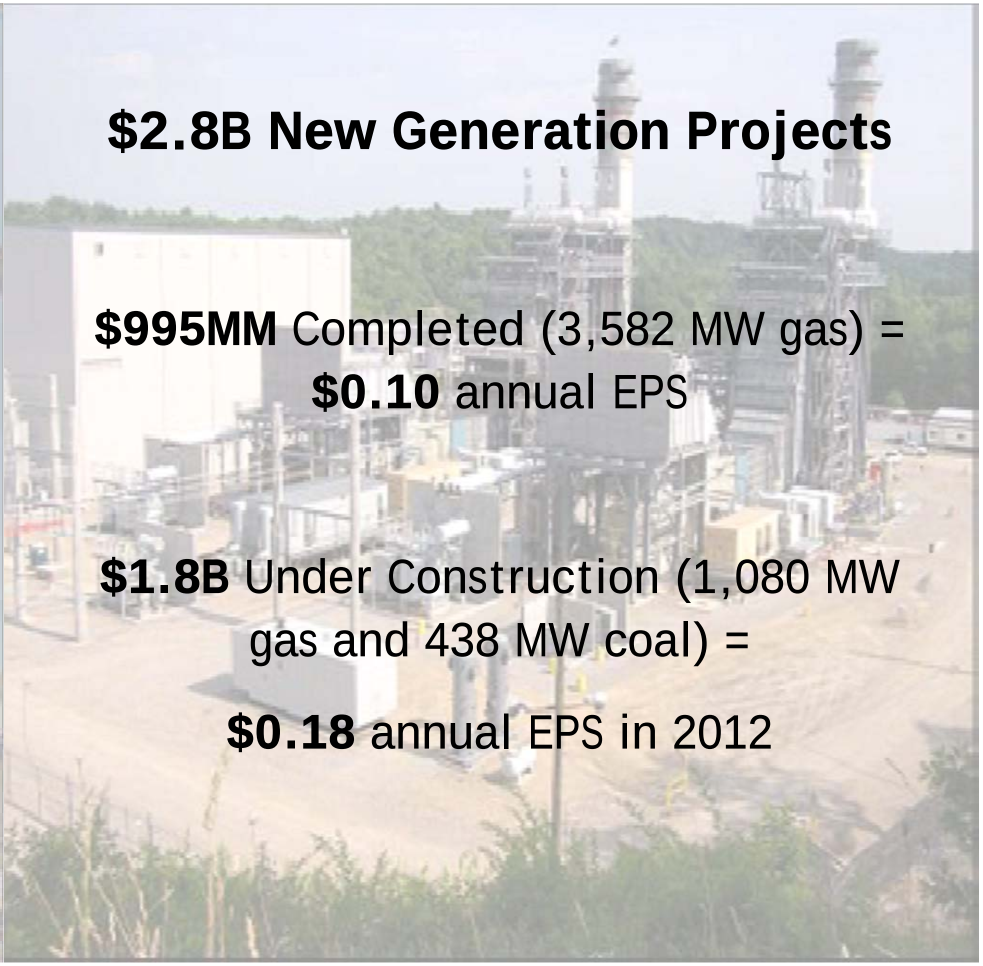
Environmental Retrofits & New Generation Projects

$5.4B Environmental Retrofits

$3.5B Completed = **$0.37** annual EPS

$1.9B Under Construction =

$0.20 annual EPS in 2011



$2.8B New Generation Projects

$995MM Completed (3,582 MW gas) = **$0.10** annual EPS

$1.8B Under Construction (1,080 MW gas and 438 MW coal) =

$0.18 annual EPS in 2012

Note: EPS calculations assume timely regulatory recovery with a 10.5% ROE and a 60/40 debt to capital ratio

2008-2010 Projected Capital Expenditures

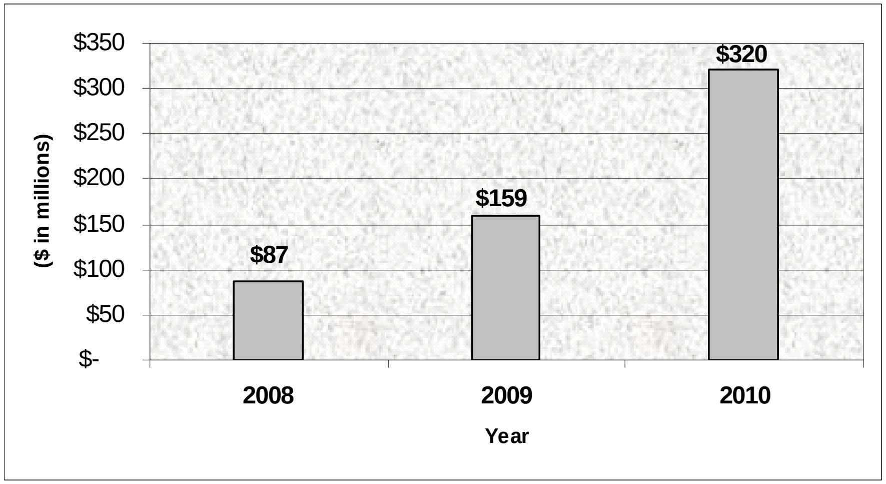
	2008	2009	2010
Environmental	$875MM	$606MM	$394MM
New Generation - gas	$362MM	$126MM	$37MM
New Generation – coal *	$210MM	$244MM	$174MM

* $22MM relates to IGCC; the remaining capital is attributable to the ultra-supercritical Turk plant

AEP®

Transmission – Investments and Earnings Contributions

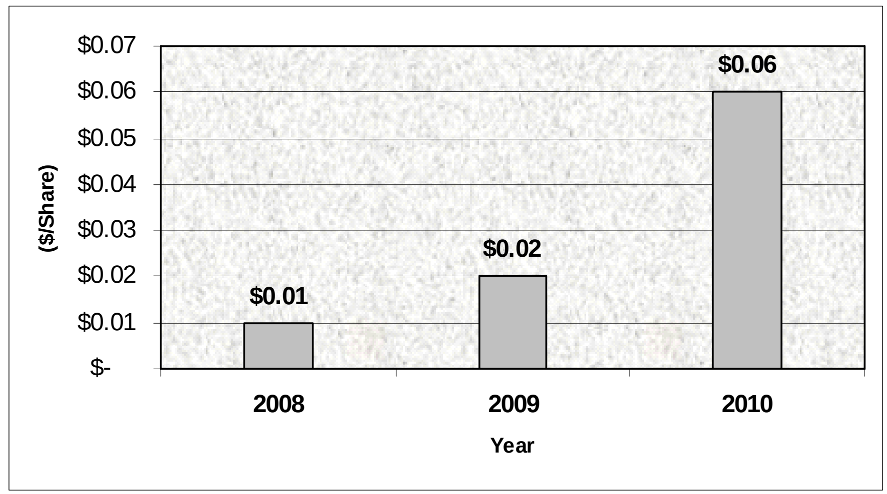
Projected Transmission Capital Spending*



* ETT and PATH joint ventures included in above projection. Amounts represent AEP's 50% share of total transmission joint venture capital expense. These amounts are excluded from AEP's base capital forecast because the joint ventures are not consolidated for financial reporting purposes. AEP will be responsible for funding 40-50% of these amounts with equity contributions, and the remainder will be financed with debt issued by the joint ventures.

ETT Electric Transmission Texas

Projected Transmission EPS Contributions*



* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

PATH Potomac-Appalachian Transmission Highline

AEP®

Transmission will provide a near and long term catalyst for growth.

At the conclusion of our current environmental retrofit program, over 58% of our 24,630 MW coal-fired generation fleet will be equipped with SCRs and over 73% will be scrubbed (FGDs).

AEP Leadership in Technology: IGCC and USC

NEW ADVANCED GENERATION

IGCC -- AEP first to announce plans to build two 600+ MW IGCC commercial size facilities in US (OH and WV) by next decade

USC -- AEP will be first to employ new generation ultra-supercritical (steam temperatures >1100°F) coal plant in U.S. (Arkansas)

gridSMART℠

- gridSMART℠: implementing AEP's vision for the distribution and customer services business in the future, including the development of new customer programs to reduce consumption and peak demand, and a plan to deploy advanced technologies.

- **Enables customers to better manage energy**
- **Improves service to our customers by enhancing customer choice and customer control**
- **Improves efficiency**
- **Integrates distributed energy resources into our grid**
- **Transforms the way we do business**

Capital Investment, Subject to Regulatory Approval *

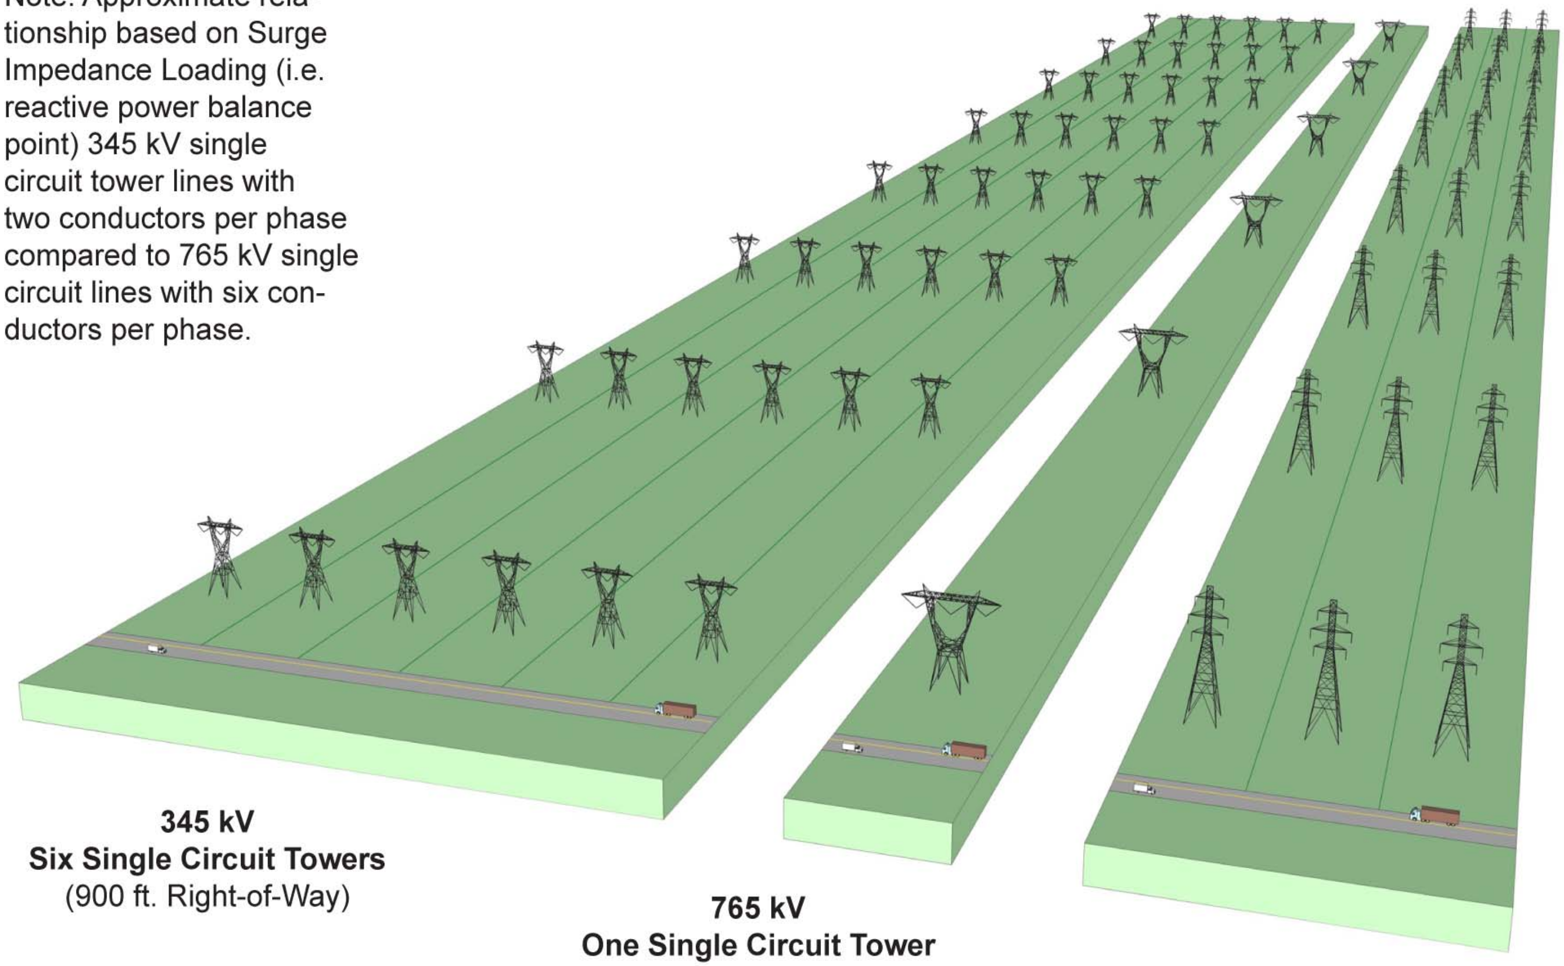
765 Right-of-Way Comparison

Note: Approximate relationship based on Surge Impedance Loading (i.e. reactive power balance point) 345 kV single circuit tower lines with two conductors per phase compared to 765 kV single circuit lines with six conductors per phase.



345 kV
Six Single Circuit Towers
(900 ft. Right-of-Way)

765 kV
One Single Circuit Tower
(200 ft. Right-of-Way)

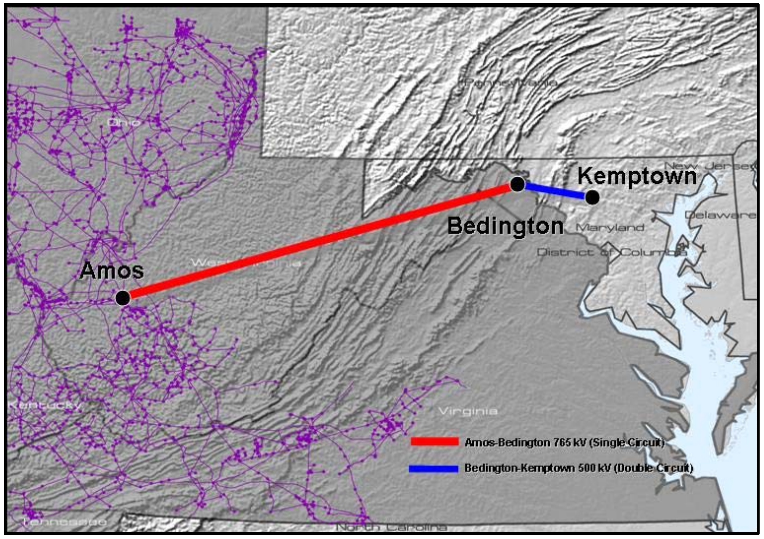
345 kV
Three Double Circuit Towers
(450 ft. Right-of-Way)

AEP®

From a siting standpoint, 765-kV is more efficient in terms of economies of scale and right-of-way than lower capacity lines.

I-765™ Transmission in PJM: PATH

- *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries -- to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP
    - 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
  - FERC ordered the formula rate mechanism be set for hearing, pending settlement judge procedures



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

- *Funding Plans/Transaction Structure*
  - AEP and Allegheny share ownership of Amos – Bedington line and contribute equally to this portion of the project through PATH West Virginia Transmission Company, LLC
  - AEP's investment will be held in the AEP Transmission Holding Company LLC subsidiary

- *Key Next Steps*
  - Siting Approval from WV and MD – 2010
  - Targeted Completion – 2012

PATH
Potomac-Appalachian Transmission Highline

AEP®

Joint Ventures with MEHC

Electric Transmission Texas Update

- *Transaction Structure*
  - 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
  - ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
  - Services provided by AEP and investment opportunities can be offered by either partner
  - Total initial investment of $70 million before ownership division
- *Next Steps*
  - ETT project opportunities to be evaluated on a case by case basis
  - Anticipate transferring some project opportunities in 2008 after regulatory approvals obtained.

Electric Transmission America Update

- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.
  - ETA recently signed an agreement with Westar Energy forming Prairie Wind Transmission, LLC proposing to build the first segment of the 765-kV Overlay Plan in SPP

AEP®

I-765™ Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- *Overview*
  - Sent non-binding Letter of Commitment to SPP to construct 765-kV and 500-kV projects in SPP region consistent with SPP Overlay Study – Summer 2007
  - Updated EHV Overlay Study completed by SPP – March 2008
- *Benefits*
  - Overall reliability reinforcement with improved voltage support throughout the SPP system
  - Significantly increased transfer capability
  - Provides access to new generation resources, especially renewables
  - Allows for effective interconnections for EHV system development
- *Next Steps*
  - ETA Partnering Agreements - 2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate and Cost Allocation Filing (postage stamp) – 2009
  - Siting Approval for projects – 2009-2011
  - Estimated Completion (in segments) – 2013-2017

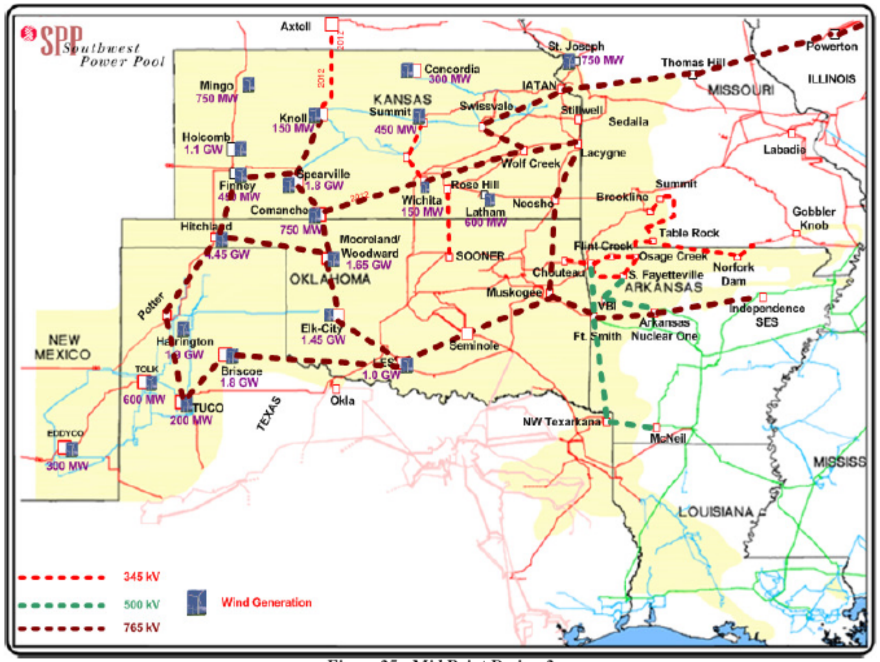


Figure 25: Mid Point Design 2

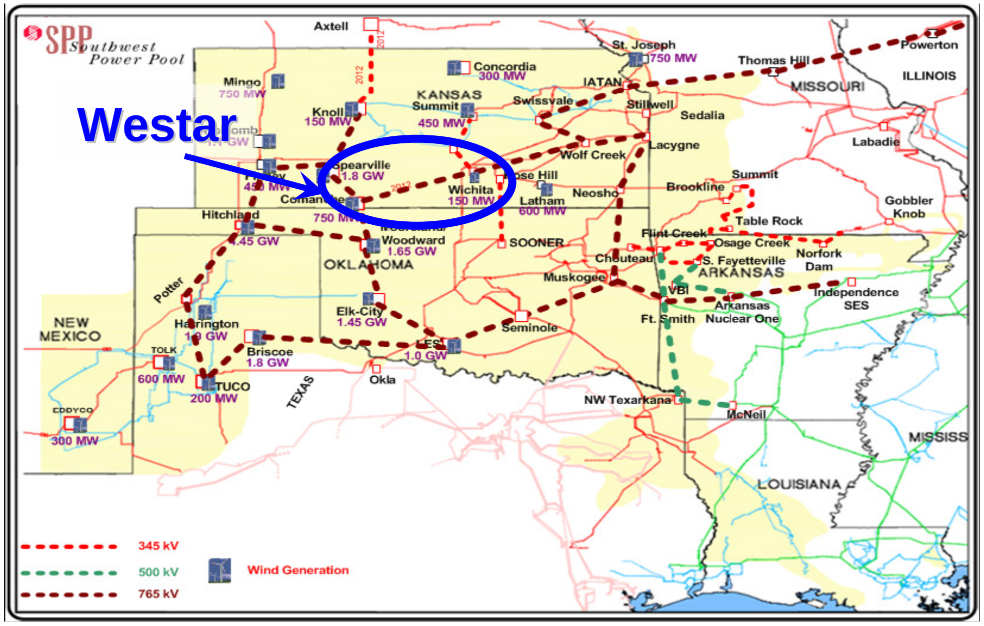
Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Prairie Wind Transmission, LLC

JV to build first segment of 765-kV transmission in SPP

- *Overview*
  - On May 19, 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT)
  - PWT is a 50/50 JV that is proposing to build approximately 230 miles of 765-kV lines extending from Wichita, Kan., west to a substation northeast of Dodge City, Kan., and then south to the Kansas border from Medicine Lodge, Kan.
  - The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region
  - Project is expected to cost approximately $600 million (based on SPP estimates) and be in-service by 2013
  - AEP's ownership of the joint venture is 25%
  - AEP obligations include oversight of 765-kV Engineering, 765-kV Technology and Project Management
  - Other responsibilities will be handled by the partners or outsourced
- *Next Steps*
  - File CPCN –2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate and Cost Allocation Filing (postage stamp) – 2009
  - Siting Approval – 2009
  - Estimated Completion – 2013



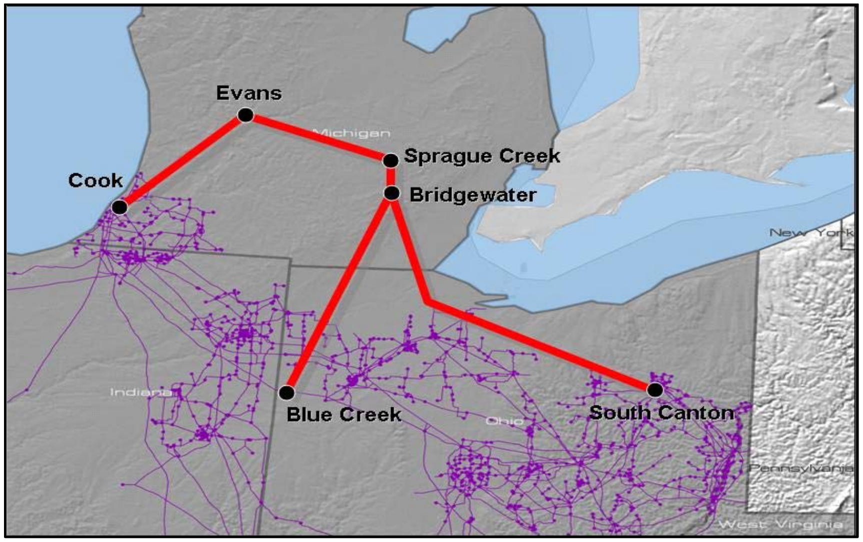
Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

I-765™ Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
  - Study was released Q3 2007
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.6 billion investment (before ownership division)
  - AEP and ITC are in discussions to form a Joint Venture
- *Benefits*
  - Up to 5,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- *Next Steps*
  - Agreement on JV (AEP/ITC) - Summer 2008
  - JV Formation - 2008
  - MISO and PJM Review/Approval - 2009
  - FERC Formula Rate and Cost Allocation Filing - Fall 2009
  - Siting Approval – 2011-2012
  - Estimated Completion –2015-2021



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP®

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A reliable and reasonably-priced electric supply is necessary to support the economic well-being of the areas we serve.

Advanced Generation & CO_2

Near Term:

- Chilled Ammonia project at Mountaineer moving to commercial scale at the Northeastern Plant in 2012

$ in millions			
	2008	**2009**	**2010**
Mountaineer Chilled Ammonia Project	**$30**	**$39**	**$0**

Long Term Strategy (Post-2010):

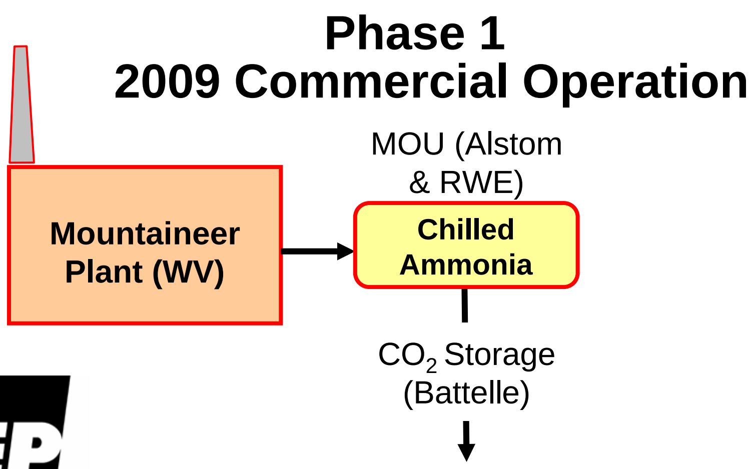
- IGCC
- Oxy Coal Technology
- Chilled Ammonia
- Nuclear COL

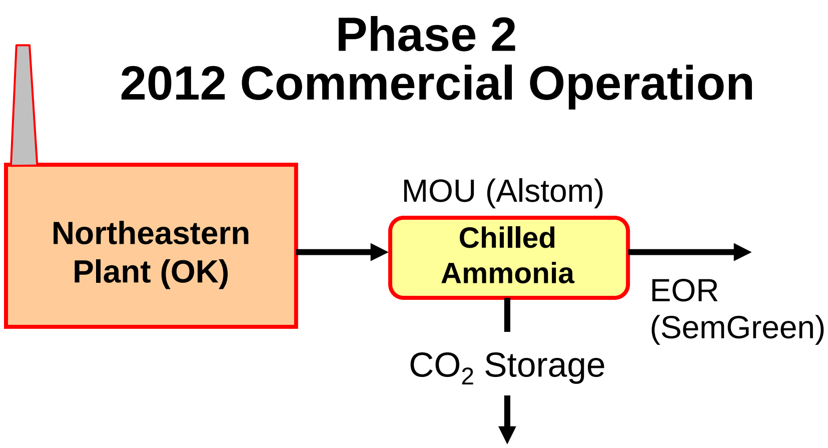
We are committed to validating and deploying technologies that ensure coal remains a viable resource for AEP and America.

AEP®

AEP's Carbon Capture & Storage Initiative

- In March 2007, AEP announced a major new carbon capture and storage initiative:
- Chilled Ammonia CCS--We will install carbon capture on two coal-fired power plants, the first commercial use of technologies to significantly reduce carbon dioxide emissions from existing plants.
  - The first carbon capture project, at the Mountaineer plant in West Virginia, is expected to complete its product validation phase in 2009.
  - The second, at the Northeastern plant in Oklahoma, will begin commercial operation in 2012.





CO_2 Capture Techniques

- **Post-Combustion Capture**
  - Conventional or Advanced Amines, Chilled Ammonia
    - Amine technologies commercially available in other industrial applications
    - Relatively low CO_2 concentration in flue gas – More difficult to capture than other approaches
    - High parasitic demand
      - Conventional Amine ~25-30%, Chilled Ammonia target ~10-15%
    - Amines require **<u>very</u>** clean flue gas

- **Modified-Combustion Capture**
  - Oxy-Coal
    - Technology not yet proven at commercial scale
    - Creates stream of very high CO_2 concentration
    - High parasitic demand, >25%

- **Pre-Combustion Capture**
  - IGCC with Water-Gas Shift
    - Most of the processes commercially available in other industrial applications have never been integrated together
    - Turbine modified for H_2-based fuel, which has not yet been proven at commercial scale
    - Creates stream of very high CO_2 concentration
    - Parasitic demand (~20%) for CO_2 capture - lower than amine or oxy-coal

AEP®

Regulatory Activity Underway

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $140MM. Approximately $10MM of the increase relates to 3rd party and the rest, if approved, would be recovered through retail jurisdictional filings in SWEPCo and PSO, as appropriate.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to February 1, 2008, with rates subject to refund.
- Settlement discussions are currently on-going.

AEP®

Regulatory Activity Underway

APCo Mountaineer IGCC Filing

Virginia

- Testimony filed with the Virginia State Corporation Commission on July 16, 2007 seeking a prudence determination and approval to recover, beginning in 2009, Virginia's share of the carrying costs associated with the proposed plant.
- We received an order on April 14, 2008, denying our request. We petitioned for reconsideration on April 29, 2008, and on May 29, 2008 the SCC denied our request to reconsider the previous rejection. We are now reviewing various options.

West Virginia

- Air permit anticipated in the third or fourth quarter of 2008.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.
- In March 2008, the Ohio Supreme Court remanded the original order back to the PUCO, giving the PUCO the opportunity to supplement the record. No refund of Phase I costs was mandated by the Supreme Court in its decision.
- We now await further clarity from the PUCO on the remanded issues as well as resolution of pending rulemaking related to SB221 in Ohio.

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- The PSC issued its order on November 21, 2007, approving construction of the plant.
- Air permit anticipated in the third or fourth quarter of 2008.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The peaking facility has been addressed and the intermediate facility is under review. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- The LPSC issued its order on April 29, 2008, approving construction of the plant.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- Public hearings commenced October 17, 2007. On January 17, 2008, the ALJ recommended the PUCT deny the request. The commissioners requested another hearing to directly cross examine some of the witnesses. The additional hearing was held May 29, 2008.

Regulatory Activity Underway

SWEPCo Stall Plant Filings

Arkansas

- Proceeding is currently suspended pending outcome in Louisiana.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The intermediate facility, known as the Stall Plant and sited in Shreveport, LA, was bifurcated from the original filing and had a procedural schedule established on January 9, 2008.
- Staff and intervenor testimony was completed on February 15, 2008, rebuttal testimony was due February 29, 2008 and hearings were held in April 2008. Staff testimony was favorable. An order is expected in mid-summer.
- Air permit received on March 20, 2008.

Texas

- PUCT order approving plant was issued on March 8, 2007.

AEP®

Commitment to Credit Quality

- Maintain adequate liquidity
- $150MM annually in new equity from Dividend Reinvestment and 401(k) plans
- Target 60% maximum consolidated AEP debt/cap ratio on an adjusted basis
- Target utility company capitalization structures:

Company	Target Equity Ratio
APCo	42-44%
CSP	45-47%
I&M	40-42%
KPCo	41-43%
OPCo	44-46%
PSO	43-45%
SWEPCo	43-45%
TCC	40%
TNC	40%

- Target long term dividend payout ratio range of 55-60%
- Maintain adequate coverage ratios to support current credit ratings

AEP®

We are committed to maintaining our current credit ratings.

AEP AMERICAN ELECTRIC POWER®

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; volatility in the financial markets, particularly development affecting the availability of capital on reasonable terms and developments impairing our ability to refinance existing debt at attractive rates; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation in Ohio and the allocation of costs within regional transmission organizations; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

AEP enjoys significant presence throughout the energy value chain.

AEP Strategy

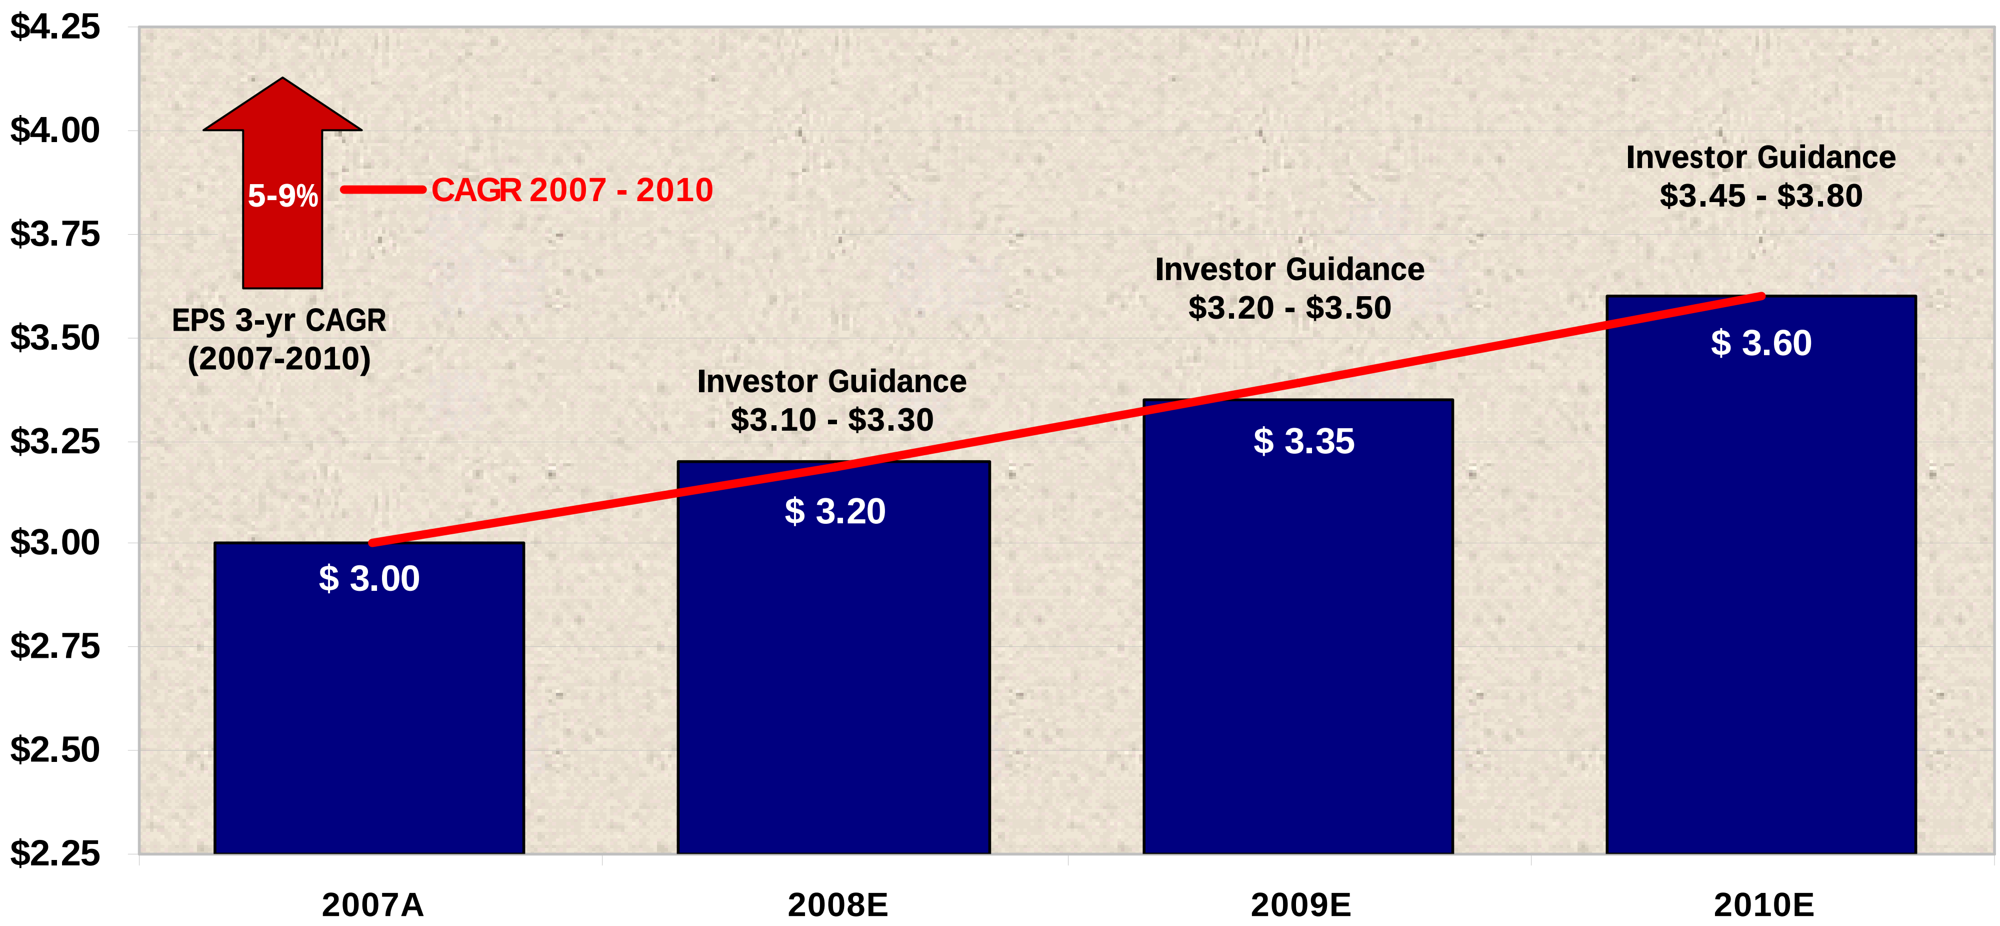
Strategy: grow our core utility business at a consistent rate through major investment supported and funded by innovative programs for regulatory recovery as well as develop our independent, federally regulated Transmission Company for the pursuit of new major interstate projects.

Our 2008 Focus:

- Prepare for post-2008 transition in Ohio
- Invest in and evolve infrastructure to support future technology and customer needs focused on efficiency, conservation and load management
- Enhance cash flow & earnings through rate recovery mechanisms
- Take advantage of AEP's size to benefit our customers and shareholders through regulatory-supported investment

Sustained capital investment opportunities support earnings growth.

4-Year Earnings Range Forecast

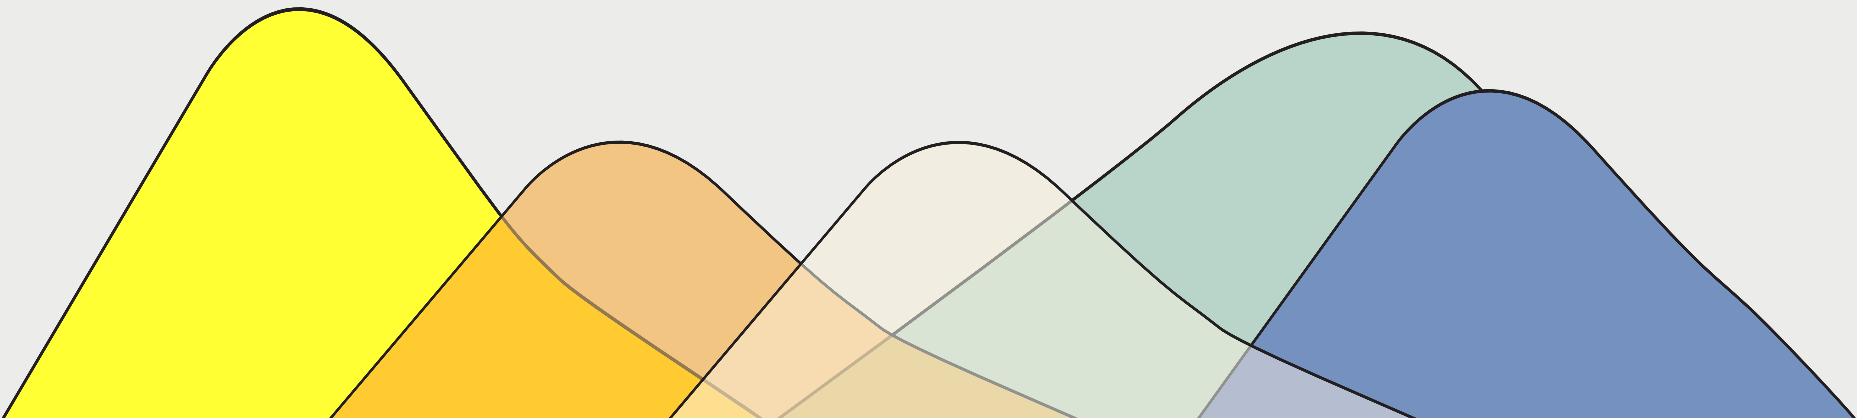


5% to 9% earnings growth

Capital Investment Earnings Catalysts

Capital Investment – Consistent Waves of Opportunity

Environmental Retrofits	New Generation Projects	GridSMART Technology	Transmission Ventures	Adv Generation/ CO_2
$5.4B	$1.3B+	$1-2B	$2.25B - $3.75B*	$2.0B+



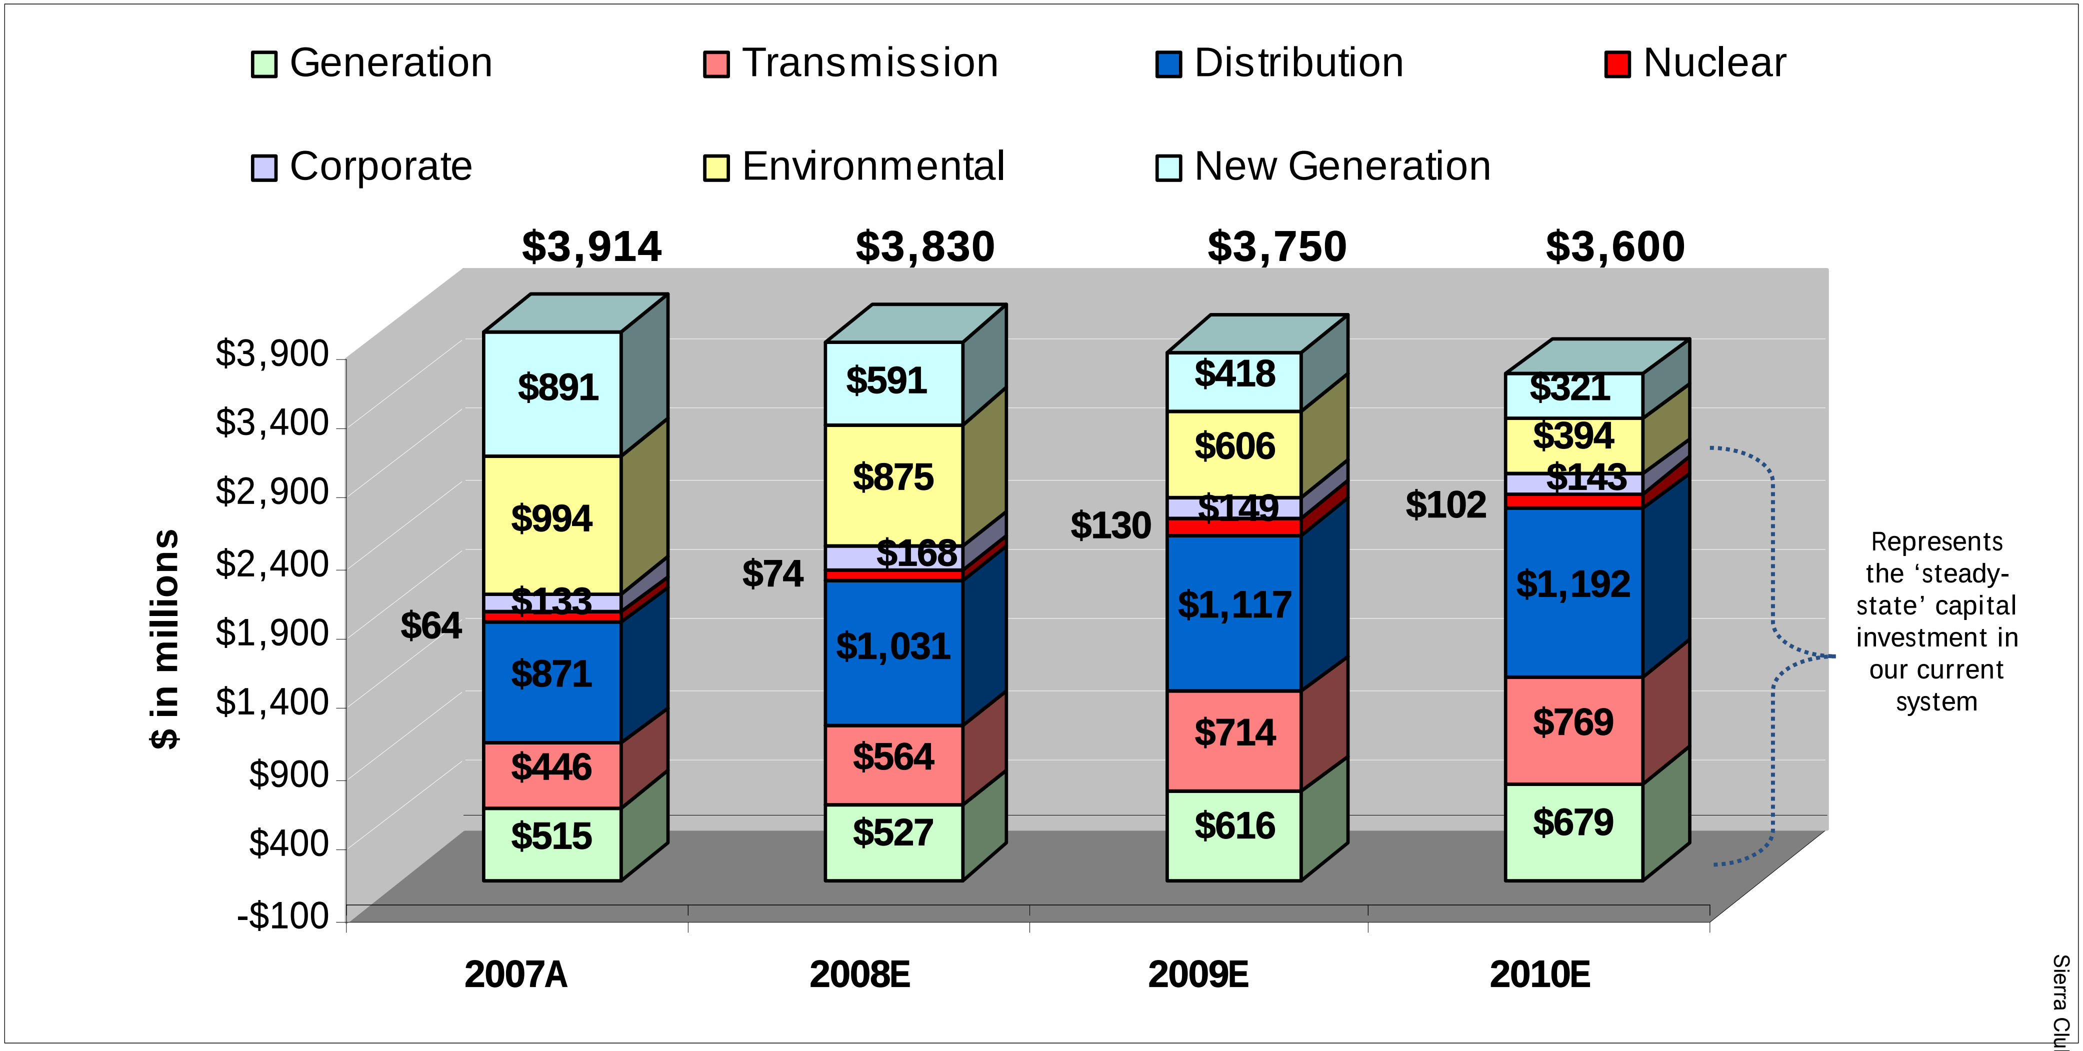
Baseline capital investment of approximately $2.5B/year for Transmission, Distribution & Generation versus annual depreciation of $1.1B/year

2005 → 2010 → 2020 →

Note: This slide represents current capital investment plans as well as future capital investment opportunities. For current capital investment guidance through 2010, please refer to page 10. *The transmission opportunity is shown utilizing anticipated JV ownership structure.

Capital investment opportunities combined with associated rate relief will drive sustainable earnings growth.

4-Year Capital Investment Forecast



Note: amounts exclude AFUDC, $472MM related to gridSMART[SM] and $566MM related to transmission joint venture projects

Capital Investment + Rate Relief = Earnings Growth

Capital Investment Drives Operating Company Growth

At the conclusion of our current environmental retrofit program, over 58% of our 24,630 MW coal-fired generation fleet will be equipped with SCRs and over 73% will be scrubbed (FGDs).

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
PSO	Riverside	Oklahoma	$59 MM	Gas	Simple-cycle	170	2Q 2008
AEG	Dresden	Ohio	$305 MM	Gas	Combined-cycle	580	2010
SWEPCo	Stall	Louisiana	$378 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.5 B (1)	Coal	Ultra-supercritical	600 (1)	2012
APCo	Mountaineer	West Virginia	$2.23 B	Coal	IGCC	629	2012
CSP/OP	Great Bend	Ohio	$2.7 B (2)	Coal	IGCC	629	2017

(1) SWEPCo will own approximately 73%, or 438 megawatts, totaling about $1,110 million in capital investment. The increase in the cost estimate relates to cost escalations due to the delay in receipt of permits and approvals.

(2) Cost estimates, updated to reflect cost escalations due to revised commercial operation date of 2017, are not yet filed with the PUCO.

AEP is meeting the growing electricity needs of customers through the pursuit of new economic generation facilities.

gridSMART℠

gridSMART℠: implementing AEP's vision for the distribution and customer services business in the future, including the development of new customer programs to reduce consumption and peak demand, and a plan to deploy advanced technologies.

- **Enables customers to better manage energy**
- **Improves service to our customers by enhancing customer choice and customer control**
- **Improves efficiency**
- **Integrates distributed energy resources into our grid**
- **Transforms the way we do business**

Capital Investment, Subject to Regulatory Approval *
$ in millions

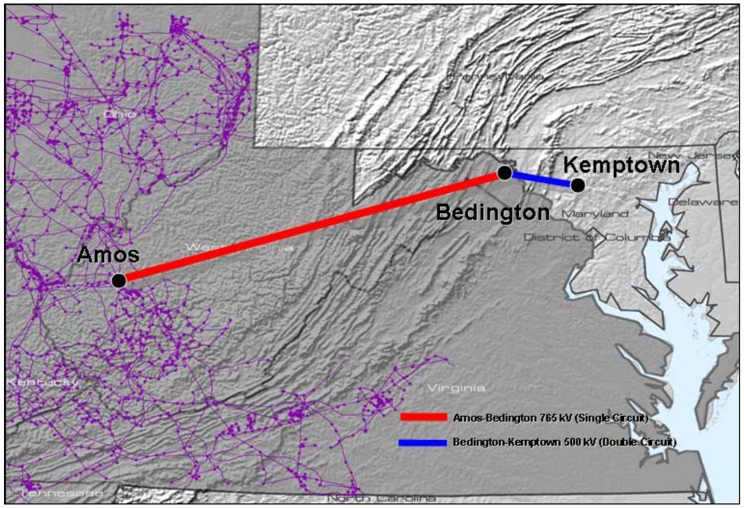
Technology	2008	2009	2010
Metering & Communications	$83	$138	$146
Distribution Technology Enhancements	$40	$ 63	$ 82

*$472MM of the $552MM not in current forecast; spending contingent upon regulatory approval

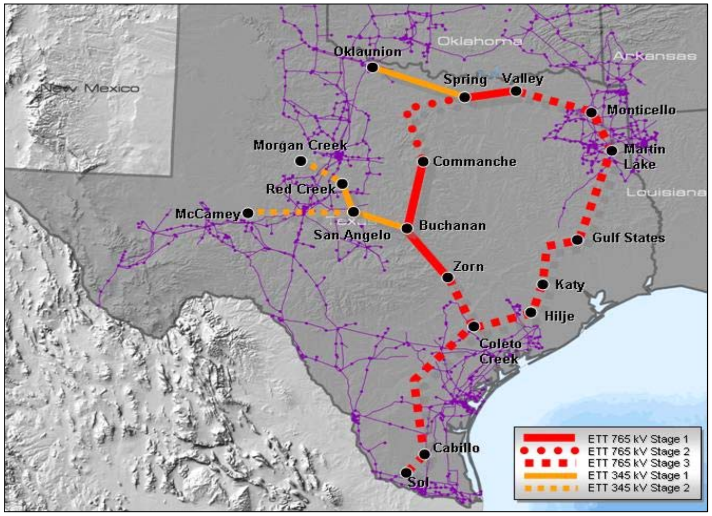
AEP will continue to be an industry leader in deploying advanced technology on a commercial scale. $552MM capital investment by 2010, subject to regulatory approval

I-765™ Transmission: Investment Opportunities

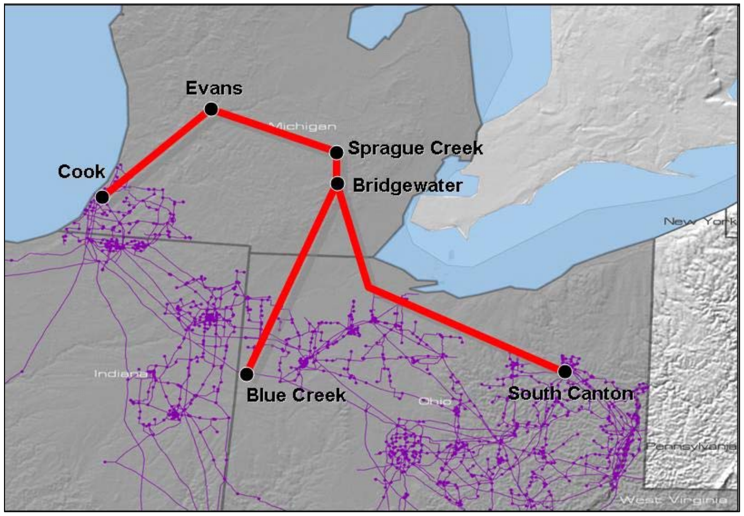
AEP is Advancing the Development of a National Interstate Today



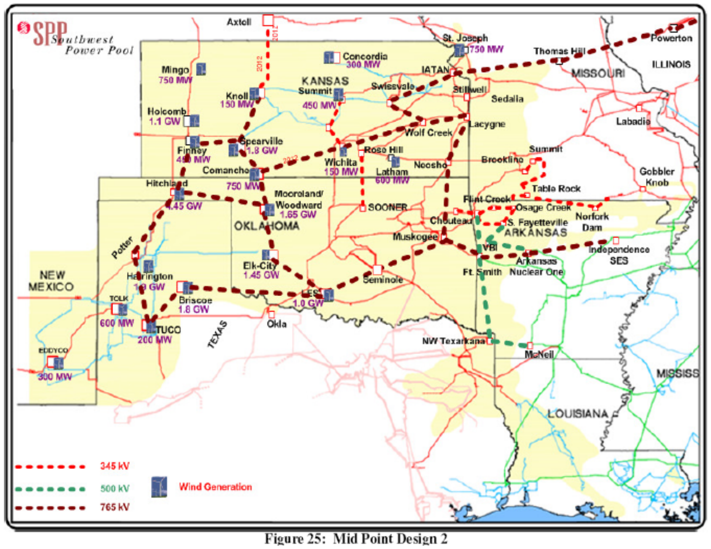
PATH Project (PJM)



ETT Proposal (ERCOT)



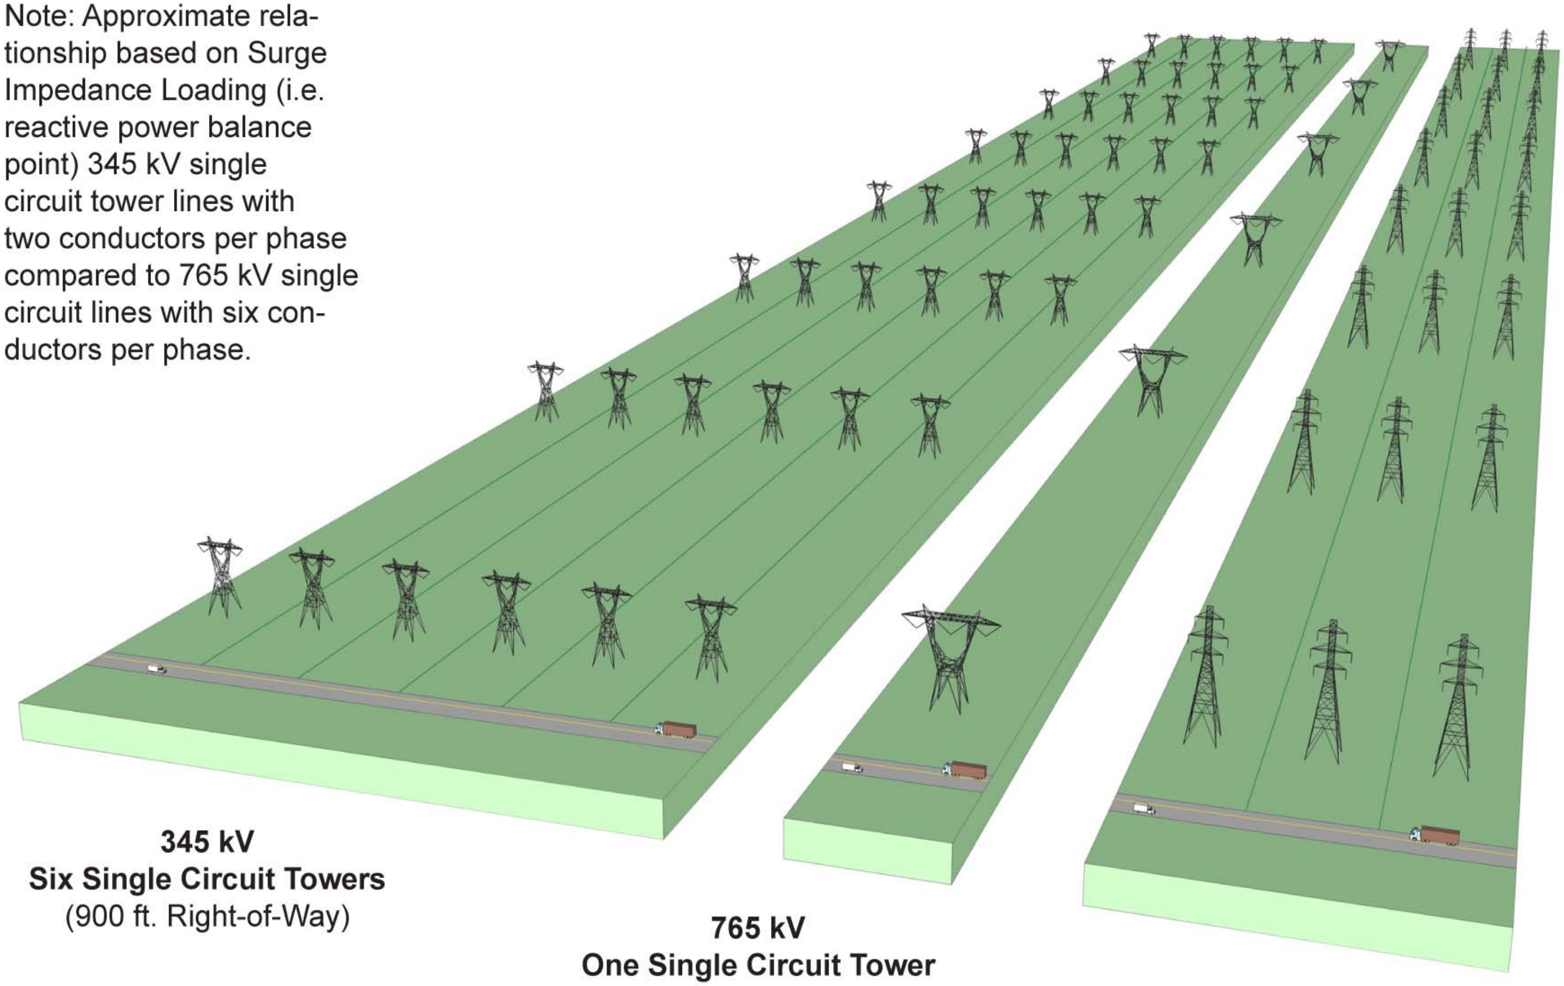
AEP-ITC Michigan Proposal (PJM/MISO)



SPP Overlay Study – Mid Design 2

765 Right-of-Way Comparison

Note: Approximate relationship based on Surge Impedance Loading (i.e. reactive power balance point) 345 kV single circuit tower lines with two conductors per phase compared to 765 kV single circuit lines with six conductors per phase.



345 kV
Six Single Circuit Towers
(900 ft. Right-of-Way)

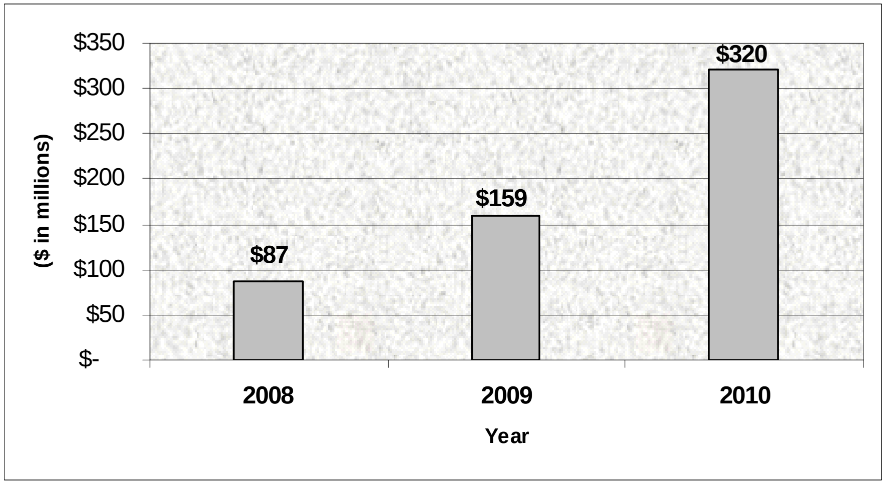
765 kV
One Single Circuit Tower
(200 ft. Right-of-Way)

345 kV
Three Double Circuit Towers
(450 ft. Right-of-Way)

From a siting standpoint, 765-kV is more efficient in terms of economies of scale and right-of-way than lower capacity lines.

Transmission - Investments and Earnings Contributions

Projected Transmission Capital Spending*

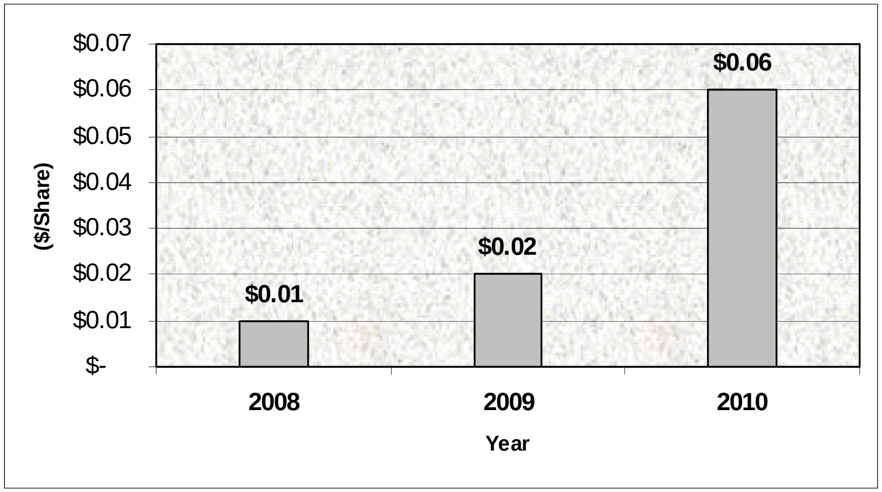


* ETT and PATH joint ventures included in above projection. Amounts represent AEP's 50% share of total transmission joint venture capital expense. These amounts are excluded from AEP's base capital forecast because the joint ventures are not consolidated for financial reporting purposes. AEP will be responsible for funding 40-50% of these amounts with equity contributions, and the remainder will be financed with debt issued by the joint ventures.

ETT
Electric Transmission Texas

PATH
Potomac-Appalachian Transmission Highline

Projected Transmission EPS Contributions*



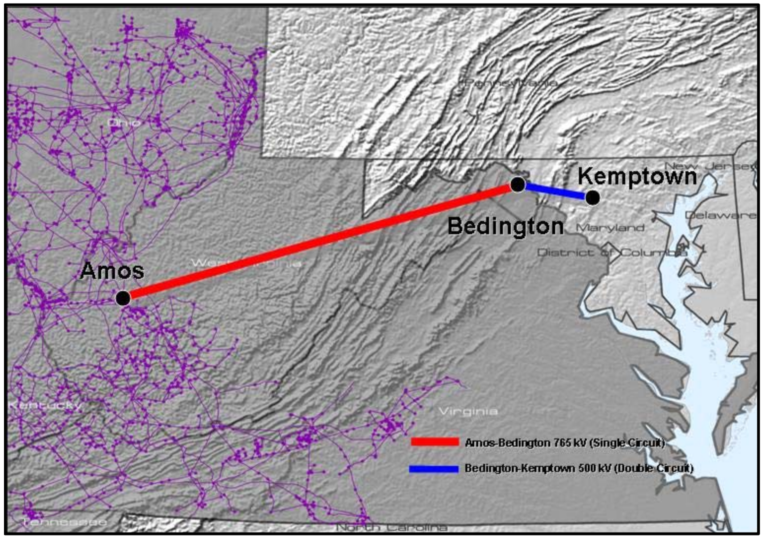
* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

Transmission will provide a near and long term catalyst for growth.

I-765[TM] Transmission in PJM: PATH

Execution in Action

- *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries -- to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP
    - 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
  - FERC ordered the formula rate mechanism be set for hearing, pending settlement judge procedures
- *Funding Plans/Transaction Structure*
  - AEP and Allegheny share ownership of Amos – Bedington line and contribute equally to this portion of the project through PATH West Virginia Transmission Company, LLC
  - AEP's investment will be held in the AEP Transmission Holding Company LLC subsidiary
- *Key Next Steps*
  - Siting Approval from WV and MD – 2010
  - Targeted Completion – 2012



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Potomac-Appalachian Transmission Highline

I-765™ Transmission in Texas (ETT)

Electric Transmission Texas Update

- *Transaction Structure*
  - 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
  - ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
  - Services provided by AEP and investment opportunities can be offered by either partner
  - Total initial investment of $70 million before ownership division
- *Next Steps*
  - ETT project opportunities to be evaluated on a case by case basis
  - Anticipate transferring some project opportunities in 2008 after regulatory approvals obtained.

Electric Transmission America (ETA)

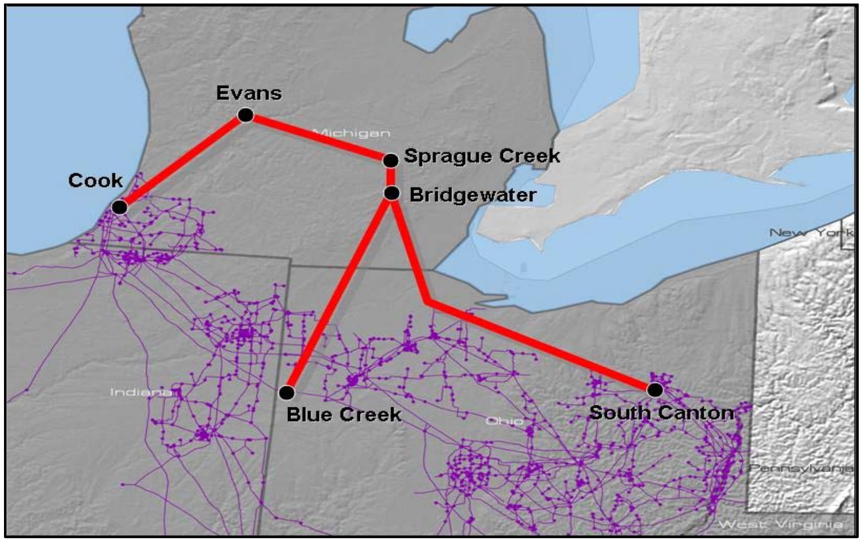
- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.

ETA reflects a natural progression and expansion of AEP's partnership with MidAmerican.

I-765™ Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
  - Study was released Q3 2007
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.6 billion investment (before ownership division)
  - AEP and ITC are in discussions to form a Joint Venture
- *Benefits*
  - Up to 5,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- *Next Steps*
  - Agreement on JV (AEP/ITC) - Summer 2008
  - JV Formation - 2008
  - MISO and PJM Review/Approval - 2009
  - FERC Formula Rate and Cost Allocation Filing - Fall 2009
  - Siting Approval – 2011-2012
  - Estimated Completion –2015-2021



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

I-765[TM] Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- ### *Overview*
  - Sent non-binding Letter of Commitment to SPP to construct 765-kV and 500-kV projects in SPP region consistent with SPP Overlay Study – Summer 2007
  - Updated EHV Overlay Study completed by SPP – March 2008
- ### *Benefits*
  - Overall reliability reinforcement with improved voltage support throughout the SPP system
  - Significantly increased transfer capability
  - Provides access to new generation resources, especially renewables
  - Allows for effective interconnections for EHV system development
- ### *Next Steps*
  - ETA Partnering Agreements - 2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate and Cost Allocation Filing (postage stamp) – 2009
  - Siting Approval for projects – 2009-2011
  - Estimated Completion (in segments) – 2012-2017

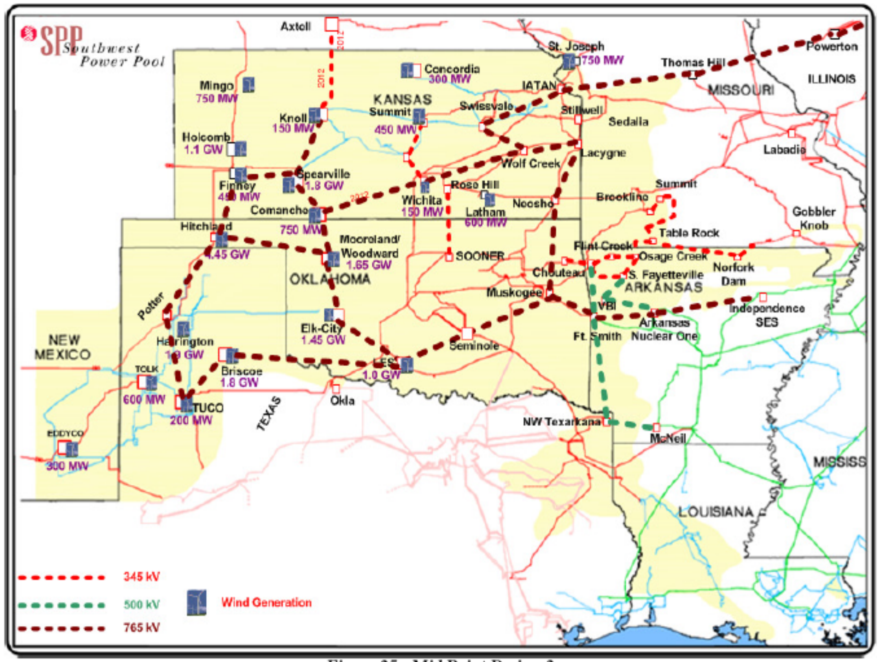


Figure 25: Mid Point Design 2

Total SPP 765-kV Overlay estimated to cost approximately $5 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A reliable and reasonably-priced electric supply is necessary to support the economic well-being of the areas we serve.

Highlights of Bingaman-Specter Proposal

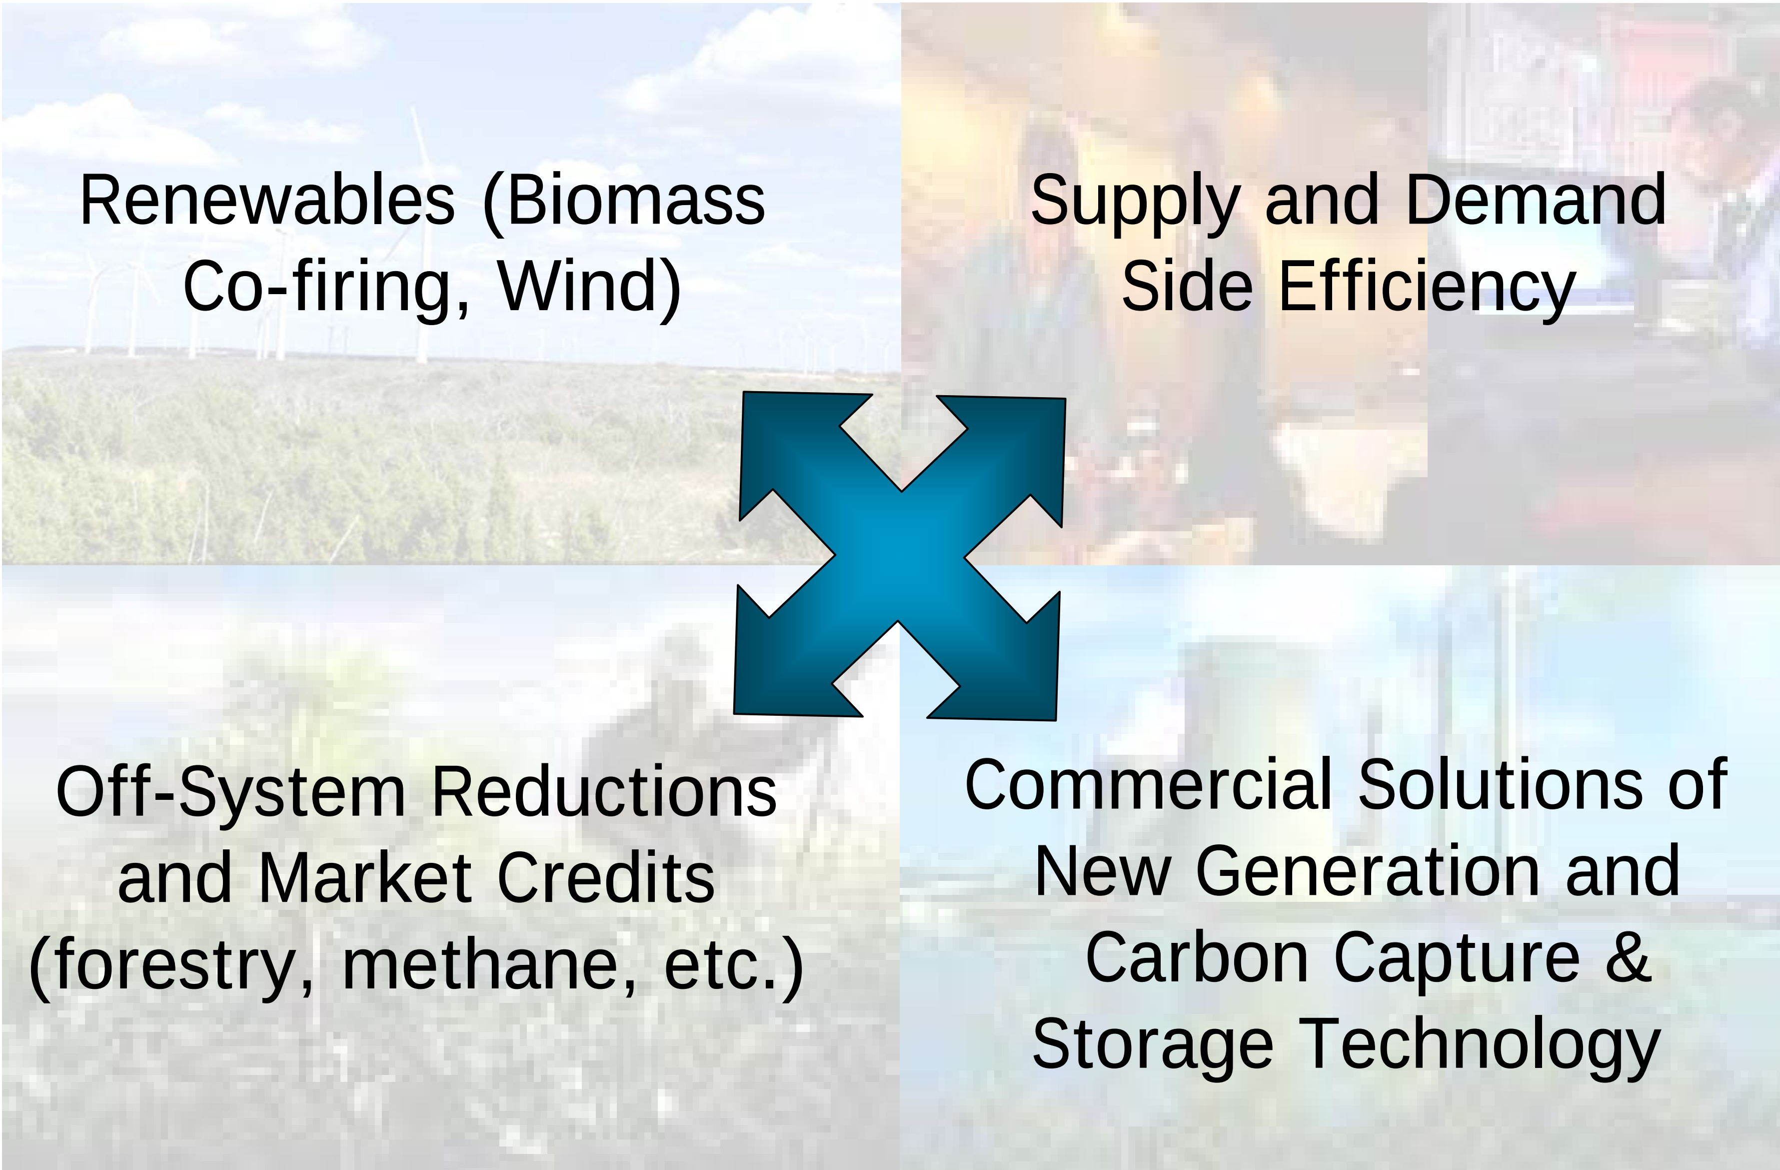
“Low Carbon Economy Act of 2007”

Key Components:

- Start date for greenhouse-gas reductions is 2012
- Goals: 2006 levels by 2020; 1990 levels by 2030
- Includes a safety valve of $12 per metric ton, increasing at an annual rate of 5% above inflation
- Carbon Capture Technology Support—Bonus Allowances
- International action (AEP-IBEW trade proposal)

AEP endorses this proposal because it sets reasonable and achievable reduction targets and includes the AEP-IBEW trade proposal.

AEP's Long-Term GHG Reduction Portfolio



AEP is investing in a portfolio of GHG reduction alternatives

A Portfolio Approach: AEP's Long-Term CO_2 Reduction Commitment

Existing Programs

- **Existing plant efficiency improvements**
- **Renewable Energy**
  - 800 MWs of Wind
  - 300 MWs of Hydro
- **Domestic Offsets**
  - **Forestry - 0.35MM tons/yr**
  - **Over 63MM trees planted through 2006**
  - **1.2MM tons of carbon sequestered**
- **International Offsets**
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- **Chicago Climate Exchange**

AEP's reductions/offsets of CO_2:

- **2003-2007: 39 MM Tons**

New Program Additions (by 2011)

- **1000 MWs of Wind PPAs: 2 MM tons/yr**
- **Domestic Offsets (methane/forestry): 2.5 MM tons/yr**
- **Fleet Vehicle/Aviation Offsets: 0.2 MM tons/yr**
- **Additional actions—energy efficiency and biomass: 0.3MM tons/yr**

New Technology Additions

- **New Generation - IGCC and USC**
- **Retrofit solutions for existing fleet**
  - Chilled Ammonia
  - Oxy-Coal

AEP's reductions/offsets of CO_2:
2011+: 5 MMT/YEAR
Longer Term—New Technology

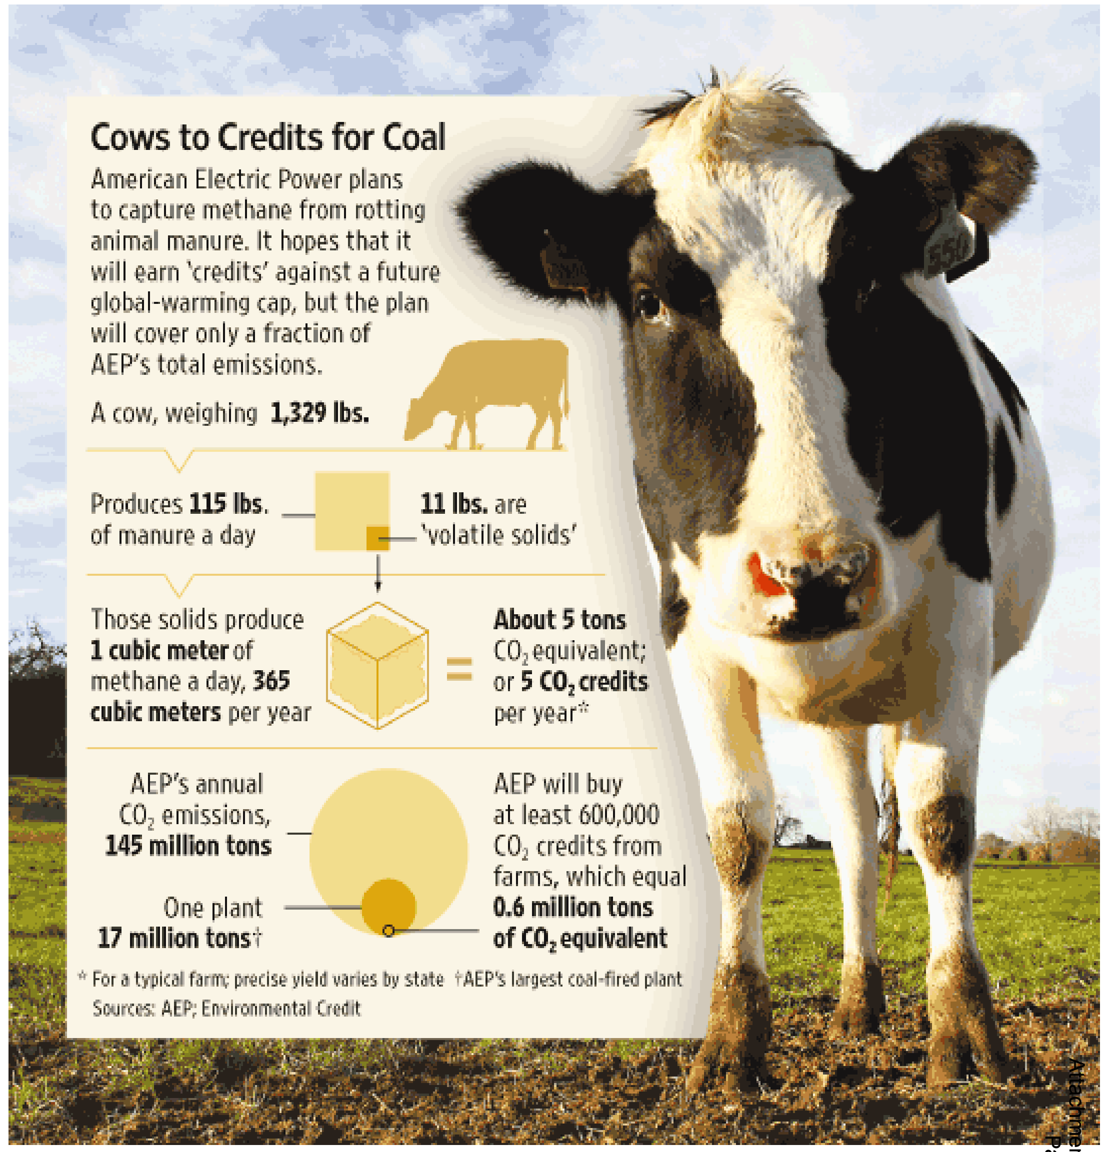
Off-System Reductions

New AEP Offset Commitment by 2011:

• 2.5 MM tons/year additional CO_2 offsets

Latest Announcement:

- Methane Capture Deal with Environmental Credit Corp.
  - 0.6 MM Tons CO2e per year
  - 2010 through 2017
  - 51% of credits sourced from "AEP States"



Source: Wall Street Journal June 14, 2007

Advanced Generation & CO_2

Near Term:

- Chilled Ammonia project at Mountaineer moving to commercial scale at the Northeastern Plant in 2012

$ in millions				
		2008	2009	2010
Mountaineer Chilled Ammonia Project		$30	$39	$0

Long Term Strategy (Post-2010):

- IGCC
- Oxy Coal Technology
- Chilled Ammonia
- Nuclear COL

We are committed to validating and deploying technologies that ensure coal remains a viable resource for AEP and America.

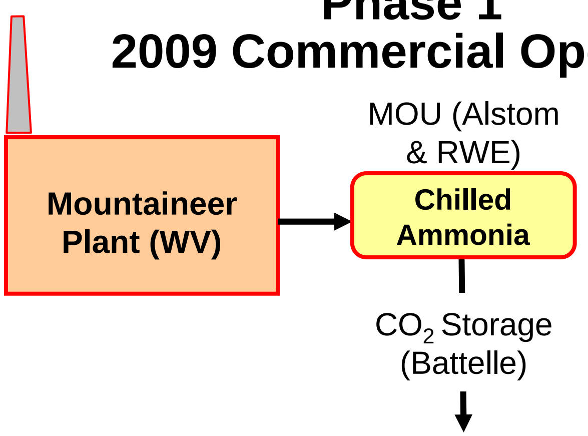
AEP's Carbon Capture & Storage Initiative

In March 2007, AEP announced a major new carbon capture and storage initiative:

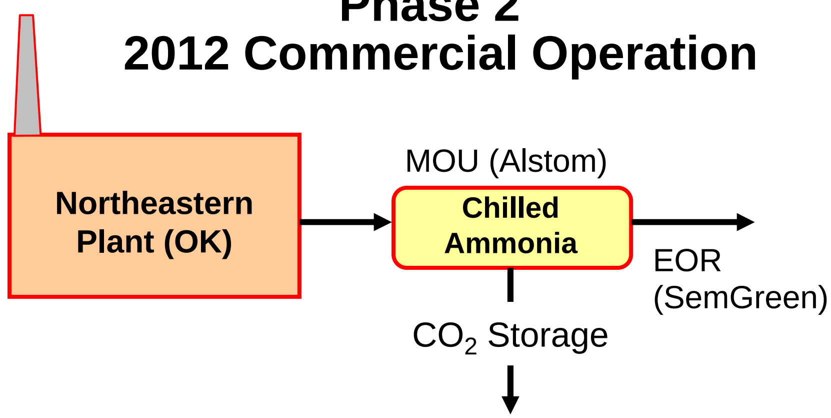
Chilled Ammonia CCS--We will install carbon capture on two coal-fired power plants, the first commercial use of technologies to significantly reduce carbon dioxide emissions from existing plants.

- **The first carbon capture project, at the Mountaineer plant in West Virginia, is expected to complete its product validation phase in 2009.**
- **The second, at the Northeastern plant in Oklahoma, will begin commercial operation in 2012.**

Phase 1
2009 Commercial Operation



Phase 2
2012 Commercial Operation



KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 5569 of 9556

CO_2 Capture Techniques

Post-Combustion Capture

- Conventional or Advanced Amines, Chilled Ammonia
  - Amine technologies commercially available in other industrial applications
  - Relatively low CO_2 concentration in flue gas – More difficult to capture than other approaches
  - High parasitic demand
    - Conventional Amine ~25-30%, Chilled Ammonia target ~10-15%
  - Amines require **<u>very</u>** clean flue gas

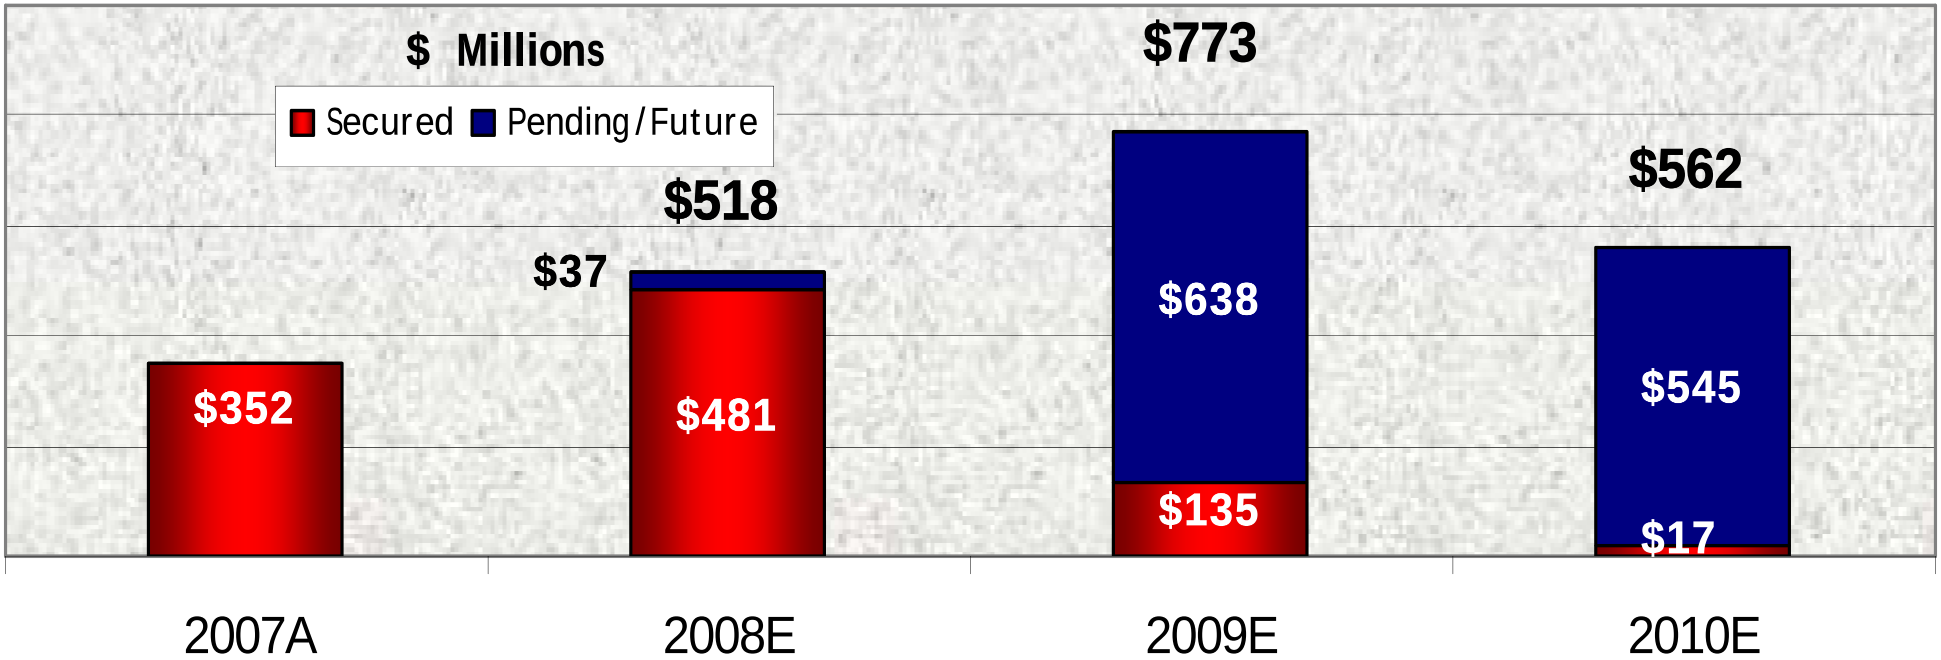
Modified-Combustion Capture

- Oxy-Coal
  - Technology not yet proven at commercial scale
  - Creates stream of very high CO_2 concentration
  - High parasitic demand, >25%

Pre-Combustion Capture

- IGCC with Water-Gas Shift
  - Most of the processes commercially available in other industrial applications
    - Have never been integrated together
  - Turbine modified for H_2-based fuel, which has not yet been proven at commercial scale
  - Creates stream of very high CO_2 concentration
  - Parasitic demand (~20%) for CO_2 capture - lower than amine or oxy-coal

Incremental Rate Relief

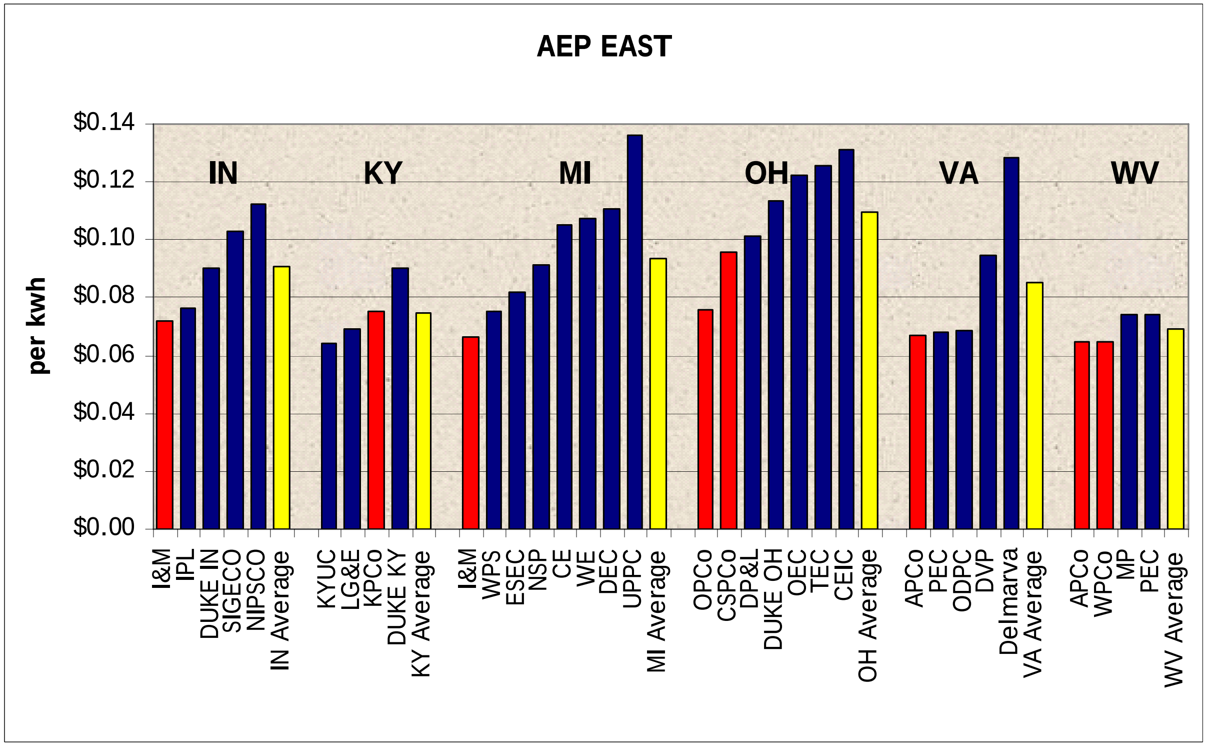


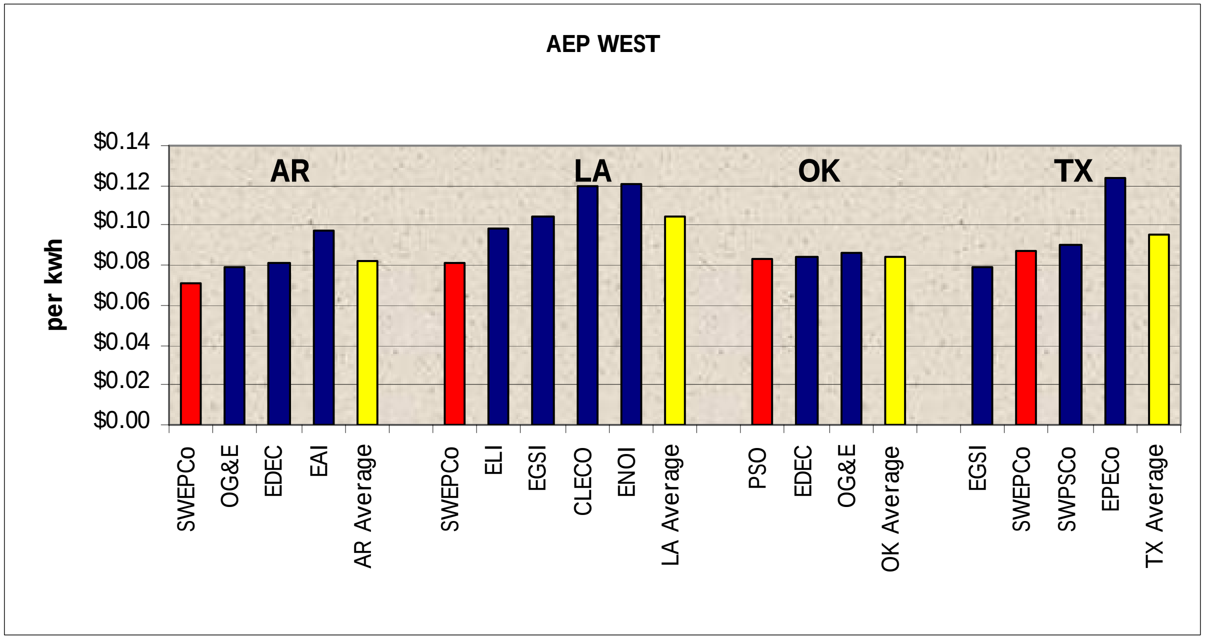
- **93% of 2008 Rate Relief Secured: I&M Depreciation, APCo - WV Surcharge, TCC & TNC General Rate Cases, Ohio RSP (3% & 7%), PSO Peaking Generation & General Rate Case, Ohio 4% Generation Rider and Marginal Loss Recovery, APCo - Virginia Fuel Factor, 2007 TCC/TNC TCRF filings, PSO 2007 Storm Recovery, SWEPCo - LA Formula Rate Plan.**

- **2008 Pending: 2008 TCC/TNC TCRF filings, other cases yet to be filed including Virginia base case.**

Secured $481MM of $518MM for 2008

AEP Provides Low Cost Electric Service





Residential Average rates for 1,000 kWh - 12 months ended 7/01/2007

Source: Summer 2007 EEI Typical Bills and Average Rates Report

Regulatory Activity Underway

PSO Red Rock Generating Facility Recovery Filing

- On December 28, 2007, PSO filed an application with the Oklahoma Corporation Commission to defer, amortize and recover costs related to the Red Rock Generating Facility, which was denied construction and recovery pre-approval in October 2007.
- On March 13, 2008, PSO signed a settlement agreement with various parties regarding recovery of costs incurred in the Red Rock project. The agreement provides for recovery from customers of 50% of the costs ($10.5MM). The settlement agreement has not yet been approved by the OCC. Hearings held May 12, 2008.

Regulatory Activity Underway

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $140MM. Approximately $10MM of the increase relates to 3rd party and the rest, if approved, would be recovered through retail jurisdictional filings in SWEPCo and PSO, as appropriate.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to February 1, 2008, with rates subject to refund.
- Settlement discussions are currently on-going.

Regulatory Activity Underway

APCo Mountaineer IGCC Filing

Virginia

- Testimony filed with the Virginia State Corporation Commission on July 16, 2007 seeking a prudence determination and approval to recover, beginning in 2009, Virginia's share of the carrying costs associated with the proposed plant.
- We received an order on April 14, 2008, denying our request. We petitioned for reconsideration on 4/29/2008, and the SCC issued an order granting reconsideration on 4/30/2008.

West Virginia

- Air permit anticipated in the third or fourth quarter of 2008.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.
- In March 2008, the Ohio Supreme Court remanded the original order back to the PUCO, giving the PUCO the opportunity to supplement the record. No refund of Phase I costs was mandated by the Supreme Court in its decision.
- We now await further clarity from the PUCO on the remanded issues as well as the outcome of current legislative discussions in Ohio regarding the post-2008 landscape for generation in Ohio.

Regulatory Activity Underway

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- The PSC issued its order on November 21, 2007, approving construction of the plant.
- Air permit anticipated in the third or fourth quarter of 2008.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The peaking facility has been addressed and the intermediate facility is under review. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- The LPSC issued its order on March 19, 2008, approving construction of the plant.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- Public hearings commenced October 17, 2007. On January 17, 2008, the ALJ recommended the PUCT deny the request. The commissioners have requested another hearing where they can directly cross examine some of the witnesses. The additional hearing is scheduled for May 29-30, 2008.

Regulatory Activity Underway

SWEPCo Stall Plant Filings

Arkansas

- Proceeding is currently suspended pending outcome in Louisiana.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The intermediate facility, known as the Stall Plant and sited in Shreveport, LA, was bifurcated from the original filing and had a procedural schedule established on January 9, 2008.
- Staff and intervenor testimony was completed on February 15, 2008, rebuttal testimony was due February 29, 2008 and hearings were held in April 2008. Staff testimony was favorable. An order is expected in mid-summer.
- Air permit received on March 20, 2008.

Texas

- PUCT order approving plant was issued on March 8, 2007.

Approved Rate Bases and ROEs

Jurisdiction	Rate Base	Approved ROE	Effective Date
APCo - Virginia	$2,022MM	10.00%	10/2/2006

Note: For analysis purposes, certain financial statement amounts have been reclassified for this effect on the earnings presentation.

* - 2007 actual amount includes distressed generation purchases of $512 million

Capital investment is funded from cash from operations and debt issuances.

Commitment to Credit Quality

- Maintain adequate liquidity
- $150MM annually in new equity from Dividend Reinvestment and 401(k) plans
- Target 60% maximum consolidated AEP debt/cap ratio on an adjusted basis
- Target utility company capitalization structures:

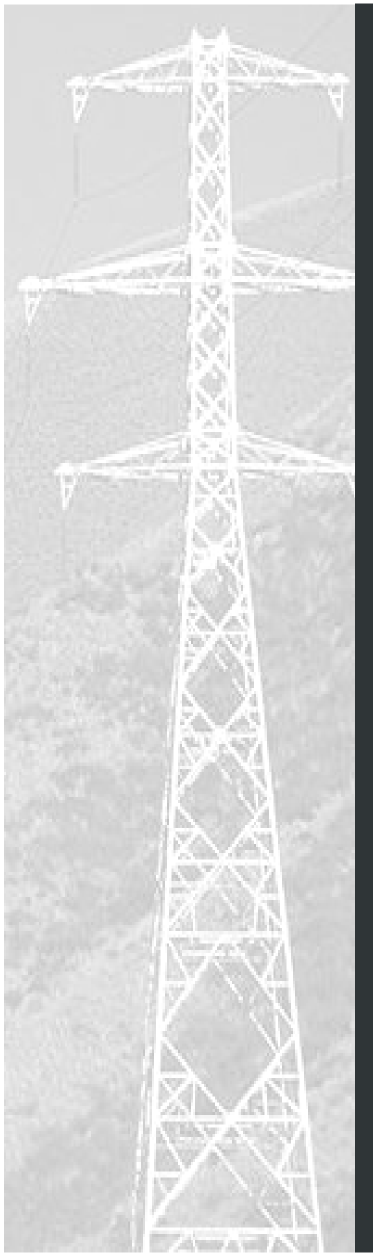
Company	Target Equity Ratio
APCo	42-44%
CSP	45-47%
I&M	40-42%
KPCo	41-43%
OPCo	44-46%
PSO	43-45%
SWEPCo	43-45%
TCC	40%
TNC	40%

- Target long term dividend payout ratio range of 55-60%
- Maintain adequate coverage ratios to support current credit ratings

We are committed to maintaining our current credit ratings.

Sustainable Business Model

- *Strength and scale in assets & operations*
- *Continued innovation and deployment of leading technology advancements*
- *Sustainable earnings growth through near and long term capital investment opportunities*
- *Comprehensive regulatory strategy focused on maximization of cash flow and return through minimized regulatory lag*
- *Strong dividend yield with respect to peers*
- *Balance sheet and credit profile stability*



1Q09 Earnings Release Presentation

April 24, 2009

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants including our ability to restore Indiana Michigan Power Company’s Donald C. Cook Nuclear Plant Unit 1 in a timely manner; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity and transmission lines (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary or deflationary interest rate trends; volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impacting our ability to finance new capital projects and refinance existing debt at attractive rates; the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurred cots and recovery is long and the costs are material; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

1Q09 Performance Drivers:

- *Retail Sales (lines 1-4):*
  - *Rate relief of $101MM (Primarily APCo and PSO)*
  - *Lower OSS sharing of $54MM*
  - *Offset by:*
    - *$58MM favorable variance in the prior year related to a coal contract amendment*
    - *$20MM credit for fuel to I&M customers from a portion of Cook Unit 1 accidental outage policy proceeds*
    - *Load contraction of $6MM, primarily from industrial customers in I&M and the Ohio companies*
  - *Weather had no EPS impact vs. prior year or normal*
- *Off-System Sales (line 5):*
  - *Off System Sales were lower primarily due to lower volumes and market prices which reflect weak market demand and a significant drop in natural gas prices*
- *Other Operating Revenue (line 7):*
  - *Increase due to accidental outage insurance payments related to the DC Cook Unit 1 outage ($54MM)*
- *Operations & Maintenance (line 9):*
  - *Higher O&M costs related to the 1Q08 PSO storm deferral of $72MM, 2009 storms ($38MM) and an accrual of$15MM for the Partnership with Ohio Fund, offset by the Red Rock write-off in 1Q08($10MM) and a decrease in employee-related expenses ($34MM).*
- *Interest Expense & Preferred Dividend (line 12):*
  - *Higher due to increased long-term debt outstanding and higher interest rates*
- *Income Taxes (line 14):*
  - *Effective tax rate for utility operations was 32.9% in 2009 and 33.6% in 2008*
- *River Operations increased due to gains on the sale of two older towboats.*
- *Generation & Marketing increased as a result of higher gross margin from marketing activities in ERCOT.*
- *Parent and Other decreased primarily due to higher interest expense at the Parent.*

1Q2009 Cash Flow

Ending Cash & Cash Equivalent Balances	$ 155	$ 710

1Q2009 Cash Flow Drivers:

Operating Activities

- Changes in working capital largely driven by fuel (coal) stock increase and G&A type items
- Changes in other assets and liabilities largely driven by changes in un-recovered fuel

Investing Activities

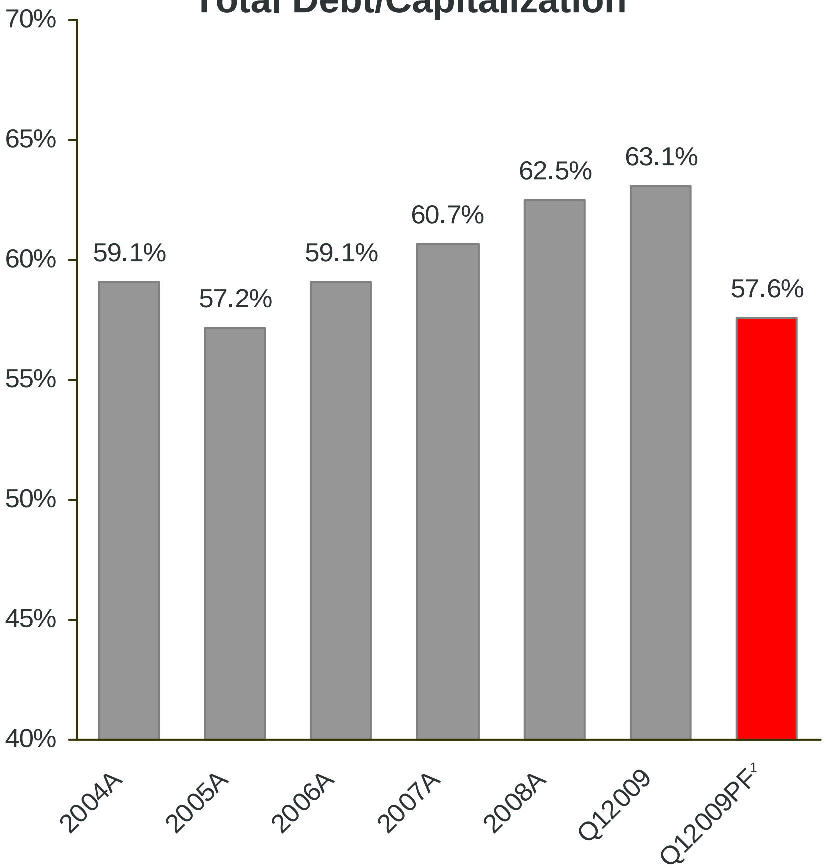
- Cash outlay of $897MM for 2009 YTD capital investment.
- 2009 asset sale proceeds primarily relate to the transfer of assets from TCC to ETT ($60MM) and the payments from the third-party owners of the Turk Plant ($104MM)

Financing Activities

- Long-term debt issuances of $854MM primarily related to I&M and APCo senior notes.

Maintaining Strong Capitalization & Liquidity

Total Debt/Capitalization



Note: Total Debt is calculated according to GAAP and includes securitized debt

Sanford C. Bernstein 2007 Carbon Symposium

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

AEP®

Presentation Topics

- **AEP Climate Strategy:**
  - How is AEP preparing for ultimate climate legislation?
  - What specific voluntary actions and proactive investments is the company undertaking?

- **Federal Legislation:**
  - What type of climate legislation is likely?
  - When will it become effective?
  - How will climate legislation affect operations, capital investment, choice of generation, operations and earnings?
  - What constitutes “reasonable” climate legislation?

AEP®

Distribution	~208,000 miles	# 1

AEP®

AEP Climate Strategy

AEP's Climate Strategy

- **Being proactive and engaged in the development of climate policy**
  - International Emissions Trading Association (IETA)
  - Electric Power Research Institute (EPRI)
  - Pew Center on Global Climate Change
  - e8
  - Global Roundtable on Climate Change
- **Investing in science/technology R&D**
  - FutureGen Alliance
  - US DOE research on carbon capture and sequestration at our Mountaineer Plant
  - EPRI – combustion technologies
  - MIT Energy Laboratory
  - B&W – Oxy-Coal
- **Taking voluntary, proactive action now, making real reductions and setting policy precedents thru CCX**
  - Chicago Climate Exchange (CCX)
  - EPA Climate Leaders and SF-6 Program
  - Asia-Pacific Partnership
  - DOE 1605B- voluntary reporting of GHGs Program
  - Business Roundtable Climate Resolve
  - Numerous forestry activities
- **Investing in longer term technology solutions--new generation and carbon capture and storage (e.g., IGCC, Ultra-supercritical PC)**

AEP must be a leader in addressing climate change

AEP's Long-Term GHG Reduction Portfolio

Renewables (Biomass Co-firing, Wind)

Supply and Demand Side Efficiency

Off-System Reductions and Market Credits (forestry, methane, etc.)

Commercial Solutions of New Generation and Carbon Capture & Storage Technology

AEP®

AEP is investing in a portfolio of GHG reduction alternatives

A Portfolio Approach: AEP Long-Term CO_2 Reduction Commitment

Existing Programs

- **Existing plant efficiency improvements**
- **Renewable Energy**
  - 800 MWs of Wind
  - 300 MWs of Hydro
- **Domestic Offsets**
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - **1.2MM tons of carbon sequestered**
- **International Offsets**
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- **Chicago Climate Exchange**

AEP's reductions/offsets of CO_2:
- **2003-2005: 31 MMT**
- **2006-2010 (proj.): Additional 15 MMT**

New Program Additions (by 2011)

- **1000 MWs of Wind PPAs: 2MM tons/yr**
- **Domestic Offsets (methane): 2MM tons/yr**
- **Forestry: Tripling annual investment to increase to 0.5MM tons/yr by 2015**
- **Fleet Vehicle/Aviation Offsets: 0.2MM tons/yr**
- **Additional actions--end use and supply efficiency and biomass: 0.2MM tons/yr**

New Technology Additions

- **New Technology Generation – IGCC and USC**
- **Commercial solutions for existing fleet**
  - Chilled Ammonia
  - Oxy-Coal

AEP's reductions/offsets of CO_2:
2011+: 5 MMT/YEAR
Longer Term—New Technology

AEP®

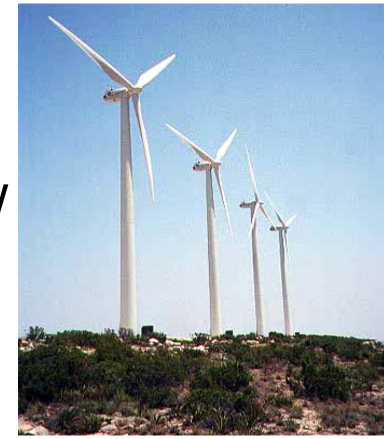
AEP Wind Operations/Purchases

Trent Mesa (2001)

- **150 MW** (100 - 1.5 MW turbines)
- Abilene/Sweetwater, TX

Southwest Mesa (1999)

- **75 MW** (107 – 700kW turbines)
- McCarney, TX
- Power Purchaser



Desert Sky (2002)

- **160 MW** (107 - 1.5 MW turbines)
- Bakersfield, TX

Summary

- Owned/Operated 385 MW
- Wind Purchases 392 MW
- Total Existing Wind at end of 2006: 777 MW
- **New Wind Purchases in 2007: 275 MW**

Will acquire an additional 725 MW of new wind to attain goal of 1,000 MW by 2011

AEP Has 10 Years of Wind Experience

- 5 MW Ft. Davis Wind Farm: Early AEP R&D Project (1996 - 2004) Decommissioned
- 75 MW Southwest Mesa PPA: Project built on AEP owned land (1998) SWEPCo
- 150 MW Trent Wind Farm: AEP owned / developed IPP wind farm (2001) AEPEP
- 160 MW Desert Sky Wind Farm: AEP owned IPP wind farm (2001) AEPEP
- 147 MW Weatherford PPA: (2005) PSO
- 151 MW Blue Canyon II PPA: (2005) PSO
- 94.5 MW Sleeping Bear PPA: Completion in Summer 2007 PSO
- **200 MW Fowler Ridge PPA: Completion in late Q4 – 2008** **I&M / APCo**
- **75 MW Camp Grove PPA: Completion in early – 2008** **APCo**

AEP®

Off-System Reductions

Existing AEP Programs:

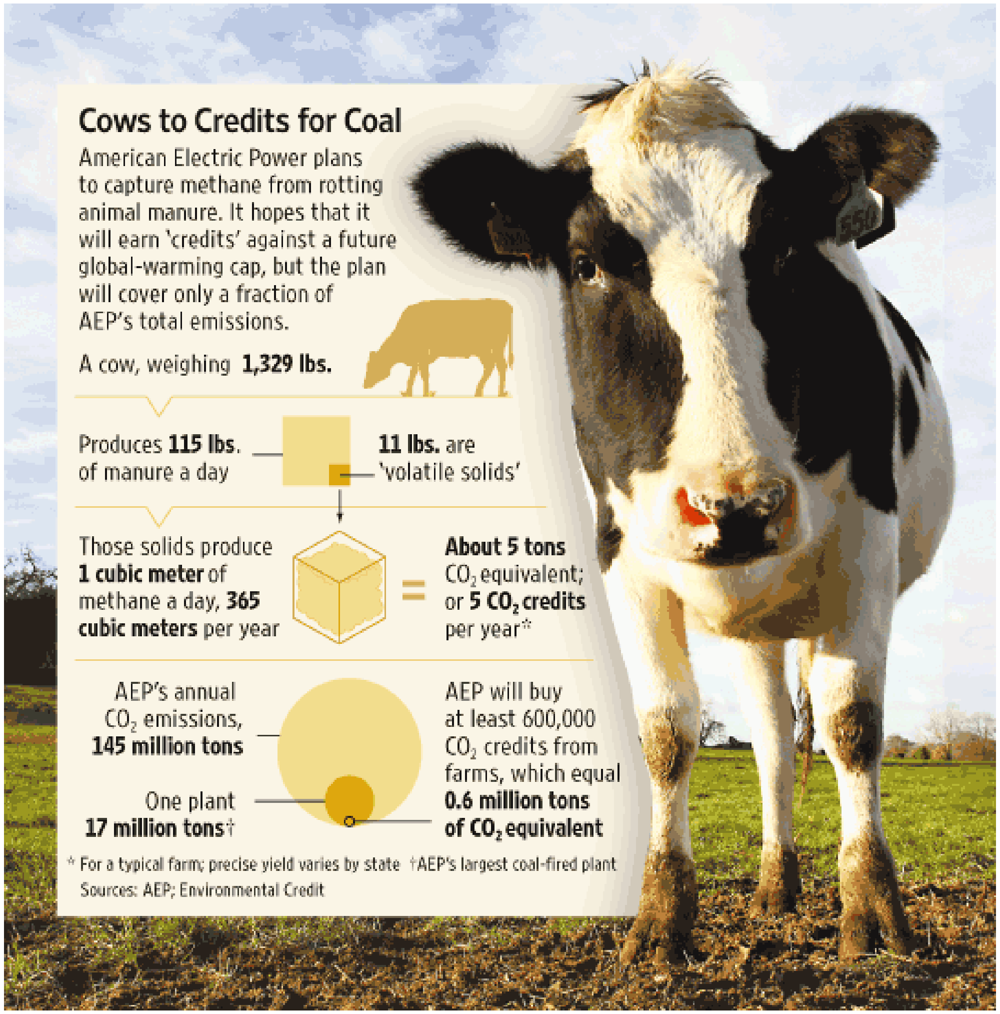
- Forestry - Domestic
  - 350,000 tons / yr
  - 63 MM trees planted
- Forestry – International
- Chicago Climate Exchange

New AEP Commitment by 2011:

- 2 M tons per year of additional CO_2 offsets

Latest Announcement:

- Methane Capture Deal with Environmental Credit Corp.
  - 600,000 CCX carbon credits per year
  - Begins 2010
  - Runs through 2017
  - 51% of credits sourced from "AEP States"



Source: Wall Street Journal June 14, 2007

AEP®

AEP Leadership in Technology: IGCC/USC and Future Gen

NEW ADVANCED GENERATION

- **IGCC---AEP plans to build first two 600+ MW IGCC commercial-scale facilities in the US in OH and WV by the end of the next decade**

- **USC--AEP plans to build a new generation ultra-supercritical (steam temperatures greater than 1100°F) coal plant in Arkansas**

FUTUREGEN- First Near Zero Emissions Hydrogen/ Electric (coal-fueled IGCC with CCS)- AEP and Alliance members

AEP®

AEP's Carbon Capture & Storage Initiative

In March 2007, AEP announced a major new carbon capture and storage initiative:

- **Chilled Ammonia CCS--We will install carbon capture on two coal-fired power plants, the first commercial use of technologies to significantly reduce carbon dioxide emissions from existing plants.**
  - **The first carbon capture project, at the Mountaineer plant in West Virginia, is expected to complete its product validation phase in 2009**
  - **The second, at the Northeastern plant in Oklahoma, will begin commercial operation in 2012.**
- **Oxy-Coal--AEP will also demonstrate (10MWe) and then install oxy-coal CO_2 capture & storage at a commercial sized coal unit (about 200 MWe)—feasibility study to be completed in 2008.**

AEP Leadership in New Technology: Chilled Ammonia CCS

Phase 1

2009 Commercial Validation

1300 MW Mountaineer Plant (WV) → MOU (Alstom) **Chilled Ammonia 20MWe scale**

CO_2 Storage (Battelle)

Captures and sequesters 100,000 metric tons of CO_2 /yr.

Phase 2

2012 Commercial Operation

450 MW Northeastern Plant (OK) → MOU (Alstom) **Chilled Ammonia 200MWe scale** → EOR

CO_2 Storage

Captures and sequesters 1.5 Million metric tons of CO_2 /yr.

Examples of Relative GHG Mitigation Costs for Power Sector

$40+

$/ton CO_2e

$0

- Carbon Capture w/ Geologic Sequestration
- Other renewable, advanced geothermal and/or solar
- Carbon Capture for Enhanced Oil Recovery
- New Biomass Generation
- Dispatch of additional gas vs. inefficient coal
- Biomass Co-firing
- Biological Sequestration (e.g. Forestry)
- New Wind
- Energy Efficiency
- Methane Offsets

Nuclear?

AEP®

Key Issues for CCS Development in U.S.

- Overcoming the "Economic" Hurdle
- High Up-Front Capital Investment—Getting Adequate Financing and Recovery in Rates
- Commercial Demonstrations of CCS at Large Coal-Fired Power Plants
- National Standards for Permitting of Storage Reservoirs
- Potential Institutional, Legal and Regulatory Barriers to Carbon Storage

AEP®

Federal Legislation and AEP Position

Prospects for US Federal Legislation— The Crystal Ball

- With Democratic majorities in the House and Senate, prospects during the 110th Congress for mandatory climate legislation have increased.
- Nonetheless, the Senate and House have just begun introducing/developing legislation and there are many contentious issues, particularly allocation.
- In the 2009 and after period, passage of legislation is more likely, with a new President in office.
- A general timeline for passage of Clean Air Legislation has typically been 5-8 years after the initial "serious" proposals.

We are at the "end of the beginning" NOT the "beginning of the end."

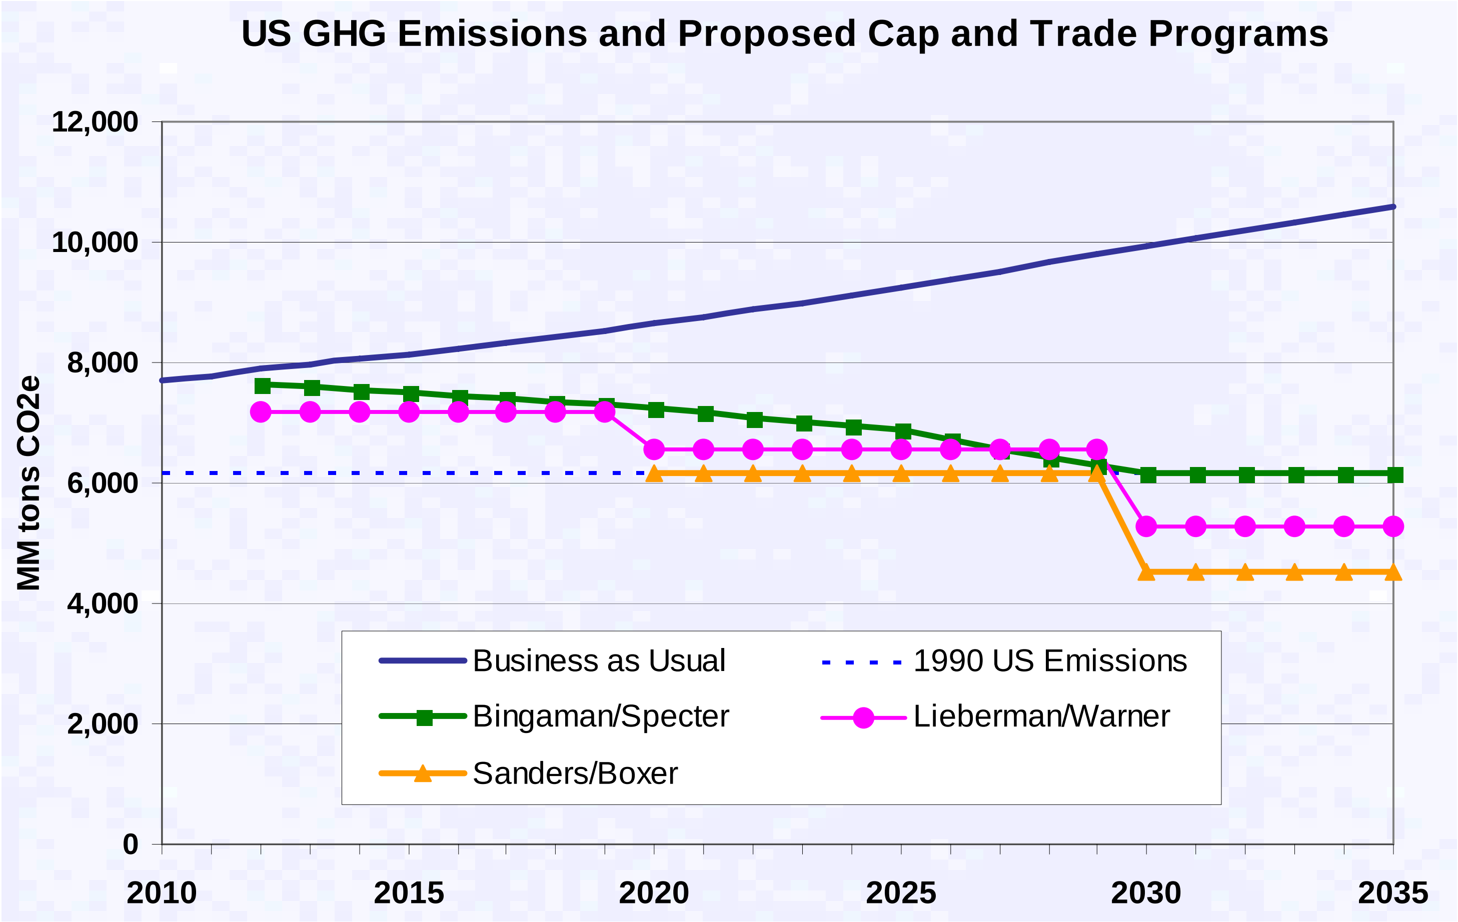
AEP®

Potential for Federal Climate Legislation

- Legislation could pass as early as 2009-10 with limits taking effect as early as 2015. Any earlier reduction requirements are unlikely.
- Moderate approach probably has best chance of passage, which means offsetting emissions growth initially (during next decade) with significant reductions thereafter.
- Impacts in terms of utility operations, capital and earnings won't be until the 2015-20 period. With more substantial impacts probably not beginning until 2020 and after.

AEP®

Emission Reductions Under Selected Bills



AEP's Climate Position

- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment

- Inclusion of adjustment provision if largest emitters in developing world do not take action

A reliable & reasonably-priced electric supply is necessary to support the economic well-being of the areas we serve.

AEP®

AEP Position: A "Reasonable" Approach to Climate Legislation

- Reductions and Timing--Moderate with Adequate Lead Times
- Scope of Program-- Economy Wide
- Point of Regulation (e.g. Upstream or Downstream)--Hybrid Approach
- Flexibility of the Program—Trading, Banking, Unrestricted Offsets, Early Action Credits
- Allowance Allocation And Other Cost Issues—Low auctions and safety valve
- International Linkage—AEP-IBEW Proposal: emission requirements to foreign imports from non-participating countries

AEP®

AEP Supports Bingaman-Specter Bill

"Low Carbon Economy Act of 2007"

- Economy wide cap-and-trade program to limit Greenhouse Gas Emissions
  - Caps and Dates
    - 2006 Levels by 2020
    - 1990 levels by 2030
  - Industry Sectors "Regulated" under bill
    - Natural Gas and Petroleum regulated "upstream"
    - Coal regulated "downstream" at the power plant level
  - Allocations to Electricity Generators
    - Only fossil-fired electric generators receive allowances
  - Safety Valve (TAP)
  - Bonus Allowances for Carbon Capture and Sequestration
  - Early Reduction Credits and Offsets Included
  - Congressional Review of International Action (e.g. AEP-IBEW Proposal)

AEP Supports Reasonable Legislation on GHG

AEP®

Background on Allowance Allocations and Auctions

- **"Allowance" = Right to emit a ton of emissions.** Each year allowances are surrendered to cover annual emissions.
- **Most programs (e.g. EPA's SO_2 and NOx, CAIR and CAMR) allocate allowances (at "no cost") to generators (primarily based on historic emissions) with little or no auction.** The EPA SO_2 program has been hailed as a success because of its AFFORDABILITY due in part to a small (2.8%) auction.
- **Allowance allocation to emitters does NOT result in a "windfall." CO_2 cap means ALLOWANCES <EMISSIONS. So reductions must be made at a NET COST.**
- **Importantly, whether allowances are allocated at "no cost" or auctioned has NO environmental impact, it is the overall CO_2 cap that determines the amount of reductions.**

AEP®

"Free" Allocation To Emitters Does Not Increase Profits

- **Example: Company Emits 100 Tons, Receives 80 "No-Cost" Allowances (i.e. 20 % Reduction).**

Beginning of Year

Allowances 80 Tons

Allocated

CO_2 100 Tons

Year End

Surrendered/ Returned to EPA

Allowances 80 Tons

Net Emission Reduction/Liability 20 Tons

- **Full Allocation to Emitters Does NOT Create a "Net Asset" or Windfall because of the Liability of Complying with the CO_2 Cap. In fact, it is a NET LIABILITY.**

AEP®

Electricity Deregulated vs. Cost Regulated States

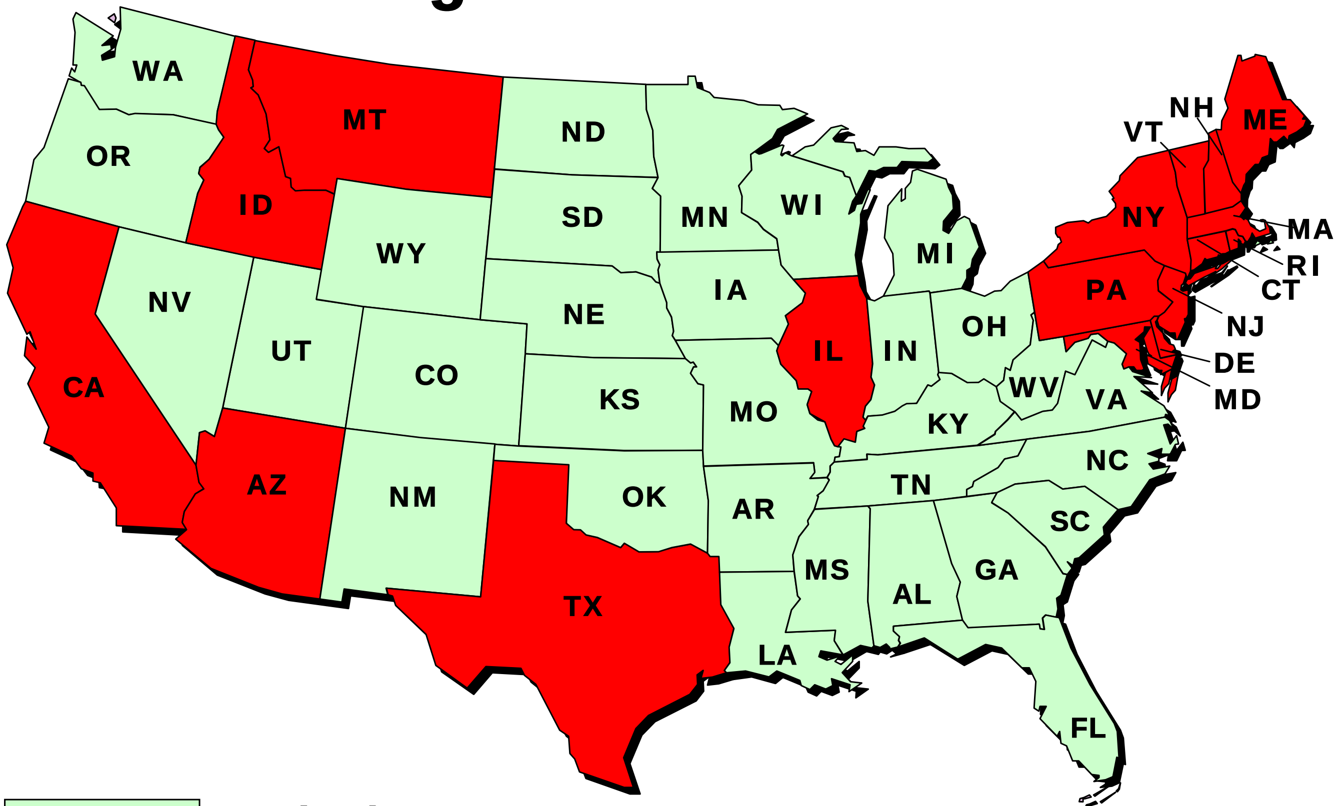
- It is the CO_2 cap that increases electricity costs and prices. The key distinction is whether a generator is subject to:
  1. Cost-of-Service Regulation
  2. Deregulated Generation Markets
- Most states and the vast majority of coal fired generation are subject to cost-based regulation. There are NO WINDFALLS or PROFIT GAINS for these generators because they are regulated and can ONLY pass-thru their costs to customers.
- For the US power industry, allocation/auction is predominantly about electricity costs and rates:

Higher Auctions = Higher Electricity Rates

AEP®

Most Coal Generation is Cost-Regulated

- Most states are "cost-regulated" today with 80 % of US coal fired generation in these states.



Regulated

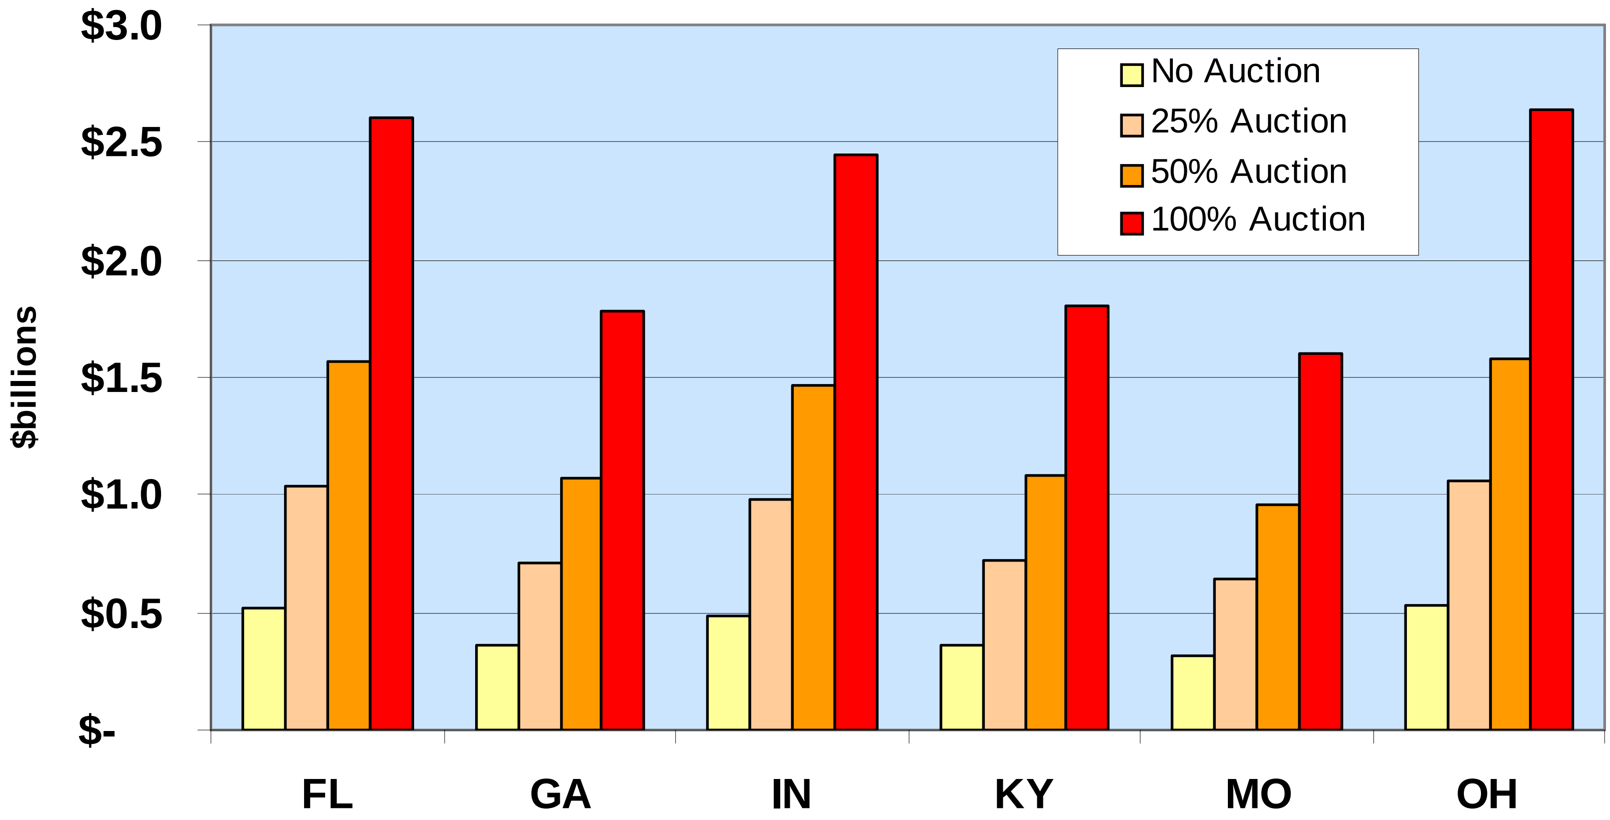
Unbundled/
Deregulated

Note: Based on "current" state status of regulation/deregulation. States that have continued cost-based POLR rates or transition rates are considered to have kept generation "regulated".

AEP®

Increase in Customer Electricity Costs/Rates due to Auctions

Annual Increase in Electricity Costs (in Billions of Dollars)



Approximate Calculation based on a 20% reduction in electric sector GHG emissions with CO_{2e} reductions/allowances costing $20/ton

AEP®

Allocations and Auctions—Price Deregulated States

- **The CO_2 cap (not allowance allocation) will increase electricity prices and, for some participants, increase profits. BUT ONLY in states (primarily in the Northeast and West), where generation is "unbundled" and retail prices deregulated.**
- **In these states, SOME generators will have higher profits IF their revenues increase more than their costs:**
  - The majority of the profit increase will go to non-fossil generation (e.g. nuclear, hydro and renewables) because they have no emissions and because almost half of the generation is projected to come from non-fossil sources in these states.
  - Natural gas units will also see profit increases because their CO_2 reduction costs are small.
- **Thus, auctions do little to "tax away" higher profits since most profits come from non-emitting or low emitting units that don't need allowances. In fact, the main impact of auctions is to penalize ratepayers or coal-fired generators.**

AEP®

Allowance Allocation Within the Electric Sector

- **Emissions-Based Allocations Are More Equitable---**Allowances should be allocated based on historic/current emissions to existing generators required to make reductions. **Allocation principle is all emitters make their "fair" pro-rata share of reductions**.
- **Output or Total KWh based Allocations Create Large Windfalls for Some Generators and Major Losses for Coal ----**
  - Allowances should NOT be allocated to sources that do not have emissions such as hydro and nuclear. Gas fired plants should not receive "excess" allocations.
  - Nuclear, hydro and gas plants will already benefit (to the extent they are in "deregulated" states) due to higher power prices.
  - Output based allocations increase costs to ratepayers of largely regulated, coal dependent states (e.g. the Midwest and Southeast) and provide large windfalls to deregulated gas and nuclear plants. For example, output-based allocation would increase costs to AEP and its customers by about $1 billion/year with no CO_2 benefit.

AEP®

Technical Appendix

Carbon Capture and Storage

CO_2 Capture Techniques

- **Post-Combustion Capture**
  - Conventional or Advanced Amines, Chilled Ammonia
  - *Key Points*
    - Amine technologies commercially available in other industrial applications
    - Relatively low CO_2 concentration in flue gas – More difficult to capture than other approaches
    - High parasitic demand
      - Conventional Amine ~25-30%, Chilled Ammonia target ~10-15%
    - Amines require **very** clean flue gas
- **Modified-Combustion Capture**
  - Oxy-Coal
  - *Key Points*
    - Technology not yet proven at commercial scale
    - Creates stream of very high CO_2 concentration
    - High parasitic demand, >25%
- **Pre-Combustion Capture**
  - IGCC with Water-Gas Shift – FutureGen
  - *Key Points*
    - Most of the processes commercially available in other industrial applications
      - Have never been integrated together
    - Turbine modified for H_2-based fuel, which has not yet been proven at commercial scale
    - Creates stream of very high CO_2 concentration
    - Parasitic demand (~20%) for CO_2 capture - lower than amine or oxy-coal

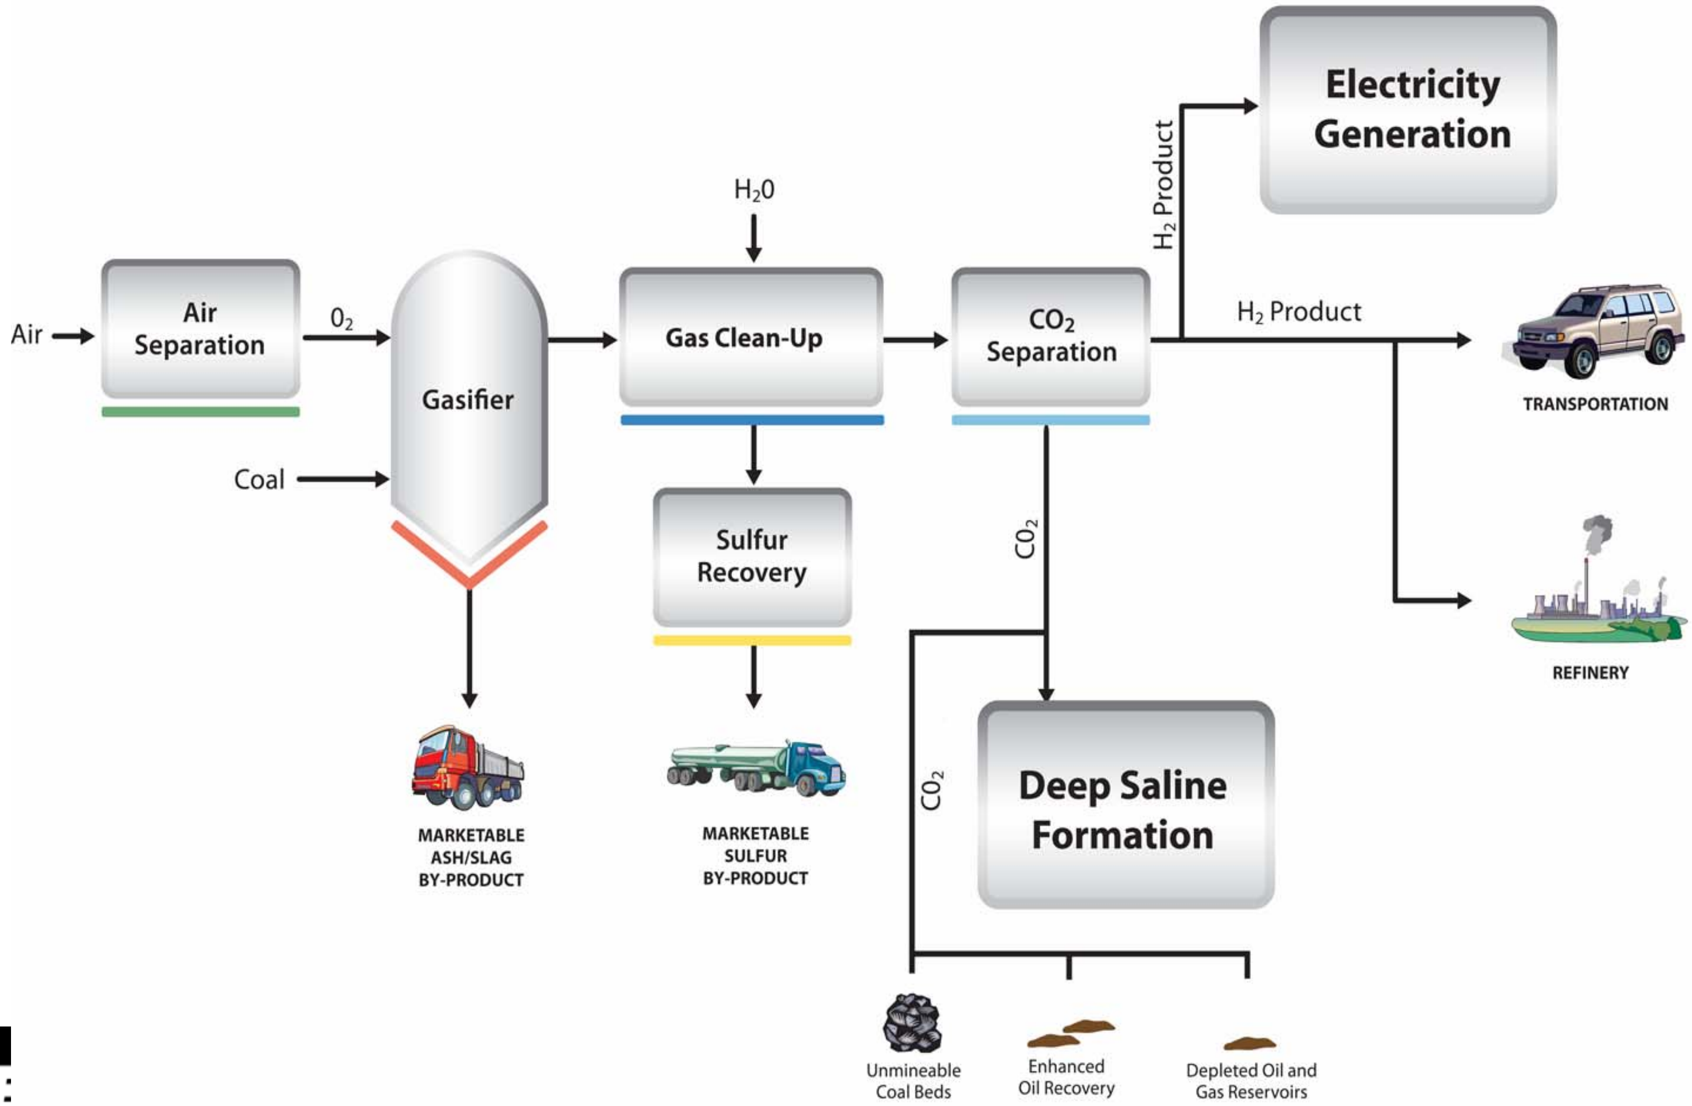
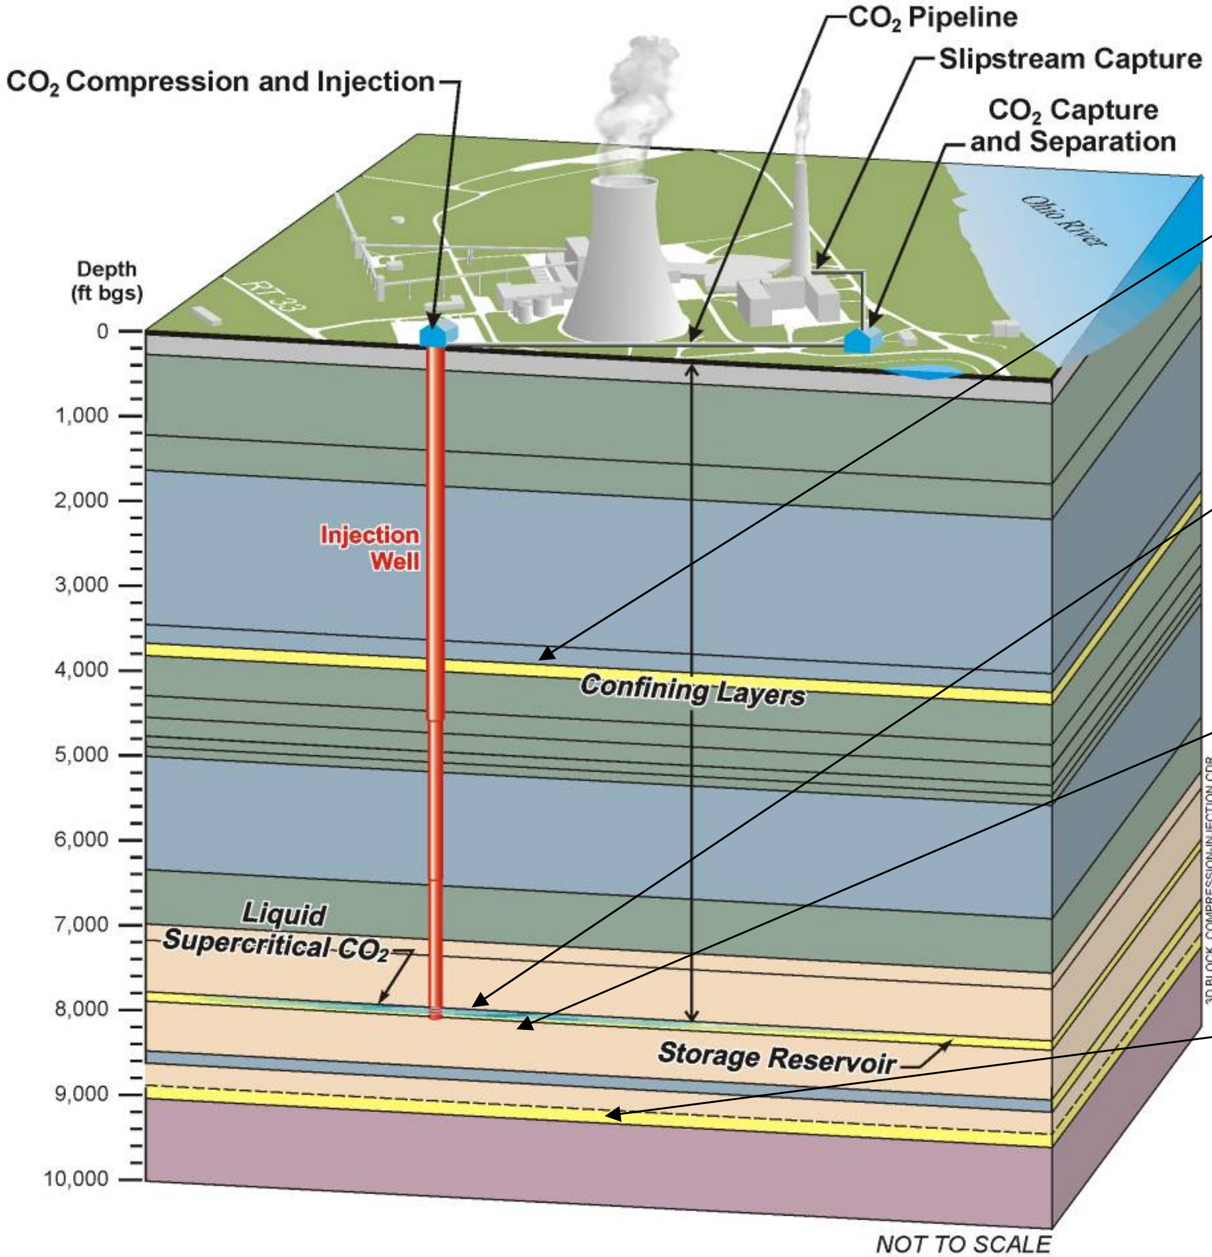
FutureGen Water-Gas Shift Process

Pre-Combustion Capture



CO_2 Injectivity in the Mountaineer Area



CO_2 injection should also be possible in shallower sandstone and carbonate layers in the region

Rose Run Sandstone (~7800 feet) is a regional candidate zone in Appalachian Basin

A high permeability zone called the “B zone” within Copper Ridge Dolomite has been identified as a new injection zone in the region

Mount Simon Sandstone/Basal Sand - the most prominent reservoir in most of the Midwest but not desirable beneath Mountaineer site

Company Overview

- 5.2 million customers in 11 states

Industry-leading size and scale of assets:

Asset	Size	Industry Rank
Domestic Generation	~37,600 MW	# 2
Transmission	~39,000 miles	# 1
Distribution	~213,000 miles	# 1

Source: Company research

- Coal & transportation assets
  - Control over 8,400 railcars
  - Own/lease and operate over 2,650 barges & 52 towboats
  - Coal handling terminal with 20 million tons of capacity
- 20,800 employees

AEP Generation Portfolio				
Coal	Gas	Nuclear	Hydro	Wind
68%	23%	6%	2%	1%

AEP enjoys significant presence throughout the energy value chain.

AEP Strategy

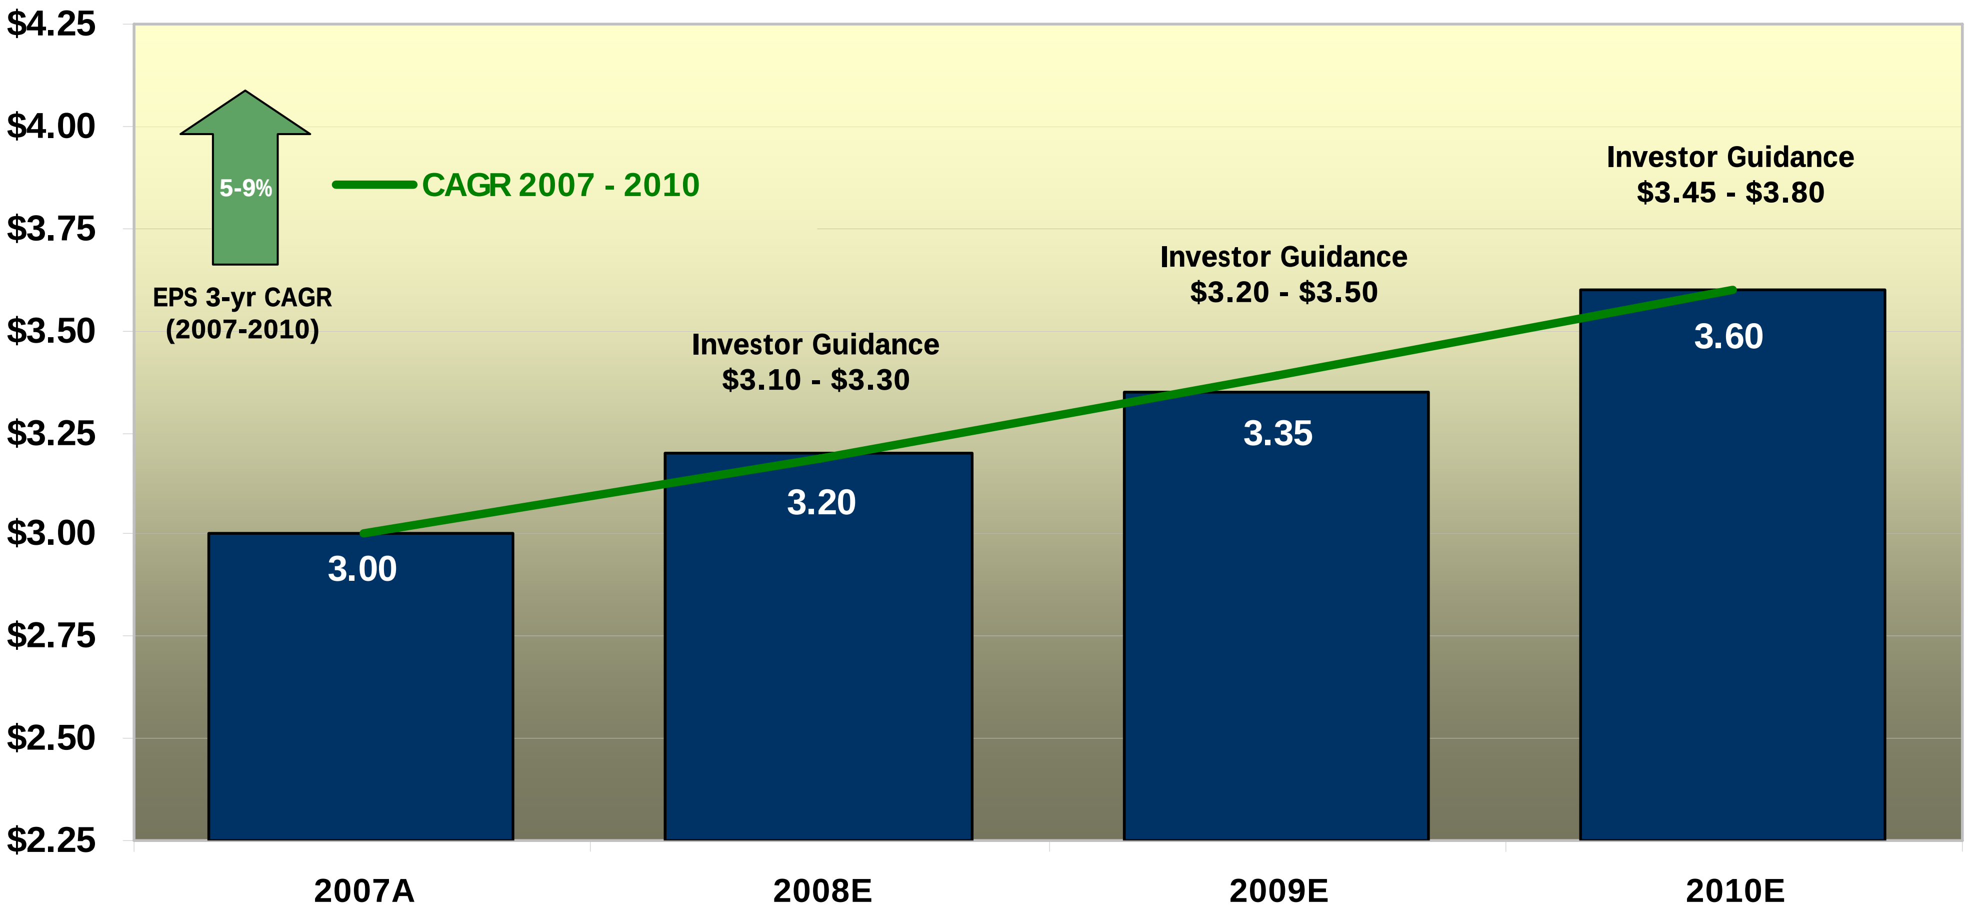
Strategy: grow our core utility business at a consistent rate through major investment supported and funded by innovative programs for regulatory recovery as well as develop our independent, federally regulated Transmission Company for the pursuit of new major interstate projects.

Our 2008 Focus:

- Prepare for post-2008 transition in Ohio
- Invest in and evolve infrastructure to support future technology and customer needs focused on efficiency, conservation and load management
- Enhance cash flow & earnings through rate recovery mechanisms
- Take advantage of AEP's size to benefit our customers and shareholders through regulatory-supported investment

Sustained capital investment opportunities support earnings growth.

4-Year Earnings Range Forecast



5% to 9% earnings growth, largely predicated on outcome in Ohio

At the conclusion of our current environmental retrofit program, over 58% of our 24,630 MW coal-fired generation fleet will be equipped with SCRs and over 73% will be scrubbed (FGDs).

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
PSO	Southwestern	Oklahoma	$58 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$59 MM	Gas	Simple-cycle	170	2008
AEG	Dresden	Ohio	$266 MM	Gas	Combined-cycle	580	2010
SWEPCo	Stall	Louisiana	$378 MM	Gas	Combined-cycle	480	2010
SWEPCo	Turk	Arkansas	$1.3 B (1)	Coal	Ultra-supercritical	600 (1)	2012
APCo	Mountaineer	West Virginia	$2.23 B	Coal	IGCC	629	2012
CSP/OP	Great Bend	Ohio	$2.7 B(2)	Coal	IGCC	629	2017

(1) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment.

(2) Cost estimates, updated to reflect cost escalations due to revised commercial operation date of 2017, are not yet filed with the PUCO pending remand from the Supreme Court of Ohio back to the PUCO.

Secured Recovery Mechanism:

PSO Peaking Facilities Rider

Additional Recovery Mechanisms Under Consideration:

Formula based rates

Requests for return on CWIP

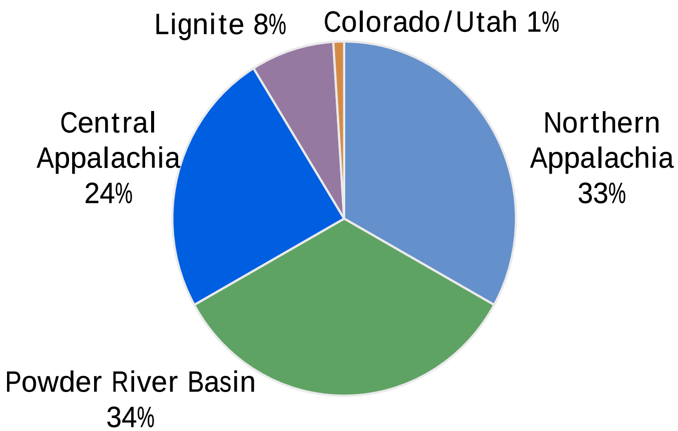
Current and future rate cases

AEP is meeting the growing electricity needs of customers through the pursuit of new economic generation facilities.

Coal Procurement - 2008 Projected

AEP burns approx. 76 million tons of coal per year

Total AEP System



Coal Stats:

- Approximately 93% contracted for 2008
- Avg. delivered price ~ $36.58/ton in 2007
- Approximate 13% price increase in 2008 based on 2007 actual results.

AEP West

* Reflects coal delivered to AEP plants transported through a combination of rail and barge

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A reliable and reasonably-priced electric supply is necessary to support the economic well-being of the areas we serve.

Highlights of Bingaman-Specter Proposal

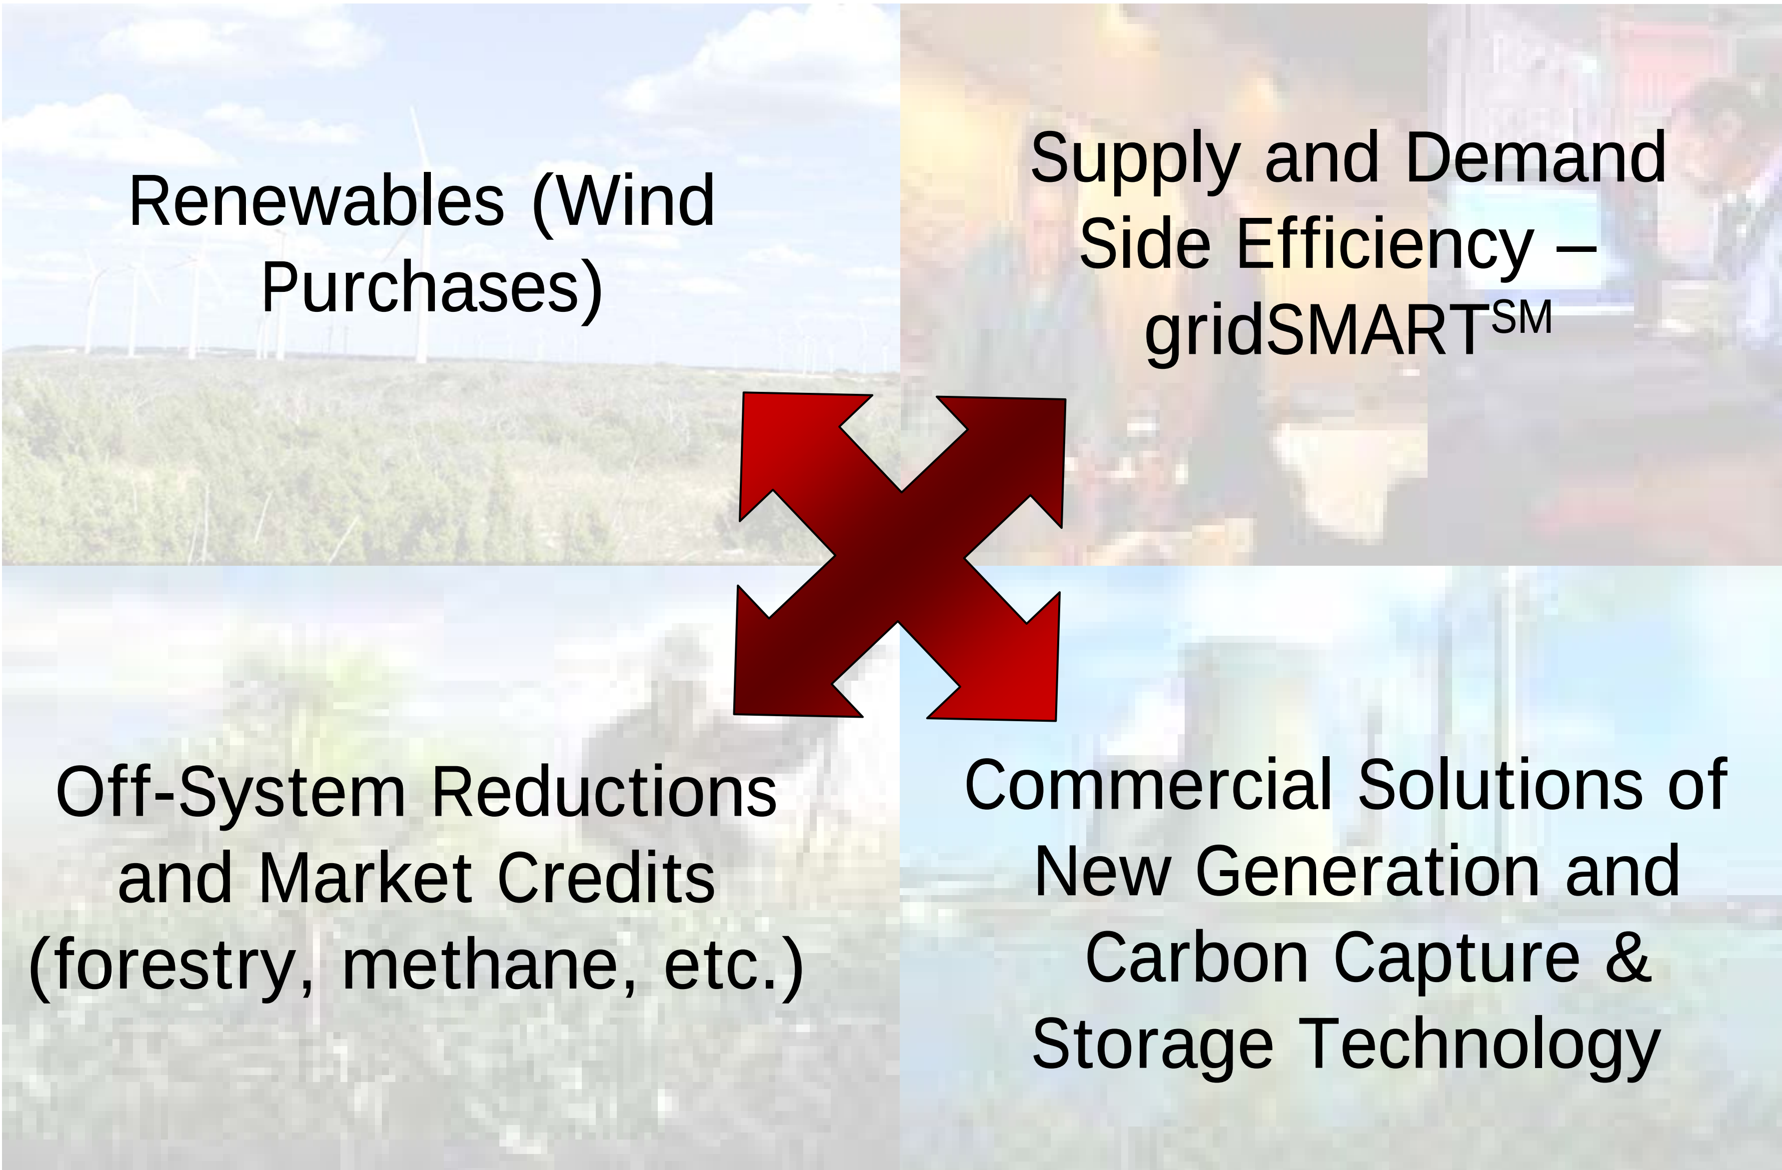
“Low Carbon Economy Act of 2007”

Key Components:

- Start date for greenhouse-gas reductions is 2012
- Goals: 2006 levels by 2020; 1990 levels by 2030
- Includes a safety valve of $12 per metric ton, increasing at an annual rate of 5% above inflation
- Support for allowance allocations
- International action

AEP endorses this proposal because it sets reasonable and achievable reduction targets and includes the AEP-IBEW trade proposal.

AEP's Long-Term GHG Reduction Portfolio



AEP is investing in a portfolio of GHG reduction alternatives.

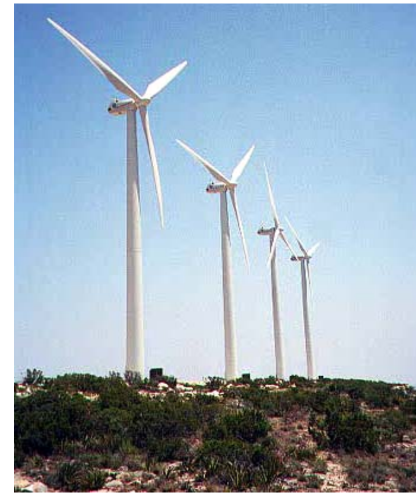
AEP Wind Operations/Purchases

Trent Mesa (2001)

150 MW (100 - 1.5 MW turbines)
Abilene/Sweetwater, TX

Southwest Mesa (1999)

- **75 MW** (107 – 700kW turbines)
- McCarney, TX
- Power Purchaser



Desert Sky (2002)

160 MW (107 - 1.5 MW turbines)
Bakersfield, TX

Summary

- Owned/Operated 385 MW
- Wind Purchases 392 MW
- Total Existing Wind at end of 2006: 777 MW
- **New Wind Purchases in 2007: 275 MW**

AEP will acquire an additional 725 MW of new wind to attain goal of 1,000 MW by 2011.

Off-System Reductions

Existing AEP Programs:

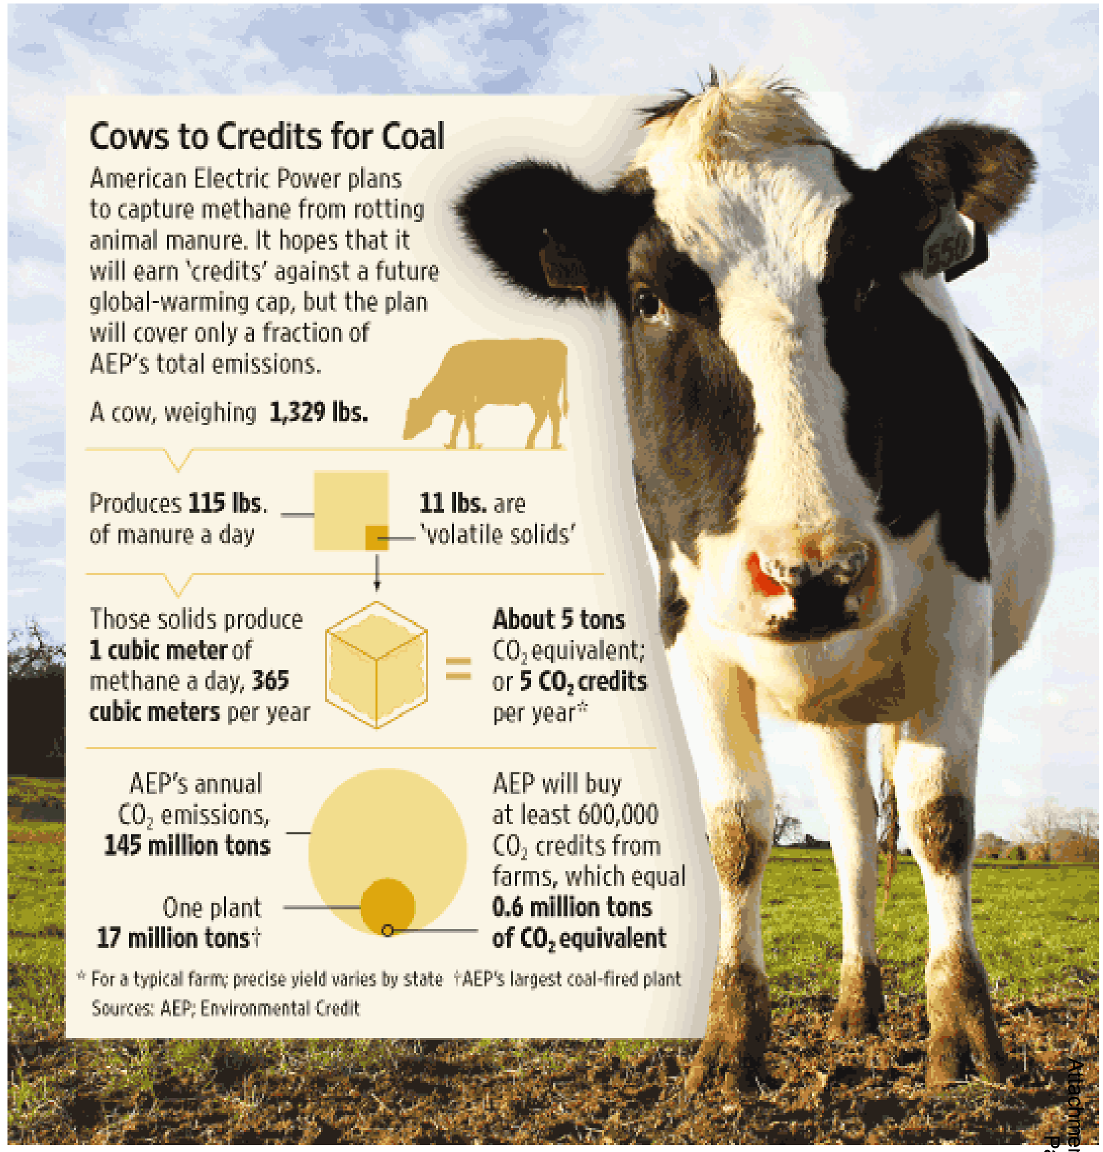
- Forestry - Domestic
  - 350,000 tons / yr
  - 63 MM trees planted
- Forestry – International
- Chicago Climate Exchange

New AEP Commitment by 2011:

- 2 M tons per year of additional CO_2 offsets

Latest Announcement:

- Methane Capture Deal with Environmental Credit Corp.
  - 600,000 CCX carbon credits per year
  - Begins 2010
  - Runs through 2017
  - 51% of credits sourced from "AEP States"



Source: Wall Street Journal June 14, 2007

Advanced Generation & CO_2

Near Term:

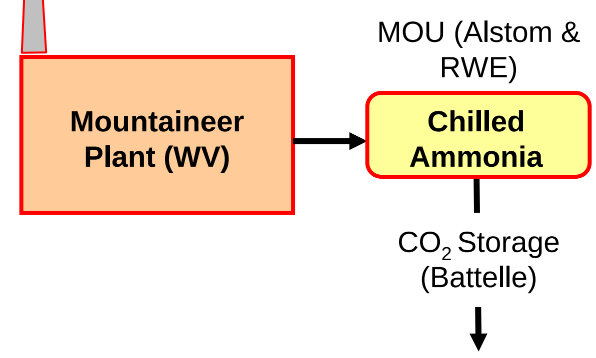
- Chilled Ammonia project at Mountaineer moving to commercial scale at the Northeastern Plant in 2012

$ in millions				
		2008	2009	2010
Mountaineer Chilled Ammonia Project		$30	$39	$0

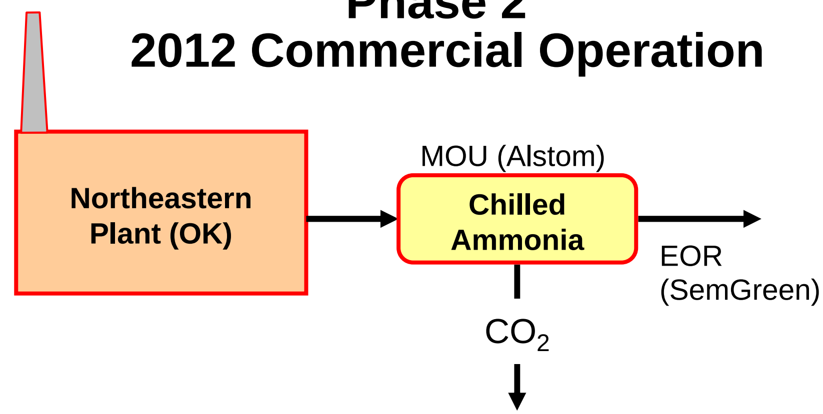
Long Term Strategy (Post-2010):

- IGCC
- Oxy Coal Technology
- Chilled Ammonia
- Nuclear COL

Phase 1
2009 Commercial Operation



Phase 2
2012 Commercial Operation



We are committed to validating and deploying technologies that ensure coal remains a viable resource for AEP and America.

AEP Leadership in Technology: IGCC and USC

NEW ADVANCED GENERATION

IGCC -- AEP first to announce plans to build two 600+ MW IGCC commercial size facilities in US (OH and WV) by next decade

USC -- AEP will be first to employ new generation ultra-supercritical (steam temperatures >1100^{o}F) coal plant in U.S (AR)

AEP's Carbon Capture & Storage Initiative

In March 2007, AEP announced a major new carbon capture and storage initiative:

Chilled Ammonia CCS--We will install carbon capture on two coal-fired power plants, the first commercial use of technologies to significantly reduce carbon dioxide emissions from existing plants.

- **The first carbon capture project, at the Mountaineer plant in West Virginia, is expected to complete its product validation phase in 2009.**
- **The second, at the Northeastern plant in Oklahoma, will begin commercial operation in 2012.**

Oxy-Coal--AEP will also demonstrate (10MWe) and then install oxy-coal CO_2 capture & storage at a commercial sized coal unit (about 200 MWe)—feasibility study to be completed in 2008.

CO_2 Capture Techniques

Post-Combustion Capture

- Conventional or Advanced Amines, Chilled Ammonia
  - Amine technologies commercially available in other industrial applications
  - Relatively low CO_2 concentration in flue gas – More difficult to capture than other approaches
  - High parasitic demand
    - Conventional Amine ~25-30%, Chilled Ammonia target ~10-15%
  - Amines require <u>**very**</u> clean flue gas

Modified-Combustion Capture

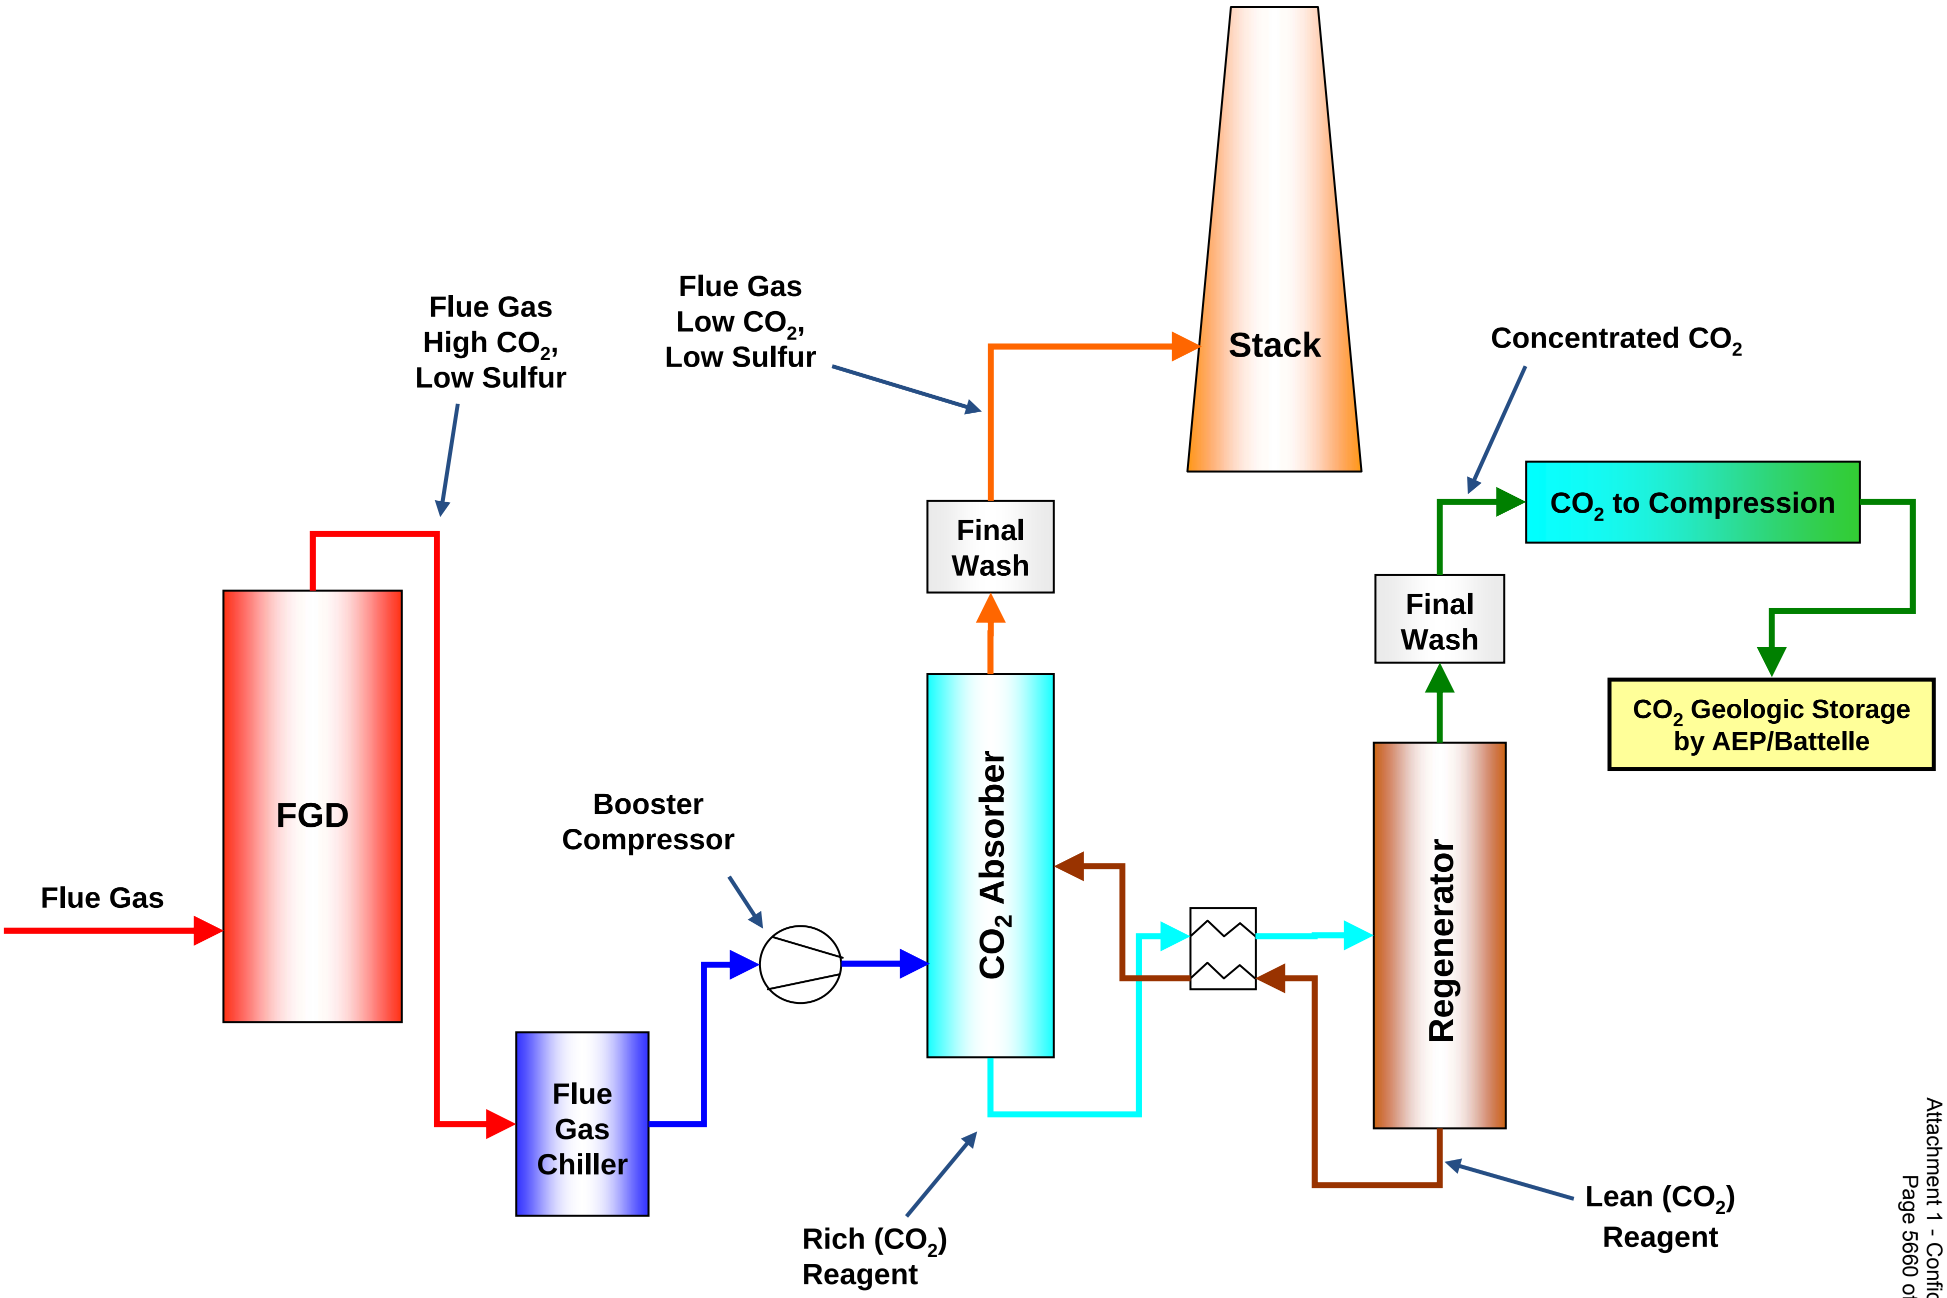
- Oxy-Coal
  - Technology not yet proven at commercial scale
  - Creates stream of very high CO_2 concentration
  - High parasitic demand, >25%

Pre-Combustion Capture

- IGCC with Water-Gas Shift
  - Most of the processes commercially available in other industrial applications
    - Have never been integrated together
  - Turbine modified for H_2-based fuel, which has not yet been proven at commercial scale
  - Creates stream of very high CO_2 concentration
  - Parasitic demand (~20%) for CO_2 capture - lower than amine or oxy-coal

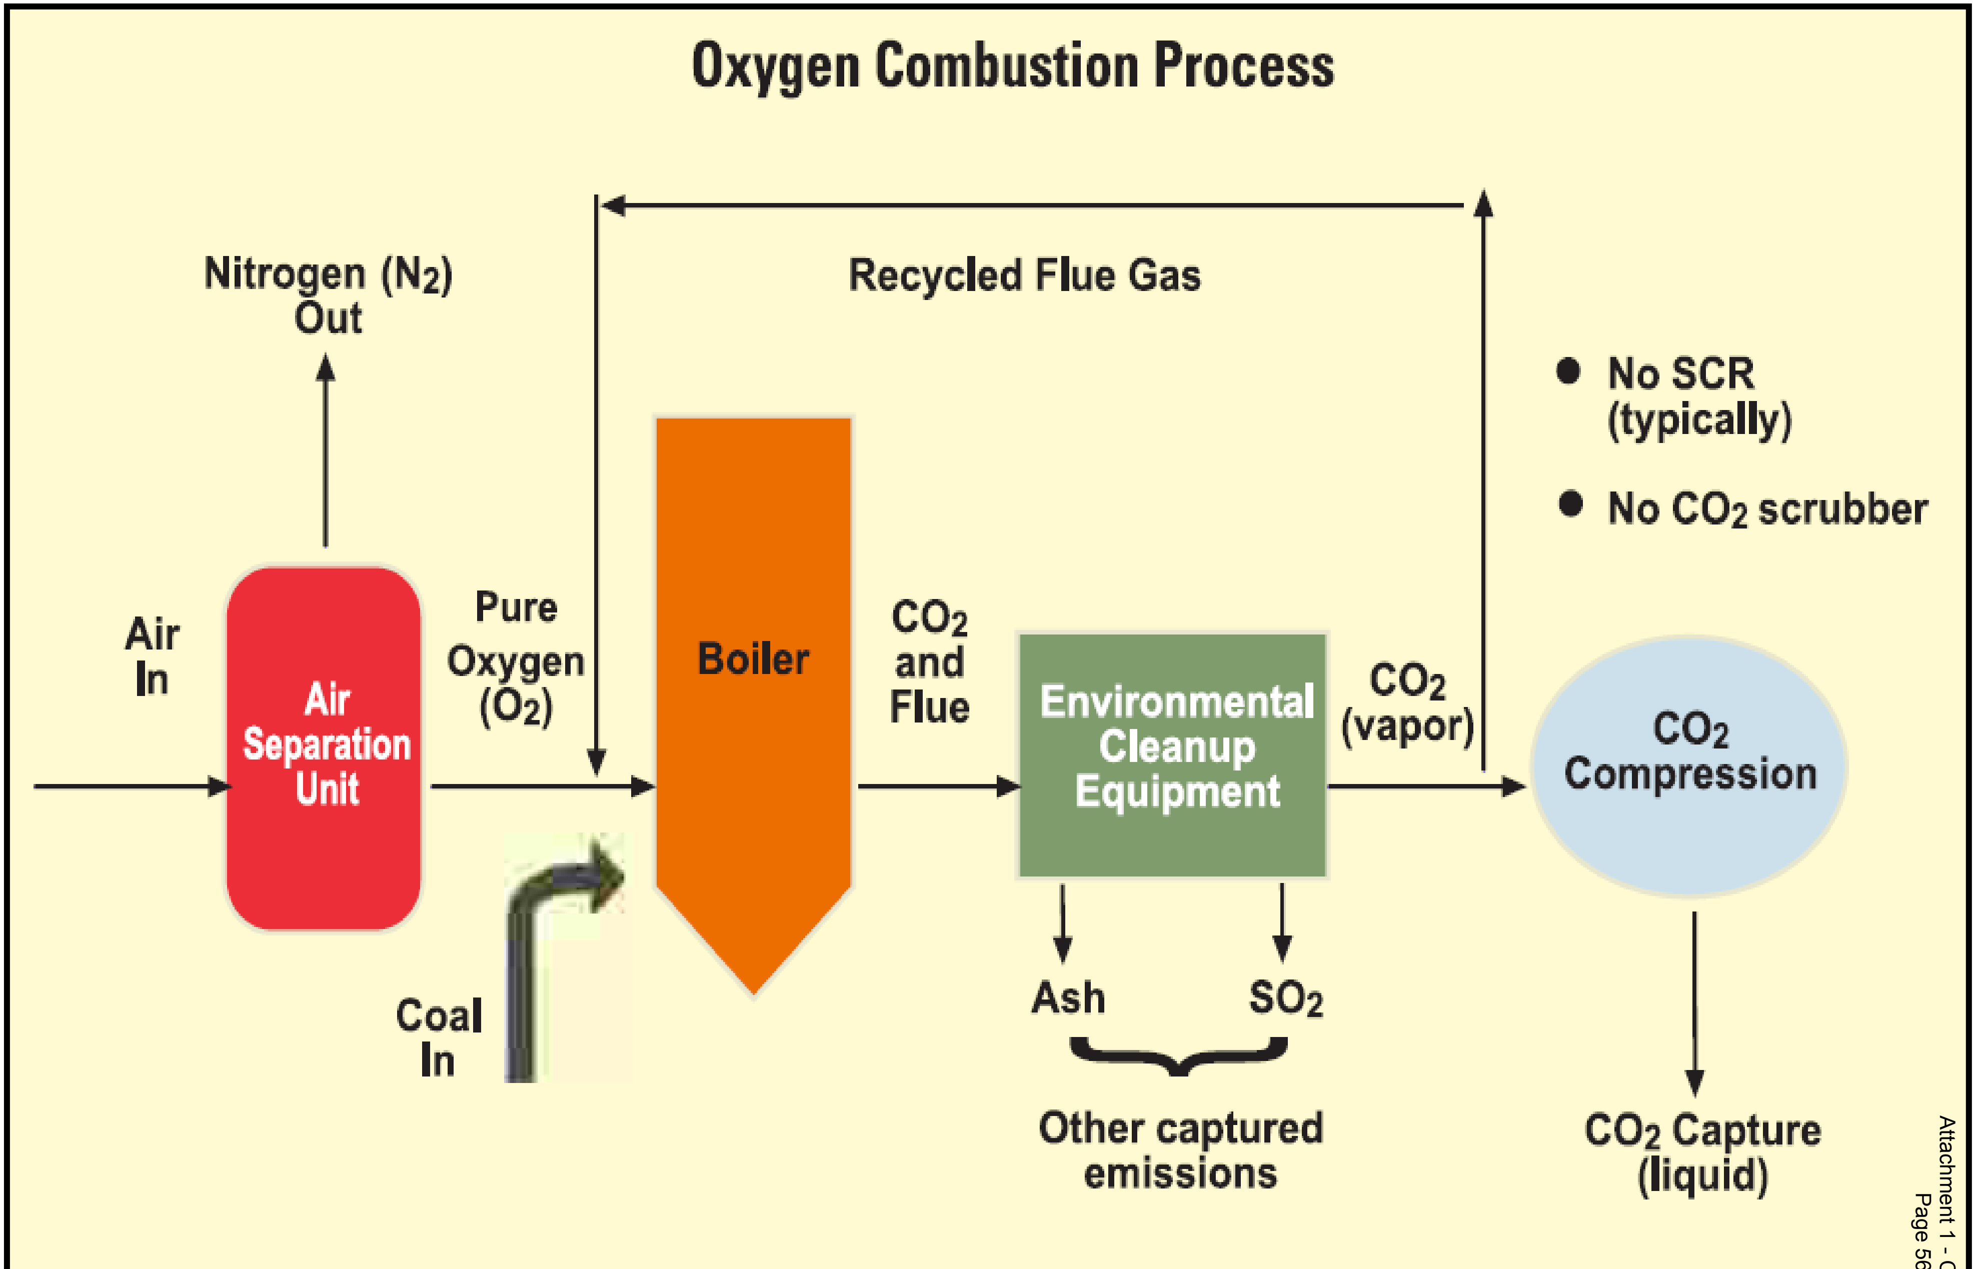
Alstom's Chilled Ammonia Process

Post-Combustion Capture



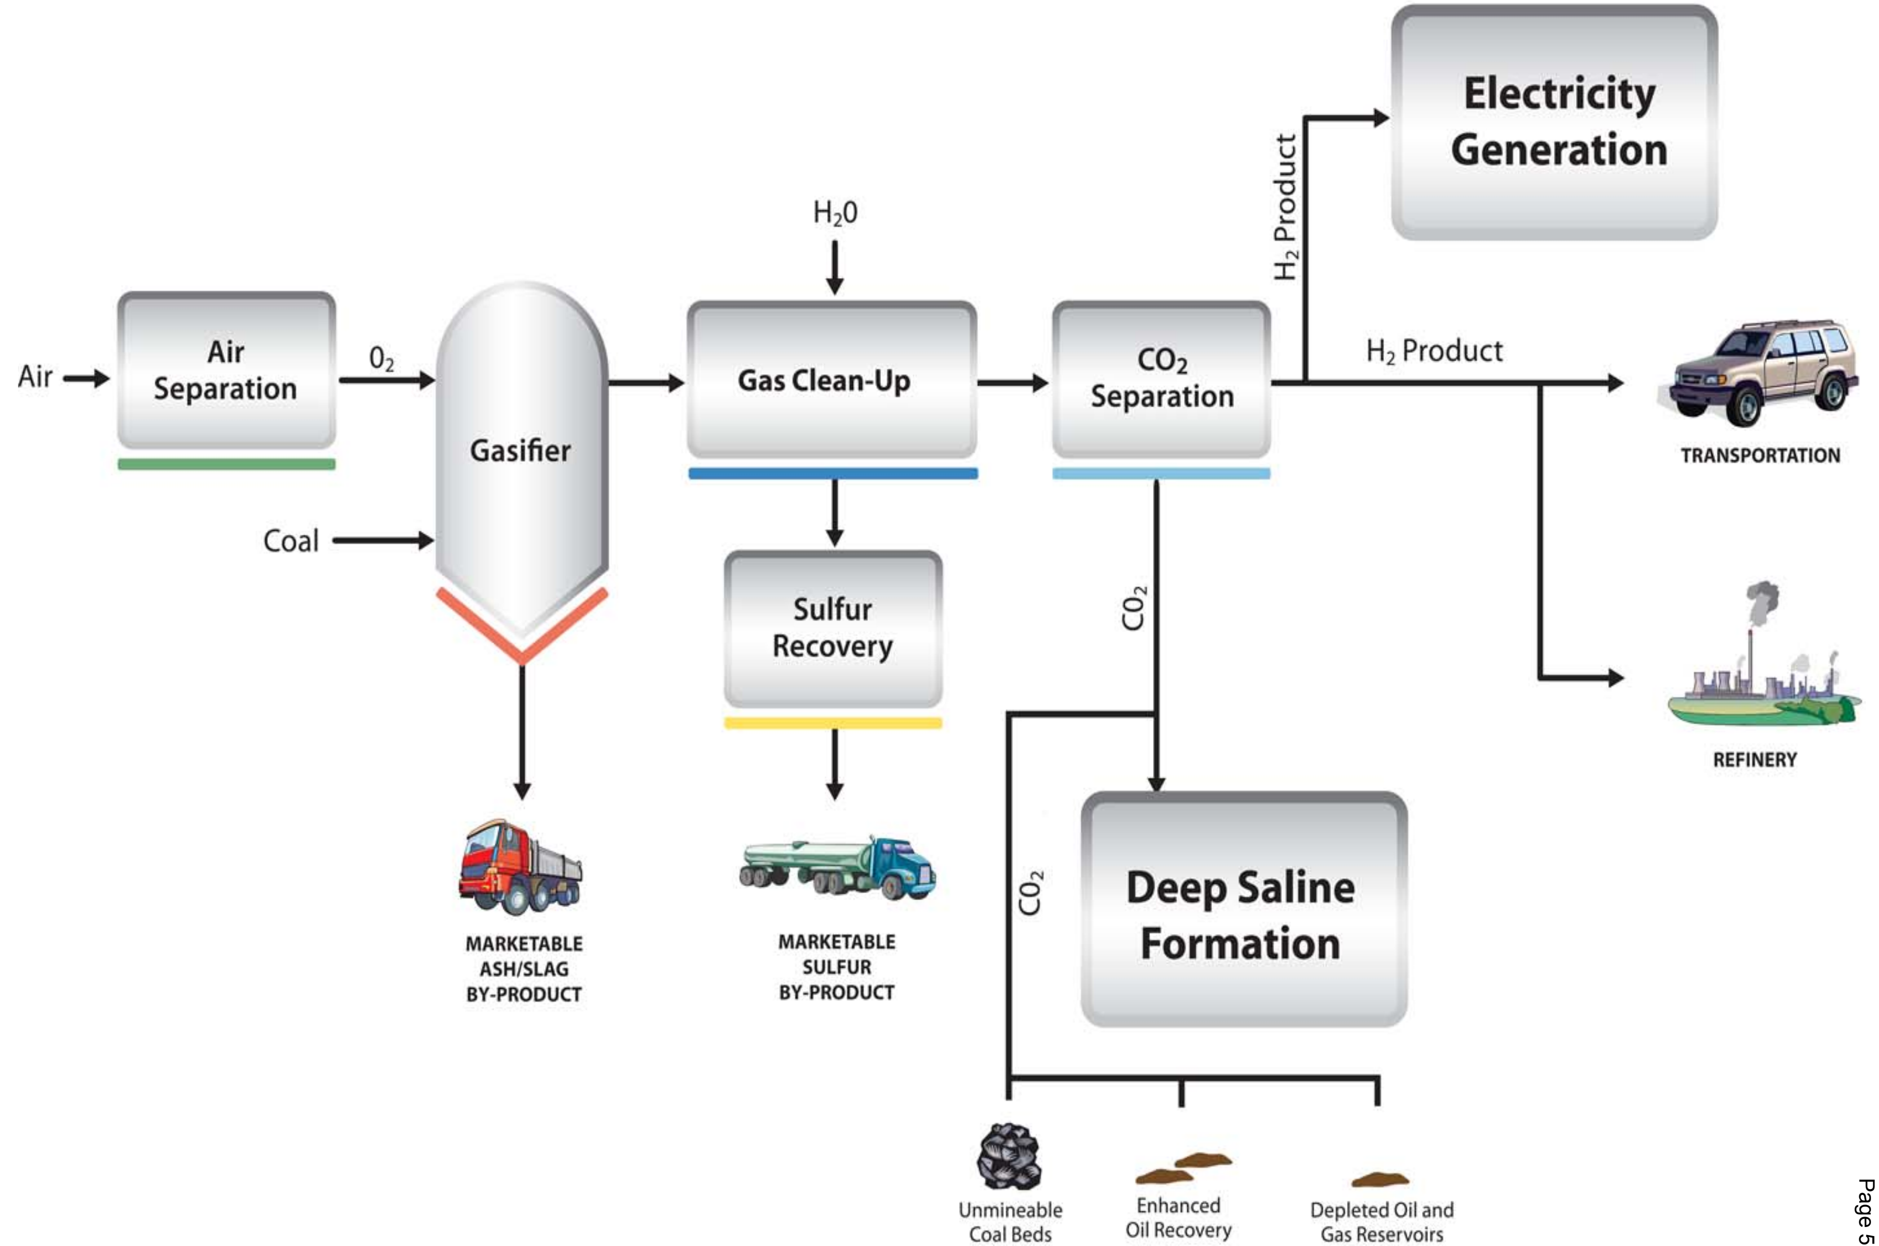
Babcock & Wilcox Oxy-Coal Process

Modified Combustion Capture

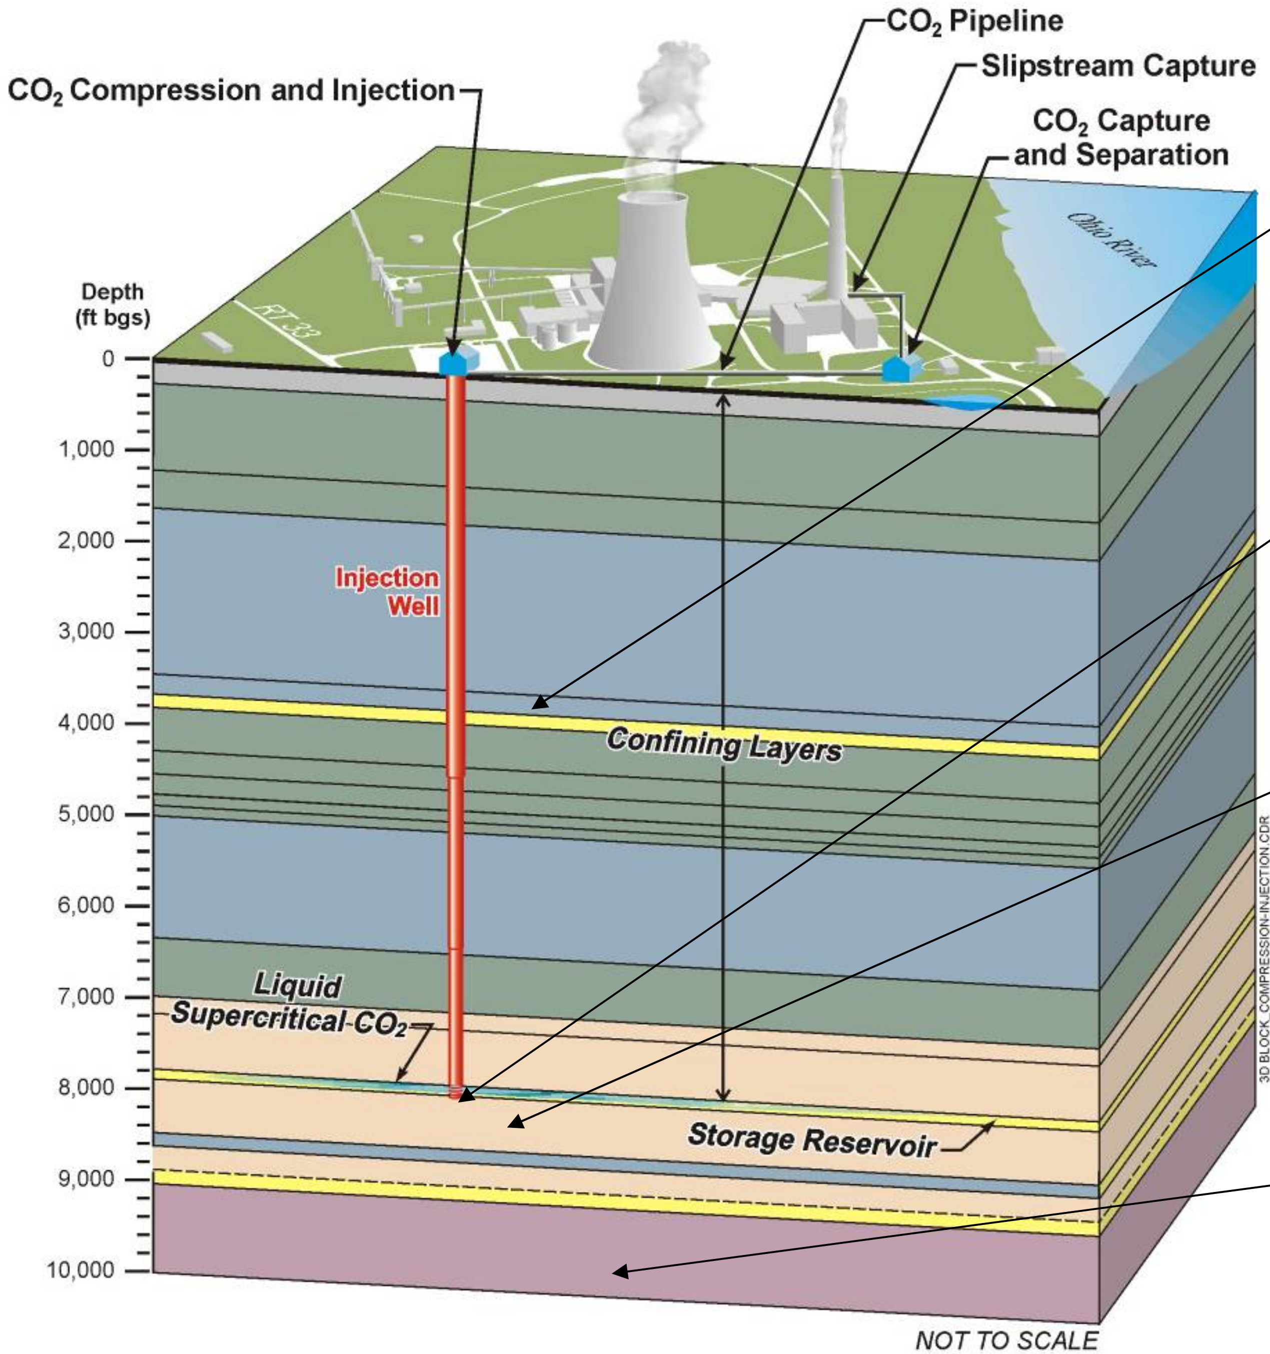


IGCC with Water-Gas Shift Process

Pre-Combustion Capture



CO_2 Injectivity in the Mountaineer Area



CO_2 injection should also be possible in shallower sandstone and carbonate layers in the region

Rose Run Sandstone (~7800 feet) is a regional candidate zone in Appalachian Basin

A high permeability zone called the “B zone” within Copper Ridge Dolomite has been identified as a new injection zone in the region

Mount Simon Sandstone/Basal Sand - the most prominent reservoir in most of the Midwest but not desirable beneath Mountaineer site

Distribution - gridSMART^{SM}

gridSMART^{SM}: implementing AEP's vision for the distribution and customer services business in the future, including the development of new customer programs to reduce consumption and peak demand, and a plan to deploy advanced technologies.

- **Enables customers to better manage energy**
- **Improves service to our customers by enhancing customer choice and customer control**
- **Improves efficiency**
- **Integrates distributed energy resources into our grid**
- **Transforms the way we do business**

Capital Investment, Subject to Regulatory Approval *
$ in millions

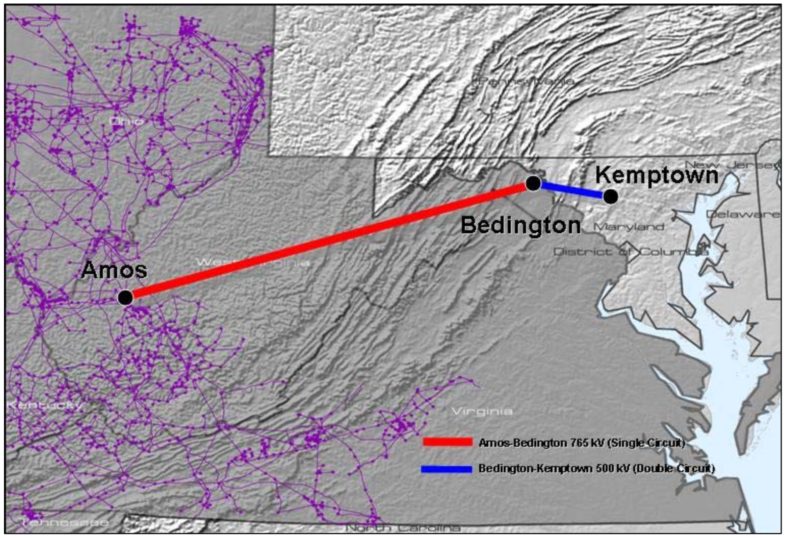
Technology	2008	2009	2010
Metering & Communications	$83	$138	$146
Distribution Technology Enhancements	$40	$ 63	$ 82

*$472MM of the $552MM not in current forecast; spending contingent upon regulatory approval

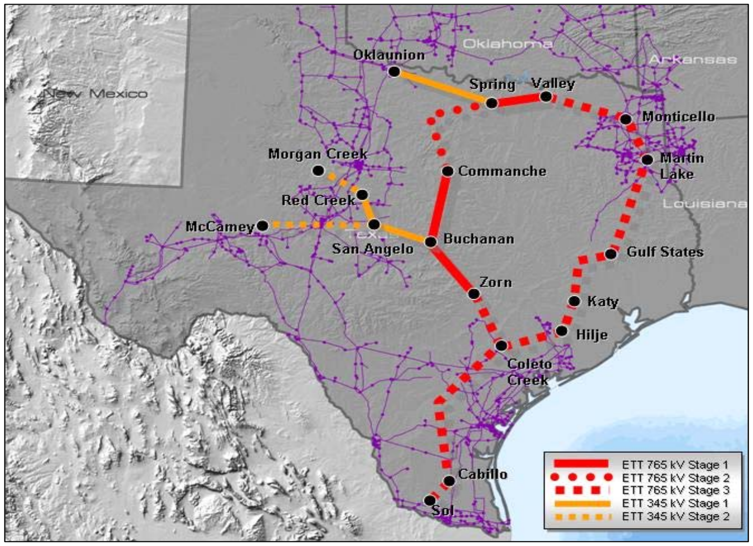
AEP will continue to be an industry leader in deploying advanced technology on a commercial scale. $552MM capital investment by 2010, subject to regulatory approval

I-765TM Transmission: Investment Opportunities

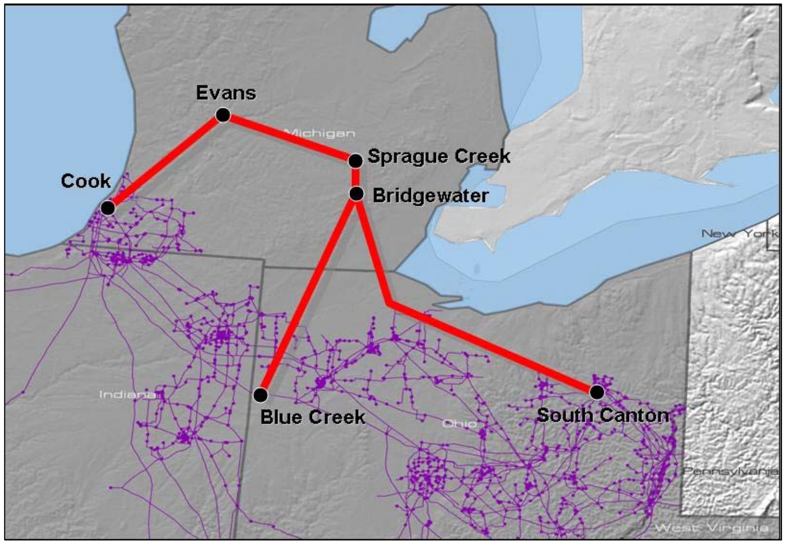
AEP is Advancing the Development of a National Interstate Today



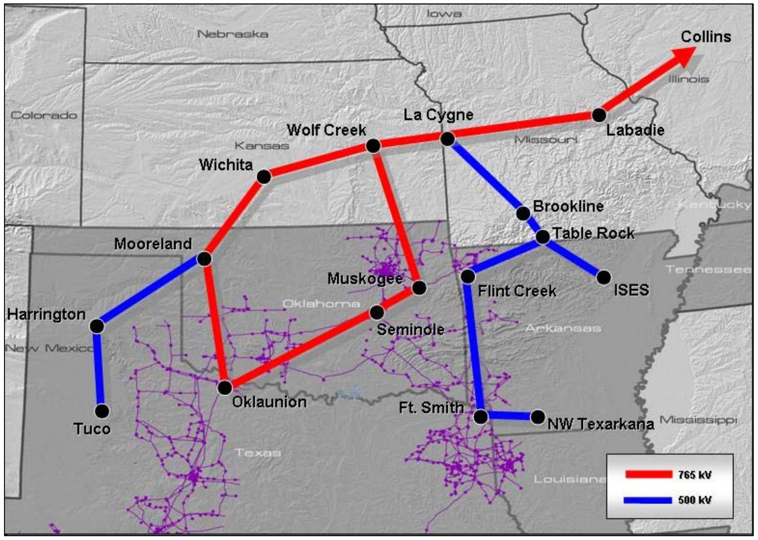
PATH Project (PJM)



ETT Proposal (ERCOT)



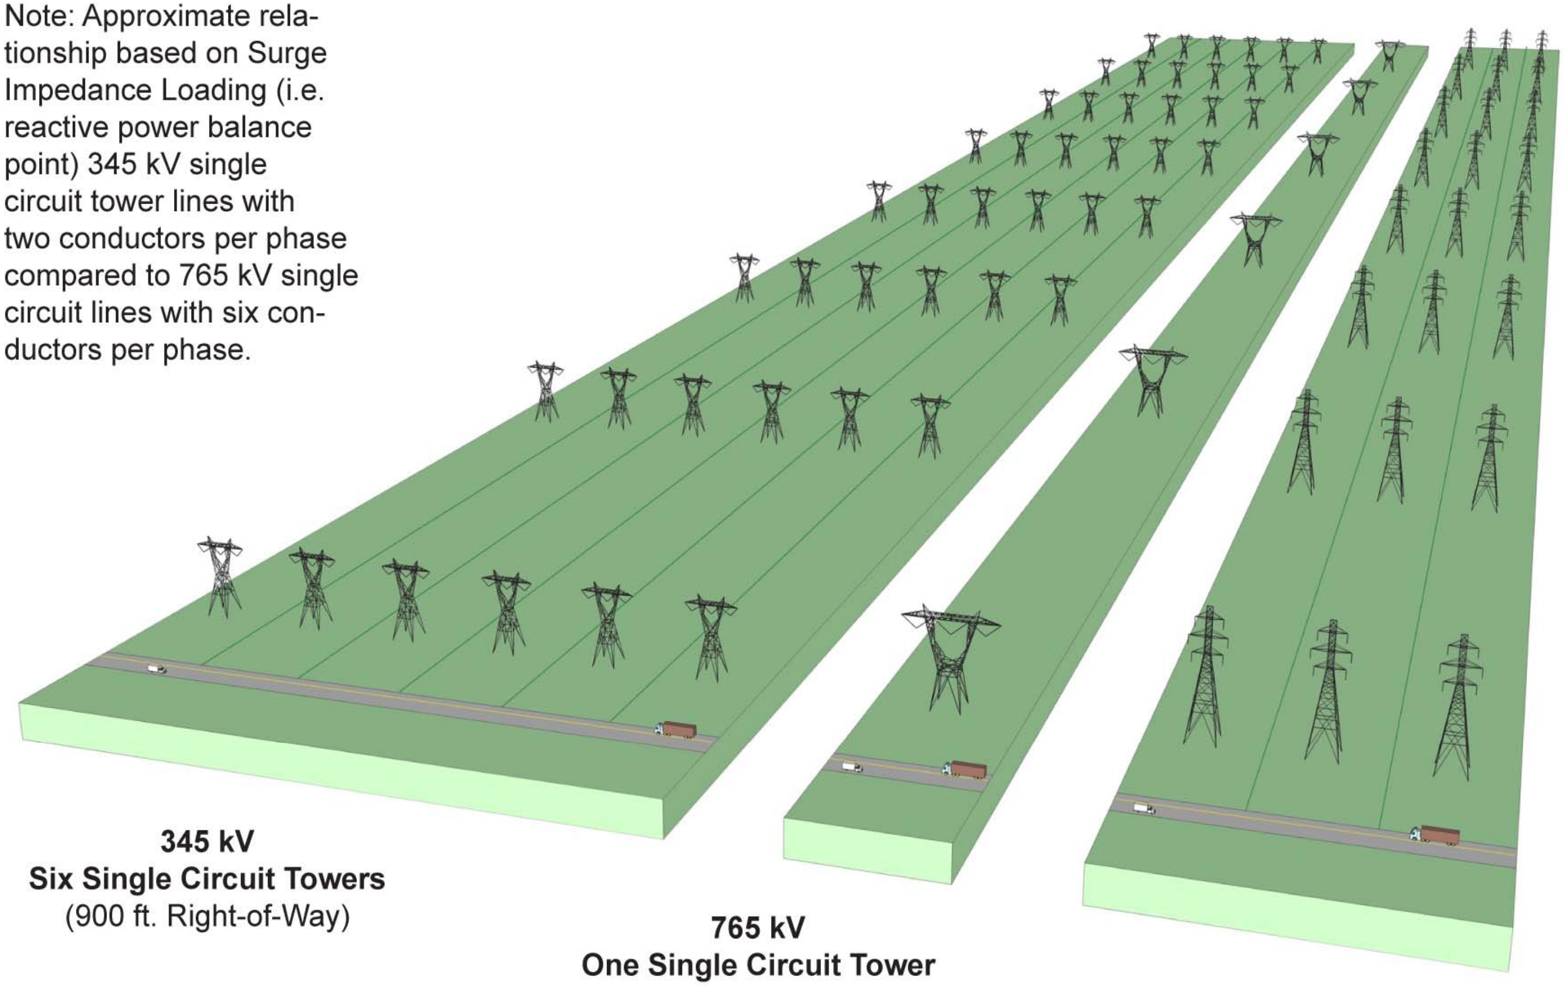
AEP-ITC Michigan Proposal (PJM/MISO)



SPP Overlay Study

765 Right-of-Way Comparison

Note: Approximate relationship based on Surge Impedance Loading (i.e. reactive power balance point) 345 kV single circuit tower lines with two conductors per phase compared to 765 kV single circuit lines with six conductors per phase.



345 kV
Six Single Circuit Towers
(900 ft. Right-of-Way)

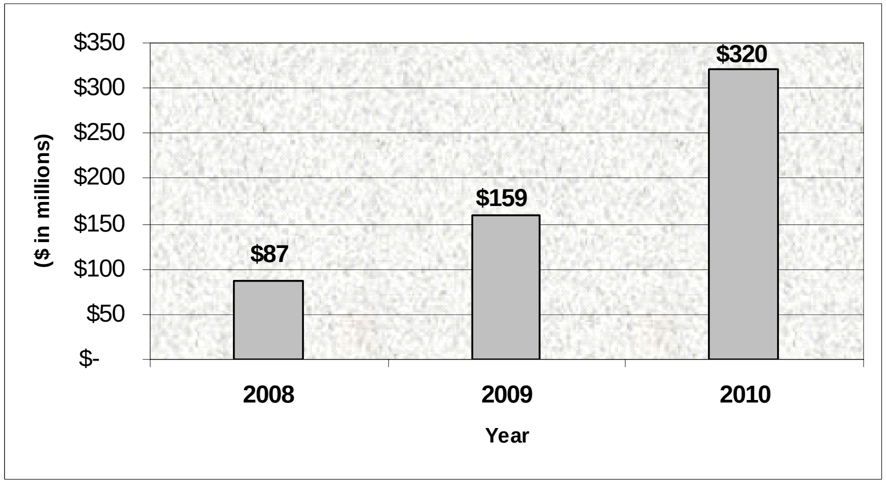
765 kV
One Single Circuit Tower
(200 ft. Right-of-Way)

345 kV
Three Double Circuit Towers
(450 ft. Right-of-Way)

From a siting standpoint, 765-kV is more efficient in terms of economies of scale and right-of-way than lower capacity lines.

Transmission – Investments and Earnings Contributions

Projected Transmission Capital Spending*

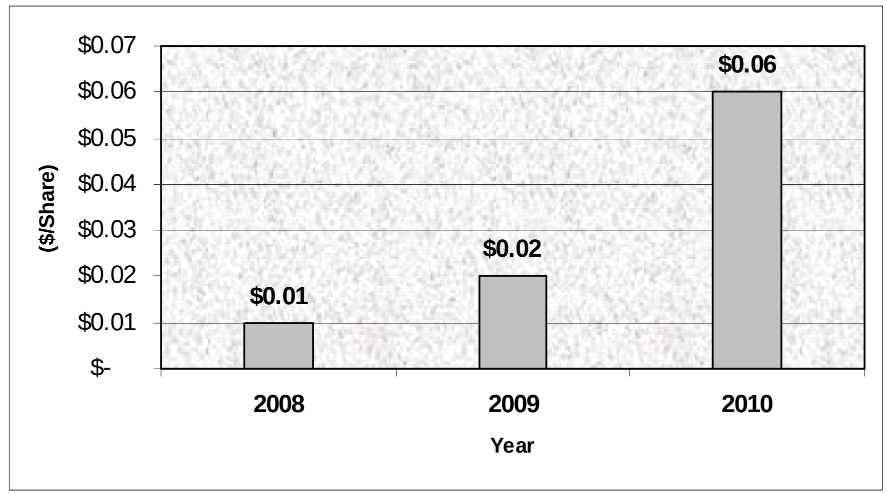


* ETT and PATH joint ventures included in above projection. Amounts represent AEP's 50% share of total transmission joint venture capital expense. These amounts are excluded from AEP's base capital forecast because the joint ventures are not consolidated for financial reporting purposes. AEP will be responsible for funding 40-50% of these amounts with equity contributions, and the remainder will be financed with debt issued by the joint ventures.

ETT Electric Transmission Texas

PATH Potomac-Appalachian Transmission Highline

Projected Transmission EPS Contributions*



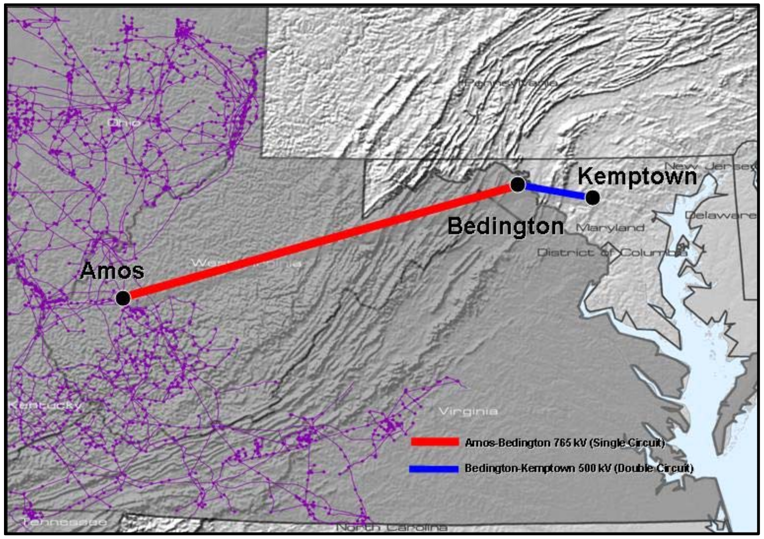
* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

Transmission will provide a near and long term catalyst for growth.

I-765™ Transmission in PJM: PATH

Execution in Action

- ## *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries -- to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
  - Completed FERC Filing – December 2007; FERC order issued on February 29, 2008 approving:
    - *cash return on CWIP*
    - *14.3% ROE*
    - *recovery of all costs incurred prior to the time rates go into effect, and*
    - *recovery of all prudently incurred development and construction costs if the project is abandoned.*
  - FERC ordered the formula rate issue be set for hearing, pending settlement judge procedures



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

- ## *Funding Plans/Transaction Structure*
  - AEP and Allegheny share ownership of Amos – Bedington line and contribute equally to this portion of the project through PATH West Virginia Transmission Company, LLC
  - AEP's investment will be held in the AEP Transmission Holding Company LLC subsidiary
  - Project corridor was included in the DOE's National Interest Electric Transmission Corridor
- ## *Key Next Steps*
  - Siting Approval – Fall 2009
  - Targeted Completion – 2012

PATH
Potomac-Appalachian Transmission Highline

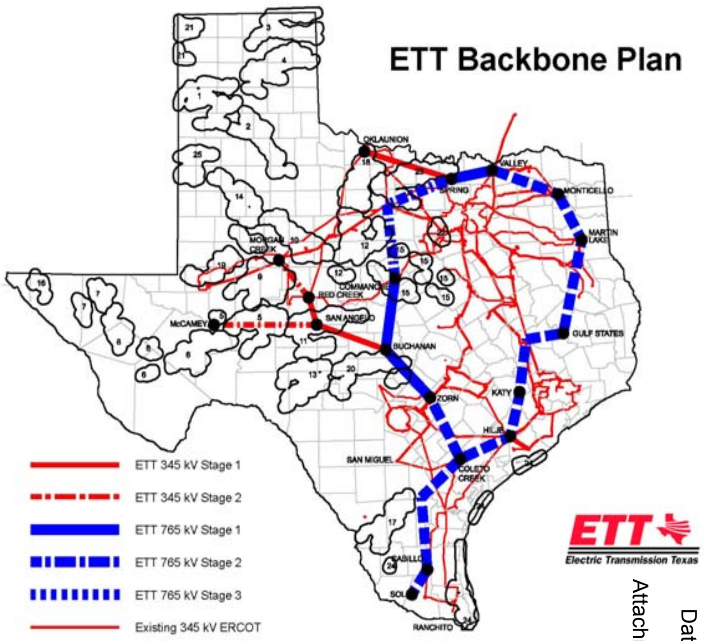
I-765™ Transmission in Texas (ETT)

Electric Transmission Texas Update

- ***Transaction Structure***
  - 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
  - ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
  - Services provided by AEP and investment opportunities can be offered by either partner

- ***Next Steps***
  - ETT project opportunities to be evaluated on a case by case basis
  - Anticipate offering projects in Q2 2008

- ***ETT ERCOT Backbone Proposal***
  - ETT proposal for ERCOT and PUCT to consider CREZ transmission in context of long-term vision for transmission system.
  - Current 5-year planning horizon results in higher ultimate costs, lower system efficiency.
  - Long-term 15-20 year perspective provides better plan, supports development of high voltage backbone at 765-kV.
  - $4.2 billion investment (long-term backbone).*



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

* Before ownership division.

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 5669 of 9556

Electric Transmission America (ETA)

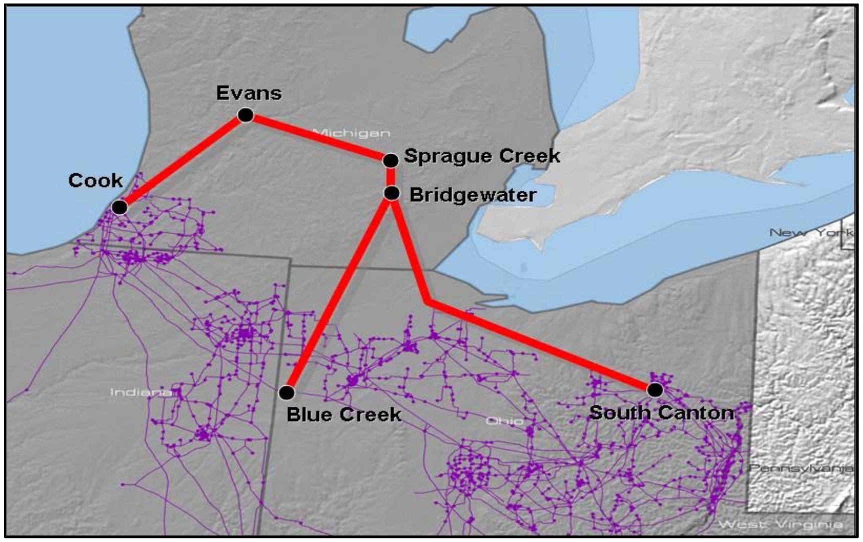
- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.

ETA reflects a natural progression and expansion of AEP's partnership with MidAmerican.

I-765™ Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
  - Study was released Q3 2007
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.6 billion investment (before ownership division)
  - AEP and ITC are in discussions to form a Joint Venture
- *Benefits*
  - Up to 5,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- *Next Steps*
  - Agreement on JV (AEP/ITC) Q2 2008
  - JV Formation - 2008
  - MISO and PJM Review/Approval - 2008
  - FERC Filing - Fall 2008
  - Siting Approval – Fall 2010
  - Estimated Completion – Fall 2015

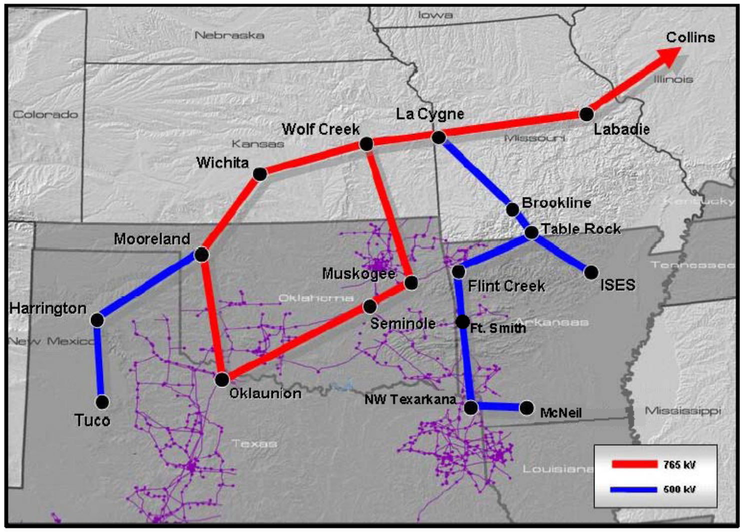


The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

I-765™ Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- *Overview*
  - July 2006 AEP submitted conceptual project for six 765-kV lines
  - Proposed 765-kV Kansas / Oklahoma / Arkansas connecting to MISO/PJM
  - 610 miles from Kansas to Arkansas
  - SPP proposes 765-kV in Texas / Oklahoma / Kansas / Missouri connecting to MISO/PJM
  - SPP also proposes 500-kV in Texas / Oklahoma / Arkansas / Missouri
  - $3.0 billion investment (before ownership division)
  - Proposed 2012-2017 construction period
- *Benefits*
  - 4,000 MW improved transfer capability
- *Next Steps*
  - Study Disclosure – Completed 2Q 2007
  - JV Formation (ETA) – Completed 3Q 2007
  - SPP 10-year Expansion Plan Issued – December 2007
  - SPP RTO/BOD EHV Overlay Approval – 2Q 2009
  - SPP RTO FERC Filing – 3Q 2009
  - Siting Approval – 3Q 2011
  - Estimated Completion – 3Q 2017



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Regulatory Activity Underway/Completed

PSO Storm Cost Recovery Filing

- On October 24, 2007, PSO filed an application with the Oklahoma Corporation Commission to defer, amortize and recover costs related to a severe January 2007 winter storm. PSO requests the Commission to direct it to establish a regulatory asset of approximately $13 million reflecting the future recovery of these costs, and to amortize the regulatory asset as PSO realizes proceeds from the sales of sulfur dioxide (SO_2) emission allowances.
- Staff and intervenor testimony was filed January 17, 2008 and a settlement agreement has been signed and filed with the OCC. The settlement allows for the deferral of approximately $83 million related to both the January and December 2007 ice storms. A portion of the deferral would be amortized against gains on sales of allowances with the remainder collected from customers over a five-year period beginning in October 2008. An ALJ approved the settlement in February 2008 and the OCC approved it on March 13, 2008.

PSO Red Rock Generating Facility Recovery Filing

- On December 28, 2007, PSO filed an application with the Oklahoma Corporation Commission to defer, amortize and recover costs related to the Red Rock Generating Facility, which was denied construction and recovery pre-approval in October 2007.
- On March 13, 2008 PSO signed a settlement agreement to recover 50% of the costs ($10.5MM). This agreement has not yet been approved by the OCC.

Regulatory Activity Underway

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $140MM. Approximately $10.5MM of the increase relates to 3rd party and the rest, if approved would be recovered through retail jurisdictional filings in SWEPCo and PSO, as appropriate. We proposed an 11.5% ROE.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to February 1, 2008, with rates subject to refund.
- Settlement discussions are currently on-going. Intervenors and AEP will meet on March 20, 2008 to review any additional issues and report back to the settlement judge on the status of the settlement discussions.

Regulatory Activity Underway/Completed

APCo Mountaineer IGCC Filing

West Virginia

- Testimony filed with the West Virginia Public Service Commission on June 18, 2007 in support of APCo's application for a Certificate of Public Convenience and Necessity to construct a 629MW IGCC plant in WV at a cost of approximately $2.23 billion.
  - Testimony included a proposal for the Commission to approve a cost recovery mechanism through the existing Expanded Net Energy Cost (ENEC) mechanism. The filing is not a formal proposal to adjust rates.
  - Actual requests for increased rates will be included in future filings, once construction of the plant has commenced and actual Construction Work In Progress data is known.
- Staff and Intervenor testimony was filed November 19, 2007 and hearings were held December 10-12, 2007. On March 6, 2008 the WV PSC granted the Certificate of Public Convenience and Necessity, and approved the use of a surcharge during construction.

Virginia

- Testimony filed with the Virginia State Corporation Commission on July 16, 2007 seeking a prudence determination and approval to recover, beginning in 2009, Virginia's share of the carrying costs associated with the proposed plant.
- Intervenor testimony was received December 10, 2007 and Staff testimony was received on January 18, 2008. Public hearings commenced February 12, 2008. We expect an order on April 16, 2008.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.
- Oral arguments regarding this matter were conducted at the Ohio Supreme Court on October 9, 2007. On March 13, 2008, the Ohio Supreme Court issued an order remanding the Ohio IGCC proceeding back to the PUCO.

Regulatory Activity Underway/Completed

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- The PSC issued its order on November 21, 2007, approving construction of the plant.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The peaking facility has been addressed and the intermediate facility is under review. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- Public hearings commenced September 11, 2007. A positive ALJ report was issued on February 8, 2008 recommending approval of the plant. An order is expected in March 2008.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- Public hearings commenced October 17, 2007. On January 17, 2008, the ALJ recommended the PUCT deny the request. A final order is expected on March 27, 2008.

Regulatory Activity Underway/Completed

SWEPCo Stall Plant Filings

Arkansas

- Proceeding is currently suspended pending outcome in Louisiana.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The intermediate facility, known as the Stall Plant and sited in Shreveport, LA, was bifurcated from the original filing and had a procedural schedule established on January 9, 2008.
- Staff and intervenor testimony was completed on February 15, 2008, rebuttal testimony was filed February 29, 2008 and hearings will commence on April 7, 2008. Staff testimony was favorable.

Texas

- PUCT order approving plant was issued on March 8, 2007.

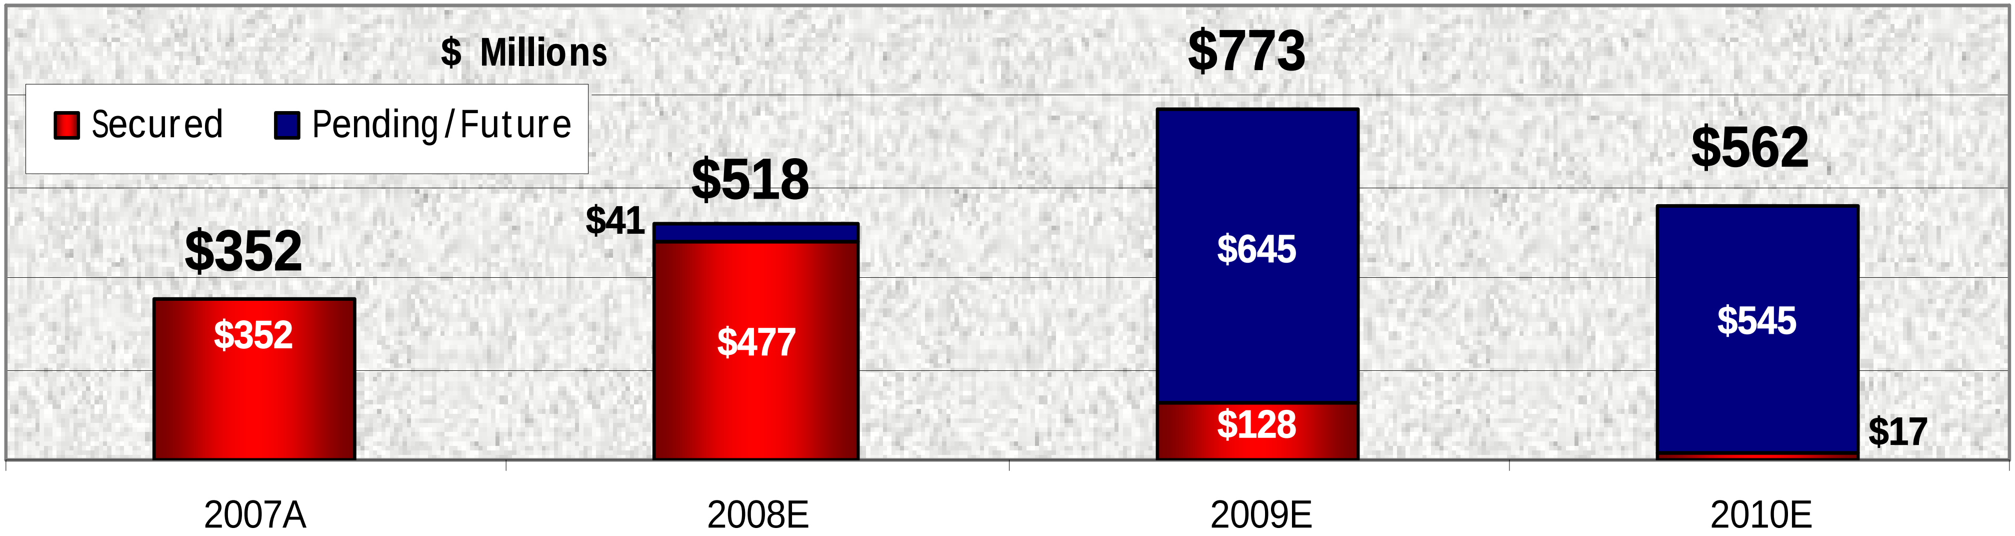
Incremental Rate Relief Assumptions



- **92% of 2008 Rate Relief Secured: I&M Depreciation, APCo - WV Surcharge, TCC & TNC General Rate Cases, Ohio RSP (3% & 7%), PSO Peaking Generation & General Rate Case, Ohio 4% Generation Rider and Marginal Loss Recovery, APCo - Virginia Fuel Factor, 2007 TCC/TNC TCRF filings & PSO ice storm recovery.**

- **2008 Pending: SWEPCo - LA Financial Review, 2008 TCC/TNC TCRF filings, other cases yet to be filed.**

Our goal is to maximize utility company cash flow and returns by minimizing regulatory lag.

Commitment to Credit Quality

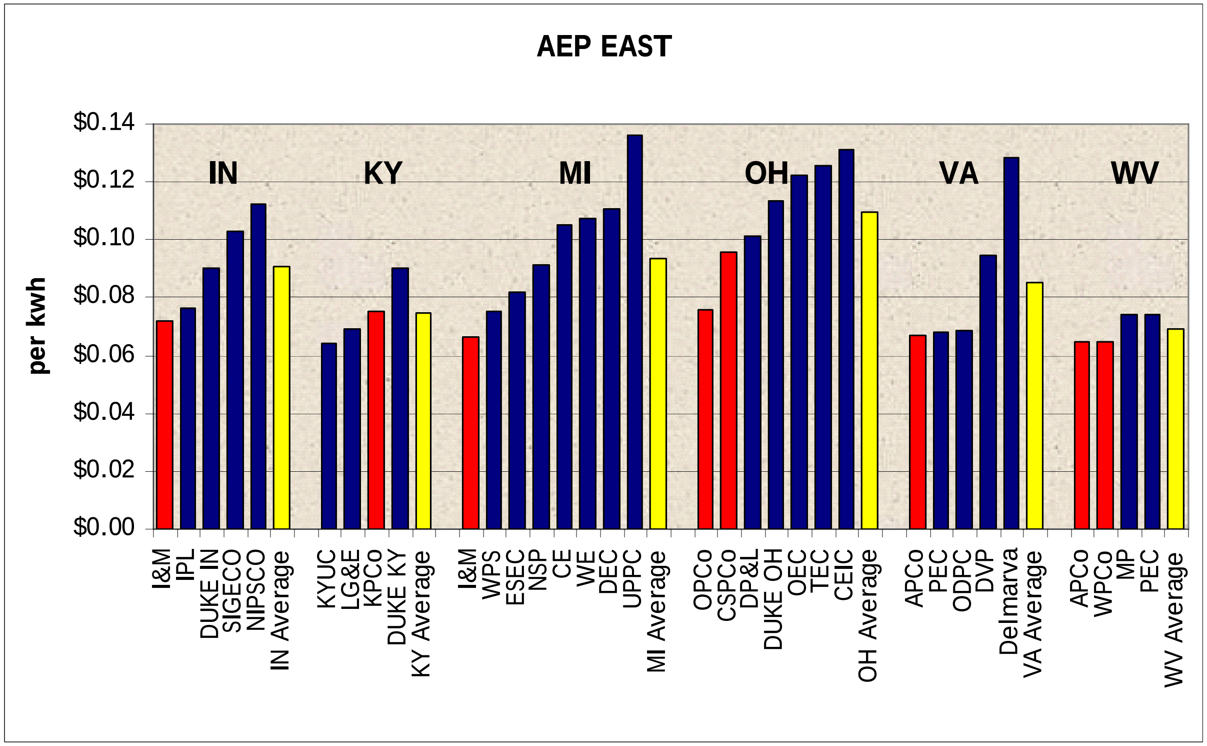
- Maintain adequate liquidity
- $150MM annually in new equity from Dividend Reinvestment and 401(k) plans
- Target 60% maximum consolidated AEP debt/cap ratio on an adjusted basis
- Target utility company capitalization structures:

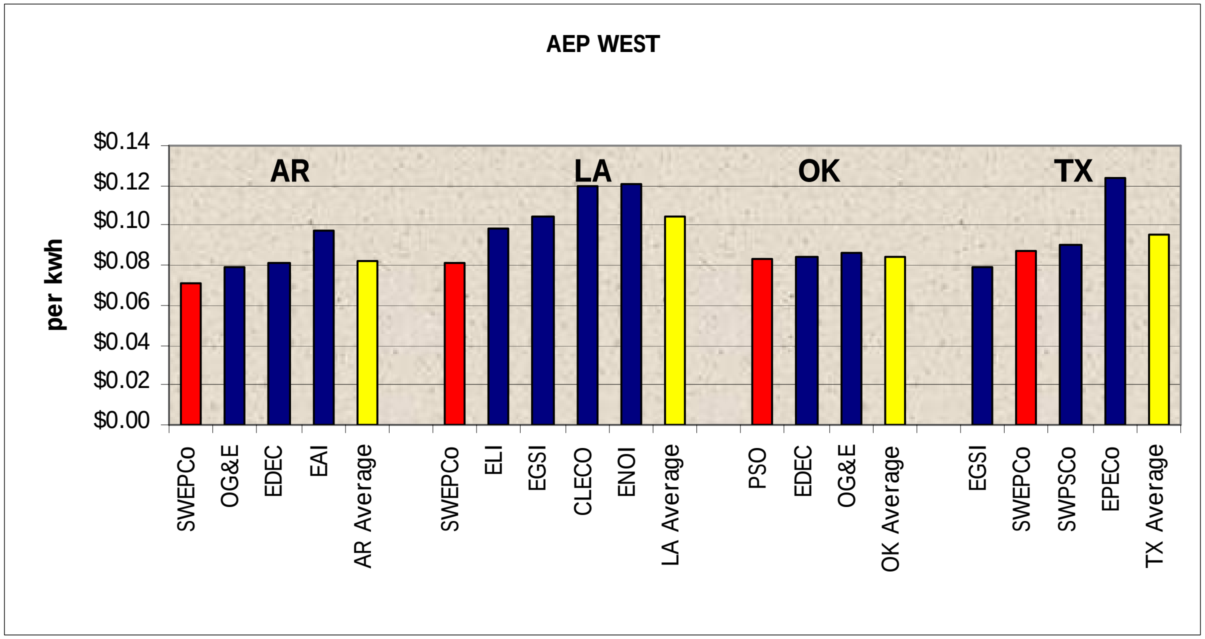
Company	Target Equity Ratio
APCo	42-44%
CSP	45-47%
I&M	40-42%
KPCo	41-43%
OPCo	44-46%
PSO	43-45%
SWEPCo	43-45%
TCC	40%
TNC	40%

- Target long term dividend payout ratio range of 55-60%
- Maintain adequate coverage ratios to support current credit ratings

We are committed to maintaining our current credit ratings.

AEP Provides Low Cost Electric Service





Residential Average rates for 1,000 kWh - 12 months ended 7/01/2007

Source: Summer 2007 EEI Typical Bills and Average Rates Report

AEP's low cost provider status in most of its jurisdictions will allow AEP's pricing to remain competitive following anticipated rate increases

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation in Ohio, and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

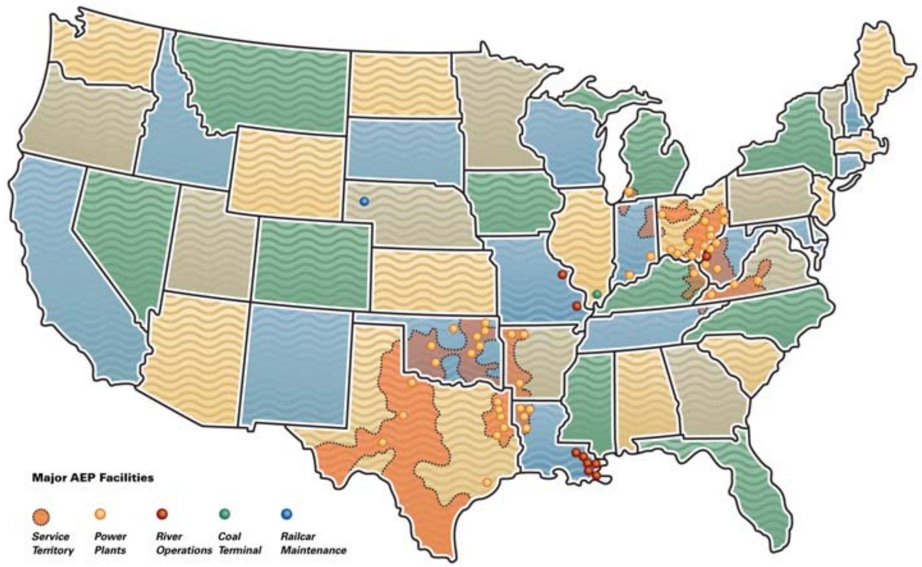
Strength & Scale in Assets & Operations

- 5.1 million customers in 11 states
- Industry-leading size and scale of assets:

Asset	Size	Industry Rank
Domestic Generation	~38,200 MW	# 2
Transmission	~39,000 miles	# 1
Distribution	~208,000 miles	# 1

Source: Company research & Resource Data International Platts, PowerDat 2005



- Coal & transportation assets
  - Control over 8,000 railcars
  - Own/lease and operate over 2,600 barges & 51 towboats
  - Coal handling terminal with 20 million tons of capacity

AEP Generation Portfolio				
Coal	Gas	Nuclear	Hydro	Wind
67%	24%	6%	2%	1%

- 20,000 employees

AEP Enjoys Significant Presence Throughout The Energy Value Chain

Strategic Direction

AEP®

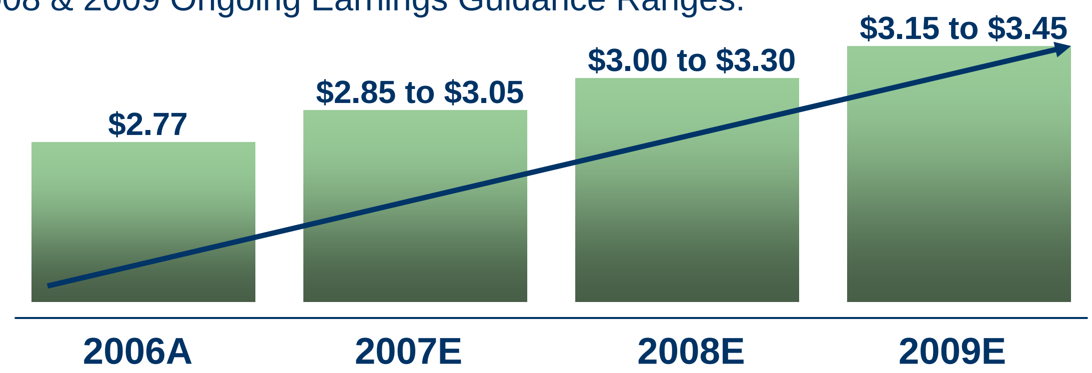
- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Develop our transmission business
- Achieve adequate returns on all assets

Deliver value to investors and cost effective service to our customers

Continued Commitment To Our Core Utility Mission: Bring Reasonably Priced Electric Service To Our Customers, Thereby Strengthening Our Communities And Rewarding Our Investors

Framework For Long-Range Performance

- 2007, 2008 & 2009 Ongoing Earnings Guidance Ranges:



- EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in existing utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
  - Investment in new transmission opportunities
  - Seek rate recovery for new investments
  - Control costs & achieve timely rate relief
- Maintain credit ratings
  - BBB/Baa2/BBB

Future Earnings Growth Driven by Native Load Growth and Substantial Utility Investment Opportunity Focused On Regulated Operations

Utility Investment Drives Growth

Purchased Generation

AEP®

Waterford

–821 MW combined-cycle gas plant
–$220MM purchase price
–Columbus Southern Power completed purchase on Sept. 28, 2005

Ceredo

–505 MW simple-cycle gas plant
–$100MM purchase price
–APCo completed purchase on Dec. 15, 2005

2,946 MW of gas-fired generation added since 2005

Darby

–480 MW simple-cycle gas plant
–$102MM purchase price
–Columbus Southern Power completed purchase on April 25, 2007

Lawrenceburg

–1140 MW combined-cycle gas plant
–$325MM purchase price
–AEG completed purchase on May 16, 2007

Additional Gas-fired Generation Allows Us To Meet The Growing Needs Of Our Customers And Provides The Company With Greater Fuel Flexibility

New Generation Facilities

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
SWEPCo	Tontitown	Arkansas	$130 MM	Gas	Simple-cycle	320	2007/2008
PSO	Southwestern	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
SWEPCo	Arsenal Hill	Louisiana	$300 MM	Gas	Combined-cycle	480	2010
SWEPCo	Hempstead	Arkansas	$1.3 B(1)	Coal	Ultra-supercritical	600(3)	2011
PSO	Red Rock	Oklahoma	$1.8 B(2)	Coal	Ultra-supercritical	950(4)	2012
APCo	Mountaineer	West Virginia	$2.23 B	Coal	IGCC	600	2012
CSP/OP	Great Bend	Ohio	Under Review(3)	Coal	IGCC	600	2017

(1) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment
(2) PSO will own 50%, or 475 megawatts, totaling approximately $900MM in capital investment
(3) The FEED (front-end engineering and design) study with GE and Bechtel is complete. Cost estimates are not yet filed with the PUCO due to the pending appeals to the Supreme Court of Ohio resulting from the PUCO's April 10, 2006 Opinion and Order.

AEP Is Meeting The Growing Electricity Needs Of Customers Through The Pursuit Of New Economic Generation Facilities

New Gas-Fired Generation Facilities

SWEPCo

- Mattison Plant (Tontitown, AR)
  - Certificate of Need filings (LA, AR, TX) were approved in all 3 states
  - Air permit filed and approved in February 2007
  - Units 3 and 4 online by summer peaking-season 2007; Units 1 and 2 online by January 2008
- Stall Plant (Arsenal Hill, LA)
  - Certificate of Need filings (LA, AR, TX)
    - TX settled in Feb 2007
    - AR & LA decisions expected by year-end 2007
  - Air permit filed on April 27, 2007 – expecting approval by March 2008
  - Commercial operation date in 2010

PSO

Southwestern & Riverside Additions

- Air permit received March 22, 2007
- Commercial operation date of December 2007
- Regulatory Recovery
  - Settlement and final order in the Lawton Cogen case authorizes costs for Southwestern and Riverside peakers to be recovered through a rider mechanism beginning as early as June 2008 based on the Commercial Operation date

2007-2009 Projected Capital Expenditures

	2007	2008	2009
Mattison	$56MM	$4MM	-
Stall	$82MM	$126MM	$64MM
Southwestern	$36MM	$3MM	-
Riverside	$35MM	$2MM	-

SWEPCo's and PSO's Short-Term and Intermediate Power Needs Will Be Met With Newly Constructed Gas-Fired Facilities

New Ultra-Supercritical Coal Facilities

SWEPCo

Turk Plant (Fulton, AR)

- Certificate of Need approvals (LA, AR, TX) expected by September/October 2007
- Air permit approval expected in August 2007
- Regulatory Recovery
  - Recovery of carrying cost requested in LA Certificate of Need filing – Hearings scheduled for September 2007
  - AR and TX rate recovery will be addressed in separate filings
- Approximately 85-90% of costs are firm
  - EPC contract for balance of plant work awarded in May 2007
  - Contracts for turbine, boiler, and environmental control equipment awarded in 2006

PSO

Red Rock Generating Facility (Red Rock, OK)

- Used and useful determination filed in February 2006 – Hearings commenced July 9, 2007 and approval is expected by September 2007
- Air permit approval expected in August 2007
- Regulatory Recovery
  - Order expected in PSO rate filing in July 2007 – filing included request for CWIP treatment for new projects
- Original cost estimate of $1.8 billion – revised cost estimate expected in the third quarter of 2007

2007-2009 Projected Capital Expenditures

	2007	2008	2009
Turk Plant	$211MM	$230MM	$243MM
Red Rock Generating Facility	$54MM	$120MM	$236MM

Ultra-Supercritical Coal-Fired Generation Is The Most Economical Choice For New Baseload Plants In AEP's Western Service Territory

Integrated Gasification Combined Cycle Facilities

Front-End Engineering & Design (FEED) results complete. Results were filed in June 2007. Cost estimates in target range of 20-30% premium over new ultra-supercritical coal-fired facilities of equal capacity.

West Virginia

- Certificate of Public Convenience & Necessity filed Jan. 11, 2006
  - APCo testimony filed June 18, 2007
  - Intervenor & Staff testimony due Aug. 17, 2007
  - Hearings Sept. 10-14, 2007
  - Statutory Deadline – Dec. 2, 2007
- Air permit filed in Oct 2006 – A technical review of the application and development of a draft permit is ongoing by the WV Dept. of Environmental Protection
- Regulatory Recovery Filing
  - Filing made in June 2007 –included request for cash recovery mechanism

Ohio

- Certificate of Environmental Compatibility & Public Need filed on March 24, 2006
  - Ohio Power Siting Board approved application on March 9, 2007
- Air permit filed in Oct 2006
- Regulatory Recovery Filing
  - Phase 1 – June 2006 – PUCO approved tariff to recover pre-construction costs ($24MM) over 12-month period effective July 1, 2006
  - Phase 2 – filing likely to be withheld until resolution of Ohio Supreme Court action
  - Informational filing made on June 18, 2007 to inform PUCO of the West Virginia filing

Construction Period Of 48-50 Months Following Receipt Of Major Regulatory And Permit Approvals

Investing In IGCC

Generation Technology Comparative Statistics

US2006$	Eastern Bituminous		
	USC	**IGCC**	**NGCC**
Nominal Capacity (MW)	618	629	530
Capacity Factor (%)	85%	85%	25%
Total Plant Cost (EPC + Owner's Cost) ($/kW)	$2,152	$2,717	$572
Production Cost ($/MWh)	$22	$22	$45
Cost of Electricity, without CO_2 Capture ($/MWh)	$72	$83	$87
Estimated Cost of Electricity, with 90% CO_2 Capture ($/MWh)	$118	$108	$135

Source: Results of AEP analysis based on EPRI studies.

- Total Plant Cost (Overnight EPC 2006$s) includes the cost to engineer, procure and construct plant and owner's direct costs.
- Assumes Northern Appalachian coal price of $2.25/mmBtu for USC and IGCC and natural gas price of $6.00/mmBtu for NGCC.
- Production cost includes fuel cost plus variable operations and maintenance (VOM) cost.
- Cost of electricity represents first year estimates only in 2006$ and are based on total plant cost plus generic cost estimates for AFUDC, emission credits, infrastructure, interconnections, transmission lines and upgrades.
- Cost of electricity with CO2 capture provides pressurized CO2 at the fence line and does not include transportation, storage and monitoring costs.

IGCC Technology Is Strategic To Keeping Coal In The Money

Transmission Investment Opportunity *

Creating a business model to manage capital requirements for enhanced returns with partners

- ~ $3 billion I-765 Project in PJM
- ~ $2 billion 765-kV study with ITC in Michigan
- ~ $3 billion project filed with SPP
- ~ $1- $7 billion in ERCOT via Electric Transmission Texas, LLC (ETT)

Assumptions	
Estimated Investment Opportunity	$15 Billion
Ownership Structure w/ Partner	50% / 50%
Debt/Equity Ratio	50% debt / 50% equity
Return on Equity	11.00%-13.00%
Potential EPS Impact (based on 396 MM shares)	$0.60+ **

* This identified transmission opportunity is not included in current capex guidance

** Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion

Building The Next US Interstate System For Enhanced Reliability And Market Efficiency Could Have Significant EPS Implications

AEP®

AEP Texas Central Company General Rate Case

On November 9, 2006, TCC & TNC filed applications with the PUCT to raise base rates they charge to Retail Electric Providers (REP) serving end-use electricity customers in their service territories. On April 3, 2007, TCC and TNC submitted revised rate increase requests of $69.9MM and $22MM, respectively. Requested increases include the expiration of merger-related billing credits that have been in place since 2000, totaling $20MM and $6.2MM for TCC and TNC, respectively. (TCC Docket #33309, TNC Docket #33310). TNC reached settlement on May 4, 2007 for a $13.7MM increase in revenues and a $2MM increase in depreciation, resulting in an annual increase of $11.7MM. The settlement was approved by the PUCT on May 24, 2007.

Regulatory Activity Underway

PSO General Rate Case

On November 21, 2006, Public Service Oklahoma filed an application with the Oklahoma Corporation Commission to increase base rates by $49.6 million to recovery investments already made and costs incurred. The request represents a 4% overall increase (including fuel). The filing also includes a proposal to adopt an annually adjusted rate mechanism, which includes a return on CWIP. The formula rate would adjust rates, up or down, if PSO earns above or below an approved bandwidth around the authorized ROE. (Case #200600285)

Pro-forma Capital Structure – Company Position (Test Year ended 6/30/06)

	% of Capitalization	Cost Rate	Weighted Cost
Long-Term Debt	53.55%	6.32%	3.39%
Preferred Stock	0.43%	4.02%	0.02%

Procedural Schedule

November 21, 2006	Case filed
March 20, 2007	Intervenor and staff testimony filed
April 9, 2007	Rebuttal testimony filed
May 1, 2007	Hearings to commence
May 30, 2007	ALJ report issued
June 13, 2007	Oral closing arguments
July 2007	Final order expected

Regulatory Activity Underway

AEP Ohio Application For 4% Provision On Generation Rate

- On Jan. 23, 2007, CSP and OP filed an application at the PUCO to recover 2007 costs associated with additional generation-related expenditures the companies are encountering related to environmental, security and other new generation-related costs pursuant to the RSP.
- CSP and OP are requesting to implement the provision to recover $24.5MM and $8.2MM, respectively, from May 2007 through December 2007.
- Staff & Intervenor testimony filed May 11, 2007; Staff recommended a $15MM increase at CSP and a $3.7MM increase at OP; OCC recommended a $19.9MM increase for CSP and a $3.7MM increase for OP.
- Hearings were held in May and June and we expect an order in September or October 2007.
- Because there was no specific action by the PUCO within the required time frame, we were allowed to implement these increases, subject to refund, in May 2007.

I&M Indiana Rate Petition

- On June 19, 2007, I&M filed a petition with the Indiana Utility Regulatory Commission for authority to increase its rates and charges for electric utility service and to establish and implement rate adjustment mechanisms to track certain matters.
- Requested trackers relate to reliability enhancement, demand-side management/energy efficiency programs, off-system sales margins, PJM, environmental compliance and capacity equalization settlement.
- I&M requested a test year of the twelve months ended September 30, 2007 but it is up to the IURC to determine the test year to be used.
- I&M will file its revenue requirement in approximately 2-3 months after the end of the stipulated test year.

Regulatory Activity Underway

Electric Transmission Texas (ETT) Rate Filing

- Jan. 22, 2007 – ETT filed with the PUCT for approval to operate as an electric transmission utility in Texas and to establish initial rates for ETT.
  - Requested capital structure of 60% debt / 40% equity; requested ROE of 11.25%.
  - Intervenor testimony filed June 8, 2007; Staff testimony filed June 18, 2007; Staff recommended a 10.50% ROE – 10.0% with a 50 bps addition for start-up risk; Hearings are scheduled for July 16-19, 2007.
  - An order is expected in the third quarter of 2007 and operations are expected to commence in the 2nd half of 2007. Upon receipt of approvals, AEP and MidAmerican will each own a 50% interest in the joint venture.

Seams Elimination Cost Adjustment Revenues

- August 2006 – ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
  - Up to $96MM of SECA revenues could be disallowed, net of unused provisions.
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both.
- Exceptions to initial decision filed Sept. 11, 2006; Replies to exceptions filed Oct. 11, 2006; Order expected by the Commission in 2007.

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission serves over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1st.
- The current revenue requirement is $88.7MM and the new total revenue requirement requested is $161MM.
- We requested an effective date of September 1, 2007 for the revised tariff and FERC can suspend for an additional five months, which would push the effective date to February 1, 2008.

Regulatory Activity Underway

West Virginia Mountaineer IGCC Filing

- Testimony filed on June 18, 2007 in support of APCo's application for a Certificate of Public Convenience and Necessity to construct a 600MW IGCC plant in WV at a cost of approximately $2.23 billion.
  - Testimony includes a proposal for the Commission to approve a cost recovery mechanism through the existing Expanded Net Energy Cost (ENEC) mechanism. The filing is not a formal proposal to adjust rates.
  - Actual requests for increased rates will be included in future filings, once construction of the plant has commenced and actual Construction Work In Progress data is known.
- Public hearings are scheduled for September 10-14, 2007 with an order on or before December 2, 2007.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- Oral arguments regarding this matter are scheduled on the Ohio Supreme Court's agenda for October 9, 2007.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.

Regulatory Activity Underway

Oklahoma Red Rock Generating Facility

- Testimony filed on February 1, 2006 in support of PSO's application for a determination that additional baseload electric generating capacity will be used and useful.
- The Oklahoma Corporation Commission consolidated this cause with Oklahoma Gas and Electric's application for an order granting pre-approval to construct Red Rock Generating Facility and authorize a recovery rider.
- Initial staff and intervenor testimony agrees that PSO needs baseload capacity and staff recommends that the OCC find Red Rock used and useful. The biggest challenges related to the RFP process and the debt equivalence issue in evaluating the PPA bids.
- Hearings for the Used and Useful Determination commenced July 9, 2007.
- Hearings for OG&E's cost recovery commence July 19, 2007.

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- Depending on contested issues, public hearings will begin either July 19, 2007 or August 9, 2007.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to Purchase, Operate, Own and Install Peaking, Intermediate and Baseload Generating Facilities. Peaking and intermediate facilities have been addressed. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- Public hearings are scheduled for September 11-14, 2007.

2007 Regulatory Activity Completed

Appalachian Power – Virginia Base Rate Case

Final order approved on May 15, 2007

✓ Results in $24 Million annual increase in base rates

✓ 10.0% approved ROE

Texas North Base Rate Case

Final settlement order approved on May 24, 2007

✓ Results in $11.7 million increase in pre-tax earnings ($13.7 million increase in revenues offset by $2 million increase in depreciation expense)

✓ No stipulated ROE in the settlement. For AFUDC purposes, Texas North will utilize the ROE that comes out of the Texas Central rate case.

Appalachian Power – West Virginia Expanded Net Energy Cost (ENEC) Filing

Final settlement order approved on June 22, 2007

✓ Results in $85.5 million net increase in revenues effective July 1, 2007

- ✓$54.8 million covers increased costs related to coal and purchased power
- ✓$28.5 million covers environmental construction costs, primarily related to installation of scrubbers
- ✓Remainder ($2.2 million) recovers first year costs of rehabilitating four small electric utilities acquired as of July 1

Indiana Michigan Power – Indiana Depreciation Study

Interim settlement order approved on June 13, 2007

✓ Allowed a change in depreciation rates effective July 1, 2007, resulting in a pretax earnings increase of approximately $69 million per year

✓ Stipulated a $5 million credit to customers in the next fuel adjustment clause proceeding

✓ Required I&M to file a rate petition on or before July 1. Petition was filed on June 19.

In Hand to Date - $282MM of the $338MM Rate Recovery in 2007 Guidance

Summary of 5-7% Long-Range Growth Components

AEP®

- ✓ Energy sales growth of 1.5%
- ✓ Rate base investment
  - – Generation plant purchases & build
  - – Transmission – interstate & intrastate
  - – Distribution
  - – Reliability
- ✓ Transmission company
- ✓ Commercial operations
- ✓ Regulatory strategy
  - – Achieve timely returns
  - – Seek cash returns on investment during construction
  - – Create & secure innovative rate plans
    - – Pursue post-2008 solution in Ohio
    - – Expand use of trackers
    - – Formula rates

New Generation And Transmission Projects Largely Reflect Upside To The Long-Range Earnings Growth Target Of 5-7%

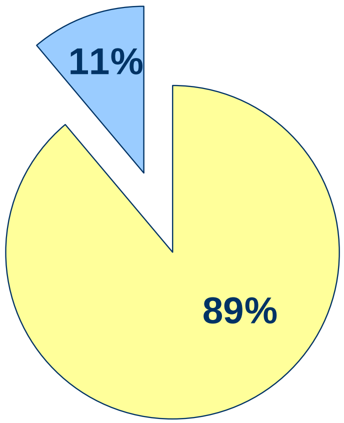
*Excludes AEP's 44% ownership in OVEC (980 MWs of coal-fired capacity)

Installation Of SCR And FGD Equipment Will Allow Our Coal Fleet To Remain Extremely Cost Competitive

Materials and Vendors – AEP's Advantage

Environmental Program Costs:
Active/Firm Costs to Remaining Estimated Costs



Actuals To Date & Firm Costs
Remaining Estimated Costs*

* Primarily labor and activated carbon injection systems

SCR Technology

- Removes 90 – 93% of NOx emissions
- Requires ~ 1% use of auxiliary power
- **AEP Capital Cost ~ $121/kw avg.**

Combination of SCR & FGD technology results in co-benefit of Hg removal ~80% removal efficiency

FGD Technology

- Removes 95 – 98% of SO_2 emissions
- Requires ~1.5% to 3.0% use of auxiliary power
- **AEP Capital Cost ~ $250/kw avg.**

AEP Benefits From First-mover Advantage Through Lower Contracted Pricing and Reduced Market Escalation Exposure

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A Reliable & Reasonably-priced Electric Supply Is Necessary To Support The Economic Well-being Of The Areas We Serve

AEP's Climate Strategy

- **Being proactive and engaged in the development of climate policy**
  - International Emissions Trading Association (IETA)
  - Electric Power Research Institute (EPRI)
  - Pew Center on Global Climate Change
  - e8
  - Global Roundtable on Climate Change
- **Investing in science/technology R&D**
  - FutureGen Alliance
  - US DOE research on carbon capture and sequestration at our Mountaineer Plant
  - EPRI – combustion technologies
  - MIT Energy Laboratory
  - B&W – Oxy-Fuel
- **Taking voluntary, proactive action now, demonstrating voluntary programs can work and setting policy precedents thru CCX**
  - Chicago Climate Exchange (CCX)
  - EPA Climate Leaders
  - EPA SF-6 Emission Reduction Partnership for Electric Power Systems Program
  - Asia-Pacific Partnership
  - DOE 1605B- voluntary reporting of GHGs Program
  - Business Roundtable Climate Resolve
  - Numerous forestry activities
- **Evaluating longer term investment decisions such as new generation and carbon capture and storage (e.g., IGCC, Ultra-supercritical)**

AEP Must Be A Leader In Addressing Climate Change

AEP's Long-term GHG Reduction Portfolio

AEP®

Renewables (Biomass Co-firing, Wind)

Supply and Demand Side Efficiency

Off-System Reductions and Market Credits (forestry, methane, etc.)

Commercial Solutions of New Generation and Carbon Capture & Storage Technology

AEP Is Investing In A Portfolio Of GHG Reduction Alternatives

AEP's Long-term CO_2 Reduction Commitment

Existing Programs

- Renewables
  - 800 MWs of Wind
  - 300 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

New Program Additions

- Incremental Reduction quantity: 5MM tons/yr
- Timing: Implement during 2007 to take effect/receive credits by 2011
- Methods
  - +1000 MWs of Wind PPAs – 2MM tons/yr
  - Domestic Offsets (methane) – 2MM tons/yr
  - Forestry – Tripling annual investment to increase to 0.5MM tons/yr by 2015
  - Fleet Vehicle/Aviation Offsets – 0.2MM tons/yr
  - Additional actions to include DSM and end use energy efficiency, biomass and power plant efficiency – 0.2MM tons/yr

New Technology Additions

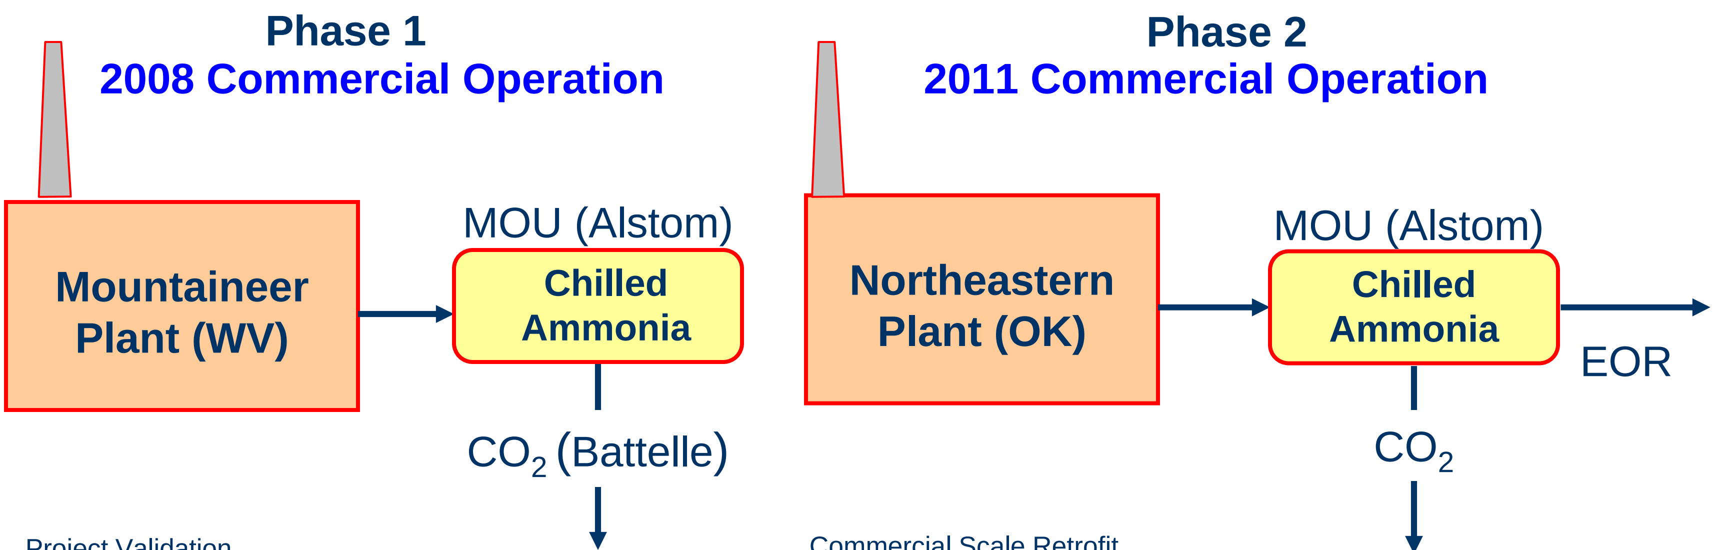
- Commercial solutions for existing fleet
  - Chilled Ammonia
  - Oxy-Fuel

AEP Is Committed To A 5mm Ton/Yr Reduction In Co_2 Emissions Which Offsets Approximately Half Of The Emissions Projected From New Generation Projects Previously Announced

Chilled Ammonia Process Plant Footprint

AEP®

Chilled Ammonia Technology Program



Project Validation

- 30 MW_t (megawatts thermal) scale (a scale up of Alstom/EPRI 5 MW_t field pilot, under construction at WE Energies)
- <0.1MM tonnes CO_2 per year
- In operation 4Q 2008
- Approximate total cost \$50 – \$80M
- Using Alstom "Chilled Ammonia" Technology
- Located at the AEP Mountaineer Plant in WV
- CO_2 for geologic storage

Commercial Scale Retrofit

- ~ 200 MW_e scale (megawatt electric)
- ~ 600 MW_t scale (megawatt thermal)
- ~1.5MM tonnes CO_2 per year
- In operation late 2011
- Approx. capital \$250 – \$300M (CO_2 capture & compression)
- Approx. O&M cost \$12M per year
- Energy penalty ~ 35 – 50 MW steam, 25 – 30 MW for CO_2 compression
- Retrofit SCR & Wet FGD Required: ~\$225 – \$300M (required for CO_2 capture equipment)
- Located at AEP's Northeastern Plant Unit 3 or 4 in Oklahoma
- CO_2 for Enhanced Oil Recovery (EOR) or geologic storage

Post-combustion Carbon Solution Provides Pure CO_2 Stream For Capture

Oxy-Fuel Technology Initiative

Near-zero Emissions Using Oxy-fuel Combustion Technology

Oxy-Fuel CO_2 Capture & Storage Project

Pilot Scale Demonstration

- 10 MW_e scale
- Teamed with B&W at its Alliance Research Center and 16 other utilities
- Demo completed 3Q 2007
- AEP funding of $50k

Commercial Scale Retrofit

- Retrofit on existing AEP sub-critical unit (several available)
- 150 – 230 MW_e scale retrofit
- 4,000 – 5,000 tons CO_2 per day
- Teamed with B&W
- AEP funding of ~ $200k – $3M for feasibility study
- Feasibility study to be completed in late 2008/early 2009

Combustion Conversion Technology For Existing Coal Fleet – Longer Lead Time With Enhanced Viability And Long-term Potential

AEP®

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

AEP®

AEP Enjoys Significant Presence Throughout The Energy Value Chain

Strategic Direction

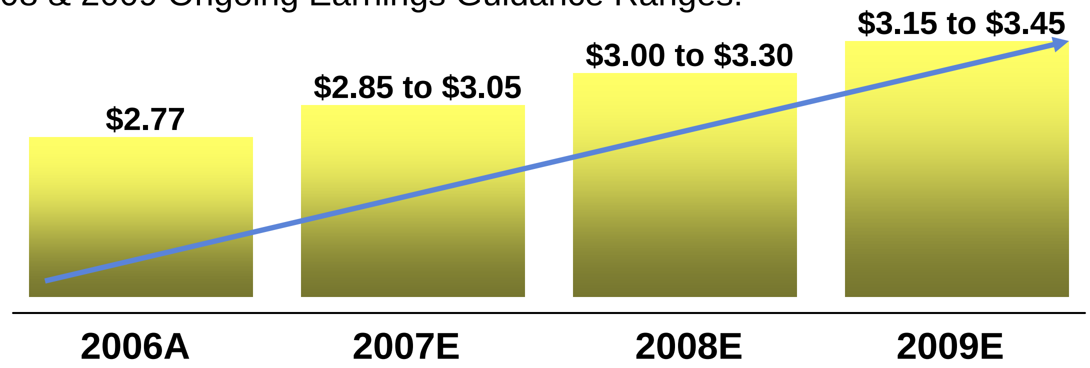
- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Develop our transmission business
- Achieve adequate returns on all assets

Deliver value to investors and cost effective service to our customers

Continued Commitment To Our Core Utility Mission: Bring Reasonably Priced Electric Service To Our Customers, Thereby Strengthening Our Communities And Rewarding Our Investors

Framework For Long-Range Performance

- 2007, 2008 & 2009 Ongoing Earnings Guidance Ranges:



- EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in existing utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
  - Investment in new transmission opportunities
  - Seek rate recovery for new investments
  - Control costs & achieve timely rate relief
- Maintain credit ratings
  - BBB/Baa2/BBB

Future Earnings Growth Driven by Native Load Growth and Substantial Utility Investment Opportunity Focused On Regulated Operations

Summary of 5-7% Long-Range Growth Components

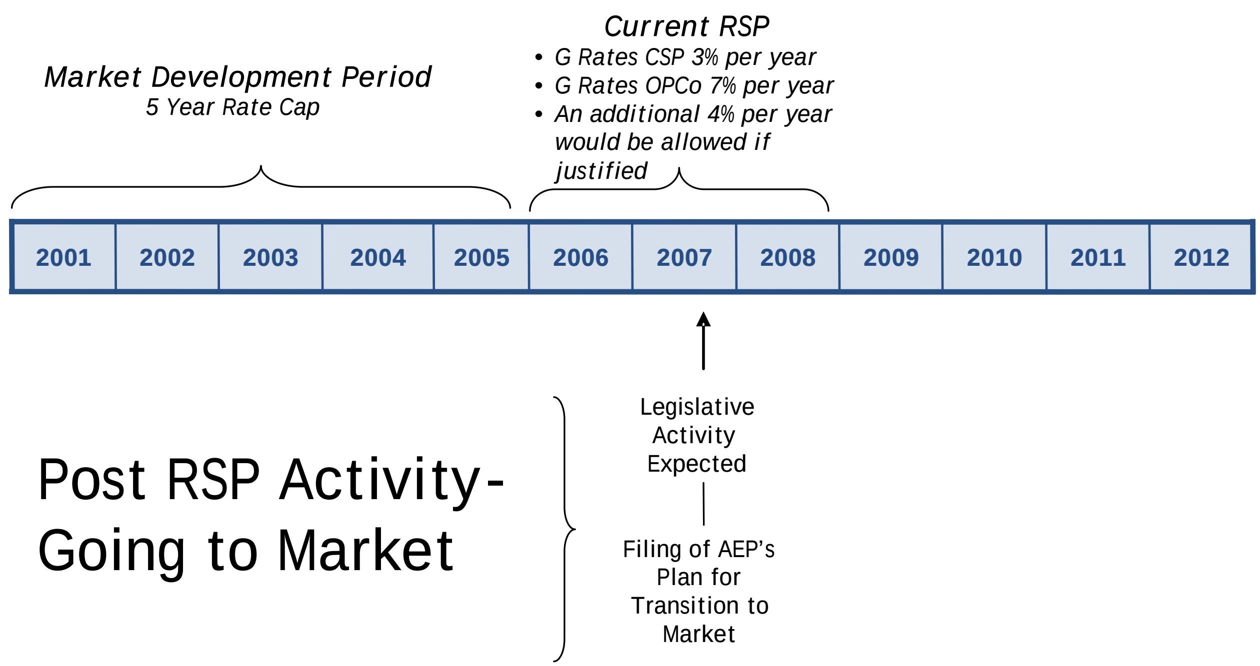
- Energy sales growth of 1.5%
- Rate base investment
  - Generation plant purchases & build
  - Transmission – interstate & intrastate
  - Distribution
  - Reliability
- Transmission company
- Commercial operations
- Regulatory strategy
  - Achieve timely returns
  - Seek cash returns on investment during construction
  - Create & secure innovative rate plans
    - Pursue post-2008 solution in Ohio
    - Expand use of trackers
    - Formula rates

AEP®

New Generation And Transmission Projects Largely Reflect Upside To The Long-Range Earnings Growth Target Of 5-7%

Ohio Background

- The Ohio market was restructured beginning 1/1/2001 with a five year market development period during which time total rates were capped.
- The company was scheduled to go to market on 1/1/2006; however, rate shock to customers was a significant Commission concern (the region lacked competitive suppliers).
- The Ohio Rate Stabilization Plan (RSP) extended the market development period an additional three years with the customers going to market on 1/1/2009.



AEP®

AEP Ohio Next Steps

- AEP has filed as an intervenor in support of competitive generation.
- The plan, proposed on July 10, 2007 by First Energy includes bidding processes for providing competitively priced generation.
- AEP's Ohio customers who do not choose another electricity supplier would, beginning Jan 1, 2009 pay generation rates as determined through an auction process.
- Not clear that a new statutory framework will be in place before Jan. 1, 2009.
- Joining the current case before PUCO is the best way to ensure we have certainty regarding electricity generation before the end of 2008.
- We will continue to work with the utility coalition that has proposed legislation to address alternative approaches post-2008.

Utility Investment Drives Growth

Capital Investment Forecast (2007-2009)

($ in millions)	2007	2008	2009	Total (2007-09)
Environmental	$935	$521	$301	**$1,757**
New Generation - Purchase	$118	$0	$0	**$443***
New Generation - Build	$474	$485	$573	**$1,532**

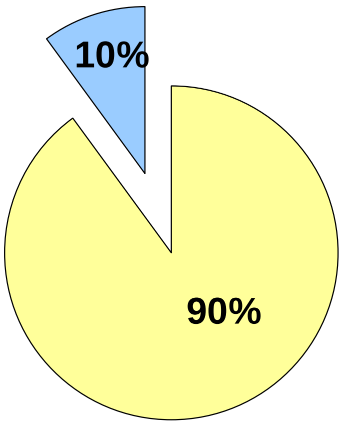
AT THE CONCLUSION OF OUR CURRENT ENVIRONMENTAL RETROFIT PROGRAM, OVER 47% OF OUR COAL-FIRED GENERATION FLEET WILL BE EQUIPPED WITH SCRs AND OVER 50% WILL BE SCRUBBED (FGD). AEP's TOTAL COAL FLEET CAPACITY = 24,710 MEGAWATTS*

AEP®

*Excludes AEP's 44% ownership in OVEC (980 MWs of coal-fired capacity)

Materials and Vendors – AEP's Advantage

Environmental Program Costs:
Active/Firm Costs to Remaining Estimated Costs



Actuals To Date & Firm Costs

Remaining Estimated Costs*

* Primarily labor and activated carbon injection systems

Typical Vendors Include:

•B&W/Alstom – FGD Spray Tower
•B&V/Chyioda – FGD Jet Bubbling Reactor
•Pullman Power – Stack Supplier
•Babcock Power – SCR
•Black & Veatch – Architect/Engineering
•Sargent & Lundy – Architect/Engineering

SCR Technology

- Removes 90 – 93% of NOx emissions
- Requires ~ 1% use of auxiliary power
- **AEP Capital Cost ~ $121/kW avg.**

Combination of SCR & FGD technology results in co-benefit of Hg removal ~80% removal efficiency

FGD Technology

- Removes 95 – 98% of SO_2 emissions
- Requires ~1.5% to 3.0% use of auxiliary power
- **AEP Capital Cost ~ $250/kW avg.**

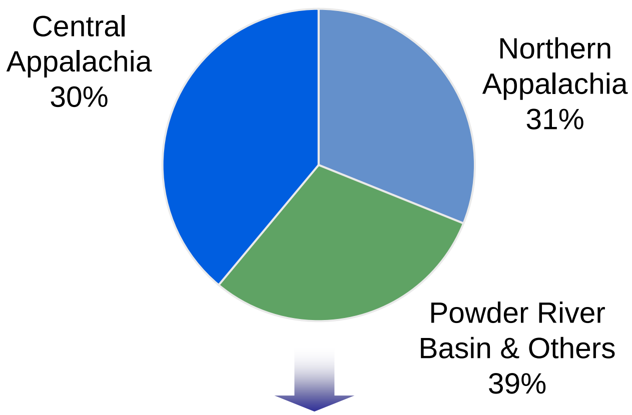
Coal Procurement – 2007 Projected

AEP purchases approx. 76 million tons of coal per year

Total AEP System



Coal Stats:

- 95% contracted for 2007
- Avg. delivered price ~ $35.10/ton in 2006
- Approximate 4-6% price increase in 2007 -- ($36.50 to $37.50/ton)
  - Addition of Mountaineer & Mitchell scrubbers allows for a greater mix of Northern Appalachian coal in 2007

Purchased Generation

Waterford

- 821 MW combined-cycle gas plant
- $220MM purchase price
- Columbus Southern Power completed purchase on Sept. 28, 2005

Ceredo

- 505 MW simple-cycle gas plant
- $100MM purchase price
- APCo completed purchase on Dec. 15, 2005

2,946 MW of gas-fired generation added since 2005

Darby

- 480 MW simple-cycle gas plant
- $102MM purchase price
- Columbus Southern Power completed purchase on April 25, 2007

Lawrenceburg

- 1140 MW combined-cycle gas plant
- $325MM purchase price
- AEG completed purchase on May 16, 2007

AEP®

Additional Gas-fired Generation Allows Us To Meet The Growing Needs Of Our Customers And Provides The Company With Greater Fuel Flexibility

New Generation Facilities

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
SWEPCo	Mattison	Arkansas	$130 MM	Gas	Simple-cycle	340 (1)	2007
PSO	Southwestern	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
AEG	Dresden	Ohio	$348-406 MM (2)	Gas	Combined-cycle	580	2010
SWEPCo	Stall	Louisiana	$300 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.3 B (3)	Coal	Ultra-supercritical	600 (3)	2011
PSO	Red Rock	Oklahoma	$1.8 B (4)	Coal	Ultra-supercritical	900 (4)	2012
APCo	Mountaineer	West Virginia	$2.23 B	Coal	IGCC	630	2012
CSP/OP	Great Bend	Ohio	Under Review (5)	Coal	IGCC	630	2017

(1) 150MW were declared in commercial operation on July 12, 2007.
(2) We are currently developing contracts and estimates to complete the project. It is anticipated that the unit can be completed between $600 to $700 per kW using an "all-in" cost basis
(3) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment.
(4) PSO will own 50%, or 450 megawatts, totaling approximately $900MM in capital investment.
(5) FEED (front-end engineering and design) study with GE/Bechtel is complete. Cost estimates are not yet filed with the PUCO due to the pending appeals to the Supreme Court of Ohio resulting from the PUCO's April 10, 2006 Opinion and Order.

AEP®

AEP Is Meeting The Growing Electricity Needs Of Customers Through The Pursuit Of New Economic Generation Facilities

New Gas-Fired Generation Facilities

SWEPCo

- Mattison Plant (Tontitown, AR)
  - Certificate of Need filings (LA, AR, TX) were approved in all 3 states
  - Air permit received in February 2007
  - Units 3 and 4 (150 MW) online on July 12, 2007; Units 1 and 2 online by January 2008
- Stall Plant (Arsenal Hill, LA)
  - Certificate of Need filings (LA, AR, TX)
    - TX settled in Feb 2007
    - AR & LA decisions expected by year-end 2007
  - Air permit filed on April 27, 2007 – expecting approval by March 2008
  - Commercial operation date in 2010

PSO

Southwestern & Riverside Additions

- Air permit received March 22, 2007
- Commercial operation date of December 2007
- Regulatory Recovery
  - Settlement and final order in the Lawton Cogen case authorizes recovery of costs for Southwestern and Riverside peakers through a rider mechanism beginning as early as June 2008 based on the Commercial Operation date

2007-2009 Projected Capital Expenditures

	2007	2008	2009
Mattison	$56MM	$4MM	-
Stall	$82MM	$126MM	$64MM
Southwestern	$36MM	$3MM	-
Riverside	$35MM	$2MM	-

SWEPCo's and PSO's Short-Term and Intermediate Power Needs Will Be Met With Newly Constructed Gas-Fired Facilities

AEP®

New Ultra-Supercritical Coal Facilities

SWEPCo

Turk Plant (Fulton, AR)

- Certificate of Need approvals (LA, AR, TX) expected by September/October 2007
- Air permit approval expected in Fall 2007
- Regulatory Recovery
  - Recovery of carrying cost requested in LA Certificate of Need filing – Hearings scheduled for September 2007
  - AR and TX rate recovery will be addressed in separate filings
- Approximately 85-90% of costs are firm
  - EPC contract for balance of plant work awarded in May 2007
  - Contracts for turbine, boiler, and environmental control equipment awarded in 2006

PSO

Red Rock Generating Facility (Red Rock, OK)

- Used and Useful Determination filed in February 2006 – Hearings concluded July 31, 2007 and order is expected in September 2007
- Favorable ALJ report received August 21, 2007
- Air permit approval expected in October 2007
- Regulatory Recovery
  - Order expected in PSO rate case filing in July 2007 – filing included request for CWIP treatment for new projects
- Original cost estimate of $1.8 billion – revised cost estimate expected in the third quarter of 2007

2007-2009 Projected Capital Expenditures

	2007	2008	2009
Turk Plant	$211MM	$230MM	$243MM
Red Rock Generating Facility	$54MM	$120MM	$236MM

AEP®

Ultra-Supercritical Coal-Fired Generation Is The Most Economical Choice For New Baseload Plants In AEP's Western Service Territory

Integrated Gasification Combined Cycle Facilities

Front-End Engineering & Design (FEED) results complete. Results were filed in June 2007. Cost estimates in target range of 20-30% premium over new ultra-supercritical coal-fired facilities of equal capacity.

West Virginia

- **Certificate of Public Convenience & Necessity filed Jan. 11, 2006**
  - APCo testimony filed June 18, 2007
  - Intervenor & Staff testimony due Nov. 19, 2007
  - Hearings Dec. 10-14, 2007
  - Statutory Deadline – Mar. 7, 2008
- **Air permit filed in Oct 2006**
  - A technical review of the application and development of a draft permit is ongoing by the WV Dept. of Environmental Protection
- **Regulatory Recovery**
  - Filing made in June 2007 –included request for cash recovery mechanism

Ohio

- **Certificate of Environmental Compatibility & Public Need filed March 24, 2006**
  - Ohio Power Siting Board certificate issued in April 2007
- **Air permit filed in Oct 2006**
- **Regulatory Recovery**
  - Phase 1 – June 2006 – PUCO approved tariff to recover pre-construction costs ($24MM) over 12-month period effective July 1, 2006
  - Phase 2 – filing likely to be withheld until resolution of Ohio Supreme Court action
  - Informational filing made on June 18, 2007 to inform PUCO of the West Virginia filing

AEP®

Construction Period Of 48-50 Months Following Receipt Of Major Regulatory And Permit Approvals

Investing In IGCC

Generation Technology Comparative Statistics

US2006$	Eastern Bituminous		
	USC	IGCC	NGCC
Nominal Capacity (MW)	618	629	530
Capacity Factor (%)	85%	85%	25%
Total Plant Cost (EPC + Owner's Cost) ($/kW)	$2,152	$2,717	$572
Production Cost ($/MWh)	$22	$22	$45
Cost of Electricity, without CO_2 Capture ($/MWh)	$72	$83	$87
Estimated Cost of Electricity, with 90% CO_2 Capture ($/MWh)	$118	$108	$135

Source: Results of AEP analysis based on EPRI studies.

- Total Plant Cost (Overnight EPC 2006$s) includes the cost to engineer, procure and construct plant and owner's direct costs.
- Assumes Northern Appalachian coal price of $2.25/mmBtu for USC and IGCC and natural gas price of $6.00/mmBtu for NGCC.
- Production cost includes fuel cost plus variable operations and maintenance (VOM) cost.
- Cost of electricity represents first year estimates only in 2006$ and are based on total plant cost plus generic cost estimates for AFUDC, emission credits, infrastructure, interconnections, transmission lines and upgrades.
- Cost of electricity with CO_2 capture provides pressurized CO_2 at the fence line and does not include transportation, storage and monitoring costs.

IGCC Technology Is Strategic To Keeping Coal In The Money

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

AEP®

A Reliable & Reasonably-priced Electric Supply Is Necessary To Support The Economic Well-being Of The Areas We Serve

Highlights of Bingaman-Specter Proposal

"Low Carbon Economy Act of 2007"

Key Components:

- Start date for greenhouse-gas reductions is 2012
- Goals: 2006 levels by 2020; 1990 levels by 2030
- Includes a safety valve of $12 per metric ton, increasing at an annual rate of 5% above inflation
- Support for allowance allocations
- International action

AEP Endorses this Proposal Because It Sets Reasonable And Achievable Reduction Targets and Includes the AEP-IBEW Trade Proposal

AEP®

AEP's Climate Strategy

- **Being proactive and engaged in the development of climate policy**

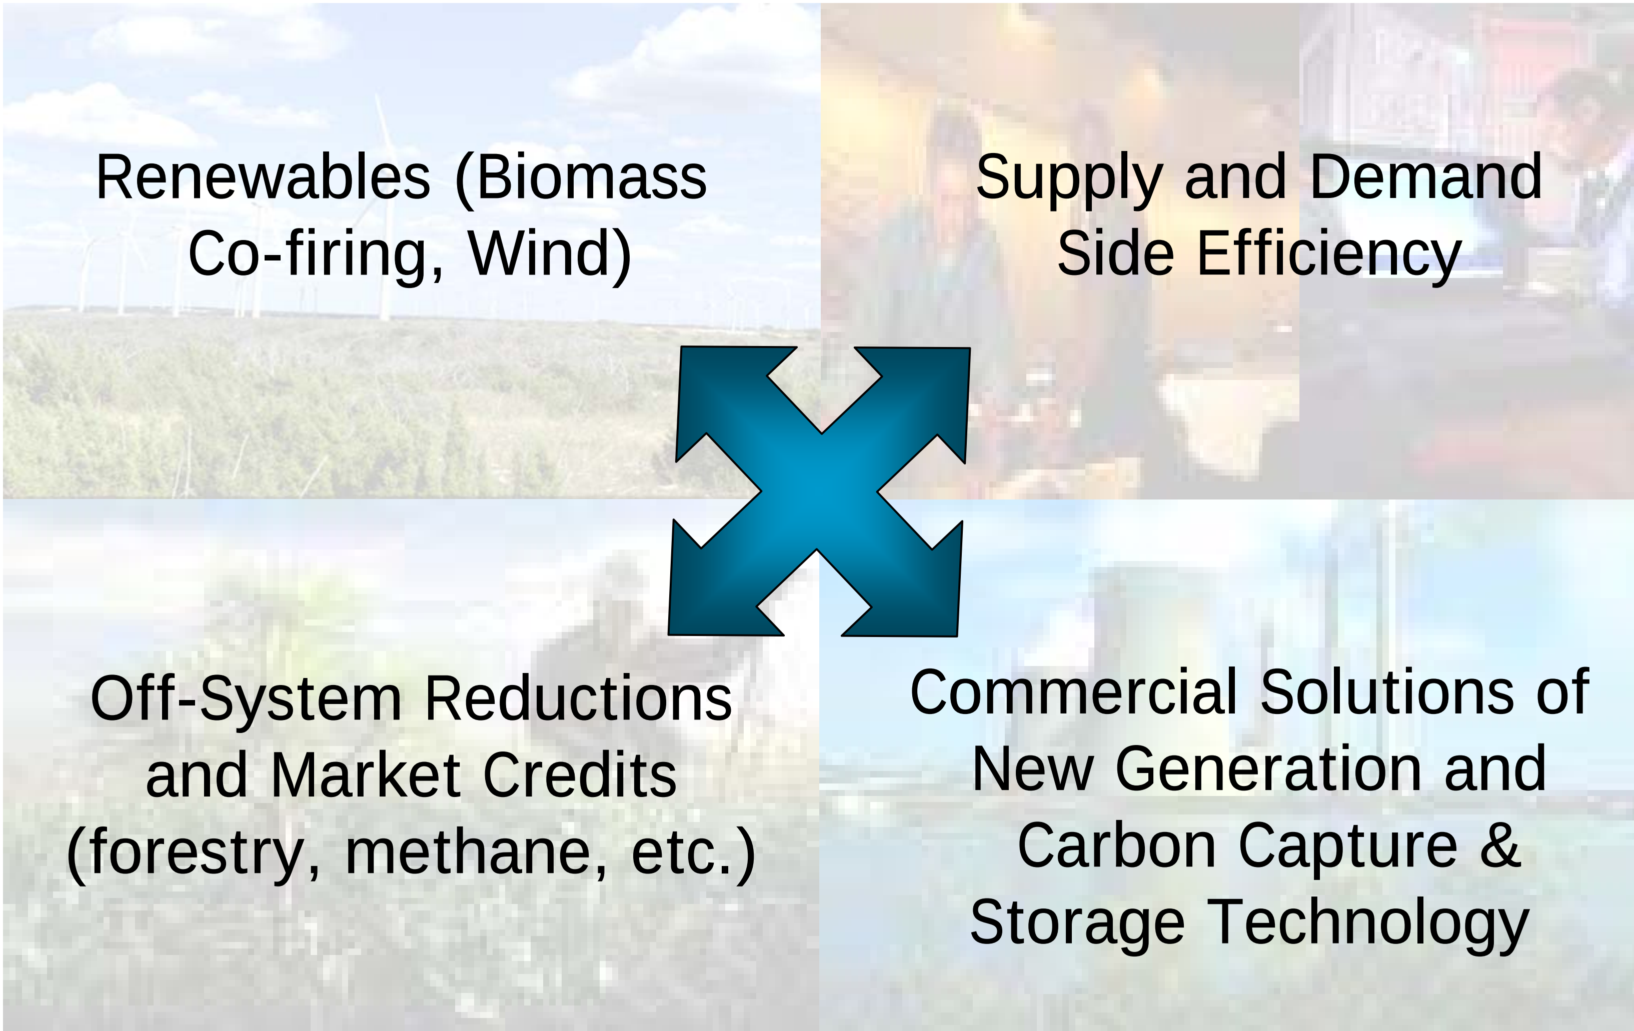
  - EPRI – combustion technologies
  - MIT Energy Laboratory
  - B&W – Oxy-Coal
- **Taking voluntary, proactive action now, demonstrating voluntary programs can work and setting policy precedents thru CCX**
  - Chicago Climate Exchange (CCX)
  - EPA Climate Leaders
  - EPA SF-6 Emission Reduction Partnership for Electric Power Systems Program
  - Asia-Pacific Partnership
  - DOE 1605B- voluntary reporting of GHGs Program
  - Business Roundtable Climate Resolve
  - Numerous forestry activities
- **Evaluating longer term investment decisions such as new generation and carbon capture and storage (e.g., IGCC, Ultra-supercritical)**

AEP Must Be A Leader In Addressing Climate Change

AEP's Long-term GHG Reduction Portfolio



AEP Is Investing In A Portfolio Of GHG Reduction Alternatives

15

AEP's Long-term CO_2 Reduction Commitment

Existing Programs

- Renewables
  - 800 MWs of Wind
  - 300 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

New Program Additions

- Incremental Reduction quantity: 5MM tons/yr
- Timing: To take effect/receive credits by 2011
- Methods
  - +1000 MWs of Wind PPAs – 2MM tons/yr
  - Domestic Offsets (methane) – 2MM tons/yr (e.g., livestock methane capture deal of 0.6MM tons/yr)
  - Forestry – Tripling annual investment to increase to 0.5MM tons/yr by 2015
  - Fleet Vehicle/Aviation Offsets – 0.2MM tons/yr
  - Additional actions to include DSM and end use energy efficiency, biomass and power plant efficiency – 0.2MM tons/yr

New Technology Additions

- Commercial solutions for existing fleet
  - Chilled Ammonia
  - Oxy-Coal

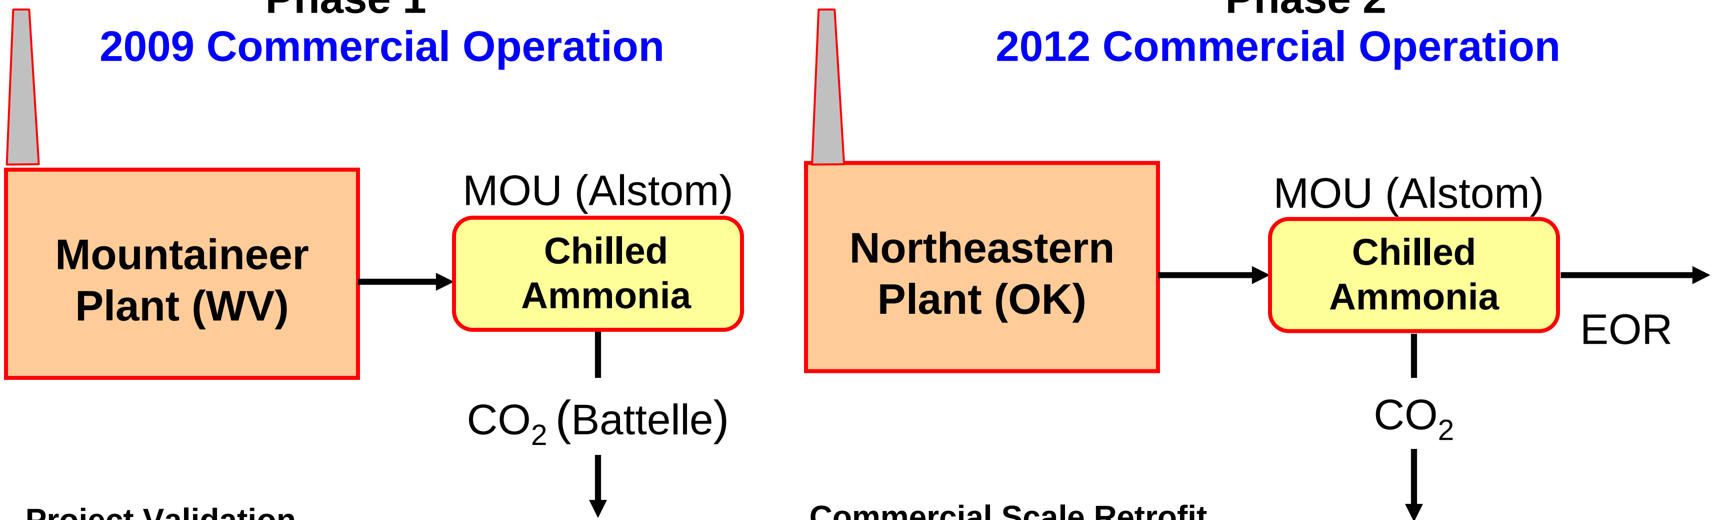
AEP Is Committed To A 5mm Ton/Yr Reduction In Co_2 Emissions Which Offsets Approximately Half Of The Emissions Projected From New Generation Projects Previously Announced

AEP®

Chilled Ammonia Technology Program

Phase 1
2009 Commercial Operation

Phase 2
2012 Commercial Operation



Project Validation

- 20 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, under construction at WE Energies)
- 100,000 – 300,000 tonnes CO_2 per year
- In operation 1Q 2009
- Approximate total cost $50 – $80M
- Using Alstom "Chilled Ammonia" Technology
- Located at the AEP Mountaineer Plant in WV
- CO_2 for geologic storage

Commercial Scale Retrofit

- ~ 200 - 300 MW_e scale (megawatt electric)
- ~ 600 MW_t scale (megawatt thermal)
- ~1.5MM tonnes CO_2 per year
- In operation late 2011
- Approx. capital $250 – $300M ($CO_2$ capture & compression)
- Approx. O&M cost $12M per year
- Energy penalty ~ 35 – 50 MW steam, 25 – 30 MW for CO_2 compression
- Retrofit Wet FGD Required: ~$225 – $300M
- Located at AEP's Northeastern Plant Unit 3 or 4 in Oklahoma
- CO_2 for Enhanced Oil Recovery (EOR)

AEP®

Post-combustion Carbon Solution Provides Pure CO_2 Stream For Capture

Oxy-Coal CO_2 Capture & Storage Project

Pilot Scale Demonstration

- 10 MW_e scale
- Teamed with B&W at its Alliance Research Center and 16 other utilities
- Demo complete 3Q 2007
- AEP funding of $50k

Commercial Scale Retrofit

- Retrofit on existing AEP sub-critical unit (several available)
- 150 – 230 MW_e scale retrofit
- 4,000 – 5,000 tons CO_2 per day
- Team with B&W
- AEP funding of ~ $1.5M for feasibility study
- Feasibility study to be completed in late 2007/early 2008

Combustion Conversion Technology For Existing Coal Fleet – Longer Lead Time With Enhanced Viability And Long-term Potential

AEP ®

Transmission ~ $9-$15 Billion Opportunity

Creating a business model to manage capital requirements for enhanced returns with partners

Potential Opportunities
~ $3 Billion I765$_{TM}$ Project in PJM
~ $2 Billion 765-kV study in Michigan w/ ITC
~ $3 Billion Project filed with SPP
~ $1-7 Billion in ERCOT via Electric Transmission Texas, LLC (ETT)

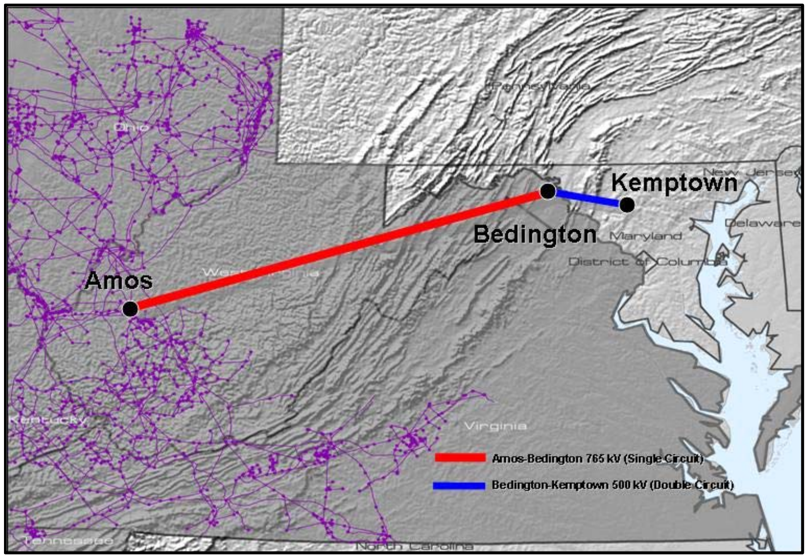
Assumptions	
Estimated Investment Opportunity	$9 - $15 Billion
Ownership Structure w/ Partner	50% / 50%
Debt / Equity Ratio	50% debt / 50% equity
Return on Equity	11.00% - 13.00%
Potential EPS Impact (based on 396 MM shares)	$1.00+

1) ~$9-$15 billion investment opportunity not included in current capital guidance forecasts

2) Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

PJM I-765$_{TM}$

- *Overview*
  - $3 billion investment (before ownership division)
  - 550 line miles
  - 5000MW improved transfer capability
  - To be completed in 2 phases (1st phase PJM approved)
- *Benefits*
  - Improves eastern grid reliability
  - Improves market efficiency with reduced congestion
  - Reduces consumer cost $1B (est.) annually in the east
  - Reduces network line losses by 280 MW at peak
  - Provides AEP rate base opportunity for transmission investment with ROE upside & other FERC incentives
  - Provides off-system sales and siting opportunity for AEP and other low-cost mid-western generation
- *Phase I Progress to Date*
  - AEP and Allegheny entered into the PATH (Potomac-Appalachian Transmission Highline) JV to construct the 290 mile West Virginia-Maryland line
  - Total estimated cost of $1.8 billion
  - AEP portion approximately $600 million
  - Expected completion 2012



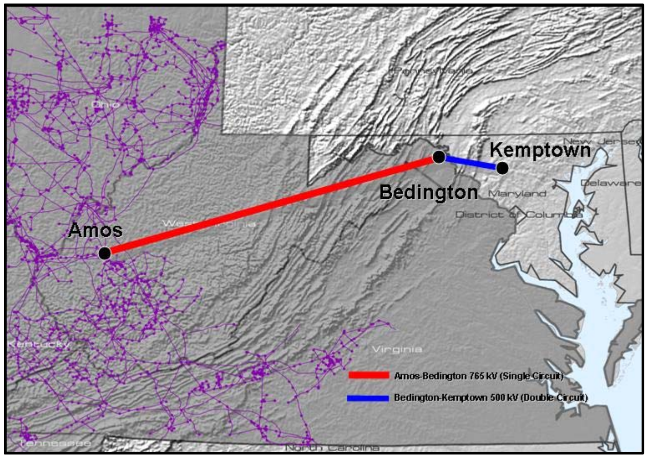
AEP®

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 5756 of 9556

PJM I-765$_{TM}$ Phase I cont'd

Execution in Action

- *Funding Plans/Transaction Structure*
  - Formed a joint venture with Allegheny Energy for 290 miles of the proposed 550 mile project
  - JV portion of the I-765$_{TM}$ Interstate Project approved by PJM in its Regional Transmission Expansion Plan in June 2007
  - Equity – 50% AEP / 50% Allegheny
  - AEP's 50% investment will be held at the AEP Transmission Holding Company LLC subsidiary
  - Operations to commence in the second half of 2007
  - I-765$_{TM}$ Interstate Project included in the DOE's draft National Interest Electric Transmission Corridor issued in April 2007



- *Key Regulatory Activity Completed*
  - FERC declaratory order approved July 2006
  - PJM approved plan June 2007

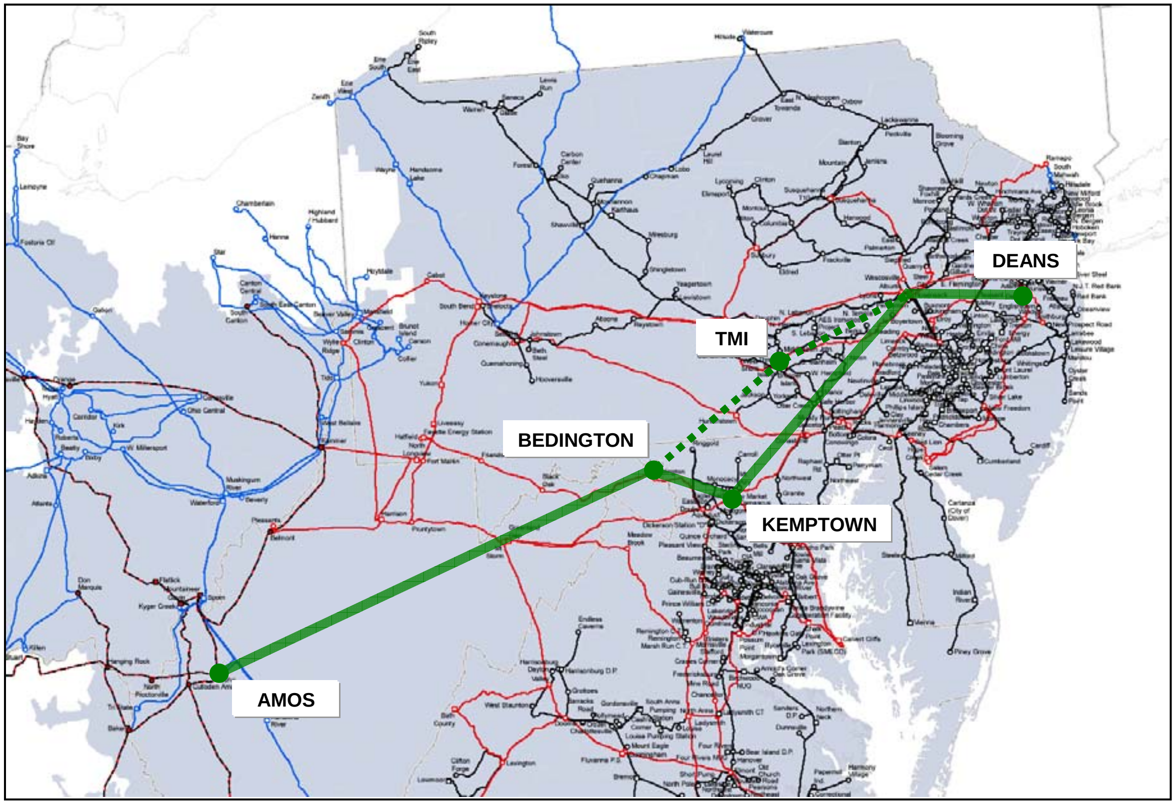
- *Key Next Steps*
  - Complete FERC Filing – Fall 2007
    - *Pursuing new project FERC incentives: cash return on CWIP, higher ROE, recovery of pre-commercial operation costs and recovery of abandonment costs.*
  - Siting Approved – Fall 2009
  - Completion – Fall 2012

AEP®

PJM I-765™ Phase II (Bedington-Deans)

Second phase of original AEP 550-mile I-765 proposal

- Approximately 250 miles from West Virginia-Maryland border to Public Service Electric & Gas Deans Station in New Jersey.
- Currently under consideration by PJM as part of Regional Transmission Expansion Plan (RTEP).
- Based on PJM RTEP approval, AEP will seek a suitable business partner (JV partner) to complete the second leg of the original proposal.

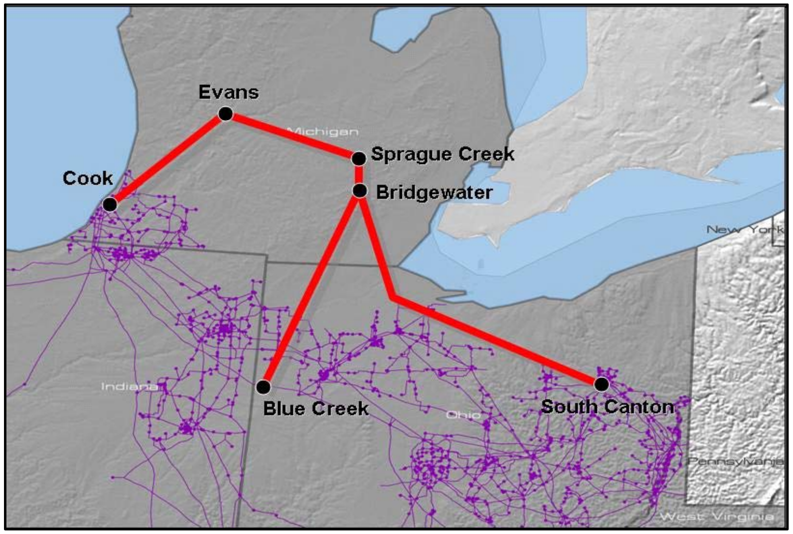


AEP®

765-kV in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - Agreement with ITC Transmission for 765-kV study
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.0 billion investment (before ownership division)



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

- *Benefits*
  - 3,000 MW improved transfer capability
  - Reduces network line losses by 250 MW

- *Next Steps*
  - Study results shared with PJM/MISO– Summer 2007
  - Public release of study results – Fall 2007
  - Potential JV formation – Fall 2007
  - PJM/MISO approval - Summer 2008
  - FERC Filing - Fall 2008
  - Siting approval – Summer 2010
  - Estimated completion – Summer 2013

AEP®

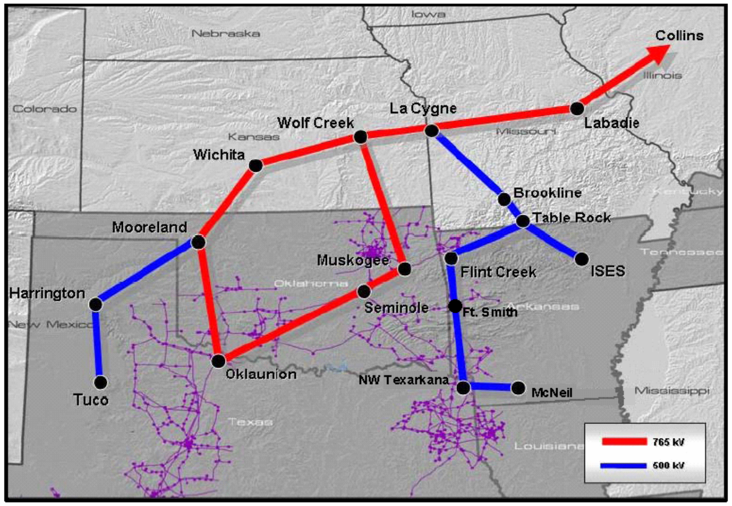
765-kV in SPP

Significant opportunity for 765-kV transmission in SPP

- *Overview*
  - July 2006 AEP submitted conceptual project for six 765-kV lines
  - Proposed 765-kV Kansas / Oklahoma / Arkansas connecting to MISO/PJM
  - 610 miles from Kansas to Arkansas
  - $3.0 billion investment (before ownership division)
  - Proposed 2012-2017 construction period
  - SPP proposes 765-kV in Texas / Oklahoma / Kansas / Missouri connecting to MISO/PJM
  - SPP also proposes 500-kV in Texas / Oklahoma / Arkansas / Missouri

- *Benefits*
  - 4,000 MVA capability

- *Next Steps*
  - Study disclosure – Fall 2007
  - JV formation (Partner-TBD) – Fall 2007
  - SPP RTO/BOD EHV Overlay approval – Summer 2009
  - SPP RTO FERC Filing – Fall 2009
  - Siting approval – Fall 2011
  - Estimated completion – Summer 2017



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP®

ETT Status Update

ETT: Delivering Power for Texas' Future

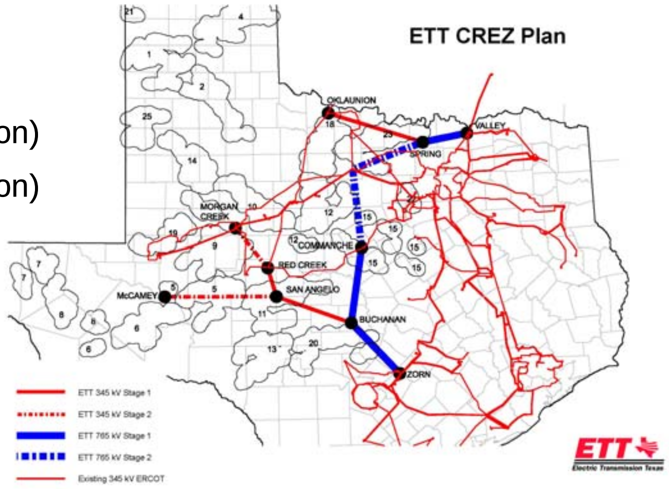
- *Transaction Structure*
  - 50/50 joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC.
  - ETT capital structure is 60% debt / 40% equity (PUCT requirement).
  - Executive manager provided by AEP; business manager provided by MidAmerican.
  - Investment opportunities can be offered by either partner and accepted or rejected by ETT.

- *Transaction Status*
  - Formation documents finalized and Participation Agreement signed Jan. 9, 2007.
  - Texas regulatory filing on Jan. 22, 2007.
    - Requested utility status, transfer of initial assets, establishment of TCOS transmission recovery mechanism.
    - Hearings conducted July 16-17, 2007, commission order expected in September 2007.
  - FERC approval for asset transfer received April 20, 2007.
  - Closing deadline of Nov. 1, 2007 can be extended by mutual agreement.

CREZ & Backbone Opportunities

Harnessing the Wind: Competitive Renewable Energy Zones offer unique opportunities to showcase ETT

- **ETT CREZ Overview**
  - Strengthen ERCOT grid to collect and deliver wind generation to load
  - Build transmission in the most cost effective manner, addressing:
    - Future generation development
    - Load growth pockets
    - Market efficiency (reduce congestion)
    - Competitive wholesale markets
    - Economic growth
  - \$1.5 billion investment Phase 1 – 2012 (before ownership division)
  - \$1.5 billion investment Phase 2 – 2015 (before ownership division)

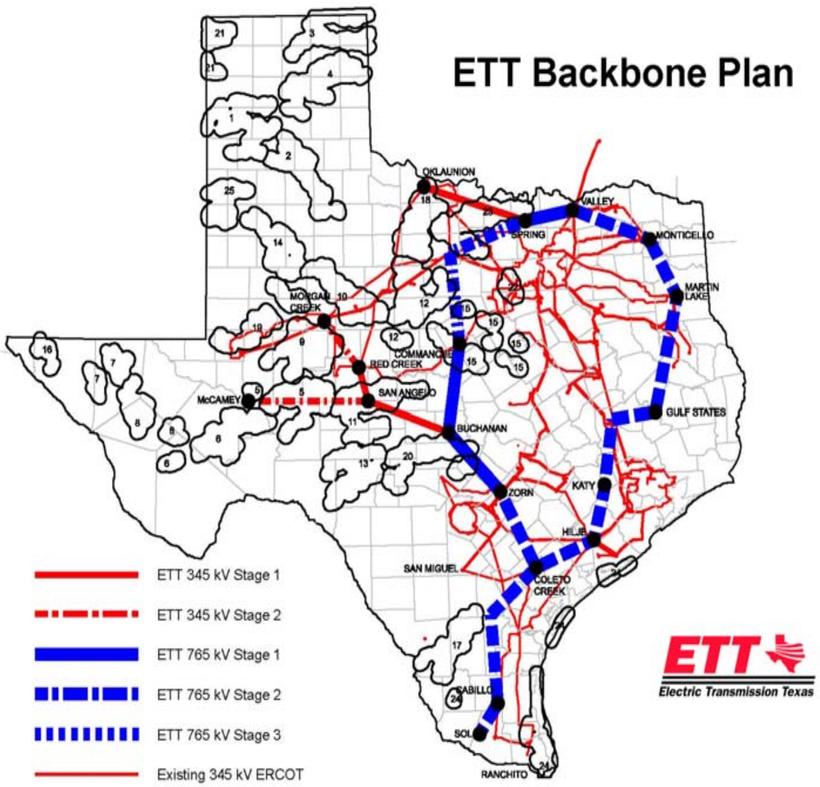


- **CREZ Approval Stages as outlined by the PUCT**
  - Stage 1 – Final order designating power regions – August 2007
  - Stage 2 – CREZ Transmission Optimization Study – January 2008
  - Stage 3 – PUCT selection of transmission construction designees – February 2008
  - Stage 4 – CCN development and submission – February 2009
  - Stage 5 – CCN approval – August 2009
  - Stage 6 – Construction (TBD)

CREZ & Backbone Opportunities – cont'd

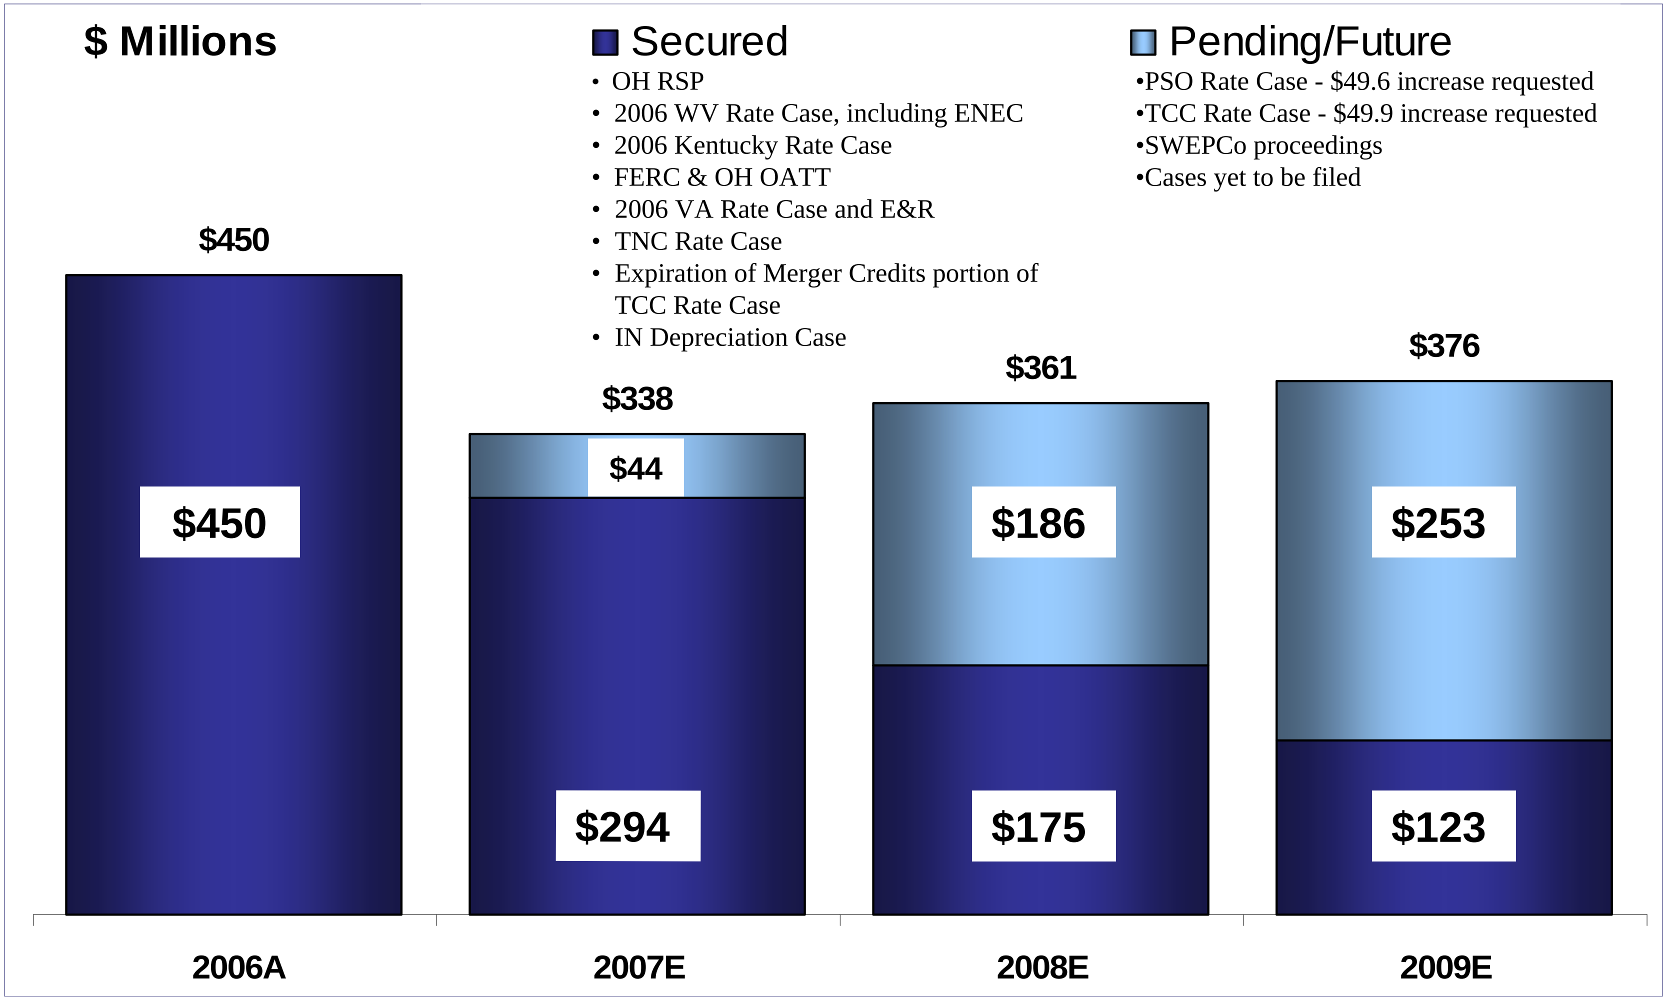
Harnessing the Wind: Competitive Renewable Energy Zones offer unique opportunities to showcase ETT

- **ETT ERCOT Backbone Proposal**
  - ETT proposal for ERCOT and PUCT to consider CREZ transmission in context of long-term vision for transmission system.
  - Current 5-year planning horizon results in higher ultimate costs, lower system efficiency.
  - Long-term 15-20 year perspective provides better plan, supports development of high voltage backbone at 765-kV.
  - $4.2 billion investment (long-term backbone).



AEP®

Incremental Rate Relief Composition



Rate Relief Is A Critical Element To AEP's Financial Success

2007 Regulatory Activity Completed

Appalachian Power – Virginia Base Rate Case

Final order approved on May 15, 2007

✓ Results in $24 Million annual increase in base rates

✓ 10.0% approved ROE

Texas North Base Rate Case

Final settlement order approved on May 24, 2007

✓ Results in $11.7 million increase in pre-tax earnings ($13.7 million increase in revenues offset by $2 million increase in depreciation expense)

✓ No stipulated ROE in the settlement. For AFUDC purposes, Texas North will utilize the ROE that comes out of the Texas Central rate case.

Appalachian Power – West Virginia Expanded Net Energy Cost (ENEC) Filing

Final settlement order approved on June 22, 2007

✓ Results in $85.5 million net increase in revenues effective July 1, 2007

- ✓$54.8 million covers increased costs related to coal and purchased power
- ✓$28.5 million covers environmental construction costs, primarily related to installation of scrubbers
- ✓Remainder ($2.2 million) recovers first year costs of rehabilitating four small electric utilities acquired as of July 1

Indiana Michigan Power – Indiana Depreciation Study

Interim settlement order approved on June 13, 2007

✓ Allowed a change in depreciation rates effective July 1, 2007, resulting in a pretax earnings increase of approximately $69 million per year

✓ Stipulated a $5 million credit to customers in the next fuel adjustment clause proceeding

✓ Required I&M to file a rate petition on or before July 1. Petition was filed on June 19.

AEP ®

In Hand to Date - $294MM of the $338MM Rate Recovery in 2007 Guidance

Regulatory Activity Underway

  - SWEPCo Turk Plant Filings in Arkansas, Louisiana and Texas for Certificates of Need

Level Of Capital Investment Will Be Adjusted Based On Rate Recovery And/Or Cash Generation

Regulatory Activity Underway

AEP Texas Central Company General Rate Case

On November 9, 2006, TCC & TNC filed applications with the PUCT to raise base rates they charge to Retail Electric Providers (REP) serving end-use electricity customers in their service territories. On April 3, 2007, TCC and TNC submitted revised rate increase requests of $69.9MM and $22MM, respectively. Requested increases include the expiration of merger-related billing credits that have been in place since 2000, totaling $20MM and $6.2MM for TCC and TNC, respectively. (TCC Docket #33309, TNC Docket #33310). TNC reached settlement on May 4, 2007 for a $13.7MM increase in revenues and a $2MM increase in depreciation, resulting in an annual increase of $11.7MM. The settlement was approved by the PUCT on May 24, 2007. The expiration of the merger credits for TCC was approved by the PUCT in June 2007.

Procedural Schedule

March 13, 2007	Intervenor testimony

PSO General Rate Case

On November 21, 2006, Public Service Oklahoma filed an application with the Oklahoma Corporation Commission to increase base rates by $49.6 million to recover investments already made and costs incurred. The request represents a 4% overall increase (including fuel). The filing also includes a proposal to adopt an annually adjusted rate mechanism, which includes a return on CWIP. The formula rate would adjust rates, up or down, if PSO earns above or below an approved bandwidth around the authorized ROE. (Case #200600285)

Pro-forma Capital Structure – Company Position (Test Year ended 6/30/06)

	% of Capitalization	Cost Rate	Weighted Cost
Long-Term Debt	53.55%	6.32%	3.39%
Preferred Stock	0.43%	4.02%	0.02%
Common Equity	46.02%	11.75%	5.41%
Total	100%		8.82%

Pro-forma Rate Base – Company Position (Test Year ended 6/30/06)*

($ in millions)

Rate Base	$ 1,189.4
Rate of Return	8.82%
Operating Income Requirement	$ 104.9
Pro-Forma Operating Income	$ 74.8
Difference	$ 30.1
Revenue Conversion Factor	1.65
Change in Revenues	$ 49.6

Regulatory Activity Underway

AEP Ohio Application For 4% Provision On Generation Rate

- On Jan. 23, 2007, CSP and OP filed an application at the PUCO to recover 2007 costs associated with additional generation-related expenditures the companies are encountering related to environmental, security and other new generation-related costs pursuant to the RSP.
- CSP and OP are requesting to implement the provision to recover $24.5MM and $8.2MM, respectively, from May 2007 through December 2007.
- Staff & Intervenor testimony filed May 11, 2007; Staff recommended a $15MM increase at CSP and a $3.7MM increase at OP; OCC recommended a $19.9MM increase for CSP and a $3.7MM increase for OP.
- Hearings were held in May and June and we expect an order in September or October 2007.
- Because there was no specific action by the PUCO within the required time frame, we were allowed to implement these increases, subject to refund, in May 2007.

I&M Indiana Rate Petition

- On June 19, 2007, I&M filed a petition with the Indiana Utility Regulatory Commission (IURC) for authority to increase its rates and charges for electric utility service and to establish and implement rate adjustment mechanisms to track certain matters.
- Requested trackers relate to reliability enhancement, demand-side management/energy efficiency programs, off-system sales margins, PJM, environmental compliance and capacity equalization settlement.
- Parties have agreed to a historic test year ended September 30, 2007, with a rate case filing date of January 31, 2008. This schedule is subject to IURC approval.

Regulatory Activity Underway

Electric Transmission Texas (ETT) Rate Filing

- Jan. 22, 2007 – ETT filed with the Public Utility Commission of Texas for approval to operate as an electric transmission utility in Texas and to establish initial rates for ETT.
  - Requested capital structure of 60% debt / 40% equity; requested ROE of 11.25%.
  - Intervenor testimony filed June 8, 2007; Staff testimony filed June 18, 2007; Staff recommended a 10.50% ROE – 10.0% with a 50 bps addition for start-up risk; Hearings were held July 16 and 17, 2007.
  - An order is expected in the third quarter of 2007 and operations are expected to commence in the 2nd half of 2007. Upon receipt of approvals, AEP and MidAmerican will each own a 50% interest in the joint venture.

Seams Elimination Cost Adjustment Revenues

- August 2006 – ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
  - Up to $96MM of SECA revenues could be disallowed, net of unused provisions.
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both.
- Exceptions to initial decision filed Sept. 11, 2006; Replies to exceptions filed Oct. 11, 2006; Order expected by the Commission in 2007.

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission serves over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1st.
- The current revenue requirement is $88.7MM and the new total revenue requirement requested is $161MM.
- We requested an effective date of September 1, 2007 for the revised tariff and FERC can suspend for an additional five months, which would push the effective date to February 1, 2008.

Regulatory Activity Underway

APCo Mountaineer IGCC Filing

West Virginia

- Testimony filed with the West Virginia Public Service Commission on June 18, 2007 in support of APCo's application for a Certificate of Public Convenience and Necessity to construct a 600MW IGCC plant in WV at a cost of approximately $2.23 billion.
  - Testimony includes a proposal for the Commission to approve a cost recovery mechanism through the existing Expanded Net Energy Cost (ENEC) mechanism. The filing is not a formal proposal to adjust rates.
  - Actual requests for increased rates will be included in future filings, once construction of the plant has commenced and actual Construction Work In Progress data is known.
- Public hearings are scheduled for December 10-14, 2007 with an order on or before March 7, 2008.

Virginia

- Testimony filed with the Virginia State Corporation Commission on July 16, 2007 seeking a prudence determination and approval to recover, beginning in 2009, Virginia's share of the carrying costs associated with the proposed plant.
- Public hearings are scheduled for February 12, 2007.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- Oral arguments regarding this matter are scheduled on the Ohio Supreme Court's agenda for October 9, 2007.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.

AEP®

Regulatory Activity Underway

Oklahoma Red Rock Generating Facility

- Testimony filed on February 1, 2006 in support of PSO's application for a determination that additional baseload electric generating capacity will be used and useful.
- The Oklahoma Corporation Commission consolidated this cause with Oklahoma Gas and Electric's application for an order granting pre-approval to construct Red Rock Generating Facility and authorize a recovery rider.
- Initial staff and intervenor testimony agrees that PSO needs baseload capacity and staff recommends that the OCC find Red Rock used and useful. The biggest challenges related to the RFP process and the debt equivalence issue in evaluating the PPA bids.
- Hearings for PSO's Used and Useful Determination and OG&E's cost recovery were held July 9-31, 2007.
- We received a positive ALJ report on August 21, 2007.

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- Public hearings began August 20, 2007.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to Purchase, Operate, Own and Install Peaking, Intermediate and Baseload Generating Facilities. Peaking and intermediate facilities have been addressed. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- Public hearings are scheduled for September 11-14, 2007.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- Public hearings are scheduled for September 27-28, 2007.

AEP®

Commitment To Credit Quality

- Maintain adequate liquidity
- Target 60% consolidated AEP debt/cap ratio
- Target long term AEP dividend payout ratio range of 55-60%

Jurisdictional Fuel Clause Summary

STATE	FUEL CLAUSE	ADJUSTMENT FREQUENCY
Arkansas	Yes	Monthly
Indiana	Yes	Semi-annually
Kentucky	Yes	Monthly
Louisiana	Yes	Monthly
Michigan	Yes	Annually
Ohio	No	n/a
Oklahoma	Yes	Annually
Tennessee	Yes	Monthly
Texas (SPP)	Yes	Annually
Virginia	Yes	Annually
West Virginia	Yes	Annually

Jurisdictional Off-System Sales Sharing Summary

STATE	OSS Sharing?	Detail
Arkansas	Yes, above and below base levels	Up to $758,600 annual margin, ratepayers receive 100%. From $758,601 to $1,167,078, ratepayers receive 85%. Above $1,167,078, ratepayers receive 50%.
Indiana	No	There is $17 million built into Indiana's base rates
Kentucky	Yes, above and below base levels	Sharing only occurs after annual profits exceed $24,855,326. Between that amount and $30 million, ratepayers receive 70%. Above $30 million, ratepayers receive 60%.
Louisiana	Yes, above base levels	Up to $874,000 annual margin, ratepayers receive 100%. From $874,001 to $1,314,000, ratepayers receive 85%. Above $1,314,000, ratepayers receive 50%.
Michigan	Yes	There are two jurisdictions: St Joe and Three Rivers. For St Joe, 100% of profits are shared with ratepayers. No profits are shared in Three Rivers, including base rates. St Joe represents 67% of the Michigan market.
Ohio	No	n/a
Oklahoma	Yes	75% of profits are shared with ratepayers.
Tennessee	No	n/a
Texas (SPP)	Yes	90% of profits are shared with ratepayers.
Virginia	Yes	Factored into base rates at a fixed rate. Effective 7/1/07, legislation was enacted to allow company retention of at least 25% of OSS margins. We have a filing pending before the VA SCC to initiate this sharing.
West Virginia	Yes	100% of profits passed back to ratepayers through the Expanded Net Energy Cost (ENEC) clause.

Maintain Financial Strength Of Utility Companies By Retaining And/Or Infusing Equity Capital Depending On Their Credit Ratios And Free Cash Flow

AEP®

Managing Subsidiary Cash Flows

- We monitor:
  - AEP consolidated cash requirements
  - Utility expected rates of return and potential regulatory lags
  - Amount of capital spending and internal cash needs
  - Free cash flow – cash available after construction
  - Credit ratios

- Dividends and equity:
  - We pay dividends based on free cash flow and credit metrics
  - When additional equity/cash is needed at the subsidiary level, the first option is dividend reductions, then capital infusions
  - We are currently evaluating hybrid securities as a source of equity

Our Objective Is To Maintain The Financial Strength And Capital Markets Access Of The AEP Operating Companies

AEP®

Commitment To Credit Quality

- Maintain adequate liquidity
- Target 60% consolidated AEP debt/cap ratio
- Target long term AEP dividend payout ratio range of 55-60%

Long-Term Debt Guidelines

Issuers:

- Issue at operating companies.

Size:

- Make transactions index eligible if possible.
- When possible, issue a size sufficient for competitive execution.

Maturity:

- Issue maturities for which the market has appetite.
- Achieve weighted average life targets for operating companies, generally between 10-15 years.

Timing:

- Will issue based on the timing of maturities and levels of short-term debt as driven by capital spending and operating cash flow.

AEP Texas Central Company

President and Chief Operating Officer: Charles Patton

AEP Texas Central Company (TCC)

(organized in Texas in 1945) is engaged in the transmission and sale of power to affiliated and non-affiliated entities and the distribution of electric power to approximately 738,000 retail customers through REPs in southern Texas, and (to a limited extent) in supplying and marketing electric power at wholesale to other electric utility companies and market participants. Under the Texas Act, TCC completed its exit from the generation business through the sale of all of its generation assets. At December 31, 2006, TCC had 1,224 employees. In addition to its AEP System interconnections, TCC is a member of ERCOT.

MAJOR CUSTOMERS:

Valero Energy Corporation
Koch Industries, Inc.
Air Liquide America, LP
Equistar Chemicals LP
TXC
Javelina Refinery
Citgo Petroleum Corporation
Formosa Utl Ven Ltd.

PRINCIPAL INDUSTRIES SERVED:

Oil and gas extraction
Food processing
Petroleum refining
Chemicals

- **Top 10 customers = 47% of industrial sales* ($)**

Appalachian Power

President and Chief Operating Officer:
Dana Waldo

Appalachian Power Company (APCo)

(organized in Virginia in 1926) is engaged in the generation, transmission and distribution of electric power to approximately 949,000 retail customers in the southwestern portion of Virginia and southern West Virginia, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities and other market participants. APCo covers a service territory of 19,049 square miles, and at December 31, 2006, APCo and its wholly owned subsidiaries had 2,461 employees. Among the principal industries served by APCo are coal mining, primary metals, chemicals and textile mill products. In addition to its AEP System interconnections, APCo also is interconnected with the following unaffiliated utility companies: Carolina Power & Light Company, Duke Energy Corporation and Virginia Electric and Power Company. APCo has several points of interconnection with TVA and has entered into agreements with TVA under which APCo and TVA interchange and transfer electric power over portions of their respective systems. APCo is a member of PJM.

Columbus Southern Power

President and Chief Operating Officer: Kevin Walker

Columbus Southern Power Company (CSPCo)

(organized in Ohio in 1937, the earliest direct predecessor company having been organized in 1883) is engaged in the generation, transmission and distribution of electric power to approximately 742,000 retail customers in Ohio, and in supplying and marketing electric power at wholesale to other electric utilities, municipalities and other market participants. CSPCo covers a service territory of 3,701 miles and at December 31, 2006, CSPCo had 1,233 employees. CSPCo's service area is comprised of two areas in Ohio, which include portions of twenty-five counties. One area includes the City of Columbus and the other is a predominantly rural area in south central Ohio. In addition to its AEP System interconnections, CSPCo also is interconnected with the following unaffiliated utility companies: CG&E, DP&L and Ohio Edison Company. CSPCo is a member of PJM.

PRINCIPAL INDUSTRIES SERVED:

Food processing
Chemicals
Primary metals
Fabricated metals
Rubber and plastic products

Total Customers:

• **Residential**	**662,000**
• **Commercial**	**76,000**
• **Industrial**	**4,000**

Public Service Company of Oklahoma

President and Chief Operating Officer: Stuart Solomon

Public Service Company of Oklahoma (PSO)

(organized in Oklahoma in 1913) is engaged in the generation, transmission and distribution of electric power to approximately 520,000 retail customers in eastern and southwestern Oklahoma, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities, rural electric cooperatives and other market participants. PSO has a service territory of 30,000 square miles and at December 31, 2006, PSO had 1,233 employees. In addition to its AEP System interconnections, PSO also is interconnected with Ameren Corporation, Empire District Electric Co., Oklahoma Gas & Electric Co., Southwestern Public Service Co. and Westar Energy Inc. PSO is a member of SPP.

PRINCIPAL INDUSTRIES SERVED:

Oil and gas extraction
Paper products
Stone, clay and glass products
Primary metals
Transportation equipment

Total Customers:	
• **Residential**	**447,000**
• **Commercial**	**58,000**
• **Industrial**	**7,000**
• **Other**	**8,000**
Total	**520,000**

Citigroup Power, Gas & Utilities Conference

March 1 – 3, 2006
The Mandarin Oriental Hotel,
Miami, FL

A Century of Firsts

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

A Century of Firsts

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Summary of Major 2006 Earnings Drivers

- ✓ **Load growth of 2.5%**
- ✓ **$500MM rate recovery assured or in progress**
- ✓ **Rising fuel costs of 11-13%**
- ✓ **Higher planned outages, increased retail load, & sale of TCC generation to impact off system sales**
- ✓ **Decline in utility operations O&M**
- ✓ **Parent Company improvement**

TRADITIONAL UTILITY FACTORS WILL DRIVE 2006 EARNINGS

Risks & Uncertainties

2006 EPS Guidance Range is $2.50 to $2.70

2006

- ✓ *Outcome of pending regulatory proceedings*
  - ✓ *Texas, Ohio, Virginia, West Virginia, Indiana, Kentucky, FERC*
- ✓ *Wholesale market volatility*
- ✓ *Plant availability*
- ✓ *Rising fuel costs*
- ✓ *Weather*

GUIDANCE RANGE DESIGNED TO WITHSTAND A REASONABLE RANGE OF RISKS AND UNCERTAINTIES

- ✓ APCo & WPCo Base Rate & Expanded Net Energy Cost (ENEC) Filing in West Virginia
- ✓ Kentucky Base Rate Filing – Settlement Pending
- ✓ Indiana Depreciation Petition
- ✓ IGCC

LEVEL OF CAPITAL INVESTMENT WILL BE ADJUSTED BASED ON RATE RECOVERY AND/OR CASH GENERATION

Regulatory Activity Underway

<u>TCC Stranded Cost Recovery Case</u>

February 16, 2006 – PUCT final order provides for net true-up of $1.475 billion

- Mar 2006 - Request for securitization
  - 4Q06 - Issuance of securitization bonds if no appeal
- Apr 2006 – Request approval for CTC to collect other true-up items
  - Jan 2007 – CTC charge to be implemented

<u>Ohio Companies Pass through of FERC OATT Changes</u>

Filed Feb 3, 2006 - Seeking authority to pass through to customers the changes in the FERC OATT related to the elimination of the SECA revenues and the costs associated with the Wyoming-Jacksons Ferry transmission line

Regulatory Activity Underway

Appalachian Power – Virginia E & R Cost Recovery Factor

Filed July 1, 2005 - Seeking recovery of $62.1 Million in new Environmental & Reliability costs

- ✓ Oct 14, 2005 – SCC ruled VA law does not allow recovery of prospective costs - $48.6 Million
- ✓ Nov 14, 2005 - APCo filed supplemental direct testimony which included updated actual E&R costs incurred through Sept. 30, 2005 of $21.1 million
- ✓ Public hearings began February 27, 2006

Appalachian Power & Wheeling Power – West Virginia Base Rate Case & ENEC Reactivation

Filed August 26, 2005 – Seeking $183 Million increase in revenues for increasing costs for coal, purchased power and environmental improvement construction projects

- ✓ APCo filed supplemental testimony on January 18, 2006 to reflect Ceredo plant purchase and other miscellaneous items resulting in a revised revenue requirement of $171 Million.
- ✓ APCO was granted the authority to begin deferral accounting for ENEC beginning July 1, 2006.

Proposed Phase-in over 4 years

- ✓ June 23, 2006 – $74 Million
- ✓ June 23, 2006 – $9 Million
- ✓ Jan 1, 2007 – $43 Million
- ✓ Jan 1, 2008 – $8 Million
- ✓ Jan 1, 2009 – $37 Million

Procedural Schedule

- ✓ March 8, 2006 – Staff and Intervenors Testimony
- ✓ March 16, 2006 – Rebuttal & Cross-rebuttal
- ✓ April 18 - 21, 2006 – Evidentiary Hearings
- ✓ Initial Briefs – 20 days after receipt of transcripts
- ✓ Reply Briefs – 10 days after initial briefs
- ✓ July 28, 2006 – Statutory deadline for an order

Regulatory Activity Underway

Kentucky Base Rate Case

Filed Sept 26, 2005 – Seeking recovery of increasing costs associated with providing safe and reliable electric service

- ✓ Parties to the case reached a settlement on Feb 6, 2006
  - ✓ $41 million annual increase in base rates
  - ✓ To be effective March 30, 2006
- ✓ Settlement was presented to the Commission at a public hearing on Feb 7, 2006
- ✓ Final order expected in March 2006

Indiana Depreciation Filing

December 1, 2005 – I&M filed petition with the IURC for accounting authorization to revise the depreciation rates applicable to its electric utility plant in service

- ✓ Based on a 2004 depreciation study, I&M recommends a decrease in annual depreciation expense of approximately $45 Million on an after-tax Indiana jurisdictional basis.
- ✓ Procedural schedule has been set with final order expected in June 2006

IGCC Regulatory Activity

Ohio - Cost Recovery Filing

Phase 1
- ✓ Effective during 2006
- ✓ Seeks recovery of initial costs, including those already incurred, such as site engineering and various other engineering services
- ✓ Approximately $23.7 Million

Phase 2
- ✓ Effective 2007- mid 2010 (Construction Phase)
- ✓ Seeks recovery of carrying costs associated with plant construction

Phase 3
- ✓ Effective mid 2010 (Commercial Operation begins)
- ✓ Seeks recovery of projected $1.174 Billion cost of plant over its operating life.

Ohio Next Steps

2006:
- ✓ Secure cost recovery plan
  - Final PUCO Order expected in 1Q06
- ✓ Finalize site selection
- ✓ Negotiate with suppliers

2006—2007:
- ✓ Obtain permits and finalize engineering and procurement

2007—2010:
- ✓ Construct and start-up plant

West Virginia IGCC Activity

On January 11, 2006, Appalachian Power Co. filed a Certificate of Public Convenience and Necessity seeking authority to construct a 600-MW IGCC facility in West Virginia.

SEEKING AUTHORITY FOR THREE PHASE RECOVERY APPROACH IN OHIO

Regulatory Activity Completed

Ohio – Rate Stabilization Plan (2006 – 2008)

- ✓ Annual 3% and 7% generation rate increases at CSP & OP, respectively
- ✓ POLR rate rider for environmental additions
- ✓ Ability to request additional 4% annual increase in generation rate
- ✓ Elimination of 5% residential generation credit (stipulated in the pre-existing Electric Transition Plan of 2000)

AEP East FERC Transmission Case

December 20, 2005 – FERC approved settlement allowing wholesale transmission rates to increase

- ✓ Results in $22 Million net revenue in 2006 from wholesale transmission

SWEPCo Fuel Factor/Surcharge Filing

January 12, 2006 – Settlement approved by PUCT

- ✓ Fuel factor will increase SWEPCo's annual Texas retail fuel-related revenues by approximately $46 Million.
- ✓ Interim surcharge will collect the under-recovery amount of $44 Million, including interest.

Appalachian Power- Virginia Fuel Factor Increase

- ✓ $57.7 Million increase in fuel factor approved on January 20, 2006

PROGRESS IS BEING MADE ON THE REGULATORY FRONT

Summary Rate Case Information

A Century of Firsts

West Virginia Base Case Rate Filing

On August 26, 2005, Appalachian Power Co. and Wheeling Power Co. filed an application with the West Virginia Public Service Commission (WVPSC) to increase electric rates and charges, a request for the reactivation and modification of the expanded net energy cost mechanism (ENEC), a proposal for the disposition of Appalachian Power Company's ENEC over-recovery balance, a request for implementation of a System Reliability Tracker mechanism, and a request for waiver of certain provisions of the Commission's Rules. APCo filed supplemental testimony on January 18, 2006 to reflect Ceredo plant purchase and other miscellaneous items resulting in a revised revenue requirement of $171 Million. (Docket #: 05-1278-E-PC-PW-42T)

Summary Rate Case Information

Virginia E&R Factor Filing

On July 1, 2005, Appalachian Power Co. filed a request with the Virginia SCC to recover incremental actual and projected costs for environmental compliance and T&D System reliability in the amount of $62.1MM. The SCC has ruled that under applicable VA law, it does not have authority to approve the recovery of projected E&R costs before their actual incurrence and adjudication. APCo filed supplemental direct testimony which included actual costs incurred for E&R thru September 30, 2005 of $21.1 million. Docket # PUE-2005-00056

Capital Structure – Company vs. Staff

Capital Structure	Company Position (filed 7/1/05)	Staff Position (filed 1/11/06)
Long-Term Debt	53.43%	51.50%
Short-Term Debt	2.67%	2.20%
Preferred Stock	0.54%	0.53%
Common Equity	42.65%	45.16%
ITC	0.71%	0.61%
Total	**100.00%**	**100.00%**
Recommended ROE	**10.85%**	**9.80%**

Revenue Requirement – Company vs. Staff*

Revenue Requirement	Company Position (filed 11/14/05)	Staff Position (filed 1/11/06)
Environmental	13.3	8.2
Transmission	6.1	8.8
Distribution	1.7	2.6
Total	**$21.1MM**	**$19.6MM**

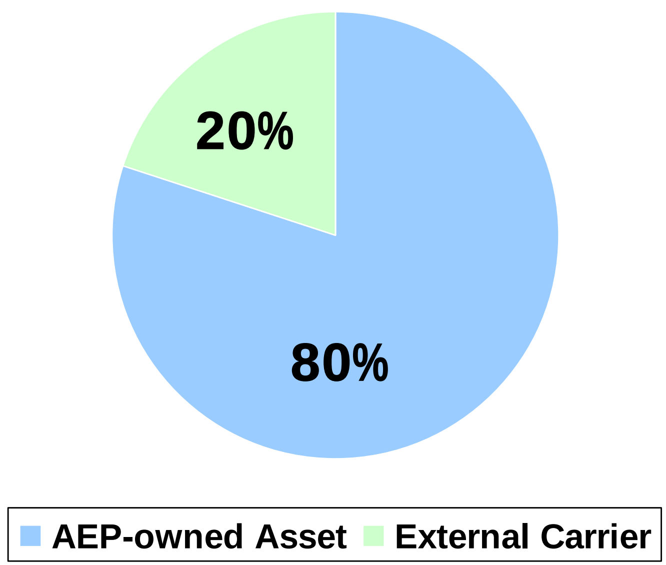
AEP's Coal Transportation Assets

Coal Transportation to AEP Plants*
2005 Actual



AEP's substantial coal transportation assets include:

- 7,065 railcars
- 2,318 barges
- 53 towboats
- 1 active coal handling terminal (20 million tons of annual capacity)

* Represents close approximations

AEP'S TRANSPORTATION ASSETS PROVIDE FLEXIBILITY IN A CONSTRAINED DELIVERY ENVIRONMENT

IGCC

Integration Gasification Combined Cycle

A Century of Firsts

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called "syngas" – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2 , mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP's eastern service territory.

AEP is currently working with a technology provider to develop a firm price for an IGCC facility to be built in our eastern service region. This price will be available in 2006. AEP intends to seek regulatory recovery approvals in advance of building the plant.

AEP AMERICAN® ELECTRIC POWER

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate relief or other recovery for new investments, transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements periodically issued by accounting setting bodies; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

AEP Strategy

Strategy: grow our core utility business at a consistent rate through major investment supported and funded by innovative programs for regulatory recovery as well as develop our independent, federally regulated Transmission Company for the pursuit of new major interstate projects.

Our 2008 Focus:

- Prepare for post-2008 transition in Ohio
- Invest in and evolve infrastructure to support future technology and customer needs focused on efficiency, conservation and load management
- Enhance cash flow & earnings through rate recovery mechanisms
- Take advantage of AEP's size to benefit our customers and shareholders through regulatory-supported investment

Sustained capital investment opportunities support earnings growth.

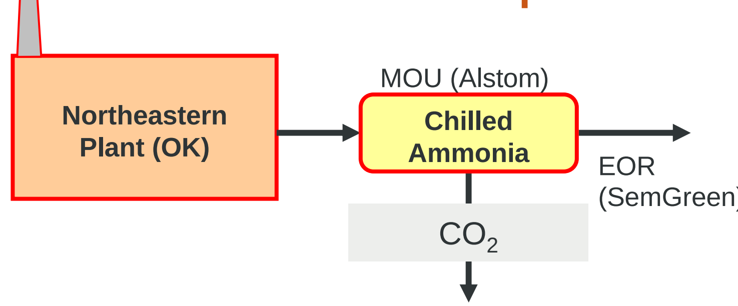
Phase 2

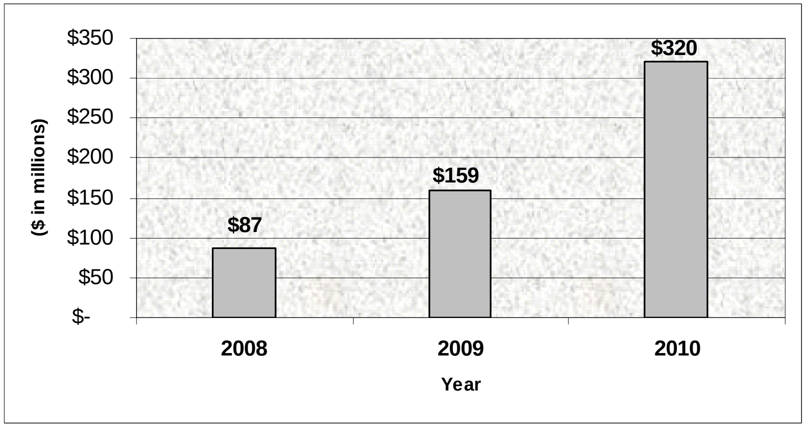
2012 Commercial Operation



We are committed to validating and deploying technologies that ensure coal remains a viable resource for AEP and America.

Transmission – Investments and Earnings Contributions

Projected Transmission Capital Spending*

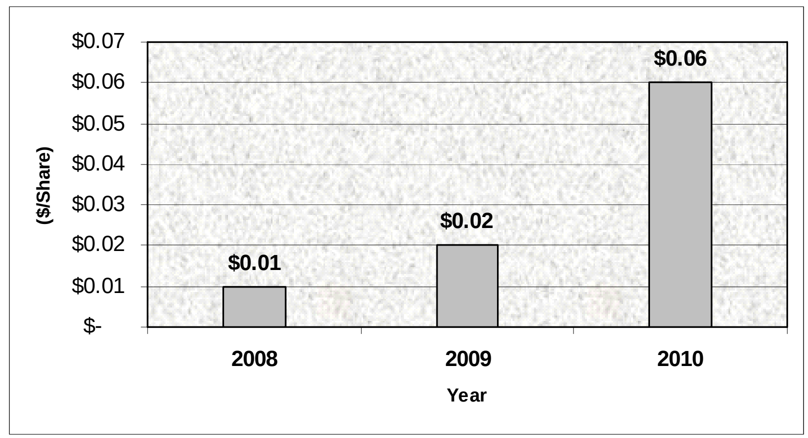


* ETT and PATH projects included in above projection.

ETT Electric Transmission Texas

PATH Potomac-Appalachian Transmission Highline

Projected Transmission EPS Contributions*



* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

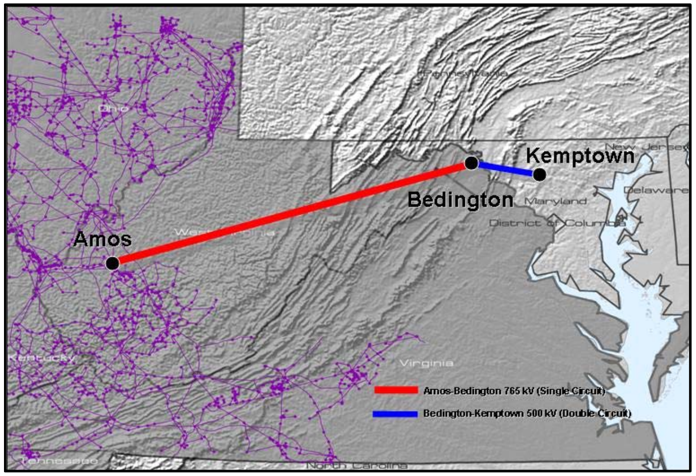
Note: Transmission Joint Ventures are excluded from AEP's base forecast as shown on slide 8 because they are not consolidated for financial reporting. AEP will be responsible for funding 40-50% of our 50% share with our own capital, and the remainder will be financed with off-balance sheet debt.

Transmission will provide a near and long term catalyst for growth.

I-765™ Transmission in PJM: PATH

Execution in Action

- *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries -- to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
  - Completed FERC Filing – December 2007
    - *Pursuing new project FERC incentives: cash return on CWIP, 14.3% ROE, recovery of all costs incurred prior to the time rates go into effect, and recovery of all prudently incurred development and construction costs if the project is abandoned.*
- *Funding Plans/Transaction Structure*
  - AEP and Allegheny share ownership of Amos – Bedington line and contribute equally to this portion of the project through PATH West Virginia Transmission Company, LLC
  - AEP's investment will be held in the AEP Transmission Holding Company LLC subsidiary
  - Project corridor was included in the DOE's National Interest Electric Transmission Corridor
- *Key Next Steps*
  - Siting Approval – Fall 2009
  - Targeted Completion – 2012



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Potomac-Appalachian Transmission Highline

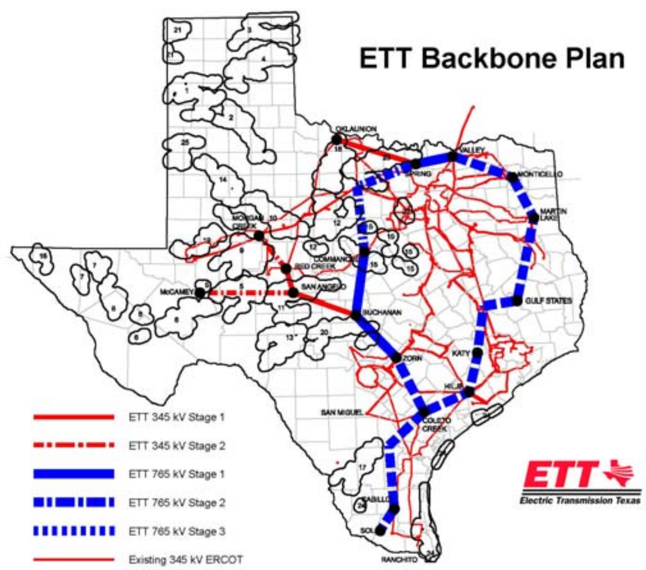
I-765™ Transmission in Texas (ETT)

Electric Transmission Texas Update

- **Transaction Structure**
  - 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
  - ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
  - Services provided by AEP and investment opportunities can be offered by either partner

- **Next Steps**
  - ETT project opportunities to be evaluated on a case by case basis
  - Anticipate offering projects in Q2 2008

- **ETT ERCOT Backbone Proposal**
  - ETT proposal for ERCOT and PUCT to consider CREZ transmission in context of long-term vision for transmission system.
  - Current 5-year planning horizon results in higher ultimate costs, lower system efficiency.
  - Long-term 15-20 year perspective provides better plan, supports development of high voltage backbone at 765-kV.
  - $4.2 billion investment (long-term backbone).*



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

* Before ownership division.

Distribution - gridSMART^{SM}

gridSMART^{SM}: implementing AEP's vision for the distribution and customer services business in the future, including the development of new customer programs to reduce consumption and peak demand, and a plan to deploy advanced technologies.

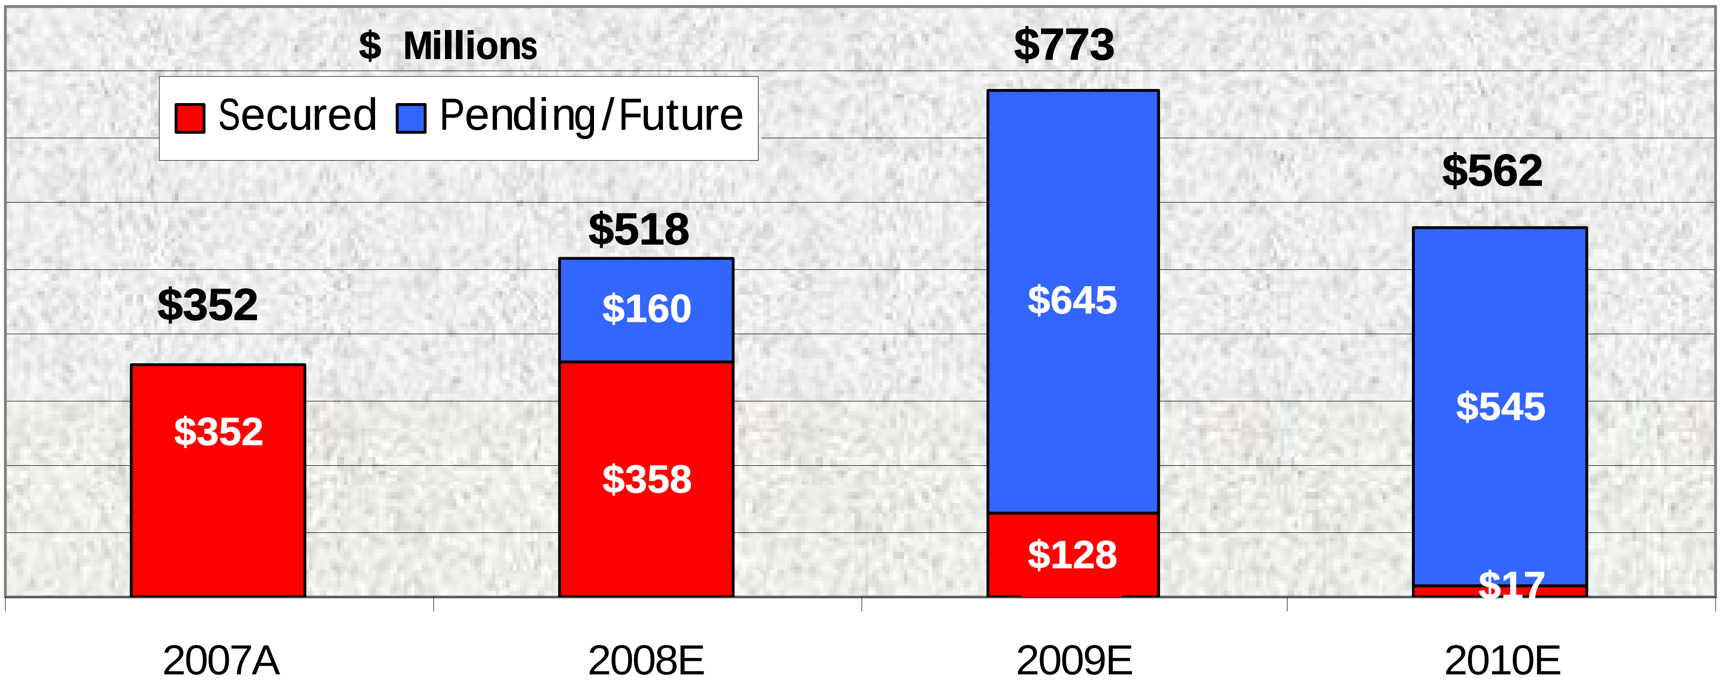
- **Enables customers to better manage energy**
- **Improves service to our customers by enhancing customer choice and customer control**
- **Improves efficiency**
- **Integrates distributed energy resources into our grid**
- **Transforms the way we do business**

Capital Investment, Subject to Regulatory Approval * $ in millions			
Technology	**2008**	**2009**	**2010**
Metering & Communications	**$83**	**$138**	**$146**
Distribution Technology Enhancements	**$40**	**$ 63**	**$ 82**

*$472MM of the $552MM not in current forecast; spending contingent upon regulatory approval

AEP will continue to be an industry leader in deploying advanced technology on a commercial scale. $552MM capital investment by 2010, subject to regulatory approval.

Incremental Rate Relief Assumptions



- 69% of 2008 Rate Relief Secured: I&M Depreciation, APCo - WV Surcharge, TCC & TNC General Rate Cases, Ohio RSP (3% & 7%), PSO Peaking Generation & General Rate Case, Ohio 4% Generation Rider and Marginal Loss Recovery.
- 2008 Pending: APCo - Virginia Fuel Factor, PSO January 2007 Ice Storm Recovery, SWEPCo - LA Financial Review, other cases yet to be filed.

Our goal is to maximize utility company cash flow and returns by minimizing regulatory lag.

  - IGCC Phase 2 Filings in Ohio on Hold Pending Resolution of Supreme Court Challenge of PUCO's authority
  - SWEPCo Turk Plant Filings in Louisiana and Texas
  - SWEPCo Stall Plant Filings in Louisiana and Arkansas

Sustainable Business Model

- *Strength and scale in assets & operations*
- *Continued innovation and deployment of leading technology advancements*
- *Sustainable earnings growth through near and long term capital investment opportunities*
- *Comprehensive regulatory strategy focused on maximization of cash flow and return through minimized regulatory lag*
- *Strong dividend yield with respect to peers*
- *Balance sheet and credit profile stability*

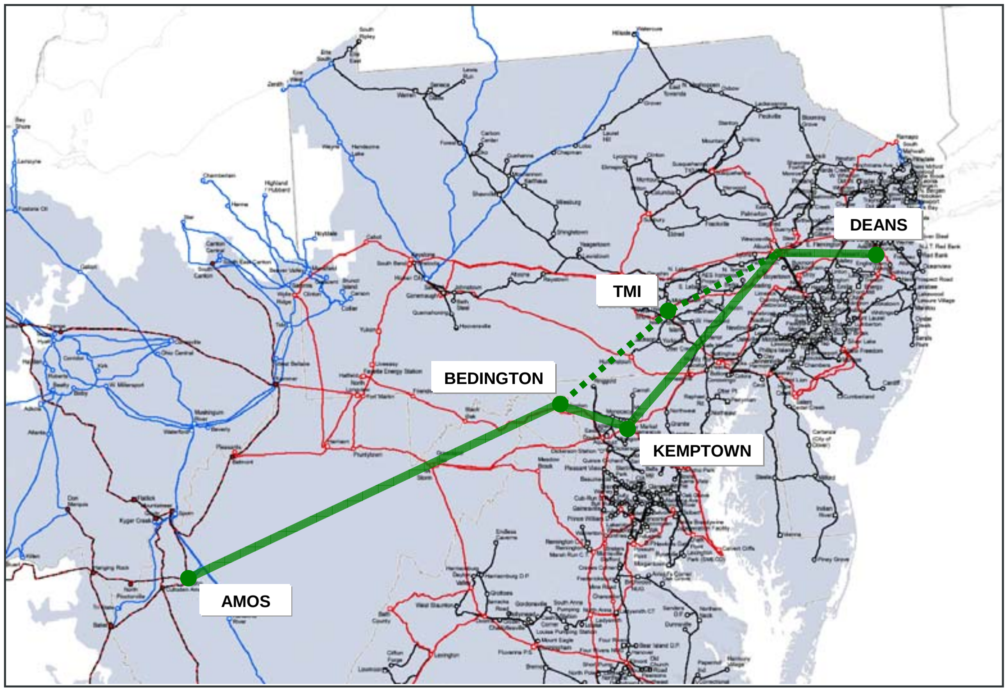
Capital Investment + Rate Relief = Earnings Growth

I-765™ Transmission in PJM East

Second phase of original AEP 550-mile I-765 proposal

- Approximately 250 miles from West Virginia-Maryland border to Public Service Electric & Gas Deans Station in New Jersey.
- Currently under consideration by PJM as part of Regional Transmission Expansion Plan (RTEP).
- Based on PJM RTEP approval, AEP will seek a suitable business partner (JV partner) to complete the second leg of the original proposal.

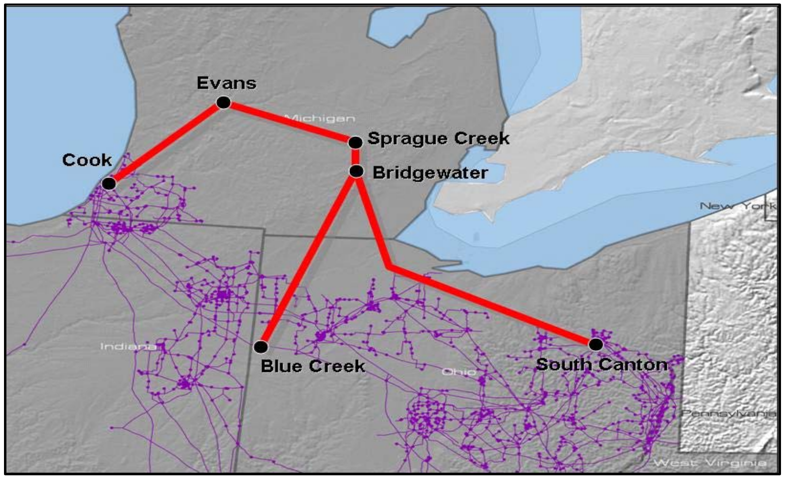


The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

I-765^{TM} Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
  - Study was released Q3 2007
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.6 billion investment (before ownership division)
  - AEP and ITC are in discussions to form a Joint Venture
- *Benefits*
  - Up to 5,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- *Next Steps*
  - Agreement on JV (AEP/ITC) Q2 2008
  - JV Formation - 2008
  - MISO and PJM Review/Approval - 2008
  - FERC Filing - Fall 2008
  - Siting Approval – Fall 2010
  - Estimated Completion – Fall 2015

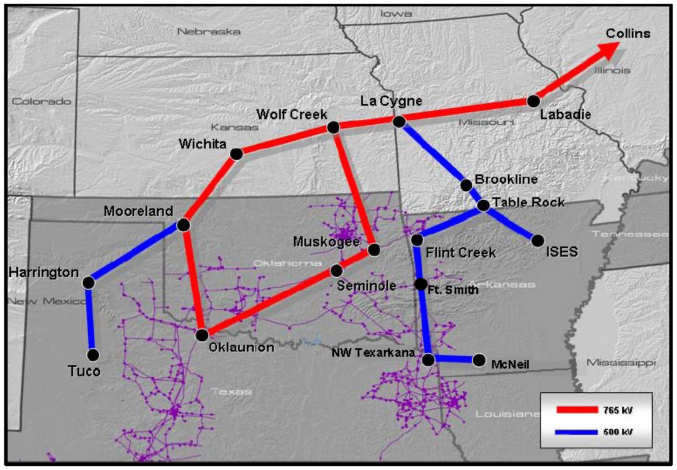


The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

I-765TM Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- ***Overview***
  - July 2006 AEP submitted conceptual project for six 765-kV lines
  - Proposed 765-kV Kansas / Oklahoma / Arkansas connecting to MISO/PJM
  - 610 miles from Kansas to Arkansas
  - SPP proposes 765-kV in Texas / Oklahoma / Kansas / Missouri connecting to MISO/PJM
  - SPP also proposes 500-kV in Texas / Oklahoma / Arkansas / Missouri
  - $3.0 billion investment (before ownership division)
  - Proposed 2012-2017 construction period
- ***Benefits***
  - 4,000 MW improved transfer capability
- ***Next Steps***
  - Study Disclosure – Completed 2Q 2007
  - JV Formation (ETA) – Completed 3Q 2007
  - SPP 10-year Expansion Plan Issued – December 2007
  - SPP RTO/BOD EHV Overlay Approval – 2Q 2009
  - SPP RTO FERC Filing – 3Q 2009
  - Siting Approval – 3Q 2011
  - Estimated Completion – 3Q 2017



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Electric Transmission America (ETA)

- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.

ETA reflects a natural progression and expansion of AEP's partnership with MidAmerican.

2008 Regulatory Activity Completed

AEP Ohio Application For 4% Provision On Generation Rate

- On January 30, 2008, a settlement agreement was approved by the PUCO allowing the generation rider to be increased to recover in 2008 an additional $28.5 million for CSPCo and $4.9 million for OPCo.
- The approved settlement also authorized the inclusion of $78 million of estimated net costs of marginal losses ($38.9 million for CSPCo and $39.2 million for OPCo) in the existing Transmission Cost Recovery Rider, with any over/under recovery of the actually incurred costs from June 2007 through December 2008 to be reflected in the 2009 TCRR recovery mechanism, including carrying charges on any such over/under recovery.

Regulatory Activity Underway

Ohio Post-2008

- On August 29, 2007, the Ohio Governor submitted legislation (SB221) that would restructure the regulation of Ohio's electric industry. The bill also includes several efficiency and renewable energy standards.
- Hearings on the legislation began on September 26, 2007 in the Ohio Senate and continued through the end of October.
- On October 25, 2007, the substitute version and associated amendments were incorporated into SB221.
- Full Senate vote occurred October 31, 2007. SB221 passed 32-0.
- Presented to House Public Utilities Committee on November 7, 2007; Hearing schedule extends to the end of January 2008 and we anticipate a signed bill in March or April of 2008.

APCo (Virginia) Fuel Factor Adjustment

- On July 16, 2007, a filing was made with the VA SCC requesting the termination of the OSS base credit and reflected 75% of OSS margins as a credit to fuel expense, consistent with new Virginia legislation. Implementation of the fuel factor was approved effective September 1, 2007, subject to review/refund.
- Intervenor testimony was filed on October 5, 2007, staff testimony filed on October 15, 2007 and rebuttal testimony filed on October 22, 2007. APCo's rebuttal testimony included adding $18.8 million to the fuel factor request related to the recovery of PJM marginal losses incurred.
- Public hearings were held on December 19, 2007. We await an order in this proceeding.

Regulatory Activity Underway

I&M Indiana Base Rate Case

- On January 31, 2008, I&M filed a base rate case with the Indiana Utility Regulatory Commission (IURC) for authority to increase its rates and charges for electric utility service and to establish and implement rate adjustment mechanisms to track certain matters.
- Requested trackers relate to reliability enhancement, demand-side management/energy efficiency programs, off-system sales margins, PJM costs and environmental compliance.
- Parties agreed to a historic test year ended September 30, 2007, with adjustments allowed for fixed, known and measurable items that will occur within 12 months following the end of the test year.
- The case includes the following:
  - Required Rate Relief/Revenue Requirement - $128.5 million
  - Rate Base (original cost less depreciation) – approximately $2 billion
  - Requested ROE – 11.50%
  - Required ROR – 8.10%
- Hearings are expected in May 2008 and an order in the first quarter of 2009.

Regulatory Activity Underway

PSO Storm Cost Recovery Filing

- On October 24, 2007, PSO filed an application with the Oklahoma Corporation Commission to defer, amortize and recover costs related to a severe January 2007 winter storm. PSO requests the Commission to direct it to establish a regulatory asset of approximately $13 million reflecting the future recovery of these costs, and to amortize the regulatory asset as PSO realizes proceeds from the sales of sulfur dioxide (SO_2) emission allowances.
- Staff and intervenor testimony was filed January 17, 2008, a settlement conference is scheduled for February 25, 2008 and hearings are scheduled for February 27 and 28, 2008.
- Staff and AG testimony was supportive of PSO's requested treatment for cost recovery.

PSO Red Rock Generating Facility Recovery Filing

- On December 28, 2007, PSO filed an application with the Oklahoma Corporation Commission to defer, amortize and recover costs related to the Red Rock Generating Facility, which was denied construction and recovery pre-approval in October 2007.
- PSO requests the Commission make a determination that the costs incurred on the Red Rock project were prudent and direct it to establish a regulatory asset of approximately $21 million reflecting the future recovery of these costs, and to amortize the regulatory asset as PSO realizes proceeds from the sales of SO_2 emission allowances.
- A procedural schedule in the case has not yet been established.

Regulatory Activity Underway

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $161MM.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to February 1, 2008, with rates subject to refund.
- Technical conferences and settlement meetings were held in October – December 2007. Settlement discussions are currently on-going.

Regulatory Activity Underway

APCo Mountaineer IGCC Filing

West Virginia

- Testimony filed with the West Virginia Public Service Commission on June 18, 2007 in support of APCo's application for a Certificate of Public Convenience and Necessity to construct a 600MW IGCC plant in WV at a cost of approximately $2.23 billion.
  - Testimony includes a proposal for the Commission to approve a cost recovery mechanism through the existing Expanded Net Energy Cost (ENEC) mechanism. The filing is not a formal proposal to adjust rates.
  - Actual requests for increased rates will be included in future filings, once construction of the plant has commenced and actual Construction Work In Progress data is known.
- Staff and Intervenor testimony was filed November 19, 2007 and hearings were held December 10-12, 2007. An order is due by March 6, 2008.

Virginia

- Testimony filed with the Virginia State Corporation Commission on July 16, 2007 seeking a prudence determination and approval to recover, beginning in 2009, Virginia's share of the carrying costs associated with the proposed plant.
- Intervenor testimony was received December 10, 2007 and Staff testimony was received on January 18, 2008. Public hearings are scheduled for February 12, 2008.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.
- Oral arguments regarding this matter were conducted at the Ohio Supreme Court on October 9, 2007. It is likely the court's decision will not be announced until some time in the first quarter of 2008.

Regulatory Activity Underway

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- The PSC issued its order on November 21, 2007, approving construction of the plant.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The peaking facility has been addressed and the intermediate facility is under review. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- Public hearings commenced September 11, 2007. Decision expected in the first quarter of 2008.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- Public hearings commenced October 17, 2007. Decision expected in the first quarter of 2008.

Regulatory Activity Underway

SWEPCo Stall Plant Filings

Arkansas

- Proceeding is currently suspended pending outcome in Louisiana.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The intermediate facility, known as the Stall Plant and sited in Shreveport, LA, was bifurcated from the original filing and had a procedural schedule established on January 9, 2008.
- Staff and intervenor testimony is due February 15, 2008, rebuttal testimony is due February 29, 2008 and hearings will commence on April 7, 2008.

Texas

- PUCT order approving plant was issued on March 8, 2007.

AEP AMERICAN® ELECTRIC POWER

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate relief or other recovery for new investments transmission service and environmental compliance); resolution of litigation (including pending Clean Air Act enforcement actions and disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements periodically issued by accounting setting bodies; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

AEP Strategy

Strategy: grow our core utility business at a consistent rate through major investment supported and funded by innovative programs for regulatory recovery as well as develop our independent, federally regulated Transmission Company for the pursuit of new major interstate projects.

Our Focus:

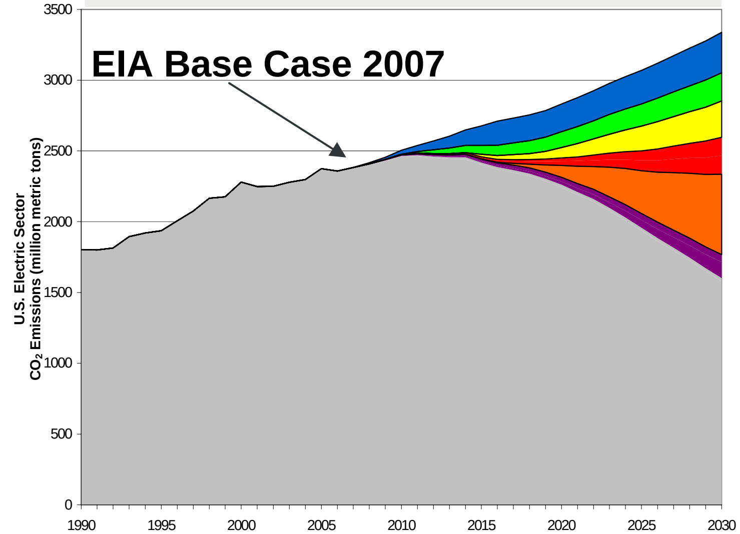
- Prepare for transition to market in Ohio
- **Invest in and evolve infrastructure to support future technology and customer needs focused on efficiency, conservation and load management**
- Enhance cash flow & earnings through rate recovery mechanisms
- Take advantage of AEP's size to benefit our customers and shareholders through regulatory-supported investment

Sustained capital investment opportunities support earnings growth.

AEP is Pursuing a Portfolio of Options to Address Sustainability

Technology	EIA 2007 Reference	Industry Target	AEP Plan
Efficiency	Load Growth ~ +1.5%/yr	Load Growth ~ +1.1%/yr	DSM: 1000MW reduction in demand by 2012
Renewables	30 GWe by 2030	70 GWe by 2030	Wind PPAs through 2015: 1610MW nameplate or 232MW capacity for planning purposes. Also, voluntary green energy tariffs (Ohio program started 2007)
Nuclear Generation	12.5 GWe by 2030	64 GWe by 2030	Evaluation of COL
Advanced Coal Generation	No Existing Plant Upgrades 40% New Plant Efficiency by 2020–2030	150 GWe Plant Upgrades 46% New Plant Efficiency by 2020; 49% in 2030	1,246MW IGCC by 2017 447MW USC Turk plant by 2011
Carbon Capture and Storage	None	Widely Deployed After 2020	Chilled Ammonia: Mountaineer 2009 & Northeastern 2012 Oxy-coal by 2020
Plug-in Hybrid Electric Vehicles	None	10% of New Vehicle Sales by 2017; +2%/yr Thereafter	Joined Electric Drive Transportation Association (EDTA) in May 2007
Distributed Energy Resources	< 0.1% of Base Load in 2030	5% of Base Load in 2030	Pursuit of NaS® Energy Storage – 25MW of storage by 2010 and 1000MW of other storage/fuel cells by 2020

Technical Potential for CO_2 Reductions - *Achieving all targets is very aggressive, but potentially feasible.*



Technology advancement is required beyond present "state of the art" to achieve 1990 CO_2 levels by 2030. AEP is investing in a portfolio of GHG reduction initiatives. Allocation of funds will shift over time depending on technology, legislation, etc.

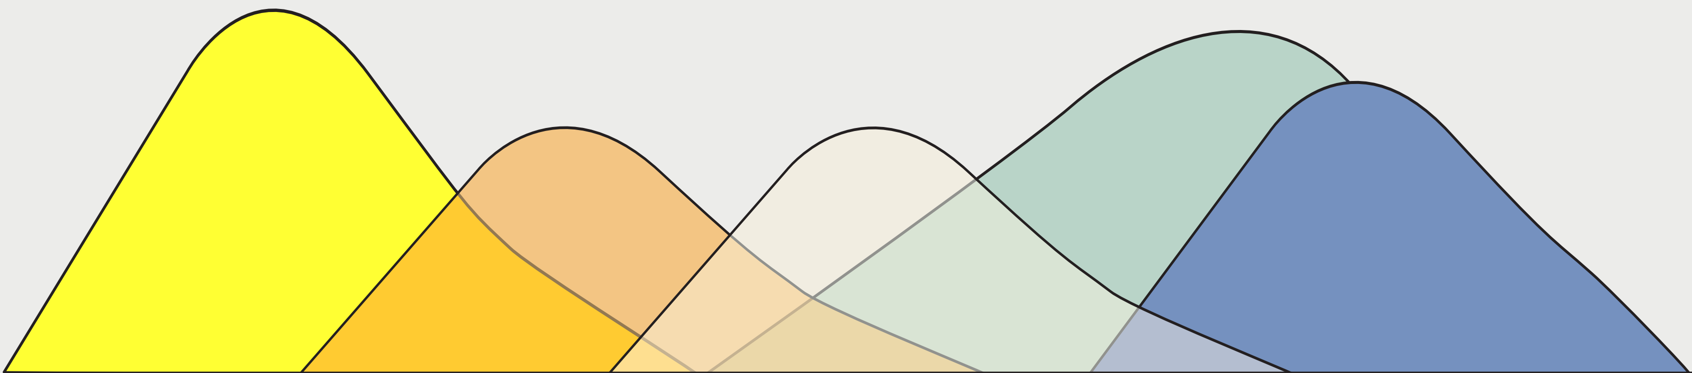
Capital Investment Earnings Catalysts

Capital Investment – Consistent Waves of Opportunity

Environmental Retrofits	New Generation Projects	GridSMART Technology	Transmission Ventures	Adv Generation/ CO_2
$5.1B	$1.7B+	$1.5B+	$2.25B - $3.75B*	$2.0B+



Baseline capital investment of approximately $2.5B/year for Transmission, Distribution & Generation versus annual depreciation of $1.1B/year

2005 → 2010 → 2020 →

Note: This slide represents current capital investment plans as well as future capital investment opportunities.

Capital investment opportunities combined with associated rate relief will drive sustainable earnings growth.

Imagine . . .

- Enabling our customers to better manage energy
- Dramatically improving service to our customers
- Integrating distributed energy resources into our grid
- Transforming the way we do business

Our vision for GridSMART is ambitious and innovative.

What is GridSMART?

- **Addresses the full energy pathway from the power plant to the customer**
- **Improves efficiency and reduces both customer demand and energy losses**
- **Enhances Customer Choice, Customer Control and Customer Service through:**
  - Time of use rates
  - Real time pricing/critical peak pricing
  - Direct load control
  - New and improved self service options
    - Account maintenance
    - Start/Stop service
    - Remittance date selection with electronic bill presentment and payment
    - Outage reporting and restoration notification
    - Prepay metering
    - Energy usage analysis

GridSMART: implementing AEP's vision for the distribution and customer services business in the future, including the development of new customer programs to reduce consumption and peak demand, and a plan to deploy advanced technologies.

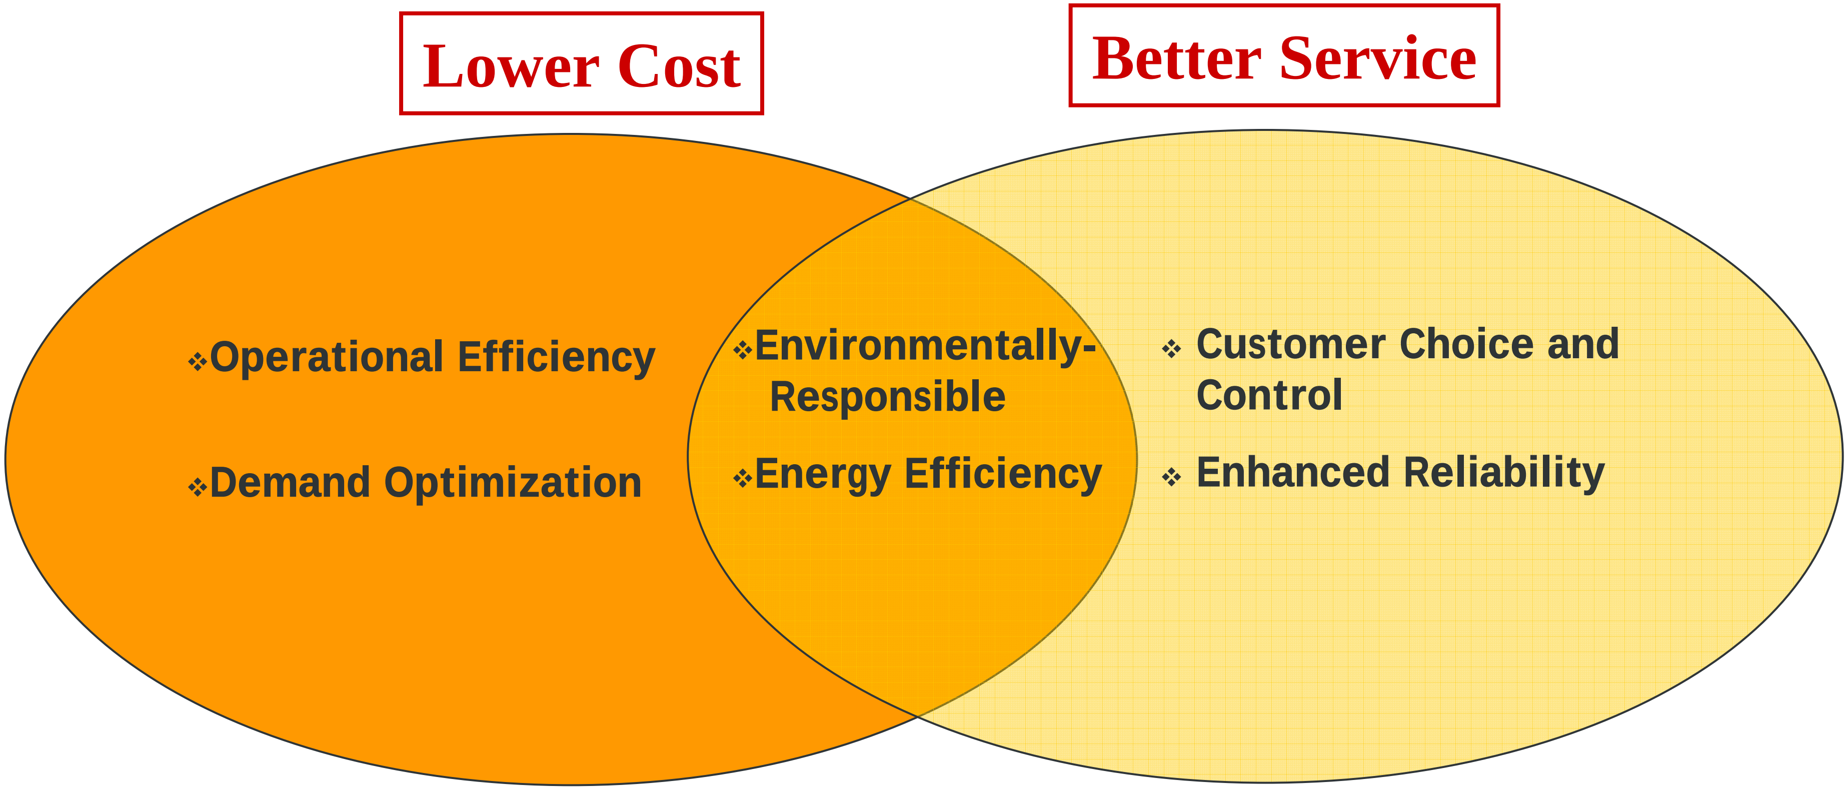
Why Now?

- The price of electricity is rising and demand is growing
- Costs of equipment/technology for consumers are decreasing
- Customers are increasingly technologically savvy
- T&D infrastructure is aging
- New generation is needed
- Increased focus on environmental issues, including carbon footprint

Customer programs + Advanced technologies = Customer, Shareholder and Company Value

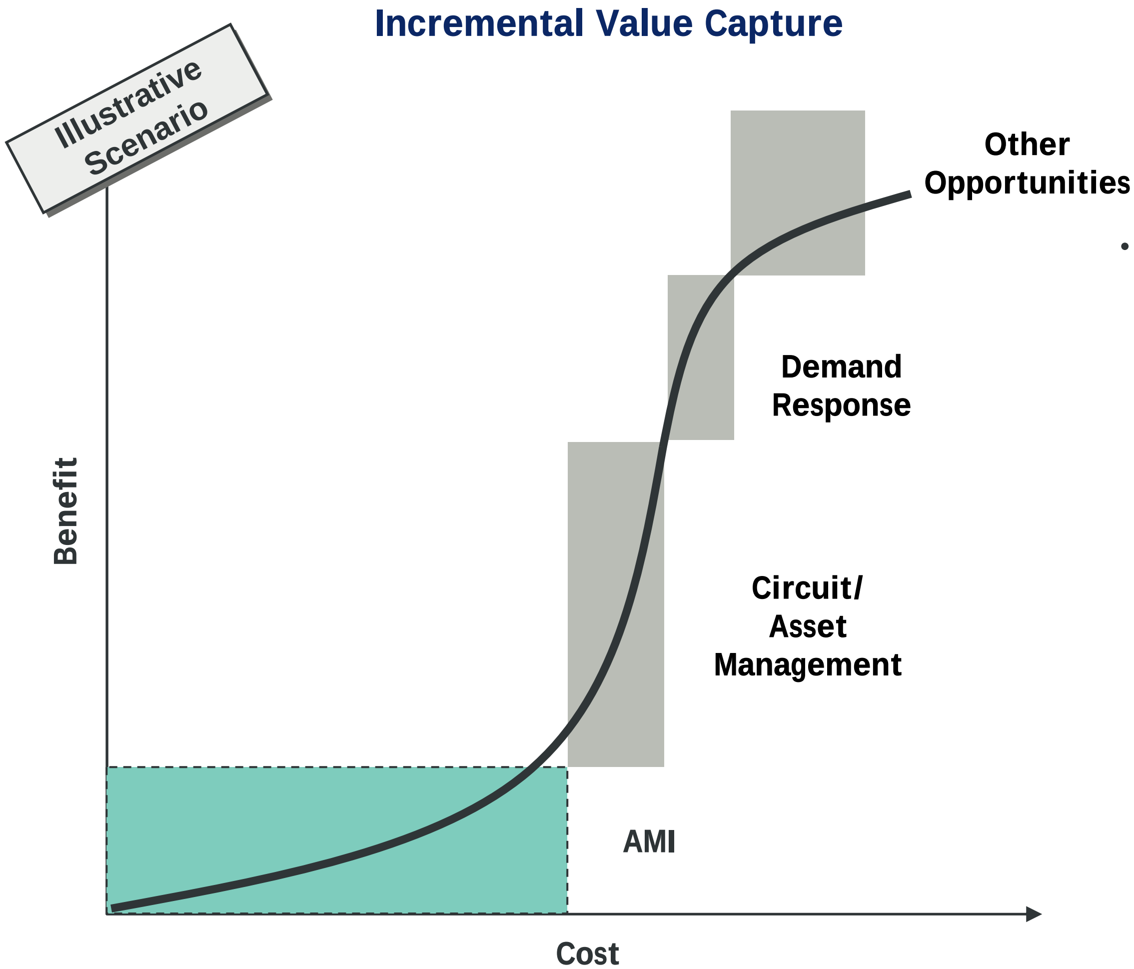
AEP's GridSMART Project

AEP's **GridSMART** project will develop a deployment plan for new customer programs and advanced technologies to support pursuit of the following value propositions:



Increased efficiency reduces cost and GHG emissions. It also delays the need for new generation.

Investment Opportunity Evaluation

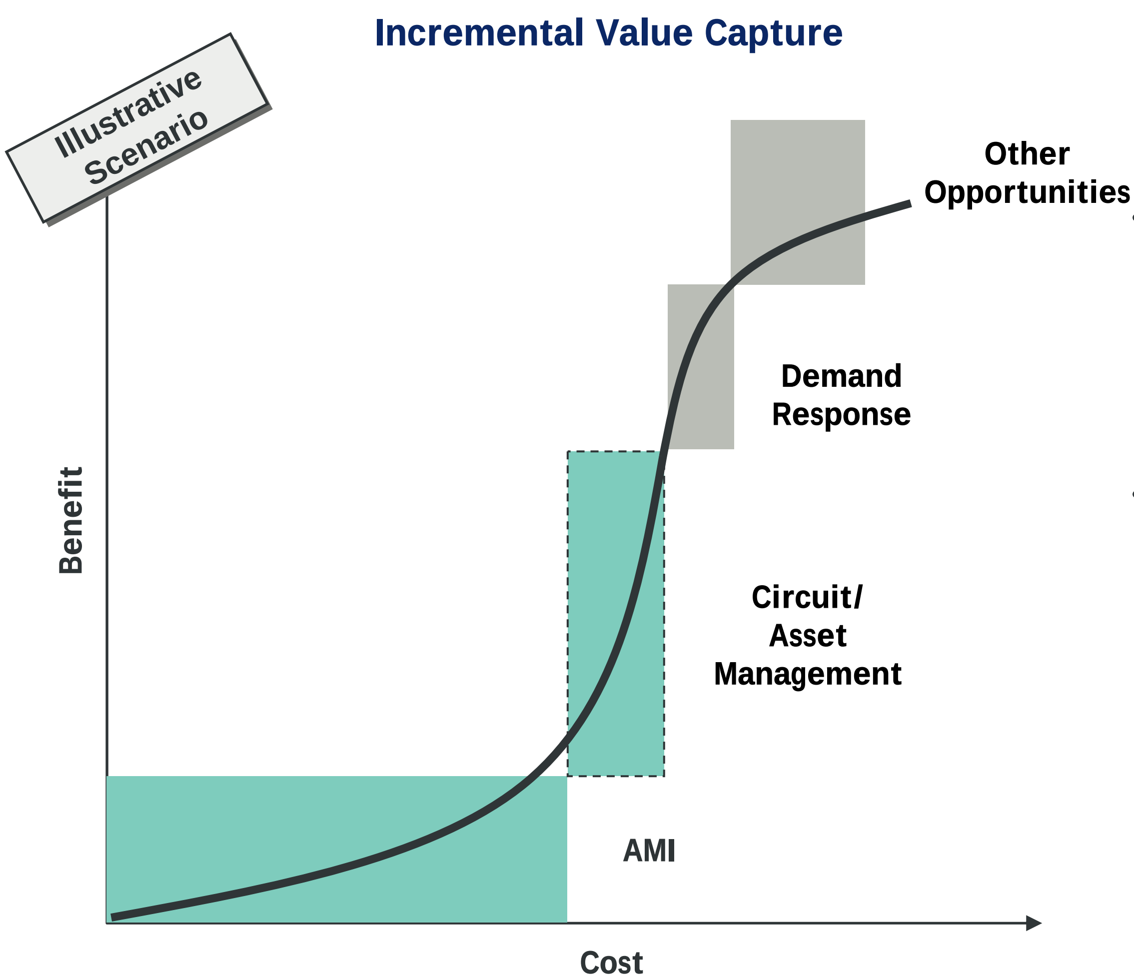


AMI

- **Represents the initial capital outlay**
  - Meter functionality
  - Communications infrastructure
  - Head-end and legacy systems modifications
  - Dependent upon regulatory approval

AMI is the first building block of the GridSMART initiative.

Investment Opportunity Evaluation

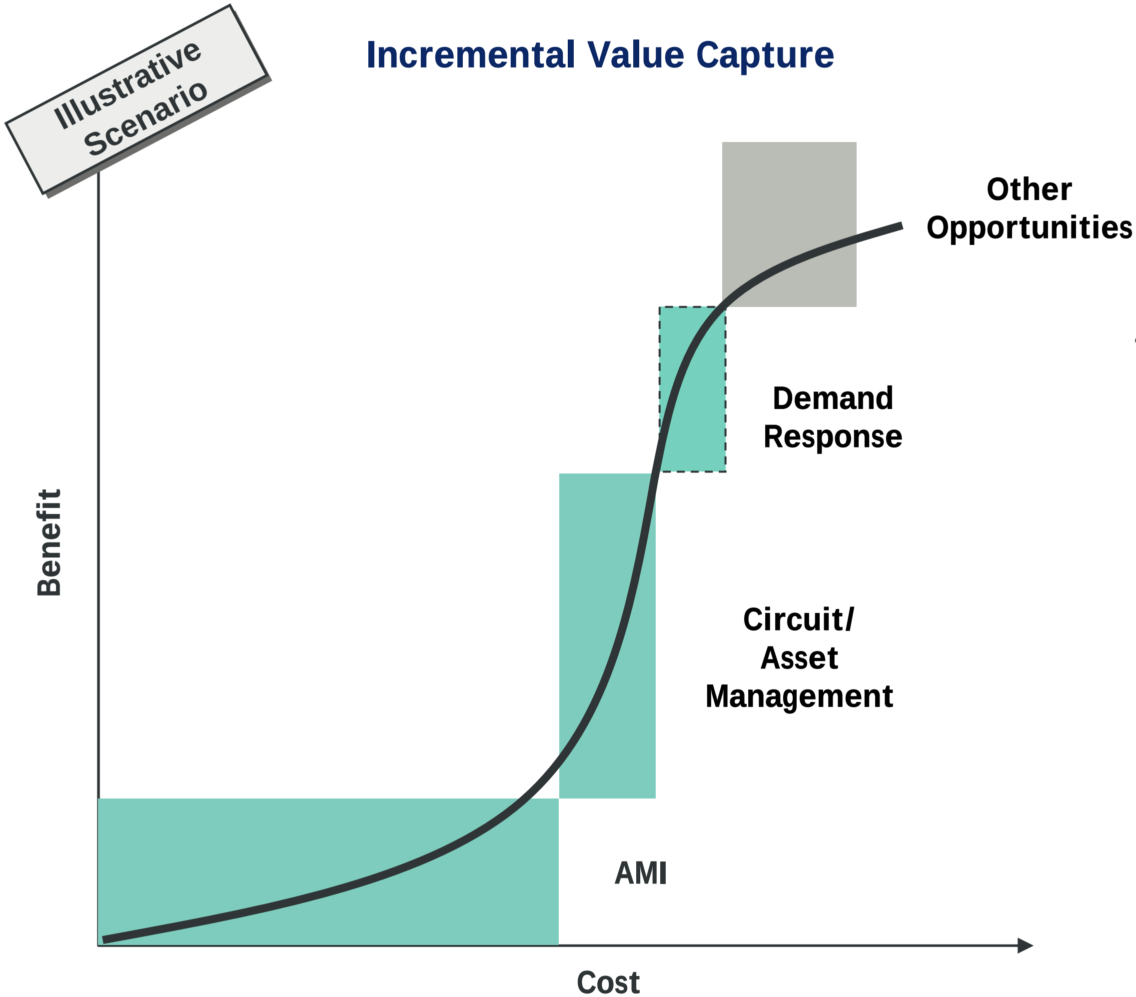


Circuit & Asset Management

- **Incremental field capital and knowledge-based applications**
  - Sensors & device controllers
  - Information management
- **Real-time information from our distribution assets enables advanced analysis and improved operations**
  - Outage and restoration reporting
  - Circuit reporting on exceptions
  - Voltage alerts on all feeders

Circuit & asset management will transform our distribution business.

Investment Opportunity Evaluation



Demand Response

- **Incremental utility-side capital**
  - Provides real-time pricing
  - Enables customer control
  - Results in reduced demand and energy consumption
  - Improves environmental performance

Demand response sends real-time signals to customers to enable decision making.

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1

The AEP-GE Initiative

We will deploy smart meters, distribution automation and the associated enhanced technology resulting from the collaboration with GE in two regions by the end of 2008 -- representing approximately 200,000 customers.

By integrating customers and their end use technologies into the daily operation of the grid, we can collaborate to optimize supply and demand and improve energy efficiency and environmental sustainability.

Our agreement with GE is a winner for our customers, our shareholders and for the environment.

AEP AMERICAN® ELECTRIC POWER

Working Together for a Brighter Future

imagination at work

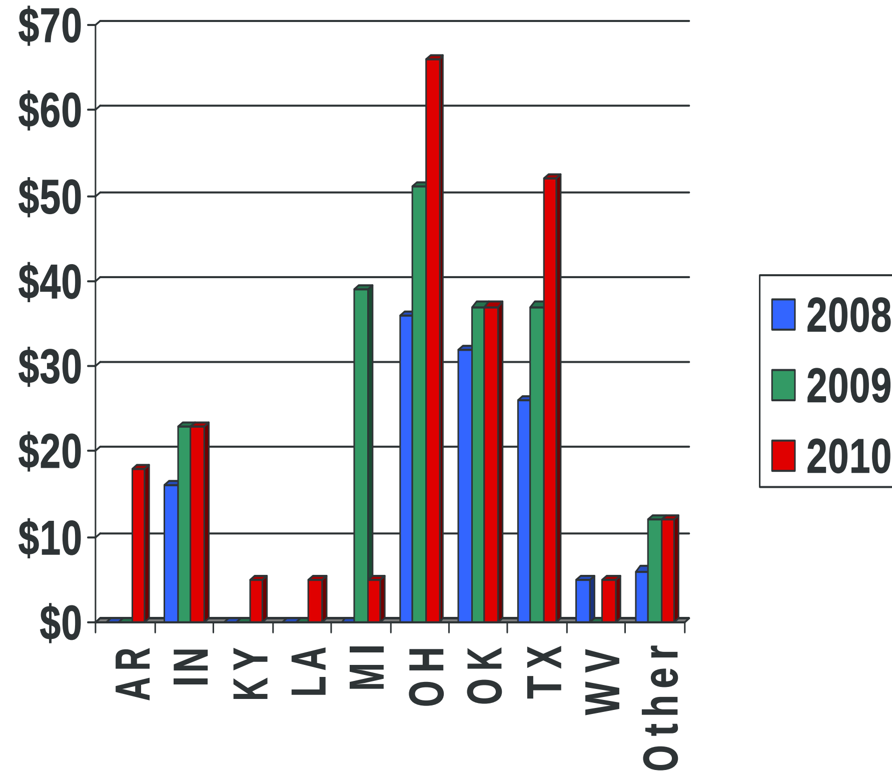
AEP and GE will collaborate to address the full energy pathway from the power plant to the home.

Pace of our GridSMART Implementation Determined by Regulators

- **Our GridSMART initiative results in a 'menu' of programs from which regulators can choose what they would like implemented in their jurisdiction**
- **Discussions and/or implementation underway in the following jurisdictions:**

EAST	**WEST**
- Indiana	**- Arkansas**
- Michigan	**- Oklahoma**
- Kentucky	**- Texas**
- Ohio	

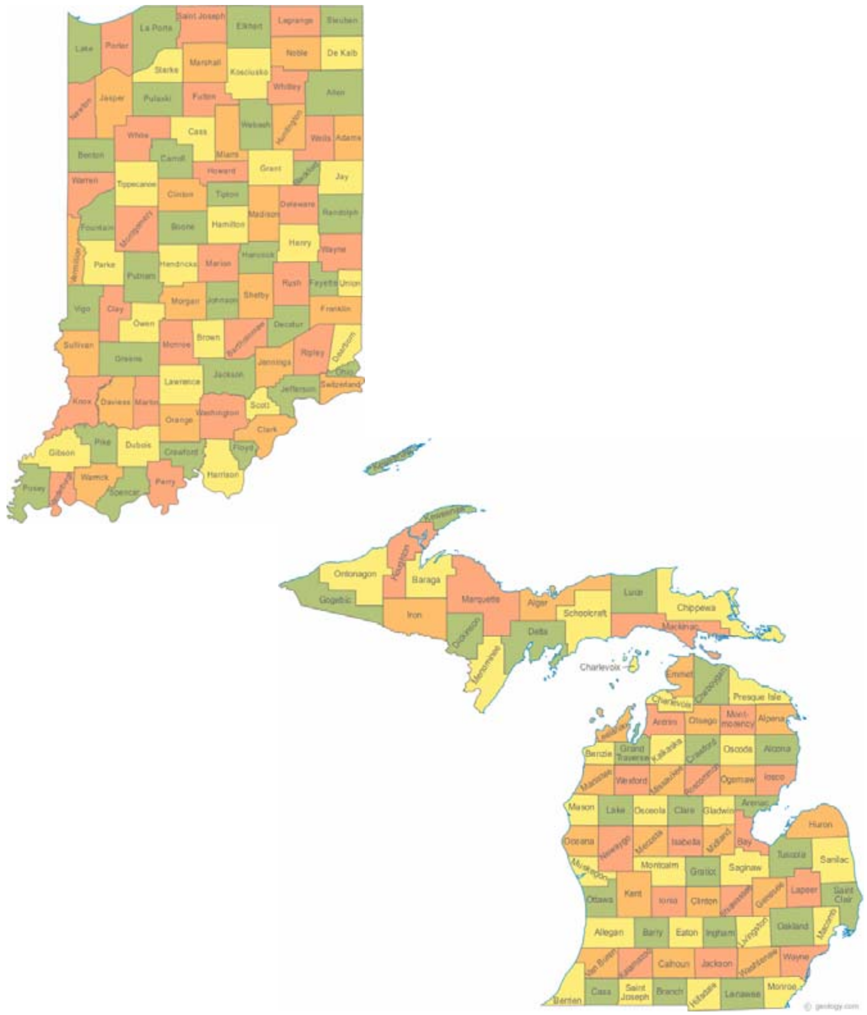
2008-2010 proposed capital investment by jurisdiction, subject to regulatory approval ($ in millions)



AEP will continue to be an industry leader in deploying advanced technology on a commercial scale. $554MM capital investment by 2010, subject to regulatory approval.

Indiana/Michigan

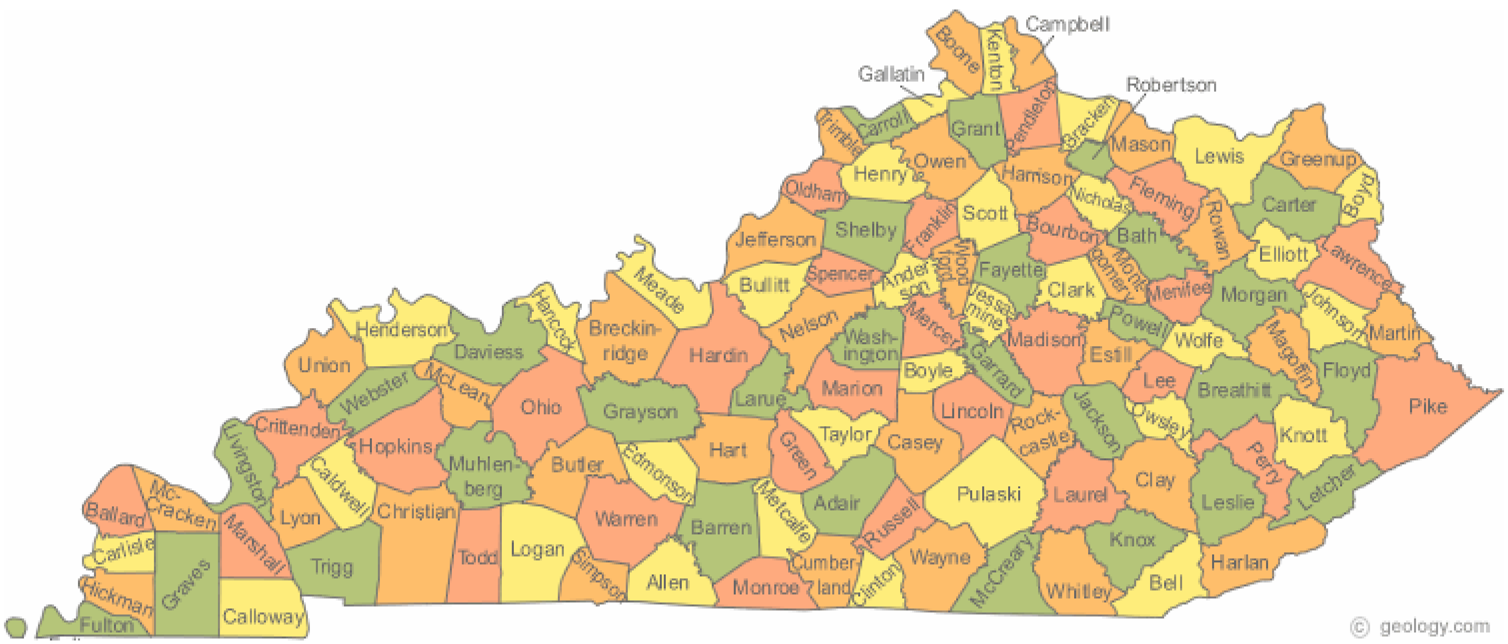
- Smart Metering Pilot Program (SMPP) for approximately 10,000 Indiana customers
- I&M proposed seven circuits in South Bend, Indiana with a total estimated capital cost of approximately $7 million and O&M costs of approximately $200,000 per year
- Initial meter installation occurring in 2008
- Beginning initial discussions with Michigan for a demand response/smart metering collaboration



I&M is pleased to be a leader in the exploration of smart metering as a part of AEP's GridSMART initiative. As smart metering expands beyond pilot projects, we can imagine even more of our customers benefiting, not just from being able to use our service more efficiently, but also from our service being more reliable and convenient to use.
- Helen Murray, I&M President and COO

Kentucky

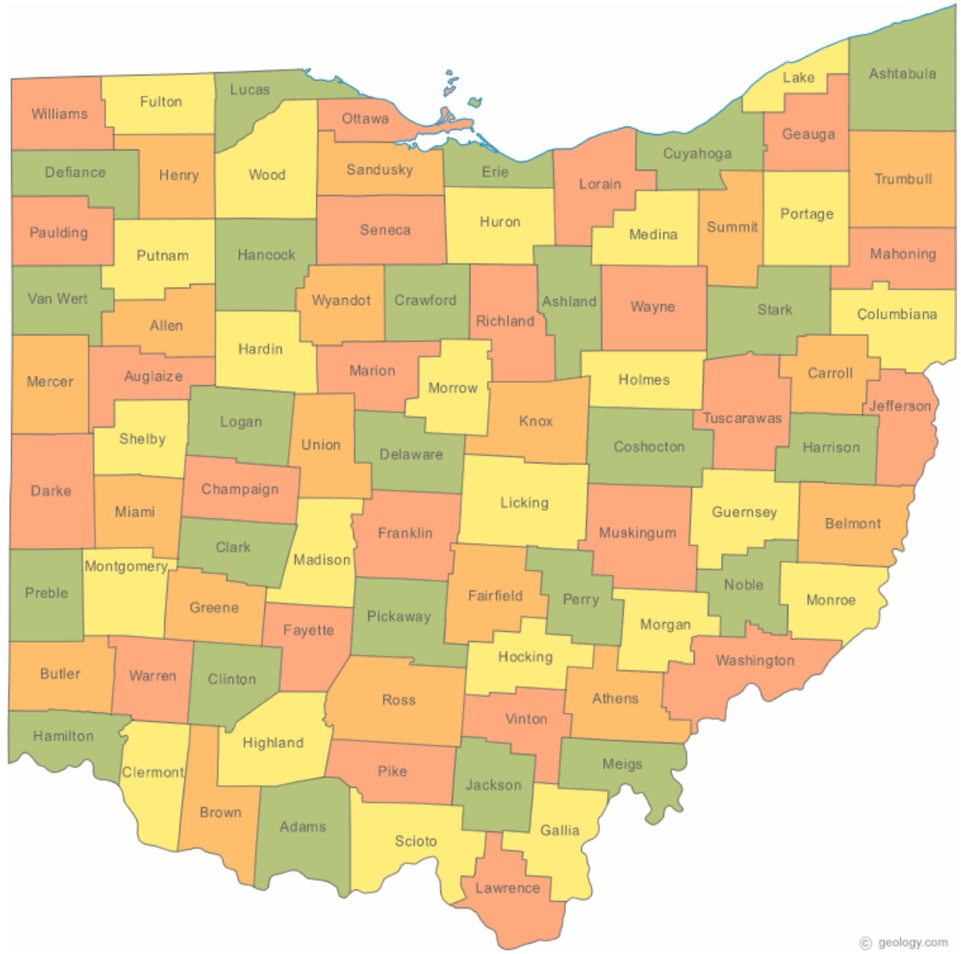
- Successful demand-side management programs have been in place since 1996
- Recent proposal filed for a real-time pricing pilot



Since the inception of our DSM program in Kentucky over a decade ago, 17,400 customers, nearly 10% of those we serve, have participated in various programs from weatherization to energy smart audits. Based on the success of these programs, we're looking forward to the new opportunities energy efficiency programming and real time pricing tariffs will offer. Our active DSM Collaborative has been anxiously awaiting new programs.
- Tim Mosher, KPCo President and COO

Ohio

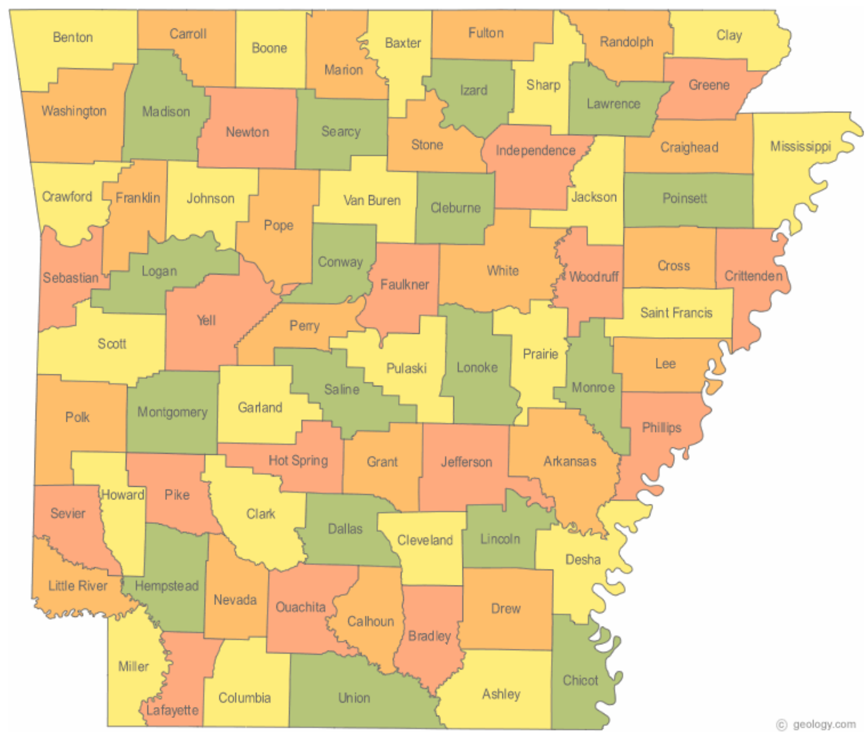
- Recent Governor remarks and draft legislation indicates modernization of Ohio's infrastructure is a high priority and includes demand and energy efficiency goals.
- PUCO-sponsored series of six Smart Meter Deployment Workshops currently underway.



As demand for electricity continues to grow, it is critical that we modernize Ohio's infrastructure. Through the GridSMART initiative, AEP Ohio is taking an active role working with our stakeholders to identify solutions that provide long-term benefits for our customers.
- Kevin Walker, AEP Ohio President and COO

Arkansas

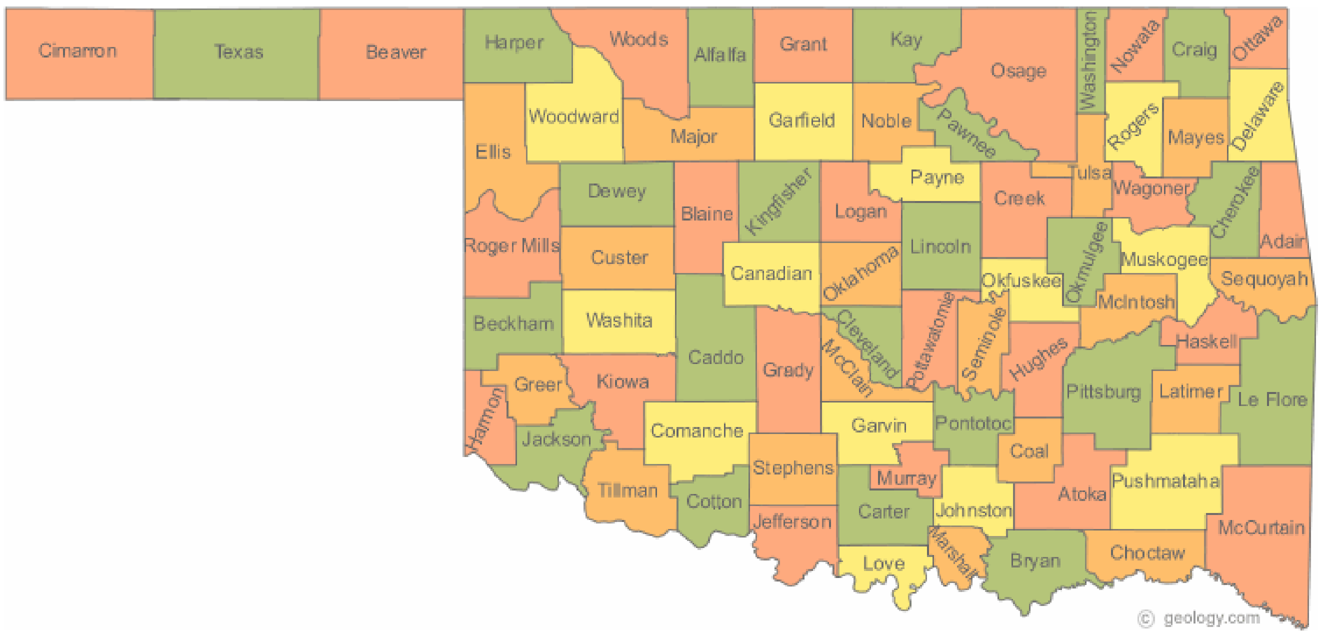
- Quick-Start Energy Efficiency Programs approved in September 2007
  - State-wide education
  - Incentive to encourage use of compact florescent lights and higher efficiency appliances
  - Weatherization for low-income housing
  - Cost recovery beginning with the first billing cycle of November 2007
- GridSMART discussions requested by the PSC
  - Potential solution to next incremental need for capacity



The growth in Northwest Arkansas makes it a perfect platform for GridSMART technology. SWEPCo is excited about exploring this solution with the PSC.
- Venita McCellon-Allen, SWEPCo President and COO

Oklahoma

- In October 2007, the OCC issued a Notice of Proposed Rulemaking to Establish Rules Promoting Energy Efficiency and Establishing Demand Program Requirements for Oklahoma Electric Utilities
- As part of PSO’s recent base rate case order, the OCC requested that PSO file a DSM/energy efficiency plan by December 8, 2007.

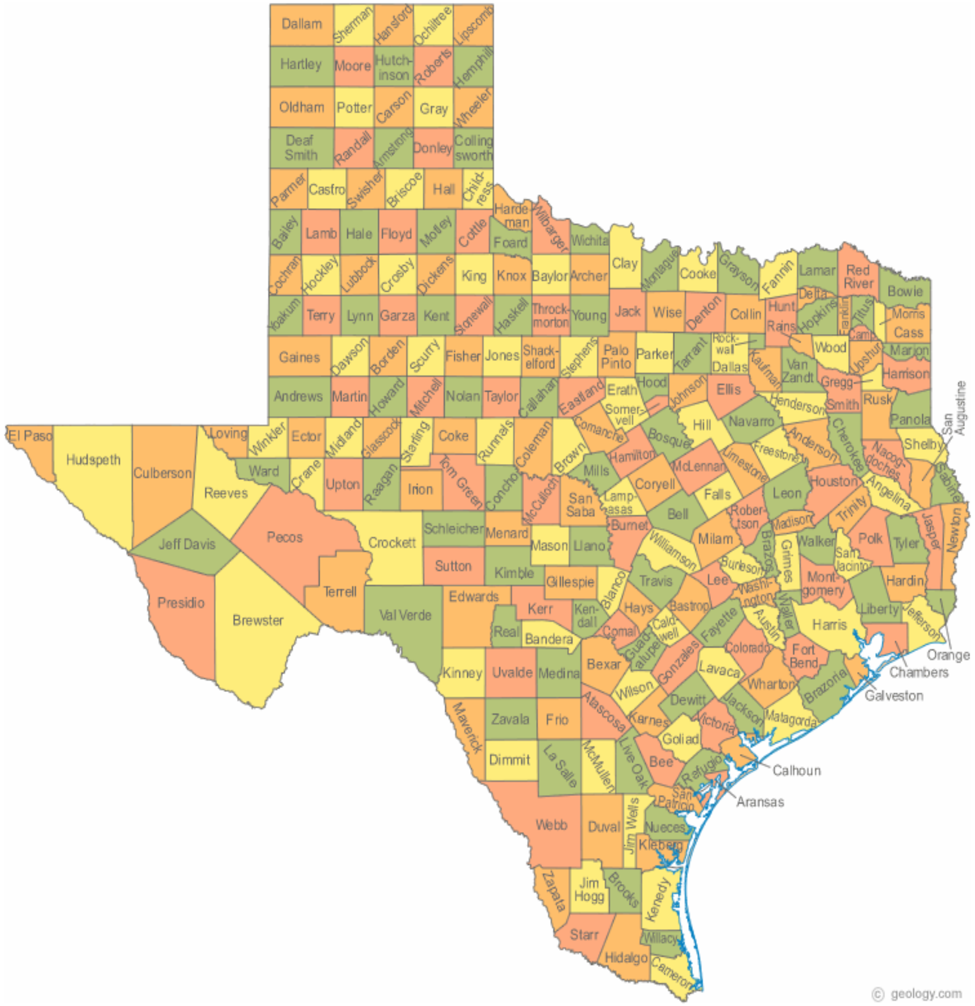


As demonstrated by its rulemaking and the recent PSO rate case order, the Oklahoma Corporation Commission is more focused on energy efficiency, conservation and demand programs than ever before.
- Stuart Solomon, PSO President and COO

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 5926 of 9556

Texas

- Successful demand side management and energy efficiency programs have been in place since the 1990s
- PUCT recently opened an Energy Efficiency Rulemaking to expand energy efficiency goals and add a cost recovery rider
- AEP Texas Advanced Metering Project commenced July 31, 2007
- Goal of filing with the PUCT an advanced metering deployment plan and a related surcharge recovery proposal by March 2008



Both the Texas Legislature and the Public Utility Commission of Texas have clearly demonstrated by law and rule their commitment to the deployment of advanced metering technologies in Texas. Deployment is not speculative nor tentative, it will occur and at a grand scale and place Texas at the forefront of implementing smart meter technologies.

- Charles Patton, AEP Texas President and COO

AEP's Continued Value Proposition

- Strength and scale in assets & operations
- Continued innovation and deployment of leading technology advancements
- Sustainable earnings growth through near and long term capital investment opportunities
- Comprehensive regulatory strategy focused on maximization of cash flow and return through minimized regulatory lag
- Strong dividend yield with respect to peers
- Balance sheet and credit profile stability

Sustainable Business Model

AEP AMERICAN® ELECTRIC POWER

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation or regulation in Ohio and/or Virginia, and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

AEP®

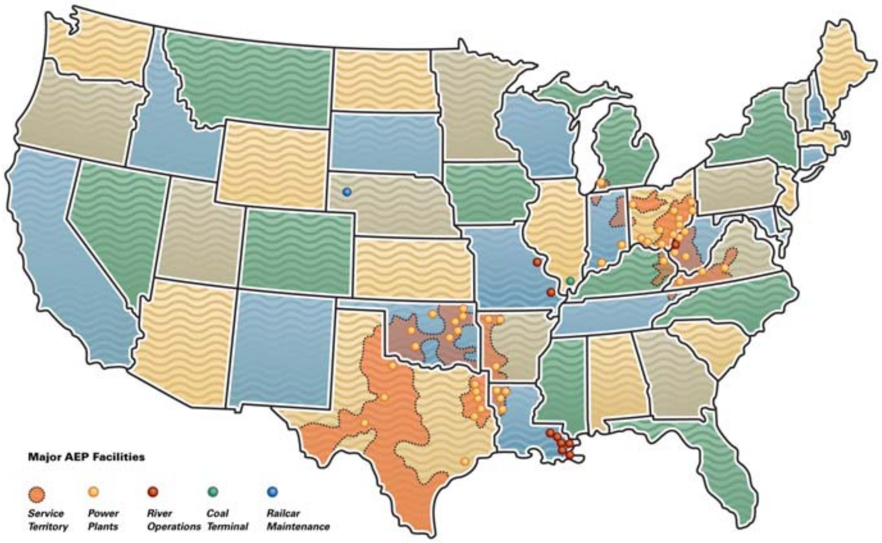
Company Overview

- 5.1 million customers in 11 states
- Industry-leading size and scale of assets:

Asset	Size	Industry Rank
Domestic Generation	~38,200 MW	# 2
Transmission	~39,000 miles	# 1
Distribution	~208,000 miles	# 1

Source: Company research & Resource Data International Platts, PowerDat 2005



- Coal & transportation assets
  - Control over 8,000 railcars
  - Own/lease and operate over 2,600 barges & 51 towboats
  - Coal handling terminal with 20 million tons of capacity
- 20,000 employees

AEP Generation Portfolio				
Coal	Gas	Nuclear	Hydro	Wind
67%	24%	6%	2%	1%

AEP ENJOYS SIGNIFICANT PRESENCE THROUGHOUT THE ENERGY VALUE CHAIN

Strategic Direction

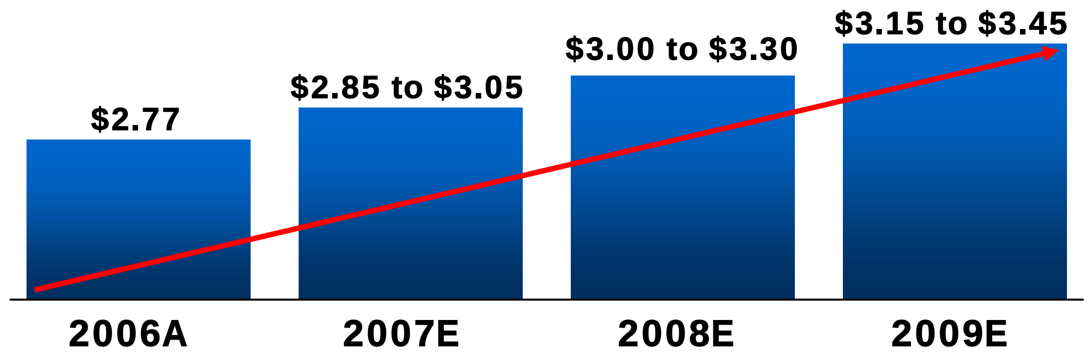
- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Develop our transmission business
- Achieve adequate returns on all assets

Deliver value to investors and cost effective service to our customers

CONTINUED COMMITMENT TO OUR CORE UTILITY MISSION: BRING REASONABLY PRICED ELECTRIC SERVICE TO OUR CUSTOMERS, THEREBY STRENGTHENING OUR COMMUNITIES AND REWARDING OUR INVESTORS

Framework For Long-Range Performance

- 2007, 2008 & 2009 Ongoing Earnings Guidance Ranges:

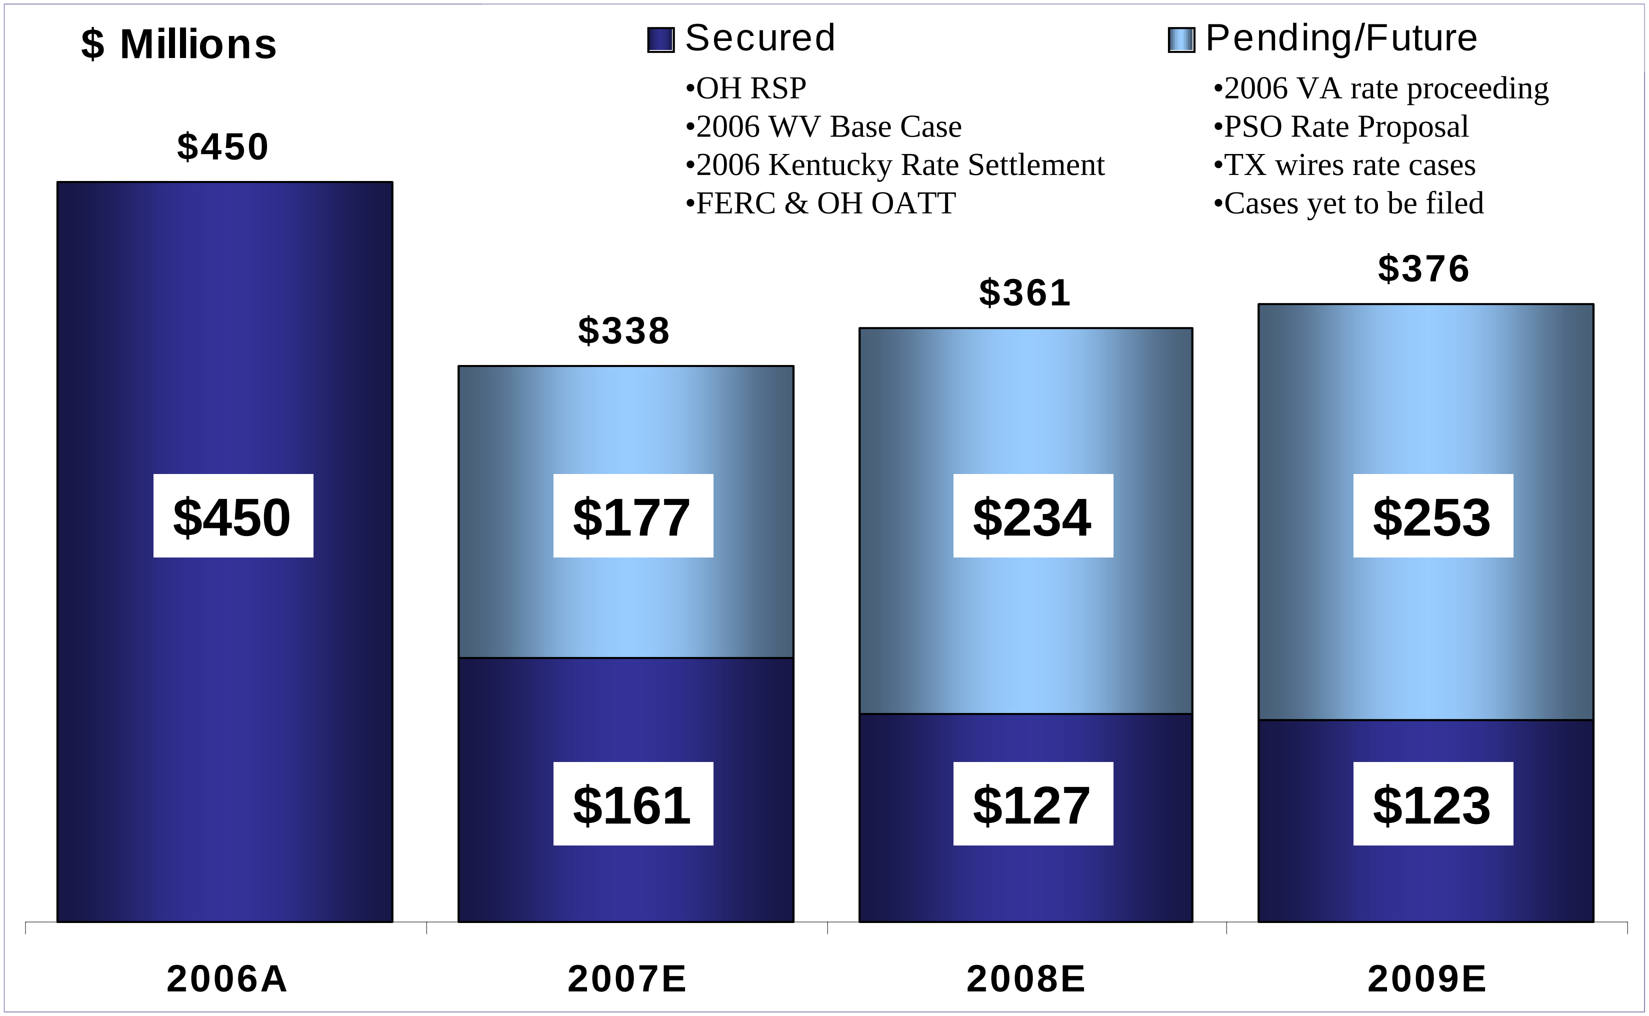


- EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in existing utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
  - Investment in new transmission opportunities
  - Seek rate recovery for new investments
  - Control costs & achieve timely rate relief
- Maintain credit ratings
  - BBB/Baa2/BBB

AEP®

Our Strategy Remains Focused On Regulated Operations

Incremental Rate Relief Composition



RATE RELIEF IS A CRITICAL ELEMENT TO AEP'S FINANCIAL SUCCESS

Utility Investment Drives Growth

Capital Investment Forecast (2007-2009)

($ in millions)	2007	2008	2009	Total (2007-09)
Environmental	$935	$521	$301	**$1,757**
New Generation - Build	$474	$485	$573	**$1,532**
New Generation - Purchase	$118	$0	$0	**$443 ***
Nuclear	$50	$57	$60	**$167**
Generation	$456	$417	$327	**$1,200**

SWEPCo	Hempstead	Arkansas	$1.3 B(3)	Coal	Ultra-supercritical	600(3)	2011
PSO	Red Rock	Oklahoma	$1.8 B(4)	Coal	Ultra-supercritical	950(4)	2012
CSP/OP	Great Bend	Ohio	Under Review(5)	Coal	IGCC	600	TBD
APCo	Mountaineer	West Virginia	Under Review(5)	Coal	IGCC	600	TBD

(1) Sale closed on April 25, 2007 - Plant began commercial operation in 2001
(2) Sale expected to close 2Q07 - Plant began commercial operation in 2004
(3) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment
(4) PSO will own 50%, or 425 megawatts, totaling approximately $900MM in capital investment
(5) AEP is currently working with GE and Bechtel on a FEED (front-end engineering and design) study. When completed (expected mid-year 2007), a cost estimate will be available.

AEP®

IGCC Overview

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called "syngas" – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2 , mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

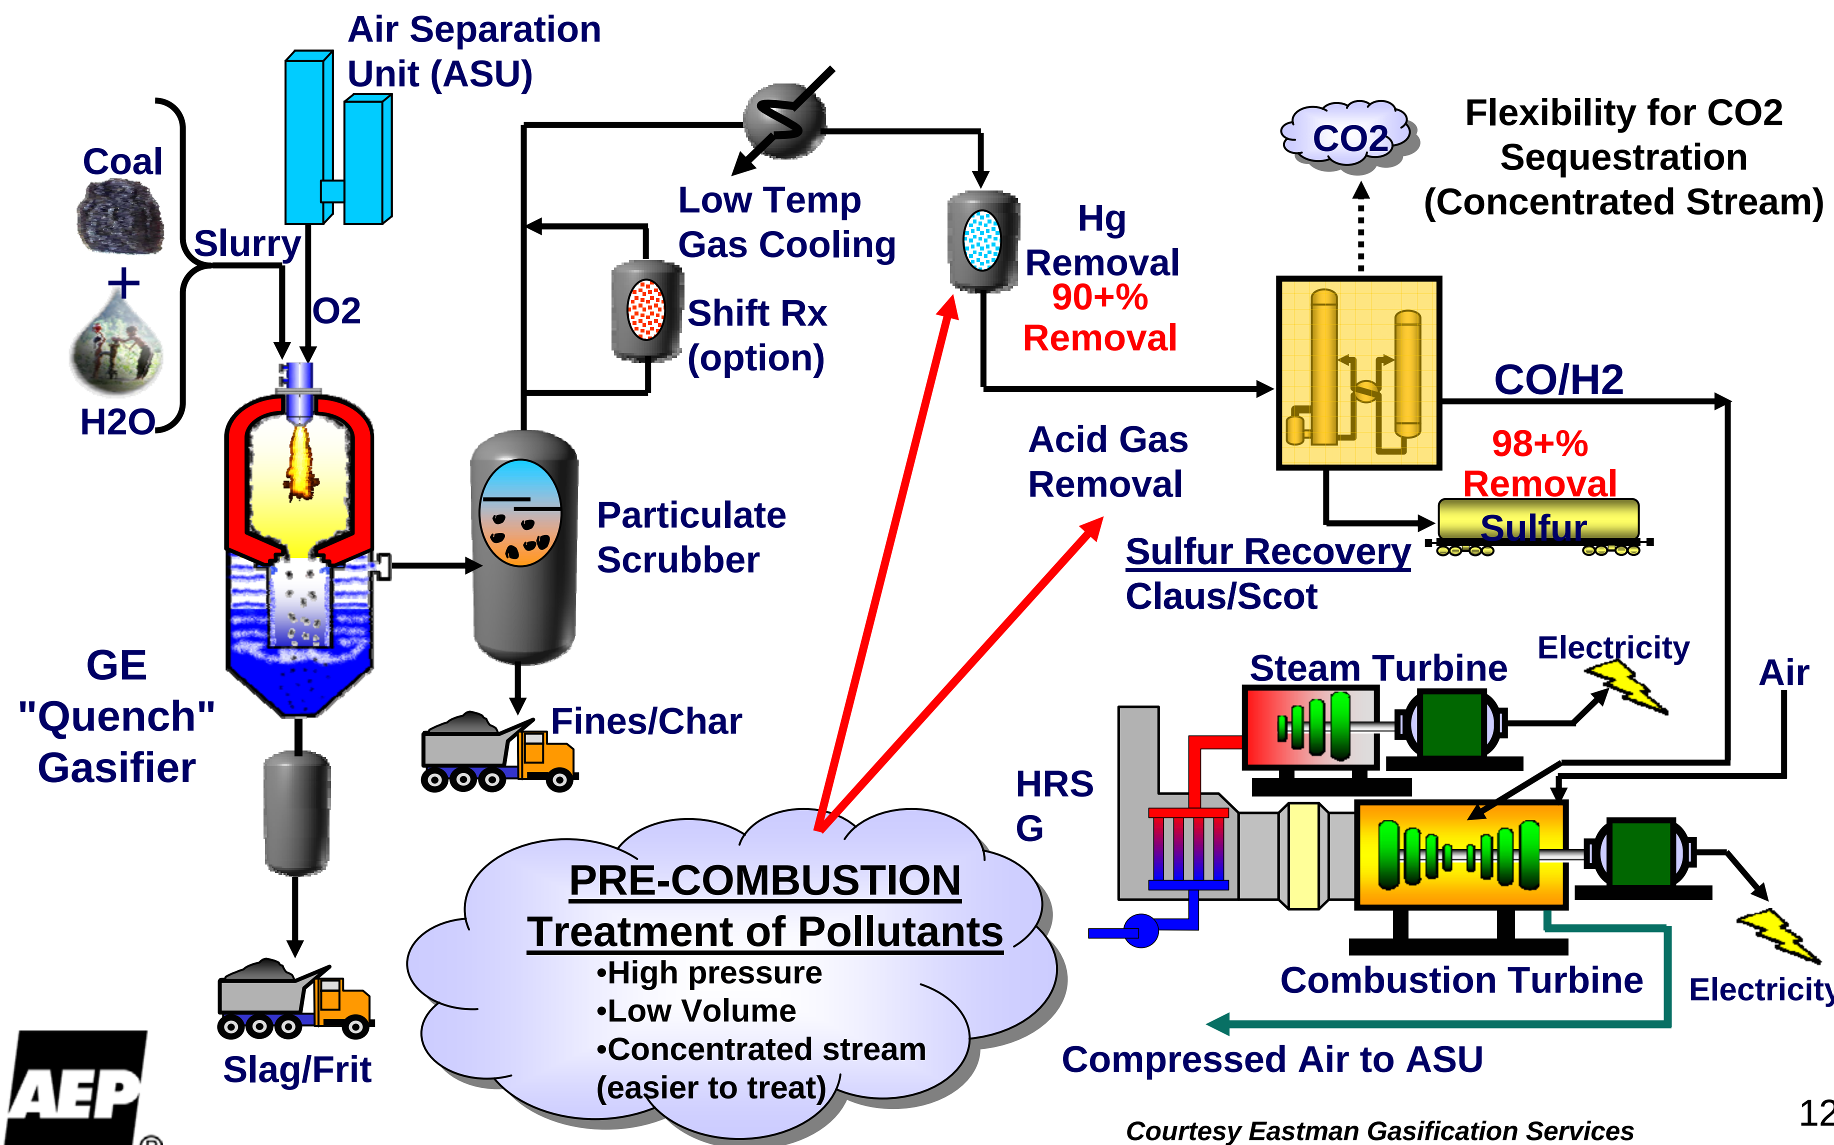
Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP's eastern service territory.

AEP®

AEP Is Committed To IGCC Technology

IGCC Technology



Courtesy Eastman Gasification Services

IGCC Permitting Process

IGCC Permitting Issues

- **Air**
  - ✓ Identify best available control technology (BACT)
  - ✓ Determine how start-up and shut-down emissions should be addressed
- **Wastewater**
  - ✓ understand nature of wastewater streams
  - ✓ Determine treatability and permitting scopes
- **US ACE (US Army Corp of Engineers)**
  - ✓ Conduct all necessary site studies per NEPA (National Environmental Policy Act) requirements (Wetlands, endangered species, archaeology)
  - ✓ Obtain permit to construct river facilities

Permitting process takes 1 – 2 years and is well under way

Transmission ~ $9 Billion Opportunity*

Creating a business model to manage capital requirements for enhanced returns with partners

- ~ $1 billion+ in ERCOT via Electric Transmission Texas, LLC (ETT)
- ~ $2 billion 765-kV study with ITC in Michigan
- ~ $3 billion I-765 Project in PJM
- ~ $3 billion project filed with SPP

Assumptions	
Estimated Investment Opportunity	$9 Billion
Ownership Structure w/ Partner	50% / 50%
Debt/Equity Ratio	50% debt / 50% equity
Return on Equity	11.00%
Potential EPS Impact (based on 396 MM shares)	+ $0.60**

* ~$9 billion investment opportunity not included in current capital guidance forecasts

** Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion

AEP®

Building The Next US Interstate System For Enhanced Reliability And Market Efficiency Could Have Significant EPS Implications

New Transmission Investment Funding Plans

- Electric Transmission Texas LLC
  - 40% equity / 60% debt capital structure requested at the PUCT follows Texas precedent for T&D companies' filings
  - Equity – 50% AEP / 50% Mid-American Energy
  - AEP's 50% investment will be held at the AEP Utilities, Inc. subsidiary
  - Debt – Initially bank financing
  - Initial funding in 3Q07 after regulatory approvals

- AEP I-765 Interstate Project
  - Forming a joint venture with Allegheny Energy for 250 miles of the proposed 550 mile project
  - Equity – 50% AEP / 50% Allegheny
  - AEP's 50% investment will be held at the AEP Transmission Holding Company LLC subsidiary
  - Operations to commence in the second half of 2007
  - Project included in the DOE's draft National Interest Electric Transmission Corridor issued in April 2007

- Other Transmission Projects
  - Equity percentage of capital structure will target FERC precedents
  - Equity ownership percentage will vary by project
  - Will seek FERC transmission incentives:
    - Incentive ROE
    - Return on CWIP
    - Abandonment recovery
    - Expensing pre-construction expenses

AEP®

Environmental Investment

AT THE CONCLUSION OF OUR CURRENT ENVIRONMENTAL RETROFIT PROGRAM, OVER 47% OF OUR COAL-FIRED GENERATION FLEET WILL BE EQUIPPED WITH SCRs AND OVER 50% WILL BE SCRUBBED (FGD). AEP's TOTAL COAL FLEET CAPACITY = 24,710 MEGAWATTS*

Plant Name	MW Capacity	SCR	Status	FGD	Status
Amos 1-3	2900	✓	In-service	✓	Projected 2008-09
Gavin 1 & 2	2620	✓	In-service	✓	In-service
Mitchell 1	800	✓	Projected 2007	✓	Projected 2007
Mitchell 2	800	✓	Projected 2007	✓	In-service

Cardinal 1	600	✓	In-service	✓	Projected 2007
Muskingum River 5	585	✓	In-service		Delayed
Pirkey	580		N/A	✓	In-service
Oklaunion	485		N/A	✓	In-service
Conesville 4	339	✓	Projected 2009	✓	Projected 2009
Zimmer	330	✓	In-service	✓	In-service
Dolet Hills	262		N/A	✓	In-service

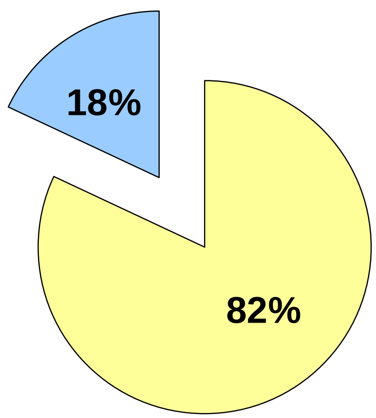
*Excludes AEP's 44% ownership in OVEC (980 MWs of coal-fired capacity)

AEP®

Installation Of SCR And FGD Equipment Will Allow Our Coal Fleet To Remain Extremely Cost Competitive

Materials and Vendors – AEP's Advantage

Environmental Program Costs:
Active/Firm Costs to Remaining Estimated Costs



Actuals To Date & Firm Costs
Remaining Estimated Costs*

* Primarily labor and activated carbon injection systems

SCR Technology

- Removes 90 – 93% of NOx emissions
- Requires ~ 1% use of auxiliary power
- **AEP Capital Cost ~ $121/kw avg.**

Combination of SCR & FGD technology results in co-benefit of Hg removal ~80% removal efficiency

FGD Technology

- Removes 95 – 98% of SO_2 emissions
- Requires ~1.5% to 3.0% use of auxiliary power
- **AEP Capital Cost ~ $250/kw avg.**

AEP Benefits From First-mover Advantage Through Lower Contracted Pricing and Reduced Market Escalation Exposure

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

AEP®

A RELIABLE & REASONABLY-PRICED ELECTRIC SUPPLY IS NECESSARY TO SUPPORT THE ECONOMIC WELL-BEING OF THE AREAS WE SERVE

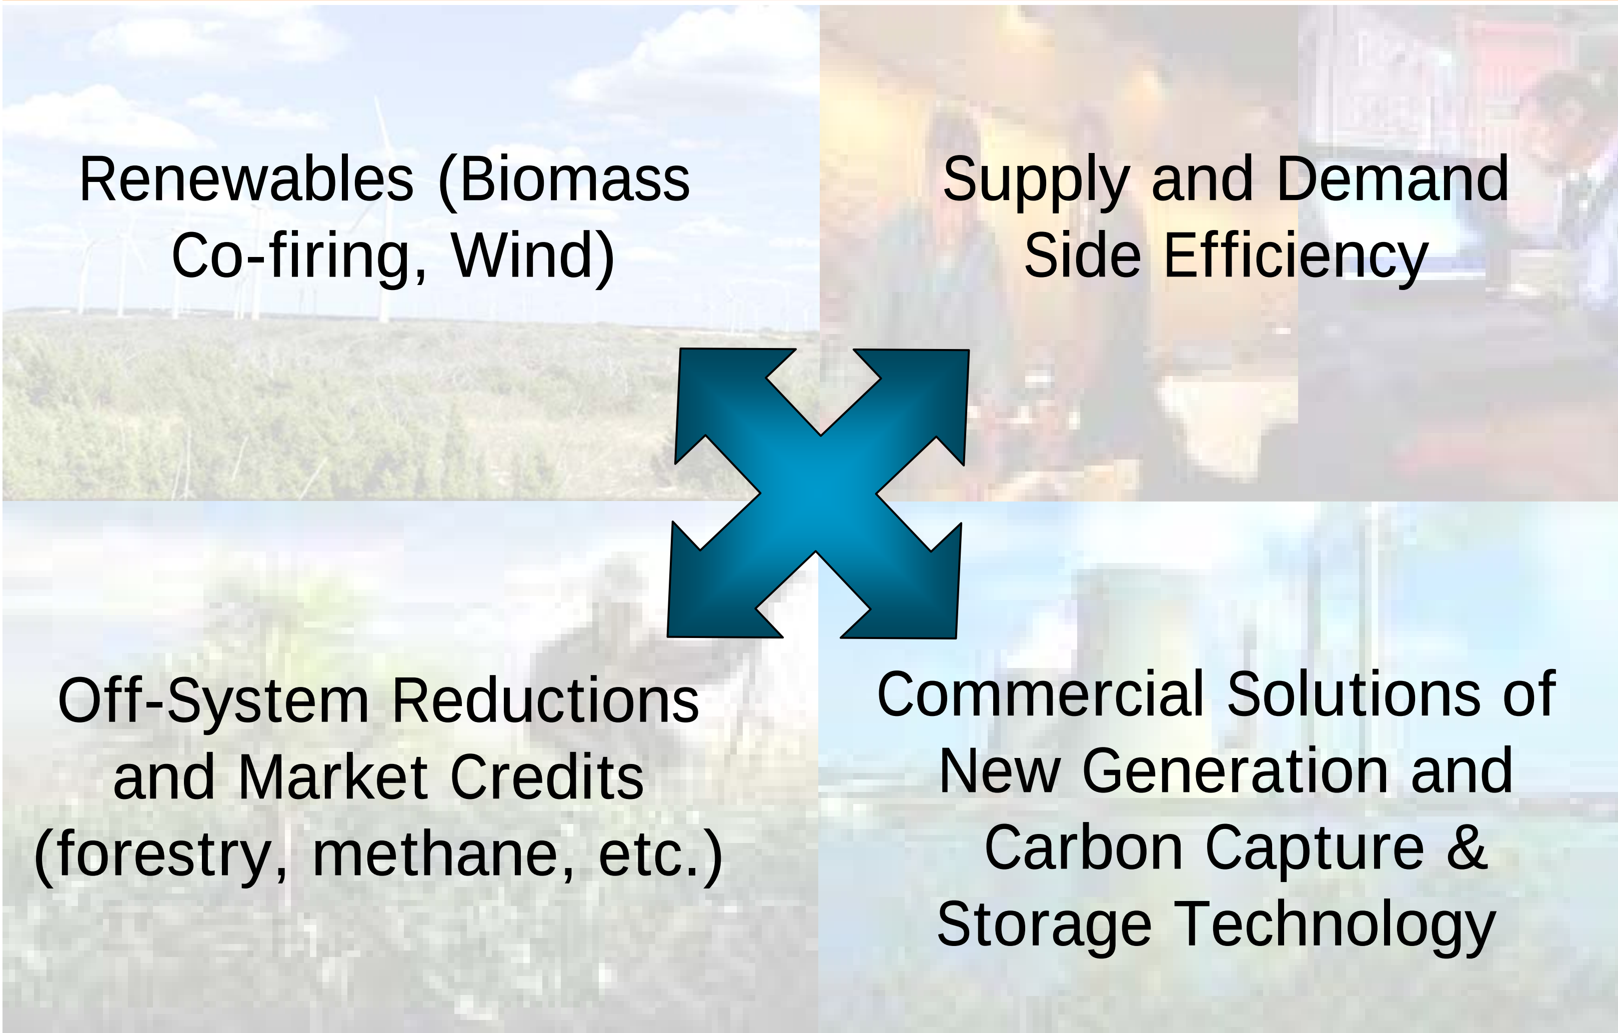
AEP®

AEP MUST BE A LEADER IN ADDRESSING CLIMATE CHANGE

AEP's Long-term GHG Reduction Portfolio



AEP®

AEP IS INVESTING IN A PORTFOLIO OF GHG REDUCTION ALTERNATIVES

AEP's Long-term CO_2 Reduction Commitment

Existing Programs

- Renewables
  - 800 MWs of Wind
  - 300 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

New Program Additions

- Incremental Reduction quantity: 5MM tons/yr
- Timing: Implement during 2007 to take effect/receive credits by 2011
- Methods
  - +1000 MWs of Wind PPAs – 2MM tons/yr
  - Domestic Offsets (methane) – 2MM tons/yr
  - Forestry – Tripling annual investment to increase to 0.5MM tons/yr by 2015
  - Fleet Vehicle/Aviation Offsets – 0.2MM tons/yr
  - Additional actions to include DSM and end use energy efficiency, biomass and power plant efficiency – 0.2MM tons/yr

New Technology Additions

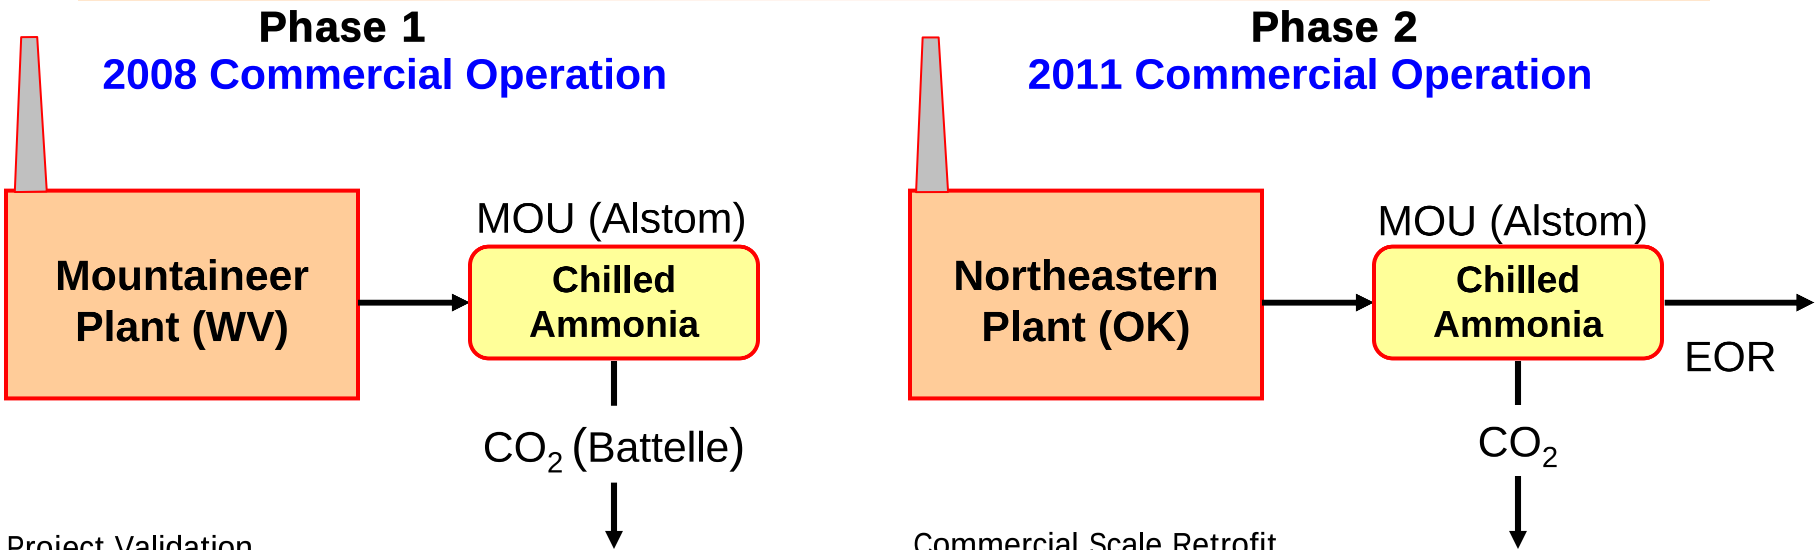
- Commercial solutions for existing fleet
  - Chilled Ammonia
  - Oxy-Fuel

AEP IS COMMITTED TO A 5MM TON/YR REDUCTION IN CO_2 EMISSIONS WHICH OFFSETS APPROXIMATELY HALF OF THE EMISSIONS PROJECTED FROM NEW GENERATION PROJECTS PREVIOUSLY ANNOUNCED

AEP®

Chilled Ammonia Process Plant Footprint

Chilled Ammonia Technology Program



Project Validation

- 30 MW_t (megawatts thermal) scale (a scale up of Alstom/EPRI 5 MW_t field pilot, under construction at WE Energies)
- <0.1MM tonnes CO_2 per year
- In operation 4Q 2008
- Approximate total cost \$50 – \$80M
- Using Alstom "Chilled Ammonia" Technology
- Located at the AEP Mountaineer Plant in WV
- CO_2 for geologic storage

Commercial Scale Retrofit

- ~ 200 MW_e scale (megawatt electric)
- ~ 600 MW_t scale (megawatt thermal)
- ~1.5MM tonnes CO_2 per year
- In operation late 2011
- Approx. capital \$250 – \$300M (CO_2 capture & compression)
- Approx. O&M cost \$12M per year
- Energy penalty ~ 35 – 50 MW steam, 25 – 30 MW for CO_2 compression
- Retrofit SCR & Wet FGD Required: ~\$225 – \$300M (required for CO_2 capture equipment)
- Located at AEP's Northeastern Plant Unit 3 or 4 in Oklahoma
- CO_2 for Enhanced Oil Recovery (EOR) or geologic storage

Oxy-Fuel CO_2 Capture & Storage Project

<u>Pilot Scale Demonstration</u>

- 10 MW_e scale
- Teamed with B&W at its Alliance Research Center and 16 other utilities
- Demo completed 3Q 2007
- AEP funding of $50k

<u>Commercial Scale Retrofit</u>

- Retrofit on existing AEP sub-critical unit (several available)
- 150 – 230 MW_e scale retrofit
- 4,000 – 5,000 tons CO_2 per day
- Teamed with B&W
- AEP funding of ~ $200k – $3M for feasibility study
- Feasibility study to be completed 2Q 2008

* Super-critical includes coal units with a net maximum capacity of 450MW or greater; Sub-critical includes coal units with a net maximum capacity less than 450MW.

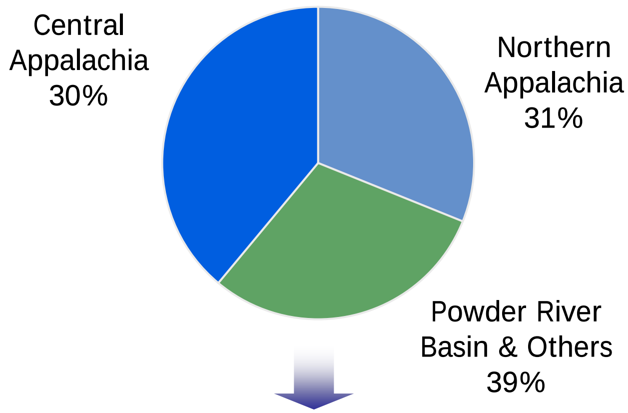
** East gas units are evaluated using Equivalent Forced Outage Factor. Since these units run infrequently, this factor gauges performance based on period hours instead of service hours.

AEP®

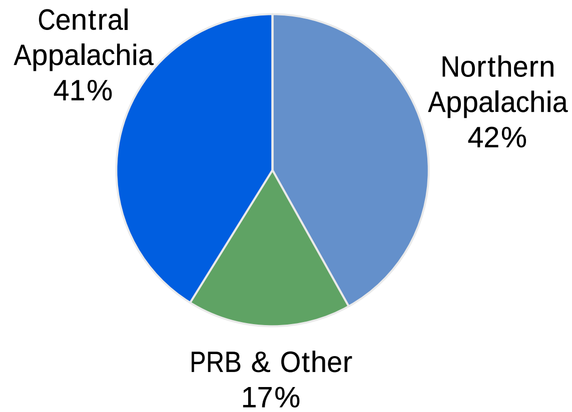
Coal Procurement – 2007 Projected

AEP purchases approx. 76 million tons of coal per year

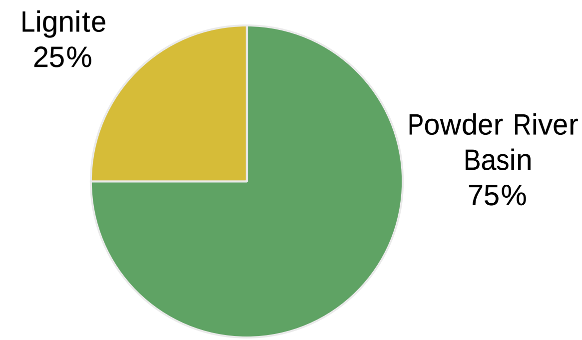
Total AEP System



AEP East



AEP West



Coal Stats:

- 95% contracted for 2007
- Avg. delivered price ~ $35.10/ton in 2006
- Approximate 7-9% price increase in 2007 -- ($37.50 to $38.50/ton)
  - Addition of Mountaineer & Mitchell scrubbers allows for a greater mix of Northern Appalachian coal in 2007

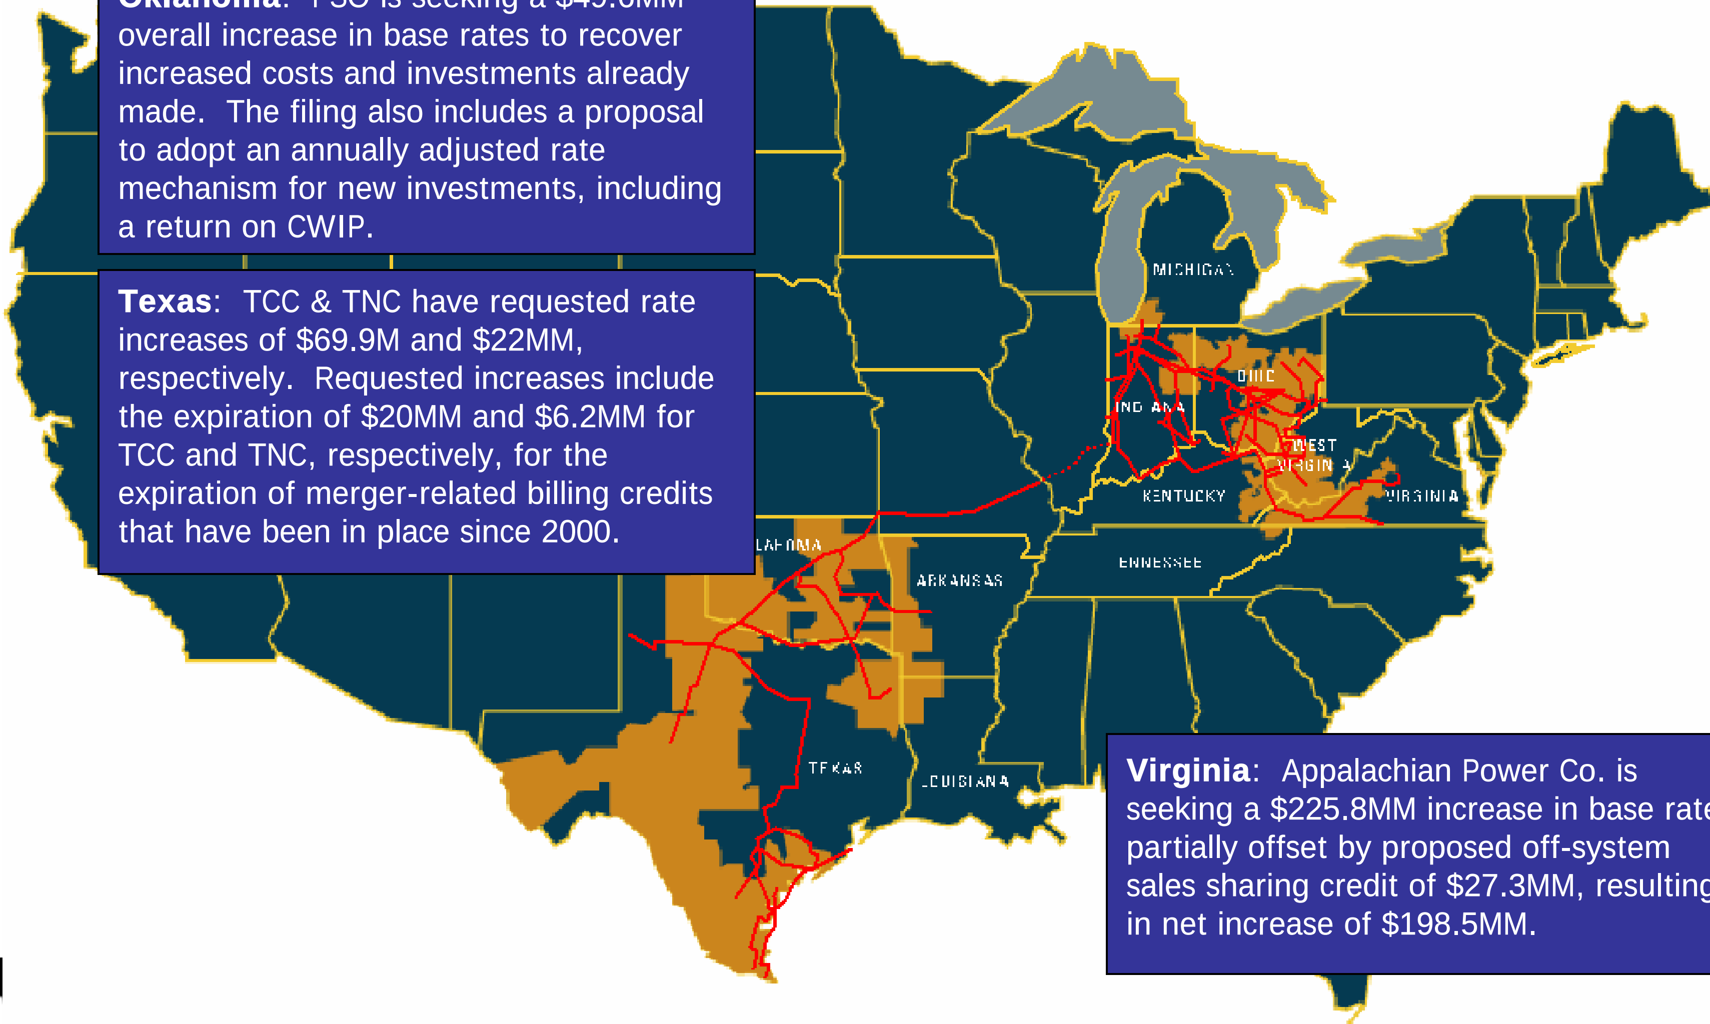
Base Case Regulatory Summary



Oklahoma: PSO is seeking a $49.6MM overall increase in base rates to recover increased costs and investments already made. The filing also includes a proposal to adopt an annually adjusted rate mechanism for new investments, including a return on CWIP.

Texas: TCC & TNC have requested rate increases of $69.9M and $22MM, respectively. Requested increases include the expiration of $20MM and $6.2MM for TCC and TNC, respectively, for the expiration of merger-related billing credits that have been in place since 2000.

Virginia: Appalachian Power Co. is seeking a $225.8MM increase in base rates, partially offset by proposed off-system sales sharing credit of $27.3MM, resulting in net increase of $198.5MM.

Regulatory Activity

AEP Ohio Application For 4% Provision On Generation Rate

- On Jan. 23, 2007, CSP and OP filed an application at the PUCO to recover 2007 costs associated with additional generation-related expenditures the companies are encountering related to environmental, security and other new generation-related costs pursuant to the RSP.
- CSP and OP are requesting to implement the provision to recover $24.5MM and $8.2MM, respectively, from May 2007 through December 2007.
- Staff & Intervenor testimony were due May 11, 2007; Evidentiary hearing to commence May 22, 2007.

AEP®

Regulatory Activity

Electric Transmission Texas (ETT) Rate Filing

- Jan. 22, 2007 – ETT filed with the PUCT for approval to operate as an electric transmission utility in Texas and to establish initial rates for ETT.
  - Requested capital structure of 60% debt / 40% equity; requested ROE of 11.25%.
  - Intervenor testimony is due May 30, 2007. Staff testimony is due June 7, 2007. Hearings are scheduled for June 26-29, 2007.
    - An order is expected Mid-2007 and operations are expected to commence in the 2nd half of 2007. Upon receipt of approvals, AEP and MidAmerican will each own a 50% interest in the joint venture.

Seams Elimination Cost Adjustment Revenues

- August 2006 – ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
  - Up to $96MM of SECA revenues could be disallowed, net of unused provisions
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both.
- Exceptions to initial decision filed Sept. 11, 2006; Replies to exceptions filed Oct. 11, 2006; Order expected by the Commission in 2007

AEP AMERICAN ELECTRIC POWER

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate relief or other recovery for new investments, transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements periodically issued by accounting setting bodies; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

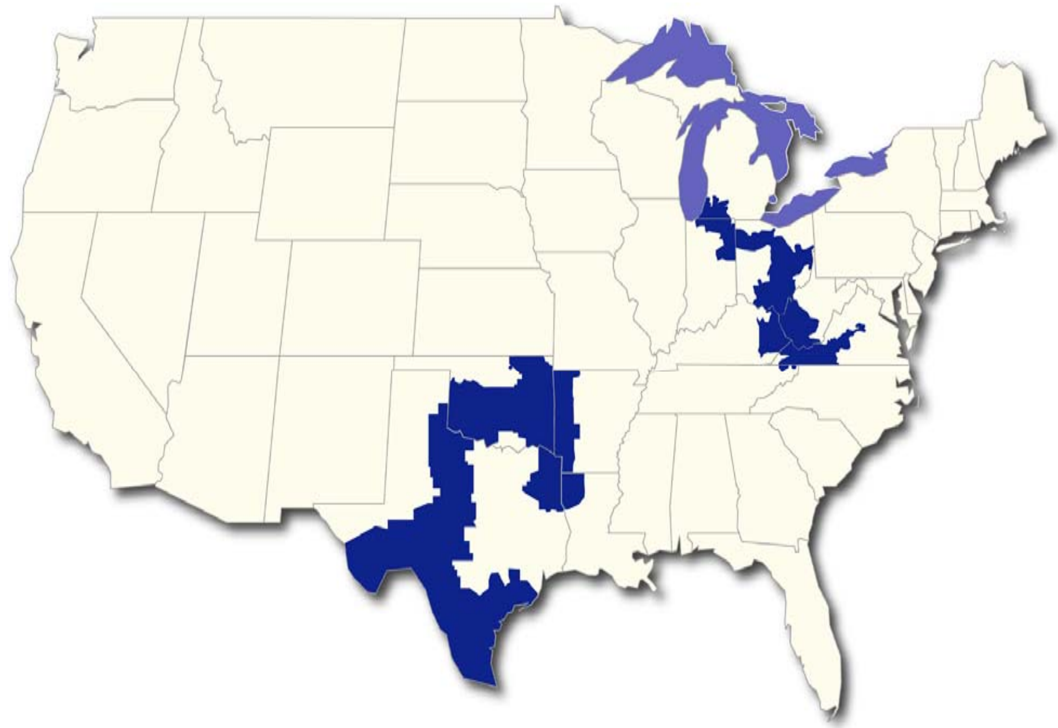
Company Overview



5.2 million customers in 11 states

Industry-leading size and scale of assets:

Asset	Size	Industry Rank
Domestic Generation	~38,300 MW	# 2
Transmission	~39,000 miles	# 1
Distribution	~213,000 miles	# 1

Source: Company research

Coal & transportation assets

- Control over 8,400 railcars
- Own/lease and operate over 2,650 barges & 52 towboats
- Coal handling terminal with 20 million tons of capacity

20,800 employees

AEP Generation Portfolio				
Coal	**Gas**	**Nuclear**	**Hydro**	**Wind**
67%	**24%**	**6%**	**2%**	**1%**

AEP enjoys significant presence throughout the energy value chain.

AEP Strategy

Strategy: grow our core utility business at a consistent rate trough major investment supported and funded by innovative programs for regulatory recovery as well as develop our independent, federally regulated Transmission Company for the pursuit of new major interstate projects.

Our 2008 Focus:

- Prepare for post-2008 transition in Ohio
- Invest in and evolve infrastructure to support future technology and customer needs focused on efficiency, conservation and load management
- Enhance cash flow & earnings through rate recovery mechanisms
- Take advantage of AEP's size to benefit our customers and shareholders through regulatory-supported investment

Sustained capital investment opportunities support earnings growth.

At the conclusion of our current environmental retrofit program, over 58% of our 24,630 MW coal-fired generation fleet will be equipped with SCRs and over 73% will be scrubbed (FGDs).

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
PSO	Southwestern	Oklahoma	$58 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$59 MM	Gas	Simple-cycle	170	2008
AEG	Dresden	Ohio	$266 MM	Gas	Combined-cycle	580	2009
SWEPCo	Stall	Louisiana	$378 MM	Gas	Combined-cycle	480	2010
SWEPCo	Turk	Arkansas	$1.3 B (1)	Coal	Ultra-supercritical	600 (1)	2012
APCo	Mountaineer	West Virginia	$2.23 B	Coal	IGCC	629	2012
CSP/OP	Great Bend	Ohio	$2.7 B(2)	Coal	IGCC	629	2017

(1) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment.

(2) Front-end engineering and design is complete. Cost estimates, updated to reflect cost escalations due to revised commercial operation date of 2017, are not yet filed with the PUCO due to the pending appeals to the Supreme Court of Ohio resulting from the PUCO's April 2006 opinion and order.

Secured Recovery Mechanism:

PSO Peaking Facilities Rider

Additional Recovery Mechanisms Under Consideration:

Formula based rates

Requests for return on CWIP

Current and future rate cases

AEP is meeting the growing electricity needs of customers through the pursuit of new economic generation facilities.

Advanced Generation & CO_2

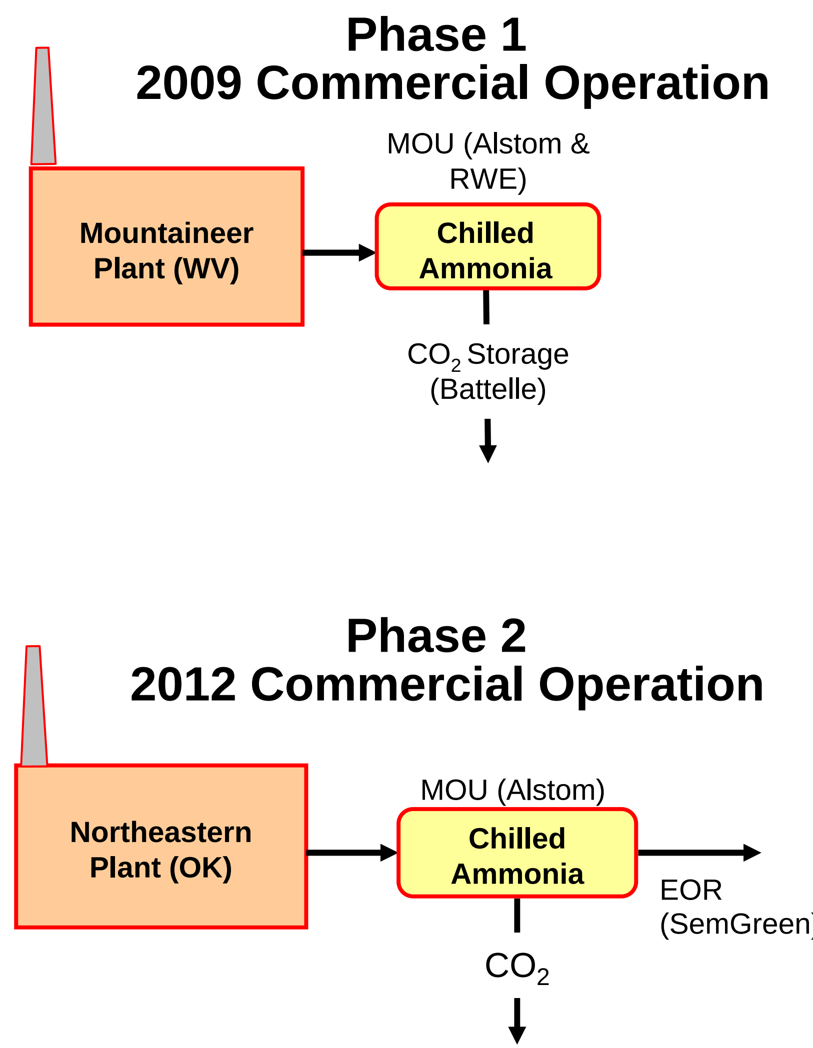
Near Term:

- Chilled Ammonia project at Mountaineer moving to commercial scale at the Northeastern Plant in 2012

$ in millions				
		2008	2009	2010
Mountaineer Chilled Ammonia Project		$30	$39	$0

Long Term Strategy (Post-2010):

- IGCC
- Oxy Coal Technology
- Chilled Ammonia
- Nuclear COL



We are committed to validating and deploying technologies that ensure coal remains a viable resource for AEP and America.

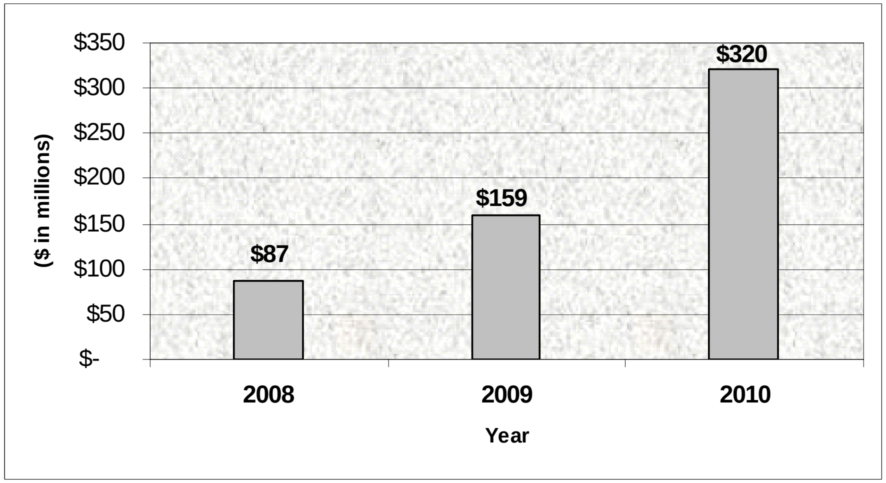
Transmission – Investments and Earnings Contributions

Projected Transmission Capital Spending*

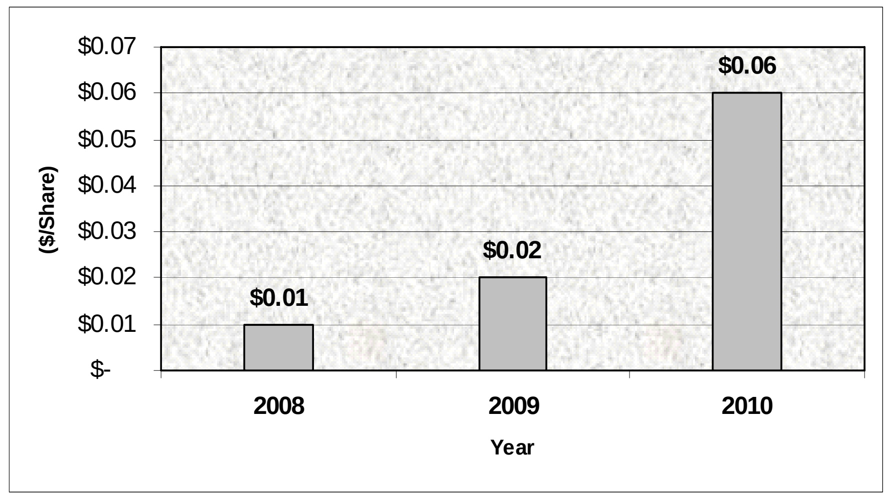


* ETT and PATH joint ventures included in above projection. Amounts represent AEP's 50% share of total transmission joint venture capital expense. These amounts are excluded from AEP's base capital forecast because the joint ventures are not consolidated for financial reporting purposes. AEP will be responsible for funding 40-50% of these amounts with equity contributions, and the remainder will be financed with debt issued by the joint ventures.

PATH
Potomac-Appalachian Transmission Highline

ETT
Electric Transmission Texas

Projected Transmission EPS Contributions*



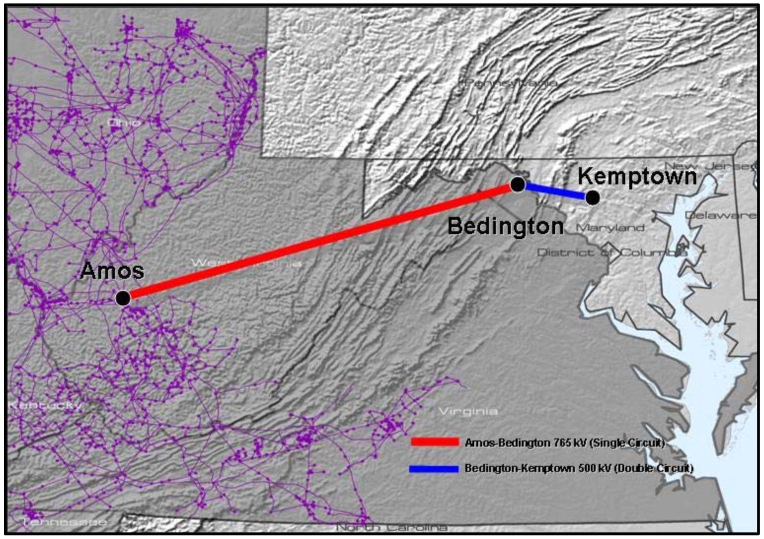
* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

Transmission will provide a near and long term catalyst for growth.

I-765™ Transmission in PJM: PATH

Execution in Action

- *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries -- to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
  - Completed FERC Filing – December 2007
    - *Pursuing new project FERC incentives: cash return on CWIP, 14.3% ROE, recovery of all costs incurred prior to the time rates go into effect, and recovery of all prudently incurred development and construction costs if the project is abandoned.*
- *Funding Plans/Transaction Structure*
  - AEP and Allegheny share ownership of Amos – Bedington line and contribute equally to this portion of the project through PATH West Virginia Transmission Company, LLC
  - AEP’s investment will be held in the AEP Transmission Holding Company LLC subsidiary
  - Project corridor was included in the DOE’s National Interest Electric Transmission Corridor
- *Key Next Steps*
  - Siting Approval – Fall 2009
  - Targeted Completion – 2012



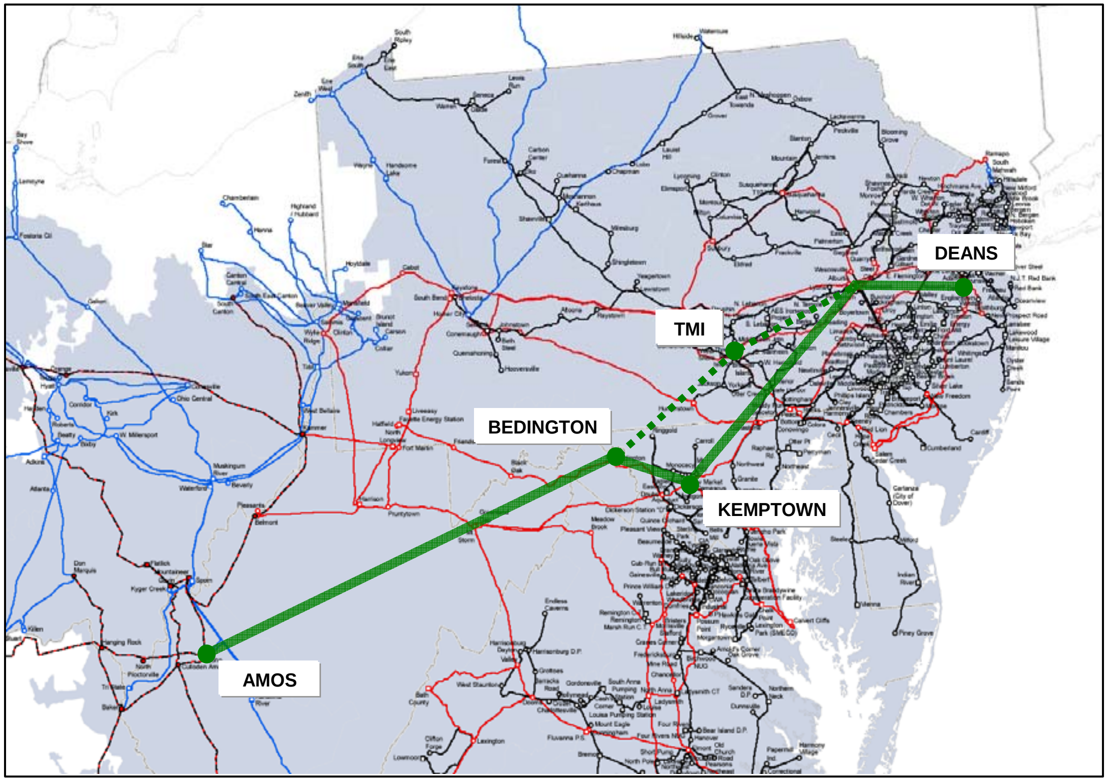
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

PATH
Potomac-Appalachian Transmission Highline

I-765™ Transmission in PJM East

Second phase of original AEP 550-mile I-765 proposal

- Approximately 250 miles from West Virginia-Maryland border to Public Service Electric & Gas Deans Station in New Jersey.
- Currently under consideration by PJM as part of Regional Transmission Expansion Plan (RTEP).
- Based on PJM RTEP approval, AEP will seek a suitable business partner (JV partner) to complete the second leg of the original proposal.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

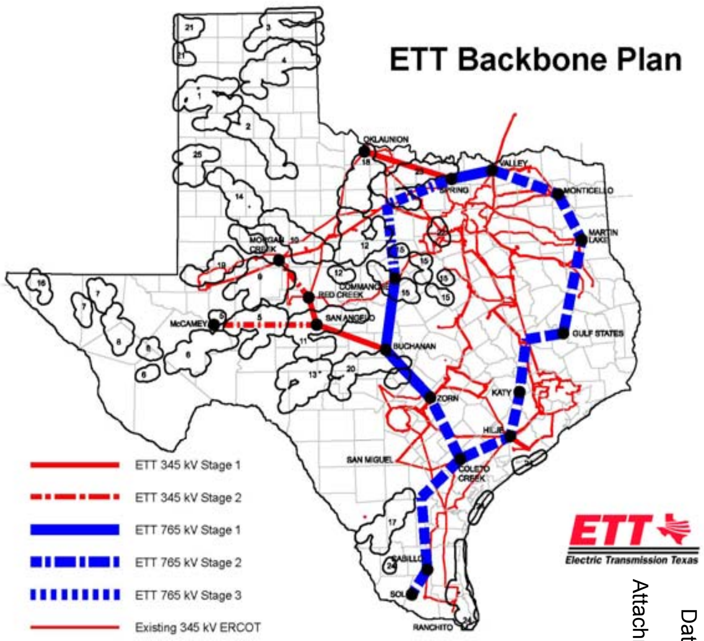
I-765TM Transmission in Texas (ETT)

Electric Transmission Texas Update

- **_Transaction Structure_**
  - 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
  - ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
  - Services provided by AEP and investment opportunities can be offered by either partner

- **_Next Steps_**
  - ETT project opportunities to be evaluated on a case by case basis
  - Anticipate offering projects in Q2 2008

- **_ETT ERCOT Backbone Proposal_**
  - ETT proposal for ERCOT and PUCT to consider CREZ transmission in context of long-term vision for transmission system.
  - Current 5-year planning horizon results in higher ultimate costs, lower system efficiency.
  - Long-term 15-20 year perspective provides better plan, supports development of high voltage backbone at 765-kV.
  - $4.2 billion investment (long-term backbone).*



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

* Before ownership division.

Electric Transmission America (ETA)

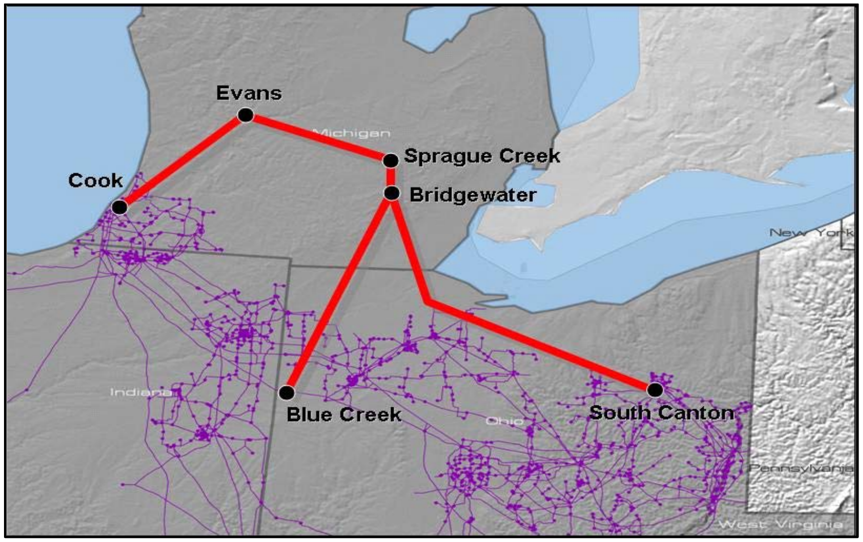
- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.

ETA reflects a natural progression and expansion of AEP's partnership with MidAmerican.

I-765™ Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
  - Study was released Q3 2007
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.6 billion investment (before ownership division)
  - AEP and ITC are in discussions to form a Joint Venture
- *Benefits*
  - Up to 5,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- *Next Steps*
  - Agreement on JV (AEP/ITC) Q2 2008
  - JV Formation - 2008
  - MISO and PJM Review/Approval - 2008
  - FERC Filing - Fall 2008
  - Siting Approval – Fall 2010
  - Estimated Completion – Fall 2015

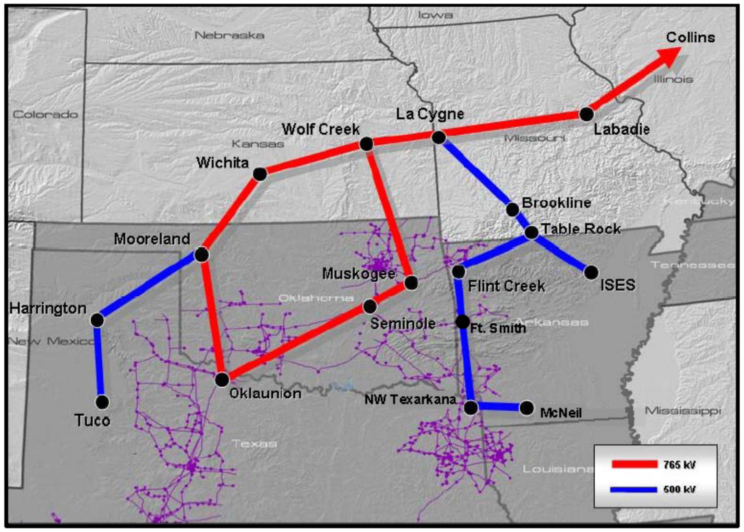


The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

I-765™ Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- *Overview*
  - July 2006 AEP submitted conceptual project for six 765-kV lines
  - Proposed 765-kV Kansas / Oklahoma / Arkansas connecting to MISO/PJM
  - 610 miles from Kansas to Arkansas
  - SPP proposes 765-kV in Texas / Oklahoma / Kansas / Missouri connecting to MISO/PJM
  - SPP also proposes 500-kV in Texas / Oklahoma / Arkansas / Missouri
  - $3.0 billion investment (before ownership division)
  - Proposed 2012-2017 construction period
- *Benefits*
  - 4,000 MW improved transfer capability
- *Next Steps*
  - Study Disclosure – Completed 2Q 2007
  - JV Formation (ETA) – Completed 3Q 2007
  - SPP 10-year Expansion Plan Issued – December 2007
  - SPP RTO/BOD EHV Overlay Approval – 2Q 2009
  - SPP RTO FERC Filing – 3Q 2009
  - Siting Approval – 3Q 2011
  - Estimated Completion – 3Q 2017



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Distribution - gridSMART^{SM}

gridSMART^{SM}: implementing AEP's vision for the distribution and customer services business in the future, including the development of new customer programs to reduce consumption and peak demand, and a plan to deploy advanced technologies.

- **Enables customers to better manage energy**
- **Improves service to our customers by enhancing customer choice and customer control**
- **Improves efficiency**
- **Integrates distributed energy resources into our grid**
- **Transforms the way we do business**

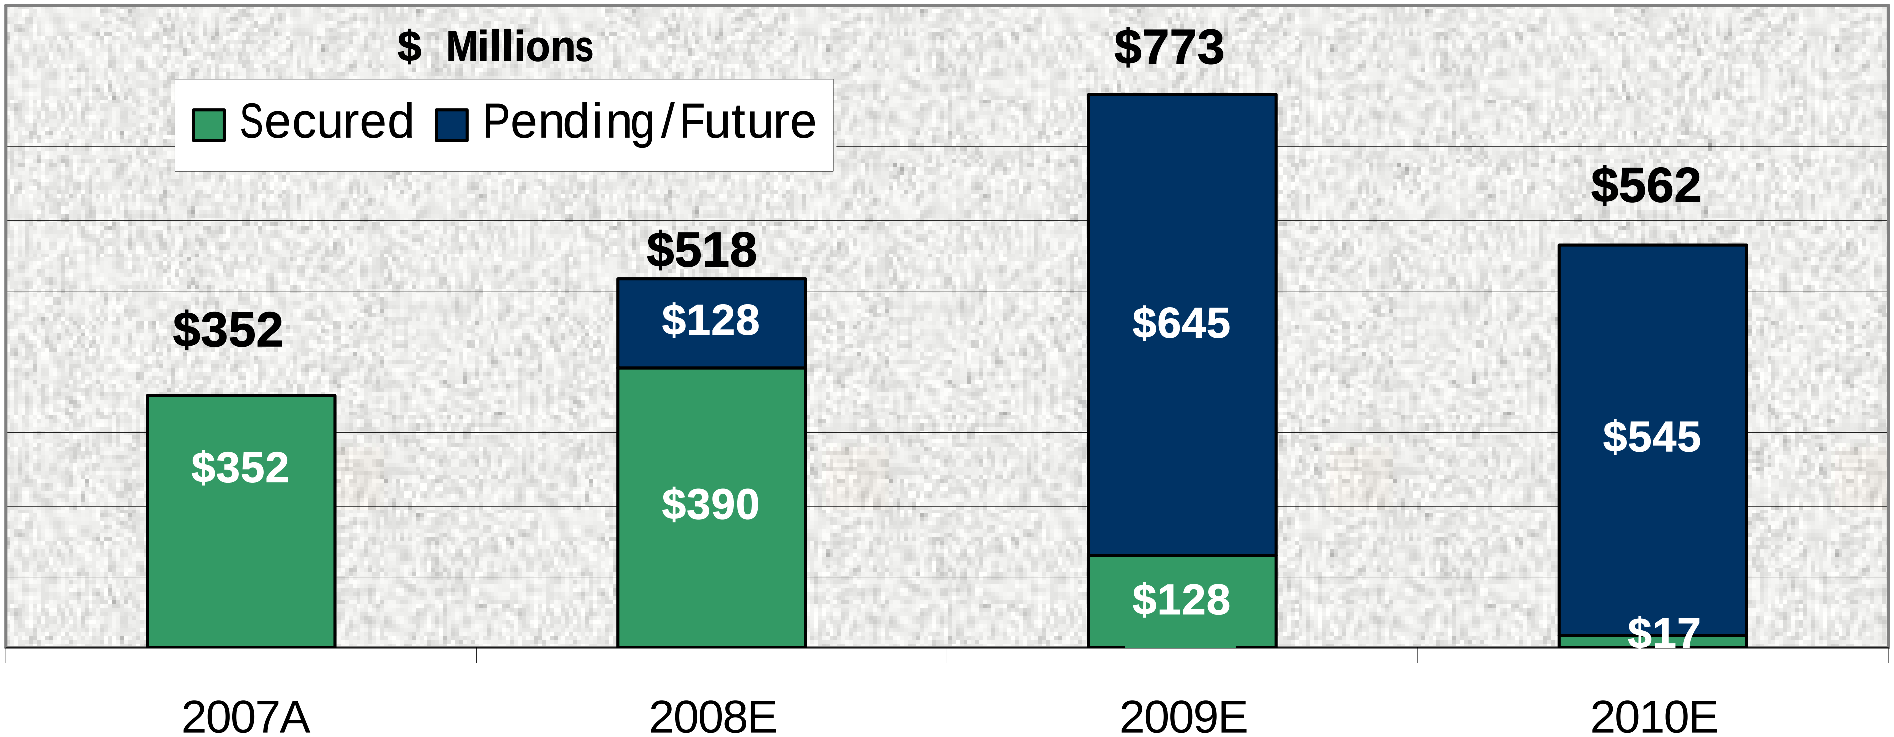
Capital Investment, Subject to Regulatory Approval *
$ in millions

Technology	2008	2009	2010
Metering & Communications	$83	$138	$146
Distribution Technology Enhancements	$40	$ 63	$ 82

*$472MM of the $552MM not in current forecast; spending contingent upon regulatory approval

AEP will continue to be an industry leader in deploying advanced technology on a commercial scale. $552MM capital investment by 2010, subject to regulatory approval

Incremental Rate Relief Assumptions



- **75% of 2008 Rate Relief Secured: I&M Depreciation, APCo - WV Surcharge, TCC & TNC General Rate Cases, Ohio RSP (3% & 7%), PSO Peaking Generation & General Rate Case, Ohio 4% Generation Rider and Marginal Loss Recovery, APCo - Virginia Fuel Factor, 2007 TCC/TNC TCRF filings.**

- **2008 Pending: PSO January 2007 Ice Storm Recovery, SWEPCo - LA Financial Review, 2008 TCC/TNC TCRF filings, other cases yet to be filed.**

Our goal is to maximize utility company cash flow and returns by minimizing regulatory lag.

2008 Regulatory Activity Completed

AEP Ohio Application For 4% Provision On Generation Rate

- On January 30, 2008, a settlement agreement was approved by the PUCO allowing the generation rider to be increased to recover in 2008 an additional $28.5 million for CSPCo and $4.9 million for OPCo.
- The approved settlement also authorized the inclusion of $78 million of estimated net costs of marginal losses ($38.9 million for CSPCo and $39.2 million for OPCo) in the existing Transmission Cost Recovery Rider, with any over/under recovery of the actually incurred costs from June 2007 through December 2008 to be reflected in the 2009 TCRR recovery mechanism, including carrying charges on any such over/under recovery.

APCo Virginia - Fuel Factor Adjustment

- On February 1, 2008 APCo Virginia received an order authorizing annual incremental earnings and cash increases of approximately $28MM and $6MM, respectively. The incremental earnings increase is attributed to recovery of marginal losses and the change in OSS sharing.

Regulatory Activity Underway

Ohio Post-2008

- On August 29, 2007, the Ohio Governor submitted legislation (SB221) that would restructure the regulation of Ohio's electric industry. The bill also includes several efficiency and renewable energy standards.
- Hearings on the legislation began on September 26, 2007 in the Ohio Senate and continued through the end of October.
- On October 25, 2007, the substitute version and associated amendments were incorporated into SB221.
- Full Senate vote occurred October 31, 2007. SB221 passed 32-0.
- Presented to House Public Utilities Committee on November 7, 2007; Hearings continue and we anticipate a signed bill in March or April of 2008.

Regulatory Activity Underway

I&M Indiana Base Rate Case

- On January 31, 2008, I&M filed a base rate case with the Indiana Utility Regulatory Commission (IURC) for authority to increase its rates and charges for electric utility service and to establish and implement rate adjustment mechanisms to track certain matters.
- Requested trackers relate to reliability enhancement, demand-side management/energy efficiency programs, off-system sales margins, PJM costs and environmental compliance.
- Parties agreed to a historic test year ended September 30, 2007, with adjustments allowed for fixed, known and measurable items that will occur within 12 months following the end of the test year.
- The case includes the following:
  - Required Rate Relief/Revenue Requirement - $128.5 MM ($46MM trackers)
  - Rate Base – approximately $2 billion
  - Requested ROE – 11.50%
  - Required ROR – 8.10%
- Hearings are expected in May 2008 and an order in the first quarter of 2009.

Regulatory Activity Underway

PSO Storm Cost Recovery Filing

- On October 24, 2007, PSO filed an application with the Oklahoma Corporation Commission to defer, amortize and recover costs related to a severe January 2007 winter storm. PSO requests the Commission to direct it to establish a regulatory asset of approximately $13 million reflecting the future recovery of these costs, and to amortize the regulatory asset as PSO realizes proceeds from the sales of sulfur dioxide (SO_2) emission allowances.
- Staff and intervenor testimony was filed January 17, 2008, a settlement conference is scheduled for February 25, 2008 and hearings are scheduled for February 27 and 28, 2008.
- Staff and AG testimony was supportive of PSO's requested treatment for cost recovery.

PSO Red Rock Generating Facility Recovery Filing

- On December 28, 2007, PSO filed an application with the Oklahoma Corporation Commission to defer, amortize and recover costs related to the Red Rock Generating Facility, which was denied construction and recovery pre-approval in October 2007.
- PSO requests the Commission make a determination that the costs incurred on the Red Rock project were prudent and direct it to establish a regulatory asset of approximately $21 million reflecting the future recovery of these costs, and to amortize the regulatory asset as PSO realizes proceeds from the sales of SO_2 emission allowances.
- A procedural schedule in the case has not yet been established.

Regulatory Activity Underway

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $161MM.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to February 1, 2008, with rates subject to refund.
- Technical conferences and settlement meetings were held in October – December 2007. Settlement discussions are currently on-going.

Regulatory Activity Underway

APCo Mountaineer IGCC Filing

West Virginia

- Testimony filed with the West Virginia Public Service Commission on June 18, 2007 in support of APCo's application for a Certificate of Public Convenience and Necessity to construct a 600MW IGCC plant in WV at a cost of approximately $2.23 billion.
  - Testimony includes a proposal for the Commission to approve a cost recovery mechanism through the existing Expanded Net Energy Cost (ENEC) mechanism. The filing is not a formal proposal to adjust rates.
  - Actual requests for increased rates will be included in future filings, once construction of the plant has commenced and actual Construction Work In Progress data is known.
- Staff and Intervenor testimony was filed November 19, 2007 and hearings were held December 10-12, 2007. An order is due by March 6, 2008.

Virginia

- Testimony filed with the Virginia State Corporation Commission on July 16, 2007 seeking a prudence determination and approval to recover, beginning in 2009, Virginia's share of the carrying costs associated with the proposed plant.
- Intervenor testimony was received December 10, 2007 and Staff testimony was received on January 18, 2008. Public hearings commenced February 12, 2008.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.
- Oral arguments regarding this matter were conducted at the Ohio Supreme Court on October 9, 2007. It is likely the court's decision will not be announced until some time in the first quarter of 2008.

Regulatory Activity Underway

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- The PSC issued its order on November 21, 2007, approving construction of the plant.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The peaking facility has been addressed and the intermediate facility is under review. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- Public hearings commenced September 11, 2007. Decision expected in the first quarter of 2008. A positive ALJ report was issued on February 8, 2008 recommending approval of the plant.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- Public hearings commenced October 17, 2007. Decision expected in the first quarter of 2008.

Regulatory Activity Underway

SWEPCo Stall Plant Filings

Arkansas

- Proceeding is currently suspended pending outcome in Louisiana.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The intermediate facility, known as the Stall Plant and sited in Shreveport, LA, was bifurcated from the original filing and had a procedural schedule established on January 9, 2008.
- Intervenor testimony was completed on February 15, 2008, rebuttal testimony is due February 29, 2008 and hearings will commence on April 7, 2008.

Texas

- PUCT order approving plant was issued on March 8, 2007.

Detailed Ongoing Earnings Guidance

2007A: $3.00

2008E: $3.10 - $3.30

AMERICAN ELECTRIC POWER

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; volatility in the financial markets, particularly development affecting the availability of capital on reasonable terms and developments impairing our ability to refinance existing debt at attractive rates; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation in Ohio and the allocation of costs within regional transmission organizations; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

AEP Strategy

Strategy: grow our core utility business at a consistent rate through major investment supported and funded by innovative programs for regulatory recovery as well as develop our independent, federally regulated Transmission Company for the pursuit of new major interstate projects.

Our 2008 Focus:

- Prepare for post-2008 transition in Ohio
- Invest in and evolve infrastructure to support future technology and customer needs focused on efficiency, conservation and load management
- Enhance cash flow & earnings through rate recovery mechanisms
- Take advantage of AEP's size to benefit our customers and shareholders through regulatory-supported investment

Sustained capital investment opportunities support earnings growth.

Northeastern 4	450		N/A	☑	Projected 2014
Oklaunion	485		N/A	☑	In-service
Pirkey	580		N/A	☑	Upgrade In-service
Welsh 2	528		N/A	☑	Projected 2012

At the conclusion of our current environmental retrofit program, over 58% of our 24,630 MW coal-fired generation fleet will be equipped with SCRs and over 73% will be scrubbed (FGDs).

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
PSO	Southwestern	Oklahoma	$58 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$59 MM	Gas	Simple-cycle	170	2008
AEG	Dresden	Ohio	$266 MM	Gas	Combined-cycle	580	2010
SWEPCo	Stall	Louisiana	$378 MM	Gas	Combined-cycle	480	2010
SWEPCo	Turk	Arkansas	$1.3 B (1)	Coal	Ultra-supercritical	600 (1)	2012
APCo	Mountaineer	West Virginia	$2.23 B	Coal	IGCC	629	2012
CSP/OP	Great Bend	Ohio	$2.7 B (2)	Coal	IGCC	629	2017

(1) SWEPCo will own approximately 73%, or 438 megawatts, totaling about $950 million in capital investment.
(2) FEED (front-end engineering and design) study with GE/Bechtel is complete. Cost estimates, updated to reflect cost escalations due to revised commercial operation date of 2017, are not yet filed with the PUCO due to the current appeals before the Supreme Court of Ohio resulting from the PUCO's April 10, 2006 Opinion and Order.

Secured Recovery Mechanism:

PSO Peaking Facilities Rider

Additional Recovery Mechanisms Under Consideration:

Formula based rates

Requests for return on CWIP

Current and future rate cases

AEP is meeting the growing electricity needs of customers through the pursuit of new economic generation facilities.

gridSMART[SM]

gridSMART[SM]: implementing AEP's vision for the distribution and customer services business in the future, including the development of new customer programs to reduce consumption and peak demand, and a plan to deploy advanced technologies.

- **Enables customers to better manage energy**
- **Improves service to our customers by enhancing customer choice and customer control**
- **Improves efficiency**
- **Integrates distributed energy resources into our grid**
- **Transforms the way we do business**

Capital Investment, Subject to Regulatory Approval * $ in millions			
Technology	**2008**	**2009**	**2010**
Metering & Communications	$83	$138	$146
Distribution Technology Enhancements	$40	$ 63	$ 82

*$472MM of the $552MM not in current forecast; spending contingent upon regulatory approval

AEP will continue to be an industry leader in deploying advanced technology on a commercial scale. $552MM capital investment by 2010, subject to regulatory approval.

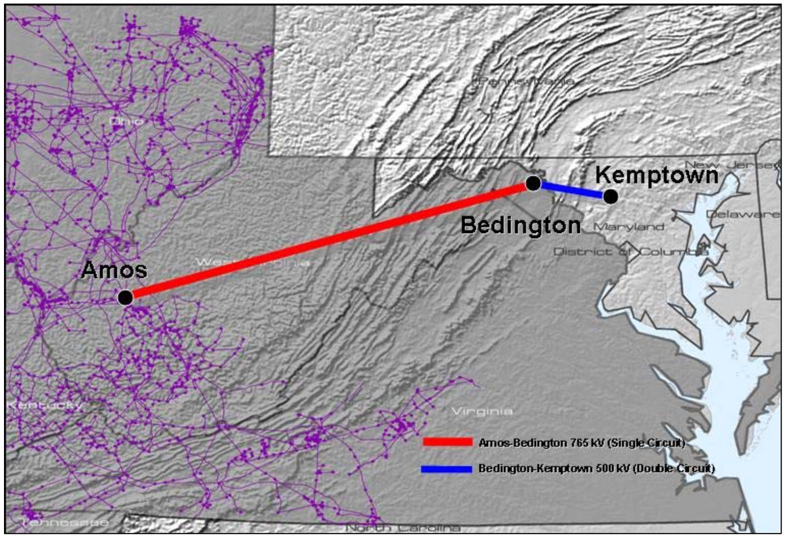
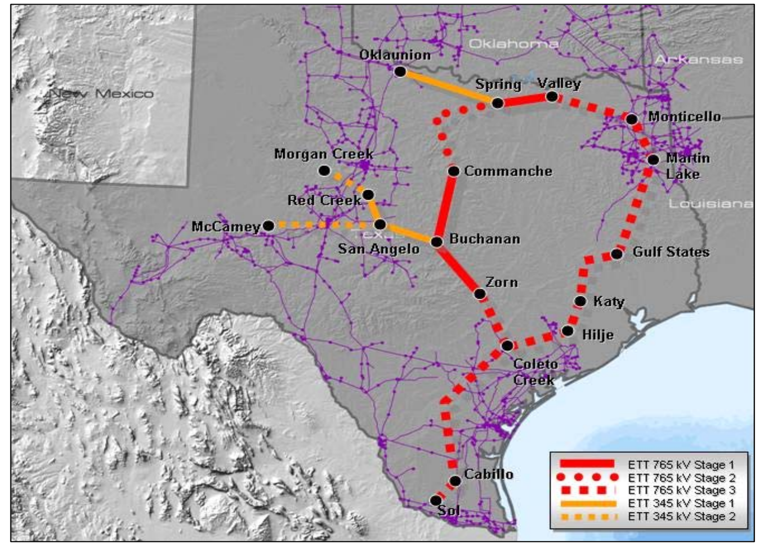
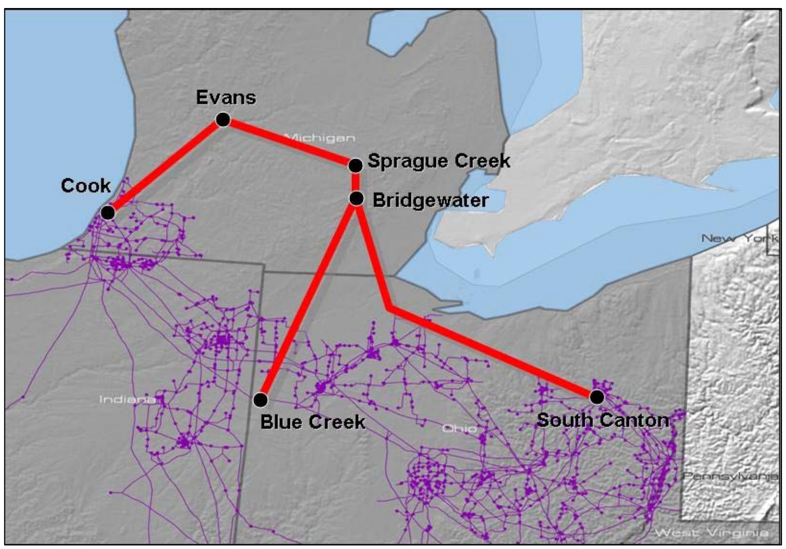
AEP is Advancing the Development of a National Interstate Today



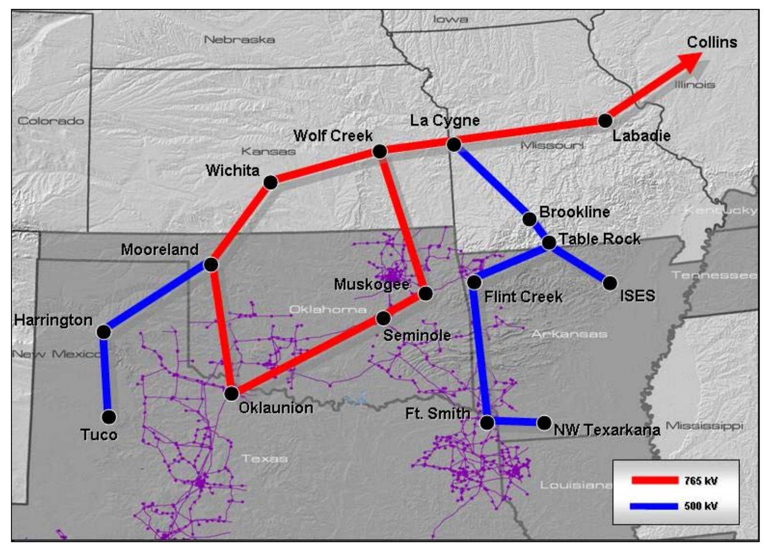
PATH Project (PJM)



ETT Proposal (ERCOT)



AEP-ITC Michigan Proposal (PJM/MISO)

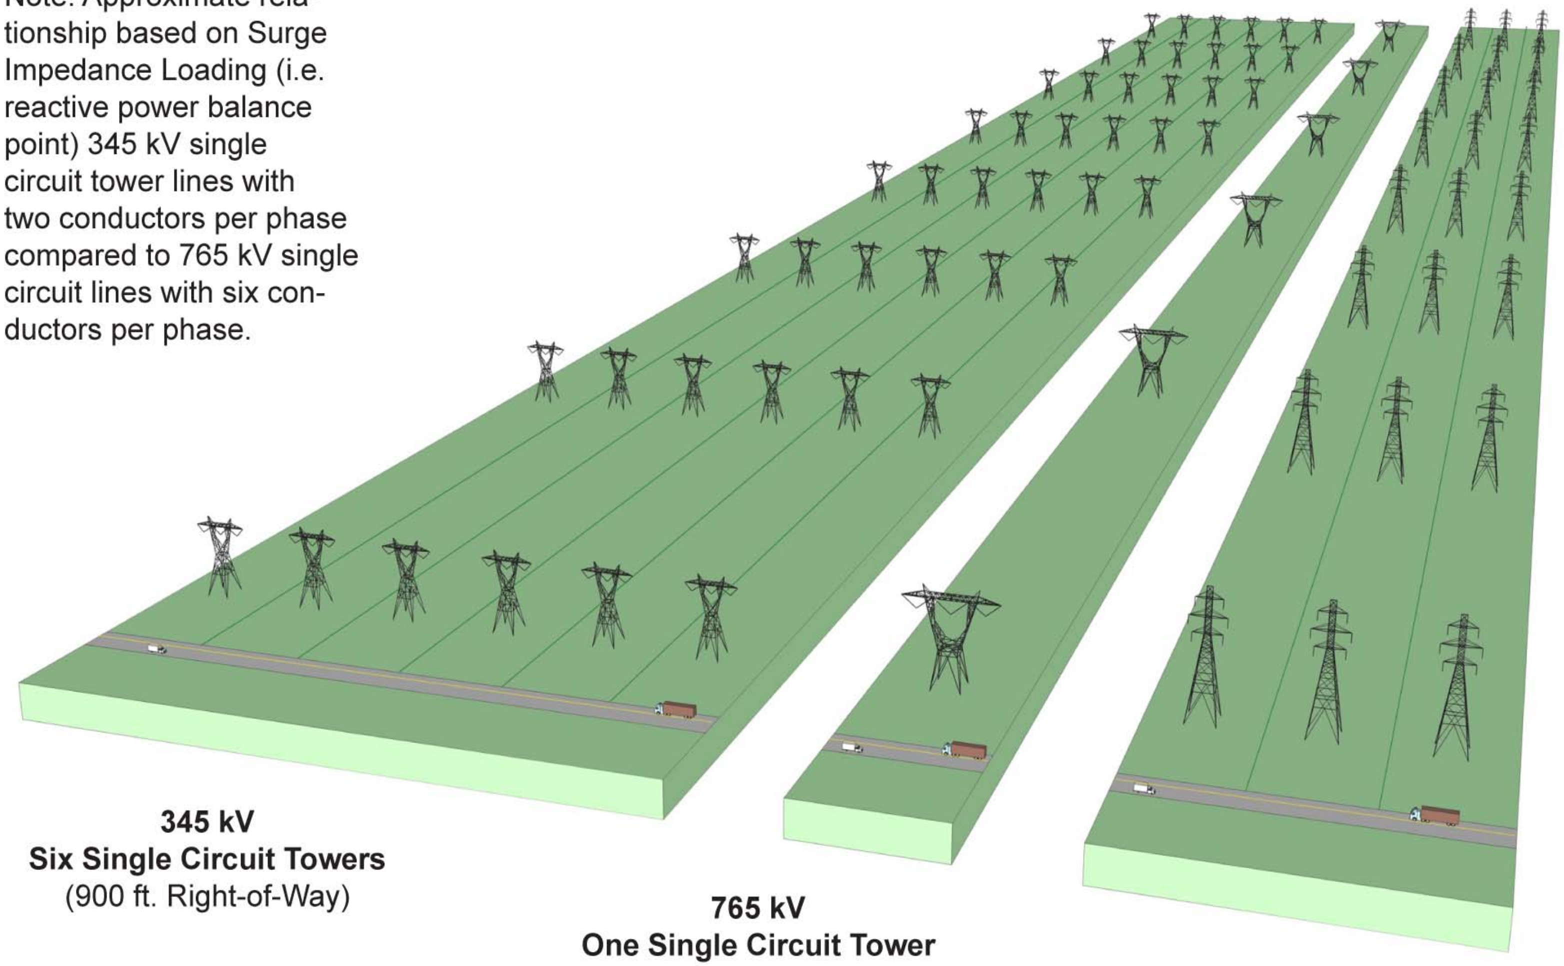


SPP Overlay Study

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 6018 of 9556

765 Right-of-Way Comparison

Note: Approximate relationship based on Surge Impedance Loading (i.e. reactive power balance point) 345 kV single circuit tower lines with two conductors per phase compared to 765 kV single circuit lines with six conductors per phase.



345 kV
Six Single Circuit Towers
(900 ft. Right-of-Way)

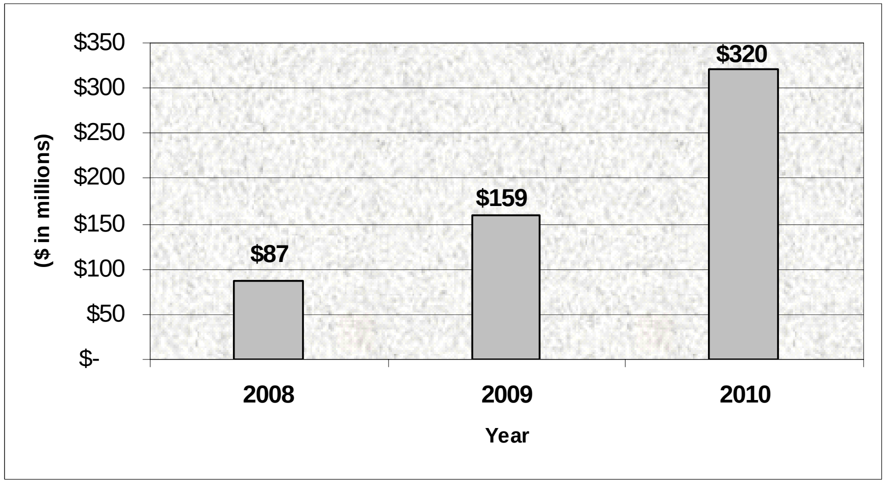
765 kV
One Single Circuit Tower
(200 ft. Right-of-Way)

345 kV
Three Double Circuit Towers
(450 ft. Right-of-Way)

From a siting standpoint, 765-kV is more efficient in terms of economies of scale and right-of-way than lower capacity lines.

Transmission – Investments and Earnings Contributions

Projected Transmission Capital Spending*

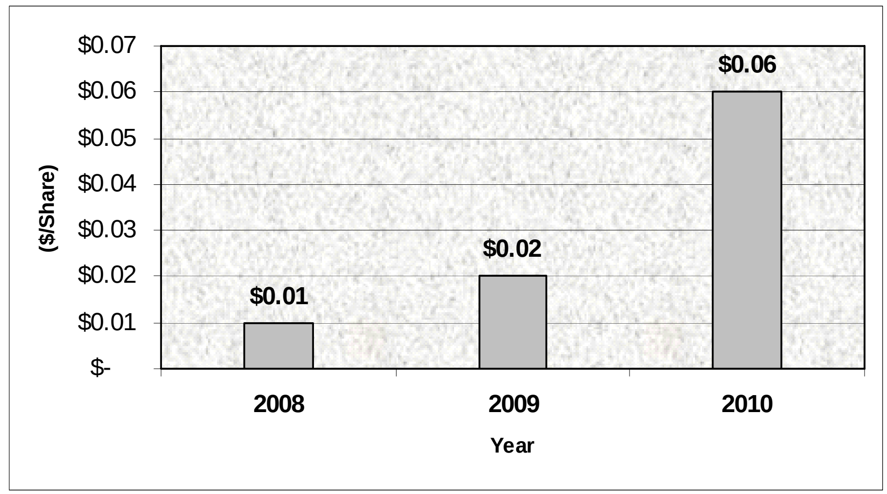


* ETT and PATH joint ventures included in above projection. Amounts represent AEP's 50% share of total transmission joint venture capital expense. These amounts are excluded from AEP's base capital forecast because the joint ventures are not consolidated for financial reporting purposes. AEP will be responsible for funding 40-50% of these amounts with equity contributions, and the remainder will be financed with debt issued by the joint ventures.

ETT Electric Transmission Texas

PATH Potomac-Appalachian Transmission Highline

Projected Transmission EPS Contributions*



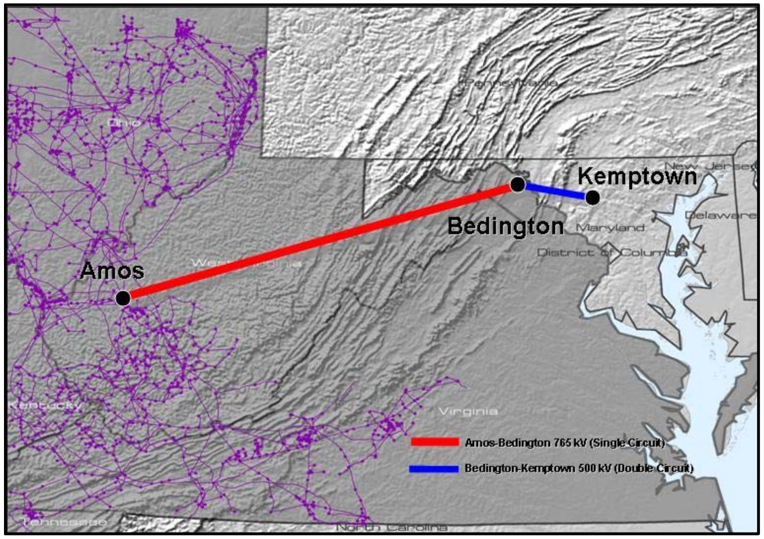
* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

Transmission will provide a near and long term catalyst for growth.

I-765TM Transmission in PJM: PATH

Execution in Action

- ## *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - Project corridor was included in the DOE's National Interest Electric Transmission Corridor
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries -- to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
  - FERC order issued on February 29, 2008 approving:
    - cash return on CWIP
    - 14.3% incentive ROE
    - recovery of all costs incurred prior to the time rates go into effect, and
    - recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
  - FERC ordered the formula rate issue be set for hearing, pending settlement judge procedures
- ## *Funding Plans/Transaction Structure*
  - AEP and Allegheny share ownership of Amos – Bedington line and contribute equally to this portion of the project through PATH West Virginia Transmission Company, LLC
  - AEP's investment will be held in the AEP Transmission Holding Company LLC subsidiary
- ## *Key Next Steps*
  - Siting Approval from WV and MD – Fall 2009
  - Targeted Completion – 2012



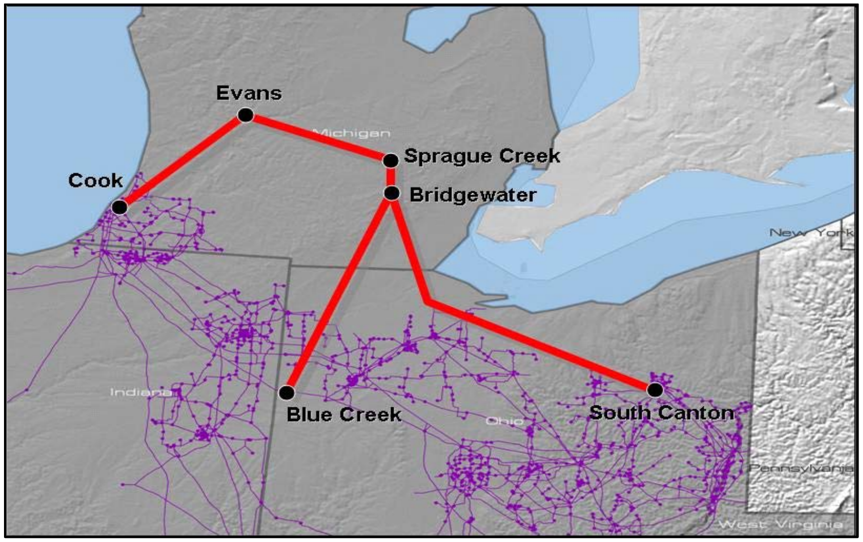
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Potomac-Appalachian Transmission Highline

I-765™ Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
  - Study was released Q3 2007
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.6 billion investment (before ownership division)
  - AEP and ITC are in discussions to form a Joint Venture
- *Benefits*
  - Up to 5,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- *Next Steps*
  - Agreement on JV (AEP/ITC) Q2 2008
  - JV Formation - 2008
  - MISO and PJM Review/Approval - 2008
  - FERC Filing - Fall 2008
  - Siting Approval – Fall 2010
  - Estimated Completion – Fall 2015



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

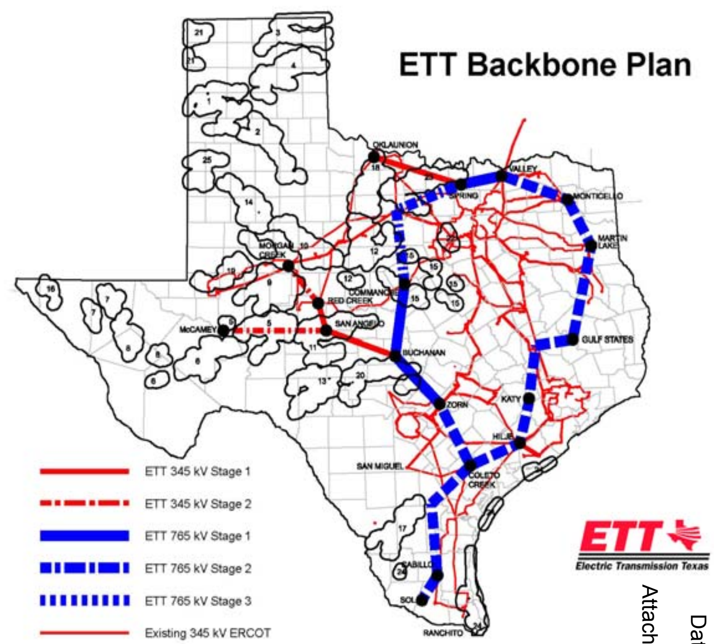
I-765™ Transmission in Texas (ETT)

Electric Transmission Texas Update

- *Transaction Structure*
  - 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
  - ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
  - Services provided by AEP and investment opportunities can be offered by either partner

- *Next Steps*
  - ETT project opportunities to be evaluated on a case by case basis
  - Anticipate offering projects in Q2 2008

- *ETT ERCOT Backbone Proposal*
  - ETT proposal for ERCOT and PUCT to consider CREZ transmission in context of long-term vision for transmission system.
  - Current 5-year planning horizon results in higher ultimate costs, lower system efficiency.
  - Long-term 15-20 year perspective provides better plan, supports development of high voltage backbone at 765-kV.
  - $4.2 billion investment (long-term backbone).*



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

* Before ownership division.

Electric Transmission America (ETA)

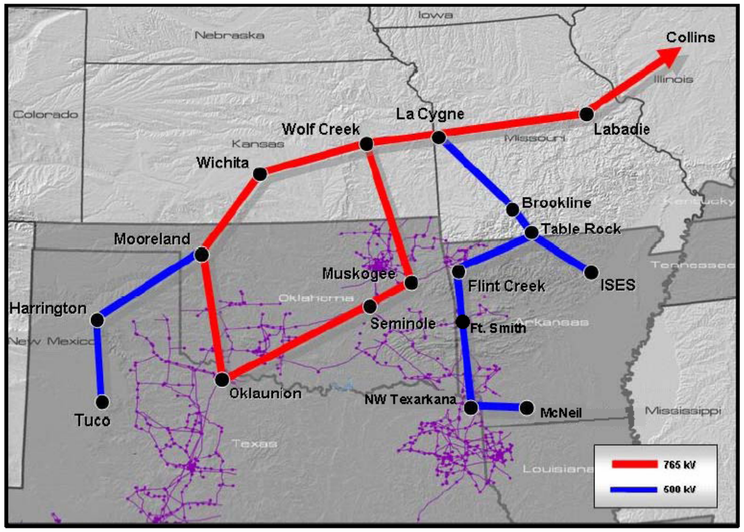
- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.

ETA reflects a natural progression and expansion of AEP's partnership with MidAmerican.

I-765™ Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- *Overview*
  - July 2006 AEP submitted conceptual project for six 765-kV lines
  - Proposed 765-kV Kansas / Oklahoma / Arkansas connecting to MISO/PJM
  - 610 miles from Kansas to Arkansas
  - SPP proposes 765-kV in Texas / Oklahoma / Kansas / Missouri connecting to MISO/PJM
  - SPP also proposes 500-kV in Texas / Oklahoma / Arkansas / Missouri
  - $3.0 billion investment (before ownership division)
  - Proposed 2012-2017 construction period
- *Benefits*
  - 4,000 MW improved transfer capability
- *Next Steps*
  - Study Disclosure – Completed 2Q 2007
  - JV Formation (ETA) – Completed 3Q 2007
  - SPP 10-year Expansion Plan Issued – December 2007
  - SPP RTO/BOD EHV Overlay Approval – 2Q 2009
  - SPP RTO FERC Filing – 3Q 2009
  - Siting Approval – 3Q 2011
  - Estimated Completion – 3Q 2017



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A reliable and reasonably-priced electric supply is necessary to support the economic well-being of the areas we serve.

Highlights of Bingaman-Specter Proposal

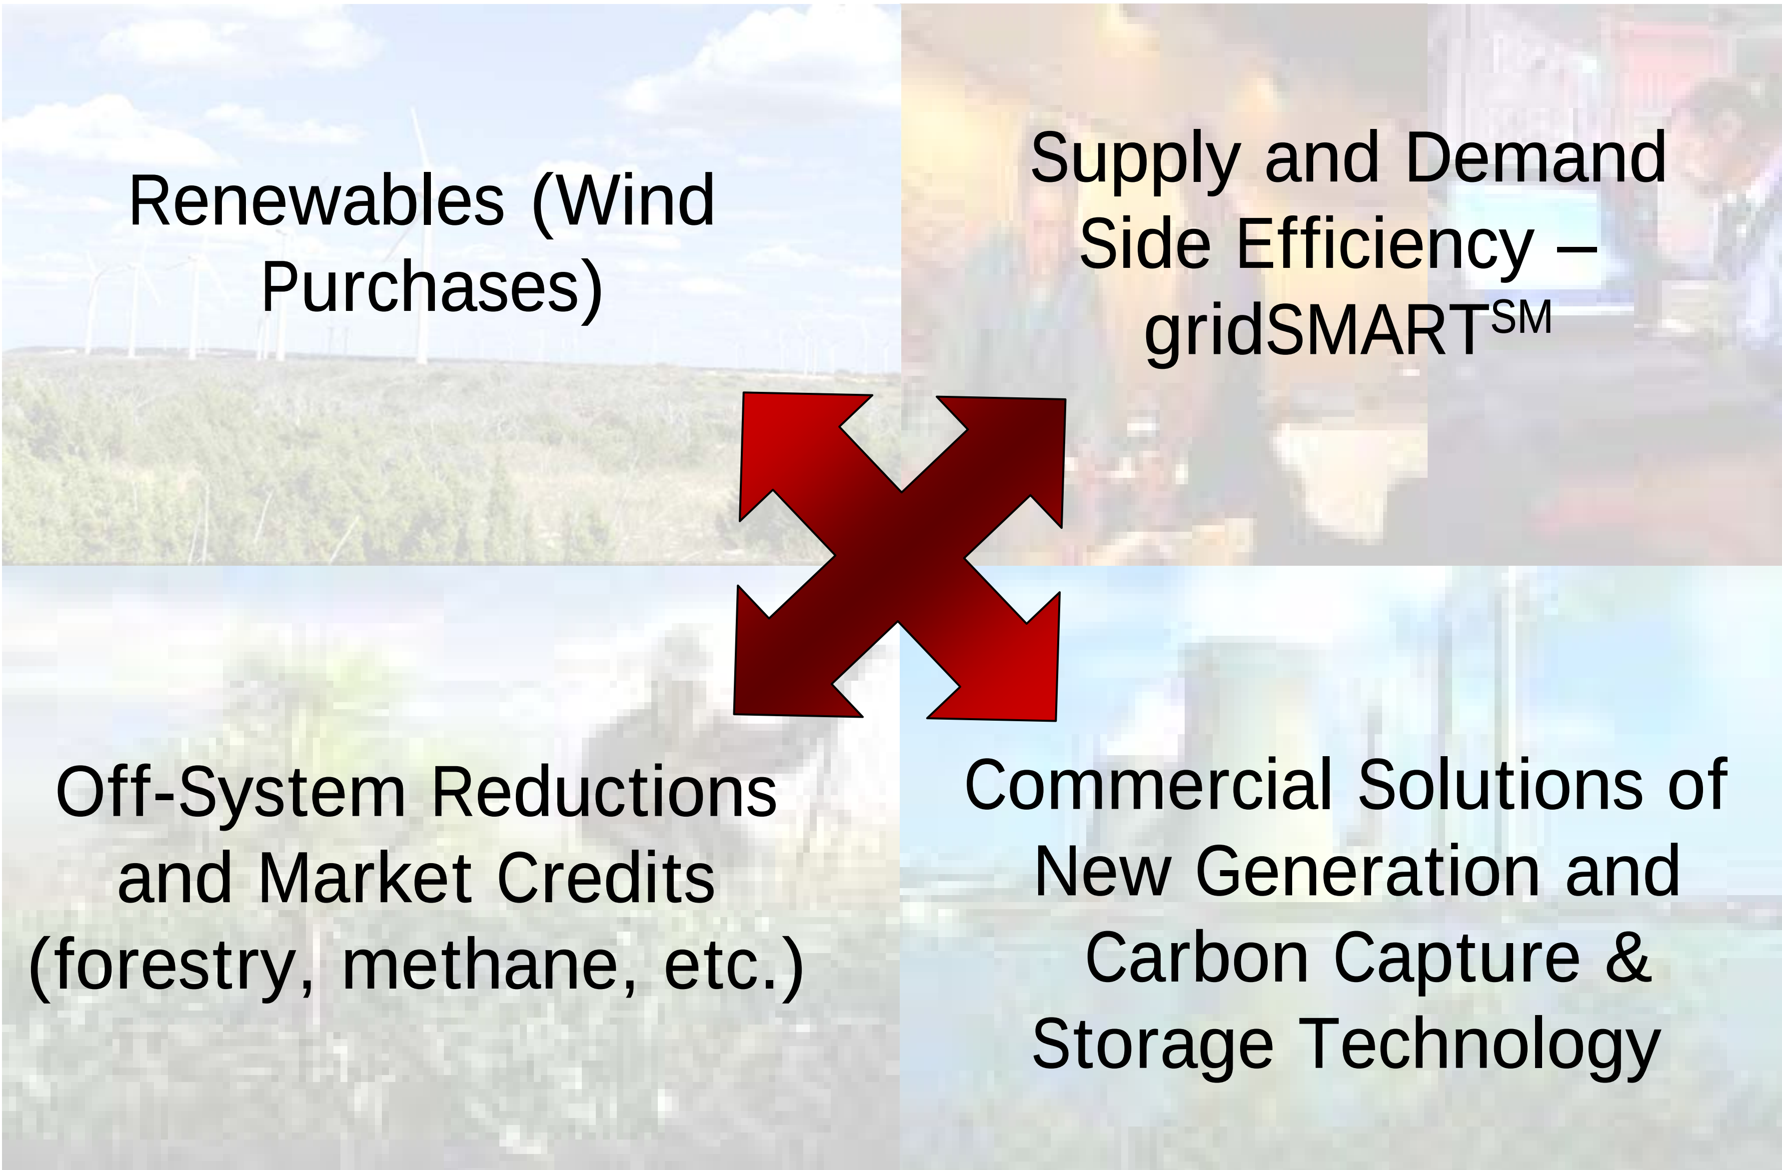
"Low Carbon Economy Act of 2007"

Key Components:

- Start date for greenhouse-gas reductions is 2012
- Goals: 2006 levels by 2020; 1990 levels by 2030
- Includes a safety valve of $12 per metric ton, increasing at an annual rate of 5% above inflation
- Support for allowance allocations
- International action

AEP endorses this proposal because it sets reasonable and achievable reduction targets and includes the AEP-IBEW trade proposal.

AEP's Long-Term GHG Reduction Portfolio



AEP is investing in a portfolio of GHG reduction alternatives.

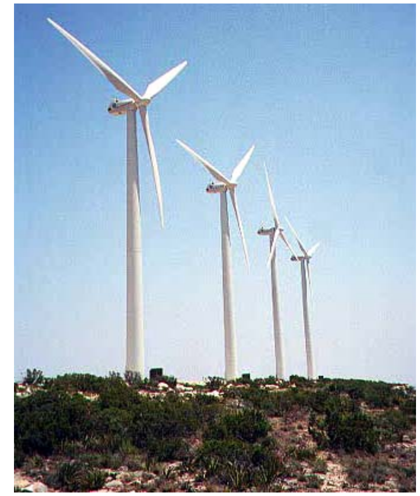
AEP Wind Operations/Purchases

Trent Mesa (2001)

150 MW (100 - 1.5 MW turbines)

Abilene/Sweetwater, TX

Southwest Mesa (1999)



- **75 MW** (107 – 700kW turbines)
- McCarney, TX
- Power Purchaser

Desert Sky (2002)

160 MW (107 - 1.5 MW turbines)

Bakersfield, TX

Summary

- Owned/Operated 385 MW
- Wind Purchases 392 MW
- Total Existing Wind at end of 2006: 777 MW
- **New Wind Purchases in 2007: 275 MW**

AEP will acquire an additional 725 MW of new wind to attain goal of 1,000 MW by 2011.

Off-System Reductions

Existing AEP Programs:

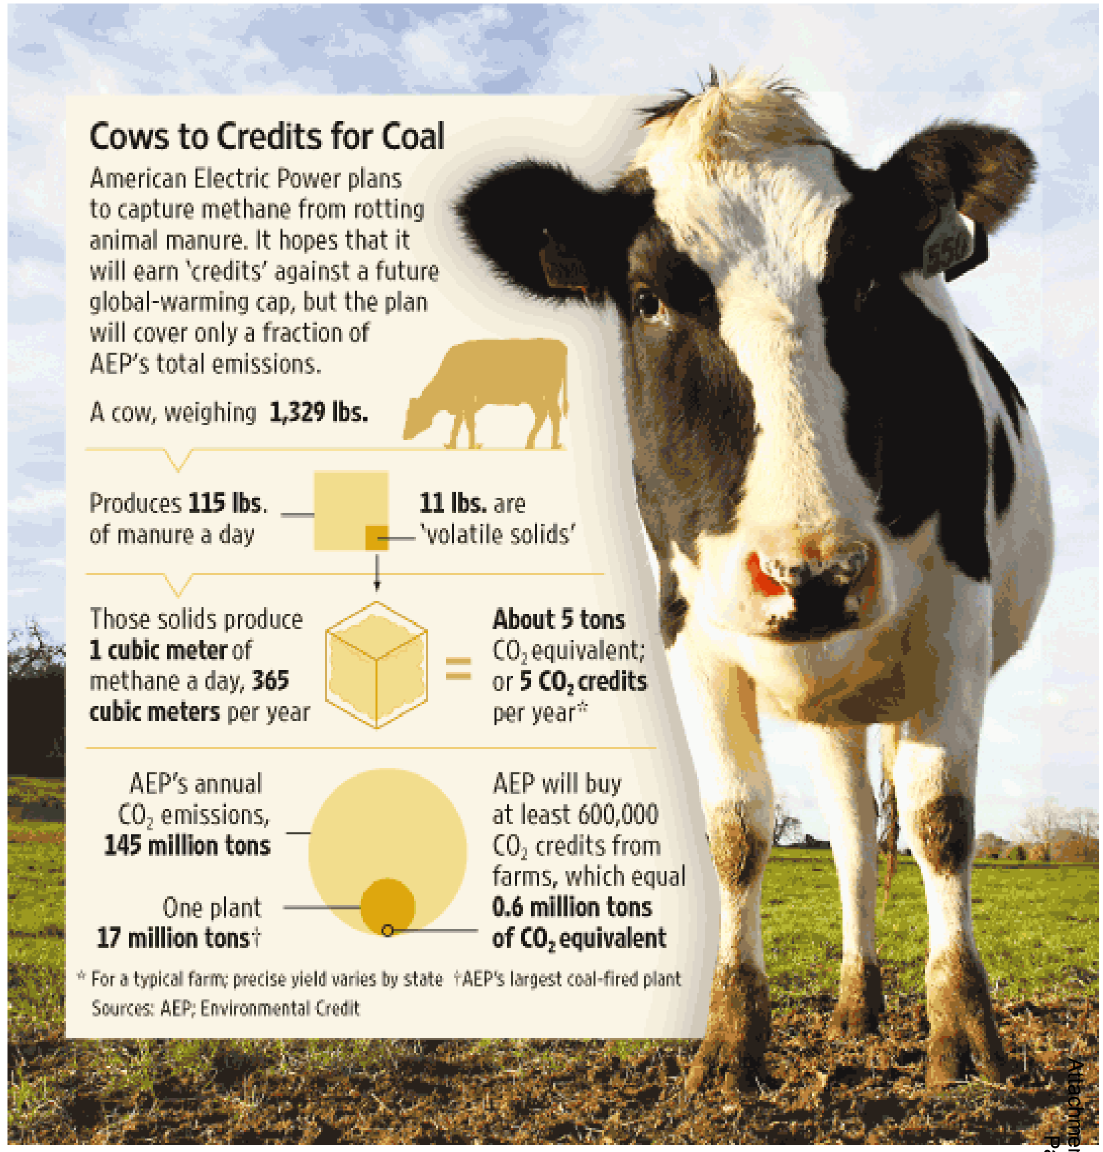
- Forestry - Domestic
  - 350,000 tons / yr
  - 63 MM trees planted
- Forestry – International
- Chicago Climate Exchange

New AEP Commitment by 2011:

- 2 M tons per year of additional CO_2 offsets

Latest Announcement:

- Methane Capture Deal with Environmental Credit Corp.
  - 600,000 CCX carbon credits per year
  - Begins 2010
  - Runs through 2017
  - 51% of credits sourced from "AEP States"



Source: Wall Street Journal June 14, 2007

AEP Leadership in Technology: IGCC and USC

NEW ADVANCED GENERATION

IGCC -- AEP first to announce plans to build two 600+ MW IGCC commercial size facilities in US (OH and WV) by next decade

USC -- AEP will be first to employ new generation ultra-supercritical (steam temperatures >1100ºF) coal plant in U.S (AR)

Advanced Generation & CO_2

Near Term:

- Chilled Ammonia project at Mountaineer moving to commercial scale at the Northeastern Plant in 2012

$ in millions				
		2008	2009	2010
Mountaineer Chilled Ammonia Project		$30	$39	$0

Long Term Strategy (Post-2010):

- IGCC
- Oxy Coal Technology
- Chilled Ammonia
- Nuclear COL

We are committed to validating and deploying technologies that ensure coal remains a viable resource for AEP and America.

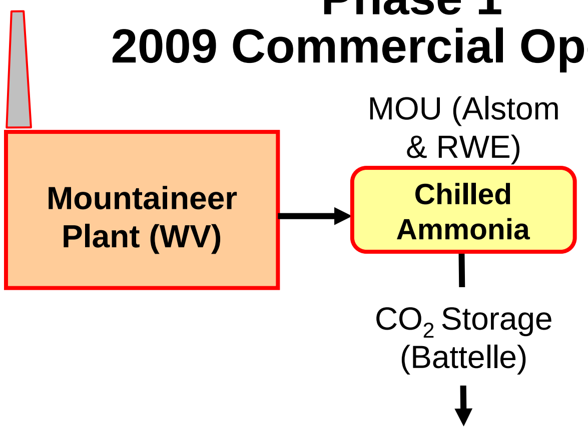
AEP's Carbon Capture & Storage Initiative

In March 2007, AEP announced a major new carbon capture and storage initiative:

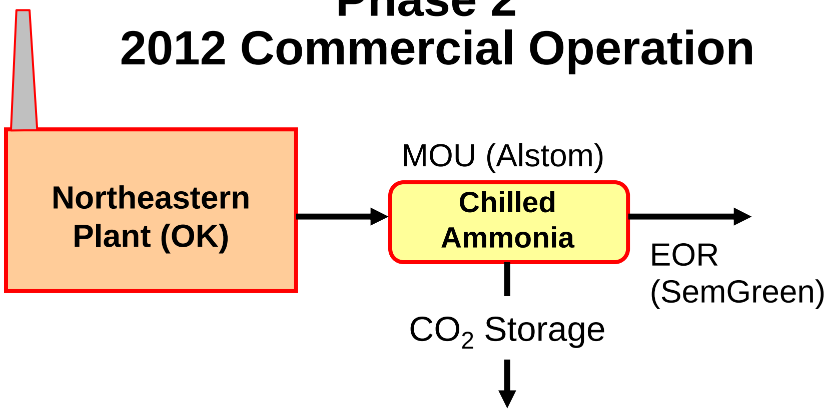
Chilled Ammonia CCS--We will install carbon capture on two coal-fired power plants, the first commercial use of technologies to significantly reduce carbon dioxide emissions from existing plants.

- **The first carbon capture project, at the Mountaineer plant in West Virginia, is expected to complete its product validation phase in 2009.**
- **The second, at the Northeastern plant in Oklahoma, will begin commercial operation in 2012.**

Phase 1
2009 Commercial Operation



Phase 2
2012 Commercial Operation



CO_2 Capture Techniques

Post-Combustion Capture

- Conventional or Advanced Amines, Chilled Ammonia
  - Amine technologies commercially available in other industrial applications
  - Relatively low CO_2 concentration in flue gas – More difficult to capture than other approaches
  - High parasitic demand
    - Conventional Amine ~25-30%, Chilled Ammonia target ~10-15%
  - Amines require **<u>very</u>** clean flue gas

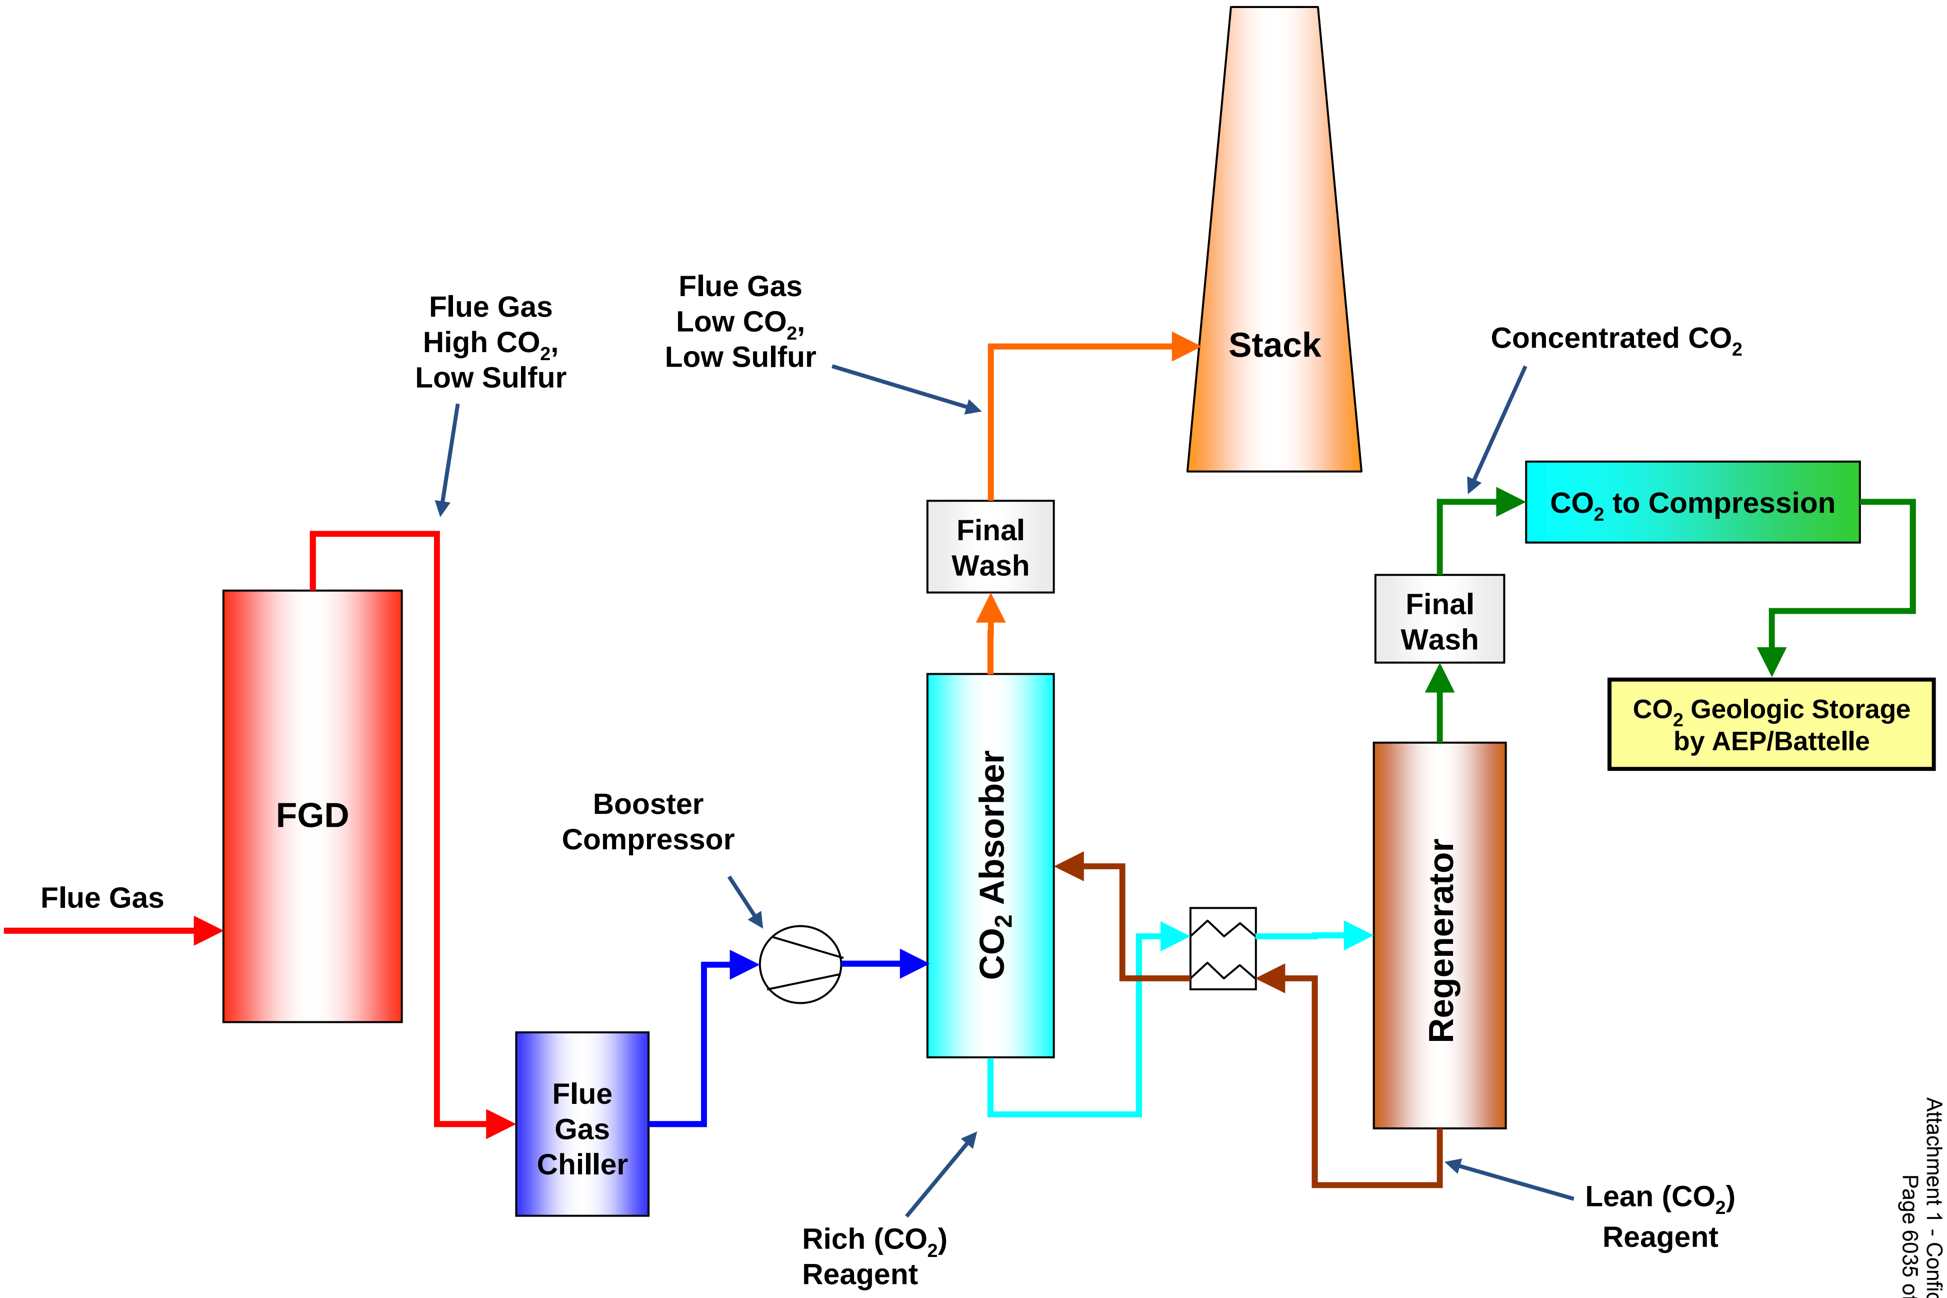
Modified-Combustion Capture

- Oxy-Coal
  - Technology not yet proven at commercial scale
  - Creates stream of very high CO_2 concentration
  - High parasitic demand, >25%

Pre-Combustion Capture

- IGCC with Water-Gas Shift
  - Most of the processes commercially available in other industrial applications
    - Have never been integrated together
  - Turbine modified for H_2-based fuel, which has not yet been proven at commercial scale
  - Creates stream of very high CO_2 concentration
  - Parasitic demand (~20%) for CO_2 capture - lower than amine or oxy-coal

Alstom's Chilled Ammonia Process
Post-Combustion Capture



Babcock & Wilcox Oxy-Coal Process
Modified Combustion Capture

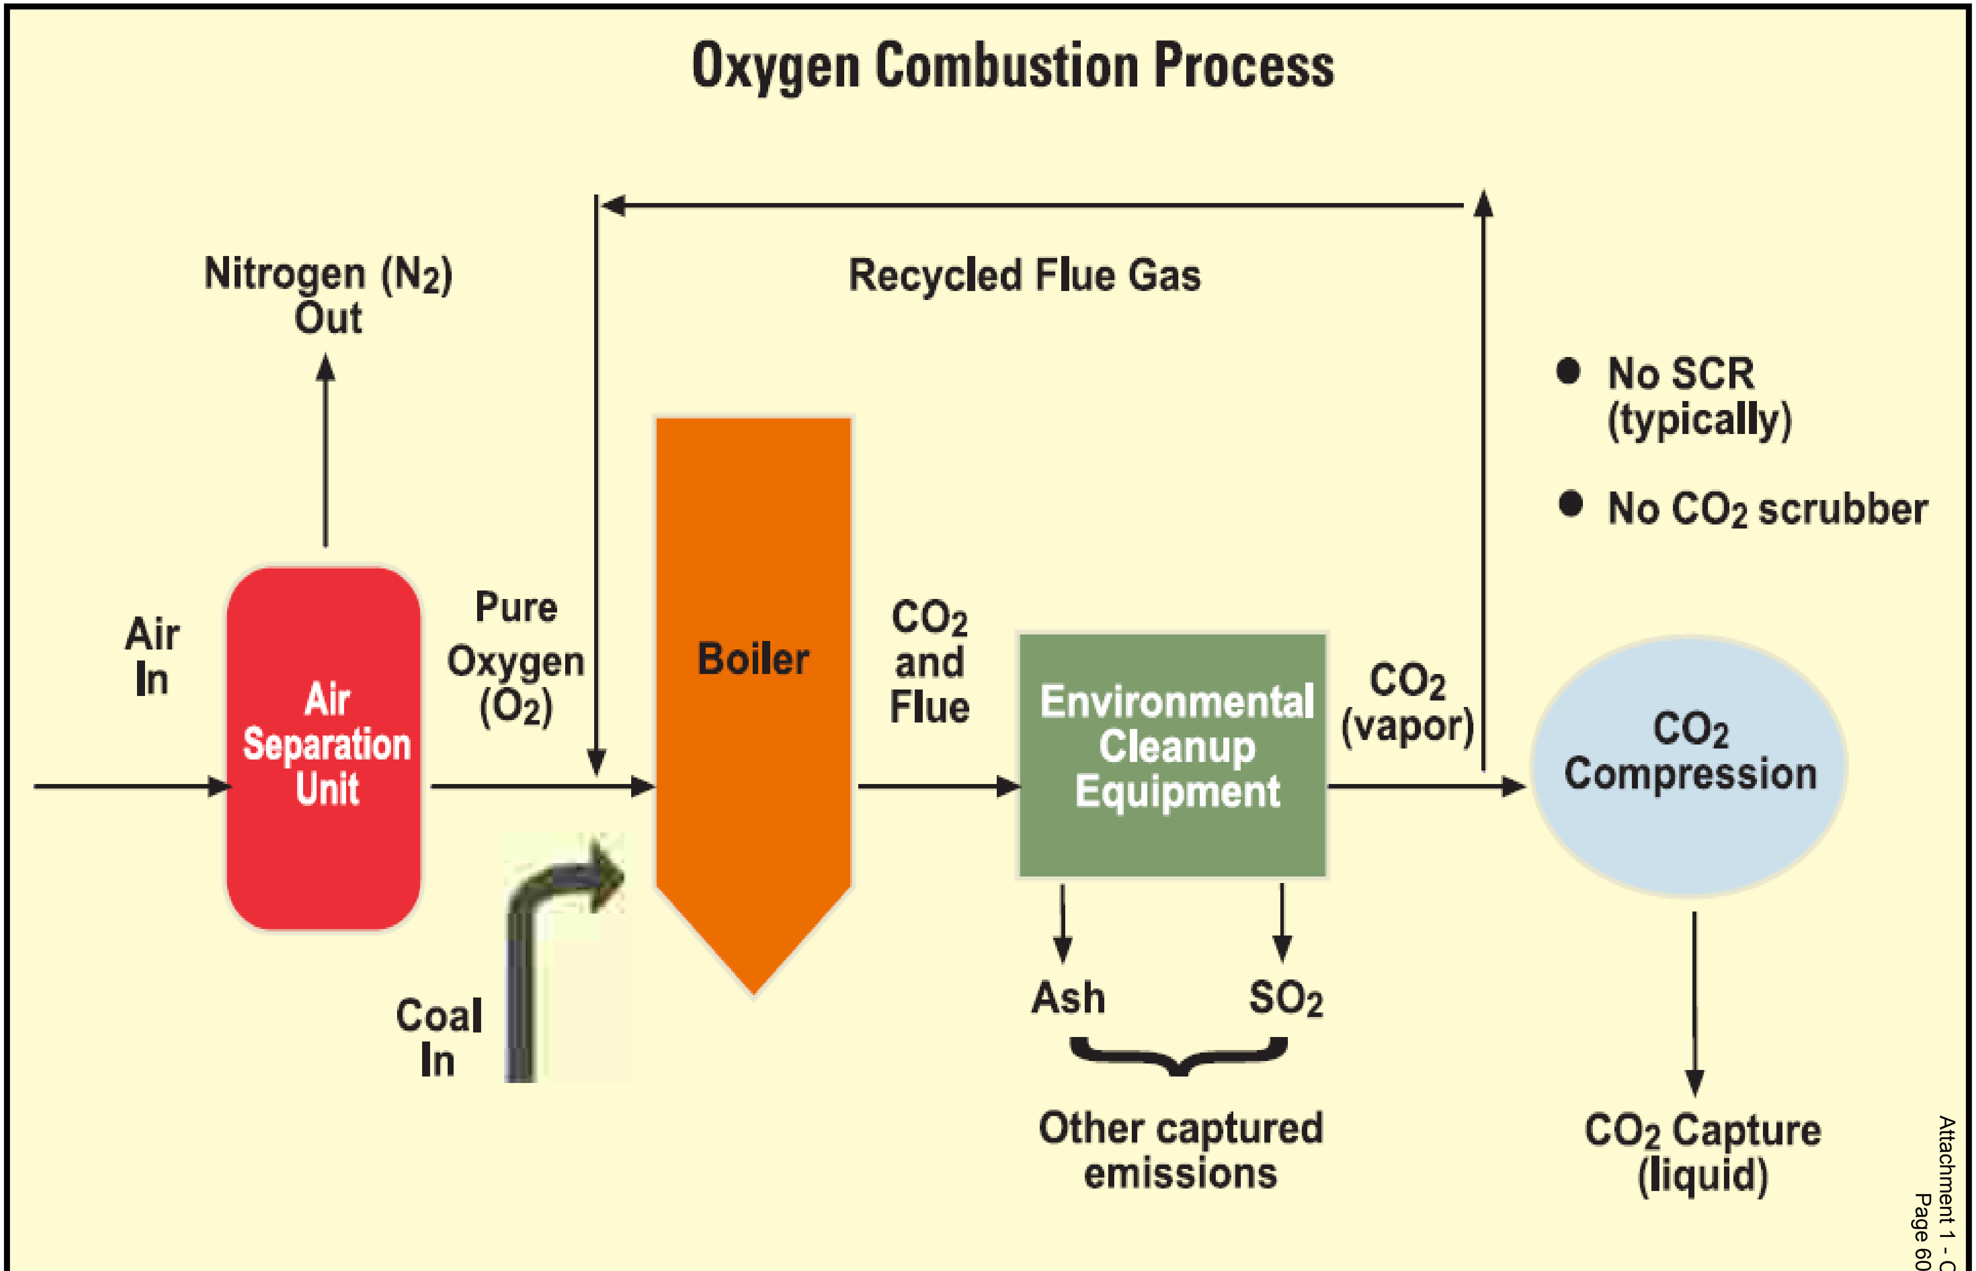


Illustration supplied courtesy of The Babcock & Wilcox Company

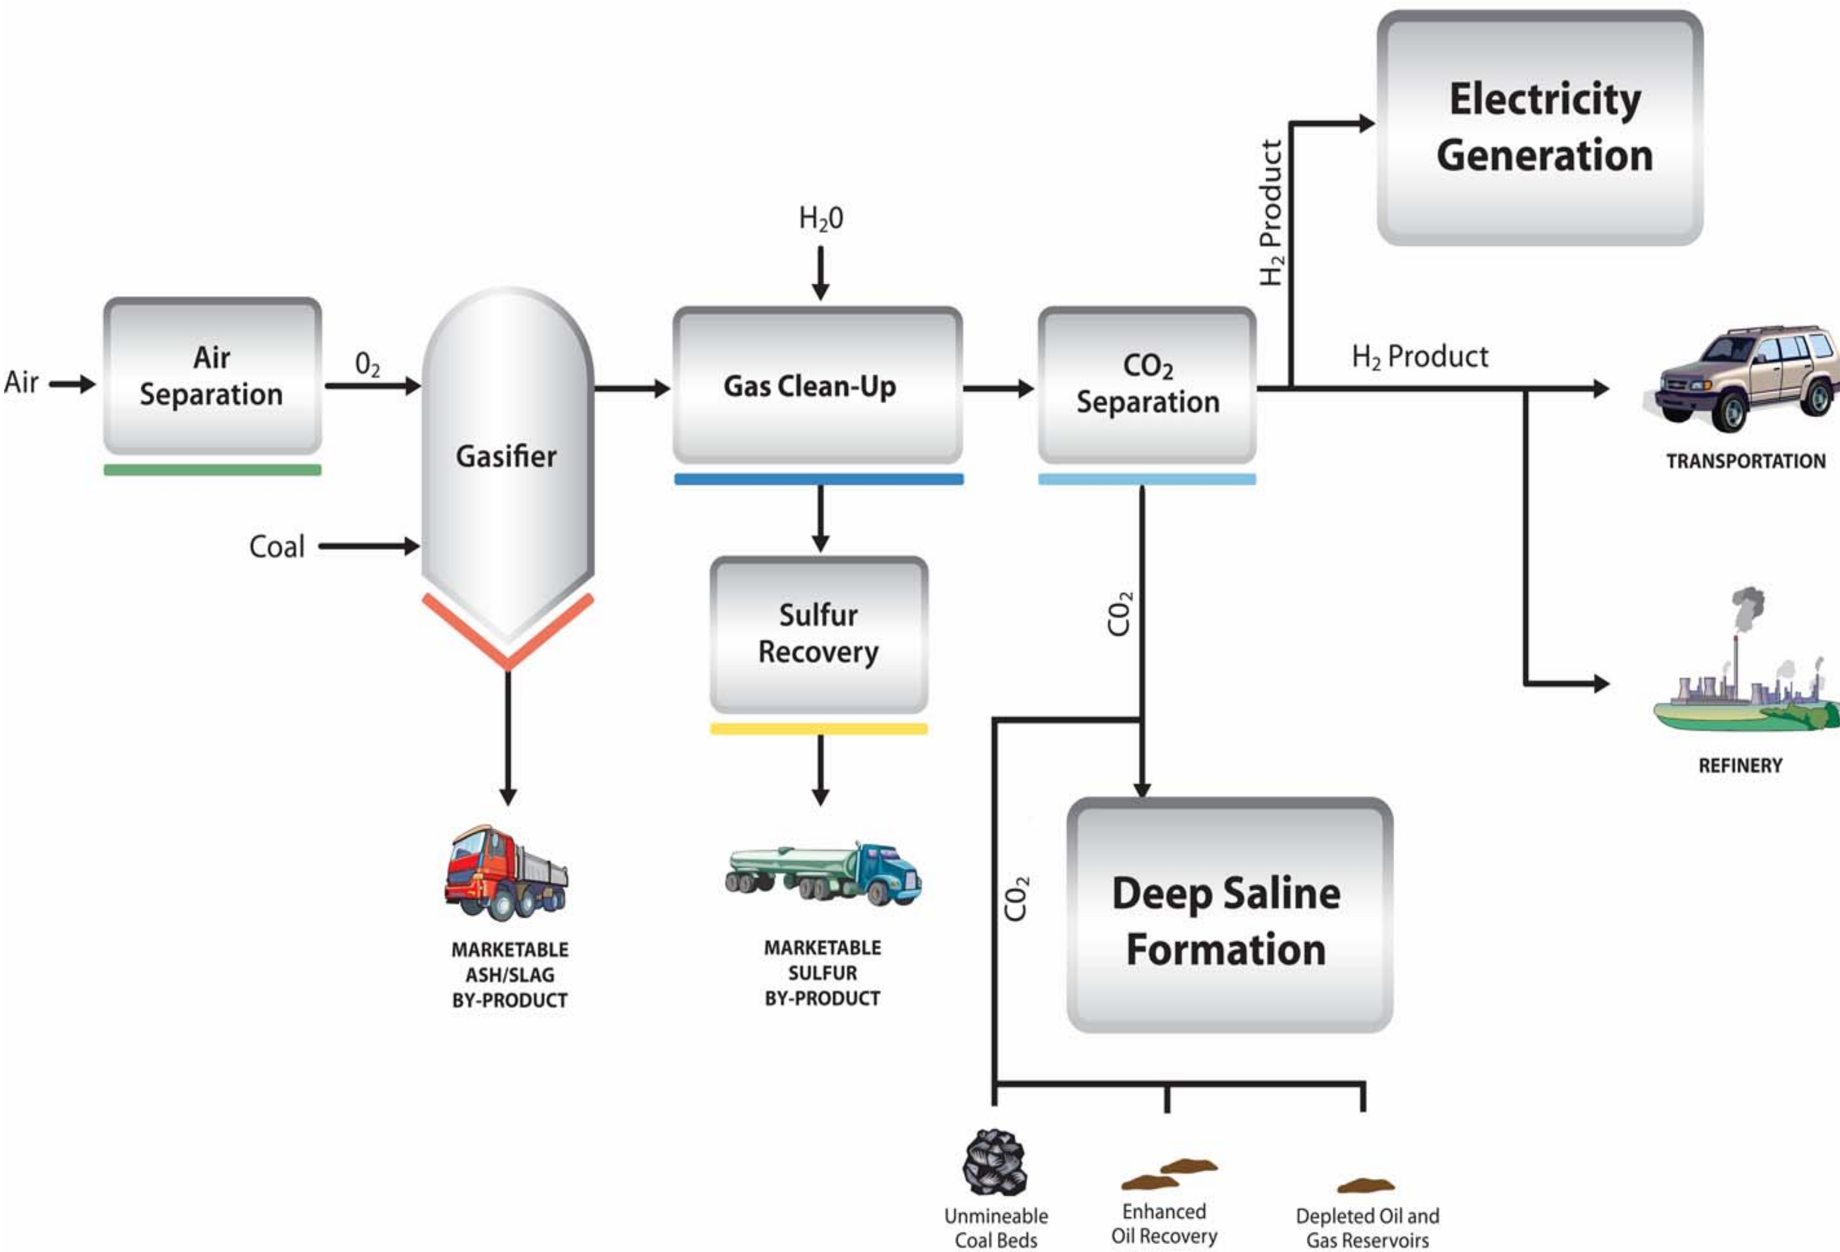
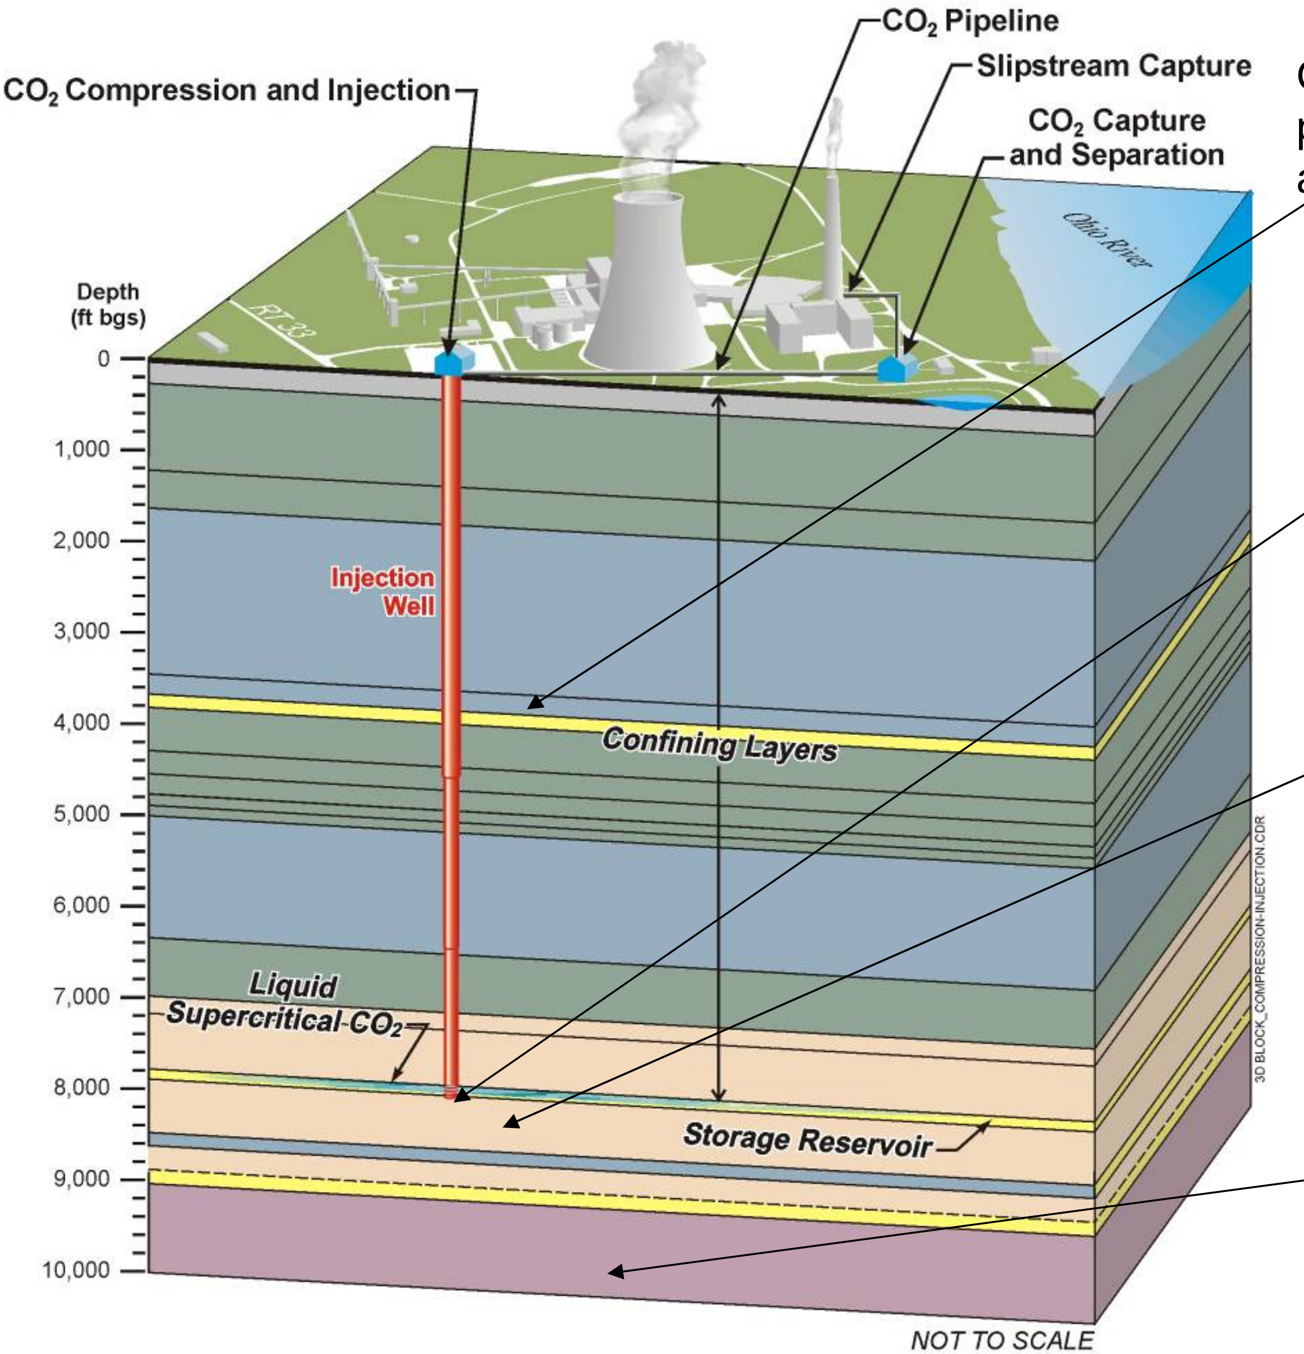
IGCC with Water-Gas Shift Process
Pre-Combustion Capture



CO_2 Injectivity in the Mountaineer Area



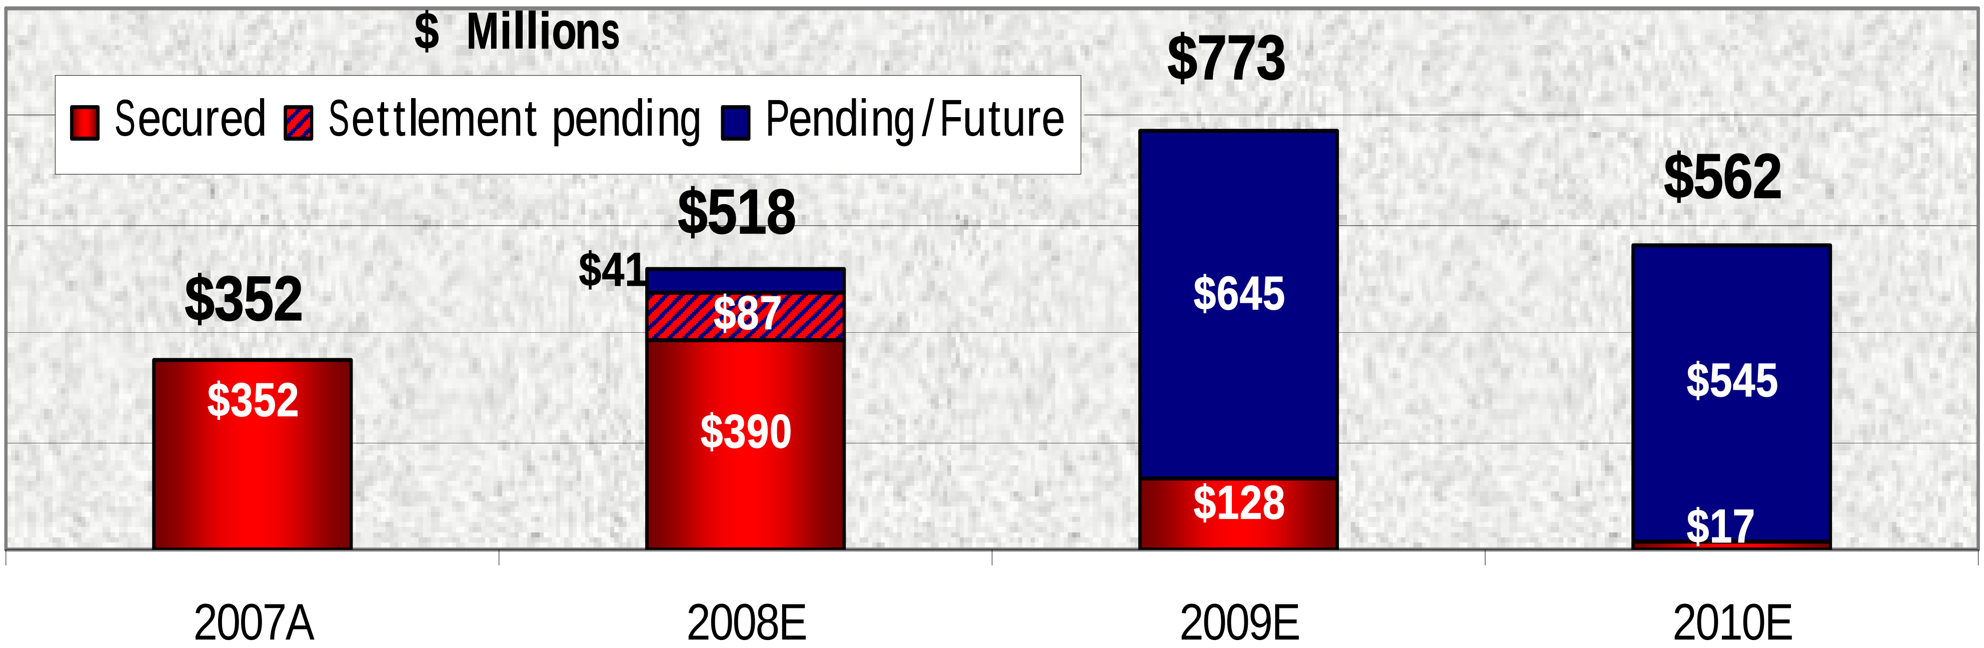
CO_2 injection should also be possible in shallower sandstone and carbonate layers in the region

Rose Run Sandstone (~7800 feet) is a regional candidate zone in Appalachian Basin

A high permeability zone called the “B zone” within Copper Ridge Dolomite has been identified as a new injection zone in the region

Mount Simon Sandstone/Basal Sand - the most prominent reservoir in most of the Midwest but not desirable beneath Mountaineer site

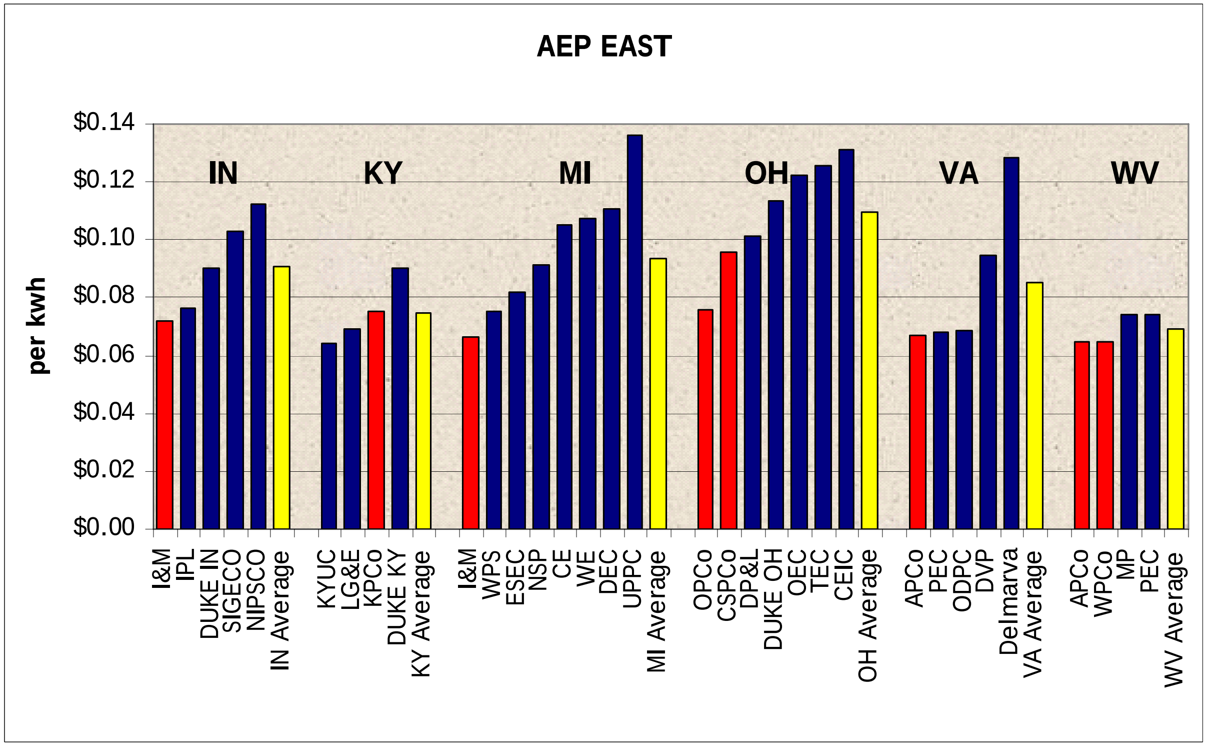
Incremental Rate Relief Assumptions

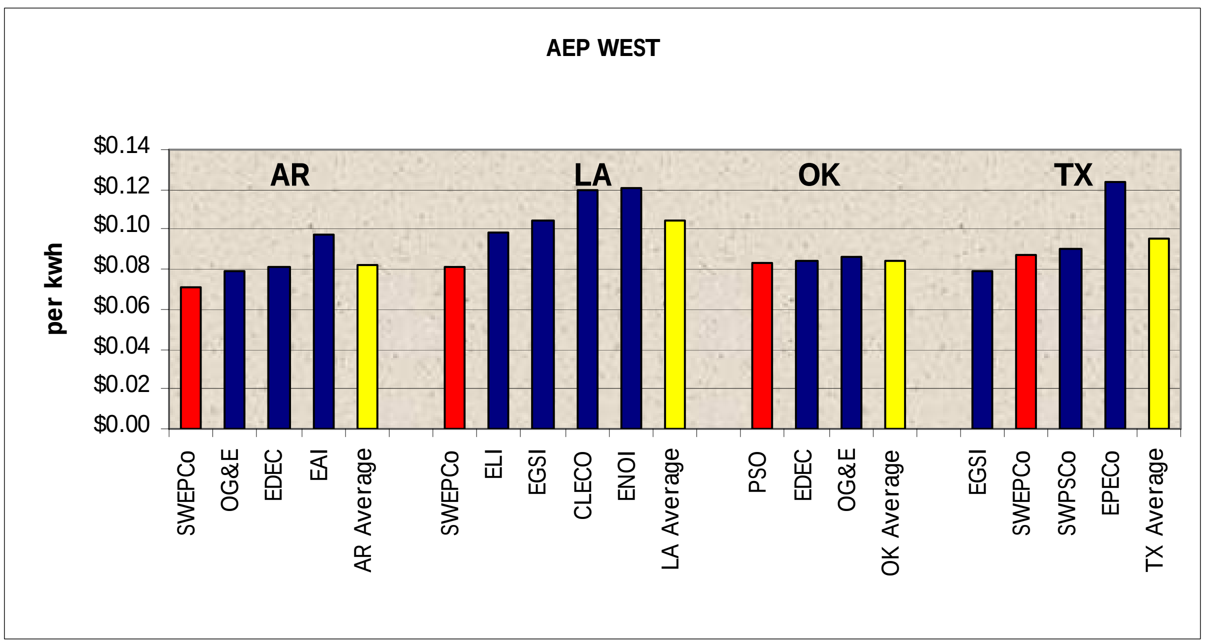


- **75% of 2008 Rate Relief Secured: I&M Depreciation, APCo - WV Surcharge, TCC & TNC General Rate Cases, Ohio RSP (3% & 7%), PSO Peaking Generation & General Rate Case, Ohio 4% Generation Rider and Marginal Loss Recovery, APCo - Virginia Fuel Factor, 2007 TCC/TNC TCRF filings.**
- **17% of 2008 Rate Relief Settlement Pending: Uncontested settlement approved by an ALJ on February 29, 2008 for the PSO January and December 2007 Ice Storm Recovery; OCC approval pending**
- **2008 Pending: SWEPCo - LA Financial Review, 2008 TCC/TNC TCRF filings, other cases yet to be filed.**

Our goal is to maximize utility company cash flow and returns by minimizing regulatory lag.

AEP Provides Low Cost Electric Service





Residential Average rates for 1,000 kWh - 12 months ended 7/01/2007

  - SWEPCo Stall Plant Filings in Louisiana and Arkansas

Regulatory Activity Underway

Ohio Post-2008

- On August 29, 2007, the Ohio Governor submitted legislation (SB221) that would restructure the regulation of Ohio's electric industry.
- Hearings on the legislation began on September 26, 2007 in the Ohio Senate and continued through the end of October.
- On October 25, 2007, the substitute version and associated amendments were incorporated into SB221.
- Full Senate vote occurred October 31, 2007. SB221 passed 32-0.
- Presented to House Public Utilities Committee on November 7, 2007; Hearings continue and we anticipate a signed bill in March or April of 2008.

Page 6042 of 9556

Regulatory Activity Underway

PSO Red Rock Generating Facility Recovery Filing

- On December 28, 2007, PSO filed an application with the Oklahoma Corporation Commission to defer, amortize and recover costs related to the Red Rock Generating Facility, which was denied construction and recovery pre-approval in October 2007.
- PSO requests the Commission make a determination that the costs incurred on the Red Rock project were prudent and direct it to establish a regulatory asset of approximately $21 million reflecting the future recovery of these costs, and to amortize the regulatory asset as PSO realizes proceeds from the sales of SO_2 emission allowances.
- The procedural schedule in this case has been suspended pending the outcome of the storm cost recovery. Once an order in that case is issued, additional cost recovery testimony likely will be filed and a new procedural schedule established.

Regulatory Activity Underway

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $140MM. Approximately $10MM of the increase relates to 3rd party and the rest, if approved, would be recovered through retail jurisdictional filings in SWEPCo and PSO, as appropriate.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to February 1, 2008, with rates subject to refund.
- Technical conferences and settlement meetings were held in October – December 2007. Settlement discussions are currently on-going. Intervenors and AEP are scheduled to meet on March 11, 2008 to review any additional issues and report back to the settlement judge on the status of the settlement discussions.

Regulatory Activity Underway

APCo Mountaineer IGCC Filing

West Virginia

- Testimony filed with the West Virginia Public Service Commission on June 18, 2007 in support of APCo's application for a Certificate of Public Convenience and Necessity to construct a 629MW IGCC plant in WV at a cost of approximately $2.23 billion.
  - Testimony includes a proposal for the Commission to approve a cost recovery mechanism through the existing Expanded Net Energy Cost (ENEC) mechanism. The filing is not a formal proposal to adjust rates.
  - Actual requests for increased rates will be included in future filings, once construction of the plant has commenced and actual Construction Work In Progress data is known.
- Staff and Intervenor testimony was filed November 19, 2007 and hearings were held December 10-12, 2007. We expect an order in early March 2008.

Virginia

- Testimony filed with the Virginia State Corporation Commission on July 16, 2007 seeking a prudence determination and approval to recover, beginning in 2009, Virginia's share of the carrying costs associated with the proposed plant.
- Intervenor testimony was received December 10, 2007 and Staff testimony was received on January 18, 2008. Public hearings commenced February 12, 2008. We expect an order in April 2008.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.
- Oral arguments regarding this matter were conducted at the Ohio Supreme Court on October 9, 2007. It is likely the court's decision will not be announced until some time in the first quarter of 2008.

Regulatory Activity Underway

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- The PSC issued its order on November 21, 2007, approving construction of the plant.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The peaking facility has been addressed and the intermediate facility is under review. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- Public hearings commenced September 11, 2007. A positive ALJ report was issued on February 8, 2008 recommending approval of the plant. An order is expected in March 2008.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- Public hearings commenced October 17, 2007. On January 17, 2008, the ALJ recommended the PUCT deny the request. A final order is expected on March 27, 2008.

Regulatory Activity Underway

SWEPCo Stall Plant Filings

Arkansas

- Proceeding is currently suspended pending outcome in Louisiana.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The intermediate facility, known as the Stall Plant and sited in Shreveport, LA, was bifurcated from the original filing and had a procedural schedule established on January 9, 2008.
- Staff and intervenor testimony was completed on February 15, 2008, rebuttal testimony was due February 29, 2008 and hearings will commence on April 7, 2008. Staff testimony was favorable.

Texas

- PUCT order approving plant was issued on March 8, 2007.

Multi-Year Capital Investment Funding Plan

$ in millions

	Actual	Projection		
	2007	**2008**	**2009**	**2010**
Planned Capital Investment (Excluding AFUDC) *	$ (3,914)	$ (3,830)	$ (3,750)	$ (3,600)
Planned Transmission Initiatives	$ -	$ (75)	$ (57)	$ (194)
Dividend on Common Stock	(630)	(659)	(664)	(669)
Cash Sources				
Cash from Operations	2,388	2,572	2,691	3,324
Proceeds from Sale of Assets	222	-	-	-
Common Stock Issued (Dividend Reinvestment Plan)	143	150	150	150
Change in Debt, Net	1,902	1,796	2,119	1,180
Other	(234)	(6)	(458)	(247)
Change in Cash	(123)	(52)	31	(56)
Ending Cash Balance	$ 178	$ 126	$ 157	$ 101

Note: For analysis purposes, certain financial statement amounts have been reclassified for this effect on the earnings presentation.

* - 2007 actual amount includes distressed generation purchases of $512 million

Capital investment is funded from cash from operations and debt issuances.

Commitment to Credit Quality

- Maintain adequate liquidity
- $150MM annually in new equity from Dividend Reinvestment and 401(k) plans
- Target 60% maximum consolidated AEP debt/cap ratio on an adjusted basis
- Target utility company capitalization structures:

Company	Target Equity Ratio
APCo	42-44%
CSP	45-47%
I&M	40-42%
KPCo	41-43%
OPCo	44-46%
PSO	43-45%
SWEPCo	43-45%
TCC	40%
TNC	40%

- Target long term dividend payout ratio range of 55-60%
- Maintain adequate coverage ratios to support current credit ratings

We are committed to maintaining our current credit ratings.

Sustainable Business Model

- *Strength and scale in assets & operations*
- *Continued innovation and deployment of leading technology advancements*
- *Sustainable earnings growth through near and long term capital investment opportunities*
- *Comprehensive regulatory strategy focused on maximization of cash flow and return through minimized regulatory lag*
- *Strong dividend yield with respect to peers*
- *Balance sheet and credit profile stability*

AEP AMERICAN ELECTRIC POWER

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; volatility in the financial markets, particularly development affecting the availability of capital on reasonable terms and developments impairing our ability to refinance existing debt at attractive rates; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation in Ohio and the allocation of costs within regional transmission organizations; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

AEP enjoys significant presence throughout the energy value chain.

AEP Strategy

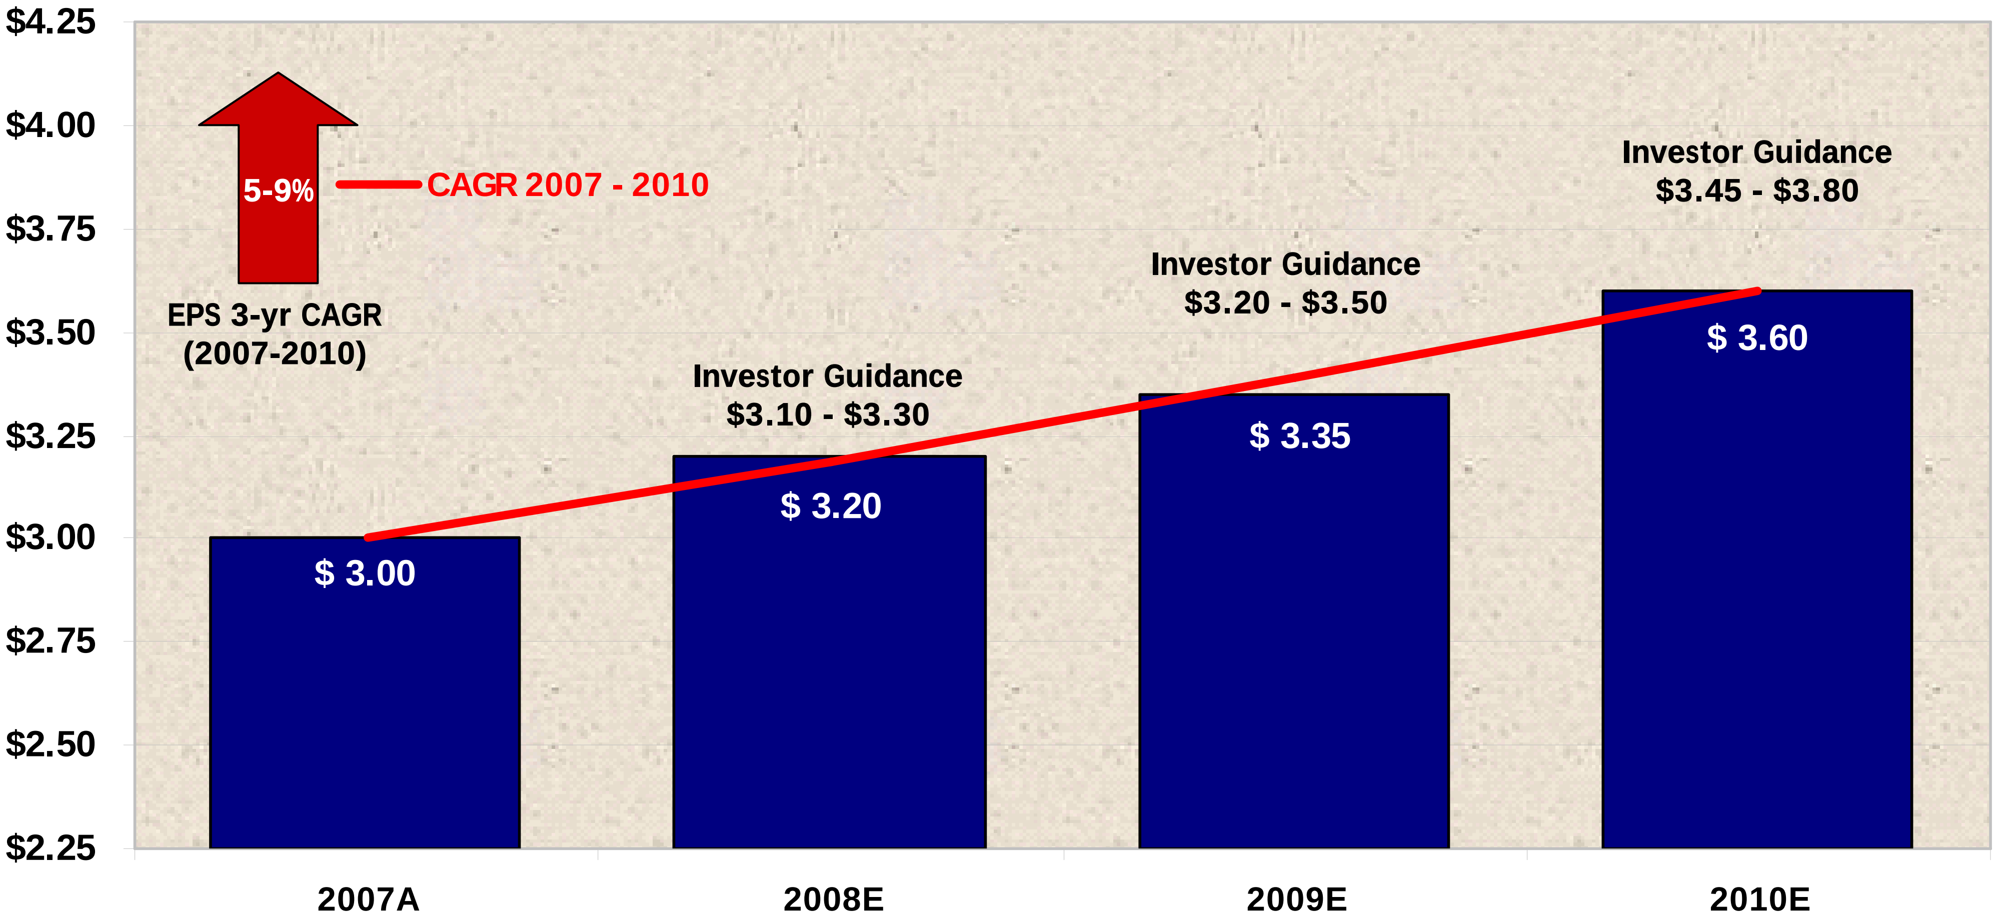
Strategy: grow our core utility business at a consistent rate through major investment supported and funded by innovative programs for regulatory recovery as well as develop our independent, federally regulated Transmission Company for the pursuit of new major interstate projects.

Our 2008 Focus:

- Prepare for post-2008 transition in Ohio
- Invest in and evolve infrastructure to support future technology and customer needs focused on efficiency, conservation and load management
- Enhance cash flow & earnings through rate recovery mechanisms
- Take advantage of AEP's size to benefit our customers and shareholders through regulatory-supported investment

Sustained capital investment opportunities support earnings growth.

4-Year Earnings Range Forecast

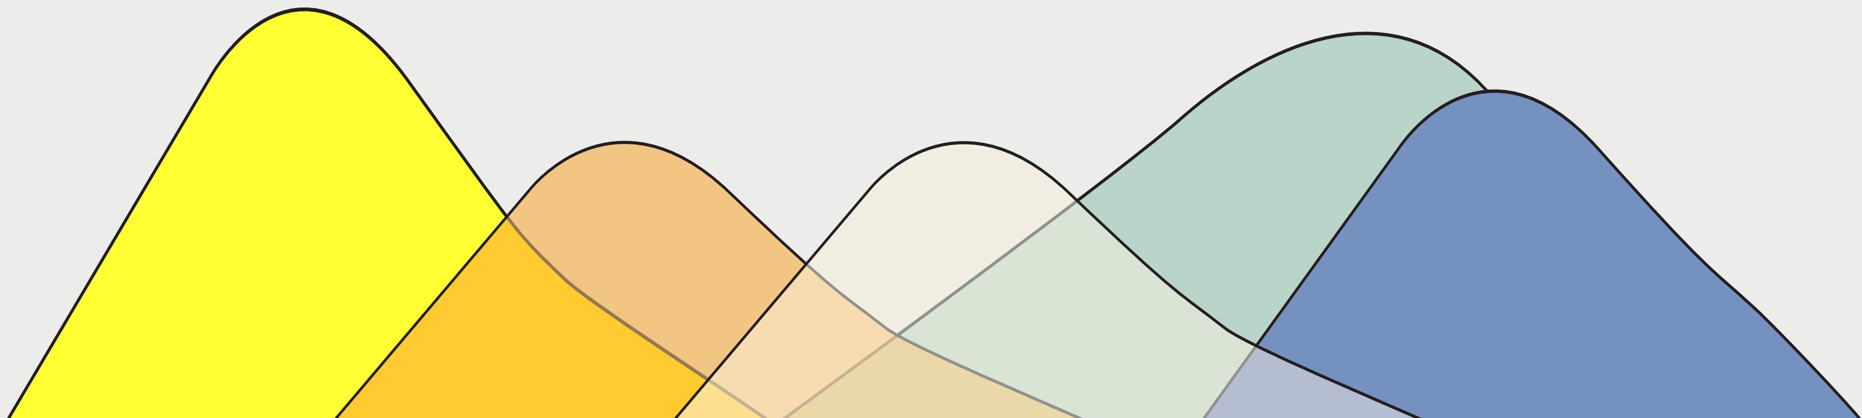


5% to 9% earnings growth

Capital Investment Earnings Catalysts

Capital Investment - Consistent Waves of Opportunity

Environmental Retrofits	New Generation Projects	GridSMART Technology	Transmission Ventures	Adv Generation/ CO_2
$5.4B	$1.3B+	$1-2B	$2.25B - $3.75B*	$2.0B+



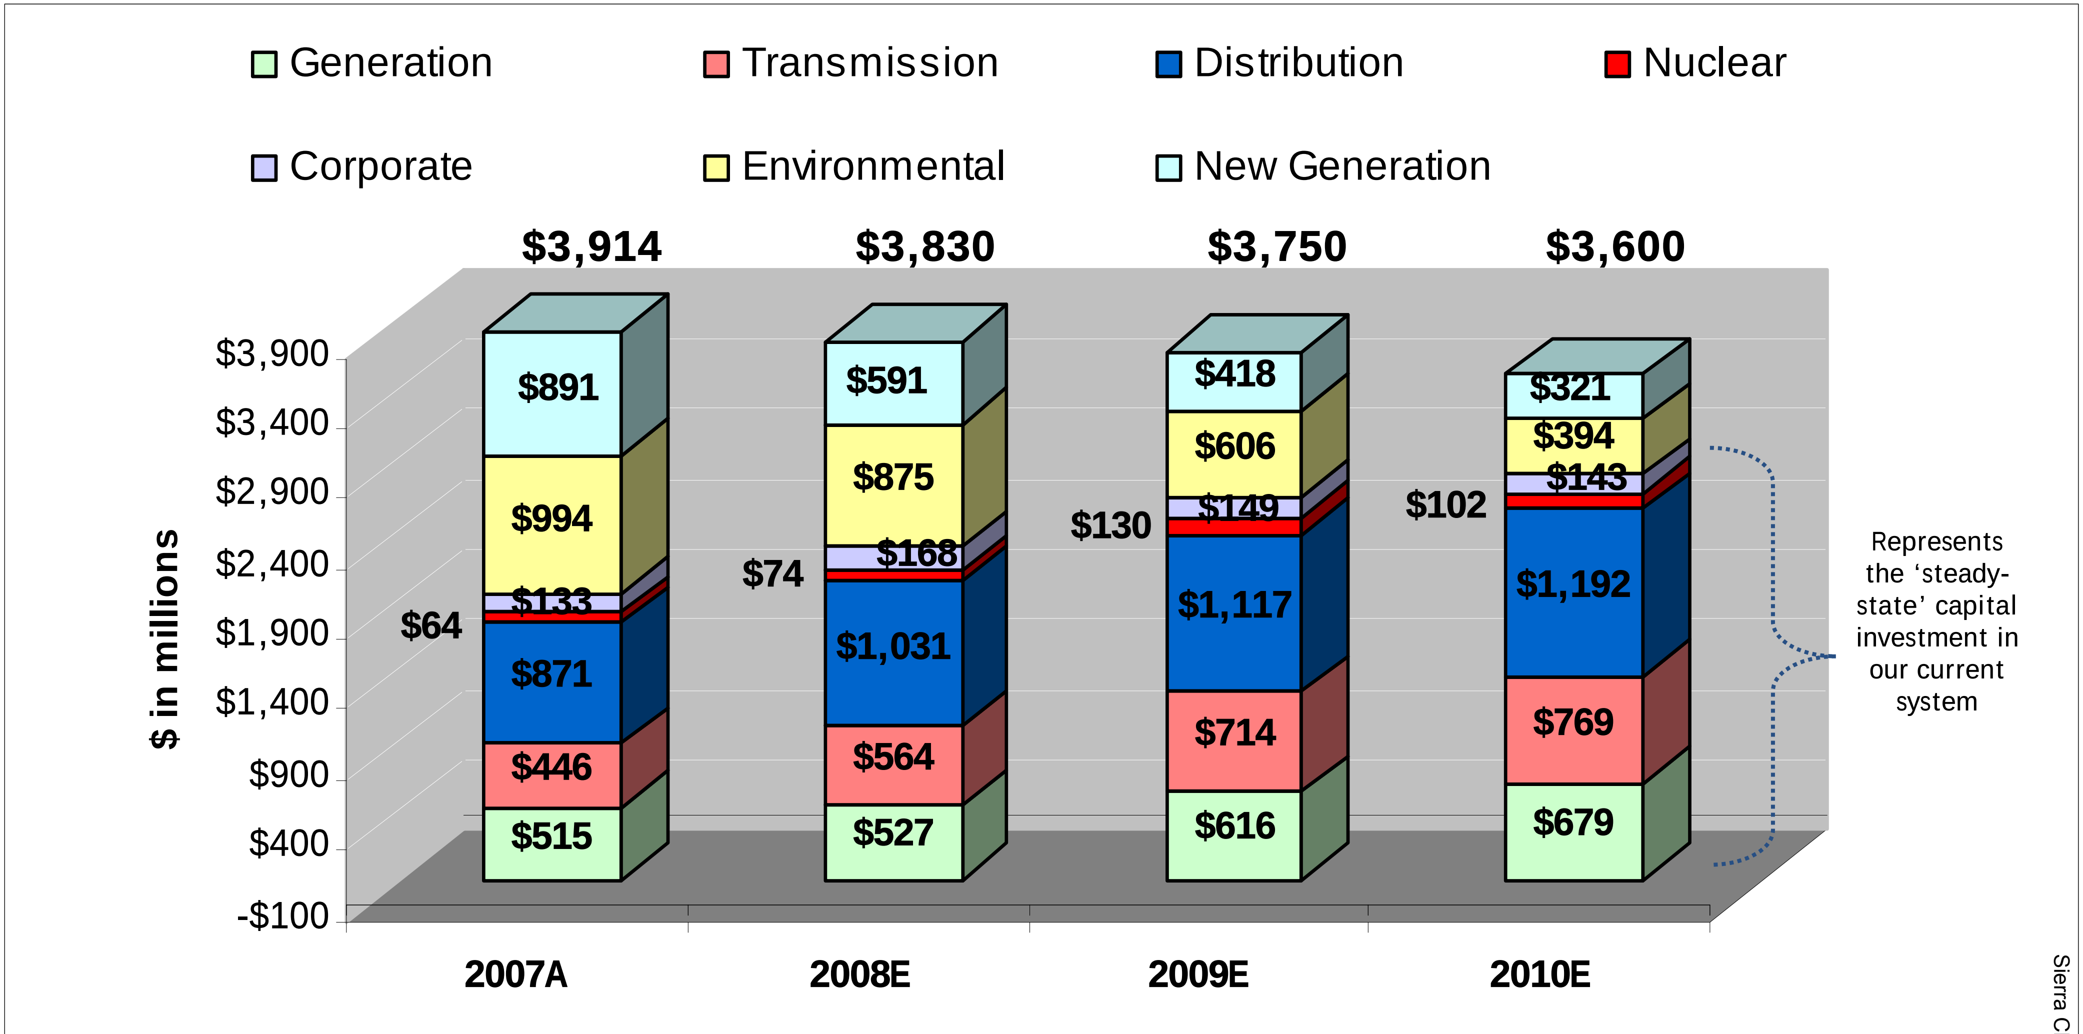
Baseline capital investment of approximately $2.5B/year for Transmission, Distribution & Generation versus annual depreciation of $1.1B/year

2005 → 2010 → 2020 →

Note: This slide represents current capital investment plans as well as future capital investment opportunities. For current capital investment guidance through 2010, please refer to page 10. *The transmission opportunity is shown utilizing anticipated JV ownership structure.

Capital investment opportunities combined with associated rate relief will drive sustainable earnings growth.

4-Year Capital Investment Forecast



Note: amounts exclude AFUDC, $472MM related to gridSMART[SM] and $566MM related to transmission joint venture projects

Capital Investment + Rate Relief = Earnings Growth

Capital Investment Drives Operating Company Growth

Welsh 2	528		N/A	☑	Projected 2012

At the conclusion of our current environmental retrofit program, over 58% of our 24,630 MW coal-fired generation fleet will be equipped with SCRs and over 73% will be scrubbed (FGDs).

AEP®

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
PSO	Riverside	Oklahoma	$59 MM	Gas	Simple-cycle	170	2Q 2008
AEG	Dresden	Ohio	$305 MM	Gas	Combined-cycle	580	2010
SWEPCo	Stall	Louisiana	$378 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.5 B (1)	Coal	Ultra-supercritical	600 (1)	2012
APCo	Mountaineer	West Virginia	$2.23 B	Coal	IGCC	629	2012
CSP/OP	Great Bend	Ohio	$2.7 B (2)	Coal	IGCC	629	2017

(1) SWEPCo will own approximately 73%, or 438 megawatts, totaling about $1,110 million in capital investment. The increase in the cost estimate relates to cost escalations due to the delay in receipt of permits and approvals.

(2) Cost estimates, updated to reflect cost escalations due to revised commercial operation date of 2017, are not yet filed with the PUCO.

AEP is meeting the growing electricity needs of customers through the pursuit of new economic generation facilities.

gridSMART℠

gridSMART℠: implementing AEP's vision for the distribution and customer services business in the future, including the development of new customer programs to reduce consumption and peak demand, and a plan to deploy advanced technologies.

- **Enables customers to better manage energy**
- **Improves service to our customers by enhancing customer choice and customer control**
- **Improves efficiency**
- **Integrates distributed energy resources into our grid**
- **Transforms the way we do business**

Capital Investment, Subject to Regulatory Approval * $ in millions			
Technology	**2008**	**2009**	**2010**
Metering & Communications	$83	$138	$146
Distribution Technology Enhancements	$40	$ 63	$ 82

*$472MM of the $552MM not in current forecast; spending contingent upon regulatory approval

AEP will continue to be an industry leader in deploying advanced technology on a commercial scale. $552MM capital investment by 2010, subject to regulatory approval

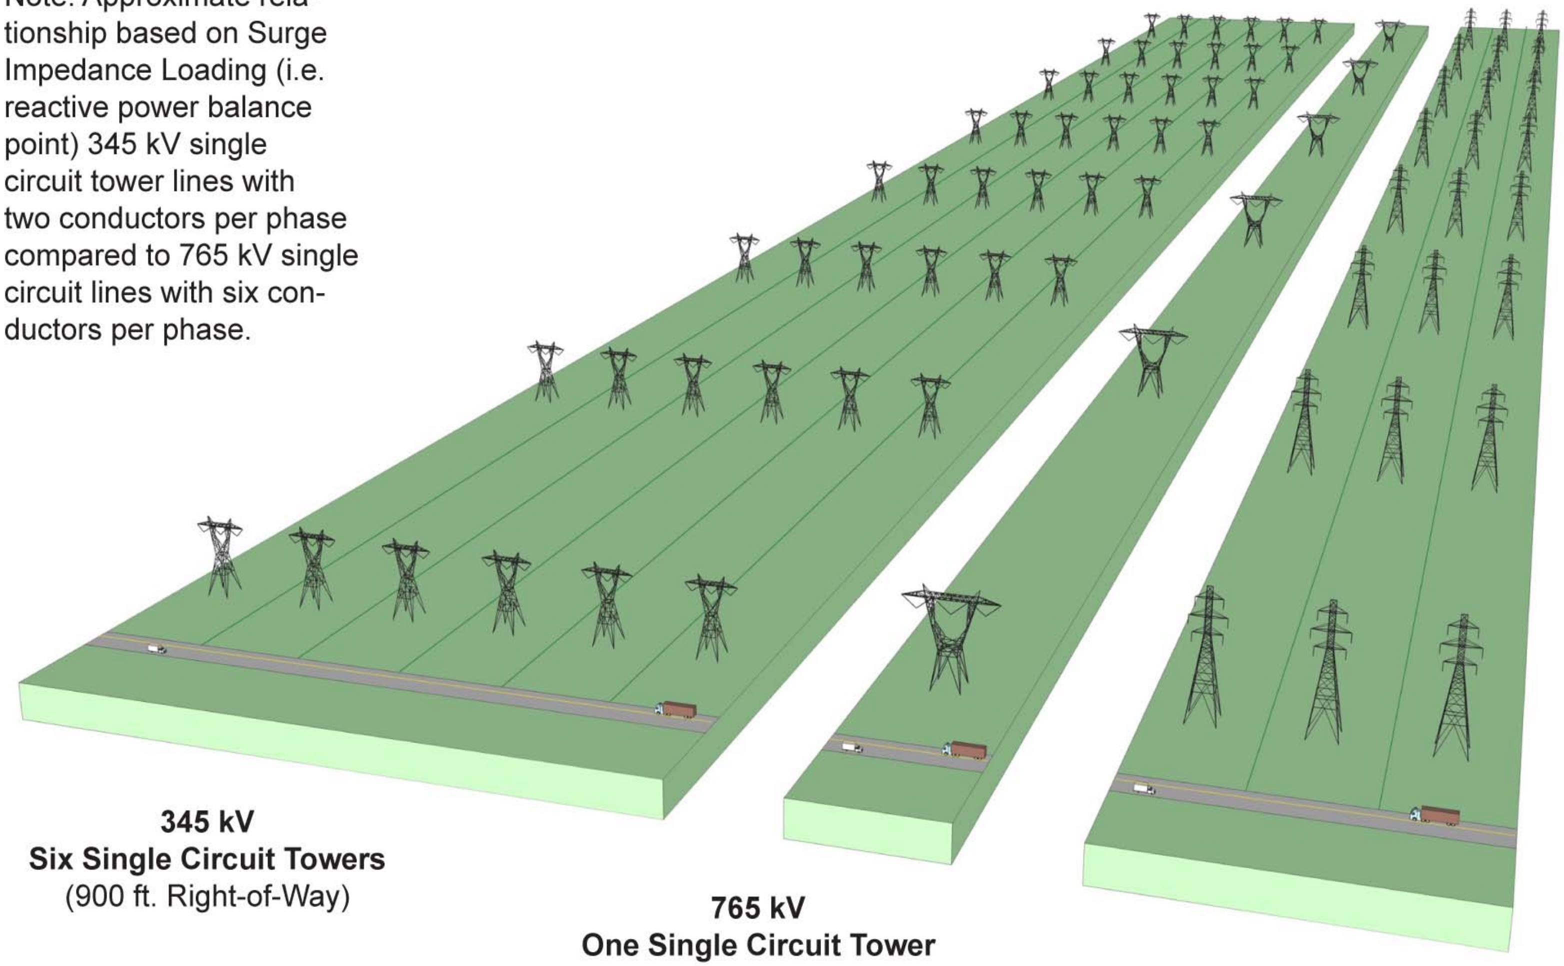
KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 6069 of 9556

765 Right-of-Way Comparison

Note: Approximate relationship based on Surge Impedance Loading (i.e. reactive power balance point) 345 kV single circuit tower lines with two conductors per phase compared to 765 kV single circuit lines with six conductors per phase.



345 kV
Six Single Circuit Towers
(900 ft. Right-of-Way)

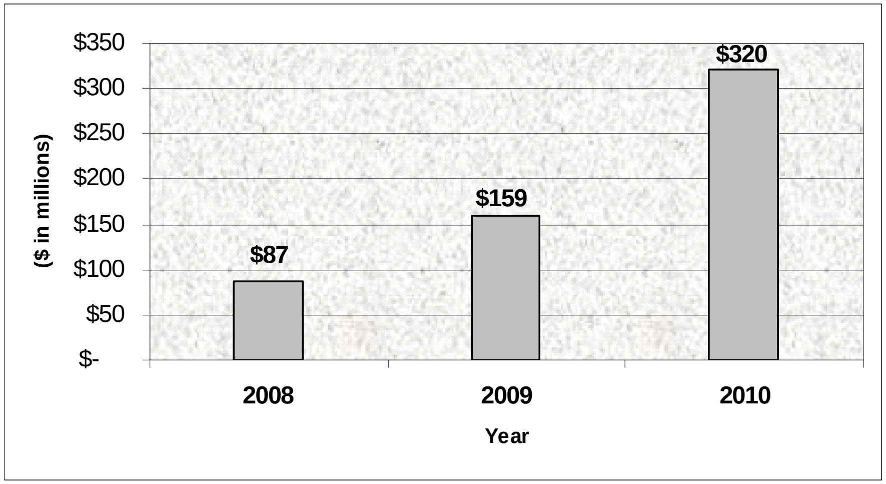
765 kV
One Single Circuit Tower
(200 ft. Right-of-Way)

345 kV
Three Double Circuit Towers
(450 ft. Right-of-Way)

From a siting standpoint, 765-kV is more efficient in terms of economies of scale and right-of-way than lower capacity lines.

Transmission - Investments and Earnings Contributions

Projected Transmission Capital Spending*

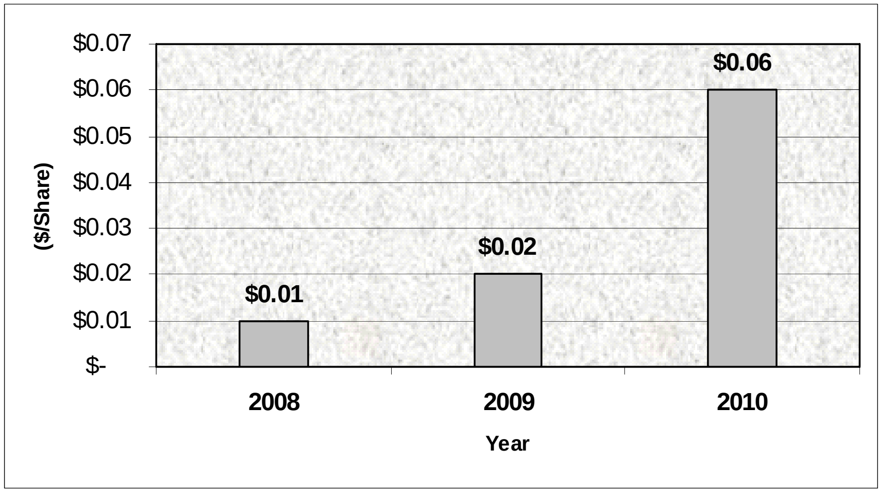


* ETT and PATH joint ventures included in above projection. Amounts represent AEP's 50% share of total transmission joint venture capital expense. These amounts are excluded from AEP's base capital forecast because the joint ventures are not consolidated for financial reporting purposes. AEP will be responsible for funding 40-50% of these amounts with equity contributions, and the remainder will be financed with debt issued by the joint ventures.

ETT
Electric Transmission Texas

PATH
Potomac-Appalachian Transmission Highline

Projected Transmission EPS Contributions*



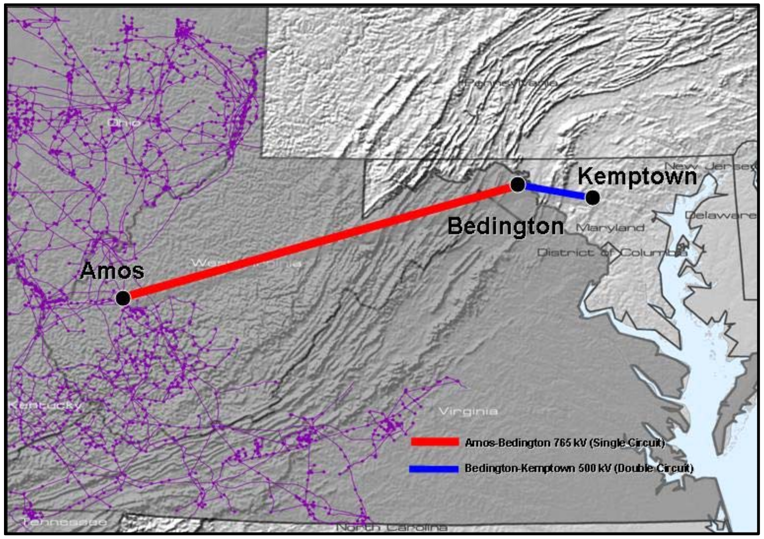
* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

Transmission will provide a near and long term catalyst for growth.

I-765™ Transmission in PJM: PATH

Execution in Action

- *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries -- to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP
    - 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
  - FERC ordered the formula rate mechanism be set for hearing, pending settlement judge procedures
- *Funding Plans/Transaction Structure*
  - AEP and Allegheny share ownership of Amos – Bedington line and contribute equally to this portion of the project through PATH West Virginia Transmission Company, LLC
  - AEP's investment will be held in the AEP Transmission Holding Company LLC subsidiary
- *Key Next Steps*
  - Siting Approval from WV and MD – 2010
  - Targeted Completion – 2012



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Potomac-Appalachian Transmission Highline

I-765™ Transmission in Texas (ETT)

Electric Transmission Texas Update

- *Transaction Structure*
  - 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
  - ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
  - Services provided by AEP and investment opportunities can be offered by either partner
  - Total initial investment of $70 million before ownership division
- *Next Steps*
  - ETT project opportunities to be evaluated on a case by case basis
  - Anticipate transferring some project opportunities in 2008 after regulatory approvals obtained.

Electric Transmission America (ETA)

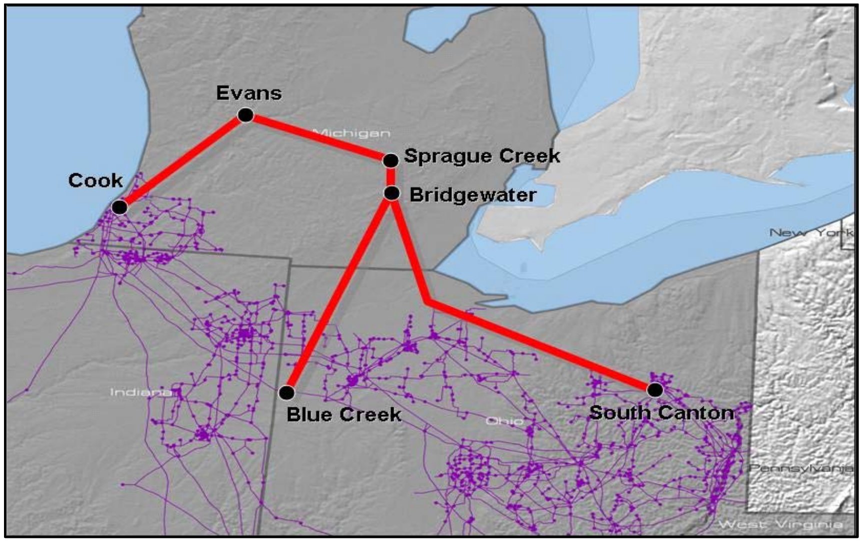
- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.

ETA reflects a natural progression and expansion of AEP's partnership with MidAmerican.

I-765™ Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
  - Study was released Q3 2007
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.6 billion investment (before ownership division)
  - AEP and ITC are in discussions to form a Joint Venture
- *Benefits*
  - Up to 5,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- *Next Steps*
  - Agreement on JV (AEP/ITC) - Summer 2008
  - JV Formation - 2008
  - MISO and PJM Review/Approval - 2009
  - FERC Formula Rate and Cost Allocation Filing - Fall 2009
  - Siting Approval – 2011-2012
  - Estimated Completion –2015-2021



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

I-765™ Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- ### *Overview*
  - Sent non-binding Letter of Commitment to SPP to construct 765-kV and 500-kV projects in SPP region consistent with SPP Overlay Study – Summer 2007
  - Updated EHV Overlay Study completed by SPP – March 2008
- ### *Benefits*
  - Overall reliability reinforcement with improved voltage support throughout the SPP system
  - Significantly increased transfer capability
  - Provides access to new generation resources, especially renewables
  - Allows for effective interconnections for EHV system development
- ### *Next Steps*
  - ETA Partnering Agreements - 2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate and Cost Allocation Filing (postage stamp) – 2009
  - Siting Approval for projects – 2009-2011
  - Estimated Completion (in segments) – 2012-2017

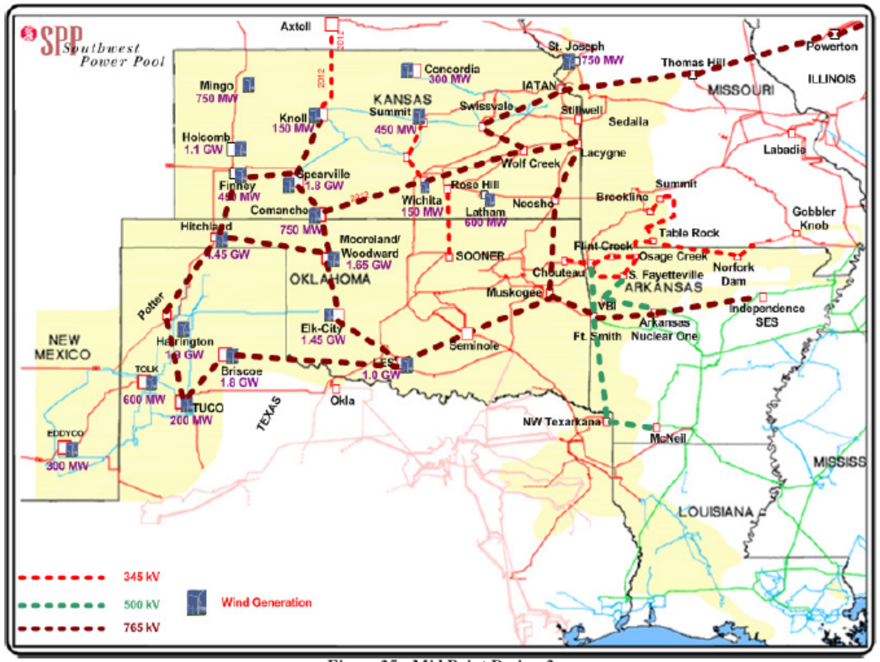


Figure 25: Mid Point Design 2

Total SPP 765-kV Overlay estimated to cost approximately $5 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A reliable and reasonably-priced electric supply is necessary to support the economic well-being of the areas we serve.

Highlights of Bingaman-Specter Proposal

"Low Carbon Economy Act of 2007"

Key Components:

- Start date for greenhouse-gas reductions is 2012
- Goals: 2006 levels by 2020; 1990 levels by 2030
- Includes a safety valve of $12 per metric ton, increasing at an annual rate of 5% above inflation
- Carbon Capture Technology Support—Bonus Allowances
- International action (AEP-IBEW trade proposal)

AEP endorses this proposal because it sets reasonable and achievable reduction targets and includes the AEP-IBEW trade proposal.

AEP's Long-Term GHG Reduction Portfolio

Renewables (Biomass Co-firing, Wind)

Supply and Demand Side Efficiency

Off-System Reductions and Market Credits (forestry, methane, etc.)

Commercial Solutions of New Generation and Carbon Capture & Storage Technology

AEP is investing in a portfolio of GHG reduction alternatives.

A Portfolio Approach: AEP's Long-Term CO_2 Reduction Commitment

Existing Programs

- **Existing plant efficiency improvements**
- **Renewable Energy**
  - 800 MWs of Wind
  - 300 MWs of Hydro
- **Domestic Offsets**
  - **Forestry - 0.35MM tons/yr**
  - **Over 63MM trees planted through 2006**
  - **1.2MM tons of carbon sequestered**
- **International Offsets**
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- **Chicago Climate Exchange**

AEP's reductions/offsets of CO_2:
- **2003-2007: 39 MM Tons**

New Program Additions (by 2011)

- **1000 MWs of Wind PPAs: 2 MM tons/yr**
- **Domestic Offsets (methane/forestry): 2.5 MM tons/yr**
- **Fleet Vehicle/Aviation Offsets: 0.2 MM tons/yr**
- **Additional actions—energy efficiency and biomass: 0.3MM tons/yr**

New Technology Additions

- **New Generation - IGCC and USC**
- **Retrofit solutions for existing fleet**
  - Chilled Ammonia
  - Oxy-Coal

AEP's reductions/offsets of CO_2:
2011+: 5 MMT/YEAR
Longer Term—New Technology

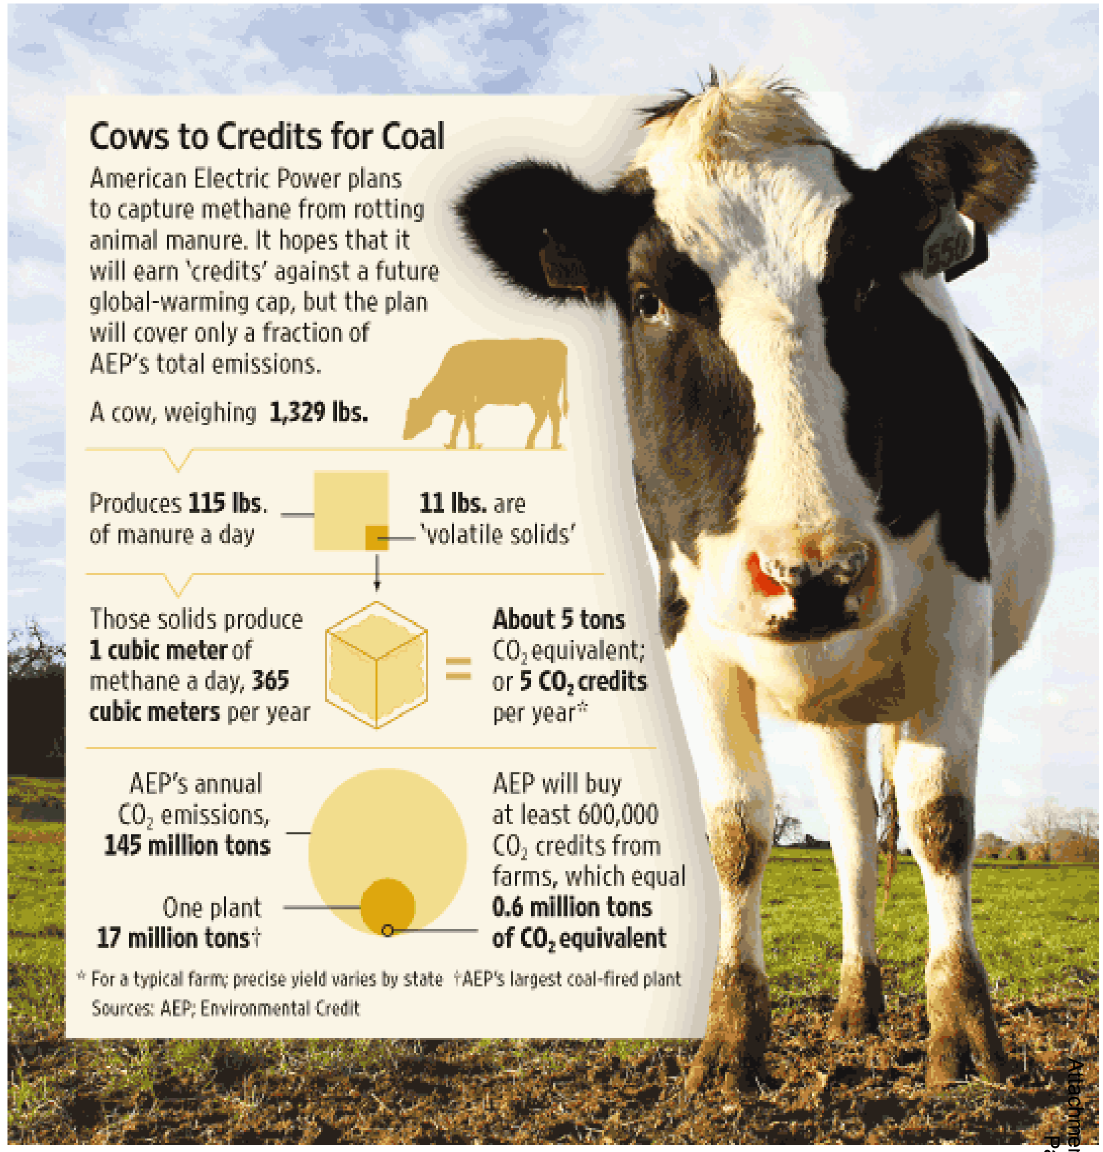
Off-System Reductions

New AEP Offset Commitment by 2011:

• 2.5 MM tons/year additional CO_2 offsets

Latest Announcement:

- Methane Capture Deal with Environmental Credit Corp.
  - 0.6 MM Tons CO2e per year
  - 2010 through 2017
  - 51% of credits sourced from "AEP States"



Source: Wall Street Journal June 14, 2007

Advanced Generation & CO_2

Near Term:

- Chilled Ammonia project at Mountaineer moving to commercial scale at the Northeastern Plant in 2012

$ in millions				
		2008	2009	2010
Mountaineer Chilled Ammonia Project		$30	$39	$0

Long Term Strategy (Post-2010):

- IGCC
- Chilled Ammonia
- Oxy Coal Technology
- Nuclear COL

We are committed to validating and deploying technologies that ensure coal remains a viable resource for AEP and America.

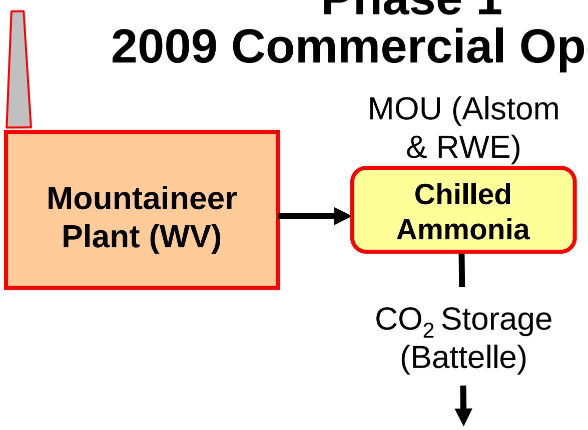
AEP's Carbon Capture & Storage Initiative

In March 2007, AEP announced a major new carbon capture and storage initiative:

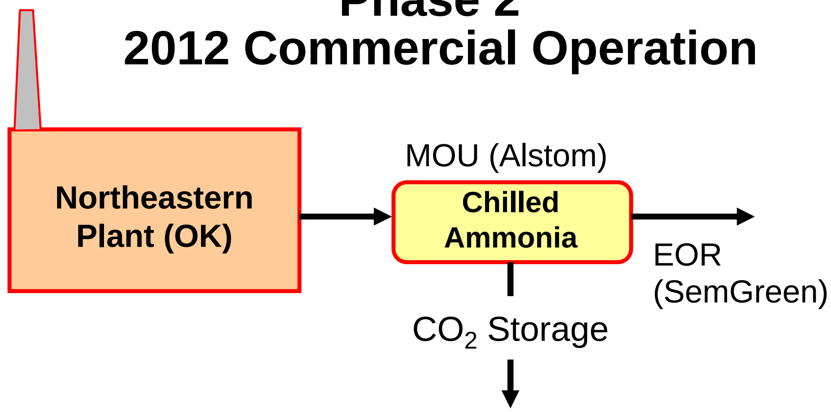
Chilled Ammonia CCS--We will install carbon capture on two coal-fired power plants, the first commercial use of technologies to significantly reduce carbon dioxide emissions from existing plants.

- **The first carbon capture project, at the Mountaineer plant in West Virginia, is expected to complete its product validation phase in 2009.**
- **The second, at the Northeastern plant in Oklahoma, will begin commercial operation in 2012.**

Phase 1
2009 Commercial Operation



Phase 2
2012 Commercial Operation



CO_2 Capture Techniques

Post-Combustion Capture

- Conventional or Advanced Amines, Chilled Ammonia
  - Amine technologies commercially available in other industrial applications
  - Relatively low CO_2 concentration in flue gas – More difficult to capture than other approaches
  - High parasitic demand
    - Conventional Amine ~25-30%, Chilled Ammonia target ~10-15%
  - Amines require **very** clean flue gas

Modified-Combustion Capture

- Oxy-Coal
  - Technology not yet proven at commercial scale
  - Creates stream of very high CO_2 concentration
  - High parasitic demand, >25%

Pre-Combustion Capture

- IGCC with Water-Gas Shift
  - Most of the processes commercially available in other industrial applications
    - Have never been integrated together
  - Turbine modified for H_2-based fuel, which has not yet been proven at commercial scale
  - Creates stream of very high CO_2 concentration
  - Parasitic demand (~20%) for CO_2 capture - lower than amine or oxy-coal

Incremental Rate Relief

Regulatory Activity Underway

PSO Red Rock Generating Facility Recovery Filing

- On December 28, 2007, PSO filed an application with the Oklahoma Corporation Commission to defer, amortize and recover costs related to the Red Rock Generating Facility, which was denied construction and recovery pre-approval in October 2007.
- On March 13, 2008, PSO signed a settlement agreement with various parties regarding recovery of costs incurred in the Red Rock project. The agreement provides for recovery from customers of 50% of the costs ($10.5MM). The settlement agreement has not yet been approved by the OCC. A hearing is scheduled for May 12, 2008.

Regulatory Activity Underway

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $140MM. Approximately $10MM of the increase relates to 3rd party and the rest, if approved, would be recovered through retail jurisdictional filings in SWEPCo and PSO, as appropriate.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to February 1, 2008, with rates subject to refund.
- Settlement discussions are currently on-going.

Regulatory Activity Underway

APCo Mountaineer IGCC Filing

Virginia

- Testimony filed with the Virginia State Corporation Commission on July 16, 2007 seeking a prudence determination and approval to recover, beginning in 2009, Virginia's share of the carrying costs associated with the proposed plant.
- We received an order on April 14, 2008, denying our request. We petitioned for reconsideration on 4/29/2008, and the SCC issued an order granting reconsideration on 4/30/2008.

West Virginia

- Air permit anticipated in the third or fourth quarter of 2008.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.
- In March 2008, the Ohio Supreme Court remanded the original order back to the PUCO, giving the PUCO the opportunity to supplement the record. No refund of Phase I costs was mandated by the Supreme Court in its decision.
- We now await further clarity from the PUCO on the remanded issues as well as the outcome of current legislative discussions in Ohio regarding the post-2008 landscape for generation in Ohio.

Regulatory Activity Underway

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- The PSC issued its order on November 21, 2007, approving construction of the plant.
- Air permit anticipated in the third or fourth quarter of 2008.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The peaking facility has been addressed and the intermediate facility is under review. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- The LPSC issued its order on March 19, 2008, approving construction of the plant.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- Public hearings commenced October 17, 2007. On January 17, 2008, the ALJ recommended the PUCT deny the request. The commissioners have requested another hearing where they can directly cross examine some of the witnesses. The additional hearing is scheduled for May 29-30, 2008.

Regulatory Activity Underway

SWEPCo Stall Plant Filings

Arkansas

- Proceeding is currently suspended pending outcome in Louisiana.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The intermediate facility, known as the Stall Plant and sited in Shreveport, LA, was bifurcated from the original filing and had a procedural schedule established on January 9, 2008.
- Staff and intervenor testimony was completed on February 15, 2008, rebuttal testimony was due February 29, 2008 and hearings were held in April 2008. Staff testimony was favorable. An order is expected in mid-summer.
- Air permit received on March 20, 2008.

Texas

- PUCT order approving plant was issued on March 8, 2007.

Approved Rate Bases and ROEs

* - 2007 actual amount includes distressed generation purchases of $512 million

Capital investment is funded from cash from operations and debt issuances.

Commitment to Credit Quality

- Maintain adequate liquidity
- $150MM annually in new equity from Dividend Reinvestment and 401(k) plans
- Target 60% maximum consolidated AEP debt/cap ratio on an adjusted basis
- Target utility company capitalization structures:

Company	Target Equity Ratio
APCo	42-44%
CSP	45-47%
I&M	40-42%
KPCo	41-43%
OPCo	44-46%
PSO	43-45%
SWEPCo	43-45%
TCC	40%
TNC	40%

- Target long term dividend payout ratio range of 55-60%
- Maintain adequate coverage ratios to support current credit ratings

We are committed to maintaining our current credit ratings.

Sustainable Business Model

- *Strength and scale in assets & operations*
- *Continued innovation and deployment of leading technology advancements*
- *Sustainable earnings growth through near and long term capital investment opportunities*
- *Comprehensive regulatory strategy focused on maximization of cash flow and return through minimized regulatory lag*
- *Strong dividend yield with respect to peers*
- *Balance sheet and credit profile stability*

Operating Company Overview

AEP AMERICAN® ELECTRIC POWER

May 23, 2007
New York, NY

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation or regulation in Ohio, and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Long-Term Debt Guidelines

Issuers:

- Issue at operating companies.

Size:

- Make transactions index eligible if possible.
- When possible, issue a size sufficient for competitive execution.

Maturity:

- Issue maturities for which the market has appetite.
- Achieve weighted average life targets for operating companies, generally between 10-15 years.

Timing:

- Will issue based on the timing of maturities and levels of short-term debt as driven by capital spending and operating cash flow.

Commitment To Credit Quality

- Maintain adequate liquidity
- Target 60% consolidated AEP debt/cap ratio
- Target long term AEP dividend payout ratio range of 55-60%

Current Ratings for AEP, Inc. & Subsidiaries

	Moody's	S&P		Fitch
Company	Senior Unsecured	Business Profile	Senior Unsecured	Senior Unsecured
AEP, Inc. [1]	Baa2	5	BBB	BBB
AEP, Inc. Short Term Rating	P2	N/A	A2	F2
APCo	Baa2	5	BBB	BBB+
CSPCo	A3	4	BBB	A-
I&M	Baa2	6	BBB	BBB
KPCo	Baa2	5	BBB	BBB
OPCo	A3	4	BBB	BBB+
PSO	Baa1	5	BBB	A-
SWEPCo	Baa1	5	BBB	A-
TCC	Baa2	3	BBB	BBB+
TNC	Baa1	3	BBB	A-

(1) In September 2006, S&P upgraded AEP's consolidated business profile score from 6 to 5.

Note: All rating agencies have each company on stable outlook with the exception of Fitch, which has a negative outlook on TCC.

WE ARE COMMITTED TO MAINTAINING OUR CURRENT CREDIT RATINGS

Managing Subsidiary Cash Flows

- **We monitor:**
  - AEP consolidated cash requirements
  - Utility expected rates of return and potential regulatory lags
  - Amount of capital spending and internal cash needs
  - Free cash flow – cash available after construction
  - Credit ratios

- **Dividends and equity:**
  - We pay dividends based on free cash flow and credit metrics
  - When additional equity/cash is needed, the first option is dividend reductions, then capital infusions

OUR OBJECTIVE IS TO MAINTAIN THE FINANCIAL STRENGTH AND CAPITAL MARKETS ACCESS OF THE AEP OPERATING COMPANIES

AEP Texas Central Company

AEP Texas Central Company (TCC)

(organized in Texas in 1945) is engaged in the transmission and sale of power to affiliated and non-affiliated entities and the distribution of electric power to approximately 738,000 retail customers through REPs in southern Texas, and (to a limited extent) in supplying and marketing electric power at wholesale to other electric utility companies and market participants. Under the Texas Act, TCC completed its exit from the generation business through the sale of all of its generation assets. At December 31, 2006, TCC had 1,224 employees. In addition to its AEP System interconnections, TCC is a member of ERCOT.

Appalachian Power

President and Chief Operating Officer:
Dana Waldo

Appalachian Power Company (APCo)

(organized in Virginia in 1926) is engaged in the generation, transmission and distribution of electric power to approximately 949,000 retail customers in the southwestern portion of Virginia and southern West Virginia, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities and other market participants. APCo covers a service territory of 19,049 square miles, and at December 31, 2006, APCo and its wholly owned subsidiaries had 2,461 employees. Among the principal industries served by APCo are coal mining, primary metals, chemicals and textile mill products. In addition to its AEP System interconnections, APCo also is interconnected with the following unaffiliated utility companies: Carolina Power & Light Company, Duke Energy Corporation and Virginia Electric and Power Company. APCo has several points of interconnection with TVA and has entered into agreements with TVA under which APCo and TVA interchange and transfer electric power over portions of their respective systems. APCo is a member of PJM.

PRINCIPAL INDUSTRIES SERVED:
Coal mining
Primary metals
Chemicals
Textile mill products
Paper products

Columbus Southern Power

President and Chief Operating Officer: Kevin Walker

Columbus Southern Power Company (CSPCo)

(organized in Ohio in 1937, the earliest direct predecessor company having been organized in 1883) is engaged in the generation, transmission and distribution of electric power to approximately 742,000 retail customers in Ohio, and in supplying and marketing electric power at wholesale to other electric utilities, municipalities and other market participants. CSPCo covers a service territory of 3,701 miles and at December 31, 2006, CSPCo had 1,233 employees. CSPCo's service area is comprised of two areas in Ohio, which include portions of twenty-five counties. One area includes the City of Columbus and the other is a predominantly rural area in south central Ohio. In addition to its AEP System interconnections, CSPCo also is interconnected with the following unaffiliated utility companies: CG&E, DP&L and Ohio Edison Company. CSPCo is a member of PJM.

PRINCIPAL INDUSTRIES SERVED:

Indiana Michigan Power

President and Chief Operating Officer: Helen Murray

Indiana Michigan Power Company (I&M)

(organized in Indiana in 1925) is engaged in the generation, transmission and distribution of electric power to approximately 582,000 retail customers in northern and eastern Indiana and southwestern Michigan, and in supplying and marketing electric power at wholesale to other electric utility companies, rural electric cooperatives, municipalities and other market participants. I&M has a service territory of 4,578 square miles and at December 31, 2006, I&M had 2,643 employees. Since 1975, I&M has leased and operated the assets of the municipal system of the City of Fort Wayne, Indiana. In addition to its AEP System interconnections, I&M also is interconnected with the following unaffiliated utility companies: Central Illinois Public Service Company, CG&E, Commonwealth Edison Company, Consumers Energy Company, Illinois Power Company, Indianapolis Power & Light Company, Louisville Gas and Electric Company, Northern Indiana Public Service Company, PSI Energy Inc. and Richmond Power & Light Company. I&M is a member of PJM.

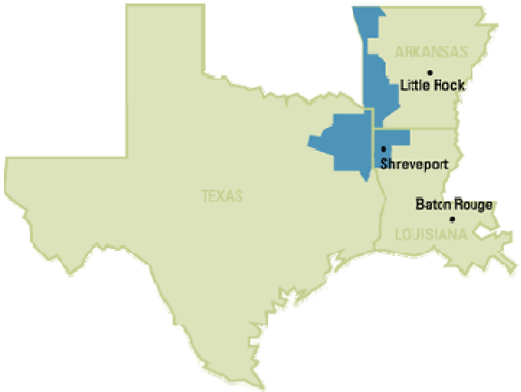
Southwestern Electric Power

President and Chief Operating Officer: Venita McCellon-Allen



Southwestern Electric Power Company (SWEPCo)

(organized in Delaware in 1912) is engaged in the generation, transmission and distribution of electric power to approximately 456,000 retail customers in northeastern Texas, northwestern Louisiana and western Arkansas, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities, rural electric cooperatives and other market participants. SWEPCo has a service territory of 25,000 square miles and at December 31, 2006, SWEPCo had 1,545 employees. The territory served by SWEPCo also includes several military installations, colleges, and universities. In addition to its AEP System interconnections, SWEPCo is also interconnected with CLECO Corp., Empire District Electric Co., Entergy Corp. and Oklahoma Gas & Electric Co. SWEPCo is a member of SPP.

PRINCIPAL INDUSTRIES SERVED:

Oil and gas extraction
Paper products
Chemicals
Food processing
Primary metals

Total Customers:

• **Residential**	**386,000**
• **Commercial**	**62,000**
• **Industrial**	**7,000**
• **Other**	**<u>1,000</u>**
Total	**456,000**

Generating Capacity	**4,487 MW**

Generating Capacity by Fuel Mix:

- **Coal/Lignite: 60%**
- **Natural Gas: 40%**

Transmission Miles	**3,500**
Distribution Miles	**19,300**

Southwestern Electric Power

AEP AMERICAN ELECTRIC POWER

Presentation to

PHILADELPHIA SECURITIES ASSOCIATION

established 1929

August 5, 2008

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are canceled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; volatility in the financial markets, particularly development affecting the availability of capital on reasonable terms and developments impairing our ability to refinance existing debt at attractive rates; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

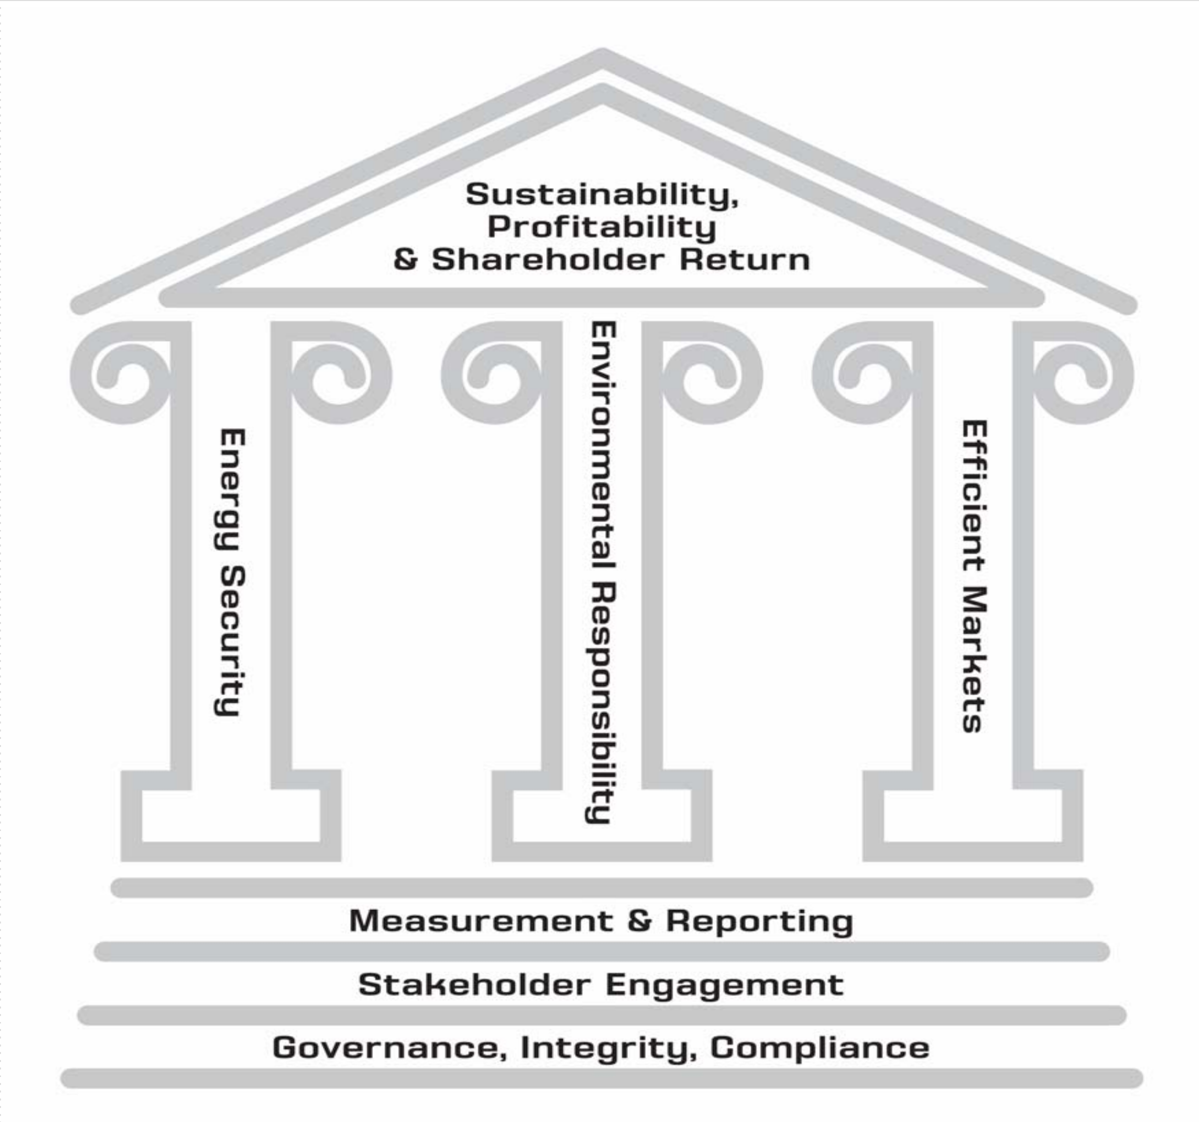
Chairman, President & CEO

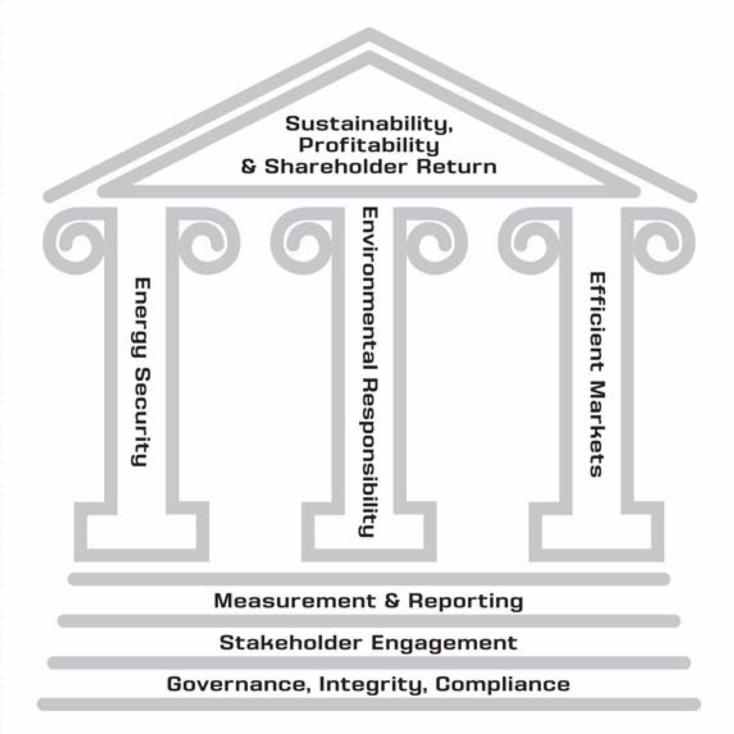
AEP's Vision for Sustainability



AEP's programs for Environmental, Advanced Generation, Carbon Capture and Storage, Transmission, Renewable Resources and gridSMART℠ underpin the three pillars supporting sustainability and profitability.

AEP®

Environmental Program



Energy Security:

- Environmental retrofits keep coal plants viable in order to take advantage of vast domestic fuel resources

Environmental Responsibility:

- Scrubbers and SCRs reduce emissions of SO_2, NOx and Mercury

Efficient Markets:

- Environmental technology installed on existing plants delays the premature retirement of those plants, thereby keeping low cost generation assets available to the market

$5.4B Environmental Retrofits

$3.5B Completed = **$0.37** annual EPS

$1.9B Under Construction =

$0.20 annual EPS in 2011

Note: EPS calculations assume timely regulatory recovery with a 10.5% ROE and a 60/40 debt to capital ratio

Advanced Generation & Carbon Capture and Storage

Energy Security:

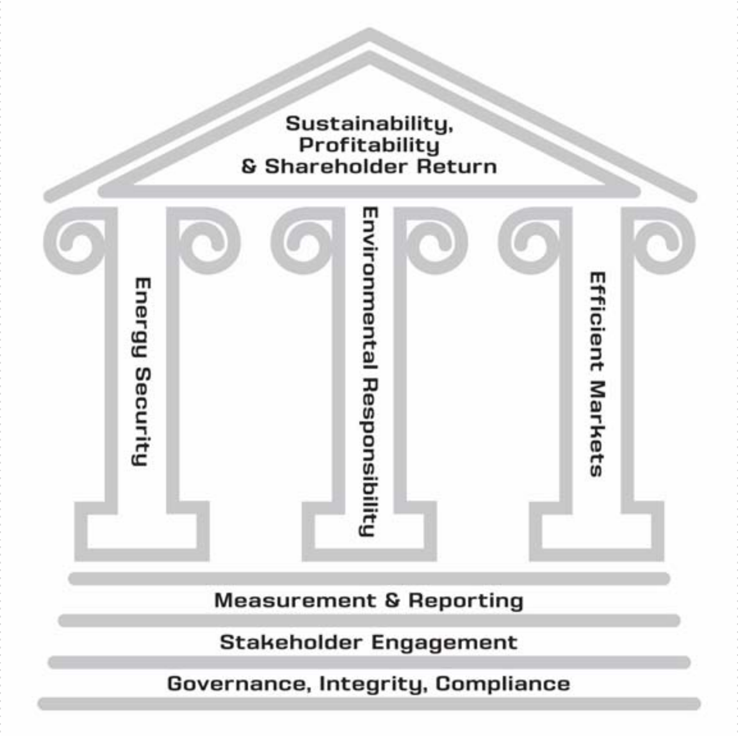
- New state-of-the-art coal plants and solutions for retrofitting current coal plants to capture and store CO_2 will ensure domestic fuel resources are utilized to the fullest potential

Environmental Responsibility:

- USC technology burns less fuel, thereby creating fewer emissions.
- Carbon capture and storage advancement will help find a solution to reduce carbon emissions in the future.

Efficient Markets:

- New baseload coal plants allow lower cost generation to enter the market
- Understanding the price of CCS will lead to a sensible solution that will ensure coal plants remain economically viable



NEW ADVANCED GENERATION

USC -- AEP will be the first company to employ a new generation ultra-supercritical (steam temperatures >1100ºF) coal plant in the U.S. (Arkansas)

Transmission and Renewable Resources

Energy Security:

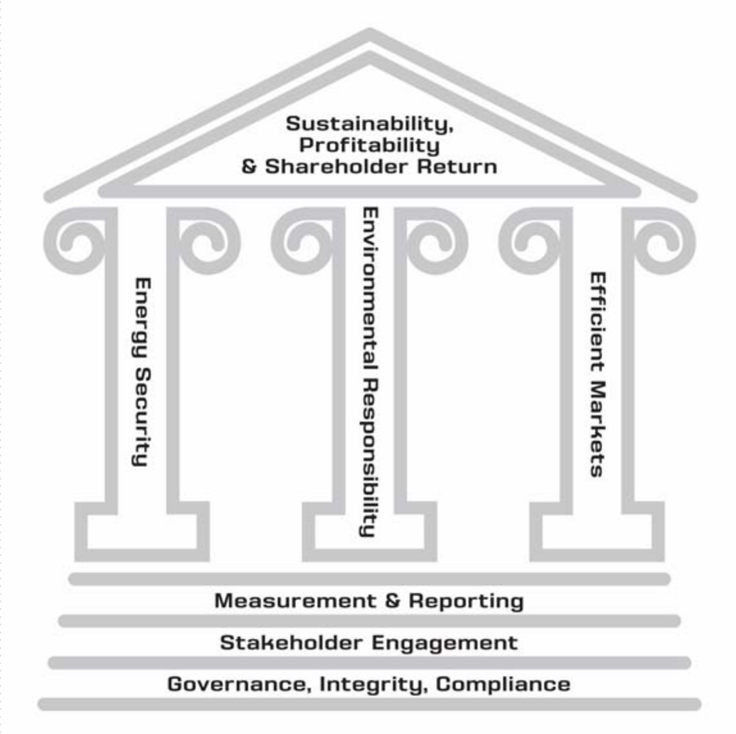
- Improved reliability, increased usage of renewable resources and enhanced fuel diversity allows the U.S. to strengthen its energy security

Environmental Responsibility:

- Availability of increased renewable generation resources through transmission investment acts as an alternative path to reduce emissions and could potentially offset the future need for polluting generation sources

Efficient Markets:

- Enhanced transmission infrastructure within RTOs allows energy markets to operate more efficiently by increasing reliability while at the same time reducing congestion
- New transmission ensures that the most economical generation serves as many people as possible



$2.0B Transmission Investment in Existing Assets and New Joint Ventures 2008 - 2010 =

$0.21 annual EPS in 2011

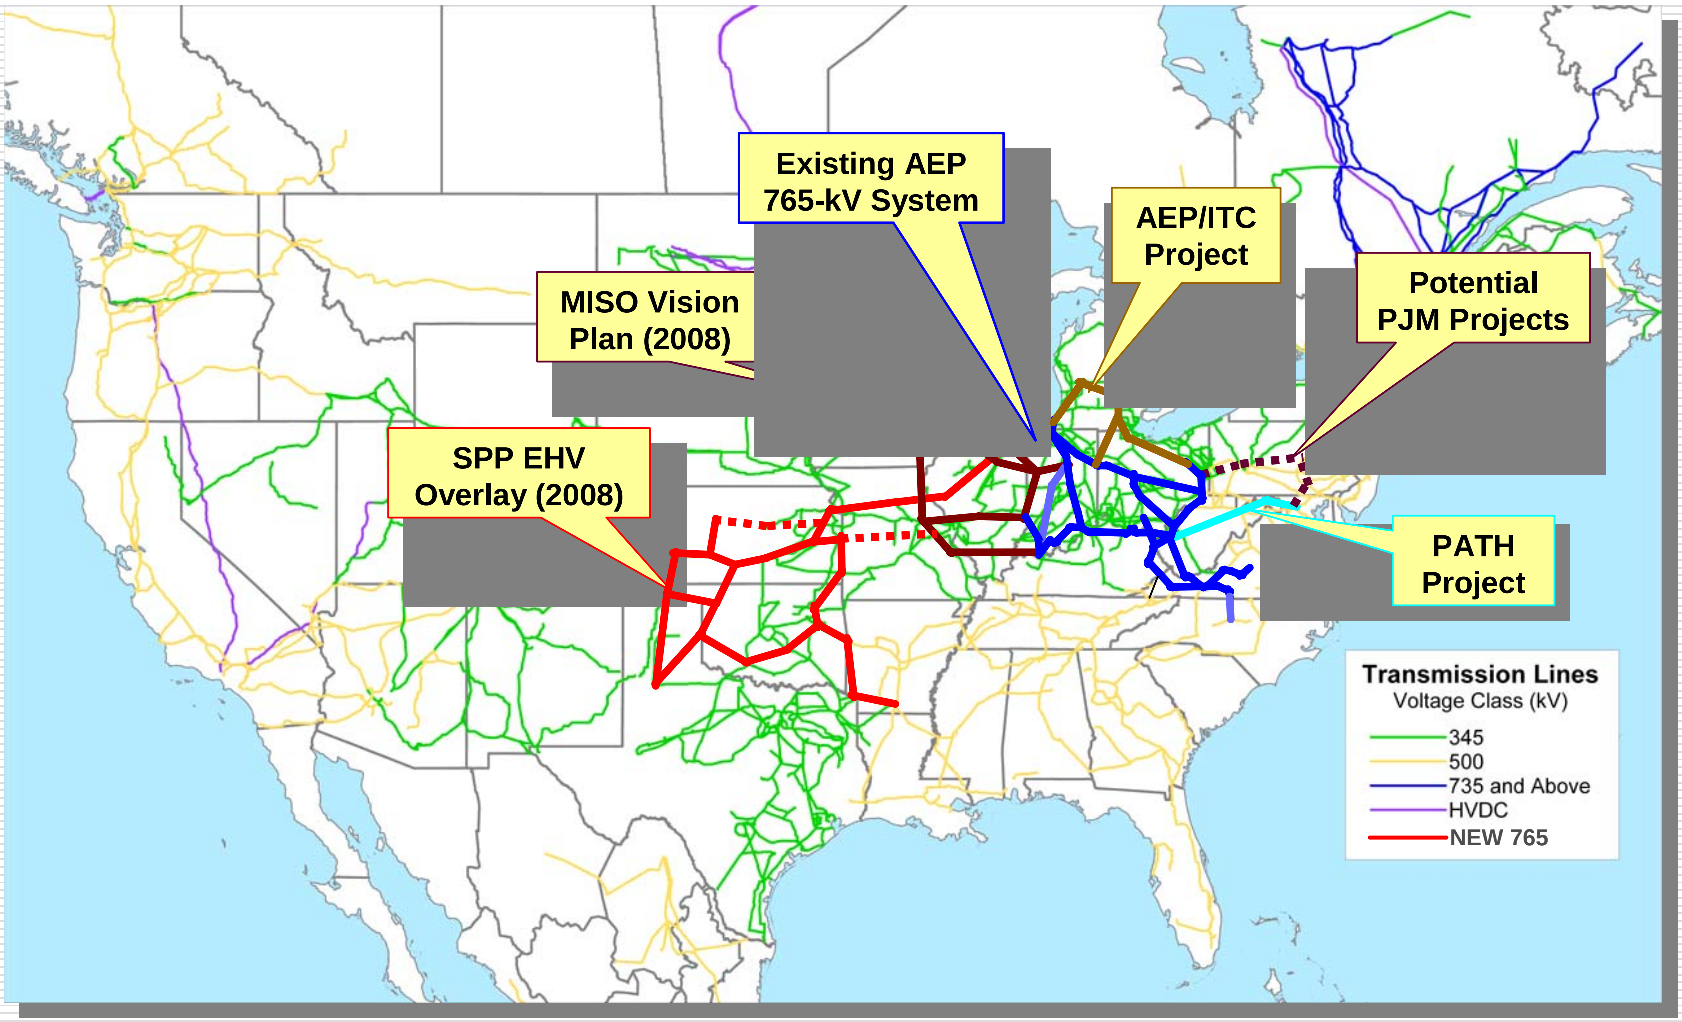
Note: EPS calculation assumes timely regulatory recovery with a 10.5% ROE and a 60/40 debt to capital ratio

By leveraging existing assets, expertise and leadership, AEP will enhance shareholder value by creating a significant new transmission investment opportunity.

AEP®

Transmission & Renewable Resources

Our Goal: Contribute sustainable shareholder growth by leveraging AEP's position as the nation's leading transmission provider to become the nation's leading developer and owner of interstate transmission investment.



NOTE: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

AEP is advancing the development of a national transmission interstate.

gridSMART[SM]

Energy Security:

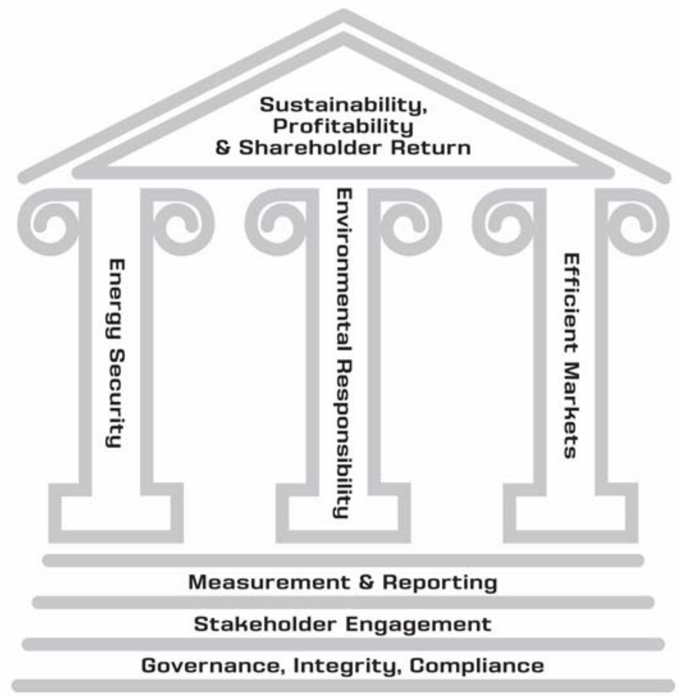
- More efficient operations mean reduced fuel consumption and reduced reliance on imported fuels

Environmental Responsibility:

- Efficiency improvements can help reduce the need for the fuels used to generate electricity, which translates directly into lower emissions and a cleaner environment
- Energy use reduction through energy efficiency and demand-side management options could ultimately delay the need for new or replacement power generating equipment

Efficient Markets:

- Peak demand adjustments (the maximum amount of energy used at any one time) allow AEP to make more efficient use of its existing facilities



$1.5B+ gridSMART technology

through 2015 =

$0.16 annual EPS in 2016

Pilot program underway in Indiana

Note: EPS calculation assumes timely regulatory recovery with a 10.5% ROE and a 60/40 debt to capital ratio

Increased efficiency reduces costs and emissions. It also delays the need for new generation sources.

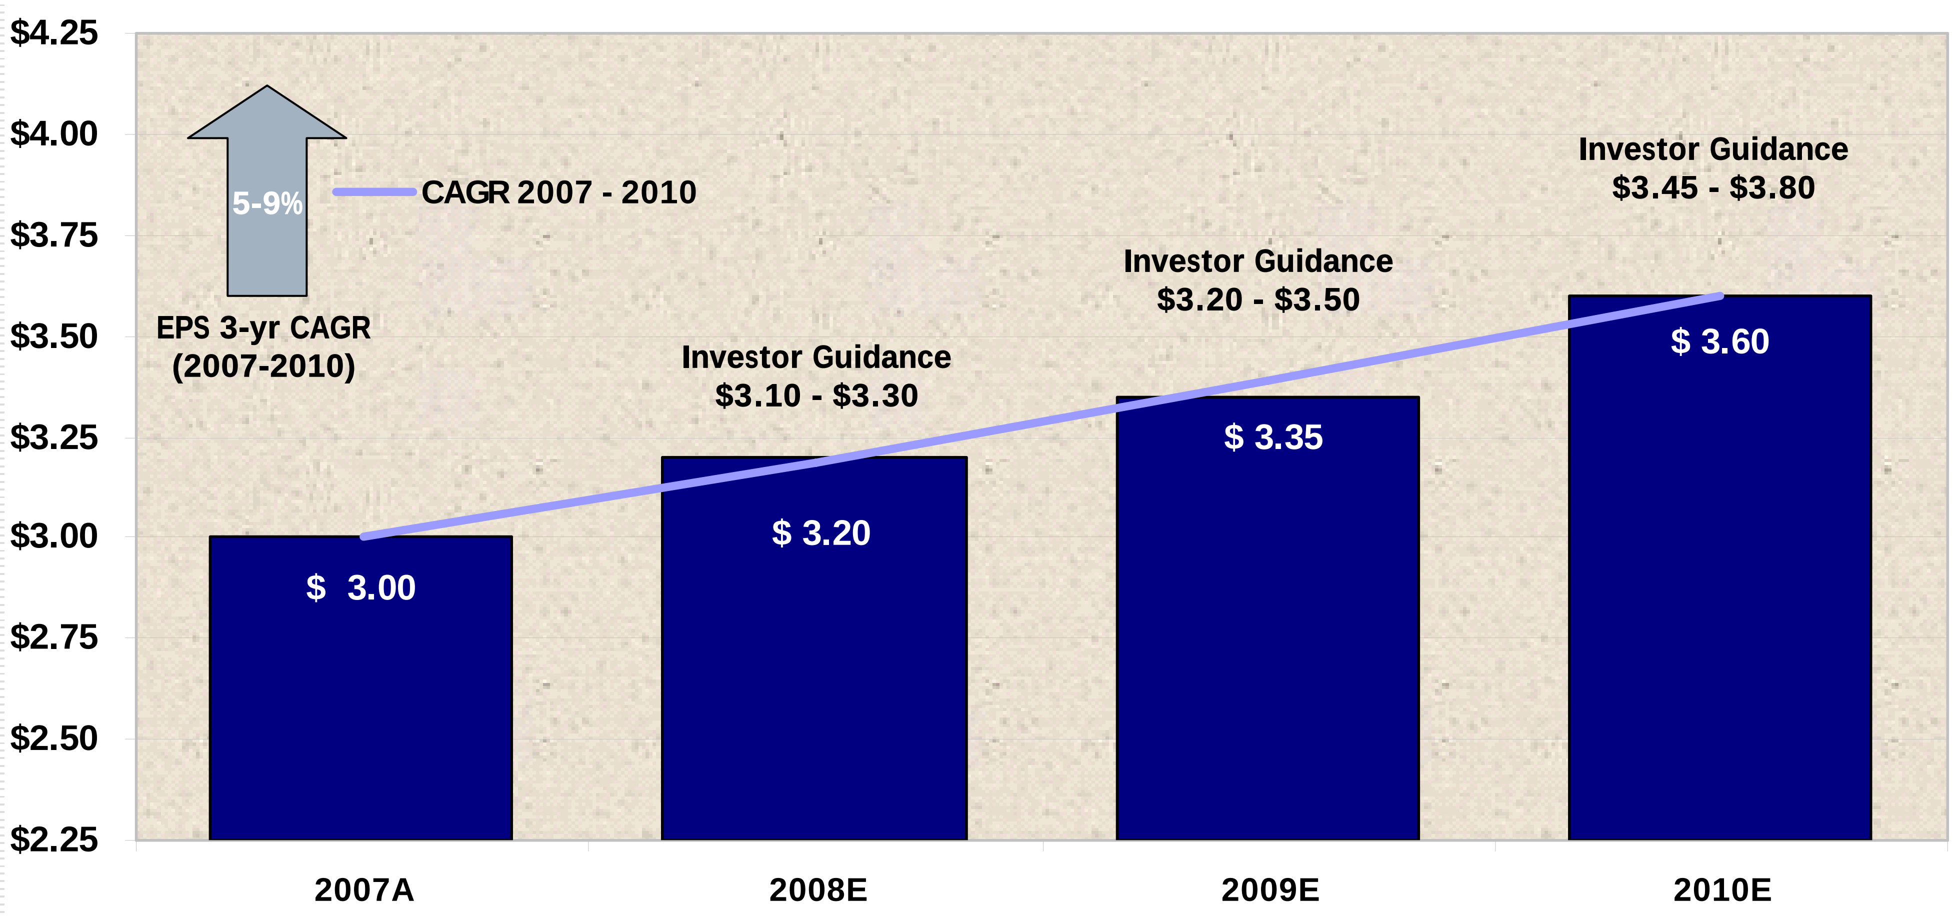
Policy Initiatives

AEP is heavily involved in shaping public policy, including:

- Federal Carbon Policy
    - The Low Carbon Economy Act of 2007
- Federal and state Carbon Capture and Storage Policies
    - The Carbon Capture and Storage Early Development Act
    - CCS framework development in WV and OK
- Federal and state Renewable Portfolio Standards
- Advanced Distribution Infrastructure and Demand-Reduction Programs in all jurisdictions (gridSMART)
- Federal and state Energy Policy

Through the shaping of federal and state public policy, AEP is balancing the need for energy security, environmental responsibility and efficient markets.

The AEP Value Proposition



AEP's leadership role in ensuring a balanced approach to energy security, environmental responsibility and efficient markets allows us to sustainably grow earnings and shareholder value.

AEP®

Questions

Appendix

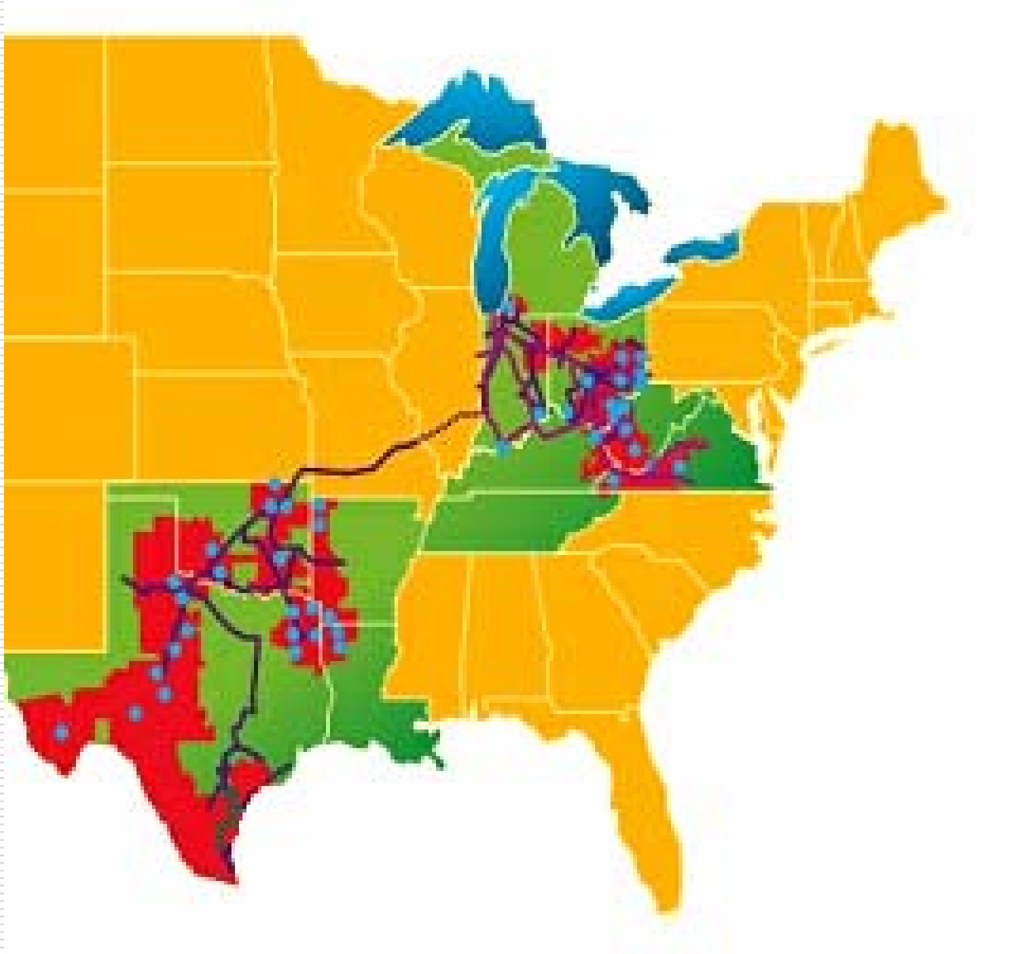
Company Overview

- 5.2 million customers in 11 states
- Industry-leading size and scale of assets:

Asset	Size	Industry Rank
Domestic Generation	~37,900 MW	# 2
Transmission	~39,000 miles	# 1
Distribution	~213,000 miles	# 1

Source: Company research

- 2007 financial statistics:
  - GAAP Net Income: $1.1B
    - 87% Regulated/13% Nonregulated
  - Assets: $40.3B
  - Adjusted Equity Ratio: 41.5%
- Current dividend - $1.64 per share annualized



AEP enjoys significant presence throughout the energy value chain.

AEP Strategy

Strategy: grow our core utility business at a consistent 6-8% long-term rate through major regulated investment using disciplined capital allocation methods.

Our 2008 Focus:

- Prepare for post-2008 transition in Ohio
- Invest $3.8 billion in our infrastructure
- Enhance cash flow & earnings through rate recovery mechanisms

Disciplined capital investment opportunities support earnings growth.

Detailed Ongoing Earnings Guidance

2007A: $3.00

2008E: $3.10 - $3.30

American Electric Power

gridSMART^SM

gridSMART^SM: implementing AEP's vision for the distribution and customer services business in the future, including the development of new customer programs to reduce consumption and peak demand, and a plan to deploy advanced technologies.

- **Enables customers to better manage energy**
- **Improves service to our customers by enhancing customer choice and customer control**
- **Improves efficiency**
- **Integrates distributed energy resources into our grid**
- **Transforms the way we do business**

Capital Investment, Subject to Regulatory Approval *
$ in millions

Technology	2008	2009	2010
Metering & Communications	$ 5	$ 65	$132
Distribution Technology Enhancements	$28	$117	$179

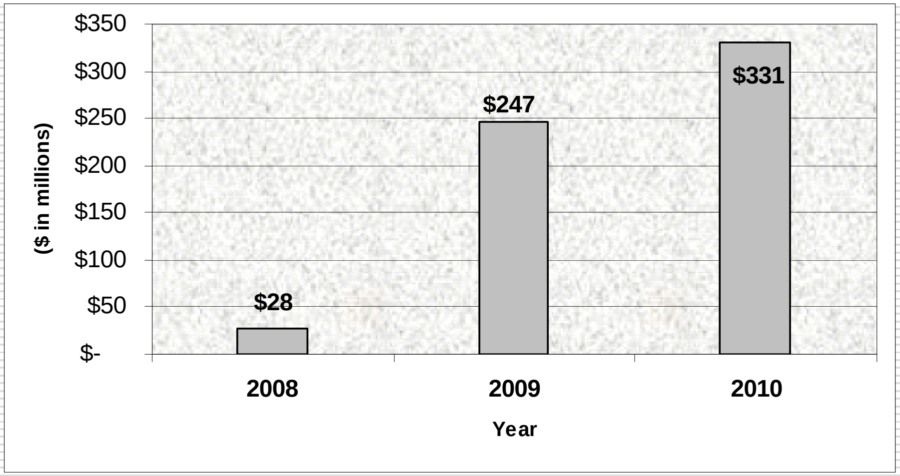
* $387MM not in current forecast; spending contingent upon regulatory approval

AEP will continue to be an industry leader in deploying advanced technology on a commercial scale. $526MM capital investment by 2010, subject to regulatory approval.

AEP®

Transmission – Investments and Earnings Contributions

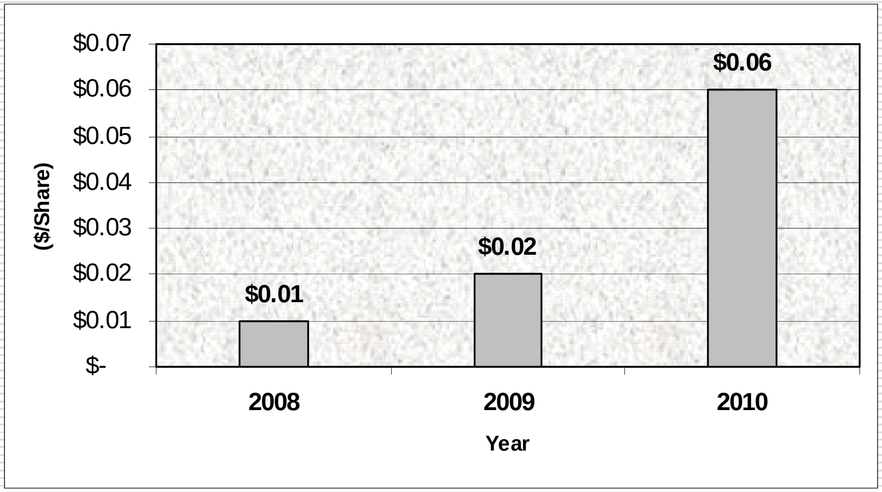
Projected Transmission Capital Spending*



* ETT and PATH joint ventures included in above projection. Amounts represent AEP's 50% share of total transmission joint venture capital expense. These amounts are excluded from AEP's base capital forecast because the joint ventures are not consolidated for financial reporting purposes. AEP will be responsible for funding 40-50% of these amounts with equity contributions, and the remainder will be financed with debt issued by the joint ventures.

ETT Electric Transmission Texas

Projected Transmission EPS Contributions*



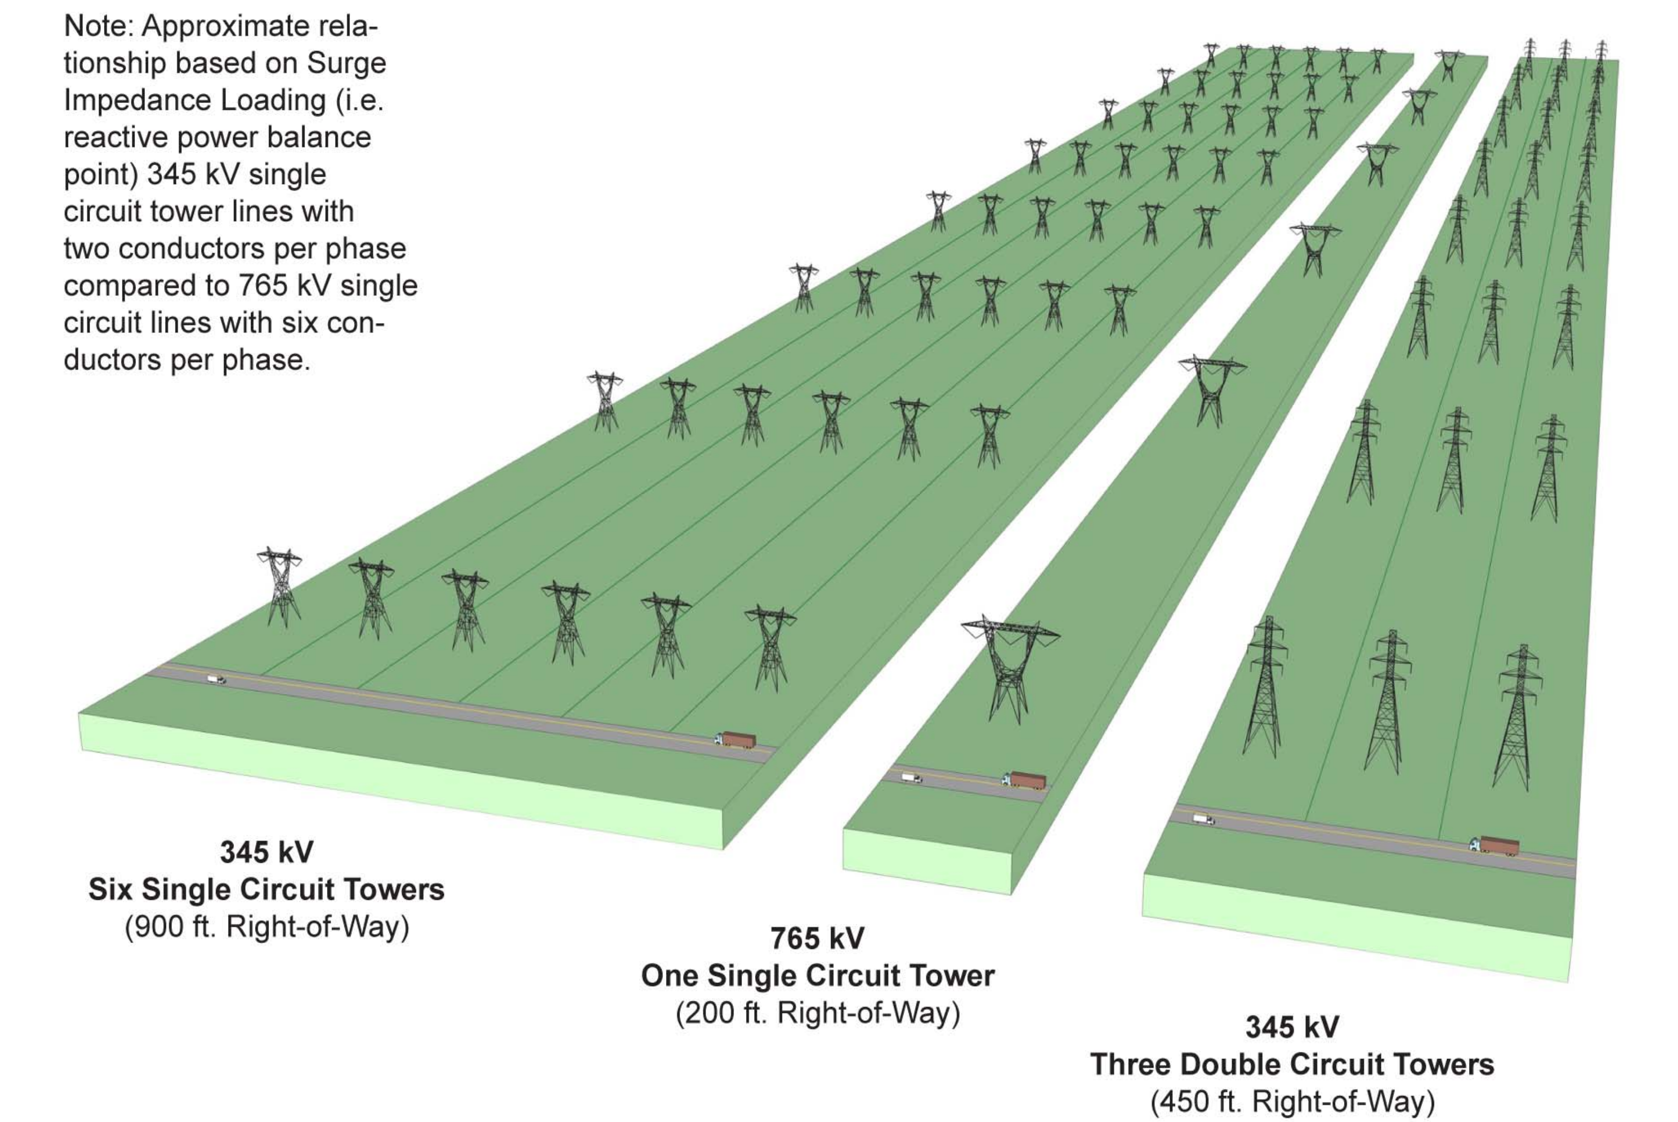
* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

PATH Potomac-Appalachian Transmission Highline

Transmission will provide a near and long term catalyst for growth.

AEP®

765 Right-of-Way Comparison



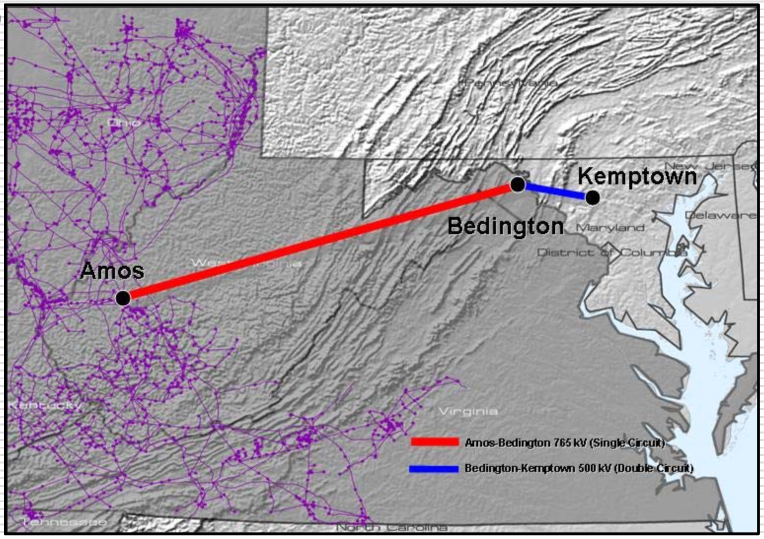
From a siting standpoint, 765-kV is more efficient in terms of economies of scale and right-of-way than lower capacity lines.

I-765™ Transmission in PJM: PATH

- *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries -- to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP
    - 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
  - FERC ordered the formula rate mechanism be set for hearing, pending settlement judge procedures

- *Funding Plans/Transaction Structure*
  - AEP and Allegheny share ownership of Amos – Bedington line and contribute equally to this portion of the project through PATH West Virginia Transmission Company, LLC
  - AEP's investment will be held in the AEP Transmission Holding Company LLC subsidiary

- *Key Next Steps*
  - Siting Approval from WV and MD - 2010
  - Targeted Completion - 2012



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Joint Ventures with MEHC

Electric Transmission Texas Update

- *Transaction Structure*
  - 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
  - ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
  - Services provided by AEP and investment opportunities can be offered by either partner
  - Total initial investment of $70 million before ownership division
- *Next Steps*
  - Await PUCT approval of consortium proposal, which includes ETT's portion of 710 miles of new transmission at an estimated cost of between $1.5 billion and $1.7 billion
  - Anticipate transferring some project opportunities in 2008 after regulatory approvals obtained.

Electric Transmission America Update

- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.
  - ETA recently signed agreements with Westar Energy and OGE proposing to build the first and second segments of the 765-kV Overlay Plan in SPP

AEP®

I-765™ Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- *Overview*
  - Sent non-binding Letter of Commitment to SPP to construct 765-kV and 500-kV projects in SPP region consistent with SPP Overlay Study – Summer 2007
  - Updated EHV Overlay Study completed by SPP – March 2008
- *Benefits*
  - Overall reliability reinforcement with improved voltage support throughout the SPP system
  - Significantly increased transfer capability
  - Provides access to new generation resources, especially renewables
  - Allows for effective interconnections for EHV system development
- *Next Steps*
  - ETA Partnering Agreements - 2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate and Cost Allocation Filing (postage stamp) – 2009
  - Siting Approval for projects – 2009-2011
  - Estimated Completion (in segments) – 2013-2017

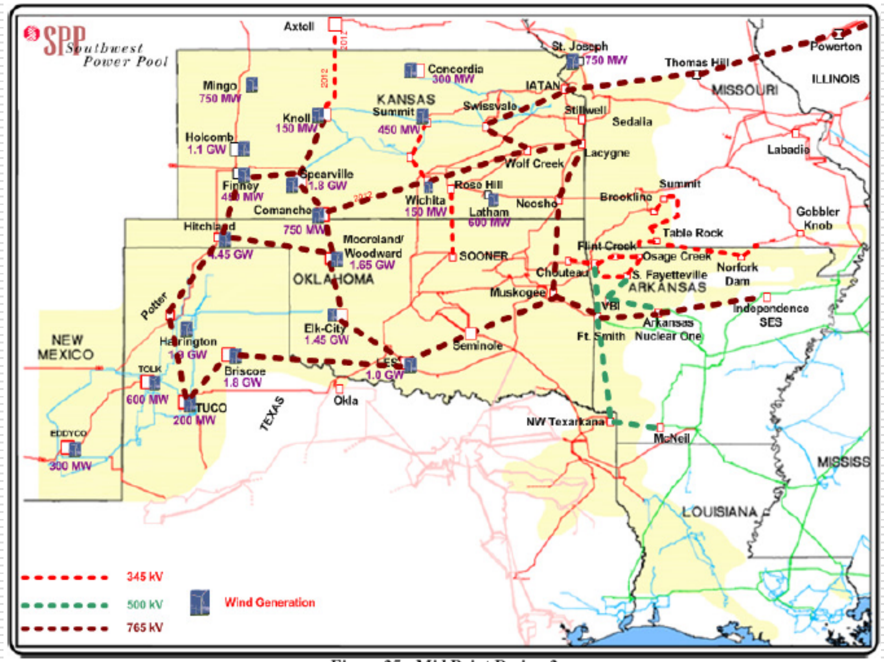


Figure 25: Mid Point Design 2

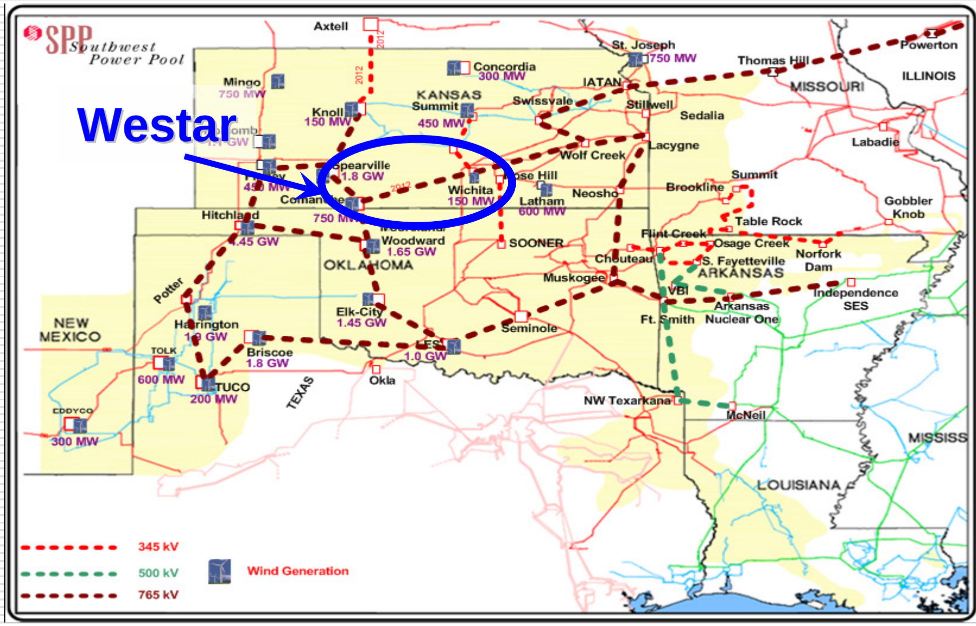
Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Prairie Wind Transmission, LLC

JV to build first segment of 765-kV transmission in SPP

- *Overview*
  - On May 19, 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT)
  - PWT is a 50/50 JV that is proposing to build approximately 230 miles of 765-kV lines extending from Wichita, Kan., west to a substation northeast of Dodge City, Kan., and then south to the Kansas border from Medicine Lodge, Kan.
  - The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region
  - Project is expected to cost approximately $600 million (based on SPP estimates) and be in-service by 2013
  - AEP's ownership of the joint venture is 25%
  - AEP obligations include oversight of 765-kV Engineering, 765-kV Technology and Project Management
  - Other responsibilities will be handled by the partners or outsourced
- *Next Steps*
  - File CPCN –2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate and Cost Allocation Filing (postage stamp) – 2009
  - Siting Approval – 2009
  - Estimated Completion – 2013



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.
