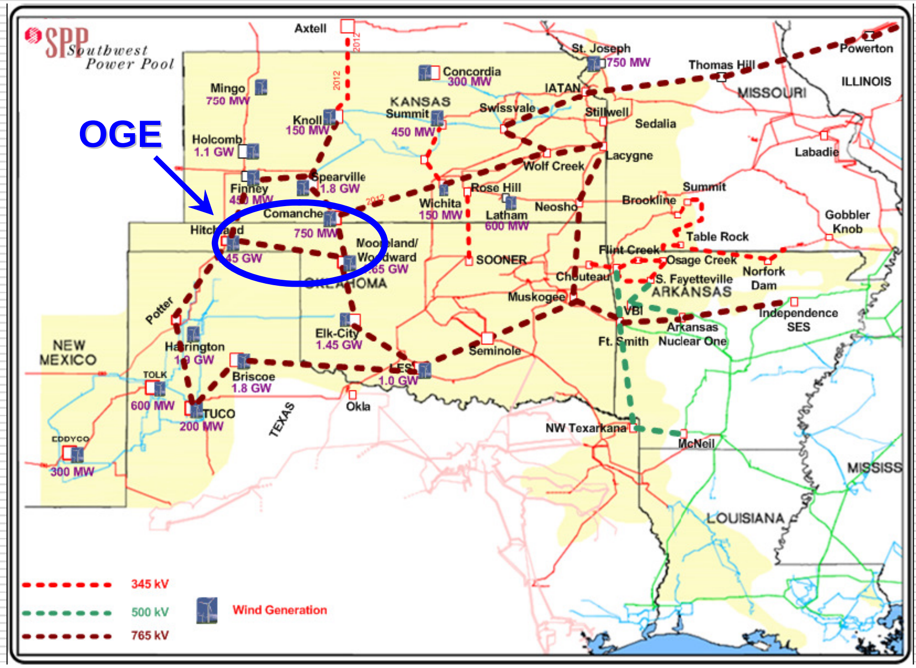
Horizon Transmission, LLC

JV to build second segment of 765-kV transmission in SPP

- *Overview*
  - On July 15, 2008, ETA signed an agreement with OGE Energy Corp. to form Horizon Transmission, LLC (Horizon)
  - Horizon is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines extending from the Kansas-Oklahoma border north of Woodward, OK, that will link into OGE's station at Woodward and then extend west to a new station that will be built near Guymon, OK.
  - The project will provide enhanced electricity transport in Oklahoma and support expansion of renewable electricity generation in the region
  - Project is expected to cost approximately $500 million (based on SPP estimates) and be in-service by 2013
  - AEP's ownership of the joint venture is 25%
  - AEP obligations include oversight of 765-kV Engineering, 765-kV Technology and Project Management
  - Other responsibilities will be handled by the partners or outsourced
- *Next Steps*
  - File CPCN –2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate and Cost Allocation Filing (postage stamp) – 2009
  - Siting Approval – 2009
  - Estimated Completion – 2013



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

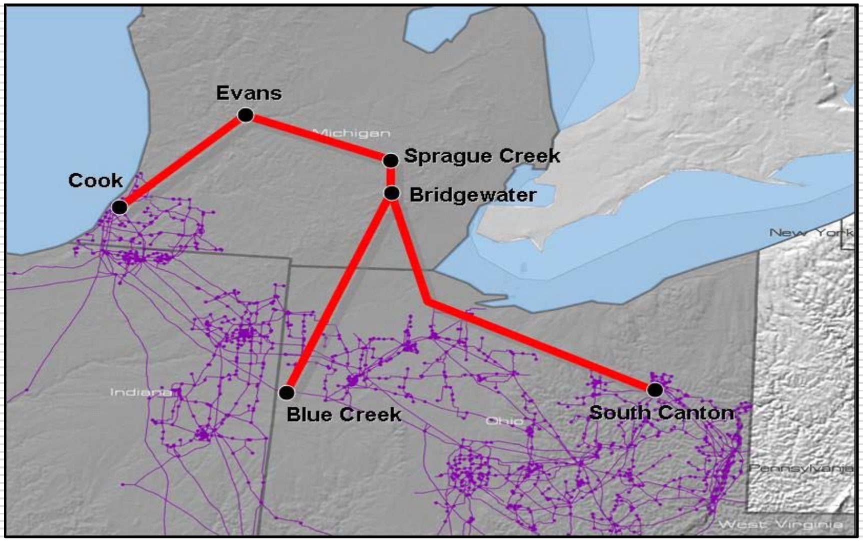
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP®

I-765TM Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
  - Study was released Q3 2007
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.6 billion investment (before ownership division)
  - AEP and ITC are in discussions to form a Joint Venture
- *Benefits*
  - Up to 5,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- *Next Steps*
  - Agreement on JV (AEP/ITC) - Summer 2008
  - JV Formation - 2008
  - MISO and PJM Review/Approval - 2009
  - FERC Formula Rate and Cost Allocation Filing - Fall 2009
  - Siting Approval – 2011-2012
  - Estimated Completion –2015-2021



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Advanced Generation & CO_2

Near Term:

- Chilled Ammonia project at Mountaineer Plant in West Virginia

$ in millions			
	2008	**2009**	**2010**
Mountaineer Chilled Ammonia Project	**$33**	**$40**	**$0**

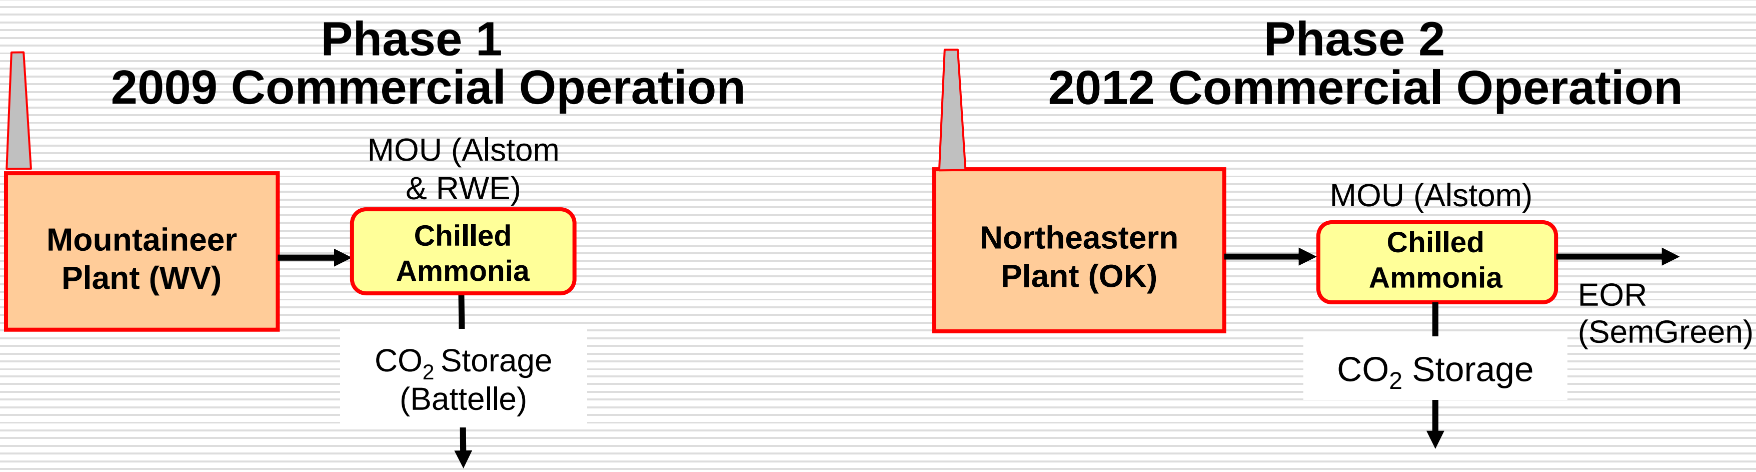
Long Term Strategy (Post-2010):

- IGCC
- Chilled Ammonia
- Oxy Coal Technology
- Nuclear COL

We are committed to validating and deploying technologies that ensure coal remains a viable resource for AEP and America.

AEP's Carbon Capture & Storage Initiative

- **In March 2007, AEP announced a major new carbon capture and storage initiative**
- **Chilled Ammonia CCS--We will install carbon capture on two coal-fired power plants, the first commercial use of technologies to significantly reduce carbon dioxide emissions from existing plants.**
  - **The first carbon capture project, at the Mountaineer plant in West Virginia, is expected to complete its product validation phase in 2009.**
  - **The second, at the Northeastern plant in Oklahoma *, will begin commercial operation in 2012.**



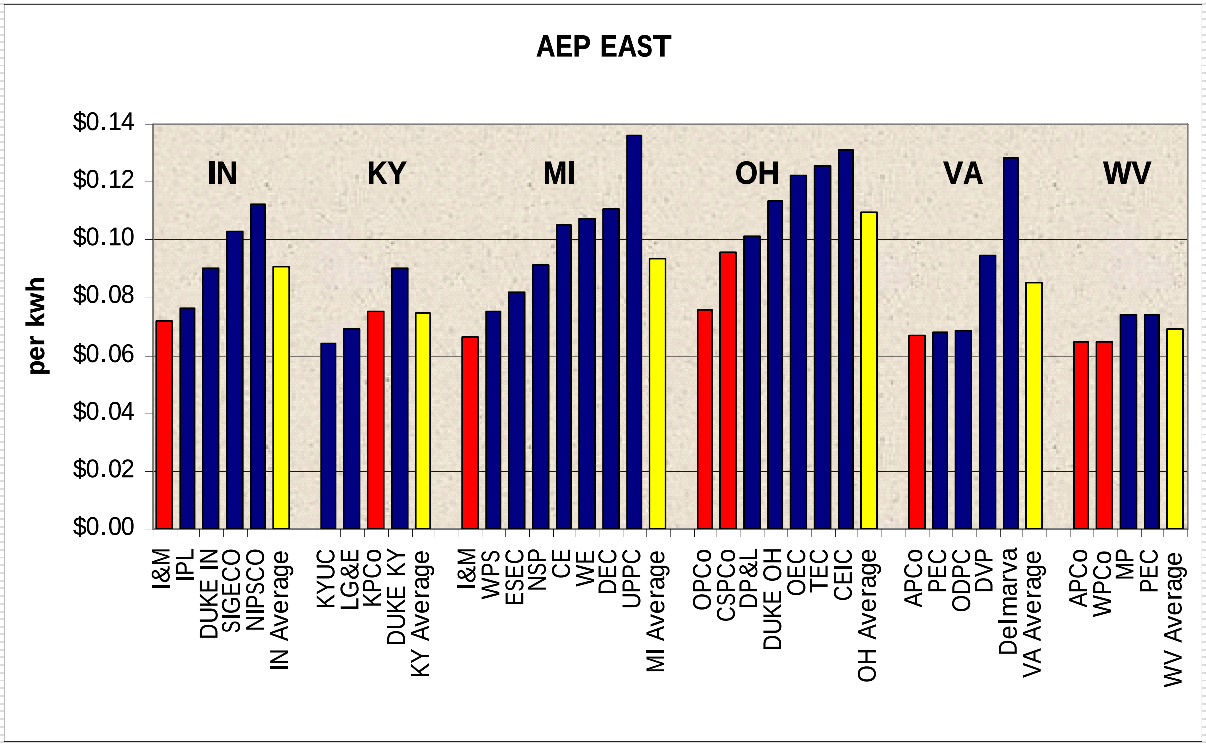
* - the second project is dependent upon the results of the validation phase at the Mountaineer plant as well as favorable regulatory treatment

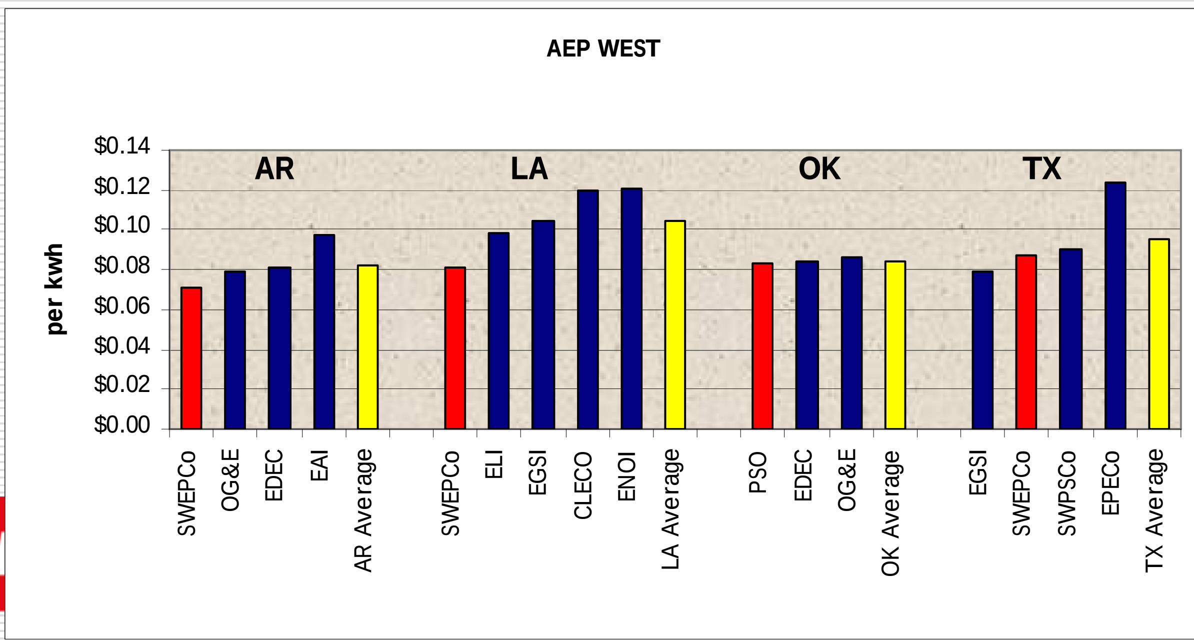
AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A reliable and reasonably-priced electric supply is necessary to support the economic well-being of the areas we serve.

AEP Provides Low Cost Electric Service





Residential Average rates for 1,000 kWh - 12 months ended 7/01/2007

Source: Summer 2007 EEI Typical Bills and Average Rates Report

AEP's low cost provider status in most of its jurisdictions will allow AEP's pricing to remain competitive following anticipated rate increases

AEP Ohio Electric Security Plan Filing

- On July 31, 2008, in conjunction with the requirements of SB221, AEP Ohio filed an Electric Security Plan with the PUCO on behalf of CSPCo and OPCo.
- The filing includes the following key components:
  - Energy Efficiency and Demand Response
  - Renewable Energy
  - gridSMART Phase 1
  - Distribution Reliability Enhancement
  - Economic Development
  - Provider of Last Resort
- The proposed rate plan results in an annual increase of approximately 15 percent on customers' total bills
- The filing seeks to recover changes in fuel and environmental expenses relative to levels reflected in current rates
- We anticipate an order at the end of 2008

Summary Rate Case Information

I&M Indiana General Rate Case

On January 31, 2008, I&M filed a general base rate case with the Indiana Utility Regulatory Commission (IURC) requesting an increase of $128.5 million ($82.4 million in base revenues and $46.1 million in tracker mechanisms). (Docket #: 43306). Order is expected in June 2009.

III	PUE-2008-00045	10/1/2006 thru 12/31/2007	Proposed 1/1/09 thru 12/31/09	$66.5 million

Regulatory Activity Underway

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $140MM. Approximately $10MM of the increase relates to 3rd party and the rest, if approved, would be recovered through retail jurisdictional filings in SWEPCo and PSO, as appropriate.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to February 1, 2008, with rates subject to refund.
- Settlement discussions are currently on-going.

Regulatory Activity Underway

PJM OATT Formula Rate Filing

- On July 31, 2008, the seven AEP East companies filed with the FERC to update the Open Access Transmission Tariff (OATT) rate and implement a formula transmission rate that will be updated annually to keep rates current with transmission investment.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is \$507MM and the new revenue requirement requested is \$606MM. Approximately \$31MM of the increase relates to 3rd party and Ohio and the rest, if approved, would be recovered through retail jurisdictional filings in the other east jurisdictions.
- We requested an effective date of October 1, 2008 for the revised tariff, which the FERC may suspend for an additional five months.

Regulatory Activity Underway

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- The PSC issued its order on November 21, 2007, approving construction of the plant.
- Air permit anticipated in the second half of 2008.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The peaking facility has been addressed and the intermediate facility is under review. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- The LPSC issued its order on April 29, 2008, approving construction of the plant.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- The PUCT verbally approved construction of the plant on July 3, 2008. A written order is pending.

SWEPCo Stall Plant Filings

Arkansas

- Proceeding is currently suspended pending outcome in Louisiana.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The intermediate facility, known as the Stall Plant and sited in Shreveport, LA, was bifurcated from the original filing and had a procedural schedule established on January 9, 2008.
- Staff and intervenor testimony was completed on February 15, 2008, rebuttal testimony was due February 29, 2008 and hearings were held in April 2008. Staff testimony was favorable. An order is expected in mid-summer.
- Air permit received on March 20, 2008.

Texas

- PUCT order approving plant was issued on March 8, 2007.

AEP®

Commitment to Credit Quality

- Maintain adequate liquidity
- $150MM annually in new equity from Dividend Reinvestment and 401(k) plans
- Target 60% maximum consolidated AEP debt/cap ratio on an adjusted basis
- Target utility company capitalization structures:

Company	Target Equity Ratio
APCo	42-44%
CSP	45-47%
I&M	40-42%
KPCo	41-43%
OPCo	44-46%
PSO	43-45%
SWEPCo	43-45%
TCC	40%
TNC	40%

- Target long term dividend payout ratio range of 55-60%
- Maintain adequate coverage ratios to support current credit ratings

We are committed to maintaining our current credit ratings.

AEP Strategy

Strategy: grow our core utility business at a consistent rate through major investment supported and funded by innovative programs for regulatory recovery as well as develop our independent, federally regulated Transmission Company for the pursuit of new major interstate projects.

Our 2008 Focus:

- Prepare for post-2008 transition in Ohio
- Invest in and evolve infrastructure to support future technology and customer needs focused on efficiency, conservation and load management
- Enhance cash flow & earnings through rate recovery mechanisms
- Take advantage of AEP's size to benefit our customers and shareholders through regulatory-supported investment

Sustained capital investment opportunities support earnings growth.

At the conclusion of our current environmental retrofit program, over 58% of our 24,630 MW coal-fired generation fleet will be equipped with SCRs and over 73% will be scrubbed (FGDs).

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
PSO	Riverside	Oklahoma	$59 MM	Gas	Simple-cycle	170	2Q 2008
AEG	Dresden	Ohio	$305 MM	Gas	Combined-cycle	580	2010
SWEPCo	Stall	Louisiana	$378 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.5 B (1)	Coal	Ultra-supercritical	600 (1)	2012
APCo	Mountaineer	West Virginia	$2.23 B	Coal	IGCC	629	2012
CSP/OP	Great Bend	Ohio	$2.7 B (2)	Coal	IGCC	629	2017

(1) SWEPCo will own approximately 73%, or 438 megawatts, totaling about $1,110 million in capital investment. The increase in the cost estimate relates to cost escalations due to the delay in receipt of permits and approvals.

(2) Cost estimates, updated to reflect cost escalations due to revised commercial operation date of 2017, are not yet filed with the PUCO.

AEP is meeting the growing electricity needs of customers through the pursuit of new economic generation facilities.

gridSMART℠

gridSMART℠: implementing AEP's vision for the distribution and customer services business in the future, including the development of new customer programs to reduce consumption and peak demand, and a plan to deploy advanced technologies.

- **Enables customers to better manage energy**
- **Improves service to our customers by enhancing customer choice and customer control**
- **Improves efficiency**
- **Integrates distributed energy resources into our grid**
- **Transforms the way we do business**

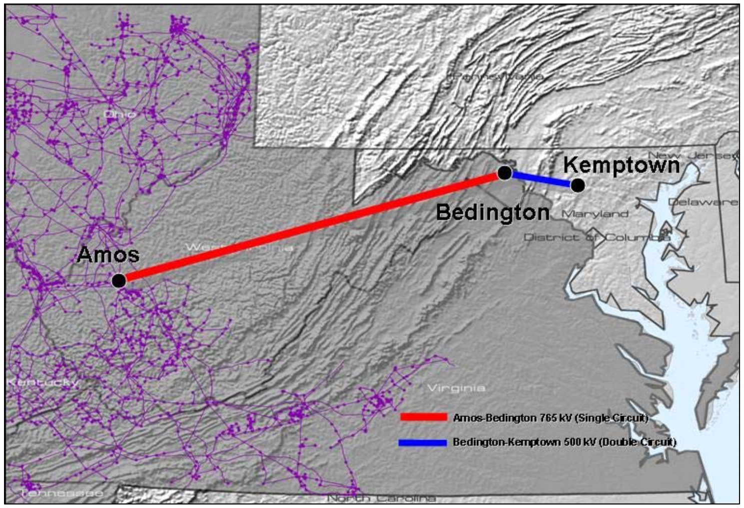
Capital Investment, Subject to Regulatory Approval * $ in millions			
Technology	**2008**	**2009**	**2010**
Metering & Communications	**$83**	**$138**	**$146**
Distribution Technology Enhancements	**$40**	**$ 63**	**$ 82**

*$472MM of the $552MM not in current forecast; spending contingent upon regulatory approval

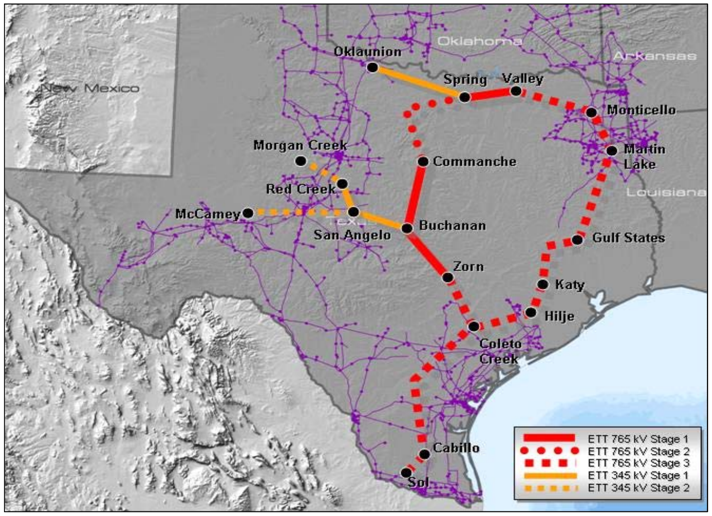
AEP will continue to be an industry leader in deploying advanced technology on a commercial scale. $552MM capital investment by 2010, subject to regulatory approval.

I-765™ Transmission: Investment Opportunities

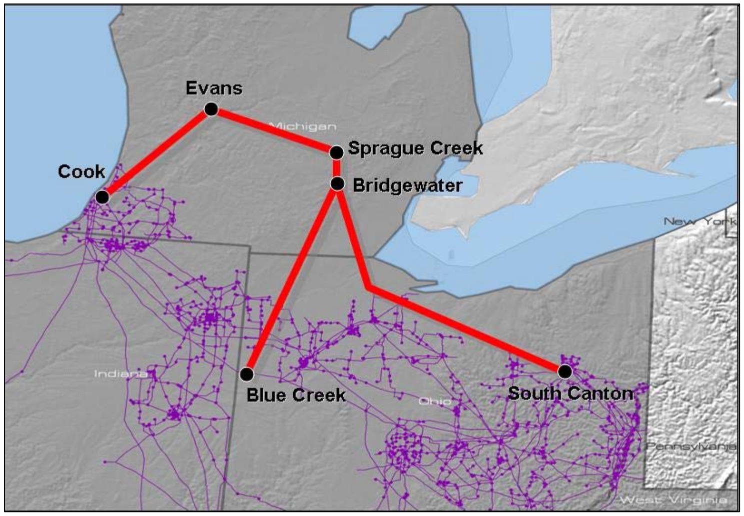
AEP is Advancing the Development of a National Interstate Today



PATH Project (PJM)



ETT Proposal (ERCOT)



AEP-ITC Michigan Proposal (PJM/MISO)

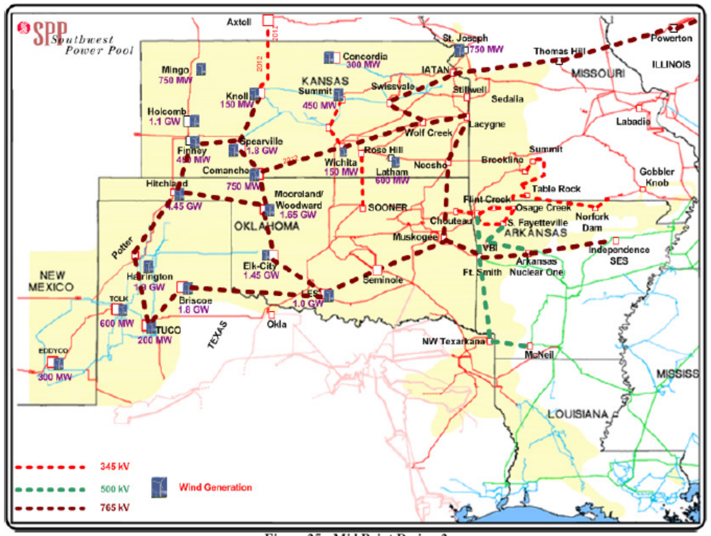


Figure 25: Mid Point Design 2

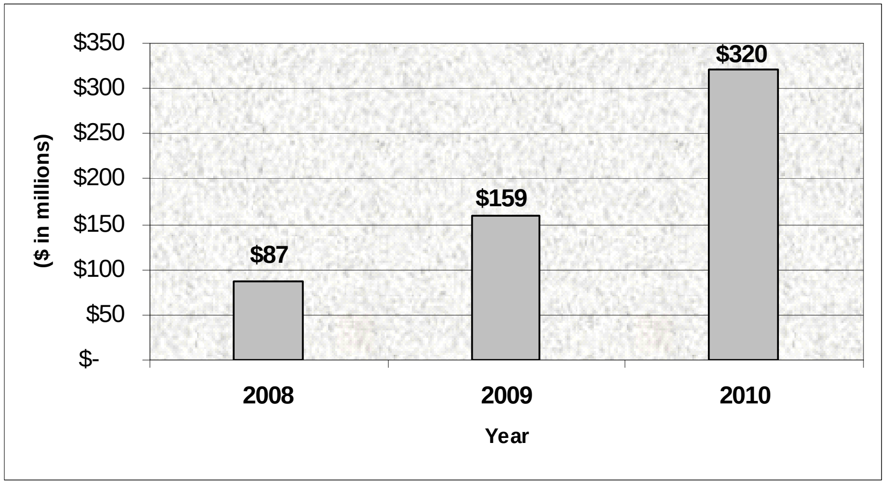
SPP Overlay Study – Mid Design 2

Transmission – Investments and Earnings Contributions

Projected Transmission Capital Spending*

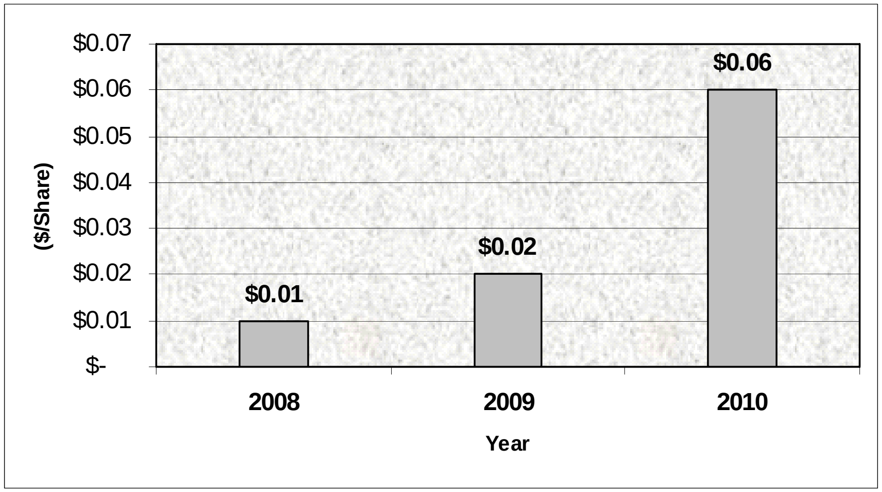


* ETT and PATH joint ventures included in above projection. Amounts represent AEP's 50% share of total transmission joint venture capital expense. These amounts are excluded from AEP's base capital forecast because the joint ventures are not consolidated for financial reporting purposes. AEP will be responsible for funding 40-50% of these amounts with equity contributions, and the remainder will be financed with debt issued by the joint ventures.

Electric Transmission Texas

Potomac-Appalachian Transmission Highline

Projected Transmission EPS Contributions*

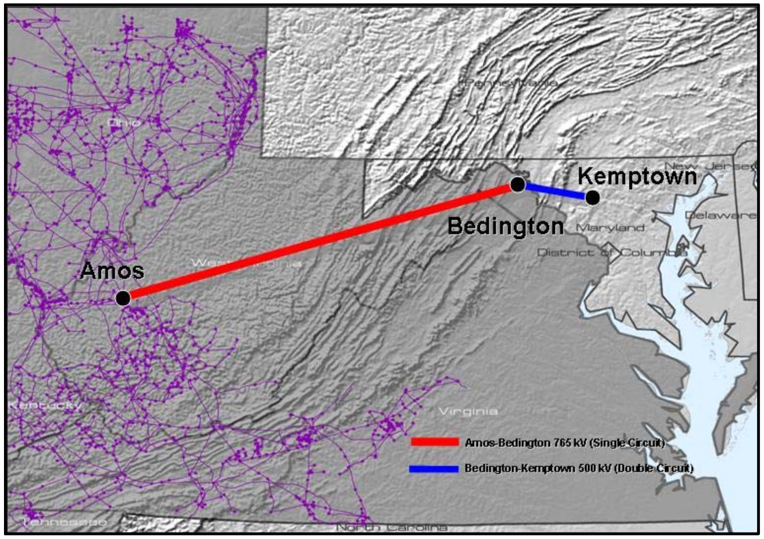


* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

Transmission will provide a near and long term catalyst for growth.

I-765™ Transmission in PJM: PATH

- *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries -- to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP
    - 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
  - FERC ordered the formula rate mechanism be set for hearing, pending settlement judge procedures



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

- *Funding Plans/Transaction Structure*
  - AEP and Allegheny share ownership of Amos – Bedington line and contribute equally to this portion of the project through PATH West Virginia Transmission Company, LLC
  - AEP's investment is held in the AEP Transmission Holding Company LLC subsidiary

- *Key Next Steps*
  - Siting Approval from WV and MD – 2010
  - Targeted Completion – 2012

Joint Ventures with MEHC

Electric Transmission Texas Update	Electric Transmission America Update

- *Transaction Structure*
  - 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
  - ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
  - Services provided by AEP and investment opportunities can be offered by either partner
  - Total initial investment of $70 million before ownership division
- *Next Steps*
  - ETT project opportunities to be evaluated on a case by case basis
  - Anticipate transferring some project opportunities in 2008 after regulatory approvals obtained

- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.

I-765TM Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- ### *Overview*
  - Sent non-binding Letter of Commitment to SPP to construct 765-kV and 500-kV projects in SPP region consistent with SPP Overlay Study – Summer 2007
  - Updated EHV Overlay Study completed by SPP – March 2008
- ### *Benefits*
  - Overall reliability reinforcement with improved voltage support throughout the SPP system
  - Significantly increased transfer capability
  - Provides access to new generation resources, especially renewables
  - Allows for effective interconnections for EHV system development
- ### *Next Steps*
  - ETA Partnering Agreements - 2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate and Cost Allocation Filing (postage stamp) – 2009
  - Siting Approval for projects – 2009-2011
  - Estimated Completion (in segments) – 2012-2017

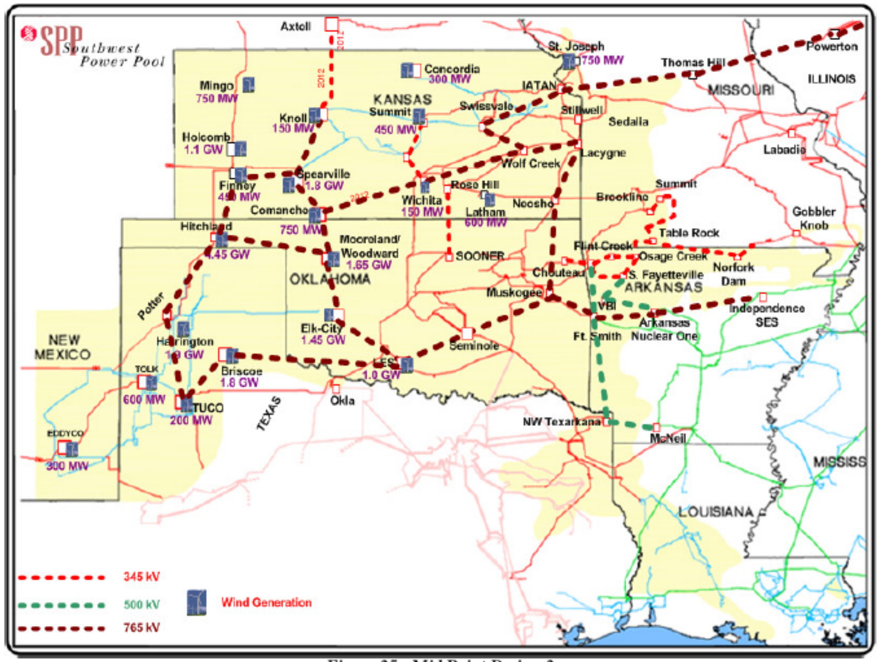


Figure 25: Mid Point Design 2

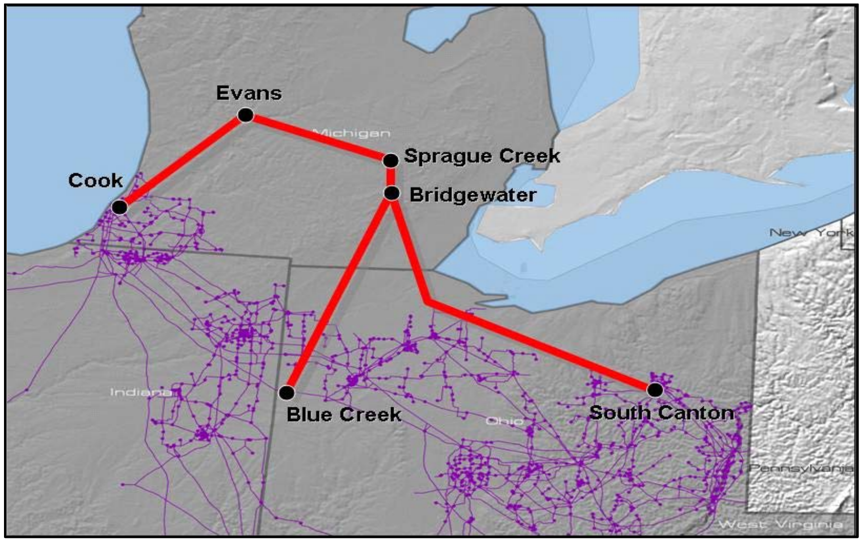
Total SPP 765-kV Overlay estimated to cost approximately $5 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

I-765™ Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
  - Study was released Q3 2007
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.6 billion investment (before ownership division)
  - AEP and ITC are in discussions to form a Joint Venture
- *Benefits*
  - Up to 5,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- *Next Steps*
  - Agreement on JV (AEP/ITC) - Summer 2008
  - JV Formation - 2008
  - MISO and PJM Review/Approval - 2009
  - FERC Formula Rate and Cost Allocation Filing - Fall 2009
  - Siting Approval – 2011-2012
  - Estimated Completion –2015-2021



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A reliable and reasonably-priced electric supply is necessary to support the economic well-being of the areas we serve.

Advanced Generation & CO_2

Near Term:

- Chilled Ammonia project at Mountaineer moving to commercial scale at the Northeastern Plant in 2012

$ in millions				
		2008	2009	2010
Mountaineer Chilled Ammonia Project		$30	$39	$0

Long Term Strategy (Post-2010):

- IGCC
- Chilled Ammonia
- Oxy Coal Technology
- Nuclear COL

We are committed to validating and deploying technologies that ensure coal remains a viable resource for AEP and America.

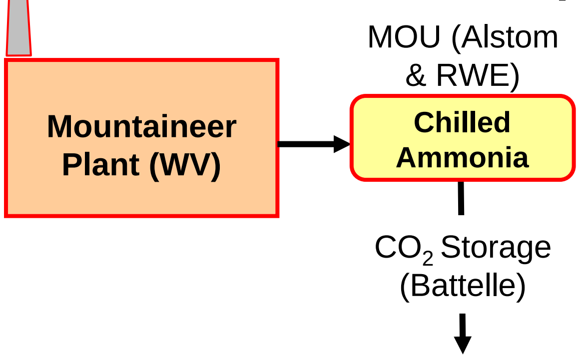
AEP's Carbon Capture & Storage Initiative

In March 2007, AEP announced a major new carbon capture and storage initiative:

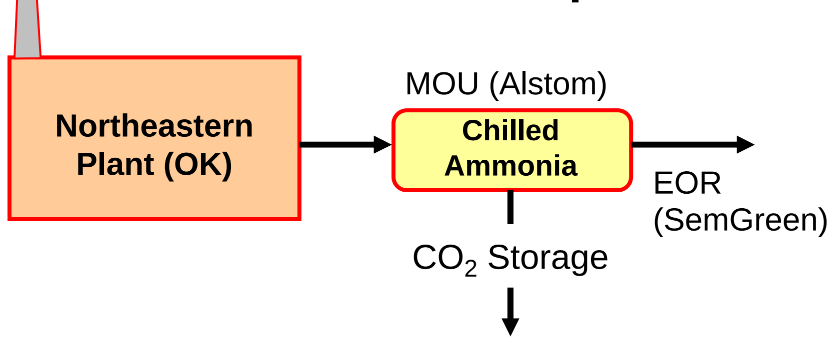
Chilled Ammonia CCS--We will install carbon capture on two coal-fired power plants, the first commercial use of technologies to significantly reduce carbon dioxide emissions from existing plants.

- **The first carbon capture project, at the Mountaineer plant in West Virginia, is expected to complete its product validation phase in 2009.**
- **The second, at the Northeastern plant in Oklahoma, will begin commercial operation in 2012.**

Phase 1
2009 Commercial Operation



Phase 2
2012 Commercial Operation



CO_2 Capture Techniques

Post-Combustion Capture

- Conventional or Advanced Amines, Chilled Ammonia
  - Amine technologies commercially available in other industrial applications
  - Relatively low CO_2 concentration in flue gas – More difficult to capture than other approaches
  - High parasitic demand
    - Conventional Amine ~25-30%, Chilled Ammonia target ~10-15%
  - Amines require **<u>very</u>** clean flue gas

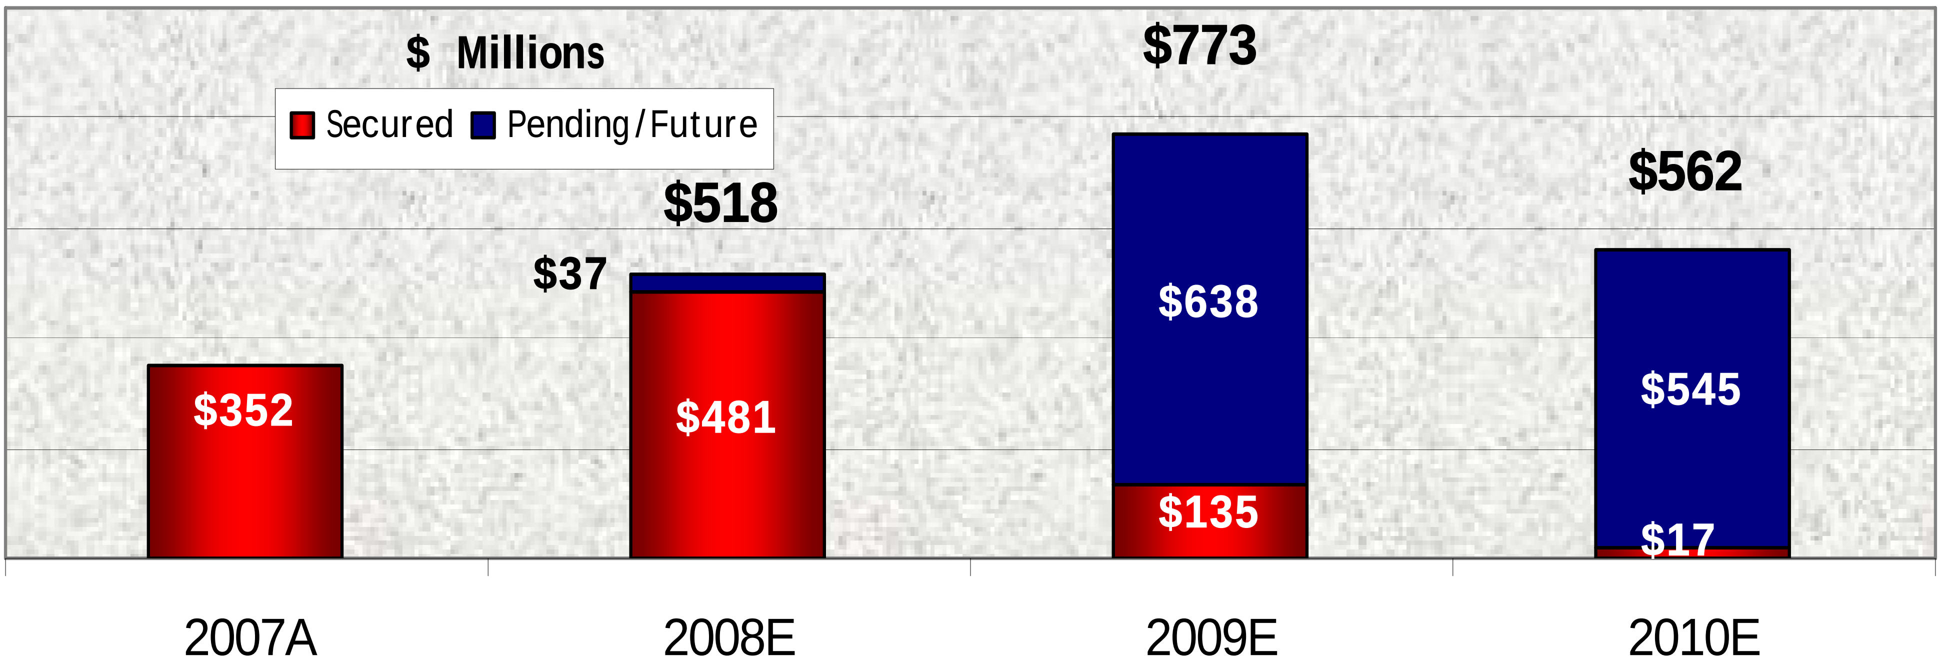
Modified-Combustion Capture

- Oxy-Coal
  - Technology not yet proven at commercial scale
  - Creates stream of very high CO_2 concentration
  - High parasitic demand, >25%

Pre-Combustion Capture

- IGCC with Water-Gas Shift
  - Most of the processes commercially available in other industrial applications
    - Have never been integrated together
  - Turbine modified for H_2-based fuel, which has not yet been proven at commercial scale
  - Creates stream of very high CO_2 concentration
  - Parasitic demand (~20%) for CO_2 capture - lower than amine or oxy-coal

Incremental Rate Relief



- 93% of 2008 Rate Relief Secured: I&M Depreciation, APCo - WV Surcharge, TCC & TNC General Rate Cases, Ohio RSP (3% & 7%), PSO Peaking Generation & General Rate Case, Ohio 4% Generation Rider and Marginal Loss Recovery, APCo - Virginia Fuel Factor, 2007 TCC/TNC TCRF filings, PSO 2007 Storm Recovery, SWEPCo - LA Formula Rate Plan.

- 2008 Pending: 2008 TCC/TNC TCRF filings, other cases yet to be filed including Virginia base case.

Secured $481MM of $518MM for 2008

AEP Provides Low Cost Electric Service

Regulatory Activity Underway

PSO Red Rock Generating Facility Recovery Filing

- On December 28, 2007, PSO filed an application with the Oklahoma Corporation Commission to defer, amortize and recover costs related to the Red Rock Generating Facility, which was denied construction and recovery pre-approval in October 2007.
- On March 13, 2008, PSO signed a settlement agreement with various parties regarding recovery of costs incurred in the Red Rock project. The agreement provides for recovery from customers of 50% of the costs ($10.5MM). The settlement agreement has not yet been approved by the OCC. Hearing held May 12, 2008.

Regulatory Activity Underway

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $140MM. Approximately $10MM of the increase relates to 3rd party and the rest, if approved, would be recovered through retail jurisdictional filings in SWEPCo and PSO, as appropriate.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to February 1, 2008, with rates subject to refund.
- Settlement discussions are currently on-going.

Regulatory Activity Underway

APCo Mountaineer IGCC Filing

Virginia

- Testimony filed with the Virginia State Corporation Commission on July 16, 2007 seeking a prudence determination and approval to recover, beginning in 2009, Virginia's share of the carrying costs associated with the proposed plant.
- We received an order on April 14, 2008, denying our request. We petitioned for reconsideration on April 29, 2008, and the SCC issued an order granting reconsideration on April 30, 2008.

West Virginia

- Air permit anticipated in the third or fourth quarter of 2008.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.
- In March 2008, the Ohio Supreme Court remanded the original order back to the PUCO, giving the PUCO the opportunity to supplement the record. No refund of Phase I costs was mandated by the Supreme Court in its decision.
- We now await further clarity from the PUCO on the remanded issues as well as resolution of pending rulemaking related to SB221 in Ohio.

Regulatory Activity Underway

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- The PSC issued its order on November 21, 2007, approving construction of the plant.
- Air permit anticipated in the third or fourth quarter of 2008.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The peaking facility has been addressed and the intermediate facility is under review. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- The LPSC issued its order on March 19, 2008, approving construction of the plant.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- Public hearings commenced October 17, 2007. On January 17, 2008, the ALJ recommended the PUCT deny the request. The commissioners have requested another hearing where they can directly cross examine some of the witnesses. The additional hearing is scheduled for May 29-30, 2008.

Regulatory Activity Underway

SWEPCo Stall Plant Filings

Arkansas

- Proceeding is currently suspended pending outcome in Louisiana.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The intermediate facility, known as the Stall Plant and sited in Shreveport, LA, was bifurcated from the original filing and had a procedural schedule established on January 9, 2008.
- Staff and intervenor testimony was completed on February 15, 2008, rebuttal testimony was due February 29, 2008 and hearings were held in April 2008. Staff testimony was favorable. An order is expected in mid-summer.
- Air permit received on March 20, 2008.

Texas

- PUCT order approving plant was issued on March 8, 2007.

Approved Rate Bases and ROEs

* - 2007 actual amount includes distressed generation purchases of $512 million

Capital investment is funded from cash from operations and debt issuances.

Commitment to Credit Quality

- Maintain adequate liquidity
- $150MM annually in new equity from Dividend Reinvestment and 401(k) plans
- Target 60% maximum consolidated AEP debt/cap ratio on an adjusted basis
- Target utility company capitalization structures:

Company	Target Equity Ratio
APCo	42-44%
CSP	45-47%
I&M	40-42%
KPCo	41-43%
OPCo	44-46%
PSO	43-45%
SWEPCo	43-45%
TCC	40%
TNC	40%

- Target long term dividend payout ratio range of 55-60%
- Maintain adequate coverage ratios to support current credit ratings

We are committed to maintaining our current credit ratings.

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation or regulation in Ohio and/or Virginia, and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

AEP®

Table of Contents

Strategic Direction

- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Develop our transmission business
- Achieve adequate returns on all assets

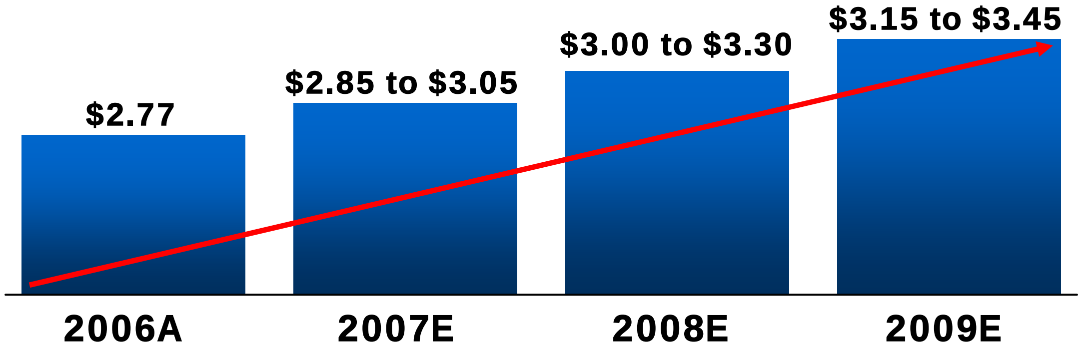
Deliver value to investors and cost effective service to our customers

CONTINUED COMMITMENT TO OUR CORE UTILITY MISSION: BRING REASONABLY PRICED ELECTRIC SERVICE TO OUR CUSTOMERS, THEREBY STRENGTHENING OUR COMMUNITIES AND REWARDING OUR INVESTORS

AEP®

Framework For Long-Range Performance

- 2007, 2008 & 2009 Ongoing Earnings Guidance Ranges:



- EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in existing utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
  - Investment in new transmission opportunities
  - Seek rate recovery for new investments
  - Control costs & achieve timely rate relief
- Maintain credit ratings
  - BBB/Baa2/BBB

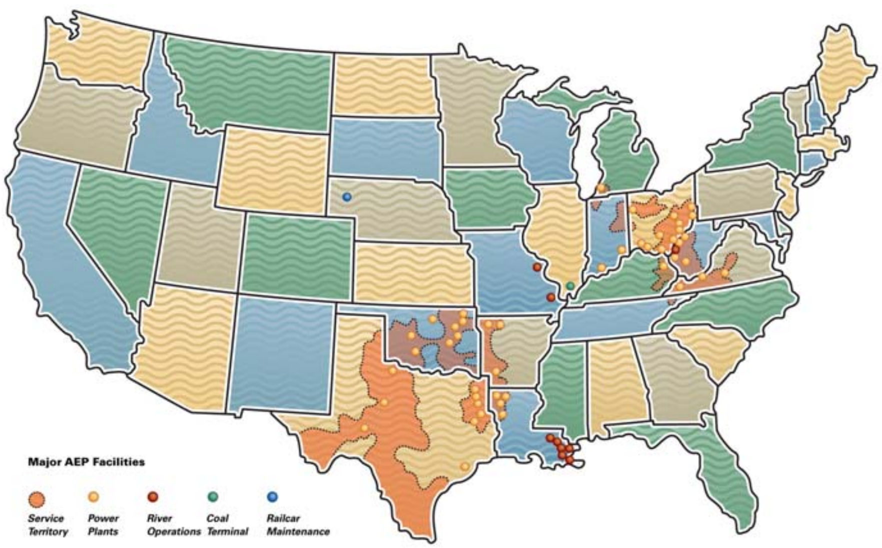
Our Strategy Remains Focused On Regulated Operations

Company Overview

- 5.1 million customers in 11 states
- Industry-leading size and scale of assets:

Asset	Size	Industry Rank
Domestic Generation	~38,200 MW	# 2
Transmission	~39,000 miles	# 1
Distribution	~208,000 miles	# 1

Source: Company research & Resource Data International Platts, PowerDat 2005



- Coal & transportation assets
  - Control over 8,000 railcars
  - Own/lease and operate over 2,600 barges & 51 towboats
  - Coal handling terminal with 20 million tons of capacity
- 20,000 employees

AEP Generation Portfolio

PSO	Riverside	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
SWEPCo	Arsenal Hill	Louisiana	$300 MM	Gas	Combined-cycle	480	2010
SWEPCo	Hempstead	Arkansas	$1.3 B[3]	Coal	Ultra-supercritical	600[3]	2011
PSO	Red Rock	Oklahoma	$1.8 B[4]	Coal	Ultra-supercritical	950[4]	2012
CSP/OP	Great Bend	Ohio	Under Review[5]	Coal	IGCC	600	TBD
APCo	Mountaineer	West Virginia	Under Review[5]	Coal	IGCC	600	TBD

(1) Sale closed on April 25, 2007 - Plant began commercial operation in 2001
(2) Sale expected to close 2Q07 - Plant began commercial operation in 2004
(3) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment
(4) PSO will own 50%, or 425 megawatts, totaling approximately $900MM in capital investment
(5) AEP is currently working with GE and Bechtel on a FEED (front-end engineering and design) study. When completed (expected mid-year 2007), a cost estimate will be available.

AEP®

IGCC Overview

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called "syngas" – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2 , mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP's eastern service territory.

AEP®

IGCC Permitting Process

IGCC Permitting Issues

- **Air**
  - ✓ Identify best available control technology (BACT)
  - ✓ Determine how start-up and shut-down emissions should be addressed
- **Wastewater**
  - ✓ understand nature of wastewater streams
  - ✓ Determine treatability and permitting scopes
- **US ACE (US Army Corp of Engineers)**
  - ✓ Conduct all necessary site studies per NEPA (National Environmental Policy Act) requirements (Wetlands, endangered species, archaeology)
  - ✓ Obtain permit to construct river facilities

Permitting process takes 1 – 2 years and is well under way

Transmission ~ $9 Billion Opportunity*

Creating a business model to manage capital requirements for enhanced returns with partners

- ~ $1 billion+ in ERCOT via Electric Transmission Texas, LLC (ETT)
- ~ $2 billion 765-kV study with ITC in Michigan
- ~ $3 billion I-765 Project in PJM
- ~ $3 billion project filed with SPP

Assumptions	
Estimated Investment Opportunity	$9 Billion
Ownership Structure w/ Partner	50% / 50%
Debt/Equity Ratio	50% debt / 50% equity
Return on Equity	11.00%
Potential EPS Impact (based on 396 MM shares)	+ $0.60**

* ~$9 billion investment opportunity not included in current capital guidance forecasts

** Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion

AEP®

Building The Next US Interstate System For Enhanced Reliability And Market Efficiency Could Have Significant EPS Implications

New Transmission Investment Funding Plans

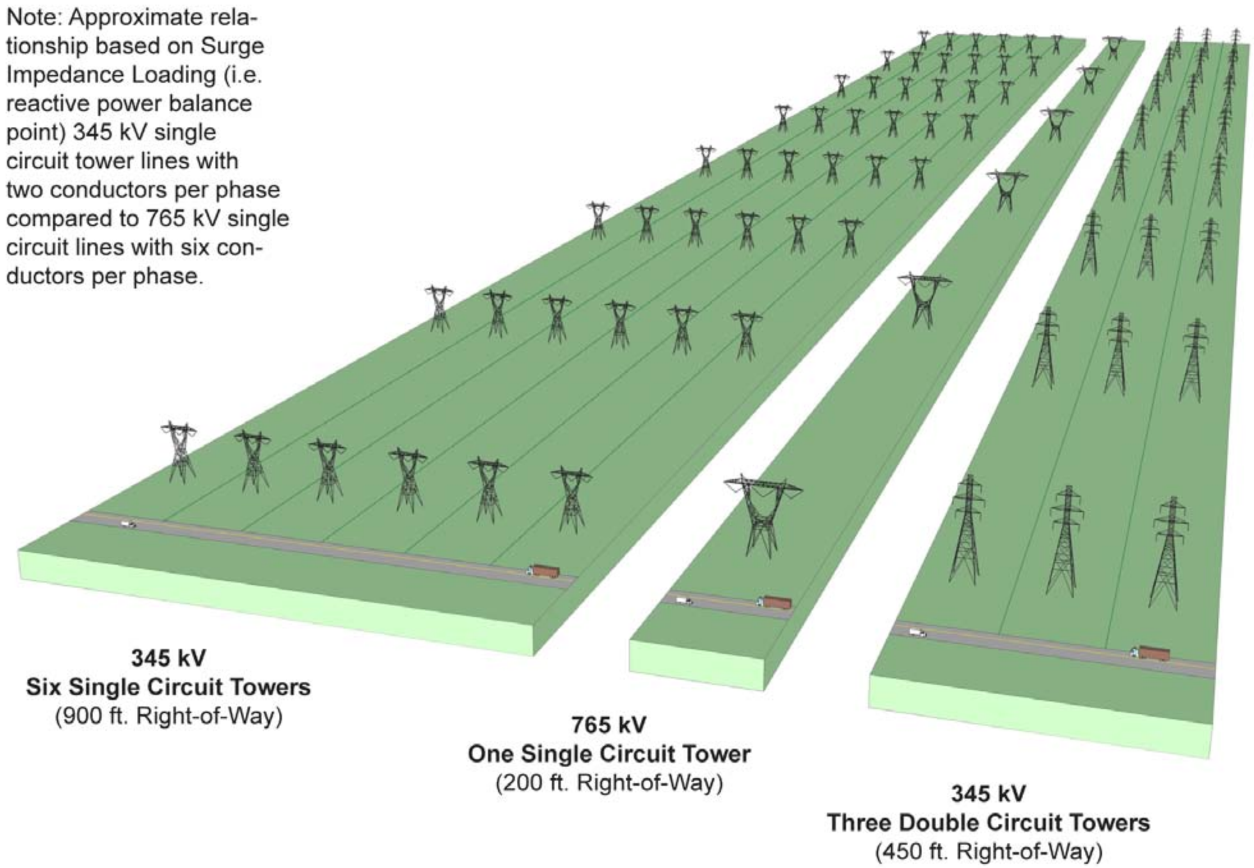
- Electric Transmission Texas LLC
  - 40% equity / 60% debt capital structure requested at the PUCT follows Texas precedent for T&D companies' filings
  - Equity – 50% AEP / 50% Mid-American Energy
  - AEP's 50% investment will be held at the AEP Utilities, Inc. subsidiary
  - Debt – Initially bank financing
  - Initial funding in 3Q07 after regulatory approvals

- AEP I-765 Interstate Project
  - Forming a joint venture with Allegheny Energy for 250 miles of the proposed 550 mile project
  - Equity – 50% AEP / 50% Allegheny
  - AEP's 50% investment will be held at the AEP Transmission Holding Company LLC subsidiary
  - Operations to commence in the second half of 2007
  - Project included in the DOE's draft National Interest Electric Transmission Corridor issued in April 2007

- Other Transmission Projects
  - Equity percentage of capital structure will target FERC precedents
  - Equity ownership percentage will vary by project
  - Will seek FERC transmission incentives:
    - Incentive ROE
    - Return on CWIP
    - Abandonment recovery
    - Expensing pre-construction expenses

AEP®

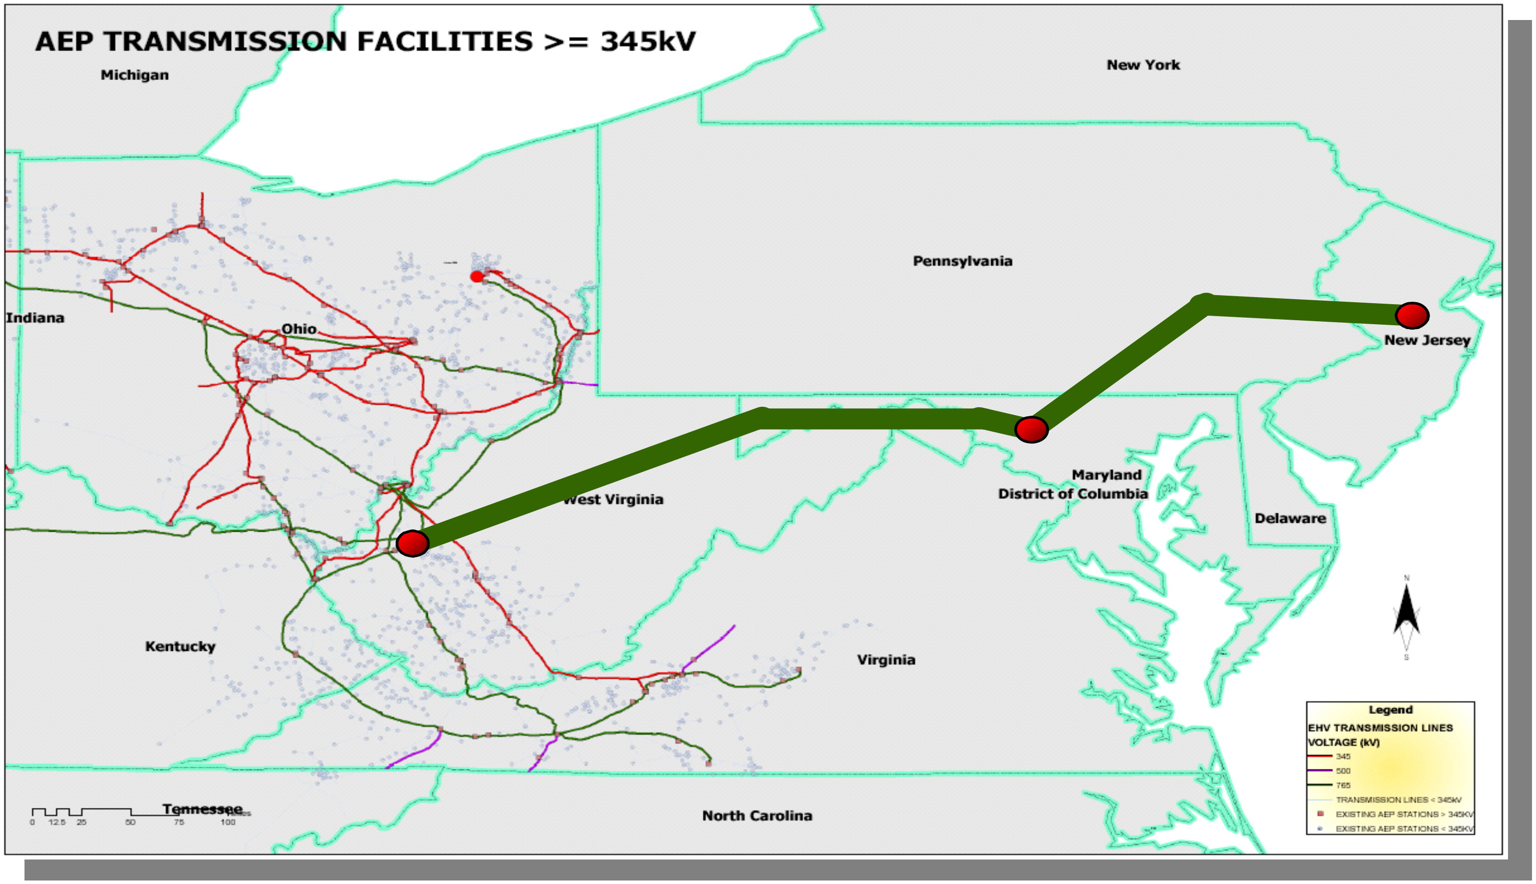
765 Right-of-Way Comparison



From a siting standpoint, 765 kV is much more efficient in terms of economies of scale and right-of-way than lower capacity lines

AEP®

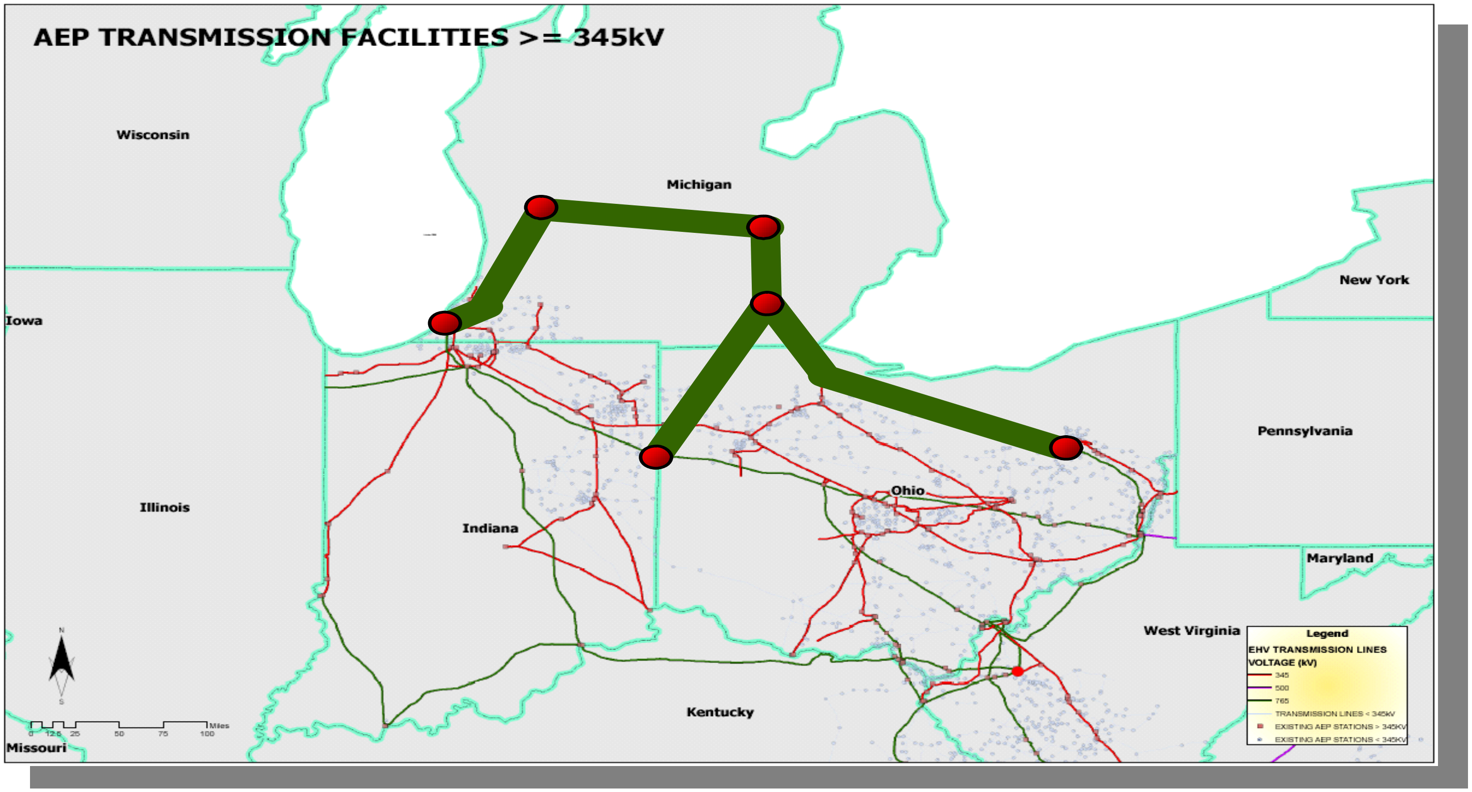
765 PJM



- **Jointly owned with Allegheny, will improve eastern grid reliability**
- **Enhance Midwest-Mid-Atlantic power transfer capability by 5000 MW**
- **Reduces network line losses by 280 MW at peak with heavy Midwest – Mid-Atlantic power transfers.**

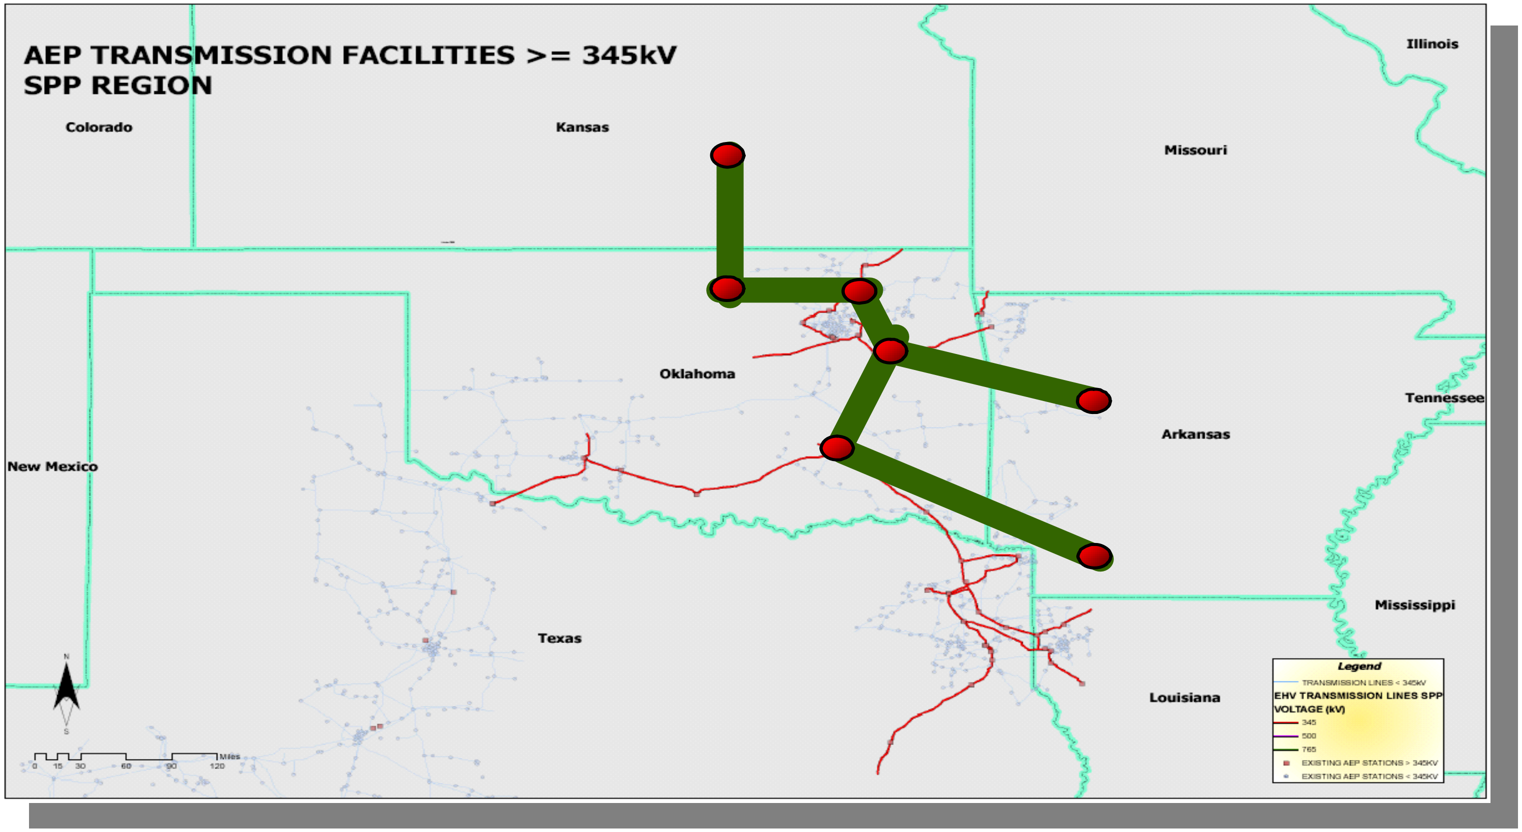
AEP®

765-Michigan



- Agreement with ITC Transmission for Michigan 765-kV to study the feasibility of a new line in MI.
  - 675 line miles
  - Over 4000MW improved transfer capability
  - 765-kV anticipated to alleviate constraints

765-SPP



➢July '06 AEP submitted conceptual project to SPP:

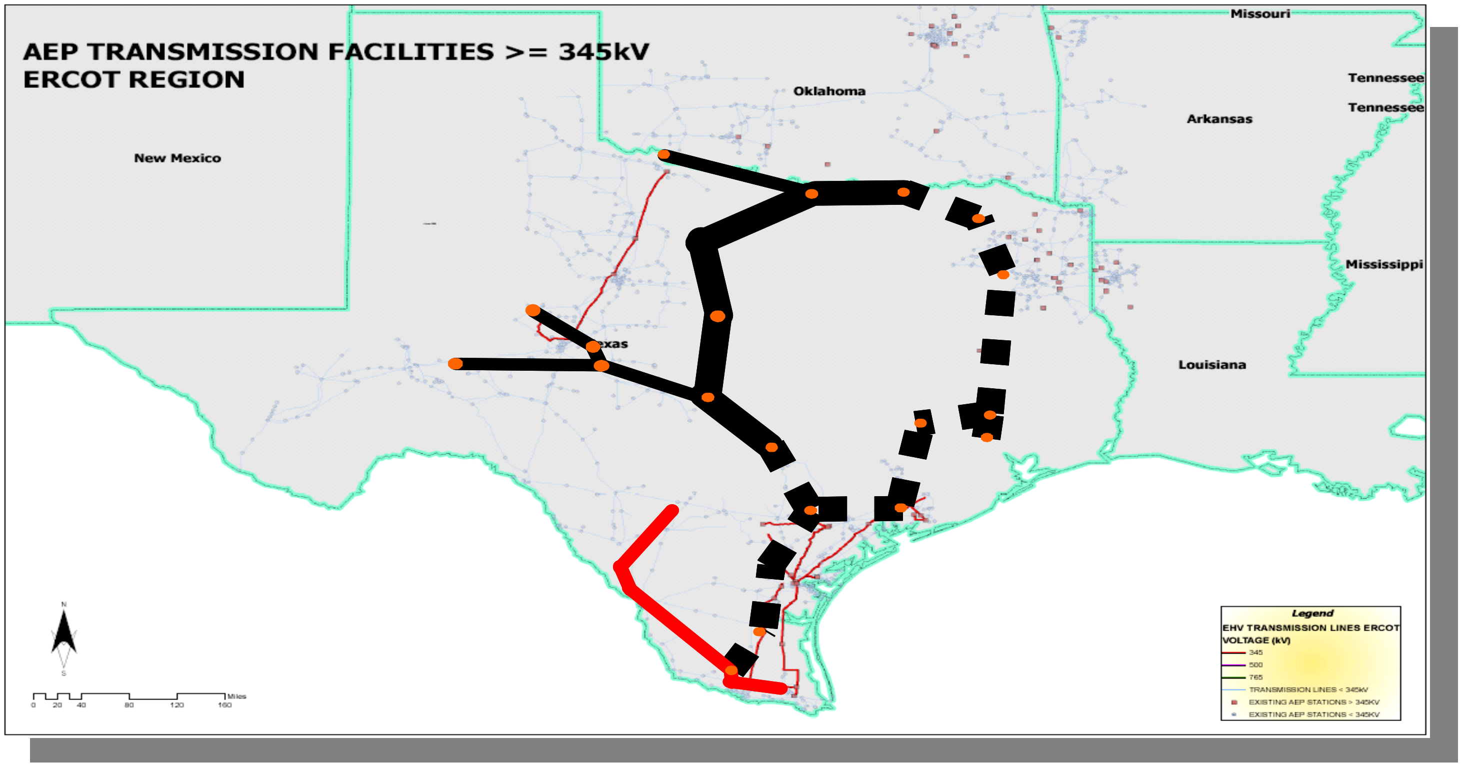
Six 765-kV lines, 610 line miles from Arkansas to Wichita, KS, proposed construction period 2012-17

➢Next steps:

SPP issued EHV Overlay Study RFP to review 345 kV, 500 kV, and 765 kV potential projects in SPP with results expected in mid-2007

AEP®

765-ERCOT



- Jointly-owned utility company (AEP and Mid American) will design, construct & operate ERCOT transmission assets
- AEP exploring 765-kV ERCOT transmission investment opportunity
- 420 line miles
- Up to 4000MW improved transfer capability

AEP®

Environmental Investment

AT THE CONCLUSION OF OUR CURRENT ENVIRONMENTAL RETROFIT PROGRAM, OVER 47% OF OUR COAL-FIRED GENERATION FLEET WILL BE EQUIPPED WITH SCRs AND OVER 50% WILL BE SCRUBBED (FGD). AEP's TOTAL COAL FLEET CAPACITY = 24,710 MEGAWATTS*

Plant Name	MW Capacity	SCR	Status	FGD	Status
Amos 1-3	2900	☑	In-service	☑	Projected 2008-09

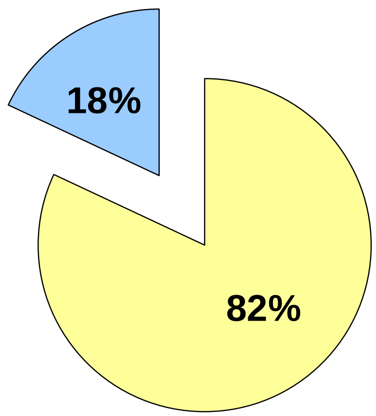
*Excludes AEP's 44% ownership in OVEC (980 MWs of coal-fired capacity)

AEP®

Installation Of SCR And FGD Equipment Will Allow Our Coal Fleet To Remain Extremely Cost Competitive

Materials and Vendors – AEP's Advantage

Environmental Program Costs:
Active/Firm Costs to Remaining Estimated Costs



Actuals To Date & Firm Costs
Remaining Estimated Costs*

* Primarily labor and activated carbon injection systems

SCR Technology

- Removes 90 – 93% of NOx emissions
- Requires ~ 1% use of auxiliary power
- **AEP Capital Cost ~ $121/kw avg.**

Combination of SCR & FGD technology results in co-benefit of Hg removal ~80% removal efficiency

FGD Technology

- Removes 95 – 98% of SO_2 emissions
- Requires ~1.5% to 3.0% use of auxiliary power
- **AEP Capital Cost ~ $250/kw avg.**

AEP®

AEP Benefits From First-mover Advantage Through Lower Contracted Pricing and Reduced Market Escalation Exposure

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

AEP®

A RELIABLE & REASONABLY-PRICED ELECTRIC SUPPLY IS NECESSARY TO SUPPORT THE ECONOMIC WELL-BEING OF THE AREAS WE SERVE

AEP®

AEP IS INVESTING IN A PORTFOLIO OF GHG REDUCTION ALTERNATIVES

AEP's Long-term CO_2 Reduction Commitment

Existing Programs

- Renewables
  - 800 MWs of Wind
  - 300 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

New Program Additions

- Incremental Reduction quantity: 5MM tons/yr
- Timing: Implement during 2007 to take effect/receive credits by 2011
- Methods
  - +1000 MWs of Wind PPAs – 2MM tons/yr
  - Domestic Offsets (methane) – 2MM tons/yr
  - Forestry – Tripling annual investment to increase to 0.5MM tons/yr by 2015
  - Fleet Vehicle/Aviation Offsets – 0.2MM tons/yr
  - Additional actions to include DSM and end use energy efficiency, biomass and power plant efficiency – 0.2MM tons/yr

New Technology Additions

- Commercial solutions for existing fleet
  - Chilled Ammonia
  - Oxy-Fuel

AEP IS COMMITTED TO A 5MM TON/YR REDUCTION IN CO_2 EMISSIONS WHICH OFFSETS APPROXIMATELY HALF OF THE EMISSIONS PROJECTED FROM NEW GENERATION PROJECTS PREVIOUSLY ANNOUNCED

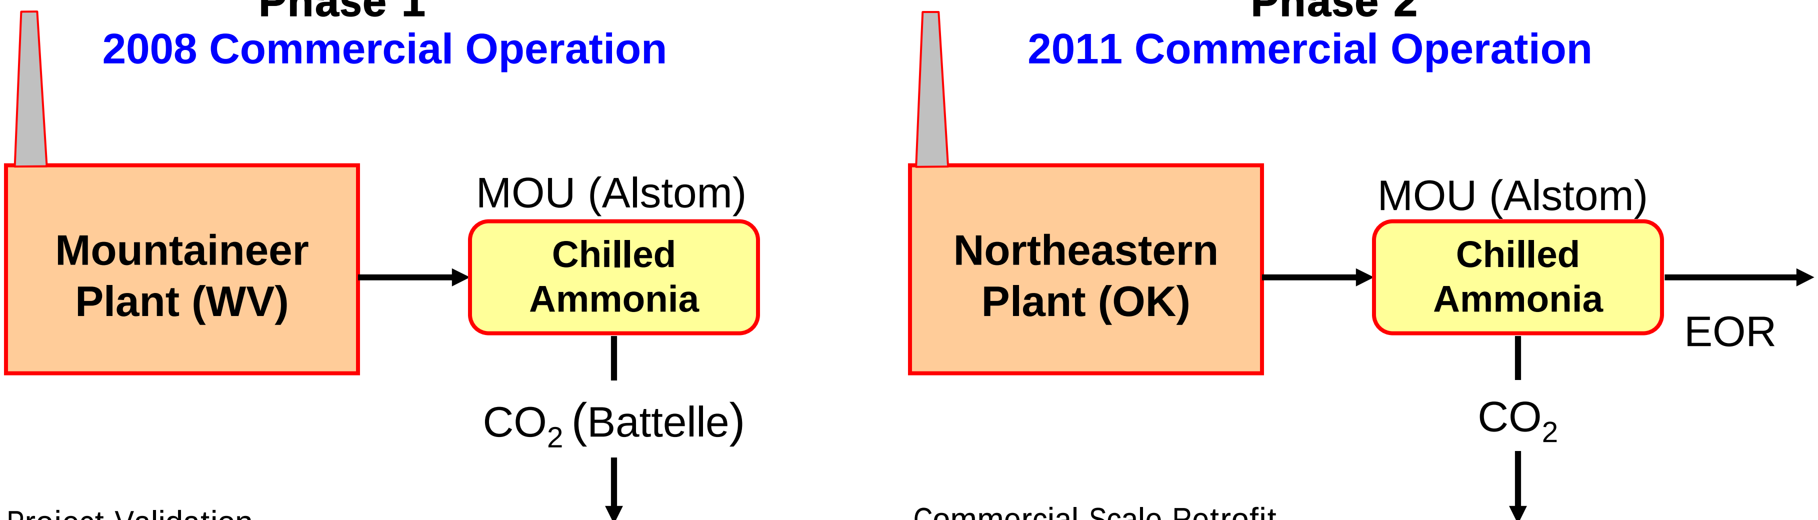
Chilled Ammonia Process Plant Footprint

Chilled Ammonia Technology Program

Phase 1 — **2008 Commercial Operation**

Phase 2 — **2011 Commercial Operation**



<u>Project Validation</u>

- 30 MW_t (megawatts thermal) scale (a scale up of Alstom/EPRI 5 MW_t field pilot, under construction at WE Energies)
- <0.1MM tonnes CO_2 per year
- In operation 4Q 2008
- Approximate total cost $50 – $80M
- Using Alstom "Chilled Ammonia" Technology
- Located at the AEP Mountaineer Plant in WV
- CO_2 for geologic storage

<u>Commercial Scale Retrofit</u>

- ~ 200 MW_e scale (megawatt electric)
- ~ 600 MW_t scale (megawatt thermal)
- ~1.5MM tonnes CO_2 per year
- In operation late 2011
- Approx. capital $250 – $300M ($CO_2$ capture & compression)
- Approx. O&M cost $12M per year
- Energy penalty ~ 35 – 50 MW steam, 25 – 30 MW for CO_2 compression
- Retrofit SCR & Wet FGD Required: ~$225 – $300M (required for CO_2 capture equipment)
- Located at AEP's Northeastern Plant Unit 3 or 4 in Oklahoma
- CO_2 for Enhanced Oil Recovery (EOR) or geologic storage

NEAR-ZERO EMISSIONS USING OXY-FUEL COMBUSTION TECHNOLOGY

Oxy-Fuel CO_2 Capture & Storage Project

Pilot Scale Demonstration

- 10 MW_e scale
- Teamed with B&W at its Alliance Research Center and 16 other utilities
- Demo completed 3Q 2007
- AEP funding of $50k

Commercial Scale Retrofit

- Retrofit on existing AEP sub-critical unit (several available)
- 150 – 230 MW_e scale retrofit
- 4,000 – 5,000 tons CO_2 per day
- Teamed with B&W
- AEP funding of ~ $200k – $3M for feasibility study
- Feasibility study to be completed 2Q 2008

COMBUSTION CONVERSION TECHNOLOGY FOR EXISTING COAL FLEET – LONGER LEAD TIME WITH ENHANCED VIABILITY AND LONG-TERM POTENTIAL

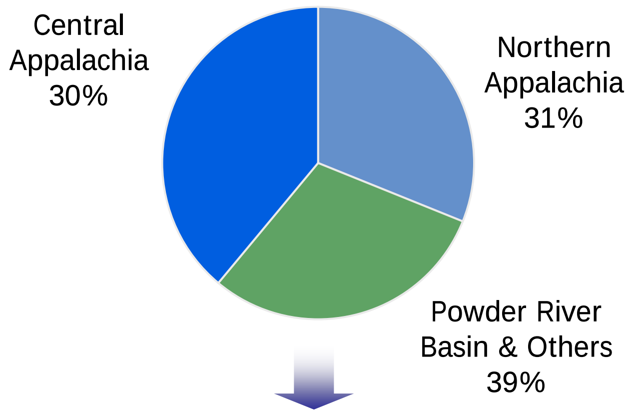
* Super-critical includes coal units with a net maximum capacity of 450MW or greater; Sub-critical includes coal units with a net maximum capacity less than 450MW.

** East gas units are evaluated using Equivalent Forced Outage Factor. Since these units run infrequently, this factor gauges performance based on period hours instead of service hours.

Coal Procurement – 2007 Projected

AEP purchases approx. 76 million tons of coal per year

Total AEP System



Coal Stats:

- 95% contracted for 2007
- Avg. delivered price ~ $35.10/ton in 2006
- Approximate 7-9% price increase in 2007 -- ($37.50 to $38.50/ton)
  - Addition of Mountaineer & Mitchell scrubbers allows for a greater mix of Northern Appalachian coal in 2007

AEP East

Summary Rate Case Information

APCo Virginia General Rate Case

On May 4, 2006, Appalachian Power Co. filed a general base rate case with the Virginia State Corporation Commission (VSCC) requesting an increase of $198.5 million ($225.8 million in base revenues offset by an off-system sales credit of $27.3 million). (Docket #: PUE-2006-00065). An order was issued on May 15, 2007, authorizing $24MM, with E&R to be addressed in a separate filing.

Projected Capital Structure – Company Position (9/30/07)

Summary Rate Case Information

Texas Central & Texas North Companies Wires Case

On November 9, 2006, TCC & TNC filed applications with the PUCT to raise base rates they charge to Retail Electric Providers (REP) serving end-use electricity customers in their service territories. On April 3, 2007, TCC and TNC submitted revised rate increase requests of $69.9MM and $22MM, respectively. Requested increases include the expiration of merger-related billing credits that have been in place since 2000, totaling $20MM and $6.2MM for TCC and TNC, respectively. (TCC Docket #33309, TNC Docket #33310). TNC reached settlement on May 4, 2007 for $13.7MM

Summary Rate Case Information

PSO Rate Proposal

On November 21, 2006, Public Service Oklahoma filed an application with the Oklahoma Corporation Commission to increase base rates by $49.6 million to recovery investments already made and costs incurred. The request represents a 4% overall increase (including fuel). The filing also includes a proposal to adopt an annually adjusted rate mechanism, which includes a return on CWIP. The formula rate would adjust rates, up or down, if PSO earns above or below an approved bandwidth around the authorized ROE. (Case #200600285)

Pro-forma Capital Structure – Company Position (Test Year ended 6/30/06)

	% of Capitalization	Cost Rate	Weighted Cost
Long-Term Debt	53.55%	6.32%	3.39%
Preferred Stock	0.43%	4.02%	0.02%
Common Equity	46.02%	11.75%	5.41%
Total	100%		8.82%

Pro-forma Rate Base – Company Position (Test Year ended 6/30/06)*

Rate Base	$ 1,189.4
Rate of Return	8.82%
Operating Income Requirement	$ 104.9
Pro-Forma Operating Income	$ 74.8
Difference	$ 30.1
Revenue Conversion Factor	1.65
Change in Revenues	$ 49.6

* Figures are rounded

March 20, 2007	Intervenor & Staff testimony
April 9, 2007	Rebuttal testimony
May 1, 2007	Hearings
June 20, 2007	Final order expected

AEP®

Regulatory Activity

AEP Ohio Application For 4% Provision On Generation Rate

- On Jan. 23, 2007, CSP and OP filed an application at the PUCO to recover 2007 costs associated with additional generation-related expenditures the companies are encountering related to environmental, security and other new generation-related costs pursuant to the RSP.
- CSP and OP are requesting to implement the provision to recover $24.5MM and $8.2MM, respectively, from May 2007 through December 2007.
- Staff & Intervenor testimony due May 11, 2007; Evidentiary hearing to commence May 22, 2007.

AEP®

Regulatory Activity

Electric Transmission Texas (ETT) Rate Filing

- Jan. 22, 2007 – ETT filed with the PUCT for approval to operate as an electric transmission utility in Texas and to establish initial rates for ETT.
  - Requested capital structure of 60% debt / 40% equity; requested ROE of 11.25%.
  - Intervenor testimony is due May 30, 2007. Staff testimony is due June 7, 2007. Hearings are scheduled for June 26-29, 2007.
    - An order is expected Mid-2007 and operations are expected to commence in the 2nd half of 2007. Upon receipt of approvals, AEP and MidAmerican will each own a 50% interest in the joint venture.

Seams Elimination Cost Adjustment Revenues

- August 2006 – ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
  - Up to $96MM of SECA revenues could be disallowed, net of unused provisions
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both.
- Exceptions to initial decision filed Sept. 11, 2006; Replies to exceptions filed Oct. 11, 2006; Order expected by the Commission in 2007

AEP®

Regulatory Activity

FERC Regional Rate Design

- The FERC instituted an investigation of PJM's zonal rate regime
  - Consider establishing regional rates that would compensate AEP, among others, for the regional transmission service provided by high voltage facilities they own that benefit customers throughout PJM
- July 2006 ALJ-rendered initial decision:
  - License plate rates for existing facilities are not just and reasonable, and must be replaced (effective April 1, 2006, when SECA ended)
  - Staff's proposal for a "Postage Stamp" rate phased in so as to limit increases in any one pricing zone to 10% per year as the best choice for replacing current rates
  - Staff's proposed rate design would produce slightly more net revenue for AEP than the original AEP/Allegheny Power proposal, if not phased in.
- April 2007 Commission decision:
  - Reaffirmed PJM's current "license plate" rate design, reversing the finding of the ALJ; each utility pays for transmission service based on the costs of transmission facilities located in the same, sub-regional zone that the utility is located in
  - Directed PJM to develop a detailed methodology to be included in PJM's tariff for determining who benefits from and therefore, who pays for new facilities below 500 kV.
  - Determined that the costs of all new PJM-planned facilities that operate at or above 500 kV should be shared on a region-wide basis.

Earned ROE's

Company	Earned ROE as of March 31, 2007
AEP Texas Central Company	**5.81%**
AEP Texas North Company	**5.24%**
Appalachian Power Company	**8.97%**
Columbus Southern Power Company	**17.14%**
Indiana Michigan Power Company	**7.12%**
Kentucky Power Company	**11.06%**
Ohio Power Company	**10.57%**
Public Service Company of Oklahoma	**3.75%**
Southwestern Electric Power Company	**10.11%**

These ROE's are based on GAAP, Not Rate Base

Jurisdictional Fuel Clause Summary

STATE	FUEL CLAUSE	ADJUSTMENT FREQUENCY
Arkansas	Yes	Monthly
Indiana	Yes	Capped at increasing rates through June 30, 2007
Kentucky	Yes	Monthly
Louisiana	Yes	Monthly
Michigan	Yes	Annually
Ohio	No	n/a
Oklahoma	Yes	Annually
Tennessee	Yes	Monthly
Texas (SPP)	Yes	Annually
Virginia	Yes	Annually
West Virginia	Yes	Annually

Jurisdictional Off-System Sales Sharing Summary

STATE	OSS Sharing?	Detail
Arkansas	Yes, above and below base levels	Up to $758,600 annual margin, ratepayers receive 100%. From $758,601 to $1,167,078, ratepayers receive 85%. Above $1,167,078, ratepayers receive 50%.
Indiana	No	There is $17 million built into Indiana's base rates
Kentucky	Yes, above and below base levels	Sharing only occurs after annual profits exceed $24,855,326. Between that amount and $30 million, ratepayers receive 70%. Above $30 million, ratepayers receive 60%.
Louisiana	Yes, above base levels	Up to $874,000 annual margin, ratepayers receive 100%. From $874,001 to $1,314,000, ratepayers receive 85%. Above $1,314,000, ratepayers receive 50%.
Michigan	Yes	There are two jurisdictions: St Joe and Three Rivers. For St Joe, 100% of profits are shared with ratepayers. No profits are shared in Three Rivers, including base rates. St Joe represents 67% of the Michigan market.
Ohio	No	n/a
Oklahoma	Yes	75% of profits are shared with ratepayers.
Tennessee	No	n/a
Texas (SPP)	Yes	90% of profits are shared with ratepayers.
Virginia	Yes	Factored into base rates at a fixed rate.
West Virginia	Yes	100% of profits passed back to ratepayers through the Expanded Net Energy Cost (ENEC) clause.

AMERICAN ELECTRIC POWER, INC.

Tokyo Investor Meetings September 12, 2007

Hosted by Nikko Citigroup Limited

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

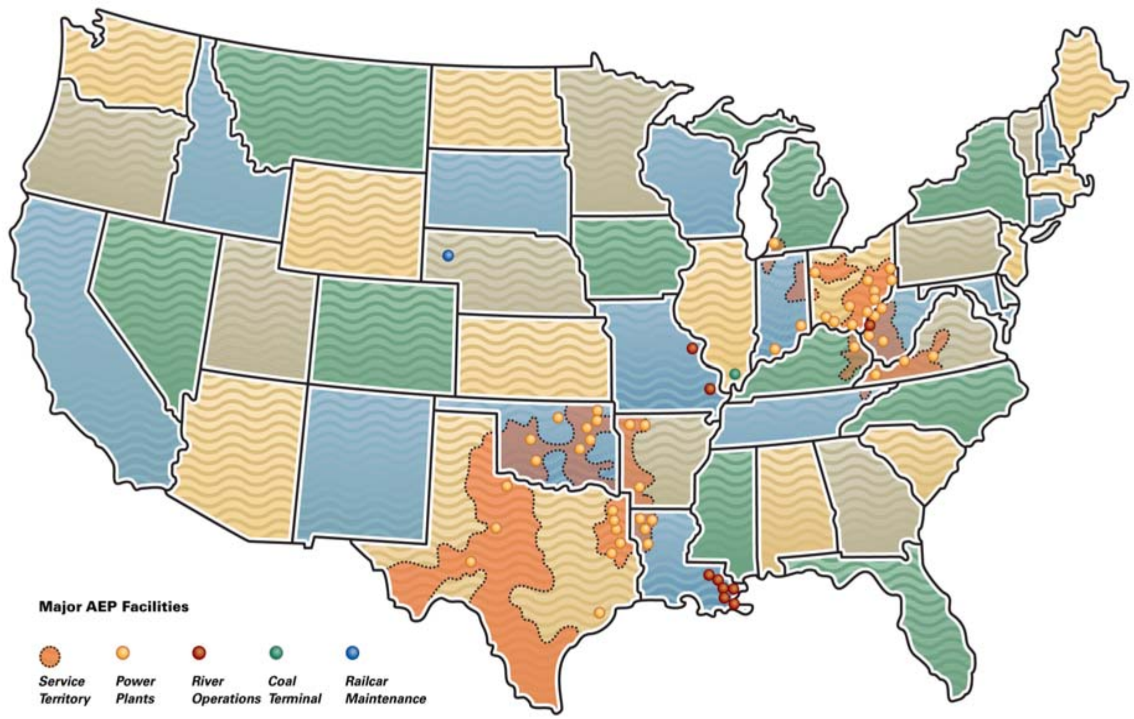
- October 4, 2007 – Strategic Direction: Financial Analyst/Investor Conference, NYC
- October 11, 2007 – Dublin Investor Meetings
- October 24, 2007 – 3Q07 Earnings Call

Strength & Scale in Assets & Operations

- 5.1 million customers in 11 states
- Industry-leading size and scale of assets:

Asset	Size	Industry Rank
Domestic Generation	~38,400 MW	# 2
Transmission	~39,000 miles	# 1
Distribution	~208,000 miles	# 1

Source: Company research & Resource Data International Platts, PowerDat 2005



- Coal & transportation assets:
  - Control over 8,000 railcars
  - Own/lease and operate over 2,600 barges & 51 towboats
  - Coal handling terminal with 20 million tons of capacity
- 20,000 employees

AEP Generation Portfolio

Coal	Gas	Nuclear	Hydro	Wind
67%	24%	6%	2%	1%

AEP Strategic Direction

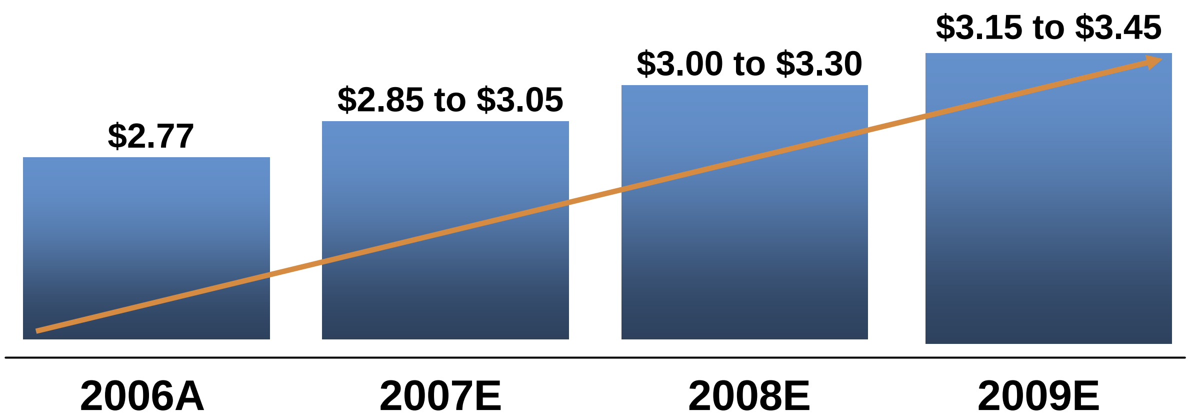
Delivering Value to Investors and Cost-Effective Service to our Customers

- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Grow our transmission business
- Achieve adequate returns on all assets

Our core utility mission: Bring reasonably priced electric service to our customers, thereby strengthening our communities and rewarding our investors

Long Range Performance – Consistent and Predictable Growth

2007, 2008 & 2009 Ongoing Earnings Guidance Ranges: 5-7% Annual Growth



- Continued disciplined investment in existing utility operations:
  - Reliability
  - Environmental
  - New Generation & Distribution Infrastructure
- Investment in new transmission opportunities
- New investment coupled with rate recovery
- Continued cost control
- Timely Rate Relief
- Maintain Credit Ratings
  - BBB/Baa2/BBB

Future earnings growth driven by native load growth and substantial utility investment opportunity focused on regulated operations

Summary of 5-7% Long-Range Growth Components

Energy sales growth of 1.5%

Rate base investment

- Generation plant purchases & build
- Transmission – interstate & intrastate
- Distribution
- Reliability

Transmission company

Commercial operations

Regulatory strategy

- Achieve timely returns
- Seek cash returns on investment during construction
- Create & secure innovative rate plans
  - Pursue post-2008 solution in Ohio
  - Expand use of trackers
  - Formula rates

New baseload generation and transmission projects largely reflect upside to the long-range earnings growth targets of 5-7%

Capital Investment Focus

- Completion of our intensive environmental retrofit program, coupled with associated rate relief, allows us to redeploy capital into other areas
- Near-term
  - In our western footprint, our capital investment will focus on new generation
  - In our eastern footprint, our capital investment will focus on modernization of the distribution infrastructure, also known as the 'Modern Grid' program
  - In both the east and west, we will focus on successful demonstration and implementation of the chilled ammonia technology for carbon capture
- Long-term
  - Throughout our service territory, transmission and IGCC will be our long-term capital investment focus

9

Utility Investment Drives Growth

Capital Investment Forecast (2007-2009)

($ in millions)	2007	2008	2009	Total (2007-09)
Environmental	$935	$521	$301	**$1,757**
New Generation - Purchase	$118	$0	$0	**$528** *
New Generation - Build	$474	$485	$573	**$1,532**
Nuclear	$50	$57	$60	**$167**
Generation	$456	$417	$327	**$1,200**
Transmission	$496	$521	$583	**$1,600**
Distribution	$848	$915	$1,016	**$2,779**
Corporate	$165	$110	$114	**$389**
Total Capex	**$3,542**	**$3,026**	**$2,974**	**$9,952**

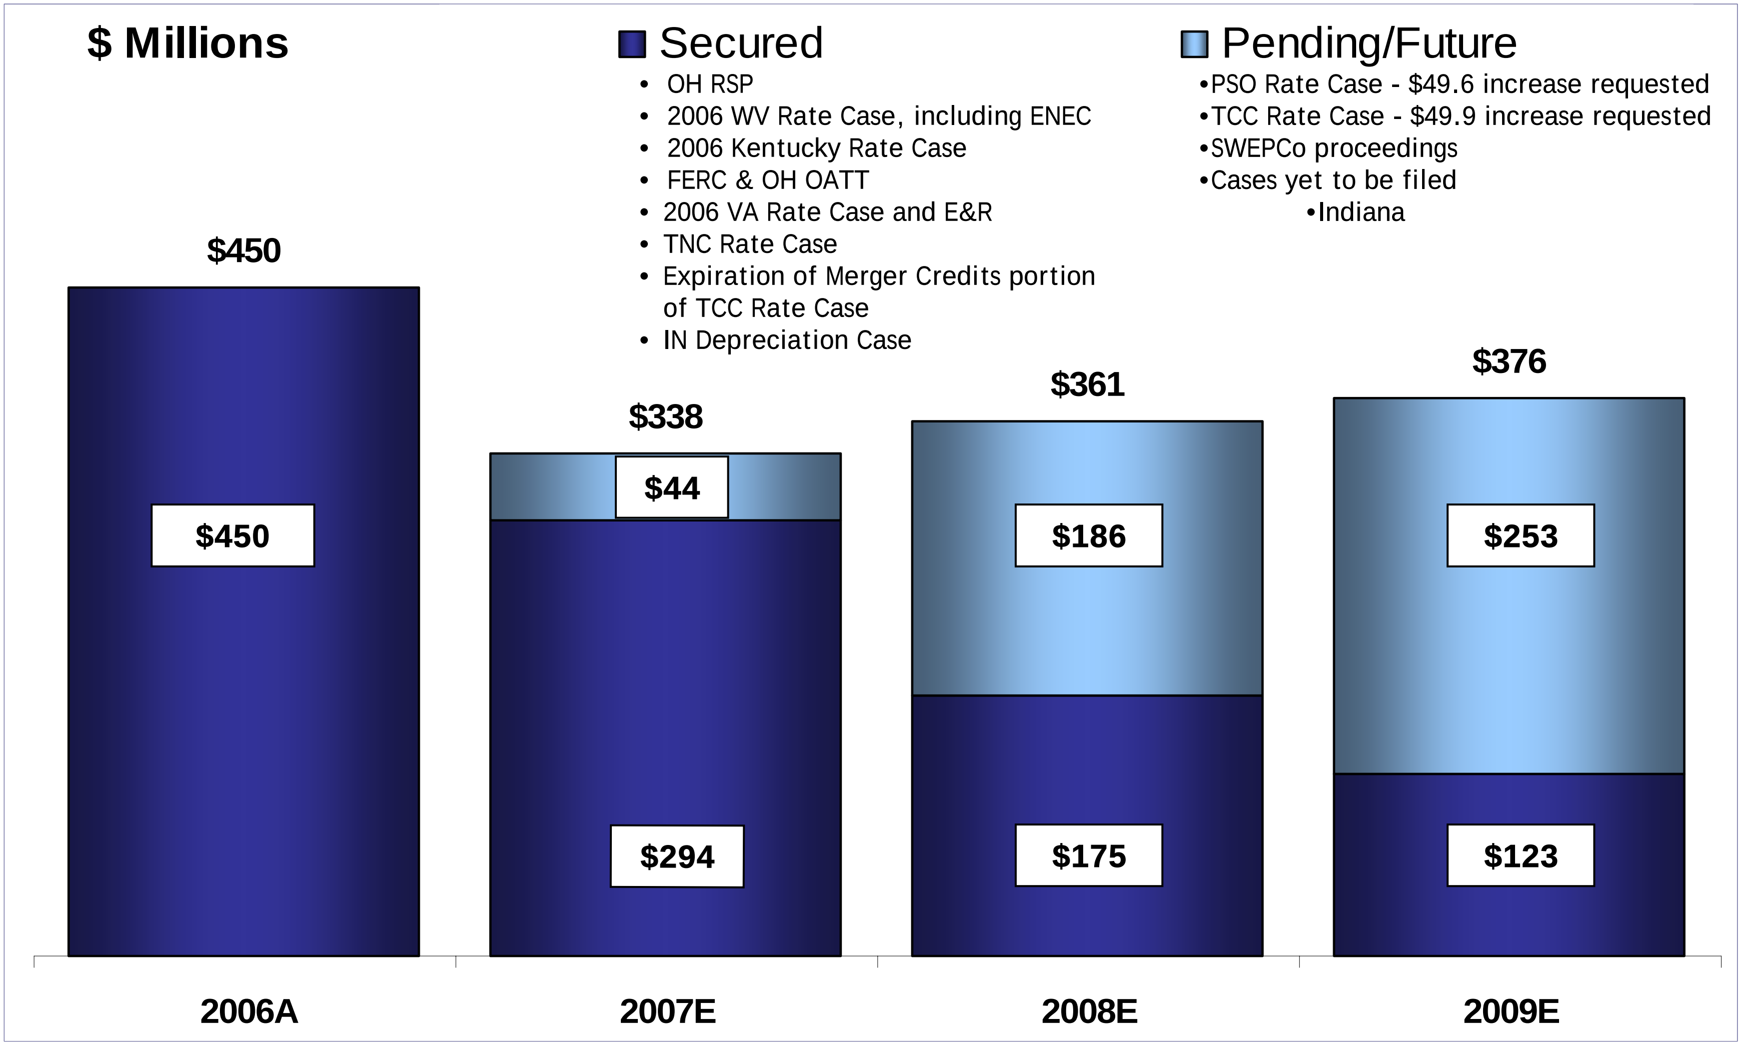
Add: Lawrenceburg Plant Purchase	$325
Add: Dresden Plant Purchase	$85
2007 Including Lawrenceburg & Dresden	**$3,952**

Note: Excludes AFUDC and recently announced CO_2 and transmission projects

* Includes Lawrenceburg purchase of $325MM and Dresden purchase of $85MM in 2007

Growth investment to be funded by cash from operations via rate relief and debt issuances

Incremental Rate Relief Composition



Rate relief is a critical element to AEP's financial success and allows us to pursue additional generation, transmission and infrastructure investment

AEP AMERICAN ELECTRIC POWER

2007 Regulatory Activity Completed

Appalachian Power - Virginia Base Rate Case

Final order approved on May 15, 2007

- ✓ Results in $24 Million annual increase in base rates
- ✓ 10.0% approved ROE

Texas North Base Rate Case

Final settlement order approved on May 24, 2007

- ✓ Results in $11.7 million increase in pre-tax earnings ($13.7 million increase in revenues offset by $2 million increase in depreciation expense)
- ✓ No stipulated ROE in the settlement. For AFUDC purposes, Texas North will utilize the ROE that comes out of the Texas Central rate case.

Appalachian Power - West Virginia Expanded Net Energy Cost (ENEC) Filing

Final settlement order approved on June 22, 2007

- ✓ Results in $85.5 million net increase in revenues effective July 1, 2007
  - ✓ $54.8 million covers increased costs related to coal and purchased power
  - ✓ $28.5 million covers environmental construction costs, primarily related to installation of scrubbers
  - ✓ Remainder ($2.2 million) recovers first year costs of rehabilitating four small electric utilities acquired as of July 1

Indiana Michigan Power - Indiana Depreciation Study

Interim settlement order approved on June 13, 2007

- ✓ Allowed a change in depreciation rates effective July 1, 2007, resulting in a pretax earnings increase of approximately $69 million per year
- ✓ Stipulated a $5 million credit to customers in the next fuel adjustment clause proceeding
- ✓ Required I&M to file a rate petition on or before July 1. Petition was filed on June 19.

In Hand to Date - $294MM of the $338MM
Rate Recovery in 2007 Guidance

Regulatory Activity Underway

- ✓ AEP Texas Central Company General Rate Case
- ✓ PSO General Rate Case
- ✓ CSP and OPCo Filing for 4% Increase Provision on Generation Rates
- ✓ I&M Indiana Rate Petition
- ✓ Virginia Filings – Fuel Factor and E&R
- ✓ Electric Transmission Texas LLC Request for Certificate of Convenience and Necessity and Initial Rates
- ✓ FERC Seams Elimination Cost Adjustment Proceedings
- ✓ SPP OATT Formula Rate Filing
- ✓ New Generation
  - ✓ IGCC Filing in Virginia and West Virginia for Certificate of Need and approval of a cost recovery mechanism
  - ✓ IGCC Phase 2 Filings in Ohio on Hold Pending Resolution of Supreme Court Challenge of PUCO's authority
  - ✓ PSO Red Rock Generating Facility Filing in Oklahoma for a Used and Useful Determination
  - ✓ SWEPCo Turk Plant Filings in Arkansas, Louisiana and Texas for Certificates of Need

Level Of Capital Investment Will Be Adjusted Based On Rate Recovery And/Or Cash Generation

AEP AMERICAN ELECTRIC POWER

Generation Investment Forecast

Public Service Company of Oklahoma Rate Proposal

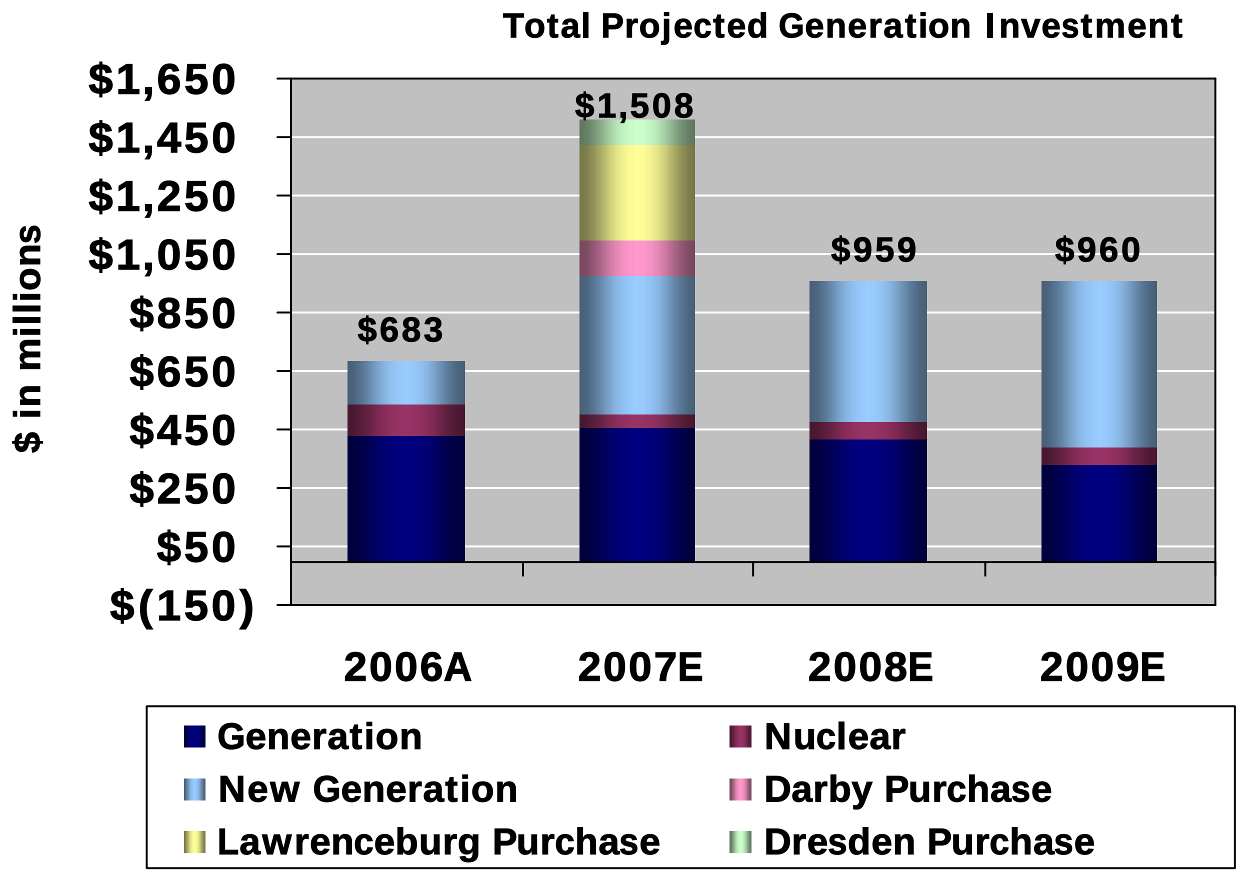
- Proposal to adopt an annually adjusted rate mechanism for new investments, including a return on CWIP

Distressed Generation Initiative

- New generation resources required to meet growing electricity needs of our customers
- Completed purchase of 1,368 MW of gas-fired generating capacity in 2005 and 1,620 MW in 2007

WV and VA IGCC Filings

- Filings made with both commissions requesting return on CWIP, including development design and planning costs



Investing in generation to meet the growing electricity demands of our customers at an attractive price

Purchased Generation

Waterford

- 821 MW combined-cycle gas plant
- $220MM purchase price
- Columbus Southern Power completed purchase on Sept. 28, 2005
- $268/kW

Lawrenceburg

- 1140 MW combined-cycle gas plant
- $325MM purchase price
- AEG completed purchase on May 16, 2007
- $295/kW

2,946 MW of gas-fired generation added since 2005

Darby

- 480 MW simple-cycle gas plant
- $102MM purchase price
- Columbus Southern Power completed purchase on April 25, 2007
- $227/kW

Ceredo

- 505 MW simple-cycle gas plant
- $100MM purchase price
- APCo completed purchase on Dec. 15, 2005
- $198/kW

Addition of gas-fired generation allows us to meet the growing needs of our customers and provides the company with greater fuel flexibility

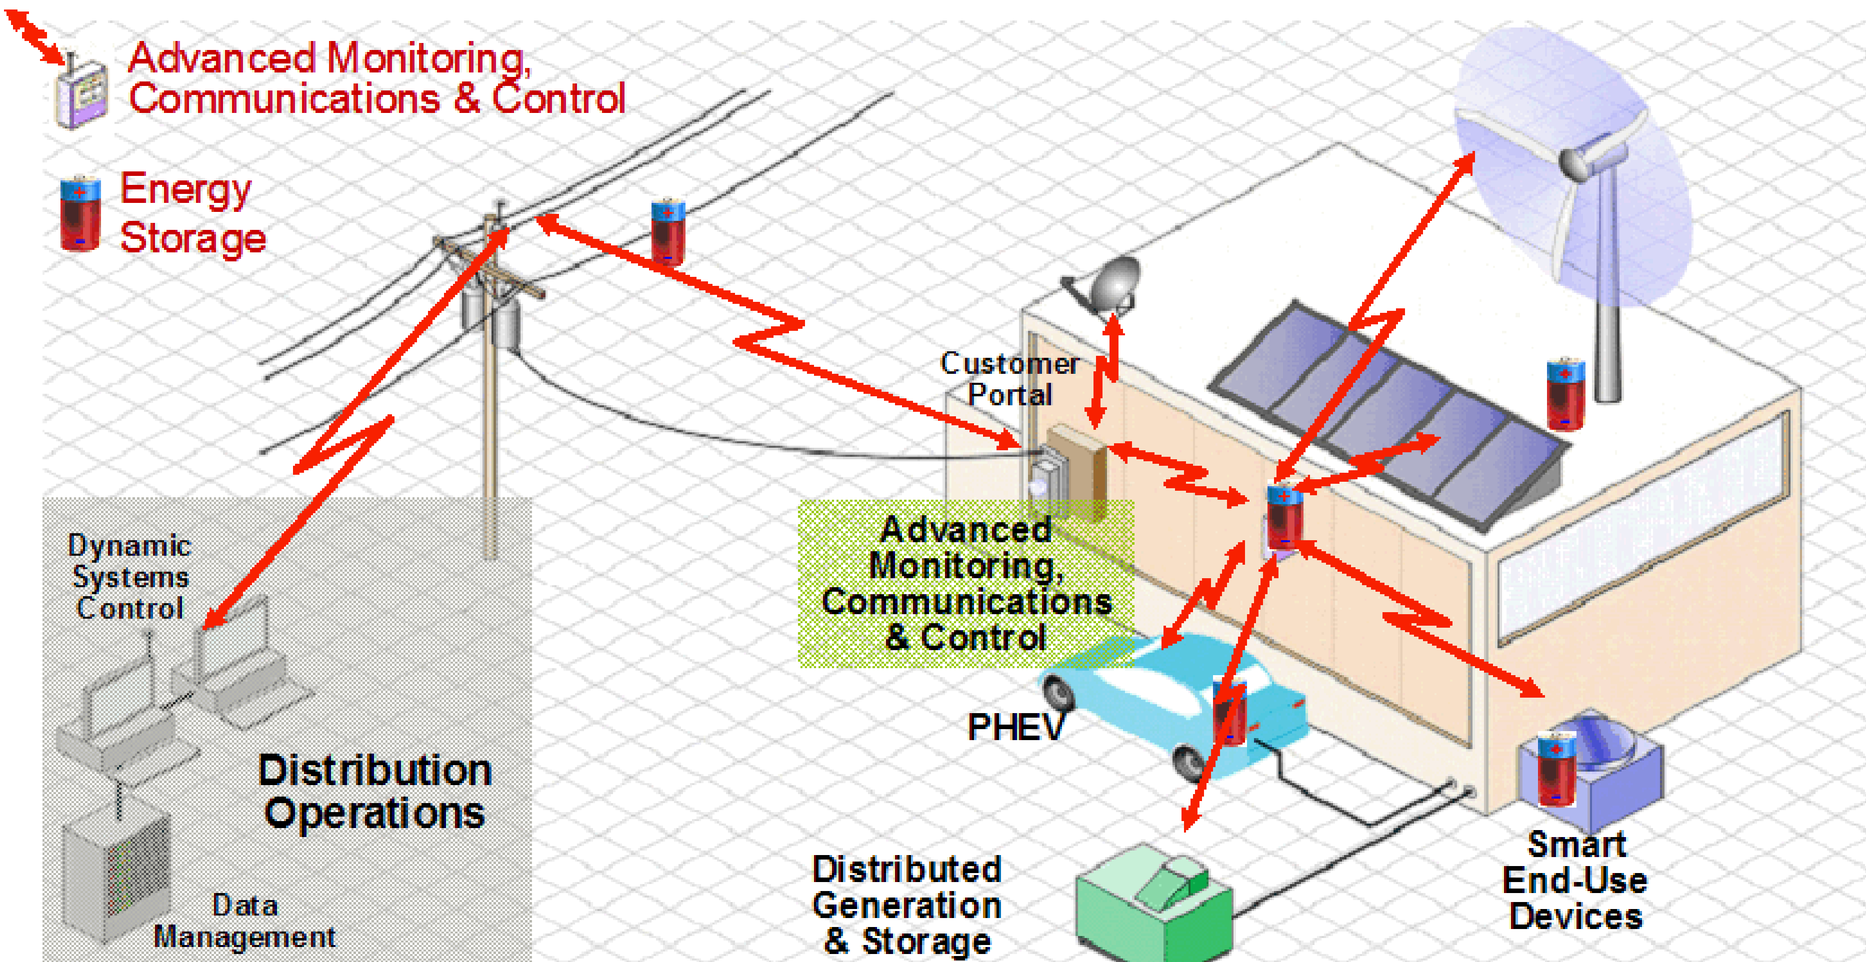
New Generation Facilities

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
SWEPCo	Mattison	Arkansas	$130 MM	Gas	Simple-cycle	340 (1)	2007
PSO	Southwestern	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
AEG	Dresden	Ohio	$348-406 MM (2)	Gas	Combined-cycle	580	2010
SWEPCo	Stall	Louisiana	$300 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.3 B (3)	Coal	Ultra-supercritical	600 (3)	2011
PSO	Red Rock	Oklahoma	$1.8 B (4)	Coal	Ultra-supercritical	900 (4)	2012
APCo	Mountaineer	West Virginia	$2.23 B	Coal	IGCC	630	2012
CSP/OP	Great Bend	Ohio	Under Review (5)	Coal	IGCC	630	2017

(1) 150MW were declared in commercial operation on July 12, 2007.
(2) We are currently developing contracts and estimates to complete the project. It is anticipated that the unit can be completed between $600 to $700 per kW using an "all-in" cost basis
(3) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment.
(4) PSO will own 50%, or 450 megawatts, totaling approximately $900MM in capital investment.
(5) FEED (front-end engineering and design) study with GE/Bechtel is complete. Cost estimates are not yet filed with the PUCO due to the pending appeals to the Supreme Court of Ohio resulting from the PUCO's April 10, 2006 Opinion and Order.

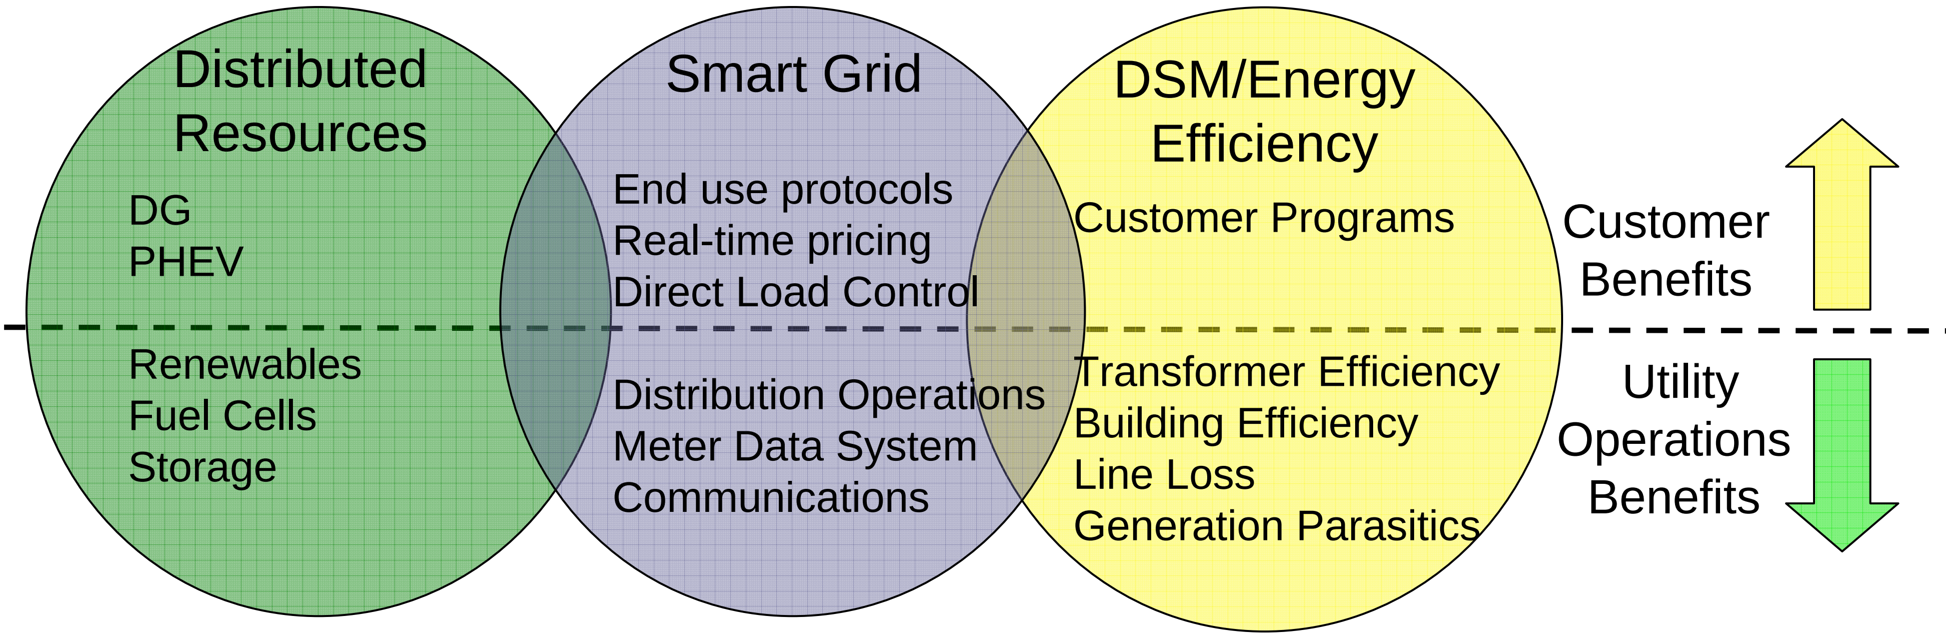
AEP is meeting the growing electricity needs of customers through the pursuit of new, economic generation facilities

Distribution Operations of the Future



Courtesy of EPRI for source image

The “Modern Grid” Initiative



AEP has initiated an internal project to help clarify these inter-relationships, and develop our strategy for deploying these programs and technologies

Modern Grid Initiative

- Project to develop a vision for AEP's distribution and customer services business in the future, including the development of new customer programs and a plan to deploy advanced technologies

- Focus on:
  - Enabling greater customer control over energy usage
  - Enhancing conservation activities and overall environmental performance
  - Optimizing the operation of AEP's distribution business

- AEP needs to pursue:
  - Providing customers with real-time pricing signals
  - Providing customers with program options that encourage reduced energy consumption and lower peak demand
  - Promoting the use of electric vehicles and distributed generation
  - Using real-time system intelligence on our distribution system to improve operations and customer service
  - Utilizing advanced electricity storage for peak usage and power outages
  - Enabling technologies such as biomass, solar and fuel cells
  - Modeling future customer behaviors as a consumer of our own products

- Examples include:
  - Customer Energy Efficiency and Demand-Side Management Programs
  - Advanced Metering Infrastructure (AMI) & Distribution Automation (DA)
  - Distributed Generation, Renewable Resources and Energy Storage

Pace of our Modern Grid Implementation Determined by Regulators

- **Arkansas** – SWEPCo filed 'quick-start' programs with the commission on July 1, 2007, which include education, incentive to encourage use of compact florescent lights and higher efficiency appliances, weatherization for low-income housing, an emergency load management pilot and a pay-for-for-performance pilot that results in a payment to customers who curtail load upon request. We are awaiting commission approval.

- **Indiana** - As ordered by the IURC in June 2007, I&M, in collaboration with the Office of Utility Consumer Counselor, is designing and administering a Smart Metering Pilot Program (SMPP) for approximately 10,000 customers in South Bend, Indiana.

- **Kentucky** – Successful demand-side management programs have been in place in Kentucky since 1996. We recently filed a proposed real-time pricing pilot for which we are waiting commission approval.

- **Ohio**
  - Recent Governor remarks indicate modernization of Ohio's infrastructure is a high priority and his plan would allow single-issue rate cases for these high-priority investments and system upgrades.
  - PUCO-sponsored series of six Smart Meter Deployment Workshops currently underway.

- **Texas**
  - Energy Efficiency Cost Recovery Rider currently under consideration by the PUCT in TCC's base rate case; if adopted in TCC's case, it will also apply to TNC.
  - AEP Texas Advanced Metering Project commenced July 31, 2007, which has the goal of filing with the PUCT an advanced metering deployment plan and a related surcharge recovery proposal by March 2008.

- **Virginia** – The Virginia commission has initiated a docket to address various aspects of demand-side management and energy efficiency.

Energy efficiency is an investment, which should be treated by regulators in the same manner as investments in generation, transmission and distribution

Environmental Investment Forecast

Ohio Rate Stabilization Plan

- Annual 3% and 7% generation rate increases at CSP & OP, respectively for 2006-2008
- Filing made on Jan. 23 for recovery of 2007 costs associated with additional generation-related investments – activation of 4% rider

West Virginia Rate Settlement

- Mechanism in place to provide rate increases through 2009 for ongoing environmental investments

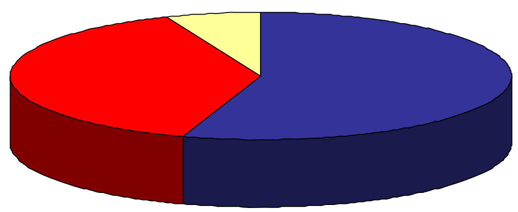
Virginia E&R Mechanism

- Allows APCo-VA to recover incremental environmental & reliability costs
- Last filing - order issued Nov. 20, 2006 granting $21.4MM of recovery
- Additional filing made in July 2007 requesting recovery of $60MM of E&R costs

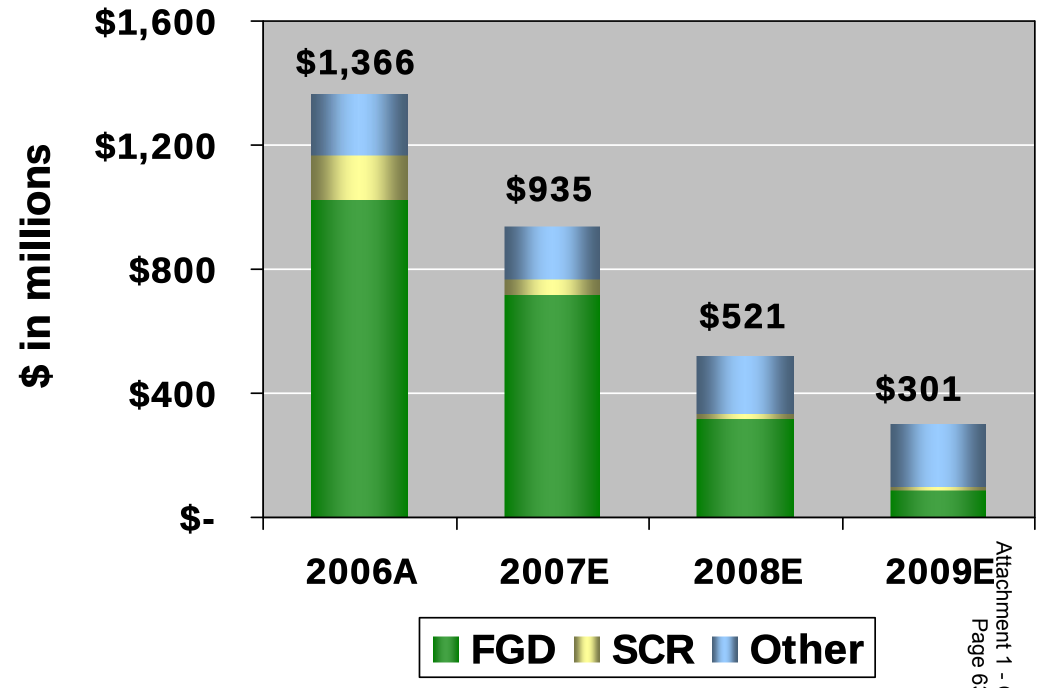
Kentucky Environmental Surcharge

- Monthly surcharge mechanism allows for recovery of pollution-control projects required by the Federal Clean Air Act

Projected Environmental Investment Allocation (2006A – 2009E)



Total Projected Environmental Investment



Environmental Investment

Plant Name	MW Capacity	SCR	Status	FGD	Status
East Plants					
Amos 1	800	✓	In-service	✓	Projected 2009
Amos 2	800	✓	In-service	✓	Projected 2010
Amos 3	1300	✓	In-service	✓	Projected 2009
Big Sandy 2	800	✓	In-service	☐	Delayed
Cardinal 1	600	✓	In-service	✓	Projected 2008
Conesville 5 & 6	750		N/A	✓	Unit 5 Upgrade In-service
Gavin 1 & 2	2620	✓	In-service	✓	In-service
Mitchell 1&2	1600	✓	In-service	✓	In-service

Pirkey	580		N/A	✓	Upgrade In-service

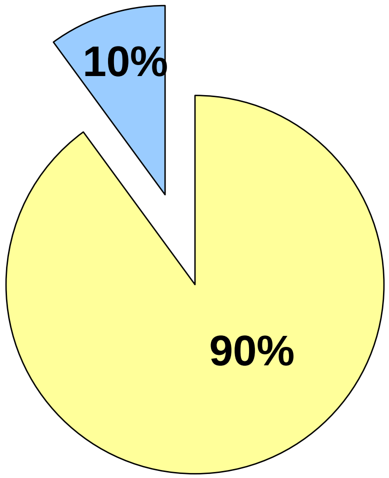
At the conclusion of our current environmental retrofit program, over 47% of our coal-fired generation fleet will be equipped with SCRs and over 50% will be scrubbed (FGD).
AEP's total coal fleet capacity = 24,630 megawatts *

*Excludes AEP's 44% ownership in OVEC (980 MWs of coal-fired capacity)

Materials and Vendors – AEP's Advantage

Environmental Program Costs:

Active/Firm Costs to Remaining Estimated Costs



- Actuals To Date & Firm Costs
- Remaining Estimated Costs*

* Primarily labor and activated carbon injection systems

Typical Vendors Include:

- B&W/Alstom – FGD Spray Tower
- B&V/Chyioda – FGD Jet Bubbling Reactor
- Babcock Power – SCR
- Pullman Power – Stack Supplier
- Black & Veatch – Architect/Engineering
- Sargent & Lundy – Architect/Engineering

First-Mover Advantage:

- By locking in our environmental program costs in the early portion of this decade, AEP has a clear 'first-mover' advantage
- AEP capital costs for a scrubber average approximately $250/kW
- We have since seen a 30-60% increase in material costs and a 15% increase in labor rates
- An FGD system for a nominal 600MW plant in 2005 $ was approximately $225/kW and in 2007 $ is $320/kW

AEP's customers and shareholders benefit from first-mover advantage through lower contracted pricing & reduced market escalation exposure

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A reliable and reasonably-priced electric supply is necessary to support the economic well-being of the areas we serve

AEP AMERICAN ELECTRIC POWER

Highlights of Bingaman-Specter Proposal

"Low Carbon Economy Act of 2007"

Key Components:

- Start date for greenhouse-gas reductions is 2012
- Goals: 2006 levels by 2020; 1990 levels by 2030
- Includes a safety valve of $12 per metric ton, increasing at an annual rate of 5% above inflation
- Support for allowance allocations
- International action

AEP endorses this proposal because it sets reasonable and achievable reduction targets and includes the AEP-IBEW trade proposal

AEP's Long-term CO_2 Reduction Commitment

Existing Programs

- Renewables
  - 800 MWs of Wind
  - 300 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

New Program Additions

Incremental Reduction quantity: 5MM tons/yr

Timing: To take effect/receive credits by 2011

Methods

- +1000 MWs of Wind PPAs – 2MM tons/yr
- Domestic Offsets (methane) – 2MM tons/yr (e.g., livestock methane capture deal of 0.6MM tons/yr)
- Forestry – Tripling annual investment to increase to 0.5MM tons/yr by 2015
- Fleet Vehicle/Aviation Offsets – 0.2MM tons/yr
- Additional actions to include DSM and end use energy efficiency, biomass and power plant efficiency – 0.2MM tons/yr

New Technology Additions

IGCC and Ultra-supercritical coal plants

Commercial solutions for existing fleet

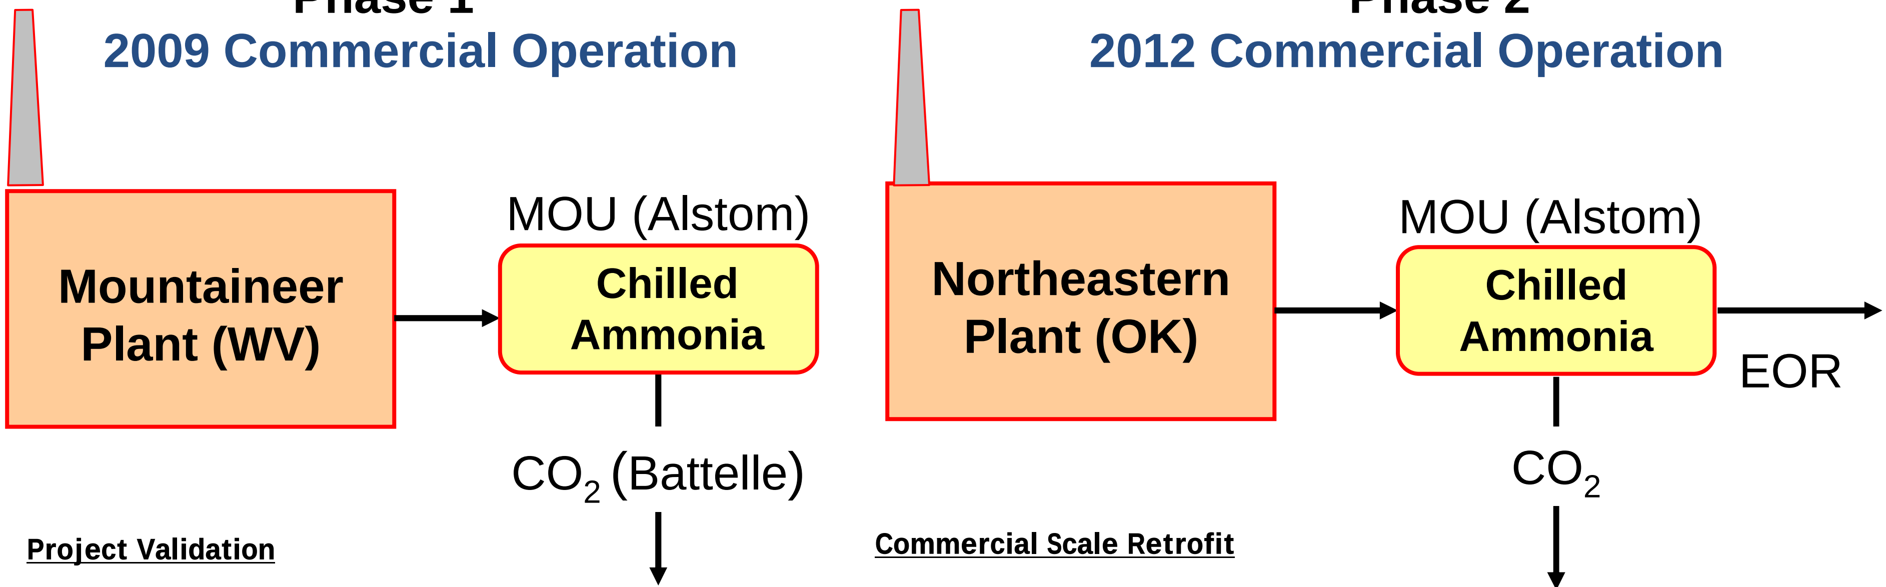
- Chilled Ammonia
- Oxy-Coal

AEP is committed to a 5mm ton/yr reduction in CO_2 emissions which offsets approx half of the emissions projected from new generation projects previously announced

Chilled Ammonia Technology Program

Phase 1
2009 Commercial Operation

Phase 2
2012 Commercial Operation



Project Validation

- 20 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, under construction at WE Energies)
- 100,000 – 300,000 tonnes CO_2 per year
- In operation 1Q 2009
- Approximate total cost \$50 – \$80M
- Using Alstom "Chilled Ammonia" Technology
- Located at the AEP Mountaineer Plant in WV
- CO_2 for geologic storage

Commercial Scale Retrofit

- ~ 200 - 300 MW_e scale (megawatt electric)
- ~ 600 MW_t scale (megawatt thermal)
- ~1.5MM tonnes CO_2 per year
- In operation late 2011
- Approx. capital \$250 – \$300M (CO_2 capture & compression)
- Approx. O&M cost \$12M per year
- Energy penalty ~ 35 – 50 MW steam, 25 – 30 MW for CO_2 compression
- Retrofit Wet FGD Required: ~\$225 – \$300M
- Located at AEP's Northeastern Plant Unit 3 or 4 in Oklahoma
- CO_2 for Enhanced Oil Recovery (EOR)

Post-combustion carbon solution provides pure CO_2 stream for capture

Oxy-Coal CO_2 Capture & Storage Project

Pilot Scale Demonstration

10 MW_e scale

Teamed with B&W at its Alliance Research Center and 16 other utilities

Demo complete 3Q 2007

AEP funding of $50k

Commercial Scale Retrofit

Retrofit on existing AEP sub-critical unit (several available)

150 – 230 MW_e scale retrofit

4,000 – 5,000 tons CO_2 per day

Team with B&W

AEP funding of ~ $1.5M for feasibility study

Feasibility study to be completed in late 2007/early 2008

Combustion conversion technology for existing coal fleet – longer lead time with enhanced viability and long term potential

Significant Opportunity for Investment

The current U.S. transmission system cannot support the demand of tomorrow's energy supply needs

- Investment in transmission has lagged load growth
- Transmission congestion equates to increased costs to customers
- Large-scale wind generation in remote areas requires a high-capacity transmission system for efficient energy movement to load centers

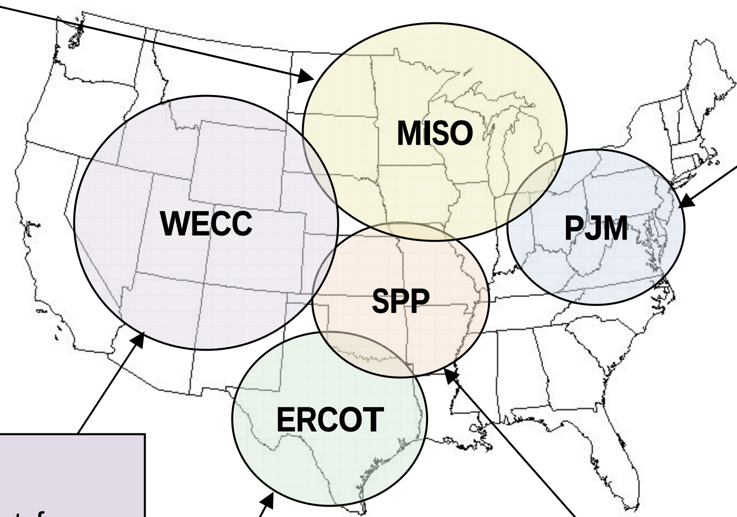
AEP AMERICAN ELECTRIC POWER

Transmission Investment Opportunities

Investigation of opportunities needs to be mindful of regional drivers

MISO

ITC 765-kV project may be test case for cross-border cost recovery and seams issues



PJM

Congestion will be reduced and reliability will be increased

WESTERN STATES

Opportunity for 765-kV build-out for long-haul transportation from remote resources to load

ERCOT

Load growth and access to wind resources driving transmission investment

SPP

Regional rate design under development to encourage investment and accommodate new generation sources

Transmission ~ $9-$15 Billion Opportunity

Creating a business model to manage capital requirements for enhanced returns with partners

Potential Opportunities

~ $3 Billion I765$_{TM}$ Project in PJM
~ $2 Billion 765-kV study in Michigan w/ ITC
~ $3 Billion Project filed with SPP
~ $1-7 Billion in ERCOT via Electric Transmission Texas, LLC (ETT)

1) ~$9-$15 billion investment opportunity not included in current capital guidance forecasts

2) Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

Assumptions

Estimated Investment Opportunity	$9 - $15 Billion
Ownership Structure w/ Partner	50% / 50%
Debt / Equity Ratio	50% debt / 50% equity
Return on Equity	11.00% - 13.00%
Potential EPS Impact (based on 396 MM shares)	$1.00+

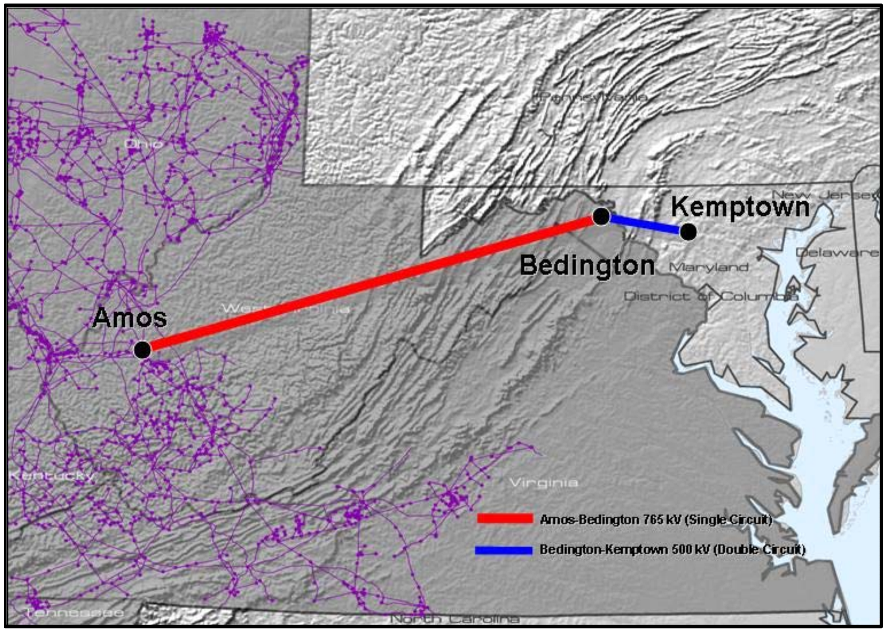
Building the next US interstate system for enhanced reliability and market efficiency

AEP AMERICAN ELECTRIC POWER

PJM I-765™

Execution in Action

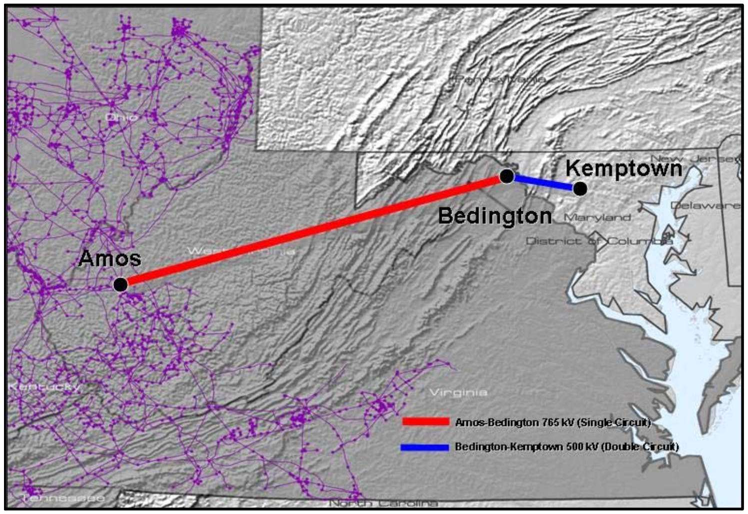
- ### *Overview*
  - $3 billion investment (before ownership division)
  - 550 line miles
  - 5000MW improved transfer capability
  - To be completed in 2 phases (1st phase PJM approved)
- ### *Benefits*
  - Improves eastern grid reliability
  - Improves market efficiency with reduced congestion
  - Reduces consumer cost $1B (est.) annually in the east
  - Reduces network line losses by 280 MW at peak
  - Provides AEP rate base opportunity for transmission investment with ROE upside & other FERC incentives
  - Provides off-system sales and siting opportunity for AEP and other low-cost mid-western generation
- ### *Phase I Progress to Date*
  - AEP and Allegheny entered into the PATH (Potomac-Appalachian Transmission Highline) JV to construct the 290 mile West Virginia-Maryland line
  - Total estimated cost of $1.8 billion
  - AEP portion approximately $600 million
  - Expected completion 2012



PJM I-765™ Phase I cont'd

Execution in Action

- ### *Funding Plans/Transaction Structure*
  - Formed a joint venture with Allegheny Energy for 290 miles of the proposed 550 mile project
  - JV portion of the I-765™ Interstate Project approved by PJM in its Regional Transmission Expansion Plan in June 2007
  - Equity – 50% AEP / 50% Allegheny
  - AEP's 50% investment will be held at the AEP Transmission Holding Company LLC subsidiary
  - Operations to commence in the second half of 2007
  - I-765™ Interstate Project included in the DOE's draft National Interest Electric Transmission Corridor issued in April 2007



- ### *Key Regulatory Activity Completed*
  - FERC declaratory order approved July 2006
  - PJM approved plan June 2007

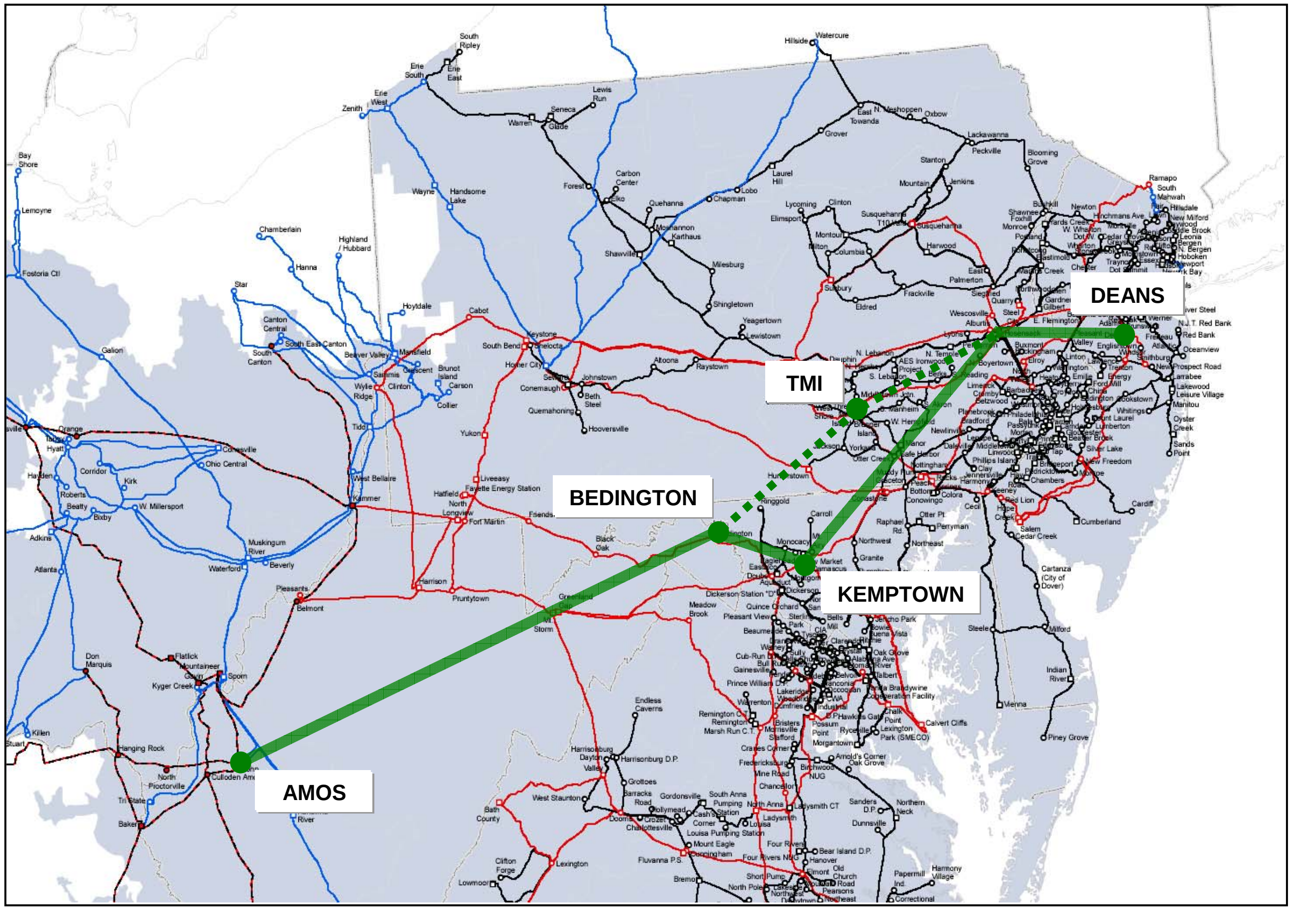
- ### *Key Next Steps*
  - Complete FERC Filing – Fall 2007
    - *Pursuing new project FERC incentives: cash return on CWIP, higher ROE, recovery of pre-commercial operation costs and recovery of abandonment costs.*
  - Siting Approved – Fall 2009
  - Completion – Fall 2012

AEP AMERICAN ELECTRIC POWER

PJM I-765™ Phase II (Bedington-Deans)

Second phase of original AEP 550-mile I-765 proposal

- Approximately 250 miles from West Virginia-Maryland border to Public Service Electric & Gas Deans Station in New Jersey.
- Currently under consideration by PJM as part of Regional Transmission Expansion Plan (RTEP).
- Based on PJM RTEP approval, AEP will seek a suitable business partner (JV partner) to complete the second leg of the original proposal.



AEP AMERICAN ELECTRIC POWER

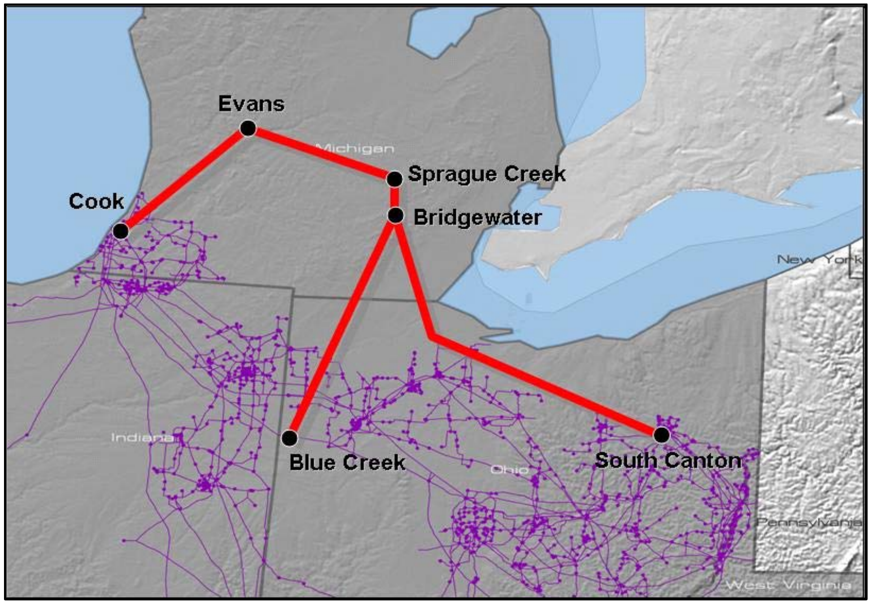
765-kV in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - Agreement with ITC Transmission for 765-kV study
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.0 billion investment (before ownership division)

- *Benefits*
  - 3,000 MW improved transfer capability
  - Reduces network line losses by 250 MW

- *Next Steps*
  - Study results shared with PJM/MISO– Summer 2007
  - Public release of study results – Fall 2007
  - Potential JV formation – Fall 2007
  - PJM/MISO approval - Summer 2008
  - FERC Filing - Fall 2008
  - Siting approval – Summer 2010
  - Estimated completion – Summer 2013



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

765-kV in SPP

Significant opportunity for 765-kV transmission in SPP

Overview

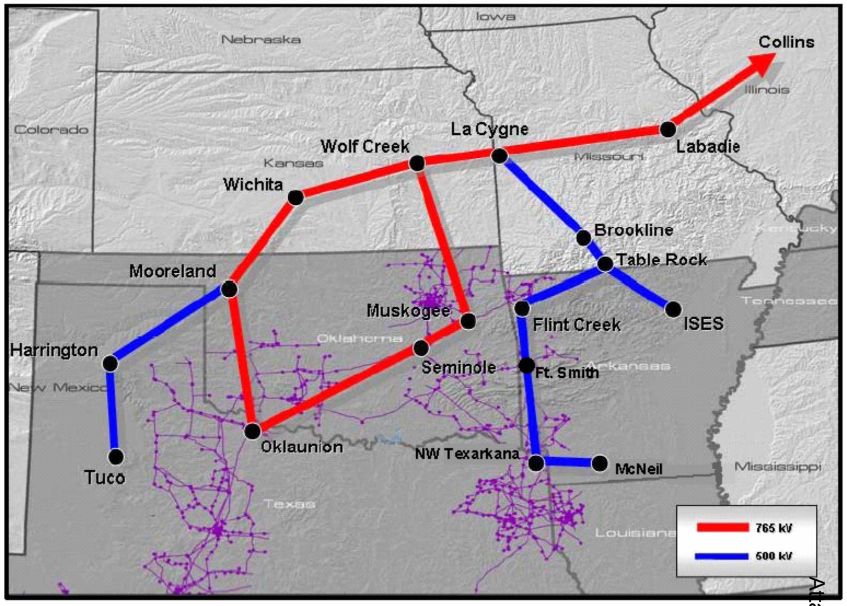
- July 2006 AEP submitted conceptual project for six 765-kV lines
- Proposed 765-kV Kansas / Oklahoma / Arkansas connecting to MISO/PJM
- 610 miles from Kansas to Arkansas
- $3.0 billion investment (before ownership division)
- Proposed 2012-2017 construction period
- SPP proposes 765-kV in Texas / Oklahoma / Kansas / Missouri connecting to MISO/PJM
- SPP also proposes 500-kV in Texas / Oklahoma / Arkansas / Missouri

Benefits

- 4,000 MVA capability

Next Steps

- Study disclosure – Fall 2007
- JV formation (Partner-TBD) – Fall 2007
- SPP RTO/BOD EHV Overlay approval – Summer 2009
- SPP RTO FERC Filing – Fall 2009
- Siting approval – Fall 2011
- Estimated completion – Summer 2017



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

ETT Status Update

ETT: Delivering Power for Texas' Future

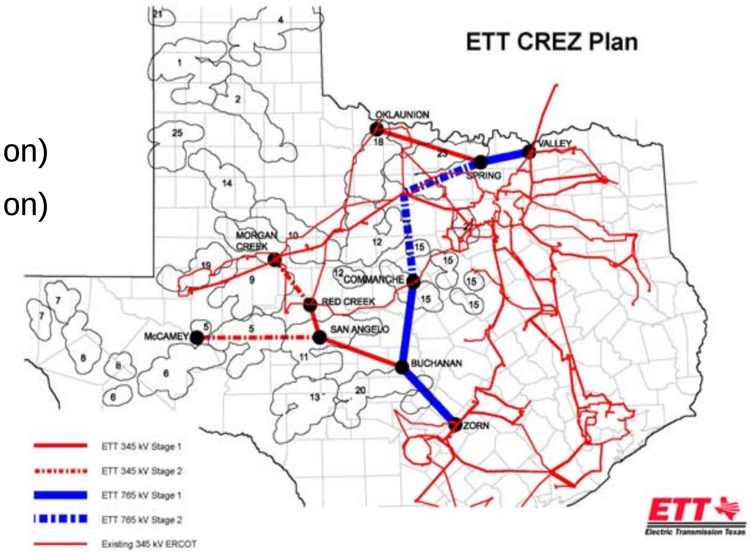
- *Transaction Structure*
  - 50/50 joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC.
  - ETT capital structure is 60% debt / 40% equity (PUCT requirement).
  - Executive manager provided by AEP; business manager provided by MidAmerican.
  - Investment opportunities can be offered by either partner and accepted or rejected by ETT.

- *Transaction Status*
  - Formation documents finalized and Participation Agreement signed Jan. 9, 2007.
  - Texas regulatory filing on Jan. 22, 2007.
    - Requested utility status, transfer of initial assets, establishment of TCOS transmission recovery mechanism.
    - Hearings conducted July 16-17, 2007, commission order expected in September 2007.
  - FERC approval for asset transfer received April 20, 2007.
  - Closing deadline of Nov. 1, 2007 can be extended by mutual agreement.

CREZ & Backbone Opportunities

Harnessing the Wind: Competitive Renewable Energy Zones offer unique opportunities to showcase ETT

- **ETT CREZ Overview**
  - Strengthen ERCOT grid to collect and deliver wind generation to load
  - Build transmission in the most cost effective manner, addressing:
    - Future generation development
    - Load growth pockets
    - Market efficiency (reduce congestion)
    - Competitive wholesale markets
    - Economic growth
  - $1.5 billion investment Phase 1 – 2012 (before ownership division)
  - $1.5 billion investment Phase 2 – 2015 (before ownership division)

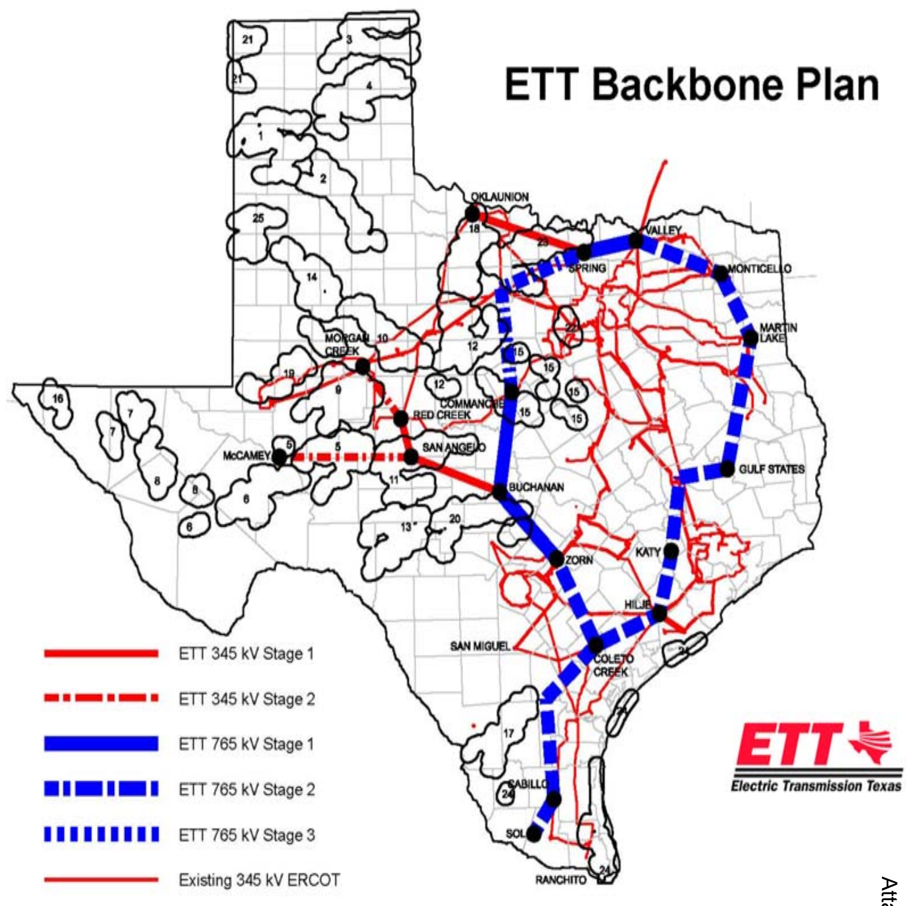


- **CREZ Approval Stages as outlined by the PUCT**
  - Stage 1 – Final order designating power regions – August 2007
  - Stage 2 – CREZ Transmission Optimization Study – January 2008
  - Stage 3 – PUCT selection of transmission construction designees – February 2008
  - Stage 4 – CCN development and submission – February 2009
  - Stage 5 – CCN approval – August 2009
  - Stage 6 – Construction (TBD)

CREZ & Backbone Opportunities – cont'd

Harnessing the Wind: Competitive Renewable Energy Zones offer unique opportunities to showcase ETT

- **ETT ERCOT Backbone Proposal**
  - ETT proposal for ERCOT and PUCT to consider CREZ transmission in context of long-term vision for transmission system.
  - Current 5-year planning horizon results in higher ultimate costs, lower system efficiency.
  - Long-term 15-20 year perspective provides better plan, supports development of high voltage backbone at 765-kV.
  - $4.2 billion investment (long-term backbone).



AMERICAN ELECTRIC POWER

2007 Ongoing Guidance: $2.85 to $3.05 per share

American Electric Power
Financial Results for 2006 Actual vs. 2007 Estimate

		Performance Driver	2006 Actual ($ millions)	Performance Driver	2007 Estimate ($ millions)
	UTILITY OPERATIONS:				
	Gross Margin:				
1	East Regulated Integrated Utilities	69,107 GWh @ $ 30.5 /MWhr =	2,111	73,325 GWh @ $ 33.3 /MWhr =	2,440
2	Ohio Companies	45,880 GWh @ $ 46.0 /MWhr =	2,110	50,452 GWh @ $ 48.2 /MWhr =	2,433

Ending Cash Balance	**$ 301**	**$ 205**

* Assumes the midpoint of the $2.85 to $3.05 per share guidance range.

Cash on hand is expected to be $205 million by the end of 2007

AEP AMERICAN ELECTRIC POWER

Multi-Year Capital Investment Funding Plan

	Actual	Projection		
	2006	**2007**	**2008**	**2009**
Planned Capital Investment (Projection amts. exclude AFUDC)	$ (3,528)	$ (3,867)	$ (3,026)	$ (2,974)
Dividend on Common	$ (591)	$ (620)	$ (624)	$ (627)
Cash Sources				
Cash from Operations *	$ 2,732	$ 2,353	$ 2,642	$ 2,671
Proceeds from Sale of Assets	$ 186	$ 43	$ -	$ -
Common Stock Issued (Dividend Reinvestment Plan)	$ 99	$ 80	$ 80	$ 80
Change in Debt, Net	$	$ 2,010	$ 1,176	$ 967
Change in Other Temporary Cash Investments, Net	$ (291)	$ -	$ -	$ -
Other Investing and Financing Activities	$ (127)	$ (95)	$ (137)	$ (29)
Cash Sources Less Capital Expenditures, Dividends & Other	$ (100)	$ (96)	$ 111	$ 88
Ending Cash Balance	$ 301	$ 205	$ 316	$ 404

Projected 2007-2009 AEP Consolidated Credit Metric Ranges:

Debt to total capital (adjusted - rating agency view) range of 58% to 60%

FFO to Interest range of 3.6x to 4.0x

FFO/Total Debt range of 16% to 18%

* Cash Flow from Operations projections assume full rate recovery on capital expenditures.

Capital investment is funded by cash from operations and debt issuances

Why Invest in AEP?

- Strength and scale in assets & operations
- Disciplined utility model focus - investing in established utility business to drive 5-7% consistent annual earnings growth
- Annual dividend of $1.56 per share providing an above average dividend yield of 3.4%
- Positive dividend outlook
- Stable credit profile

KPSC Case No. 2011-00401

UBS 2008 Natural Gas, Electric Power & Coal Conference

March 6, 2008

Austin, Texas

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate relief or other recovery for new investments, transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements periodically issued by accounting setting bodies; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Table of Contents

Company Overview

- 5.2 million customers in 11 states

Industry-leading size and scale of assets:

Asset	Size	Industry Rank
Domestic Generation	~37,600 MW	# 2
Transmission	~39,000 miles	# 1
Distribution	~213,000 miles	# 1

Source: Company research

- Coal & transportation assets
  - Control over 8,400 railcars
  - Own/lease and operate over 2,650 barges & 52 towboats
  - Coal handling terminal with 20 million tons of capacity
- 20,800 employees

AEP Generation Portfolio				
Coal	**Gas**	**Nuclear**	**Hydro**	**Wind**
68%	**23%**	**6%**	**2%**	**1%**

AEP enjoys significant presence throughout the energy value chain.

AEP Strategy

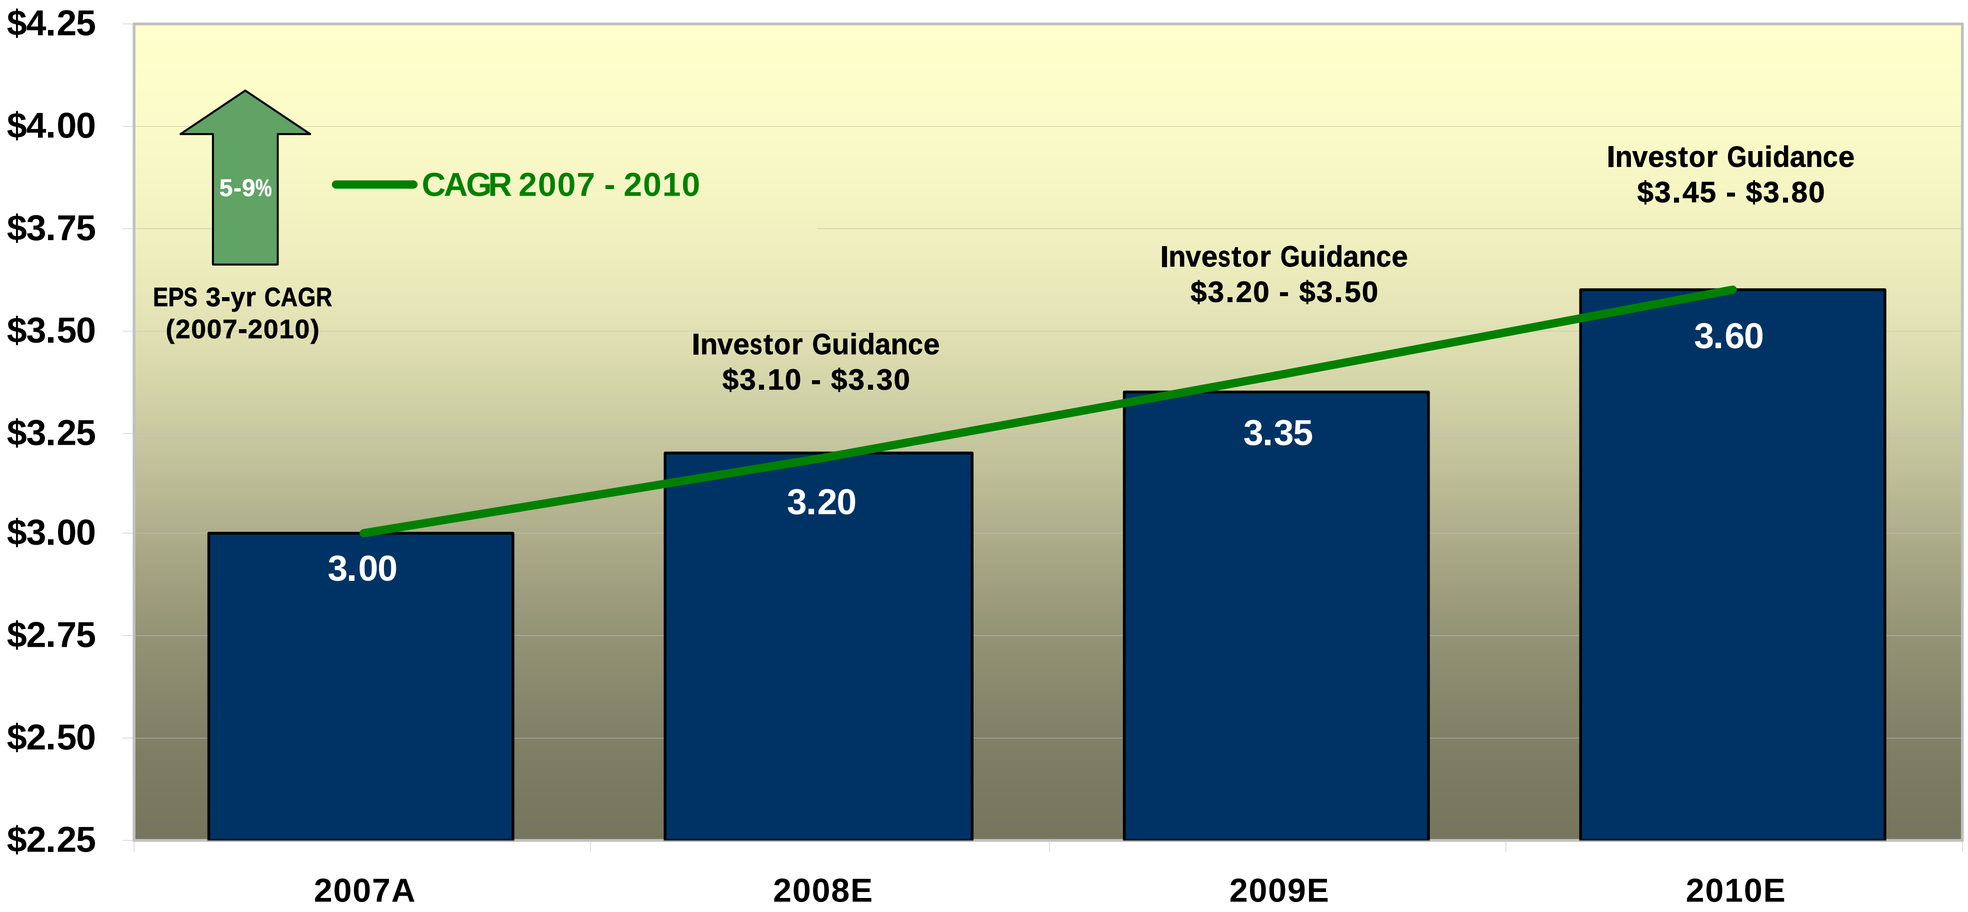
Strategy: grow our core utility business at a consistent rate through major investment supported and funded by innovative programs for regulatory recovery as well as develop our independent, federally regulated Transmission Company for the pursuit of new major interstate projects.

Our 2008 Focus:

- Prepare for post-2008 transition in Ohio
- Invest in and evolve infrastructure to support future technology and customer needs focused on efficiency, conservation and load management
- Enhance cash flow & earnings through rate recovery mechanisms
- Take advantage of AEP's size to benefit our customers and shareholders through regulatory-supported investment

Sustained capital investment opportunities support earnings growth.

4-Year Earnings Range Forecast



5% to 9% earnings growth, largely predicated on outcome in Ohio

Vision for Sustainability

Welsh 2	528		N/A	☑	Projected 2012

At the conclusion of our current environmental retrofit program, over 58% of our 24,630 MW coal-fired generation fleet will be equipped with SCRs and over 73% will be scrubbed (FGDs).

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
PSO	Southwestern	Oklahoma	$58 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$59 MM	Gas	Simple-cycle	170	2008
AEG	Dresden	Ohio	$266 MM	Gas	Combined-cycle	580	2010
SWEPCo	Stall	Louisiana	$378 MM	Gas	Combined-cycle	480	2010
SWEPCo	Turk	Arkansas	$1.3 B (1)	Coal	Ultra-supercritical	600 (1)	2012
APCo	Mountaineer	West Virginia	$2.23 B	Coal	IGCC	629	2012
CSP/OP	Great Bend	Ohio	$2.7 B(2)	Coal	IGCC	629	2017

(1) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment.

(2) Cost estimates, updated to reflect cost escalations due to revised commercial operation date of 2017, are not yet filed with the PUCO due to the pending appeals to the Supreme Court of Ohio resulting from the PUCO's April 2006 opinion and order.

Secured Recovery Mechanism:

PSO Peaking Facilities Rider

Additional Recovery Mechanisms Under Consideration:

Formula based rates

Requests for return on CWIP

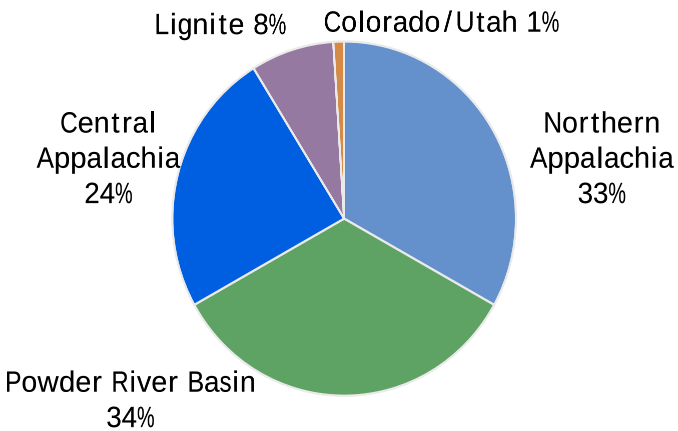
Current and future rate cases

AEP is meeting the growing electricity needs of customers through the pursuit of new economic generation facilities.

Coal Procurement - 2008 Projected

AEP burns approx. 76 million tons of coal per year

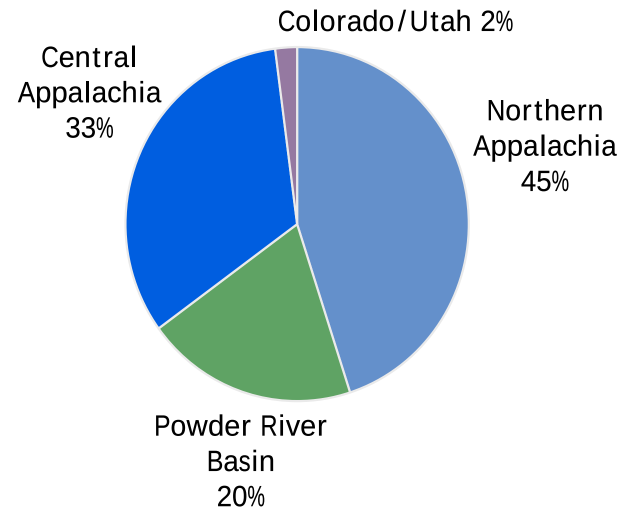
Total AEP System



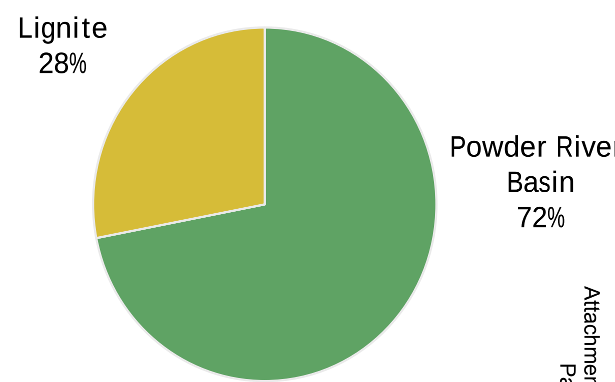
Coal Stats:

- Approximately 93% contracted for 2008
- Avg. delivered price ~ $36.58/ton in 2007
- Approximate 13% price increase in 2008 based on 2007 actual results.

AEP East



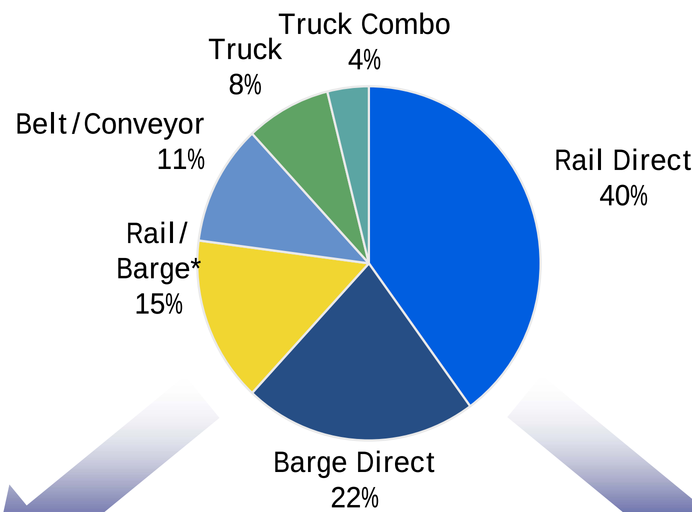
AEP West



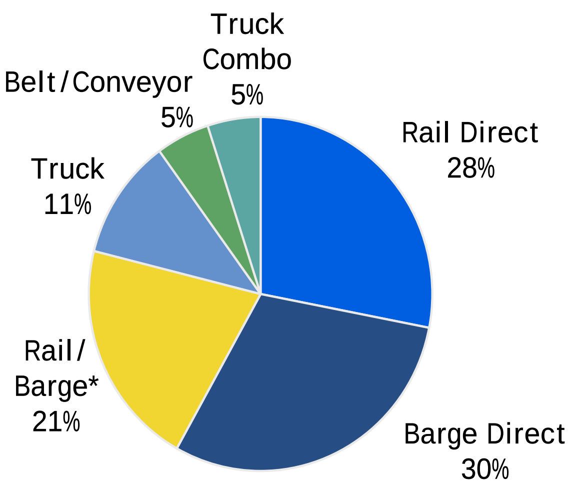
Coal Delivery

Total AEP System

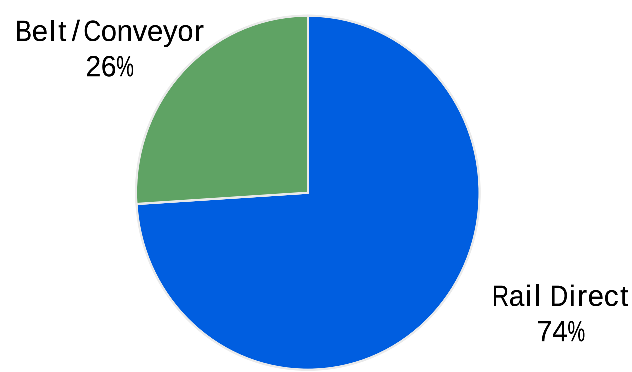
2007 Actual



AEP East



AEP West



* Reflects coal delivered to AEP plants transported through a combination of rail and barge

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A reliable and reasonably-priced electric supply is necessary to support the economic well-being of the areas we serve.

Highlights of Bingaman-Specter Proposal

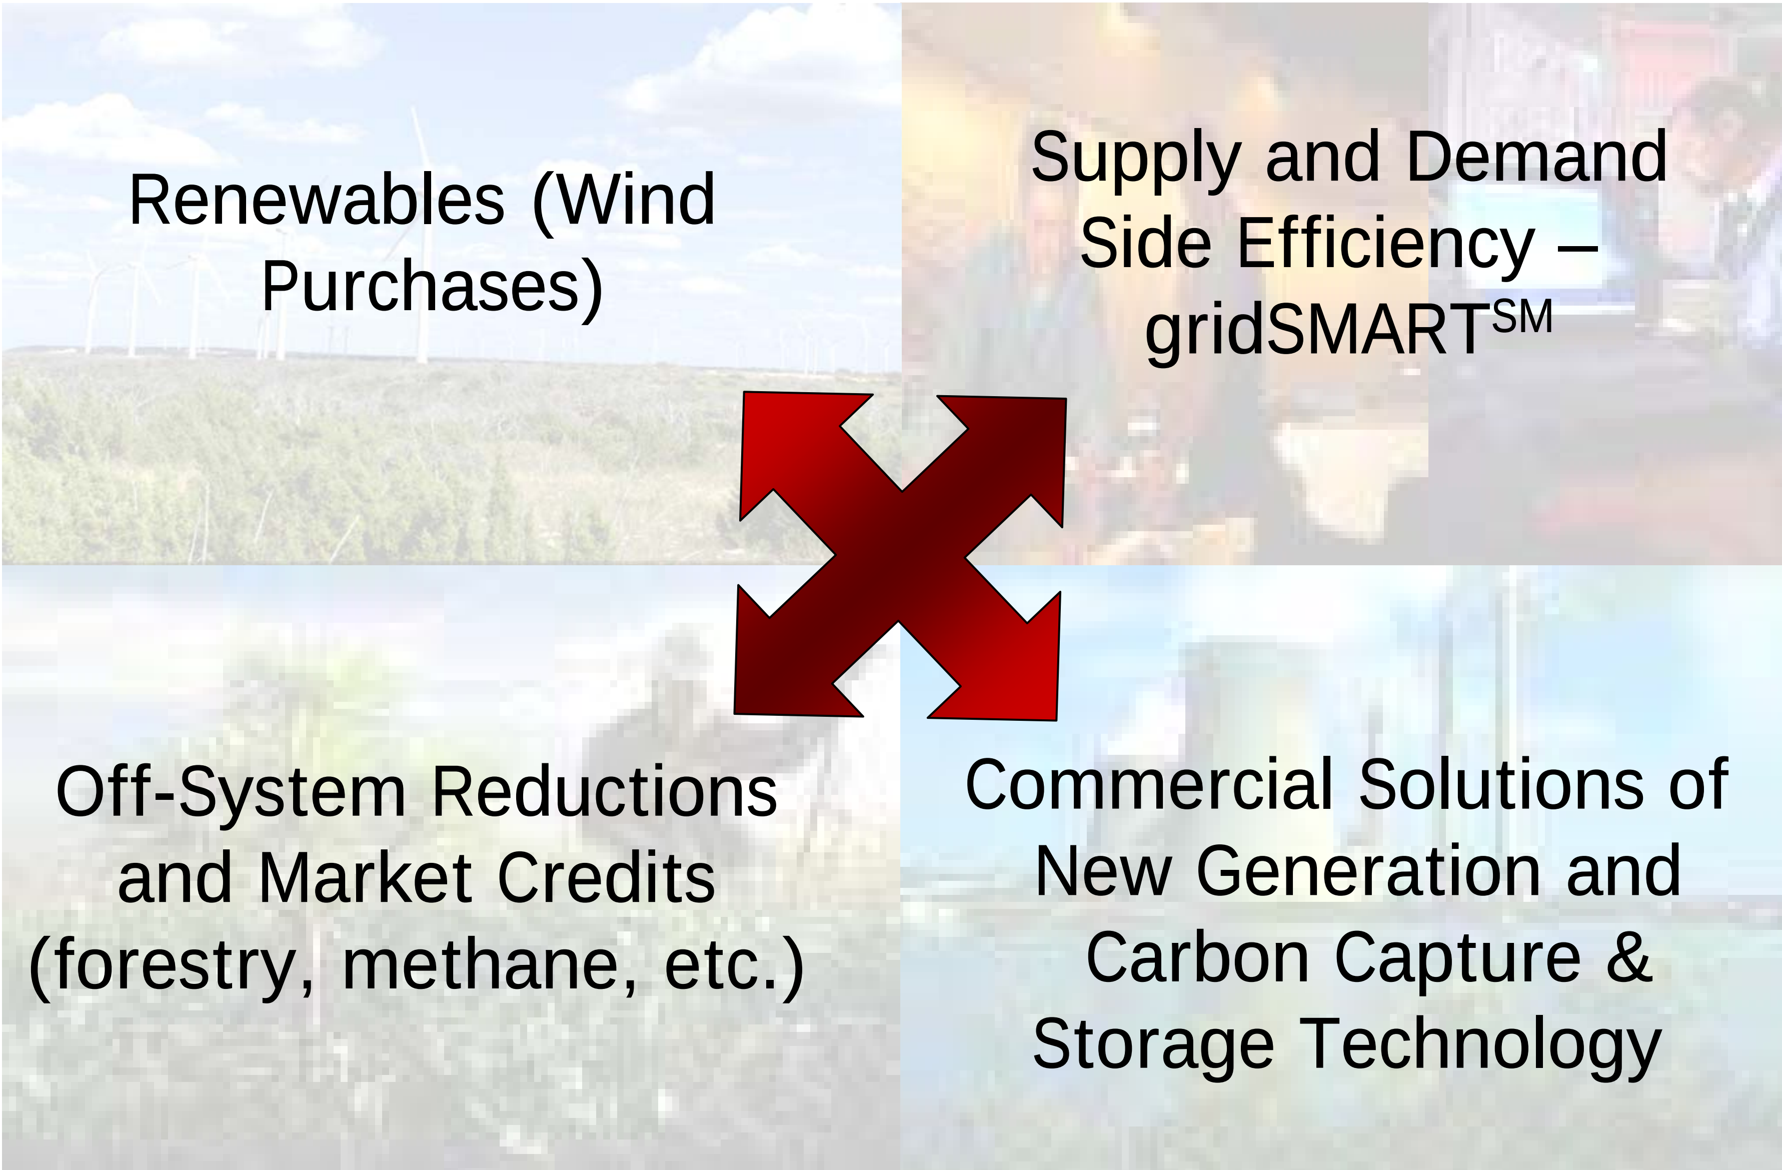
"Low Carbon Economy Act of 2007"

Key Components:

- Start date for greenhouse-gas reductions is 2012
- Goals: 2006 levels by 2020; 1990 levels by 2030
- Includes a safety valve of $12 per metric ton, increasing at an annual rate of 5% above inflation
- Support for allowance allocations
- International action

AEP endorses this proposal because it sets reasonable and achievable reduction targets and includes the AEP-IBEW trade proposal.

AEP's Long-Term GHG Reduction Portfolio



AEP is investing in a portfolio of GHG reduction alternatives.

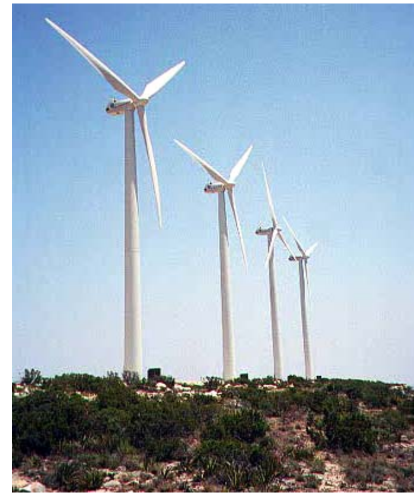
AEP Wind Operations/Purchases

Trent Mesa (2001)

150 MW (100 - 1.5 MW turbines)
Abilene/Sweetwater, TX

Southwest Mesa (1999)

- **75 MW** (107 – 700kW turbines)
- McCarney, TX
- Power Purchaser



Desert Sky (2002)

160 MW (107 - 1.5 MW turbines)
Bakersfield, TX

Summary

•Owned/Operated 385 MW

•Wind Purchases 392 MW

•Total Existing Wind at end of 2006: 777 MW

•**New Wind Purchases in 2007: 275 MW**

AEP will acquire an additional 725 MW of new wind to attain goal of 1,000 MW by 2011.

Off-System Reductions

Existing AEP Programs:

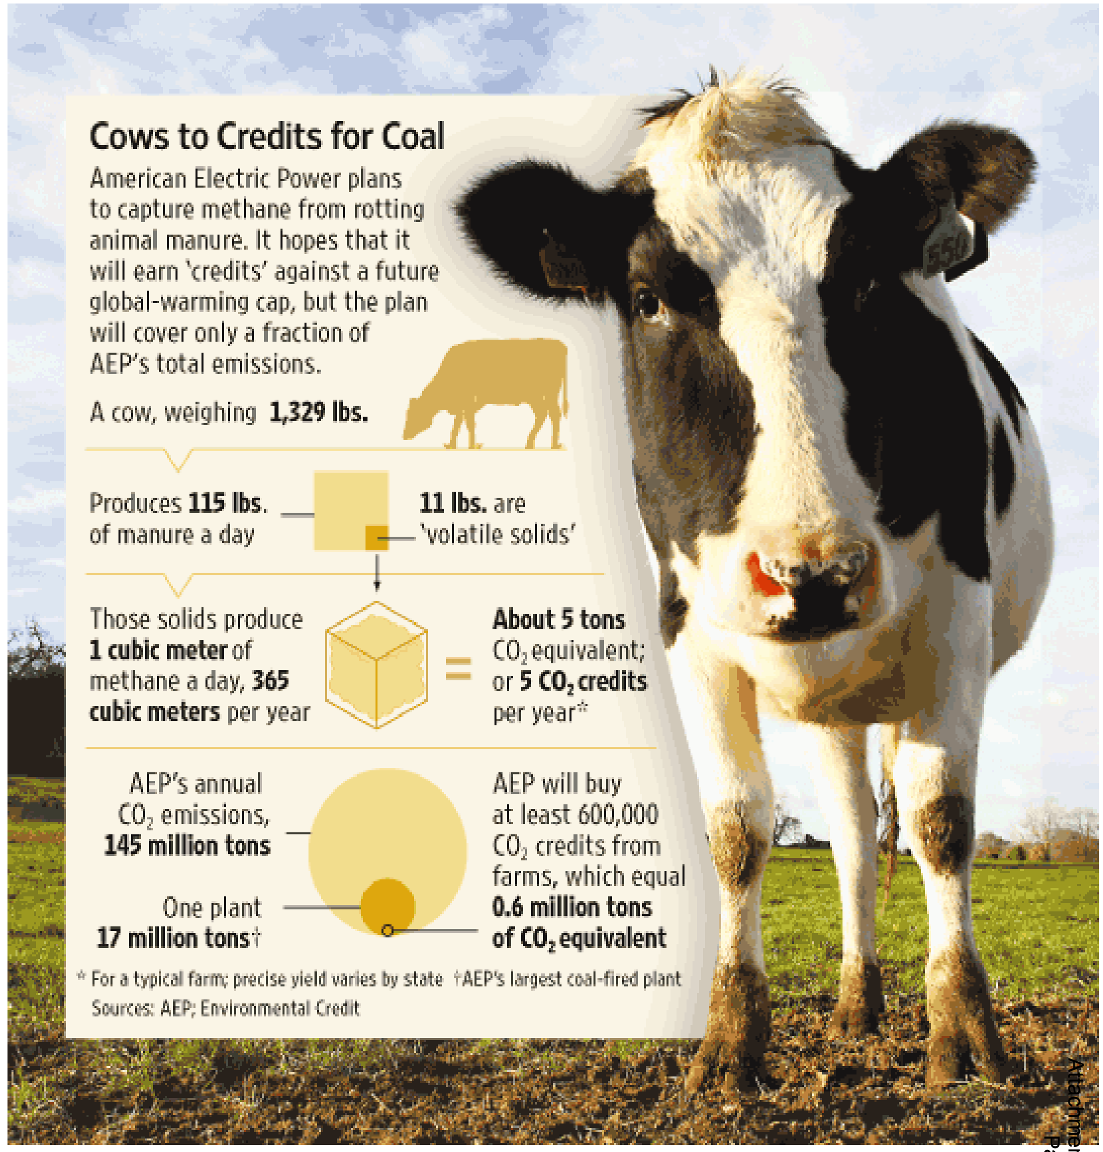
- Forestry - Domestic
    - 350,000 tons / yr
    - 63 MM trees planted
- Forestry – International
- Chicago Climate Exchange

New AEP Commitment by 2011:

- 2 M tons per year of additional CO_2 offsets

Latest Announcement:

- Methane Capture Deal with Environmental Credit Corp.
    - 600,000 CCX carbon credits per year
    - Begins 2010
    - Runs through 2017
    - 51% of credits sourced from “AEP States”



Source: Wall Street Journal June 14, 2007

Advanced Generation & CO_2

Near Term:

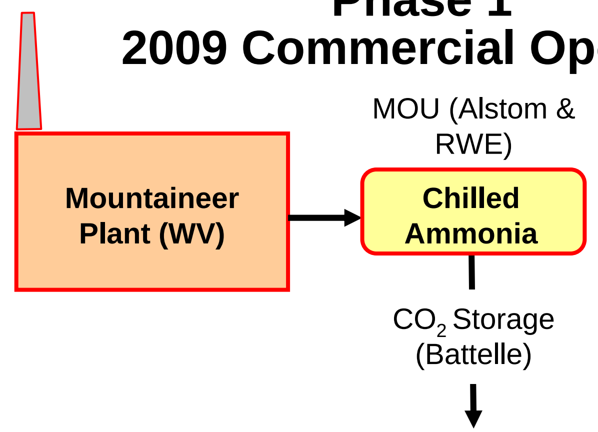
- Chilled Ammonia project at Mountaineer moving to commercial scale at the Northeastern Plant in 2012

$ in millions				
		2008	2009	2010
Mountaineer Chilled Ammonia Project		$30	$39	$0

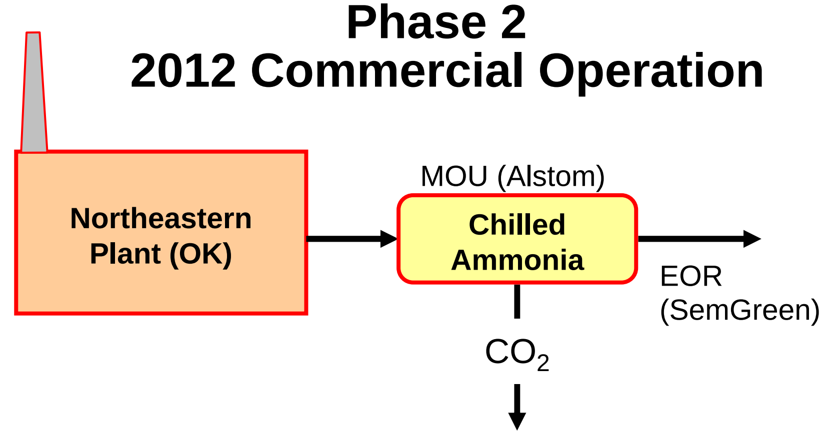
Long Term Strategy (Post-2010):

- IGCC
- Oxy Coal Technology
- Chilled Ammonia
- Nuclear COL

Phase 1
2009 Commercial Operation



Phase 2
2012 Commercial Operation



We are committed to validating and deploying technologies that ensure coal remains a viable resource for AEP and America.

AEP Leadership in Technology: IGCC and USC

NEW ADVANCED GENERATION

IGCC -- AEP first to announce plans to build two 600+ MW IGCC commercial size facilities in US (OH and WV) by next decade

USC -- AEP will be first to employ new generation ultra-supercritical (steam temperatures >1100^{o}F) coal plant in U.S (AR)

AEP's Carbon Capture & Storage Initiative

In March 2007, AEP announced a major new carbon capture and storage initiative:

Chilled Ammonia CCS--We will install carbon capture on two coal-fired power plants, the first commercial use of technologies to significantly reduce carbon dioxide emissions from existing plants.

- **The first carbon capture project, at the Mountaineer plant in West Virginia, is expected to complete its product validation phase in 2009.**
- **The second, at the Northeastern plant in Oklahoma, will begin commercial operation in 2012.**

Oxy-Coal--AEP will also demonstrate (10MWe) and then install oxy-coal CO_2 capture & storage at a commercial sized coal unit (about 200 MWe)—feasibility study to be completed in 2008.

CO_2 Capture Techniques

Post-Combustion Capture

- Conventional or Advanced Amines, Chilled Ammonia
  - Amine technologies commercially available in other industrial applications
  - Relatively low CO_2 concentration in flue gas – More difficult to capture than other approaches
  - High parasitic demand
    - Conventional Amine ~25-30%, Chilled Ammonia target ~10-15%
  - Amines require **<u>very</u>** clean flue gas

Modified-Combustion Capture

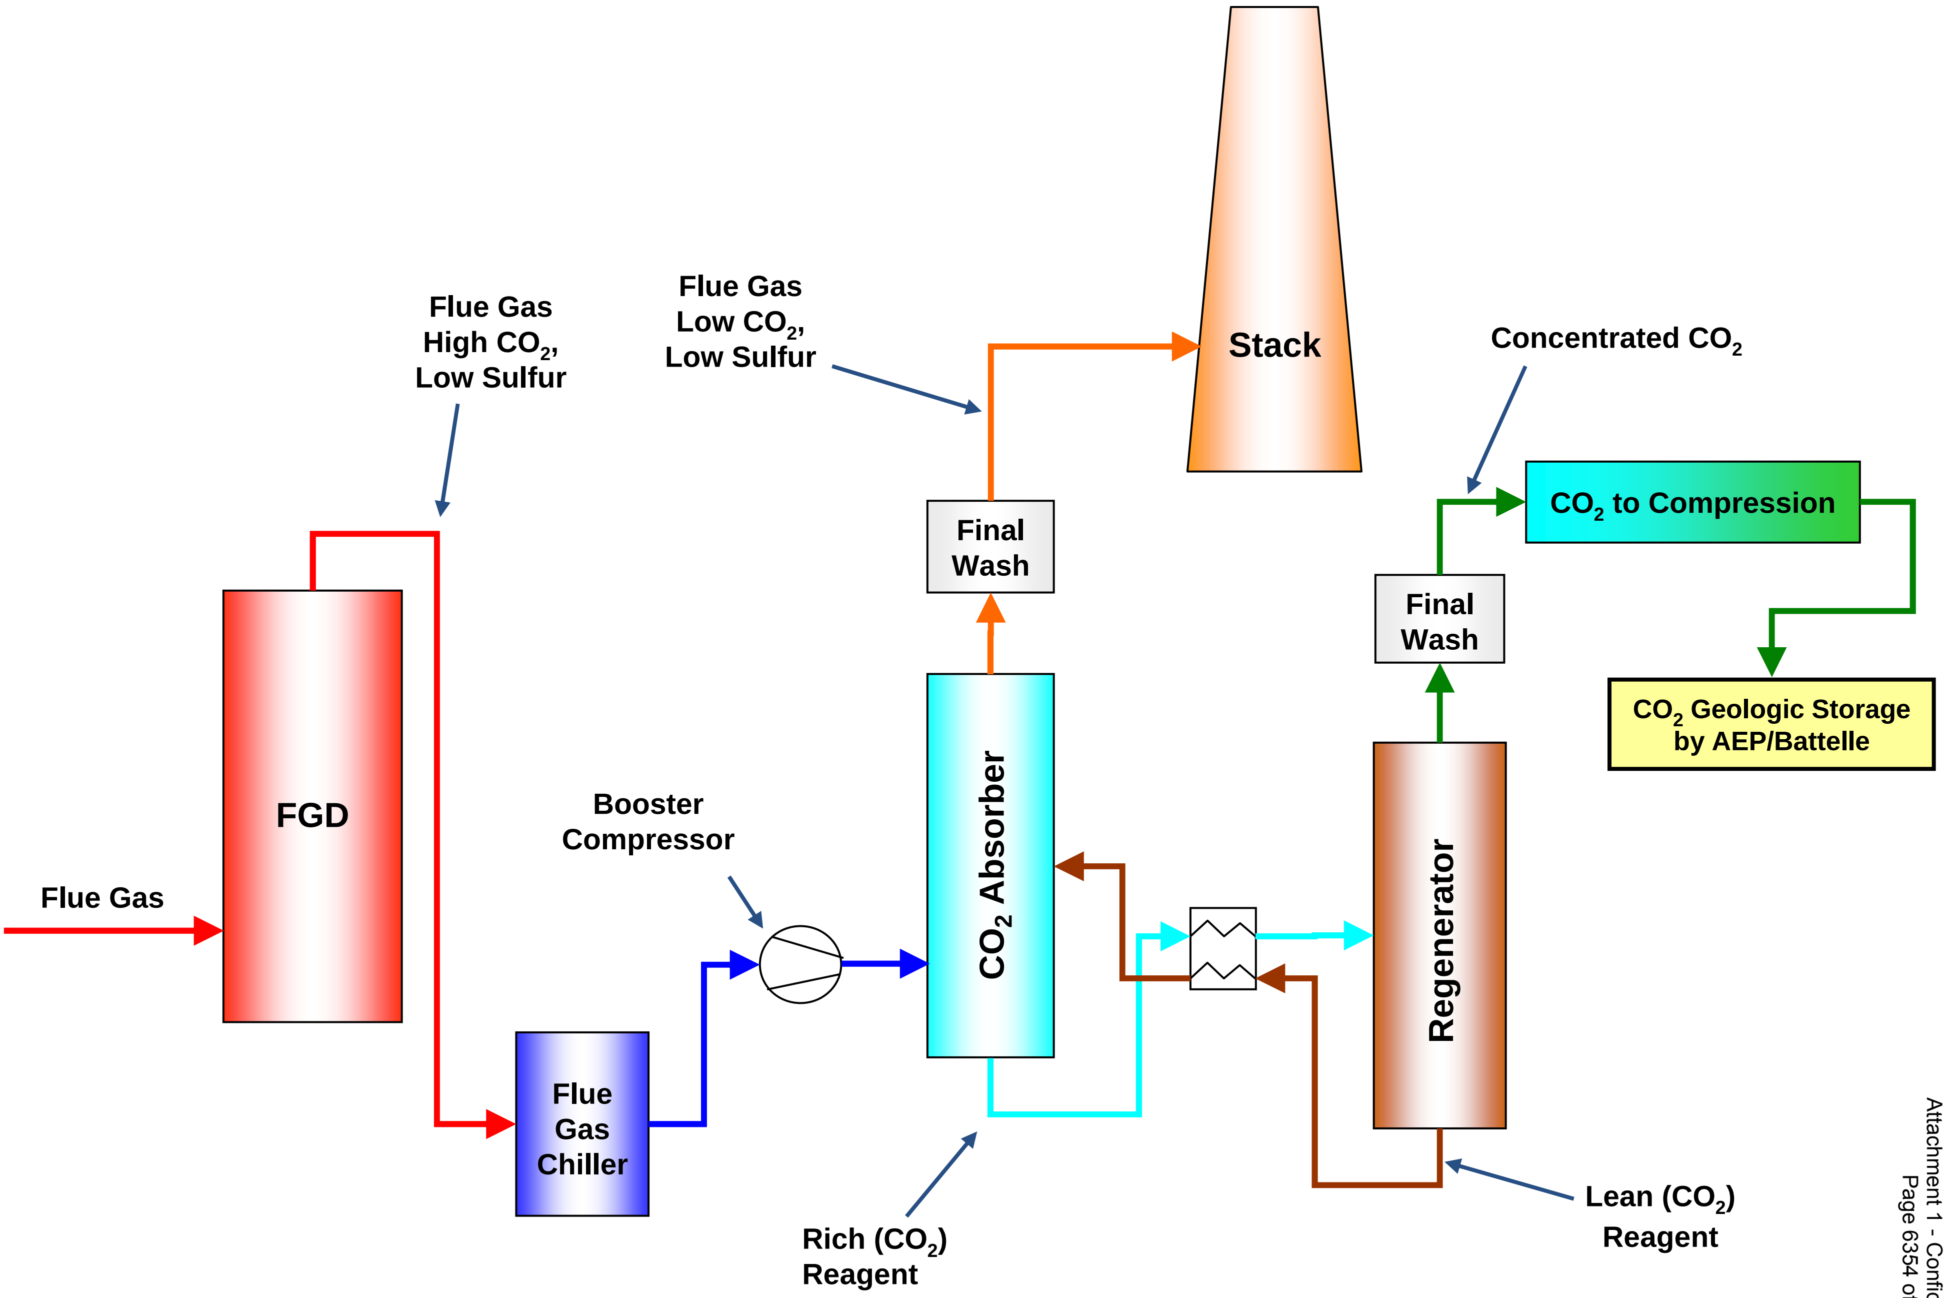
- Oxy-Coal
  - Technology not yet proven at commercial scale
  - Creates stream of very high CO_2 concentration
  - High parasitic demand, >25%

Pre-Combustion Capture

- IGCC with Water-Gas Shift
  - Most of the processes commercially available in other industrial applications
    - Have never been integrated together
  - Turbine modified for H_2-based fuel, which has not yet been proven at commercial scale
  - Creates stream of very high CO_2 concentration
  - Parasitic demand (~20%) for CO_2 capture - lower than amine or oxy-coal

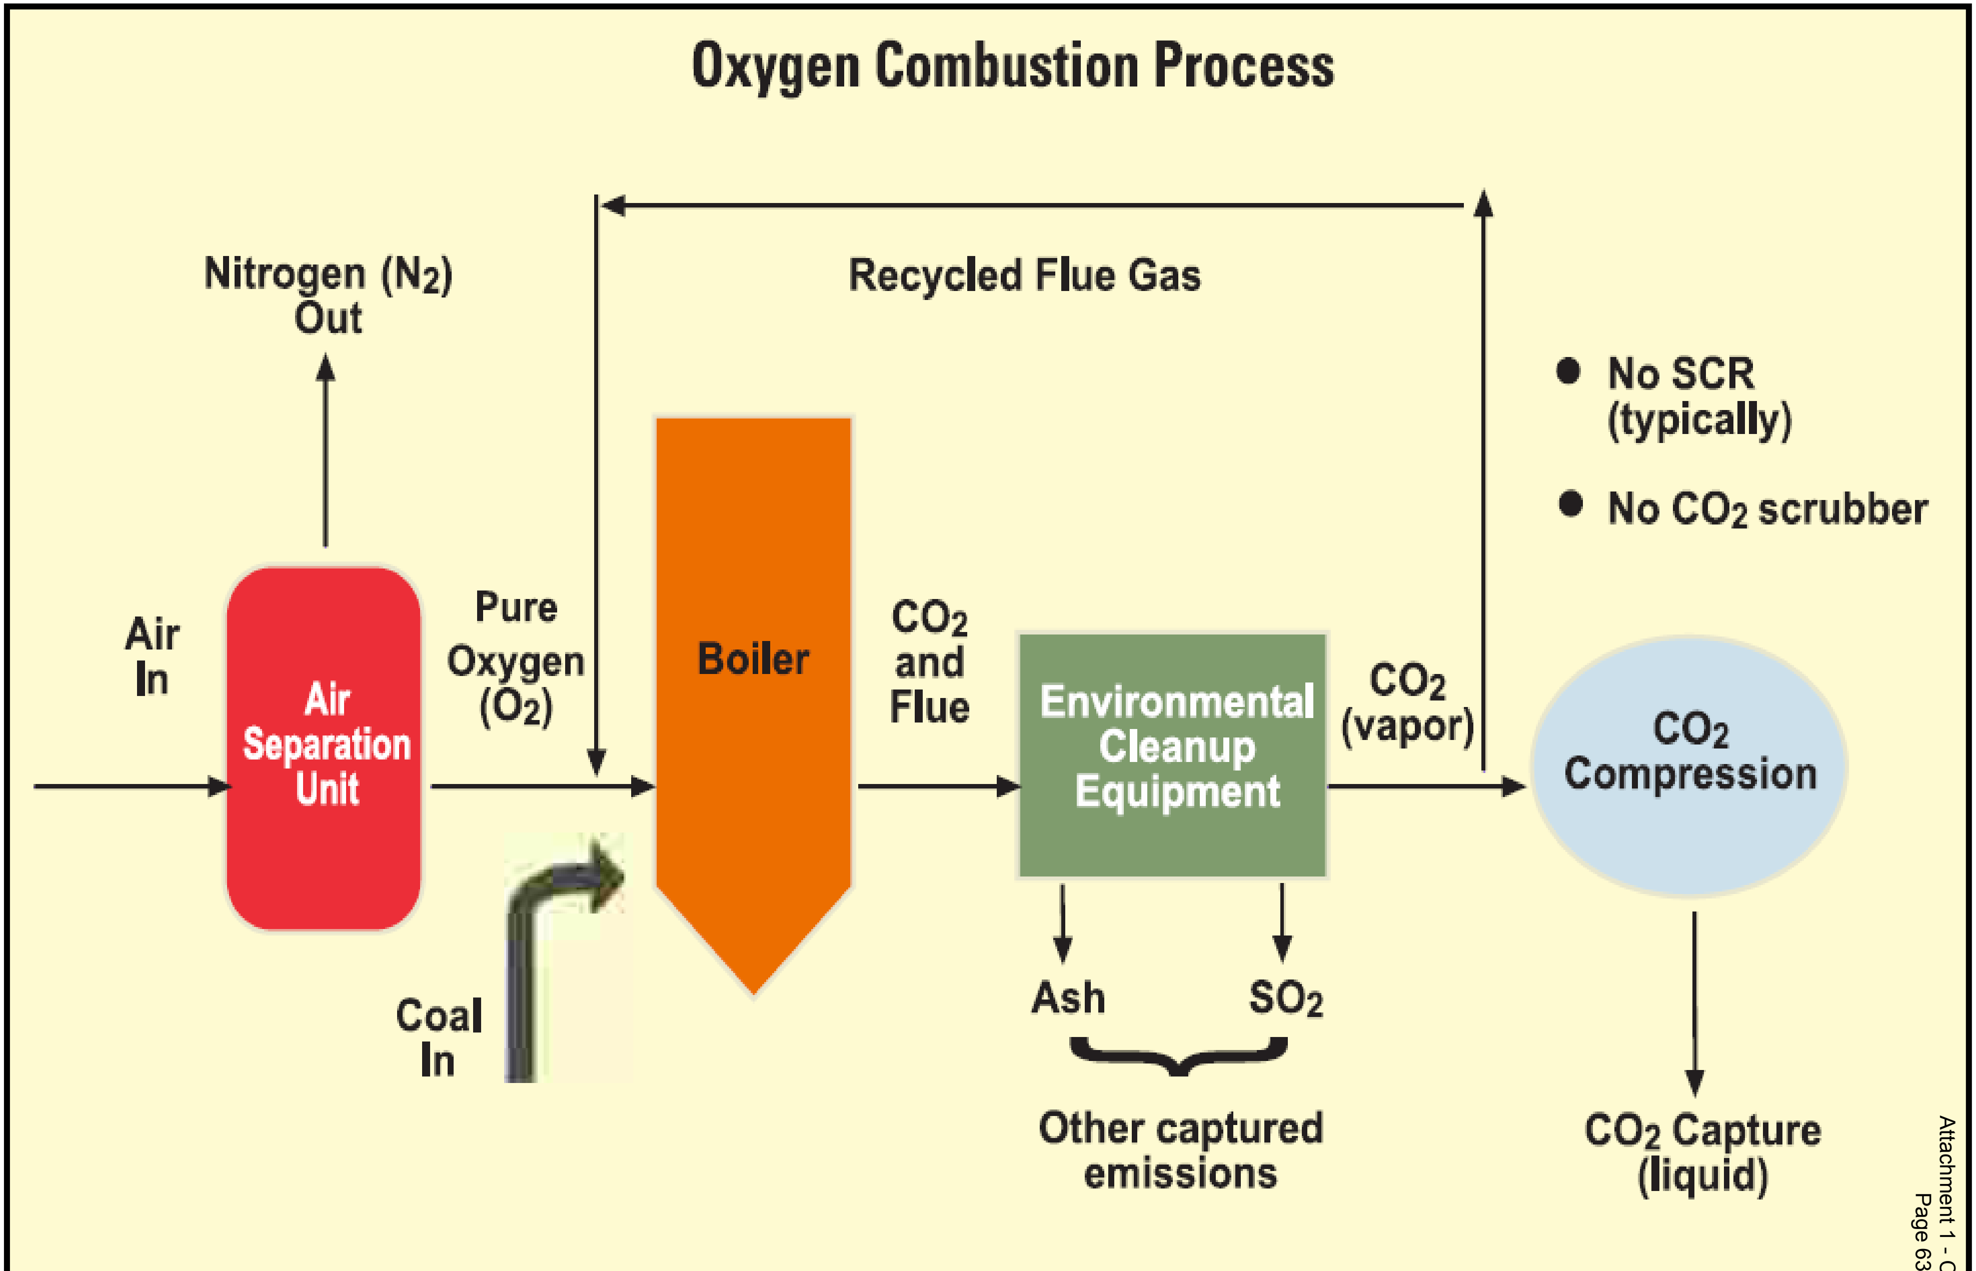
Alstom's Chilled Ammonia Process

Post-Combustion Capture



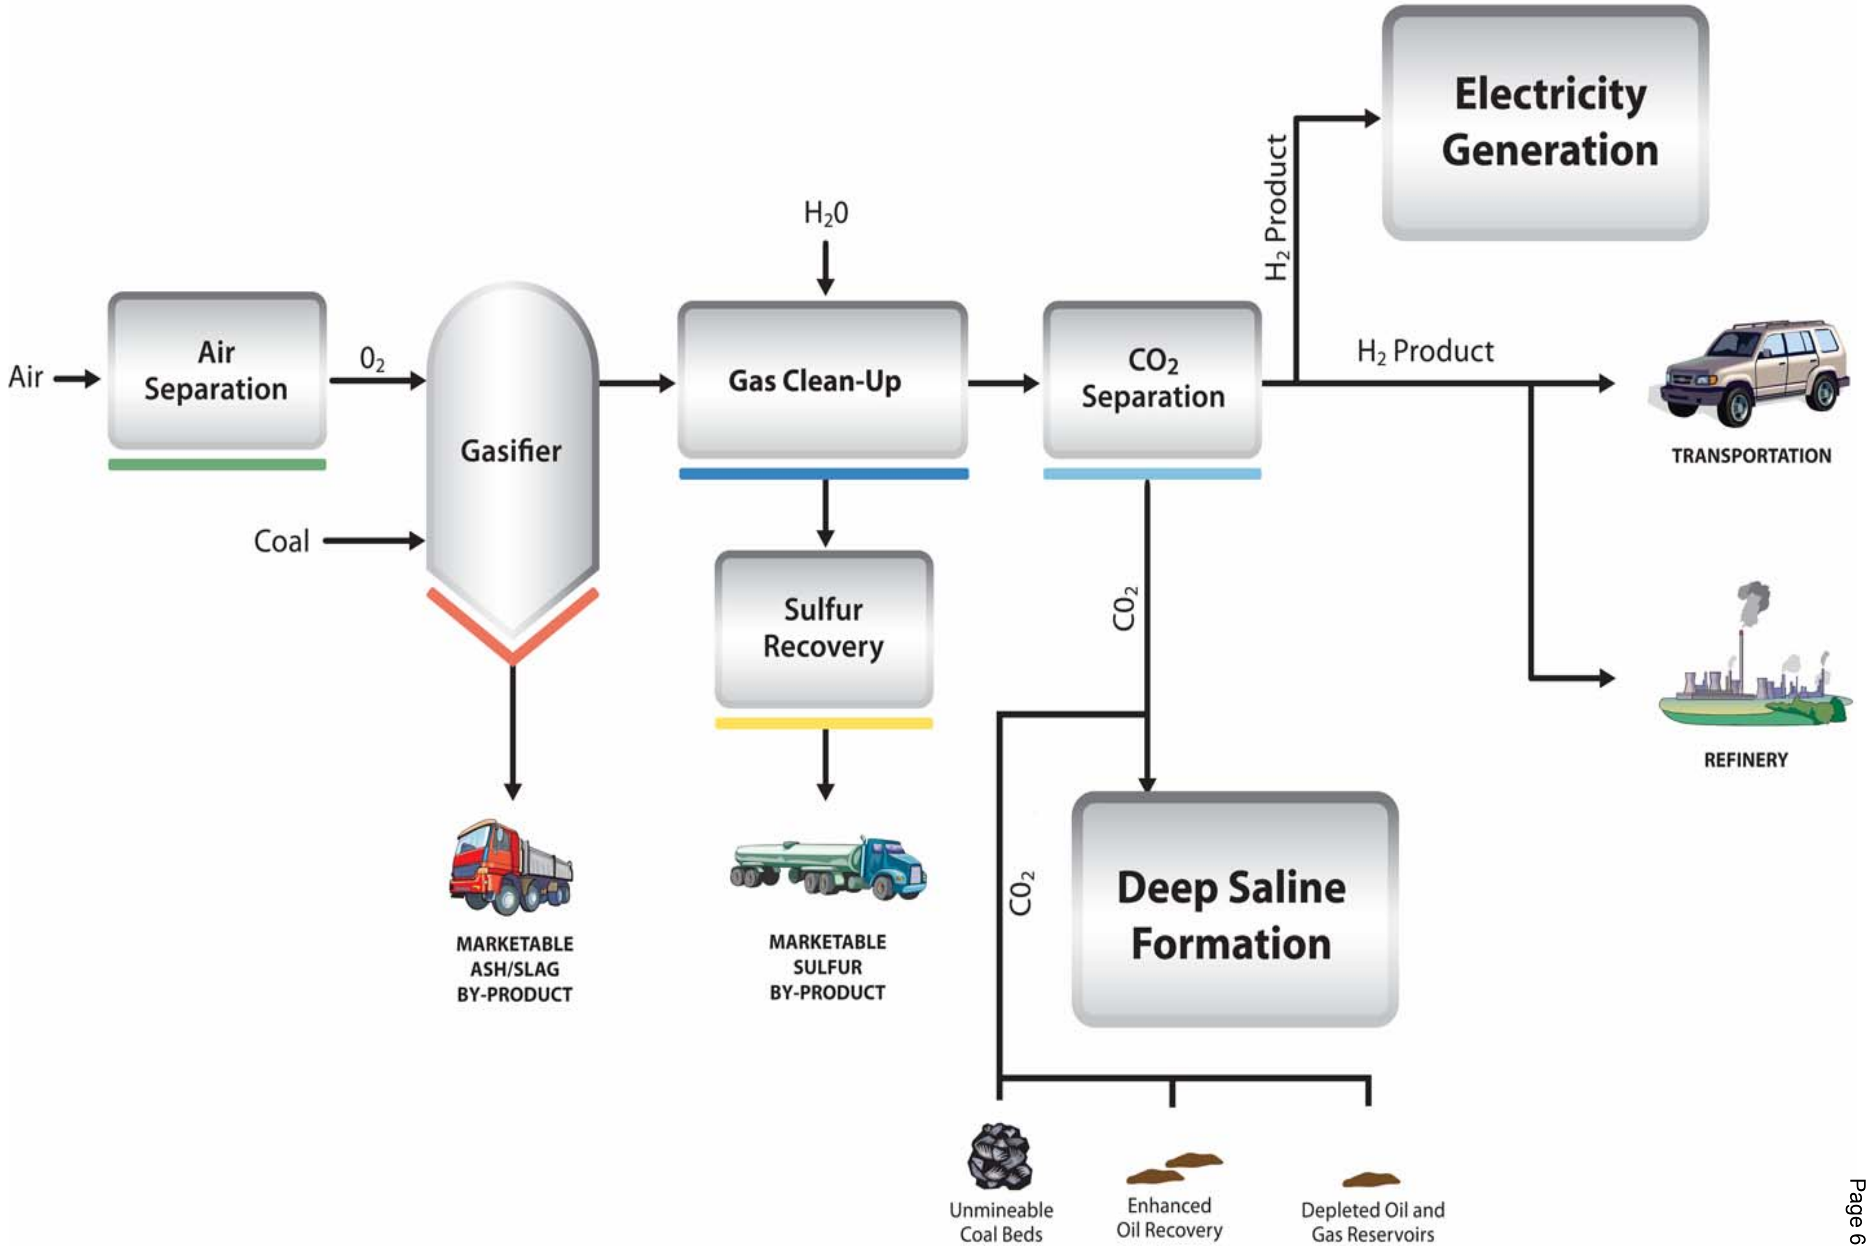
Babcock & Wilcox Oxy-Coal Process

Modified Combustion Capture

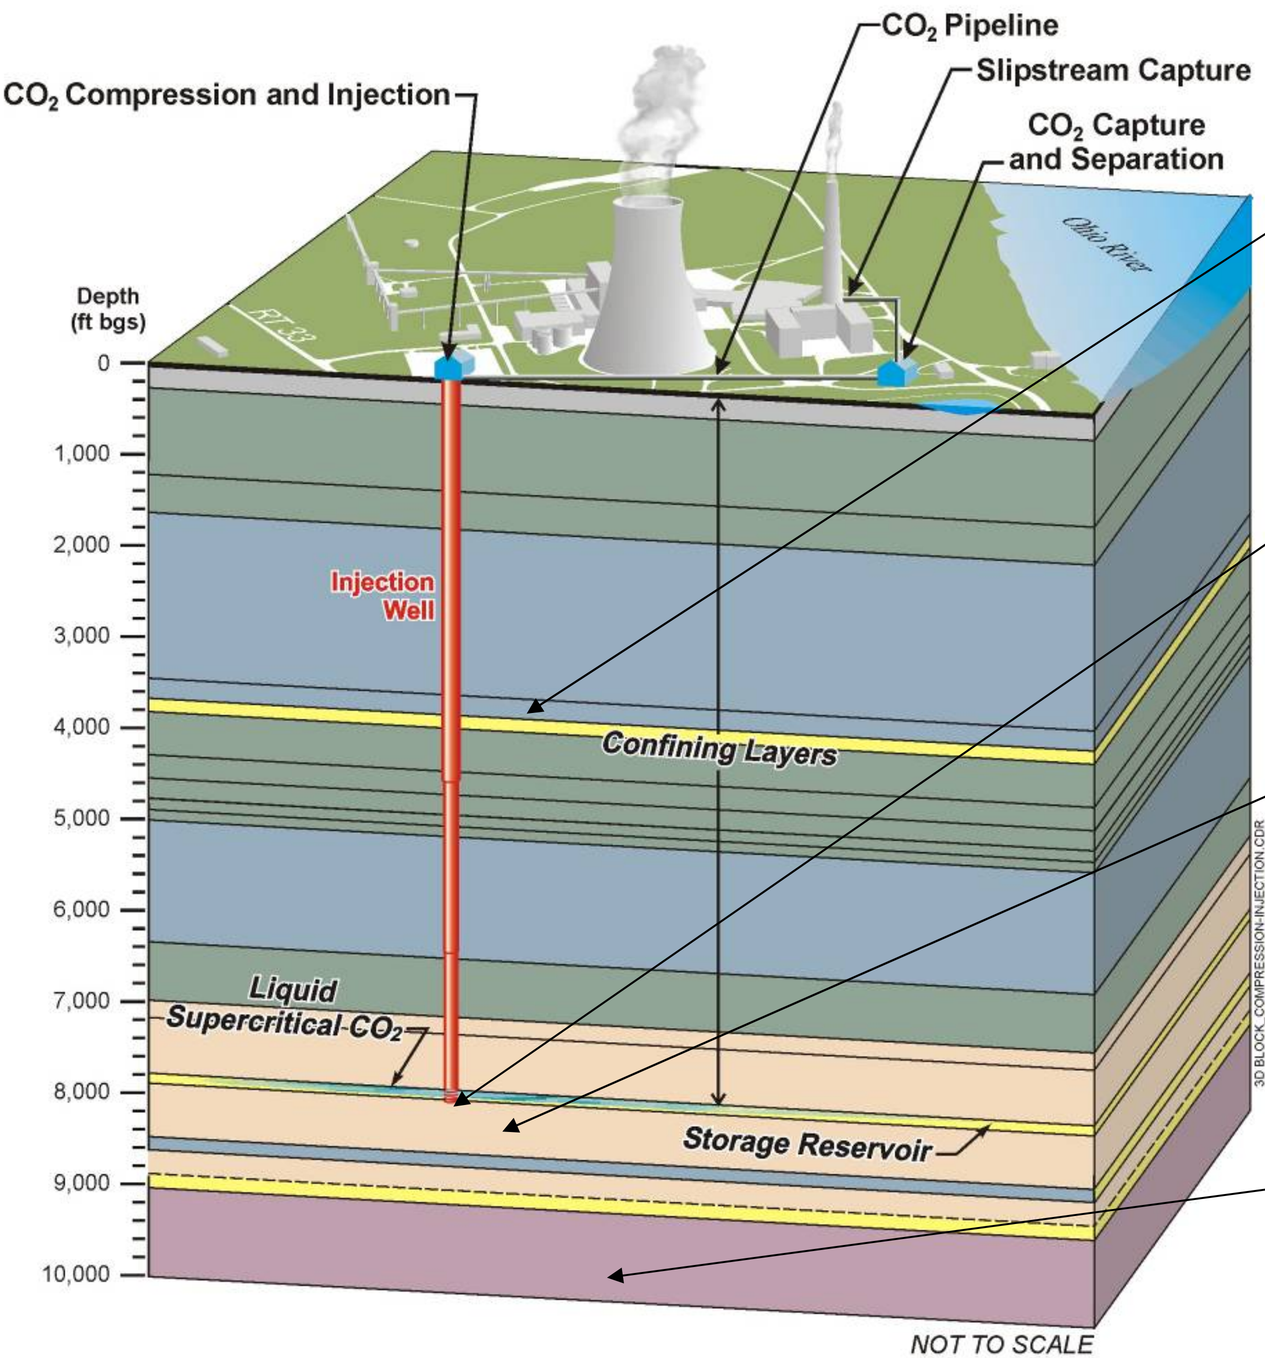


IGCC with Water-Gas Shift Process

Pre-Combustion Capture



CO_2 Injectivity in the Mountaineer Area



CO_2 injection should also be possible in shallower sandstone and carbonate layers in the region

Rose Run Sandstone (~7800 feet) is a regional candidate zone in Appalachian Basin

A high permeability zone called the “B zone” within Copper Ridge Dolomite has been identified as a new injection zone in the region

Mount Simon Sandstone/Basal Sand - the most prominent reservoir in most of the Midwest but not desirable beneath Mountaineer site

Distribution - gridSMART^{SM}

gridSMART^{SM}: implementing AEP's vision for the distribution and customer services business in the future, including the development of new customer programs to reduce consumption and peak demand, and a plan to deploy advanced technologies.

- **Enables customers to better manage energy**
- **Improves service to our customers by enhancing customer choice and customer control**
- **Improves efficiency**
- **Integrates distributed energy resources into our grid**
- **Transforms the way we do business**

Capital Investment, Subject to Regulatory Approval *
$ in millions

Technology	2008	2009	2010
Metering & Communications	$83	$138	$146
Distribution Technology Enhancements	$40	$ 63	$ 82

*$472MM of the $552MM not in current forecast; spending contingent upon regulatory approval

AEP will continue to be an industry leader in deploying advanced technology on a commercial scale. $552MM capital investment by 2010, subject to regulatory approval

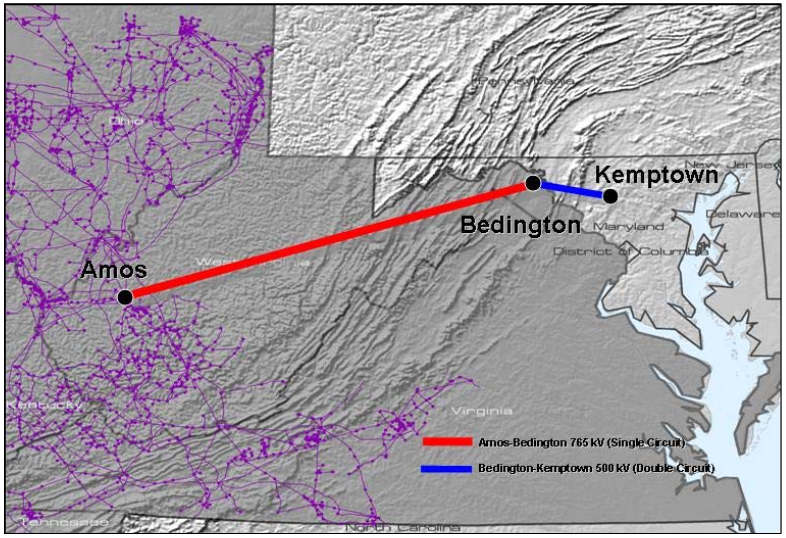
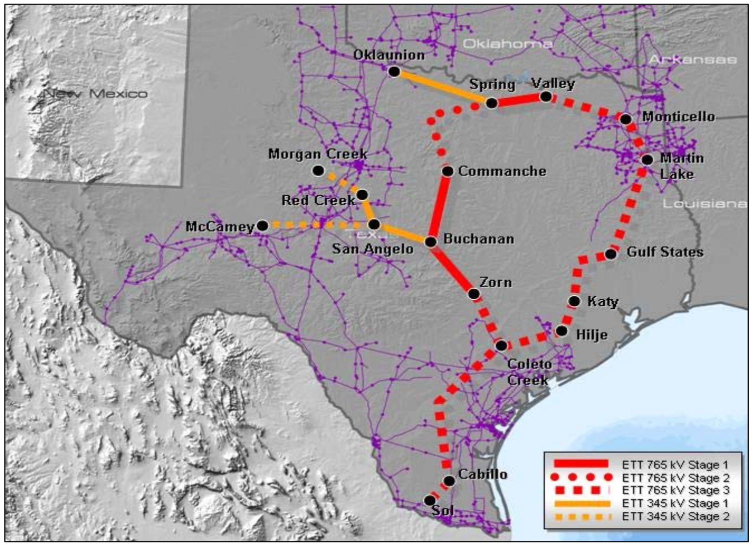
I-765™ Transmission: Investment Opportunities

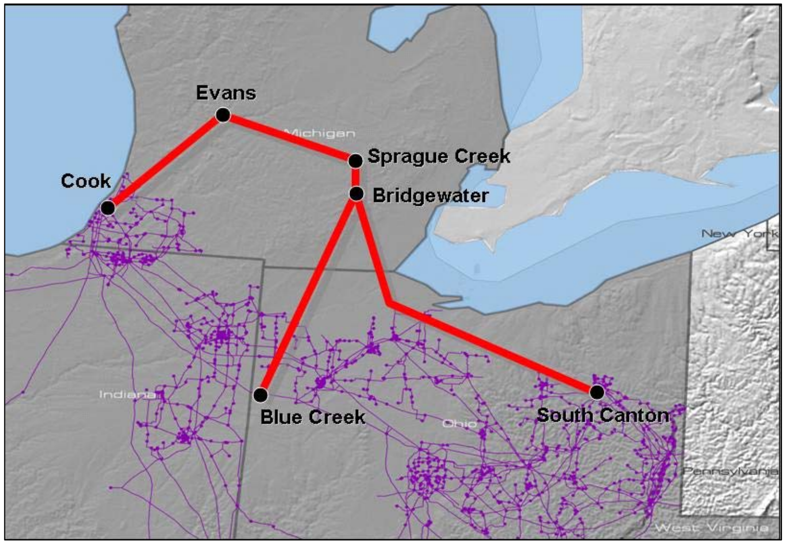
AEP is Advancing the Development of a National Interstate Today



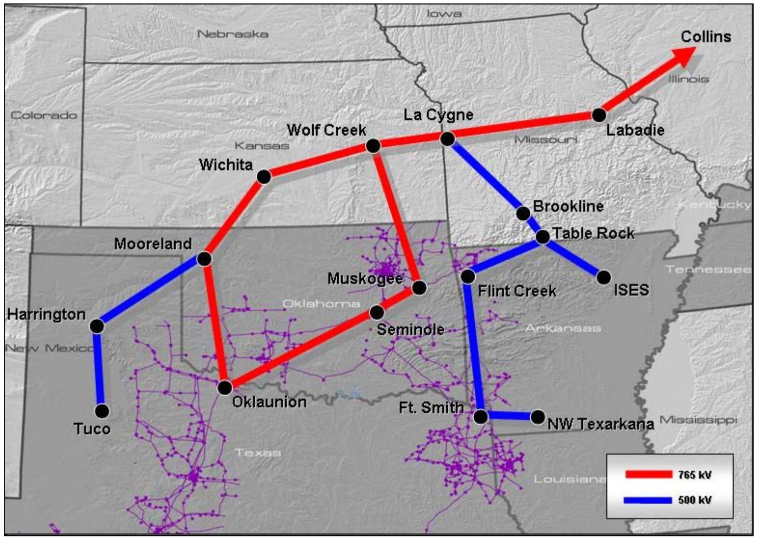
PATH Project (PJM)



ETT Proposal (ERCOT)



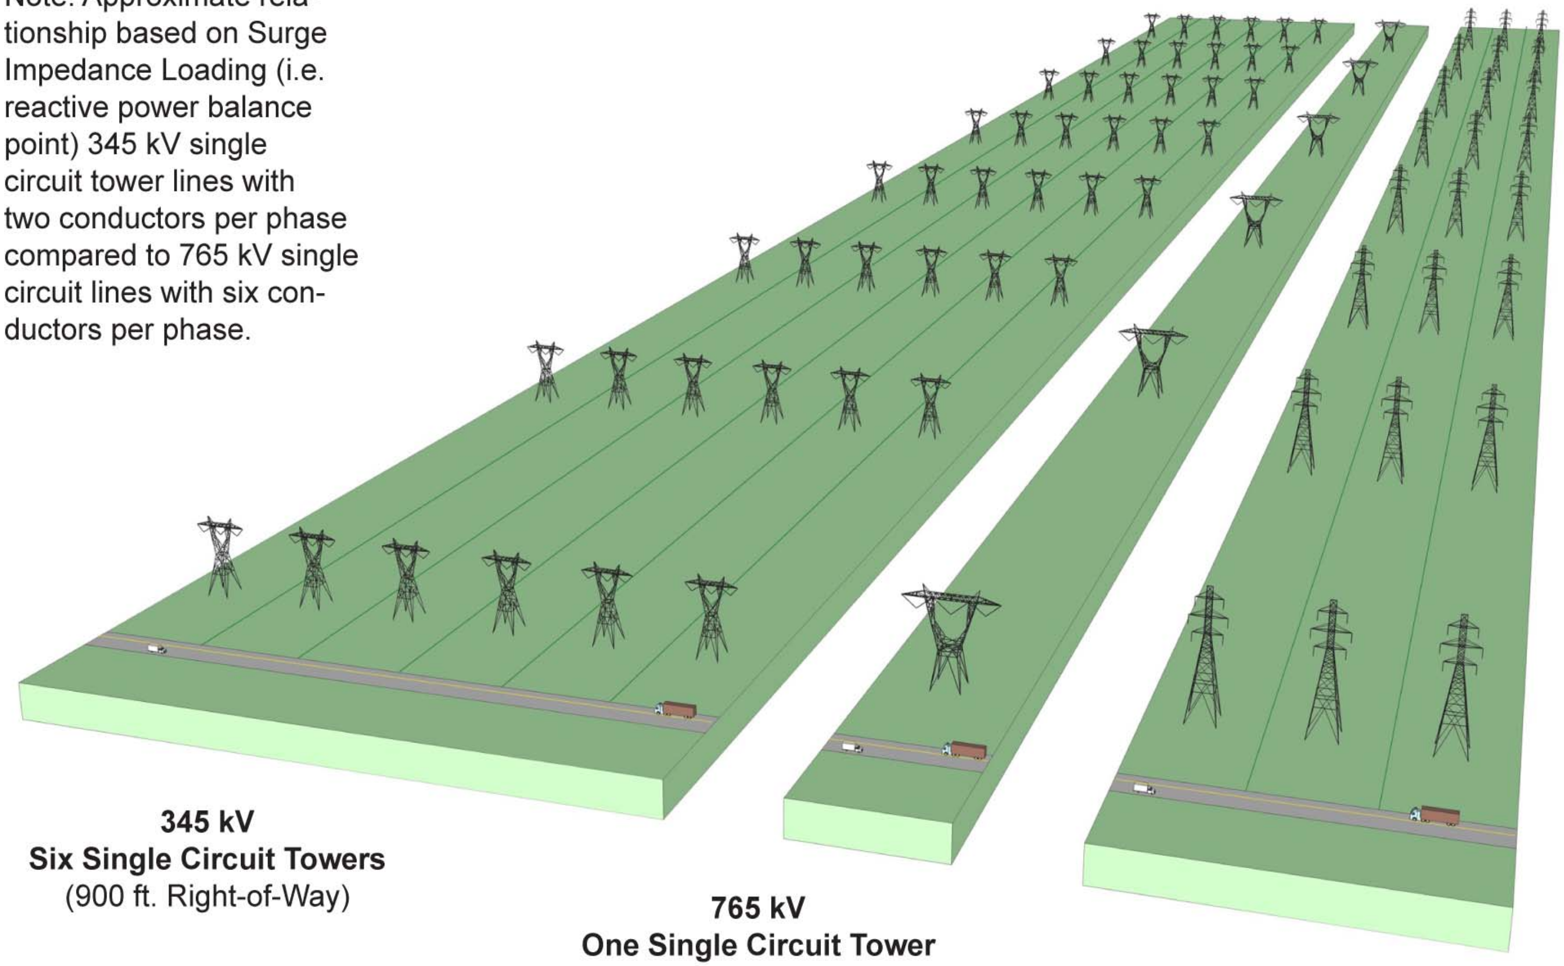
AEP-ITC Michigan Proposal (PJM/MISO)



SPP Overlay Study

765 Right-of-Way Comparison

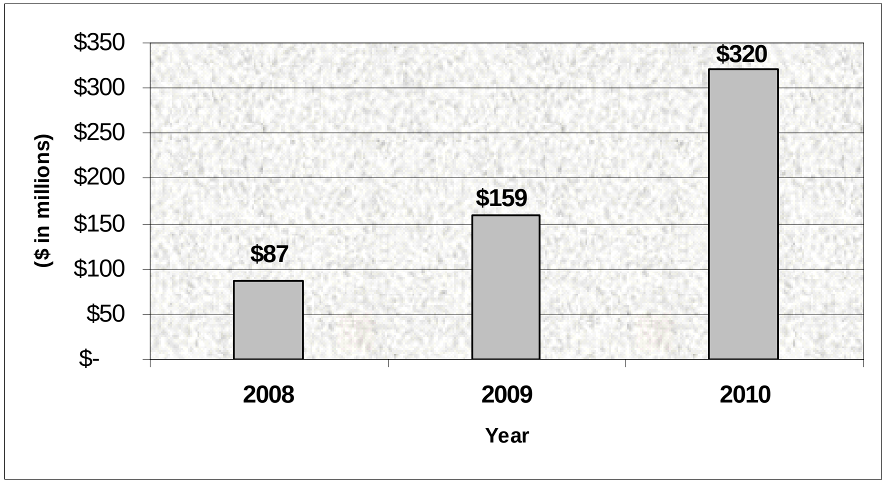
Note: Approximate relationship based on Surge Impedance Loading (i.e. reactive power balance point) 345 kV single circuit tower lines with two conductors per phase compared to 765 kV single circuit lines with six conductors per phase.



From a siting standpoint, 765-kV is more efficient in terms of economies of scale and right-of-way than lower capacity lines.

Transmission – Investments and Earnings Contributions

Projected Transmission Capital Spending*

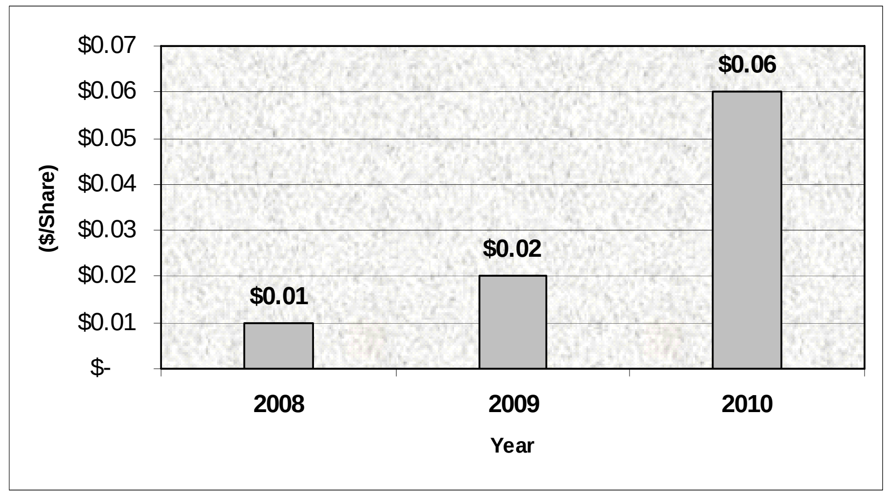


* ETT and PATH joint ventures included in above projection. Amounts represent AEP's 50% share of total transmission joint venture capital expense. These amounts are excluded from AEP's base capital forecast because the joint ventures are not consolidated for financial reporting purposes. AEP will be responsible for funding 40-50% of these amounts with equity contributions, and the remainder will be financed with debt issued by the joint ventures.

ETT Electric Transmission Texas

PATH Potomac-Appalachian Transmission Highline

Projected Transmission EPS Contributions*



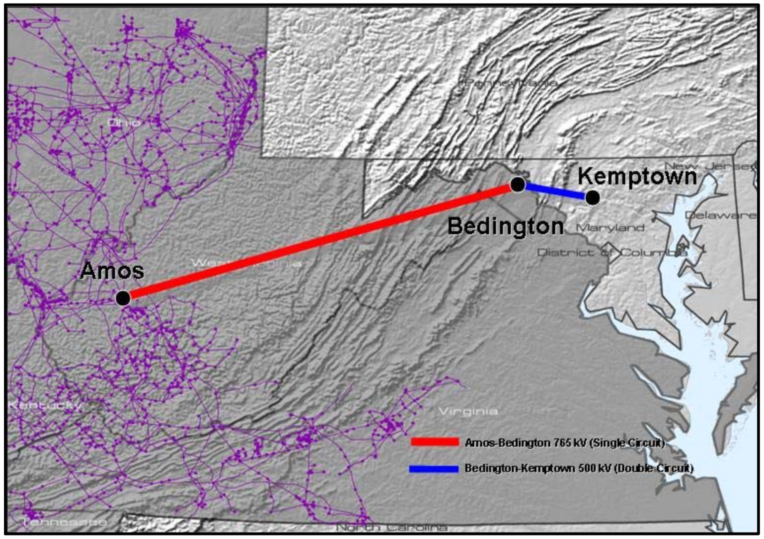
* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

Transmission will provide a near and long term catalyst for growth.

I-765™ Transmission in PJM: PATH

Execution in Action

- *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries -- to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
  - Completed FERC Filing – December 2007; FERC order issued on February 29, 2008 approving:
    - *cash return on CWIP*
    - *14.3% ROE*
    - *recovery of all costs incurred prior to the time rates go into effect, and*
    - *recovery of all prudently incurred development and construction costs if the project is abandoned.*
  - FERC ordered the formula rate issue be set for hearing, pending settlement judge procedures



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

- *Funding Plans/Transaction Structure*
  - AEP and Allegheny share ownership of Amos – Bedington line and contribute equally to this portion of the project through PATH West Virginia Transmission Company, LLC
  - AEP's investment will be held in the AEP Transmission Holding Company LLC subsidiary
  - Project corridor was included in the DOE's National Interest Electric Transmission Corridor
- *Key Next Steps*
  - Siting Approval – Fall 2009
  - Targeted Completion – 2012

PATH
Potomac-Appalachian Transmission Highline

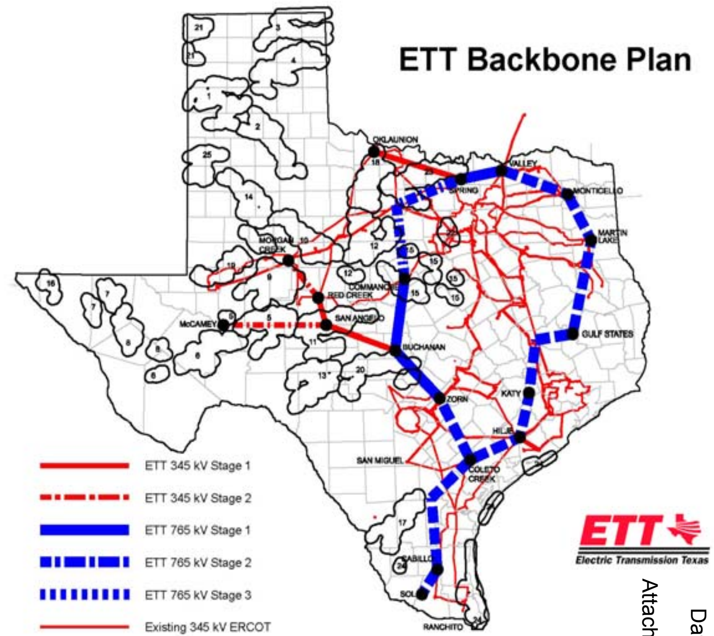
I-765^{TM} Transmission in Texas (ETT)

Electric Transmission Texas Update

- ***Transaction Structure***
  - 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
  - ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
  - Services provided by AEP and investment opportunities can be offered by either partner

- ***Next Steps***
  - ETT project opportunities to be evaluated on a case by case basis
  - Anticipate offering projects in Q2 2008

- ***ETT ERCOT Backbone Proposal***
  - ETT proposal for ERCOT and PUCT to consider CREZ transmission in context of long-term vision for transmission system.
  - Current 5-year planning horizon results in higher ultimate costs, lower system efficiency.
  - Long-term 15-20 year perspective provides better plan, supports development of high voltage backbone at 765-kV.
  - $4.2 billion investment (long-term backbone).*



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

* Before ownership division.

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 6363 of 9556

Electric Transmission America (ETA)

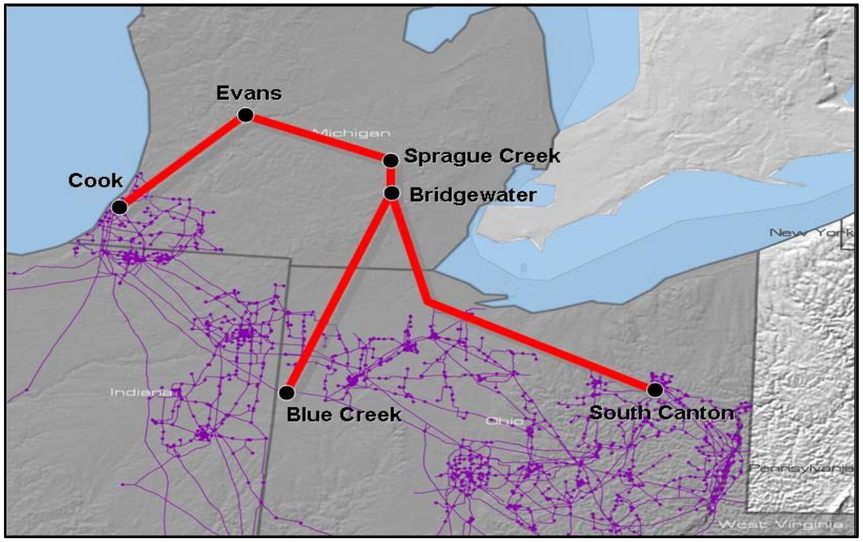
- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.

ETA reflects a natural progression and expansion of AEP's partnership with MidAmerican.

I-765™ Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
  - Study was released Q3 2007
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.6 billion investment (before ownership division)
  - AEP and ITC are in discussions to form a Joint Venture
- *Benefits*
  - Up to 5,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- *Next Steps*
  - Agreement on JV (AEP/ITC) Q2 2008
  - JV Formation - 2008
  - MISO and PJM Review/Approval - 2008
  - FERC Filing - Fall 2008
  - Siting Approval – Fall 2010
  - Estimated Completion – Fall 2015

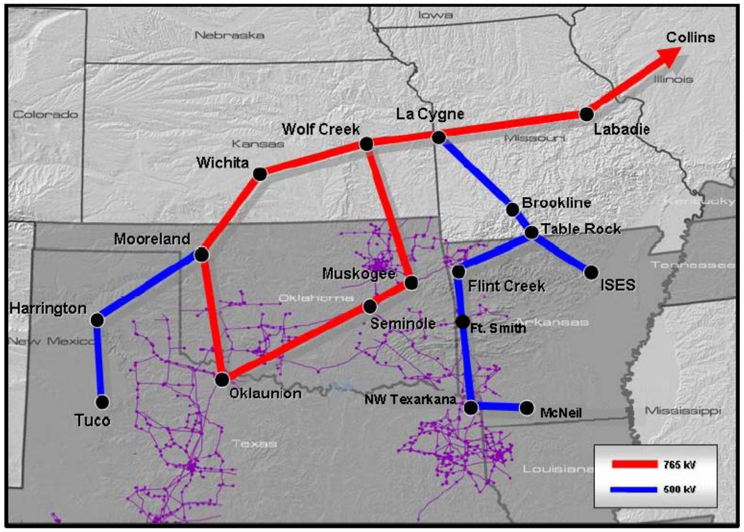


The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

I-765™ Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- ### *Overview*
  - July 2006 AEP submitted conceptual project for six 765-kV lines
  - Proposed 765-kV Kansas / Oklahoma / Arkansas connecting to MISO/PJM
  - 610 miles from Kansas to Arkansas
  - SPP proposes 765-kV in Texas / Oklahoma / Kansas / Missouri connecting to MISO/PJM
  - SPP also proposes 500-kV in Texas / Oklahoma / Arkansas / Missouri
  - $3.0 billion investment (before ownership division)
  - Proposed 2012-2017 construction period
- ### *Benefits*
  - 4,000 MW improved transfer capability
- ### *Next Steps*
  - Study Disclosure – Completed 2Q 2007
  - JV Formation (ETA) – Completed 3Q 2007
  - SPP 10-year Expansion Plan Issued – December 2007
  - SPP RTO/BOD EHV Overlay Approval – 2Q 2009
  - SPP RTO FERC Filing – 3Q 2009
  - Siting Approval – 3Q 2011
  - Estimated Completion – 3Q 2017



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Regulatory Activity Underway

- Ohio Post 2008
- I&M - Indiana Base Rate Case
- PSO Storm Cost Recovery Filing
- PSO Red Rock Generating Facility Cost Recovery Filing
- SPP OATT Formula Rate Filing
- New Generation:
  - IGCC Filing in Virginia and West Virginia for Certificate of Need and approval of a cost recovery mechanism
  - IGCC Phase 2 Filings in Ohio on Hold Pending Resolution of Supreme Court Challenge of PUCO's authority
  - SWEPCo Turk Plant Filings in Louisiana and Texas
  - SWEPCo Stall Plant Filings in Louisiana and Arkansas

Regulatory Activity Underway

Ohio Post-2008

- On August 29, 2007, the Ohio Governor submitted legislation (SB221) that would restructure the regulation of Ohio's electric industry.
- Hearings on the legislation began on September 26, 2007 in the Ohio Senate and continued through the end of October.
- On October 25, 2007, the substitute version and associated amendments were incorporated into SB221.
- Full Senate vote occurred October 31, 2007. SB221 passed 32-0.
- Presented to House Public Utilities Committee on November 7, 2007; Hearings continue and we anticipate a signed bill in March or April of 2008.

Summary Rate Case Information

I&M Indiana General Rate Case

On January 31, 2008, I&M filed a general base rate case with the Indiana Utility Regulatory Commission (IURC) requesting an increase of $128.5 million ($82.4 million in base revenues and $46.1 million in tracker mechanisms). (Docket #: 43306).

Projected Capital Structure - Company Position (9/30/07)

Regulatory Activity Underway

PSO Storm Cost Recovery Filing

- On October 24, 2007, PSO filed an application with the Oklahoma Corporation Commission to defer, amortize and recover costs related to a severe January 2007 winter storm. PSO requests the Commission to direct it to establish a regulatory asset of approximately $13 million reflecting the future recovery of these costs, and to amortize the regulatory asset as PSO realizes proceeds from the sales of sulfur dioxide (SO_2) emission allowances.
- Staff and intervenor testimony was filed January 17, 2008 and a settlement agreement has been signed and filed with the OCC. The settlement allows for the deferral of approximately $83 million related to both the January and December 2007 ice storms. A portion of the deferral would be amortized against gains on sales of allowances with the remainder collected from customers over a five-year period beginning in October 2008. An ALJ approved the settlement in February 2008 and we anticipate an order in late March or early April 2008.

PSO Red Rock Generating Facility Recovery Filing

- On December 28, 2007, PSO filed an application with the Oklahoma Corporation Commission to defer, amortize and recover costs related to the Red Rock Generating Facility, which was denied construction and recovery pre-approval in October 2007.
- PSO requests the Commission make a determination that the costs incurred on the Red Rock project were prudent and direct it to establish a regulatory asset of approximately $21 million reflecting the future recovery of these costs, and to amortize the regulatory asset as PSO realizes proceeds from the sales of SO_2 emission allowances.
- The procedural schedule in this case has been suspended pending the outcome of the storm cost recovery. Once an order in that case is issued, additional cost recovery testimony likely will be filed and a new procedural schedule established.

Regulatory Activity Underway

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $140MM. Approximately $10MM of the increase relates to 3rd party and the rest, if approved would be recovered through retail jurisdictional filings in SWEPCo and PSO, as appropriate.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to February 1, 2008, with rates subject to refund.
- Technical conferences and settlement meetings were held in October – December 2007. Settlement discussions are currently on-going. Intervenors and AEP will meet on March 11, 2008 to review any additional issues and report back to the settlement judge on the status of the settlement discussions.

Regulatory Activity Underway

APCo Mountaineer IGCC Filing

West Virginia

- Testimony filed with the West Virginia Public Service Commission on June 18, 2007 in support of APCo's application for a Certificate of Public Convenience and Necessity to construct a 629MW IGCC plant in WV at a cost of approximately $2.23 billion.
    - Testimony includes a proposal for the Commission to approve a cost recovery mechanism through the existing Expanded Net Energy Cost (ENEC) mechanism. The filing is not a formal proposal to adjust rates.
    - Actual requests for increased rates will be included in future filings, once construction of the plant has commenced and actual Construction Work In Progress data is known.
- Staff and Intervenor testimony was filed November 19, 2007 and hearings were held December 10-12, 2007. An order is due by March 6, 2008.

Virginia

- Testimony filed with the Virginia State Corporation Commission on July 16, 2007 seeking a prudence determination and approval to recover, beginning in 2009, Virginia's share of the carrying costs associated with the proposed plant.
- Intervenor testimony was received December 10, 2007 and Staff testimony was received on January 18, 2008. Public hearings commenced February 12, 2008. We expect an order in April 2008.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.
- Oral arguments regarding this matter were conducted at the Ohio Supreme Court on October 9, 2007. It is likely the court's decision will not be announced until some time in the first quarter of 2008.

Regulatory Activity Underway

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- The PSC issued its order on November 21, 2007, approving construction of the plant.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The peaking facility has been addressed and the intermediate facility is under review. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- Public hearings commenced September 11, 2007. A positive ALJ report was issued on February 8, 2008 recommending approval of the plant. An order is expected in March 2008.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- Public hearings commenced October 17, 2007. On January 17, 2008, the ALJ recommended the PUCT deny the request. A final order is expected on March 27, 2008.

Regulatory Activity Underway

SWEPCo Stall Plant Filings

Arkansas

- Proceeding is currently suspended pending outcome in Louisiana.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The intermediate facility, known as the Stall Plant and sited in Shreveport, LA, was bifurcated from the original filing and had a procedural schedule established on January 9, 2008.
- Staff and intervenor testimony was completed on February 15, 2008, rebuttal testimony was due February 29, 2008 and hearings will commence on April 7, 2008. Staff testimony was favorable.

Texas

- PUCT order approving plant was issued on March 8, 2007.

Rate Base & Approved ROEs

Jurisdiction	Rate Base	Approved ROE	Effective Date
APCo - Virginia	$2,022MM	10.00%	10/2/2006

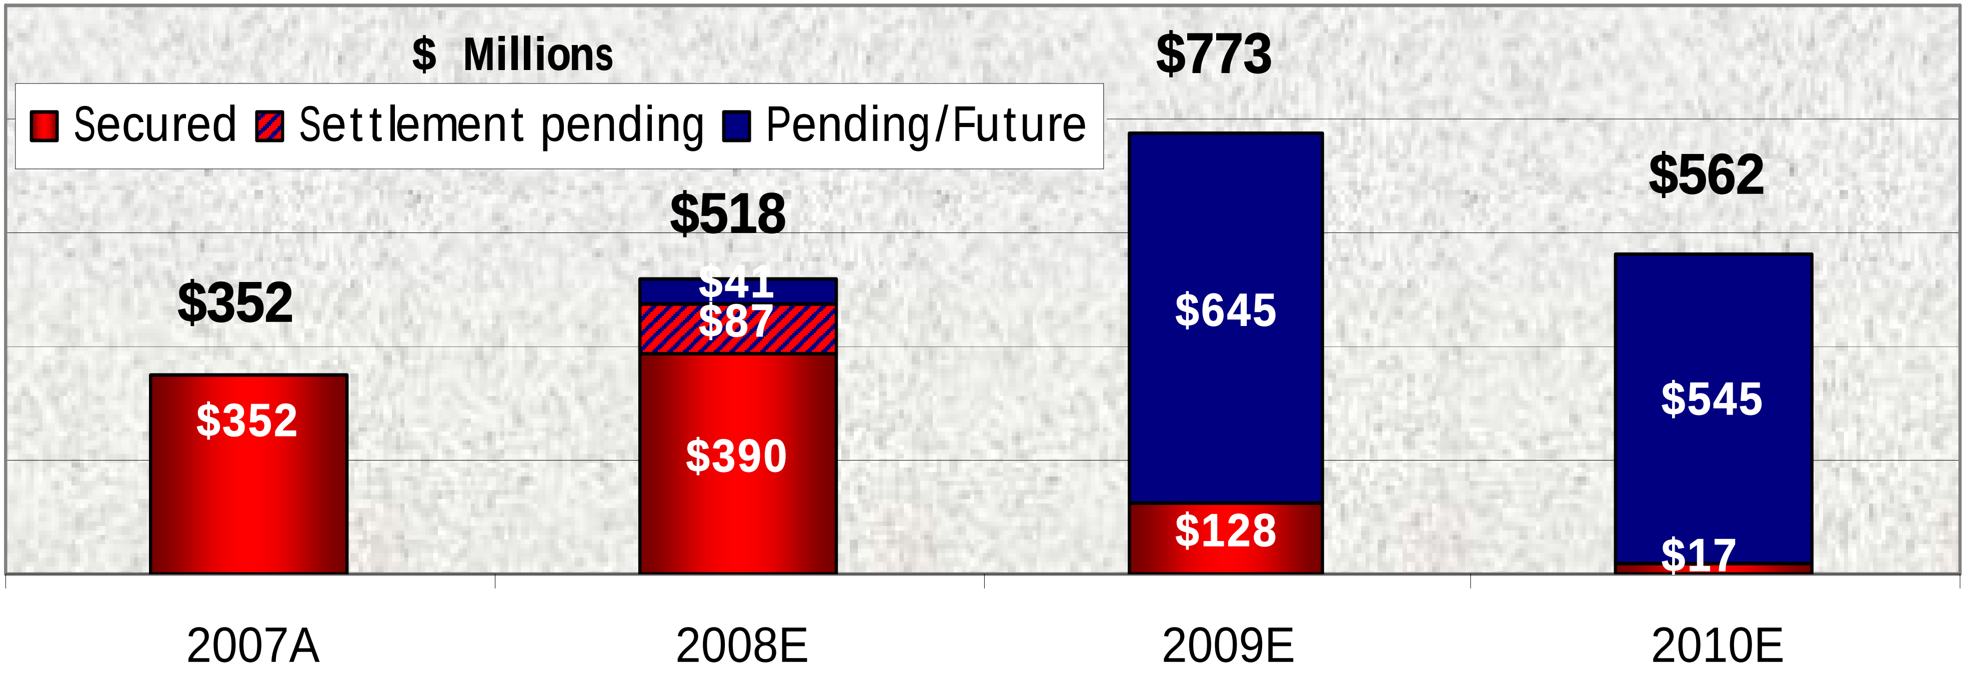
Incremental Rate Relief Assumptions



- **75% of 2008 Rate Relief Secured: I&M Depreciation, APCo – WV Surcharge, TCC & TNC General Rate Cases, Ohio RSP (3% & 7%), PSO Peaking Generation & General Rate Case, Ohio 4% Generation Rider and Marginal Loss Recovery, APCo – Virginia Fuel Factor, 2007 TCC/TNC TCRF filings.**
- **17% of 2008 Rate Relief Settlement Pending: Uncontested settlement approved by an ALJ on February 29, 2008 for the PSO January and December 2007 Ice Storm Recovery; OCC approval pending**
- **2008 Pending: SWEPCo – LA Financial Review, 2008 TCC/TNC TCRF filings, other cases yet to be filed.**

Our goal is to maximize utility company cash flow and returns by minimizing regulatory lag.

Commitment to Credit Quality

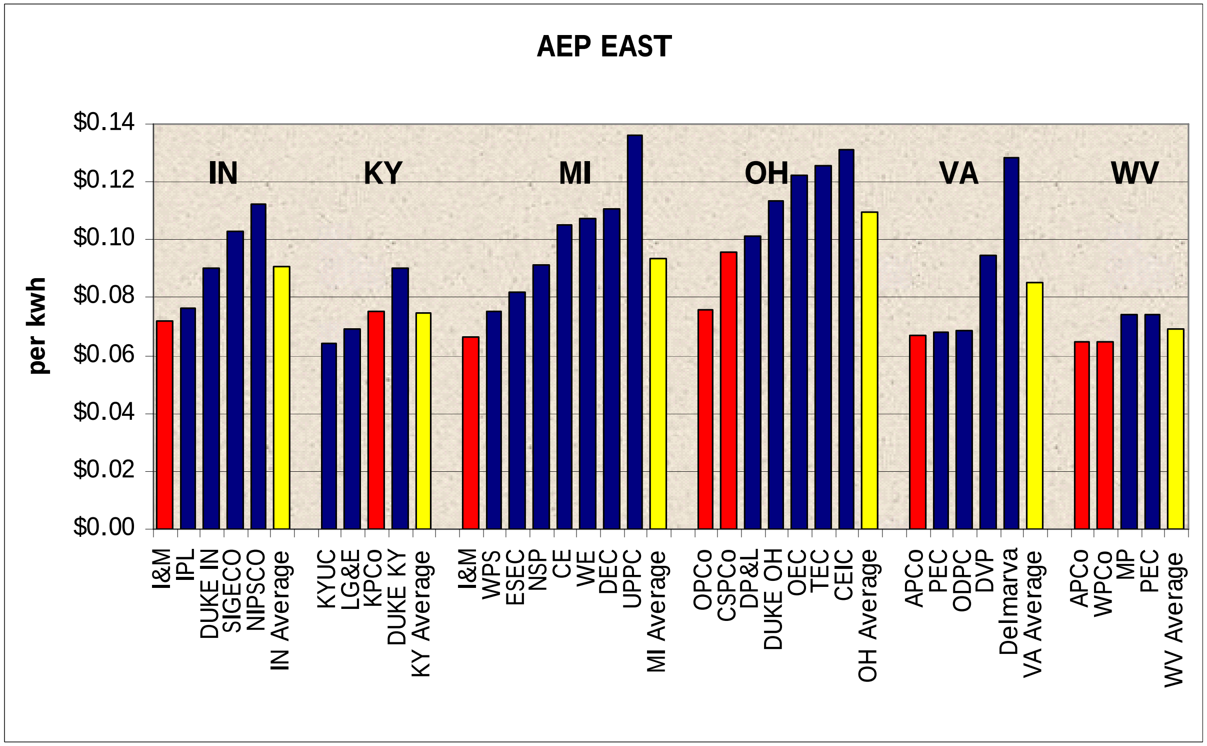
- Maintain adequate liquidity
- $150MM annually in new equity from Dividend Reinvestment and 401(k) plans
- Target 60% maximum consolidated AEP debt/cap ratio on an adjusted basis
- Target utility company capitalization structures:

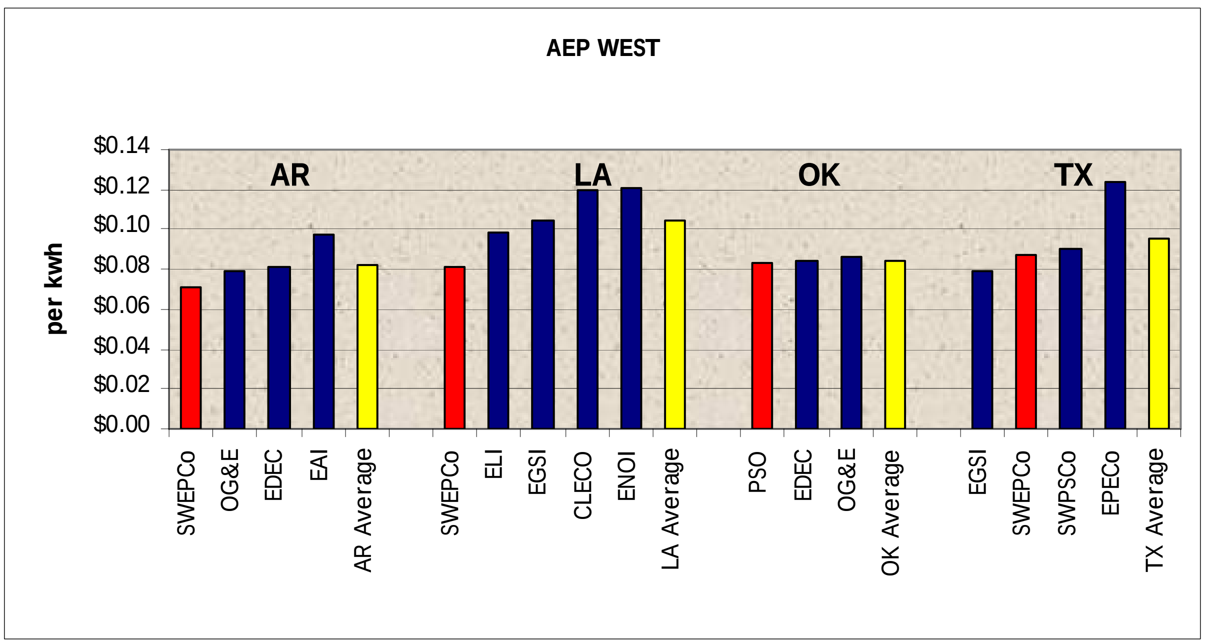
Company	Target Equity Ratio
APCo	42-44%
CSP	45-47%
I&M	40-42%
KPCo	41-43%
OPCo	44-46%
PSO	43-45%
SWEPCo	43-45%
TCC	40%
TNC	40%

- Target long term dividend payout ratio range of 55-60%
- Maintain adequate coverage ratios to support current credit ratings

We are committed to maintaining our current credit ratings.

AEP Provides Low Cost Electric Service





Residential Average rates for 1,000 kWh - 12 months ended 7/01/2007

Source: Summer 2007 EEI Typical Bills and Average Rates Report

AEP's low cost provider status in most of its jurisdictions will allow AEP's pricing to remain competitive following anticipated rate increases

Strategic Direction & Financial Outlook

W New York Union Square
October 4, 2007

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

STRATEGIC DIRECTION & FINANCIAL OUTLOOK

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

STRATEGIC DIRECTION & FINANCIAL OUTLOOK

Michael G. Morris
Chairman, President & CEO

Agenda

- 2007 Delivered Results & Strategic Direction
- Sustainable Capital Investment Opportunities
  - Near-term: Environmental, New Generation & GridSMART
  - Long-term: Transmission, Advanced Generation & CO_2
- Capital Investment and Regulatory Strategy Inextricably Linked
  - AEP Regulatory Strategy: Reduce Lag
  - Ohio Post-2008
- 2007-2010 Financial Forecast
  - Increase growth rate target range to 5%-9%
- 2007–2010 Capital Investment Projections and Funding
- 2008 Earnings Guidance and Details
  - Includes proposed dividend increase

2007 Delivered Results

Accomplishments:

- ✓ **Acquisition of low-cost generation to meet capacity demand**
  - Darby—480MW simple cycle ($227/kW)
  - Lawrenceburg—1,140MW combined cycle ($295/kW)
  - Dresden—580MW combined cycle (currently under construction); anticipated all-in cost $600-$700/kW
- ✓ **Brought SWEPCo's Mattison Units 3&4 (150MW) on-line July 2007 (~$380/kW)**
- ✓ **Completed installation of scrubbers at Mitchell & Mountaineer**
- ✓ **Continued progress on transmission opportunities**
  - Obtained PJM approval of Potomac-Appalachian Transmission Highline
  - Formed joint venture with Allegheny Energy to construct the PATH
  - Formed joint ventures with MidAmerican Energy for ETT & ETA
  - Completed technical study with ITC for 765-kV in Michigan and continue to investigate the feasibility of forming a joint venture to develop the project
- ✓ **Secured to-date $302MM of $338MM of 2007 rate relief projections**
- ✓ **On track to deliver 5%-7% growth rate in 2007**

AEP continues track record of capital investment, regulatory approvals and earnings growth.

AEP Strategy

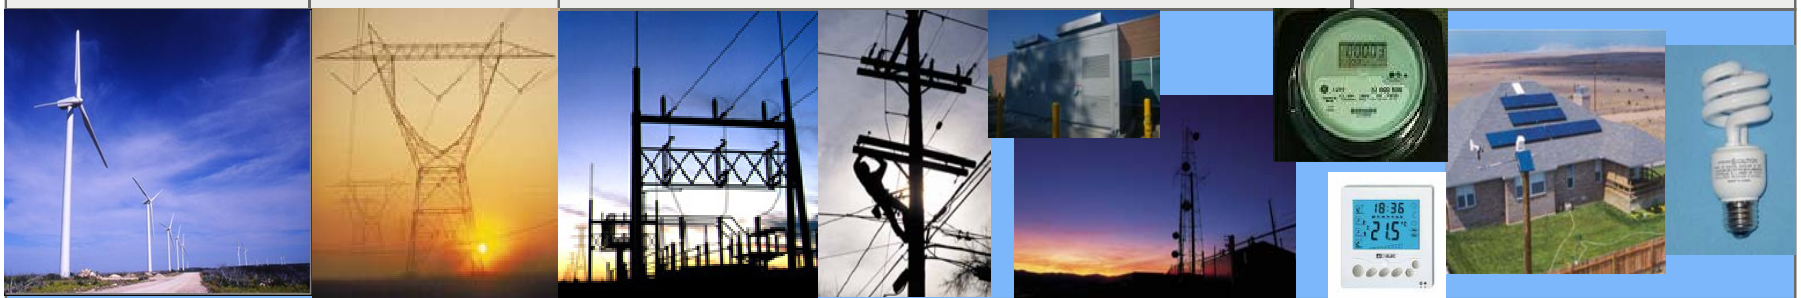
Strategy: grow our core utility business at a consistent rate through major investment supported and funded by innovative programs for regulatory recovery as well as develop our independent, federally regulated Transmission Company for the pursuit of new major interstate projects.

Our Focus:

- Prepare for transition to market in Ohio
- Invest in and evolve infrastructure to support future technology and customer needs focused on efficiency, conservation and load management
- Enhance cash flow & earnings through rate recovery mechanisms
- Take advantage of AEP's size to bring economic savings to our customers while continuing to enhance shareholder value through regulatory-supported investment and operational excellence

Sustained capital investment opportunities support earnings growth.

Vision for Sustainability



Generation	Transmission	Distribution	Customers

Total Capex	Total Capex	$1,727

* - intended to source requirements to be met by Red Rock Plant prior to cancellation.

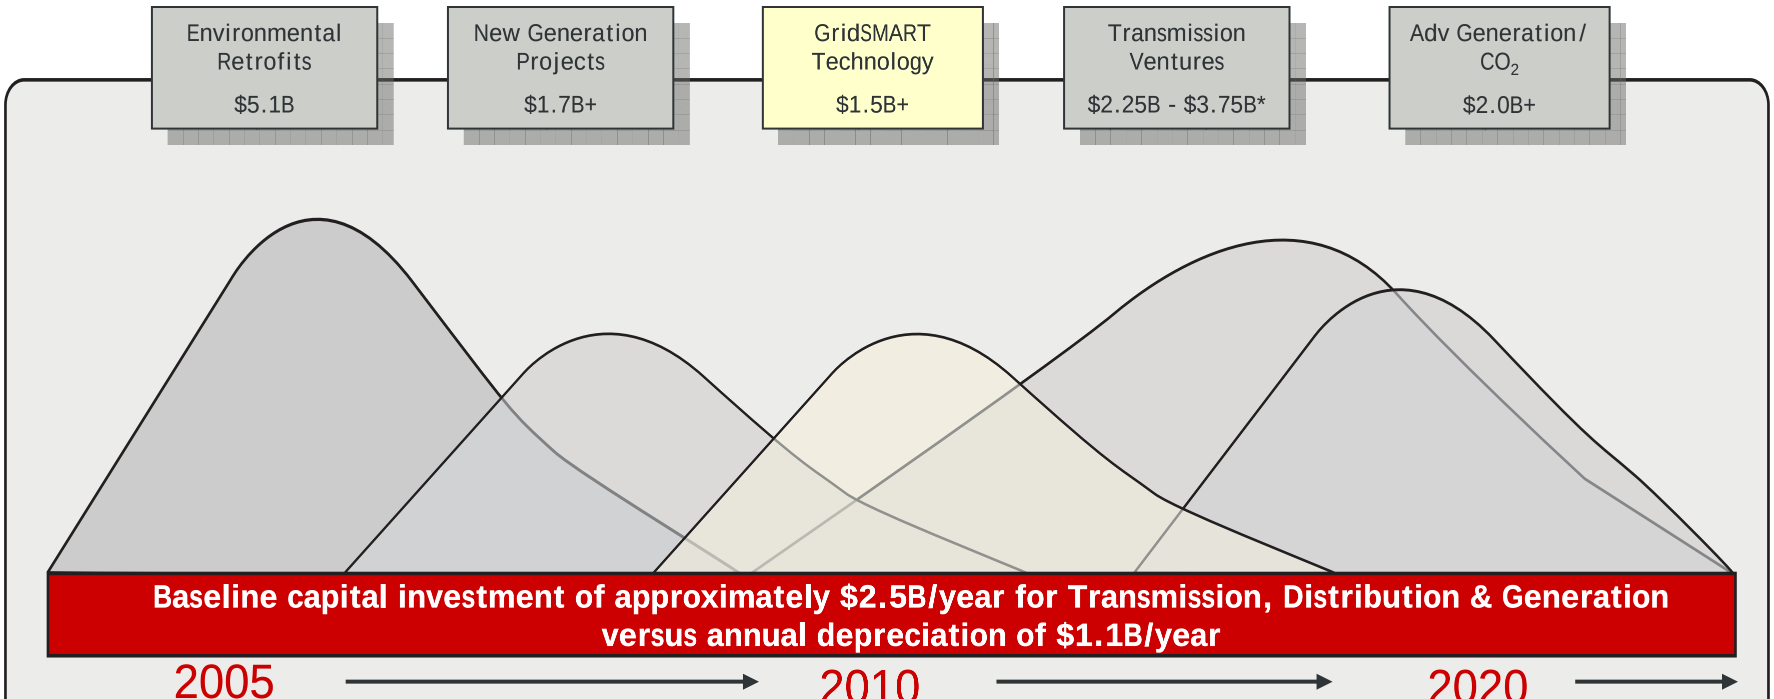
Additional Recovery Mechanisms Under Consideration:

- Formula based rates
- Requests for return on CWIP
- Current and future rate cases

AEP®

Investment Opportunity: GridSMART

Capital Investment – Consistent Waves of Opportunity



Note: This slide represents current capital investment plans as well as future capital investment opportunities. For current capital investment guidance through 2010, please refer to slide 33. *The Transmission opportunity is shown utilizing anticipated JV ownership structure.

Modernization of our transmission and distribution infrastructure will change how our customers use energy and how we manage demand to economically meet future electric energy needs.

GridSMART

AEP Vision

- AEP is moving technology out of the laboratory and into real-world applications
- Aggressive goals:
  - 25 MW NaS battery installations by 2010
  - 1,000 MW demand reduction by 2012
  - 5 million smart meters by 2015

AEP Leadership

- **Environmental:** AEP's fleet includes hybrids
- **Efficiency and Conservation:** DOE Transformer Efficiency Initiative and participation in the Clinton Global Initiative
- **Education:** AEP Foundation's support of the National Energy Education Development (NEED) Project and Change-a-Light Program
- **Technology:** High temperature superconductors, micro grid test bed and extra-high voltage transmission advances

AEP's Collaboration with Others

- NGK (NaS battery) & Rolls Royce (fuel cells)
- Collaboration with GE to demonstrate the distribution/customer service business of the future

Modernization of our distribution infrastructure will change how we manage the flows of information and electricity across the energy value chain to optimize overall performance and prepare for the future.

AEP-GE Initiative

We will deploy smart meters, distribution automation and the associated enhanced technology resulting from the collaboration with GE in two regions by the end of 2008 -- representing approximately 200,000 customers.

By integrating customers and their end use technologies into the daily operation of the grid, we can collaborate to optimize supply and demand and improve energy efficiency and environmental sustainability.

Our agreement with GE is a winner for our customers, our shareholders and for the environment.

Working Together for a Brighter Future

AEP and GE will collaborate to address the full energy pathway from the power plant to the home.

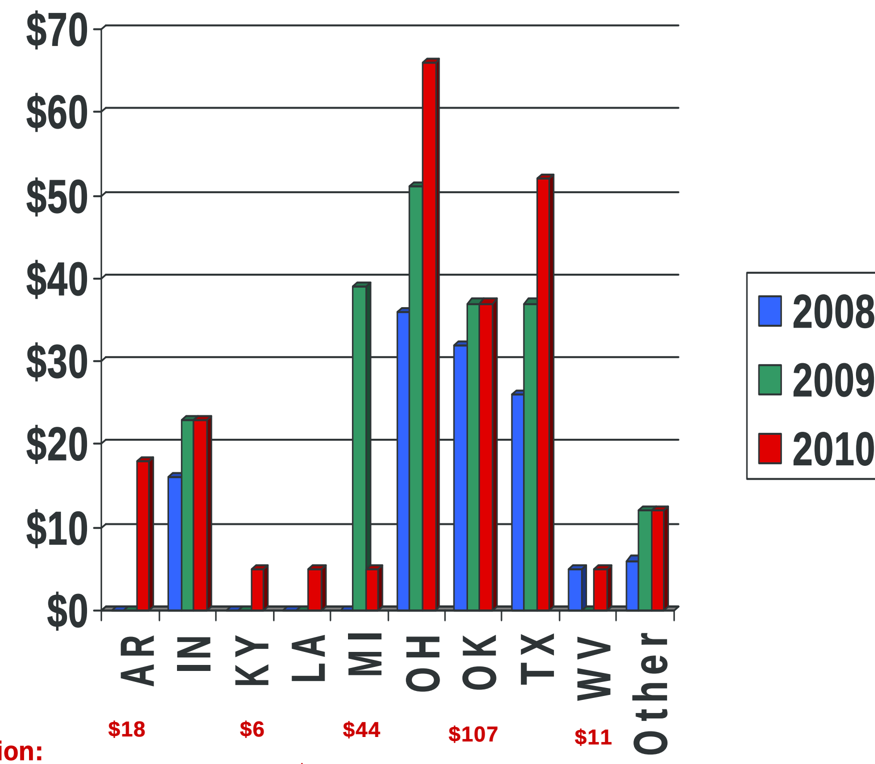
GridSMART

GridSMART: implementing AEP's vision for the distribution and customer services business in the future, including the development of new customer programs to reduce consumption and peak demand, and a plan to deploy advanced technologies.

Capital Investment, Subject to Regulatory Approval * $ in millions				
Technology	**2007**	**2008**	**2009**	**2010**
Metering & Communications	$0	$83	$138	$146
Distribution Technology Enhancements	$2	$40	$ 63	$ 82

*$452MM of the $554MM not in current forecast; spending contingent upon regulatory approval

$ in millions



3-Year Total by Jurisdiction: $18 $62 $6 $5 $44 $153 $107 $115 $11 $31

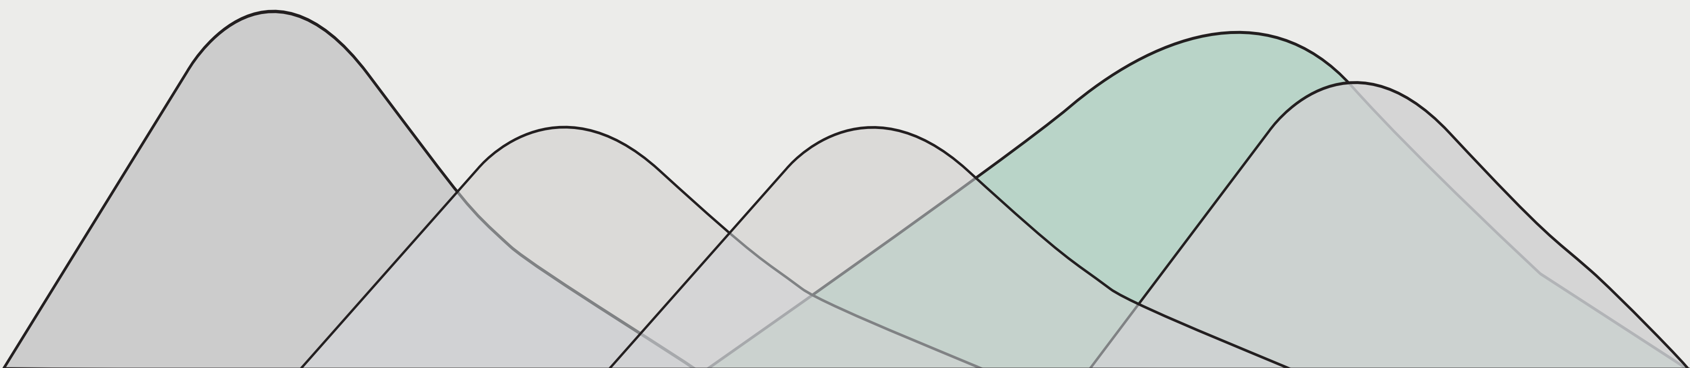
AEP will continue to be an industry leader in deploying advanced technology on a commercial scale. $554MM capital investment by 2010, subject to regulatory approval.

STRATEGIC DIRECTION & FINANCIAL OUTLOOK

Investment Opportunity: Transmission Ventures

Capital Investment – Consistent Waves of Opportunity

Environmental Retrofits	New Generation Projects	GridSMART Technology	Transmission Ventures	Adv Generation/ CO_2
$5.1B	$1.7B+	$1.5B+	$2.25B - $3.75B*	$2.0B+



Baseline capital investment of approximately $2.5B/year for Transmission, Distributon & Generation versus annual depreciation of $1.1B/year

2005 → 2010 → 2020 →

Note: This slide represents current capital investment plans as well as future capital investment opportunities. For current capital investment guidance through 2010, please refer to slide 33. *The Transmission opportunity is shown utilizing anticipated JV ownership structure.

Today's state of the art high voltage transmission technology optimizes land use, minimizes environmental impacts, and provides the gateway to an interconnected system that is more sustainable, reliable and competitive.

Contribution of Transmission Investments

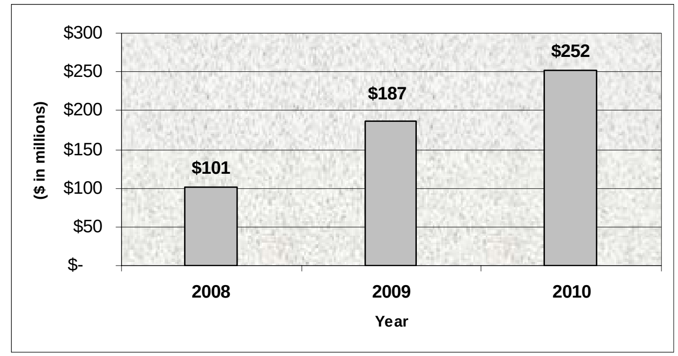
Potential Transmission Opportunities

~ $3 Billion I765™ Project in PJM
~ $2.6 Billion 765-kV study in Michigan w/ ITC
~ $3 Billion Project filed with SPP
~ $1-7 Billion in ERCOT via Electric Transmission Texas, LLC (ETT)

Assumptions

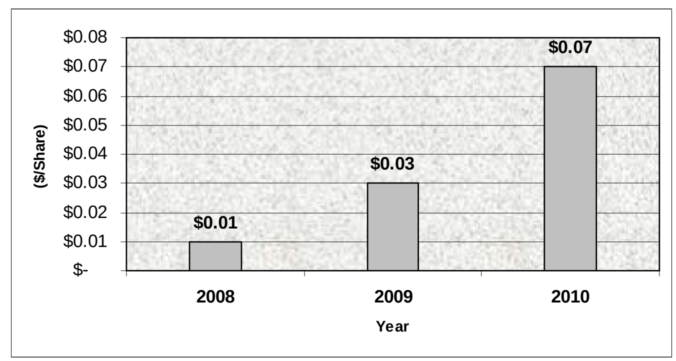
Estimated Investment Opportunity	$9 - $15 Billion
Ownership Structure w/ Partner	50% / 50%
Debt / Equity Ratio	50% debt / 50% equity
Return on Equity	11.00% - 13.00%
Potential EPS Impact (based on 402 MM shares)	$0.60 - $1.00+

Projected Transmission Capital Spending*



* ~$9-$15 billion investment opportunity not included in current capital guidance forecasts, since it will be put into a JV. ETT base case and PATH projects included in above projection.

Projected Transmission EPS Contributions*



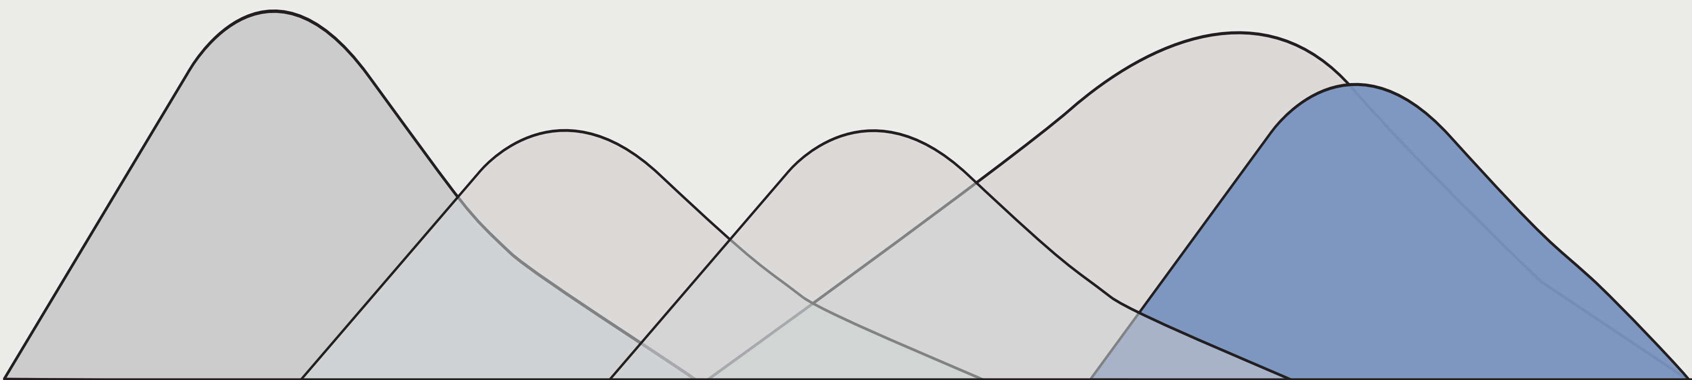
* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

Transmission will provide a near and long term catalyst for growth.

Investment Opportunity: Advanced Generation/CO_2

Capital Investment – Consistent Waves of Opportunity

Environmental Retrofits	New Generation Projects	GridSMART Technology	Transmission Ventures	Adv Generation/ CO_2
$5.1B	$1.7B+	$1.5B+	$2.25B - $3.75B*	$2.0B+



Baseline capital investment of approximately $2.5B/year for Transmission, Distribution & Generation versus annual depreciation of $1.1B/year

2005 → 2010 → 2020 →

Note: This slide represents current capital investment plans as well as future capital investment opportunities. For current capital investment guidance through 2010, please refer to slide 33. *The Transmission opportunity is shown utilizing anticipated JV ownership structure.

New technology keeps coal a sustainable domestic energy resource that is good for the economy, good for the environment, and good for society.

Advanced Generation & CO_2

Near Term:

- Chilled Ammonia project at Mountaineer moving to commercial scale at the Northeastern Plant in 2012

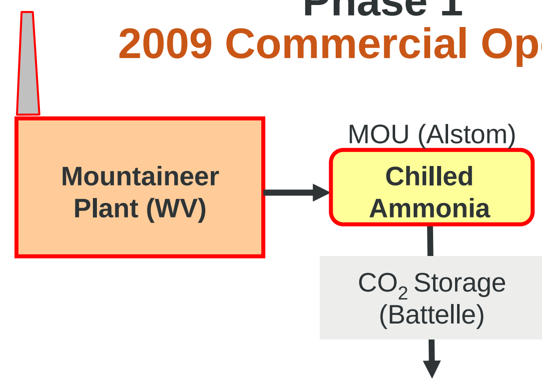
$ in millions				
	2007	2008	2009	2010
Mountaineer Chilled Ammonia Project	$4	$56	$11	$0

Long Term Strategy (Post 2010):

- IGCC
- Oxy Coal Technology
- Chilled Ammonia
- Nuclear COL

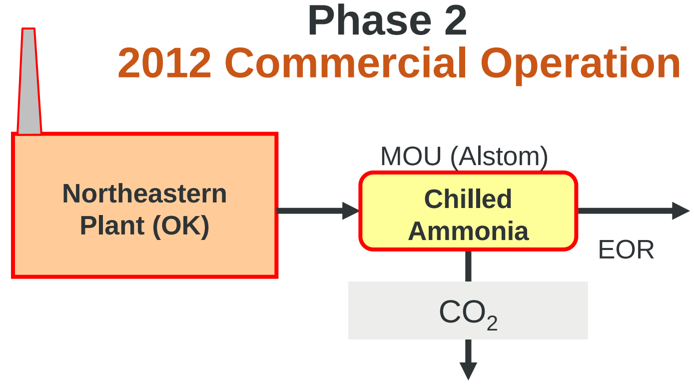
Phase 1

2009 Commercial Operation



Phase 2

2012 Commercial Operation



We are committed to validating and deploying technologies that ensure coal remains a viable resource for AEP and America.

Capital Investment Drives Operating Company Growth

($ in millions)	2007E	2008E	2009E	2010E	Total
APCo	$658	$720	$749	$579	**$2,706**

Note: amounts exclude AFUDC

Capital Investment + Rate Relief = Earnings Growth

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 6400 of 9556

Regulatory Strategy: Reduce Lag

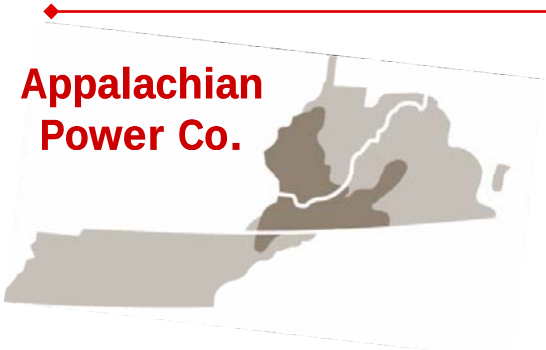
The strategy: reduce the time between in-service dates and rate recovery

- Maximize frequency of filings
  - Seek ability to pro-forma both capital and O&M through date which rates are effective
- Single-issue cost recovery
  - Reliability
  - Vegetation
  - Environmental
- Trackers
  - Federally-approved transmission costs
  - Fuel and emissions
  - ERO compliance costs
  - Off-system sales margin sharing
- Formula rates
- Return on CWIP

Our goal is to maximize utility company cash flow and returns by minimizing regulatory lag.

Regulatory Lag Reduction: East Regulated Utilities

Appalachian Power Co.



Customers: 949,000
Estimated Rate Base: $3.7B *
Estimated 2007 Earnings: $183MM

Indiana Michigan Power Co.

Customers: 582,000
Est. Rate Base: $2.1B *
Est. 2007 Earnings: $130MM

Kentucky Power Co.

Customers: 176,000
Estimated Rate Base: $.9B *
Estimated 2007 Earnings: $27MM

* See Appendix, page 48 for rate base details

Virginia
- Opportunity for one rate case exists before 12/31/08
- E&R rider
- Post 2008 rider for DSM, renewable programs & new generation
- Fuel clause
- OSS margin sharing

West Virginia
- Special construction surcharge permitted
- Fuel clause (ENEC)

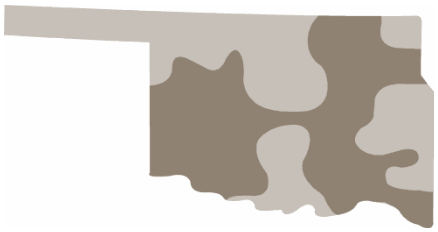
Indiana
- Riders to be requested for DSM, Environmental and RTOs
- CWIP may be approved for clean coal technology projects utilizing Indiana coal or qualified pollution control property via surcharge
- Fuel clause

Michigan
- Return on CWIP can be included in rate base
- Fuel clause

Kentucky
- Environmental surcharge
- Monthly adjustment clauses in place for DSM & fuel
- OSS margin sharing

Regulatory Lag Reduction: West Regulated Utilities

Public Service of Oklahoma

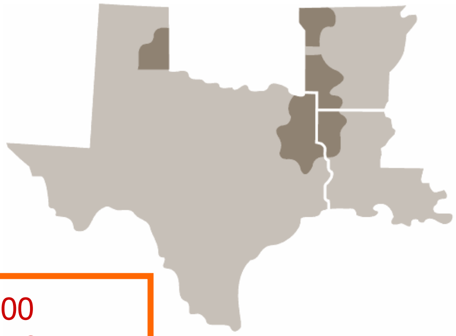


Customers: 520,000
Estimated Rate Base: $1.2B *
Estimated 2007 earnings: $35MM

* See Appendix, page 48 for rate base details

Oklahoma
- Rider mechanisms authorized for vegetation, Lawton Cogen & new peaking facilities after December 2007 in-service date
- Fuel clause
- OSS margin sharing

Southwestern Electric Power Co



Customers: 456,000
Est. Rate Base: $1.3B *
Est. 2007 earnings: $66MM

Arkansas
- CWIP permitted in rate base for plant that is placed in service within 6 months after the test year
- Fuel clause
- OSS margin sharing

Louisiana
- Formula rate plans permitted
- Fuel clause
- Seeking partial CWIP return on new generation projects
- OSS margin sharing

Texas
- CWIP allowed in rate base in some cases
- Fuel clause
- OSS margin sharing

Regulatory Lag Reduction: Texas Wires Business

AEP Texas Central Co & AEP Texas North Co

Customers: 927,000
Estimated Rate Base: $2.1B *
Estimated 2007 earnings: $73MM

* See Appendix, page 48 for rate base details

Texas
- Transmission rider provides annual recovery dependent on the level of transmission investment and ERCOT load growth rates
- AFUDC is permitted in limited circumstances

AEP Texas will synchronize general rate requests with significant rate base changes and benefit from the flexibility of periodic transmission filings.

The AEP Ohio Post-2008 Action Plan

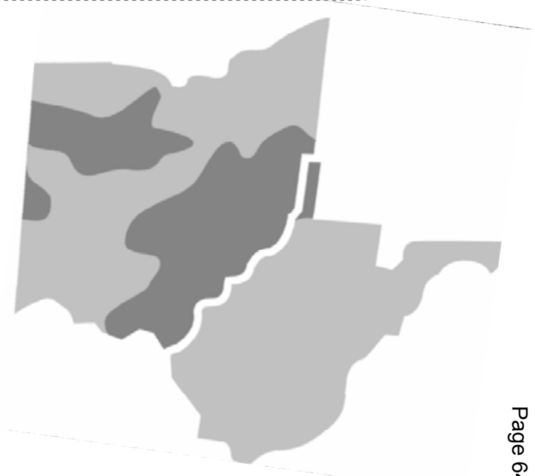
Concurrent pursuit of regulatory and legislative options

- Work for a legislative outcome that:
  - Allows for market pricing or
  - Allows for new Rate Stabilization Plans that reflect a value for generation consistent with market
- If legislation is not forthcoming, work with the PUCO Staff to develop new Rate Stabilization Plans that reflect the market value of generation

Essential elements of Post-2008 Plan

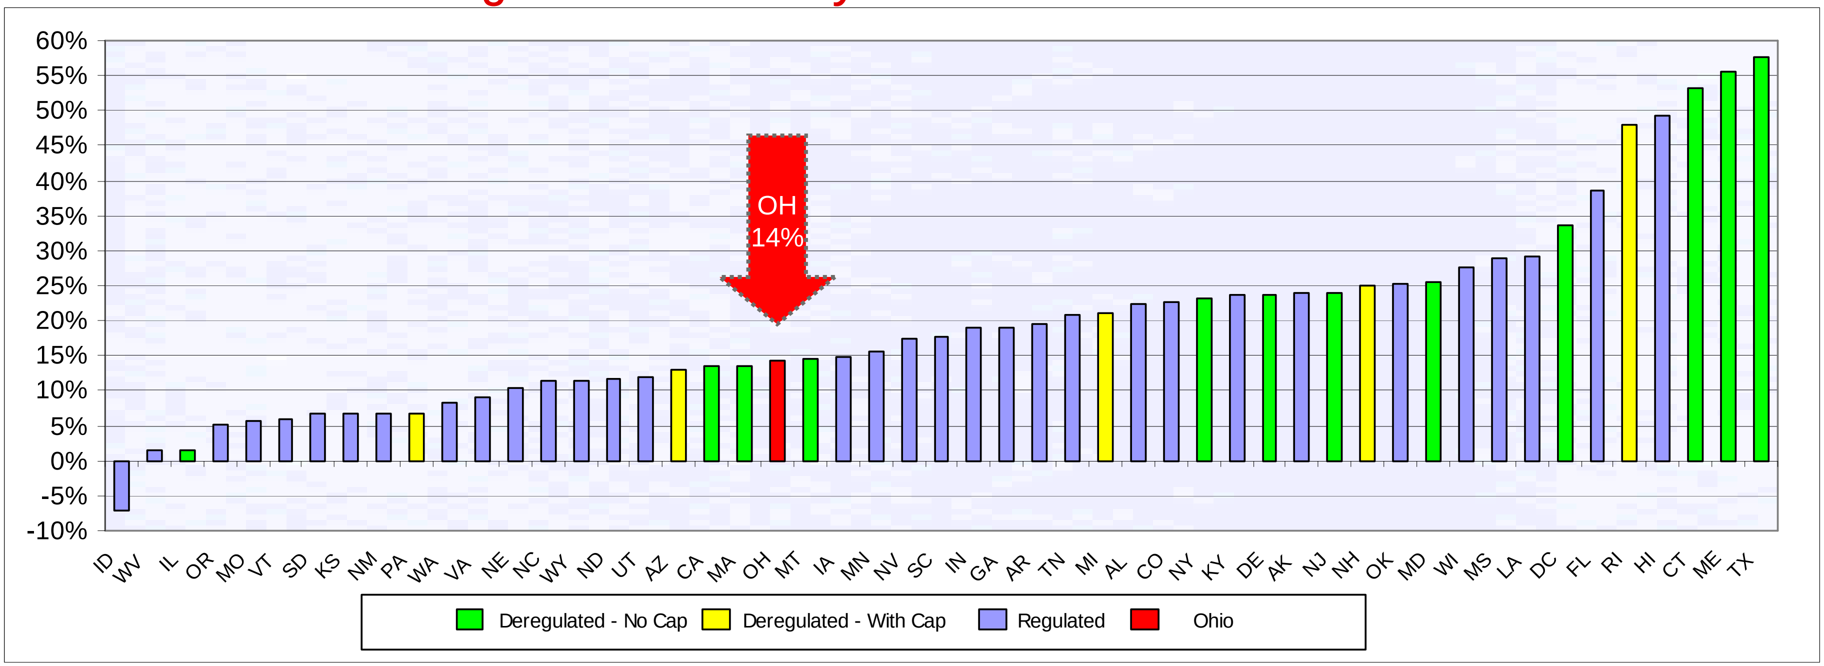
- Market-based generation pricing option
- Recovery mechanisms for new plants, fuel clause, environmental investments, GridSMART initiatives, energy efficiency projects and renewable energy investments
- Well-defined parameters for PUCO authority

Achieve a sustainable balance between shareholders and the Ohio economy.



Electricity Costs Have Increased in Both Regulated and Deregulated States

2002-2006 % Change in Electricity Prices

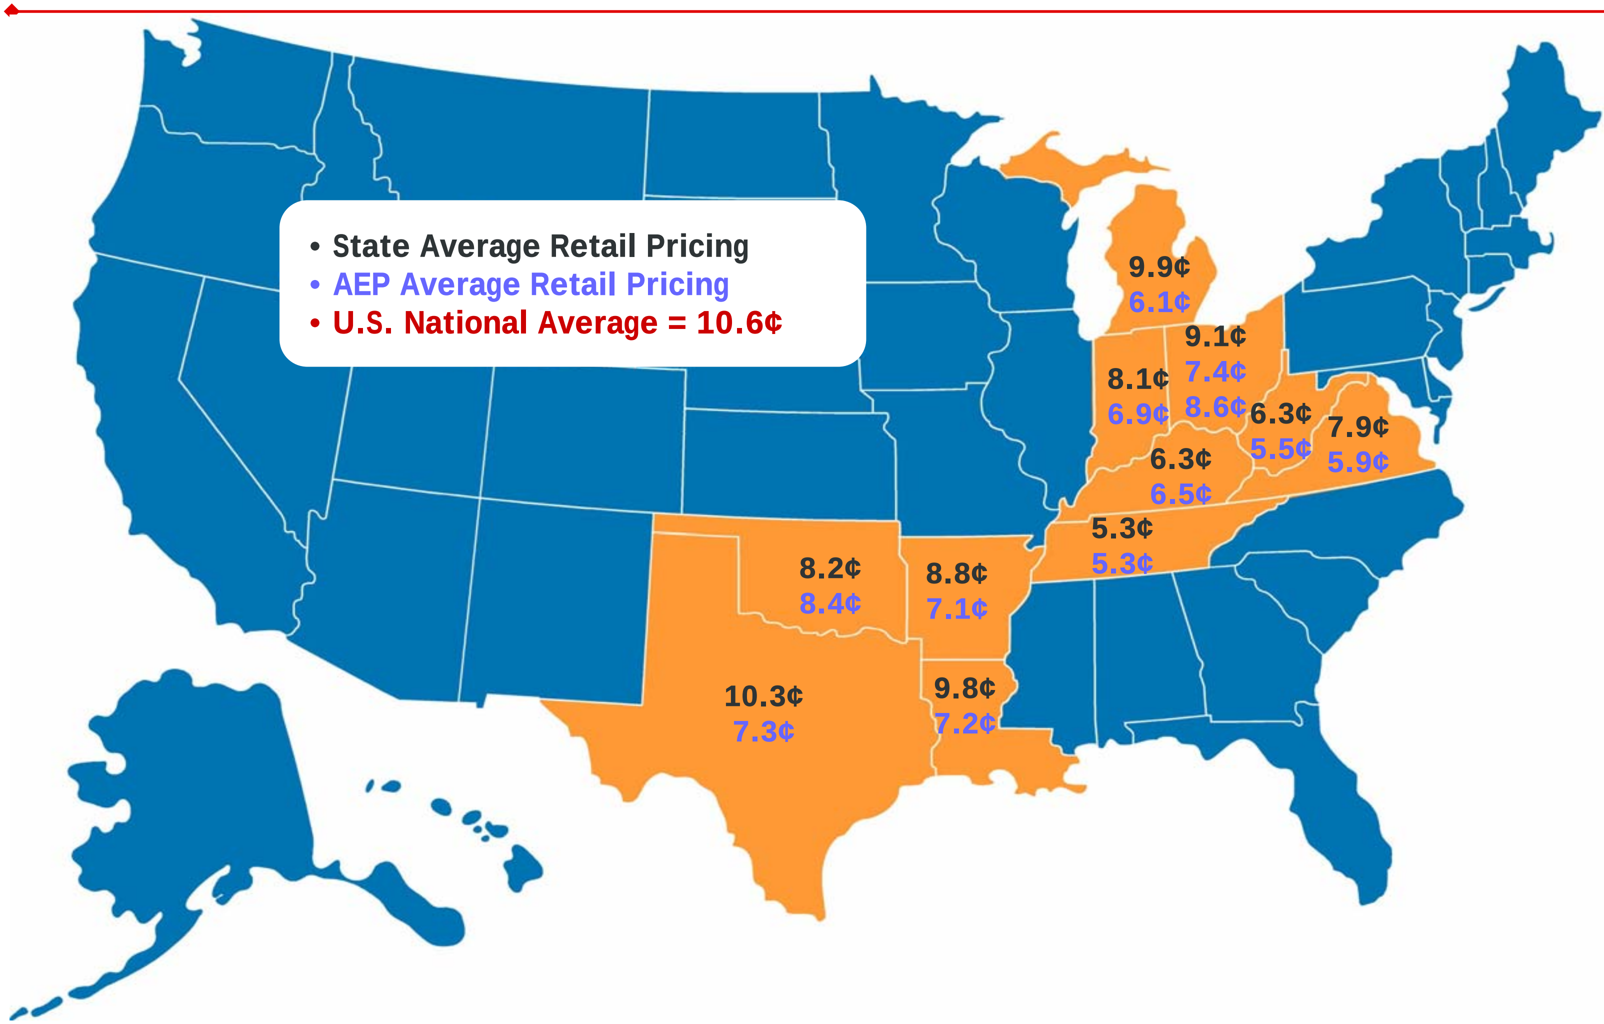


Source: USA Today, Aug. 10, 2007

- **Deregulated states median increase: 25%**
- **Regulated states average increase: 23%**
- **Ohio average increase: 14%**

Ohio increased less than the average of both regulated & deregulated states. Under any scenario, rates in Ohio will likely increase.

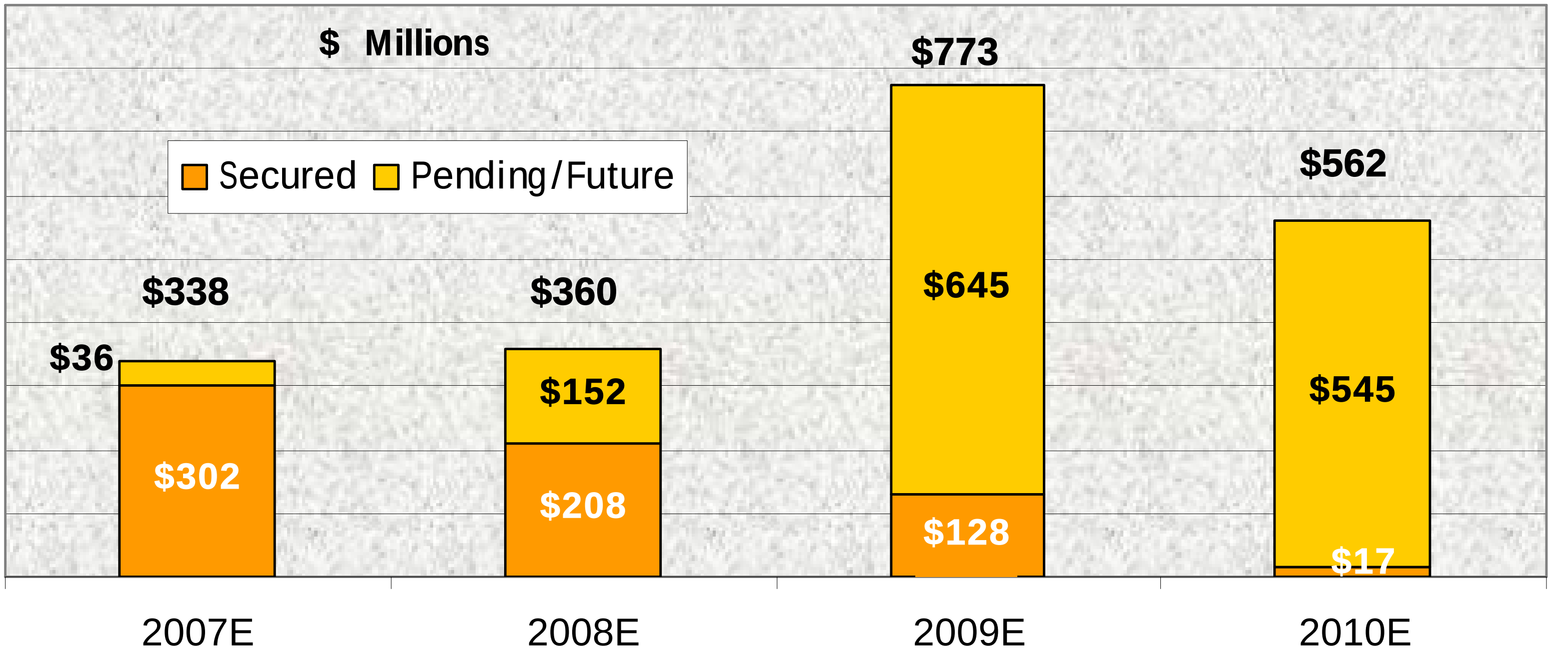
Average Retail Price of Electricity



AEP's pricing will remain competitive following anticipated rate increases.

Data source: EEI Summary of Average Realizations for the twelve months ended December 31, 2006
Ohio: OPCo = 7.4¢ / CSP = 8.6¢

Incremental Rate Relief Assumptions

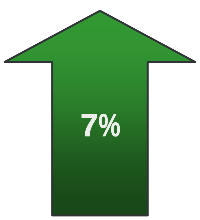


2007 Pending: PSO Rate Case
TCC Rate Case
Ohio 4%

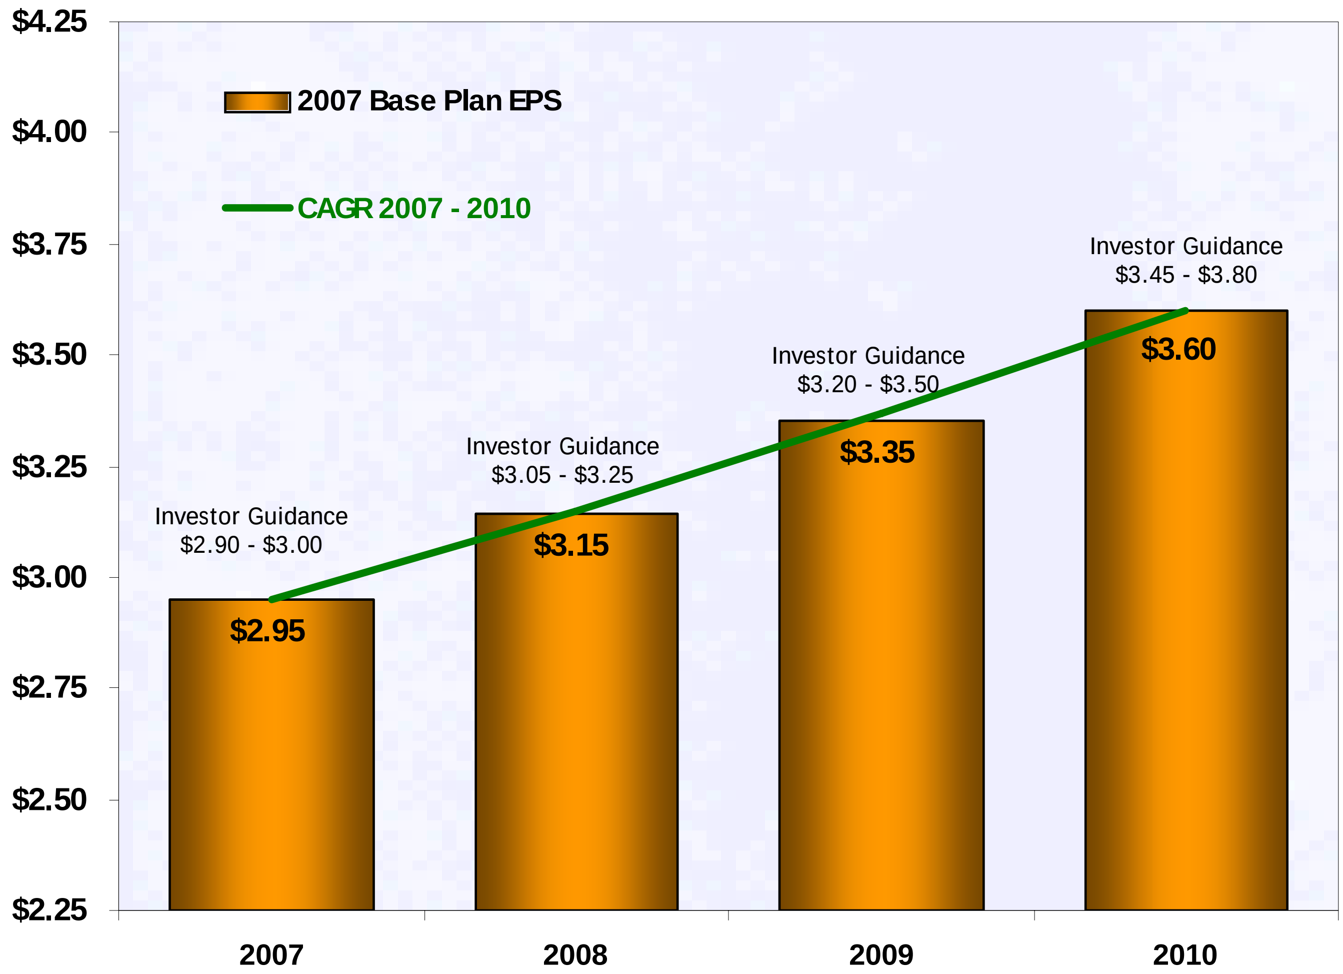
2008 Secured: Ohio 3% & 7%
I&M Depreciation
APCo-WV Construction Surcharge
PSO Peaking Generation

2007 - 2010 projected annual rate increases of 5.5%

4-Year Earnings Range Forecast



EPS 3-yr CAGR
(2007-2010)



5% to 9% earnings growth and recommendation of a 4Q07 dividend increase.

Value Proposition

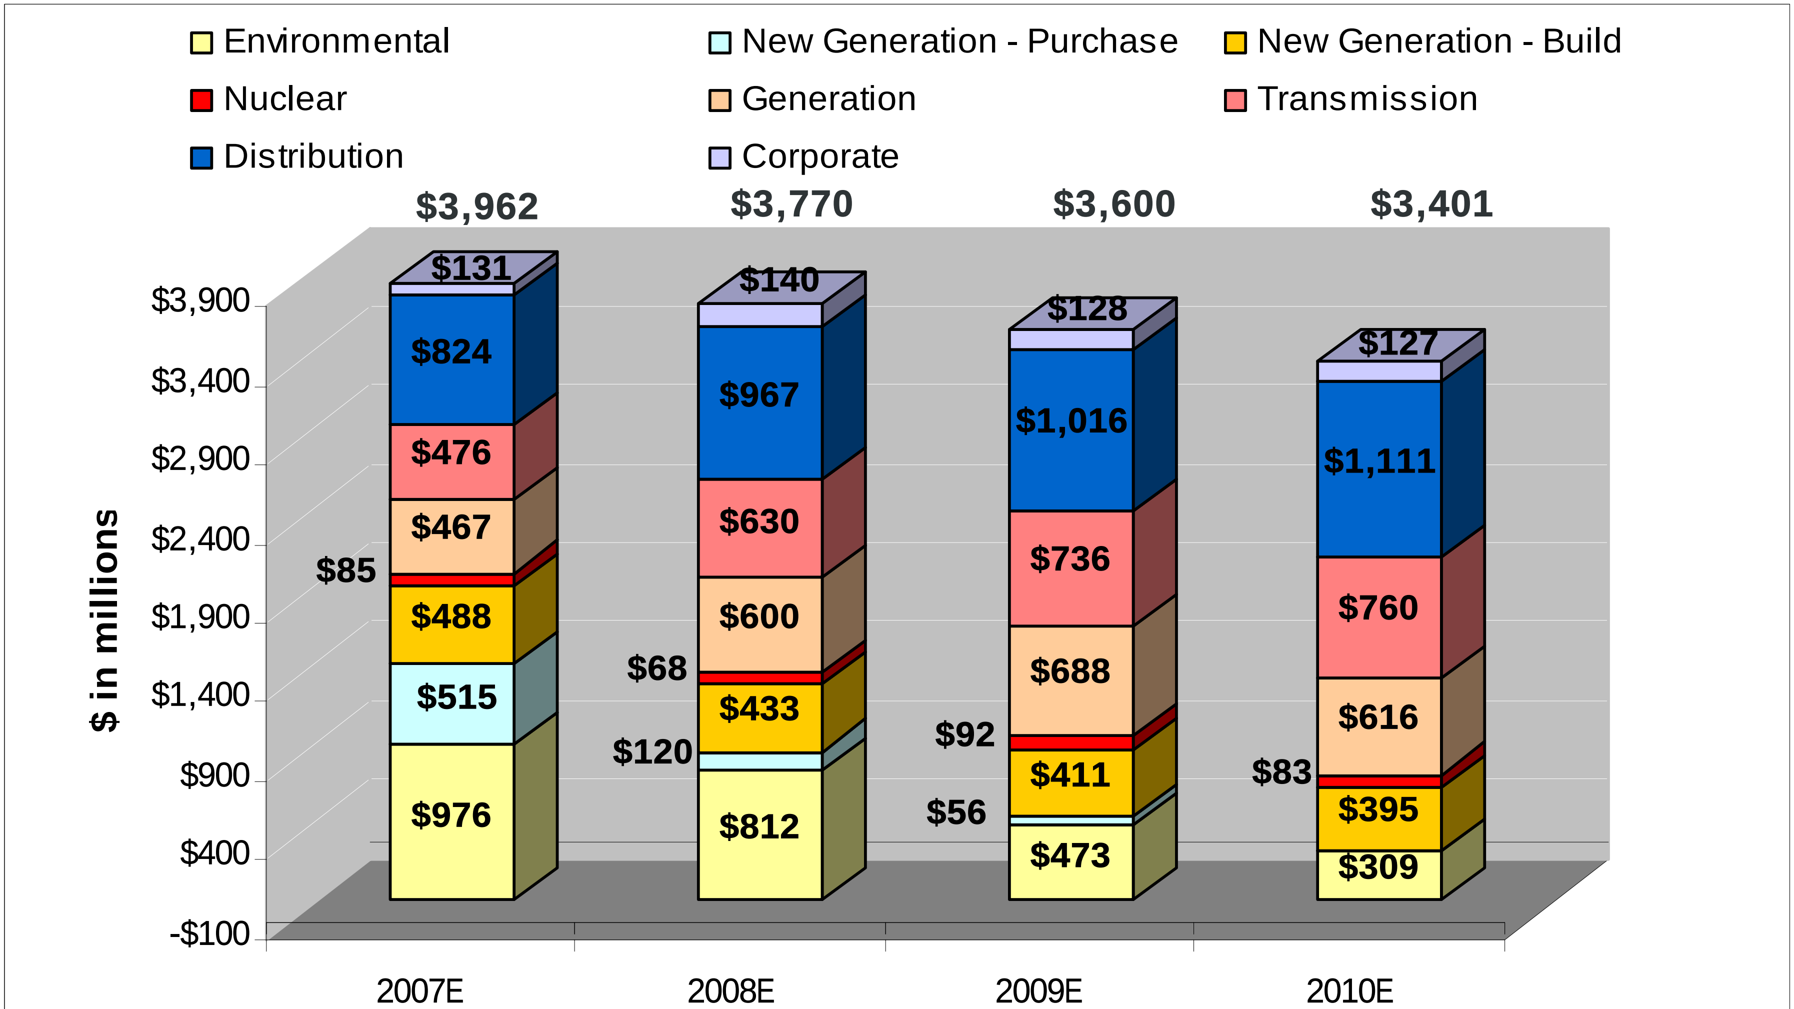
- *Strength and scale in assets & operations*
- *Continued innovation and deployment of leading technology advancements*
- *Sustainable earnings growth through near and long term capital investment opportunities*
- *Comprehensive regulatory strategy focused on maximization of cash flow and return through minimized regulatory lag*
- *Strong dividend yield with respect to peers*
- *Balance sheet and credit profile stability*

Sustainable Business Model

STRATEGIC DIRECTION & FINANCIAL OUTLOOK

Holly Koeppel
EVP & Chief Financial Officer

4-Year Capital Investment Forecast



Note: amounts exclude AFUDC, $452MM related to GridSMART and $540MM related to transmission joint venture projects

Capital Investment + Rate Relief = Earnings Growth

Multi-Year Capital Investment Funding Plan

	Actual	Projection			
	2006	2007	2008	2009	2010
Planned Capital Investment (Excluding AFUDC) *	$ (3,448)	$ (3,962)	$ (3,770)	$ (3,600)	$ (3,401)
Investment in Non-Consolidating Subsidiaries	$ -	$ (13)	$ (34)	$ (66)	$ (114)
Dividend on Common Stock	(591)	(631)	(659)	(664)	(669)
Cash Sources					
Cash from Operations	2,732	2,053	2,825	3,028	3,292
Proceeds from Sale of Assets	186	228	-	-	-
Common Stock Issued (Dividend Reinvestment Plan)	99	150	150	150	150
Change in Debt, Net	(320)	1,863	1,678	1,432	989
TCC Securitization Bond Issuance	1,740	-	-	-	-

2008 Earnings Guidance

#		2007 Guidance ($ millions)	2008 Guidance ($ millions)
	UTILITY OPERATIONS:		
	Gross Margin:		
1	East Regulated Integrated Utilities	2,440	2,425
2	Ohio Companies	2,433	2,497
3	West Regulated Integrated Utilities	1,046	1,111
4	Texas Wires	520	536
5	Off-System Sales	617	642
6	Transmission Revenue - 3rd Party	276	331
7	Other Operating Revenue	627	545
8	Utility Gross Margin	7,959	8,087
9	Operations & Maintenance	(3,353)	(3,328)
10	Depreciation & Amortization	(1,476)	(1,479)
11	Taxes Other than Income Taxes	(775)	(788)
12	Interest Exp & Preferred Dividend	(773)	(864)
13	Other Income & Deductions	101	191
14	Income Taxes	(566)	(582)
15	Utility Operations On-Going Earnings	1,117	1,237

Performance Drivers

Retail Sales (lines 1-4):

- Positive load growth - $132MM
- Continued rate relief - $228MM
- Offset by fuel and PJM costs - $(186)MM

Off-System Sales (line 5):

- Increase due to slightly higher margins

Transmission Revenue (line 6):

- Higher rates in ERCOT, PJM and SPP

Other Operating Revenue (line 7):

- Lower revenues from third party work, primarily offset in line 9 - O&M

Operations & Maintenance (line 9):

- Continued emphasis on cost control

Interest Expense (line 12):

- Increased long term debt outstanding

Other Income & Deductions (line 13):

- Additional 2008 APCo E&R carrying charges & AFUDC, offset by elimination of Centrica earnings sharing mechanism in 2008

Income Taxes (line 14):

- Higher pre-tax income, offset by change in effective tax rate. Effective tax rate for utility operations is 33.6% in 2007 and 32.0% in 2008.

2008 Earnings Guidance

	2007 Guidance ($ millions)	2008 Guidance ($ millions)
TRANSMISSION OPERATIONS	-	5
NON-UTILITY OPERATIONS:		
MEMCO	67	57
Generation & Marketing	29	21
Non-Utility Operations On-Going Earnings	96	78
Parent and Other On-Going Earnings	(40)	(51)

Performance Drivers

Transmission Operations:

- Equity earnings contribution from Electric Transmission Texas LLC

MEMCO:

- Decrease due to increasing costs and reduced import/northbound river traffic

Generation & Marketing:

- Decrease due to divestiture of Sweeny in 4Q07

Parent & Other:

- Increase loss due primarily to interest expense related to hybrid securities issued at the parent

2008 Projected Cash Flow

	2007 Estimate	2008 Estimate
Beginning Cash Balance	$ 301	$ 102
Cash from Operations:		
Income from Continuing Operations	1,173	1,269
Depreciation and Amortization	1,535	1,511
Other	(655)	45
Total from Operations	2,053	2,825
Cash from Investing:		
Construction Expenditures	(3,604)	(3,860)
Asset Sales	228	-
Distressed Generation Purchases	(515)	-
Investment in Non-Consolidating Subsidiaries	(13)	(34)
Other	138	(69)
Total from Investing	(3,766)	(3,963)
Cash from Financing:		
Common Equity	150	150
Long-Term Debt Issued/(Retired)	1,334	1,789
Short-Term Debt Change, Net	529	(111)
Common Dividends	(631)	(659)
Other Financing Activities	132	(28)
Total from Financing	1,514	1,141
Net Change in Cash	$ (199)	$ 3
Ending Cash Balance	$ 102	$ 105

Note: For analysis purposes, certain financial statement amounts have been reclassified for this effect on the earnings presentation. In addition, construction expenditures include AFUDC.

Credit Quality Parameters

Forecast Parameters:

- $150MM annually in new equity from Dividend Reinvestment and 401(k) plans
- Target 60% maximum consolidated debt/cap ratio on an adjusted basis
- Target utility company capitalization structures:

Company	Target Equity Ratio
APCO	42-44%
CSP	45-47%
I&M	40-42%
KPCO	41-43%
OPCo	44-46%
PSO	43-45%
SWEPCo	43-45%
TCC	40%
TNC	40%

- Long term dividend payout ratio range of 55-60%
- Maintain adequate coverage ratios to support current credit ratings
  - FFO to Interest range of 3.7x to 4.2x
  - FFO/Total Debt range of 16% to 19%

KPSC Case No. 2011-00401

Page 6419 of 9556

Performance Sensitivities

Driver	Change	Effect
EPS Sensitivities		
Load Growth (MWh)	1%	$0.10 EPS
Utility O&M	1%	$0.05 EPS
Capital Spending	$250M	$0.03 EPS
Unit Availability	1%	$0.04 EPS
ECAR Power Price	$1/MWh	$0.04 EPS
Fuel and Purchased Power	1%	$0.03 EPS
Henry Hub Gas Price	5%	$0.07 EPS
Interest Rate (20% floating debt)	100 BPs	$0.05 EPS
Authorized ROE	**1%**	**$0.24 EPS**

Longer term performance can be substantially enhanced by achieving a higher authorized return.

Financial Forecast Highlights

- **Updated 2008 & 2009 earnings guidance ranges and introduction of 2010**

2007 Range $2.90 to $3.00	**2008 Range $3.05 to $3.25**
2009 Range $3.20 to $3.50	**2010 Range $3.45 to $3.80**

- Increased EPS growth range: 5-9% (2007-2010)
  - Disciplined investment in utility operations
  - Innovative rate recovery for new investments
  - Ohio: Continue momentum toward market
  - Cost management
- Commitment to recommend an 8-cent/share increase in annual dividend effective 4Q07 (from $1.56/share to $1.64/share annually)
- Refined capital investment forecast and introduction of 2010 level

2007E: $3,962 MM	**2008E: $3,770 MM**
2009E: $3,600 MM	**2010E: $3,401 MM**

- Maintain credit ratings: BBB/Baa2/BBB

Questions

Appendix

Pace of our GridSMART Implementation Determined by Regulators

- **Arkansas** – The Arkansas commission approved our 'quick-start' programs in September 2007, which include education, incentive to encourage use of compact florescent lights and higher efficiency appliances, weatherization for low-income housing, an emergency load management pilot and a pay-for-performance pilot that results in a payment to customers who curtail load upon request. The commission's order allows implementation on or after October 1, 2007. We will now file a revised tariff, which will seek to recover costs beginning with the first billing cycle of November 2007.

- **Indiana** - As ordered by the IURC in June 2007, I&M, in collaboration with the Office of Utility Consumer Counselor, is designing and will administer a Smart Metering Pilot Program (SMPP) for approximately 10,000 customers in South Bend, Indiana.

- **Kentucky** – Successful demand-side management programs have been in place in Kentucky since 1996. We recently filed a proposed real-time pricing pilot for which we are waiting commission approval.

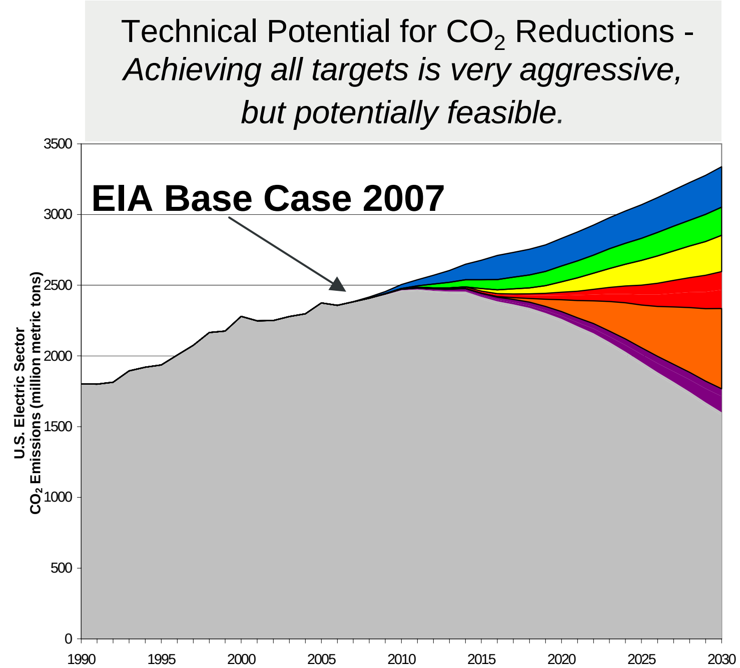
- **Ohio**
  - Recent Governor remarks and draft legislation indicates modernization of Ohio's infrastructure is a high priority.
  - PUCO-sponsored series of six Smart Meter Deployment Workshops currently underway.

- **Texas**
  - Successful demand side management and energy efficiency programs have been in place in Texas since the 1990s.
  - Energy Efficiency Cost Recovery Rider currently under consideration by the PUCT in TCC's base rate case; if adopted in TCC's case, it will also apply to TNC.
  - AEP Texas Advanced Metering Project commenced July 31, 2007, which has the goal of filing with the PUCT an advanced metering deployment plan and a related surcharge recovery proposal by March 2008.

Distribution technologies and DSM/energy efficiency programs are an investment, which should be treated by regulators in the same manner as investments in generation and T&D

AEP is Pursuing a Portfolio of Options to Address Carbon

Technology	EIA 2007 Reference	Industry Target	AEP Plan
Efficiency	Load Growth ~ +1.5% / yr	Load Growth ~ +1.1% / yr	DSM: 1000MW reduction in demand by 2012
Renewables	30 GWe by 2030	70 GWe by 2030	Wind PPAs through 2015: 1610MW nameplate or 232MW capacity for planning purposes. Also, voluntary green energy tariffs (Ohio program starting 2007)
Nuclear Generation	12.5 GWe by 2030	64 GWe by 2030	Evaluation of Nuclear COL
Advanced Coal Generation	No Existing Plant Upgrades 40% New Plant Efficiency by 2020–2030	150 GWe Plant Upgrades 46% New Plant Efficiency by 2020; 49% in 2030	1,246MW IGCC by 2017 447MW USC Turk plant by 2011
Carbon Capture and Storage	None	Widely Deployed After 2020	Chilled Ammonia: Mountaineer 2009 & Northeastern 2012 Oxy-coal by 2020
Plug-in Hybrid Electric Vehicles	None	10% of New Vehicle Sales by 2017; +2% / yr Thereafter	Joined Electric Drive Transportation Association (EDTA) in May 2007
Distributed Energy Resources	< 0.1% of Base Load in 2030	5% of Base Load in 2030	Pursuit of NaS® Energy Storage – 25MW of storage by 2010 and 1000MW of other storage / fuel cells by 2020



Technology advancement is required beyond present "state of the art" to achieve 1990 CO_2 levels by 2030. AEP is investing in a portfolio of GHG reduction initiatives. Allocation of funds will shift over time depending on technology, legislation, etc.

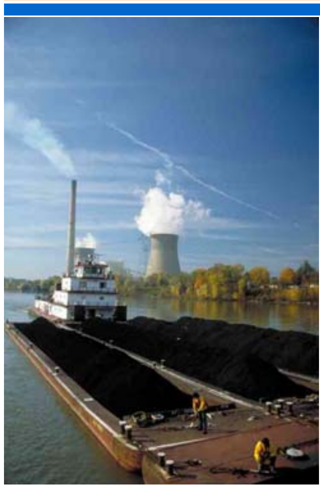
EEI International Utility Conference

London, United Kingdom

March 5-6, 2007



AEP AMERICAN ELECTRIC POWER®

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation or regulation in Ohio and/or Virginia, and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

EVP & Chief Financial Officer

AEP®

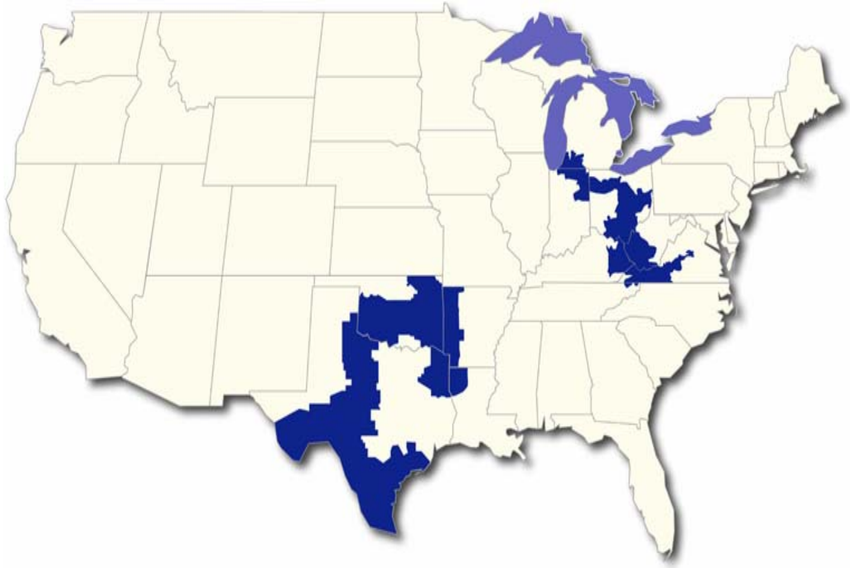
Company Overview

- 5.1 million customers in 11 states
- Industry-leading size and scale of assets:

Asset	Size	Industry Rank
Domestic Generation	~37,000 MW	# 3
Transmission	~39,000 miles	# 1
Distribution	~208,000 miles	# 1

Source: Company research & Resource Data International Platts, PowerDat 2005

- Coal & transportation assets
  - Control over 8,000 railcars
  - Own/lease and operate over 2,600 barges & 51 towboats
  - Coal handling terminal with 20 million tons of capacity
- 20,000 employees



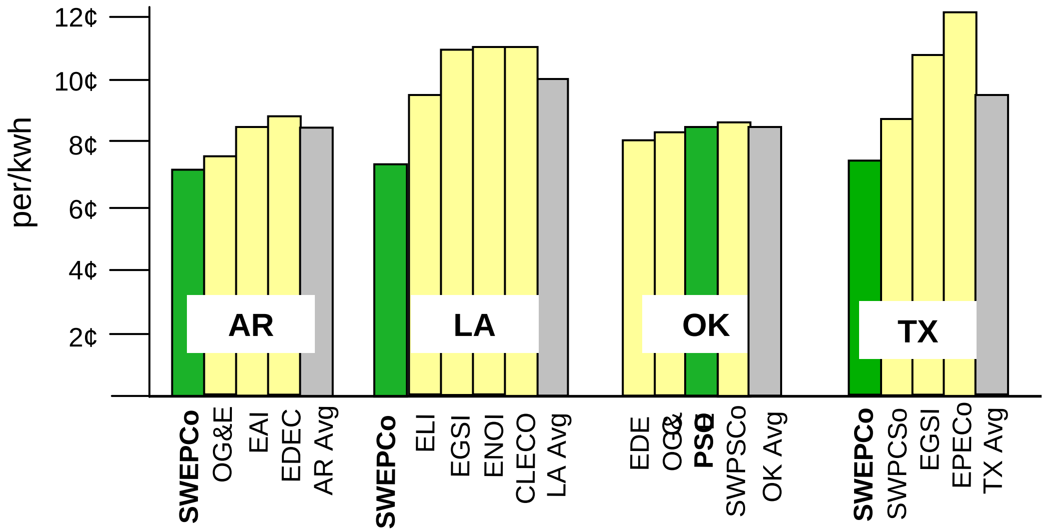
AEP Generation Portfolio				
Coal	Gas	Nuclear	Hydro	Wind
70%	21%	6%	2%	1%

AEP®

AEP Enjoys Significant Presence Throughout the Energy Value Chain

AEP Provides Low Cost Electric Service

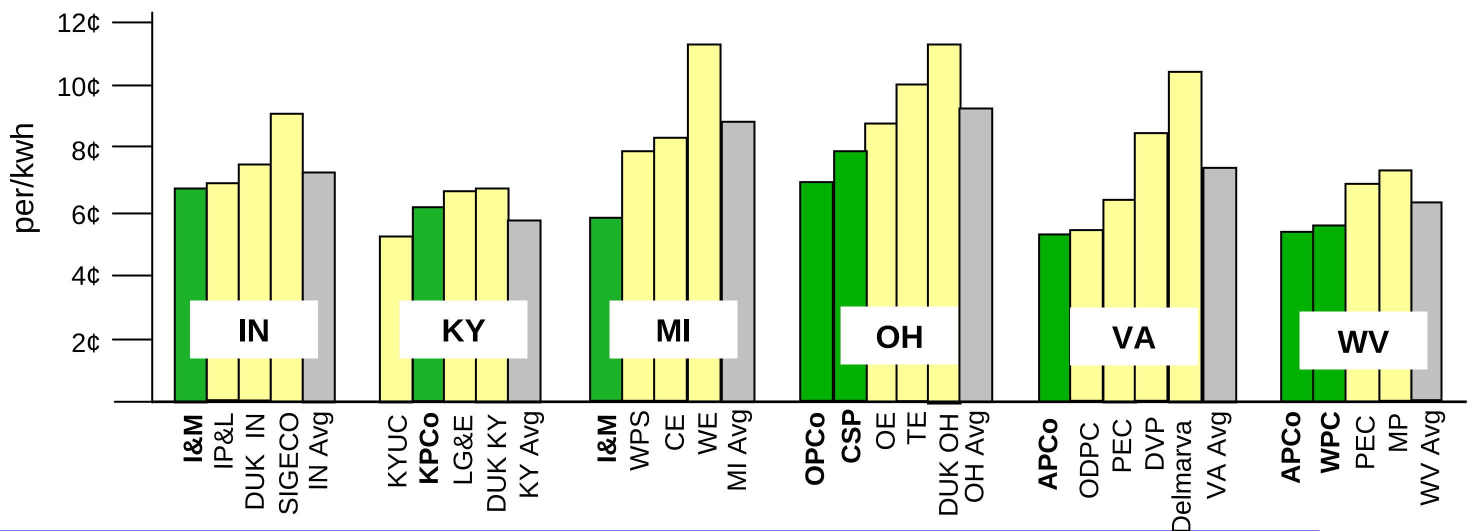
AEP West



Residential Average rates 12 months ended 6/30/2006

Source: Summer 2006 EEI Typical Bills and Average Rates Report.

AEP East



2006-2009 Projected Annual Rate Increase Of 3.8%

Strategic Direction

- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Achieve adequate returns on all assets

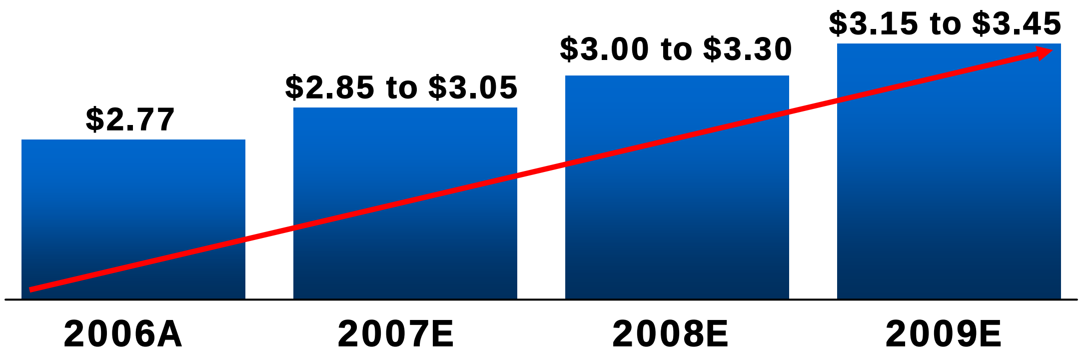
Deliver value to investors and cost effective service to our customers

Continued Commitment To Our Core Utility Mission: Bring Reasonably Priced Electric Service To Our Customers, Thereby Strengthening Our Communities And Rewarding Our Investors

AEP®

Framework For Long-Range Performance

- 2007, 2008 & 2009 Ongoing Earnings Guidance Ranges:



- EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in existing utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
  - Investment in new transmission opportunities
  - Seek rate recovery for new investments
  - Control costs & achieve timely rate relief
- Maintain credit ratings
  - BBB/Baa2/BBB

Our Strategy Remains Focused On Regulated Operations

Utility Investment Drives Growth

Updated Capital Investment Forecast (2007-2009)

($ in millions)	2007	2008	2009	Total (2007-09)
Environmental	$935	$521	$301	**$1,757**
New Generation - Build	$474	$485	$573	**$1,532**
New Generation - Purchase	$118	$0	$0	**$443** *

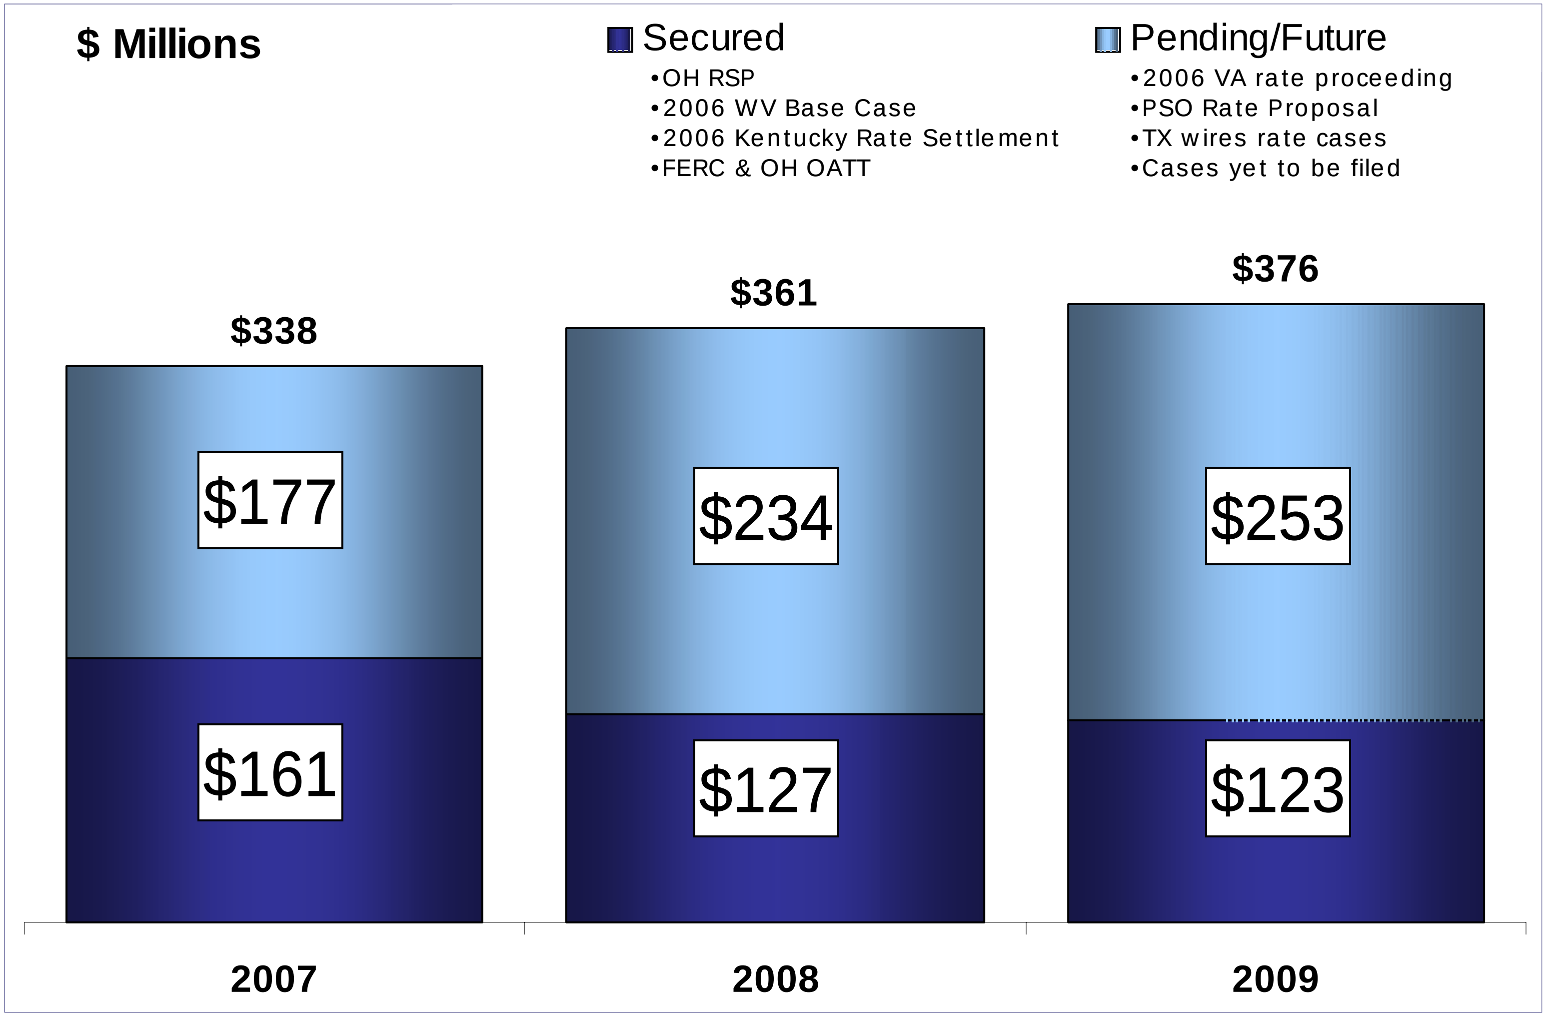
Note: Excludes AFUDC

*Includes Lawrenceburg purchase $325MM in 2007

Growth Investment To Be Funded By Cash
From Operations via Rate Relief and Debt Issuances

AEP®

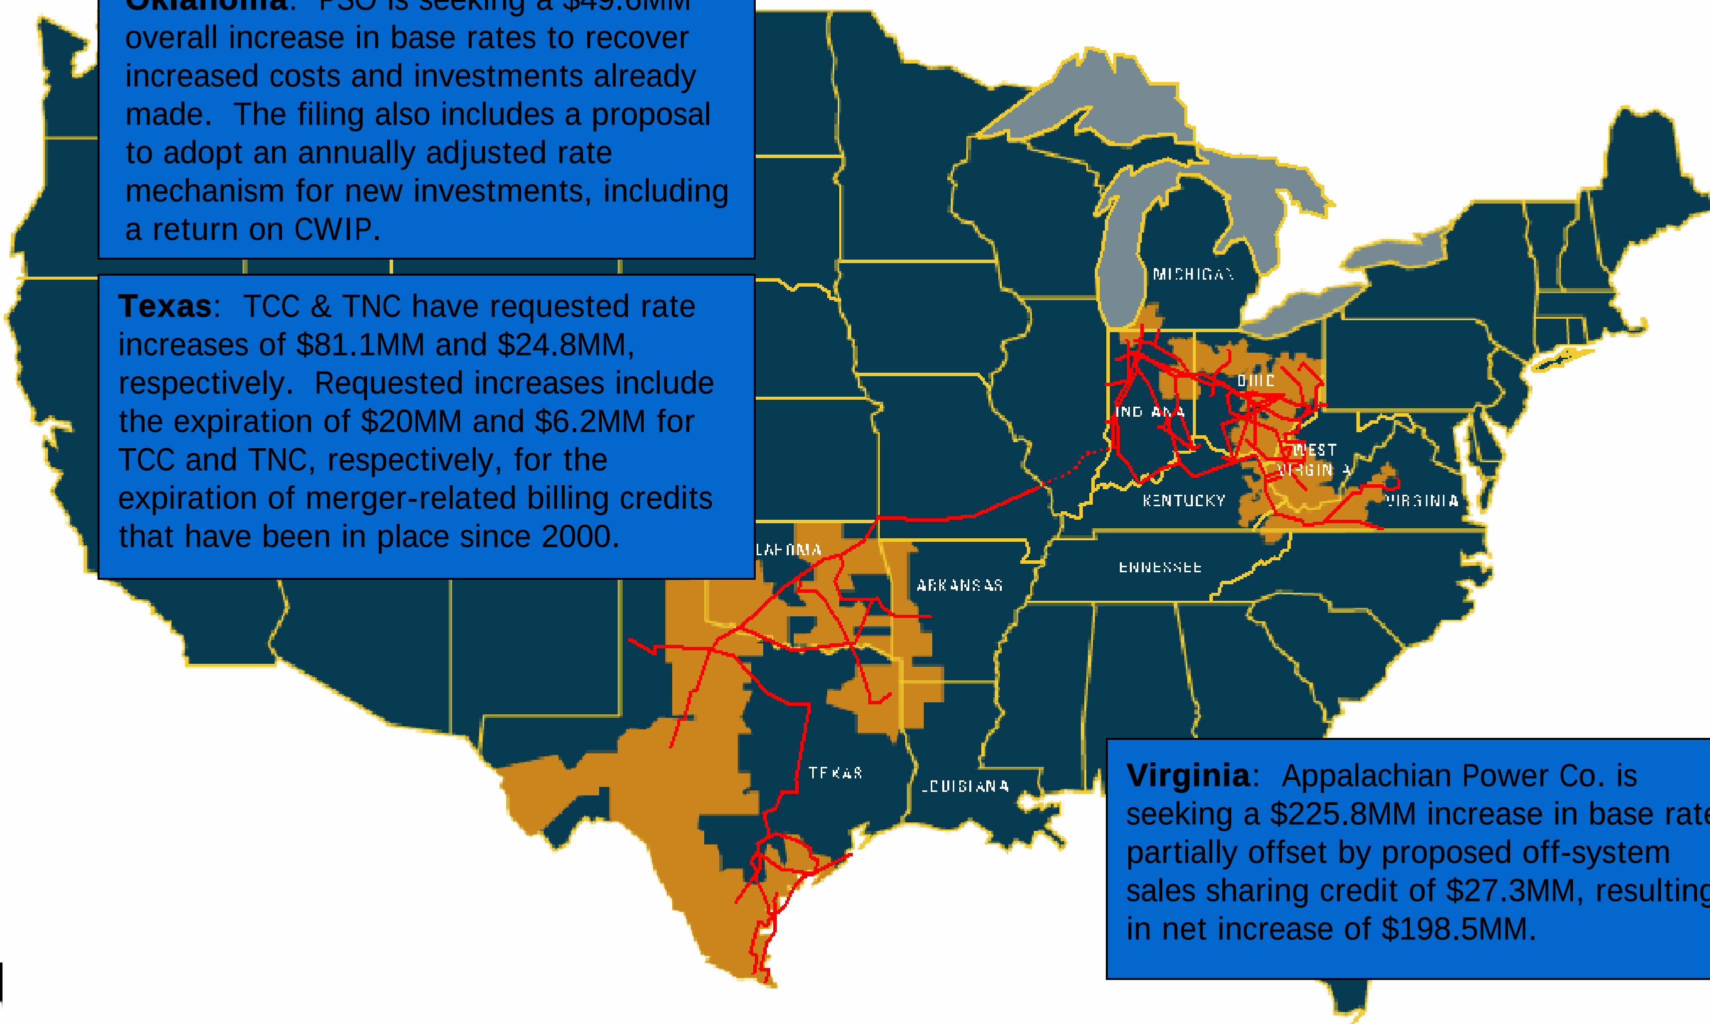
Incremental Rate Relief Composition



Note: A portion of the pending/future rate recovery related to Virginia E&R costs will now be considered secured, based on the Virginia SCC's Nov. 20, 2006 order in our E&R case. Further analysis is required to quantify these amounts.

Rate Relief Is A Critical Element To AEP's Financial Success

Base Case Regulatory Summary



Oklahoma: PSO is seeking a $49.6MM overall increase in base rates to recover increased costs and investments already made. The filing also includes a proposal to adopt an annually adjusted rate mechanism for new investments, including a return on CWIP.

Texas: TCC & TNC have requested rate increases of $81.1MM and $24.8MM, respectively. Requested increases include the expiration of $20MM and $6.2MM for TCC and TNC, respectively, for the expiration of merger-related billing credits that have been in place since 2000.

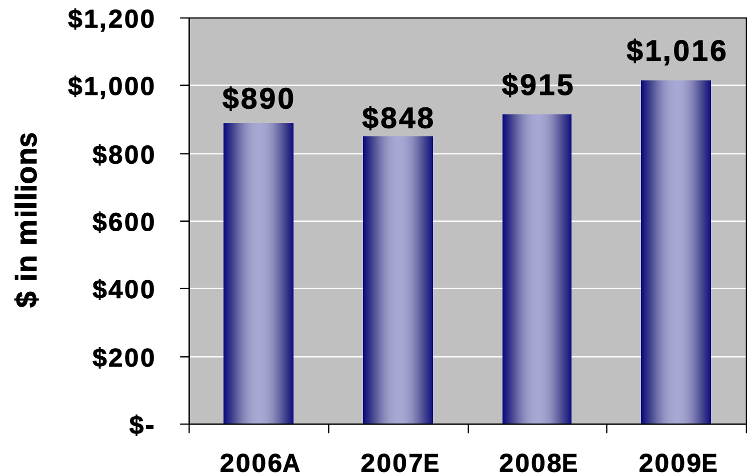
Virginia: Appalachian Power Co. is seeking a $225.8MM increase in base rates, partially offset by proposed off-system sales sharing credit of $27.3MM, resulting in net increase of $198.5MM.

Rate Relief & Enhanced Distribution Investment

- AEP Ohio Reliability Plan (Filed Oct. 6, 2006)
  - Plan will enhance distribution system reliability
  - Proposing an average annual investment of $130MM over 5-year period
- Virginia E&R Mechanism
  - Allows APCo-VA to recover incremental environmental & reliability costs
  - Order issued Nov. 20, 2006 granting $21.4MM of recovery for costs incurred thru Sept. 30, 2005
- Public Service of Oklahoma Rate Rider
  - $24MM annual vegetation management rider approved in Nov. 2005
- Texas Wires Rate Cases (Filed Nov. 9, 2006)
  - TCC & TNC seeking to increase rates for distribution & transmission services
  - Requested increases total $60.8MM and $15.9MM for TCC & TNC distribution revenues, respectively.

	2005	2006
Line Miles	201,666	207,632
Net PP&E-Distribution	$7,617MM	$8,241MM

Total Projected Distribution Investment

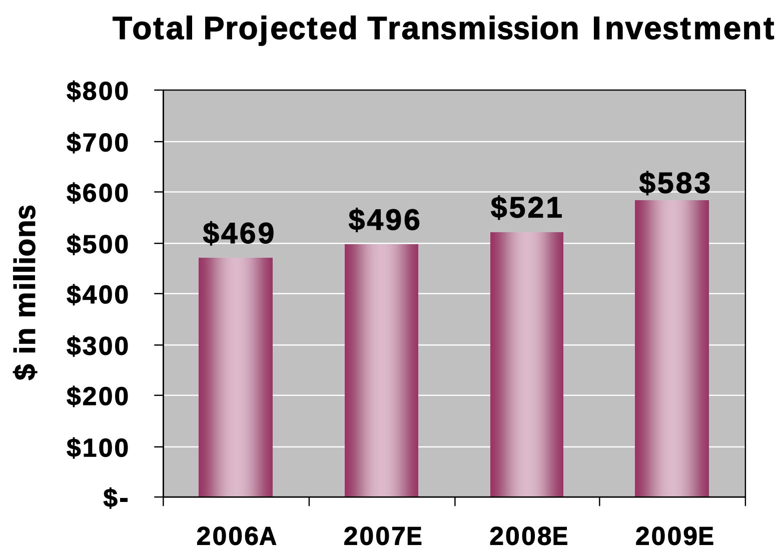


Rate Relief For Distribution Enhancement Will Be Sought Through Innovative Recovery Methods, Such As Rate Riders

Transmission Investment Forecast

- FERC PJM Regional Transmission Rate Design
  - FERC ALJ recommended adoption of "postage stamp" rate
  - Final order expected in early to mid-2007
- Ohio Annual Transmission Rate Filing
  - Ohio companies transmission rates annually adjusted for FERC-approved open access rates, net congestion & ancillary services
- PUCT & FERC Filings to establish Electric Transmission Texas LLC (ETT)
  - Certificate of Convenience & Necessity filed Jan. 22, 2007 to establish ETT as a regulated utility company and to set initial rates
  - FERC filing to transfer transmission assets to ETT submitted Feb. 15, 2007
  - Approvals and asset transfer expected mid-2007

	2005	2006
Circuit Miles	38,879	39,158
Net PP&E-Transmission	$4,153MM	$4,686MM



The AEP Advantage: 100 Years Of Transmission Leadership Experience In The United States

Transmission ~ $9 Billion Opportunity*

Creating a business model to manage capital requirements for enhanced returns with partners

- ~ $1 billion+ in ERCOT via Electric Transmission Texas, LLC (ETT)
- ~ $2 billion 765-kV study with ITC in Michigan
- ~ $3 billion I-765 Project in PJM
- ~ $3 billion project filed with SPP

Assumptions	
Estimated Investment Opportunity	$9 Billion
Ownership Structure w/ Partner	50% / 50%
Debt/Equity Ratio	50% debt / 50% equity
Return on Equity	11.00%
Potential EPS Impact (based on 396 MM shares)	+ $0.60**

* ~$9 billion investment opportunity not included in current capital guidance forecasts

** Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion

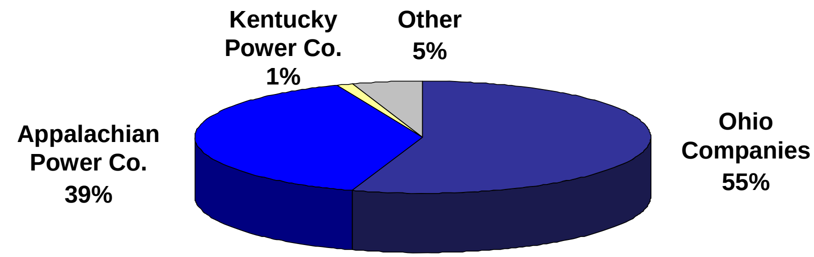
AEP®

Building The Next US Interstate System For Enhanced Reliability And Market Efficiency Could Have Significant EPS Implications

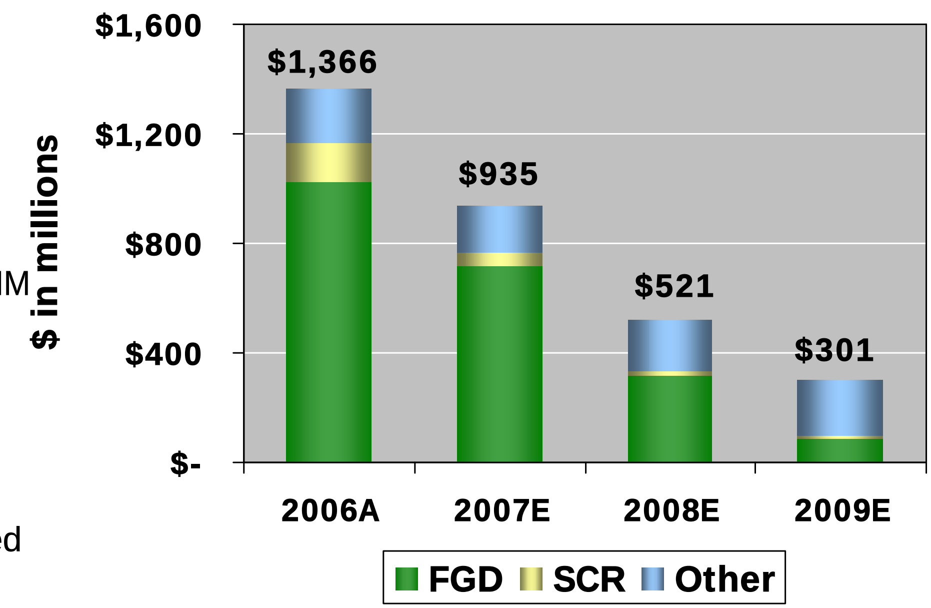
Environmental Investment Forecast

- Ohio Rate Stabilization Plan
  - Annual 3% and 7% generation rate increases at CSP & OP, respectively for 2006-2008
  - Filing made on Jan. 23 for recovery of 2007 costs associated with additional generation-related expenditures, pursuant to the 4% provision of the RSP
- West Virginia Rate Settlement
  - Mechanism in place to provide for rate increases through 2009 for ongoing environmental investments
- Virginia E&R Mechanism
  - Allows APCo-VA to recover incremental environmental & reliability costs
  - Order issued Nov. 20, 2006 granting $21.4MM of recovery for costs incurred thru Sept. 30, 2005
- Kentucky Environmental Surcharge
  - Monthly surcharge mechanism allows for recovery of pollution-control projects required by the Federal Clean Air Act

Projected Environmental Investment Allocation (2006A – 2009E)



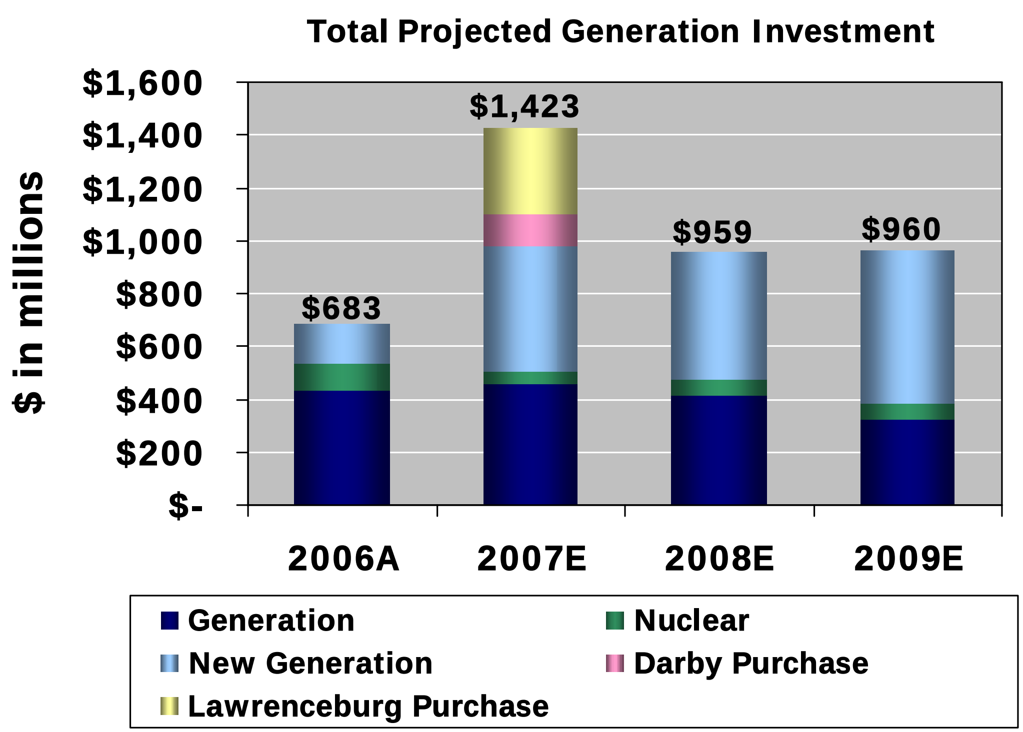
Total Projected Environmental Investment



AEP Benefits From First-Mover Advantage Through Lower Contracted Pricing & Reduced Market Escalation Exposure

Generation Investment Forecast

- Public Service Oklahoma Rate Proposal
  - Proposal to adopt an annually adjusted rate mechanism, which includes a return on CWIP
- Purchased Generation Initiative
  - New generation resources required to meet growing electricity needs of our customers
  - Completed purchase of 1,368 MW of gas-fired generating capacity in 2005 -- purchase pending for additional 1,620 MW
- Ohio Phase I IGCC Approval
  - PUCO approved tariff to recover Phase 1 pre-construction costs ($24MM) over 12-month period effective July 1, 2006



AEP®

Investing In Generation To Meet The Growing Electricity Demands Of Our Customers At An Attractive Price

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
CSP	Darby	Ohio	$102 MM	Gas	Simple-cycle	480	1Q07[(1)]
AEG	Lawrenceburg	Indiana	$325 MM	Gas	Combined-cycle	1140	2Q07[(2)]
SWEPCo	Tontitown	Arkansas	$130 MM	Gas	Simple-cycle	320	2008
PSO	Southwestern	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
SWEPCo	Arsenal Hill	Louisiana	$300 MM	Gas	Combined-cycle	480	2010
SWEPCo	Hempstead	Arkansas	$1.3 B[(3)]	Coal	Ultra-supercritical	600[(3)]	2011
PSO	Red Rock	Oklahoma	$1.8 B[(4)]	Coal	Ultra-supercritical	950[(4)]	2011
CSP/OP	Great Bend	Ohio	Under Review[(5)]	Coal	IGCC	600	TBD
APCo	Mountaineer	West Virginia	Under Review[(5)]	Coal	IGCC	600	TBD

(1) Sale expected to close 1Q07 - Plant began commercial operation in 2001
(2) Sale expected to close 2Q07 - Plant began commercial operation in 2004
(3) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment
(4) PSO will own 50%, or 425 megawatts, totaling approximately $900MM in capital investment
(5) AEP is currently working with GE and Bechtel on a FEED (front-end engineering and design) study. When completed (expected mid-year 2007), a cost estimate will be available.

AEP®

Coming Soon – AEP's 2006 Corporate Responsibility Report

Our Vision for Sustainability

AEP enters its second century committed to operating responsibly, efficiently and profitably for customers, shareholders, employees and communities. We will safely provide reliable, reasonably priced electric power while actively working to protect people and the environment. We will engage stakeholders and continue our role in making people's lives better today and for generations to come.

Our Challenges & Opportunities

•Leadership, management and strategy

•Climate Change

•Energy security, reliability and growth

•Environmental performance

•Workforce issues

•Stakeholder engagement

•Public Policy

We will continue to work as innovatively, efficiently, diligently and responsibly as we did during our first century. Sustainability is a journey, not a destination.

AEP®

Why Invest in AEP?

- Strength and scale in assets & operations
- Disciplined utility model focus - investing in established utility business to drive 5-7% consistent annual earnings growth
- Annual dividend of $1.56 per share providing an above average dividend yield of 3.4%
- Positive dividend outlook
- Stable credit profile

Appendix

Company Overview

SIGNIFICANT PRESENCE THROUGHOUT THE DOMESTIC VALUE CHAIN

Our US electric assets include:

- Nearly 37,000 megawatts of generating capacity in 3 power pools (one of the largest US generation portfolios with a significant cost advantage in many of our market areas)
- Approximately 39,000 circuit miles of transmission lines, including 2,116 miles of 765kV lines, the backbone of the electric interconnection grid in the Eastern U.S.
- Nearly 208,000 miles of overhead and underground distribution lines

With our coal and transportation assets we:

- control over 8,000 railcars
- own and/or operate over 2,600 hopper barges and 51 towboats
- operate one active coal-handling terminal with 20 million tons of capacity

We consume approximately 76 million tons of coal annually.

AEP®

Summary of 5-7% Long-Range Growth Components

- Energy sales growth of 1.5%
- Rate base investment
  - Generation plant purchases & build
  - Transmission – interstate & intrastate
  - Distribution
  - Reliability
- Transmission company
- Commercial operations
- Regulatory strategy
  - Achieve timely returns
  - Seek cash returns on investment during construction
  - Create & secure innovative rate plans
    - Pursue post-2008 solution in Ohio
    - Expand use of trackers
    - Formula rates

Rate Base Investment Coupled With Innovative Regulatory Plans Will Reduce Lag And Drive Earnings Growth

AEP®

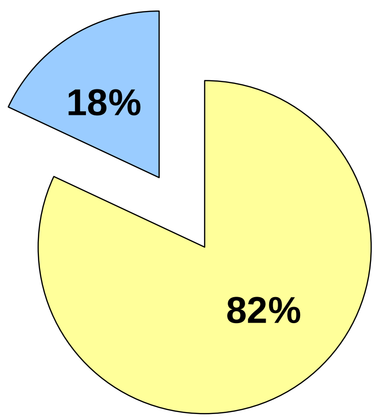
* Oklaunion's MW capacity represents combination of PSO, TCC & TNC ownership. TCC's 54 MW ownership of Oklaunion is currently under negotiation for sale.

Installation Of SCR And FGD Equipment Will Allow Our Coal Fleet To Remain Extremely Cost Competitive

Materials and Vendors – AEP's Advantage

Environmental Program Costs:

Active/Firm Costs to Remaining Estimated Costs



- Actuals To Date & Firm Costs
- Remaining Estimated Costs*

* Primarily labor and activated carbon injection systems

SCR Technology

- Removes 90 – 93% of NOx emissions
- Requires ~ 1% use of auxiliary power
- **AEP Capital Cost ~ $121/kw avg.**

Combination of SCR & FGD technology results in co-benefit of Hg removal ~80% removal efficiency

FGD Technology

- Removes 95 – 98% of SO_2 emissions
- Requires ~1.5% to 3.0% use of auxiliary power
- **AEP Capital Cost ~ $250/kw avg.**

AEP®

AEP Benefits From First-mover Advantage Through Lower Contracted Pricing and Reduced Market Escalation Exposure

IGCC Overview

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called “syngas” – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2 , mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP’s eastern service territory.

AEP is currently working with a technology provider to develop a firm price for an IGCC facility to be built in our eastern service region. AEP intends to seek regulatory recovery approvals in advance of building the plant.

AEP®

AEP Is Committed To IGCC Technology

IGCC Technology

Regulatory Activity

AEP Ohio Distribution Reliability Filing

Filed Oct. 6, 2006 – AEP Ohio proposes an additional annual average investment of approximately $130MM over the next 5 years on vegetation management, equipment replacement, infrastructure upgrades & improved use of technology, to help reduce outages and improve service reliability.

- We are requesting implementation of a Reliability Cost Recovery Rider for recovery of the incremental O&M expenses and a return on and of the capital investments made under the plan. The requested ROE is 10.5%.
  - If approved, the rider would be implemented July 1, 2007 through December 31, 2008 and would be effective until new distribution rates are placed in effect. We anticipate that new base distribution rates would be effective after the expiration of the RSP on Dec. 31, 2008.
- Requested recovery amounts total $20MM in 2007 and $51MM in 2008.
- Staff testimony due April 17, 2007; Evidentiary hearing to commence April 30, 2007.

AEP Ohio Application For 4% Provision On Generation Rate

- On Jan. 23, 2007, CSP and OP filed an application at the PUCO to recover 2007 costs associated with additional generation-related expenditures the companies are encountering related to environmental, security and other new generation-related costs pursuant to the RSP.
- CSP and OP are requesting to implement the provision to recover $24.5MM and $8.2MM, respectively, from May 2007 through December 2007.

AEP®

Regulatory Activity

Electric Transmission Texas (ETT) Rate Filing

- Jan. 22, 2007 – ETT filed with the PUCT for approval 1) to operate as an electric transmission utility in Texas; 2) to contribute transmission assets currently under construction by AEP subsidiary TCC to the joint venture company; and 3) establish initial rates for ETT.
  - Requested capital structure of 60% debt / 40% equity; requested ROE of 11.25%
  - An order is expected Mid-2007 and operations are expected to commence in the 2nd half of 2007. Upon receipt of approvals, AEP and MidAmerican will each own a 50% interest in the joint venture

Seams Elimination Cost Adjustment Revenues

- August 2006 – ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
  - Up to $96MM of SECA revenues could be disallowed, net of unused provisions
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both.
- Exceptions to initial decision filed Sept. 11, 2006; Replies to exceptions filed Oct. 11, 2006; Order expected by the Commission in 2007

AEP®

Regulatory Activity

FERC Regional Rate Design

- The FERC instituted an investigation of PJM's zonal rate regime
  - Present regime may need to be replaced
  - Consider establishing regional rates that would compensate AEP, among others, for the regional transmission service provided by high voltage facilities they own that benefit customers throughout PJM
- July 2006 ALJ-rendered initial decision:
  - License plate rates for existing facilities are not just and reasonable, and must be replaced (effective April 1, 2006, when SECA ended)
  - Staff's proposal for a "Postage Stamp" rate phased in so as to limit increases in any one pricing zone to 10% per year as the best choice for replacing current rates
  - Staff's proposed rate design would produce slightly more net revenue for AEP than the original AEP/Allegheny Power proposal, if not phased in.
  - Briefs on Exceptions to the initial decision by all parties have been filed; An order is expected by the Commission in early to mid-2007.

AEP®

Summary Rate Case Information

APCo Virginia General Rate Case

On May 4, 2006, Appalachian Power Co. filed a general base rate case with the Virginia State Corporation Commission (VSCC) requesting an increase of $198.5 million ($225.8 million in base revenues offset by an off-system sales credit of $27.3 million). (Docket #: PUE-2006-00065)

Projected Capital Structure – Company Position (9/30/07)

(in thousands)		Amount Outstanding	% of Capitalization	Cost Rate	Weighted Cost
Long-term debt	$	2,789,504	53.36%	5.67%	3.02%

Test Year Adjusted Base Rate Rev.	$ 36,025,589	$ 112,706,901
Requested Base Rate Increase	$ 9,017,564	$ 9,589,012

Note: O&M expenses and test year adjusted base rate revenues for distribution include TCOS billings

Summary Rate Case Information

PSO Rate Proposal

On November 21, 2006, Public Service Oklahoma filed an application with the Oklahoma Corporation Commission to increase base rates by $49.6 million to recovery investments already made and costs incurred. The request represents a 4% overall increase (including fuel). The filing also includes a proposal to adopt an annually adjusted rate mechanism, which includes a return on CWIP. The formula rate would adjust rates, up or down, if PSO earns above or below an approved bandwidth around the authorized ROE. (Case #200600285)

Pro-forma Capital Structure – Company Position (Test Year ended 6/30/06)

	% of Capitalization	Cost Rate	Weighted Cost
Long-Term Debt	53.55%	6.32%	3.39%
Preferred Stock	0.43%	4.02%	0.02%
Common Equity	46.02%	11.75%	5.41%
Total	100%		8.82%

Pro-forma Rate Base – Company Position (Test Year ended 6/30/06)*

($ in millions)

Rate Base	$ 1,189.4
Rate of Return	8.82%
Operating Income Requirement	$ 104.9

AEP AMERICAN ELECTRIC POWER

Bruce H. Braine
Vice President, Strategic Policy Analysis

Sanford C. Bernstein Investor Conference
June 14, 2007

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation or regulation in Ohio and/or Virginia, and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Company Overview

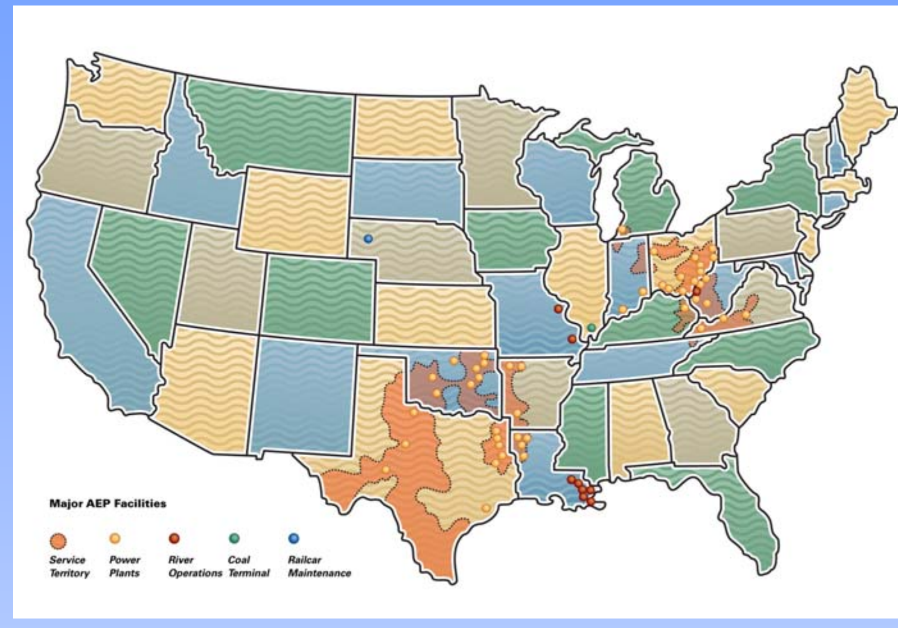
AEP®

- 5.1 million customers in 11 states
- Industry-leading size and scale of assets:

Asset	Size	Industry Rank
Domestic Generation	~38,200 MW	# 2
Transmission	~39,000 miles	# 1
Distribution	~208,000 miles	# 1

Source: Company research & Resource Data International Platts, PowerDat 2005

- Coal & transportation assets
  - Control over 8,000 railcars
  - Own/lease and operate over 2,600 barges & 51 towboats
  - Coal handling terminal with 20 million tons of capacity
- 20,000 employees



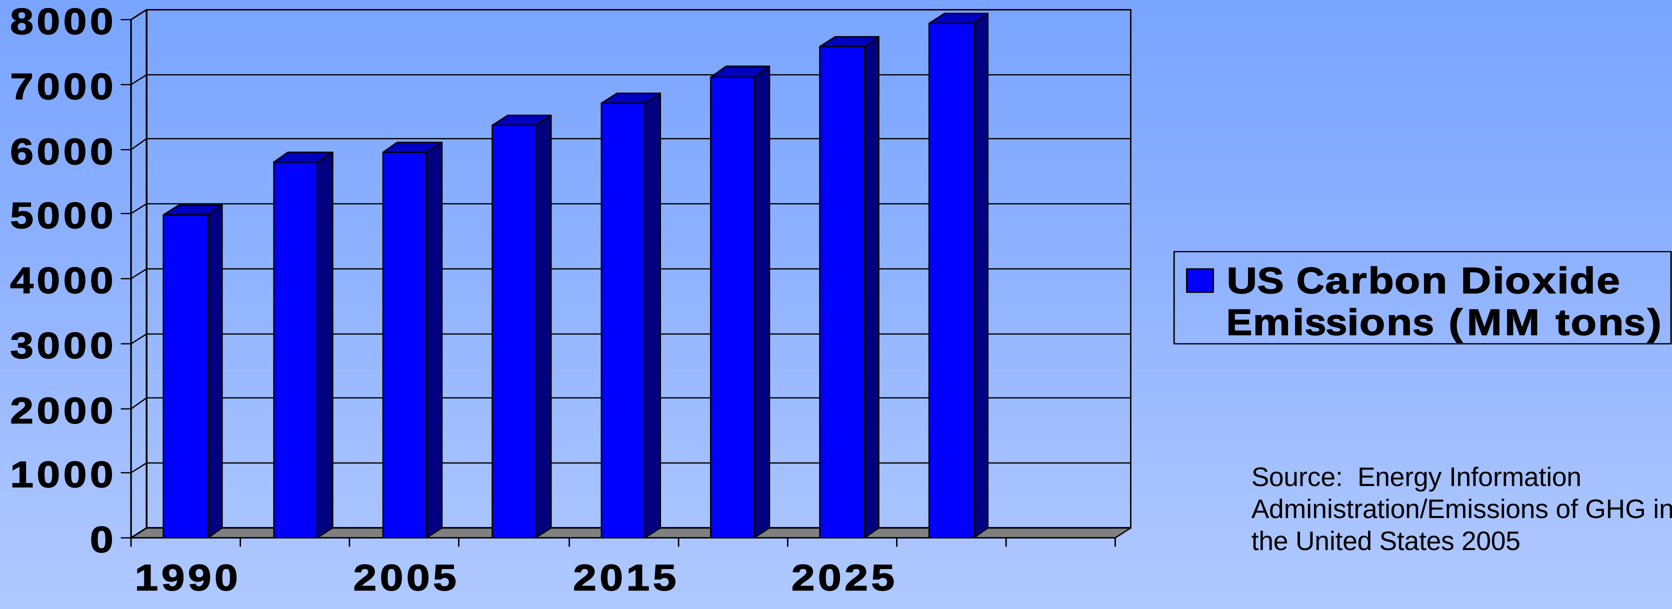
AEP Generation Portfolio				
Coal	Gas	Nuclear	Hydro	Wind
67%	24%	6%	2%	1%

AEP Enjoys Significant Presence Throughout The Energy Value Chain

Presentation Topics

- **How is AEP preparing for ultimate climate legislation? What specific voluntary actions and proactive investments is the company undertaking?**
- **What type of climate legislation is likely? When will it become effective? How will climate legislation affect operations, capital investment, choice of generation, operations and earnings?**
- **What constitutes “reasonable” climate legislation?**

Investment Decisions Today Must Consider Likely Future CO_2 Emission Limits



Source: Energy Information Administration/Emissions of GHG in the United States 2005

Note: Chart above assumes no mandatory limits imposed on CO_2 emissions

- **Absent federal policies, long-term CO_2 growth is likely to be significant, driven by population and economic growth, electrification, transportation**

- **Likelihood of US GHG legislation is growing**
  - **Climate change science**
  - **Public perceptions**
  - **Political shifts in Congress**

Inclusion Of Climate Change In Investment Decisions And Taking Voluntary Actions To Reduce CO_2 Footprint Will Enhance Shareholder Return Prospects

AEP's Climate Strategy

- **Being proactive and engaged in the development of climate policy**
  - International Emissions Trading Association (IETA)
  - Electric Power Research Institute (EPRI)
  - Pew Center on Global Climate Change
  - e8
  - Global Roundtable on Climate Change
- **Investing in science/technology R&D**
  - FutureGen Alliance
  - US DOE research on carbon capture and sequestration at our Mountaineer Plant
  - EPRI – combustion technologies
  - MIT Energy Laboratory
  - B&W – Oxy-Fuel
- **Taking voluntary, proactive action now, demonstrating voluntary programs can work and setting policy precedents thru CCX**
  - Chicago Climate Exchange (CCX)
  - EPA Climate Leaders
  - EPA SF-6 Emission Reduction Partnership for Electric Power Systems Program
  - Asia-Pacific Partnership
  - DOE 1605B- voluntary reporting of GHGs Program
  - Business Roundtable Climate Resolve
  - Numerous forestry activities
- **Evaluating/making longer term investment decisions such as new generation and carbon capture and storage (e.g., IGCC, Ultra-supercritical)**

AEP Must Be A Leader In Addressing Climate Change

AEP Long-Term GHG Reduction Portfolio

Renewables (Biomass Co-firing, Wind)

Supply and Demand Side Efficiency

Off-System Reductions and Market Credits (forestry, methane, etc.)

Commercial Solutions of New Generation and Carbon Capture & Storage Technology

AEP Is Investing In A Portfolio Of GHG Reduction Alternatives

AEP's Long-Term CO_2 Reduction Commitment

Existing Programs

- **Existing plant efficiency improvements**
- **Renewable Energy**
  - 800 MWs of Wind
  - 300 MWs of Hydro
- **Domestic Offsets**
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - **1.2MM tons of carbon sequestered**
- **International Offsets**
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- **Chicago Climate Exchange**

AEP's reductions / offsets of CO_2:
- **2003-2005: 31 MMT**
- **2006-2010 (proj.): Additional 15 MMT**

New Program Additions (by 2011)

- **1000 MWs of Wind PPAs: 2MM tons/yr**
- **Domestic Offsets (methane): 2MM tons/yr**
- **Forestry: Tripling annual investment to increase to 0.5MM tons/yr by 2015**
- **Fleet Vehicle/Aviation Offsets: 0.2MM tons/yr**
- **Additional actions (e.g. DSM): 0.2MM tons**

AEP's reductions / offsets of CO_2:
2011+: 5 MMT / YEAR

New Technology@ Existing Coal: Chilled Ammonia/Oxy Fuel

AEP Wind Operations/Purchases

Southwest Mesa (1999)

- **75 MW** (107 – 700 kW turbines)
- McCarney, TX
- Power Purchaser

Trent Mesa (2001)

- **150 MW** (100 - 1.5 MW turbines)
- Abilene/Sweetwater, TX

Desert Sky (2002)

- **160 MW** (107 -1.5 MW turbines)
- Bakersfield, TX

Summary

- **Owned/Operated: 385 MW**
- **Wind Purchases: 392 MW**
- **Total Existing Wind: 777 MW**
- **New Wind by 2011: 1000 MW**

AEP and New Clean Coal Technology

AEP®

Phase 1—CO_2 Capture / Storage
2008 Commercial Validation

Mountaineer Plant (WV) @ 30 MW → MOU (Alstom) **Chilled Ammonia** → CO_2 (Battelle) → **0.1 MM tons CO_2 / yr**

Phase 2—CO_2 Capture / Storage
2011 Commercial Operation

Northeastern Plant (OK)- 600 MW → MOU (Alstom) **Chilled Ammonia** → CO_2 EOR → **1.5 MM tons CO_2 / yr**

FUTUREGEN - First Near Zero Emissions Hydrogen/ Electric-AEP and Alliance members

AEP Carbon Capture & Storage Initiative

- In March, AEP announced a major carbon capture and storage initiative.
- AEP will install carbon capture on two coal-fired power plants, the first commercial use of technologies to significantly reduce carbon dioxide emissions from existing plants.
- AEP will also demonstrate and then install oxy-coal CO_2 capture & storage project at a commercial sized coal unit (about 200 MW)—feasibility study completed in 2008. (See Appendix)
- The first carbon capture project, at the Mountaineer plant in West Virginia, is expected to complete its product validation phase in 2008 and the second, at the Northeastern plant in Oklahoma, will begin commercial operation in 2011.

AEP's 2006 Corporate Responsibility Report

Our Vision for Sustainability

AEP enters its second century committed to operating responsibly, efficiently and profitably for customers, shareholders, employees and communities. We will safely provide reliable, reasonably priced electric power while actively working to protect people and the environment. We will engage stakeholders and continue our role in making people's lives better today and for generations to come.

Our Challenges & Opportunities

- **Leadership, management and strategy**
- **Climate Change**
- **Energy security, reliability and growth**
- **Environmental performance**
- **Workforce issues**
- **Stakeholder engagement**
- **Public Policy**

We Will Continue To Work As Innovatively, Efficiently, Diligently And Responsibly As We Did During Our First Century. Sustainability Is A Journey, Not A Destination.

Potential for Federal Climate Legislation

- **Legislation could pass as early as 2009-10 with limits taking effect as early as 2015. Any earlier requirements are unlikely.**
- **Moderate approach probably has best chance of passage -- offsetting emissions growth initially (during next decade) with significant reductions thereafter.**
- **Impacts in terms of utility operations, capital and earnings won't be until the 2015-20 period -- more substantial impacts probably not beginning until 2020 and after.**

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 6484 of 9556

Climate Legislation: Longer Term Impacts on Investment/Operations

- Climate change legislation will likely lead to greater capital investment for compliance particularly in 2020 and after. This will mean for AEP:
  - Installation of carbon capture and storage at existing coal plants and at new plants
  - Replacement of some older coal fired units with new clean coal technologies or with combined cycle gas
  - Increased deployment of wind and biomass
  - Investment in end-use and supply side efficiency
- AEP investments over next 5-10 years envision transition from voluntary, proactive efforts to mandatory regime
  - New USC coal and IGCC plants
  - First retrofit carbon capture project
- Likely AEP operations impacts:
  - Greater utilization of our gas combined cycle units
  - Earlier shutdown/lower dispatch of older coal units

Climate Legislation: Impacts on Long Term Earnings

- For AEP, most significantly in the long term (2020 and after), climate change legislation will mean higher electricity prices for our customers since most of our generation serves retail customers under cost-of-service regulation.
- Cost pass-thru to customers would/should be largely earnings neutral.
- However, to the extent there is higher capital investment, this may build rate base and enhance earnings potential depending on rates of return.
- Wholesale margins and other deregulated generation may earn higher or lower margins depending on the legislation that passes and allowance allocations.

AEP Position: A “Reasonable” Approach to Climate Legislation

- Reductions and Timing--Moderate with Adequate Lead Times
- Scope of Program-- Economy Wide
- Point of Regulation (e.g. Upstream or Downstream)--Hybrid Approach
- Flexibility of the Program—Trading, Banking, Unrestricted Offsets, Early Action Credits
- Allowance Allocation And Other Cost Issues—Low auctions and safety valve
- International Linkage—emission requirements to foreign imports from non-participating countries

Scope/Reductions/Timing

- **Program Needs to Be Economy-Wide**
  - Utility Emissions are only one-third of total GHG emissions
  - EU Program --Utility and Large Industrial is Only About Half the CO_2 Emissions
  - Economy Wide – provides more cost-effective reductions, creates the right "incentives" and avoids inefficiencies
- **Moderate Level of Reductions/Start Slowly**
  - Important to Avoid Short Run Uneconomic Investment at Expense of Long-Run Improved Technology Choices
  - Recognize Lead Times Needed for New Investments; Stock Turnover and Regulations
  - Avoid Rate Shock
  - Significant Reductions should be Tied to Technology Advancement

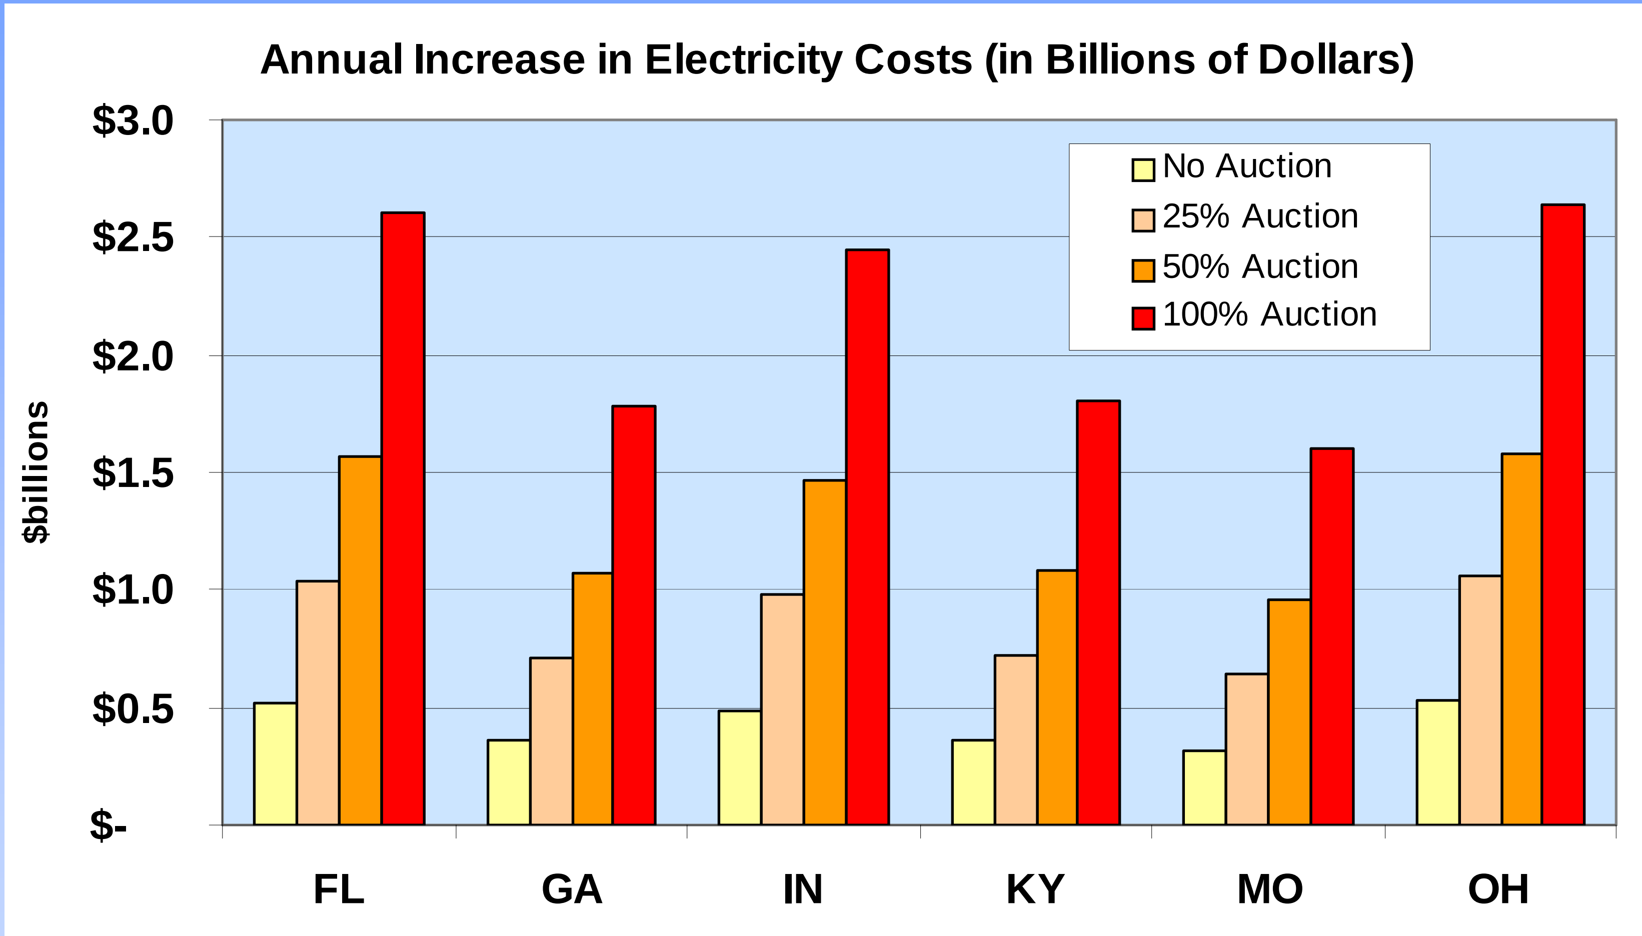
Flexibility of Program

- **Unrestricted Emissions Trading**
- **Unrestricted Emissions Banking**
- **All Greenhouse Gases Count**
  - Not just CO_2—Methane and N_2O and other non-CO_2 GHGs are 20% of total US GHGs and often cheaper to control
- **All Real and Verifiable Offsets Should Count (e.g. Forestry, Methane from landfills, agriculture)**
  - Many options cost less than \$10/ton CO_2 equivalent reduced vs. Utility Reductions generally \$10-50/ton
- **Credit for Early Action**

Allowance Auctions Increase Rates Significantly in "Cost-of-Service" States

- **Most generators are in states with cost-of-service regulation and part of vertically integrated utilities. (AEP generation is subject to cost based regulation in 10 out of our 11 states).**
  - **About 80% of US coal-fired generation is in cost of service states. Allowance auctions for these states result in large increases in electricity rates. (See next page)**
  - Example: Utility must reduce from 100 to 80 tons. Assume Allowance Price = $10.
    - No Auction: Utility gets 80 "no-cost" allowances and reduces by 20 at a cost of $200. **Total costs/customers rate impact = $200.**
    - 50% Auction: Utility gets 40 "no-cost" allowances, buys 40 from the auction for $400 and reduces by 20 at a cost of $200. **Total costs/customer rate impact = $600 or 3 times as much as the no auction case.**

Increase in Customer Electricity Costs Due to Allowance Auctions



Source: AEP estimate based on 2005 EIA electric sector revenue and emission data, an assumed CO_2 price of \$20/ton and a 20% reduction in electric sector CO_2 emissions.

Allowance Allocation Within the Electric Sector

- **Emissions-Based Allocations Are More Equitable---**Allowances should be allocated based on historic/current emissions to existing generators required to make reductions. **Allocation principle is all emitters make their "fair" pro-rata share of reductions**.
- **Output or Total KWh based Allocations Create Large Windfalls for Some Generators and Major Losses for Coal ---**
  - Allowances should NOT be allocated to sources that do not have emissions such as hydro and nuclear. Gas-fired plants should not receive "excess" allocations.
  - Nuclear, hydro and gas plants will already benefit (to the extent they are in "deregulated" states) due to higher power prices.
  - Output based allocations such as in the Carper bill increase costs to ratepayers of largely regulated, coal dependent states (e.g. the Midwest and Southeast) and provide large windfalls to deregulated gas and nuclear plants. For example, output-based allocation would increase costs to AEP and its customers by about $1 billion/year with no CO_2 benefit.

CSP/OP	Great Bend	Ohio	Under Review[3]	Coal	IGCC	600	TBD
APCo	Mountaineer	West Virginia	Under Review[3]	Coal	IGCC	600	TBD

(1) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment.
(2) PSO will own 50%, or 475 megawatts, totaling approximately $900MM in capital investment.
(3) FEED (front-end engineering and design) study is completed. Final results will be available in June.

AEP Is Meeting The Growing Electricity Needs Of Customers Through The Pursuit Of New Economic Generation Facilities

Chilled Ammonia Technology Program

AEP®

Phase 1
2008 Commercial Operation

Mountaineer Plant (WV) → MOU (Alstom) **Chilled Ammonia** → CO_2 (Battelle)

Phase 2
2011 Commercial Operation

Northeastern Plant (OK) → MOU (Alstom) **Chilled Ammonia** → EOR; CO_2

Project Validation

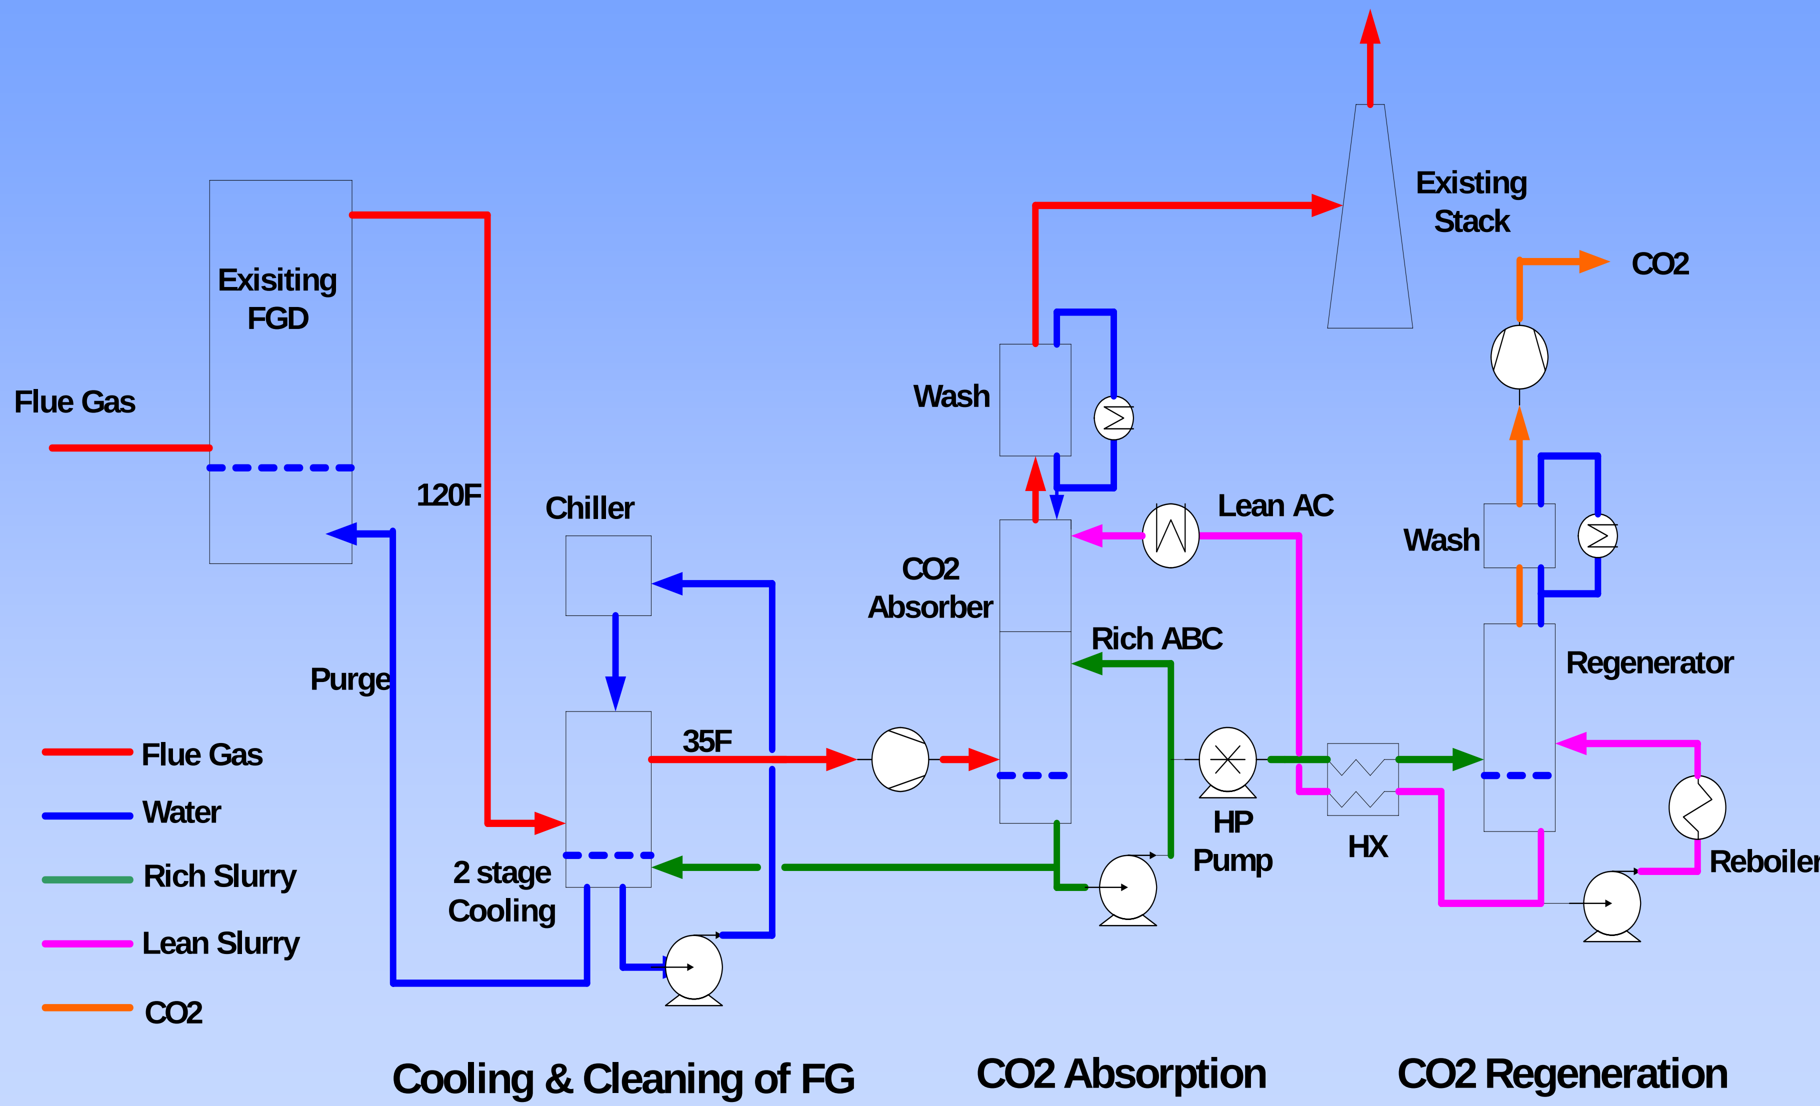
- 30 MW_t (megawatts thermal) scale (a scale up of Alstom/EPRI 5 MW_t field pilot, under construction at WE Energies)
- <0.1MM tonnes CO_2 per year
- In operation 4Q 2008
- Approximate total cost \$50 – \$80M
- Using Alstom "Chilled Ammonia" Technology
- Located at the AEP Mountaineer Plant in WV
- CO_2 for geologic storage

Commercial Scale Retrofit

- ~ 200 MW_e scale (megawatt electric)
- ~ 600 MW_t scale (megawatt thermal)
- ~1.5MM tonnes CO_2 per year
- In operation late 2011
- Approx. capital \$250 – \$300M (CO_2 capture & compression)
- Approx. O&M cost \$12M per year
- Energy penalty ~ 35 – 50 MW steam, 25 – 30 MW for CO_2 compression
- Retrofit SCR & Wet FGD Required: ~\$225 – \$300M (required for CO_2 capture equipment)
- Located at AEP's Northeastern Plant Unit 3 or 4 in Oklahoma
- CO_2 for Enhanced Oil Recovery (EOR) or geologic storage

Post-Combustion Carbon Solution Provides Pure Co_2 Stream For Capture

Schematic of the Chilled Ammonia Process



Chilled Ammonia Process Plant Footprint

Oxy-Fuel CO_2 Capture & Storage Project

AEP®

Pilot Scale Demonstration

- 10 MW_e scale
- Teamed with B&W at its Alliance Research Center and 16 other utilities
- Demo completed 3Q 2007
- AEP funding of $50k

Commercial Scale Retrofit

- Retrofit on existing AEP sub-critical unit (several available)
- 150 – 230 MW_e scale retrofit
- 4,000 – 5,000 tons CO_2 per day
- Teamed with B&W
- AEP funding of ~ $200k – $3M for feasibility study
- Feasibility study completed 2Q 2008

Combustion Conversion Technology For Existing Coal Fleet – Longer Lead Time With Enhanced Viability And Long-term Potential

AEP AMERICAN® ELECTRIC POWER

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation or regulation in Ohio and/or Virginia, and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

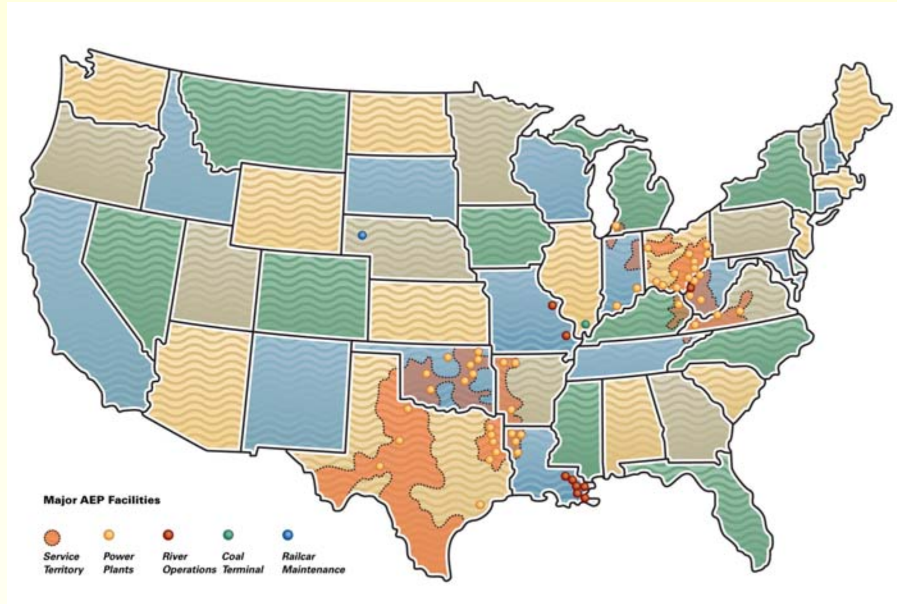
EVP & Chief Financial Officer

Company Overview

- 5.1 million customers in 11 states
- Industry-leading size and scale of assets:

Asset	Size	Industry Rank
Domestic Generation	~38,200 MW	# 2
Transmission	~39,000 miles	# 1
Distribution	~208,000 miles	# 1

Source: Company research & Resource Data International Platts, PowerDat 2005



- Coal & transportation assets
  - Control over 8,000 railcars
  - Own/lease and operate over 2,600 barges & 51 towboats
  - Coal handling terminal with 20 million tons of capacity
- 20,000 employees

AEP Generation Portfolio				
Coal	Gas	Nuclear	Hydro	Wind
67%	24%	6%	2%	1%

AEP Enjoys Significant Presence Throughout The Energy Value Chain

Strategic Direction

- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Develop our transmission business
- Achieve adequate returns on all assets

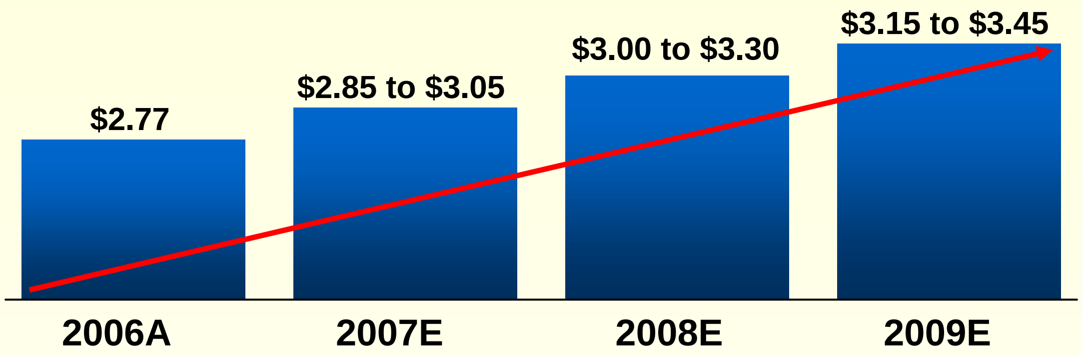
Deliver value to investors and cost effective service to our customers

Continued Commitment To Our Core Utility Mission: Bring Reasonably Priced Electric Service To Our Customers, Thereby Strengthening Our Communities And Rewarding Our Investors

AEP®

Framework For Long-Range Performance

- 2007, 2008 & 2009 Ongoing Earnings Guidance Ranges:

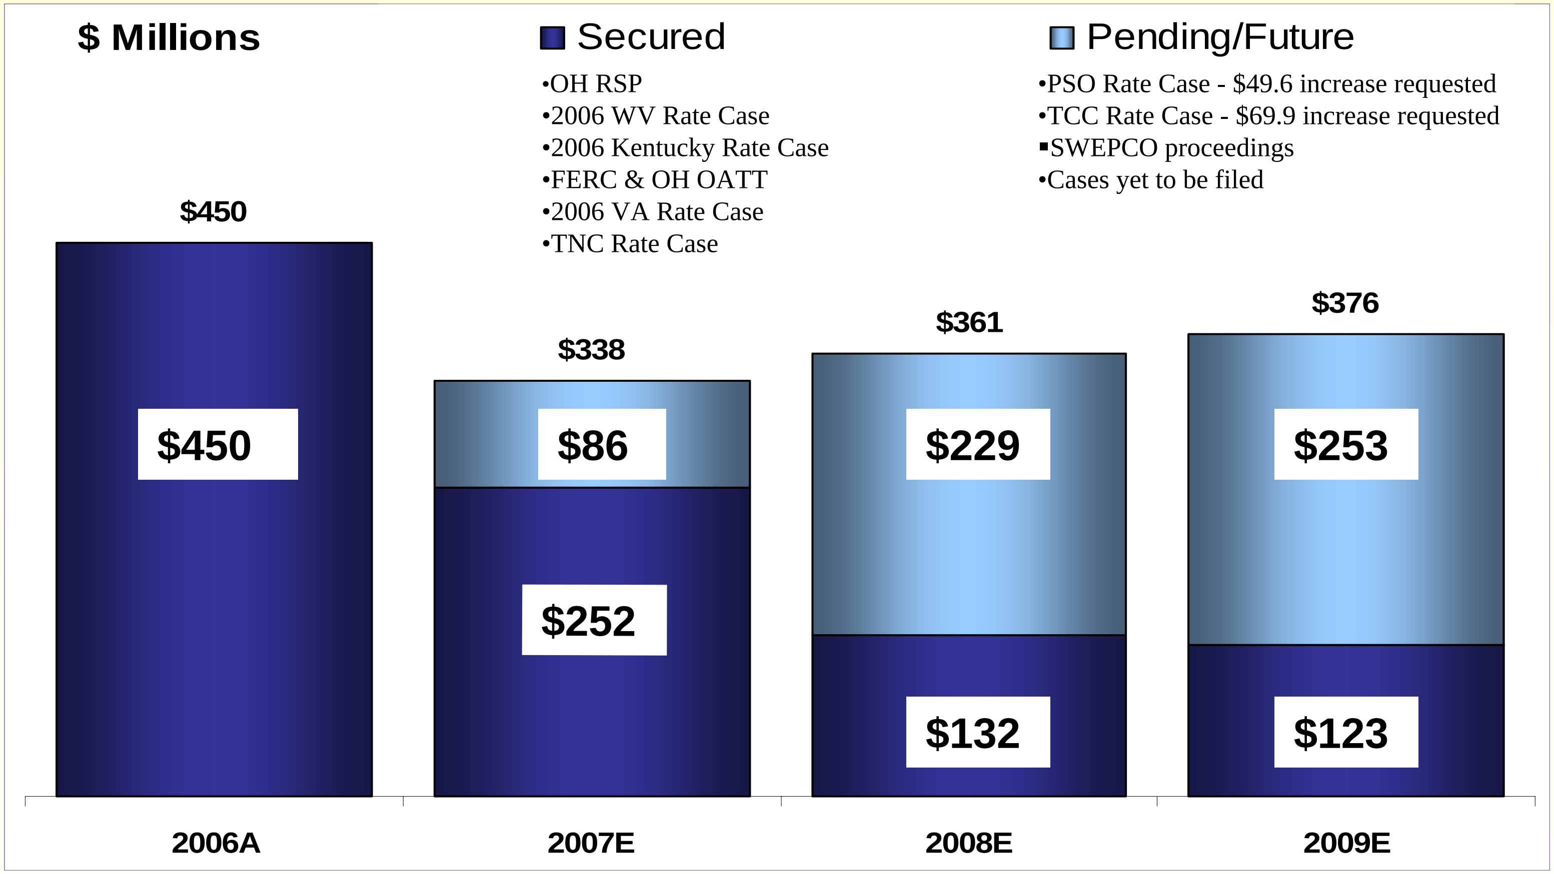


- EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in existing utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
  - Investment in new transmission opportunities
  - Seek rate recovery for new investments
  - Control costs & achieve timely rate relief
- Maintain credit ratings
  - BBB/Baa2/BBB

AEP®

Our Strategy Remains Focused On Regulated Operations

Incremental Rate Relief Composition



AEP®

Rate Relief Is A Critical Element To AEP's Financial Success

Utility Investment Drives Growth

Capital Investment Forecast (2007-2009)

($ in millions)	2007	2008	2009	Total (2007-09)

AEP®

Purchased Generation

Waterford

- 821 MW combined-cycle gas plant
- $220MM purchase price
- Columbus Southern Power completed purchase on Sept. 28, 2005

Ceredo

- 505 MW simple-cycle gas plant
- $100MM purchase price
- APCo completed purchase on Dec. 15, 2005

2,946 MW of gas-fired generation added since 2005

Darby

- 480 MW simple-cycle gas plant
- $102MM purchase price
- Columbus Southern Power completed purchase on April 25, 2007

Lawrenceburg

- 1140 MW combined-cycle gas plant
- $325MM purchase price
- AEG completed purchase on May 16, 2007

Additional Gas-fired Generation Allows Us To Meet The Growing Needs Of Our Customers And Provides The Company With Greater Fuel Flexibility

CSP/OP	Great Bend	Ohio	Under Review(3)	Coal	IGCC	600	TBD
APCo	Mountaineer	West Virginia	Under Review(3)	Coal	IGCC	600	TBD

(1) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment
(2) PSO will own 50%, or 425 megawatts, totaling approximately $900MM in capital investment
(3) FEED (front-end engineering and design) study is completed. Final results will be available in June.

AEP Is Meeting The Growing Electricity Needs Of Customers Through The Pursuit Of New Economic Generation Facilities

New Gas-Fired Generation Facilities

SWEPCo

- Mattison Plant (Tontitown, AR)
  - Certificate of Need filings (LA, AR, TX) were approved in all 3 states
  - Air permit filed and approved in Feb 2007
  - Units 3 and 4 online by summer peaking-season 2007; Units 1 and 2 online by Jan 2008
- Stall Plant (Arsenal Hill, LA)
  - Certificate of Need filings (LA, AR, TX)
    - TX settled in Feb 2007
    - AR & LA decisions expected by year-end 2007
  - Air permit filed on April 27, 2007 – expecting approval by Mar 2008

PSO

- Southwestern & Riverside Additions
  - Air permit received March 22, 2007
  - Commercial operation date of Dec 2007
  - Projects to be completed by Q1 2008
  - Regulatory Recovery
    - Settlement and final order in the Lawton Cogen case authorizes costs for Southwestern and Riverside peakers to be recovered through a rider mechanism beginning as early as June 2008 based on the Commercial Operation date

2007-2009 Projected Capital Expenditures

	2007	2008	2009
Mattison	$56MM	$4MM	-
Stall	$82MM	$126MM	$64MM
Southwestern	$36MM	$3MM	-
Riverside	$35MM	$2MM	-

AEP®

SWEPCo's and PSO's Short-Term and Intermediate Power Needs Will Be Met With Newly Constructed Gas-Fired Facilities

New Ultra-Supercritical Coal Facilities

SWEPCo

- Turk Plant (Fulton, AR)
  - Certificate of Need approvals (LA, AR, TX) expected by Sept 2007
  - Air permit approval expected in Aug 2007
  - Regulatory Recovery
    - Recovery of carrying cost requested in LA Certificate of Need filing – Hearings scheduled for Sept 2007
    - AR and TX rate recovery will be addressed in separate filings
  - Approximately 85-90% of costs are firm
    - EPC contract for balance of plant work awarded in May 2007
    - Contracts for turbine, boiler, and environmental control equipment awarded in 2006

PSO

- Red Rock Plant (Red Rock, OK)
  - Used and useful determination filed in Feb 2006 – approval expected by Sept 2007
  - Air permit approval expected in Aug 2007
  - Regulatory Recovery
    - Order expected in PSO rate filing by June 19, 2007 – filing includes request for CWIP treatment for new projects
  - Original cost estimate of $1.8 billion – revised cost estimate expected in July 2007

2007-2009 Projected Capital Expenditures

	2007	2008	2009
Turk Plant	$211MM	$230MM	$243MM
Red Rock Generating Facility	$54MM	$120MM	$236MM

AEP®

Ultra-Supercritical Coal-Fired Generation Is The Most Economical Choice For New Baseload Plants In AEP's Western Service Territory

Integrated Gasification Combined Cycle Facilities

Front-End Engineering & Design (FEED) results complete. Results to be filed in June 2007. Cost estimates expected to be in target range of 20-30% premium over new ultra-supercritical coal-fired facilities of equal capacity.

West Virginia

- Certificate of Public Convenience & Necessity filed Jan. 11, 2006
  - APCo testimony due June 18, 2007
  - Intervenor & Staff testimony due Aug. 17, 2007
  - Hearings Sept. 10-14, 2007
  - Statutory Deadline – Dec. 2, 2007
- Air permit filed in Oct 2006 – pre-draft report is expected in June 2007
- Regulatory Recovery Filing
  - Filing expected in June 2007 – will include request for cash recovery mechanism

Ohio

- Certificate of Environmental Compatibility & Public Need filed on March 24, 2006
  - Ohio Power Siting Board approved application on March 9, 2007
- Air permit filed in Oct 2006
- Regulatory Recovery Filing
  - Phase 1 – June 2006 – PUCO approved tariff to recover pre-construction costs ($24MM) over 12-month period effective July 1, 2006
  - Phase 2 – filing likely to be withheld until resolution of Ohio Supreme Court action

Construction Period Of 48-50 Months Following Receipt Of Major Regulatory And Permit Approvals

AEP®

Transmission Investment Opportunity *

Creating a business model to manage capital requirements for enhanced returns with partners

- ~ $3 billion I-765 Project in PJM
- ~ $2 billion 765-kV study with ITC in Michigan
- ~ $3 billion project filed with SPP
- ~ $1- $7 billion in ERCOT via Electric Transmission Texas, LLC (ETT)

Assumptions	
Estimated Investment Opportunity	$15 Billion
Ownership Structure w/ Partner	50% / 50%
Debt/Equity Ratio	50% debt / 50% equity
Return on Equity	11.00%-13.00%
Potential EPS Impact (based on 396 MM shares)	$0.60+ **

* This identified transmission opportunity is not included in current capex guidance

** Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion

AEP®

Building The Next US Interstate System For Enhanced Reliability And Market Efficiency Could Have Significant EPS Implications

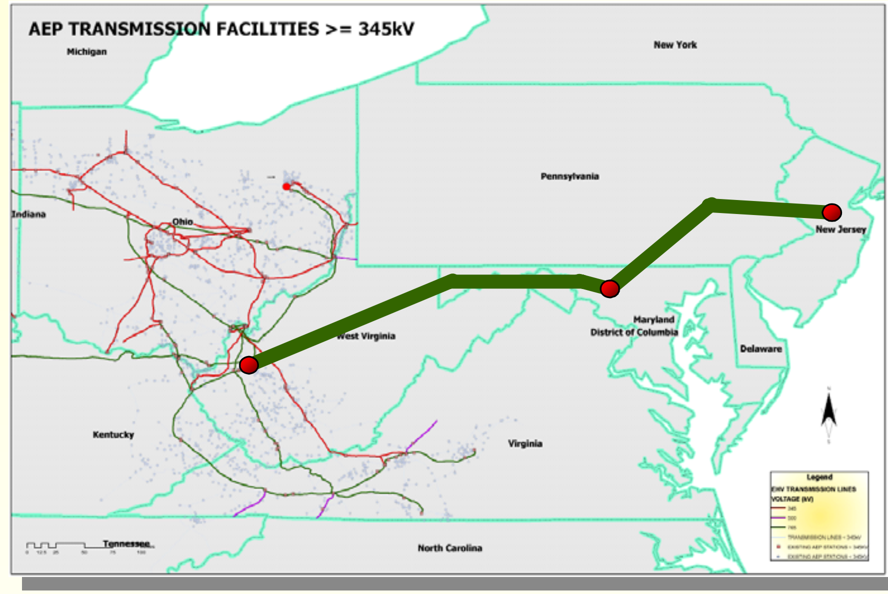
I-765$_{TM}$ PJM Transmission Project

Joint Venture with AYE

- 290 miles of the proposed 550 mile project
- Line will link AEP's Amos station in WV to AYE's proposed Kemptown station in MD with an intermediate station at AYE's Bedington station in WV
- JV project costs will encompass $1.1 billion, with each company owning 50%
- AEP's investment will total approximately $700 million, including ancillary projects
- Entire I-765$_{TM}$ project included in DOE's draft National Interest Electric Transmission Corridor
- FERC incentive rate treatment applies
- Operations to commence in the 2H07

Remaining I-765$_{TM}$ Project

- PJM is evaluating the Kemptown (MD) - Deans (NJ) line as a separate alternative



➢ Jointly owned with Allegheny, will improve eastern grid reliability

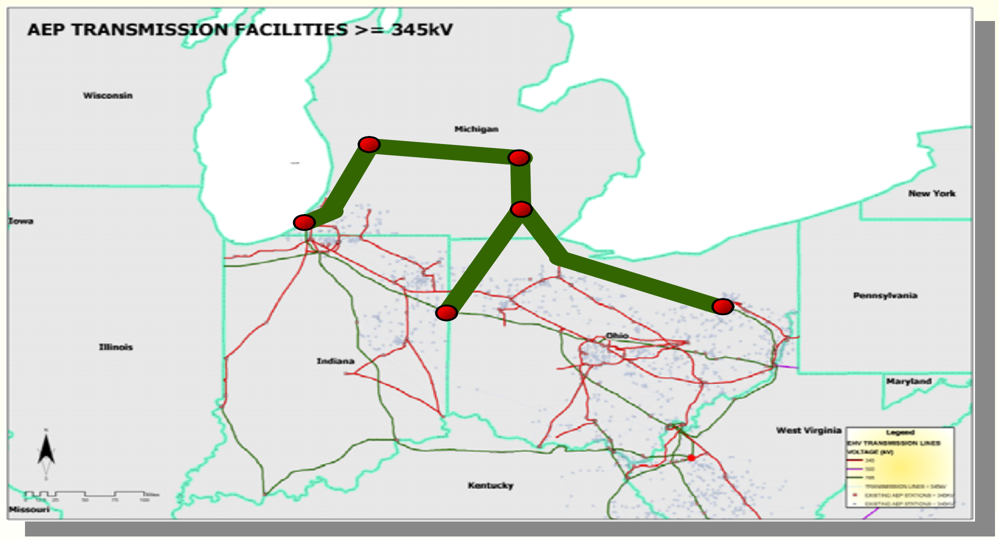
➢ Enhance Midwest-Mid-Atlantic power transfer capability by 5000 MW

➢ Reduces network line losses by 280 MW at peak with heavy Midwest – Mid-Atlantic power transfers.

PJM's Targeted In-Service Date For the 290-Mile Project Is 2012

Michigan 765kV Study

- Agreement with ITC Transmission for Michigan 765-kV study
- Estimated $2B investment potential (before ownership division)
  - 630 line miles
  - Over 5000MW improved transfer capability
  - Anticipated rate impact <1mil/kWh
- 765-kV could help alleviate constraints
- Study results anticipated in 2Q07
- We anticipate signing an MOU with ITC on joint ownership in mid-2007



Project Construction Would Not Proceed Until Proper Regulatory Approvals Are Received And Cost Allocation Is Clarified

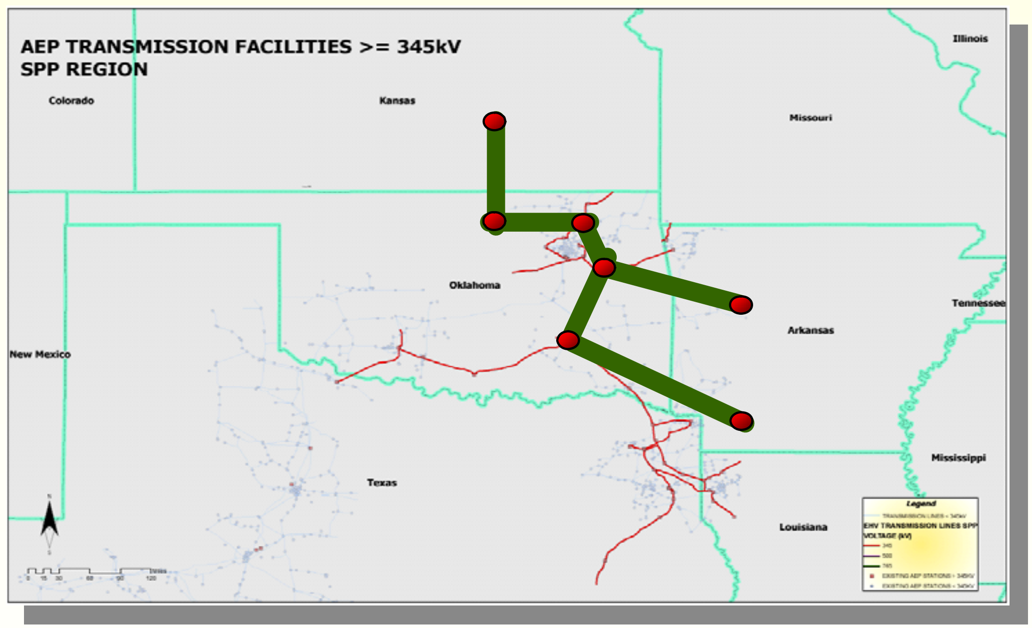
SPP Transmission Potential

- June 2006 SPP requested proposal to address congestion, reliability & access for new generation

- July 2006 AEP submitted proposal:

- Six 765-kV lines, 610 line miles from Arkansas to Wichita, Kansas, under construction 2012-2017
- Investment ~$3 billion
  - ~4000MW improved transfer capability
  - Anticipated rate impact 2mils/kWh

Next steps:
SPP issued EHV Overlay Study RFP to review 345 kV, 500 kV, and 765 kV potential projects in SPP with results expected in mid-2007



Long-term Opportunity For Large Transmission Investments to Reduce Congestion, Enhance Reliability and Access New Generation

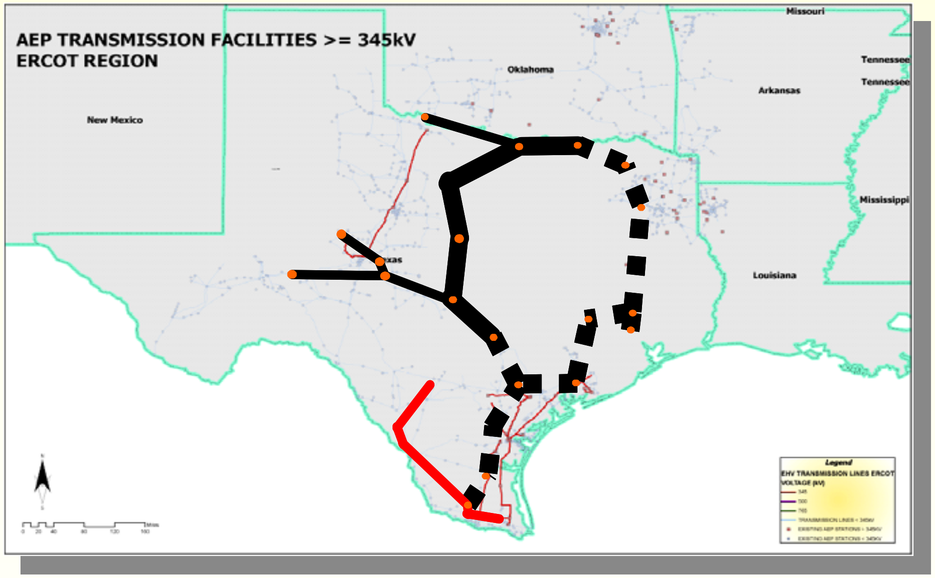
Electric Transmission Texas, LLC

Joint Venture with MidAmerican Energy

- Ownership – 50% AEP / 50% MidAmerican Energy
- 40% equity / 60% debt capital structure requested at the PUCT follows Texas precedent for T&D companies' filings
- AEP's 50% investment will be held at the AEP Utilities, Inc. subsidiary
- Hearings with PUCT to be held July 16-19, 2007
- Initial funding in 3Q07 after regulatory approvals
- Debt – Initially bank financing

Competitive Renewable Energy Zone (CREZ) docket

- In February 2007, ETT proposed the development of a long-term transmission plan for ERCOT to address the Texas legislature's CREZ initiative. The plan includes:
  - $1.5 billion for Stage I of CREZ development by 2012
  - $1.5 billion for Stage II of CREZ development by 2015
  - $4.2 billion for Stage III for completion of ERCOT transmission backbone needed for long-term



AEP®

Operations of JV Could Begin As Soon As 3Q07 Upon Receipt of Regulatory Approvals

Summary of 5-7% Long-Range Growth Components

- ✓ Energy sales growth of 1.5%
- ✓ Rate base investment
  - Generation plant purchases & build
  - Transmission – interstate & intrastate
  - Distribution
  - Reliability
- ✓ Transmission company
- ✓ Commercial operations
- ✓ Regulatory strategy
  - Achieve timely returns
  - Seek cash returns on investment during construction
  - Create & secure innovative rate plans
    - Pursue post-2008 solution in Ohio
    - Expand use of trackers
    - Formula rates

New Generation And Transmission Projects Largely Reflect Upside To The Long-Range Earnings Growth Target Of 5-7%

AEP®

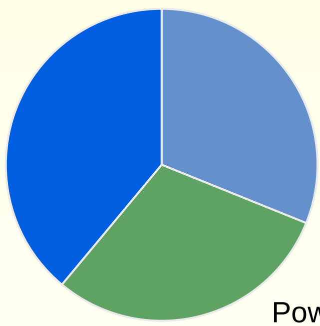
* Super-critical includes coal units with a net maximum capacity of 450MW or greater; Sub-critical includes coal units with a net maximum capacity less than 450MW.

** East gas units are evaluated using Equivalent Forced Outage Factor. Since these units run infrequently, this factor gauges performance based on period hours instead of service hours.

Coal Procurement – 2007 Projected

AEP purchases approx. 76 million tons of coal per year

Total AEP System



Coal Stats:

- 95% contracted for 2007
- Avg. delivered price ~ $35.10/ton in 2006
- Approximate 7-9% price increase in 2007 -- ($37.50 to $38.50/ton)
  - Addition of Mountaineer & Mitchell scrubbers allows for a greater mix of Northern Appalachian coal in 2007

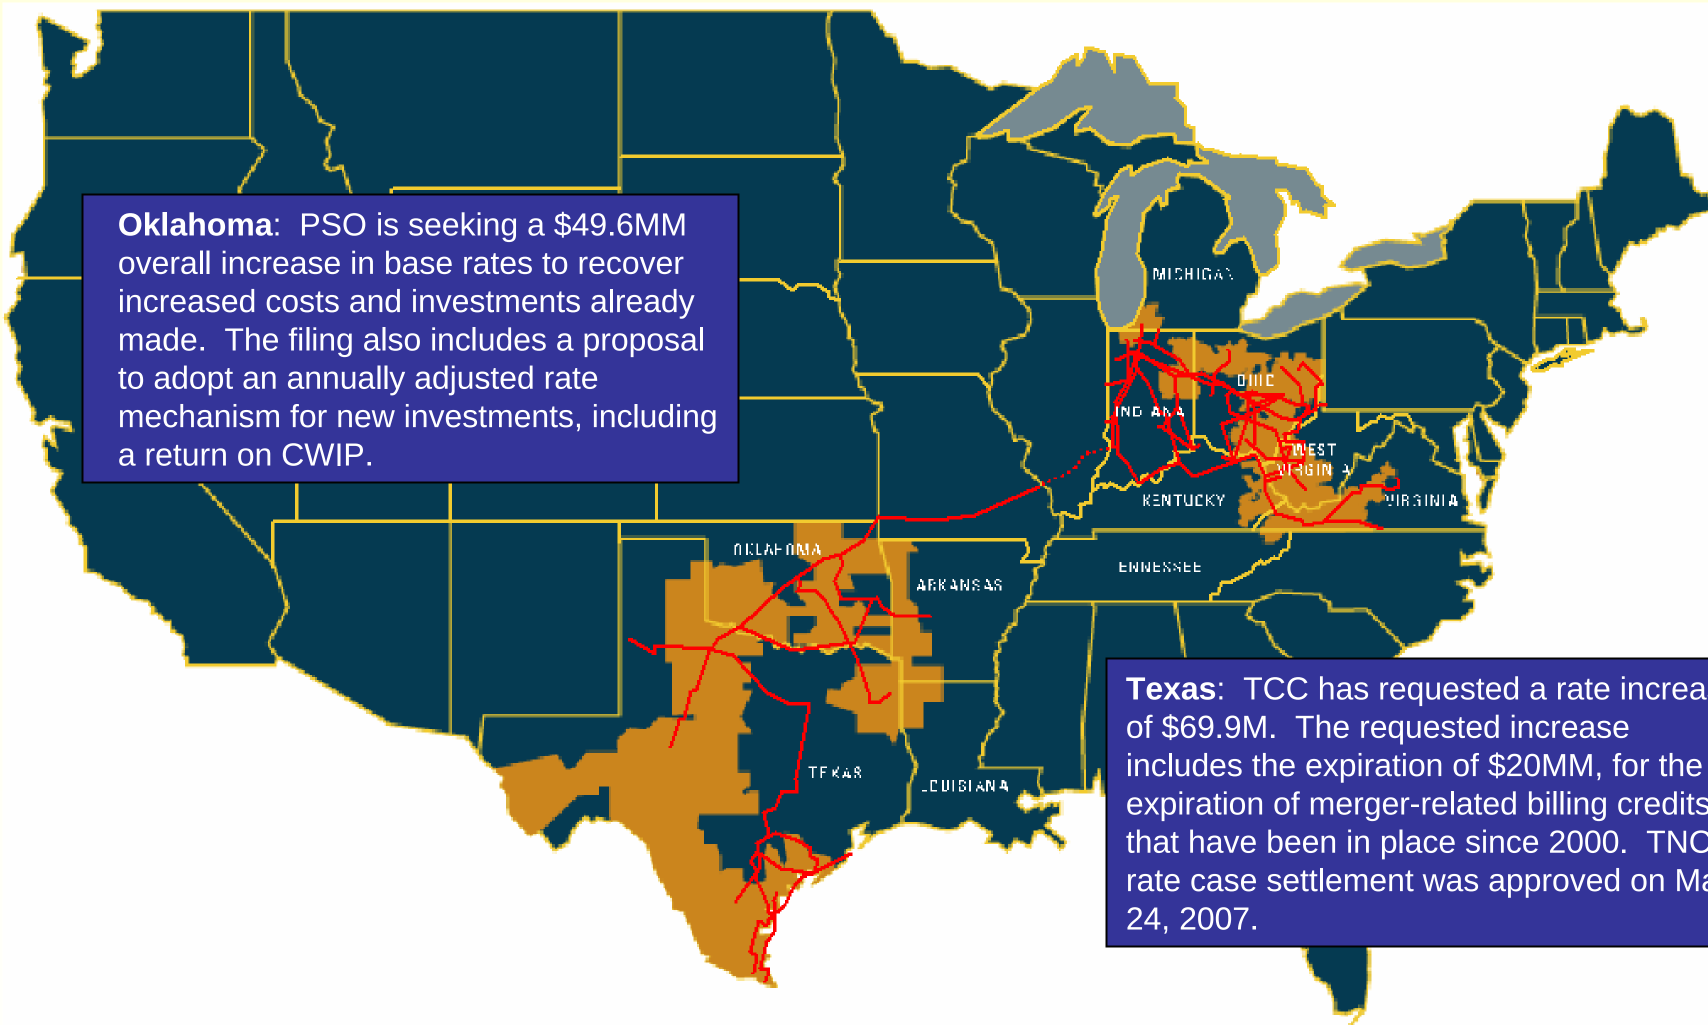
Base Case Regulatory Summary



Oklahoma: PSO is seeking a $49.6MM overall increase in base rates to recover increased costs and investments already made. The filing also includes a proposal to adopt an annually adjusted rate mechanism for new investments, including a return on CWIP.

Texas: TCC has requested a rate increase of $69.9M. The requested increase includes the expiration of $20MM, for the expiration of merger-related billing credits that have been in place since 2000. TNC's rate case settlement was approved on May 24, 2007.

New Transmission Investment Funding Plans

- **Electric Transmission Texas LLC**
  - 40% equity / 60% debt capital structure requested at the PUCT follows Texas precedent for T&D companies' filings
  - Equity – 50% AEP / 50% MidAmerican Energy
  - AEP's 50% investment will be held at the AEP Utilities, Inc. subsidiary
  - Debt – Initially bank financing
  - Initial funding in 3Q07 after regulatory approvals

- **AEP I-765$_{TM}$ Interstate Project**
  - Forming a joint venture with Allegheny Energy for 290 miles of the proposed 550 mile project
  - Equity – 50% AEP / 50% Allegheny
  - AEP's 50% investment will be held at the AEP Transmission Holding Company LLC subsidiary
  - Operations to commence in the second half of 2007
  - Project included in the DOE's draft National Interest Electric Transmission Corridor issued in April 2007

- **Other Transmission Projects**
  - Equity percentage of capital structure will target FERC precedents
  - Equity ownership percentage will vary by project
  - Will seek FERC transmission incentives:
    - Incentive ROE
    - Return on CWIP
    - Abandonment recovery
    - Expensing pre-construction expenses

Procedural Schedules and Details

- Turk Plant - Arkansas
  - Docket No. 06-154-U
  - Staff/Intervenor Testimony – June 29
  - Rebuttal Testimony – July 13
  - Public Hearings – July 19 or August 9

- Red Rock Facility - Oklahoma
  - PSO and OG&E Cases were consolidated by the OCC
  - PSO Docket Nos. 200500516 and 200600030
  - OG&E Docket No. 200700012
  - Staff/Intervenor Testimony - received May 21
  - Rebuttal Testimony – June 18
  - Hearings re. Used and Useful Determination – July 2
  - Hearings re. OG&E Cost Recovery – July 19
  - ALJ Report – August 6
  - Order – August 21

- Turk Plant - Louisiana
  - Docket No. U-29702
  - Staff/Intervenor Testimony – June 15
  - Rebuttal Testimony – July 16
  - Public Hearings – September 11-14

- ETT LLC - Texas
  - Docket No. 33734
  - Intervenor Testimony – June 8
  - Staff Testimony – June 18
  - Rebuttal Testimony – June 26
  - Hearings – July 16-19

AEP®

IGCC Overview

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called "syngas" – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2 , mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP's eastern service territory.

AEP®

AEP Is Committed To IGCC Technology

IGCC Permitting Process

IGCC Permitting Issues

- **Air**
  - ✓ Identify best available control technology (BACT)
  - ✓ Determine how start-up and shut-down emissions should be addressed
- **Wastewater**
  - ✓ Understand nature of wastewater streams
  - ✓ Determine treatability and permitting scopes
- **US ACE (US Army Corp of Engineers**)
  - ✓ Conduct all necessary site studies per NEPA (National Environmental Policy Act) requirements (Wetlands, endangered species, archaeology)
  - ✓ Obtain permit to construct river facilities

AEP®

Permitting process takes 1 – 2 years and is well under way

Environmental Investment

AT THE CONCLUSION OF OUR CURRENT ENVIRONMENTAL RETROFIT PROGRAM, OVER 47% OF OUR COAL-FIRED GENERATION FLEET WILL BE EQUIPPED WITH SCRs AND OVER 50% WILL BE SCRUBBED (FGD). AEP's TOTAL COAL FLEET CAPACITY = 24,710 MEGAWATTS*

Plant Name	MW Capacity	SCR	Status	FGD	Status
Amos 1-3	2900	☑	In-service	☑	Projected 2008-10
Gavin 1 & 2	2620	☑	In-service	☑	In-service

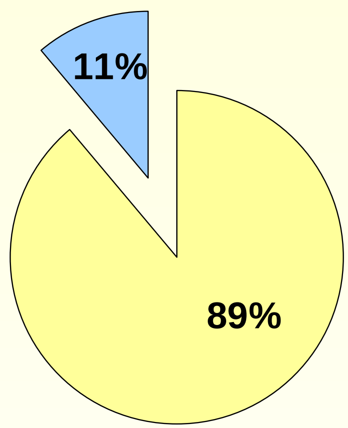
*Excludes AEP's 44% ownership in OVEC (980 MWs of coal-fired capacity)

AEP®

Installation Of SCR And FGD Equipment Will Allow Our Coal Fleet To Remain Extremely Cost Competitive

Materials and Vendors – AEP's Advantage

Environmental Program Costs:
Active/Firm Costs to Remaining Estimated Costs



Actuals To Date & Firm Costs
Remaining Estimated Costs*

* Primarily labor and activated carbon injection systems

SCR Technology

- Removes 90 – 93% of NOx emissions
- Requires ~ 1% use of auxiliary power
- **AEP Capital Cost ~ $121/kw avg.**

Combination of SCR & FGD technology results in co-benefit of Hg removal ~80% removal efficiency

FGD Technology

- Removes 95 – 98% of SO_2 emissions
- Requires ~1.5% to 3.0% use of auxiliary power
- **AEP Capital Cost ~ $250/kw avg.**

AEP®

AEP Benefits From First-mover Advantage Through Lower Contracted Pricing and Reduced Market Escalation Exposure

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A Reliable & Reasonably-priced Electric Supply Is Necessary To Support The Economic Well-being Of The Areas We Serve

AEP's Climate Strategy

- **Being proactive and engaged in the development of climate policy**
  - International Emissions Trading Association (IETA)
  - Electric Power Research Institute (EPRI)
  - Pew Center on Global Climate Change
  - e8
  - Global Roundtable on Climate Change
- **Investing in science/technology R&D**
  - FutureGen Alliance
  - US DOE research on carbon capture and sequestration at our Mountaineer Plant
  - EPRI – combustion technologies
  - MIT Energy Laboratory
  - B&W – Oxy-Fuel
- **Taking voluntary, proactive action now, demonstrating voluntary programs can work and setting policy precedents thru CCX**
  - Chicago Climate Exchange (CCX)
  - EPA Climate Leaders
  - EPA SF-6 Emission Reduction Partnership for Electric Power Systems Program
  - Asia-Pacific Partnership
  - DOE 1605B- voluntary reporting of GHGs Program
  - Business Roundtable Climate Resolve
  - Numerous forestry activities
- **Evaluating longer term investment decisions such as new generation and carbon capture and storage (e.g., IGCC, Ultra-supercritical)**

AEP Must Be A Leader In Addressing Climate Change

AEP's Long-term GHG Reduction Portfolio

Renewables (Biomass Co-firing, Wind)

Supply and Demand Side Efficiency

Off-System Reductions and Market Credits (forestry, methane, etc.)

Commercial Solutions of New Generation and Carbon Capture & Storage Technology

AEP®

AEP Is Investing In A Portfolio Of GHG Reduction Alternatives

AEP's Long-term CO_2 Reduction Commitment

Existing Programs

- Renewables
  - 800 MWs of Wind
  - 300 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

New Program Additions

- Incremental Reduction quantity: 5MM tons/yr
- Timing: Implement during 2007 to take effect/receive credits by 2011
- Methods
  - +1000 MWs of Wind PPAs – 2MM tons/yr
  - Domestic Offsets (methane) – 2MM tons/yr
  - Forestry – Tripling annual investment to increase to 0.5MM tons/yr by 2015
  - Fleet Vehicle/Aviation Offsets – 0.2MM tons/yr
  - Additional actions to include DSM and end use energy efficiency, biomass and power plant efficiency – 0.2MM tons/yr

New Technology Additions

- Commercial solutions for existing fleet
  - Chilled Ammonia
  - Oxy-Fuel

AEP Is Committed To A 5mm Ton/Yr Reduction In Co_2 Emissions Which Offsets Approximately Half Of The Emissions Projected From New Generation Projects Previously Announced

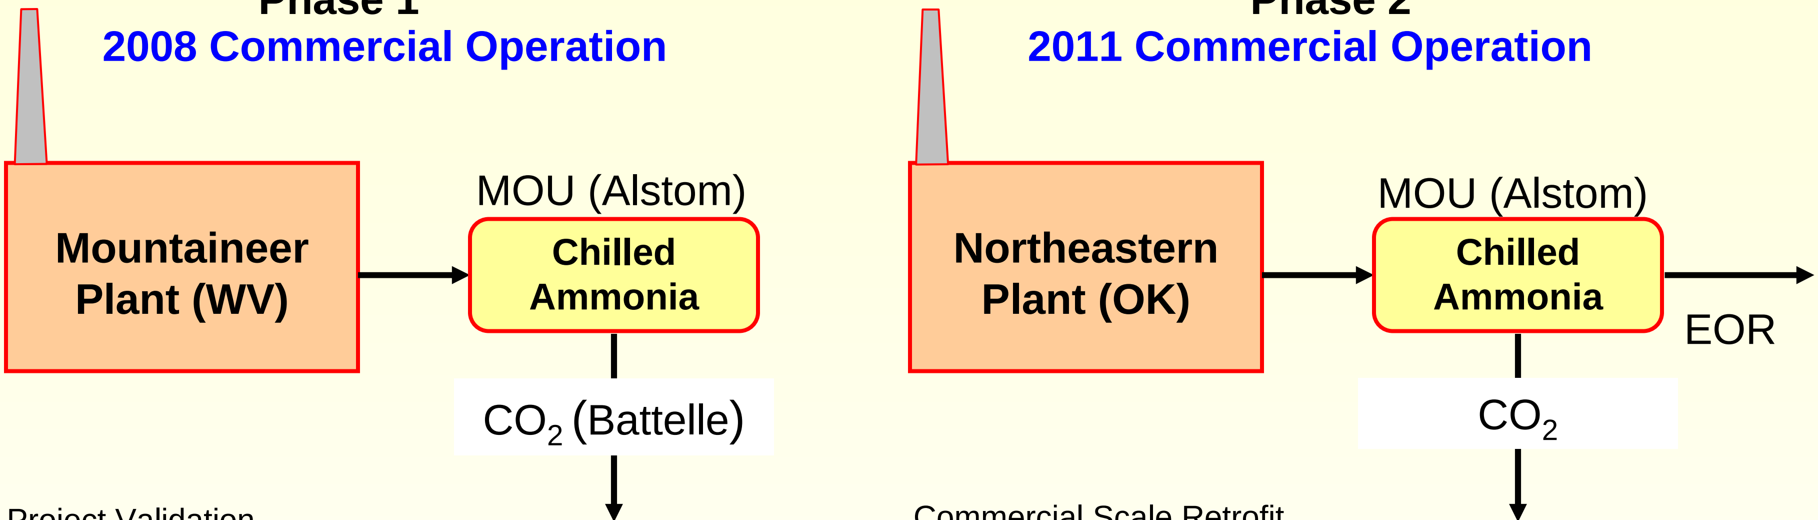
AEP®

Chilled Ammonia Process Plant Footprint

Chilled Ammonia Technology Program

Phase 1
2008 Commercial Operation

Phase 2
2011 Commercial Operation



Project Validation

- 30 MW_t (megawatts thermal) scale (a scale up of Alstom/EPRI 5 MW_t field pilot, under construction at WE Energies)
- <0.1MM tonnes CO_2 per year
- In operation 4Q 2008
- Approximate total cost \$50 – \$80M
- Using Alstom "Chilled Ammonia" Technology
- Located at the AEP Mountaineer Plant in WV
- CO_2 for geologic storage

Commercial Scale Retrofit

- ~ 200 MW_e scale (megawatt electric)
- ~ 600 MW_t scale (megawatt thermal)
- ~1.5MM tonnes CO_2 per year
- In operation late 2011
- Approx. capital \$250 – \$300M (CO_2 capture & compression)
- Approx. O&M cost \$12M per year
- Energy penalty ~ 35 – 50 MW steam, 25 – 30 MW for CO_2 compression
- Retrofit SCR & Wet FGD Required: ~\$225 – \$300M (required for CO_2 capture equipment)
- Located at AEP's Northeastern Plant Unit 3 or 4 in Oklahoma
- CO_2 for Enhanced Oil Recovery (EOR) or geologic storage

AEP®

Post-combustion Carbon Solution Provides Pure Co_2 Stream For Capture

Oxy-Fuel Technology Initiative

Near-zero Emissions Using Oxy-fuel Combustion Technology

Oxy-Fuel CO_2 Capture & Storage Project

Pilot Scale Demonstration

- 10 MW_e scale
- Teamed with B&W at its Alliance Research Center and 16 other utilities
- Demo completed 3Q 2007
- AEP funding of $50k

Commercial Scale Retrofit

- Retrofit on existing AEP sub-critical unit (several available)
- 150 – 230 MW_e scale retrofit
- 4,000 – 5,000 tons CO_2 per day
- Teamed with B&W
- AEP funding of ~ $200k – $3M for feasibility study
- Feasibility study to be completed in late 2008/early 2009

AEP®

Combustion Conversion Technology For Existing Coal Fleet – Longer Lead Time With Enhanced Viability And Long-term Potential

Regulatory Activity

AEP Ohio Application For 4% Provision On Generation Rate

- On Jan. 23, 2007, CSP and OP filed an application at the PUCO to recover 2007 costs associated with additional generation-related expenditures the companies are encountering related to environmental, security and other new generation-related costs pursuant to the RSP.
- CSP and OP are requesting to implement the provision to recover $24.5MM and $8.2MM, respectively, from May 2007 through December 2007.
- Staff & Intervenor testimony filed May 11, 2007; Staff recommended a $15MM increase at CSP and a $3.7MM increase at OP; OCC recommended a $19.9MM increase for CSP and a $3.7MM increase for OP.
- Evidentiary hearing commenced May 22, 2007.
- Because there was no specific action by the PUCO within the required time frame, we were allowed to implement these increases, subject to refund, in May 2007.

Regulatory Activity

Electric Transmission Texas (ETT) Rate Filing

- Jan. 22, 2007 – ETT filed with the PUCT for approval to operate as an electric transmission utility in Texas and to establish initial rates for ETT.
  - Requested capital structure of 60% debt / 40% equity; requested ROE of 11.25%.
  - Intervenor testimony is due June 8, 2007. Staff testimony is due June 18, 2007. Hearings are scheduled for July 16-19, 2007.
    - An order is expected Mid-2007 and operations are expected to commence in the 2nd half of 2007. Upon receipt of approvals, AEP and MidAmerican will each own a 50% interest in the joint venture.

Seams Elimination Cost Adjustment Revenues

- August 2006 – ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
  - Up to $96MM of SECA revenues could be disallowed, net of unused provisions
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both.
- Exceptions to initial decision filed Sept. 11, 2006; Replies to exceptions filed Oct. 11, 2006; Order expected by the Commission in 2007

AEP AMERICAN® ELECTRIC POWER

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation or regulation in Ohio and/or Virginia, and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

2006-2009 Projected Annual Rate Increase Of 3.8%

Strategic Direction

- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Develop our transmission business
- Achieve adequate returns on all assets

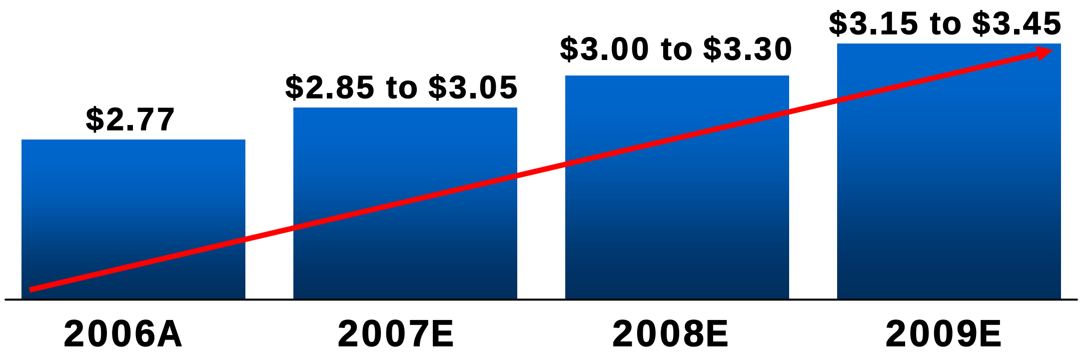
Deliver value to investors and cost effective service to our customers

CONTINUED COMMITMENT TO OUR CORE UTILITY MISSION: BRING REASONABLY PRICED ELECTRIC SERVICE TO OUR CUSTOMERS, THEREBY STRENGTHENING OUR COMMUNITIES AND REWARDING OUR INVESTORS

AEP®

Framework For Long-Range Performance

- 2007, 2008 & 2009 Ongoing Earnings Guidance Ranges:



- EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in existing utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
  - Investment in new transmission opportunities
  - Seek rate recovery for new investments
  - Control costs & achieve timely rate relief
- Maintain credit ratings
  - BBB/Baa2/BBB

AEP®

Our Strategy Remains Focused On Regulated Operations

Utility Investment Drives Growth

Capital Investment Forecast (2007-2009)

($ in millions)	2007	2008	2009	Total (2007-09)
Environmental	$935	$521	$301	**$1,757**
New Generation - Build	$474	$485	$573	**$1,532**
New Generation - Purchase	$118	$0	$0	**$443** *
Nuclear	$50	$57	$60	**$167**

Add: Lawrenceburg Plant Purchase	$325
2007 Including Lawrenceburg	**$3,867**

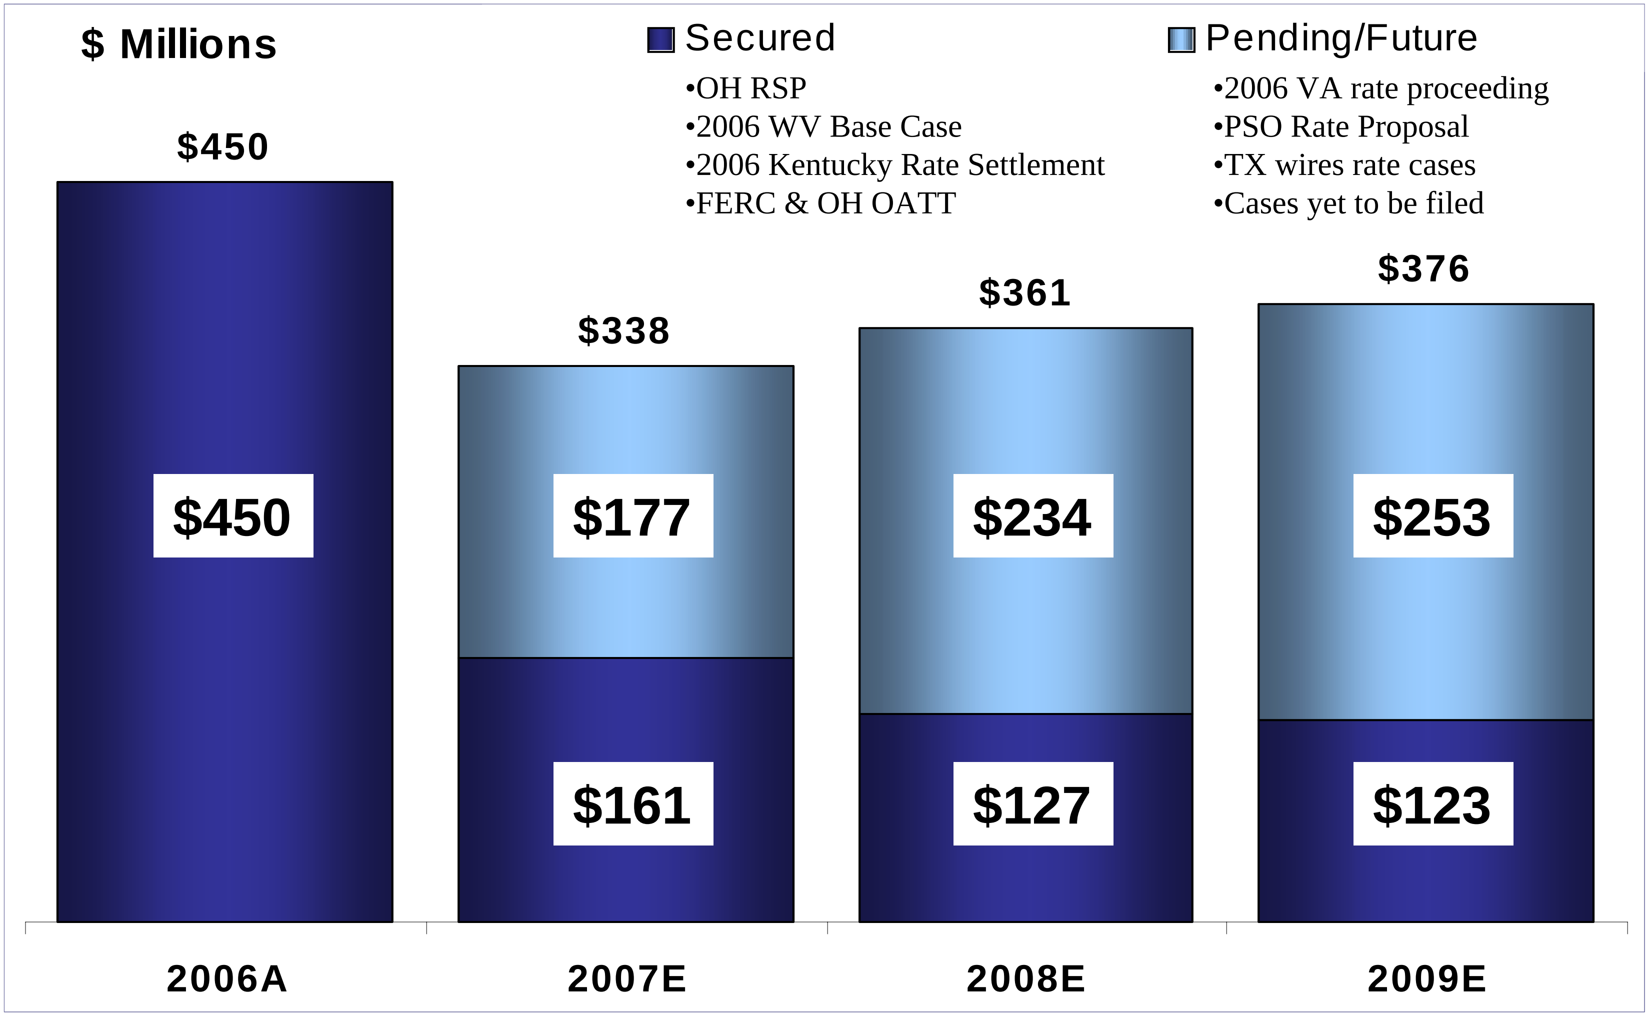
Note: Excludes AFUDC

*Includes Lawrenceburg purchase $325MM in 2007

AEP®

GROWTH INVESTMENT TO BE FUNDED BY CASH FROM OPERATIONS VIA RATE RELIEF AND DEBT ISSUANCES

Incremental Rate Relief Composition



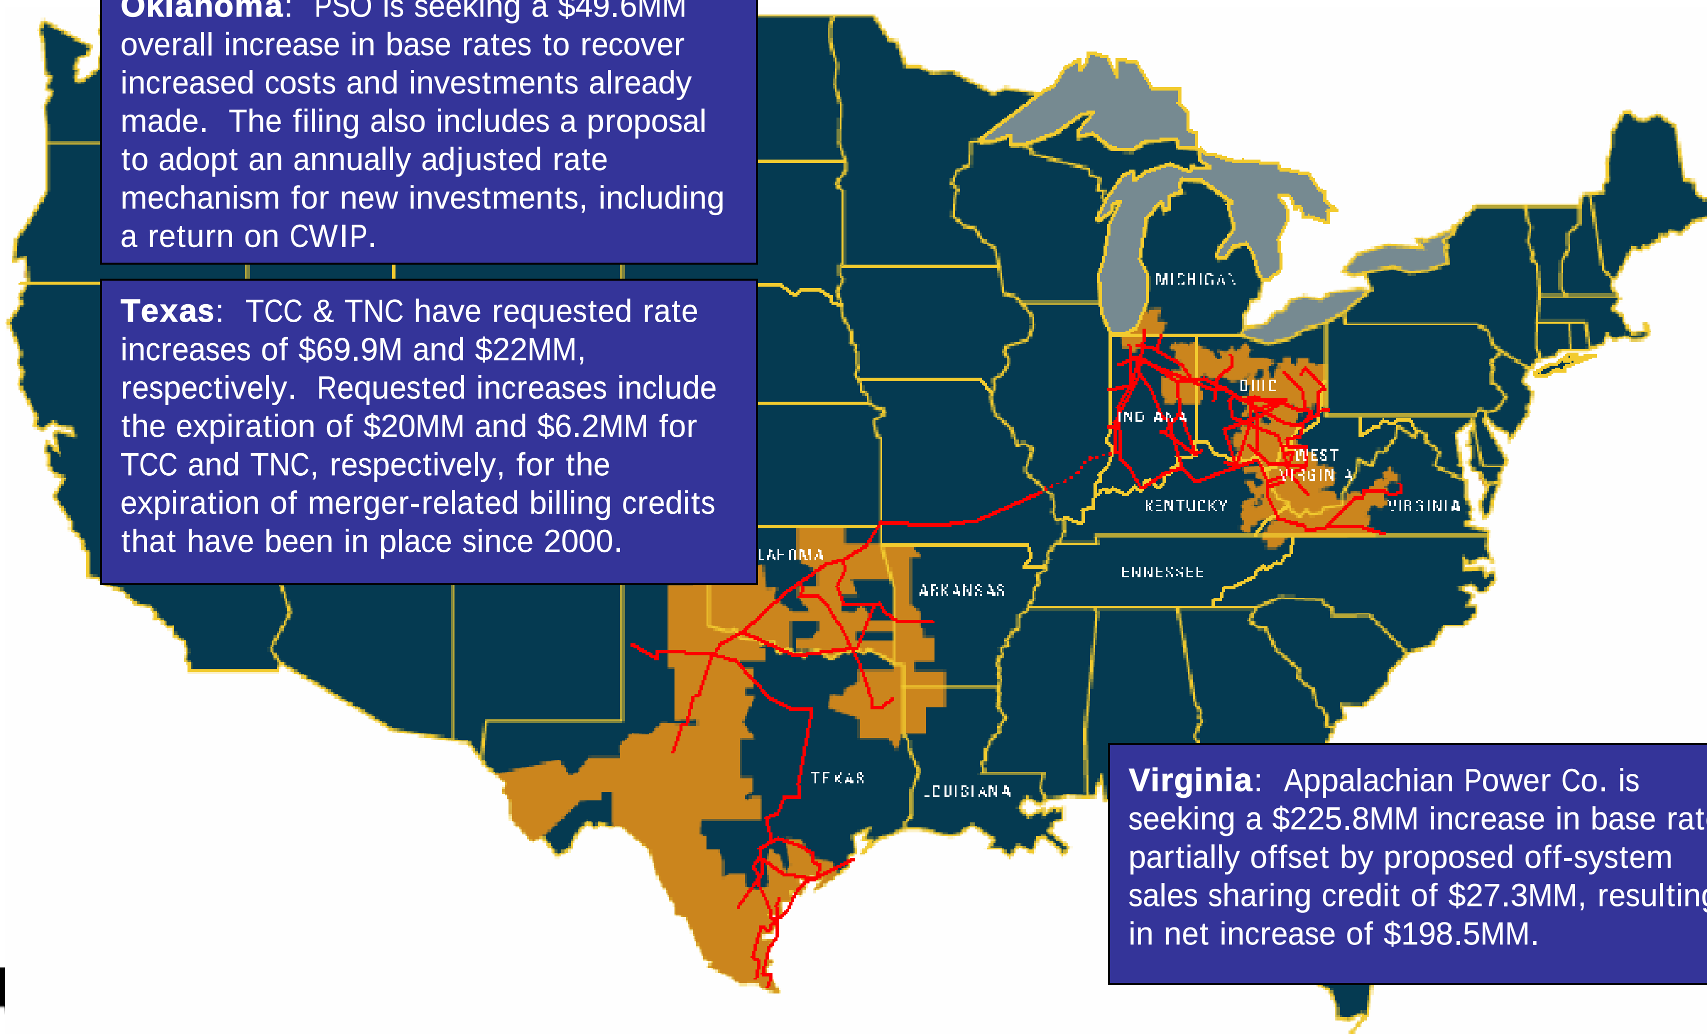
AEP®

RATE RELIEF IS A CRITICAL ELEMENT TO AEP'S FINANCIAL SUCCESS

Base Case Regulatory Summary

Oklahoma: PSO is seeking a $49.6MM overall increase in base rates to recover increased costs and investments already made. The filing also includes a proposal to adopt an annually adjusted rate mechanism for new investments, including a return on CWIP.

Texas: TCC & TNC have requested rate increases of $69.9M and $22MM, respectively. Requested increases include the expiration of $20MM and $6.2MM for TCC and TNC, respectively, for the expiration of merger-related billing credits that have been in place since 2000.



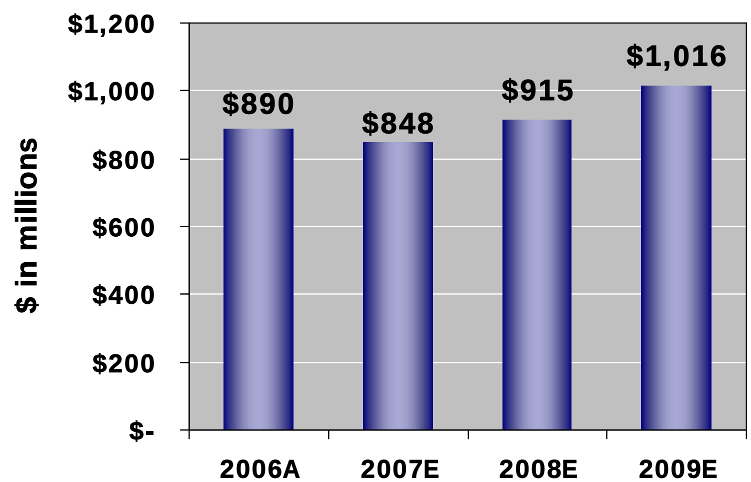
Virginia: Appalachian Power Co. is seeking a $225.8MM increase in base rates, partially offset by proposed off-system sales sharing credit of $27.3MM, resulting in net increase of $198.5MM.

Rate Relief & Enhanced Distribution Investment

- AEP Ohio Reliability Plan (Filed Oct. 6, 2006)
  - Plan will enhance distribution system reliability
  - Proposing an average annual investment of $130MM over 5-year period
- Virginia E&R Mechanism
  - Allows APCo-VA to recover incremental environmental & reliability costs
  - Order issued Nov. 20, 2006 granting $21.4MM of recovery for costs incurred thru Sept. 30, 2005
- Public Service of Oklahoma Rate Rider
  - $24MM annual vegetation management rider approved in Nov. 2005
- Texas Wires Rate Cases (Filed Nov. 9, 2006)
  - TCC & TNC seeking to increase rates for distribution & transmission services
  - Requested increases total $69.9MM and $20MM for TCC & TNC transmission & distribution revenues, respectively.

	2005	2006
Line Miles	201,666	207,632
Net PP&E-Distribution	$7,617MM	$8,241MM

Total Projected Distribution Investment



Rate Relief For Distribution Enhancement Will Be Sought Through Innovative Recovery Methods, Such As Rate Riders

Transmission Investment Forecast

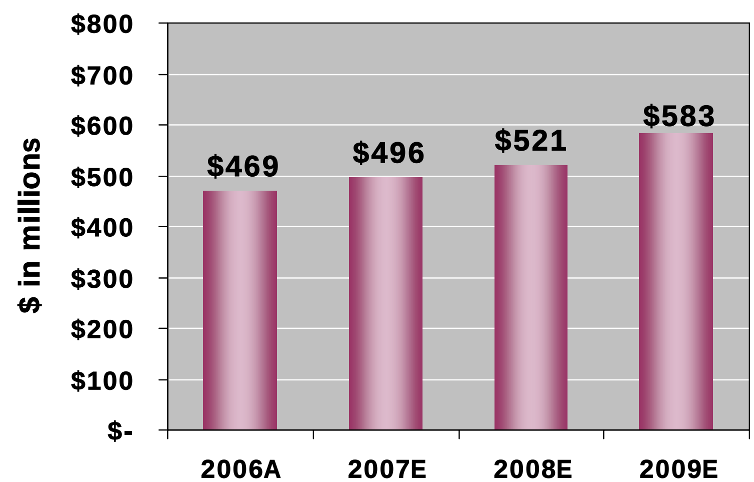
- FERC PJM Regional Transmission Rate Design
  - FERC ALJ recommended adoption of “postage stamp” rate
  - Final order expected in mid-2007

- Ohio Annual Transmission Rate Filing
  - Ohio companies transmission rates annually adjusted for FERC-approved open access rates, net congestion & ancillary services

- PUCT & FERC Filings to establish Electric Transmission Texas LLC (ETT)
  - Certificate of Convenience & Necessity filed Jan. 22, 2007 to establish ETT as a regulated utility company and to set initial rates
  - FERC filing to transfer transmission assets to ETT submitted Feb. 15, 2007
  - Approvals and asset transfer expected mid-2007

	2005	2006
Circuit Miles	38,879	39,158
Net PP&E-Transmission	$4,153MM	$4,686MM

Total Projected Transmission Investment



AEP®

The AEP Advantage: 100 Years Of Transmission Leadership Experience In The United States

Transmission ~ $9 Billion Opportunity*

Creating a business model to manage capital requirements for enhanced returns with partners

- ~ $1 billion+ in ERCOT via Electric Transmission Texas, LLC (ETT)
- ~ $2 billion 765-kV study with ITC in Michigan
- ~ $3 billion I-765 Project in PJM
- ~ $3 billion project filed with SPP

Assumptions	
Estimated Investment Opportunity	$9 Billion
Ownership Structure w/ Partner	50% / 50%
Debt/Equity Ratio	50% debt / 50% equity
Return on Equity	11.00%
Potential EPS Impact (based on 396 MM shares)	+ $0.60**

* ~$9 billion investment opportunity not included in current capital guidance forecasts

** Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion

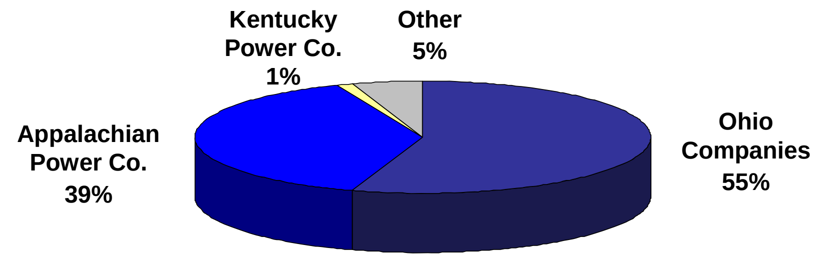
AEP®

Building The Next US Interstate System For Enhanced Reliability And Market Efficiency Could Have Significant EPS Implications

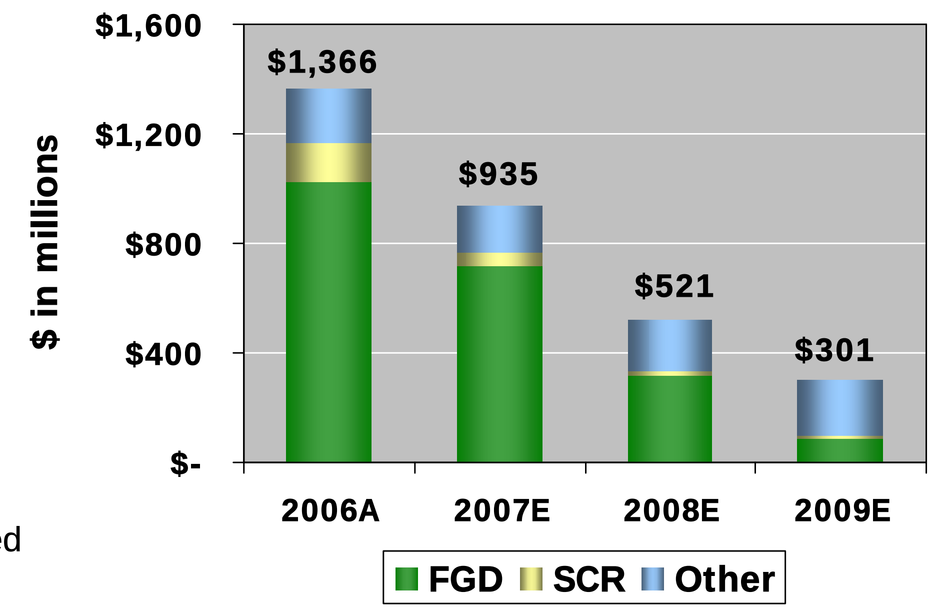
Environmental Investment Forecast

- Ohio Rate Stabilization Plan
  - Annual 3% and 7% generation rate increases at CSP & OP, respectively for 2006-2008
  - Filing made on Jan. 23 for recovery of 2007 costs associated with additional generation-related expenditures, pursuant to the 4% provision of the RSP
- West Virginia Rate Settlement
  - Mechanism in place to provide for rate increases through 2009 for ongoing environmental investments
- Virginia E&R Mechanism
  - Allows APCo-VA to recover incremental environmental & reliability costs
  - Order issued Nov. 20, 2006 granting $21.4MM of recovery for costs incurred thru Sept. 30, 2005
- Kentucky Environmental Surcharge
  - Monthly surcharge mechanism allows for recovery of pollution-control projects required by the Federal Clean Air Act

Projected Environmental Investment Allocation (2006A – 2009E)



Total Projected Environmental Investment

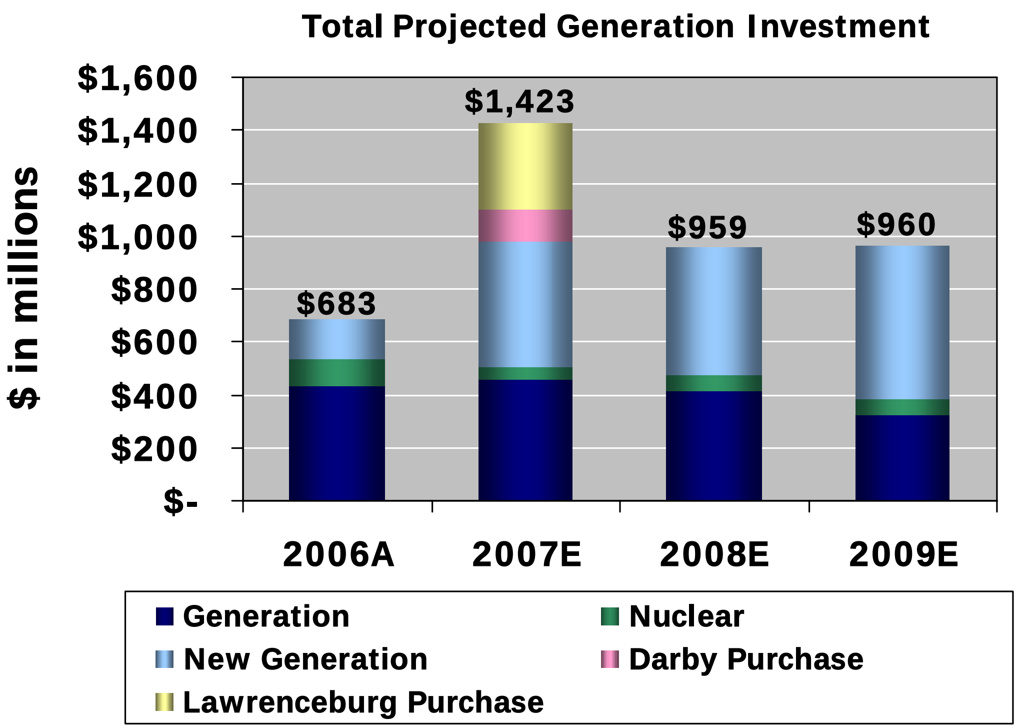


AEP Benefits From First-Mover Advantage Through Lower Contracted Pricing & Reduced Market Escalation Exposure

AEP®

Generation Investment Forecast

- Public Service Oklahoma Rate Proposal
  - Proposal to adopt an annually adjusted rate mechanism, which includes a return on CWIP
- Purchased Generation Initiative
  - New generation resources required to meet growing electricity needs of our customers
  - Completed purchase of 1,368 MW of gas-fired generating capacity in 2005 -- purchase pending for additional 1,620 MW
- Ohio Phase I IGCC Approval
  - PUCO approved tariff to recover Phase 1 pre-construction costs ($24MM) over 12-month period effective July 1, 2006



AEP®

Investing In Generation To Meet The Growing Electricity Demands Of Our Customers At An Attractive Price

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)

(1) Sale expected to close 2Q07 - Plant began commercial operation in 2001
(2) Sale expected to close 2Q07 - Plant began commercial operation in 2004
(3) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment
(4) PSO will own 50%, or 425 megawatts, totaling approximately $900MM in capital investment
(5) AEP is currently working with GE and Bechtel on a FEED (front-end engineering and design) study. When completed (expected mid-year 2007), a cost estimate will be available.

AEP®

Why Invest in AEP?

- Strength and scale in assets & operations
- Disciplined utility model focus - investing in established utility business to drive 5-7% consistent annual earnings growth
- Annual dividend of $1.56 per share providing an above average dividend yield of 3.2%
- Positive dividend outlook
- Stable credit profile

AEP®

Appendix

Company Overview

SIGNIFICANT PRESENCE THROUGHOUT THE DOMESTIC VALUE CHAIN

Our US electric assets include:

- Nearly 38,240 megawatts of generating capacity in 3 power pools (one of the largest US generation portfolios with a significant cost advantage in many of our market areas)
- Approximately 39,000 circuit miles of transmission lines, including 2,116 miles of 765kV lines, the backbone of the electric interconnection grid in the Eastern U.S.
- Nearly 208,000 miles of overhead and underground distribution lines

With our coal and transportation assets we:

- control over 8,000 railcars
- own and/or operate over 2,600 hopper barges and 51 towboats
- operate one active coal-handling terminal with 20 million tons of capacity

We consume approximately 76 million tons of coal annually.

AEP®

Summary of 5-7% Long-Range Growth Components

- Energy sales growth of 1.5%
- Rate base investment
  - Generation plant purchases & build
  - Transmission – interstate & intrastate
  - Distribution
  - Reliability
- Transmission company
- Commercial operations
- Regulatory strategy
  - Achieve timely returns
  - Seek cash returns on investment during construction
  - Create & secure innovative rate plans
    - Pursue post-2008 solution in Ohio
    - Expand use of trackers
    - Formula rates

AEP®

RATE BASE INVESTMENT COUPLED WITH INNOVATIVE REGULATORY PLANS WILL REDUCE LAG AND DRIVE EARNINGS GROWTH

AEP Is The Leader In Transmission Expertise

New Transmission Investment Funding Plans

- Electric Transmission Texas
  - 40% equity / 60% debt capital structure requested in PUCT follows Texas precedent for T&D companies' filings
  - Equity – 50% AEP / 50% Mid-American Energy
  - Debt – Initially bank financing
  - Initial funding in 3Q07 after regulatory approvals

- Other Transmission Projects
  - Equity percentage of capital structure will target FERC precedents
  - Equity ownership percentage will vary by project
  - Will seek FERC transmission incentives
    - Incentive ROE
    - Return on CWIP
    - Abandonment recovery
    - Expensing pre-construction expenses

AEP®

Environmental Investment

AT THE CONCLUSION OF OUR CURRENT ENVIRONMENTAL RETROFIT PROGRAM, OVER 47% OF OUR COAL-FIRED GENERATION FLEET WILL BE EQUIPPED WITH SCRs AND OVER 50% WILL BE SCRUBBED (FGD). AEP's TOTAL COAL FLEET CAPACITY = 24,710 MEGAWATTS*

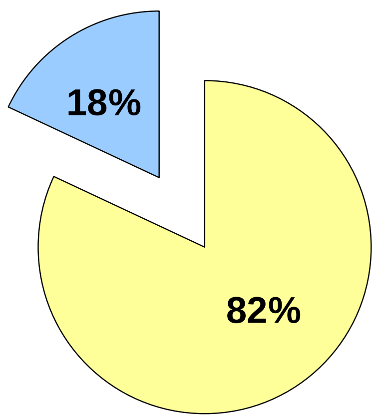
Materials and Vendors – AEP's Advantage

Environmental Program Costs:
Active/Firm Costs to Remaining Estimated Costs



Actuals To Date & Firm Costs
Remaining Estimated Costs*

* Primarily labor and activated carbon injection systems

SCR Technology

- Removes 90 – 93% of NOx emissions
- Requires ~ 1% use of auxiliary power
- **AEP Capital Cost ~ $121/kw avg.**

Combination of SCR & FGD technology results in co-benefit of Hg removal ~80% removal efficiency

FGD Technology

- Removes 95 – 98% of SO_2 emissions
- Requires ~1.5% to 3.0% use of auxiliary power
- **AEP Capital Cost ~ $250/kw avg.**

AEP Benefits From First-mover Advantage Through Lower Contracted Pricing and Reduced Market Escalation Exposure

IGCC Overview

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called "syngas" – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2 , mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP's eastern service territory.

AEP is currently working with a technology provider to develop a firm price for an IGCC facility to be built in our eastern service region.   AEP intends to seek regulatory recovery approvals in advance of building the plant.

AEP®

AEP Is Committed To IGCC Technology

IGCC Technology

IGCC Permitting Process

IGCC Permitting Issues

- Air – to evaluate best available control technology (BACT)
- Wastewater – to understand wastewater streams
- US COE (Corp of Engineers) – to obtain permits for construction of river facilities
- NEPA Process – (National Environmental Policy Act) – Environmental site studies addressing wetlands, endangered species, historical artifacts

Permitting Process Will Take 1 – 2 Years

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

AEP®

A RELIABLE & REASONABLY-PRICED ELECTRIC SUPPLY IS NECESSARY TO SUPPORT THE ECONOMIC WELL-BEING OF THE AREAS WE SERVE

AEP's Climate Strategy

Commercial Solutions of New Generation and Carbon Capture & Storage Technology

AEP ®

AEP IS INVESTING IN A PORTFOLIO OF GHG REDUCTION ALTERNATIVES

AEP's Long-term CO_2 Reduction Commitment

Existing Programs

- Renewables
  - 800 MWs of Wind
  - 300 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

New Program Additions

- Incremental Reduction quantity: 5MM tons/yr
- Timing: Implement during 2007 to take effect/receive credits by 2011
- Methods
  - +1000 MWs of Wind PPAs – 2MM tons/yr
  - Domestic Offsets (methane) – 2MM tons/yr
  - Forestry – Tripling annual investment to increase to 0.5MM tons/yr by 2015
  - Fleet Vehicle/Aviation Offsets – 0.2MM tons/yr
  - Additional actions to include DSM and end use energy efficiency, biomass and power plant efficiency – 0.2MM tons/yr

New Technology Additions

- Commercial solutions for existing fleet
  - Chilled Ammonia
  - Oxy-Fuel

AEP IS COMMITTED TO A 5MM TON/YR REDUCTION IN CO_2 EMISSIONS WHICH OFFSETS APPROXIMATELY HALF OF THE EMISSIONS PROJECTED FROM NEW GENERATION PROJECTS PREVIOUSLY ANNOUNCED

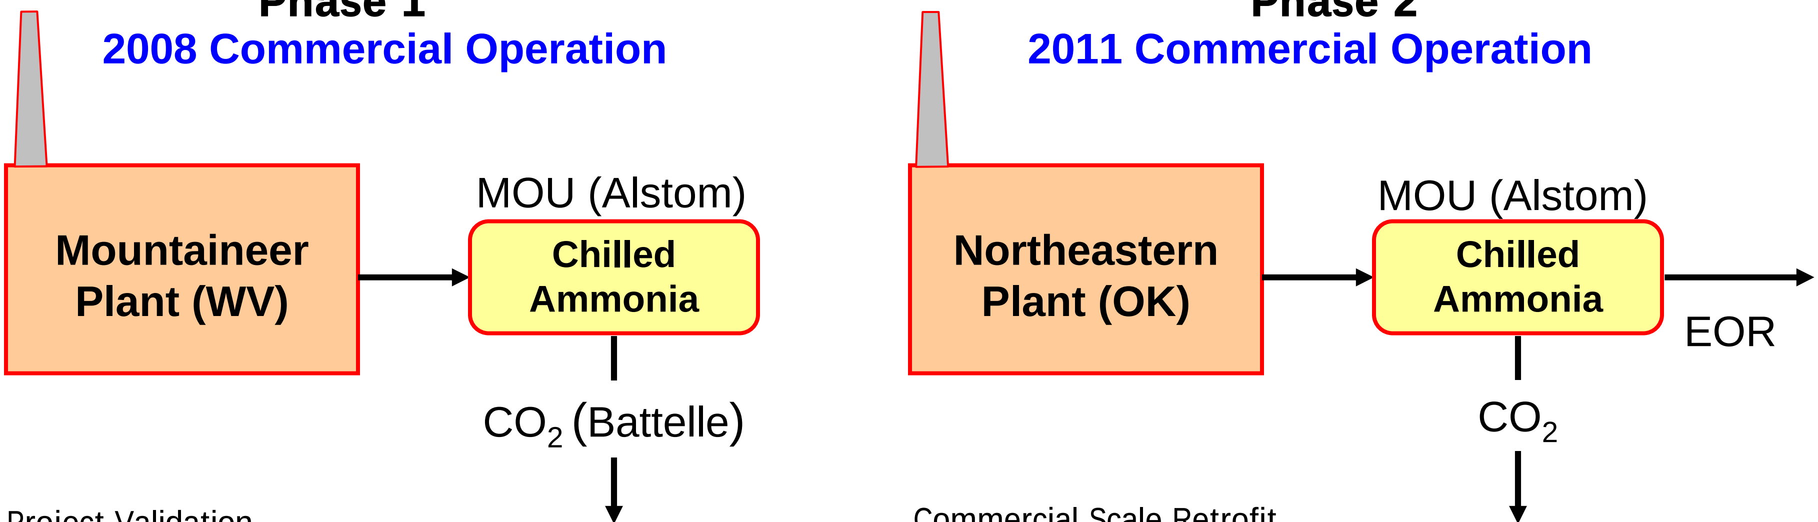
AEP®

Chilled Ammonia Process Plant Footprint

Chilled Ammonia Technology Program

Phase 1
2008 Commercial Operation

Phase 2
2011 Commercial Operation



<u>Project Validation</u>

- 30 MW_t (megawatts thermal) scale (a scale up of Alstom/EPRI 5 MW_t field pilot, under construction at WE Energies)
- <0.1MM tonnes CO_2 per year
- In operation 4Q 2008
- Approximate total cost \$50 – \$80M
- Using Alstom "Chilled Ammonia" Technology
- Located at the AEP Mountaineer Plant in WV
- CO_2 for geologic storage

<u>Commercial Scale Retrofit</u>

- ~ 200 MW_e scale (megawatt electric)
- ~ 600 MW_t scale (megawatt thermal)
- ~1.5MM tonnes CO_2 per year
- In operation late 2011
- Approx. capital \$250 – \$300M (CO_2 capture & compression)
- Approx. O&M cost \$12M per year
- Energy penalty ~ 35 – 50 MW steam, 25 – 30 MW for CO_2 compression
- Retrofit SCR & Wet FGD Required: ~\$225 – \$300M (required for CO_2 capture equipment)
- Located at AEP's Northeastern Plant Unit 3 or 4 in Oklahoma
- CO_2 for Enhanced Oil Recovery (EOR) or geologic storage

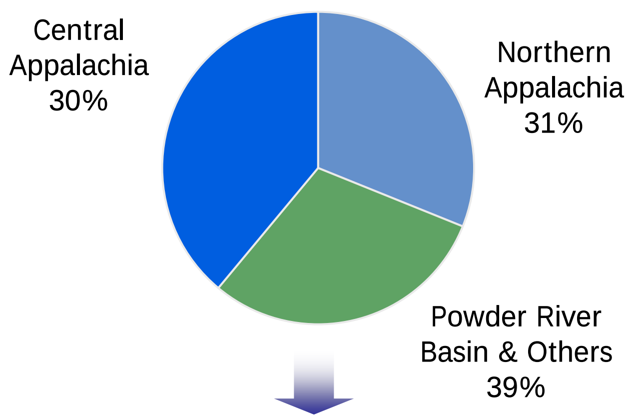
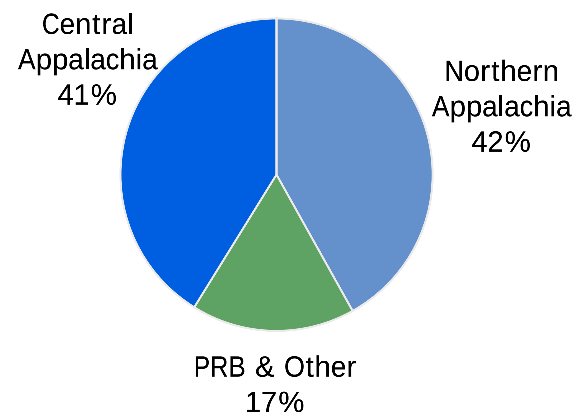
Coal Procurement – 2007 Projected

AEP purchases approx. 76 million tons of coal per year

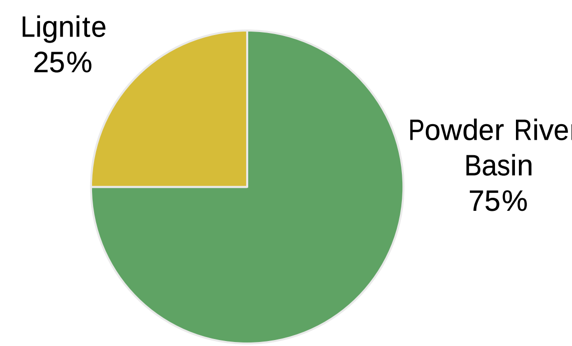
Total AEP System



AEP East



AEP West

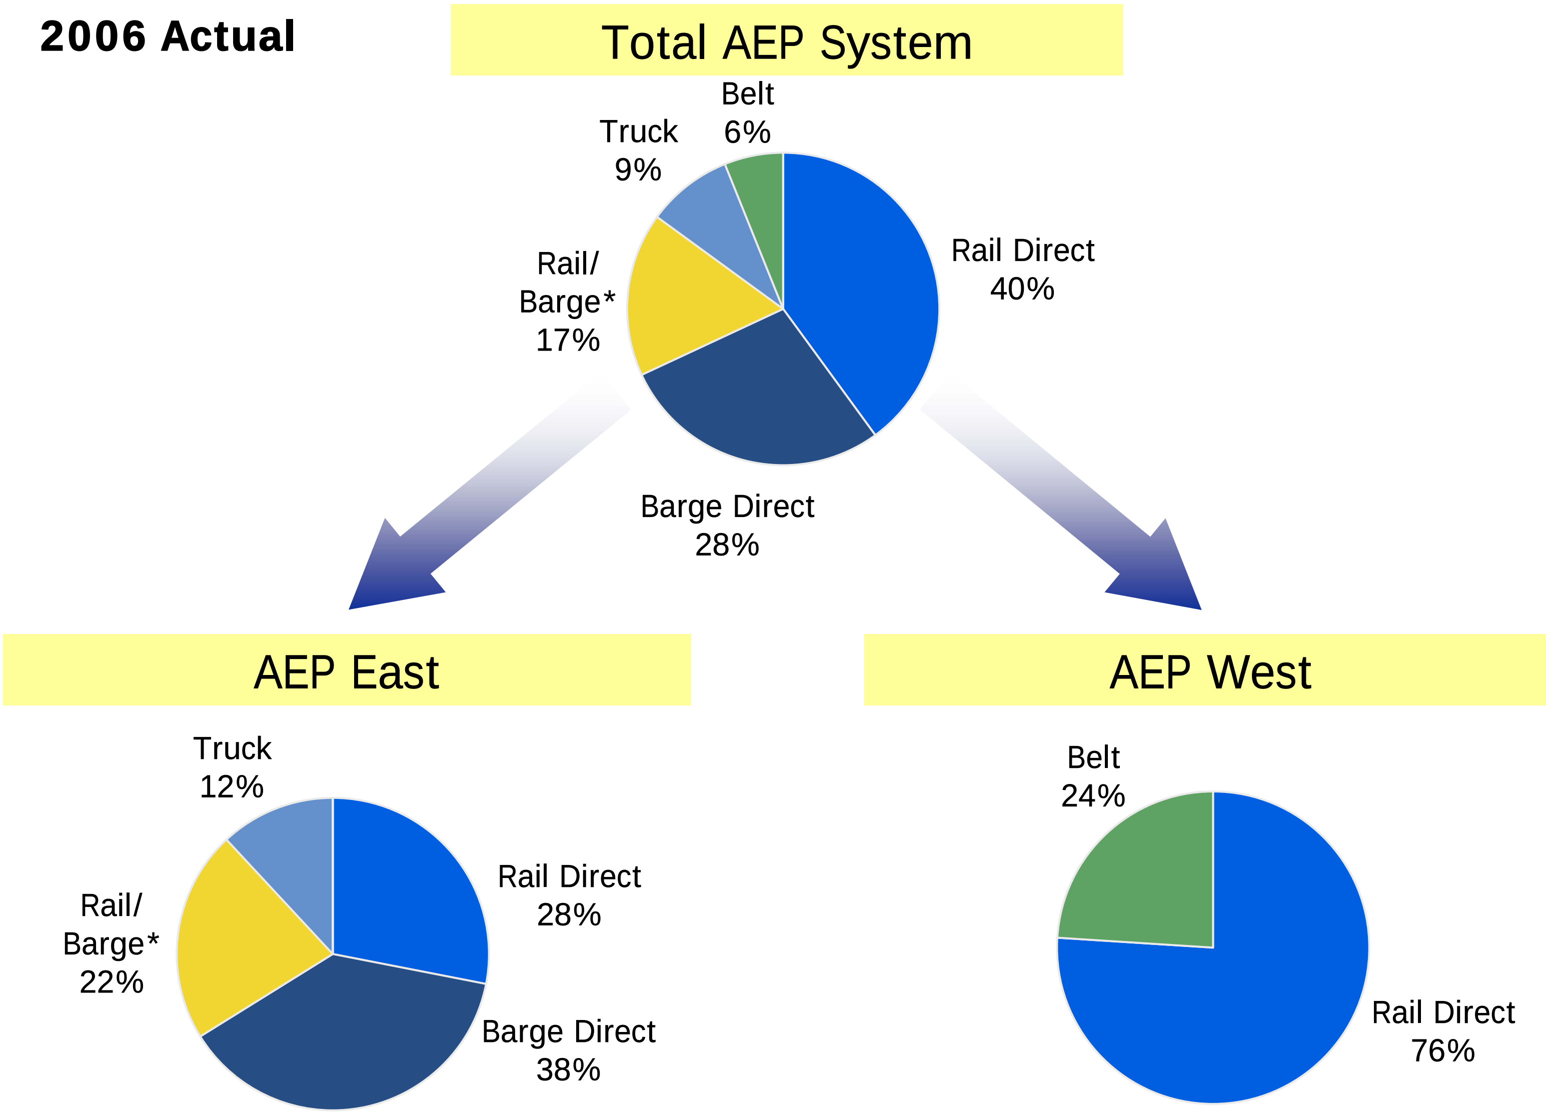


Coal Stats:

- 95% contracted for 2007
- Avg. delivered price ~ $35.10/ton in 2006
- Approximate 7-9% price increase in 2007 -- ($37.50 to $38.50/ton)
  - Addition of Mountaineer & Mitchell scrubbers allows for a greater mix of Northern Appalachian coal in 2007

Coal Delivery

2006 Actual



* Reflects coal delivered to AEP plants transported through a combination of rail and barge

Regulatory Activity

AEP Ohio Distribution Reliability Filing

Filed Oct. 6, 2006 – AEP Ohio proposes an additional annual average investment of approximately $130MM over the next 5 years on vegetation management, equipment replacement, infrastructure upgrades & improved use of technology, to help reduce outages and improve service reliability.

- We are requesting implementation of a Reliability Cost Recovery Rider for recovery of the incremental O&M expenses and a return on and of the capital investments made under the plan. The requested ROE is 10.5%.
  - If approved, the rider would be implemented July 1, 2007 through December 31, 2008 and would be effective until new distribution rates are placed in effect. We anticipate that new base distribution rates would be effective after the expiration of the RSP on Dec. 31, 2008.
- Requested recovery amounts total $20MM in 2007 and $51MM in 2008.
- Staff testimony due April 17, 2007; Evidentiary hearing to commence April 30, 2007.

AEP Ohio Application For 4% Provision On Generation Rate

- On Jan. 23, 2007, CSP and OP filed an application at the PUCO to recover 2007 costs associated with additional generation-related expenditures the companies are encountering related to environmental, security and other new generation-related costs pursuant to the RSP.
- CSP and OP are requesting to implement the provision to recover $24.5MM and $8.2MM, respectively, from May 2007 through December 2007.
- Staff & Intervenor testimony due May 7, 2007; Evidentiary hearing to commence May 22, 2007.

AEP®

Regulatory Activity

Electric Transmission Texas (ETT) Rate Filing

- Jan. 22, 2007 – ETT filed with the PUCT for approval to operate as an electric transmission utility in Texas and to establish initial rates for ETT.
  - Requested capital structure of 60% debt / 40% equity; requested ROE of 11.25%.
  - Intervenor testimony is due May 30, 2007. Staff testimony is due June 7, 2007. Hearings are scheduled for June 26-29, 2007.
    - An order is expected Mid-2007 and operations are expected to commence in the 2nd half of 2007. Upon receipt of approvals, AEP and MidAmerican will each own a 50% interest in the joint venture.

Seams Elimination Cost Adjustment Revenues

- August 2006 – ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
  - Up to $96MM of SECA revenues could be disallowed, net of unused provisions
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both.
- Exceptions to initial decision filed Sept. 11, 2006; Replies to exceptions filed Oct. 11, 2006; Order expected by the Commission in 2007

AEP®

Regulatory Activity

FERC Regional Rate Design

- The FERC instituted an investigation of PJM's zonal rate regime
  - Present regime may need to be replaced
  - Consider establishing regional rates that would compensate AEP, among others, for the regional transmission service provided by high voltage facilities they own that benefit customers throughout PJM
- July 2006 ALJ-rendered initial decision:
  - License plate rates for existing facilities <u>are not</u> just and reasonable, and must be replaced (effective April 1, 2006, when SECA ended)
  - Staff's proposal for a "Postage Stamp" rate phased in so as to limit increases in any one pricing zone to 10% per year as the best choice for replacing current rates
  - Staff's proposed rate design would produce slightly more net revenue for AEP than the original AEP/Allegheny Power proposal, if not phased in.
  - Briefs on Exceptions to the initial decision by all parties have been filed; An order is expected by the Commission in mid-2007.

AEP®

Summary Rate Case Information

APCo Virginia General Rate Case

On May 4, 2006, Appalachian Power Co. filed a general base rate case with the Virginia State Corporation Commission (VSCC) requesting an increase of $198.5 million ($225.8 million in base revenues offset by an off-system sales credit of $27.3 million). (Docket #: PUE-2006-00065)

Summary Rate Case Information

PSO Rate Proposal

On November 21, 2006, Public Service Oklahoma filed an application with the Oklahoma Corporation Commission to increase base rates by $49.6 million to recovery investments already made and costs incurred. The request represents a 4% overall increase (including fuel). The filing also includes a proposal to adopt an annually adjusted rate mechanism, which includes a return on CWIP. The formula rate would adjust rates, up or down, if PSO earns above or below an approved bandwidth around the authorized ROE. (Case #200600285)

Pro-forma Capital Structure – Company Position (Test Year ended 6/30/06)

(b) Ratios include impact of Rockport 2 lease
(c) Excludes impact of securitization on the equity ratio

AEP®

Long-Term Debt Guidelines

Issuers:

- Issue at operating companies.

Size:

- Make transactions index eligible if possible.
- When possible, issue a size sufficient for competitive execution.

Maturity:

- Issue maturities for which the market has appetite.
- Achieve weighted average life targets for operating companies, generally between 10-15 years.

Timing:

- Will issue based on the timing of maturities and levels of short-term debt as driven by capital spending and operating cash flow.

AEP®

Credit Ratings

AEP AMERICAN ELECTRIC POWER

STRONG

FLEXIBLE

ADAPTABLE

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; volatility in the financial markets, particularly development affecting the availability of capital on reasonable terms and developments impacting our ability to refinance existing debt at attractive rates; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas coal, nuclear fuel and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

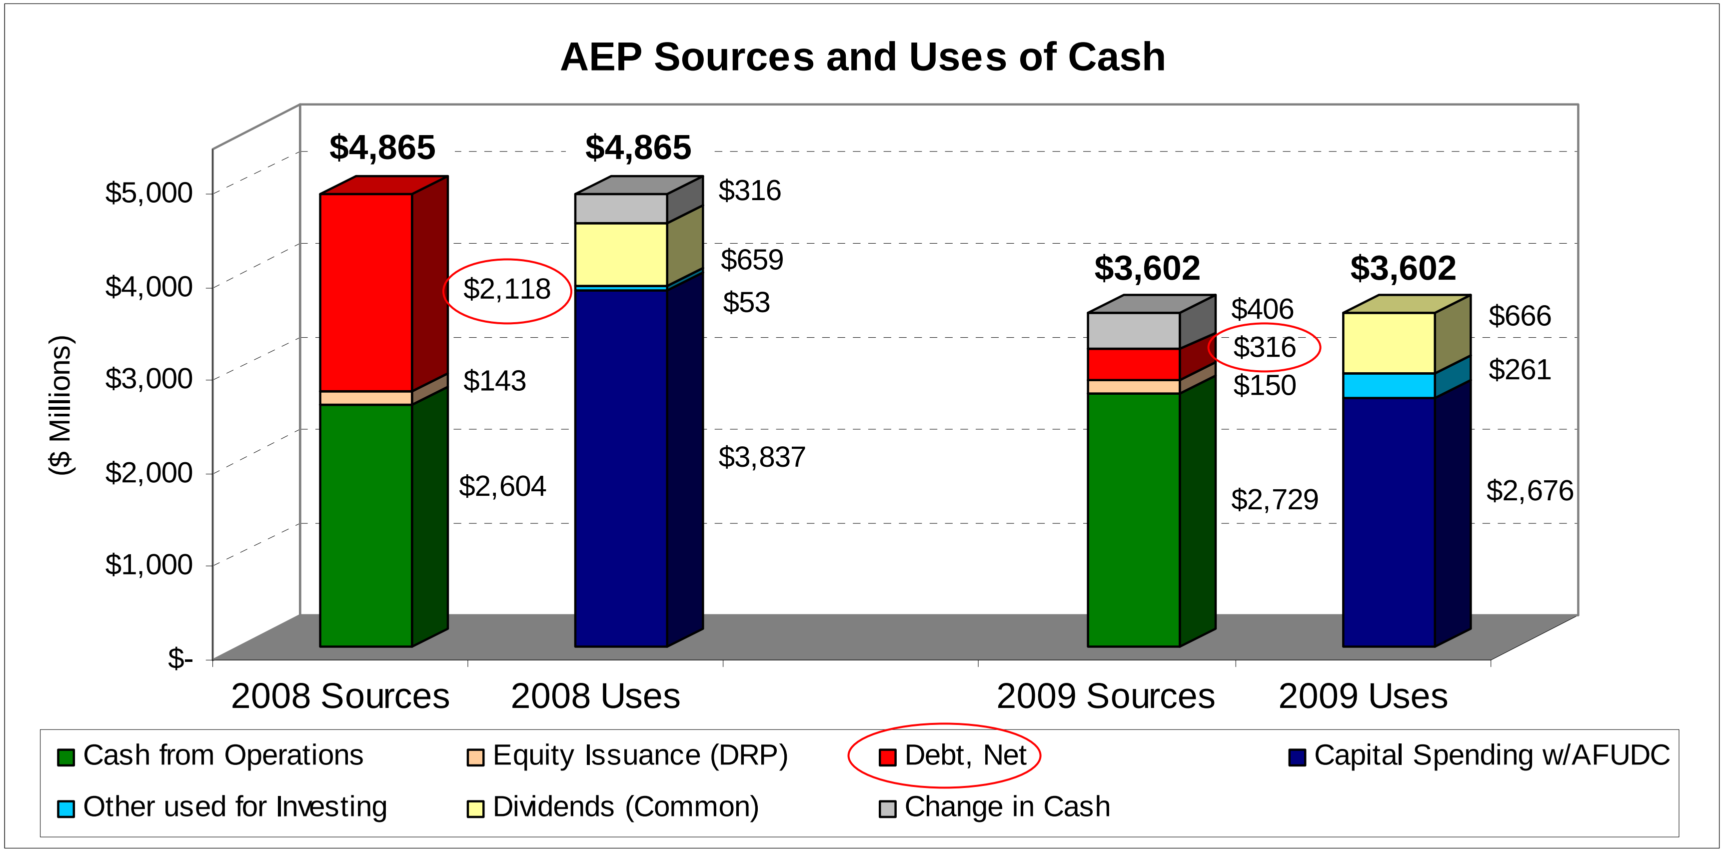
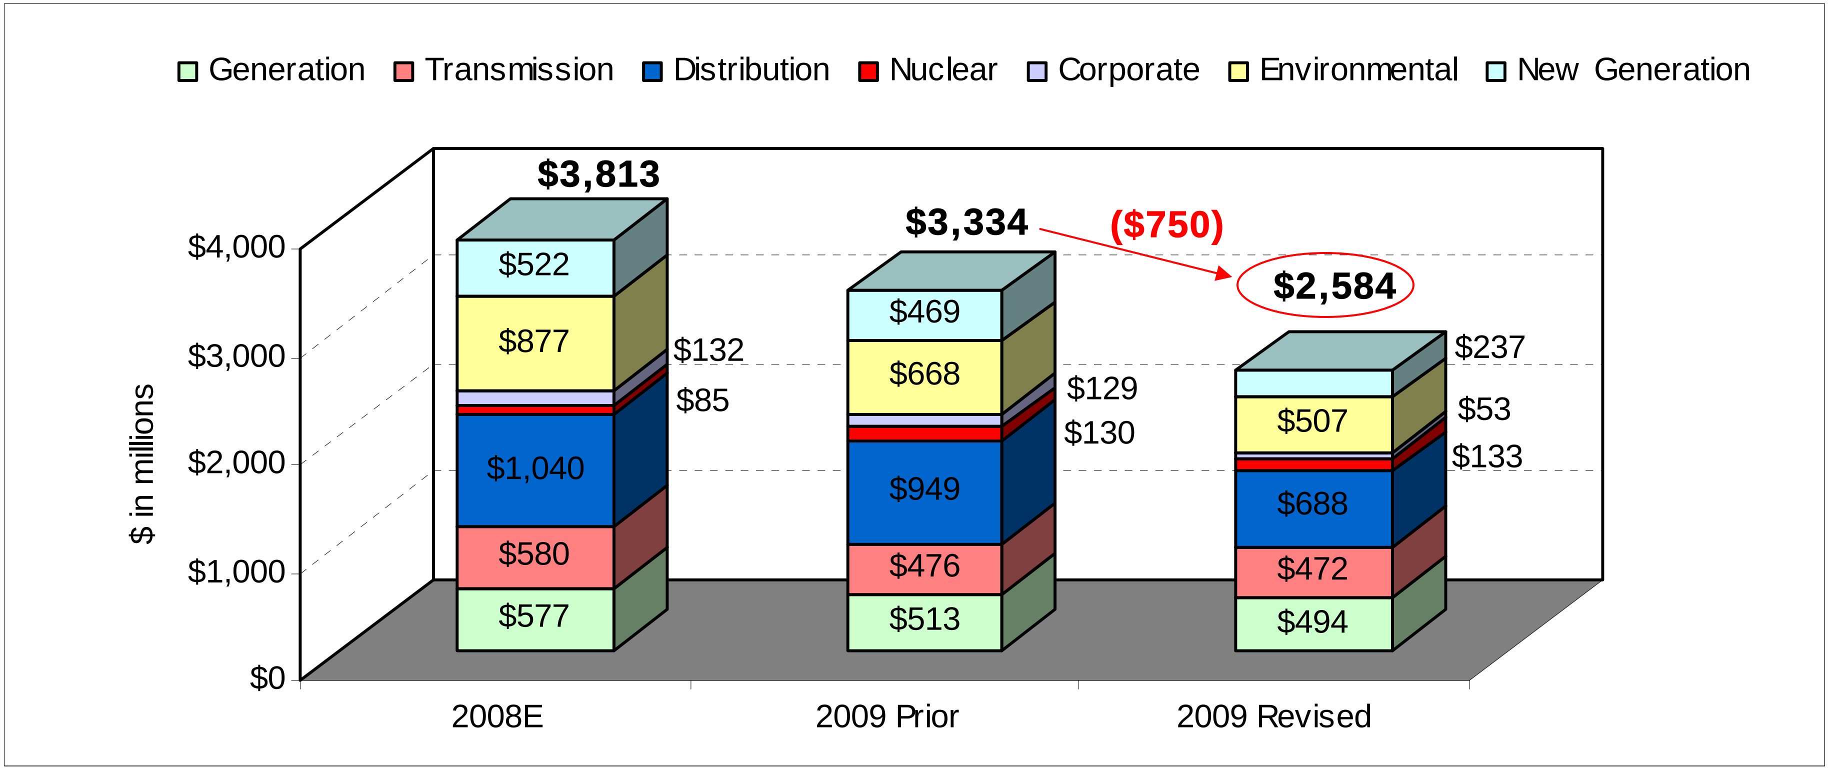
2008 & 2009 Cash Flow Forecast



Capital spending closely matches cash flow from operations in 2009.

2008 & 2009 Capital Spending

- Capital expenditures for 2009 will be cut by $750 million from previous guidance.



The reduction in capital spending will significantly reduce our need to access capital markets in 2009.

2008 & 2009 Ongoing Earnings Guidance

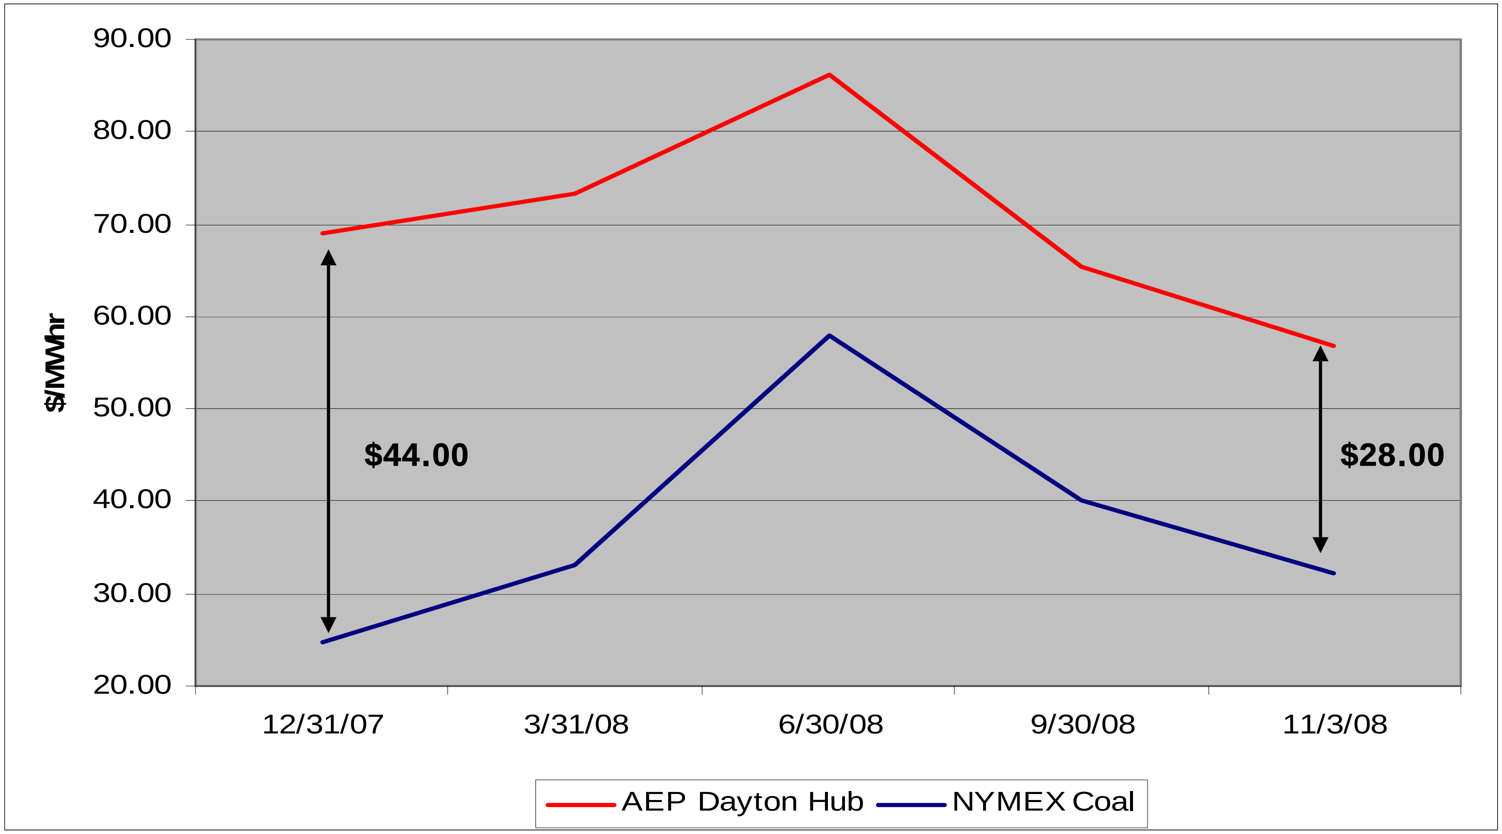
American Electric Power
Earnings Guidance for 2008 and 2009

	2008 Original Guidance		2009 Guidance	
	($ millions)	EPS	($ millions)	EPS
Utility Gross Margin	**8,148**		**8,433**	
Operations & Maintenance	(3,337)		(3,337)	
Depreciation & Amortization	(1,451)		(1,546)	
Taxes Other than Income Taxes	(779)		(790)	
Interest Exp & Preferred Dividend	(839)		(929)	
Other Income & Deductions	127		120	
Income Taxes	(602)		(641)	
Utility Operations	**1,267**	**3.15**	**1,310**	**3.23**
Transmission Operations	2	0.01	5	0.01
Non-Utility Operations:				
AEP River Operations	57	0.14	62	0.15
Generation & Marketing	20	0.05	13	0.03
Parent & Other	(61)	(0.15)	(91)	(0.22)
ON-GOING EARNINGS	**1,285**	**3.20**	**1,299**	**3.20**

2009 guidance provides range for reasonable Ohio outcome, holds O&M flat and reflects higher interest expense.

Dark Spread Comparison

NYMEX Coal vs. AEP-Dayton Hub Peak Electricity



Coal Purchases:
2009: 95+%
2010: 85+%

Del. Coal Prices:
2007A: $36.58/ton
2008E: $46.82/ton

2009 estimated increase: 12%-15%

- Coal price represents standard NYMEX contract specifications with a heat content of 12,000 Btus/lb
- 10,000 heat rate used for conversion
- Coal and peak electricity prices reflect market prices for calendar year 2009 delivery on the business dates given above

DC Cook Unit 1 Update

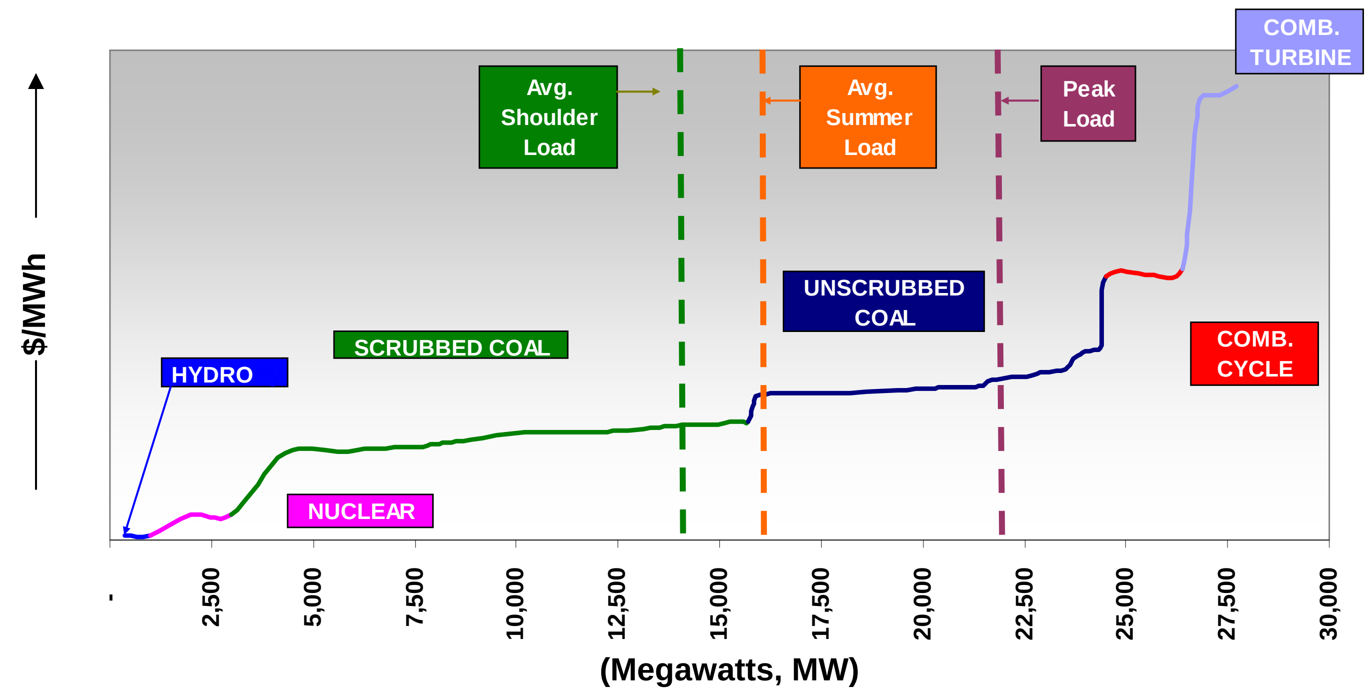
- Status
  - Off-line since September 20 due to vibrations caused by a broken turbine blade, which damaged the main turbine
  - Turbines and turbine rotors being assessed for repair vs. replace
  - Return to service schedule and cost estimates available in late November
- No incremental O&M or capital expected; Vendor warranties and property insurance will cover repair costs
- Active fuel clauses in Indiana and Michigan will allow for recovery of the fuel differential from retail customers
- Planned outage schedules have been adjusted to partially mitigate the impact of the Cook Unit 1 outage on available generation output for OSS purposes
- Accidental outage insurance of $3.5MM per week commencing in mid-December mitigates financial impact

We will provide an update on Cook once we receive additional information from our vendors

AEP Supply Stack

- ❑ Supply stack with Cook unit 1 outage would slide the supply stack 1,009 MW to the left.
- ❑ Planned outages typically shorten supply stack in the shoulder months by several thousand megawatts.
- ❑ Shoulder periods offer the flexibility to reschedule planned outages.

Typical AEP Supply Stack



With the loss of Cook 1 this fall season, a planned outage on a scrubbed coal unit was cancelled, leaving the supply stack in roughly the same position for off-system sales

Pension and OPEB Estimate

- The Pension plan and OPEB funds investment returns are each down about 25% YTD as of October 16, 2008. The drop in assets is mitigated slightly by a corresponding decrease in plan liability caused by a higher discount rate (from 6% to 7% for pensions and from 6.25% to 7.25% for OPEB).
- Investment losses increase plan expense for both pension and OPEB, but the investment losses are smoothed in over several years.
- OPEB contributions will increase along with OPEB expense, in accordance with agreements in most of our regulatory jurisdictions.
- As of October 16, 2008, we expect 2009 pension expense to increase $10MM over 2008 and the estimated OPEB expense to increase $30MM year over year.
- These increases are reflected in our current guidance.
- We are currently not expecting any mandatory contributions to pension in 2009.

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants including our ability to restore I&M's Donald C. Cook Nuclear Plant Unit 1 in a timely manner, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of the recently passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events. AEP and its Registrant Subsidiaries expressly disclaim any obligation to update any forward-looking information.

AEP AMERICAN® ELECTRIC POWER

Pension and OPEB Estimate

- Investment returns for our pension plan and OPEB funds rebounded sharply in 2009. Year-to-date, the pension fund is up about 15% through September, with similar gains in the OPEB funds.
- Investment losses from 2008 continue to increase plan expense for both pension and OPEB, as the investment losses are smoothed in over several years.
- We expect combined pension and OPEB expense to increase $59MM from 2009 to 2010 (pre-tax and pre-capitalization).
- OPEB contributions will increase along with OPEB expense, in accordance with agreements in most of our regulatory jurisdictions.
- There were no mandatory contributions to pension in 2009. Required pension contributions are estimated to be $62MM in 2010 and $389MM in 2011 including non-qualified plans.
- Discount rates are assumed to be 6.0% for pension and 6.1% for OPEB for 2009, and 5.25% and 5.45% for 2010 and beyond.
- Estimates for expense and contribution figures are very sensitive to changes in interest rates and investment returns between now and year-end.

AEP AMERICAN® ELECTRIC POWER

DC Cook Unit 1 Update

- Previously identified technical challenges have solutions
  - Low pressure turbine rotors have been straightened
  - Foundation repair work is in progress and is the critical path
  - Generator and high pressure turbine repair work supports the critical path
- The unit is scheduled to return to service in the fourth quarter of 2009
  - The unit will operate without the last stage blades at 30 MW (summer) to 100 MW (winter) reduced capacity
- Root cause: "A blade-rotor system design that failed to provide adequate stress margin"
  - The root cause also found no operational or installation issues
- The replacement rotors are scheduled for installation in the spring of 2011
  - Different design with several years of fault-free commercial operation.
- We continue to receive $3.5MM per week from the accidental outage policy through mid-December
  - Insurance proceeds are reflected as other operating revenue; During 2009 YTD, approximately 40% of the insurance payments were used to offset increased fuel costs to customers

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants including our ability to restore I&M’s Donald C. Cook Nuclear Plant Unit 1 in a timely manner, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of the recently passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events. AEP and its Registrant Subsidiaries expressly disclaim any obligation to update any forward-looking information.

AEP AMERICAN ELECTRIC POWER

Michael G. Morris - Chairman, President & CEO

Brian X. Tierney – Executive Vice President & CFO

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 6620 of 9556

Policy Update

- **AEP supports Climate Change Legislation**
  - AEP supports the American Clean Energy and Security Act (ACES) passed in the House
  - Senate bill released at the end of September. AEP will work for constructive changes to help passage in the Senate
  - EPA issued two new climate rules for comment at the end of September
- **Outlook for Legislation**
  - Timing of Climate Change Legislation Passage
  - Outlook for Energy-Only Bill

Mountaineer Plant (WV)

Desert Sky (TX)

AEP AMERICAN® ELECTRIC POWER

Mountaineer CCS Update

PROJECT STATUS

- September 2 – successfully captured CO_2
- October 1 - began underground injection and storage
- October 30 – facility dedicated

NEXT STEPS

- Monitor the CO_2 behavior once underground
- Assess the parasitic load impact of the equipment on the plant
- DOE funding requested for 50% of commercial phase of project ($334MM); project expected to be operational between 2012 and 2015

PROJECT DESCRIPTION

- Alstom's chilled ammonia process captures CO_2 from a 20 MWe slipstream of flue gas at AEP's Mountaineer plant located in New Haven, WV
- Captured CO_2, transformed to a semi-liquid state, is pumped into sandstone or dolomite layers approximately 1.5 miles underground. Caprock will hold the CO_2 in place permanently.

AEP AMERICAN ELECTRIC POWER

Accomplishments and Priorities

2004 - 2009

- ✓ Returned to the operating company model to enhance our constructive local relationships
- ✓ Secured over $2B in rate relief across the AEP system with solid regulatory relationships in all eleven jurisdictions
- ✓ Designed and implemented a $5.2 billion environmental retrofit program
- ✓ Effectively managed our credit and liquidity
- ✓ Paid over $3 billion in dividends
- ✓ Safe, diverse and motivated employee culture

2010 +

- ❑ Navigate through ongoing economic conditions
- ❑ Maintain capital spending and balance sheet discipline
- ❑ Continue delivering successful regulatory outcomes
- ❑ Participate in policy making at both the federal and state levels, particularly related to environmental/climate and transmission issues
- ❑ Invest in the next generation of energy infrastructure: high-voltage transmission, CCS, gridSMART℠

AEP AMERICAN ELECTRIC POWER

2010 Ongoing Earnings Guidance

	2009E: $2.90-$3.05	2010E: $2.80-$3.20
Utility Operations	$ 2.92	$ 3.01
Transmission Operations	$ 0.01	$ 0.02
Nonutility Operations	$ 0.18	$ 0.09
Parent & Other	$(0.14)	$(0.12)

EARNINGS DRIVERS

- ↑ $317MM in rate relief
- ↑ Increase in off-system sales volumes
- ↑ Load growth

- ↓ Net increase in utility operations O&M of $72MM
- ↓ Elimination of Cook accidental outage insurance proceeds
- ↓ Increase in average shares outstanding

AEP AMERICAN® ELECTRIC POWER

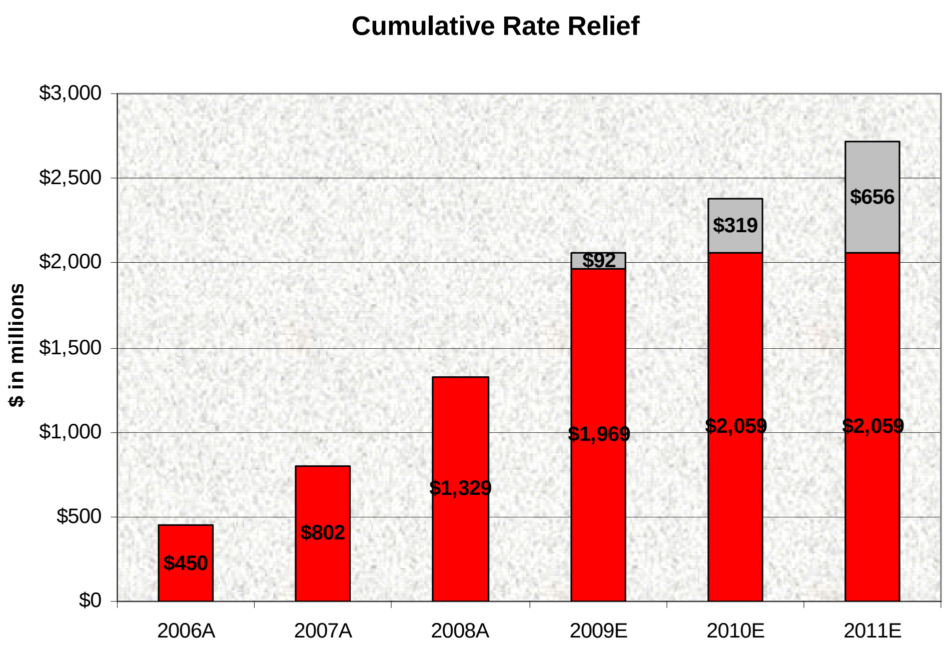
Investment in Utility Platform

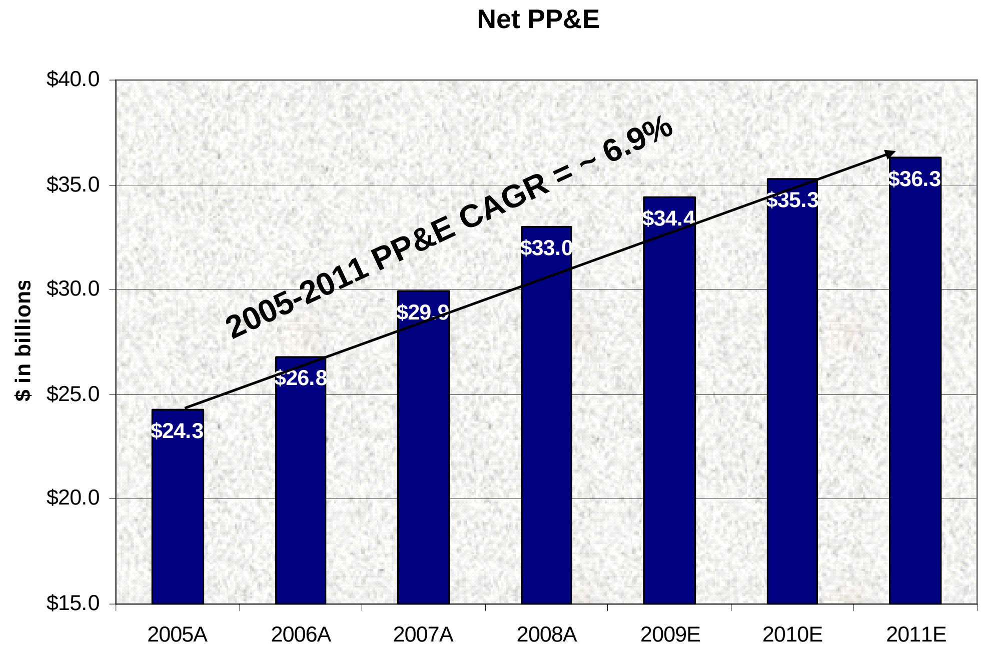
Track Record of Rate Relief



Annual rate increases, $mm	$450	$352	$527	$732	$317[1]	$337

[1] $90mm was secured for 2010 as of October 30, 2009

Growth in Net PP&E



AEP AMERICAN ELECTRIC POWER

Transmission Investment Opportunities

- **ETT: Projects in Texas ERCOT jurisdiction**
  - Framework in Texas allows for more expeditious siting and recovery
  - $600MM of projects est. in service 2010-2013 with $236MM spent as of 9/30/2009
  - ETT's opportunity could reach $3.1B in the next decade

- **Transco: Within our existing footprint**
  - Provides opportunity to:
    - Develop new AEP-only projects within AEP's footprint
    - Reduce regulatory lag through FERC formula rates adjusted annually
    - Enhance access to capital
    - First year investment opportunity--$118MM

- **Joint Ventures: Outside of our footprint, with ETA or others**
  - Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
  - State and future Federal RPS will provide enhanced investment opportunities
  - Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2015
  - Robust pipeline of projects up to $15B

Transco

- **Transco will be used to develop significant new on-system, AEP-owned investment**
  - Greenfield Projects
  - Station Additions
  - System Upgrades
- **Next steps:**
  - Obtain state utility status where required and join PJM and SPP as a transmission owner
  - File FERC tariff for Transco in late 2009, with rates effective and first projects in service in 2010
  - Seek retail tracking mechanisms at the state level (OH, LA, VA, TX-ERCOT already secured)

765-kV Tower

AEP AMERICAN ELECTRIC POWER

JV Strategy – Nationwide Grid Expansion

ACTIVE PROJECTS

SPP

Prairie Wind — COD: 2013-14

- 110 miles of 765 kV
- Partners: Westar (50%) & MidAmerican Energy (50%)
- Estimated Cost: $400 million
- ROE: 12.8%

Tallgrass — COD: 2013-14

- 170 miles of 765 kV
- Partners: OG&E (50%) & MidAmerican Energy (50%)
- Estimated Cost: $500 million
- ROE: 12.8%

ERCOT

ETT — COD: 2010-2013

- 345 kV ERCOT Expansion
- Partner: MidAmerican Energy (50%)
- Estimated Cost: $600 million+
- ROE: 9.96%

PJM

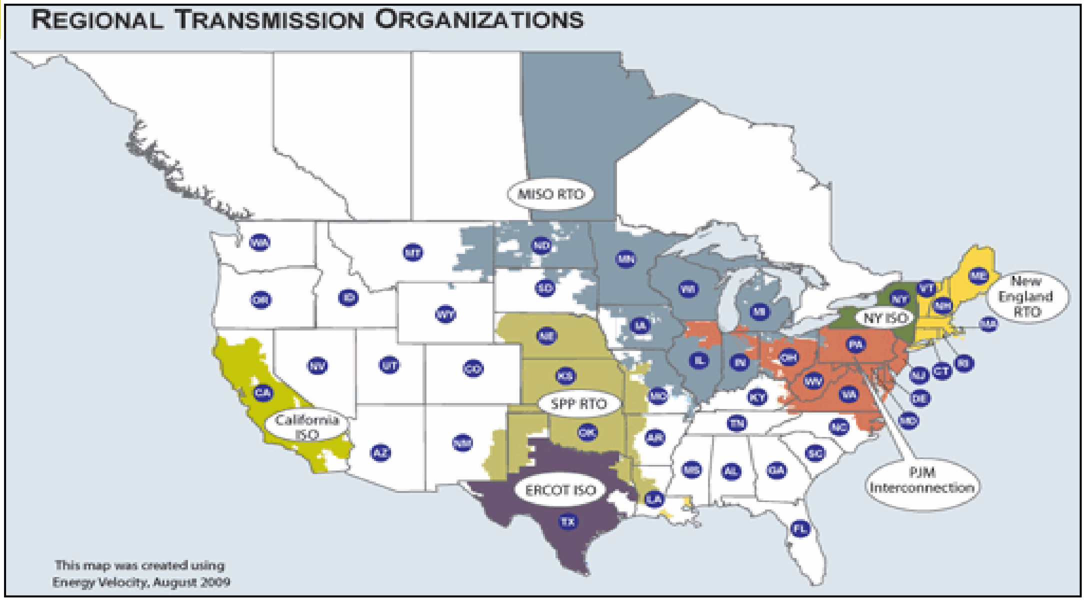
PATH-WV — COD: 2014

- 275 miles of 765 kV
- Partner: Allegheny Energy (50%)
- Estimated Cost: $1.2 billion
- ROE: 14.3%

PJM/MISO

Pioneer — COD: 2015

- 240 miles of 765 kV
- Partner: Duke Energy (50%)
- Estimated Cost: $1 billion
- ROE: 12.54%



FUTURE DEVELOPMENT

SMARTransmission Study

- Interregional EHV & Wind Integration Study
- Partners: ATC, Exelon, MidAmerican Energy, Northwestern Energy, Xcel Energy

SPP

SPP EHV Overlay

- Regional Expansion of 765 kV Backbone

ERCOT

ETT — COD: various

- Additional CREZ spend of ~ $1 billion+ (COD 2012-2013, subject to a 6-month routing approval)
- Other Projects Pending Transfer of ~ $1.5 billion (COD 2010-2017)

PJM

PJM Expansion

- Regional Expansion of 765 kV, 500 kV and 345 kV systems

PJM/MISO

EHV Michigan/Ohio

- 700 miles of Proposed 765 kV

AEP AMERICAN® ELECTRIC POWER

Investment Attributes

- **Strong utility platform**
  - Consistent regulatory outcomes
  - Active fuel recovery
  - Geographic and regulatory diversity
  - Growth through capital investment

- **Consistent dividend policy**
  - 50-60% payout ratio targeted
  - Nearly a century of dividend payments to shareholders

- **Growth Opportunities**
  - Investment in utility platform greater than depreciation level (2 - 4%)
  - With transmission opportunities (4 - 8%)
  - Capital investment to comply with carbon legislation

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms and our ability to recover significant restoration costs through applicable rate activities, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through rates, insurance or warranty, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances that could impact the continued operation of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of the recently passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events. AEP and its Registrant Subsidiaries expressly disclaim any obligation to update any forward-looking information.

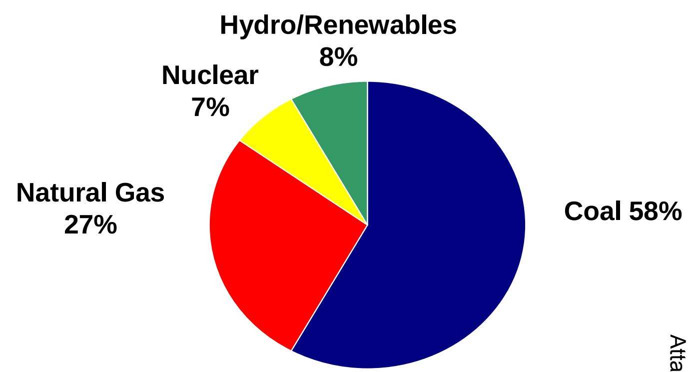
Fuel Mix - 2009



Projected Fuel Mix - 2017

New Generation Projects

J. Lamar Stall Combined-Cycle Gas Plant

- J. Lamar Stall Combined-Cycle gas plant is a 508-MW unit that began commercial operations in June 2010.
  - The total projected cost of the plant is $380 million.
  - The plant is located in AEP's SWEPCo region at its existing Arsenal Hill Power Plant in Shreveport, Louisiana.
  - The plant serves the needs of customers in the Arkansas, Louisiana and Texas service territories.

- John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant. Located in AEP's SWEPCo region. AEP owns 73 percent or roughly 440 megawatts of the total unit.
  - The cost of the plant is anticipated at $1.7 billion with AEP's share approximately $1.3 billion and will begin commercial operation in 2012.
  - The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls.
  - Various legal challenges are on-going related to the plant (see 10-Q). Recently, following the Arkansas Supreme Court decision regarding CECPN, SWEPCO filed notice to the APSC that the 88MW will now be merchant and will not be included in rate base.

John W. Turk Jr. Ultra-Supercritical Coal Plant

Carbon Capture and Storage

Carbon Capture and Storage project located at AEP's Mountaineer Plant in New Haven, WV

PHASE I – Validation

Captured CO_2 – September 2009

Injected CO_2 – October 2009

CO_2 Capture

Project employs Alstom's chilled ammonia process for post-combustion CO_2 capture.

CO_2 Storage

Compressed CO_2 is injected about 1.5 miles below the earth's surface.

PHASE I - Validation

20 MWe scale validation project designed to remove 90% of CO_2 from flue gas and store 100,000 metric tons/year. Currently in operation.

PHASE II - Commercialization

235 MWe commercial scale project designed to capture and store 1.5 million metric tons of CO_2/year. Awarded 50% US DOE funding. Commercial operation in 2015.

2010 Ongoing Earnings Guidance

2009A: $2.97/share

2010E: $2.80-$3.20/share

Summary Rate Case Information

Kentucky General Rate Case – Docket #2009-00459

On December 29, 2009, KPCo filed a base rate case with the Kentucky Public Service Commission requesting an increase of $123.6 million to cover costs related to enhanced distribution reliability spending, depreciation of capital investments, investments in renewable energy and participation in PJM. A settlement agreement was filed with the KPSC on May 20, 2010, with a $64 million base rate increase, which includes $10 million on reliability spending at an ROE of 10.5%. Commission approval is pending.

Summary Rate Case Information

I&M Michigan General Rate Case – Docket #U-16180

On January 27, 2010, I&M filed a base rate case with the Michigan Public Service Commission requesting an increase of $62.5 million to cover increased costs related to distribution O&M, taxes, interest and employee related expenses. I&M also requested new tracker mechanisms for enhanced distribution reliability spending, energy efficiency, investments in generation and participation in PJM. The requested ROE is 11.75%. An order is expected in early 2011.

Summary Rate Case Information

APCo West Virginia General Rate Case – Docket #10-0699-E-42T

On May 14, 2010, APCo filed a base rate case with the West Virginia Public Service Commission requesting a net increase of $155.5 million, comprised of a $223.8 million base rate increase and a $68.3 million decrease in the construction surcharge. The filing related to capital investments made and to recover increased costs. In addition, APCo requested to establish a separate transmission tracker related to PJM charges. The requested ROE is 11.75%. An order is expected at the end of March 2011.

Actual Capital Structure – Company Position (12/31/09)

	% of Capitalization	Cost Rate	Weighted Return

Transmission Investment Opportunities

- ETT: Projects in Texas ERCOT jurisdiction
  - $600MM of projects est. in service 2010-2013
  - ETT's opportunity could reach $3.0B in this decade
- Transco: Within our existing footprint
  - Provides opportunity to:
    - Develop new AEP-only projects
    - Reduce regulatory lag through FERC formula rates adjusted annually
- Joint Ventures: Outside of our footprint, via ETA or with others
  - Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
  - Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2015
  - Robust pipeline of projects up to $15B

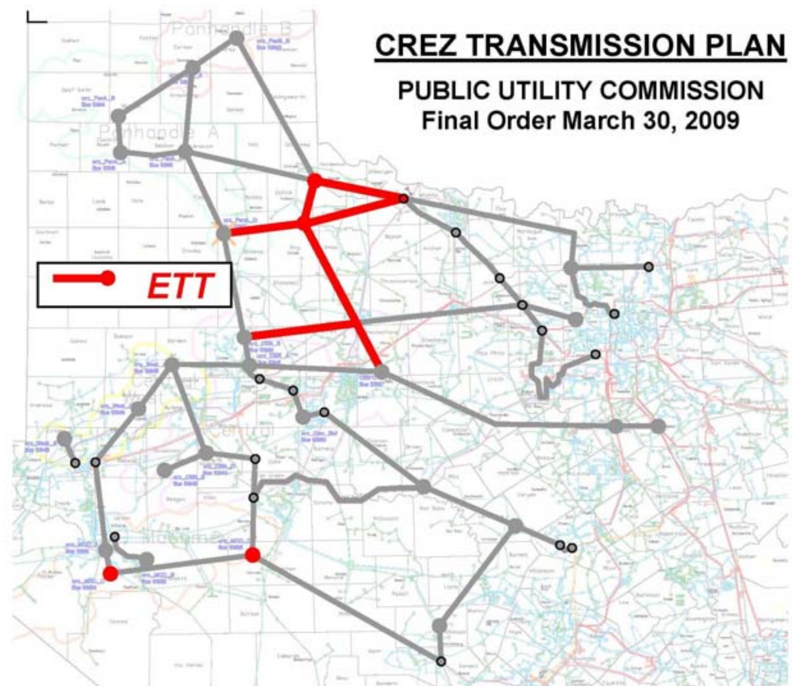
Electric Transmission Texas, LLC

Overview:

- ETT is a 50/50 JV between AEP and MidAmerican Energy Holding Company that plans to construct and operate transmission projects within ERCOT with an investment opportunity of more than $3 billion.
- Current JV rate base is $127 million with an additional $262 million requested in the current ITCOS filing, resulting in a total anticipated rate base of $389 million; debt to capital ratio of 60/40 and an authorized ROE of 9.96%.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Opportunities:

- Projects in service 2010-2018: $1.4 billion
- CREZ projects in service 2012-2013: $1.1 billion
- Other projects representing recent and pending transfers in service 2010-2014: approaching $600 million

Next Steps:

- Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in 2010.

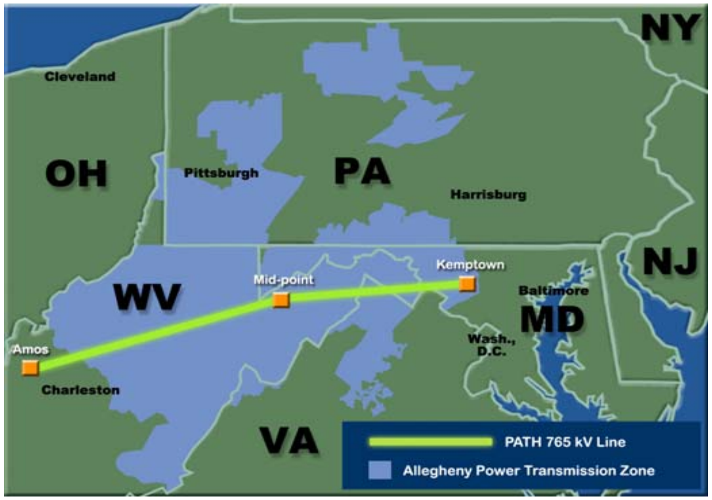
Electric Transmission Texas

EHV Transmission in PJM: PATH

Project Description: 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

Overview:

- FERC order issued on February 29, 2008 approving:
  - Cash return on CWIP and 14.3% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents
  - Rates went into effect March 1, 2008
- Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million.
  - A budget reforecast effort is currently underway. Total project cost will likely increase due to delays in the original 2012 in-service date.
- Estimated completion date: June 1, 2015, pending outcome of the 2010 PJM Regional Transmission Expansion Plan (2010 RTEP).



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

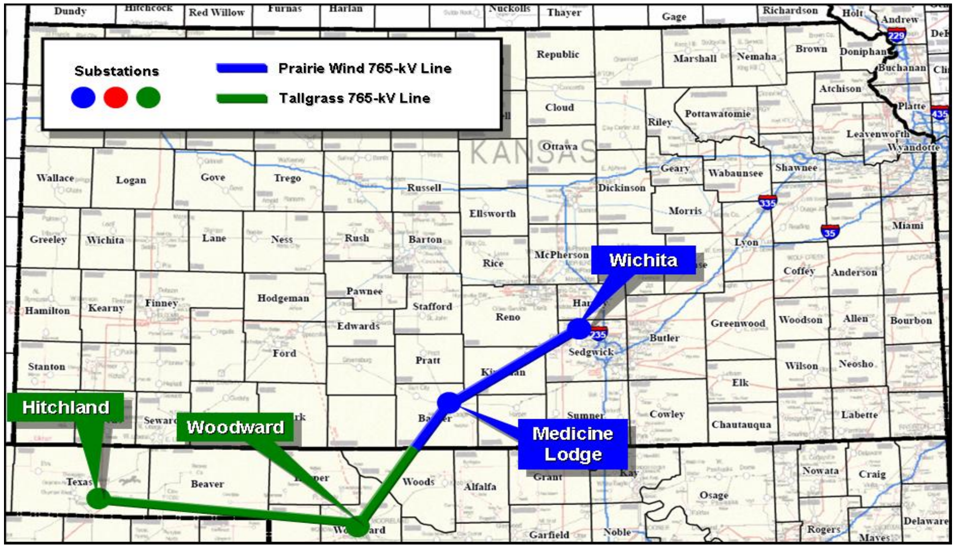
Key Challenges:

- Obtaining a CPCN in West Virginia, Virginia and Maryland. CPCN applications in West Virginia and Maryland are pending because their procedural schedule allows the consideration of the 2010 RTEP. A new application in Virginia is expected in the third quarter of 2010 after consideration of the 2010 RTEP.

Prairie Wind Transmission, LLC

Overview:

- In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
- PWT is a 50/50 JV that is proposing to build approximately 110 miles of 765-kV lines extending from Wichita, KS.
- The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
- The project is expected to cost approximately $400 million and be in-service by 2013-2014 and was approved by the KCC on July 24, 2009.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned
- Project was approved as SPP Priority Project in April 2010
  - Notice to construct anticipated to be received summer 2010.
  - Currently approved at 345 kV. Cost at 345 kV estimated to be $165 mm. May revert to 765 kV depending on results of SPP ITP study.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

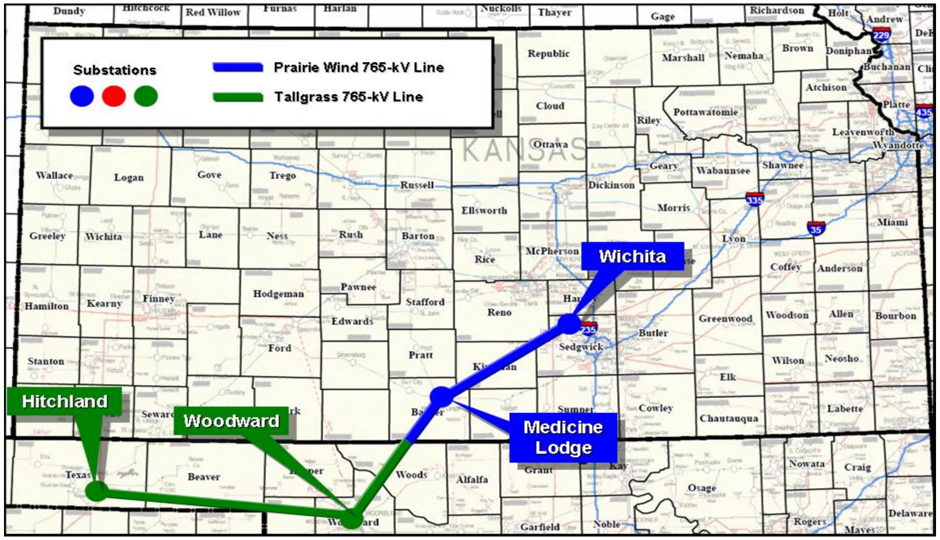
Key Challenges:

- Siting

Tallgrass Transmission, LLC

Overview:

- In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
- TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines in Oklahoma.
- The project will promote wind development in the western half of Oklahoma.
- Project is expected to cost approximately $500 million and be in-service by 2013-2014.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned
- Project was approved as SPP Priority Project in April 2010
  - Notice to construct anticipated to be received summer 2010.
  - Currently approved at 345 kV. Cost at 345 kV estimated to be $350 mm. May revert to 765 kV depending on results of SPP ITP study.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

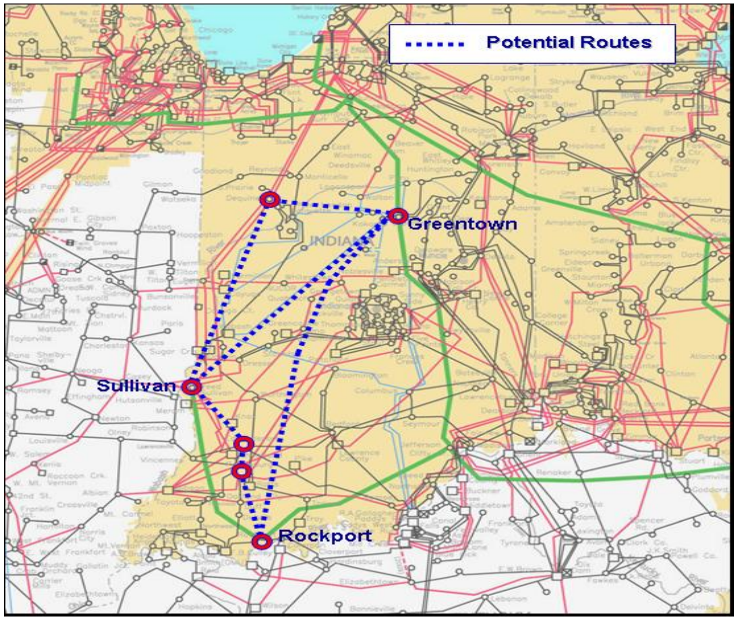
Key Challenges:

- Siting

Pioneer Transmission, LLC

Overview:

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
- The project will improve the reliability of the transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, and expand opportunities for new generation, including renewables.
- The project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP's ownership of the joint venture is 50%.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

- RTO Approval (PJM & MISO)
- Cost allocation which enables the development of "system solutions"
- Siting

Upper Midwest EHV Development—SMART Study

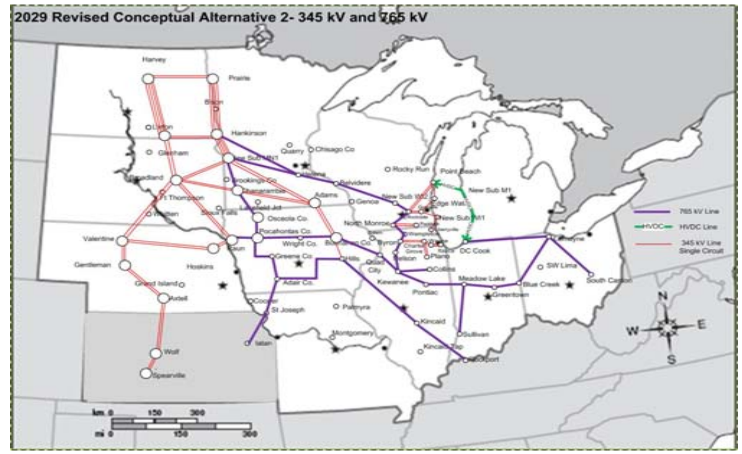
Project Description: a comprehensive study of the transmission needed in the Upper Midwest to support renewable energy development and transporting that energy to consumers throughout the study area. The SMART Study will develop EHV overlay alternatives that ensure reliable service for sponsors' communities, is environmentally friendly, and supports national energy policy.

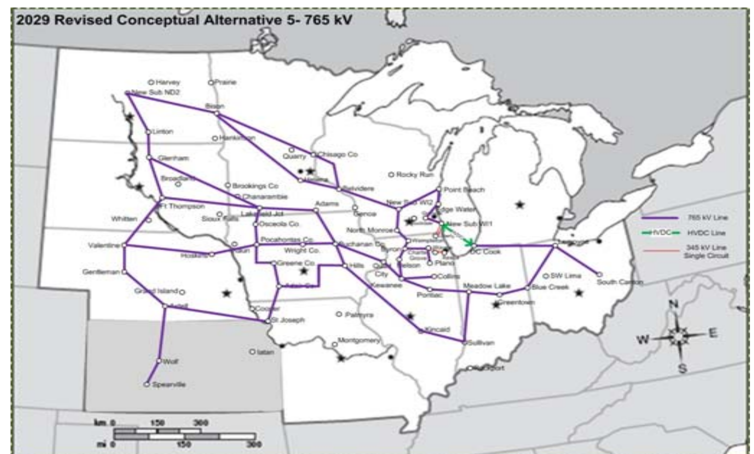
Overview:

- SMARTransmission Study announced August 2009
- Primary Focus Areas: North Dakota, South Dakota, Iowa, Nebraska, Indiana, Ohio, Illinois, Minnesota, Wisconsin, Michigan
- Study Sponsors include: ETA, Exelon, ATC, Northwestern, MidAmerican Energy Company, and Xcel
- Phase 1 completed April 30
- Phase 2 anticipated completion: June 30
  - Studying two alternatives in Phase 2. One combination 345 kV / 765 kV. One primarily 765 kV.

Next Steps:

- Investment structure
- Obtaining cost allocation between states, PJM, and MISO
- RTO technical approvals
- Favorable 205 Order including incentives

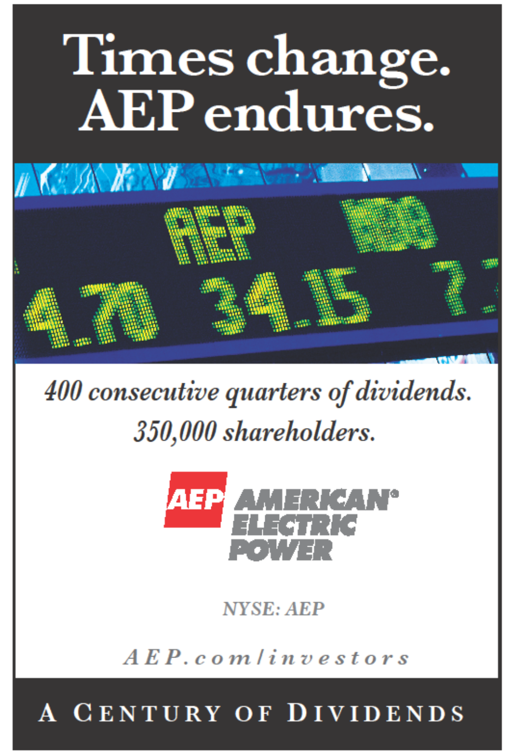




The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Value Proposition

- **Current Yield Opportunity of 5.1%[1]**
  - **June 10th – 400th consecutive quarterly dividend was paid to shareholders**
  - **50-60% payout ratio targeted**
  - **Dividend increased 2.44% on April 27th**
- **Earnings Growth Prospects**
  - **Investment in utility platform greater than depreciation level (2 - 4%)**
  - **With transmission opportunities (4 - 8%)**



Attractive total return potential

[1] yield percentage based on AEP closing price of $32.99 on 06/25/2010

ADAPTABLE

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants including our ability to restore Indiana Michigan Power Company's Donald C. Cook Nuclear Plant Unit 1 in a timely manner; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity and transmission lines (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary or deflationary interest rate trends; volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impacting our ability to finance new capital projects and refinance existing debt at attractive rates; the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurred cots and recovery is long and the costs are material; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

Table of Contents

AEP AMERICAN® ELECTRIC POWER

AEP Highlights

Premier utility platform

- Leadership position in electric generation, transmission and distribution operations
- Cash flow, earnings and regulatory diversity with more than 5 million customers in 11 states
- $6.3 billion capital expenditure program (2009-2011) will continue to drive rate base growth

Effective regulatory relationships

- Traditional recovery mechanisms with equitable risk allocation enhance both earnings and cash flow
- Emerging energy policies play to AEP's strengths (transmission, energy efficiency, reliability)
- Constructive local relationships deliver successful regulatory outcomes

High-growth transmission business

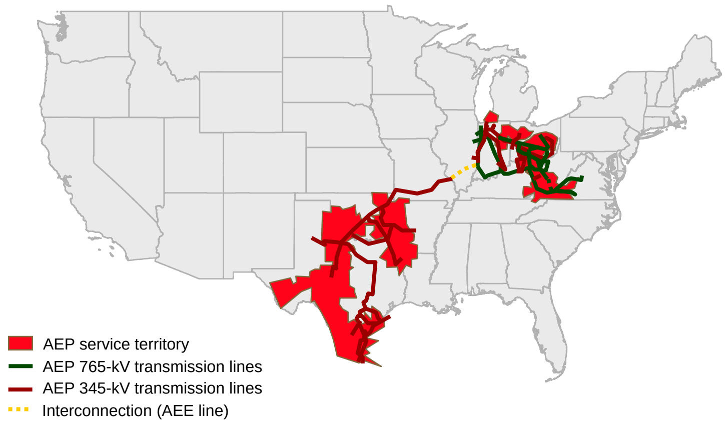
- The leading US transmission owner, operator, and developer
- Exceptional portfolio of high-quality development projects and project partners
- Attractive ROEs, regulatory support and access to capital will drive earnings growth beyond our traditional utility footprint

Stable financial position

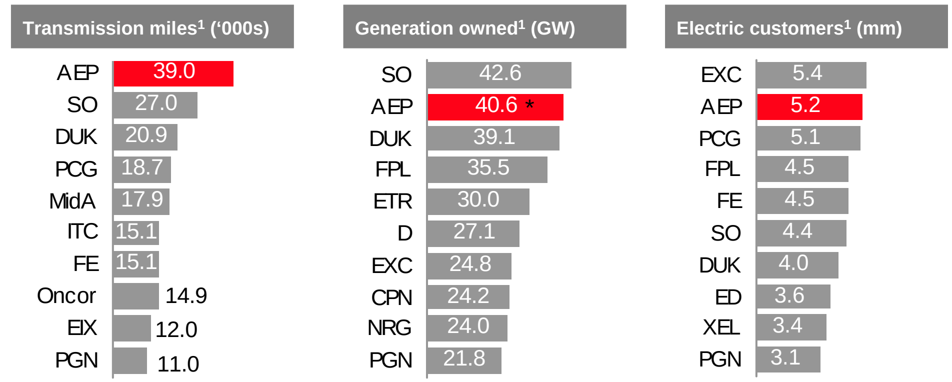
- Maximization of shareholder value through regulated utility and transmission investments
- Balanced approach to cost containment and capital allocation
- Commitment to investment grade profile, prudent balance sheet, and liquidity management
- Conservative dividend payout with attractive yield

Premier Regulated Utility Platform

Overview

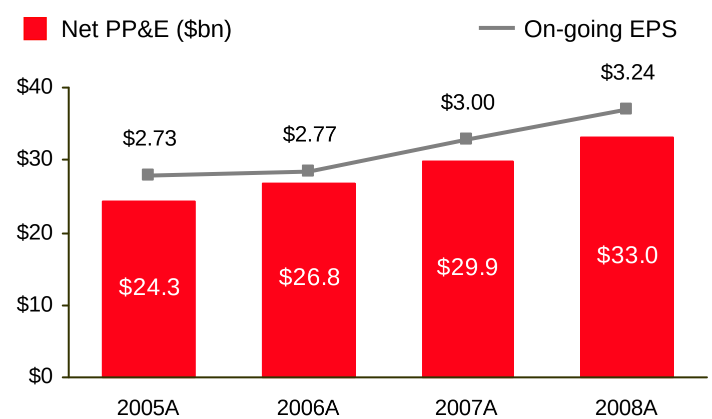


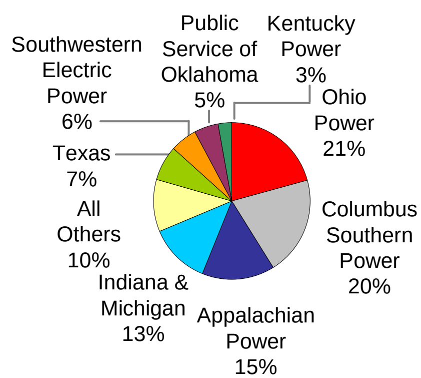
AEP's Leadership Position



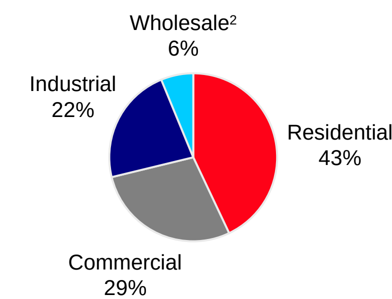
* - AEP generation includes long-term PPAs and generation under construction

Regulated Operations





2008 On-going Earnings = $1.3bn



2008 Retail Base Revenue = $6.4bn

- *Net PP&E CAGR of 10.7% since 2005*
- *Earnings CAGR of 5.9% since 2005*

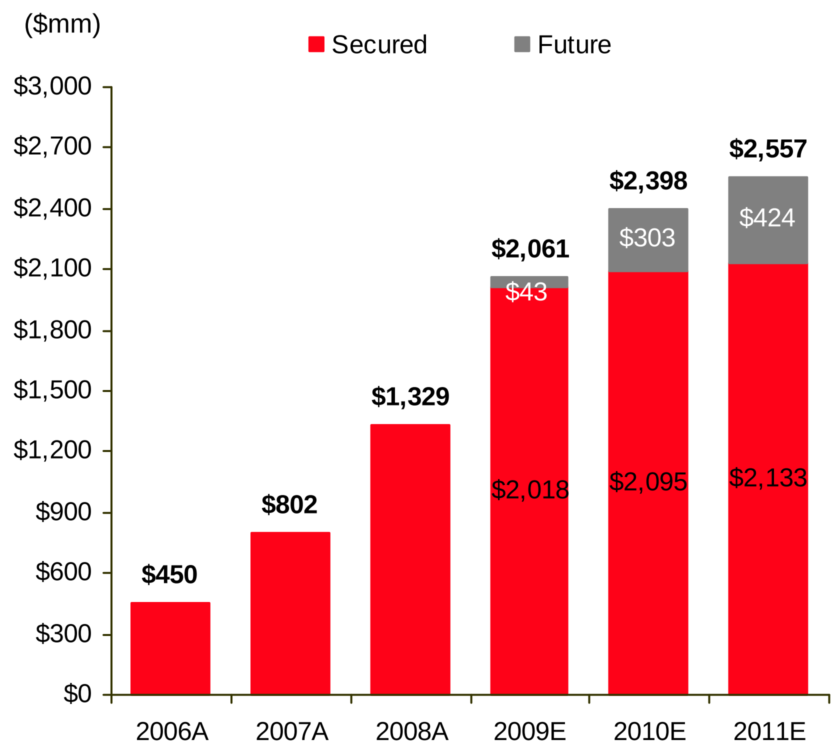
- *Highly diversified regulated utility earnings contribution*
- *Balanced customer mix*

¹ Source: Company filings
² Wholesale includes sales to municipal and cooperative power systems, other wholesale, and other retail sales

AEP AMERICAN ELECTRIC POWER

Track Record of Successful Regulatory Outcomes

Cumulative Rate Relief



Annual rate increases, $mm	$450	$352	$527	$732	$337[1]	$159[1]

[1] *$77mm and $38mm was secured for 2010 and 2011, respectively, as of May 15, 2009*

Our Regulatory Approach:

Maximize utility company returns:

- Successfully secured significant rate relief
- 2009 rate relief:
  - ✓ Ohio ($455MM)
  - ✓ I&M ($52MM)
  - ✓ APCo ($58MM)
  - ✓ PSO ($74MM)
- Pending rate relief including amount requested:
  - ✓ APCo WV ($25MM – in ENEC filing)
  - ✓ SWEPCo ($56MM)
- Anticipated filings:
  - APCo VA and others to be determined

Minimize regulatory lag:

- Active fuel adjustment clauses now in place in all jurisdictions
- Increased frequency of rate cases
- Employing tracking features

Strong local relationships with regulators

AMERICAN ELECTRIC POWER

Energy Policy Initiatives are Core to Our Strategy

Greenhouse Gas Reduction & Regulation

- Actively engaging in CO_2 policy debate – support cap & trade with <u>allocated</u> credits
- Leadership position in development of carbon capture and storage technology
- Reducing carbon footprint via offsets and other measures
- Founding member of Chicago Climate Exchange

Renewable Energy

- Develop “transmission superhighway” to facilitate renewable energy projects
- Satisfy RES requirements in our jurisdictions
- Add 2,000MW of wind capacity via long-term PPAs – 903MW achieved to-date

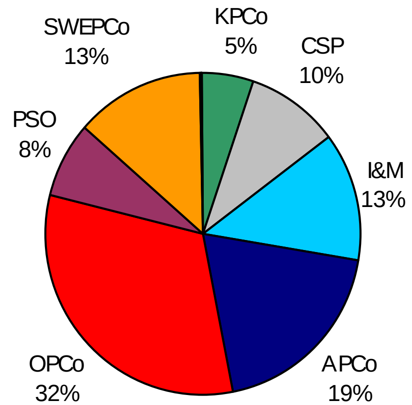
Energy Efficiency, Security & Reliability

- Develop high-voltage transmission projects to strengthen America’s power grid
- Build generation to ensure reliable supply
- Reduce 1,000MW of demand by 2012
- Reduce 2.25 million MWhs of consumption by 2012
- Diversify our fuel mix; have added 3,705MW of gas-fired capacity since 2005 and have 1,080MW under construction

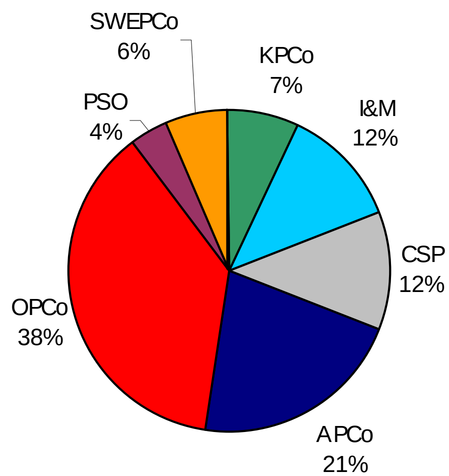
AEP AMERICAN ELECTRIC POWER

CO_2 Cost Recovery – Should Follow SO_2 & NOx

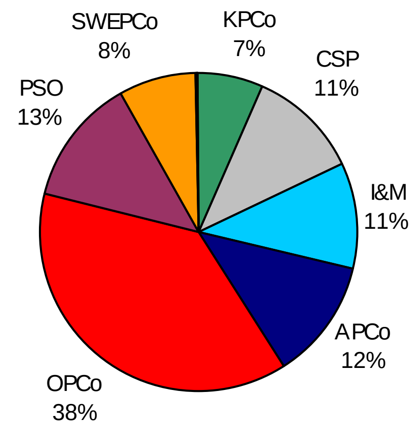
2008 AEP System CO_2 Emissions
163M tons



2008 AEP System SO_2 Emissions
637k tons



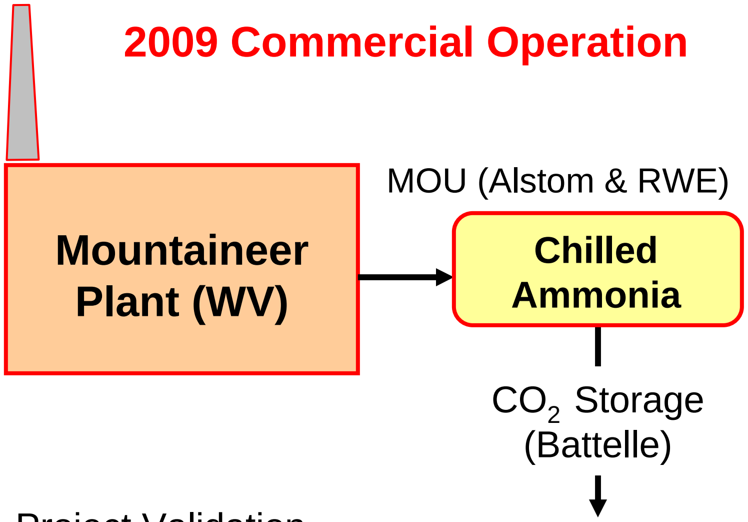
2008 AEP System NOx Emissions
248k tons



- 100% of SO_2 and NOx allowance costs currently recovered through tracker or similar mechanisms
- Prudently incurred costs associated with carbon-based taxes and other carbon-related regulations explicitly included in Ohio Fuel Adjustment Clause

AEP AMERICAN® ELECTRIC POWER

Carbon Capture & Storage



Project Validation

- Alstom “Chilled Ammonia” Technology
- 20-30 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, in operation at We Energies’ Pleasant Prairie Power Plant)
- Located at the AEP Mountaineer Plant in WV
- 100,000 - 300,000 tonnes CO_2 per year
- In operation 3Q 2009
- Geologic storage for CO_2

Represents Post-Combustion Capture

- Conventional or Advanced Amines; Chilled Ammonia
  - Amine technologies are currently available in other industrial applications
  - Relatively low CO_2 concentration in flue gas - more difficult to capture than other approaches
  - High parasitic demand
    - Conventional Amine ~ 25-30%
    - Chilled Ammonia target ~ 10-15%

Key Issues for CCS Development in the U.S.

- Overcoming the ‘economic’ hurdle
- High up-front capital investment
- Commercial demonstration at large coal-fired power plants
- National standards for permitting of storage reservoirs
- Potential institutional, legal and regulatory barriers to carbon storage

AEP AMERICAN ELECTRIC POWER

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
AEG	Dresden	Ohio	$322 MM	Gas	Combined-cycle	580	2013
SWEPCo	Stall	Louisiana	$385 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.6 B (1)	Coal	Ultra-supercritical	600 (1)	2012

(1) SWEPCo will own approximately 73%, or 438 megawatts, totaling about $1.2 billion in capital investment.

- Turk – AEP self-reported impacts to jurisdictional wetlands in March 2009. Work continues outside the jurisdictional areas. Hearing on the air permit appeal is scheduled for June 2009.
- Stall – Construction continues.
- Dresden – Construction suspended due to shifts in capital spending. Commercial operation date has been projected for 2013 (previously 2010).

AEP AMERICAN ELECTRIC POWER

DC Cook Unit 1 Update

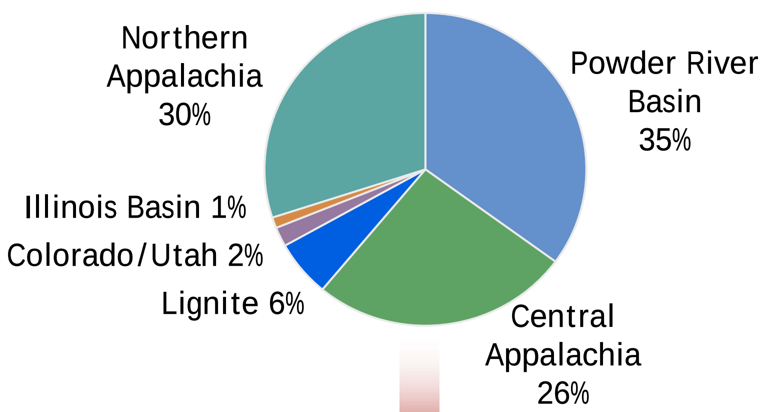
- Previously identified technical challenges have solutions
  - Low pressure turbine rotors have been straightened
  - Foundation repair work is in progress and is the critical path
  - Generator and high pressure turbine repair work supports the critical path
- The unit is scheduled to return to service in the fourth quarter of 2009
  - The unit will operate without the last stage blades at 30 MW (summer) to 100 MW (winter) reduced capacity
- Root cause: “A blade-rotor system design that failed to provide adequate stress margin”
  - The root cause also found no operational or installation issues
- The replacement rotors are scheduled for installation in the spring of 2011
  - Different design with several years of fault-free commercial operation.
- We continue to receive $3.5MM per week from the accidental outage policy
  - Insurance proceeds are reflected as other operating revenue; During 1Q09, approximately 40% of the insurance payments ($20MM) were used to offset increased fuel costs to customers

AMERICAN ELECTRIC POWER

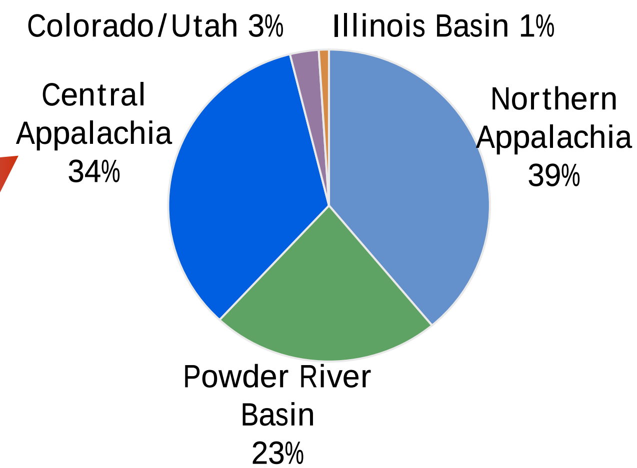
Coal Procurement - 2009 Projected

AEP burns approx. 77 million tons of coal per year

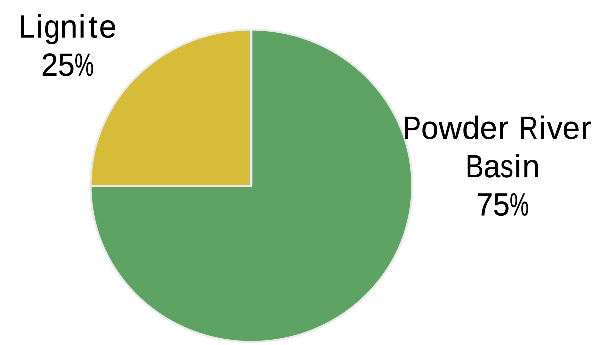
Total AEP System



AEP East



AEP West



Coal Stats:

- 98% contracted for 2009
- Avg. delivered price ~ $46.61/ton in 2008
- Approximate 12% price increase in 2009 ~ $52.00/ton

AEP AMERICAN ELECTRIC POWER

Uniquely Positioned for Nationwide Grid Expansion

Active Projects:

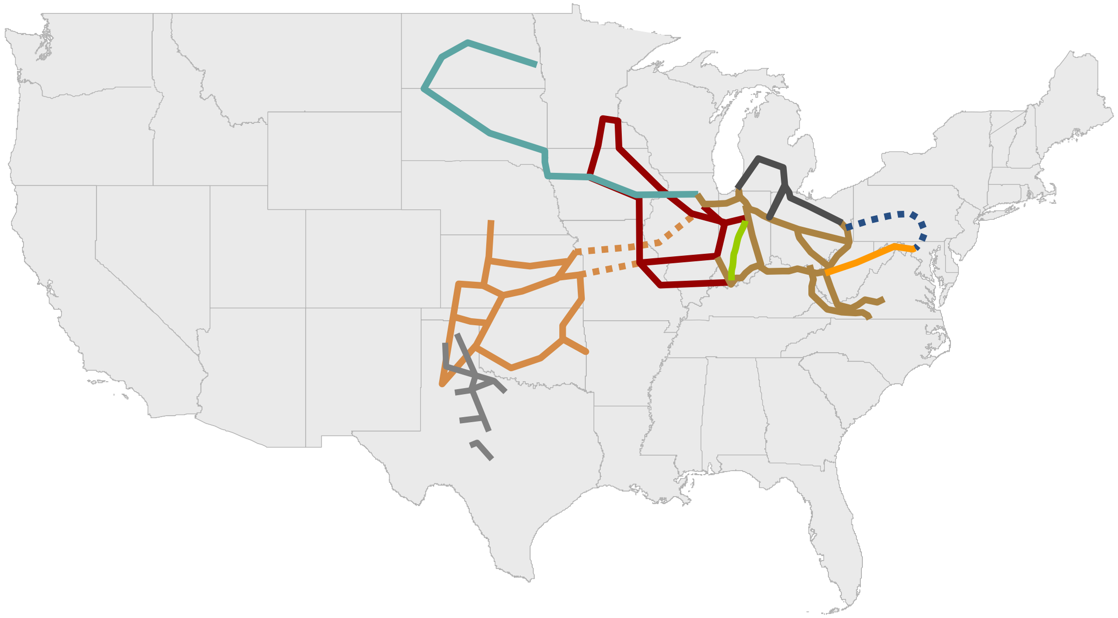
Pioneer — **COD: 2015**
- *240 miles of 765 kV*
- *Partner: Duke Energy (50%)*
- *Estimated Cost: $1 billion*
- *ROE: 12.54%*

PATH-WV — **COD: 2014**
- *275 miles of 765 kV*
- *Partner: Allegheny Energy (50%)*
- *Estimated Cost: $1.2 billion*
- *ROE: 14.3%*

Tallgrass — **COD: 2013-14**
- *170 miles of 765 kV*
- *Partners: OG&E (50%) & MidAmerican Energy (25%)*
- *Estimated Cost: $500 million*
- *ROE: 12.8%*

Prairie Wind — **COD: 2013-14**
- *230 miles of 765 kV*
- *Partners: Westar Energy (50%) & MidAmerican Energy (25%)*
- *Estimated Cost: $600 million*
- *ROE: 12.8%*

ETT — **COD: 2013**
- *345 kV in ERCOT*
- *Partner: MidAmerican Energy (50%)*
- *Estimated Cost: $400 million*
- *ROE: 9.96%*



Future Projects:

EHV Michigan — **COD: ~2020**
- *700 miles of 765 kV*
- *Partner: ITC*

PJM Projects
- *Enhance existing 765/345 kV*

Hartland — **COD: ~2020**
- *1000+ miles of 765 kV*
- *Partner: Hartland Wind LLC*

MISO Vision Plan
- *765 kV Backbone*

SPP Overlay — **COD: 2013-14**
- *765 kV Backbone*

ETT — **COD: ~2018**
- *345 kV in ERCOT*
- *Additional CREZ spend of $750-$850 million*

AEP AMERICAN ELECTRIC POWER

Note: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

Equity Contributions Enhance Earnings Growth to 4 – 8%

AEP is the leader

- Largest US transmission footprint
- Interstate EHV highway vision
- National renewables transmission strategy

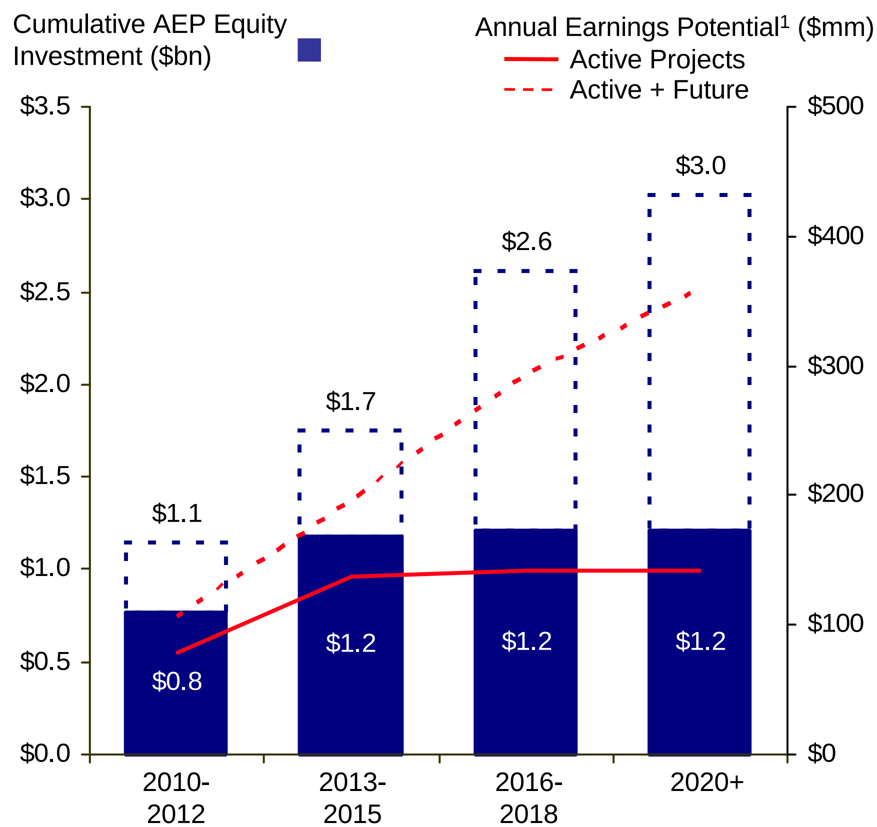
Quality projects

- 4 FERC-approved ($3.3 billion)
- Independent ERCOT transmission JV company (up to $2.6 billion)
- Robust pipeline of future 765 kV projects (up to $15 billion)

Attractive returns

- FERC incentive rates (12.5-14.3%)
- Strong cash flow with CWIP
- Long-term earnings potential of ~$140-$360 million annually[1]

Illustrative Earnings Potential of New Transmission Initiatives



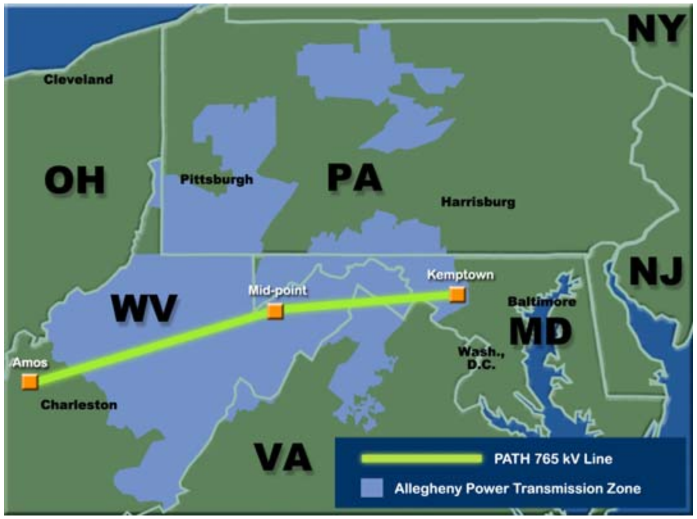
[1] *Illustrative calculation assumes 50/50 debt/equity capitalization and incentive ROE of ~13.0% for FERC projects and a 60/40 debt/equity capitalization and 10.5% ROE for ERCOT projects*

AEP AMERICAN ELECTRIC POWER

EHV Transmission in PJM: PATH

Project Description: 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

- **Near Term Risks**
  - Obtaining a CPCN in West Virginia or costly concessions with WV to receive the CPCN
- **Pertinent Data**
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP and 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
    - Rates went into effect March 1, 2008; current annual revenue requirement is $15MM effective 1/1/09
  - Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million
  - Estimated completion date: 2014



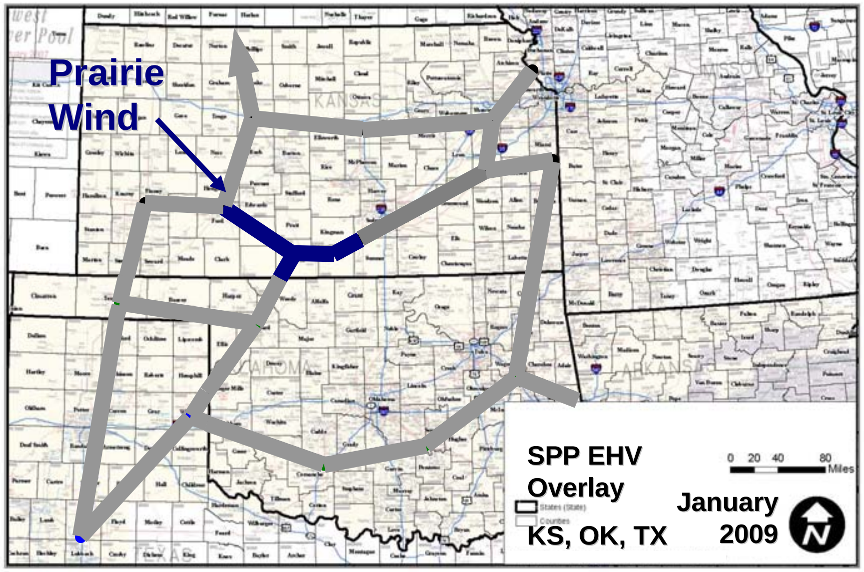
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP AMERICAN ELECTRIC POWER

Prairie Wind Transmission, LLC

JV to build first segment of 765-kV transmission in SPP

- ***Overview***
  - In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
  - PWT is a 50/50 JV that is proposing to build approximately 230 miles of 765-kV lines extending from Wichita, KS, west to a substation northeast of Dodge City, KS, and then south to the Kansas border from Medicine Lodge, KS.
  - The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
  - Project is expected to cost approximately $600 million (based on SPP estimates) and be in-service by 2013.
  - AEP's ownership of the joint venture is 25%.
  - Kansas CPC filing submitted in May 2008.
  - FERC order received in December 2008:
    - Cash return on CWIP and 12.8% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PWT or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

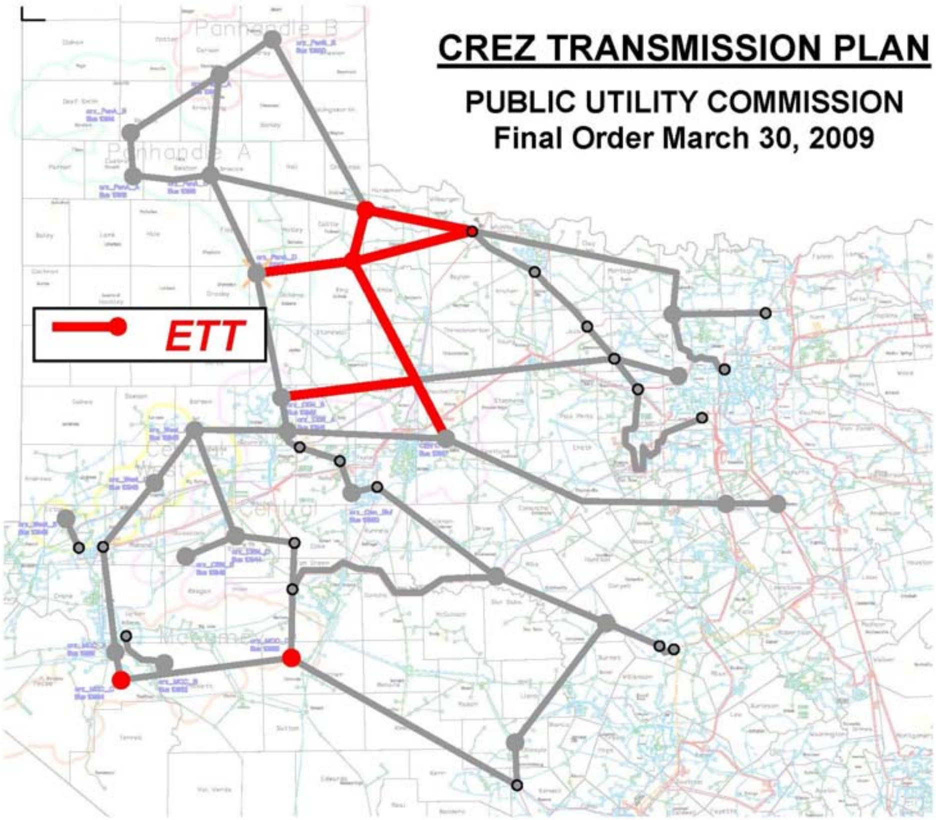
- ***Key Challenges***
  - Cost allocation which enables the development of "system solutions"
  - RTO Approval
  - Competing ITC Great Plains project

AEP AMERICAN ELECTRIC POWER

Texas CREZ Project

Strengthening the ERCOT grid to collect and deliver wind generation to load

- ***Status:***
  - On February 26, 2009, PUCT ordered its staff to stage the development of CREZ transmission lines.
  - Staging to occur in separate docket and consider timing of wind projects and congestion.
  - PUCT established 2 categories based on priorities. ETT has no first priority lines.
  - PUCT issued a final order assigning transmission service providers on March 30, 2009.
  - ETT's share of CREZ investment is approx. $840MM of $4.9B total.
  - The filing calls for completion of the plan by 2013.
- ***Next Steps***
  - Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in early 2010.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

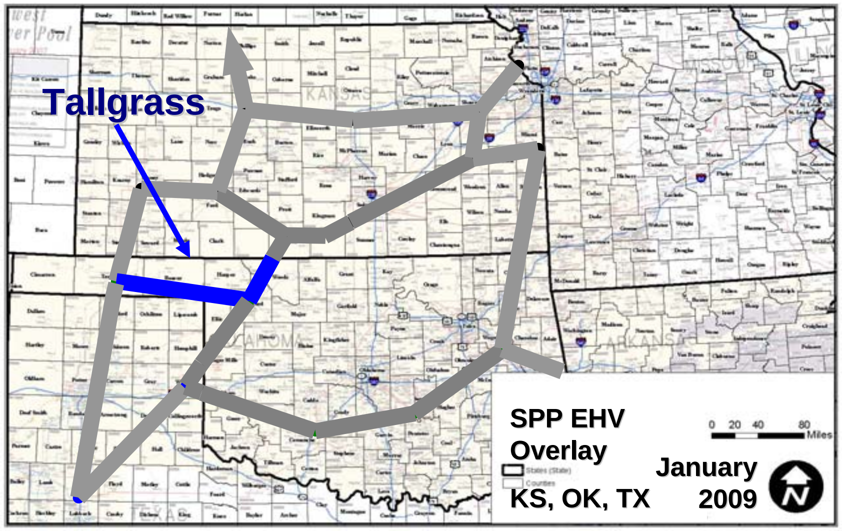
Electric Transmission Texas

AMERICAN ELECTRIC POWER

Tallgrass Transmission, LLC

JV to build second segment of 765-kV transmission in SPP

- ***Overview***
  - In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
  - TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines extending from the Kansas-Oklahoma border north of Woodward, OK, extending west into the Oklahoma panhandle to a new station that will be built near Guymon, OK.
  - The project will promote wind development in the western half of Oklahoma.
  - Project is expected to cost approximately $500 million and be in-service by 2013.
  - AEP's ownership of the joint venture is 25%.
  - Other responsibilities will be handled by the partners or outsourced.
  - FERC order received in December 2008:
    - Cash return on CWIP and 12.8% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of TG or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

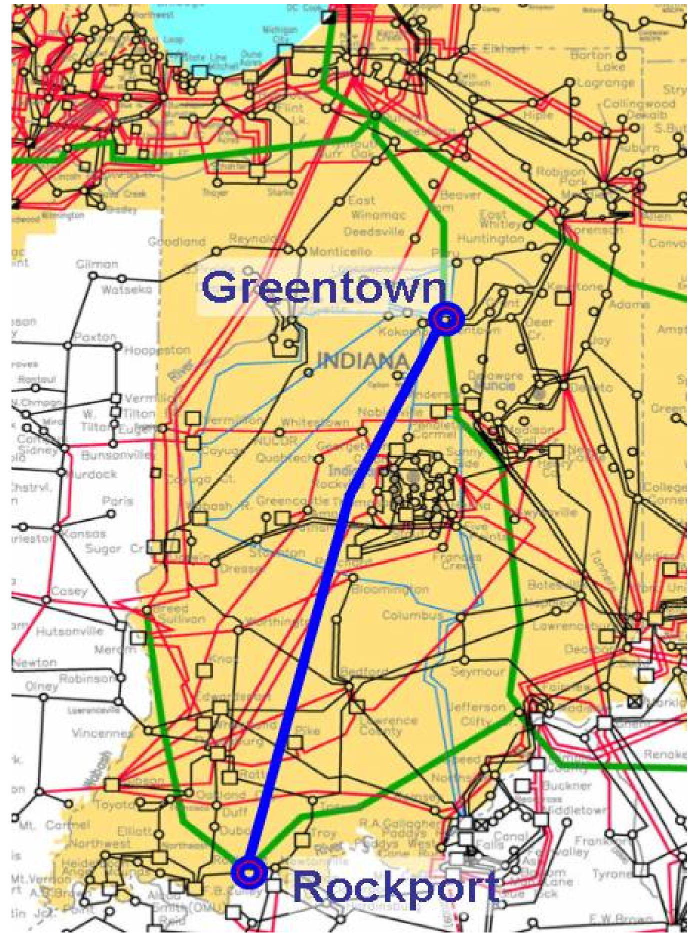
- ***Key Challenges***
  - Cost allocation which enables the development of "system solutions"
  - RTO Approval

AEP AMERICAN ELECTRIC POWER

Pioneer Transmission LLC

Overview

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
- The project will improve the reliability of the nation's transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, protect national security and expand opportunities for new generation, including renewables.
- Project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP's ownership of the joint venture is 50%.
- Other responsibilities will be handled by the partners or outsourced.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect, and
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PT or its parents.
  - Certain formula rate issues were set for hearing



Key Challenges

- Cost allocation which enables the development of "system solutions"
- RTO Approval - touches two RTOs – PJM & MISO
- Siting

AEP AMERICAN ELECTRIC POWER

Hartland Wind Concept EHV Development in Upper-Midwest

Project Description: 1000+ miles of 765-kV transmission linking Upper Midwest generation sources with the existing EHV infrastructure in the Chicago area expected to cost $5-$10 billion over a 10 year period.

- **Near Term Risks**
  - Technical feasibility study
  - Identification of willing and able partners
  - Obtaining cost allocation between states, PJM, and MISO
  - RTO Technical Approvals
  - Favorable 205 Order including 679 incentives
- **Mitigation**
  - Target the identified need for the project and its ability to provide access for wind energy to load centers
  - Collaboration in regulatory process for regional cost allocation between MISO, PJM, and Midwest Governors Association
  - Prepare comprehensive regulatory filing, including incentives

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP AMERICAN ELECTRIC POWER

Overview of 2009 Guidance

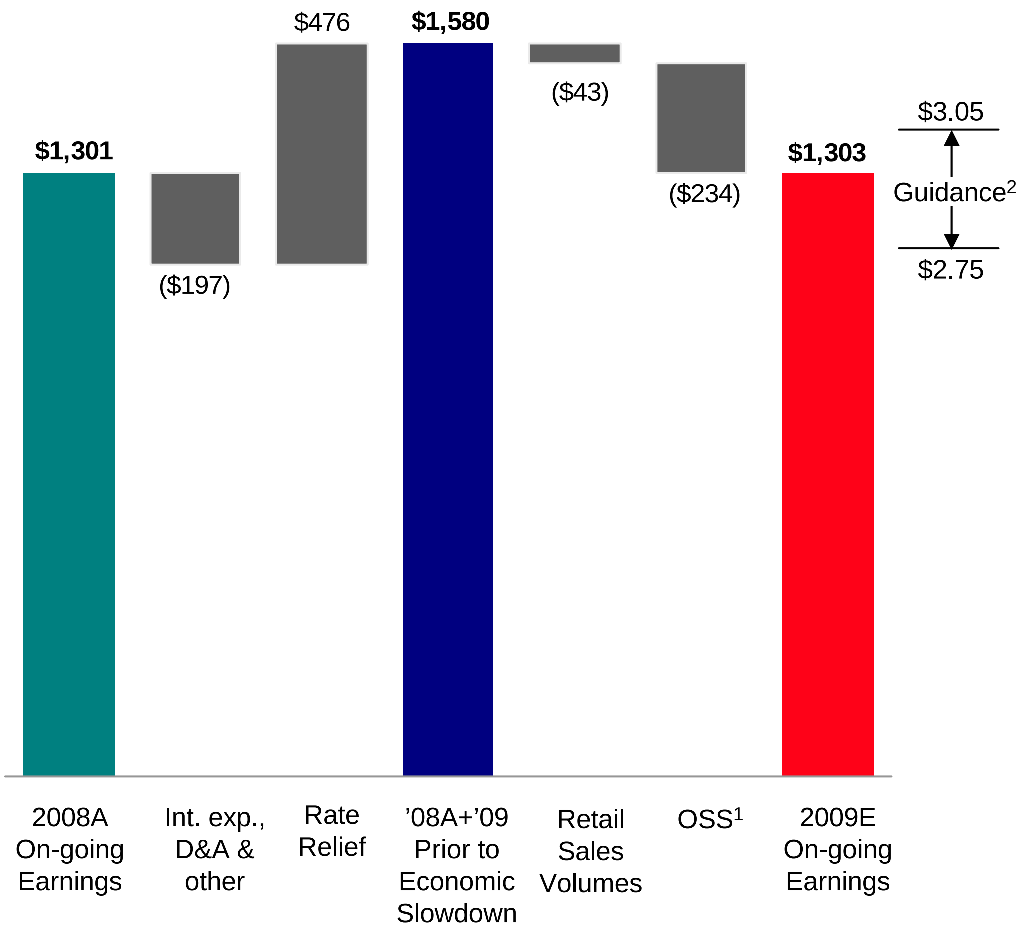
2009 Earnings Drivers:

- Positive Ohio outcome
- Rate relief - $732mm
- Economic slowdown
  - Lower OSS revenues
  - Lower loads

Long-term Earnings Drivers:

- Rate base investments
- Additional rate relief
- OSS/Retail load
- Transmission JV earnings

2008A-2009E Earnings Bridge ($mm)

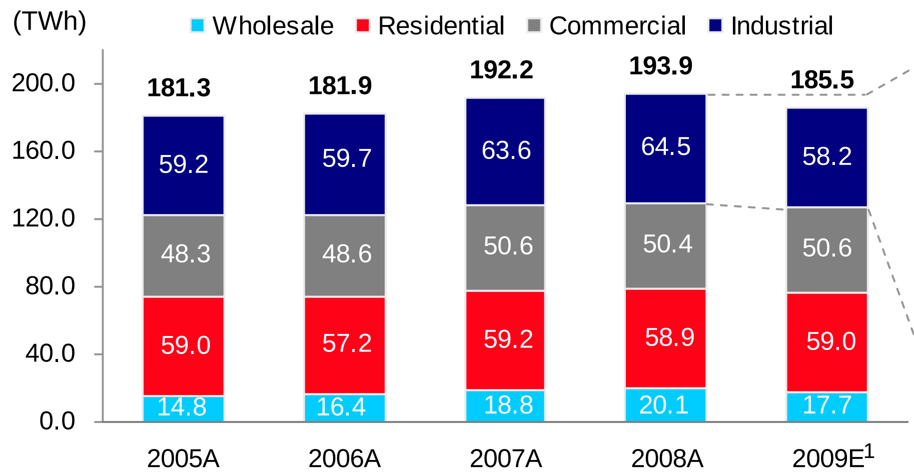


Note all items are presented after-tax
[1] Net of sharing
[2] Assumes 2009 average shares outstanding ~ 450 million

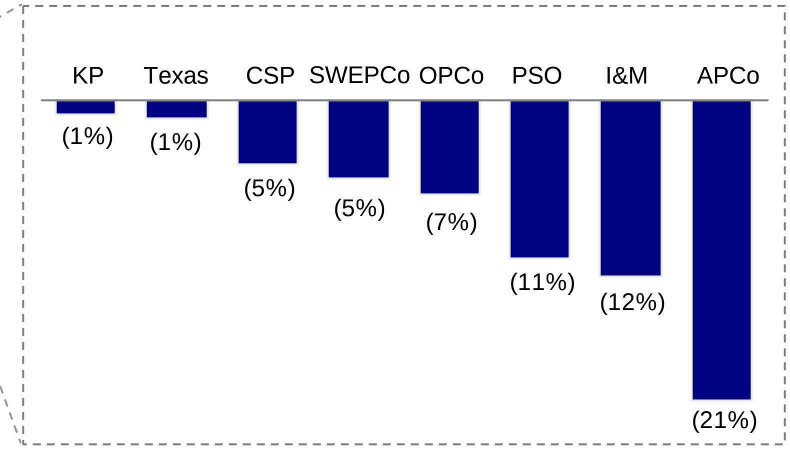
AEP AMERICAN ELECTRIC POWER

Key Drivers of Revised 2009 Guidance: Retail Sales

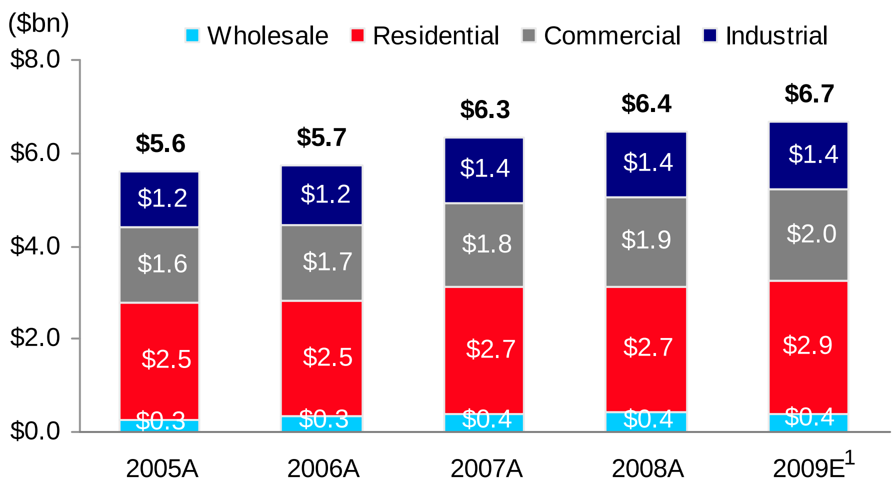
Retail Load by Customer Class



Forecast Drop in 2009 Industrial Sales



Retail Base Revenue[2] by Customer Class



Key Contributors to 2009E Industrial Volume Decline

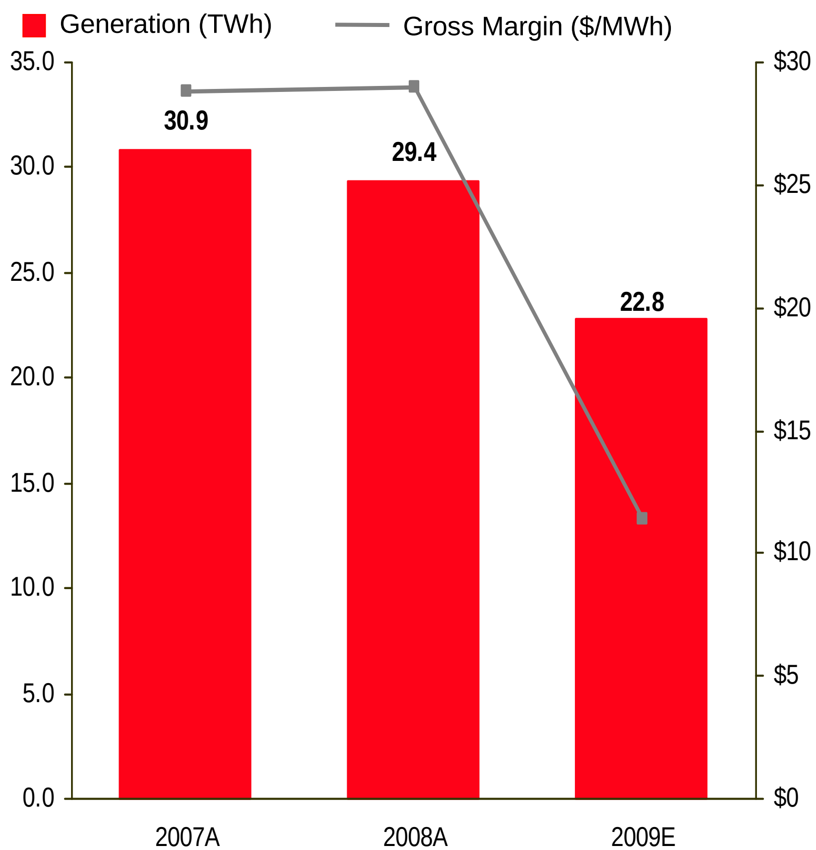
- Primary metals (APCo, I&M, OPCo, CSP, SWEPCo, KP)
- Basic industries (I&M)
- Paper (PSO, SWEPCo)
- Oil & Gas extraction (PSO, SWEPCo)

AEP AMERICAN ELECTRIC POWER

[1] 2009E assumes normalized weather
[2] Excludes the impact of current year rate relief, fuel over/under recovery, PJM costs and consumables

Key Drivers of Revised 2009 Guidance: Off-System Sales

Off-System Sales Metrics



$ in millions		2007A		2008A		2009E

Jurisdictional Off-System Sales Sharing Summary

STATE	OSS Sharing?	Detail
Arkansas	Yes, above and below base levels	Up to $758,600 annual margin, ratepayers receive 100%. From $758,601 to $1,167,078, ratepayers receive 85%. Above $1,167,078, ratepayers receive 50%.
Indiana	Yes	There is $37.5 million built into Indiana's base rates. Above $37.5 million, ratepayers received 50%
Kentucky	Yes, above and below base levels	Sharing occurs above and below levels included in base rates of $24,855,326. Between $0 and $30 million, ratepayers receive 70%. Above $30 million, ratepayers receive 60%.
Louisiana	Yes, above base levels	Up to $874,000 annual margin, ratepayers receive 100%. From $874,001 to $1,314,000, ratepayers receive 85%. Above $1,314,000, ratepayers receive 50%.
Michigan	Yes	There are two jurisdictions: St Joe and Three Rivers. For St Joe, 100% of profits are shared with ratepayers. No profits are shared in Three Rivers, including base rates. St Joe represents 66% of the Michigan market.
Ohio	No	n/a
Oklahoma	Yes	75% of profits are shared with ratepayers.
Tennessee	No	n/a
Texas (SPP)	Yes	90% of profits are shared with ratepayers.
Virginia	Yes	75% of profits are shared with ratepayers.
West Virginia	Yes	100% of profits passed back to ratepayers through the Expanded Net Energy Cost (ENEC) clause.

AEP AMERICAN ELECTRIC POWER

Utility Capital Expenditures Support Growth of 2 - 4%

Annual $1.8 billion capital program creates rate base growth over annual depreciation expense of $1.2 billion

AEP AMERICAN ELECTRIC POWER

Pension and OPEB Estimate

- Our pension plan and OPEB funds investment returns were each down about 24% in 2008.
- Discount rates are assumed to be 6.0% for pension and 6.1% for OPEB.
- Investment losses increase plan expense for both pension and OPEB, but the investment losses are smoothed in over several years.
- We expect 2009 pension and OPEB expense to increase $104MM from 2008 to 2009 (pre-tax and pre-capitalization).
- OPEB contributions will increase along with OPEB expense, in accordance with agreements in most of our regulatory jurisdictions.
- We do not expect any mandatory contributions to pension in 2009. Pension trust contributions are estimated to be $475MM in 2010 and $283MM in 2011.

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

New Generation Projects

AEP
A CENTURY OF DIVIDENDS • 1910 • 2010

J. Lamar Stall Combined-Cycle Gas Plant

- J. Lamar Stall Combined-Cycle gas plant is a 508-MW unit that began commercial operations in June 2010.
  - The final estimated cost of the plant is $433 million including $49MM of AFUDC.
  - The plant is located in AEP's SWEPCo region at its existing Arsenal Hill Power Plant in Shreveport, Louisiana.
  - The plant serves the needs of customers in the Arkansas, Louisiana and Texas service territories.

- John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant. Located in AEP's SWEPCo region. AEP owns 73 percent or roughly 440 megawatts of the total unit.
  - The cost of the plant and related transmission is anticipated at $1.8 billion with AEP's share approximately $1.4 billion and will begin commercial operation in 2012.
  - The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls.
  - Various legal challenges are on-going related to the plant (see 10-Q). Recently, following the Arkansas Supreme Court decision regarding CECPN, SWEPCO filed notice to the APSC that the 88MW will now be merchant and will not be included in rate base.

John W. Turk Jr. Ultra-Supercritical Coal Plant

Carbon Capture and Storage

Carbon Capture and Storage project located at AEP's Mountaineer Plant in New Haven, WV

PHASE I – Validation

Captured CO_2 – September 2009

Injected CO_2 – October 2009

CO_2 Capture

Project employs Alstom's chilled ammonia process for post-combustion CO_2 capture.

CO_2 Storage

Compressed CO_2 is injected about 1.5 miles below the earth's surface.

PHASE I - Validation

20 MWe scale validation project designed to remove 90% of CO_2 from flue gas and store 100,000 metric tons/year. Currently in operation.

PHASE II - Commercialization

235 MWe commercial scale project designed to capture and store 1.5 million metric tons of CO_2/year. Awarded 50% US DOE funding. Commercial operation in 2015.

Transmission Investment Opportunities

- ETT: Projects in Texas ERCOT jurisdiction
  - $600MM of projects est. in service 2010-2013
  - ETT's opportunity could reach $3.0B in this decade
- Transco: Within our existing footprint
  - Provides opportunity to:
    - Develop new AEP-only projects
    - Reduce regulatory lag through FERC formula rates adjusted annually
- Joint Ventures: Outside of our footprint, via ETA or with others
  - Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
  - Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2015
  - Robust pipeline of projects up to $15B

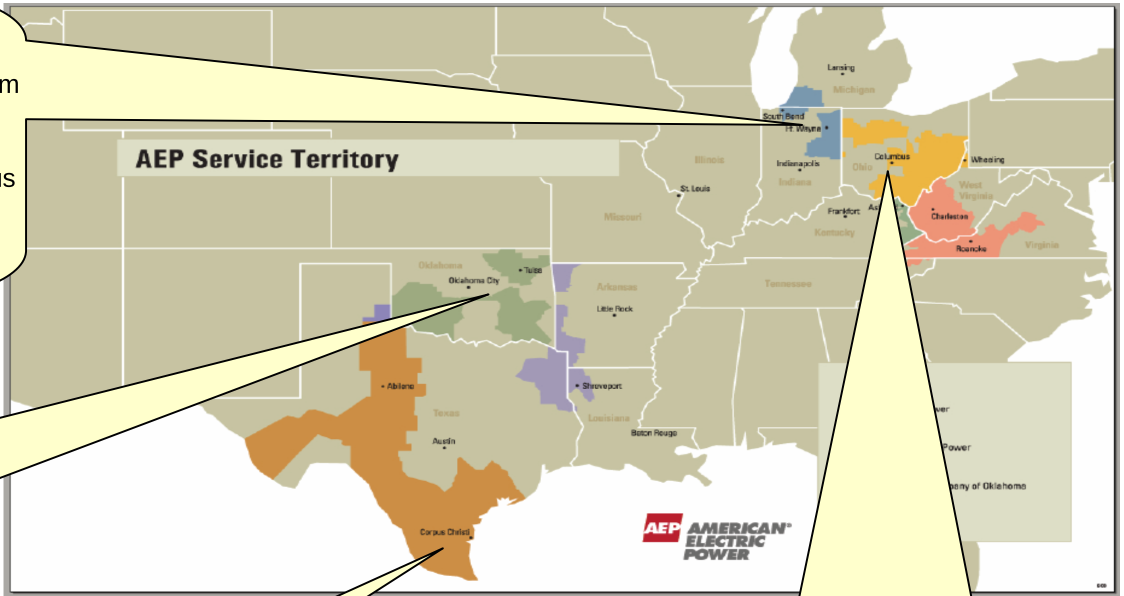
AEP's "Smart Grid" Deployment Status



Indiana Michigan Power (Completed, 12/2008)
- 10,000 AMI pilot program (GE meters, Silver Spring AMI Network)
- Distribution automation (GE ENMAC Distribution Management System and Integrated Volt-Var Control (IVVC))
- Two-tiered, two-season time-of-use tariffs with Critical Peak Pricing
- Customer web portal displaying 15-minute interval data up-to-previous day
- Field testing direct load control using Programmable communicating thermostats

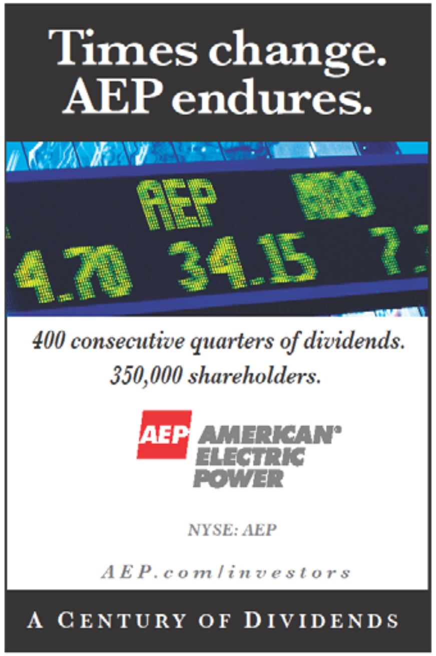
Public Service of Oklahoma (Final Planning)
- Applied for and approved for $7million low interest loan from OK Department of Commerce (ARRA source)
- Planned scope is 10,000 meters
- Increased penetration of In Home Devices for usage monitoring
- Distribution technologies include DA and IVVC

AEP Texas (underway)
- Legislature enabled and commission directing TDSPs to deploy advanced metering
- Enables REPs to innovate around electricity pricing and consumer technologies
- Filed and received approval from PUCT for 4-year deployment of 970,000 meters, $270 million project
- AEP Texas to collect a surcharge over 11 years
- Includes 10,000 in-home displays for low income customers
- Landis & Gyr Meters and AMI network

AEP Ohio (underway)
- PUCO-Approved 110,000 AMI deployment in NE Central Ohio
- Selected by DOE as a Smart Grid Demonstration Project for $75million in federal funding, 42-month deployment/evaluation
- Partnered with Battelle
- Full suite of distribution grid management technologies on over 70 distribution circuits
- Advanced technology deployment (Energy storage, PHEVs)
- Enhanced time-of-use tariffs, including a field trial of realtime pricing
- Home area networks & grid-friendly appliances

Value Proposition

- **Current Yield Opportunity of 4.7%[1]**
  - June 10th - 400th consecutive quarterly dividend was paid to shareholders
  - 50-60% payout ratio targeted
  - Dividend increased 2.44% on April 27th
- **Earnings Growth Prospects**
  - Investment in utility platform greater than depreciation level (2 - 4%)
  - With transmission opportunities (4 - 8%)



Attractive total return potential

[1] yield percentage based on AEP closing price of $36.10 on 07/29/2010

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

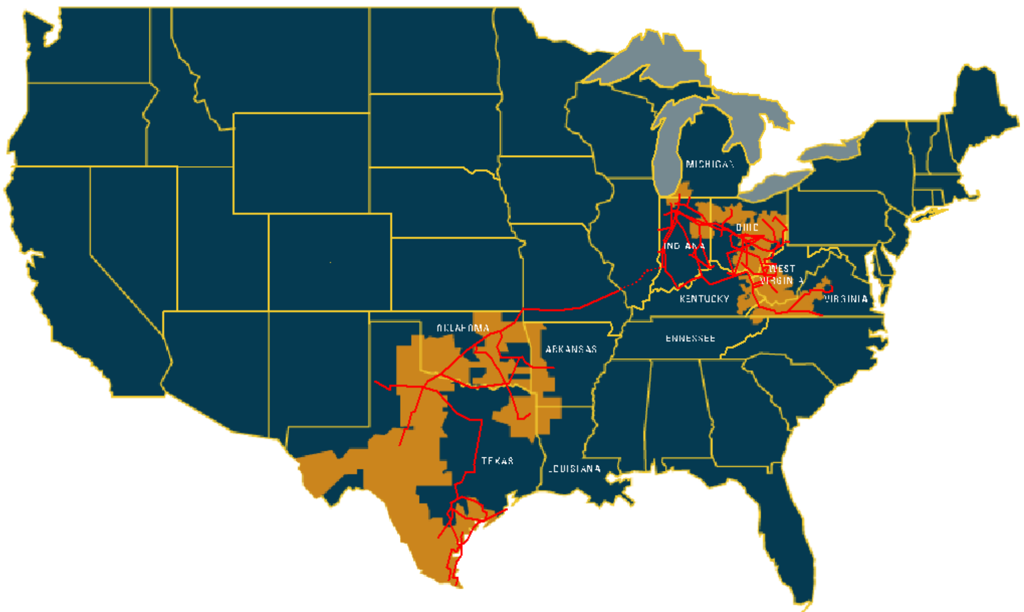
Asset Portfolio

Strength & Scale in Assets & Operations



Generation	35,500 MW capacity
Transmission	38,953 miles
Distribution	200,930 miles
Customers	5 million

FUTURE EARNINGS GROWTH DRIVEN BY NATIVE LOAD GROWTH & SUBSTANTIAL UTILITY INVESTMENT OPPORTUNITY

Generation Fleet Composition

- 35,500 MW Domestic Capacity
- 85% System Availability Factor YE 2004
- 62% System Capacity Factor YE 2004

Capacity by Fuel Mix

	Baseload	Load-Following	Peaking
PJM	24,226	0	586
ERCOT	1,089	0	0
SPP	4,828	3,516	188
Total*	**30,143**	**3,516**	**774**

* Figures do not include mothballed or decommissioned units (1,015 MW of capacity)

GENERATION FLEET IS SUBSTANTIAL AND LOW COST

Fuel, Emissions & Logistics

Introduction

The generation assets are co-managed by the Power Generation and the Commercial Operation Groups within AEP - each with a deliberate focus on roles and responsibilities within the organization

Power Generation
Operate 35,500 MW

Commercial Operations
Coal, gas, power and emissions markets

Fossil and Hydro Generation
Bill Sigmon, SVP

Generation Dispatch

Nuclear Generation

Energy Marketing
Brian Tierney, SVP

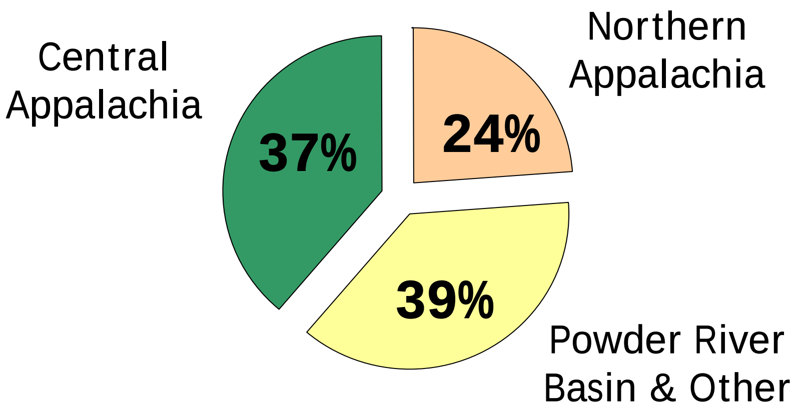
Engineering, Environmental & Technical Services
John McManus, VP Environmental Services

Fuel, Emissions & Logistics
Chuck Zebula, SVP

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 6735 of 9556

Coal Procurement

AEP SYSTEM

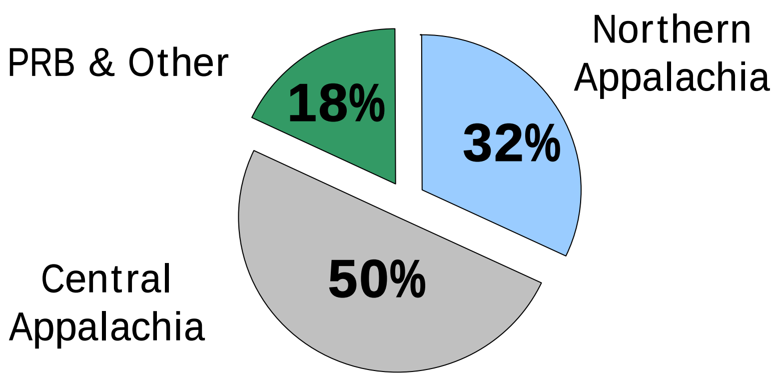


Coal Supply

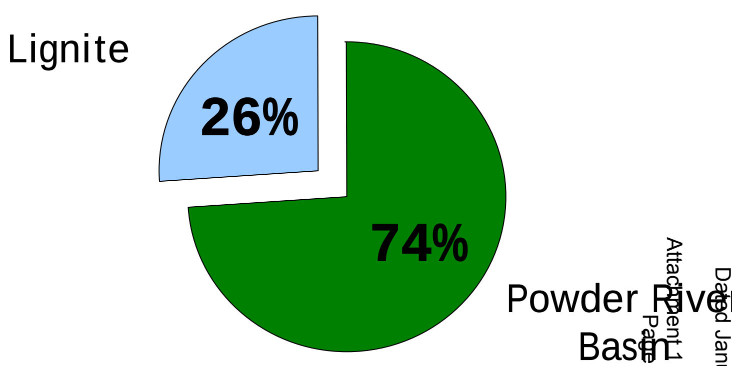
(on average)

- ➢Purchase 75 MM tons per year
- ➢Avg. delivered price ~ $28.50/ton in 2004
- ➢Essentially 100% purchased for 2005
- ➢Approximately 10% price increase in 2005

EASTERN SYSTEM

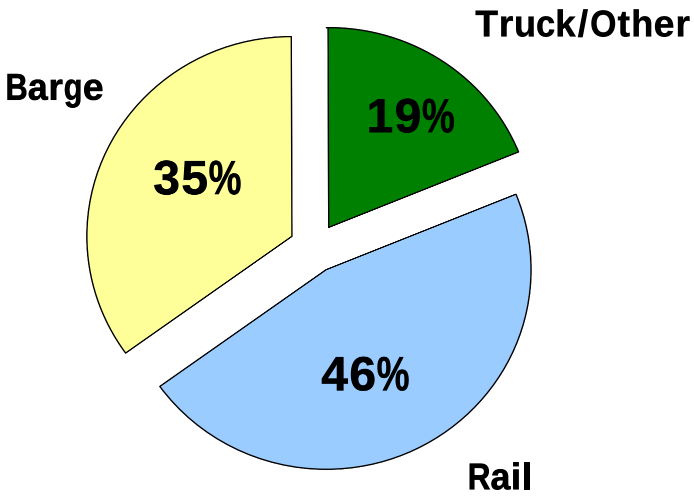


WESTERN SYSTEM



Coal Delivery Mix

DELIVERY MODE DIVERSITY
25 GW coal capacity



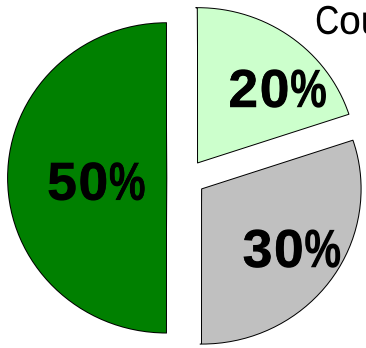
AEP's substantial coal transportation assets include:

- 7,065 railcars
- 2,230 barges
- 53 towboats
- 1 active coal handling terminal (20 million tons of annual capacity)

AEP'S TRANSPORTATION ASSETS PROVIDE FLEXIBILITY IN A CONSTRAINED DELIVERY ENVIRONMENT

Fuel Recovery

AEP SYSTEM

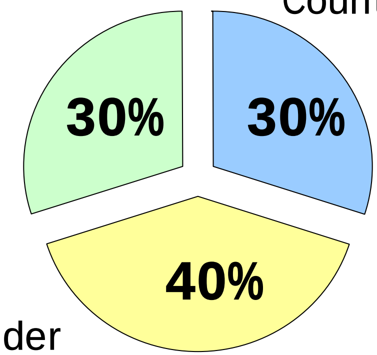


Fuel Cost Recovery
(on average)

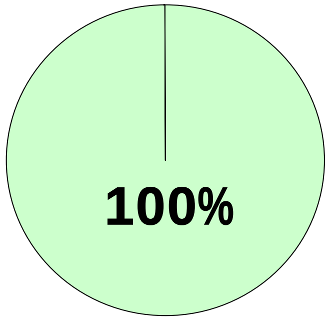
- ➢Fuel recovery varies by jurisdiction
- ➢70% of fuel cost is recoverable across the AEP System
- ➢Active Fuel Clause Jurisdictions:

AEP EAST: AP-VA, I&M, KGP, KP
AEP WEST: PSO, SWEPCO

EASTERN SYSTEM

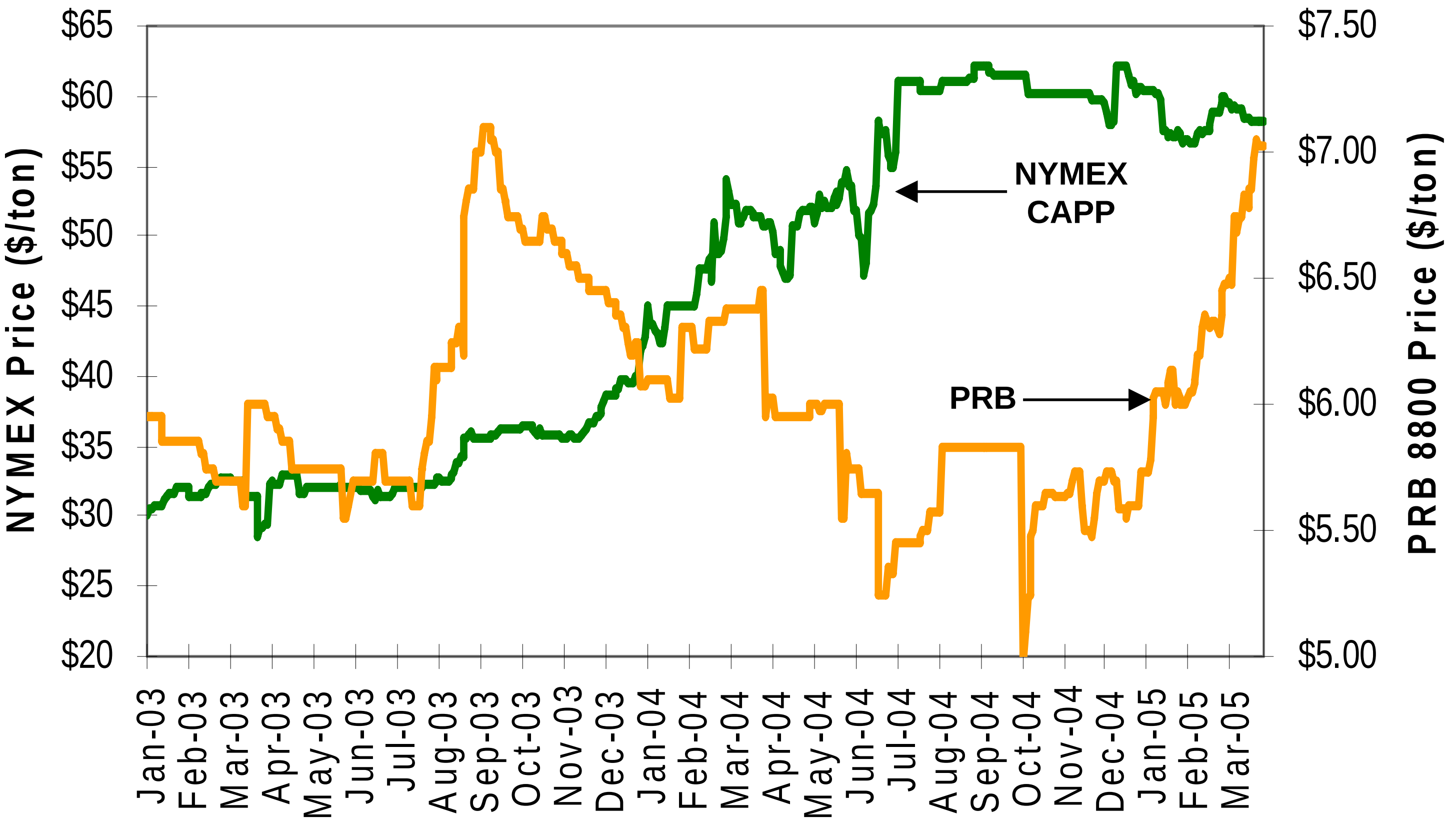


WESTERN SYSTEM



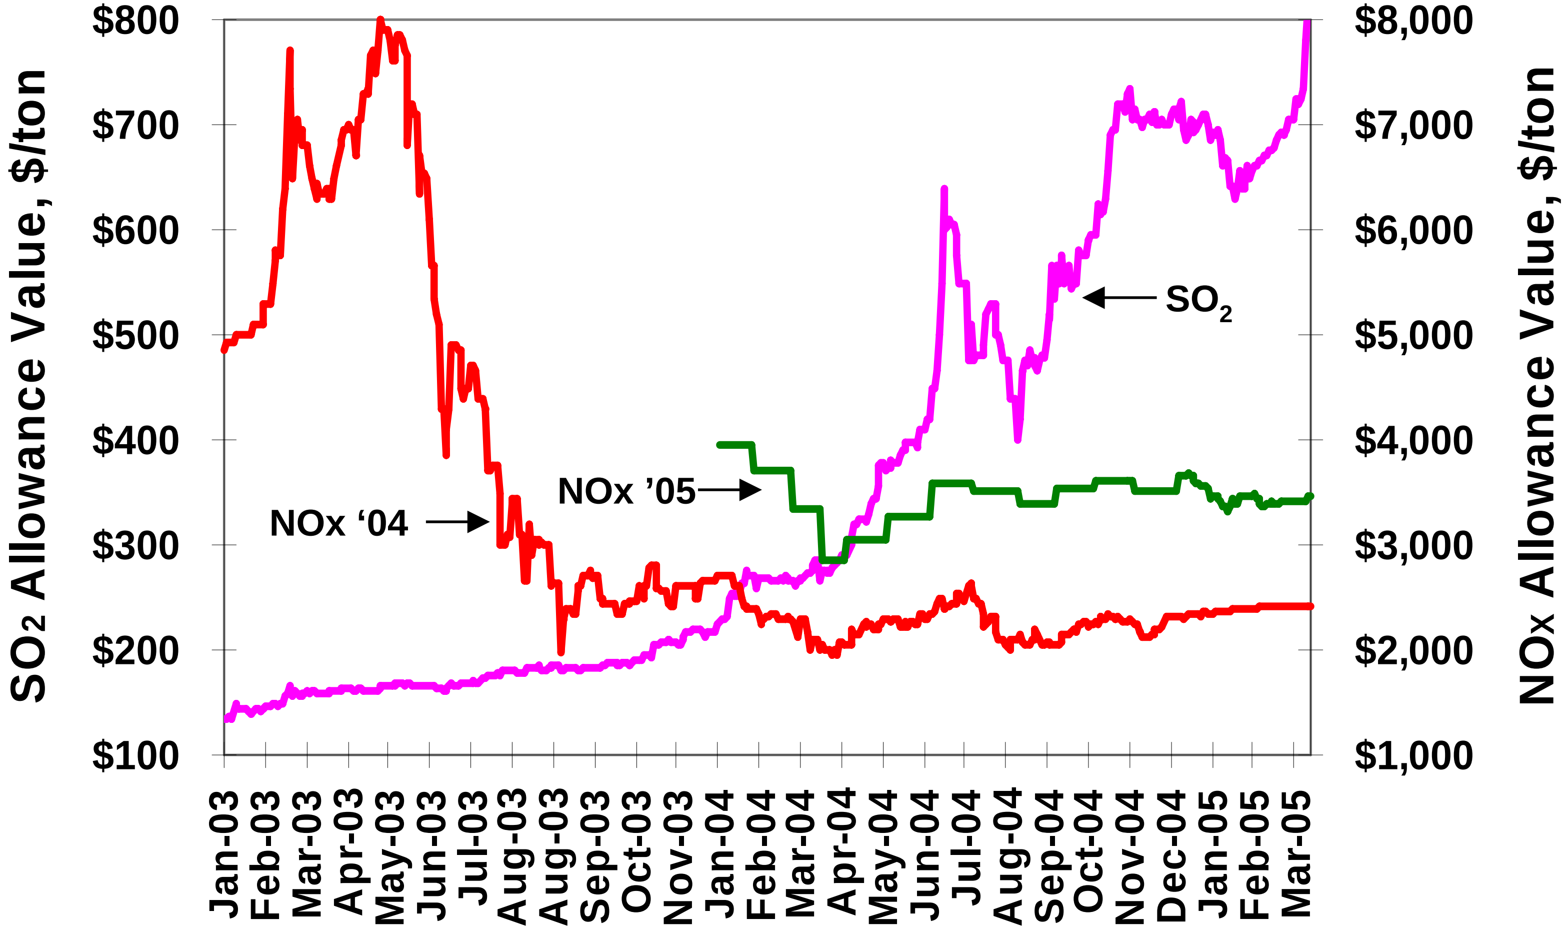
Coal Markets

The tale of two markets – one with labor, permitting and capacity constraints (CAPP) and the other with transportation bottlenecks and limited "immediate" substitution capability (PRB) but gaining strength



Emission Allowance Prices

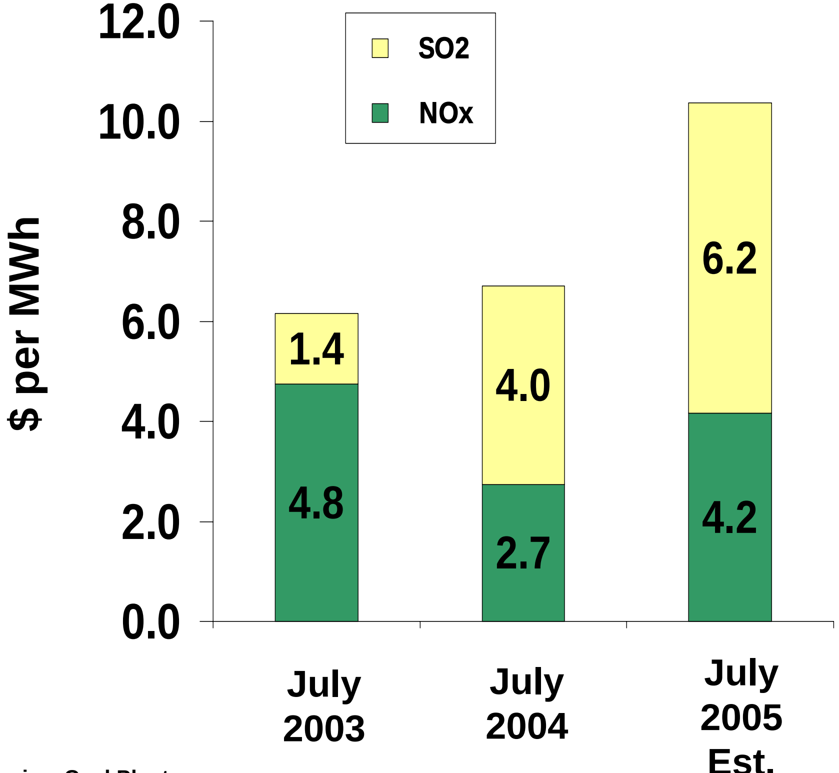
Allowance prices for SO_2 and NOx have been extremely volatile since the beginning of 2003



KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 6740 of 9556

Market Value vs. Inventory Cost

Profile of Uncontrolled Power Plant exposed to Market Value of Emission Credits



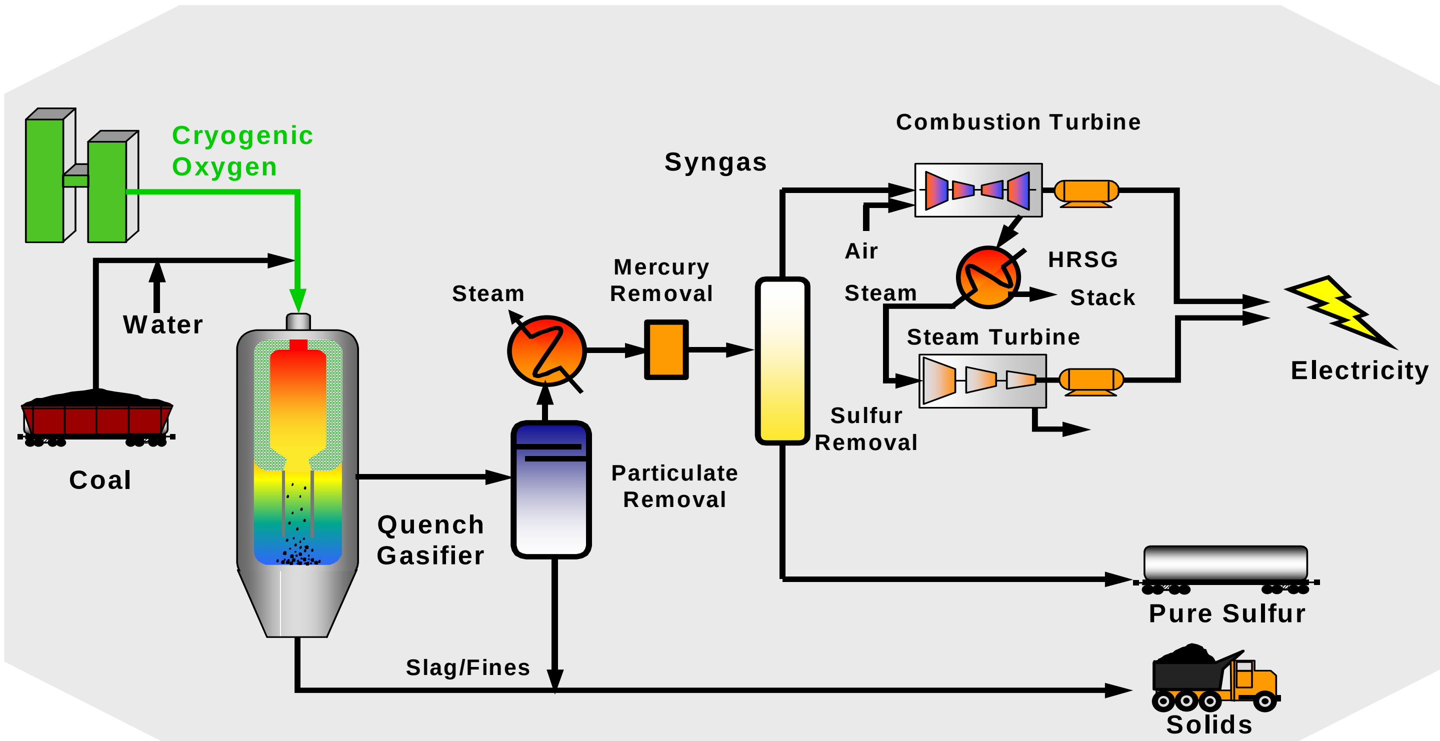
Basis – Coal Plant
9.5 MMBtu/MWh Heat Rate
0.25 lbs NOx/mmBtu
1.67 lbs SO_2/mmBtu

AEP has managed its exposure to rising emission allowance costs

- Inventory cost of emission credits is low
- Effective hedging program for SO_2 allowances
- Effective capital implementation in the NOx SIP Call ($1.3 B)
- Exposure in future years reduced by $3.7 B capital program and current inventory of allowances

Investing in IGCC

Looking to the Future - IGCC



162110 - GJS/CE-01/1-23-02

AEP has announced its intention to construct a commercial-scale Integrated Gasification Combined Cycle (IGCC) Plant by the end of the decade.

Investing in IGCC

	PC	IGCC	NGCC
Nominal Capacity (MW)	600	600	530
Heat Rate (BTU/kWh)	8700	8600	7200
EPC cost* ($/kW)	1290	1350	440
Total Plant cost** ($/kW)	1490	1610	475
Variable Production cost*** ($/MWh)	15	14	38
All-In Cost of Electricity (without CO2 Capture) ($/MWh)	47	50	57
Estimated Cost of Electricity (with CO2 Capture) ($/MWh)	76	70	91

Source: Electric Power Research Institute

* EPC includes the cost to engineer, procure and construct plant.

** Total plant cost include land, overheads, AFUDC, etc.

*** Assumes Northern App Coal @ $36/ton, no emission credits and $5.00 gas

Site Selection Considerations

- Brownfield site vs. Greenfield site
- Sufficient Space
  - Flat area with adequate construction access
  - 600 acres
- Fuel delivery options
  - Rail/barge/truck
  - Up to 4 million tons/year of coal
  - Access to water
- Transmission Line Costs
  - Distance from high-voltage lines
  - Costs for grid interconnects and stability impacts

PJM EVALUATION REQUESTED FOR 3 POTENTIAL SITES

IGCC Permitting Issues

- Air – to evaluate best available control technology (BACT)
- Wastewater – to understand wastewater streams
- US COE (Corp of Engineers) – to obtain permits for construction of river facilities
- NEPA Process – (National Environmental Policy Act)– Environmental site studies addressing wetlands, endangered species, historical artifacts

PERMIT PROCESS WILL TAKE 1 – 2 YEARS

Next Steps

<u>2005</u>

- Secure cost recovery plan – Summer
- Finalize site selection - Fall
- Negotiate with suppliers – Throughout 2005

- 2005—2007: Obtain permits and finalize engineering and procurement

- 2008—2009: Construct and start-up plant

AEP WILL PIONEER CONSTRUCTION OF LARGEST IGCC PLANT IN THE WORLD

Environmental

Clean Air Interstate Rule

- Rule Finalized March 2005
- CAIR designed to address the contribution of regional emissions to downwind $PM_{2.5}$ & 8-hour Ozone non-attainment
- CAIR reductions from 2003 emissions: ~73% SO_2; & ~61% NO_x
- Reductions occur in phases: Phase I (2009); Phase II (2015)
- CAIR established three Cap & Trade Programs:

1. Annual SO_2 Trading Program
2. Annual NO_x Trading Program
3. Separate Ozone-Season only NO_x Trading Program

CAIR Applicability to AEP

- AEP-East States & Louisiana subject to <u>all</u> three trading programs
- Arkansas subject <u>only</u> to the Ozone-Season trading program
- Texas subject to <u>only</u> the Annual NO_x & SO_2 trading programs
- CAIR does <u>not</u> apply to Oklahoma

AEP WILL HAVE TO INSTALL ADDITIONAL SCR AND FGD SYSTEMS IN ORDER TO MEET THE EMISSION REDUCTIONS REQUIRED BY CAIR

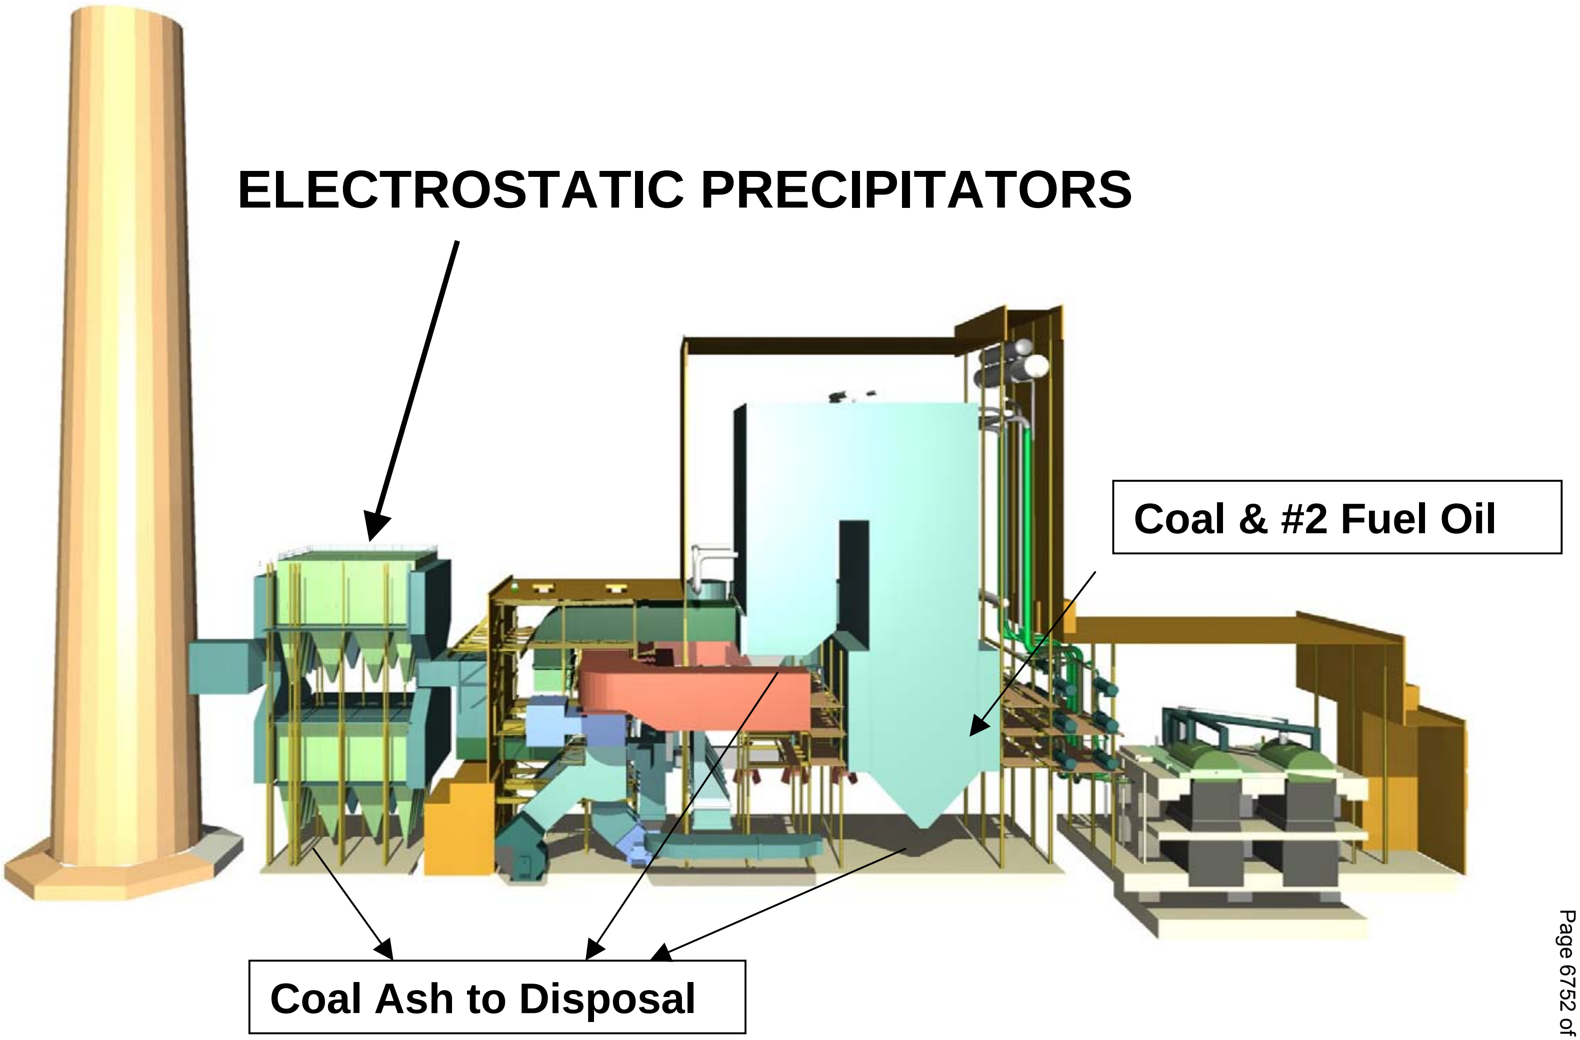
KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 6750 of 9556

Mercury Rule

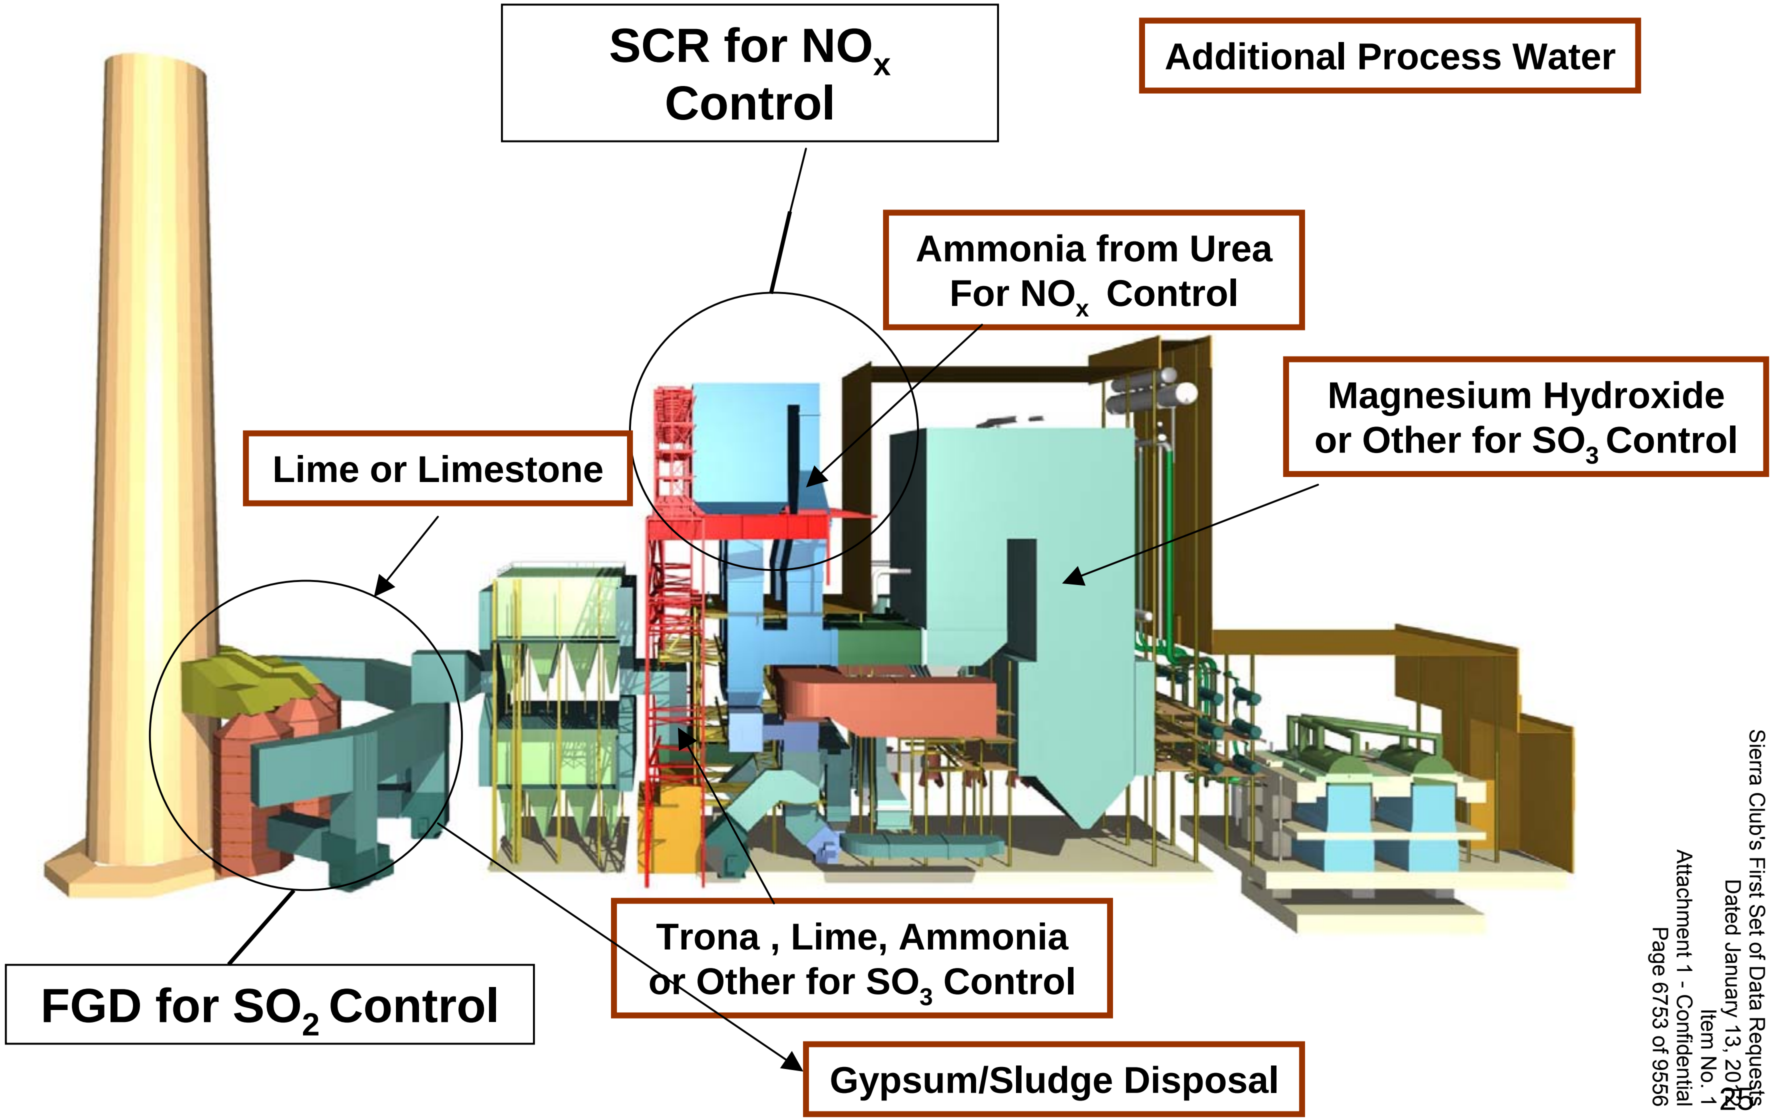
- Rule Finalized March 2005
- Designed to reduce mercury emissions by ~70% nationwide from electric utilities
- Reductions occur in phases: Phase I (2010); Phase II (2018)
- Establishes a Cap & Trade structure to achieve mercury reductions

AEP WILL ACHIEVE SOME MERCURY REDUCTIONS AS A CO-BENEFIT OF SCR AND FGD SYSTEMS, BUT MERCURY SPECIFIC CONTROL EQUIPMENT WILL BE NEEDED ON SOME UNITS

Pulverized Coal Unit as Built in 1970s

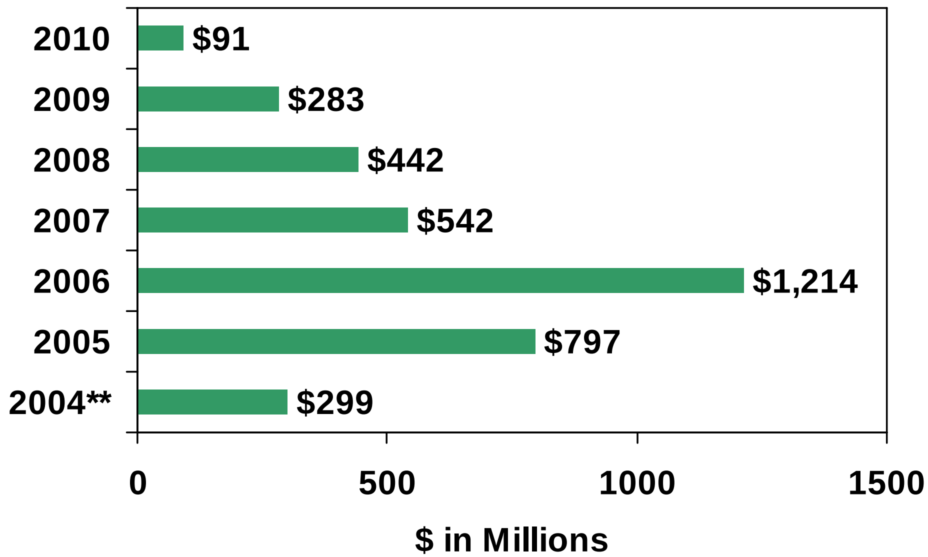


Pulverized Coal Unit Today Showing Retrofits & New Feedstock(s)



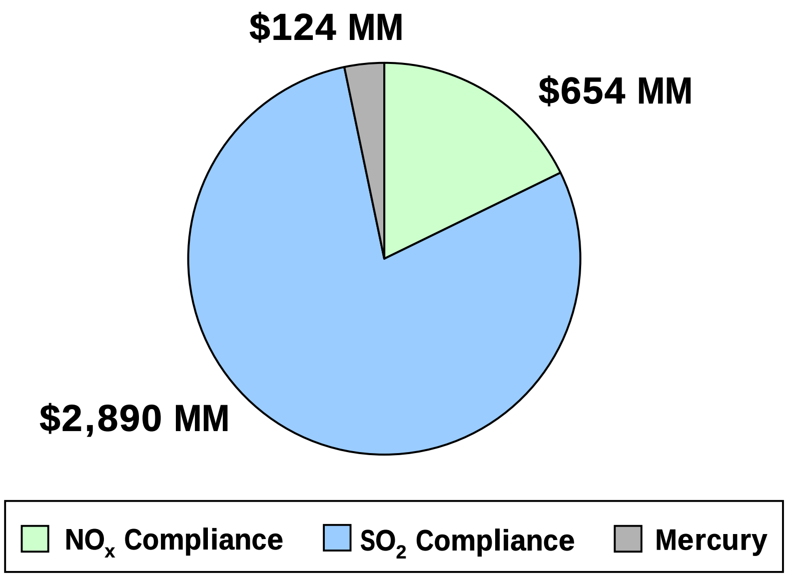
Environmental Investment: $3.7 Billion Through 2010

Environmental Capital Investment*



*Environmental investment for NOx, SO_2 , & Hg purposes
** Actual investment level in 2004

Compliance Allocation



Current Programs
$1.9 Billion:
$0.6 billion for NOx
$1.2 billion for SO_2

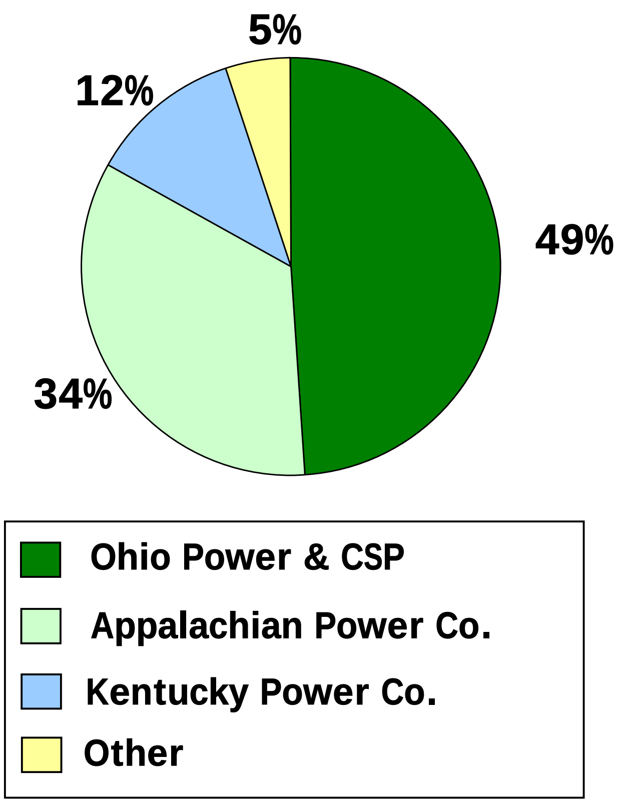
Future Programs
$1.8 Billion:
$1.7 billion for SO_2
$0.1 billion for Other

MAJORITY OF 2005 & 2006 DOLLARS WILL BE INVESTED IN OHIO & APCO

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 6754 of 9556

Environmental Spending by Company

Projected Environmental Investment Allocation



Funding the Environmental Investments

- **Ohio**: 49% ($1.8 billion)
  - Rate stabilization plan annual increases at CSP – 3% and OP – 7% beginning in 2006 through 2008
- **Virginia/West Virginia**: 34% ($1.2 billion)
  - VA: Environmental cost recovery mechanism/two rate case opportunities through 2010
  - WV: General rate case filing
- **Kentucky**: 12% ($433 million)
  - Surcharge mechanism

Environmental Investment

FGD	SCR

Regulatory Overview

Managing the Regulatory Process

- **Current Regulatory Activity**
  - TCC Wires Rate Case
  - TCC Stranded Cost Recovery
  - Louisiana Rate Review
  - FERC Transmission Rate Case
- **Planned Regulatory Activity (2005-2007)**
  - General Rate Cases in all AEP East jurisdictions to seek recovery of investment:
    - IN, KY, MI, TN, VA, WV

BRING CASH IN THE DOOR TO COVER CAPITAL EXPENDITURES & GROW EARNINGS THROUGH ADDITIONS TO THE ASSET BASE

Components of TCC's Net True-up Regulatory Asset

	31-Mar-05	31-Dec-04
	(in millions)	
Stranded Generation Plant Costs	$ 898	$ 897
Net Generation-related Regulatory Asset	249	249
Unrefunded Excess Earnings	(6)	(10)
Net Stranded Generation Costs	1141	1136
Carrying Costs on Stranded Generation Plant Costs	205	225
Net Stranded Generation Costs Designated for Securitization	1346	1361
Wholesale Capacity Auction True-up	483	483
Carrying Costs on Wholesale Capacity Auction True-up	91	77
Retail Clawback	(61)	(61)
Deferred Over-recovered Fuel Balance	(215)	(212)
Net Other Recoverable True-up Amounts	298	287
Total Recorded Net True-up Regulatory Asset	$ 1,644	$ 1,648

Carrying charge calculated using pre-tax cost of capital of 11.79%

Debt Component: 8.12% - $296 million recognized as income thru 3/31/05

Equity Component: $154 million to be recognized in income as collected

CARRYING CHARGES FOR 2005 EXPECTED TO BE $87 MILLION

Regulatory Matrix – East

Ohio (Restructured)
• Unbundled rates for default customers frozen until 12/31/2005
• Pursuant to RSP Plan approved by PUCO 1-26-05:
  • Distribution rates in effect at December 31, 2005 are frozen, with certain exceptions, until the end of 2008.
  • Institute for 2006-2008 a non-bypassable distribution rider for provider of last resort (POLR) costs.
  • CSP ”G” rates to increase 3% per year (2006-2008).
  • OP “G” rates to increase 7% per year (2006-2008).
  • Transmission rates can upon filing reflect change in RTO costs.
• No active fuel clause
• Application for IGCC plant recovery filed on 3-18-05, Hearings scheduled to begin 8-8-05.
	West Virginia (Regulated)
	• Base rates not frozen
	• Annual ENEC proceedings have been suspended, the factor is currently fixed at pre-2000 levels.
	• No active fuel clause

Virginia (Restructured) • Capped rates for default customers frozen through end of 2010 • Capped rates can be adjusted by two rate cases prior to the end of 2010 and incremental environmental and reliability cost recovery mechanisms • Active annual fuel clause	**Indiana (Regulated)** • Subject to IURC order approving a settlement agreement, base rates are frozen and fuel cost recovery factors are capped at increasing rates through June 30, 2007.
Kentucky (Regulated) • Base rates not frozen • Fuel clause, adjusted monthly • Environmental surcharge costs are adjusted monthly for approved environmental compliance plan • Rockport Unit Power Supply Agreement extension through 12-07-2022 was approved by FERC & KPSC in December 2004	**Michigan (Restructured, but Regulated)** • Base rates not frozen. • Active annual fuel clause.
Tennessee (Regulated) • Base rates not frozen • Automatic fuel clause, adjusted monthly	

Regulatory Matrix - West

Texas (Regulated) • SWEPCO-Texas retail competition delayed until at least 2007 • Bi-annual fuel clause adjustment opportunity **Texas (Restructured)** • TCC stranded cost true-up filing in May 2005. ($2.4 billion true-up amount requested) • TCC wires rate case order expected in June 2005. • TCC final fuel reconciliation (July 98-Dec. 01) decision issued in April 2005. TCC will appeal decision. • TNC true-up order approved in April 2005 (retail clawback and fuel over-recovery only). No adjustments to revised amounts filed by TNC. • TNC final fuel reconciliation (July 00-Dec. 01). Final order received October 18, 2004. Appeals filed in state and federal courts in Dec. 2004.	**Oklahoma (Regulated)** • General rate case filed Oct. 31, 2003 • On 5-2-05 the OCC issued an order approving a settlement agreement which included a $6.9 million annual revenue reduction, offset by changed depreciation rates and deferral recoveries, changed the fuel clause from a quarterly to annual factor, and made permanent an $11.8 million annual system reliability rider. • 2001 Fuel review case •Hearings expected in August 2005. Scope expanded to cover 2002-2004 margin allocation issue. • 2003 Fuel review case • Likely to include motions to expand scope to include prudence review
Louisiana (Regulated) • Base rates capped through June 15, 2005 • Currently under a merger required financial review • Fuel clause, adjusted monthly	**Arkansas (Regulated)** • Base rates not frozen • Fuel clause, adjusted annually

Ohio Rate Stabilization Plan Recap

Summary of Impact (Columbus Southern Power & Ohio Power):

	Revenues				Incremental Cash			
Rate Stabilization Plan	**2005**	**2006**	**2007**	**2008**	**2005**	**2006**	**2007**	**2008**
Escalation of Generation Rate	0	83	173	271	0	83	173	271
POLR Rider/Recovery of RTO Costs**	21	0	0	0	0	7	7	7
POLR Rider/Return on Environmental Additions	44	26	26	26	0	41	41	40
Total RSP Impact	**65**	**109**	**199**	**297**	**0**	**131**	**221**	**318**
Pre-Existing Electric Transition Plan								
Elimination of 5% Residential Generation Credit*	0	25	25	26	0	25	25	26
Recovery of RTO costs**	0	29	29	29	0	29	29	29
Total ETP Impact	**0**	**54**	**54**	**55**	**0**	**54**	**54**	**55**

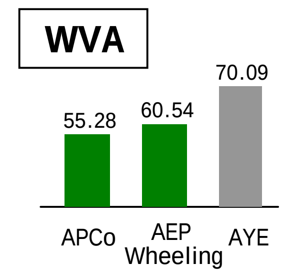
* Elimination of 5% credit is per Statute, and part of pre-existing ETP, not the RSP

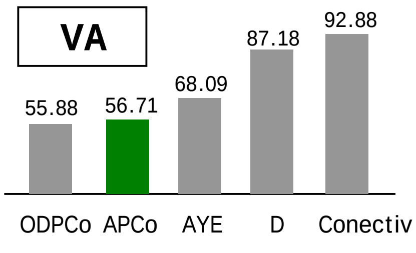
** Recovery of administrative RTO costs, net congestion fees and ancillary services permitted in pre-existing ETP, but the RSP allows for recovery of 2005 costs as well

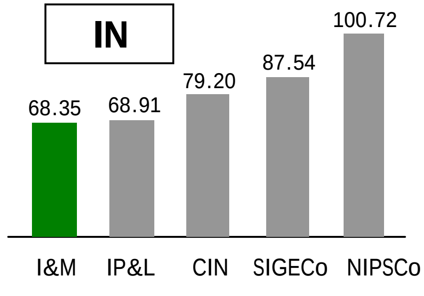
AEP WILL STILL HAVE AMONG THE LOWEST RETAIL RATES IN OHIO

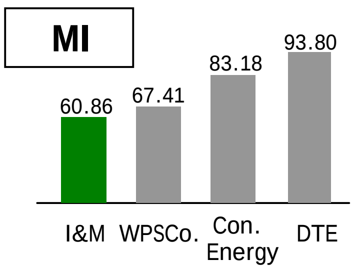
AEP: The Low Cost Provider

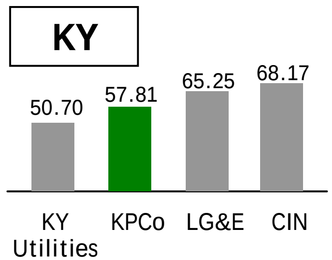
Regulated Rates

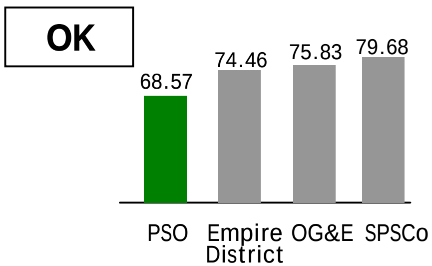


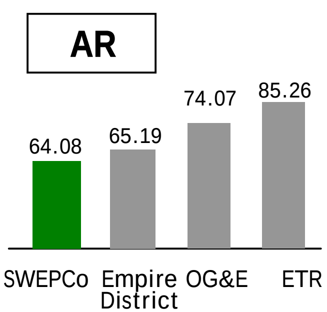


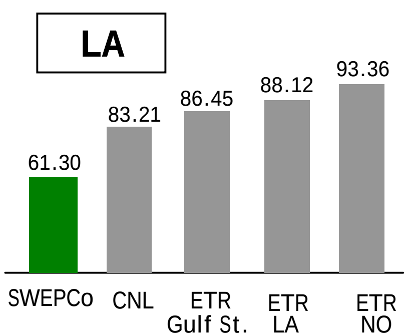


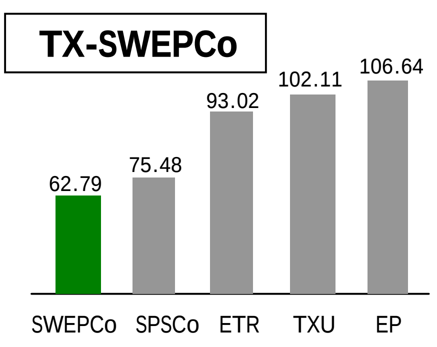




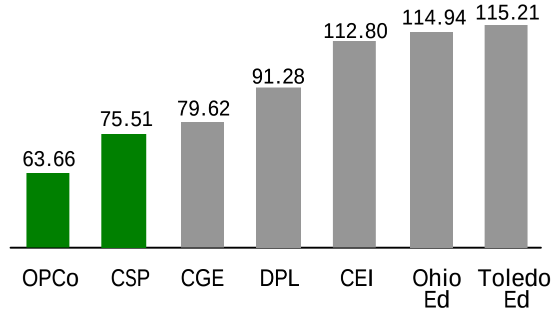








Unregulated Rates



OH (POLR bundled residential rates)

Wholesale

Fossil fleet variable cost of production:

- Today: $16-$18/MWh
- Tomorrow: $18-$21/MWh
  - Post-environmental retrofit installation

Note: Rate amounts reflect bundled residential rates and are expressed in $/MWh. The source for the shown rate amounts (excluding wholesale) is the EEI Typical Bills and Average Rates Report.

Finance

2005 Cash Flow Projection

	2004 Actual	2005 Guidance	
Beginning Cash Balance	**$ 976**	**$ 420**	
Cash from Operations:			
Income from Continuing Operations	1,006	936	*

Short Term Debt Change, Net	(400)	16	
Common Dividends	(555)	(545)	
Total from Financing	**$ (2,777)**	**$ (129)**	
Net Change in Cash	**$ (556)**	**$ 73**	
Ending Cash Balance	**$ 420**	**$ 493**	

*** Assumes the midpoint range based upon $2.30 to $2.50 per share earnings guidance and 389 million shares outstanding**

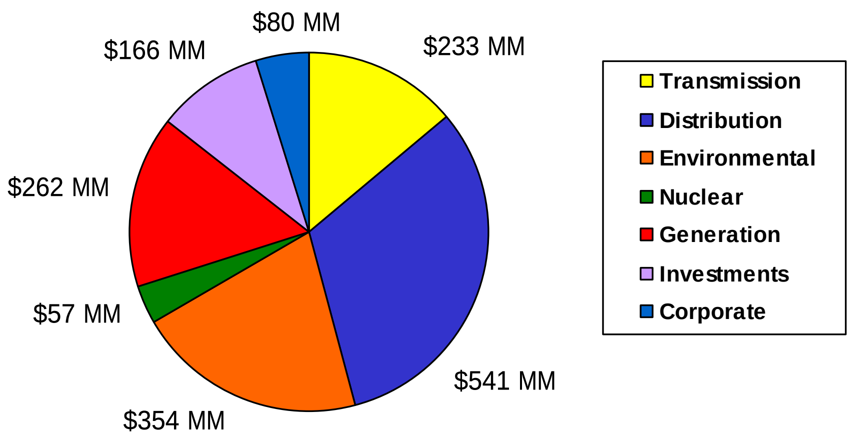
**** Includes HPL, STP, Oklaunion & Pacific Hydro asset sales**

***** Includes $550MM of parent debt reduction**

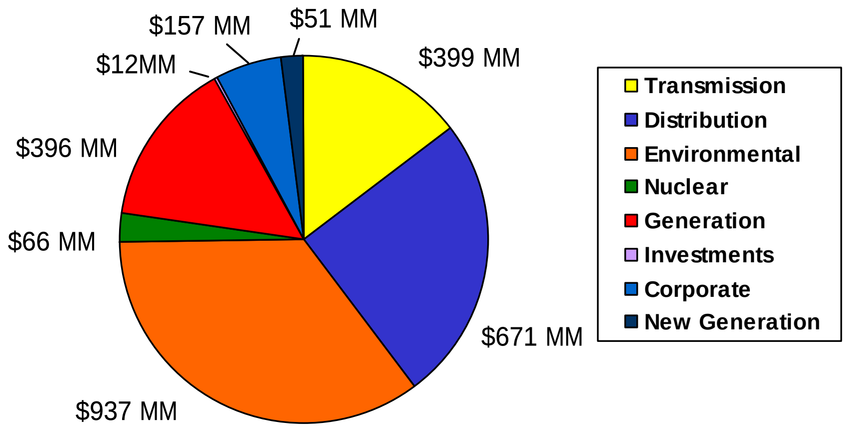
******Equity units terms require issuance of $345MM common shares in August 2005; offset by $500MM share buyback program**

2005 Capex

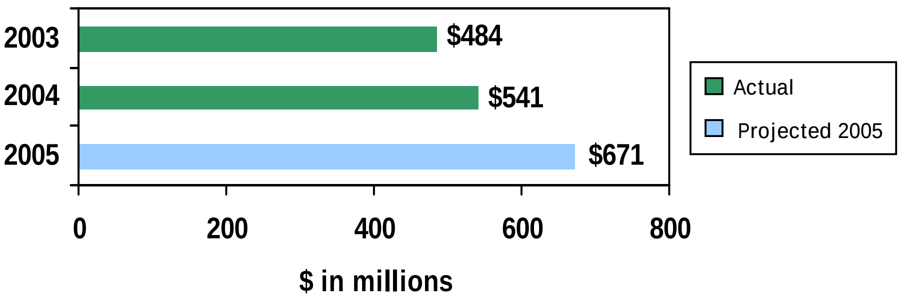
2004 Actual Totaled $1.69 Billion

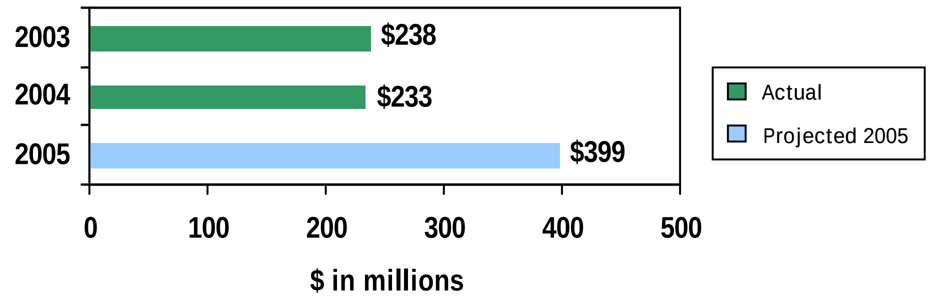


2005 Projected Totals $2.69 Billion



Energy Delivery Investment





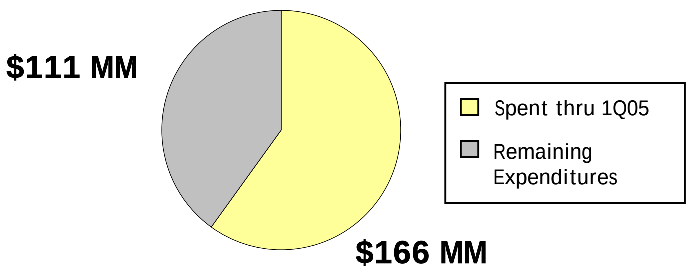
Operating Company	Transmission & Distribution 2003	2004	2005 *
AEP Ohio	$ 181	$ 210	$ 214
Appalachian Power	147	200	283
Indiana Michigan Power	69	68	89
Kentucky Power	27	25	35
AEP Texas	140	131	262
Public Service Co. of Oklahoma	70	70	85
Southwestern Electric Power	88	70	102
	$ 722	$ 774	$ 1,070

Notes:

* Represents projected capital expenditures for 2005

Major Capital Project

Wyoming/Jackson Ferry 765 kV Line



Project should increase average T&D rates from 2.0 cents to 2.04 cents/kWh

INVESTMENT IN ENERGY DELIVERY WILL CONTINUE TO BE SUBSTANTIAL

Covering Capital Expenditures

Year	2005E	2006E	2007E	2008E	2009E	2010E
Environmental Capex	$797MM	$1,214MM	$542MM	$442MM	$283MM	$91MM
Total Capex	$2,690MM	Guidance not yet released				

Typical Investment Capitalization*	Approx. 60% debt / 40% equity
Expected Investment ROE*	11-13%

*Varies by jurisdiction

Sources of Cash

- **Cash Flow from Operations**: Continued earnings growth
- **Rate Relief**: Ohio cash rate relief begins in 2006; Rate proceedings expected in all other jurisdictions by 2007
- **Asset Sales**: HPL, STP, Oklaunion, Pacific Hydro & Bajio
- **Texas Securitization**: $1 billion plus in 2006 (Half goes to TCC debt paydown)
- **Texas Competition Transition Charge**: Approximately $190MM per year before securitization; $45MM per year after securitization
- **Debt Issuances**: Will maintain debt-to-capitalization ratio of approximately 60%

AEP HAS ADEQUATE SOURCES OF CASH FOR CAPEX PROGRAM

Long-term Debt Maturity Profile

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms, and our ability to recover significant restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance or the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of flyash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including our dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events.

AEP AMERICAN® ELECTRIC POWER

Table of Contents

AEP AMERICAN® ELECTRIC POWER

AEP Transmission Company (Transco)

- Transco will be used to develop significant new on-system, AEP-owned investments
  - Greenfield Projects
  - Station Additions
  - System Upgrades
- Seven companies have been established under the AEP Transco holding company
- Next steps:
  - Obtain state utility status where required
    - No filing required in Michigan or Oklahoma
    - Filing made in Ohio
  - FERC tariff for Transco filed December 1, 2009 with rates effective and first projects in-service in 2010; Settlement discussions on-going
  - Seek retail tracking mechanisms at the state level (OH, LA, VA, TX-ERCOT already secured)

AEP AMERICAN® ELECTRIC POWER

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 6778 of 9556

Electric Transmission Texas, LLC

Overview:

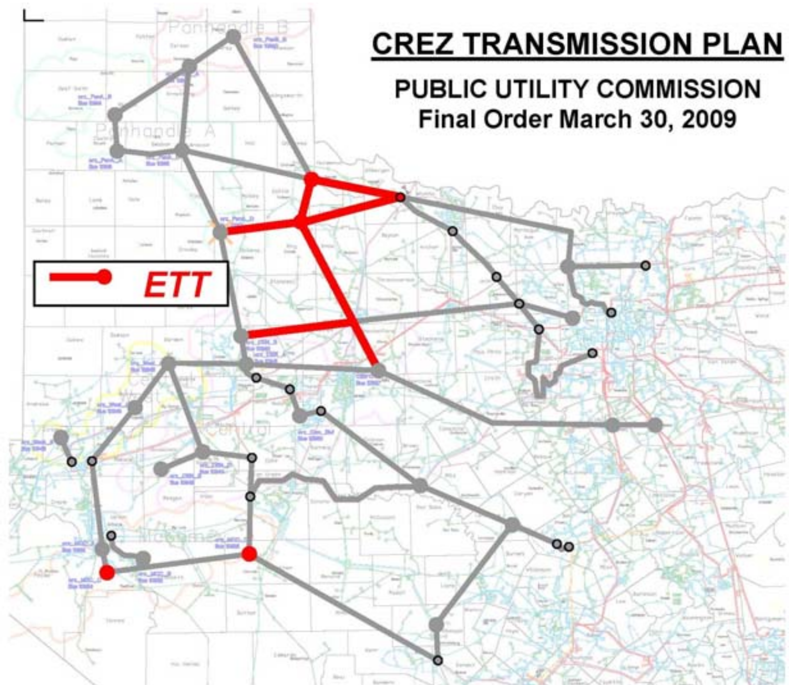
- ETT is a 50/50 JV between AEP and MidAmerican Energy Holding Company that plans to construct and operate transmission projects within ERCOT with an investment opportunity of more than $3 billion.
- Current JV rate base is $127 million with a debt to capital ratio of 60/40 and an authorized ROE of 9.96%.

Opportunities:

- Projects in service 2010-2017: $1.4 billion
- CREZ projects in service 2012-2013: $1.1 billion
- Other projects pending transfer in service 2010-2013: $600 million

Next Steps:

- Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in 2010.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

ETT
Electric Transmission Texas

AEP AMERICAN® ELECTRIC POWER

EHV Transmission in PJM: PATH

Project Description: 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

Overview:

- FERC order issued on February 29, 2008 approving:
  - Cash return on CWIP and 14.3% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents
  - Rates went into effect March 1, 2008
- Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million.
- Estimated completion date: 2014+, pending outcome of the 2010 PJM Regional Transmission Expansion Plan (2010 RTEP).

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

- Obtaining a CPCN in West Virginia, Virginia and Maryland. CPCN applications in West Virginia and Maryland are pending because their procedural schedule allows the consideration of the 2010 RTEP. A new application in Virginia is expected in the third quarter of 2010 after consideration of the 2010 RTEP.

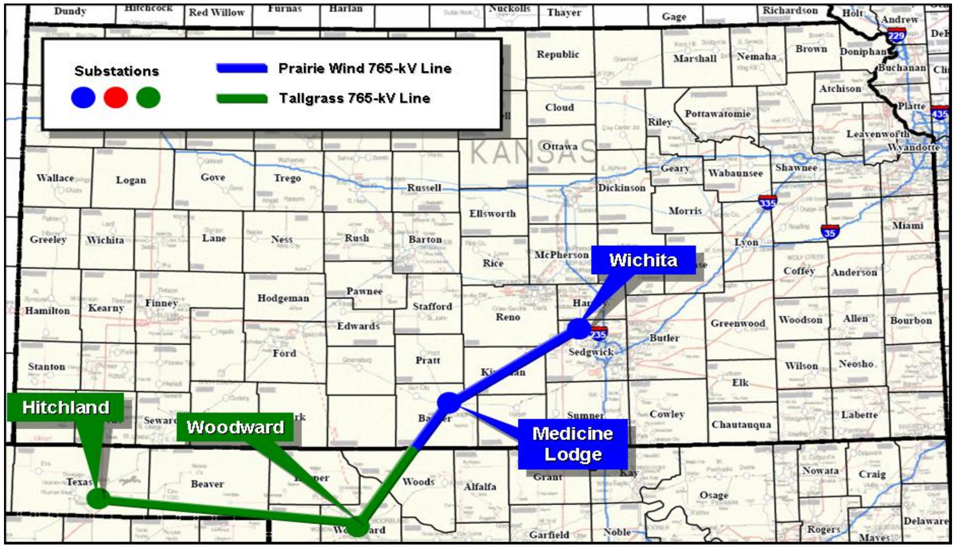
Potomac-Appalachian Transmission Highline

AEP AMERICAN® ELECTRIC POWER

Prairie Wind Transmission, LLC

Overview:

- In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
- PWT is a 50/50 JV that is proposing to build approximately 110 miles of 765-kV lines extending from Wichita, KS.
- The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
- The project is expected to cost approximately $400 million and be in-service by 2013-2014 and was approved by the KCC on July 24, 2009.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

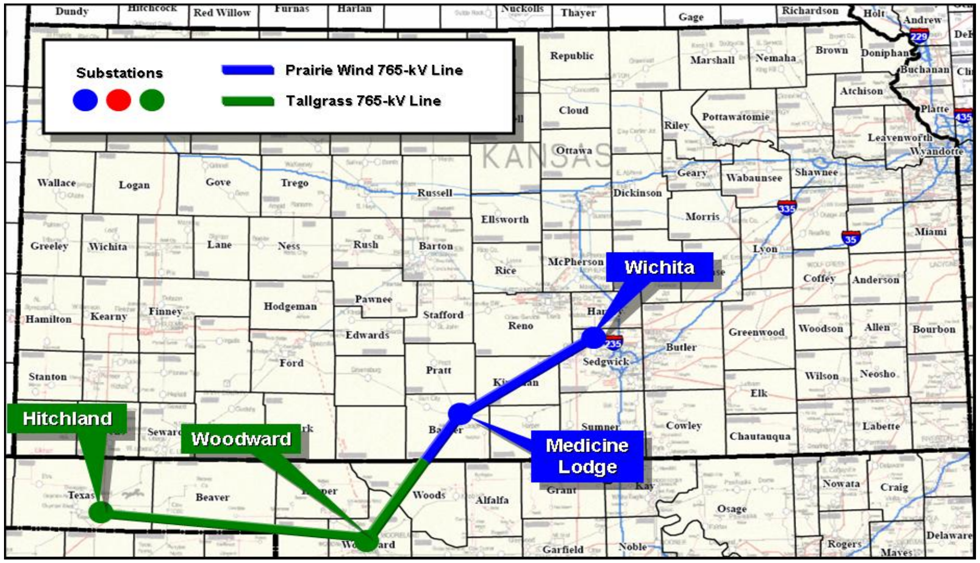
- RTO Approval
- Siting

AEP AMERICAN® ELECTRIC POWER

Tallgrass Transmission, LLC

Overview:

- In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
- TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines in Oklahoma.
- The project will promote wind development in the western half of Oklahoma.
- Project is expected to cost approximately $500 million and be in-service by 2013-2014.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

- RTO Approval
- Siting

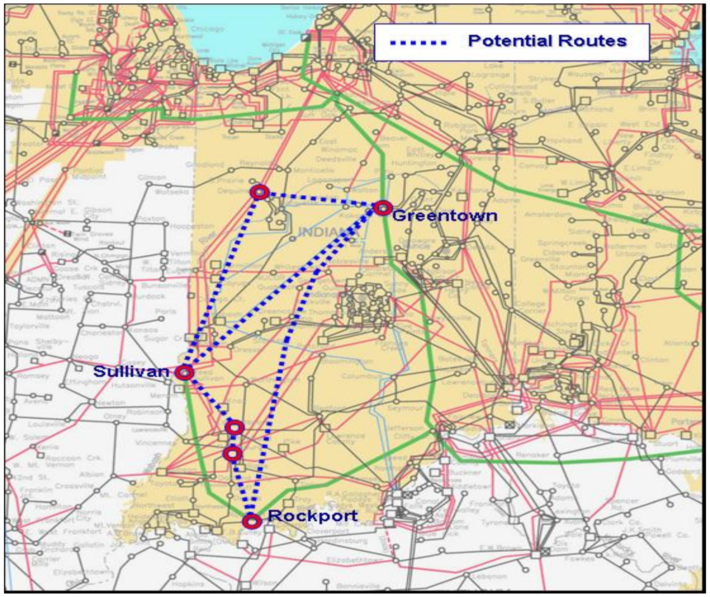
Pioneer Transmission, LLC

Overview:

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
- The project will improve the reliability of the nation's transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, protect national security and expand opportunities for new generation, including renewables.
- The project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP's ownership of the joint venture is 50%.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

- RTO Approval (PJM & MISO)
- Cost allocation which enables the development of "system solutions"
- Siting

AEP AMERICAN® ELECTRIC POWER

Upper Midwest EHV Development—SMART Study

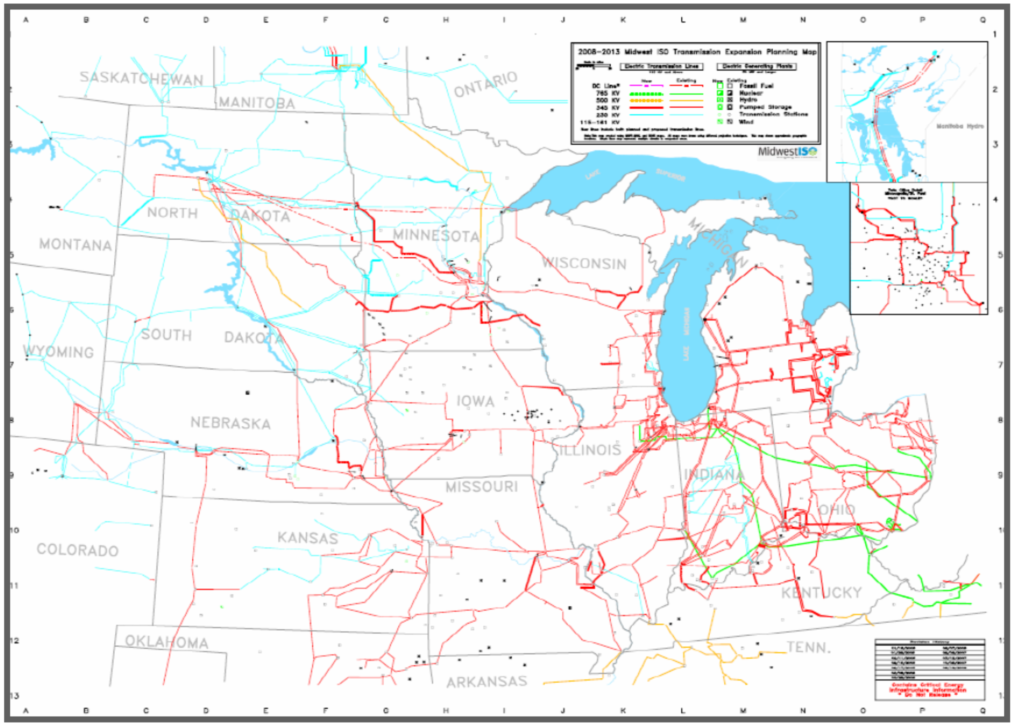
Project Description: a comprehensive study of the transmission needed in the Upper Midwest to support renewable energy development and transporting that energy to consumers throughout the study area. The SMART Study will develop EHV overlay alternative that ensures reliable service for sponsors' communities, is environmentally friendly, and supports national energy policy.

Overview:

- SMARTransmission Study announced August 2009
- Sponsors of the Study include ETA, Exelon, ATC, Northwestern, MidAmerican Energy Company, and Xcel
- Study due to be completed end of 2Q2010 and will include "overlay" options and quantification of economic benefits

Next Steps:

- Investment structure
- Obtaining cost allocation between states, PJM, and MISO
- RTO technical approvals
- Favorable 205 Order including incentives



Primary Focus Areas: North Dakota – South Dakota – Iowa – Nebraska – Indiana – Ohio – Illinois – Minnesota – Wisconsin – Michigan

Summary Rate Case Information

APCo Virginia General Rate Case – Docket #PUE-2009-00030

On August 14, 2009, APCo filed an update to its pre-biennial base rate case, originally filed July 15, 2009 with the Virginia SCC, per the statute, for recovery of generation and distribution costs requesting an increase of $154 million. A hearing commenced March 30, 2010.

Proposed Capital Structure – Company Position (12/31/08)

	% of Capitalization	Cost Rate	Weighted Return
Short-Term Debt	3.135%	3.906%	0.12%

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance, resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and the expected legal separation and transition to market for generation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives, evolving public perception of the risks associated with fuels used before, during and after the generation of electricity, including nuclear fuel and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events.

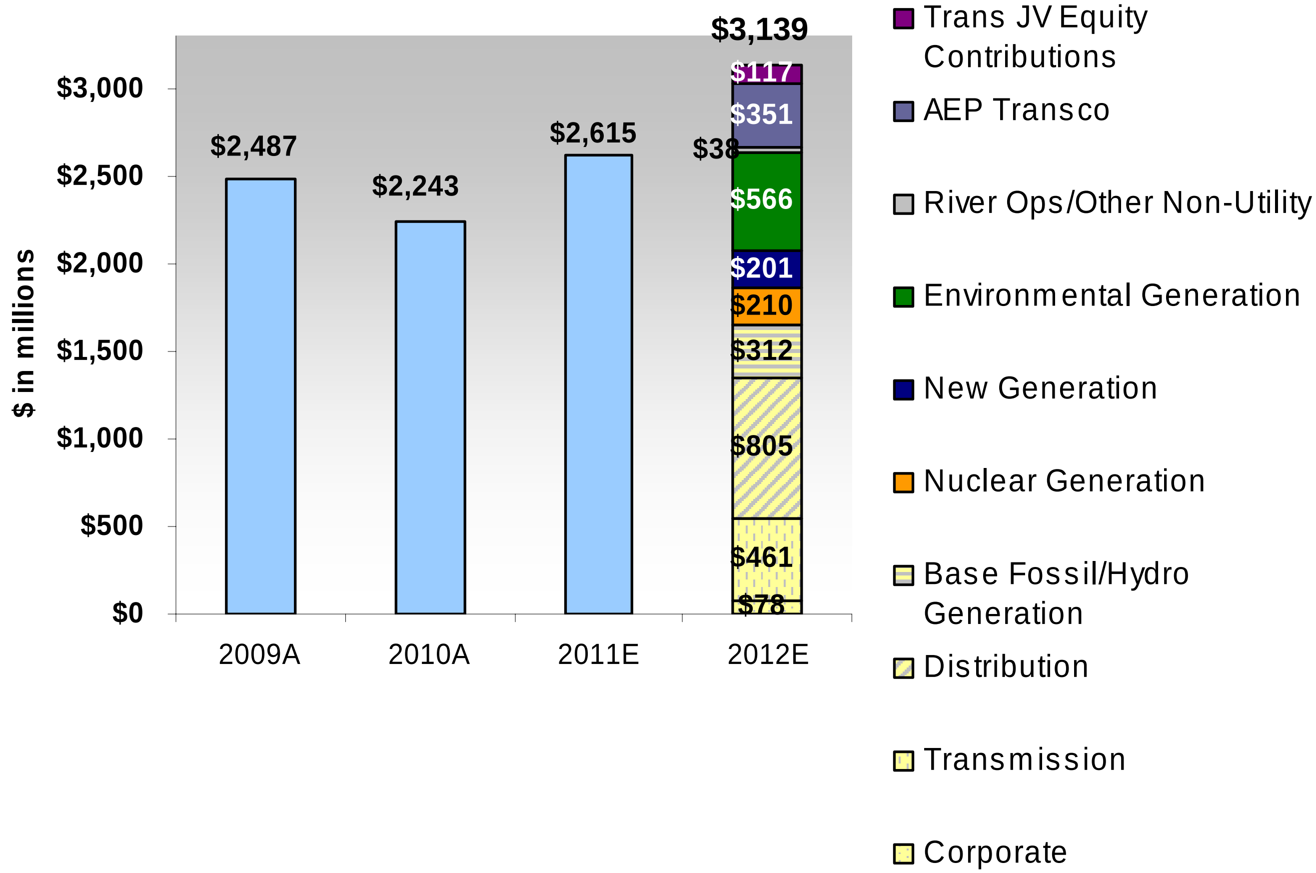
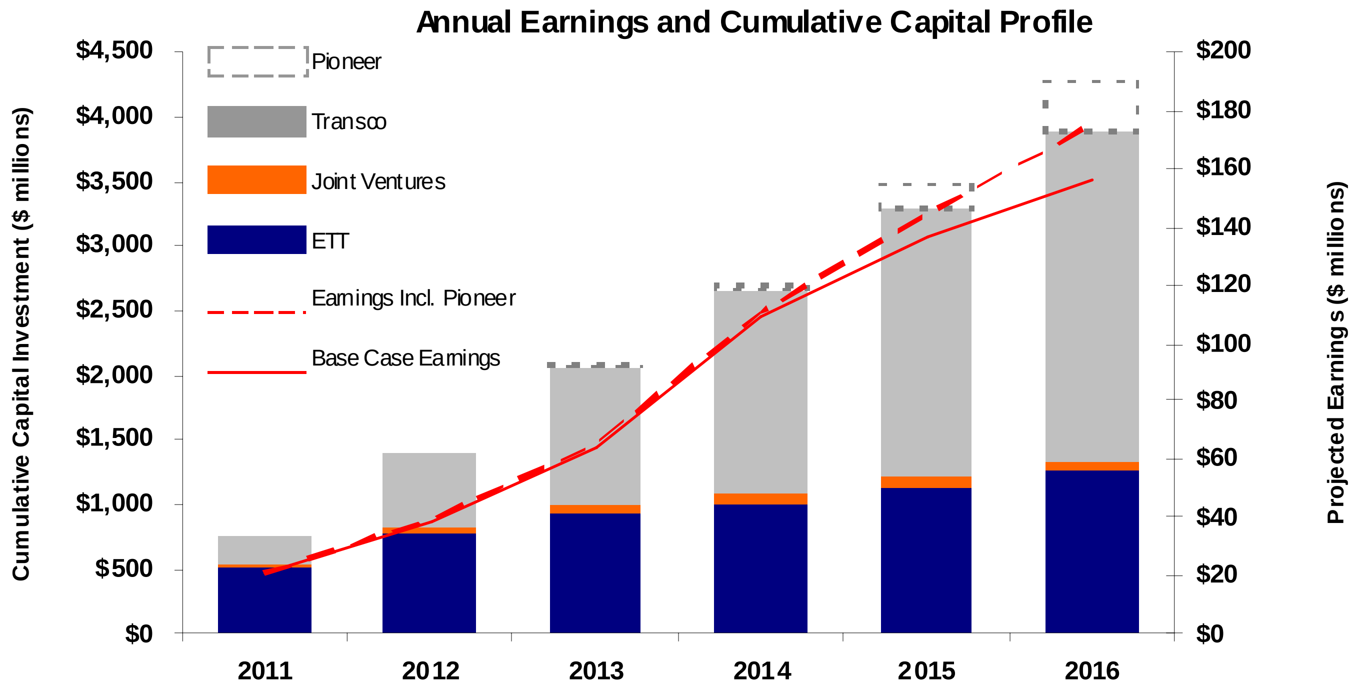
Capital Allocation

2012 AEP System Capital $3.1B



Major projects include: Turk Plant, Reliability upgrades, ETT contributions and Transco growth

Transmission Earnings & Capital Profile



[1] High Case includes AEP's share of Pioneer (50% ownership)

[2] Transco base case includes approximately $21MM in 2012 capital spend that is dependent upon state approval of Arkansas and Kentucky

[3] Joint Ventures include: PATH (50% ownership) assuming an ongoing suspension and Prairie Wind (25% ownership) assuming construction at 345kV

[4] ETT (50% ownership) includes CREZ and additional projects

[5] Projection of earnings potential at the transmission holding company level assuming 50/50 debt/equity capitalization and ROE of 11-13% for FERC projects; 60/40 debt/equity capitalization and 9.96% ROE (through 2013) and 55/45 debt/equity capitalization and 10% ROE (2014 forward) for ERCOT projects; and 50/50 debt/equity capitalization and ROE of 11.2-11.49% for Transco projects

Transmission Investment Opportunities

Electric Transmission Texas

- **Ownership Structure:** 50/50 (AEP/MidAmerican Energy Holding Company)
- **Total Project Cost**: Over $3 Billion
- **Growing Rate Base:** Current rate base is $482 million; expected to grow as follows:
  - 2011: $495 million
  - 2012: $750 million
  - 2013: $1,200 million
- **Interim TCOS filings twice per calendar year**
- **Approved ROE:** 9.96%

AEP Transcos

- Seven wholly-owned Transcos
- Expansion and growth within AEP's existing utility footprint
- Efficient recovery mechanism via FERC formula rates
- Forecasted capital investment of $210 million in 2011 and more than $350 million in 2012
- Approved ROE: 11.20%-11.49%

ROE Optimization

ROE by Jurisdiction		
Jurisdiction	Authorized ROE	Sep 2011 Proforma ROE*
AEP Ohio	NA	13.51%

Kentucky	10.50%	11.08%
Overall AEP Return	**NA**	**10.90%**

* Twelve Month Rolling Proforma Recurring ROE

- Strong overall system ROE with current rate cases on file for under earning utilities
- Continue to strengthen local relationships
- Concurrent recovery mechanisms
- Operating Company model refinement
  - Investment Review Committee
  - Advanced planning discussions with stakeholders

Ohio ESP Settlement

Gradual Transition to Market and Regulatory Stability in Ohio

- **Parties to the Settlement** - Signed by more than 20 organizations representing customers, competitive retail electricity suppliers, environmental groups, communities and other key stakeholders
- **Cases included in Settlement** - 2012 Electric Security Plan, Capacity Charges, Merger
- **Generation** - Corporate separation of Ohio generation assets targeted by May 2013 and transition all of Ohio generation supply to market by mid-2015; the company may pursue recovery of Pool modification costs once they exceed $50 million
- **Transition to market** - company will make a specific percentage of the Ohio retail load open to competitive retail suppliers at the RPM price for a three-year period. The remaining capacity that switches will be priced at $255/MW-day
  - Year one (2012), approximately 20 percent will be available
  - Year two (2013), approximately 30 percent will be available
  - Year three (2014 through May 2015), approximately 40 percent will be made available.
  - Standard service offer price beginning in June 2015 will be determined through auctions involving multiple suppliers of generation service. Auctions will begin as early as September 2013.
- **Fuel Adjustment Clause** - continues through May 31, 2015; parties to support legislation for securitization of fuel deferrals
- **Nonbypassable Generation Resource Rider** – allows the distribution company to recover costs related to building new generating assets dedicated solely to Ohio customers. Project-related costs will be presented in future PUCO cases.
- **Distribution Investment Rider** – Costs associated with new distribution investment to maintain and improve reliability will be recovered under this rider with an ROE of 10.5% based on a capital structure of 47% debt/53% equity. In its first year (2012), the rider will be capped at $86 million. An additional $18 million will be added in 2013 and an additional $20 million in 2014.
- **SEET ROE threshold of 13.5%**.

Summary Rate Case Information

AEP Ohio Distribution Rate Case – Docket #11-351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%.

Summary Rate Case Information

I&M Michigan Base Rate Case – Docket # U-16801

On July 1, 2011 I&M filed a base rate case with the Michigan Public Service Commission requesting an increase of $24.5 million. Rates proposed in this filing are based on projected 2012 cost of service and will not go into effect until 2012, therefore rates will reflect a current cost of service. This filing includes revised depreciation rates to include additions since the last approved depreciation study as well as accelerated retirement of Tanners Creek Units 1, 2 and 3. The requested ROE is 11.15%. In accordance with Michigan law I&M requested to implement rates, subject to refund, on January 1, 2012. An order is expected by mid-year 2012.

New Generation – Turk Plant

John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant, located in AEP's SWEPCO region. AEP owns 73 percent or roughly 440 megawatts of the total unit.

- The cost of the plant and related transmission is anticipated at $1.8 billion with AEP's share approximately $1.4 billion and will begin commercial operation in the fourth quarter of 2012.

- The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls.

- Third party owners include: Arkansas Electric Cooperative Corp. (12%), East Texas Electric Cooperative (8%), and Oklahoma Municipal Power Authority (7%).

- Various legal challenges are on-going related to the plant (see 10-Q).

(1) The impact of all rules continues to be under review. Project scope and technical assessments are ongoing. Any change in scope will impact the capital cost ranges.

(2) Gas plants are not included in MW. Proposed 316 (b) will impact some gas facilities.

(3) Air Rules include: CSAPR as finalized and HAPs and Regional Haze Federal Implementation Plans in OK & AR, as proposed.

(4) Includes NSR Compliance.

(5) Includes Big Sandy Unit 2, which remains fully exposed but, pending regulatory approval, will be scrubbed rather than replaced with new natural gas generation.

Retrofits/New Generation

- The tables below represent our estimated $6 - $8 billion capital investment from 2012 to 2020 for environmental retrofits on 10,500 MW and new/refueled generation of 2,152 MW. The below costs include management estimates for compliance with CSAPR, HAPs MACT, CCR and 316(b) regulations as currently proposed.

Operating Company	Plant	MW	Type of retrofit	Low Cost Estimate 2012-2020 ($MM)	High Cost Estimate 2012-2020 ($MM)	
AEP Ohio	Conesville 5	400	SCR, DSI			
	Conesville 6	400	SCR, DSI

New Generation Projects

- John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant. Located in AEP's SWEPCo region AEP owns 73 percent or roughly 440 megawatts of the total unit.
  - The cost of the plant is anticipated at $1.6 billion with AEP's share approximately $1.2 billion and will begin commercial operation in 2012.
  - SWEPCo's share of the plant's costs will be allocated on the basis of electric load among customers in Arkansas, Louisiana and Texas.
  - The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls.

John W. Turk Jr. Ultra-Supercritical Coal Plant

J. Lamar Stall Combined-Cycle Gas Plant

- J. Lamar Stall Combined-Cycle gas plant is a 508-MW unit scheduled for commercial operation in 2010.
  - The total projected cost of the plant is $378 million.
  - The plant is located in AEP's SWEPCo region at its existing Arsenal Hill Power Plant in Shreveport, Louisiana.
  - The plant will be used to service the needs of customers in the Arkansas, Louisiana and Texas service territories.

Total Required Rate Relief	$	123.6

Summary Rate Case Information

I&M Michigan General Rate Case – Docket #U-16180

On January 27, 2010, I&M filed a base rate case with the Michigan Public Service Commission requesting an increase of $62.5 million to cover increased costs related to distribution O&M, taxes, interest and employee related expenses. I&M also requested new tracker mechanisms for enhanced distribution reliability spending, energy efficiency, investments in generation and participation in PJM. The requested ROE is 11.75%. A procedural schedule is pending from the MPSC. An order is expected in early 2011.

Forecasted Capital Structure – Company Position (12/31/10)

	% of Capitalization	Cost Rate	Weighted Return
Short-Term Debt	0.88%	1.54%	0.01%
Long-Term Debt	43.95%	6.40%	2.81%

AEP AMERICAN® ELECTRIC POWER

AEP Transmission Company (Transco)

- Transco will be used to develop significant new on-system, AEP-owned investments
  - Greenfield Projects
  - Station Additions
  - System Upgrades
- Seven companies have been established under the AEP Transco holding company: AEP Appalachian Transmission Company Inc., AEP West Virginia Transmission Company Inc., AEP Indiana Michigan Transmission Company Inc., AEP Kentucky Transmission Company Inc., AEP Ohio Transmission Company inc., AEP Oklahoma Transmission Company Inc., and AEP Southwestern Transmission Company Inc.
- Next steps:
  - Obtain state utility status where required
    - No filing required in Michigan or Oklahoma
    - Filings made/to be made in Ohio, Virginia and West Virginia
  - FERC tariff for Transco filed December 1, 2009 with rates effective and first projects in-service in 2010; Settlement discussions on-going
  - Seek retail tracking mechanisms at the state level (OH, LA, VA, TX-ERCOT already secured)

AEP AMERICAN® ELECTRIC POWER

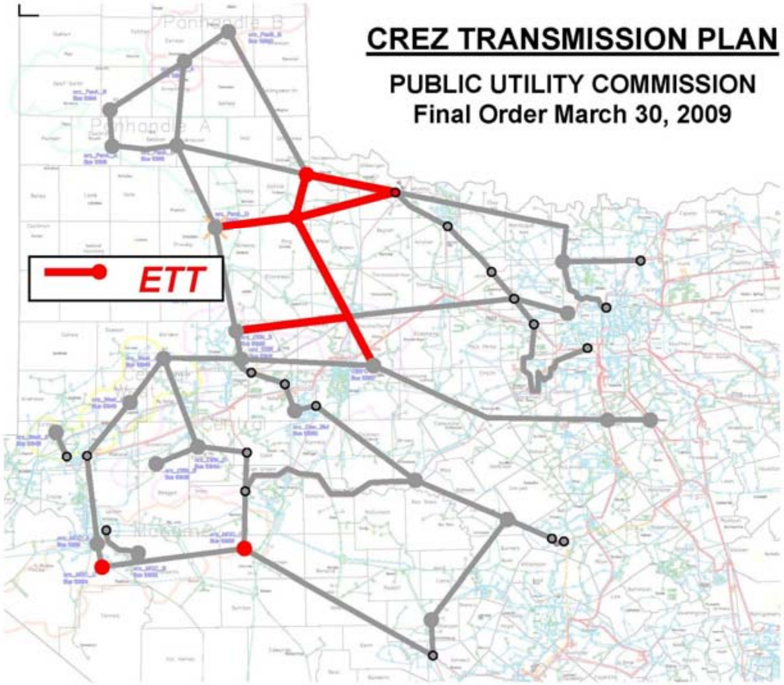
Electric Transmission Texas, LLC

Overview:

- ETT is a 50/50 JV between AEP and MidAmerican Energy Holding Company that plans to construct and operate transmission projects within ERCOT with an investment opportunity of more than $3 billion.
- Current JV rate base is $127 million with a debt to capital ratio of 60/40 and an authorized ROE of 9.96%.

- **Opportunities:**
  - Projects in service 2010-2017: $1.4 billion
  - CREZ projects in service 2012-2013: $1.1 billion
  - Other projects pending transfer in service 2010-2013: $600 million

- **Next Steps:**
  - Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in 2010.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Electric Transmission Texas

AMERICAN ELECTRIC POWER

EHV Transmission in PJM: PATH

Project Description: 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

Overview:

- FERC order issued on February 29, 2008 approving:
  - Cash return on CWIP and 14.3% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents
  - Rates went into effect March 1, 2008
- Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million.
- Estimated completion date: 2014+, pending outcome of the 2010 PJM Regional Transmission Expansion Plan (2010 RTEP).

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

- Obtaining a CPCN in West Virginia, Virginia and Maryland. CPCN applications in West Virginia and Maryland are pending because their procedural schedule allows the consideration of the 2010 RTEP. A new application in Virginia is expected in the third quarter of 2010 after consideration of the 2010 RTEP.

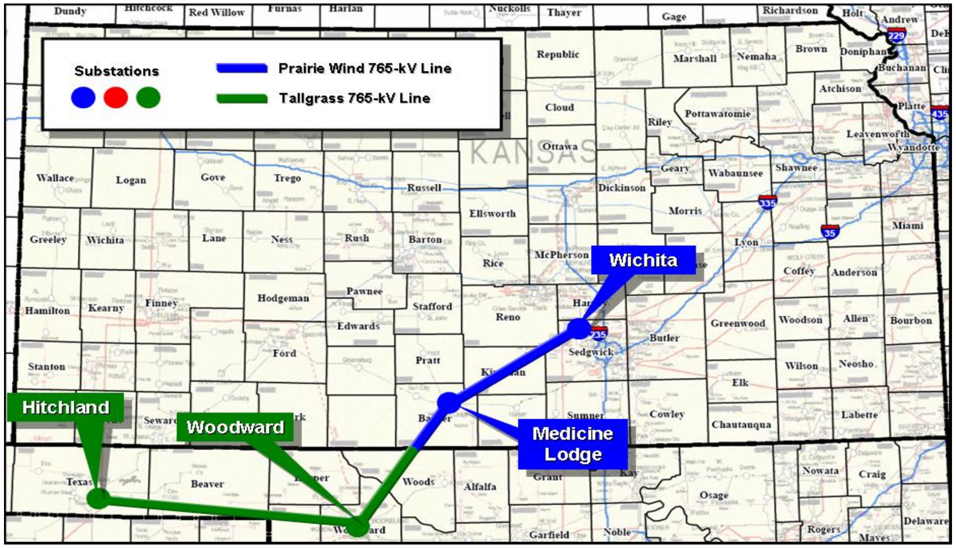
PATH
Potomac-Appalachian Transmission Highline

AEP AMERICAN® ELECTRIC POWER

Prairie Wind Transmission, LLC

Overview:

- In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
- PWT is a 50/50 JV that is proposing to build approximately 110 miles of 765-kV lines extending from Wichita, KS.
- The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
- The project is expected to cost approximately $400 million and be in-service by 2013-2014 and was approved by the KCC on July 24, 2009.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

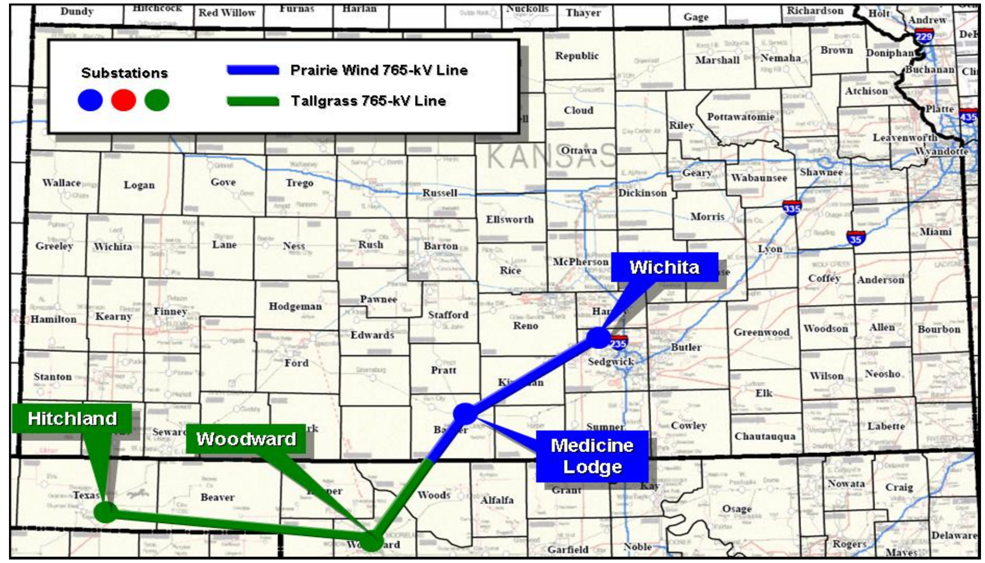
- RTO Approval
- Siting

AEP AMERICAN ELECTRIC POWER

Tallgrass Transmission, LLC

Overview:

- In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
- TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines in Oklahoma.
- The project will promote wind development in the western half of Oklahoma.
- Project is expected to cost approximately $500 million and be in-service by 2013-2014.
- AEP’s ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

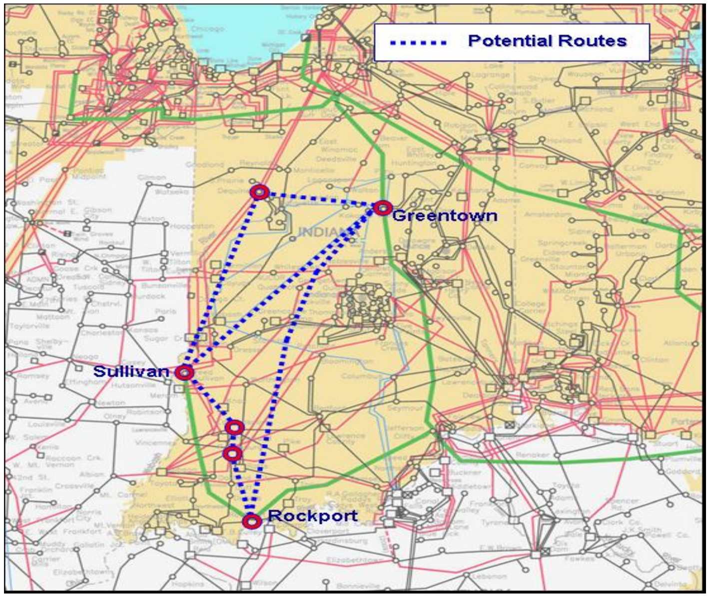
- RTO Approval
- Siting

AEP AMERICAN ELECTRIC POWER

Pioneer Transmission, LLC

Overview:

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP’s Rockport Station to Duke’s Greentown station in Indiana.
- The project will improve the reliability of the nation's transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, protect national security and expand opportunities for new generation, including renewables.
- The project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP’s ownership of the joint venture is 50%.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

- RTO Approval (PJM & MISO)
- Cost allocation which enables the development of “system solutions”
- Siting

AEP AMERICAN ELECTRIC POWER

Upper Midwest EHV Development—SMART Study

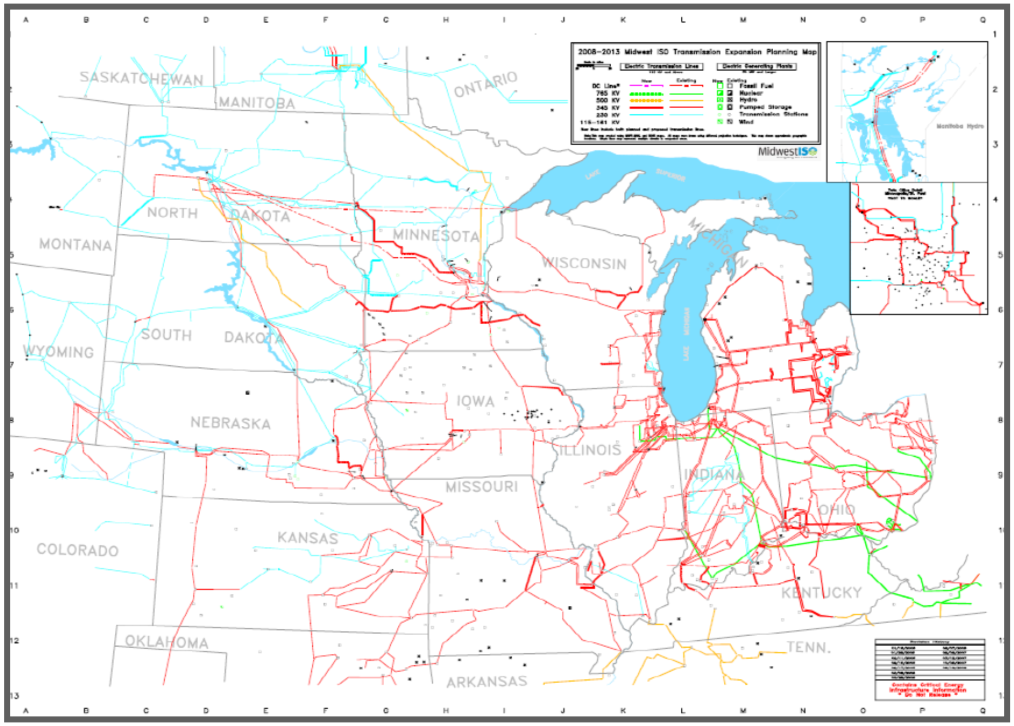
Project Description: a comprehensive study of the transmission needed in the Upper Midwest to support renewable energy development and transporting that energy to consumers throughout the study area. The SMART Study will develop EHV overlay alternative that ensures reliable service for sponsors' communities, is environmentally friendly, and supports national energy policy.

Overview:

- SMARTransmission Study announced August 2009
- Sponsors of the Study include ETA, Exelon, ATC, Northwestern, MidAmerican Energy Company, and Xcel
- Study due to be completed end of 2Q2010 and will include "overlay" options and quantification of economic benefits

Next Steps:

- Investment structure
- Obtaining cost allocation between states, PJM, and MISO
- RTO technical approvals
- Favorable 205 Order including incentives



Primary Focus Areas: North Dakota – South Dakota – Iowa – Nebraska – Indiana – Ohio – Illinois – Minnesota – Wisconsin – Michigan

A Century of Firsts

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

AEP Texas Central Company

President and Chief Operating Officer: Charles Patton

AEP Texas Central Company (TCC)

(organized in Texas in 1945) is engaged in the generation (to an extremely limited extent), transmission and sale of power to affiliated and non-affiliated entities and the distribution of electric power to approximately 729,000 retail customers through REPs in southern Texas, and (to a limited extent) in supplying and marketing electric power at wholesale to other electric utility companies and market participants. Under the Texas Act, TCC is completing the final stage of exiting the generation business and has already sold most of its generation assets, including STP. At December 31, 2005, TCC had 1,160 employees. In addition to its AEP System interconnections, TCC is a member of ERCOT.

Principal industries served:
- Oil and gas extraction
- Food processing
- Apparel
- Metal refining
- Chemical and petroleum refining
- Plastics
- Machinery equipment

Total Customers:
(Based on electric meters)

Regulatory Information

Public Utility Commission of Texas (PUCT)

AEP Regulated Electric Utilities

Texas Central Company
Texas North Company
Southwestern Electric Power Company

Commissioners

Number: 3	**Appointed/Elected**: Appointed	**Term**: 6 years	**Political Makeup**: **R:3**

Qualifications for Commissioners

To be eligible for appointment, a commissioner must be: (1) a qualified voter; (2) a citizen of the United States; and (3) a representative of the general public. Chairman appointed by the Governor.

Commissioners

Paul Hudson, Chairman (Rep.), since August 2003; current term expires August 2009. Served as policy director in governor's office. Worked at PUCT as advisor and senior economic analyst. Served on National Governor's Association Task Force on Electric Infrastructure; Western Governor's Association Working Group on Cross Border Energy Issues. Master's degree from Arizona State.

Barry T. Smitherman, Commissioner (Rep.), since April 2004; current term expires August 2007. Attorney; Assistant DA; 16 years as a public finance investment banker. Law degree from the University of Texas School of Law, Master's in public administration from Harvard University.

Julie Parsley, Commissioner (Rep.), since November 2002; current term expires August 2011. Lawyer, private practice. Served as Solicitor General of Texas with Office of Attorney General. Also served as Deputy Solicitor General. Received law degree from Texas Tech University.

Texas Regulatory Activity

<u>TCC Stranded Cost Recovery Case</u>

February 16, 2006 – PUCT final order provides for net true-up of $1.475 billion

- March 3, 2006 – Requested approval of financing order to issue $1.8 billion in low-cost securitization bonds
    - ➢ Final order expected in May 2006
    - ➢ September 1, 2006 - Issuance of securitization bonds if no appeal

<u>Procedural Schedule for TCC Securitization</u>

- ✓ April 17, 2006 – Intervenors File Testimony
- ✓ April 24, 2006 – Staff Files Testimony
- ✓ April 27, 2006 – TCC Files Rebuttal Testimony
- ✓ May 2-4, 2006 – Hearings On Merit

- April 2006 – Request approval for CTC to address other true-up items
    - ➢ Expected $475 million credit to customers
    - ➢ Jan 2007 – CTC to be implemented

Regulatory Activity Underway

- ✓ TCC Stranded Cost Recovery True-up Filing – Final Order Issued
- ✓ Ohio Companies filing for pass through of FERC OATT changes
- ✓ APCo Filing for Recovery of E&R Costs in Virginia
- ✓ APCo & WPCo Base Rate & Expanded Net Energy Cost (ENEC) Filing in West Virginia
- ✓ Indiana Depreciation Petition
- ✓ IGCC

LEVEL OF CAPITAL INVESTMENT WILL BE ADJUSTED BASED ON RATE RECOVERY AND/OR CASH GENERATION

Regulatory Activity Underway

Ohio Companies Pass through of FERC OATT Changes

Filed Feb 3, 2006 - Seeking authority to pass through to customers the changes in the FERC OATT related to the elimination of the SECA revenues and the costs associated with the Wyoming-Jacksons Ferry transmission line

Indiana Depreciation Filing

December 1, 2005 – I&M filed petition with the IURC for accounting authorization to revise the depreciation rates applicable to its electric utility plant in service

- ✓ Based on a 2004 depreciation study, I&M recommends a decrease in annual depreciation expense of approximately $45 Million on an after-tax Indiana jurisdictional basis.
- ✓ Procedural schedule has been set with final order expected in June 2006

Regulatory Activity Underway

Appalachian Power

Virginia E & R Cost Recovery Factor - Filed July 1, 2005 - Seeking recovery of $62.1 Million in new Environmental & Reliability costs

- ✓ Oct 14, 2005 – SCC ruled VA law does not allow recovery of prospective costs - $48.6 Million
- ✓ Nov 14, 2005 - APCo filed supplemental direct testimony which included updated actual E&R costs incurred through Sept. 30, 2005 of $21.1 million

Virginia General Rate Case – Gave notice to VA SCC on March 1, 2006 of intent to file general rate case no sooner than May 1, 2006

Appalachian Power & Wheeling Power – West Virginia Base Rate Case & ENEC Reactivation

Filed August 26, 2005 – Seeking $183 Million increase in revenues for increasing costs for coal, purchased power and environmental improvement construction projects

- ✓ APCo filed supplemental testimony on January 18, 2006 to reflect Ceredo plant purchase and other miscellaneous items resulting in a revised revenue requirement of $171 Million.
- ✓ APCO was granted the authority to begin deferral accounting for ENEC beginning July 1, 2006.

Proposed Phase-in over 4 years

- ✓ June 23, 2006 – $74 Million*
- ✓ June 23, 2006 – $9 Million
- ✓ Jan 1, 2007 – $43 Million
- ✓ Jan 1, 2008 – $8 Million
- ✓ Jan 1, 2009 – $37 Million

*Includes:
$16MM Base Rates
$56MM ENEC
$2MM Misc

Procedural Schedule

- ✓ March 8, 2006 – Staff and Intervenors Testimony
- ✓ April 7, 2006 – Rebuttal & Cross-rebuttal
- ✓ April 18 - 21, 2006 – Evidentiary Hearings
- ✓ Initial Briefs – 20 days after receipt of transcripts
- ✓ Reply Briefs – 10 days after initial briefs
- ✓ July 28, 2006 – Statutory deadline for an order

IGCC Regulatory Activity

Ohio - Cost Recovery Filing

Phase 1

- ✓ Effective during 2006
- ✓ Seeks recovery of initial costs, including those already incurred, such as site engineering and various other engineering services
- ✓ Approximately $23.7 Million

Phase 2

- ✓ Effective 2007- mid 2010 (Construction Phase)
- ✓ Seeks recovery of carrying costs associated with plant construction

Phase 3

- ✓ Effective mid 2010 (Commercial Operation begins)
- ✓ Seeks recovery of projected $1.174 Billion cost of plant over its operating life.

Ohio Next Steps

2006:

- ✓ Secure cost recovery plan
  - Final PUCO Order expected in 1Q06
- ✓ Finalize site selection
- ✓ Negotiate with suppliers

2006—2007:

- ✓ Obtain permits and finalize engineering and procurement

2007—2010:

- ✓ Construct and start-up plant

West Virginia IGCC Activity

On January 11, 2006, Appalachian Power Co. filed a Certificate of Public Convenience and Necessity seeking authority to construct a 600-MW IGCC facility in West Virginia.

SEEKING AUTHORITY FOR THREE PHASE RECOVERY APPROACH IN OHIO

Regulatory Activity Completed

Ohio – Rate Stabilization Plan (2006 - 2008)

- ✓ Annual 3% and 7% generation rate increases at CSP & OP, respectively
- ✓ POLR rate rider for environmental additions
- ✓ Ability to request additional 4% annual increase in generation rate
- ✓ Elimination of 5% residential generation credit (stipulated in the pre-existing Electric Transition Plan of 2000)

AEP East FERC Transmission Case

December 20, 2005 – FERC approved settlement allowing wholesale transmission rates to increase

- ✓ Results in $22 Million net revenue in 2006 from wholesale transmission

SWEPCo Fuel Factor/Surcharge Filing

January 12, 2006 – Settlement approved by PUCT

- ✓ Fuel factor will increase SWEPCo's annual Texas retail fuel-related revenues by approximately $46 Million.
- ✓ Interim surcharge will collect the under-recovery amount of $44 Million, including interest.

Appalachian Power- Virginia Fuel Factor Increase

- ✓ $57.7 Million increase in fuel factor approved on January 20, 2006

Kentucky Base Rate Case

Final order approved on March 14, 2006

- ✓ $41 million annual increase in base rates
- ✓ To be effective March 30, 2006

PROGRESS IS BEING MADE ON THE REGULATORY FRONT

Summary Rate Case Information

West Virginia Base Case Rate Filing

On August 26, 2005, Appalachian Power Co. and Wheeling Power Co. filed an application with the West Virginia Public Service Commission (WVPSC) to increase electric rates and charges, a request for the reactivation and modification of the expanded net energy cost mechanism (ENEC), a proposal for the disposition of Appalachian Power Company's ENEC over-recovery balance, a request for implementation of a System Reliability Tracker mechanism, and a request for waiver of certain provisions of the Commission's Rules. APCo filed supplemental testimony on January 18, 2006 to reflect Ceredo plant purchase and other miscellaneous items resulting in a revised revenue requirement of $171 Million. (Docket #: 05-1278-E-PC-PW-42T)

Summary Rate Case Information

A Century of Firsts

Virginia E&R Factor Filing

On July 1, 2005, Appalachian Power Co. filed a request with the Virginia SCC to recover incremental actual and projected costs for environmental compliance and T&D System reliability in the amount of $62.1MM. The SCC has ruled that under applicable VA law, it does not have authority to approve the recovery of projected E&R costs before their actual incurrence and adjudication. APCo filed supplemental direct testimony which included actual costs incurred for E&R thru September 30, 2005 of $21.1 million. Docket # PUE-2005-00056

Capital Structure - Company vs. Staff

Capital Structure	Company Position (filed 7/1/05)	Staff Position (filed 1/11/06)
Long-Term Debt	53.43%	51.50%
Short-Term Debt	2.67%	2.20%
Preferred Stock	0.54%	0.53%
Common Equity	42.65%	45.16%
ITC	0.71%	0.61%
Total	**100.00%**	**100.00%**
Recommended ROE	**10.85%**	**9.80%**

Revenue Requirement - Company vs. Staff*

Revenue Requirement	Company Position (filed 11/14/05)	Staff Position (filed 1/11/06)
Environmental	13.3	8.2
Transmission	6.1	8.8
Distribution	1.7	2.6
Total	**$21.1MM**	**$19.6MM**

* Difference in positions does not reflect the relative earnings impact and is not necessarily a reflection of the ultimate outcome of the case.

Integrated Gasification Combined Cycle

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called "syngas" – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

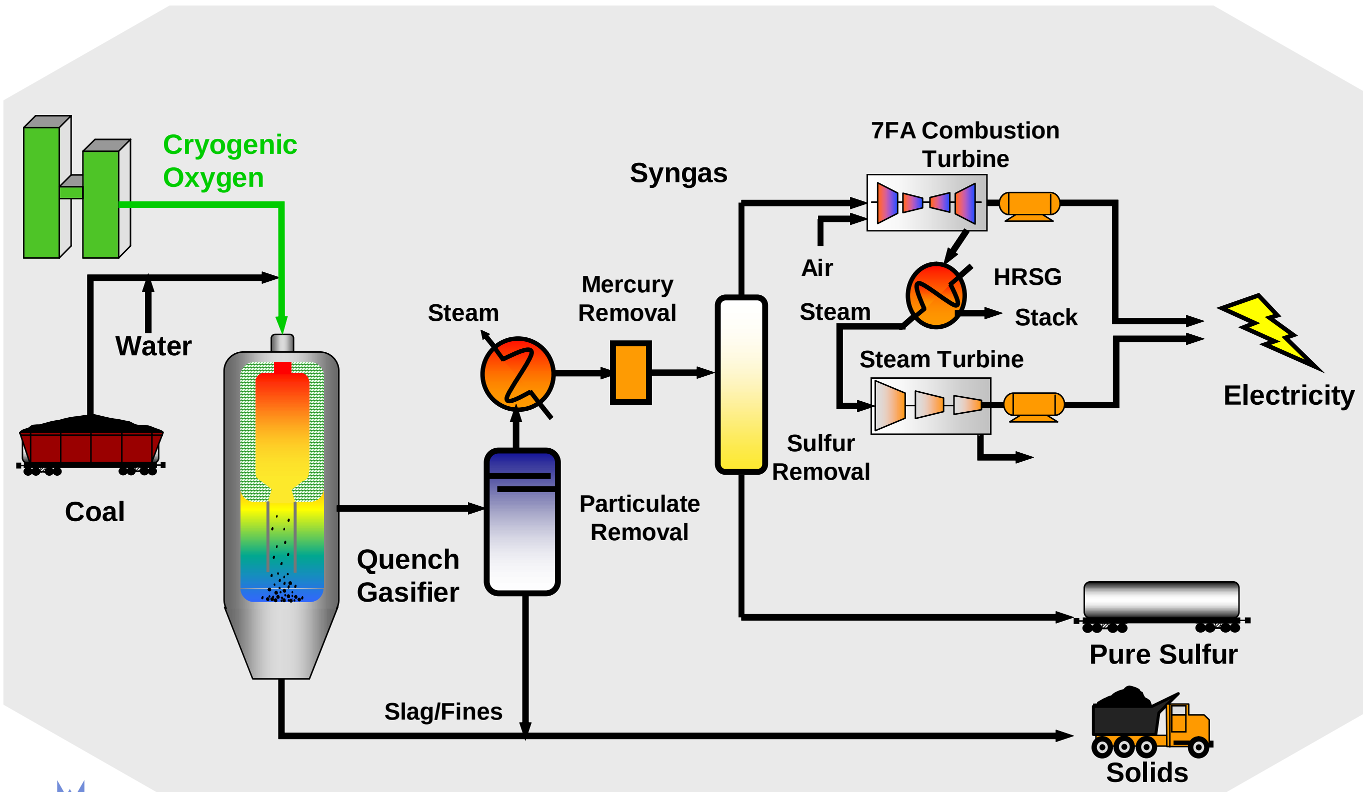
Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2, mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP's eastern service territory.

AEP is currently working with a technology provider to develop a firm price for an IGCC facility to be built in our eastern service region. This price will be available in 2006. AEP intends to seek regulatory recovery approvals in advance of building the plant.

Looking to the Future - IGCC



162110 - GJS/CE-01/1-23-02

AEP HAS ANNOUNCED ITS INTENTION TO CONSTRUCT A COMMERCIAL-SCALE INTEGRATED GASIFICATION COMBINED CYCLE (IGCC) PLANT BY THE END OF THE DECADE

Investing in IGCC

Generation Technology Comparative Statistics

	PC	IGCC	NGCC
Nominal Capacity (MW)	600	600	600
Heat Rate (Btu/kWh)	8700	8600	7200
Total Plant Cost (EPC) ($/kW)	1700	1900	480
Production Cost ($/MWh)	17	16	57
Cost of Electricity, without CO2 Capture ($/MWh)	58	63	90
Estimated Cost of Electricity, with CO2 Capture ($/MWh)	94	87	137

•Source: Results of AEP analysis based on EPRI studies.

• Total Plant Cost (2005$'s) includes the cost to **E**ngineer, **P**rocure and **C**onstruct plant and owner's direct costs; does not include interconnections, transmission lines, transmission upgrades, contingency or AFUDC.

• Assumes Northern Appalachian Coal price of $1.60 /mmBtu for PC and IGCC, and natural gas price of $7.00/mmBtu for NGCC.

• Assumes 85% capacity factor for PC and IGCC, 25% for NGCC.

• Production Cost includes Fuel Cost and Variable Operations & Maintenance (VOM) cost.

• Cost of Electricity based on EPC cost, does not include the cost of Emission Credits.

• Cost of Electricity with CO2 capture does not include sequestration cost.

IGCC TECHNOLOGY IS STRATEGIC TO KEEPING COAL IN THE MONEY

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including the potential for new legislation or regulation in Ohio and/or Virginia, and membership in and integration into regional transmission structures; accounting pronouncements; performance of pension and other post retirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

AEP®

2006-2009 Projected Annual Rate Increase Of 3.8%

Strategic Direction

- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Achieve adequate returns on all assets

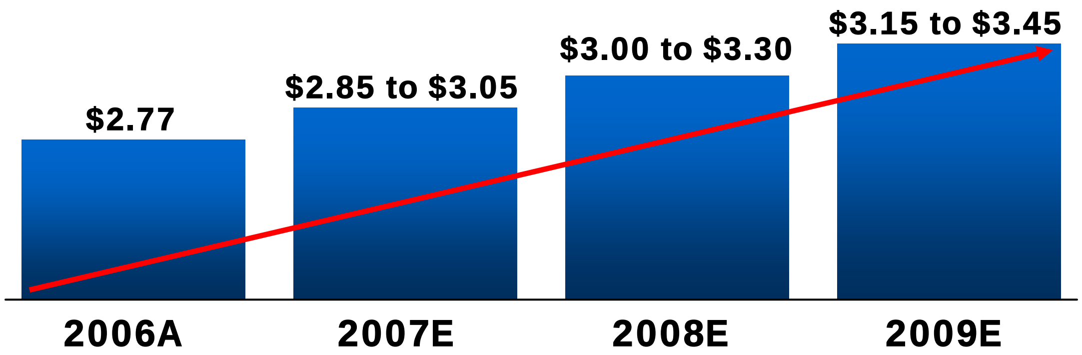
Deliver value to investors and cost effective service to our customers

Continued Commitment To Our Core Utility Mission: Bring Reasonably Priced Electric Service To Our Customers, Thereby Strengthening Our Communities And Rewarding Our Investors

AEP®

Framework For Long-Range Performance

- 2007, 2008 & 2009 Ongoing Earnings Guidance Ranges:



- EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in existing utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
  - Investment in new transmission opportunities
  - Seek rate recovery for new investments
  - Control costs & achieve timely rate relief
- Maintain credit ratings
  - BBB/Baa2/BBB

AEP®

Our Strategy Remains Focused On Regulated Operations

Utility Investment Drives Growth

Updated Capital Investment Forecast (2007-2009)

($ in millions)	2007	2008	2009	Total (2007-09)
Environmental	$935	$521	$301	**$1,757**

Add: Lawrenceburg Plant Purchase	$325
2007 Including Lawrenceburg	**$3,867**

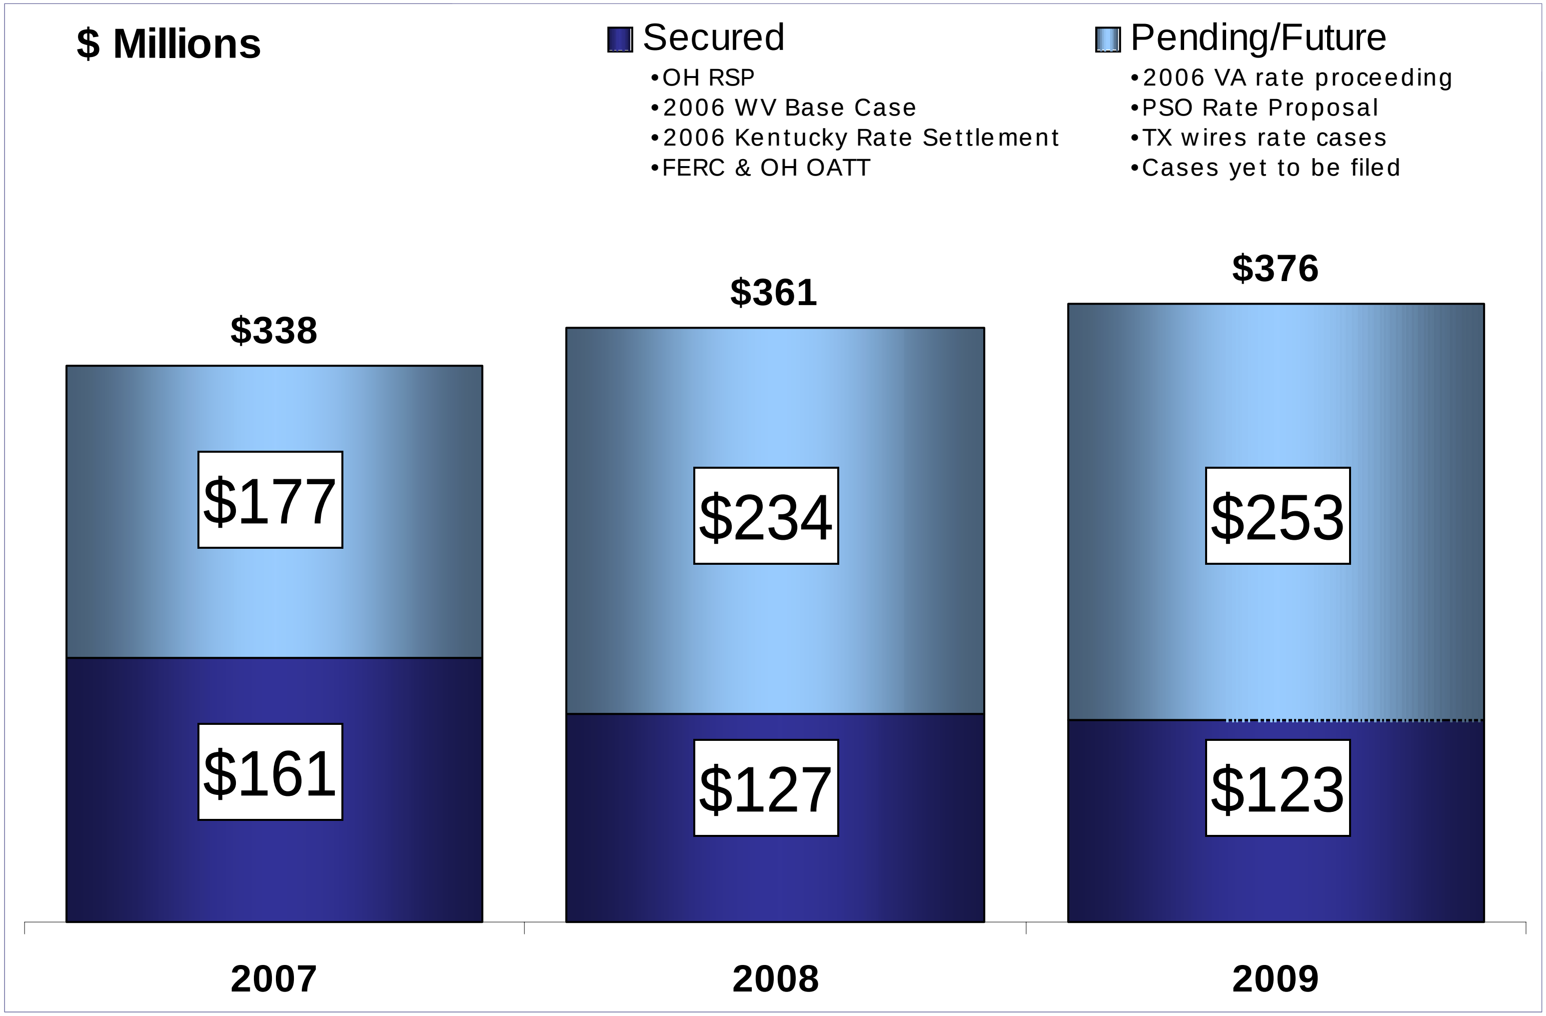
Note: Excludes AFUDC

*Includes Lawrenceburg purchase $325MM in 2007

Growth Investment To Be Funded By Cash
From Operations via Rate Relief and Debt Issuances

AEP®

Incremental Rate Relief Composition



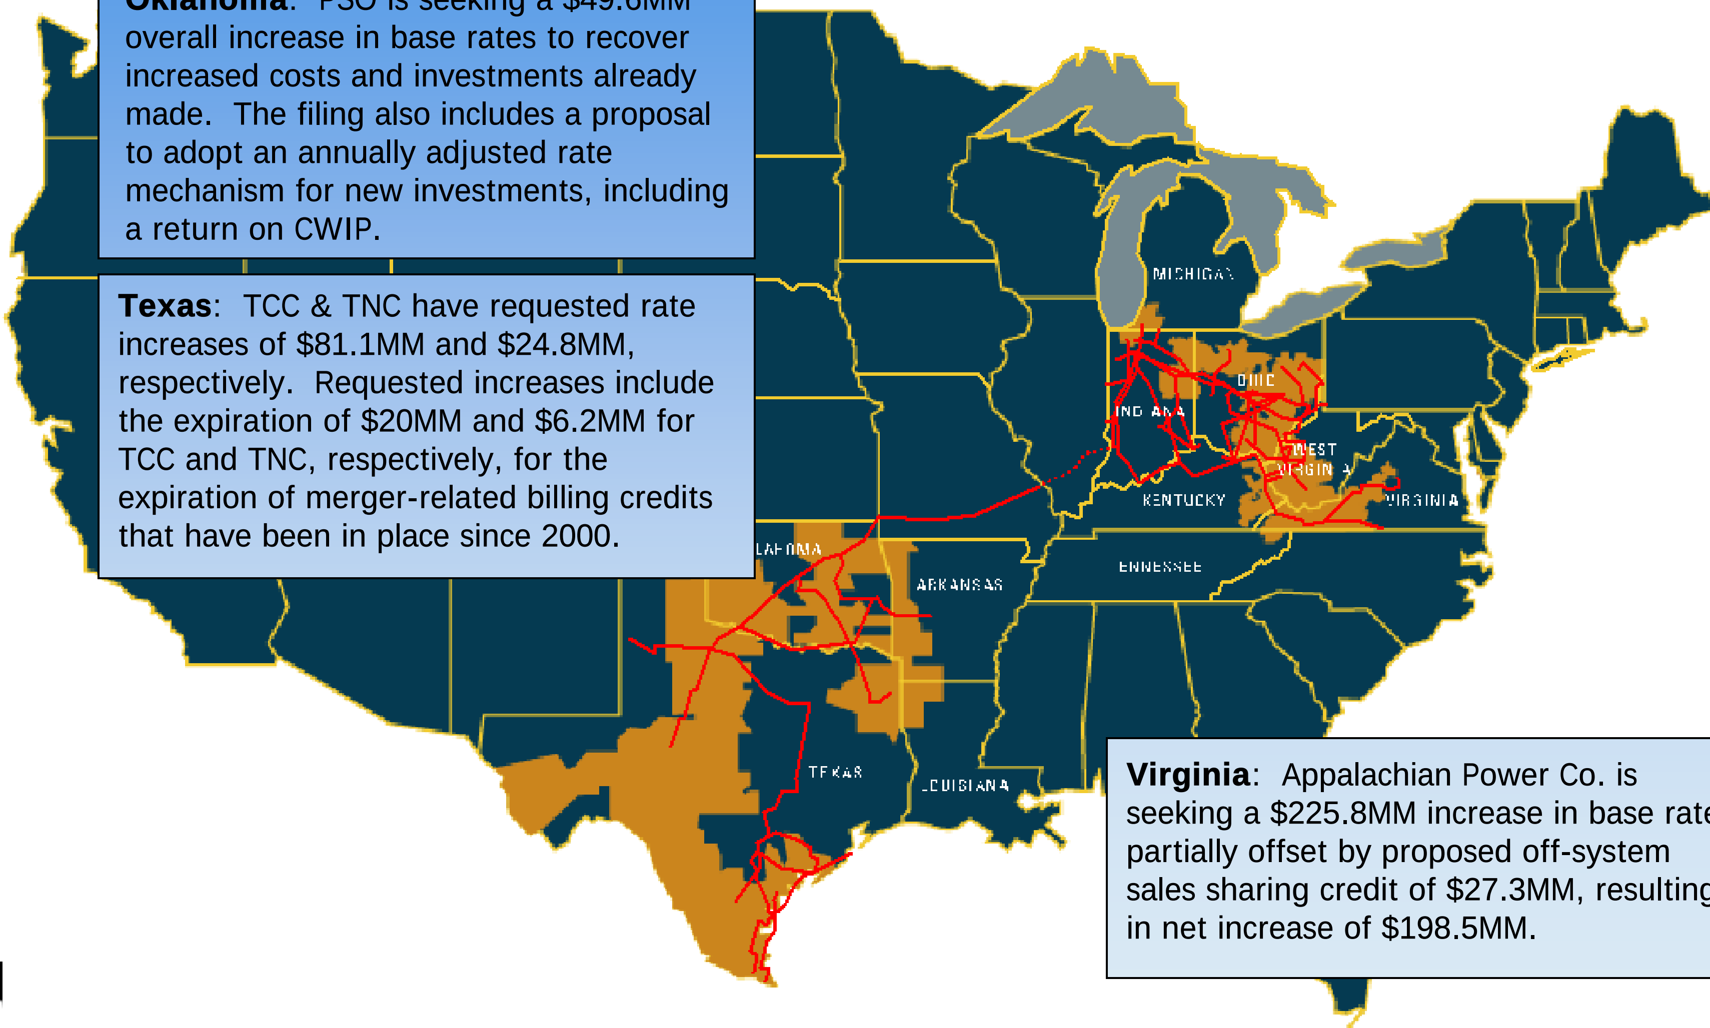
Note: A portion of the pending/future rate recovery related to Virginia E&R costs will now be considered secured, based on the Virginia SCC's Nov. 20, 2006 order in our E&R case. Further analysis is required to quantify these amounts.

Rate Relief Is A Critical Element To AEP's Financial Success

Base Case Regulatory Summary

Oklahoma: PSO is seeking a $49.6MM overall increase in base rates to recover increased costs and investments already made. The filing also includes a proposal to adopt an annually adjusted rate mechanism for new investments, including a return on CWIP.

Texas: TCC & TNC have requested rate increases of $81.1MM and $24.8MM, respectively. Requested increases include the expiration of $20MM and $6.2MM for TCC and TNC, respectively, for the expiration of merger-related billing credits that have been in place since 2000.



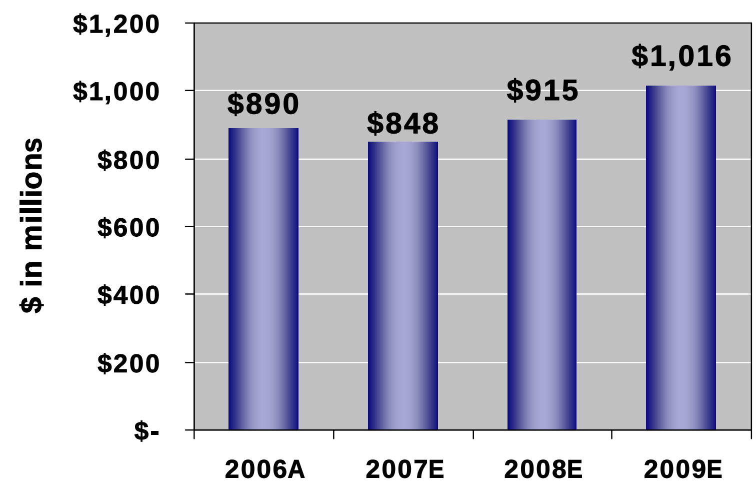
Virginia: Appalachian Power Co. is seeking a $225.8MM increase in base rates, partially offset by proposed off-system sales sharing credit of $27.3MM, resulting in net increase of $198.5MM.

Rate Relief & Enhanced Distribution Investment

- AEP Ohio Reliability Plan (Filed Oct. 6, 2006)
  - Plan will enhance distribution system reliability
  - Proposing an annual average investment of $130MM over 5-year period
- Virginia E&R Mechanism
  - Allows APCo-VA to recover incremental environmental & reliability costs
  - Last filing - order issued Nov. 20, 2006 granting $21.4MM of recovery
- Public Service of Oklahoma Rate Rider
  - $24MM annual vegetation management rider approved in Nov. 2005
- Texas Wires Rate Cases (Filed Nov. 9, 2006)
  - TCC & TNC seeking to increase rates for distribution & transmission services
  - Requested increases total $60.8MM and $15.9MM for TCC & TNC distribution revenues, respectively.

	2005	2006
Line Miles	201,666	207,632
Net PP&E-Distribution	$7,617MM	$8,241MM

Total Projected Distribution Investment



Rate Relief For Distribution Enhancement Will Be Sought Through Innovative Recovery Methods, Such As Rate Riders

Transmission Investment Forecast

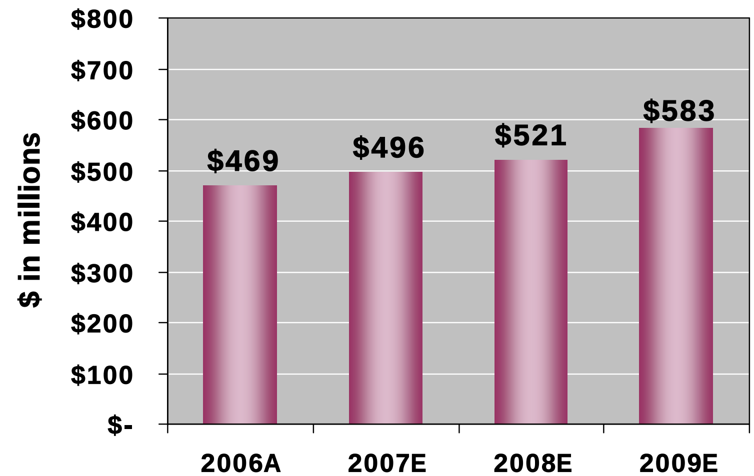
- FERC PJM Regional Transmission Rate Design
  - FERC ALJ recommended adoption of "postage stamp" rate
  - Final order expected in early to mid-2007

- Ohio Annual Transmission Rate Filing
  - Ohio companies transmission rates annually adjusted for FERC-approved open access rates, net congestion & ancillary services

- PUCT & FERC Filings to establish Electric Transmission Texas LLC (ETT)
  - Certificate of Convenience & Necessity filed Jan. 22, 2007 to establish ETT as a regulated utility company
  - FERC filing to transfer transmission assets to ETT submitted Jan. 22, 2007
  - Approvals and asset transfer expected mid-2007

	2005	2006
Circuit Miles	38,879	39,158
Net PP&E-Transmission	$4,153MM	$4,686MM

Total Projected Transmission Investment



The AEP Advantage: 100 Years Of Transmission Leadership Experience In The United States

Transmission ~ $9 Billion Opportunity*

Creating a business model to manage capital requirements for enhanced returns with partners

- ~ $1 billion in ERCOT via Electric Transmission Texas, LLC (ETT)
- ~ $2 billion 765-kV study with ITC in Michigan
- ~ $3 billion I-765 Project in PJM
- ~ $3 billion project filed with SPP

Assumptions	
Estimated Investment Opportunity	$9 Billion
Ownership Structure w/ Partner	50% / 50%
Debt/Equity Ratio	50% debt / 50% equity
Return on Equity	11.00%
Potential EPS Impact (based on 396 MM shares)	+ $0.60**

* ~$9 billion investment opportunity not included in current capital guidance forecasts

** Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion

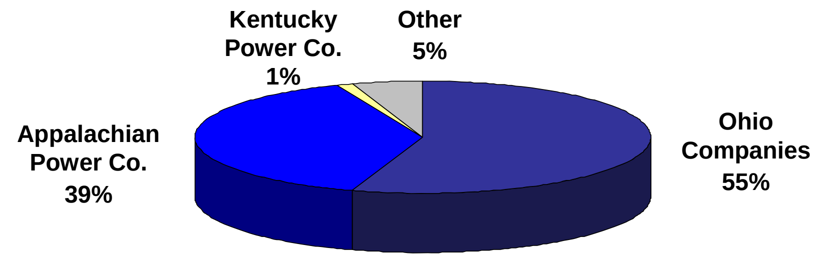
AEP®

Building The Next US Interstate System For Enhanced Reliability And Market Efficiency Could Have Significant EPS Implications

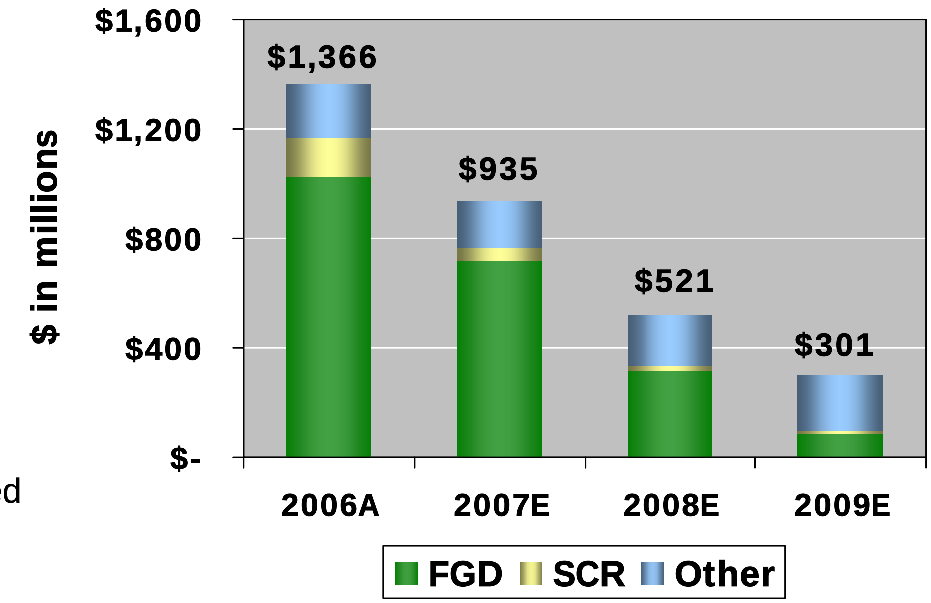
Environmental Investment Forecast

- Ohio Rate Stabilization Plan
  - Annual 3% and 7% generation rate increases at CSP & OP, respectively for 2006-2008
  - Filing made on Jan. 23 for recovery of 2007 costs associated with additional generation-related expenditures – activation of 4% rider
- West Virginia Rate Settlement
  - Mechanism in place to provide for rate increases through 2009 for ongoing environmental investments
- Virginia E&R Mechanism
  - Allows APCo-VA to recover incremental environmental & reliability costs
  - Last filing - order issued Nov. 20, 2006 granting $21.4MM of recovery
- Kentucky Environmental Surcharge
  - Monthly surcharge mechanism allows for recovery of pollution-control projects required by the Federal Clean Air Act

Projected Environmental Investment Allocation (2006A – 2009E)



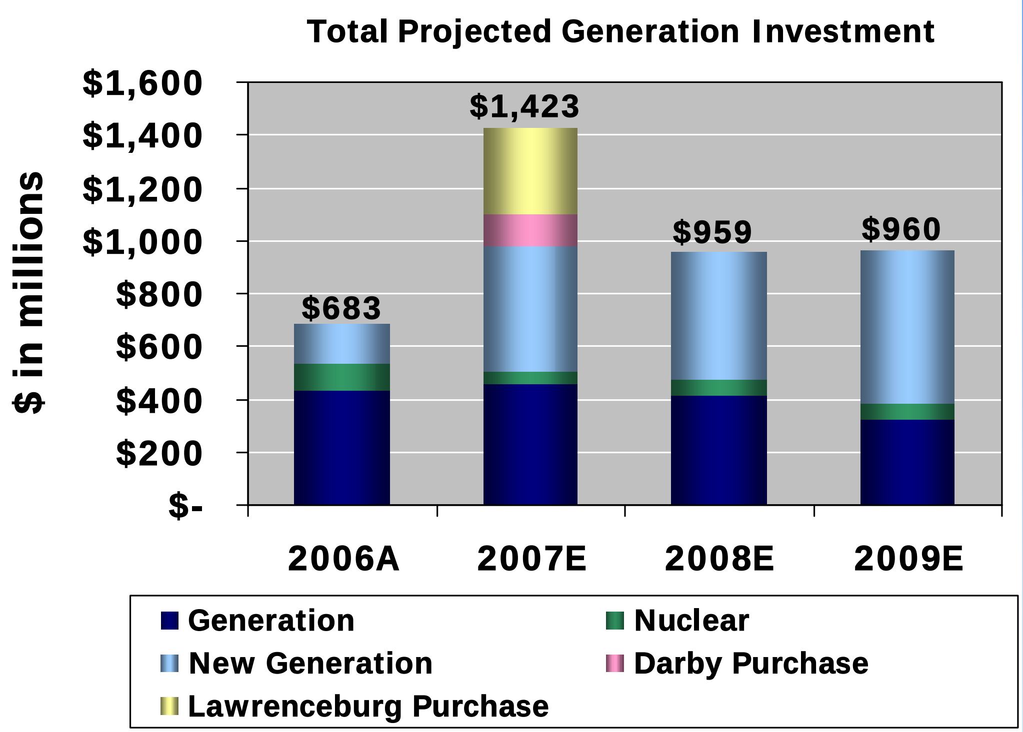
Total Projected Environmental Investment



AEP Benefits From First-Mover Advantage Through Lower Contracted Pricing & Reduced Market Escalation Exposure

Generation Investment Forecast

- Public Service Oklahoma Rate Proposal
  - Proposal to adopt an annually adjusted rate mechanism for new investments, including a return on CWIP
- Distressed Generation Initiative
  - New generation resources required to meet growing electricity needs of our customers
  - Completed purchase of 1,368 MW of gas-fired generating capacity in 2005 -- purchase pending for additional 1,620 MW
- Ohio Phase I IGCC Approval
  - PUCO approved tariff to recover Phase 1 pre-construction costs ($24MM) over 12-month period effective July 1, 2006



AEP®

Investing In Generation To Meet The Growing Electricity Demands Of Our Customers At An Attractive Price

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
CSP	Darby	Ohio	$102 MM	Gas	Simple-cycle	480	1Q07 (1)
AEG	Lawrenceburg	Indiana	$325 MM	Gas	Combined-cycle	1140	2Q07 (2)
SWEPCo	Tontitown	Arkansas	$130 MM	Gas	Simple-cycle	320	2008
PSO	Southwestern	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
SWEPCo	Arsenal Hill	Louisiana	$300 MM	Gas	Combined-cycle	480	2010
SWEPCo	Hempstead	Arkansas	$1.3 B (3)	Coal	Ultra-supercritical	600 (3)	2011
PSO	Red Rock	Oklahoma	$1.8 B (4)	Coal	Ultra-supercritical	950 (4)	2011
CSP/OP	Great Bend	Ohio	Under Review (5)	Coal	IGCC	600	TBD
APCo	Mountaineer	West Virginia	Under Review (5)	Coal	IGCC	600	TBD

(1) Sale expected to close 1Q07 - Plant began commercial operation in 2001
(2) Sale expected to close 2Q07 - Plant began commercial operation in 2004
(3) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment
(4) PSO will own 50%, or 425 megawatts, totaling approximately $900MM in capital investment
(5) AEP is currently working with GE and Bechtel on a FEED (front-end engineering and design) study. When completed (expected mid-year 2007), a cost estimate will be available.

AEP®

Why Invest in AEP?

- Strength and scale in assets & operations
- Disciplined utility model focus - investing in established utility business to drive 5-7% consistent annual earnings growth
- Annual dividend of $1.56 per share providing an above average dividend yield of 3.6%
- Positive dividend outlook
- Stable credit profile

Appendix

Company Overview

SIGNIFICANT PRESENCE THROUGHOUT THE DOMESTIC VALUE CHAIN

Our US electric assets include:

- Nearly 37,000 megawatts of generating capacity in 3 power pools (one of the largest US generation portfolios with a significant cost advantage in many of our market areas)
- Approximately 39,000 circuit miles of transmission lines, including 2,116 miles of 765kV lines, the backbone of the electric interconnection grid in the Eastern U.S.
- Nearly 208,000 miles of overhead and underground distribution lines

With our coal and transportation assets we:

- control over 8,000 railcars
- own and/or operate over 2,600 hopper barges and 51 towboats
- operate one active coal-handling terminal with 20 million tons of capacity

We consume approximately 76 million tons of coal annually.

AEP®

Summary of 5-7 % Long-Range Growth Components

- Energy sales growth of 1.5%
- Rate base investment
  - Generation plant purchases & build
  - Transmission – interstate & intrastate
  - Distribution
  - Reliability
- Transmission company
- Commercial operations
- Regulatory strategy
  - Achieve timely returns
  - Seek cash returns on investment during construction
  - Create & secure innovative rate plans
    - Pursue post-2008 solution in Ohio
    - Expand use of trackers
    - Formula rates

AEP®

Rate Base Investment Coupled With Innovative Regulatory Plans Will Reduce Lag And Drive Earnings Growth

AEP®

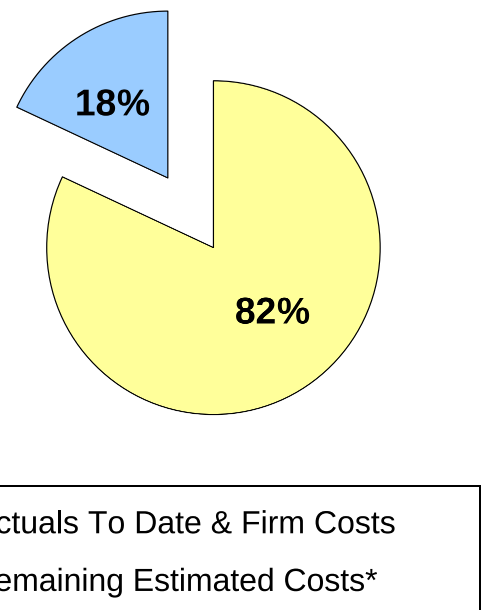
Installation Of SCR And FGD Equipment Will Allow Our Coal Fleet To Remain Extremely Cost Competitive

Materials and Vendors – AEP's Advantage

Environmental Program Costs:
Active/Firm Costs to Remaining Estimated Costs



* Primarily labor and activated carbon injection systems

SCR Technology

- Removes 90 – 93% of NOx emissions
- Requires ~ 1% use of auxiliary power
- **AEP Capital Cost ~ $121/kw avg.**

Combination of SCR & FGD technology results in co-benefit of Hg removal ~80% removal efficiency

FGD Technology

- Removes 95 – 98% of SO_2 emissions
- Requires ~1.5% to 3.0% use of auxiliary power
- **AEP Capital Cost ~ $250/kw avg.**

AEP Benefits From First-mover Advantage Through Lower Contracted Pricing and Reduced Market Escalation Exposure

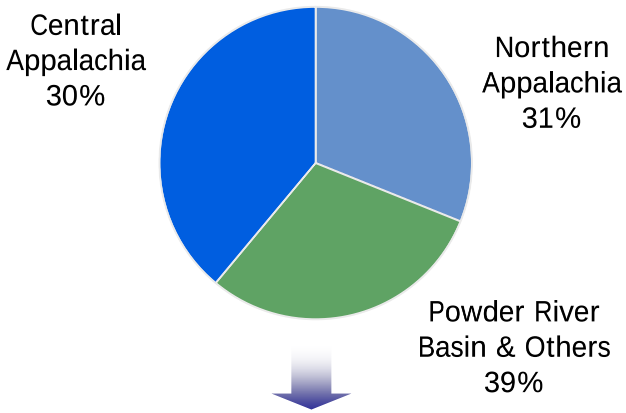
Note: The figures on this slide exclude the Darby and Lawrenceburg plants, as these purchases have not yet closed.

Coal Procurement – 2007 Projected

AEP purchases approx. 76 million tons of coal per year

Total AEP System



Coal Stats:

- 95% contracted for 2007
- Avg. delivered price ~ $35.10/ton in 2006
- Approximate 7-9% price increase in 2007 -- ($37.50 to $38.50/ton)
  - Addition of Mountaineer & Mitchell scrubbers allows for a greater mix of Northern Appalachian coal in 2007

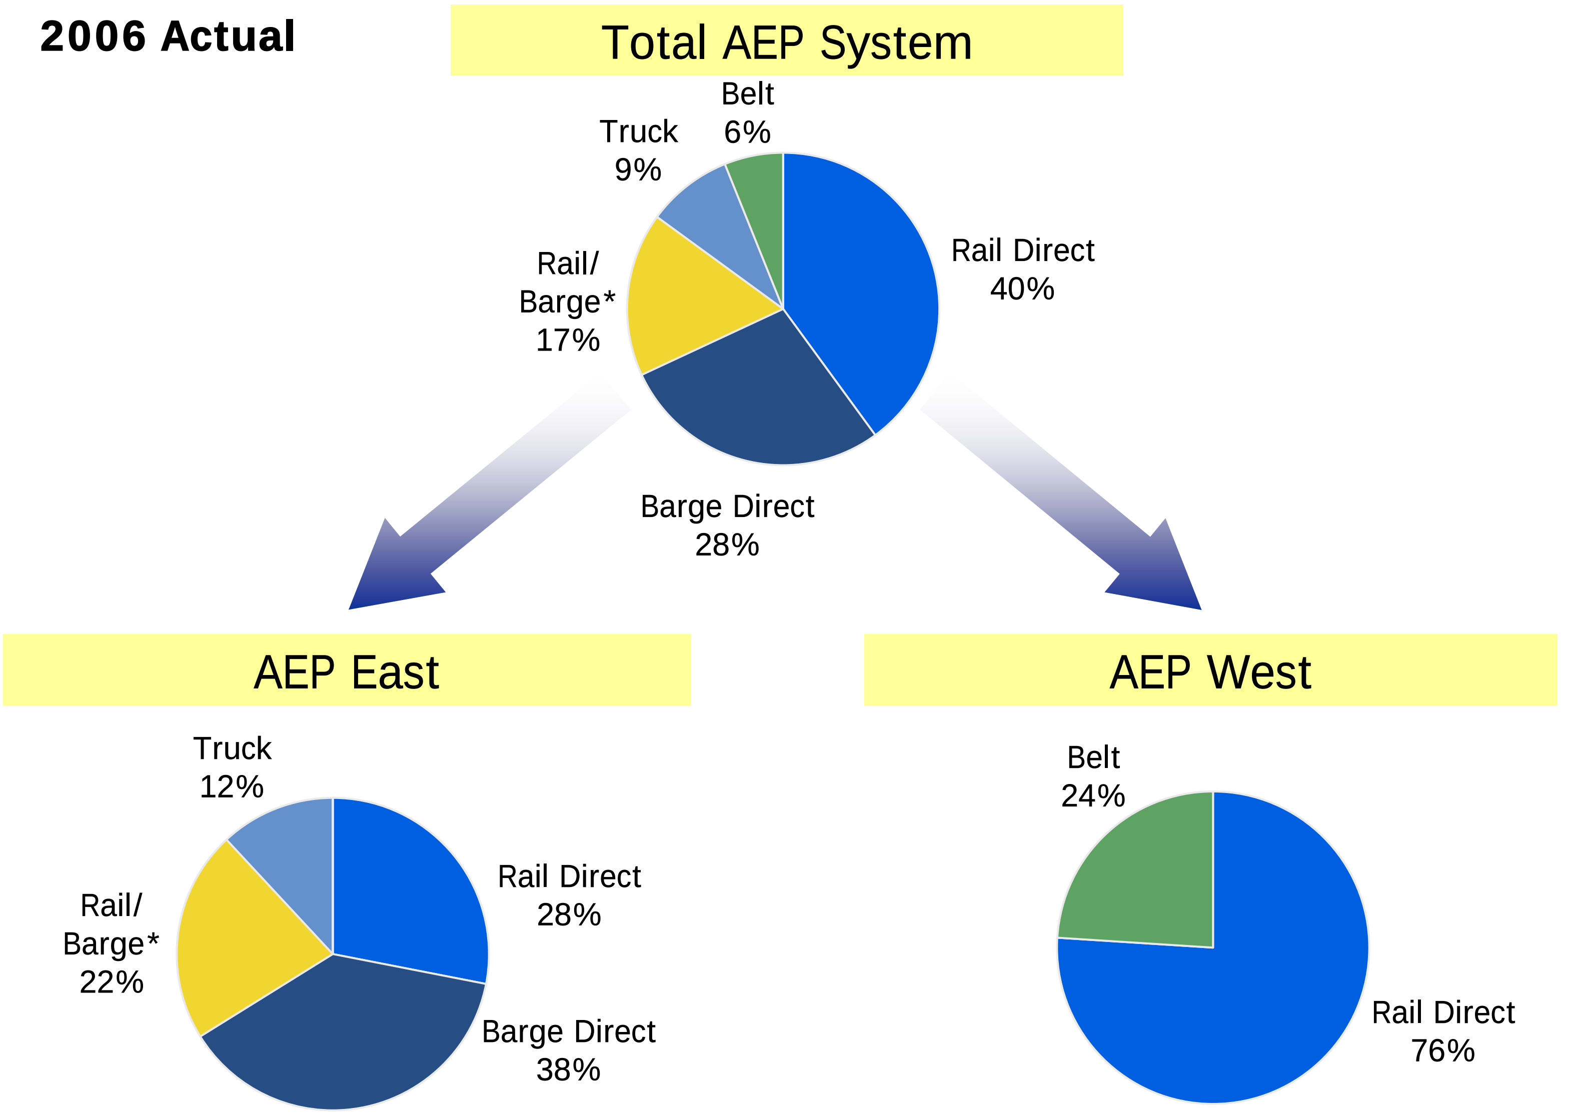
Coal Delivery

2006 Actual



* Reflects coal delivered to AEP plants transported through a combination of rail and barge

Regulatory Activity

Ohio Distribution Reliability Filing

Filed Oct. 6, 2006 – AEP Ohio proposes an additional annual average investment of approximately $130MM over the next 5 years on vegetation management, equipment replacement, infrastructure upgrades & improved use of technology, to help reduce outages and improve service reliability.

- We are requesting implementation of a Reliability Cost Recovery Rider for recovery of the incremental O&M expenses and a return on and of the capital investments made under the plan. The requested ROE is 10.5%.
    - If approved, the rider would be implemented July 1, 2007 through December 31, 2008 and would be effective until new distribution rates are placed in effect. We anticipate that new base distribution rates would be effective after the expiration of the RSP on Dec. 31, 2008.
- Requested recovery amounts total $20MM in 2007 and $51MM in 2008.
- Staff testimony due Feb. 14, 2007; Evidentiary hearing to commence Feb. 27, 2007.

AEP Ohio Application For 4% Provision On Generation Rate

- On Jan. 23, 2007, CSP and OP filed an application at the PUCO to recover 2007 costs associated with additional generation-related expenditures the companies are encountering related to environmental, security and other new generation-related costs pursuant to the RSP.
- CSP and OP are requesting to implement the allowed 4% provision to recover $24.5MM and $8.2MM, respectively, from May 2007 through December 2007.

AEP®

Regulatory Activity

Electric Transmission Texas (ETT) Rate Filing

- Jan. 22, 2007 – ETT filed with the PUCT for approval 1) to operate as an electric transmission utility in Texas; 2) to contribute transmission assets currently under construction by AEP subsidiary TCC to the joint venture company; and 3) establish initial rates for ETT.
  - Requested capital structure of 60% debt / 40% equity; requested ROE of 11.25%
  - An order is expected in Fall 2007 and operations are expected to commence in the 2nd half of 2007. Upon receipt of approvals, AEP and MidAmerican will each acquire a 50% interest in the joint venture

Seams Elimination Cost Adjustment Revenues

- August 2006 – ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
  - Up to $111MM of SECA revenues could be disallowed, net of unused provisions
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both.
- Exceptions to initial decision filed Sept. 11, 2006; Replies to exceptions filed Oct. 11, 2006; Order expected by the Commission in early to mid-2007

AEP®

Regulatory Activity

FERC Regional Rate Design

- At our urging, the FERC instituted an investigation of PJM's zonal rate regime
  - Present regime may need to be replaced
  - Consider establishing regional rates that would compensate AEP, among others, for the regional transmission service provided by high voltage facilities they own that benefit customers throughout PJM
- July 2006 ALJ-rendered initial decision:
  - License plate rates for existing facilities <u>are not</u> just and reasonable, and must be replaced (effective April 1, 2006, when SECA ended)
  - Staff's proposal for a "Postage Stamp" rate phased in so as to limit increases in any one pricing zone to 10% per year is the best choice for replacing current rates
  - Staff's proposed rate design would produce slightly more net revenue for AEP than the original AEP/Allegheny Power proposal, when fully effective
  - Briefs on Exceptions to the initial decision by all parties have been filed; An order is expected by the Commission in early to mid-2007.

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

IGCC – Significant Role in New Generation Plan

IGCC

- June 2006 – PUCO approved tariff to recover Phase 1 pre-construction costs ($24MM) over 12-month period effective July 1, 2006
- Expect to obtain permits and finalize engineering by 2007
- Construction of 600 MW facility to begin in OH in 2007, assuming regulatory approval
- Certificates of Convenience and Necessity (CCN) applications filed in OH and WV and currently in process.

SWEPCO

- May 31, 2006- Announced plans to build $1.7 billion of new generation
- Expected generation build includes a simple-cycle gas turbine totaling 320 MW at Tontitown, AR and combined-cycle gas plant totaling 480 MW at Arsenal Hill
- Aug 2006 – Announced plans to build $1.3 billion 600 MW base load ultra-supercritical coal-fueled plant – expected SWEPCO investment will be approx. 75%
- Commercial operation dates between 2007 and 2011

PSO

- 2H05 - Submitted RFPs for up to 1100 MW of peaking and baseload capacity in aggregate
- March 2006 - Two peaking RFPs totaling 340 MW awarded; commercial operation 2008
- July 2006 - Entered into JVA with OG&E to build 950 MW coal-fueled unit with goal to use ultra-supercritical technology – PSO will own 50% or 425 MW; commercial operation 2011

Integrated Gasification Combined Cycle

AEP IS COMMITTED TO IGCC TECHNOLOGY

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called "syngas" – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2 , mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP's eastern service territory.

AEP is currently working with a technology provider to develop a firm price for an IGCC facility to be built in our eastern service region.   AEP intends to seek regulatory recovery approvals in advance of building the plant.

Generation Technology Comparative Stats

	PC	IGCC	NGCC
Nominal Capacity (MW)	600	600	600
Heat Rate (Btu/kWh)	8700	8600	7200
Total Plant Cost (EPC) ($/kW)	1700	1900	480
Production Cost ($/MWh)	17	16	57
Cost of Electricity, without CO_2 Capture ($/MWh)	58	63	90
Estimated Cost of Electricity, with CO_2 Capture ($/MWh)	94	87	137

Source: Results of AEP analysis based on EPRI studies

- Total Plant Cost (2005$'s) includes the cost to **E**ngineer, **P**rocure and **C**onstruct plant and owner's direct costs; does not include interconnections, transmission lines, transmission upgrades, contingency or AFUDC.
- Assumes Northern Appalachian Coal price of $1.60 /mmBtu for PC and IGCC, and natural gas price of $7.00/mmBtu for NGCC.
- Assumes 85% capacity factor for PC and IGCC, 25% for NGCC.
- Production Cost includes Fuel Cost and Variable Operations & Maintenance (VOM) cost.
- Cost of Electricity based on EPC cost, does not include the cost of Emission Credits.
- Cost of Electricity with CO_2 capture does not include sequestration cost.

IGCC TECHNOLOGY IS STRATEGIC TO KEEPING COAL IN THE MONEY

IGCC Regulatory Activity

Ohio IGCC Activity

March 18, 2005: CSP and OPCO filed an application with the PUCO seeking authority to recover costs related to building and operating an IGCC plant if built in Ohio.

October 2, 2006: Filed state environmental permit application with the Ohio Environmental Protection Agency

West Virginia IGCC Activity

January 11, 2006: Appalachian Power Co. filed a Certificate of Public Convenience and Necessity seeking authority to construct a 600-MW IGCC facility in West Virginia.

October 2, 2006: Filed state environmental permit application with the West Virginia Department of Environmental Protection

AEP WILL PIONEER CONSTRUCTION OF FIRST COMMERCIAL SCALE IGCC PLANT IN THE WORLD

IGCC Activity in Ohio

Ohio - Cost Recovery Filing

Phase 1 – PUCO AUTHORIZED

- Effective during 2006
- Seeks recovery of initial costs, including those already incurred, such as site engineering and various other engineering services
- Approximately $23.7 Million

Phase 2

- Effective 2007- mid 2012* (Construction Phase)
- Seeks recovery of carrying costs associated with plant construction

Phase 3

- Effective mid 2012* (Commercial Operation begins)
- Seeks recovery of projected $1.174 Billion cost of plant over its operating life

Ohio Next Steps

2006:

- Secure cost recovery plan
  - April 10, 2006 – PUCO authorized implementation of Phase 1 Rates
  - Phase 2 & 3 ruling – Post October 2006 filing – following completion of FEED study
- Negotiate with suppliers

2006—2007:

- Obtain permits and finalize engineering and procurement

2007—2012*:

- Design, construct and start-up plant

Construction of IGCC plant takes approximately 4 years from ground-breaking to start-up

***PROJECT TIMING DEPENDENT ON REGULATORY RECOVERY ASSURANCES**

IGCC Permitting Process

IGCC Permitting Issues

- Air – to evaluate best available control technology (BACT)
- Wastewater – to understand wastewater streams
- US COE (Corp of Engineers) – to obtain permits for construction of river facilities
- NEPA Process – (National Environmental Policy Act) – Environmental site studies addressing wetlands, endangered species, historical artifacts

PERMITTING PROCESS WILL TAKE 1 – 2 YEARS

ADAPTABLE

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants including our ability to restore Indiana Michigan Power Company's Donald C. Cook Nuclear Plant Unit 1 in a timely manner; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity and transmission lines (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary or deflationary interest rate trends; volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impacting our ability to finance new capital projects and refinance existing debt at attractive rates; the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurred cots and recovery is long and the costs are material; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

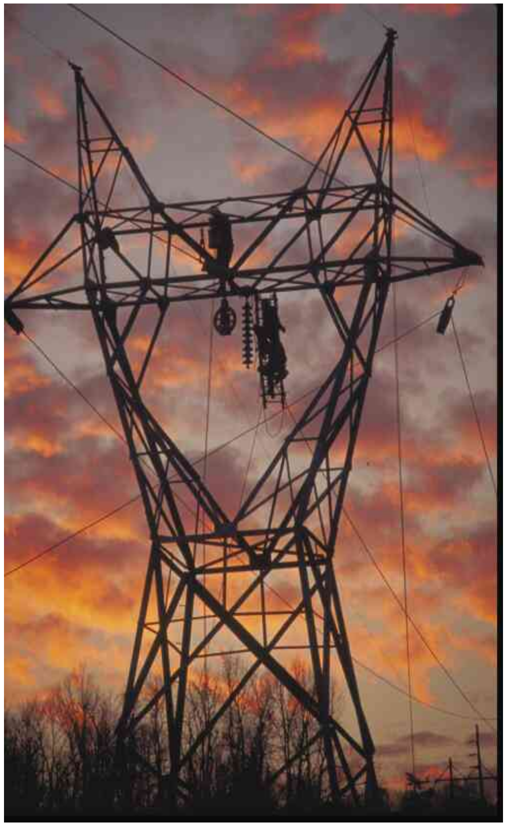
AEP AMERICAN ELECTRIC POWER

Chuck Zebula
Senior Vice President, Investor Relations & Treasurer

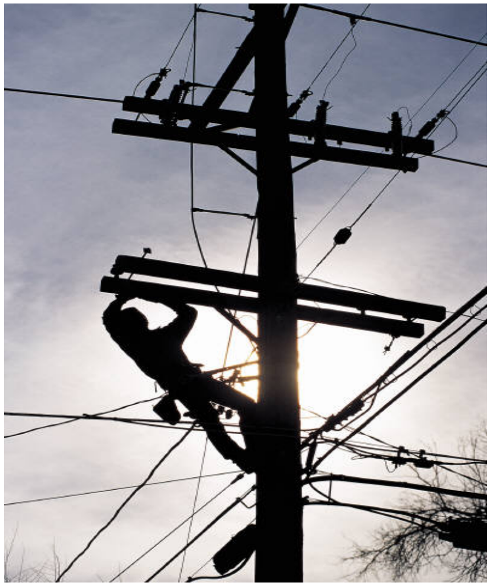
AEP AMERICAN ELECTRIC POWER

AEP is . . .

One of the largest electricity generator in the United States, owning over 39,000 MW of generating capacity



The largest electricity transmitter in the United States, owning over 39,000 miles of transmission



The largest electricity distributor in the United States, owning and operating over 213,000 miles of distribution

AEP AMERICAN ELECTRIC POWER

Company Overview

- 5.2 million customers in 11 states
- 21,700 employees
- Industry-leading size and scale of assets
- 11 Operating Companies
  - Appalachian Power Co. (VA, WV)
  - Columbus Southern Power Co. (OH)
  - Indiana Michigan Power Co. (IN, MI)
  - Kentucky Power Co. (KY)
  - Kingsport Power Co. (TN)
  - Ohio Power Co. (OH)
  - Public Service Co. of Oklahoma (OK)
  - Southwestern Electric Power Co. (LA, AR, TX)
  - Texas Central Co. (TX)
  - Texas North Co. (TX)
  - Wheeling Power Co. (WV)

AEP AMERICAN ELECTRIC POWER

AEP enjoys a diverse geographic footprint.

AEP Highlights

Premier utility platform

- Leadership position in electric generation, transmission and distribution operations
- Cash flow, earnings and regulatory diversity
- $6.3 billion capital expenditure program (2009-2011) will continue to drive rate base growth

Effective regulatory relationships

- Traditional recovery mechanisms with equitable risk allocation enhance both earnings and cash flow
- Emerging energy policies play to AEP's strengths (transmission, energy efficiency, reliability)
- Constructive local relationships deliver successful regulatory outcomes

High-growth transmission business

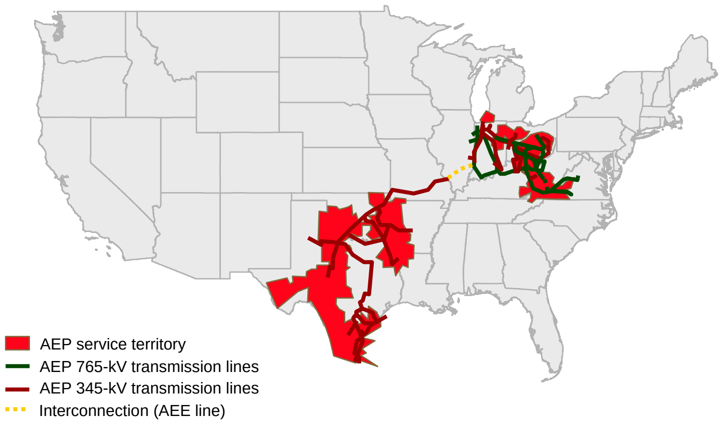
- The leading US transmission owner, operator, and developer
- Exceptional portfolio of high-quality development projects and project partners
- Attractive ROEs, regulatory support and access to capital will drive earnings growth beyond our traditional utility footprint

Stable financial position

- Maximization of shareholder value through regulated utility and transmission investments
- Balanced approach to cost containment and capital allocation
- Commitment to investment grade profile, prudent balance sheet, and liquidity management
- Conservative dividend payout with attractive yield

Premier Regulated Utility Platform

Overview



AEP's Leadership Position

Transmission miles[1] ('000s)		Generation owned[1] (GW)		Electric customers[1] (mm)	
AEP	39.0	SO	42.6	EXC	5.4
SO	27.0	AEP	40.6 *	AEP	5.2
DUK	20.9	DUK	39.1	PCG	5.1

AEP AMERICAN ELECTRIC POWER

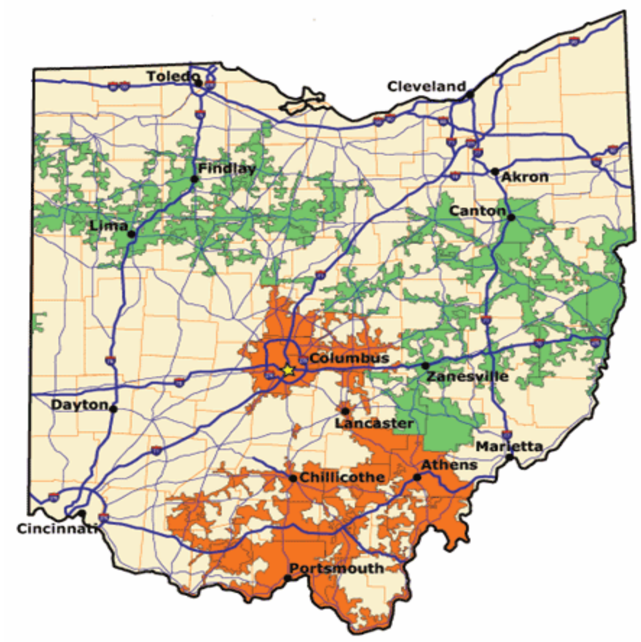
Strong Ohio Presence

Columbus Southern Power Company (CSPCo)

(organized in Ohio in 1937, the earliest direct predecessor company having been organized in 1883) is engaged in the generation, transmission and distribution of electric power to approximately 749,000 retail customers in Ohio, and in supplying and marketing electric power at wholesale to other electric utilities, municipalities and other market participants. At December 31, 2008, CSPCo had 1,323 employees. CSPCo’s service area is comprised of two areas in Ohio, which include portions of twenty-five counties. One area includes the City of Columbus and the other is a predominantly rural area in south central Ohio.

Ohio Power Company (OPCo)

(organized in Ohio in 1907 and re-incorporated in 1924) is engaged in the generation, transmission and distribution of electric power to approximately 712,000 retail customers in the northwestern, east central, eastern and southern sections of Ohio, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities and other market participants. At December 31, 2008, OPCo had 2,434 employees.



PRINCIPAL INDUSTRIES SERVED:

Primary Metals
Chemicals
Petroleum Refining
Food Products
Rubber & Plastic Products
Fabricated Metals
Stone, Clay and Concrete Products

Total Customers at 12/31/08:

• Residential	1,277,000
• Commercial	170,500
• Industrial	10,500
• Other	3,000
Total	1,461,000
Generation Capacity (MW)	12,179
Transmission Miles	8,924
Distribution Miles	45,277

AEP AMERICAN ELECTRIC POWER

Diversified Fuel Mix

Coal/Lignite

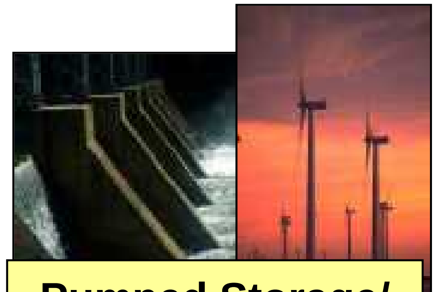
66%

Natural Gas/ Oil

23%

Nuclear

6%



Pumped Storage/ Hydro/Wind

5%

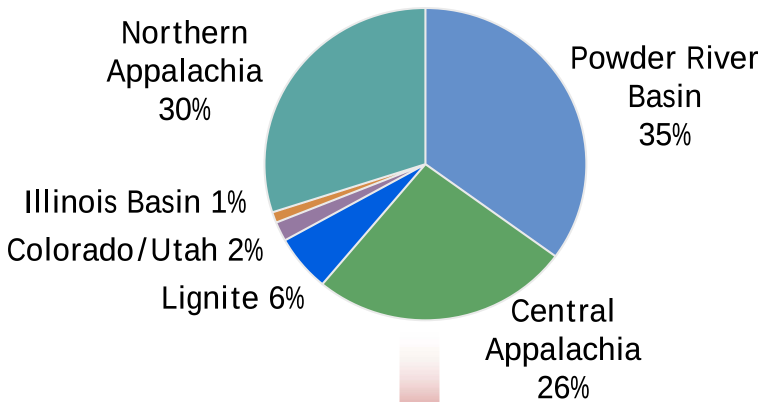
AEP's Generation Fleet

39,200 MW Capacity

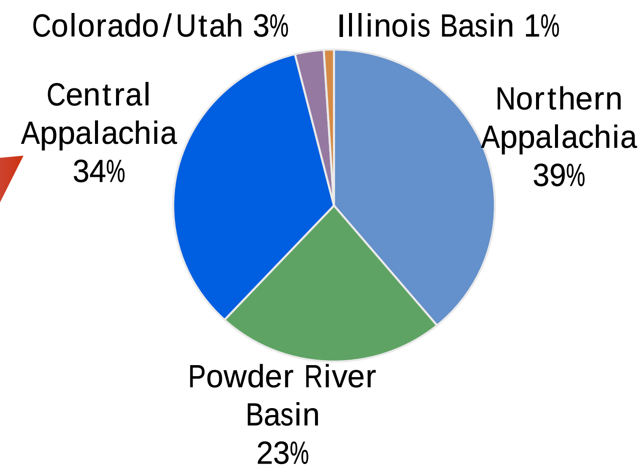
Coal Procurement - 2009 Projected

AEP burns approx. 77 million tons of coal per year

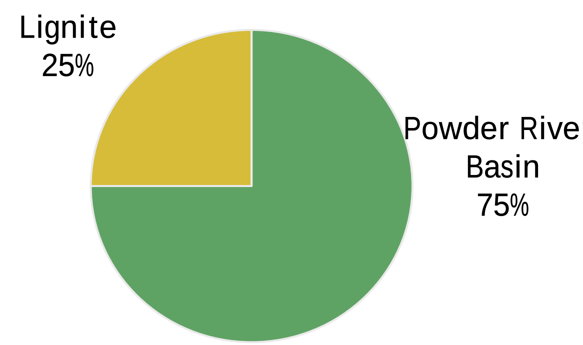
Total AEP System



AEP East



AEP West



Coal Stats:

- 100% contracted for 2009
- 94% contracted for 2010
- Avg. delivered price ~ $46.61/ton in 2008
- Approximate 10% price increase in 2009 ~ $51.00/ton

AMERICAN ELECTRIC POWER

AEP River Operations

- Full-service Inland Waterways carrier
  - 2,978 hopper barges
  - 58 towboats & 25 harbor boats
- Tonnage & Commodity:
  - Captive: (for AEP) 37MM tons of coal
  - Commercial: 35MM tons of coal/grain/bulk
- Gulf Operations
  - Barge cleaning and repair
  - Fleeting and shifting
  - Midstream transfers
- Operating Centers in Lakin, WV, Cape Girardeau, MO, Paducah, KY, Convent and Belle Chase, LA

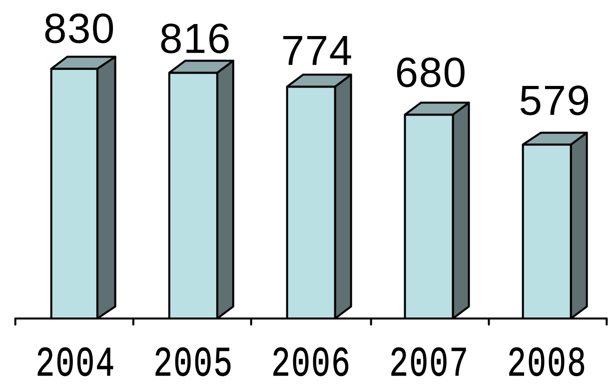
Inland Waterway Routes For AEP River Operations

AEP AMERICAN ELECTRIC POWER

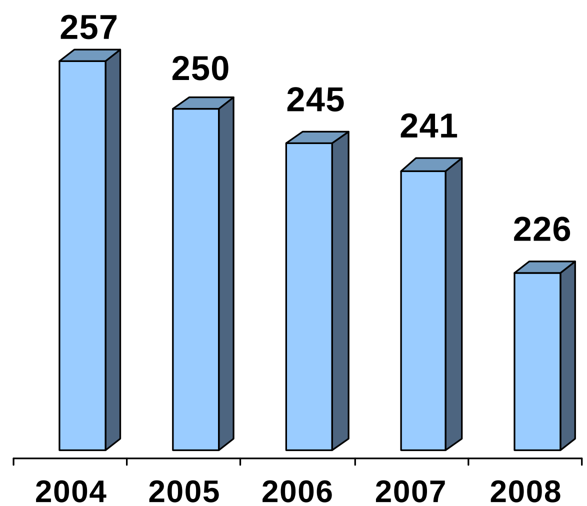
Environmental Program

- Environmental retrofits keep coal plants viable in order to take advantage of vast domestic fuel resources
- Scrubbers and SCRs reduce emissions of SO_2, NOx and Mercury
- Environmental technology installed on existing plants delays the premature retirement of those plants, thereby keeping low cost generation assets available to the market
- Since 2004, we have invested $4.4 billion in environmental retrofits to meet obligations required by environmental regulations

Annual SO_2 Emissions
(in kilotons)



Annual NOx Emissions
(in kilotons)



AEP AMERICAN ELECTRIC POWER

Energy Policy Initiatives are Core to Our Strategy

Greenhouse Gas Reduction & Regulation

- Actively engaging in CO_2 policy debate – support cap & trade with allocated credits
- Leadership position in development of carbon capture and storage technology
- Reducing carbon footprint via offsets and other measures
- Founding member of Chicago Climate Exchange

Renewable Energy

- Develop "transmission superhighway" to facilitate renewable energy projects
- Satisfy RES requirements in our jurisdictions – currently Ohio with 25% (renewables + advanced) by 2025, Texas with ~ 5% by 2015, West Virginia with 25% (renewables + advanced) and Michigan with 10% by 2015; Voluntary goal of 12% by 2022 in Virginia
- Add 2,000MW of wind capacity via long-term PPAs – 903MW achieved to-date

---

Energy Efficiency, Security & Reliability

- Develop high-voltage transmission projects to strengthen America's power grid
- Build generation to ensure reliable supply
- Reduce 1,000MW of demand by 2012
- Reduce 2.25 million MWhs of consumption by 2012
- Diversify our fuel mix; have added 3,705MW of gas-fired capacity since 2005 and have 1,080MW under construction

---

AEP AMERICAN ELECTRIC POWER

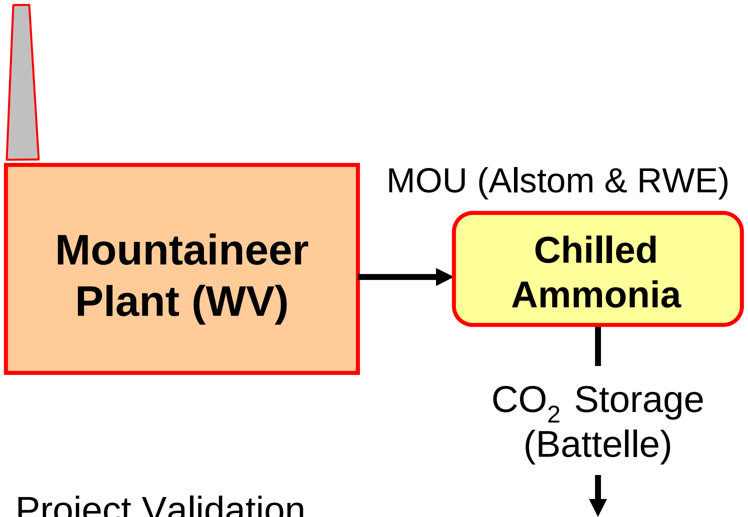
AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US with legislation rather than regulation
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of international trade provisions to protect American jobs

AEP supports the American Clean Energy and Security Act of 2009

AEP AMERICAN ELECTRIC POWER

Carbon Capture & Storage



Project Validation

- Alstom “Chilled Ammonia” Technology
- 20-30 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, in operation at We Energies’ Pleasant Prairie Power Plant)
- Located at the AEP Mountaineer Plant in WV
- 100,000 - 300,000 tonnes CO_2 per year
- Operations commenced September 2009
- Geologic storage for CO_2
- Underground injection control permit received in May 2009 from WV Dept. of Environmental Protection

Represents Post-Combustion Capture

- **Conventional or Advanced Amines; Chilled Ammonia**
  - Amine technologies are currently available in other industrial applications
  - Relatively low CO_2 concentration in flue gas - more difficult to capture than other approaches
  - High parasitic demand
    - Conventional Amine ~ 25-30%
    - Chilled Ammonia target ~ 10-15%

Key Issues for CCS Development in the U.S.

- Overcoming the ‘economic’ hurdle
- High up-front capital investment
- Commercial demonstration at large coal-fired power plants
- National standards for permitting of storage reservoirs
- Potential institutional, legal and regulatory barriers to carbon storage

AEP AMERICAN ELECTRIC POWER

Uniquely Positioned for Nationwide Grid Expansion

Active Projects:

Pioneer — **COD: 2015**

- 240 miles of 765 kV
- Partner: Duke Energy (50%)
- Estimated Cost: $1 billion
- ROE: 12.54%

PATH-WV — **COD: 2014**

- 275 miles of 765 kV
- Partner: Allegheny Energy (50%)
- Estimated Cost: $1.2 billion
- ROE: 14.3%

Tallgrass — **COD: 2013-14**

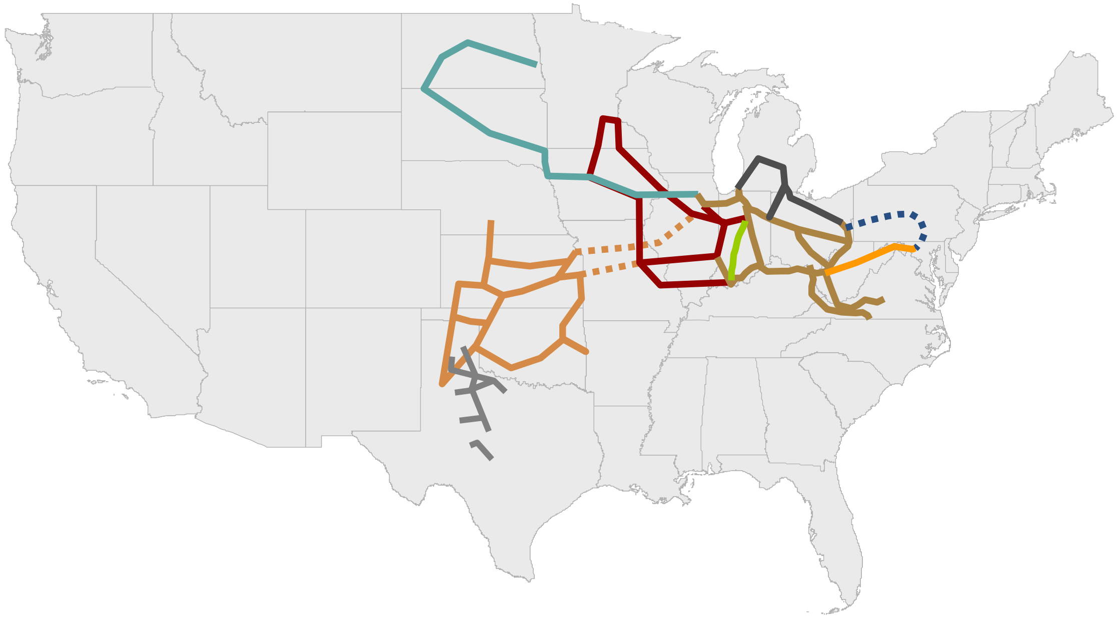
- 170 miles of 765 kV
- Partners: OG&E (50%) & MidAmerican Energy (25%)
- Estimated Cost: $500 million
- ROE: 12.8%

Prairie Wind — **COD: 2013**

- 110 miles of 765 kV
- Partners: Westar Energy (50%) & MidAmerican Energy (25%)
- Estimated Cost: $400 million
- ROE: 12.8%

ETT — **COD: 2013**

- 345 kV in ERCOT
- Partner: MidAmerican Energy (50%)
- Estimated Cost: $400 million
- ROE: 9.96%



Future Projects:

EHV Michigan — **COD: ~2020**

- 700 miles of 765 kV

PJM Projects

- Enhance existing 765/345 kV

Hartland — **COD: ~2020**

- 1000+ miles of 765 kV

MISO Vision Plan

- 765 kV Backbone

SPP Overlay — **COD: 2013-14**

- 765 kV Backbone

ETT — **COD: ~2018**

- 345 kV in ERCOT
- Additional CREZ spend of $750-$850 million

AEP AMERICAN ELECTRIC POWER

Overview of 2009 Guidance

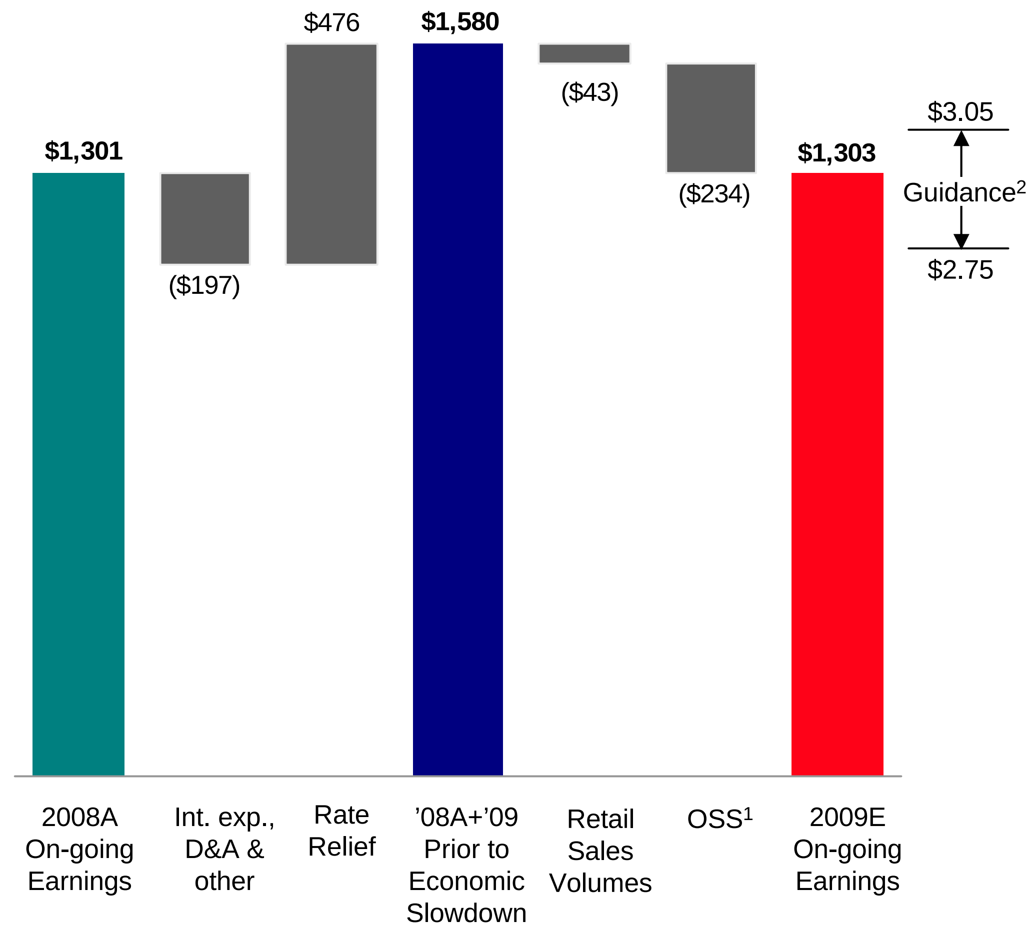
2009 Earnings Drivers:

- Rate relief - $732mm
- Economic slowdown
  - Lower OSS revenues
  - Lower loads

Long-term Earnings Drivers:

- Rate base investments
- Additional rate relief
- OSS/Retail load
- Transmission JV earnings

2008A-2009E Earnings Bridge ($mm)

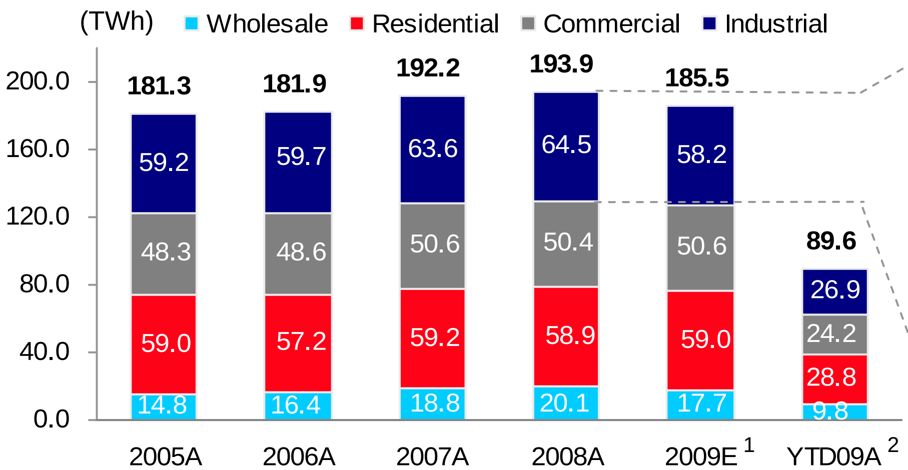


Note all items are presented after-tax
[1] Net of sharing
[2] Assumes 2009 average shares outstanding ~ 450 million

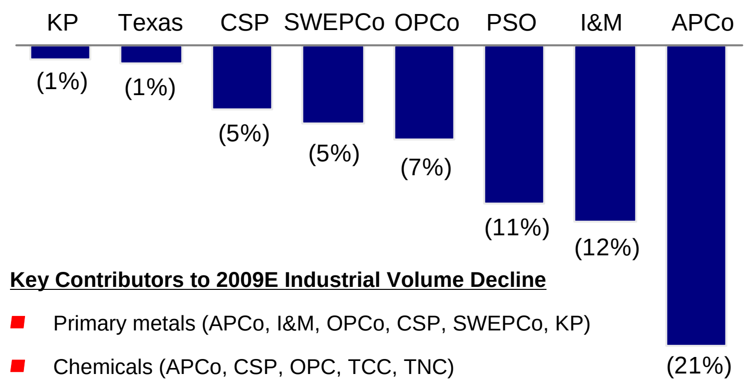
AEP AMERICAN ELECTRIC POWER

Key Drivers of 2009 Guidance: Retail Sales

Retail Load by Customer Class



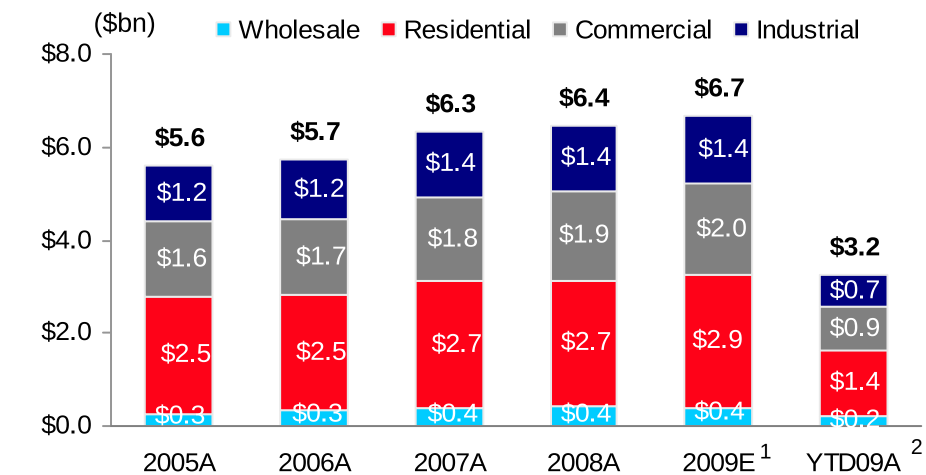
Forecast Drop in 2009 Industrial Sales

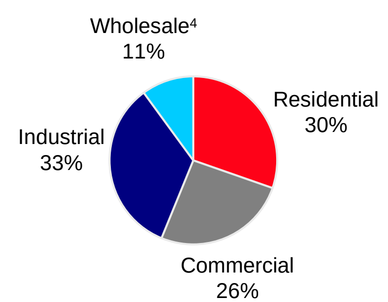


Key Contributors to 2009E Industrial Volume Decline

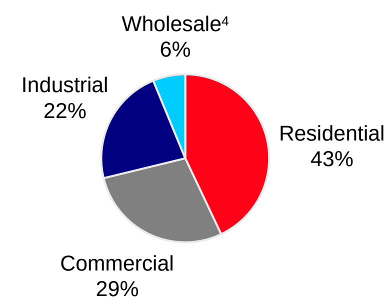
- Primary metals (APCo, I&M, OPCo, CSP, SWEPCo, KP)
- Chemicals (APCo, CSP, OPC, TCC, TNC)
- Paper (APCo, PSO, SWEPCo)
- Plastics & Rubber (APCo, CSP, OPCo, I&M)

Retail Base Revenue[3] by Customer Class





2008 Retail Load = 193.9 TWh



2008 Retail Base Revenue [3] = $6.4bn

AEP AMERICAN ELECTRIC POWER

[1] *2009E assumes normalized weather*
[2] *YTD09A represents actual results through June 30, 2009*

[3] *Excludes the impact of current year rate relief, fuel over/under recovery, PJM costs and consumables*
[4] *Wholesale includes sales to municipal and cooperative power systems, other wholesale, and other retail sales*

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

AEP®

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events and our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives, evolving public perception of the risks associated with fuels used before, during and after the generation of electricity, including nuclear fuel.

  - Ohio Distribution

June YTD 2011 Performance

June YTD 2011 Reconciliation

	EPS	Ongoing Earnings ($ in millions)
2010	$ 1.50	$720
Operations & Maintenance	$ (0.04)	
Other Costs, net	$ (0.05)	
Customer Switching	$ (0.06)	
Rate Changes	$ 0.15	
Off-System Sales	$ 0.07	
Weather	$ (0.02)	
2011	$ 1.55	$744

EPS Based on 482MM shares in YTD11

YTD 2011 Performance Drivers

- O&M increase of $30M, net of offsets, primarily due to higher storm expenses
- Other Costs, Net increased $35M primarily due to gain on sale of ICE shares in 2Q10 and increased taxes
- Customer Switching in Ohio up $43M from last year
- Rate Changes, net of offsets, of $110M from multiple operating jurisdictions
- Off-System Sales, net of sharing, were favorable by $49M due to higher volumes and higher power prices
- Weather was unfavorable by $15M vs. prior year, favorable $67M vs. normal

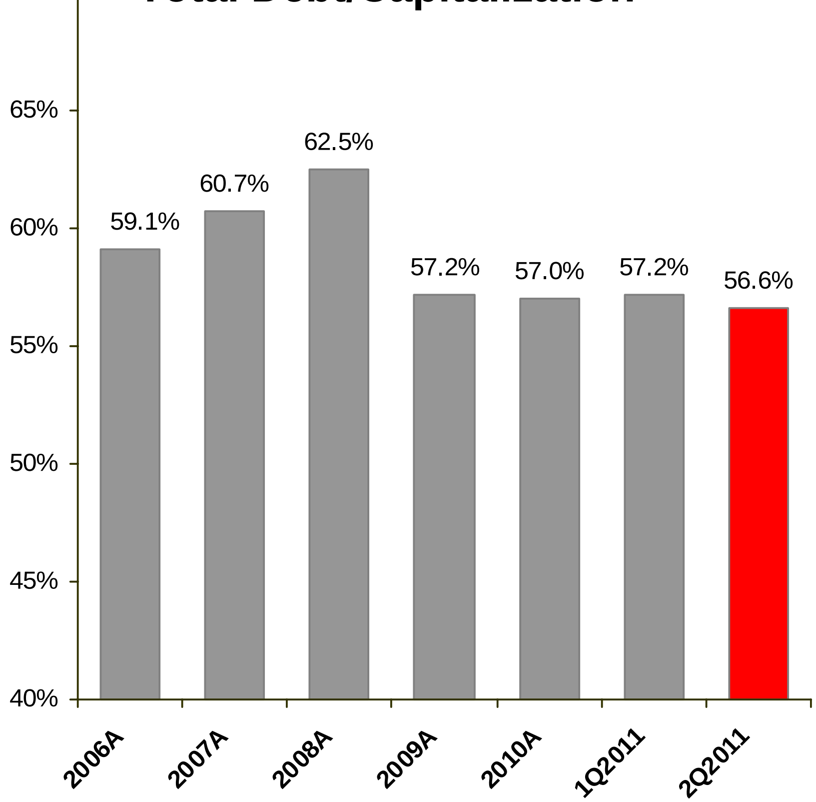
2011 On-going Earnings Guidance of $3.00 - $3.20 per share

AEP Texas Central Supreme Court Remand

- In early 2006, TCC received an order in the stranded cost proceeding enabling it to securitize $1.7 billion in stranded assets in October 2006, but denied recovery for other items.
  - TCC's inability to sell all of the capacity it was required to auction resulted in the PUCT rejecting the auction prices for purposes of calculating a legislatively-prescribed market-based true-up.
  - This led to a disallowance of $421 million and an after-tax impairment of $274 million being booked in 2005.
- In July 2011, the Texas Supreme Court reversed the PUCT's decision to reject use of auction prices, and the issue has been remanded to the PUCT.
- TCC is entitled to recovery of the $421 million plus carrying costs back to 2002. The carrying costs are expected to be $382 million.
- There will be regulatory proceedings and likely settlement discussions before the final amount is approved. TCC can securitize the recovery.

Capitalization & Liquidity

Total Debt/Capitalization



Note: Total Debt is calculated according to GAAP and includes securitized debt

Liquidity Summary (06/30/2011)

Liquidity Summary (unaudited)		**Actual**	
($ in millions)		Amount	Maturity
Revolving Credit Facility	$	1,500	Jun-13
Revolving Credit Facility		1,454	Apr-12
Total Credit Facilities		**2,954**	
Plus			
Cash & Cash Equivalents		417	
Less			
Commercial Paper Outstanding		(944)	
Letters of credit issued		(132)	
Net available Liquidity	**$**	**2,295**	

On July 26, 2011, we renewed and upsized the facility expiring in April 2012. The new facility has a capacity of $1.75B and expires in July 2016.

We also extended and repriced the facility expiring in June 2013. That facility now expires in June 2015.

This brings our total available capacity to $3.25B.

Ohio ESP Settlement

Gradual Transition to Market and Regulatory Stability in Ohio

- **Parties to the Settlement** - Signed by more than 20 organizations representing customers, competitive retail electricity suppliers, environmental groups, communities and other key stakeholders
- **Cases included in Settlement** - 2012 Electric Security Plan, Capacity Charges, Merger
- **Generation** - Corporate separation of Ohio generation assets targeted by May 2013 and transition all of Ohio generation supply to market by mid-2015; the company may pursue recovery of Pool modification costs once they exceed $50 million
- **Transition to market** - company will make a specific percentage of the Ohio retail load open to competitive retail suppliers at the RPM price for a three-year period. The remaining capacity that switches will be priced at $255/MW-day
  - Year one (2012), approximately 20 percent will be available
  - Year two (2013), approximately 30 percent will be available
  - Year three (2014 through May 2015), approximately 40 percent will be made available.
  - Standard service offer price beginning in June 2015 will be determined through auctions involving multiple suppliers of generation service. Auctions will begin as early as September 2013.
- **Fuel Adjustment Clause** - continues through May 31, 2015; parties to support legislation for securitization of fuel deferrals
- **Nonbypassable Generation Resource Rider** – allows the distribution company to recover costs related to building new generating assets dedicated solely to Ohio customers. Project-related costs will be presented in future PUCO cases.
- **Distribution Investment Rider** – Costs associated with new distribution investment to maintain and improve reliability will be recovered under this rider with an ROE of 10.5% based on a capital structure of 47% debt/53% equity. In its first year (2012), the rider will be capped at $86 million. An additional $18 million will be added in 2013 and an additional $20 million in 2014.
- **SEET ROE threshold of 13.5%**.

AEP Highlights

- Premier Utility Platform
- Traditional and Effective Regulatory Relationships
- Significant Investment Opportunities in Environmental Retrofits and Transmission
- Strong Value and Total Return Proposition

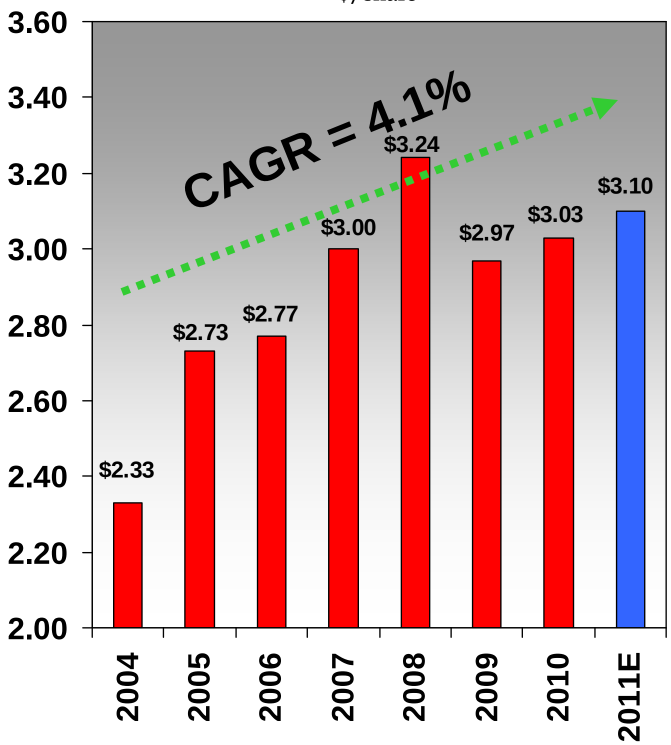
Earnings and Dividends

On-Going EPS History Since 2004

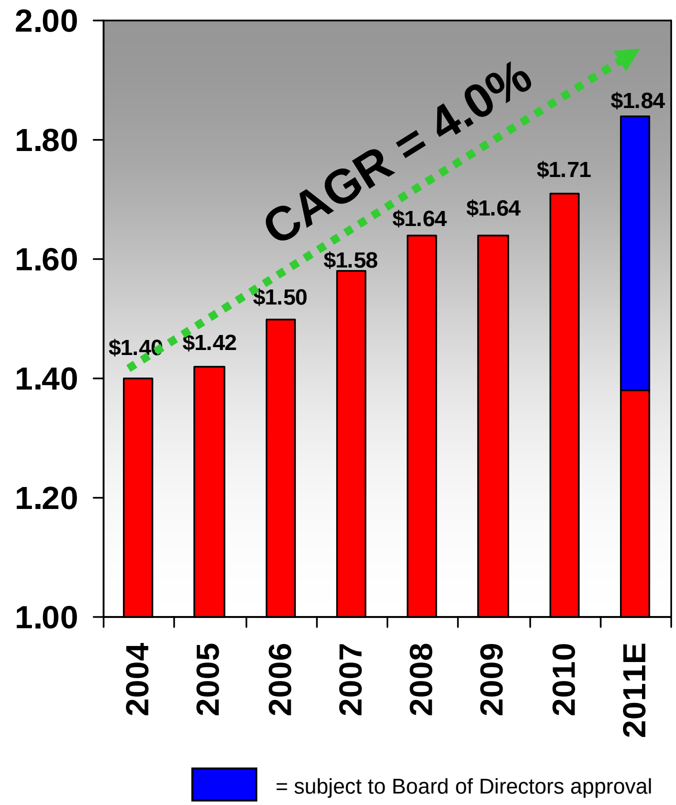
$/share



- Earnings growth largely attributed to capital investment program
- Pre-recession earnings supported by robust wholesale market activity and high power prices
- 2011 guidance range of $3.00 to $3.20 per share

Dividend History Since 2004

$/share



- Quarterly dividend <u>increased 12%</u> in 2010
- <u>405th consecutive</u> quarterly dividend paid September 9, 2011
- 50-60% payout ratio target
- Current yield near 5%

Detailed Ongoing Earnings Guidance

2010A: $3.03

2011E: $3.00 - $3.20

Summary Rate Case Information

AEP Ohio Distribution Rate Case – Docket #11-351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%. See ESP Settlement slide for a discussion of the Distribution Investment Rider which authorizes a rate increase of $86 million in 2012.

Summary Rate Case Information

APCo Virginia Base Rate Case – Docket #PUE-2011-00037

On March 31,2011 APCo filed an update to its pre-biennial base rate case for recovery of generation and distribution costs requesting an increase of $75 million ($126 million total increase less $51 million deferral of depreciation increase).

In conjunction with this case, an environmental rate adjustment clause (E-RAC), a generation rate adjustment clause (G-RAC) and a renewable portfolio standard rate adjustment clause (RPS-RAC) were filed. APCo has requested that rates in the base case, E-RAC and RPS-RAC go into effect on 2/1/2012 and the G-RAC on 3/1/2012.

I&M Michigan Base Rate Case – Docket # U-16801

On July 1, 2011 I&M filed a base rate case with the Michigan Public Service Commission requesting an increase of $24.5 million. Rates proposed in this filing are based on projected 2012 cost of service and will not go into effect until 2012, therefore rates will reflect a current cost of service. This filing includes revised depreciation rates to include additions since the last approved depreciation study as well as accelerated retirement of Tanners Creek Units1, 2 and 3. The requested ROE is 11.15%. In accordance with Michigan law I&M intends to implement rates, subject to refund, on January 1, 2012. An order is expected by mid-year 2012.

Projected Capital Structure – Company Position (12/31/12)

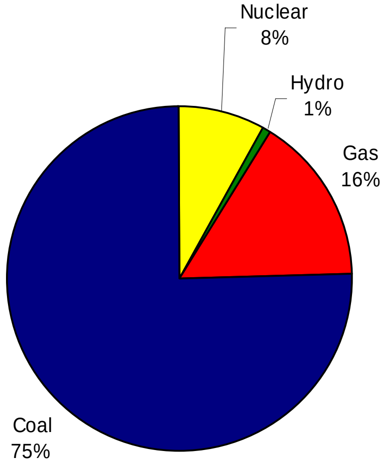
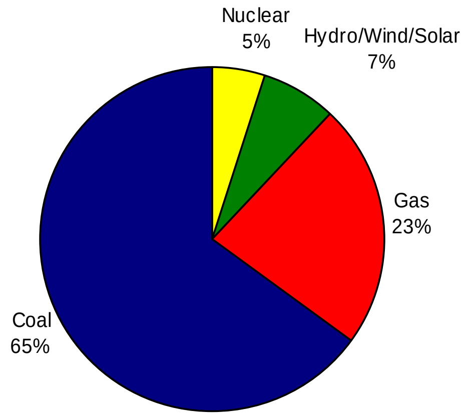
- Capacity reduction caused by retirements will create grid reliability issues particularly in the 2014-2016 time frame
- Net impact could be approx. 600 fewer jobs at AEP as well as indirect job losses affecting local vendors, contractors and service providers
- Annual lost wages of approximately $40 million
- Tax payments could decline by more than $30 million

Generation Transformation

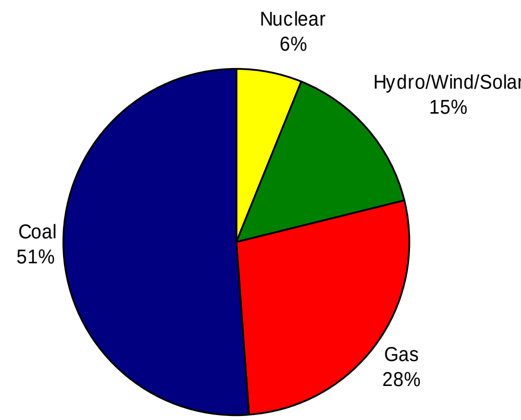
1990 AEP Generating Capacity by Fuel
37,428 total MW's



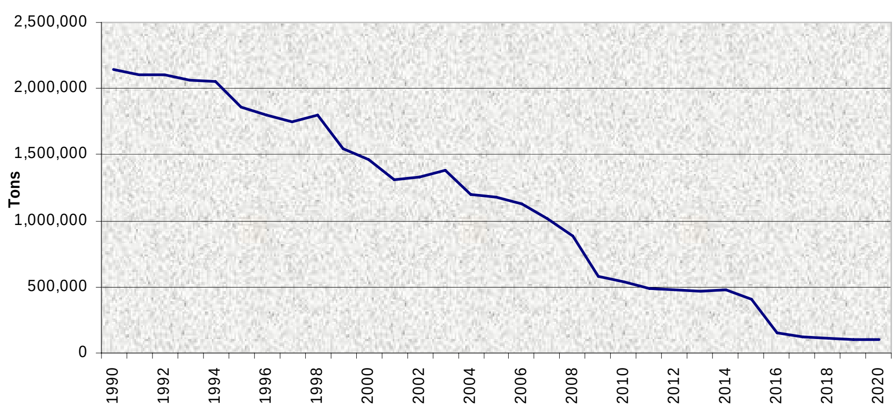
2010 AEP Generating Capacity by Fuel
39,910 total MW's



2020 AEP Generating Capacity by Fuel
37,707 total MW's



Total System NOx & SO2 (actual through 2010 and forecasted based on proposed EPA regulations)



- $7.2 billion capital invested from 1990-2010 to reduce emissions approximately 1.7 million tons
- Estimated $6-$8 billion additional capital investment from 2012-2020 for further reductions of approximately 440,000 tons

Transmission Investment Strategy

AEP®

- **Near-Term Investment** – Electric Transmission Texas (ETT) secures near term investment opportunities, allowing AEP to invest in the large, growth-oriented Texas transmission market. Total capital expenditures of $3 billion with a 9.96% ROE.

- **Mid-Term Investment** – Seven wholly-owned transcos allow for expansion and growth within AEP's existing utility footprint through an efficient recovery mechanism. Will spend $210 million in 2011 and more than $350 million in 2012. ROE is in the 11.20%-11.49% range.

- **Long-Term Investment** – Joint ventures provide opportunities for longer-term growth outside of AEP's existing utility footprint with forward looking formula rates, reasonable ROEs and FERC incentives where appropriate.

Transmission has a diversified investment approach that positions it as one of the key AEP growth businesses.

Texas Transmission Growth Strategy : Near Term Investment

AEP

Ownership Structure: 50/50 (AEP/MidAmerican Energy Holding Company)

Total Project Cost: Over $3 Billion

Growing Rate Base:

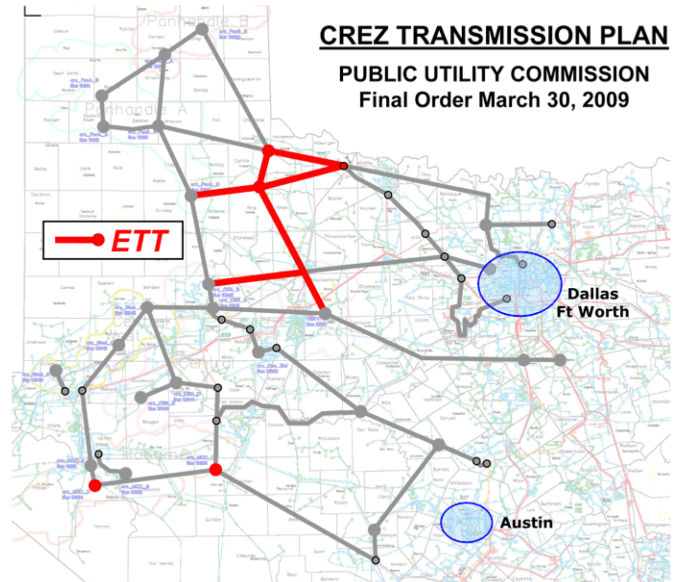
Current rate base is $412 million; expected to grow as follows:

2011: $490 million
2012: $750 million
2013: $1,200 million

ETT Electric Transmission Texas

Interim TCOS filings twice per calendar year

Approved ROE: 9.96%



- **Additional Projects in the Pipeline ~$1.5 B:**
  - Approximately 500 miles of lines and 29 substations with in-service dates through 2020

- **Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.4 B:**
  - Nine new transmission lines totaling approximately 600 miles and 16 substations
  - PUCT Certificate of Convenience and Necessity (CCN) proceedings underway; 5 lines already approved

Joint Venture Strategy: Long-term

- **Strategy**: JV's secure new investment opportunities with local utilities to diversify AEP's investment outside AEP's traditional footprint while providing longer-term incremental earnings**.** JV projects are well-suited for FERC formula rate recovery mechanism, including potential for incentive rates.

- **Future:** Federal/regional initiatives may accelerate expansion of EHV transmission (e.g. cap-and-trade, renewable portfolio standards, inter-region wide planning). Securing first mover advantage will enable AEP to secure LT investment opportunities.

- **Future flexibility**: Passive investment opportunities can be considered and can provide entry beyond SPP/PJM/ERCOT

A Century of Firsts

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

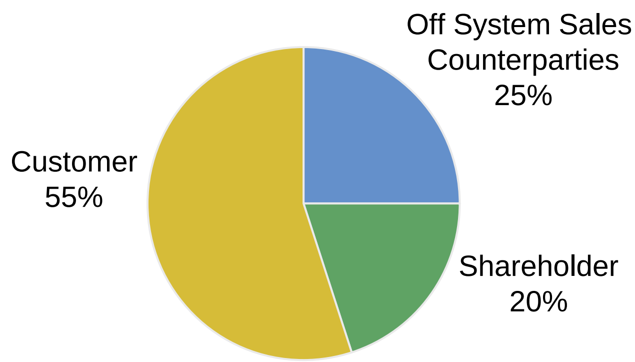
Fuel Recovery

AEP System



Fuel Cost Recovery
(on average)

- Fuel recovery varies by jurisdiction
- 80% of fuel cost is recoverable across the AEP System
- Active Fuel Clause Jurisdictions:
  - AEP EAST: APCo, I&M, KPCo, KGP, WP
  - AEP WEST: PSO, SWEPCO

Note: Fuel recovery percentages are based on estimates for 2006 fiscal year

Jurisdictional Fuel Clause Summary

STATE	FUEL CLAUSE	ADJUSTMENT FREQUENCY
Arkansas	Yes	Monthly
Indiana	Yes	Capped at increasing rates through June 30, 2007
Kentucky	Yes	Monthly
Louisiana	Yes	Monthly
Michigan	Yes	Annually
Ohio	No	Although there is no recovery mechanism in Ohio, the RSP provides for a 3% (CSP) and 7% (OP) increase in generation rates annually, which includes fuel beginning January 2006 and extending through December 2008.
Oklahoma	Yes	Annually
Tennessee	Yes	Monthly
Texas (SPP)	Yes	Annually
Virginia	Yes	Annually
West Virginia	Yes	Annual ENEC currently suspended. On Jan 6, 2006, WVPSC approved deferral accounting for ENEC to begin July 1, 2006 and new rates to be effective July 28, 2006.

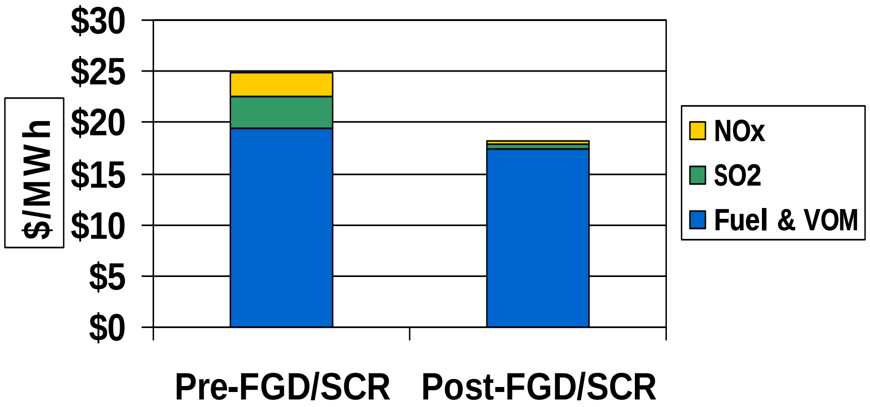
Note: MW capacity shown represents AEP's owned capacity only

INSTALLATION OF SCR AND FGD WILL ALLOW OUR COAL FLEET TO REMAIN EXTREMELY COST COMPETITIVE

Low Cost Production Supports Investment & Investment Sustains Low Cost Production

- Lowers exposure to high cost emission allowances
- Creates opportunity to burn wider variety of lower cost fuels
- Improves baseload operation (higher capacity factor, higher margin)
- All-in cost of electricity, including FGD/SCR investment, remains low

Typical Pulverized Coal Plant
Comparison of Variable Production Cost
Pre- and Post- FGD/SCR (future view)*



* Assumes annual NOx program

AEP WILL REMAIN THE LOW COST PRODUCER FOLLOWING COMPLETION OF ENVIRONMENTAL RETROFIT PROJECTS

Investing in IGCC

Integrated Gasification Combined Cycle

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called "syngas" – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

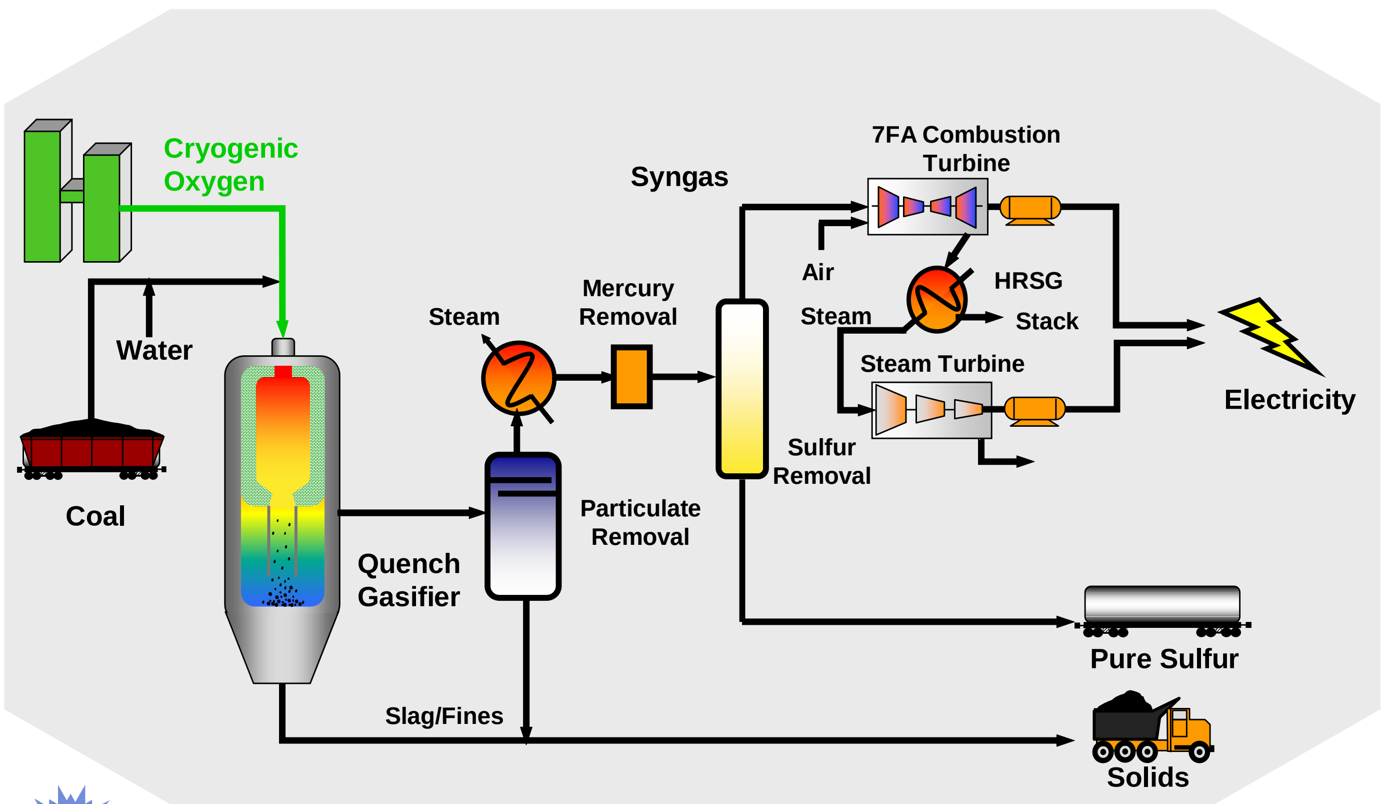
Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2 , mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP's eastern service territory.

AEP is currently working with a technology provider to develop a firm price for an IGCC facility to be built in our eastern service region. This price will be available in 2006. AEP intends to seek regulatory recovery approvals in advance of building the plant.

Looking To The Future - IGCC



162110 - GJS/CE-01/1-23-02

AEP HAS ANNOUNCED ITS INTENTION TO CONSTRUCT A COMMERCIAL-SCALE INTEGRATED GASIFICATION COMBINED CYCLE (IGCC) PLANT BY THE END OF THE DECADE

Investing In IGCC

Generation Technology Comparative Statistics

	PC	IGCC	NGCC
Nominal Capacity (MW)	**600**	**600**	**600**

Estimated Cost of Electricity, with CO_2 Capture ($/MWh)	**94**	**87**	**137**

Source: Results of AEP analysis based on EPRI studies

- Total Plant Cost (2005$'s) includes the cost to **E**ngineer, **P**rocure and **C**onstruct plant and owner's direct costs; does not include interconnections, transmission lines, transmission upgrades, contingency or AFUDC.
- Assumes Northern Appalachian Coal price of $1.60 /mmBtu for PC and IGCC, and natural gas price of $7.00/mmBtu for NGCC.
- Assumes 85% capacity factor for PC and IGCC, 25% for NGCC.
- Production Cost includes Fuel Cost and Variable Operations & Maintenance (VOM) cost.
- Cost of Electricity based on EPC cost, does not include the cost of Emission Credits.
- Cost of Electricity with CO_2 capture does not include sequestration cost.

IGCC TECHNOLOGY IS STRATEGIC TO KEEPING COAL IN THE MONEY

Regulatory Overview

Regulatory Activity Underway

- TCC Request for Securitization of Stranded Costs
- Indiana Depreciation Petition
- APCo General Rate Case Filing in Virginia
- APCo Filing for Recovery of E&R Costs in Virginia
- APCo & WPCo Base Rate & Expanded Net Energy Cost (ENEC) Filing in West Virginia – Settlement Pending
- IGCC – Received Rate Authorization of Pre-Construction Costs

YEAR-TO-DATE, SECURED $415 MILLION OF THE $500 MILLION RATE RECOVERY ASSUMED IN 2006 EARNINGS GUIDANCE RANGE

Texas Regulatory Activity

TCC Stranded Cost Recovery Case

- February 16, 2006 – PUCT final order provides for net true-up of $1.475 billion
- March 3, 2006 – Requested approval of financing order to issue $1.8 billion in low-cost securitization bonds
- May 22, 2006 – Settlement agreement filed with PUCT in securitization proceeding
  - Securitization financing order expected in June
  - Issuance of securitization bonds expected late 3Q06

Settlement Agreement (if approved):

- Securitization amount of $1.72 billion
- Securitization order not appealable
- Issues to be settled by the Commission:
  - Correct amount for ADFIT (assumed to be $315 million)
  - The treatment of ADFIT benefits either to be recovered through a CTC or as a reduction of the securitized amount
  - The treatment of EDFIT and ADITC ($90 million in total) either as a reduction to the costs to be recovered through a CTC or as a reduction to the securitized amount

- June 2006 – Request approval for CTC to address other true-up items
  - Expected $476 million credit to customers (assuming ADFIT is refunded through CTC)
  - Sept 2006 – CTC to be implemented

Regulatory Activity Underway

Indiana Depreciation Filing

December 1, 2005 – I&M filed petition with the IURC for accounting authorization to revise the depreciation rates applicable to its electric utility plant in service

- Based on a 2004 depreciation study, I&M recommends a decrease in annual depreciation expense of approximately $45 Million on an after-tax Indiana jurisdictional basis.
- Procedural schedule has been set with final order expected in third quarter 2006

Appalachian Power - Virginia E&R & General Rate Case Activity

Virginia E & R Cost Recovery Factor - Filed July 1, 2005 – Originally filed for recovery of $62.1 Million in new Environmental & Reliability costs

- Oct 14, 2005 – SCC ruled VA law does not allow recovery of prospective costs - $48.6 Million
- Nov 14, 2005 - APCo filed supplemental direct testimony which included updated actual E&R costs incurred through Sept. 30, 2005 of $21.1 million

Virginia General Rate Case Filing – Filed May 4, 2006 – Seeking $225.8MM increase in base rates, partially offset by a proposed credit to reflect sharing of $27.3MM in margins from off system sales (OSS), resulting in a net annual increase of $198.5MM.

- May 30, 2006 – SCC suspended the effective date of the rates until 10/2/06, upon which, the full rate increase requested by APCO-VA will be implemented, subject to refund.

Procedural Schedule

June 30, 2006	Company to file additional direct testimony
Sept 1, 2006	Intervenor testimony due
Oct 4, 2006	SCC Staff testimony due
Oct 19, 2006	Company to file rebuttal testimony
Nov 17, 2006	Hearings to commence

Regulatory Activity Underway

Appalachian Power & Wheeling Power – West Virginia Base Rate Case & ENEC Reactivation

Filed April 24, 2006 – Joint Settlement Agreement

- Estimated overall impact of revenue increases to be phased-in through 2009:
  - $129 Million
  - 16% Increase
- Provides for timely recovery of Wyoming-Jacksons Ferry 765kV line and Mountaineer & Amos FGDs

Phased-In Settlement Agreement Increases:

- ✓ July 28, 2006 - $61 Million*
- ✓ July 1, 2007 - $36 Million**
- ✓ July 1, 2008 - $14 Million**
- ✓ July 1, 2009 - $18 Million**

* Excludes ENEC over-recovery negative surcharge ($17 million) -- surcharge does not have an earnings impact

** Estimated

Settlement Details

- ✓ Increase effective July 28, 2006:

($18MM)	Base Rates
$56MM	ENEC
$23MM	WJF & FGD investment @ 12/31/05
$61MM	Gross revenue increase
($17MM)	ENEC over-recovery negative surcharge
$44MM	Net increase effective 7/28/06

- ✓ Phased-in revenue increases annually on July 1, 2007 – 2009 provides for timely recovery of FGD project balances at 12/31 of prior year

IGCC Regulatory Activity

Ohio - Cost Recovery Filing

Phase 1 – PUCO AUTHORIZED

- Effective during 2006
- Seeks recovery of initial costs, including those already incurred, such as site engineering and various other engineering services
- Approximately $23.7 Million

Phase 2

- Effective 2007- mid 2010 (Construction Phase)
- Seeks recovery of carrying costs associated with plant construction

Phase 3

- Effective mid 2010 (Commercial Operation begins)
- Seeks recovery of projected $1.174 Billion cost of plant over its operating life

Ohio Next Steps

2006:

- Secure cost recovery plan
  - April 10, 2006 – PUCO authorized implementation of Phase 1 Rates
  - Phase 2 & 3 ruling – Post October 2006 – following completion of FEED study
- Finalize site selection
- Negotiate with suppliers

2006—2007:

- Obtain permits and finalize engineering and procurement

2007—2010:

- Construct and start-up plant

West Virginia IGCC Activity

On January 11, 2006, Appalachian Power Co. filed a Certificate of Public Convenience and Necessity seeking authority to construct a 600-MW IGCC facility in West Virginia.

SEEKING AUTHORITY FOR THREE PHASE RECOVERY APPROACH IN OHIO

Regulatory Activity Completed

Ohio – Rate Stabilization Plan (2006 – 2008)

- Annual 3% and 7% generation rate increases at CSP & OP, respectively
- POLR rate rider for environmental additions
- Ability to request additional 4% annual increase in generation rate, for certain specific incremental costs
- Elimination of 5% residential generation credit (stipulated in the pre-existing Electric Transition Plan of 2000)

AEP East FERC Transmission Case

December 20, 2005 – FERC approved settlement allowing wholesale transmission rates to increase

- Results in $22 million net revenue increase in 2006 from wholesale transmission

Ohio Companies Pass Through of FERC OATT Changes

May 26, 2006 – PUCO approved a final order allowing for adjustment of the transmission component of standard service tariffs to FERC-approved rates

- Transmission rate adjustment results in additional annual revenues of approximately $89 million ($63 million in 2006)

SWEPCo Fuel Factor/Surcharge Filing

January 12, 2006 – Settlement approved by PUCT

- Fuel factor will increase SWEPCo's annual Texas retail fuel-related revenues by approximately $46 million
- Interim surcharge will collect the under-recovery amount of $44 million, including interest

Appalachian Power- Virginia Fuel Factor Increase

- $57.7 million increase in fuel factor approved on January 20, 2006

Kentucky Base Rate Case

Final order approved on March 14, 2006

- $41 million annual increase in base rates
- Rates effective March 30, 2006

Capital Investment

Ending Cash Balance	$ 320	$ 401	$ 326	$ 200	$ 200

* Statement of Cash Flows shows $2.404B for 2005 and $1.637 for 2004 which reflects difference in accruals from previous year

* * Cash Flow from Operations assumes full rate recovery on capital expenditures.

Note: Capital forecasts do not include amounts for AEP Interstate Project. Totals may not foot due to rounding.

REGULATORY RECOVERY WILL DRIVE CAPITAL INVESTMENT THROTTLE

New Generation

IGCC

- Expect to obtain permits and finalize engineering by 2007
- Construction of 600 MW facility to begin in 2007
- Commercial operation date expected in 2010

SWEPCO

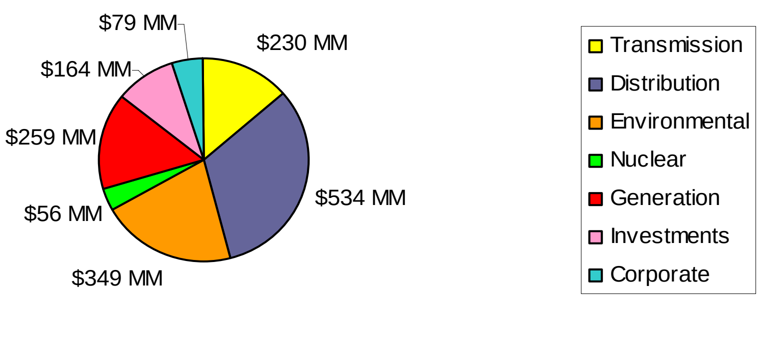
- On May 31, 2006 SWEPCo announced plans to build $1.4 billion of new generation
- Expected generation build includes a simple-cycle gas turbine totaling up to 450 MW, combined-cycle gas plant totaling 480 MW and a new base load coal- or lignite fueled plant

PSO RFPs

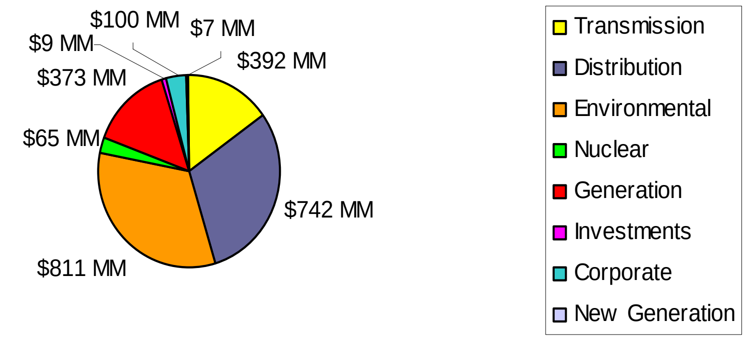
- Submitted RFPs totaling 900 MW of baseload and peaking capacity
- Two peaking RFPs totaling 340 MW awarded
- Commercial operation dates expected in 2008 and 2011

Capital Investment 2004 - 2006

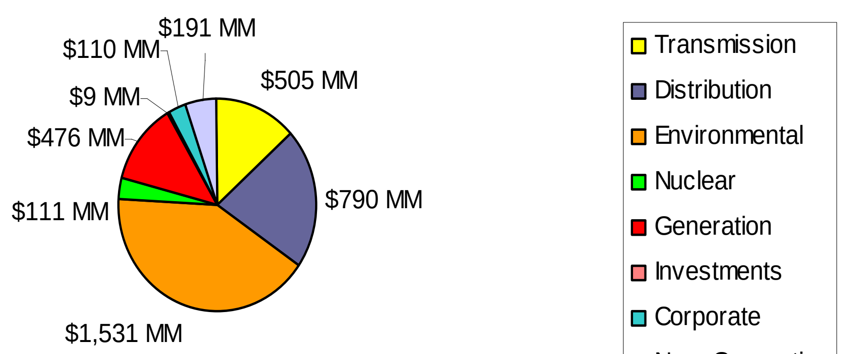
2004 Actual Totaled $1.6 Billion



2005 Actual Totaled $2.5 Billion (see note below)



2006 Projected Totals $3.7 Billion



Notes: 2005 Statement of Cash Flows shows $2.402B which reflects difference in accruals from 2004 to 2005.
Figures exclude AFUDC.

Summary of Major 2006 Financial Performance Drivers

- Load Growth of 2.5%
- $500MM rate recovery assured or in progress
- Rising fuel costs of 11-13%
- Higher planned outages, increased retail load and sale of TCC generation to impact off system sales
- Decline in utility O&M
- Parent Company improvement (debt & interest expense reduction)

TRADITIONAL UTILITY FACTORS WILL DRIVE 2006 PERFORMANCE

2006 Projected Cash Flow

($ in millions)	2005 Actual	2006 Guidance *
Beginning Cash Balance	**$ 320**	**$ 401**
Cash from Operations:		
Income from Continuing Operations	787	1,023

* Includes expenditures of other subsidiaries not shown. The figures reflect construction expenditures, not investments in subsidiary companies.

2006 Key Operating Company Highlights

Dependent on Actual Capital Investment

Company	Projected Capital Expenditures	(in millions) Projected Issuances	Target Equity Ratio
APCO	$943	$500 - $600 (completed*)	42-45%
CSP	$343	$100 - $150	44-48%
I&M	$311	$400 - $500	38-42% (a)
KPCo	$100	$50 - $75	42-45%
OPCo	$1,070	$450 - $550	44-48%
PSO	$279	$150 - $200	44-48%
SWEPCo	$288	$100 - $150	44-48%
TCC (b)	$278	$0	40%
TNC	$73	$0	40%

*Issuances completed in 2006 totaling $550 Million

(a) Ratios include impact of Rockport 2 lease.

(b) Excludes impact of securitization.

MAINTAIN FINANCIAL STRENGTH OF SUBS BY RETAINING AND/OR INFUSING EQUITY CAPITAL DEPENDING ON THEIR CREDIT RATIOS AND FREE CASH FLOW

p. 43

Long-Term Debt Guidelines

Issuers:

- Issue at operating companies.

Size:

- Make transactions index eligible if possible.
- When possible, issue a size sufficient for competitive execution.

Maturity:

- Issue maturities for which the market has appetite.
- Achieve weighted average life targets for operating companies, generally between 10-15 years.

Timing:

- Will issue based on the timing of maturities and levels of short-term debt as driven by capital spending and operating cash flow.

Long-Term Debt Maturity Profile[1]

Year	2006[2]	2007	2008
AEP Service Corporation	$ 2,000,000[3]	$ 2,000,000[3]	$ 34,000,000

What AEP Offers

Utility Operations: The Platform for Growth & Financial Strength

1. Strength and scale in assets and operations
2. Focused utility business model
3. Earnings growth driven by native load & capital investment
4. Pioneering advanced technologies in the sector
5. Solid liquidity position and stable credit profile
6. Attractive dividend yield in excess of 4%

Summary Rate Case Information

West Virginia Base Case Rate Filing

On August 26, 2005, Appalachian Power Co. and Wheeling Power Co. filed an application with the West Virginia Public Service Commission (WVPSC) to increase electric rates and charges, a request for the reactivation and modification of the expanded net energy cost mechanism (ENEC), a proposal for the disposition of Appalachian Power Company's ENEC over-recovery balance, a request for implementation of a System Reliability Tracker mechanism, and a request for waiver of certain provisions of the Commission's Rules. APCo filed supplemental testimony on January 18, 2006 to reflect Ceredo plant purchase and other miscellaneous items resulting in a revised revenue requirement of $171 Million. On April 24th, APCo and Wheeling Power, together with the PSC staff and the Consumer Advocate in WV, filed a joint settlement agreement in the companies' rate case. The agreement provides for an initial $44 million increase in revenues, effective July 28, 2006. The initial increase consists of a $56 million increase for fuel and purchased power expenses, and $23 million for recovery of WJF transmission line costs and environmental investments to date. These increases are partially offset by an $18 million base rate reduction and a $17 million credit to customers for previously over-recovered fuel costs. (Docket #: 05-1278-E-PC-PW-42T)

Summary Rate Case Information

Virginia E&R Factor Filing

On July 1, 2005, Appalachian Power Co. filed a request with the Virginia SCC to recover incremental actual and projected costs for environmental compliance and T&D System reliability in the amount of $62.1MM. The SCC has ruled that under applicable VA law, it does not have authority to approve the recovery of projected E&R costs before their actual incurrence and adjudication. APCo filed supplemental direct testimony which included actual costs incurred for E&R thru September 30, 2005 of $21.1 million. Hearings concluded in March. Briefs were filed in early April. We are awaiting a Commission order. Docket # PUE-2005-00056

Capital Structure – Company vs. Staff

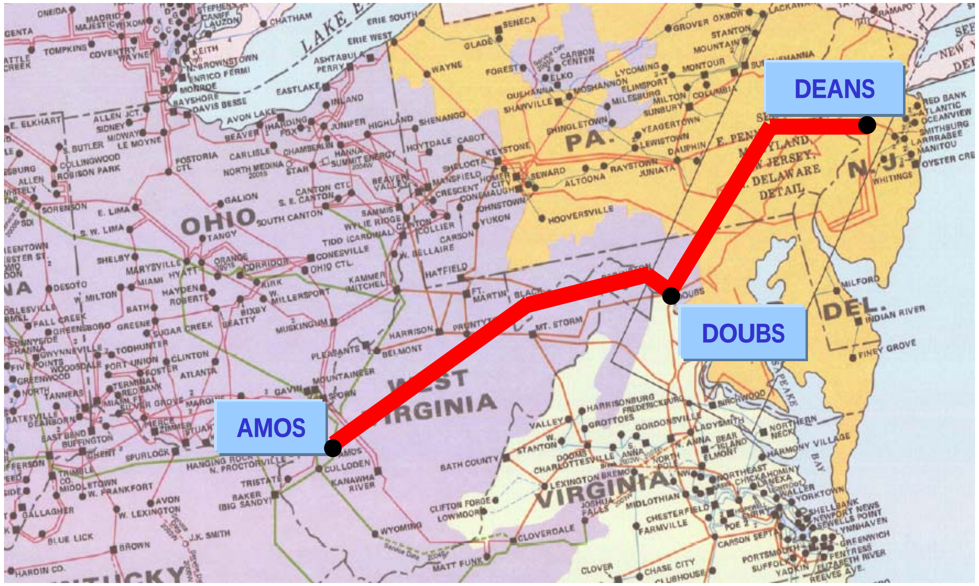
AEP Interstate Project



Map of the Proposed AEP Interstate Project 765 kV Transmission Line (Line route is conceptual and subject to change in regulatory and PJM Regional Transmission Expansion Plan processes)

- Line connects AEP's Amos 765 kV station to Allegheny Power's Doubs 500 kV station in Maryland, and terminates at PSEG's Deans 500 kV station in New Jersey
- Total line length is approximately 550 miles
- Will improve power transfer capability from the Midwest to the Mid-Atlantic by 5,000 MW
- Expected to cost $3 billion (subject to change based on a detailed investigation)
- Not yet determined which other non-AEP companies may be interested in participating
- Any financing activity relating to this project would be structured to allow AEP to meet its consolidated debt-to-cap target of approximately 60% and maintain its BBB credit rating
- Project expected to be in service in 2014

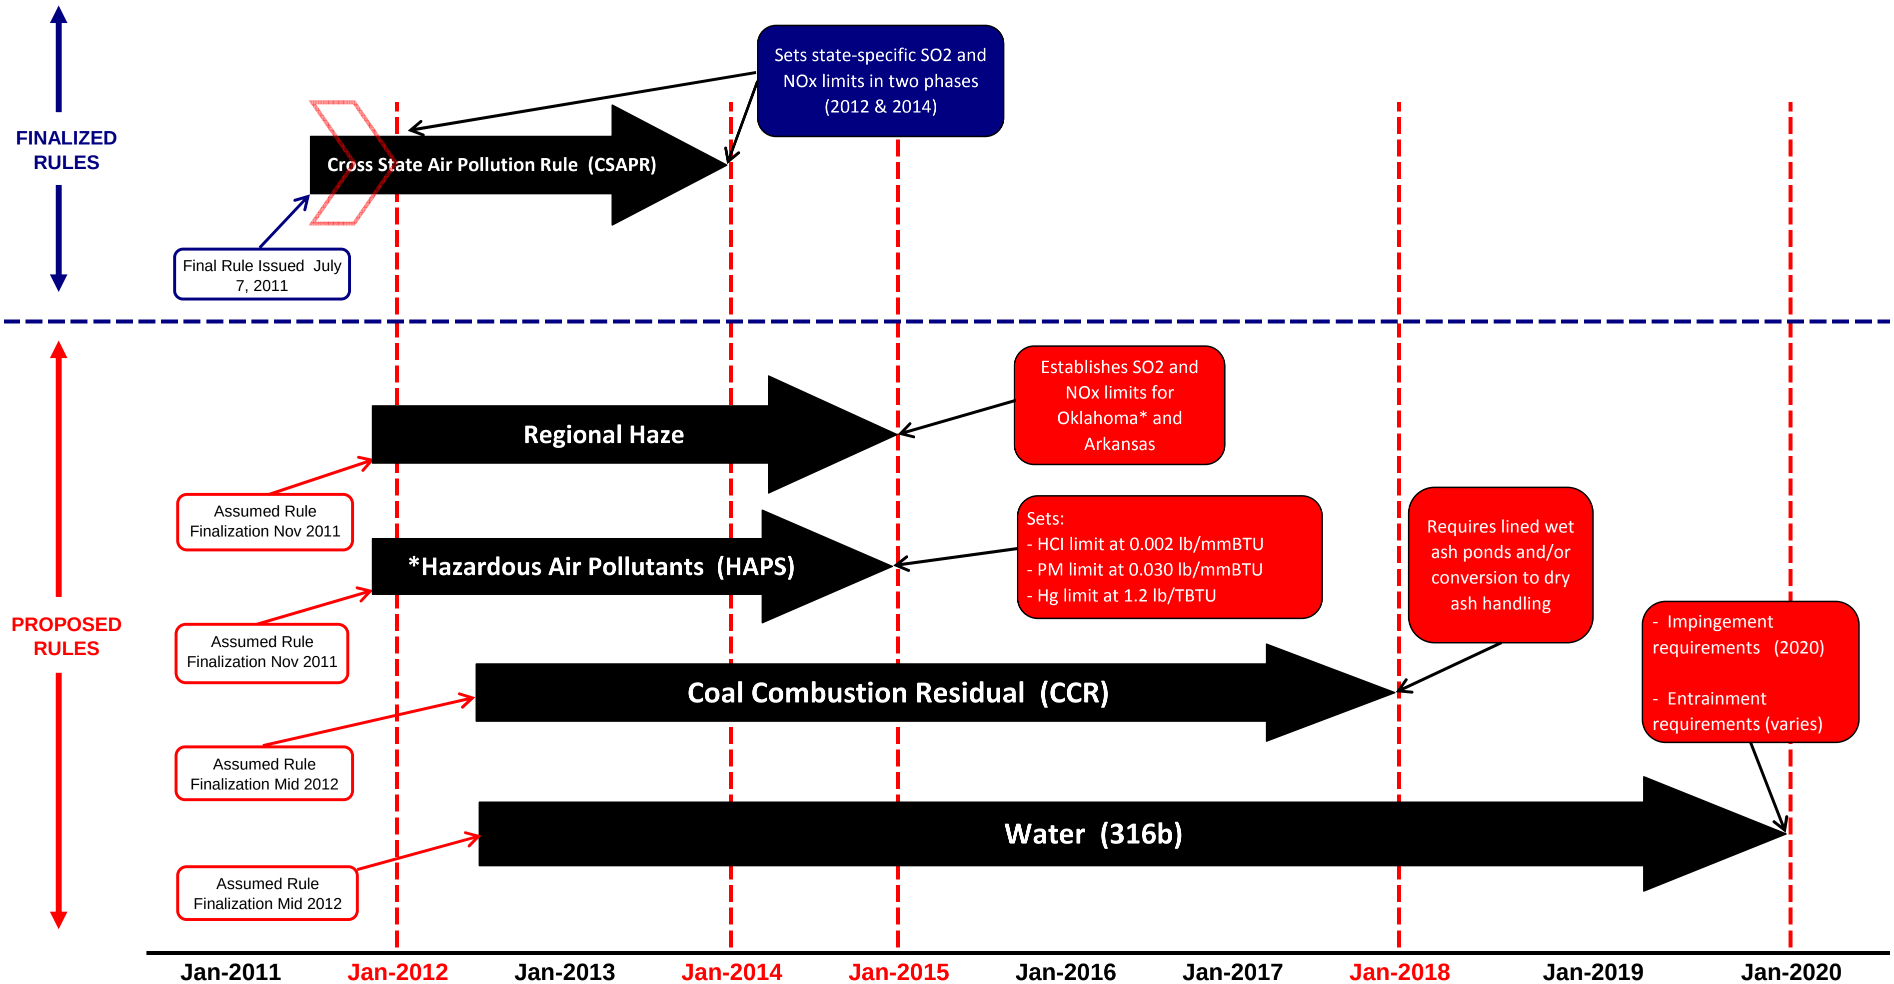
EPA Regulatory Deadlines



*** Units that will be retrofit may be eligible for a one year compliance extension from the EPA related to HAPs and the Oklahoma units may also be eligible for a one year compliance extension under Regional Haze.**

Strictly Confidential

Turk Plant

- John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant. Located in Arkansas. SWEPCo owns 73 percent or roughly 440 megawatts of the total unit.
- The cost of the plant and related transmission is anticipated at $1.7 billion with AEP's share approximately $1.3 billion (excluding AFUDC) and will begin commercial operation in 2012.
- The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls

- $1.2 billion capitalized expenditures 6/30/11. SWEPCO's contractual commitments $157MM.
- Third party owners include: Arkansas Electric Cooperative Corp. (12%), East Texas Electric Cooperative (8%), and Oklahoma Municipal Power Authority (7%)

Turk Plant Proceedings

Water Permit

- In 2009 a wetlands permit was issued by the U.S. Army Corps of Engineers.
- In 2010 the Sierra Club, Audubon Society and others filed a complaint in Federal Court challenging the Corps of Engineers permit and NEPA review
- Later in 2010 the Hempstead County Hunting Club also filed a complaint challenging the Corps permit and claiming that SWEPCO was not entitled to proceed under the exemption from the state CECPN requirements.
- A preliminary injunction was issued in October 2010 halting remaining work under the Corps permit and the CECPN claims were certified to the Arkansas Supreme Court
- In 2011 Arkansas Supreme Court determined that claims must first be brought before the APSC and that federal court does not have jurisdiction to hear state law claims.
- Preliminary injunction was upheld by the Court of Appeals in July, 2011.
- After the settlement with the Hunting Club and all named individuals, SWEPCO filed motions to dismiss the remaining claims
- Cross motions for summary judgment are also pending before the District Court

Air Permit

- Received required air permit approval from Arkansas Dept. of Environmental Quality (ADEQ) in Nov 2008.
- In Dec 2008, opponents filed an appeal with the Arkansas Pollution Control & Ecology Commission.
- Permit was Affirmed by the Commission in January 2010.
- Same parties filed an appeal with the Hempstead County Circuit Court.
- Circuit Court affirmed Commission's decision in December 2010.
- Same parties filed an appeal with the Arkansas Court of Appeals.
  - Briefing underway
  - A decision is likely early next year

In July 2011, SWEPCO reached an agreement resolving all pending matters with the Hunting Club and several other parties. The Hunting Club's challenge regarding the Water Permit was dismissed and the appeal of the Air Permit was withdrawn. SWEPCO was unable to resolve claims by the Sierra Club and the Audubon Society. Their challenges to the wetlands and air permits will continue.

Regulatory Update

Ohio ESP Settlement

- **Parties to the Settlement** - Signed by more than 20 organizations representing customers, competitive retail electricity suppliers, environmental groups, communities and other key stakeholders.
- **Cases included in Settlement** - 2012 Electric Security Plan, Capacity Charges, Merger.
- **Generation** - Corporate separation of Ohio generation assets targeted by May 2013 and transition all of Ohio generation supply to market by mid-2015; the company may pursue recovery of Pool modification costs once they exceed $50 million.
- **Transition to market** - company will make a specific percentage of the Ohio retail load open to competitive retail suppliers at the RPM price for a three-year period. The remaining capacity that switches will be priced at $255/MW-day.
    - Year one (2012), 21 percent will be available at RPM price; Year two (2013), 31 percent will be available at RPM price; Year three (2014 through May 2015), 41 percent will be available at RPM price.
    - Standard service offer price beginning in June 2015 will be determined through auctions involving multiple suppliers of generation service. Auctions will begin as early as September 2013.
- **Fuel Adjustment Clause** - continues through May 31, 2015; parties to support legislation for securitization of fuel deferrals.
- **Nonbypassable Generation Resource Rider** – allows the distribution company to recover costs related to building new generating assets dedicated solely to Ohio customers. Project-related costs will be presented in future PUCO cases.
- **Distribution Investment Rider** – Costs associated with new distribution investment to maintain and improve reliability will be recovered under this rider with an ROE of 10.5% based on a capital structure of 47% debt/53% equity. In its first year (2012), the rider will be capped at $86 million. An additional $18 million will be added in 2013 and an additional $20 million in 2014.
- **SEET ROE threshold of 13.5%**.
- **Hearing Scheduled for October 4, 2011**

Gradual Transition to Market and Regulatory Stability in Ohio

Summary Rate Case Information

AEP Ohio Distribution Rate Case – Docket #11-351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%. A procedural schedule and settlement agreement are both pending.

APCo Virginia Base Rate Case – Docket #PUE-2011-00037

On March 31,2011 APCo filed an update to its pre-biennial base rate case for recovery of generation and distribution costs requesting an increase of $75 million ($126 million total increase less $51 million deferral of depreciation increase).

In conjunction with this case, an environmental rate adjustment clause (E-RAC), a generation rate adjustment clause (G-RAC) and a renewable portfolio standard rate adjustment clause (RPS-RAC) were filed.   APCo has requested that rates in the base case, E-RAC and RPS-RAC go into effect on 2/1/2012 and the G-RAC on 3/1/2012.

I&M Michigan Base Rate Case – Docket # U-16801

On July 1, 2011 I&M filed a base rate case with the Michigan Public Service Commission requesting an increase of $24.5 million. Rates proposed in this filing are based on projected 2012 cost of service and will not go into effect until 2012, therefore rates will reflect a current cost of service. This filing includes revised depreciation rates to include additions since the last approved depreciation study as well as accelerated retirement of Tanners Creek Units1, 2 and 3. The requested ROE is 11.15%. In accordance with Michigan law I&M intends to implement rates, subject to refund, on January 1, 2012. An order is expected by mid-year 2012.

I&M Indiana Base Rate Case Cause #44075

On September 23, 2011 I&M filed a base rate case with the Indiana Utility Regulatory Commission requesting an increase of $148.7 million ($178.4 million in base revenues offset by $29.7 million in proposed changes to the OSS, PJM and CCT riders). Rates proposed in this filing are based on a historical 03/31/2011 cost of service and will not go into effect until an order is issued. The requested ROE is 11.15%. An order is expected by the end of 2012 or early 2013.

Historical Capital Structure – Company Position (03/31/2011)

	% of Capitalization	Cost Rate	Weighted Return
Long-Term Debt	38.74%	6.33%	2.45%
Common Equity	42.67%	11.15%	4.76%
Preferred Stock	0.20%	4.58%	0.01%
Other Items	18.39%	various	0.16%
Total	100.00%		7.38%

Procedural Schedule - TBD

Required Rate Relief – Company Position (03/31/2011)

***represents a negotiated settlement

AEP Texas Central Supreme Court Remand

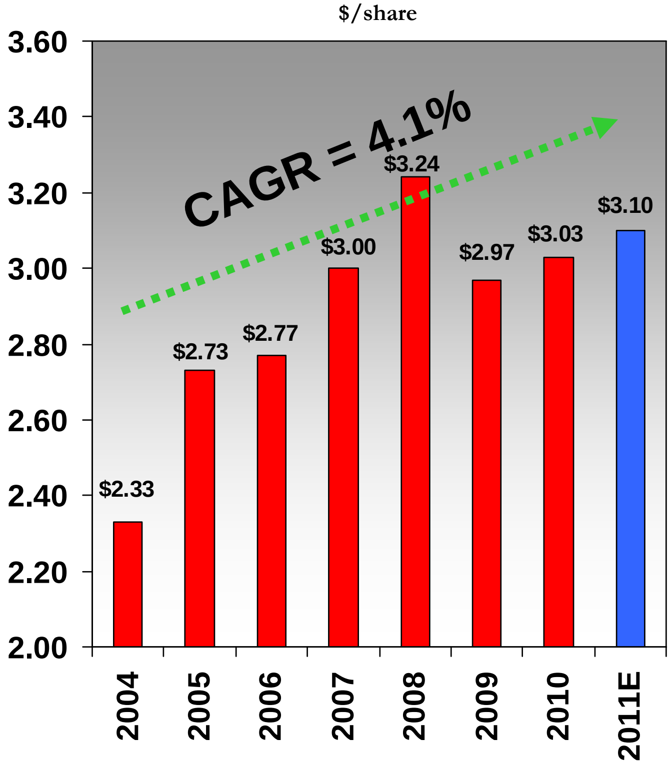
- In early 2006, TCC received an order in the stranded cost proceeding enabling it to securitize $1.7 billion in stranded assets in October 2006, but denied recovery for other items.
  - TCC's inability to sell all of the capacity it was required to auction resulted in the PUCT rejecting the auction prices for purposes of calculating a legislatively-prescribed market-based true-up.
  - This led to a disallowance of $421 million and an after-tax impairment of $274 million being booked in 2005.
- In July 2011, the Texas Supreme Court reversed the PUCT's decision to reject use of auction prices, and the issue has been remanded to the PUCT.
- TCC is entitled to recovery of the $421 million plus carrying costs back to 2002 at a rate of 7.47%.
- There will be regulatory proceedings and likely settlement discussions before the final amount is approved. TCC can securitize the recovery.

Financial Update

Earnings and Dividends

On-Going EPS History Since 2004

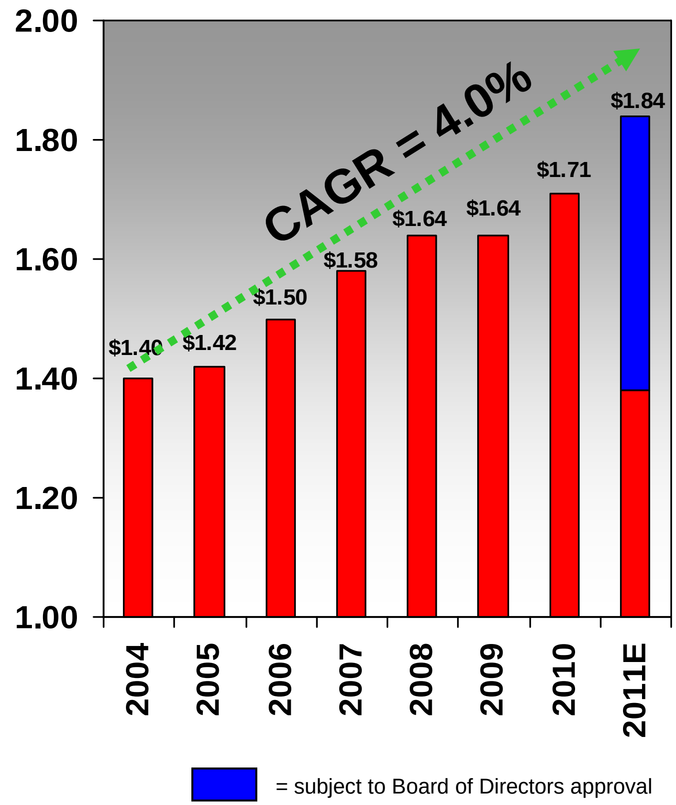
$/share



- Earnings growth largely attributed to capital investment program
- Pre-recession earnings supported by robust wholesale market activity and high power prices
- 2011 guidance range of $3.00 to $3.20 per share

Dividend History Since 2004

$/share



- Quarterly dividend increased 12% in 2010
- 405th consecutive quarterly dividend declared July 27, 2011
- 50-60% payout ratio target
- Current yield near 5%

Detailed Ongoing Earnings Guidance

2010A: $3.03

2011E: $3.00 - $3.20

Liquidity Summary (06/30/2011)

Liquidity Summary (unaudited)		**Actual**	
($ in millions)		Amount	Maturity
Revolving Credit Facility	$	1,500	Jun-13
Revolving Credit Facility		1,454	Apr-12
Total Credit Facilities		**2,954**	
Plus			
Cash & Cash Equivalents		417	
Less			
Commercial Paper Outstanding		(944)	
Letters of credit issued		(132)	
Net available Liquidity	**$**	**2,295**	

On July 26, 2011, we renewed and upsized the facility expiring in April 2012. The new facility has a capacity of $1.75B and expires in July 2016.

We also extended and repriced the facility expiring in June 2013. That facility now expires in June 2015.

This brings our total available capacity to $3.25B.

Transmission Update

Transmission Investment Strategy

- **Near-Term Investment** – Electric Transmission Texas (ETT) secures near term investment opportunities, allowing AEP to invest in the large, growth-oriented Texas transmission market. Total capital expenditures of $3 billion with a 9.96% ROE.

- **Mid-Term Investment** – Seven wholly-owned transcos allow for expansion and growth within AEP's existing utility footprint through an efficient recovery mechanism. Will spend $210 million in 2011 and more than $350 million in 2012. ROE is in the 11.20%-11.49% range.

- **Long-Term Investment** – Joint ventures provide opportunities for longer-term growth outside of AEP's existing utility footprint with forward looking formula rates, reasonable ROEs and FERC incentives where appropriate.

Transmission has a diversified investment approach that positions it as one of the key AEP growth businesses.

Transco Update

FERC:

- April 2011 -- The Commission finds in the order that the Settlement is just and reasonable and the business plan will provide benefits to AEP operating companies and customers.
  - ROE order for East Transco's is 11.49%
  - ROE order for West Transco's is 11.20%

State Filing Status Update:

- **Ohio** – PUCO approved the Ohio Transco December 29, 2010
- **Michigan and Oklahoma** – do not require state filing
- **Indiana** - draft settlement agreement filed; waiting on Commission approval
- **Arkansas –** filed May 6, 2011; procedural schedule set with hearings to begin February 15, 2012
- **Louisiana** – filed August 12, 2011; no procedural schedule set
- **Kentucky** – hearings set for October 19, 2011
- **West Virginia** –hearing held June 14, 2011; briefs filed July 2, 2011
- **Virginia** – original filing withdrawn to give additional time to resolve issues with Staff; re-filing expected in 4Q11

$210M capital spend forecasted for 2011

Texas Transmission Growth Strategy : Near Term Investment

Ownership Structure: 50/50 (AEP/MidAmerican Energy Holding Company)

Total Project Cost: Over $3 Billion

Growing Rate Base:

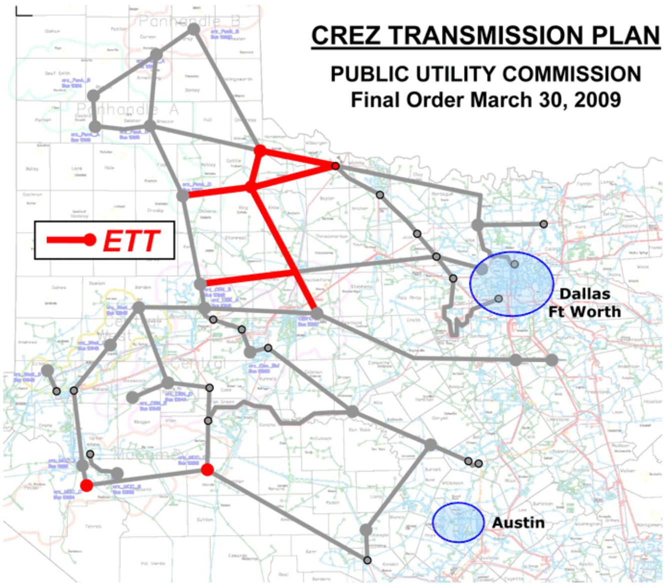
Current rate base is $412 million; expected to grow as follows:

2011: $490 million
2012: $750 million
2013: $1,200 million

ETT Electric Transmission Texas

Interim TCOS filings twice per calendar year

Approved ROE: 9.96%



- **<u>Additional Projects in the Pipeline ~$1.5 B:</u>**
  - Approximately 500 miles of lines and 29 substations with in-service dates through 2020

- **<u>Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.4 B:</u>**
  - Nine new transmission lines totaling approximately 600 miles and 16 substations
  - PUCT Certificate of Convenience and Necessity (CCN) proceedings underway; 5 lines already approved

Joint Venture Strategy: Long-term

- **Strategy**: JV's secure new investment opportunities with local utilities to diversify AEP's investment outside AEP's traditional footprint while providing longer-term incremental earnings. JV projects are well-suited for FERC formula rate recovery mechanism, including potential for incentive rates.
- **Future:** Federal/regional initiatives may accelerate expansion of EHV transmission (e.g. cap-and-trade, renewable portfolio standards, inter-region wide planning). Securing first mover advantage will enable AEP to secure LT investment opportunities.
- **Future flexibility**: Passive investment opportunities can be considered and can provide entry beyond SPP/PJM/ERCOT

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new of heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives.

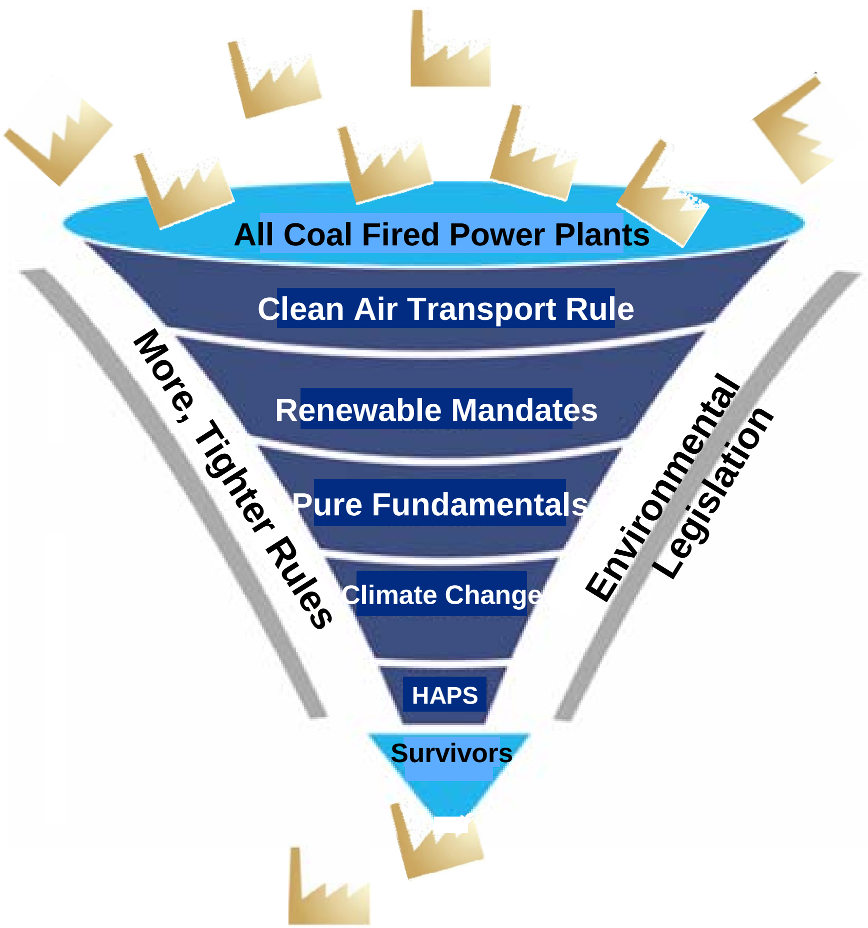
The Pressure on Coal Generation



Key EPA Actions Pending

- Transport Rule – Proposed July 2010
- "Coal Ash" Rule – Proposed May 2010
- Mercury and other Hazardous Air Pollutants (HAPs) Rule – Expect Proposed Rule in March 2011
- Cooling Water Intakes – Expect Proposed Rule in Spring 2011
- Greenhouse Gas Tailoring Rule – January 2011

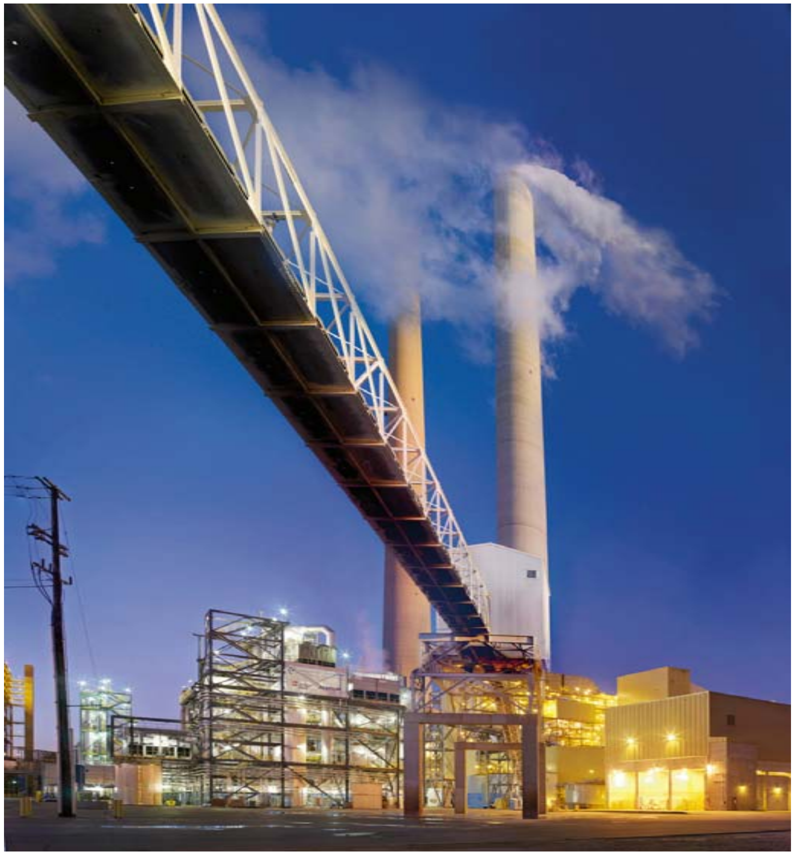
Carbon Capture and Storage

PHASE I - Validation

- World's first operating CCS facility on a coal fired power plant
- Gained competitive advantage through technology development
- Currently testing key performance parameters: auxiliary power, removal efficiency, reliability, CO_2 product quality

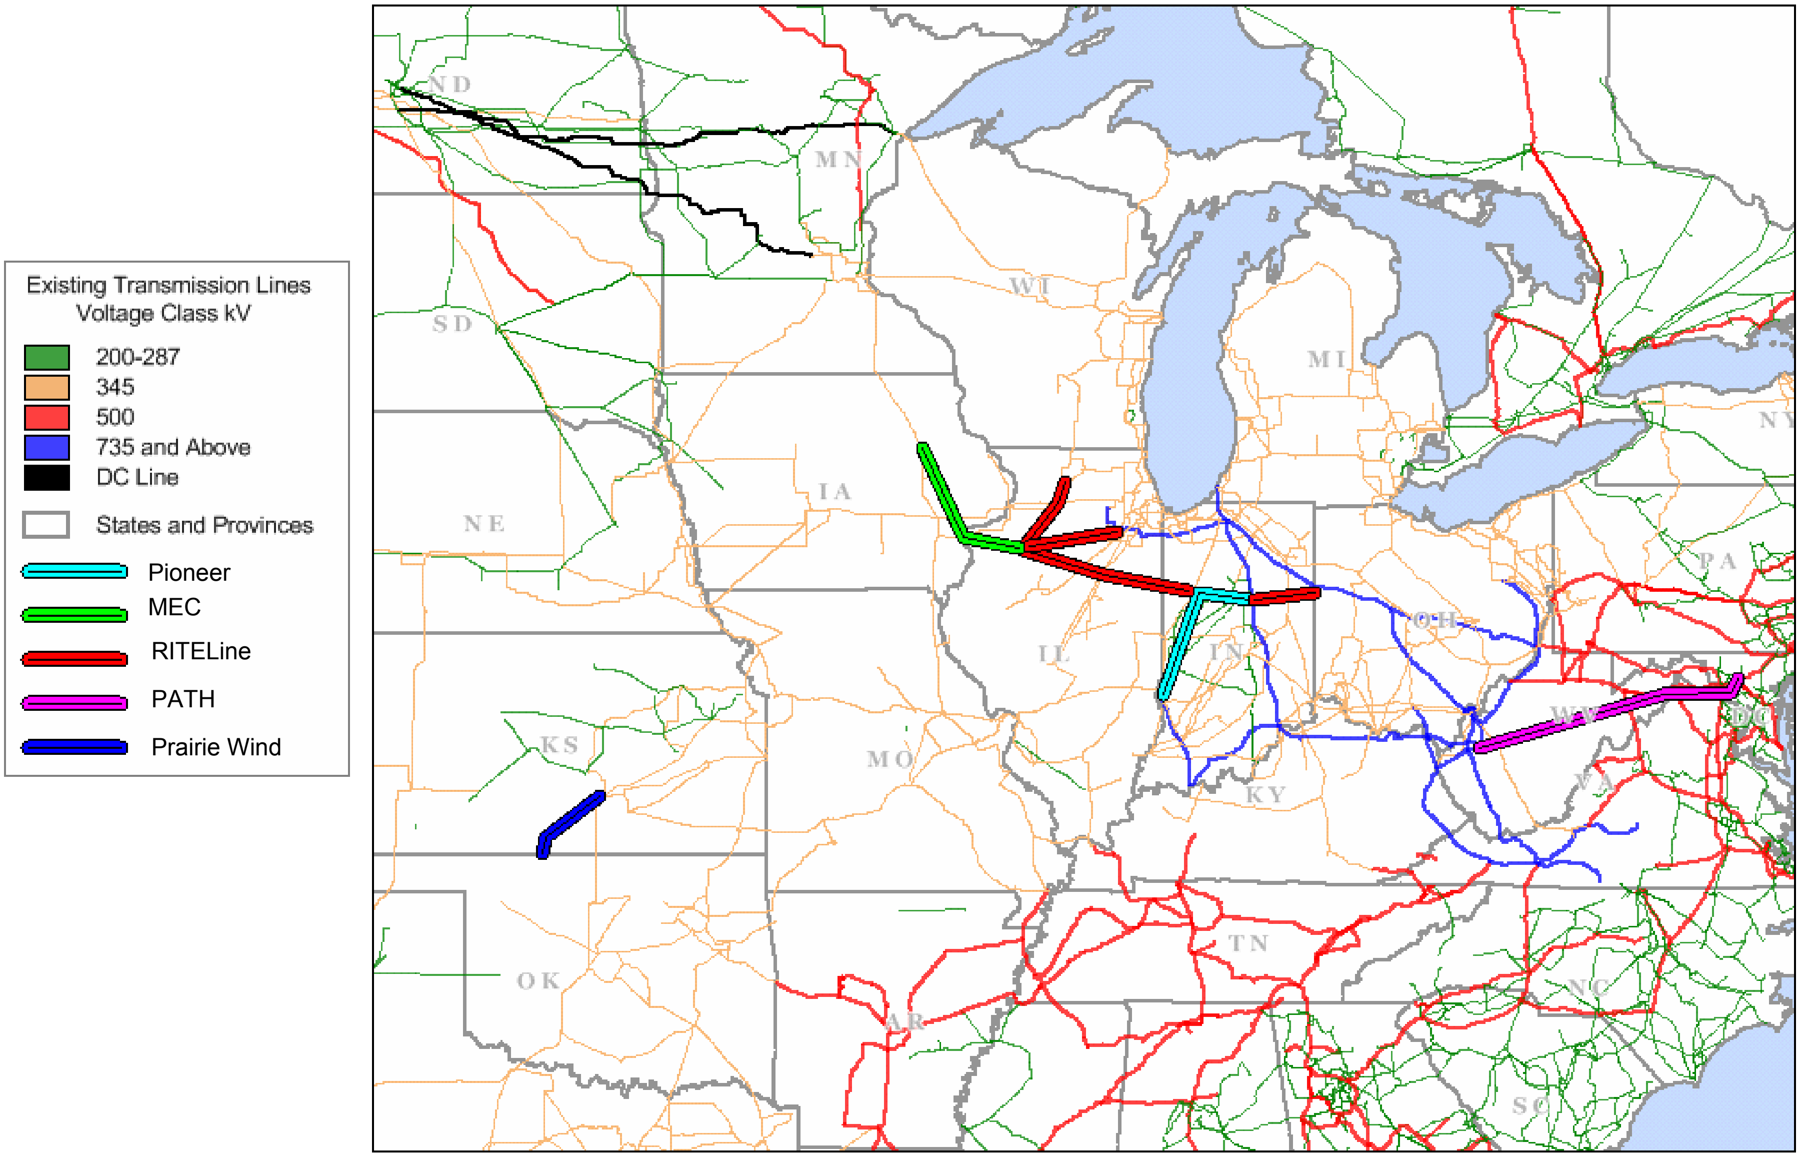
PHASE II - Commercialization

- Initiated in January 2010
- Designed to capture and store 1.5 million metric tons of CO_2/year
- Estimated cost of $668 million with 50% DOE funding
- Pursuing additional funding/participation
- Scheduled in service date is mid-2015
- Key activities through July 2011 include conceptual engineering, detailed cost estimate and National Environmental Policy Act process



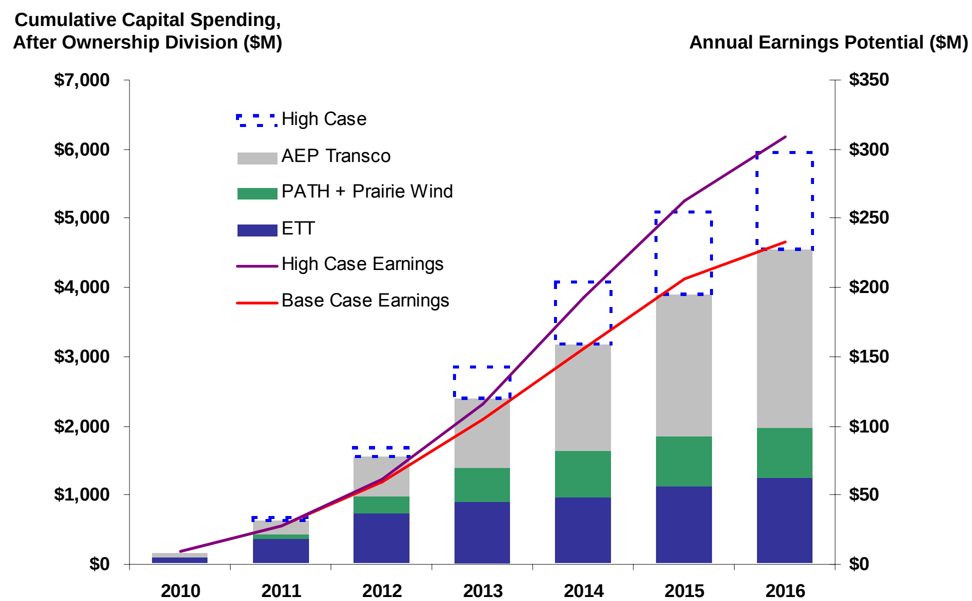
Carbon Capture and Storage project
Mountaineer Plant - New Haven, WV

Current/Proposed Transmission Projects



Transmission as a Growth Engine

- Electric Transmission Texas (ETT)
  - Growing Rate Base
  - $1.1B CREZ opportunity; Received CCN approval on one CREZ line; 3 more approvals expected in 2011
  - $1.6B Non-CREZ projects in the pipeline
- AEP Transmission Company (AEP Transco)
  - Settlement filed at FERC for wholesale rates
  - $50M spend for 2010; $160M forecasted for 2011
- Progress on Joint Ventures in 2010
  - PATH
  - Prairie Wind
  - Pioneer
  - SMART Transmission study



[1] High Case includes: Pioneer (50% ownership), Prairie Wind at 765kV (25% ownership), Tallgrass at 765kV (25% ownership), ETA-Exelon (25% ownership) and other future opportunities

[2] AEP Transco (100% ownership) includes spending in OH, MI & OK only through 2011 and in other jurisdictions for 2012 and beyond

[3] PATH (50% ownership) assumes an in-service date of 2015 and Prairie Wind (25% ownership) assumed at 345kV

[4] ETT (50% ownership) includes CREZ and additional projects

[5] Projection of earnings potential at the transmission holding company level assuming 50/50 debt/equity capitalization and ROE of 12-13% for FERC projects; 60/40 debt/equity capitalization and 10.25% ROE (2011 forward) for ERCOT projects; and 50/50 debt/equity capitalization and ROE of 11.2-11.49% for Transco projects

Transmission investments present significant growth opportunities within and outside of AEP's traditional service territories

Evolving Transmission Regulatory Policy

Transmission Framework

- Regulated by the Federal Energy Regulatory Commission
- Based on Cost of Service
- Formula Rate Treatment Reduces Regulatory Lag
- Costs Socialized Beyond Retail Customers
- Incentive ROEs available – particularly for technology enhancements

Planning, cost allocation and siting continue to be issues the industry and the United States must resolve

AEP's "Smart Grid" Deployment – Pilot Projects

AEP®

Indiana Michigan Power - South Bend Pilot (Completed – September 2010)

- 10,000 AMI meters
- Integrated Mesh communication network
- Distribution grid management – centralized & decentralized
- Consumer programs: 2-tier time-of-day rates and technology enabled direct load control using PCTs
- Customer web portal
- Initial meter data management system development

AEP Ohio– central Ohio– (2009-2013)

- Awarded US DOE Smart Demonstration Project
- 133,000 meters using integrated mesh network
- Advanced distribution grid management with volt-VAR control
- Advanced consumer programs including critical peak and real-time pricing
- Extensive consumer outreach and communication
- Innovative web portal
- Large scale distributed storage
- Concentrated PHEV implementation
- Smart appliance deployment
- Industry first smart grid cyber security center

AEP Texas – Statewide (2009-2012)

- Legislature enabled and commission directed T&D service providers to deploy advanced metering
- 970,000 meters using mesh network communications
- Enable Texas retail service providers to provide innovative pricing and in-home consumer technologies
- 10,000 in-home displays for low income customers
- Statewide portal for usage and home device provisioning

PSO– Owasso Pilot (Implement in 2011)

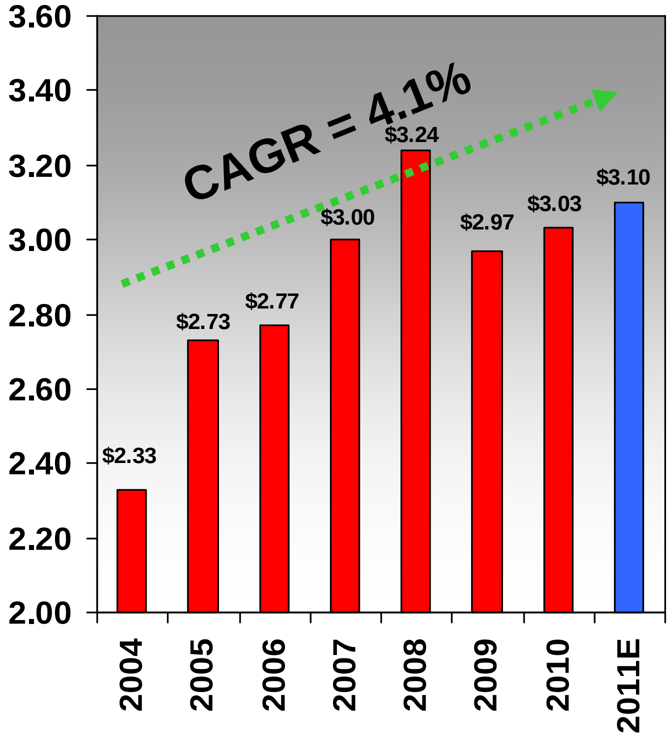
- 13,000 AMI meters
- AMI and distribution control communication networks
- Distribution automation
- Distribution Volt-VAR control
- High level of in-home devices – displays and PCTs
- Customer programs – time-of-day and direct load control programs
- Web portal

gridSMART attributes from the utility side of the meter look promising; customers with low rates may not see material savings/benefits

Earnings and Dividends

On-Going EPS History Since 2004

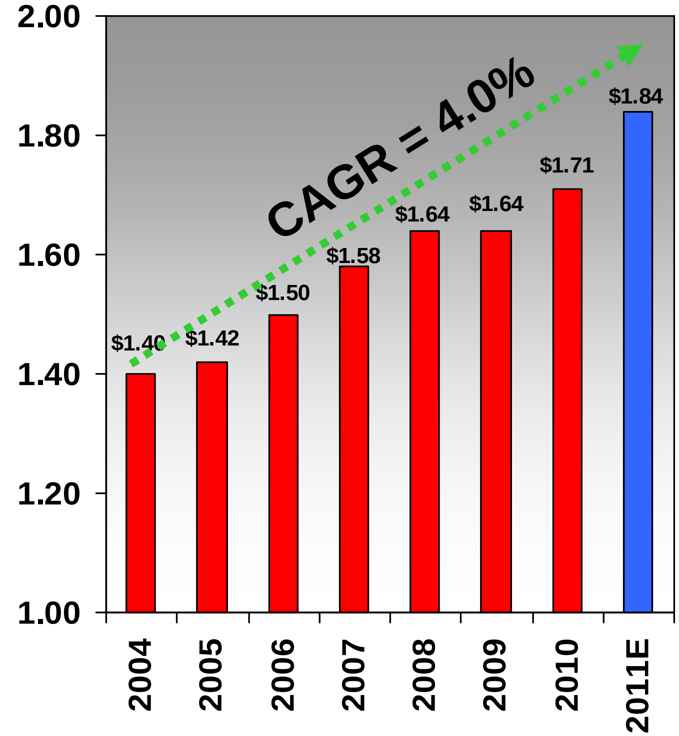
$/share



- Earnings growth largely attributed to capital investment program
- Pre-recession earnings supported by robust wholesale market activity and high power prices
- Equity offering in 2009 stabilized credit and strengthened balance sheet
- 2011 guidance range of $3.00 to $3.20 per share

Dividend History Since 2004

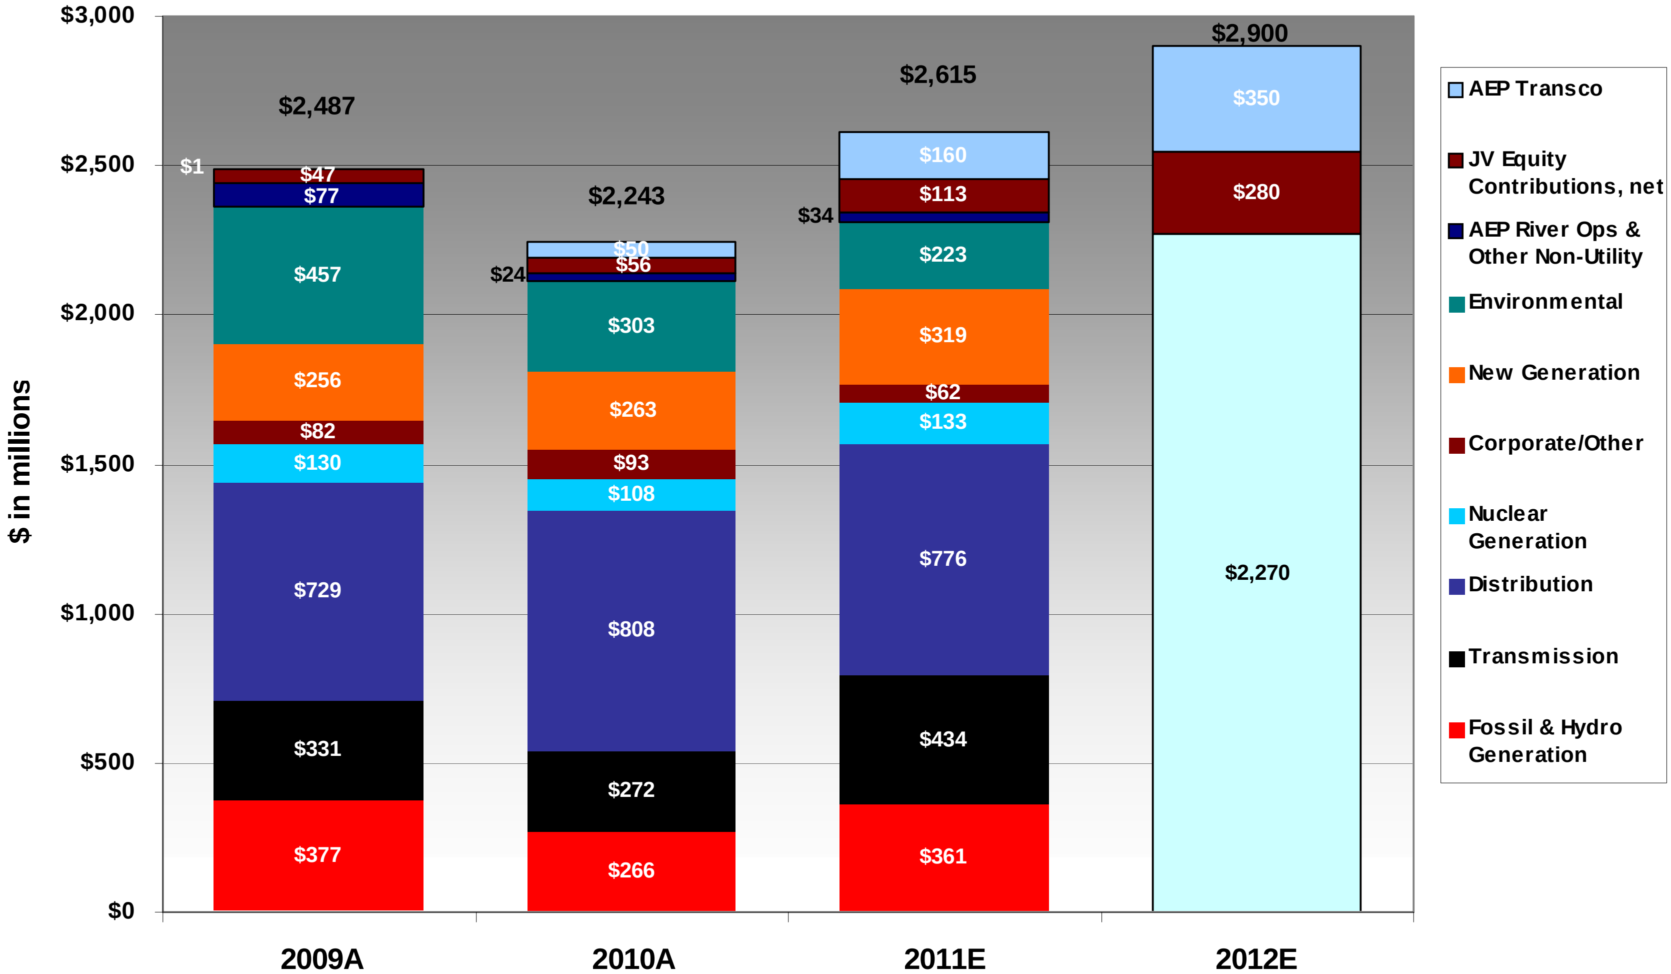
$/share



= subject to Board of Directors approval

- Dividend <u>increased 12%</u> in 2010
- <u>403rd consecutive</u> quarterly dividend declared in January
- 50-60% payout ratio target
- Current yield over 5%

Capital Expenditures



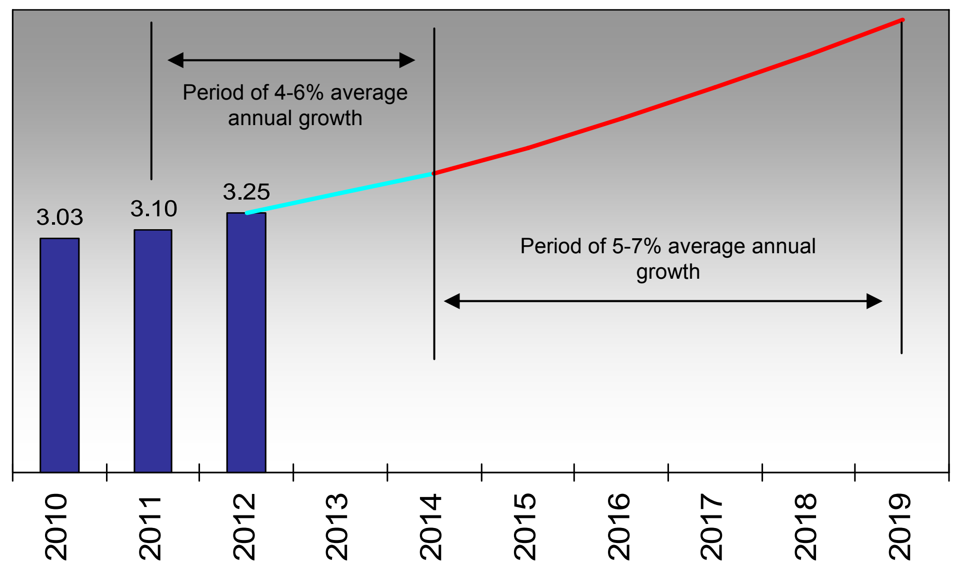
Investment levels greater than depreciation of $1.4B per year cause rate base growth in 2011 and 2012

Long-term EPS Growth Rate

AEP®

- 4-6% EPS growth 2012-14
  - Average annual capital spend between $2.9-3.4B
    - Utility platform replacement capital of about $1.4B (annual depreciation)
    - Growth in rate base of $1.5-2.0B per year, allocated between utility platform and transmission projects
  - Blended ROE of 10.5 - 11%
  - Slow, steady recovery in economy
- 5-7% EPS growth post 2014
  - Base utility platform capital including generation transformation
  - Higher allocation of discretionary capital going to opportunities in the transmission development pipeline
  - Higher overall blended ROE opportunity
  - Robust economic growth

Average Annual EPS Growth defined over two periods



AEP Highlights

- Premier Utility Platform
- Traditional and Effective Regulatory Relationships
- Energy Policy Initiatives Create Technology Deployment and Investment Opportunity
- Strong Value and Total Return Proposition

JP Morgan Utility Corporate Access Day

Boston, MA
March 24, 2011

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events and our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives.

Transmission Investment Strategy

- **Near-Term Investment** – Electric Transmission Texas (ETT) secures near term investment opportunities, allowing AEP to invest in the large, growth-oriented Texas transmission market. Total project cost of $3 billion with a 9.96% ROE.

- **Mid-Term Investment** – Seven wholly-owned transcos allow for expansion and growth within AEP's existing utility footprint through an efficient recovery mechanism. Will spend $160 million in 2011 and more than $350 million in 2012. Expected ROE is in the 11.20%-11.49% range.

- **Long-Term Investment** – Joint ventures provide opportunities for longer-term growth outside of AEP's existing utility footprint with forward looking formula rates, higher ROEs and FERC incentives, and mitigated risk profiles.

Transmission has a diversified investment approach that positions it as one of the key AEP growth businesses.

Texas Transmission Growth Strategy : Near Term Investment

Ownership Structure: 50/50 (AEP/MidAmerican Energy Holding Company)

Total Project Cost: Over $3 Billion

Growing Rate Base:

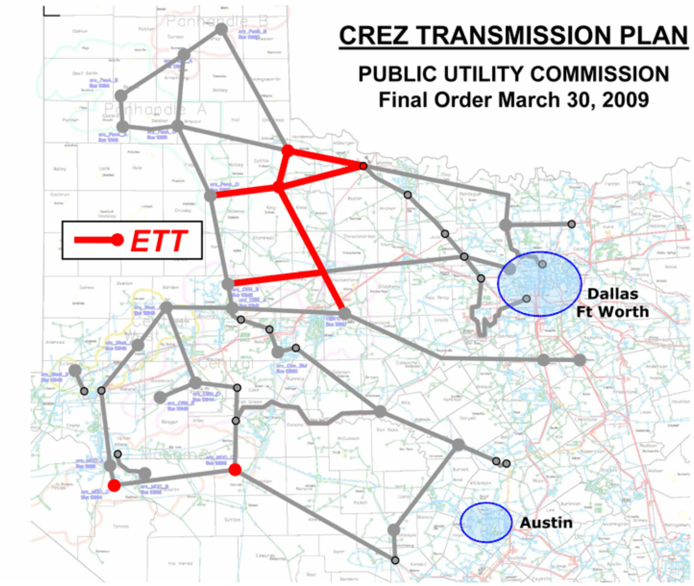
Current rate base is $412 million; expected to grow as follows:

2011: $473 million
2012: $778 million
2013: $1,352 million

ETT Electric Transmission Texas

Interim TCOS filings twice per calendar year

Approved ROE: 9.96%



- **Additional Projects in the Pipeline ~$1.6 B:**
  - Approximately 822 miles of lines and 28 substations with in-service dates through 2017

- **Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.1 B:**
  - Seven double-circuit 345kV transmission lines (~$750 M), eight major 345kV stations and several series compensation installations (~$350 M)
  - PUCT Certificate of Convenience and Necessity (CCN) proceedings underway

Transco Update

Filing Status Update:

- ***Ohio*** *(filed and approved)* – PUCO approved the Ohio Transco December 29, 2010
- ***West Virginia*** *(filed)* – Procedural schedule is set, with company testimony filed January 6; Intervenor's testimony is due April 6 and rebuttal is due April 20; Hearings in June
- ***Arkansas and Louisiana*** – Filing date in Arkansas likely early 2011
- ***Texas-SPP*** – Expecting TX filing in mid 2011
- ***Kentucky*** – Filing made February 4, 2011; Informal conference with staff held March 2, 2011
- ***Indiana*** – Filing made March 1, 2011; Pre-hearing conference March 28, 2011
- ***Virginia*** *(withdrawn)* – Filing withdrawn to give additional time to resolve issues with Staff
- ***Michigan and Oklahoma*** – Do not require state filing

$160M capital spend forecasted for 2011

Joint Venture Strategy: Long-term

- **<u>Strategy</u>:** JV's secure new investment opportunities with local utilities to diversify AEP's investment outside AEP's traditional footprint while providing longer-term incremental earnings**.** JV projects are well-suited for FERC formula rate recovery mechanism, including potential for incentive rates.

- **<u>Future:</u>** Federal/regional initiatives may accelerate expansion of EHV transmission (e.g. cap-and-trade, renewable portfolio standards, inter-region wide planning). Securing first mover advantage will enable AEP to secure LT investment opportunities.

- **<u>Future flexibility</u>:** Passive investment opportunities can be considered and can provide entry beyond SPP/PJM/ERCOT

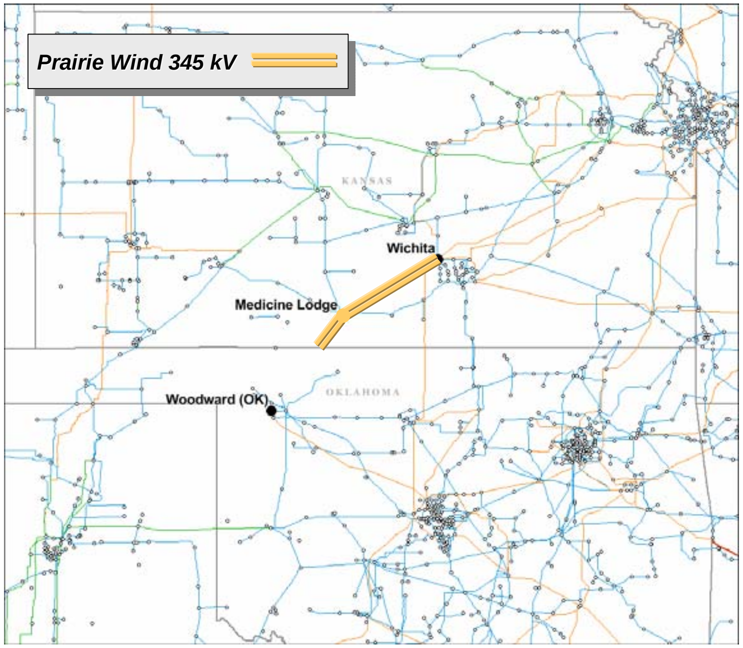
Prairie Wind Transmission, LLC

AEP®

<u>Project Description</u>: 110 miles of EHV transmission lines extending from Wichita, KS to the KS/OK border

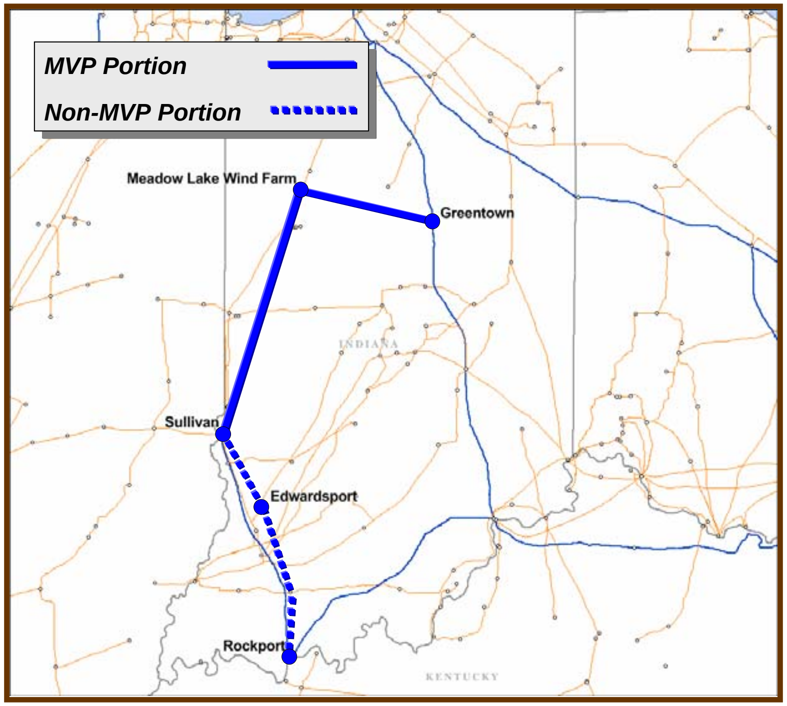
Overview:

- The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region
- The project is expected to cost $225 million and be in-service by 2013-2014
- AEP's ownership of the joint venture is 25%
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned
- Project was approved as SPP Priority Project in April 2010
  - Notice To Construct was issued to Westar July 2010. Currently working on a novation of the NTC to Prairie Wind. As a Transmission Owner, Prairie Wind will be entitled to collect revenue upon the novation of the Notice to Construct.
  - Currently approved at 345 kV.
  - Siting permit application filed in February 2011.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Pioneer



MVP = Multi-Value Project; projects that MISO has identified as supporting a public policy requirement or addressing reliability and/or multiple economic issues in multiple transmission zones. The costs of these projects will be allocated across the entire RTO.

Ownership Structure: 50/50 (AEP/Duke)

Total Project Cost: Up to $1 Billion

Approved ROE: 12.54%

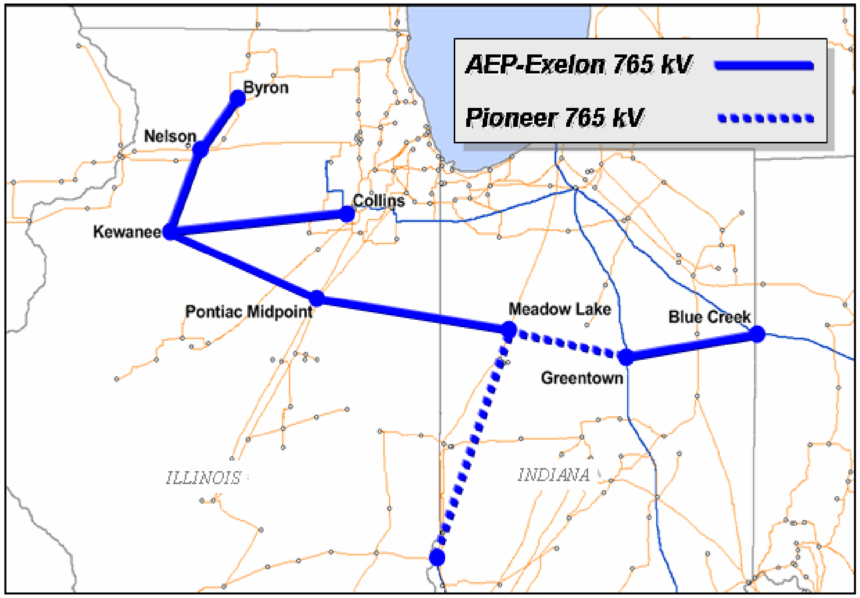
Line Miles: Up to 240

In-Service Date: 2016 (Estimate)

Greatest Risk: RTO Approval & cost allocation between PJM and MISO

RITELine Project

- AEP, ETA and Exelon Corporation executed a Memorandum of Understanding on October 26, 2010 for the development of the Reliability Interregional Transmission Extension Line (“RITELine”) project



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

- Estimated Project Cost: $1.6 billion

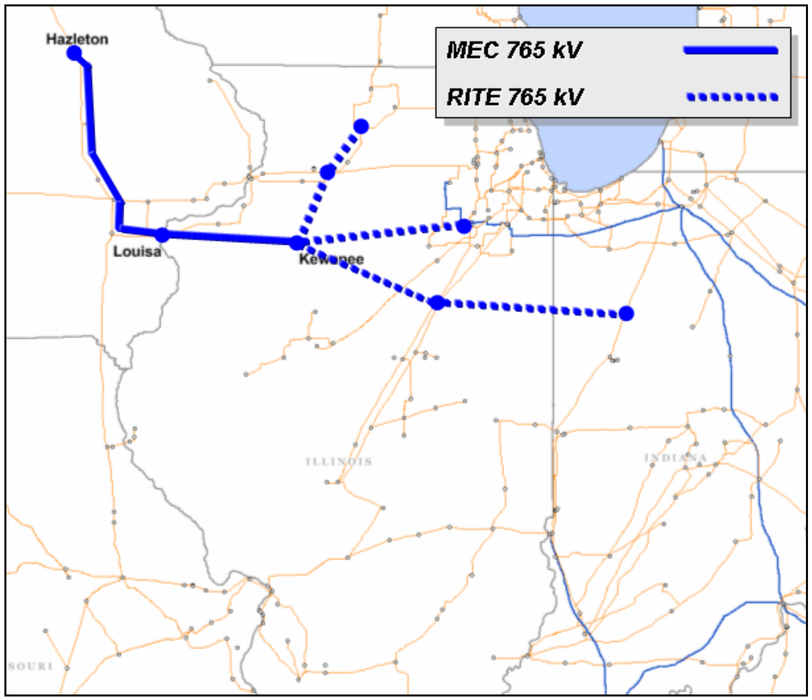
  AEP = $152 million
  ETA = $350 million
  $175M AEP
  $175M MEHC
  Exelon = $1.086 billion

- 765 kV transmission line (or a designated lower-voltage solution such as double-circuit 345 kV line)

- Extends approximately 420 miles from the Byron Substation in Illinois to the Blue Creek substation at the Ohio/Indiana border and from Kewanee to the Collins Substation in Illinois

MEC Project

- ETA and MidAmerican Energy Company executed a Memorandum of Understanding on October 28, 2010 for the development of the MEC project



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

- Estimated Project Cost: $650 million

  ETA = $325 million
  $162.5M AEP
  $162.5M MEHC
  MEC = $325 million

- 765 kV transmission line (or a designated lower-voltage solution such as double-circuit 345 kV)

- Extends approximately 180 miles from the Kewanee Substation in Illinois to the Louisa substation in Iowa and northwest to the Hazelton substation

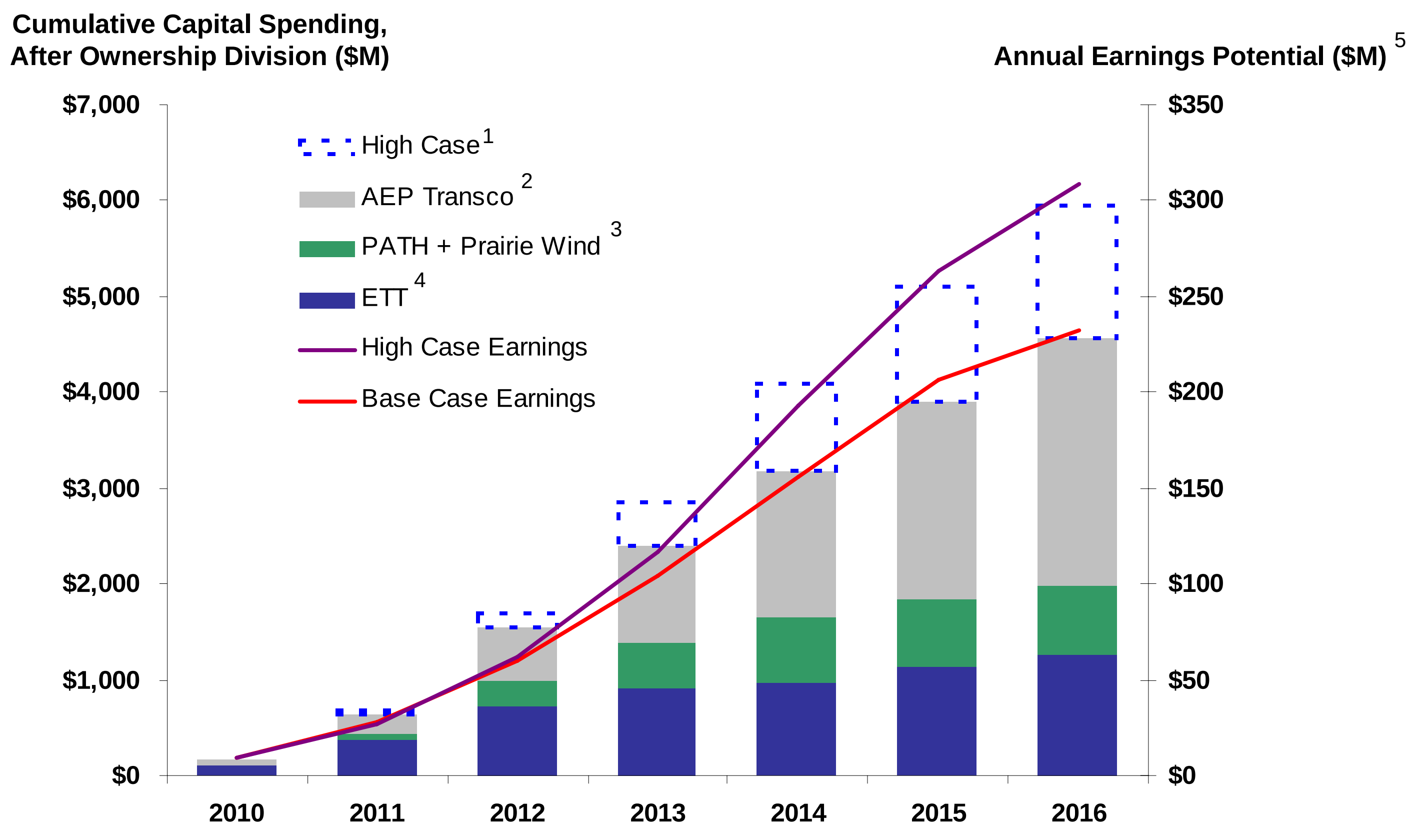
Transmission (Transco/JV's) – Capital/Earnings Profile

Transco and JV's have the potential to significantly add earnings growth to AEP.



[1] High Case includes: Pioneer (50% ownership), Prairie Wind at 765kV (25% ownership), Tallgrass at 765kv (25% ownership) and other future opportunities

[2] AEP Transco (100% ownership) includes spending in OH, MI & OK only through 2011 and in other jurisdictions for 2012 and beyond

[3] PATH (50% ownership) assumes an in-service date of 2015 and Prairie Wind (25% ownership) assumed at 345kV

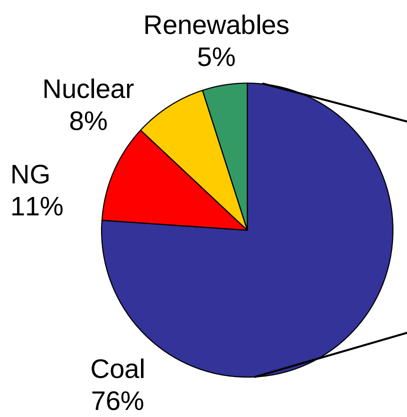
[4] ETT (50% ownership) includes CREZ and additional projects

[5] Projection of earnings potential at the transmission holding company level assuming 50/50 debt/equity capitalization and ROE of 12-13% for FERC projects; 60/40 debt/equity capitalization and 10.25% ROE (2011 forward) for ERCOT projects; and 50/50 debt/equity capitalization and ROE of 11.2-11.49% for Transco projects

AEP Generation Capacity

AEP®

East Capacity – 27,253 MW
AEP Ohio, APCo, I&M, AEG, KPCo, Wind, Solar, Hydro



Coal Source

NAPP	46%
CAPP	30%

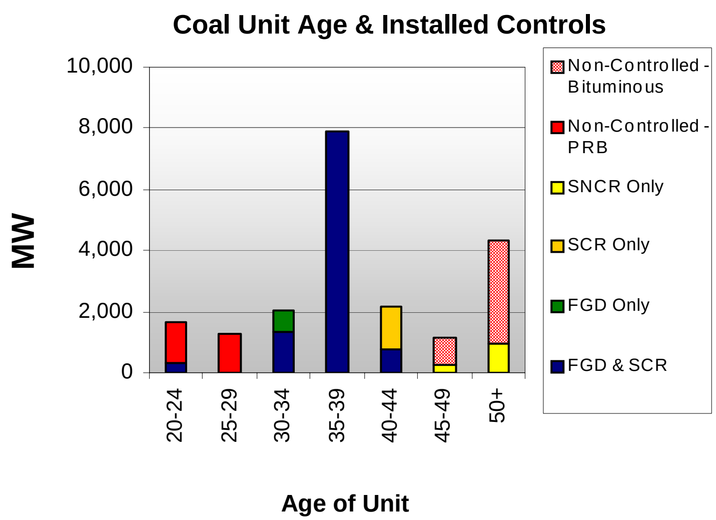
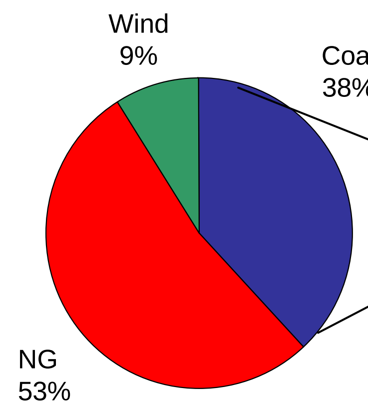
Others	2%

Avg. Delivered Cost
2009A - $56/ton
2010A - $52/ton
2011E - $51/ton



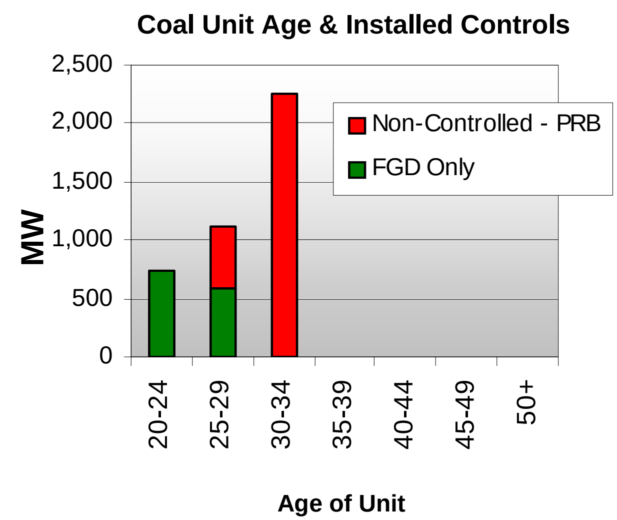
West Capacity – 11,677 MW
PSO, SWEPCO, TNC, Wind



Coal Source

PRB	75%
Lignite	25%

Avg. Delivered Cost
2009A - $29/ton
2010A - $29/ton
2011E - $29/ton



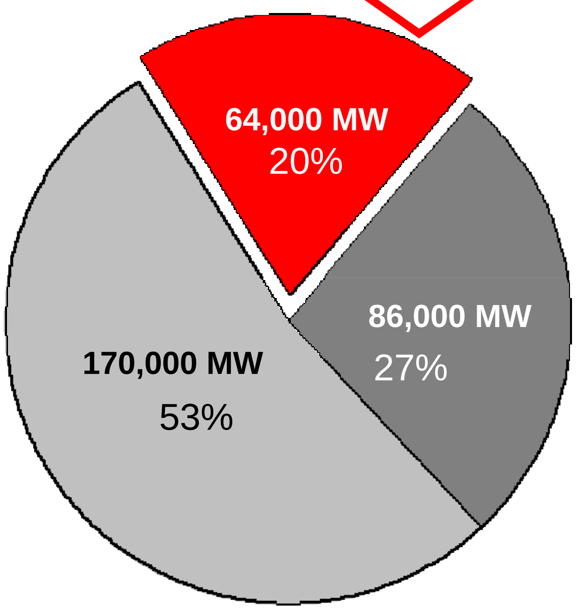
Continual Evaluation is Required

AEP®

"Fully-Exposed"	"Partially-Exposed"	"Least-Exposed"
Probable Retirement	*Evaluating potential retirement*	*Not likely to be retired*

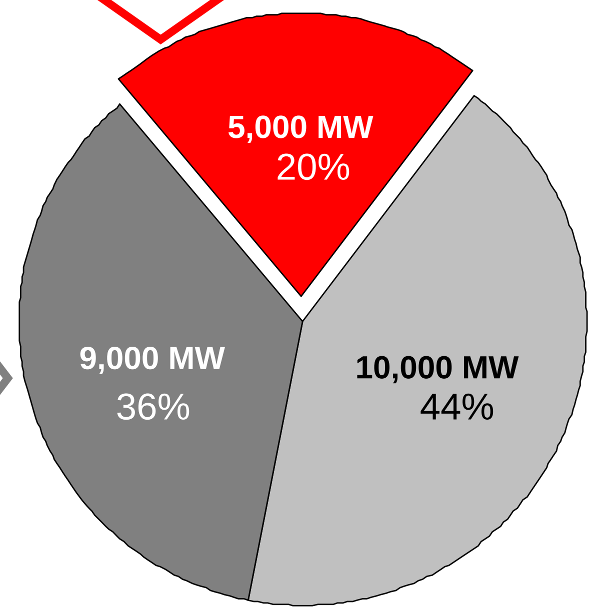
CCS Candidates

Smaller, older, less-efficient coal units that will not be economic if retrofitted



US Coal

Newer and larger coal units that do not have SCR's and/or FGD's will be evaluated due to emerging environmental rulemaking and NSR requirements

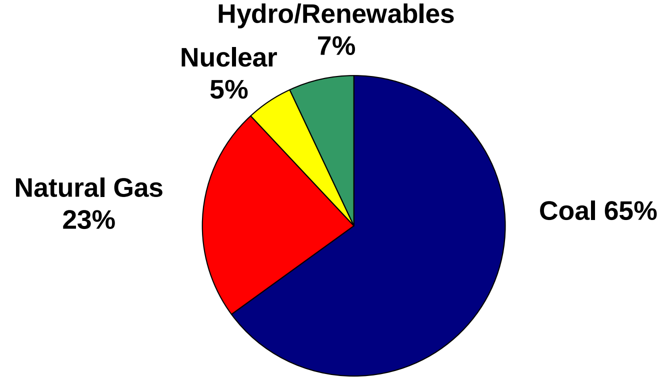


AEP Coal

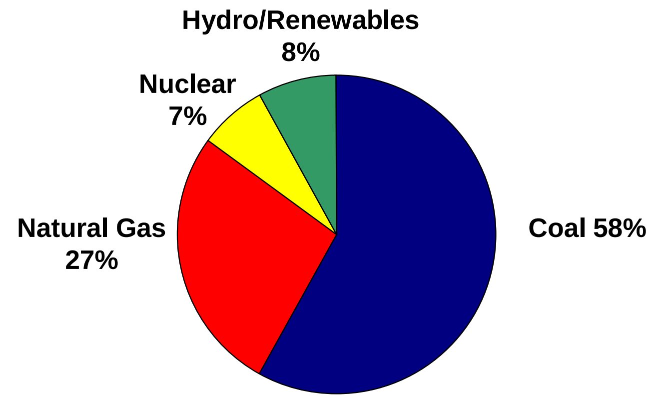
Nearly 50% of U.S. coal plants are exposed

Continued Investment in Utility Platform

- Plan for old, small coal units
  - Initially operate seasonally
  - Transition towards retirement
  - Regulatory plan for recovery
- Continue evaluation of “partially exposed” units for additional controls
- Add non-coal capacity when needed
  - Dresden NGCC (under construction)
  - New NGCC at existing site
  - Cook plant uprate (under study)
  - Renewables
- Deploy technology as appropriate
  - Continue pursuit of CCS technology
  - Energy storage technologies
  - gridSMART®



Capacity - 2010

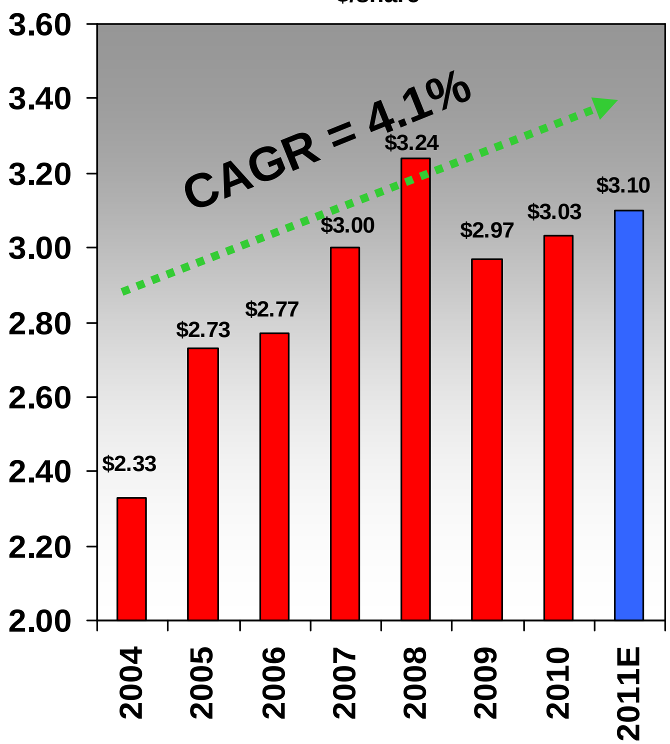


Projected Capacity - 2017

Earnings and Dividends

On-Going EPS History Since 2004

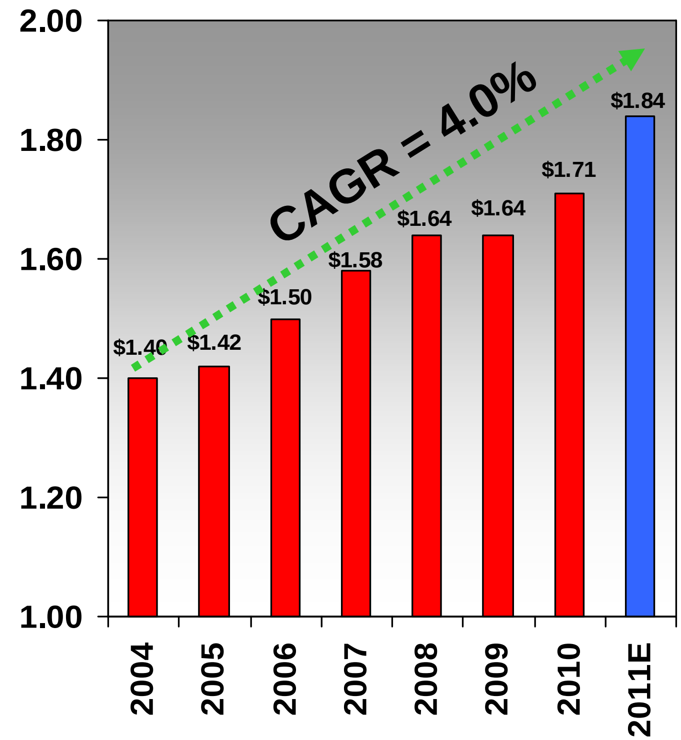
$/share



- Earnings growth largely attributed to capital investment program
- Pre-recession earnings supported by robust wholesale market activity and high power prices
- Equity offering in 2009 stabilized credit and strengthened balance sheet
- 2011 guidance range of $3.00 to $3.20 per share

Dividend History Since 2004

$/share



= subject to Board of Directors approval

- Quarterly dividend <u>increased 12%</u> in 2010
- <u>403rd consecutive</u> quarterly dividend paid March 10, 2011
- 50-60% payout ratio target
- Current yield over 5%

Long-term EPS Growth Rate

- 4-6% EPS growth 2012-14
  - Average annual capital spend between $2.9-3.4B
    - Utility platform replacement capital of about $1.4B (annual depreciation)
    - Growth in rate base of $1.5-2.0B per year, allocated between utility platform and transmission projects
  - Average ROE of 10.5 - 11%
  - Slow, steady recovery in economy
- 5-7% EPS growth post 2014
  - Base utility platform capital including generation transformation
  - Higher allocation of discretionary capital going to opportunities in the transmission development pipeline
  - Higher overall blended ROE opportunity
  - Robust economic growth

Average Annual EPS Growth defined over two periods

APCo West Virginia General Rate Case – Docket #10-0699-E-42T

On May 14, 2010, APCo filed a base rate case with the West Virginia Public Service Commission requesting a net increase of $155.5 million, comprised of a $223.8 million base rate increase and a $68.3 million decrease in the construction surcharge. The filing related to capital investments made and to recover increased costs. In addition, APCo requested to establish a separate transmission tracker related to PJM charges. The requested ROE was 11.75%. A settlement is on file which stipulates a rate increase of $60MM and the ability to defer $18MM of storm damage expenses. An order is expected by the end of March 2011.

AEP Ohio ESP Filing – Core Policy Issues

Investment in Ohio	Jobs in Ohio	Energy Security
Supports economic development and essential tax base	**Jobs are a key component of growth potential in Ohio**	**Secure, reliable and predictable electricity supply is basis for sustained investment and employment in Ohio**
Fundamental barriers must be addressed to attract investment for Environmental Compliance and New Generation	Without regulatory assurances over time we could see loss of direct & indirect jobs related to power generation, and business relocations to surrounding states	Volatility in power prices can lead to major loss of economic activity over time

Primary objective of ESP: Stabilize rates and support economic development in the state of Ohio

Merged AEP Ohio	Rate Redesign	29-Month ESP Period	Alternative Long Term Option	Ohio Growth Fund	Distribution Components Included
Single merged AEP Ohio company presumed with supporting information on an individual OP/CSP basis	Generation rates redesigned to resemble market pricing structures	ESP period Jan 1, 2012 through May 31,2014 (May 31 date aligns with PJM annual planning cycle)	Alternative longer-term price certainty option offered for qualifying commercial & industrial customers	Creation of significant private sector economic development to attract investment and job growth in AEP Ohio service territory	Inclusion of certain distribution components while pursuing a parallel distribution base rate case

Summary of ESP Filing - Continued

- Pre-tax earnings impact from proposed ESP (excluding potential earnings impact from trackers)
  - **Net base $54MM or 1.4% in year 1 (2012)**
  - **Net base $106MM or 2.7% in year 2 (2013)**

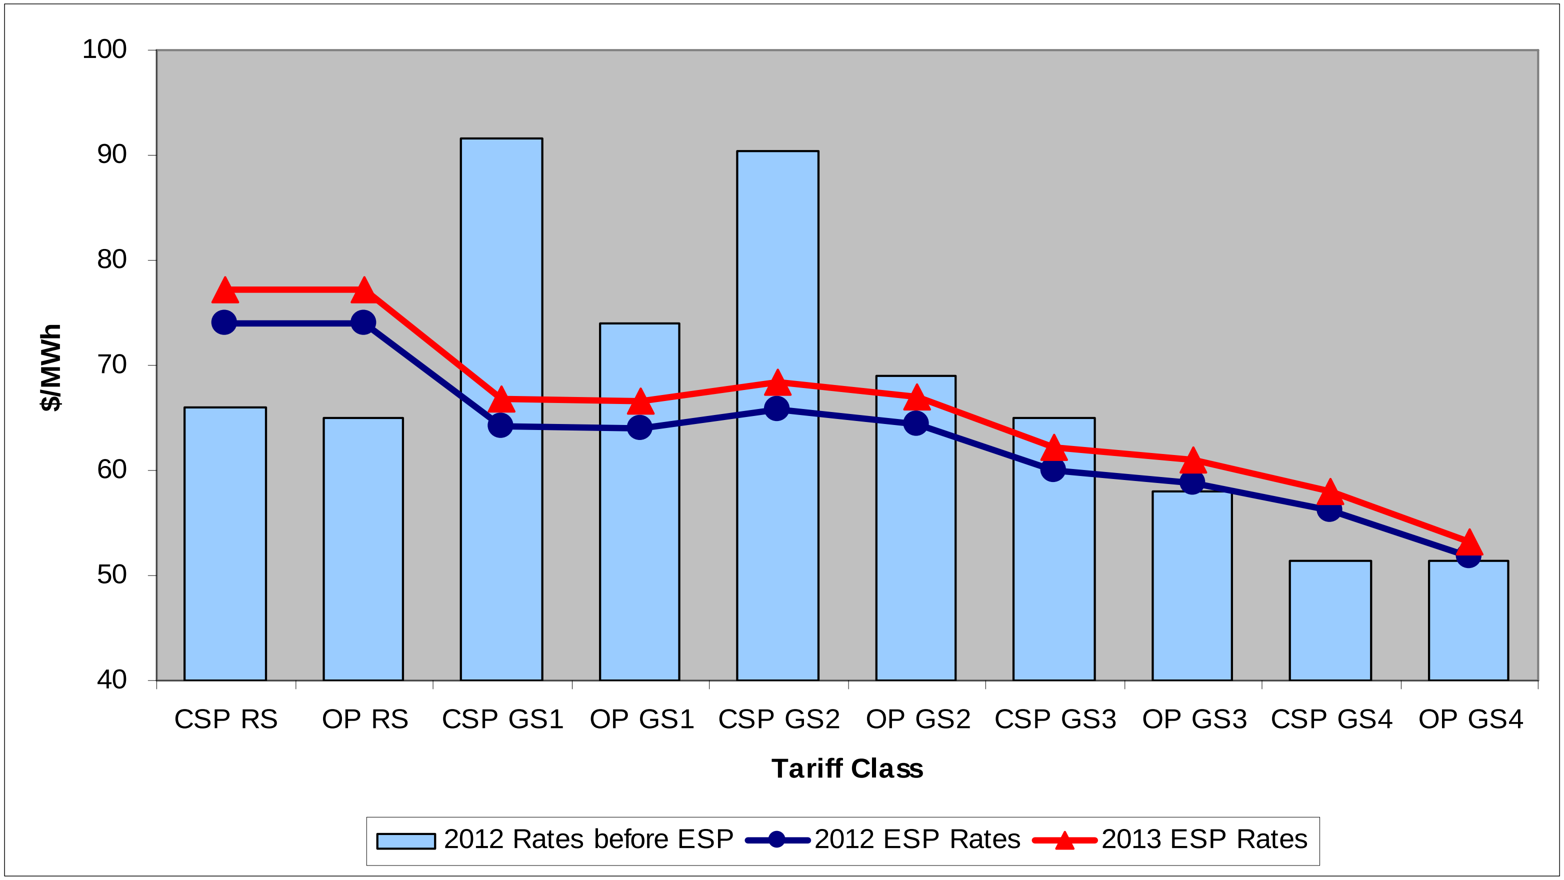
	2012			**2013**			**2014**		
	Revenue	**$/MWh**	**%**	**Revenue**	**$/MWh**	**%**	**Revenue**	**$/MWh**	**%**
Proposed ESP Changes									
Base Generation	**$65MM**	**$1.50**	**1.7%**	**$106MM**	**$2.43**	**2.7%**	**N/C***	**N/C***	**N/C***
POLR	**($11MM)**	**($0.23)**	**(0.3%)**	**N/C***	**N/C***	**N/C***	**N/C***	**N/C***	**N/C***
FAC Actual Recovery 2012-2014	**Actual**			**Actual**			**Actual**		

N/C* = No change from prior year

While the ESP includes a small base generation increase, the move to a market-based rate design, consistent with state policy, will result in varying impacts for different customer groups.

Price to Compare

Proposed **SSO** Rates Redesigned To Resemble Market Pricing Structures



Rates do not reflect mitigation impact of market transition rider
2012 Rates before ESP reflect current 2011 rates for generation & transmission service, adjusted to reflect full cost 2011 fuel and environmental costs.

The realignment of rates with market should provide all customers with equivalent opportunities to shop. Additionally, since the proposed design eliminates explicit demand charges, customers should be more easily able to evaluate competitive offers. To ease the rate impact that customers will experience from the realignment, we have proposed a Market Transition Rider.

Market Transition Rider – Mitigates the Initial Impact of Rate Realignment

Three-Year Market Transition Plan
Summary of AEP Ohio ESP Generation Rate Changes

CSP Current Customer Class	CSP New Customer Class	2012 Increase	2013 Increase	2014 Increase	Total Increase
Residential	Residential	5.0%	3.9%	1.0%	10.2%
GS1	GS Non-Demand	(6.4%)	(5.2%)	(7.8%)	(18.1%)
GS2		(5.3%)	(5.5%)	(8.2%)	(17.8%)
GS3	GS Demand	(0.3%)	1.0%	(1.8%)	(1.2%)
GS4/IRP		2.3%	7.7%	4.7%	15.3%
Total CSP		**2.2%**	**2.7%**	**0.0%**	**5.0%**

Total OPCo		**0.4%**	**2.7%**	**0.0%**	**3.1%**
AEP Ohio		1.4%	2.7%	0.0%	4.2%

Illustration of Market Transition Rider on ESP Generation Rate Increases

The Market Transition Rider is a transition rider designed to facilitate the transition from AEP Ohio's current rates to market-based SSO Generation Service rates. It is a non-bypassable rider designed to limit the first and second year changes for any customer classes to uniformly transition any above or below average changes in three steps. Any revenue shortfall that is produced by limiting the increases for certain customer classes is collected from those classes whose decreases are limited.

List of ESP Riders – Existing and Proposed

Line	Rate Mechanism	Abbreviation	Bypassable	Distribution	Notes
1	**Current Riders**				
2	Universal Service Fund Rider	USF	--	Yes	
3	Advanced Energy Fund Rider	AEF	--	Yes	Expired 12/31/2010
4	kWh Tax Rider	kWh Tax	--		May be self-assessed under specific terms
5	Provider of Last Resort Charge	POLR	No		Option to avoid under specific terms
6	Monongahela Power Litigation Termination Rider	Mon Power	--	Yes	Expires once amount collected
7	Transmission Cost Recovery Rider	TCRR	Yes		
8	Fuel Adjustment Clause Rider	FAC	Yes		
9	Energy Efficiency and Peak Demand Reduction Cost Recovery Rider	EE/PDR	--	Yes	
10	Economic Development Cost Recovery Rider	EDR	--	Yes	
11	Enhanced Service Reliability Rider	ESRR	--	Yes	
12	gridSMART® Rider	gridSMART®	--	Yes	
13	Environmental Investment Carrying Cost Rider	EICCR	No		the current bypassable rider is proposed to be nonbypassable in the new ESP
14					
15	**Proposed Riders**				
16	Standard Offer Generation Service Rider	GSR	Yes		Relocation of base generation rates
17	Generation Resource Rider	GRR	No		Capital/solar investment
18	Alternative Energy Rider	AER	Yes		Relocation of RECs from FAC
19	Phase-In Recovery Rider	PIRR	--	Yes	Previous ESP deferrals, possibility of securitization
20	Distribution Investment Rider	DIR	--	Yes	
21	Market Transition Rider	MTR	--	Yes	
22	Generation NERC Compliance Cost Recovery Rider	NERCR	No		
23	Facility Closure Cost Recovery Rider	FCCR	No		
24	Carbon Capture and Sequestration Rider	CCSR	No		
25					
26	**Other Provisions**				
27	Green Power Portfolio Rider	GPPR	--		Voluntary
28	Rate Security Rider	RSR	--		Voluntary
29	Plug-In Electric Vehicle Tariff / Costs	PEV	--	Yes	Voluntary, Deferral of Costs
30	Emergency Curtailable Service Rider	ECS	--		Voluntary, pending
31	Storm Damage Recovery Mechanism		--	Yes	Reconciliation of storm experience to funding level
32	Pool Termination or Modification Provision		Yes		
33	PIPP Uncollectibles	PIPP	--	Yes

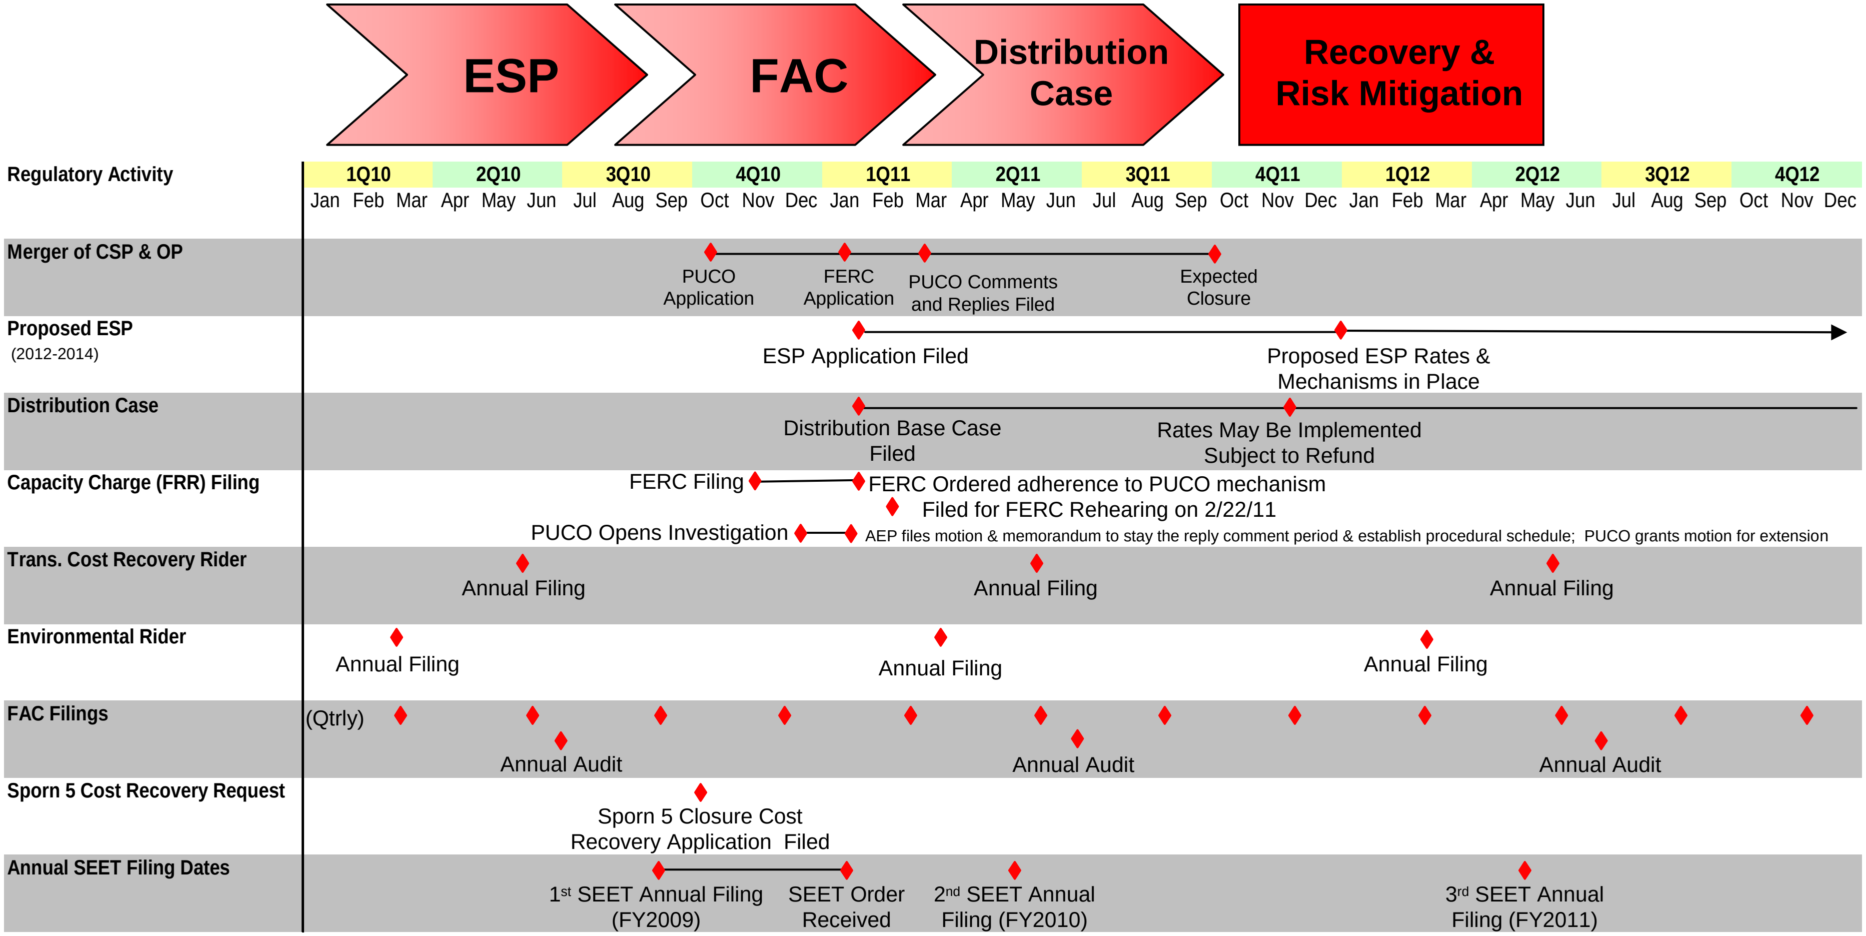
Ohio Timeline

AEP®



AEP Ohio's long-term strategy is designed to produce rate relief for items currently known as well as anticipated future items. The filings and riders we seek today are designed to be broad and flexible enough to accommodate a variety of circumstances, because it is impossible to know all variables and specific items for which we will desire to seek rate relief or what regulatory circumstances will prevail at the time.

American Electric Power, Inc.

Los Angeles Road Show

Hosted by UBS Investment Bank

August 6-7, 2007

AEP®

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Table of Contents

AEP®

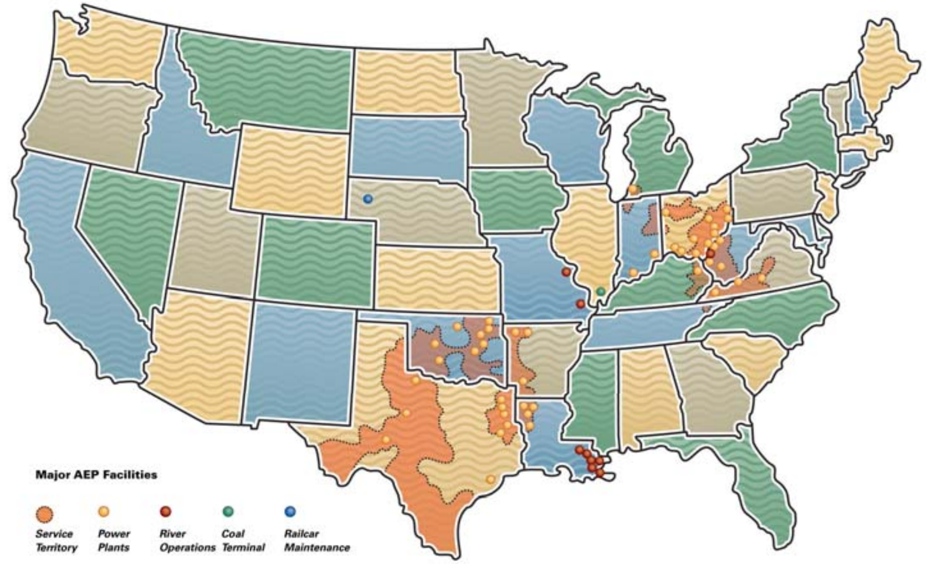
Strength & Scale in Assets & Operations

- 5.1 million customers in 11 states
- Industry-leading size and scale of assets:

Asset	Size	Industry Rank
Domestic Generation	~38,400 MW	# 2
Transmission	~39,000 miles	# 1
Distribution	~208,000 miles	# 1

Source: Company research & Resource Data International Platts, PowerDat 2005

- Coal & transportation assets
  - Control over 8,000 railcars
  - Own/lease and operate over 2,600 barges & 51 towboats
  - Coal handling terminal with 20 million tons of capacity
- 20,000 employees



AEP Generation Portfolio				
Coal	Gas	Nuclear	Hydro	Wind
67%	24%	6%	2%	1%

AEP Enjoys Significant Presence Throughout The Energy Value Chain

AEP®

Strategic Direction

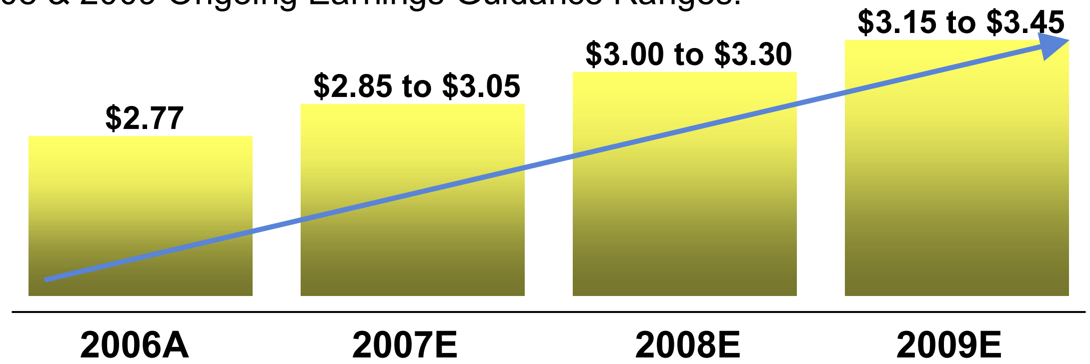
- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Develop our transmission business
- Achieve adequate returns on all assets

Deliver value to investors and cost effective service to our customers

Continued Commitment To Our Core Utility Mission: Bring Reasonably Priced Electric Service To Our Customers, Thereby Strengthening Our Communities And Rewarding Our Investors

Framework For Long-Range Performance

- 2007, 2008 & 2009 Ongoing Earnings Guidance Ranges:



- EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in existing utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
  - Investment in new transmission opportunities
  - Seek rate recovery for new investments
  - Control costs & achieve timely rate relief
- Maintain credit ratings
  - BBB/Baa2/BBB

Future Earnings Growth Driven by Native Load Growth and Substantial Utility Investment Opportunity Focused On Regulated Operations

AEP®

Summary of 5-7% Long-Range Growth Components

- ✓ Energy sales growth of 1.5%
- ✓ Rate base investment
  - Generation plant purchases & build
  - Transmission – interstate & intrastate
  - Distribution
  - Reliability
- ✓ Transmission company
- ✓ Commercial operations
- ✓ Regulatory strategy
  - Achieve timely returns
  - Seek cash returns on investment during construction
  - Create & secure innovative rate plans
    - Pursue post-2008 solution in Ohio
    - Expand use of trackers
    - Formula rates

AEP®

New Generation And Transmission Projects Largely Reflect Upside To The Long-Range Earnings Growth Target Of 5-7%

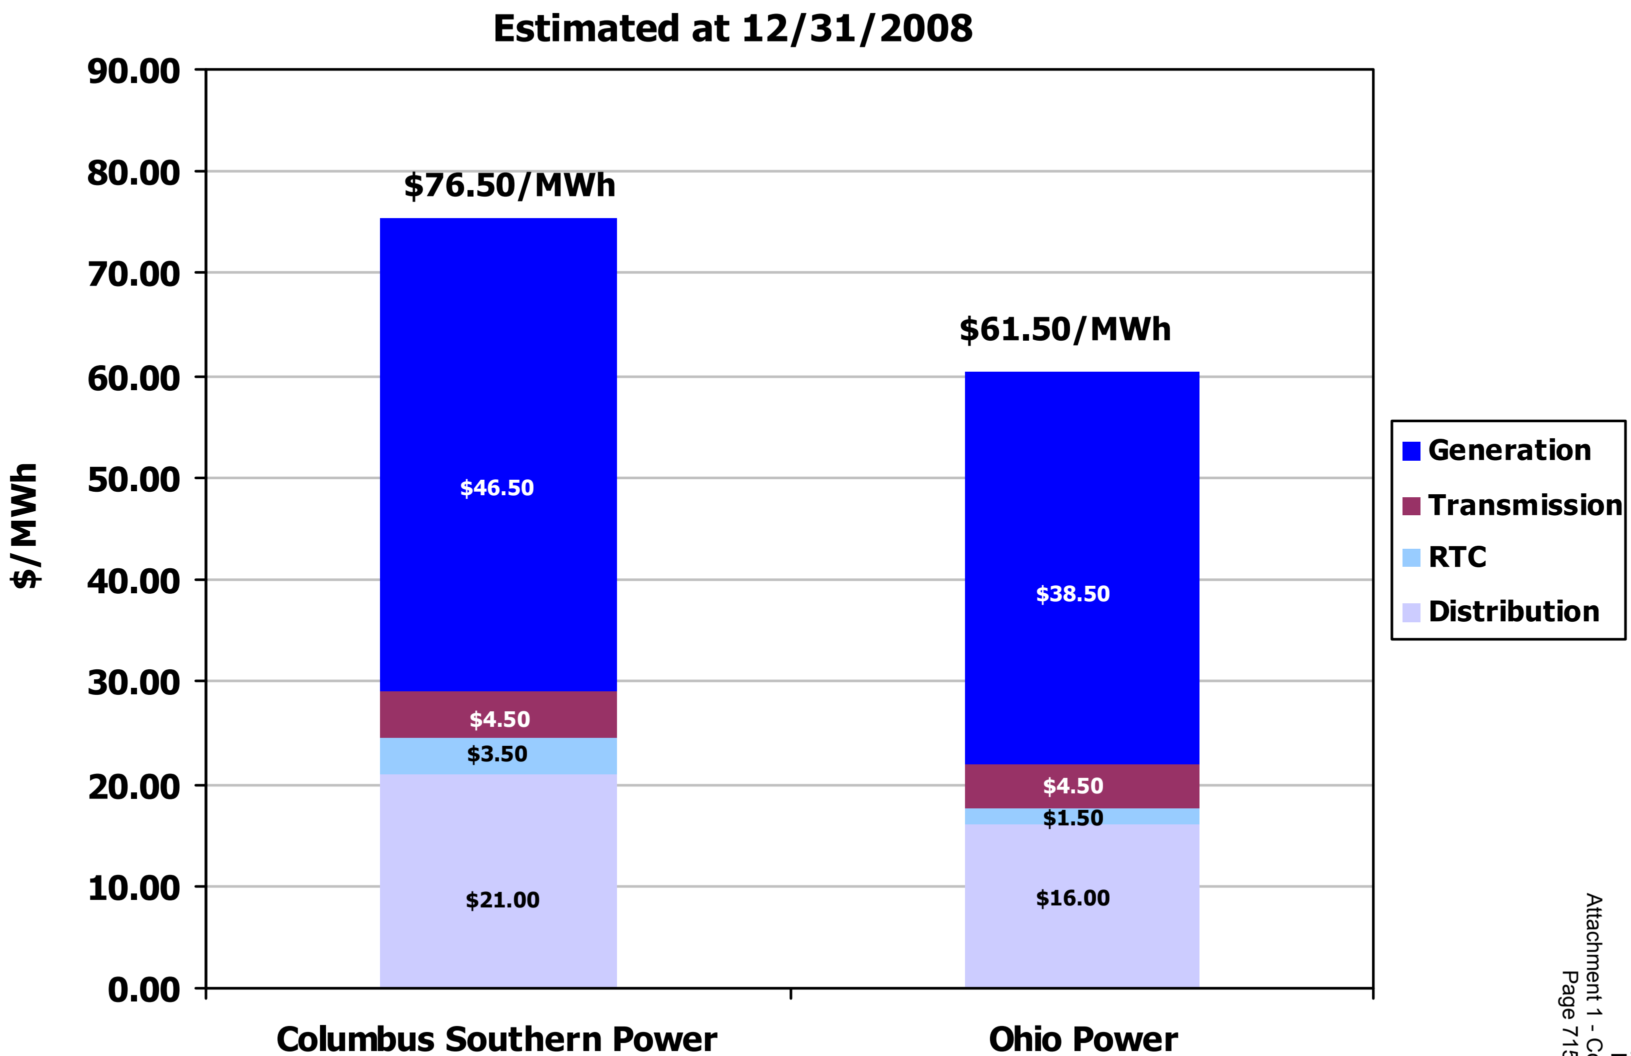
AEP OHIO – Post-2008

- Continued dialogue with fellow utilities
- Potential proposal from the governor's office sometime this summer
- Potential legislation crafted late 2007/early 2008
- The price of electricity in Ohio is going up to be more reflective of what is happening in the markets
- 'Stair-step' in a rate increase that is bigger than the current RSPs of 3% and 7%
- We will pursue recording the shortfall between the stair-step level and market prices as a regulatory asset – along with securitization at a legislative level

It Is Our Hope That We Can Craft A Reasonable Compromise That Will Allow Us To Achieve At Or Near Market Prices Without Causing Rate Shock To Our Customers And The Ohio Economy

AEP®

Average Unbundled AEP Ohio Rates



AEP®

Utility Investment Drives Growth

Capital Investment Forecast (2007-2009)

($ in millions)	2007	2008	2009	Total (2007-09)
Environmental	$935	$521	$301	**$1,757**

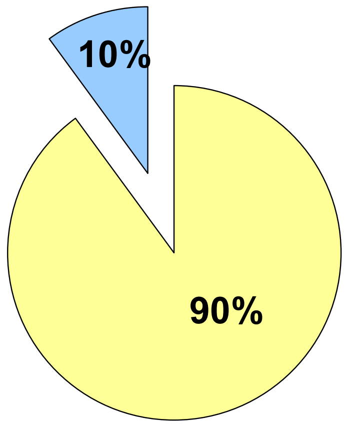
AT THE CONCLUSION OF OUR CURRENT ENVIRONMENTAL RETROFIT PROGRAM, OVER 47% OF OUR COAL-FIRED GENERATION FLEET WILL BE EQUIPPED WITH SCRs AND OVER 50% WILL BE SCRUBBED (FGD). AEP's TOTAL COAL FLEET CAPACITY = 24,710 MEGAWATTS*

*Excludes AEP's 44% ownership in OVEC (980 MWs of coal-fired capacity)

AEP®

Materials and Vendors – AEP's Advantage

Environmental Program Costs:
Active/Firm Costs to Remaining Estimated Costs



Actuals To Date & Firm Costs

Remaining Estimated Costs*

* Primarily labor and activated carbon injection systems

Typical Vendors Include:

- B&W/Alstom – FGD Spray Tower
- B&V/Chyioda – FGD Jet Bubbling Reactor
- Pullman Power – Stack Supplier
- Babcock Power – SCR
- Black & Veatch – Architect/Engineering
- Sargent & Lundy – Architect/Engineering

SCR Technology

- Removes 90 – 93% of NOx emissions
- Requires ~ 1% use of auxiliary power
- **AEP Capital Cost ~ $121/kW avg.**

Combination of SCR & FGD technology results in co-benefit of Hg removal ~80% removal efficiency

FGD Technology

- Removes 95 – 98% of SO_2 emissions
- Requires ~1.5% to 3.0% use of auxiliary power
- **AEP Capital Cost ~ $250/kW avg.**

AEP Benefits From First-mover Advantage Through Lower Contracted Pricing and Reduced Market Escalation Exposure

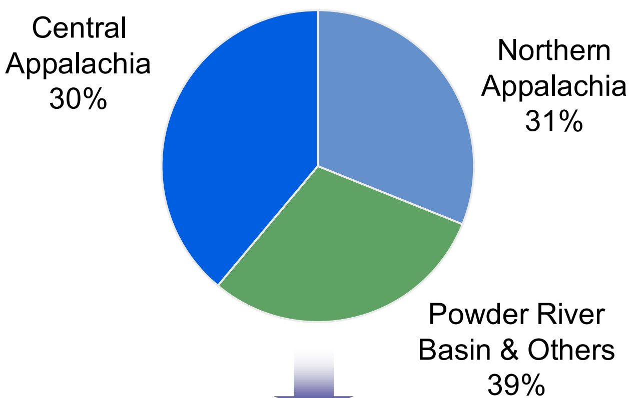
Coal Procurement – 2007 Projected

AEP purchases approx. 76 million tons of coal per year

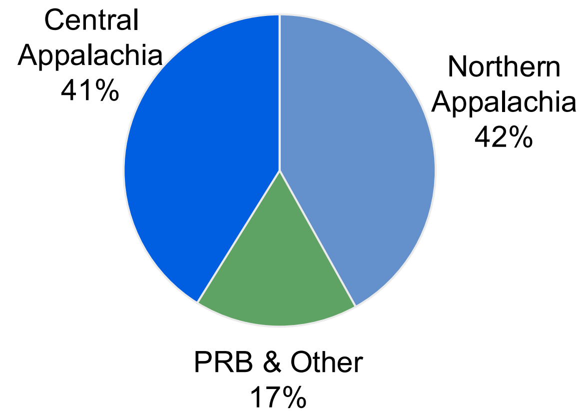
Total AEP System



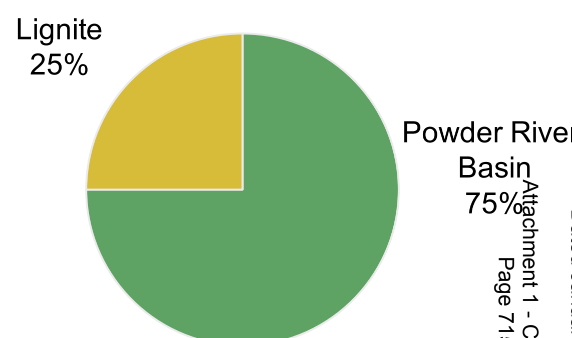
Coal Stats:

- 95% contracted for 2007
- Avg. delivered price ~ $35.10/ton in 2006
- Approximate 4-6% price increase in 2007 -- ($36.50 to $37.50/ton)
  - Addition of Mountaineer & Mitchell scrubbers allows for a greater mix of Northern Appalachian coal in 2007

AEP East

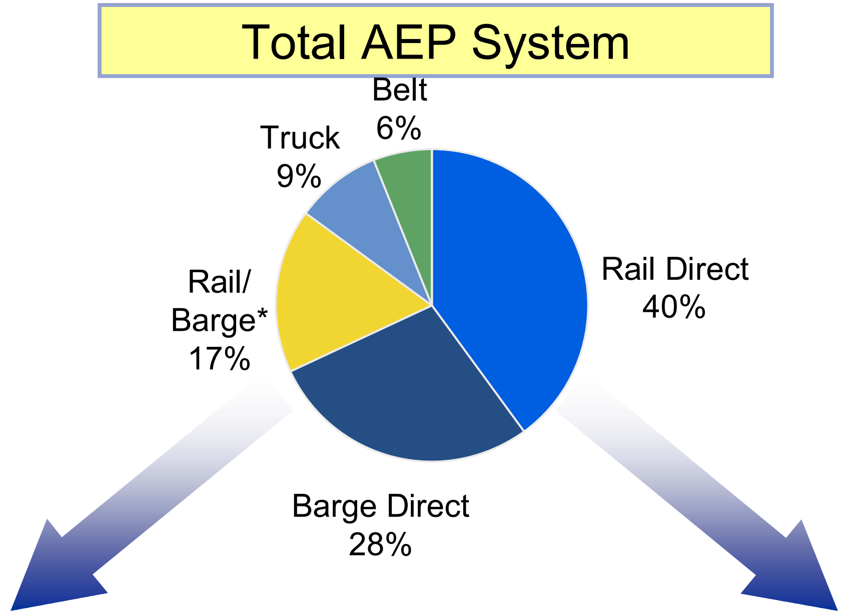


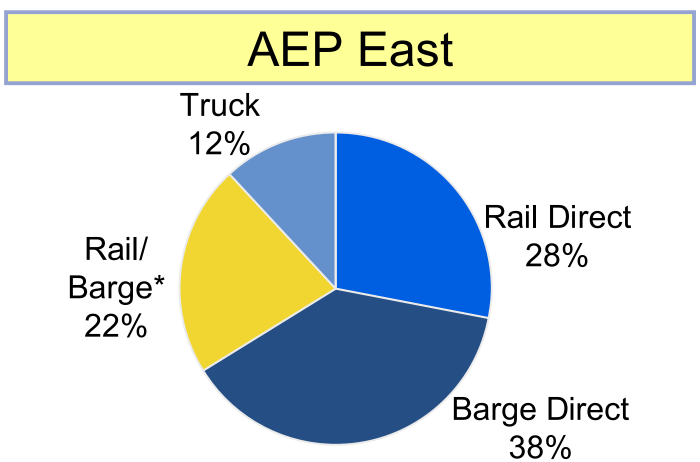
AEP West

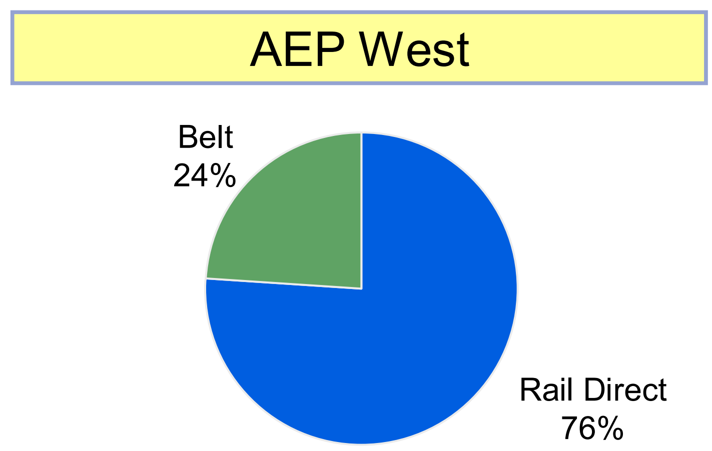


Coal Delivery

2006 Actual







* Reflects coal delivered to AEP plants transported through a combination of rail and barge

Purchased Generation

Waterford

- 821 MW combined-cycle gas plant
- $220MM purchase price
- Columbus Southern Power completed purchase on Sept. 28, 2005

Ceredo

- 505 MW simple-cycle gas plant
- $100MM purchase price
- APCo completed purchase on Dec. 15, 2005

2,946 MW of gas-fired generation added since 2005

Darby

- 480 MW simple-cycle gas plant
- $102MM purchase price
- Columbus Southern Power completed purchase on April 25, 2007

Lawrenceburg

- 1140 MW combined-cycle gas plant
- $325MM purchase price
- AEG completed purchase on May 16, 2007

Additional Gas-fired Generation Allows Us To Meet The Growing Needs Of Our Customers And Provides The Company With Greater Fuel Flexibility

AEP®

New Generation Facilities

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
SWEPCo	Mattison	Arkansas	$130 MM	Gas	Simple-cycle	340 [1]	2007
PSO	Southwestern	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
SWEPCo	Stall	Louisiana	$300 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.3 B [2]	Coal	Ultra-supercritical	600 [2]	2011
PSO	Red Rock	Oklahoma	$1.8 B [3]	Coal	Ultra-supercritical	900 [3]	2012
APCo	Mountaineer	West Virginia	$2.23 B	Coal	IGCC	630	2012
CSP/OP	Great Bend	Ohio	Under Review [4]	Coal	IGCC	630	2017

(1) 150MW were declared in commerical operation on July 12, 2007.
(2) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment.
(3) PSO will own 50%, or 450 megawatts, totaling approximately $900MM in capital investment.
(4) FEED (front-end engineering and design) study with GE/Bechtel is complete. Cost estimates are not yet filed with the PUCO due to the pending appeals to the Supreme Court of Ohio resulting from the PUCO's April 10, 2006 Opinion and Order.

AEP®

AEP Is Meeting The Growing Electricity Needs Of Customers Through The Pursuit Of New Economic Generation Facilities

New Gas-Fired Generation Facilities

SWEPCo

- Mattison Plant (Tontitown, AR)
  - Certificate of Need filings (LA, AR, TX) were approved in all 3 states
  - Air permit received in February 2007
  - Units 3 and 4 (150 MW) online on July 12, 2007; Units 1 and 2 online by January 2008
- Stall Plant (Arsenal Hill, LA)
  - Certificate of Need filings (LA, AR, TX)
    - TX settled in Feb 2007
    - AR & LA decisions expected by year-end 2007
  - Air permit filed on April 27, 2007 – expecting approval by March 2008
  - Commercial operation date in 2010

PSO

Southwestern & Riverside Additions

- Air permit received March 22, 2007
- Commercial operation date of December 2007
- Regulatory Recovery
  - Settlement and final order in the Lawton Cogen case authorizes recovery of costs for Southwestern and Riverside peakers through a rider mechanism beginning as early as June 2008 based on the Commercial Operation date

2007-2009 Projected Capital Expenditures

	2007	2008	2009
Mattison	$56MM	$4MM	-
Stall	$82MM	$126MM	$64MM
Southwestern	$36MM	$3MM	-
Riverside	$35MM	$2MM	-

SWEPCo's and PSO's Short-Term and Intermediate Power Needs Will Be Met With Newly Constructed Gas-Fired Facilities

New Ultra-Supercritical Coal Facilities

SWEPCo

Turk Plant (Fulton, AR)

- Certificate of Need approvals (LA, AR, TX) expected by September/October 2007
- Air permit approval expected in August 2007
- Regulatory Recovery
  - Recovery of carrying cost requested in LA Certificate of Need filing – Hearings scheduled for September 2007
  - AR and TX rate recovery will be addressed in separate filings
- Approximately 85-90% of costs are firm
  - EPC contract for balance of plant work awarded in May 2007
  - Contracts for turbine, boiler, and environmental control equipment awarded in 2006

PSO

Red Rock Generating Facility (Red Rock, OK)

- Used and Useful Determination filed in February 2006 – Hearings concluded July 31, 2007 and order is expected in September 2007
- Air permit approval expected in October 2007
- Regulatory Recovery
  - Order expected in PSO rate case filing in July 2007 – filing included request for CWIP treatment for new projects
- Original cost estimate of $1.8 billion – revised cost estimate expected in the third quarter of 2007

2007-2009 Projected Capital Expenditures

	2007	2008	2009
Turk Plant	$211MM	$230MM	$243MM
Red Rock Generating Facility	$54MM	$120MM	$236MM

Ultra-Supercritical Coal-Fired Generation Is The Most Economical Choice For New Baseload Plants In AEP's Western Service Territory

Integrated Gasification Combined Cycle Facilities

Front-End Engineering & Design (FEED) results complete. Results were filed in June 2007. Cost estimates in target range of 20-30% premium over new ultra-supercritical coal-fired facilities of equal capacity.

West Virginia

- **Certificate of Public Convenience & Necessity filed Jan. 11, 2006**
  - APCo testimony filed June 18, 2007
  - Intervenor & Staff testimony due Nov. 19, 2007
  - Hearings Dec. 10-14, 2007
  - Statutory Deadline – Mar. 7, 2008
- **Air permit filed in Oct 2006**
  - A technical review of the application and development of a draft permit is ongoing by the WV Dept. of Environmental Protection
- **Regulatory Recovery**
  - Filing made in June 2007 –included request for cash recovery mechanism

Ohio

- **Certificate of Environmental Compatibility & Public Need filed March 24, 2006**
  - Ohio Power Siting Board certificate issued in April 2007
- **Air permit filed in Oct 2006**
- **Regulatory Recovery**
  - Phase 1 – June 2006 – PUCO approved tariff to recover pre-construction costs ($24MM) over 12-month period effective July 1, 2006
  - Phase 2 – filing likely to be withheld until resolution of Ohio Supreme Court action
  - Informational filing made on June 18, 2007 to inform PUCO of the West Virginia filing

Construction Period Of 48-50 Months Following Receipt Of Major Regulatory And Permit Approvals

Investing In IGCC

Generation Technology Comparative Statistics

US2006$	Eastern Bituminous		
	USC	**IGCC**	**NGCC**
Nominal Capacity (MW)	618	629	530
Capacity Factor (%)	85%	85%	25%
Total Plant Cost (EPC + Owner's Cost) ($/kW)	$2,152	$2,717	$572
Production Cost ($/MWh)	$22	$22	$45
Cost of Electricity, without CO_2 Capture ($/MWh)	$72	$83	$87
Estimated Cost of Electricity, with 90% CO_2 Capture ($/MWh)	$118	$108	$135

Source: Results of AEP analysis based on EPRI studies.

- Total Plant Cost (Overnight EPC 2006$s) includes the cost to engineer, procure and construct plant and owner's direct costs.
- Assumes Northern Appalachian coal price of $2.25/mmBtu for USC and IGCC and natural gas price of $6.00/mmBtu for NGCC.
- Production cost includes fuel cost plus variable operations and maintenance (VOM) cost.
- Cost of electricity represents first year estimates only in 2006$ and are based on total plant cost plus generic cost estimates for AFUDC, emission credits, infrastructure, interconnections, transmission lines and upgrades.
- Cost of electricity with CO_2 capture provides pressurized CO_2 at the fence line and does not include transportation, storage and monitoring costs.

AEP®

IGCC Technology Is Strategic To Keeping Coal In The Money

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A Reliable & Reasonably-priced Electric Supply Is Necessary To Support The Economic Well-being Of The Areas We Serve

Highlights of Bingaman-Specter Proposal

"Low Carbon Economy Act of 2007"

Key Components:

- Start date for greenhouse-gas reductions is 2012
- Goals: 2006 levels by 2020; 1990 levels by 2030
- Includes a safety valve of $12 per metric ton, increasing at an annual rate of 5% above inflation
- Support for allowance allocations
- International action

AEP Endorses this Proposal Because It Sets Reasonable And Achievable Reduction Targets and Includes the AEP-IBEW Trade Proposal

AEP®

  - Business Roundtable Climate Resolve
  - Numerous forestry activities
- **Evaluating longer term investment decisions such as new generation and carbon capture and storage (e.g., IGCC, Ultra-supercritical)**

AEP Must Be A Leader In Addressing Climate Change

AEP's Long-term GHG Reduction Portfolio

Renewables (Biomass Co-firing, Wind)

Supply and Demand Side Efficiency

Off-System Reductions and Market Credits (forestry, methane, etc.)

Commercial Solutions of New Generation and Carbon Capture & Storage Technology

AEP Is Investing In A Portfolio Of GHG Reduction Alternatives

AEP®

AEP's Long-term CO_2 Reduction Commitment

Existing Programs

- Renewables
  - 800 MWs of Wind
  - 300 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

New Program Additions

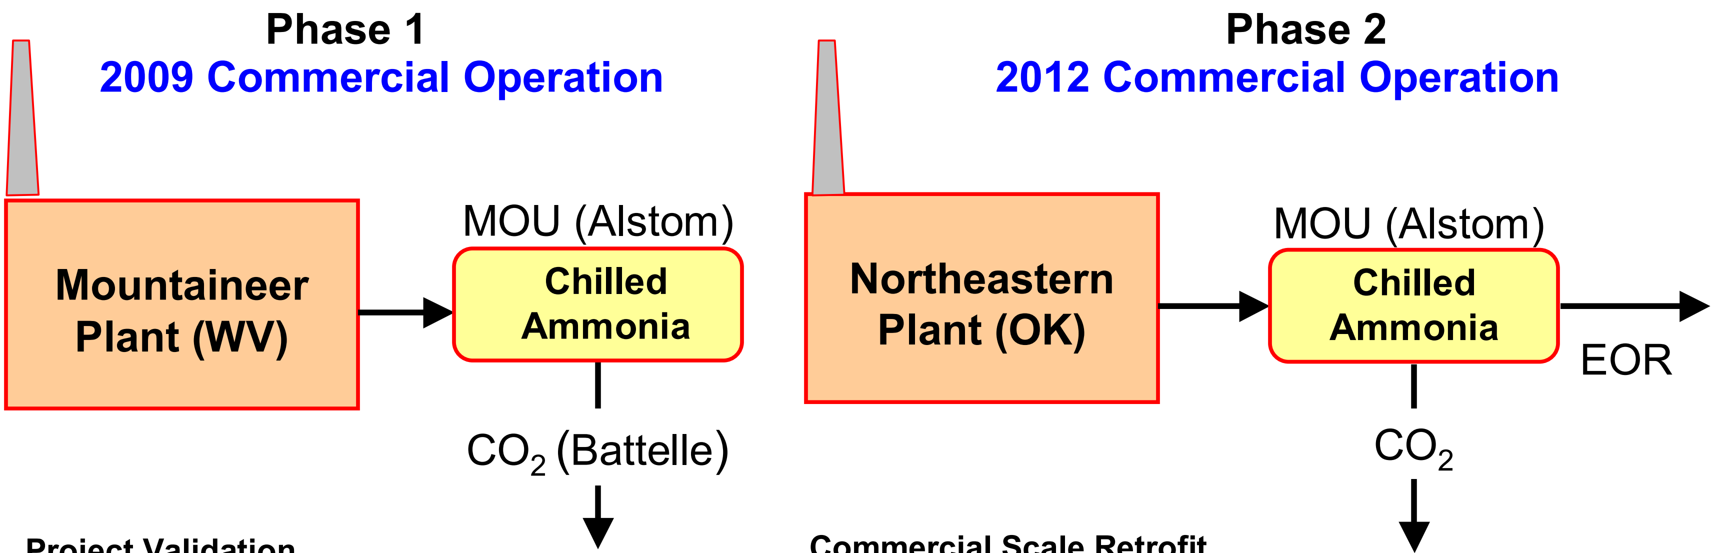
- Incremental Reduction quantity: 5MM tons/yr
- Timing: To take effect/receive credits by 2011
- Methods
  - +1000 MWs of Wind PPAs – 2MM tons/yr
  - Domestic Offsets (methane) – 2MM tons/yr (e.g., livestock methane capture deal of 0.6MM tons/yr)
  - Forestry – Tripling annual investment to increase to 0.5MM tons/yr by 2015
  - Fleet Vehicle/Aviation Offsets – 0.2MM tons/yr
  - Additional actions to include DSM and end use energy efficiency, biomass and power plant efficiency – 0.2MM tons/yr

New Technology Additions

- Commercial solutions for existing fleet
  - Chilled Ammonia
  - Oxy-Coal

AEP Is Committed To A 5mm Ton/Yr Reduction In Co_2 Emissions Which Offsets Approximately Half Of The Emissions Projected From New Generation Projects Previously Announced

Chilled Ammonia Technology Program



Project Validation

- 20 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, under construction at WE Energies)
- 100,000 – 300,000 tonnes CO_2 per year
- In operation 1Q 2009
- Approximate total cost \$50 – \$80M
- Using Alstom "Chilled Ammonia" Technology
- Located at the AEP Mountaineer Plant in WV
- CO_2 for geologic storage

Commercial Scale Retrofit

- ~ 200 - 300 MW_e scale (megawatt electric)
- ~ 600 MW_t scale (megawatt thermal)
- ~1.5MM tonnes CO_2 per year
- In operation late 2011
- Approx. capital \$250 – \$300M (CO_2 capture & compression)
- Approx. O&M cost \$12M per year
- Energy penalty ~ 35 – 50 MW steam, 25 – 30 MW for CO_2 compression
- Retrofit Wet FGD Required: ~\$225 – \$300M
- Located at AEP's Northeastern Plant Unit 3 or 4 in Oklahoma
- CO_2 for Enhanced Oil Recovery (EOR)

AEP®

Post-combustion Carbon Solution Provides Pure CO_2 Stream For Capture

Oxy-Coal CO_2 Capture & Storage Project

Pilot Scale Demonstration

- 10 MW_e scale
- Teamed with B&W at its Alliance Research Center and 16 other utilities
- Demo complete 3Q 2007
- AEP funding of $50k

Commercial Scale Retrofit

- Retrofit on existing AEP sub-critical unit (several available)
- 150 – 230 MW_e scale retrofit
- 4,000 – 5,000 tons CO_2 per day
- Team with B&W
- AEP funding of ~ $1.5M for feasibility study
- Feasibility study to be completed in late 2007/early 2008

AEP®

Combustion Conversion Technology For Existing Coal Fleet – Longer Lead Time With Enhanced Viability And Long-term Potential

Transmission Investment Opportunity *

Creating a business model to manage capital requirements for enhanced returns with partners

- ~ $3 billion I-765 Project in PJM
- ~ $2 billion 765-kV study with ITC in Michigan
- ~ $3 billion project filed with SPP
- ~ $1- $7 billion in ERCOT via Electric Transmission Texas, LLC (ETT)

Assumptions	
Estimated Investment Opportunity	$15 Billion
Ownership Structure w/ Partner	50% / 50%
Debt/Equity Ratio	50% debt / 50% equity
Return on Equity	11.00%-13.00%
Potential EPS Impact (based on 396 MM shares)	$1.00+ **

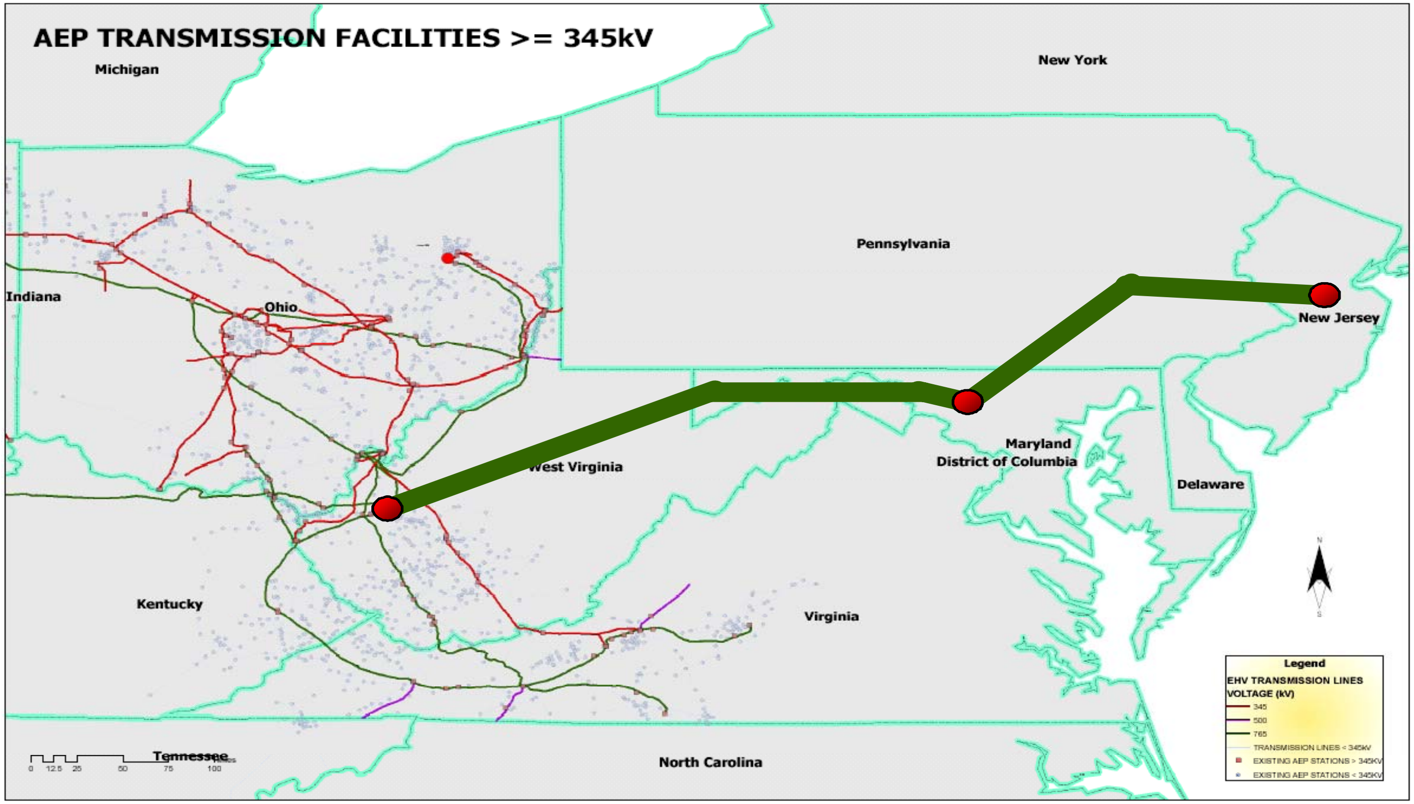
* This identified transmission opportunity is not included in current capex guidance

** Ultimate earnings contribution and timing dependent on ownership structure, capitalization, ROE and date assets are put in-service

AEP®

Building The Next US Interstate System For Enhanced Reliability And Market Efficiency Could Have Significant EPS Implications

765-PJM



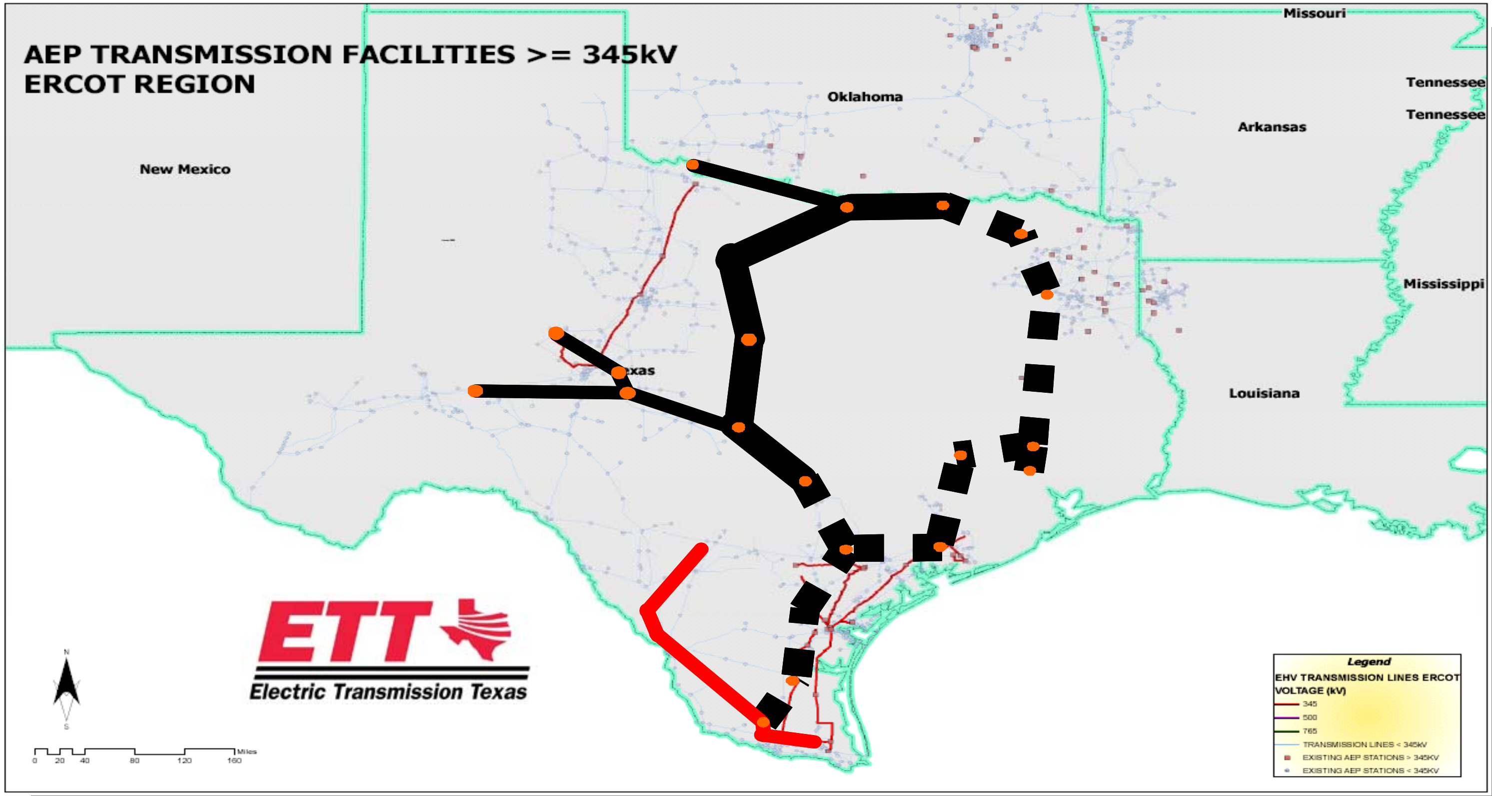
- JV with Allegheny to build a 290 mile West Virginia – Maryland line (Approved by PJM in June 2007). Total estimated cost of $1.8 billion (AEP portion appprox. $600 million). (Second leg which would continue to New Jersey still under consideration by PJM.)

- Enhances Midwest-Mid-Atlantic reliability and improves power transfer capability by 5000 MW.

- Reduces network line losses by 280 MW.

AEP®

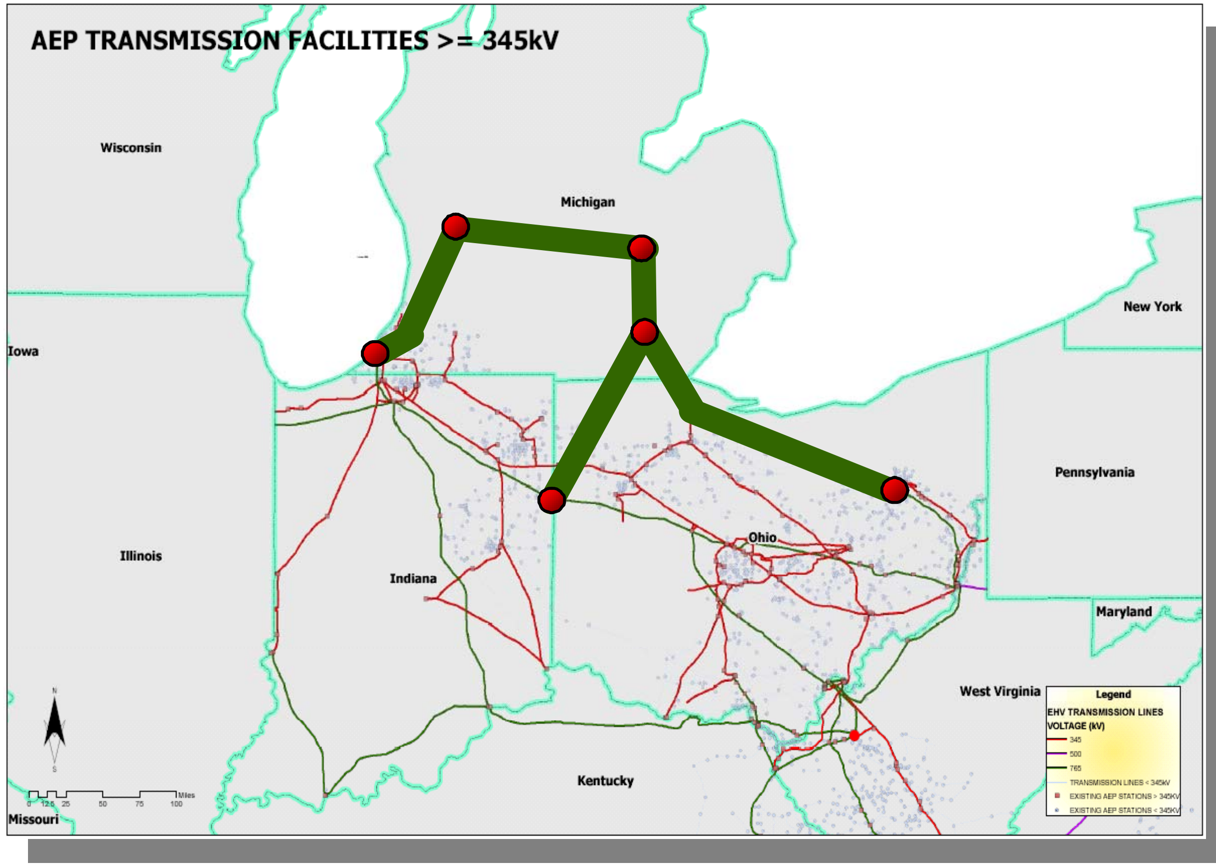
765-ERCOT



- Jointly-owned utility company (AEP and Mid American) will design, construct & operate ERCOT transmission assets.
- AEP exploring ERCOT transmission investment opportunity, including 420 miles of 765-kV initially.
- Up to 4000MW improved transfer capability.

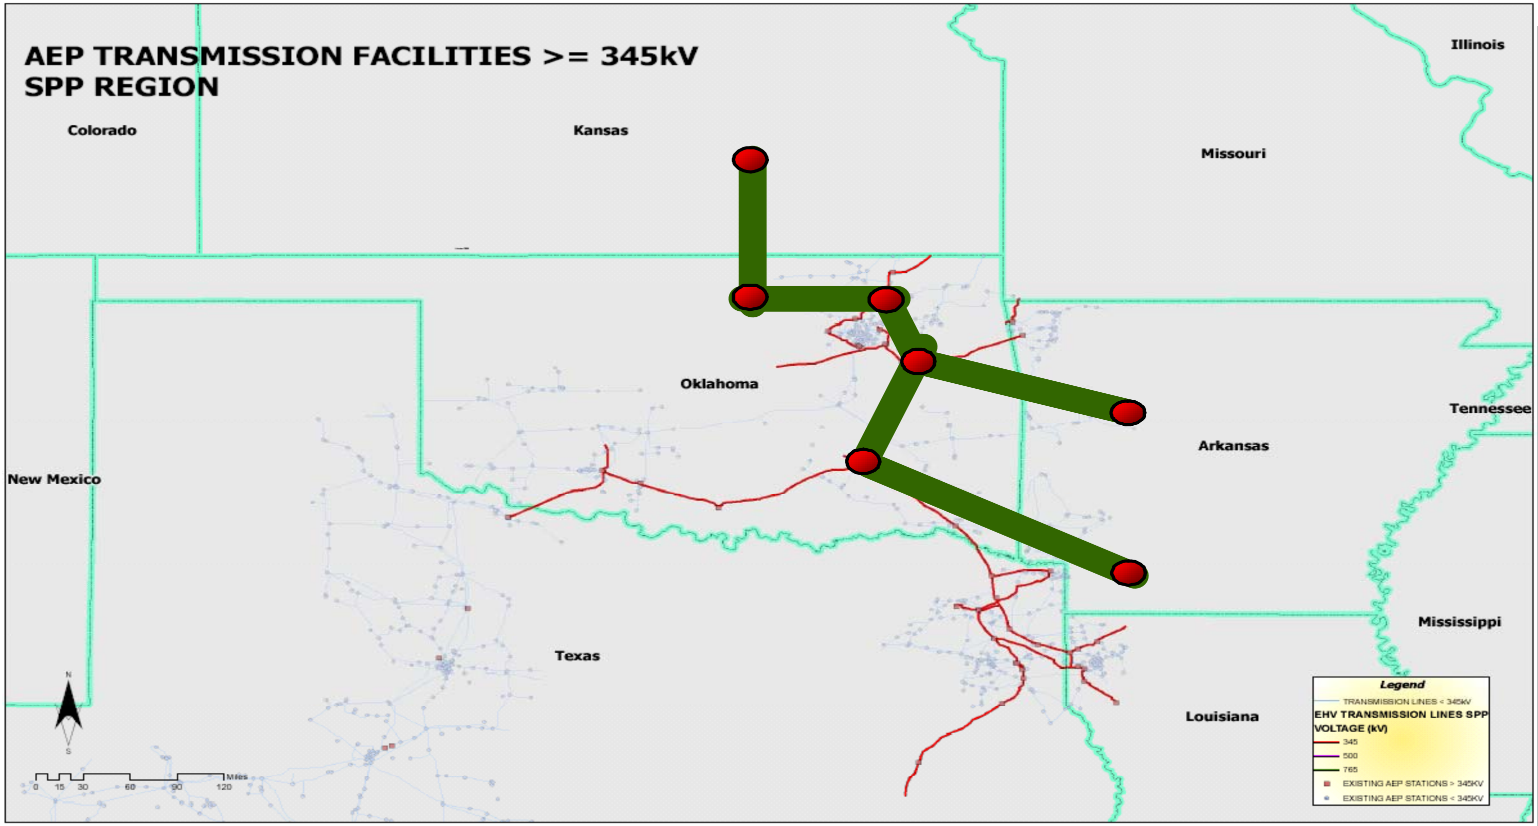
3

765-Michigan



- Agreement with ITC Transmission for Michigan 765-kV to study the feasibility of 700 miles of 765-kV lines in Ohio and Michigan. Completed study should be available in the third quarter of 2007.
- Over 3000MW improved transfer capability.
- Reduces network line losses by 250 MW.

765-SPP



- In July 2006, AEP submitted a conceptual project to SPP for six 765-kV lines, 610 line miles from Arkansas to Wichita, KS, with a proposed construction period of 2012-17.
- SPP issued its EHV Overlay Study in June 2007 reviewing 345 kV, 500 kV, and 765 kV potential projects in SPP. An alternative, which includes a 765-kV line in Oklahoma and Kansas connecting the east to PJM, was chosen as the preferred alternative.

AEP®

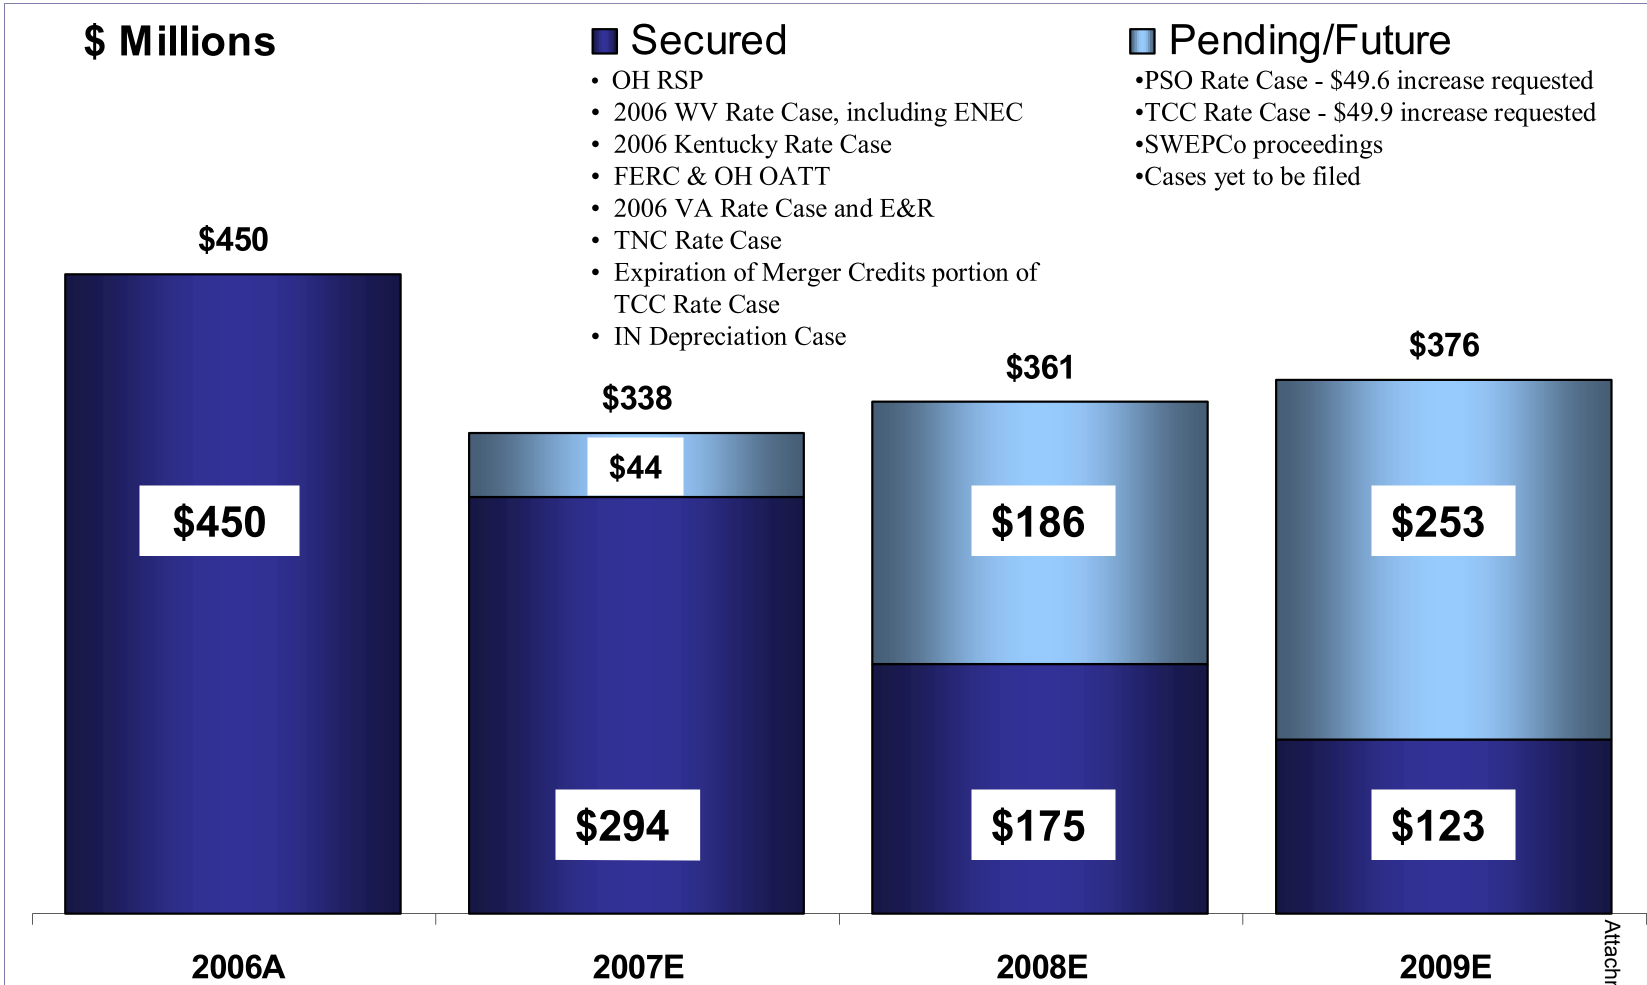
New Transmission Investment Funding Plans

- Electric Transmission Texas LLC
  - **40% equity / 60% debt capital structure requested at the PUCT follows Texas' precedent for T&D companies' filings**
  - **Equity – 50% AEP / 50% MidAmerican Energy**
  - **AEP's 50% investment will be held at the AEP Utilities, Inc. subsidiary**
  - **Debt – Initially bank financing**
  - **Initial funding in 3Q07 after regulatory approvals**

- AEP I-765$_{TM}$ Interstate Project
  - **Forming a joint venture with Allegheny Energy for 250 miles of the proposed 550 mile project**
  - **JV portion of the I-765$_{TM}$ Interstate Project approved by PJM in its Regional Transmission Expansion Plan in June 2007**
  - **Equity – 50% AEP / 50% Allegheny**
  - **AEP's 50% investment will be held at the AEP Transmission Holding Company LLC subsidiary**
  - **Operations to commence in the second half of 2007**
  - **I-765$_{TM}$ Interstate Project included in the DOE's draft National Interest Electric Transmission Corridor issued in April 2007**

- Other Transmission Projects
  - **Equity percentage of capital structure will target FERC precedents**
  - **Equity ownership percentage will vary by project**
  - **Will seek FERC transmission incentives:**
    - **Incentive ROE**
    - **Return on CWIP**
    - **Abandonment recovery**
    - **Expensing pre-construction expenses**

Incremental Rate Relief Composition



AEP®

Rate Relief Is A Critical Element To AEP's Financial Success

2007 Regulatory Activity Completed

Appalachian Power – Virginia Base Rate Case

Final order approved on May 15, 2007

- ✓ Results in $24 Million annual increase in base rates
- ✓ 10.0% approved ROE

Texas North Base Rate Case

Final settlement order approved on May 24, 2007

- ✓ Results in $11.7 million increase in pre-tax earnings ($13.7 million increase in revenues offset by $2 million increase in depreciation expense)
- ✓ No stipulated ROE in the settlement. For AFUDC purposes, Texas North will utilize the ROE that comes out of the Texas Central rate case.

Appalachian Power – West Virginia Expanded Net Energy Cost (ENEC) Filing

Final settlement order approved on June 22, 2007

- ✓ Results in $85.5 million net increase in revenues effective July 1, 2007
  - ✓$54.8 million covers increased costs related to coal and purchased power
  - ✓$28.5 million covers environmental construction costs, primarily related to installation of scrubbers
  - ✓Remainder ($2.2 million) recovers first year costs of rehabilitating four small electric utilities acquired as of July 1

Indiana Michigan Power – Indiana Depreciation Study

Interim settlement order approved on June 13, 2007

- ✓ Allowed a change in depreciation rates effective July 1, 2007, resulting in a pretax earnings increase of approximately $69 million per year
- ✓ Stipulated a $5 million credit to customers in the next fuel adjustment clause proceeding
- ✓ Required I&M to file a rate petition on or before July 1. Petition was filed on June 19.

Regulatory Activity Underway

AEP Texas Central Company General Rate Case

On November 9, 2006, TCC & TNC filed applications with the PUCT to raise base rates they charge to Retail Electric Providers (REP) serving end-use electricity customers in their service territories. On April 3, 2007, TCC and TNC submitted revised rate increase requests of $69.9MM and $22MM, respectively. Requested increases include the expiration of merger-related billing credits that have been in place since 2000, totaling $20MM and $6.2MM for TCC and TNC, respectively. (TCC Docket #33309, TNC Docket #33310). TNC reached settlement on May 4, 2007 for a $13.7MM increase in revenues and a $2MM increase in depreciation, resulting in an annual increase of $11.7MM. The settlement was approved by the PUCT on May 24, 2007. The expiration of the merger credits for TCC was approved by the PUCT in June 2007.

Procedural Schedule

March 13, 2007	Intervenor testimony
March 23, 2007	Staff testimony
April 3, 2007	Rebuttal testimony
April 12, 2007	Hearings
May 14, 2007	Rates effective under bond, subject to refund

Final Order expected in September-October 2007

TNC Approved Rate Base

Description	Transmission	Distribution

PSO General Rate Case

On November 21, 2006, Public Service Oklahoma filed an application with the Oklahoma Corporation Commission to increase base rates by $49.6 million to recovery investments already made and costs incurred. The request represents a 4% overall increase (including fuel). The filing also includes a proposal to adopt an annually adjusted rate mechanism, which includes a return on CWIP. The formula rate would adjust rates, up or down, if PSO earns above or below an approved bandwidth around the authorized ROE. (Case #200600285)

Pro-forma Capital Structure – Company Position (Test Year ended 6/30/06)

	% of Capitalization	Cost Rate	Weighted Cost
Long-Term Debt	53.55%	6.32%	3.39%
Preferred Stock	0.43%	4.02%	0.02%
Common Equity	46.02%	11.75%	5.41%
Total	100%		8.82%

May 30, 2007	ALJ report issued
June 13, 2007	Oral closing arguments
July 2007	Final order expected

Regulatory Activity Underway

AEP Ohio Application For 4% Provision On Generation Rate

- On Jan. 23, 2007, CSP and OP filed an application at the PUCO to recover 2007 costs associated with additional generation-related expenditures the companies are encountering related to environmental, security and other new generation-related costs pursuant to the RSP.
- CSP and OP are requesting to implement the provision to recover \$24.5MM and \$8.2MM, respectively, from May 2007 through December 2007.
- Staff & Intervenor testimony filed May 11, 2007; Staff recommended a \$15MM increase at CSP and a \$3.7MM increase at OP; OCC recommended a \$19.9MM increase for CSP and a \$3.7MM increase for OP.
- Hearings were held in May and June and we expect an order in September or October 2007.
- Because there was no specific action by the PUCO within the required time frame, we were allowed to implement these increases, subject to refund, in May 2007.

I&M Indiana Rate Petition

- On June 19, 2007, I&M filed a petition with the Indiana Utility Regulatory Commission (IURC) for authority to increase its rates and charges for electric utility service and to establish and implement rate adjustment mechanisms to track certain matters.
- Requested trackers relate to reliability enhancement, demand-side management/energy efficiency programs, off-system sales margins, PJM, environmental compliance and capacity equalization settlement.
- Parties have agreed to a historic test year ended September 30, 2007, with a rate case filing date of January 31 2008. This schedule is subject to IURC approval.

AEP®

Regulatory Activity Underway

Electric Transmission Texas (ETT) Rate Filing

- Jan. 22, 2007 – ETT filed with the Public Utility Commission of Texas for approval to operate as an electric transmission utility in Texas and to establish initial rates for ETT.
  - Requested capital structure of 60% debt / 40% equity; requested ROE of 11.25%.
  - Intervenor testimony filed June 8, 2007; Staff testimony filed June 18, 2007; Staff recommended a 10.50% ROE – 10.0% with a 50 bps addition for start-up risk; Hearings were held July 16 and 17, 2007.
  - An order is expected in the third quarter of 2007 and operations are expected to commence in the 2nd half of 2007. Upon receipt of approvals, AEP and MidAmerican will each own a 50% interest in the joint venture.

Seams Elimination Cost Adjustment Revenues

- August 2006 – ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
  - Up to $96MM of SECA revenues could be disallowed, net of unused provisions.
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both.
- Exceptions to initial decision filed Sept. 11, 2006; Replies to exceptions filed Oct. 11, 2006; Order expected by the Commission in 2007.

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission serves over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1st.
- The current revenue requirement is $88.7MM and the new total revenue requirement requested is $161MM.
- We requested an effective date of September 1, 2007 for the revised tariff and FERC can suspend for an additional five months, which would push the effective date to February 1, 2008.

AEP®

Regulatory Activity Underway

APCo Mountaineer IGCC Filing

West Virginia

- Testimony filed with the West Virginia Public Service Commission on June 18, 2007 in support of APCo's application for a Certificate of Public Convenience and Necessity to construct a 600MW IGCC plant in WV at a cost of approximately $2.23 billion.
  - Testimony includes a proposal for the Commission to approve a cost recovery mechanism through the existing Expanded Net Energy Cost (ENEC) mechanism. The filing is not a formal proposal to adjust rates.
  - Actual requests for increased rates will be included in future filings, once construction of the plant has commenced and actual Construction Work In Progress data is known.
- Public hearings are scheduled for December 10-14, 2007 with an order on or before March 7, 2008.

Virginia

- Testimony filed with the Virginia State Corporation Commission on July 16, 2007 seeking a prudence determination and approval to recover, beginning in 2009, Virginia's share of the carrying costs associated with the proposed plant.
- No procedural schedule has been set but Virginia legislation requires a decision within nine months.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- Oral arguments regarding this matter are scheduled on the Ohio Supreme Court's agenda for October 9, 2007.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.

Regulatory Activity Underway

Oklahoma Red Rock Generating Facility

- Testimony filed on February 1, 2006 in support of PSO's application for a determination that additional baseload electric generating capacity will be used and useful.
- The Oklahoma Corporation Commission consolidated this cause with Oklahoma Gas and Electric's application for an order granting pre-approval to construct Red Rock Generating Facility and authorize a recovery rider.
- Initial staff and intervenor testimony agrees that PSO needs baseload capacity and staff recommends that the OCC find Red Rock used and useful. The biggest challenges related to the RFP process and the debt equivalence issue in evaluating the PPA bids.
- Hearings for PSO's Used and Useful Determination and OG&E's cost recovery were held July 9-31, 2007.
- We await an ALJ report in August 2007.

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- Public hearings will begin August 9, 2007.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to Purchase, Operate, Own and Install Peaking, Intermediate and Baseload Generating Facilities. Peaking and intermediate facilities have been addressed. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- Public hearings are scheduled for September 11-14, 2007.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- Public hearings are scheduled for September 27-28, 2007.

AEP®

Change in Debt, Net	$	$ 2,010	$ 1,176	$ 967
Change in Other Temporary Cash Investments, Net	$ (291)	$ -	$ -	$ -
Other Investing and Financing Activities	$ (127)	$ (95)	$ (137)	$ (29)
Cash Sources Less Capital Expenditures, Dividends & Other	$ (100)	$ (96)	$ 111	$ 88
Ending Cash Balance	$ 301	$ 205	$ 316	$ 404

Projected 2007-2009 AEP Consolidated Credit Metric Ranges:
Debt to total capital (adjusted - rating agency view) range of 58% to 60%
FFO to Interest range of 3.6x to 4.0x
FFO/Total Debt range of 16% to 18%

* Cash Flow from Operations projections assume full rate recovery on capital expenditures.

AEP®

Capital Investment Is Funded By Cash From Operations And Debt Issuances

Why Invest in AEP?

- Strength and scale in assets & operations
- Disciplined utility model focus - investing in established utility business to drive 5-7% consistent annual earnings growth
- Annual dividend of $1.56 per share providing an above average dividend yield of 3.4%
- Positive dividend outlook
- Stable credit profile

AEP AMERICAN® ELECTRIC POWER

STRONG

FLEXIBLE

ADAPTABLE

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants including our ability to restore Indiana Michigan Power Company's Donald C. Cook Nuclear Plant Unit 1 in a timely manner; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity and transmission lines (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary or deflationary interest rate trends; volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impacting our ability to finance new capital projects and refinance existing debt at attractive rates; the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurred cots and recovery is long and the costs are material; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

AEP AMERICAN ELECTRIC POWER

AEP Highlights

Premier utility platform

- Leadership position in electric generation, transmission and distribution operations
- Cash flow, earnings and regulatory diversity with more than 5 million customers in 11 states
- $6.3 billion capital expenditure program (2009-2011) will continue to drive rate base growth

Effective regulatory relationships

- Traditional recovery mechanisms with equitable risk allocation enhance both earnings and cash flow
- Emerging energy policies play to AEP's strengths (transmission, energy efficiency, reliability)
- Constructive local relationships deliver successful regulatory outcomes

High-growth transmission business

- The leading US transmission owner, operator, and developer
- Exceptional portfolio of high-quality development projects and project partners
- Attractive ROEs, regulatory support and access to capital will drive earnings growth beyond our traditional utility footprint

Stable financial position

- Maximization of shareholder value through regulated utility and transmission investments
- Balanced approach to cost containment and capital allocation
- Commitment to investment grade profile, prudent balance sheet, and liquidity management
- Conservative dividend payout with attractive yield

Uniquely Positioned for Nationwide Grid Expansion

Active Projects:

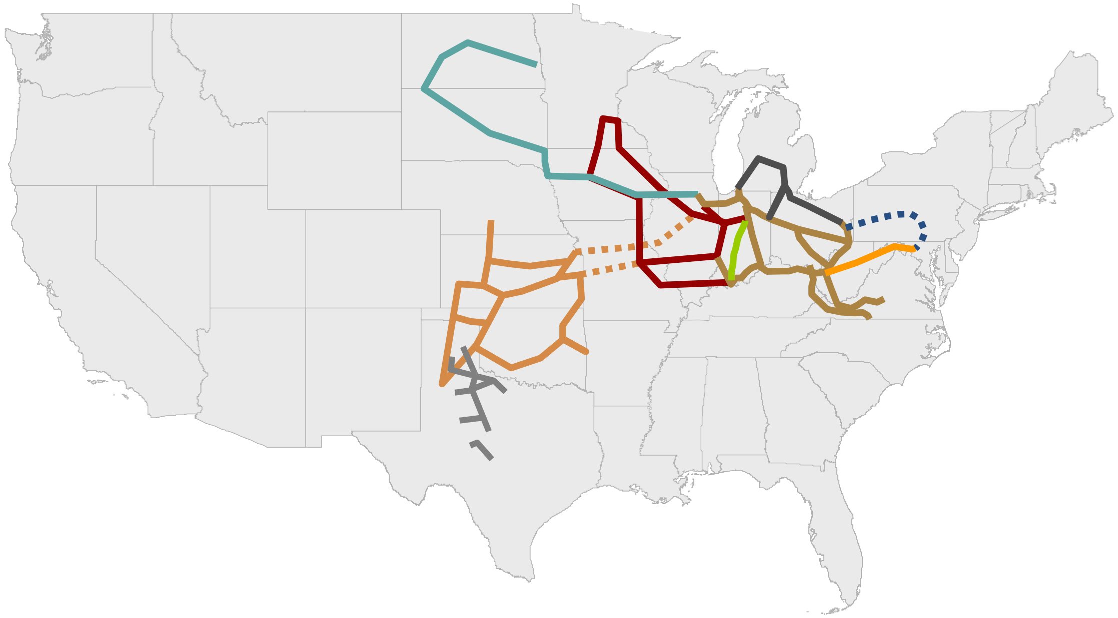
Pioneer — COD: 2015
- *240 miles of 765 kV*
- *Partner: Duke Energy (50%)*
- *Estimated Cost: $1 billion*
- *ROE: 12.54%*

PATH-WV — COD: 2014
- *275 miles of 765 kV*
- *Partner: Allegheny Energy (50%)*
- *Estimated Cost: $1.2 billion*
- *ROE: 14.3%*

Tallgrass — COD: 2013-14
- *170 miles of 765 kV*
- *Partners: OG&E (50%) & MidAmerican Energy (25%)*
- *Estimated Cost: $500 million*
- *ROE: 12.8%*

Prairie Wind — COD: 2013
- *110 miles of 765 kV*
- *Partners: Westar Energy (50%) & MidAmerican Energy (25%)*
- *Estimated Cost: $400 million*
- *ROE: 12.8%*

ETT — COD: 2013
- *345 kV in ERCOT*
- *Partner: MidAmerican Energy (50%)*
- *Estimated Cost: $400 million*
- *ROE: 9.96%*



Future Projects:

EHV Michigan — COD: ~2020
- *700 miles of 765 kV*
- *Partner: ITC*

PJM Projects
- *Enhance existing 765/345 kV*

Hartland — COD: ~2020
- *1000+ miles of 765 kV*
- *Partner: Hartland Wind LLC*

MISO Vision Plan
- *765 kV Backbone*

SPP Overlay — COD: 2013-14
- *765 kV Backbone*

ETT — COD: ~2018
- *345 kV in ERCOT*
- *Additional CREZ spend of $750-$850 million*

AEP AMERICAN ELECTRIC POWER

Note: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

Equity Contributions Enhance Earnings Growth to 4 – 8%

AEP is the leader

- Largest US transmission footprint
- Interstate EHV highway vision
- National renewables transmission strategy

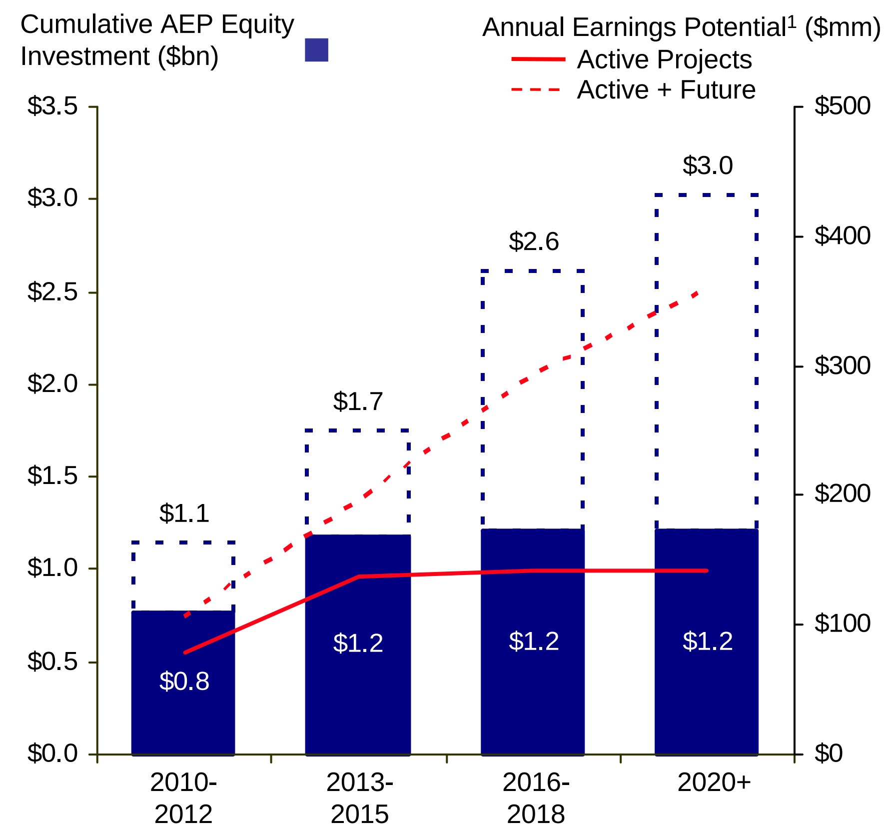
Quality projects

- 4 FERC-approved ($3.3 billion)
- Independent ERCOT transmission JV company (up to $2.6 billion)
- Robust pipeline of future 765 kV projects (up to $15 billion)

Attractive returns

- FERC incentive rates (12.5-14.3%)
- Strong cash flow with CWIP
- Long-term earnings potential of ~$140-$360 million annually[1]

Illustrative Earnings Potential of New Transmission Initiatives



[1] *Illustrative calculation assumes 50/50 debt/equity capitalization and incentive ROE of ~13.0% for FERC projects and a 60/40 debt/equity capitalization and 10.5% ROE for ERCOT projects*

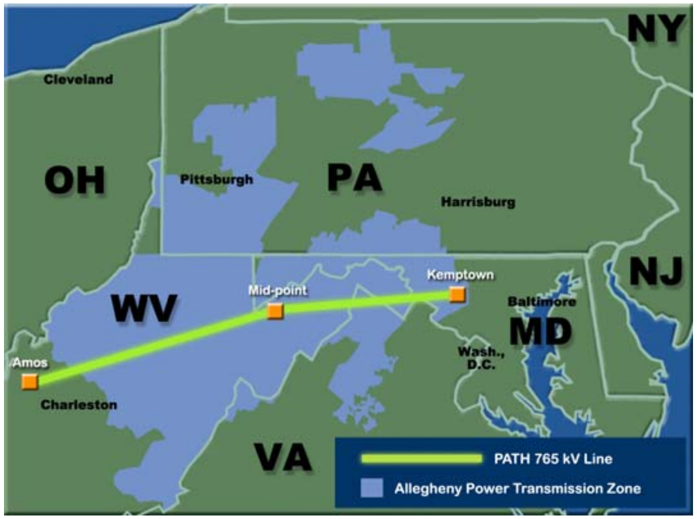
EHV Transmission in PJM: PATH

<u>Project Description:</u> 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

- **Near Term Risks**
  - Obtaining a CPCN in West Virginia or costly concessions with WV to receive the CPCN; CPCN filing made May 15, 2009
- **Pertinent Data**
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP and 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
    - Rates went into effect March 1, 2008; current annual revenue requirement is $15MM effective 1/1/09
  - Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million
  - Estimated completion date: 2014



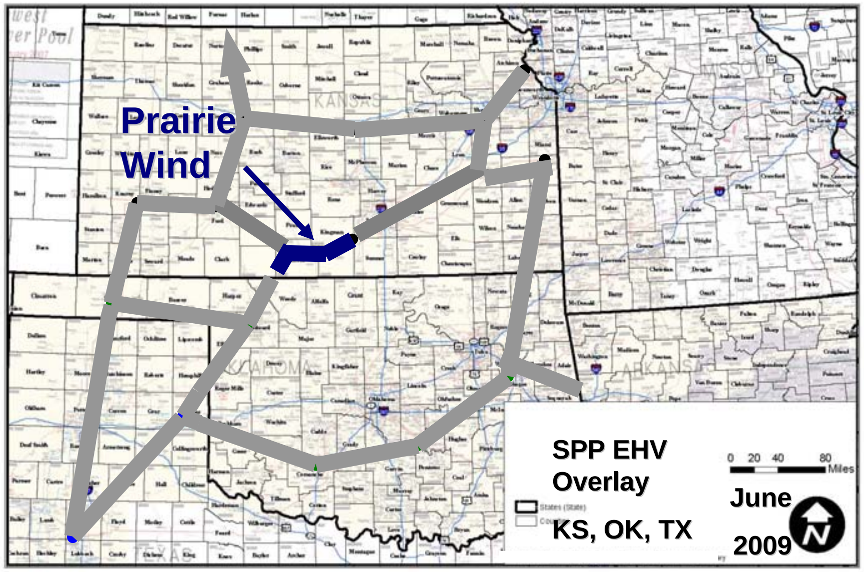
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP AMERICAN® ELECTRIC POWER

Prairie Wind Transmission, LLC

JV to build first segment of 765-kV transmission in SPP

- ***Overview***
  - In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
  - Following a settlement agreement with ITC on June 1, 2009 both entities agreed to split the mileage and costs of building the 765-kv transmission superhighway. The newly revised project is expected to cost approximately $400 million and be in-service by 2013. Settlement approval by the KCC is still pending.
  - PWT is a 50/50 JV that is proposing to build approximately 110 miles of 765-kV lines extending from Wichita, KS, west to a substation near Medicine Lodge, KS, and then south to the Kansas border from Medicine Lodge, KS.
  - The original proposed mileage prior to settlement was approximately 230 miles.
  - The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
  - AEP's ownership of the joint venture is 25%.
  - FERC order received in December 2008:
    - ❑ Cash return on CWIP and 12.8% incentive ROE
    - ❑ Recovery of all costs incurred prior to the time rates go into effect, and
    - ❑ Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PWT or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

- ***Key Challenges***
  - Regional Cost allocation which enables the development of "system solutions"
  - RTO Approval

AEP AMERICAN ELECTRIC POWER

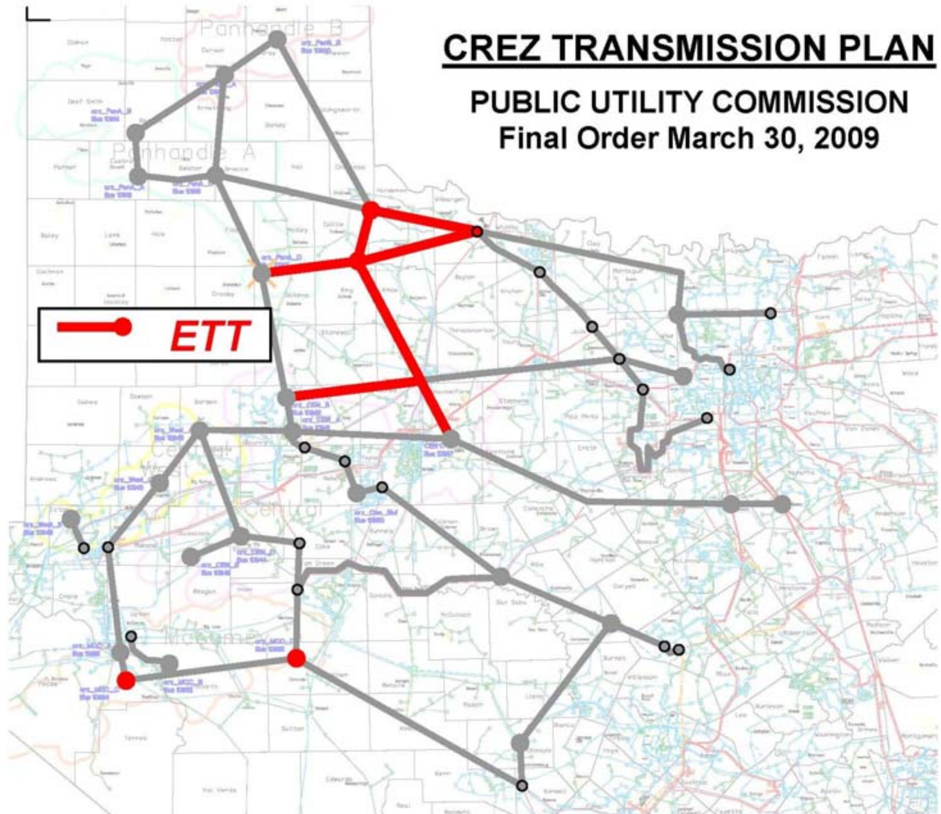
Texas CREZ Project

Strengthening the ERCOT grid to collect and deliver wind generation to load

- ***Status:***
  - On February 26, 2009, PUCT ordered its staff to stage the development of CREZ transmission lines.
  - Staging to occur in separate docket and consider timing of wind projects and congestion.
  - PUCT established 2 categories based on priorities. ETT has no first priority lines.
  - PUCT issued a final order assigning transmission service providers on March 30, 2009.
  - ETT's share of CREZ investment is approx. \$840MM of \$4.9B total.
  - The filing calls for completion of the plan by 2013.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

- ***Next Steps***
  - Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in early 2010.

AEP AMERICAN ELECTRIC POWER

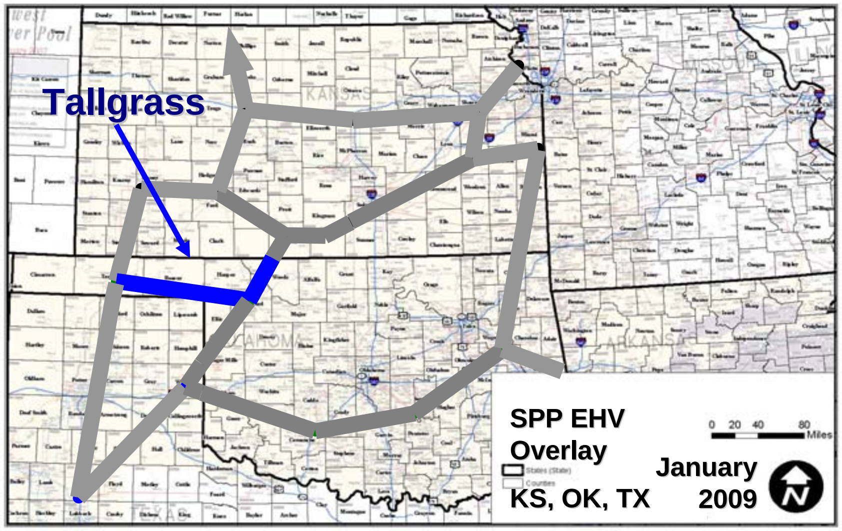
ETT Electric Transmission Texas

Tallgrass Transmission, LLC

JV to build second segment of 765-kV transmission in SPP

Overview

- In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
- TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines extending from the Kansas-Oklahoma border north of Woodward, OK, extending west into the Oklahoma panhandle to a new station that will be built near Guymon, OK.
- The project will promote wind development in the western half of Oklahoma.
- Project is expected to cost approximately $500 million and be in-service by 2013.
- AEP's ownership of the joint venture is 25%.
- Other responsibilities will be handled by the partners or outsourced.
- FERC order received in December 2008:
  - ❑ Cash return on CWIP and 12.8% incentive ROE
  - ❑ Recovery of all costs incurred prior to the time rates go into effect, and
  - ❑ Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of TG or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges

- Cost allocation which enables the development of "system solutions"
- RTO Approval

AEP AMERICAN ELECTRIC POWER

Pioneer Transmission LLC

Overview

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
- The project will improve the reliability of the nation's transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, protect national security and expand opportunities for new generation, including renewables.
- Project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP's ownership of the joint venture is 50%.
- Other responsibilities will be handled by the partners or outsourced.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect, and
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PT or its parents.
  - Certain formula rate issues were set for hearing

Key Challenges

- Cost allocation which enables the development of "system solutions"
- RTO Approval - touches two RTOs – PJM & MISO
- Siting

AEP AMERICAN ELECTRIC POWER

Hartland Wind Concept EHV Development in Upper-Midwest

Project Description: 1000+ miles of 765-kV transmission linking Upper Midwest generation sources with the existing EHV infrastructure in the Chicago area expected to cost \$5-\$10 billion over a 10 year period.

- **Near Term Risks**
  - Technical feasibility study
  - Identification of willing and able partners
  - Obtaining cost allocation between states, PJM, and MISO
  - RTO Technical Approvals
  - Favorable 205 Order including 679 incentives
- **Mitigation**
  - Target the identified need for the project and its ability to provide access for wind energy to load centers
  - Collaboration in regulatory process for regional cost allocation between MISO, PJM, and Midwest Governors Association
  - Prepare comprehensive regulatory filing, including incentives

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP AMERICAN ELECTRIC POWER

AMERICAN ELECTRIC POWER, INC.

Lehman Brothers 2007 CEO Energy Conference – September 5, 2007

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

AEP AMERICAN ELECTRIC POWER

AEP Strategic Direction

Delivering Value to Investors and Cost-Effective Service to our Customers

- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Grow our transmission business
- Achieve adequate returns on all assets

Our core utility mission: Bring reasonably priced electric service to our customers, thereby strengthening our communities and rewarding our investors

AEP AMERICAN ELECTRIC POWER

Capital Investment Focus

- Completion of our intensive environmental retrofit program, coupled with associated rate relief, allows us to redeploy capital into other areas
- Near-term
  - In our western footprint, our capital investment will focus on new generation
  - In our eastern footprint, our capital investment will focus on modernization of the distribution infrastructure, also known as the 'Modern Grid' program
  - In both the east and west, we will focus on successful demonstration and implementation of the chilled ammonia technology for carbon capture
- Long-term
  - Throughout our service territory, transmission and IGCC will be our long-term capital investment focus

Utility Investment Drives Growth

Capital Investment Forecast (2007-2009)

($ in millions)	2007	2008	2009	Total (2007-09)
Environmental	$935	$521	$301	**$1,757**
New Generation - Purchase	$118	$0	$0	**$528** *
New Generation - Build	$474	$485	$573	**$1,532**
Nuclear	$50	$57	$60	**$167**
Generation	$456	$417	$327	**$1,200**
Transmission	$496	$521	$583	**$1,600**
Distribution	$848	$915	$1,016	**$2,779**
Corporate	$165	$110	$114	**$389**
Total Capex	**$3,542**	**$3,026**	**$2,974**	**$9,952**

Add: Lawrenceburg Plant Purchase	$325
Add: Dresden Plant Purchase	$85
2007 Including Lawrenceburg & Dresden	**$3,952**

Note: Excludes AFUDC and recently announced CO_2 and transmission projects

* Includes Lawrenceburg purchase of $325MM and Dresden purchase of $85MM in 2007

Growth investment to be funded by cash from operations via rate relief and debt issuances

AMERICAN ELECTRIC POWER

Environmental Investment Forecast

Ohio Rate Stabilization Plan

- Annual 3% and 7% generation rate increases at CSP & OP, respectively for 2006-2008
- Filing made on Jan. 23 for recovery of 2007 costs associated with additional generation-related investments – activation of 4% rider

West Virginia Rate Settlement

- Mechanism in place to provide rate increases through 2009 for ongoing environmental investments

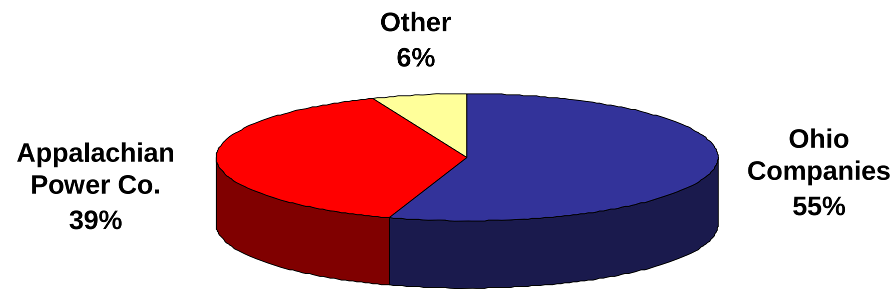
Virginia E&R Mechanism

- Allows APCo-VA to recover incremental environmental & reliability costs
- Last filing - order issued Nov. 20, 2006 granting $21.4MM of recovery
- Additional filing made in July 2007 requesting recovery of $60MM of E&R costs

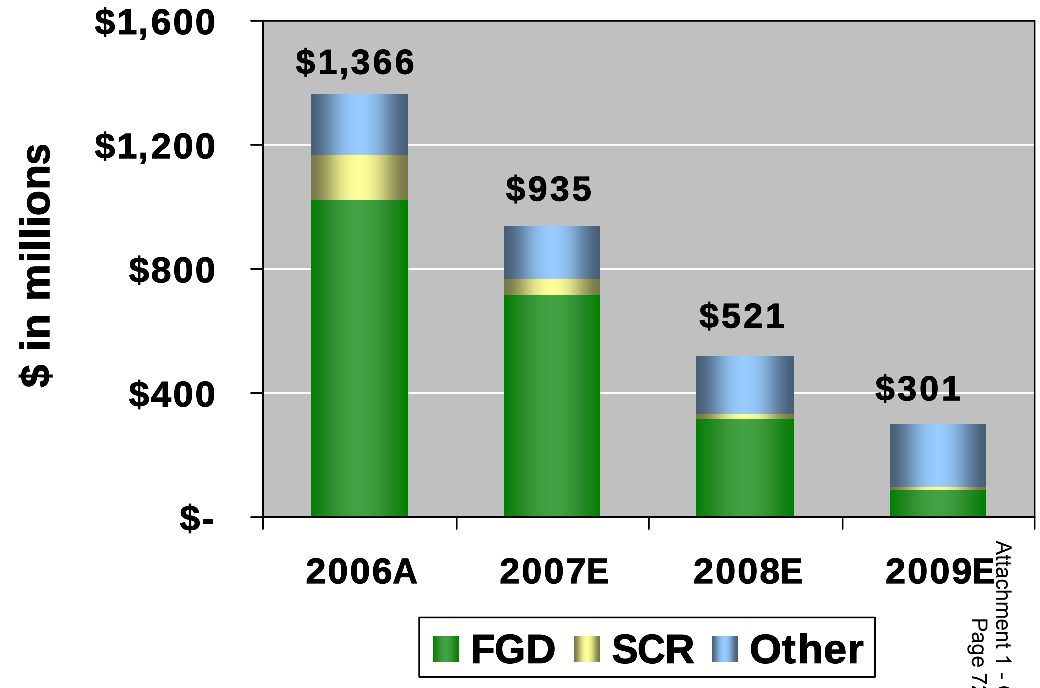
Kentucky Environmental Surcharge

- Monthly surcharge mechanism allows for recovery of pollution-control projects required by the Federal Clean Air Act

Projected Environmental Investment Allocation (2006A – 2009E)



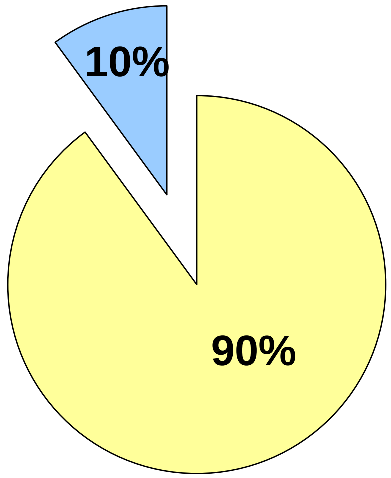
Total Projected Environmental Investment



Materials and Vendors – AEP's Advantage

Environmental Program Costs:

Active/Firm Costs to Remaining Estimated Costs



Actuals To Date & Firm Costs

Remaining Estimated Costs*

* Primarily labor and activated carbon injection systems

Typical Vendors Include:

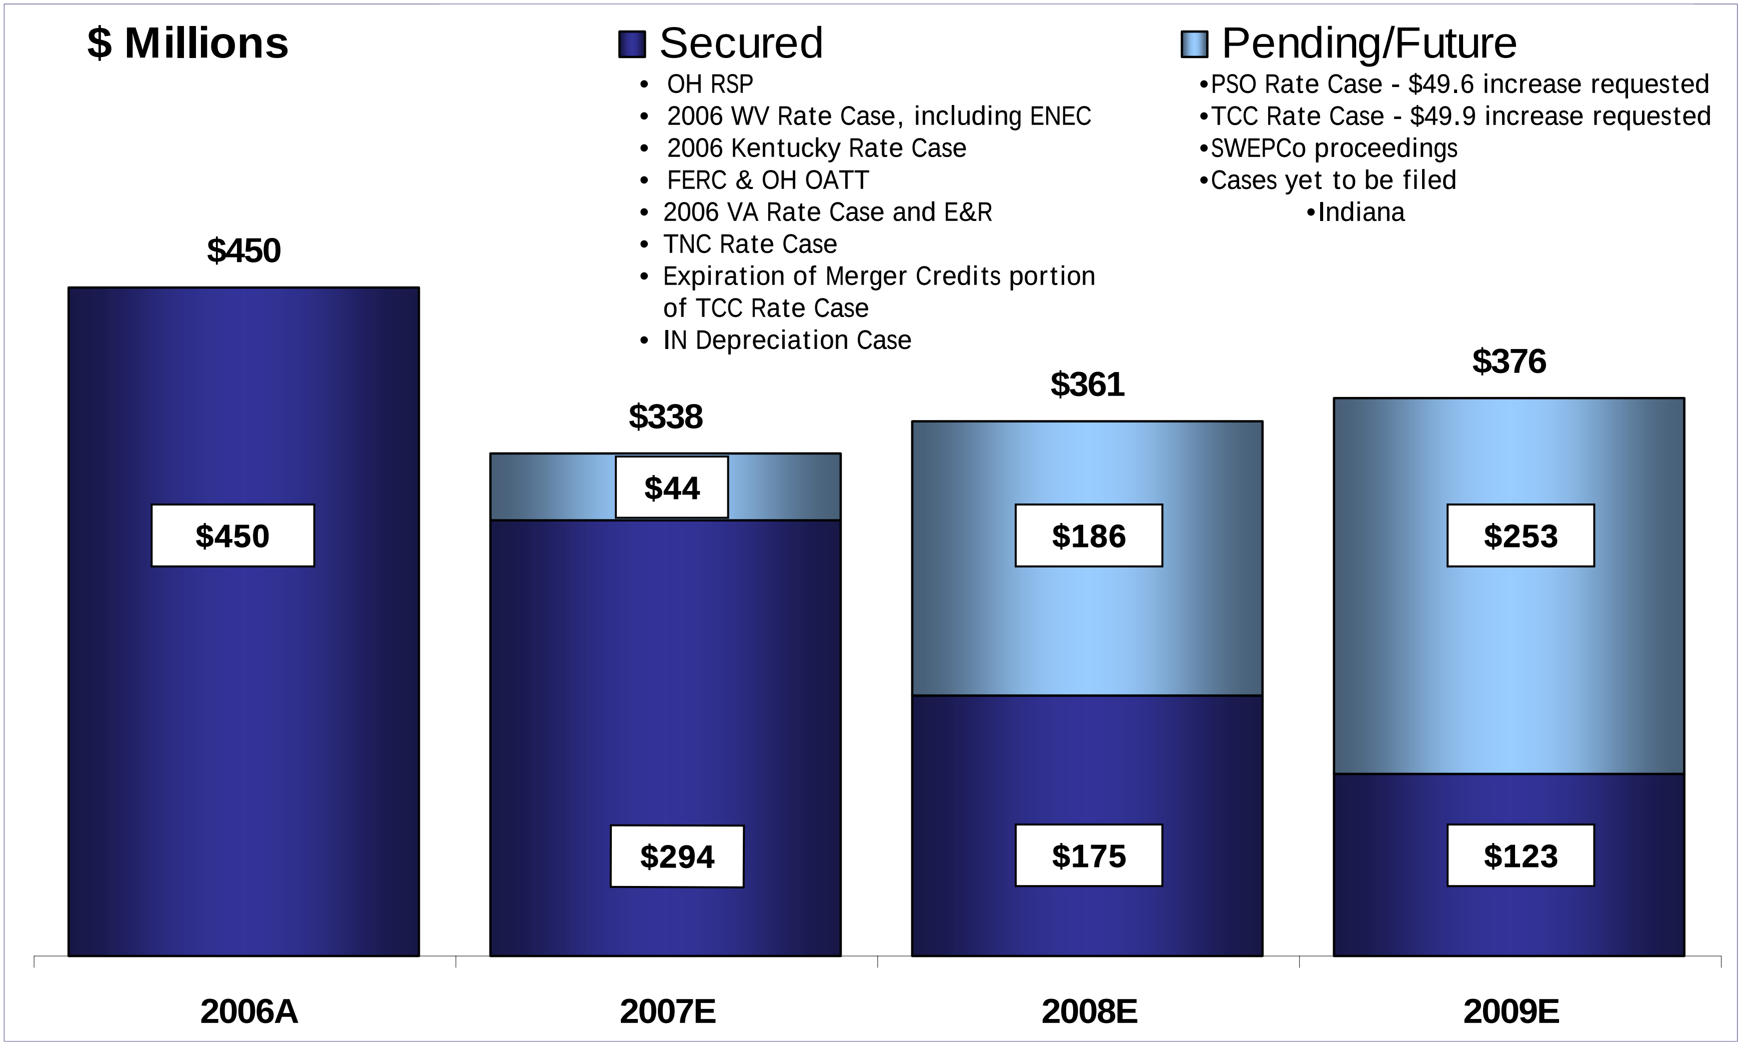
- B&W/Alstom – FGD Spray Tower
- B&V/Chyioda – FGD Jet Bubbling Reactor
- Babcock Power – SCR
- Pullman Power – Stack Supplier
- Black & Veatch – Architect/Engineering
- Sargent & Lundy – Architect/Engineering

First-Mover Advantage:

- By locking in our environmental program costs in the early portion of this decade, AEP has a clear 'first-mover' advantage
- AEP capital costs for a scrubber average approximately $250/kW
- We have since seen a 30-60% increase in material costs and a 15% increase in labor rates
- An FGD system for a nominal 600MW plant in 2005 $ was approximately $225/kW and in 2007 $ is $320/kW

AEP's customers and shareholders benefit from first-mover advantage through lower contracted pricing & reduced market escalation exposure

Incremental Rate Relief Composition



Rate relief is a critical element to AEP's financial success and allows us to pursue additional generation, transmission and infrastructure investment

Near-term Capital Spending

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 7214 of 9556

Generation Investment Forecast

Public Service Company of Oklahoma Rate Proposal

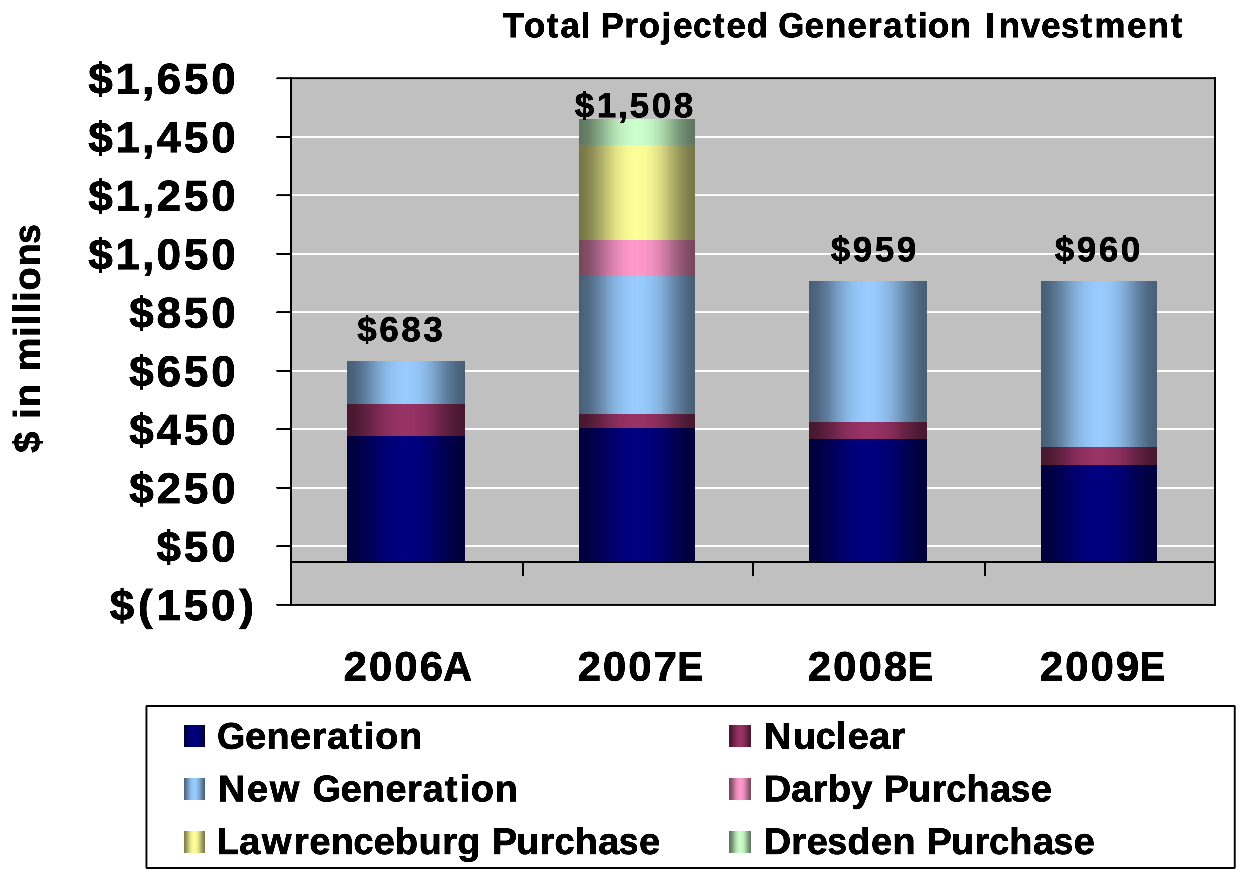
- Proposal to adopt an annually adjusted rate mechanism for new investments, including a return on CWIP

Distressed Generation Initiative

- New generation resources required to meet growing electricity needs of our customers
- Completed purchase of 1,368 MW of gas-fired generating capacity in 2005 and 1,620 MW in 2007

WV and VA IGCC Filings

- Filings made with both commissions requesting return on CWIP, including development design and planning costs



Investing in generation to meet the growing electricity demands of our customers at an attractive price

Purchased Generation

Waterford
- 821 MW combined-cycle gas plant
- $220MM purchase price
- Columbus Southern Power completed purchase on Sept. 28, 2005
- $268/kW

Lawrenceburg
- 1140 MW combined-cycle gas plant
- $325MM purchase price
- AEG completed purchase on May 16, 2007
- $295/kW

2,946 MW of gas-fired generation added since 2005

Darby
- 480 MW simple-cycle gas plant
- $102MM purchase price
- Columbus Southern Power completed purchase on April 25, 2007
- $227/kW

Ceredo
- 505 MW simple-cycle gas plant
- $100MM purchase price
- APCo completed purchase on Dec. 15, 2005
- $198/kW

Addition of gas-fired generation allows us to meet the growing needs of our customers and provides the company with greater fuel flexibility

New Generation Facilities

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
SWEPCo	Mattison	Arkansas	$130 MM	Gas	Simple-cycle	340 (1)	2007
PSO	Southwestern	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
AEG	Dresden	Ohio	$348-406 MM (2)	Gas	Combined-cycle	580	2010
SWEPCo	Stall	Louisiana	$300 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.3 B (3)	Coal	Ultra-supercritical	600 (3)	2011
PSO	Red Rock	Oklahoma	$1.8 B (4)	Coal	Ultra-supercritical	900 (4)	2012
APCo	Mountaineer	West Virginia	$2.23 B	Coal	IGCC	630	2012
CSP/OP	Great Bend	Ohio	Under Review (5)	Coal	IGCC	630	2017

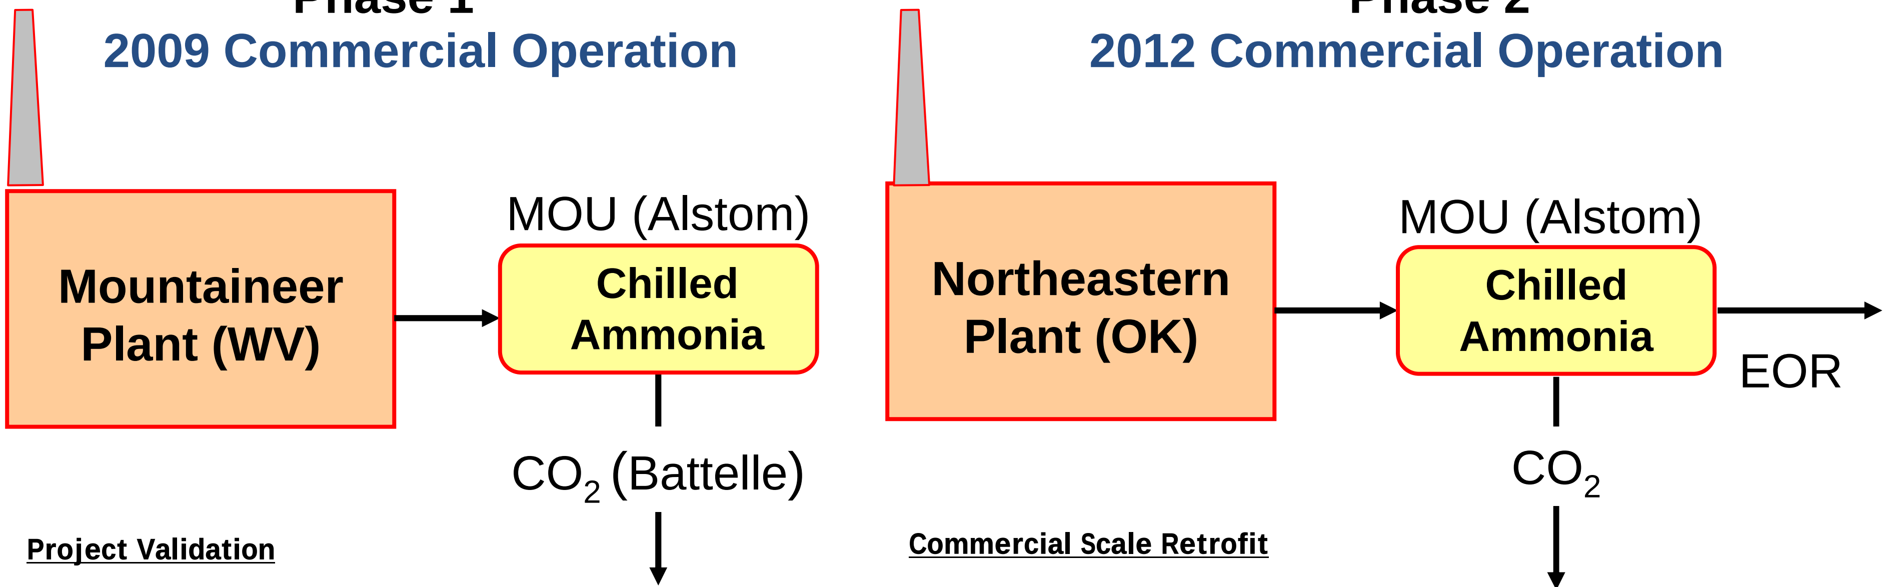
(1) 150MW were declared in commercial operation on July 12, 2007.
(2) We are currently developing contracts and estimates to complete the project. It is anticipated that the unit can be completed between $600 to $700 per kW using an "all-in" cost basis
(3) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment.
(4) PSO will own 50%, or 450 megawatts, totaling approximately $900MM in capital investment.
(5) FEED (front-end engineering and design) study with GE/Bechtel is complete. Cost estimates are not yet filed with the PUCO due to the pending appeals to the Supreme Court of Ohio resulting from the PUCO's April 10, 2006 Opinion and Order.

AEP is meeting the growing electricity needs of customers through the pursuit of new, economic generation facilities

Chilled Ammonia Technology Program

Phase 1
2009 Commercial Operation

Phase 2
2012 Commercial Operation



Project Validation

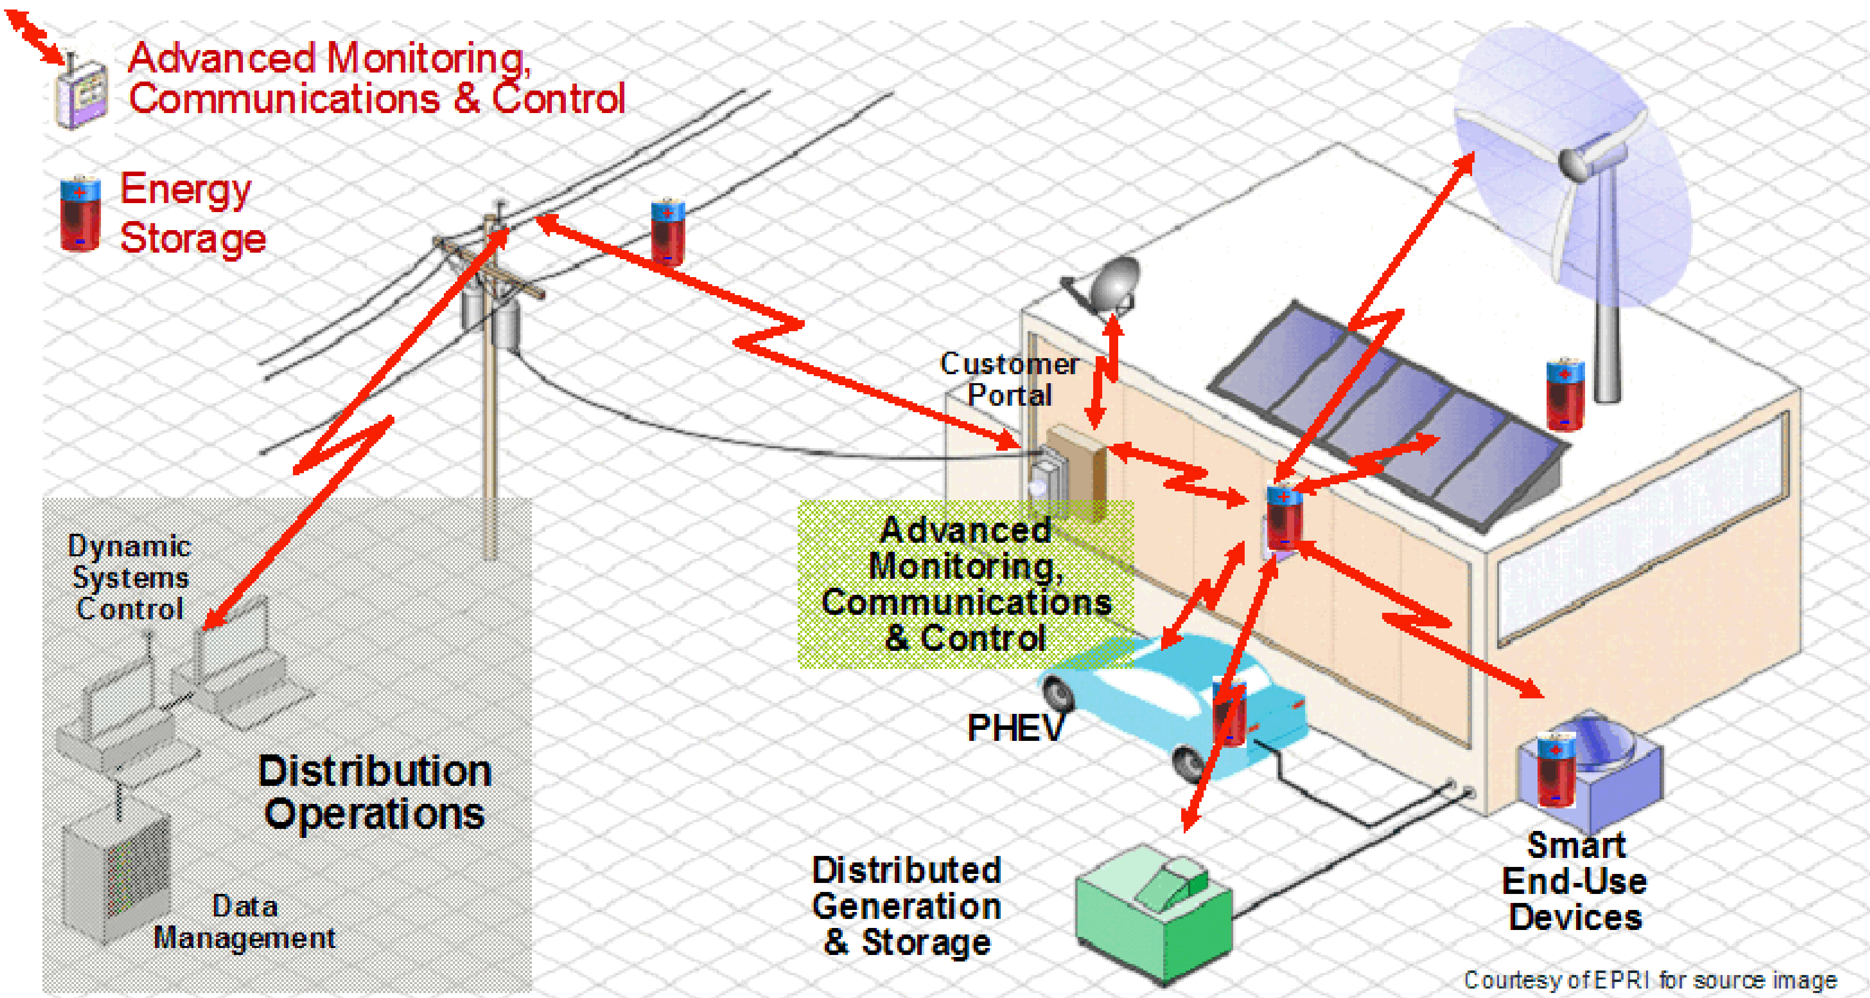
- 20 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, under construction at WE Energies)
- 100,000 – 300,000 tonnes CO_2 per year
- In operation 1Q 2009
- Approximate total cost \$50 – \$80M
- Using Alstom "Chilled Ammonia" Technology
- Located at the AEP Mountaineer Plant in WV
- CO_2 for geologic storage

Commercial Scale Retrofit

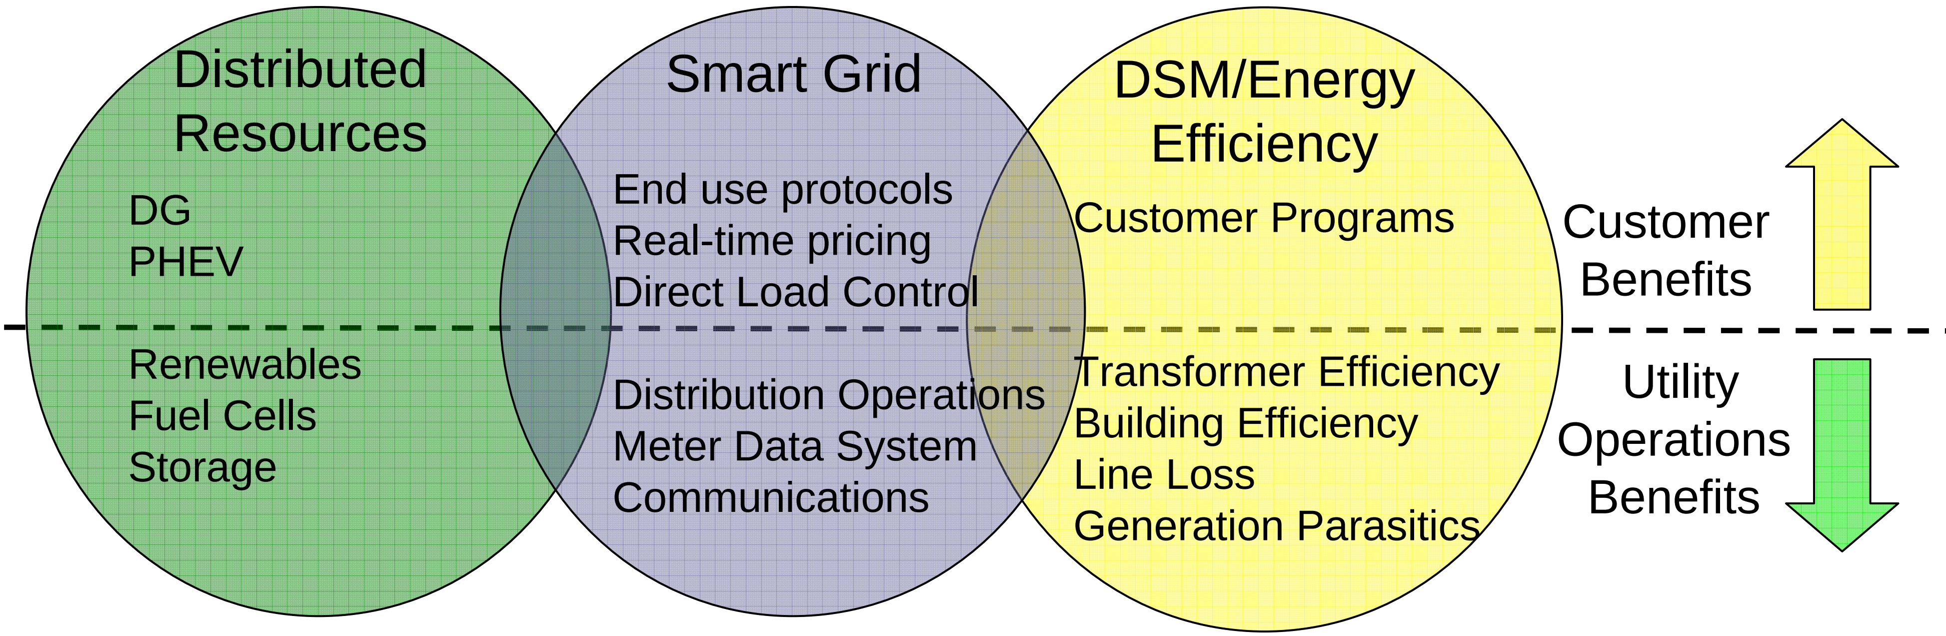
- ~ 200 - 300 MW_e scale (megawatt electric)
- ~ 600 MW_t scale (megawatt thermal)
- ~1.5MM tonnes CO_2 per year
- In operation late 2011
- Approx. capital \$250 – \$300M (CO_2 capture & compression)
- Approx. O&M cost \$12M per year
- Energy penalty ~ 35 – 50 MW steam, 25 – 30 MW for CO_2 compression
- Retrofit Wet FGD Required: ~\$225 – \$300M
- Located at AEP's Northeastern Plant Unit 3 or 4 in Oklahoma
- CO_2 for Enhanced Oil Recovery (EOR)

Post-combustion carbon solution provides pure CO_2 stream for capture

Distribution Operations of the Future



The “Modern Grid” Initiative



AEP has initiated an internal project to help clarify these inter-relationships, and develop our strategy for deploying these programs and technologies

Modern Grid Initiative

- Project to develop a vision for AEP's distribution and customer services business in the future, including the development of new customer programs and a plan to deploy advanced technologies
- Focus on:
  - Enabling greater customer control over energy usage
  - Enhancing conservation activities
  - Optimizing the operation of AEP's distribution business
- AEP needs to pursue:
  - Using real-time status intelligence on our distribution system to improve operations and customer service
  - Providing customers with real-time pricing signals
  - Providing customers with program options that encourage reduced energy consumption
  - Promoting the use of electric vehicles and distributed generation
  - Utilizing advanced electricity storage for peak usage and power outages
  - Enabling technologies such as biomass, solar and fuel cells
  - Modeling future customer behaviors as a consumer of our own products
- Examples include:
  - Customer Energy Efficiency and Demand-Side Management Programs
  - Advanced Metering Infrastructure (AMI) & Distribution Automation (DA)
  - Distributed Generation and Storage

Pace of our Modern Grid Implementation Determined by Regulators

- **Arkansas** – SWEPCo filed 'quick-start' programs with the commission on July 1, 2007, which include education, incentive to encourage use of compact florescent lights and higher efficiency appliances, weatherization for low-income housing, an emergency lad management pilot and a pay-for-for-performance pilot that results in a payment to customers who curtail load upon request. We are awaiting commission approval.
- **Indiana** - As ordered by the IURC in June 2007, I&M, in collaboration with the Office of Utility Consumer Counselor, is designing and administering a Smart Metering Pilot Program (SMPP) for approximately 10,000 customers in South Bend, Indiana.
- **Kentucky** – Successful demand-side management programs have been in place in Kentucky since 1996. We recently filed a proposed real-time pricing pilot for which we are waiting commission approval.
- **Ohio**
  - Recent Governor remarks indicate modernization of Ohio's infrastructure is a high priority and his plan would allow single-issue rate cases for these high-priority investments and system upgrades.
  - PUCO-sponsored series of six Smart Meter Deployment Workshops currently underway.
- **Texas**
  - Energy Efficiency Cost Recovery Rider currently under consideration by the PUCT in TCC's base rate case; if adopted in TCC's case, it will also apply to TNC.
  - AEP Texas Advanced Metering Project commenced July 31, 2007, which has the goal of filing with the PUCT an advanced metering deployment plan and a related surcharge recovery proposal by March 2008.
- **Virginia** – The Virginia commission has initiated a docket to address various aspects of demand-side management and energy efficiency.

Energy efficiency is an investment, which should be treated by regulators in the same manner as investments in generation, transmission and distribution

Long-term Capital Spending

Significant Opportunity for Investment

The current U.S. transmission system cannot support the demand of tomorrow's energy supply needs

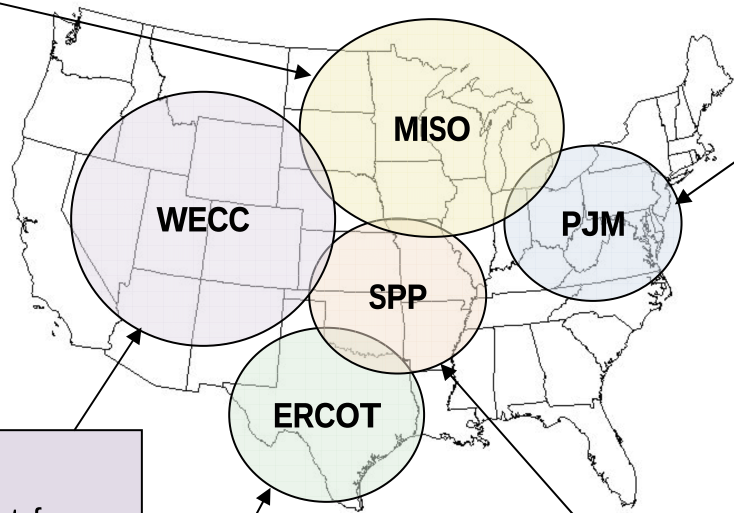
- Investment in transmission has lagged load growth
- Transmission congestion equates to increased costs to customers
- Large-scale wind generation in remote areas requires a high-capacity transmission system for efficient energy movement to load centers

Transmission Investment Opportunities

Investigation of opportunities needs to be mindful of regional drivers

MISO

ITC 765-kV project may be test case for cross-border cost recovery and seams issues



PJM

Congestion will be reduced and reliability will be increased

WESTERN STATES

Opportunity for 765-kV build-out for long-haul transportation from remote resources to load

ERCOT

Load growth and access to wind resources driving transmission investment

SPP

Regional rate design under development to encourage investment and accommodate new generation sources

Transmission ~ $9-$15 Billion Opportunity

Creating a business model to manage capital requirements for enhanced returns with partners

Potential Opportunities

~ $3 Billion I765$_{TM}$ Project in PJM
~ $2 Billion 765-kV study in Michigan w/ ITC
~ $3 Billion Project filed with SPP
~ $1-7 Billion in ERCOT via Electric Transmission Texas, LLC (ETT)

1) ~$9-$15 billion investment opportunity not included in current capital guidance forecasts

2) Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

Assumptions

Estimated Investment Opportunity	$9 - $15 Billion
Ownership Structure w/ Partner	50% / 50%
Debt / Equity Ratio	50% debt / 50% equity
Return on Equity	11.00% - 13.00%
Potential EPS Impact (based on 396 MM shares)	$1.00+

Building the next US interstate system for enhanced reliability and market efficiency

Why Invest in AEP?

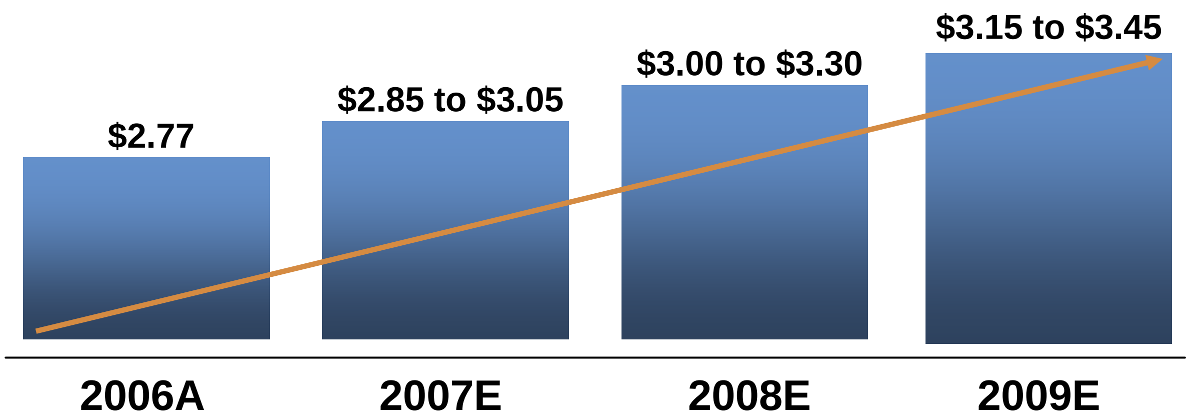
- Strength and scale in assets & operations
- Disciplined utility model focus - investing in established utility business to drive 5-7% consistent annual earnings growth
- Annual dividend of $1.56 per share providing an above average dividend yield of 3.4%
- Positive dividend outlook
- Stable credit profile

Questions

Appendix

Long Range Performance – Consistent and Predictable Growth

2007, 2008 & 2009 Ongoing Earnings Guidance Ranges: 5-7% Annual Growth



- Continued disciplined investment in existing utility operations:
  - Reliability
  - Environmental
  - New Generation & Distribution Infrastructure
- Investment in new transmission opportunities
- New investment coupled with rate recovery
- Continued cost control
- Timely Rate Relief
- Maintain Credit Ratings
  - BBB/Baa2/BBB

Future earnings growth driven by native load growth and substantial utility investment opportunity focused on regulated operations

Summary of 5-7% Long-Range Growth Components

Energy sales growth of 1.5%

Rate base investment

- Generation plant purchases & build
- Transmission – interstate & intrastate
- Distribution
- Reliability

Transmission company

Commercial operations

Regulatory strategy

- Achieve timely returns
- Seek cash returns on investment during construction
- Create & secure innovative rate plans
  - Pursue post-2008 solution in Ohio
  - Expand use of trackers
  - Formula rates

New baseload generation and transmission projects largely reflect upside to the long-range earnings growth targets of 5-7%

Environmental Investment

At the conclusion of our current environmental retrofit program, over 47% of our coal-fired generation fleet will be equipped with SCRs and over 50% will be scrubbed (FGD).
AEP's total coal fleet capacity = 24,630 megawatts *

*Excludes AEP's 44% ownership in OVEC (980 MWs of coal-fired capacity)

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A reliable and reasonably-priced electric supply is necessary to support the economic well-being of the areas we serve

AEP AMERICAN ELECTRIC POWER

Highlights of Bingaman-Specter Proposal

"Low Carbon Economy Act of 2007"

Key Components:

- Start date for greenhouse-gas reductions is 2012
- Goals: 2006 levels by 2020; 1990 levels by 2030
- Includes a safety valve of $12 per metric ton, increasing at an annual rate of 5% above inflation
- Support for allowance allocations
- International action

AEP endorses this proposal because it sets reasonable and achievable reduction targets and includes the AEP-IBEW trade proposal

AEP's Long-term CO_2 Reduction Commitment

Existing Programs

- Renewables
  - 800 MWs of Wind
  - 300 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

New Program Additions

Incremental Reduction quantity: 5MM tons/yr

Timing: To take effect/receive credits by 2011

Methods

- +1000 MWs of Wind PPAs – 2MM tons/yr
- Domestic Offsets (methane) – 2MM tons/yr (e.g., livestock methane capture deal of 0.6MM tons/yr)
- Forestry – Tripling annual investment to increase to 0.5MM tons/yr by 2015
- Fleet Vehicle/Aviation Offsets – 0.2MM tons/yr
- Additional actions to include DSM and end use energy efficiency, biomass and power plant efficiency – 0.2MM tons/yr

New Technology Additions

IGCC and Ultra-supercritical coal plants

Commercial solutions for existing fleet

- Chilled Ammonia
- Oxy-Coal

AEP is committed to a 5mm ton/yr reduction in CO_2 emissions which offsets approx half of the emissions projected from new generation projects previously announced

Oxy-Coal CO_2 Capture & Storage Project

Pilot Scale Demonstration

10 MW_e scale

Teamed with B&W at its Alliance Research Center and 16 other utilities

Demo complete 3Q 2007

AEP funding of $50k

Commercial Scale Retrofit

Retrofit on existing AEP sub-critical unit (several available)

150 – 230 MW_e scale retrofit

4,000 – 5,000 tons CO_2 per day

Team with B&W

AEP funding of ~ $1.5M for feasibility study

Feasibility study to be completed in late 2007/early 2008

Combustion conversion technology for existing coal fleet – longer lead time with enhanced viability and long term potential

PJM I-765™

Execution in Action

Overview

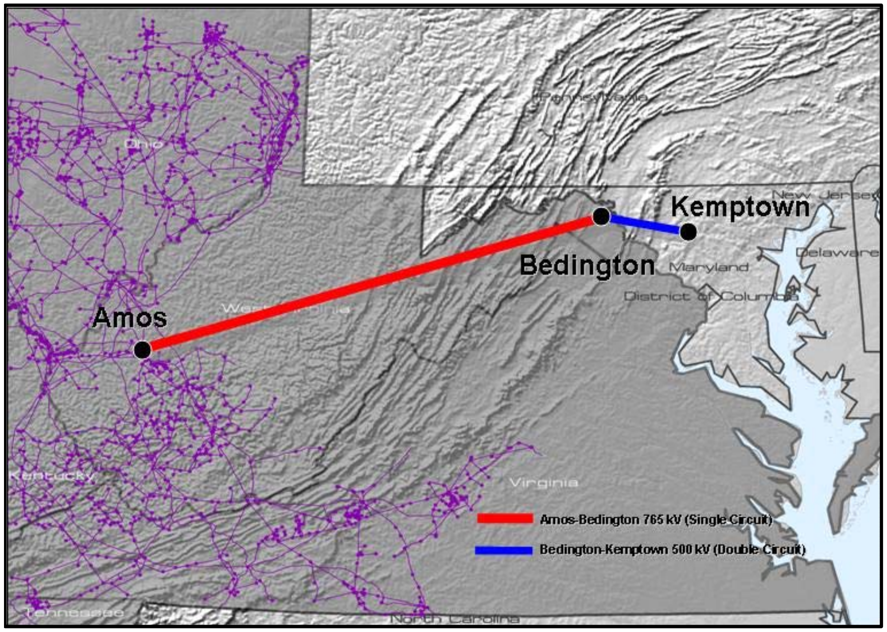
- $3 billion investment (before ownership division)
- 550 line miles
- 5000MW improved transfer capability
- To be completed in 2 phases (1st phase PJM approved)

Benefits

- Improves eastern grid reliability
- Improves market efficiency with reduced congestion
- Reduces consumer cost $1B (est.) annually in the east
- Reduces network line losses by 280 MW at peak
- Provides AEP rate base opportunity for transmission investment with ROE upside & other FERC incentives
- Provides off-system sales and siting opportunity for AEP and other low-cost mid-western generation

Phase I Progress to Date

- AEP and Allegheny entered into the PATH (Potomac-Appalachian Transmission Highline) JV to construct the 290 mile West Virginia-Maryland line
- Total estimated cost of $1.8 billion
- AEP portion approximately $600 million
- Expected completion 2012

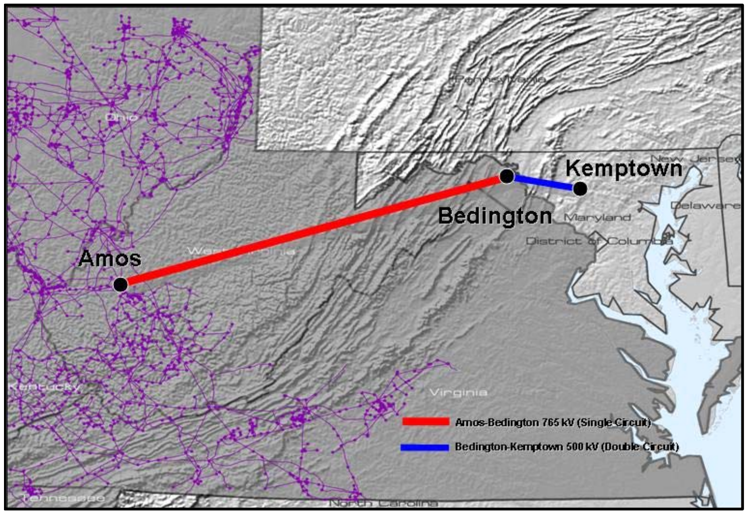


PJM I-765^{TM} Phase I cont'd

Execution in Action

Funding Plans/Transaction Structure

- Formed a joint venture with Allegheny Energy for 290 miles of the proposed 550 mile project
- JV portion of the I-765^{TM} Interstate Project approved by PJM in its Regional Transmission Expansion Plan in June 2007
- Equity – 50% AEP / 50% Allegheny
- AEP's 50% investment will be held at the AEP Transmission Holding Company LLC subsidiary
- Operations to commence in the second half of 2007
- I-765^{TM} Interstate Project included in the DOE's draft National Interest Electric Transmission Corridor issued in April 2007



Key Regulatory Activity Completed

- FERC declaratory order approved July 2006
- PJM approved plan June 2007

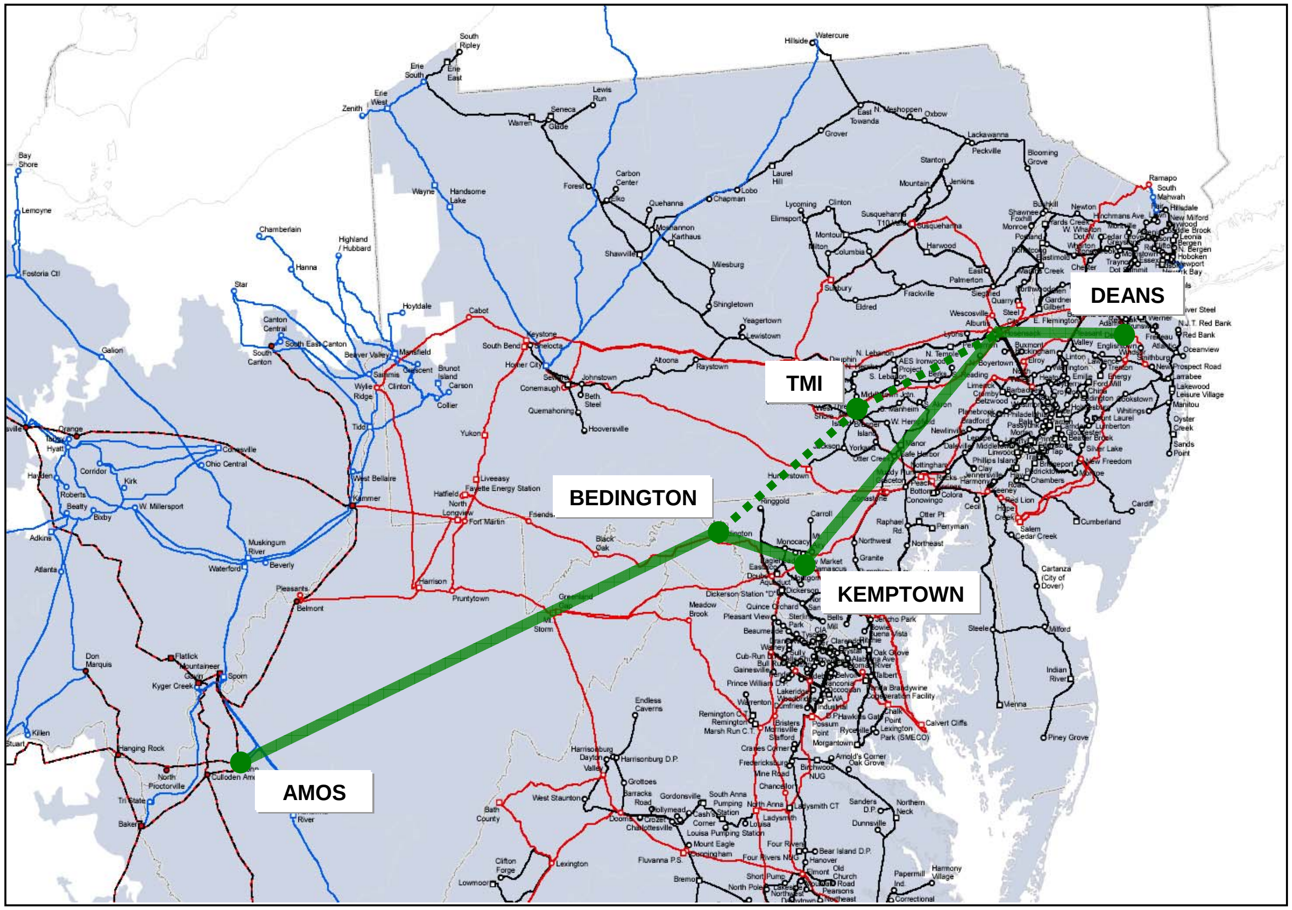
Key Next Steps

- Complete FERC Filing – Fall 2007
  - *Pursuing new project FERC incentives: cash return on CWIP, higher ROE, recovery of pre-commercial operation costs and recovery of abandonment costs.*
- Siting Approved – Fall 2009
- Completion – Fall 2012

PJM I-765™ Phase II (Bedington-Deans)

Second phase of original AEP 550-mile I-765 proposal

- Approximately 250 miles from West Virginia-Maryland border to Public Service Electric & Gas Deans Station in New Jersey.
- Currently under consideration by PJM as part of Regional Transmission Expansion Plan (RTEP).
- Based on PJM RTEP approval, AEP will seek a suitable business partner (JV partner) to complete the second leg of the original proposal.



KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests

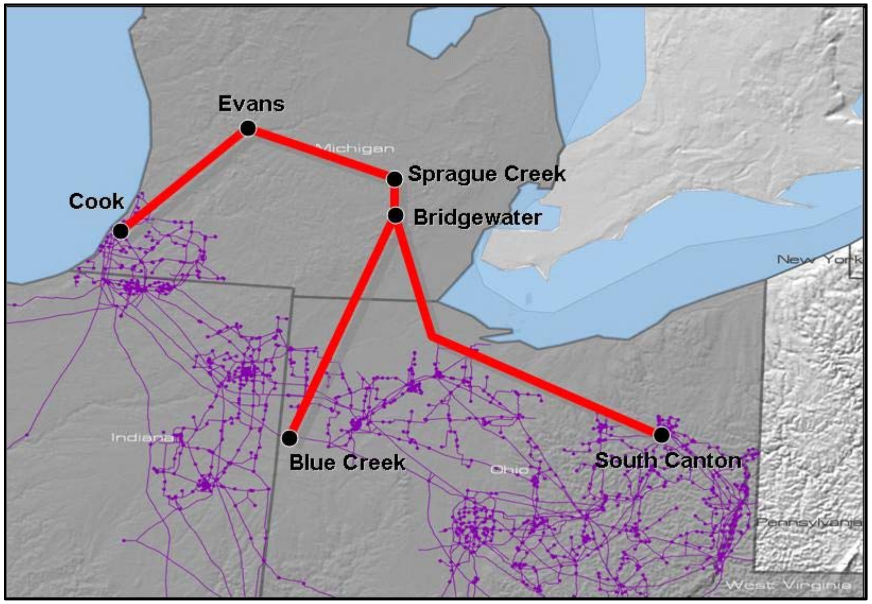
765-kV in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - Agreement with ITC Transmission for 765-kV study
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.0 billion investment (before ownership division)
- *Benefits*
  - 3,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- *Next Steps*
  - Study results shared with PJM/MISO– Summer 2007
  - Public release of study results – Fall 2007
  - Potential JV formation – Fall 2007
  - PJM/MISO approval - Summer 2008
  - FERC Filing - Fall 2008
  - Siting approval – Summer 2010
  - Estimated completion – Summer 2013



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

765-kV in SPP

Significant opportunity for 765-kV transmission in SPP

Overview

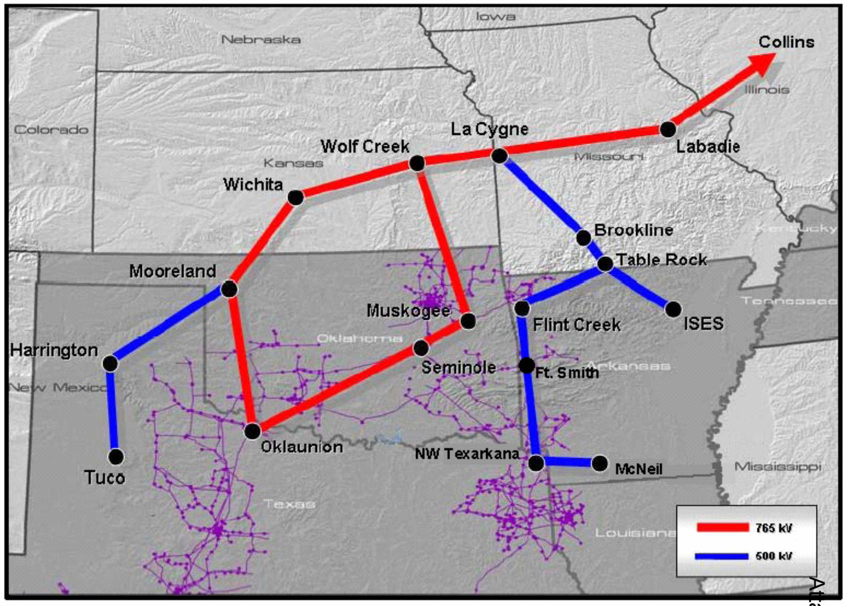
- July 2006 AEP submitted conceptual project for six 765-kV lines
- Proposed 765-kV Kansas / Oklahoma / Arkansas connecting to MISO/PJM
- 610 miles from Kansas to Arkansas
- $3.0 billion investment (before ownership division)
- Proposed 2012-2017 construction period
- SPP proposes 765-kV in Texas / Oklahoma / Kansas / Missouri connecting to MISO/PJM
- SPP also proposes 500-kV in Texas / Oklahoma / Arkansas / Missouri

Benefits

- 4,000 MVA capability

Next Steps

- Study disclosure – Fall 2007
- JV formation (Partner-TBD) – Fall 2007
- SPP RTO/BOD EHV Overlay approval – Summer 2009
- SPP RTO FERC Filing – Fall 2009
- Siting approval – Fall 2011
- Estimated completion – Summer 2017



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

ETT Status Update

ETT: Delivering Power for Texas' Future

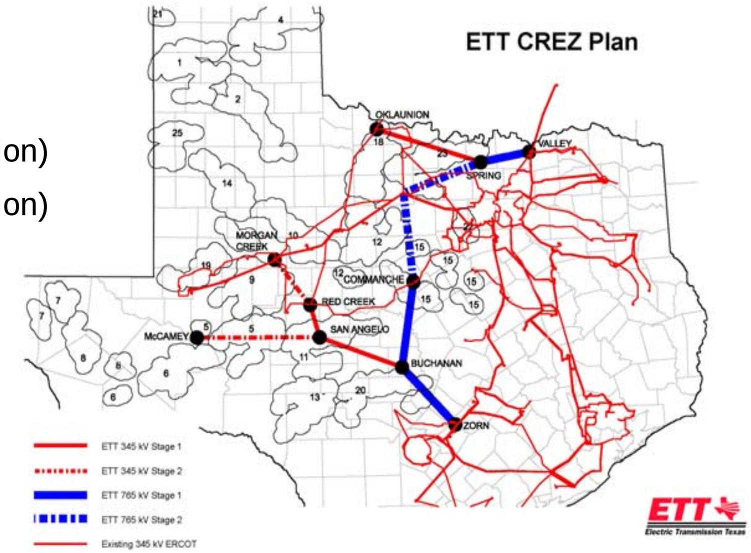
- *Transaction Structure*
  - 50/50 joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC.
  - ETT capital structure is 60% debt / 40% equity (PUCT requirement).
  - Executive manager provided by AEP; business manager provided by MidAmerican.
  - Investment opportunities can be offered by either partner and accepted or rejected by ETT.

- *Transaction Status*
  - Formation documents finalized and Participation Agreement signed Jan. 9, 2007.
  - Texas regulatory filing on Jan. 22, 2007.
    - Requested utility status, transfer of initial assets, establishment of TCOS transmission recovery mechanism.
    - Hearings conducted July 16-17, 2007, commission order expected in September 2007.
  - FERC approval for asset transfer received April 20, 2007.
  - Closing deadline of Nov. 1, 2007 can be extended by mutual agreement.

CREZ & Backbone Opportunities

Harnessing the Wind: Competitive Renewable Energy Zones offer unique opportunities to showcase ETT

- **ETT CREZ Overview**
  - Strengthen ERCOT grid to collect and deliver wind generation to load
  - Build transmission in the most cost effective manner, addressing:
    - Future generation development
    - Load growth pockets
    - Market efficiency (reduce congestion)
    - Competitive wholesale markets
    - Economic growth
  - $1.5 billion investment Phase 1 – 2012 (before ownership division)
  - $1.5 billion investment Phase 2 – 2015 (before ownership division)

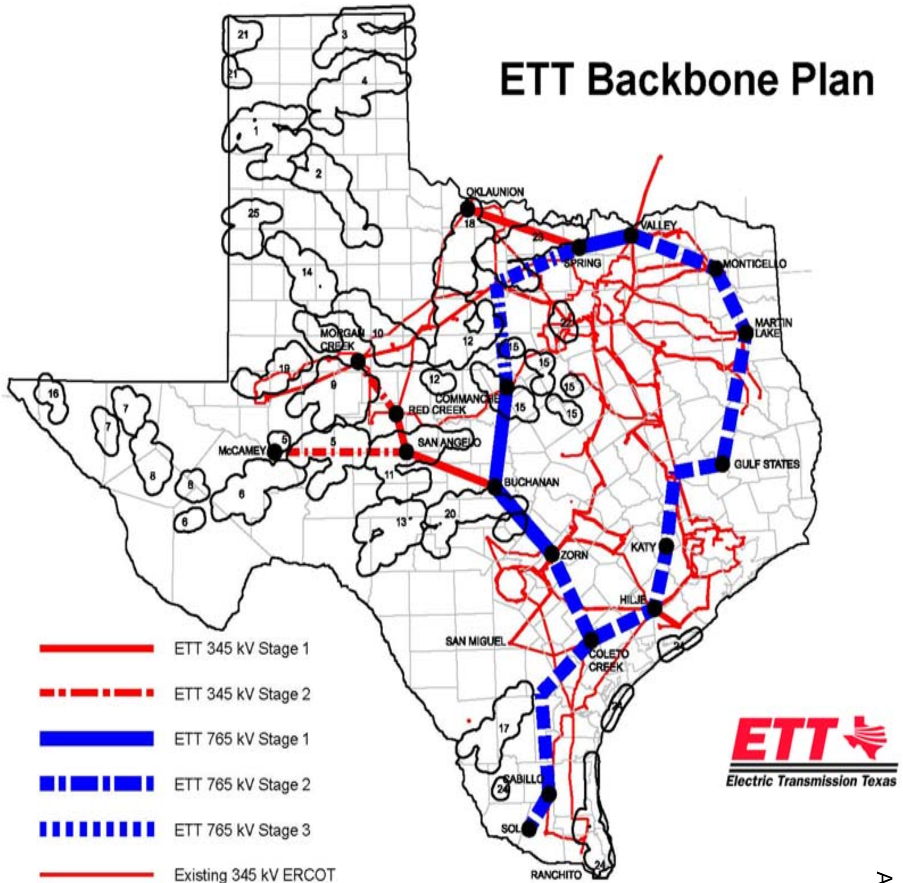


- **CREZ Approval Stages as outlined by the PUCT**
  - Stage 1 – Final order designating power regions – August 2007
  - Stage 2 – CREZ Transmission Optimization Study – January 2008
  - Stage 3 – PUCT selection of transmission construction designees – February 2008
  - Stage 4 – CCN development and submission – February 2009
  - Stage 5 – CCN approval – August 2009
  - Stage 6 – Construction (TBD)

CREZ & Backbone Opportunities – cont'd

Harnessing the Wind: Competitive Renewable Energy Zones offer unique opportunities to showcase ETT

- **ETT ERCOT Backbone Proposal**
  - ETT proposal for ERCOT and PUCT to consider CREZ transmission in context of long-term vision for transmission system.
  - Current 5-year planning horizon results in higher ultimate costs, lower system efficiency.
  - Long-term 15-20 year perspective provides better plan, supports development of high voltage backbone at 765-kV.
  - $4.2 billion investment (long-term backbone).



2007 Ongoing Guidance: $2.85 to $3.05 per share

American Electric Power
Financial Results for 2006 Actual vs. 2007 Estimate

		2006 Performance Driver	2006 Actual ($ millions)	2007 Performance Driver	2007 Estimate ($ millions)
	UTILITY OPERATIONS:				
	Gross Margin:				
1	East Regulated Integrated Utilities	69,107 GWh @ $ 30.5 /MWhr =	2,111	73,325 GWh @ $ 33.3 /MWhr =	2,440

AEP AMERICAN ELECTRIC POWER

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

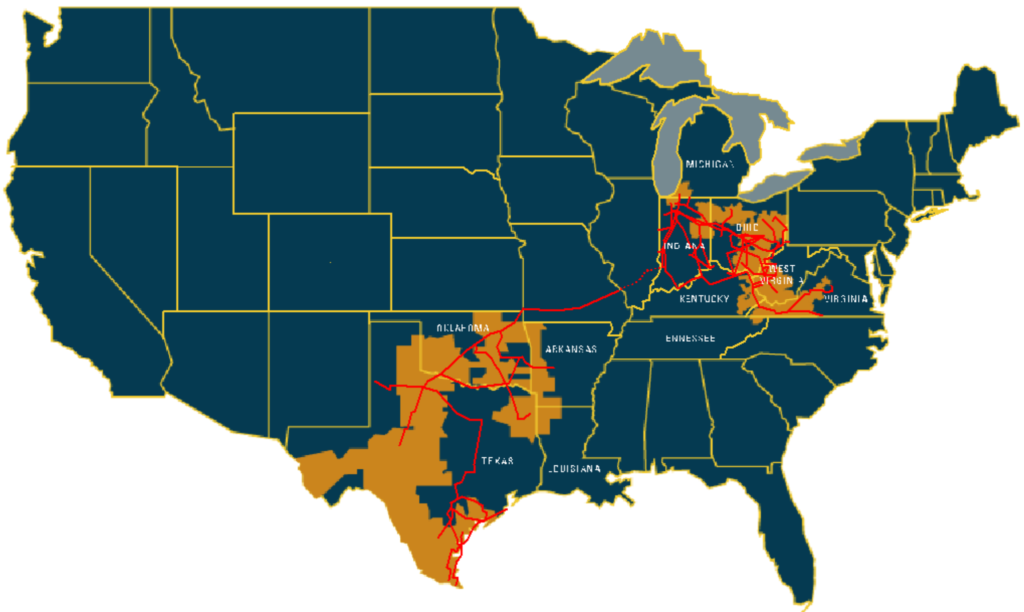
Strength & Scale in Assets & Operations



Generation	35,500 MW capacity
Transmission	38,953 miles
Distribution	200,930 miles
Customers	5 million

FUTURE EARNINGS GROWTH DRIVEN BY NATIVE LOAD GROWTH & SUBSTANTIAL UTILITY INVESTMENT OPPORTUNITY

Utility Investment to Drive Earnings Growth

Investment Opportunities:

- Traditional Maintenance
- Environmental
- New Generation

Preserves low cost production advantage and extends generation asset life

- IGCC

Environmentally sensitive investment can be blended with AEP's low production cost

- Energy Delivery Infrastructure

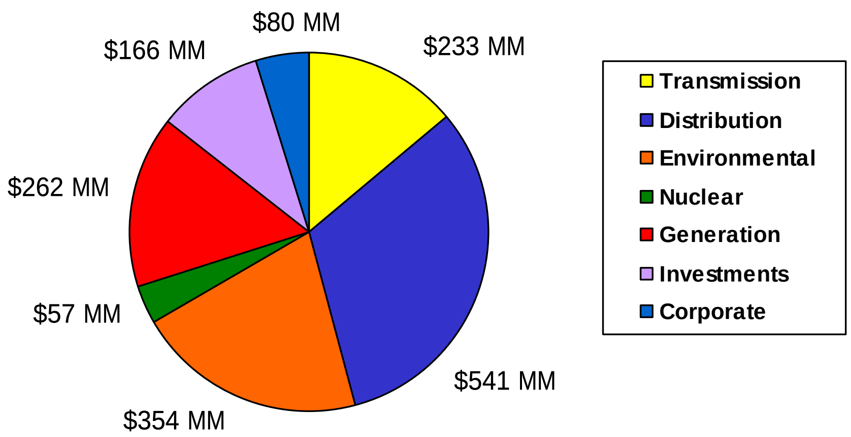
Annual Growth Rate 3-5%:

- Organic demand growth rate of 2%
- Utility investment recovery to add 1-3% to growth

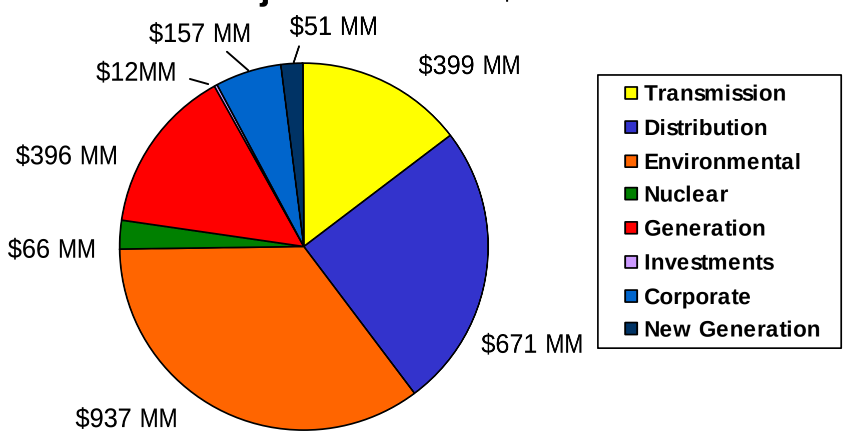
PRUDENT INVESTMENT WILL PRESERVE LOW COST ADVANTAGE AND DRIVE EARNINGS GROWTH

2005 Capex

2004 Actual Totaled $1.69 Billion



2005 Projected Totals $2.69 Billion



Note: 2005 capital expenditures exclude the announced Waterford and Monongahela Power transactions.

AEP's Environmental Compliance Strategy

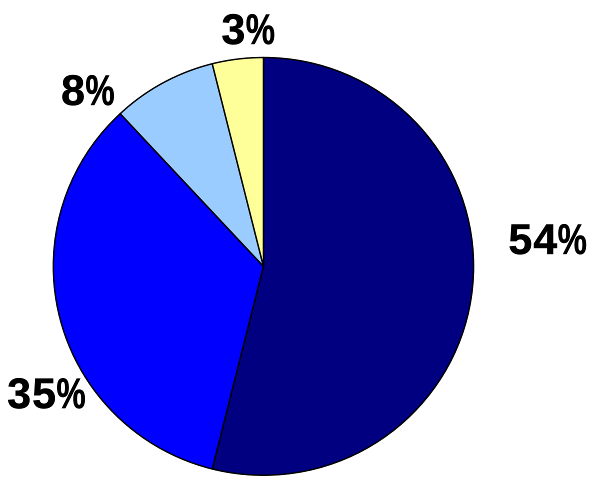
NOx and SO_2 emission reductions are part of AEP's on-going strategy to comply with the Clean Air Act, Title IV regulations, the Clean Air Interstate Rule (CAIR) and the Clean Air Mercury Rule (CAMR).

- **Much of this investment will be for:**
  - **Selective catalytic reduction (SCR) systems to reduce nitrogen oxide emissions by 90%.**
  - **Flue gas desulfurization (FGD) systems (scrubbers) to reduce sulfur dioxide emissions by 98+%.**
  - **SCR and FGD systems together offer co-benefit of mercury capture.**
  - **Sale of gypsum (by-product) avoids future landfill costs.**
  - **Provides fuel flexibility.**

Represents the best and least-cost compliance path to improve environmental performance on a fleet basis, while continuing to provide a reliable supply of power to customers at a reasonable price and a solid return for investors.

$4.1 Billion Environmental Investment: Spending by Company

Projected Environmental Investment Allocation



- Ohio Power & CSP (OH)
- Appalachian Power Co. (VA/WV)
- Kentucky Power Co. (KY)
- Other

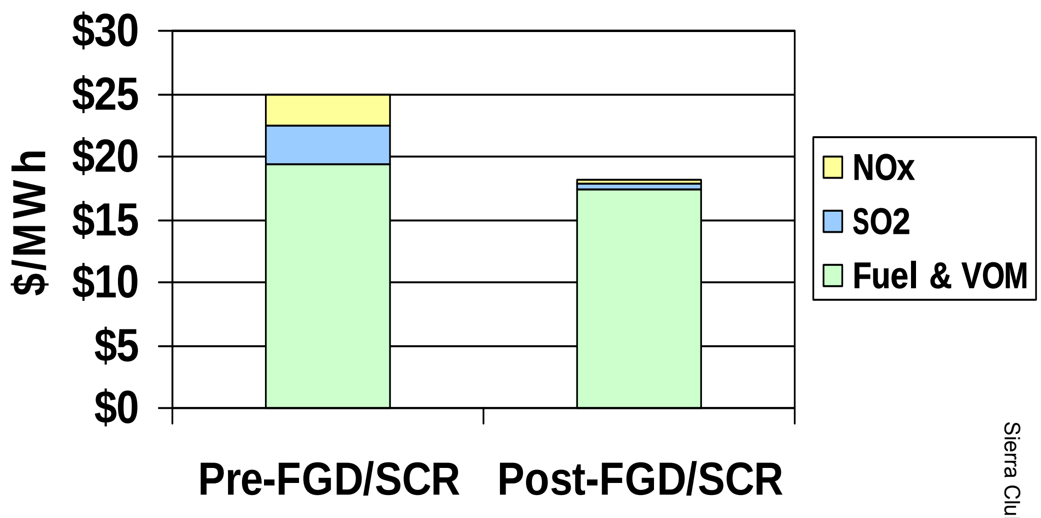
Funding the Environmental Investments

- **Ohio**: 54% ($2.2 billion)
  - Approved annual increases 2006-2008
    - CSP – 3% annually
    - OP – 7% annually
- **Virginia/West Virginia**: 35% ($1.4 billion)
  - VA: Annual Rate Relief through Environmental & Reliability cost recovery mechanism
  - Two rate case opportunities through 2010
  - WV: General rate increase filed 8/26/05 including environmental, reliability & fuel recovery
- **Kentucky**: 8% ($319 million)
  - Automatic surcharge mechanism

Low Cost Production Supports Investment & Investment Sustains Low Cost Production

- Lowers exposure to high cost emission allowances
- Creates opportunity to burn wider variety of lower cost fuels
- Improves baseload operation (higher capacity factor, higher margin)
- All-in cost of electricity, including FGD/SCR investment, remains low

Typical Pulverized Coal Plant
Comparison of Variable Production Cost
Pre- and Post- FGD/SCR (future view)*

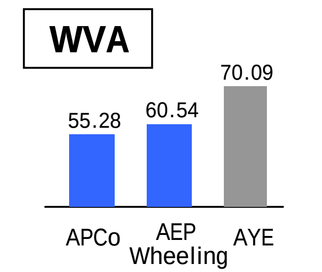


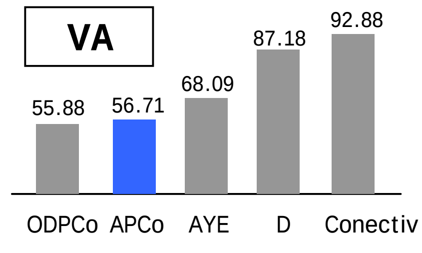
* Assumes annual NOx program

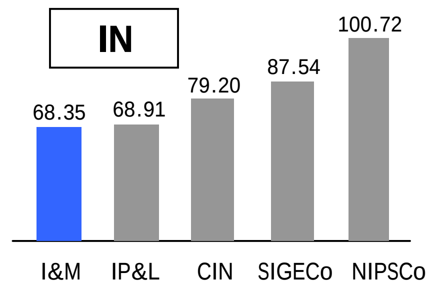
AEP WILL REMAIN THE LOW COST PRODUCER FOLLOWING COMPLETION OF ENVIRONMENTAL RETROFIT PROJECTS

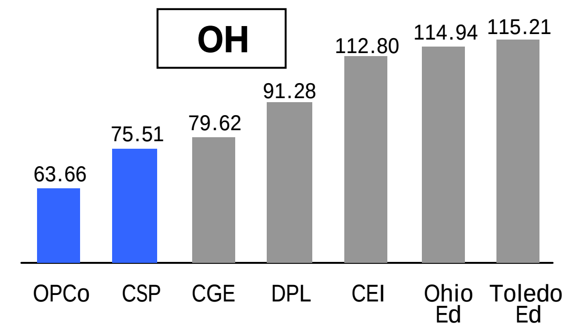
AEP: The Low Cost Provider

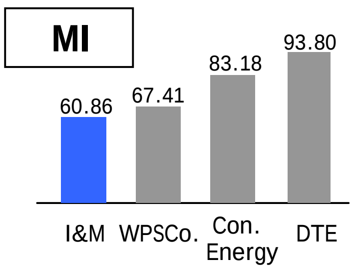
Comparative Rates

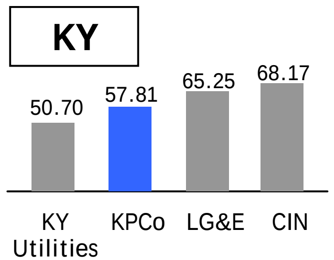


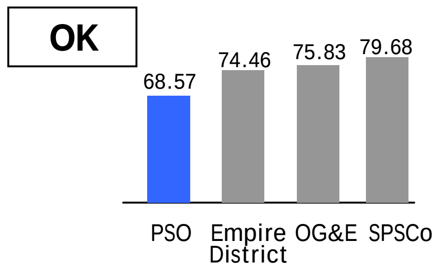


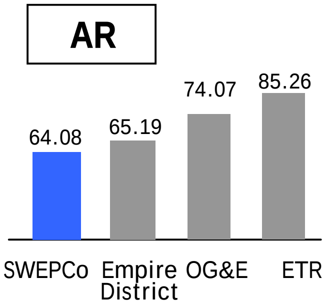


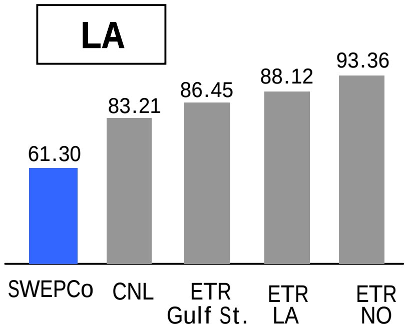


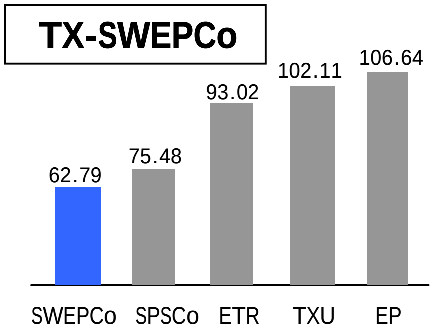












Wholesale

AEP System fossil fleet average variable book cost of production:

- Today: $16-$18/MWh
- Tomorrow: $18-$21/MWh
  - Post-environmental retrofit installation

Note: Rate amounts reflect bundled residential rates and are expressed in $/MWh. The source for the shown rate amounts (excluding wholesale) is the EEI Typical Bills and Average Rates Report. Ohio rates represent POLR bundled residential rates.

Investing in IGCC

Ohio IGCC Procedural Schedule

- **August 16, 2005: Evidentiary Hearings Concluded**
- **September 13, 2005: Initial Briefs Due**
- **October 3, 2005: Reply Briefs Due**

Generation Technology Comparative Stats

	PC	IGCC	NGCC
Nominal Capacity (MW)	600	600	530
Heat Rate (BTU/kWh)	8700	8600	7200
EPC cost* ($/kW)	1290	1350	440
Total Plant cost** ($/kW)	1490	1610	475
Variable Production cost*** ($/MWh)	15	14	38
All-In Cost of Electricity (without CO2 Capture) ($/MWh)	47	50	57
Estimated Cost of Electricity (with CO2 Capture) ($/MWh)	76	70	91

Source: Electric Power Research Institute

* EPC includes the cost to engineer, procure and construct plant.
** Total plant cost include land, overheads, AFUDC, etc.
*** Assumes Northern App Coal @ $36/ton, no emission credits and $5.00 gas

Investment in Asset Base Will Drive Earnings

Potential Return On Investment

Assumptions	Environmental Investment	600MW IGCC Investment*
Projected Investment	$4.1 Billion	$1.0 Billion
Approx. Debt/Equity Ratio	60% debt / 40% equity	52% debt / 48% equity**
Return on Equity	10-12%	11.75%***
Potential EPS Impact (based on 393 MM shares)	+ $0.42 to $0.50	+ $0.14

* Assume a similar return for an additional 600 MW IGCC facility

** Requested debt/equity ratio per AEP Ohio IGCC filing

*** Requested ROE in AEP Ohio IGCC filing

EPS CONTRIBUTION FROM INVESTMENT WILL BE SUBSTANTIAL

Funding the Investment

- Cash flow from operations
- Rate Relief
  - Ohio approved annual generation rate increases for 2006-2008
  - Virginia annual rate relief through environmental & reliability cost recovery mechanism plus two rate case opportunities through 2010
  - West Virginia general rate increase filed 8/26/05 including environmental, reliability & fuel recovery
  - Kentucky automatic environmental surcharge mechanism
- Asset Sales
  - 2005 proceeds estimated to be $1.5 billion
- Texas Securitization/Texas Competition Transition Charge
  - Seeking recovery of $2.4 billion
- Debt Issuances
  - Maintain debt-to-capitalization ratio of approximately 60%

UTILITY INVESTMENT TO BE FUNDED BY A VARIETY OF TRADITIONAL SOURCES

Appendix

Asset Portfolio

Generation Fleet Composition

- 35,500 MW Domestic Capacity
- 85% System Availability Factor YE 2004
- 62% System Capacity Factor YE 2004

Capacity by Fuel Mix

	Baseload	Load-Following	Peaking
PJM	24,226	0	586
ERCOT	1,089	0	0
SPP	4,828	3,516	188
Total*	**30,143**	**3,516**	**774**

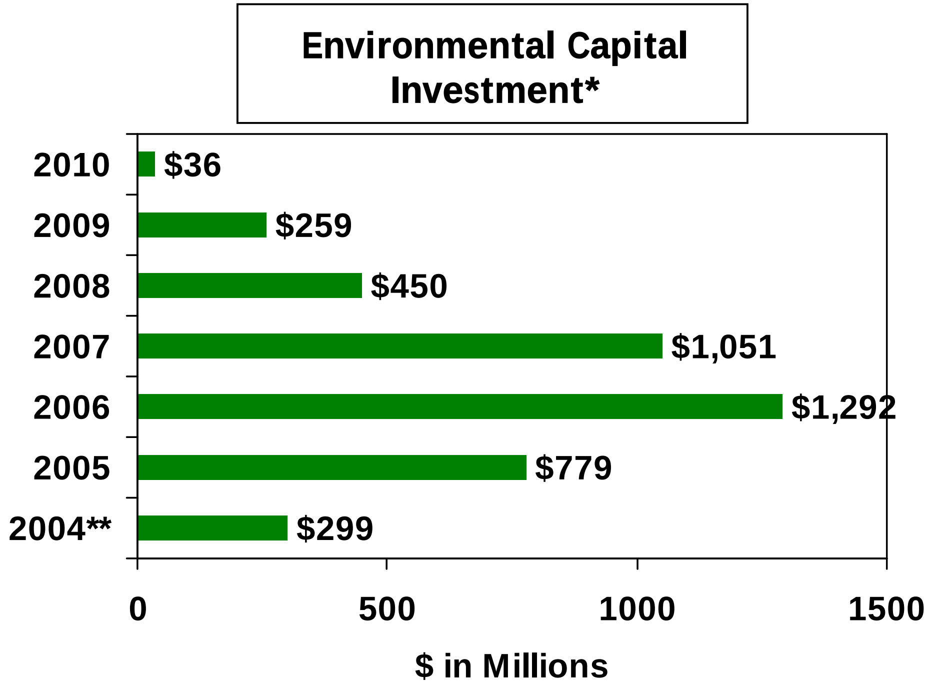
* Figures do not include mothballed or decommissioned units (1,015 MW of capacity). Also excludes the Waterford and Ceredo generating facilities.

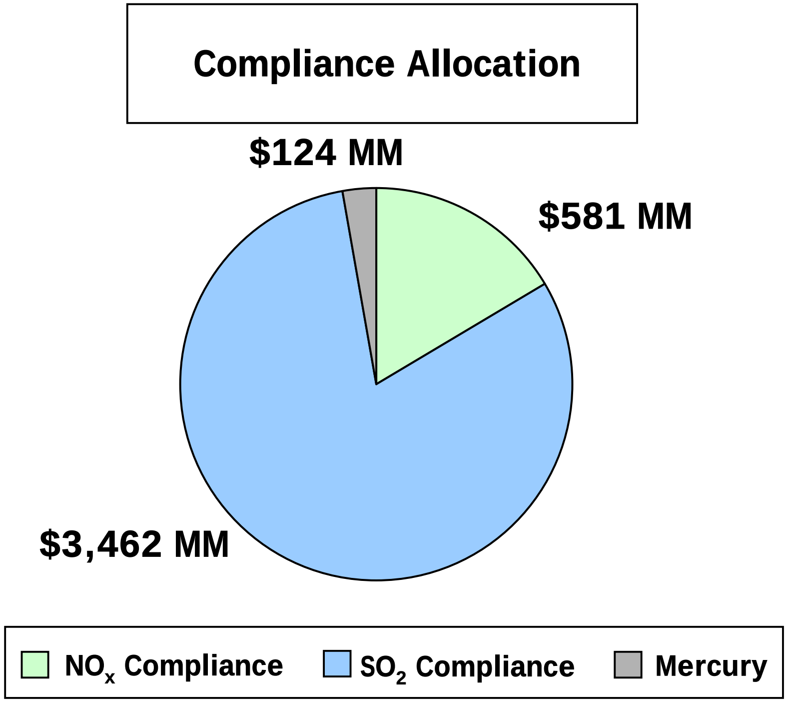
GENERATION FLEET IS SUBSTANTIAL AND LOW COST

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 7263 of 9556

Environmental Investment

Environmental Investment: $4.1 Billion Through 2010





*Environmental investment for NOx, SO_2 , & Hg purposes
** Actual investment level in 2004

Current Programs
$2.0 Billion:
$0.5 billion for NOx
$1.5 billion for SO_2

Future Programs
$2.1 Billion:
$1.9 billion for SO_2
$0.2 billion for Other

MAJORITY OF 2005 & 2006 DOLLARS WILL BE INVESTED IN OHIO & APCO

Environmental Investment

	FGD	SCR
Completed	see tables below	see tables below

Completed — FGD

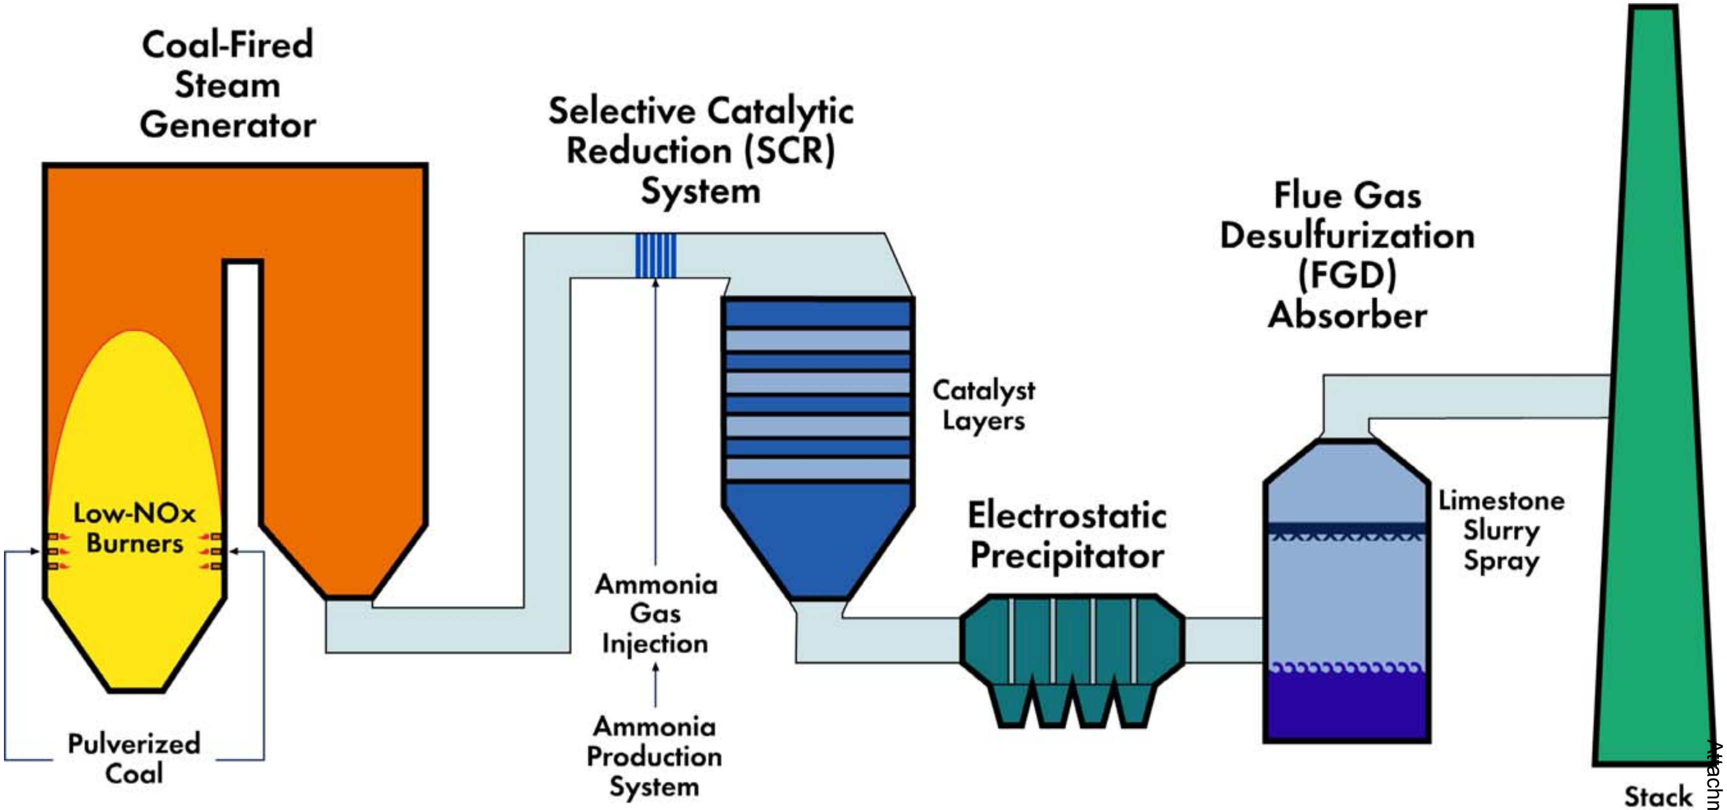
Planned or Under Construction — SCR

Plant Name	MW Capacity
Mitchell 1 & 2	1600
Conesville 4	339
Total	**1939**

2006 - 2009

Note: MW capacity shown represents AEP's owned capacity only

The Flue Gas Stream



Materials and Vendors

Material Costs

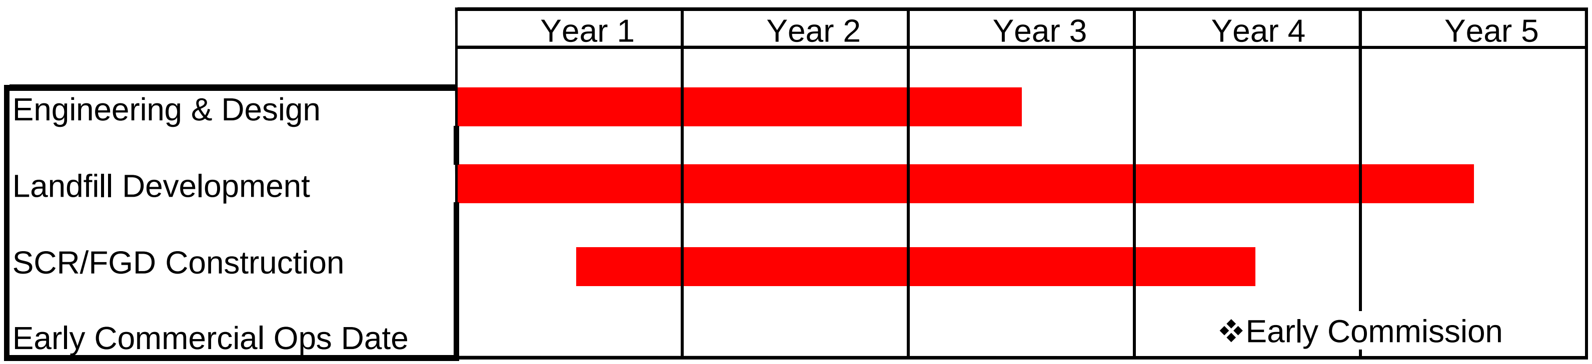
- The primary materials used during construction are steel and alloys, the cost of which is volatile. We closely monitor the cost of such materials and strive to proactively manage our cost exposure.

Typical Vendors

- FGD
  - B&W
  - Alstom
  - B & V Chyioda
- SCR
  - Babcock-Riley Power
- Stack Supplier
  - Pullman Power Inc.

Typical FGD/SCR Project Milestone Schedule

- **Phased Execution**
  - Lessons Learned: Focus on performance/risk management/cost
  - Phase 1 Feasibility Study, Phase 2a Conceptual design, Phase 2b Detailed design, bid Phase 3 Construction At 30 – 60 % design complete
- **Typical Plant and Landfill Schedule for Engineering, Procurement, Permitting, and Construction**
  - A new landfill requirement can be the critical path



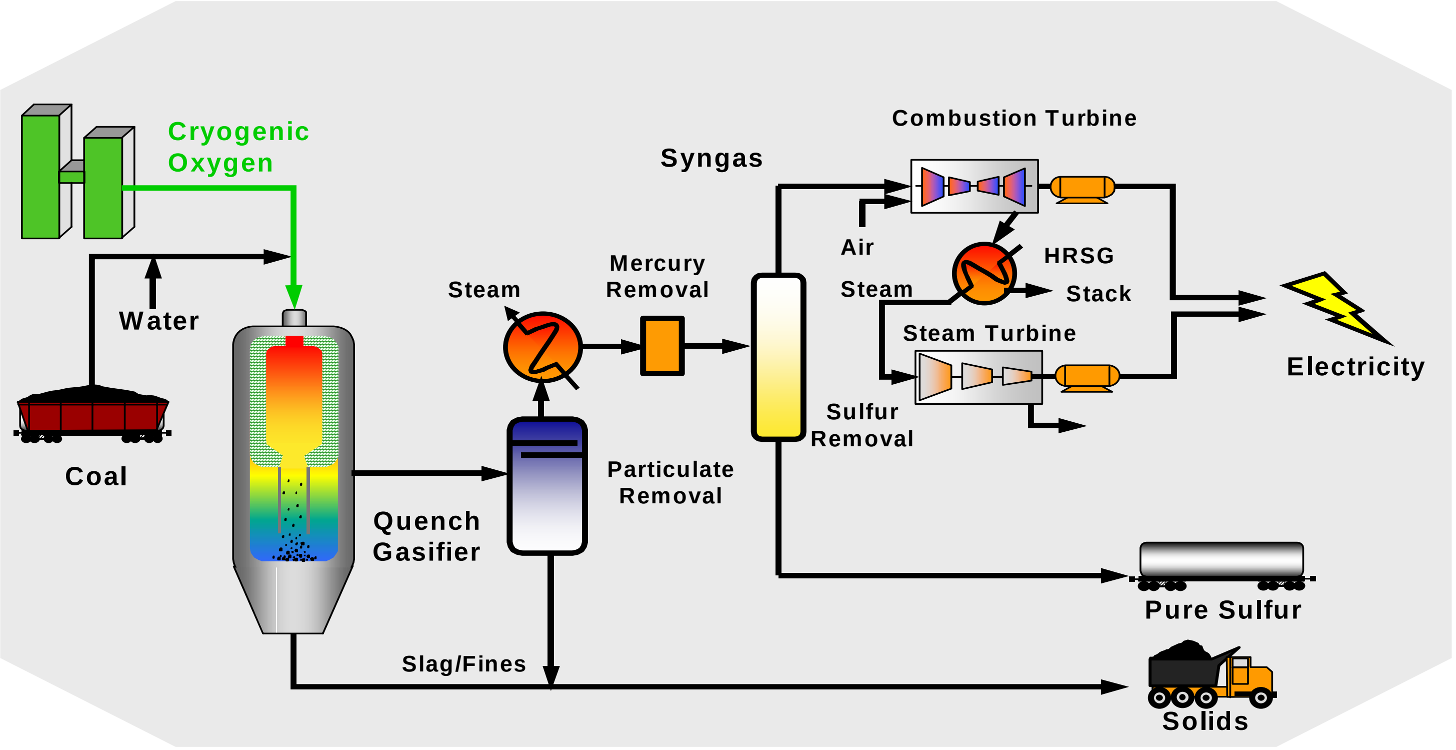
Impact of SCR and FGD on Net Generation

- The overall generation loss in capacity associated with SCR and FGD for the entire AEP fleet is roughly 600MW.
- Typically, an SCR consumes approximately 1% whereas an FGD consumes from 1.5% to 3.0% of the plant electricity output.

PLANT MODIFICATIONS WILL MITIGATE FGD AND SCR CAPACITY CONSUMPTION

Investing in IGCC

Looking to the Future - IGCC



AEP has announced its intention to construct a commercial-scale Integrated Gasification Combined Cycle (IGCC) Plant by the end of the decade.

Site Selection Considerations

- Brownfield site vs. Greenfield site
- Sufficient Space
  - Flat area with adequate construction access
  - 600 acres
- Fuel delivery options
  - Rail/barge/truck
  - Up to 4 million tons/year of coal
  - Access to water
- Transmission Line Costs
  - Distance from high-voltage lines
  - Costs for grid interconnects and stability impacts

PJM EVALUATION REQUESTED FOR 3 POTENTIAL SITES

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 7273 of 9556

IGCC Permitting Issues

- **Air** – to evaluate best available control technology (BACT)
- **Wastewater** – to understand wastewater streams
- **US COE** (Corp of Engineers) – to obtain permits for construction of river facilities
- **NEPA Process** – (National Environmental Policy Act)– Environmental site studies addressing wetlands, endangered species, historical artifacts

PERMIT PROCESS WILL TAKE 1 - 2 YEARS

Next Steps

<u>2005</u>

- Secure cost recovery plan – Summer
- Finalize site selection - Fall
- Negotiate with suppliers – Throughout 2005

- 2005—2007: Obtain permits and finalize engineering and procurement

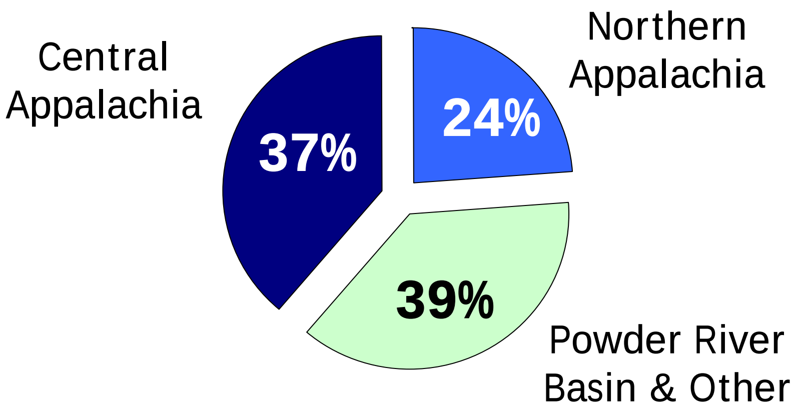
- 2008—2009: Construct and start-up plant

AEP WILL PIONEER CONSTRUCTION OF LARGEST IGCC PLANT IN THE WORLD

Fuel, Emissions & Logistics

Coal Procurement

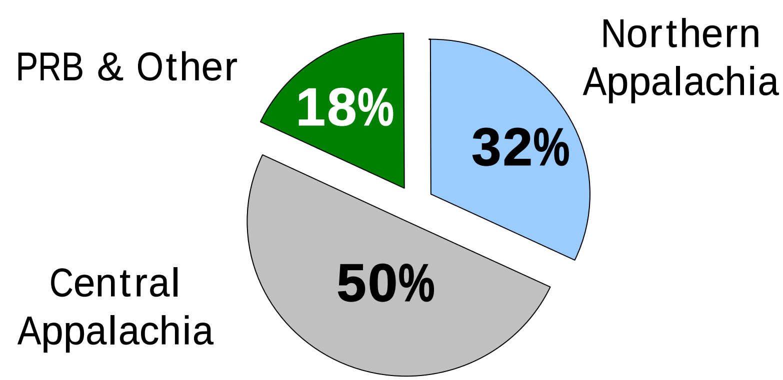
AEP SYSTEM



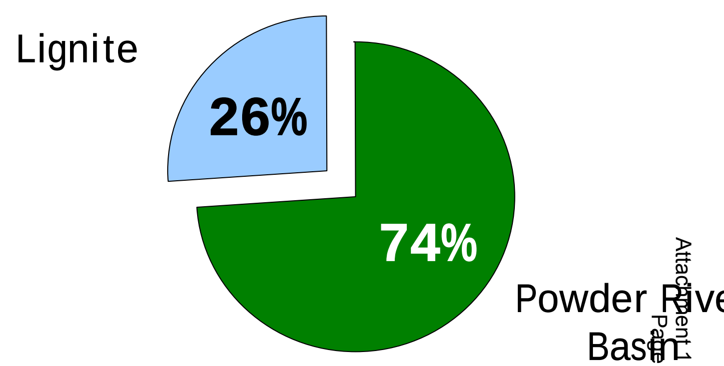
Coal Supply
(on average)

- Purchase 75 MM tons per year
- Avg. delivered price ~ $28.50/ton in 2004
- Essentially 100% purchased for 2005
- Approximately 12%-14% price increase in 2005
  - Increase being pressured by strong burn
  - PRB deliveries will impact results

EASTERN SYSTEM



WESTERN SYSTEM



KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential

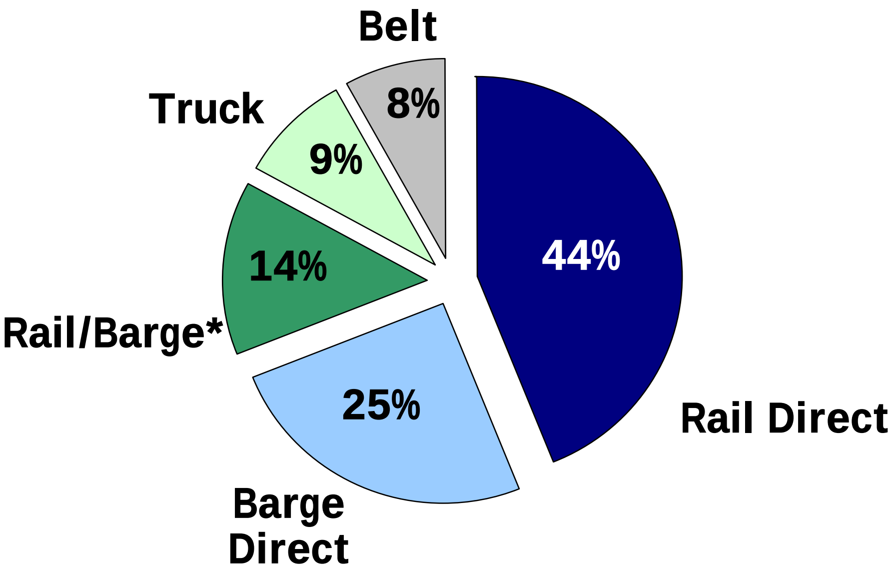
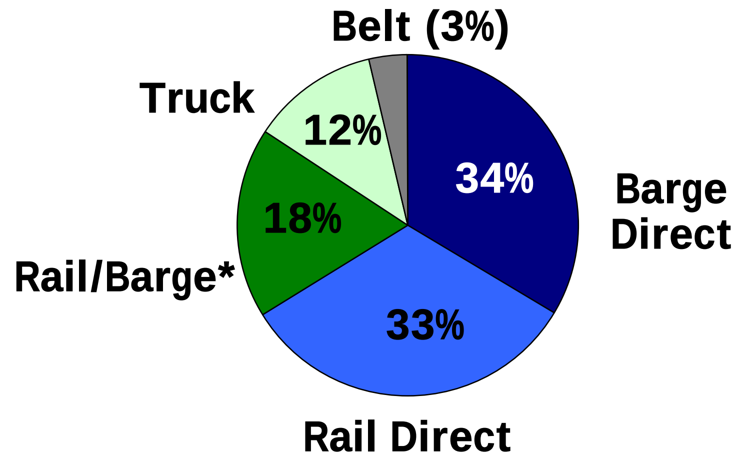
Coal Delivery Mix

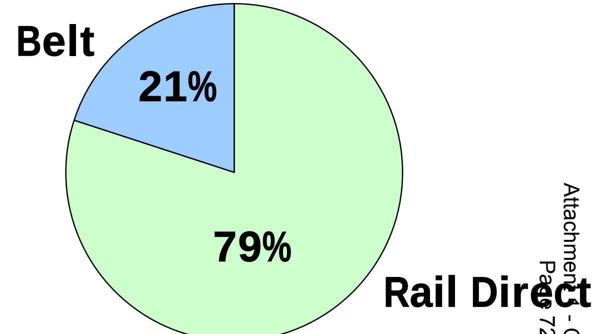
AEP SYSTEM
DELIVERY MODE DIVERSITY
Jan-June 2005 Actual



EASTERN SYSTEM
Jan-June 2005 Actual



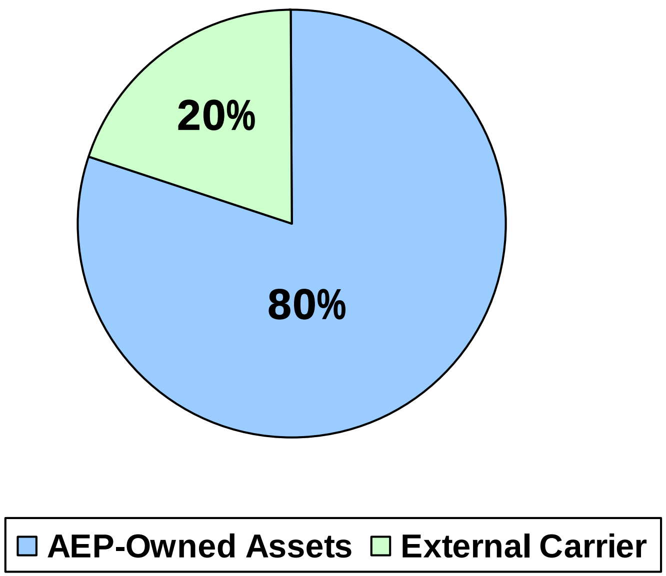
WESTERN SYSTEM
Jan-June 2005 Actual



* Coal delivered to AEP plants transported through combination of rail and barge

AEP's Coal Transportation Assets

Coal Transportation to AEP Plants*
Jan-June 2005 Actual



* Represents close approximations

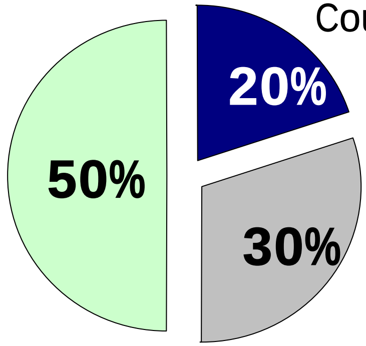
AEP's substantial coal transportation assets include:

- 7,065 railcars
- 2,230 barges
- 53 towboats
- 1 active coal handling terminal (20 million tons of annual capacity)

AEP'S TRANSPORTATION ASSETS PROVIDE FLEXIBILITY IN A CONSTRAINED DELIVERY ENVIRONMENT

Fuel Recovery

AEP SYSTEM



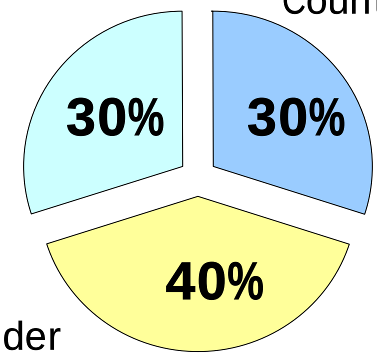
Fuel Cost Recovery

(on average)

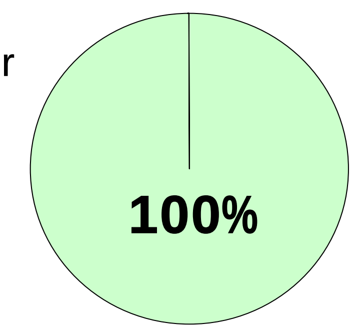
- Fuel recovery varies by jurisdiction
- 70% of fuel cost is recoverable across the AEP System
- Active Fuel Clause Jurisdictions:

AEP EAST: AP-VA, I&M, KGP, KP
AEP WEST: PSO, SWEPCO

EASTERN SYSTEM



WESTERN SYSTEM



Regulatory Matrix – East

Ohio (Restructured)
- Unbundled rates for default customers frozen until 12/31/2005
- Pursuant to RSP Plan approved by PUCO 1-26-05:
  - Distribution rates in effect at December 31, 2005 are frozen, with certain exceptions, until the end of 2008.
  - Institute for 2006-2008 a non-bypassable distribution rider for provider of last resort (POLR) costs.
  - CSP ”G” rates to increase 3% per year (2006-2008).
  - OP “G” rates to increase 7% per year (2006-2008).
  - Transmission rates can upon filing reflect change in RTO costs.
- No active fuel clause
- Application for IGCC plant recovery filed on 3-18-05, Hearings are done. Initial and reply briefs are due 9-13-05 and 10-3-05, respectively.
- Hearings set for 10-11-05 on CSP’s possible acquisition of Mon Power’s Ohio service territory.

West Virginia (Regulated)
- Base rates not frozen
- No active fuel clause
- Annual ENEC proceedings have been suspended, the factor is currently fixed at pre-2000 levels.
- On 8-26-05 AP & WP filed with the WVPSC for a $183 million revenue increase to be phased in over a four-year period beginning in mid 2006. The filing consists of a general rate case, reinstatement of the ENEC, to implement scheduled incremental rate increases for major clean air & transmission investments, and the implementation of a system reliability tracker mechanism.

Virginia (Restructured)
- Capped rates for default customers frozen through end of 2010
- Capped rates can be adjusted by two rate cases prior to the end of 2010 and incremental environmental and reliability cost recovery mechanisms
- Active annual fuel clause
- On 7-1-05 AP filed a request with the Virginia Commission seeking to recover incremental costs for environmental compliance and T&D System reliability (E&R) of $62.1 million, effective on an interim basis beginning 8-1-05. The commission has scheduled hearings to begin 2-7-06 and has stayed the effective date of rates pending resolution of a legal issue that parties have been requested to submit briefs on by 9-6-05.

Kentucky (Regulated)
- Base rates not frozen
- Fuel clause, adjusted monthly
- Environmental surcharge costs are adjusted monthly for approved environmental compliance plan
- Rockport Unit Power Supply Agreement extension through 12-07-2022 was approved by FERC & KPSC in December 2004
- On 8-26-05 the Company filed a notice of intent with the KPSC of its intention to file a case on or before 9-26-05 using a 6-30-05 ending test year. The level of rate increase was not specified. The Company expects an effective date on or before April 1, 2006 based on a 9-26-05 filing date.

Michigan (Restructured, but Regulated)
- Base rates not frozen.
- Active annual fuel clause.

Indiana (Regulated)
- Base rates are frozen and fuel cost recovery factors are capped at increasing rates through June 30, 2007.

Tennessee (Regulated)
- Base rates not frozen
- Automatic fuel clause, adjusted monthly

Regulatory Matrix - West

Texas (Regulated) • SWEPCO Texas retail competition delayed until at least 2007. PUC Chairman believes the precursors for full and open competition are not yet in place and will not exist prior to 2009. The Chairman committed to the Texas Legislature that the commission would consider maintaining the current status of competition in the SWEPCO Texas (and SPP portion of TNC) areas in future proceedings. • Bi-annual fuel clause adjustment opportunity **Texas ERCOT Area (Restructured)** • TCC stranded cost true-up filing in May 2005. ($2.4 billion true-up amount requested) Hearings-late Sept. • TCC wires rate case PUCT approved final order on July 15. Final order results in slight rate decrease with a positive earnings impact. Rate expected to be effective no earlier than September 2005. • TCC final fuel reconciliation (July 98-Dec. 01) order on rehearing is final and appeals were filed in state and federal court in August 2005. • TNC true-up order approved in May 2005 (retail clawback and fuel over-recovery only). No adjustments to revised amounts filed by TNC. The results of the true-up case were filed in TNC's Competition Transition Charge (CTC) proceeding in August 2005. • TNC final fuel reconciliation (July 00-Dec. 01). Final order received October 18, 2004. Appeals filed in state and federal courts in Dec. 2004.	**Oklahoma (Regulated)** • On 6-3-05 PSO file to increase its Reliability Enhancement Plan annual spending to a $27.21 million level (up $15.4 million) pending OCC approval. Staff submitted testimony supporting an annual cap of $22.59 million up from the $11.81 million cap currently in place. The ALJ has recommended approval of the Staff proposed rider cap. It is now pending a Commission decision. • Annual Fuel Clause • 2001 Fuel review case Hearings scheduled for Sept. 2005 have now been continued to a later date to be determined. Scope expanded to cover 2002-2004 margin allocation issue. Intervenors have submitted testimony which would substantially off-set the recovery of PSO's $42 million Internal Cost Reconstruction (ICR) error. • 2003 Fuel review case Scope has been expanded to include a prudence review.
Louisiana (Regulated) • Base rates not frozen • Currently under a merger required financial review • Fuel clause, adjusted monthly	**Arkansas (Regulated)** • Base rates not frozen • Fuel clause, adjusted annually

Ohio Rate Stabilization Plan Recap

Summary of Impact (Columbus Southern Power & Ohio Power):

	POLR Rider	Revenues & POLR Rider*			Incremental Cash			
Rate Stabilization Plan	**2005**	**2006**	**2007**	**2008**	**2005**	**2006**	**2007**	**2008**
Escalation of Generation Rate	0	83	173	271	0	83	173	271
POLR Rider/Recovery of RTO Costs***	21	0	0	0	0	7	7	7
POLR Rider/Return on Environmental Additions	44	26	26	26	0	41	41	40
Total RSP Impact	**65**	**109**	**199**	**297**	**0**	**131**	**221**	**318**
Pre-Existing Electric Transition Plan								
Elimination of 5% Residential Generation Credit**	0	25	25	26	0	25	25	26
Recovery of RTO costs***	0	23	23	23	0	23	23	23
Total ETP Impact	**0**	**48**	**48**	**49**	**0**	**48**	**48**	**49**

* Incremental over 2004 base year

** Elimination of 5% credit is per Statute, and part of pre-existing ETP, not the RSP

*** Recovery of administrative RTO costs, net congestion fees and ancillary services permitted in pre-existing ETP, but the RSP allows for recovery of 2005 costs as well

AEP WILL STILL HAVE AMONG THE LOWEST RETAIL RATES IN OHIO

2008 Lehman Brothers CEO Energy/Power Conference

New York, NY

September 3, 2008

AEP AMERICAN® ELECTRIC POWER

Michael G. Morris

Chairman, President & CEO

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are canceled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; volatility in the financial markets, particularly development affecting the availability of capital on reasonable terms and developments impairing our ability to refinance existing debt at attractive rates; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

AEP's Key Strategic Priorities

- Work for best possible outcome for the long-term value of our business in Ohio

- Invest in our vast energy platform to provide low-risk growth opportunities for our shareholders and reliable, cost effective energy solutions to our customers
  - Execute transmission strategies to enhance reliability, enable low-cost and renewable energy transport to market and support long-term earnings growth
  - Implement customized state-by-state investment strategies to achieve sustainable returns

Execution and regulatory success will determine results.

AEP Ohio Electric Security Plan

- On July 31, 2008, in conjunction with the requirements of SB221, AEP Ohio filed an Electric Security Plan with the PUCO on behalf of CSPCo and OPCo.
- The filing includes the following key components:
  - Energy Efficiency and Demand Response
  - Renewable Energy
  - gridSMART[SM] Phase 1
  - Distribution Reliability Enhancement
  - Economic Development
  - Provider of Last Resort
- The proposed rate plan results in an annual increase of approximately 15 percent on customers' total bills.
- The filing seeks to recover changes in fuel and environmental expenses relative to levels reflected in current rates.
- Intervenor testimony is due October 17, Staff testimony is due October 24 and the public hearing commences on November 3, 2008. We anticipate an order at the end of 2008.

Transmission Investment and Energy Policy

- A major debate over national energy policy will occur over the next few years.

- Emerging policies must support and encourage development of new transmission investment to meet future energy needs.
  - Existing infrastructure is deteriorating and inadequate
  - Carbon policies will force the need for renewables
  - Technological innovation should be strongly supported

- New policies must address several critical issues.
  - Federal siting authority
  - Cost allocation
  - Incentives

To advance our transmission business strategy, AEP has taken a leadership position in both national and regional public policy debates.

Building the Nation's Leading Interstate Electric Transmission Company

Our Goal: Contribute sustainable shareholder growth by leveraging AEP's position as the nation's leading transmission provider to become the nation's leading developer and owner of interstate transmission investment.

EXPERIENCE

- AEP is recognized as the industry leader in transmission.

PLATFORM

- AEP's asset base provides a strong starting point for new transmission investment within our footprint.

GROWTH

- AEP assets and leadership will open opportunities for significant new regional investments, beyond our traditional retail service territory boundaries.

By leveraging existing assets, expertise and leadership, AEP will grow shareholder value by creating a significant new transmission investment opportunity.

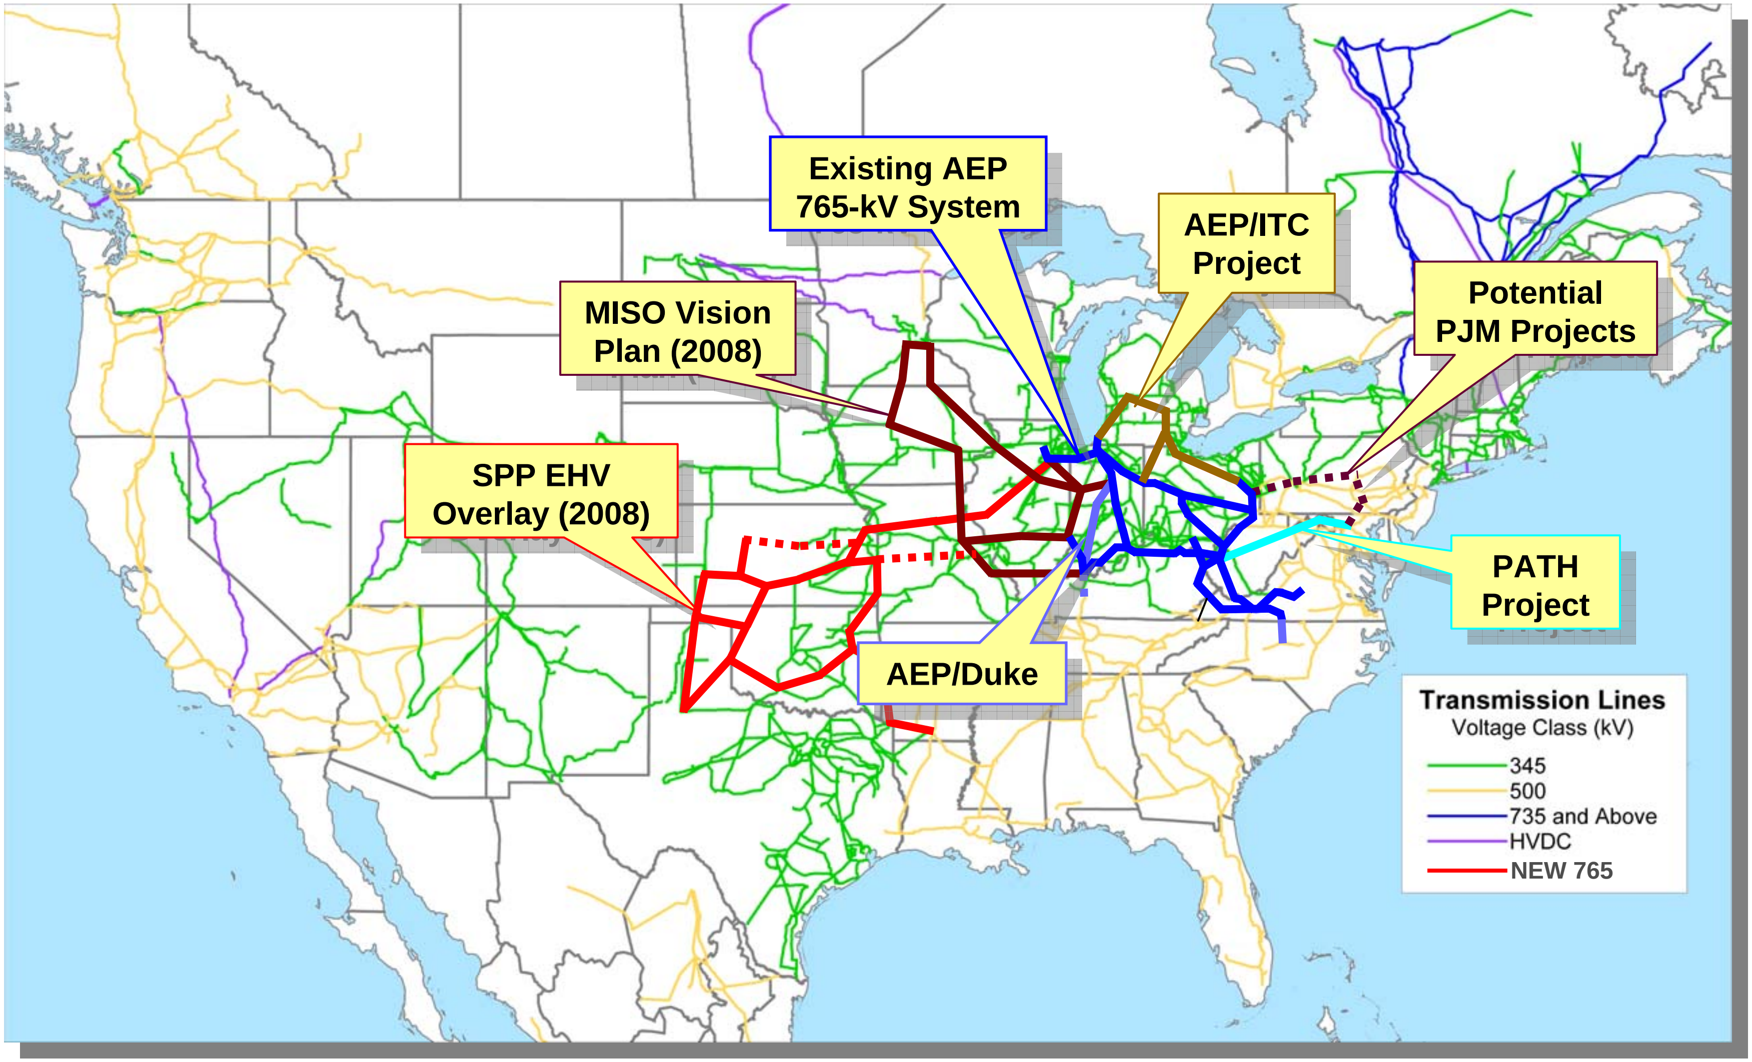
KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 7298 of 9556

The Business Potential

- **Faced with ever rising energy costs, aging infrastructure and emerging climate change policies, transmission development is needed more than ever before to:**
  - Enhance reliability
  - Enable existing low-cost generation a path to market
  - Move renewable resources from generation centers to load centers
- **AEP Projects Underway:**
  - Electric Transmission Texas (JV with MidAmerican Energy Holdings)
  - Electric Transmission America (JV with MidAmerican Energy Holdings)
    - ETA JV with Westar Energy
    - ETA JV with OGE
  - Potomac-Appalachian Transmission Highline (JV with Allegheny Energy)
  - Pioneer Transmission (JV with Duke Energy)

"Many of our resources, whether it's wind or sun or geothermal, they're out in rural areas...and we just don't have any infrastructure. If we're going to take this whole energy piece on the renewable side seriously … we've got to get the transmission and infrastructure piece right" *Utah Gov. Jon Huntsman - AP Western Governors, Utility Heads Seeks Energy Solutions July 1, 2008*

Making it Happen: EHV Projects Under Development



NOTE: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

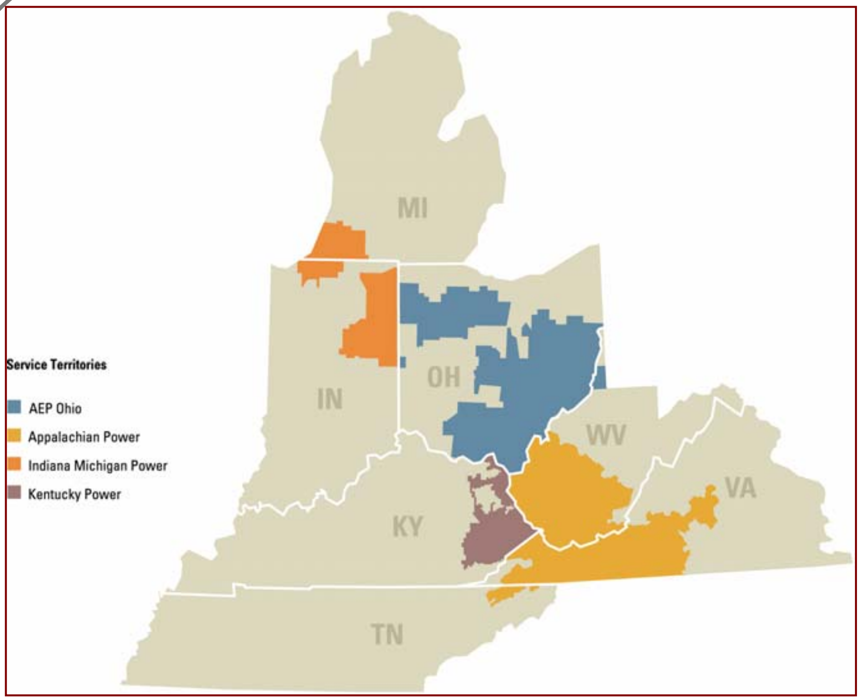
Making it Happen: Challenges

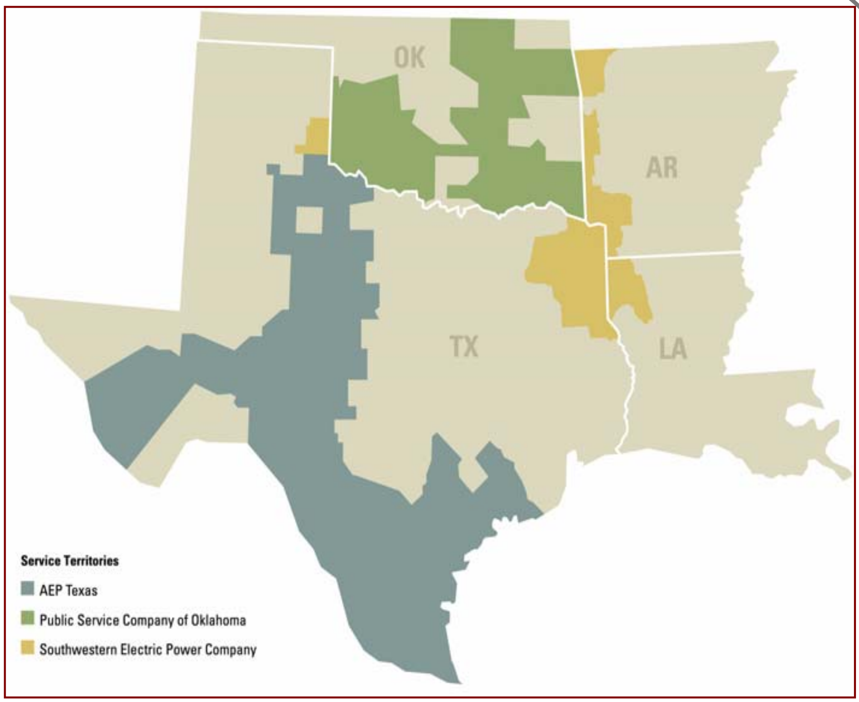
- Capital requirements: Infrastructure development through JVs requires committed capital to secure timely project development.

- Regulatory challenges: Federal policies should: favor spreading the costs broadly across customers on a regional basis; provide incentives for transmission development and investment; and address challenges associated with siting EHV projects.

- Managing a development business- Pursue standardized deal structures to permit more efficient portfolio management. Organize business processes to support JV goals and timetables. Pursue alliances to reduce risks associated with commodities and the provision of direct services. Exercise fiscal discipline to minimize expenditures prior to cost recovery.

"We need a true nationwide transmission version of our interstate highway system; a grid of extra-high voltage backbone transmission lines reaching out to remote resources and overlaying, reinforcing, and tying together the existing grid in each interconnection to an extent never before seen." *Suedeen Kelly-Commissioner FERC*





AEP's Generation and Distribution Investment Strategies

Generation & Distribution Investment Opportunities

- gridSMART^{SM} – as commodity costs and electric prices rise, investments that improve customer options and lower customer bills are key items on the minds of AEP's state regulators
- AEP East States – continue to invest in the existing generation platform and plan for key capacity additions to enable continued availability of low-cost energy to our customers and the market
- AEP West States - address the capacity/energy deficit through investments in new generation

gridSMART^{SM} Evolution – AEP East

	State Policy	AEP Action Plans
AEP OHIO – A unit of American Electric Power	SSB 221 provides targets and provisions for DSM/EE programs and supports infrastructure modernization.	Filed an Electric Security Plan (2008) which includes a model city pilot in NE Columbus and addresses DSM/EE programs.
AEP APPALACHIAN POWER – A unit of American Electric Power	Policy in VA is beginning to drive both renewables standards and DSM/EE programs.	AMR investments in VA and WV will defer new AMI for several years. New 2 MW NaS battery in Milton, WV will test dynamic islanding – supplying electricity while disconnected from the grid.
AEP KENTUCKY POWER – A unit of American Electric Power	KY's commission rules regarding DSM/EE programs are the model we seek in other states. However, like in other states, cost effective programs are difficult to implement due to KPCo's low rates.	Existing programs are focused on low-income weatherization and heat pump programs for mobile homes and receive favorable recovery.
AEP INDIANA MICHIGAN POWER – A unit of American Electric Power	IN & MI both have strong interests in efficiency programs. MI is considering requiring 2% of state revenues allocated to EE.	Broadly focused South Bend Pilot includes AMI, distribution automation, demand response, pre-paid meters. NaS battery installation in IN in 2008 to demonstrate storage with intermittent wind.

The eastern states are evolving in their positions regarding demand management, energy efficiency and AMI investments.

gridSMART[SM] Evolution – AEP West

	State Policy	AEP Action Plans
AEP TEXAS — A unit of American Electric Power	Current legislation supports concurrent cost recovery of DSM/EE programs. Legislature expecting distribution service providers in ERCOT to file plans for smart meter deployment.	Executing aggressive DSM/EE programs with targets of 15% and 20% offset to growth in 2008 & 2009. Will file by Oct. 31, 2008 a deployment plan for smart meters.
AEP PUBLIC SERVICE COMPANY OF OKLAHOMA — A unit of American Electric Power	Heavily involved in DSM rulemaking with OCC and rules to be developed in Oct 2008. Small DSM/EE program ($4.3M) approved.	Conducting small scale Distribution Automation pilot in South Tulsa. In process of implementing DSM/EE programs.
AEP SOUTHWESTERN ELECTRIC POWER COMPANY — A unit of American Electric Power	DSM/EE program costs are recoverable thru a rider in AR and base rates in LA and TX. There is no statutory support for AMI outside of TX footprint.	Continue DSM/EE in AR and in TX.

Texas currently has the most progressive legislative stance with regards to supporting AMI. PSO and SWEPCo have active DSM/EE programs with Distribution Automation pilots proposed in each state.

Regional Capacity and Energy Situation: AEP East

Generation planning in the East is a mix of regional and state-level strategy. Planning is regional because capacity requirements and energy to serve native load are shared under AEP's pooling agreement. Execution is state-by-state because regulators control cost-recovery approval for any new plants and sharing of off-system sales margins.

AEP OHIO – A unit of American Electric Power

- OPCo is significantly long capacity.
- CSP gradually gets capacity short as plants are retired.
- SSB 221 sets significant renewable and advanced energy standards, but contains provisions for a waiver of the requirements if the costs are too high.

AEP APPALACHIAN POWER – A unit of American Electric Power

- APCo is the most capacity-short company in the East.
- WV has a strong long-term interest in coal.
- Law in VA sets voluntary renewable targets.
- AEP continues to pursue wind energy through long-term PPAs.

AEP KENTUCKY POWER – A unit of American Electric Power

- KPCo is short capacity, but less so than APCo.
- KY also has a strong long-term interest in coal.

AEP INDIANA MICHIGAN POWER – A unit of American Electric Power

- I&M is long capacity (no new fossil generation in the near or mid-term).
- IN & MI legislatures are considering RPS standards, with wind being the renewable of choice in IN.

New Generation Plan: AEP East

CAPACITY POSITION

- AEP East will be capacity deficient in approximately 2012 without new capacity additions.

ENERGY POSITION

- AEP can generate economic energy well in excess of native load for the next ten years.

2008-2010 Projected AEP East New Generation Capital Expenditures

	2008	2009	2010
Dresden- 580 MW (owned by AEG; capacity to APCo)	$99MM	$102MM	$3MM
Potential I&M Wind Farm	-	$33MM	$106MM

In the East, large-scale capital investment in new generation is not required in the near-term. AEP continues considering IGCC with carbon-capture options.

Regional Capacity and Energy Situation: AEP West

AEP®

CAPACITY POSITION

- PSO and SWEPCo are currently capacity deficit and filling their needs with market purchases.

PSO New Generation Situation

- Regulators will act, but regional economic interest still prevails.
- As a clear example, the Oklahoma Commission acknowledged and approved PSO's need for 450MW of baseload capacity, but denied a CCN and cost recovery for the proposed coal-fired Red Rock plant.
- An RFP was issued to purchase needed capacity and energy and proposals were due August 22. Evaluation of the proposals is underway.

ENERGY POSITION

- PSO and SWEPCo are also facing significant, growing energy deficits.

SWEPCo New Generation Situation

- SWEPCo's states have less vested interest in gas-only to meet the region's energy needs for 2013 and beyond and are in various stages of approval for the Stall (509 MW gas-CC) plant. The Turk Plant (447 MW coal) has been approved by all three jurisdictions and we await the air permit from the ADEQ.

2008-2010 Projected AEP West New Generation Capital Expenditures

	2008	2009	2010
Stall	$207MM	$85MM	$32MM
Turk	$115MM	$249MM	$227MM

PSO and SWEPCo face immediate and growing infrastructure shortages. We have implemented an RFP process to purchase the needed capacity and energy in Oklahoma and are building new generation in Arkansas and Louisiana to meet SWEPCo's capacity and energy needs.

Conclusion: AEP's Key Strategic Priorities

Work for best possible outcome for the long-term value of our business in Ohio

- Comprehensive Electric Security Plan filed on July 31, 2008

Invest in our vast energy platform to provide for growth:

Execute transmission strategies to support long-term earnings growth

- Leverage AEP experience and existing infrastructure
- Enhance reliability
- Move low-cost energy and renewable resources from generation centers to load centers
- Strategic alliances to distribute financial and operational risks

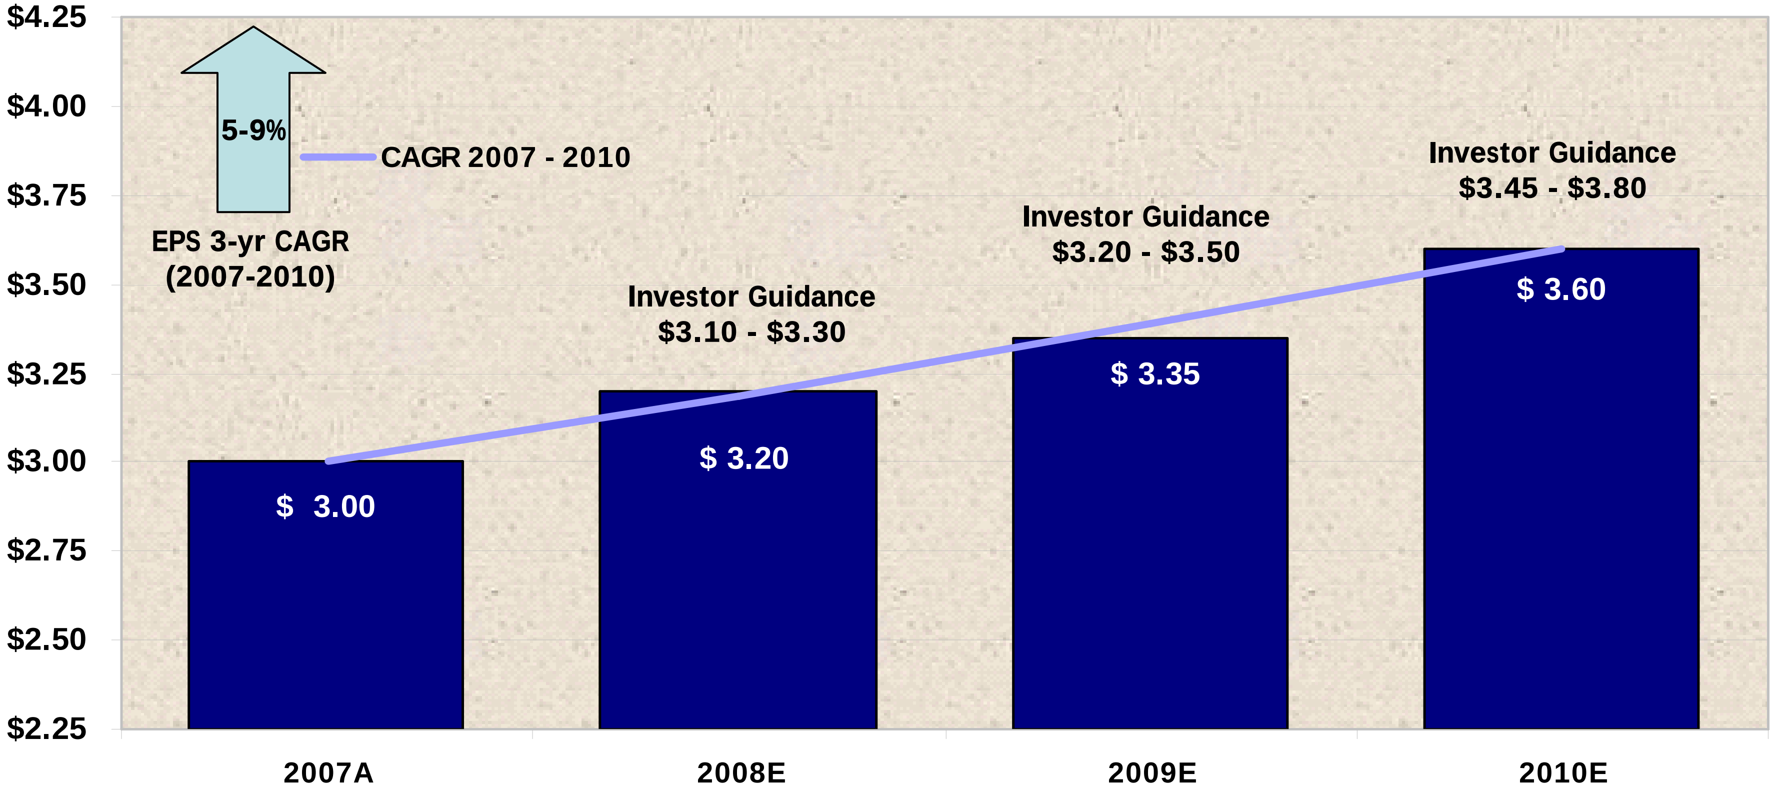
Implement customized state-by-state strategies to achieve sustainable returns

- gridSMART℠ provides customers added optionality during a time of rising commodity prices
- Investments in generation and distribution that align with the interests of our regulators
- Fuel cost recovery in each jurisdiction mitigates the impacts of rising commodity costs

Continued disciplined capital investment/rate base growth, new generation investments in the West and investments in interstate transmission are the main drivers of earnings growth over the next several years.

The AEP Value Proposition

Leveraging our vast energy platform with low-risk investments in infrastructure to enable sustainable growth.



AEP's ability to ensure a disciplined approach to capital investment allows us to sustainably grow earnings and shareholder value.

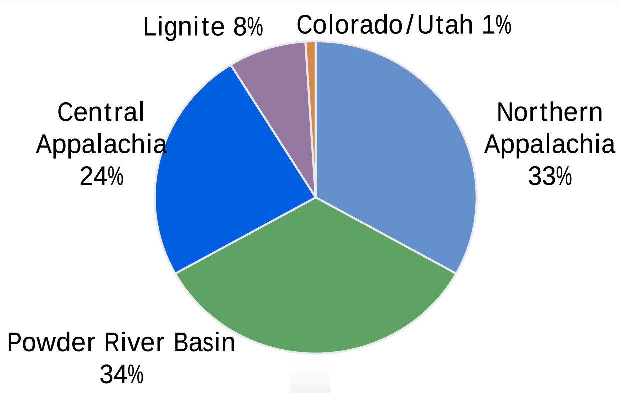
Coal Procurement – 2008 Projected

AEP burns approx. 76 million tons of coal per year

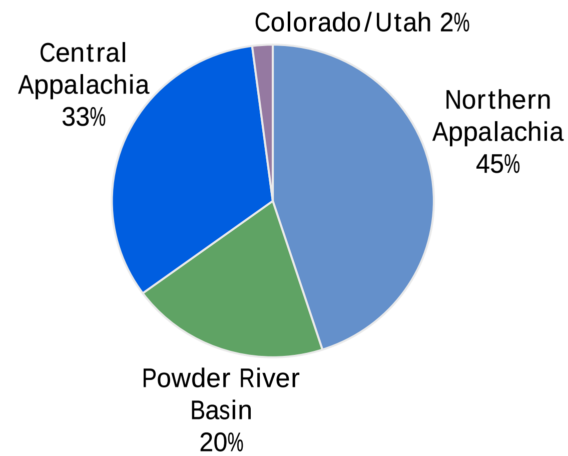
Total AEP System



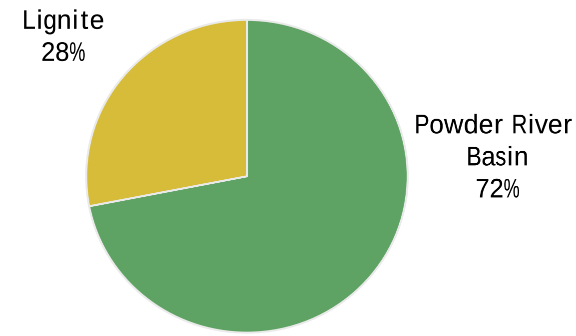
Coal Stats:

- > 95% contracted for 2008
- Avg. delivered price ~ $36.58/ton in 2007
- Approximate 20% price increase in 2008 based on 2007 actual results.

AEP East

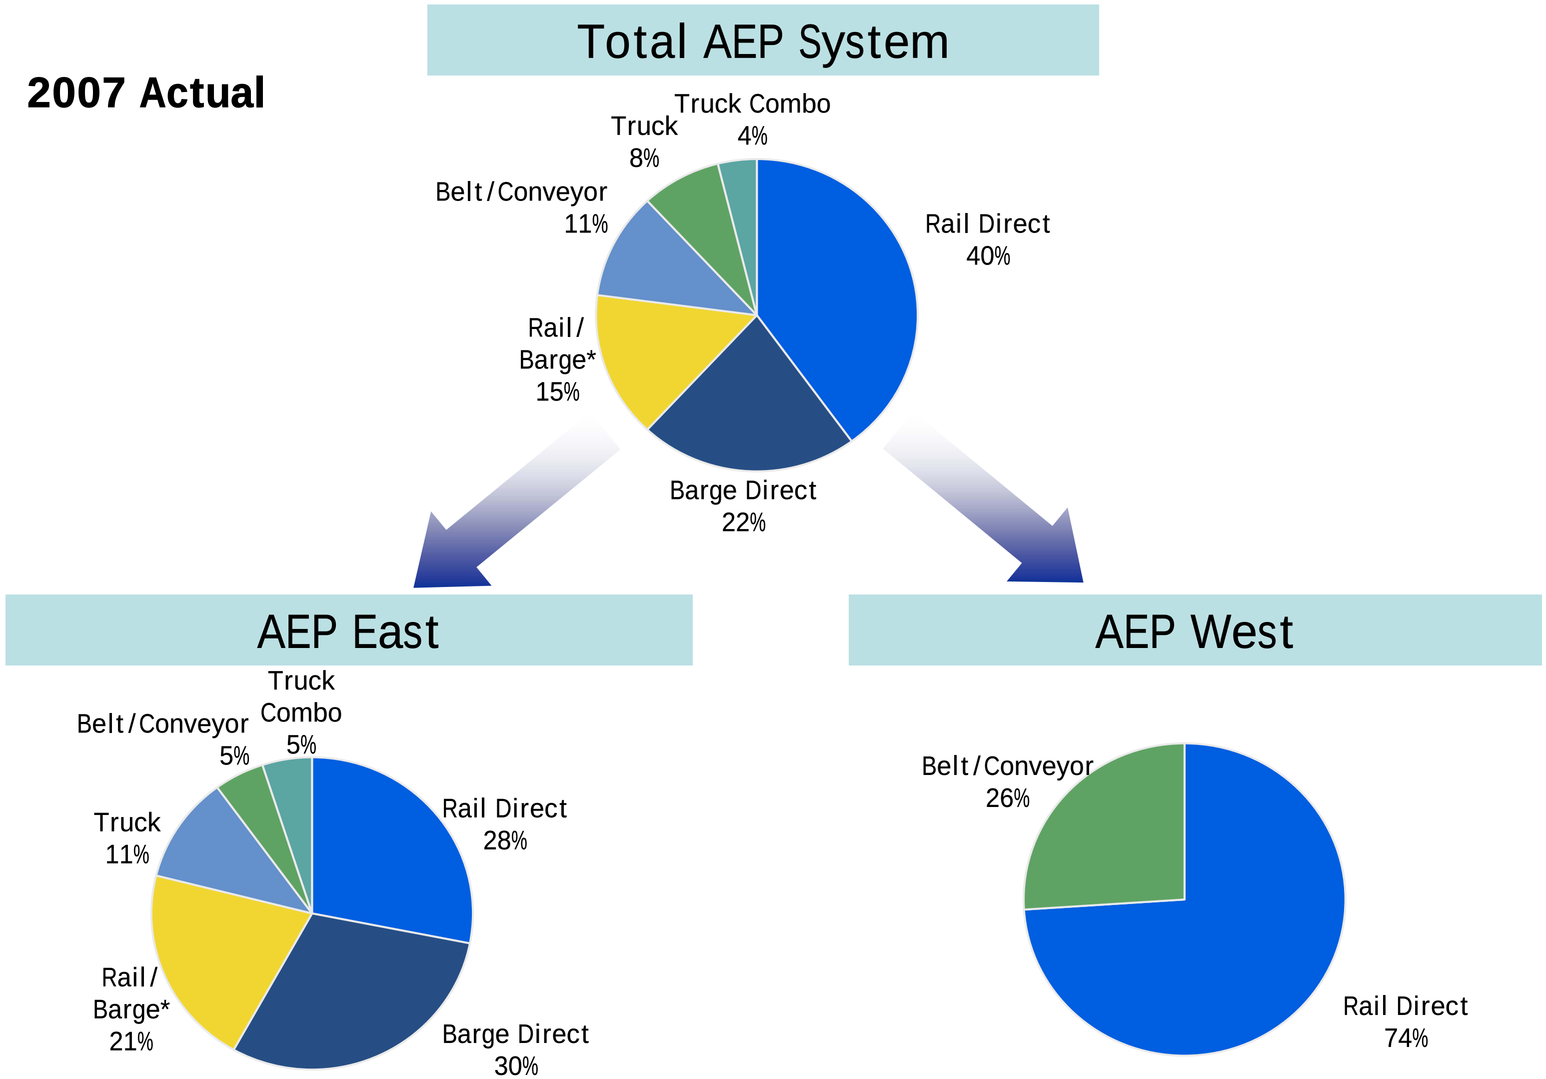


AEP West



Coal Delivery

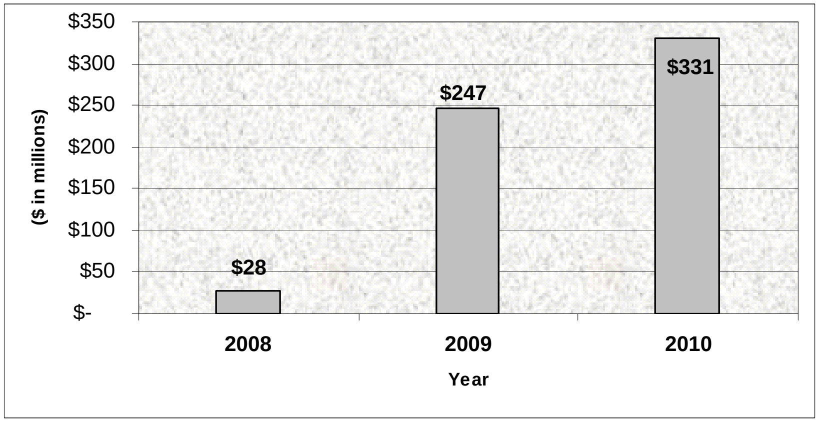
2007 Actual



* Reflects coal delivered to AEP plants transported through a combination of rail and barge

Transmission – Investments and Earnings Contributions

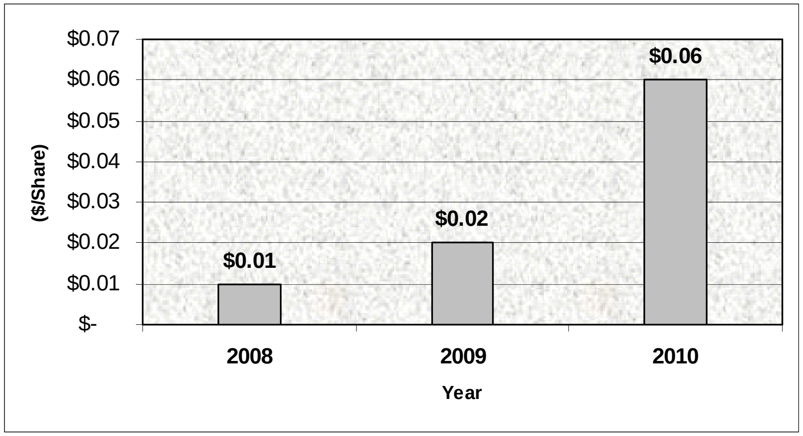
Projected Transmission Capital Spending*



* ETT and PATH joint ventures included in above projection. Amounts represent AEP's 50% share of total transmission joint venture capital expense. These amounts are excluded from AEP's base capital forecast because the joint ventures are not consolidated for financial reporting purposes. AEP will be responsible for funding 40-50% of these amounts with equity contributions, and the remainder will be financed with debt issued by the joint ventures.

ETT Electric Transmission Texas

Projected Transmission EPS Contributions*



* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

PATH Potomac-Appalachian Transmission Highline

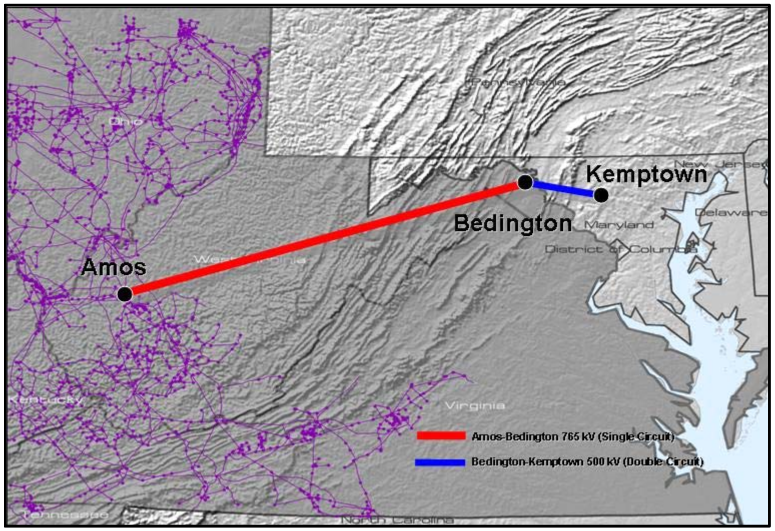
Transmission will provide a near and long-term catalyst for earnings growth.

I-765™ Transmission in PJM: PATH

- *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries -- to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP
    - 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
  - FERC ordered the formula rate mechanism be set for hearing, pending settlement judge procedures

- *Funding Plans/Transaction Structure*
  - AEP and Allegheny share ownership of Amos – Bedington line and contribute equally to this portion of the project through PATH West Virginia Transmission Company, LLC
  - AEP's investment will be held in the AEP Transmission Holding Company LLC subsidiary

- *Key Next Steps*
  - Siting Approval from WV and MD - 2010
  - Targeted Completion - 2012



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

PATH
Potomac-Appalachian Transmission Highline

Joint Ventures with MEHC

Electric Transmission Texas Update

- *Transaction Structure*
  - 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
  - ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
  - Services provided by AEP and investment opportunities can be offered by either partner
  - Total initial investment of $70 million before ownership division
- *Next Steps*
  - Await PUCT approval of consortium proposal, which includes ETT's portion of 710 miles of new transmission at an estimated cost of between $1.5 billion and $1.7 billion
  - Anticipate transferring some project opportunities in 2008 after regulatory approvals obtained.

Electric Transmission America Update

- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.
  - ETA recently signed agreements with Westar Energy and OGE proposing to build the first and second segments of the 765-kV Overlay Plan in SPP

I-765™ Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- *Overview*
  - Sent non-binding Letter of Commitment to SPP to construct 765-kV and 500-kV projects in SPP region consistent with SPP Overlay Study – Summer 2007
  - Updated EHV Overlay Study completed by SPP – March 2008
- *Benefits*
  - Overall reliability reinforcement with improved voltage support throughout the SPP system
  - Significantly increased transfer capability
  - Provides access to new generation resources, especially renewables
  - Allows for effective interconnections for EHV system development
- *Next Steps*
  - ETA Partnering Agreements - 2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate and Cost Allocation Filing (postage stamp) – 2009
  - Siting Approval for projects – 2009-2011
  - Estimated Completion (in segments) – 2013-2017

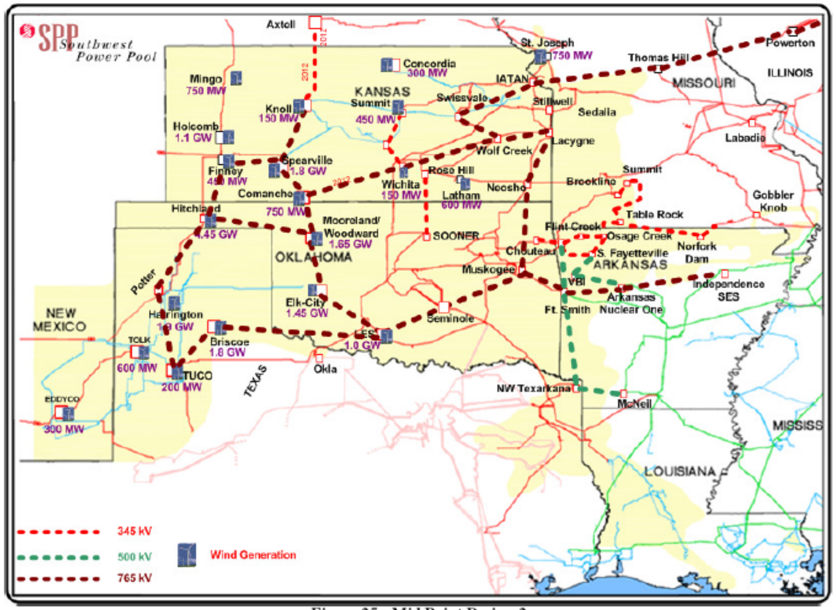


Figure 25: Mid Point Design 2

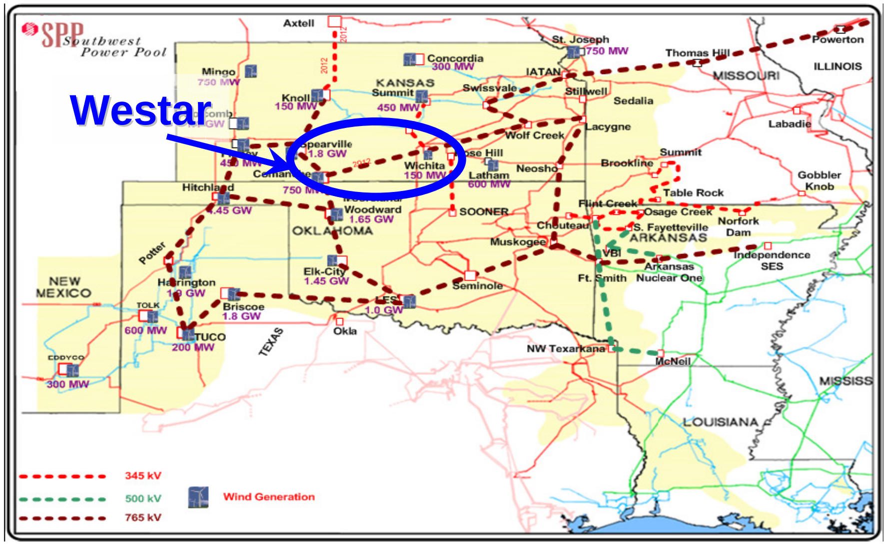
Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Prairie Wind Transmission, LLC

JV to build first segment of 765-kV transmission in SPP

- *Overview*
  - On May 19, 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT)
  - PWT is a 50/50 JV that is proposing to build approximately 230 miles of 765-kV lines extending from Wichita, Kan., west to a substation northeast of Dodge City, Kan., and then south to the Kansas border from Medicine Lodge, Kan.
  - The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region
  - Project is expected to cost approximately $600 million (based on SPP estimates) and be in-service by 2013
  - AEP's ownership of the joint venture is 25%
  - AEP obligations include oversight of 765-kV Engineering, 765-kV Technology and Project Management
  - Other responsibilities will be handled by the partners or outsourced
- *Next Steps*
  - Filed CPCN – 2Q2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate Filing (postage stamp) – Fall 2008
  - SPP Cost Allocation Filing - 2009
  - Siting Approval – 2009
  - Estimated Completion – 2013



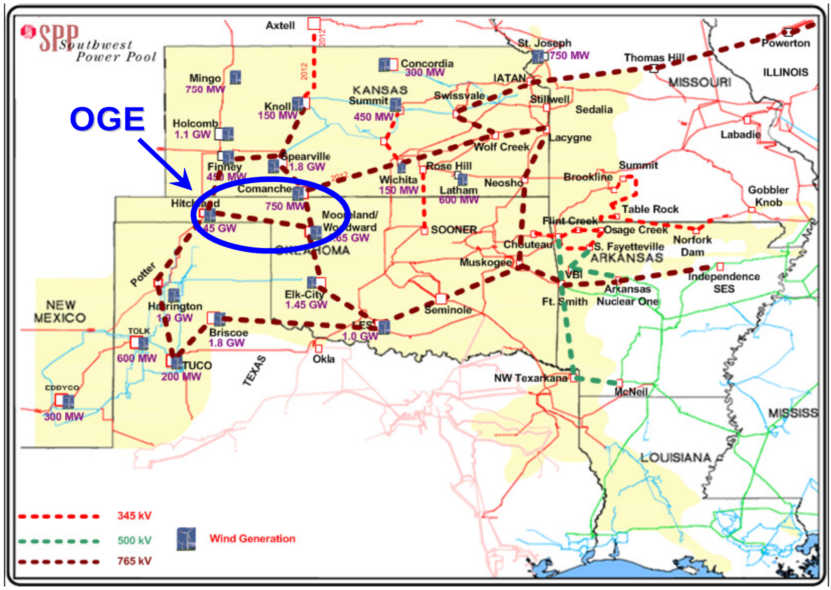
Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

ETA JV with OGE

JV to build second segment of 765-kV transmission in SPP

- ❑ *Overview*
  - ❑ On July 15, 2008, ETA signed an agreement with OGE Energy Corp. to form a joint venture
  - ❑ The JV is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines extending from the Kansas-Oklahoma border north of Woodward, OK, that will link into OGE's station at Woodward and then extend west to a new station that will be built near Guymon, OK.
  - ❑ The project will provide enhanced electricity transport in Oklahoma and support expansion of renewable electricity generation in the region
  - ❑ Project is expected to cost approximately $500 million (based on SPP estimates) and be in-service by 2013
  - ❑ AEP's ownership of the joint venture is 25%
  - ❑ AEP obligations include oversight of 765-kV Engineering, 765-kV Technology and Project Management
  - ❑ Other responsibilities will be handled by the partners or outsourced
- ❑ *Next Steps*
  - ❑ File CPCN –2008
  - ❑ SPP RTO EHV Overlay Approval – 2009
  - ❑ FERC Formula Rate – Fall 2008
  - ❑ SPP Cost Allocation Filing – 2009
  - ❑ Siting Approval – 2009
  - ❑ Estimated Completion – 2013

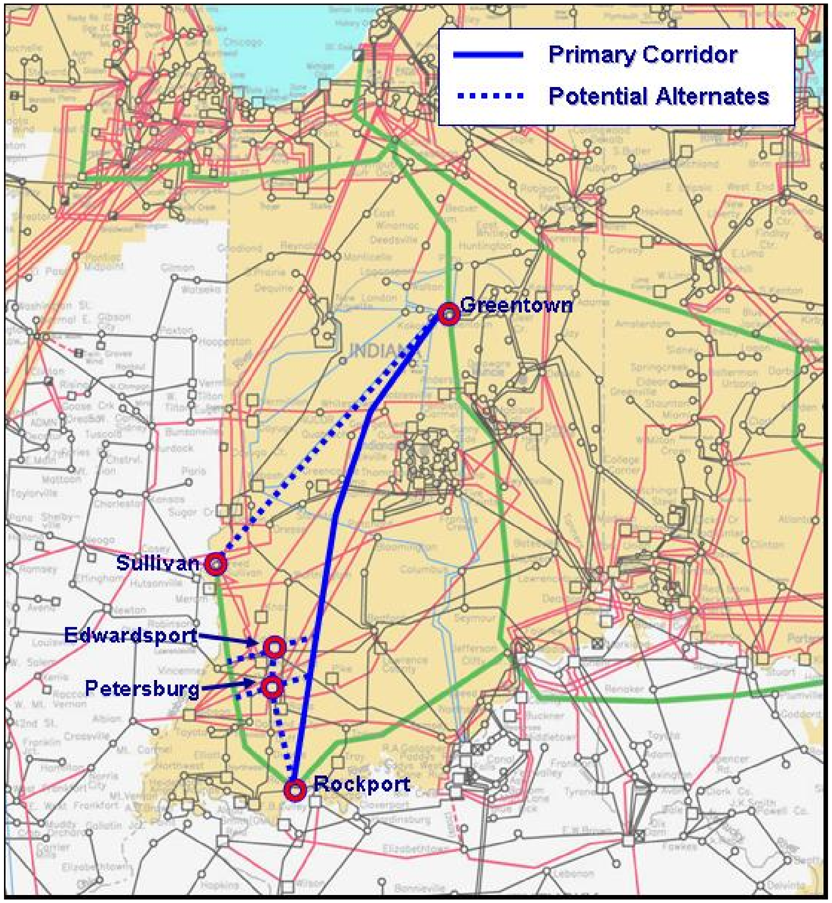


Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Pioneer Transmission, LLC

- *Overview*
  - On August 11, 2008, AEP & Duke formed a joint venture to build and own a 765-kV transmission line. Pioneer Transmission LLC is a 50/50 joint venture between the two companies.
  - The primary project involves the construction of approximately 240 miles of 765-kV lines extending from AEP's Rockport substation east of Evansville, Indiana with Duke's Greentown substation near Kokomo, Indiana.
  - Project is expected to cost approximately $1 billion, but final costs will depend on the routing of the line, equipment and commodity costs. AEP's share of the costs will be 50% of the total.
  - In-service date will be determined by the MISO and PJM planning process, with earliest possible completion in the 2014-2015 timeframe.
- *Next Steps*
  - Submit proposal to PJM & MISO for consideration in their transmission expansion plans
  - FERC filing for rate approval – 2008
  - Estimated Completion – 2014-2015



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected.

I-765™ Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

Overview

- ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
- Study was released Q3 2007
- 700 miles of 765-kV line in Ohio and Michigan
- $2.6 billion investment (before ownership division)
- AEP and ITC are in discussions to form a Joint Venture

Benefits

- Up to 5,000 MW improved transfer capability
- Reduces network line losses by 250 MW

Next Steps

- Agreement on JV (AEP/ITC) - Summer 2008
- JV Formation - 2008

Note 1: AEP Ohio requested phase-in of proposed incremental FAC expenses during the three-year ESP period. Additionally, there will be a periodic true-up of the current period actual FAC to what was recovered in rates for that period. This will produce on-going periodic under/over recoveries of FAC costs for the period that have not been estimated for 2010 or 2011.

Note 2: Represents capital carrying cost on environmental facilities not currently reflected in rates. Exhibits PJN-8 &PJN-10 provides calculation of environmental carrying cost and components of the carrying cost rate applied to the capital expenditures, respectively.

Note 3: We requested a 3% & 7% per year increase in non-FAC generation for CSP & OPCo, respectively, consistent with the RSP increases. Exhibit PJN-8 shows the capital carrying cost on incremental environmental facilities forecasted for 2009. Exhibit PJN-10 provides the calculation and components of the carrying cost rate applied to the capital expenditures.

Note 4: Represents the Provider of Last Resort charge which is addressed in the testimony of Craig Baker starting on page 25.

Note 5: Requested an annual 7% & 6.5% per year increase in Distribution for CSP & OPCo, respectively. Exhibit DMR-4 shows expected O&M & carrying charge cost of capital for reliability and in the case of CSP, gridSMART, for the 2009-2011 time period. The carrying charge costs are provided on Exhibit PJN-10.

Note 6: Represents estimated costs to provide AEP-sponsored customer demand response & energy efficiency programs. These costs are discussed in the Sloneker testimony starting on page 18.

Note 7:

	2009 CSP	2009 OPCo	2011 CSP	2011 OPCo
Expiration of Special Contract	-$22.7M	-$27.1M		
Reg Asset Surcharge	-$54.2M		22.8M	15.2M
Other	-$3.8M	$0.0M		
Total Other	-$80.7M	-$27.1M	$22.8M	$15.2M

A special contract expires 12/31/08 and the customer will go on the standard tariff.
The revenue reduction associated with the elimination of the reg asset surcharge in 2009 will be offset by the reduction in related amortization.
Other of $3.8M represents the expiration of monthly line extension surcharges.

Summary Rate Case Information

I&M Indiana General Rate Case

On January 31, 2008, I&M filed a general base rate case with the Indiana Utility Regulatory Commission (IURC) requesting an increase of $128.5 million ($82.4 million in base revenues and $46.1 million in tracker mechanisms). (Docket #: 43306). Order is expected in June 2009.

Regulatory Activity Underway

APCo-Virginia E&R Filing

On May 30, 2008, Appalachian Power filed the third tranche of E&R surcharge filings with the SCC, requesting a $66.5 MM increase for environmental and reliability costs incurred during the period October 1, 2006 through December 31, 2007, with a proposed one year recovery period commencing January 1, 2009. Respondent testimony was received August 13, Staff testimony was received August 27, Rebuttal testimony is due September 3 and a hearing will commence on September 17.

Summary of APCo's E&R filings:

E&R Tranche:	Case Number	Cost Incurred :	Recovery Period:	Amount:
I	PUE-2005-00056	7/1/2004 thru 9/30/2005	12/1/2006 thru 11/30/2007	$21.3 million
II	PUE-2007-00069	10/1/2005 thru 9/30/2006	1/1/2008 thru 12/31/2008	$48.9 million
III	PUE-2008-00045	10/1/2006 thru 12/31/2007	Proposed 1/1/09 thru 12/31/09	$66.5 million

Regulatory Activity Underway

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $140MM. Approximately $10MM of the increase relates to 3rd party and the rest, if approved, would be recovered through retail jurisdictional filings in SWEPCo and PSO, as appropriate.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to February 1, 2008, with rates subject to refund.
- Settlement discussions are currently on-going.

Regulatory Activity Underway

PJM OATT Formula Rate Filing

- On July 31, 2008, the seven AEP East companies filed with the FERC to update the Open Access Transmission Tariff (OATT) rate and implement a formula transmission rate that will be updated annually to keep rates current with transmission investment.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $507MM and the new revenue requirement requested is $606MM. Approximately $31MM of the increase relates to 3rd party and Ohio and the rest, if approved, would be recovered through retail jurisdictional filings in the other east jurisdictions.
- We requested an effective date of October 1, 2008 for the revised tariff, which the FERC may suspend for an additional five months.

Regulatory Activity Underway

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- The PSC issued its order on November 21, 2007, approving construction of the plant.
- Air permit anticipated in the third or fourth quarter of 2008. A draft air permit approval was released for public comment on August 11, 2008.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The peaking facility has been addressed and the intermediate facility is under review. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- The LPSC issued its order on April 29, 2008, approving construction of the plant.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- The PUCT issued a written order approving construction of the plant on August 12, 2008.

Regulatory Activity Underway

SWEPCo Stall Plant Filings

Arkansas

- Proceeding is currently suspended pending outcome in Louisiana.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The intermediate facility, known as the Stall Plant and sited in Shreveport, LA, was bifurcated from the original filing and had a procedural schedule established on January 9, 2008.
- Staff and intervenor testimony was completed on February 15, 2008, rebuttal testimony was due February 29, 2008 and hearings were held in April 2008. Staff testimony was favorable and the ALJ recommended approval. An order is expected in the second half of 2008.
- Air permit received on March 20, 2008.

Texas

- PUCT order approving plant was issued on March 8, 2007.

Commitment to Credit Quality

- ❑ Maintain adequate liquidity
- ❑ $150MM annually in new equity from Dividend Reinvestment and 401(k) plans
- ❑ Target 60% maximum consolidated AEP debt/cap ratio on an adjusted basis
- ❑ Target utility company capitalization structures:

Company	Target Equity Ratio
APCo	42-44%
CSP	45-47%
I&M	40-42%
KPCo	41-43%
OPCo	44-46%
PSO	43-45%
SWEPCo	43-45%
TCC	40%
TNC	40%

- ❑ Target long term dividend payout ratio range of 55-60%
- ❑ Maintain adequate coverage ratios to support current credit ratings

We are committed to maintaining our current credit ratings.

EEI International Utility Conference London March 13-15, 2011

AEP AMERICAN® ELECTRIC POWER

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M's Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events and our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives.

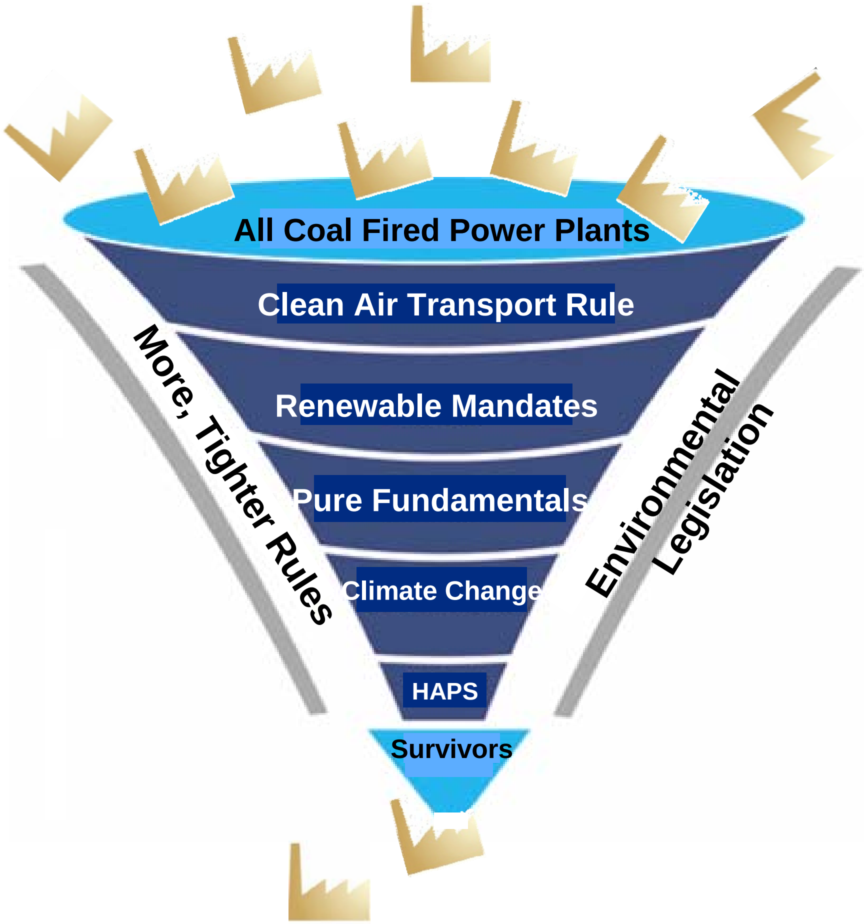
The Pressure on Coal Generation



Key EPA Actions Pending

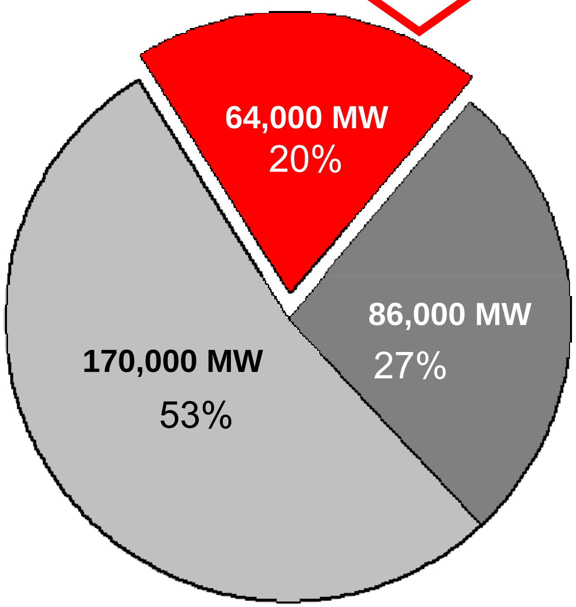
- Transport Rule – Proposed July 2010
- "Coal Ash" Rule – Proposed May 2010
- Mercury and other Hazardous Air Pollutants (HAPs) Rule – Expect Proposed Rule in March 2011
- Cooling Water Intakes – Expect Proposed Rule in Spring 2011
- Greenhouse Gas Tailoring Rule – January 2011

Continual Evaluation is Required

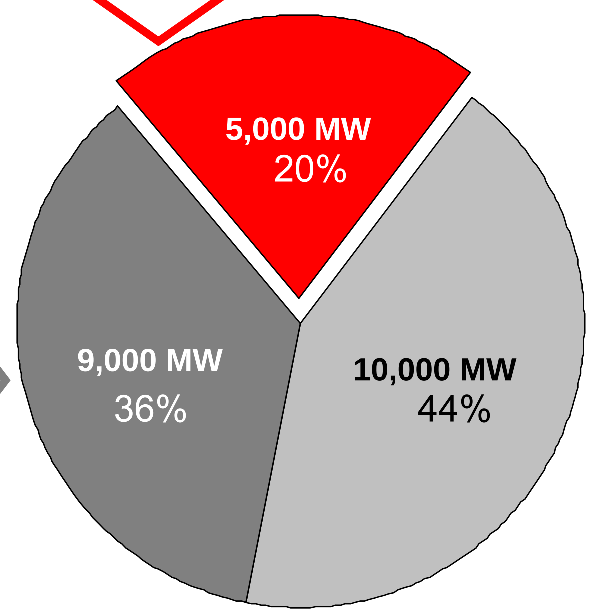
"Fully-Exposed"	"Partially-Exposed"	"Least-Exposed"
Probable Retirement	*Evaluating potential retirement*	*Not likely to be retired*

CCS Candidates

Smaller, older, less-efficient coal units that will not be economic if retrofitted



Newer and larger coal units that do not have SCR's and/or FGD's will be evaluated due to emerging environmental rulemaking and NSR requirements

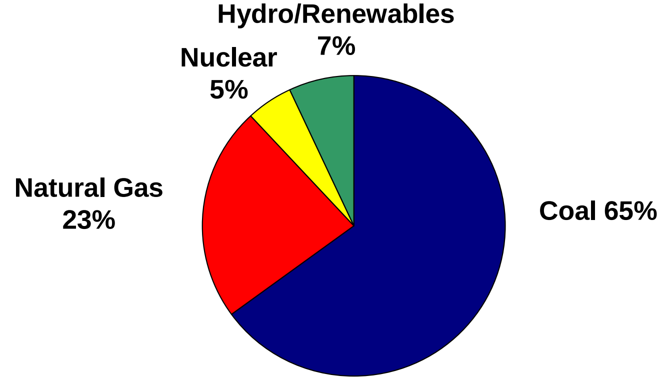


Nearly 50% of U.S. coal plants are exposed

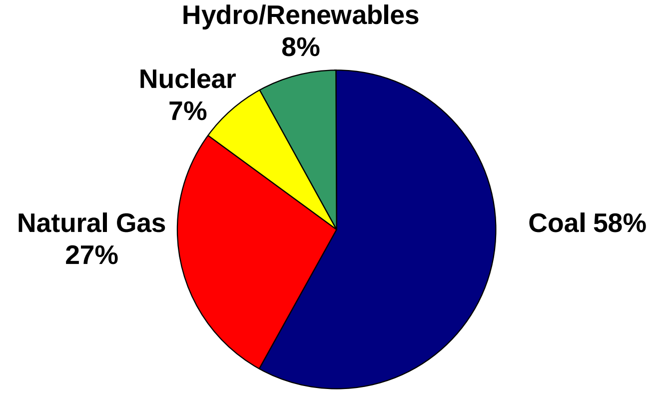
Continued Investment in Utility Platform

AEP®

- Plan for old, small coal units
  - Initially operate seasonally
  - Transition towards retirement
  - Regulatory plan for recovery
- Continue evaluation of “partially exposed” units for additional controls
- Add non-coal capacity when needed
  - Dresden NGCC (partially complete)
  - New NGCC at existing site
  - Cook plant uprate (under study)
  - Renewables
- Deploy technology as appropriate
  - Continue pursuit of CCS technology
  - Energy storage technologies
  - gridSMART®



Capacity - 2010



Projected Capacity - 2017

Carbon Capture and Storage

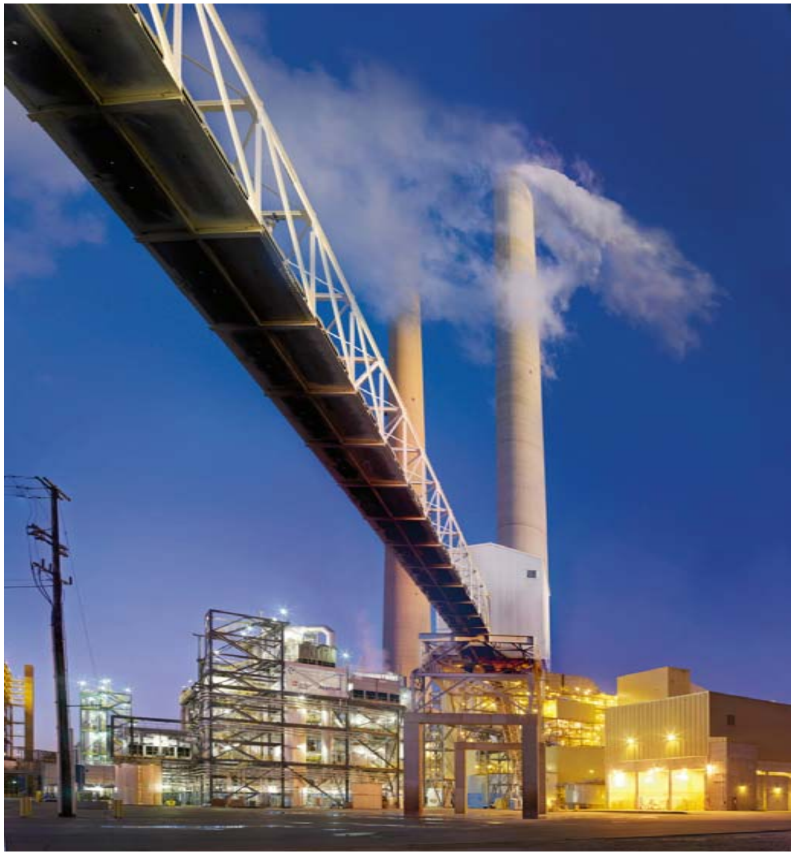
AEP®

PHASE I - Validation

- World's first operating CCS facility on a coal fired power plant
- Gained competitive advantage through technology development
- Currently testing key performance parameters: auxiliary power, removal efficiency, reliability, CO_2 product quality

PHASE II - Commercialization

- Initiated in January 2010
- Designed to capture and store 1.5 million metric tons of CO_2/year
- Estimated cost of $668 million with 50% DOE funding
- Pursuing additional funding/participation
- Scheduled in service date is mid-2015
- Key activities through July 2011 include conceptual engineering, detailed cost estimate and National Environmental Policy Act process



Carbon Capture and Storage project
Mountaineer Plant - New Haven, WV

AEP's "Smart Grid" Deployment – Pilot Projects

AEP®

Indiana Michigan Power - South Bend Pilot (Completed – September 2010)

- 10,000 AMI meters
- Integrated Mesh communication network
- Distribution grid management – centralized & decentralized
- Consumer programs: 2-tier time-of-day rates and technology enabled direct load control using PCTs
- Customer web portal
- Initial meter data management system development

AEP Ohio– central Ohio– (2009-2013)

- Awarded US DOE Smart Demonstration Project
- 133,000 meters using integrated mesh network
- Advanced distribution grid management with volt-VAR control
- Advanced consumer programs including critical peak and real-time pricing
- Extensive consumer outreach and communication
- Innovative web portal
- Large scale distributed storage
- Concentrated PHEV implementation
- Smart appliance deployment
- Industry first smart grid cyber security center

AEP Texas – Statewide (2009-2012)

- Legislature enabled and commission directed T&D service providers to deploy advanced metering
- 970,000 meters using mesh network communications
- Enable Texas retail service providers to provide innovative pricing and in-home consumer technologies
- 10,000 in-home displays for low income customers
- Statewide portal for usage and home device provisioning

PSO– Owasso Pilot (Implement in 2011)

- 13,000 AMI meters
- AMI and distribution control communication networks
- Distribution automation
- Distribution Volt-VAR control
- High level of in-home devices – displays and PCTs
- Customer programs – time-of-day and direct load control programs
- Web portal

gridSMART® attributes from the utility side of the meter look promising; customers with low rates may not see material savings/benefits

Transmission Investment Strategy

- **Near-Term Investment** – Electric Transmission Texas (ETT) secures near term investment opportunities, allowing AEP to invest in the large, growth-oriented Texas transmission market.
  - Total project cost: $3 billion with a 9.96% ROE
- **Mid-Term Investment** – Seven wholly-owned transcos allow for expansion and growth within AEP's existing utility footprint through an efficient recovery mechanism.
  - Will spend $160 million in 2011 and more than $350 million in 2012; Expected ROE will be in the 11.2%-11.49% range
- **Long-Term Investment** – Joint ventures provide opportunities for longer-term growth outside of AEP's existing utility footprint with forward looking formula rates, higher ROEs and FERC incentives, and mitigated risk profiles.

765-kV Tower

Texas Transmission Growth Strategy :Near Term Investment

Ownership Structure: 50/50 (AEP/MidAmerican Energy Holding Company)

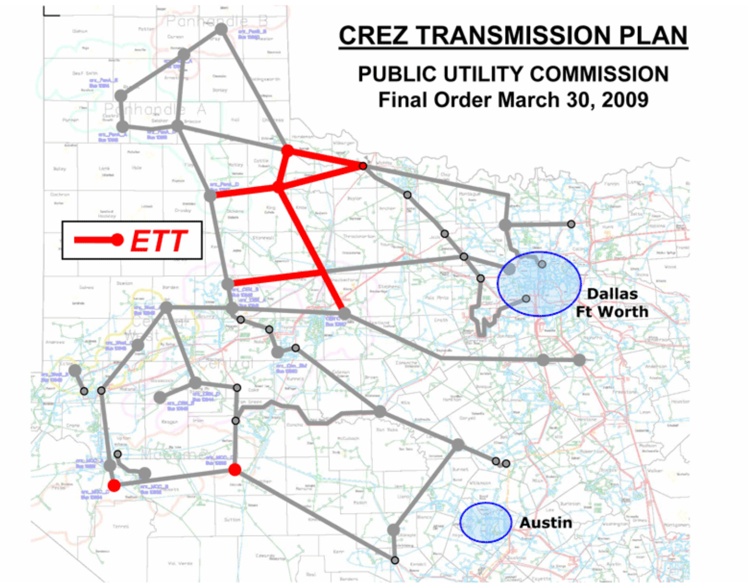
Total Project Cost: Over $3 Billion

Growing Rate Base:
Current rate base is $412 million; expected to grow as follows:
2011: $473 million
2012: $778 million
2013: $1,352 million

ETT Electric Transmission Texas

Interim TCOS filings twice per calendar year

Approved ROE: 9.96%



- **Additional Projects in the Pipeline ~$1.6 B:**
  - Approximately 822 miles of lines and 28 substations with in-service dates through 2017

- **Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.1 B:**
  - Seven double-circuit 345kV transmission lines (~$750 M), eight major 345kV stations and several series compensation installations (~$350 M)
  - PUCT Certificate of Convenience and Necessity (CCN) proceedings underway

Joint Venture Strategy: Long-term

- **Strategy**: JV's secure new investment opportunities with local utilities to diversify AEP's investment outside AEP's traditional footprint while providing longer-term incremental earnings**.** JV projects are well-suited for FERC formula rate recovery mechanism, including potential for incentive rates.
- **Future:** Federal/regional initiatives may accelerate expansion of EHV transmission (e.g. cap-and-trade, renewable portfolio standards, inter-region wide planning). Securing first mover advantage will enable AEP to secure LT investment opportunities.
- **Future flexibility**: Passive investment opportunities can be considered and can provide entry beyond SPP/PJM/ERCOT

Capital Allocation

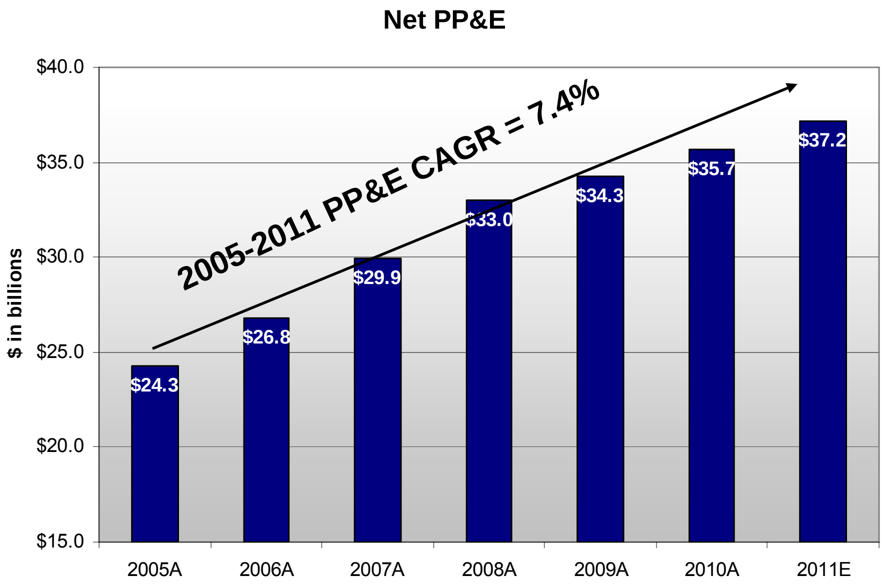
AEP®

In this economic recovery cycle, capital allocation requires balance for spending that considers the obligation to serve, the ability to obtain rate increases, a balance sheet to support the plan, and the total return proposition to shareholders

- Capital for Growth
  - Capital budget of $2.6B for 2011
  - Capital budget plan of $2.9B for 2012
- Return of Capital to Shareholders
  - 12% increase in quarterly dividend in 2010
  - Future dividend increases will grow with earnings
- Capital to Reduce Risk
  - Voluntarily funded pension $500M in 2010
  - Allocating an additional $150M of funding for pension in 2011

Traditional Ratemaking Environment

Growth in Net PP&E

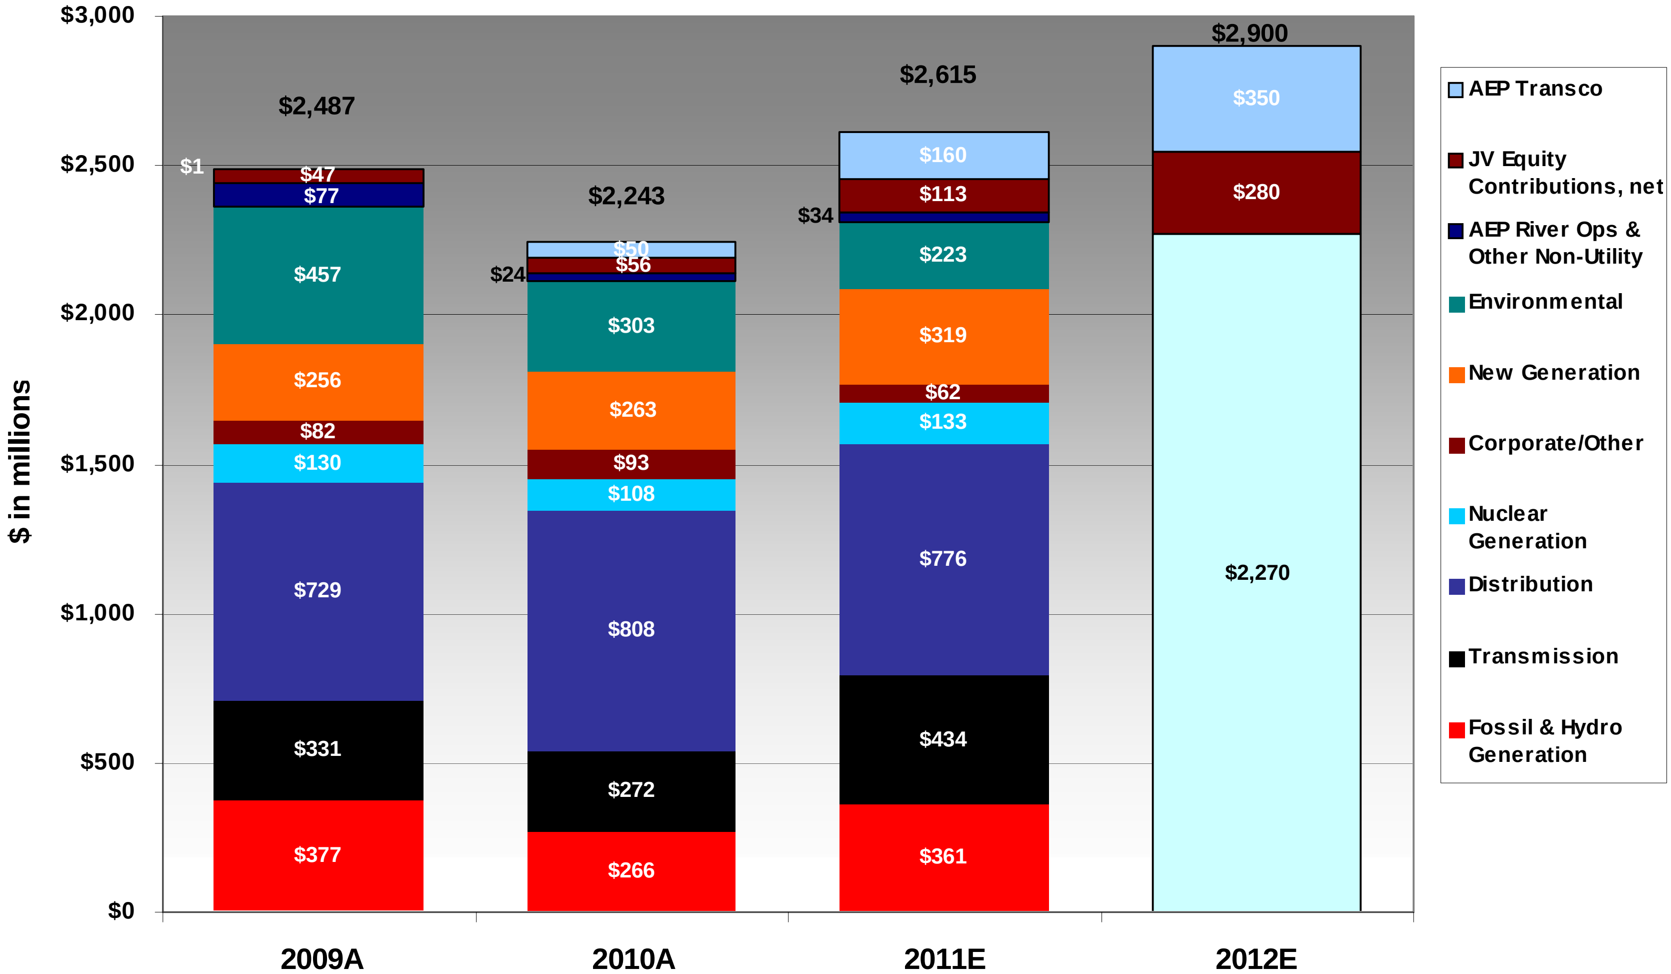


Growth in rate base resulting in $2.3 billion of rate relief secured from 2006 through 2010

Regulatory Framework

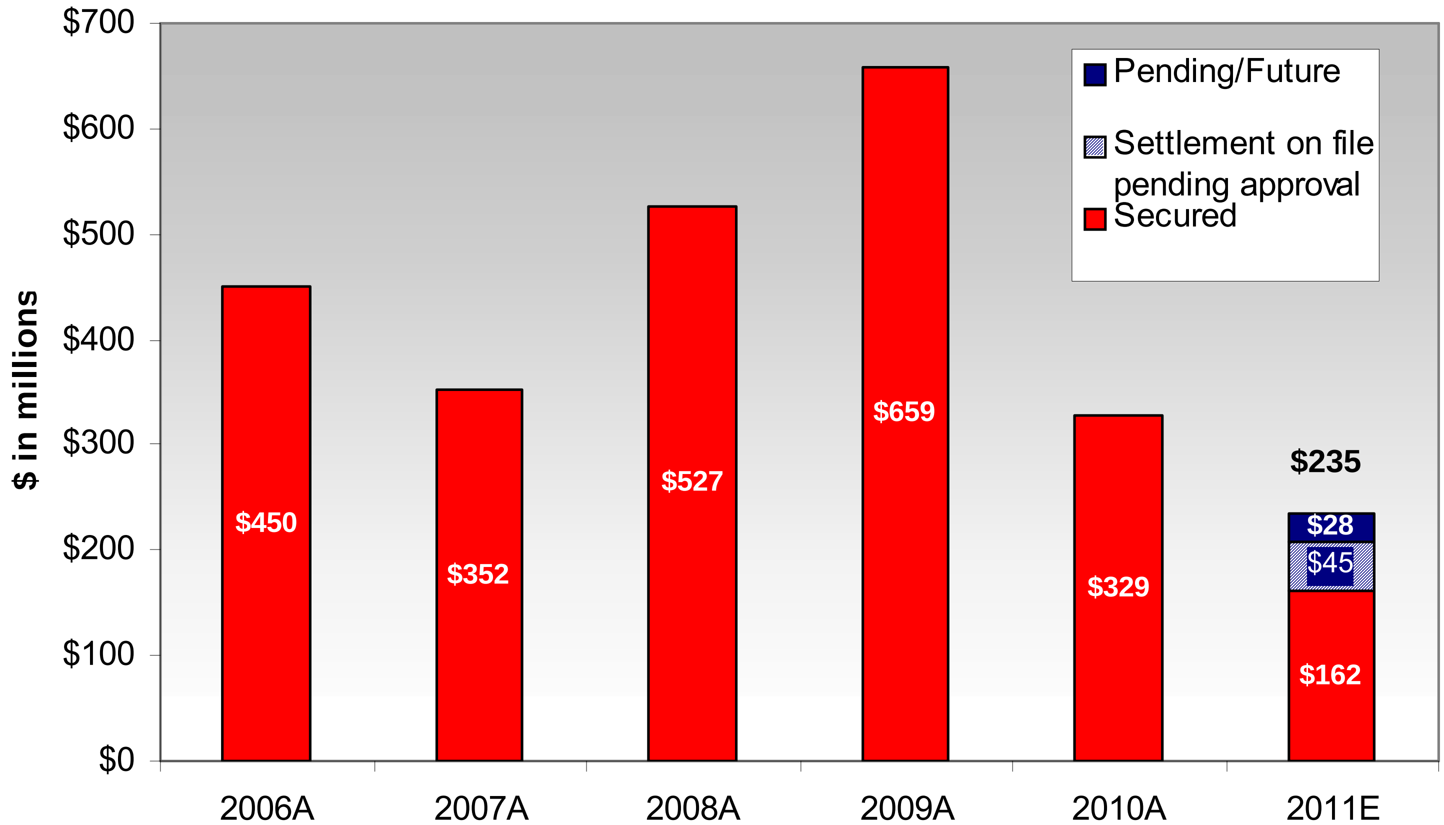
- Base Rates
  - — Recovery of capital and financing costs
  - — Recovery of set level of O&M costs
- Recovery of Fuel Costs
  - — Active fuel clauses in all jurisdictions
- Opportunities to Reduce Regulatory Lag
  - — Contemporaneous recovery for construction costs, reliability, environmental spending, etc.
- Ohio Generation Rates set by PUCO according to SB221 (non-cost based)

Capital Expenditures



Investment levels greater than depreciation of $1.4B per year cause rate base growth in 2011 and 2012

Rate Changes



Note: Rate changes in this chart exclude revenues with offsetting costs

Pending/future rate cases include cases yet to be filed

Settlement on file pending approval relates to the WV base rate case

Detailed Ongoing Earnings Guidance

AEP Ohio ESP Filing – Core Policy Issues

AEP®

Investment in Ohio

Supports economic development and essential tax base

Fundamental barriers must be addressed to attract investment for Environmental Compliance and New Generation

Jobs in Ohio

Jobs are a key component of growth potential in Ohio

Without regulatory assurances over time we could see loss of direct & indirect jobs related to power generation, and business relocations to surrounding states

Energy Security

Secure, reliable and predictable electricity supply is basis for sustained investment and employment in Ohio

Volatility in power prices can lead to major loss of economic activity over time

Primary objective of ESP: Stabilize rates and support economic development in the state of Ohio

Merged AEP Ohio

Single merged AEP Ohio company presumed with supporting information on an individual OP/CSP basis

Rate Redesign

Generation rates redesigned to resemble market pricing structures

29-Month ESP Period

ESP period Jan 1, 2012 through May 31,2014 (May 31 date aligns with PJM annual planning cycle)

Alternative Long Term Option

Alternative longer-term price certainty option offered for qualifying commercial & industrial customers

Ohio Growth Fund

Creation of significant private sector economic development to attract investment and job growth in AEP Ohio service territory

Distribution Components Included

Inclusion of certain distribution components while pursuing a parallel distribution base rate case

Summary of ESP Filing - Continued

- Pre-tax earnings impact from proposed ESP (excluding potential earnings impact from trackers)
  - **Net base $54MM or 1.4% in year 1 (2012)**
  - **Net base $106MM or 2.7% in year 2 (2013)**

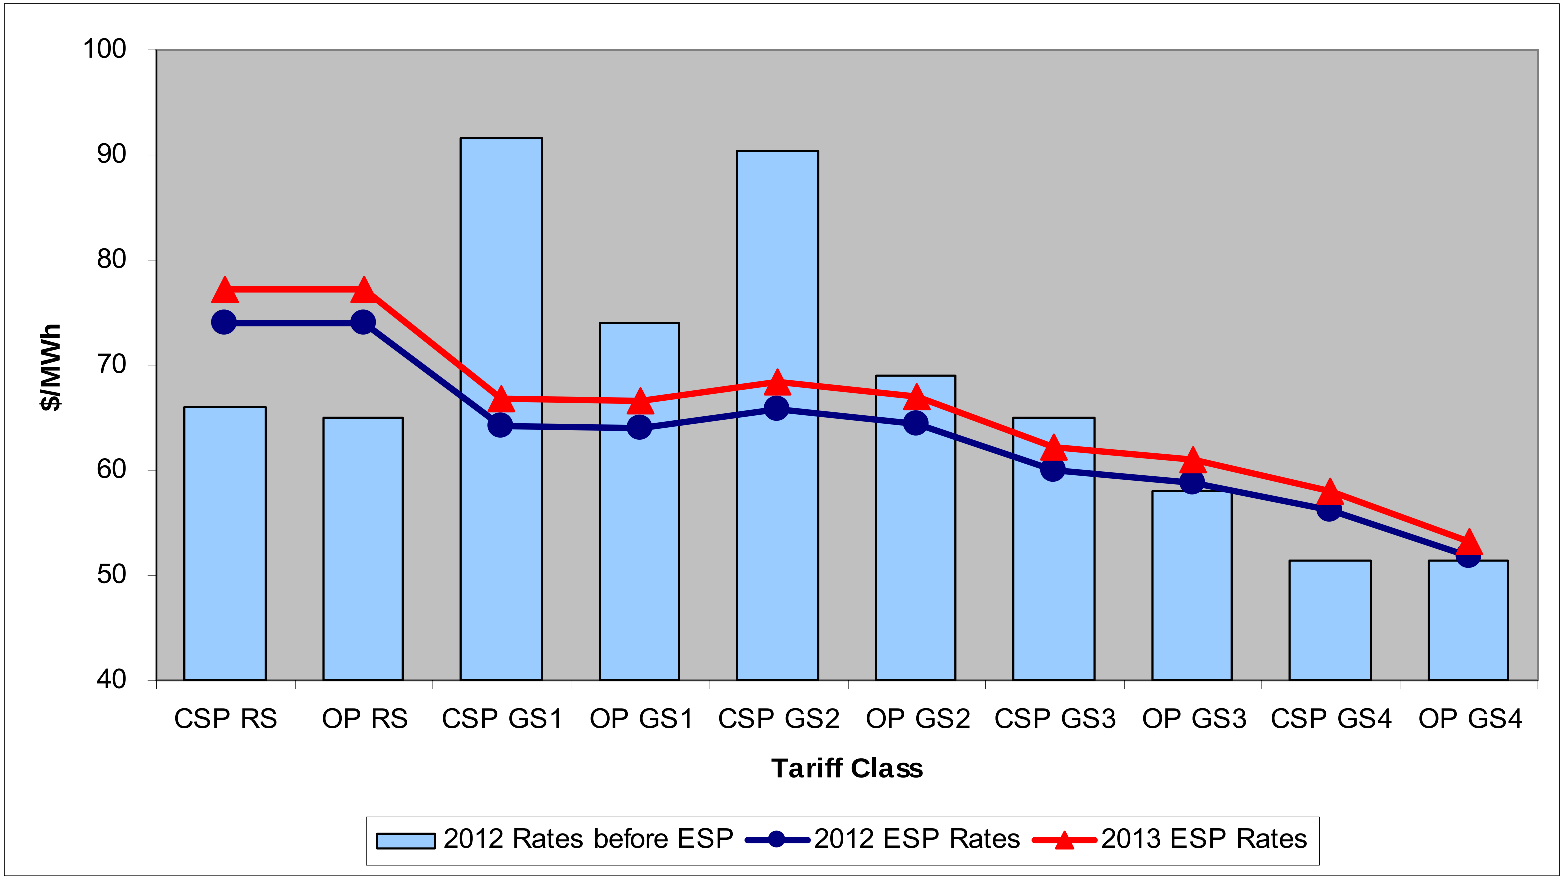
	2012			2013			2014		
	Revenue	**$/MWh**	**%**	**Revenue**	**$/MWh**	**%**	**Revenue**	**$/MWh**	**%**
Proposed ESP Changes									
Base Generation	**$65MM**	**$1.50**	**1.7%**	**$106MM**	**$2.43**	**2.7%**	**N/C***	**N/C***	**N/C***
POLR	**($11MM)**	**($0.23)**	**(0.3%)**	**N/C***	**N/C***	**N/C***	**N/C***	**N/C***	**N/C***
FAC Actual Recovery 2012-2014	**Actual**			**Actual**			**Actual**		

N/C* = No change from prior year

While the ESP includes a small base generation increase, the move to a market-based rate design, consistent with state policy, will result in varying impacts for different customer groups.

Price to Compare

Proposed **SSO** Rates Redesigned To Resemble Market Pricing Structures



Rates do not reflect mitigation impact of market transition rider
2012 Rates before ESP reflect current 2011 rates for generation & transmission service, adjusted to reflect full cost 2011 fuel and environmental costs.

The realignment of rates with market should provide all customers with equivalent opportunities to shop. Additionally, since the proposed design eliminates explicit demand charges, customers should be more easily able to evaluate competitive offers. To ease the rate impact that customers will experience from the realignment, we have proposed a Market Transition Rider.

Market Transition Rider – Mitigates the Initial Impact of Rate Realignment

AEP®

Three-Year Market Transition Plan
Summary of AEP Ohio ESP Generation Rate Changes

CSP Current Customer Class	CSP New Customer Class	2012 Increase	2013 Increase	2014 Increase	Total Increase

AEP Ohio		1.4%	2.7%	0.0%	4.2%

Illustration of Market Transition Rider on ESP Generation Rate Increases

The Market Transition Rider is a transition rider designed to facilitate the transition from AEP Ohio's current rates to market-based SSO Generation Service rates. It is a non-bypassable rider designed to limit the first and second year changes for any customer classes to uniformly transition any above or below average changes in three steps. Any revenue shortfall that is produced by limiting the increases for certain customer classes is collected from those classes whose decreases are limited.

List of ESP Riders – Existing and Proposed

Line	Rate Mechanism	Abbreviation	Bypassable	Distribution	Notes
1	**Current Riders**				
2	Universal Service Fund Rider	USF	--	Yes	
3	Advanced Energy Fund Rider	AEF	--	Yes	Expired 12/31/2010

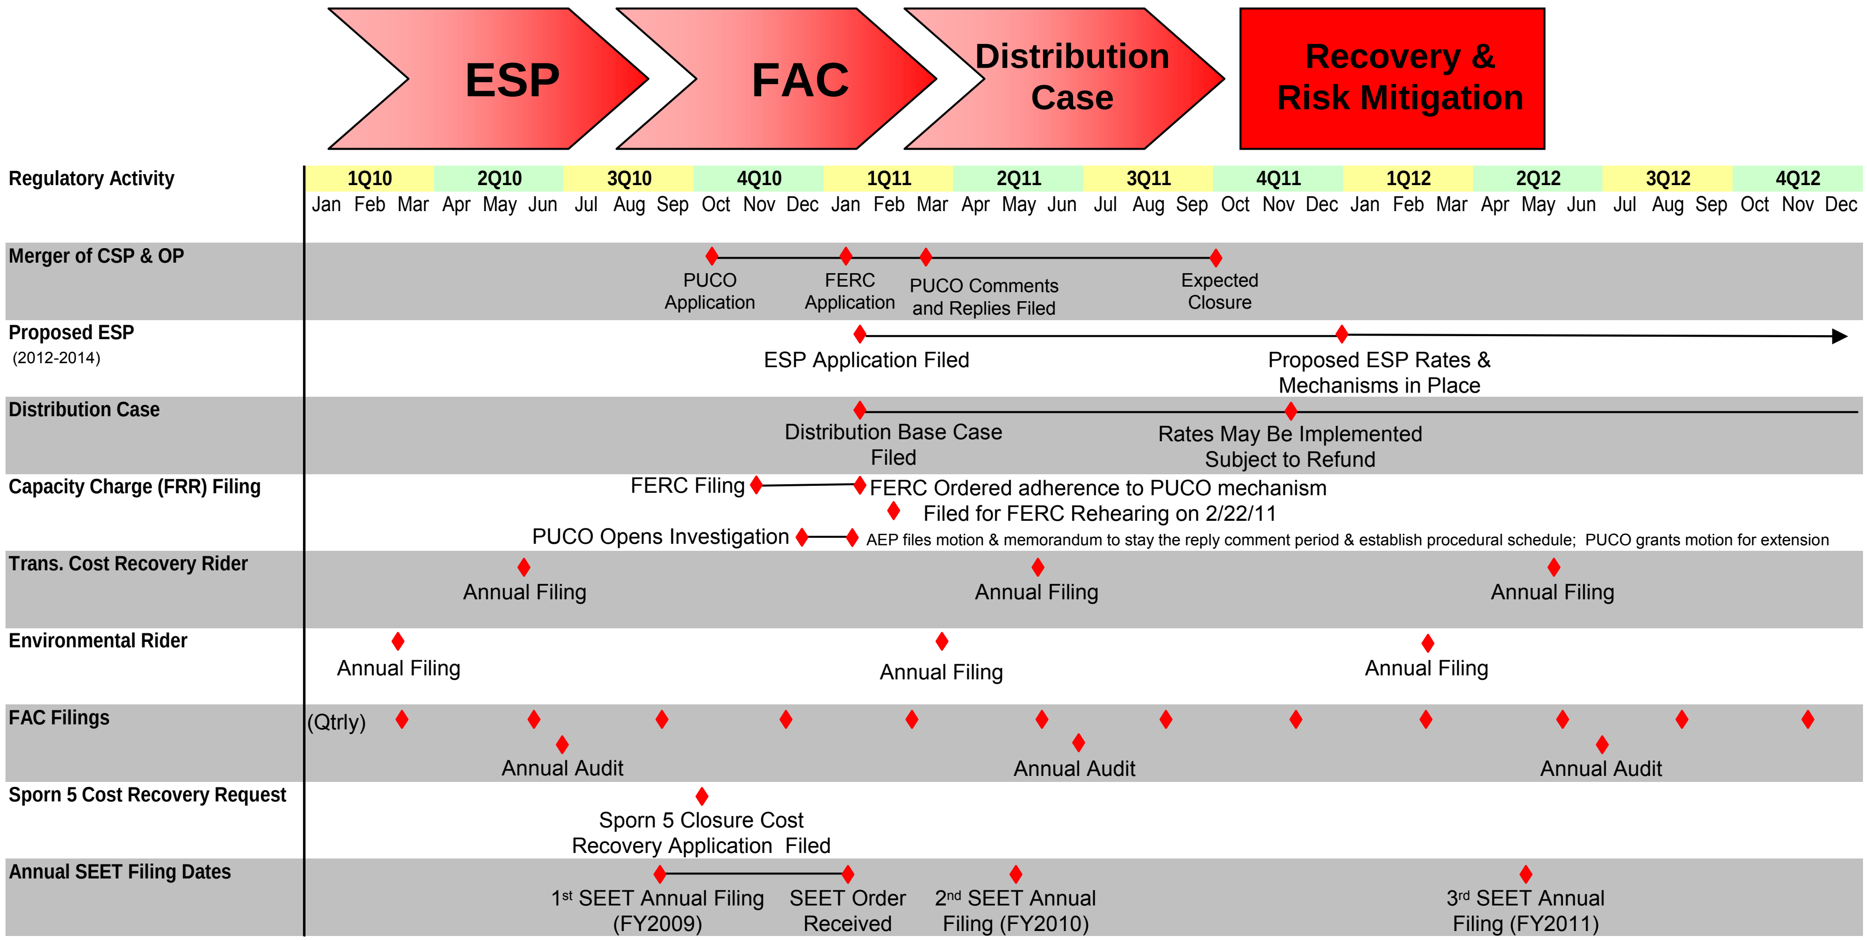
11	Enhanced Service Reliability Rider	ESRR	--	Yes	
12	gridSMART® Rider	gridSMART®	--	Yes	
13	Environmental Investment Carrying Cost Rider	EICCR	No		the current bypassable rider is proposed to be nonbypassable in the new ESP
14					
15	**Proposed Riders**				
16	Standard Offer Generation Service Rider	GSR	Yes		Relocation of base generation rates
17	Generation Resource Rider	GRR	No		Capital/solar investment
18	Alternative Energy Rider	AER	Yes		Relocation of RECs from FAC
19	Phase-In Recovery Rider	PIRR	--	Yes	Previous ESP deferrals, possibility of securitization
20	Distribution Investment Rider	DIR	--	Yes	
21	Market Transition Rider	MTR	--	Yes	
22	Generation NERC Compliance Cost Recovery Rider	NERCR	No		
23	Facility Closure Cost Recovery Rider	FCCR	No		
24	Carbon Capture and Sequestration Rider	CCSR	No		
25					
26	**Other Provisions**				
27	Green Power Portfolio Rider	GPPR	--		Voluntary
28	Rate Security Rider	RSR	--		Voluntary
29	Plug-In Electric Vehicle Tariff / Costs	PEV	--	Yes	Voluntary, Deferral of Costs
30	Emergency Curtailable Service Rider	ECS	--		Voluntary, pending
31	Storm Damage Recovery Mechanism		--	Yes	Reconciliation of storm experience to funding level
32	Pool Termination or Modification Provision		Yes		
33	PIPP Uncollectibles	PIPP	--	Yes	

Ohio Timeline



AEP Ohio's long-term strategy is designed to produce rate relief for items currently known as well as anticipated future items. The filings and riders we seek today are designed to be broad and flexible enough to accommodate a variety of circumstances, because it is impossible to know all variables and specific items for which we will desire to seek rate relief or what regulatory circumstances will prevail at the time.

Summary Rate Case Information

AEP Ohio Distribution Rate Case – Docket #351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%. A procedural schedule from the PUCO is pending.

Summary Rate Case Information

APCo West Virginia General Rate Case – Docket #10-0699-E-42T

On May 14, 2010, APCo filed a base rate case with the West Virginia Public Service Commission requesting a net increase of $155.5 million, comprised of a $223.8 million base rate increase and a $68.3 million decrease in the construction surcharge. The filing related to capital investments made and to recover increased costs. In addition, APCo requested to establish a separate transmission tracker related to PJM charges. The requested ROE was 11.75%. A settlement is on file which stipulates a rate increase of $60MM and the ability to defer $18MM of storm damage expenses. An order is expected by the end of March 2011.

Actual Capital Structure – Company Position (@12/31/09)

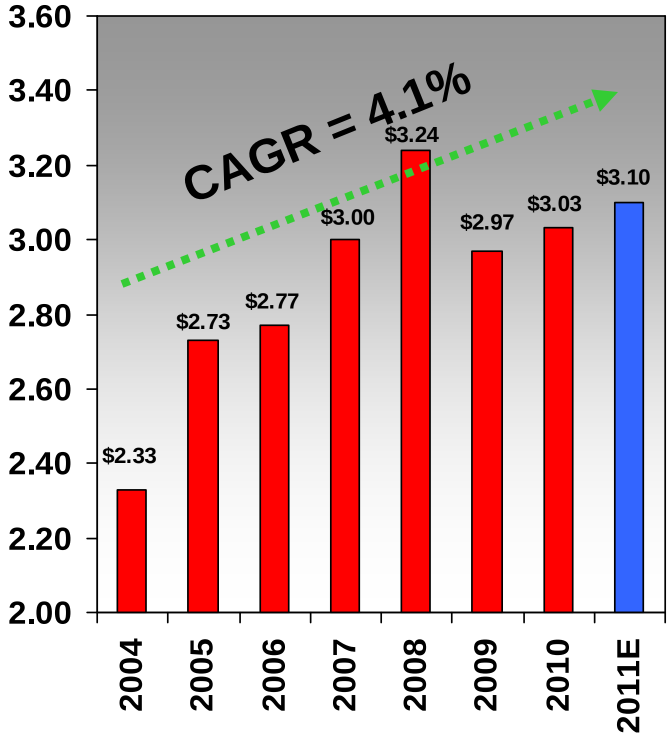
Earnings and Dividends

AEP®

On-Going EPS History Since 2004

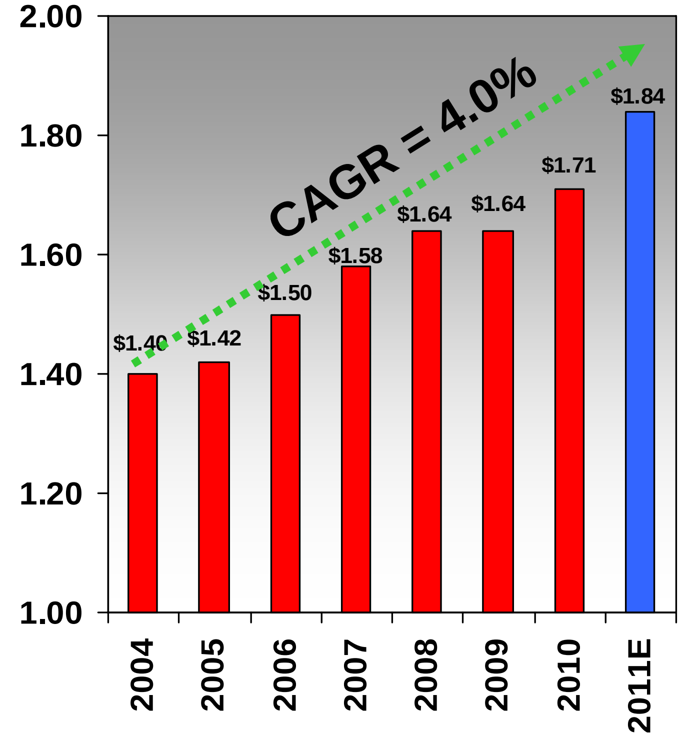
$/share



- Earnings growth largely attributed to capital investment program
- Pre-recession earnings supported by robust wholesale market activity and high power prices
- Equity offering in 2009 stabilized credit and strengthened balance sheet
- 2011 guidance range of $3.00 to $3.20 per share

Dividend History Since 2004

$/share



= subject to Board of Directors approval

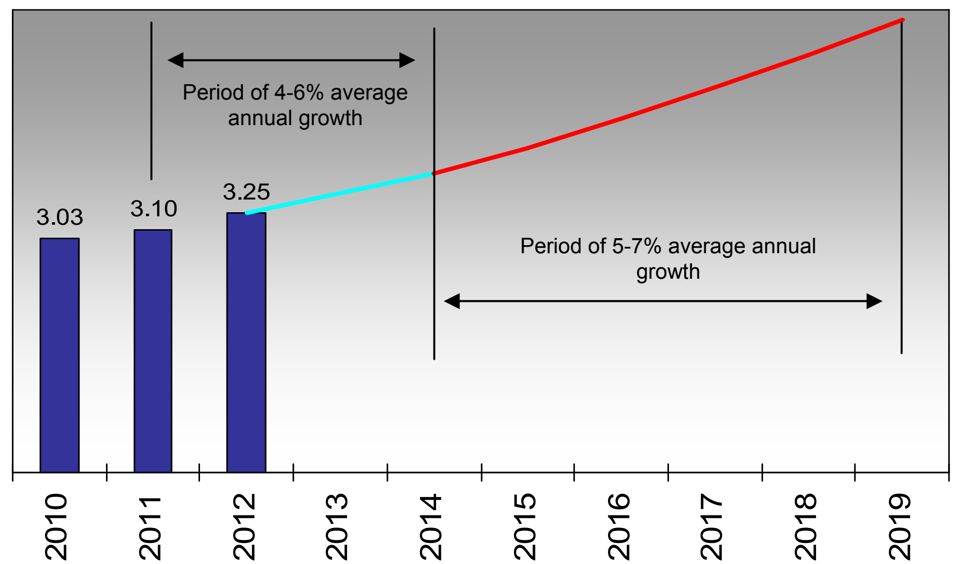
- Dividend <u>increased 12%</u> in 2010
- <u>403rd consecutive</u> quarterly dividend paid March 10, 2011
- 50-60% payout ratio target
- Current yield over 5%

Long-term EPS Growth Rate

- 4-6% EPS growth 2012-14
  - Average annual capital spend between $2.9-3.4B
    - Utility platform replacement capital of about $1.4B (annual depreciation)
    - Growth in rate base of $1.5-2.0B per year, allocated between utility platform and transmission projects
  - Blended ROE of 10.5 - 11%
  - Slow, steady recovery in economy

- 5-7% EPS growth post 2014
  - Base utility platform capital including generation transformation
  - Higher allocation of discretionary capital going to opportunities in the transmission development pipeline
  - Higher overall blended ROE opportunity
  - Robust economic growth

Average Annual EPS Growth defined over two periods



AEP Highlights

- **Regulated Electric Utility**
  - Regulatory and economic diversity
  - Operating Company Model
- **Focus on Capital Allocation**
  - Capital for Growth
  - Return of Capital to Shareholders
- **Strong Balance Sheet**
  - Stable credit ratings
  - Capital plan supported by cash flow
  - Strong liquidity position
- **Growth Opportunities**
  - Capital for utility platform
  - Transmission projects
- **Dividend yield over 5%**

AEP AMERICAN ELECTRIC POWER®

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation or regulation in Ohio and/or Virginia, and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Strategic Direction

- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Develop our transmission business
- Achieve adequate returns on all assets

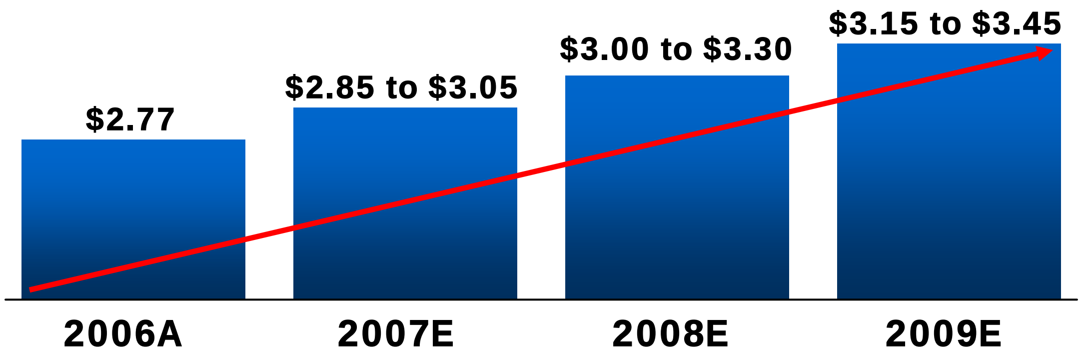
Deliver value to investors and cost effective service to our customers

CONTINUED COMMITMENT TO OUR CORE UTILITY MISSION: BRING REASONABLY PRICED ELECTRIC SERVICE TO OUR CUSTOMERS, THEREBY STRENGTHENING OUR COMMUNITIES AND REWARDING OUR INVESTORS

AEP®

Framework For Long-Range Performance

- 2007, 2008 & 2009 Ongoing Earnings Guidance Ranges:

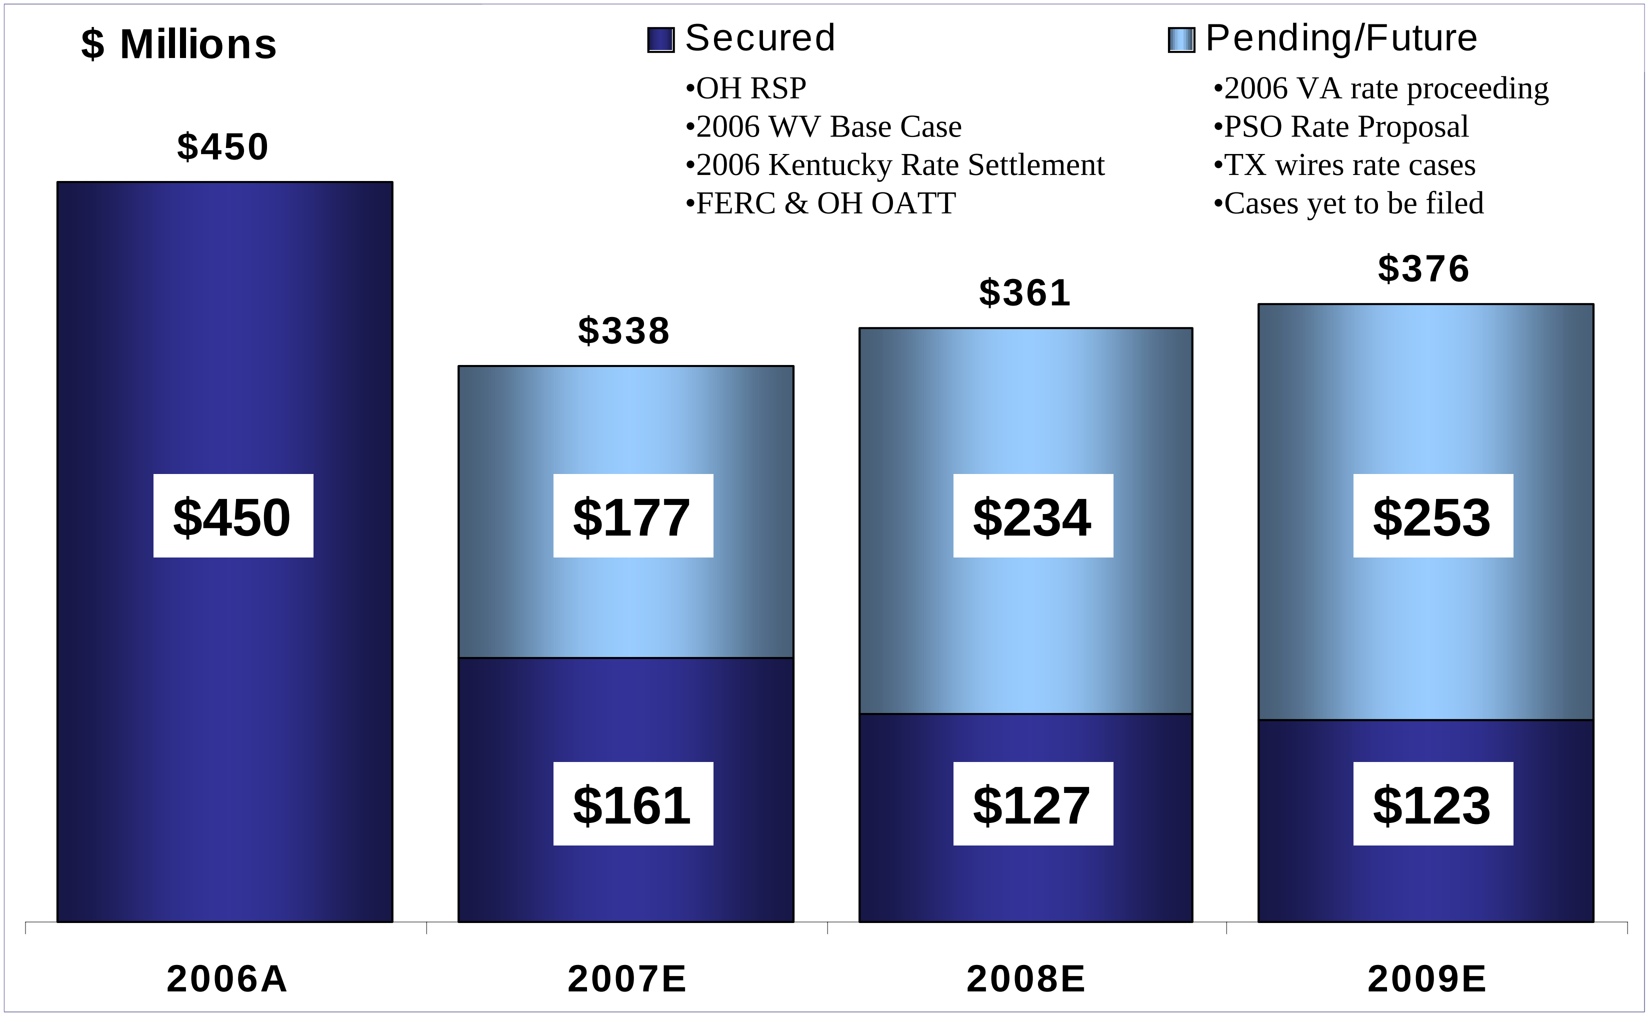


- EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in existing utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
  - Investment in new transmission opportunities
  - Seek rate recovery for new investments
  - Control costs & achieve timely rate relief
- Maintain credit ratings
  - BBB/Baa2/BBB

AEP®

Our Strategy Remains Focused On Regulated Operations

Incremental Rate Relief Composition



AEP®

RATE RELIEF IS A CRITICAL ELEMENT TO AEP'S FINANCIAL SUCCESS

Utility Investment Drives Growth

Capital Investment Forecast (2007-2009)

($ in millions)	2007	2008	2009	Total (2007-09)
Environmental	$935	$521	$301	**$1,757**
New Generation - Build	$474	$485	$573	**$1,532**
New Generation - Purchase	$118	$0	$0	**$443** *
Nuclear	$50	$57	$60	**$167**

Total Capex	**$3,542**	**$3,026**	**$2,974**	**$9,867**

Add: Lawrenceburg Plant Purchase	$325
2007 Including Lawrenceburg	**$3,867**

Note: Excludes AFUDC

*Includes Lawrenceburg purchase $325MM in 2007

GROWTH INVESTMENT TO BE FUNDED BY CASH FROM OPERATIONS VIA RATE RELIEF AND DEBT ISSUANCES

AEP®

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
CSP	Darby	Ohio	$102 MM	Gas	Simple-cycle	480	2Q07[1]
AEG	Lawrenceburg	Indiana	$325 MM	Gas	Combined-cycle	1140	2Q07[2]
SWEPCo	Tontitown	Arkansas	$130 MM	Gas	Simple-cycle	320	2007/2008
PSO	Southwestern	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
SWEPCo	Arsenal Hill	Louisiana	$300 MM	Gas	Combined-cycle	480	2010
SWEPCo	Hempstead	Arkansas	$1.3 B[3]	Coal	Ultra-supercritical	600[3]	2011
PSO	Red Rock	Oklahoma	$1.8 B[4]	Coal	Ultra-supercritical	950[4]	2012
CSP/OP	Great Bend	Ohio	Under Review[5]	Coal	IGCC	600	TBD
APCo	Mountaineer	West Virginia	Under Review[5]	Coal	IGCC	600	TBD

(1) Sale closed on April 25, 2007 - Plant began commercial operation in 2001
(2) Sale expected to close 2Q07 - Plant began commercial operation in 2004
(3) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment
(4) PSO will own 50%, or 425 megawatts, totaling approximately $900MM in capital investment
(5) AEP is currently working with GE and Bechtel on a FEED (front-end engineering and design) study. When completed (expected mid-year 2007), a cost estimate will be available.

AEP®

IGCC Overview

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called “syngas” – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2 , mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP’s eastern service territory.

AEP®

AEP Is Committed To IGCC Technology

IGCC Technology

AEP®

IGCC Permitting Process

IGCC Permitting Issues

- **Air**
  - ✓ Identify best available control technology (BACT)
  - ✓ Determine how start-up and shut-down emissions should be addressed
- **Wastewater**
  - ✓ understand nature of wastewater streams
  - ✓ Determine treatability and permitting scopes
- **US ACE (US Army Corp of Engineers**)
  - ✓ Conduct all necessary site studies per NEPA (National Environmental Policy Act) requirements (Wetlands, endangered species, archaeology)
  - ✓ Obtain permit to construct river facilities

Permitting process takes 1 – 2 years and is well under way

Transmission ~ $9 Billion Opportunity*

Creating a business model to manage capital requirements for enhanced returns with partners

- ~ $1 billion+ in ERCOT via Electric Transmission Texas, LLC (ETT)
- ~ $2 billion 765-kV study with ITC in Michigan
- ~ $3 billion I-765 Project in PJM
- ~ $3 billion project filed with SPP

Assumptions	
Estimated Investment Opportunity	$9 Billion
Ownership Structure w/ Partner	50% / 50%
Debt/Equity Ratio	50% debt / 50% equity
Return on Equity	11.00%
Potential EPS Impact (based on 396 MM shares)	+ $0.60**

* ~$9 billion investment opportunity not included in current capital guidance forecasts

** Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion

AEP®

Building The Next US Interstate System For Enhanced Reliability And Market Efficiency Could Have Significant EPS Implications

New Transmission Investment Funding Plans

- Electric Transmission Texas LLC
  - 40% equity / 60% debt capital structure requested at the PUCT follows Texas precedent for T&D companies' filings
  - Equity – 50% AEP / 50% Mid-American Energy
  - AEP's 50% investment will be held at the AEP Utilities, Inc. subsidiary
  - Debt – Initially bank financing
  - Initial funding in 3Q07 after regulatory approvals

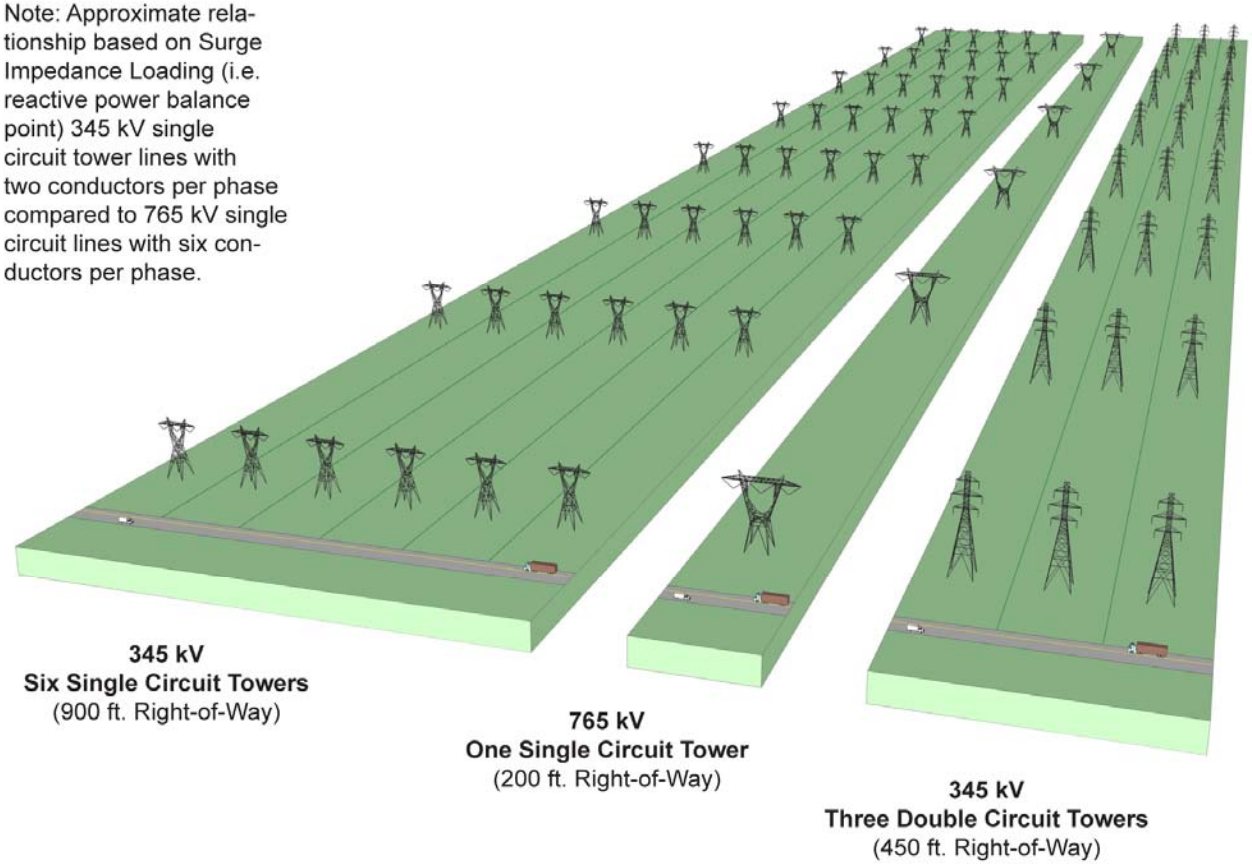
- AEP I-765 Interstate Project
  - Forming a joint venture with Allegheny Energy for 250 miles of the proposed 550 mile project
  - Equity – 50% AEP / 50% Allegheny
  - AEP's 50% investment will be held at the AEP Transmission Holding Company LLC subsidiary
  - Operations to commence in the second half of 2007
  - Project included in the DOE's draft National Interest Electric Transmission Corridor issued in April 2007

- Other Transmission Projects
  - Equity percentage of capital structure will target FERC precedents
  - Equity ownership percentage will vary by project
  - Will seek FERC transmission incentives:
    - Incentive ROE
    - Return on CWIP
    - Abandonment recovery
    - Expensing pre-construction expenses

AEP®

765 Right-of-Way Comparison

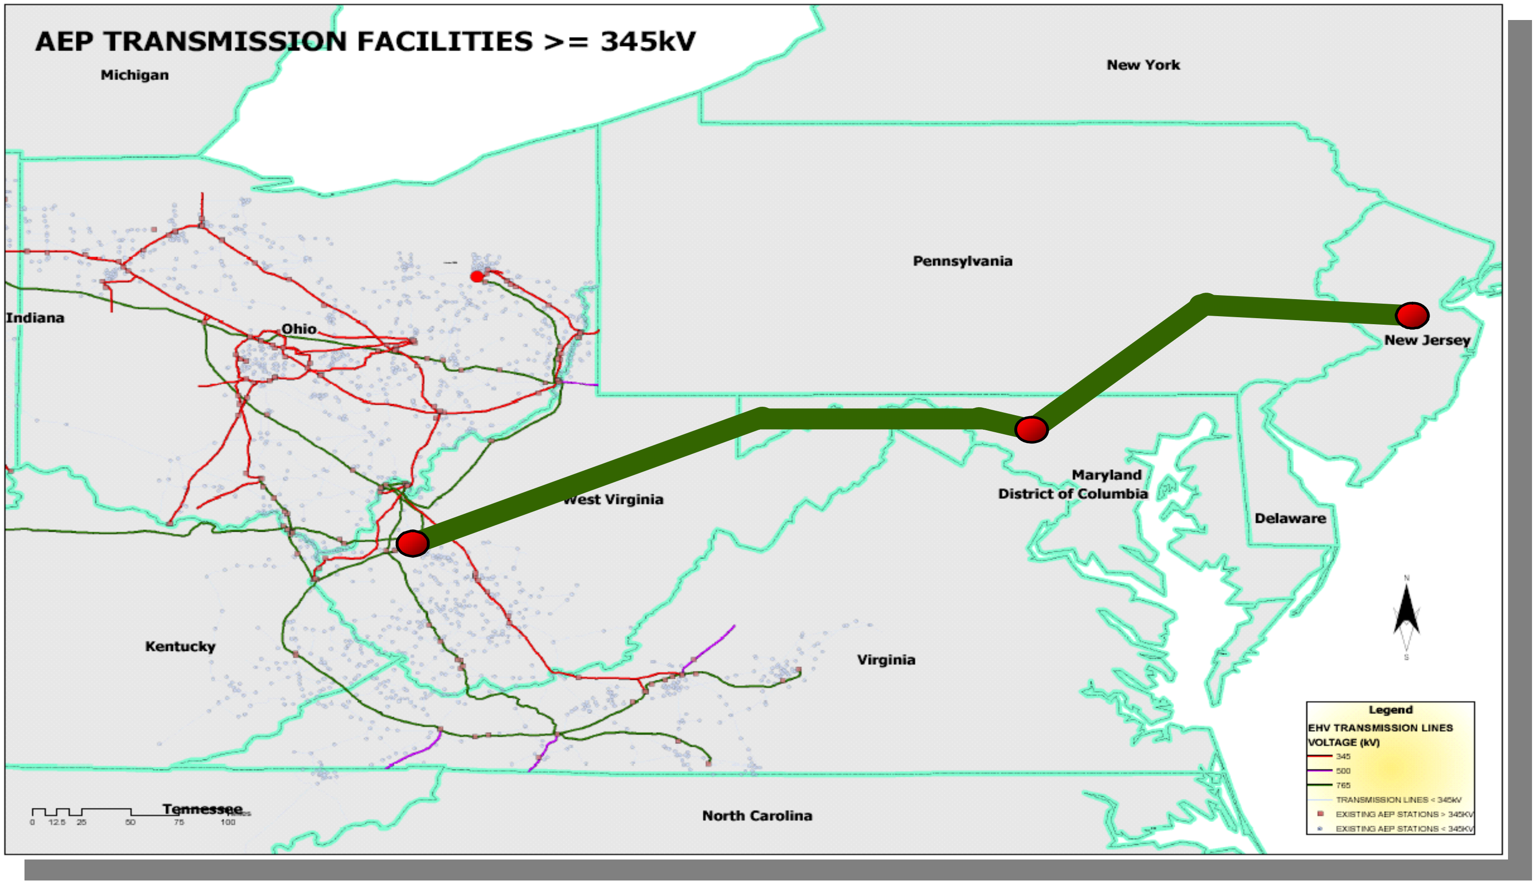
Note: Approximate relationship based on Surge Impedance Loading (i.e. reactive power balance point) 345 kV single circuit tower lines with two conductors per phase compared to 765 kV single circuit lines with six conductors per phase.



From a siting standpoint, 765 kV is much more efficient in terms of economies of scale and right-of-way than lower capacity lines

AEP®

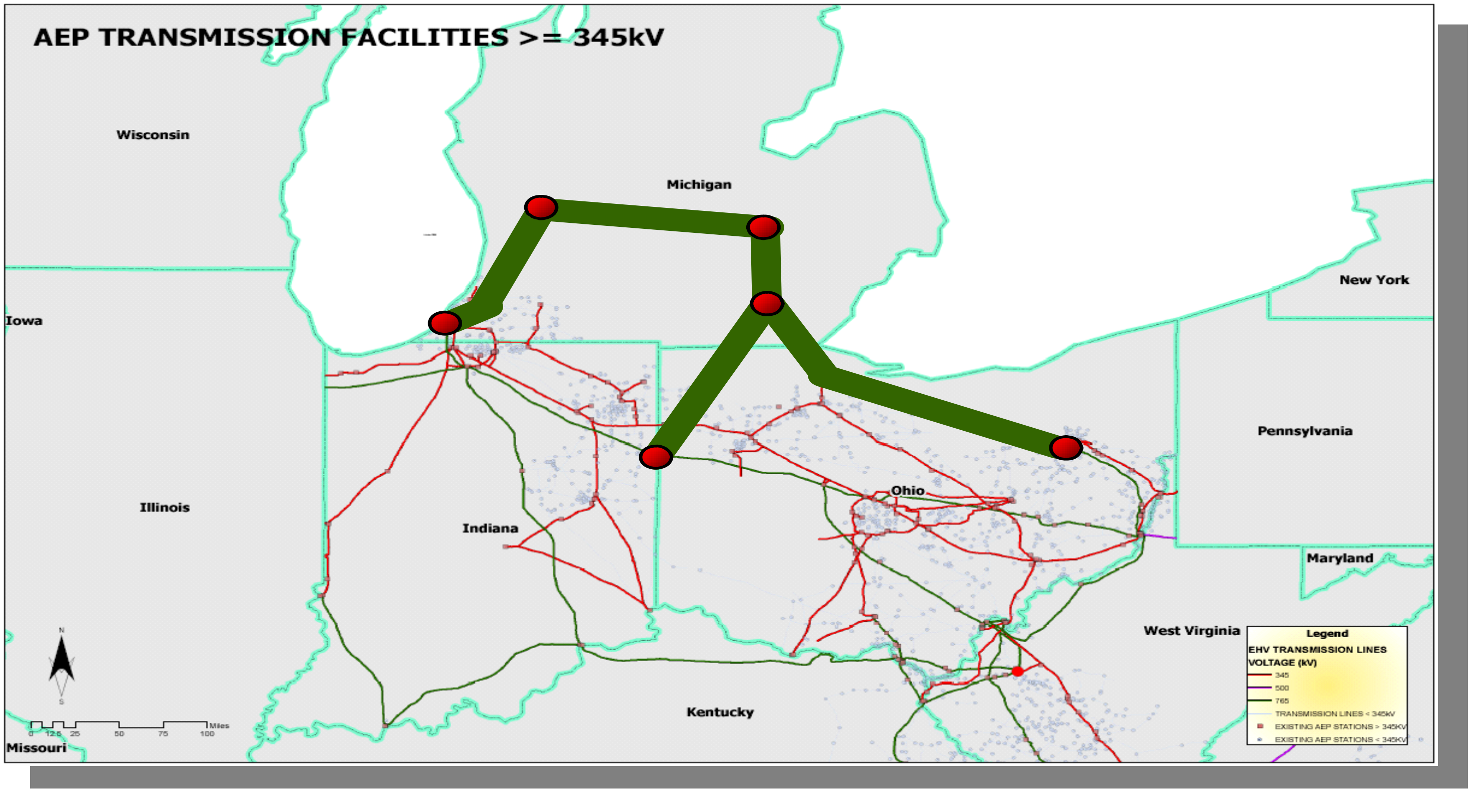
765 PJM



- Jointly owned with Allegheny, will improve eastern grid reliability
- Enhance Midwest-Mid-Atlantic power transfer capability by 5000 MW
- Reduces network line losses by 280 MW at peak with heavy Midwest – Mid-Atlantic power transfers.

AEP®

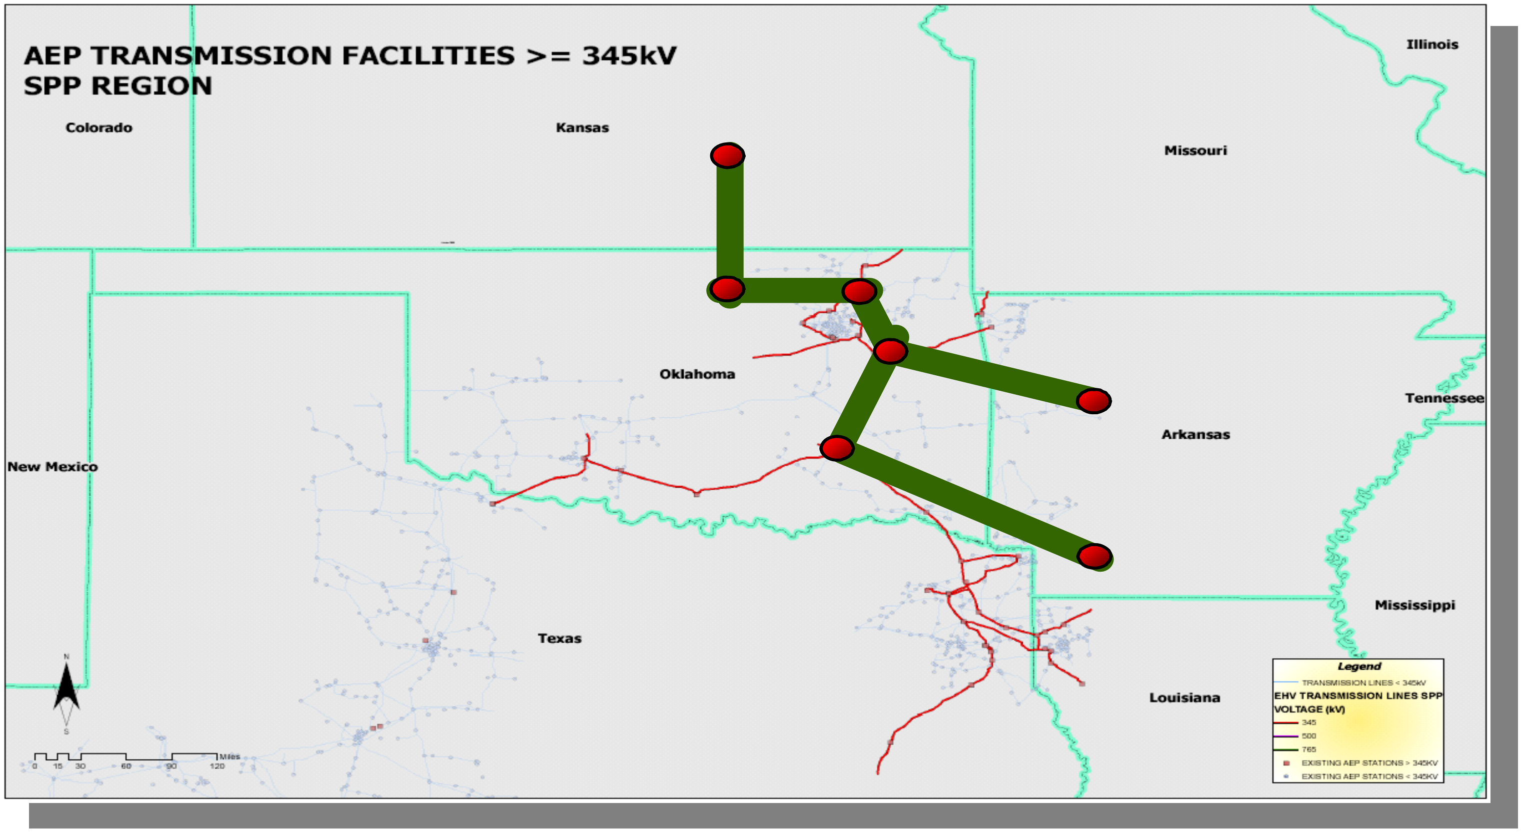
765-Michigan



- ➢Agreement with ITC Transmission for Michigan 765-kV to study the feasibility of a new line in MI.
  - ➢675 line miles
  - ➢Over 4000MW improved transfer capability
  - ➢765-kV anticipated to alleviate constraints

AEP®

765-SPP



➢July ‘06 AEP submitted conceptual project to SPP:

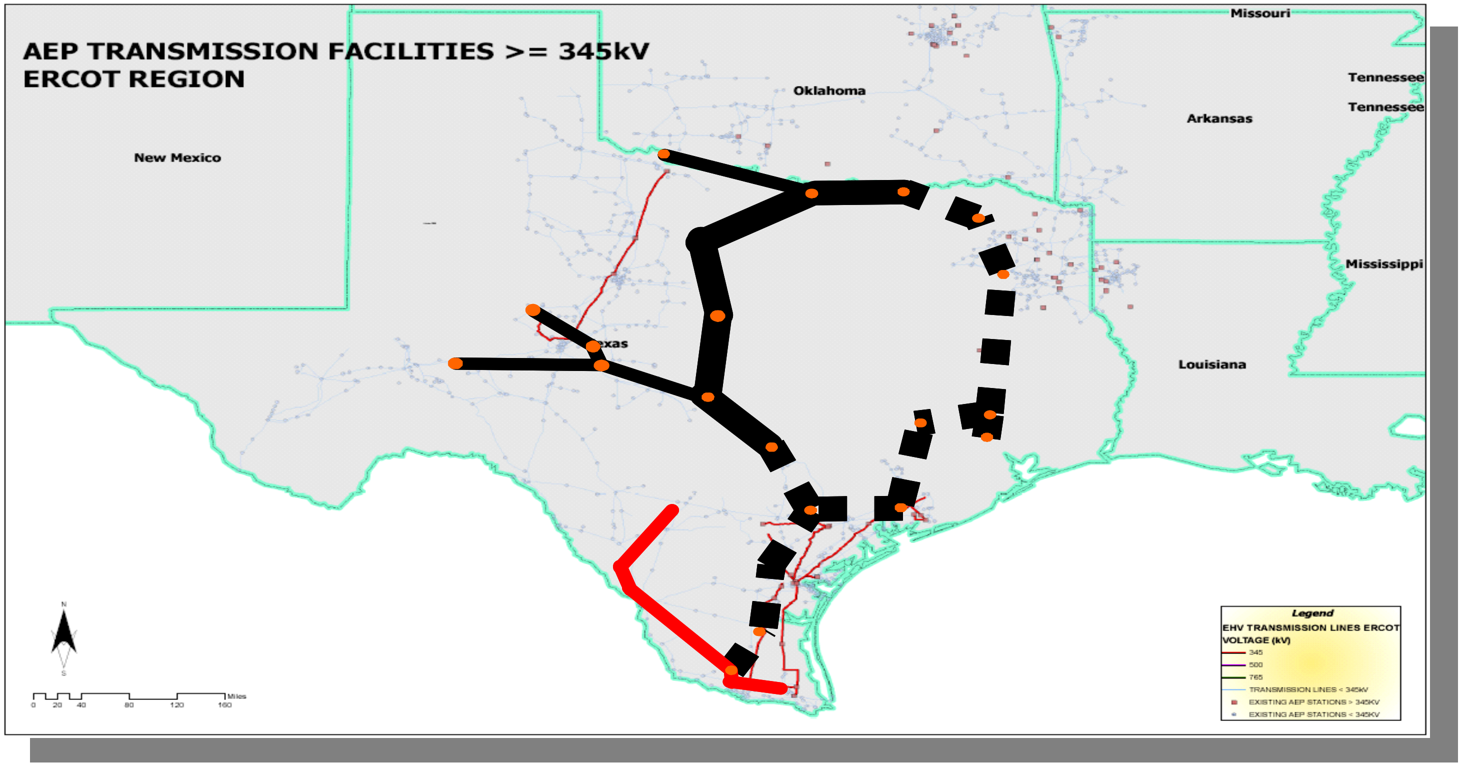
Six 765-kV lines, 610 line miles from Arkansas to Wichita, KS, proposed construction period 2012-17

➢Next steps:

SPP issued EHV Overlay Study RFP to review 345 kV, 500 kV, and 765 kV potential projects in SPP with results expected in mid-2007

AEP®

765-ERCOT



- Jointly-owned utility company (AEP and Mid American) will design, construct & operate ERCOT transmission assets
- AEP exploring 765-kV ERCOT transmission investment opportunity
- 420 line miles
- Up to 4000MW improved transfer capability

AEP®

Environmental Investment

AT THE CONCLUSION OF OUR CURRENT ENVIRONMENTAL RETROFIT PROGRAM, OVER 47% OF OUR COAL-FIRED GENERATION FLEET WILL BE EQUIPPED WITH SCRs AND OVER 50% WILL BE SCRUBBED (FGD). AEP's TOTAL COAL FLEET CAPACITY = 24,710 MEGAWATTS*

Plant Name	MW Capacity	SCR	Status	FGD	Status

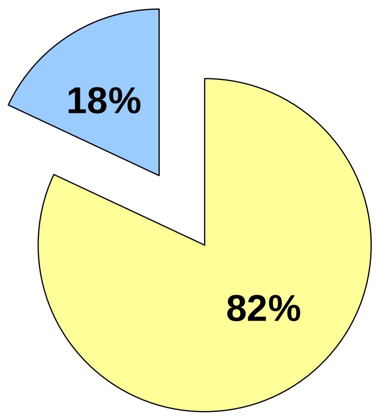
*Excludes AEP's 44% ownership in OVEC (980 MWs of coal-fired capacity)

AEP®

Installation Of SCR And FGD Equipment Will Allow Our Coal Fleet To Remain Extremely Cost Competitive

Materials and Vendors – AEP's Advantage

Environmental Program Costs:
Active/Firm Costs to Remaining Estimated Costs



Actuals To Date & Firm Costs
Remaining Estimated Costs*

* Primarily labor and activated carbon injection systems

SCR Technology

- Removes 90 – 93% of NOx emissions
- Requires ~ 1% use of auxiliary power
- **AEP Capital Cost ~ $121/kw avg.**

Combination of SCR & FGD technology results in co-benefit of Hg removal ~80% removal efficiency

FGD Technology

- Removes 95 – 98% of SO_2 emissions
- Requires ~1.5% to 3.0% use of auxiliary power
- **AEP Capital Cost ~ $250/kw avg.**

AEP®

AEP Benefits From First-mover Advantage Through Lower Contracted Pricing and Reduced Market Escalation Exposure

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

AEP®

A RELIABLE & REASONABLY-PRICED ELECTRIC SUPPLY IS NECESSARY TO SUPPORT THE ECONOMIC WELL-BEING OF THE AREAS WE SERVE

AEP's Climate Strategy

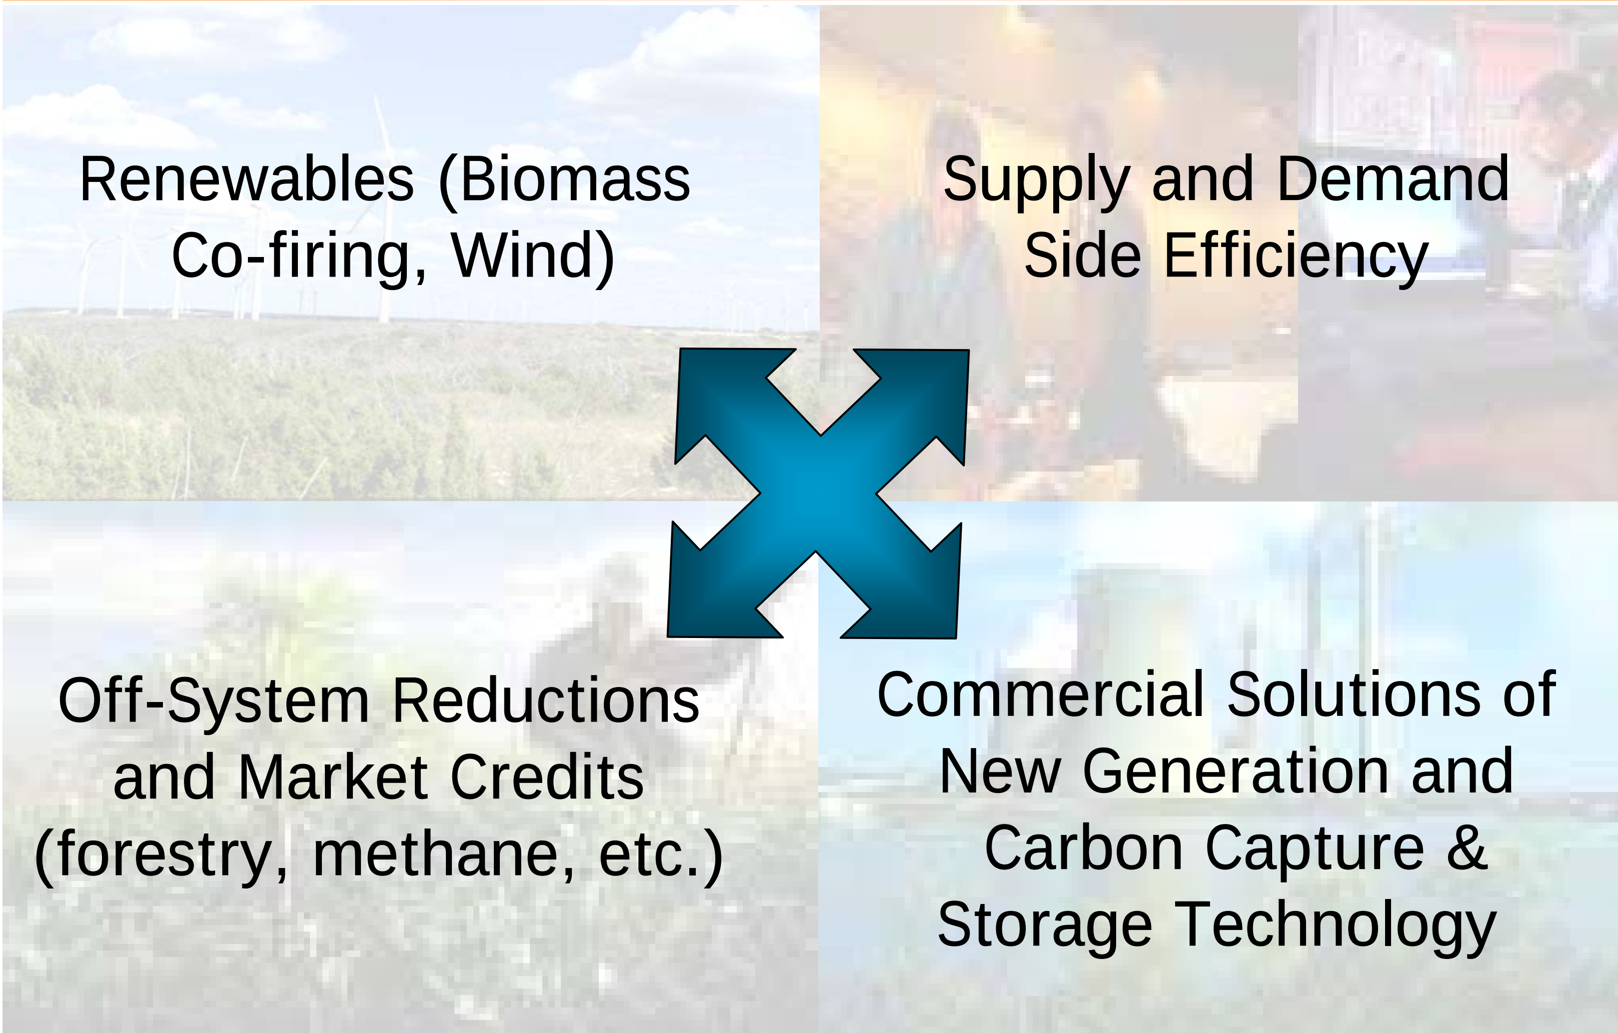
- **Being proactive and engaged in the development of climate policy**
  - International Emissions Trading Association (IETA)
  - Electric Power Research Institute (EPRI)
  - Pew Center on Global Climate Change
  - e8
  - Global Roundtable on Climate Change

- **Investing in science/technology R&D**
  - FutureGen Alliance
  - US DOE research on carbon capture and sequestration at our Mountaineer Plant
  - EPRI – combustion technologies
  - MIT Energy Laboratory
  - B&W – Oxy-Fuel
- **Taking voluntary, proactive action now, demonstrating voluntary programs can work and setting policy precedents thru CCX**
  - Chicago Climate Exchange (CCX)
  - EPA Climate Leaders
  - EPA SF-6 Emission Reduction Partnership for Electric Power Systems Program
  - Asia-Pacific Partnership
  - DOE 1605B- voluntary reporting of GHGs Program
  - Business Roundtable Climate Resolve
  - Numerous forestry activities

- **Evaluating longer term investment decisions such as new generation and carbon capture and storage (e.g., IGCC, Ultra-supercritical)**

AEP MUST BE A LEADER IN ADDRESSING CLIMATE CHANGE

AEP's Long-term GHG Reduction Portfolio



AEP IS INVESTING IN A PORTFOLIO OF GHG REDUCTION ALTERNATIVES

AEP®

AEP's Long-term CO_2 Reduction Commitment

Existing Programs

- Renewables
  - 800 MWs of Wind
  - 300 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

New Program Additions

- Incremental Reduction quantity: 5MM tons/yr
- Timing: Implement during 2007 to take effect/receive credits by 2011
- Methods
  - +1000 MWs of Wind PPAs – 2MM tons/yr
  - Domestic Offsets (methane) – 2MM tons/yr
  - Forestry – Tripling annual investment to increase to 0.5MM tons/yr by 2015
  - Fleet Vehicle/Aviation Offsets – 0.2MM tons/yr
  - Additional actions to include DSM and end use energy efficiency, biomass and power plant efficiency – 0.2MM tons/yr

New Technology Additions

- Commercial solutions for existing fleet
  - Chilled Ammonia
  - Oxy-Fuel

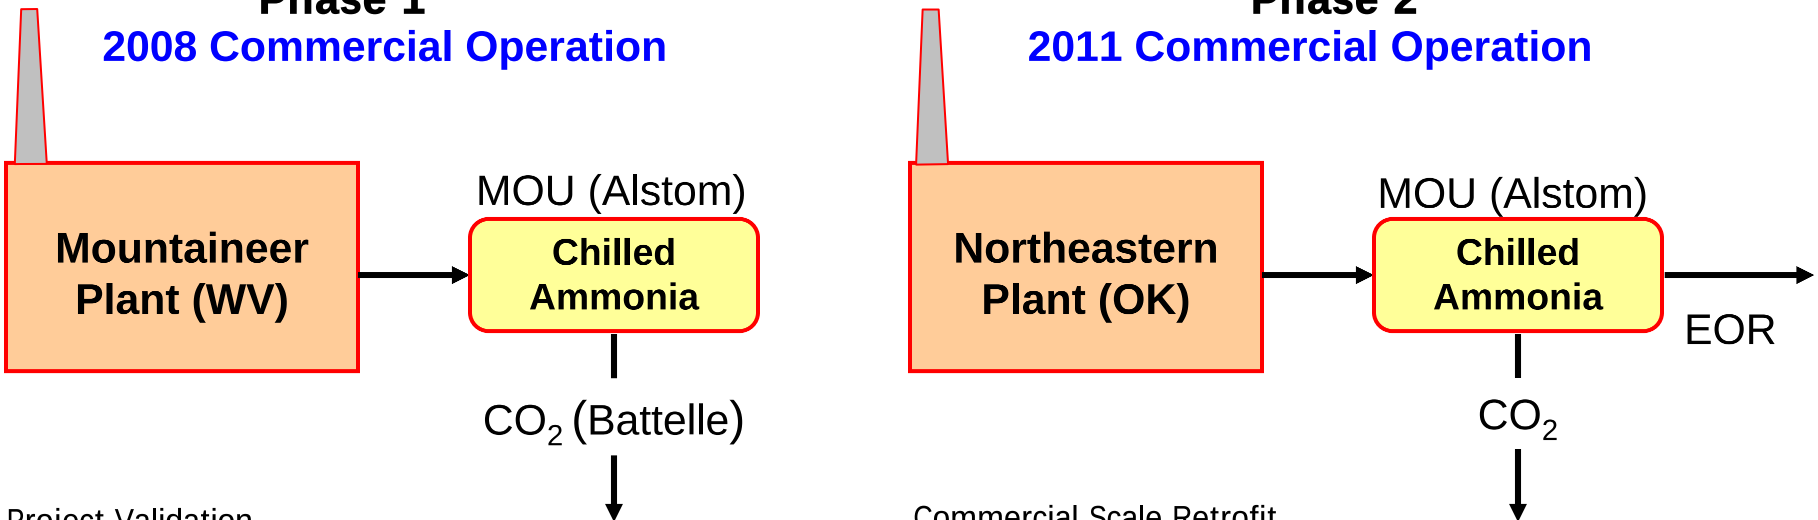
AEP IS COMMITTED TO A 5MM TON/YR REDUCTION IN CO_2 EMISSIONS WHICH OFFSETS APPROXIMATELY HALF OF THE EMISSIONS PROJECTED FROM NEW GENERATION PROJECTS PREVIOUSLY ANNOUNCED

Chilled Ammonia Process Plant Footprint

Chilled Ammonia Technology Program

Phase 1
2008 Commercial Operation

Phase 2
2011 Commercial Operation



Project Validation

- 30 MW$_t$ (megawatts thermal) scale (a scale up of Alstom/EPRI 5 MW$_t$ field pilot, under construction at WE Energies)
- <0.1MM tonnes CO_2 per year
- In operation 4Q 2008
- Approximate total cost $50 – $80M
- Using Alstom "Chilled Ammonia" Technology
- Located at the AEP Mountaineer Plant in WV
- CO_2 for geologic storage

Commercial Scale Retrofit

- ~ 200 MW$_e$ scale (megawatt electric)
- ~ 600 MW$_t$ scale (megawatt thermal)
- ~1.5MM tonnes CO_2 per year
- In operation late 2011
- Approx. capital $250 – $300M ($CO_2$ capture & compression)
- Approx. O&M cost $12M per year
- Energy penalty ~ 35 – 50 MW steam, 25 – 30 MW for CO_2 compression
- Retrofit SCR & Wet FGD Required: ~$225 – $300M (required for CO_2 capture equipment)
- Located at AEP's Northeastern Plant Unit 3 or 4 in Oklahoma
- CO_2 for Enhanced Oil Recovery (EOR) or geologic storage

AEP®

POST-COMBUSTION CARBON SOLUTION PROVIDES PURE CO_2 STREAM FOR CAPTURE

Oxy-Fuel Technology Initiative

NEAR-ZERO EMISSIONS USING OXY-FUEL COMBUSTION TECHNOLOGY

Oxy-Fuel CO_2 Capture & Storage Project

Pilot Scale Demonstration

- 10 MW_e scale
- Teamed with B&W at its Alliance Research Center and 16 other utilities
- Demo completed 3Q 2007
- AEP funding of $50k

Commercial Scale Retrofit

- Retrofit on existing AEP sub-critical unit (several available)
- 150 – 230 MW_e scale retrofit
- 4,000 – 5,000 tons CO_2 per day
- Teamed with B&W
- AEP funding of ~ $200k – $3M for feasibility study
- Feasibility study to be completed 2Q 2008

AEP®

Long-Term Debt Guidelines

Issuers:

- Issue at operating companies.

Size:

- Make transactions index eligible if possible.
- When possible, issue a size sufficient for competitive execution.

Maturity:

- Issue maturities for which the market has appetite.
- Achieve weighted average life targets for operating companies, generally between 10-15 years.

Timing:

- Will issue based on the timing of maturities and levels of short-term debt as driven by capital spending and operating cash flow.

AEP®

Commitment To Credit Quality

- Maintain adequate liquidity
- Target 60% consolidated AEP debt/cap ratio
- Target long term AEP dividend payout ratio range of 55-60%

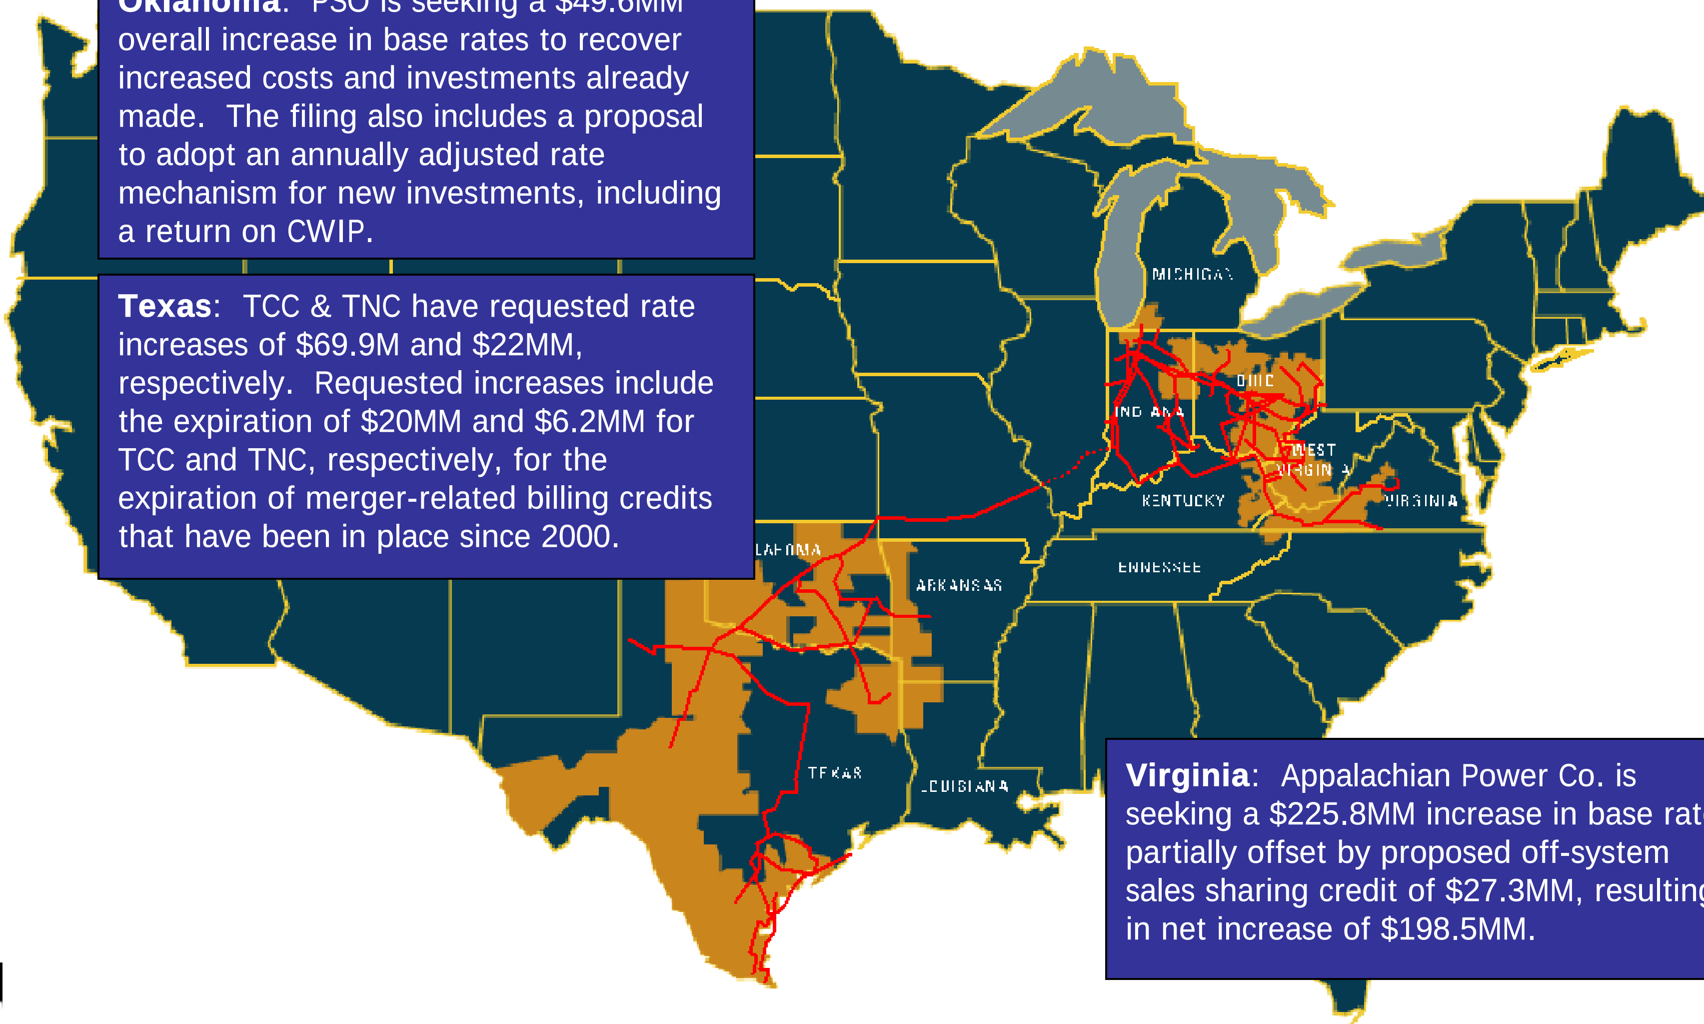
Base Case Regulatory Summary

Oklahoma: PSO is seeking a $49.6MM overall increase in base rates to recover increased costs and investments already made. The filing also includes a proposal to adopt an annually adjusted rate mechanism for new investments, including a return on CWIP.

Texas: TCC & TNC have requested rate increases of $69.9M and $22MM, respectively. Requested increases include the expiration of $20MM and $6.2MM for TCC and TNC, respectively, for the expiration of merger-related billing credits that have been in place since 2000.



Virginia: Appalachian Power Co. is seeking a $225.8MM increase in base rates, partially offset by proposed off-system sales sharing credit of $27.3MM, resulting in net increase of $198.5MM.

Regulatory Activity

AEP Ohio Application For 4% Provision On Generation Rate

- On Jan. 23, 2007, CSP and OP filed an application at the PUCO to recover 2007 costs associated with additional generation-related expenditures the companies are encountering related to environmental, security and other new generation-related costs pursuant to the RSP.
- CSP and OP are requesting to implement the provision to recover $24.5MM and $8.2MM, respectively, from May 2007 through December 2007.
- Staff & Intervenor testimony due May 11, 2007; Evidentiary hearing to commence May 22, 2007.

AEP®

Regulatory Activity

Electric Transmission Texas (ETT) Rate Filing

- Jan. 22, 2007 – ETT filed with the PUCT for approval to operate as an electric transmission utility in Texas and to establish initial rates for ETT.
  - Requested capital structure of 60% debt / 40% equity; requested ROE of 11.25%.
  - Intervenor testimony is due May 30, 2007. Staff testimony is due June 7, 2007. Hearings are scheduled for June 26-29, 2007.
    - An order is expected Mid-2007 and operations are expected to commence in the 2nd half of 2007. Upon receipt of approvals, AEP and MidAmerican will each own a 50% interest in the joint venture.

Seams Elimination Cost Adjustment Revenues

- August 2006 – ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
  - Up to $96MM of SECA revenues could be disallowed, net of unused provisions
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both.
- Exceptions to initial decision filed Sept. 11, 2006; Replies to exceptions filed Oct. 11, 2006; Order expected by the Commission in 2007

AEP®

Regulatory Activity

FERC Regional Rate Design

- The FERC instituted an investigation of PJM's zonal rate regime
  - Consider establishing regional rates that would compensate AEP, among others, for the regional transmission service provided by high voltage facilities they own that benefit customers throughout PJM
- July 2006 ALJ-rendered initial decision:
  - License plate rates for existing facilities are not just and reasonable, and must be replaced (effective April 1, 2006, when SECA ended)
  - Staff's proposal for a "Postage Stamp" rate phased in so as to limit increases in any one pricing zone to 10% per year as the best choice for replacing current rates
  - Staff's proposed rate design would produce slightly more net revenue for AEP than the original AEP/Allegheny Power proposal, if not phased in.
- April 2007 Commission decision:
  - Reaffirmed PJM's current "license plate" rate design, reversing the finding of the ALJ; each utility pays for transmission service based on the costs of transmission facilities located in the same, sub-regional zone that the utility is located in
  - Directed PJM to develop a detailed methodology to be included in PJM's tariff for determining who benefits from and therefore, who pays for new facilities below 500 kV.
  - Determined that the costs of all new PJM-planned facilities that operate at or above 500 kV should be shared on a region-wide basis.

Jurisdictional Fuel Clause Summary

Jurisdictional Off-System Sales Sharing Summary

STATE	OSS Sharing?	Detail
Arkansas	Yes, above and below base levels	Up to $758,600 annual margin, ratepayers receive 100%. From $758,601 to $1,167,078, ratepayers receive 85%. Above $1,167,078, ratepayers receive 50%.
Indiana	No	There is $17 million built into Indiana's base rates
Kentucky	Yes, above and below base levels	Sharing only occurs after annual profits exceed $24,855,326. Between that amount and $30 million, ratepayers receive 70%. Above $30 million, ratepayers receive 60%.
Louisiana	Yes, above base levels	Up to $874,000 annual margin, ratepayers receive 100%. From $874,001 to $1,314,000, ratepayers receive 85%. Above $1,314,000, ratepayers receive 50%.
Michigan	Yes	There are two jurisdictions: St Joe and Three Rivers. For St Joe, 100% of profits are shared with ratepayers. No profits are shared in Three Rivers, including base rates. St Joe represents 67% of the Michigan market.
Ohio	No	n/a
Oklahoma	Yes	75% of profits are shared with ratepayers.
Tennessee	No	n/a
Texas (SPP)	Yes	90% of profits are shared with ratepayers.
Virginia	Yes	Factored into base rates at a fixed rate.
West Virginia	Yes	100% of profits passed back to ratepayers through the Expanded Net Energy Cost (ENEC) clause.

Summary Rate Case Information

PSO Rate Proposal

On November 21, 2006, Public Service Oklahoma filed an application with the Oklahoma Corporation Commission to increase base rates by $49.6 million to recovery investments already made and costs incurred. The request represents a 4% overall increase (including fuel). The filing also includes a proposal to adopt an annually adjusted rate mechanism, which includes a return on CWIP. The formula rate would adjust rates, up or down, if PSO earns above or below an approved bandwidth around the authorized ROE. (Case #200600285)

Pro-forma Capital Structure – Company Position (Test Year ended 6/30/06)

St. Regis Hotel

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

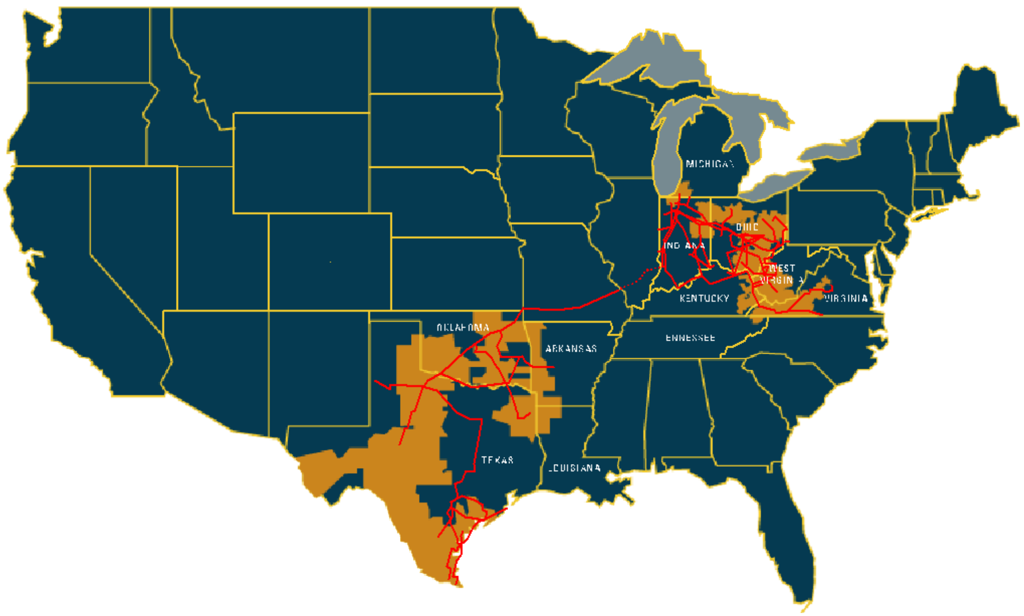
“Growing the Ratebase”

Mike Morris
Chairman, President & Chief Executive Officer

Strength & Scale in Assets & Operations



Generation	35,500 MW capacity
Transmission	38,953 miles
Distribution	200,930 miles
Customers	5 million

FUTURE EARNINGS GROWTH DRIVEN BY NATIVE LOAD GROWTH & SUBSTANTIAL UTILITY INVESTMENT OPPORTUNITY

Utility Investment to Drive Earnings Growth

Investment Opportunities:

- Traditional Maintenance
- Environmental
- New Generation

Preserves low cost production advantage

- IGCC

Environmentally sensitive investment can be blended with AEP's low production cost

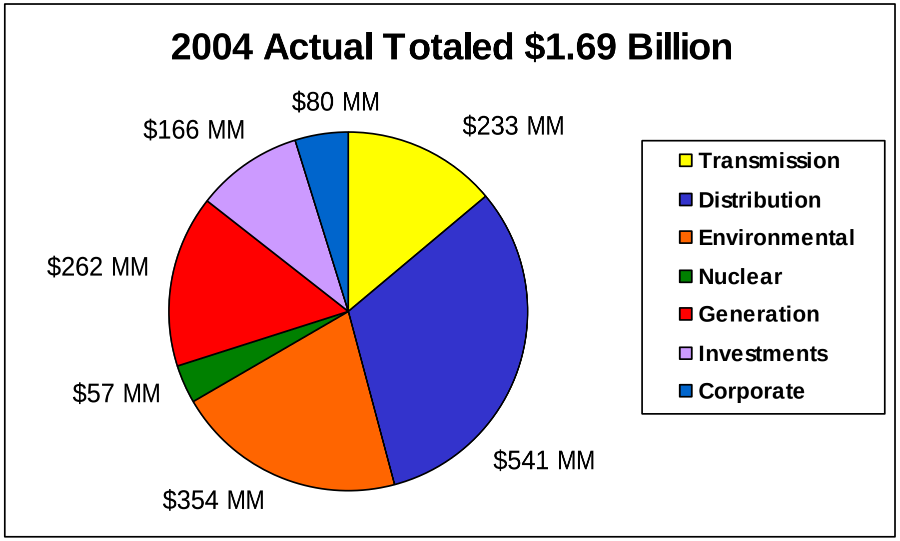
- Energy Delivery Infrastructure

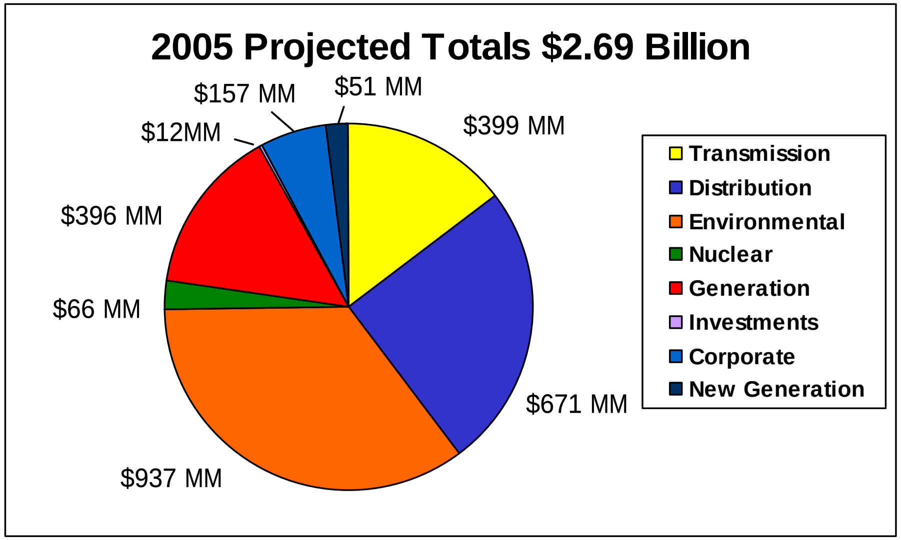
Annual Growth Rate 3-5%:

- Organic demand growth rate of 2%
- Utility investment recovery to add 1-3% to growth

PRUDENT INVESTMENT WILL PRESERVE LOW COST ADVANTAGE AND DRIVE EARNINGS GROWTH

2005 Capex





Note: 2005 capital expenditures exclude the announced Waterford and Monongahela Power transactions.

AEP's Environmental Compliance Strategy

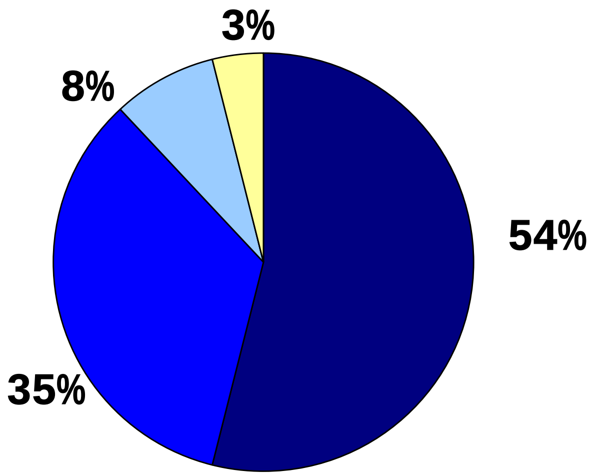
NOx and SO_2 emission reductions are part of AEP's on-going strategy to comply with the Clean Air Act, Title IV regulations, the Clean Air Interstate Rule (CAIR) and the Clean Air Mercury Rule (CAMR).

- **Much of this investment will be for:**
  - **Selective catalytic reduction (SCR) systems to reduce nitrogen oxide emissions by 90%.**
  - **Flue gas desulfurization (FGD) systems (scrubbers) to reduce sulfur dioxide emissions by 98+%.**
  - **SCR and FGD systems together offer co-benefit of mercury capture.**
  - **Sale of gypsum (by-product) avoids future landfill costs.**
  - **Provides fuel flexibility.**

Represents the best and least-cost compliance path to improve environmental performance on a fleet basis, while continuing to provide a reliable supply of power to customers at a reasonable price and a solid return for investors.

$4.1 Billion Environmental Investment: Spending by Company

Projected Environmental Investment Allocation



- Ohio Power & CSP (OH)
- Appalachian Power Co. (VA/WV)
- Kentucky Power Co. (KY)
- Other

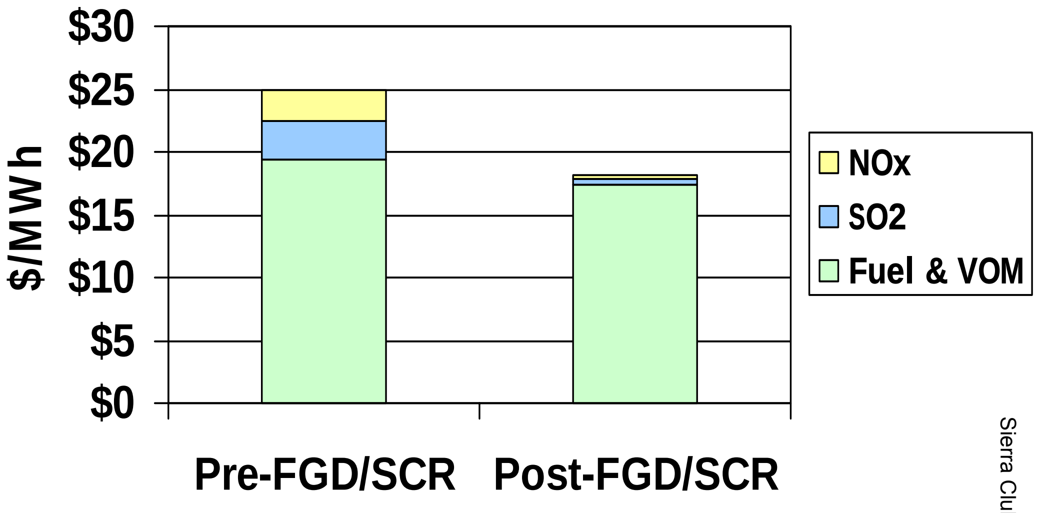
Funding the Environmental Investments

- **Ohio**: 54% ($2.2 billion)
  - Approved annual generation increases 2006-2008
    - CSP – 3% annually
    - OP – 7% annually
- **Virginia/West Virginia**: 35% ($1.4 billion)
  - VA: Annual rate relief through Environmental & Reliability cost recovery mechanism; Two rate case opportunities through 2010
  - WV: General rate increase filed 8/26/05 including environmental, reliability & fuel recovery
- **Kentucky**: 8% ($319 million)
  - Automatic surcharge mechanism

Low Cost Production Supports Investment & Investment Sustains Low Cost Production

- Lowers exposure to high cost emission allowances
- Creates opportunity to burn wider variety of lower cost fuels
- Improves baseload operation (higher capacity factor, higher margin)
- All-in cost of electricity, including FGD/SCR investment, remains low

Typical Pulverized Coal Plant Comparison of Variable Production Cost Pre- and Post- FGD/SCR (future view)*



* Assumes annual NOx program

AEP WILL REMAIN THE LOW COST PRODUCER FOLLOWING COMPLETION OF ENVIRONMENTAL RETROFIT PROJECTS

**** Annual investment net of depreciation

EPS CONTRIBUTION FROM INVESTMENT WILL BE SUBSTANTIAL

Funding the Investment

- Cash flow from operations
- Rate Relief
  - Ohio approved annual generation rate increases for 2006-2008
  - Virginia annual rate relief through environmental & reliability cost recovery mechanism plus two rate case opportunities through 2010
  - West Virginia general rate increase filed 8/26/05 including environmental, reliability & fuel recovery
  - Kentucky automatic environmental surcharge mechanism & general rate case to be filed September 2005
- Asset Sales
  - 2005 proceeds estimated to be $1.5 billion
- Texas Securitization/Texas Competition Transition Charge
  - Seeking recovery of $2.4 billion
- Debt Issuances
  - Maintain debt-to-capitalization ratio of approximately 60%

UTILITY INVESTMENT TO BE FUNDED BY A VARIETY OF TRADITIONAL SOURCES

Regulatory Track Record

December 2004: SWEPCO Louisiana Service Quality Improvement Program – LPSC issued order approving amendment to SQIP allowing deferral of incremental tree management and trimming costs with carrying costs for future rate recovery;

January 2005: Ohio Rate Stabilization Plan approved by PUCO - Annual generation increases 2006-2008: 3% for Columbus Southern Power, 7% for Ohio Power; Opportunity to request incremental generation 4% increase in each year 2006-2008;

May 2005: Settled PSO rate case - Neutral to earnings; Approved $11.81MM Reliability Enhancement Plan; annual rider may be increased to $23.68MM per OCC Staff testimony & ALJ recommendation (currently pending);

August 2005: TCC Wires rate case – $11.5 million positive earnings impact;

September 2005: Kentucky Environmental Surcharge approved - $1.8MM increase in annual revenue

---

Active filings: FERC Transmission case (settlement pending), FERC SECA/Regional rate design case, TCC True-Up, IGCC in Ohio, Monongahela Power acquisition in Ohio, VA E & R case, WV general rate case, notice filed in Kentucky for rate case

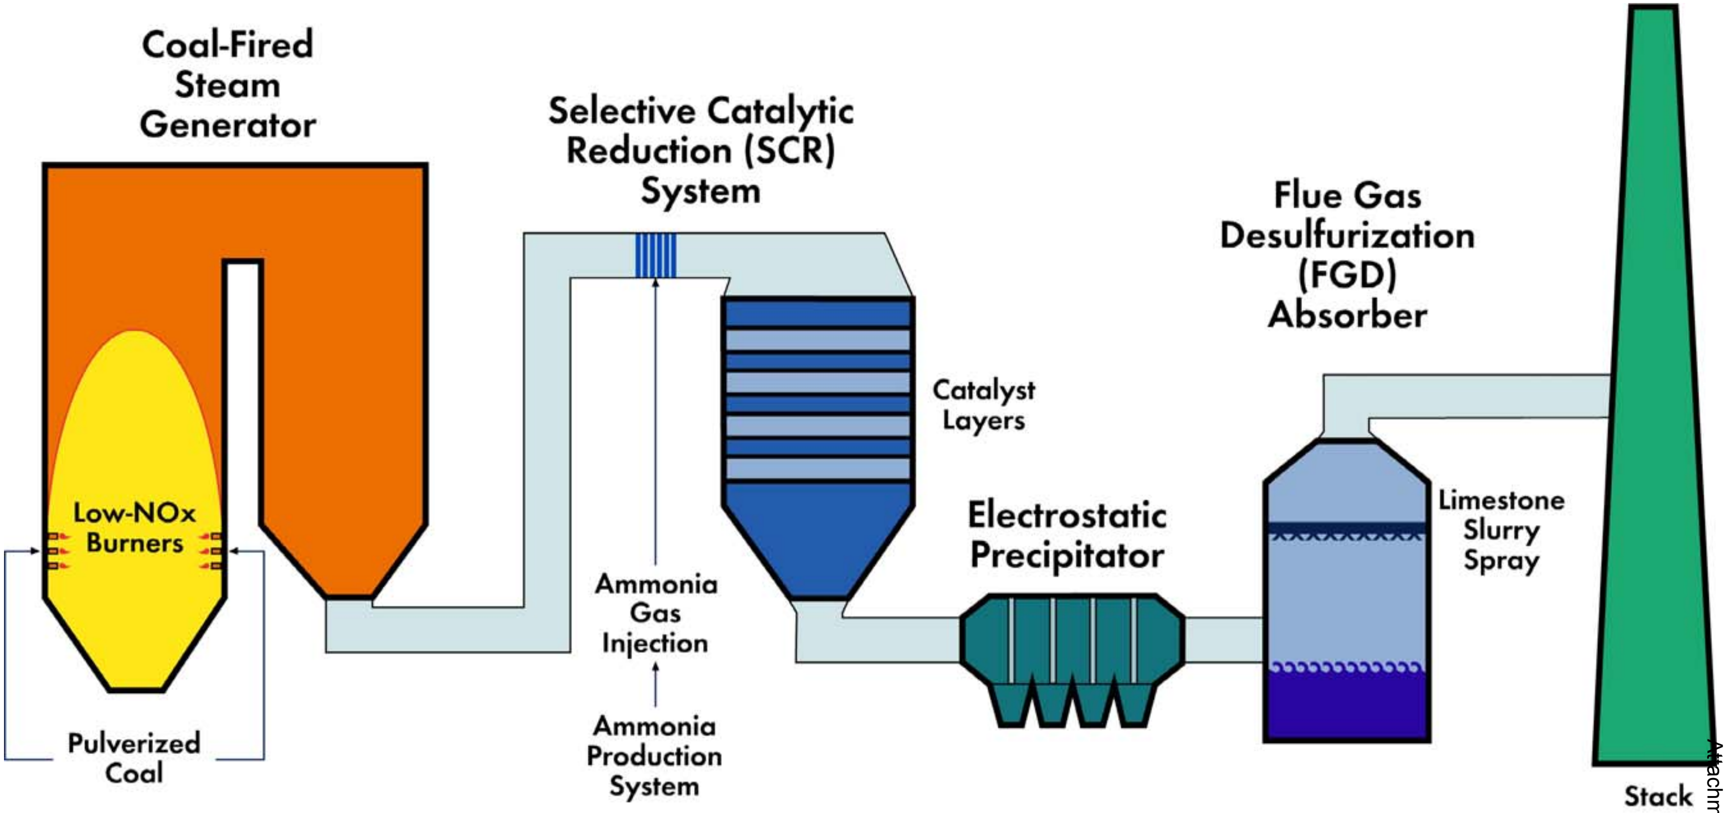
KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 7453 of 9556

The Flue Gas Stream



Materials and Vendors

Material Costs

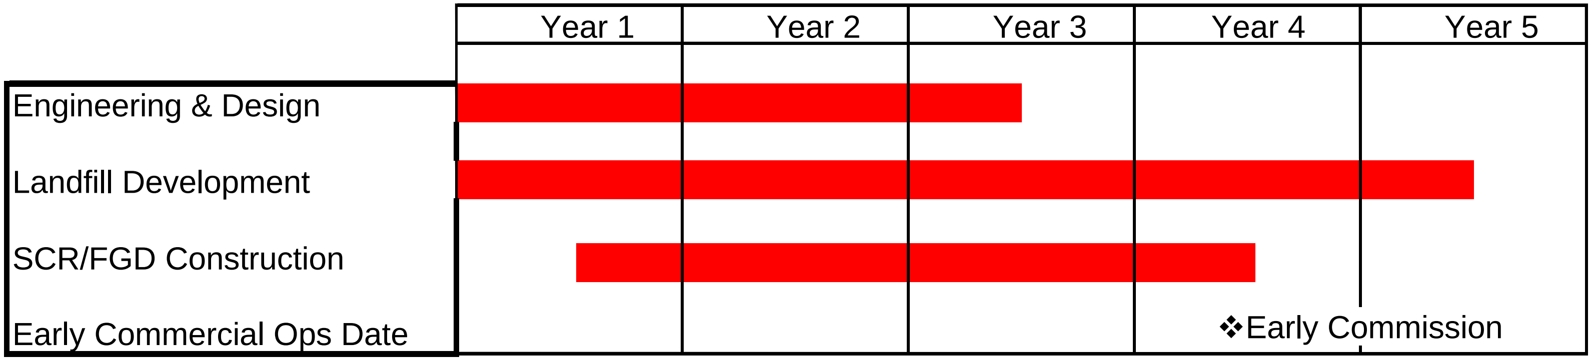
- The primary materials used during construction are steel and alloys, the cost of which, is volatile. We closely monitor the cost of such materials and strive to proactively manage our cost exposure.

Typical Vendors

- FGD
  - B&W
  - Alstom
  - B & V Chyioda
- SCR
  - Babcock-Riley Power
- Stack Supplier
  - Pullman Power Inc.

Typical FGD/SCR Project Milestone Schedule

- **Phased Execution**
  - Lessons Learned: Focus on performance/risk management/cost
  - Phase 1 Feasibility Study, Phase 2a Conceptual design, Phase 2b Detailed design, bid Phase 3 Construction At 30 – 60 % design complete
- **Typical Plant and Landfill Schedule for Engineering, Procurement, Permitting, and Construction**
  - A new landfill requirement can be the critical path



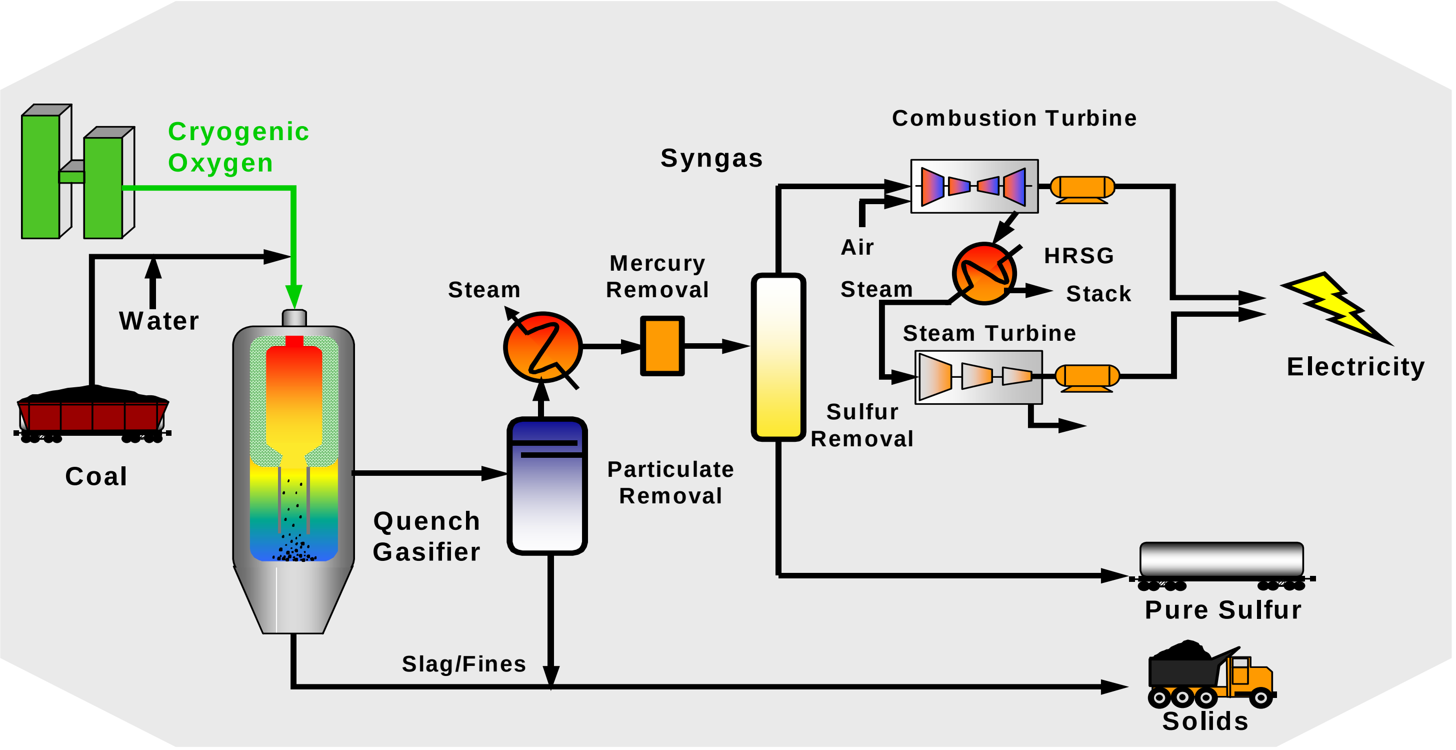
Impact of SCR and FGD on Net Generation

- The overall generation loss in capacity associated with SCR and FGD for the entire AEP fleet is roughly 600MW.
- Typically, an SCR consumes approximately 1% whereas an FGD consumes from 1.5% to 3.0% of the plant electricity output.

PLANT MODIFICATIONS WILL MITIGATE FGD AND SCR CAPACITY CONSUMPTION

Investing in IGCC

Looking to the Future - IGCC



162110 - GJS/CE-01/1-23-02

AEP has announced its intention to construct a commercial-scale Integrated Gasification Combined Cycle (IGCC) Plant by the end of the decade.

Site Selection Considerations

- Brownfield site vs. Greenfield site
- Sufficient Space
  - Flat area with adequate construction access
  - 600 acres
- Fuel delivery options
  - Rail/barge/truck
  - Up to 4 million tons/year of coal
  - Access to water
- Transmission Line Costs
  - Distance from high-voltage lines
  - Costs for grid interconnects and stability impacts

PJM EVALUATION REQUESTED FOR 3 POTENTIAL SITES

IGCC Permitting Issues

- Air – to evaluate best available control technology (BACT)
- Wastewater – to understand wastewater streams
- US COE (Corp of Engineers) – to obtain permits for construction of river facilities
- NEPA Process – (National Environmental Policy Act)– Environmental site studies addressing wetlands, endangered species, historical artifacts

PERMIT PROCESS WILL TAKE 1 - 2 YEARS

Next Steps

2005

- Secure cost recovery plan
- Finalize site selection
- Negotiate with suppliers

- 2005—2007: Obtain permits and finalize engineering and procurement

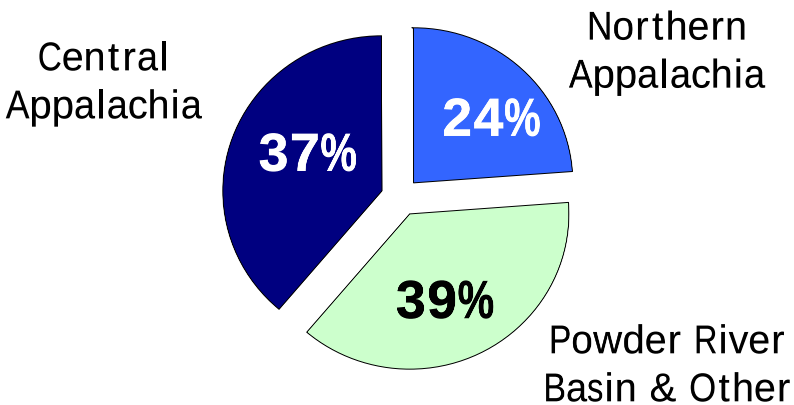
- 2008—2009: Construct and start-up plant

AEP WILL PIONEER CONSTRUCTION OF LARGEST IGCC PLANT IN THE WORLD

Fuel, Emissions & Logistics

Coal Procurement

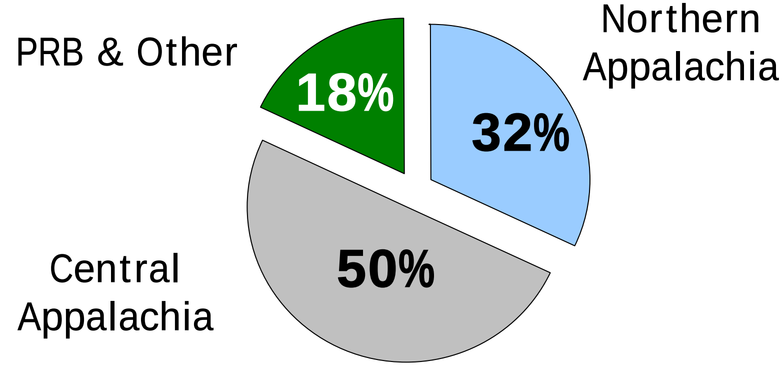
AEP SYSTEM



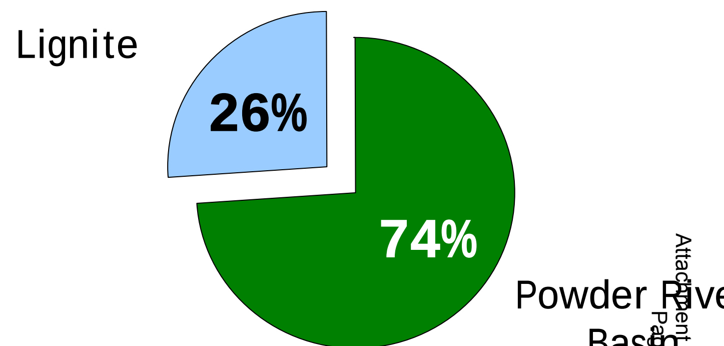
Coal Supply
(on average)

- ➢ Purchase 75 MM tons per year
- ➢ Avg. delivered price ~ $28.50/ton in 2004
- ➢ Essentially 100% purchased for 2005
- ➢ Approximately 12%-14% price increase in 2005
    - Increase being pressured by strong burn
    - PRB deliveries will impact results

EASTERN SYSTEM

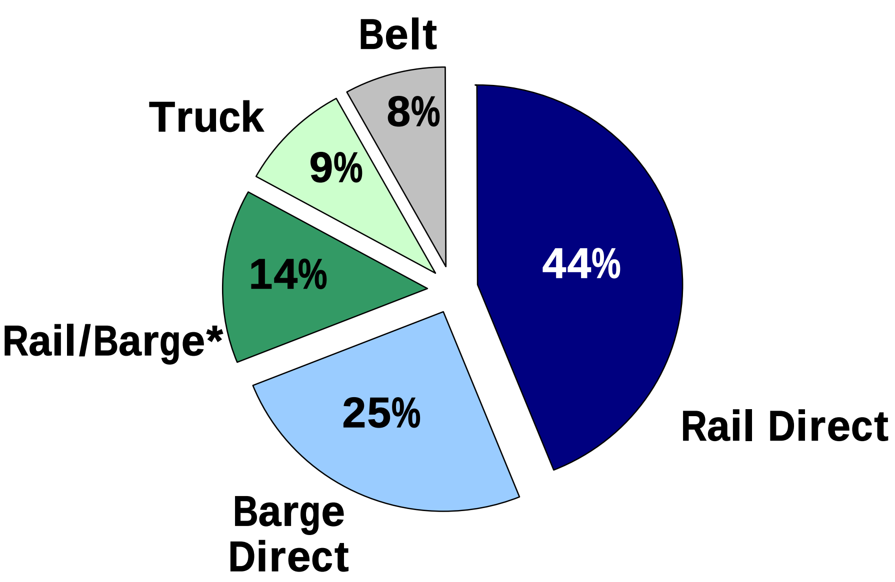


WESTERN SYSTEM

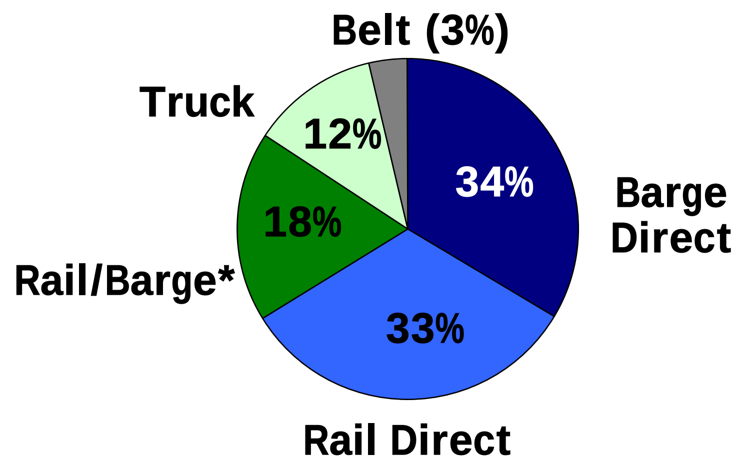


Coal Delivery Mix

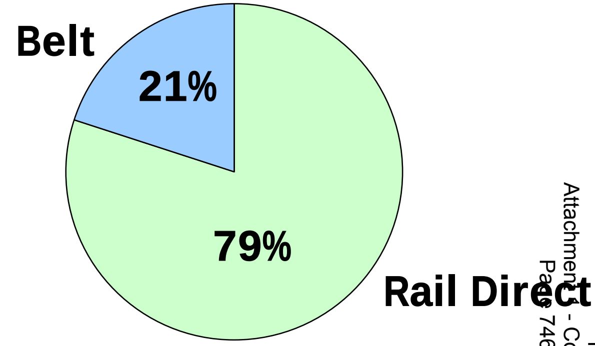
AEP SYSTEM
DELIVERY MODE DIVERSITY
Jan-June 2005 Actual



EASTERN SYSTEM
Jan-June 2005 Actual



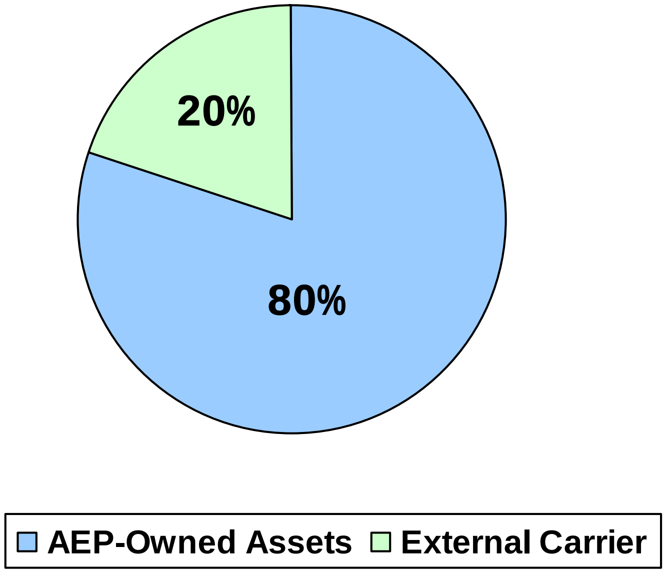
WESTERN SYSTEM
Jan-June 2005 Actual



* Coal delivered to AEP plants transported through combination of rail and barge

AEP's Coal Transportation Assets

Coal Transportation to AEP Plants*
Jan-June 2005 Actual



* Represents close approximations

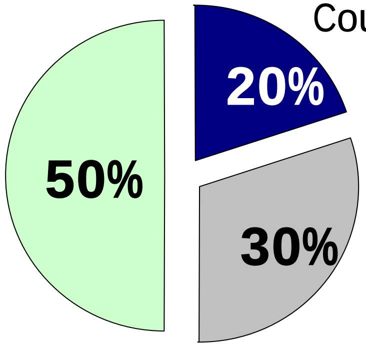
AEP's substantial coal transportation assets include:

- 7,065 railcars
- 2,230 barges
- 53 towboats
- 1 active coal handling terminal (20 million tons of annual capacity)

AEP'S TRANSPORTATION ASSETS PROVIDE FLEXIBILITY IN A CONSTRAINED DELIVERY ENVIRONMENT

Fuel Recovery

AEP SYSTEM

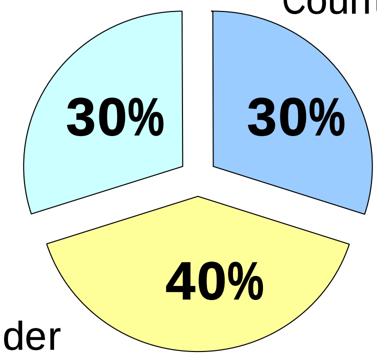


Fuel Cost Recovery
(on average)

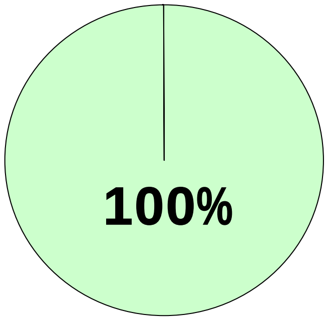
- ➢Fuel recovery varies by jurisdiction
- ➢70% of fuel cost is recoverable across the AEP System
- ➢Active Fuel Clause Jurisdictions:

AEP EAST: AP-VA, I&M, KGP, KP
AEP WEST: PSO, SWEPCO

EASTERN SYSTEM



WESTERN SYSTEM



Regulatory Matrix – East

Ohio (Restructured)
• Unbundled rates for default customers frozen until 12/31/2005
• Pursuant to RSP Plan approved by PUCO 1-26-05:
  • Distribution rates in effect at December 31, 2005 are frozen, with certain exceptions, until the end of 2008.
  • Institute for 2006-2008 a non-bypassable distribution rider for provider of last resort (POLR) costs.
  • CSP "G" rates to increase 3% per year (2006-2008).
  • OP "G" rates to increase 7% per year (2006-2008).
  • Transmission rates can upon filing reflect change in RTO costs.
• No active fuel clause
• Application for IGCC plant recovery filed on 3-18-05, Hearings are done. Initial and reply briefs were due 9-20-05 and 10-11-05, respectively.
• Hearings set for 10-11-05 on CSP's possible acquisition of Mon Power's Ohio service territory.
	West Virginia (Regulated)
	• Base rates not frozen
	• No active fuel clause
	• Annual ENEC proceedings have been suspended, the factor is currently fixed at pre-2000 levels.
	• On 8-26-05 AP & WP filed with the WVPSC for a $183 million revenue increase to be phased in over a four-year period beginning in mid 2006. The filing consists of a general rate case, reinstatement of the ENEC, to implement scheduled incremental rate increases for major clean air & transmission investments, and the implementation of a system reliability tracker mechanism.
	• On 8-31-05 AP and Reliant jointly filed with the WVA PSC for approval to buy Ceredo.

Virginia (Restructured) • Capped rates for default customers frozen through end of 2010 • Capped rates can be adjusted by two rate cases prior to the end of 2010 and incremental environmental and reliability cost recovery mechanisms • Active annual fuel clause • On 7-1-05 AP filed a request with the Virginia Commission seeking to recover incremental costs for environmental compliance and T&D System reliability (E&R) of $62.1 million, effective on an interim basis beginning 8-1-05. The commission has scheduled hearings to begin 2-7-06 and has stayed the effective date of rates pending resolution of a legal issue concerning the commission's authority to approve interim rates in this proceeding.	**Kentucky (Regulated)** • Base rates not frozen • Fuel clause, adjusted monthly • Environmental surcharge costs are adjusted monthly for approved environmental compliance plan • Rockport Unit Power Supply Agreement extension through 12-07-2022 was approved by FERC & KPSC in December 2004 • On 8-26-05 the Company filed a notice of intent with the KPSC of its intention to file a case on or before 9-26-05 using a 6-30-05 ending test year. The level of rate increase was not specified. The Company expects an effective date on or before April 1, 2006 based on a 9-26-05 filing date.
Michigan (Restructured, but Regulated) • Base rates not frozen. • Active annual fuel clause.	**Indiana (Regulated)** • Base rates are frozen and fuel cost recovery factors are capped at increasing rates through June 30, 2007.
Tennessee (Regulated) • Base rates not frozen • Automatic fuel clause, adjusted monthly	

Regulatory Matrix - West

Texas (Regulated) • SWEPCO Texas retail competition delayed until at least 2007. PUC Chairman believes the precursors for full and open competition are not yet in place and will not exist prior to 2009. The Chairman committed to the Texas Legislature that the commission would consider maintaining the current status of competition in the SWEPCO Texas (and SPP portion of TNC) areas in future proceedings. • Bi-annual fuel clause adjustment opportunity **Texas ERCOT Area (Restructured)** • TCC stranded cost true-up filing in May 2005. ($2.4 billion true-up amount requested) Hearings-late Sept. • TCC wires rate case PUCT approved final order on July 15. Final order results in slight rate decrease with a positive earnings impact. Rates are effective on September 6, 2005. • TCC final fuel reconciliation (July 98-Dec. 01) order on rehearing is final and appeals were filed in state and federal court in August 2005. • TNC true-up order approved in May 2005 (retail clawback and fuel over-recovery only). No adjustments to revised amounts filed by TNC. The results of the true-up case were filed in TNC's Competition Transition Charge (CTC) proceeding in August 2005. • TNC final fuel reconciliation (July 00-Dec. 01). Final order received October 18, 2004. District Court affirmed PUC on September 9, 2005. TNC will appeal. No action to date on appeals filed in federal courts in Dec. 2004.	**Oklahoma (Regulated)** • On 6-3-05 PSO filed to increase its Reliability Enhancement Plan annual spending to a $27.21 million level (up $15.4 million) pending OCC approval. Staff submitted testimony supporting an annual cap of $23.68 million up from the $11.81 million cap currently in place. The ALJ has recommended approval of the Staff proposed rider cap. The ALJ recommendation also allows for the recovery of return, depreciation, taxes, etc. associated with converting overhead distribution lines to underground. It is now pending a Commission decision. • Annual Fuel Clause • 2001 Fuel review case Hearings scheduled for Sept. 2005 have now been continued to a later date to be determined. Scope expanded to cover 2002-2004 margin allocation issue. Intervenors have submitted testimony which would substantially off-set the recovery of PSO's $42 million Internal Cost Reconstruction (ICR) error. • 2003 Fuel review case Scope has been expanded to include a prudence review.
Louisiana (Regulated) • Base rates not frozen • Currently under a merger required financial review • Fuel clause, adjusted monthly	**Arkansas (Regulated)** • Base rates not frozen • Fuel clause, adjusted annually

Ohio Rate Stabilization Plan Recap

Summary of Impact (Columbus Southern Power & Ohio Power):

	POLR Rider	Revenues & POLR Rider*			Incremental Cash			
Rate Stabilization Plan	**2005**	**2006**	**2007**	**2008**	**2005**	**2006**	**2007**	**2008**
Escalation of Generation Rate	0	83	173	271	0	83	173	271
POLR Rider/Recovery of RTO Costs***	21	0	0	0	0	7	7	7
POLR Rider/Return on Environmental Additions	44	26	26	26	0	41	41	40
Total RSP Impact	**65**	**109**	**199**	**297**	**0**	**131**	**221**	**318**
Pre-Existing Electric Transition Plan								
Elimination of 5% Residential Generation Credit**	0	25	25	26	0	25	25	26
Recovery of RTO costs***	0	23	23	23	0	23	23	23
Total ETP Impact	**0**	**48**	**48**	**49**	**0**	**48**	**48**	**49**

* Incremental over 2004 base year

** Elimination of 5% credit is per Statute, and part of pre-existing ETP, not the RSP

*** Recovery of administrative RTO costs, net congestion fees and ancillary services permitted in pre-existing ETP, but the RSP allows for recovery of 2005 costs as well

AEP WILL STILL HAVE AMONG THE LOWEST RETAIL RATES IN OHIO

Components of TCC's Net True-up Regulatory Asset

	30-Jun-05	31-Dec-04
	(in millions)	
Stranded Generation Plant Costs	$ 887	$ 897

AMERICAN ELECTRIC POWER • 100TH ANNIVERSARY

1906 2006

A Century of Firsts

February 27, 2006
The Grand Hyatt Hotel
New York

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

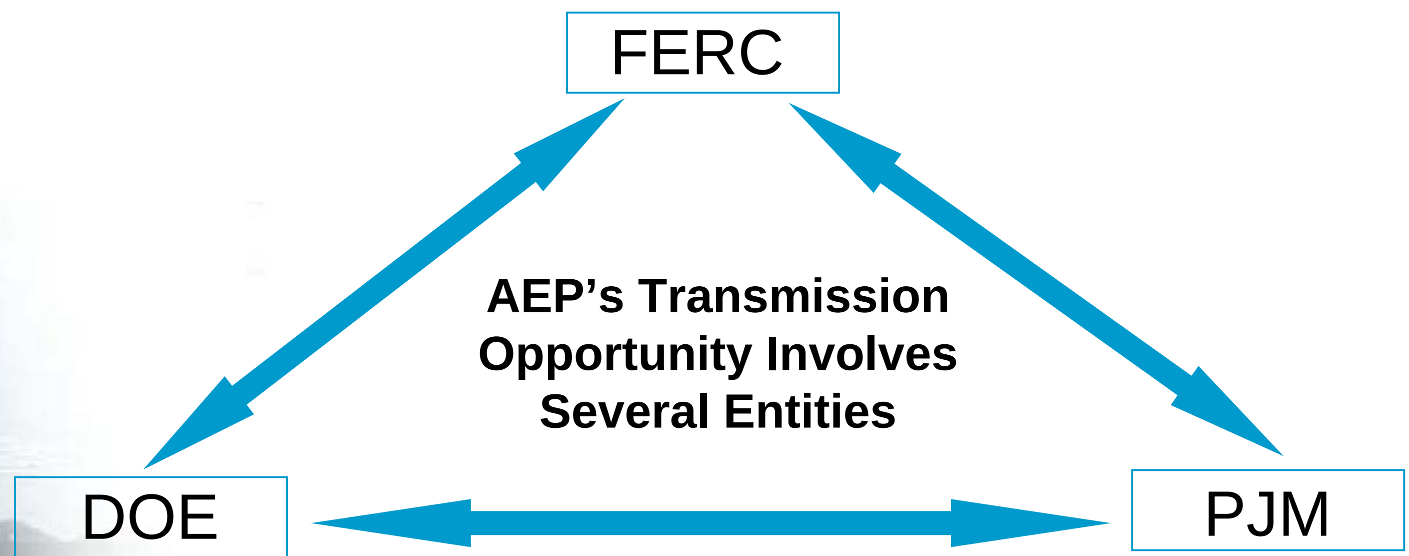
90 MILE WYOMING-JACKSONS FERRY 765-kV TRANSMISSION LINE SCHEDULED TO ENTER SERVICE MID-2006. THE NEW LINE WILL RUN FROM WYOMING, W.VA. TO JACKSONS FERRY, VA.

AEP Transmission Opportunity

The Energy Policy Act of 2005 provides an unprecedented opportunity for transmission development, and AEP is in an enviable position to build upon our core strength to extend our strong 765 kV system to meet the nation's urgent need for interstate transmission.



AEP Transmission Strategy Overview

Vision & Mission

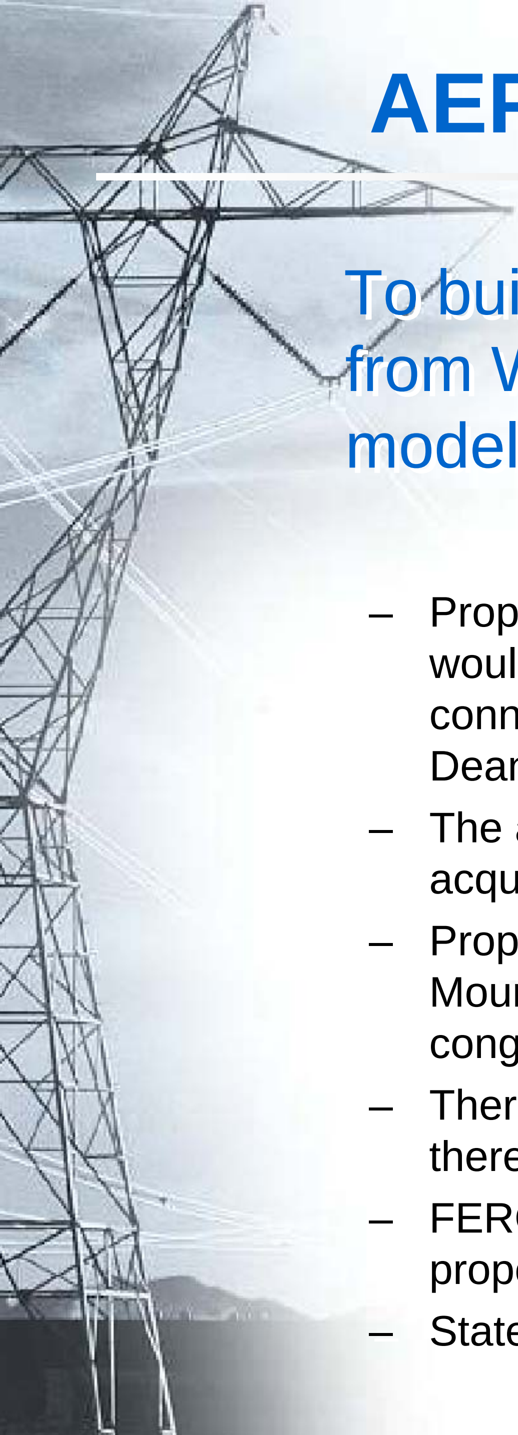
- To maintain our leadership in technical innovation of transmission systems and our position as the largest transmission company in the United States
- To set the standards for transmission safety, efficiency, and reliability

Strategic Opportunities

- To grow a vibrant Transmission business integrated within AEP, taking advantage of the tenets of the Energy Policy Act of 2005
- To aggressively seek recovery through various state/federal recovery mechanisms
- To significantly influence national debate on transmission aspects of the Energy Policy Act of 2005
- To advocate Transmission nationally as an enabler of economic opportunity, environmental optimization, and national security
- To advocate a national interstate grid, our core transmission strength

AEP Transmission Strategic Actions

- Settled FERC rate case for $22 million revenue increase in 2006, and revised OATT rates in Ohio while seeking recovery in other jurisdictions
- Developed opinion papers:
  - "Electric Transmission – Building the Next Interstate System," published in *Public Utilities Fortnightly* in January 2006
  - "R&D Technological Advances to Increase Power Grid Reliability: A Call to Action" with EPRI
- Participated in technical forums and policy debates, and provided comments on proposed rulemakings

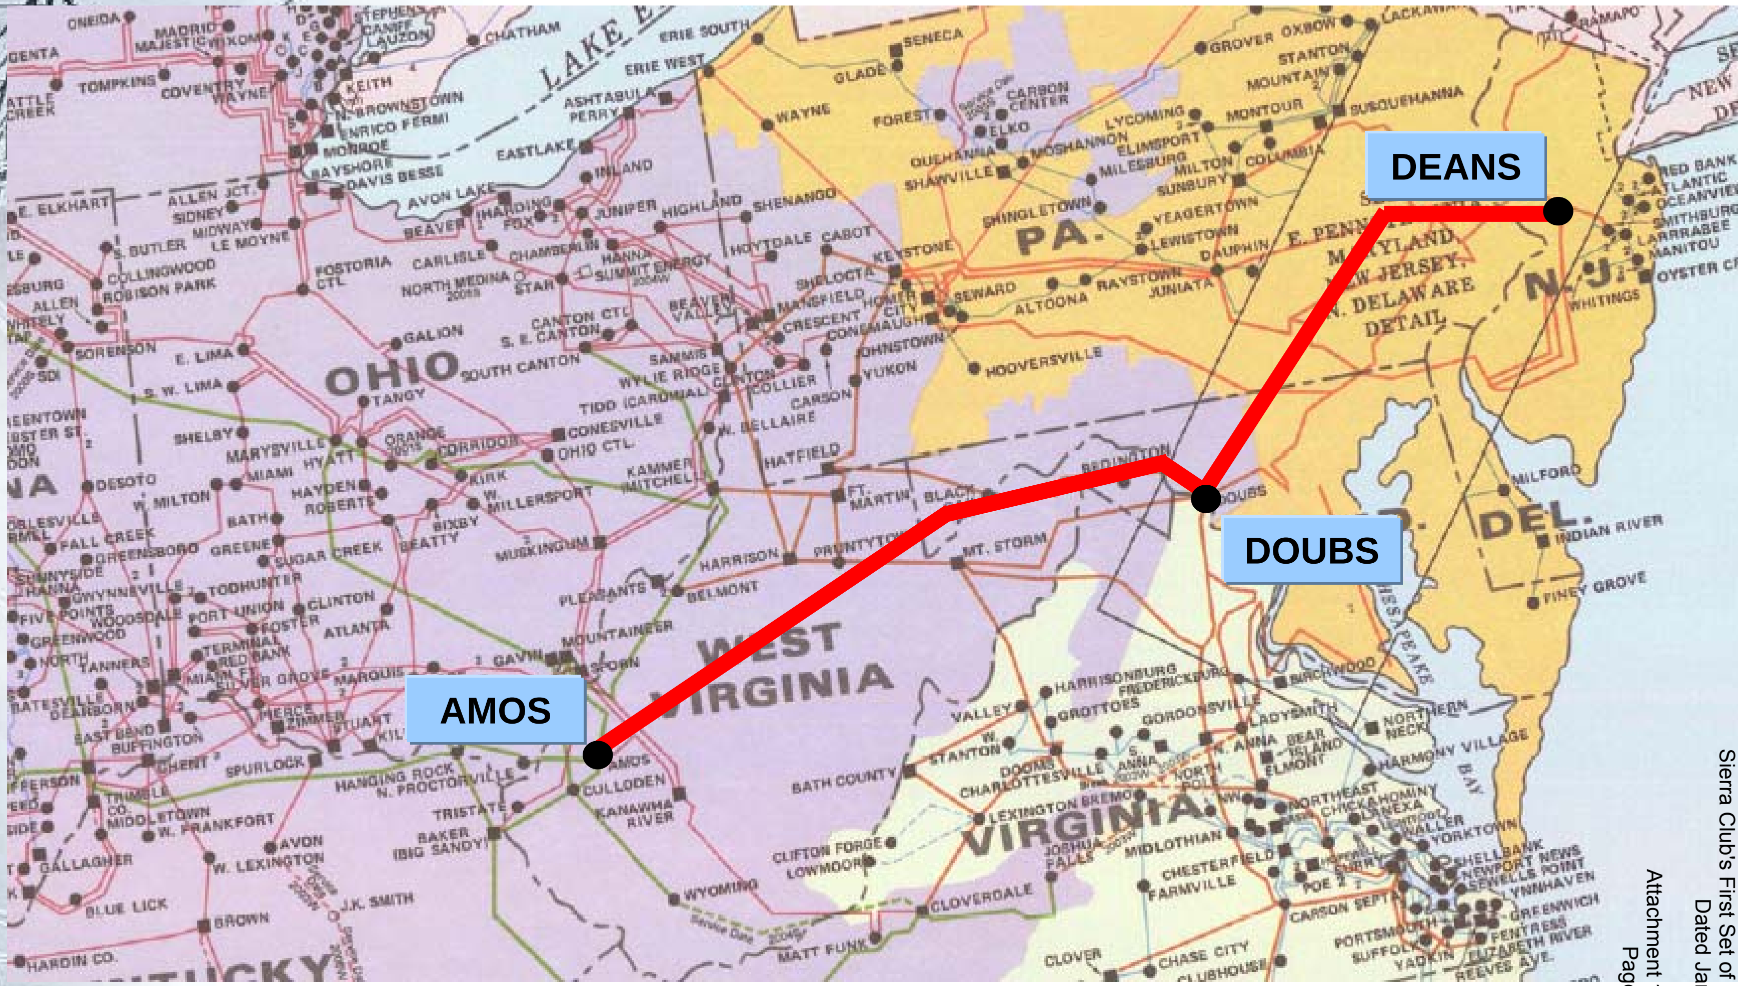


AEP Proposes Interstate Project

To build a new 765 kV transmission line stretching from West Virginia to New Jersey and to create a model to enhance AEP's transmission business.

- Proposed transmission superhighway will span approximately 550 miles and would originate at AEP's Amos transmission station in Putnam County, WV, connect through Doubs Station in Frederick County, MD, and terminate at the Deans Station in Middlesex County, NJ.
- The anticipated in-service date is 2014 assuming three years to site and acquire rights-of way and five years to build the line.
- Proposed route follows a corridor conceptually identified by PJM as Project Mountaineer, a transmission route needed to address critical transmission congestion within the PJM footprint.
- There is significant opportunity to improve west-east transfer capability and thereby reduce congestion and losses by developing I-765.
- FERC has indicated a stated need for transmission development and has proposed incentives for significant congestion relief.
- States appear receptive to transmission development.

Proposed AEP Interstate Project Route



Map of the Proposed AEP Interstate Project 765 kV Transmission Line Route

(Line route is conceptual and subject to change in regulatory and PJM Regional Transmission Expansion Plan processes)

Interstate Project Benefits

- Improves market efficiency with reduced congestion, lowering consumer costs in the east
  - PJM congestion costs in 2004 totaled approximately $800 million, and in 2005, congestion costs are expected to exceed $1 billion
- Improves peak west-east transfer capability by 5000 MW
- Reduces network losses by 280 MW at peak with heavy west-east transfers
- Improves reliability significantly from the Midwest to the east
- Provides opportunity for AEP surplus generation and other generation in the area that can compete
- Provides opportunity for siting new generation for AEP and others
- Provides AEP traditional rate base opportunity with potential ROE bonus and other FERC NOPR incentives
- Creates ownership options

Interstate Project Regulatory Plan

- Project within PJM jurisdiction
  - Must participate in PJM regional planning process, but alignment with Mountaineer Project concept likely mitigates risk
  - Rights of first refusal

- FERC filing required
  - Propose Transco structure (as public utility, not merchant) under FERC jurisdiction
  - Propose pricing for Transco facilities using the regional “highway/byway” rate approach that matches our pending pricing proposal before FERC

- Request incentives as outlined in the NOPR

- AEP has filed with the DOE to have the proposed route designated as a National Interest Electric Transmission Corridor (NIETC) to expedite line certification and siting process

AMERICAN ELECTRIC POWER • 100TH ANNIVERSARY

A Century of Firsts

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

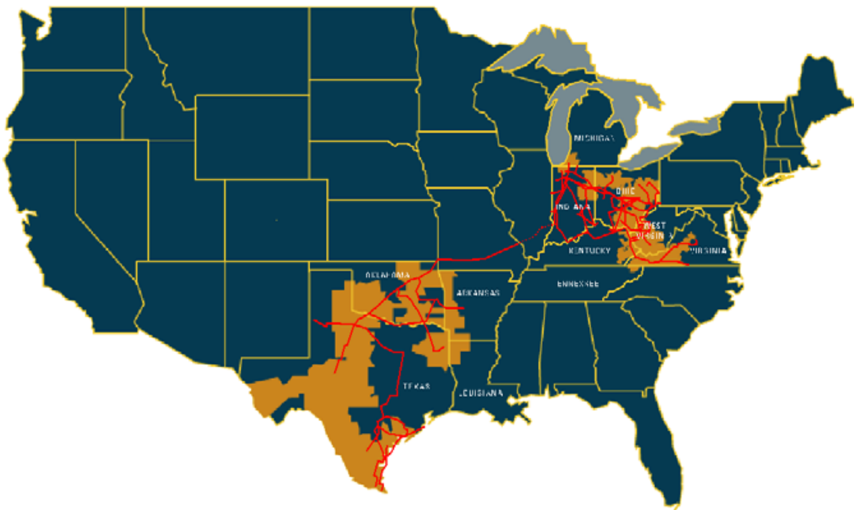
Strength & Scale in Assets & Operations

Utility Operations: The Platform for Growth



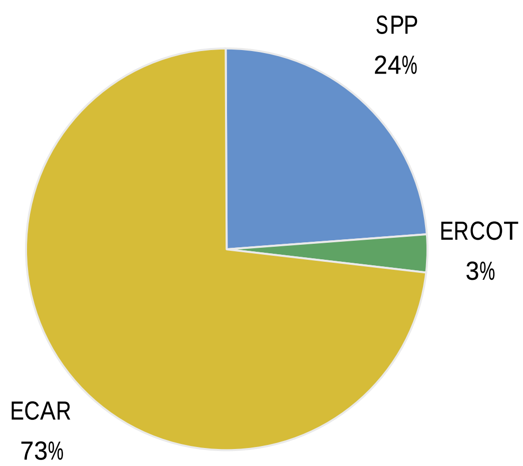
Generation*	**35,600 MW capacity**
Transmission	**39,000 miles**
Distribution	**205,500 miles**
Customers	**5 million**

* Figures do not include mothballed or decommissioned units (1,015 MW of capacity).

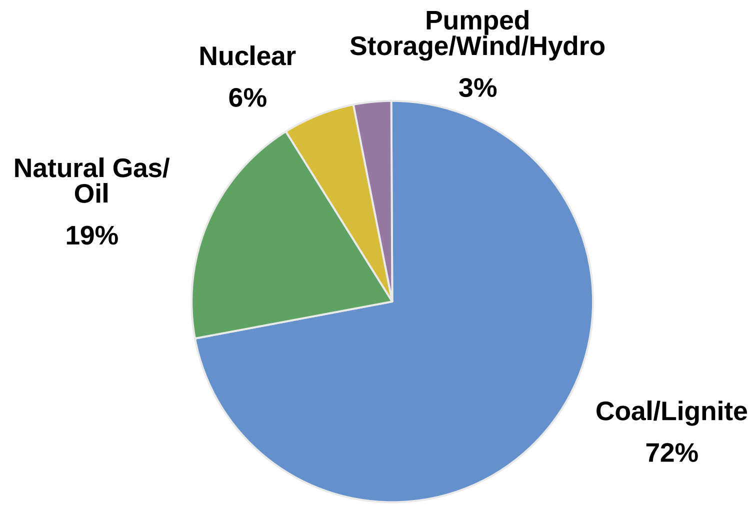
FUTURE EARNINGS GROWTH DRIVEN BY NATIVE LOAD GROWTH & SUBSTANTIAL UTILITY INVESTMENT OPPORTUNITY

Domestic Generation Fleet

Capacity by NERC Region



Capacity by Fuel Mix



Does not sum to 100% due to rounding

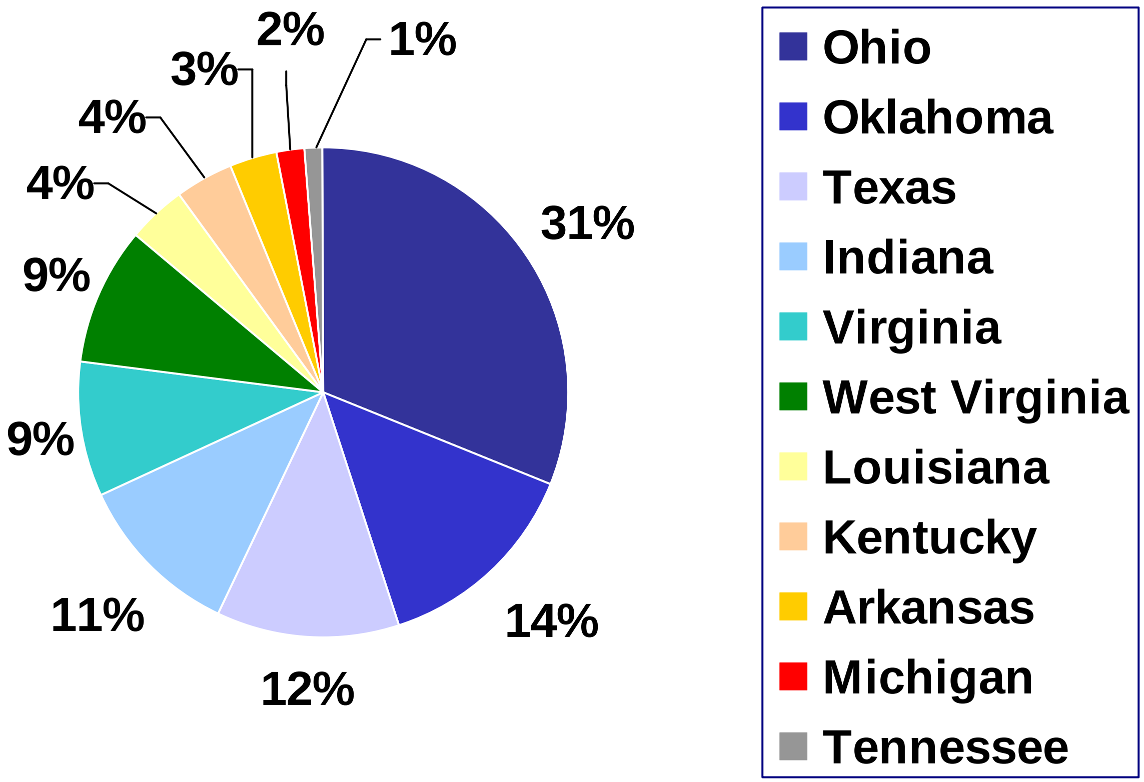
Operating Statistics

Commercial Availability Factor	
2004	85.24%
2005	84.50%

Capacity Factor	
2004	62.06%
2005	62.53%

2005 Retail Revenue

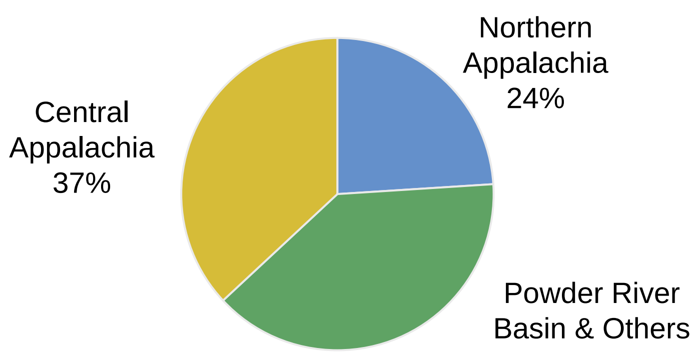
Retail Revenue Composition by State



Fuel

Coal Procurement

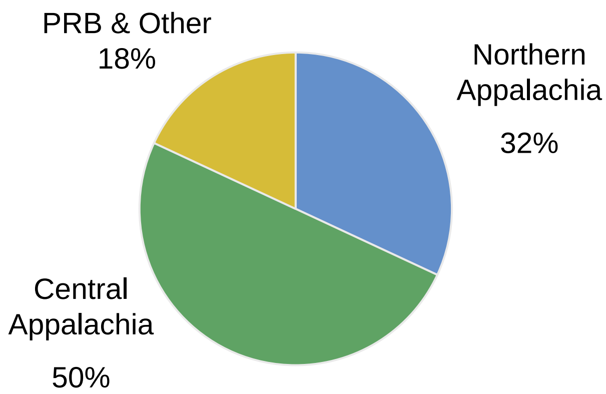
Total AEP System



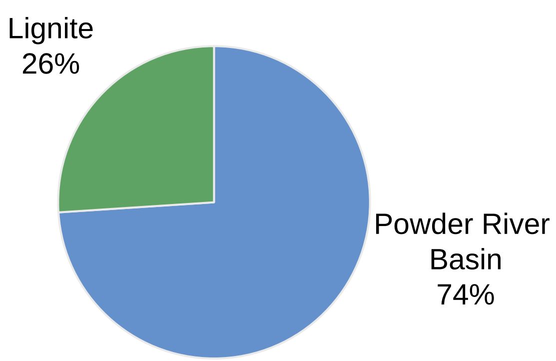
Coal Supply (on average)

- Purchase approximately 75 MM tons per year
- Avg. delivered price ~ $32.52/ton in 2005
- Fully contracted for 2006; 90%+ contracted for 2007
- Approximate 11%-13% price increase in 2006
  - Rising costs at Eastern mines & safety issues
  - High SO2 Allowance prices drive low sulfur coal prices

AEP Eastern System

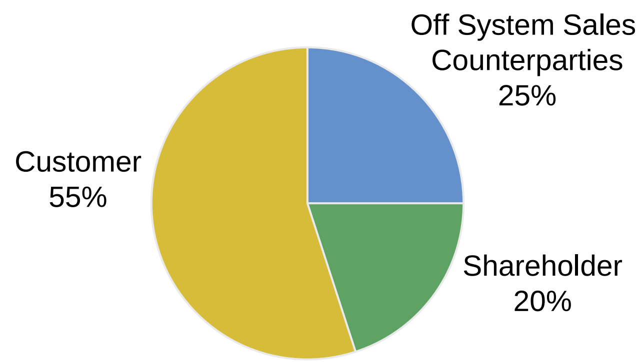


AEP Western System



Fuel Recovery

AEP System



Fuel Cost Recovery (on average)

- Fuel recovery varies by jurisdiction
- 80% of fuel cost is recoverable across the AEP System
- Active Fuel Clause Jurisdictions:
  - AEP EAST: APCo, I&M, KPCo, KGP, WP
  - AEP WEST: PSO, SWEPCO

Note: Fuel recovery percentages are based on estimates for 2006 fiscal year

Jurisdictional Fuel Clause Summary

STATE	FUEL CLAUSE	ADJUSTMENT FREQUENCY
Arkansas	Yes	Monthly
Indiana	Yes	Capped at increasing rates through June 30, 2007
Kentucky	Yes	Monthly
Louisiana	Yes	Monthly
Michigan	Yes	Annually
Ohio	No	Although there is no recovery mechanism in Ohio, the RSP provides for a 3% (CSP) and 7% (OP) increase in generation rates annually, which includes fuel beginning January 2006 and extending through December 2008.
Oklahoma	Yes	Annually
Tennessee	Yes	Monthly
Texas (SPP)	Yes	Annually
Virginia	Yes	Annually
West Virginia	Yes	Annual ENEC currently suspended. On Jan 6, 2006, WVPSC approved deferral accounting for ENEC to begin July 1, 2006 and new rates to be effective July 28, 2006.

Plant Name	MW Capacity
Mitchell 1 & 2	1600
Conesville 4	339
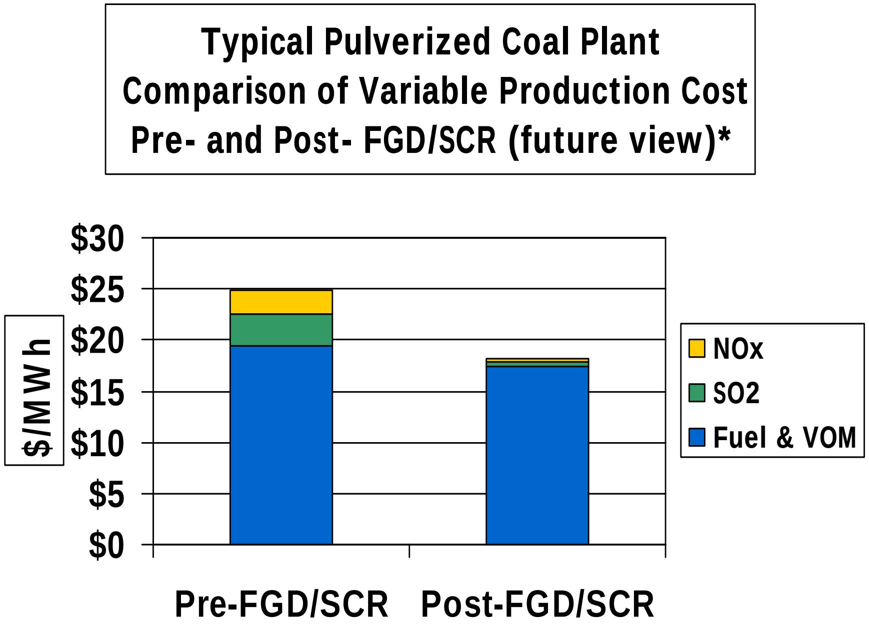
Total	**1939**

Note: MW capacity shown represents AEP's owned capacity only

INSTALLATION OF SCR AND FGD WILL ALLOW OUR COAL FLEET TO REMAIN EXTREMELY COST COMPETITIVE

Low Cost Production Supports Investment & Investment Sustains Low Cost Production

- Lowers exposure to high cost emission allowances
- Creates opportunity to burn wider variety of lower cost fuels
- Improves baseload operation (higher capacity factor, higher margin)
- All-in cost of electricity, including FGD/SCR investment, remains low



* Assumes annual NOx program

AEP WILL REMAIN THE LOW COST PRODUCER FOLLOWING COMPLETION OF ENVIRONMENTAL RETROFIT PROJECTS

Investing in IGCC

Integrated Gasification Combined Cycle

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called "syngas" – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

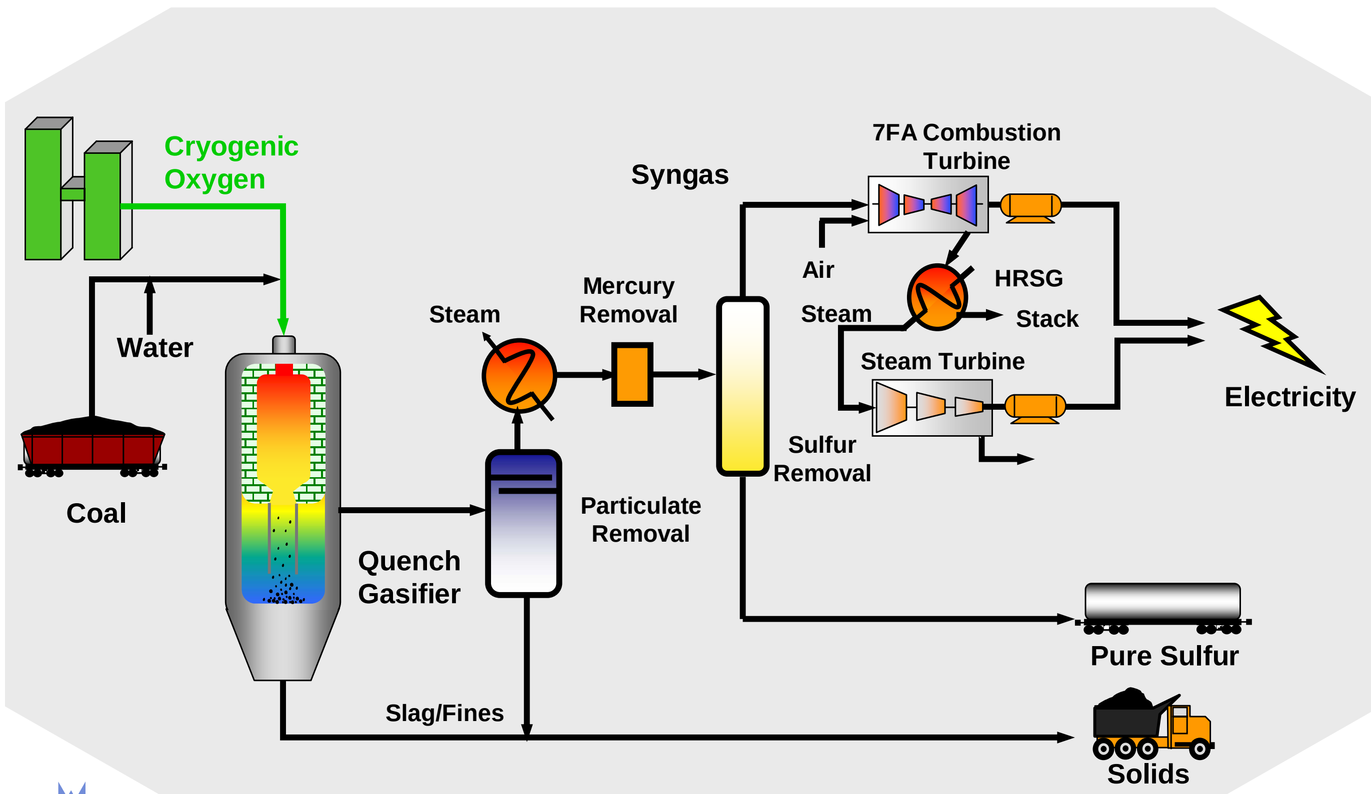
Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2, mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP's eastern service territory.

AEP is currently working with a technology provider to develop a firm price for an IGCC facility to be built in our eastern service region. This price will be available in 2006. AEP intends to seek regulatory recovery approvals in advance of building the plant.

Looking To The Future - IGCC



162110 - GJS/CE-01/1-23-02

AEP HAS ANNOUNCED ITS INTENTION TO CONSTRUCT A COMMERCIAL-SCALE INTEGRATED GASIFICATION COMBINED CYCLE (IGCC) PLANT BY THE END OF THE DECADE

Investing In IGCC

Generation Technology Comparative Statistics

	PC	IGCC	NGCC
Nominal Capacity (MW)	**600**	**600**	**600**
Heat Rate (Btu/kWh)	**8700**	**8600**	**7200**
Total Plant Cost (EPC) ($/kW)	**1700**	**1900**	**480**
Production Cost ($/MWh)	**17**	**16**	**57**
Cost of Electricity, without CO2 Capture ($/MWh)	**58**	**63**	**90**
Estimated Cost of Electricity, with CO2 Capture ($/MWh)	**94**	**87**	**137**

Source: Results of AEP analysis based on EPRI studies

- Total Plant Cost (2005$'s) includes the cost to **E**ngineer, **P**rocure and **C**onstruct plant and owner's direct costs; does not include interconnections, transmission lines, transmission upgrades, contingency or AFUDC.
- Assumes Northern Appalachian Coal price of $1.60 /mmBtu for PC and IGCC, and natural gas price of $7.00/mmBtu for NGCC.
- Assumes 85% capacity factor for PC and IGCC, 25% for NGCC.
- Production Cost includes Fuel Cost and Variable Operations & Maintenance (VOM) cost.
- Cost of Electricity based on EPC cost, does not include the cost of Emission Credits.
- Cost of Electricity with CO2 capture does not include sequestration cost.

IGCC TECHNOLOGY IS STRATEGIC TO KEEPING COAL IN THE MONEY

Regulatory Overview

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 7512 of 9556

Regulatory Activity Underway

- TCC Request for Securitization of Stranded Costs
- Indiana Depreciation Petition
- APCo General Rate Case Filing in Virginia
- APCo Filing for Recovery of E&R Costs in Virginia
- APCo & WPCo Base Rate & Expanded Net Energy Cost (ENEC) Filing in West Virginia – Settlement Pending
- IGCC – Received Rate Authorization of Pre-Construction Costs

YEAR-TO-DATE, SECURED $415 MILLION OF THE $500 MILLION RATE RECOVERY ASSUMED IN 2006 EARNINGS GUIDANCE RANGE

Texas Regulatory Activity

TCC Stranded Cost Recovery Case

- February 16, 2006 – PUCT final order provides for net true-up of $1.475 billion
- March 3, 2006 – Requested approval of financing order to issue $1.8 billion in low-cost securitization bonds
- May 22, 2006 – Settlement agreement filed with PUCT in securitization proceeding
  - Securitization financing order expected in June
  - Issuance of securitization bonds expected late 3Q06

Settlement Agreement (if approved):

- Securitization amount of $1.72 billion
- Securitization order not appealable
- Issues to be settled by the Commission:
  - Correct amount for ADFIT (assumed to be $315 million)
  - The treatment of ADFIT benefits either to be recovered through a CTC or as a reduction of the securitized amount
  - The treatment of EDFIT and ADITC ($90 million in total) either as a reduction to the costs to be recovered through a CTC or as a reduction to the securitized amount

- June 2006 – Request approval for CTC to address other true-up items
  - Expected $476 million credit to customers (assuming ADFIT is refunded through CTC)
  - Sept 2006 – CTC to be implemented

Regulatory Activity Underway

Indiana Depreciation Filing

December 1, 2005 – I&M filed petition with the IURC for accounting authorization to revise the depreciation rates applicable to its electric utility plant in service

- Based on a 2004 depreciation study, I&M recommends a decrease in annual depreciation expense of approximately $45 Million on an after-tax Indiana jurisdictional basis.
- Procedural schedule has been set with final order expected in third quarter 2006

Appalachian Power - Virginia E&R & General Rate Case Activity

Virginia E & R Cost Recovery Factor - Filed July 1, 2005 – Originally filed for recovery of $62.1 Million in new Environmental & Reliability costs

- Oct 14, 2005 – SCC ruled VA law does not allow recovery of prospective costs - $48.6 Million
- Nov 14, 2005 - APCo filed supplemental direct testimony which included updated actual E&R costs incurred through Sept. 30, 2005 of $21.1 million

Virginia General Rate Case Filing – Filed May 4, 2006 – Seeking $225.8MM increase in base rates, partially offset by a proposed credit to reflect sharing of $27.3MM in margins from off system sales (OSS), resulting in a net annual increase of $198.5MM.

Regulatory Activity Underway

Appalachian Power & Wheeling Power – West Virginia Base Rate Case & ENEC Reactivation

Filed April 24, 2006 – Joint Settlement Agreement

- Estimated overall impact of revenue increases to be phased-in through 2009:
  - $129 Million
  - 16% Increase
- Provides for timely recovery of Wyoming-Jacksons Ferry 765kV line and Mountaineer & Amos FGDs

Phased-In Settlement Agreement Increases:

- ✓ July 28, 2006 - $61 Million*
- ✓ July 1, 2007 - $36 Million**
- ✓ July 1, 2008 - $14 Million**
- ✓ July 1, 2009 - $18 Million**

* Excludes ENEC over-recovery negative surcharge ($17 million) -- surcharge does not have an earnings impact

** Estimated

Settlement Details

- ✓ Increase effective July 28, 2006:

($18MM) Base Rates

$56MM ENEC

$23MM WJF & FGD investment @ 12/31/05

$61MM Gross revenue increase

($17MM) ENEC over-recovery negative surcharge

$44MM Net increase effective 7/28/06

- ✓ Phased-in revenue increases annually on July 1, 2007 – 2009 provides for timely recovery of FGD project balances at 12/31 of prior year

IGCC Regulatory Activity

Ohio - Cost Recovery Filing

Phase 1 – PUCO AUTHORIZED

- Effective during 2006
- Seeks recovery of initial costs, including those already incurred, such as site engineering and various other engineering services
- Approximately $23.7 Million

Phase 2

- Effective 2007- mid 2010 (Construction Phase)
- Seeks recovery of carrying costs associated with plant construction

Phase 3

- Effective mid 2010 (Commercial Operation begins)
- Seeks recovery of projected $1.174 Billion cost of plant over its operating life

Ohio Next Steps

2006:

- Secure cost recovery plan
  - April 10, 2006 – PUCO authorized implementation of Phase 1 Rates
  - Phase 2 & 3 ruling – Post October 2006 – following completion of FEED study
- Finalize site selection
- Negotiate with suppliers

2006—2007:

- Obtain permits and finalize engineering and procurement

2007—2010:

- Construct and start-up plant

West Virginia IGCC Activity

On January 11, 2006, Appalachian Power Co. filed a Certificate of Public Convenience and Necessity seeking authority to construct a 600-MW IGCC facility in West Virginia.

SEEKING AUTHORITY FOR THREE PHASE RECOVERY APPROACH IN OHIO

Regulatory Activity Completed

Ohio – Rate Stabilization Plan (2006 – 2008)

- Annual 3% and 7% generation rate increases at CSP & OP, respectively
- POLR rate rider for environmental additions
- Ability to request additional 4% annual increase in generation rate
- Elimination of 5% residential generation credit (stipulated in the pre-existing Electric Transition Plan of 2000)

AEP East FERC Transmission Case

December 20, 2005 – FERC approved settlement allowing wholesale transmission rates to increase

- Results in $22 million net revenue increase in 2006 from wholesale transmission

Ohio Companies Pass Through of FERC OATT Changes

May 26, 2006 – PUCO approved a final order allowing for adjustment of the transmission component of standard service tariffs to FERC-approved rates

- Transmission rate adjustment results in additional annual revenues of approximately $89 million ($63 million in 2006)

SWEPCo Fuel Factor/Surcharge Filing

January 12, 2006 – Settlement approved by PUCT

- Fuel factor will increase SWEPCo's annual Texas retail fuel-related revenues by approximately $46 million
- Interim surcharge will collect the under-recovery amount of $44 million, including interest

Appalachian Power- Virginia Fuel Factor Increase

- $57.7 Million increase in fuel factor approved on January 20, 2006

Kentucky Base Rate Case

Final order approved on March 14, 2006

- $41 million annual increase in base rates
- To be effective March 30, 2006

Summary of Major 2006 Financial Performance Drivers

- Load Growth of 2.5%
- $500MM rate recovery assured or in progress
- Rising fuel costs of 11-13%
- Higher planned outages, increased retail load and sale of TCC generation to impact off system sales
- Decline in utility O&M
- Parent Company improvement (debt & interest expense reduction)

TRADITIONAL UTILITY FACTORS WILL DRIVE 2006 PERFORMANCE

2006 Projected Cash Flow

($ in millions)	2005 Actual	2006 Guidance *
Beginning Cash Balance	**$ 320**	**$ 401**
Cash from Operations:		
Income from Continuing Operations	787	1,023

SWEPCo	$287,900	$366,700	$458,400
TCC	$278,400	$247,000	$222,100
TNC	$72,500	$71,600	$89,400

* Includes expenditures of other subsidiaries not shown. The figures reflect construction expenditures, not investments in subsidiary companies.

2006 Key Operating Company Highlights

Dependent on Actual Capital Investment

Company	Projected Capital Expenditures	(in millions) Projected Issuances	Target Equity Ratio
APCO	$943	$500 - $600 (completed*)	42-45%
CSP	$343	$100 - $150	44-48%
I&M	$311	$400 - $500	38-42% (a)
KPCo	$100	$50 - $75	42-45%
OPCo	$1,070	$450 - $550	44-48%
PSO	$279	$150 - $200	44-48%
SWEPCo	$288	$100 - $150	44-48%
TCC (b)	$278	$0	40%
TNC	$73	$0	40%

* Issuances completed in 2006 totaling $550 Million

(a) Ratios include impact of Rockport 2 lease.

(b) Excludes impact of securitization.

MAINTAIN FINANCIAL STRENGTH OF SUBS BY RETAINING AND/OR INFUSING EQUITY CAPITAL DEPENDING ON THEIR CREDIT RATIOS AND FREE CASH FLOW

Long-Term Debt Guidelines

Issuers:

- Issue at operating companies.

Size:

- Make transactions index eligible if possible.
- When possible, issue a size sufficient for competitive execution.

Maturity:

- Issue maturities for which the market has appetite.
- Achieve weighted average life targets for operating companies, generally between 10-15 years.

Timing:

- Will issue based on the timing of maturities and levels of short-term debt as driven by capital spending and operating cash flow.

Long-Term Debt Maturity Profile[1]

Year	2006[2]	2007	2008
AEP Service Corporation	$ 2,000,000[3]	$ 2,000,000[3]	$ 34,000,000

What AEP Offers

Utility Operations: The Platform for Growth & Financial Strength

1. Strength and scale in assets and operations
2. Focused utility business model
3. Earnings growth driven by native load & capital investment
4. Pioneering advanced technologies in the sector
5. Solid liquidity position and stable credit profile
6. Attractive dividend yield in excess of 4%

Summary Rate Case Information

West Virginia Base Case Rate Filing

On August 26, 2005, Appalachian Power Co. and Wheeling Power Co. filed an application with the West Virginia Public Service Commission (WVPSC) to increase electric rates and charges, a request for the reactivation and modification of the expanded net energy cost mechanism (ENEC), a proposal for the disposition of Appalachian Power Company's ENEC over-recovery balance, a request for implementation of a System Reliability Tracker mechanism, and a request for waiver of certain provisions of the Commission's Rules. APCo filed supplemental testimony on January 18, 2006 to reflect Ceredo plant purchase and other miscellaneous items resulting in a revised revenue requirement of $171 Million. On April 24th, APCo and Wheeling Power, together with the PSC staff and the Consumer Advocate in WV, filed a joint settlement agreement in the companies' rate case. The agreement provides for an initial $44 million increase in revenues, effective July 28, 2006. The initial increase consists of a $56 million increase for fuel and purchased power expenses, and $23 million for recovery of WJF transmission line costs and environmental investments to date. These increases are partially offset by an $18 million base rate reduction and a $17 million credit to customers for previously over-recovered fuel costs. (Docket #: 05-1278-E-PC-PW-42T)

Summary Rate Case Information

Virginia E&R Factor Filing

On July 1, 2005, Appalachian Power Co. filed a request with the Virginia SCC to recover incremental actual and projected costs for environmental compliance and T&D System reliability in the amount of $62.1MM. The SCC has ruled that under applicable VA law, it does not have authority to approve the recovery of projected E&R costs before their actual incurrence and adjudication. APCo filed supplemental direct testimony which included actual costs incurred for E&R thru September 30, 2005 of $21.1 million. Hearings concluded in March. Briefs were filed in early April. We are awaiting a Commission order. Docket # PUE-2005-00056

Capital Structure – Company vs. Staff

Capital Structure	Company Position (filed 7/1/05)	Staff Position (filed 1/11/06)
Long-Term Debt	53.43%	51.50%
Short-Term Debt	2.67%	2.20%
Preferred Stock	0.54%	0.53%
Common Equity	42.65%	45.16%
ITC	0.71%	0.61%
Total	**100.00%**	**100.00%**
Recommended ROE	**10.85%**	**9.80%**

Revenue Requirement – Company vs. Staff*

Revenue Requirement	Company Position (filed 11/14/05)	Staff Position (filed 1/11/06)
Environmental	13.3	8.2
Transmission	6.1	8.8
Distribution	1.7	2.6
Total	**$21.1MM**	**$19.6MM**

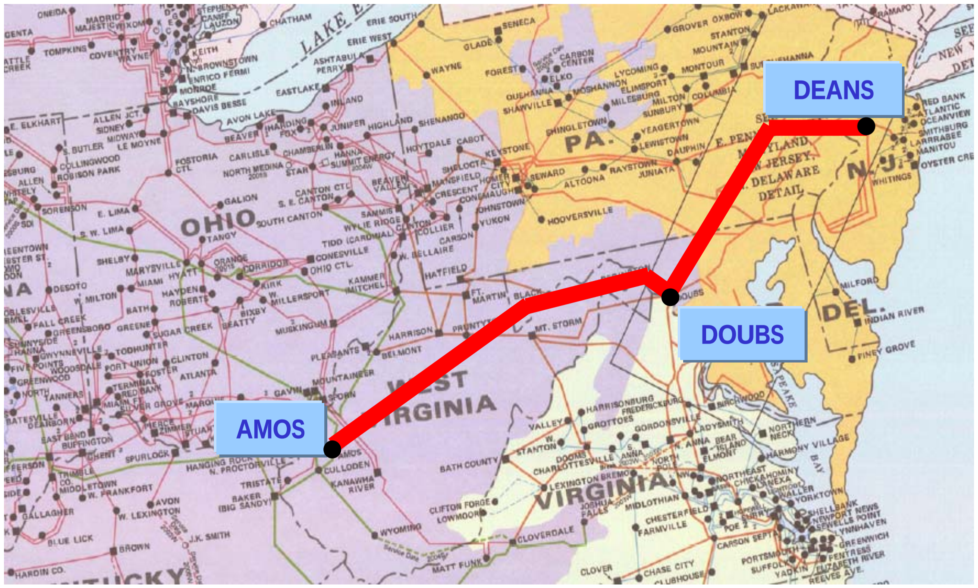
AEP Interstate Project



Map of the Proposed AEP Interstate Project 765 kV Transmission Line (Line route is conceptual and subject to change in regulatory and PJM Regional Transmission Expansion Plan processes)

- Line connects AEP's Amos 765 kV station to Allegheny Power's Doubs 500 kV station in Maryland, and terminates at PSEG's Deans 500 kV station in New Jersey
- Total line length is approximately 550 miles
- Will improve power transfer capability from the Midwest to the Mid-Atlantic by 5,000 MW
- Expected to cost $3 billion (subject to change based on a detailed investigation)
- Not yet determined which other non-AEP companies may be interested in participating
- Any financing activity relating to this project would be structured to allow AEP to meet its consolidated debt-to-cap target of approximately 60% and maintain its BBB credit rating
- Project expected to be in service in 2014

2008 Merrill Lynch Power & Gas Leaders Conference

New York, NY

AEP AMERICAN ELECTRIC POWER®

Michael G. Morris

Chairman, President & CEO

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are canceled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; volatility in the financial markets, particularly development affecting the availability of capital on reasonable terms and developments impairing our ability to refinance existing debt at attractive rates; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

AEP's Key Strategic Priorities

Work for best possible outcome for the long-term value of our business in Ohio

- ❑ Comprehensive Electric Security Plan filed on July 31, 2008

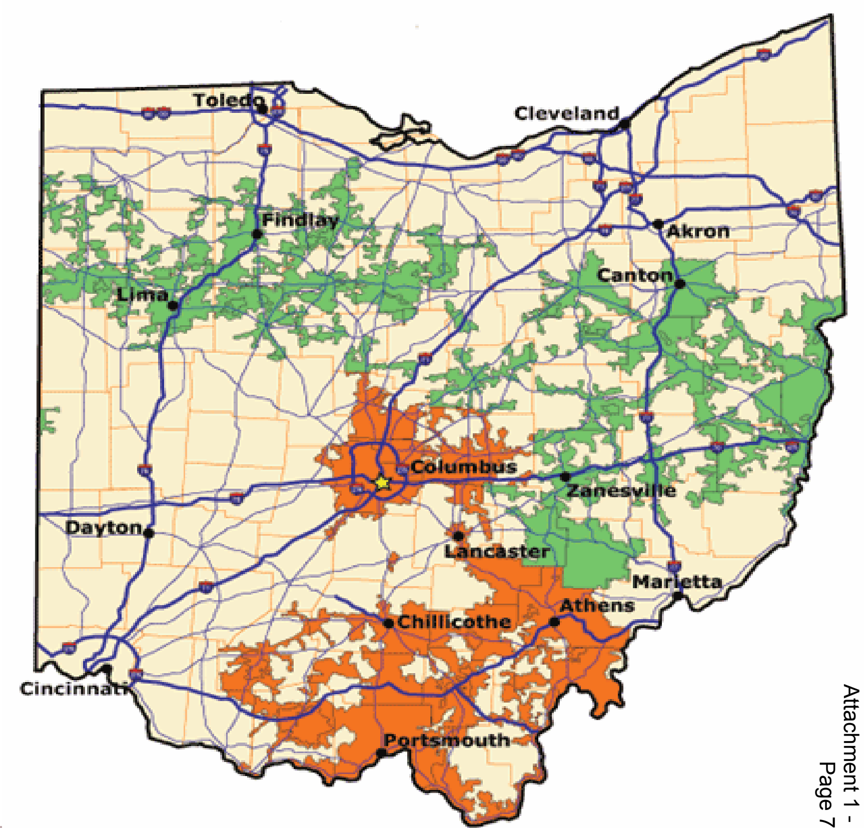
Invest in our vast energy platform to provide for growth:

- ❑ **Execute transmission strategies to support long-term earnings growth**
- ❑ **Implement customized state-by-state strategies to achieve sustainable returns**
  - ➢ gridSMART[SM] provides customers added optionality during a time of rising commodity prices
  - ➢ Investments in generation and distribution that align with the interests of our regulators
  - ➢ Fuel cost recovery in each jurisdiction mitigates the impacts of rising commodity costs

While today we will discuss our Ohio filing and managing commodity exposure, it is important to keep in mind that a continued disciplined capital investment/rate base growth, and investments in interstate transmission are the other main drivers of earnings growth over the next several years.

AEP Ohio Electric Security Plan

- On July 31, 2008, in conjunction with the requirements of SB221, AEP Ohio filed an Electric Security Plan with the PUCO on behalf of CSPCo and OPCo.
- The filing addresses a range of issues that are broader than simply focusing on the Standard Service Offer (SSO) and includes the following key components:
  - Renewable Energy
  - gridSMART[SM] Phase 1
  - Distribution Reliability Enhancement
  - Energy Efficiency and Demand Response
  - Economic Development



Components of Filing

- Renewable Energy: RFP for up to 300 MW of renewable sources of energy has yielded reasonable wind bids including the possibility of a "jump start" on wind sources physically located in Ohio.

- Gridsmart: Phased-in approach to implementing specific components, including Automated Meter Infrastructure (AMI), Home Area Networks (HAN) and Distribution Automation (DA)

  - Phase 1 will be installed over a three-year period in the northeast area of central Ohio

- Distribution Reliability: Designed to reach a higher level of reliability and includes incremental vegetation management and expansion of current base programs

- Energy Efficiency & Demand Response: AEP is conducting a Market Potential Study collaboratively with a group to explore and develop a suite of cost effective programs.

Customer Rate Impacts

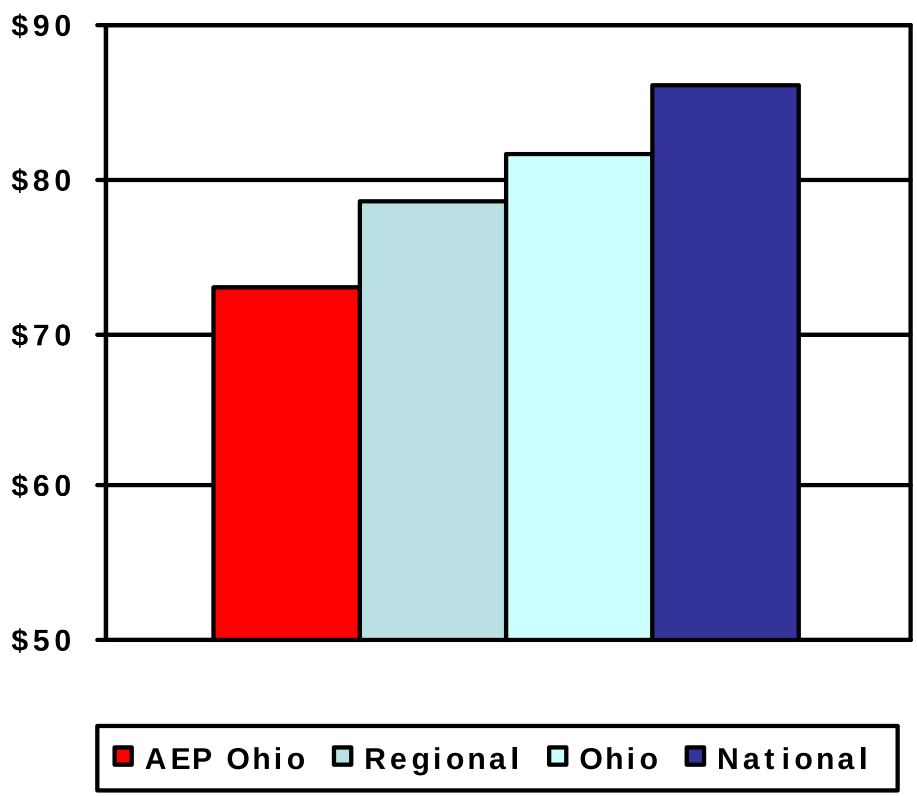
- Key components included in rates include:
  - Phase-in of FAC expenses
  - Environmental capital (carrying charge on investments not currently reflected in rates)
  - Basic non-fuel generation (primarily continuation of the 3% & 7% consistent with RSP increases)
  - Energy efficiency and demand reduction riders
  - Distribution (enhanced reliability and gridSMART)
  - Regulatory assets amortization (SB3 implementation, etc.)
  - Provider of last resort (POLR)

Next Steps:
Intervenor testimony is due October 31, 2008
Staff testimony is due November 7, 2008
Public hearing commences on November 17, 2008. We anticipate an order at the end of 2008.

Proposed rate plan results in annual increase of approximately 15% on customers' total bill, with deferral and phase-in of Fuel Activation Clause (FAC) expenses

A Look At How We Compare

AEP Ohio's rates are well below regional and national averages



Based on EEI Typical Bills and Average Rates Report – Winter 2008. Average CSP and OPCo residential bill using 750 kWh per month.

Rates across the country will continue to escalate as commodity prices increase

Coal and Transportation Position

Committed Coal Position

% of forecasted burn

- **2008 99%**
- **2009 94%**
- **2010 88%**

- **Continue to secure short/medium/ long-term fuel supply contracts-continue to manage as a portfolio**
- **Testing alternate fuel blends at various plant to optimize plant economics and fuel choice flexibility**
- **Continuing to evaluate additional delivery options to increase capability and flexibility**
- **Transportation positions have been secured for rail contracts and are not up for renegotiation during the period.**
- **Transportation utilizing barges through AEP River Operations provides a meaningful hedge and reliable service.**

AEP buys 55% of all the coal that is mined in Ohio

AEP River Operations

- **Full-service Inland Waterways carrier**
  - **2,900 hopper barges**
  - **60+ towboats/20 tugs**
- **Tonnage & Commodity:**
  - **Captive: (for AEP)-37MM tons of coal;**
  - **Commercial: 35MM tons of coal/grain/bulk**
- **Gulf Operations**

  Barge cleaning and repair

  Fleeting and shifting

  Midstream transfers
- **Operating Centers in Lakin, WV, Cape Girardeau, MO, Paducah, KY, Convent and Belle Chase, LA**

Inland Waterway Routes For AEP River Operations

gridSMART℠ Evolution – AEP East

	State Policy	AEP Action Plans
AEP OHIO — A unit of American Electric Power	SSB 221 provides targets and provisions for DSM/EE programs and supports infrastructure modernization.	Filed an Electric Security Plan (2008) which includes a model city pilot in NE Columbus and addresses DSM/EE programs.
AEP APPALACHIAN POWER — A unit of American Electric Power	Policy in VA is beginning to drive both renewables standards and DSM/EE programs.	AMR investments in VA and WV will defer new AMI for several years. New 2 MW NaS battery in Milton, WV will test dynamic islanding – supplying electricity while disconnected from the grid.
AEP KENTUCKY POWER — A unit of American Electric Power	KY's commission rules regarding DSM/EE programs are the model we seek in other states. However, like in other states, cost effective programs are difficult to implement due to KPCo's low rates.	Existing programs are focused on low-income weatherization and heat pump programs for mobile homes and receive favorable recovery.
AEP INDIANA MICHIGAN POWER — A unit of American Electric Power	IN & MI both have strong interests in efficiency programs. MI is considering requiring 2% of state revenues allocated to EE.	Broadly focused South Bend Pilot includes AMI, distribution automation, demand response, pre-paid meters. NaS battery installation in IN in 2008 to demonstrate storage with intermittent wind.

The eastern states are evolving in their positions regarding demand management, energy efficiency and AMI investments.

gridSMART^{SM} Evolution – AEP West

	State Policy	AEP Action Plans
AEP TEXAS — A unit of American Electric Power	Current legislation supports concurrent cost recovery of DSM/EE programs. Legislature expecting distribution service providers in ERCOT to file plans for smart meter deployment.	Executing aggressive DSM/EE programs with targets of 15% and 20% offset to growth in 2008 & 2009. Will file by Oct. 31, 2008 a deployment plan for smart meters.
AEP PUBLIC SERVICE COMPANY OF OKLAHOMA — A unit of American Electric Power	Heavily involved in DSM rulemaking with OCC and rules to be developed in Oct 2008. Small DSM/EE program ($4.3M) approved.	Conducting small scale Distribution Automation pilot in South Tulsa. In process of implementing DSM/EE programs.
AEP SOUTHWESTERN ELECTRIC POWER COMPANY — A unit of American Electric Power	DSM/EE program costs are recoverable thru a rider in AR and base rates in LA and TX. There is no statutory support for AMI outside of TX footprint.	Continue DSM/EE in AR and in TX.

Texas currently has the most progressive legislative stance with regards to supporting AMI. PSO and SWEPCo have active DSM/EE programs with Distribution Automation pilots proposed in each state.

Regional Capacity and Energy Situation: AEP East

Generation planning in the East is a mix of regional and state-level strategy. Planning is regional because capacity requirements and energy to serve native load are shared under AEP's pooling agreement. Execution is state-by-state because regulators control cost-recovery approval for any new plants and sharing of off-system sales margins.

AEP OHIO
A unit of American Electric Power

- OPCo is significantly long capacity.
- CSP gradually gets capacity short as plants are retired.
- SSB 221 sets significant renewable and advanced energy standards, but contains provisions for a waiver of the requirements if the costs are too high.

AEP APPALACHIAN POWER
A unit of American Electric Power

- APCo is the most capacity-short company in the East.
- WV has a strong long-term interest in coal.
- Law in VA sets voluntary renewable targets.
- AEP continues to pursue wind energy through long-term PPAs.

AEP KENTUCKY POWER
A unit of American Electric Power

- KPCo is short capacity, but less so than APCo.
- KY also has a strong long-term interest in coal.

AEP INDIANA MICHIGAN POWER
A unit of American Electric Power

- I&M is long capacity (no new fossil generation in the near or mid-term).
- IN & MI legislatures are considering RPS standards, with wind being the renewable of choice in IN.

Regional Capacity and Energy Situation: AEP West

CAPACITY POSITION

- PSO and SWEPCo are currently capacity deficit and filling their needs with market purchases.

PSO New Generation Situation

- Regulators will act, but regional economic interest still prevails.
- As a clear example, the Oklahoma Commission acknowledged and approved PSO's need for 450MW of baseload capacity, but denied a CCN and cost recovery for the proposed coal-fired Red Rock plant.
- An RFP was issued to purchase needed capacity and energy and proposals were due August 22. Evaluation of the proposals is underway.

ENERGY POSITION

- PSO and SWEPCo are also facing significant, growing energy deficits.

SWEPCo New Generation Situation

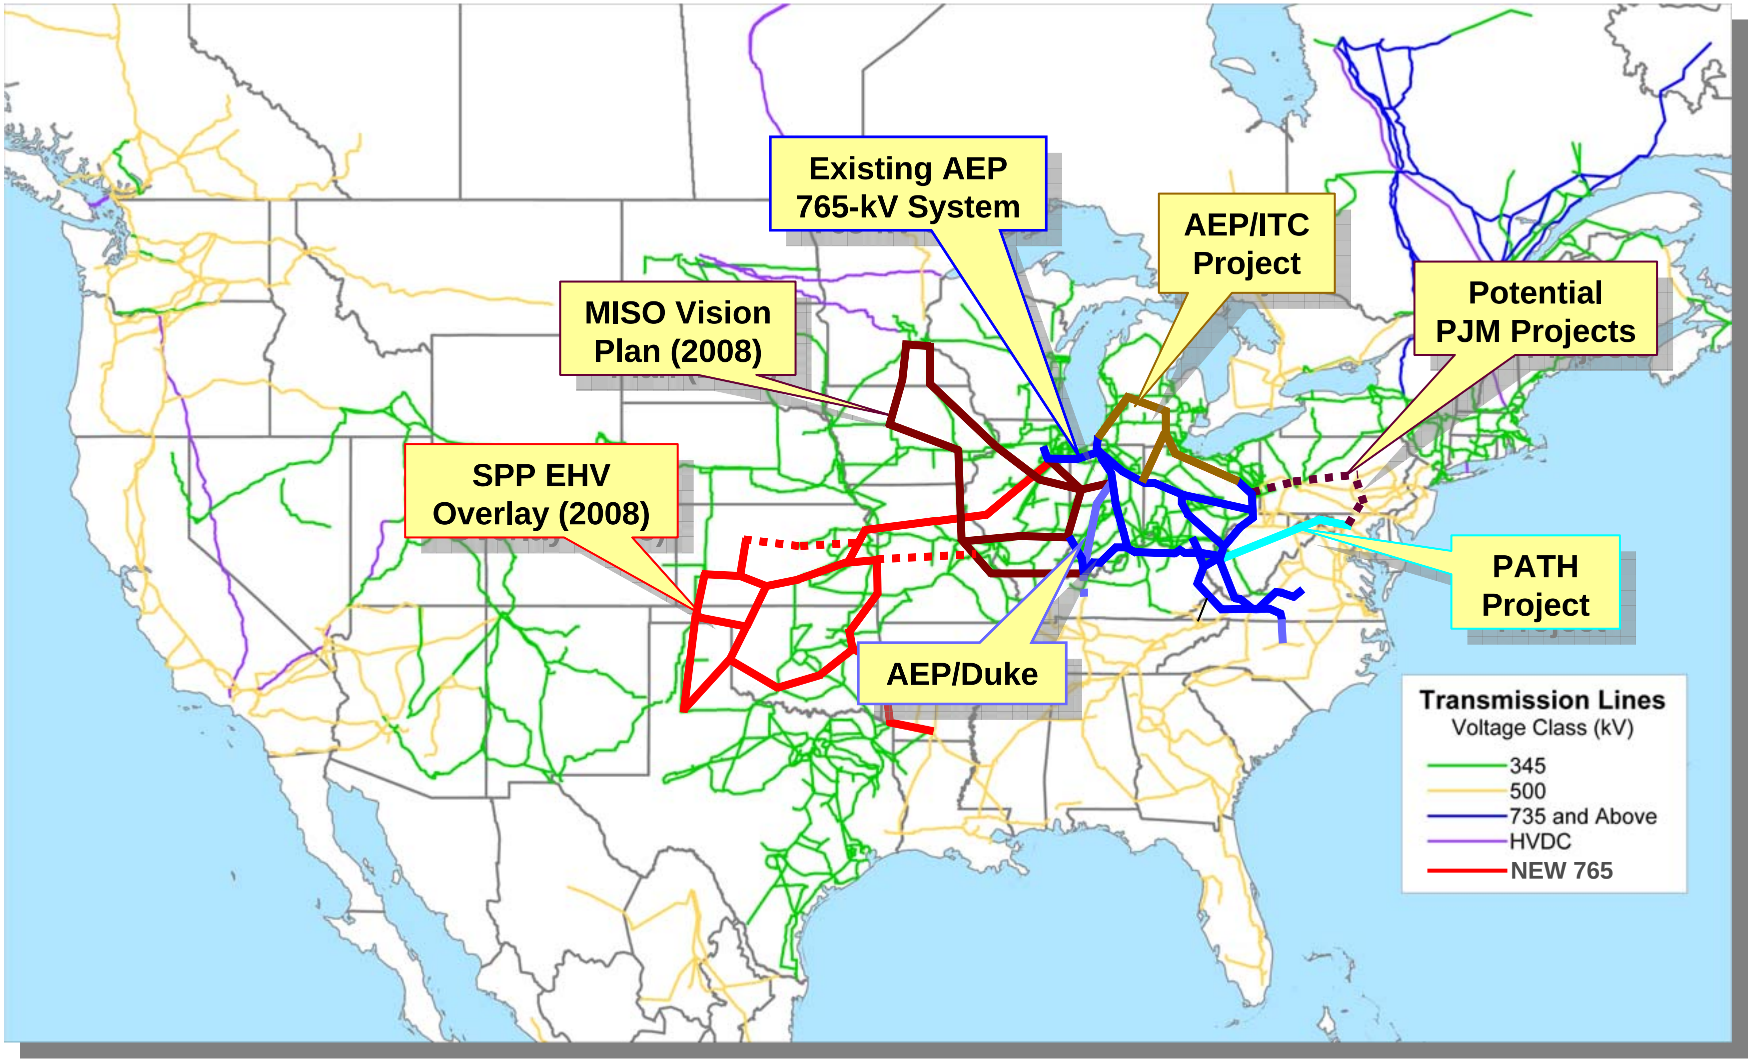
- SWEPCo's states have less vested interest in gas-only to meet the region's energy needs for 2013 and beyond and are in various stages of approval for the Stall (509 MW gas-CC) plant. The Turk Plant (447 MW coal) has been approved by all three jurisdictions and we await the air permit from the ADEQ.

2008-2010 Projected AEP West New Generation Capital Expenditures

	2008	2009	2010
Stall	$207MM	$85MM	$32MM
Turk	$115MM	$249MM	$227MM

PSO and SWEPCo face immediate and growing infrastructure shortages. We have implemented an RFP process to purchase the needed capacity and energy in Oklahoma and are building new generation in Arkansas and Louisiana to meet SWEPCo's capacity and energy needs.

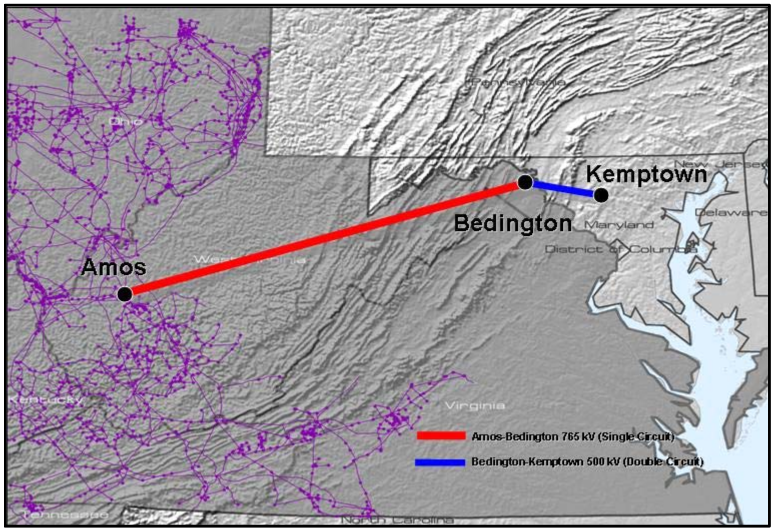
Making it Happen: EHV Projects Under Development



NOTE: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

I-765™ Transmission in PJM: PATH

- *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries -- to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP
    - 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
  - FERC ordered the formula rate mechanism be set for hearing, pending settlement judge procedures
- *Funding Plans/Transaction Structure*
  - AEP and Allegheny share ownership of Amos – Bedington line and contribute equally to this portion of the project through PATH West Virginia Transmission Company, LLC
  - AEP's investment will be held in the AEP Transmission Holding Company LLC subsidiary
- *Key Next Steps*
  - Siting Approval from WV and MD - 2010
  - Targeted Completion - 2012



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

PATH
Potomac-Appalachian Transmission Highline

Joint Ventures with MEHC

Electric Transmission Texas Update

- *Transaction Structure*
  - 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
  - ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
  - Services provided by AEP and investment opportunities can be offered by either partner
  - Total initial investment of $70 million before ownership division
- *Next Steps*
  - Await PUCT approval of consortium proposal, which includes ETT's portion of 710 miles of new transmission at an estimated cost of between $1.5 billion and $1.7 billion
  - Anticipate transferring some project opportunities in 2008 after regulatory approvals obtained.

Electric Transmission America Update

- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.
  - ETA recently signed agreements with Westar Energy and OGE proposing to build the first and second segments of the 765-kV Overlay Plan in SPP

I-765™ Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- *Overview*
  - Sent non-binding Letter of Commitment to SPP to construct 765-kV and 500-kV projects in SPP region consistent with SPP Overlay Study – Summer 2007
  - Updated EHV Overlay Study completed by SPP – March 2008
- *Benefits*
  - Overall reliability reinforcement with improved voltage support throughout the SPP system
  - Significantly increased transfer capability
  - Provides access to new generation resources, especially renewables
  - Allows for effective interconnections for EHV system development
- *Next Steps*
  - ETA Partnering Agreements - 2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate and Cost Allocation Filing (postage stamp) – 2009
  - Siting Approval for projects – 2009-2011
  - Estimated Completion (in segments) – 2013-2017

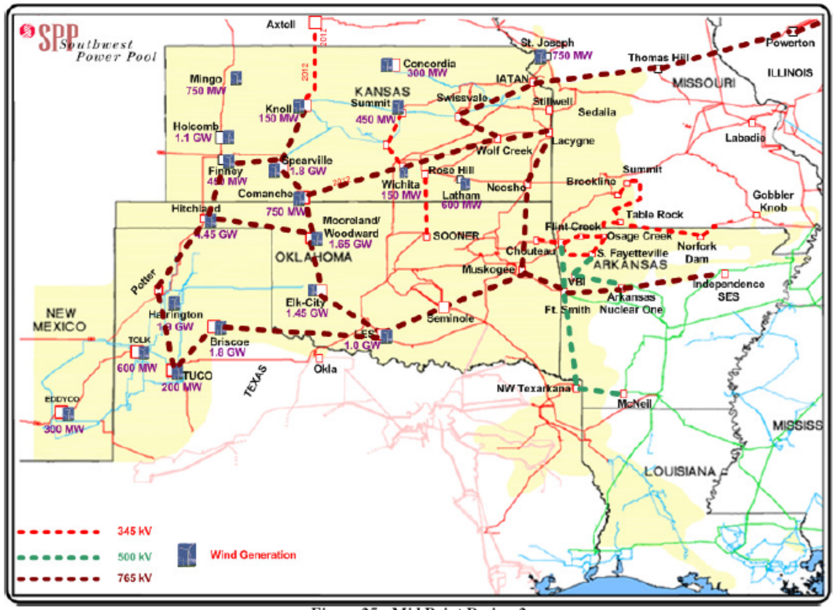


Figure 25: Mid Point Design 2

Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

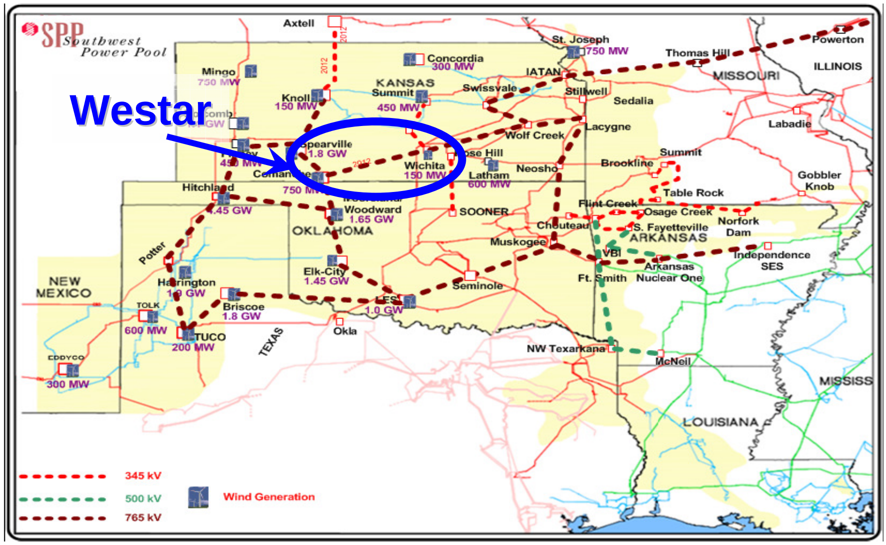
Page 7567 of 9556

Prairie Wind Transmission, LLC

JV to build first segment of 765-kV transmission in SPP

- **Overview**
  - On May 19, 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT)
  - PWT is a 50/50 JV that is proposing to build approximately 230 miles of 765-kV lines extending from Wichita, Kan., west to a substation northeast of Dodge City, Kan., and then south to the Kansas border from Medicine Lodge, Kan.
  - The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region
  - Project is expected to cost approximately $600 million (based on SPP estimates) and be in-service by 2013
  - AEP's ownership of the joint venture is 25%
  - AEP obligations include oversight of 765-kV Engineering, 765-kV Technology and Project Management
  - Other responsibilities will be handled by the partners or outsourced



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

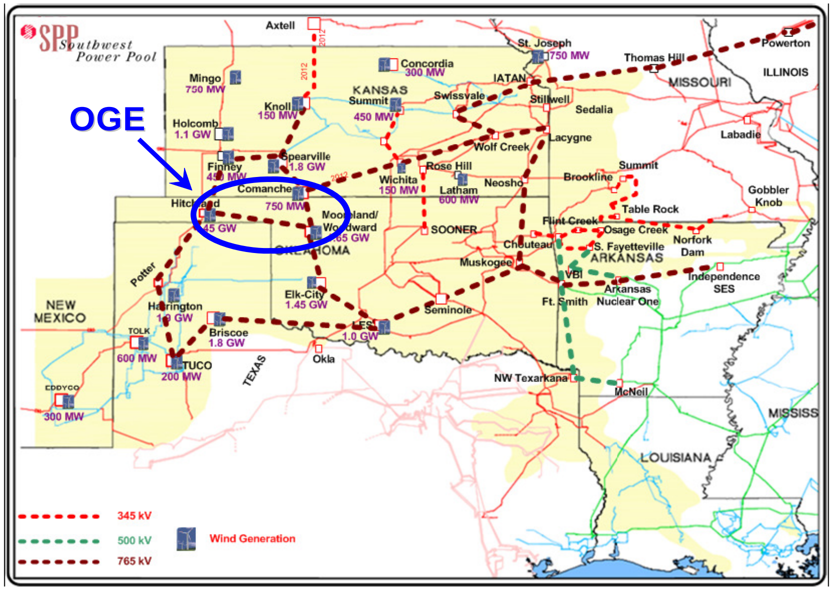
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

- **Next Steps**
  - Filed CPCN – 2Q2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate Filing (postage stamp) – Fall 2008
  - SPP Cost Allocation Filing - 2009
  - Siting Approval – 2009
  - Estimated Completion – 2013

ETA JV with OGE

JV to build second segment of 765-kV transmission in SPP

- **Overview**
  - On July 15, 2008, ETA signed an agreement with OGE Energy Corp. to form a joint venture
  - The JV is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines extending from the Kansas-Oklahoma border north of Woodward, OK, that will link into OGE's station at Woodward and then extend west to a new station that will be built near Guymon, OK.
  - The project will provide enhanced electricity transport in Oklahoma and support expansion of renewable electricity generation in the region
  - Project is expected to cost approximately $500 million (based on SPP estimates) and be in-service by 2013
  - AEP's ownership of the joint venture is 25%
  - AEP obligations include oversight of 765-kV Engineering, 765-kV Technology and Project Management
  - Other responsibilities will be handled by the partners or outsourced



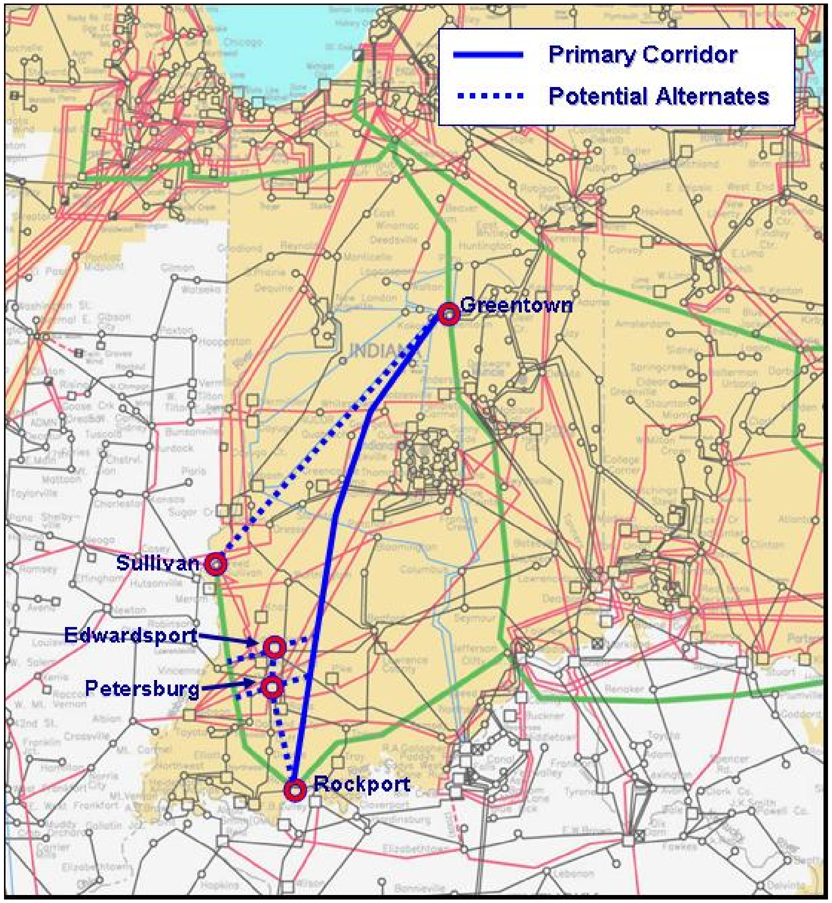
Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

- **Next Steps**
  - File CPCN –2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate – Fall 2008
  - SPP Cost Allocation Filing – 2009
  - Siting Approval – 2009
  - Estimated Completion – 2013

Pioneer Transmission, LLC

- *Overview*
  - On August 11, 2008, AEP & Duke formed a joint venture to build and own a 765-kV transmission line. Pioneer Transmission LLC is a 50/50 joint venture between the two companies.
  - The primary project involves the construction of approximately 240 miles of 765-kV lines extending from AEP's Rockport substation east of Evansville, Indiana with Duke's Greentown substation near Kokomo, Indiana.
  - Project is expected to cost approximately $1 billion, but final costs will depend on the routing of the line, equipment and commodity costs. AEP's share of the costs will be 50% of the total.
  - In-service date will be determined by the MISO and PJM planning process, with earliest possible completion in the 2014-2015 timeframe.
- *Next Steps*
  - Submit proposal to PJM & MISO for consideration in their transmission expansion plans
  - FERC filing for rate approval – 2008
  - Estimated Completion – 2014-2015



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected.

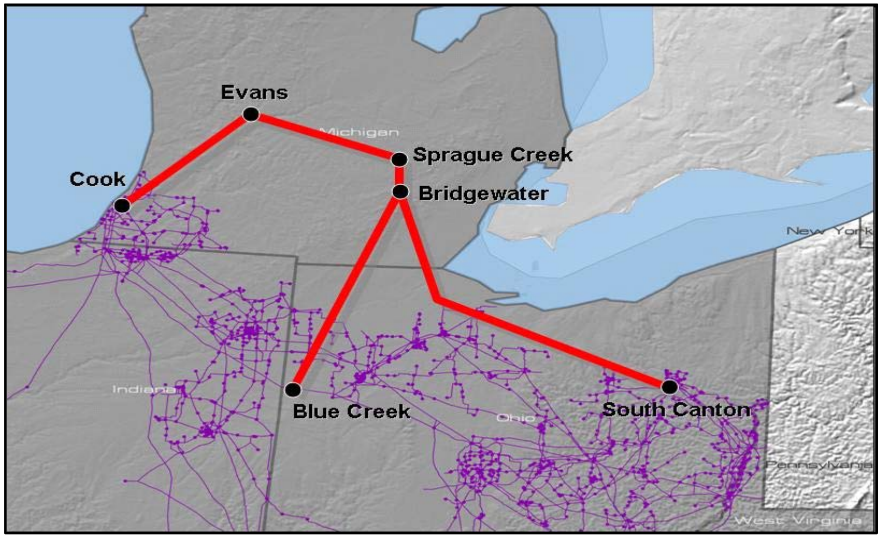
I-765™ Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

Overview

- ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
- Study was released Q3 2007
- 700 miles of 765-kV line in Ohio and Michigan
- $2.6 billion investment (before ownership division)
- AEP and ITC are in discussions to form a Joint Venture



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Benefits

- Up to 5,000 MW improved transfer capability
- Reduces network line losses by 250 MW

Next Steps

- Agreement on JV (AEP/ITC) - Summer 2008
- JV Formation - 2008
- MISO and PJM Review/Approval - 2009
- FERC Formula Rate & Cost Allocation Filing - 2009
- Siting Approval – 2011-2012
- Estimated Completion – 2015-2021

Note 8	**Economic Development**	**25.0M**	**0.0M**	**25.0M**	**0.0M**	**25.0M**	**0.0M**	JH Test P16

Note 1: AEP Ohio requested phase-in of proposed incremental FAC expenses during the three-year ESP period. Additionally, there will be a periodic true-up of the current period actual FAC to what was recovered in rates for that period. This will produce on-going periodic under/over recoveries of FAC costs for the period that have not been estimated for 2010 or 2011.

Note 2: Represents capital carrying cost on environmental facilities not currently reflected in rates. Exhibits PJN-8 &PJN-10 provides calculation of environmental carrying cost and components of the carrying cost rate applied to the capital expenditures, respectively.

Note 3: We requested a 3% & 7% per year increase in non-FAC generation for CSP & OPCo, respectively, consistent with the RSP increases. Exhibit PJN-8 shows the capital carrying cost on incremental environmental facilities forecasted for 2009. Exhibit PJN-10 provides the calculation and components of the carrying cost rate applied to the capital expenditures.

Note 4: Represents the Provider of Last Resort charge which is addressed in the testimony of Craig Baker starting on page 25.

Note 5: Requested an annual 7% & 6.5% per year increase in Distribution for CSP & OPCo, respectively. Exhibit DMR-4 shows expected O&M & carrying charge cost of capital for reliability and in the case of CSP, gridSMART, for the 2009-2011 time period. The carrying charge costs are provided on Exhibit PJN-10.

Note 6: Represents estimated costs to provide AEP-sponsored customer demand response & energy efficiency programs. These costs are discussed in the Sloneker testimony starting on page 18.

Note 7:

	2009 CSP	2009 OPCo	2011 CSP	2011 OPCo
Expiration of Special Contract	-$22.7M	-$27.1M		
Reg Asset Surcharge	-$54.2M		22.8M	15.2M
Other	-$3.8M	$0.0M		
Total Other	-$80.7M	-$27.1M	$22.8M	$15.2M

A special contract expires 12/31/08 and the customer will go on the standard tariff.
The revenue reduction associated with the elimination of the reg asset surcharge in 2009 will be offset by the reduction in related amortization.
Other of $3.8M represents the expiration of monthly line extension surcharges.

Summary Rate Case Information

I&M Indiana General Rate Case

On January 31, 2008, I&M filed a general base rate case with the Indiana Utility Regulatory Commission (IURC) requesting an increase of $128.5 million ($82.4 million in base revenues and $46.1 million in tracker mechanisms). (Docket #: 43306). Order is expected in June 2009.

Regulatory Activity Underway

APCo-Virginia E&R Filing

On May 30, 2008, Appalachian Power filed the third tranche of E&R surcharge filings with the SCC, requesting a $66.5 MM increase for environmental and reliability costs incurred during the period October 1, 2006 through December 31, 2007, with a proposed one year recovery period commencing January 1, 2009. Respondent testimony was received August 13, Staff testimony was received August 27, Rebuttal testimony received September 3 and hearing commenced on September 17.

Summary of APCo's E&R filings:

E&R Tranche:	Case Number	Cost Incurred :	Recovery Period:	Amount:
I	PUE-2005-00056	7/1/2004 thru 9/30/2005	12/1/2006 thru 11/30/2007	$21.3 million
II	PUE-2007-00069	10/1/2005 thru 9/30/2006	1/1/2008 thru 12/31/2008	$48.9 million
III	PUE-2008-00045	10/1/2006 thru 12/31/2007	Proposed 1/1/09 thru 12/31/09	$66.5 million

Regulatory Activity Underway

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $140MM. Approximately $10MM of the increase relates to 3rd party and the rest, if approved, would be recovered through retail jurisdictional filings in SWEPCo and PSO, as appropriate.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to February 1, 2008, with rates subject to refund.
- Settlement discussions are currently on-going.

Regulatory Activity Underway

PJM OATT Formula Rate Filing

- On July 31, 2008, the seven AEP East companies filed with the FERC to update the Open Access Transmission Tariff (OATT) rate and implement a formula transmission rate that will be updated annually to keep rates current with transmission investment.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is \$507MM and the new revenue requirement requested is \$606MM. Approximately \$31MM of the increase relates to 3rd party and Ohio and the rest, if approved, would be recovered through retail jurisdictional filings in the other east jurisdictions.
- We requested an effective date of October 1, 2008 for the revised tariff, which the FERC may suspend for an additional five months.

Regulatory Activity Underway

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- The PSC issued its order on November 21, 2007, approving construction of the plant.
- Air permit anticipated in the fourth quarter of 2008. A draft air permit approval was released for public comment on August 11, 2008.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The peaking facility has been addressed and the intermediate facility is under review. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- The LPSC issued its order on April 29, 2008, approving construction of the plant.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- The PUCT issued a written order approving construction of the plant on August 12, 2008.

Regulatory Activity Underway

SWEPCo Stall Plant Filings

Arkansas

- Proceeding was suspended pending outcome in Louisiana. Now that Louisiana approval has been received, we will seek an expedited ruling from Arkansas.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The intermediate facility, known as the Stall Plant and sited in Shreveport, LA, was bifurcated from the original filing and had a procedural schedule established on January 9, 2008.
- Staff and intervenor testimony was completed on February 15, 2008, rebuttal testimony was due February 29, 2008 and hearings were held in April 2008. Staff testimony was favorable and the ALJ recommended approval. An order is expected in the second half of 2008.
- Air permit received on March 20, 2008.

Texas

- PUCT order approving plant was issued on March 8, 2007.

Commitment to Credit Quality

- ❑ Maintain adequate liquidity
- ❑ $150MM annually in new equity from Dividend Reinvestment and 401(k) plans
- ❑ Target 60% maximum consolidated AEP debt/cap ratio on an adjusted basis
- ❑ Target utility company capitalization structures:

Company	Target Equity Ratio
APCo	42-44%
CSP	45-47%
I&M	40-42%
KPCo	41-43%
OPCo	44-46%
PSO	43-45%
SWEPCo	43-45%
TCC	40%
TNC	40%

- ❑ Target long term dividend payout ratio range of 55-60%
- ❑ Maintain adequate coverage ratios to support current credit ratings

We are committed to maintaining our current credit ratings.

American Electric Power

AEP AMERICAN ELECTRIC POWER

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

AEP Strategic Direction

Delivering Value to Investors and Cost-Effective Service to our Customers

- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Grow our transmission business
- Achieve adequate returns on all assets

Our core utility mission: Bring reasonably priced electric service to our customers, thereby strengthening our communities and rewarding our investors

Our Strategy has a Capital Investment Focus

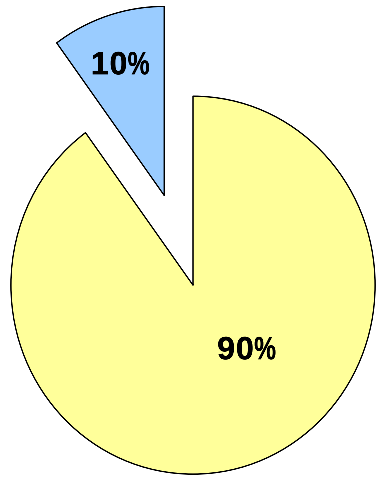
- Near-term
  - Completion of our intensive environmental retrofit program, coupled with associated rate relief, allows us to redeploy capital into other areas
- Mid-term
  - In our western footprint, our capital investment will focus on new generation
  - In our eastern footprint, our capital investment will focus on modernization of the distribution infrastructure, also known as the 'Modern Grid' program
  - In both the east and west, we will focus on successful demonstration and implementation of the chilled ammonia technology for carbon capture
- Long-term
  - Throughout our service territory, transmission, carbon technology, and IGCC will be our long-term capital investment focus

Capital investment opportunities will drive earnings growth for the foreseeable future

Environmental Investment Forecast

Environmental Program Costs:

Active/Firm Costs to Remaining Estimated Costs



Actuals To Date & Firm Costs

Remaining Estimated Costs

First-Mover Advantage:

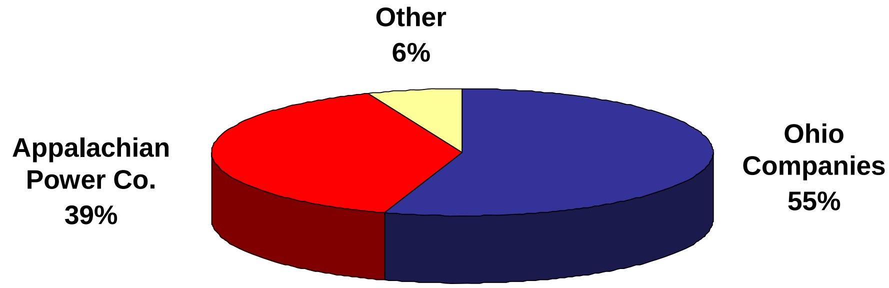
By locking in our environmental program costs in the early portion of this decade, AEP has a clear ‘first-mover’ advantage

AEP capital costs for a scrubber average approximately $250/kW

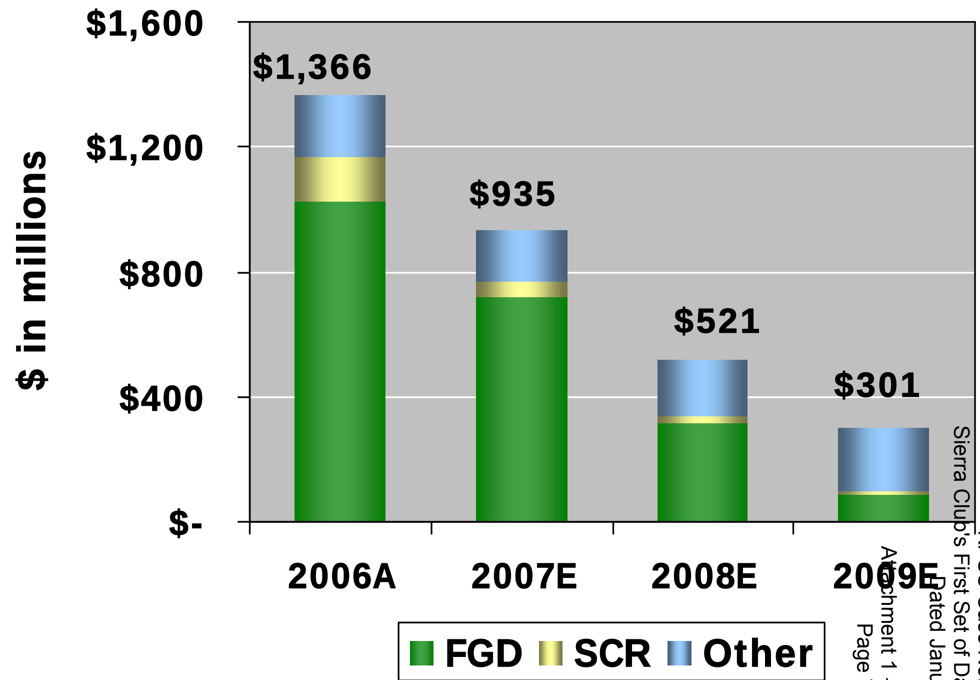
We have since seen a 30-60% increase in material costs and a 15% increase in labor rates

An FGD system for a nominal 600MW plant in 2005 $ was approximately $225/kW and in 2007 $ is $320/kW

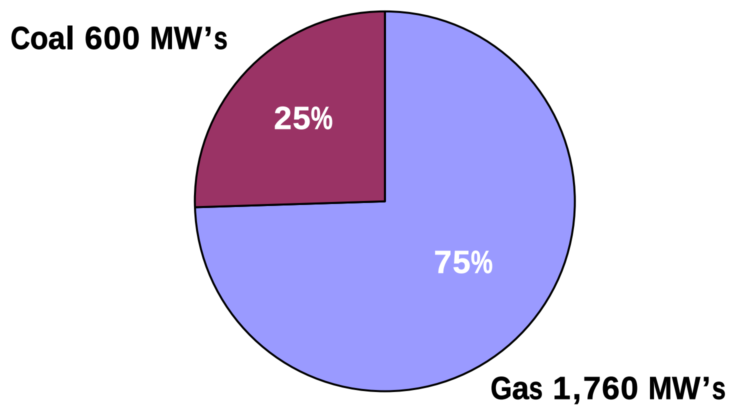
Projected Environmental Investment Allocation (2006A – 2009E)



Total Projected Environmental Investment

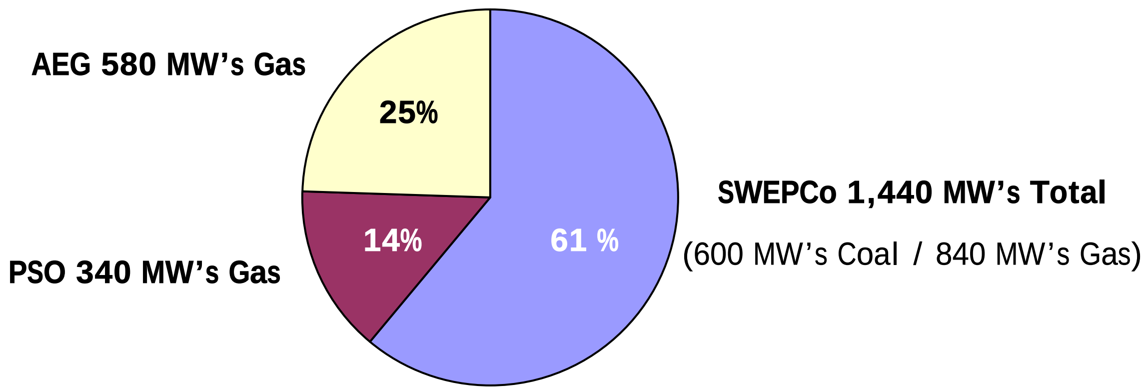


New Generation Facilities – Mostly Gas in Near Term



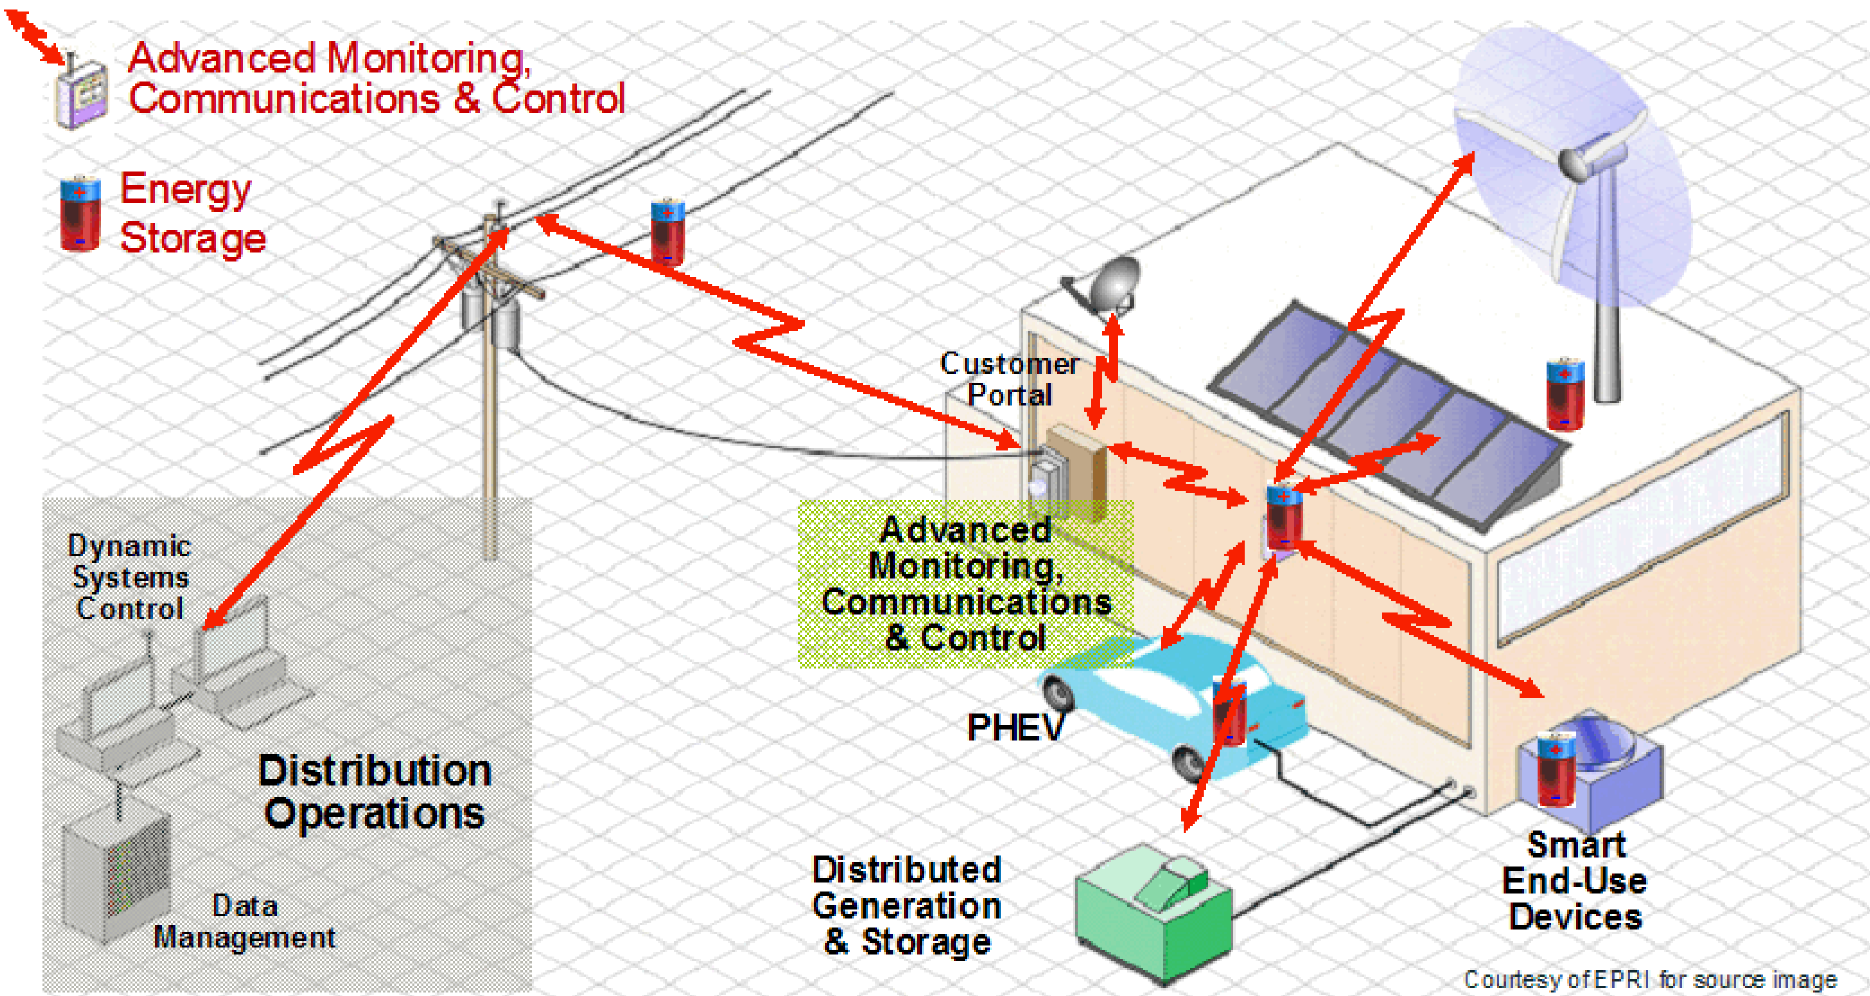
Project Name	Fuel Type	MW Capacity	Projected Costs
Mattison	Gas	340	$130 MM
Southwestern	Gas	170	$57 MM
Riverside	Gas	170	$57 MM
Dresden	Gas	580	$348 MM - $406 MM
Stall	Gas	500	$300 MM
Turk	Coal	600	$1.3 B

In addition, AEP has purchased approximately 3,000 MW gas capacity through distressed generation initiatives.



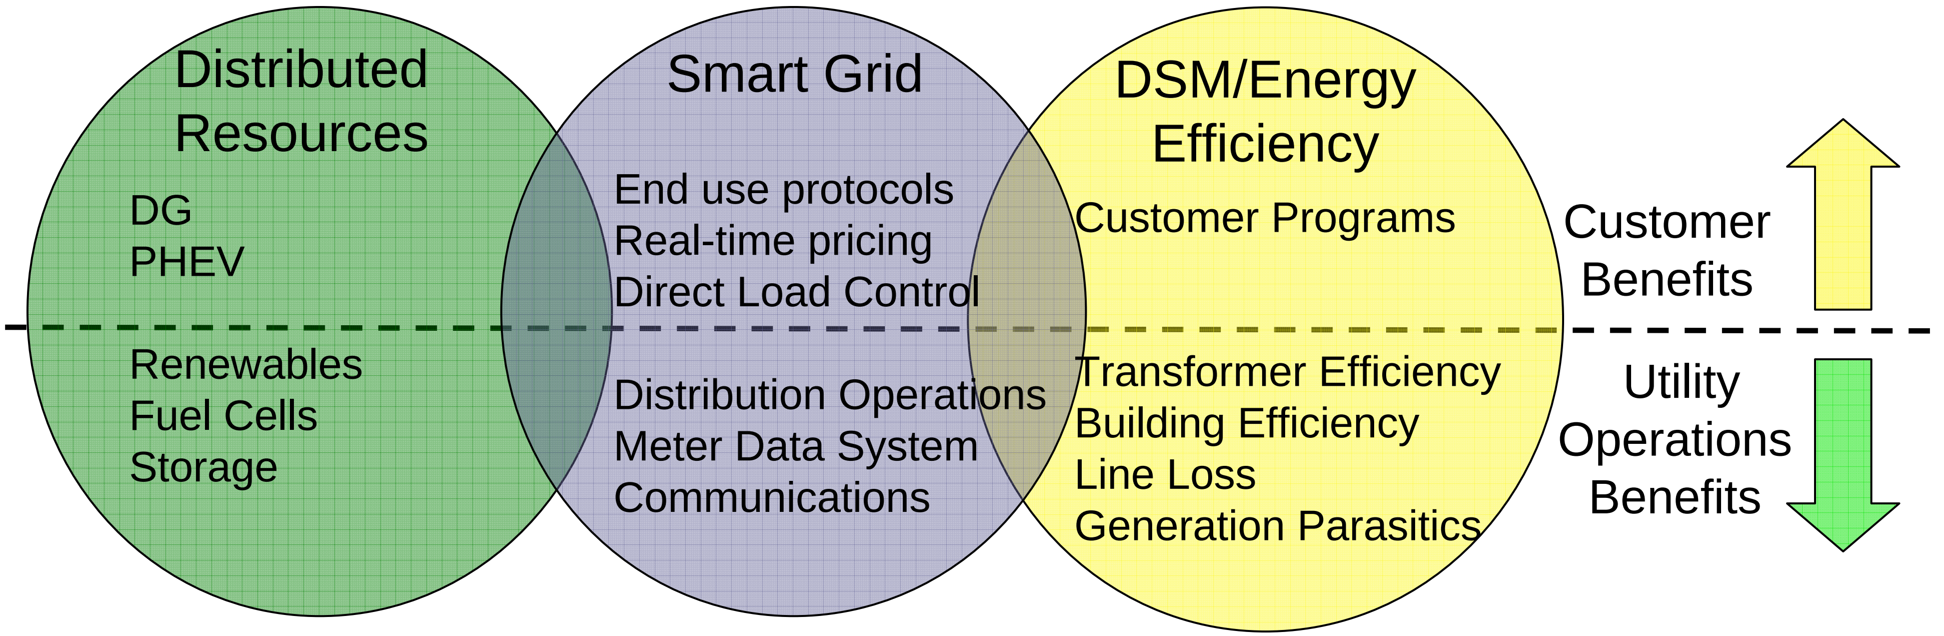
AEP is meeting the growing electricity needs of customers through the pursuit of new economic generation facilities

Distribution Operations of the Future



AEP AMERICAN ELECTRIC POWER

The "Modern Grid" Initiative



AEP has initiated an internal project to help clarify these inter-relationships, and develop our strategy for deploying these programs and technologies

Modern Grid Initiative

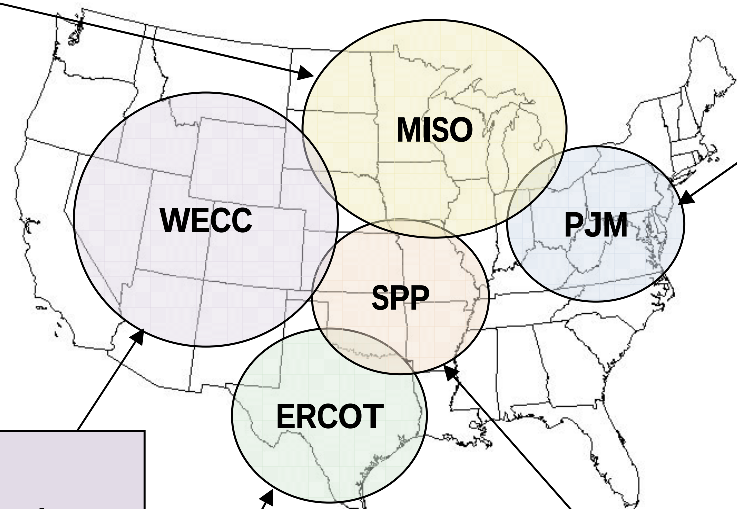
- Project to develop a vision for AEP's distribution and customer services business in the future, including the development of new customer programs and a plan to deploy advanced technologies
- Focus on:
  - Enabling greater customer control over energy usage
  - Enhancing conservation activities and overall environmental performance
  - Optimizing the operation of AEP's distribution business
- AEP needs to pursue:
  - Providing customers with real-time pricing signals
  - Providing customers with program options that encourage reduced energy consumption and lower peak demand
  - Promoting the use of electric vehicles and distributed generation
  - Using real-time system intelligence on our distribution system to improve operations and customer service
  - Utilizing advanced electricity storage for peak usage and power outages
  - Enabling technologies such as biomass, solar and fuel cells
  - Modeling future customer behaviors as a consumer of our own products
- Examples include:
  - Customer Energy Efficiency and Demand-Side Management Programs
  - Advanced Metering Infrastructure (AMI) & Distribution Automation (DA)
  - Distributed Generation, Renewable Resources and Energy Storage

Transmission Investment Vision

Investigation of opportunities needs to be mindful of regional drivers

MISO

ITC 765-kV project may be test case for cross-border cost recovery and seams issues



PJM

Congestion will be reduced and reliability will be increased

WESTERN STATES

Opportunity for 765-kV build-out for long-haul transportation from remote resources to load

SPP

Regional rate design under development to encourage investment and accommodate new generation sources

ERCOT

Load growth and access to wind resources driving transmission investment

We advocate a long-term transmission vision with a national interstate focus & 765kV technology

Transmission ~ $9-$15 Billion Opportunity

Creating a business model to manage capital requirements for enhanced returns with partners

Potential Opportunities

~ $3 Billion I765$_{TM}$ Project in PJM
~ $2 Billion 765-kV study in Michigan w/ ITC
~ $3 Billion Project filed with SPP
~ $1-7 Billion in ERCOT via Electric Transmission Texas, LLC (ETT)

1) ~$9-$15 billion investment opportunity not included in current capital guidance forecasts

2) Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

Assumptions

Estimated Investment Opportunity	$9 - $15 Billion
Ownership Structure w/ Partner	50% / 50%
Debt / Equity Ratio	50% debt / 50% equity
Return on Equity	11.00% - 13.00%
Potential EPS Impact (based on 396 MM shares)	$1.00+

Building the next US interstate system for enhanced reliability and market efficiency

Electric Transmission America (ETA)

Electric Transmission America (ETA)

- AEP signed an agreement with MidAmerican Energy Holdings Company on September 12, 2007 to form Electric Transmission America, a 50/50 Joint Venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by the Joint Venture would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA will hope to identify and initiate the approval process for the first project during the first half of 2008.
- AEP will act as project manager and will develop, build and operate transmission lines and facilities for ETA.

This JV reflects a natural progression and expansion of our partnership with MidAmerican.

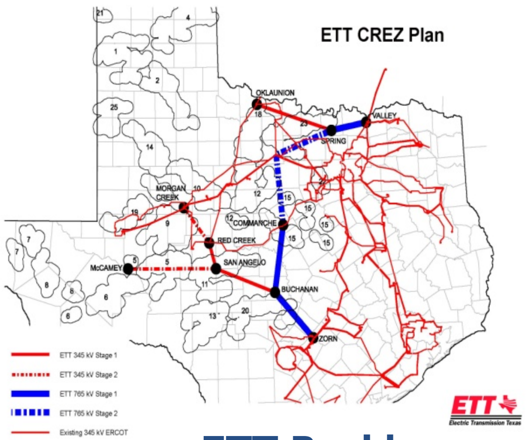
Electric Transmission Texas (ETT)

- **Electric Transmission Texas (ETT) Transaction Status**
  - Participation Agreement signed Jan. 9, 2007.
  - Texas regulatory filing on Jan. 22, 2007.
    - Requested utility status, transfer of initial assets, establishment of TCOS transmission recovery mechanism.
    - Hearings conducted July 16-17, 2007, commission order expected in the fall of 2007.
  - FERC approval for asset transfer received April 20, 2007.
  - Closing deadline of Nov. 1, 2007 can be extended by mutual agreement.

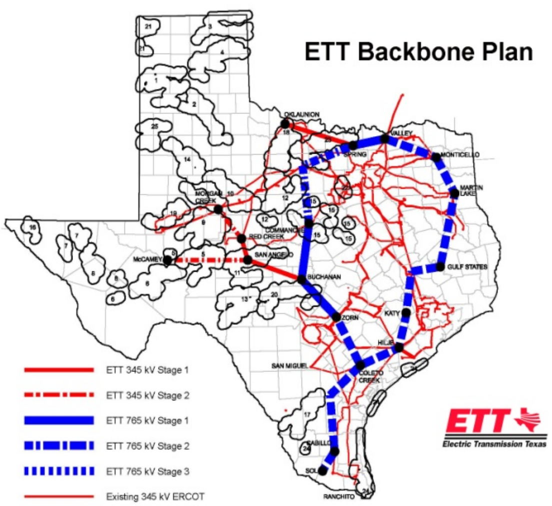
- **ETT CREZ Overview**
  - Strengthen ERCOT grid to collect and deliver wind generation to load
  - $1.5 billion investment Phase 1 – 2012 (before ownership division)
  - $1.5 billion investment Phase 2 – 2015 (before ownership division)

- **ETT ERCOT Backbone Proposal**
  - ETT proposal for ERCOT and PUCT to consider CREZ transmission in context of long-term vision for transmission system.
  - Current 5-year planning horizon results in higher ultimate costs, lower system efficiency.
  - Long-term 15-20 year perspective provides better plan, supports development of high voltage backbone at 765-kV.
  - $4.2 billion investment (long-term backbone).

ETT CREZ



ETT Backbone

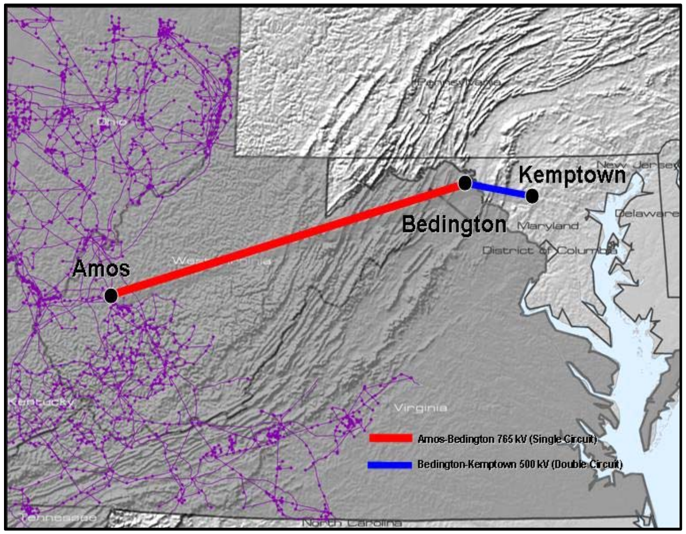


14

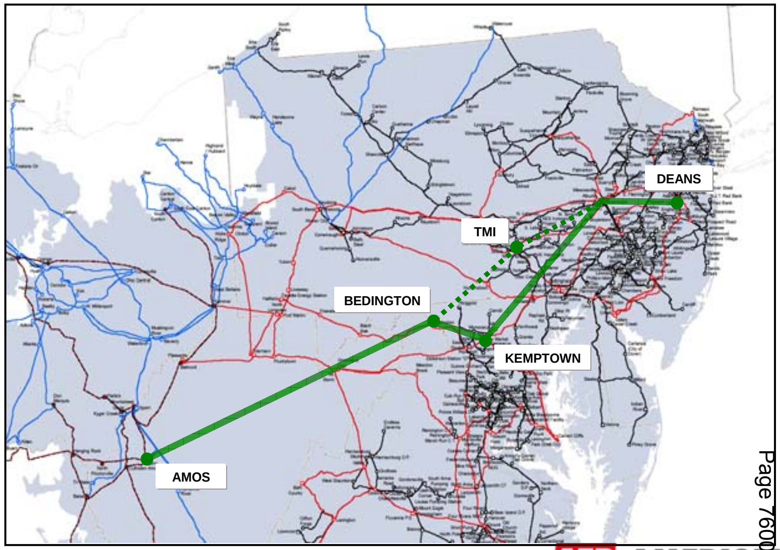
Transmission Project Updates

- *PJM I-765 TM Phase I Progress to Date*
  - AEP and Allegheny entered into the PATH (Potomac- Appalachian Transmission Highline) JV to construct the 290 mile West Virginia-Maryland line
  - Total estimated cost of $1.8 billion
  - AEP portion approximately $600 million
  - Expected completion 2012
- *Key Next Steps*
  - Complete FERC Filing – Fall 2007
    - *Pursuing new project FERC incentives: cash return on CWIP, higher ROE, recovery of pre-commercial operation costs and recovery of abandonment costs.*
  - Siting Approved – Fall 2009
  - Completion – Fall 2012
- *PJM I-765 TM Phase II Update*
  - Approximately 250 miles from West Virginia-Maryland border to Public Service Electric & Gas Deans Station in New Jersey.
  - Currently under consideration by PJM as part of Regional Transmission Expansion Plan (RTEP).
  - Based on PJM RTEP approval, AEP will seek a suitable business partner (JV partner) to complete the second leg of the original proposal.

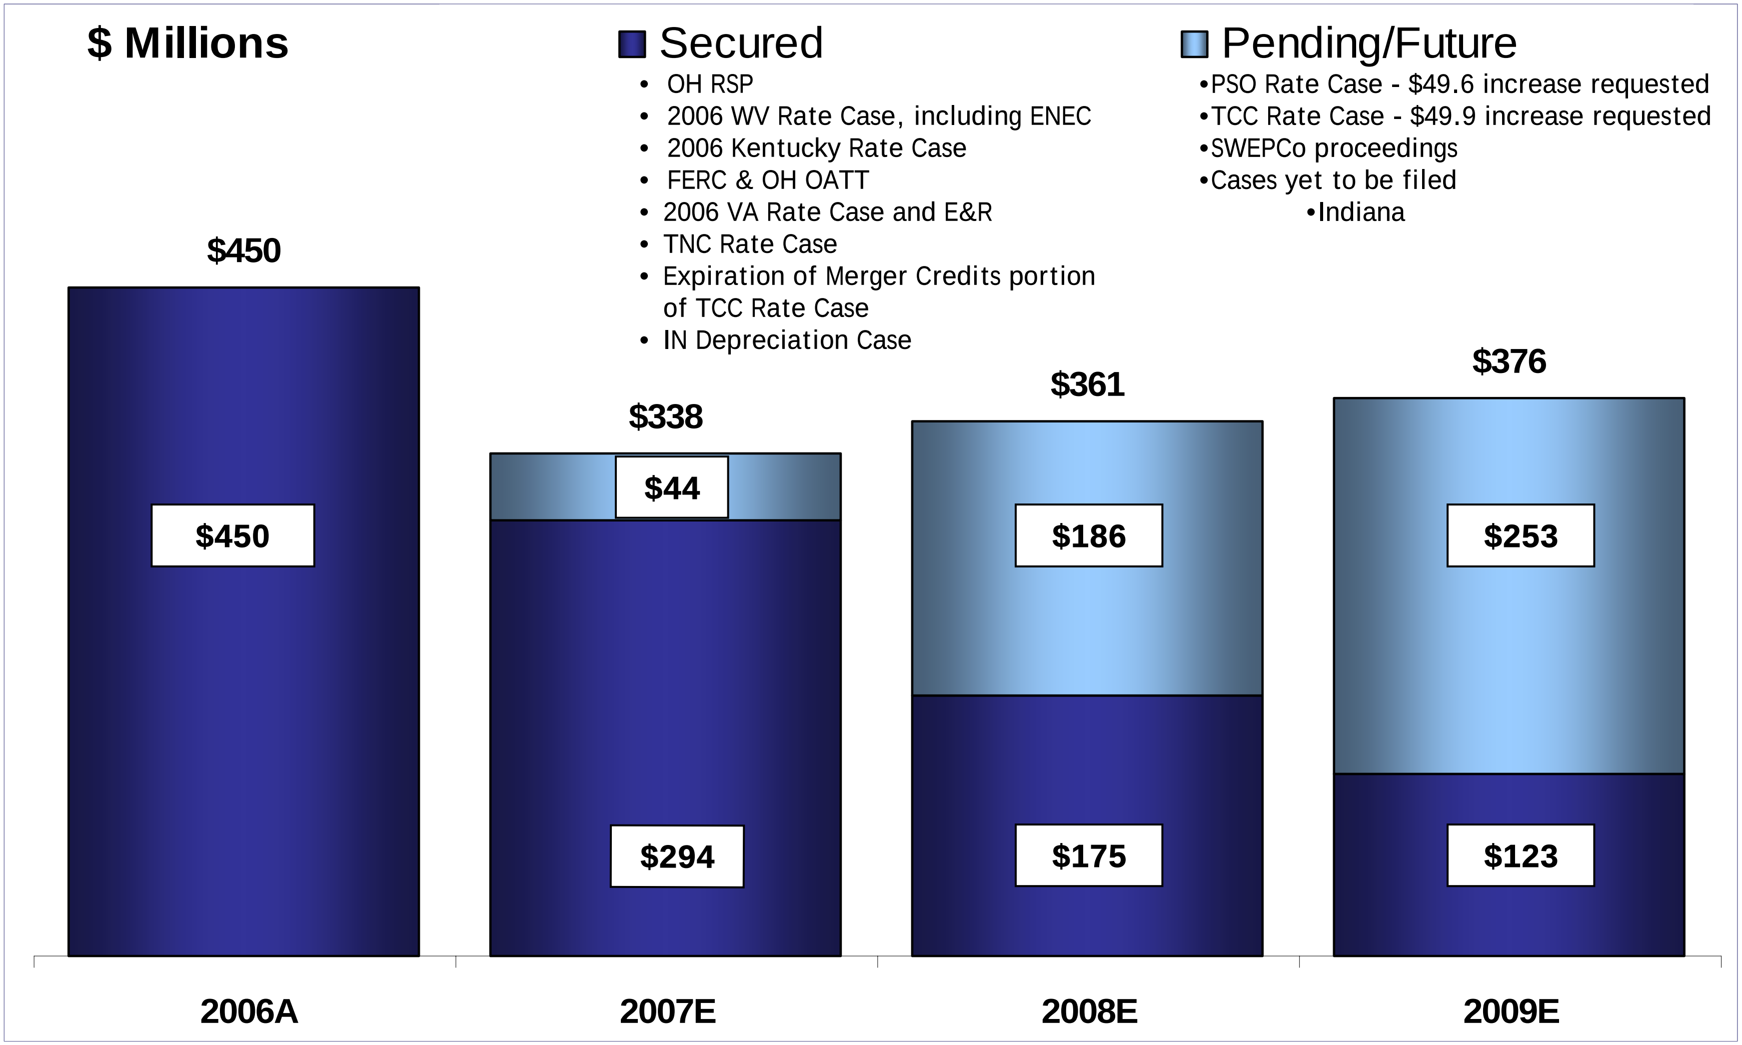
PJM Phase I



PJM Phase II



Incremental Rate Relief Composition



Rate relief is a critical element to AEP's financial success and allows us to pursue additional generation, transmission and infrastructure investment

Demonstrated Success in Regulatory Recovery

Track record for rate recovery of capital investment:

- Kentucky Environmental Surcharge—Monthly surcharge mechanism allows for recovery of pollution-control projects required by the Federal Clean Air Act.
- Ohio Rate Stabilization Plan—3% & 7% generation rate increases for CSP & OP, respectively for 2006-2008; Activation of additional 4% rider for additional generation-related investments.
- Virginia E&R mechanism—allows APCo-VA to recover incremental environmental & reliability costs.
- West Virginia rate settlement—Mechanism in place to provide rate increases through 2009 for ongoing environmental and transmission investments.

We expect to achieve similar success with rate recovery of Modern Grid, Transmission and New Generation Investments

Discussion of Industry Issue

Is Coal Generation Viable in Today's Regulatory Environment?

In Summary:

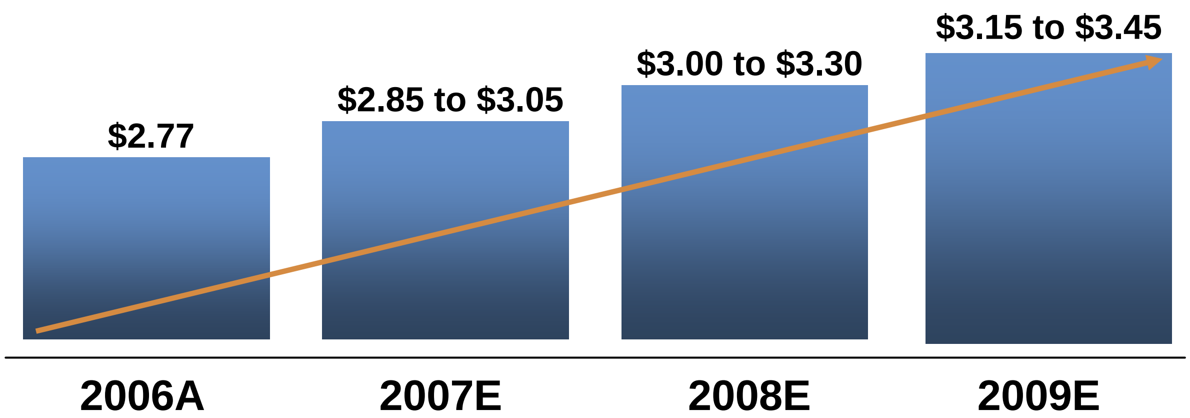
- AEP has embarked on an intensive capital investment program.
- We have achieved a successful track record of regulatory recovery of those investments and have demonstrated discipline where regulatory recovery wasn't assured.
- We will continue to take advantage of capital investment opportunities in the near, mid & long term:
  - Environmental
  - New Generation
  - Modern Grid
  - New Transmission
  - These capital investment opportunities will continue to enhance our earnings potential

Questions?

Appendix

Long Range Performance – Consistent and Predictable Growth

2007, 2008 & 2009 Ongoing Earnings Guidance Ranges: 5-7% Annual Growth



- Continued disciplined investment in existing utility operations:
  - Reliability
  - Environmental
  - New Generation & Distribution Infrastructure
- Investment in new transmission opportunities
- New investment coupled with rate recovery
- Continued cost control
- Timely Rate Relief
- Maintain Credit Ratings
  - BBB/Baa2/BBB

Future earnings growth driven by native load growth and substantial utility investment opportunity focused on regulated operations

2007 Ongoing Guidance: $2.85 to $3.05 per share

American Electric Power
Financial Results for 2006 Actual vs. 2007 Estimate

		Performance Driver	2006 Actual ($ millions)	Performance Driver	2007 Estimate ($ millions)
	UTILITY OPERATIONS:

At the conclusion of our current environmental retrofit program, over 47% of our coal-fired generation fleet will be equipped with SCRs and over 50% will be scrubbed (FGD).
AEP's total coal fleet capacity = 24,630 megawatts *

*Excludes AEP's 44% ownership in OVEC (980 MWs of coal-fired capacity)

AEP AMERICAN ELECTRIC POWER

Purchased Generation

Waterford
–821 MW combined-cycle gas plant
–$220MM purchase price
–Columbus Southern Power completed purchase on Sept. 28, 2005
–$268/kW

Lawrenceburg
–1140 MW combined-cycle gas plant
–$325MM purchase price
–AEG completed purchase on May 16, 2007
–$295/kW

2,946 MW of gas-fired generation added since 2005

Darby
–480 MW simple-cycle gas plant
–$102MM purchase price
–Columbus Southern Power completed purchase on April 25, 2007
–$227/kW

Ceredo
–505 MW simple-cycle gas plant
–$100MM purchase price
–APCo completed purchase on Dec. 15, 2005
–$198/kW

Addition of gas-fired generation allows us to meet the growing needs of our customers and provides the company with greater fuel flexibility

AEP AMERICAN ELECTRIC POWER

New Generation Facilities

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
SWEPCo	Mattison	Arkansas	$130 MM	Gas	Simple-cycle	340 (1)	2007

CSP/OP	Great Bend	Ohio	Under Review (4)	Coal	IGCC	630	2017

(1) 150MW declared in commercial operation on July 12, 2007.
(2) We are currently developing contracts and estimates to complete the project. It is anticipated that the unit can be completed between $600 to $700 per kW using an "all-in" cost basis.
(3) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment.
(4) FEED (front-end engineering and design) study with GE/Bechtel is complete. Cost estimates are not yet filed with the PUCO due to the pending appeals to the Supreme Court of Ohio resulting from the PUCO's April 10, 2006 Opinion and Order.

AEP is meeting the growing electricity needs of customers through the pursuit of new economic generation facilities

New Gas-Fired Generation Facilities

SWEPCo

- **Mattison Plant (Tontitown, AR)**
  - Certificate of Need filings (LA, AR, TX) were approved in all 3 states
  - Air permit received in February 2007
  - Units 3 and 4 (150 MW) online on July 12, 2007; Units 1 and 2 online by January 2008
- **Stall Plant (Arsenal Hill, LA)**
  - Certificate of Need filings (LA, AR, TX)
    - TX settled in Feb 2007
    - AR & LA decisions expected by year-end 2007
  - Air permit filed on April 27, 2007 – expecting approval by March 2008
  - Commercial operation date in 2010

PSO

Southwestern & Riverside Additions

- Air permit received March 22, 2007
- Commercial operation date of December 2007
- Regulatory Recovery
  - Settlement and final order in the Lawton Cogen case authorizes recovery of costs for Southwestern and Riverside peakers through a rider mechanism beginning as early as June 2008 based on the Commercial Operation date

2007-2009 Projected Capital Expenditures

	2007	2008	2009
Mattison	$56MM	$4MM	-
Stall	$82MM	$126MM	$64MM
Southwestern	$36MM	$3MM	-
Riverside	$35MM	$2MM	-

New Ultra-Supercritical Coal Facility

Turk Plant (Fulton, AR)

SWEPCo

- Certificate of Need approvals (LA, AR, TX) expected in the fourth quarter of 2007
- Air permit approval expected in Fall 2007
- Regulatory Recovery
  - Recovery of carrying cost requested in LA Certificate of Need filing – Hearings commenced September 11, 2007
  - AR and TX rate recovery will be addressed in separate filings
- Approximately 85-90% of costs are firm
  - EPC contract for balance of plant work awarded in May 2007
  - Contracts for turbine, boiler, and environmental control equipment awarded in 2006

2007-2009 Projected Capital Expenditures

	2007	2008	2009
Turk Plant	$211MM	$230MM	$243MM

Integrated Gasification Combined Cycle Facilities

Front-End Engineering & Design (FEED) results complete. Results were filed in June 2007. Cost estimates in target range of 20-30% premium over new ultra-supercritical coal-fired facilities of equal capacity.

West Virginia

- **Certificate of Public Convenience & Necessity filed Jan. 11, 2006**
  - APCo testimony filed June 18, 2007
  - Intervenor & Staff testimony due Nov. 19, 2007
  - Hearings Dec. 10-14, 2007
  - Statutory Deadline – Mar. 7, 2008
- **Air permit filed in Oct 2006**
  - A technical review of the application and development of a draft permit is ongoing by the WV Dept. of Environmental Protection
- **Regulatory Recovery**
  - West Virginia filing made in June 2007 – included request for cash recovery mechanism
  - Virginia filing made in July 2007 requesting cash recovery mechanism

Ohio

- **Certificate of Environmental Compatibility & Public Need filed March 24, 2006**
  - Ohio Power Siting Board certificate issued in April 2007
- **Air permit filed in Oct 2006**
- **Regulatory Recovery**
  - Phase 1 – June 2006 – PUCO approved tariff to recover pre-construction costs ($24MM) over 12-month period effective July 1, 2006
  - Phase 2 – filing likely to be withheld until resolution of Ohio Supreme Court action
  - Informational filing made on June 18, 2007 to inform PUCO of the West Virginia filing

Construction Period Of 48-50 Months Following Receipt Of Major Regulatory And Permit Approvals

Investing In IGCC

Generation Technology Comparative Statistics

US2006$	Eastern Bituminous		
	USC	**IGCC**	**NGCC**
Nominal Capacity (MW)	618	629	530
Capacity Factor (%)	85%	85%	25%
Total Plant Cost (EPC + Owner's Cost) ($/kW)	$2,152	$2,717	$572
Production Cost ($/MWh)	$22	$22	$45
Cost of Electricity, without CO_2 Capture ($/MWh)	$72	$83	$87
Estimated Cost of Electricity, with 90% CO_2 Capture ($/MWh)	$118	$108	$135

Source: Results of AEP analysis based on EPRI studies.

Total Plant Cost (Overnight EPC 2006$s) includes the cost to engineer, procure and construct plant and owner's direct costs.

Assumes Northern Appalachian coal price of $2.25/mmBtu for USC and IGCC and natural gas price of $6.00/mmBtu for NGCC.

Production cost includes fuel cost plus variable operations and maintenance (VOM) cost.

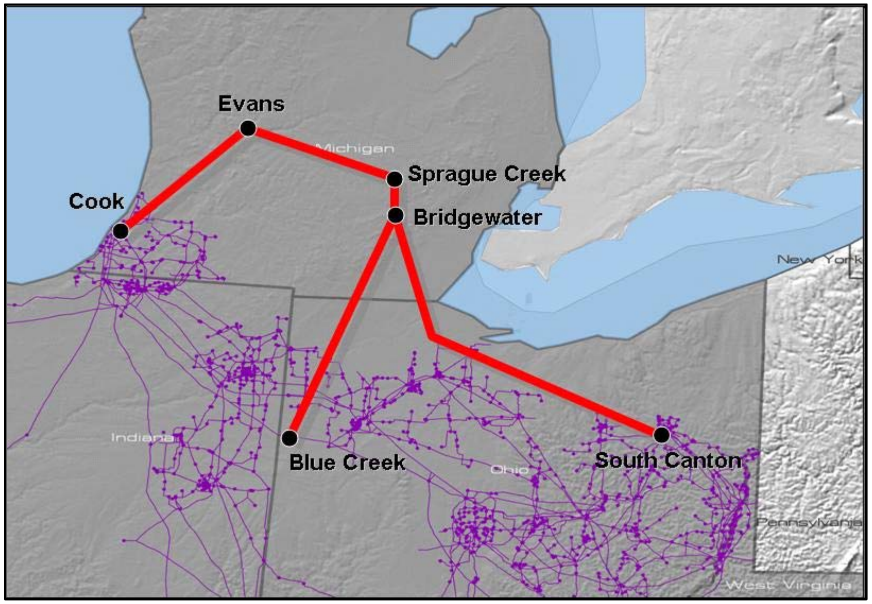
Cost of electricity represents first year estimates only in 2006$ and are based on total plant cost plus generic cost estimates for AFUDC, emission credits, infrastructure, interconnections, transmission lines and upgrades.

Cost of electricity with CO_2 capture provides pressurized CO_2 at the fence line and does not include transportation, storage and monitoring costs.

765-kV in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - Agreement with ITC Transmission for 765-kV study
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.6 billion investment (before ownership division)
- *Benefits*
  - 3,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- *Next Steps*
  - Study results shared with PJM/MISO– Summer 2007
  - Potential JV formation – Fall 2007
  - PJM/MISO approval - Summer 2008
  - FERC Filing - Fall 2008
  - Siting approval – Summer 2010
  - Estimated completion – Summer 2013



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

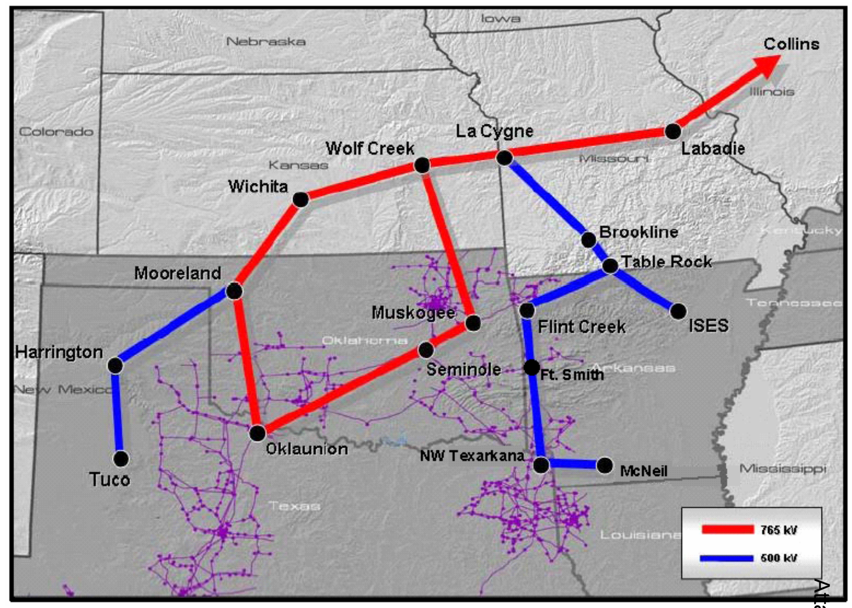
765-kV in SPP

Significant opportunity for 765-kV transmission in SPP

- ### *Overview*
  - July 2006 AEP submitted conceptual project for six 765-kV lines
  - Proposed 765-kV Kansas / Oklahoma / Arkansas connecting to MISO/PJM
  - 610 miles from Kansas to Arkansas
  - $3.0 billion investment (before ownership division)
  - Proposed 2012-2017 construction period
  - SPP proposes 765-kV in Texas / Oklahoma / Kansas / Missouri connecting to MISO/PJM
  - SPP also proposes 500-kV in Texas / Oklahoma / Arkansas / Missouri

- ### *Benefits*
  - 4,000 MVA capability

- ### *Next Steps*
  - Study disclosure – Fall 2007
  - JV formation (Partner-TBD) – Fall 2007
  - SPP RTO/BOD EHV Overlay approval – Summer 2009
  - SPP RTO FERC Filing – Fall 2009
  - Siting approval – Fall 2011
  - Estimated completion – Summer 2017



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP's Long-term CO_2 Reduction Commitment

Existing Programs

- Renewables
  - 800 MWs of Wind
  - 300 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

New Program Additions

Incremental Reduction quantity: 5MM tons/yr

Timing: To take effect/receive credits by 2011

Methods

- +1000 MWs of Wind PPAs – 2MM tons/yr
- Domestic Offsets (methane) – 2MM tons/yr (e.g., livestock methane capture deal of 0.6MM tons/yr)
- Forestry – Tripling annual investment to increase to 0.5MM tons/yr by 2015
- Fleet Vehicle/Aviation Offsets – 0.2MM tons/yr
- Additional actions to include DSM and end use energy efficiency, biomass and power plant efficiency – 0.2MM tons/yr

New Technology Additions

IGCC and Ultra-supercritical coal plants

Commercial solutions for existing fleet

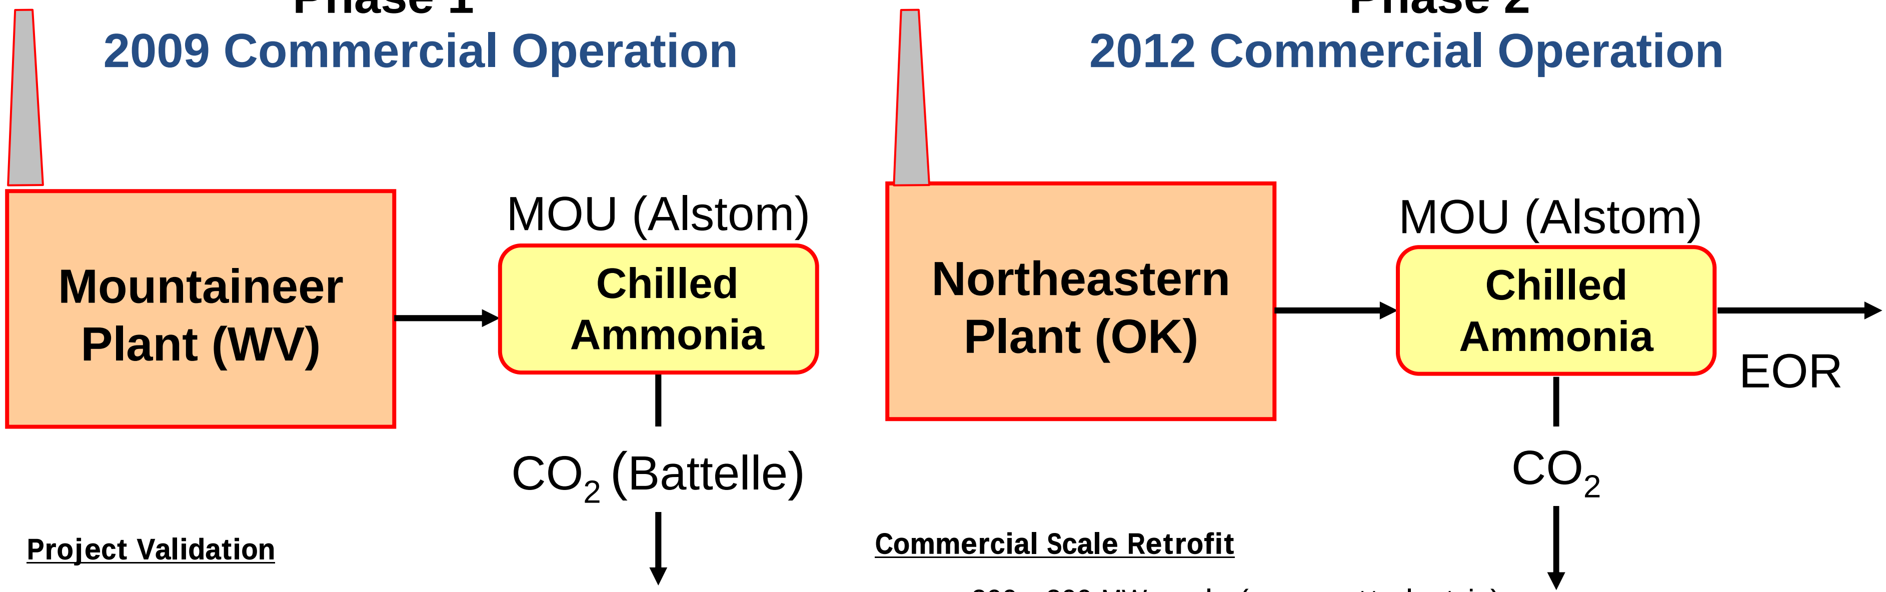
- Chilled Ammonia
- Oxy-Coal

AEP is committed to a 5mm ton/yr reduction in CO_2 emissions which offsets approx half of the emissions projected from new generation projects previously announced

Chilled Ammonia Technology Program

Phase 1
2009 Commercial Operation

Phase 2
2012 Commercial Operation



Project Validation

- 20 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, under construction at WE Energies)
- 100,000 – 300,000 tonnes CO_2 per year
- In operation 1Q 2009
- Approximate total cost \$50 – \$80M
- Using Alstom "Chilled Ammonia" Technology
- Located at the AEP Mountaineer Plant in WV
- CO_2 for geologic storage

Commercial Scale Retrofit

- ~ 200 - 300 MW_e scale (megawatt electric)
- ~ 600 MW_t scale (megawatt thermal)
- ~1.5MM tonnes CO_2 per year
- In operation late 2011
- Approx. capital \$250 – \$300M (CO_2 capture & compression)
- Approx. O&M cost \$12M per year
- Energy penalty ~ 35 – 50 MW steam, 25 – 30 MW for CO_2 compression
- Retrofit Wet FGD Required: ~\$225 – \$300M
- Located at AEP's Northeastern Plant Unit 3 or 4 in Oklahoma
- CO_2 for Enhanced Oil Recovery (EOR)

Post-combustion carbon solution provides pure CO_2 stream for capture

Oxy-Coal CO_2 Capture & Storage Project

Pilot Scale Demonstration

10 MW_e scale

Teamed with B&W at its Alliance Research Center and 16 other utilities

Demo complete 3Q 2007

AEP funding of $50k

Commercial Scale Retrofit

Retrofit on existing AEP sub-critical unit (several available)

150 – 230 MW_e scale retrofit

4,000 – 5,000 tons CO_2 per day

Team with B&W

AEP funding of ~ $1.5M for feasibility study

Feasibility study to be completed in late 2007/early 2008

Combustion conversion technology for existing coal fleet – longer lead time with enhanced viability and long term potential

2007 Regulatory Activity Completed

Appalachian Power - Virginia Base Rate Case

Final order approved on May 15, 2007

- ✓ Results in $24 Million annual increase in base rates
- ✓ 10.0% approved ROE

Texas North Base Rate Case

Final settlement order approved on May 24, 2007

- ✓ Results in $11.7 million increase in pre-tax earnings ($13.7 million increase in revenues offset by $2 million increase in depreciation expense)
- ✓ No stipulated ROE in the settlement. For AFUDC purposes, Texas North will utilize the ROE that comes out of the Texas Central rate case.

Appalachian Power - West Virginia Expanded Net Energy Cost (ENEC) Filing

Final settlement order approved on June 22, 2007

- ✓ Results in $85.5 million net increase in revenues effective July 1, 2007
  - ✓ $54.8 million covers increased costs related to coal and purchased power
  - ✓ $28.5 million covers environmental construction costs, primarily related to installation of scrubbers
  - ✓ Remainder ($2.2 million) recovers first year costs of rehabilitating four small electric utilities acquired as of July 1

Indiana Michigan Power - Indiana Depreciation Study

Interim settlement order approved on June 13, 2007

- ✓ Allowed a change in depreciation rates effective July 1, 2007, resulting in a pretax earnings increase of approximately $69 million per year
- ✓ Stipulated a $5 million credit to customers in the next fuel adjustment clause proceeding
- ✓ Required I&M to file a rate petition on or before July 1. Petition was filed on June 19.

In Hand to Date - $294MM of the $338MM Rate Recovery in 2007 Guidance

AEP AMERICAN ELECTRIC POWER

Regulatory Activity Underway

- ✓ AEP Texas Central Company General Rate Case
- ✓ PSO General Rate Case
- ✓ CSP and OPCo Filing for 4% Increase Provision on Generation Rates
- ✓ I&M Indiana Rate Petition
- ✓ Virginia Filings - Fuel Factor and E&R
- ✓ Electric Transmission Texas LLC Request for Certificate of Convenience and Necessity and Initial Rates
- ✓ FERC Seams Elimination Cost Adjustment Proceedings
- ✓ SPP OATT Formula Rate Filing
- ✓ New Generation
  - ✓ IGCC Filing in Virginia and West Virginia for Certificate of Need and approval of a cost recovery mechanism
  - ✓ IGCC Phase 2 Filings in Ohio on Hold Pending Resolution of Supreme Court Challenge of PUCO's authority
  - ✓ SWEPCo Turk Plant Filings in Arkansas, Louisiana and Texas for Certificates of Need

Level Of Capital Investment Will Be Adjusted Based On Rate Recovery And/Or Cash Generation

Pace of our Modern Grid Implementation Determined by Regulators

- **Arkansas** – SWEPCo filed 'quick-start' programs with the commission on July 1, 2007, which include education, incentive to encourage use of compact florescent lights and higher efficiency appliances, weatherization for low-income housing, an emergency load management pilot and a pay-for-for-performance pilot that results in a payment to customers who curtail load upon request. We are awaiting commission approval.
- **Indiana** - As ordered by the IURC in June 2007, I&M, in collaboration with the Office of Utility Consumer Counselor, is designing and administering a Smart Metering Pilot Program (SMPP) for approximately 10,000 customers in South Bend, Indiana.
- **Kentucky** – Successful demand-side management programs have been in place in Kentucky since 1996. We recently filed a proposed real-time pricing pilot for which we are waiting commission approval.
- **Ohio**
  - Recent Governor remarks indicate modernization of Ohio's infrastructure is a high priority and his plan would allow single-issue rate cases for these high-priority investments and system upgrades.
  - PUCO-sponsored series of six Smart Meter Deployment Workshops currently underway.
- **Texas**
  - Energy Efficiency Cost Recovery Rider currently under consideration by the PUCT in TCC's base rate case; if adopted in TCC's case, it will also apply to TNC.
  - AEP Texas Advanced Metering Project commenced July 31, 2007, which has the goal of filing with the PUCT an advanced metering deployment plan and a related surcharge recovery proposal by March 2008.
- **Virginia** – The Virginia commission has initiated a docket to address various aspects of demand-side management and energy efficiency.

Energy efficiency is an investment, which should be treated by regulators in the same manner as investments in generation, transmission and distribution

New York/Boston Investor Meetings

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms and our ability to recover significant restoration costs through applicable rate activities, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants, our ability to recover I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration costs through rates, insurance or warranty, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances that could impact the continued operation of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of the recently passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events. AEP and its Registrant Subsidiaries expressly disclaim any obligation to update any forward-looking information.

New Generation Projects

J. Lamar Stall Combined-Cycle Gas Plant

- J. Lamar Stall Combined-Cycle gas plant is a 508-MW unit that began commercial operations in June 2010.
  - The total projected cost of the plant is $380 million.
  - The plant is located in AEP's SWEPCo region at its existing Arsenal Hill Power Plant in Shreveport, Louisiana.
  - The plant serves the needs of customers in the Arkansas, Louisiana and Texas service territories.

- John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant. Located in AEP's SWEPCo region. AEP owns 73 percent or roughly 440 megawatts of the total unit.
  - The cost of the plant is anticipated at $1.7 billion with AEP's share approximately $1.3 billion and will begin commercial operation in 2012.
  - The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls.
  - Various legal challenges are on-going related to the plant (see 10-Q). Recently, following the Arkansas Supreme Court decision regarding CECPN, SWEPCO filed notice to the APSC that the 88MW will now be merchant and will not be included in rate base.

John W. Turk Jr. Ultra-Supercritical Coal Plant

Carbon Capture and Storage

Carbon Capture and Storage project located at AEP's Mountaineer Plant in New Haven, WV

PHASE I – Validation

Captured CO_2 – September 2009

Injected CO_2 – October 2009

CO_2 Capture

Project employs Alstom's chilled ammonia process for post-combustion CO_2 capture.

CO_2 Storage

Compressed CO_2 is injected about 1.5 miles below the earth's surface.

PHASE I - Validation

20 MWe scale validation project designed to remove 90% of CO_2 from flue gas and store 100,000 metric tons/year. Currently in operation.

PHASE II - Commercialization

235 MWe commercial scale project designed to capture and store 1.5 million metric tons of CO_2/year. Awarded 50% US DOE funding. Commercial operation in 2015.

2010 Ongoing Earnings Guidance

2009A: $2.97/share

2010E: $2.80-$3.20/share

Near-term Earnings Drivers

- **Rate recovery from returns on capital investment**
- **Load growth (and recovery)**
- **Increase in off-system sales volumes and/or prices**
- **O&M discipline and cost-cutting initiatives**

Status: Case filed on January 27, 2010. Hearings scheduled for August 9-17, 2010. Interim rates in effect July 26, 2010 ($44.3MM of original $62.4MM request). Decision expected by November 16, 2010.

$565 million of total base rate increase requests on file

Transmission Investment Opportunities

- ETT: Projects in Texas ERCOT jurisdiction
  - $600MM of projects est. in service 2010-2013
  - ETT's opportunity could reach $3.0B in this decade
- Transco: Within our existing footprint
  - Provides opportunity to:
    - Develop new AEP-only projects
    - Reduce regulatory lag through FERC formula rates adjusted annually
- Joint Ventures: Outside of our footprint, via ETA or with others
  - Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
  - Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2015
  - Robust pipeline of projects up to $15B

Electric Transmission Texas, LLC

Overview:

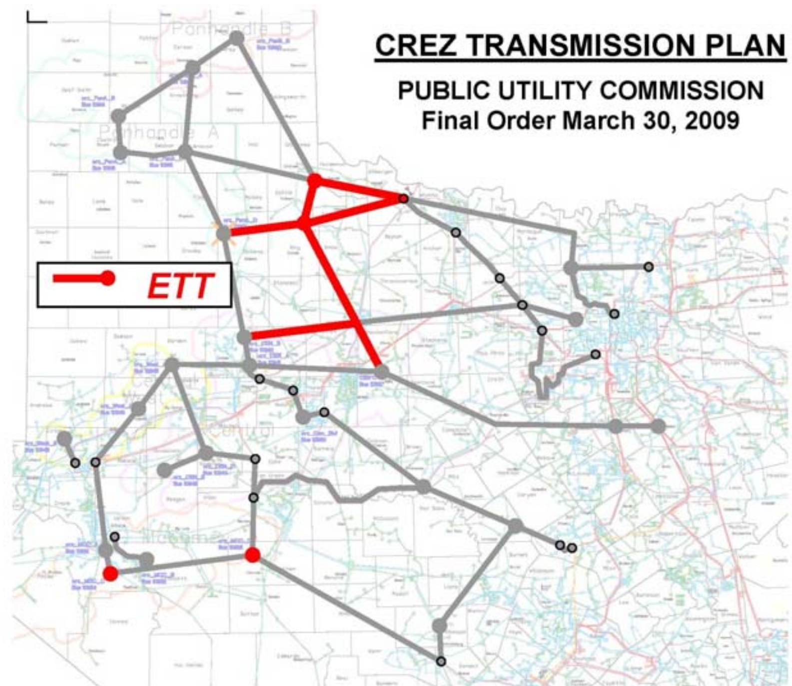
- ETT is a 50/50 JV between AEP and MidAmerican Energy Holding Company that plans to construct and operate transmission projects within ERCOT with an investment opportunity of more than $3 billion.
- Current JV rate base is $127 million with an additional $262 million requested in the current ITCOS filing, resulting in a total anticipated rate base of $389 million; debt to capital ratio of 60/40 and an authorized ROE of 9.96%.

Opportunities:

- Projects in service 2010-2018: $1.4 billion
- CREZ projects in service 2012-2013: $1.1 billion
- Other projects representing recent and pending transfers in service 2010-2014: approaching $600 million

Next Steps:

- Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in 2010.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

ETT
Electric Transmission Texas

EHV Transmission in PJM: PATH

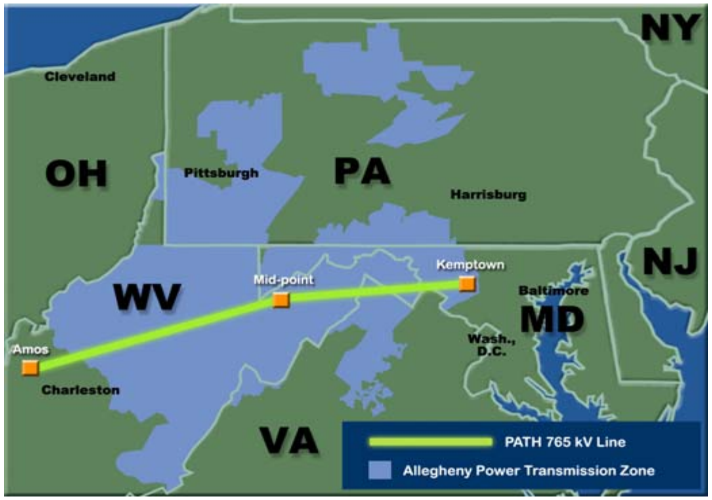
Project Description: 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

Overview:

- FERC order issued on February 29, 2008 approving:
  - Cash return on CWIP and 14.3% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents
  - Rates went into effect March 1, 2008
- Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million.
  - A budget reforecast effort is currently underway. Total project cost will likely increase due to delays in the original 2012 in-service date.
- Estimated completion date: 2014+, pending outcome of the 2010 PJM Regional Transmission Expansion Plan (2010 RTEP).

Key Challenges:

- Obtaining a CPCN in West Virginia, Virginia and Maryland. CPCN applications in West Virginia and Maryland are pending because their procedural schedule allows the consideration of the 2010 RTEP. A new application in Virginia is expected in the third quarter of 2010 after consideration of the 2010 RTEP.



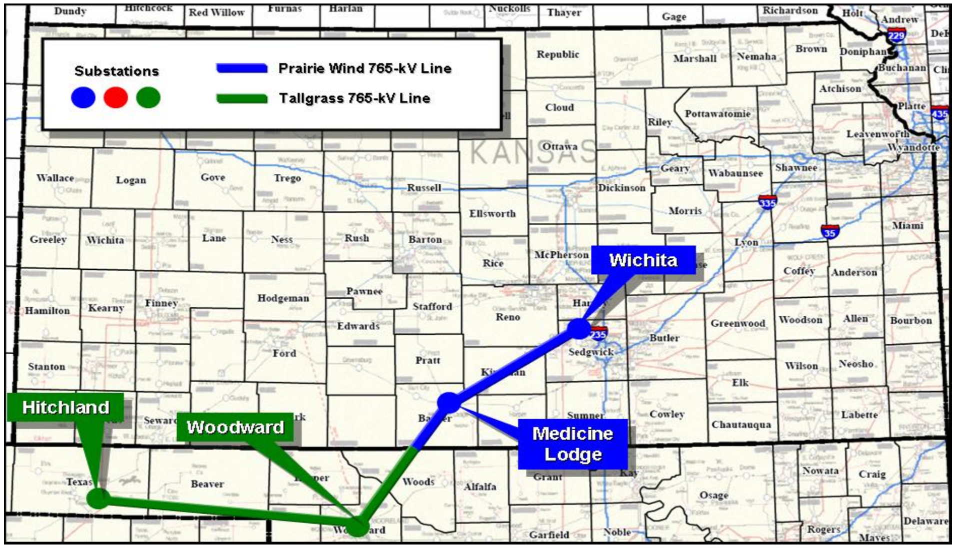
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

PATH
Potomac-Appalachian Transmission Highline

Prairie Wind Transmission, LLC

Overview:

- In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
- PWT is a 50/50 JV that is proposing to build approximately 110 miles of 765-kV lines extending from Wichita, KS.
- The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
- The project is expected to cost approximately $400 million and be in-service by 2013-2014 and was approved by the KCC on July 24, 2009.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned
- Project was approved as SPP Priority Project in April 2010
  - NTC anticipated to be received summer 2010. Currently pending approval of SPP cost allocation methodology at FERC.
  - Currently approved at 345 kV. Cost at 345 kV estimated to be $165 mm. May revert to 765 kV depending on results of SPP ITP study.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

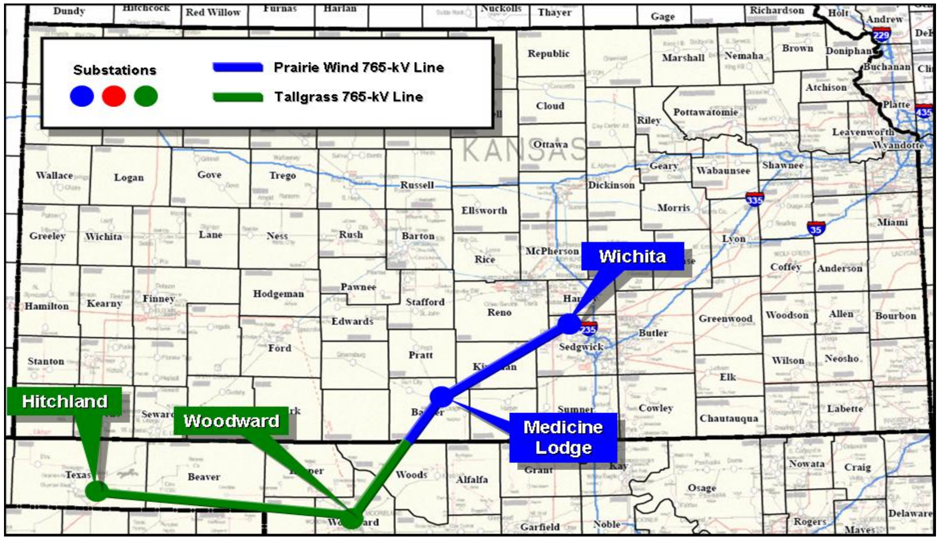
Key Challenges:

- Siting

Tallgrass Transmission, LLC

Overview:

- In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
- TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines in Oklahoma.
- The project will promote wind development in the western half of Oklahoma.
- Project is expected to cost approximately $500 million and be in-service by 2013-2014.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned
- Project was approved as SPP Priority Project in April 2010
  - NTC anticipated to be received summer 2010. Currently pending approval of SPP cost allocation methodology at FERC.
  - Currently approved at 345 kV. Cost at 345 kV estimated to be $350 mm. May revert to 765 kV depending on results of SPP ITP study.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

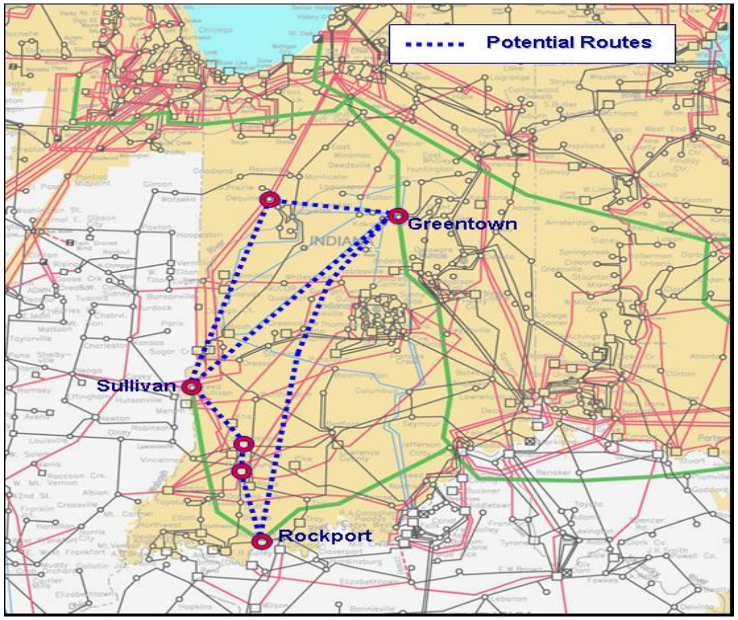
Key Challenges:

- Siting

Pioneer Transmission, LLC

<u>Overview</u>:

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
- The project will improve the reliability of the transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, and expand opportunities for new generation, including renewables.
- The project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP's ownership of the joint venture is 50%.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

<u>Key Challenges</u>:

- RTO Approval (PJM & MISO)
- Cost allocation which enables the development of "system solutions"
- Siting

Upper Midwest EHV Development—SMART Study

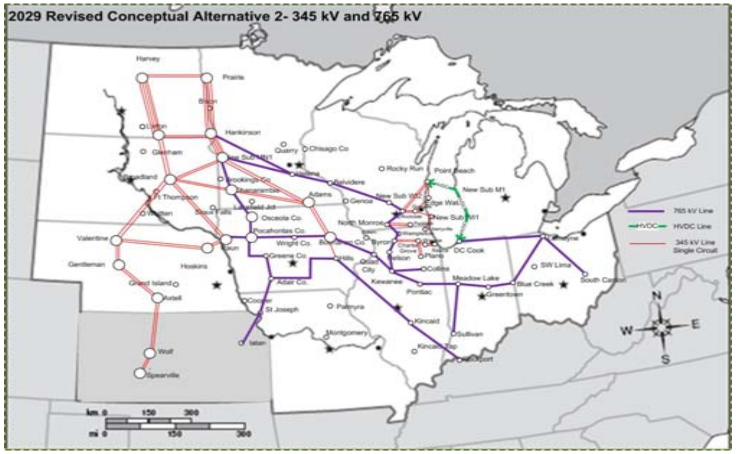
Project Description: a comprehensive study of the transmission needed in the Upper Midwest to support renewable energy development and transporting that energy to consumers throughout the study area. The SMART Study will develop EHV overlay alternatives that ensure reliable service for sponsors' communities, is environmentally friendly, and supports national energy policy.

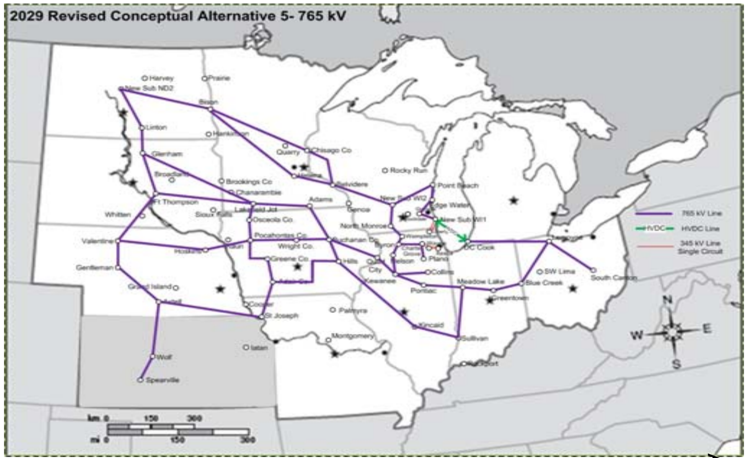
Overview:

- SMARTransmission Study announced August 2009
- Primary Focus Areas: North Dakota, South Dakota, Iowa, Nebraska, Indiana, Ohio, Illinois, Minnesota, Wisconsin, Michigan
- Study Sponsors include: ETA, Exelon, ATC, Northwestern, MidAmerican Energy Company, and Xcel
- Phase 1 completed April 30
- Phase 2 anticipated completion: June 30
  - Studying two alternatives in Phase 2. One combination 345 kV / 765 kV. One primarily 765 kV.

Next Steps:

- Investment structure
- Obtaining cost allocation between states, PJM, and MISO
- RTO technical approvals
- Favorable 205 Order including incentives

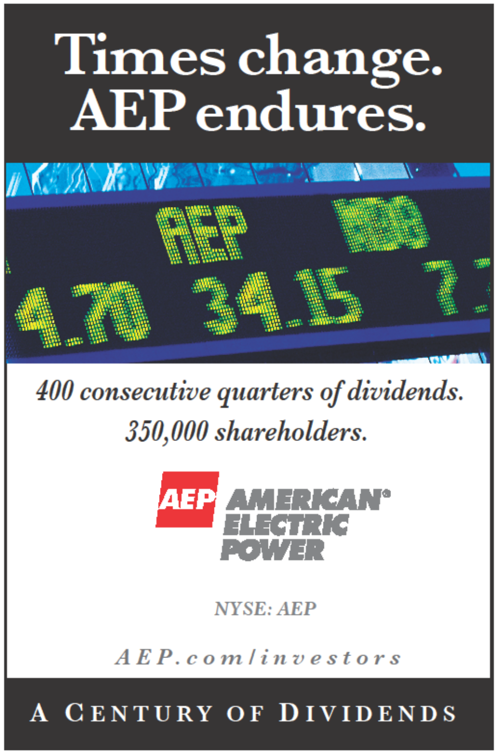




The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Value Proposition

- **Current Yield Opportunity of 5.1%[1]**
  - June 10th – 400th consecutive quarterly dividend was paid to shareholders
  - 50-60% payout ratio targeted
  - Dividend increased 2.44% on April 27th
- **Earnings Growth Prospects**
  - Investment in utility platform greater than depreciation level (2 - 4%)
  - With transmission opportunities (4 - 8%)



Attractive total return potential

[1] yield percentage based on AEP closing price of $32.72 on 06/24/2010

A Century of Firsts

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Cash Sources Less Capital Expenditures, Dividends & Other	$ (458)	$ 81	$ (75)	$ (126)	$ -
Ending Cash Balance	$ 320	$ 401	$ 326	$ 200	$ 200

* Statement of Cash Flows shows $2.404B for 2005 and $1.637 for 2004 which reflects difference in accruals from previous year

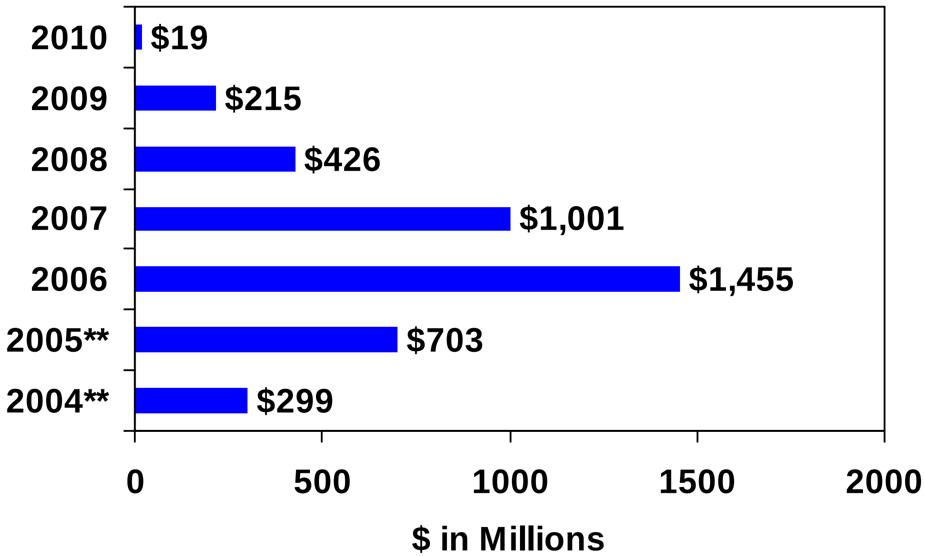
* * Cash Flow from Operations assumes full rate recovery on capital expenditures.

Note: Capital forecasts do not include amounts for AEP Interstate Project. Totals may not foot due to rounding.

REGULATORY RECOVERY WILL DRIVE CAPITAL INVESTMENT THROTTLE

$4.1 Billion Environmental Investment

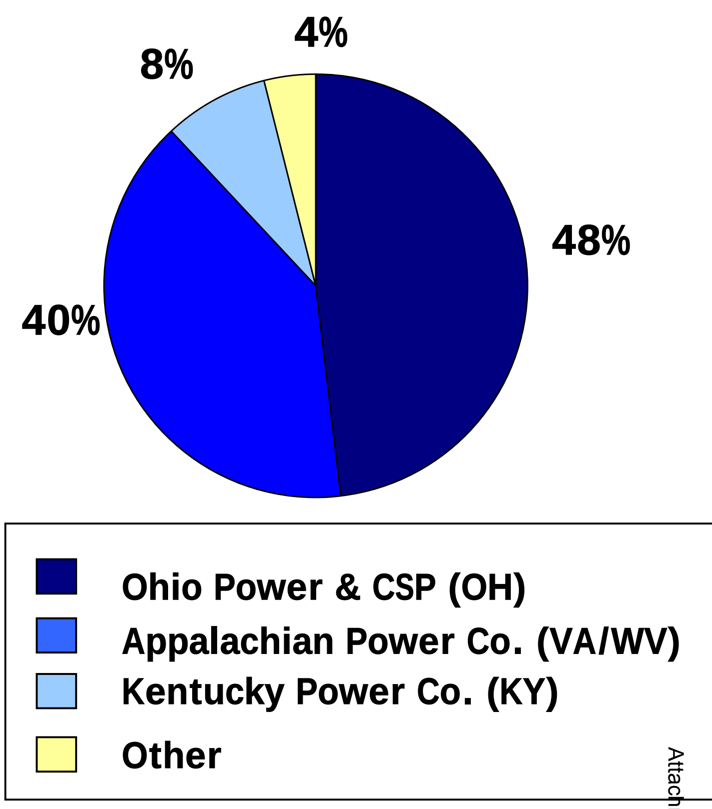
Environmental Capital Investment*



*Environmental investment for NOx, SO_2 , & Hg purposes including AFUDC

** Actual investment level in 2004 and 2005

Projected Environmental Investment Allocation



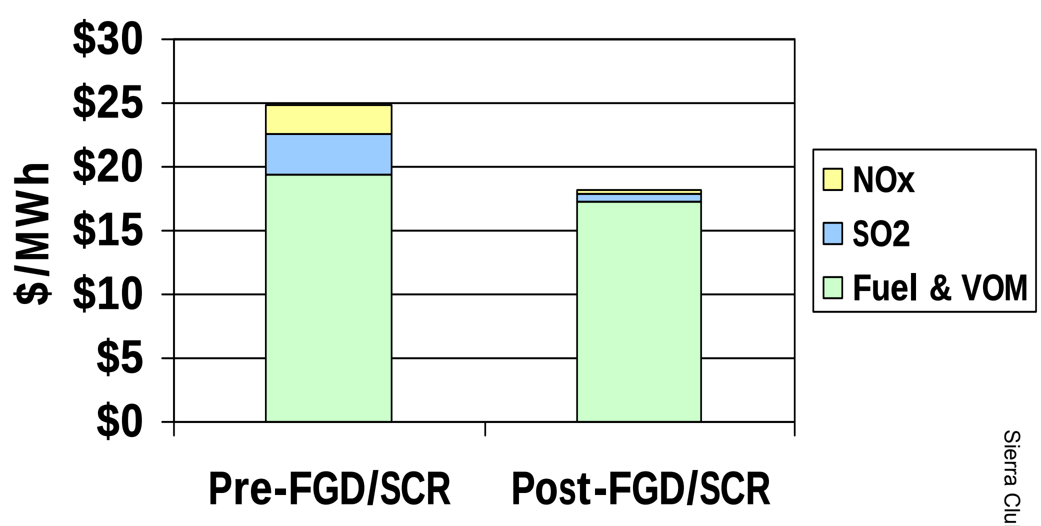
MAJORITY OF 2006 & 2007 DOLLARS WILL BE INVESTED IN OHIO & APCO

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 7668 of 9556

Low Cost Production Supports Investment & Investment Sustains Low Cost Production

- Lowers exposure to high cost emission allowances
- Creates opportunity to burn wider variety of lower cost fuels
- Improves baseload operation (higher capacity factor, higher margin)
- All-in cost of electricity, including FGD/SCR investment, remains low

Typical Pulverized Coal Plant
Comparison of Variable Production Cost
Pre- and Post- FGD/SCR (future view)*



* Assumes annual NOx program

AEP WILL REMAIN THE LOW COST PRODUCER FOLLOWING COMPLETION OF ENVIRONMENTAL RETROFIT PROJECTS

Regulatory Activity Underway

- ✓ TCC Stranded Cost Recovery True-up Filing – Final Order Issued
- ✓ Ohio Companies filing for pass through of FERC OATT changes
- ✓ Indiana Depreciation Petition
- ✓ APCo Filing for Recovery of E&R Costs in Virginia
- ✓ APCo & WPCo Base Rate & Expanded Net Energy Cost (ENEC) Filing in West Virginia
- ✓ IGCC

LEVEL OF CAPITAL INVESTMENT WILL BE ADJUSTED BASED ON RATE RECOVERY AND/OR CASH GENERATION

KPSC Case No. 2011-00401

Item No. 1
Attachment 1 - Confidential
Page 7670 of 9556

Texas Regulatory Activity

<u>TCC Stranded Cost Recovery Case</u>

February 16, 2006 – PUCT final order provides for net true-up of $1.475 billion

- March 3, 2006 – Requested approval of financing order to issue $1.8 billion in low-cost securitization bonds
  - ➢ Final order expected in May 2006
  - ➢ September 1, 2006 - Issuance of securitization bonds if no appeal

<u>Procedural Schedule for TCC Securitization</u>

- ✓ April 17, 2006 – Intervenors File Testimony
- ✓ April 24, 2006 – Staff Files Testimony
- ✓ April 27, 2006 – TCC Files Rebuttal Testimony
- ✓ May 2-4, 2006 – Hearings On Merit

- April 2006 – Request approval for CTC to address other true-up items
  - ➢ Expected $475 million credit to customers
  - ➢ Jan 2007 – CTC to be implemented

Regulatory Activity Underway

<u>Ohio Companies Pass through of FERC OATT Changes</u>

Filed Feb 3, 2006 - Seeking authority to pass through to customers the changes in the FERC OATT related to the elimination of the SECA revenues and the costs associated with the Wyoming-Jacksons Ferry transmission line

<u>Indiana Depreciation Filing</u>

December 1, 2005 – I&M filed petition with the IURC for accounting authorization to revise the depreciation rates applicable to its electric utility plant in service

- ✓ Based on a 2004 depreciation study, I&M recommends a decrease in annual depreciation expense of approximately $45 Million on an after-tax Indiana jurisdictional basis.
- ✓ Procedural schedule has been set with final order expected in June 2006

Regulatory Activity Underway

AEP®

Appalachian Power

Virginia E & R Cost Recovery Factor - Filed July 1, 2005 - Seeking recovery of $62.1 Million in new Environmental & Reliability costs

- ✓ Oct 14, 2005 – SCC ruled VA law does not allow recovery of prospective costs - $48.6 Million
- ✓ Nov 14, 2005 - APCo filed supplemental direct testimony which included updated actual E&R costs incurred through Sept. 30, 2005 of $21.1 million

Virginia General Rate Case – Gave notice to VA SCC on March 1, 2006 of intent to file general rate case no sooner than May 1, 2006

Appalachian Power & Wheeling Power - West Virginia Base Rate Case & ENEC Reactivation

Filed August 26, 2005 – Seeking $183 Million increase in revenues for increasing costs for coal, purchased power and environmental improvement construction projects

- ✓ APCo filed supplemental testimony on January 18, 2006 to reflect Ceredo plant purchase and other miscellaneous items resulting in a revised revenue requirement of $171 Million.
- ✓ APCO was granted the authority to begin deferral accounting for ENEC beginning July 1, 2006.

Proposed Phase-in over 4 years

- ✓ June 23, 2006 – $74 Million*
- ✓ June 23, 2006 – $9 Million
- ✓ Jan 1, 2007 – $43 Million
- ✓ Jan 1, 2008 – $8 Million
- ✓ Jan 1, 2009 – $37 Million

*Includes:
$16MM Base Rates
$56MM ENEC
$2MM Misc

Procedural Schedule

- ✓ March 8, 2006 – Staff and Intervenors Testimony
- ✓ April 7, 2006 – Rebuttal & Cross-rebuttal
- ✓ April 18 - 21, 2006 – Evidentiary Hearings
- ✓ Initial Briefs – 20 days after receipt of transcripts
- ✓ Reply Briefs – 10 days after initial briefs
- ✓ July 28, 2006 – Statutory deadline for an order

IGCC Regulatory Activity

AEP®

Ohio - Cost Recovery Filing

Phase 1

- ✓ Effective during 2006
- ✓ Seeks recovery of initial costs, including those already incurred, such as site engineering and various other engineering services
- ✓ Approximately $23.7 Million

Phase 2

- ✓ Effective 2007- mid 2010 (Construction Phase)
- ✓ Seeks recovery of carrying costs associated with plant construction

Phase 3

- ✓ Effective mid 2010 (Commercial Operation begins)
- ✓ Seeks recovery of projected $1.174 Billion cost of plant over its operating life.

Ohio Next Steps

2006:

- ✓ **Secure cost recovery plan**
  - **Final PUCO Order expected in 2Q06**
- ✓ **Finalize site selection**
- ✓ **Negotiate with suppliers**

2006—2007:

- ✓ **Obtain permits and finalize engineering and procurement**

2007—2010:

- ✓ **Construct and start-up plant**

West Virginia IGCC Activity

On January 11, 2006, Appalachian Power Co. filed a Certificate of Public Convenience and Necessity seeking authority to construct a 600-MW IGCC facility in West Virginia.

SEEKING AUTHORITY FOR THREE PHASE RECOVERY APPROACH IN OHIO

Regulatory Activity Completed

Ohio – Rate Stabilization Plan (2006 - 2008)

- ✓ Annual 3% and 7% generation rate increases at CSP & OP, respectively
- ✓ POLR rate rider for environmental additions
- ✓ Ability to request additional 4% annual increase in generation rate
- ✓ Elimination of 5% residential generation credit (stipulated in the pre-existing Electric Transition Plan of 2000)

AEP East FERC Transmission Case

December 20, 2005 – FERC approved settlement allowing wholesale transmission rates to increase

- ✓ Results in $22 Million net revenue in 2006 from wholesale transmission

SWEPCo Fuel Factor/Surcharge Filing

January 12, 2006 – Settlement approved by PUCT

- ✓ Fuel factor will increase SWEPCo's annual Texas retail fuel-related revenues by approximately $46 Million.
- ✓ Interim surcharge will collect the under-recovery amount of $44 Million, including interest.

Appalachian Power- Virginia Fuel Factor Increase

- ✓ $57.7 Million increase in fuel factor approved on January 20, 2006

Kentucky Base Rate Case

Final order approved on March 14, 2006

- ✓ $41 million annual increase in base rates
- ✓ Rates implemented March 30, 2006

PROGRESS IS BEING MADE ON THE REGULATORY FRONT

What AEP Offers

- Strength and scale in assets & operations
- Focused utility model
- Earnings growth driven by native load & capital investment
- Attractive dividend yield in excess of 4%
- Stable credit profile

INSTALLATION OF SCR AND FGD WILL ALLOW OUR COAL FLEET TO REMAIN EXTREMELY COST COMPETITIVE

Integrated Gasification Combined Cycle

AEP®

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called “syngas” – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2 , mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP’s eastern service territory.

AEP is currently working with a technology provider to develop a firm price for an IGCC facility to be built in our eastern service region. This price will be available in 2006. AEP intends to seek regulatory recovery approvals in advance of building the plant.

Generation Technology Comparative Statistics

	PC	IGCC	NGCC
Nominal Capacity (MW)	600	600	600
Heat Rate (Btu/kWh)	8700	8600	7200
Total Plant Cost (EPC) ($/kW)	1700	1900	480
Production Cost ($/MWh)	17	16	57
Cost of Electricity, without CO2 Capture ($/MWh)	58	63	90
Estimated Cost of Electricity, with CO2 Capture ($/MWh)	94	87	137

- Source: Results of AEP analysis based on EPRI studies.
- Total Plant Cost (2005$'s) includes the cost to **E**ngineer, **P**rocure and **C**onstruct plant and owner's direct costs; does not include interconnections, transmission lines, transmission upgrades, contingency or AFUDC.
- Assumes Northern Appalachian Coal price of $1.60 /mmBtu for PC and IGCC, and natural gas price of $7.00/mmBtu for NGCC.
- Assumes 85% capacity factor for PC and IGCC, 25% for NGCC.
- Production Cost includes Fuel Cost and Variable Operations & Maintenance (VOM) cost.
- Cost of Electricity based on EPC cost, does not include the cost of Emission Credits.
- Cost of Electricity with CO2 capture does not include sequestration cost.

IGCC TECHNOLOGY IS STRATEGIC TO KEEPING COAL IN THE MONEY

Summary Rate Case Information

West Virginia Base Case Rate Filing

On August 26, 2005, Appalachian Power Co. and Wheeling Power Co. filed an application with the West Virginia Public Service Commission (WVPSC) to increase electric rates and charges, a request for the reactivation and modification of the expanded net energy cost mechanism (ENEC), a proposal for the disposition of Appalachian Power Company's ENEC over-recovery balance, a request for implementation of a System Reliability Tracker mechanism, and a request for waiver of certain provisions of the Commission's Rules. APCo filed supplemental testimony on January 18, 2006 to reflect Ceredo plant purchase and other miscellaneous items resulting in a revised revenue requirement of $171 Million. (Docket #: 05-1278-E-PC-PW-42T)

Capital Structure - Company Position (8/26/05)

Summary Rate Case Information

Virginia E&R Factor Filing

On July 1, 2005, Appalachian Power Co. filed a request with the Virginia SCC to recover incremental actual and projected costs for environmental compliance and T&D System reliability in the amount of $62.1MM. The SCC has ruled that under applicable VA law, it does not have authority to approve the recovery of projected E&R costs before their actual incurrence and adjudication. APCo filed supplemental direct testimony which included actual costs incurred for E&R thru September 30, 2005 of $21.1 million. Docket # PUE-2005-00056

Capital Structure – Company vs. Staff

Capital Structure	Company Position (filed 7/1/05)	Staff Position (filed 1/11/06)
Long-Term Debt	53.43%	51.50%
Short-Term Debt	2.67%	2.20%
Preferred Stock	0.54%	0.53%
Common Equity	42.65%	45.16%
ITC	0.71%	0.61%
Total	**100.00%**	**100.00%**
Recommended ROE	**10.85%**	**9.80%**

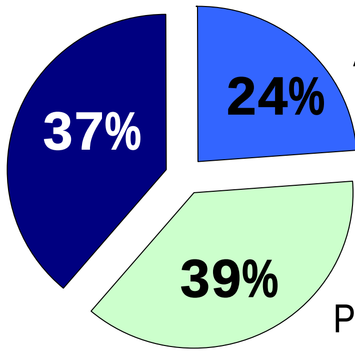
Revenue Requirement – Company vs. Staff*

Revenue Requirement	Company Position (filed 11/14/05)	Staff Position (filed 1/11/06)
Environmental	13.3	8.2
Transmission	6.1	8.8
Distribution	1.7	2.6
Total	**$21.1MM**	**$19.6MM**

* Difference in positions does not reflect the relative earnings impact and is not necessarily a reflection of the ultimate outcome of the case.

Coal Procurement

AEP SYSTEM



Coal Supply
(on average)

- ➢ Purchase 75 MM tons per year
- ➢ Avg. delivered price ~ $32.52/ton in 2005
- ➢ Essentially >95% purchased for 2006
- ➢ Approximately 11%-13% price increase in 2006
  - Rising costs at Eastern mines & safety issues
  - High SO_2 Allowance prices drive low sulfur coal prices

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms, and our ability to recover significant restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants, our ability to recover I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance or the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of flyash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including our dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events.

Transmission Investment Opportunities

ETT: Projects in Texas ERCOT jurisdiction

- $600MM of projects est. in service 2010-2013
- ETT's opportunity could reach $3.0B in this decade

Transco: Within our existing footprint

- Provides opportunity to:
  - Develop new AEP-only projects
  - Reduce regulatory lag through FERC formula rates adjusted annually

Joint Ventures: Outside of our footprint, via ETA or with others

- Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
- Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2016
- Robust pipeline of projects up to $15B

SWEPCO Texas General Rate Case – Docket #37364

On August 28, 2009, SWEPCO filed a base rate case with the Public Utility Commission of Texas requesting an increase of $75 million to cover costs related to the construction of the Stall and Turk plants as well as enhanced distribution reliability spending. A settlement was filed in March 2010 resulting in a revenue increase of $25MM, an ROE of 10.33%, reduced depreciation expense of $17MM and expiration of merger credits of $7MM. An order is expected in mid-April 2010.

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events and our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives.

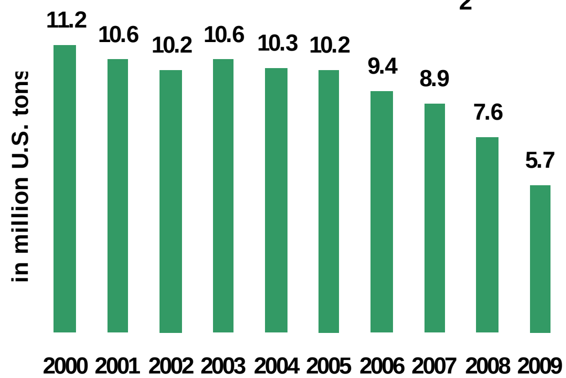
Emissions Reductions since 2000

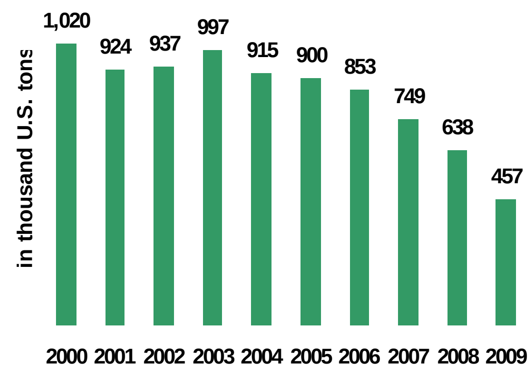
AEP®

U.S. Power Plant SO_2 Emissions



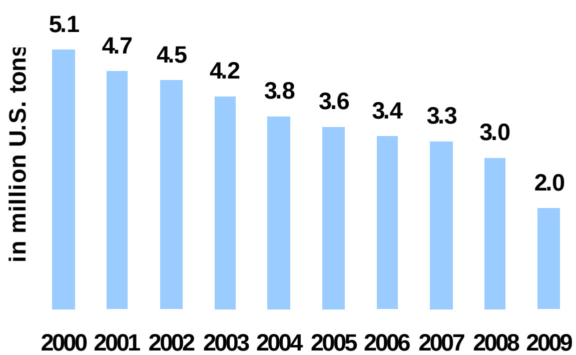
49% reduction since 2000

AEP SO_2 Emissions



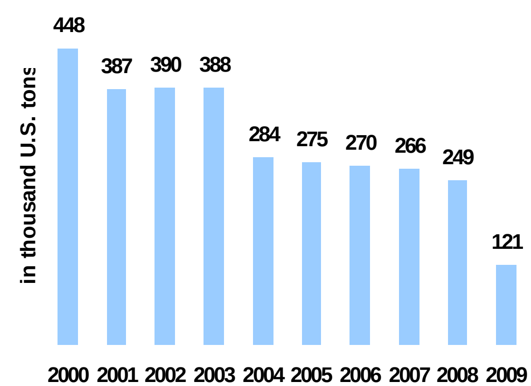
55% reduction since 2000

U.S. Power Plant NOx Emissions



61% reduction since 2000

AEP NOx Emissions



73% reduction since 2000

Source: EPA, 2010; Acid Rain Program

Over $5B capital invested by AEP from 2004-2010 to reduce emissions

Pending EPA Regulations

TRANSPORT RULE

- Proposed Transport Rule (July 2010) limits utility SO_2 and NOx emissions
- SO_2 and NOx subject to caps in 2012, with further SO_2 reductions required in most Eastern states by 2014
- Major concerns with the proposed rule:
  - Not enough time is provided for environmental control installations (i.e. FGD/SCR)
  - EPA costs of retrofitting units are grossly underestimated/ other incorrect assumptions used (though EPA has since modified some of these assumptions)
  - Rule does not account for recent improvements in air quality
  - Inability to trade and bank allowances effectively

MERCURY AND HAP MACT

- Proposed rule issued in March 2011
- Final HAP regulations must be issued by November 2011
  - Maximum Achievable Control Technology (MACT) standards for Hg, other metals, and acid gases, combustion practices for organics
- Compliance Required 3 Yrs. After Final Rule, EPA could grant a 1 year extension
- Very little flexibility in the proposal; opportunity to average across a plant and limited sub categorization
- MACT could require FGD or DSI for acid gases and/or baghouses with activated carbon injection for Hg and metals.

COAL ASH RULE

- Draft coal ash disposal rules issued in May 2010
- EPA proposed two different regulatory designations:
  - "Non-hazardous", solid waste - action required by ~2017
  - "Special" hazardous waste - action required by ~2018-2020
- AEP supports Subtitle D Prime Option of RCRA (solid waste NOT hazardous)
- AEP capital cost of ~$4 billion for solid waste option
- "Hazardous" option could cost DOUBLE this amount

316b RULE

- EPA issued proposal March 28
- Addresses impingement and entrainment of aquatic species
- Proposes upgraded intake screens for impingement
- Suggests cooling towers as an effective technology for entrainment, but defers the decision until site-specific study is conducted
- Cost impact very uncertain at this time

The cumulative effect of the proposed rules is not achievable in the allowed timeframe.

Transmission Investment Strategy

- **<u>Near-Term Investment</u>** – Electric Transmission Texas (ETT) secures near term investment opportunities, allowing AEP to invest in the large, growth-oriented Texas transmission market. Total project cost of $3 billion with a 9.96% ROE.
- **<u>Mid-Term Investment</u>** – Seven wholly-owned transcos allow for expansion and growth within AEP's existing utility footprint through an efficient recovery mechanism. Will spend $160 million in 2011 and more than $350 million in 2012; Expected ROE will be in the 11.20%-11.49% range
- **<u>Long-Term Investment</u>** – Joint ventures provide opportunities for longer-term growth outside of AEP's existing utility footprint with forward looking formula rates, higher ROEs and FERC incentives, and mitigated risk profiles.

765-kV Tower

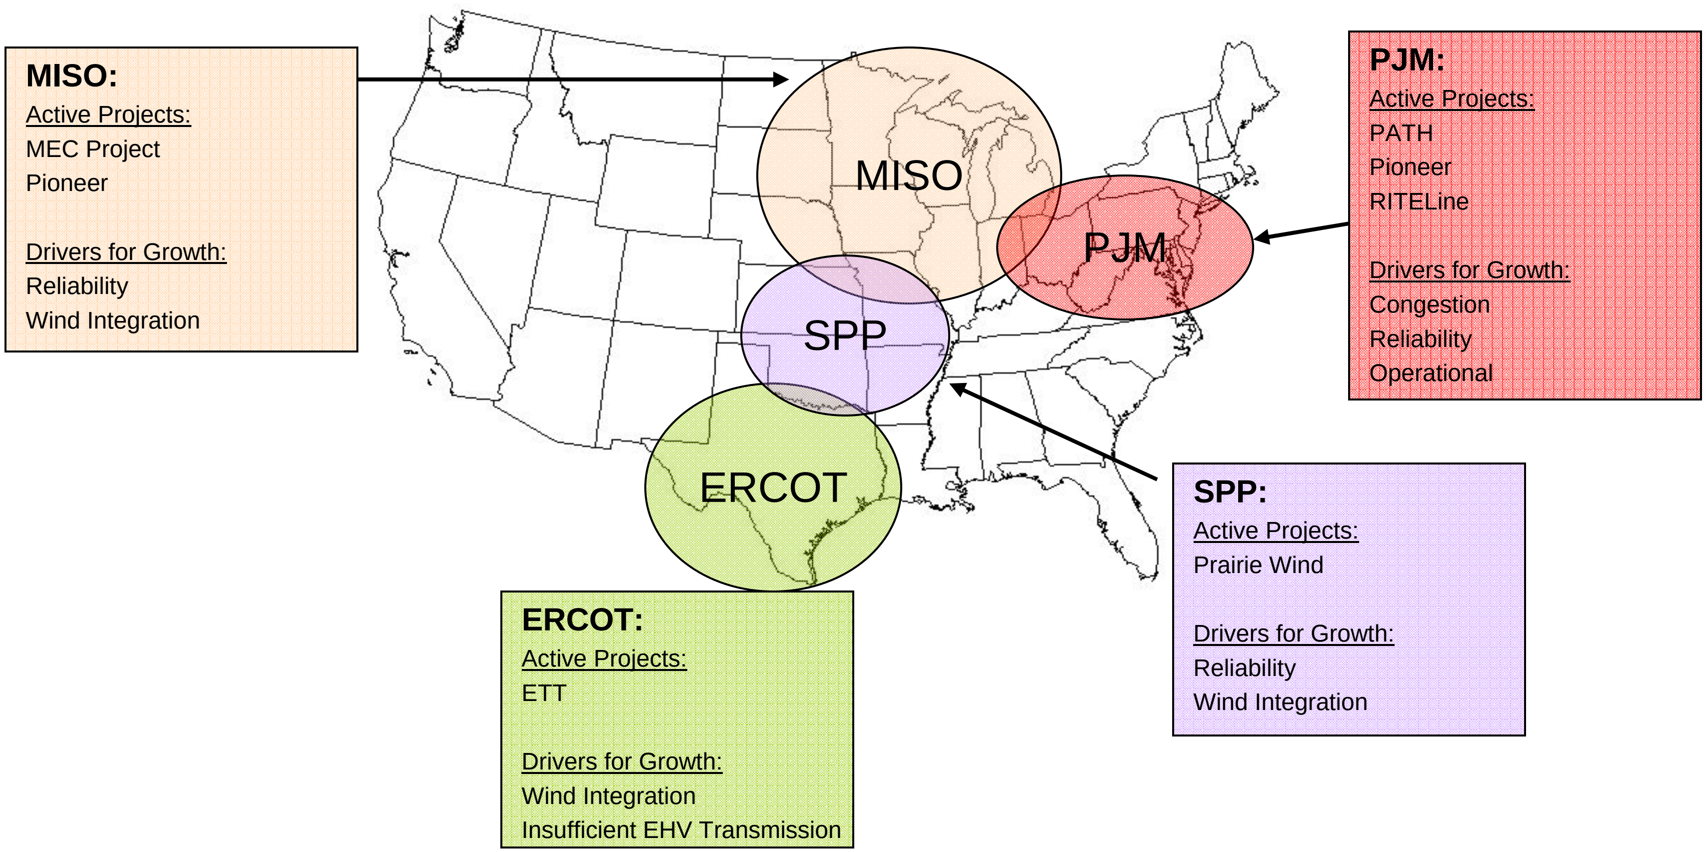
Transmission has a diversified investment approach that positions it as one of the key AEP growth businesses.

Joint Venture Strategy: Long-term

- **Strategy**: JV's secure new investment opportunities with local utilities to diversify AEP's investment outside AEP's traditional footprint while providing longer-term incremental earnings**.** JV projects are well-suited for FERC formula rate recovery mechanism, including potential for incentive rates.

- **Future:** Federal/regional initiatives may accelerate expansion of EHV transmission (e.g. cap-and-trade, renewable portfolio standards, inter-region wide planning). Securing first mover advantage will enable AEP to secure LT investment opportunities.

- **Future flexibility**: Passive investment opportunities can be considered and can provide entry beyond SPP/PJM/ERCOT



AEP Ohio ESP Filing – Core Policy Issues

AEP®

Investment in Ohio

Supports economic development and essential tax base

Fundamental barriers must be addressed to attract investment for Environmental Compliance and New Generation

Jobs in Ohio

Jobs are a key component of growth potential in Ohio

Without regulatory assurances over time we could see loss of direct & indirect jobs related to power generation, and business relocations to surrounding states

Energy Security

Secure, reliable and predictable electricity supply is basis for sustained investment and employment in Ohio

Volatility in power prices can lead to major loss of economic activity over time

Primary objective of ESP: Stabilize rates and support economic development in the state of Ohio

Merged AEP Ohio

Single merged AEP Ohio company presumed with supporting information on an individual OP/CSP basis

Rate Redesign

Generation rates redesigned to resemble market pricing structures

29-Month ESP Period

ESP period Jan 1, 2012 through May 31,2014 (May 31 date aligns with PJM annual planning cycle)

Alternative Long Term Option

Alternative longer-term price certainty option offered for qualifying commercial & industrial customers

Ohio Growth Fund

Creation of significant private sector economic development to attract investment and job growth in AEP Ohio service territory

Distribution Components Included

Inclusion of certain distribution components while pursuing a parallel distribution base rate case

Capital Allocation

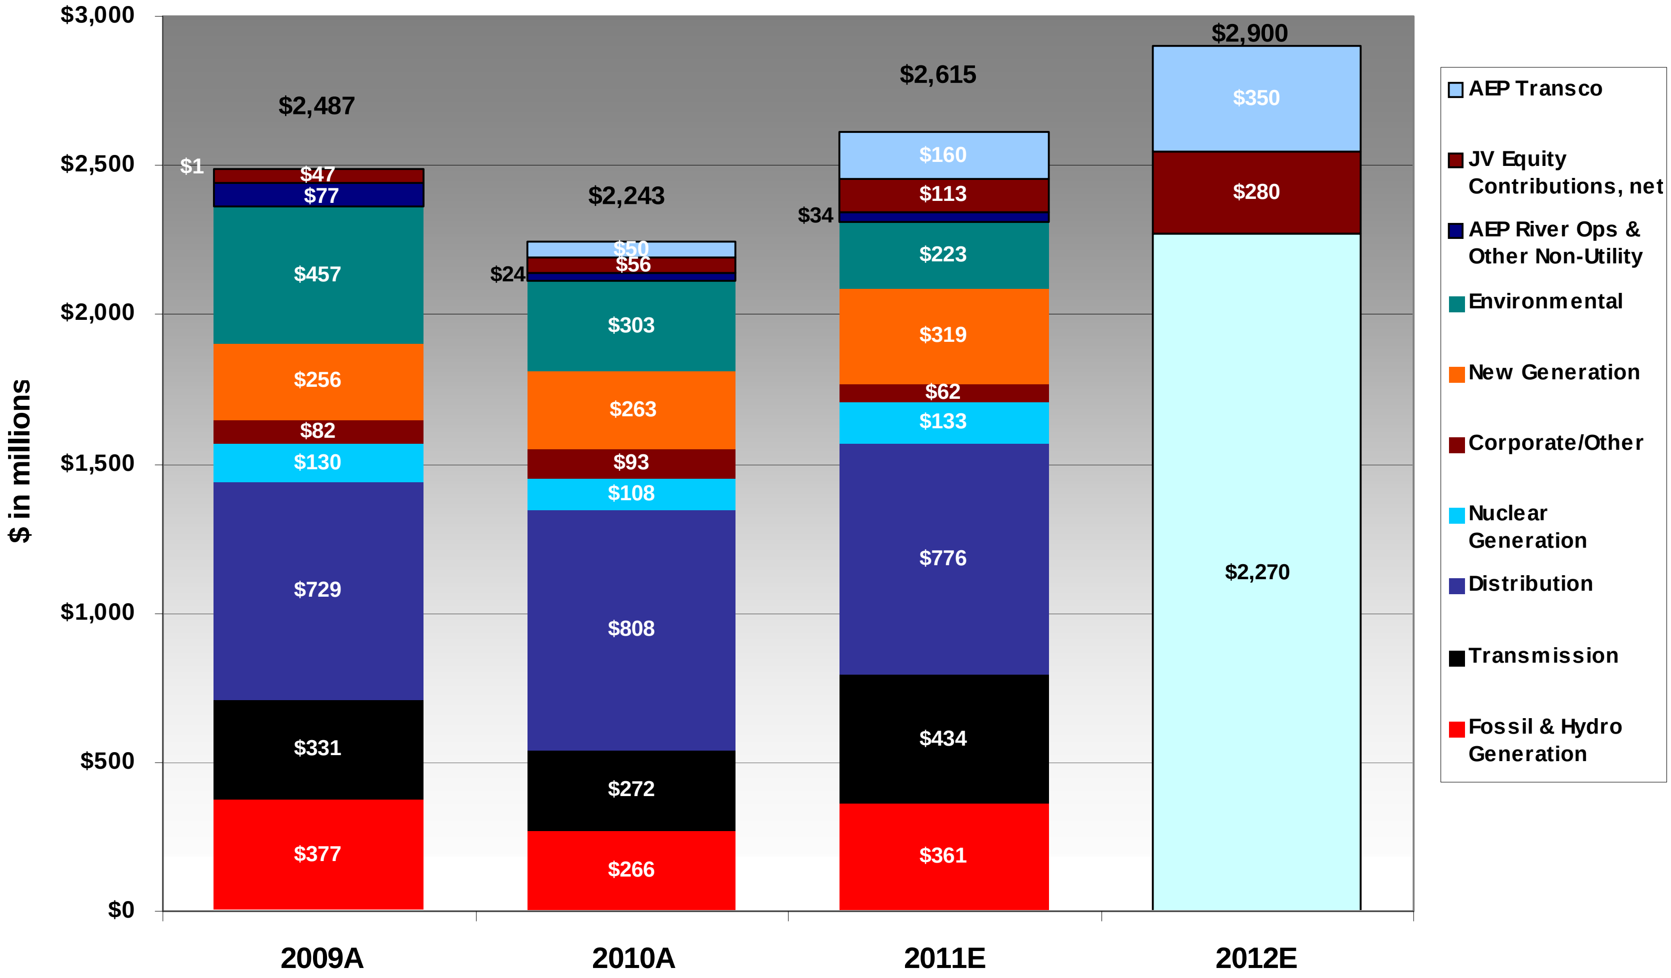
In this economic recovery cycle, capital allocation requires balance for spending that considers the obligation to serve, the ability to obtain rate increases, a balance sheet to support the plan, and the total return proposition to shareholders

- **Capital for Growth**
  - Capital budget of $2.6B for 2011
  - Capital budget plan of $2.9B for 2012

- **Return of Capital to Shareholders**
  - 12% increase in quarterly dividend in 2010
  - Future dividend increases will grow with earnings

- **Capital to Reduce Risk**
  - Voluntarily funded pension $500M in 2010
  - Allocating an additional $150M of funding for pension in 2011

Capital Expenditures



Investment levels greater than depreciation of $1.4B per year cause rate base growth in 2011 and 2012

2011 Ongoing Earnings Guidance

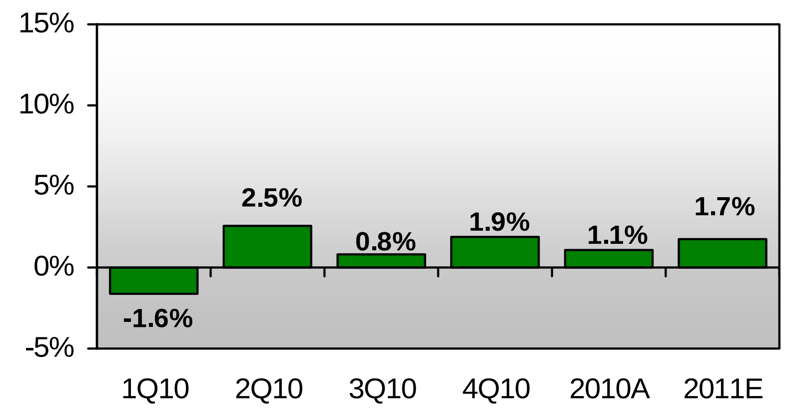
2010A: $3.03/share

2011E: $3.00-$3.20/share

Near-Term Earnings Drivers

- Recovering economy
- Rate recovery from returns on capital investment
- Continued O&M discipline

AEP Total Normalized GWh Sales
Quarter % Change vs. Prior Year

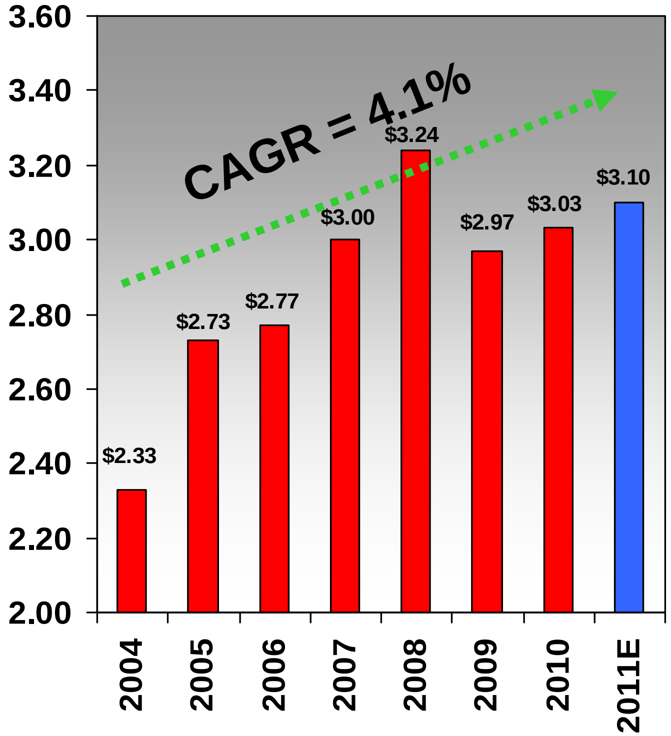


Year over Year change by segment:
Residential: 1.9%
Commercial: 0.7%
Industrial: 1.9%

Earnings and Dividends

On-Going EPS History Since 2004

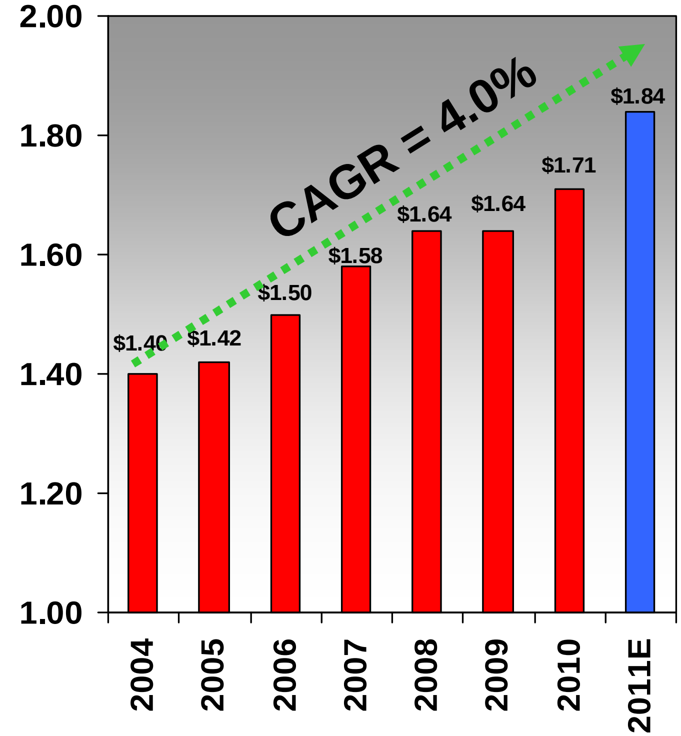
$/share



- Earnings growth largely attributed to capital investment program
- Pre-recession earnings supported by robust wholesale market activity and high power prices
- Equity offering in 2009 stabilized credit and strengthened balance sheet
- 2011 guidance range of $3.00 to $3.20 per share

Dividend History Since 2004

$/share



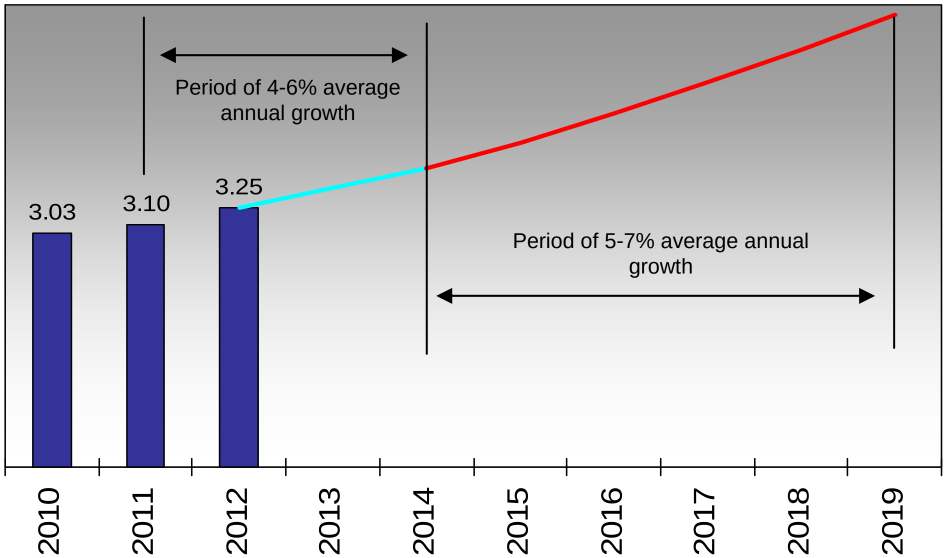
= subject to Board of Directors approval

- Dividend increased 12% in 2010
- 403rd consecutive quarterly dividend paid March 10, 2011
- 50-60% payout ratio target
- Current yield over 5%

Long-term EPS Growth Rate

- 4-6% EPS growth 2012-14
  - Average annual capital spend between $2.9-3.4B
    - Utility platform replacement capital of about $1.4B (annual depreciation)
    - Growth in rate base of $1.5-2.0B per year, allocated between utility platform and transmission projects
  - Blended ROE of 10.5 - 11%
  - Slow, steady recovery in economy
- 5-7% EPS growth post 2014
  - Base utility platform capital including generation transformation
  - Higher allocation of discretionary capital going to opportunities in the transmission development pipeline
  - Higher overall blended ROE opportunity
  - Robust economic growth

Average Annual EPS Growth defined over two periods



AEP Highlights

- **Regulated Electric Utility**
  - Regulatory and economic diversity
  - Operating Company Model
- **Focus on Capital Allocation**
  - Capital for Growth
  - Return of Capital to Shareholders
- **Strong Balance Sheet**
  - Stable credit ratings
  - Capital plan supported by cash flow
  - Strong liquidity position
- **Growth Opportunities**
  - Capital for utility platform
  - Transmission projects
- **Dividend yield over 5%**

AEP Ohio Distribution Rate Case – Docket #351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%. A procedural schedule from the PUCO is pending.

Summary Rate Case Information

APCo Virginia Base Rate Case

On March 31,2011 APCo filed an update to its pre-biennial base rate case for recovery of generation and distribution costs requesting an increase of $75 million ($126 million total increase less $51 million deferral of depreciation increase). (Docket #:) A procedural schedule is pending from the VSCC. In conjunction with this case, an environmental rate adjustment clause (E-RAC), generation rate adjustment clause (G-RAC) and a renewable portfolio standard rate adjustment clause (RPS-RAC) were filed . APCo has requested that rates in the base case, E-RAC and RPS-RAC go into effect on 2/1/2012 and the G-RAC on 3/1/2012.

Projected Capital Structure - Company Position (12/31/10)

	% of Capitalization	Cost Rate	Weighted Return
Short-Term Debt	3.76%	0.33%	0.01%
Long-Term Debt	53.25%	5.90%	3.14%
Common Equity	42.72%	11.65%	4.98%
Preferred Stock	0.27%	4.35%	0.01%
Total	100.00%		8.14%

Procedural Schedule - TBD

Required Rate Relief - Company Position (12/31/10)

($ in millions)

Rate Base	$	2,192.5
Rate of Return		8.14%

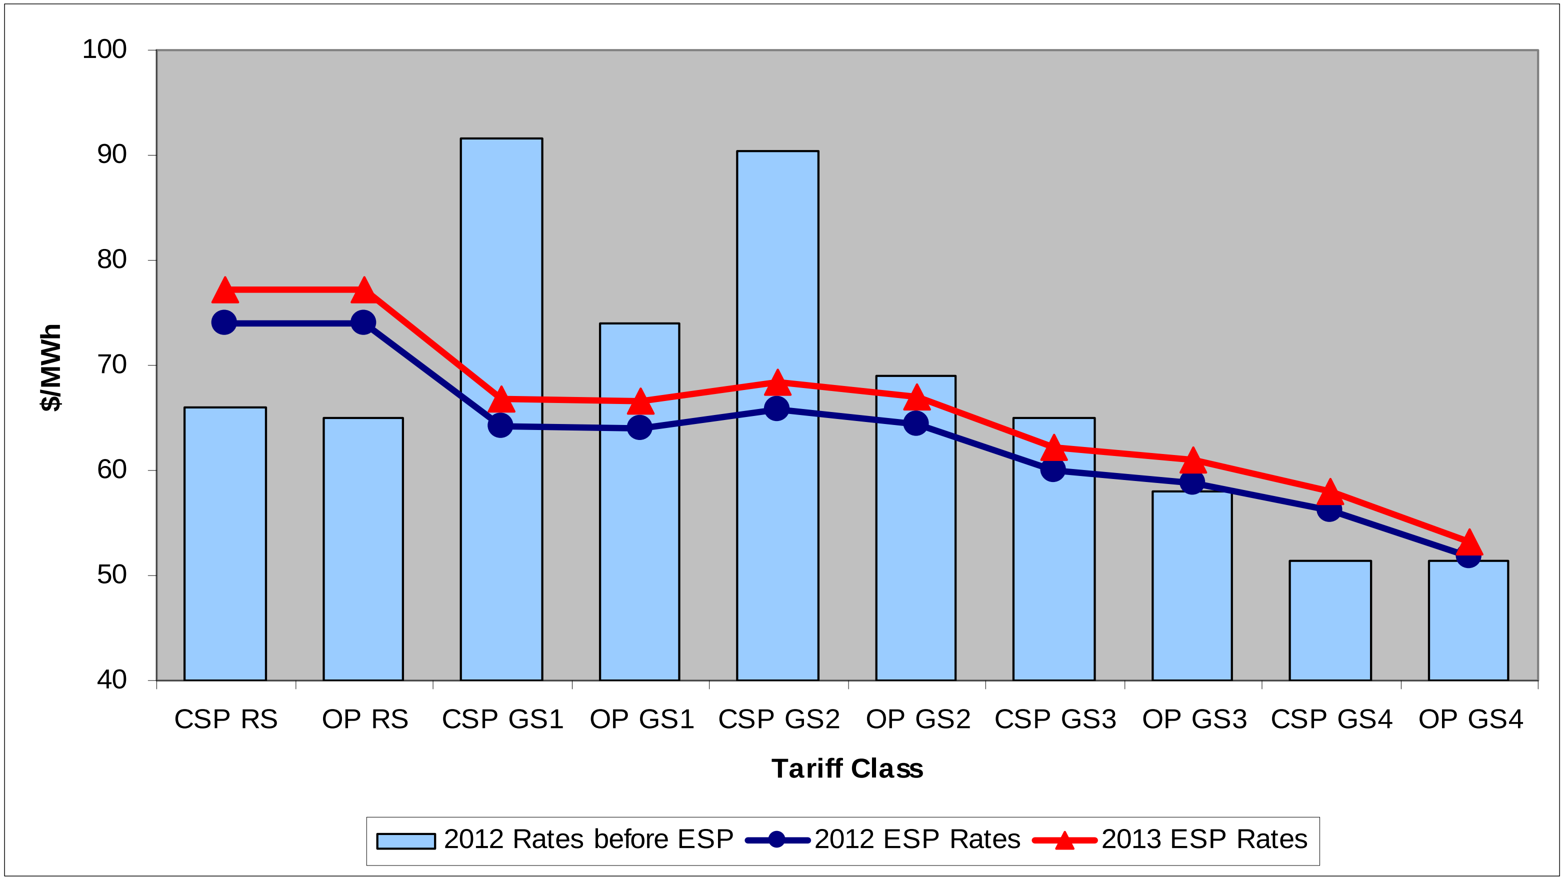
FAC Actual Recovery 2012-2014	**Actual**			**Actual**			**Actual**		

N/C* = No change from prior year

While the ESP includes a small base generation increase, the move to a market-based rate design, consistent with state policy, will result in varying impacts for different customer groups.

Price to Compare

Proposed **SSO** Rates Redesigned To Resemble Market Pricing Structures



Rates do not reflect mitigation impact of market transition rider
2012 Rates before ESP reflect current 2011 rates for generation & transmission service, adjusted to reflect full cost 2011 fuel and environmental costs.

The realignment of rates with market should provide all customers with equivalent opportunities to shop. Additionally, since the proposed design eliminates explicit demand charges, customers should be more easily able to evaluate competitive offers. To ease the rate impact that customers will experience from the realignment, we have proposed a Market Transition Rider.

Market Transition Rider – Mitigates the Initial Impact of Rate Realignment

Three-Year Market Transition Plan
Summary of AEP Ohio ESP Generation Rate Changes

CSP Current Customer Class	CSP New Customer Class	2012 Increase	2013 Increase	2014 Increase	Total Increase
Residential	Residential	5.0%	3.9%	1.0%	10.2%
GS1	GS Non-Demand	(6.4%)	(5.2%)	(7.8%)	(18.1%)
GS2		(5.3%)	(5.5%)	(8.2%)	(17.8%)
GS3	GS Demand	(0.3%)	1.0%	(1.8%)	(1.2%)
GS4/IRP		2.3%	7.7%	4.7%	15.3%
Total CSP		**2.2%**	**2.7%**	**0.0%**	**5.0%**
OPCo Current Customer Class	**OPCo New Customer Class**	**2012 Increase**	**2013 Increase**	**2014 Increase**	**Total Increase**
Residential	Residential	6.0%	3.1%	0.3%	9.7%
GS1	GS Non-Demand	1.5%	(3.3%)	(6.1%)	(7.8%)
GS2		0.1%	(0.7%)	(3.5%)	(4.1%)
GS3	GS Demand	(0.7%)	2.8%	(0.0%)	2.0%
GS4/IRP		(6.6%)	5.8%	3.0%	1.7%
Total OPCo		**0.4%**	**2.7%**	**0.0%**	**3.1%**
AEP Ohio		1.4%	2.7%	0.0%	4.2%

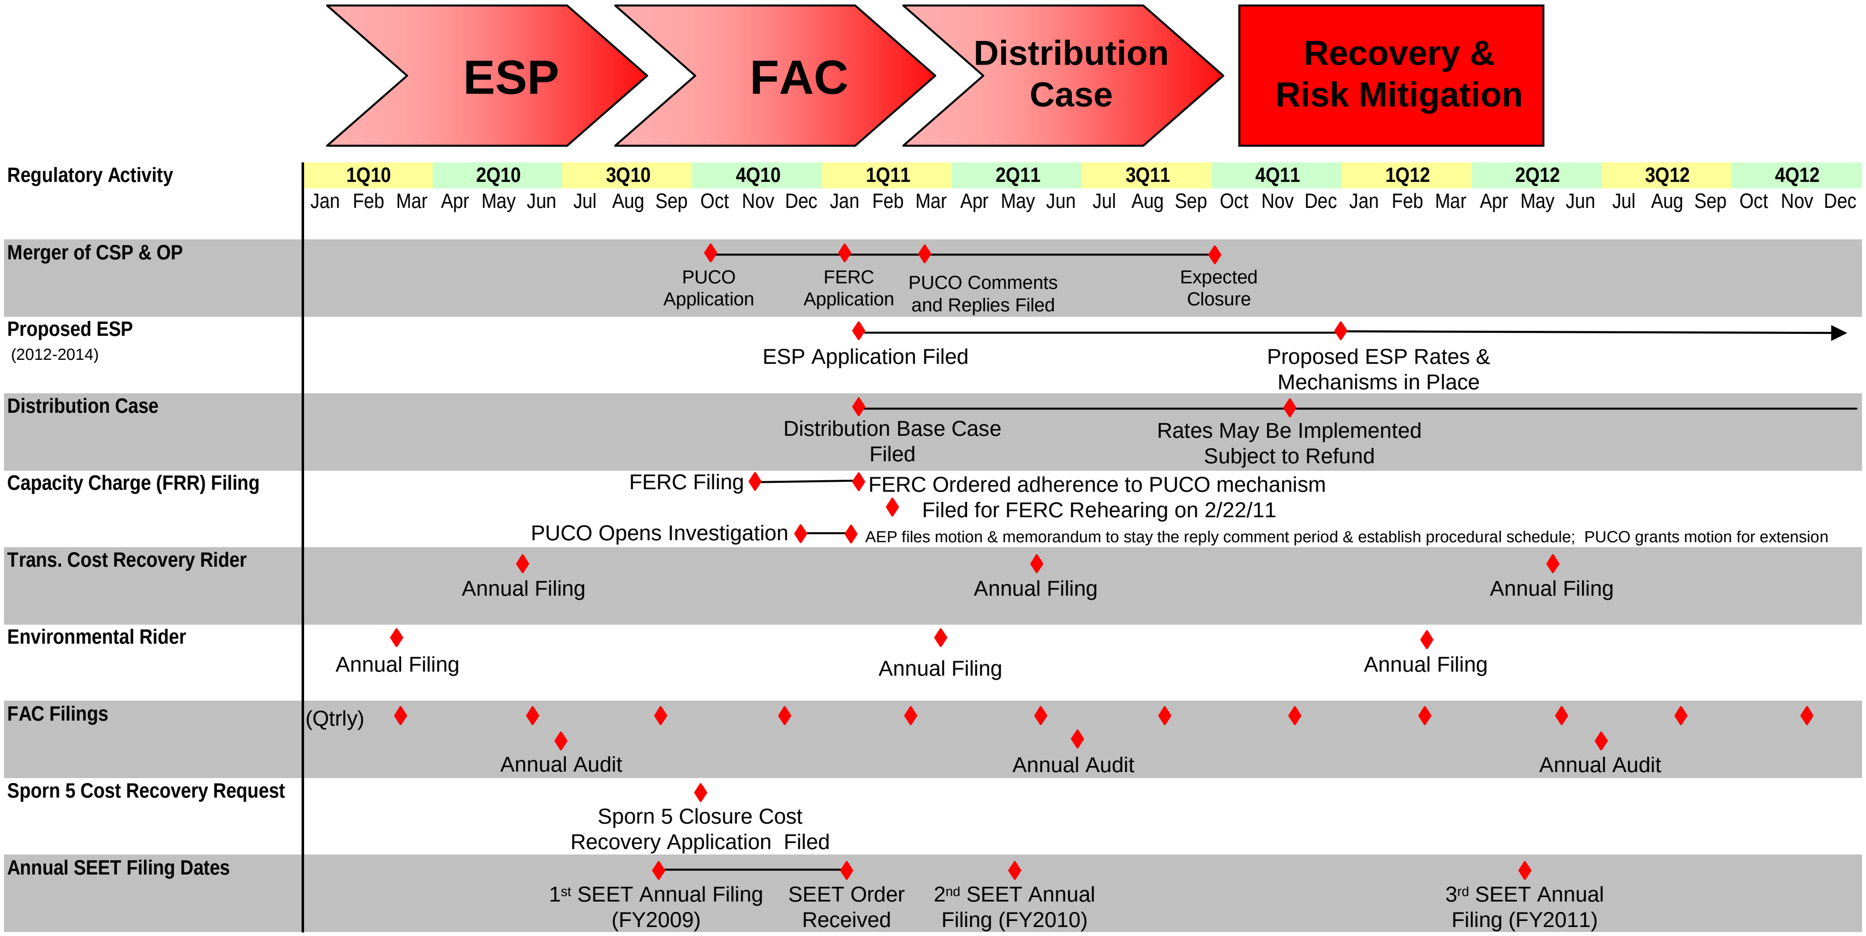
Illustration of Market Transition Rider on ESP Generation Rate Increases

The Market Transition Rider is a transition rider designed to facilitate the transition from AEP Ohio's current rates to market-based SSO Generation Service rates. It is a non-bypassable rider designed to limit the first and second year changes for any customer classes to uniformly transition any above or below average changes in three steps. Any revenue shortfall that is produced by limiting the increases for certain customer classes is collected from those classes whose decreases are limited.

List of ESP Riders – Existing and Proposed

Line	Rate Mechanism	Abbreviation	Bypassable	Distribution	Notes
1	**Current Riders**				
2	Universal Service Fund Rider	USF	--	Yes	
3	Advanced Energy Fund Rider	AEF	--	Yes	Expired 12/31/2010
4	kWh Tax Rider	kWh Tax	--		May be self-assessed under specific terms
5	Provider of Last Resort Charge	POLR	No		Option to avoid under specific terms
6	Monongahela Power Litigation Termination Rider	Mon Power	--	Yes	Expires once amount collected
7	Transmission Cost Recovery Rider	TCRR	Yes		
8	Fuel Adjustment Clause Rider	FAC	Yes		
9	Energy Efficiency and Peak Demand Reduction Cost Recovery Rider	EE/PDR	--	Yes	
10	Economic Development Cost Recovery Rider	EDR	--	Yes	
11	Enhanced Service Reliability Rider	ESRR	--	Yes	
12	gridSMART® Rider	gridSMART®	--	Yes	
13	Environmental Investment Carrying Cost Rider	EICCR	No		the current bypassable rider is proposed to be nonbypassable in the new ESP
14					
15	**Proposed Riders**				
16	Standard Offer Generation Service Rider	GSR	Yes		Relocation of base generation rates
17	Generation Resource Rider	GRR	No		Capital/solar investment
18	Alternative Energy Rider	AER	Yes		Relocation of RECs from FAC
19	Phase-In Recovery Rider	PIRR	--	Yes	Previous ESP deferrals, possibility of securitization
20	Distribution Investment Rider	DIR	--	Yes	
21	Market Transition Rider	MTR	--	Yes	
22	Generation NERC Compliance Cost Recovery Rider	NERCR	No		
23	Facility Closure Cost Recovery Rider	FCCR	No		
24	Carbon Capture and Sequestration Rider	CCSR	No		
25					
26	**Other Provisions**				
27	Green Power Portfolio Rider	GPPR	--		Voluntary
28	Rate Security Rider	RSR	--		Voluntary
29	Plug-In Electric Vehicle Tariff / Costs	PEV	--	Yes	Voluntary, Deferral of Costs
30	Emergency Curtailable Service Rider	ECS	--		Voluntary, pending
31	Storm Damage Recovery Mechanism		--	Yes	Reconciliation of storm experience to funding level
32	Pool Termination or Modification Provision		Yes		
33	PIPP Uncollectibles	PIPP	--	Yes	

Ohio Timeline



AEP Ohio's long-term strategy is designed to produce rate relief for items currently known as well as anticipated future items. The filings and riders we seek today are designed to be broad and flexible enough to accommodate a variety of circumstances, because it is impossible to know all variables and specific items for which we will desire to seek rate relief or what regulatory circumstances will prevail at the time.

Texas Transmission Growth Strategy : Near Term Investment

Ownership Structure: 50/50 (AEP/MidAmerican Energy Holding Company)

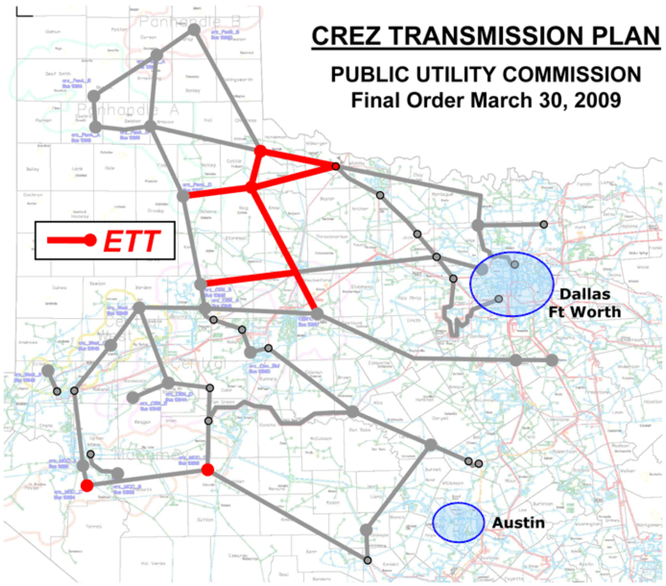
Total Project Cost: Over $3 Billion

Growing Rate Base:
Current rate base is $412 million; expected to grow as follows:
2011: $473 million
2012: $778 million
2013: $1,352 million

ETT
Electric Transmission Texas

Interim TCOS filings twice per calendar year

Approved ROE: 9.96%



- **Additional Projects in the Pipeline ~$1.6 B:**
  - Approximately 822 miles of lines and 28 substations with in-service dates through 2017

- **Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.1 B:**
  - Seven double-circuit 345kV transmission lines (~$750 M), eight major 345kV stations and several series compensation installations (~$350 M)
  - PUCT Certificate of Convenience and Necessity (CCN) proceedings underway

Transco Update

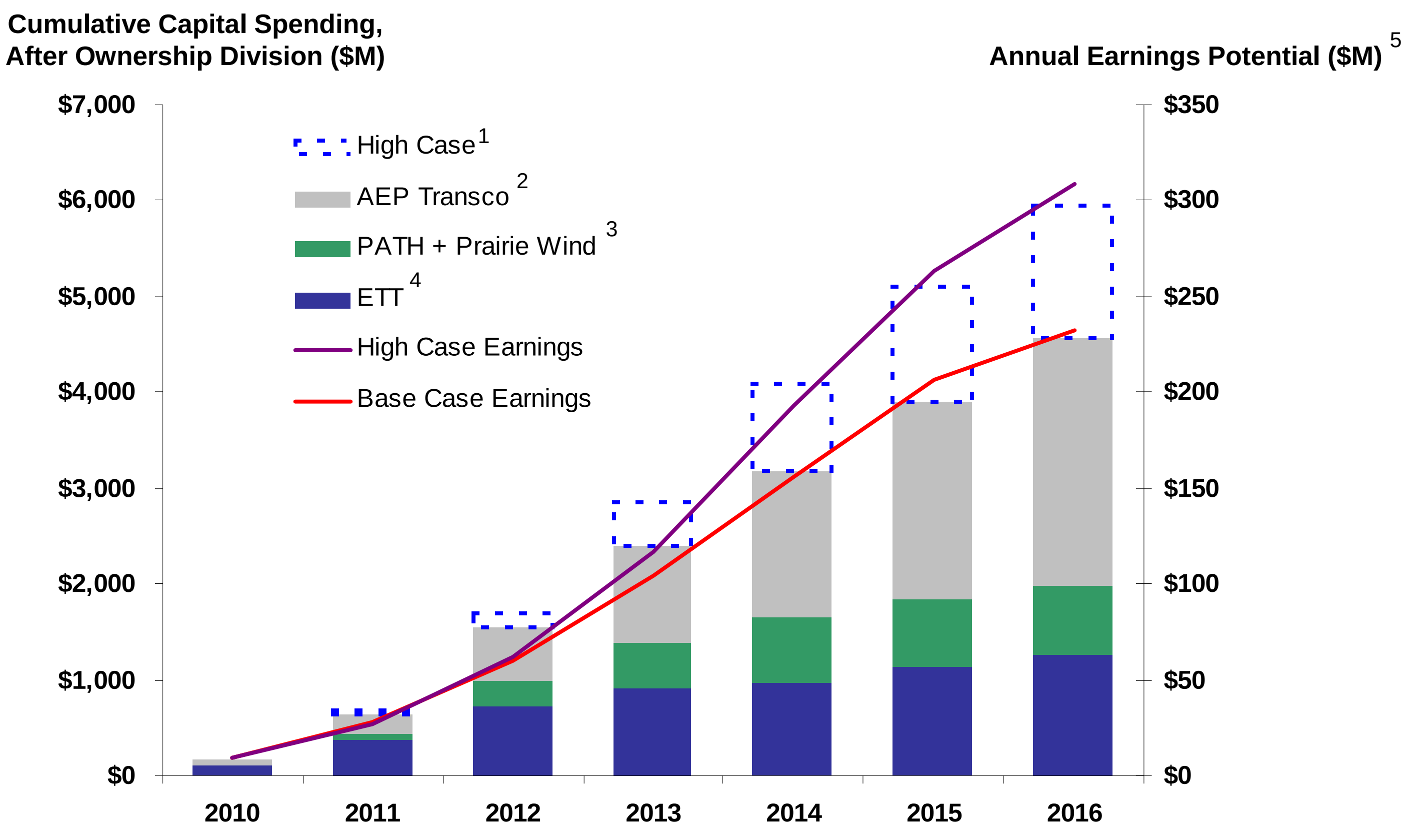
Filing Status Update:

- ***Ohio** (filed and approved)* – PUCO approved the Ohio Transco December 29, 2010
- ***West Virginia** (filed)* – Procedural schedule is set, with company testimony filed January 6; Intervenor's testimony is due April 6 and rebuttal is due April 20; Hearings in June
- ***Arkansas and Louisiana*** – Filing date in Arkansas likely early 2011
- ***Texas-SPP*** – Expecting TX filing in mid 2011
- ***Kentucky*** – Filing made February 4, 2011; Informal conference with staff held March 2, 2011
- ***Indiana*** – Filing made March 1, 2011; Pre-hearing conference March 28, 2011
- ***Virginia** (withdrawn)* – Filing withdrawn to give additional time to resolve issues with Staff
- ***Michigan and Oklahoma*** – Do not require state filing

$160M capital spend forecasted for 2011

Transmission (Transco/JV's) – Capital/Earnings Profile

Transco and JV's have the potential to significantly add earnings growth to AEP.



[1] High Case includes: Pioneer (50% ownership), Prairie Wind at 765kV (25% ownership), Tallgrass at 765kv (25% ownership) and other future opportunities

[2] AEP Transco (100% ownership) includes spending in OH, MI & OK only through 2011 and in other jurisdictions for 2012 and beyond

[3] PATH (50% ownership) assumes an in-service date of 2015 and Prairie Wind (25% ownership) assumed at 345kV

[4] ETT (50% ownership) includes CREZ and additional projects

[5] Projection of earnings potential at the transmission holding company level assuming 50/50 debt/equity capitalization and ROE of 12-13% for FERC projects; 60/40 debt/equity capitalization and 10.25% ROE (2011 forward) for ERCOT projects; and 50/50 debt/equity capitalization and ROE of 11.2-11.49% for Transco projects

AEP AMERICAN® ELECTRIC POWER

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate relief or other recovery for new investments, transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements periodically issued by accounting setting bodies; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

AEP Addressing Industry Concerns

- Rising Commodity Costs – Fuel and Transportation
- Rising Capital Costs – Environmental Retrofit and New Generation
- Declining Reserve Margins
- Need for Additional Transmission
- Regulatory Pressures Due to Rising Rates

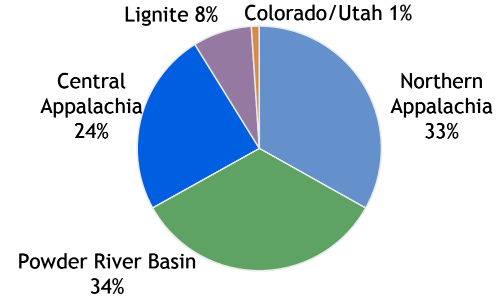
AEP is well positioned to manage each of these industry concerns.

Industry Concern: Rising Commodity Costs - Fuel and Transportation

AEP SOLUTION – FUEL PROCUREMENT STRATEGY:

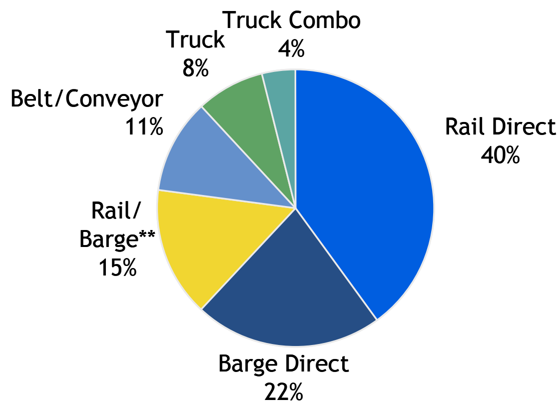
- **Portfolio of Coal Contracts**
  - Geographic and supplier diversity
  - Diversity of terms – currently ranging from 2008 to 2022
- **Portfolio of Transportation Resources**
- **Portfolio of Options to Manage the Economics of Converting BTUs to MWhs**
  - Manage emission allowance exposure
  - Blending capabilities at many plants
  - Transportation fleet to reposition coal
- **Regulatory Recovery**
  - Active fuel clauses in ten of eleven jurisdictions

AEP Supply Diversity *



* 2008 Projected

AEP Transportation Diversity *



* 2007 Actual

** Reflects coal delivered to AEP plants transported through a combination of rail and barge

AEP strategy: manage coal supply sources and transportation assets to mitigate price increases and market disruptions.

Industry Concern: Rising Capital Costs

AEP SOLUTION – Completed Environmental Retrofit

Lower Capital, Lower Operating Costs, Successful Operating Performance

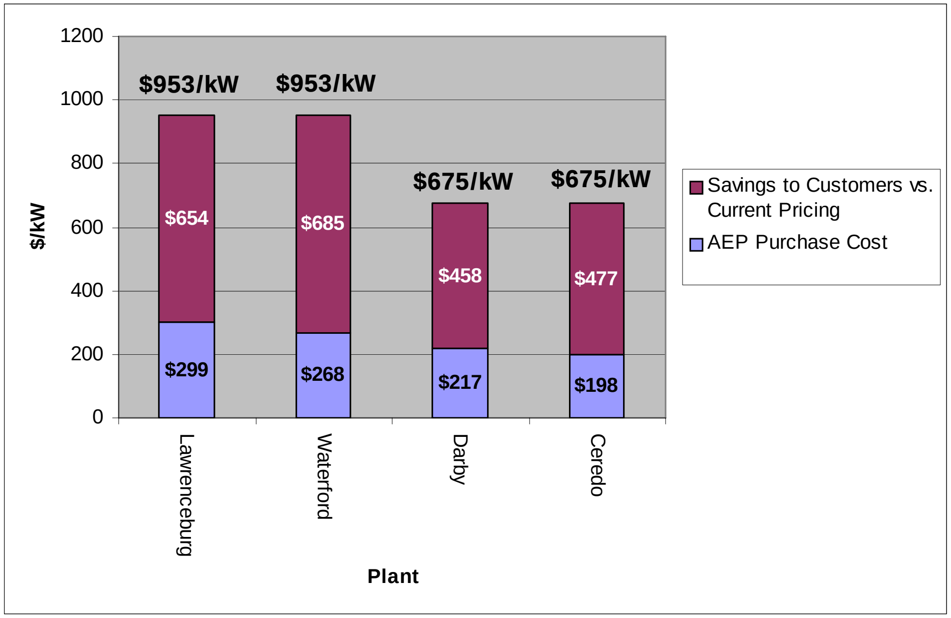
- By locking in our environmental program costs in the early portion of this decade, AEP has a clear 'first-mover' advantage
- Capital cost comparison for wet scrubber:
  - AEP average ~ $250/kW
  - 2007 pricing for a 600MW plant ~ $320/kW
  - 2012 forecast for a 600MW plant ~ $470/kW

- **11,076 MW FGDs currently in service or under construction equates to cost savings to rate payers based on 2007 $ of $775 million.**

AEP SOLUTION – Purchased Low-Cost Generation

Lower Capital, Successful Operating Performance, Delayed Need for Baseload

- Cost to replace plants in 2008 are estimated at $675/kW for simple-cycle and $953/kW for combined-cycle. Costs include as-spent direct plant costs only. Excluded are AFUDC, land, transmission and gas pipeline interconnections. This equates to cost savings to rate payers of $1.7 billion.



By moving early, AEP avoided approximately $2.5 billion of capital. Nearly all of these investments are currently reflected in rates.

Industry Concern: Declining Reserve Margins

AEP SOLUTION – Add Generation:

Harry D. Mattison Plant – commercial operations achieved in 2007

Generation:

- Adequate reserves in East due to purchased generation
- Build peaking, intermediate and baseload generation in the West

Project Name	State	Fuel Type	Plant Type	MW Capacity	Original In Service Date	As Contracted Cost	Cost if Contracted in 2008	In Service if Contracted in 2008
Mattison	Arkansas	Gas	Simple-cycle	340	2007	$333/kW	$675/kW	2010
Stall	Louisiana	Gas	Combined-cycle	480	2010	$671/kW	$953/kW	2011
Turk	Arkansas	Coal	Ultra-supercritical	600	2011	$2,123/kW	$2,605/kW	2014

Costs include as-spent direct plant costs only. Excluded are AFUDC, land, transmission and gas pipeline interconnections.

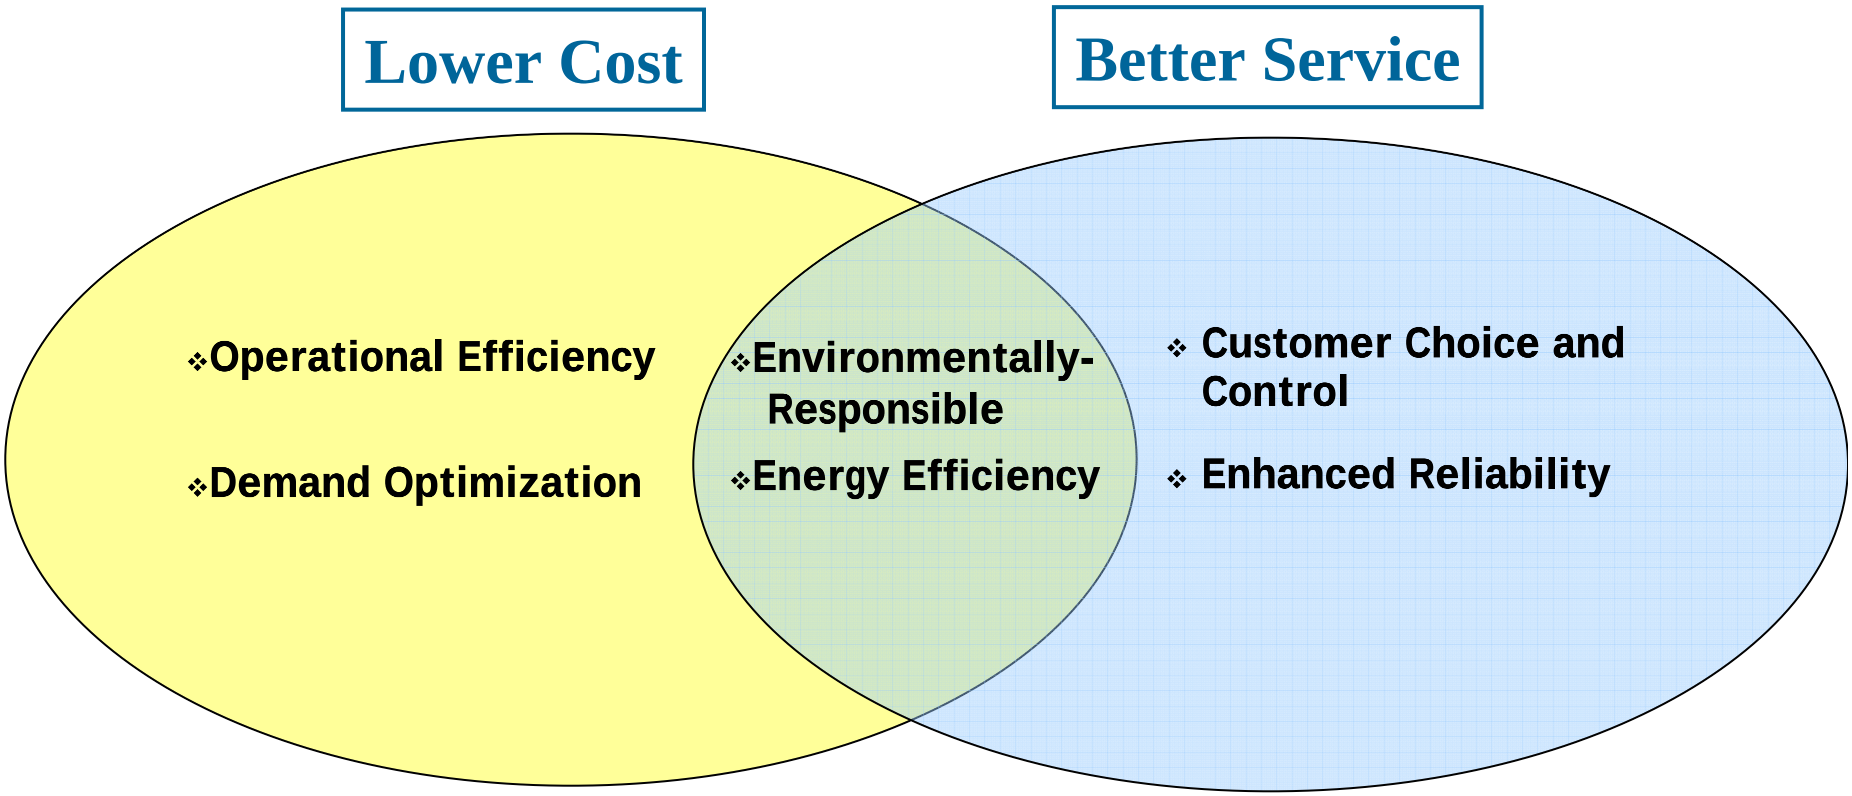
AEP's current initiatives help mitigate both the supply and demand issues facing the U.S.

AEP®

Industry Concern: Declining Reserve Margins

AEP SOLUTION – Improve Efficiency and Demand Management:

AEP's **gridSMART**SM initiative will develop a deployment plan for new customer programs and advanced technologies to support pursuit of the following value propositions:

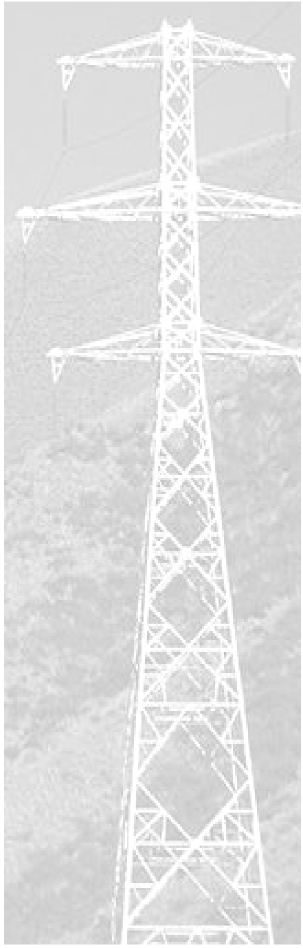


Increased efficiency reduces cost and GHG emissions. It also delays the need for new generation.

Industry Concern: Need for Additional Transmission

AEP SOLUTION:

Our status as the largest transmission owner in the U.S. affords us technical, operational and economic advantages:



- Efficient System Design - 765-kV Technology
- Advanced Technology Solutions - Laredo Variable Frequency Transformer
- Strong Supplier Relationships - Long-term Equipment and Construction Contracting
- Joint Venture Partnerships - Investment opportunities identified
  - – MidAmerican Energy Holdings Company
    - – Electric Transmission Texas - $1 billion - $7 billion opportunity
    - – Electric Transmission America - $3 billion opportunity in SPP
  - – Allegheny Energy Inc.
    - – PATH - $1.8 billion opportunity

Our customers and shareholders benefit from the scope, scale and expertise of our transmission operations.

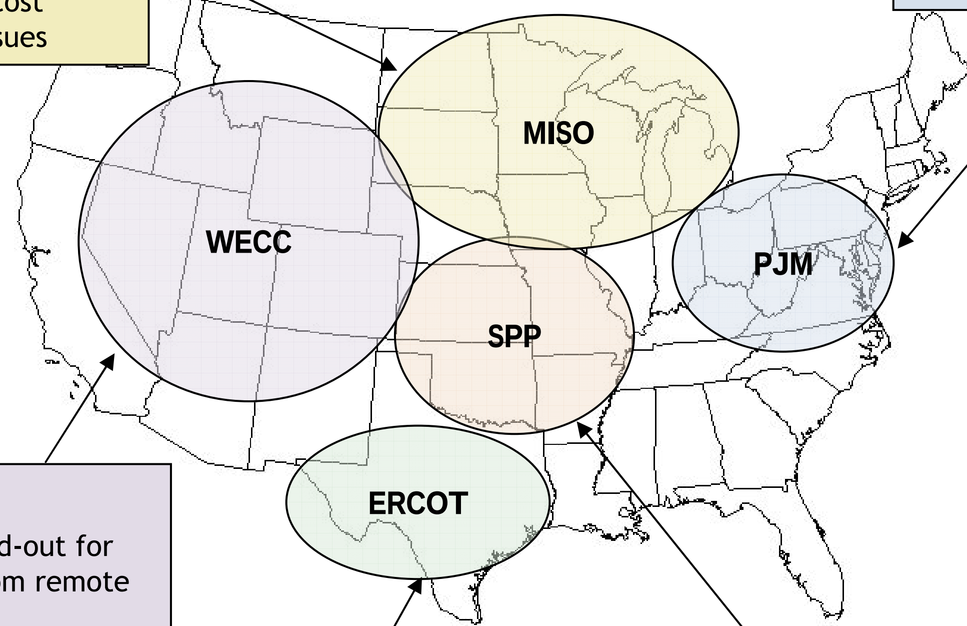
Transmission Investment Opportunities Allow Broader Market Access

MISO

ITC 765-kV project may be test case for cross-border cost recovery and seams issues

PJM

Congestion will be reduced and reliability will be increased



WESTERN STATES

Opportunity for 765-kV build-out for long-haul transportation from remote resources to load

SPP

Regional rate design under development to encourage investment and accommodate new generation sources

ERCOT

Load growth and access to wind resources driving transmission investment

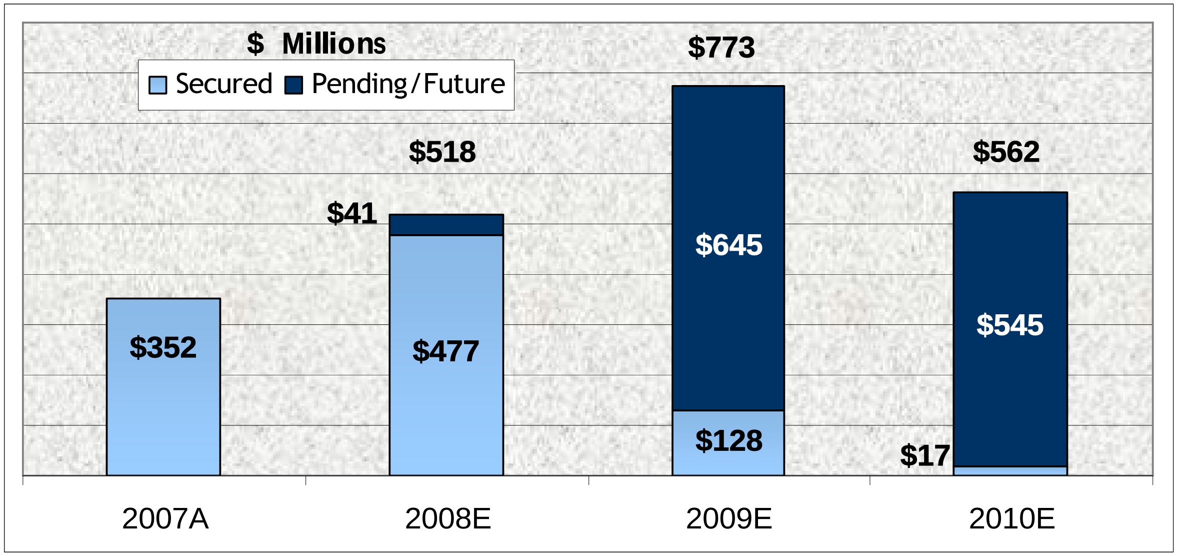
AEP's transmission initiative addresses regional supply/demand issues (congestion) and is required for more robust deployment of renewable generation sources.

AEP®

Industry Concern: Regulatory Pressures Due to Rising Rates

AEP SOLUTION:

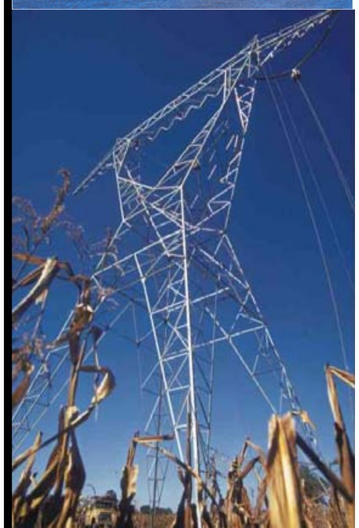
- **History of Regulatory Success/Proven Track Record**
- **Lowest Cost Provider to 93% of our customers (8 of 10 Jurisdictions)**
- **gridSMART^{SM} Initiative to reduce customer bills**
  - Benefit: more power to sell off-system creates increased sharing for retail customers, further reducing customer bills
- **AEP Track Record of Success – Anticipated 2007 rate relief of $338MM; Achieved $352MM; Already secured 92% of 2008 rate relief through the 1st quarter of 2008.**



AEP is well-positioned for continued favorable regulatory treatment.

AEP®

American Electric Power - Solid Track Record of Successful Execution



- *Economies of scope and scale in assets & operations*
  - *2nd Largest Generating Fleet in the U.S. including largest supercritical units at 1300 MW*
  - *Largest Transmission and Distribution Network in the U.S.*
- *Continued innovation and first-mover deployment of leading technology advancements*
  - *Ultra-supercritical and IGCC coal generation*
  - *765-kV leadership*
  - *gridSMART℠ initiative*

Poised for Continued Success

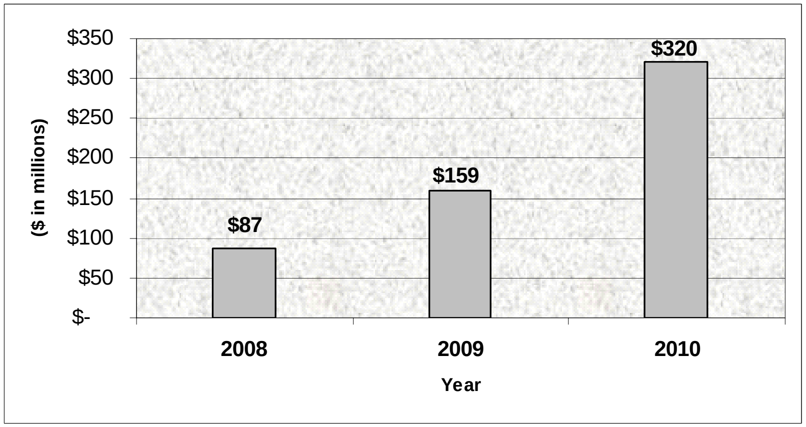
Projected Transmission Capital Spending*

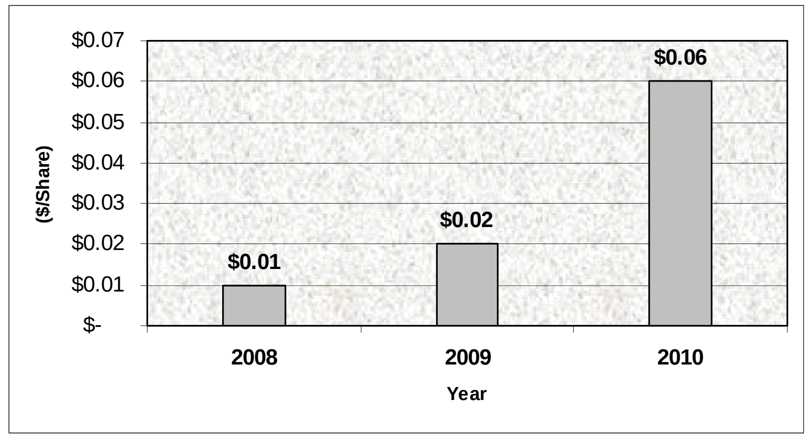


* ETT and PATH joint ventures included in above projection. Amounts represent AEP's 50% share of total transmission joint venture capital expense. These amounts are excluded from AEP's base capital forecast because the joint ventures are not consolidated for financial reporting purposes. AEP will be responsible for funding 40-50% of these amounts with equity contributions, and the remainder will be financed with debt issued by the joint ventures.

PATH
Potomac-Appalachian Transmission Highline

ETT
Electric Transmission Texas

Projected Transmission EPS Contributions*



* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

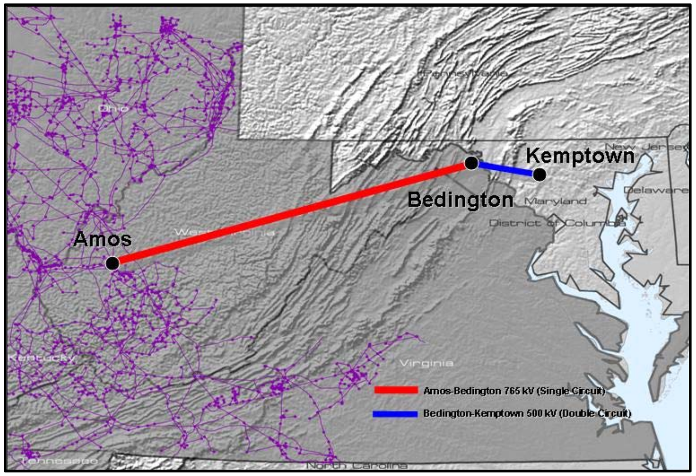
AEP®

Transmission will provide a near and long term catalyst for growth.

I-765™ Transmission in PJM: PATH

Execution in Action

- *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries -- to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP
    - 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
  - FERC ordered the formula rate mechanism be set for hearing, pending settlement judge procedures
- *Funding Plans/Transaction Structure*
  - AEP and Allegheny share ownership of Amos – Bedington line and contribute equally to this portion of the project through PATH West Virginia Transmission Company, LLC
  - AEP's investment will be held in the AEP Transmission Holding Company LLC subsidiary
- *Key Next Steps*
  - Siting Approval from WV and MD – 2010
  - Targeted Completion – 2012



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

PATH
Potomac-Appalachian Transmission Highline

AEP

I-765™ Transmission in Texas (ETT)

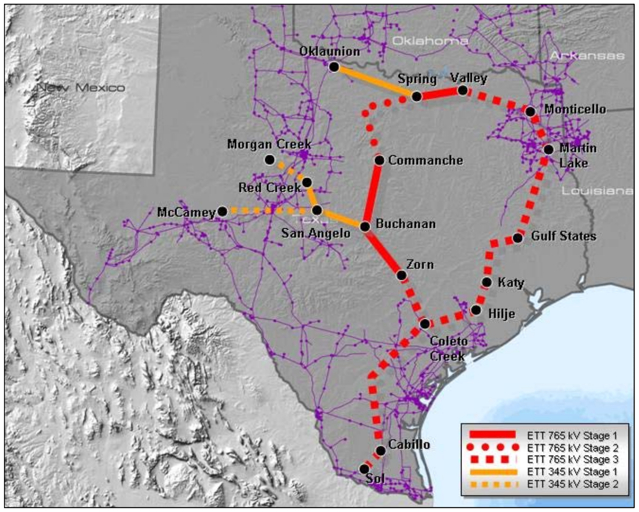
Electric Transmission Texas Update

- ### *Transaction Structure*
  - 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
  - ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
  - Services provided by AEP and investment opportunities can be offered by either partner

- ### *Next Steps*
  - ETT project opportunities to be evaluated on a case by case basis
  - Anticipate offering projects in Q2 2008

- ### *ETT ERCOT Backbone Proposal*
  - ETT proposal for ERCOT and PUCT to consider CREZ transmission in context of long-term vision for transmission system.
  - Current 5-year planning horizon results in higher ultimate costs, lower system efficiency.
  - Long-term 15-20 year perspective provides better plan, supports development of high voltage backbone at 765-kV.
  - $4.2 billion investment (long-term backbone).*

* Before ownership division.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP®

Electric Transmission America (ETA)

- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.

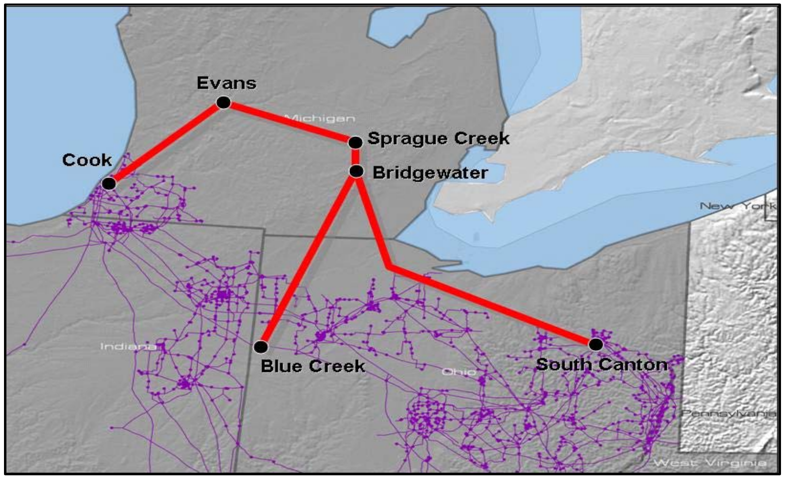
ETA reflects a natural progression and expansion of AEP's partnership with MidAmerican.

AEP®

I-765™ Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
  - Study was released Q3 2007
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.6 billion investment (before ownership division)
  - AEP and ITC are in discussions to form a Joint Venture
- *Benefits*
  - Up to 5,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- *Next Steps*
  - Agreement on JV (AEP/ITC) - Summer 2008
  - JV Formation - 2008
  - MISO and PJM Review/Approval - 2009
  - FERC Formula Rate and Cost Allocation Filing - Fall 2009
  - Siting Approval – 2011-2012
  - Estimated Completion –2015-2021



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP

I-765™ Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- ***Overview***
  - Sent non-binding Letter of Commitment to SPP to construct 765-kV and 500-kV projects in SPP region consistent with SPP Overlay Study – Summer 2007
  - Updated EHV Overlay Study completed by SPP – March 2008
- ***Benefits***
  - Overall reliability reinforcement with improved voltage support throughout the SPP system
  - Significantly increased transfer capability
  - Provides access to new generation resources, especially renewables
  - Allows for effective interconnections for EHV system development
- ***Next Steps***
  - ETA Partnering Agreements - 2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate and Cost Allocation Filing (postage stamp) – 2009
  - Siting Approval for projects – 2009-2011
  - Estimated Completion (in segments) – 2012-2017

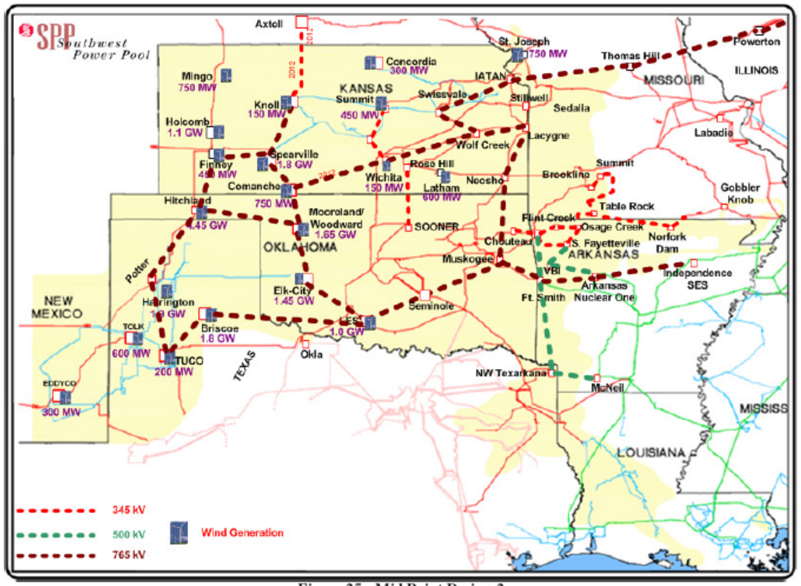


Figure 25: Mid Point Design 2

Total SPP 765-kV Overlay estimated to cost approximately $5 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential

2008 Regulatory Activity Completed

- AEP-Ohio Application for 4% Provision on Generation Rate
- APCo (Virginia) Fuel Factor Filing (including 75%/25% Off-System Sales Sharing)
- PSO Storm Cost Recovery Filing
- New Generation:
  - IGCC Filing in West Virginia - Certificate of Public Convenience and Necessity and approval of a cost recovery mechanism
  - SWEPCo Turk Plant Filing in Louisiana - construction approval

Regulatory Activity Underway

- I&M - Indiana Base Rate Case
- PSO Red Rock Generating Facility Cost Recovery Filing
- SPP OATT Formula Rate Filing
- New Generation:
  - IGCC Filing in Virginia - approval of a cost recovery mechanism
  - IGCC Phase 2 Filings in Ohio - on hold pending resolution of Supreme Court remand to PUCO
  - SWEPCo Turk Plant Filing in Texas
  - SWEPCo Stall Plant Filings in Louisiana and Arkansas

AEP®

Regulatory Activity Underway

PSO Red Rock Generating Facility Recovery Filing

- On December 28, 2007, PSO filed an application with the Oklahoma Corporation Commission to defer, amortize and recover costs related to the Red Rock Generating Facility, which was denied construction and recovery pre-approval in October 2007.
- On March 13, 2008, PSO signed a settlement agreement with various parties regarding recovery of costs incurred in the Red Rock project. The agreement provides for recovery from customers of 50% of the costs ($10.5MM). The settlement agreement has not yet been approved by the OCC.

Regulatory Activity Underway

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $140MM. Approximately $10MM of the increase relates to 3rd party and the rest, if approved, would be recovered through retail jurisdictional filings in SWEPCo and PSO, as appropriate.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to February 1, 2008, with rates subject to refund.
- Settlement discussions are currently on-going.

AEP®

Regulatory Activity Underway

APCo Mountaineer IGCC Filing

Virginia

- Testimony filed with the Virginia State Corporation Commission on July 16, 2007 seeking a prudence determination and approval to recover, beginning in 2009, Virginia's share of the carrying costs associated with the proposed plant.
- Intervenor testimony was received December 10, 2007 and Staff testimony was received on January 18, 2008. Public hearings commenced February 12, 2008. We expect an order in April 2008.

West Virginia

- Air permit anticipated in the third or fourth quarter of 2008.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.
- In March 2008, the Ohio Supreme Court remanded the original order back to the PUCO, giving the PUCO the opportunity to supplement the record. No refund of Phase I costs was mandated by the Supreme Court in its decision.
- We now await further clarity from the PUCO on the remanded issues as well as the outcome of current legislative discussions in Ohio regarding the post-2008 landscape for generation in Ohio.

AEP®

Regulatory Activity Underway

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- The PSC issued its order on November 21, 2007, approving construction of the plant.
- Air permit anticipated in the third quarter of 2008.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The peaking facility has been addressed and the intermediate facility is under review. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- The PSC issued its order on March 19, 2008, approving construction of the plant.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- Public hearings commenced October 17, 2007. On January 17, 2008, the ALJ recommended the PUCT deny the request. The commissioners have requested another hearing where they can directly cross examine some of the witnesses. A procedural schedule is being developed and the hearing most likely will occur in May or June 2008.

Regulatory Activity Underway

SWEPCo Stall Plant Filings

Arkansas

- Proceeding is currently suspended pending outcome in Louisiana.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The intermediate facility, known as the Stall Plant and sited in Shreveport, LA, was bifurcated from the original filing and had a procedural schedule established on January 9, 2008.
- Staff and intervenor testimony was completed on February 15, 2008, rebuttal testimony was due February 29, 2008 and hearings will commence on April 8, 2008. Staff testimony was favorable.
- Air permit received on March 20, 2008.

Texas

- PUCT order approving plant was issued on March 8, 2007.

AEP AMERICAN ELECTRIC POWER

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

AEP East Coal Fleet Availability & Capacity Factor Statistics

GENERATION PERFORMANCE	2007 YTD	2006
•CAPACITY FACTOR:	69.90%	70.39%
•EQUIVALENT AVAILABILITY FACTOR:	78.95%	80.22%
•EQUIVALENT FORCED OUTAGE RATE:	10.24%	9.64%
•Net Generation (MWh)	74,228,296	134,339,449

Mitchell Plant Statistics

- Twin 800 MW Units - generating energy capacity of 9,200 GWH annually
- In service 1971
- 153 employees
- Pulverized coal fired steam generators
- Each unit to be equipped with Flue Gas Desulfurization Systems (FGD) & Selective Catalytic Reduction Systems (SCR)
- Coal yard storage capacity of 660,000 thousand tons or 60 day supply
- Consume approximately 10,000 tons of coal daily or in excess of 3.5 million tons annually
- Coal delivered by barge and rail

Mitchell Plant Fuel Statistics

- Current Coal Deliveries
  - CAPP coal – about 12,200 Btu/lb and 1.5 lbs SO2/mmBtu
  - Consumes approximately 3.5 million tons annually
  - Coal is primarily delivered by CSX rail – in 10,000 ton unit trains – resulting in about 1 train per day
  - Some coal is delivered to Mitchell by barge
- Future Coal Deliveries
  - Plant modifications will allow for future fuel flexibility
  - Locally available high-sulfur coal use will now be possible
- Current Coal Inventory
  - Current inventory levels are higher than normal
  - Plan is to have approximately 35-40 days inventory

AEP's Environmental Compliance Strategy

NOx and SO_2 emission reductions are part of AEP's on-going strategy to comply with the Clean Air Act, Title IV regulations, the Clean Air Interstate Rule (CAIR) and the Clean Air Mercury Rule (CAMR).

- **Much of this investment is for:**
  - **Selective catalytic reduction (SCR) systems to reduce nitrogen oxide emissions by 90%.**
  - **Flue gas desulfurization (FGD) systems (scrubbers) to reduce sulfur dioxide emissions by 98+%.**
  - **SCR and FGD systems together offer co-benefit of mercury capture.**
  - **Sale of gypsum (by-product) avoids future landfill costs.**
  - **Provides fuel flexibility.**

Represents the best and least-cost compliance path to improve environmental performance on a fleet basis, while continuing to provide a reliable supply of power to customers at a reasonable price and a solid return for investors.

$4.1 Billion Environmental Investment

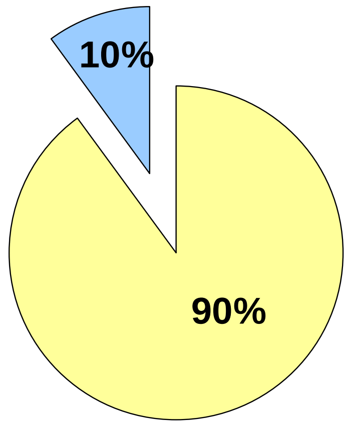
AT THE CONCLUSION OF OUR CURRENT ENVIRONMENTAL RETROFIT PROGRAM, OVER 47% OF OUR COAL-FIRED GENERATION FLEET WILL BE EQUIPPED WITH SCRs AND OVER 50% WILL BE SCRUBBED (FGD). AEP's TOTAL COAL FLEET CAPACITY = 24,710 MEGAWATTS*

*Excludes AEP's 44% ownership in OVEC (980 MWs of coal-fired capacity)

Materials and Vendors – AEP's Advantage

Environmental Program Costs:

Active/Firm Costs to Remaining Estimated Costs



Actuals To Date & Firm Costs

Remaining Estimated Costs*

* Primarily labor and activated carbon injection systems

Typical Vendors Include:

- B&W/Alstom – FGD Spray Tower
- B&V/Chyioda – FGD Jet Bubbling Reactor
- Pullman Power – Stack Supplier
- Babcock Power – SCR
- Black & Veatch – Architect/Engineering
- Sargent & Lundy – Architect/Engineering

SCR Technology

- Removes 90 – 93% of NOx emissions
- Requires ~ 1% use of auxiliary power
- **AEP Capital Cost ~ $121/kW avg.**

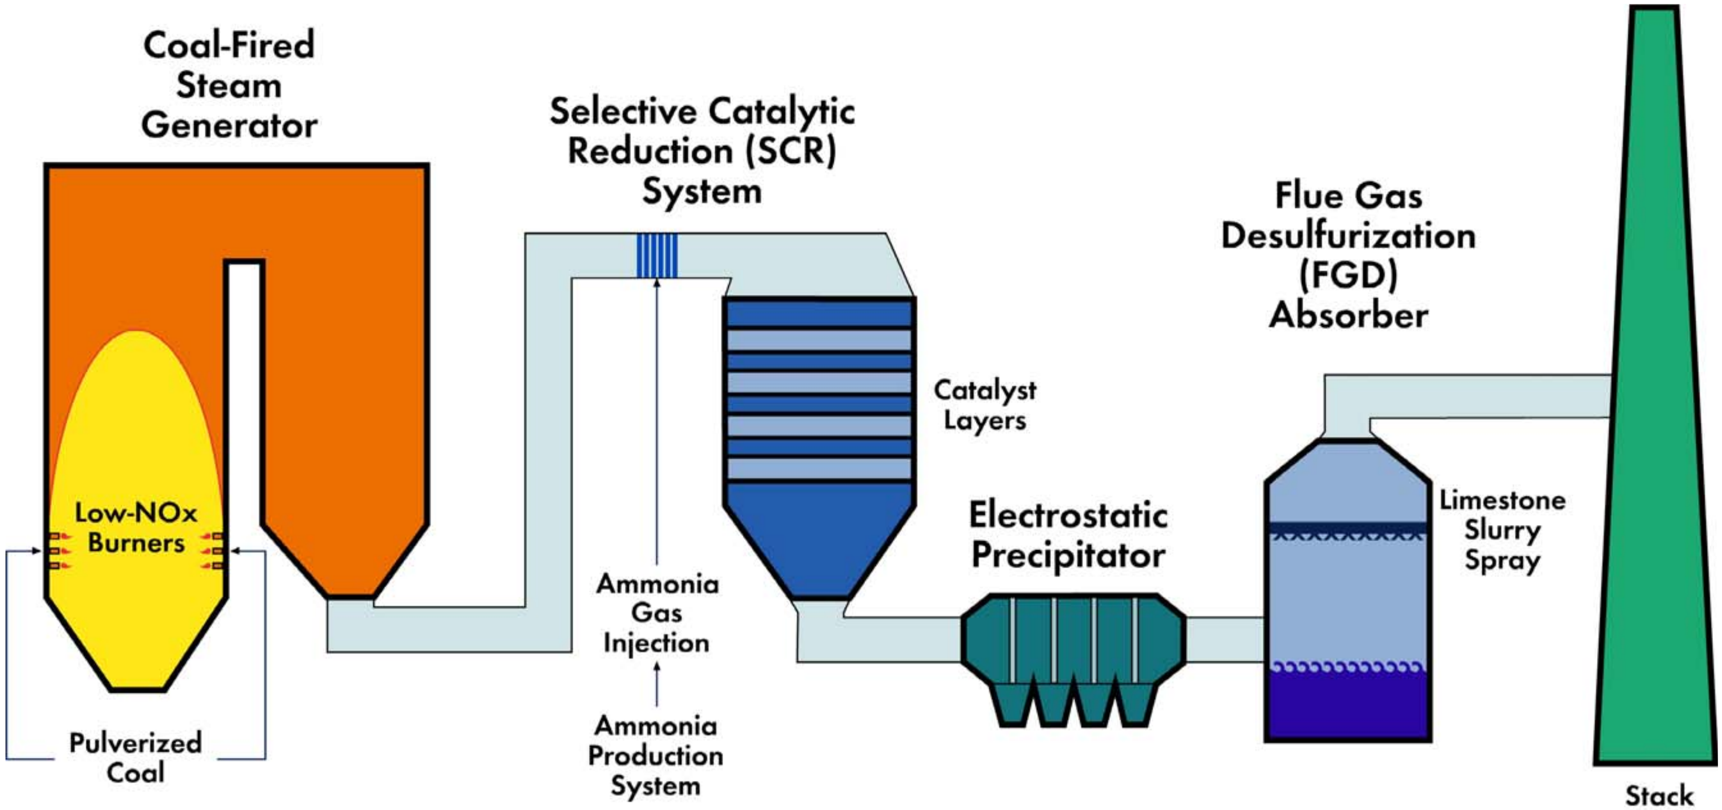
Combination of SCR & FGD technology results in co-benefit of Hg removal ~80% removal efficiency

FGD Technology

- Removes 95 – 98% of SO_2 emissions
- Requires ~1.5% to 3.0% use of auxiliary power
- **AEP Capital Cost ~ $250/kW avg.**

AEP Benefits From First-mover Advantage Through Lower Contracted Pricing and Reduced Market Escalation Exposure

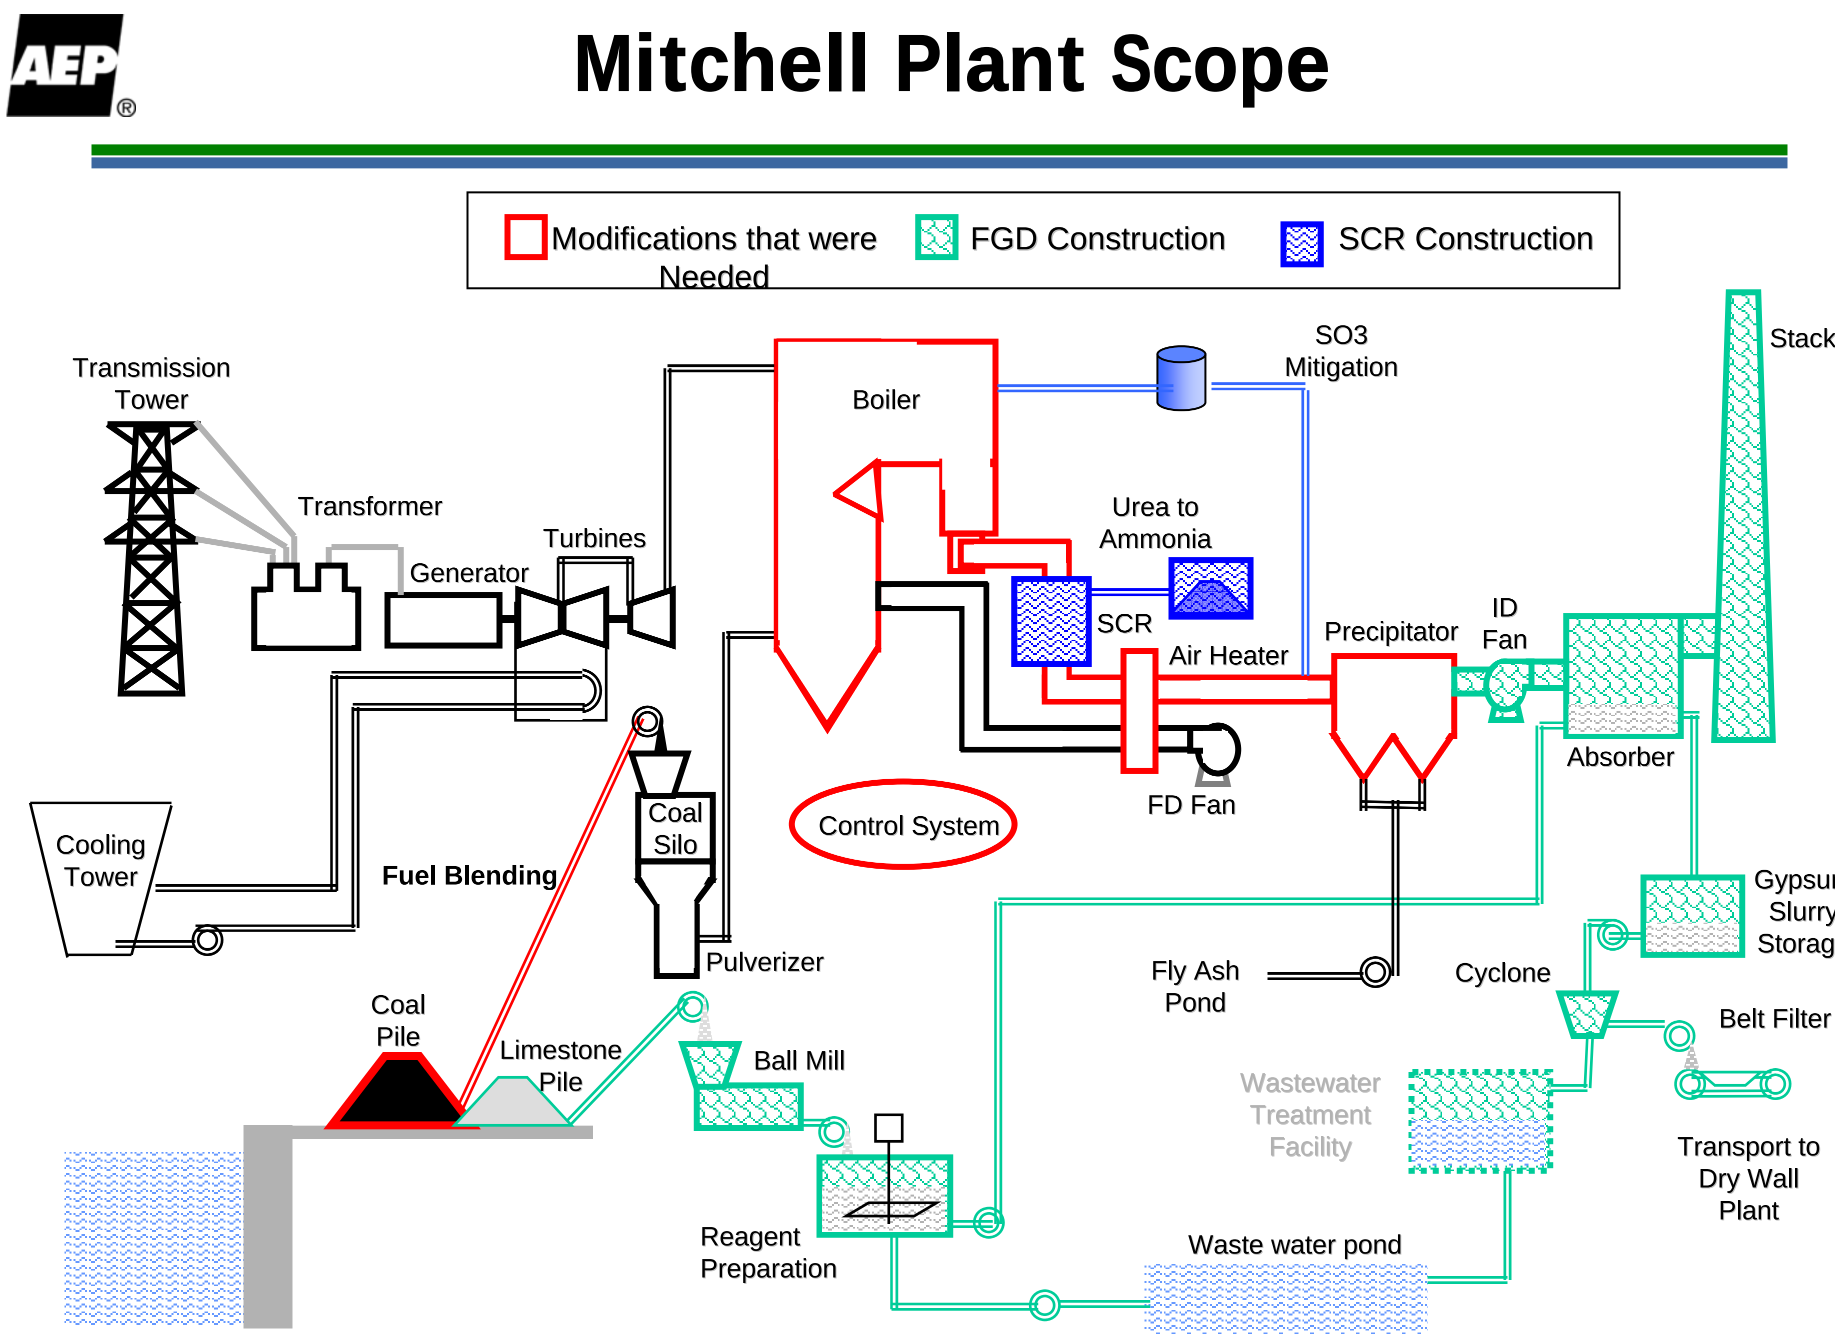
The Flue Gas Stream



SCR / FGD Installation Effect on Mitchell

- The Mitchell Plant had typically burned low sulfur bituminous coal including compliance coal.
- In the past, higher sulfur coals have produced operational inefficiencies; therefore, the steam generator underwent modifications to improve operations on higher sulfur bituminous coals.
- The FGD design accommodates the higher sulfur coal and expands the fuel flexibility of the plant. This fuel flexibility allows adaptation in changing coal markets to optimize the economic viability of the plant.

Mitchell Plant Scope



Purchased Generation

Waterford

- –821 MW combined-cycle gas plant
- –$220MM purchase price
- –Columbus Southern Power completed purchase on Sept. 28, 2005

Ceredo

- –505 MW simple-cycle gas plant
- –$100MM purchase price
- –APCo completed purchase on Dec. 15, 2005

2,946 MW of gas-fired generation added since 2005

Darby

- –480 MW simple-cycle gas plant
- –$102MM purchase price
- –Columbus Southern Power completed purchase on April 25, 2007

Lawrenceburg

- –1140 MW combined-cycle gas plant
- –$325MM purchase price
- –AEG completed purchase on May 16, 2007

Additional Gas-fired Generation Allows Us To Meet The Growing Needs Of Our Customers And Provides The Company With Greater Fuel Flexibility

SWEPCo	Turk	Arkansas	$1.3 B (2)	Coal	Ultra-supercritical	600 (2)	2011
PSO	Red Rock	Oklahoma	$1.8 B (3)	Coal	Ultra-supercritical	900 (3)	2012
APCo	Mountaineer	West Virginia	$2.23 B	Coal	IGCC	630	2012
CSP/OP	Great Bend	Ohio	Under Review (4)	Coal	IGCC	630	2017

(1) 150MW were declared in commerical operation on July 12, 2007.

(2) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment.

(3) PSO will own 50%, or 450 megawatts, totaling approximately $900MM in capital investment.

(4) FEED (front-end engineering and design) study with GE/Bechtel is complete. Cost estimates are not yet filed with the PUCO due to the pending appeals to the Supreme Court of Ohio resulting from the PUCO's April 10, 2006 Opinion and Order.

AEP Is Meeting The Growing Electricity Needs Of Customers Through The Pursuit Of New Economic Generation Facilities

New Gas-Fired Generation Facilities

SWEPCo

– Mattison Plant (Tontitown, AR)

- Certificate of Need filings (LA, AR, TX) were approved in all 3 states
- Air permit received in February 2007
- Units 3 and 4 (150 MW) online on July 12, 2007; Units 1 and 2 online by January 2008

– Stall Plant (Arsenal Hill, LA)

- Certificate of Need filings (LA, AR, TX)
  - TX settled in Feb 2007
  - AR & LA decisions expected by year-end 2007
- Air permit filed on April 27, 2007 – expecting approval by March 2008
- Commercial operation date in 2010

PSO

Southwestern & Riverside Additions

- Air permit received March 22, 2007
- Commercial operation date of December 2007
- Regulatory Recovery
  - Settlement and final order in the Lawton Cogen case authorizes recovery of costs for Southwestern and Riverside peakers through a rider mechanism beginning as early as June 2008 based on the Commercial Operation date

2007-2009 Projected Capital Expenditures

	2007	2008	2009
Mattison	$56MM	$4MM	-
Stall	$82MM	$126MM	$64MM
Southwestern	$36MM	$3MM	-
Riverside	$35MM	$2MM	-

SWEPCo's and PSO's Short-Term and Intermediate Power Needs Will Be Met With Newly Constructed Gas-Fired Facilities

New Ultra-Supercritical Coal Facilities

SWEPCo

Turk Plant (Fulton, AR)

– Certificate of Need approvals (LA, AR, TX) expected by September/October 2007

– Air permit approval expected in August 2007

– Regulatory Recovery
  - Recovery of carrying cost requested in LA Certificate of Need filing – Hearings scheduled for September 2007
  - AR and TX rate recovery will be addressed in separate filings

– Approximately 85-90% of costs are firm
  - EPC contract for balance of plant work awarded in May 2007
  - Contracts for turbine, boiler, and environmental control equipment awarded in 2006

PSO

Red Rock Generating Facility (Red Rock, OK)

– Used and Useful Determination filed in February 2006 – Hearings concluded July 31, 2007 and order is expected in September 2007

– Air permit approval expected in October 2007

– Regulatory Recovery
  - Order expected in PSO rate case filing in July 2007 – filing included request for CWIP treatment for new projects

– Original cost estimate of $1.8 billion – revised cost estimate expected in the third quarter of 2007

2007-2009 Projected Capital Expenditures

	2007	2008	2009
Turk Plant	$211MM	$230MM	$243MM
Red Rock Generating Facility	$54MM	$120MM	$236MM

Ultra-Supercritical Coal-Fired Generation Is The Most Economical Choice For New Baseload Plants In AEP's Western Service Territory

Integrated Gasification Combined Cycle Facilities

Front-End Engineering & Design (FEED) results complete. Results were filed in June 2007. Cost estimates in target range of 20-30% premium over new ultra-supercritical coal-fired facilities of equal capacity.

West Virginia

- **Certificate of Public Convenience & Necessity filed Jan. 11, 2006**
  - APCo testimony filed June 18, 2007
  - Intervenor & Staff testimony due Nov. 19, 2007
  - Hearings Dec. 10-14, 2007
  - Statutory Deadline – Mar. 7, 2008
- **Air permit filed in Oct 2006**
  - A technical review of the application and development of a draft permit is ongoing by the WV Dept. of Environmental Protection
- **Regulatory Recovery**
  - Filing made in June 2007 –included request for cash recovery mechanism

Ohio

- **Certificate of Environmental Compatibility & Public Need filed March 24, 2006**
  - Ohio Power Siting Board certificate issued in April 2007
- **Air permit filed in Oct 2006**
- **Regulatory Recovery**
  - Phase 1 – June 2006 – PUCO approved tariff to recover pre-construction costs ($24MM) over 12-month period effective July 1, 2006
  - Phase 2 – filing likely to be withheld until resolution of Ohio Supreme Court action
  - Informational filing made on June 18, 2007 to inform PUCO of the West Virginia filing

Construction Period Of 48-50 Months Following Receipt Of Major Regulatory And Permit Approvals

Investing In IGCC

US2006$	Eastern Bituminous		
	USC	IGCC	NGCC
Nominal Capacity (MW)	618	629	530
Capacity Factor (%)	85%	85%	25%
Total Plant Cost (EPC + Owner's Cost) ($/kW)	$2,152	$2,717	$572
Production Cost ($/MWh)	$22	$22	$45
Cost of Electricity, without CO_2 Capture ($/MWh)	$72	$83	$87
Estimated Cost of Electricity, with 90% CO_2 Capture ($/MWh)	$118	$108	$135

Source: Results of AEP analysis based on EPRI studies.

- Total Plant Cost (Overnight EPC 2006$s) includes the cost to engineer, procure and construct plant and owner's direct costs.
- Assumes Northern Appalachian coal price of $2.25/mmBtu for USC and IGCC and natural gas price of $6.00/mmBtu for NGCC.
- Production cost includes fuel cost plus variable operations and maintenance (VOM) cost.
- Cost of electricity represents first year estimates only in 2006$ and are based on total plant cost plus generic cost estimates for AFUDC, emission credits, infrastructure, interconnections, transmission lines and upgrades.
- Cost of electricity with CO_2 capture provides pressurized CO_2 at the fence line and does not include transportation, storage and monitoring costs.

IGCC Technology Is Strategic To Keeping Coal In The Money

IGCC Technology

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A Reliable & Reasonably-priced Electric Supply Is Necessary To Support The Economic Well-being Of The Areas We Serve

Highlights of Bingaman-Specter Proposal

"Low Carbon Economy Act of 2007"

Key Components:

- Start date for greenhouse-gas reductions is 2012
- Goals: 2006 levels by 2020; 1990 levels by 2030
- Includes a safety valve of $12 per metric ton, increasing at an annual rate of 5% above inflation
- Support for allowance allocations
- International action

AEP Endorses this Proposal Because It Sets Reasonable And Achievable Reduction Targets and Includes the AEP-IBEW Trade Proposal

AEP's Climate Strategy

- **Being proactive and engaged in the development of climate policy**
  - International Emissions Trading Association (IETA)
  - Electric Power Research Institute (EPRI)
  - Pew Center on Global Climate Change
  - e8
  - Global Roundtable on Climate Change
- **Investing in science/technology R&D**
  - FutureGen Alliance
  - US DOE research on carbon capture and sequestration at our Mountaineer Plant
  - EPRI – combustion technologies
  - MIT Energy Laboratory
  - B&W – Oxy-Coal
- **Taking voluntary, proactive action now, demonstrating voluntary programs can work and setting policy precedents thru CCX**
  - Chicago Climate Exchange (CCX)
  - EPA Climate Leaders
  - EPA SF-6 Emission Reduction Partnership for Electric Power Systems Program
  - Asia-Pacific Partnership
  - DOE 1605B- voluntary reporting of GHGs Program
  - Business Roundtable Climate Resolve
  - Numerous forestry activities
- **Evaluating longer term investment decisions such as new generation and carbon capture and storage (e.g., IGCC, Ultra-supercritical)**

AEP Must Be A Leader In Addressing Climate Change

AEP's Long-term GHG Reduction Portfolio

Renewables (Biomass Co-firing, Wind)

Supply and Demand Side Efficiency

Off-System Reductions and Market Credits (forestry, methane, etc.)

Commercial Solutions of New Generation and Carbon Capture & Storage Technology

AEP Is Investing In A Portfolio Of GHG Reduction Alternatives

AEP's Long-term CO_2 Reduction Commitment

Existing Programs

- Renewables
  - 800 MWs of Wind
  - 300 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

New Program Additions

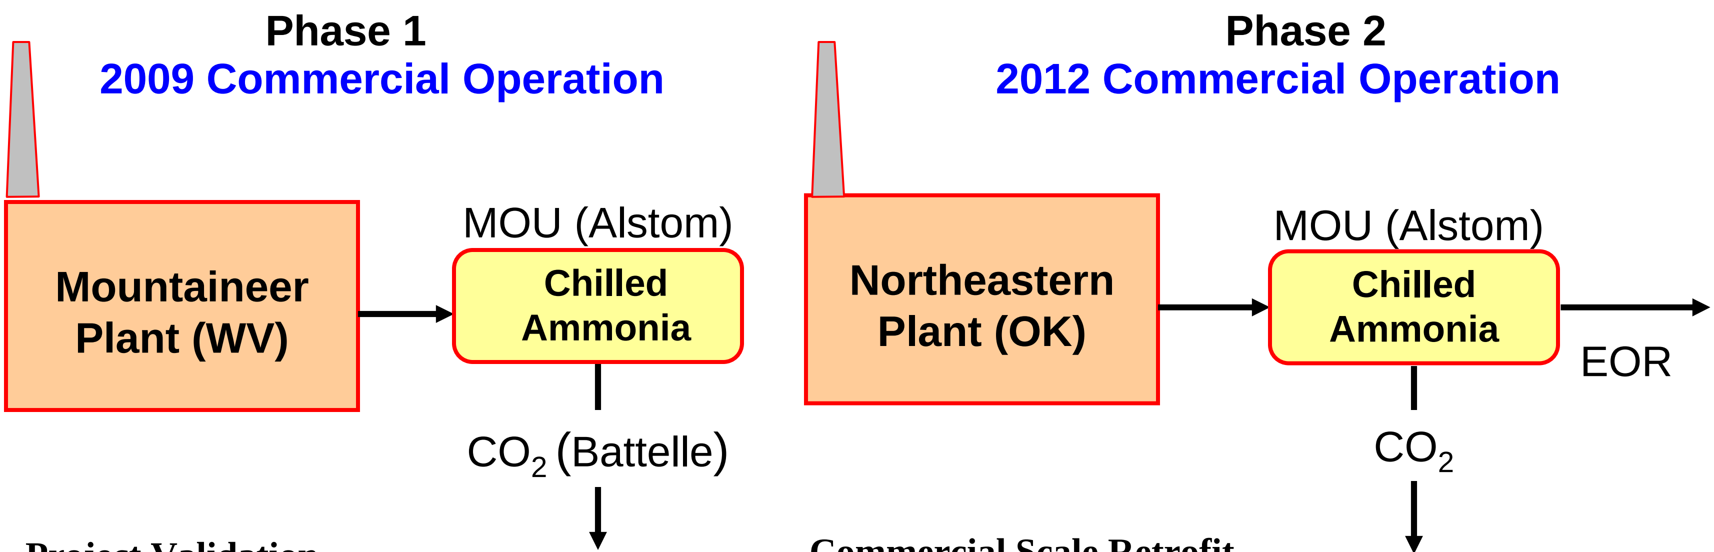
- Incremental Reduction quantity: 5MM tons/yr
- Timing: To take effect/receive credits by 2011
- Methods
  - +1000 MWs of Wind PPAs – 2MM tons/yr
  - Domestic Offsets (methane) – 2MM tons/yr (e.g., livestock methane capture deal of 0.6MM tons/yr)
  - Forestry – Tripling annual investment to increase to 0.5MM tons/yr by 2015
  - Fleet Vehicle/Aviation Offsets – 0.2MM tons/yr
  - Additional actions to include DSM and end use energy efficiency, biomass and power plant efficiency – 0.2MM tons/yr

New Technology Additions

- Commercial solutions for existing fleet
  - Chilled Ammonia
  - Oxy-Coal

AEP Is Committed To A 5mm Ton/Yr Reduction In Co_2 Emissions Which Offsets Approximately Half Of The Emissions Projected From New Generation Projects Previously Announced

Chilled Ammonia Technology Program



Project Validation

- 20 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, under construction at WE Energies)
- 100,000 – 300,000 tonnes CO_2 per year
- In operation 1Q 2009
- Approximate total cost \$50 – \$80M
- Using Alstom "Chilled Ammonia" Technology
- Located at the AEP Mountaineer Plant in WV
- CO_2 for geologic storage

Commercial Scale Retrofit

- ~ 200 - 300 MW_e scale (megawatt electric)
- ~ 600 MW_t scale (megawatt thermal)
- ~1.5MM tonnes CO_2 per year
- In operation late 2011
- Approx. capital \$250 – \$300M (CO_2 capture & compression)
- Approx. O&M cost \$12M per year
- Energy penalty ~ 35 – 50 MW steam, 25 – 30 MW for CO_2 compression
- Retrofit Wet FGD Required: ~\$225 – \$300M
- Located at AEP's Northeastern Plant Unit 3 or 4 in Oklahoma
- CO_2 for Enhanced Oil Recovery (EOR)

Post-combustion Carbon Solution Provides Pure CO_2 Stream For Capture

Oxy-Coal CO_2 Capture & Storage Project

Pilot Scale Demonstration

- 10 MW_e scale
- Teamed with B&W at its Alliance Research Center and 16 other utilities
- Demo complete 3Q 2007
- AEP funding of $50k

Commercial Scale Retrofit

- Retrofit on existing AEP sub-critical unit (several available)
- 150 – 230 MW_e scale retrofit
- 4,000 – 5,000 tons CO_2 per day
- Team with B&W
- AEP funding of ~ $1.5M for feasibility study
- Feasibility study to be completed in late 2007/early 2008

Combustion Conversion Technology For Existing Coal Fleet – Longer Lead Time With Enhanced Viability And Long-term Potential

AEP AMERICAN® ELECTRIC POWER

Mitsubishi UFJ Securities Utility Day Handout

New York, NY
September 13, 2011

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M's Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events and our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives, evolving public perception of the risks associated with fuels used before, during and after the generation of electricity, including nuclear fuel.

Net available Liquidity	**$**	**2,295**	

On July 26, 2011, we renewed and upsized the facility expiring in April 2012. The new facility has a capacity of $1.75B and expires in July 2016.

We also extended and repriced the facility expiring in June 2013. That facility now expires in June 2015.

This brings our total available capacity to $3.25B.

AEP Ohio Distribution Rate Case – Docket #11-351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%. See ESP Settlement slide for a discussion of the Distribution Investment Rider which authorizes a rate increase of $86 million in 2012.

Summary Rate Case Information

APCo Virginia Base Rate Case – Docket #PUE-2011-00037

On March 31,2011 APCo filed an update to its pre-biennial base rate case for recovery of generation and distribution costs requesting an increase of $75 million ($126 million total increase less $51 million deferral of depreciation increase).

In conjunction with this case, an environmental rate adjustment clause (E-RAC), a generation rate adjustment clause (G-RAC) and a renewable portfolio standard rate adjustment clause (RPS-RAC) were filed.   APCo has requested that rates in the base case, E-RAC and RPS-RAC go into effect on 2/1/2012 and the G-RAC on 3/1/2012.

I&M Michigan Base Rate Case – Docket # U-16801

On July 1, 2011 I&M filed a base rate case with the Michigan Public Service Commission requesting an increase of $24.5 million. Rates proposed in this filing are based on projected 2012 cost of service and will not go into effect until 2012, therefore rates will reflect a current cost of service. This filing includes revised depreciation rates to include additions since the last approved depreciation study as well as accelerated retirement of Tanners Creek Units1, 2 and 3. The requested ROE is 11.15%. In accordance with Michigan law I&M intends to implement rates, subject to refund, on January 1, 2012. An order is expected by mid-year 2012.

* represents Generation and Distribution rate base only.

** represents the midpoint of the ROE range approved in the formula rate case settled in April 2008.

***represents a negotiated settlement

ESP Settlement

Gradual Transition to Market and Regulatory Stability in Ohio

- **Parties to the Settlement** - Signed by more than 20 organizations representing customers, competitive retail electricity suppliers, environmental groups, communities and other key stakeholders
- **Cases included in Settlement** - 2012 Electric Security Plan, Capacity Charges, Merger
- **Generation** - Corporate separation of Ohio generation assets targeted by May 2013 and transition all of Ohio generation supply to market by mid-2015; the company may pursue recovery of Pool modifications costs greater than $50 million
- **Transition to market** - company will make a specific percentage of generation resources open to competitive retail suppliers at the RPM price for a three-year period. The remaining capacity will be priced at $255/MW-day
  - Year one (2012), approximately 20 percent will be available
  - Year two (2013), approximately 30 percent will be available
  - Year three (2014 through May 2015), approximately 40 percent will be made available
  - Standard service offer price beginning in June 2015 will be determined through auctions involving multiple suppliers of generation service. Auctions will begin as early as September 2013.
- **Fuel Adjustment Clause** - continues through May 31, 2015
- **Nonbypassable Generation Resource Rider** – allows the distribution company to recover costs related to building new generating assets dedicated solely to Ohio customers. Project-related costs will be presented in future PUCO cases.
- **Distribution Investment Rider** – Costs associated with new distribution investment to maintain and improve reliability will be recovered under this rider with an ROE of 10.5% based on a capital structure of 47% debt/53% equity. In its first year (2012), the rider will be capped at $86 million. An additional $18 million will be added in 2013 and an additional $20 million in 2014.
- **SEET ROE threshold of 13.5%**.

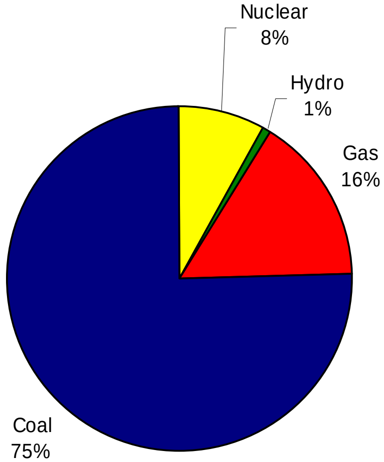
	Total MW	**528**	
	Grand Total	**5,909**	

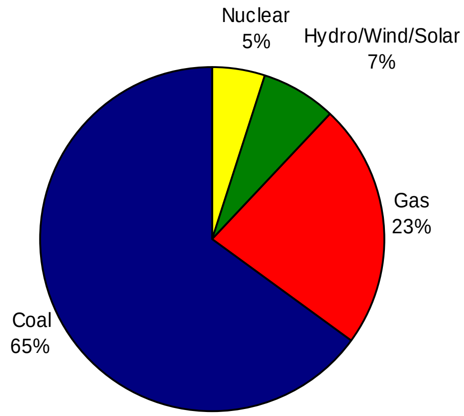
- Capacity reduction caused by retirements will create grid reliability issues particularly in the 2014-2016 time frame
- Net impact could be approx. 600 fewer jobs at AEP as well as indirect job losses affecting local vendors, contractors and service providers
- Annual lost wages of approximately $40 million
- Tax payments could decline by more than $30 million

Generation Transformation

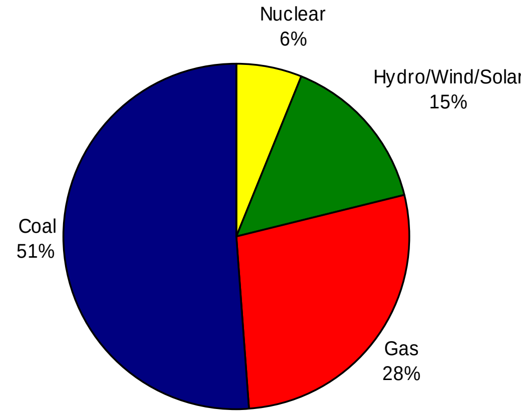
1990 AEP Generating Capacity by Fuel
37,428 total MW's



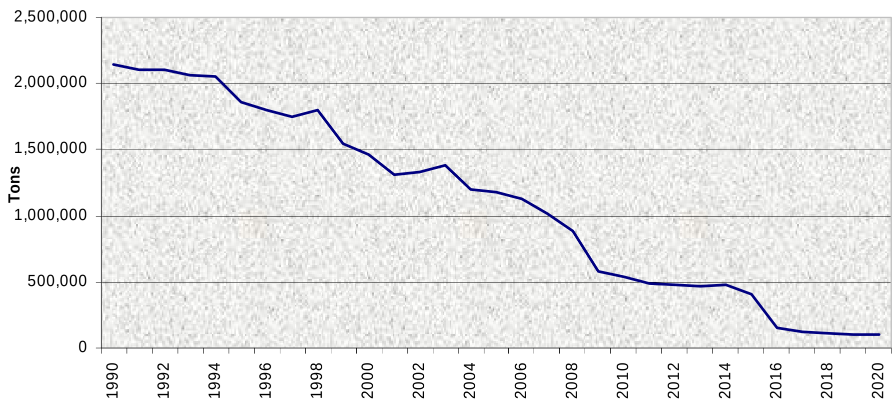
2010 AEP Generating Capacity by Fuel
39,910 total MW's



2020 AEP Generating Capacity by Fuel
37,707 total MW's



Total System NOx & SO2 (actual through 2010 and forecasted based on proposed EPA regulations)



- $7.2 billion capital invested from 1990-2010 to reduce emissions approximately 1.7 million tons
- Estimated $6-$8 billion additional capital investment from 2012-2020 for further reductions of approximately 440,000 tons

Transmission Investment Strategy

AEP®

- **Near-Term Investment** – Electric Transmission Texas (ETT) secures near term investment opportunities, allowing AEP to invest in the large, growth-oriented Texas transmission market. Total capital expenditures of $3 billion with a 9.96% ROE.

- **Mid-Term Investment** – Seven wholly-owned transcos allow for expansion and growth within AEP's existing utility footprint through an efficient recovery mechanism. Will spend $210 million in 2011 and more than $350 million in 2012. ROE is in the 11.20%-11.49% range.

- **Long-Term Investment** – Joint ventures provide opportunities for longer-term growth outside of AEP's existing utility footprint with forward looking formula rates, reasonable ROEs and FERC incentives where appropriate.

Transmission has a diversified investment approach that positions it as one of the key AEP growth businesses.

Texas Transmission Growth Strategy : Near Term Investment

Ownership Structure: 50/50 (AEP/MidAmerican Energy Holding Company)

Total Project Cost: Over $3 Billion

Growing Rate Base:

Current rate base is $412 million; expected to grow as follows:

2011: $490 million

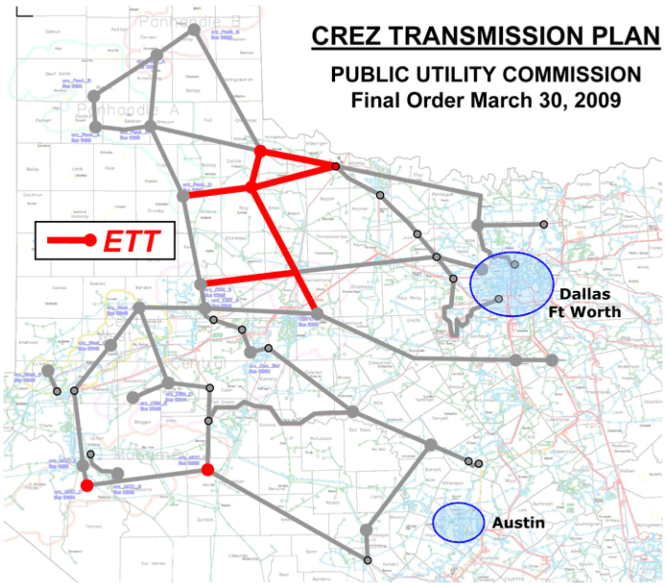
2012: $750 million

2013: $1,200 million

ETT Electric Transmission Texas

Interim TCOS filings twice per calendar year

Approved ROE: 9.96%



- **Additional Projects in the Pipeline ~$1.5 B:**
  - Approximately 500 miles of lines and 29 substations with in-service dates through 2020

- **Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.4 B:**
  - Nine new transmission lines totaling approximately 600 miles and 16 substations
  - PUCT Certificate of Convenience and Necessity (CCN) proceedings underway; 5 lines already approved

Joint Venture Strategy: Long-term

- **Strategy**: JV's secure new investment opportunities with local utilities to diversify AEP's investment outside AEP's traditional footprint while providing longer-term incremental earnings. JV projects are well-suited for FERC formula rate recovery mechanism, including potential for incentive rates.

- **Future:** Federal/regional initiatives may accelerate expansion of EHV transmission (e.g. cap-and-trade, renewable portfolio standards, inter-region wide planning). Securing first mover advantage will enable AEP to secure LT investment opportunities.

- **Future flexibility**: Passive investment opportunities can be considered and can provide entry beyond SPP/PJM/ERCOT

Morgan Stanley Smith Barney Financial Advisors Presentation

Atlanta, GA

May 26, 2010

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including our dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

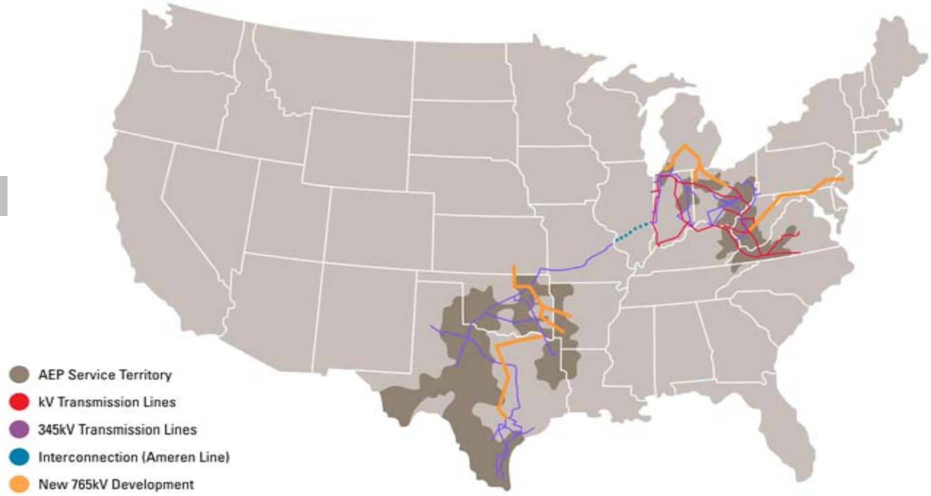
The AEP Footprint

Strength & Scale in Assets & Operations

- **5.1 million customers in 11 states**
- **Industry-leading size and scale of assets:**

Asset	Size	Industry Rank
Domestic Generation	~38,400 MW	#2
Transmission	~39,000 miles	#1
Distribution	~208,000 miles	#1

- **Coal & transportation assets:**
  - Control over 8,000 railcars
  - Own/lease and operate over 2,600 barges & 51 towboats
  - Coal handling terminal with 20 million tons of capacity



AEP Generation Portfolio				
Coal	Gas	Nuclear	Hydro	Wind
67%	24%	6%	2%	1%

AEP enjoys significant presence throughout the energy value chain.

AEP Strategy

Strategy: grow our core utility business at a consistent rate through major investment supported and funded by innovative programs for regulatory recovery as well as develop our independent, federally regulated Transmission Company for the pursuit of new major interstate projects.

Our Focus:

- Prepare for transition to market in Ohio
- Invest in and evolve infrastructure to support future technology and customer needs focused on efficiency, conservation and load management
- Enhance cash flow & earnings through rate recovery mechanisms
- Take advantage of AEP's size to bring economic savings to our customers while continuing to enhance shareholder value through regulatory-supported investment and operational excellence

Sustained capital investment opportunities support earnings growth.

2007 Delivered Results

STRATEGIC DIRECTION & FINANCIAL OUTLOOK

Accomplishments:

✓ **Acquisition of low-cost generation to meet capacity demand**

- Darby—480MW simple cycle ($227/kW)
- Lawrenceburg—1,140MW combined cycle ($295/kW)
- Dresden—580MW combined cycle (currently under construction); anticipated all-in cost $600-$700/kW

✓ **Brought SWEPCo's Mattison Units 3&4 (150MW) on-line July 2007 (~$380/kW)**

✓ **Completed installation of scrubbers at Mitchell & Mountaineer**

✓ **Continued progress on transmission opportunities**

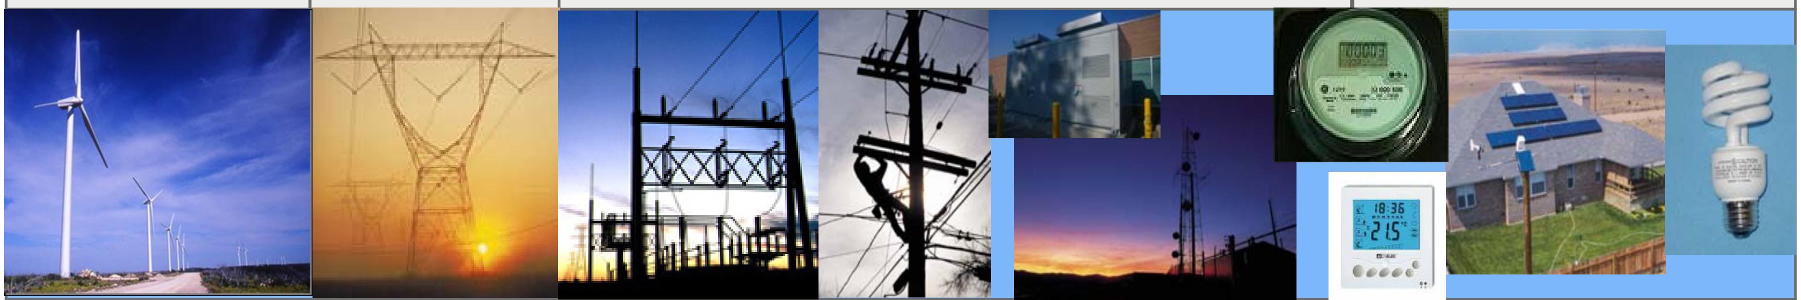
- Obtained PJM approval of Potomac-Appalachian Transmission Highline
- Formed joint venture with Allegheny Energy to construct the PATH
- Formed joint ventures with MidAmerican Energy for ETT & ETA
- Completed technical study with ITC for 765-kV in Michigan and continue to investigate the feasibility of forming a joint venture to develop the project

✓ **Secured to-date $325MM of $338MM of 2007 rate relief projections**

✓ **On track to deliver 5%-7% growth rate in 2007**

AEP continues track record of capital investment, regulatory approvals and earnings growth.

Vision for Sustainability



Generation	Transmission	Distribution	Customers

• Environmental Projects
• Wind
• IGCC
• Carbon Capture & Storage
	• I-765™
	• Electric Transmission Texas JV

	• AEP-ABB Alliance
		• Distribution automation
		• Self-healing distribution circuits
		• Advanced metering
		• Communications infrastructure
		• Mobile workforce
		• Internal energy efficiency
		• Integration platform for advanced visualization and analytics
		• Distributed generation and energy storage
			• Customer programs and incentives
			  • Energy efficiency
			  • Direct load control
			  • Peak demand reduction
			• Energy storage

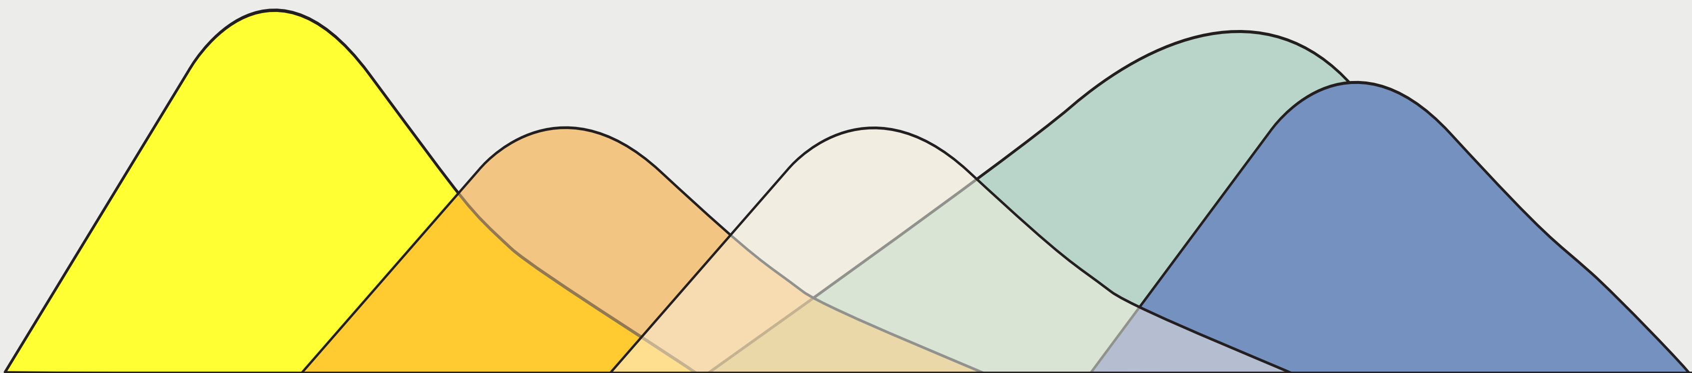
Existing generation and transmission control systems		**GridSMART**: bridging the gap to provide integrated two-way communications & control across the electricity value chain	Home energy automation

AEP is committed to operating responsibly, efficiently and profitably for customers, shareholders, employees and communities.

Capital Investment Earnings Catalysts

Capital Investment – Consistent Waves of Opportunity

Environmental Retrofits	New Generation Projects	GridSMART Technology	Transmission Ventures	Adv Generation/ CO_2
$5.1B	$1.7B+	$1.5B+	$2.25B - $3.75B*	$2.0B+



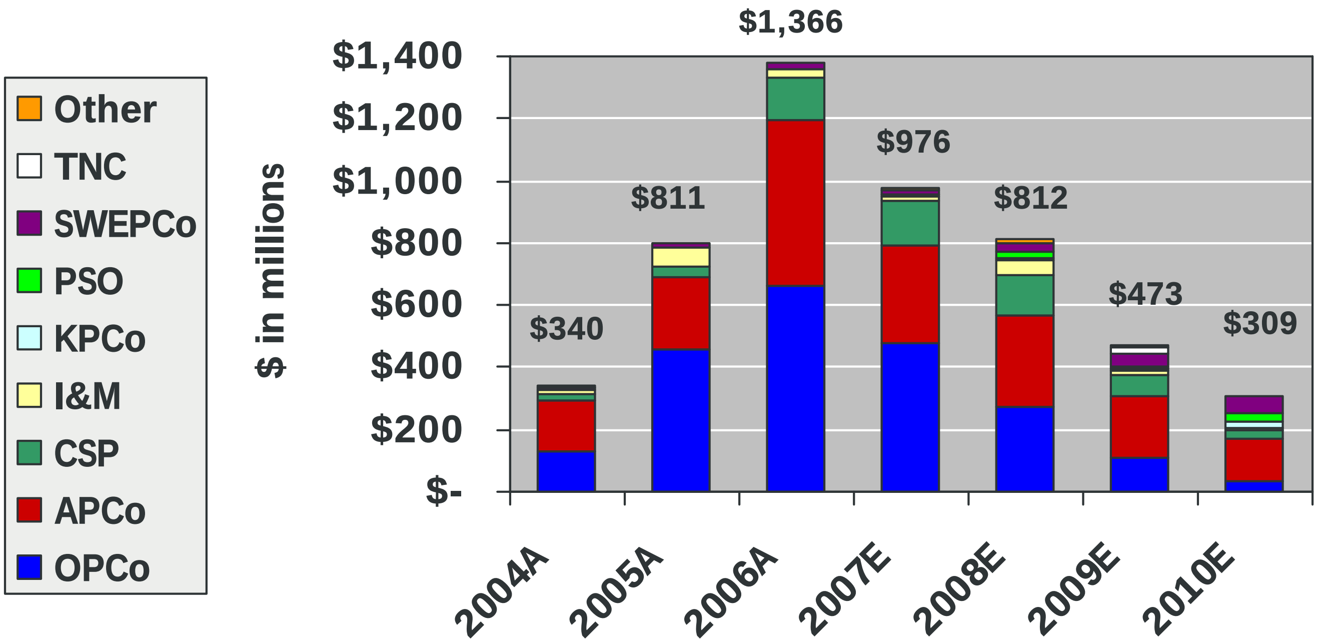
Baseline capital investment of approximately $2.5B/year for Transmission, Distribution & Generation versus annual depreciation of $1.1B/year

2005 → 2010 → 2020 →

Note: This slide represents current capital investment plans as well as future capital investment opportunities. For current capital investment guidance through 2010, please refer to slide 33. *The Transmission opportunity is shown utilizing anticipated JV ownership structure.

Capital investment opportunities combined with associated rate relief will drive sustainable earnings growth.

Environmental Investments Receive Timely Rate Recovery



($ in millions)	Completed (2004-2006)	Rate Recovery
AEG	$9	partial/pending
APCo	$923	yes

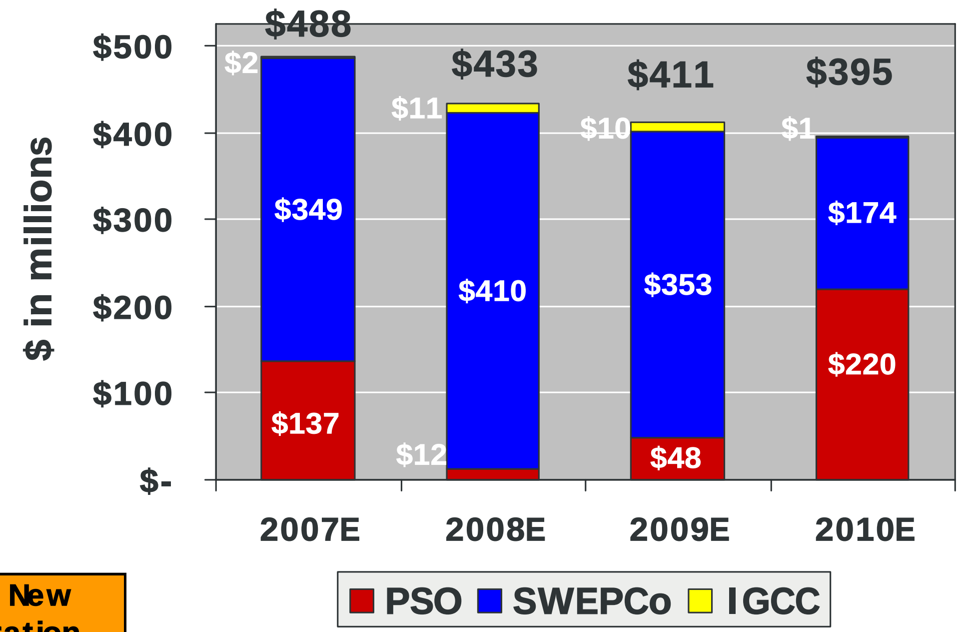
AT THE CONCLUSION OF OUR CURRENT ENVIRONMENTAL RETROFIT PROGRAM, OVER 47% OF OUR 24,630 MW COAL-FIRED GENERATION FLEET WILL BE EQUIPPED WITH SCRs AND OVER 50% WILL BE SCRUBBED (FGD).

New Generation Investments and Related Recovery

Secured Recovery Mechanism

- PSO Peaking Facilities Rider



($ in millions)	Projected Construction Completion	Total New Generation Investment (2007-10)
PSO - Peaking Facilities	2008	$102
PSO - Combined Cycle *	2012	$315
SWEPCo - Mattison	2007	$66
SWEPCo - Stall	2010	$422
SWEPCo - Turk	2011	$798
APCo - IGCC	tbd	$12
CSP/OPCo - IGCC	tbd	$12
Total Capex	Total Capex	$1,727

* - intended to source requirements to be met by Red Rock Plant prior to cancellation.

Additional Recovery Mechanisms Under Consideration:

- Formula based rates
- Requests for return on CWIP
- Current and future rate cases

GridSMART

➢AEP Vision

- AEP is moving technology out of the laboratory and into real-world applications
- Aggressive goals:
  - 25 MW NaS battery installations by 2010
  - 1,000 MW demand reduction by 2012
  - 5 million smart meters by 2015

➢AEP Leadership

- **Environmental:** AEP's fleet includes hybrids
- **Efficiency and Conservation:** DOE Transformer Efficiency Initiative and participation in the Clinton Global Initiative
- **Education:** AEP Foundation's support of the National Energy Education Development (NEED) Project and Change-a-Light Program
- **Technology:** High temperature superconductors, micro grid test bed and extra-high voltage transmission advances

➢AEP's Collaboration with Others

- NGK (NaS battery) & Rolls Royce (fuel cells)
- Collaboration with GE to demonstrate the distribution/customer service business of the future

Modernization of our distribution infrastructure will change how we manage the flows of information and electricity across the energy value chain to optimize overall performance and prepare for the future.

AEP-GE Initiative

We will deploy smart meters, distribution automation and the associated enhanced technology resulting from the collaboration with GE in two regions by the end of 2008 -- representing approximately 200,000 customers.

By integrating customers and their end use technologies into the daily operation of the grid, we can collaborate to optimize supply and demand and improve energy efficiency and environmental sustainability.

Our agreement with GE is a winner for our customers, our shareholders and for the environment.

AMERICAN ELECTRIC POWER

Working Together for a Brighter Future

imagination at work

AEP and GE will collaborate to address the full energy pathway from the power plant to the home.

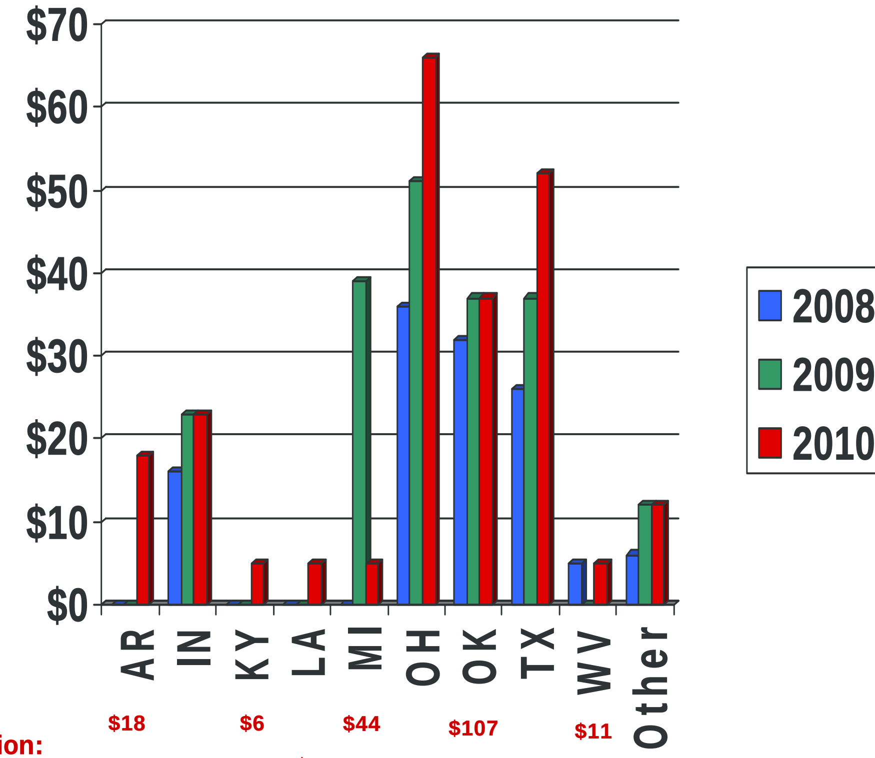
GridSMART

GridSMART: implementing AEP's vision for the distribution and customer services business in the future, including the development of new customer programs to reduce consumption and peak demand, and a plan to deploy advanced technologies.

Capital Investment, Subject to Regulatory Approval * $ in millions				
Technology	**2007**	**2008**	**2009**	**2010**
Metering & Communications	$0	$83	$138	$146
Distribution Technology Enhancements	$2	$40	$ 63	$ 82

*$452MM of the $554MM not in current forecast; spending contingent upon regulatory approval

$ in millions



3-Year Total by Jurisdiction: AR $18, IN $62, KY $6, LA $5, MI $44, OH $153, OK $107, TX $115, WV $11, Other $31

AEP will continue to be an industry leader in deploying advanced technology on a commercial scale. $554MM capital investment by 2010, subject to regulatory approval.

Pace of our GridSMART Implementation Determined by Regulators

- **Arkansas** – The Arkansas commission approved our 'quick-start' programs in September 2007, which include education, incentive to encourage use of compact florescent lights and higher efficiency appliances, weatherization for low-income housing, an emergency load management pilot and a pay-for-performance pilot that results in a payment to customers who curtail load upon request. The commission's order allows implementation on or after October 1, 2007. We will now file a revised tariff, which will seek to recover costs beginning with the first billing cycle of November 2007.

- **Indiana** - As ordered by the IURC in June 2007, I&M, in collaboration with the Office of Utility Consumer Counselor, is designing and will administer a Smart Metering Pilot Program (SMPP) for approximately 10,000 customers in South Bend, Indiana.

- **Kentucky** – Successful demand-side management programs have been in place in Kentucky since 1996. We recently filed a proposed real-time pricing pilot for which we are waiting commission approval.

- **Ohio**
  - Recent Governor remarks and draft legislation indicates modernization of Ohio's infrastructure is a high priority.
  - PUCO-sponsored series of six Smart Meter Deployment Workshops currently underway.

- **Texas**
  - Successful demand side management and energy efficiency programs have been in place in Texas since the 1990s.
  - Energy Efficiency Cost Recovery Rider currently under consideration by the PUCT in TCC's base rate case; if adopted in TCC's case, it will also apply to TNC.
  - AEP Texas Advanced Metering Project commenced July 31, 2007, which has the goal of filing with the PUCT an advanced metering deployment plan and a related surcharge recovery proposal by March 2008.

Distribution technologies and DSM/energy efficiency programs are an investment, which should be treated by regulators in the same manner as investments in generation and T&D

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 7876 of 9556

Contribution of Transmission Investments

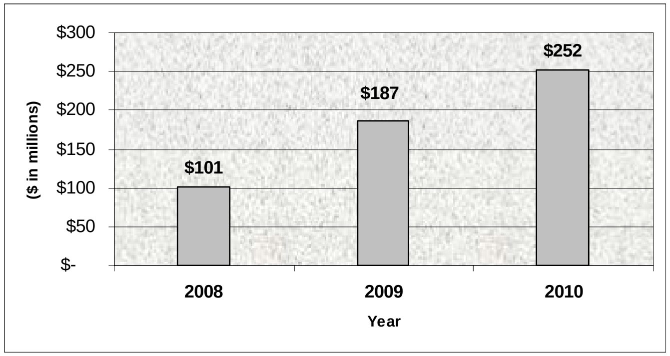
Potential Transmission Opportunities

~ $3 Billion I765[TM] Project in PJM
~ $2.6 Billion 765-kV study in Michigan w/ ITC
~ $3 Billion Project filed with SPP
~ $1-7 Billion in ERCOT via Electric Transmission Texas, LLC (ETT)

Assumptions

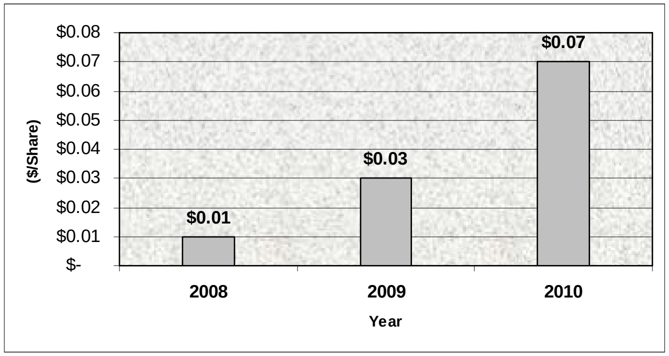
Estimated Investment Opportunity	$9 - $15 Billion
Ownership Structure w/ Partner	50% / 50%
Debt / Equity Ratio	50% debt / 50% equity
Return on Equity	11.00% - 13.00%
Potential EPS Impact (based on 402 MM shares)	$0.60 - $1.00+

Projected Transmission Capital Spending*



* ~$9-$15 billion investment opportunity not included in current capital guidance forecasts, since it will be put into a JV. ETT base case and PATH projects included in above projection.

Projected Transmission EPS Contributions*



* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

Transmission will provide a near and long term catalyst for growth.

Electric Transmission America (ETA)

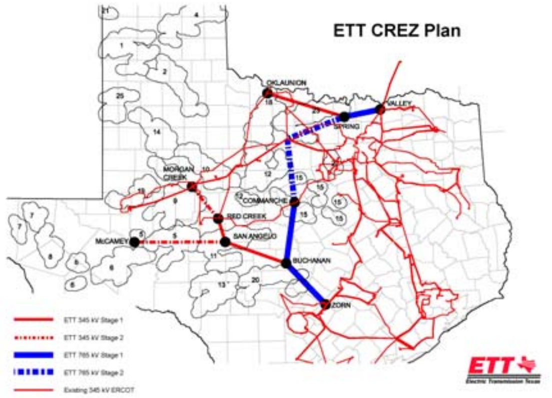
- *Electric Transmission America (ETA)*
  - AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 Joint Venture.
  - Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
  - Projects taken on by the Joint Venture would entail transmission facilities:
    - 345 kV and above
    - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
    - Greater than $100 million
  - ETA will hope to identify and initiate the approval process for the first project during the first half of 2008.
  - ETA will look to collaborate with qualified partners in each particular region.

This JV reflects a natural progression and expansion of our partnership with MidAmerican.

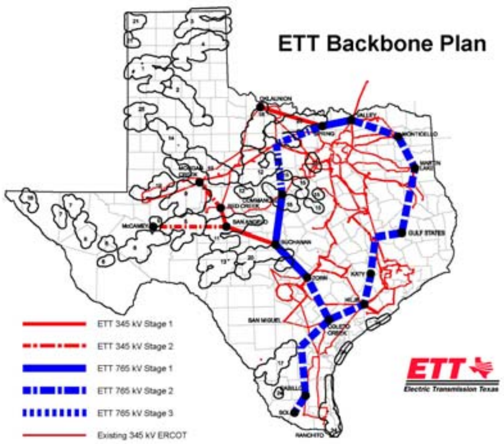
Electric Transmission Texas (ETT)

- **Electric Transmission Texas (ETT) Transaction Status**
  - Participation Agreement signed Jan. 9, 2007.
  - Texas regulatory filing on Jan. 22, 2007.
    - Requested utility status, transfer of initial assets, establishment of TCOS transmission recovery mechanism.
    - Hearings conducted July 16-17, 2007, commission order expected in the fall of 2007.
  - FERC approval for asset transfer received April 20, 2007.
  - Closing deadline of Nov. 1, 2007 can be extended by mutual agreement.
- **ETT CREZ Overview**
  - Strengthen ERCOT grid to collect and deliver wind generation to load
  - $1.5 billion investment Phase 1 – 2012 (before ownership division)
  - $1.5 billion investment Phase 2 – 2015 (before ownership division)
- **ETT ERCOT Backbone Proposal**
  - ETT proposal for ERCOT and PUCT to consider CREZ transmission in context of long-term vision for transmission system.
  - Current 5-year planning horizon results in higher ultimate costs, lower system efficiency.
  - Long-term 15-20 year perspective provides better plan, supports development of high voltage backbone at 765-kV.
  - $4.2 billion investment (long-term backbone).
- **Traditional ratemaking process through the PUCT will be utilized for investment cost recovery.**

ETT CREZ



ETT Backbone



Transmission Project Updates

PJM I-765 TM Phase I Progress to Date

- AEP and Allegheny entered into the PATH (Potomac-Appalachian Transmission Highline) JV to construct the 290 mile West Virginia-Maryland line
- Total estimated cost of $1.8 billion
- AEP portion approximately $600 million
- Expected completion 2012

Key Next Steps

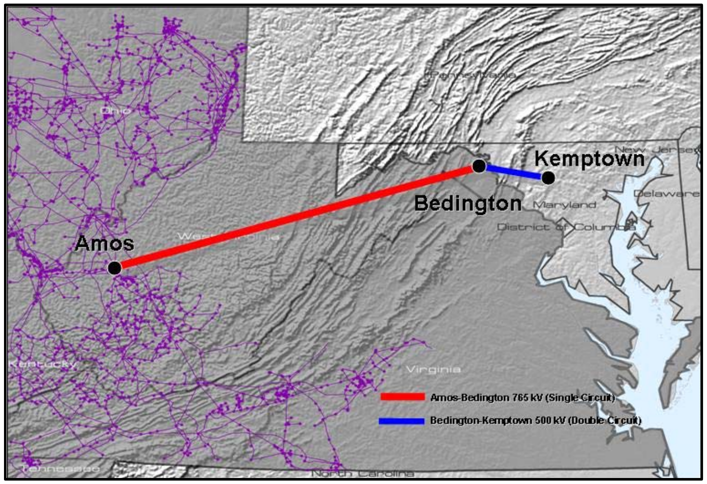
- Complete FERC Filing – Fall 2007
  - *Pursuing new project FERC incentives: cash return on CWIP, higher ROE, recovery of pre-commercial operation costs and recovery of abandonment costs.*
- Siting Approved – Fall 2009
- Completion – Fall 2012

PJM I-765 TM Phase II Update

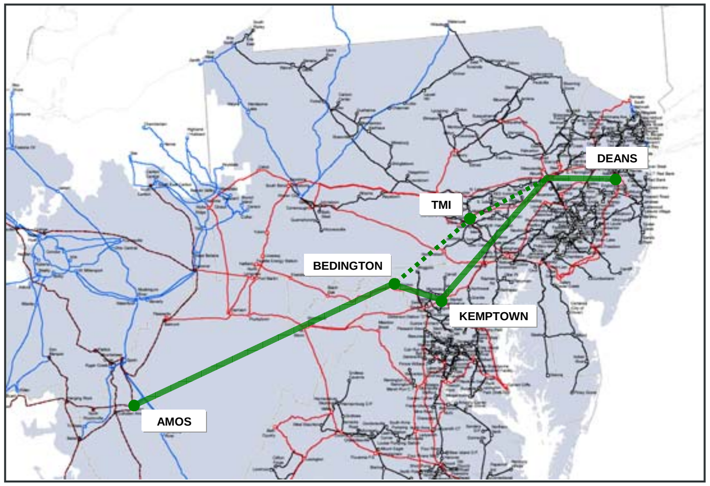
- Approximately 250 miles from West Virginia-Maryland border to Public Service Electric & Gas Deans Station in New Jersey.
- Currently under consideration by PJM as part of Regional Transmission Expansion Plan (RTEP).
- Based on PJM RTEP approval, AEP will seek a suitable business partner (JV partner) to complete the second leg of the original proposal.

Regional Rate Design will be utilized for investment cost recovery.

PJM Phase I



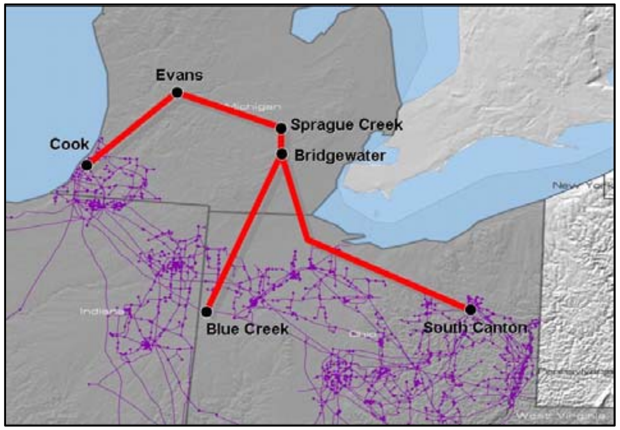
PJM Phase II



Transmission Project Updates – cont'd

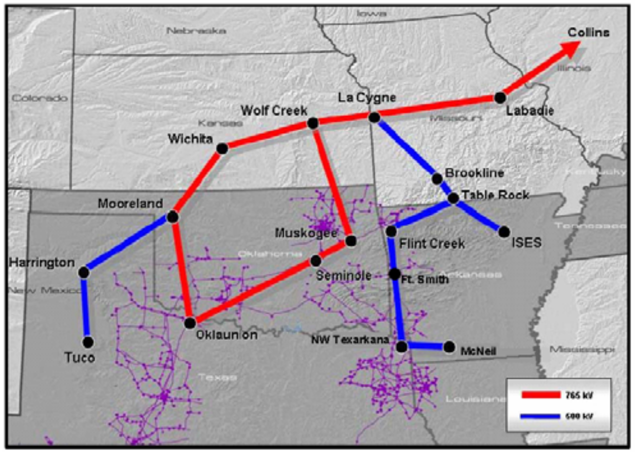
- *765 – kV in Michigan – Key Next Steps*
  - Study results shared with PJM/MISO– Summer 2007
  - Public release of study results – Fall 2007
  - Potential JV formation – Fall 2007
  - PJM/MISO approval - Summer 2008
  - FERC Filing - Fall 2008
  - Siting approval – Summer 2010
  - Estimated completion – Summer 2015

Michigan



- *765-kV in SPP – Key Next Steps*
  - Study disclosure – Fall 2007
  - JV formation (Partner-TBD) – Fall 2007
  - SPP RTO/BOD EHV Overlay approval – Summer 2009
  - SPP RTO FERC Filing – Fall 2009
  - Siting approval – Fall 2011
  - Estimated completion – Summer 2017

Southwest Power Pool



- *Regional Rate Design will be utilized for investment cost recovery.*

STRATEGIC DIRECTION & FINANCIAL OUTLOOK

Advanced Generation & CO_2

Near Term:

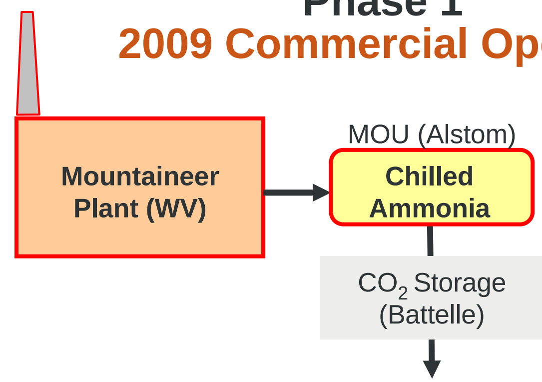
- Chilled Ammonia project at Mountaineer moving to commercial scale at the Northeastern Plant in 2012

$ in millions				
	2007	2008	2009	2010
Mountaineer Chilled Ammonia Project	$4	$56	$11	$0

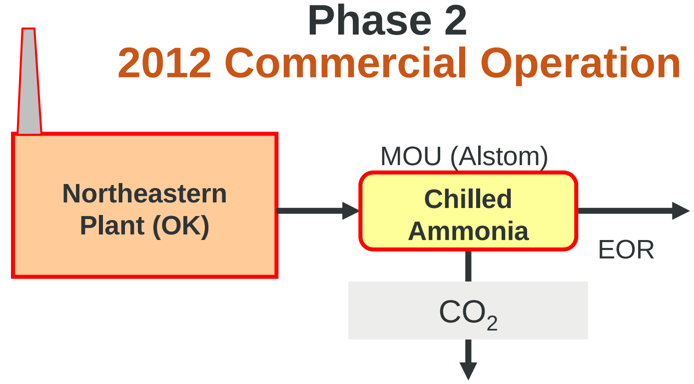
Long Term Strategy (Post 2010):

- IGCC
- Oxy Coal Technology
- Chilled Ammonia
- Nuclear COL

Phase 1
2009 Commercial Operation



Phase 2
2012 Commercial Operation

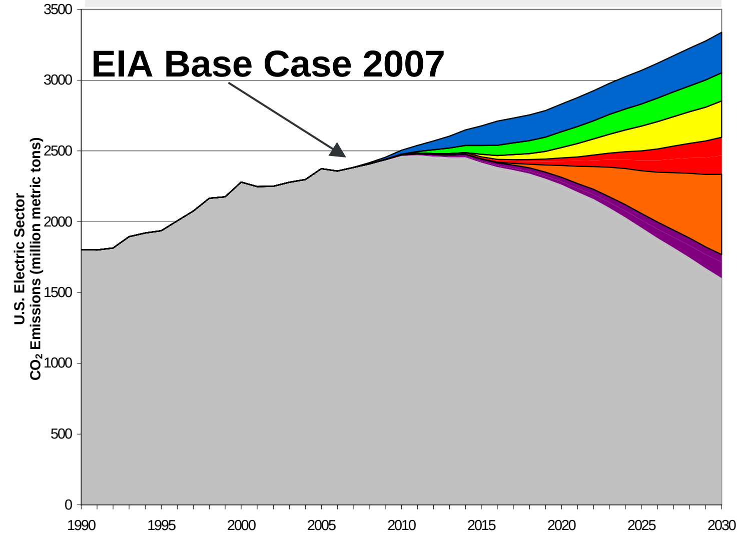


We are committed to validating and deploying technologies that ensure coal remains a viable resource for AEP and America.

AEP is Pursuing a Portfolio of Options to Address Carbon

Technology	EIA 2007 Reference	Industry Target	AEP Plan
Efficiency	Load Growth ~ +1.5%/yr	Load Growth ~ +1.1%/yr	DSM: 1000MW reduction in demand by 2012
Renewables	30 GWe by 2030	70 GWe by 2030	Wind PPAs through 2015: 1610MW nameplate or 232MW capacity for planning purposes. Also, voluntary green energy tariffs (Ohio program starting 2007)
Nuclear Generation	12.5 GWe by 2030	64 GWe by 2030	Evaluation of Nuclear COL
Advanced Coal Generation	No Existing Plant Upgrades 40% New Plant Efficiency by 2020–2030	150 GWe Plant Upgrades 46% New Plant Efficiency by 2020; 49% in 2030	1,246MW IGCC by 2017 447MW USC Turk plant by 2011
Carbon Capture and Storage	None	Widely Deployed After 2020	Chilled Ammonia: Mountaineer 2009 & Northeastern 2012 Oxy-coal by 2020
Plug-in Hybrid Electric Vehicles	None	10% of New Vehicle Sales by 2017; +2%/yr Thereafter	Joined Electric Drive Transportation Association (EDTA) in May 2007
Distributed Energy Resources	< 0.1% of Base Load in 2030	5% of Base Load in 2030	Pursuit of NaS® Energy Storage – 25MW of storage by 2010 and 1000MW of other storage/fuel cells by 2020

Technical Potential for CO_2 Reductions - *Achieving all targets is very aggressive, but potentially feasible.*



Technology advancement is required beyond present "state of the art" to achieve 1990 CO_2 levels by 2030. AEP is investing in a portfolio of GHG reduction initiatives. Allocation of funds will shift over time depending on technology, legislation, etc.

STRATEGIC DIRECTION & FINANCIAL OUTLOOK

Source for graphic, EIA 2007 reference and industry target data: EPRI

Investing in IGCC

Generation Technology Comparative Statistics

US2012$	Eastern Bituminous		
	USC	IGCC	NGCC
Nominal Capacity (MW)	618	629	530
Capacity Factor (%)	85%	85%	25%
Total Plant Cost (2012$, including: EPC+Owner's Cost+AFUDC+Transmission) ($/kW)	$2,876	$3,709	$754
Production Cost ($/MWh)	$23	$23	$57
Cost of Electricity, Without CO_2 Capture ($/MWh)	$86	$98	$111
Estimated Cost of Electricity, with 90% CO_2 Capture ($/MWh)	$137	$124	$169

Source: Results of AEP analysis based on EPRI studies.

- Total Plant Cost includes cost to engineer, procure and construct plus owners direct costs, AFUDC, overheads and transmission lines.
- Assumes Northern Appalachian coal price of $2.28/mmBtu (2012$) for USC & IGCC and natural gas price of $7.73/mmBtu (2012$) for NGCC.
- Production cost includes fuel plus variable operations and maintenance costs.
- Cost of electricity represents first year estimates in 2012$ and are based on total plant cost plus fuel costs, operation and maintenance costs, and emission allowance costs.
- Cost of electricity with CO_2 capture provides pressurized CO_2 at the fence line and does not include transportation, storage and monitoring costs.

Regulatory Strategy: Reduce Lag

The strategy: reduce the time between in-service dates and rate recovery

- Maximize frequency of filings
  - Seek ability to pro-forma both capital and O&M through date which rates are effective
- Single-issue cost recovery
  - Reliability
  - Vegetation
  - Environmental
- Trackers
  - Federally-approved transmission costs
  - Fuel and emissions
  - ERO compliance costs
  - Off-system sales margin sharing
- Formula rates
- Return on CWIP

Our goal is to maximize utility company cash flow and returns by minimizing regulatory lag.

Regulatory Lag Reduction: East Regulated Utilities

Appalachian Power Co.

Customers: 949,000
Estimated Rate Base: $3.7B *
Estimated 2007 Earnings: $183MM

Indiana Michigan Power Co.

Customers: 582,000
Est. Rate Base: $2.1B *
Est. 2007 Earnings: $130MM

Kentucky Power Co.

Customers: 176,000
Estimated Rate Base: $.9B *
Estimated 2007 Earnings: $27MM

* See page 28 for rate base details

Virginia
- Opportunity for one rate case exists before 12/31/08
- E&R rider
- Post 2008 rider for DSM, renewable programs & new generation
- Fuel clause
- OSS margin sharing

West Virginia
- Special construction surcharge permitted
- Fuel clause (ENEC)

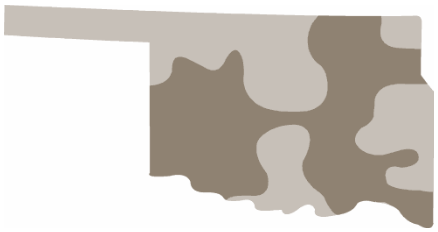
Indiana
- Riders to be requested for DSM, Environmental and RTOs
- CWIP may be approved for clean coal technology projects utilizing Indiana coal or qualified pollution control property via surcharge
- Fuel clause

Michigan
- Return on CWIP can be included in rate base
- Fuel clause

Kentucky
- Environmental surcharge
- Monthly adjustment clauses in place for DSM & fuel
- OSS margin sharing

Regulatory Lag Reduction: West Regulated Utilities

Public Service of Oklahoma

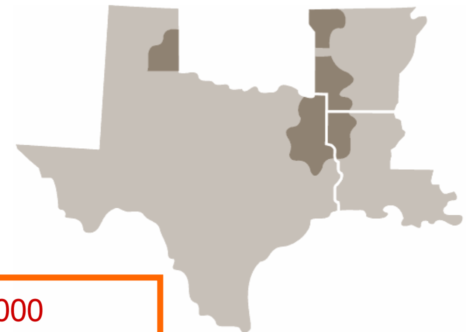


Customers: 520,000
Estimated Rate Base: $1.2B *
Estimated 2007 earnings: $35MM

* See page28 for rate base details

Oklahoma
•Rider mechanisms authorized for vegetation, Lawton Cogen & new peaking facilities after December 2007 in-service date
•Fuel clause
•OSS margin sharing

Southwestern Electric Power Co



Customers: 456,000
Est. Rate Base: $1.3B *
Est. 2007 earnings: $66MM

Arkansas
•CWIP permitted in rate base for plant that is placed in service within 6 months after the test year
•Fuel clause
•OSS margin sharing

Louisiana
•Formula rate plans permitted
•Fuel clause
•Seeking partial CWIP return on new generation projects
•OSS margin sharing

Texas
•CWIP allowed in rate base in some cases
•Fuel clause
•OSS margin sharing

Regulatory Lag Reduction: Texas Wires Business

AEP Texas Central Co & AEP Texas North Co

Customers: 927,000
Estimated Rate Base: $2.1B *
Estimated 2007 earnings: $73MM

* See page 28 for rate base details

Texas

- Transmission rider provides annual recovery dependent on the level of transmission investment and ERCOT load growth rates
- AFUDC is permitted in limited circumstances

AEP Texas will synchronize general rate requests with significant rate base changes and benefit from the flexibility of periodic transmission filings.

Rate Base by Jurisdiction

Jurisdiction	Rate Base	Approved ROE	Date	6/30/07 GAAP Earned ROE
APCo VA	$2.022MM	10.00%	5/15/2007	8.44%
APCo WV	$1.656MM	10.50%	7/26/2006

Texas-TNC (3)	$530MM	TBD	5/24/2007	8.63%

(1) PSO rate case under review. Company position is a new rate base of $1,189,422,564. Awaiting final order.

(2) TCC rate case under review. Company position is a new rate base of $1,600,487,376. Awaiting final order.

(3) PUCT approved a settlement agreement, and indicated ROE will be determined as part of TCC's rate case.

Regulatory Activity Underway

- ✓ AEP Texas Central Company General Rate Case
- ✓ PSO General Rate Case
- ✓ I&M Indiana Rate Petition
- ✓ Virginia Filings – Fuel Factor and E&R
- ✓ Electric Transmission Texas LLC Request for Certificate of Convenience and Necessity and Initial Rates
- ✓ FERC Seams Elimination Cost Adjustment Proceedings
- ✓ SPP OATT Formula Rate Filing
- ✓ New Generation
  - ✓ IGCC Filing in Virginia and West Virginia for Certificate of Need and approval of a cost recovery mechanism
  - ✓ IGCC Phase 2 Filings in Ohio on Hold Pending Resolution of Supreme Court Challenge of PUCO's authority
  - ✓ SWEPCo Turk Plant Filings in Arkansas, Louisiana and Texas for Certificates of Need

Level Of Capital Investment Will Be Adjusted Based On Rate Recovery And/Or Cash Generation

The AEP Ohio Post-2008 Action Plan

Concurrent pursuit of regulatory and legislative options

- Work for a legislative outcome that:
  - Allows for market pricing or
  - Allows for new Rate Stabilization Plans that reflect a value for generation consistent with market
- If legislation is not forthcoming, work with the PUCO Staff to develop new Rate Stabilization Plans that reflect the market value of generation

Essential elements of Post-2008 Plan

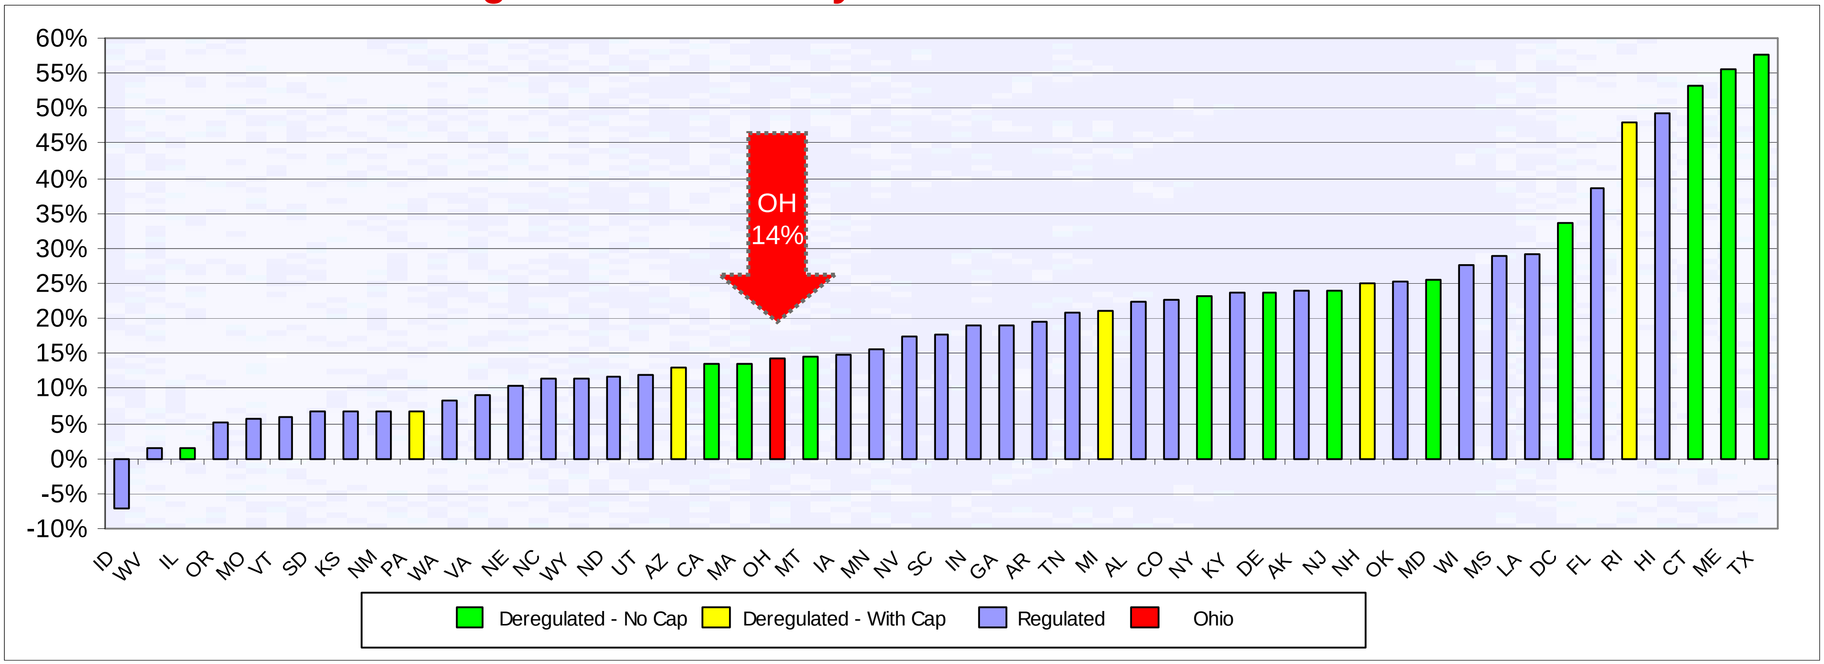
- Market-based generation pricing option
- Recovery mechanisms for new plants, fuel clause, environmental investments, GridSMART initiatives, energy efficiency projects and renewable energy investments
- Well-defined parameters for PUCO authority

Achieve a sustainable balance between shareholders and the Ohio economy.

Electricity Costs Have Increased in Both Regulated and Deregulated States

STRATEGIC DIRECTION & FINANCIAL OUTLOOK

2002-2006 % Change in Electricity Prices



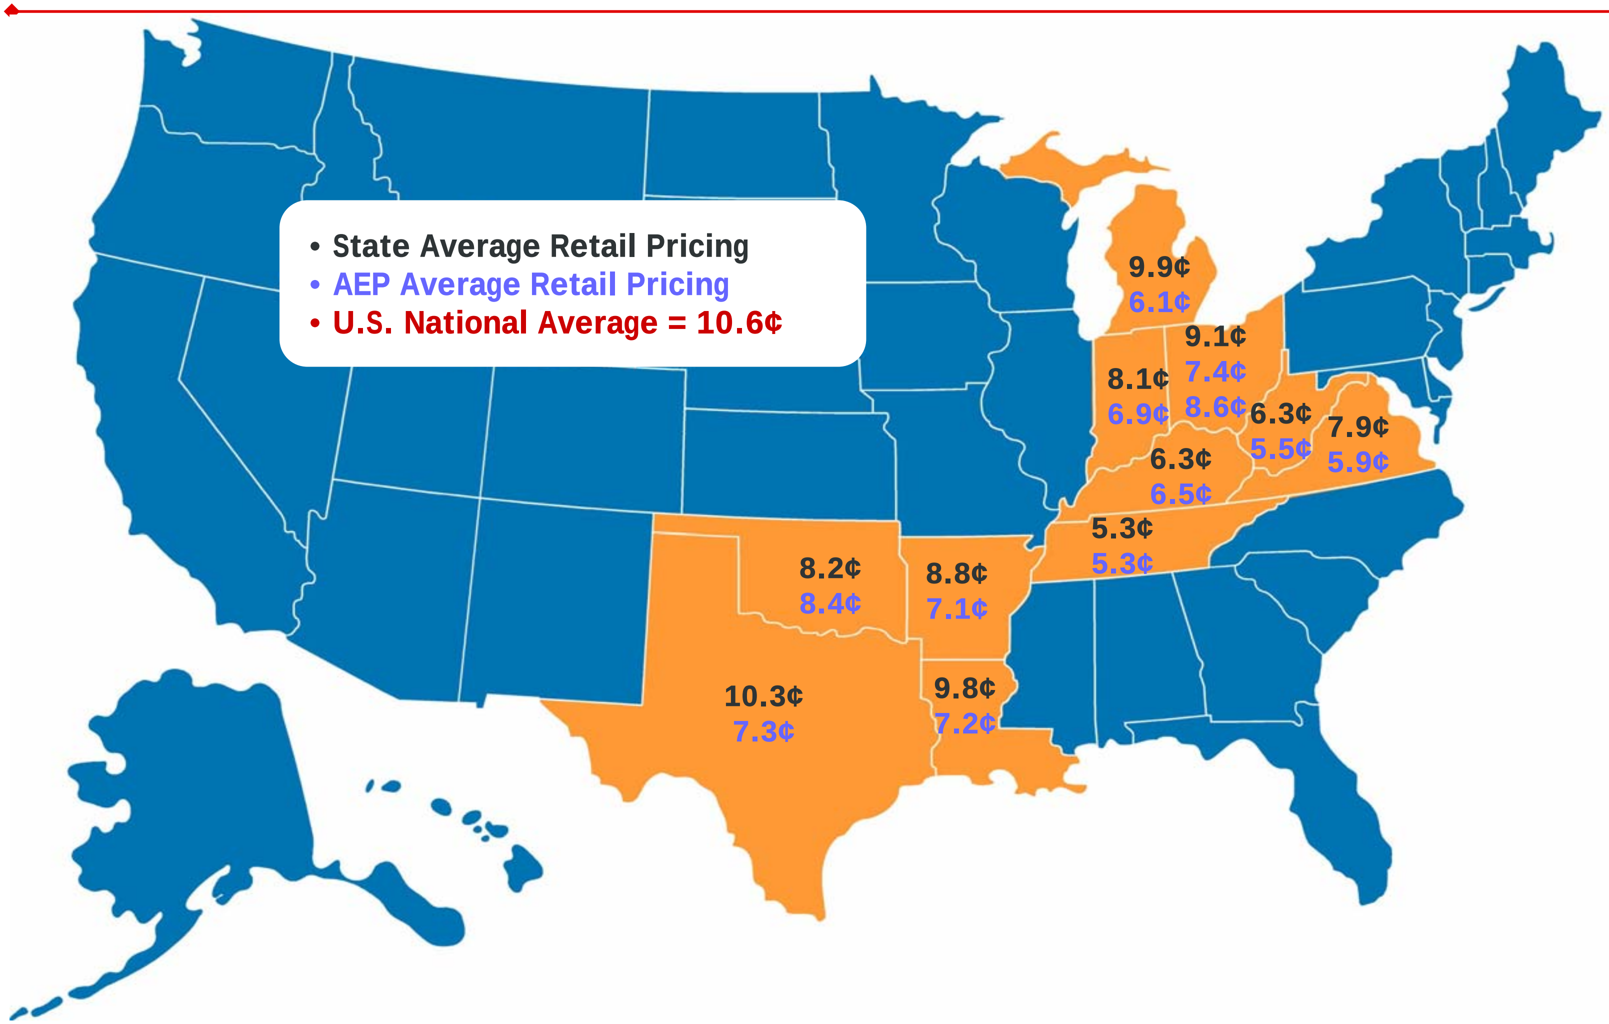
Source: USA Today, Aug. 10, 2007

- **Deregulated states median increase: 25%**
- **Regulated states average increase: 23%**
- **Ohio average increase: 14%**

Ohio increased less than the average of both regulated & deregulated states. Under any scenario, rates in Ohio will likely increase.

Average Retail Price of Electricity

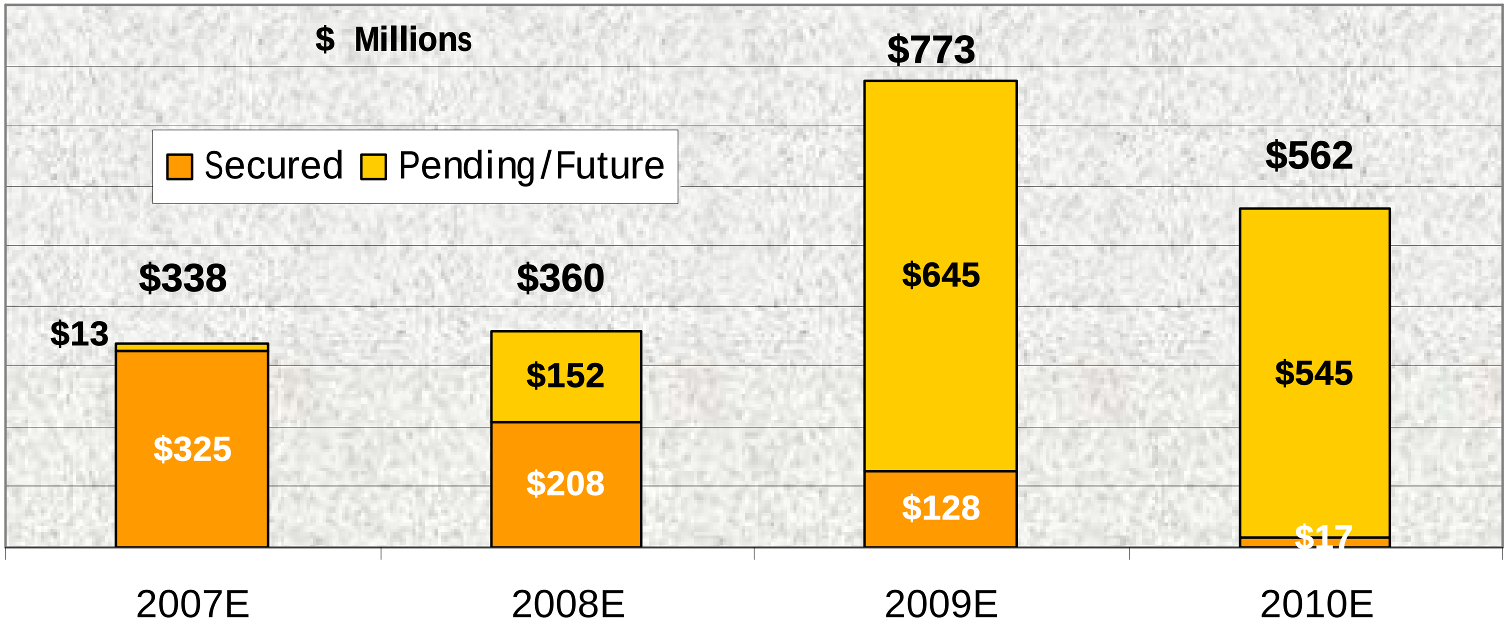
STRATEGIC DIRECTION & FINANCIAL OUTLOOK



AEP's pricing will remain competitive following anticipated rate increases.

Data source: EEI Summary of Average Realizations for the twelve months ended December 31, 2006
Ohio: OPCo = 7.4¢ / CSP = 8.6¢

Incremental Rate Relief Assumptions

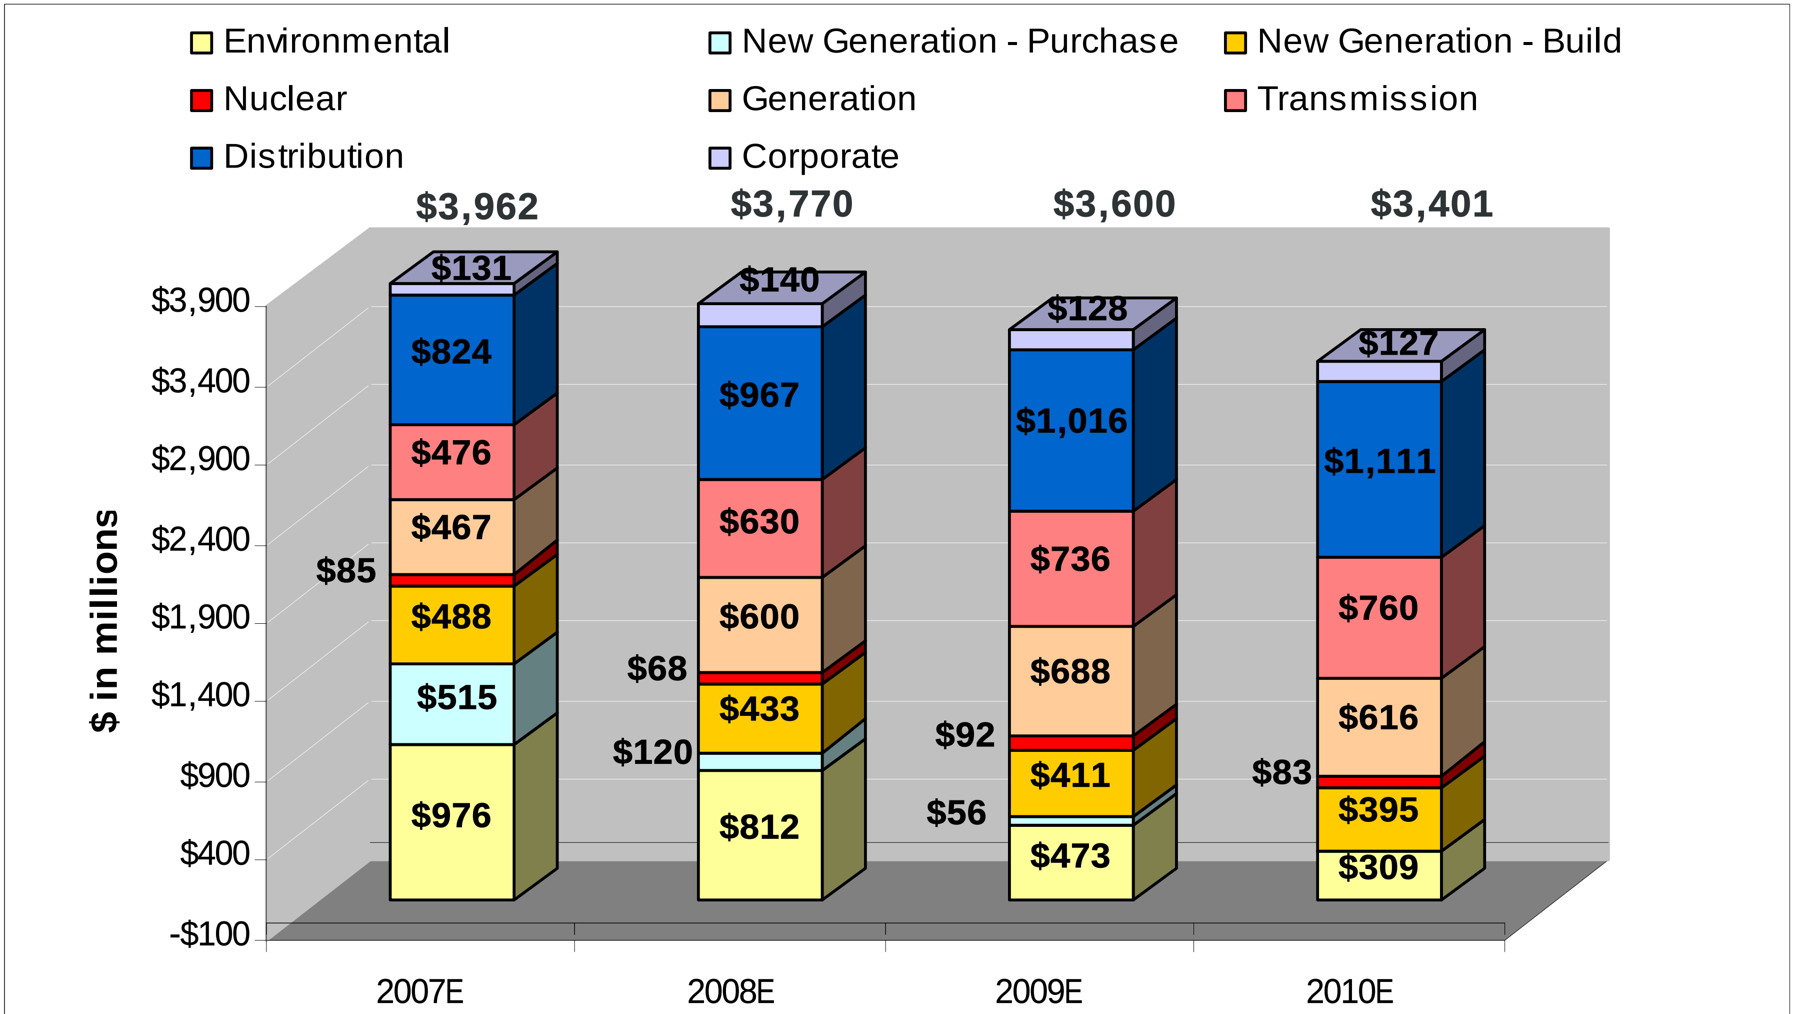


2007 Pending: PSO Rate Case
TCC Rate Case
Ohio 4%

2008 Secured: Ohio 3% & 7%
I&M Depreciation
APCo-WV Construction Surcharge
PSO Peaking Generation

2007 - 2010 projected annual rate increases of 5.5%

4-Year Capital Investment Forecast



Note: amounts exclude AFUDC, $452MM related to GridSMART and $540MM related to transmission joint venture projects

Capital Investment + Rate Relief = Earnings Growth

STRATEGIC DIRECTION & FINANCIAL OUTLOOK

Other Companies	$466	$200	$170	$116	**$952**
Total Capex	**$3,962**	**$3,770**	**$3,600**	**$3,401**	**$14,733**

Note: amounts exclude AFUDC

Capital Investment + Rate Relief = Earnings Growth

Credit Quality Parameters

Forecast Parameters:

- $150MM annually in new equity from Dividend Reinvestment and 401(k) plans
- Target 60% maximum consolidated debt/cap ratio on an adjusted basis
- Target utility company capitalization structures:

Company	Target Equity Ratio
APCO	42-44%
CSP	45-47%
I&M	40-42%
KPCO	41-43%
OPCo	44-46%
PSO	43-45%
SWEPCo	43-45%
TCC	40%
TNC	40%

- Long term dividend payout ratio range of 55-60%
- Maintain adequate coverage ratios to support current credit ratings
  - FFO to Interest range of 3.7x to 4.2x
  - FFO/Total Debt range of 16% to 19%

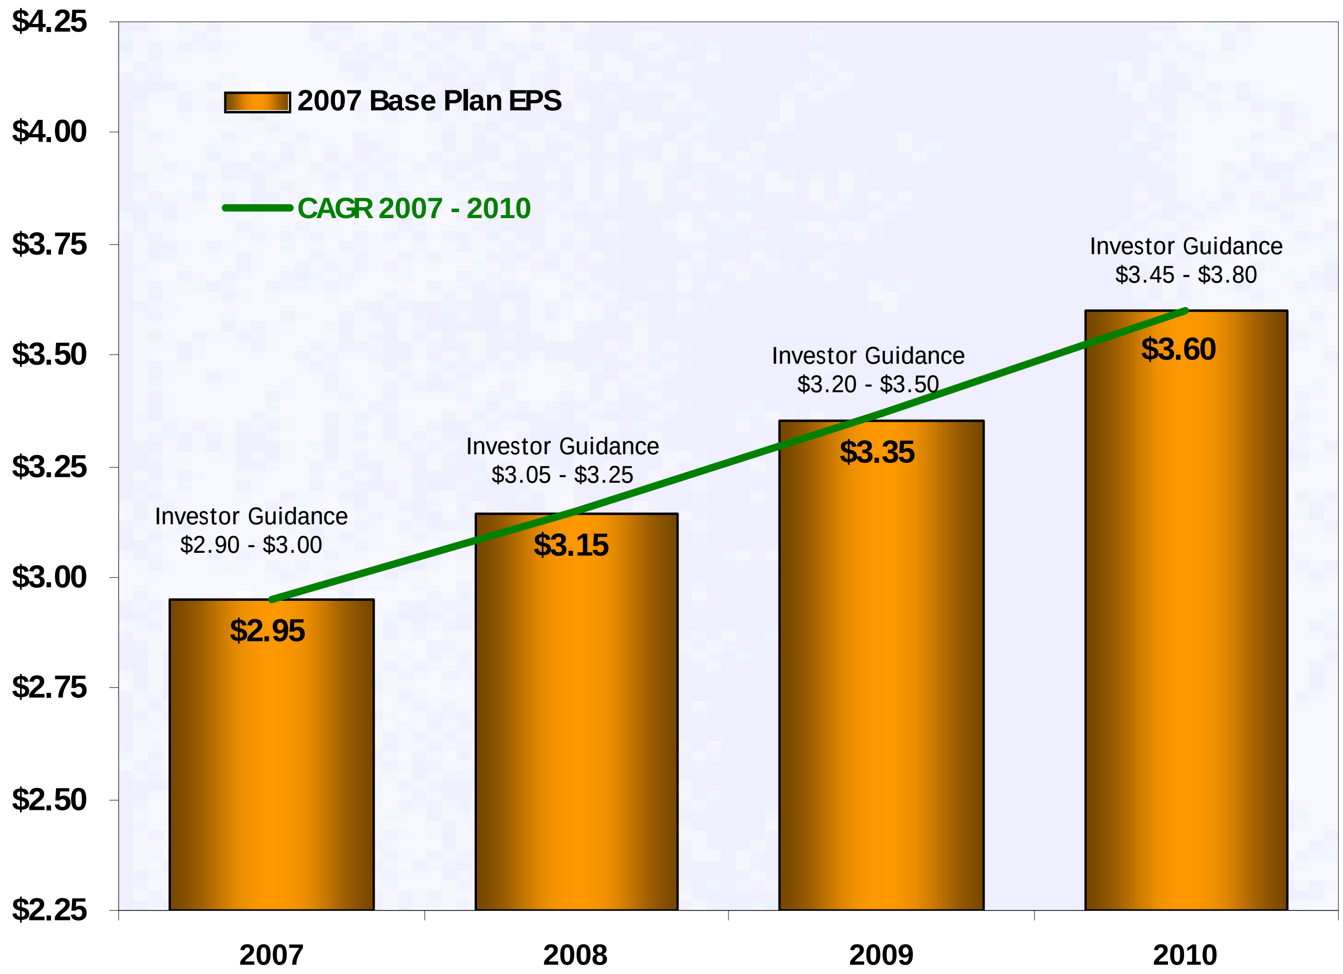
2008 Projected Cash Flow

	2007 Estimate	2008 Estimate
Beginning Cash Balance	$ 301	$ 102
Cash from Operations:		
Income from Continuing Operations	1,173	1,269
Depreciation and Amortization	1,535	1,511
Other	(655)	45
Total from Operations	2,053	2,825
Cash from Investing:		
Construction Expenditures	(3,604)	(3,860)
Asset Sales	228	-
Distressed Generation Purchases	(515)	-
Investment in Non-Consolidating Subsidiaries	(13)	(34)
Other	138	(69)
Total from Investing	(3,766)	(3,963)
Cash from Financing:		
Common Equity	150	150
Long-Term Debt Issued/(Retired)	1,334	1,789
Short-Term Debt Change, Net	529	(111)
Common Dividends	(631)	(659)
Other Financing Activities	132	(28)
Total from Financing	1,514	1,141
Net Change in Cash	$ (199)	$ 3
Ending Cash Balance	$ 102	$ 105

Note: For analysis purposes, certain financial statement amounts have been reclassified for this effect on the earnings presentation. In addition, construction expenditures include AFUDC.

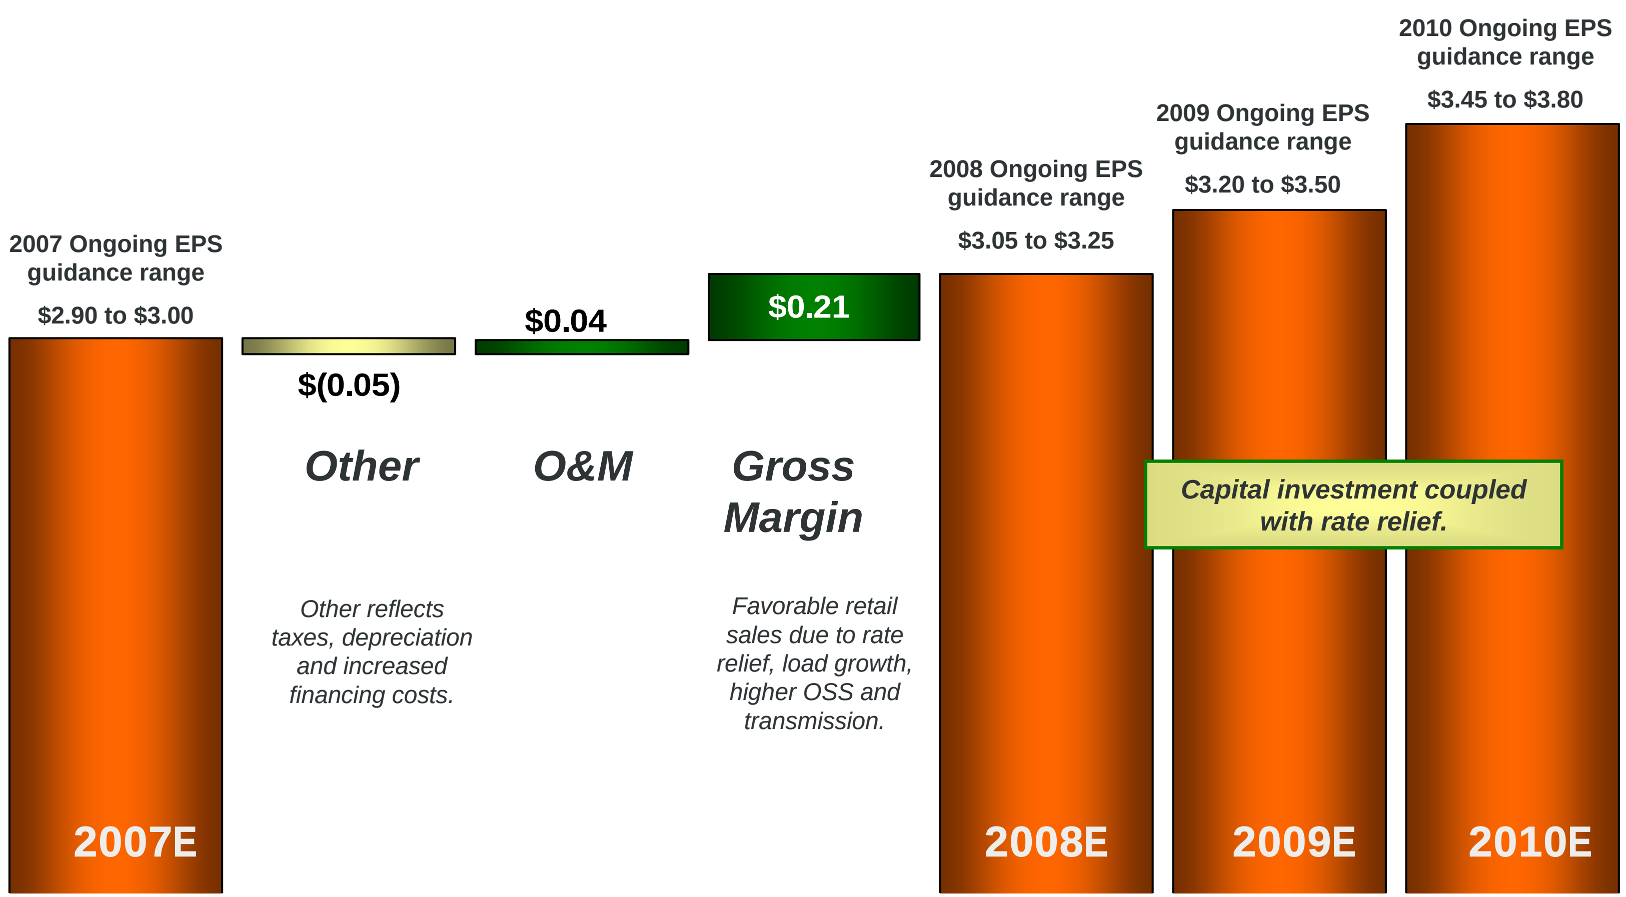
4-Year Earnings Range Forecast

STRATEGIC DIRECTION & FINANCIAL OUTLOOK



5% to 9% earnings growth and recommendation of a 4Q07 dividend increase.

Long-Range Earnings Drivers



Traditional utility factors will drive earnings

2008 Earnings Guidance

STRATEGIC DIRECTION & FINANCIAL OUTLOOK

		2007 Guidance ($ millions)	2008 Guidance ($ millions)
	UTILITY OPERATIONS:		
	Gross Margin:		
1	East Regulated Integrated Utilities	2,440	2,425
2	Ohio Companies	2,433	2,497
3	West Regulated Integrated Utilities	1,046	1,111
4	Texas Wires	520	536
5	Off-System Sales	617	642
6	Transmission Revenue - 3rd Party	276	331
7	Other Operating Revenue	627	545
8	Utility Gross Margin	7,959	8,087
9	Operations & Maintenance	(3,353)	(3,328)
10	Depreciation & Amortization	(1,476)	(1,479)
11	Taxes Other than Income Taxes	(775)	(788)
12	Interest Exp & Preferred Dividend	(773)	(864)
13	Other Income & Deductions	101	191
14	Income Taxes	(566)	(582)
15	Utility Operations On-Going Earnings	1,117	1,237

Performance Drivers

Retail Sales (lines 1-4):
- Positive load growth - $132MM
- Continued rate relief - $228MM
- Offset by fuel and PJM costs - $(186)MM

Off-System Sales (line 5):
- Increase due to slightly higher margins

Transmission Revenue (line 6):
- Higher rates in ERCOT, PJM and SPP

Other Operating Revenue (line 7):
- Lower revenues from third party work, primarily offset in line 9 - O&M

Operations & Maintenance (line 9):
- Continued emphasis on cost control

Interest Expense (line 12):
- Increased long term debt outstanding

Other Income & Deductions (line 13):
- Additional 2008 APCo E&R carrying charges & AFUDC, offset by elimination of Centrica earnings sharing mechanism in 2008

Income Taxes (line 14):
- Higher pre-tax income, offset by change in effective tax rate. Effective tax rate for utility operations is 33.6% in 2007 and 32.0% in 2008.

2008 Earnings Guidance

	2007 Guidance ($ millions)	2008 Guidance ($ millions)
TRANSMISSION OPERATIONS	-	5
NON-UTILITY OPERATIONS:		
MEMCO	67	57
Generation & Marketing	29	21
Non-Utility Operations On-Going Earnings	96	78
Parent and Other On-Going Earnings	(40)	(51)

Performance Drivers

Transmission Operations:

- Equity earnings contribution from Electric Transmission Texas LLC

MEMCO:

- Decrease due to increasing costs and reduced import/northbound river traffic

Generation & Marketing:

- Decrease due to divestiture of Sweeny in 4Q07

Parent & Other:

- Increase loss due primarily to interest expense related to hybrid securities issued at the parent

Performance Sensitivities

Driver	Change	Effect
EPS Sensitivities		
Load Growth (MWh)	1%	$0.10 EPS
Utility O&M	1%	$0.05 EPS
Capital Spending	$250M	$0.03 EPS
Unit Availability	1%	$0.04 EPS
ECAR Power Price	$1/MWh	$0.04 EPS
Fuel and Purchased Power	1%	$0.03 EPS
Henry Hub Gas Price	5%	$0.07 EPS
Interest Rate (20% floating debt)	100 BPs	$0.05 EPS
Authorized ROE	**1%**	**$0.24 EPS**

Longer term performance can be substantially enhanced by achieving a higher authorized return.

Financial Forecast Highlights

- **Updated 2008 & 2009 earnings guidance ranges and introduction of 2010**

2007 Range $2.90 to $3.00	**2008 Range $3.05 to $3.25**
2009 Range $3.20 to $3.50	**2010 Range $3.45 to $3.80**

- Increased EPS growth range: 5-9% (2007-2010)
  - Disciplined investment in utility operations
  - Innovative rate recovery for new investments
  - Ohio: Continue momentum toward market
  - Cost management
- Commitment to recommend an 8-cent/share increase in annual dividend effective 4Q07 (from $1.56/share to $1.64/share annually)
- Refined capital investment forecast and introduction of 2010 level

2007E: $3,962 MM	**2008E: $3,770 MM**
2009E: $3,600 MM	**2010E: $3,401 MM**

- Maintain credit ratings: BBB/Baa2/BBB

Value Proposition

- *Strength and scale in assets & operations*
- *Continued innovation and deployment of leading technology advancements*
- *Sustainable earnings growth through near and long term capital investment opportunities*
- *Comprehensive regulatory strategy focused on maximization of cash flow and return through minimized regulatory lag*
- *Strong dividend yield with respect to peers*
- *Balance sheet and credit profile stability*

AEP AMERICAN ELECTRIC POWER®

Transmission Investment Opportunities

ETT: Projects in Texas ERCOT jurisdiction

- $600MM of projects est. in service 2010-2013
- ETT's opportunity could reach $3.0B this decade

Transco: Within our existing footprint

- Provides opportunity to:
  - Develop new AEP-only projects
  - Reduce regulatory lag through FERC formula rates adjusted annually

Joint Ventures: Outside of our footprint, via ETA or with others

- Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
- Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2016
- Robust pipeline of projects up to $15B

765-kV Tower

AEP AMERICAN ELECTRIC POWER

JV Strategy – Nationwide Grid Expansion

SPP

Prairie Wind — COD: 2013-14
- 110 miles of 765 kV
- Partners: Westar (50%) & Electric Transmission America (50%)
- Estimated Cost: $400 million
- ROE: 12.8%

Tallgrass — COD: 2013-14
- 170 miles of 765 kV
- Partners: OG&E (50%) & Electric Transmission America (50%)
- Estimated Cost: $500 million
- ROE: 12.8%

ERCOT

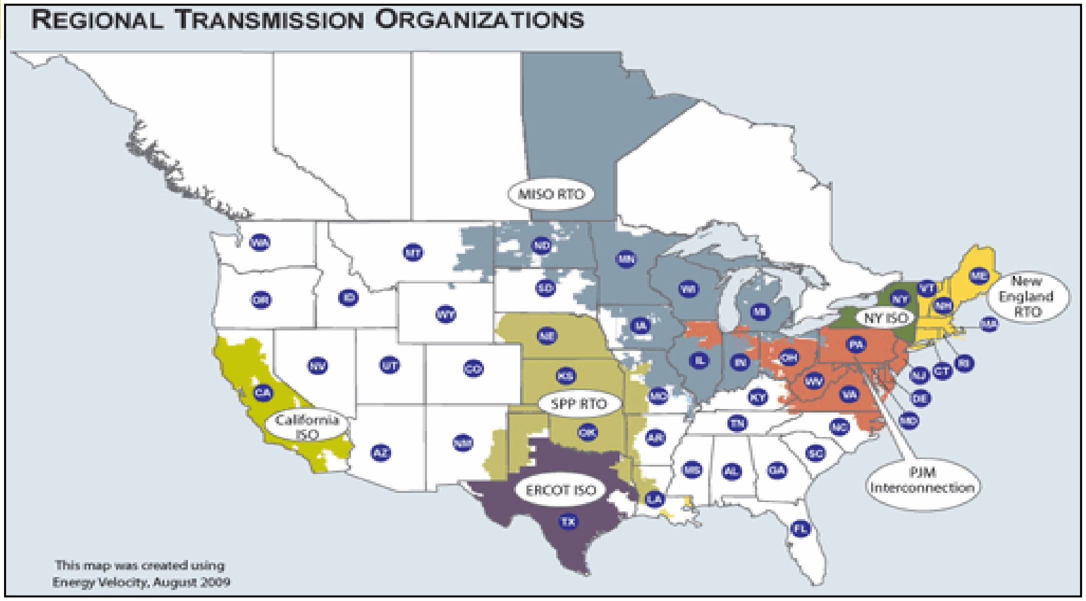
ETT — COD: 2010-2017
- 345 kV ERCOT Expansion
- Partner: MidAmerican Energy (50%)
- Estimated Cost: $1.4 billion
- ROE: 9.96%

PJM

PATH-WV — COD: 2014
- 275 miles of 765 kV
- Partner: Allegheny Energy (50%)
- Estimated Cost: $1.2 billion
- ROE: 14.3%

PJM/MISO

Pioneer — COD: 2015
- 240 miles of 765 kV
- Partner: Duke Energy (50%)
- Estimated Cost: $1 billion
- ROE: 12.54%



ACTIVE PROJECTS

FUTURE DEVELOPMENT

SMARTransmission Study
- Interregional EHV & Wind Integration Study
- Study Sponsors: ETA, ATC, Exelon, MidAmerican Energy, Northwestern Energy, Xcel Energy

SPP EHV Overlay
- Regional Expansion of 765 kV Backbone

ETT — COD: various
- Additional CREZ spend of ~ $1.1 billion (COD 2012-2013, subject to a 6-month routing approval)
- Other Projects Pending Transfer of ~ $600 million (COD 2010-2013)

PJM Expansion
- Regional Expansion of 765 kV, 500 kV and 345 kV systems

EHV Michigan/Ohio
- 700 miles of Proposed 765 kV

SPP | ERCOT | PJM | PJM/MISO

AEP AMERICAN® ELECTRIC POWER

Electric Transmission Texas, LLC

Overview:

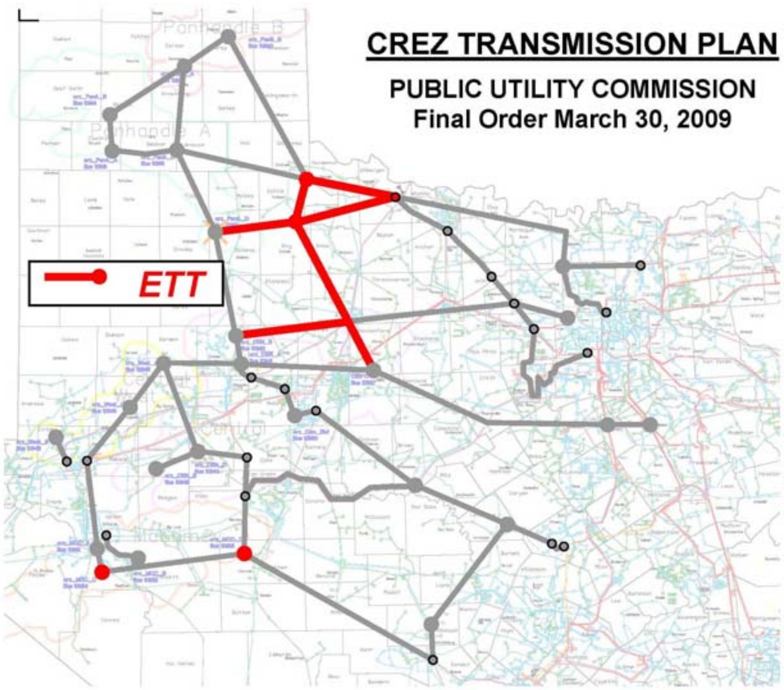
- ETT is a 50/50 JV between AEP and MidAmerican Energy Holding Company that plans to construct and operate transmission projects within ERCOT with an investment opportunity of more than $3 billion.
- Current JV rate base is $127 million with a debt to capital ratio of 60/40 and an authorized ROE of 9.96%.

Opportunities:

- Projects in service 2010-2017: $1.4 billion
- CREZ projects in service 2012-2013: $1.1 billion
- Other projects pending transfer in service 2010-2013: $600 million

Next Steps:

- Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in 2010.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Electric Transmission Texas

AEP AMERICAN® ELECTRIC POWER

EHV Transmission in PJM: PATH

Project Description: 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

Overview:

- FERC order issued on February 29, 2008 approving:
  - Cash return on CWIP and 14.3% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents
  - Rates went into effect March 1, 2008
- Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million.
- Estimated completion date: 2014+, pending outcome of the 2010 PJM Regional Transmission Expansion Plan (2010 RTEP).

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

- Obtaining a CPCN in West Virginia, Virginia and Maryland. CPCN applications in West Virginia and Maryland are pending because their procedural schedule allows the consideration of the 2010 RTEP. A new application in Virginia is expected in the third quarter of 2010 after consideration of the 2010 RTEP.

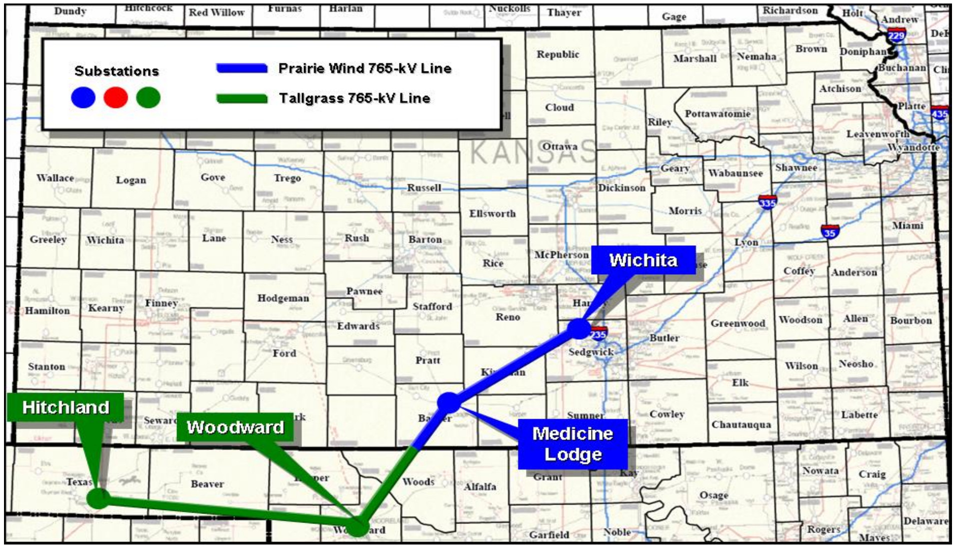
PATH
Potomac-Appalachian Transmission Highline

AEP AMERICAN® ELECTRIC POWER

Prairie Wind Transmission, LLC

Overview:

- In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
- PWT is a 50/50 JV that is proposing to build approximately 110 miles of 765-kV lines extending from Wichita, KS.
- The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
- The project is expected to cost approximately $400 million and be in-service by 2013-2014 and was approved by the KCC on July 24, 2009.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

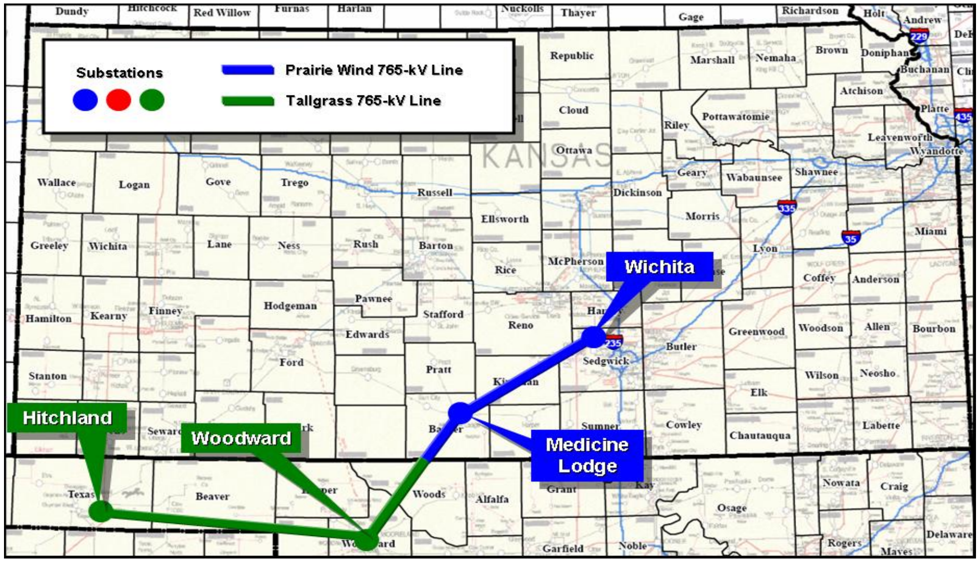
Key Challenges:

- RTO Approval
- Siting

Tallgrass Transmission, LLC

Overview:

- In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
- TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines in Oklahoma
- The project will promote wind development in the western half of Oklahoma.
- Project is expected to cost approximately $500 million and be in-service by 2013-2014.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

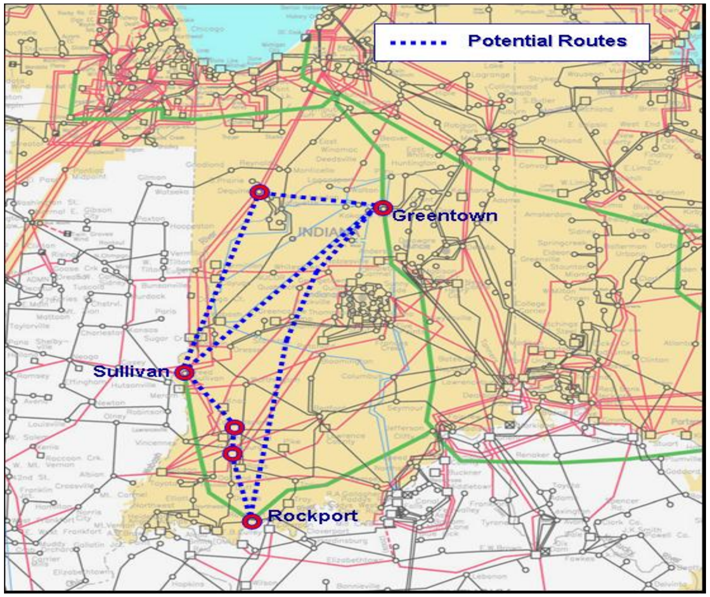
- RTO Approval
- Siting

AEP AMERICAN ELECTRIC POWER

Pioneer Transmission, LLC

Overview:

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
- The project will improve the reliability of the nation's transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, protect national security and expand opportunities for new generation, including renewables.
- The project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP's ownership of the joint venture is 50%.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

- RTO Approval (PJM & MISO)
- Cost allocation which enables the development of "system solutions"
- Siting

AEP AMERICAN ELECTRIC POWER®

Upper Midwest EHV Development—SMART Study

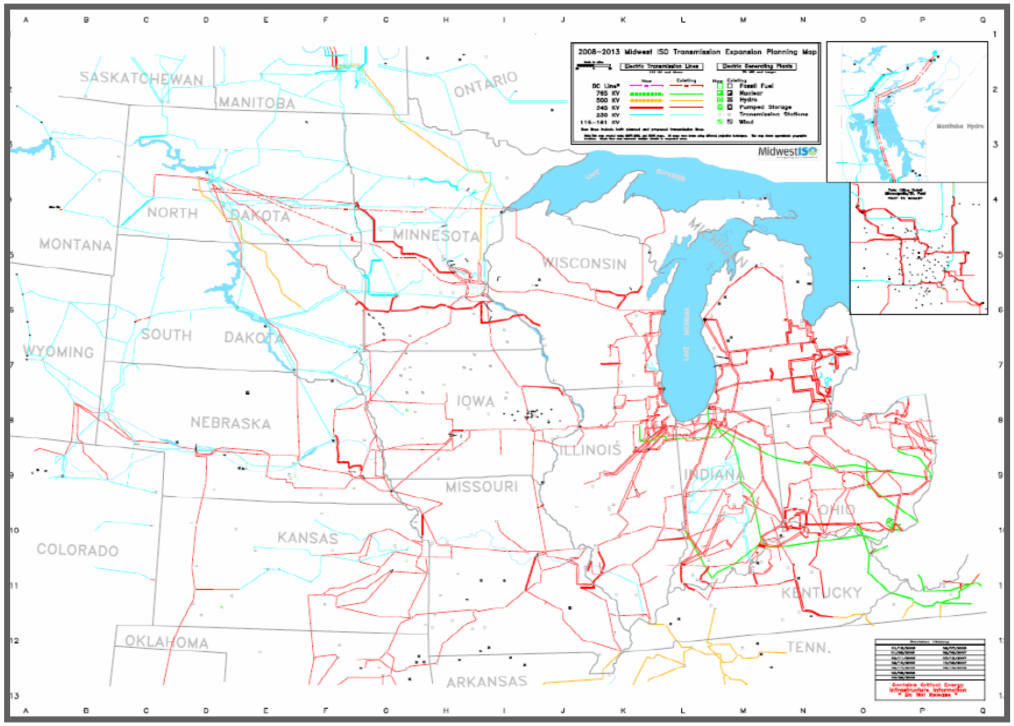
Project Description: a comprehensive study of the transmission needed in the Upper Midwest to support renewable energy development and transporting that energy to consumers throughout the study area. The SMART Study will develop EHV overlay alternative that ensures reliable service for sponsors' communities, is environmentally friendly, and supports national energy policy.

Overview:

- SMARTransmission Study announced August 2009
- Sponsors of the Study include ETA, Exelon, ATC, Northwestern, MidAmerican Energy Company, and Xcel
- Study due to be completed end of 2nd Qtr 2010 and will include "overlay" options and quantification of economic benefits

Next Steps:

- Investment structure
- Obtaining cost allocation between states, PJM, and MISO
- RTO technical approvals
- Favorable 205 Order including incentives



Primary Focus Areas: North Dakota – South Dakota – Iowa – Nebraska – Indiana – Ohio – Illinois – Minnesota – Wisconsin – Michigan

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

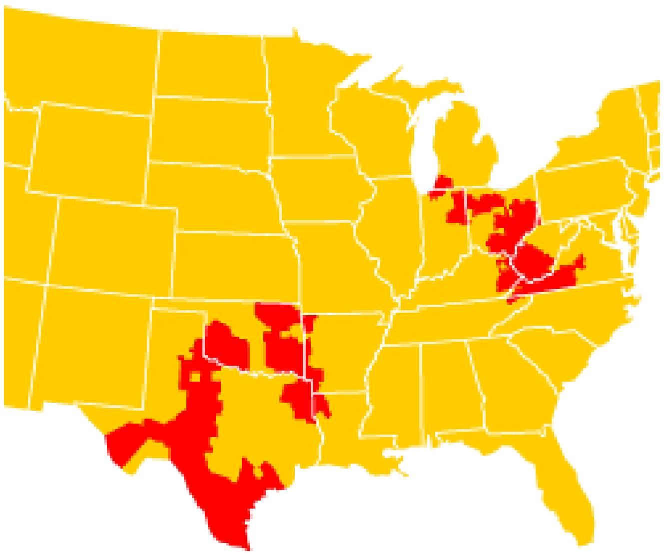
  - Stable credit ratings
  - Capital plan supported by cash flow
  - Strong liquidity position
- **Growth Opportunities**
  - Capital for utility platform
  - Transmission projects
- **Dividend yield of 5%**

Serving electric customers in 11 states



AEP Fast Facts

5.3 million customers
39 GW of generation capacity
39,000 miles of transmission lines

$17.7B Market Capitalization
BBB/Baa2/BBB credit rating

Capital Allocation

In this economic recovery cycle, capital allocation requires balance for spending that considers the obligation to serve, the ability to obtain rate increases, a balance sheet to support the plan, and the total return proposition to shareholders

- Capital for Growth
  - Capital budget of $2.6B for 2011
  - Capital budget plan of $2.9B for 2012

- Return of Capital to Shareholders
  - 12% increase in quarterly dividend in 2010
  - Future dividend increases will grow with earnings

- Capital to Reduce Risk
  - Voluntarily funded pension $500M in 2010
  - Allocating an additional $150M of funding for pension in 2011

Managing Operations and Investment

AEP®

Challenges:

Required refinement of the operating company model and improved line-of-sight management due to decreased load growth, regulatory lag, reduced rate headroom, and environmental challenges

Actions:

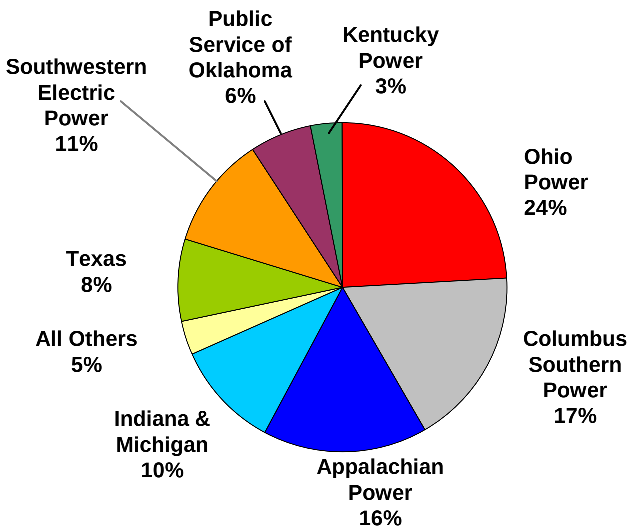
- Empower operating company employees to drive results
- Efficiently allocate capital
- Demonstrate O&M and capital expenditure discipline
- Identify asset renewal strategy for investing in traditional distribution and transmission assets that enhance reliability and customer satisfaction
- Enable long-term planning discussions with regulators and legislators

Expected Outcomes:
Optimize spending for more efficient return on investment
Improve dialogue with customers and regulators
Minimize lag in rate recovery

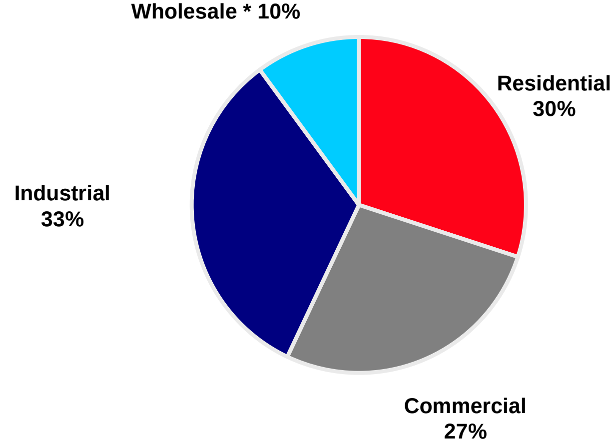
Highly Diversified Regulated Utility Platform

AEP®

2010 On-Going Earnings Contribution



2010 Retail Load



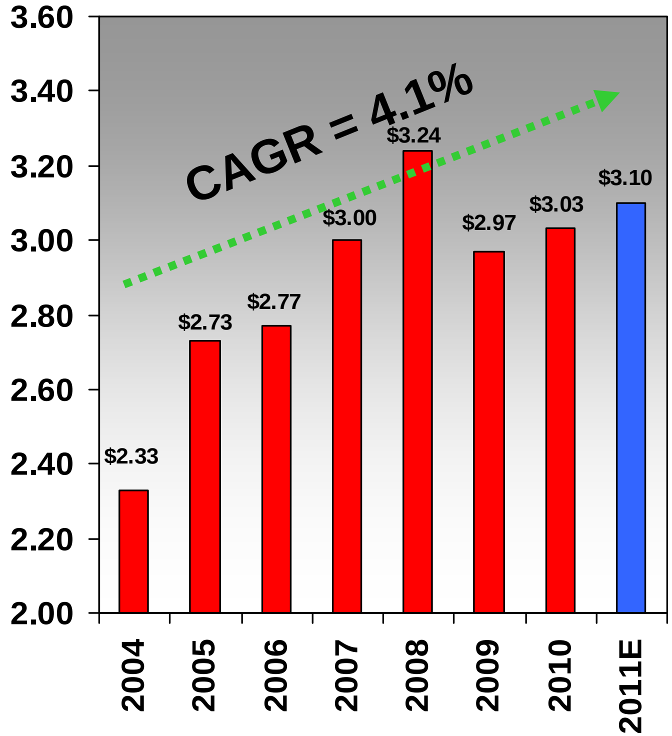
* *Wholesale includes sales to municipal and cooperative power systems, other wholesale, and other retail sales*

Region	# of customers
Appalachian Power (incl. TN)	1,004,000
Indiana & Michigan	582,000
Kentucky Power	174,000
Ohio & Wheeling	1,497,000
PSO (Oklahoma)	532,000
SWEPCO (AR, LA, TX)	520,000
Texas	961,000

Earnings and Dividends

On-Going EPS History Since 2004

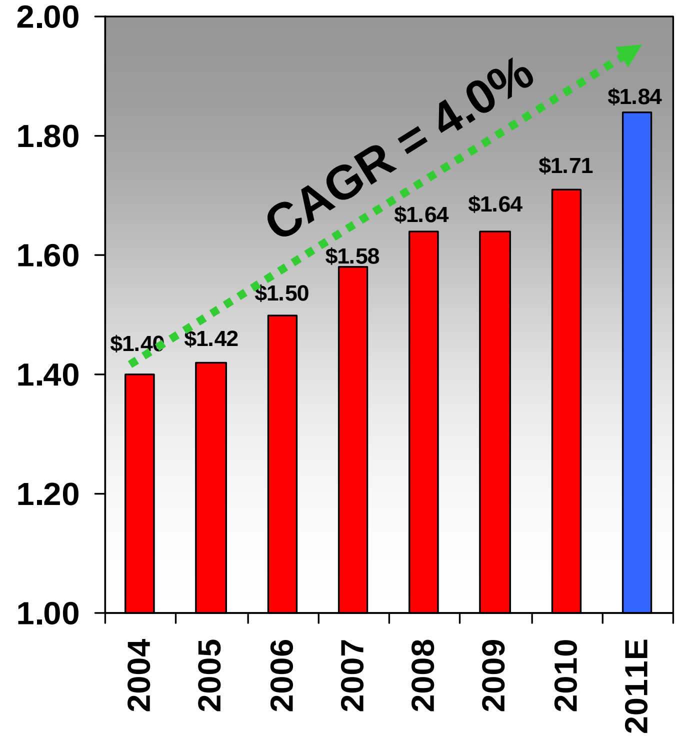
$/share



- Earnings growth largely attributed to capital investment program
- Pre-recession earnings supported by robust wholesale market activity and high power prices
- Equity offering in 2009 stabilized credit and strengthened balance sheet
- 2011 guidance range of $3.00 to $3.20 per share

Dividend History Since 2004

$/share



= subject to Board of Directors approval

- Dividend <u>increased 12%</u> in 2010
- <u>403rd consecutive</u> quarterly dividend declared in January 2011
- 50-60% payout ratio target
- Current yield over 5%

Long-term EPS Growth Rate

- 4-6% EPS growth 2012-14
  - Average annual capital spend between $2.9-3.4B
    - Utility platform replacement capital of about $1.4B (annual depreciation)
    - Growth in rate base of $1.5-2.0B per year, allocated between utility platform and transmission projects
  - Blended ROE of 10.5 - 11%
  - Slow, steady recovery in economy
- 5-7% EPS growth post 2014
  - Base utility platform capital including generation transformation
  - Higher allocation of discretionary capital going to opportunities in the transmission development pipeline
  - Higher overall blended ROE opportunity
  - Robust economic growth

Average Annual EPS Growth defined over two periods

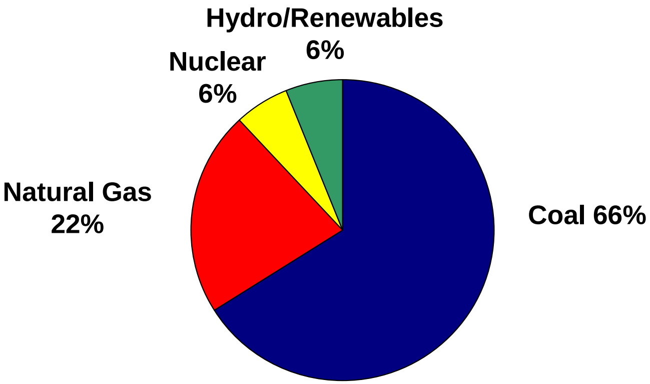
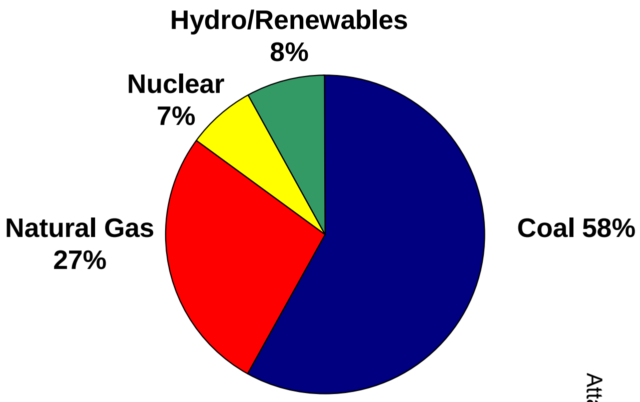
Continued Investment in Utility Platform

- Plan for old, small coal units
  - Initially operate seasonally
  - Transition towards retirement
  - Regulatory plan for recovery
- Continue evaluation of “partially exposed” units for additional controls
- Add non-coal capacity when needed
  - Dresden NGCC (partially complete)
  - New NGCC at existing site
  - Cook plant uprate (under study)
  - Renewables
- Deploy technology as appropriate
  - Continue pursuit of CCS technology
  - Energy storage technologies
  - gridSMART®



Capacity - 2009



Projected Capacity - 2017

AEP Ohio ESP Filing – Core Policy Issues

AEP®

Investment in Ohio

Supports economic development and essential tax base

Fundamental barriers must be addressed to attract investment for Environmental Compliance and New Generation

Jobs in Ohio

Jobs are a key component of growth potential in Ohio

Without regulatory assurances over time we could see loss of direct & indirect jobs related to power generation, and business relocations to surrounding states

Energy Security

Secure, reliable and predictable electricity supply is basis for sustained investment and employment in Ohio

Volatility in power prices can lead to major loss of economic activity over time

Primary objective of ESP: Stabilize rates and support economic development in the state of Ohio

Merged AEP Ohio

Single merged AEP Ohio company presumed with supporting information on an individual OP/CSP basis

Rate Redesign

Generation rates redesigned to resemble market pricing structures

29-Month ESP Period

ESP period Jan 1, 2012 through May 31,2014 (May 31 date aligns with PJM annual planning cycle)

Alternative Long Term Option

Alternative longer-term price certainty option offered for qualifying commercial & industrial customers

Ohio Growth Fund

Creation of significant private sector economic development to attract investment and job growth in AEP Ohio service territory

Distribution Components Included

Inclusion of certain distribution components while pursuing a parallel distribution base rate case

Summary of ESP Filing - Continued

AEP®

- Pre-tax earnings impact from proposed ESP (excluding potential earnings impact from trackers)
  - **Net base $54MM or 1.4% in year 1 (2012)**
  - **Net base $106MM or 2.7% in year 2 (2013)**

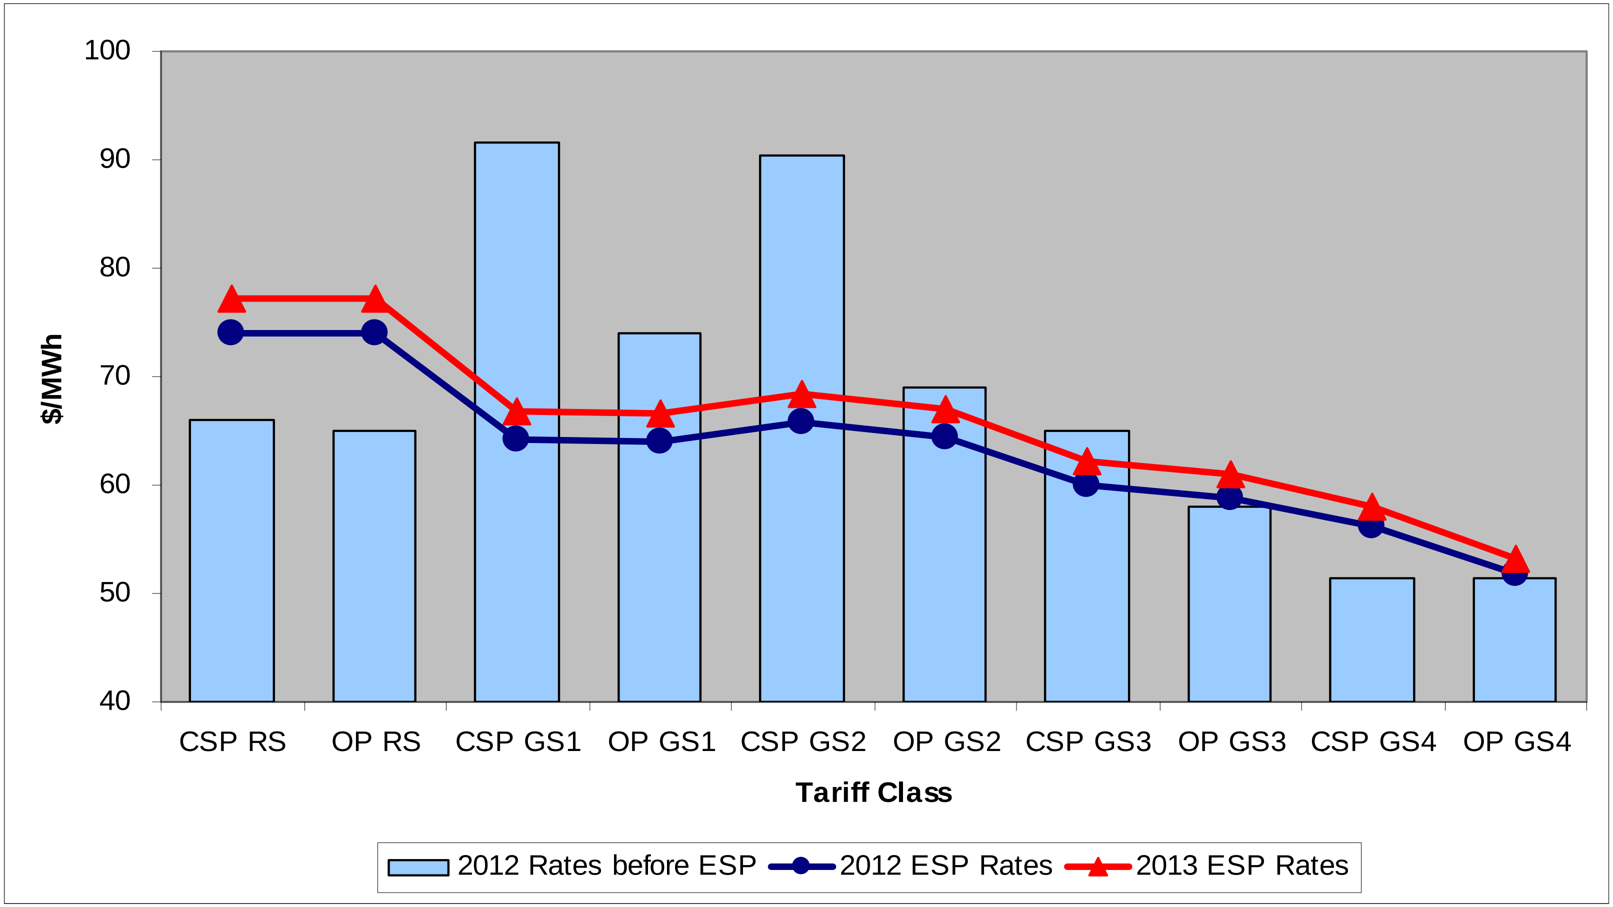
N/C* = No change from prior year

While the ESP includes a small base generation increase, the move to a market-based rate design, consistent with state policy, will result in varying impacts for different customer groups.

Price to Compare

Proposed **SSO** Rates Redesigned To Resemble Market Pricing Structures



Rates do not reflect mitigation impact of market transition rider
2012 Rates before ESP reflect current 2011 rates for generation & transmission service, adjusted to reflect full cost 2011 fuel and environmental costs.

The realignment of rates with market should provide all customers with equivalent opportunities to shop. Additionally, since the proposed design eliminates explicit demand charges, customers should be more easily able to evaluate competitive offers. To ease the rate impact that customers will experience from the realignment, we have proposed a Market Transition Rider.

Market Transition Rider – Mitigates the Initial Impact of Rate Realignment

Three-Year Market Transition Plan
Summary of AEP Ohio ESP Generation Rate Changes

CSP Current Customer Class	CSP New Customer Class	2012 Increase	2013 Increase	2014 Increase	Total Increase
Residential	Residential	5.0%	3.9%	1.0%	10.2%
GS1	GS Non-Demand	(6.4%)	(5.2%)	(7.8%)	(18.1%)
GS2	GS Demand	(5.3%)	(5.5%)	(8.2%)	(17.8%)
GS3		(0.3%)	1.0%	(1.8%)	(1.2%)
GS4/IRP		2.3%	7.7%	4.7%	15.3%
Total CSP		**2.2%**	**2.7%**	**0.0%**	**5.0%**
OPCo Current Customer Class	**OPCo New Customer Class**	**2012 Increase**	**2013 Increase**	**2014 Increase**	**Total Increase**
Residential	Residential	6.0%	3.1%	0.3%	9.7%
GS1	GS Non-Demand	1.5%	(3.3%)	(6.1%)	(7.8%)
GS2	GS Demand	0.1%	(0.7%)	(3.5%)	(4.1%)
GS3		(0.7%)	2.8%	(0.0%)	2.0%
GS4/IRP		(6.6%)	5.8%	3.0%	1.7%
Total OPCo		**0.4%**	**2.7%**	**0.0%**	**3.1%**
AEP Ohio		1.4%	2.7%	0.0%	4.2%

Illustration of Market Transition Rider on ESP Generation Rate Increases

The Market Transition Rider is a transition rider designed to facilitate the transition from AEP Ohio's current rates to market-based SSO Generation Service rates. It is a non-bypassable rider designed to limit the first and second year changes for any customer classes to uniformly transition any above or below average changes in three steps. Any revenue shortfall that is produced by limiting the increases for certain customer classes is collected from those classes whose decreases are limited.

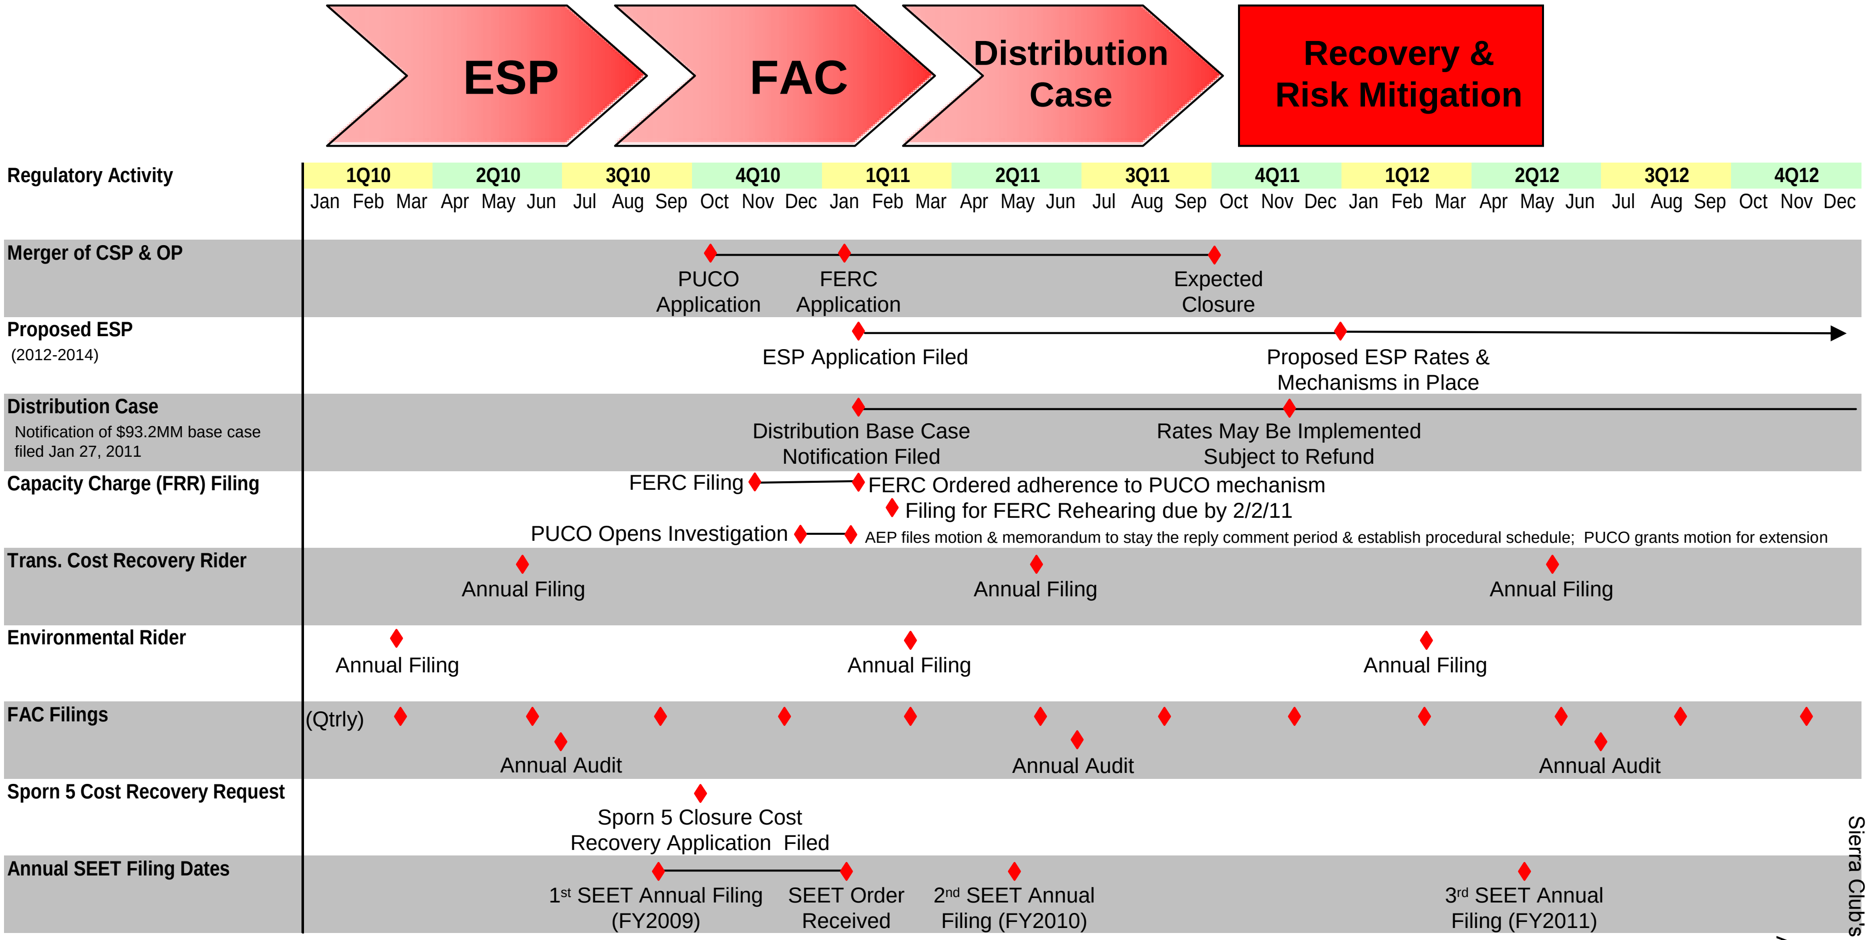
List of ESP Riders – Existing and Proposed

AEP®

Line	Rate Mechanism	Abbreviation	Bypassable	Distribution	Notes
1	**Current Riders**				
2	Universal Service Fund Rider	USF	--	Yes	
3	Advanced Energy Fund Rider	AEF	--	Yes	Expired 12/31/2010
4	kWh Tax Rider	kWh Tax	--		May be self-assessed under specific terms
5	Provider of Last Resort Charge	POLR	No		Option to avoid under specific terms
6	Monongahela Power Litigation Termination Rider	Mon Power	--	Yes	Expires once amount collected
7	Transmission Cost Recovery Rider	TCRR	Yes		
8	Fuel Adjustment Clause Rider	FAC	Yes		
9	Energy Efficiency and Peak Demand Reduction Cost Recovery Rider	EE/PDR	--	Yes	
10	Economic Development Cost Recovery Rider	EDR	--	Yes	
11	Enhanced Service Reliability Rider	ESRR	--	Yes	
12	gridSMART® Rider	gridSMART®	--	Yes	
13	Environmental Investment Carrying Cost Rider	EICCR	No		the current bypassable rider is proposed to be nonbypassable in the new ESP
14					
15	**Proposed Riders**				
16	Standard Offer Generation Service Rider	GSR	Yes		Relocation of base generation rates
17	Generation Resource Rider	GRR	No		Capital/solar investment
18	Alternative Energy Rider	AER	Yes		Relocation of RECs from FAC
19	Phase-In Recovery Rider	PIRR	--	Yes	Previous ESP deferrals, possibility of securitization
20	Distribution Investment Rider	DIR	--	Yes	
21	Market Transition Rider	MTR	--	Yes	
22	Generation NERC Compliance Cost Recovery Rider	NERCR	No		
23	Facility Closure Cost Recovery Rider	FCCR	No		
24	Carbon Capture and Sequestration Rider	CCSR	No		
25					
26	**Other Provisions**				
27	Green Power Portfolio Rider	GPPR	--		Voluntary
28	Rate Security Rider	RSR	--		Voluntary
29	Plug-In Electric Vehicle Tariff / Costs	PEV	--	Yes	Voluntary, Deferral of Costs
30	Emergency Curtailable Service Rider	ECS	--		Voluntary, pending
31	Storm Damage Recovery Mechanism		--	Yes	Reconciliation of storm experience to funding level
32	Pool Termination or Modification Provision		Yes		
33	PIPP Uncollectibles	PIPP	--	Yes	

Ohio Timeline

AEP®



AEP Ohio's long-term strategy is designed to produce rate relief for items currently known as well as anticipated future items. The filings and riders we seek today are designed to be broad and flexible enough to accommodate a variety of circumstances, because it is impossible to know all variables and specific items for which we will desire to seek rate relief or what regulatory circumstances will prevail at the time.

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms and our ability to recover significant restoration costs through applicable rate activities, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants, our ability to recover I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration costs through rates, insurance or warranty, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances that could impact the continued operation of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of the recently passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events. AEP and its Registrant Subsidiaries expressly disclaim any obligation to update any forward-looking information.

AEP AMERICAN® ELECTRIC POWER

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate relief or other recovery for new investments, transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements periodically issued by accounting setting bodies; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

AEP Addressing Industry Concerns

- Rising Commodity Costs – Fuel and Transportation
- Rising Capital Costs – Environmental Retrofit and New Generation
- Declining Reserve Margins
- Need for Additional Transmission
- Regulatory Pressures Due to Rising Rates

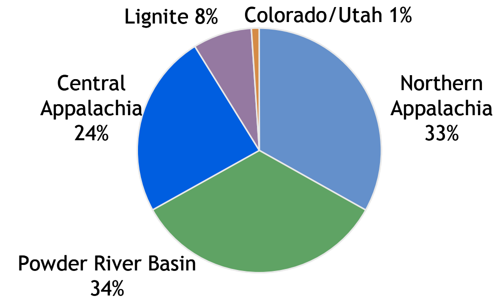
AEP is well positioned to manage each of these industry concerns.

Industry Concern: Rising Commodity Costs – Fuel and Transportation

AEP SOLUTION – FUEL PROCUREMENT STRATEGY:

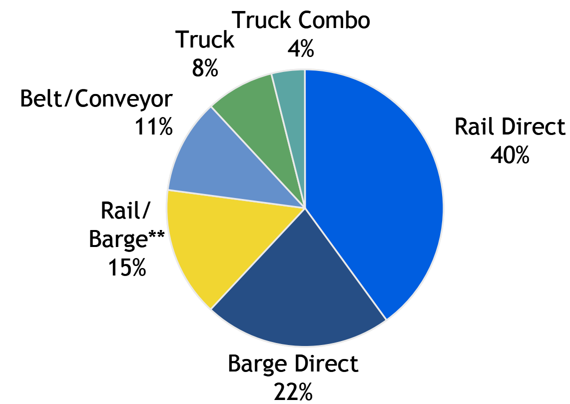
- **Portfolio of Coal Contracts**
  - Geographic and supplier diversity
  - Diversity of terms – currently ranging from 2008 to 2022
- **Portfolio of Transportation Resources**
- **Portfolio of Options to Manage the Economics of Converting BTUs to MWhs**
  - Manage emission allowance exposure
  - Blending capabilities at many plants
  - Transportation fleet to reposition coal
- **Regulatory Recovery**
  - Active fuel clauses in ten of eleven jurisdictions

AEP Supply Diversity *



* 2008 Projected

AEP Transportation Diversity *



* 2007 Actual

** Reflects coal delivered to AEP plants transported through a combination of rail and barge

AEP strategy: manage coal supply sources and transportation assets to mitigate price increases and market disruptions.

Industry Concern: Rising Capital Costs

AEP SOLUTION – Completed Environmental Retrofit

Lower Capital, Lower Operating Costs, Successful Operating Performance

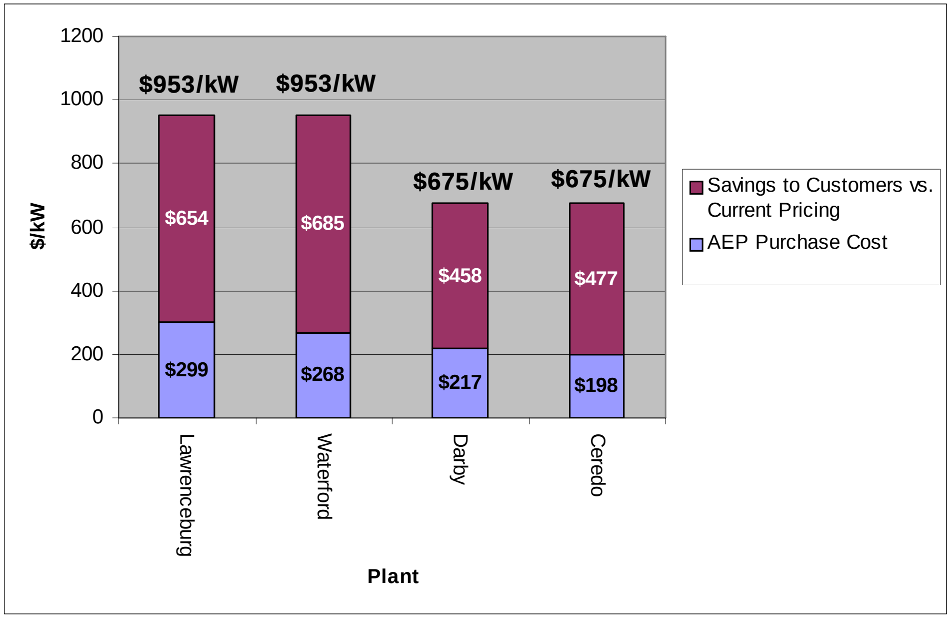
- By locking in our environmental program costs in the early portion of this decade, AEP has a clear 'first-mover' advantage
- Capital cost comparison for wet scrubber:
  - AEP average ~ $250/kW
  - 2007 pricing for a 600MW plant ~ $320/kW
  - 2012 forecast for a 600MW plant ~ $470/kW

- **11,076 MW FGDs currently in service or under construction equates to cost savings to rate payers based on 2007 $ of $775 million.**

AEP SOLUTION – Purchased Low-Cost Generation

Lower Capital, Successful Operating Performance, Delayed Need for Baseload

- Cost to replace plants in 2008 are estimated at $675/kW for simple-cycle and $953/kW for combined-cycle. Costs include as-spent direct plant costs only. Excluded are AFUDC, land, transmission and gas pipeline interconnections. This equates to cost savings to rate payers of $1.7 billion.



By moving early, AEP avoided approximately $2.5 billion of capital. Nearly all of these investments are currently reflected in rates.

AEP®

Industry Concern: Declining Reserve Margins

AEP SOLUTION – Add Generation:

Harry D. Mattison Plant – commercial operations achieved in 2007

Generation:

- **Adequate reserves in East due to purchased generation**
- **Build peaking, intermediate and baseload generation in the West**

Project Name	State	Fuel Type	Plant Type	MW Capacity	Original In Service Date	As Contracted Cost	Cost if Contracted in 2008	In Service if Contracted in 2008
Mattison	Arkansas	Gas	Simple-cycle	340	2007	$333/kW	$675/kW	2010
Stall	Louisiana	Gas	Combined-cycle	480	2010	$671/kW	$953/kW	2011
Turk	Arkansas	Coal	Ultra-supercritical	600	2011	$2,123/kW	$2,605/kW	2014

Costs include as-spent direct plant costs only. Excluded are AFUDC, land, transmission and gas pipeline interconnections.

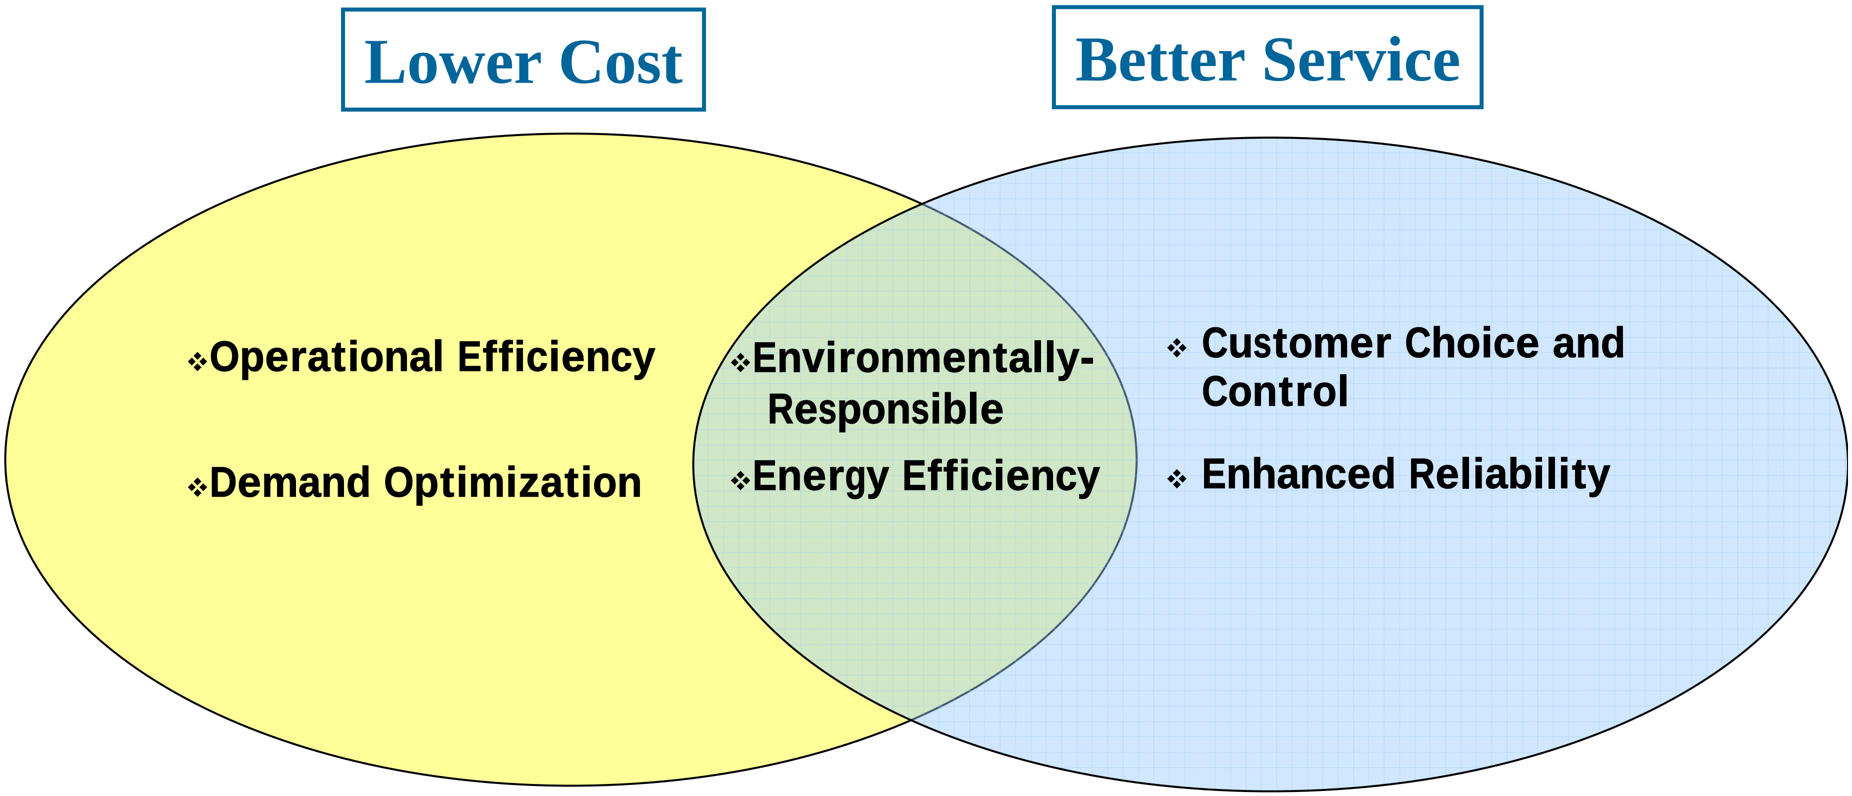
AEP's current initiatives help mitigate both the supply and demand issues facing the U.S.

AEP®

Industry Concern: Declining Reserve Margins

AEP SOLUTION – Improve Efficiency and Demand Management:

AEP's **gridSMART**^SM initiative will develop a deployment plan for new customer programs and advanced technologies to support pursuit of the following value propositions:



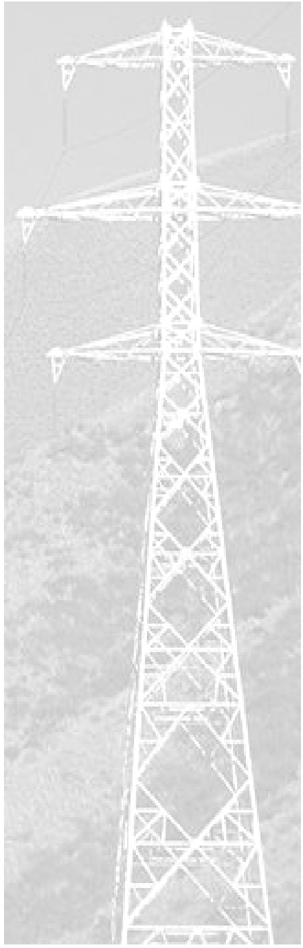
Increased efficiency reduces cost and GHG emissions. It also delays the need for new generation.

Industry Concern: Need for Additional Transmission

AEP SOLUTION:

Our status as the largest transmission owner in the U.S. affords us technical, operational and economic advantages:

- Efficient System Design - 765-kV Technology
- Advanced Technology Solutions - Laredo Variable Frequency Transformer
- Strong Supplier Relationships - Long-term Equipment and Construction Contracting
- Joint Venture Partnerships - Investment opportunities identified
  - MidAmerican Energy Holdings Company
    - Electric Transmission Texas - $1 billion - $7 billion opportunity
    - Electric Transmission America - $3 billion opportunity in SPP
  - Allegheny Energy Inc.
    - PATH - $1.8 billion opportunity



Our customers and shareholders benefit from the scope, scale and expertise of our transmission operations.

AEP®

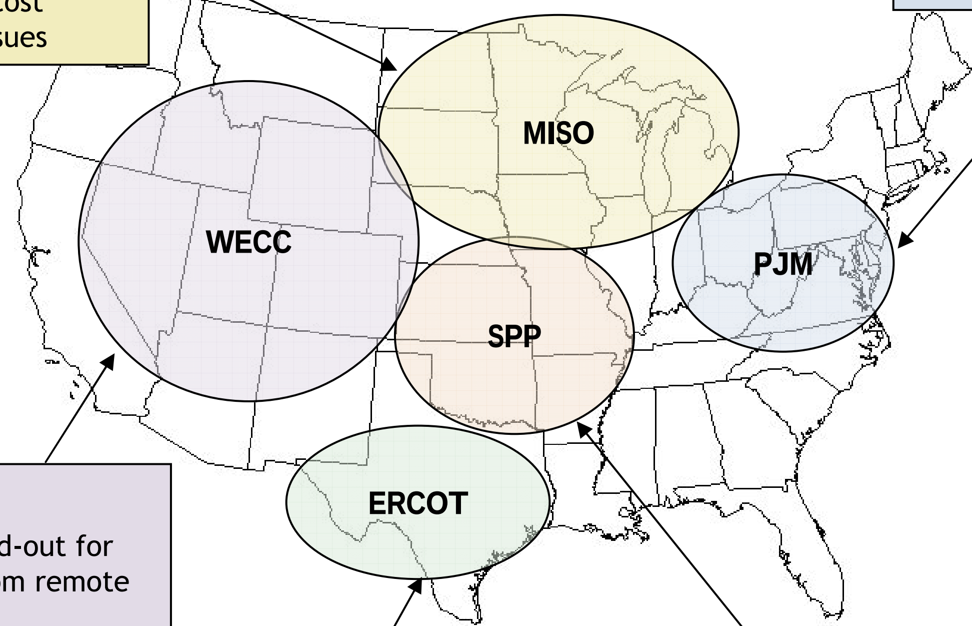
Transmission Investment Opportunities Allow Broader Market Access

MISO

ITC 765-kV project may be test case for cross-border cost recovery and seams issues

PJM

Congestion will be reduced and reliability will be increased



WESTERN STATES

Opportunity for 765-kV build-out for long-haul transportation from remote resources to load

SPP

Regional rate design under development to encourage investment and accommodate new generation sources

ERCOT

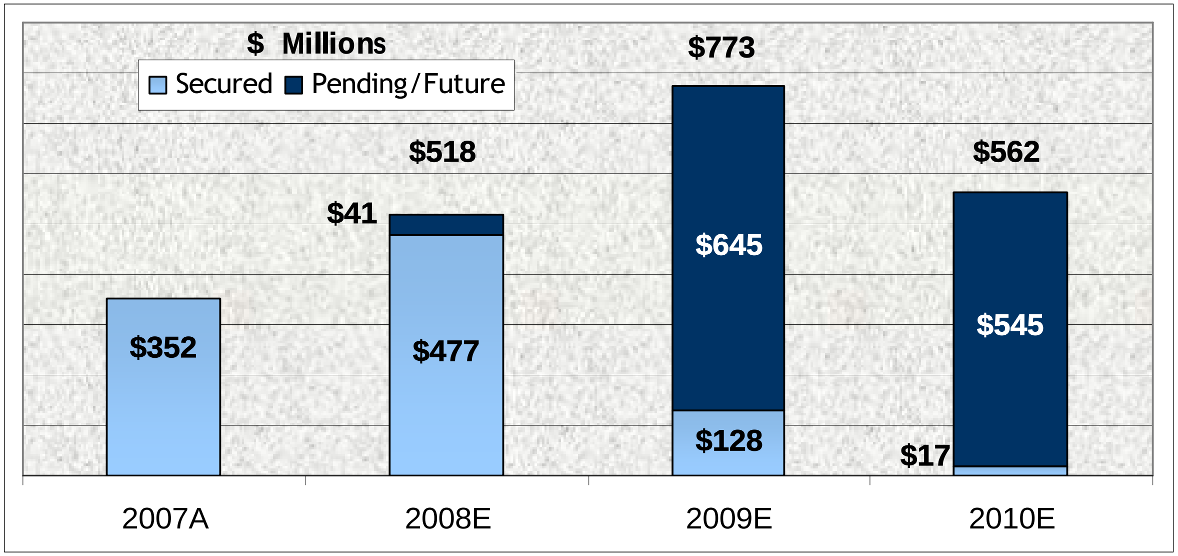
Load growth and access to wind resources driving transmission investment

AEP's transmission initiative addresses regional supply/demand issues (congestion) and is required for more robust deployment of renewable generation sources.

Industry Concern: Regulatory Pressures Due to Rising Rates

AEP SOLUTION:

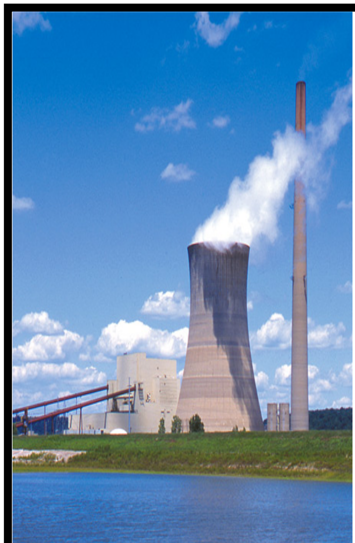
- **History of Regulatory Success/Proven Track Record**
- **Lowest Cost Provider to 93% of our customers (8 of 10 Jurisdictions)**
- **gridSMART℠ Initiative to reduce customer bills**
  - Benefit: more power to sell off-system creates increased sharing for retail customers, further reducing customer bills
- **AEP Track Record of Success – Anticipated 2007 rate relief of \$338MM; Achieved \$352MM; Already secured 92% of 2008 rate relief through the 1st quarter of 2008.**

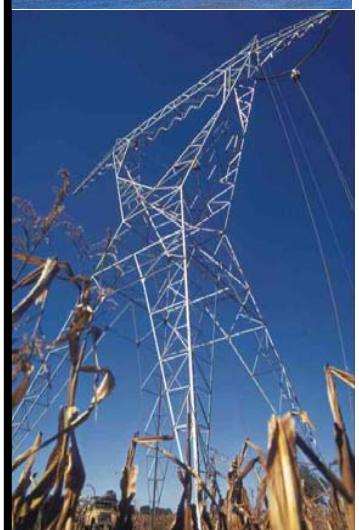


AEP is well-positioned for continued favorable regulatory treatment.

AEP®

American Electric Power - Solid Track Record of Successful Execution





- *Economies of scope and scale in assets & operations*
  - *2nd Largest Generating Fleet in the U.S. including largest supercritical units at 1300 MW*
  - *Largest Transmission and Distribution Network in the U.S.*

- *Continued innovation and first-mover deployment of leading technology advancements*
  - *Ultra-supercritical and IGCC coal generation*
  - *765-kV leadership*
  - *gridSMART^{SM} initiative*

AEP®

Poised for Continued Success

AEP-ITC Michigan Proposal (PJM/MISO)

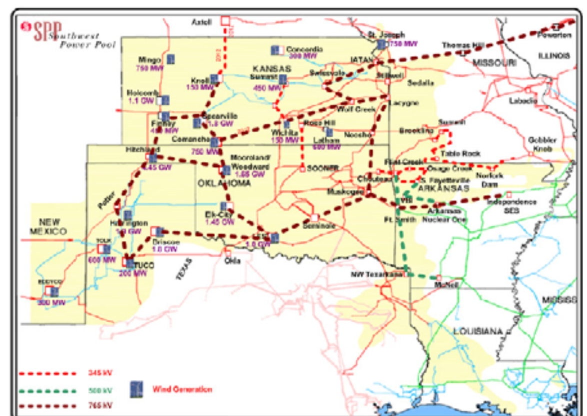

Figure 25: Mid Point Design 2

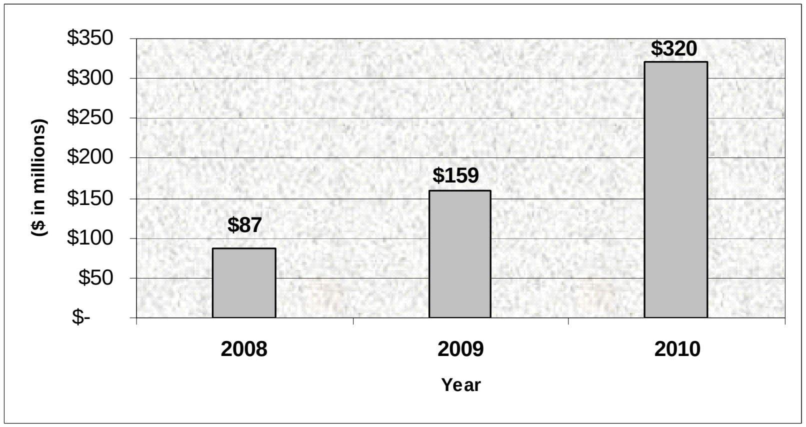
SPP Overlay Study - Mid Design 2

AEP®

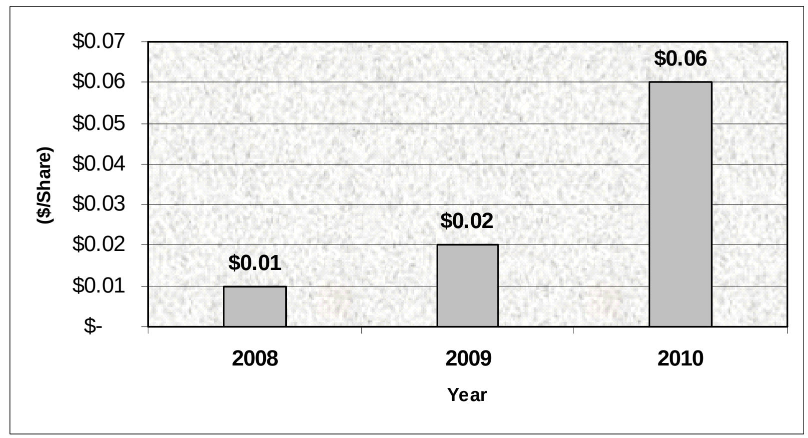
Transmission – Investments and Earnings Contributions

Projected Transmission Capital Spending*



* ETT and PATH joint ventures included in above projection. Amounts represent AEP's 50% share of total transmission joint venture capital expense. These amounts are excluded from AEP's base capital forecast because the joint ventures are not consolidated for financial reporting purposes. AEP will be responsible for funding 40-50% of these amounts with equity contributions, and the remainder will be financed with debt issued by the joint ventures.

Projected Transmission EPS Contributions*



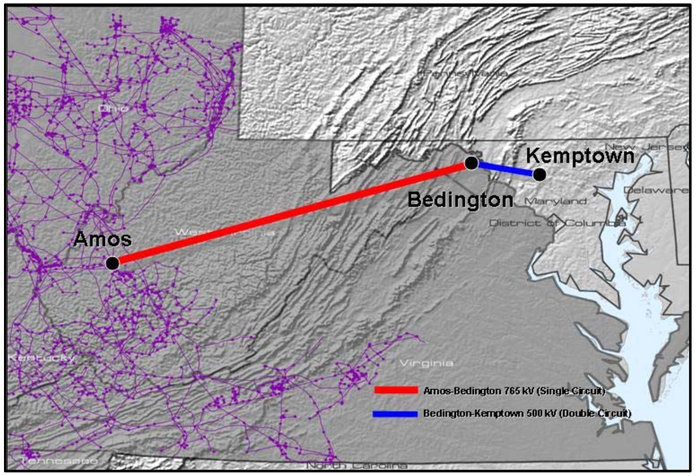
* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

Transmission will provide a near and long term catalyst for growth.

I-765™ Transmission in PJM: PATH

Execution in Action

- *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries -- to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP
    - 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
  - FERC ordered the formula rate mechanism be set for hearing, pending settlement judge procedures
- *Funding Plans/Transaction Structure*
  - AEP and Allegheny share ownership of Amos – Bedington line and contribute equally to this portion of the project through PATH West Virginia Transmission Company, LLC
  - AEP's investment will be held in the AEP Transmission Holding Company LLC subsidiary
- *Key Next Steps*
  - Siting Approval from WV and MD – 2010
  - Targeted Completion – 2012



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

PATH
Potomac-Appalachian Transmission Highline

AEP®

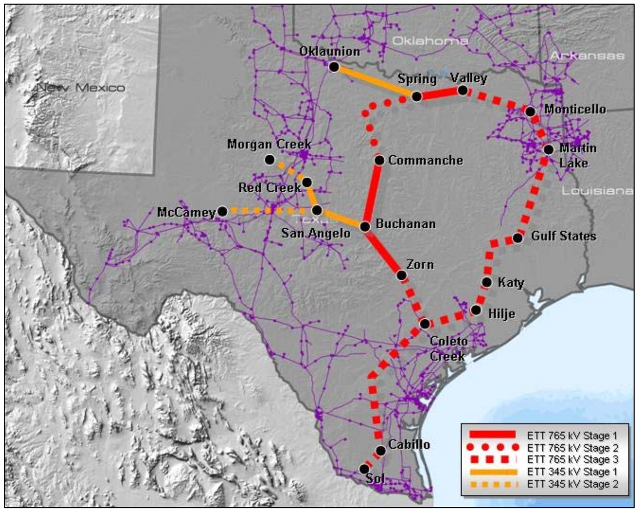
I-765™ Transmission in Texas (ETT)

Electric Transmission Texas Update

- *Transaction Structure*
  - 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
  - ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
  - Services provided by AEP and investment opportunities can be offered by either partner

- *Next Steps*
  - ETT project opportunities to be evaluated on a case by case basis
  - Anticipate offering projects in Q2 2008

- *ETT ERCOT Backbone Proposal*
  - ETT proposal for ERCOT and PUCT to consider CREZ transmission in context of long-term vision for transmission system.
  - Current 5-year planning horizon results in higher ultimate costs, lower system efficiency.
  - Long-term 15-20 year perspective provides better plan, supports development of high voltage backbone at 765-kV.
  - $4.2 billion investment (long-term backbone).*



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

* Before ownership division.

AEP®

Electric Transmission America (ETA)

- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.

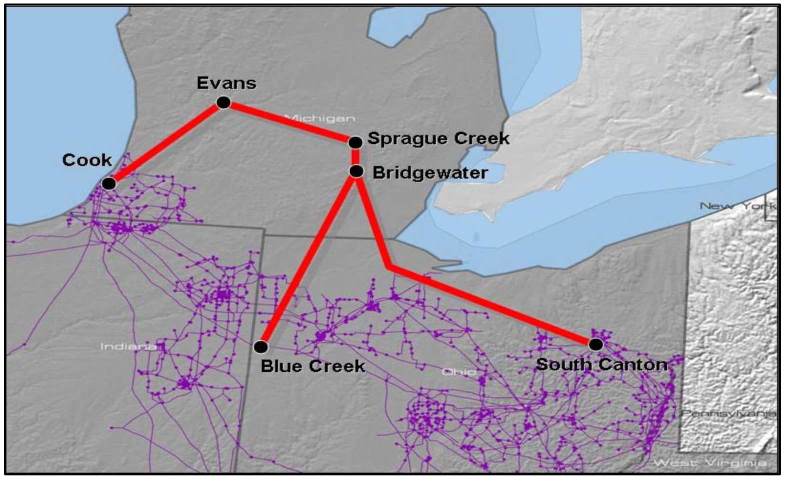
ETA reflects a natural progression and expansion of AEP's partnership with MidAmerican.

AEP®

I-765™ Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
  - Study was released Q3 2007
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.6 billion investment (before ownership division)
  - AEP and ITC are in discussions to form a Joint Venture
- *Benefits*
  - Up to 5,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- *Next Steps*
  - Agreement on JV (AEP/ITC) - Summer 2008
  - JV Formation - 2008
  - MISO and PJM Review/Approval - 2009
  - FERC Formula Rate and Cost Allocation Filing - Fall 2009
  - Siting Approval – 2011-2012
  - Estimated Completion –2015-2021



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

I-765TM Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- *Overview*
  - Sent non-binding Letter of Commitment to SPP to construct 765-kV and 500-kV projects in SPP region consistent with SPP Overlay Study – Summer 2007
  - Updated EHV Overlay Study completed by SPP – March 2008
- *Benefits*
  - Overall reliability reinforcement with improved voltage support throughout the SPP system
  - Significantly increased transfer capability
  - Provides access to new generation resources, especially renewables
  - Allows for effective interconnections for EHV system development
- *Next Steps*
  - ETA Partnering Agreements - 2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate and Cost Allocation Filing (postage stamp) – 2009
  - Siting Approval for projects – 2009-2011
  - Estimated Completion (in segments) – 2012-2017

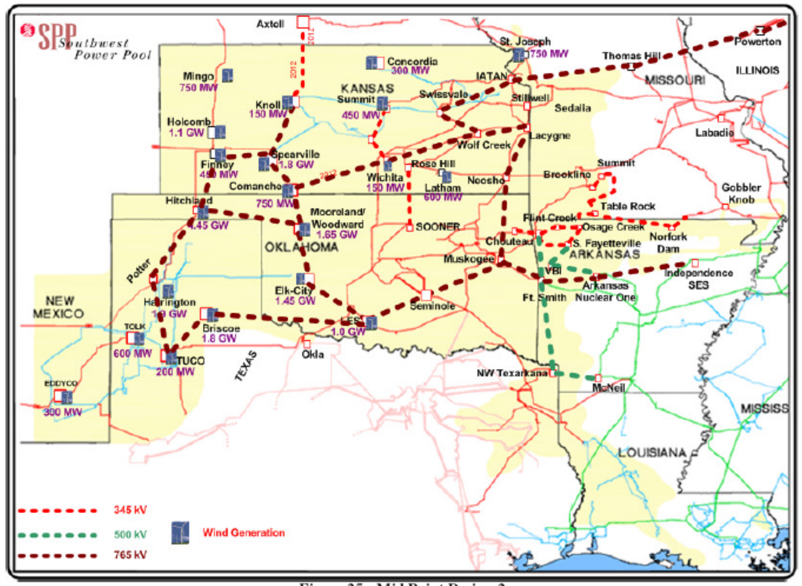


Figure 25: Mid Point Design 2

Total SPP 765-kV Overlay estimated to cost approximately $5 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

2008 Regulatory Activity Completed

- AEP-Ohio Application for 4% Provision on Generation Rate
- APCo (Virginia) Fuel Factor Filing (including 75%/25% Off-System Sales Sharing)
- PSO Storm Cost Recovery Filing
- New Generation:
  - IGCC Filing in West Virginia - Certificate of Public Convenience and Necessity and approval of a cost recovery mechanism
  - SWEPCo Turk Plant Filing in Louisiana - construction approval

AEP®

Regulatory Activity Underway

- I&M - Indiana Base Rate Case
- PSO Red Rock Generating Facility Cost Recovery Filing
- SPP OATT Formula Rate Filing
- New Generation:
  - IGCC Filing in Virginia - approval of a cost recovery mechanism
  - IGCC Phase 2 Filings in Ohio - on hold pending resolution of Supreme Court remand to PUCO
  - SWEPCo Turk Plant Filing in Texas
  - SWEPCo Stall Plant Filings in Louisiana and Arkansas

Regulatory Activity Underway

PSO Red Rock Generating Facility Recovery Filing

- On December 28, 2007, PSO filed an application with the Oklahoma Corporation Commission to defer, amortize and recover costs related to the Red Rock Generating Facility, which was denied construction and recovery pre-approval in October 2007.
- On March 13, 2008, PSO signed a settlement agreement with various parties regarding recovery of costs incurred in the Red Rock project. The agreement provides for recovery from customers of 50% of the costs ($10.5MM). The settlement agreement has not yet been approved by the OCC.

AEP®

Regulatory Activity Underway

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $140MM. Approximately $10MM of the increase relates to 3rd party and the rest, if approved, would be recovered through retail jurisdictional filings in SWEPCo and PSO, as appropriate.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to February 1, 2008, with rates subject to refund.
- Settlement discussions are currently on-going.

AEP®

Regulatory Activity Underway

APCo Mountaineer IGCC Filing

Virginia

- Testimony filed with the Virginia State Corporation Commission on July 16, 2007 seeking a prudence determination and approval to recover, beginning in 2009, Virginia's share of the carrying costs associated with the proposed plant.
- Intervenor testimony was received December 10, 2007 and Staff testimony was received on January 18, 2008. Public hearings commenced February 12, 2008. We expect an order in April 2008.

West Virginia

- Air permit anticipated in the third or fourth quarter of 2008.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.
- In March 2008, the Ohio Supreme Court remanded the original order back to the PUCO, giving the PUCO the opportunity to supplement the record. No refund of Phase I costs was mandated by the Supreme Court in its decision.
- We now await further clarity from the PUCO on the remanded issues as well as the outcome of current legislative discussions in Ohio regarding the post-2008 landscape for generation in Ohio.

AEP®

Regulatory Activity Underway

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- The PSC issued its order on November 21, 2007, approving construction of the plant.
- Air permit anticipated in the third quarter of 2008.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The peaking facility has been addressed and the intermediate facility is under review. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- The PSC issued its order on March 19, 2008, approving construction of the plant.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- Public hearings commenced October 17, 2007. On January 17, 2008, the ALJ recommended the PUCT deny the request. The commissioners have requested another hearing where they can directly cross examine some of the witnesses. A procedural schedule is being developed and the hearing most likely will occur in May or June 2008.

AEP®

Regulatory Activity Underway

SWEPCo Stall Plant Filings

Arkansas

- Proceeding is currently suspended pending outcome in Louisiana.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The intermediate facility, known as the Stall Plant and sited in Shreveport, LA, was bifurcated from the original filing and had a procedural schedule established on January 9, 2008.
- Staff and intervenor testimony was completed on February 15, 2008, rebuttal testimony was due February 29, 2008 and hearings will commence on April 8, 2008. Staff testimony was favorable.
- Air permit received on March 20, 2008.

Texas

- PUCT order approving plant was issued on March 8, 2007.

Summary Rate Case Information

I&M Indiana General Rate Case

On January 31, 2008, I&M filed a general base rate case with the Indiana Utility Regulatory Commission (IURC) requesting an increase of $128.5 million ($82.4 million in base revenues and $46.1 million in tracker mechanisms). (Docket #: 43306).

Upcoming Investor Communication Activities*

April 24, 2007	Annual Meeting of Shareholders – Shreveport, LA
April 26, 2007	1Q07 Earnings Call
June 7, 2007	Citigroup Power, Gas & Utilities Conference

AEP®

*Note: Events at which Mike Morris is scheduled to speak with investors/analysts.

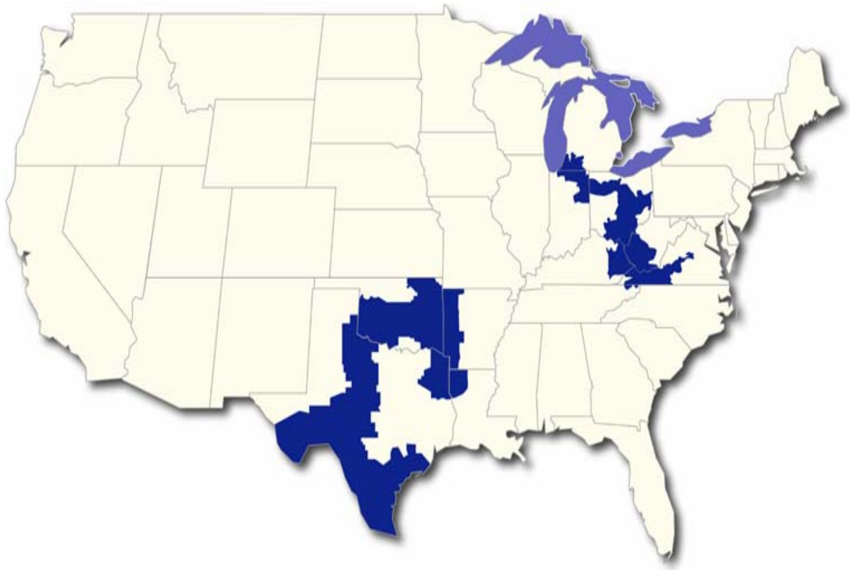
Company Overview

- 5.1 million customers in 11 states
- Industry-leading size and scale of assets:

Asset	Size	Industry Rank
Domestic Generation	~38,300 MW	# 2
Transmission	~39,000 miles	# 1
Distribution	~208,000 miles	# 1

Source: Company research & Resource Data International Platts, PowerDat 2005

- Coal & transportation assets
  - Control over 8,000 railcars
  - Own/lease and operate over 2,600 barges & 51 towboats
  - Coal handling terminal with 20 million tons of capacity
- 20,000 employees



AEP Generation Portfolio				
Coal	Gas	Nuclear	Hydro	Wind
67%	24%	6%	2%	1%

AEP ENJOYS SIGNIFICANT PRESENCE THROUGHOUT THE ENERGY VALUE CHAIN

Strategic Direction

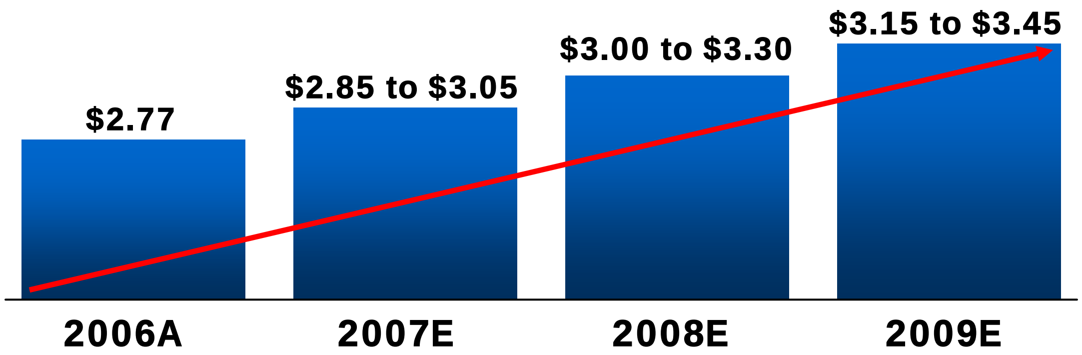
- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Develop our transmission business
- Achieve adequate returns on all assets

Deliver value to investors and cost effective service to our customers

CONTINUED COMMITMENT TO OUR CORE UTILITY MISSION: BRING REASONABLY PRICED ELECTRIC SERVICE TO OUR CUSTOMERS, THEREBY STRENGTHENING OUR COMMUNITIES AND REWARDING OUR INVESTORS

Framework For Long-Range Performance

- 2007, 2008 & 2009 Ongoing Earnings Guidance Ranges:

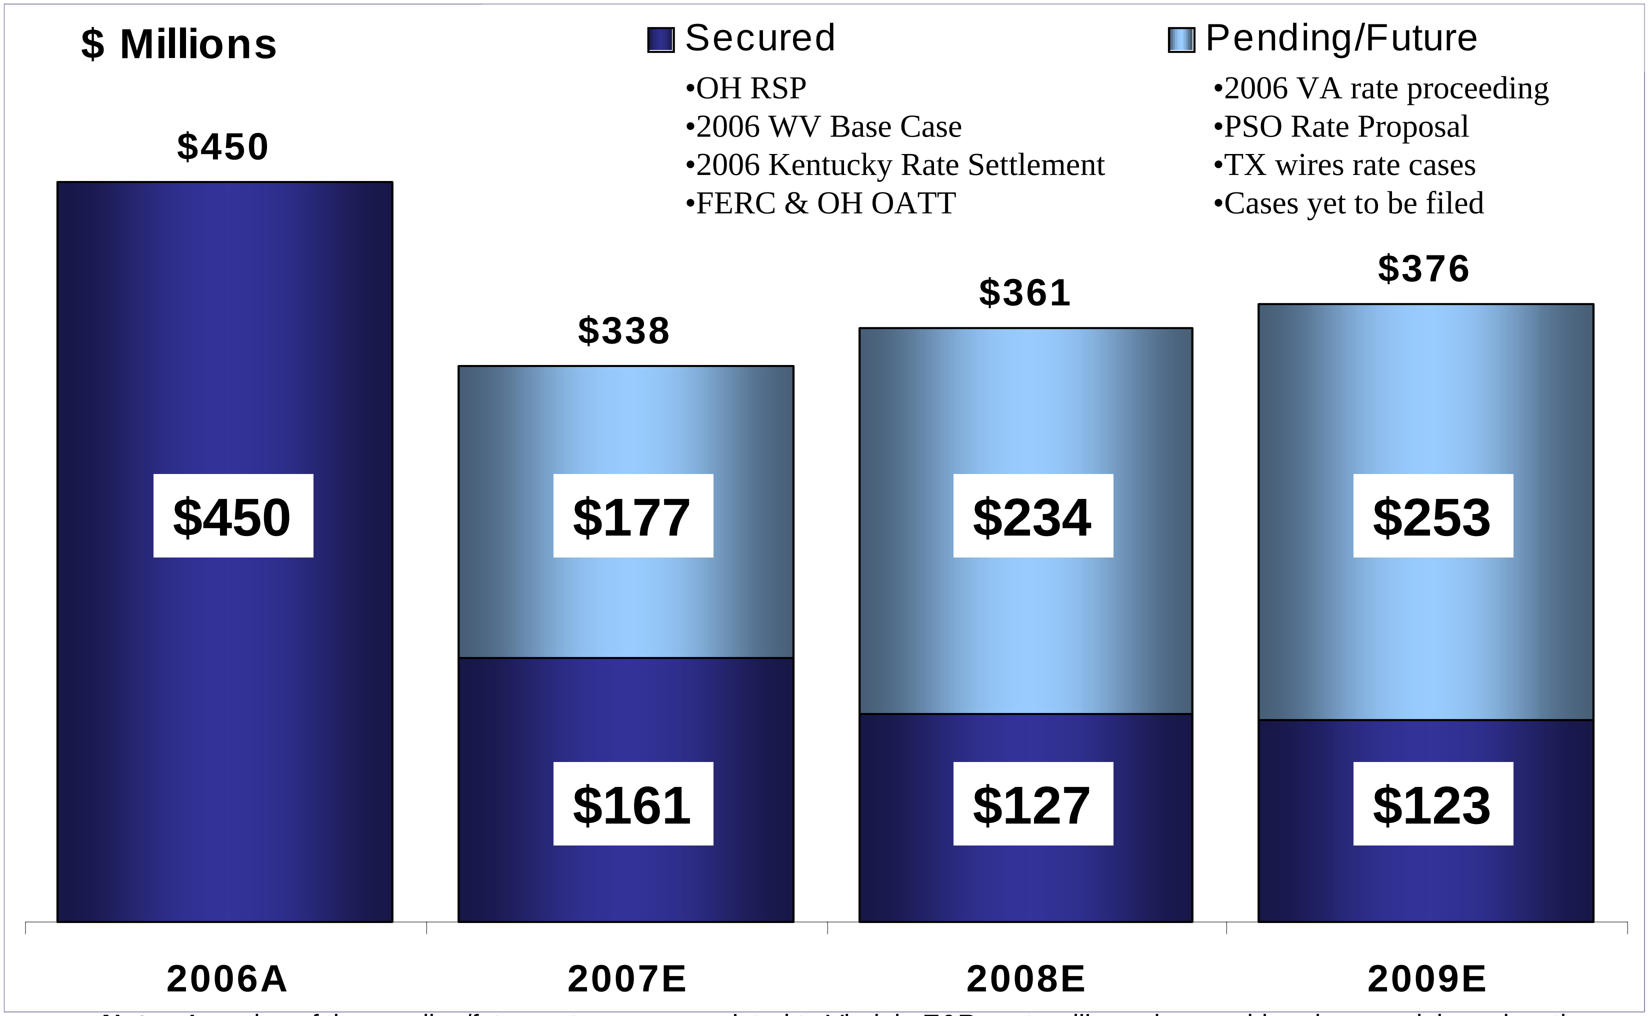


- EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in existing utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
  - Investment in new transmission opportunities
  - Seek rate recovery for new investments
  - Control costs & achieve timely rate relief
- Maintain credit ratings
  - BBB/Baa2/BBB

AEP®

OUR STRATEGY REMAINS FOCUSED ON REGULATED OPERATIONS

Incremental Rate Relief Composition



Note: A portion of the pending/future rate recovery related to Virginia E&R costs will now be considered secured, based on the Virginia SCC's Nov. 20, 2006 order in our E&R case. Further analysis is required to quantify these amounts.

RATE RELIEF IS A CRITICAL ELEMENT TO AEP'S FINANCIAL SUCCESS

Utility Investment Drives Growth

Updated Capital Investment Forecast (2007-2009)

($ in millions)	2007	2008	2009	Total (2007-09)
Environmental	$935	$521	$301	**$1,757**
New Generation - Build	$474	$485	$573	**$1,532**
New Generation - Purchase	$118	$0	$0	**$443** *
Nuclear	$50	$57	$60	**$167**
Generation	$456	$417	$327	**$1,200**
Transmission	$496	$521	$583	**$1,600**
Distribution	$848	$915	$1,016	**$2,779**
Corporate	$165	$110	$114	**$389**
Total Capex	**$3,542**	**$3,026**	**$2,974**	**$9,867**

Add: Lawrenceburg Plant Purchase $325

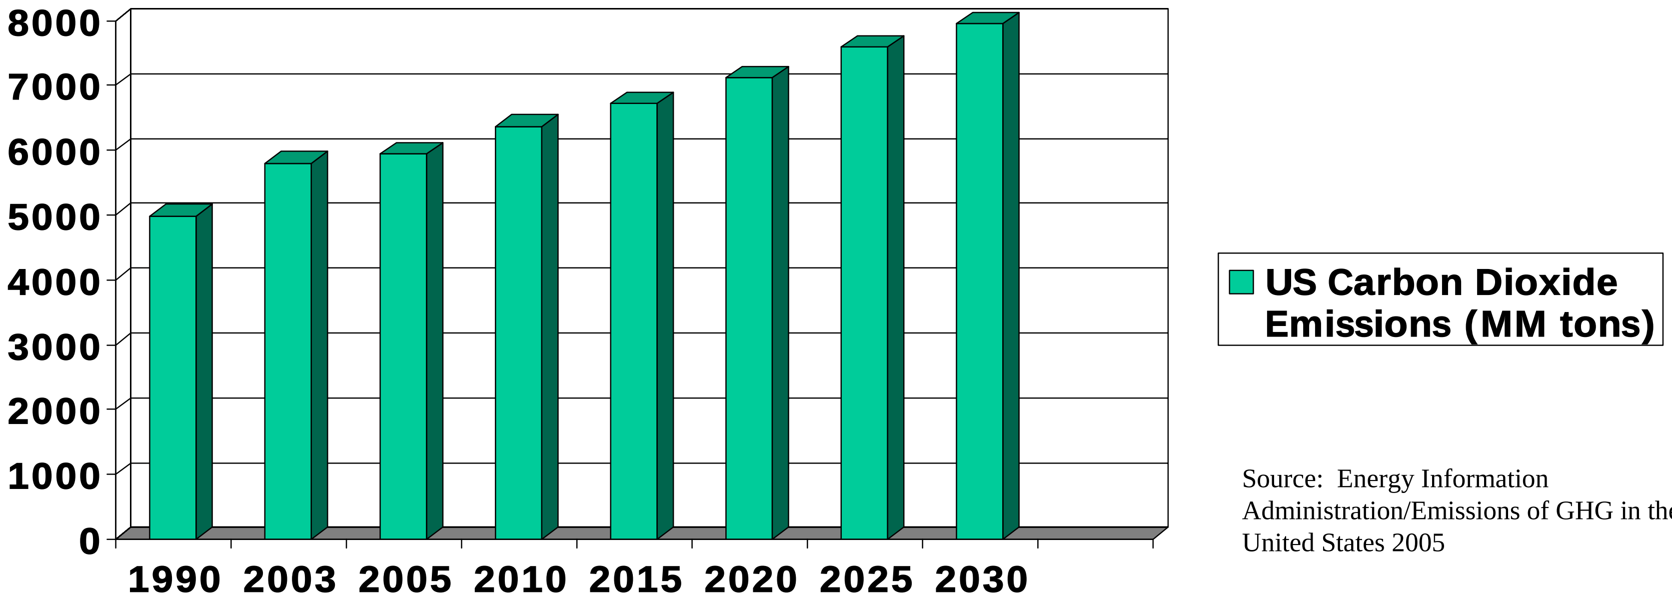
2007 Including Lawrenceburg **$3,867**

Note: Excludes AFUDC

*Includes Lawrenceburg purchase $325MM in 2007

GROWTH INVESTMENT TO BE FUNDED BY CASH FROM OPERATIONS VIA RATE RELIEF AND DEBT ISSUANCES

Investment Decisions Today Must Consider Likelihood of Future CO_2 Emission Limits



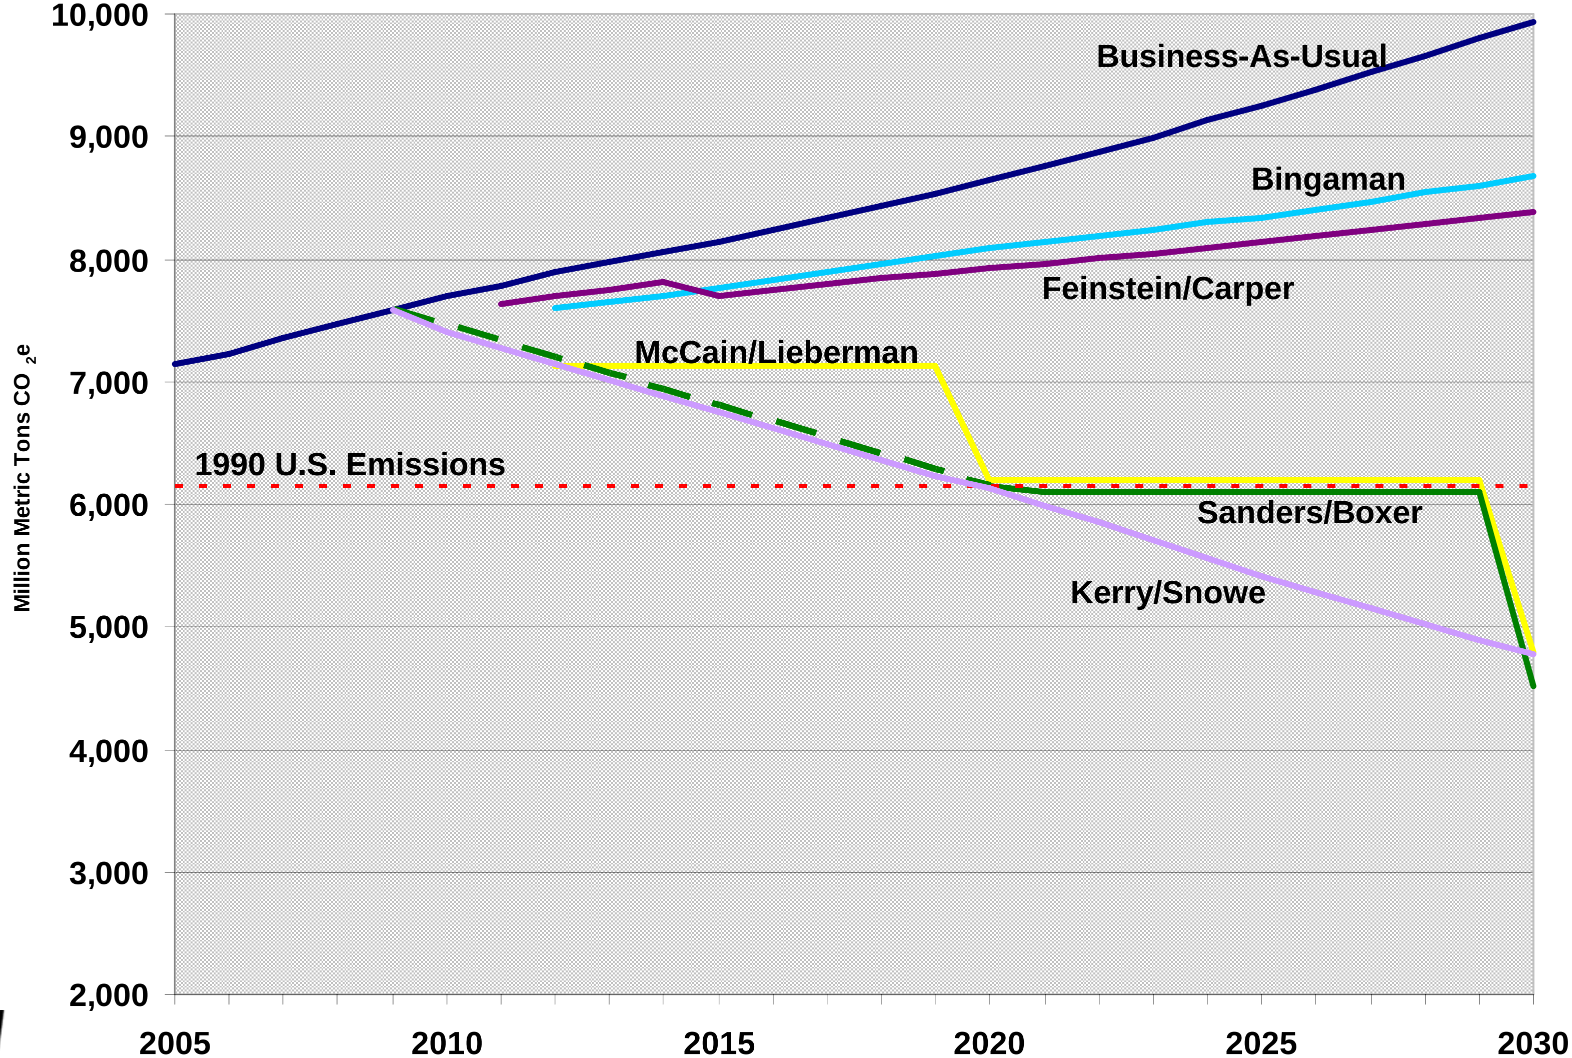
Source: Energy Information Administration/Emissions of GHG in the United States 2005

Note: Chart above assumes no mandatory limits imposed on CO_2 emissions

- Absent federal policies, long-term CO_2 growth is likely to be significant, driven by:
  - Population and economic growth
  - Increased penetration of computers, electronics and appliances
  - Increases in commercial floor space
  - Increases in highway, rail and air travel
- Likelihood of US GHG legislation is growing
  - Climate change science
  - Public perceptions
  - Political shifts in Congress

INCLUSION OF CLIMATE CHANGE IN INVESTMENT DECISIONS AND TAKING VOLUNTARY ACTIONS TO REDUCE CO_2 FOOTPRINT WILL ENHANCE SHAREHOLDER RETURN PROSPECTS

Initial Greenhouse Gas Regulatory Proposals
110th Congress



Sources: EIA & EPA data/forecasts

Note: Most proposals are still in "draft" stage

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

AEP®

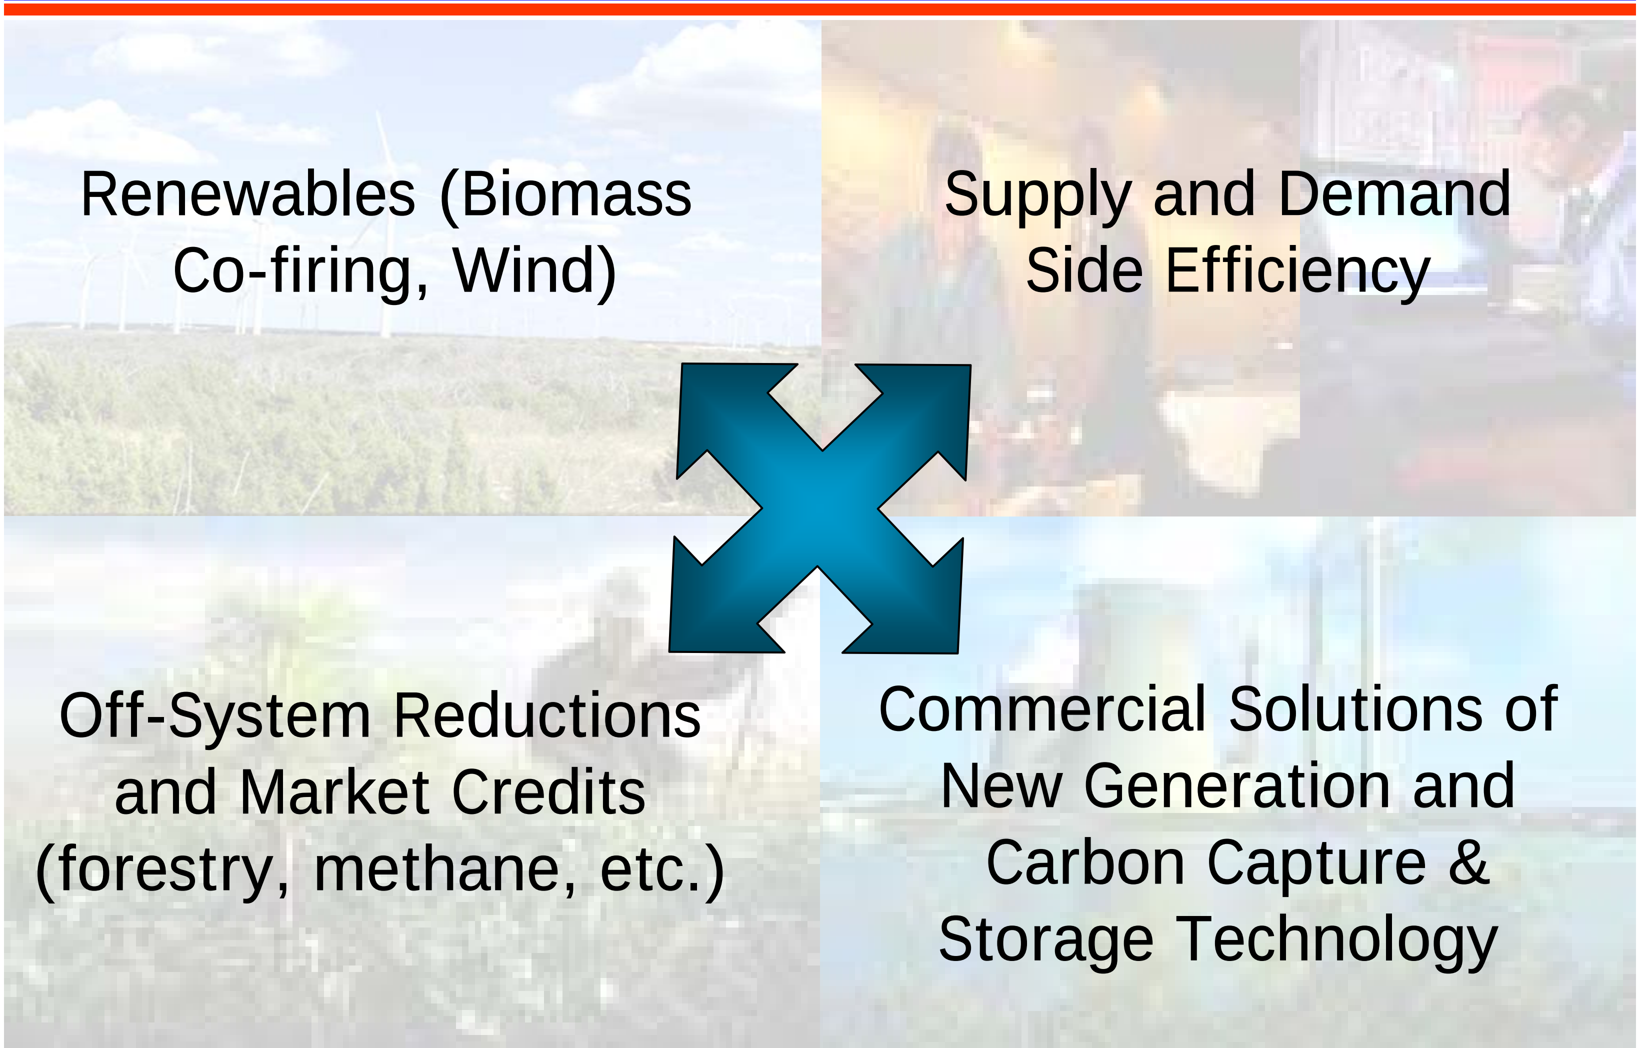
A RELIABLE & REASONABLY-PRICED ELECTRIC SUPPLY IS NECESSARY TO SUPPORT THE ECONOMIC WELL-BEING OF THE AREAS WE SERVE

AEP's Climate Strategy

- **Being proactive and engaged in the development of climate policy**
  - International Emissions Trading Association (IETA)
  - Electric Power Research Institute (EPRI)
  - Pew Center on Global Climate Change
  - e8
  - Global Roundtable on Climate Change
- **Investing in science/technology R&D**
  - FutureGen Alliance
  - US DOE research on carbon capture and sequestration at our Mountaineer Plant
  - EPRI – combustion technologies
  - MIT Energy Laboratory
  - B&W – Oxy-Fuel
- **Taking voluntary, proactive action now, demonstrating voluntary programs can work and setting policy precedents thru CCX**
  - Chicago Climate Exchange (CCX)
  - EPA Climate Leaders
  - EPA SF-6 Emission Reduction Partnership for Electric Power Systems Program
  - Asia-Pacific Partnership
  - DOE 1605B- voluntary reporting of GHGs Program
  - Business Roundtable Climate Resolve
  - Numerous forestry activities
- **Evaluating longer term investment decisions such as new generation and carbon capture and storage (e.g., IGCC, Ultra-supercritical)**

AEP MUST BE A LEADER IN ADDRESSING CLIMATE CHANGE

AEP's Long-term GHG Reduction Portfolio



AEP IS INVESTING IN A PORTFOLIO OF GHG REDUCTION ALTERNATIVES

AEP®

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential

Strategic Emission Reduction Initiatives

- **Environmental Retrofit Program**
- **Power Plant Efficiency Improvements**
- **New Generation Technology**
  - IGCC
  - Ultra-supercritical
  - FutureGen
- **Carbon Reduction and Offset Program**
- **Carbon Capture and Storage**

AEP HAS A PLAN TO OFFSET THE GROWTH OF ITS FUTURE CO_2 EMISSIONS

AEP®

AEP's Long-term CO_2 Reduction Commitment

Existing Programs

- Renewables
  - 800 MWs of Wind
  - 300 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

New Program Additions

- Incremental Reduction quantity: 5MM tons/yr
- Timing: Implement during 2007 to take effect/receive credits by 2011
- Methods
  - +1000 MWs of Wind PPAs – 2MM tons/yr
  - Domestic Offsets (methane) – 2MM tons/yr
  - Forestry – Tripling annual investment to increase to 0.5MM tons/yr by 2015
  - Fleet Vehicle/Aviation Offsets – 0.2MM tons/yr
  - Additional actions to include DSM and end use energy efficiency, biomass and power plant efficiency – 0.2MM tons/yr

New Technology Additions

- Commercial solutions for existing fleet
  - Chilled Ammonia
  - Oxy-Fuel

AEP IS COMMITTED TO A 5MM TON/YR REDUCTION IN CO_2 EMISSIONS WHICH OFFSETS APPROXIMATELY HALF OF THE EMISSIONS PROJECTED FROM NEW GENERATION PROJECTS PREVIOUSLY ANNOUNCED

AEP®

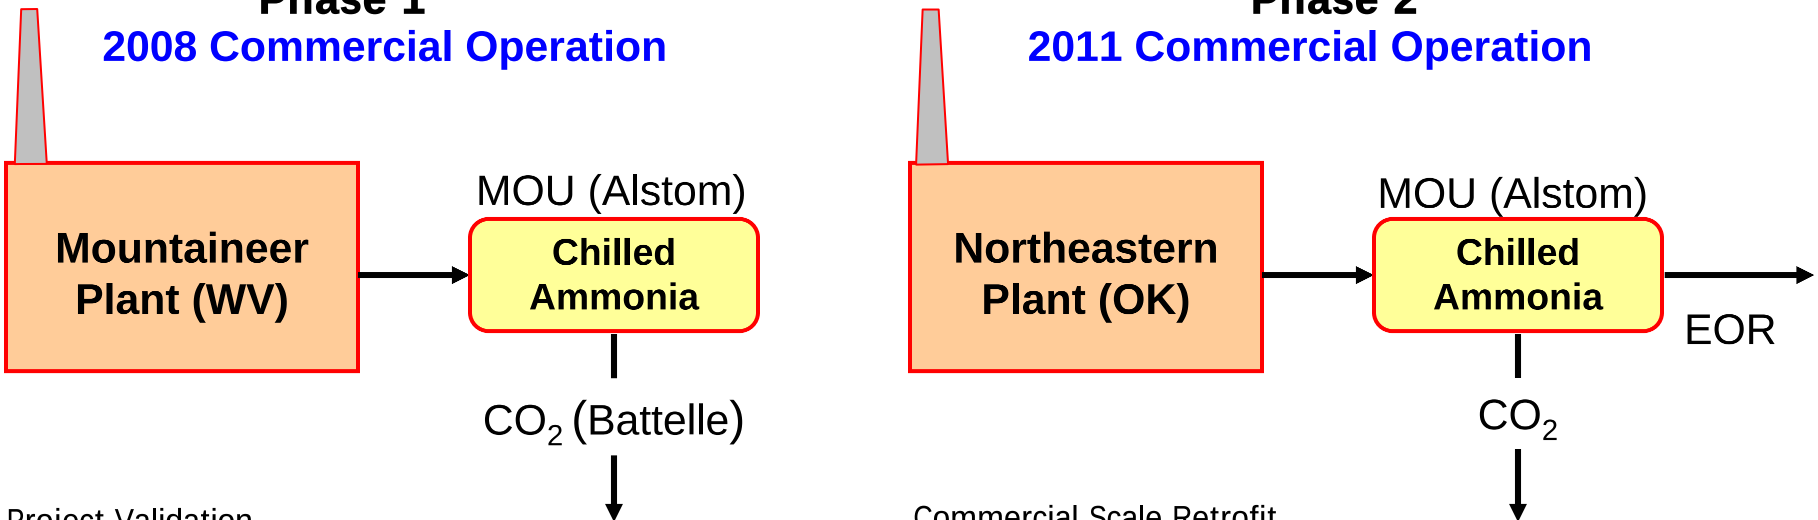
Chilled Ammonia Process Plant Footprint

Chilled Ammonia Technology Program

Phase 1
2008 Commercial Operation

Phase 2
2011 Commercial Operation



<u>Project Validation</u>

- 30 MW_t (megawatts thermal) scale (a scale up of Alstom/EPRI 5 MW_t field pilot, under construction at WE Energies)
- <0.1MM tonnes CO_2 per year
- In operation 4Q 2008
- Approximate total cost \$50 – \$80M
- Using Alstom "Chilled Ammonia" Technology
- Located at the AEP Mountaineer Plant in WV
- CO_2 for geologic storage

<u>Commercial Scale Retrofit</u>

- ~ 200 MW_e scale (megawatt electric)
- ~ 600 MW_t scale (megawatt thermal)
- ~1.5MM tonnes CO_2 per year
- In operation late 2011
- Approx. capital \$250 – \$300M (CO_2 capture & compression)
- Approx. O&M cost \$12M per year
- Energy penalty ~ 35 – 50 MW steam, 25 – 30 MW for CO_2 compression
- Retrofit SCR & Wet FGD Required: ~\$225 – \$300M (required for CO_2 capture equipment)
- Located at AEP's Northeastern Plant Unit 3 or 4 in Oklahoma
- CO_2 for Enhanced Oil Recovery (EOR) or geologic storage

NEAR-ZERO EMISSIONS USING OXY-FUEL COMBUSTION TECHNOLOGY

Oxy-Fuel CO_2 Capture & Storage Project

Pilot Scale Demonstration

- 10 MW_e scale
- Teamed with B&W at its Alliance Research Center and 16 other utilities
- Demo completed 3Q 2007
- AEP funding of $50k

Commercial Scale Retrofit

- Retrofit on existing AEP sub-critical unit (several available)
- 150 – 230 MW_e scale retrofit
- 4,000 – 5,000 tons CO_2 per day
- Teamed with B&W
- AEP funding of ~ $200k – $3M for feasibility study
- Feasibility study completed 2Q 2008

COMBUSTION CONVERSION TECHNOLOGY FOR EXISTING COAL FLEET – LONGER LEAD TIME WITH ENHANCED VIABILITY AND LONG-TERM POTENTIAL

AEP ®

Coming Soon – AEP's 2006 Corporate Responsibility Report

Our Vision for Sustainability

AEP enters its second century committed to operating responsibly, efficiently and profitably for customers, shareholders, employees and communities. We will safely provide reliable, reasonably priced electric power while actively working to protect people and the environment. We will engage stakeholders and continue our role in making people's lives better today and for generations to come.

Our Challenges & Opportunities

- Leadership, management and strategy
- Climate Change
- Energy security, reliability and growth
- Environmental performance
- Workforce issues
- Stakeholder engagement
- Public Policy

WE WILL CONTINUE TO WORK AS INNOVATIVELY, EFFICIENTLY, DILIGENTLY AND RESPONSIBLY AS WE DID DURING OUR FIRST CENTURY. SUSTAINABILITY IS A JOURNEY, NOT A DESTINATION.

AEP®

Why Invest in AEP?

- Strength and scale in assets & operations
- Disciplined utility model focus - investing in established utility business to drive 5-7% consistent annual earnings growth
- Annual dividend of $1.56 per share providing an above average dividend yield of 3.4%
- Positive dividend outlook
- Stable credit profile

AEP®

Appendix

Company Overview

SIGNIFICANT PRESENCE THROUGHOUT THE DOMESTIC VALUE CHAIN

Our US electric assets include:

- Nearly 38,300 megawatts of generating capacity in 3 power pools (one of the largest US generation portfolios with a significant cost advantage in many of our market areas)
- Approximately 39,000 circuit miles of transmission lines, including 2,116 miles of 765kV lines, the backbone of the electric interconnection grid in the Eastern U.S.
- Nearly 208,000 miles of overhead and underground distribution lines

With our coal and transportation assets we:

- control over 8,000 railcars
- own and/or operate over 2,600 hopper barges and 51 towboats
- operate one active coal-handling terminal with 20 million tons of capacity

We consume approximately 76 million tons of coal annually.

AEP®

Summary of 5-7% Long-Range Growth Components

- Energy sales growth of 1.5%
- Rate base investment
  - Generation plant purchases & build
  - Transmission – interstate & intrastate
  - Distribution
  - Reliability
- Transmission company
- Commercial operations
- Regulatory strategy
  - Achieve timely returns
  - Seek cash returns on investment during construction
  - Create & secure innovative rate plans
    - Pursue post-2008 solution in Ohio
    - Expand use of trackers
    - Formula rates

AEP®

RATE BASE INVESTMENT COUPLED WITH INNOVATIVE REGULATORY PLANS WILL REDUCE LAG AND DRIVE EARNINGS GROWTH

Regulatory Activity

AEP Ohio Distribution Reliability Filing

Filed Oct. 6, 2006 – AEP Ohio proposes an additional annual average investment of approximately $130MM over the next 5 years on vegetation management, equipment replacement, infrastructure upgrades & improved use of technology, to help reduce outages and improve service reliability.

- We are requesting implementation of a Reliability Cost Recovery Rider for recovery of the incremental O&M expenses and a return on and of the capital investments made under the plan. The requested ROE is 10.5%.
  - If approved, the rider would be implemented July 1, 2007 through December 31, 2008 and would be effective until new distribution rates are placed in effect. We anticipate that new base distribution rates would be effective after the expiration of the RSP on Dec. 31, 2008.
- Requested recovery amounts total $20MM in 2007 and $51MM in 2008.
- Staff testimony due April 17, 2007; Evidentiary hearing to commence April 30, 2007.

AEP Ohio Application For 4% Provision On Generation Rate

- On Jan. 23, 2007, CSP and OP filed an application at the PUCO to recover 2007 costs associated with additional generation-related expenditures the companies are encountering related to environmental, security and other new generation-related costs pursuant to the RSP.
- CSP and OP are requesting to implement the provision to recover $24.5MM and $8.2MM, respectively, from May 2007 through December 2007.

Regulatory Activity

Electric Transmission Texas (ETT) Rate Filing

- Jan. 22, 2007 – ETT filed with the PUCT for approval 1) to operate as an electric transmission utility in Texas; 2) to contribute transmission assets currently under construction by AEP subsidiary TCC to the joint venture company; and 3) establish initial rates for ETT.
  - Requested capital structure of 60% debt / 40% equity; requested ROE of 11.25%
  - An order is expected Mid-2007 and operations are expected to commence in the 2nd half of 2007. Upon receipt of approvals, AEP and MidAmerican will each own a 50% interest in the joint venture

Seams Elimination Cost Adjustment Revenues

- August 2006 – ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
  - Up to $96MM of SECA revenues could be disallowed, net of unused provisions
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both.
- Exceptions to initial decision filed Sept. 11, 2006; Replies to exceptions filed Oct. 11, 2006; Order expected by the Commission in 2007

Regulatory Activity

FERC Regional Rate Design

- The FERC instituted an investigation of PJM's zonal rate regime
  - Present regime may need to be replaced
  - Consider establishing regional rates that would compensate AEP, among others, for the regional transmission service provided by high voltage facilities they own that benefit customers throughout PJM
- July 2006 ALJ-rendered initial decision:
  - License plate rates for existing facilities are not just and reasonable, and must be replaced (effective April 1, 2006, when SECA ended)
  - Staff's proposal for a "Postage Stamp" rate phased in so as to limit increases in any one pricing zone to 10% per year as the best choice for replacing current rates
  - Staff's proposed rate design would produce slightly more net revenue for AEP than the original AEP/Allegheny Power proposal, if not phased in.
  - Briefs on Exceptions to the initial decision by all parties have been filed; An order is expected by the Commission in early to mid-2007.

AEP®

Summary Rate Case Information

APCo Virginia General Rate Case

On May 4, 2006, Appalachian Power Co. filed a general base rate case with the Virginia State Corporation Commission (VSCC) requesting an increase of $198.5 million ($225.8 million in base revenues offset by an off-system sales credit of $27.3 million). (Docket #: PUE-2006-00065)

Projected Capital Structure – Company Position (9/30/07)

(in thousands)		Amount Outstanding	% of Capitalization	Cost Rate	Weighted Cost
Long-term debt	$	2,789,504	53.36%	5.67%	3.02%

Summary Rate Case Information

Texas Central & Texas North Companies Wires Case

On November 9, 2006, TCC & TNC filed applications with the PUCT to raise base rates they charge to Retail Electric Providers (REP) serving end-use electricity customers in their service territories. TCC and TNC requested rate increases of $81.1MM and $24.8MM, respectively. Requested increases include the expiration of merger-related billing credits that have been in place since 2000, totaling $20MM and $6.2MM for TCC and TNC, respectively. (TCC Docket #33309, TNC Docket #33310)

Summary Rate Case Information

PSO Rate Proposal

On November 21, 2006, Public Service Oklahoma filed an application with the Oklahoma Corporation Commission to increase base rates by $49.6 million to recovery investments already made and costs incurred. The request represents a 4% overall increase (including fuel). The filing also includes a proposal to adopt an annually adjusted rate mechanism, which includes a return on CWIP. The formula rate would adjust rates, up or down, if PSO earns above or below an approved bandwidth around the authorized ROE. (Case #200600285)

765-kV Transmission Line (WV)

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms, and our ability to recover significant restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants, our ability to recover I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance or the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of flyash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including our dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events.

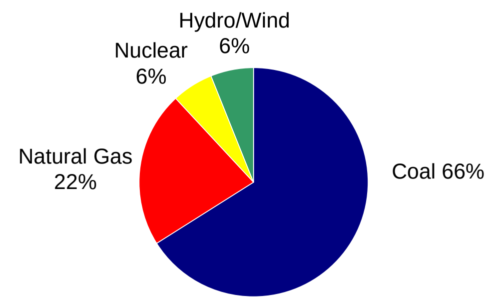
** Wholesale includes sales to municipal and cooperative power systems, other wholesale, and other retail sales*

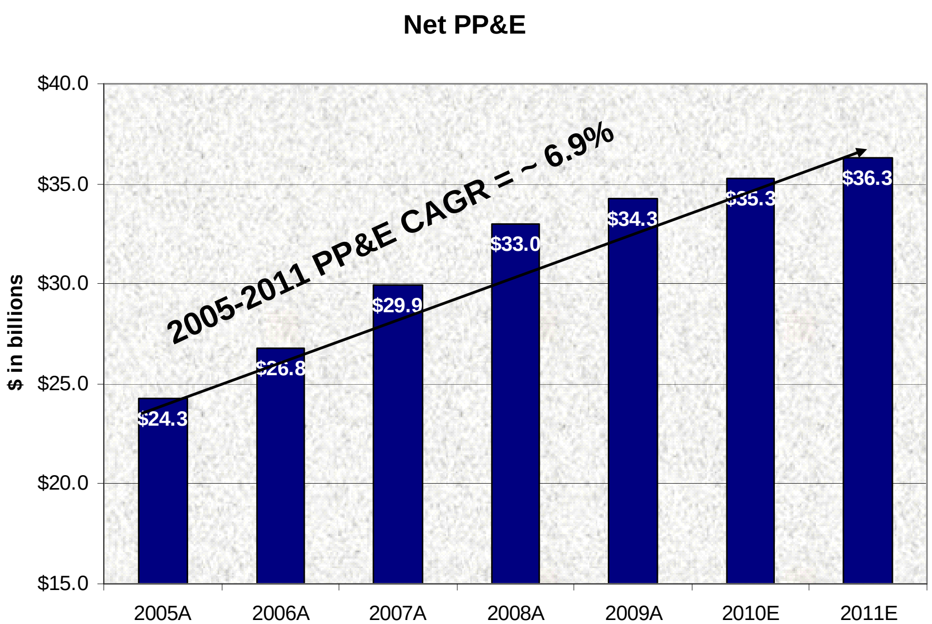
Fuel Mix



Traditional Ratemaking Environment

AEP®

Growth in Net PP&E



Growth in rate base resulted in $2 billion of rate relief secured from 2006 through 2009

- **Base Rates**
  - Recovery of capital and financing costs
  - Recovery of set level of O&M costs
- **Recovery of Fuel Costs**
  - Active fuel clauses in all jurisdictions
- **Opportunities to Reduce Regulatory Lag**
  - Contemporaneous recovery for construction costs, reliability, environmental spending, etc.
- **Primarily wires-only business in Texas (transmission and distribution)**

Energy Policy Initiatives = Opportunities

Policy: Greenhouse Gas Emissions Reductions

Technology: Mountaineer Carbon Capture and Storage Project

Carbon Capture and Storage Project – Mountaineer Plant (WV)

Policy: Renewable Energy Standards; Energy Efficiency, Security and Reliability

Technology: Industry Leading High Voltage Transmission and gridSMART℠ Projects

765-kV Transmission Line – Wyoming-Jacksons Ferry (WV)

Transmission Investment Opportunities

<u>ETT</u>: Projects in Texas ERCOT jurisdiction

- $600MM of projects est. in service 2010-2013
- ETT's opportunity could reach $3.1B in this decade

<u>Transco</u>: Within our existing footprint

- Provides opportunity to:
  - Develop new AEP-only projects
  - Reduce regulatory lag through FERC formula rates adjusted annually

<u>Joint Ventures</u>: Outside of our footprint, via ETA or with others

- Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
- Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2015
- Robust pipeline of projects up to $15B

AEP AMERICAN ELECTRIC POWER

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

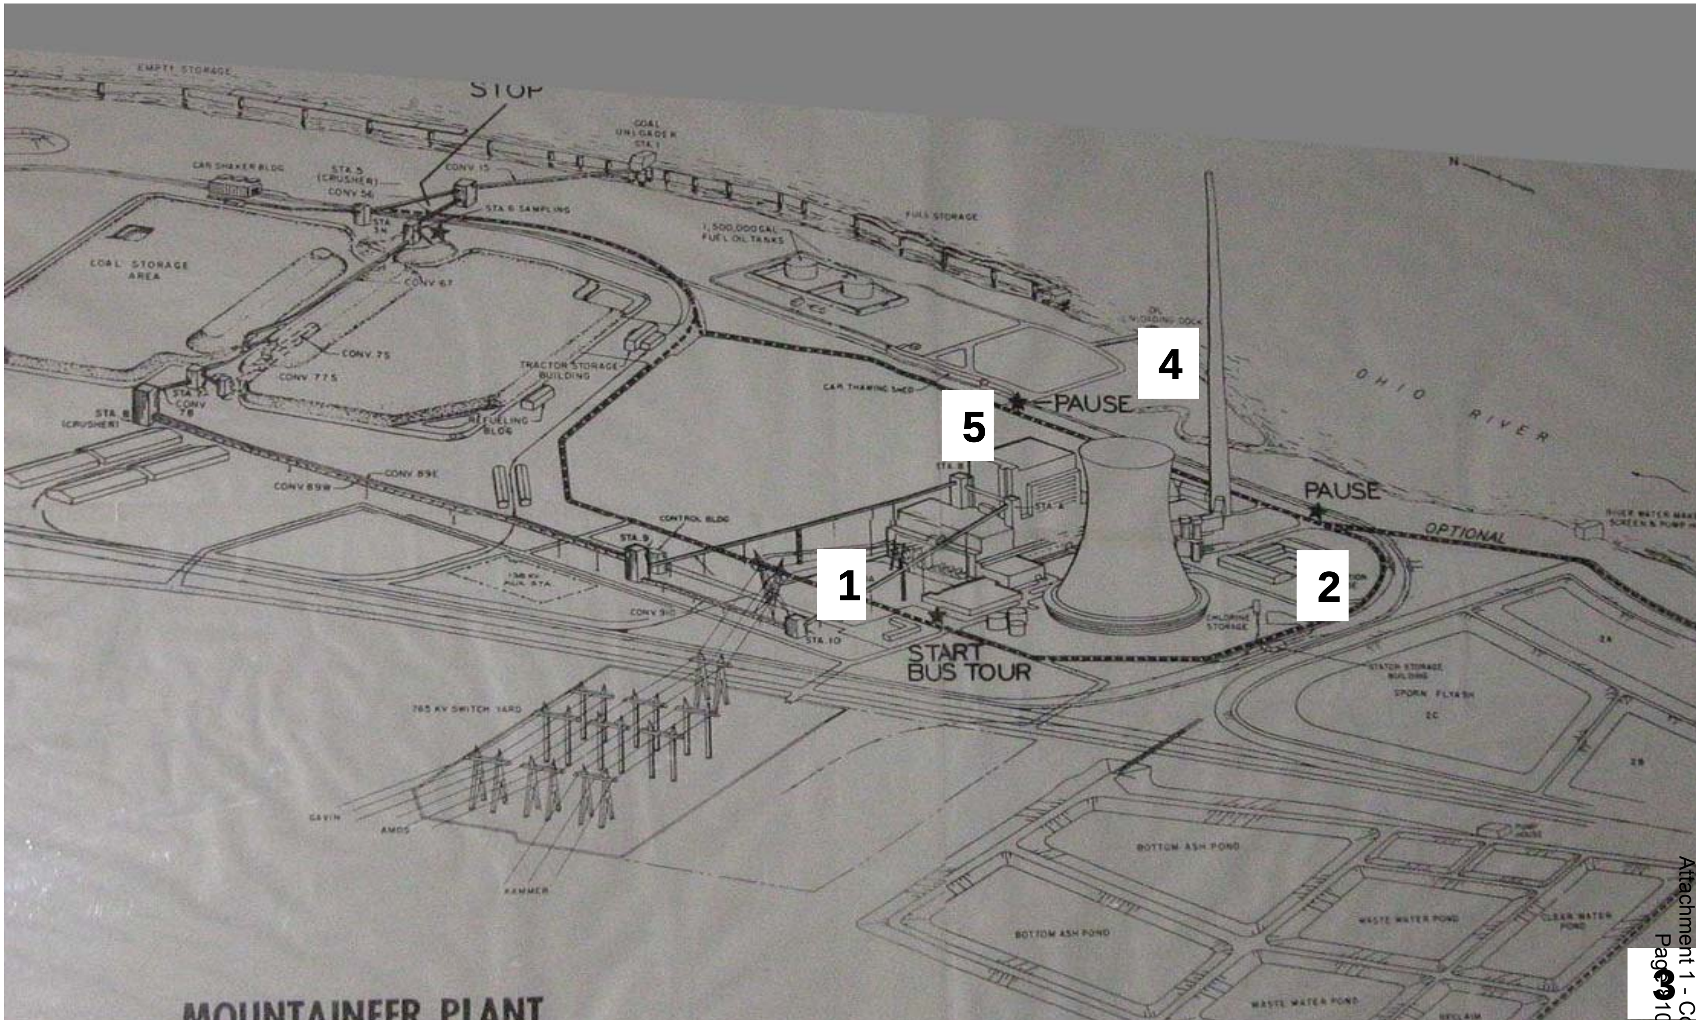
Mountaineer Plant Statistics

- One 1300 MW Unit - generating energy capacity of 10,500 GWH annually
- In service 1980
- 150 employees (excluding contractors)
- Pulverized coal fired steam generators
- Unit to be equipped with Flue Gas Desulfurization Systems (FGD) in Jan 07
- Selective Catalytic Reduction Systems (SCR) in-service 2002
  - NOx Emissions non-ozone season < 0.50 LB/MBTU
  - NOx Emissions ozone season (May-Sept) 0.05 LB/MBTU (90% reduction)
- Average coal yard storage capacity 420,000 thousand tons or 35 day supply
- Consume approximately 12,000 tons of coal daily or in excess of 4.0 million tons annually
- Coal delivered by barge (95%) and rail (5%)

Driving Toward Mountaineer Performance Levels at Other Large AEP Plants

- Fossil & Hydro Generation Organized in Regions by series (1300, 800, 600, etc.)
- Internal Benchmarking
- GAPs – applying learning at all applicable facilities
- Focused, correctly prioritized capital investment (2004 – 2008)
  - All pendant reheaters replaced approx. $70 MM
  - Superheater for Amos 3, Gavin 1, Gavin 2, Mountaineer, Rockport 1 approx. $125 MM
  - Other steam generators upgrade approx. $50 MM
  - Turbine and valve upgrade approx. $50 MM

PLANT TOUR ROUTE



Tour Layout

- Phase 1 – Bus Tour (begin at area 1 on map)
  - FGD construction site (area 2)
  - New mine location, gypsum landfill, waste water and bottom ash ponds (area 3)
  - New construction – E Crane to unload limestone from barge (area 4)

Phase 2 – Walking Tour Inside Plant (area 5)
  - Boiler
  - 18th Floor view
  - Control Room

SVP – Engineering, Projects & Field Services

AEP's Environmental Compliance Strategy

NOx and SO_2 emission reductions are part of AEP's on-going strategy to comply with the Clean Air Act, Title IV regulations, the Clean Air Interstate Rule (CAIR) and the Clean Air Mercury Rule (CAMR).

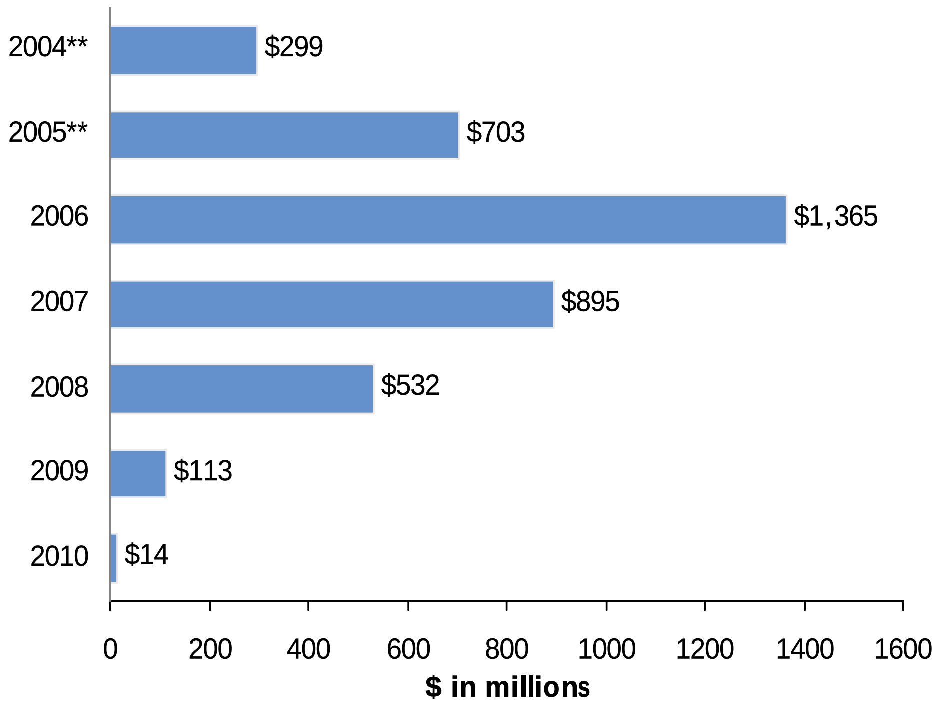
Much of this investment will position AEP to accomplish the following:

- Reduce nitrogen oxide emissions by 90% through installation of Selective Catalytic Reduction (SCR) systems
- Reduce sulfur dioxide emissions by 95% to 98%+ through installation of Flue Gas Desulfurization (FGD) systems (scrubbers)
- Realize co-benefit of mercury capture offered through SCR and FGD systems together
- Avoid future landfill costs through sale of gypsum (by-product) & build where landfill costs are lower
- Realize benefits achieved through fuel flexibility

Represents the best and least-cost compliance path to improve environmental performance on a fleet basis, while continuing to provide a reliable supply of power to customers at a reasonable price and a solid return for investors.

Environmental Investment: $3.9 Billion Through 2010

Environmental Capital Investment*

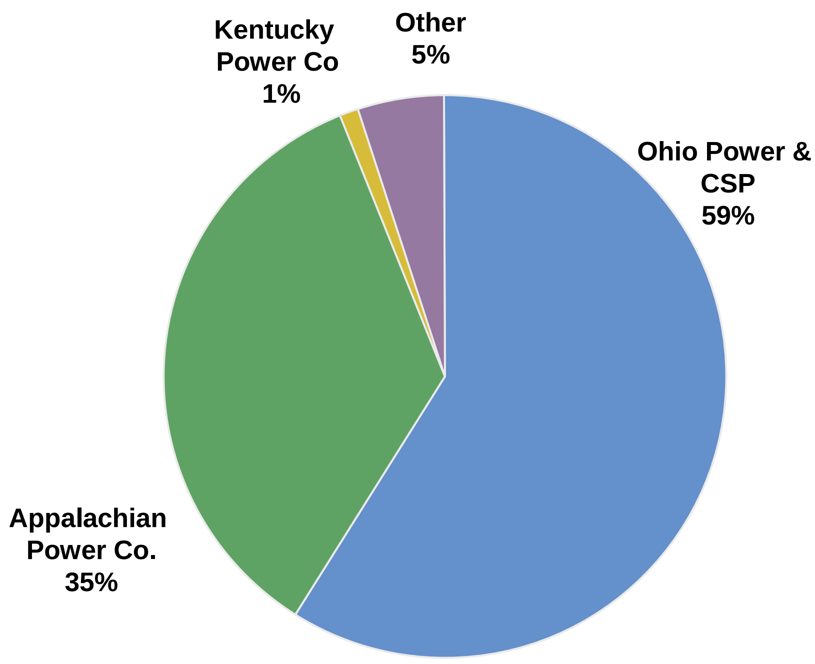


*Environmental investment for NOx, SO_2 , & Hg purposes including AFUDC

** Actual investment level in 2004 and 2005

($3.9 billion figure reflects delay of Big Sandy 2 investment)

Projected Environmental Investment Allocation



Majority of 2006 & 2007 dollars will be invested in Ohio & APCo

Environmental Investment

FGD – Reduces SO_2 by 95% to 98%

Co-Benefit Hg Capture

SCR - Reduces NOx by 90%

Completed

Plant Name	MW Capacity
Gavin 1 & 2	2600
Conesville 5 & 6	750

Total	**7951**	

Plant Name	MW Capacity	In-Service
Mitchell 1 & 2	1600	2007
Conesville 4	339	2009
Total	**1939**	

INSTALLATION OF SCR AND FGD WILL ALLOW OUR COAL FLEET TO REMAIN EXTREMELY COST COMPETITIVE

Cost of Control Technology

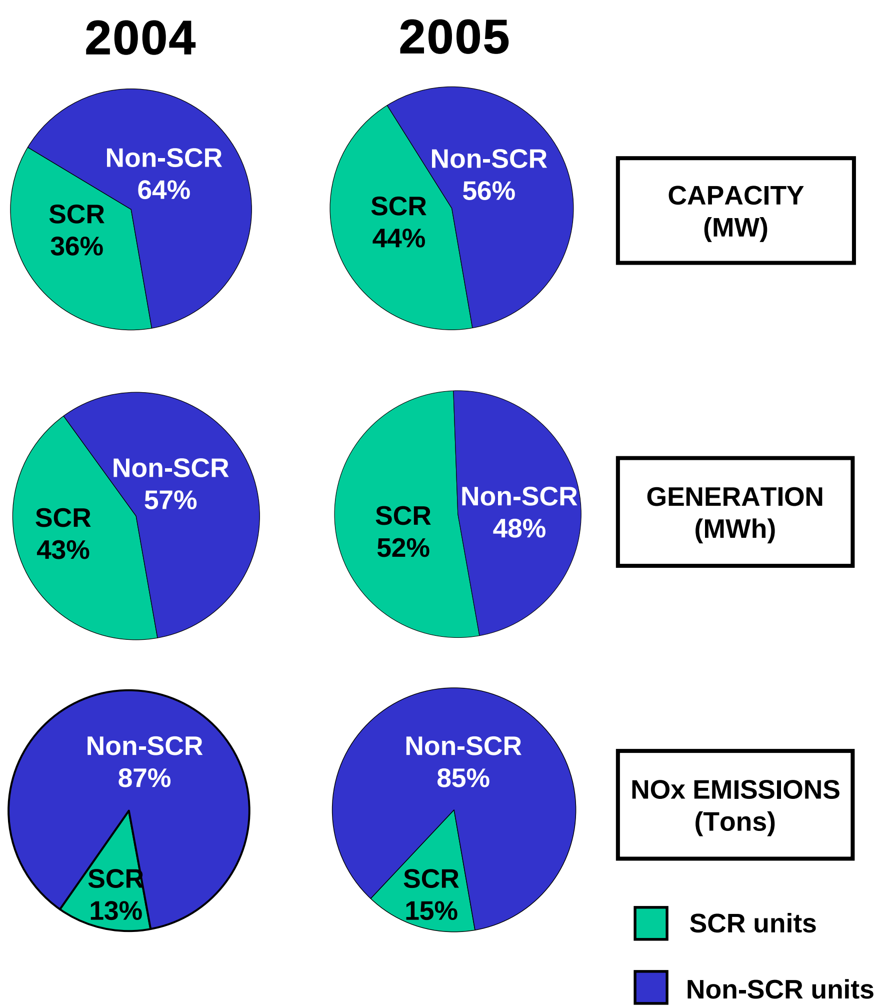
AEP's compliance plan largely relies on SCR & FGD technology to meet the requirements of CAIR and CAMR. AEP also deployed other combustion related controls, such as low NOx burners and optimized boiler controls throughout the system.

Conventional Technology

	SCR	**FGD**
AEP Capital Cost	~$121/kW avg.	~$250/kW avg.
Pollutant(s)	NO_x	SO_2 (& Hg as co-benefit)
Removal Efficiency	85 to 93%	95%-98% (&~80%)
Aux. Power	Approx. 1%	1.5% to 3.0%

SCR Performance and NOx Removal

OPERATED FOSSIL CAPACITY in OZONE SEASON



AEP has demonstrated the ability to achieve high NOx removals from units with SCR. Beginning in 2001 through the past two full ozone seasons, our operating experience has proven to be valuable as we continue to strive for consistently high NOx removals and increased boiler availabilities at these low NOx emitting plants.

Why scrub Mountaineer?

- Limitations on current coal supply due to current federal SO_2 limitations
- Access to competitive high sulfur coal supply
- Landfill readily available
- Age of unit
- Easy to retrofit & attractive economies of scale
- Unit has SCR installed – co-benefit of mercury reduction

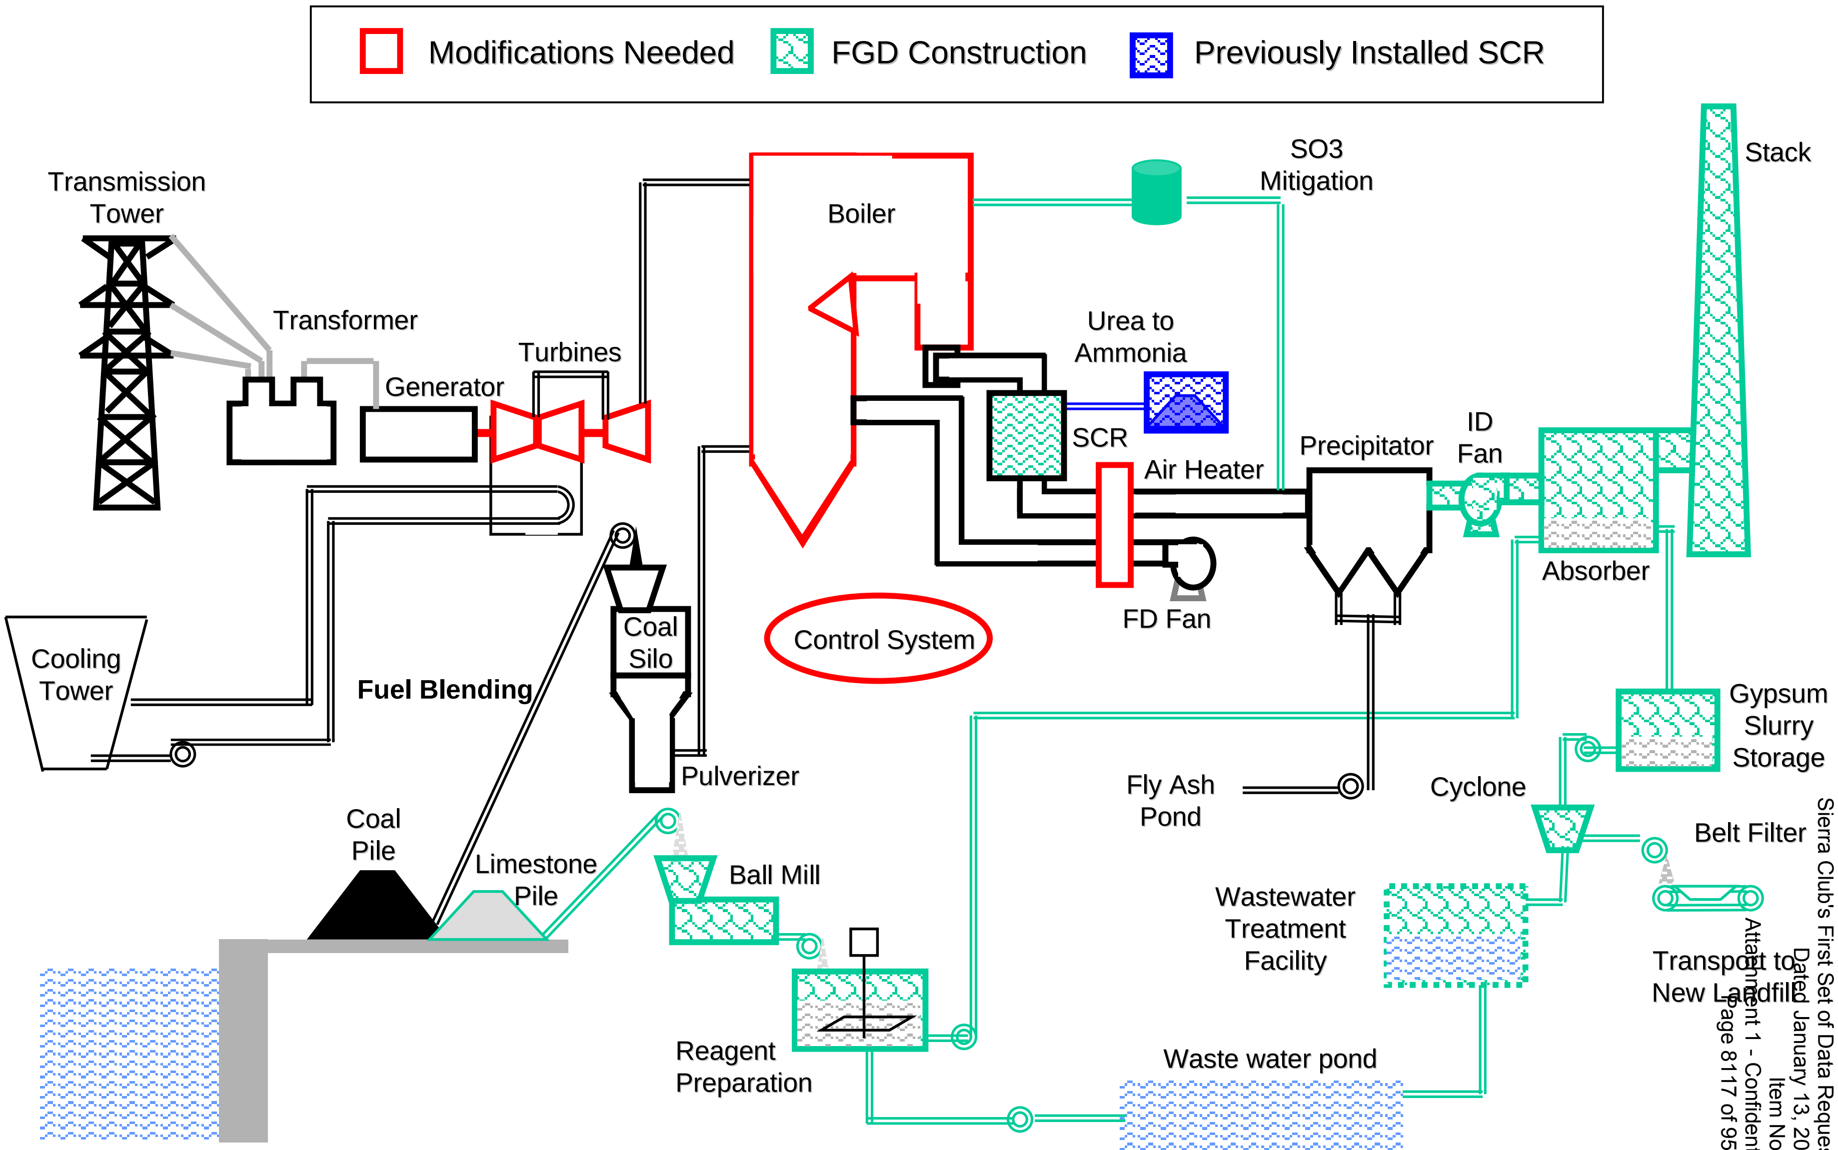
Typical FGD Installation Effect

The FGD design will accommodate higher sulfur coal and expand the fuel flexibility of the plant, while maintaining reduced SO_2 emissions. This fuel flexibility will permit adaptation in changing coal markets to optimize the economic viability of the plant.

The Process -

- **Higher sulfur coal requires boiler upgrades to maintain reliable operation**
- **Creates byproduct (gypsum) that must be disposed via wallboard plant or landfill**
- **High sulfur coal promotes SO_3 formation that must be mitigated**
- **Water vapor from FGD requires a new “wet” chimney**
- **Auxillary power consumption 1.5-3%**

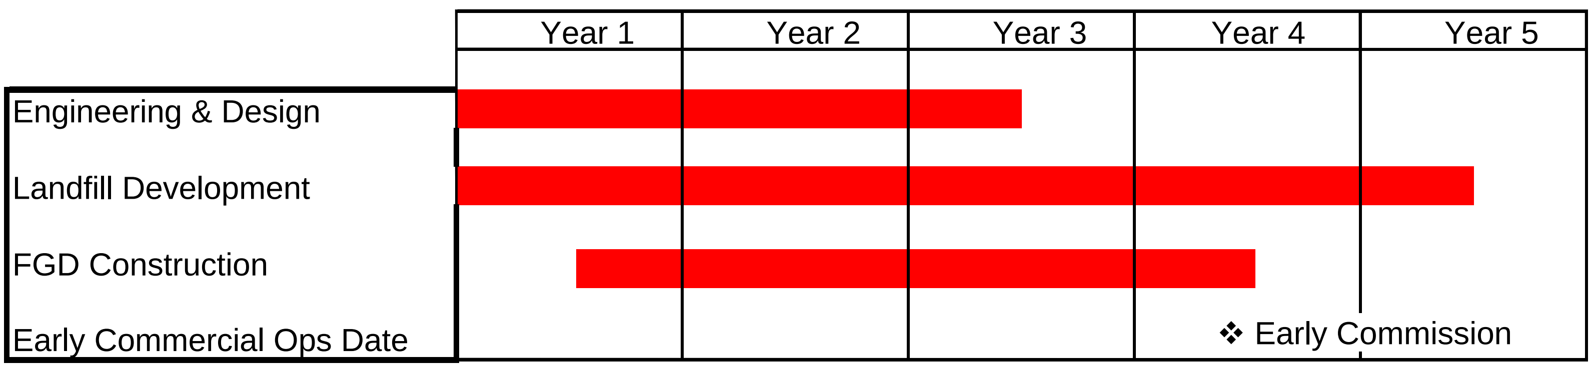
Mountaineer Plant Scope



Typical FGD Project Milestone Schedule

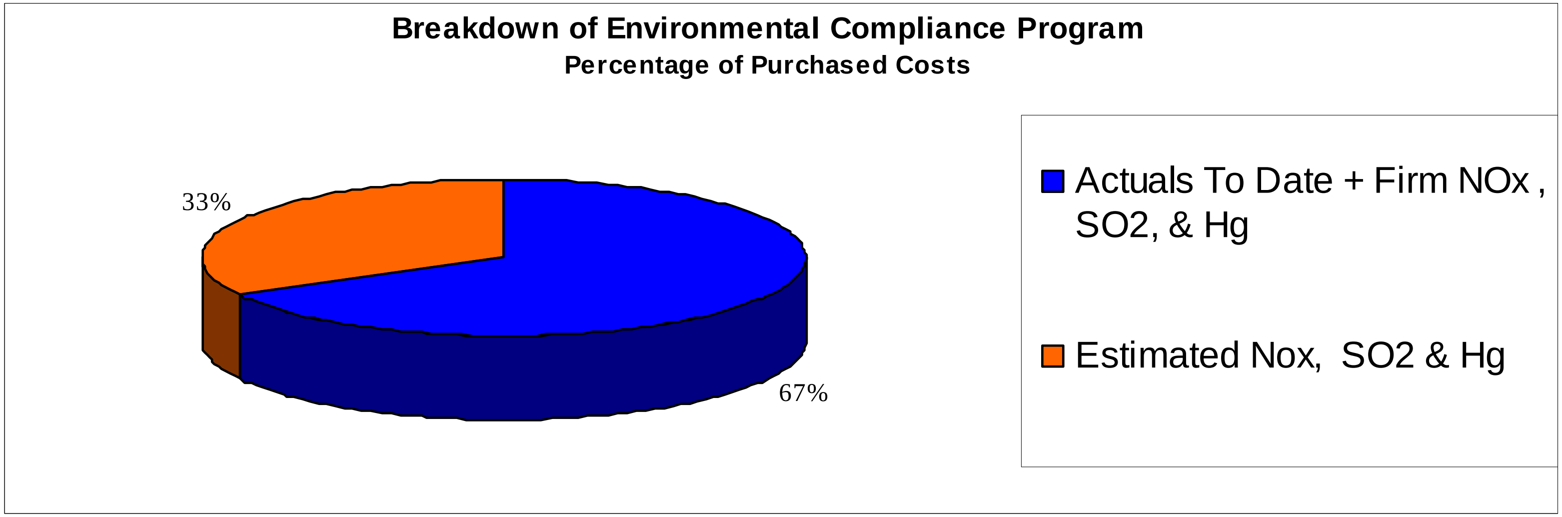
- **Phased Execution**
  - Lessons Learned: Focus on performance/risk management/cost
  - Phase 1 Feasibility Study, Phase 2a Conceptual design, Phase 2b Detailed design, Phase 3 Bid Construction at 30 – 60 % design complete

- **Typical Plant and Landfill Schedule for Engineering, Procurement, Permitting, and Construction**
  - A new landfill requirement can be the critical path



Materials and Vendors

Cost Management of Materials



Typical Vendors

- FGD
  - Spray Tower – B&W/Alstom
  - Jet Bubbling Reactor – B&V Chyioda
- Stack Supplier
  - Pullman Power Inc.
- SCR
  - Babcock Power
- Architect Engineering Firms
  - Black & Veatch
  - Sargent & Lundy
  - Shaw – Stone & Webster
  - Worley Parsons

Impact of SCR and FGD on Net Generation

- The overall generation loss in capacity associated with SCR and FGD for the entire AEP fleet is roughly 600MW.
- Typically, an SCR consumes approximately 1% whereas an FGD consumes from 1.5% to 3.0% of the plant electricity output.
- Plant modifications increasing unit MW ratings are being implemented as part of the retrofit program
  - For example, Mountaineer turbine valve upgrades will increase unit output by ~30-45 MW
  - Similar upgrades will be implemented on other units

PLANT MODIFICATIONS WILL MITIGATE FGD AND SCR CAPACITY CONSUMPTION

IGCC Opportunity at Mountaineer Site

- Two sites under primary consideration
  - Great Bend (Ohio)
  - Mountaineer (West Virginia)
- IGCC footprint for 2-600 MW IGCC at either site
- Mountaineer offers advantages of existing infrastructure
  - Site preparation
  - River frontage development
  - Coal handling
  - Transmission
  - Landfill

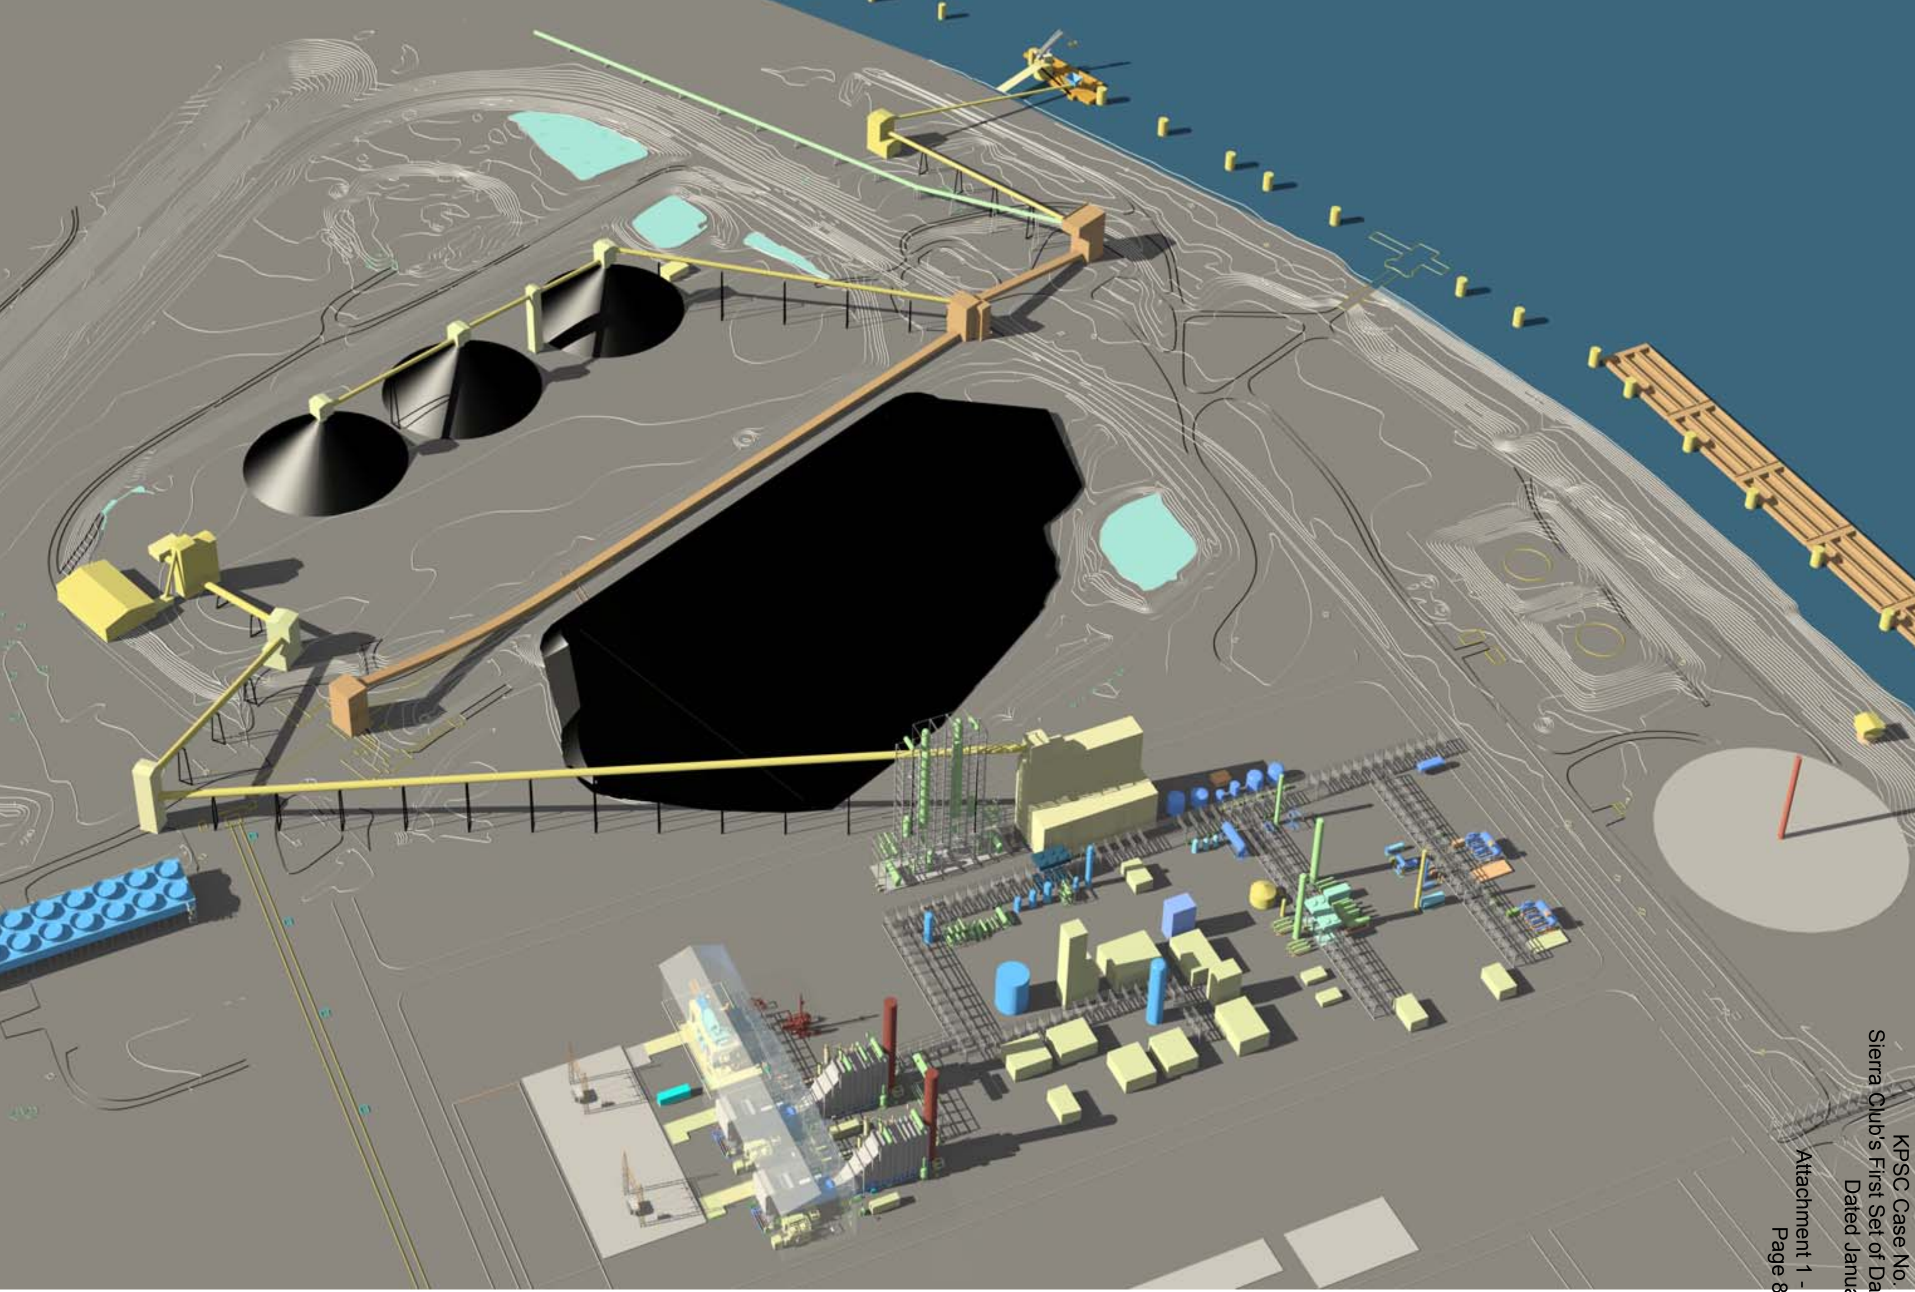
IGCC Opportunity at Mountaineer Site

- **Status**
  - **Concurrent FEED (Front End Engineering and Design) on both Mountaineer and Great Bend Sites with GE/Bechtel**
  - **Applications made to PJM on both sites for Facilities Studies**
  - **Air permit applications by 3Q06**
  - **Wastewater and U.S. Corps of Engineers permit applications in progress**

IGCC Opportunity at Mountaineer Site

- **Key Elements of Plant Design**
  - **2-GE 7FB Combustion Turbines**
  - **2-Radiant+Quench Gasifiers**
  - **SO_2 Removal > 99%**
  - **Mercury Removal > 90%**

- **Fuel Envelope**
  - **Chlorides to 3500 ppm (Illinois Basin)**
  - **Sulfur to 7.5 lb/MMBtu (Northern Appalachian)**
  - **Ash to 12%**
  - **Ability to blend up to 30% petroleum coke**



AEP AMERICAN ELECTRIC POWER

Mountaineer IGCC Plant Opportunity

Generation Technology Comparative Stats

	PC	IGCC	NGCC
Nominal Capacity (MW)	600	600	600
Heat Rate (Btu/kWh)	8700	8600	7200
Total Plant Cost (EPC) ($/kW)	1700	1900	480
Production Cost ($/MWh)	17	16	57
Cost of Electricity, without CO2 Capture ($/MWh)	58	63	90
Estimated Cost of Electricity, with CO2 Capture ($/MWh)	94	87	137

Source: Results of AEP analysis based on EPRI studies

- Total Plant Cost (2005$'s) includes the cost to **E**ngineer, **P**rocure and **C**onstruct plant and owner's direct costs; does not include interconnections, transmission lines, transmission upgrades, contingency or AFUDC.
- Assumes Northern Appalachian Coal price of $1.60 /mmBtu for PC and IGCC, and natural gas price of $7.00/mmBtu for NGCC.
- Assumes 85% capacity factor for PC and IGCC, 25% for NGCC.
- Production Cost includes Fuel Cost and Variable Operations & Maintenance (VOM) cost.
- Cost of Electricity based on EPC cost, does not include the cost of Emission Credits.
- Cost of Electricity with CO2 capture does not include sequestration cost.

IGCC TECHNOLOGY IS STRATEGIC TO KEEPING COAL IN THE MONEY

Chuck Zebula

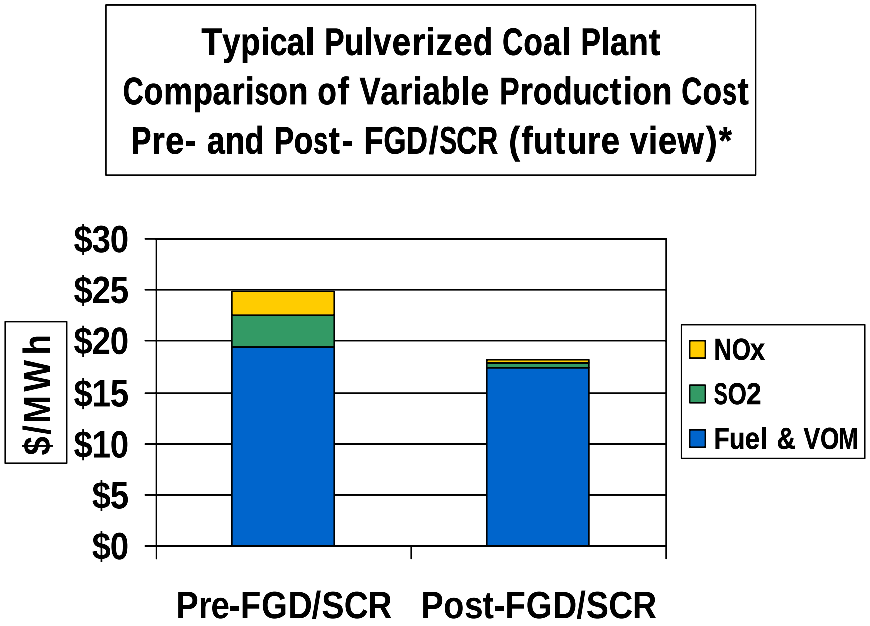
KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 8126 of 9556

Low Cost Production Supports Investment & Investment Sustains Low Cost Production

- Lowers exposure to high cost emission allowances
- Creates opportunity to burn wider variety of lower cost fuels
- Improves baseload operation (higher capacity factor, higher margin)
- All-in cost of electricity, including FGD/SCR investment, remains low



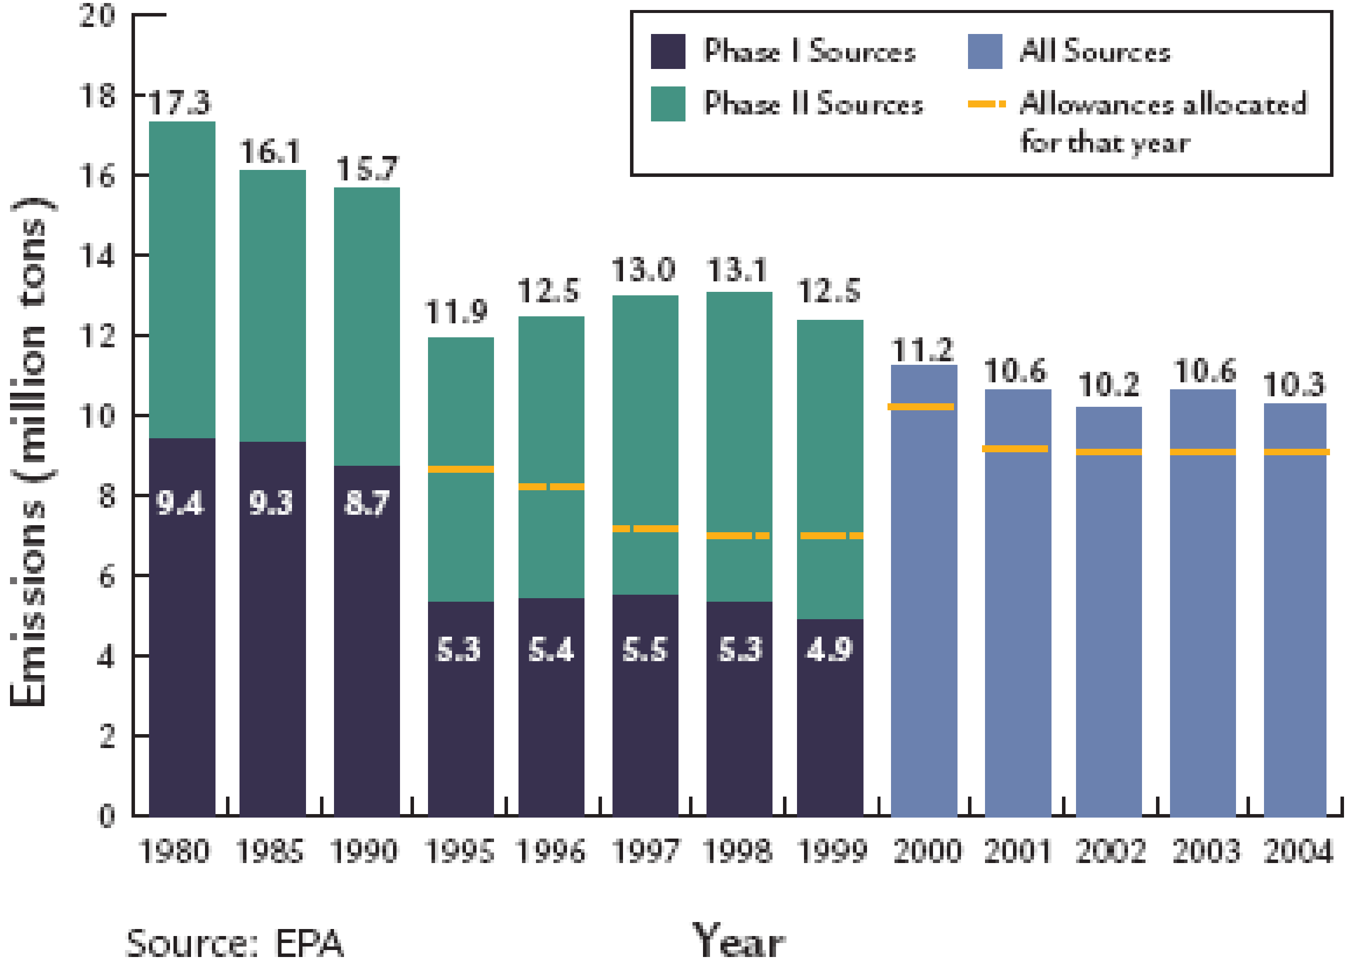
* Assumes annual NOx program

AEP will remain the low cost producer following completion of environmental retrofit projects

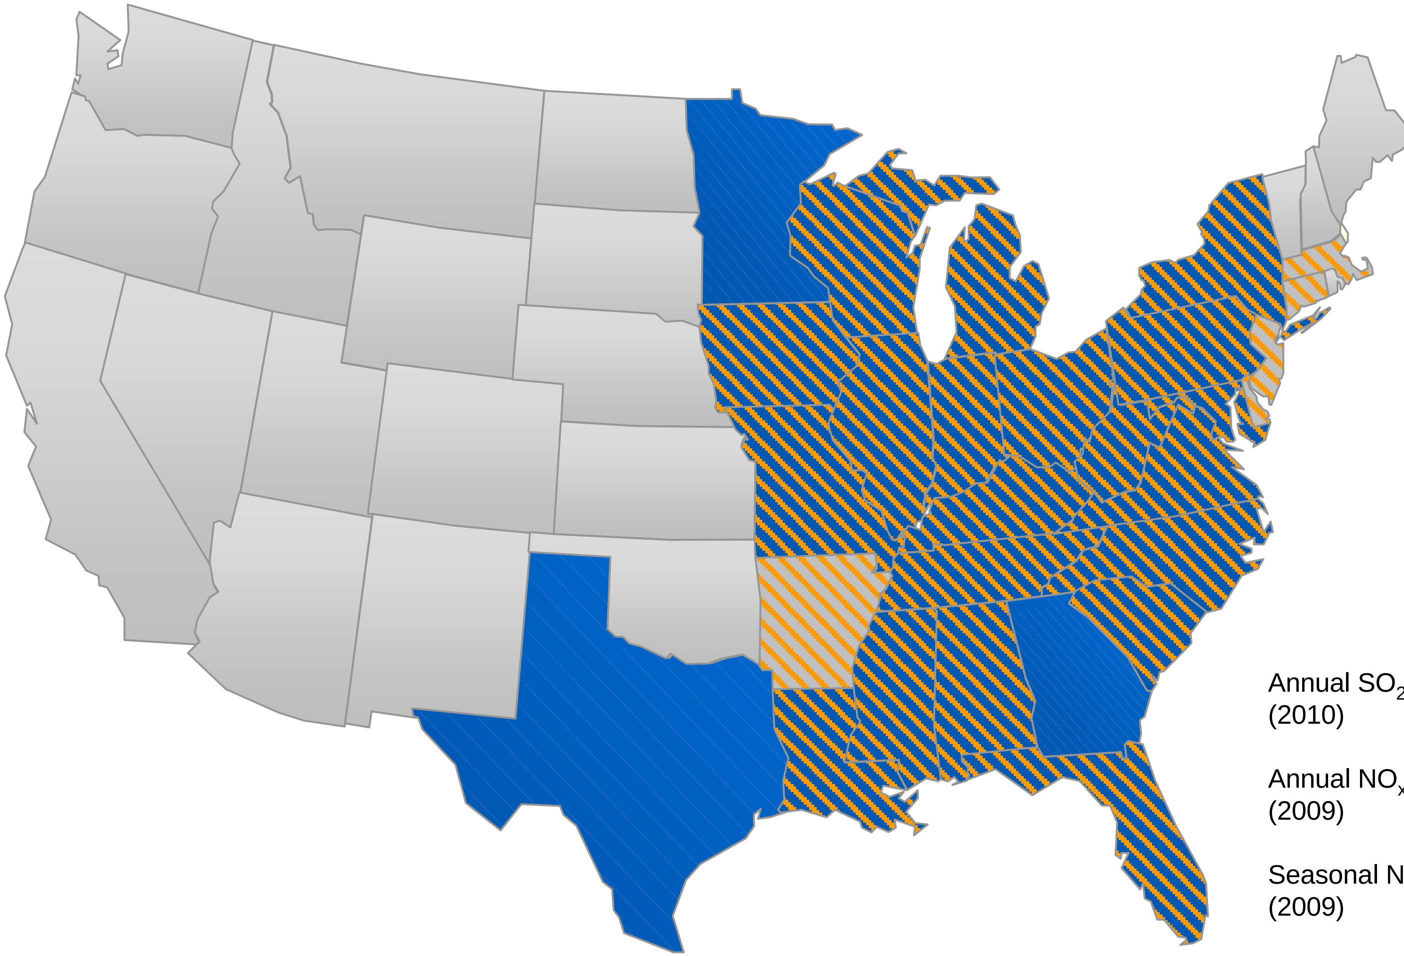
Coal Requirements - Mountaineer

- Federal NSPS limit – 1.2 lbs SO_2/mmBtu
- Current Coal Deliveries
  - Blend of CAPP and PRB coal
  - Consumes approximately 4.0 million tons annually
  - Delivery primarily by barge; some by rail
- Future Coal Deliveries
  - Plant modifications will allow for future fuel flexibility
  - Locally available high-sulfur coal use will now be possible
  - Mine development near Mountaineer property – which will deliver coal via conveyor
- Current Coal Inventory
  - Current inventory levels are near normal levels
  - Plan is to have approximately 35 days of inventory

Title IV SO_2 Compliance



Clean Air Interstate Rule



Emission Caps*

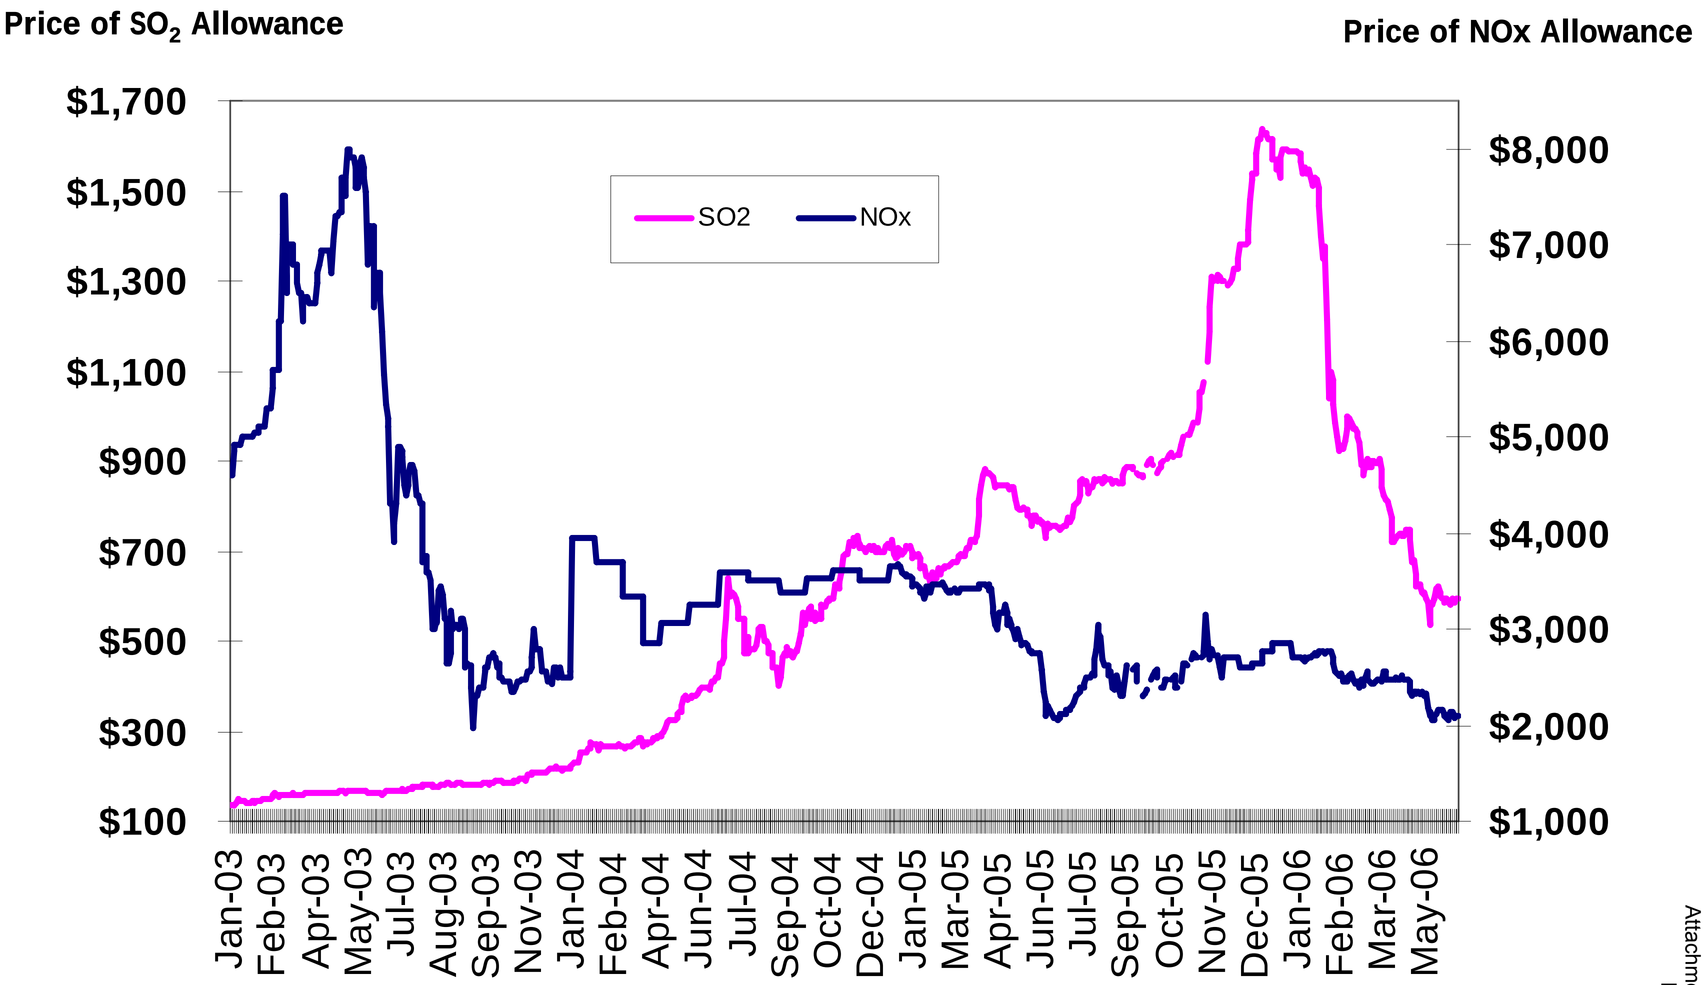
(million tons)

	2009/2010	2015
Annual SO_2 (2010)	3.6	2.5
Annual NO_x (2009)	1.5	1.3
Seasonal NO_x (2009)	.58	.48

*For the affected region.

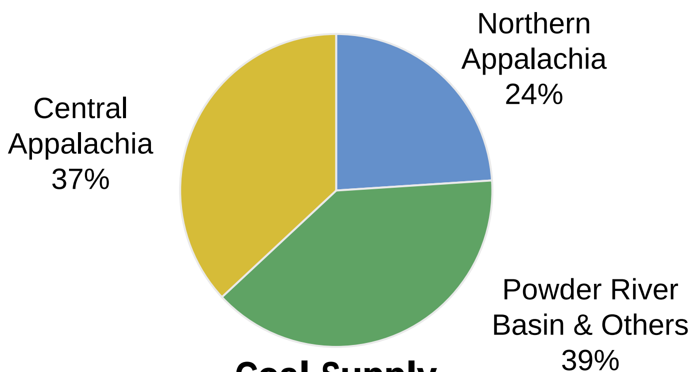
- States controlled for fine particles (annual SO_2 and NO_x)
- States controlled for ozone (ozone season NO_x)
- States controlled for both fine particles (annual SO_2 and NO_x) and ozone (ozone season NO_x)
- States not covered by CAIR

Allowance Markets for SO_2 and NOx



Coal Procurement

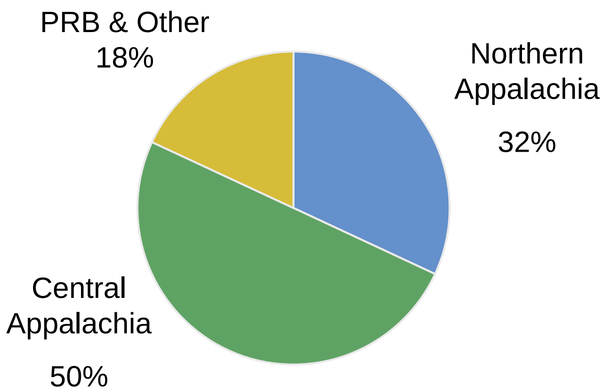
Total AEP System



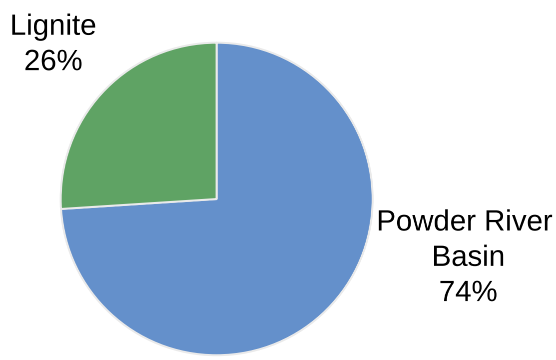
Coal Supply (on average)

- Purchase 75 MM tons per year
- Avg. delivered price ~ $32.52/ton in 2005
- Fully contracted for 2006; 90%+ contracted for 2007
- Approximate 11%-13% price increase in 2006

AEP Eastern System

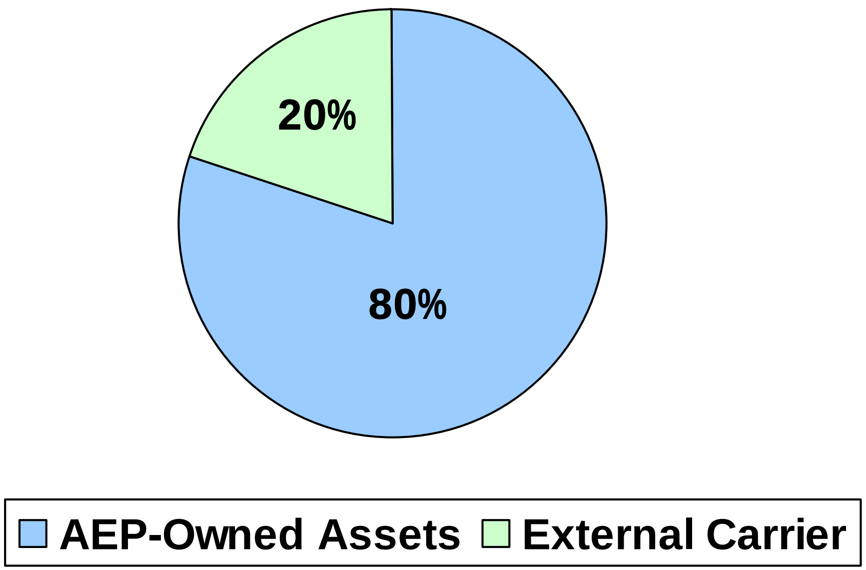


AEP Western System



AEP's Coal Transportation Assets

Coal Transportation to AEP Plants*



* Represents close approximations

AEP's substantial coal transportation assets include:

- 7,065 railcars
- 2,230 barges
- 53 towboats
- 1 active coal handling terminal (20 million tons of annual capacity)

AEP'S TRANSPORTATION ASSETS PROVIDE FLEXIBILITY IN A CONSTRAINED DELIVERY ENVIRONMENT

AEP River Operations - Memco

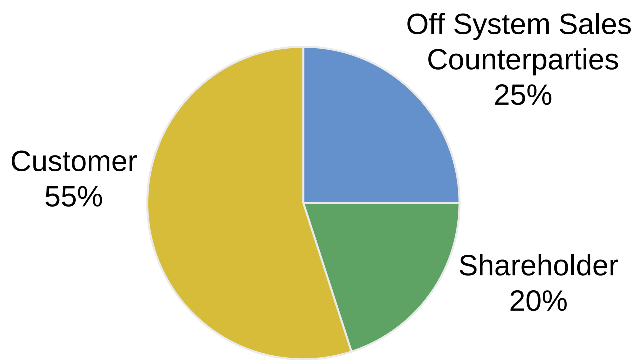
2006 Performance Drivers

- Favorable supply/demand levels of barges
- Strong market for transportation
- Efficiency of operations
- Good operating conditions
- Strong management team

APPENDIX

Fuel Recovery

AEP System



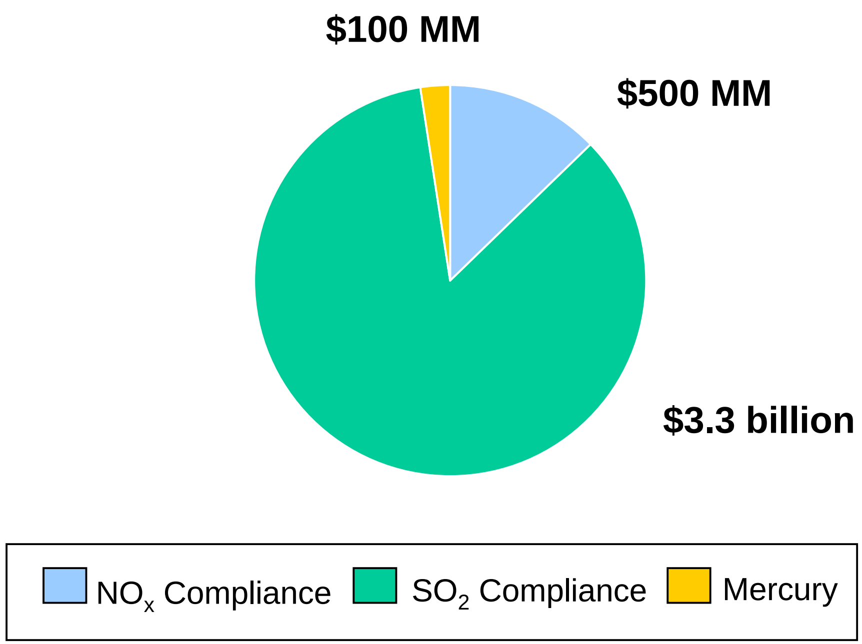
Fuel Cost Recovery (on average)

- Fuel recovery varies by jurisdiction
- 80% of fuel cost is recoverable across the AEP System
- Active Fuel Clause Jurisdictions:
  - AEP EAST: APCo, I&M - MI, KGP, KP
  - AEP WEST: PSO, SWEPCO

Note: Fuel recovery percentages are based on estimates for 2006 fiscal year

Environmental Compliance Investment

Compliance Allocation



Current Programs

$2.0 Billion:

$0.5 Billion for NOx

$1.5 Billion for SO_2

Future Programs

$1.9 Billion:

$1.8 Billion for SO_2

$0.1 Billion for Other

$3.9 BILLION ENVIRONMENTAL INVESTMENT PROJECTED 2004 THROUGH 2010

Note: Figures Include AFUDC; $3.9 billion figure reflects delay of Big Sandy 2 investment

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

Carbon Capture and Storage Project – Mountaineer Plant (WV)

Policy: Renewable Energy Standards; Energy Efficiency, Security and Reliability

Technology: Industry Leading High Voltage Transmission and gridSMART℠ Projects

765-kV Transmission Line – Wyoming-Jacksons Ferry (WV)

Transmission Investment Opportunities

- **AEP Transmission Company (Transco): Within our existing footprint**
  - Develop new AEP-only projects within AEP's footprint
  - Reduce regulatory lag through FERC formula rates adjusted annually
- **Electric Transmission Texas (ETT): Projects in Texas ERCOT jurisdiction**
  - Framework in Texas allows for more expeditious siting and recovery
  - $600MM of projects est. in service 2010-2013
  - ETT's opportunity could reach $3.0B within this decade
- **Joint Ventures (JVs): Outside of our footprint, with Electric Transmission America (ETA) or others**
  - Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
  - Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2015
  - Robust pipeline of projects up to $15B

765-kV Tower

AEP AMERICAN® ELECTRIC POWER

Morgan Stanley Smith Barney Financial Advisors Presentation

Bloomington, MN

October 4, 2010

AEP®

A CENTURY OF DIVIDENDS • 1910 - 2010

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

AEP®

A CENTURY OF DIVIDENDS • 1910 - 2010

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

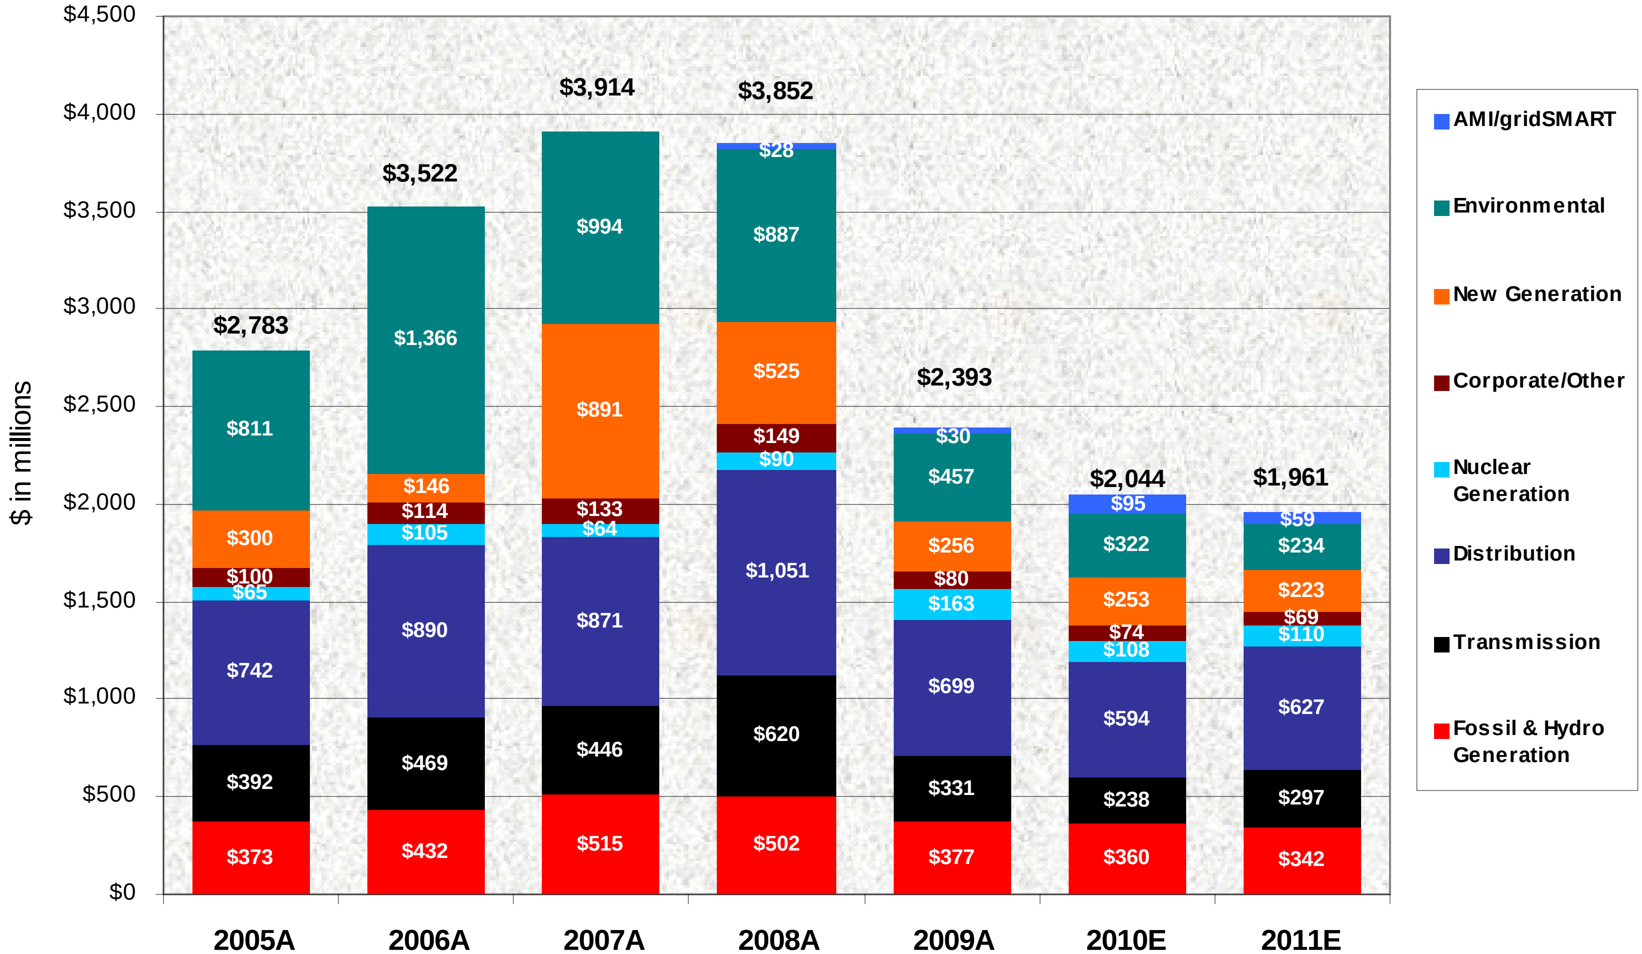
  - Reduce regulatory lag through FERC formula rates adjusted annually
- **Electric Transmission Texas (ETT): Projects in Texas ERCOT jurisdiction**
  - Framework in Texas allows for more expeditious siting and recovery
  - $600MM of projects est. in service 2010-2013
  - ETT's opportunity could reach $3.0B within this decade
- **Joint Ventures (JVs): Outside of our footprint, with Electric Transmission America (ETA) or others**
  - Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
  - Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2015
  - Robust pipeline of projects up to $15B

765-kV Tower

Utility Operations Capital Expenditures



Non-Utility Operations Capital (not included above)

$ in millions	2008A	2009A	2010E	2011E
AEP River Operations	$115	$77	$16	$20
AEP Transco	0	1	$121	$175 - $325
Joint Venture Equity	$5	$47	$89	$155 - $355

Dividend Overview

- We paid our 400th consecutive quarterly dividend to shareholders on June 10, 2010
- Annual Dividend - $1.68/share
  - Declared in January, April, July and October
  - Paid in March, June, September and December
- Attractive yield of 4.7% as of July 30, 2010
- Conservative target dividend payout ratio of 50 – 60%

AEP Highlights

- Premier Utility Platform
- Traditional and Effective Regulatory Relationships
- Energy Policy Initiatives Create Technology Deployment and Investment Opportunity
  - Greenhouse Gas Emissions Reductions
  - Energy Efficiency, Security and Reliability
- Strong Value and Total Return Proposition

Mountaineer Plant (WV)

American Electric Power

Mountaineer CO_2 Capture and Storage Project

Citigroup Investor Visit
New Haven, West Virginia

June 25, 2009

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants including our ability to restore Indiana Michigan Power Company's Donald C. Cook Nuclear Plant Unit 1 in a timely manner; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity and transmission lines (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary or deflationary interest rate trends; volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impacting our ability to finance new capital projects and refinance existing debt at attractive rates; the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurred cots and recovery is long and the costs are material; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

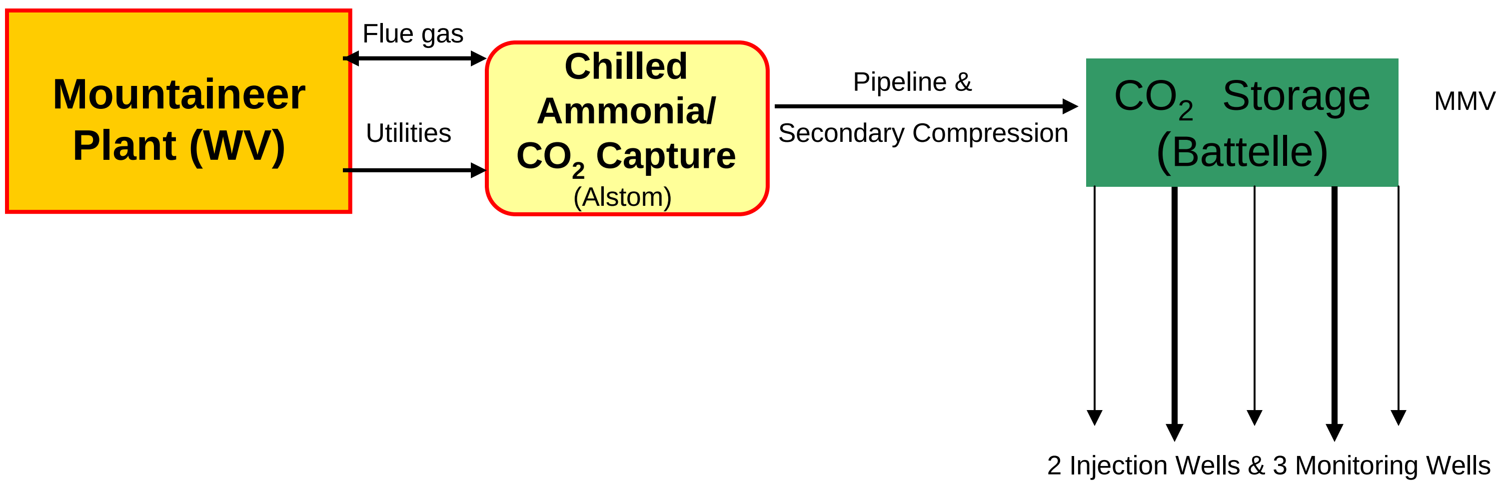
Presentation Outline

- Project Overview
- Geologic Characterization
- CO_2 Handling and Storage
- Permits, Legal Approval, & Outreach
- Questions and Answers

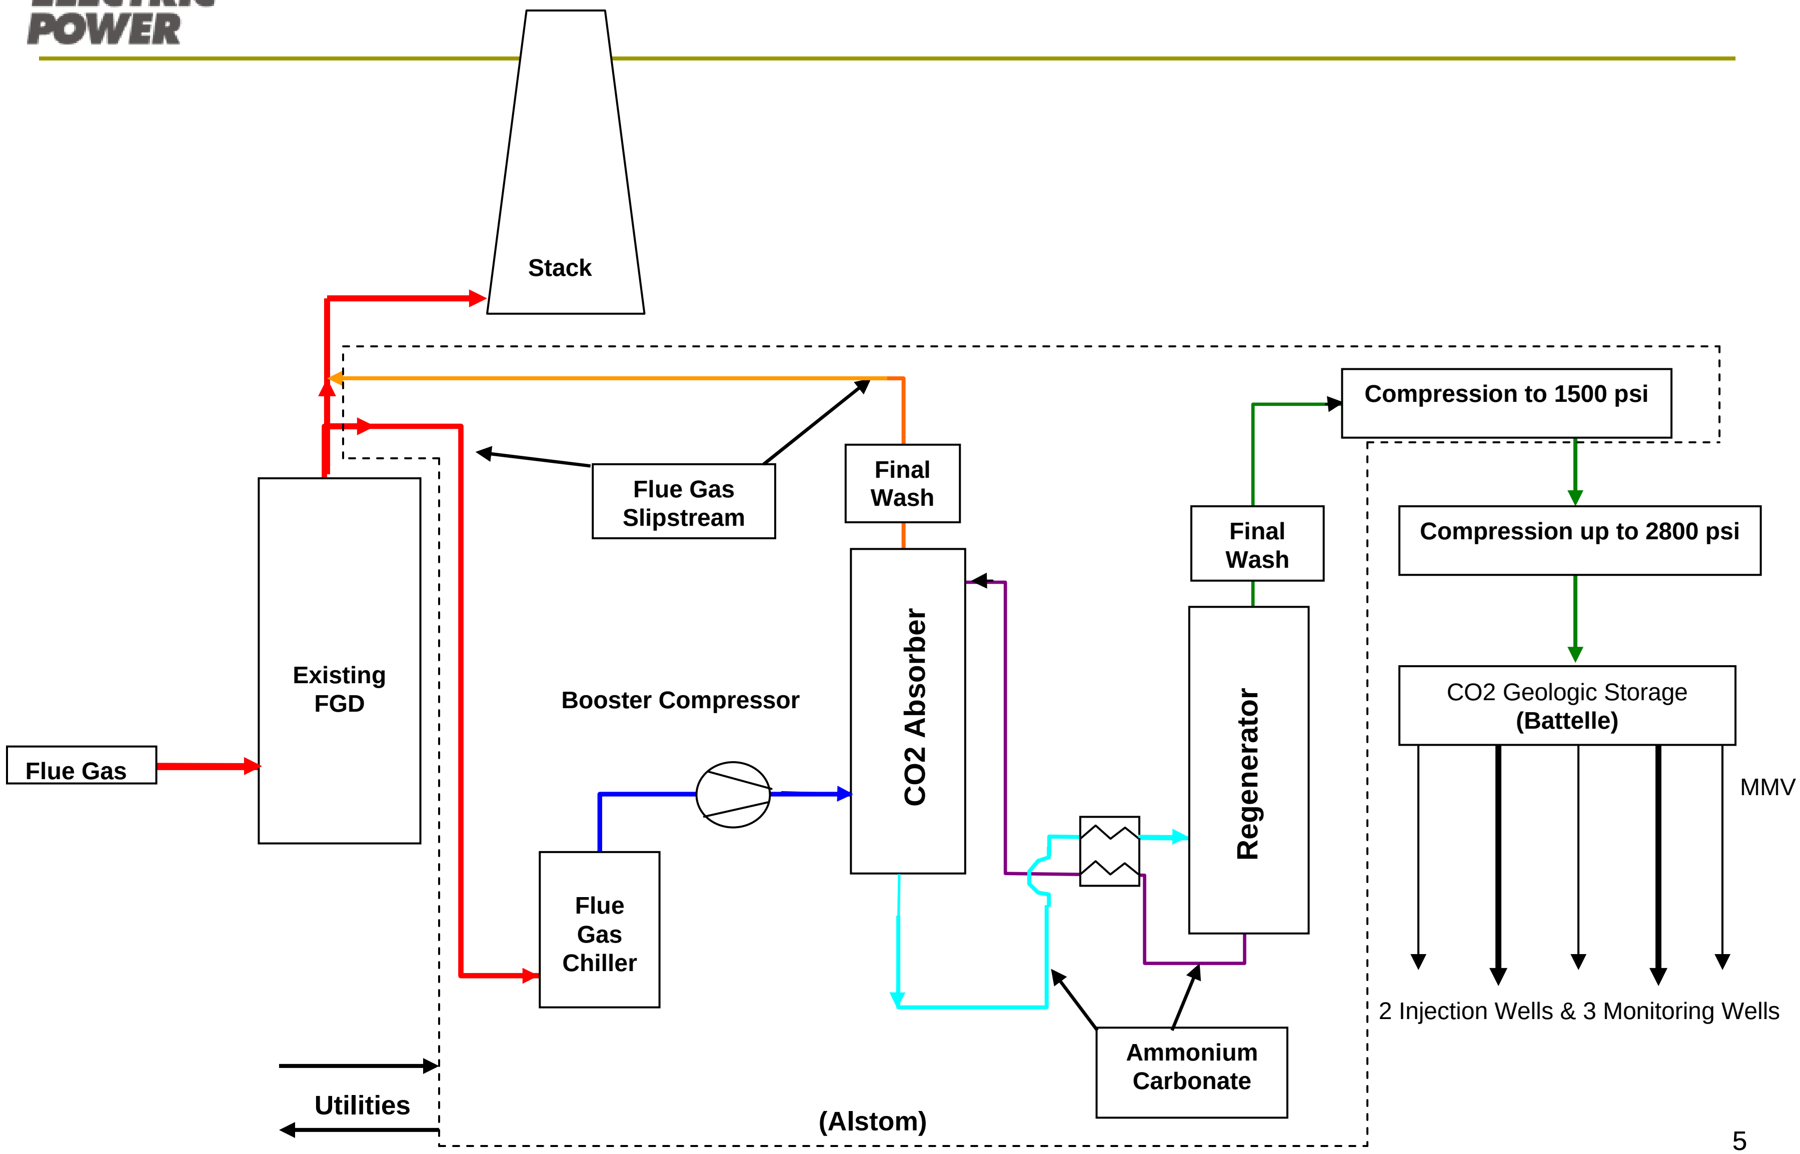
Mountaineer CCS Project

2009 Startup



- 20 MW (electric) slip stream from FGD outlet
- Capture and store ~100k–165k tonnes of CO_2 per year
- Started engineering, planning, and permitting in Sep 07
- Started construction 2Q 2008, in operation 3Q 2009
- Alstom responsible for CAP island, AEP responsible for utilities to/from CAP island and CO_2 storage (Battelle as contractor)

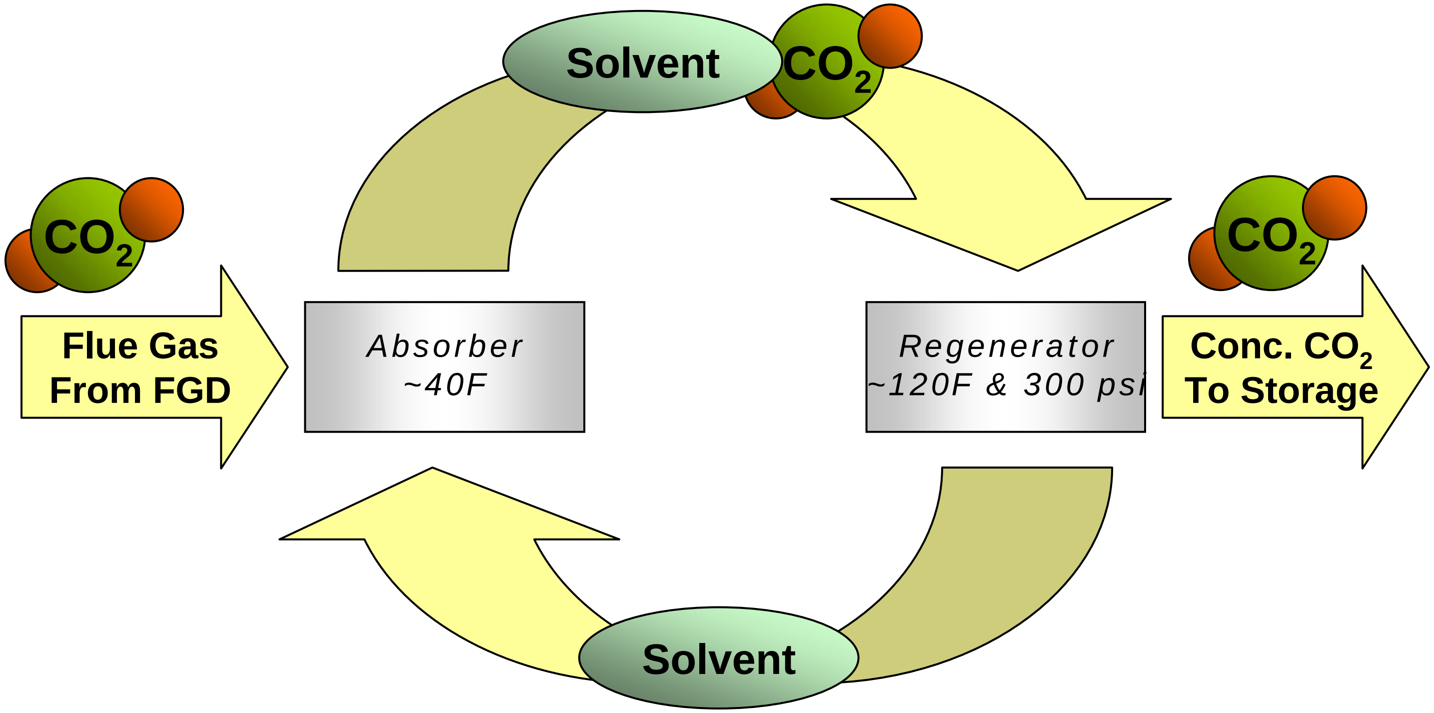
Schematic of the Alstom Chilled Ammonia Process



June 25, 2009

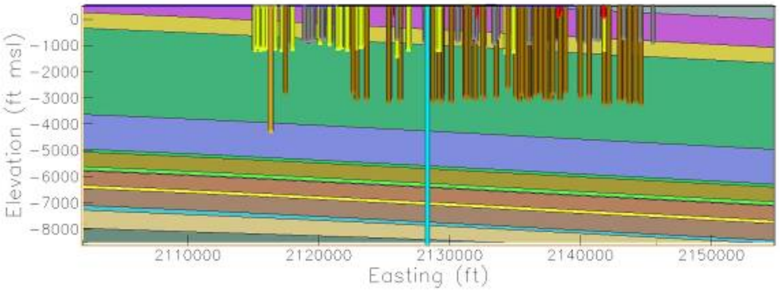
Alstom Chilled Ammonia Process

- Selected the chilled ammonia technology for CO_2 capture due to its lower steam consumption and higher energy efficiency.
- Ammonia solution (Ammonium Carbonate) absorbs CO_2 at low temperature and releases the CO_2 at moderately elevated temperature and high pressure.



Site Characterization

- Site characterization work at the site funded by DOE, AEP, Battelle, and others – MRCSP Ohio River Valley Project
- Preliminary geology report prepared in 2003
- Seismic survey in 2003
- Drilling and testing AEP#1 deep well during 2003-05
- Design, feasibility study for integrated CCS pilot 2005 -07
- Few deep wells (>5,000 ft) nearby



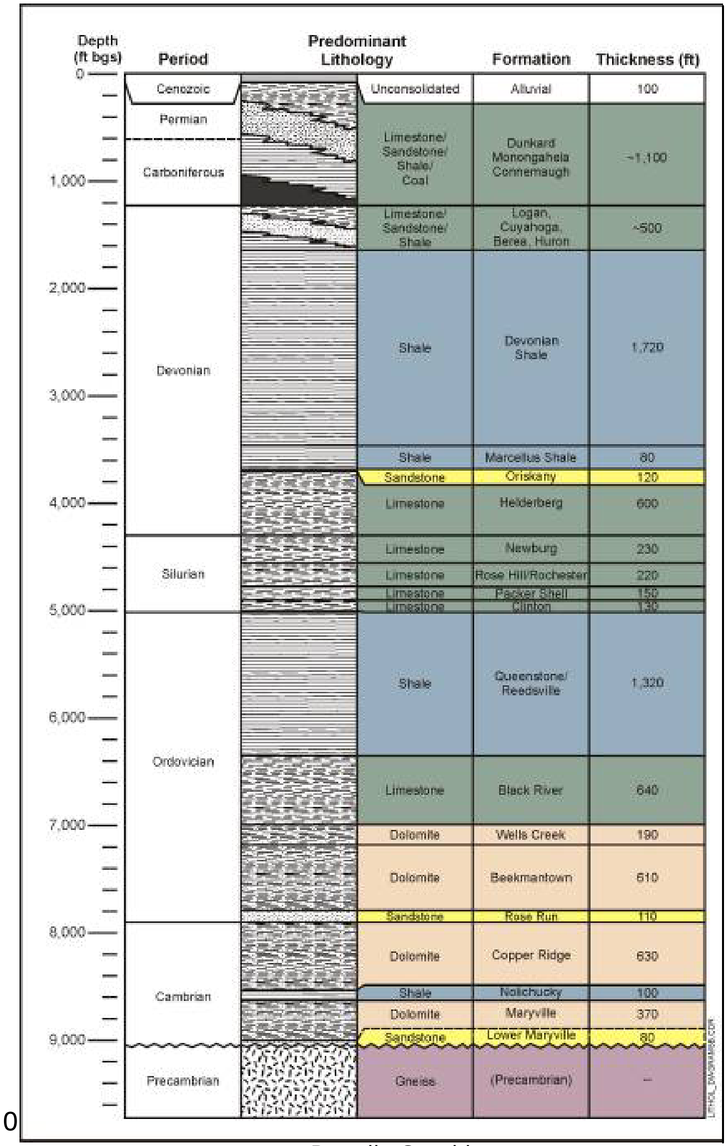
Battelle Graphic

Site Characterization and Feasibility Study

AMERICAN ELECTRIC POWER

Site characterization study identified two feasible injection reservoirs with several thousand feet of excellent caprock

- Rose Run Sandstone
- Copper Ridge B-Zone



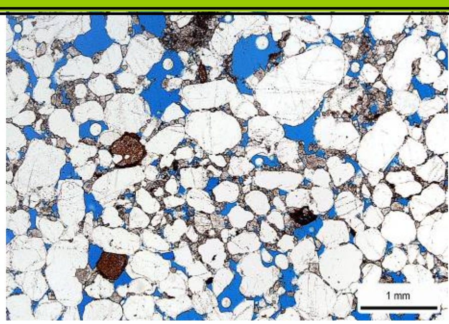
Battelle Graphic

Upper Injection Zone Cores from AEP#1 Test Well

Rose Run Sandstone- 116 ft total thickness, 30 ft porous sandstone

<u>Hydraulic Core Tests 7763.5 ft</u>

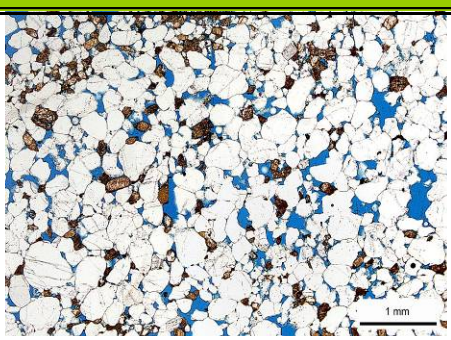
Lithology	**= Sandstone**
Density	**= 2.68 g/mL**
Porosity	**= 9.1%**
Permeability	**= 36 mD**



Data from Battelle

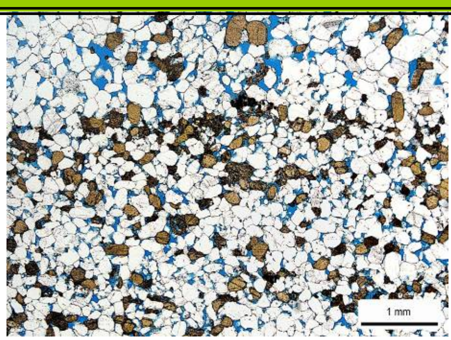
<u>Hydraulic Core Tests 7775 ft</u>

Lithology	**= Sandstone**
Density	**= 2.64 g/mL**
Porosity	**= 10.4%**
Permeability	**= 49 mD**



<u>Hydraulic Core Tests 7819 ft</u>

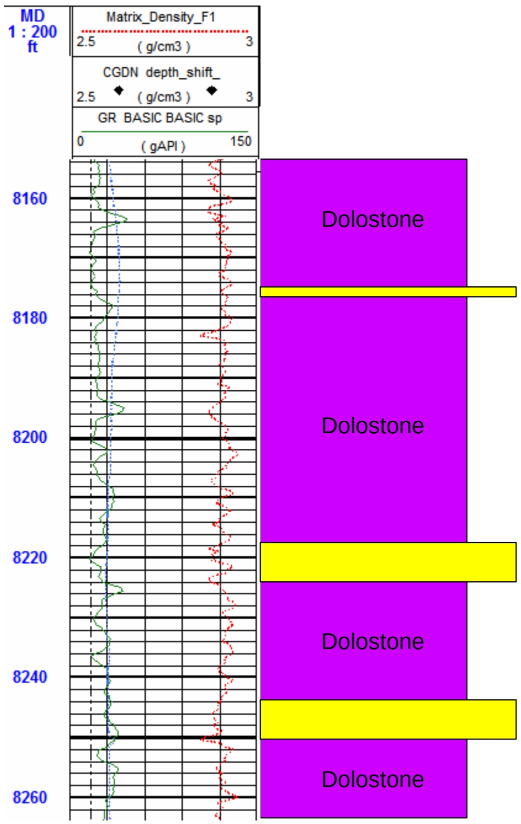
Lithology	**= Sandstone**
Density	**= 2.63 g/mL**
Porosity	**= 11.5%**
Permeability	**= 36 mD**



AMERICAN ELECTRIC POWER

Copper Ridge "B-zone"

- -Reservoir tests suggest significant storage potential in "B-zone"
- -Carbonate unit, nature of porosity/permeability uncertain
- -Few core samples collected from interval



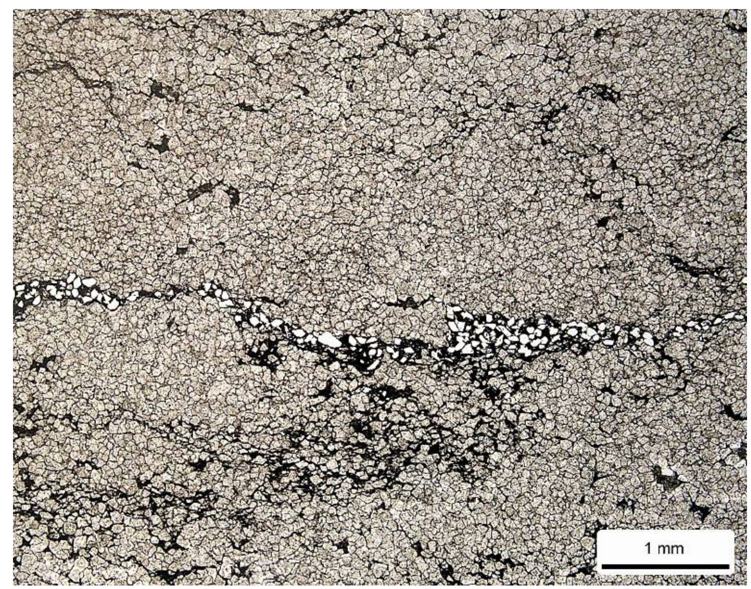
Sandy Dolostone ?, High Porosity

Sandy Dolostone ?, High Porosity

"B" Zone, Sandstone / Sandy Dolostone,
- High Porosity
- Sidewall core

Battelle Graphic

Copper Ridge Sidewall Core 7930 ft



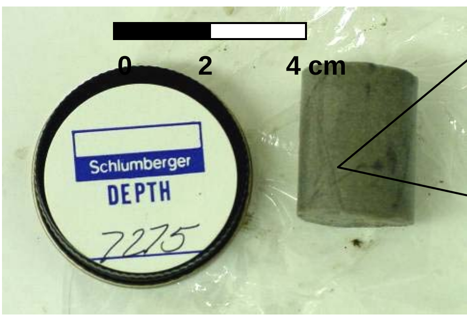
Battelle Graphic

AEP AMERICAN ELECTRIC POWER

Immediate Caprock above Injection Zone

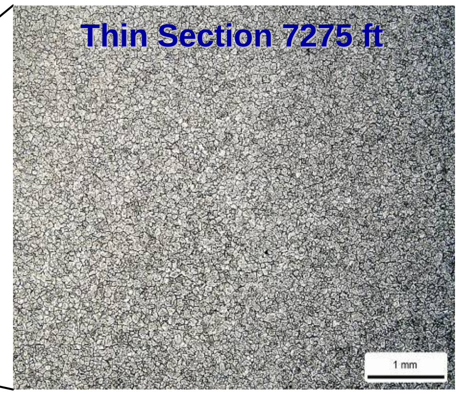
Beekmantown Dolomite 7210-7755 ft

Rotary Sidewall Core 7275 ft

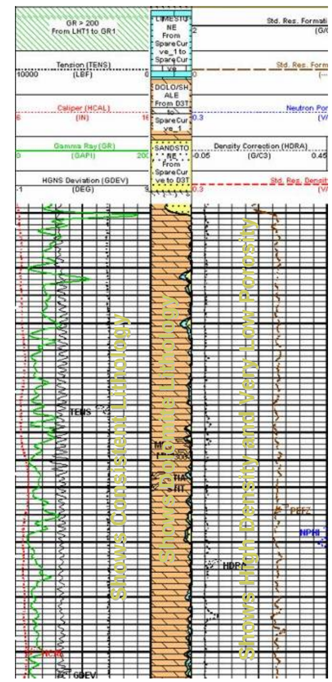


X100

Thin Section 7275 ft



Wireline Log 7100-7300 ft



Hydraulic Core Tests 7275 ft	
Lithology	= Dolomite
Density	= 2.82 g/mL
Porosity	= 0.38%
Permeability	= <0.001 mD

Battelle Graphic

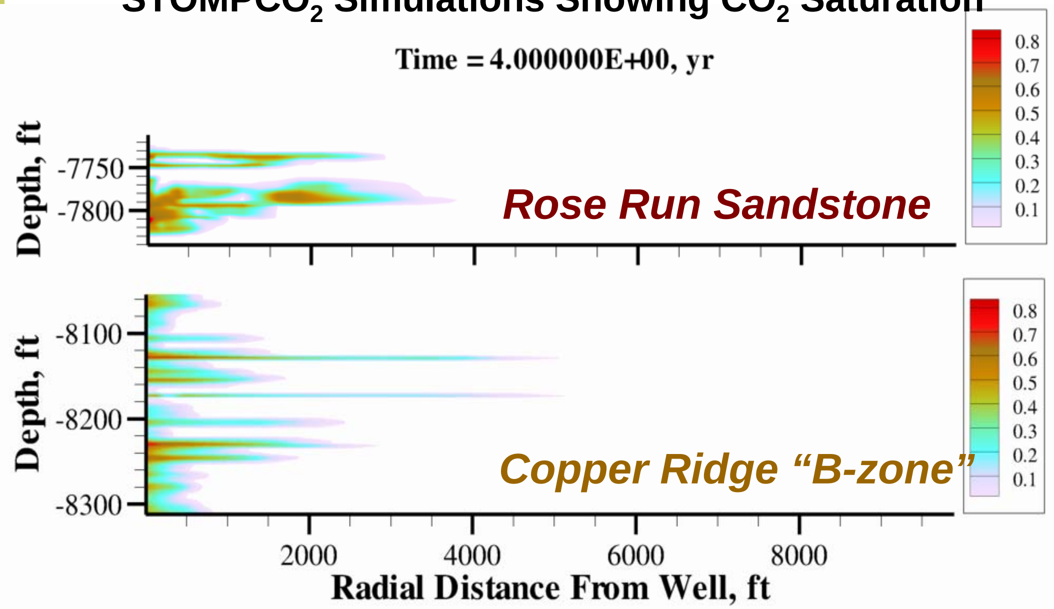
- Presence of multiple, thick, low- permeability containment zones has been established through wellbore observations and seismic survey

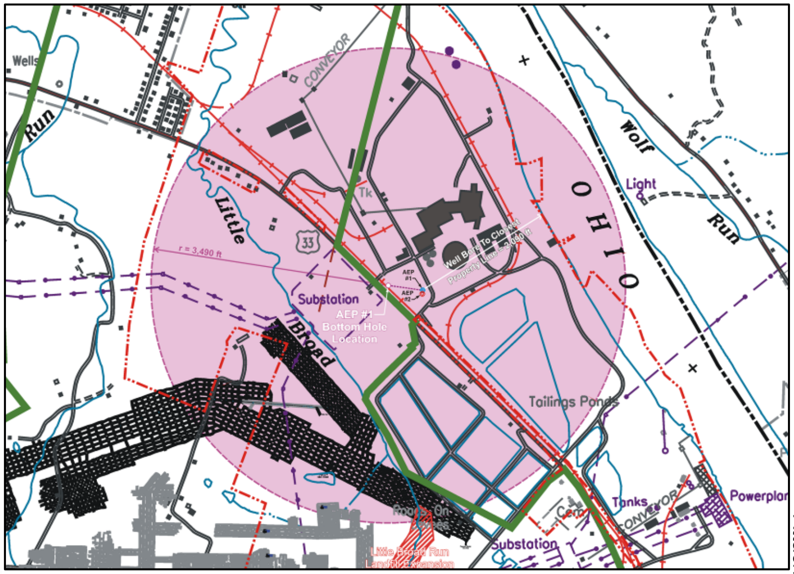
Data from Battelle

Area of Review

- "The Area of Review (AOR) is to be, at a minimum, the anticipated size of the CO_2 plume as modeled or calculated from the injection volume and the characteristics of the injection zone."
- Based on modeling of ~165,000 tonnes/yr of CO_2 into a single formation, an AOR at 3,490 ft from injection well (area containing 90% CO_2) has been proposed.

STOMPCO$_2$ Simulations Showing CO_2 Saturation





AEP AMERICAN ELECTRIC POWER

Injection Well Design Example

- Proposed well design for injection well AEP#1 for completion in Rose Run Sandstone
- Multiple well casings isolate shallow freshwater and intermediate zones from injection
- Stainless steel casing and CO_2-resistant cement used in deep injection well casing

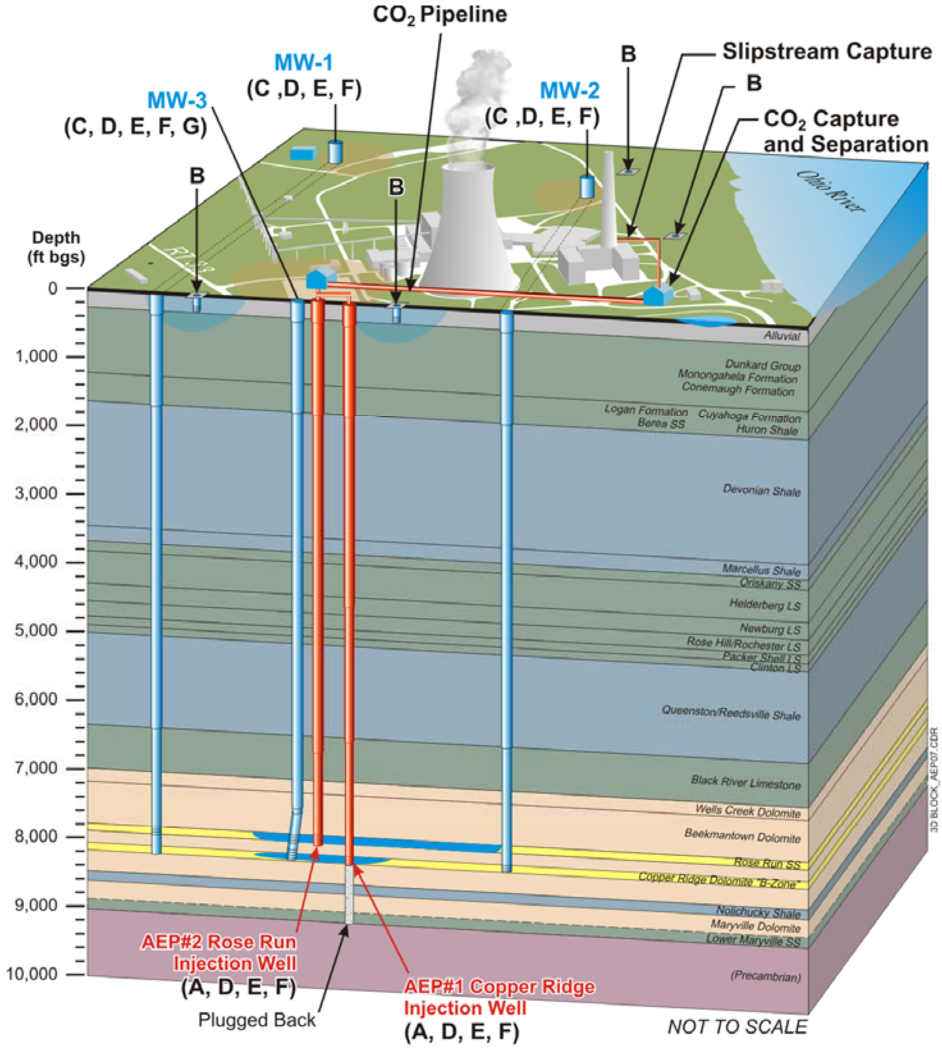
AMERICAN ELECTRIC POWER

Monitoring System Design



Injection Well Monitoring

- **A** Injection Flow Rate, Injection Pressure /Temperature, Annulus Pressure, Corrosion Monitoring, CO_2 Injectate Analysis

Surface Leak Detection Methods

- **B** Shallow Groundwater Monitoring

CO_2 Tracking Methods

- **C** Fluid Sampling
- **D** Wireline Logging for CO_2 Detection
- **E** Pressure Monitoring
- **F** Cross-Well Seismic Surveys

Caprock/Confining Layer Monitoring

- **G** Microseismic Monitoring

Battelle Graphi

Permits & Outreach

- Known or anticipated permits:
  - Underground Injection Control (UIC) – WV DEP
  - Monitoring well work permit – WV DEP
  - NPDES permit modification – WV DEP
  - Storm Water Construction Permit – WV DEP
  - Public Lands Permit – WV DNR
  - Corps permit notification – Corps of Engineers
  - Periodic seismic survey – Local/county engineer

- Communication and outreach
  - WV DEP and EPA Meetings
  - AEP informational presentations
  - Local town hall and community leader meetings
  - Outside stakeholders

CCS Development Challenges

Biggest challenges for large scale CCS projects:

1. Pore space ownership & legal approval
2. Parasitic load
3. Capital and O&M costs

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms and our ability to recover significant restoration costs through applicable rate activities, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through rates, insurance or warranty, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances that could impact the continued operation of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of the recently passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events. AEP and its Registrant Subsidiaries expressly disclaim any obligation to update any forward-looking information.

Value Proposition to Retail Investors

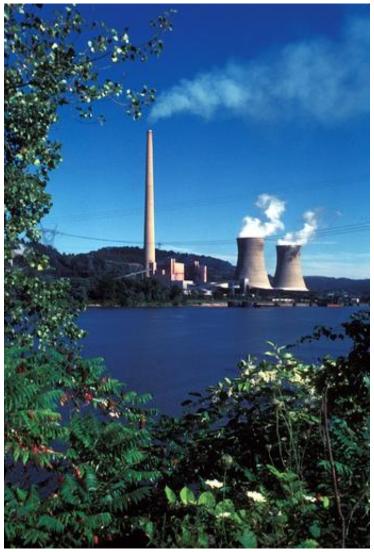
- **Attractive Yield Opportunity of 4.8%[1]**
  - 50-60% payout ratio targeted
  - Nearly a century of dividend payments to shareholders
- **Earnings Growth Prospects**
  - Investment in utility platform greater than depreciation level (2 - 4%)
  - With transmission opportunities (4 - 8%)

Current Wall Street Analyst Coverage:

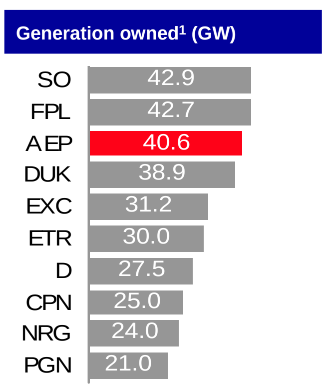
- 21 analysts
- 14 Buy Ratings
- 7 Hold Ratings

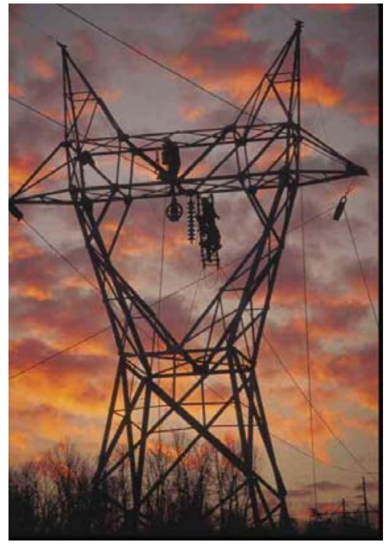
[1] yield percentage based on AEP closing price of $34.30 on 04/06/2010

Industry Leadership

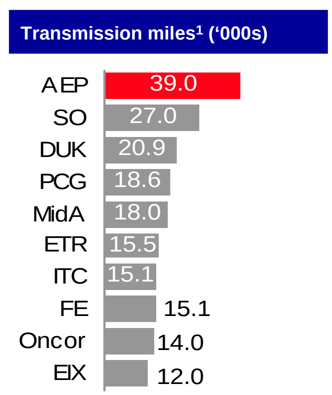


One of the largest U.S. electricity generators

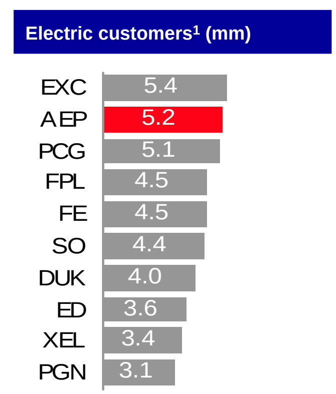




The largest U.S. electricity transmitter



One of the largest U.S. electricity distributors serving 5.2MM customers

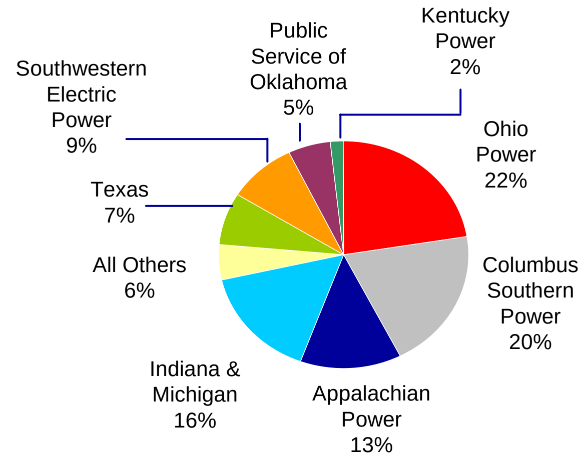


[1] Source: Company Filings
*AEP generation includes long-term PPAs and generation under construction

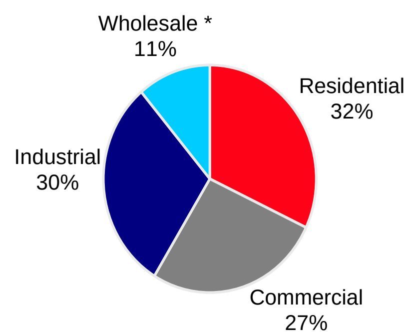
Highly Diversified Regulated Utility Platform

Serving 5.2 million customers in 11 states

2009 Earnings Contribution

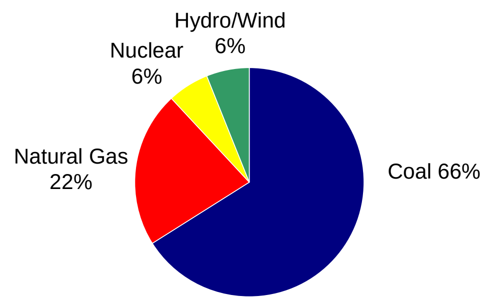


2009 Retail Load



** Wholesale includes sales to municipal and cooperative power systems, other wholesale, and other retail sales*

Fuel Mix



Traditional Ratemaking Environment

- **Base Rates**
  - Recovery of capital and financing costs
  - Recovery of set level of O&M costs

- **Recovery of Fuel Costs**
  - Active fuel clauses in all jurisdictions

- **Opportunities to Reduce Regulatory Lag**
  - Contemporaneous recovery for construction costs, reliability, environmental spending, etc.

Growth in rate base resulted in $2 billion of rate relief secured from 2006 through 2009

Energy Policy Initiatives = Opportunities

AEP®

Policy: Greenhouse Gas Emissions Reductions

Technology: Mountaineer Carbon Capture and Storage Project

Carbon Capture and Storage Project – Mountaineer Plant (WV)

Policy: Renewable Energy Standards; Energy Efficiency, Security and Reliability

Technology: Industry Leading High Voltage Transmission and gridSMART℠ Projects

765-kV Transmission Line – Wyoming-Jacksons Ferry (WV)

Transmission Investment Opportunities

ETT: Projects in Texas ERCOT jurisdiction

- $600MM of projects est. in service 2010-2013
- ETT's opportunity could reach $3.1B in this decade

Transco: Within our existing footprint

- Provides opportunity to:
  - Develop new AEP-only projects
  - Reduce regulatory lag through FERC formula rates adjusted annually

Joint Ventures: Outside of our footprint, via ETA or with others

- Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
- Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2016
- Robust pipeline of projects up to $15B

765-kV Tower

2010 Ongoing Earnings Guidance

	2009A: $2.97	2010E: $2.80-$3.20
Utility Operations	$ 2.87	$ 3.01
Transmission Operations	$ 0.01	$ 0.02
Nonutility Operations	$ 0.19	$ 0.09
Parent & Other	$(0.10)	$(0.12)

EARNINGS DRIVERS

- ↑ $320MM in rate relief
- ↑ Increase in off-system sales volumes
- ↑ Load growth

- ↓ Net increase in utility operations O&M of $23MM
- ↓ Elimination of Cook accidental outage insurance proceeds
- ↓ Increase in average shares outstanding

Topics for Discussion

- **AEP Climate Strategy:**
  - How is AEP preparing for ultimate climate legislation?
  - What specific voluntary actions and proactive investments is the company undertaking?

- **Federal Legislation:**
  - What type of climate legislation is likely?
  - When will it become effective?
  - How will climate legislation affect operations, capital investment, choice of generation, operations and earnings?
  - What constitutes "reasonable" climate legislation?

AEP®

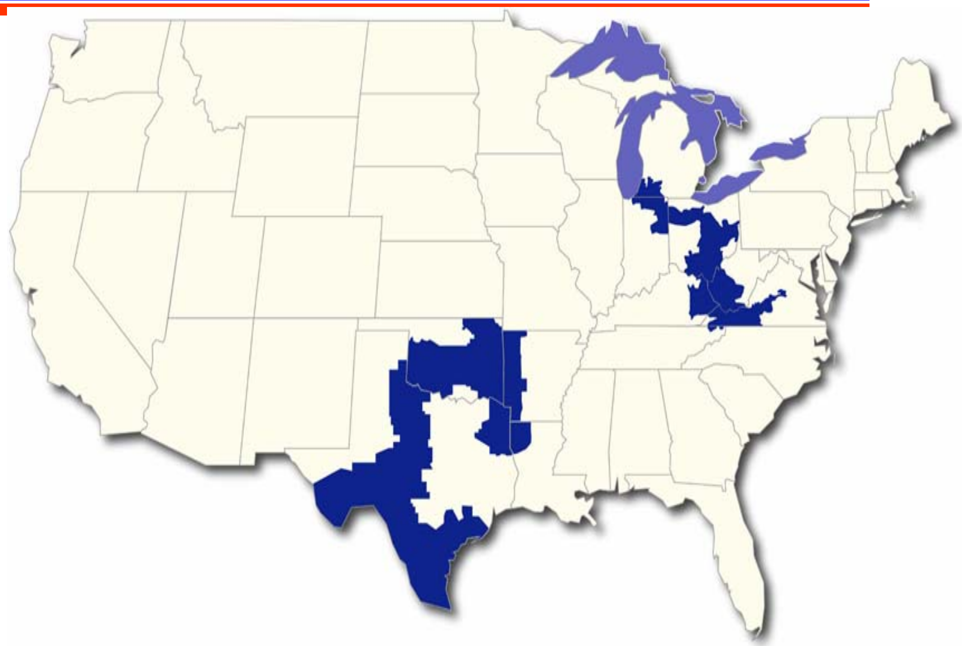
Company Overview

- 5.2 million customers in 11 states
- Industry-leading size and scale of assets:

Asset	Size	Industry Rank
Domestic Generation	~38,300 MW	# 2
Transmission	~39,000 miles	# 1
Distribution	~212,000 miles	# 1

Source: Company research

- Coal & transportation assets
  - Control over 8,400 railcars
  - Own/lease and operate over 2,650 barges & 52 towboats
  - Coal handling terminal with 20 million tons of capacity
- 20,800 employees



AEP Generation Portfolio				
Coal	**Gas**	**Nuclear**	**Hydro**	**Wind**

AEP Climate Strategy

AEP's Climate Strategy

GLOBAL ROUNDTABLE ON CLIMATE CHANGE

CLIMATE LEADERS®
U.S. Environmental Protection Agency

CCX™ Chicago Climate Exchange

EPRI | ELECTRIC POWER RESEARCH INSTITUTE

- **Being proactive and engaged in the development of climate policy**
  - International Emissions Trading Association (IETA)
  - Electric Power Research Institute (EPRI)
  - Pew Center on Global Climate Change
  - e8
  - Global Roundtable on Climate Change
- **Investing in science/technology R&D**
  - US DOE research on carbon capture and sequestration at our Mountaineer Plant
  - EPRI – combustion technologies
  - MIT Energy Laboratory
  - B&W – Oxy-Coal
- **Taking voluntary, proactive action now, making real reductions and setting policy precedents thru CCX**
  - Chicago Climate Exchange (CCX)
  - EPA Climate Leaders and SF-6 Program
  - Asia-Pacific Partnership
  - DOE 1605B- voluntary reporting of GHGs Program
  - Business Roundtable Climate Resolve
  - Numerous forestry activities
- **Investing in longer term technology solutions--new generation and carbon capture and storage (e.g., IGCC, Ultra-supercritical PC)**

AEP®

AEP must be a leader in addressing climate change

AEP's Climate Position

- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment

- Inclusion of adjustment provision if largest emitters in developing world do not take action

A reliable & reasonably-priced electric supply is necessary to support the economic well-being of the areas we serve.

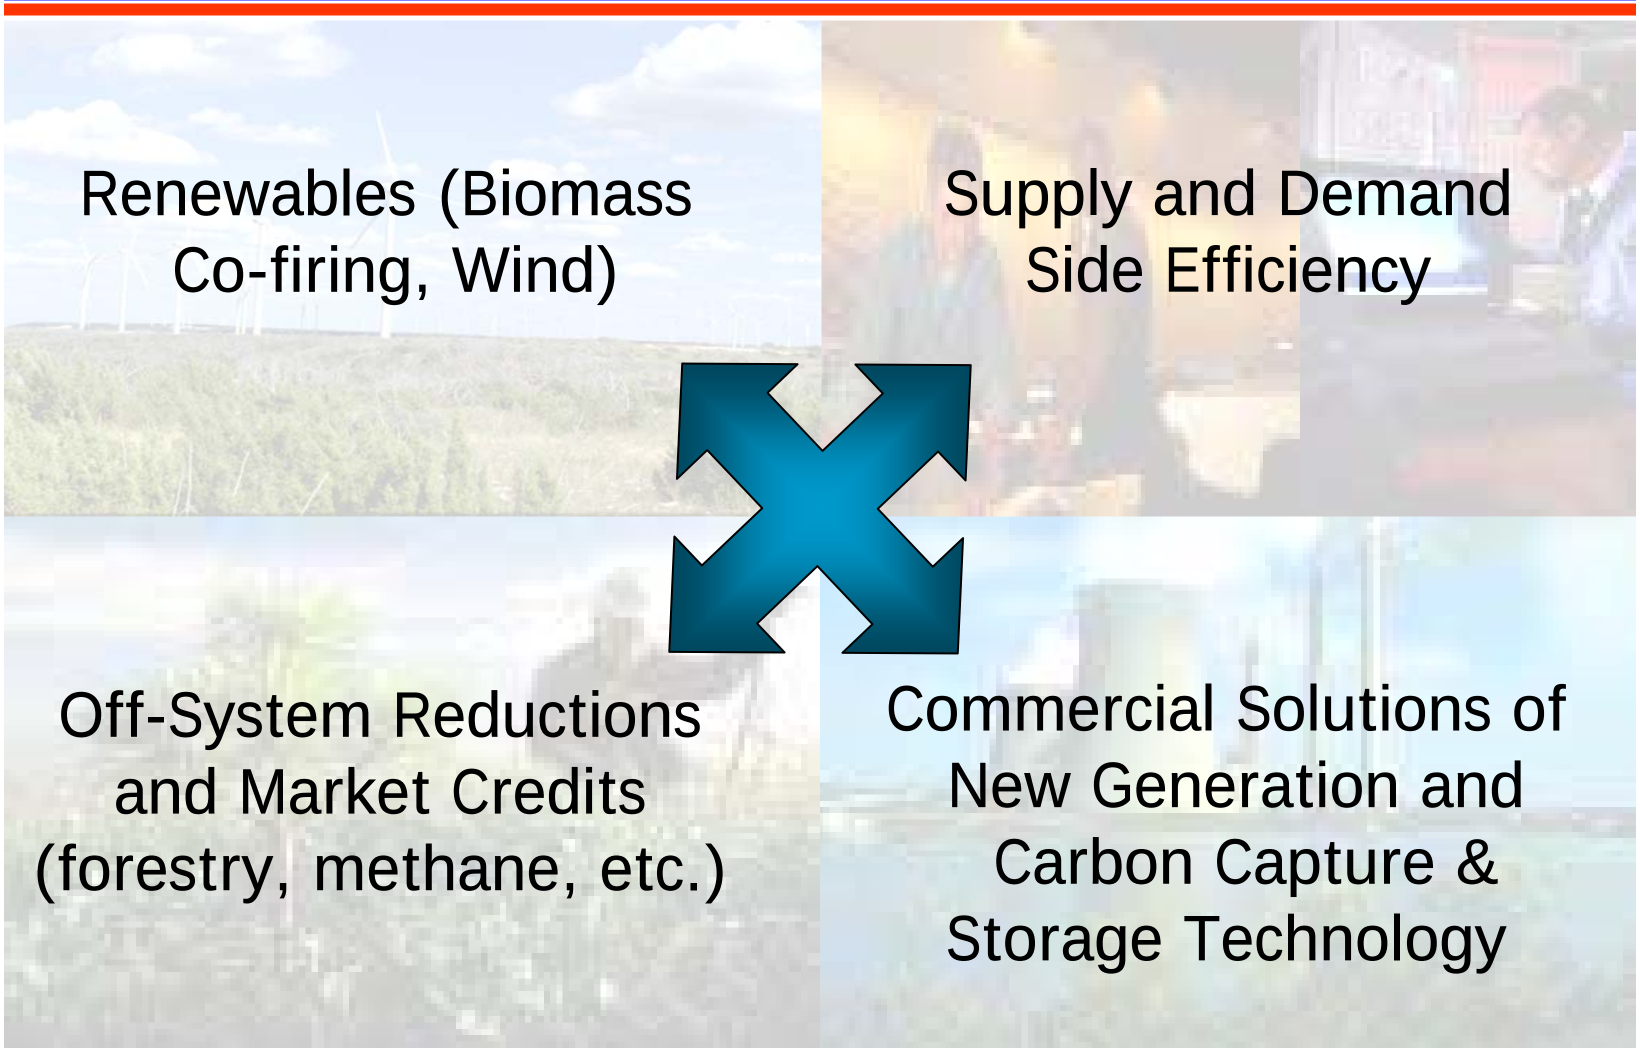
AEP's Long-Term GHG Reduction Portfolio



AEP is investing in a portfolio of GHG reduction alternatives

A Portfolio Approach: AEP Long-Term CO_2 Reduction Commitment

Existing Programs

- **Existing plant efficiency improvements**
- **Renewable Energy**
  - 800 MWs of Wind
  - 300 MWs of Hydro
- **Domestic Offsets**
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - **1.2MM tons of carbon sequestered**
- **International Offsets**
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- **Chicago Climate Exchange**

AEP's reductions/offsets of CO_2:
- **2003-2005: 31 MMT**
- **2006-2010 (proj.): Additional 15 MMT**

New Program Additions (by 2011)

- **1000 MWs of Wind PPAs: 2MM tons/yr**
- **Domestic Offsets (methane): 2MM tons/yr**
- **Forestry: Tripling annual investment to increase to 0.5MM tons/yr by 2015**
- **Fleet Vehicle/Aviation Offsets: 0.2MM tons/yr**
- **Additional actions--end use and supply efficiency and biomass: 0.2MM tons/yr**

New Technology Additions

- **New Technology Generation – IGCC and USC**
- **Commercial solutions for existing fleet**
  - Chilled Ammonia
  - Oxy-Coal

AEP's reductions/offsets of CO_2:
2011+: 5 MMT/YEAR
Longer Term—New Technology

AEP®

AEP Wind Operations/Purchases

Trent Mesa (2001)

- **150 MW** (100 - 1.5 MW turbines)
- Abilene/Sweetwater, TX

Southwest Mesa (1999)

- **75 MW** (107 – 700kW turbines)
- McCarney, TX
- Power Purchaser

Desert Sky (2002)

- **160 MW** (107 - 1.5 MW turbines)
- Bakersfield, TX

Summary

•Owned/Operated 385 MW

•Wind Purchases 392 MW

•Total Existing Wind at end of 2006: 777 MW

•**New Wind Purchases in 2007: 275 MW**

Will acquire an additional 725 MW of new wind to attain goal of 1,000 MW by 2011

Off-System Reductions

Existing AEP Programs:

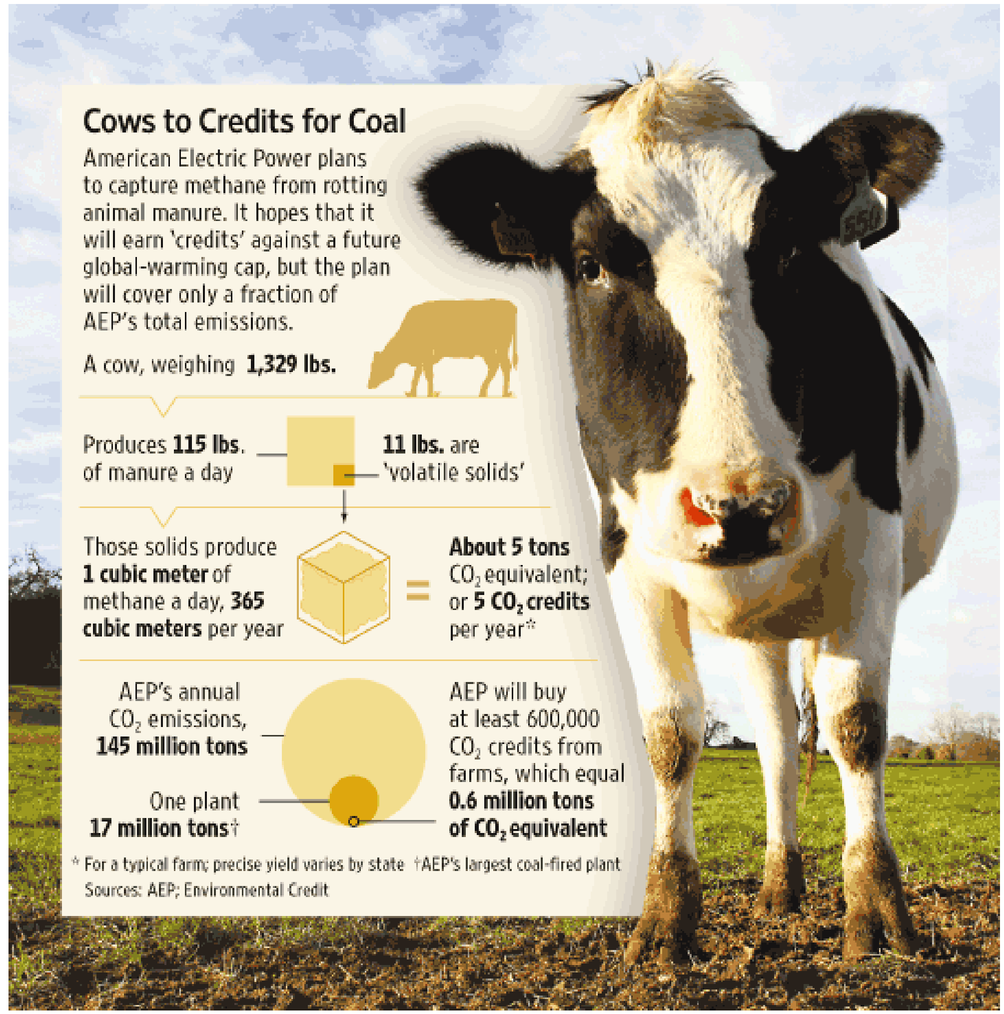
- Forestry - Domestic
  - 350,000 tons / yr
  - 63 MM trees planted
- Forestry – International
- Chicago Climate Exchange

New AEP Commitment by 2011:

- 2 M tons per year of additional CO_2 offsets

Latest Announcement:

- Methane Capture Deal with Environmental Credit Corp.
  - 600,000 CCX carbon credits per year
  - Begins 2010
  - Runs through 2017
  - 51% of credits sourced from "AEP States"

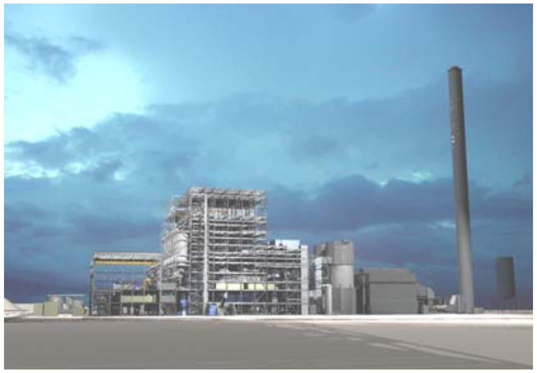


Source: Wall Street Journal June 14, 2007

AEP Leadership in Technology: IGCC and USC

NEW ADVANCED GENERATION

- **IGCC -- AEP first to announce plans to build two 600+ MW IGCC commercial size facilities in US (OH and WV) by mid next decade**



- **USC -- AEP will be first to employ new generation ultra-supercritical (steam temperatures >1100ºF) coal plant in U.S (AR)**

AEP®

AEP's Carbon Capture & Storage Initiative

In March 2007, AEP announced a major new carbon capture and storage initiative:

- **Chilled Ammonia CCS--We will install carbon capture on two coal-fired power plants, the first commercial use of technologies to significantly reduce carbon dioxide emissions from existing plants.**
  - **The first carbon capture project, at the Mountaineer plant in West Virginia, is expected to complete its product validation phase in 2009**
  - **The second, at the Northeastern plant in Oklahoma, will begin commercial operation in 2012.**
- **Oxy-Coal--AEP will also demonstrate (10MWe) and then install oxy-coal CO_2 capture & storage at a commercial sized coal unit (about 200 MWe)—feasibility study to be completed in 2008.**

AEP®

AEP Leadership in New Technology: Chilled Ammonia CCS

Phase 1

2009 Commercial Validation

1300 MW Mountaineer Plant (WV) → MOU (Alstom) **Chilled Ammonia 20MWe scale**

CO_2 Storage (Battelle)

Captures and sequesters 100,000 metric tons of CO_2 /yr.

Phase 2

2012 Commercial Operation

450 MW Northeastern Plant (OK) → MOU (Alstom) **Chilled Ammonia 200MWe scale** → EOR

CO_2 Storage

Captures and sequesters 1.5 Million metric tons of CO_2 /yr.

AEP®

ELECTRIC POWER RESEARCH INSTITUTE

Key Issues for CCS Development in U.S.

- Overcoming the "Economic" Hurdle
- High Up-Front Capital Investment—Getting Adequate Financing and Recovery in Rates
- Commercial Demonstrations of CCS at Large Coal-Fired Power Plants
- National Standards for Permitting of Storage Reservoirs
- Potential Institutional, Legal and Regulatory Barriers to Carbon Storage

AEP®

Federal Legislation and AEP Position

Prospects for US Federal Legislation—The Crystal Ball

- With Democratic majorities in the House and Senate, prospects during the 110th Congress for mandatory climate legislation have increased.
- Nonetheless, the Senate and House have just begun introducing/developing legislation and there are many contentious issues, particularly allocation.
- In the 2009 and after period, passage of legislation is more likely, with a new President in office.
- A general timeline for passage of Clean Air Legislation has typically been 5-8 years after the initial “serious” proposals.

We are at the “end of the beginning” NOT the “beginning of the end.”

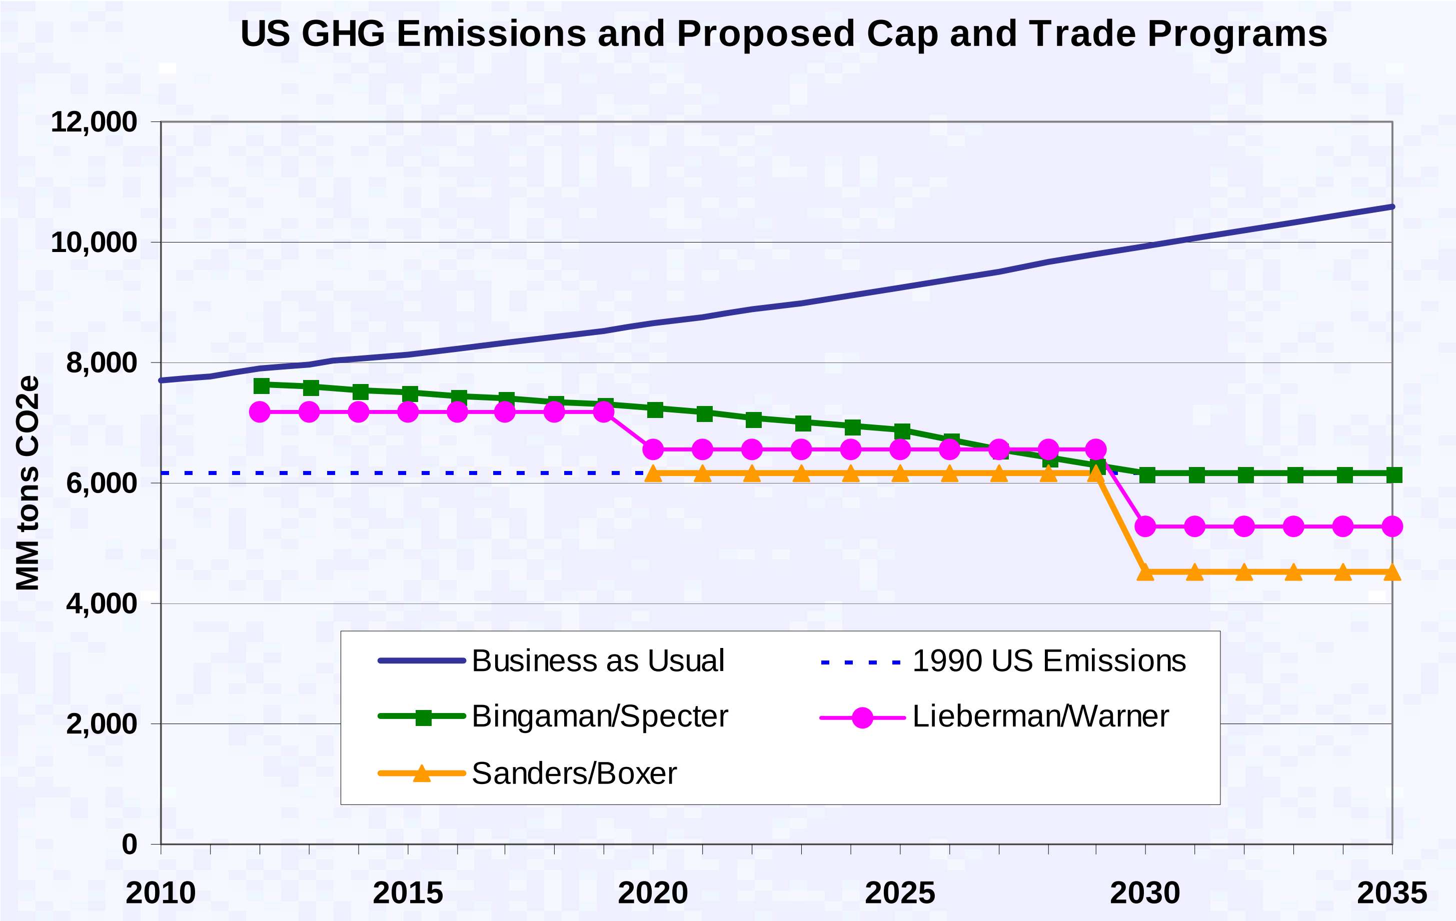
AEP®

Potential for Federal Climate Legislation

- Legislation could pass as early as 2009-10 with limits taking effect as early as 2015. Any earlier reduction requirements are unlikely.
- Moderate approach probably has best chance of passage, which means offsetting emissions growth initially (during next decade) with significant reductions thereafter.
- Impacts in terms of utility operations, capital and earnings won't be until the 2015-20 period. With more substantial impacts probably not beginning until 2020 and after.

AEP®

Emission Reductions Under Selected Bills



AEP®

AEP Supports Bingaman-Specter Bill

"Low Carbon Economy Act of 2007"

- Economy wide cap-and-trade program to limit Greenhouse Gas Emissions
  - Caps and Dates
    - 2006 Levels by 2020
    - 1990 levels by 2030
  - Industry Sectors "Regulated" under bill
    - Natural Gas and Petroleum regulated "upstream"
    - Coal regulated "downstream" at the power plant level
  - Allocations to Electricity Generators
    - Only fossil-fired electric generators receive allowances
  - Safety Valve (TAP)
  - Bonus Allowances for Carbon Capture and Sequestration
  - Early Reduction Credits and Offsets Included
  - Congressional Review of International Action (e.g. AEP-IBEW Proposal)

AEP®

AEP Supports Reasonable Legislation on GHG

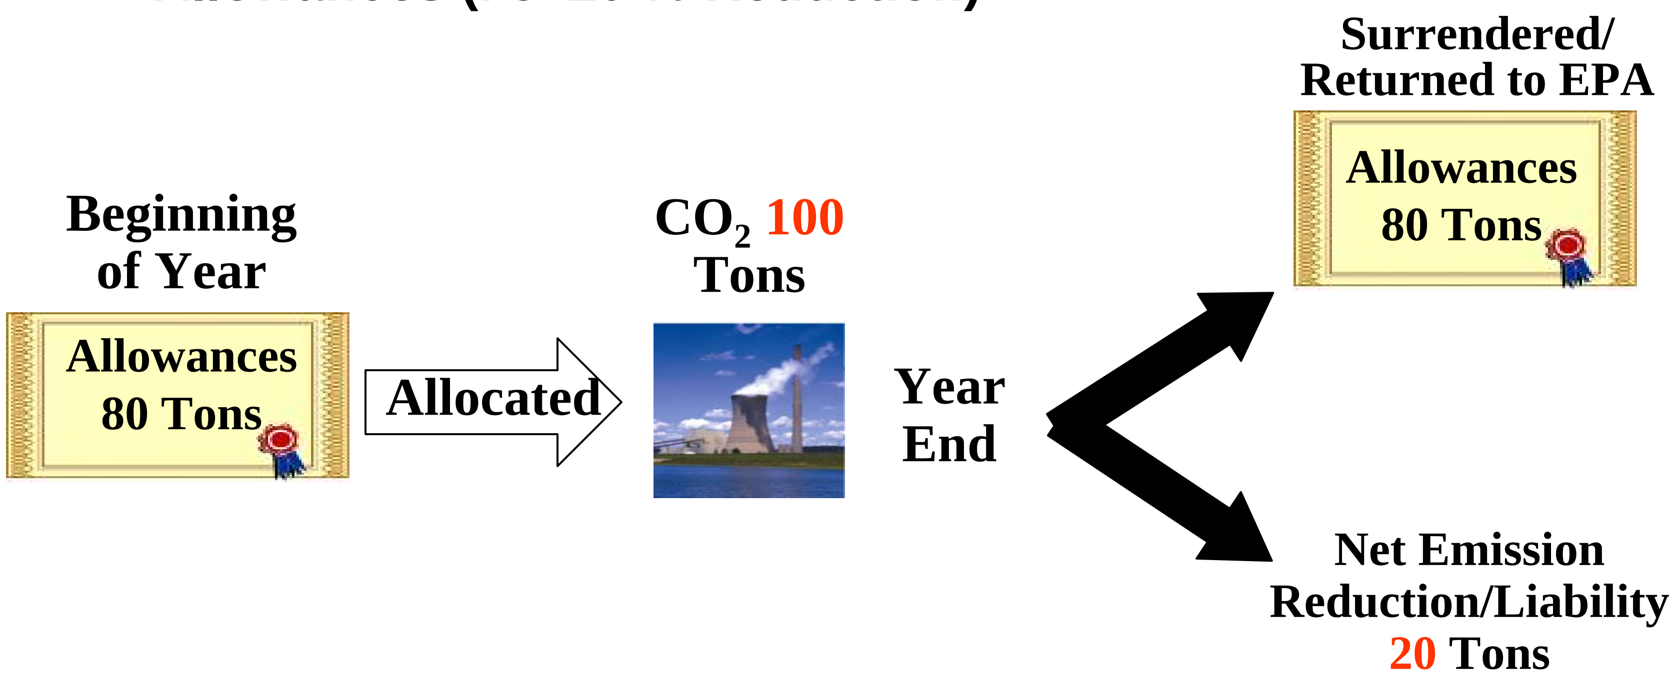
Background on Allowance Allocations and Auctions

- **"Allowance" = Right to emit a ton of emissions.** Each year allowances are surrendered to cover annual emissions.
- **Most programs (e.g. EPA's SO_2 and NOx, CAIR and CAMR) allocate allowances (at "no cost") to generators (primarily based on historic emissions) with little or no auction.** The EPA SO_2 program has been hailed as a success because of its AFFORDABILITY due in part to a small (2.8%) auction.
- **Allowance allocation to emitters does NOT result in a "windfall." CO_2 cap means ALLOWANCES <EMISSIONS. So reductions must be made at a NET COST.**
- **Importantly, whether allowances are allocated at "no cost" or auctioned has NO environmental impact, it is the overall CO_2 cap that determines the amount of reductions.**

AEP®

“Free” Allocation To Emitters Does Not Increase Profits

- Example: Company Emits 100 Tons, Receives 80 “No-Cost” Allowances (i.e. 20 % Reduction).



- Full Allocation to Emitters Does NOT Create a “Net Asset” or Windfall because of the Liability of Complying with the CO_2 Cap. In fact, it is a NET LIABILITY.

AEP®

Technical Appendix

Carbon Capture and Storage

CO_2 Capture Techniques

- **Post-Combustion Capture**
  - Conventional or Advanced Amines, Chilled Ammonia
  - *Key Points*
    - Amine technologies commercially available in other industrial applications
    - Relatively low CO_2 concentration in flue gas – More difficult to capture than other approaches
    - High parasitic demand
      - Conventional Amine ~25-30%, Chilled Ammonia target ~10-15%
    - Amines require **very** clean flue gas
- **Modified-Combustion Capture**
  - Oxy-Coal
  - *Key Points*
    - Technology not yet proven at commercial scale
    - Creates stream of very high CO_2 concentration
    - High parasitic demand, >25%
- **Pre-Combustion Capture**
  - IGCC with Water-Gas Shift – FutureGen
  - *Key Points*
    - Most of the processes commercially available in other industrial applications
      - Have never been integrated together
    - Turbine modified for H_2-based fuel, which has not yet been proven at commercial scale
    - Creates stream of very high CO_2 concentration
    - Parasitic demand (~20%) for CO_2 capture - lower than amine or oxy-coal

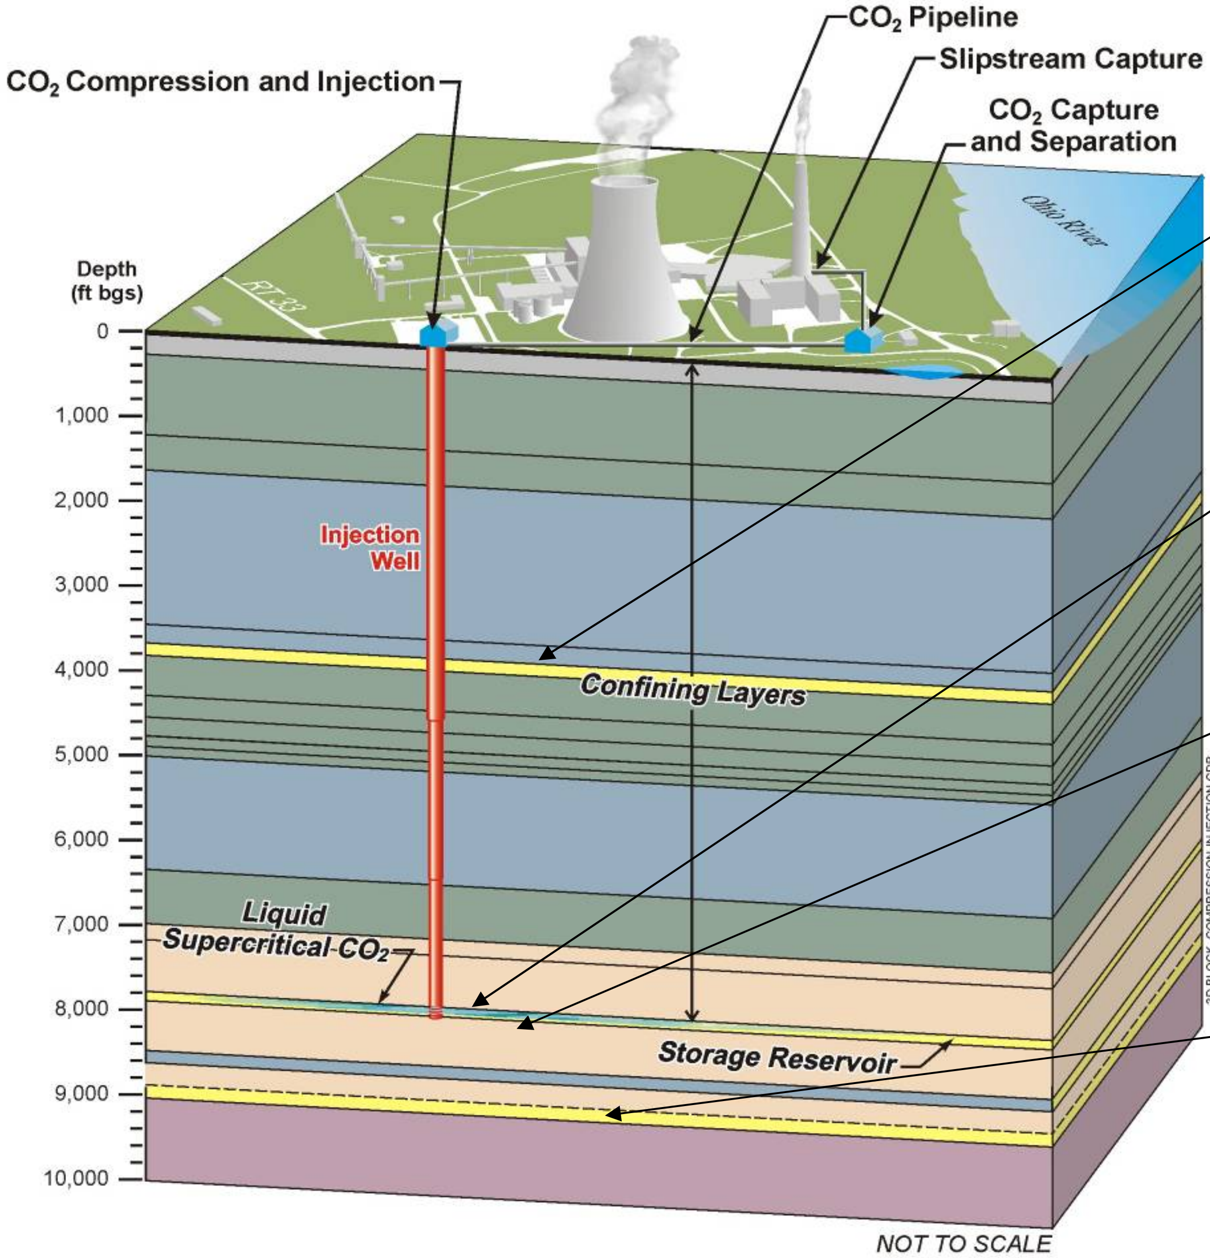
CO_2 Injectivity in the Mountaineer Area



CO_2 injection should also be possible in shallower sandstone and carbonate layers in the region

Rose Run Sandstone (~7800 feet) is a regional candidate zone in Appalachian Basin

A high permeability zone called the “B zone” within Copper Ridge Dolomite has been identified as a new injection zone in the region

Mount Simon Sandstone/Basal Sand - the most prominent reservoir in most of the Midwest but not desirable beneath Mountaineer site

CCS Clean Energy for A Clean Environment
AEP's Carbon Capture & Storage Project

Leading the Way

AEP and Carbon Capture and Storage

AEP continues its heritage of advancing technology for the electric utility industry with leading-edge carbon capture and storage initiatives.

As an industry leader in climate action, AEP recognized more than a decade ago that the emissions of its coal-fueled fleet of power plants -- including carbon, a greenhouse gas emission associated with global climate change -- would have a significant impact on the future of the company.

AEP has faced the challenge with innovative, first-of-a-kind approaches designed to allow the continued use of coal to generate electricity in a carbon-constrained world.

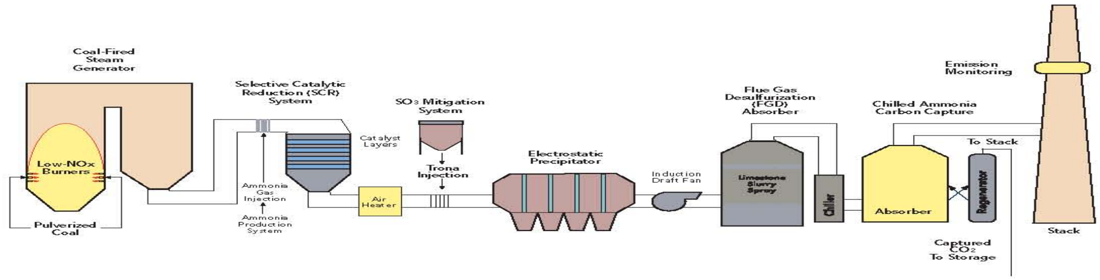
AEP and Carbon Capture and Storage

AEP's goal is to address the issue of climate change while maintaining a supply of affordable, reliable energy for customers that helps keep our economy and our nation secure and strong.

AEP will install Alstom's chilled ammonia process, a post-combustion technology, on two coal-fired power plants

- A technology validation project at Mountaineer Plant in West Virginia and
- Commercial scale installation at Northeastern Station in Oklahoma

The carbon capture project at Mountaineer Plant will be operational in early 2009. In addition, AEP will capture, compress and store underground at least 100,000 metric tons of carbon dioxide (CO_2) per year in deep geologic formations. The estimated $70 million project will operate three to five years.



CCS process occur after the flue gas exits the FGD system and before it enters the stack.

Commercial scale application of Alstom's chilled ammonia process at Northeastern will enter commercial operation in 2011. The installation will capture approximately 1.5 million metric tons of CO_2 per year. At Northeastern, AEP intends that the CO_2 will be used for enhanced oil recovery (EOR).

With these projects, AEP continues its leadership position with significant scale-up of technology to capture and store CO_2 emissions from a coal-fired plant.

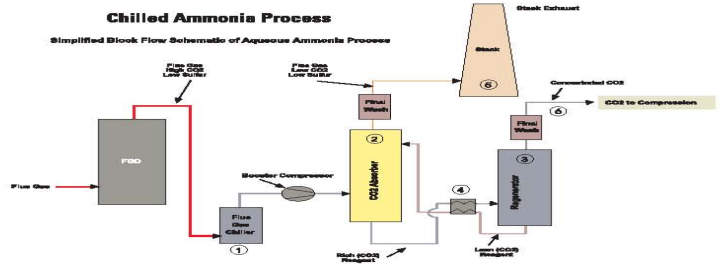
AEP®

AEP's Carbon Capture & Storage Project

Carbon Capture

With Alstom's chilled ammonia process

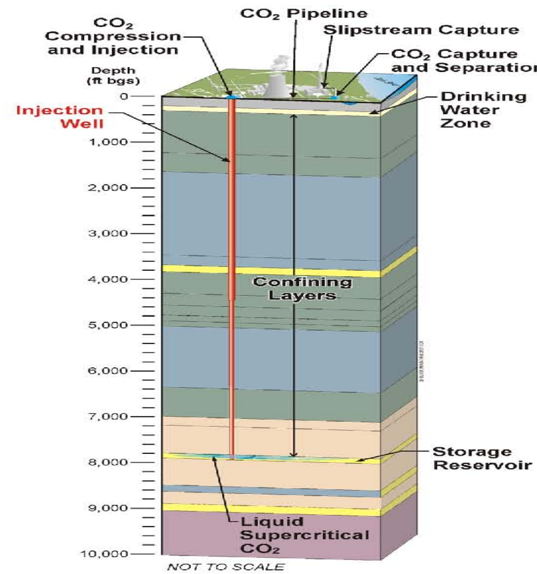
1. The flue gas is chilled to ~ 35°F
2. Ammonium carbonate absorbs CO_2 to make ammonium bicarbonate
3. Ammonium bicarbonate slurry is pumped to a regenerator for CO_2 removal, where the ammonium bicarbonate is converted back to ammonium carbonate and is reused to repeat the process.
4. Heat recovery ensures efficient operation of process.
5. The clean flue gas -- containing mainly nitrogen, excess oxygen and low concentration of CO_2 -- flows to the stack
6. CO_2 is sent to geologic storage in deep saline aquifers or EOR fields.



Carbon Storage

AEP will work with Battelle Memorial Institute to store captured carbon in deep saline aquifers on the Mountaineer Plant site. A characterization study was conducted here in 2003 - 04 and one well already exists. That study indicated that the geologic formations in this area are favorable for carbon storage.

For storage, the captured CO_2 is compressed into a liquid-like state and injected under pressure into saline aquifers in carefully chosen deep geologic formations of pourous sandstone or dolamite. The CO_2 is injected more than a mile underground and spreads through the pore space in the rock where it is effectively trapped from moving upward by layers of impermeable rock above the porous rock, much like oil and gas deposits are trapped for millions of years.



Other technologies – Oxy-coal

AEP also will conduct a retrofit feasibility study with Babcock & Wilcox of its Oxy-coal technology. Plans to retrofit an existing AEP plant for commercial-scale CO_2 capture using this pre-combustion technology will follow.

Oxy-coal combustion creates a flue gas that is primarily a concentrated stream of CO_2. In the Oxy-coal combustion process

- Combustion air is replaced with relatively pure oxygen.
- A portion of the CO_2-rich flue gas is returned to the burners, essentially substituting CO_2 for the nitrogen in the furnace.
- The fraction of the flue gas that is not re-circulated to the burners leaves the plant and is available for subsequent use or storage.
- A secondary benefit of Oxy-coal firing is the reduction of nitrogen oxide (NOx) emissions.

AEP AMERICAN® ELECTRIC POWER

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation or regulation in Ohio and/or Virginia, and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

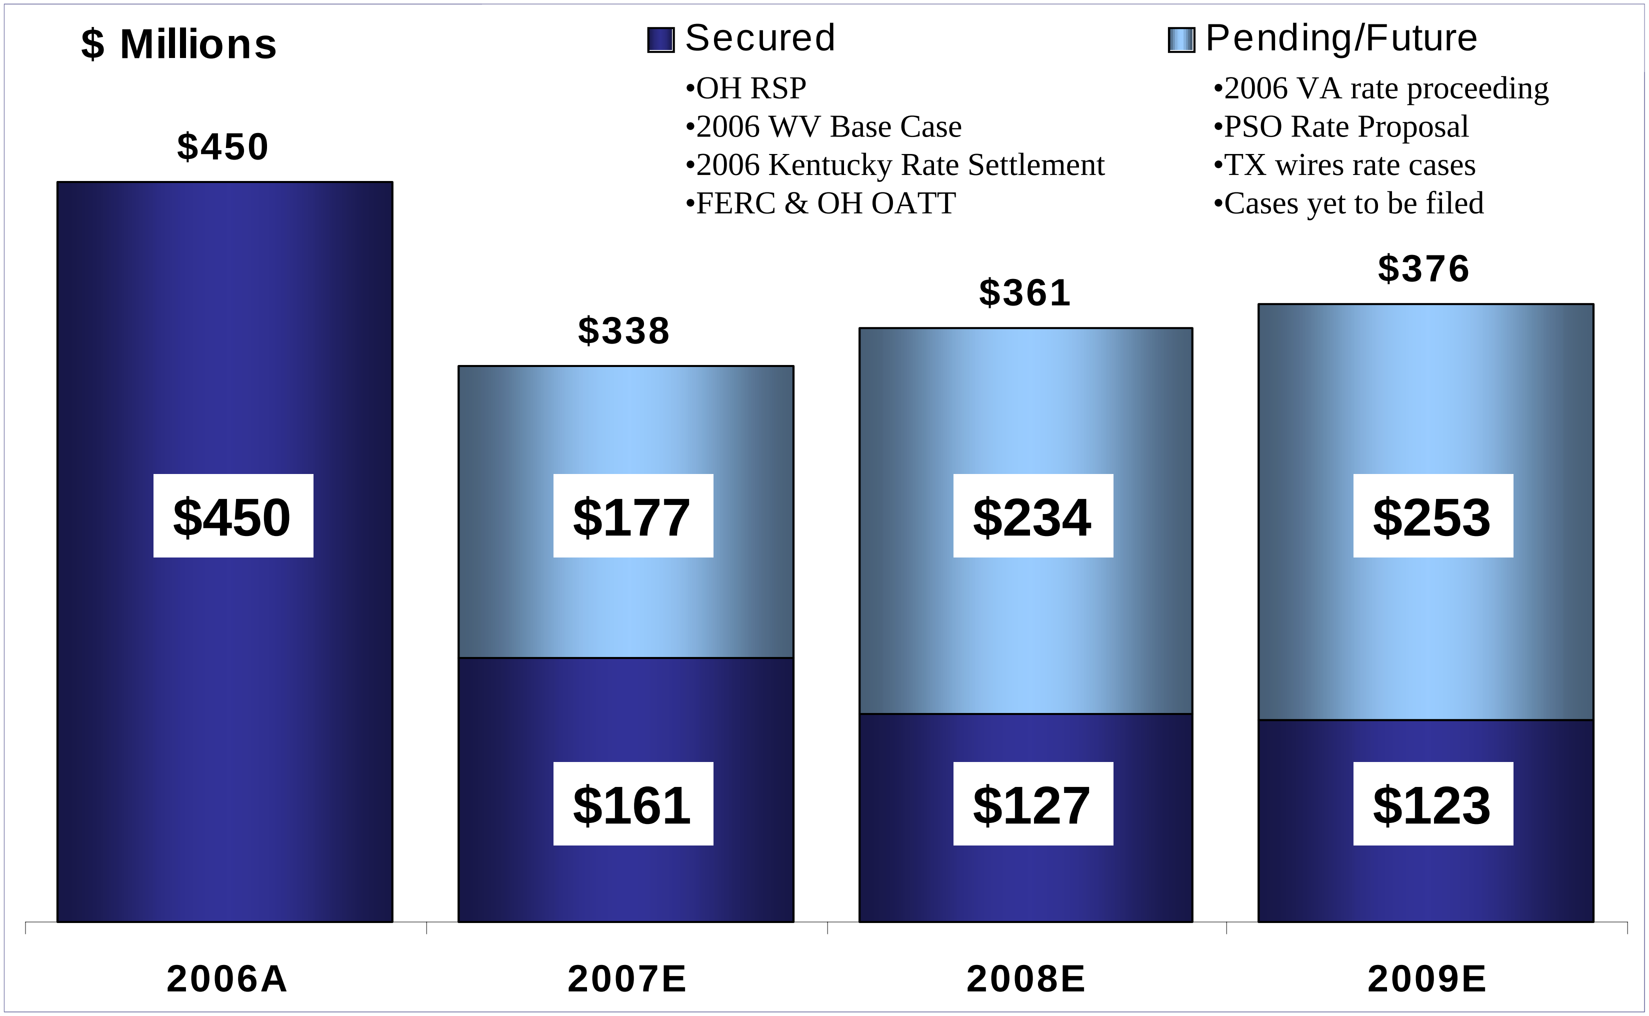
GROWTH INVESTMENT TO BE FUNDED BY CASH FROM OPERATIONS VIA RATE RELIEF AND DEBT ISSUANCES

AEP®

Incremental Rate Relief Composition

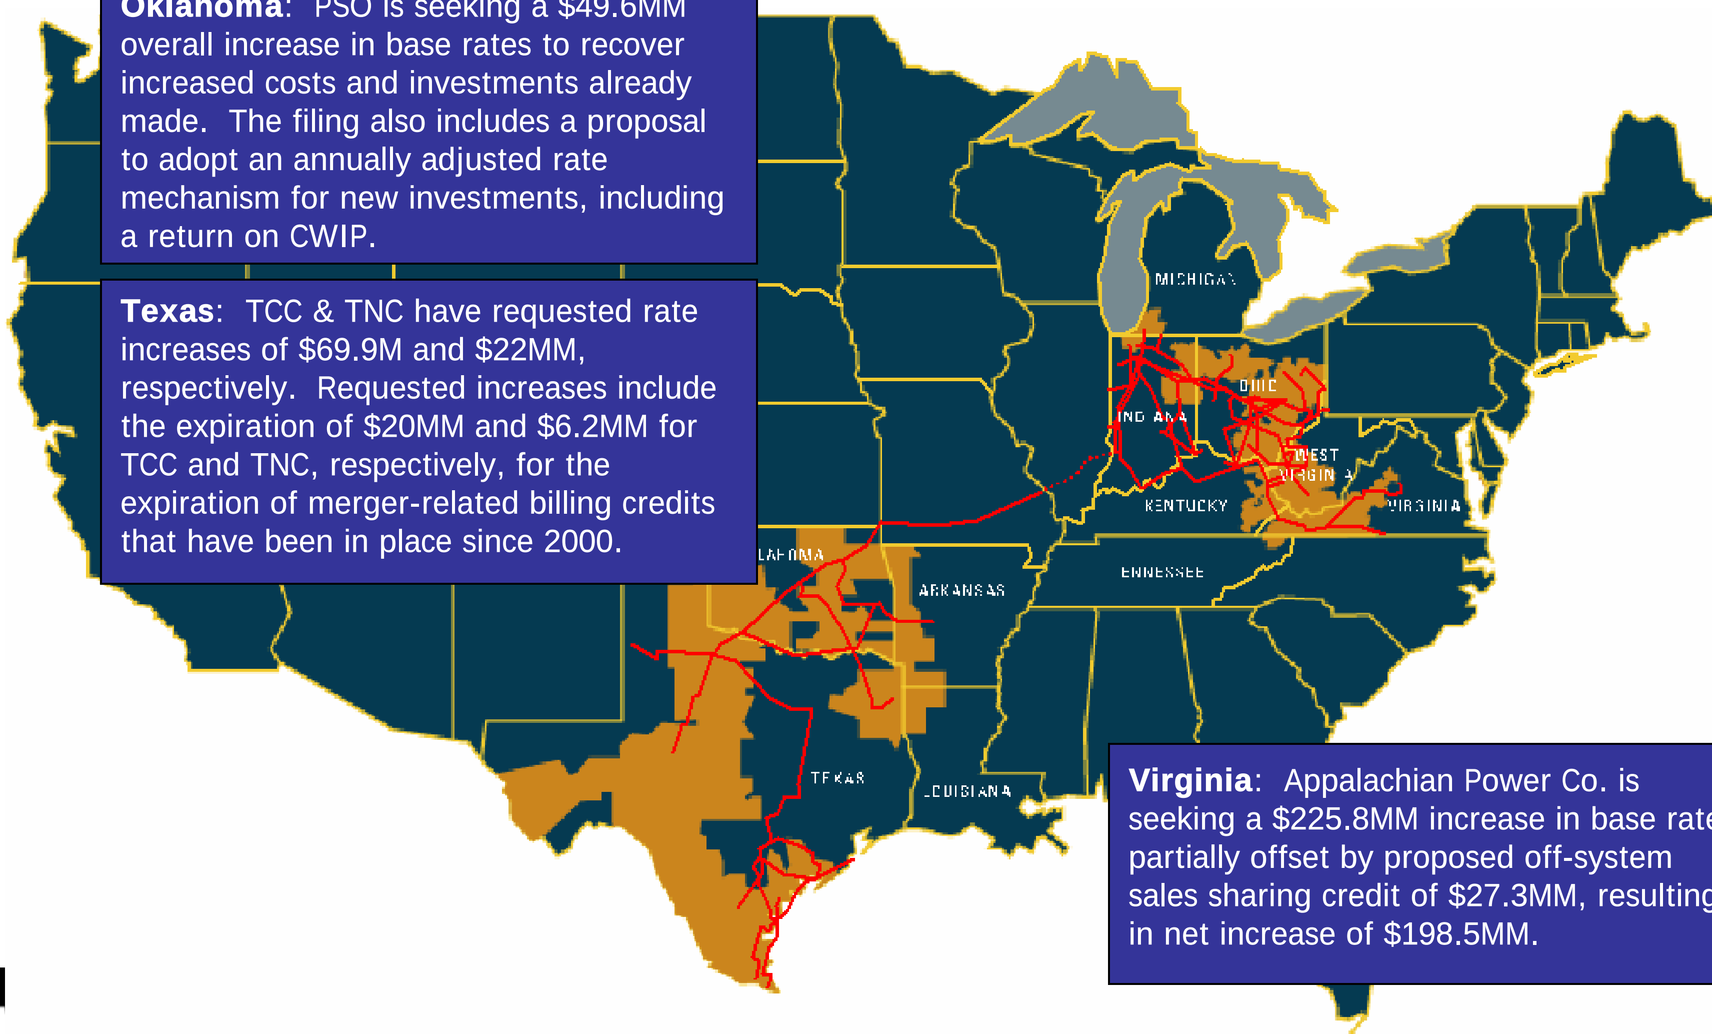


RATE RELIEF IS A CRITICAL ELEMENT TO AEP'S FINANCIAL SUCCESS

Base Case Regulatory Summary

Oklahoma: PSO is seeking a $49.6MM overall increase in base rates to recover increased costs and investments already made. The filing also includes a proposal to adopt an annually adjusted rate mechanism for new investments, including a return on CWIP.

Texas: TCC & TNC have requested rate increases of $69.9M and $22MM, respectively. Requested increases include the expiration of $20MM and $6.2MM for TCC and TNC, respectively, for the expiration of merger-related billing credits that have been in place since 2000.



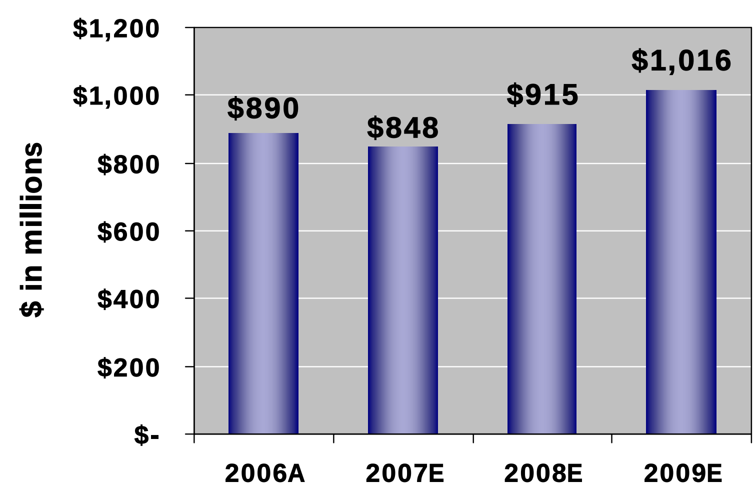
Virginia: Appalachian Power Co. is seeking a $225.8MM increase in base rates, partially offset by proposed off-system sales sharing credit of $27.3MM, resulting in net increase of $198.5MM.

Rate Relief & Enhanced Distribution Investment

- AEP Ohio Reliability Plan (Filed Oct. 6, 2006)
  - Plan will enhance distribution system reliability
  - Proposing an average annual investment of $130MM over 5-year period
- Virginia E&R Mechanism
  - Allows APCo-VA to recover incremental environmental & reliability costs
  - Order issued Nov. 20, 2006 granting $21.4MM of recovery for costs incurred thru Sept. 30, 2005
- Public Service of Oklahoma Rate Rider
  - $24MM annual vegetation management rider approved in Nov. 2005
- Texas Wires Rate Cases (Filed Nov. 9, 2006)
  - TCC & TNC seeking to increase rates for distribution & transmission services
  - Requested increases total $69.9MM and $20MM for TCC & TNC transmission & distribution revenues, respectively.

	2005	2006
Line Miles	201,666	207,632
Net PP&E-Distribution	$7,617MM	$8,241MM

Total Projected Distribution Investment



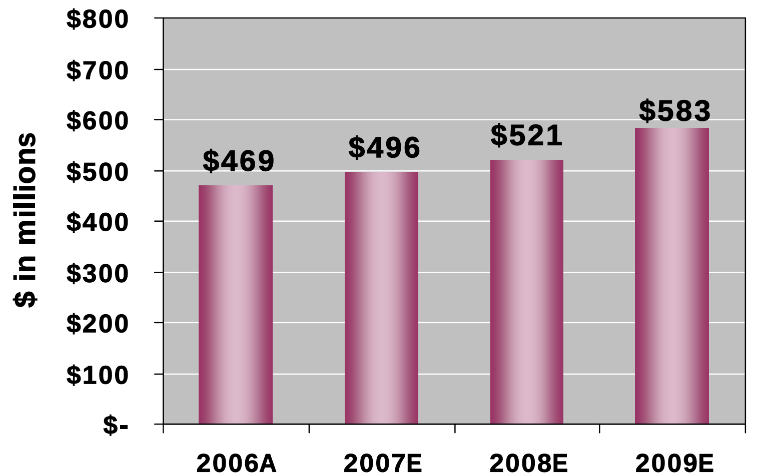
Rate Relief For Distribution Enhancement Will Be Sought Through Innovative Recovery Methods, Such As Rate Riders

Transmission Investment Forecast

- FERC PJM Regional Transmission Rate Design
  - FERC ALJ recommended adoption of "postage stamp" rate
  - Final order expected in mid-2007
- Ohio Annual Transmission Rate Filing
  - Ohio companies transmission rates annually adjusted for FERC-approved open access rates, net congestion & ancillary services
- PUCT & FERC Filings to establish Electric Transmission Texas LLC (ETT)
  - Certificate of Convenience & Necessity filed Jan. 22, 2007 to establish ETT as a regulated utility company and to set initial rates
  - FERC filing to transfer transmission assets to ETT submitted Feb. 15, 2007
  - Approvals and asset transfer expected mid-2007

	2005	2006
Circuit Miles	38,879	39,158
Net PP&E-Transmission	$4,153MM	$4,686MM

Total Projected Transmission Investment



The AEP Advantage: 100 Years Of Transmission Leadership Experience In The United States

Transmission ~ $9 Billion Opportunity*

Creating a business model to manage capital requirements for enhanced returns with partners

- ~ $1 billion+ in ERCOT via Electric Transmission Texas, LLC (ETT)
- ~ $2 billion 765-kV study with ITC in Michigan
- ~ $3 billion I-765 Project in PJM
- ~ $3 billion project filed with SPP

Assumptions	
Estimated Investment Opportunity	$9 Billion
Ownership Structure w/ Partner	50% / 50%
Debt/Equity Ratio	50% debt / 50% equity
Return on Equity	11.00%
Potential EPS Impact (based on 396 MM shares)	+ $0.60**

* ~$9 billion investment opportunity not included in current capital guidance forecasts

** Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion

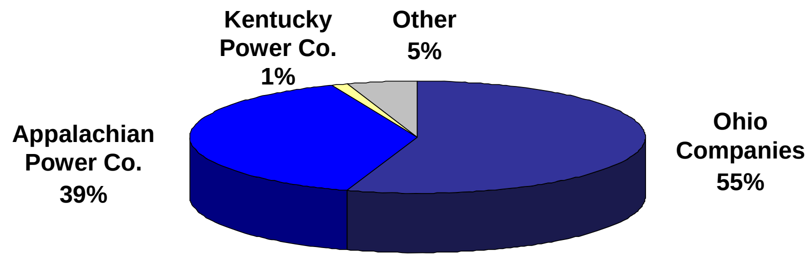
AEP®

Building The Next US Interstate System For Enhanced Reliability And Market Efficiency Could Have Significant EPS Implications

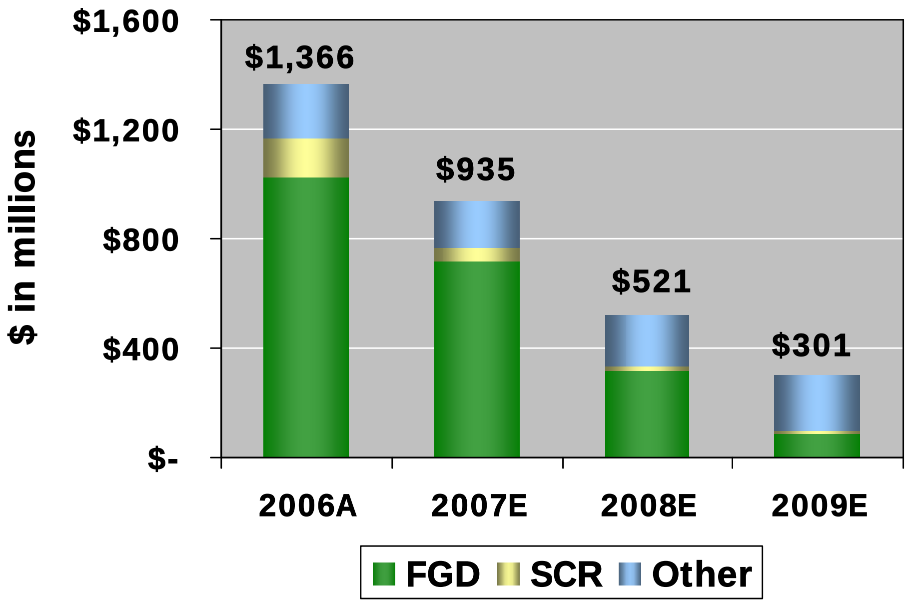
Environmental Investment Forecast

- Ohio Rate Stabilization Plan
  - Annual 3% and 7% generation rate increases at CSP & OP, respectively for 2006-2008
  - Filing made on Jan. 23 for recovery of 2007 costs associated with additional generation-related expenditures, pursuant to the 4% provision of the RSP
- West Virginia Rate Settlement
  - Mechanism in place to provide for rate increases through 2009 for ongoing environmental investments
- Virginia E&R Mechanism
  - Allows APCo-VA to recover incremental environmental & reliability costs
  - Order issued Nov. 20, 2006 granting $21.4MM of recovery for costs incurred thru Sept. 30, 2005
- Kentucky Environmental Surcharge
  - Monthly surcharge mechanism allows for recovery of pollution-control projects required by the Federal Clean Air Act

Projected Environmental Investment Allocation (2006A – 2009E)



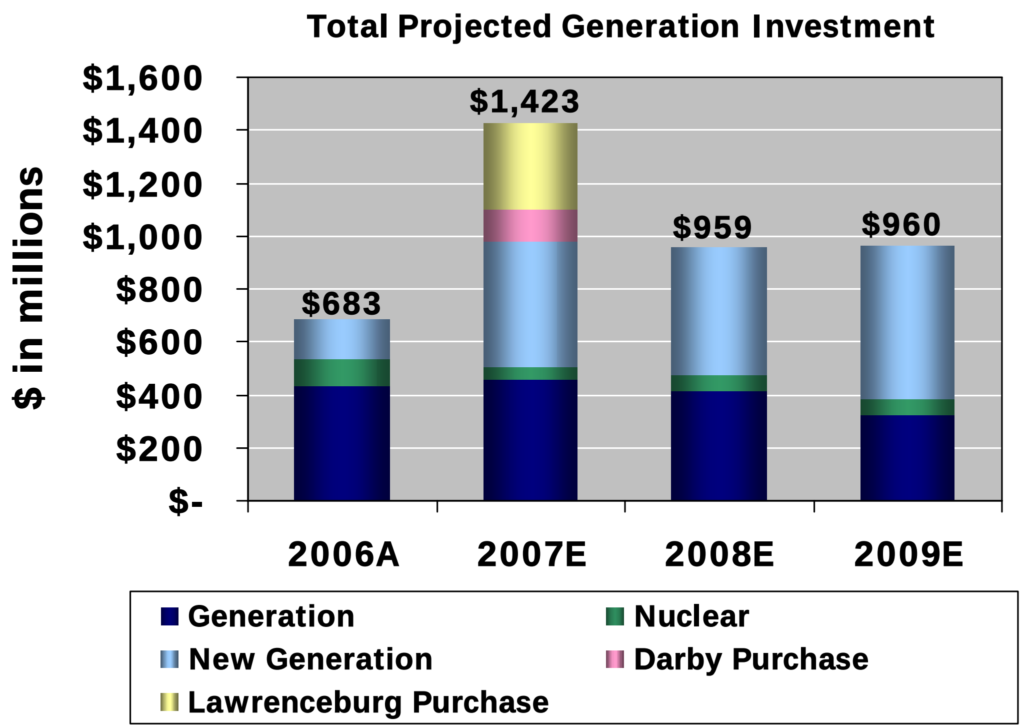
Total Projected Environmental Investment



AEP Benefits From First-Mover Advantage Through Lower Contracted Pricing & Reduced Market Escalation Exposure

Generation Investment Forecast

- Public Service Oklahoma Rate Proposal
  - Proposal to adopt an annually adjusted rate mechanism, which includes a return on CWIP
- Purchased Generation Initiative
  - New generation resources required to meet growing electricity needs of our customers
  - Completed purchase of 1,368 MW of gas-fired generating capacity in 2005 -- purchase pending for additional 1,620 MW
- Ohio Phase I IGCC Approval
  - PUCO approved tariff to recover Phase 1 pre-construction costs ($24MM) over 12-month period effective July 1, 2006



AEP®

Investing In Generation To Meet The Growing Electricity Demands Of Our Customers At An Attractive Price

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)

Page 8280 of 9556

Company Overview

SIGNIFICANT PRESENCE THROUGHOUT THE DOMESTIC VALUE CHAIN

Our US electric assets include:

- Nearly 38,240 megawatts of generating capacity in 3 power pools (one of the largest US generation portfolios with a significant cost advantage in many of our market areas)
- Approximately 39,000 circuit miles of transmission lines, including 2,116 miles of 765kV lines, the backbone of the electric interconnection grid in the Eastern U.S.
- Nearly 208,000 miles of overhead and underground distribution lines

With our coal and transportation assets we:

- control over 8,000 railcars
- own and/or operate over 2,600 hopper barges and 51 towboats
- operate one active coal-handling terminal with 20 million tons of capacity

We consume approximately 76 million tons of coal annually.

AEP®

Summary of 5-7% Long-Range Growth Components

- Energy sales growth of 1.5%
- Rate base investment
  - Generation plant purchases & build
  - Transmission – interstate & intrastate
  - Distribution
  - Reliability
- Transmission company
- Commercial operations
- Regulatory strategy
  - Achieve timely returns
  - Seek cash returns on investment during construction
  - Create & secure innovative rate plans
    - Pursue post-2008 solution in Ohio
    - Expand use of trackers
    - Formula rates

RATE BASE INVESTMENT COUPLED WITH INNOVATIVE REGULATORY PLANS WILL REDUCE LAG AND DRIVE EARNINGS GROWTH

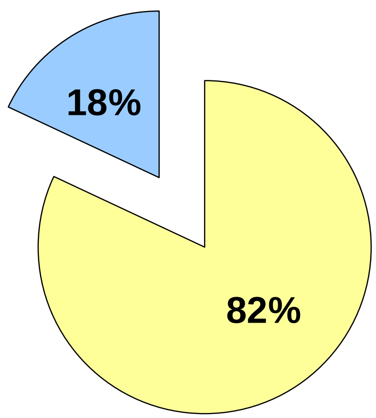
Installation Of SCR And FGD Equipment Will Allow Our Coal Fleet To Remain Extremely Cost Competitive

Materials and Vendors – AEP's Advantage

Environmental Program Costs:
Active/Firm Costs to Remaining Estimated Costs



- Actuals To Date & Firm Costs
- Remaining Estimated Costs*

* Primarily labor and activated carbon injection systems

SCR Technology

- Removes 90 – 93% of NOx emissions
- Requires ~ 1% use of auxiliary power
- **AEP Capital Cost ~ $121/kw avg.**

Combination of SCR & FGD technology results in co-benefit of Hg removal ~80% removal efficiency

FGD Technology

- Removes 95 – 98% of SO_2 emissions
- Requires ~1.5% to 3.0% use of auxiliary power
- **AEP Capital Cost ~ $250/kw avg.**

AEP ®

AEP Benefits From First-mover Advantage Through Lower Contracted Pricing and Reduced Market Escalation Exposure

IGCC Overview

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called "syngas" – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2 , mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP's eastern service territory.

AEP is currently working with a technology provider to develop a firm price for an IGCC facility to be built in our eastern service region.   AEP intends to seek regulatory recovery approvals in advance of building the plant.

AEP®

IGCC Permitting Process

IGCC Permitting Issues

- Air – to evaluate best available control technology (BACT)
- Wastewater – to understand wastewater streams
- US COE (Corp of Engineers) – to obtain permits for construction of river facilities
- NEPA Process – (National Environmental Policy Act) – Environmental site studies addressing wetlands, endangered species, historical artifacts

AEP®

Permitting Process Will Take 1 – 2 Years

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

AEP®

A RELIABLE & REASONABLY-PRICED ELECTRIC SUPPLY IS NECESSARY TO SUPPORT THE ECONOMIC WELL-BEING OF THE AREAS WE SERVE

AEP's Climate Strategy

- **Being proactive and engaged in the development of climate policy**
  - International Emissions Trading Association (IETA)
  - Electric Power Research Institute (EPRI)
  - Pew Center on Global Climate Change
  - e8
  - Global Roundtable on Climate Change
- **Investing in science/technology R&D**
  - FutureGen Alliance
  - US DOE research on carbon capture and sequestration at our Mountaineer Plant
  - EPRI – combustion technologies
  - MIT Energy Laboratory
  - B&W – Oxy-Fuel
- **Taking voluntary, proactive action now, demonstrating voluntary programs can work and setting policy precedents thru CCX**
  - Chicago Climate Exchange (CCX)
  - EPA Climate Leaders
  - EPA SF-6 Emission Reduction Partnership for Electric Power Systems Program
  - Asia-Pacific Partnership
  - DOE 1605B- voluntary reporting of GHGs Program
  - Business Roundtable Climate Resolve
  - Numerous forestry activities
- **Evaluating longer term investment decisions such as new generation and carbon capture and storage (e.g., IGCC, Ultra-supercritical)**

AEP MUST BE A LEADER IN ADDRESSING CLIMATE CHANGE

AEP's Long-term GHG Reduction Portfolio

Renewables (Biomass Co-firing, Wind)

Supply and Demand Side Efficiency

Off-System Reductions and Market Credits (forestry, methane, etc.)

Commercial Solutions of New Generation and Carbon Capture & Storage Technology

AEP IS INVESTING IN A PORTFOLIO OF GHG REDUCTION ALTERNATIVES

AEP®

AEP's Long-term CO_2 Reduction Commitment

Existing Programs

- Renewables
  - 800 MWs of Wind
  - 300 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

New Program Additions

- Incremental Reduction quantity: 5MM tons/yr
- Timing: Implement during 2007 to take effect/receive credits by 2011
- Methods
  - +1000 MWs of Wind PPAs – 2MM tons/yr
  - Domestic Offsets (methane) – 2MM tons/yr
  - Forestry – Tripling annual investment to increase to 0.5MM tons/yr by 2015
  - Fleet Vehicle/Aviation Offsets – 0.2MM tons/yr
  - Additional actions to include DSM and end use energy efficiency, biomass and power plant efficiency – 0.2MM tons/yr

New Technology Additions

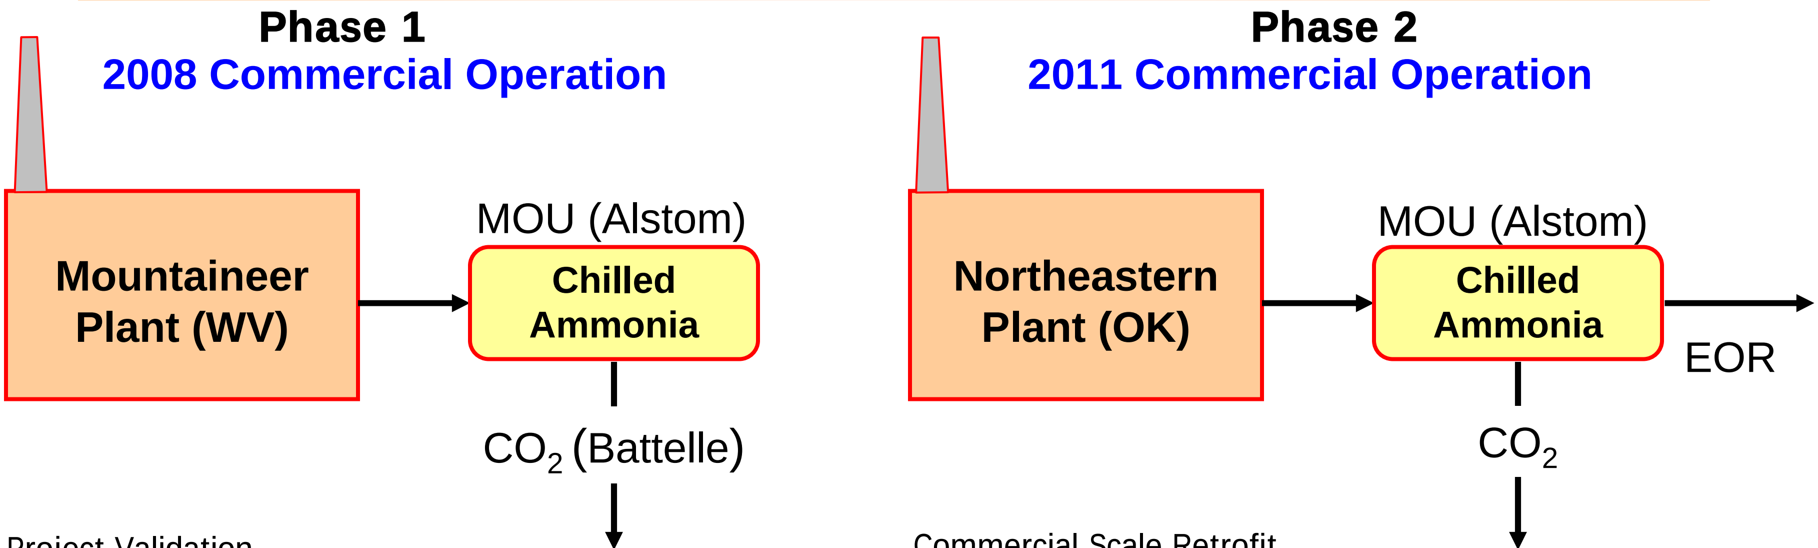
- Commercial solutions for existing fleet
  - Chilled Ammonia
  - Oxy-Fuel

AEP IS COMMITTED TO A 5MM TON/YR REDUCTION IN CO_2 EMISSIONS WHICH OFFSETS APPROXIMATELY HALF OF THE EMISSIONS PROJECTED FROM NEW GENERATION PROJECTS PREVIOUSLY ANNOUNCED

AEP®

Chilled Ammonia Process Plant Footprint

Chilled Ammonia Technology Program



<u>Project Validation</u>

- 30 MW_t (megawatts thermal) scale (a scale up of Alstom/EPRI 5 MW_t field pilot, under construction at WE Energies)
- <0.1MM tonnes CO_2 per year
- In operation 4Q 2008
- Approximate total cost \$50 – \$80M
- Using Alstom "Chilled Ammonia" Technology
- Located at the AEP Mountaineer Plant in WV
- CO_2 for geologic storage

<u>Commercial Scale Retrofit</u>

- ~ 200 MW_e scale (megawatt electric)
- ~ 600 MW_t scale (megawatt thermal)
- ~1.5MM tonnes CO_2 per year
- In operation late 2011
- Approx. capital \$250 – \$300M (CO_2 capture & compression)
- Approx. O&M cost \$12M per year
- Energy penalty ~ 35 – 50 MW steam, 25 – 30 MW for CO_2 compression
- Retrofit SCR & Wet FGD Required: ~\$225 – \$300M (required for CO_2 capture equipment)
- Located at AEP's Northeastern Plant Unit 3 or 4 in Oklahoma
- CO_2 for Enhanced Oil Recovery (EOR) or geologic storage

AEP®

POST-COMBUSTION CARBON SOLUTION PROVIDES PURE CO_2 STREAM FOR CAPTURE

Oxy-Fuel Technology Initiative

Regulatory Activity

AEP Ohio Distribution Reliability Filing

Filed Oct. 6, 2006 – AEP Ohio proposes an additional annual average investment of approximately $130MM over the next 5 years on vegetation management, equipment replacement, infrastructure upgrades & improved use of technology, to help reduce outages and improve service reliability.

- We are requesting implementation of a Reliability Cost Recovery Rider for recovery of the incremental O&M expenses and a return on and of the capital investments made under the plan. The requested ROE is 10.5%.
  - If approved, the rider would be implemented July 1, 2007 through December 31, 2008 and would be effective until new distribution rates are placed in effect. We anticipate that new base distribution rates would be effective after the expiration of the RSP on Dec. 31, 2008.
- Requested recovery amounts total $20MM in 2007 and $51MM in 2008.
- Staff testimony due April 17, 2007; Evidentiary hearing to commence April 30, 2007.

AEP Ohio Application For 4% Provision On Generation Rate

- On Jan. 23, 2007, CSP and OP filed an application at the PUCO to recover 2007 costs associated with additional generation-related expenditures the companies are encountering related to environmental, security and other new generation-related costs pursuant to the RSP.
- CSP and OP are requesting to implement the provision to recover $24.5MM and $8.2MM, respectively, from May 2007 through December 2007.
- Staff & Intervenor testimony due May 7, 2007; Evidentiary hearing to commence May 22, 2007.

Regulatory Activity

Electric Transmission Texas (ETT) Rate Filing

- Jan. 22, 2007 – ETT filed with the PUCT for approval to operate as an electric transmission utility in Texas and to establish initial rates for ETT.
    - Requested capital structure of 60% debt / 40% equity; requested ROE of 11.25%.
    - Intervenor testimony is due May 30, 2007. Staff testimony is due June 7, 2007. Hearings are scheduled for June 26-29, 2007.
        - An order is expected Mid-2007 and operations are expected to commence in the 2nd half of 2007. Upon receipt of approvals, AEP and MidAmerican will each own a 50% interest in the joint venture.

Seams Elimination Cost Adjustment Revenues

- August 2006 – ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
    - Up to $96MM of SECA revenues could be disallowed, net of unused provisions
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both.
- Exceptions to initial decision filed Sept. 11, 2006; Replies to exceptions filed Oct. 11, 2006; Order expected by the Commission in 2007

AEP®

Regulatory Activity

FERC Regional Rate Design

- The FERC instituted an investigation of PJM's zonal rate regime
  - Present regime may need to be replaced
  - Consider establishing regional rates that would compensate AEP, among others, for the regional transmission service provided by high voltage facilities they own that benefit customers throughout PJM
- July 2006 ALJ-rendered initial decision:
  - License plate rates for existing facilities are not just and reasonable, and must be replaced (effective April 1, 2006, when SECA ended)
  - Staff's proposal for a "Postage Stamp" rate phased in so as to limit increases in any one pricing zone to 10% per year as the best choice for replacing current rates
  - Staff's proposed rate design would produce slightly more net revenue for AEP than the original AEP/Allegheny Power proposal, if not phased in.
  - Briefs on Exceptions to the initial decision by all parties have been filed; An order is expected by the Commission in mid-2007.

AEP®

Summary Rate Case Information

APCo Virginia General Rate Case

On May 4, 2006, Appalachian Power Co. filed a general base rate case with the Virginia State Corporation Commission (VSCC) requesting an increase of $198.5 million ($225.8 million in base revenues offset by an off-system sales credit of $27.3 million). (Docket #: PUE-2006-00065)

Summary Rate Case Information

PSO Rate Proposal

On November 21, 2006, Public Service Oklahoma filed an application with the Oklahoma Corporation Commission to increase base rates by $49.6 million to recovery investments already made and costs incurred. The request represents a 4% overall increase (including fuel). The filing also includes a proposal to adopt an annually adjusted rate mechanism, which includes a return on CWIP. The formula rate would adjust rates, up or down, if PSO earns above or below an approved bandwidth around the authorized ROE. (Case #200600285)

Pro-forma Capital Structure – Company Position (Test Year ended 6/30/06)

Long-Term Debt Guidelines

Issuers:

- Issue at operating companies.

Size:

- Make transactions index eligible if possible.
- When possible, issue a size sufficient for competitive execution.

Maturity:

- Issue maturities for which the market has appetite.
- Achieve weighted average life targets for operating companies, generally between 10-15 years.

Timing:

- Will issue based on the timing of maturities and levels of short-term debt as driven by capital spending and operating cash flow.

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events and our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives, evolving public perception of the risks associated with fuels used before, during and after the generation of electricity, including nuclear fuel.

ESP Settlement

AEP®

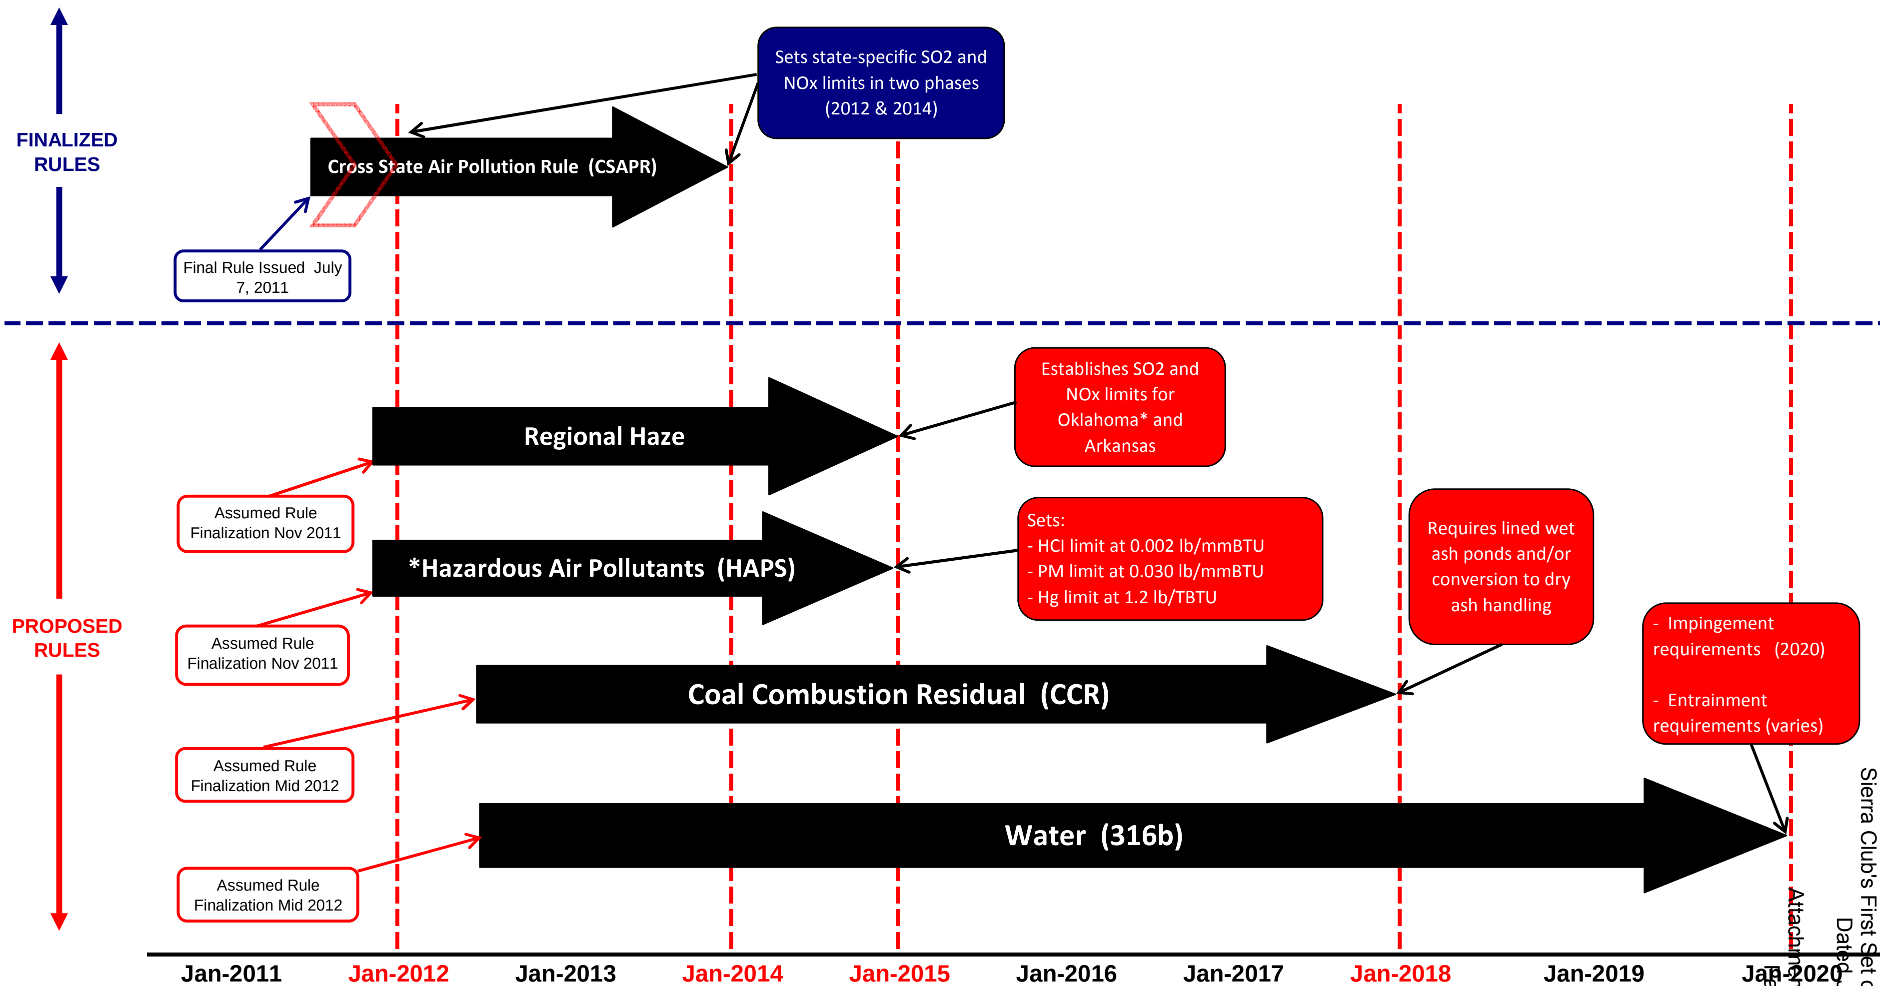
Gradual Transition to Market and Regulatory Stability in Ohio

- **Parties to the Settlement** - Signed by more than 20 organizations representing customers, competitive retail electricity suppliers, environmental groups, communities and other key stakeholders
- **Cases included in Settlement** - 2012 Electric Security Plan, Capacity Charges, Merger
- **Generation** - Corporate separation of Ohio generation assets targeted by May 2013 and transition all of Ohio generation supply to market by mid-2015; the company may pursue recovery of Pool modification costs once they exceed $50 million
- **Transition to market** - company will make a specific percentage of the Ohio retail load open to competitive retail suppliers at the RPM price for a three-year period. The remaining capacity that switches will be priced at $255/MW-day
  - Year one (2012), approximately 20 percent will be available
  - Year two (2013), approximately 30 percent will be available,
  - Year three (2014 through May 2015), approximately 40 percent will be made available.
  - Standard service offer price beginning in June 2015 will be determined through auctions involving multiple suppliers of generation service. Auctions will begin as early as September 2013.
- **Fuel Adjustment Clause** - continues through May 31, 2015; parties to support legislation for securitization of fuel deferrals
- **Nonbypassable Generation Resource Rider** – allows the distribution company to recover costs related to building new generating assets dedicated solely to Ohio customers. Project-related costs will be presented in future PUCO cases.
- **Distribution Investment Rider** – Costs associated with new distribution investment to maintain and improve reliability will be recovered under this rider with an ROE of 10.5% based on a capital structure of 47% debt/53% equity. In its first year (2012), the rider will be capped at $86 million. An additional $18 million will be added in 2013 and an additional $20 million in 2014.
- **SEET ROE threshold of 13.5%**.

EPA Regulatory Deadlines



*** Units that will be retrofit may be eligible for a one year compliance extension from the EPA related to HAPs and the Oklahoma units may also be eligible for a one year compliance extension under Regional Haze.**

(1) The impact of all rules continues to be under review. Project scope and technical assessments are ongoing. Any change in scope will impact the capital cost ranges.

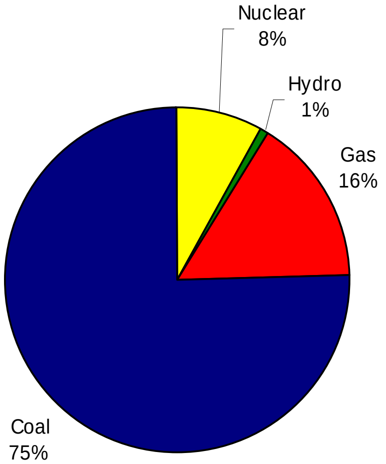
(2) Gas plants are not included in MW. Proposed 316 (b) will impact some gas facilities.

(3) Air Rules include: CSAPR as finalized and HAPs and Regional Haze Federal Implementation Plans in OK & AR, as proposed.

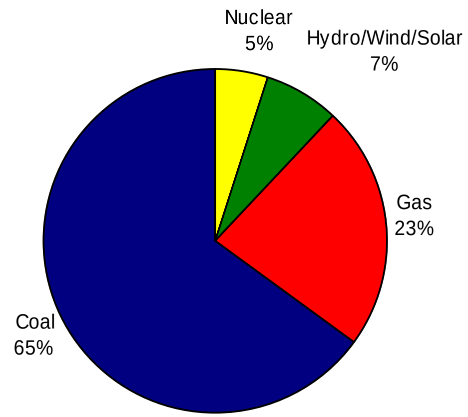
(4) Includes NSR Compliance.

Generation Transformation

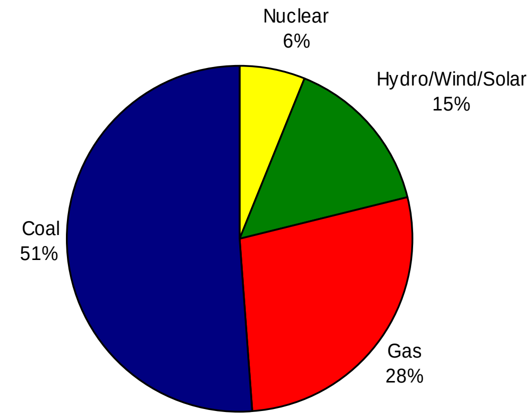
1990 AEP Generating Capacity by Fuel
37,428 total MW's



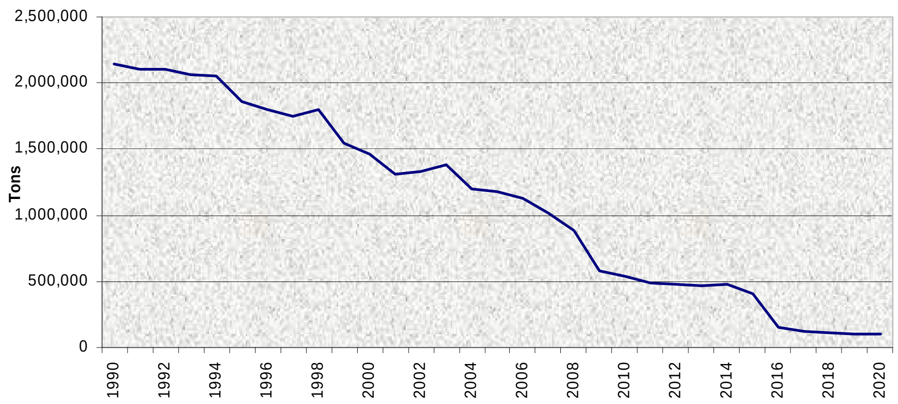
2010 AEP Generating Capacity by Fuel
39,910 total MW's



2020 AEP Generating Capacity by Fuel
37,707 total MW's



Total System NOx & SO2 (actual through 2010 and forecasted based on proposed EPA regulations)



- $7.2 billion capital invested from 1990-2010 to reduce emissions approximately 1.7 million tons
- Estimated $6-$8 billion additional capital investment from 2012-2020 for further reductions of approximately 440,000 tons

Transmission Investment Strategy

- **Near-Term Investment** – Electric Transmission Texas (ETT) secures near term investment opportunities, allowing AEP to invest in the large, growth-oriented Texas transmission market. Total capital expenditures of $3 billion with a 9.96% ROE.

- **Mid-Term Investment** – Seven wholly-owned transcos allow for expansion and growth within AEP's existing utility footprint through an efficient recovery mechanism. Will spend $210 million in 2011 and more than $350 million in 2012. ROE is in the 11.20%-11.49% range.

- **Long-Term Investment** – Joint ventures provide opportunities for longer-term growth outside of AEP's existing utility footprint with forward looking formula rates, reasonable ROEs and FERC incentives where appropriate.

Transmission has a diversified investment approach that positions it as one of the key AEP growth businesses.

AEP Highlights

- Premier Utility Platform
- Traditional and Effective Regulatory Relationships
- Significant Investment Opportunities in Environmental Retrofits and Transmission
- Strong Value and Total Return Proposition

AEP AMERICAN ELECTRIC POWER®

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation or regulation in Ohio and/or Virginia, and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.
