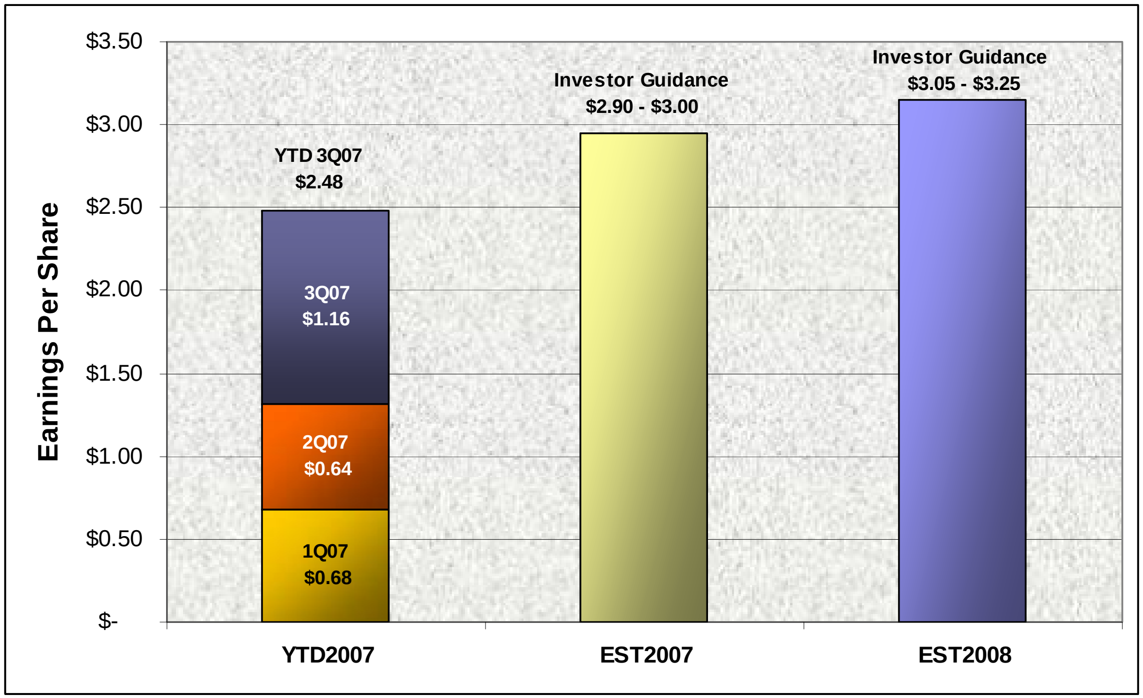
Earnings Highlights

- **3Q 2007 GAAP Earnings of $1.02 per share; Ongoing Earnings of $1.16 per share**
- **YTD 2007 GAAP Earnings of $2.15 per share; Ongoing Earnings of $2.48 per share**



Reaffirming 2007 Ongoing Earnings Guidance Range of $2.90 to $3.00 per share

Reaffirming 2008 Ongoing Earnings Guidance Range of $3.05 to $3.25 per share

Regulatory Update

Key Activities:

- Ohio RSP 4%
- Michigan Depreciation
- PSO Rate Case
- TCC Rate Case
- Electric Transmission Texas
- SWEPCO - Turk

Other Events

Key Activities:

- Ohio Post 2008
- New Source Review Settlement
- PATH JV Formation
- PJM Activities

3Q07 Performance

Note: For analysis purposes, certain financial statement amounts have been reclassified for this effect on earnings presentation.

3Q07 Performance Drivers:

- *Weather Impact of $16MM:*
  - *Positive $0.03 vs. normal; Positive $0.03 vs. prior year*
- *Retail Sales (lines 1-4):*
  - *Rate Relief $66MM; (APCo, Ohio RSP, Texas & PSO)*
  - *Positive retail load growth including new customers; $47MM*
- *Off-System Sales (line 5):*
  - *Favorable OSS combined with favorable trading margins*
- *Net Transmission Revenue (line 6):*
  - *Primarily increased PJM marginal losses ($71MM) offset by increased OSS (line 5) and lower fuel expense (lines 1&2) for a net loss of approximately $20MM*
- *Operations & Maintenance (line 9):*
  - *Lower generation expenses, including absence of 2006 Cook Plant write off and Dow Plant*
- *Interest Expense (line 12):*
  - *Higher interest expense primarily attributed to increased LTD; ($31MM)*
- *Other Income & Deductions (line 13):*
  - *Higher due to prior year write off of VA E&R carrying costs income $33MM; partially offset by lower TCC carrying costs income ($25MM)*
- *Income Taxes (line 14):*
  - *Effective tax rate for utility operations was 33.6% in 2007 and 34.3% in 2006*

YTD 2007 Performance Drivers:

- *Weather impact of $83MM:*
  - *Positive $0.08 vs. normal; Positive $0.14 vs. prior year*
- *Retail Sales (lines 1-4):*
  - *Rate relief; $167MM (AP, KP, Ohio RSP, PSO & TX Wires)*
  - *Positive retail load growth including new customers $168MM*
- *Off-System Sales (line 5):*
  - *Favorable trading margins & West Physical OSS, offset by unfavorable East Physical*
- *Net Transmission Revenue (line 6):*
  - *Increased PJM marginal losses ($91MM) offset by increased OSS (line 5) and lower fuel expense (lines 1&2) for a net loss of approximately $25MM*
- *Other Operating Revenue (line 7):*
  - *Increased securitization revenue*
- *Operations & Maintenance (line 9):*
  - *Increase due to plant outages, storm costs & increased vegetation management*
- *Depreciation & Amortization (line 10):*
  - *Increased amortization related to Texas securitization*
- *Interest Expense (line 12):*
  - *Higher due to TCC securitization bonds and more LTD*
- *Other Income & Deductions (line 13):*
  - *Decreased Centrica sharing contribution ($50MM) in 2007 vs. 2006 and lower TCC carrying costs income ($28MM)*
- *Income Taxes (line 14):*
  - *Effective tax rate for utility operations was 32.8% in 2007 and 33.3% in 2006*

September YTD 2007 Cash Flow

Beginning Cash & Cash Equivalent Balances	401	301
Ending Cash & Cash Equivalent Balances	**$ 259**	**$ 196**

YTD 2007 Cash Flow Drivers:

Operating Activities

- Changes in working capital largely driven by changes in accrued taxes, accounts receivable and other current liabilities.

Investing Activities

- Cash outlay of $2.6 billion for YTD capital investment.
- 2007 primary asset sale proceeds: Centrica sharing $20MM and TCC's share of Oklaunion $46MM; 2006 primary asset sale proceeds: Centrica sharing $70MM and Bajio $29MM.
- 2007 acquisitions consist of the Darby Plant for $102MM, Lawrenceburg for $325MM and Dresden for $85MM.

Investing Activities

- Common stock issuance of $116MM primarily related to the exercise of stock options during 2007.
- Changes in long and short term debt driven by capital funding requirements.

3Q08 Earnings Release Presentation

October 31, 2008

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; volatility in the financial markets, particularly development affecting the availability of capital on reasonable terms and developments impacting our ability to refinance existing debt at attractive rates; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas coal, nuclear fuel and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

Third Quarter 2008 Highlights

- **Economic Conditions/Outlook**
- **Current State of Credit Markets/AEP Liquidity**
- **DC Cook Plant Unit 1 Update**
- **Regulatory Updates – all $518MM of 2008 rate relief secured**
  - **Ohio ESP**
  - **Virginia Rate Case Settlement**
  - **Pending Rate Cases in Indiana and Oklahoma**
  - **Generation and Transmission**
- **Earnings:**
  - **3Q08 GAAP/Ongoing Earnings $0.93 per share**
  - **2008 YTD GAAP Earnings $3.06 per share**
  - **2008 YTD Ongoing $2.65 per share**
- **Tightening 2008 Ongoing Earnings Guidance Range to $3.15 to $3.25**

18	Generation & Marketing	3	0.01	16	0.04
19	**Parent & Other On-Going Earnings**	(2)	(0.01)	(10)	(0.03)
20	ON-GOING EARNINGS	462	1.16	374	0.93

Note: For analysis purposes, certain amounts have been reclassified for this effect on earnings presentation.

3Q08 Performance Drivers:

- *Retail Sales (lines 1-4):*
  - *$78MM higher fuel costs in Ohio, including consumables*
  - *Unfavorable weather impact of $42MM ($0.07) versus prior year and a $0.03 unfavorable impact versus normal; additionally, Hurricane Ike caused outages in SWEPCo and the Ohio Companies, resulting in $10MM in lost revenues*
  - *Offset by rate relief $90MM (APCo, I&M, KPCo, Ohio RSPs, PSO, SWEPCo & TCC)*
- *Off-System Sales (line 5):*
  - *Lower margins in the west due to a favorable fuel reconciliation recorded in the prior year quarter, somewhat offset by higher power prices & lower internal load in the east*
- *Other Operating Revenue (line 7):*
  - *Higher miscellaneous operating revenues including rents and pole attachments and 2007 TCC provision for bonded rates*
- *Operations & Maintenance (line 9):*
  - *Higher expenditures in all categories due to maintenance outages, reliability and storm restoration, some of which have revenue offsets*
- *Interest Expense & Preferred Dividend (line 12):*
  - *Higher due to increased long-term debt outstanding and higher interest rates on variable-rate debt*
- *Other Income & Deductions (line 13):*
  - *Higher due to increased interest income and carrying charges*
- *Income Taxes (line 14):*
  - *Effective tax rate for utility operations was 33.5% in 2008 and 33.6% in 2007*
- *River Operations decreased due primarily to weather related issues including hurricanes and flooding and an oil spill in New Orleans harbor, which limited ship arrivals and departures.*
- *Generation & Marketing increased due to higher gross margins from the marketing business and from the optimization of Oklaunion*
- *Parent decreased due to higher interest expense and lower interest income*

YTD Performance

American Electric Power

20	**ON-GOING EARNINGS**	990	2.48	1,064	2.65

Note: For analysis purposes, certain amounts have been reclassified for this effect on earnings presentation.

YTD Performance Drivers:

- *Retail Sales (lines 1-4):*
  - *Rate relief $247MM (APCo, Ohio RSPs, I&M, KPCo, Texas, SWEPCo & PSO)*
  - *Positive load growth including new customers; $74MM*
  - *Positive impact due to 2007 unfavorable true-up of VA order; $37MM*
  - *Offset by $135MM higher fuel costs in Ohio, including consumables, and $29MM increased OSS sharing*
  - *Unfavorable weather impact of $65MM ($0.10) versus prior year and unfavorable $0.03 ($18MM) versus normal; additionally, Hurricane Ike caused outages in SWEPCo and the Ohio Companies, resulting in $10MM in lost revenues*
- *Off-System Sales (line 5):*
  - *Favorable due to higher prices and volumes, higher plant availability & lower internal load*
- *Operations & Maintenance (line 9):*
  - *Increase primarily due to storm restoration, maintenance, reliability, Red Rock write off & employee benefits, partially offset by a deferral of 2007 PSO ice storms in 1Q2008*
- *Interest Expense & Preferred Dividend (line 12):*
  - *Higher due to increased long-term debt outstanding and higher interest rates on variable-rate debt*
- *Other Income & Deductions (line 13):*
  - *Higher due to increased interest income and carrying charges*
- *Income Taxes (line 14):*
  - *Effective tax rate for utility operations was 32.7% in 2008 and 32.8% in 2007*
- *River Operations decreased due primarily to weather related issues including hurricanes and flooding and an oil spill in New Orleans harbor, which limited ship arrivals and departures.*
- *Generation & Marketing increased due to higher gross margins from the marketing business and from the optimization of Oklaunion*
- *Parent decreased due to higher interest expense and lower interest income*

Beginning Cash & Cash Equivalent Balances	301	178
Ending Cash & Cash Equivalent Balances	$ 196	$ 338

2008 Cash Flow Drivers:

Operating Activities

- Changes in working capital largely driven by G & A type items
- Changes in other assets and liabilities largely driven by changes in securitized transition assets, regulatory assets related to the PSO storm and Red Rock cancellation and other employee-related non-current assets.

Investing Activities

- Cash outlay of $2.6B for 2008 YTD capital investment.
- 2008 asset sale proceeds relate to miscellaneous utility property sales; 2007 asset sale proceeds primarily relate to Centrica sharing $20MM and TCC's sale of its share of Oklaunion $46MM.
- Change in Other Temporary Cash Investments, net in 2008 relates to the purchase of variable rate securities, primarily with funds received from our draw down on our credit facilities
- Change in 2008 Other Investing primarily relates to the purchase of nuclear fuel of $99MM.

Financing Activities

- 2008 common share issuances of $106MM primarily due to issuances through the dividend reinvestment program.
- Changes in long and short term debt driven by capital funding requirements.

AEP Liquidity

as of October 28, 2008

Liquidity Summary (unaudited)	Actual 10/28/08	
($ in millions)	**Amount**	**Maturity**
Revolving Credit Facility	$1,500	Mar-11
Revolving Credit Facility	1,454	Apr-12
Revolving Credit Facility	627	Apr-11
Revolving Credit Facility	338	Apr-09

3Q09 Earnings Release Presentation

October 29, 2009

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants including our ability to restore I&M's Donald C. Cook Nuclear Plant Unit 1 in a timely manner, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of the recently passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events. AEP and its Registrant Subsidiaries expressly disclaim any obligation to update any forward-looking information.

Third Quarter 2009 Highlights

- 3Q09 GAAP Earnings $0.93 per share;
  3Q09 Ongoing Earnings $0.93
- 2009 YTD GAAP Earnings $2.47 per share;
  2009 YTD Ongoing Earnings $2.49
- Tightening 2009 Ongoing Earnings Guidance Range to $2.90 to $3.05 per share from $2.75 to $3.05
- Ohio ESP & SEET Update
- Turk Plant Update
- Cook Plant Update
- Thoughts on 2010

3Q09 Performance

	Per Share
3Q08 EPS	$ 0.93
Rate Relief	$ 0.49
Load Contraction	$ (0.08)
Weather	$ (0.07)
Off-System Sales	$ (0.22)
O&M	$ 0.08
Share Count Dilution	$ (0.17)
Other	$ (0.03)
3Q09 EPS	$ 0.93

3Q09 Performance Drivers:

- *Rate relief of $302MM in multiple jurisdictions*
- *Load Contraction of $47MM (weather adjusted)*
- *Weather was unfavorable by $42MM vs. prior year and unfavorable by $65MM vs. normal*
- *Lower Off-System Sales (post sharing) of $136MM*
- *Decreased O&M expense of $50MM due to quarter over quarter positive variance in storm restoration costs and lower non-outage maintenance expense*
- *Share Count Dilution due to increase in weighted average shares outstanding of 75MM (402MM to 477MM)*
- *Other includes higher Depreciation & Amortization, Interest & Taxes, partly offset by higher Other Operating Revenue*

Retail Rate Performance

	Rate Relief (in millions)
	3Q09 vs. 3Q08
East Regulated Integrated Utilities	$56
Ohio Companies	$219
West Regulated Integrated Utilities	$24
Texas Wires	$3

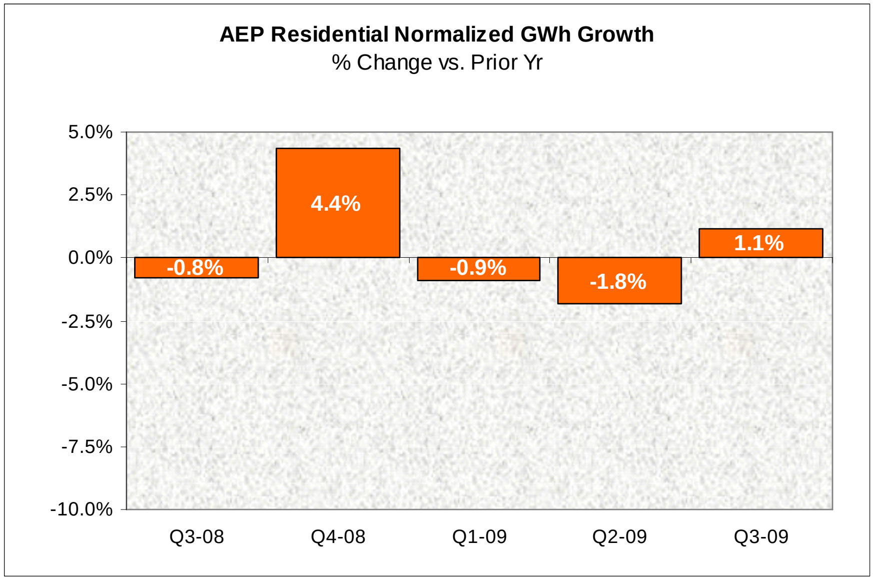
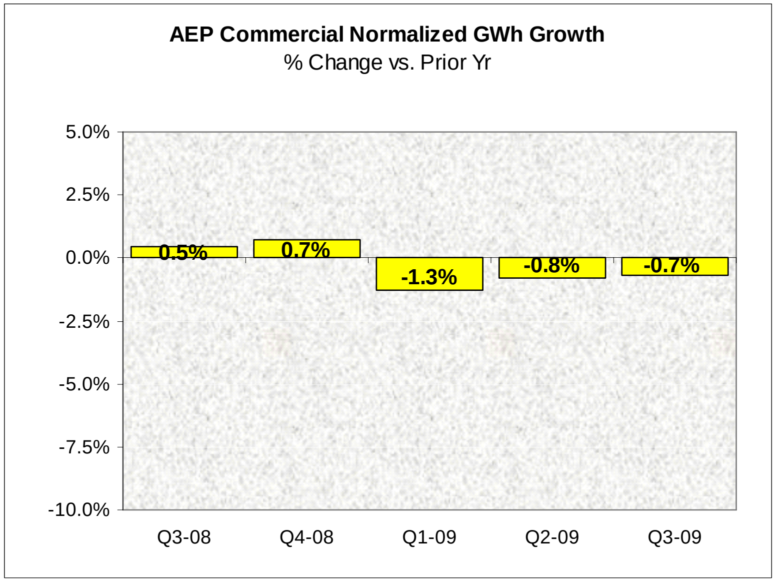
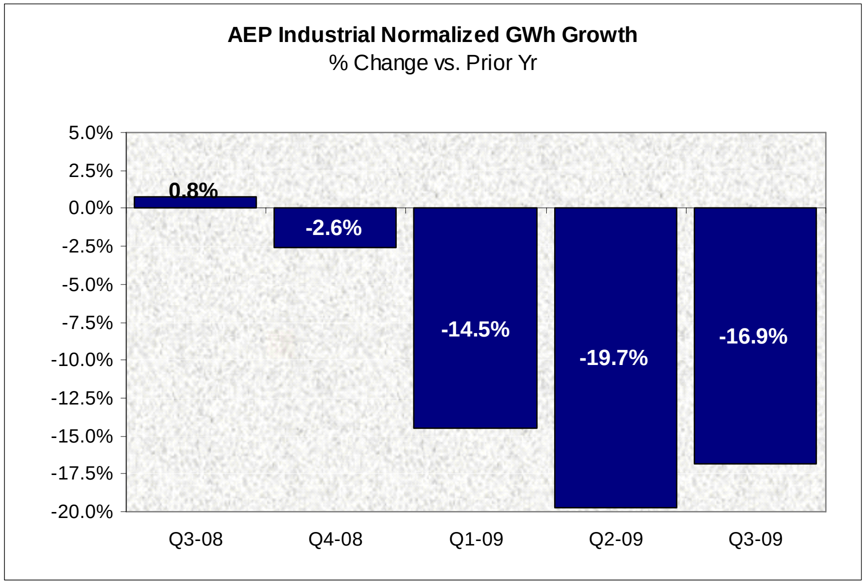
Impact on EPS	$0.49

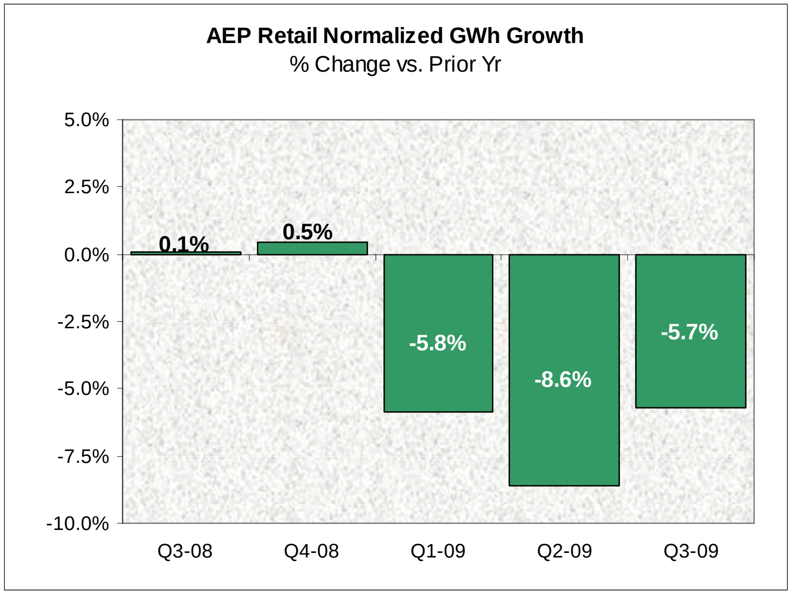
	Rate Relief (in millions)
	YTD 2009 vs. YTD 2008
East Regulated Integrated Utilities	$203
Ohio Companies	$320
West Regulated Integrated Utilities	$71
Texas Wires	$10
AEP System Total	$604
Impact on EPS	$0.98

Normalized Retail Load Trends

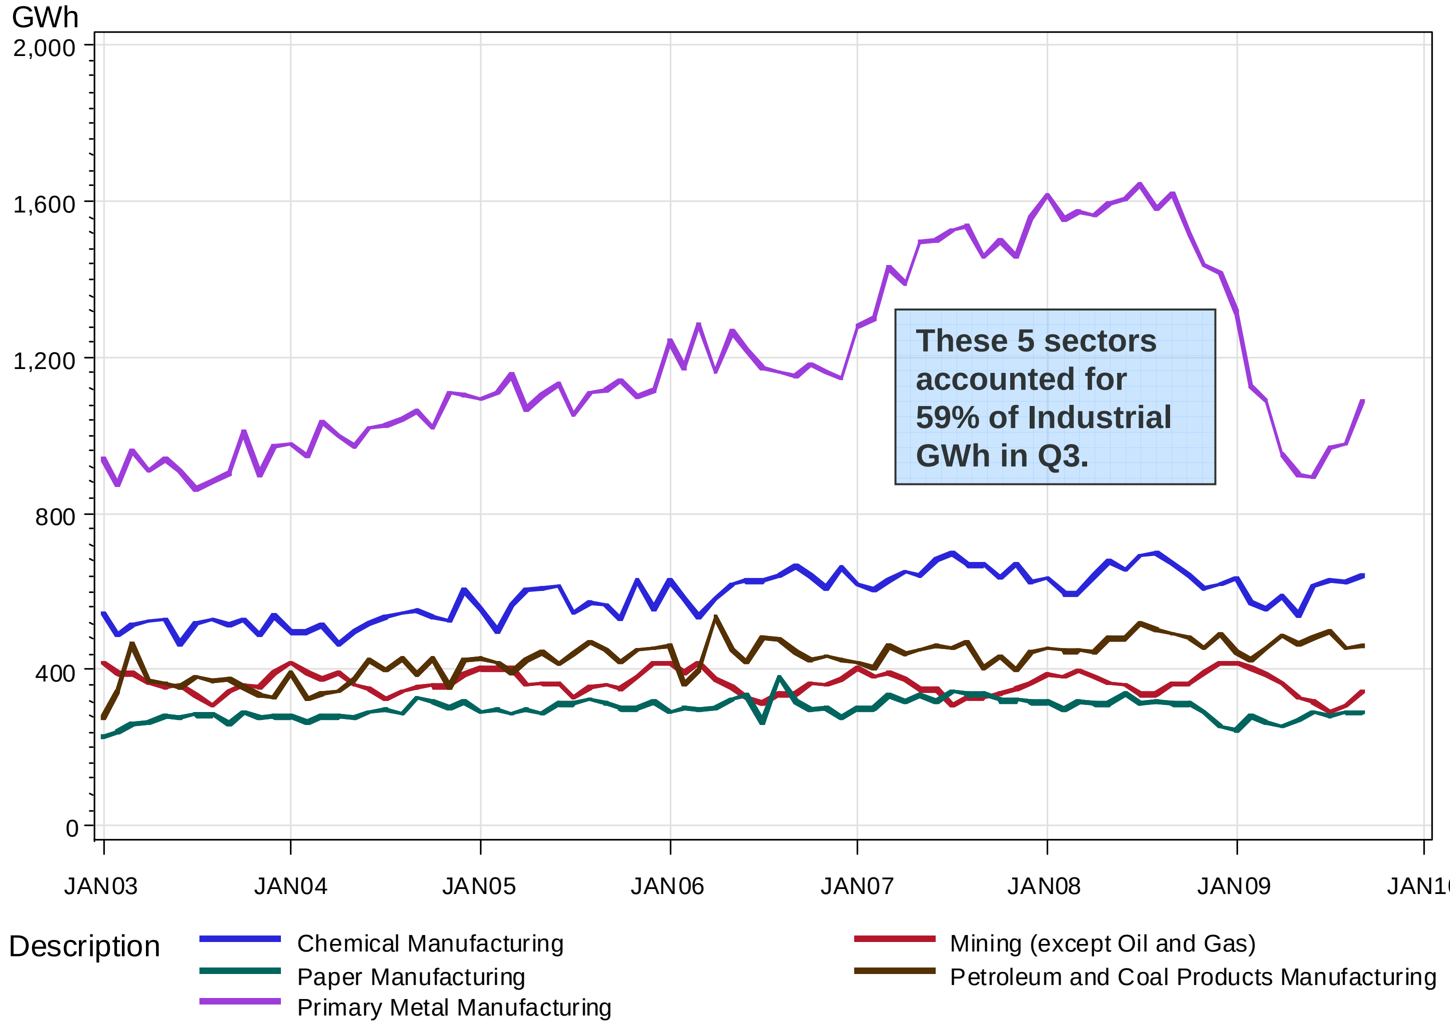




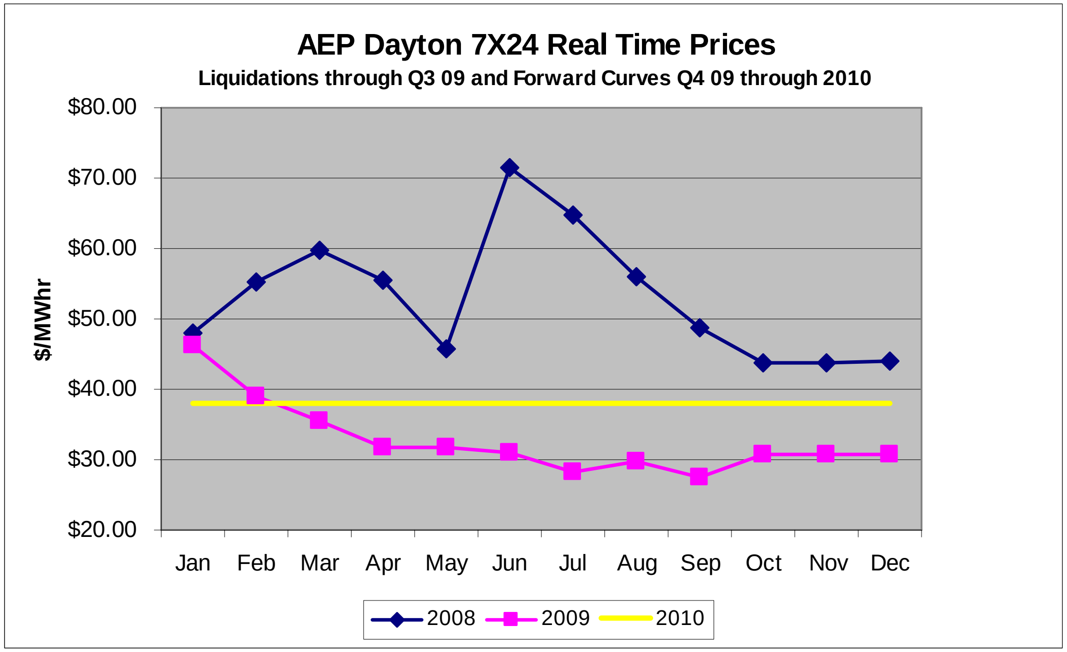




Industrial Sales Analysis



Off-System Sales



- **AEP/Dayton Hub 7X24 prices (liquidations) Q3 2009 were 50% below Q3 2008**
- **AEP Off system sales volumes were off 53%**
- **The calendar year 2010 strip is already above the estimated liquidation for 2009 but still well below 2008 liquidations by about 29%**

Q3 7X24 Price Liquidations				
Hub	2009	2008	$ Change	% Change
AEP Dayton	28.51	56.59	(28.09)	-50%
PJM West	33.20	77.37	(44.17)	-57%
NiHub	25.70	53.29	(27.59)	-52%
CinHub	25.23	52.32	(27.09)	-52%
NG	3.40	10.26	(6.86)	-67%

YTD Performance

		Per Share
YTD08 EPS	$	2.65
Rate Relief	$	0.98
Load Contraction	$	(0.23)
Weather	$	(0.05)
Off-System Sales	$	(0.50)
O&M	$	0.05
Share Count Dilution	$	(0.31)
Other	$	(0.10)
YTD09 EPS	$	2.49

YTD Performance Drivers:

- *Rate relief of $604MM in multiple jurisdictions*
- *Load Contraction of $143MM (adjusted for weather)*
- *Weather was unfavorable vs. prior year by $34MM and unfavorable $53MM vs. normal*
- *Lower Off-System Sales (post sharing) of $310MM*
- *Decreased O&M expense of $29MM due to reduction in plant outages & related expenses and tree trimming; offset by deferral of PSO ice storms in 2008*
- *Share count dilution due to increased weighted average shares outstanding of 50MM (402MM to 452MM)*
- *Other items including higher Depreciation and Amortization and prior year coal contract settlements somewhat offset by higher Other Operating Income*

Ending Cash & Cash Equivalent Balances	$ 338	$ 877

YTD 2009 Cash Flow Drivers:

Operating Activities

- Changes in working capital largely driven by fuel (coal) stock increase.
- Changes in fuel recovery primarily relate to deferrals at APCo, OPCo and CSP.

Investing Activities

- Cash outlay for 2009 YTD capital investment.
- 2009 asset sale proceeds relate to the transfer of assets from TCC to ETT and the payments from third-party owners of the Turk Plant.
- Change in other investing primarily relates to the purchase of nuclear fuel.

Financing Activities

- 2009 common share issuances of $1,706MM primarily due to equity offering completed in April.
- Changes in short term debt relate to payments made on credit facilities from the proceeds of the equity offering.
- Changes in long-term debt driven by capital funding requirements.

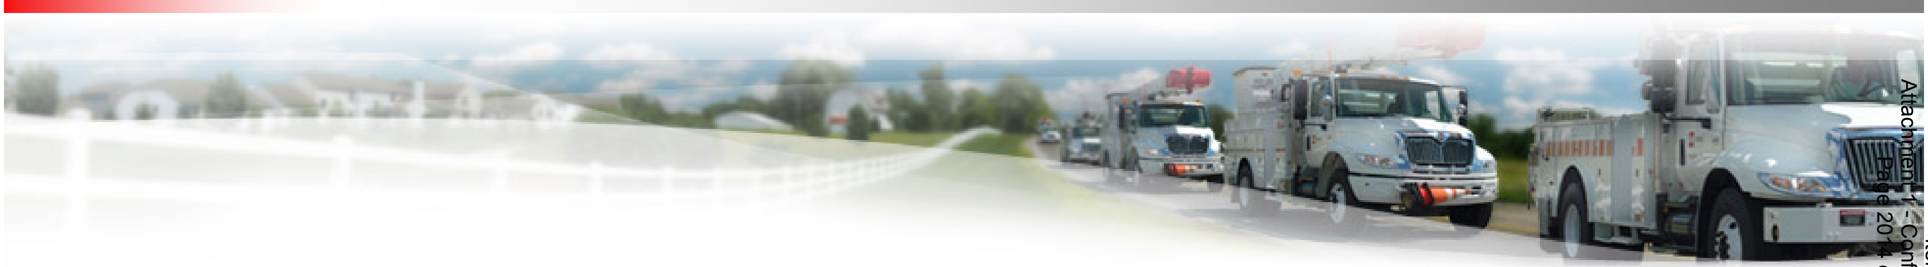
OSS Physical Sales	25,611	$ 26.51	$ 679	10,752	$ 8.56	$ 92
Oklaunion Margin	-		$ 33	-		$ 36
Marketing/Trading	-		$ 74	-		$ 141
Pre-Sharing Gross Margin	25,611		$ 786	10,752		$ 269

Reduction in Pre-Sharing OSS Physical Sales primarily due to lower demand and significantly lower realized prices as a result of natural gas price contraction.

AEP AMERICAN® ELECTRIC POWER

3Q11 Earnings Release Presentation

October 26, 2011



“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance, resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and the expected legal separation and transition to market for generation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives, evolving public perception of the risks associated with fuels used before, during and after the generation of electricity, including nuclear fuel and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events.

Third Quarter 2011 Highlights

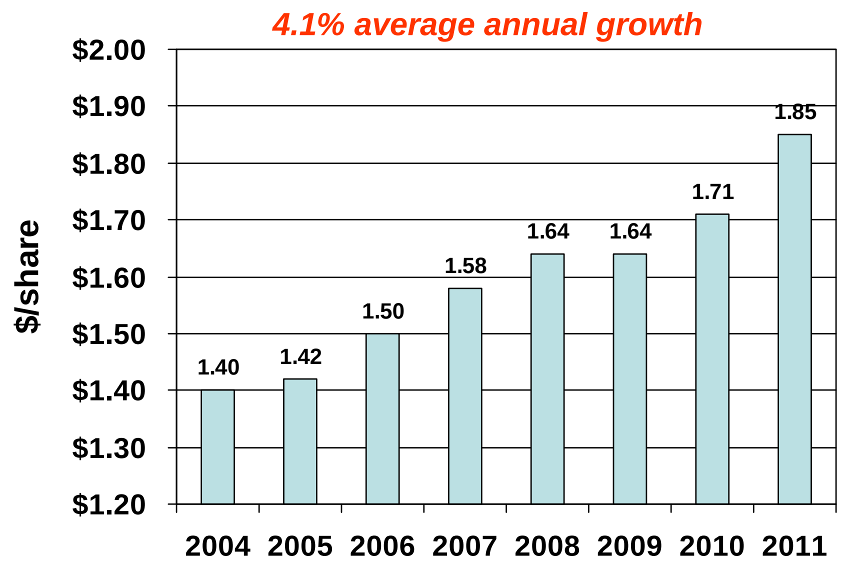
Financial Performance

- Delivered GAAP earnings of $1.93 and on-going earnings of $1.17 per share
- Tightening 2011 earnings guidance to $3.07 to $3.17 per share, from $3.00 to $3.20 per share

Announcements

- Nick Akins elected CEO effective November 12, 2011
- Board declared $0.47/share quarterly dividend; an increase of $0.01/share, or 2.2%
- Redemption of all preferred shares at AEP Subsidiaries

Dividend history since 2004



Dividend remains in-line with payout ratio target and earnings growth

Update on Key Areas of Interest

- **Hearing on Ohio Stipulation Underway**
  - Transition to Market for Ohio
  - Corporate Separation

PUCO decision expected later this year

- **Environmental Rules**
  - CSAPR Allocations
  - MACT Rules

Timing for compliance periods – impact on reliability

- **Transmission**
  - RITELine - FERC Approval in October
  - ETT
  - Transco Update

Gaining traction in regulated business growth

- **TCC Supreme Court Remand**

Keeps credit and balance sheet strong

Regulatory certainty provides clarity to AEP's business plan

3Q11 Performance

Third Quarter Reconciliation

	EPS	Ongoing Earnings ($ in millions)
3Q10	$ 1.15	$552
POLR Remand	$ (0.06)	
Customer Switching	$ (0.04)	
Operations & Maintenance	$ (0.03)	
Retail Margin	$ (0.02)	
Off-System Sales	$ -	
Weather	$ 0.02	
Other	$ 0.04	
TCC True-Up Remand	$ 0.04	
Rate Changes	$ 0.07	
3Q11	$ 1.17	$566

EPS Based on 482MM shares in Q311

3Q11 Performance Drivers

- Refund of POLR charges from Ohio ESP Remand ruling $43M
- Gross Customer Switching up $33M
- O&M expense net of offsets increased $19M primarily due to higher storm expenses and higher generation maintenance
- Retail Margins down $12M
- Weather was favorable by $14M vs. prior year, favorable $79M vs. normal
- Income from carrying costs related to TCC True-up Remand $28M
- Rate Changes net of offsets of $53M from multiple operating jurisdictions

Delivered solid quarter within Company's expectations

September YTD 2011 Performance

September YTD 2011 Reconciliation

		EPS	Ongoing Earnings ($ in millions)
2010	$	2.65	$1,272
POLR Remand	$	(0.06)	
Customer Switching	$	(0.10)	
Operations & Maintenance	$	(0.06)	
Retail Margin	$	(0.02)	
Off-System Sales	$	0.07	
Weather	$	-	
Other	$	(0.02)	
TCC True-Up Remand	$	0.04	
Rate Changes	$	0.22	
2011	$	2.72	$1,310

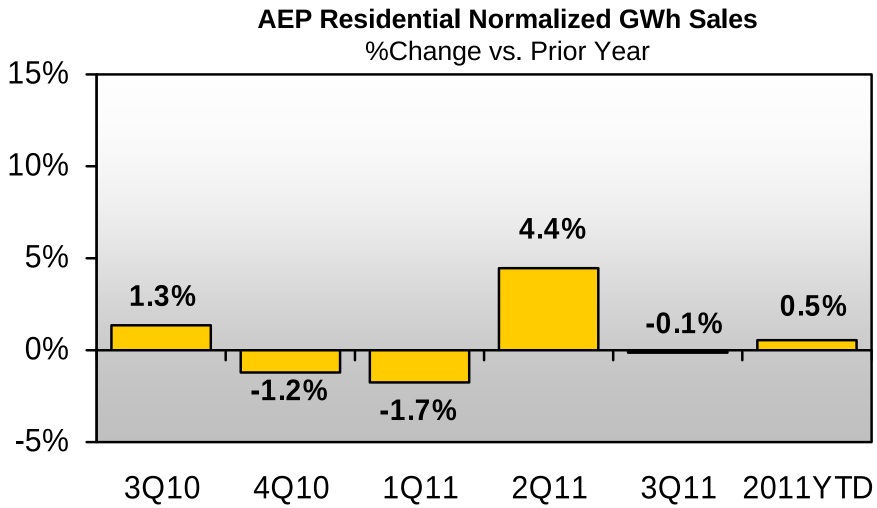
EPS Based on 482MM shares in YTD11

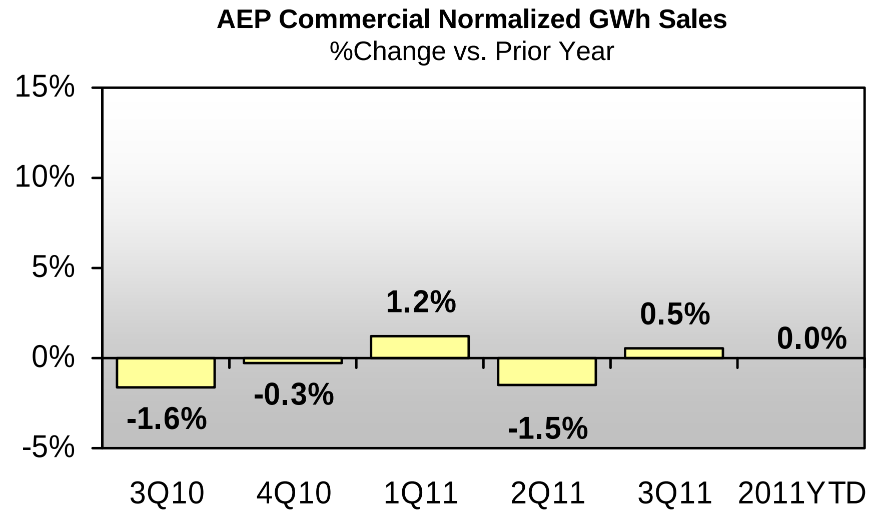
YTD 2011 Performance Drivers

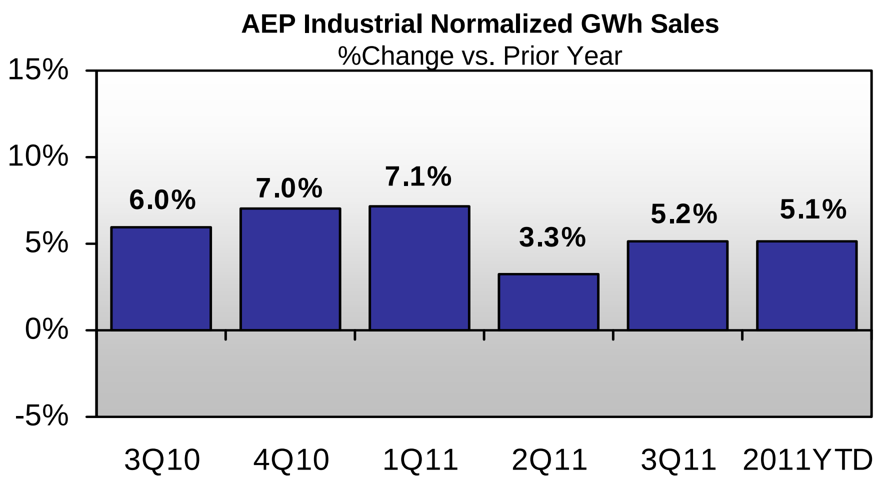
- Refund of POLR charges from Ohio ESP Remand ruling $43M
- Gross Customer Switching up $76M
- O&M expense net of offsets increased $48M primarily due to higher storm expenses
- Retail Margins down $12M
- Off-System Sales, net of sharing, were favorable by $49M due to higher volumes and higher prices
- Weather was unfavorable by $1M vs. prior year, favorable $147M vs. normal
- Income from carrying costs related to TCC True-up Remand $28M
- Rate Changes net of offsets of $163M from multiple operating jurisdictions

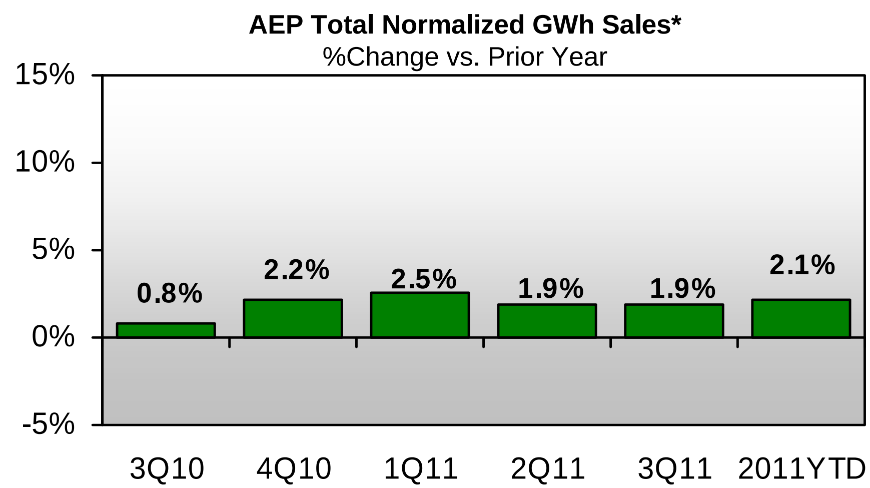
YTD results give Company confidence to raise mid-point of guidance range

Normalized Load Trends









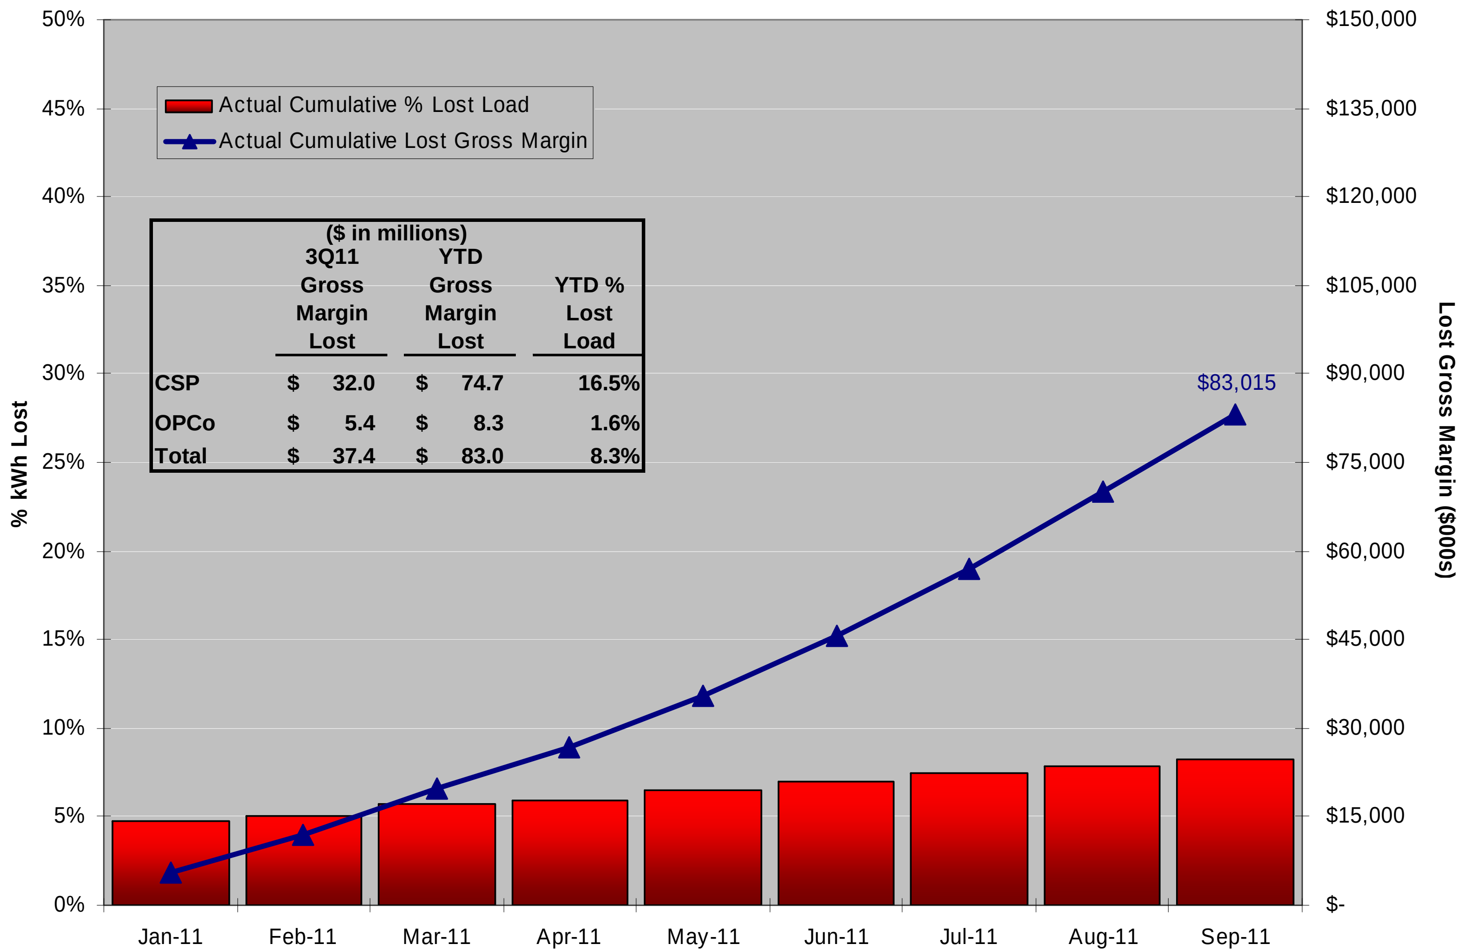
Note: Chart represents connected load

*includes firm wholesale load

Industrial sales leads load growth

Customer Switching

AEP-OH Customers Choosing Other Energy Providers

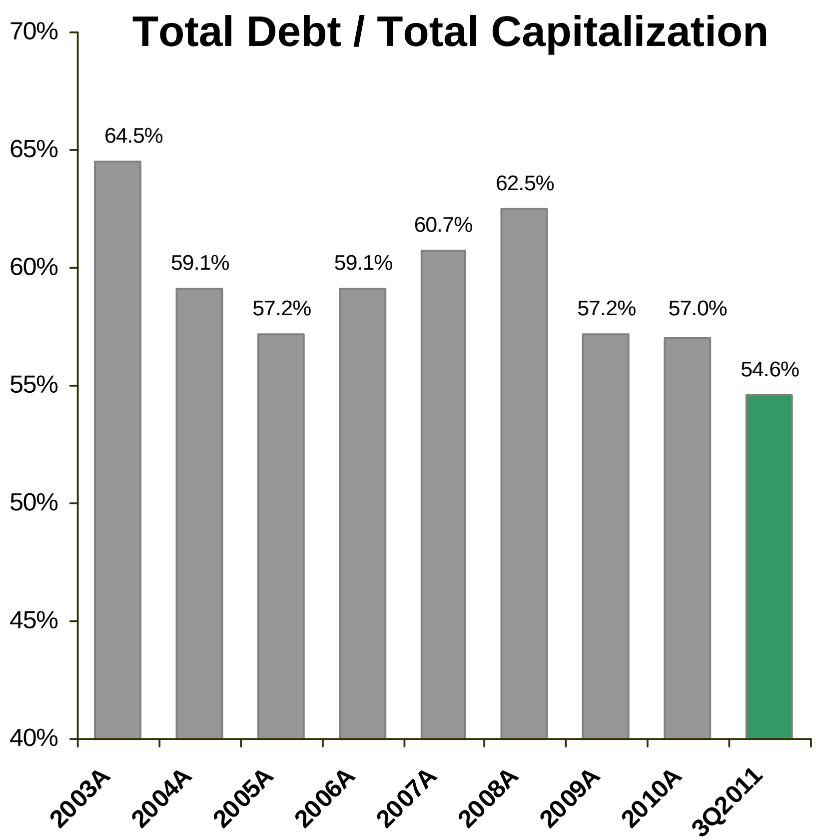


($ in millions)

	3Q11 Gross Margin Lost	YTD Gross Margin Lost	YTD % Lost Load
CSP	$ 32.0	$ 74.7	16.5%
OPCo	$ 5.4	$ 8.3	1.6%
Total	$ 37.4	$ 83.0	8.3%

Customer switching impacts offset by off-system sales and capacity revenues

Capitalization & Liquidity



Note: Total Debt is calculated according to GAAP and includes securitized debt

Debt to Cap ratio lowest in 8 years

Credit Statistics

	Actual	Target
FFO Interest Coverage	4.9	>3.6x
FFO To Total Debt	21.5%	15%- 20%

Note: Credit statistics represent the trailing 12 month as of 09/30/2011

Liquidity Summary (09/30/2011)

Liquidity Summary (unaudited)		**Actual**	
($ in millions)		Amount	Maturity
Revolving Credit Facility	$	1,750	Jul-16
Revolving Credit Facility		1,500	Jun-15
Total Credit Facilities		**3,250**	
Plus			
Cash & Cash Equivalents		546	
Less			
Commercial Paper Outstanding		(529)	
Letters of credit issued		(103)	
Net available Liquidity	**$**	**3,164**	

Liquidity profile renewed this year

Summary

- Solid performance for 2011
- Continued focus on capital and O&M discipline, as well as cash proceeds from securitization bonds in TX, will keep our credit statistics and balance sheet strong
- Certainty from “overhangs” on the company will be resolved soon
- Operating company performance remains a priority

Management committed to earnings and dividend growth

4Q 2005 Performance Drivers

Weather Impact: Positive $0.02 vs. normal
Positive $0.03 vs. prior yr

- *Favorable weather and customer growth at Reg Integ Utilities offset by off system sales sharing & capacity settlement*
- *Ohio Co increase driven by favorable weather and capacity settlement*
- *Texas Supply decrease mainly due to sale of STP in May 2005, outages at Oklaunion, and margin sharing; partially offset by fuel refund*
- *Increased OSS margin resulting from higher power prices*
- *Increase due to higher ECAR revenues*
- *Higher O&M expenses due to higher plant maintenance & operation expense, tree trimming, & PJM expense*
- *Other Income & Deductions consists of: (a) decline in TCC carrying costs ($102MM); (b) contribution from OH environmental additions ($12MM)*
- *Income taxes decline due to reduction in pretax income; somewhat offset by property tax increases & higher revenue/kwh taxes*

Note: For analysis purposes, certain financial statement amounts have been reclassified for this effect on earnings presentation.

YTD 2005 Performance Drivers

Weather Impact: Positive $0.07 vs. normal
Positive $0.15 vs. prior yr

- *Favorable weather and customer growth at Reg Integ Utilities offset by lower fuel margin, off system sales sharing & capacity settlement*
- *Ohio Co increase driven by favorable weather, customer count, emissions allowance settlement & capacity settlement; slightly offset by lower fuel margin*
- *Texas Wires increase product of favorable customer count, price/usage variances, and weather*
- *Texas Supply decline due to sale of TCC generation assets/expiration of Centrica supply contract; slightly offset by fuel provision reversal*
- *Increased OSS margin resulting from higher volumes and power prices/margins*
- *Trans Rev. decline due to elimination of through & out rates*
- *Higher O&M expenses due to higher maintenance, tree trimming, environmental expense, & PJM expense*
- *Increase in Dep & Amort offset by reduced interest expense*
- *Other Income & Deductions consists of: (a) Centrica Sharing revenue ($70MM); (b) OH RSP environmental carrying charges ($57MM); (c) AFUDC-Equity income & Other ($19MM) & (d) a decline in TCC carrying costs ($45MM);*
- *2005 taxes increases mainly due to: growth in pretax income, property tax increases & higher revenue/kwh taxes*

Note: For analysis purposes, certain financial statement amounts have been reclassified for this effect on earnings presentation.

4Q06 Earnings Release Presentation

AMERICAN ELECTRIC POWER

January 30, 2007

"Safe Harbor" Statement Under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

2006 Accomplishments & 2007 Plans

2006 Accomplishments

- ✓ 2006 GAAP Earnings $2.54 per share; Ongoing $2.77 per share
- ✓ 4Q06 GAAP Earnings $0.46 per share; Ongoing $0.38 per share
- ✓ Total shareholder return 18.8%
- ✓ Quarterly dividend increased 5.4% to $0.39 per share
- ✓ Secured $450M of new rate relief and $1.7B in Texas securitization
- ✓ Increased EPS growth range: 5 – 7% (2006-2009)
- ✓ Announced multiple transmission investment projects
  - ✓ $1B Electric Transmission Texas LLC
  - ✓ $2B 765 kV Study with ITC in Michigan
  - ✓ $3B I-765 Project in PJM
  - ✓ $3B project filed with SPP
- ✓ Completed sale of Plaquemine Facility in November 2006

2007 Plans

- Achieve ongoing earnings within guidance range of $2.85 to $3.05/share
- Continue disciplined investment in utility:
  - Generation
    - New generation @ PSO & SWEPCO
    - Lawrenceburg & Darby Plants
    - IGCC
  - Environmental
    - Substantially complete environmental tie-ins
  - Transmission
    - Establish Electric Transmission Texas LLC
    - Establish AEP Transmission Company, LLC
  - Seek innovative recovery for new investments
    - Reliability
    - Storms
- Control costs
- Maintain credit ratings
- Influence key legislative outcomes
  - Participate in GHG control dialogue
  - Ohio Post-2008 Operating Environment
  - Virginia Operating Environment

2007 Update

- **2007 Guidance Updates**
  - **Reaffirming Ongoing Earnings Guidance Range of $2.85 to $3.05 per share**
    - Revised segment presentation
    - New guidance detail (appendix) incorporates updated assumptions for rate relief, purchase of new generation, Ormet supply contract, TCC securitization and other financing items
- **2007 Regulatory Update**
  - **Indiana Depreciation Case – Request for Reconsideration Denied**
  - **Virginia**
    - General Base Rate Case Filing
  - **Texas**
    - TNC & TCC Wires Base Rate Case Filings
  - **Oklahoma**
    - General Base Rate Case Filing; January 2007 Ice Storm
  - **Ohio**
    - RSP Competitive Bid Mechanism Submitted
    - 4% Generation Increase Filing
    - Distribution Reliability Plan
  - **FERC: Regional Rate Design Proceedings**

4Q 2006 Performance Drivers

Weather Impact: Negative $0.03 vs. normal
Negative $0.05 vs. prior yr.

- *Rate relief primarily in OH, WV, VA and KY ($115MM), load growth ($47MM) & addition of new muni & coop contracts ($20MM), largely offset by weather ($29MM)*
- *Lower OSS due to a favorable adjustment in 2005 to reduce a Texas fuel over-recovery regulatory provision, partially offset by higher margins in the East*
- *3rd Party Transmission revenues down due to absence of SECA revenues in 2006*
- *Increased Other Operating Revenue primarily due to securitization revenue related to the October 2006 Texas securitization*
- *Increased D&A due to increased amortization expense related to the Texas securitization and at the Ohio Companies and higher depreciable asset balance*
- *Interest expense up due to increased long term debt outstanding, including Texas securitization bonds issued in October 2006, and higher interest rates; Other Income & Deductions increased due to carrying costs for APCo, primarily related to the VA E&R case*
- *Income Taxes up due to increased income and federal tax reserve increases*

2006 Ongoing Earnings

Note: For analysis purposes, certain financial statement amounts have been reclassified for this effect on earnings presentation.

2006 Performance Drivers

Weather Impact: Negative $0.08 vs. normal
Negative $0.16 vs. prior yr.

- *Rate Relief ($325MM), mostly Ohio RSP, KY, APCO; Increased margins reflecting customer growth, usage and price ($60MM); Mon Power customers ($63MM); New muni & coop power supply contracts ($70MM); Offset by weather ($95MM) and higher other variable costs ($93MM)*
- *Lower ECAR (primarily due to elimination of SECA) and ERCOT Transmission revenue*
- *Higher gains on sales of emission allowances*
- *O&M increase related to higher base plant operations & increased maintenance ($50MM); higher reliability costs ($26MM); higher A&G expenses ($19MM) and higher RTO costs ($7MM); Offset by lower storm restoration costs ($28MM)*
- *D&A increase primarily associated with higher amortization related to the Texas securitization and at the Ohio Companies & higher depreciation expense due to increased asset balances from cap-ex*
- *Interest expense increased due to higher LTD interest expense ($118MM), which includes interest on Texas securitization bonds issued in October 2006, somewhat offset by AFUDC ($46MM)*
- *Other Income & Deductions declined due to lower carrying costs for the Ohio Companies ($41MM) slightly offset by carrying costs related to VA E&R ($19MM)*

2006 Cash Flow

Beginning Cash & Cash Equivalent Balances	320	401
Ending Cash & Cash Equivalent Balances	401	301

2006 Cash Flow Drivers

- *2006 Impairment relates to Dow ($136MM)*
- *Positive cash effect partly due to deferred fuel recovery at PSO and SWEPCo*
- *Changes in Working Capital largely driven by Customer Deposits, Accounts Receivable and Fuel Inventory*
- *Cash outlay of $3.5 billion for 2006 capital investment. FY 2006 guidance assumed $3.7 billion in capital investment*
- *2006 primary asset sale proceeds: Centrica sharing ($70MM), Plaquemine Facility ($64MM), ICE shares ($40MM) and Bajio ($29MM); 2005 primary asset sale proceeds: HPL ($1B), Texas generation ($315MM), Centrica sharing ($115MM) and PacHydro ($88MM)*
- *Common stock issuance of $99MM primarily related to the exercise of stock options during 2006*
- *Ending cash balance for 2006 of $301MM. 2006 guidance assumed year-end cash balance of $390MM*

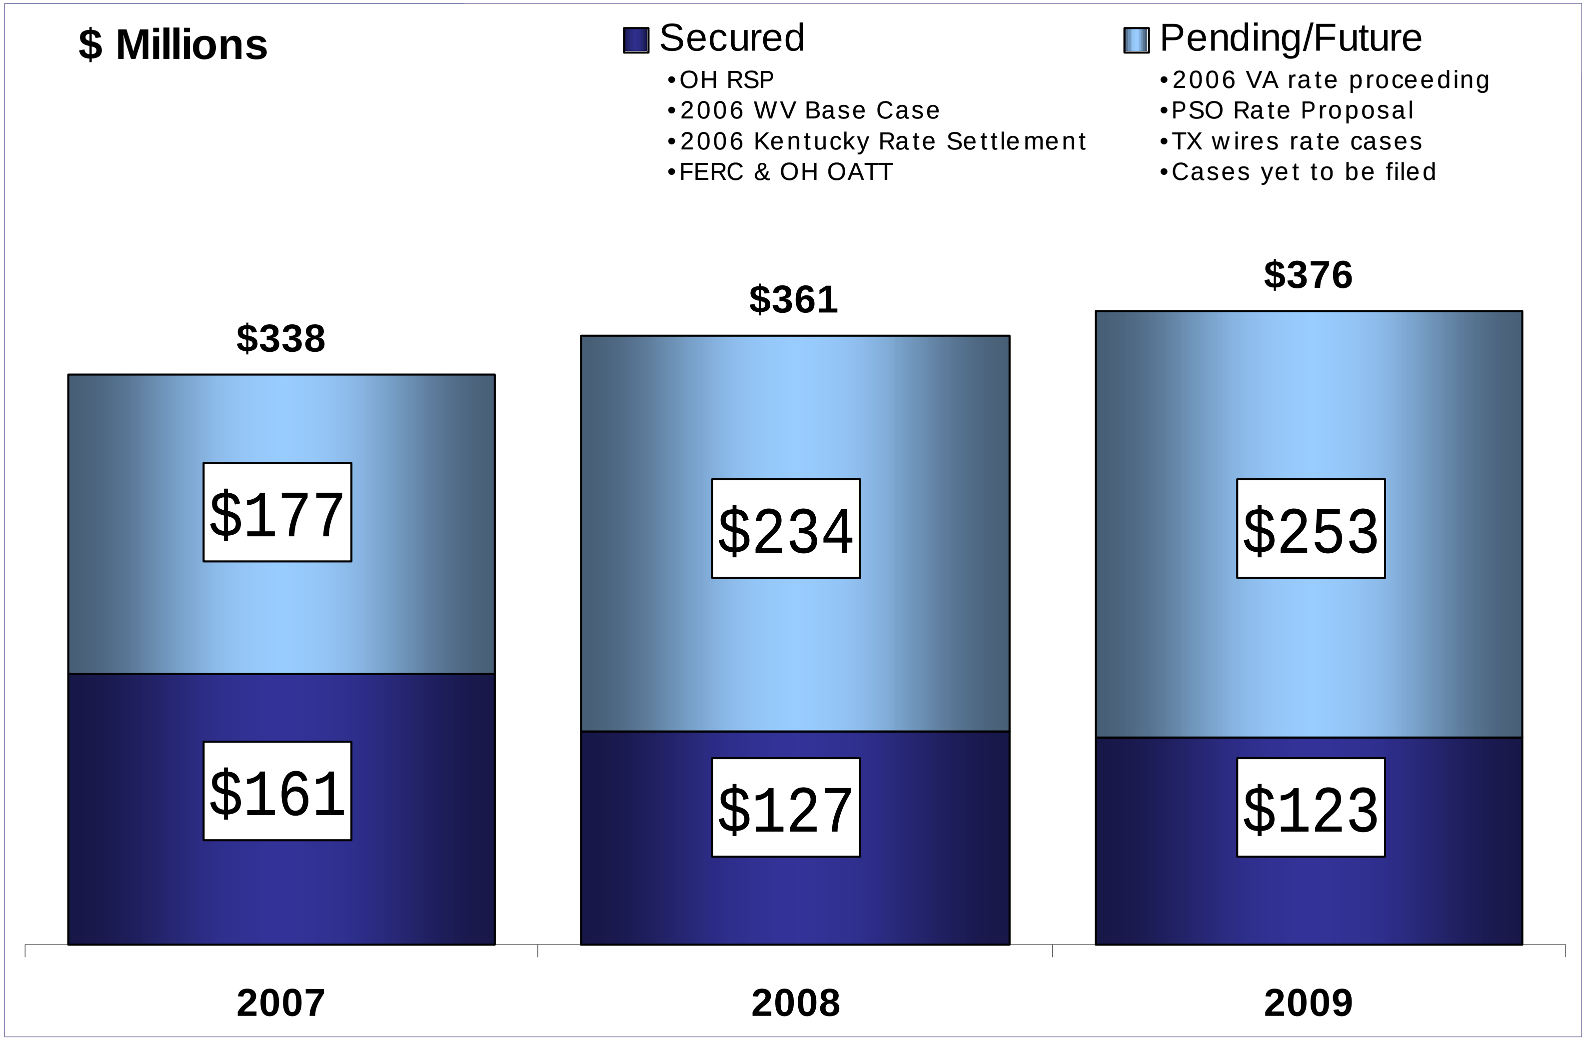
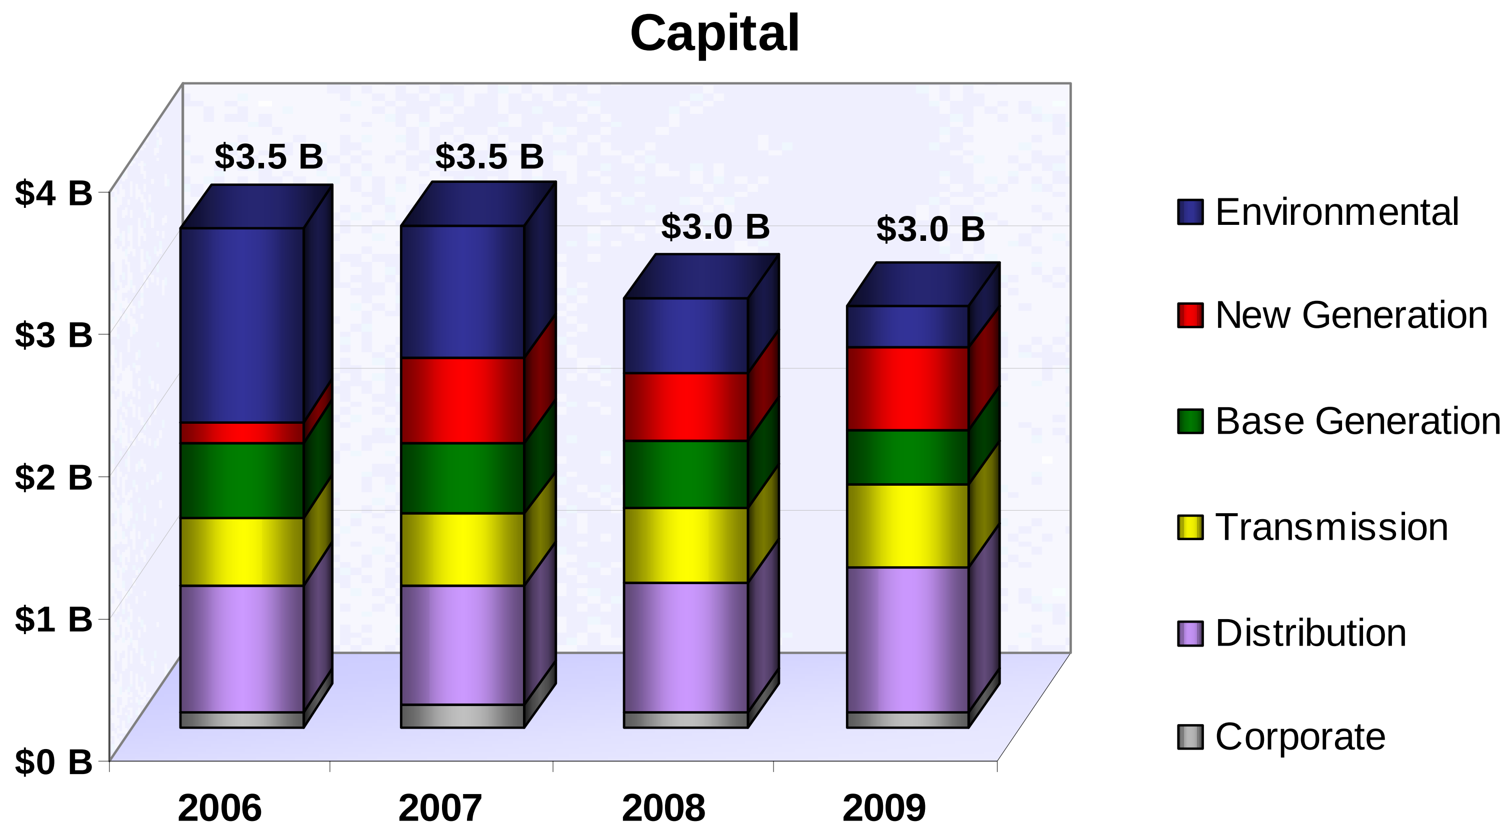
Incremental Rate Relief Composition



Note: A portion of the pending/future rate recovery related to Virginia E&R costs will now be considered secured, based on the Virginia SCC's Nov. 20, 2006 order in our E&R case. Further analysis is required to quantify these amounts.

Rate Relief is a Critical Element to AEP's Financial Success

Multi-Year Capital Investment Forecast



- *Total 2007 Capital Forecast = $3.9B (including Lawrenceburg)*
- *All periods presented exclude AFUDC*

Multi-Year Capital Investment Funding Plan

	Actual 2006	Projection 2007	Projection 2008	Projection 2009
Planned Capital Investment (Excluding AFUDC)	$ (3,528)	$ (3,867)	$ (3,026)	$ (2,974)
Dividend on Common	$ (591)	$ (620)	$ (624)	$ (627)
Cash Sources				
Cash from Operations *	$ 2,771	$ 2,353	$ 2,642	$ 2,671
Proceeds from Sale of Assets	$ 226	$ 43	$ -	$ -
Common Stock Issued (Dividend Reinvestment Plan)	$ 99	$ 80	$ 80	$ 80
Change in Debt, Net	$ 1,422	$ 2,010	$ 1,176	$ 967
Change in Other Temporary Cash Investments, Net	$ (291)	$ -	$ -	$ -
Other, primarily Working Capital, Items	$ (208)	$ (95)	$ (137)	$ (29)
Cash Sources Less Capital Expenditures, Dividends & Other	$ (100)	$ (96)	$ 111	$ 88
Ending Cash Balance	$ 301	$ 205	$ 316	$ 404

Projected 2007-2009 Credit Metric Ranges
Debt to total capital (adjusted - rating agency view) range of 58% to 60%
FFO to Interest range of 3.5x to 4.0x
FFO/Total Debt range of 15% to 17%

* Cash Flow from Operations assumes full rate recovery on capital expenditures.

CAPITAL INVESTMENT IS FUNDED BY CASH FROM OPERATIONS AND DEBT ISSUANCES

2007 Highlights

2007 Financial Highlights

- 2007 GAAP Earnings $2.73 per share; Ongoing $3.00 per share
- 4Q07 GAAP Earnings $0.58 per share; Ongoing $0.52 per share
- Quarterly Dividend increased 4.9% to $0.41 per share
- Increased EPS growth range to 5-9% (2007 – 2010)

2007 Operational Excellence

- Incremental rate relief - $352MM
- Transmission projects on track
- Environmental program nearing completion
- Generation purchases at favorable prices
- PSO storm damage restoration in January & December – cost recovery expected
- Improved safety & health – no fatalities

Continued track record of financial and operational excellence

2008 Update

2008 Plans

- Achieve ongoing earnings within guidance range of $3.10 to $3.30
- Continued disciplined investment in utility operations:
  - New Generation - SWEPCO
  - IGCC
- Environmental Retrofits:
  - Complete required tie-ins
- Transmission Initiatives:
  - PATH
  - ETT/ETA
- Regulatory Strategy – accelerate cash flow and earnings:
  - Increase filing frequency
  - Single issue cost recovery
  - Formula rates

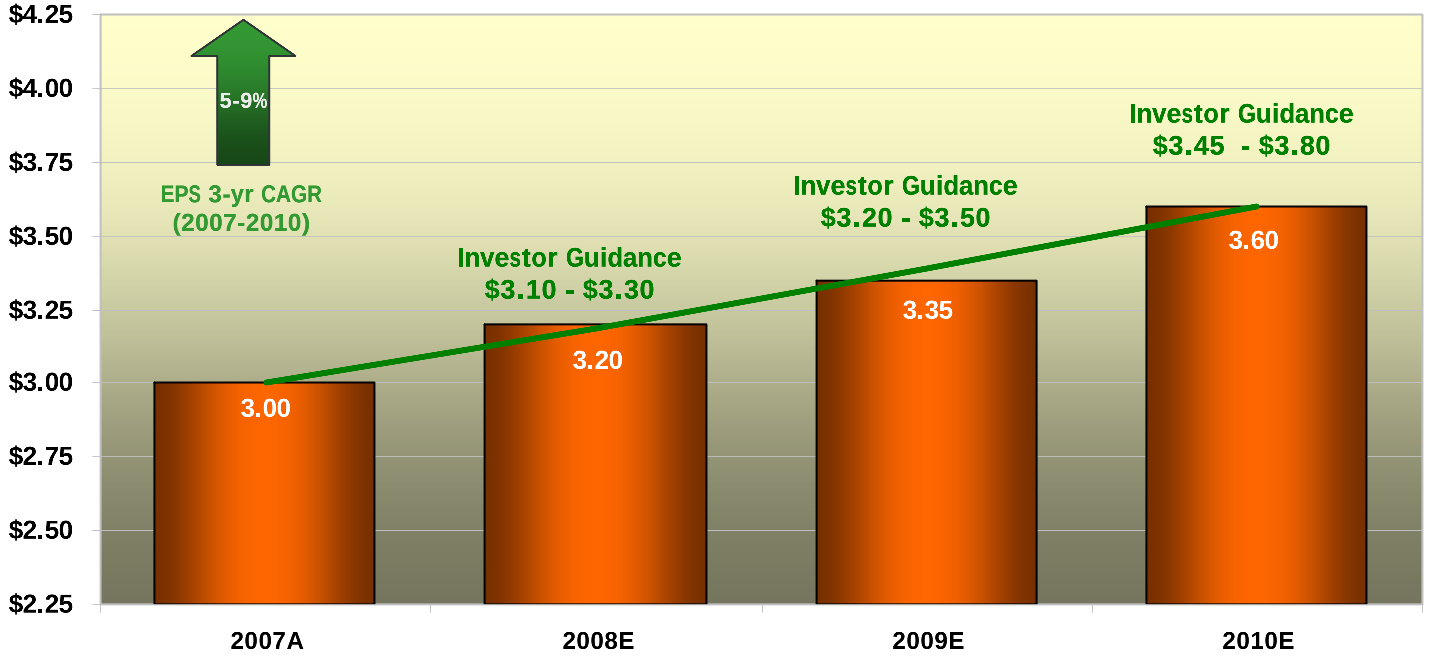
Regulatory Plan Highlights

- Ohio:
  - 2008 RSP 4%
  - Post 2008
- Indiana:
  - Base rate case filing
- Oklahoma:
  - 2007 ice storms
  - Red Rock cost recovery
- SWEPCO:
  - Turk plant
  - Stall plant
- Virginia:
  - Fuel factor
  - IGCC
- West Virginia:
  - IGCC

Secured $235MM of $518MM of rate relief for 2008 with approximately 70% of the pending/future rate relief in the form of settlements in front of the commission or storm damage

Earnings Highlights

- 4Q 2007 GAAP Earnings of $0.58 per share; Ongoing Earnings of $0.52 per share
- YTD 2007 GAAP Earnings of $2.73 per share; Ongoing Earnings of $3.00 per share



Achieved high end of 2007 guidance range at $3.00 per share

Increasing 2008 guidance by $0.05 per share to $3.10 - $3.30 per share

4Q07 Performance

Note: For analysis purposes, certain financial statement amounts have been reclassified for this effect on earnings presentation.

4Q07 Performance Drivers:

- *Weather Impact of $22MM:*
  - *Positive $0.01 vs. normal; Positive $0.04 vs. prior year*
- *Retail Sales (lines 1-4):*
  - *Rate Relief $48MM; (APCo, Ohio RSP, PSO & Texas Wires)*
  - *Positive load growth including new customers; $29MM*
- *Off-System Sales (line 5):*
  - *Favorable due to higher volumes and prices*
- *Net Transmission Revenue (line 6):*
  - *Primarily increased PJM marginal losses of $52MM offset by increased OSS (line 5) and lower fuel expense (lines 1&2) for a net loss of approximately $10MM*
- *Other Operating Revenue (line 7):*
  - *Lower third-party and miscellaneous revenues*
- *Operations & Maintenance (line 9):*
  - *Increased expenses $72MM; primarily attributed to PSO storm restoration*
- *Other Income & Deductions (line 13):*
  - *Lower due to reinstatement of VA E&R carrying costs in 4Q06*
- *Income Taxes (line 14):*
  - *Effective tax rate for utility operations was 25.9% in 2007 and 42.2% in 2006 due to unfavorable FIT adjustments in 2006 & favorable amended state income tax returns in 2007*

YTD 2007 Performance Drivers:

- *Weather impact of $105MM:*
  - *Positive $0.09 vs. normal; Positive $0.17 vs. prior year*
- *Retail Sales (lines 1-4):*
  - *Rate relief; $214MM (AP, KP, Ohio RSP, PSO & TX Wires)*
  - *Positive load growth including new customers $196MM*
- *Off-System Sales (line 5):*
  - *Favorable trading margins & West physical OSS, offset by unfavorable East physical*
- *Net Transmission Revenue (line 6):*
  - *Increased PJM marginal losses of $144MM offset by increased OSS (line 5) and lower fuel expense (lines 1&2) for a net loss of approximately $34MM*
- *Operations & Maintenance (line 9):*
  - *Increased expenses $149MM attributed to storm restoration, plant outages and other base cost of operations*
- *Depreciation & Amortization (line 10):*
  - *Increased amortization related to Texas securitization offset by lower depreciation expense*
- *Interest Expense (line 12):*
  - *Higher due to Texas securitization bonds and more LTD*
- *Other Income & Deductions (line 13):*
  - *Decreased Centrica sharing contribution of $50MM in 2007 vs. 2006 and lower Texas carrying costs income of $69MM*

Beginning Cash & Cash Equivalent Balances	401	301
Ending Cash & Cash Equivalent Balances	$ 301	$ 178

2007 Cash Flow Drivers:

Operating Activities

- Changes in working capital largely driven by changes in accrued taxes and accounts receivable/payable.

Investing Activities

- Cash outlay of $3.6 billion for 2007 capital investment.
- 2007 primary asset sale proceeds: Centrica sharing $20MM, TCC's share of Oklaunion $46MM, TCC's asset sale to Electric Transmission Texas $70MM and Sweeny Plant $82MM; 2006 primary asset sale proceeds: Centrica sharing $70MM, Bajio $29MM and DOW Plant $64MM.
- 2007 acquisitions consist of the Darby Plant for $102MM, Lawrenceburg for $325MM and Dresden for $85MM.

Investing Activities

- 2007 common share issuances of $143MM: stock options exercised $86MM and issuances for the dividend reinvestment program $57MM.
- Changes in long and short term debt driven by capital funding requirements.

AEP AMERICAN ELECTRIC POWER®

4Q10 Earnings Release Presentation

January 28, 2011

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

2010 Highlights and 2011 Plan

- **2010 Highlights**
  - 4Q10 and YTD GAAP earnings of $0.37 and $2.53 per share, respectively
  - 4Q10 and YTD on-going earnings of $0.38 and $ 3.03 per share, respectively
  - $329M in rate changes throughout all jurisdictions, $222M net of offsets
  - Overall AEP System on-going ROE of 10.75%
  - Increased quarterly dividend 12%
  - Total shareholder return of 8.7%

- **2011 Plan**
  - **Financial Performance**
    - Earnings guidance of $3.00 to $3.20 per share
    - Maintain fiscal discipline around O&M and capital spending
  - **Regulatory Plan**
    - Rate proceedings – $162M of $235M secured (69%)
    - Ohio Filings – ESP, Distribution Cases, Environmental Cases, 2010 SEET
  - **Policy Update**
    - EPA
    - Transmission

AEP Ohio ESP Filing – Core Policy Issues

AEP®

Investment in Ohio

Supports economic development and essential tax base

Fundamental barriers must be addressed to attract investment for Environmental Compliance and New Generation

Jobs in Ohio

Jobs are a key component of growth potential in Ohio

Without regulatory assurances over time we could see loss of direct & indirect jobs related to power generation, and business relocations to surrounding states

Energy Security

Secure, reliable and predictable electricity supply is basis for sustained investment and employment in Ohio

Volatility in power prices can lead to major loss of economic activity over time

Primary objective of ESP: Stabilize rates and support economic development in the state of Ohio

Merged AEP Ohio

Single merged AEP Ohio company presumed with supporting information on an individual OP/CSP basis

Rate Redesign

Generation rates redesigned to resemble market pricing structures

29-Month ESP Period

ESP period Jan 1, 2012 through May 31,2014 (May 31 date aligns with PJM annual planning cycle)

Alternative Long Term Option

Alternative longer-term price certainty option offered for qualifying commercial & industrial customers

Ohio Growth Fund

Creation of significant private sector economic development to attract investment and job growth in AEP Ohio service territory

Distribution Components Included

Inclusion of certain distribution components while pursuing a parallel distribution base rate case

Summary of ESP Filing

The proposed 2012-2014 AEP Ohio ESP contains a balanced set of customer programs, investment proposals, supply options and associated rate mechanisms. The terms of the proposed ESP offer AEP Ohio customers stable and affordable electricity rates while offering investors reasonable financial stability and returns.

Key Provisions Included in ESP:

- ✓ Generation Rate Realignment
- ✓ Alternative Longer-Term Price Certainty Option
- ✓ Fuel Adjustment Clause Mechanism
- ✓ POLR Provision
- ✓ Recovery of Generation Related Facility Closure Costs
- ✓ Interruptible Power Tariff
- ✓ Plug-in Electric Vehicles Tariff
- ✓ Pool Modification Provision
- ✓ Partnership with Ohio Fund
- ✓ Economic Development Rider
- ✓ Distribution Investment Rider
- ✓ Storm Damage Recovery

- Pre-tax earnings impact from proposed ESP (excluding potential earnings impact from trackers):
  - Net base $54MM or 1.4% in year 1 (2012)
  - Net base $106MM or 2.7% in year 2 (2013)

4Q10 Performance

Fourth Quarter Reconciliation

	EPS	Ongoing Earnings ($ in millions)
4Q09	$ 0.50	$238
Share Count Effect	$ (0.01)	
Firm Wholesale Margin	$ (0.02)	
SEET Refund	$ (0.06)	
Non-Utility Operations, net	$ (0.07)	
Other Utility Operations, net	$ (0.18)	
Off-System Sales	$ 0.01	
Retail Margin	$ 0.02	
Weather	$ 0.04	
Rate Changes	$ 0.07	
Operations & Maintenance	$ 0.08	
4Q10	$ 0.38	$179

4Q10 Performance Drivers

- Firm Wholesale Margin down $17M due to the loss of two large wholesale customers
- SEET refund of $43M related to PUCO order in the 2009 SEET filing for CSPCo
- Non-Utility Operations/Parent decreased $37M primarily due to a contribution to the AEP Foundation and a fleet lease buyout
- Other Utility Operations, net decreased approximately $88M and primarily includes the absence of accidental outage insurance and higher taxes
- Off-System Sales were favorable by $10M due to higher prices and volume and lower sharing, offset by lower trading
- Retail Margin up $18M due to increased industrial usage
- Weather was favorable by $26M vs. prior year, $15M vs. normal
- Rate Changes net of offsets $51M from multiple operating jurisdictions
- O&M expense net of offsets decreased $63M primarily due to lower storm restoration expenses and cost savings initiatives.

December YTD Performance

Annual Reconciliation

	EPS	Ongoing Earnings ($ in millions)
2009	$ 2.97	$1,362
Non-Utility Operations, net	$ (0.05)	
SEET Refund	$ (0.06)	
Firm Wholesale Margin	$ (0.10)	
Share Count Effect	$ (0.14)	
Other Utility Operations, net	$ (0.52)	
Retail Margin	$ 0.07	
Off-System Sales	$ 0.08	
Operations & Maintenance	$ 0.14	
Weather	$ 0.32	
Rate Changes	$ 0.32	
2010	$ 3.03	$1,451

Annual Performance Drivers

- Non-Utility Operations/Parent decreased $19M primarily due to a contribution to the AEP Foundation and a fleet lease buyout, somewhat offset by favorable tax adjustments
- SEET refund of $43M related to PUCO order in the 2009 SEET filing for CSPCo
- Firm Wholesale Margin down $74M due to the loss of two large wholesale customers
- Share count impact due to 20M weighted average shares outstanding increase (459M to 479M) from equity offering and DRP
- Other Utility Operations, net decreased approximately $238M and primarily includes the absence of accidental outage insurance related to the DC Cook nuclear plant and higher interest expense, depreciation and taxes
- Retail Margin up $48M, due to economic recovery, primarily in the industrial class
- Off-System Sales increase $53M with increased sales in the east offsetting decreased trading/marketing profits
- O&M decrease of $97M net of offsets, primarily due to lower storm restoration expenses and cost savings initiatives
- Weather was favorable by $229M vs. prior year, $164M vs. normal
- Rate Changes net of offsets of $222M from multiple operating jurisdictions

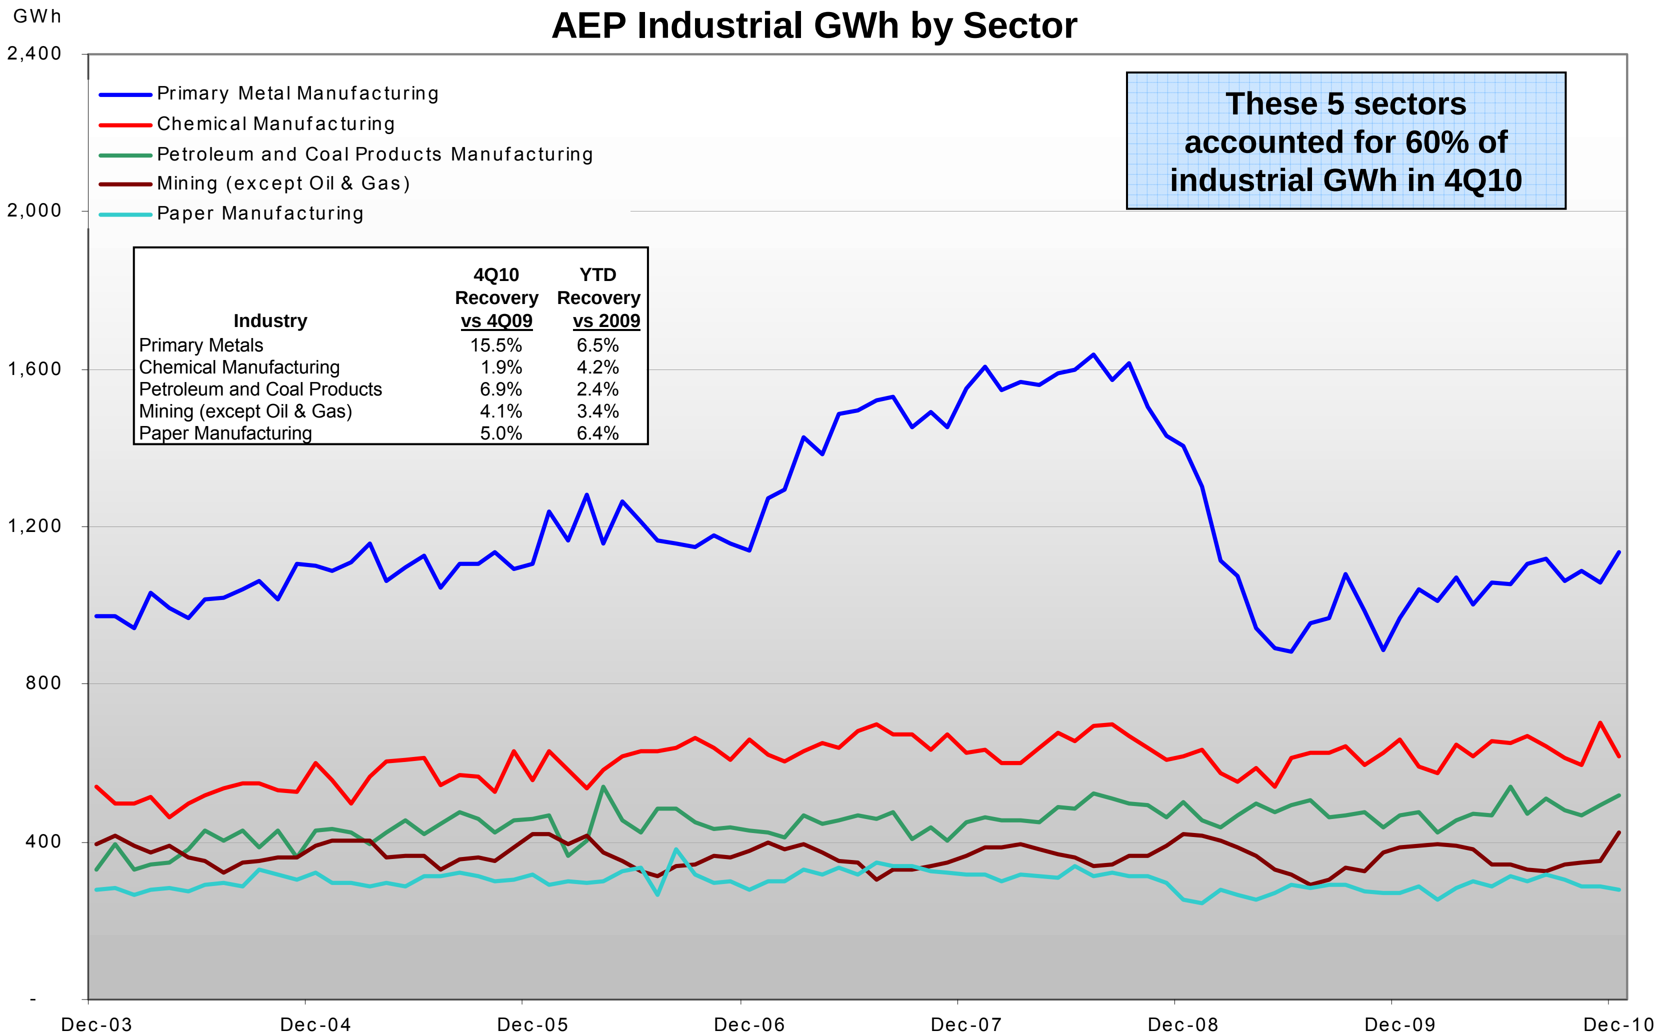
Industrial Sales Volumes



Industry	4Q10 Recovery vs 4Q09	YTD Recovery vs 2009
Primary Metals	15.5%	6.5%
Chemical Manufacturing	1.9%	4.2%
Petroleum and Coal Products	6.9%	2.4%
Mining (except Oil & Gas)	4.1%	3.4%
Paper Manufacturing	5.0%	6.4%

2011 Guidance and Business Initiatives

2011 Guidance: $3.00 - $3.20 per share

2011 Earnings Drivers

- Recovering Economy
- Rate changes (69% secured)
- Continued O&M discipline - $34M decrease net of offsets
- Customer switching – Ohio
- 2010 SEET at Columbus Southern Power
- Off-system sales

Business Initiatives

- Operating Transcos in OH, OK and MI; filings pending in other states
- AEP Eastern System Interconnection Agreement
- Bonus Depreciation
- Capital Allocation

Ending Cash & Cash Equivalent Balances	**$ 490**	**$ 294**

YTD 2010 Cash Flow Drivers:

Operating Activities

- Changes in working capital largely driven by coal inventory and accrued taxes.

Investing Activities

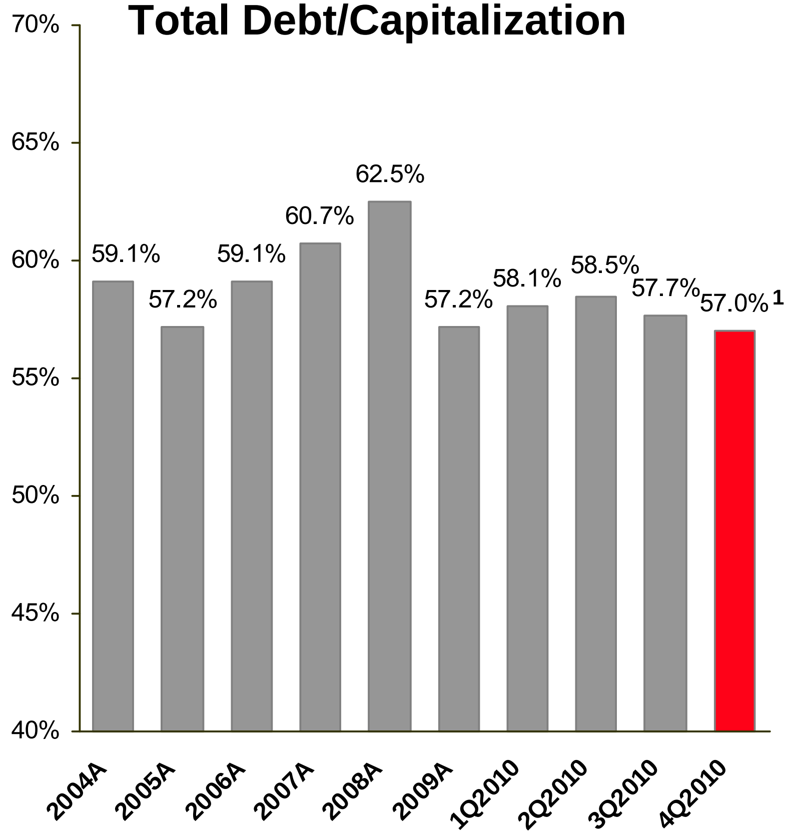
- Cash outlay for 2010 YTD capital investment.
- 2010 asset sale proceeds primarily relate to the transfer of assets to ETT.

Financing Activities

- Changes in long-term debt driven by reduced capital funding requirements.
- Changes in short term debt relate to funding of severance activity and voluntary pension funding.

Capitalization & Liquidity

Total Debt/Capitalization



Current Liquidity Summary

Liquidity Summary (unadited)	Actual 12/31/10	
($ in millions)	**Amount**	**Maturity**
Revolving Credit Facility	$1,500	Jun-13
Revolving Credit Facility	1,454	Apr-12
Revolving Credit Facility	478	Apr-11
Total Credit Facilities	**3,432**	
Plus		
Cash & Cash Equivalents	294	
Less		
Commercial Paper Outstanding	(650)	
Letters of Credit Issued	(124)	
Letters of Credit Issued for VRDNs	(477)	
Net Available Liquidity	**$2,475**	

Note: Total Debt is calculated according to GAAP and includes securitized debt

[1]: Effective January 1, 2010 in accordance with Transfers and Servicing accounting guidance (formerly SFAS 166), factored receivables of AEP Credit of $750 million are classified as short-term debt; The 4Q2010 debt/capitalization ratio would be 56.1%, excluding AEP Credit.

4Q09 Earnings Release Presentation

January 28, 2010

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants including our ability to restore I&M's Donald C. Cook Nuclear Plant Unit 1 in a timely manner, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of the recently passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events. AEP and its Registrant Subsidiaries expressly disclaim any obligation to update any forward-looking information.

2009 Accomplishments; 2010 Plans

2009 – Successful year

- ✓ **FINANCIAL PERFORMANCE**
  - ✓ **Delivered on-going earnings** $2.97/share, at the upper end of original guidance $2.75 to $3.05
  - ✓ **Raised over $4B in capital**
- ✓ **REGULATORY SUCCESS**
  - ✓ **Rate relief** –$725MM secured
  - ✓ **Fuel recovery** – now active in all jurisdictions
  - ✓ **Trackers**
- ✓ **TECHNOLOGY LEADERSHIP**
  - ✓ **Carbon capture & storage**
  - ✓ **Cook Nuclear Plant Unit 1 restart**
  - ✓ **Ultra supercritical coal - Turk**

2010 – Commitment to perform

- **MANAGE, EXECUTE, DELIVER**
  - **Meet earnings guidance** $2.80 to $3.20
  - **Manage rate cases**
  - **Celebrate 100 years of dividends**
- **POLICY INITIATIVES**
  - **Climate change**
  - **Energy policy**
- **FOCUS ON GROWTH OPPORTUNITES**
  - **Transmission (JVs & Transco)**
  - **Rate base opportunities (G,T & D)**

4Q09 Performance

Fourth Quarter Reconciliation

	EPS	Ongoing Earnings ($ in millions)
4Q08	$ 0.59	$237
Rate Relief	$ 0.28	
Load Contraction	$ (0.11)	
Weather	$ (0.03)	
O&M	$ (0.12)	
Share Count Effect	$ (0.09)	
Other	$ (0.02)	
4Q09	$ 0.50	$238

4Q09 Performance Drivers

- *Rate Relief of $178MM in Ohio, APCo, PSO, I&M*
- *Load Contraction of $70MM, primarily due to industrial customers at APCo (23%), and Ohio (17%)*
- *Weather was unfavorable by $18MM vs. prior year, $13MM vs. normal*
- *O&M expense increased $73MM primarily driven by storm damage and plant outage expenses*
- *Share count impact due to 74MM weighted average shares outstanding increase (404MM to 478MM) from equity offering and DRP*
- *Other includes higher depreciation and interest expense, partly offset by higher other operating revenue*
- *Off-System Sales after sharing is essentially flat quarter over quarter*

December YTD Performance

Annual Reconciliation

	EPS	Ongoing Earnings ($ in millions)
YTD08	$ 3.24	$1,301
Rate Relief	$ 1.17	
Load Contraction	$ (0.34)	
Weather	$ (0.08)	
Off-System Sales	$ (0.54)	
O&M	$ (0.07)	
Share Count Effect	$ (0.42)	
Other	$ 0.01	
YTD09	$ 2.97	$1,362

Annual Performance Drivers

- *Rate Relief of $725MM in Ohio, APCo, PSO, I&M and KGP*
- *Load Contraction of $213MM, primarily Industrial at APCo (25%), Ohio (18%), and I&M (10%)*
- *Weather was unfavorable by $52MM vs. prior year and unfavorable by $66MM vs. normal*
- *Lower Off-System Sales of $333MM after sharing, primarily east physical where volume and price declined*
- *O&M expense increased $44MM primarily due to storm damage*
- *Share count impact due to 57MM weighted average shares outstanding increase (402MM to 459MM) from equity offering and DRP*
- *Other items primarily includes higher other operating income & 3rd party transmission revenue offset by higher depreciation and interest expense*

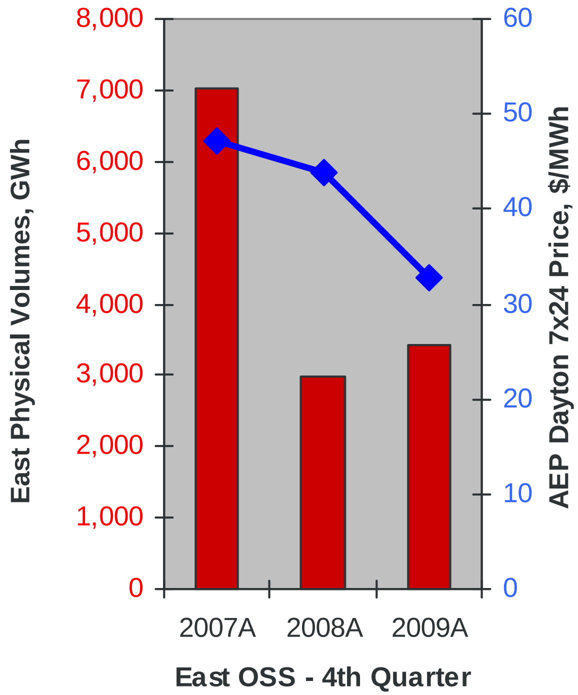
Attachment 1 - Confidential
Page 2124 of 9556

East Off-System Sales

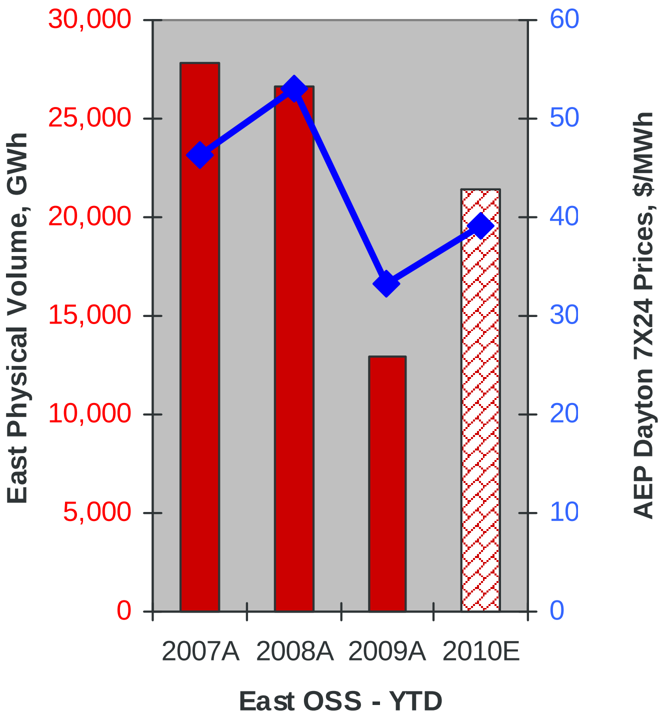
4th Quarter Actual



Volumes – Q4 2009 physical sales showed some improvement vs. Q4 2008, but continue to be off pre-recession levels

Prices – Q4 2009 liquidations reflect lower wholesale electricity pricing due to lower commodity costs and reduced demand

YTD2009 Actual/2010 Est.



Volumes – Annual 2009 physical sales were significantly lower than pre-recession levels

Prices – Annual 2009 liquidations reflect lower wholesale electricity pricing due to lower commodity costs and reduced demand

In 2010, a modest increase in forward electricity prices drives a 65% increase in projected volumes.

Additional 2010 Earnings Drivers

2010 Guidance: $2.80 - $3.20

O&M Assumptions

- $23MM increase over 2009, net of revenue offsets
- Includes $80MM increase in employee and operational expenses

Rate Relief Assumptions

- $320MM, net of trackers
- $167MM secured
  - AR, OH, OK, VA, WV
- Active or pending rate cases include KY, MI, TX, VA, WV and others

Ending Cash & Cash Equivalent Balances	$ 411	$ 490

YTD 2009 Cash Flow Drivers:

Operating Activities

- Changes in working capital largely driven by coal inventory, taxes payable and employee related expenses.
- Changes in fuel recovery primarily relate to deferrals at APCo, OPCo and CSP.

Investing Activities

- Cash outlay for 2009 YTD capital investment.
- 2009 asset sale proceeds relate to the transfer of assets from TCC to ETT and the payments from third-party owners of the Turk Plant.
- Change in other investing primarily relates to the purchase of nuclear fuel.

Financing Activities

- 2009 common share issuances of $1,728MM primarily due to equity offering completed in April.
- Changes in short term debt relate to payments made on credit facilities from the proceeds of the equity offering.
- Changes in long-term debt driven by capital funding requirements.

4Q08 Earnings Release Presentation

January 29, 2009

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; volatility in the financial markets, particularly development affecting the availability of capital on reasonable terms and developments impacting our ability to refinance existing debt at attractive rates; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas coal, nuclear fuel and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

2008 Highlights

- **Earnings:**
  - **2008 GAAP Earnings $3.43 per share; ongoing $3.24 per share**
  - **4Q08 GAAP Earnings $0.38 per share; ongoing $0.59 per share**
- **Regulatory Updates – $527MM of rate relief secured in 2008**
  - **Virginia**
  - **Oklahoma**
- **Generation - Turk Plant**
- **Transmission – Joint Ventures**
- **Economic Environment**

2009 Outlook

- Transmission Initiatives
  - PATH
  - ETT/ETA
- Generation
  - Turk plant
  - DC Cook Plant update
- Ohio ESP filing Outcome
- 2009 Earnings guidance of $3.00-$3.40
  - Cash Flow, Capex, Financing

19	ON-GOING EARNINGS	209	0.52	237	0.59

Note: For analysis purposes, certain financial statement amounts have been reclassified for this effect on earnings presentation.

4Q08 Performance Drivers:

- *Retail Sales (lines 1-4):*
  - *Rate relief of $114MM (Primarily APCo and Ohio RSPs)*
  - *Positive load growth and new customers of $20MM across the AEP system*
  - *Reduced off-system sales sharing of $47MM, partially offset by $39MM higher fuel costs in Ohio*
  - *Weather had no impact vs. prior year and a $0.01 ($5MM) favorable impact vs. normal*
- *Off-System Sales (line 5):*
  - Off System Sales margins were lower primarily due to reduced generation and higher fuel costs
- *Operations & Maintenance (line 9):*
  - *Lower expenditures in 2008 compared to costs related to PSO storm restoration recorded in 2007 of $68MM partially offset by miscellaneous other costs in G, T&D*
- *Interest Expense & Preferred Dividend (line 12):*
  - *Higher due to increased long-term debt outstanding and higher interest rates on variable-rate debt*
- *Income Taxes (line 14):*
  - *Effective tax rate for utility operations was 26.9% in 2008 and 25.9% in 2007*
- *River Operations increased due to strong grain exports and freight rates*
- *Parent and Other decreased primarily due to prior year favorable tax adjustments*

19	**Parent & Other On-Going Earnings**	15	0.04	(31)	(0.08)
20	ON-GOING EARNINGS	1,199	3.00	1,301	3.24

Note: For analysis purposes, certain financial statement amounts have been reclassified for this effect on earnings presentation.

YTD Performance Drivers:

- *Retail Sales (lines 1-4):*
  - *Rate relief $358MM (Primarily APCo, Ohio RSPs, I&M, Texas & PSO)*
  - *Positive load growth including new customers; $74MM*
  - *Positive impact due to 2007 unfavorable true-up of VA order ($37MM)*
  - *Offset by $173MM higher fuel costs in Ohio, including consumables*
  - *Unfavorable weather impact of $65MM ($0.11) versus prior year and unfavorable $0.02 ($13MM) versus normal*
- *Off-System Sales (line 5):*
  - Off System Sales margins were lower primarily due to reduced margin on trading activity
- *Operations & Maintenance (line 9):*
  - *Increase primarily due to various costs in G, T&D offset by 2007 PSO ice storms*
- *Interest Expense & Preferred Dividend (line 12):*
  - *Higher due to increased long-term debt outstanding and higher interest rates on variable-rate debt*
- *Other Income & Deductions (line 13):*
  - *Higher due to increased interest income on FIT refund and carrying charges*
- *Income Taxes (line 14):*
  - *Effective tax rate for utility operations was 31.9% in 2008 and 31.9% in 2007*
- *River Operations decreased due primarily to weather related issues including hurricanes and flooding and an oil spill in New Orleans harbor, which limited ship arrivals and departures*
- *Generation & Marketing increased due to higher gross margins from the marketing business and from the optimization of Oklaunion*
- *Parent and Other decreased due to higher interest expense and lower interest income*

Beginning Cash & Cash Equivalent Balances	301	178
Ending Cash & Cash Equivalent Balances	$ 178	$ 411

2008 Cash Flow Drivers:

Operating Activities

- Changes in working capital largely driven by fuel (coal) stock increase
- Changes in other assets and liabilities largely driven by changes in mark-to-market and fuel recovery.

Investing Activities

- Cash outlay of $3.8B for 2008 YTD capital investment.
- 2008 asset sale proceeds relate to miscellaneous utility property sales; 2007 asset sale proceeds primarily relate to Centrica sharing and TCC's sale of its share of Oklaunion.
- Acquisition of assets related to purchases by River Operations.

Financing Activities

- 2008 common share issuances of $159MM primarily due to issuances through the dividend reinvestment program.
- Changes in long and short term debt driven by capital funding requirements.

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Key Questions

- **How does “climate” affect business strategy, capital investment, choice of generation?**
- **What does AEP assume re: A cost/price for CO2 in the future? What about allocations?**
- **Will there be credit for early reductions?**
- **Given dramatic increases in CO2 related to new coal plant development, what does AEP believe is the best way to address climate change and what role does the electric sector play?**
- **How should the investment community weigh economic impacts of climate change in valuations given long term time frame?**

AEP Climate and Business Strategy

- **AEP does not support mandatory U.S. GHG requirements unless they are part of a new international agreement that limits GHGs in the long term including developing countries such as China and India.**
- **AEP has had a GHG strategy for a number of years, acknowledging the issue, accepting the science and believing in early proactive action. Our strategy includes**:
  - **Proactive on GHG policy -**IETA, EPRI, Pew, e7, Business Roundtable, etc.
  - **Science/technology R&D-** Future Gen, Sequestration, EPRI, MIT, etc.
  - **Taking voluntary action now** (e.g. CCX, EPA Climate Leaders and SF-6 Program, Asia-Pacific Efficiency, DOE1605B, BRT Climate Resolve) -- **Demonstrating voluntary programs can work and setting policy precedents thru CCX**
  - **Long-term planning (post-2010) to reduce or limit GHGs:**
    - IGCC and FutureGen
    - Retirement of less efficient capacity
    - Emission offsets (e.g., forestry, SF-6)
    - Renewables (e.g. biomass firing, wind PPAs)
- **Capital Allocation and New Generation—**
  - **Coal Builds – IGCC in East; Ultra Supercritical Coal in West**
  - **A Portfolio of New Generation Including Gas and Renewables**

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 2163 of 9556

CCX Overview

- An unprecedented voluntary greenhouse gas emission reduction and trading pilot program administered by 100+ companies and organizations
- Total member emissions= About 240 MM metric tons CO2 equivalent (~ 4% US CO_2 emissions)
- Member commitment to reduce GHG emissions below a “baseline” (average 1998-2001 levels):
    - **1% in 2003**
    - **2% in 2004**
    - **3% in 2005**
    - **4% in 2006**
    - **4.25% in 2007***
    - **4.5% in 2008***
    - **5% in 2009***
    - **6% in 2010***

*Extension Period

AEP Info:
- Current Baseline = 155 MM metric tons (adjusted for divestitures)
- Reduction or offset of about 46 MM metric tons of CO2 during 2003-10
- AEP one of 14 founding members
- AEP first company to commit to extension period

Price of CO2?

- **Fed. law unlikely through 2008. In 2009 and after, prospects for legislation will likely increase, depending on the next President.**
- **Price of CO2--**
  - **If legislation passes -- likely a "cap and trade" program (at a minimum including industrial and electric sectors, like the EU). Thus, CO2 will have a price.**
  - **Today -- price of CO2 in the US voluntary (e.g CCX) markets reflecting a "market" view that future legislation is probable.**
  - **AEP investments (such as IGCC) -- evaluated using a range of values (as shown in the August 31, 2004 Board Report titled "An Assessment of AEP's Actions to Mitigate the Economic Impacts of Emissions Policies", available on AEP.com).**
    - **More recently, we have included Bingaman bill's safety valve prices ($7 per ton CO2 increasing by 5% per year) as a moderate price path assumption.**

Allocation/Auctions and Early Action Credit?

- **Allocation/Auction**
  - Support for large auctions often reflects the incorrect economic assumption that the industry is fully deregulated and co. auction credit purchases are recovered in “market” prices.
  - In fact, about 80% of US coal-fired generation is price regulated today. **Auctions in price-regulated states will increase electricity rates, probably very substantially. (e.g. even a 10% auction will more than double the costs/electricity rate impacts of a 10% reduction program).**
  - **Given this, will major auctions survive politically in any ultimate federal legislation?**
- **Early Action Credits**
  - Some early action credit is probable (in most current legislative proposals), though 100% credit is very unlikely.
  - Probability of credits will increase if they are verified/audited, etc. **(One reason AEP is in CCX and EPA Climate Leaders).**

Best Way to Address Climate Change?

AEP has a GHG strategy, which includes:

1. Taking voluntary proactive action in the short and intermediate term (e.g. Chicago Climate Exchange commitment is from 2003-2010);

2. Being engaged in the development of climate policy so that it is as cost-effective as possible;

3. Evaluating longer term investment decisions such as new generation (e.g. IGCC) in light of the climate issue and the possibility of future mandatory legislation;

4. **Investing in R&D for the technologies which may ultimately substantially reduce CO2 emissions (e.g FutureGen, carbon sequestration).**

How should investment community weigh climate change in valuation?

- Though long-term in nature (even if legislation passes in 2010, it is unlikely to result in impacts prior to 2015), the cost implications and stakes of climate change legislation could be large.
- Companies that have a strategy that considers climate change now in their investment decisions and are taking voluntary actions to reduce their CO2 footprints should be a better value for investors than companies that do not.

A CENTURY OF DIVIDENDS • 1910 - 2010

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; volatility in the financial markets, particularly development affecting the availability of capital on reasonable terms and developments impacting our ability to refinance existing debt at attractive rates; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas coal, nuclear fuel and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

Susan Tomasky

President – AEP Transmission

Building a National Interstate Electric Transmission Company

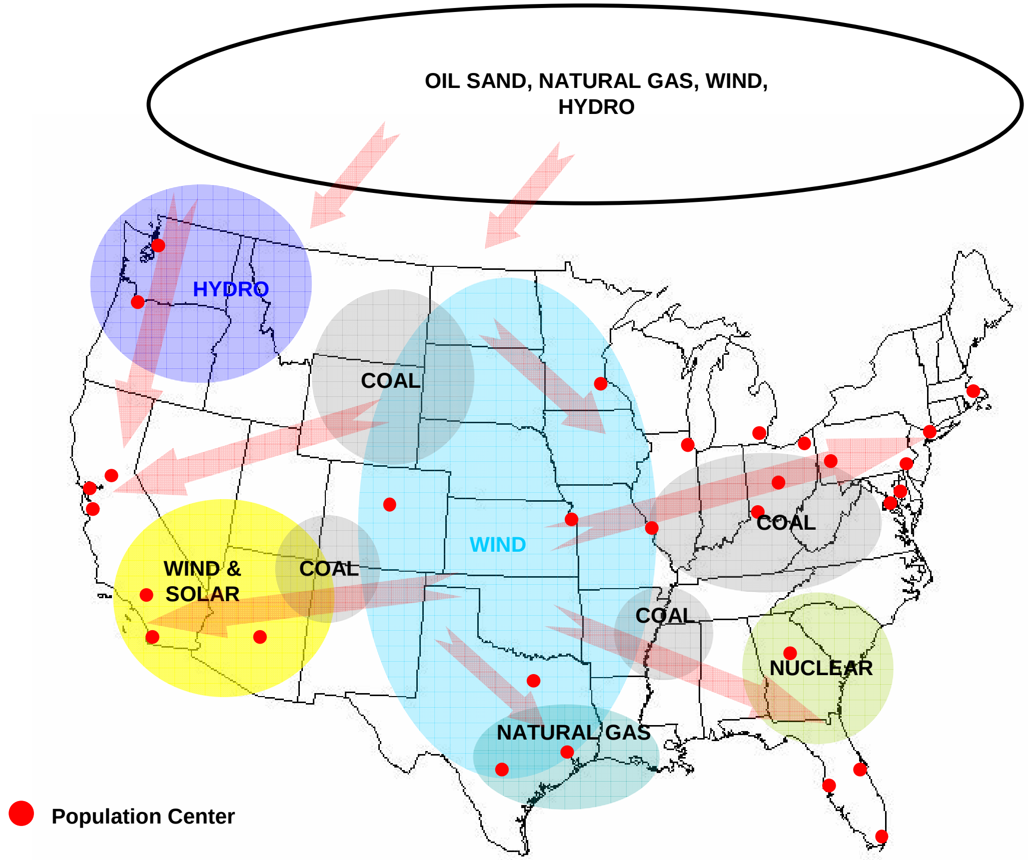
Our Goal: Contribute sustainable shareholder growth by leveraging AEP's position as the nation's leading transmission provider to become the nation's leading developer and owner of interstate transmission investment.

- AEP is recognized as the industry leader in transmission.
  - Recognized technology leader
  - Leader in industry circles - NERC, RTOs, industry groups
  - Recognized as a policy leader
- AEP's asset base provides a strong starting point for new transmission investment within our footprint.
  - 8,139 miles of EHV transmission, including 2,116 miles of 765-kV
  - Operate in three different RTOs in 11 states
  - Existing system requires substantial re-investment
- AEP assets and leadership will open opportunities for significant new regional investments, beyond our traditional retail service territory boundaries.

By leveraging existing assets, expertise and leadership, AEP will grow shareholder value by creating a significant new transmission investment opportunity.

Vision of the Nation's Transmission System

- ❑ A national interstate EHV transmission grid contributes to sustainable energy development:
  - A more sustainable long term national electricity supply portfolio, including tapping extraordinary renewable energy potential.
  - Broader impact of demand-side options and load leveling, lowering the need for new generation.
  - Strengthened national security by enhancing reliability, removing barriers to supply options and enhancing fuel diversity.
  - An alternative path to emission and CO_2 reductions.
- ❑ Economic growth remains closely tied to energy and climate related initiatives, requiring policies which understand these interdependencies.



"Many of our resources, whether it's wind or sun or geothermal, they're out in rural areas…and we just don't have any infrastructure. If we're going to take this whole energy piece on the renewable side seriously … we've got to get the transmission and infrastructure piece right" *Former Utah Gov. Jon Huntsman - AP Western Governors, Utility Heads Seeks Energy Solutions July 1, 2008*

Improved Federal and Regional Policies are Critical to Growing AEP’s Investment Opportunities

- To advance our transmission business strategy, AEP has taken a leadership position in national and regional public policy debates.
- Emerging policies must support and encourage development of new transmission investment to meet our nation’s future energy needs.
- AEP’s goal is to remove barriers to timely transmission investment through improved and clear rules to encourage transmission investment.
- We are vigorously pursuing comprehensive Federal legislation to create federal siting authority, broad cost allocation, and expedited planning.
- Within the current regional framework we are seeking to expedite planning for EHV systems and establish broad cost allocation principles within and across RTOs.
- We continue to strongly support Federal incentives for capital investment in transmission infrastructure.

> “We need a true nationwide transmission version of our interstate highway system; a grid of extra-high voltage backbone transmission lines reaching out to remote resources and overlaying, reinforcing, and tying together the existing grid in each interconnection to an extent never before seen.” *Suedeen Kelly- Former FERC Commissioner*

AEP is Actively Involved in Transmission Related Energy Policy

- Continued state, federal and regional outreach relative to siting, project approval, and cost allocation
  - Help to shape Obama administration energy initiatives to eliminate barriers to transmission investment.
  - Playing a proactive role during development of any future energy legislation (specifically Federal energy bill) to incorporate the needs of transmission development.
  - Aggressively support comprehensive Federal siting legislation.
- Actively participated in RTO proceedings to advocate EHV development, address cost allocation and improve planning.
  - Successful lobby for the SPP Highway/Byway cost allocation methodology that is waiting for FERC's approval.
  - Participating in the MISO changes to cost allocation methodology for projects specific to integrating renewable energy. Cost allocation is expected to be file with FERC by July 15th. Decisions on cost allocation and determining "what lines" get built will be made over the next 12-18months.
  - Working with other PJM TO's on modification to PJM's "bright line" planning process to ensure sufficient focus on western PJM needs. New scenario based planning approach expected to be implemented for the 2010 RTEP process.
  - Working with FERC and PJM to address the significant increase in the activity and interest from independent transmission developers.

Investment Strategy

Provide a pipeline of investment opportunities that will contribute to sustainable earnings growth for AEP shareholders, regardless of the ultimate policy direction at the Federal and regional levels

- AEP is taking a diversified approach to transmission investment, both jurisdictionally and technologically:

  <u>Jurisdictionally</u>

  - **Federal:** Continue pursuit of development of EHV interstate grid.
  - **PJM/East:** Enhance reliability, relieve congestion and enable ultimate access to renewables.
  - **SPP/West & MISO:** Enhance reliability and enable significant nearer-term renewable development.
  - **ERCOT:** Continued development of CREZ transmission build-out.

  <u>Technologically</u>

  - Aggressively seek opportunities to deploy alternative transmission technologies, including 765-kV and HVDC.

- While we will continue to pursue regionally and federally specific strategies to enhance nearer-term investment opportunities, significant on-system investment ($300-600 million potentially up to $1 billion annually) will serve as the anchor to sustainable transmission earnings growth.

Transmission Investment Opportunities

- ETT: Projects in Texas ERCOT jurisdiction
  - $600MM of projects est. in service 2010-2013
  - ETT's opportunity could reach $3.0B in this decade
- Transco: Within our existing footprint
  - Provides opportunity to:
    - Develop new AEP-only projects
    - Reduce regulatory lag through FERC formula rates adjusted annually
- Joint Ventures: Outside of our footprint, via ETA or with others
  - Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
  - Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2015
  - Robust pipeline of projects up to $15B

765-kV Tower

The Business Potential

- AEP Planned Investments:
  - Capital investment with AEP's service territory will be significant, with approximately $300 to $600 million annually from 2010 – 2014, with the possibility of additional AEP Transco projects up to $450 million.
  - In the Eastern US, AEP is actively pursing development of over 500 miles of 765 kV transmission in PJM and eastern MISO (with 275 miles approved with PATH), at total cost before ownership division of approximately $2.8 billion.
  - In the Southwest so far in 2010, AEP and its joint-venture partners have gained approval of 280 miles of new transmission in SPP (at 345 kV and potentially 765 kV), at a total cost around $515 million.
  - In Texas, AEP continues to pursue EHV transmission expansion throughout the state, with a potential capital spend in excess of $2.5 billion before ownership division.
  - In the Upper Midwest, AEP has a taken a leadership role with the SMARTransmission study, evaluating nearly 8,000 circuit miles of potential 765 kV, 345 kV, and HVDC transmission development in PJM and MISO, at a total cost of over $20 billion.
- Challenges: Making it Happen
  - Capital Requirements – Infrastructure development through JV's requires committed capital to secure timely project development.
  - Regulatory challenges – Federal policies should favor spreading the costs broadly across customers on a regional basis; provide incentives for transmission development and investment and address challenges associated with siting EHV projects.
  - Managing a development business – Pursue standardized deal structures to permit more efficient portfolio management and capital discipline. Pursue alliances to reduce risks associated with commodities and the provision of direct services. Prove to capital markets that the regulatory model provides revenue certainty.

EHV Transmission investments can assist in ensuring a reliable, adequate and affordable energy supply for the nation.

Making it Happen: EHV Projects Under Development

SPP

Prairie Wind — COD: 2013-14

- 110 miles of 765 kV
- Partners: Westar (50%) & Electric Transmission America (50%)
- Estimated Cost: $400 million
- ROE: 12.8%

Tallgrass — COD: 2013-14

- 170 miles of 765 kV
- Partners: OG&E (50%) & Electric Transmission America (50%)
- Estimated Cost: $500 million
- ROE: 12.8%

ERCOT

ETT — COD: 2010-2017

- 345 kV ERCOT Expansion
- Partner: MidAmerican Energy (50%)
- Estimated Cost: $1.4 billion
- ROE: 9.96%

PJM

PATH-WV — COD: 2014

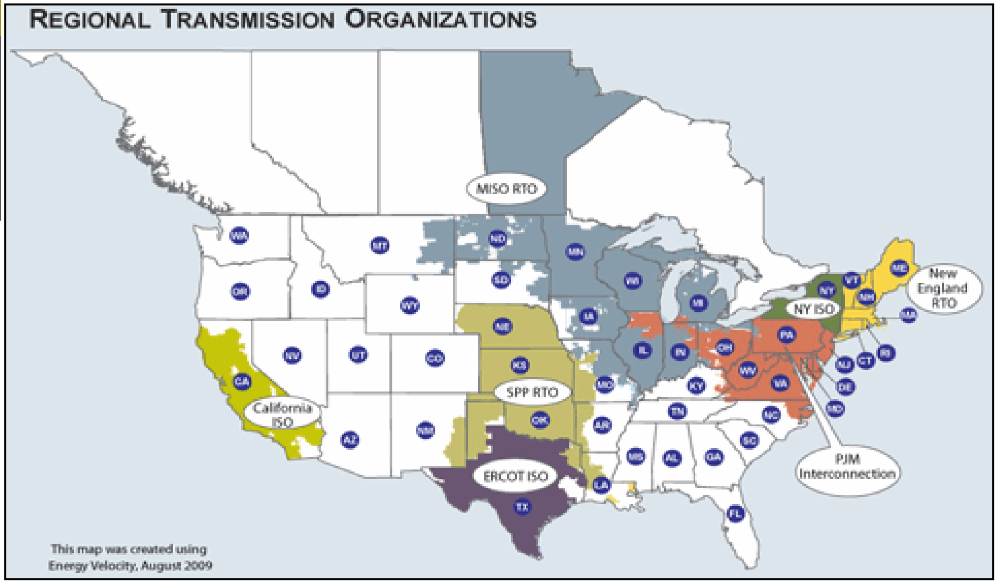
- 275 miles of 765 kV
- Partner: Allegheny Energy (50%)
- Estimated Cost: $1.2 billion
- ROE: 14.3%

PJM/MISO

Pioneer — COD: 2015

- 240 miles of 765 kV
- Partner: Duke Energy (50%)
- Estimated Cost: $1 billion
- ROE: 12.54%

ACTIVE PROJECTS



FUTURE DEVELOPMENT

SMARTransmission Study

- Interregional EHV & Wind Integration Study
- Study Sponsors: ETA, ATC, Exelon, MidAmerican Energy, Northwestern Energy, Xcel Energy

SPP

SPP EHV Overlay

- Regional Expansion of 765 kV Backbone

ERCOT

ETT — COD: various

- Additional CREZ spend of ~ $1.1 billion (COD 2012-2013, subject to a 6-month routing approval)
- Other Projects Pending Transfer of ~ $600 million (COD 2010-2013)

PJM

PJM Expansion

- Regional Expansion of 765 kV, 500 kV and 345 kV systems

PJM/MISO

EHV Michigan/Ohio

- 700 miles of Proposed 765 kV

Appendix

Transmission Joint Venture Execution

AEP Transmission has made significant strides towards our goal of becoming the nation's leading developer and owner of interstate transmission investments; Major milestones include:

PATH	-FERC approval including cash return on CWIP, 14.3% incentive ROE, and abandonment recovery -Approved by PJM in 2007; CPCN processes on-going dependent upon 2010 PJM RTEP. -Critical siting and right-of-way activities and NEPA permitting process ongoing.
Prairie Wind	-FERC approval including cash return on CWIP, 12.8% incentive ROE, and abandonment recovery -Obtained CCN in Kansas -Successfully promoted regional cost allocation in SPP (filing currently pending FERC approval) -Gained SPP approval (voltage decisions pending)
Tallgrass	-FERC approval including cash return on CWIP, 12.8% incentive ROE, and abandonment recovery -Successfully promoted regional cost allocation in SPP (filing currently pending FERC approval) -Gained SPP approval (voltage decisions pending)
Pioneer	-FERC order received March 2009, including cash return on CWIP, 12.54% incentive ROE, and abandonment recovery -Joint cost allocation discussions with PJM and MISO continuing -Project included in MISO, PJM, and SMARTransmission studies
SMARTransmission	-Initiated a joint-study (including sponsors ETA, MidAmerican Energy, Xcel Energy, Exelon, ATC, Northwestern Energy) to perform a comprehensive evaluation of the transmission needed in the Upper Midwest to support renewable energy development and to transport that energy to consumers -Completed technical study recommending around 8,000 miles of EHV transmission at a cost of over 20 billion. A subsequent economic study is underway, with results to be submitted to PJM and MISO
Other	-Discussions underway with several potential partners in PJM, MISO, SPP, WECC, and elsewhere

Electric Transmission Texas, LLC

Overview:

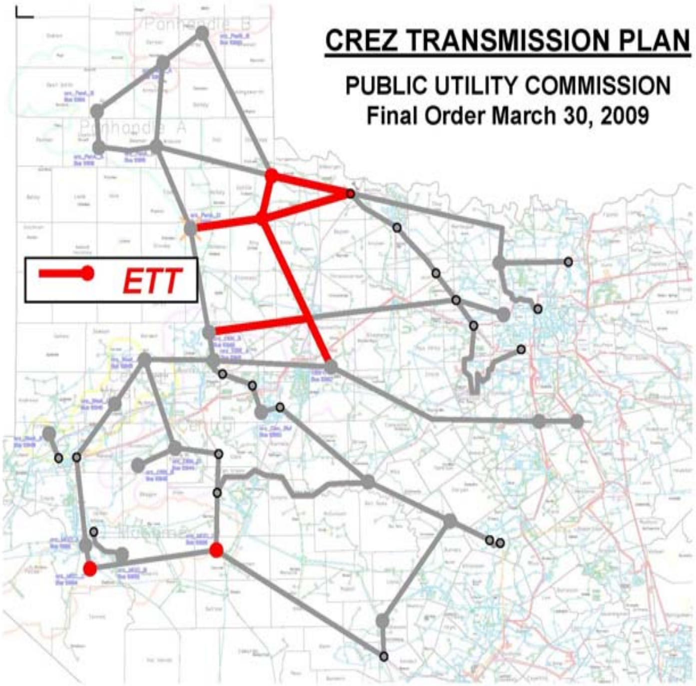
- ETT is a 50/50 JV between AEP and MidAmerican Energy Holding Company that plans to construct and operate transmission projects within ERCOT with an investment opportunity of more than $3 billion.
- Current JV rate base is $127 million with an additional $262 million requested in the current ITCOS filing, resulting in a total anticipated rate base of $389 million; debt to capital ratio of 60/40 and an authorized ROE of 9.96%.

Opportunities:

- Projects in service 2010-2018: $1.4 billion
- CREZ projects in service 2012-2013: $1.1 billion
- Other projects representing recent and pending transfers in service 2010-2014: approaching $600 million

Next Steps:

- Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in 2010.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

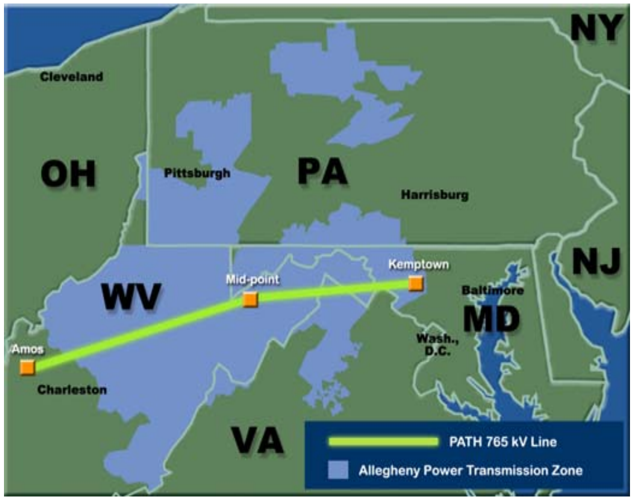
ETT
Electric Transmission Texas

EHV Transmission in PJM: PATH

<u>Project Description</u>: 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

Overview:

- FERC order issued on February 29, 2008 approving:
  - Cash return on CWIP and 14.3% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents
  - Rates went into effect March 1, 2008
- Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million.
  - A budget reforecast effort is currently underway. Total project cost will likely increase due to delays in the original 2012 in-service date.
- Estimated completion date: 2014+, pending outcome of the 2010 PJM Regional Transmission Expansion Plan (2010 RTEP).



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

PATH
Potomac-Appalachian Transmission Highline

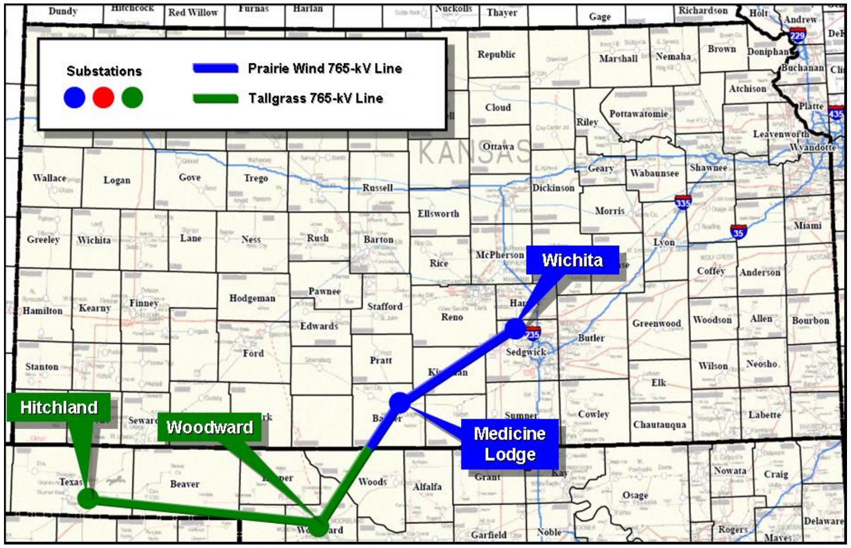
Key Challenges:

- Obtaining a CPCN in West Virginia, Virginia and Maryland. CPCN applications in West Virginia and Maryland are pending because their procedural schedule allows the consideration of the 2010 RTEP. A new application in Virginia is expected in the third quarter of 2010 after consideration of the 2010 RTEP.

Prairie Wind Transmission, LLC

Overview:

- In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
- PWT is a 50/50 JV that is proposing to build approximately 110 miles of 765-kV lines extending from Wichita, KS.
- The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
- The project is expected to cost approximately $400 million and be in-service by 2013-2014 and was approved by the KCC on July 24, 2009.
- AEP’s ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned
- Project was approved as SPP Priority Project in April 2010
  - NTC anticipated to be received summer 2010. Currently pending approval of SPP cost allocation methodology at FERC.
  - Currently approved at 345 kV. Cost at 345 kV estimated to be $165 mm. May revert to 765 kV depending on results of SPP ITP study.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

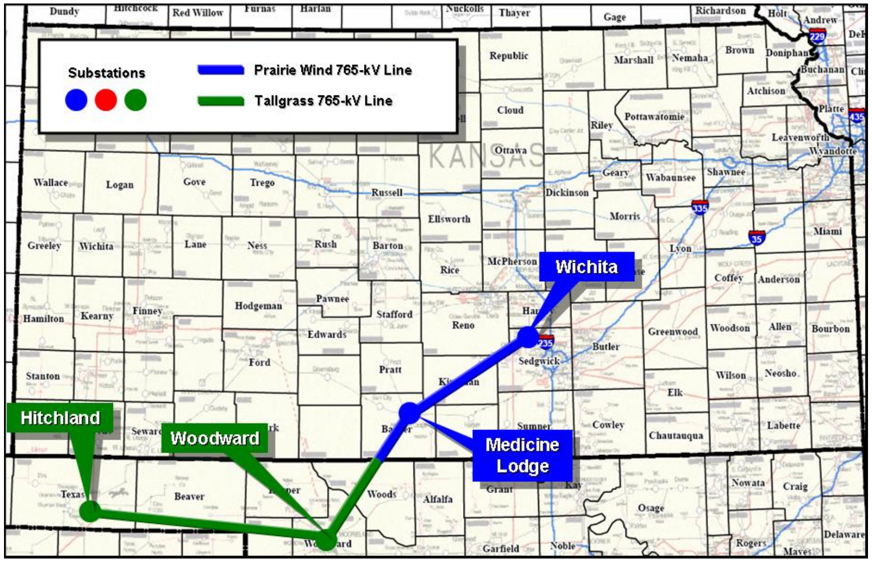
Key Challenges:

- Siting

Tallgrass Transmission, LLC

Overview:

- In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
- TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines in Oklahoma.
- The project will promote wind development in the western half of Oklahoma.
- Project is expected to cost approximately $500 million and be in-service by 2013-2014.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned
- Project was approved as SPP Priority Project in April 2010
  - NTC anticipated to be received summer 2010. Currently pending approval of SPP cost allocation methodology at FERC.
  - Currently approved at 345 kV. Cost at 345 kV estimated to be $350 mm. May revert to 765 kV depending on results of SPP ITP study.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

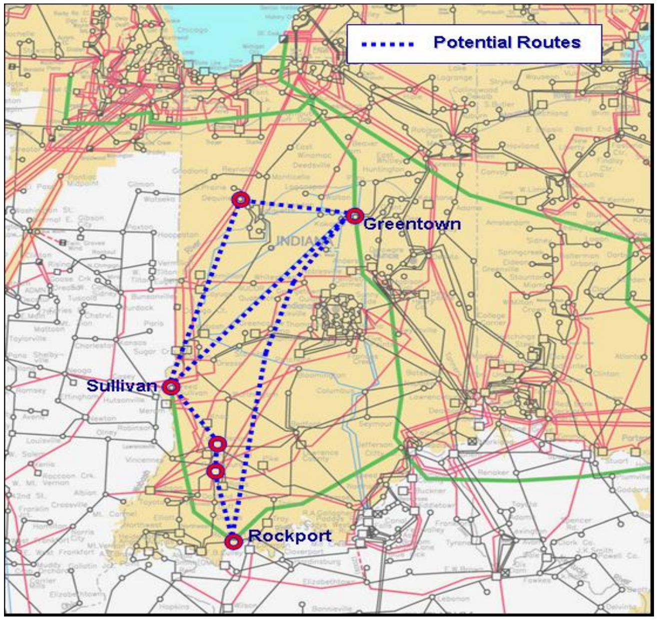
Key Challenges:

- Siting

Pioneer Transmission, LLC

Overview:

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
- The project will improve the reliability of the transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, and expand opportunities for new generation, including renewables.
- The project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP's ownership of the joint venture is 50%.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

- RTO Approval (PJM & MISO)
- Cost allocation which enables the development of "system solutions"
- Siting

Upper Midwest EHV Development—SMART Study

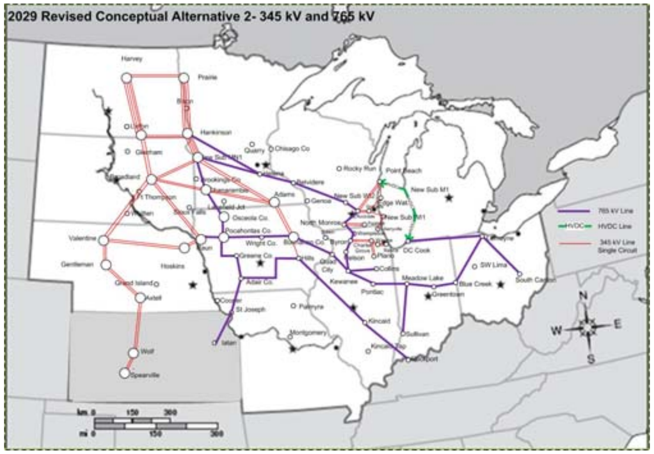
Project Description: a comprehensive study of the transmission needed in the Upper Midwest to support renewable energy development and transporting that energy to consumers throughout the study area. The SMART Study will develop EHV overlay alternatives that ensure reliable service for sponsors' communities, is environmentally friendly, and supports national energy policy.

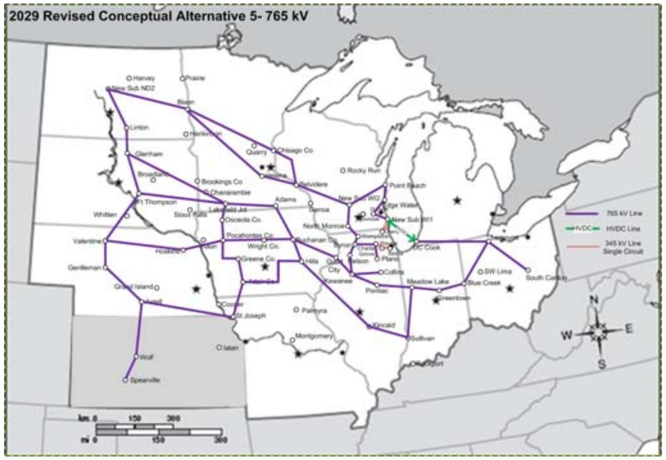
Overview:

- SMARTransmission Study announced August 2009
- Primary Focus Areas: North Dakota, South Dakota, Iowa, Nebraska, Indiana, Ohio, Illinois, Minnesota, Wisconsin, Michigan
- Study Sponsors include: ETA, Exelon, ATC, Northwestern, MidAmerican Energy Company, and Xcel
- Phase 1 completed April 30
- Phase 2 anticipated completion: June 30
  - Studying two alternatives in Phase 2. One combination 345 kV / 765 kV. One primarily 765 kV.

Next Steps:

- Investment structure
- Obtaining cost allocation between states, PJM, and MISO
- RTO technical approvals
- Favorable 205 Order including incentives





The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

June 9, 2011

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation, including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance, resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events, our ability to recover through rates the remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives and evolving public perception of the risks associated with fuels used before, during and after generation of electricity, including nuclear fuel.

AEP AMERICAN ELECTRIC POWER

AEP's environmental stewardship

AEP is an environmentally responsible company.

It supports regulations that achieve long-term environmental benefits while considering the impacts on customers, the economy and system reliability.

Environmental regulation must be approached in a coordinated, realistic and cost-effective manner.

AEP does, and will continue to, comply with all environmental regulations.

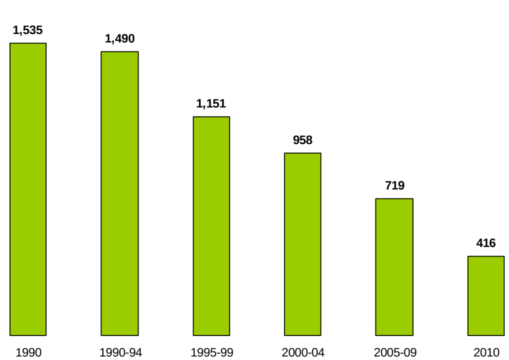
AEP AMERICAN ELECTRIC POWER

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 2190 of 9556

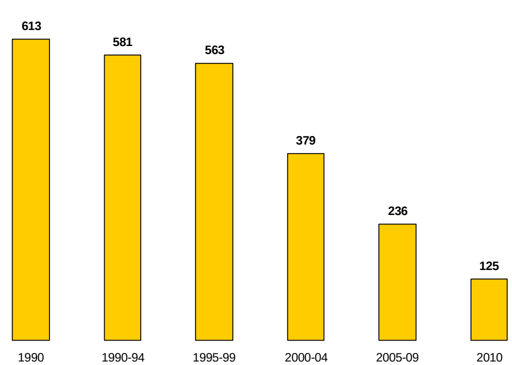
Ongoing air quality improvements

- AEP has improved its environmental performance.
  - Since 1990, AEP has reduced its NOx emissions by 80% and its SO_2 emissions by 73%.
  - AEP has invested more than $7 billion since 1990 to reduce emissions from its coal-fueled generation fleet .
- AEP will continue to improve the environmental performance of its power plants.

TOTAL SYSTEM - AVERAGE ANNUAL SO_2 EMISSIONS (in thousand US tons)

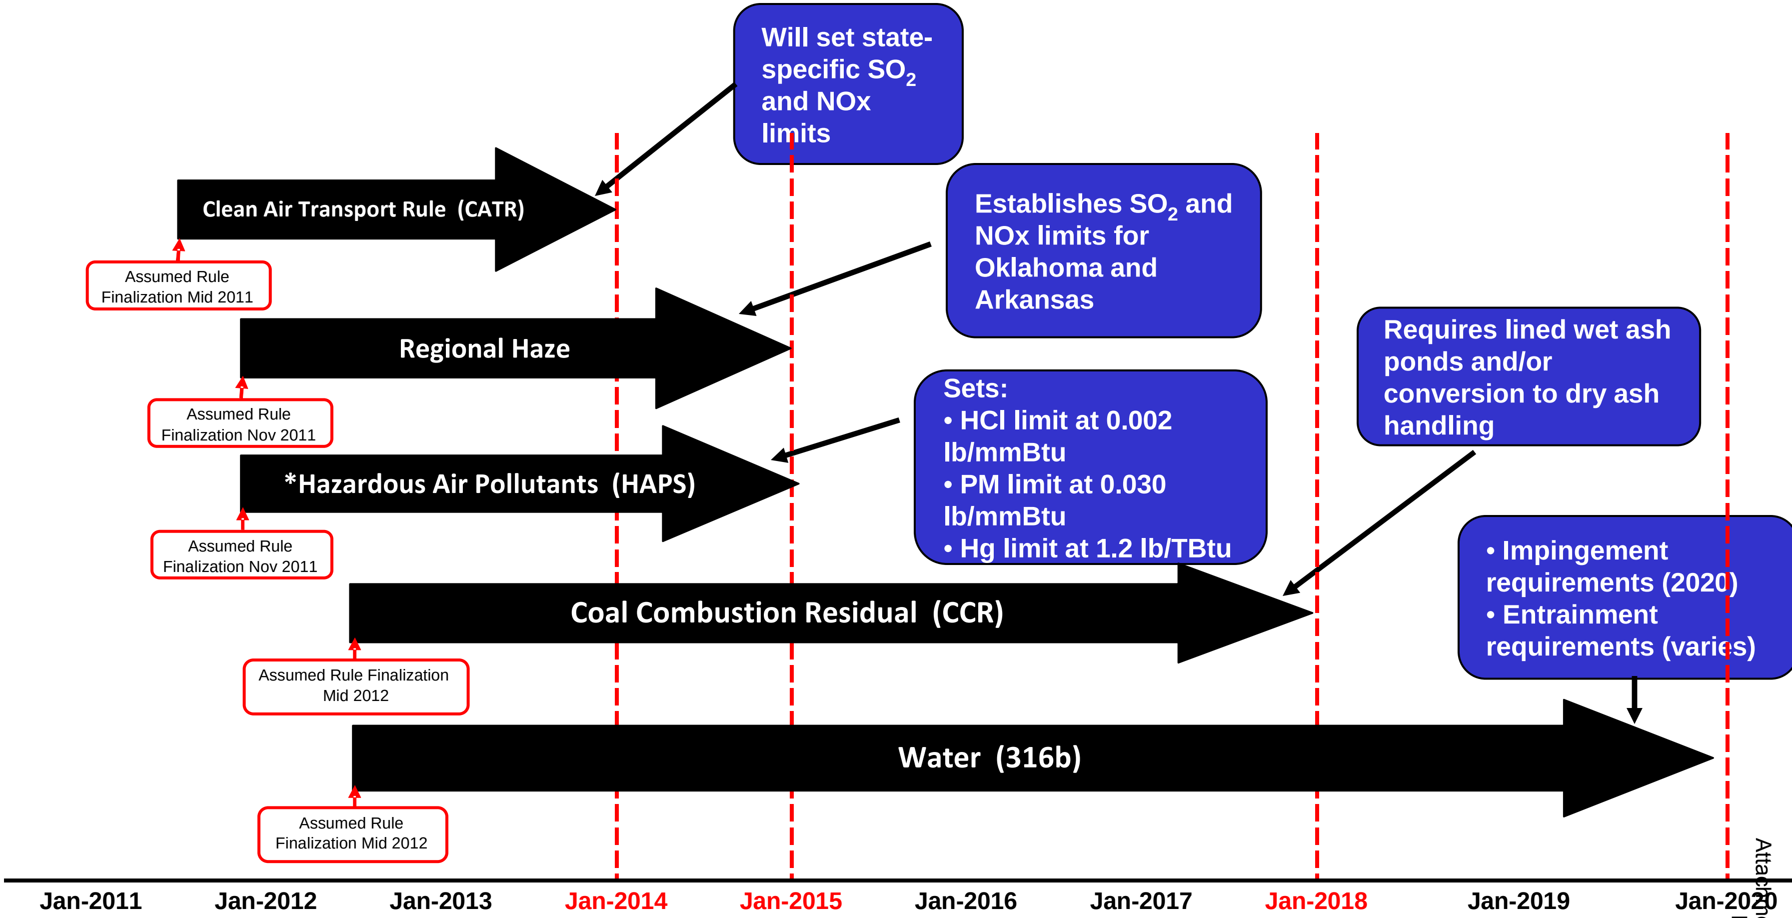


TOTAL SYSTEM - AVERAGE ANNUAL NOx EMISSIONS (in thousand US tons)



KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential

Anticipated environmental regulations and compliance deadlines

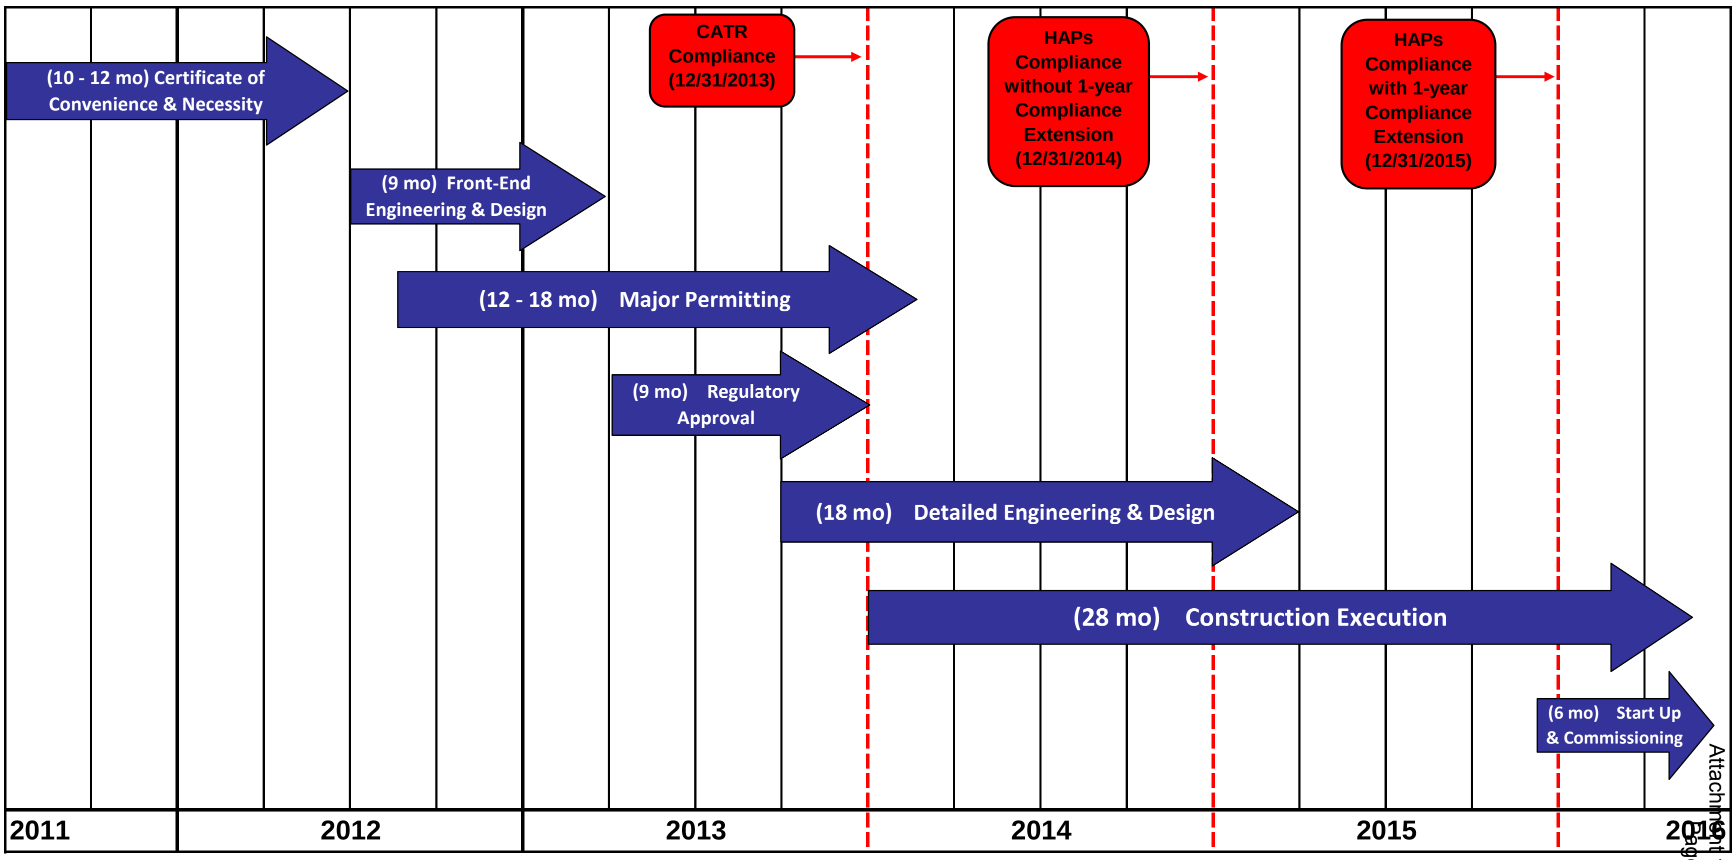


* Units that will be retrofit are eligible for a one year compliance extension from the EPA

AMERICAN ELECTRIC POWER

Compliance with time frames is not feasible

Typical FGD system construction timeline.



AMERICAN ELECTRIC POWER

Reliability concerns

- Capacity reductions caused by retirements, idled units and curtailments will create grid reliability concerns.
- Generating units provide ancillary services that support grid reliability.
  - These ancillary services -- voltage and reactive load support, frequency response, load following ability, system restoration and black start – will be lost with unit retirements and curtailments.
  - It is not clear how and when these services will be replaced.
- We are meeting with regional reliability organizations to make sure these concerns are being addressed.
- With longer time frames, AEP and the industry can address these concerns.

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 2194 of 9556

A base plan scenario

- The following slides outline what AEP currently expects it will need to do to comply *if all proposed environmental regulations are enacted without change.*
- The scenario is AEP's best estimate at this point in time.
- **This scenario will change.**

AEP AMERICAN ELECTRIC POWER

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 2195 of 9556

Overall impacts for AEP

To meet compliance deadlines for new environmental regulations, AEP expects it will need to invest $6 billion to $8 billion to:

- Retire more nearly 6,000 MW of existing coal-fired generation Refuel, retrofit with new or upgrade existing environmental controls on another 11,000 MW.
- Build approximately 1,220 MW of new generation.

This will create:

- Abrupt rate increases ranging from 10% to 35%.
- Significant reliability concerns, particularly in the 2014 – 2016 time frame.
- The need to install additional equipment to address impacts on the transmission system due to the reduction in generating capacity.
- Other locally significant economic impacts.

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 2196 of 9556

Overall impacts to employees and communities

- Nearly 750 employees could be displaced through premature unit retirements, while an estimated 170 permanent new jobs could be created by retrofit technologies. **Net impact could be approximately 600 fewer jobs with annual lost wages of approximately $40 million.**
- There will be indirect job losses affecting local vendors, contractors and service providers, as every MW of coal-fueled generation supports an average of three additional indirect jobs.
- In 2015
  - Payroll taxes could decline more than $20 million.
  - Property tax payments could decline approximately $12 million.

AEP AMERICAN ELECTRIC POWER

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 2197 of 9556

Environmental control technologies

- **FGD** – flue gas desulfurization system (scrubber) – reduces sulfur dioxide emissions
- **SCR** – selective catalytic reduction system – reduces nitrogen oxide emissions
- **ACI** – activated carbon injection – reduces mercury emissions
- **DSI** – dry sorbent injection – neutralizes acid gases
- **Baghouse** – also fabric filter – physically traps and filters particulate matter

A better option

AEP supports appropriate environmental regulation or legislation that establish a more coordinated, realistic and cost-effective compliance program.

Regulations must provide appropriate flexibility to achieve the desired emission reductions while managing customer costs.

A thoughtful phased-in approach will achieve similar environmental benefits with significantly less economic and reliability impact.

AEP AMERICAN ELECTRIC POWER

Benefits of a phased-in approach

- Will provide the time utilities need to install environmental retrofits without idling or curtailing generating units.
- Will allow unit retirements to occur over a more reasonable timeframe needed to address grid reliability issues.
- Will support construction jobs over a longer period of time.
- Will provide long-term environmental benefits.
- Will give local communities time to plan for economic losses.

AEP AMERICAN ELECTRIC POWER

A phased-in approach will arrive at the same destination

46th EEI Financial Conference Presentation

Orlando, FL
November 8, 2011

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance, resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and the expected legal separation and transition to market for generation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives, evolving public perception of the risks associated with fuels used before, during and after the generation of electricity, including nuclear fuel and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events.

Nick Akins

President and CEO-elect

American Electric Power

My areas of strategic focus…

1. ***Optimize the earnings stream of the Company***
   - ***ROE optimization***
   - ***Resource transformation***
   - ***Reposition transmission business***
2. ***Achieve regulatory certainty***
   - ***Execute Ohio strategy***
   - ***Energy policy, EPA and environmental investments***
3. ***Earnings and dividend growth***

ROE optimization…

ROE by Jurisdiction		
Jurisdiction	Authorized ROE	Sep 2011 Proforma ROE*
AEP Ohio	NA	13.51%
APCO – Virginia APCO – West Virginia Wheeling	10.53% 10.00% 10.00%	6.88%
I&M – Indiana I&M – Michigan	10.50% 10.35%	8.24%
SWEPCO – Louisiana SWEPCO – Arkansas SWEPCO – Texas	10.57% 10.25% 10.33%	10.05%
AEP Texas	9.96%	14.98%
PSO - Oklahoma	10.15%	12.36%
Kentucky	10.50%	11.08%
Overall AEP Return	**NA**	**10.90%**

* Twelve Month Rolling Proforma Recurring ROE

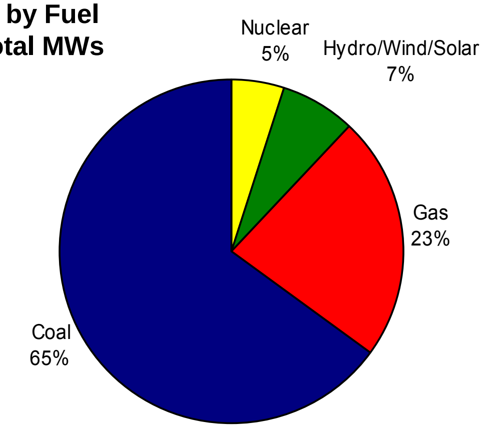
- Strong overall system ROE with current rate cases on file for under earning utilities
- Continue to strengthen local relationships
- Concurrent recovery mechanisms
- Operating Company model refinement
  - Investment Review Committee
  - Advanced planning discussions with stakeholders

Management focused on Operating Company results and rate plans

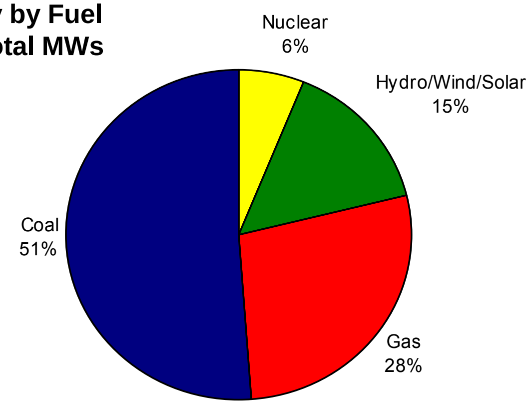
Resource transformation . . .

- Grow rate base and earnings through adding environmental controls
- Retire older, uncontrolled coal units
- Add new capacity (natural gas) to rate base to replace a portion of retirements
- Transformation already occurring due to shale gas

2010 AEP Generating Capacity by Fuel
39,910 total MWs

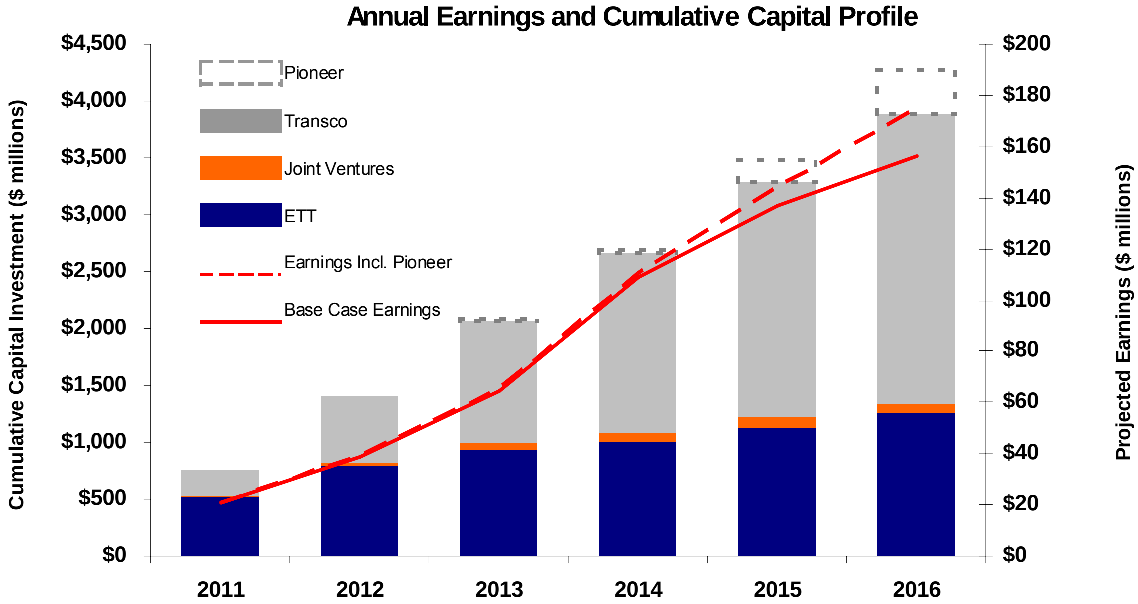


2020 AEP Generating Capacity by Fuel
37,707 total MWs



Need more time to accomplish in order to mitigate customer costs and reliability impacts

Reposition transmission business…

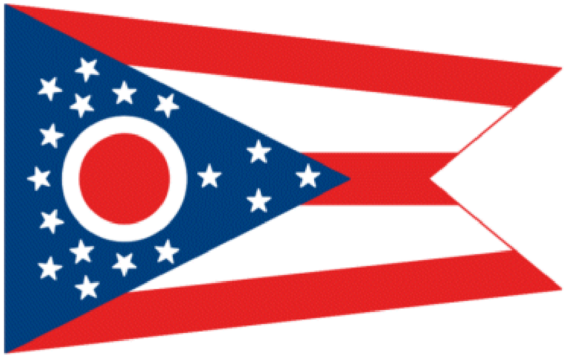


- Electric Transmission Texas
  - 50/50 ownership with MidAm
  - $1B invested to date
  - 9.96% ROE
  - $3B invested by mid-decade
- Transcos
  - 11.20-11.49% ROE
  - Forecasted investment over $500M by end of 2012
- Joint Ventures
  - ETA (50/50 with MidAm)
  - Pioneer

Transmission expected to contribute $40M in net income in 2012

Execute Ohio strategy…

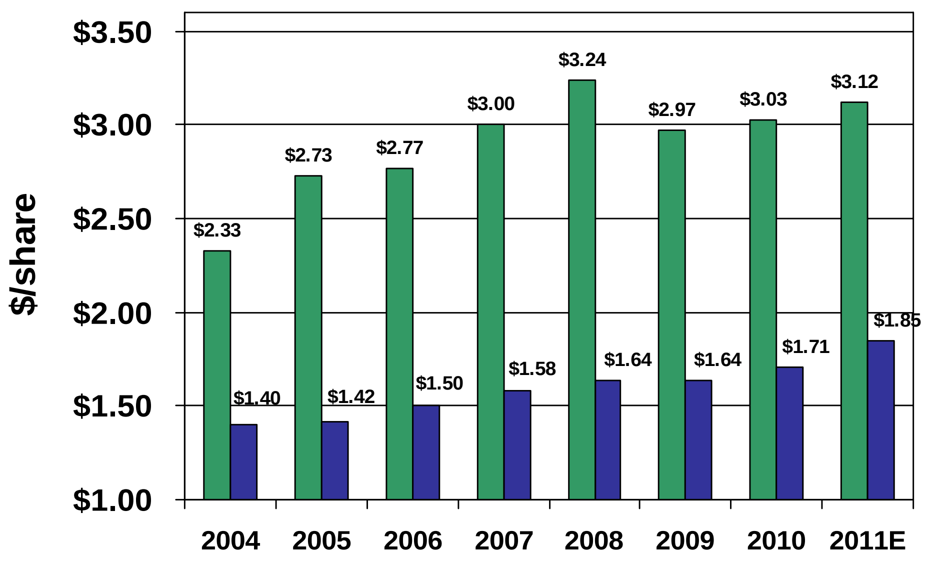
- Stipulation allows for transition to market in Ohio
  - PUCO decision expected before year-end
  - Merge Ohio Power & Columbus Southern
  - 2012-15 transition period to market
- Separate AEP Ohio into two companies
  - WiresCo
    - Regulated T&D company
    - Will auction load fully in 2015
  - GenCo
    - Unregulated generation company
    - Approximately 11,000 MW of capacity
    - Significant hedge profile
    - Allocate capital wisely
    - Targeting an investment grade rating



Transition period will create platform for the Company's future

Earnings and dividend growth …

Earnings and dividend history since 2004



4.3% average annual earnings growth

4.1% average annual dividend growth

Dividend payout ratio target of 50–60%

2012 Earnings Drivers

- **Recovering Economy**
  - System Load Growth of 1.0%
  - Off-System Sales
- **Successful Rate Case Outcomes**
  - Ohio ESP Stipulation
  - Ohio Distribution Case
  - Virginia Rate Case
  - Michigan Rate Case
- **Continued Transmission Growth**
- **O&M Discipline**

Management is committed to earnings and dividend growth

Next Steps…

- Receive Ohio ESP order – December 2011
- EPA regulation clarity – end of 2011
- Analyst & Investor Meeting in early 2012
  - 2012 detailed guidance
  - Long-term earnings growth guidance
  - Financing overview

Analyst & Investor Meeting in early 2012 following receipt of Ohio order and HAPs MACT final rule

Lisa Barton

Senior Vice President, AEP Transmission

Transmission as a Growth Engine

- Transmission investments present significant growth opportunities within and outside of AEP's traditional service territories
  - Electric Transmission Texas (ETT)
    - Growing Rate Base
    - Received CCN approval on first CREZ line; 3 more approvals expected in 2011
  - AEP Transmission Company (AEP Transco)
    - Settlement filed at FERC for wholesale rates. Final order pending.
    - $50MM spend for 2010; $160MM forecasted for 2011
  - Joint Ventures
    - PATH
    - Prairie Wind
    - Pioneer
    - SMART Transmission study
- Two new projects: RITELine and MEC

AEP Transco was established in 2010

- Formula rate settlement filed with FERC in September; awaiting final order
  - ROE: 11.49% in PJM and 11.2% in SPP
- $50 M invested in three states in 2010 (OH, MI & OK)
  - **Ohio application was approved by PUCO on December 29, 2010**
  - Oklahoma and Michigan did not require filings
- “Baseline” capital spending targets for OH, MI & OK
  - $160 M for 2011
  - $350 M for 2012
- Will pursue regulatory approvals for other states in 2011 (AR, LA, WV, VA, IN & KY)
  - Additional capital spending opportunity in these states for 2012+

JV Strategy – Nationwide Grid Expansion

- 180 miles of 765 kV
- Partners: MidAmerican Energy
- Estimated Cost: $650 million

ETT: An Operating Utility

AEP®

Electric Transmission Texas

Growing Rate Base:

- Current rate base is $385 million; expected to grow as follows:
  - 2010: $405 million
  - 2011: $465 million
  - 2012: $765 million
  - 2013: $1,415 million
- Interim TCOS filings twice per calendar year

Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.1 B:

- Seven double-circuit 345kV transmission lines (~$750 M), eight major 345kV stations and several series compensation installations (~$350 M)
- PUCT Certificate of Convenience and Necessity (CCN) proceedings underway

CREZ Transmission Line	Number of miles	Estimated Cost ($M)	CCN Filing Date	CCN Decision by PUCT
Clear Crossing to Dermott	**95**	**$160**	**5/3/2010**	**Unanimously Approved 9/30/2010**
Tesla to Riley	65	$110	8/18/2010	2/15/2011
Riley to Edith Clarke to Cottonwood	115	$199	9/8/2010	3/8/2011
Tesla to Edith Clarke to Clear Crossing to West Shackelford	145	$280	Anticipated 10/20/2010	4/20/2011

Additional Projects in the Pipeline ~$1.6 B:

- Approximately 822 miles of lines and 28 substations with in-service dates through 2017

Prairie Wind Transmission, LLC

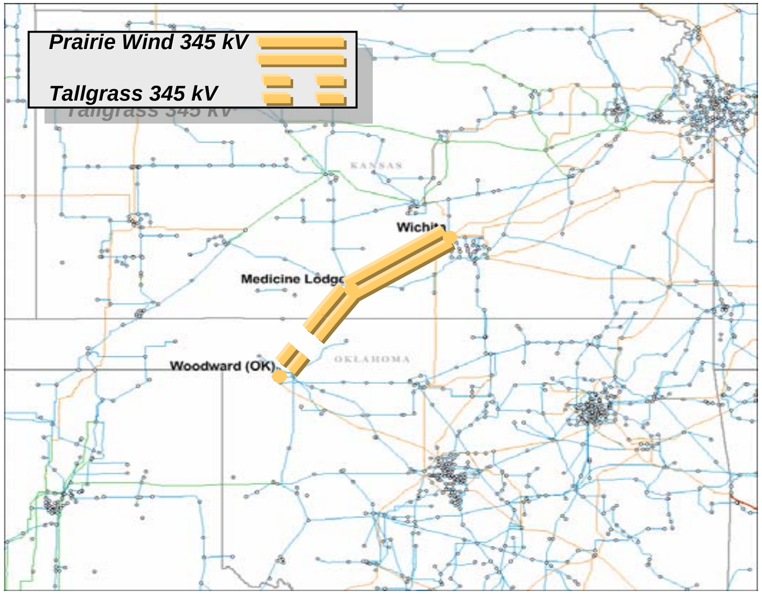
Project Description: 110 miles of EHV transmission lines extending from Wichita, KS to the KS/OK border

Overview:

- The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
- The project is expected to cost $225 million and be in-service by 2013-2014
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned
- Project was approved as SPP Priority Project in April 2010
  - NTC was issued to Westar July 2010. Currently working on a novation of the NTC to Prairie Wind. As a Transmission Owner, Prairie Wind will be entitled to collect revenue upon the novation of the Notice to Construct.
  - Currently approved at 345 kV.

Key Challenges:

- Siting and Routing



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

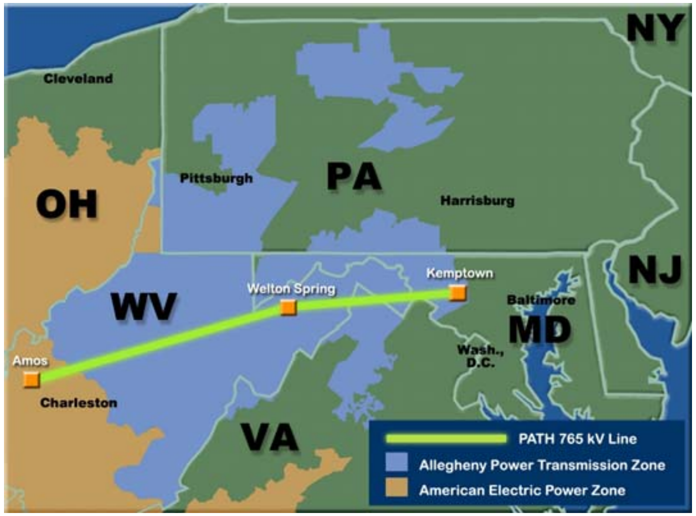
Prairie Wind Transmission
A joint venture between Westar Energy and ETA

Update on PATH, LLC

Project Description: 276 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new Welton Spring substation in Hardy County, WV, ending at a new substation near Kemptown, MD.

Overview:

- FERC order issued on February 29, 2008 approving:
  - Cash return on CWIP and 14.3% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents
  - Rates went into effect March 1, 2008
- FERC order issued on November 19, 2010 set the 14.3% ROE for hearing
- Total estimated cost of entire line is $2.1 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.4 billion. AEP share is approximately $700 million
- Estimated completion date: June 1, 2015



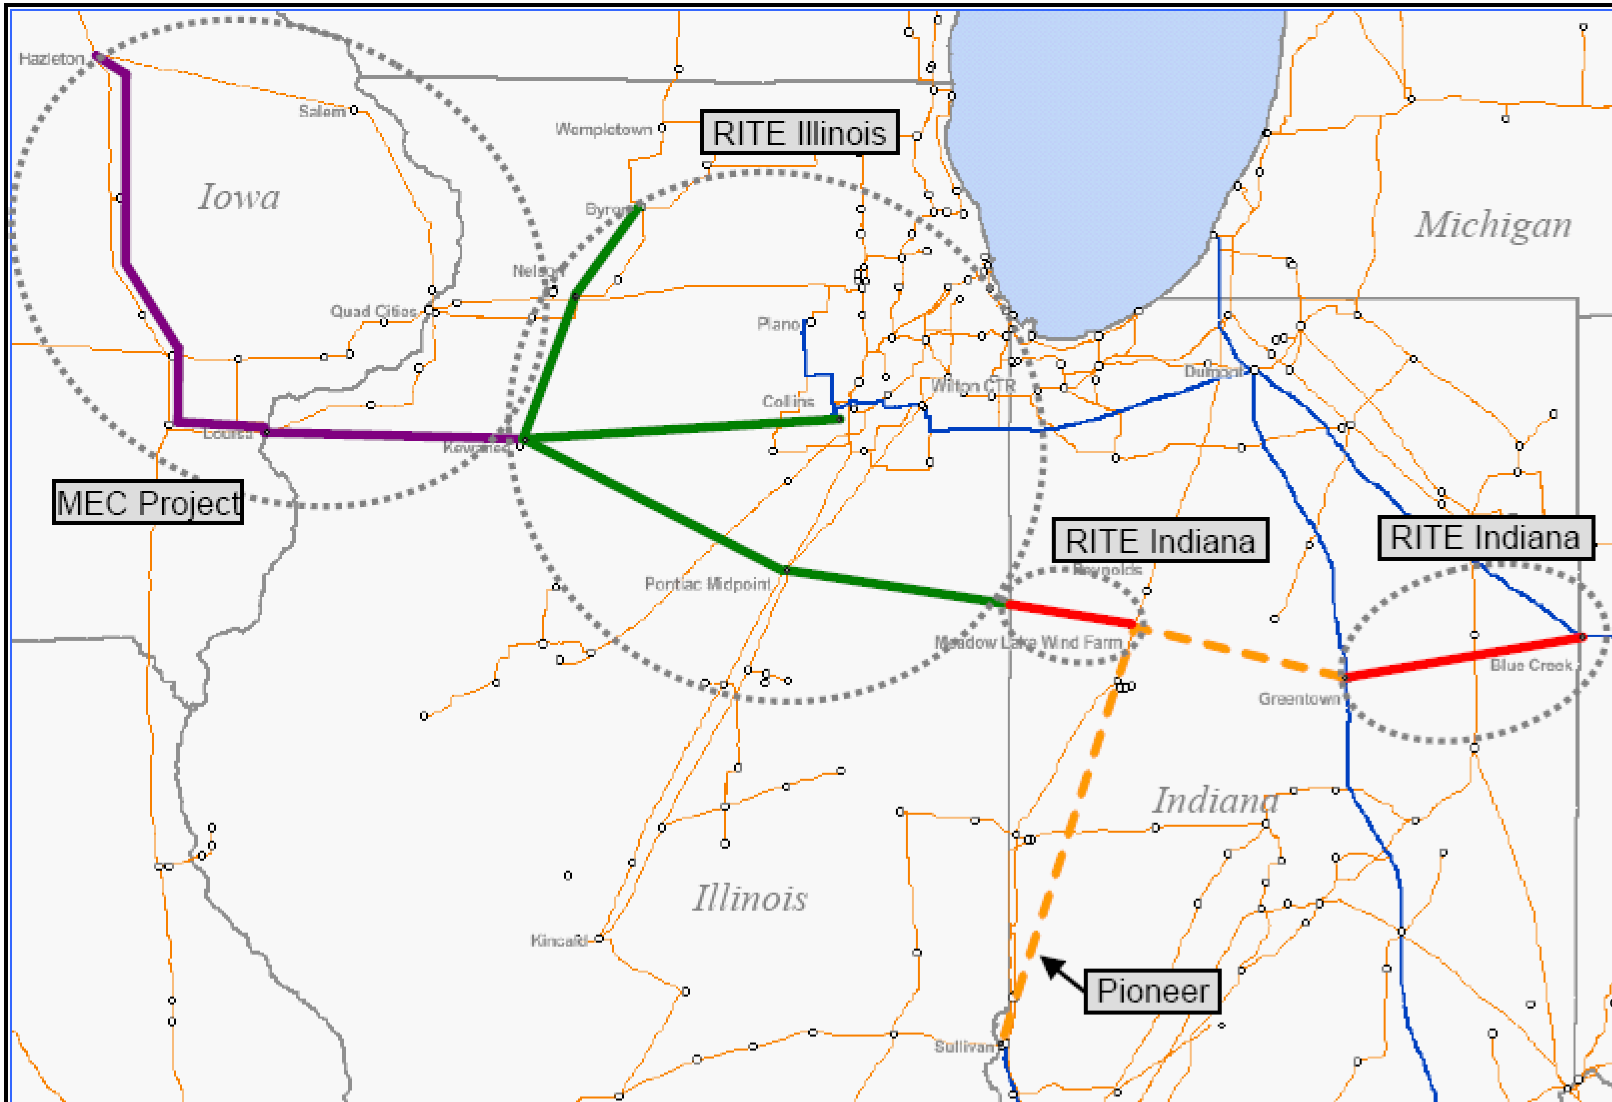
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges:

- Obtaining a CPCN in West Virginia, Virginia, and Maryland
  - CPCN applications are filed and accepted in all three states
  - PJM released a draft 2011 Load Forecast that could affect the required in-service date for PATH
  - PATH filed motions in all three states in December 2010 for a delay in the procedural schedule to allow for the filing of supplemental need testimony to reflect the 2011 PJM Load Forecast

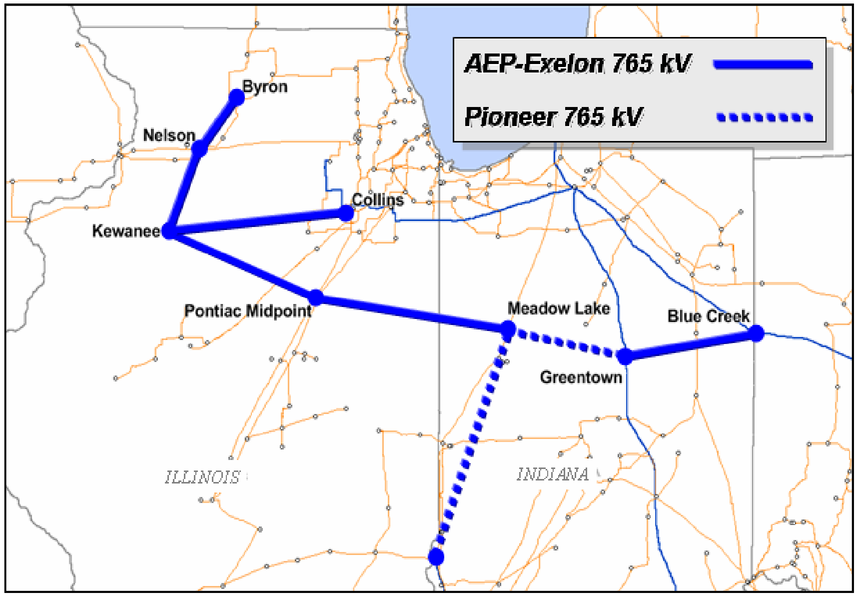
Potomac-Appalachian Transmission Highline

MISO/PJM Interface: Proposed Projects Under Evaluation



RITELine Project

- AEP, ETA and Exelon Corporation executed a Memorandum of Understanding on October 26, 2010 for the development of the Reliability Interregional Transmission Extension Line ("RITELine") project

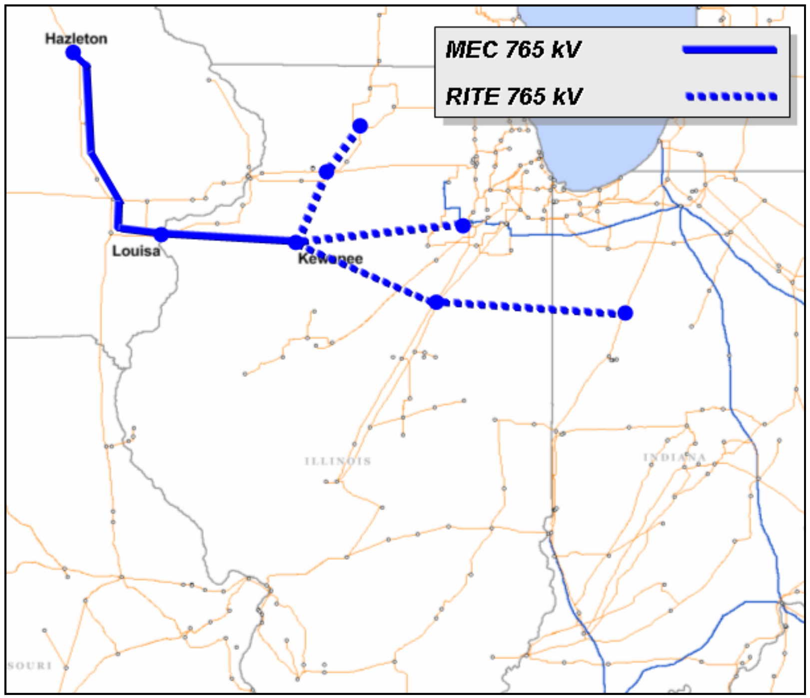


The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

- Estimated Project Cost: $1.6 billion
- 765 kV transmission line (or a designated lower-voltage solution such as double-circuit 345 kV line)
- Extends approximately 420 miles from the Byron Substation in Illinois to the Blue Creek substation at the Ohio/Indiana border and from Kewanee to the Collins Substation in Illinois

MEC Project

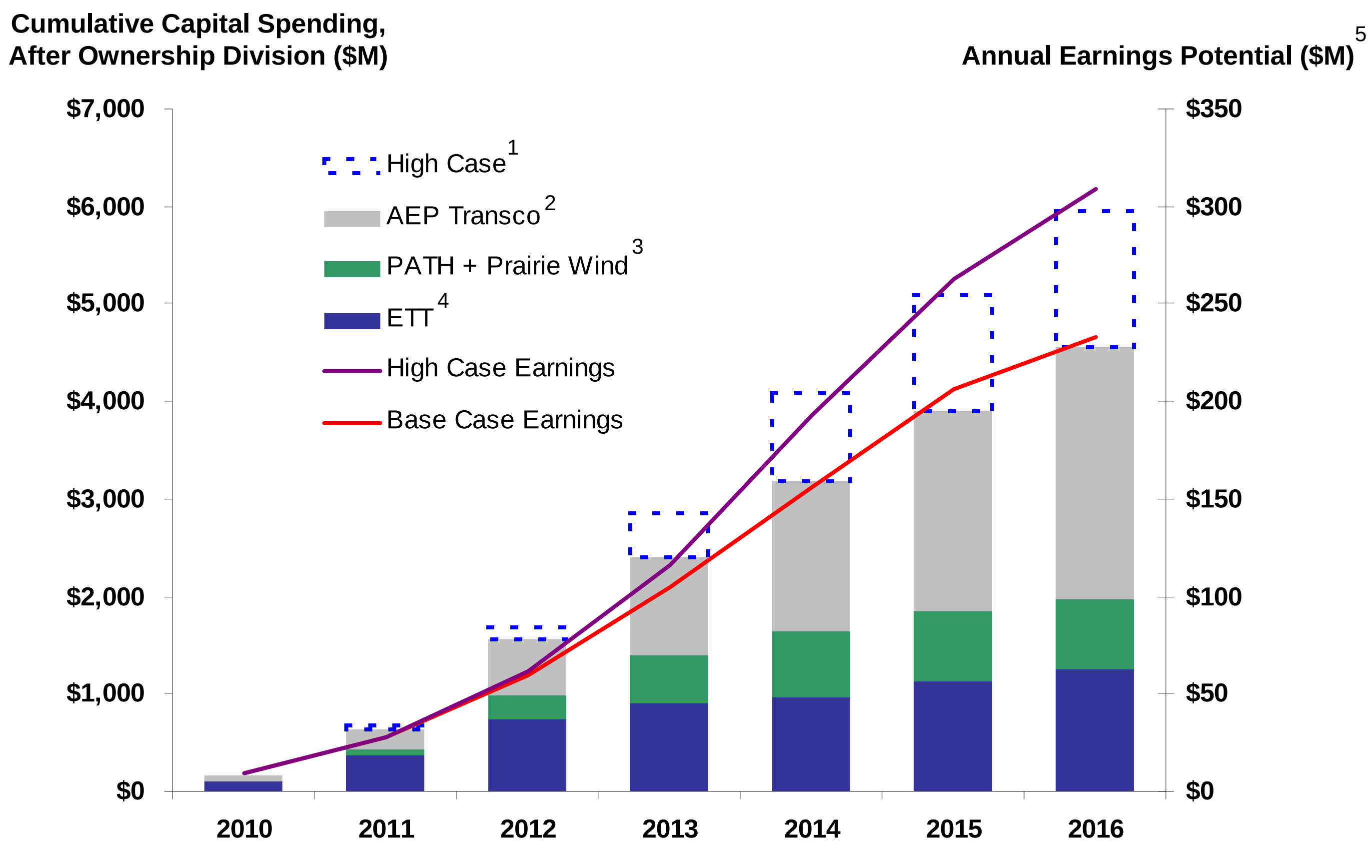
- ETA and MidAmerican Energy Company executed a Memorandum of Understanding on October 28, 2010 for the development of the MEC project



- Estimated Project Cost: $650 million
- 765 kV transmission line (or a designated lower-voltage solution such as double-circuit 345 kV)
- Extends approximately 180 miles from the Kewanee Substation in Illinois to the Louisa substation in Iowa and northwest to the Hazelton substation

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Transmission – Capital/Earnings Profile



[1] High Case includes: Pioneer (50% ownership), Prairie Wind at 765kV (25% ownership), Tallgrass at 765kV (25% ownership), ETA-Exelon (25% ownership) and other future opportunities

[2] AEP Transco (100% ownership) includes spending in OH, MI & OK only through 2011 and in other jurisdictions for 2012 and beyond

[3] PATH (50% ownership) assumes an in-service date of 2015 and Prairie Wind (25% ownership) assumed at 345kV

[4] ETT (50% ownership) includes CREZ and additional projects

[5] Projection of earnings potential at the transmission holding company level assuming 50/50 debt/equity capitalization and ROE of 12-13% for FERC projects; 60/40 debt/equity capitalization and 10.25% ROE (2011 forward) for ERCOT projects; and 50/50 debt/equity capitalization and ROE of 11.2-11.49% for Transco projects

Evolving Regulatory Policy

- 2010 saw a number of steps towards resolving the issues related to planning, cost allocation and siting
  - SPP & FERC approved SPP’s regional cost allocation methodology, and SPP adopted a new, more strategic planning process called the Integrated Transmission Planning process
  - SPP issued notices-to-construct for its “Priority Projects”, including the first segments of an EHV overlay within the region
  - The Midwest ISO, through its Regional Generator Outlet Study (RGOS) and Multi-Value Project (MVP) Process, has moved closer to approving a number of significant transmission projects

- 2011 looks to be a year in which regulatory momentum will support transmission development
  - FERC’s recently issued Notice of Proposed Rulemaking (NOPR), which is still in the comment phase, indicates FERC’s desire to break the logjam and resolve the major issues that stand in the way of strategic development of the nation’s transmission grid

Proposed Reforms in Transmission Planning

- On June 16th FERC issued Notice of Proposed Rulemaking (NOPR) suggesting significant reforms in Transmission Planning and Cost allocation

- Proposals would require Transmission Owners (TO's) in RTO's and ISO's to:
  - Participate in a regional transmission planning process that produces a regional transmission plan that considers and evaluates transmission facilities/non-transmission solutions
  - Amend its OATT such that local and regional transmission planning processes explicitly provide for public policy requirements established by state/federal laws/regulations, (i.e. renewable requirements).
  - Eliminate from transmission provider's OATT or FERC-jurisdictional agreements right of first refusal (ROFR) provisions with respect to facilities included in a regional transmission plan
  - Enter into interregional transmission planning agreement (filed with FERC), to coordinate with transmission providers in neighboring regions

Proposed Reforms in Cost Allocation

- FERC Proposal would also require RTO's and ISO's to establish a method for allocating the costs of:

  - New transmission facilities that are included in the regional transmission planning process in which it participates; and

  - New interregional transmission facility between the two neighboring transmission planning regions "in which the facility is located or among the beneficiaries of the two regions".

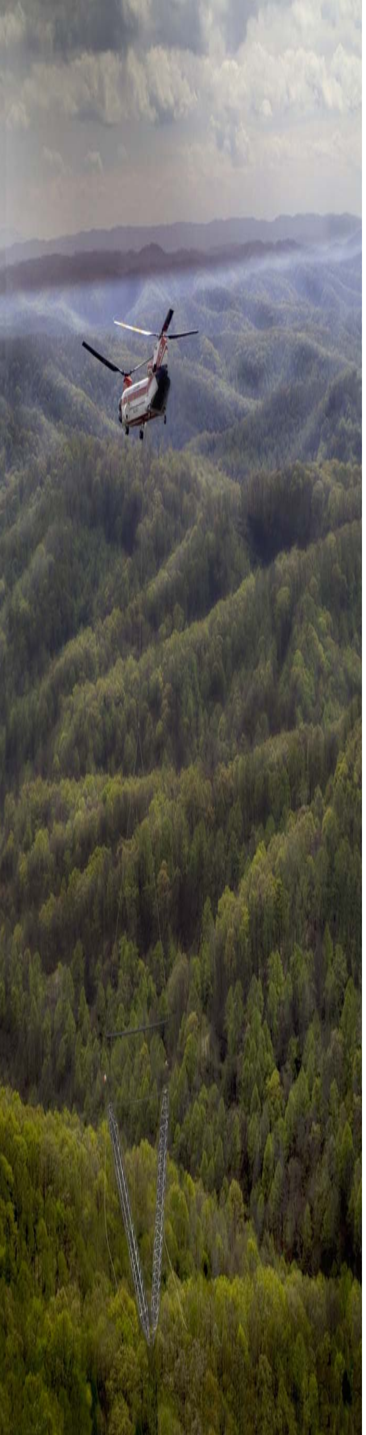
- Inter/cross-regional cost sharing mechanism could significantly improve ability to develop transmission projects across RTO "seams"

41st EEI Financial Conference

November 7, 2006

Caesar's Palace

Las Vegas, Nevada



Safe Harbor Statement Under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

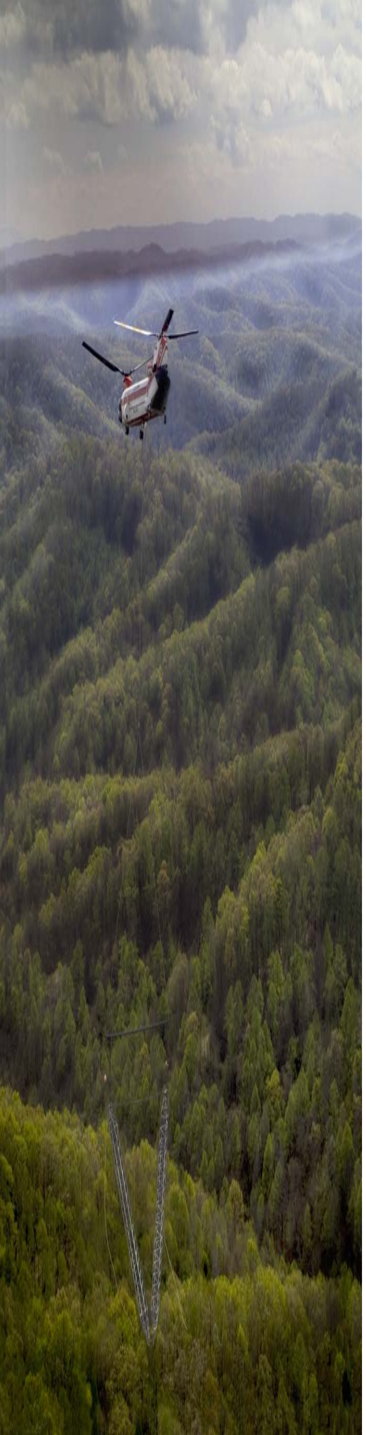
Upcoming Investor Communication Activities*

Dec. 5, 2006	**Harris Nesbitt Conference – NYC (One-on-one investor meetings)**
Jan. 30, 2007	**4Q06 Earnings Call**
Mar. 5-6, 2007	**EEI International Conference – London (Generation Panel Discussion)**
Mar. 15, 2007	**Morgan Stanley Conference – NYC (AEP Generation Sustainability Strategy)**

*Note: Events at which Mike Morris is scheduled to speak with investors/analysts.

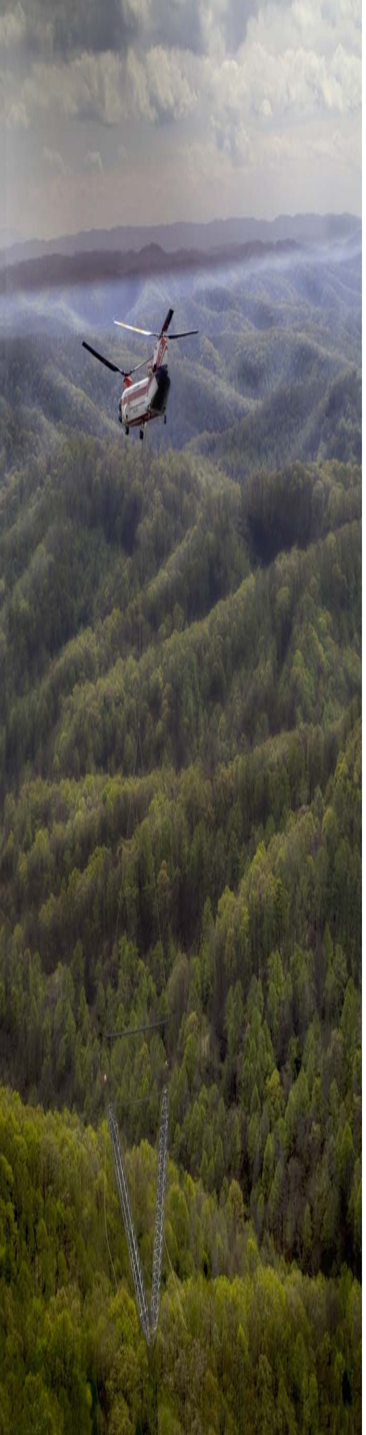


FERC Promotes Transmission Investment with Order 679

- Issued July 20, 2006 to enable EPAct 2005
- Key provisions include:
  - Return on equity at the high end of the zone of reasonableness
  - Return on CWIP
  - Return on premium for acquired assets
  - Full recovery of construction costs and costs of cancelled or abandoned facilities due to factors beyond the utility's control

AEP supports a national interstate grid – our core transmission strength

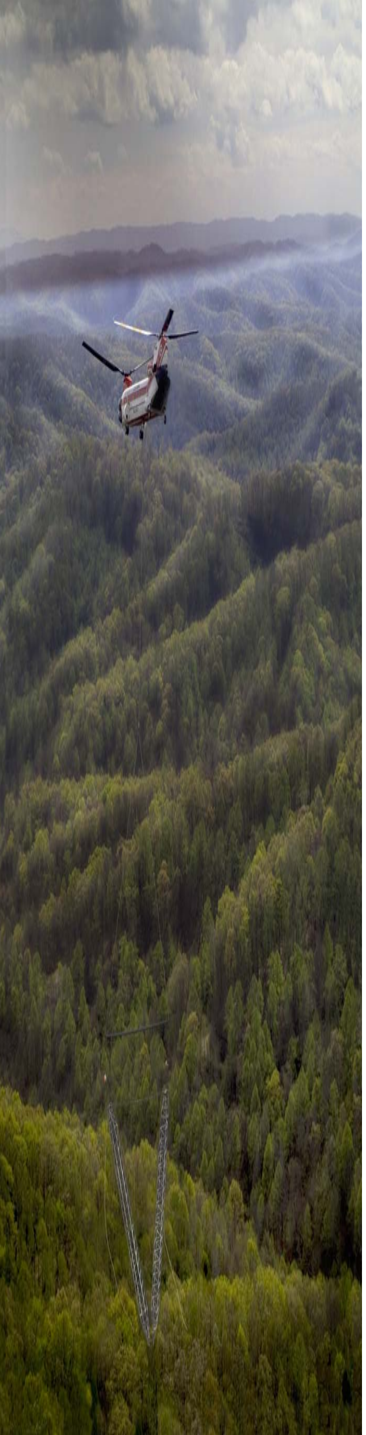
A Century of Firsts



AEP Transmission Vision & Mission

- Maintain our position as the largest transmission company in the United States
- Maintain our leadership in technical innovation of transmission systems
- Set the standards for transmission safety, efficiency, and reliability
- Provide for robust market competition - benefiting customers by de-bottlenecking the U.S. transmission grid
- Reduce the need for new generation by facilitating the optimal economic dispatch of existing generation assets
- Increase earnings for AEP shareholders

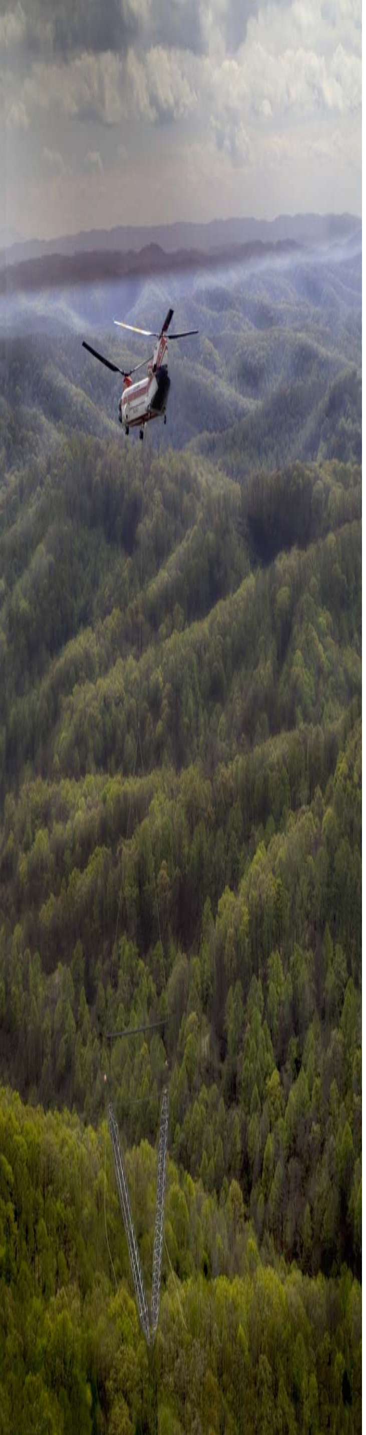
Maintaining our leadership position and setting the standards



AEP Transmission Strategy

- Expand our vibrant transmission business with major new joint venture projects, taking advantage of EPAct 2005
- Aggressively seek recovery through various state and federal mechanisms
- Advocate transmission nationally as an enabler of market efficiency, economic opportunity, environmental optimization, and national security

The AEP Advantage: 100 years of transmission leadership experience in the United States



AEP Transmission Network – The Largest in the Country

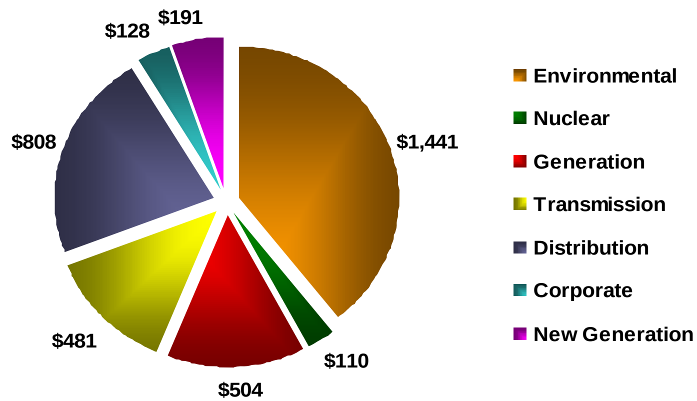
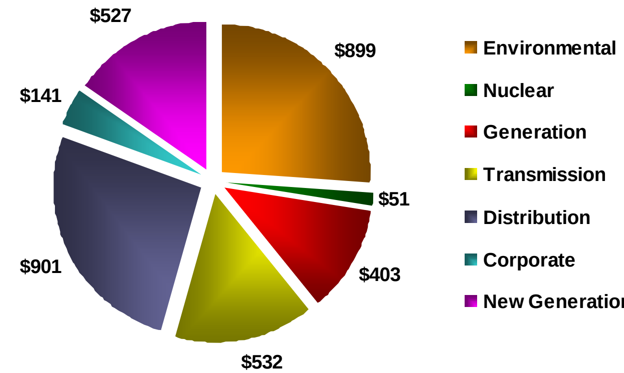
Investing over $2.1 billion 2006-2009

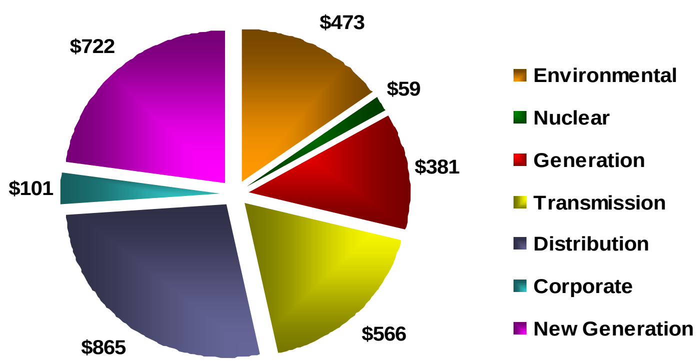
2006 Projected Totals $3.7 Billion



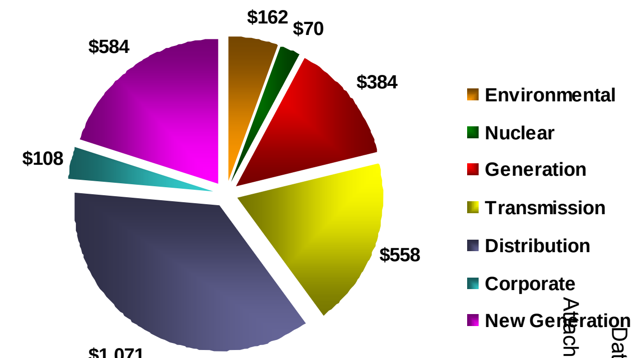
2007 Forecast Totals $3.5 Billion



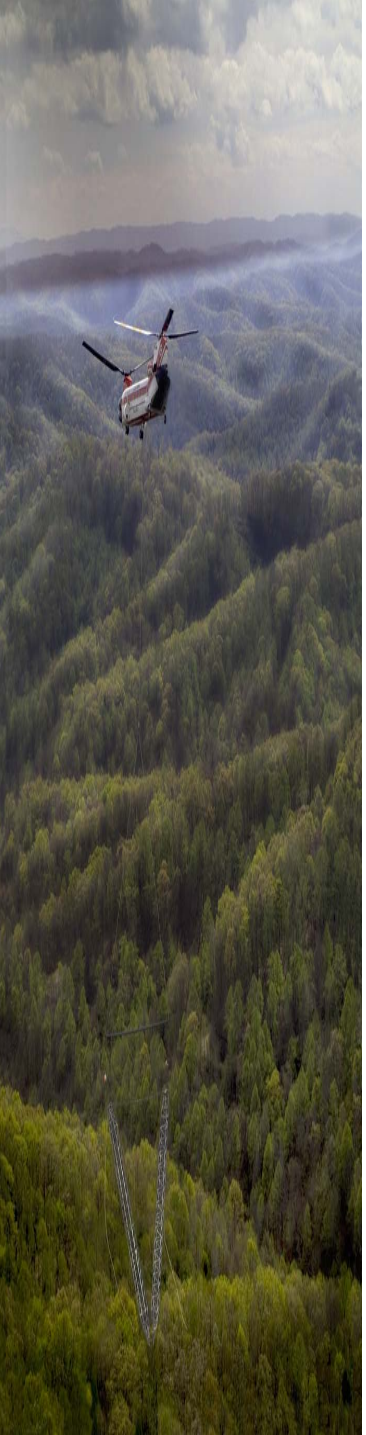
2008 Forecast Totals $3.2 Billion



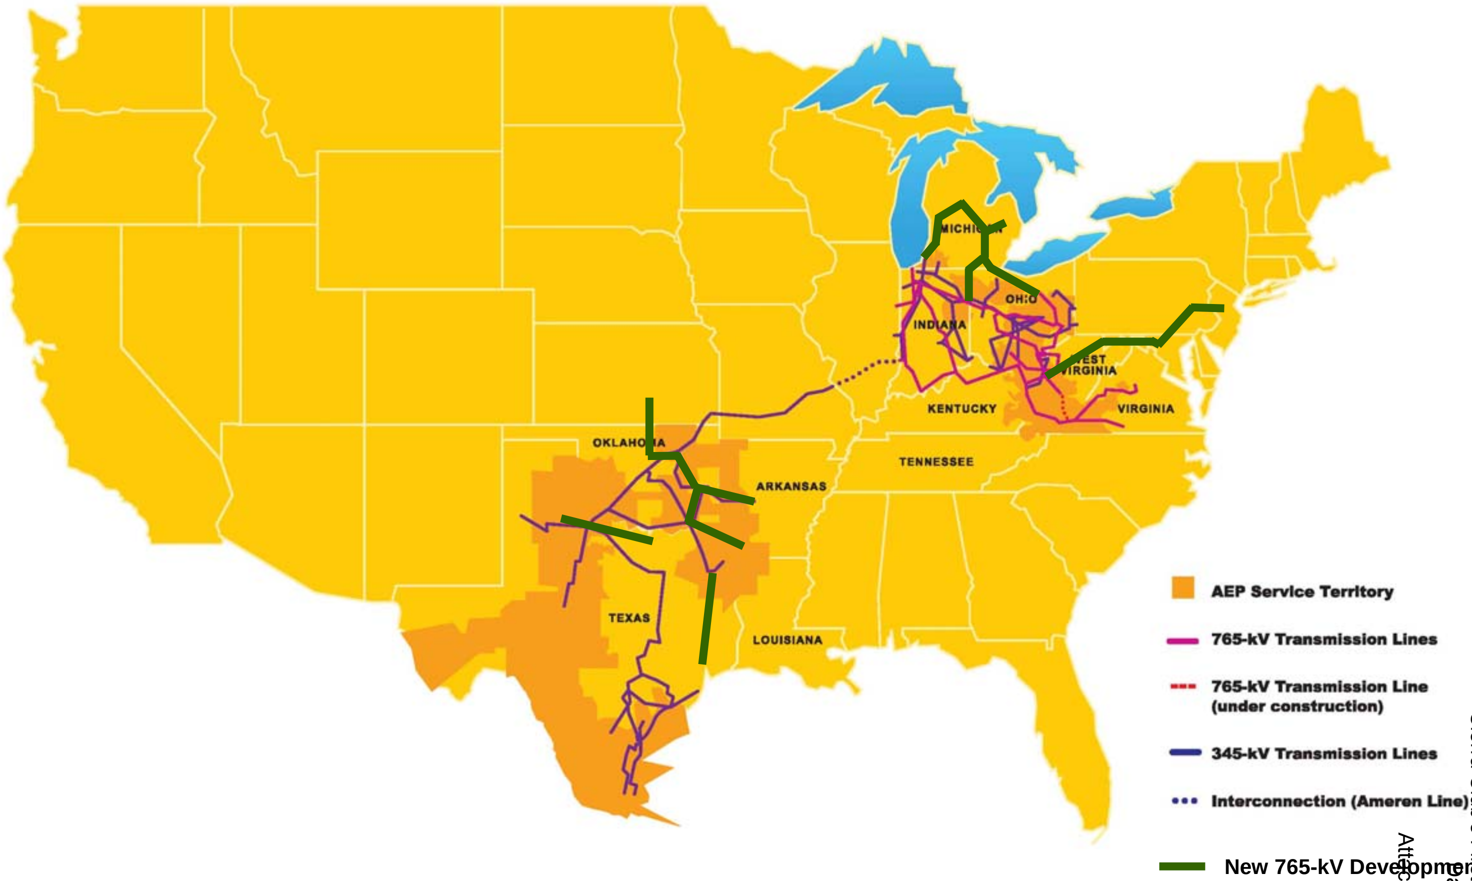
2009 Forecast Totals $2.9 Billion



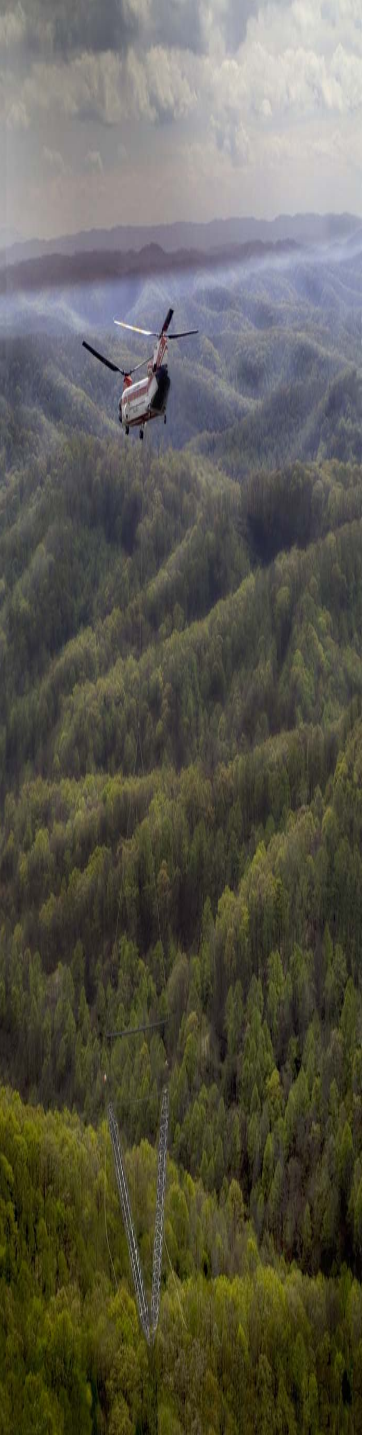
AEP – One of the premier transmission utilities in the United States, if not the world



AEP 765-kV Experience Spans Decades

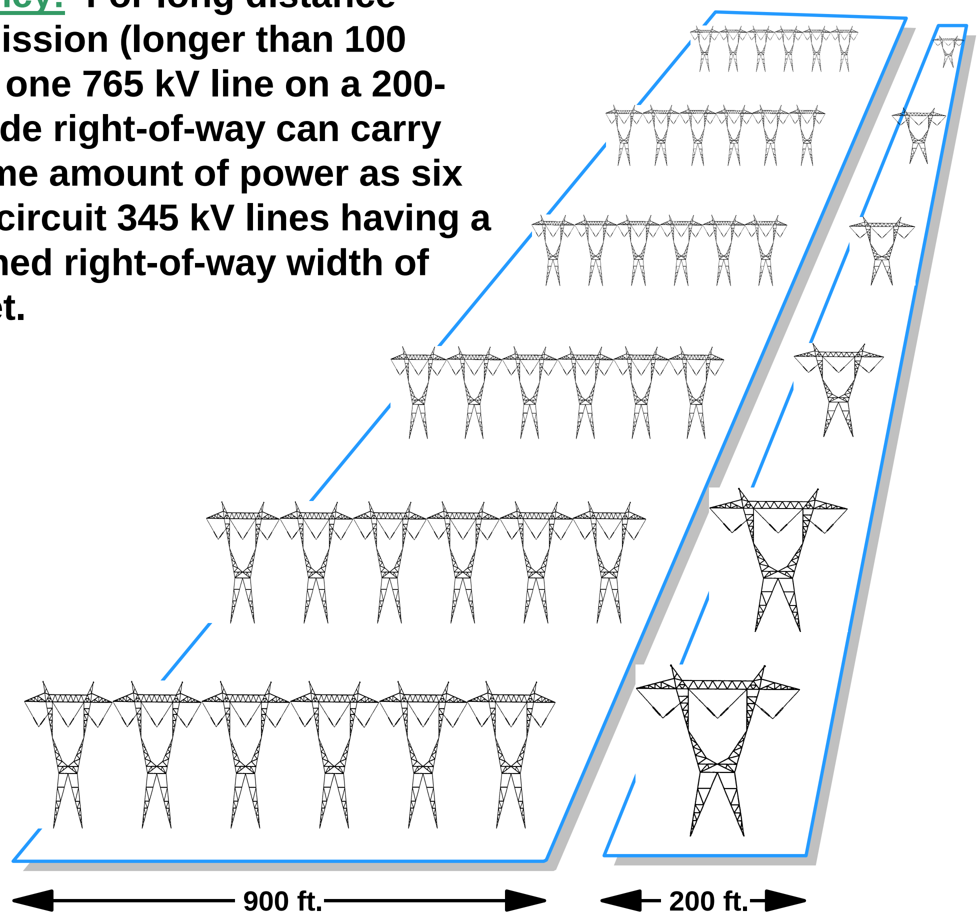


Current AEP 765-kV Mileage: 2,116
Mileage of proposed projects: 1,800 – 2,500



765-kV: The highest capacity, most efficient transmission by far

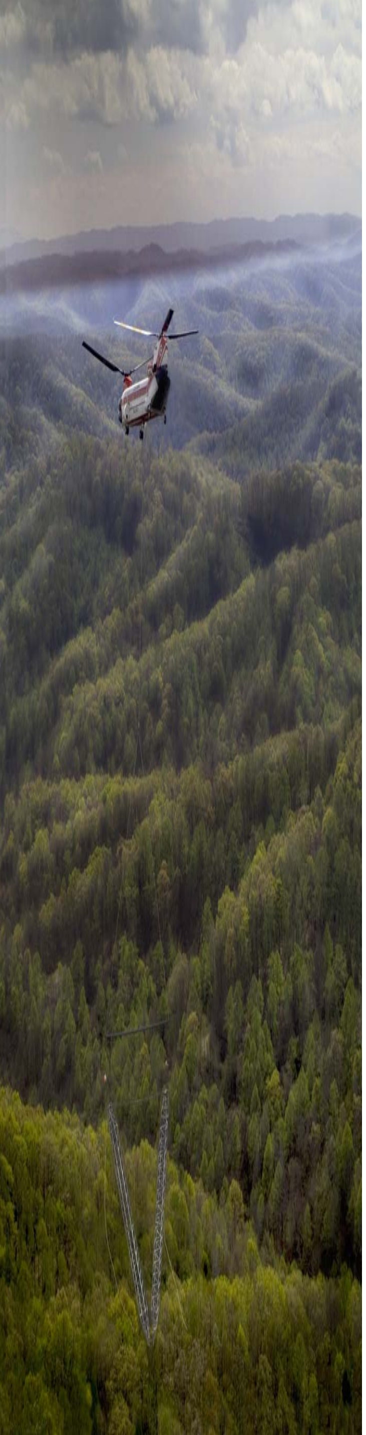
Efficiency: For long distance transmission (longer than 100 miles), one 765 kV line on a 200-foot-wide right-of-way can carry the same amount of power as six single circuit 345 kV lines having a combined right-of-way width of 900 feet.



Cost Advantage: For equivalent capacity, the cost of 765-kV is 48% of the cost of 345-kV

Note: Approximate relationship based on Surge Impedance Loading (i.e. reactive power balance point), 345 kV single circuit tower lines with two conductors per phase compared to 765 kV single circuit lines with six conductors per phase.

765-kV maximizes land use, providing greatest capacity increases with least land consumption.



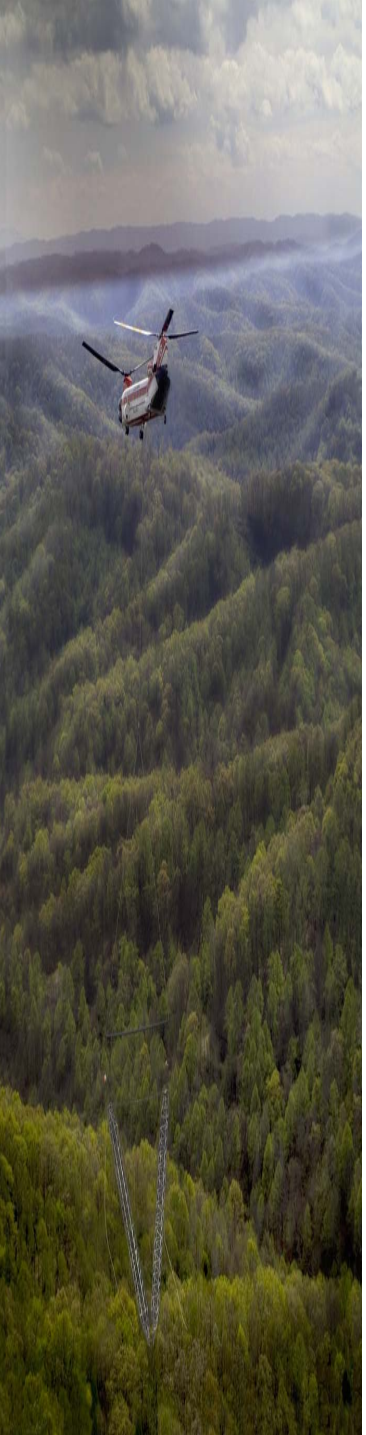
Transmission ~ $9 Billion Opportunity*

Creating a business model to manage capital requirements for enhanced returns with partners

- ~$1 billion in ERCOT
- ~$2 billion 765-kV study in Michigan
- ~$3 billion I-765 Project in PJM
- ~$3 billion project filed with SPP

Building the next US interstate system for enhanced reliability and market efficiency

*Note: ~$9 billion investment opportunity not included in current capital guidance forecasts with exception of ERCOT investment of $60MM in 2007 and $95MM 2008

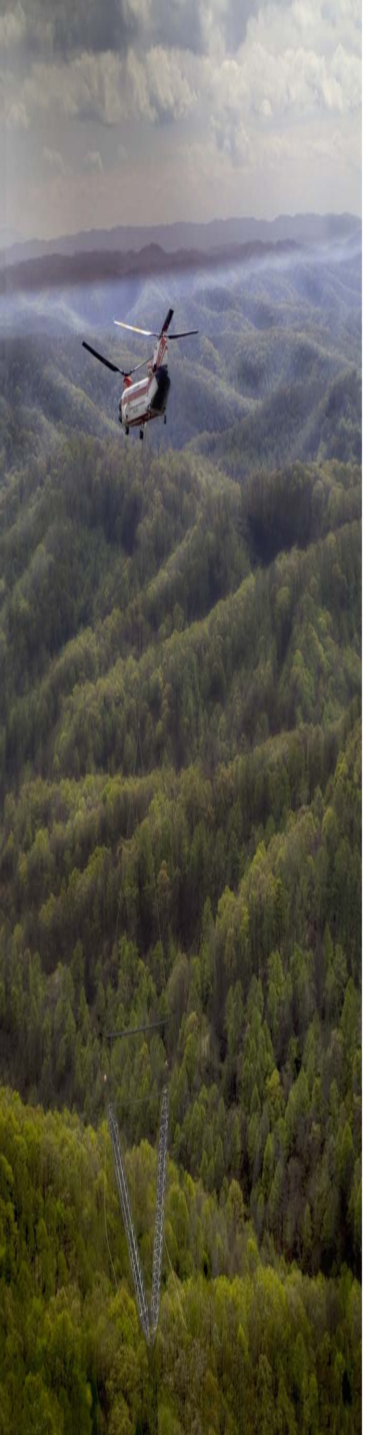


Transmission Investment Earnings Potential

Assumptions	
Estimated Investment Opportunity	$9 Billion
Ownership Structure w/ Partner	50% / 50%
Debt/Equity Ratio	50% debt / 50% equity
Return on Equity	11.00%
Potential EPS Impact (based on 396 MM shares)	+ $0.60*

Earnings accretion over time will be substantial

*Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.



Benefits & Attraction of Texas Transco Joint Venture

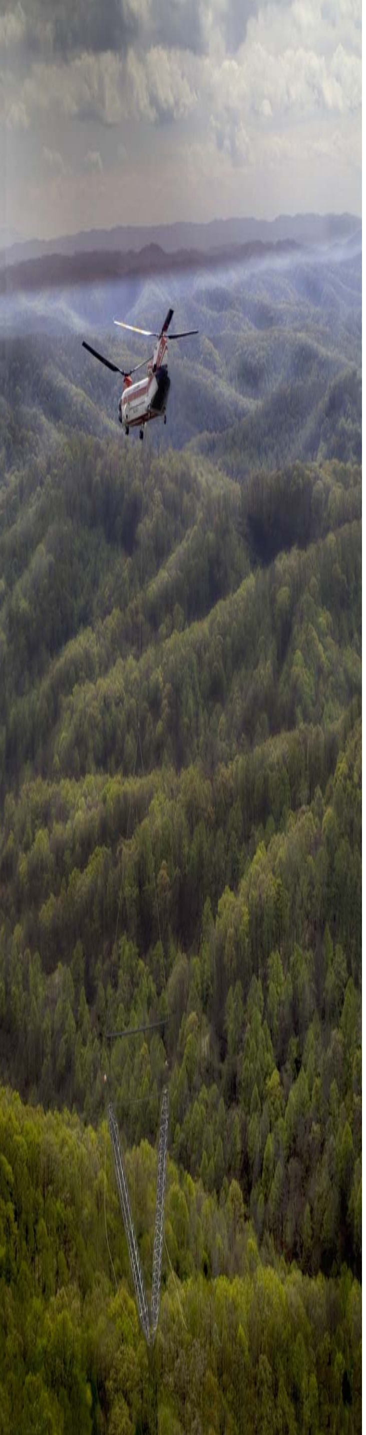
Texas Transco Joint Venture Benefits

- Opportunity to grow ERCOT interest in a timely, resource-efficient manner
- Maximization of asset value
- Formation of strategic relationship that could permit growth beyond current AEP footprint

ERCOT Attraction

- Growing electric demand
- State's commitment to:
  - Wind generation development
  - Promotion of merchant generation
  - Relief of congestion
  - Facilitation of transmission planning in support of the Texas competitive electric market

AEP Texas is uniquely positioned to develop substantial transmission to capture benefits of load growth and traditional & third-party generation



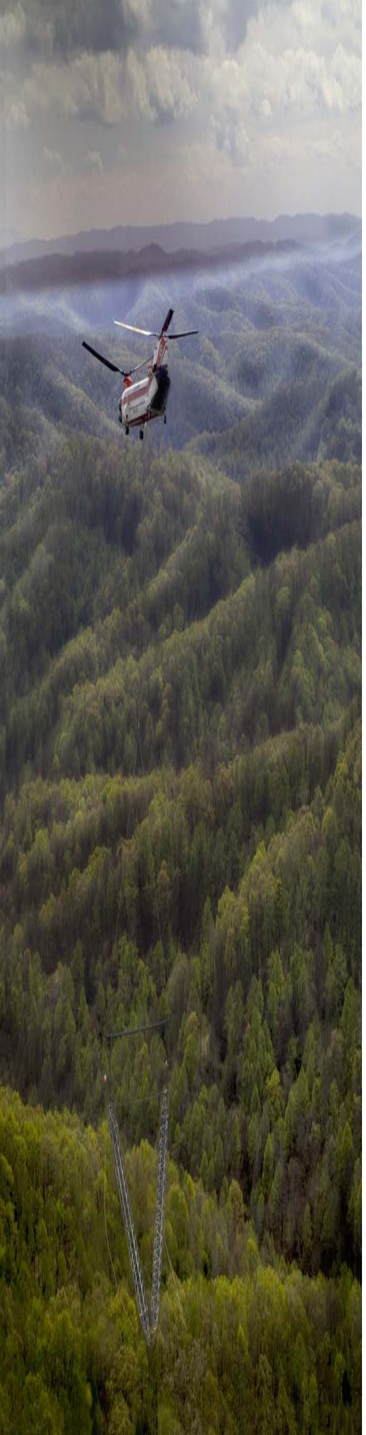
ERCOT Regulatory Certainty

- High degree of regulatory certainty
- Predetermination of need for ERCOT-endorsed projects
- Streamlined annual review process reduces lag
- ROEs commensurate with other state regulatory returns
  - In Texas, current authorized return ranges from 10.125% to 11.25%

ERCOT's predetermination of projects, streamlined annual review process & return opportunity make transmission investment attractive

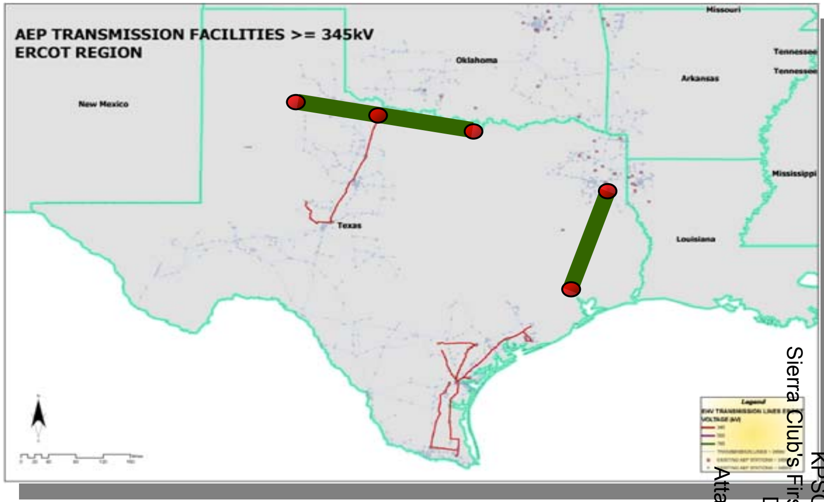
AEP AMERICAN ELECTRIC POWER

MIDAMERICAN ENERGY HOLDINGS COMPANY



- Jointly-owned utility company will design, construct and operate ERCOT transmission assets
- Up to $1B investment potential (before ownership division)
- Equity investment treatment for AEP
- AEP is also exploring 765-kV ERCOT transmission investment opportunity
  - 420 line miles
  - Up to 4000MW improved transfer capability*
  - Anticipated ERCOT rate impact 0.5mils/kWh
- This project may be considered by JV in future

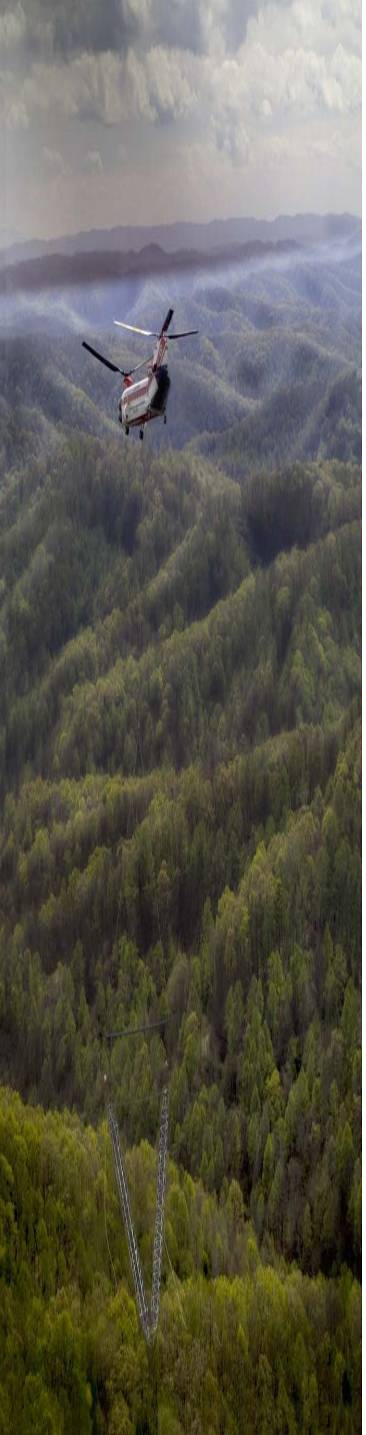
- 2007 commercial operation for first JV projects
- Execution of operating agreement 2006
- Establish JV entity 2007



Conceptual ERCOT transmission project – proposed routes not included in current JV plans

*Line segment capability; ERCOT is a free-flowing network

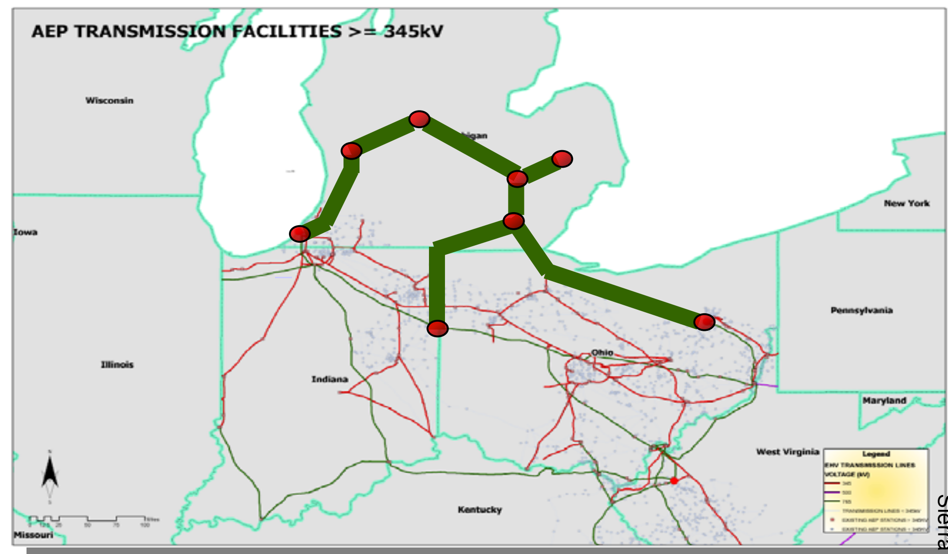
The first large-scale transmission venture in Texas



AEP AMERICAN ELECTRIC POWER

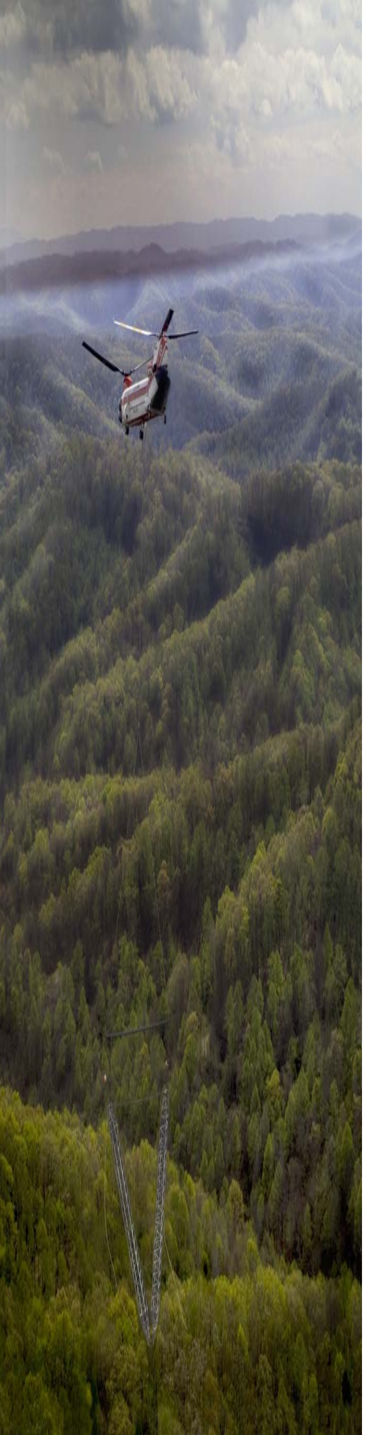
ITC Transmission

- Agreement with ITC *Transmission* for Michigan 765-kV study
- Estimated $2B investment potential (before ownership division)
  - 630 line miles
  - Over 5000MW improved transfer capability
  - Anticipated rate impact <1mil/kWh
- 765-kV could help alleviate constraints
- Study results anticipated in late 2006



The ROW routes shown on this diagram are for illustrative purposes only and they may not depict the actual route that could eventually be selected. The substation locations may also be modified.

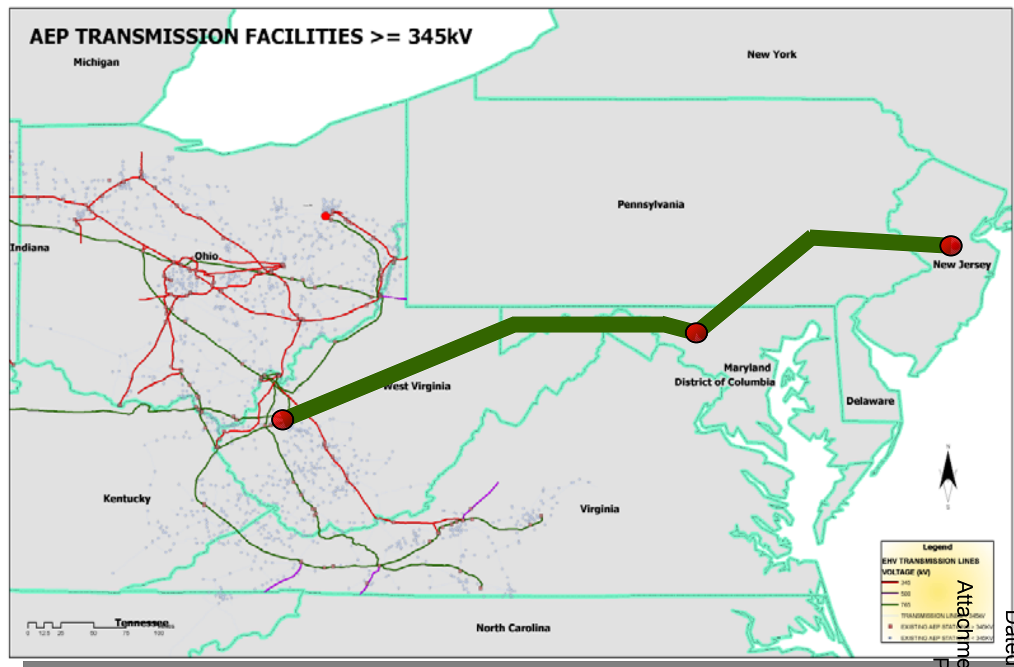
Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints identified in MPSC studies



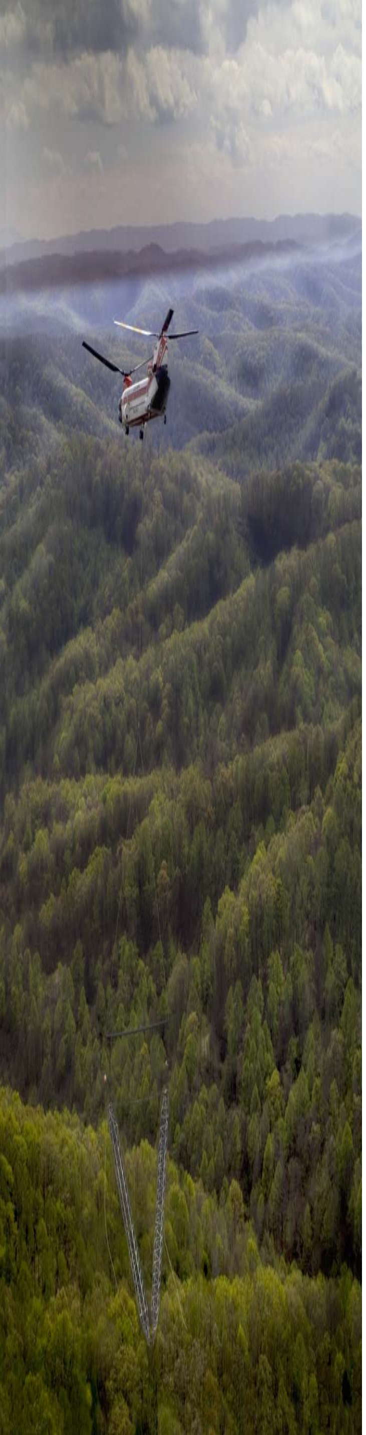
Cruise the I-765

- $3 billion investment
- 550 line miles
- 5000MW improved transfer capability
- Expected PJM rate impact 1mil/kWh
- 2014 estimated in-service date

Original line proposal connects AEP's Amos station to Allegheny Power's Doubs station in Maryland, and terminates at PSEG's Deans station in New Jersey. The final project will undoubtedly vary from the original proposal.



Our I-765 line will be the highest capacity, most reliable line in the United States

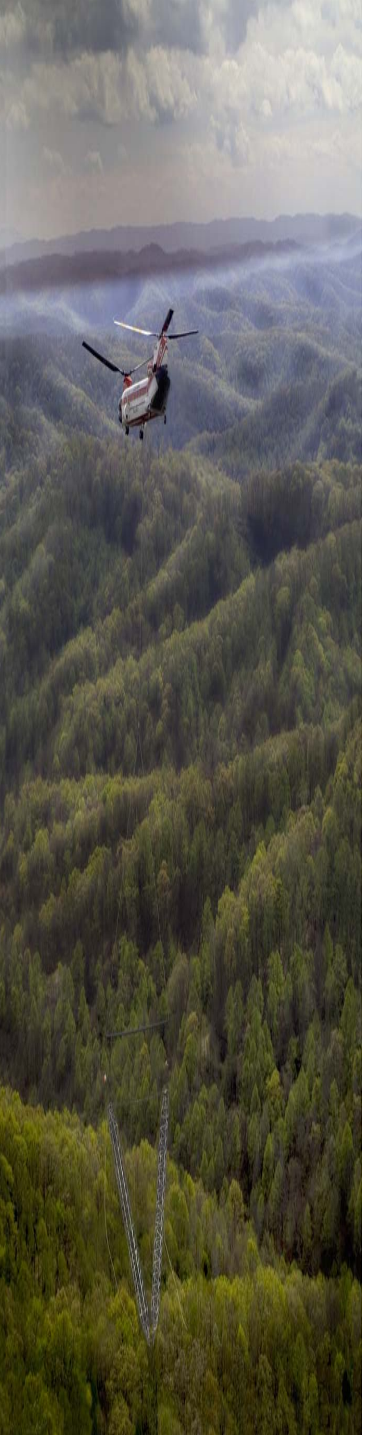


I-765 Benefits

- Improves eastern grid reliability, enhances Midwest – Mid-Atlantic power transfer capability by 5,000 MW
- Improves market efficiency with reduced congestion, lower consumer costs by an estimated $1 billion annually in the east.
- Reduces network line losses by 280 MW at peak with heavy Midwest – Mid-Atlantic power transfers.
- Provides AEP with rate base opportunity for transmission investment with ROE upside and other FERC incentives.
- Provides off-system sales and siting opportunity for AEP and other low-cost midwestern generation.

Expect investment to be shared with other transmission owners; incentive ratemaking approved

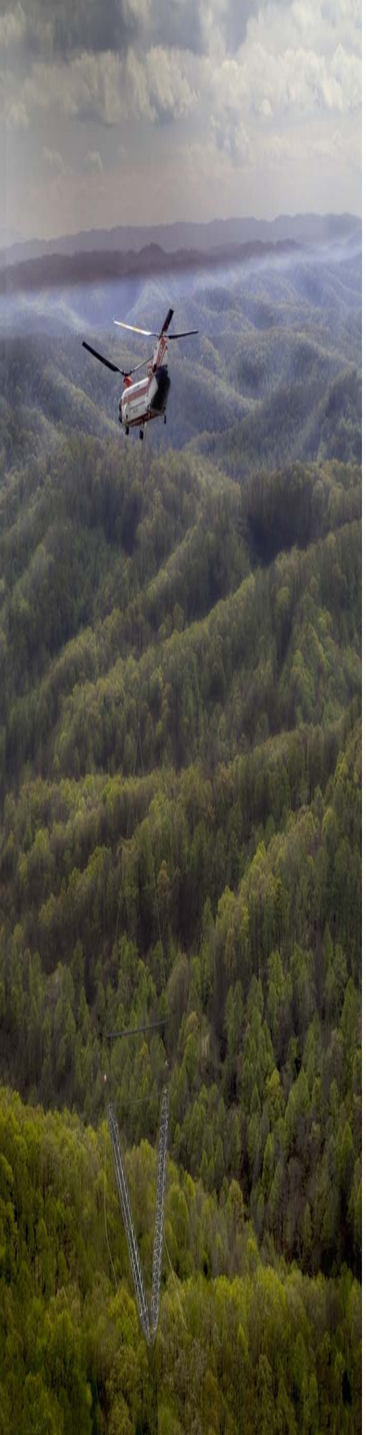
A Century of Firsts



I-765 Regulatory Plan

- Filed plan with PJM (Jan. 31, 2006)
- Filed (Feb. 1, 2006) petition for FERC declaratory order; approved July 20, 2006
- Filed application for DOE early NIETC designation (Jan. 31, 2006); anticipated approval by year-end 2006
- Final regulatory plan depends on PJM tariff
  - Total annual revenue requirement $450-500 million (1 mil/kWh)
  - If AEP's regional rate design proposal for PJM is successful at FERC, revenue requirement would be paid by parties utilizing the system and benefiting customers in PJM East

New technologies including six-conductor bundles and towers designed to blend into the scenery mitigate presence of 765-kV lines in a community



SPP Investment Potential

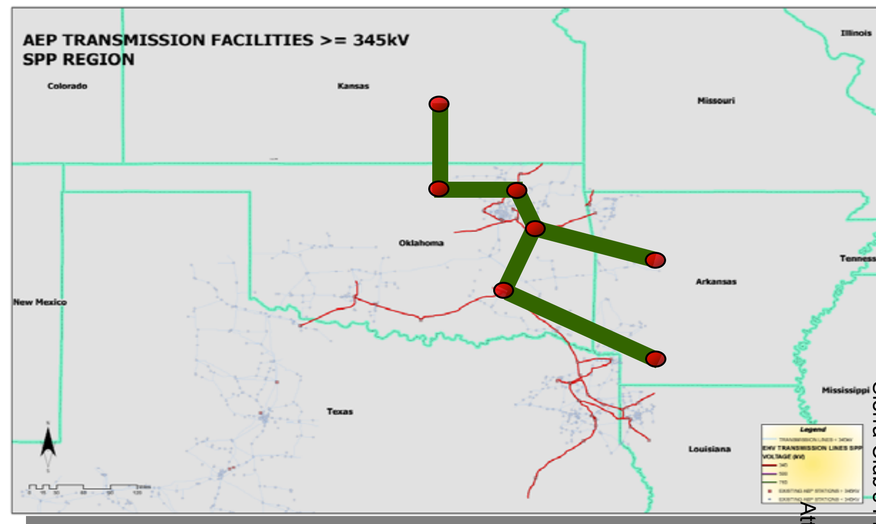
- June 2006 SPP requested proposal to address congestion, reliability & access for new generation

- July 2006 AEP submitted proposal:

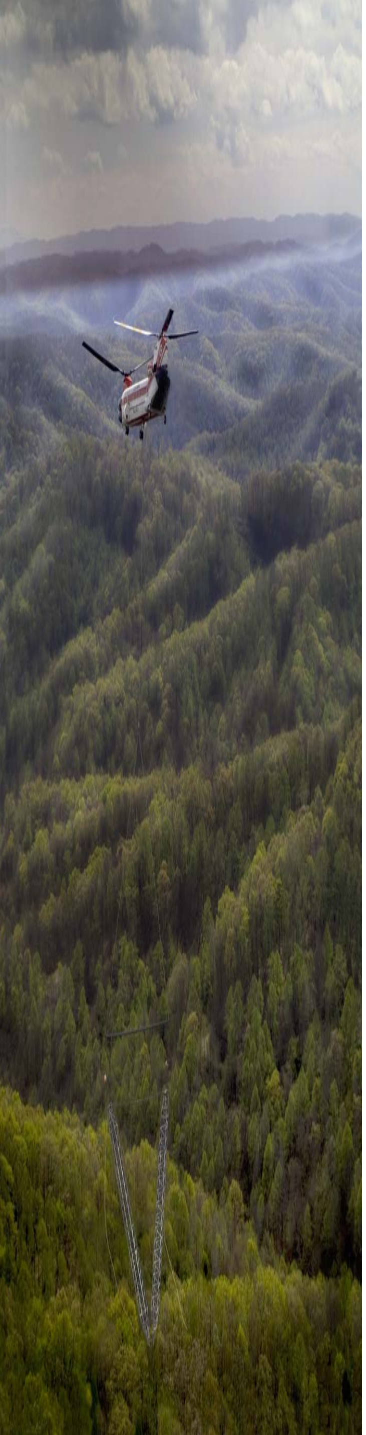
- Six 765-kV lines, 610 line miles from Arkansas to Wichita, Kansas, under construction 2012-2017
- Investment ~$3 billion
  - ~4000MW improved transfer capability
  - Anticipated rate impact 2mils/kWh

Next steps:

- SPP conducting studies to evaluate proposals
- AEP providing technical assistance and support



Significant opportunity for 765-kV transmission in SPP



Conclusion

- $2.1 billion traditional transmission investment planned 2006-2009
- Additional $9 billion transmission opportunity being pursued with anticipated partnerships
- Potential earnings contribution of $0.60/share
- The nation's pioneer in EHV technology, AEP has a leadership role in 765-kV development enabling the U.S. transmission grid and improving reliability & market efficiency
- AEP is assessing potential transmission projects and moving forward with care & prudence

A Century of Firsts

Strategic Direction & Financial Outlook

New York, NY

October 10, 2006

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Near-Term Investor Communication Activities

October 10, 2006	**Strategic Direction, Financial Outlook & Growth**
October 31, 2006	**3Q06 Earnings Call**
November 7, 2006 (EEI)	**Transmission Opportunity Update & Outlook**

Agenda

- Strategic Direction Overview
- 2006 Earnings Guidance Update
- Commitment to 5-7% Earnings Growth
- Operating Company Strategic Initiatives
- Commitment to recommend a 2-cent increase in quarterly dividend effective 4Q06
- 2007-2009 Capital Investment Projections and Funding
- 2007-2009 Earnings Guidance Details

Strategic Direction

- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Achieve adequate returns on all assets

Deliver value to our investors

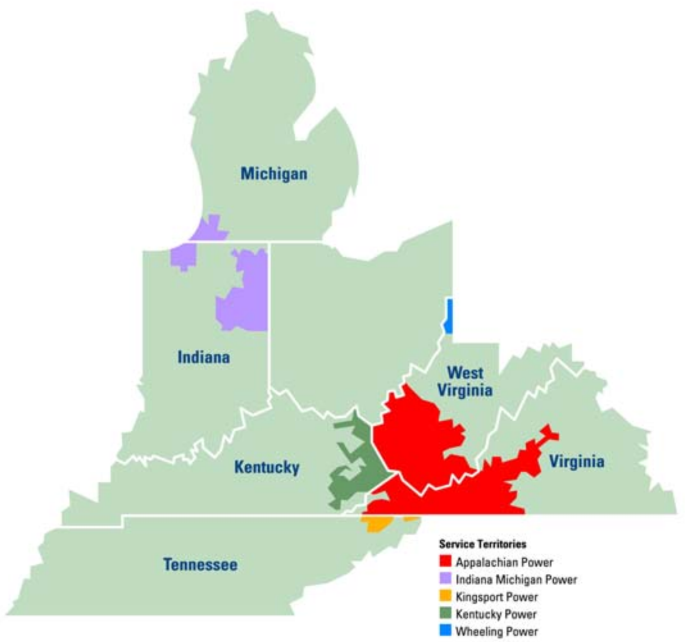
CONTINUED COMMITMENT TO OUR CORE UTILITY MISSION: BRING REASONABLY PRICED ELECTRIC SERVICE TO OUR CUSTOMERS, THEREBY STRENGTHENING OUR COMMUNITIES AND REWARDING OUR INVESTORS

Operating Company Structure Benefits

- Re-established operating company model in 2004 – results are being delivered:
  - Increasing growth rate to 5-7%
  - Providing multi-year capital, cash flow and earnings forecasts
- Accountability for performance results
  - Regulatory relationships
    - Capital efficiency
      - Seek high returns
      - Develop innovative rate plans to reduce regulatory lag
  - Operational focus
    - Customer satisfaction

OPERATING COMPANY STRUCTURE DELIVERING IMPROVED PERFORMANCE

East Regulated Utilities

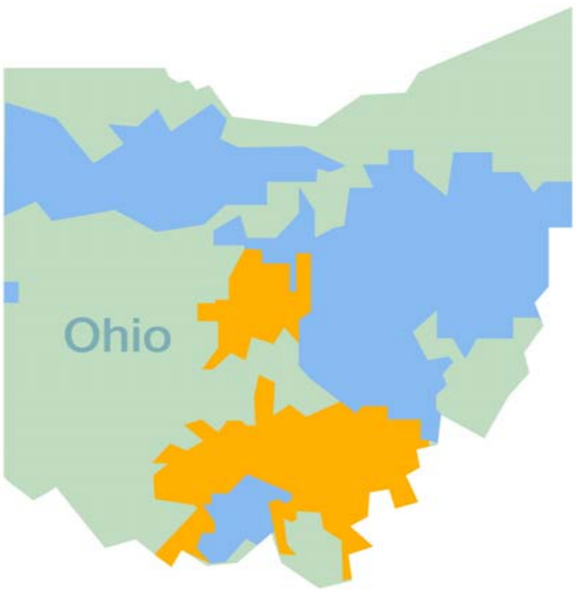


- **Strategic Direction**
  - **Obtain real-time cost recovery**
    - **Kentucky surcharge mechanism**
    - **West Virginia annual rate adjustments through 2009**
    - **Virginia E&R mechanism**
    - **Continue environmental investment program**
  - **Pursue IGCC investment opportunity**
  - **Influence future status of VA deregulation**

MAKING SIGNIFICANT PROGRESS IN REAL-TIME COST RECOVERY

AEP Ohio

Ohio Companies

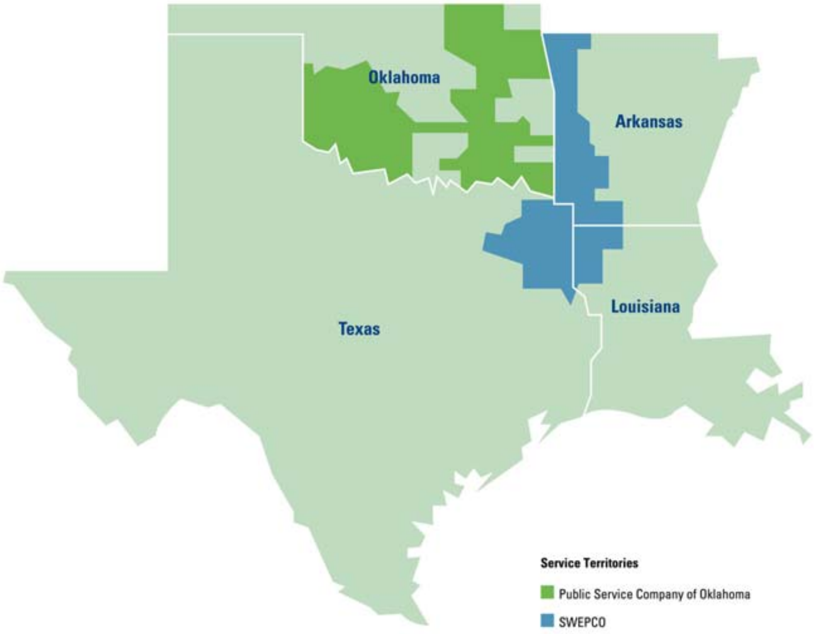


- Ohio Power Service Territory
- Columbus Southern Power Service Territory

- **Strategic Direction**
  - **Reliability enhancement**
  - **Pursue IGCC investment opportunity**
  - **Continue environmental investment program**
  - **Reach post-2008 answer**
    - **Extend RSP**
    - **Go to market**

OHIO POST 2008: SOUND PUBLIC POLICY SHOULD BALANCE ALL STAKEHOLDER EXPECTATIONS

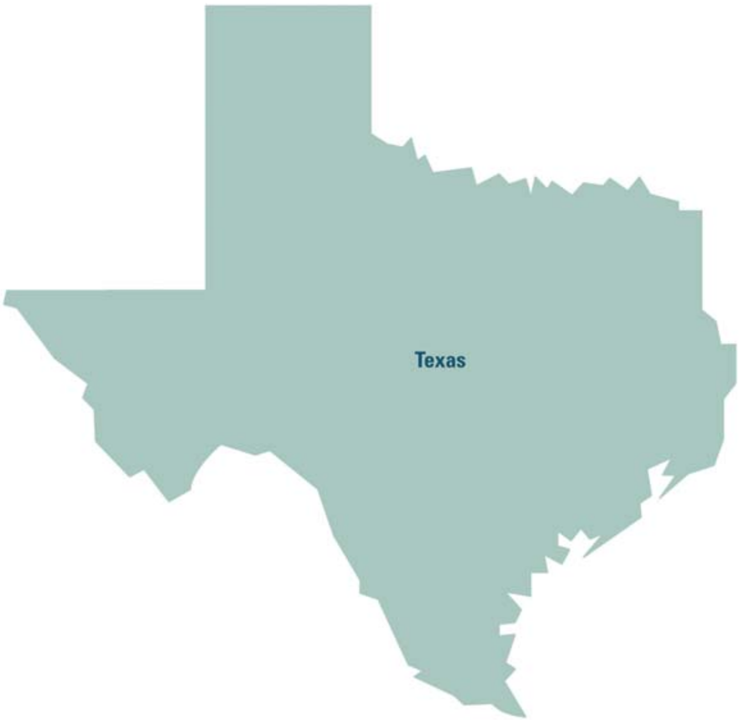
West Regulated Utilities



- **Strategic Direction**
  - **Planned investments to double combined PSO/SWEPCO rate base**
    - **Generation addition at PSO & SWEPCO – nears $3 billion**
  - **Innovative rate plans to reduce lag**
    - **Annual formula based rates**
    - **Return on CWIP**

SUBSTANTIAL GROWTH IN RATE BASE & ASSOCIATED RATE RELIEF TO DRIVE TO EARNINGS

AEP Texas

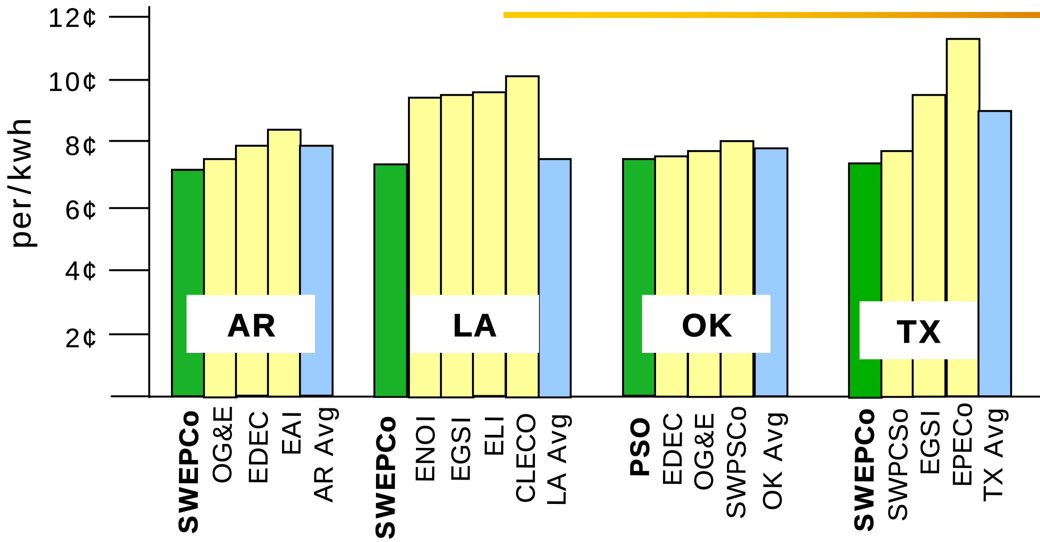


- **Strategic Direction**
- **TNC/TCC Wires Case to be filed late 2006**
- **ERCOT transmission**
  - **Formation of new AEP entity for purposes of transmission investment**
  - **Engage partner for capital investment**
  - **Total investment could double AEP transmission investment in ERCOT**

STRATEGIC DIRECTION AT FOREFRONT – WIRES CASE TO BE FILED; PURSUE TRANSMISSION INVESTMENTS

AEP Is The Low Cost Provider

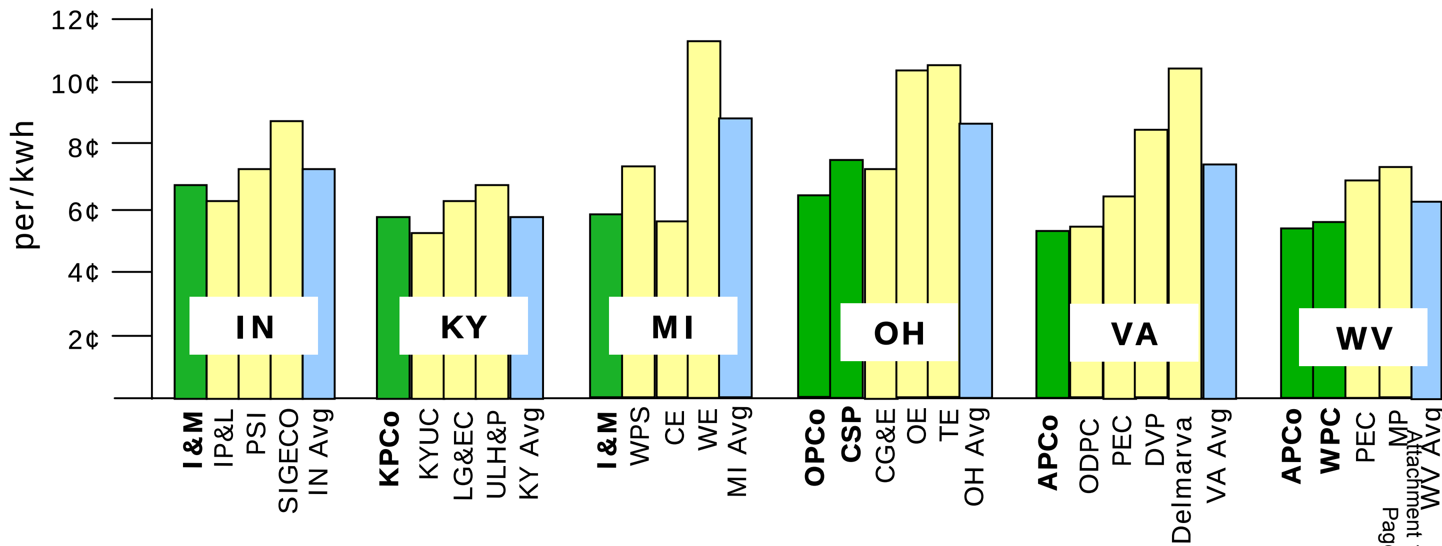
AEP West



Residential Average Realizations as of12/31/2005

Source: Winter 2006 EEI Typical Bills and Average Rates Report

AEP East



2006-2009 PROJECTED ANNUAL RATE INCREASE OF 3.8%

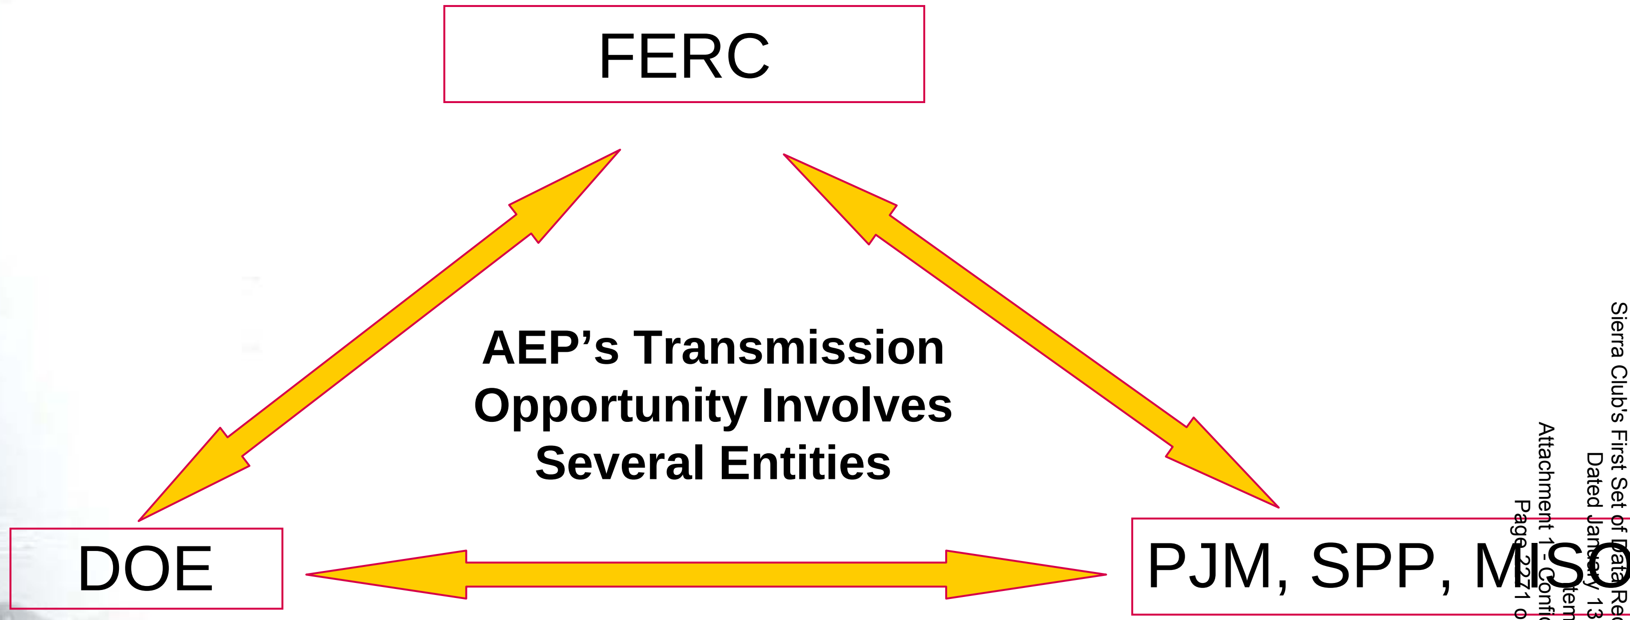
ERCOT Transmission Investment Opportunity

- **ERCOT Provides Unique Investment Opportunity**
  - **Transmission needs are considerable**
    - Competitive market resulting in ERCOT grid expansion
    - Aggressive renewable portfolio requirements for RECs
    - Socialization of grid improvement costs
    - Liberal interconnection of merchant generators
    - Continued Texas economic growth
  - **High degree of regulatory certainty for transmission investment**
    - Predetermination of need for ERCOT endorsed projects
    - Streamlined annual review process reduces lag
    - ROEs commensurate with other state regulatory returns
- **AEP Action Plan**
  - Create affiliated Texas transco company
  - Reduce capital requirements – enter into joint venture

AEP TEXAS IS UNIQUELY POSITIONED TO DEVELOP SUBSTANTIAL TRANSMISSION TO CAPTURE BENEFITS OF LOAD GROWTH AND TRADITIONAL & THIRD PARTY GENERATION

AEP's Interstate Transmission Opportunity

The Energy Policy Act of 2005 provides an unprecedented opportunity for transmission development, and AEP is in an enviable position to build upon its core strength to extend its strong 765 kV system to meet the nation's urgent need for interstate transmission. Lower voltage system opportunities also exist for AEP.



FERC Transmission

Strategic Direction

- **I-765 Project Opportunity ~ $3 billion**
  - **Formed Transco, AEP Transmission Co., LLC, subsidiary to own investment**
  - **Received conditional FERC approval for I-765 Project – cost recovery including incentive ROE rates & return on CWIP**
    - **Revenue accrual with minimal lag**
  - **Filed with DOE for early designation as National Interest Electric Transmission Corridor**
- **SPP Investment Opportunities ~ $2.75 billion**
- **ERCOT Investment Opportunity ~ $1 billion**
- **Other Transmission Investment Opportunities ~ $2 billion**
- **Actively participate in development of FERC regional rate design**

Create joint venture partnership to manage AEP capital requirements

CREATING THE BUSINESS MODEL TO ENHANCE VALUE AND MANAGE AEP CAPITAL OUTLAYS TO MEET THE NATION'S URGENT NEED FOR INTERSTATE TRANSMISSION

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 2272 of 9556

Framework for Long-Range Performance

- Introduction of 2007, 2008 & 2009 Earnings Guidance Ranges:

2007 Range $2.85 to $3.05	2008 Range $3.00 to $3.30	2009 Range $3.15 to $3.45

- Increased EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
    - AEP Transmission Company
  - Seek rate recovery for new investments
  - Control costs
- Combined 2007 & 2008 capital investment amount reduced by $528MM versus previous guidance levels
- Commitment to recommend an 8-cent/share increase in annual dividend effective 4Q06
- Maintain credit ratings
  - BBB/Baa2/BBB

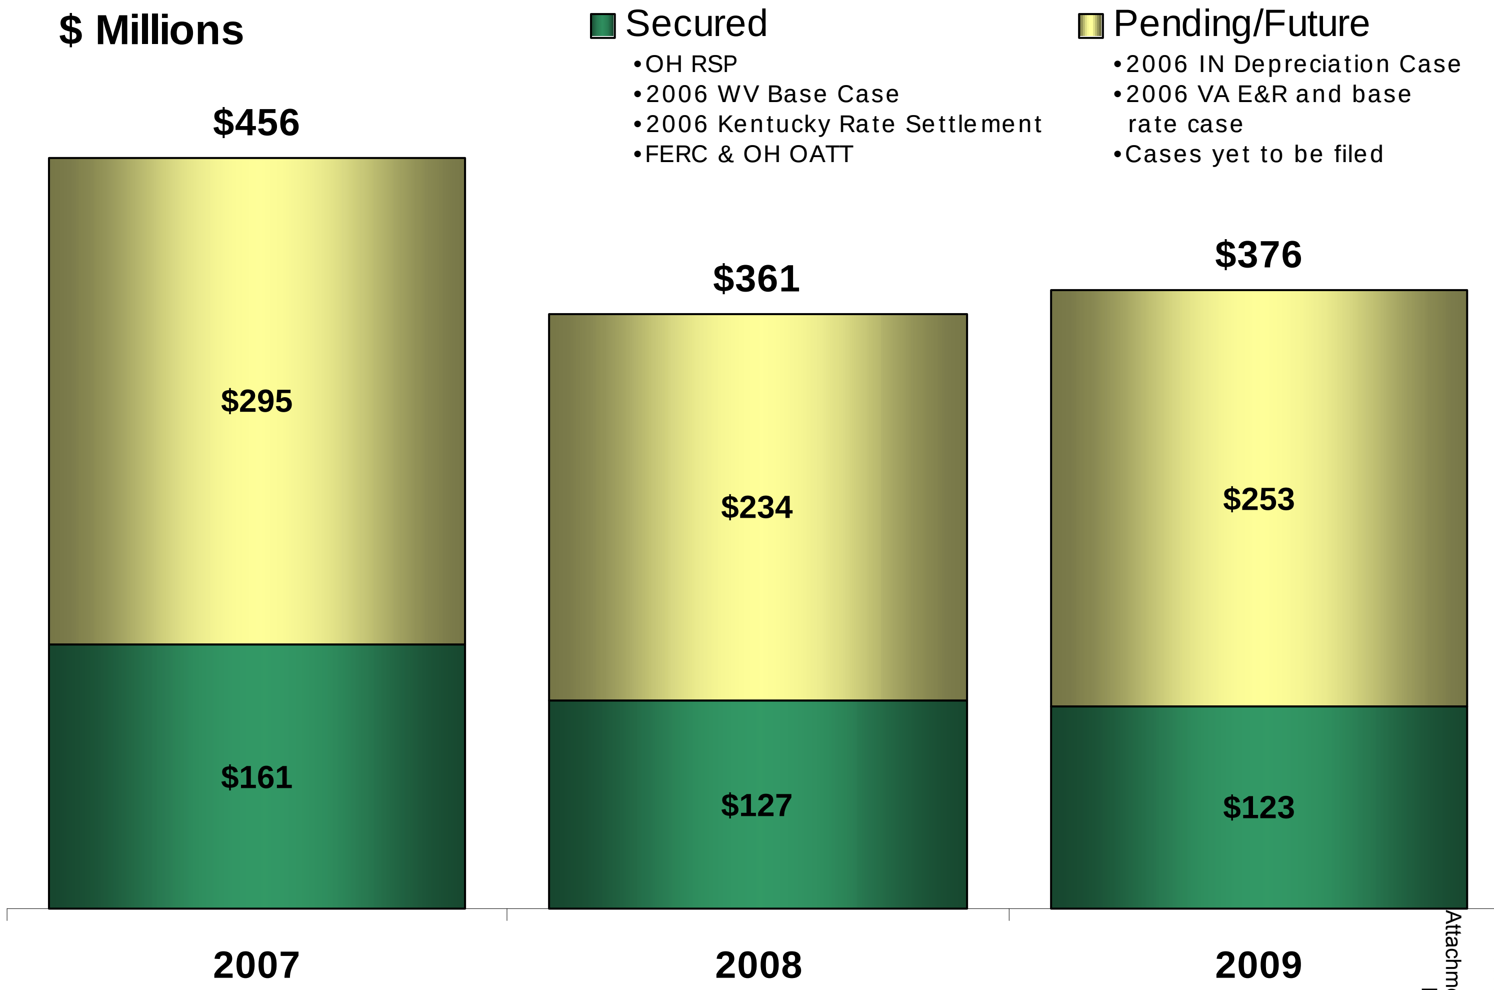
OUR STRATEGY REMAINS FOCUSED ON REGULATED OPERATIONS

Summary of 5-7% Long-Range Growth Components

- **Energy sales growth of 1.5%**
  - Predicated on AEP's ability to economically dispatch at a high load capacity
- **Rate base investment**
  - Generation Plant Purchases & Build
  - Transmission – interstate & intrastate
  - Distribution
  - Reliability
- **Transmission company**
- **Commercial operations**
- **Regulatory strategy**
  - Achieve high returns
  - Seek cash returns on investment during construction
  - Create & secure innovative rate plans
    - Pursue post-2008 solution in Ohio
    - Expand use of trackers
    - Formula rates

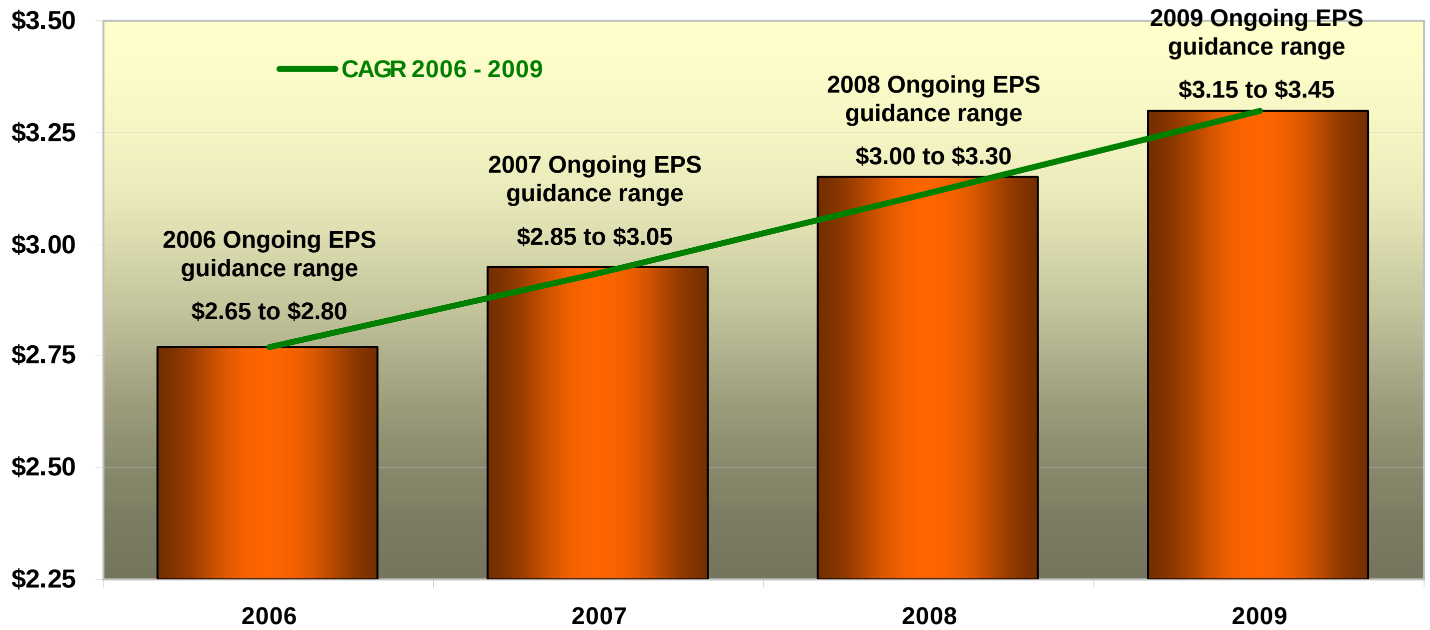
RATE BASE INVESTMENT COUPLED WITH INNOVATIVE REGULATORY PLANS WILL REDUCE LAG AND DRIVE EARNINGS GROWTH

Incremental Rate Relief Composition



RATE RELIEF IS A CRITICAL ELEMENT TO AEP'S FINANCIAL SUCCESS

Long-Range EPS Expectations



Long-Range Plan Highlights

- Committed to a 5-7% earnings growth range (2006-2009)
- Recommend an 8-cent/share increase in the annual dividend commencing 4Q2006
- Continue capital investment in utility business to support earnings growth
- Fund investment program with new rate relief and debt
  - No common equity issuance (except through Dividend Reinvestment Program)
- Create joint venture to build our transmission company

COMMITTED TO 5-7% EARNINGS GROWTH

Composition of Long-Range EPS Drivers

TRADITIONAL UTILITY FACTORS WILL DRIVE EARNINGS

Summary of 2007 Earnings Drivers

- Load growth of 1.5%
- Rate relief of $456MM ($161MM already secured)
- Improved performance at Investments
- Rising fuel costs of 6-8%
- Increased retail load & higher muni/co-op sales to impact off system sales contribution
- Higher financing costs
- Higher O&M (inflationary pressures)
- Lower contribution from Centrica sharing agreement

Merchant Conference

November 30, 2006

New York City

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Strategic Direction

- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Achieve adequate returns on all assets

Deliver value to our investors

CONTINUED COMMITMENT TO OUR CORE UTILITY MISSION: BRING REASONABLY PRICED ELECTRIC SERVICE TO OUR CUSTOMERS, THEREBY STRENGTHENING OUR COMMUNITIES AND REWARDING OUR INVESTORS

Framework For Long-Range Performance

- 2006, 2007, 2008 & 2009 Earnings Guidance Ranges:

2006 Range $2.65 to $2.80	**2007 Range $2.85 to $3.05**
2008 Range $3.00 to $3.30	**2009 Range $3.15 to $3.45**

- EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
    - AEP Transmission Company
  - Seek rate recovery for new investments
  - Control costs
- Maintain credit ratings
  - BBB/Baa2/BBB

OUR STRATEGY REMAINS FOCUSED ON REGULATED OPERATIONS

Summary of 5-7% Long-Range Growth Components

- **Energy sales growth of 1.5%**
  - Predicated on AEP's ability to economically dispatch at a high load capacity
- **Rate base investment**
  - Generation Plant Purchases & Build
  - Transmission – interstate & intrastate
  - Distribution
  - Reliability
- **Transmission company**
- **Commercial operations**
- **Regulatory strategy**
  - Achieve high returns
  - Seek cash returns on investment during construction
  - Create & secure innovative rate plans
    - Pursue post-2008 solution in Ohio
    - Expand use of trackers
    - Formula rates

RATE BASE INVESTMENT COUPLED WITH INNOVATIVE REGULATORY PLANS WILL REDUCE LAG AND DRIVE EARNINGS GROWTH

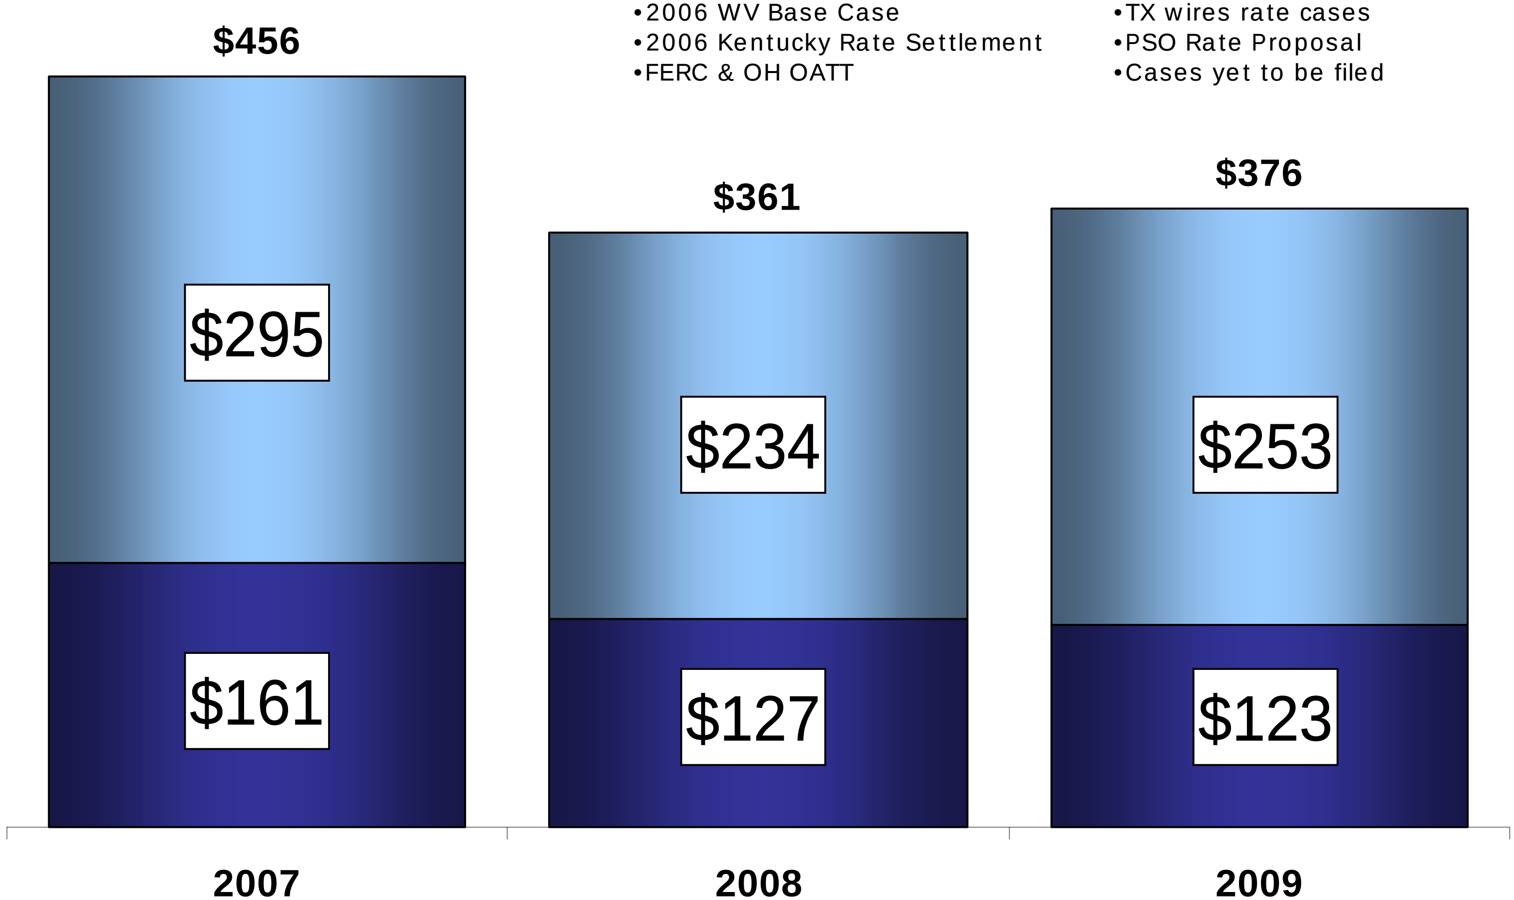
- 2006 Kentucky Rate Settlement
- FERC & OH OATT

Pending/Future
- VA General Rate Case
- TX wires rate cases
- PSO Rate Proposal
- Cases yet to be filed



Note: A portion of the pending/future rate recovery related to Virginia E&R costs will now be considered secure, based on the Virginia SCC's Nov. 20th order in our E&R case. Further analysis is required to quantify these amounts.

RATE RELIEF IS A CRITICAL ELEMENT TO AEP'S FINANCIAL SUCCESS

Current State Regulatory Activity

Virginia

VA Environmental & Reliability Order

- On Nov. 20, 2006, the VA SCC issued an order allowing APCo-VA to recover $21.3MM of incremental E&R spending covering the costs incurred July 1, 2004 through Sept. 30, 2005
- The surcharge will be collected Dec. 1, 2006 through Nov.30, 2007
- The order established an ROE of 9.8% (applicable to incremental E&R investment), but allowed for adjustment of ROE in future E&R proceedings
- The next E&R proceeding would seek recovery of costs incurred Oct. 1, 2005 thru Oct. 1, 2006

VA General Rate Case

- Seeking $225.8MM increase in base rates, partially offset by proposed off-system sales sharing credit of $27.3MM, resulting in net increase of $198.5MM
- SCC ordered implementation of full $198.5MM rate increase to be effective October 2, subject to refund
- SCC staff filed testimony recommending a $12.7MM rate increase, which includes a 9.9% ROE and no off-system sales margin sharing

Texas

TCC & TNC Wires Rate Cases – filed 11/9/06

- TCC & TNC requested rate increases of $82.7MM and $25MM, respectively. Requested increases include the expiration of $20MM and $6.2MM for TCC and TNC for the expiration of merger-related billing credits that have been in place since 2000
- Requested ROE of 11.25% using capital structure of 60% debt / 40% equity

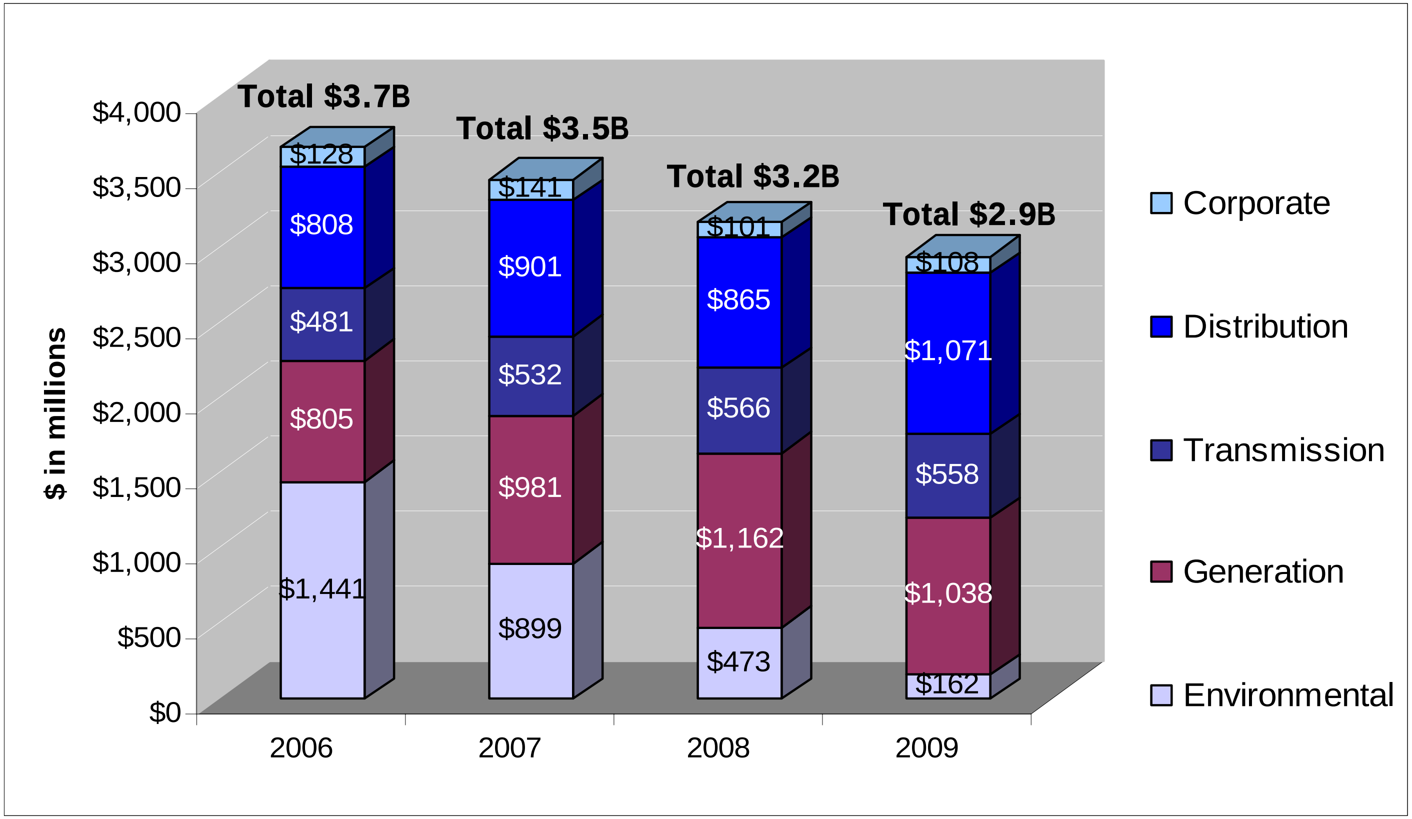
Oklahoma

PSO Rate Proposal – filed 11/21/06

- PSO's rate proposal contains the following major components:
  - $49.6MM overall increase in base rates to recover increased costs and investments already made
  - Proposal to adopt an annually adjusted rate mechanism for new investments, including a return on CWIP
  - Requested ROE of 11.75% using capital structure of 54% debt / 46% equity

NEW RATE RELIEF TO CONTRIBUTE TO EARNINGS IN 2007

Multi-year Capital Investment Forecast



Note: Excludes AFUDC

CAPITAL INVESTMENT WILL BE FUNDED BY CASH FROM OPERATIONS AND DEBT ISSUANCES

Commitment to Credit Quality

Forecast Parameters:

- Maintain minimum $200MM cash balance
- Dividend reinvestment plan activated September 2006
- Target 60% consolidated debt/cap ratio
- Target utility company capitalization structures

WE ARE COMMITTED TO MAINTAINING OUR CURRENT CREDIT RATINGS BBB/Baa2/BBB

Company	Target Equity Ratio

TNC	40%

- Target long term dividend payout ratio range of 55-60%
- Maintain adequate coverage ratios

A Century of Firsts

Transmission Opportunities

AEP Transmission Vision & Mission

- Maintain our position as the largest transmission company in the United States
- Maintain our leadership in technical innovation of transmission systems
- Set the standards for transmission safety, efficiency, and reliability
- Provide for robust market competition - benefiting customers by de-bottlenecking the U.S. transmission grid
- Reduce the need for new generation by facilitating the optimal economic dispatch of existing generation assets
- Increase earnings for AEP shareholders

MAINTAINING OUR LEADERSHIP POSITION AND SETTING THE STANDARDS

AEP Transmission Strategy

A Century of Firsts

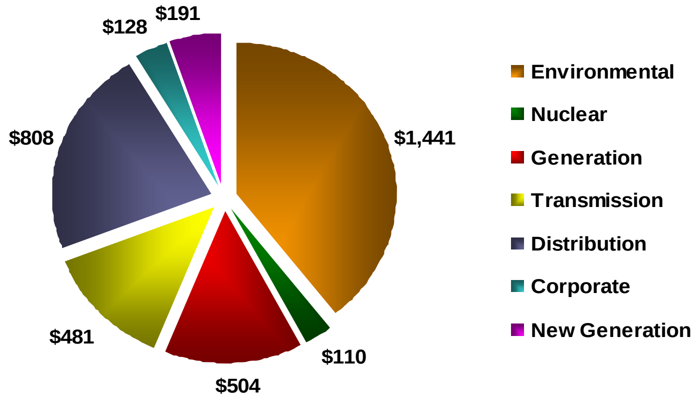
- Expand our vibrant transmission business with major new joint venture projects, taking advantage of EPAct 2005
- Aggressively seek recovery through various state and federal mechanisms
- Advocate transmission nationally as an enabler of market efficiency, economic opportunity, environmental optimization, and national security

THE AEP ADVANTAGE: 100 YEARS OF TRANSMISSION LEADERSHIP EXPERIENCE IN THE UNITED STATES

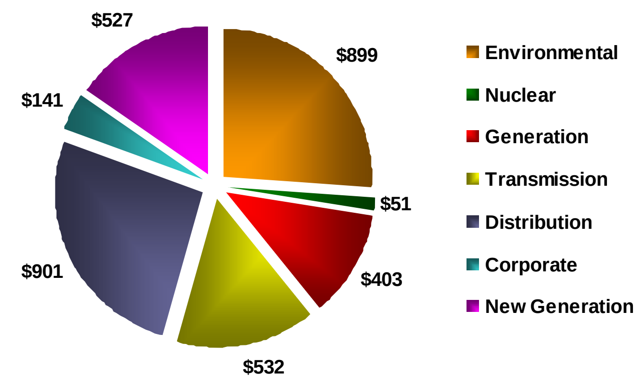
AEP Transmission Investment Forecast

Investing over $2.1 billion 2006-2009

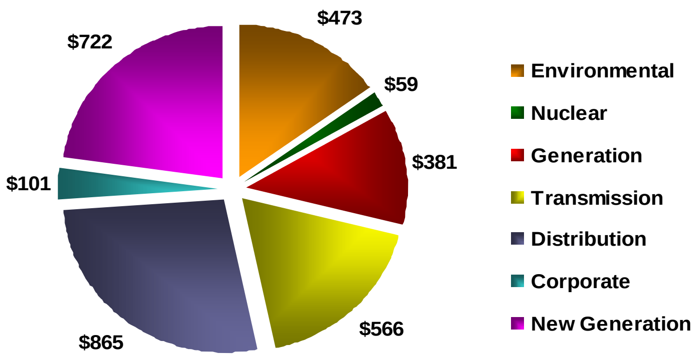
2006 Projected Totals $3.7 Billion



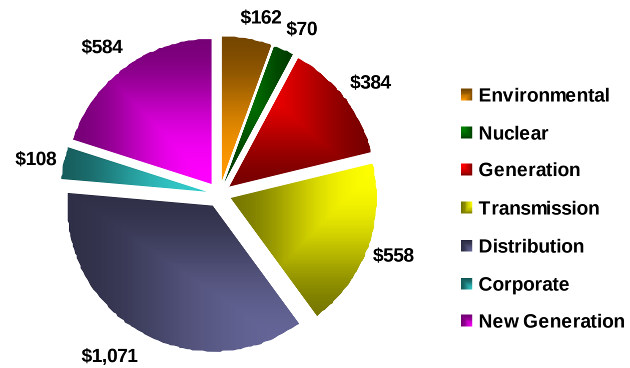
2007 Forecast Totals $3.5 Billion



2008 Forecast Totals $3.2 Billion



2009 Forecast Totals $2.9 Billion



AEP – ONE OF THE PREMIER TRANSMISSION UTILITIES IN THE UNITED STATES, IF NOT THE WORLD

15

Transmission ~ $9 Billion Opportunity*

Creating a business model to manage capital requirements for enhanced returns with partners

- **~$1 billion in ERCOT via JV with MidAmerican**
- **~$2 billion 765-kV study with ITC in Michigan**
- **~$3 billion I-765 Project in PJM**
- **~$3 billion project filed with SPP**

BUILDING THE NEXT US INTERSTATE SYSTEM FOR ENHANCED RELIABILITY AND MARKET EFFICIENCY

*Note: ~$9 billion investment opportunity not included in current capital guidance forecasts with exception of ERCOT investment of $60MM in 2007 and $95MM 2008

Conclusion

- $2.1 billion traditional transmission investment planned 2006-2009
- Additional $9 billion transmission opportunity being pursued with anticipated partnerships
- Potential earnings contribution of $0.60/share
- The nation's pioneer in EHV technology, AEP has a leadership role in 765-kV development enabling the U.S. transmission grid and improving reliability & market efficiency
- AEP is assessing potential transmission projects and moving forward with care & prudence

Summary of 2007 Earnings Drivers

- Load growth of 1.5%
- Rate relief of $456MM ($161MM already secured)
- Improved performance at Investments
- Rising fuel costs of 6-8%
- Increased retail load & higher muni/co-op sales to impact off system sales contribution
- Higher financing costs
- Higher O&M (inflationary pressures)
- Lower contribution from Centrica sharing agreement

TRADITIONAL UTILITY FACTORS WILL DRIVE EARNINGS

Risks and Uncertainties within 2007 EPS Guidance Range

2007 EPS Guidance Range is $2.85 to $3.05

2007

- *Outcome of pending regulatory proceedings*
- *Wholesale market volatility*
- *Plant availability*
- *Rising fuel costs*
- *Weather*

Multi-year Capital Investment Funding Plan

	Actual 2005	Projection 2006	2007	2008	2009
Planned Capital Investment (Excluding AFUDC)	$ (2,499)	$ (3,663)	$ (3,454)	$ (3,167)	$ (2,937)
Dividend on Common	$ (553)	$ (591)	$ (618)	$ (621)	$ (624)
Cash Sources					
Cash from Operations *	$ 1,877	$ 1,890	$ 2,232	$ 2,642	$ 2,671
Proceeds from Sale of Assets	$ 1,246	$ 175	$ -	$ -	$ -

Calyon Securities' Utility Conference
New York

December 1, 2005

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Executive Vice President & Chief Financial Officer

Framework for 2006

- 2006 Earnings Guidance Range: $2.50 to $2.70
- Controlled investment in utility operations
  - Reliability
  - Environmental
  - New Generation
- Seek rate recovery for new investments
- Control costs

COMPANY'S STRATEGY REMAINS FOCUSED ON UTILITY OPERATIONS

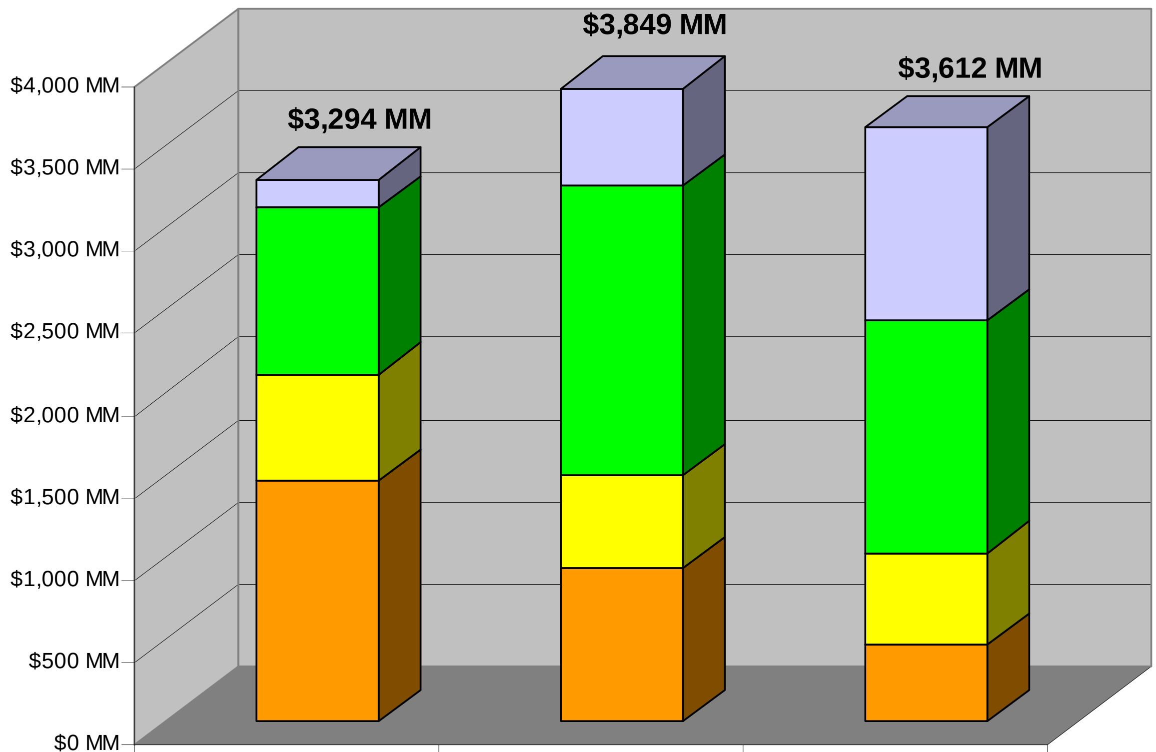
Summary of Major 2006 Earnings Drivers

AEP®

- ✓ Load growth of 2.5%
- ✓ $300MM new rate recovery in progress
- ✓ Rising fuel costs of 10-12%
- ✓ Higher planned outages, increased retail load, & sale of TCC generation to impact off system sales
- ✓ Decline in utility operations O&M
- ✓ Parent Company improvement

TRADITIONAL UTILITY FACTORS WILL DRIVE 2006 EARNINGS

Capital Investment Forecast



New Build Generation & Ongoing Infrastructure Replacement investment can be throttled

	2006	2007	2008
New Build Generation	$168 MM	$593 MM	$1,176 MM
Ongoing Infrastructure Replacement/ Economically Justified	$1,016 MM	$1,757 MM	$1,412 MM
Mandated T&D	$646 MM	$568 MM	$554 MM
Environmental Compliance	$1,464 MM	$931 MM	$470 MM

MUCH OF CAPITAL INVESTMENT IS ADJUSTABLE

* Cash Flow from Operations assumes full rate recovery on capital expenditures.

Note: Totals may not foot due to rounding.

REGULATORY RECOVERY WILL DRIVE CAPITAL INVESTMENT THROTTLE

Regulatory Activity Underway

- ✓ TCC Stranded Cost Recovery True-up Filing
- ✓ FERC Transmission Case
- ✓ APCo Filing for Recovery of E&R Costs in Virginia & Fuel Clause Increase
- ✓ APCo & WPCo Base Rate & Expanded Net Energy Clause (ENEC) Filing in West Virginia
- ✓ Kentucky Base Rate Filing
- ✓ SWEPCo – Texas Fuel Factor/Surcharge Filing
- ✓ IGCC

LEVEL OF CAPITAL INVESTMENT WILL BE ADJUSTED BASED ON RATE RECOVERY AND/OR CASH GENERATION

Regulatory Activity Underway

TCC Stranded Cost Recovery Case

- Seeking approval of true-up balances
  - ✓ $2 Billion in stranded costs and associated carrying costs
  - ✓ $400 Million in other true-up amounts including carrying costs
- Dec 2005/Jan 2006 - Final order expected, if not extended
  - ✓ Jan/Feb 2006 - Request for securitization
    - ➢ Sept 2006 - Issuance of securitization bonds if no appeal
  - ✓ Mar/April 2006 – Request approval for CTC to collect other true-up items
    - ➢ Jan 2007 – CTC charge to be implemented

AEP East FERC Transmission Case

Nov 7, 2005 - Announced Settlement agreement – Subject to FERC approval

- Results in $22 Million net revenue in 2006 from wholesale transmission

Regulatory Activity Underway

AEP®

Appalachian Power- Virginia Fuel Factor Increase

Filed Oct 21, 2005 - Annual revenue increase of $57.7 Million

- ✓ Jan 1, 2006 - Interim fuel rate increase effective, subject to refund
- ✓ Jan 12, 2006 - Public hearing

Appalachian Power – Virginia E & R Cost Recovery Factor

Filed July 1, 2005 - Seeking recovery of $62.1 Million in new Environmental & Reliability costs

- ✓ Oct 14 – SCC ruled VA law does not allow recovery of prospective costs - $48.6 Million
- ✓ Nov 14 - APCo filed supplemental direct testimony which included updated actual E&R costs incurred of $21.1 million
- ✓ Public hearing set for February 7, 2006

Regulatory Activity Underway

Appalachian Power & Wheeling Power - West Virginia Base Rate Case & ENEC Reactivation

Filed August 26, 2005 – Seeking $183 Million increase in revenues for increasing costs for coal, purchased power and environmental improvement construction projects

Proposed Phase-in over 4 years

- ✓ June 23, 2006 – $82 Million
- ✓ July 1, 2006 – $9 Million
- ✓ Jan 1, 2007 – $44 Million
- ✓ Jan 1, 2008 – $10 Million
- ✓ Jan 1, 2009 – $38 Million

Procedural Schedule

- ✓ Feb 2, 2006 – Staff & Intervenors testimony
- ✓ Feb 22, 2006 – Rebuttal & Cross-rebuttal
- ✓ Feb 28 – Mar 3, 2006 – Evidentiary Hearing
- ✓ Initial Briefs – 20 days after receipt of transcripts
- ✓ Reply Briefs – 10 days after initial briefs
- ✓ June 23, 2006 – Statutory deadline for an order

Regulatory Activity Underway

Kentucky Base Rate Case

Filed Sept 26, 2005 – Seeking recovery of increasing costs associated with providing safe and reliable electric service

- ✓ Seek increase of $64.8 Million over existing rates
- ✓ Procedural schedule (subject to change)
  - ✓ Nov 29, 2005 through January 27, 2006 – Data Requests and Responses
  - ✓ Jan 9, 2006 – Intervenor Testimony
  - ✓ Feb 2, 2006 – KPC Rebuttal Testimony
  - ✓ To be Scheduled – Public Hearing and Briefs

SWEPCo Fuel Factor/Surcharge Filing

Filed Nov 7, 2005

- ✓ Annual revenue increase of $48.6 million per year to go into effect the first billing cycle in January, subject to future reconciliation
- ✓ Plus $46.4 million surcharge for a twelve-month period of Feb 2006 through Jan 2007, subject to future reconciliation

IGCC Recovery Application Filed with PUCO

AEP®

Cost Recovery

Phase 1

- ✓ Effective during 2006
- ✓ Seeks recovery of initial costs, including those already incurred, such as site engineering and various other engineering services
- ✓ Approximately $23.7 Million

Phase 2

- ✓ Effective 2007 - mid 2010 (Construction Phase)
- ✓ Seeks recovery of carrying costs associated with plant construction

Phase 3

- ✓ Effective mid 2010 (Commercial Operation begins)
- ✓ Seeks recovery of projected $1.174 Billion cost of plant over its operating life.

Next Steps

2005:

- ✓ Secure cost recovery plan
  - ➢ Final PUCO Order expected by end of 2005 for Ohio IGCC filing
- ✓ Finalize site selection
- ✓ Negotiate with suppliers

2005—2007:

- ✓ Obtain permits and finalize engineering and procurement

2007—2010:

- ✓ Construct and start-up plant

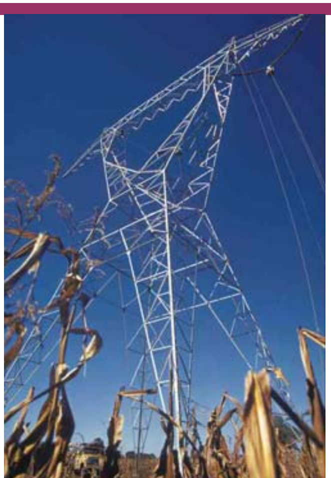
AEP AMERICAN® ELECTRIC POWER



"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension and other post retirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

AEP®

2006-2009 Projected Annual Rate Increase Of 3.8%

Strategic Direction

- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Achieve adequate returns on all assets

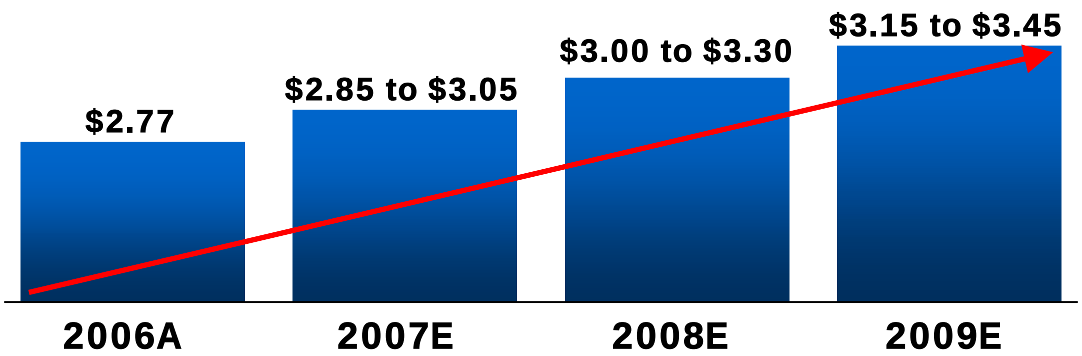
Deliver value to investors and cost effective service to our customers

Continued Commitment To Our Core Utility Mission: Bring Reasonably Priced Electric Service To Our Customers, Thereby Strengthening Our Communities And Rewarding Our Investors

AEP®

Framework For Long-Range Performance

- 2007, 2008 & 2009 Earnings Guidance Ranges:



- EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in existing utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
  - Investment in new transmission opportunities
  - Seek rate recovery for new investments
  - Control costs & achieve timely rate relief
- Maintain credit ratings
  - BBB/Baa2/BBB

Our Strategy Remains Focused On Regulated Operations

Utility Investment Drives Growth

Note: Excludes AFUDC

*Includes Lawrenceburg purchase $325MM in 2007

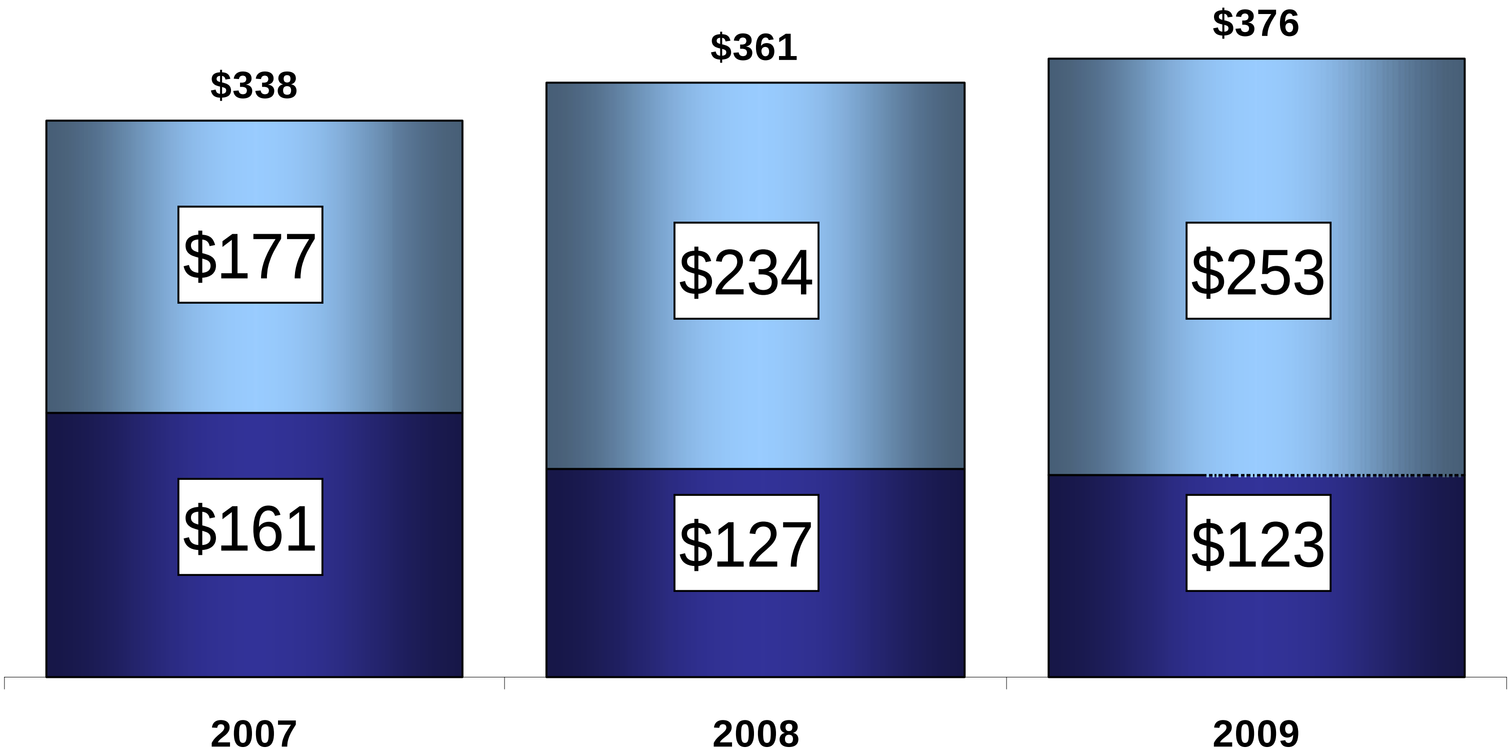
Growth Investment To Be Funded By Cash
From Operations via Rate Relief and Debt Issuances

Incremental Rate Relief Composition

$ Millions

Secured
- OH RSP
- 2006 WV Base Case
- 2006 Kentucky Rate Settlement
- FERC & OH OATT

Pending/Future
- 2006 VA rate proceeding
- PSO Rate Proposal
- TX wires rate cases
- Cases yet to be filed

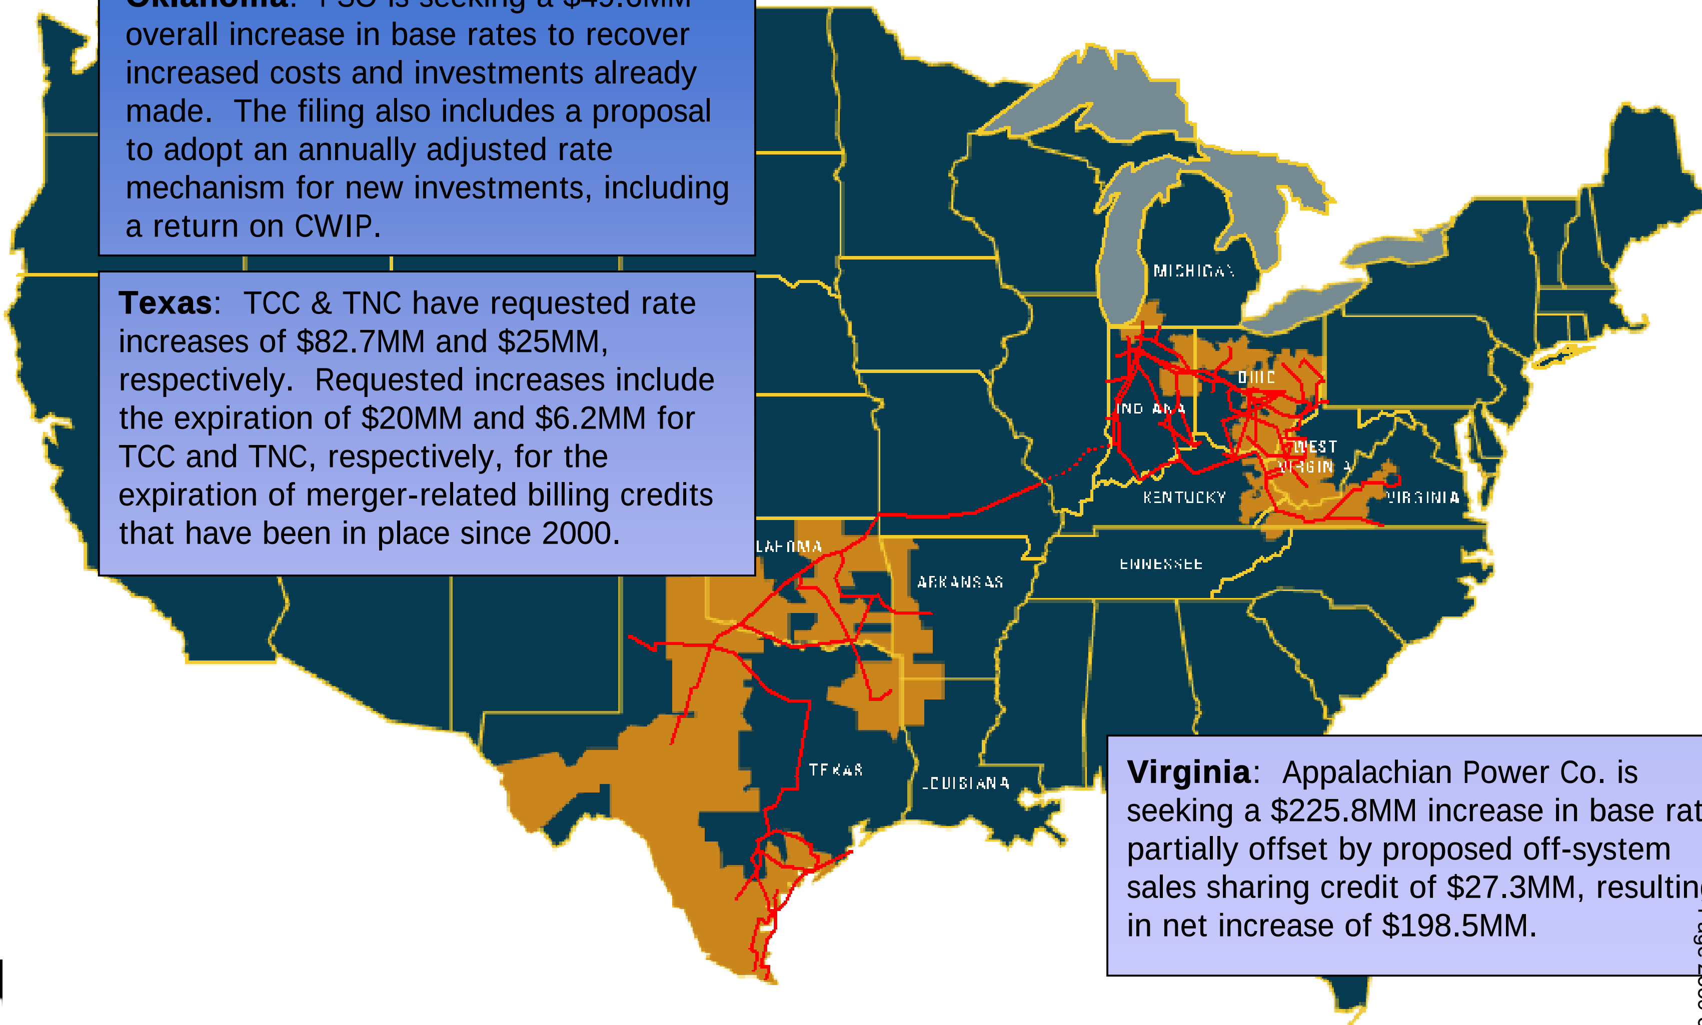


Note: A portion of the pending/future rate recovery related to Virginia E&R costs will now be considered secured, based on the Virginia SCC's Nov. 20, 2006 order in our E&R case. Further analysis is required to quantify these amounts.

AEP®

Rate Relief Is A Critical Element To AEP's Financial Success

Base Case Regulatory Summary



Oklahoma: PSO is seeking a $49.6MM overall increase in base rates to recover increased costs and investments already made. The filing also includes a proposal to adopt an annually adjusted rate mechanism for new investments, including a return on CWIP.

Texas: TCC & TNC have requested rate increases of $82.7MM and $25MM, respectively. Requested increases include the expiration of $20MM and $6.2MM for TCC and TNC, respectively, for the expiration of merger-related billing credits that have been in place since 2000.

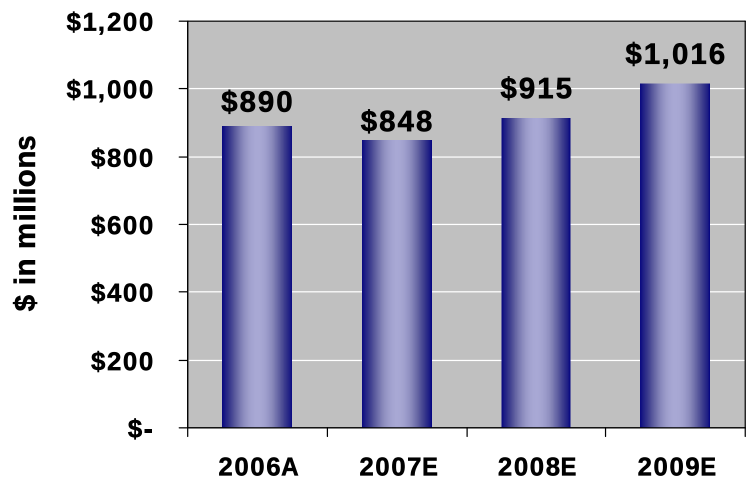
Virginia: Appalachian Power Co. is seeking a $225.8MM increase in base rates, partially offset by proposed off-system sales sharing credit of $27.3MM, resulting in net increase of $198.5MM.

Rate Relief & Enhanced Distribution Investment

- AEP Ohio Reliability Plan (Filed Oct. 6, 2006)
  - Plan will enhance distribution system reliability
  - Proposing an annual average investment of $130MM over 5-year period
- Virginia E&R Mechanism
  - Allows APCo-VA to recover incremental environmental & reliability costs
  - Last filing - order issued Nov. 20, 2006 granting $21.4MM of recovery
- Public Service of Oklahoma Rate Rider
  - $24MM annual vegetation management rider approved in Nov. 2005
- Texas Wires Rate Cases (Filed Nov. 9, 2006)
  - TCC & TNC seeking to increase rates for distribution & transmission services
  - Requested increases total $61.7MM and $16MM for TCC & TNC distribution revenues, respectively.

	2005	2006
Line Miles	201,666	207,632
Net PP&E-Distribution	$7,617MM	$8,241MM

Total Projected Distribution Investment



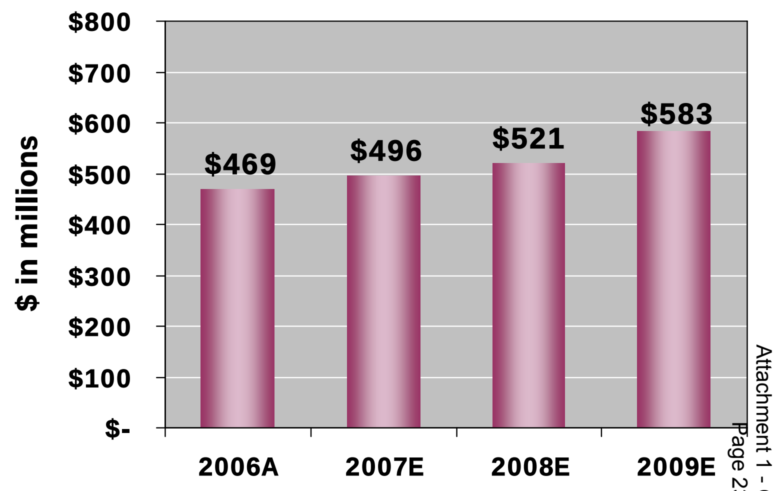
Rate Relief For Distribution Enhancement Will Be Sought Through Innovative Recovery Methods, Such As Rate Riders

Transmission Investment Forecast

- FERC PJM Regional Transmission Rate Design
  - FERC ALJ recommended adoption of "postage stamp" rate
  - Final order expected in early to mid-2007
- Ohio Annual Transmission Rate Filing
  - Ohio companies transmission rates annually adjusted for FERC-approved open access rates, net congestion & ancillary services
- PUCT & FERC Filings to establish Electric Transmission Texas LLC (ETT)
  - Certificate of Convenience & Necessity Filed Jan. 22, 2007 to establish ETT as a regulated utility company
  - FERC Filing to transfer transmission assets to ETT submitted Jan. 22, 2007
  - Approvals and asset transfer expected mid-2007

	2005	2006
Circuit Miles	38,879	39,158
Net PP&E-Transmission	$4,153MM	$4,686MM

Total Projected Transmission Investment



The AEP Advantage: 100 Years Of Transmission Leadership Experience In The United States

Transcription ~ $9 Billion Opportunity*

Creating a business model to manage capital requirements for enhanced returns with partners

- ~ $1 billion in ERCOT via Electric Transmission Texas, LLC (ETT)
- ~ $2 billion 765-kV study with ITC in Michigan
- ~ $3 billion I-765 Project in PJM
- ~ $3 billion project filed with SPP

Assumptions	
Estimated Investment Opportunity	$9 Billion
Ownership Structure w/ Partner	50% / 50%
Debt/Equity Ratio	50% debt / 50% equity
Return on Equity	11.00%
Potential EPS Impact (based on 396 MM shares)	+ $0.60**

* ~$9 billion investment opportunity not included in current capital guidance forecasts

** Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion

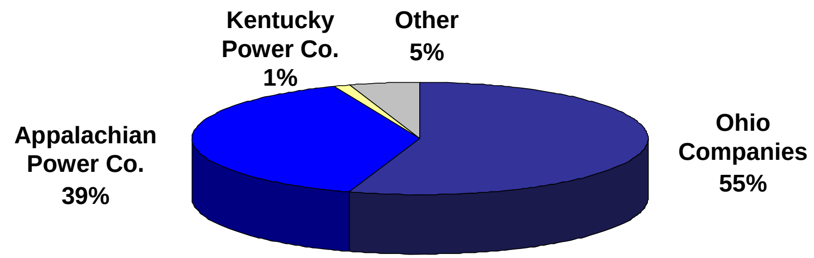
AEP®

Building The Next US Interstate System For Enhanced Reliability And Market Efficiency Could Have Significant EPS Implications

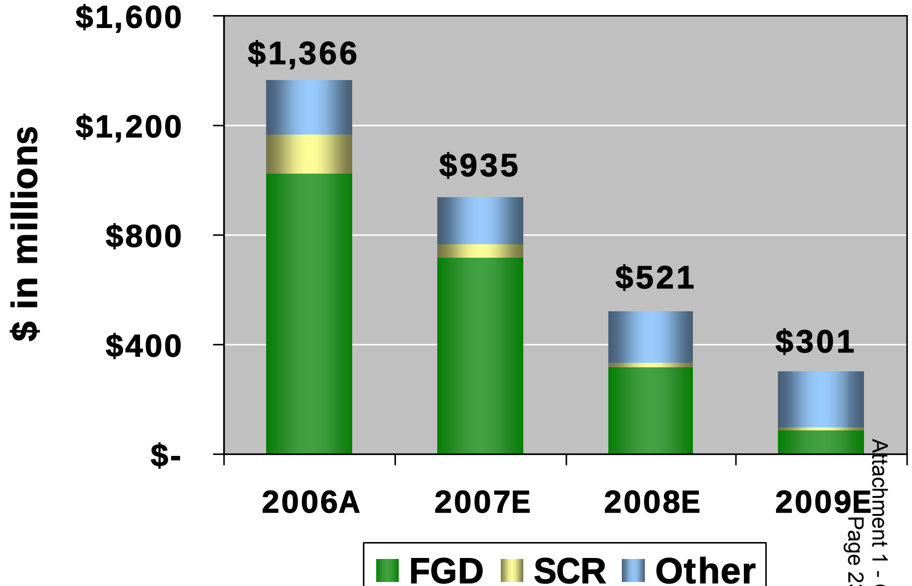
Environmental Investment Forecast

- Ohio Rate Stabilization Plan
  - Annual 3% and 7% generation rate increases at CSP & OP, respectively for 2006-2008
  - Filing made on Jan. 23 for recovery of 2007 costs associated with additional generation-related expenditures – activation of 4% rider
- West Virginia Rate Settlement
  - Mechanism in place to provide for rate increases through 2009 for ongoing environmental investments
- Virginia E&R Mechanism
  - Allows APCo-VA to recover incremental environmental & reliability costs
  - Last filing - order issued Nov. 20, 2006 granting $21.4MM of recovery
- Kentucky Environmental Surcharge
  - Monthly surcharge mechanism allows for recovery of pollution-control projects required by the Federal Clean Air Act

Projected Environmental Investment Allocation (2006A – 2009E)



Total Projected Environmental Investment

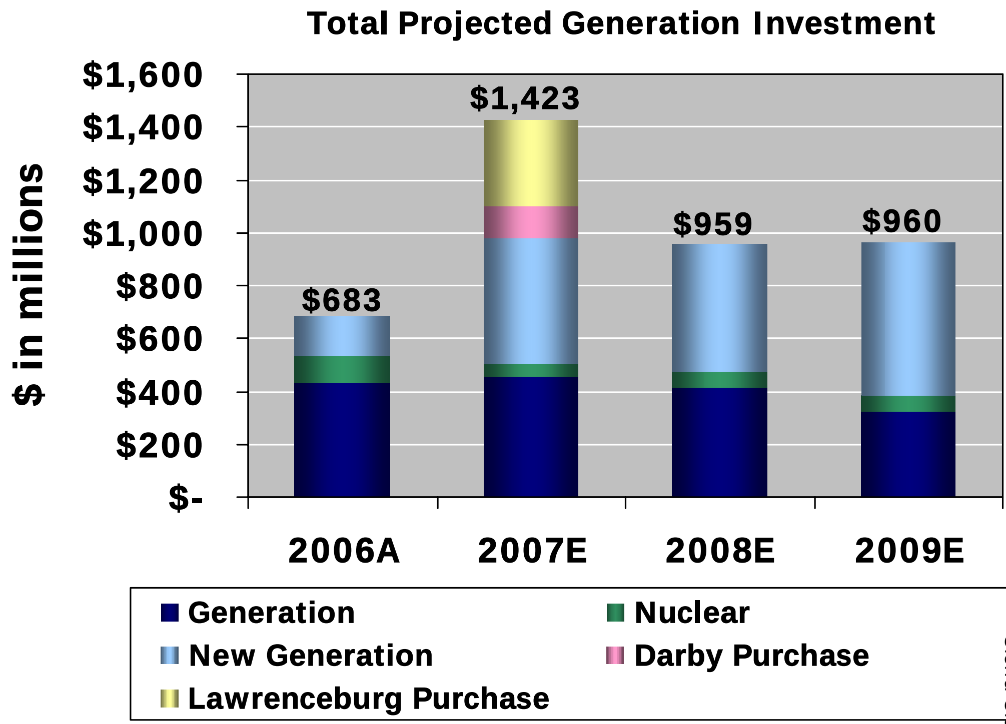


AEP Benefits From First-Mover Advantage Through Lower Contracted Pricing & Reduced Market Escalation Exposure

AEP®

Generation Investment Forecast

- Public Service Oklahoma Rate Proposal
  - Proposal to adopt an annually adjusted rate mechanism for new investments, including a return on CWIP
- Distressed Generation Initiative
  - New generation resources required to meet growing electricity needs of our customers
  - Completed purchase of 1,368 MW of gas-fired generating capacity -- purchase pending for additional 1,620 MW
- Ohio Phase I IGCC Approval
  - PUCO approved tariff to recover Phase 1 pre-construction costs ($24MM) over 12-month period effective July 1, 2006



Investing In Generation To Meet The Growing Electricity Demands Of Our Customers At An Attractive Price

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
CSP	Darby	Ohio	$102 MM	Gas	Simple-cycle	480	1Q07[1]
AEG	Lawrenceburg	Indiana	$325 MM	Gas	Combined-cycle	1140	2Q07[2]
SWEPCo	Tontitown	Arkansas	$130 MM	Gas	Simple-cycle	320	2008
PSO	Southwestern	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
SWEPCo	Arsenal Hill	Louisiana	$300 MM	Gas	Combined-cycle	480	2010
SWEPCo	Hempstead	Arkansas	$1.3 B[3]	Coal	Ultra-supercritical	600[3]	2011
PSO	Red Rock	Oklahoma	$1.8 B[4]	Coal	Ultra-supercritical	950[4]	2011
CSP/OP	Great Bend	Ohio	Under Review[5]	Coal	IGCC	600	TBD
APCo	Mountaineer	West Virginia	Under Review[5]	Coal	IGCC	600	TBD

(1) Sale expected to close 1Q07 - Plant began commercial operation in 2001
(2) Sale expected to close 2Q07 - Plant began commercial operation in 2004
(3) SWEPCo will own approximately 75%, or 450 megawatts, totaling about $975 million in capital investment
(4) PSO will own 50%, or 425 megawatts, totaling approximately $900MM in capital investment
(5) AEP is currently working with GE and Bechtel on a FEED (front-end engineering and design) study. When completed (expected mid-year 2007), a cost estimate will be available.

AEP®

Why Invest in AEP?

- Strength and scale in assets & operations
- Disciplined utility model focus - investing in established utility business to drive 5-7% consistent annual earnings growth
- Annual dividend of $1.56 per share providing an above average dividend yield of 3.6%
- Positive dividend outlook
- Stable credit profile

KPSC Case No. 2011-00401

Appendix

Company Overview

SIGNIFICANT PRESENCE THROUGHOUT THE DOMESTIC VALUE CHAIN

Our US electric assets include:

- Nearly 37,000 megawatts of generating capacity in 3 power pools (one of the largest US generation portfolios with a significant cost advantage in many of our market areas)
- Approximately 39,000 circuit miles of transmission lines, including 2,116 miles of 765kV lines, the backbone of the electric interconnection grid in the Eastern U.S.
- Nearly 208,000 miles of overhead and underground distribution lines

With our coal and transportation assets we:

- control over 8,000 railcars
- own and/or operate over 2,600 hopper barges and 51 towboats
- operate one active coal-handling terminal with 20 million tons of capacity

We consume approximately 76 million tons of coal annually.

AEP®

Summary of 5-7% Long-Range Growth Components

- Energy sales growth of 1.5%
- Rate base investment
  - Generation plant purchases & build
  - Transmission – interstate & intrastate
  - Distribution
  - Reliability
- Transmission company
- Commercial operations
- Regulatory strategy
  - Achieve timely returns
  - Seek cash returns on investment during construction
  - Create & secure innovative rate plans
    - Pursue post-2008 solution in Ohio
    - Expand use of trackers
    - Formula rates

AEP®

Rate Base Investment Coupled With Innovative Regulatory Plans Will Reduce Lag And Drive Earnings Growth

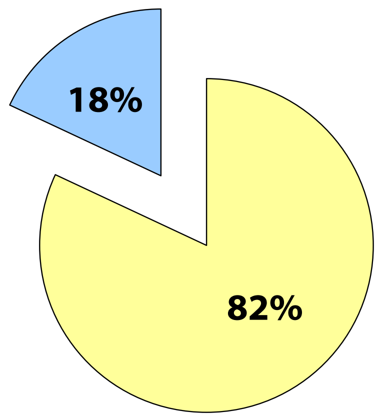
* Oklaunion's MW capacity represents combination of PSO, TCC & TNC ownership. TCC's 54 MW ownership of Oklaunion is currently under negotiation for sale.

Installation Of SCR And FGD Equipment Will Allow Our Coal Fleet To Remain Extremely Cost Competitive

Materials and Vendors – AEP's Advantage

Environmental Program Costs:
Active/Firm Costs to Remaining Estimated Costs



Actuals To Date & Firm Costs
Remaining Estimated Costs*

* Primarily labor and activated carbon injection systems

SCR Technology

- Removes 90 – 93% of NOx emissions
- Requires ~ 1% use of auxiliary power
- **AEP Capital Cost ~ $121/kw avg.**

Combination of SCR & FGD technology results in co-benefit of Hg removal ~80% removal efficiency

FGD Technology

- Removes 95 – 98% of SO_2 emissions
- Requires ~1.5% to 3.0% use of auxiliary power
- **AEP Capital Cost ~ $250/kw avg.**

Regulatory Activity

Ohio Distribution Reliability Filing

Filed Oct. 6, 2006 – AEP Ohio proposes an additional annual average investment of approximately $130MM over the next 5 years on vegetation management, equipment replacement, infrastructure upgrades & improved use of technology, to help reduce outages and improve service reliability.

- We are requesting implementation of a Reliability Cost Recovery Rider for recovery of the incremental O&M expenses and a return on and of the capital investments made under the plan. The requested ROE is 10.5%.
  - If approved, the rider would be implemented July 1, 2007 through December 31, 2008 and would be effective until new distribution rates are placed in effect. We anticipate that new base distribution rates would be effective after the expiration of the RSP on Dec. 31, 2008.
- Requested recovery amounts total $20MM in 2007 and $51MM in 2008.
- Staff testimony due Feb. 14, 2007; Evidentiary hearing to commence Feb. 27, 2007.

AEP Ohio Application For 4% Provision On Generation Rate

- On Jan. 23, 2007, CSP and OP filed an application at the PUCO to recover 2007 costs associated with additional generation-related expenditures the companies are encountering related to environmental, security and other new generation-related costs pursuant to the RSP.
- CSP and OP are requesting to implement the allowed 4% provision to recover $24.5MM and $8.2MM, respectively, from May 2007 through December 2007.

Regulatory Activity

Electric Transmission Texas (ETT) Rate Filing

- Jan. 22, 2007 – ETT filed with the PUCT for approval 1) to operate as an electric transmission utility in Texas; 2) to contribute transmission assets currently under construction by AEP subsidiary TCC to the joint venture company; and 3) establish initial rates for ETT.
  - Requested capital structure of 60% debt / 40% equity; requested ROE of 11.25%
  - An order is expected in Fall 2007 and operations are expected to commence in the 2nd half of 2007. Upon receipt of approvals, AEP and MidAmerican will each acquire a 50% interest in the joint venture

Seams Elimination Cost Adjustment Revenues

- August 2006 – ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
  - Up to $111MM of SECA revenues could be disallowed, net of unused provisions
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both.
- Exceptions to initial decision filed Sept. 11, 2006; Replies to exceptions filed Oct. 11, 2006; Order expected by the Commission in early to mid-2007

Regulatory Activity

FERC Regional Rate Design

- At our urging, the FERC instituted an investigation of PJM's zonal rate regime
  - Present regime may need to be replaced
  - Consider establishing regional rates that would compensate AEP, among others, for the regional transmission service provided by high voltage facilities they own that benefit customers throughout PJM
- July 2006 ALJ-rendered initial decision:
  - License plate rates for existing facilities <u>are not</u> just and reasonable, and must be replaced (effective April 1, 2006, when SECA ended)
  - Staff's proposal for a "Postage Stamp" rate phased in so as to limit increases in any one pricing zone to 10% per year is the best choice for replacing current rates
  - Staff's proposed rate design would produce slightly more net revenue for AEP than the original AEP/Allegheny Power proposal, when fully effective
  - Briefs on Exceptions to the initial decision by all parties have been filed; An order is expected by the Commission in early to mid-2007.

2007 Ongoing Guidance: $2.85 to $3.05 Per Share

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to control operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

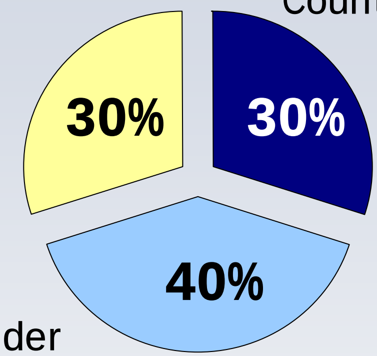
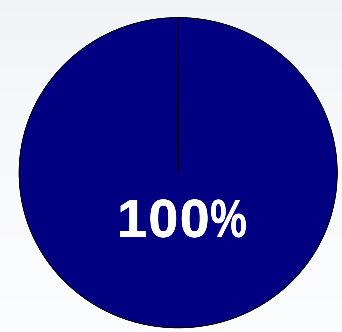
AEP WEST: PSO, SWEPCO

EASTERN SYSTEM

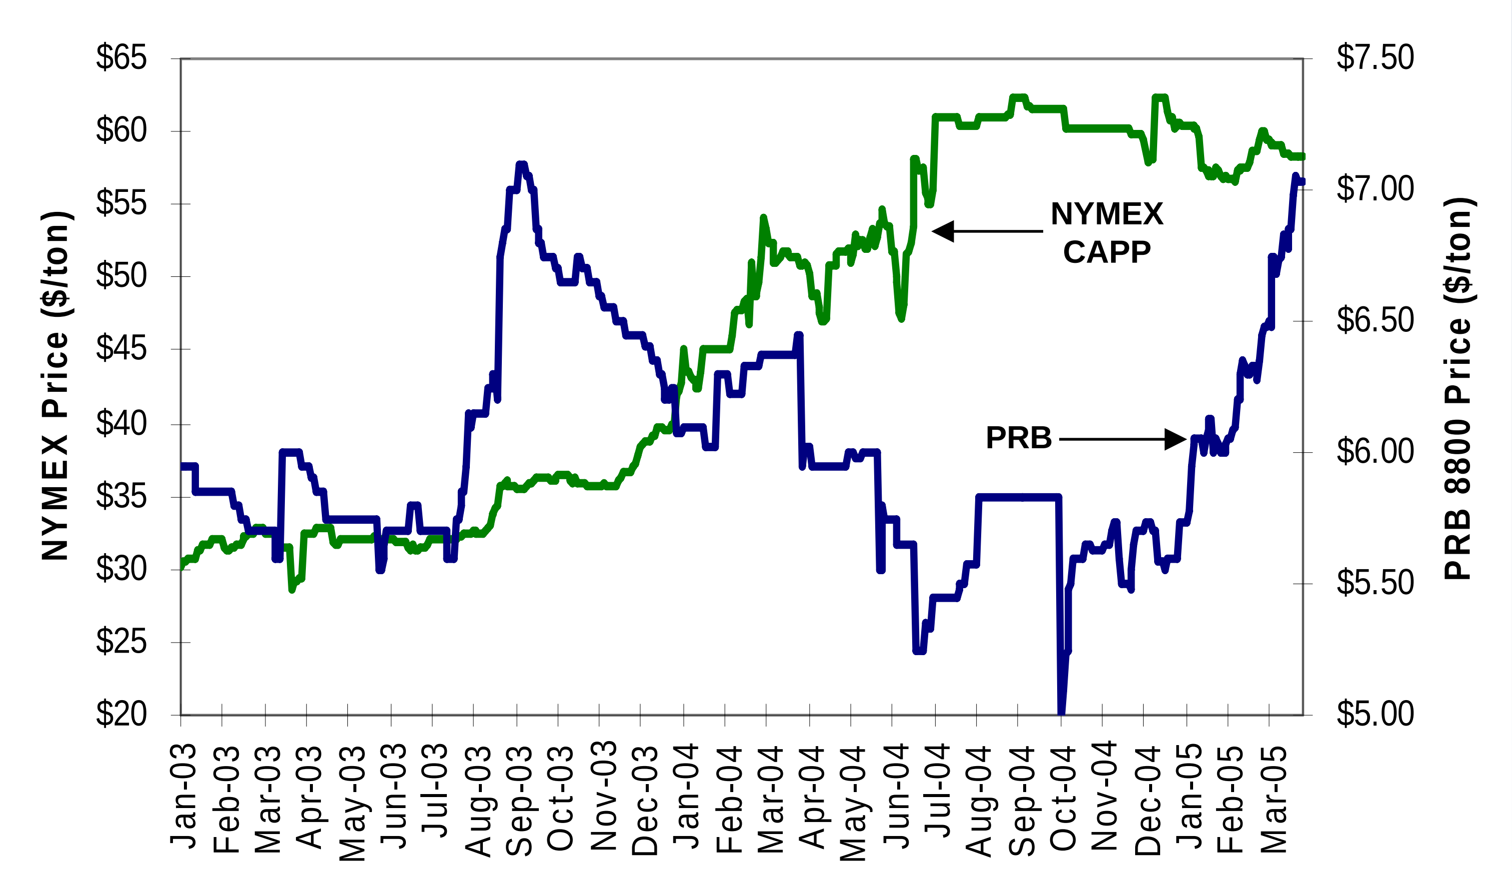


WESTERN SYSTEM



Coal Markets

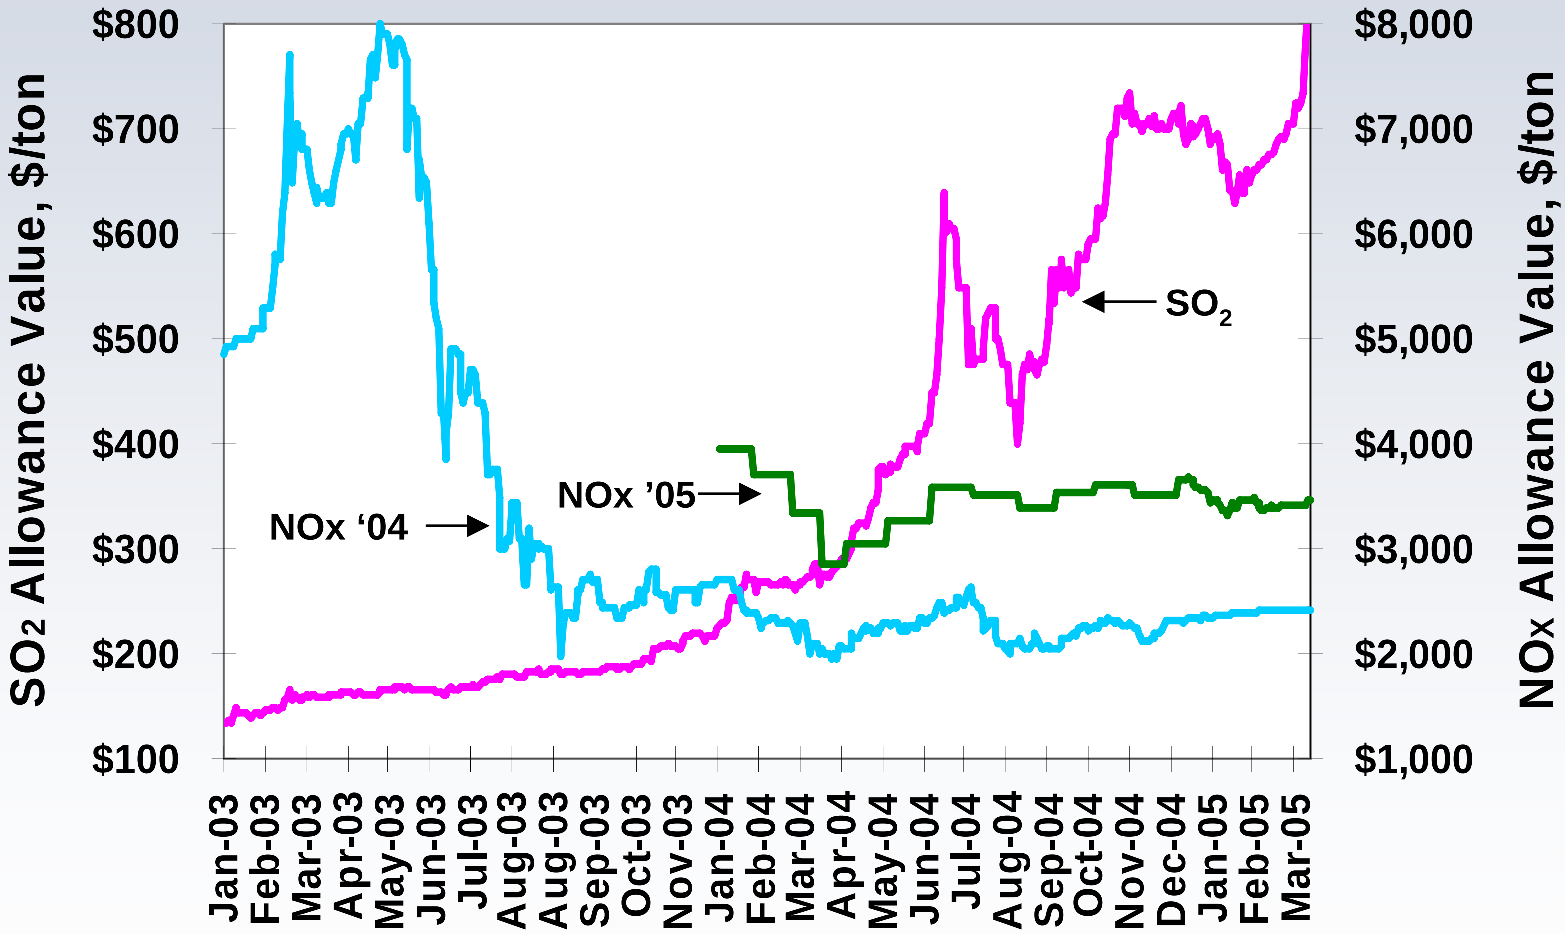
The tale of two markets – one with labor, permitting and capacity constraints (CAPP) and the other with transportation bottlenecks and limited "immediate" substitution capability (PRB) but gaining strength



KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 2392 of 9556

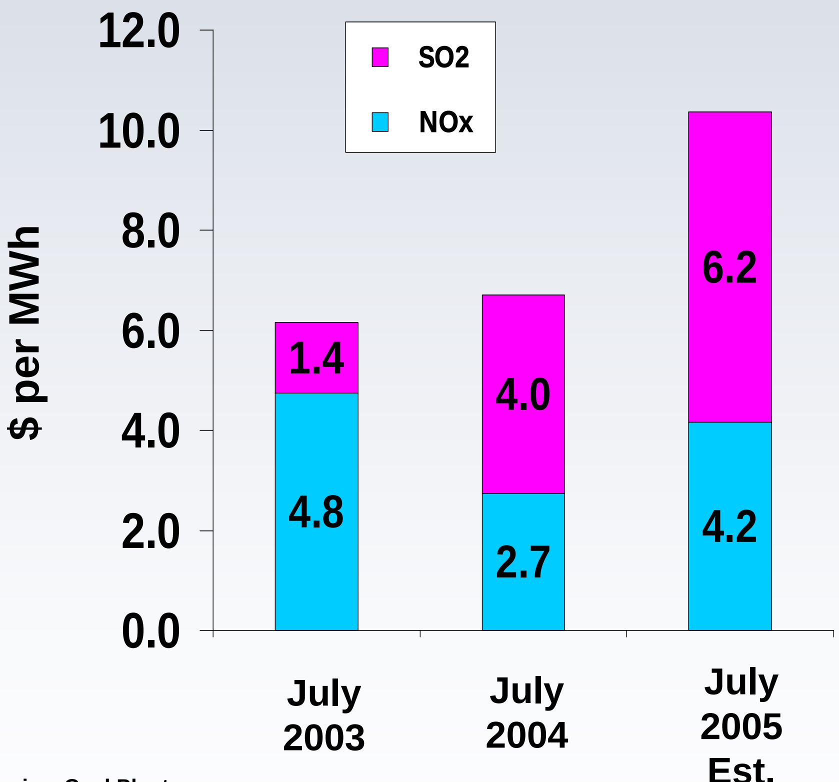
Emission Allowance Prices

Allowance prices for SO_2 and NOx have been extremely volatile since the beginning of 2003



Market Value vs. Inventory Cost

Profile of Uncontrolled Power Plant exposed to Market Value of Emission Credits



Basis – Coal Plant
9.5 MMBtu/MWh Heat Rate
0.25 lbs NOx/mmBtu
1.67 lbs SO_2/mmBtu

AEP has managed its exposure to rising emission allowance costs

- Inventory cost of emission credits is low
- Effective hedging program for SO_2 allowances
- Effective capital implementation in the NOx SIP Call ($1.3 B)
- Exposure in future years reduced by $3.7 B capital program and current inventory of allowances

KPSC Case No. 2011-00401

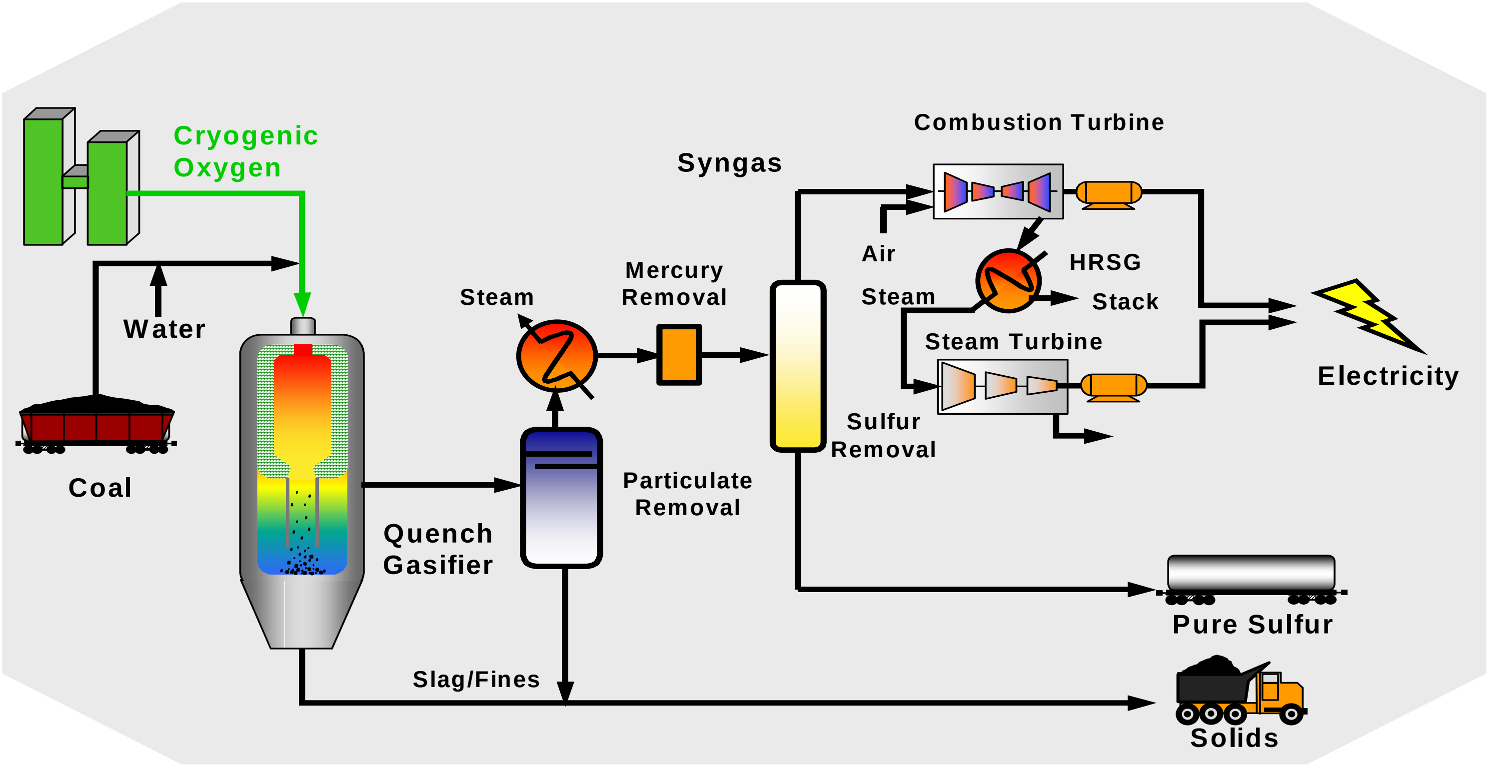
Investing in IGCC

Looking to the Future - IGCC



AEP has announced its intention to construct a commercial-scale Integrated Gasification Combined Cycle (IGCC) Plant by the end of the decade.

Investing in IGCC

	PC	IGCC	NGCC
Nominal Capacity (MW)	600	600	530
Heat Rate (BTU/kWh)	8700	8600	7200
EPC cost* ($/kW)	1290	1350	440
Total Plant cost** ($/kW)	1490	1610	475
Variable Production cost*** ($/MWh)	15	14	38
All-In Cost of Electricity (without CO2 Capture) ($/MWh	47	50	57
Estimated Cost of Electricity (with CO2 Capture) ($/MWh)	76	70	91

Source: Electric Power Research Institute

* EPC includes the cost to engineer, procure and construct plant.

** Total plant cost include land, overheads, AFUDC, etc.

*** Assumes Northern App Coal @ $36/ton, no emission credits and $5.00 gas

Site Selection Considerations

- Brownfield site vs. Greenfield site
- Sufficient Space
  - Flat area with adequate construction access
  - 600 acres
- Fuel delivery options
  - Rail/barge/truck
  - Up to 4 million tons/year of coal
  - Access to water
- Transmission Line Costs
  - Distance from high-voltage lines
  - Costs for grid interconnects and stability impacts

PJM EVALUATION REQUESTED FOR 3 POTENTIAL SITES

IGCC Permitting Issues

- **Air** – to evaluate best available control technology (BACT)
- **Wastewater** – to understand wastewater streams
- **US COE** (Corp of Engineers) – to obtain permits for construction of river facilities
- **NEPA Process** – (National Environmental Policy Act)– Environmental site studies addressing wetlands, endangered species, historical artifacts

PERMIT PROCESS WILL TAKE 1 – 2 YEARS

Next Steps

<u>2005</u>

- ➢ Secure cost recovery plan - June
- ➢ Finalize site selection - August
- ➢ Negotiate with suppliers – Throughout 2005

- ➢ 2005—2007: Obtain permits and finalize engineering and procurement

- ➢ 2008—2009: Construct and start-up plant

AEP WILL PIONEER CONSTRUCTION OF LARGEST IGCC PLANT IN THE WORLD

Environmental

Clean Air Interstate Rule

- Rule Finalized March, 2005.
- CAIR designed to address the contribution of regional emissions to downwind $PM_{2.5}$ & 8-hour Ozone non-attainment.
- CAIR reductions from 2003 emissions: ~73% SO_2; & ~61% NO_x
- Reductions occur in phases: Phase I (2009); Phase II (2015)
- CAIR established three Cap & Trade Programs:

1. Annual SO_2 Trading Program
2. Annual NO_x Trading Program
3. Separate Ozone-Season only NO_x Trading Program

CAIR Applicability to AEP

- AEP-East States & Louisiana subject to <u>all</u> three trading programs
- Arkansas subject <u>only</u> to the Ozone-Season trading program
- Texas subject to <u>only</u> the Annual NO_x & SO_2 trading programs
- CAIR does <u>not</u> apply to Oklahoma

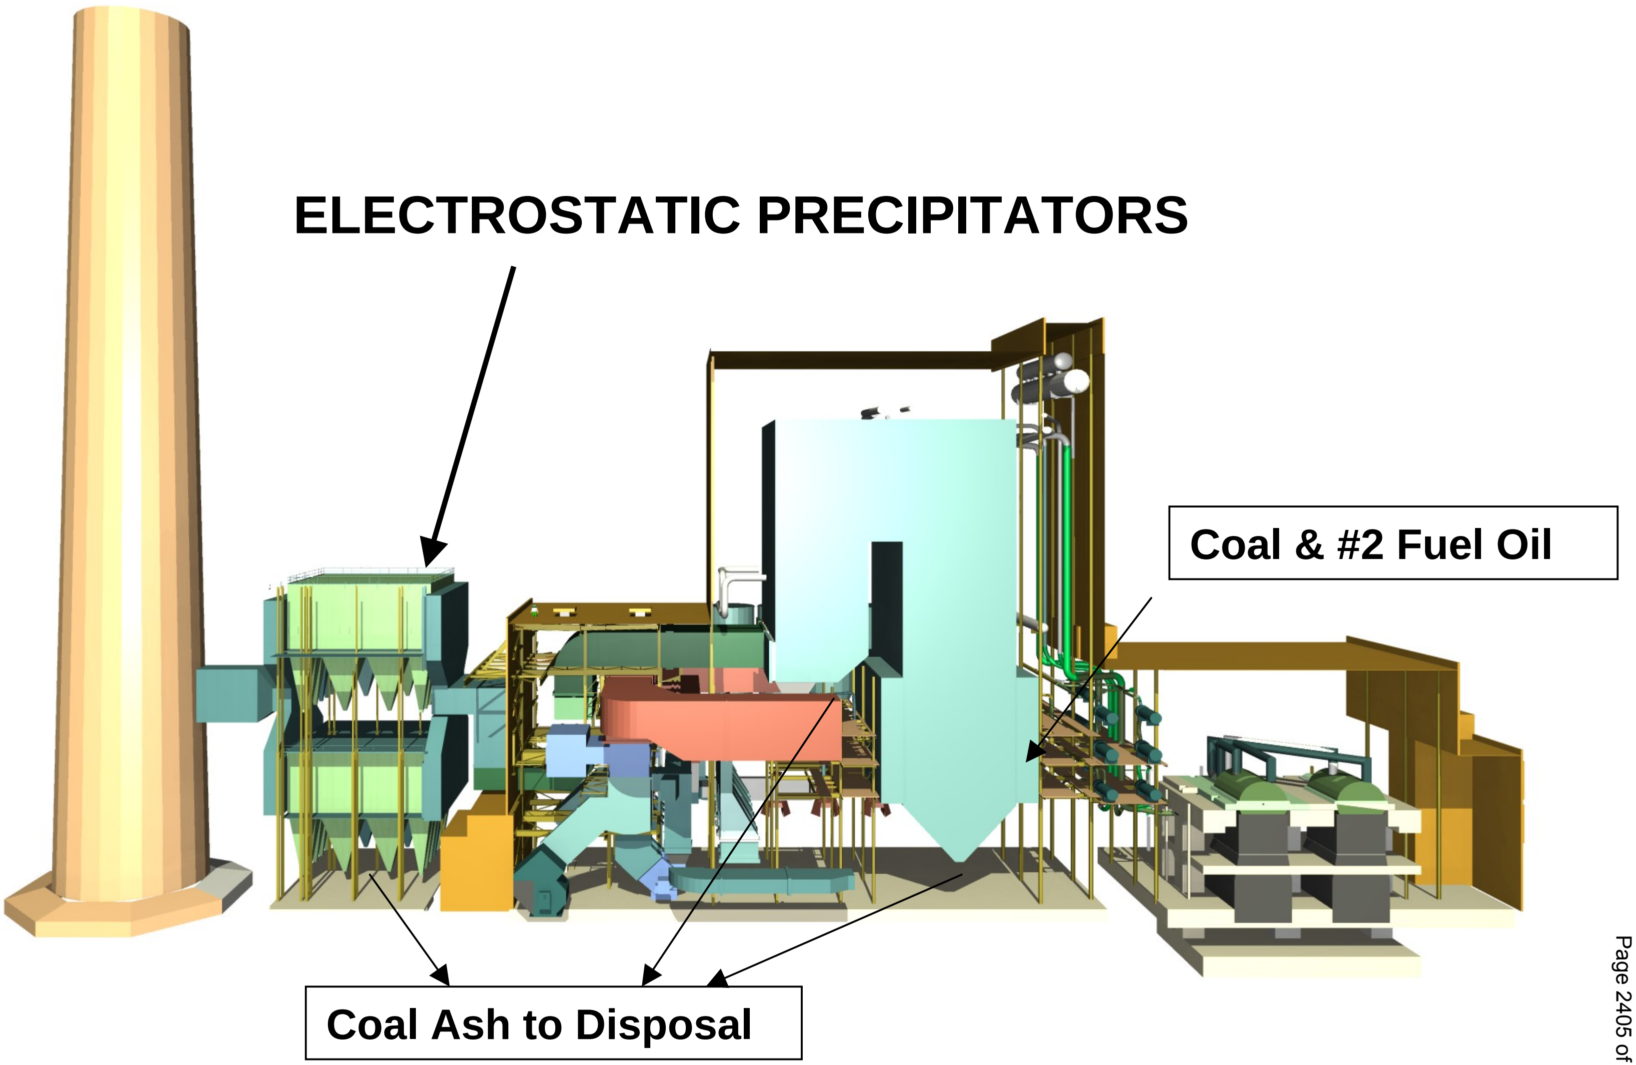
AEP WILL HAVE TO INSTALL ADDITIONAL SCR AND FGD SYSTEMS IN ORDER TO MEET THE EMISSION REDUCTIONS REQUIRED BY CAIR

Mercury Rule

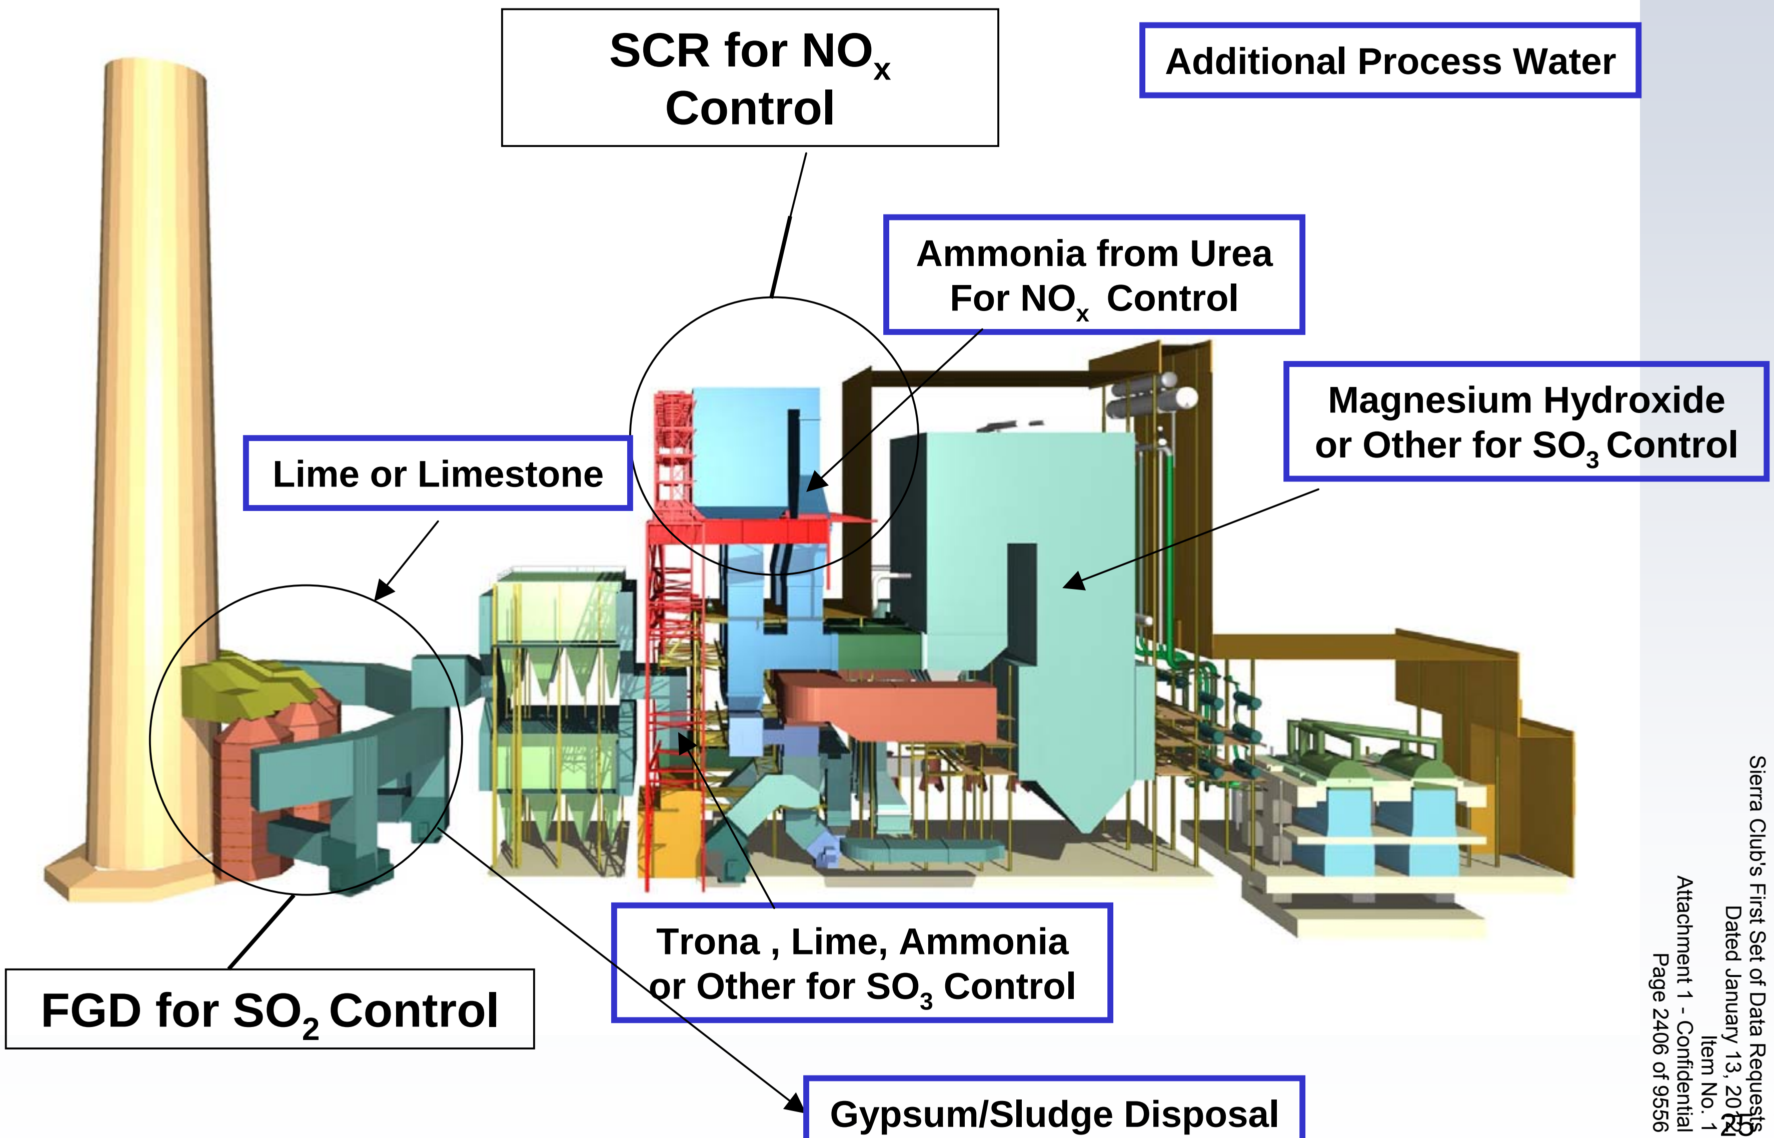
- Rule Finalized March, 2005
- Designed to reduce mercury emissions by ~70% nationwide from electric utilities
- Reductions occur in phases: Phase I (2010); Phase II (2018)
- Establishes a Cap & Trade structure to achieve mercury reductions

AEP WILL ACHIEVE SOME MERCURY REDUCTIONS AS A CO-BENEFIT OF SCR AND FGD SYSTEMS, BUT MERCURY SPECIFIC CONTROL EQUIPMENT WILL BE NEEDED ON SOME UNITS

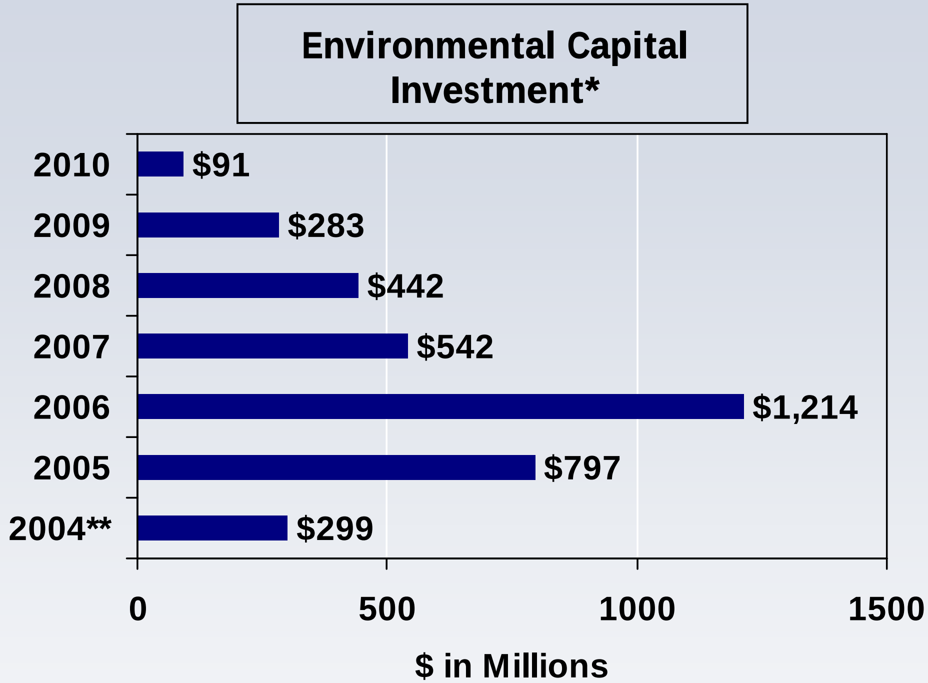
Pulverized Coal Unit As Built in 1970s



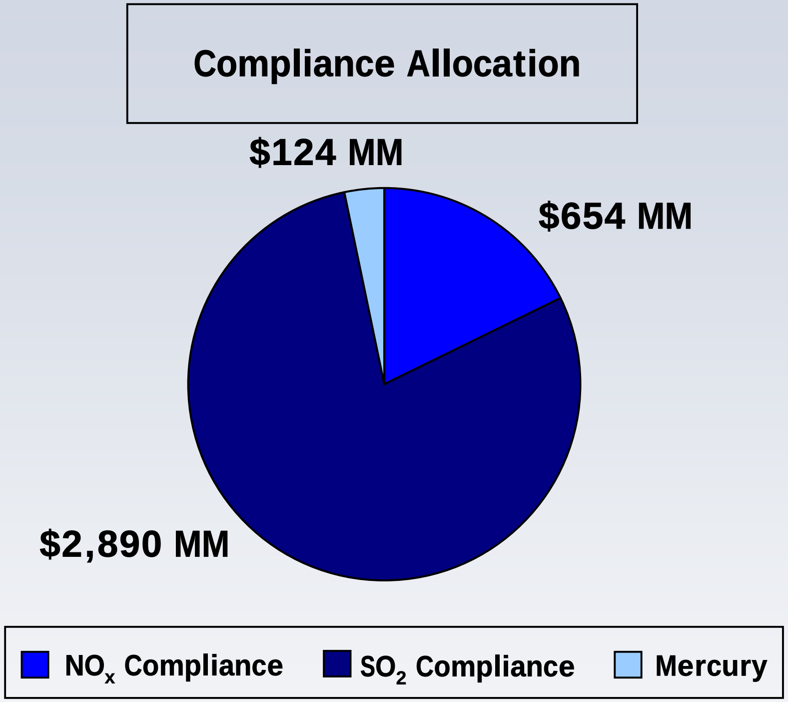
Pulverized Coal Unit Today Showing Retrofits & New Feedstock(s)



Environmental Investment: $3.7 Billion Through 2010



*Environmental investment for NOx, SO_2 , & Hg purposes
** Actual investment level in 2004



Current Programs

$1.9 Billion:

$0.6 billion for NOx

$1.2 billion for SO_2

Future Programs

$1.8 Billion:

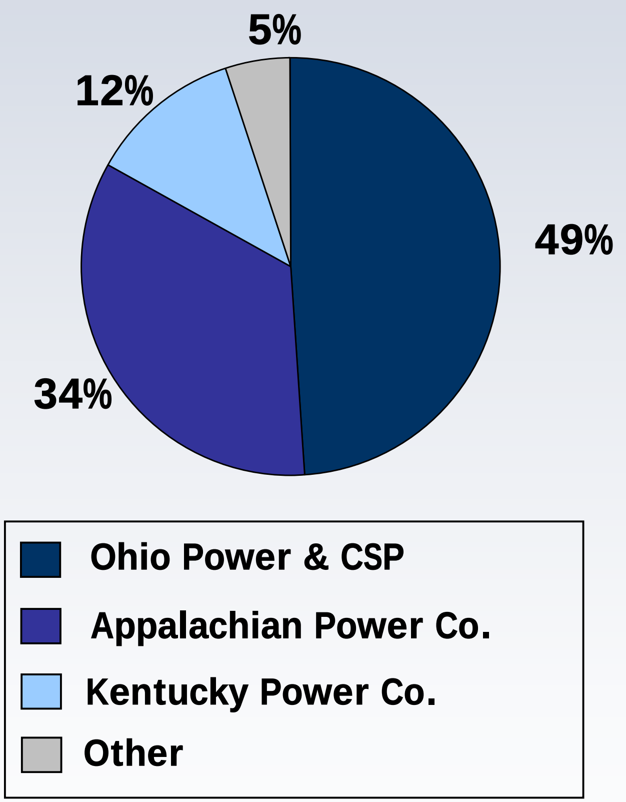
$1.7 billion for SO_2

$0.1 billion for Other

MAJORITY OF 2005 & 2006 DOLLARS WILL BE INVESTED IN OHIO & APCO

Environmental Spending by Company

Projected Environmental Investment Allocation



Funding the Environmental Investments

- **Ohio**: 49% ($1.8 billion)
  - Rate stabilization plan annual increases at CSP – 3% and OP – 7% beginning in 2006 through 2008
- **Virginia/West Virginia**: 34% ($1.2 billion)
  - VA: Environmental cost recovery mechanism/two rate case opportunities through 2010
  - WV: General rate case filing
- **Kentucky**: 12% ($433 million)
  - Surcharge mechanism

Regulatory Overview

Managing the Regulatory Process

- **Current Regulatory Activity**
  - TCC Wires Rate Case
  - TCC Stranded Cost Recovery
  - PSO Rate Case
  - Louisiana Rate Review
  - FERC Transmission Rate Case
- **Planned Regulatory Activity (2005-2007)**
  - General Rate Cases in all AEP East jurisdictions to seek recovery of investment:
    - IN, KY, MI, TN, VA, WV

BRING CASH IN THE DOOR TO COVER CAPITAL EXPENDITURES & GROW EARNINGS THROUGH ADDITIONS TO THE ASSET BASE

Insert Regulatory Matrix

Ohio Rate Stabilization Plan Recap

Summary of Impact (Columbus Southern Power & Ohio Power):

	Revenues				Incremental Cash			
Rate Stabilization Plan	**2005**	**2006**	**2007**	**2008**	**2005**	**2006**	**2007**	**2008**
Escalation of Generation Rate	0	83	173	271	0	83	173	271
POLR Rider/Recovery of RTO Costs**	21	0	0	0	0	7	7	7
POLR Rider/Return on Environmental Additions	44	26	26	26	0	41	41	40
Total RSP Impact	**65**	**109**	**199**	**297**	**0**	**131**	**221**	**318**
Pre-Existing Electric Transition Plan								
Elimination of 5% Residential Generation Credit*	0	25	25	26	0	25	25	26
Recovery of RTO costs**	0	29	29	29	0	29	29	29
Total ETP Impact	**0**	**54**	**54**	**55**	**0**	**54**	**54**	**55**

* Elimination of 5% credit is per Statute, and part of pre-existing ETP, not the RSP

** Recovery of administrative RTO costs, net congestion fees and ancillary services permitted in pre-existing ETP, but the RSP allows for recovery of 2005 costs as well

AEP WILL STILL HAVE AMONG THE LOWEST RETAIL RATES IN OHIO

21	**ON-GOING EARNINGS**	924	2.33	936	2.40

2005 Earnings Drivers

- *Retail sales increase due to return to normal weather and economic growth*
- *Lower Texas Supply due to sale of TCC assets; lower third-party Transmission margin partially offset by higher off-system sales prices*
- *Higher operating expense partially offset by lower interest expense; 2004 and 2005 Other Income and Deductions include return on Texas Stranded Cost of $109MM and $101MM, respectively*
- *Reflects sale of HPL and paydown of debt*
- *Lower interest due to debt retirements and assignment of debt to subsidiaries; 2004 includes unfavorable effect of enforcement provisions*

Covering Capital Expenditures

Year	2005E	2006E	2007E	2008E	2009E	2010E
Environmental Capex	$797MM	$1,214MM	$542MM	$442MM	$283MM	$91MM
Total Capex	$2,690MM	Guidance not yet released				

Typical Investment Capitalization*	Approx. 60% debt / 40% equity
Expected Investment ROE*	11-13%

*Varies by jurisdiction

Sources of Cash

- **Cash Flow from Operations**: Continued earnings growth
- **Rate Relief**: Ohio cash rate relief begins in 2006; Rate proceedings expected in all other jurisdictions by 2007
- **Asset Sales**: HPL, STP, Oklaunion, Pacific Hydro & Bajio
- **Texas Securitization**: $1 billion plus in 2006 (Half goes to TCC debt paydown)
- **Texas Competition Transition Charge**: Approximately $190MM per year before securitization; $45MM per year after securitization
- **Debt Issuances**: Will maintain debt-to-capitalization ratio of approximately 60%

AEP HAS ADEQUATE SOURCES OF CASH FOR CAPEX PROGRAM

Insert debt maturity schedule

Insert credit ratings

Operating In PJM Environment

- **Cost of generation to serve retail customers**
  - Retail customers continue to receive the benefits of AEP's lowest generation on an hourly basis
- **Off-system sales margin**
  - October-December was a learning period; results steadily improved each month
  - 4th quarter off-system sales margin was in line with budget

WE CONTINUE TO APPLY LESSONS LEARNED IN PJM TO MAXIMIZE THE VALUE OF OUR GENERATION FLEET

TCC Stranded Cost Carrying Charge

Carrying Cost Details:

Amount Recorded for 2002 & 2003	**$193 Million**
Amount Recorded for 2004	**$109 Million**
Estimated amount for 2005	**$101 Million**

Simplified Calculation:	
Initial Stranded Cost Base (excludes Carrying Charge)	$1.34 billion
@ debt component of the11.79% pre-tax cost of capital	8.12%
Amount (subject to limitation of actual TCC interest expense)	$109MM

Items included in stranded cost base include: Stranded Plant costs ($900 MM), Regulatory Assets ($249 MM), ECOM ($483 MM), less Over-recovered fuel ($212 MM) and retail clawback ($61 MM) and Unrefunded excess earnings ($10 MM). Carrying costs are also included and compounded monthly. At 12/31/04 total carrying costs were $302 MM, for a Net True-up Regulatory Asset value of $1.648 Billion.

A Century of Firsts

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

A Century of Firsts

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

INSTALLATION OF SCR AND FGD WILL ALLOW OUR COAL FLEET TO REMAIN EXTREMELY COST COMPETITIVE

Low Cost Production Supports Investment & Investment Sustains Low Cost Production

A Century of Firsts

- Lowers exposure to high cost emission allowances
- Creates opportunity to burn wider variety of lower cost fuels
- Improves baseload operation (higher capacity factor, higher margin)
- All-in cost of electricity, including FGD/SCR investment, remains low

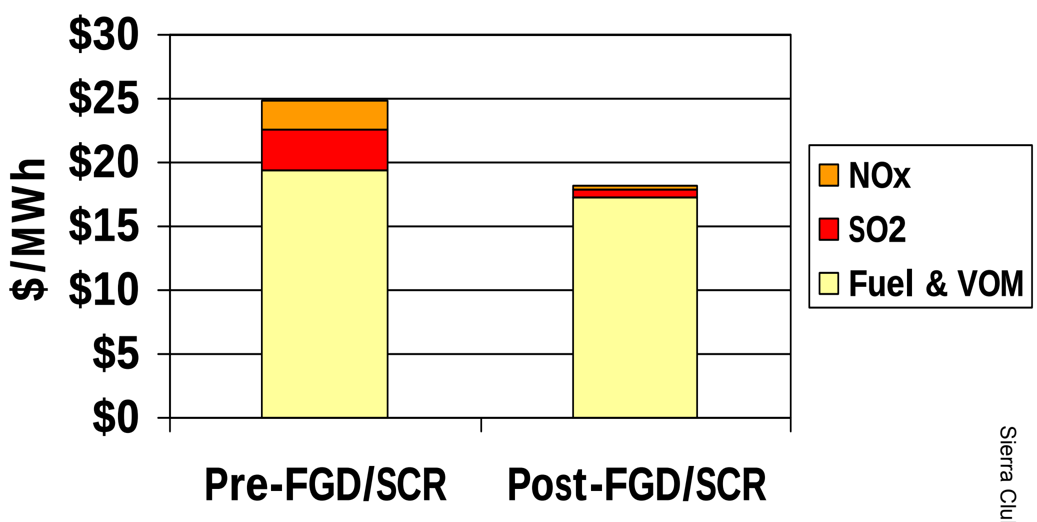
Comparison of Variable Production Cost
Pre- and Post- FGD/SCR (future view)*



* Assumes annual NOx program

AEP WILL REMAIN THE LOW COST PRODUCER FOLLOWING COMPLETION OF ENVIRONMENTAL RETROFIT PROJECTS

Investing in IGCC

Integrated Gasification Combined Cycle

A Century of Firsts

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called "syngas" – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2 , mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP's eastern service territory.

AEP is currently working with a technology provider to develop a firm price for an IGCC facility to be built in our eastern service region. This price will be available in 2006. AEP intends to seek regulatory recovery approvals in advance of building the plant.

Looking To The Future - IGCC

A Century of Firsts

A Century of Firsts

Generation Technology Comparative Statistics

	PC	IGCC	NGCC
Nominal Capacity (MW)	600	600	600
Heat Rate (Btu/kWh)	8700	8600	7200
Total Plant Cost (EPC) ($/kW)	1700	1900	480
Production Cost ($/MWh)	17	16	57
Cost of Electricity, without CO2 Capture ($/MWh)	58	63	90
Estimated Cost of Electricity, with CO2 Capture ($/MWh)	94	87	137

- Source: Results of AEP analysis based on EPRI studies.
- Total Plant Cost (2005$'s) includes the cost to **E**ngineer, **P**rocure and **C**onstruct plant and owner's direct costs; does not include interconnections, transmission lines, transmission upgrades, contingency or AFUDC.
- Assumes Northern Appalachian Coal price of $1.60 /mmBtu for PC and IGCC, and natural gas price of $7.00/mmBtu for NGCC.
- Assumes 85% capacity factor for PC and IGCC, 25% for NGCC.
- Production Cost includes Fuel Cost and Variable Operations & Maintenance (VOM) cost.
- Cost of Electricity based on EPC cost, does not include the cost of Emission Credits.
- Cost of Electricity with CO2 capture does not include sequestration cost.

IGCC TECHNOLOGY IS STRATEGIC TO KEEPING COAL IN THE MONEY

Regulatory Overview

Regulatory Activity Underway

A Century of Firsts

- ✓ TCC Stranded Cost Recovery True-up Filing - Final Order Issued
- ✓ Ohio Companies filing for pass through of FERC OATT changes
- ✓ Indiana Depreciation Petition
- ✓ APCo General Rate Case Filing in Virginia
- ✓ APCo Filing for Recovery of E&R Costs in Virginia
- ✓ APCo & WPCo Base Rate & Expanded Net Energy Cost (ENEC) Filing in West Virginia - Settlement Pending
- ✓ IGCC - Received Rate Authorization of Pre - Construction Costs

YTD SECURED $350MM OF THE $500MM RATE RECOVERY ASSUMED IN 2006 EARNINGS GUIDANCE RANGE

Texas Regulatory Activity

A Century of Firsts

TCC Stranded Cost Recovery Case

February 16, 2006 – PUCT final order provides for net true-up of $1.475 billion

- March 3, 2006 – Requested approval of financing order to issue $1.8 billion in low-cost securitization bonds
  - Final order expected in June or July 2006
  - September 2006 - Issuance of securitization bonds if no appeal

Procedural Schedule for TCC Securitization

- ✓ April 17, 2006 – Intervenors Testimony
- ✓ April 24, 2006 – Staff Testimony
- ✓ April 27, 2006 – TCC Rebuttal Testimony
- ✓ May 25-26, 2006 – Hearing On Merits

- May / June 2006 – Request approval for CTC to address other true-up items
  - Expected $475 million credit to customers
  - Sept 2006 – CTC to be implemented

Regulatory Activity Underway

A Century of Firsts

Ohio Companies Pass through of FERC OATT Changes

Filed Feb 3, 2006 - Seeking authority to pass through to customers the changes in the FERC OATT related to the elimination of the SECA revenues and the costs associated with the Wyoming-Jacksons Ferry transmission line

Indiana Depreciation Filing

December 1, 2005 – I&M filed petition with the IURC for accounting authorization to revise the depreciation rates applicable to its electric utility plant in service

- ✓ Based on a 2004 depreciation study, I&M recommends a decrease in annual depreciation expense of approximately $45 Million on an after-tax Indiana jurisdictional basis.
- ✓ Procedural schedule has been set with final order expected in third quarter 2006

Appalachian Power – Virginia

Virginia E & R Cost Recovery Factor - Filed July 1, 2005 - Seeking recovery of $62.1 million in new Environmental & Reliability costs

- ✓ Oct 14, 2005 – SCC ruled VA law does not allow recovery of prospective costs - $48.6 Million
- ✓ Nov 14, 2005 - APCo filed supplemental direct testimony which included updated actual E&R costs incurred through Sept. 30, 2005 of $21.1 million

Virginia General Rate Case Filing – Filed May 4, 2006 – Seeking $225.8 million increase in base rates, partially offset by a proposed credit to reflect sharing of $27.3 million in margins from off-system sales (OSS), resulting in a net annual increase of $198.5 million

Regulatory Activity – Settlement Pending

A Century of Firsts

Appalachian Power & Wheeling Power – West Virginia Base Rate Case & ENEC Reactivation

Filed August 26, 2005 – Seeking $183 Million increase in revenues for increasing costs for coal, purchased power and environmental improvement construction projects

- ✓ APCo filed supplemental testimony on January 18, 2006 to reflect Ceredo plant purchase and other miscellaneous items resulting in a revised revenue requirement of $171 Million.
- ✓ APCO was granted the authority to begin deferral accounting for ENEC beginning July 1, 2006.

Filed April 25, 2006 - Joint Settlement Agreement

- ✓ Estimated overall impact of revenue increases to be phased-in through 2009:
  - $129 Million
  - 16% Increase
- ✓ Provides for timely recovery of Wyoming-Jacksons Ferry 765 kV line and Mountaineer & Amos FGDs

Phased-In Settlement Agreement Increases:

- ✓ July 28, 2006 - $61 Million*
- ✓ July 1, 2007 - $36 Million**
- ✓ July 1, 2008 - $14 Million**
- ✓ July 1, 2009 - $18 Million**

* Excludes ENEC over-recovery negative surcharge ($17 million) -- surcharge does not have an earnings impact

** Estimated

Settlement Details

- ✓ Increase effective July 28, 2006:

($18MM)	Base Rates
$56MM	ENEC
$23MM	WJF & FGD investment @ 12/31/05
$61MM	Gross revenue increase
($17MM)	ENEC over-recovery negative surcharge
$44MM	Net increase effective 7/28/06

- ✓ Phased-in revenue increases on July 1 in each year 2007 – 2009 provides for timely recovery of FGD project balances at 12/31 of prior year

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests

Page 2453 of 9556

IGCC Regulatory Activity

A Century of Firsts

Ohio - Cost Recovery Filing

Phase 1 - PUCO AUTHORIZED

- ✓ Effective during 2006
- ✓ Provides recovery of initial costs, including those already incurred, such as site engineering and various other engineering services
- ✓ Approximately $23.7 Million

Phase 2

- ✓ Effective 2007- mid 2010 (Construction Phase)
- ✓ Seeks recovery of carrying costs associated with plant construction

Phase 3

- ✓ Effective mid 2010 (Commercial Operation begins)
- ✓ Seeks recovery of projected $1.174 Billion cost of plant over its operating life.

Ohio Next Steps

2006:

- ✓ **Secure cost recovery plan**
  - **April 10, 2006 - PUCO authorized implementation of Phase 1 Rates**
  - **Phase 2 & 3 ruling - Post October 2006 - after completion of FEED study**
- ✓ **Finalize site selection**
- ✓ **Negotiate with suppliers**

2006—2007:

- ✓ **Obtain permits and finalize engineering and procurement**

2007—2010:

- ✓ **Construct and start-up plant**

West Virginia IGCC Activity

On January 11, 2006, Appalachian Power Co. filed a Certificate of Public Convenience and Necessity seeking authority to construct a 600-MW IGCC facility in West Virginia.

SEEKING AUTHORITY FOR THREE PHASE RECOVERY APPROACH IN OHIO

Regulatory Activity Completed

A Century of Firsts

<u>Ohio - Rate Stabilization Plan (2006 - 2008)</u>

- ✓ Annual 3% and 7% generation rate increases at CSP & OP, respectively
- ✓ POLR rate rider for environmental additions
- ✓ Ability to request additional 4% annual increase in generation rate
- ✓ Elimination of 5% residential generation credit (stipulated in the pre-existing Electric Transition Plan of 2000)

<u>AEP East FERC Transmission Case</u>

December 20, 2005 – FERC approved settlement allowing wholesale transmission rates to increase

- ✓ Results in $22 Million net revenue in 2006 from wholesale transmission

<u>SWEPCo Fuel Factor/Surcharge Filing</u>

January 12, 2006 – Settlement approved by PUCT

- ✓ Fuel factor will increase SWEPCo's annual Texas retail fuel-related revenues by approximately $46 Million.
- ✓ Interim surcharge will collect the under-recovery amount of $44 Million, including interest.

<u>Appalachian Power- Virginia Fuel Factor Increase</u>

- ✓ $57.7 Million increase in fuel factor approved on January 20, 2006

<u>Kentucky Base Rate Case</u>

Final order approved on March 14, 2006

- ✓ $41 million annual increase in base rates
- ✓ Rates implemented March 30, 2006

Summary Rate Case Information

A Century of Firsts

West Virginia Base Case Rate Filing

On August 26, 2005, Appalachian Power Co. and Wheeling Power Co. filed an application with the West Virginia Public Service Commission (WVPSC) to increase electric rates and charges, a request for the reactivation and modification of the expanded net energy cost mechanism (ENEC), a proposal for the disposition of Appalachian Power Company's ENEC over-recovery balance, a request for implementation of a System Reliability Tracker mechanism, and a request for waiver of certain provisions of the Commission's Rules. APCo filed supplemental testimony on January 18, 2006 to reflect Ceredo plant purchase and other miscellaneous items resulting in a revised revenue requirement of $171 Million. (Docket #: 05-1278-E-PC-PW-42T)

Summary Rate Case Information

A Century of Firsts

Virginia E&R Factor Filing

On July 1, 2005, Appalachian Power Co. filed a request with the Virginia SCC to recover incremental actual and projected costs for environmental compliance and T&D System reliability in the amount of $62.1MM. The SCC has ruled that under applicable VA law, it does not have authority to approve the recovery of projected E&R costs before their actual incurrence and adjudication. APCo filed supplemental direct testimony which included actual costs incurred for E&R thru September 30, 2005 of $21.1 million. Docket # PUE-2005-00056

Capital Structure – Company vs. Staff

Capital Structure	**Company Position** (filed 7/1/05)	**Staff Position** (filed 1/11/06)
Long-Term Debt	53.43%	51.50%

Framework For 2006

- 2006 Earnings Guidance Range: $2.50 to $2.70
- Controlled investment in utility operations
  - Reliability
  - Environmental
- Seek rate recovery for new investments
- Control costs

COMPANY'S STRATEGY REMAINS FOCUSED ON UTILITY OPERATIONS

Summary of Major 2006 Earnings Drivers

A Century of Firsts

- ✓ Load growth of 2.5%
- ✓ $500MM rate recovery assured or in progress
- ✓ Rising fuel costs of 11-13%
- ✓ Higher planned outages, increased retail load, & sale of TCC generation to impact off system sales
- ✓ Decline in utility operations O&M
- ✓ Parent Company improvement

TRADITIONAL UTILITY FACTORS WILL DRIVE 2006 EARNINGS

Risks & Uncertainties

2006 EPS Guidance Range is $2.50 to $2.70

2006

- ✓ *Outcome of pending regulatory proceedings*
  - ✓ *Texas, Ohio, Virginia, West Virginia, Indiana*
- ✓ *Wholesale market volatility*
- ✓ *Plant availability*
- ✓ *Rising fuel costs*
- ✓ *Weather*

GUIDANCE RANGE DESIGNED TO WITHSTAND A REASONABLE RANGE OF RISKS AND UNCERTAINTIES

What AEP Offers

- Strength and scale in assets & operations
- Focused utility model
- Earnings growth driven by native load & capital investment
- Attractive dividend yield in excess of 4%
- Stable credit profile

International EEI Conference

February 20-21, 2006

London, United Kingdom
London Hilton on Park Lane

A Century of Firsts

American Electric Power

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

A Century of Firsts

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

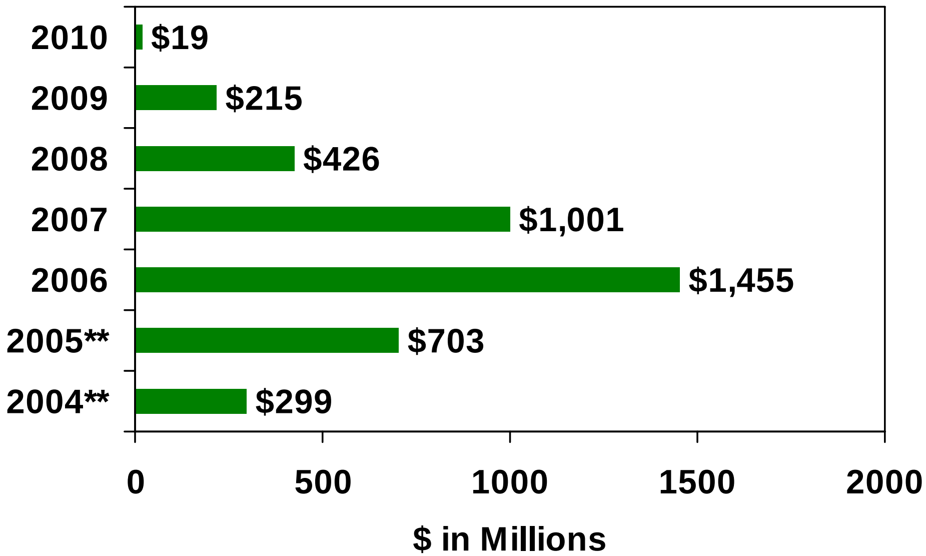
REGULATORY RECOVERY WILL DRIVE CAPITAL INVESTMENT THROTTLE

$4.1 Billion Environmental Investment

A Century of Firsts

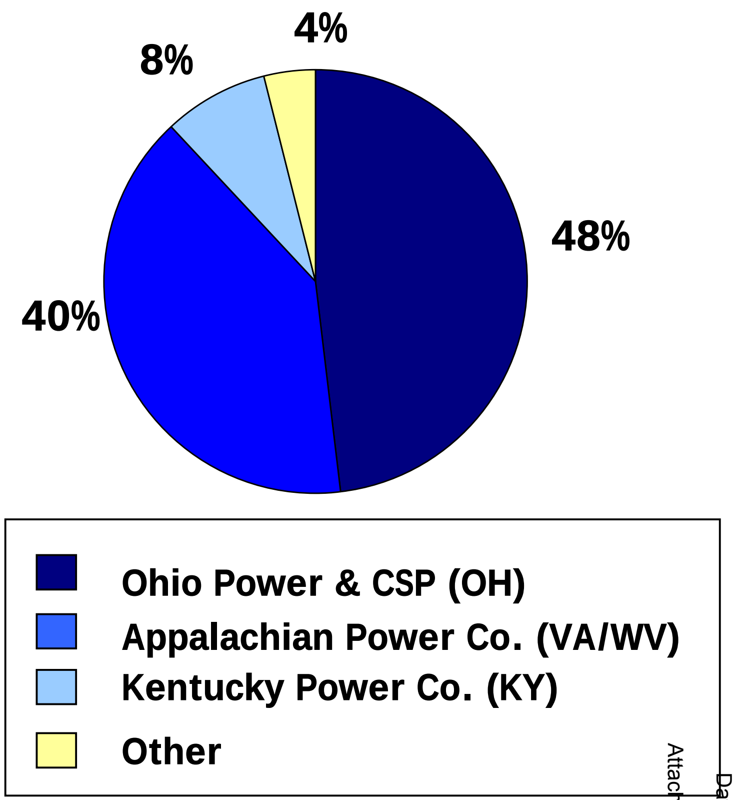
Environmental Capital Investment*



*Environmental investment for NOx, SO_2, & Hg purposes including AFUDC

** Actual investment level in 2004 and 2005

Projected Environmental Investment Allocation

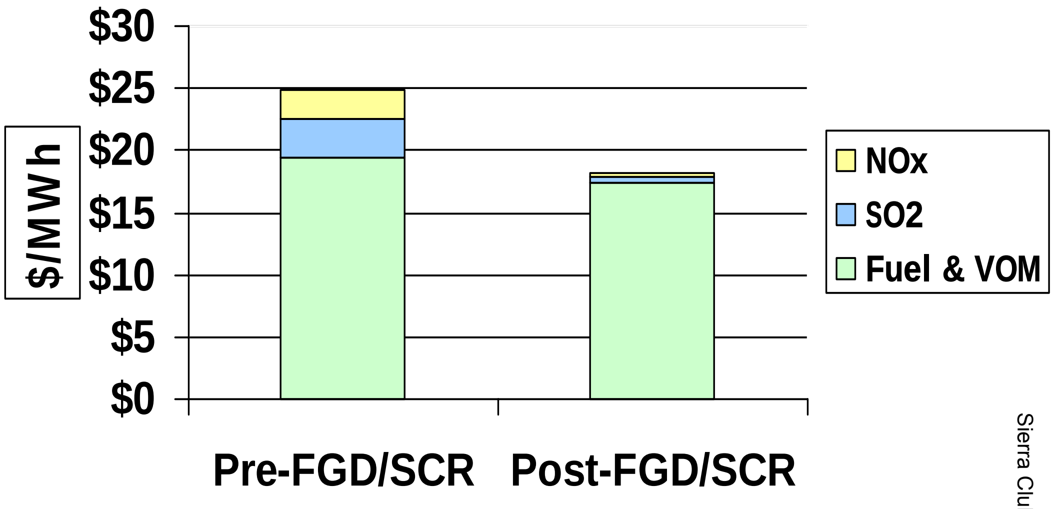


MAJORITY OF 2006 & 2007 DOLLARS WILL BE INVESTED IN OHIO & APCO

Low Cost Production Supports Investment & Investment Sustains Low Cost Production

- Lowers exposure to high cost emission allowances
- Creates opportunity to burn wider variety of lower cost fuels
- Improves baseload operation (higher capacity factor, higher margin)
- All-in cost of electricity, including FGD/SCR investment, remains low

Typical Pulverized Coal Plant
Comparison of Variable Production Cost
Pre- and Post- FGD/SCR (future view)*



* Assumes annual NOx program

AEP WILL REMAIN THE LOW COST PRODUCER FOLLOWING COMPLETION OF ENVIRONMENTAL RETROFIT PROJECTS

Regulatory Activity Underway

- ✓ TCC Stranded Cost Recovery True-up Filing
- ✓ Ohio Companies filing for pass through of FERC OATT changes
- ✓ APCo Filing for Recovery of E&R Costs in Virginia
- ✓ APCo & WPCo Base Rate & Expanded Net Energy Cost (ENEC) Filing in West Virginia
- ✓ Kentucky Base Rate Filing – Settlement Pending
- ✓ Indiana Depreciation Petition
- ✓ IGCC

LEVEL OF CAPITAL INVESTMENT WILL BE ADJUSTED BASED ON RATE RECOVERY AND/OR CASH GENERATION

Regulatory Activity Underway

A Century of Firsts

<u>TCC Stranded Cost Recovery Case</u>

- Seeking approval of true-up balances
  - ✓ February 6, 2006 – PUCT draft order provides for net true-up of $1.475 billion
- February 2006 - Final written order expected, if not extended
  - ✓ Feb/Mar 2006 - Request for securitization
    - ➢ 4Q06 - Issuance of securitization bonds if no appeal
  - ✓ Mar/Apr 2006 – Request approval for CTC to collect other true-up items
    - ➢ Jan 2007 – CTC charge to be implemented

<u>Ohio Companies Pass through of FERC OATT Changes</u>

Filed Feb 3, 2006 - Seeking authority to pass through to customers the changes in the FERC OATT related to the elimination of the SECA revenues and the costs associated with the Wyoming-Jacksons Ferry transmission line

Regulatory Activity Underway

A Century of Firsts

Appalachian Power – Virginia E & R Cost Recovery Factor

Filed July 1, 2005 - Seeking recovery of $62.1 Million in new Environmental & Reliability costs

- ✓ Oct 14, 2005 – SCC ruled VA law does not allow recovery of prospective costs - $48.6 Million
- ✓ Nov 14, 2005 - APCo filed supplemental direct testimony which included updated actual E&R costs incurred through Sept. 30, 2005 of $21.1 million
- ✓ Public hearings are scheduled to begin February 27, 2006

Appalachian Power & Wheeling Power – West Virginia Base Rate Case & ENEC Reactivation

Filed August 26, 2005 – Seeking $183 Million increase in revenues for increasing costs for coal, purchased power and environmental improvement construction projects

- ✓ APCo filed supplemental testimony on January 18, 2006 to reflect Ceredo plant purchase and other miscellaneous items resulting in a revised revenue requirement of $171 Million.

Proposed Phase-in over 4 years

- ✓ June 23, 2006 – $74 Million
- ✓ June 23, 2006 – $9 Million
- ✓ Jan 1, 2007 – $43 Million
- ✓ Jan 1, 2008 – $8 Million
- ✓ Jan 1, 2009 – $37 Million

Procedural Schedule

- ✓ March 8, 2006 – Staff and Intervenors Testimony
- ✓ March 16, 2006 – Rebuttal & Cross-rebuttal
- ✓ April 18 - 21, 2006 – Evidentiary Hearings
- ✓ Initial Briefs – 20 days after receipt of transcripts
- ✓ Reply Briefs – 10 days after initial briefs
- ✓ July 28, 2006 – Statutory deadline for an order

Regulatory Activity Underway

Kentucky Base Rate Case

Filed Sept 26, 2005 – Seeking recovery of increasing costs associated with providing safe and reliable electric service

- ✓ Parties to the case reached a settlement on Feb 6, 2006
  - ✓ $41 million annual increase in base rates
  - ✓ To be effective March 30, 2006
- ✓ Settlement was presented to the Commission at a public hearing on Feb 7, 2006
- ✓ Final order expected in March 2006

Indiana Depreciation Filing

December 1, 2005 – I&M filed petition with the IURC for accounting authorization to revise the depreciation rates applicable to its electric utility plant in service

- ✓ Based on a 2004 depreciation study, I&M recommends a decrease in annual depreciation expense of approximately $45 Million on an after-tax Indiana jurisdictional basis.
- ✓ Procedural schedule has been set with final order expected in June 2006

IGCC Regulatory Activity

Ohio - Cost Recovery Filing

Phase 1

- ✓ **Effective during 2006**
- ✓ **Seeks recovery of initial costs, including those already incurred, such as site engineering and various other engineering services**
- ✓ **Approximately $23.7 Million**

Phase 2

- ✓ **Effective 2007- mid 2010 (Construction Phase)**
- ✓ **Seeks recovery of carrying costs associated with plant construction**

Phase 3

- ✓ **Effective mid 2010 (Commercial Operation begins)**
- ✓ **Seeks recovery of projected $1.174 Billion cost of plant over its operating life.**

Ohio Next Steps

2006:

- ✓ Secure cost recovery plan
  - Final PUCO Order expected in 1Q06
- ✓ Finalize site selection
- ✓ Negotiate with suppliers

2006—2007:

- ✓ Obtain permits and finalize engineering and procurement

2007—2010:

- ✓ Construct and start-up plant

West Virginia IGCC Activity

On January 11, 2006, Appalachian Power Co. filed a Certificate of Public Convenience and Necessity seeking authority to construct a 600-MW IGCC facility in West Virginia.

SEEKING AUTHORITY FOR THREE PHASE RECOVERY APPROACH IN OHIO

Regulatory Activity Completed

Ohio – Rate Stabilization Plan

✓ Generation rate increases implemented January 1, 2006

AEP East FERC Transmission Case

December 20, 2005 – FERC approved settlement allowing wholesale transmission rates to increase

✓ Results in $22 Million net revenue in 2006 from wholesale transmission

Appalachian Power- Virginia Fuel Factor Increase

✓ $57.7 Million increase in fuel factor approved on January 20, 2006

SWEPCo Fuel Factor/Surcharge Filing

January 12, 2006 – Settlement approved by PUCT

✓ Fuel factor will increase SWEPCo's annual Texas retail fuel-related revenues by approximately $46 Million.

✓ Interim surcharge will collect the under-recovery amount of $44 Million, including interest.

PROGRESS IS BEING MADE ON THE REGULATORY FRONT

What AEP Offers

- Strength and scale in assets & operations
- Focused utility model
- Earnings growth driven by native load & capital investment
- Attractive dividend yield in excess of 4%
- Stable credit profile

INSTALLATION OF SCR AND FGD WILL ALLOW OUR COAL FLEET TO REMAIN EXTREMELY COST COMPETITIVE

Integration Gasification Combined Cycle

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called "syngas" – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

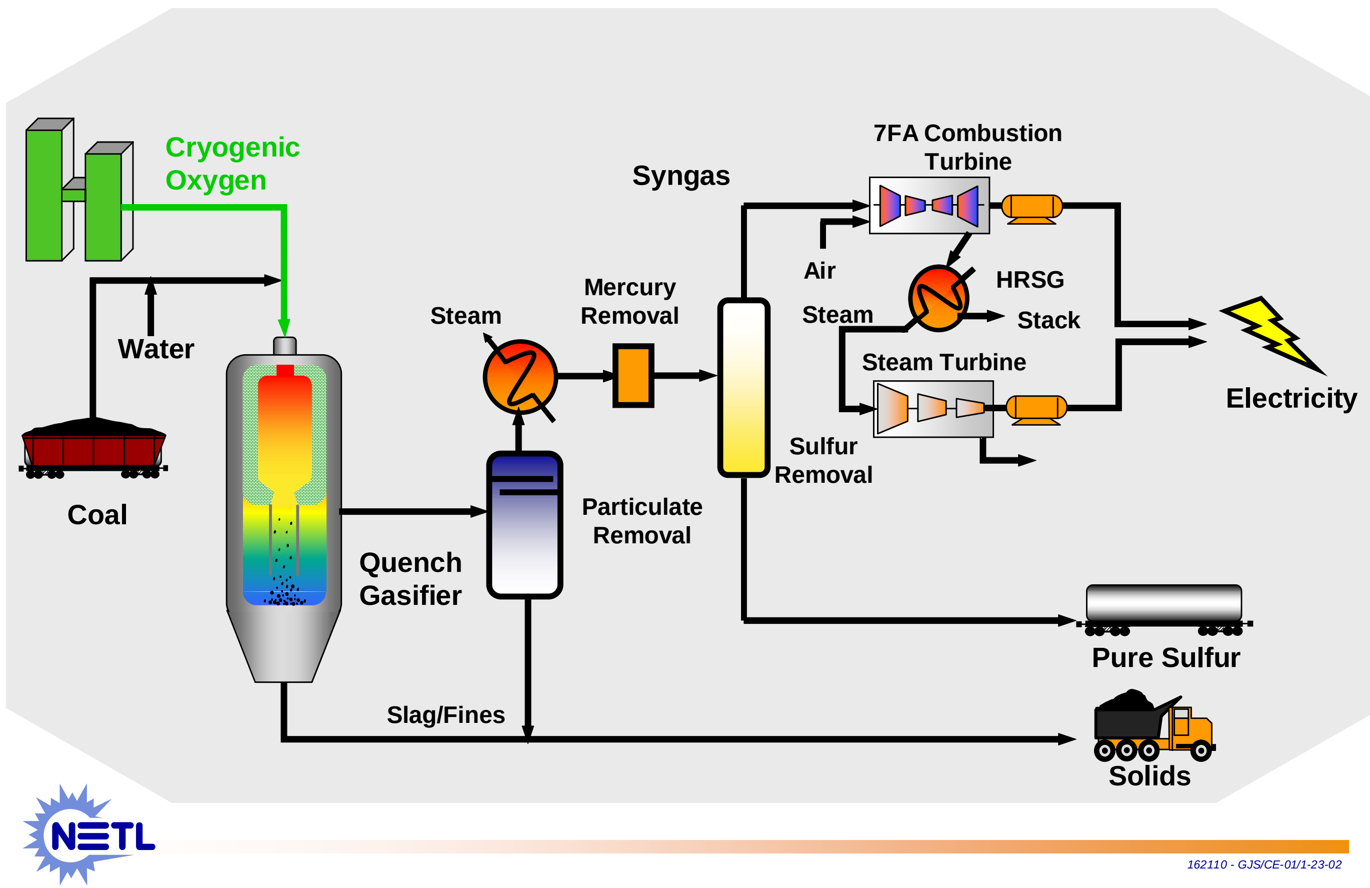
Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2, mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP's eastern service territory.

AEP is currently working with a technology provider to develop a firm price for an IGCC facility to be built in our eastern service region. This price will be available in 2006. AEP intends to seek regulatory recovery approvals in advance of building the plant.

Looking to the Future - IGCC



AEP HAS ANNOUNCED ITS INTENTION TO CONSTRUCT A COMMERCIAL-SCALE INTEGRATED GASIFICATION COMBINED CYCLE (IGCC) PLANT BY THE END OF THE DECADE

Investing in IGCC

Generation Technology Comparative Statistics

	PC	IGCC	NGCC
Nominal Capacity (MW)	600	600	600
Heat Rate (Btu/kWh)	8700	8600	7200
Total Plant Cost (EPC) ($/kW)	1700	1900	480
Production Cost ($/MWh)	17	16	57
Cost of Electricity, without CO2 Capture ($/MWh)	58	63	90
Estimated Cost of Electricity, with CO2 Capture ($/MWh)	94	87	137

•Source: Results of AEP analysis based on EPRI studies.

• Total Plant Cost (2005$'s) includes the cost to **E**ngineer, **P**rocure and **C**onstruct plant and owner's direct costs; does not include interconnections, transmission lines, transmission upgrades, contingency or AFUDC.

• Assumes Northern Appalachian Coal price of $1.60 /mmBtu for PC and IGCC, and natural gas price of $7.00/mmBtu for NGCC.

• Assumes 85% capacity factor for PC and IGCC, 25% for NGCC.

• Production Cost includes Fuel Cost and Variable Operations & Maintenance (VOM) cost.

• Cost of Electricity based on EPC cost, does not include the cost of Emission Credits.

• Cost of Electricity with CO2 capture does not include sequestration cost.

IGCC TECHNOLOGY IS STRATEGIC TO KEEPING COAL IN THE MONEY

Summary Rate Case Information

West Virginia Base Case Rate Filing

On August 26, 2005, Appalachian Power Co. and Wheeling Power Co. filed an application with the West Virginia Public Service Commission (WVPSC) to increase electric rates and charges, a request for the reactivation and modification of the expanded net energy cost mechanism (ENEC), a proposal for the disposition of Appalachian Power Company's ENEC over-recovery balance, a request for implementation of a System Reliability Tracker mechanism, and a request for waiver of certain provisions of the Commission's Rules. APCo filed supplemental testimony on January 18, 2006 to reflect Ceredo plant purchase and other miscellaneous items resulting in a revised revenue requirement of $171 Million. (Docket #: 05-1278-E-PC-PW-42T)

March 8, 2006	Staff & Intervenor Testimony
March 29, 2006	Company Rebuttal Testimony
April 18-21, 2006	Hearings

- Initial briefs due 20 days after receiving hearing transcript
- Reply briefs due 10 days after initial briefs

Statutory Deadline: July 28, 2006

* Procedural schedule subject to modification until order is issued.

Summary Rate Case Information

Virginia E&R Factor Filing

On July 1, 2005, Appalachian Power Co. filed a request with the Virginia SCC to recover incremental actual and projected costs for environmental compliance and T&D System reliability in the amount of $62.1MM. The SCC has ruled that under applicable VA law, it does not have authority to approve the recovery of projected E&R costs before their actual incurrence and adjudication. APCo filed supplemental direct testimony which included actual costs incurred for E&R thru September 30, 2005 of $21.1 million. Docket # PUE-2005-00056

Capital Structure – Company vs. Staff

Capital Structure	Company Position (filed 7/1/05)	Staff Position (filed 1/11/06)
Long-Term Debt	53.43%	51.50%
Short-Term Debt	2.67%	2.20%
Preferred Stock	0.54%	0.53%
Common Equity	42.65%	45.16%
ITC	0.71%	0.61%
Total	**100.00%**	**100.00%**
Recommended ROE	**10.85%**	**9.80%**

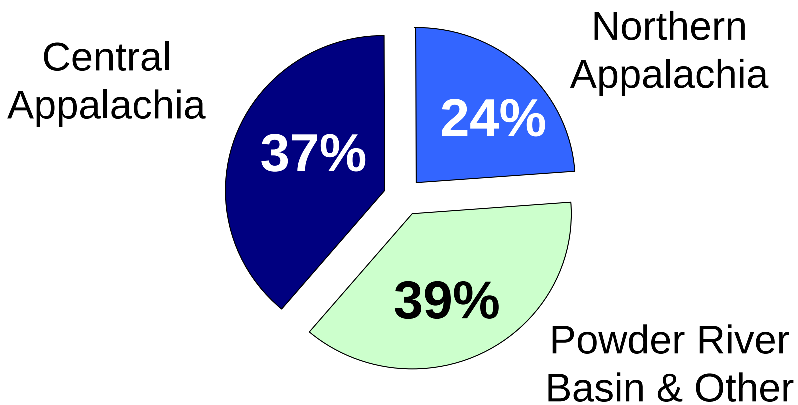
Revenue Requirement – Company vs. Staff*

Revenue Requirement	Company Position (filed 11/14/05)	Staff Position (filed 1/11/06)
Environmental	13.3	8.2
Transmission	6.1	8.8
Distribution	1.7	2.6
Total	**$21.1MM**	**$19.6MM**

* Difference in positions does not reflect the relative earnings impact and is not necessarily a reflection of the ultimate outcome of the case.

Coal Procurement

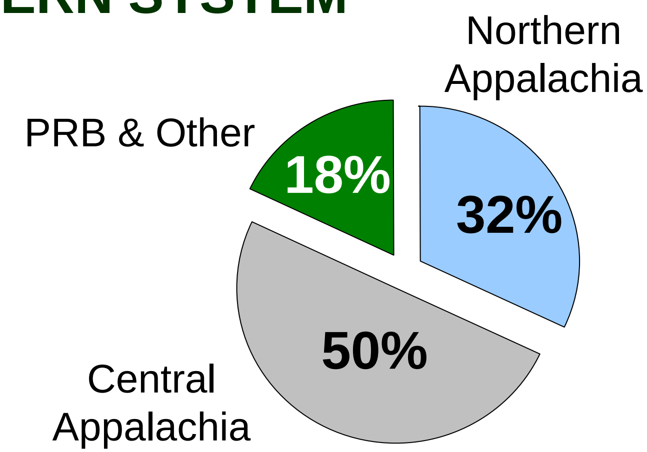
AEP SYSTEM



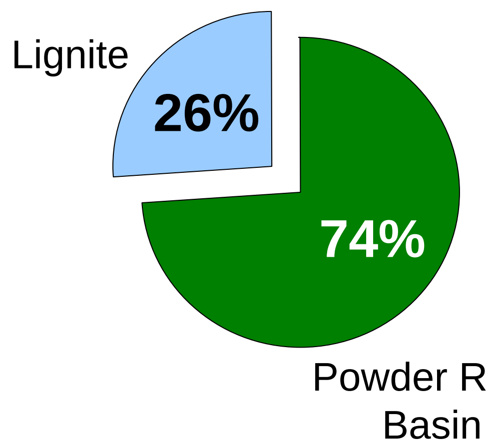
Coal Supply
(on average)

- Purchase 75 MM tons per year
- Avg. delivered price ~ \$32.52/ton in 2005
- Essentially 95% purchased for 2006
- Approximately 10%-12% price increase in 2006
  - Rising costs at Eastern mines & safety issues
  - High SO_2 Allowance prices drive low sulfur coal prices

EASTERN SYSTEM



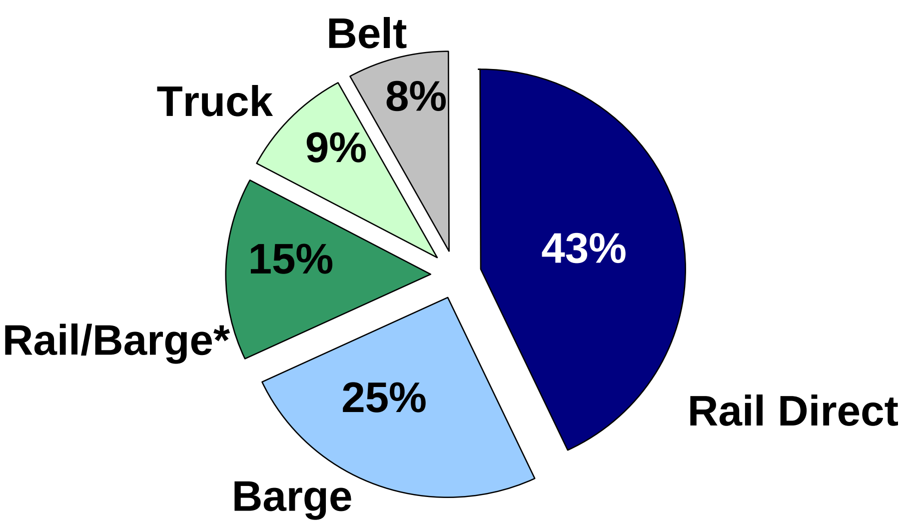
WESTERN SYSTEM



Coal Delivery

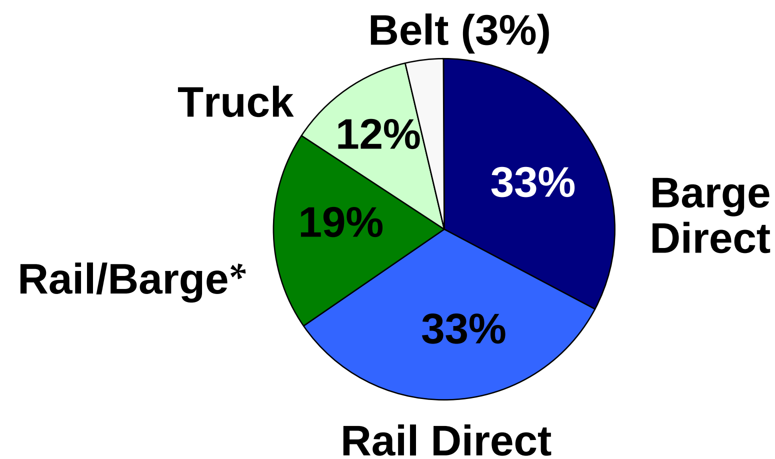
AEP SYSTEM DELIVERY MODE DIVERSITY

2005 Actual



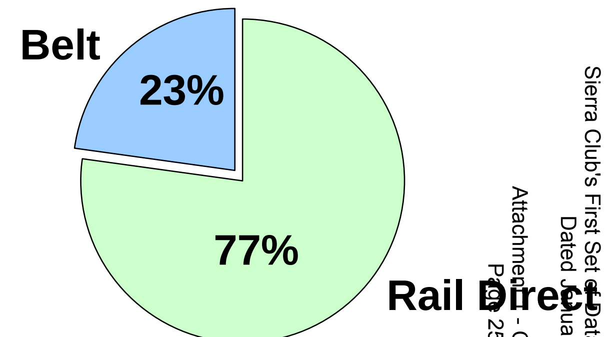
EASTERN SYSTEM

2005 Actual



WESTERN SYSTEM

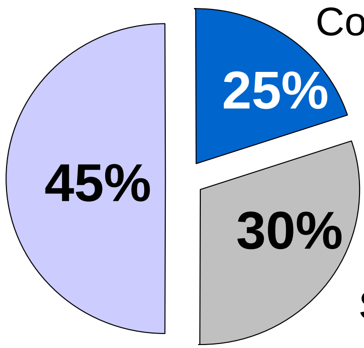
2005 Actual



* Coal delivered to AEP plants transported through combination of rail and barge

Fuel Recovery

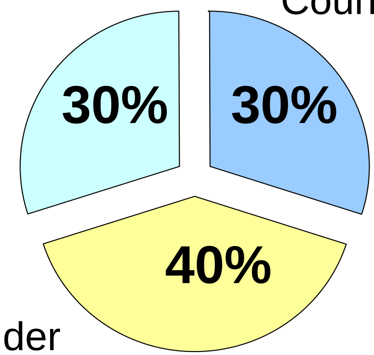
AEP SYSTEM



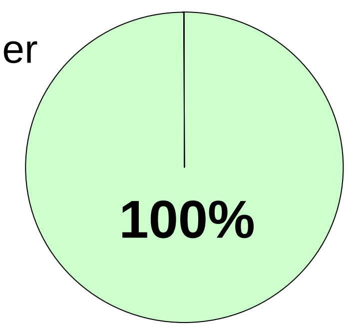
Fuel Cost Recovery
(on average)

- ➢ Fuel recovery varies by jurisdiction
- ➢ 70% of fuel cost is recoverable across the AEP System
- ➢ Active Fuel Clause Jurisdictions:
  - AEP EAST: AP-VA, I&M, KGP, KP
  - AEP WEST: PSO, SWEPCO

EASTERN SYSTEM

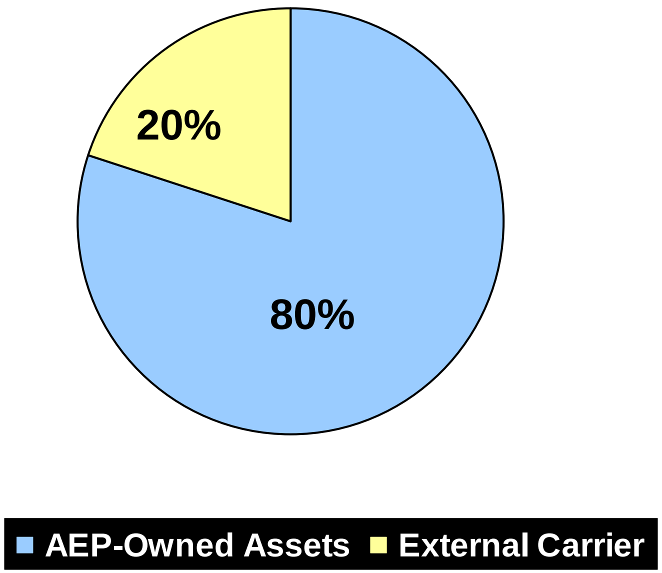


WESTERN SYSTEM



AEP's Coal Transportation Assets

Coal Transportation to AEP Plants*
Jan-June 2005 Actual



* Represents close approximations

AEP's substantial coal transportation assets include:

- 7,065 railcars
- 2,230 barges
- 53 towboats
- 1 active coal handling terminal (20 million tons of annual capacity)

TRANSPORTATION ASSETS PROVIDE FLEXIBILITY IN A CONSTRAINED DELIVERY ENVIRONMENT

International EEI Conference

February 21-22, 2005
London, United Kingdom
London Hilton on Park Lane

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements which are subject to risks and uncertainties. These factors include electric load and customer growth; abnormal weather conditions; available sources and cost of fuel; availability of generating capacity and performance of plants; the speed and degree to which competition is introduced to our service territories; the ability to recover stranded costs in connection with deregulation; new legislation and government regulation; resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to successfully control costs; the success of acquiring new business ventures and disposing of existing investments that no longer match our corporate profile; ability to sell assets at attractive prices; international and country-specific developments affecting foreign investments including the disposition of any current foreign investments and potential additional foreign investments; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; electricity and gas market prices; changes in creditworthiness in energy trading market; changes in the financial markets; changes in markets for electricity, natural gas, and other energy-related commodities; actions of rating agencies; changes in utility regulation; accounting pronouncements; performance of pension plan interest rates; liquidity in the banking, capital and wholesale power markets; prices for power we generate and sell at wholesale; changes in technology, including the increased use of distributed generation within our transmission and distribution service territory; other risks and unforeseen events, including wars, the effects of terrorism, embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

2005 Earnings Drivers

- *Retail sales increase due to return to normal weather and economic growth*
- *Lower Texas Supply due to sale of TCC assets; lower third-party Transmission margin partially offset by higher off-system sales prices*
- *Higher operating expense partially offset by lower interest expense; 2004 and 2005 Other Income and Deductions include return on Texas Stranded Cost of $109MM and $101MM, respectively*
- *Improved performance at HPL*
- *Lower interest due to debt retirements and assignment of debt to subsidiaries; 2004 includes unfavorable effect of enforcement provisions*

$1.2 billion for SO_2

Future Programs

$1.8 Billion:

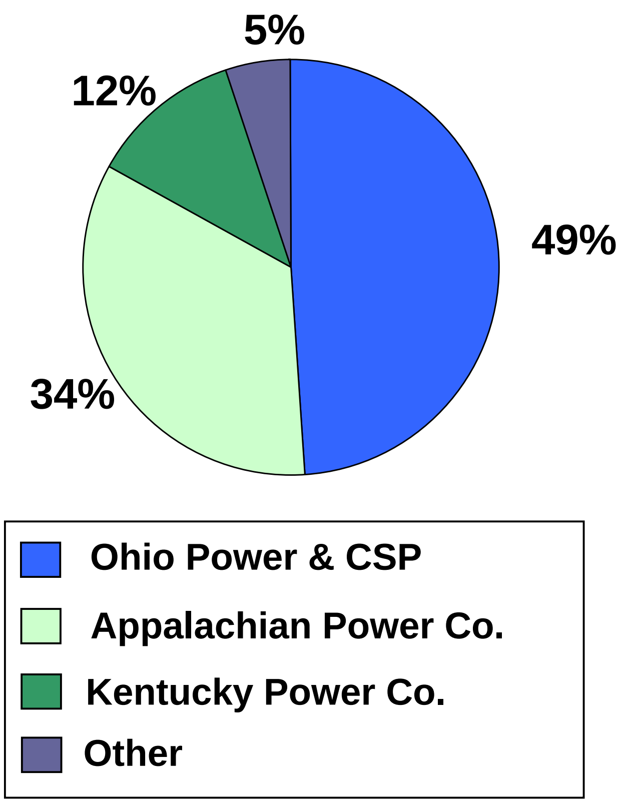
$1.7 billion for SO_2

$0.1 billion for Other

MAJORITY OF 2005 & 2006 DOLLARS WILL BE INVESTED IN OHIO & APCO

Environmental Spending by Company

Projected Environmental Investment Allocation



Funding the Environmental Investments

- Ohio: 49% ($1.8 billion)
  - Rate stabilization plan increases at CSP – 3% and OP – 7%
- Virginia/West Virginia: 34% ($1.2 billion)
  - VA: Environmental cost recovery mechanism/two rate case opportunities through 2010
  - WV: General rate case filing
- Kentucky: 12% ($433 million)
  - Surcharge mechanism

Managing the Regulatory Process

- **Current Regulatory Activity**
  - TCC Wires Rate Case
  - TCC Stranded Cost Recovery
  - PSO Rate Case
  - Louisiana Rate Review
- **Planned Regulatory Activity (2005-2007)**
  - FERC Transmission Rate Case
  - General Rate Cases in all AEP East jurisdictions to seek recovery of investment:
    - IN, KY, MI, TN, VA, WV

BRING CASH IN THE DOOR TO COVER CAPITAL EXPENDITURES & GROW EARNINGS THROUGH ADDITIONS TO THE ASSET BASE

IGCC Investment

2005

- Secure regulatory cost recovery
- Finalize site selection
- Negotiate with suppliers

- **2005—2007:** Obtain permits and finalize engineering and procurement

- **2008—2009**: Construct and start-up plant

AEP WILL PIONEER CONSTRUCTION OF LARGEST IGCC PLANT IN THE WORLD

What AEP Offers

- Strength and scale in assets & operations
- Focused utility model
- Earnings growth driven by native load & capital investment
- Attractive dividend yield in excess of 4%
- Positive dividend outlook
- Stable credit profile

Risks and Uncertainties

2005 EPS Guidance Range is $2.30 to $2.50

2005

- ***Outcome of pending regulatory proceedings***
  - ***Texas, Oklahoma & Louisiana***
- ***Operations within PJM environment***
- ***Plant availability***
- ***Rising fuel costs***
- ***Weather (storm damage and effect on sales)***

TCC Stranded Cost Carrying Charge

Carrying Cost Details:

Amount Recorded for 2002 & 2003	**$193 Million**
Amount Recorded for 2004	**$109 Million**
Estimated amount for 2005	**$101 Million**

Simplified Calculation:	
Initial Stranded Cost Base	$1.34 billion
@ debt component of the11.79% pre-tax cost of capital	8.12%
Amount (subject to limitation of actual TCC interest expense)	$109MM

Items included in stranded cost base include:
Stranded Plant costs ($900 MM), Regulatory Assets($249 MM), ECOM ($483 MM), less Over-recovered fuel ($212 MM) and retail clawback ($61 MM) and Unrefunded excess earnings ($10 MM). Carrying costs are also included and compounded monthly.

EQUITY COMPONENT RECOVERABLE ONCE AN ORDER IS RECEIVED

Ohio Rate Stabilization Plan Recap

Summary of Impact (Columbus Southern Power & Ohio Power):

	Income				Incremental Cash			
Rate Stabilization Plan	**2005**	**2006**	**2007**	**2008**	**2005**	**2006**	**2007**	**2008**
Escalation of Generation Rate	0	83	173	271	0	83	173	271
POLR Rider/Recovery of RTO Costs**	21	0	0	0	0	7	7	7
POLR Rider/Return on Environmental Additions	44	26	26	26	0	41	41	40
Total RSP Impact	**65**	**109**	**199**	**297**	**0**	**131**	**221**	**318**
Pre-Existing Electric Transition Plan								
Elimination of 5% Residential Generation Credit*	0	25	25	26	0	25	25	26
Recovery of RTO costs**	0	29	29	29	0	29	29	29
Total ETP Impact	**0**	**54**	**54**	**55**	**0**	**54**	**54**	**55**

* Elimination of 5% credit is per Statute, and part of pre-existing ETP, not the RSP

** Recovery of administrative RTO costs, net congestion fees and ancillary services permitted in pre-existing ETP, but the RSP allows for recovery of 2005 costs as well

AEP WILL STILL HAVE AMONG THE LOWEST RETAIL RATES IN OHIO

* Figures do not include mothballed or decommissioned units (1,015 MW of capacity).

FUTURE EARNINGS GROWTH DRIVEN BY NATIVE LOAD GROWTH & SUBSTANTIAL UTILITY INVESTMENT OPPORTUNITY

2006 Accomplishments

- Reached settlement on Texas securitization amount. Planning to issue securitization bonds in September 2006 of $1.7 billion.
- Successfully settled rate cases in West Virginia ($129MM over 3 years), Kentucky Power ($41MM), FERC transmission ($22MM) & Ohio OATT ($89MM)
- Began implementation of Ohio RSP & obtained approval to recover storm damage costs
- Received approval from PUCO to proceed with first phase of IGCC construction and recover costs
- Completed & dedicated Wyoming-Jackson Ferry 765-kV line
- Increased 2006 earnings guidance range to $2.65 - $2.80 per share

AEP IS WELL ON ITS WAY TO ESTABLISHING A TRACK RECORD OF REGULATORY SUCCESS

Regulatory Activity Underway

- TCC Securitization of Stranded Costs
- Indiana Depreciation Petition
- APCo General Rate Case Filing in Virginia
- APCo Filing for Recovery of E&R Costs in Virginia
- IGCC – Received Rate Authorization of Pre-Construction Costs
- FERC Regional Rate Design
- FERC SECA Revenues

YEAR-TO-DATE, SECURED $415 MILLION OF THE $500 MILLION RATE RECOVERY ASSUMED IN 2006 EARNINGS GUIDANCE RANGE

Regulatory Activity Underway

TCC Stranded Cost Recovery Case

- April 4, 2006 – Final order, following rehearing, which provides for net true-up of $1.475 billion
- March 3, 2006 – Requested approval of financing order to issue $1.8 billion in low-cost securitization bonds
- May 22, 2006 – Settlement agreement filed with PUCT in securitization proceeding
  - Securitization financing order received June 20
  - Issuance of securitization bonds expected in September

Securitization Order:

- Securitization amount of $1.697 billion plus estimated bond issuance costs ($23 million resulting in $1.72 billion requested to be securitized)
- Securitization order not appealable
- $315 million cost-of-money benefit for ADFIT to be included in CTC
- The treatment of EDFIT and ADITC ($61 million in total) as a reduction to the securitized amount

- June 2006 – Requested approval for CTC to address other true-up items
  - Requested $355 million net credit to customers over 8 years
    - $475 million gross CTC refund proposed, offset by $7 million in rate case expense recovery
    - Requested portion be deferred, pending the outcome of 2 contingent federal matters
      - $16 million of FERC jurisdictional fuel over-recoveries
      - $97 million related to ADITC and EDFIT
  - Hearings set for Sept 2006

Regulatory Activity Underway

Indiana Depreciation Filing

December 1, 2005 – I&M filed petition with the IURC for accounting authorization to revise the depreciation rates applicable to its electric utility plant in service

- Based on a 2004 depreciation study, I&M recommends a decrease in annual depreciation expense of approximately $45 Million on an after-tax Indiana jurisdictional basis.
- Hearings have been held with final order expected in third quarter 2006

Appalachian Power - Virginia E&R & General Rate Case Activity

Virginia E & R Cost Recovery Factor - Filed July 1, 2005 – Originally filed for recovery of $62.1 Million in new Environmental & Reliability costs

- Oct 14, 2005 – SCC ruled VA law does not allow recovery of prospective costs - $48.6 Million
- Nov 14, 2005 - APCo filed supplemental direct testimony which included updated actual E&R costs incurred through Sept. 30, 2005 of $21.1 million
- Hearings held, awaiting Commission Order

Virginia General Rate Case Filing – Filed May 4, 2006 – Seeking $225.8MM increase in base rates, partially offset by a proposed credit to reflect sharing of $27.3MM in margins from off system sales (OSS), resulting in a net annual increase of $198.5MM.

- May 30, 2006 – SCC suspended the effective date of the rates until 10/2/06, upon which, the full rate increase requested by APCO-VA will be implemented, subject to refund.

<u>Procedural Schedule</u>

Regulatory Activity Underway

FERC Regional Rate Design

Regional Rate Design

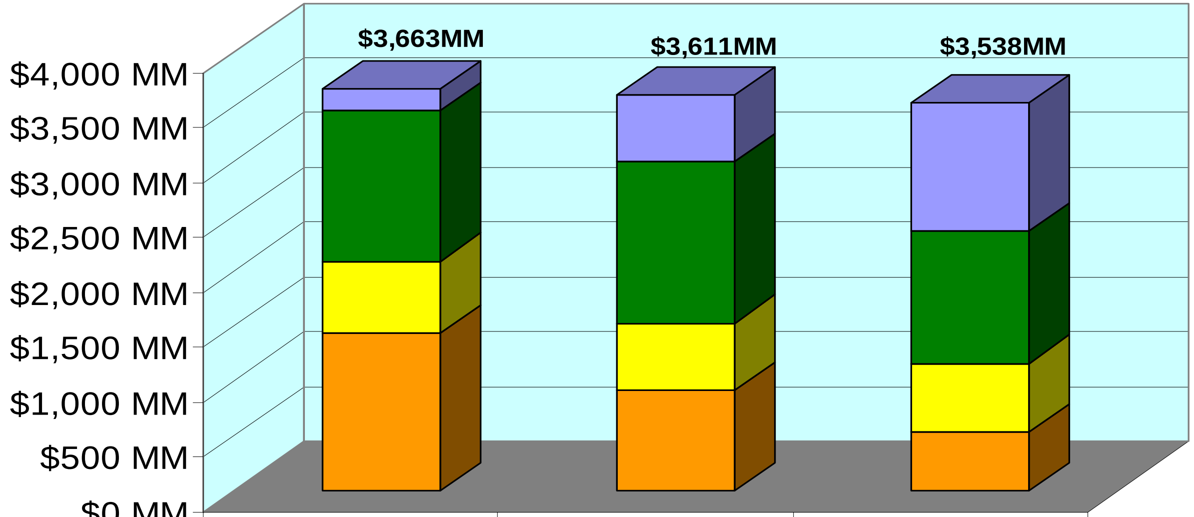
- At our urging, the FERC instituted an investigation of PJM's zonal rate regime
  - Present regime may need to be replaced
  - Consider establishing regional rates that would compensate AEP, among others, for the regional transmission service proved by high voltage facilities they own that benefit customers throughout PJM
- July 2006 ALJ rendered initial decision finding:
  - License Plate rates for existing facilities <u>are not</u> just and reasonable, and must be replaced (effective April 1, 2006 when SECA ended)
  - Staff's proposal for a "Postage Stamp" rate phased in so as to limit increases in any one pricing zone to 10% per year is best choice for replacing current rates
  - Staff's proposed rate design would produce slightly more net revenue for AEP than the original AEP/Allegheny Power proposal, when fully effective
- Exceptions and replies to the exceptions to be filed: Order expected by the Commission late 2006/2007

Seams Elimination Cost Allocations (SECA) Revenues

- August 2006 ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
  - Up to $111 million SECA revenues could be disallowed, net of unused provisions
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both
- Exceptions due Sept. 11, & Replies due Oct. 2: Order expected by the Commission in early 2007
- We will vigorously appeal the ALJ's decision

2006 Revised Capital Investment Forecast

Capital Investment Forecast
excluding AFUDC



New Build Generation & Ongoing Infrastructure Replacement investment can be throttled

	2006	2007	2008
New Build Generation	$191	$611	$1,174
Ongoing Infrastructure Replacement & Economically Justified	$1,381	$1,473	$1,203
Mandated T&D	$650	$615	$625
Environmental Compliance	$1,441	$912	$536

Note: Capital forecasts do not include amounts for AEP Interstate Project.

2006 TOTAL CAPITAL INVESTMENT LEVEL HAS BEEN REDUCED BY $60MM TO $3.663 BILLION

KPSC Case No. 2011-00401

Page 2541 of 9556

AEP's Environmental Compliance Strategy

NOx, SO2, & Hg emission reductions are part of AEP's on-going strategy to comply with the Clean Air Act, Title IV regulations, the Clean Air Interstate Rule (CAIR) and the Clean Air Mercury Rule(CAMR).

Investment will position AEP to accomplish the following:

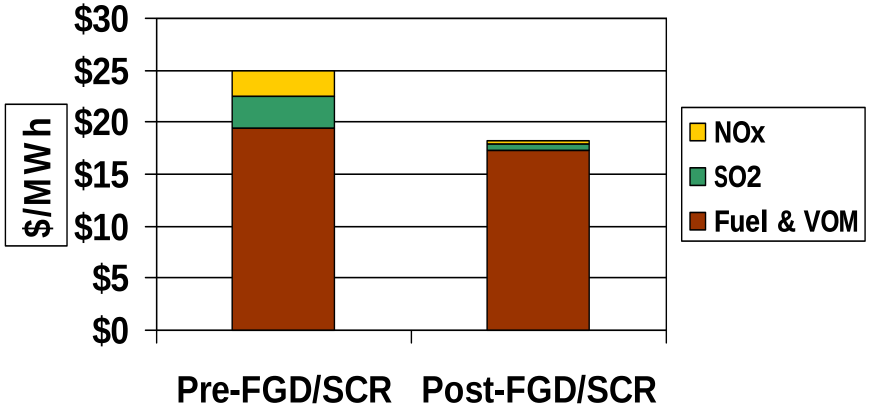
- Reduce nitrogen oxide emissions by 90% through installation of Selective Catalytic Reduction (SCR) systems
- Reduce sulfur dioxide emissions by 95% to 98%+ through installation of Flue Gas Desulfurization (FGD) systems (scrubbers)
- Realize co-benefit of mercury capture offered through SCR and FGD systems together
- Avoid future landfill costs through sale of gypsum (by-product) & build where landfill costs are lower
- Realize benefits achieved through fuel flexibility

REPRESENTS THE BEST AND LEAST-COST COMPLIANCE PATH TO IMPROVE ENVIRONMENTAL PERFORMANCE ON A FLEET BASIS, WHILE CONTINUING TO PROVIDE A RELIABLE SUPPLY OF POWER TO CUSTOMERS AT A REASONABLE PRICE AND A SOLID RETURN FOR INVESTORS.

Low Cost Production Supports Investment & Investment Sustains Low Cost Production

- Lowers exposure to high cost emission allowances
- Creates opportunity to burn wider variety of lower cost fuels
- Improves baseload operation (higher capacity factor, higher margin)
- All-in cost of electricity, including FGD/SCR investment, remains low

Typical Pulverized Coal Plant Comparison of Variable Production Cost Pre- and Post- FGD/SCR (future view)*



* Assumes annual NOx program

AEP WILL REMAIN THE LOW COST PRODUCER FOLLOWING COMPLETION OF ENVIRONMENTAL RETROFIT PROJECTS

Cost of Control Technology

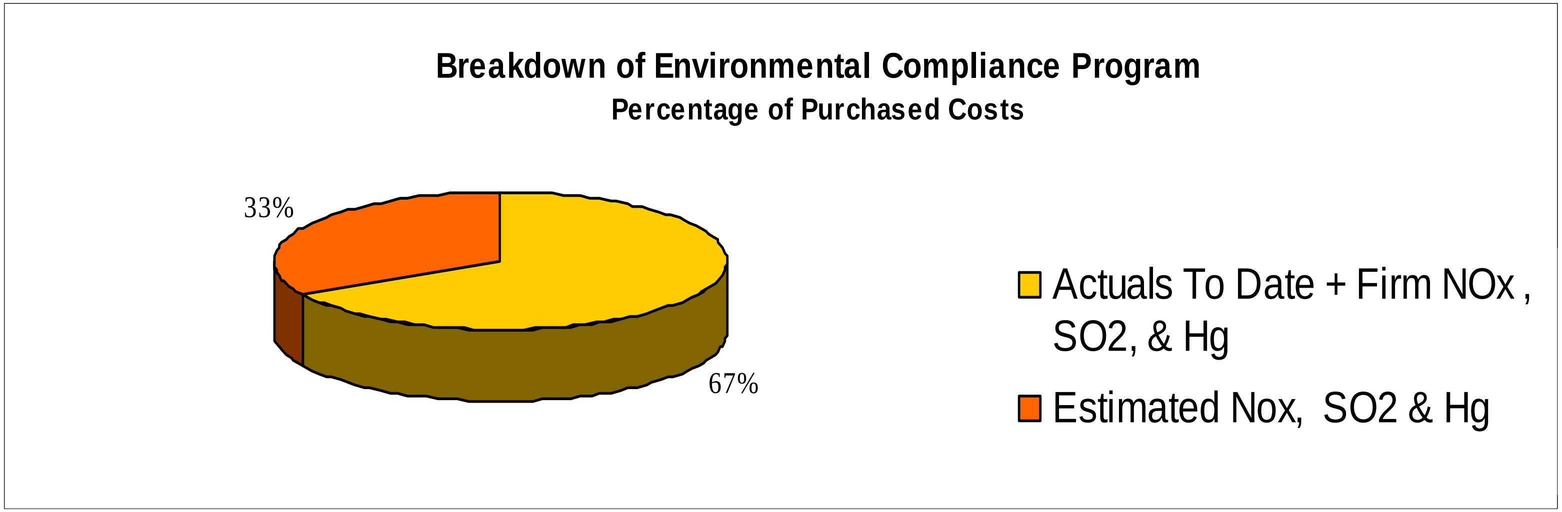
AEP's compliance plan largely relies on SCR & FGD technology to meet the requirements of CAIR and CAMR. AEP also deployed other combustion related controls, such as low NOx burners and optimized boiler controls throughout the system.

Conventional Technology

	SCR	FGD
AEP Capital Cost	~$121/kW avg.	~$250/kW avg.
Pollutant(s)	NO_x	SO_2 (& Hg as co-benefit)
Removal Efficiency	85 to 93%	95%-98% (&~80%)
Aux. Power	Approx. 1%	1.5% to 3.0%

Materials and Vendors

Cost Management of Materials



Typical Vendors

- FGD
  - Spray Tower – B&W/Alstom
  - Jet Bubbling Reactor – B&V Chyioda
- Stack Supplier
  - Pullman Power Inc.
- SCR
  - Babcock Power
- Architect Engineering Firms
  - Black & Veatch
  - Sargent & Lundy
  - Shaw – Stone & Webster
  - Worley Parsons

New Generation

IGCC

- June 2006 – PUCO approved tariff to recover Phase 1 pre-construction costs ($24MM) over 12-month period effective July 1, 2006
- Expect to obtain permits and finalize engineering by 2007
- Construction of 600 MW facility to begin in 2007

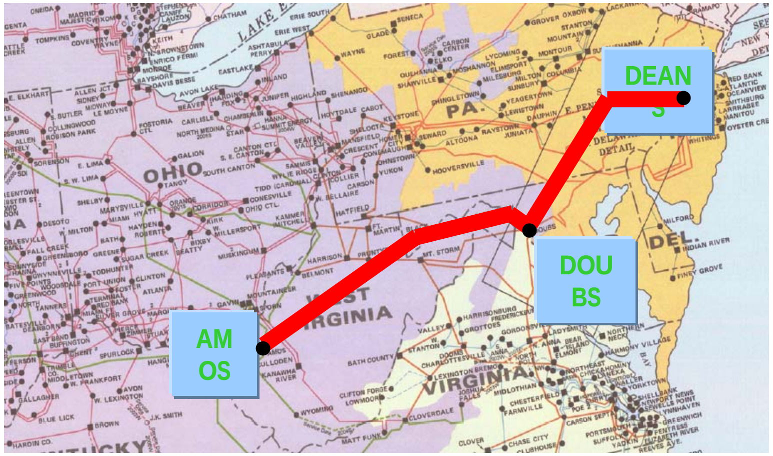
SWEPCO

- May 31, 2006- Announced plans to build $1.4 billion of new generation
- Expected generation build includes a simple-cycle gas turbine totaling up to 480 MW and combined-cycle gas plant totaling 480 MW
- Aug 2006 – Announced plans to build $1.3 billion 600 MW base load ultra-supercritical coal-fueled plant – of which SWEPCO's investment will be approx. 75%
- Commercial operation dates between 2008 and 2011

PSO RFPs

- 2H05 - Submitted RFPs for up to 1100 MW of peaking and baseload capacity in aggregate
- March 2006 - Two peaking RFPs totaling 340 MW awarded; commercial operation 2008
- July 2006 - Entered into JVA with OG&E to build 950 MW coal-fueled unit with goal to use ultra-supercritical technology – PSO will own 50% or 425 MW; commercial operation 2011

AEP Interstate Project



Map of the Proposed AEP Interstate Project 765 kV Transmission Line (Line route is conceptual and subject to change in regulatory and PJM Regional Transmission Expansion Plan processes)

- Line connects AEP's Amos 765 kV station to Allegheny Power's Doubs 500 kV station in Maryland, and terminates at PSEG's Deans 500 kV station in New Jersey
- Total line length is approximately 550 miles
- Will improve power transfer capability from the Midwest to the Mid-Atlantic by 5,000 MW
- Expected to cost $3 billion (subject to change based on a detailed investigation)
- Not yet determined which other non-AEP companies may be interested in participating
- Any financing activity relating to this project would be structured to allow AEP to meet its consolidated debt-to-cap target of approximately 60% and maintain its BBB credit rating
- Project expected to be in service in 2014

What AEP Offers

Utility Operations: The Platform for Growth & Financial Strength

1. Strength and scale in assets and operations
2. Focused utility business model
3. Earnings growth driven by native load & capital investment
4. Pioneering advanced technologies in the sector
5. Solid liquidity position and stable credit profile
6. Attractive dividend yield in excess of 4%

Regulatory

Regulatory Activity Completed

Ohio – Rate Stabilization Plan (2006 – 2008)

- Annual 3% and 7% generation rate increases at CSP & OP, respectively
- POLR rate rider for environmental additions
- Ability to request additional 4% annual increase in generation rate, for certain specific incremental costs
- Elimination of 5% residential generation credit (stipulated in the pre-existing Electric Transition Plan of 2000)

AEP East FERC Transmission Case

December 20, 2005 – FERC approved settlement allowing wholesale transmission rates to increase

- Results in $22 million net revenue increase in 2006 from wholesale transmission

Ohio Companies Pass Through of FERC OATT Changes

May 26, 2006 – PUCO approved a final order allowing for adjustment of the transmission component of standard service tariffs to FERC-approved rates

- Transmission rate adjustment results in additional annual revenues of approximately $89 million ($63 million in 2006)

SWEPCo Fuel Factor/Surcharge Filing

January 12, 2006 – Settlement approved by PUCT

- Fuel factor will increase SWEPCo's annual Texas retail fuel-related revenues by approximately $46 million
- Interim surcharge will collect the under-recovery amount of $44 million, including interest

Appalachian Power- Virginia Fuel Factor Increase

- $57.7 million increase in fuel factor approved on January 20, 2006

Kentucky Base Rate Case

Final order approved on March 14, 2006

- $41 million annual increase in base rates
- Rates effective March 30, 2006

Regulatory Activity Completed

APCo & WPCo West Virginia Rate Case

Settlement approved July 2006

- $44MM initial overall increase in rates effective July 28, 2006 comprised of:
  - $56MM increase in ENEC for fuel & purchased power expenses;
  - $23MM special construction surcharge providing recovery of the costs of scrubbers and the Wyoming-Jacksons Ferry (WJF) 765kV line;
  - $18MM general base rate reduction based on ROE of 10.5%, of which $9MM relates to a reduction in depreciation expense (affects cash flows but not earnings);
  - $17MM credit to refund a portion of deferred prior over-recoveries of ENEC costs of $51MM, currently recorded in regulatory liabilities; therefore, this item impacts cash flows but has no effect on earnings;
- Agreement also provides a surcharge mechanism that allows APCo and WPCo to adjust their rates annually for the timely recovery in each of the next three years of the incremental cost of ongoing environmental investments and the costs of WJF
- Reinstatement of the ENEC mechanism effective July 1, 2006

CSP & OPCO Storm Related Service Restoration Cost Recovery

August 9, 2006 – PUCO issued ruling allowing CSP and OPCO to recover costs associated with service restoration activities during the back-to-back December 2004 and January 2005 ice storms.

- CSP Recovery - $11.9MM
- OP Recovery - $11.7MM

Summary Rate Case Information

Virginia E&R Factor Filing

On July 1, 2005, Appalachian Power Co. filed a request with the Virginia SCC to recover incremental actual and projected costs for environmental compliance and T&D System reliability in the amount of $62.1MM. The SCC has ruled that under applicable VA law, it does not have authority to approve the recovery of projected E&R costs before their actual incurrence and adjudication. APCo filed supplemental direct testimony which included actual costs incurred for E&R thru September 30, 2005 of $21.1 million. Hearings concluded in March. Briefs were filed in early April. We are awaiting a Commission order. Docket # PUE-2005-00056

Capital Structure – Company vs. Staff

Capital Structure	Company Position (filed 7/1/05)	Staff Position (filed 1/11/06)
Long-Term Debt	53.43%	51.50%
Short-Term Debt	2.67%	2.20%
Preferred Stock	0.54%	0.53%
Common Equity	42.65%	45.16%
ITC	0.71%	0.61%
Total	**100.00%**	**100.00%**
Recommended ROE	**10.85%**	**9.80%**

Revenue Requirement – Company vs. Staff*

Revenue Requirement	Company Position (filed 11/14/05)	Staff Position (filed 1/11/06)
Environmental	13.3	8.2
Transmission	6.1	8.8
Distribution	1.7	2.6
Total	**$21.1MM**	**$19.6MM**

*Difference in positions does not reflect the relative earnings impact and is not necessarily a reflection of the ultimate outcome of the case.

Note: During the course of the hearings, Staff updated their revenue requirement recommendation to $23.6 million.

Summary Rate Case Information

Virginia Base Rate Case

On May 4, 2006, Appalachian Power Co. filed a request with the Virginia SCC to increase base rates $225.8 million partially offset by a proposed credit to reflect sharing of $27.3 million in margins from off-system sales. Docket # PUE-2006-00065

Capital Structure – Company

Capital Structure	Company Proposed in millions	%
Long-Term Debt	2,789	53%

Common Equity	2,286	44%
ITC	13	0%
Total	**5,227**	**100%**

Rate Base and ROE – Company

Rate Base (in millions)	2,345
ROE	11.50%

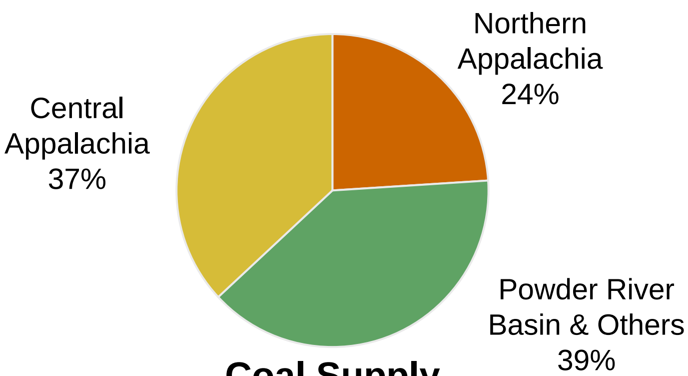
Rate Case Outcome Statistics

Company	Jurisdiction	Date of Final Order	Jurisdictional Rate Base ($ in MM)	ROE	Comments
APCo/WP	WV	7/26/2006	$1,658	10.50%	Settled case. Rate base, ROE and ROR per settlement agreement.
KPCo	KY	3/13/2006	$858 - Rate Base $853 - Capitalization	11.50%	Settled case. Rate base and ROE provided as filed by KPCo. Settlement agreement approved a 10.50% ROE for environmental surcharge filings. KY PSC requires use of total capitalization in rate filings.
PSO	OK	5/2/2005	$1,064	10.75%	Settled case. Rate base and ROE are estimated. A 10.75% ROE was found to be appropriate for AFUDC & affiliate transactions.
TCC	TX	8/15/2005	$862	10.125%	Settled case.

Fuel

Coal Procurement

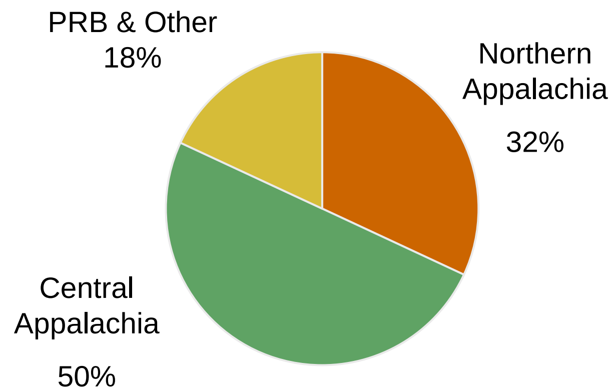
Total AEP System



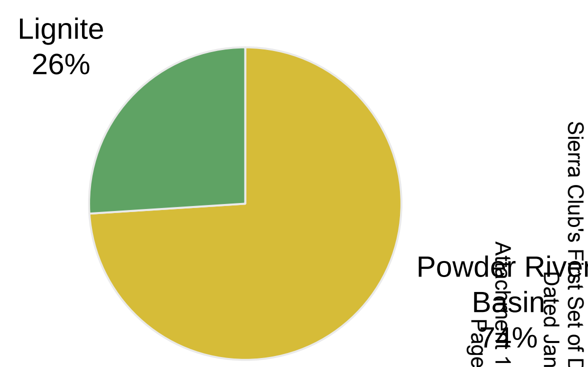
Coal Supply (on average)

- Purchase approximately 75 MM tons per year
- Avg. delivered price ~ $32.52/ton in 2005
- Fully contracted for 2006; 95%+ contracted for 2007
- Approximate 11%-13% price increase in 2006
  - Rising costs at Eastern mines & safety issues
  - High SO2 Allowance prices drive low sulfur coal prices

AEP Eastern System

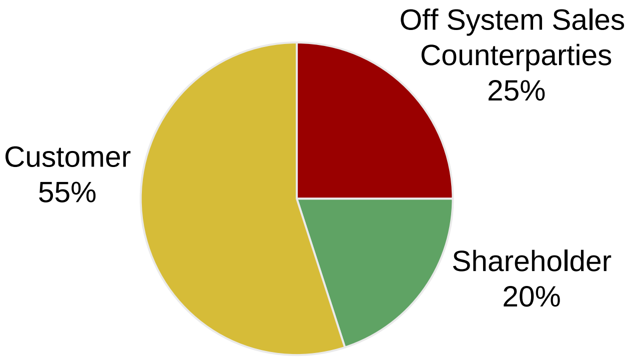


AEP Western System



Fuel Recovery

AEP System



Fuel Cost Recovery
(on average)

- Fuel recovery varies by jurisdiction
- 80% of fuel cost is recoverable across the AEP System
- Active Fuel Clause Jurisdictions:
  - AEP EAST: APCo, I&M, KPCo, KGP, WP
  - AEP WEST: PSO, SWEPCO

Note: Fuel recovery percentages are based on estimates for 2006 fiscal year

Investing in IGCC

Integrated Gasification Combined Cycle

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called “syngas” – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

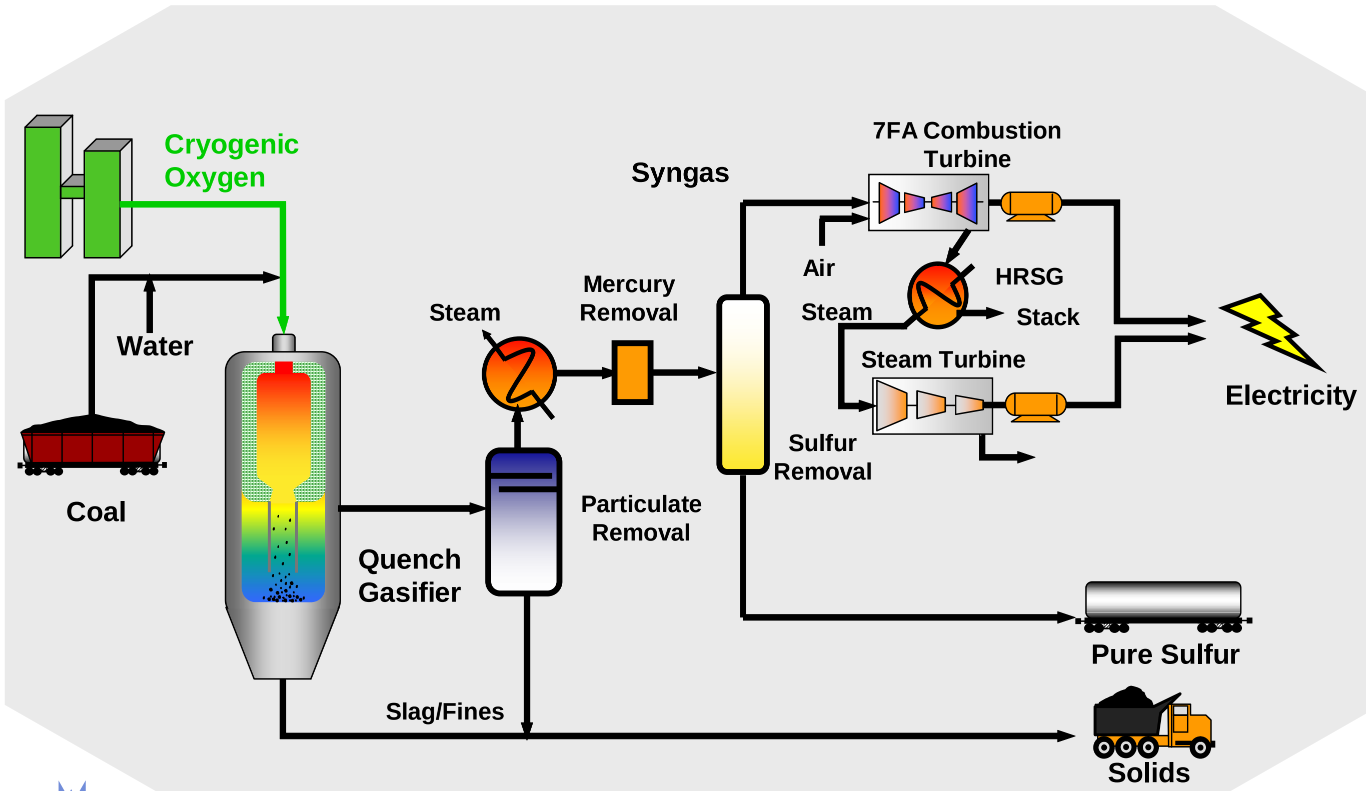
Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2 , mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP’s eastern service territory.

AEP is currently working with a technology provider to develop a firm price for an IGCC facility to be built in our eastern service region. This price will be available in 2006. AEP intends to seek regulatory recovery approvals in advance of building the plant.

Looking to the Future - IGCC



162110 - GJS/CE-01/1-23-02

AEP HAS ANNOUNCED ITS INTENTION TO CONSTRUCT A COMMERCIAL-SCALE INTEGRATED GASIFICATION COMBINED CYCLE (IGCC) PLANT BY THE END OF THE DECADE

Source: Results of AEP analysis based on EPRI studies

- Total Plant Cost (2005$'s) includes the cost to **E**ngineer, **P**rocure and **C**onstruct plant and owner's direct costs; does not include interconnections, transmission lines, transmission upgrades, contingency or AFUDC.
- Assumes Northern Appalachian Coal price of $1.60 /mmBtu for PC and IGCC, and natural gas price of $7.00/mmBtu for NGCC.
- Assumes 85% capacity factor for PC and IGCC, 25% for NGCC.
- Production Cost includes Fuel Cost and Variable Operations & Maintenance (VOM) cost.
- Cost of Electricity based on EPC cost, does not include the cost of Emission Credits.
- Cost of Electricity with CO2 capture does not include sequestration cost.

IGCC TECHNOLOGY IS STRATEGIC TO KEEPING COAL IN THE MONEY

IGCC Regulatory Activity

Ohio - Cost Recovery Filing

Phase 1 – PUCO AUTHORIZED

- Effective during 2006
- Seeks recovery of initial costs, including those already incurred, such as site engineering and various other engineering services
- Approximately $23.7 Million

Phase 2

- Effective 2007- mid 2010 (Construction Phase)
- Seeks recovery of carrying costs associated with plant construction

Phase 3

- Effective mid 2010 (Commercial Operation begins)
- Seeks recovery of projected $1.174 Billion cost of plant over its operating life

Ohio Next Steps

2006:

- Secure cost recovery plan
  - April 10, 2006 – PUCO authorized implementation of Phase 1 Rates
  - Phase 2 & 3 ruling – Post October 2006 – following completion of FEED study
- Finalize site selection
- Negotiate with suppliers

2006—2007:

- Obtain permits and finalize engineering and procurement

West Virginia IGCC Activity

On January 11, 2006, Appalachian Power Co. filed a Certificate of Public Convenience and Necessity seeking authority to construct a 600-MW IGCC facility in West Virginia.

(1) Excludes tax exempt bond remarketings and securitization bonds.
(2) Includes sinking fund payments, where applicable.
(3) Maturities remaining as of June 30, 2006.

2006 Key Operating Company Highlights

Dependent on Actual Capital Investment

(in millions $)

Company	Projected Capital Expenditures	Projected Issuances	Target Equity Ratio
APCO	$928	$500 - $600 *	42-45%
CSP	$319	$0	44-48%
I&M	$330	$400 - $500	38-42% (a)
KPCo	$53	$0	42-45%
OPCo	$1,065	$350 - $400	44-48%
PSO	$262	$150 - $200	44-48%
SWEPCo	$315	$150 - $200	44-48%
TCC (b)	$286	$0	40%
TNC	$72	$0	40%

*Issuances include potential new money tax-exempt issuances

(a) Ratios include impact of Rockport 2 lease.

(b) Excludes impact of securitization.

MAINTAIN FINANCIAL STRENGTH OF SUBS BY RETAINING AND/OR INFUSING EQUITY CAPITAL DEPENDING ON THEIR CREDIT RATIOS AND FREE CASH FLOW

Long-Term Debt Guidelines

Issuers:

- Issue at operating companies.

Size:

- Make transactions index eligible if possible.
- When possible, issue a size sufficient for competitive execution.

Maturity:

- Issue maturities for which the market has appetite.
- Achieve weighted average life targets for operating companies, generally between 10-15 years.

Timing:

- Will issue based on the timing of maturities and levels of short-term debt as driven by capital spending and operating cash flow.

Investor & Banker Meeting

March 2, 2005
The Pierre Hotel, NYC

AEP AMERICAN ELECTRIC POWER

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements which are subject to risks and uncertainties. These factors include electric load and customer growth; abnormal weather conditions; available sources and cost of fuel; availability of generating capacity and performance of plants; the speed and degree to which competition is introduced to our service territories; the ability to recover stranded costs in connection with deregulation; new legislation and government regulation; resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to successfully control costs; the success of acquiring new business ventures and disposing of existing investments that no longer match our corporate profile; ability to sell assets at attractive prices; international and country-specific developments affecting foreign investments including the disposition of any current foreign investments and potential additional foreign investments; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; electricity and gas market prices; changes in creditworthiness in energy trading market; changes in the financial markets; changes in markets for electricity, natural gas, and other energy-related commodities; actions of rating agencies; changes in utility regulation; accounting pronouncements; performance of pension plan interest rates; liquidity in the banking, capital and wholesale power markets; prices for power we generate and sell at wholesale; changes in technology, including the increased use of distributed generation within our transmission and distribution service territory; other risks and unforeseen events, including wars, the effects of terrorism, embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

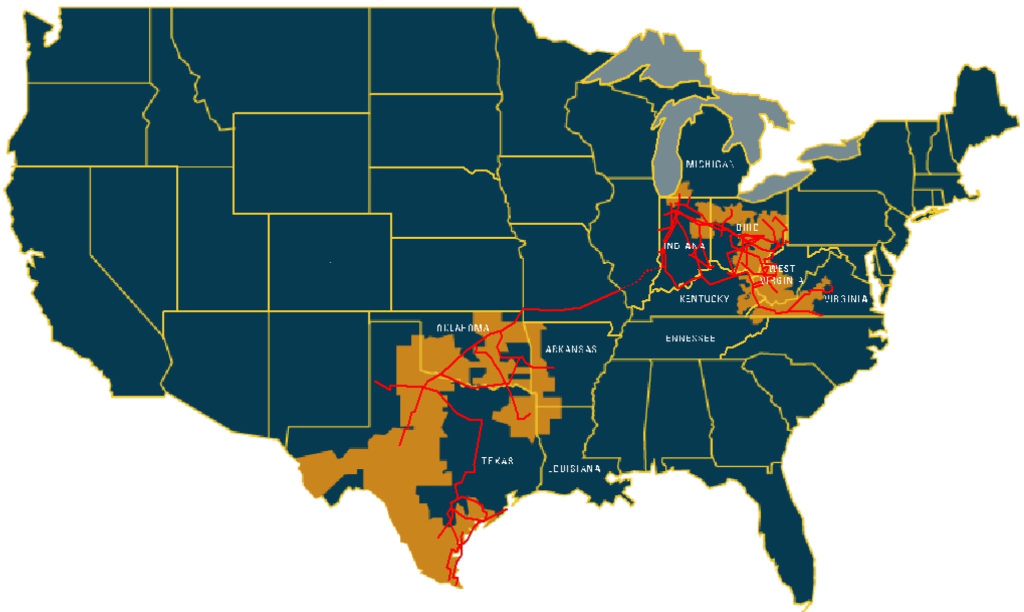
Strength & Scale in Assets & Operations

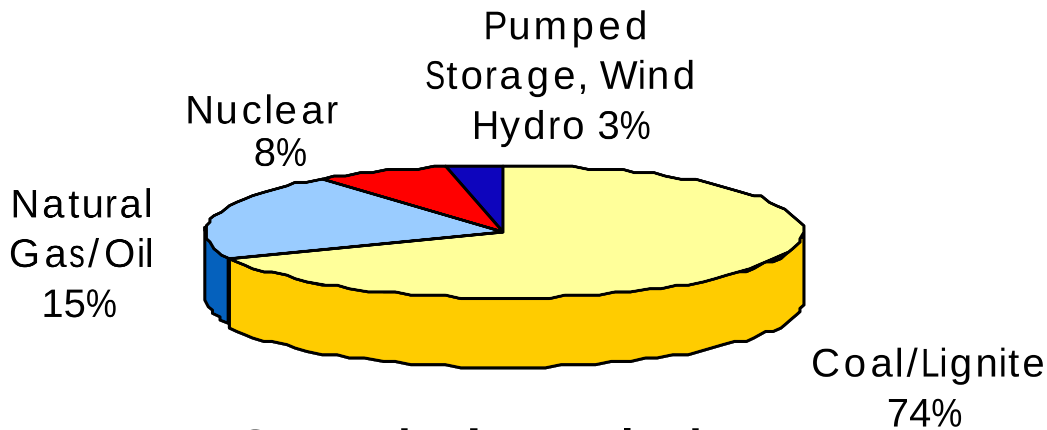


Generation	36,000 MW capacity
Transmission	38,953 miles
Distribution	200,930 miles
Customers	5 million

FUTURE EARNINGS GROWTH DRIVEN BY NATIVE LOAD GROWTH & SUBSTANTIAL UTILITY INVESTMENT OPPORTUNITY

AEP®

Fuel Mix & Operating Statistics



Capacity by Fuel Mix

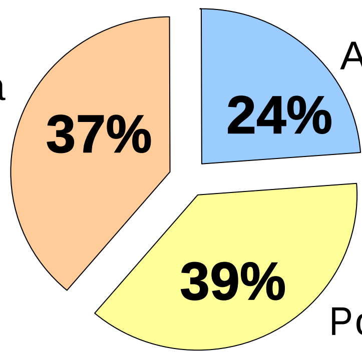
- 36,000 MW domestic capacity
- 85% system availability factor for YE 2004
- 62% system capacity factor for YE 2004

GENERATION FLEET IS SUBSTANTIAL AND LOW COST

AEP®

Coal Procurement

AEP SYSTEM

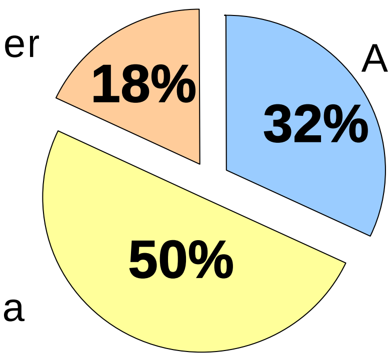


Coal Supply

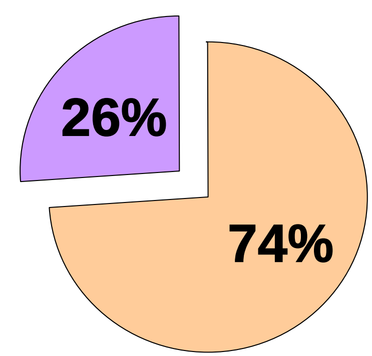
(on average)

- Purchase 75 MM tons per year
- Ave. delivered price ~ $28.50/ton in 2004
- Essentially 100% purchased for 2005
- Approximately 10% price increase in 2005

EASTERN SYSTEM



WESTERN SYSTEM

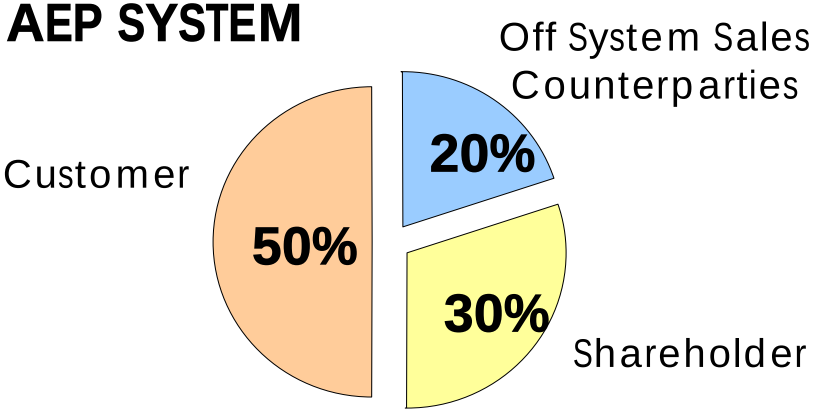


AEP®

6

Fuel Recovery

AEP SYSTEM

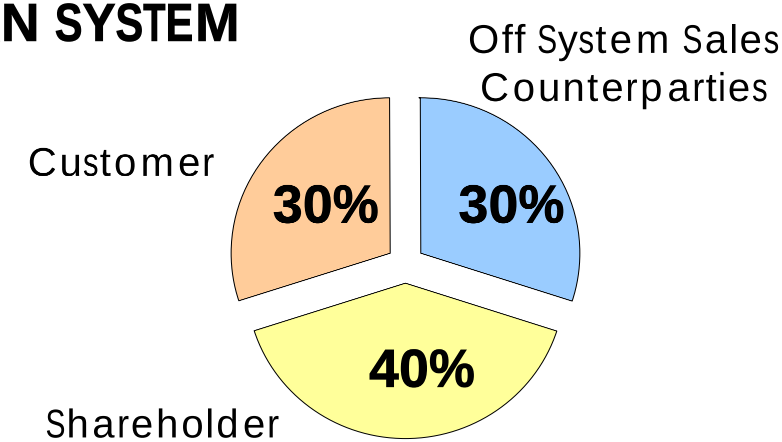


Fuel Cost Recovery
(on average)

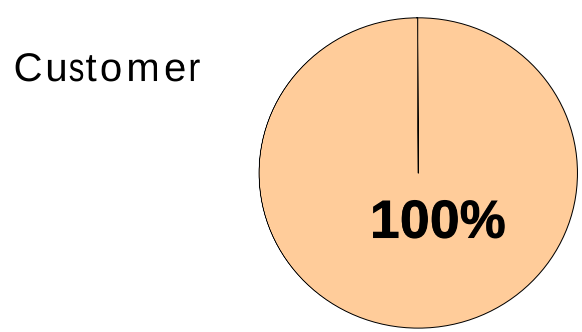
- Fuel recovery varies by jurisdiction
- 70% of fuel costs is recoverable across the AEP System
- Active Fuel Clause Jurisdictions:

AEP EAST: AP-VA, I&M, KGP, KP
AEP WEST: PSO, SWEPCO

EASTERN SYSTEM

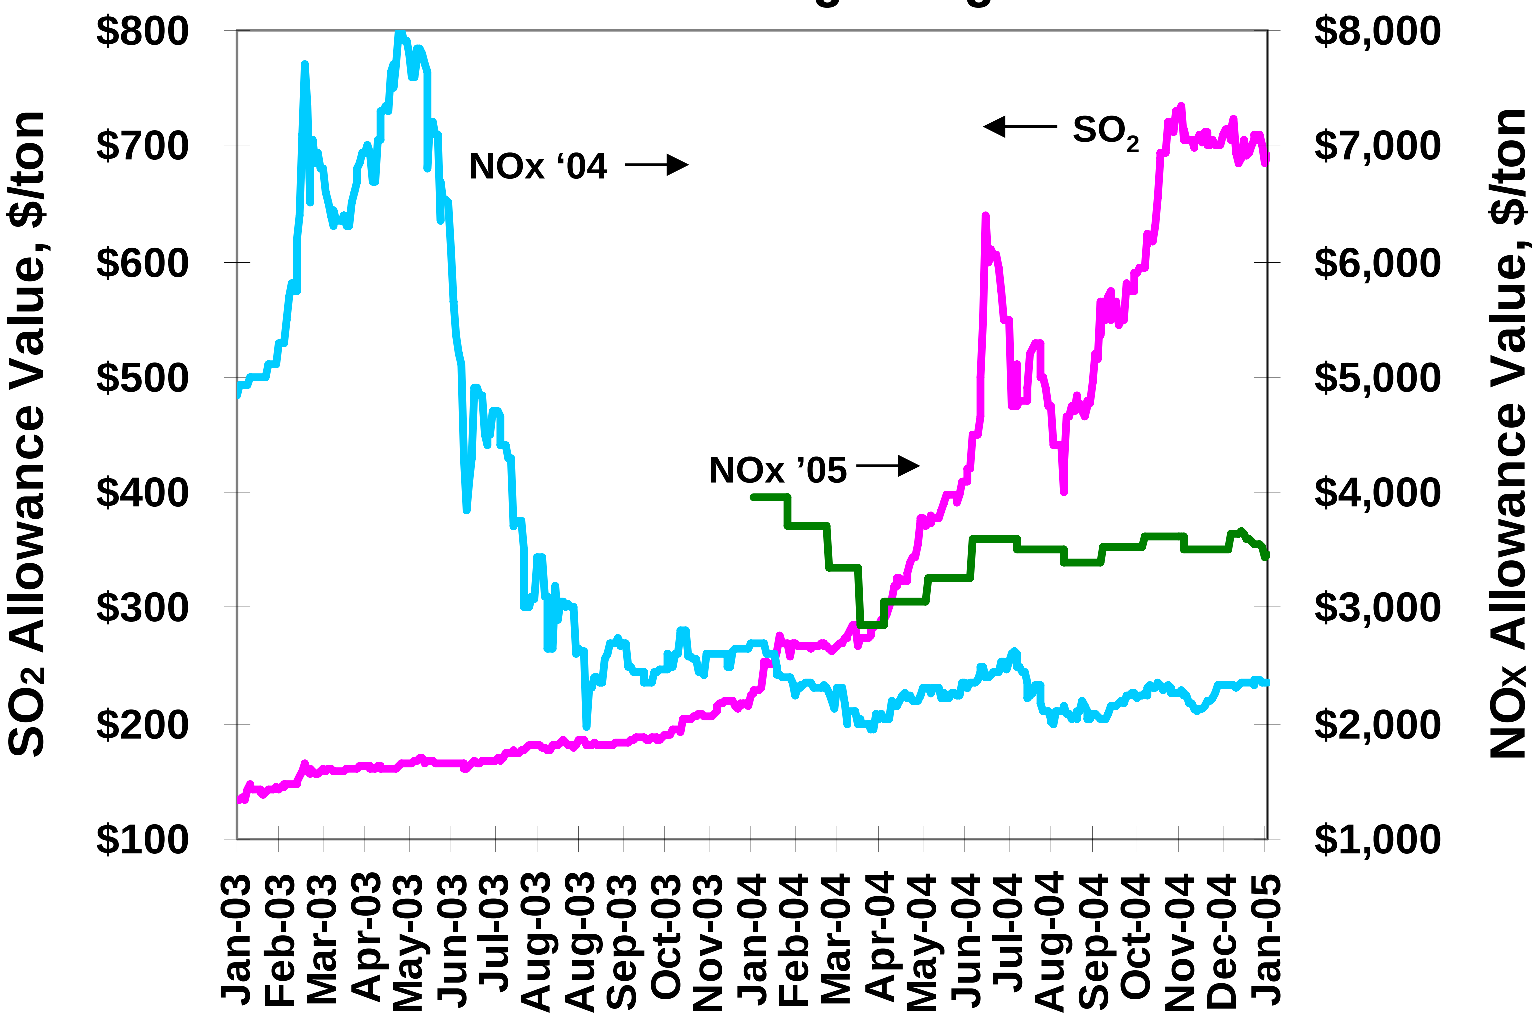


WESTERN SYSTEM



Emission Allowance Prices

Allowance prices for SO_2 and NOx have been extremely volatile since the beginning of 2003

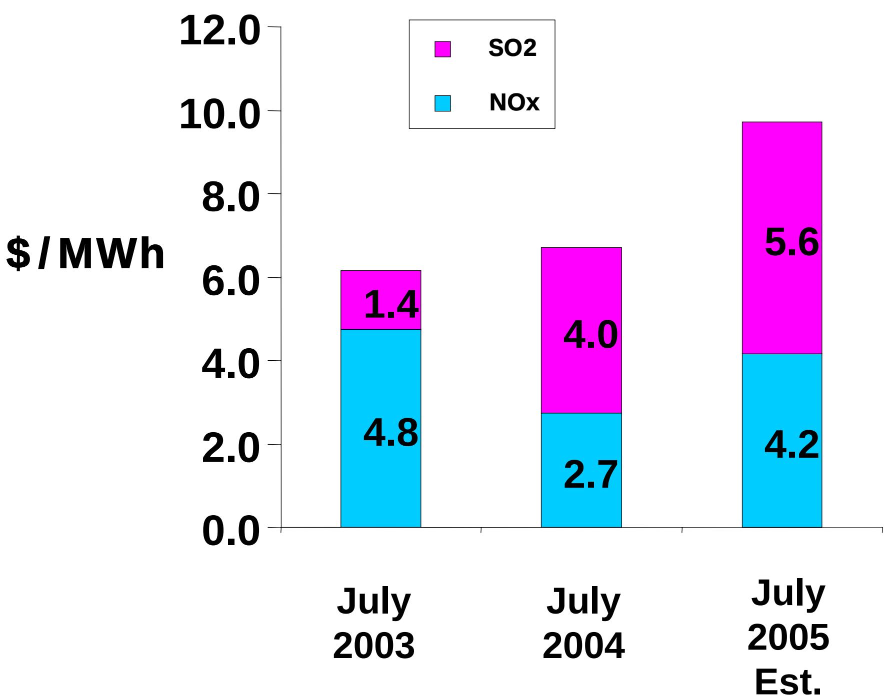


AEP®

2

Market Value vs. Inventory Cost

Profile of Uncontrolled Power Plant exposed to Market Value of Emission Credits



Basis – Coal Plant
9.5 MMBtu/MWh Heat Rate
0.25 lbs NOx/mmBtu
1.67 lbs SO_2/mmBtu

AEP has managed its exposure to rising emission allowance costs

- Inventory cost of emission credits is low
- Effective hedging program for SO_2 allowances
- Effective capital implementation in the NOx SIP Call ($1.3 B)
- Exposure in future years reduced by $3.7 B capital program and current inventory of allowances

AEP®

Operating In PJM Environment

- **Cost of generation to serve retail customers**
  - Retail customers continue to receive the benefits of AEP's lowest generation on an hourly basis

- **Off-system sales margin**
  - October-December was a learning period; results steadily improved each month
  - 4th quarter off-system sales margin was in line with budget

WE CONTINUE TO APPLY LESSONS LEARNED IN PJM TO MAXIMIZE THE VALUE OF OUR GENERATION FLEET

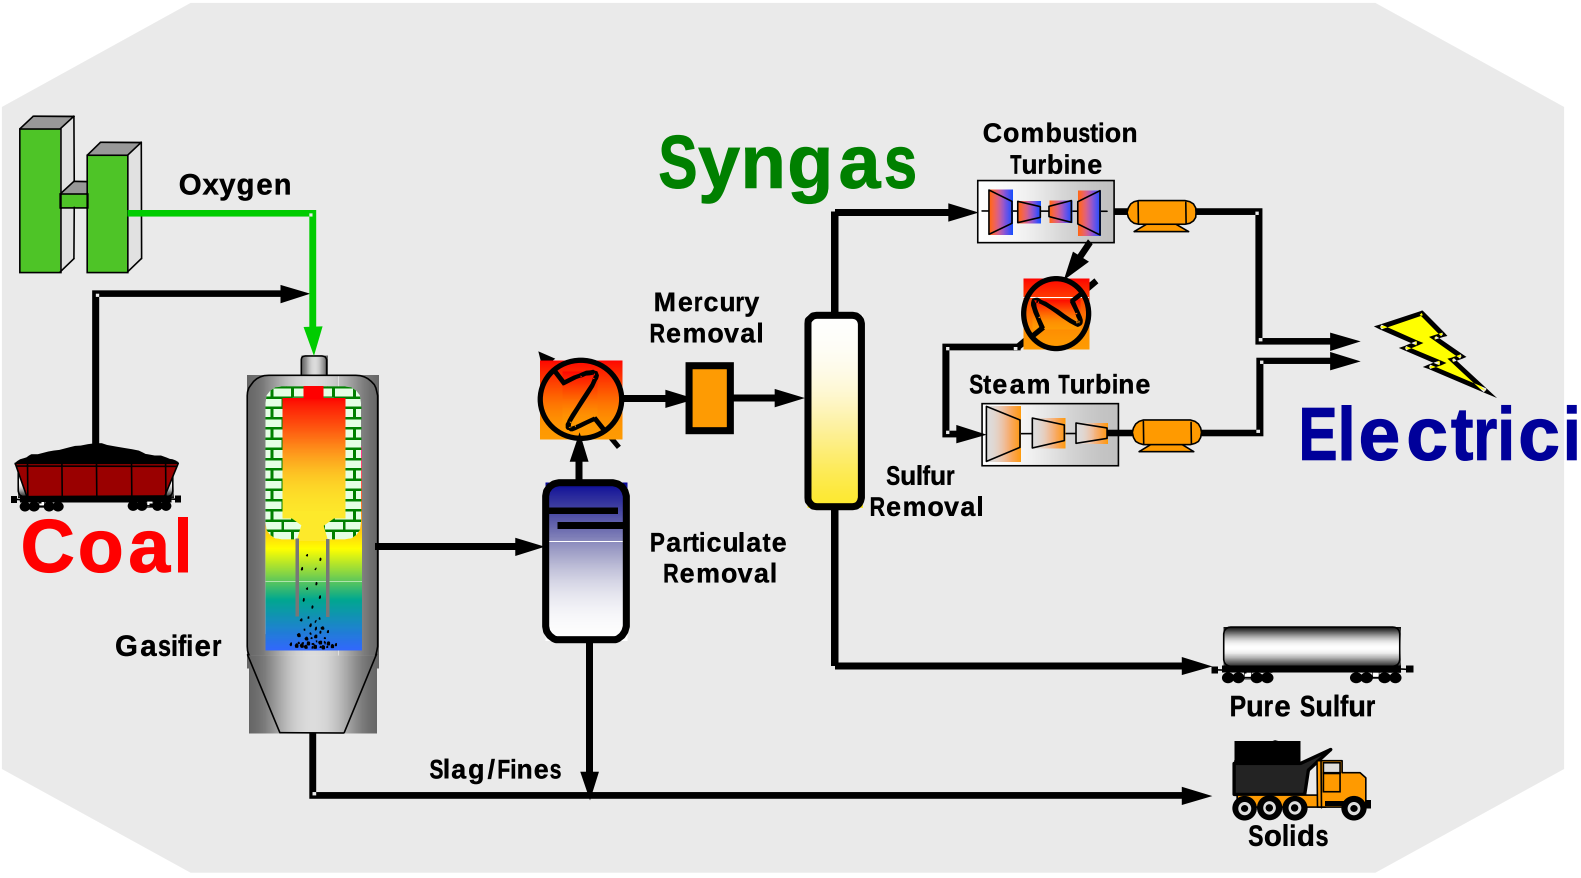
AEP®

Investment To Drive Utility Earnings Growth

- **Investment in new generation: IGCC**
- **Environmental Investment: $3.7 billion 2004- 2010**
- **Energy Delivery Investment**

GROWING EARNINGS THROUGH ADDITIONS TO THE ASSET BASE

IGCC Technology



Source: US Department of Energy

Source: US Department of Energy

Comparison Of Technology Options

IGCC vs. Pulverized Coal and Natural Gas Combined Cycle

	PC	IGCC	NGCC
Nominal Capacity (MW)	600	600	530
Heat Rate (BTU/kWh)	8700	8500	7000
EPC Cost* ($/kW)	1200	1450	400
Total Plant cost** ($/kW)	1450	1750	470
Variable Production Cost*** ($/MWh)	16	14	37

* EPC includes the cost to engineer, procure and construct plant.
** Total plant cost include land, overheads, AFUDC, etc.
*** Assumes Northern App Coal @ $37/ton, no emission credits and $5.00 gas

STRATEGIC ADVANTAGE OF IGCC OUTWEIGHS LEAST COST CONSIDERATION

AEP®

Site Selection Considerations

- Brownfield site vs. Greenfield site
- Sufficient Space
  - Flat area with adequate construction access
  - 600 acres
- Fuel delivery options
  - Rail/barge/truck
  - Up to 4 million tons/year of coal
  - Access to water
- Transmission Line Costs
  - Distance from high-voltage lines
  - Costs for grid interconnects and stability impacts

PJM EVALUATION REQUESTED FOR 3 POTENTIAL SITES

AEP®

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 2604 of 9556

IGCC Permitting Issues

- Air – to evaluate best available control technology (BACT)
- Wastewater – to understand wastewater streams
- US COE (Corp of Engineers) – to obtain permits for construction of river facilities
- NEPA Process – (National Environmental Policy Act)– Environmental site studies addressing wetlands, endangered species, historical artifacts

PERMIT PROCESS WILL TAKE 1 – 2 YEARS

AEP®

Next Steps

2005

- Secure regulatory cost recovery - June
- Finalize site selection - August
- Negotiate with suppliers – Throughout 2005

- 2005—2007: Obtain permits and finalize engineering and procurement

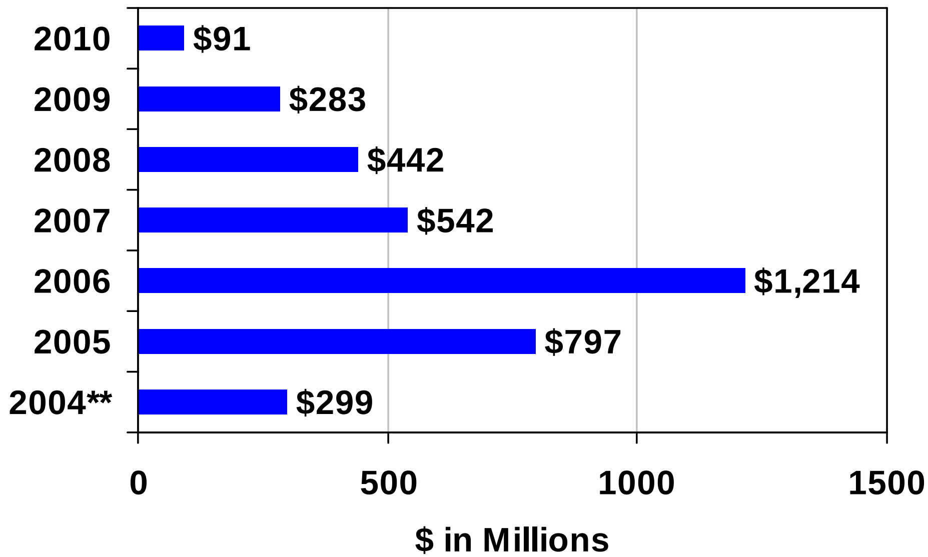
- 2008—2009: Construct and start-up plant

AEP®

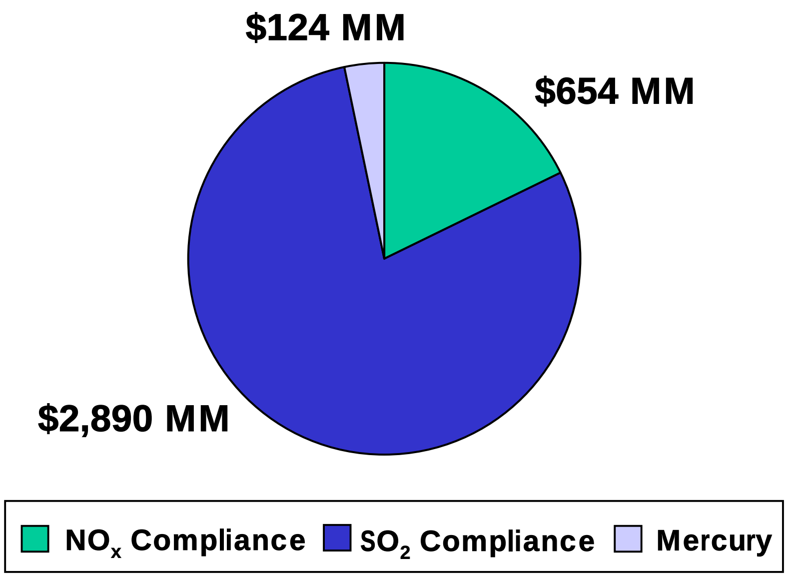
AEP WILL PIONEER CONSTRUCTION OF LARGEST IGCC PLANT IN THE WORLD

Environmental Investment: $3.7 Billion Through 2010

Environmental Capital Investment*



Compliance Allocation



*Environmental investment for NOx, SO_2 , & Hg purposes
** Actual investment level in 2004

Current Programs

$1.9 Billion:

$0.6 billion for NOx

$1.2 billion for SO_2

Future Programs

$1.8 Billion:

$1.7 billion for SO_2

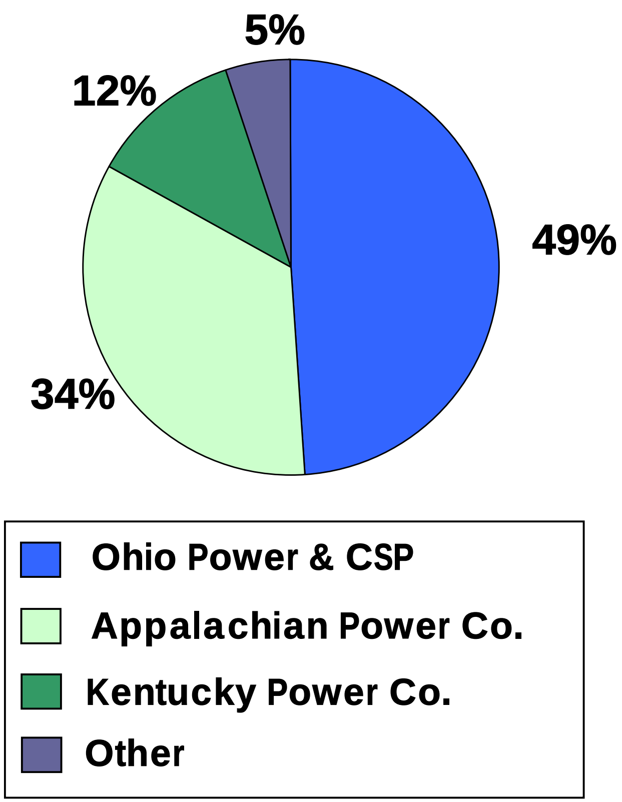
$0.1 billion for Other

MAJORITY OF 2005 & 2006 DOLLARS WILL BE INVESTED IN OHIO & APCO

AEP ®

Environmental Spending by Company

Projected Environmental Investment Allocation



Funding the Environmental Investments

- **Ohio**: 49% ($1.8 billion)
  - Rate stabilization plan annual increases at CSP – 3% and OP – 7% beginning in 2006 through 2008
- **Virginia/West Virginia**: 34% ($1.2 billion)
  - VA: Environmental cost recovery mechanism/two rate case opportunities through 2010
  - WV: General rate case filing
- **Kentucky**: 12% ($433 million)
  - Surcharge mechanism

AEP®

Environmental Investment

Plants under consideration:

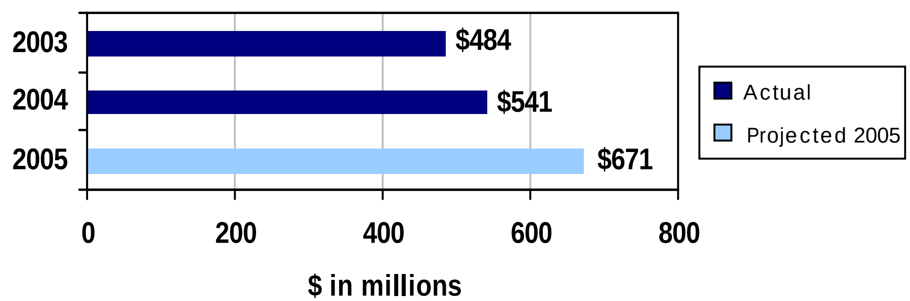
Install Scrubbers:	Install SCRs:
<u>2006 - 2010</u>	<u>2005 - 2007</u>
Mitchell	Muskingum
Mountaineer	Amos
Cardinal	Mitchell
Amos	
Big Sandy	
Muskingum	
Conesville	

AVERAGE VARIABLE COSTS WILL BE $18 - $21 PER MWh

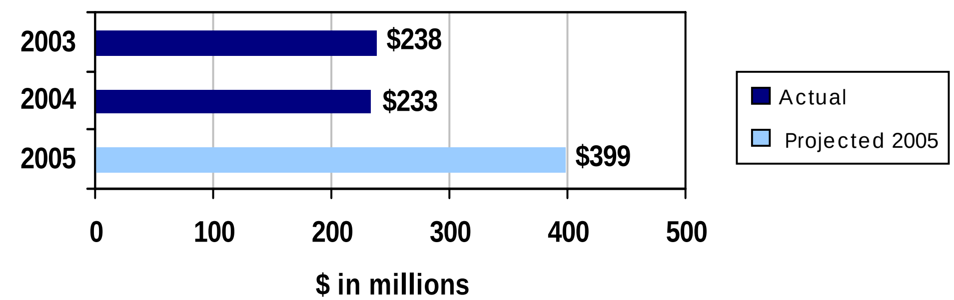
AEP®

Energy Delivery Investment

Distribution Capital Expenditures



Transmission Capital Expenditures



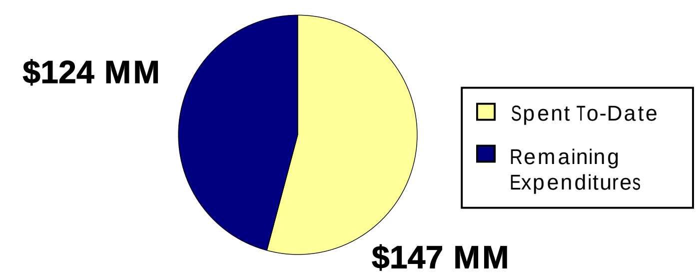
Operating Company	Transmission & Distribution 2003	2004	2005 *
AEP Ohio	$ 181	$ 210	$ 214
Appalachian Power	147	200	283
Indiana Michigan Power	69	68	89
Kentucky Power	27	25	35
AEP Texas	140	131	262
Public Service Co. of Oklahoma	70	70	85
Southwestern Electric Power	88	70	102
	$ 722	$ 774	$ 1,070

Notes:

* Represents projected capital expenditures for 2005

Major Capital Project

Wyoming/Jackson Ferry 765 kV Line



Project should increase average T&D rates from 2.0 cents to 2.04 cents/kWh

INVESTMENT IN ENERGY DELIVERY WILL CONTINUE TO BE SUBSTANTIAL

Managing the Regulatory Process

- **Current Regulatory Activity**
  - TCC Wires Rate Case
  - TCC Stranded Cost Recovery
  - PSO Rate Case
  - Louisiana Rate Review
- **Planned Regulatory Activity (2005-2007)**
  - FERC Transmission Rate Case
  - General Rate Cases in all AEP East jurisdictions to seek recovery of investment:
    - IN, KY, MI, TN, VA, WV

BRING CASH IN THE DOOR TO COVER CAPITAL EXPENDITURES & GROW EARNINGS THROUGH ADDITIONS TO THE ASSET BASE

AEP®

Ohio Rate Stabilization Plan Recap

Summary of Impact (Columbus Southern Power & Ohio Power):

	Income				Incremental Cash			
Rate Stabilization Plan	**2005**	**2006**	**2007**	**2008**	**2005**	**2006**	**2007**	**2008**
Escalation of Generation Rate	0	83	173	271	0	83	173	271
POLR Rider/Recovery of RTO Costs**	21	0	0	0	0	7	7	7
POLR Rider/Return on Environmental Additions	44	26	26	26	0	41	41	40
Total RSP Impact	**65**	**109**	**199**	**297**	**0**	**131**	**221**	**318**
Pre-Existing Electric Transition Plan								
Elimination of 5% Residential Generation Credit*	0	25	25	26	0	25	25	26
Recovery of RTO costs**	0	29	29	29	0	29	29	29
Total ETP Impact	**0**	**54**	**54**	**55**	**0**	**54**	**54**	**55**

* Elimination of 5% credit is per Statute, and part of pre-existing ETP, not the RSP

** Recovery of administrative RTO costs, net congestion fees and ancillary services permitted in pre-existing ETP, but the RSP allows for recovery of 2005 costs as well

AEP WILL STILL HAVE AMONG THE LOWEST RETAIL RATES IN OHIO

AEP®

Defining the Ohio Operating Environment Post-2008

21	**ON-GOING EARNINGS**	924	2.33	936	2.40

2005 Earnings Drivers

- *Retail sales increase due to return to normal weather and economic growth*
- *Lower Texas Supply due to sale of TCC assets; lower third-party Transmission margin partially offset by higher off-system sales prices*
- *Higher operating expense partially offset by lower interest expense; 2004 and 2005 Other Income and Deductions include return on Texas Stranded Cost of $109MM and $101MM, respectively*
- *Reflects sale of HPL and paydown of debt*
- *Lower interest due to debt retirements and assignment of debt to subsidiaries; 2004 includes unfavorable effect of enforcement provisions*

AEP®

TCC Stranded Cost Carrying Charge

Carrying Cost Details:

Amount Recorded for 2002 & 2003	**$193 Million**
Amount Recorded for 2004	**$109 Million**
Estimated amount for 2005	**$101 Million**

Simplified Calculation:	
Initial Stranded Cost Base	$1.34 billion
@ debt component of the11.79% pre-tax cost of capital	8.12%
Amount (subject to limitation of actual TCC interest expense)	$109MM

Items included in stranded cost base include:
Stranded Plant costs ($900 MM), Regulatory Assets ($249 MM), ECOM ($483 MM), less Over-recovered fuel ($212 MM) and retail clawback ($61 MM) and Unrefunded excess earnings ($10 MM). Carrying costs are also included and compounded monthly.

EQUITY COMPONENT RECOVERABLE ONCE AN ORDER IS RECEIVED

Merrill Lynch

Global Power & Gas Leaders Conference

Millennium Broadway
New York City

September 26, 2006

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Michael G. Morris
Chairman, President & CEO

2006 Accomplishments

- Reached settlement on Texas securitization amount. Planning to issue securitization bonds in October 2006 of $1.7 billion.
- Successfully settled rate cases in West Virginia ($129MM over 3 years), Kentucky Power ($41MM), FERC transmission ($22MM) & Ohio OATT ($89MM)
- Began implementation of Ohio RSP & obtained approval to recover storm damage costs
- Received approval from PUCO to proceed with first phase of IGCC construction and recover costs
- Completed & dedicated Wyoming-Jackson Ferry 765-kV line
- Increased 2006 earnings guidance range to $2.65 - $2.80 per share

AEP IS WELL ON ITS WAY TO ESTABLISHING A TRACK RECORD OF REGULATORY SUCCESS

Regulatory Activity Underway

- TCC Securitization of Stranded Costs
- TCC Request for CTC for other true-up items
- Indiana Depreciation Petition
- APCo General Rate Case Filing in Virginia
- APCo Filing for Recovery of E&R Costs in Virginia
- IGCC – Received Rate Authorization of Pre-Construction Costs
- FERC Regional Rate Design
- FERC SECA Revenues

YEAR-TO-DATE, SECURED $415 MILLION OF THE $500 MILLION RATE RECOVERY ASSUMED IN 2006 EARNINGS GUIDANCE RANGE

Regulatory Activity Underway

TCC Stranded Cost Recovery Case

Securitization Order: Financing Order received June 20

- Securitization amount of $1.697 billion plus estimated bond issuance costs ($23 million resulting in $1.72 billion requested to be securitized)
- Securitization order not appealable
- Issuance of securitization bonds expected in early October

Requested approval for CTC to address other true-up items in June 2006

- Requested $355 million net credit to customers over 8 years
- Additionally requested portion be deferred, pending the outcome of 2 contingent federal matters, including $16 million of FERC jurisdictional fuel over-recoveries and $97 million related to ADITC and EDFIT
- PUCT approved settlement of an interim CTC on September 7, returning $64MM retail clawback to residential customers by year end.
- Hearings re permanent CTC were held September 14, 2006 and decision is expected in November

Regulatory Activity Underway

Indiana Depreciation Filing

- December 1, 2005 – I&M filed petition with the IURC for accounting authorization to revise the depreciation rates applicable to its electric utility plant in service decreasing annual depreciation expense by approximately $45 Million on an after-tax Indiana jurisdictional basis.
- Hearings have been held with final order expected in third quarter 2006

Appalachian Power - Virginia E&R & General Rate Case Activity

Virginia E & R Cost Recovery Factor - Filed July 1, 2005 with a supplemental filing, with updated actual E&R costs incurred through September 30, 2005 of $21.1 million

- Hearings held, awaiting Commission Order

Virginia General Rate Case Filing – Filed May 4, 2006 – Seeking $225.8MM increase in base rates, partially offset by a proposed credit to reflect sharing of $27.3MM in margins from off system sales (OSS), resulting in a net annual increase of $198.5MM.

- May 30, 2006 – SCC suspended the effective date of the rates until 10/2/06, upon which, the full rate increase requested by APCO-VA will be implemented, subject to refund.

<u>Procedural Schedule</u>

Oct. 4, 2006	Intervenor testimony due
Oct. 24, 2006	SCC Staff testimony due
Nov. 9, 2006	Company to file rebuttal testimony
Dec. 6, 2006	Evidentiary Hearings to commence

Regulatory Activity Underway

FERC

Regional Rate Design

- At our urging, the FERC instituted an investigation of PJM's zonal rate regime
  - Present regime may need to be replaced
  - Consider establishing regional rates that would compensate AEP, among others, for the regional transmission service proved by high voltage facilities they own that benefit customers throughout PJM
- July 2006 ALJ rendered initial decision finding:
  - License Plate rates for existing facilities (effective April 1, 2006 when SECA ended) <u>are not</u> just and reasonable, and must be replaced
  - Staff's proposal for a "Postage Stamp" rate phased in so as to limit increases in any one pricing zone to 10% per year is best choice for replacing current rates
  - Staff's proposed rate design would produce slightly more net revenue for AEP than the original AEP/Allegheny Power proposal, when fully effective
- Exceptions and replies to the exceptions have been filed; Order expected by the Commission late 2006/2007

Seams Elimination Cost Allocations (SECA) Revenues

- August 2006 ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
  - Up to $111 million SECA revenues could be disallowed, net of unused provisions
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both
- Exceptions filed Sept. 11, with Replies due Oct. 2: Order expected by the Commission in early 2007
- We will vigorously appeal the ALJ's decision

Post ’08 Environment in Ohio

Potential Outcomes at Conclusion of Current Rate Stabilization Period

Some Form of Regulation

- Requires Legislation

Flashcut to Market

- Could Stifle Economic Development in Ohio

Second Period of Rate Stabilization Plan

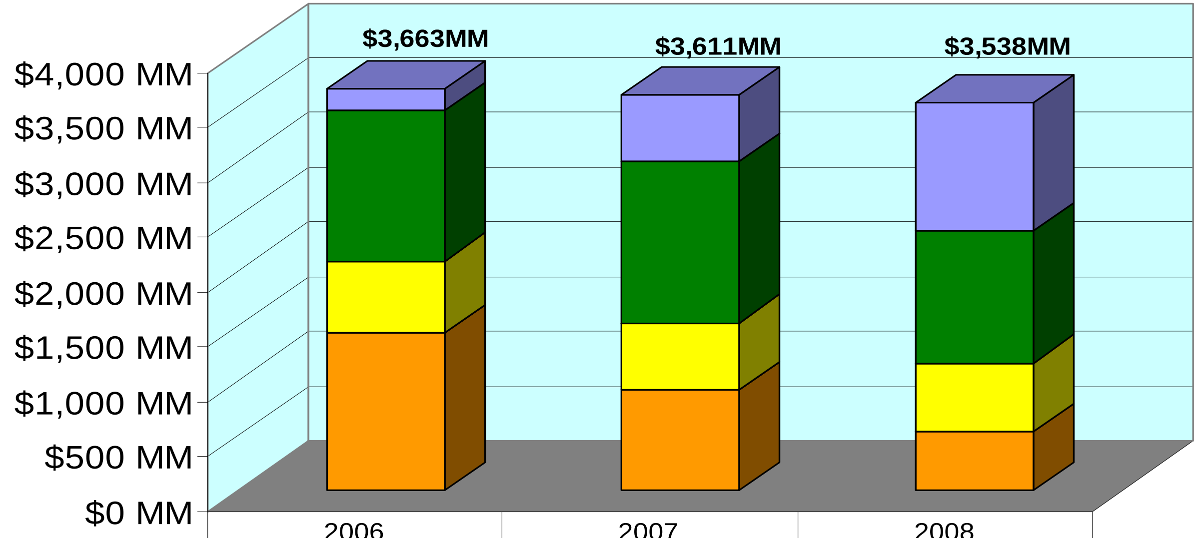
- AEP advocates this approach

SOUND PUBLIC POLICY, WHICH COULD INCLUDE A COMBINATION OF THE ABOVE, SHOULD BALANCE ALL STAKEHOLDER EXPECTATIONS

2006 Revised Capital Investment Forecast

Capital Investment Forecast

excluding AFUDC



New Build Generation & Ongoing Infrastructure Replacement investment can be throttled

	2006	2007	2008
New Build Generation	$191	$611	$1,174
Ongoing Infrastructure Replacement & Economically Justified	$1,381	$1,473	$1,203
Mandated T&D	$650	$615	$625
Environmental Compliance	$1,441	$912	$536

Note: Capital forecasts do not include amounts for AEP Interstate Project.

2006 TOTAL CAPITAL INVESTMENT LEVEL HAS BEEN REDUCED BY $60MM TO $3.663 BILLION

Environmental Investment

FGD – Reduces SO_2 by 95% to 98% → **Co-Benefit Hg Capture** ← SCR - Reduces NOx by 90%

Completed

Plant Name	MW Capacity

INSTALLATION OF SCR AND FGD WILL ALLOW OUR COAL FLEET TO REMAIN EXTREMELY COST COMPETITIVE

Materials and Vendors – AEP's Advantage

Cost Management of Materials

Breakdown of Environmental Compliance Program
Percentage of Purchased Costs

Typical Vendors

- FGD
  - Spray Tower – B&W/Alstom
  - Jet Bubbling Reactor – B&V Chyioda
- Stack Supplier
  - Pullman Power Inc.
- SCR
  - Babcock Power
- Architect Engineering Firms
  - Black & Veatch
  - Sargent & Lundy
  - Shaw – Stone & Webster
  - Worley Parsons

New Generation

IGCC

- June 2006 – PUCO approved tariff to recover Phase 1 pre-construction costs ($24MM) over 12-month period effective July 1, 2006
- Expect to obtain permits and finalize engineering by 2007
- Construction of 600 MW facility to begin in OH in 2007, assuming regulatory approval
- Certificates of Convenience and Necessity (CCN) applications filed in OH and WV and currently in process.

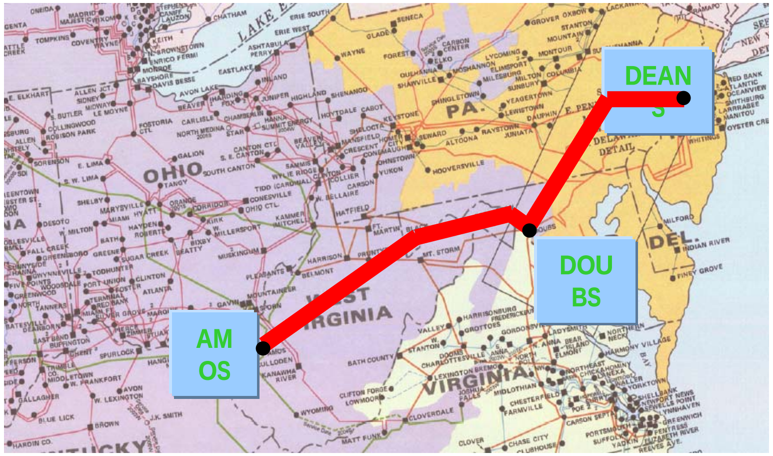
SWEPCO

- May 31, 2006- Announced plans to build $1.7 billion of new generation
- Expected generation build includes a simple-cycle gas turbine totaling 320 MW at Tontitown, AR and combined-cycle gas plant totaling 480 MW at Arsenal Hill
- Aug 2006 – Announced plans to build $1.3 billion 600 MW base load ultra-supercritical coal-fueled plant – expected SWEPCO investment will be approx. 75%
- Commercial operation dates between 2007 and 2011

PSO RFPs

- 2H05 - Submitted RFPs for up to 1100 MW of peaking and baseload capacity in aggregate
- March 2006 - Two peaking RFPs totaling 340 MW awarded; commercial operation 2008
- July 2006 - Entered into JVA with OG&E to build 950 MW coal-fueled unit with goal to use ultra-supercritical technology – PSO will own 50% or 425 MW; commercial operation 2011

AEP Interstate Project



Map of the Proposed AEP Interstate Project 765 kV Transmission Line (Line route is conceptual and subject to change in regulatory and PJM Regional Transmission Expansion Plan processes)

- Line connects AEP's Amos 765 kV station to Allegheny Power's Doubs 500 kV station in Maryland, and terminates at PSEG's Deans 500 kV station in New Jersey
- Total line length is approximately 550 miles
- Will improve power transfer capability from the Midwest to the Mid-Atlantic by 5,000 MW
- Expected to cost $3 billion (subject to change based on a detailed investigation)
- Not yet determined which other non-AEP companies may be interested in participating
- Any financing activity relating to this project would be structured to allow AEP to meet its consolidated debt-to-cap target of approximately 60% and maintain its BBB credit rating
- Project expected to be in service in 2014

FERC CONDITIONALLY APPROVED REASONABLE COST RECOVERY, INCLUDING INCENTIVE ROE RATES AND CWIP

What AEP Offers

Utility Operations: The Platform for Growth & Financial Strength

1 Strength and scale in assets and operations

2 Focused utility business model

3 Earnings growth driven by native load & capital investment

4 Pioneering advanced technologies in the sector

5 Solid liquidity position and stable credit profile

6 Attractive dividend yield in excess of 4%

Investor Meeting Hosted by Merrill Lynch

AEP Headquarters
Columbus, Ohio
May 11, 2005

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to control operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

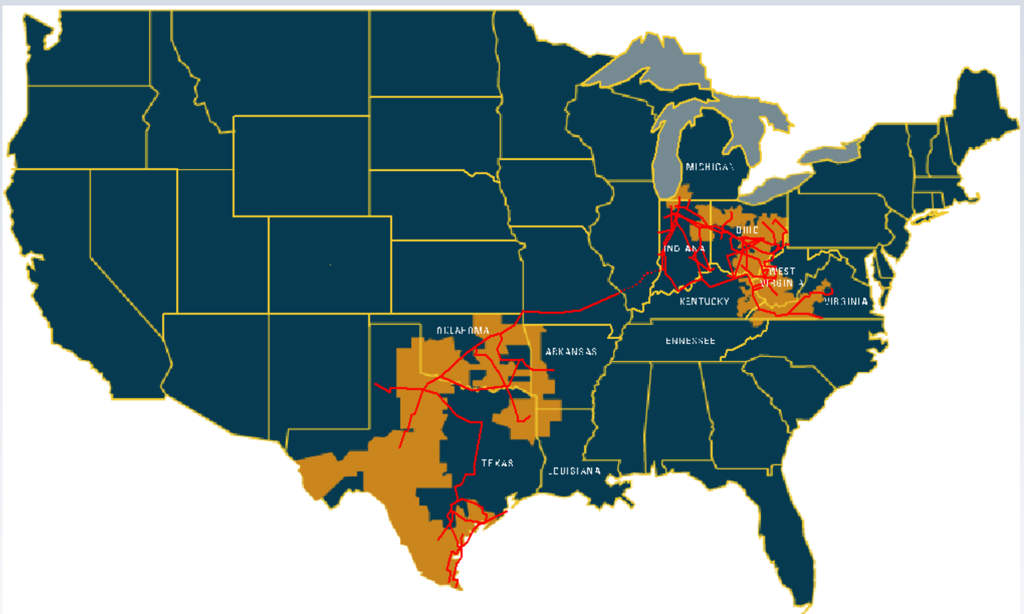
Asset Portfolio

Strength & Scale in Assets & Operations



Generation	36,000 MW capacity
Transmission	38,953 miles
Distribution	200,930 miles
Customers	5 million

FUTURE EARNINGS GROWTH DRIVEN BY NATIVE LOAD GROWTH & SUBSTANTIAL UTILITY INVESTMENT OPPORTUNITY

Generation Fleet Composition

- 36,000 MW Domestic Capacity
- 85% System Availability Factor YE 2004
- 62% System Capacity Factor YE 2004

Capacity by Fuel Mix

	Baseload	Load-Following	Peaking
PJM	24,226	0	586
ERCOT	1,719	0	0
SPP	4,828	3,516	188
Total*	**30,773**	**3,516**	**774**

* Figures do not include mothballed or decommissioned units (1,015 MW of capacity)

GENERATION FLEET IS SUBSTANTIAL AND LOW COST

Fuel, Emissions & Logistics

Introduction

The generation assets are co-managed by the Power Generation and the Commercial Operation Groups within AEP – each with a deliberate focus on roles and responsibilities within the organization

Power Generation
Operate 36,000 MW

Commercial Operations
Coal, gas, power and emissions markets

Fossil and Hydro Generation
Bill Sigmon, SVP

Generation Dispatch

Nuclear Generation

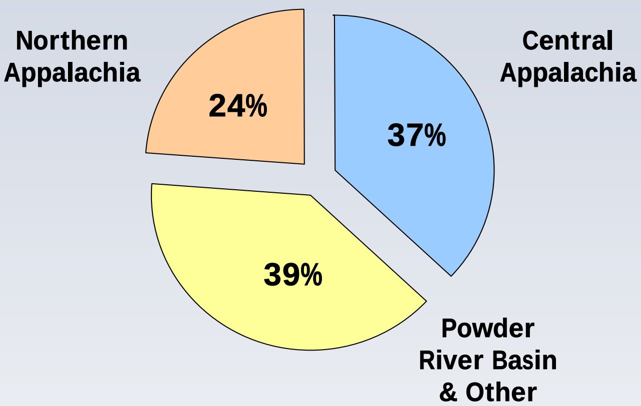
Energy Marketing
Brian Tierney, SVP

Engineering, Environmental & Technical Services
John McManus, VP Environmental Services

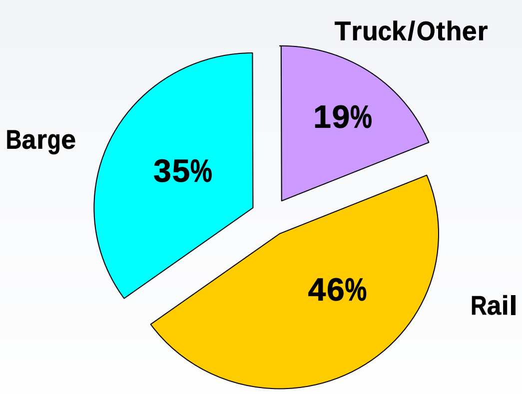
Fuel, Emissions & Logistics
Chuck Zebula, SVP

Fuel, Emissions & Logistics

FUEL BASIN DIVERSITY
73 million tons



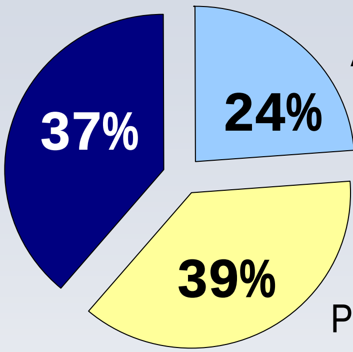
DELIVERY MODE DIVERSITY
25 GW coal capacity



- All fossil fuel activities including procurement, transportation, inventory, QA/QC, measurement, and coal trading;
- Market-based emission and renewable credit activities;
- Barge transportation, terminal, and railcar maintenance businesses;
- Procures all bulk consumables for use in combustion/emission removal;
- Optimizes all by-products of production including ash and gypsum;

Coal Procurement

AEP SYSTEM

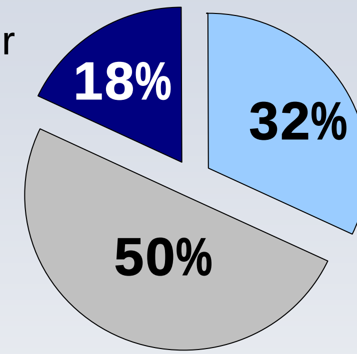


Coal Supply

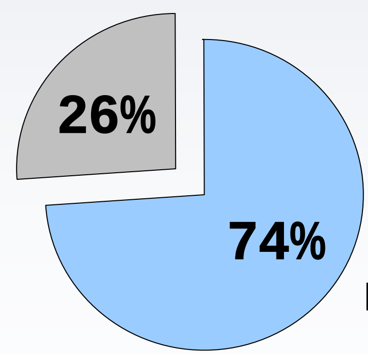
(on average)

- Purchase 75 MM tons per year
- Avg delivered price ~ $28.50/ton in 2004
- Essentially 100% purchased for 2005
- Approximately 10% price increase in 2005

EASTERN SYSTEM

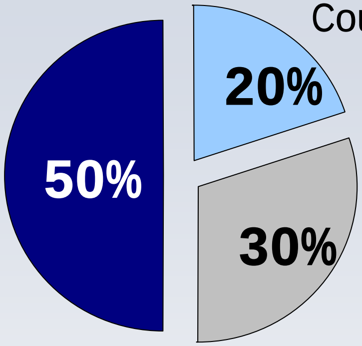


WESTERN SYSTEM



Fuel Recovery

AEP SYSTEM



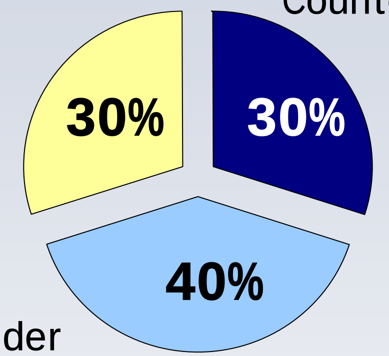
Fuel Cost Recovery

(on average)

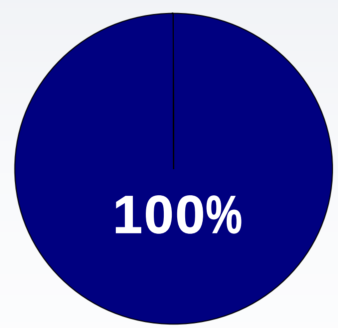
- Fuel recovery varies by jurisdiction
- 70% of fuel cost is recoverable across the AEP System
- Active Fuel Clause Jurisdictions:

AEP EAST: AP-VA, I&M, KGP, KP
AEP WEST: PSO, SWEPCO

EASTERN SYSTEM



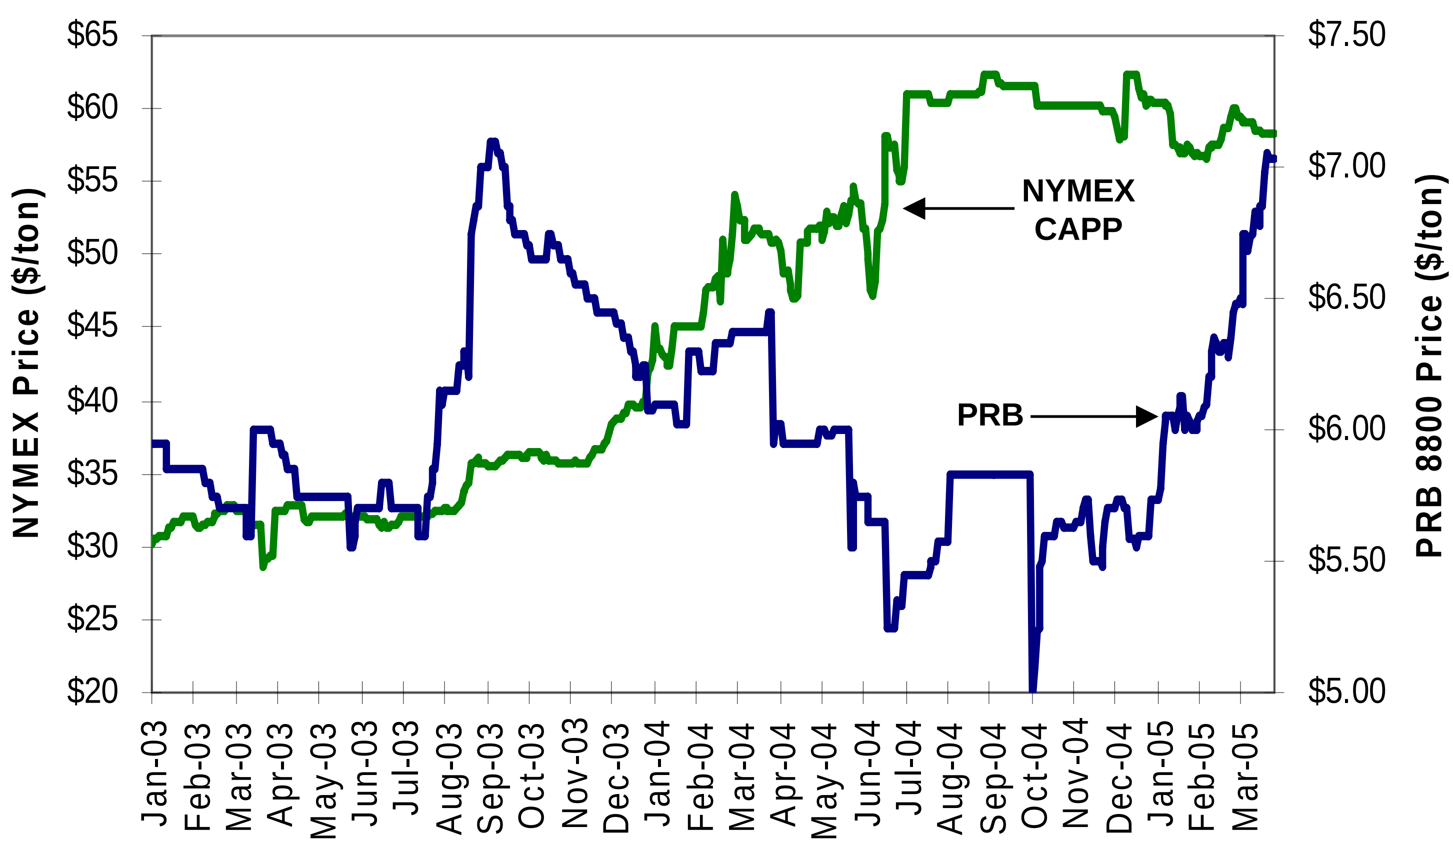
WESTERN SYSTEM



KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 2651 of 9556

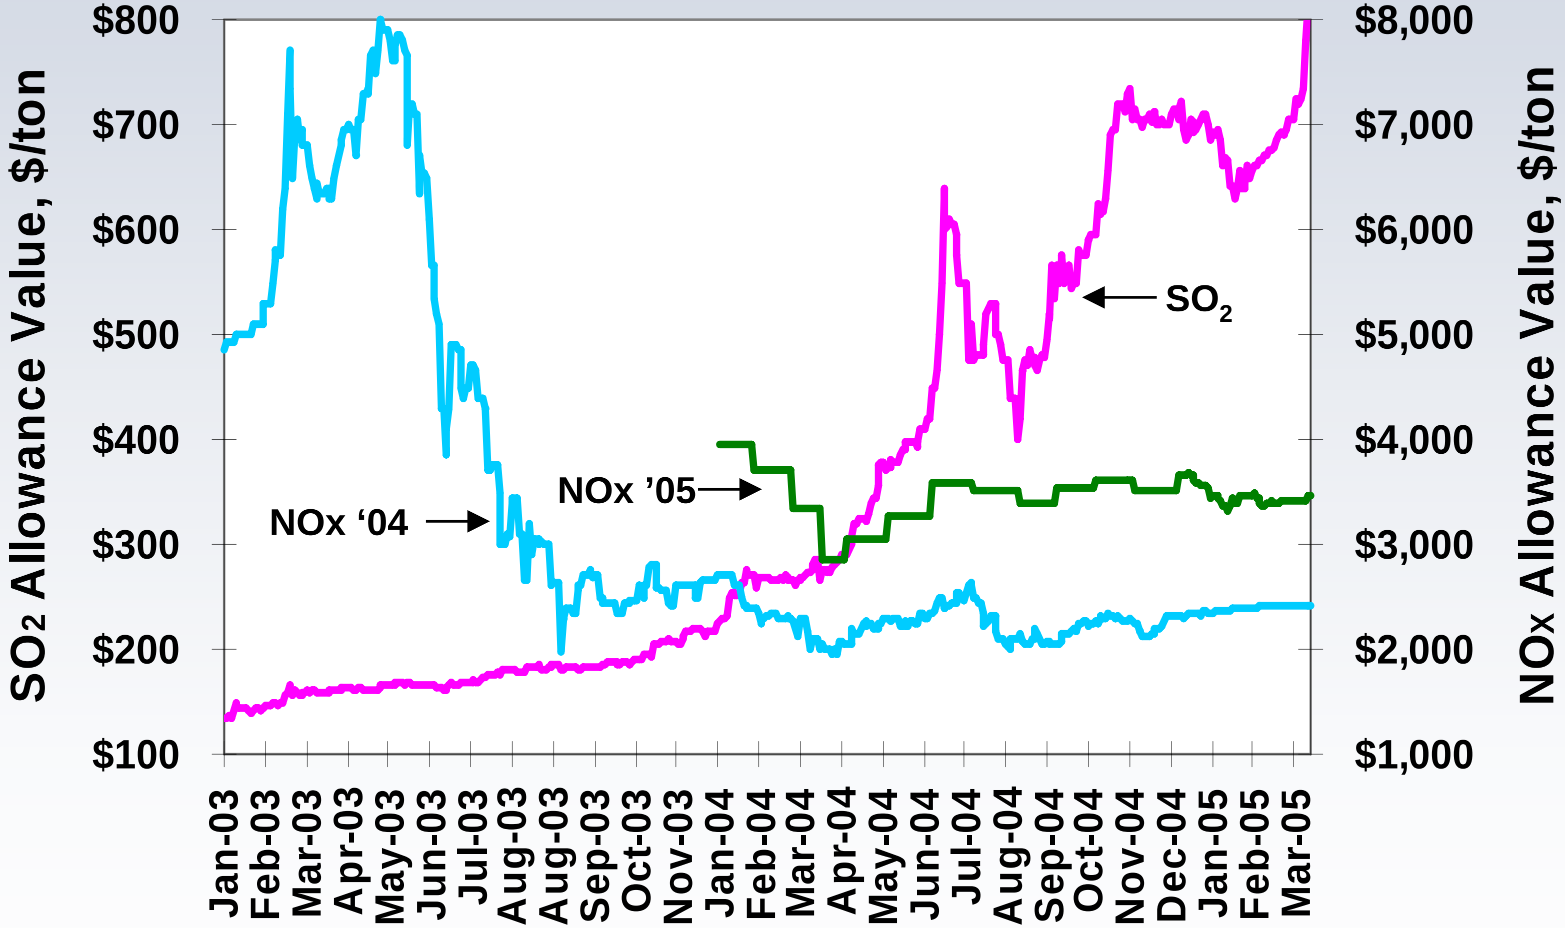
Coal Markets

The tale of two markets - one with labor, permitting and capacity constraints (CAPP) and the other with transportation bottlenecks and limited "immediate" substitution capability (PRB) but gaining strength



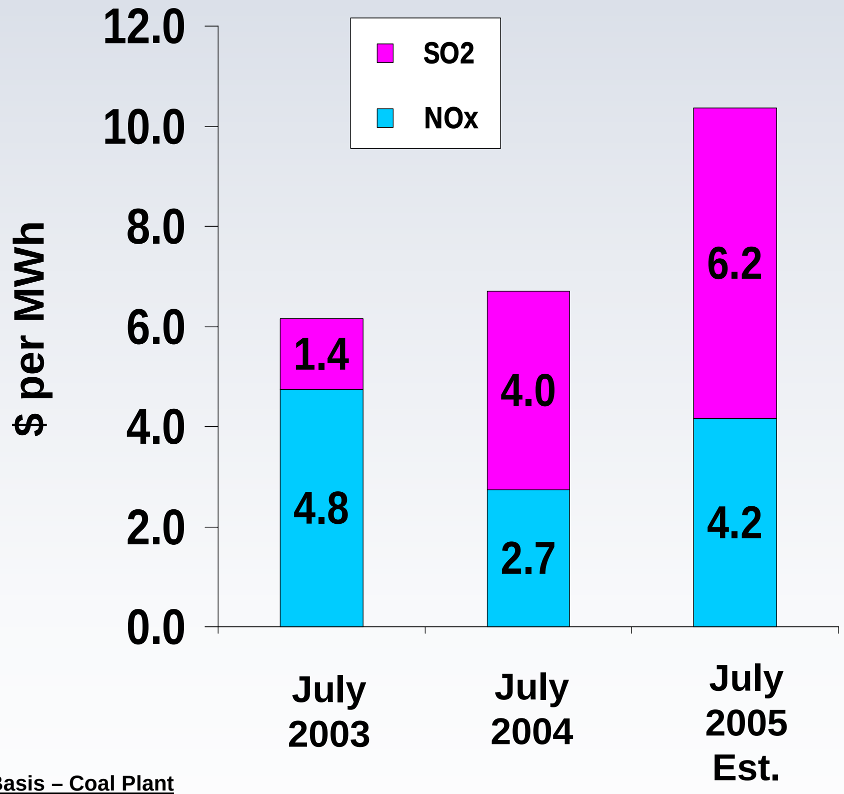
Emission Allowance Prices

Allowance prices for SO_2 and NOx have been extremely volatile since the beginning of 2003



Market Value vs. Inventory Cost

Profile of Uncontrolled Power Plant exposed to Market Value of Emission Credits



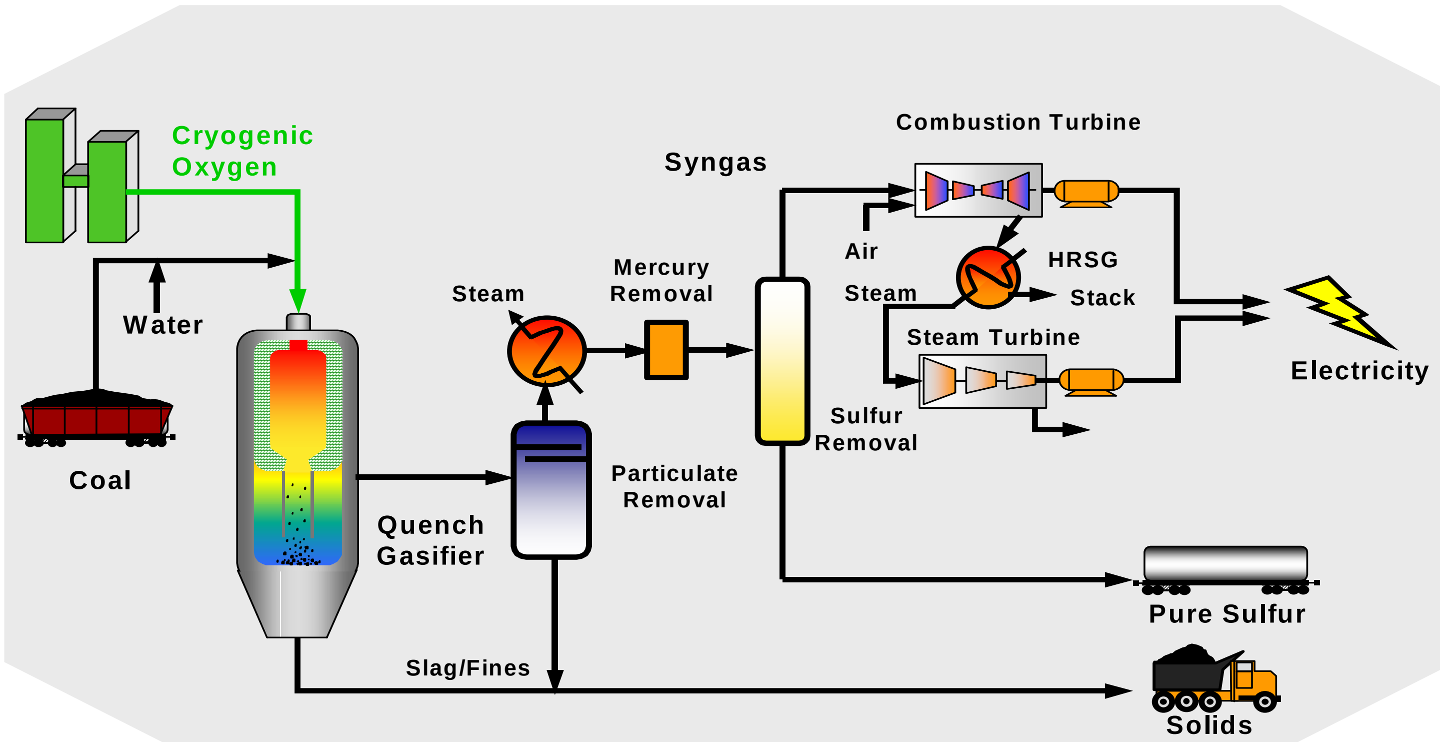
Basis – Coal Plant
9.5 MMBtu/MWh Heat Rate
0.25 lbs NOx/mmBtu
1.67 lbs SO_2/mmBtu

AEP has managed its exposure to rising emission allowance costs

- Inventory cost of emission credits is low
- Effective hedging program for SO_2 allowances
- Effective capital implementation in the NOx SIP Call ($1.3 B)
- Exposure in future years reduced by $3.7 B capital program and current inventory of allowances

Investing in IGCC

Looking to the Future - IGCC



162110 - GJS/CE-01/1-23-02

AEP has announced its intention to construct a commercial-scale Integrated Gasification Combined Cycle (IGCC) Plant by the end of the decade.

Investing in IGCC

	PC	IGCC	NGCC
Nominal Capacity (MW)	600	600	530
Heat Rate (BTU/kWh)	8700	8600	7200
EPC cost* ($/kW)	1290	1350	440
Total Plant cost** ($/kW)	1490	1610	475
Variable Production cost*** ($/MWh)	15	14	38
All-In Cost of Electricity (without CO2 Capture) ($/MWh)	47	50	57
Estimated Cost of Electricity (with CO2 Capture) ($/MWh)	76	70	91

Source: Electric Power Research Institute

* EPC includes the cost to engineer, procure and construct plant.

** Total plant cost include land, overheads, AFUDC, etc.

*** Assumes Northern App Coal @ $36/ton, no emission credits and $5.00 gas

Site Selection Considerations

- Brownfield site vs. Greenfield site
- Sufficient Space
  - Flat area with adequate construction access
  - 600 acres
- Fuel delivery options
  - Rail/barge/truck
  - Up to 4 million tons/year of coal
  - Access to water
- Transmission Line Costs
  - Distance from high-voltage lines
  - Costs for grid interconnects and stability impacts

PJM EVALUATION REQUESTED FOR 3 POTENTIAL SITES

IGCC Permitting Issues

- Air – to evaluate best available control technology (BACT)
- Wastewater – to understand wastewater streams
- US COE (Corp of Engineers) – to obtain permits for construction of river facilities
- NEPA Process – (National Environmental Policy Act)– Environmental site studies addressing wetlands, endangered species, historical artifacts

PERMIT PROCESS WILL TAKE 1 - 2 YEARS

Next Steps

2005

- Secure cost recovery plan – Summer
- Finalize site selection - Fall
- Negotiate with suppliers – Throughout 2005

- 2005—2007: Obtain permits and finalize engineering and procurement

- 2008—2009: Construct and start-up plant

AEP WILL PIONEER CONSTRUCTION OF LARGEST IGCC PLANT IN THE WORLD

Environmental

Clean Air Interstate Rule

- Rule Finalized March 2005
- CAIR designed to address the contribution of regional emissions to downwind $PM_{2.5}$ & 8-hour Ozone non-attainment
- CAIR reductions from 2003 emissions: ~73% SO_2; & ~61% NO_x
- Reductions occur in phases: Phase I (2009); Phase II (2015)
- CAIR established three Cap & Trade Programs:

1. Annual SO_2 Trading Program
2. Annual NO_x Trading Program
3. Separate Ozone-Season only NO_x Trading Program

CAIR Applicability to AEP

- AEP-East States & Louisiana subject to <u>all</u> three trading programs
- Arkansas subject <u>only</u> to the Ozone-Season trading program
- Texas subject to <u>only</u> the Annual NO_x & SO_2 trading programs
- CAIR does <u>not</u> apply to Oklahoma

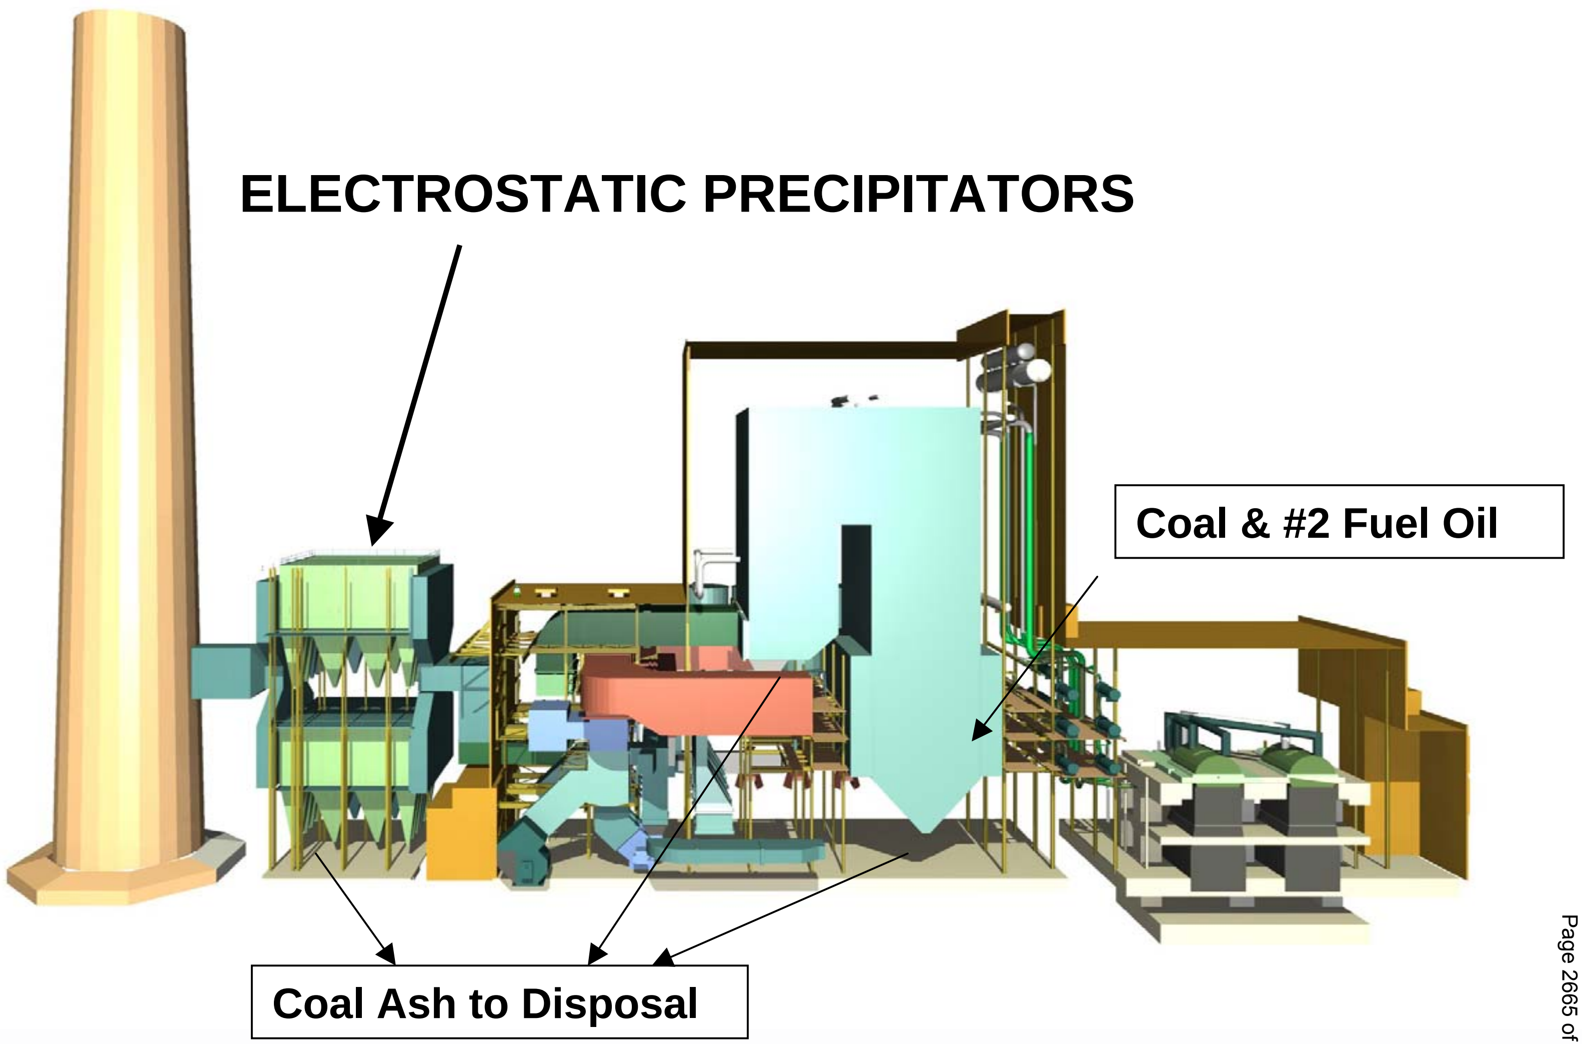
AEP WILL HAVE TO INSTALL ADDITIONAL SCR AND FGD SYSTEMS IN ORDER TO MEET THE EMISSION REDUCTIONS REQUIRED BY CAIR

Mercury Rule

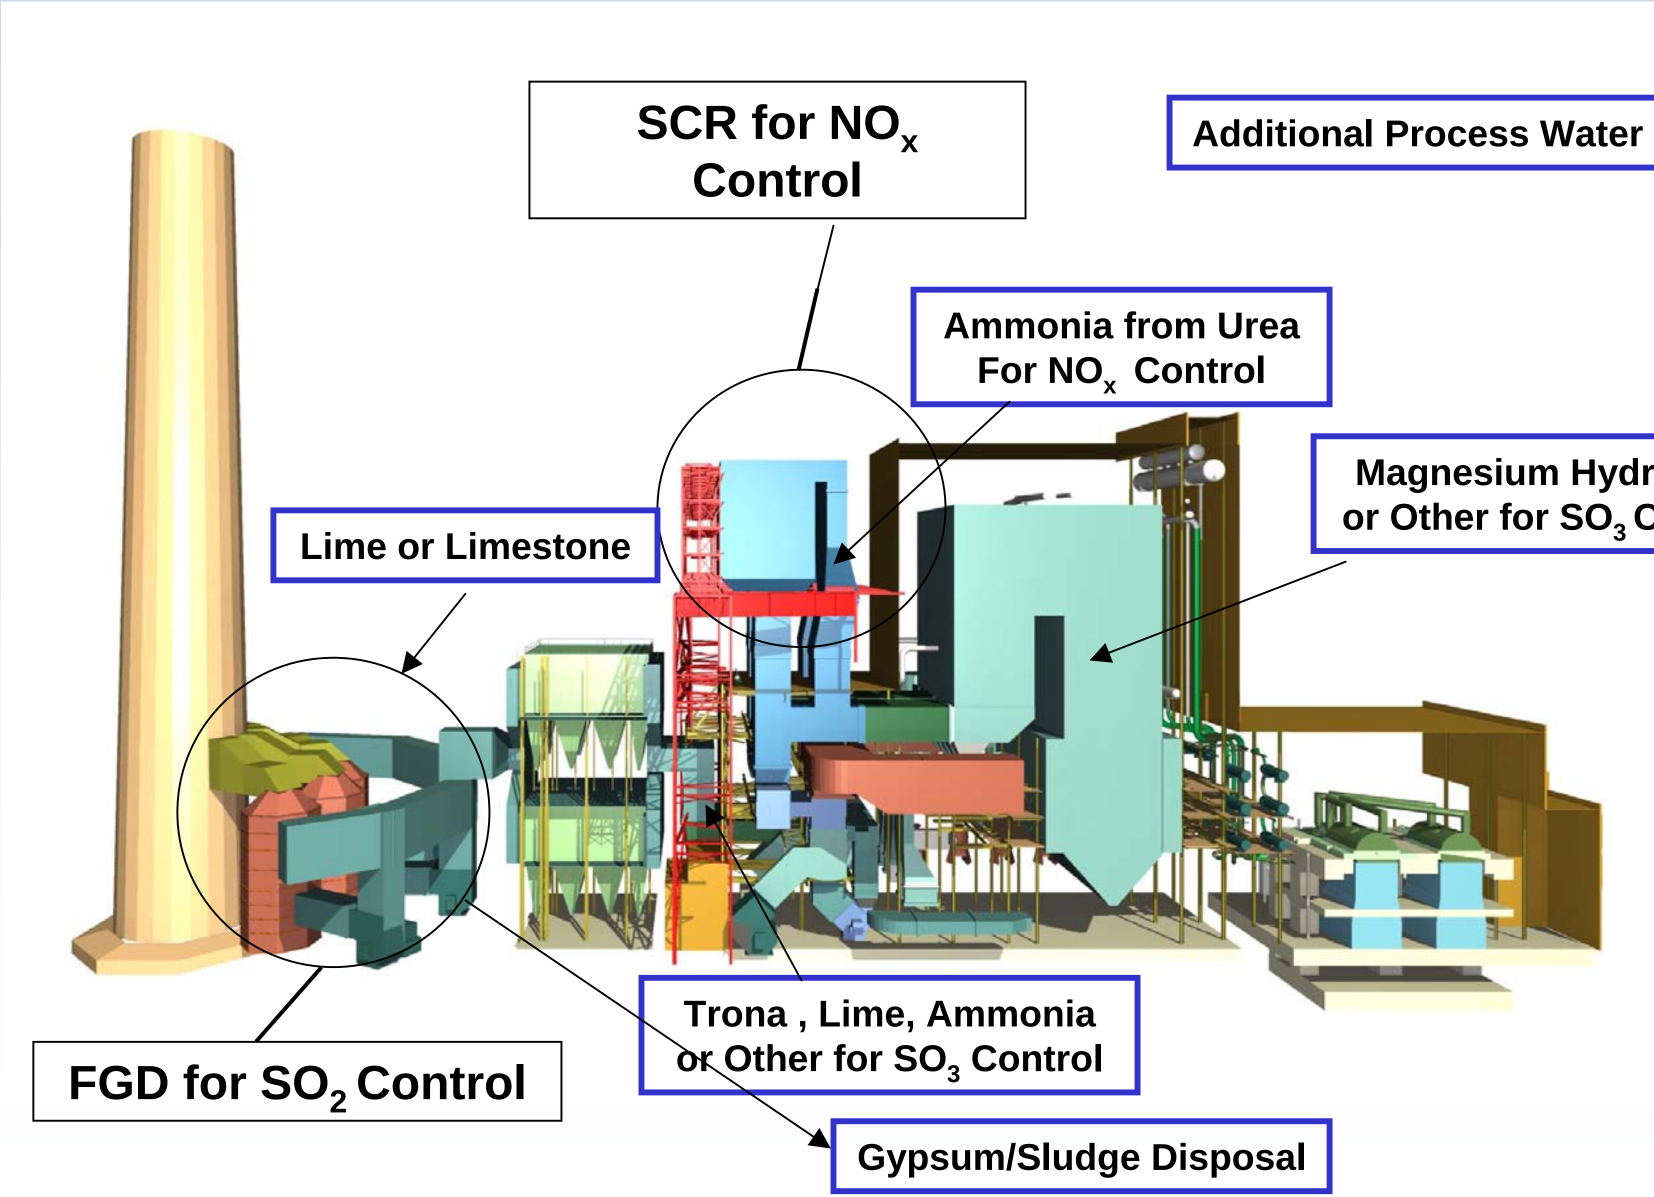
- Rule Finalized March 2005
- Designed to reduce mercury emissions by ~70% nationwide from electric utilities
- Reductions occur in phases: Phase I (2010); Phase II (2018)
- Establishes a Cap & Trade structure to achieve mercury reductions

AEP WILL ACHIEVE SOME MERCURY REDUCTIONS AS A CO-BENEFIT OF SCR AND FGD SYSTEMS, BUT MERCURY SPECIFIC CONTROL EQUIPMENT WILL BE NEEDED ON SOME UNITS

Pulverized Coal Unit as Built in 1970s

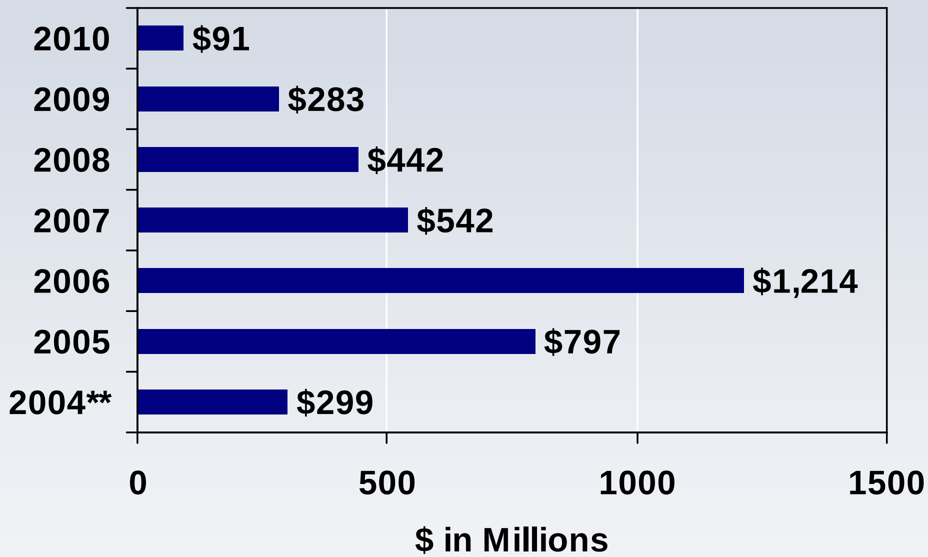


Pulverized Coal Unit Today Showing Retrofits & New Feedstock(s)

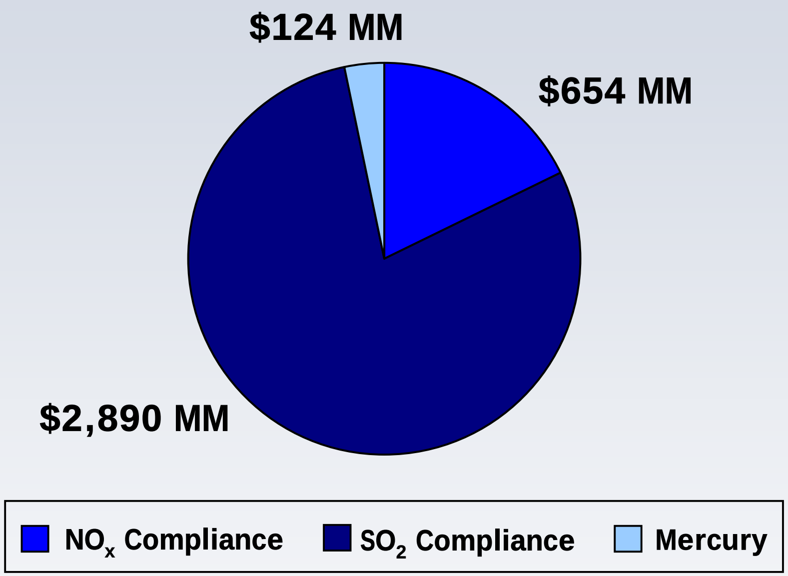


Environmental Investment: $3.7 Billion Through 2010

Environmental Capital Investment*



Compliance Allocation



*Environmental investment for NOx, SO_2 , & Hg purposes

** Actual investment level in 2004

Current Programs

$1.9 Billion:

$0.6 billion for NOx

$1.2 billion for SO_2

Future Programs

$1.8 Billion:

$1.7 billion for SO_2

$0.1 billion for Other

MAJORITY OF 2005 & 2006 DOLLARS WILL BE INVESTED IN OHIO & APCO

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests

Regulatory Overview

Managing the Regulatory Process

- **Current Regulatory Activity**
  - TCC Wires Rate Case
  - TCC Stranded Cost Recovery
  - Louisiana Rate Review
  - FERC Transmission Rate Case
- **Planned Regulatory Activity (2005-2007)**
  - General Rate Cases in all AEP East jurisdictions to seek recovery of investment:
    - IN, KY, MI, TN, VA, WV

BRING CASH IN THE DOOR TO COVER CAPITAL EXPENDITURES & GROW EARNINGS THROUGH ADDITIONS TO THE ASSET BASE

Components of TCC's Net True-up Regulatory Asset

	31-Mar-05	31-Dec-04
	(in millions)	
Stranded Generation Plant Costs	$ 898	$ 897
Net Generation-related Regulatory Asset	249	249
Unrefunded Excess Earnings	(6)	(10)
Net Stranded Generation Costs	1141	1136
Carrying Costs on Stranded Generation Plant Costs	205	225
Net Stranded Generation Costs Designated for Securitization	1346	1361
Wholesale Capacity Auction True-up	483	483
Carrying Costs on Wholesale Capacity Auction True-up	91	77
Retail Clawback	(61)	(61)
Deferred Over-recovered Fuel Balance	(215)	(212)
Net Other Recoverable True-up Amounts	298	287
Total Recorded Net True-up Regulatory Asset	$ 1,644	$ 1,648

Carrying charge calculated using pre-tax cost of capital of 11.79%

Debt Component: 8.12% - $296 million recognized as income thru 3/31/05

Equity Component: $154 million to be recognized in income as collected

CARRYING CHARGES FOR 2005 EXPECTED TO BE $87 MILLION

Regulatory Matrix – East

Ohio (Restructured)
- Unbundled rates for default customers frozen until 12/31/2005
- Pursuant to RSP Plan approved by PUCO 1-26-05:
  - Distribution rates in effect at December 31, 2005 are frozen, with certain exceptions, until the end of 2008.
  - Institute for 2006-2008 a non-bypassable distribution rider for provider of last resort (POLR) costs.
  - CSP ”G” rates to increase 3% per year (2006-2008).
  - OP “G” rates to increase 7% per year (2006-2008).
  - Transmission rates can upon filing reflect change in RTO costs.
- No active fuel clause
- Application for IGCC plant recovery filed on 3-18-05
  - AEP testimony filed on 5-5-05
  - Technical conference on 5-15-05
  - Hearings start 8-8-05

Indiana (Regulated)
- Base rate freeze expired December 31, 2004.
- Fuel rate cap expired Feb. 29, 2004; interim factors set through September 2005, subject to refund or true-up.
- The status of additional base and fuel clause rate caps, subject to certain conditions, is the subject of a settlement agreement pending before the IURC.

West Virginia (Regulated)
- Base rates not frozen
- Annual ENEC proceedings have been suspended, the factor is currently fixed at pre-2000 levels.
- No active fuel clause

Virginia (Restructured)
- Capped rates for default customers frozen through end of 2010
- Capped rates can be adjusted by two rate cases prior to the end of 2010 and incremental environmental and reliability cost recovery mechanisms
- Active annual fuel clause

Kentucky (Regulated)
- Base rates not frozen
- Fuel clause, adjusted monthly
- Environmental surcharge costs are adjusted monthly for approved environmental compliance plan
- Rockport Unit Power Supply Agreement extension through 12-07-2022 was approved by FERC & KPSC in December 2004

Michigan (Restructured, but Regulated)
- Base rates not frozen
- Active annual fuel clause

Tennessee (Regulated)
- Base rates not frozen
- Automatic fuel clause, adjusted monthly

Regulatory Matrix - West

Texas (Regulated)
- SWEPCO-Texas retail competition delayed until at least 2007
- Bi-annual fuel clause adjustment opportunity

Texas (Restructured)
- TCC stranded cost true-up filing in first half of 2005. TCC wires rate case order expected in June 2005.
- TCC final fuel reconciliation (July 98-Dec. 01) decision approved in February 2005. Additional $2 million disallowance in final decision.
- Proposal for decision received in TNC true-up filing in March 2004 (retail clawback and fuel over-recovery only) recommending adjustment of excess earnings amount in T&D rates. Commission approved order on April 13, 2005.
- TNC final fuel reconciliation (July 00-Dec. 01). Final order received October 18, 2004. Appeals filed in state and federal courts in Dec. 2004.

Oklahoma (Regulated)
- General rate case filed Oct. 31, 2003
  - Quality of Service settlement approved by OCC in June 2004
    - Settlement agreement on remaining issues filed with the Commission on March 7, 2005. Order approved on May 2, 2005.
- Fuel clause adjusted quarterly
- 2001 Fuel review case
  - Hearings expected in August 2005. Scope expanded to cover 2002-2004 margin allocation issue.
- 2003 Fuel review case
  - Likely to include motions to expand scope to include prudence review

Louisiana (Regulated)
- Base rates capped through June 15, 2005
- Currently under a merger required financial review
- Fuel clause, adjusted monthly

Arkansas (Regulated)
- Base rates not frozen
- Fuel clause, adjusted annually

Ohio Rate Stabilization Plan Recap

Summary of Impact (Columbus Southern Power & Ohio Power):

	Revenues				Incremental Cash			
Rate Stabilization Plan	**2005**	**2006**	**2007**	**2008**	**2005**	**2006**	**2007**	**2008**
Escalation of Generation Rate	0	83	173	271	0	83	173	271
POLR Rider/Recovery of RTO Costs**	21	0	0	0	0	7	7	7
POLR Rider/Return on Environmental Additions	44	26	26	26	0	41	41	40
Total RSP Impact	**65**	**109**	**199**	**297**	**0**	**131**	**221**	**318**
Pre-Existing Electric Transition Plan								
Elimination of 5% Residential Generation Credit*	0	25	25	26	0	25	25	26
Recovery of RTO costs**	0	29	29	29	0	29	29	29
Total ETP Impact	**0**	**54**	**54**	**55**	**0**	**54**	**54**	**55**

* Elimination of 5% credit is per Statute, and part of pre-existing ETP, not the RSP

** Recovery of administrative RTO costs, net congestion fees and ancillary services permitted in pre-existing ETP, but the RSP allows for recovery of 2005 costs as well

AEP WILL STILL HAVE AMONG THE LOWEST RETAIL RATES IN OHIO

Finance

Risks and Uncertainties

2005 EPS Guidance Range is $2.30 to $2.50

2005

- *Outcome of pending regulatory proceedings*
  - *Texas & Louisiana*
- *Operations within PJM environment*
- *Plant availability*
- *Rising fuel costs*
- *Weather (storm damage and effect on sales)*

Sources of Cash

- **Cash Flow from Operations**: Continued earnings growth
- **Rate Relief**: Ohio cash rate relief begins in 2006; Rate proceedings expected in all other jurisdictions by 2007
- **Asset Sales**: HPL, STP, Oklaunion, Pacific Hydro & Bajio
- **Texas Securitization**: $1 billion plus in 2006 (Half goes to TCC debt paydown)
- **Texas Competition Transition Charge**: Approximately $190MM per year before securitization; $45MM per year after securitization
- **Debt Issuances**: Will maintain debt-to-capitalization ratio of approximately 60%

AEP HAS ADEQUATE SOURCES OF CASH FOR CAPEX PROGRAM

Long-term Debt Maturity Profile

Year		**2005**[1]		**2006**		**2007**

Chicago, IL

AEP AMERICAN ELECTRIC POWER

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to control operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

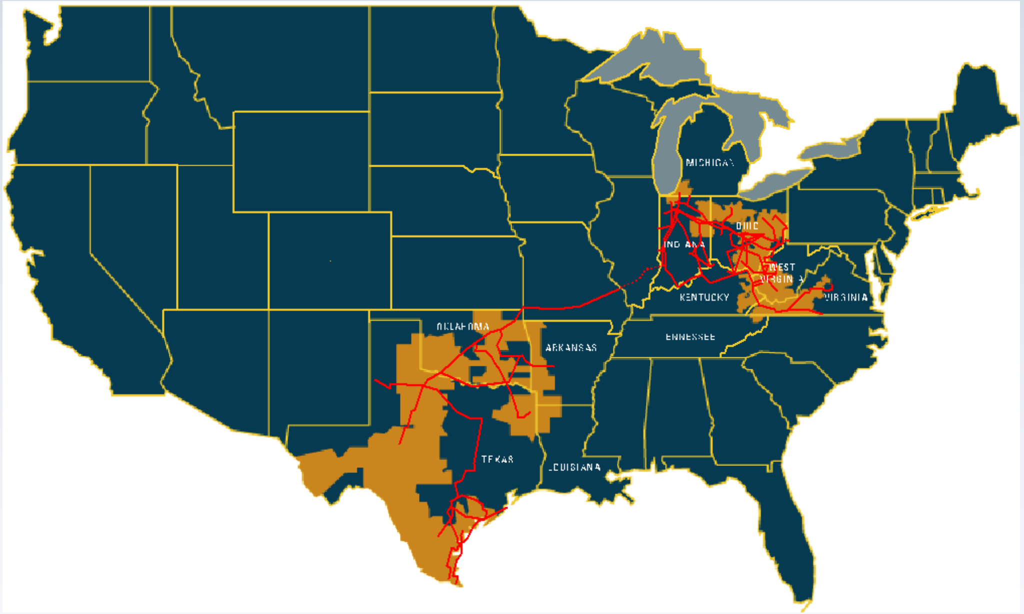
Strength & Scale in Assets & Operations



Generation	36,000 MW capacity
Transmission	38,953 miles
Distribution	200,930 miles
Customers	5 million

FUTURE EARNINGS GROWTH DRIVEN BY NATIVE LOAD GROWTH & SUBSTANTIAL UTILITY INVESTMENT OPPORTUNITY

Generation Fleet Composition

- 36,000 MW Domestic Capacity
- 85% System Availability Factor YE 2004
- 62% System Capacity Factor YE 2004

Capacity by Fuel Mix

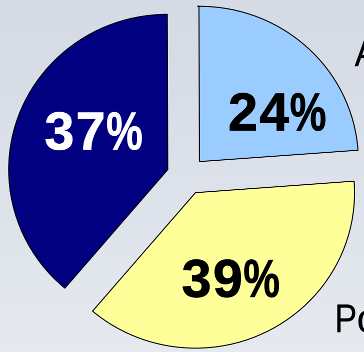
	Baseload	Load-Following	Peaking
PJM	24,226	0	586
ERCOT	1,719	0	0
SPP	4,828	3,516	188
Total*	**30,773**	**3,516**	**774**

* Figures do not include mothballed or decommissioned units (1,015 MW of capacity)

GENERATION FLEET IS SUBSTANTIAL AND LOW COST

Coal Procurement

AEP SYSTEM

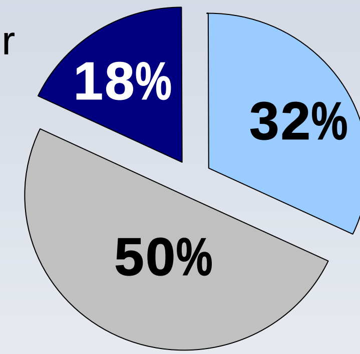


Coal Supply

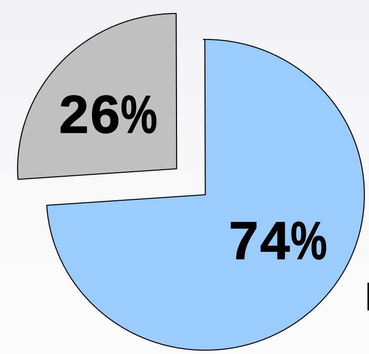
(on average)

- ➢Purchase 75 MM tons per year
- ➢Ave. delivered price ~ $28.50/ton in 2004
- ➢Essentially 100% purchased for 2005
- ➢Approximately 10% price increase in 2005

EASTERN SYSTEM

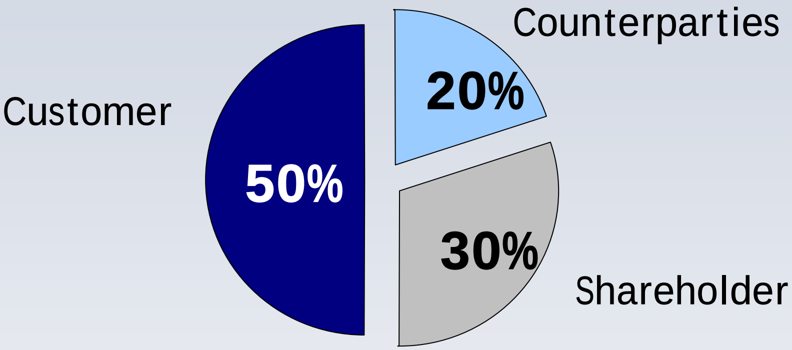


WESTERN SYSTEM



Fuel Recovery

AEP SYSTEM



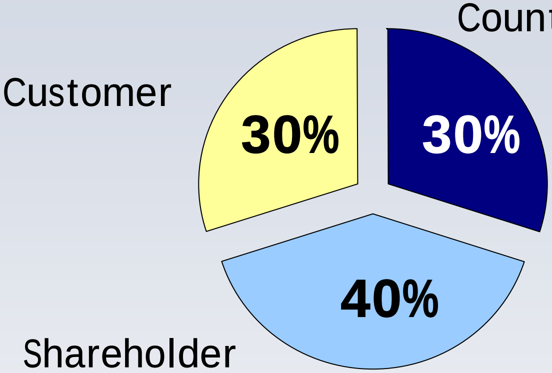
Fuel Cost Recovery

(on average)

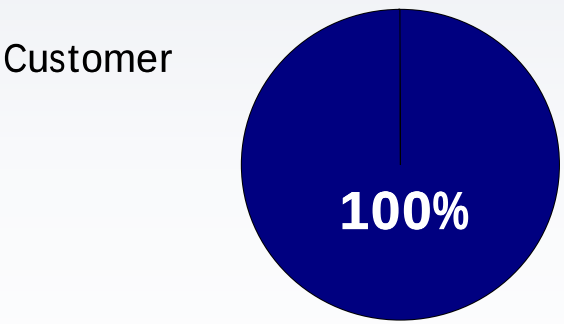
- Fuel recovery varies by jurisdiction
- 70% of fuel cost is recoverable across the AEP System
- Active Fuel Clause Jurisdictions:

AEP EAST: AP-VA, I&M, KGP, KP
AEP WEST: PSO, SWEPCO

EASTERN SYSTEM

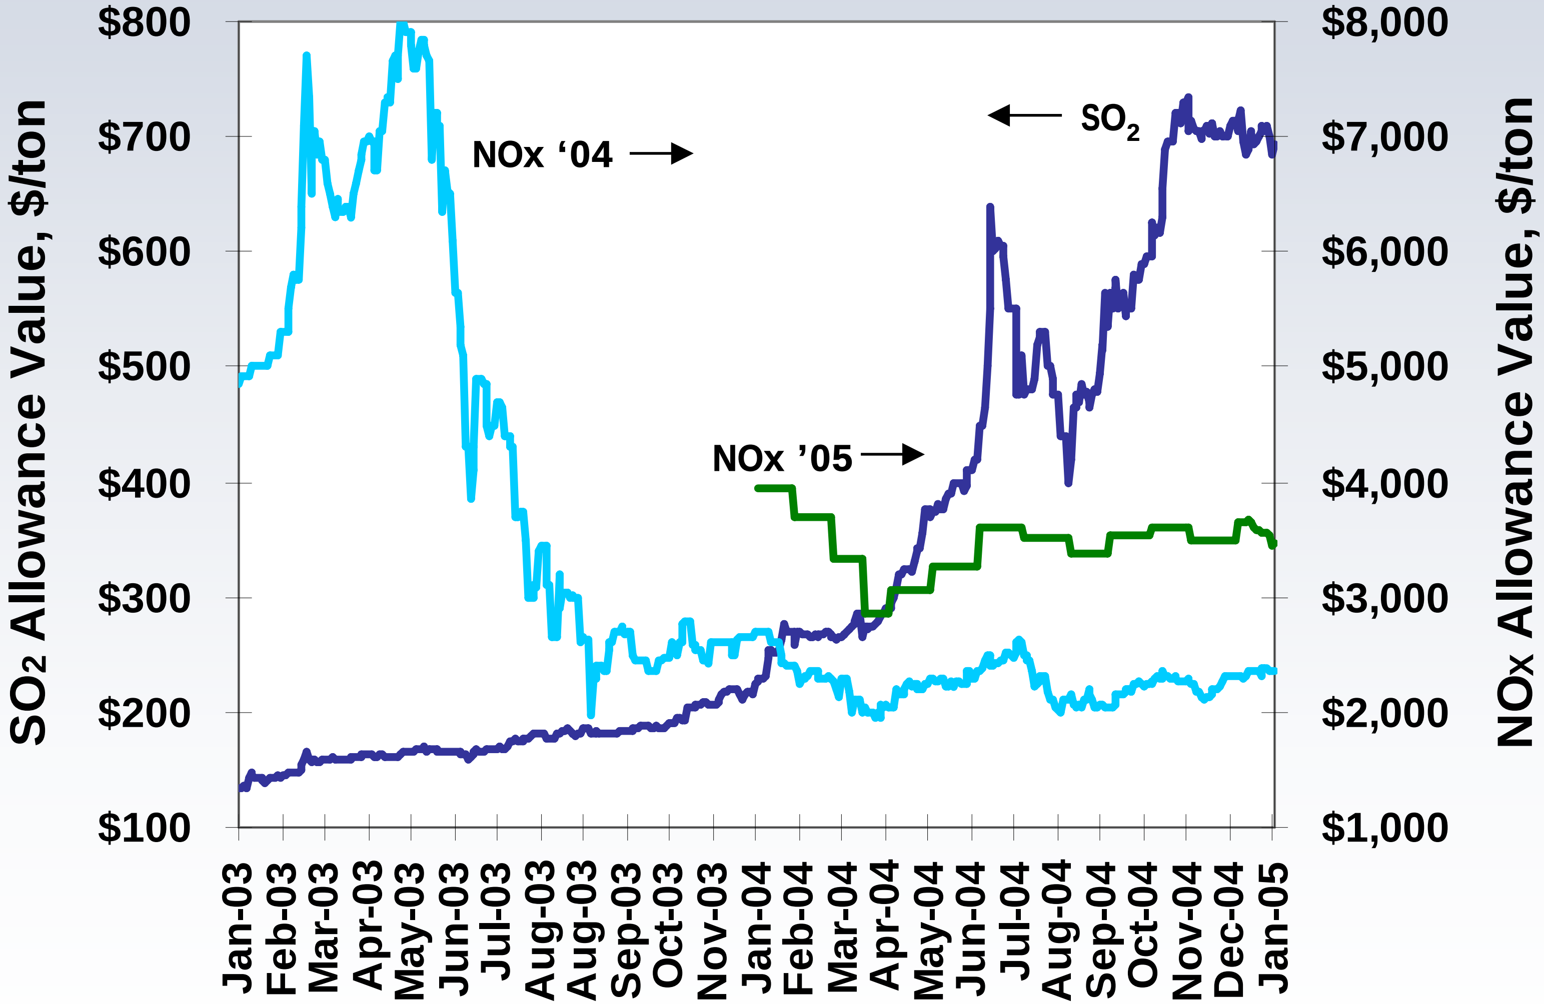


WESTERN SYSTEM



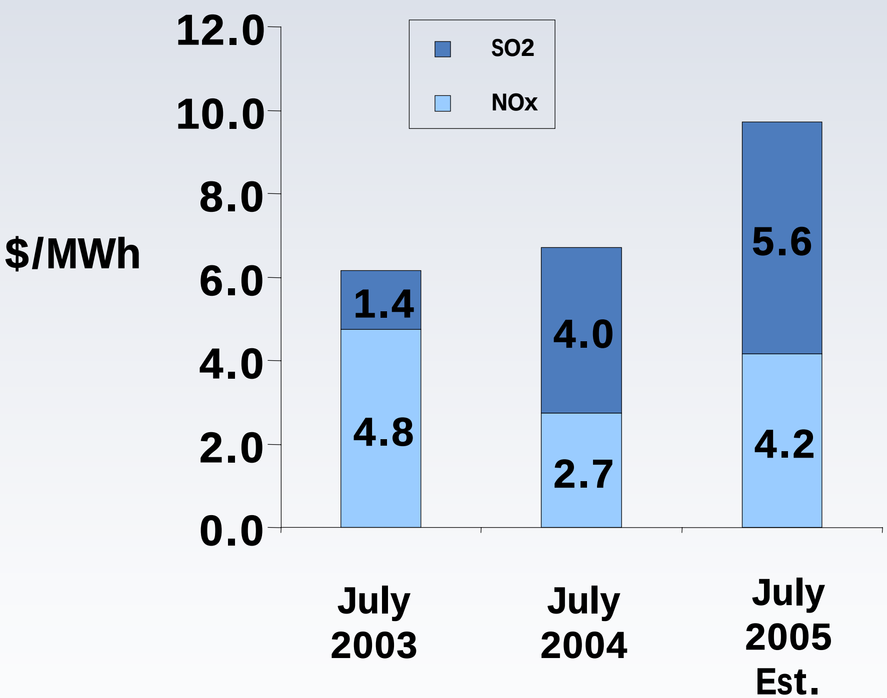
Emission Allowance Prices

Allowance prices for SO_2 and NOx have been extremely volatile since the beginning of 2003



Market Value vs. Inventory Cost

Profile of Uncontrolled Power Plant exposed to Market Value of Emission Credits



<u>Basis - Coal Plant</u>
9.5 MMBtu/MWh Heat Rate
0.25 lbs NOx/mmBtu
1.67 lbs SO_2/mmBtu

AEP has managed its exposure to rising emission allowance costs

- Inventory cost of emission credits is low
- Effective hedging program for SO_2 allowances
- Effective capital implementation in the NOx SIP Call ($1.3 B)
- Exposure in future years reduced by $3.7 B capital program and current inventory of allowances

Investment To Drive Utility Earnings Growth

- Investment in new generation: IGCC
- Environmental Investment: $3.7 billion 2004 - 2010
- Energy Delivery Investment

GROWING EARNINGS THROUGH ADDITIONS TO THE ASSET BASE

Investing in IGCC

IGCC vs. Pulverized Coal and Natural Gas Combined Cycle

	PC	IGCC	NGCC
Nominal Capacity (MW)	600	600	530
Heat Rate (BTU/kWh)	8700	8600	7200
EPC cost* ($/kW)	1290	1350	440
Total Plant cost** ($/kW)	1490	1610	475
Variable Production cost*** ($/MWh)	15	14	38

Source: Electric Power Research Institute

* EPC includes the cost to engineer, procure and construct plant.

** Total plant cost include land, overheads, AFUDC, etc.

*** Assumes Northern App Coal @ $36/ton, no emission credits and $5.00 gas

STRATEGIC ADVANTAGE OF IGCC OUTWEIGHS LEAST COST CONSIDERATION

Next Steps

<u>2005</u>

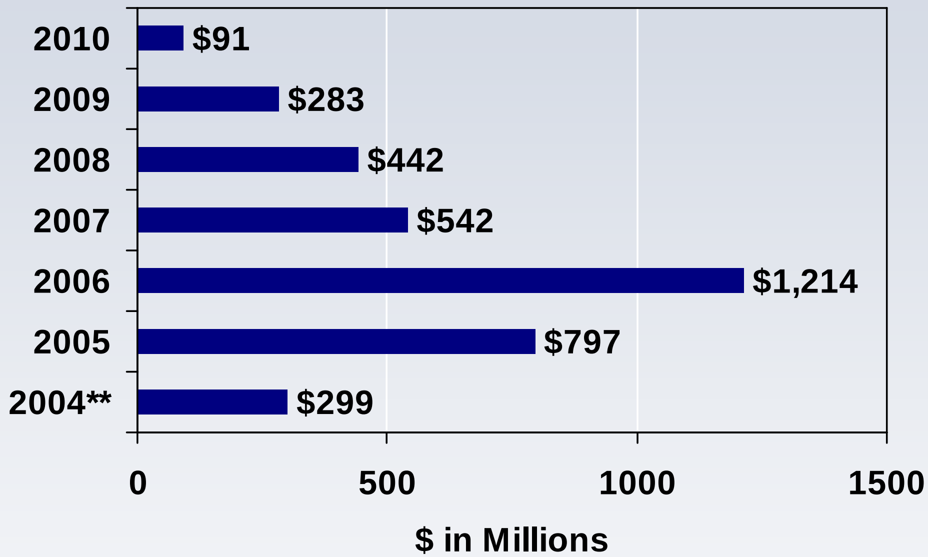
- Secure cost recovery plan - June
- Finalize site selection - August
- Negotiate with suppliers – Throughout 2005

- 2005—2007: Obtain permits and finalize engineering and procurement

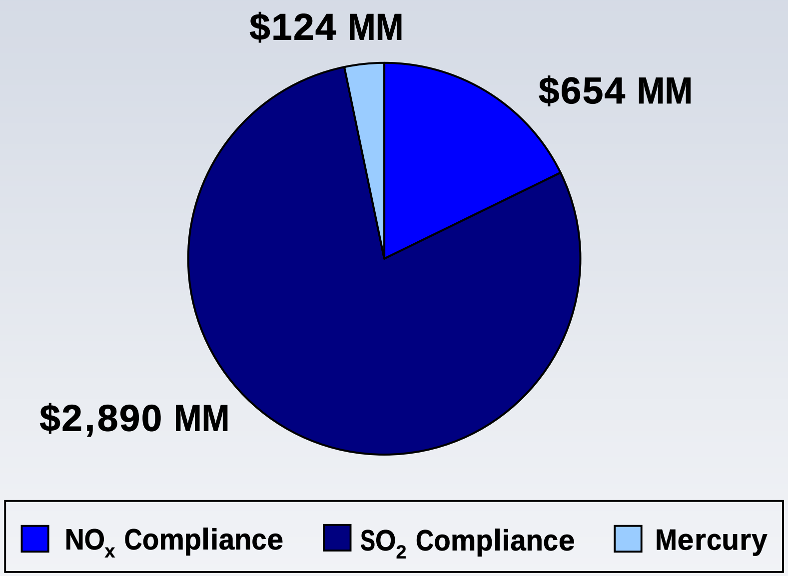
- 2008—2009: Construct and start-up plant

AEP WILL PIONEER CONSTRUCTION OF LARGEST IGCC PLANT IN THE WORLD

Environmental Investment: $3.7 Billion Through 2010



*Environmental investment for NOx, SO_2 , & Hg purposes
** Actual investment level in 2004



Current Programs

$1.9 Billion:

$0.6 billion for NOx

$1.2 billion for SO_2

Future Programs

$1.8 Billion:

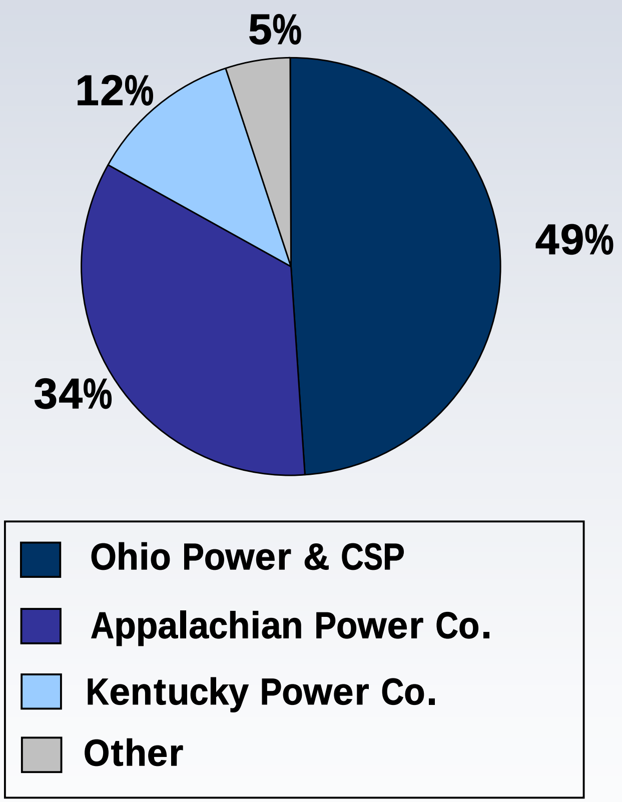
$1.7 billion for SO_2

$0.1 billion for Other

MAJORITY OF 2005 & 2006 DOLLARS WILL BE INVESTED IN OHIO & APCO

Environmental Spending by Company

Projected Environmental Investment Allocation

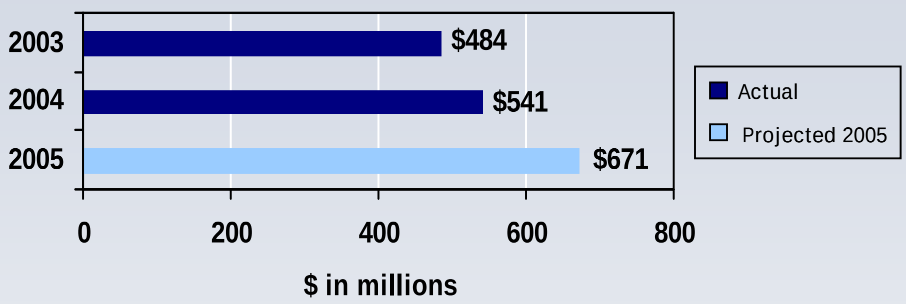


Funding the Environmental Investments

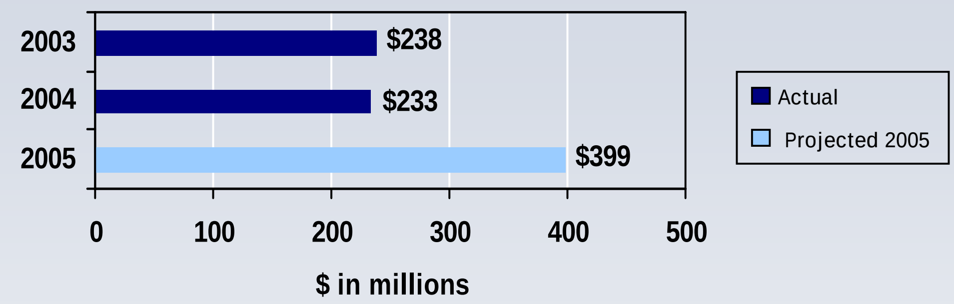
- **Ohio**: 49% ($1.8 billion)
  - Rate stabilization plan annual increases at CSP – 3% and OP – 7% beginning in 2006 through 2008
- **Virginia/West Virginia**: 34% ($1.2 billion)
  - VA: Environmental cost recovery mechanism/two rate case opportunities through 2010
  - WV: General rate case filing
- **Kentucky**: 12% ($433 million)
  - Surcharge mechanism

Energy Delivery Investment

Distribution Capital Expenditures



Transmission Capital Expenditures



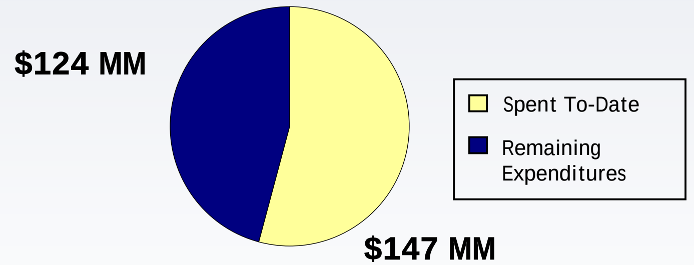
Operating Company	Transmission & Distribution 2003	2004	2005 *
AEP Ohio	$ 181	$ 210	$ 214
Appalachian Power	147	200	283
Indiana Michigan Power	69	68	89
Kentucky Power	27	25	35
AEP Texas	140	131	262
Public Service Co. of Oklahoma	70	70	85
Southwestern Electric Power	88	70	102
	$ 722	$ 774	$ 1,070

Notes:

* Represents projected capital expenditures for 2005

Major Capital Project

Wyoming/Jackson Ferry 765 kV Line



Project should increase average T&D rates from 2.0 cents to 2.04 cents/kWh

INVESTMENT IN ENERGY DELIVERY WILL CONTINUE TO BE SUBSTANTIAL

Managing the Regulatory Process

- **Current Regulatory Activity**
  - TCC Wires Rate Case
  - TCC Stranded Cost Recovery
  - PSO Rate Case
  - Louisiana Rate Review
  - FERC Transmission Rate Case
- **Planned Regulatory Activity (2005-2007)**
  - General Rate Cases in all AEP East jurisdictions to seek recovery of investment:
    - IN, KY, MI, TN, VA, WV

BRING CASH IN THE DOOR TO COVER CAPITAL EXPENDITURES & GROW EARNINGS THROUGH ADDITIONS TO THE ASSET BASE

2005 Earnings Guidance: $2.30 to $2.50 per share

21	**ON-GOING EARNINGS**	924	2.33	936	2.40

2005 Earnings Drivers

- *Retail sales increase due to return to normal weather and economic growth*
- *Lower Texas Supply due to sale of TCC assets; lower third-party Transmission margin partially offset by higher off-system sales prices*
- *Higher operating expense partially offset by lower interest expense; 2004 and 2005 Other Income and Deductions include return on Texas Stranded Cost of $109MM and $101MM, respectively*
- *Reflects sale of HPL and paydown of debt*
- *Lower interest due to debt retirements and assignment of debt to subsidiaries; 2004 includes unfavorable effect of enforcement provisions*

2005 Cash Flow Projection

	2004 Actual	2005 Guidance	
Beginning Cash Balance	**$ 976**	**$ 420**	
Cash from Operations:			
Income from Continuing Operations	1,006	936	*

*** Assumes the midpoint range based upon $2.30 to $2.50 per share earnings guidance and 389 million shares outstanding**

**** Includes HPL, STP, Oklaunion & Pacific Hydro asset sales**

***** Includes $550MM of parent debt reduction**

******Equity units terms require issuance of $345MM common shares in August 2005; offset by $500MM share buyback program**

Covering Capital Expenditures

Year	2005E	2006E	2007E	2008E	2009E	2010E
Environmental Capex	$797MM	$1,214MM	$542MM	$442MM	$283MM	$91MM
Total Capex	$2,690MM	Guidance not yet released				

Typical Investment Capitalization*	Approx. 60% debt / 40% equity
Expected Investment ROE*	11-13%

*Varies by jurisdiction

Sources of Cash

- **Cash Flow from Operations**: Continued earnings growth
- **Rate Relief**: Ohio cash rate relief begins in 2006; Rate proceedings expected in all other jurisdictions by 2007
- **Asset Sales**: HPL, STP, Oklaunion, Pacific Hydro & Bajio
- **Texas Securitization**: $1 billion plus in 2006 (Half goes to TCC debt paydown)
- **Texas Competition Transition Charge**: Approximately $190MM per year before securitization; $45MM per year after securitization
- **Debt Issuances**: Will maintain debt-to-capitalization ratio of approximately 60%

AEP HAS ADEQUATE SOURCES OF CASH FOR CAPEX PROGRAM

Page 2702 of 9556

What AEP Offers

- Strength and scale in assets & operations
- Focused utility model
- Earnings growth driven by native load & capital investment
- Attractive dividend yield in excess of 4%
- Positive dividend outlook
- Stable credit profile

AEP®

AEP AMERICAN ELECTRIC POWER

Operating In PJM Environment

- **Cost of generation to serve retail customers**
  - Retail customers continue to receive the benefits of AEP's lowest generation on an hourly basis

- **Off-system sales margin**
  - October-December was a learning period; results steadily improved each month
  - 4th quarter off-system sales margin was in line with budget

WE CONTINUE TO APPLY LESSONS LEARNED IN PJM TO MAXIMIZE THE VALUE OF OUR GENERATION FLEET

TCC Stranded Cost Carrying Charge

Carrying Cost Details:

Amount Recorded for 2002 & 2003	**$193 Million**
Amount Recorded for 2004	**$109 Million**
Estimated amount for 2005	**$101 Million**

Simplified Calculation:	
Initial Stranded Cost Base (excludes Carrying Charge)	$1.34 billion
@ debt component of the11.79% pre-tax cost of capital	8.12%
Amount (subject to limitation of actual TCC interest expense)	$109MM

Items included in stranded cost base include: Stranded Plant costs ($900 MM), Regulatory Assets ($249 MM), ECOM ($483 MM), less Over-recovered fuel ($212 MM) and retail clawback ($61 MM) and Unrefunded excess earnings ($10 MM). Carrying costs are also included and compounded monthly. At 12/31/04 total carrying costs were $302 MM, for a Net True-up Regulatory Asset value of $1.648 Billion.

Morgan Stanley
12th Annual Global Electricity & Energy Conference

March 9, 2005
The Westin Hotel at Times Square

AMERICAN ELECTRIC POWER

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements which are subject to risks and uncertainties. These factors include electric load and customer growth; abnormal weather conditions; available sources and cost of fuel; availability of generating capacity and performance of plants; the speed and degree to which competition is introduced to our service territories; the ability to recover stranded costs in connection with deregulation; new legislation and government regulation; resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to successfully control costs; the success of acquiring new business ventures and disposing of existing investments that no longer match our corporate profile; ability to sell assets at attractive prices; international and country-specific developments affecting foreign investments including the disposition of any current foreign investments and potential additional foreign investments; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; electricity and gas market prices; changes in creditworthiness in energy trading market; changes in the financial markets; changes in markets for electricity, natural gas, and other energy-related commodities; actions of rating agencies; changes in utility regulation; accounting pronouncements; performance of pension plan interest rates; liquidity in the banking, capital and wholesale power markets; prices for power we generate and sell at wholesale; changes in technology, including the increased use of distributed generation within our transmission and distribution service territory; other risks and unforeseen events, including wars, the effects of terrorism, embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

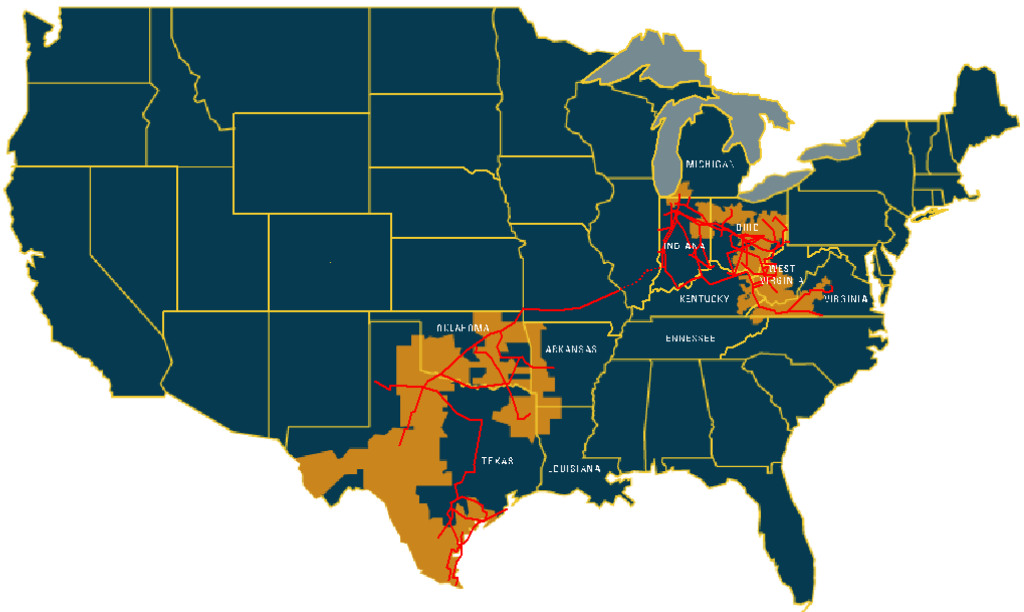
AEP®

Mike Morris
Chairman, President & Chief Executive Officer

Strength & Scale in Assets & Operations

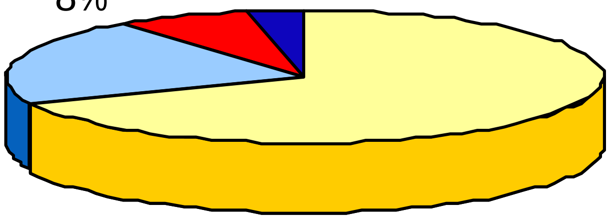


Generation	36,000 MW capacity
Transmission	38,953 miles
Distribution	200,930 miles
Customers	5 million

FUTURE EARNINGS GROWTH DRIVEN BY NATIVE LOAD GROWTH & SUBSTANTIAL UTILITY INVESTMENT OPPORTUNITY

AEP®

Fuel Mix & Operating Statistics



Capacity by Fuel Mix

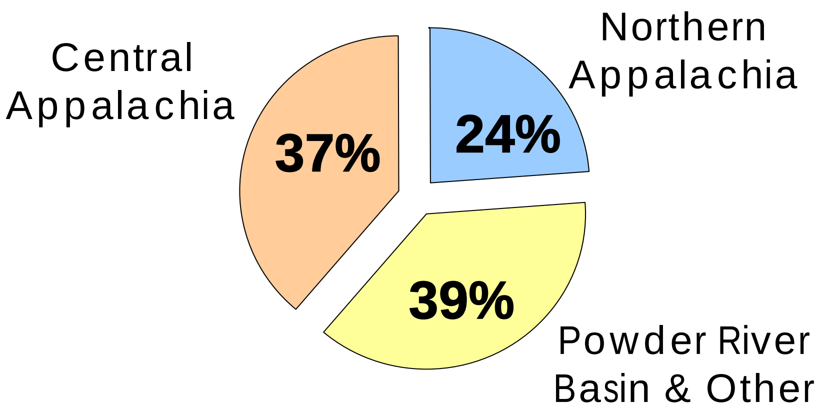
- 36,000 MW domestic capacity
- 85% system availability factor for YE 2004
- 62% system capacity factor for YE 2004

GENERATION FLEET IS SUBSTANTIAL AND LOW COST

AEP®

Coal Procurement

AEP SYSTEM

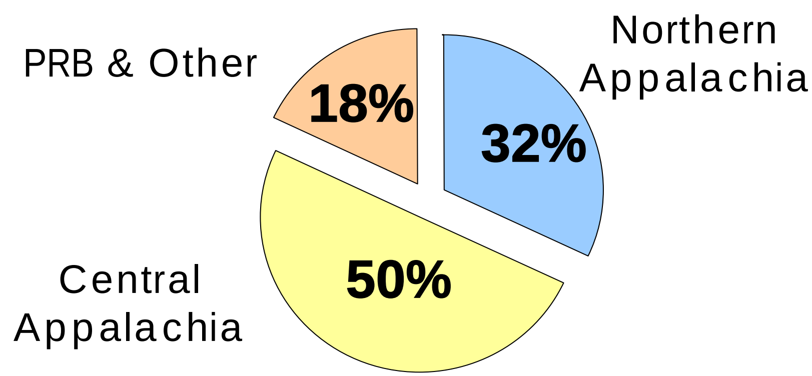


Coal Supply

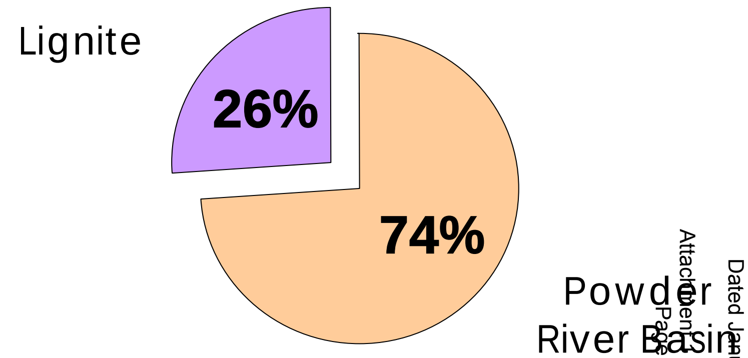
(on average)

- ➢Purchase 75 MM tons per year
- ➢Ave. delivered price ~ $28.50/ton in 2004
- ➢Essentially 100% purchased for 2005
- ➢Approximately 10% price increase in 2005

EASTERN SYSTEM



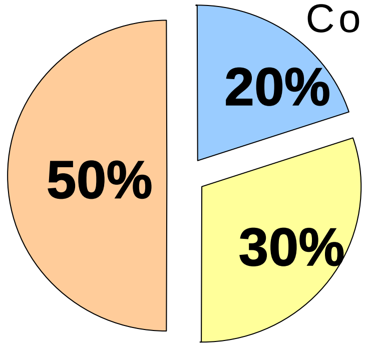
WESTERN SYSTEM



AEP®

Fuel Recovery

AEP SYSTEM

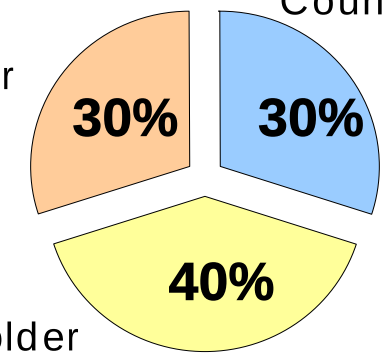


Fuel Cost Recovery
(on average)

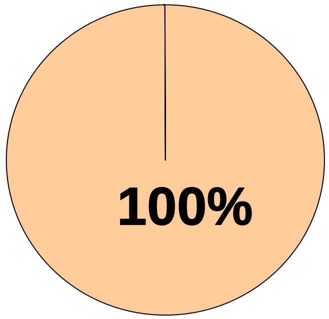
- Fuel recovery varies by jurisdiction
- 70% of fuel costs is recoverable across the AEP System
- Active Fuel Clause Jurisdictions:

AEP EAST: AP-VA, I&M, KGP, KP
AEP WEST: PSO, SWEPCO

EASTERN SYSTEM

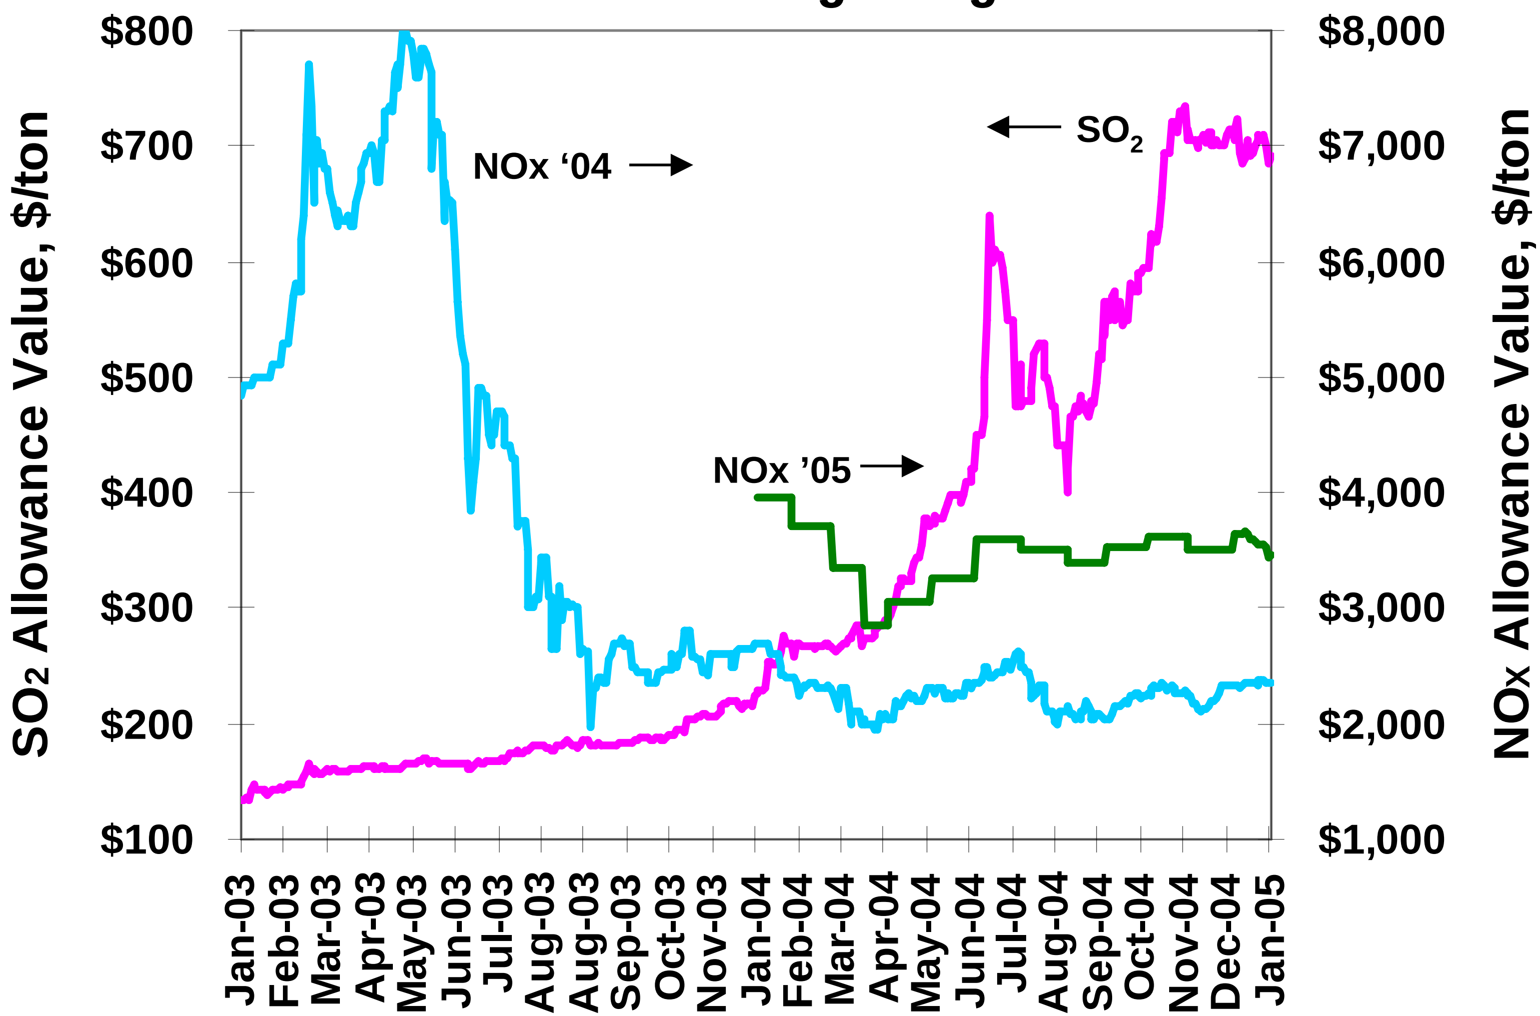


WESTERN SYSTEM



Emission Allowance Prices

Allowance prices for SO_2 and NOx have been extremely volatile since the beginning of 2003

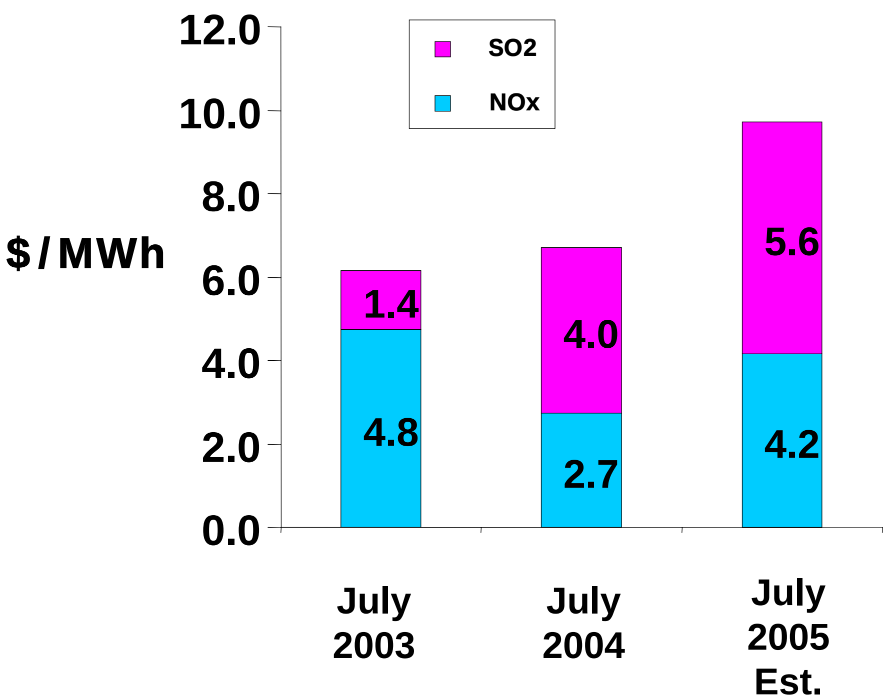


AEP®

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential

Market Value vs. Inventory Cost

Profile of Uncontrolled Power Plant exposed to Market Value of Emission Credits



Basis – Coal Plant
9.5 MMBtu/MWh Heat Rate
0.25 lbs NOx/mmBtu
1.67 lbs SO_2/mmBtu

AEP has managed its exposure to rising emission allowance costs

- Inventory cost of emission credits is low
- Effective hedging program for SO_2 allowances
- Effective capital implementation in the NOx SIP Call ($1.3 B)
- Exposure in future years reduced by $3.7 B capital program and current inventory of allowances

Operating In PJM Environment

- **Cost of generation to serve retail customers**
  - Retail customers continue to receive the benefits of AEP's lowest generation on an hourly basis

- **Off-system sales margin**
  - October-December was a learning period; results steadily improved each month
  - 4th quarter off-system sales margin was in line with budget

WE CONTINUE TO APPLY LESSONS LEARNED IN PJM TO MAXIMIZE THE VALUE OF OUR GENERATION FLEET

AEP®

Investment To Drive Utility Earnings Growth

- **Investment in new generation: IGCC**
- **Environmental Investment: $3.7 billion 2004- 2010**
- **Energy Delivery Investment**

GROWING EARNINGS THROUGH ADDITIONS TO THE ASSET BASE

AEP®

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 2722 of 9556

Comparison Of Technology Options

IGCC vs. Pulverized Coal and Natural Gas Combined Cycle

	PC	IGCC	NGCC
Nominal Capacity (MW)	600	600	530
Heat Rate (BTU/kWh)	8700	8500	7000
EPC Cost* ($/kW)	1200	1450	400
Total Plant cost** ($/kW)	1450	1750	470
Variable Production Cost*** ($/MWh)	16	14	37

* EPC includes the cost to engineer, procure and construct plant.

** Total plant cost include land, overheads, AFUDC, etc.

*** Assumes Northern App Coal @ $37/ton, no emission credits and $5.00 gas

STRATEGIC ADVANTAGE OF IGCC OUTWEIGHS LEAST COST CONSIDERATION

Next Steps

2005

- Secure regulatory cost recovery - June
- Finalize site selection - August
- Negotiate with suppliers – Throughout 2005

- 2005—2007: Obtain permits and finalize engineering and procurement

- 2008—2009: Construct and start-up plant

AEP

AEP WILL PIONEER CONSTRUCTION OF LARGEST IGCC PLANT IN THE WORLD

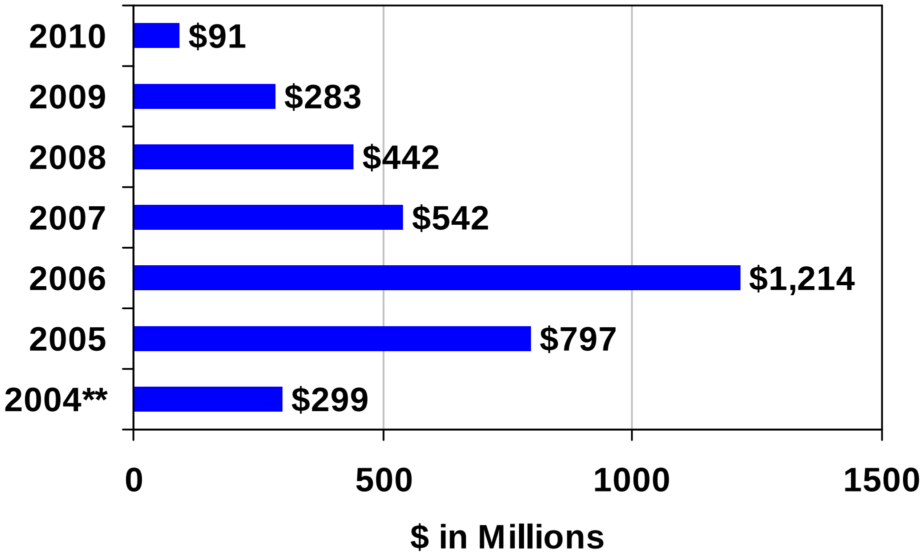
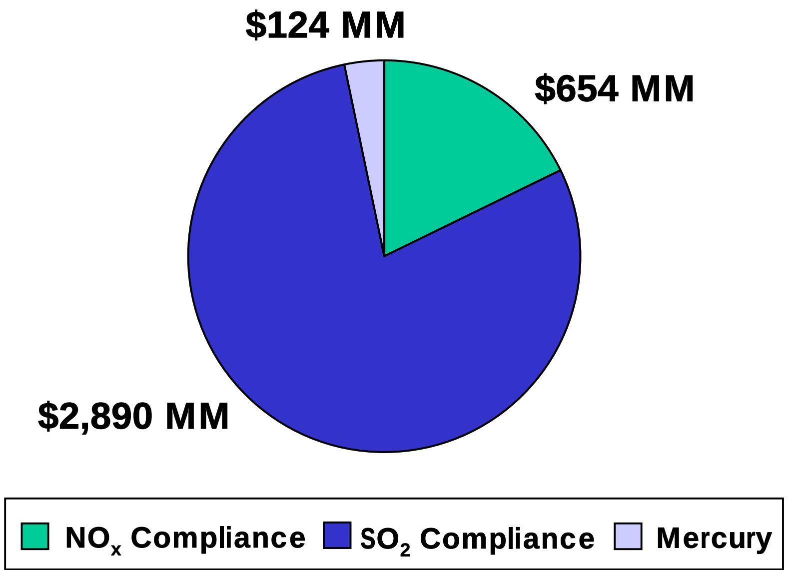
Environmental Investment: $3.7 Billion Through 2010

Environmental Capital Investment*



*Environmental investment for NOx, SO_2 , & Hg purposes
** Actual investment level in 2004

Compliance Allocation



Current Programs

$1.9 Billion:

$0.6 billion for NOx

$1.2 billion for SO_2

Future Programs

$1.8 Billion:

$1.7 billion for SO_2

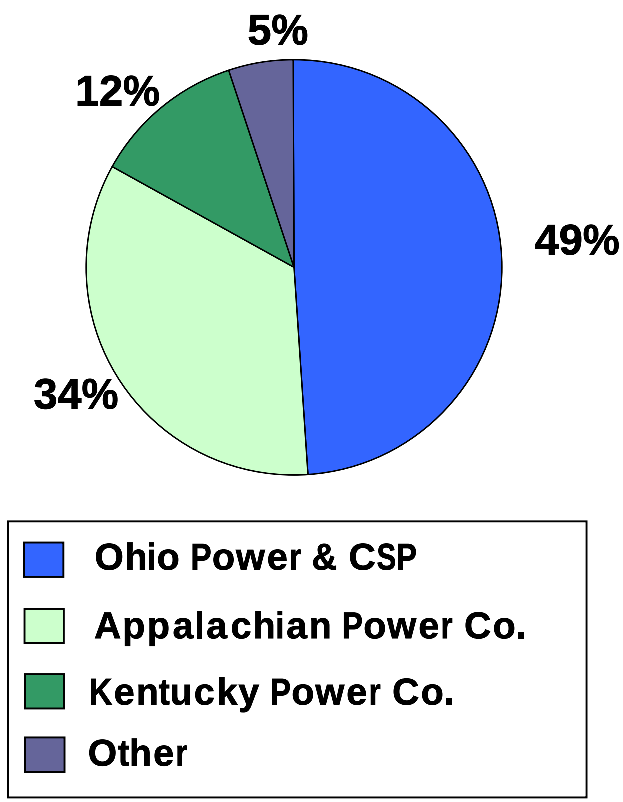
$0.1 billion for Other

MAJORITY OF 2005 & 2006 DOLLARS WILL BE INVESTED IN OHIO & APCO

AEP®

Environmental Spending by Company

Projected Environmental Investment Allocation

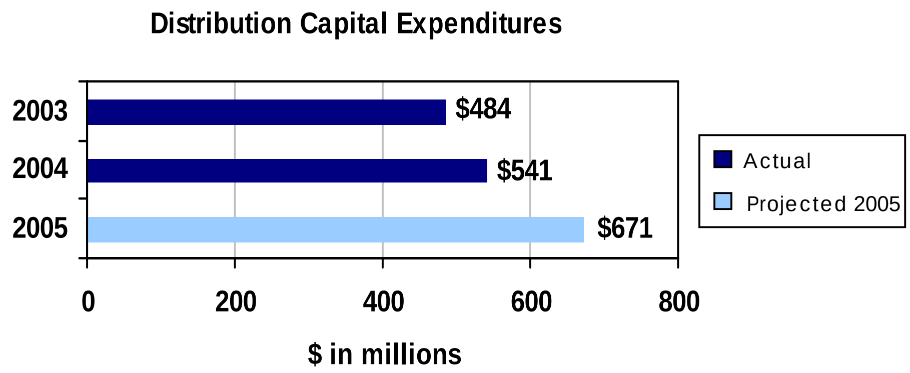


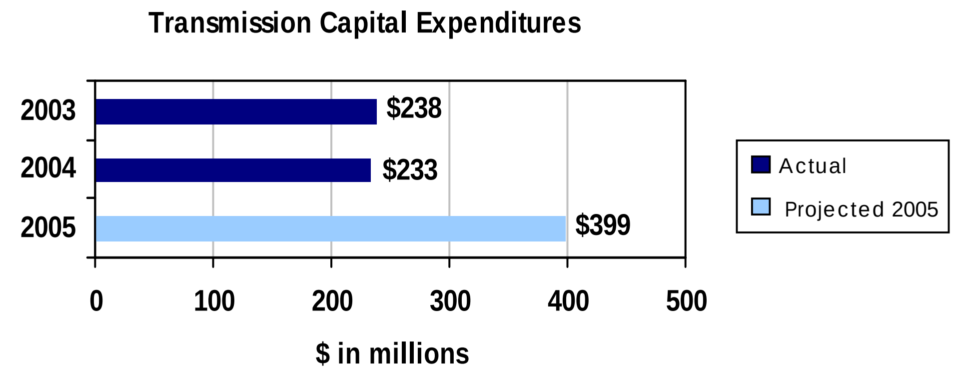
Funding the Environmental Investments

- **Ohio**: 49% ($1.8 billion)
  - Rate stabilization plan annual increases at CSP – 3% and OP – 7% beginning in 2006 through 2008
- **Virginia/West Virginia**: 34% ($1.2 billion)
  - VA: Environmental cost recovery mechanism/two rate case opportunities through 2010
  - WV: General rate case filing
- **Kentucky**: 12% ($433 million)
  - Surcharge mechanism

AEP®

Energy Delivery Investment





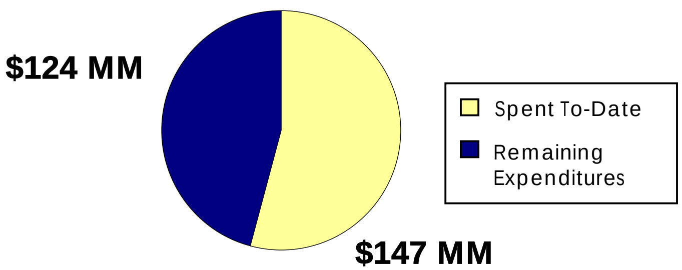
Operating Company	Transmission & Distribution 2003	2004	2005 *
AEP Ohio	$ 181	$ 210	$ 214
Appalachian Power	147	200	283
Indiana Michigan Power	69	68	89
Kentucky Power	27	25	35
AEP Texas	140	131	262
Public Service Co. of Oklahoma	70	70	85
Southwestern Electric Power	88	70	102
	$ 722	$ 774	$ 1,070

Notes:

* Represents projected capital expenditures for 2005

Major Capital Project

Wyoming/Jackson Ferry 765 kV Line



Project should increase average T&D rates from 2.0 cents to 2.04 cents/kWh

INVESTMENT IN ENERGY DELIVERY WILL CONTINUE TO BE SUBSTANTIAL

AEP®

Managing the Regulatory Process

- **Current Regulatory Activity**
  - TCC Wires Rate Case
  - TCC Stranded Cost Recovery
  - PSO Rate Case
  - Louisiana Rate Review
- **Planned Regulatory Activity (2005-2007)**
  - FERC Transmission Rate Case
  - General Rate Cases in all AEP East jurisdictions to seek recovery of investment:
    - IN, KY, MI, TN, VA, WV

BRING CASH IN THE DOOR TO COVER CAPITAL EXPENDITURES & GROW EARNINGS THROUGH ADDITIONS TO THE ASSET BASE

AEP®

Ohio Rate Stabilization Plan Recap

Summary of Impact (Columbus Southern Power & Ohio Power):

	Income				Incremental Cash			
Rate Stabilization Plan	**2005**	**2006**	**2007**	**2008**	**2005**	**2006**	**2007**	**2008**
Escalation of Generation Rate	0	83	173	271	0	83	173	271
POLR Rider/Recovery of RTO Costs**	21	0	0	0	0	7	7	7
POLR Rider/Return on Environmental Additions	44	26	26	26	0	41	41	40
Total RSP Impact	**65**	**109**	**199**	**297**	**0**	**131**	**221**	**318**
Pre-Existing Electric Transition Plan								
Elimination of 5% Residential Generation Credit*	0	25	25	26	0	25	25	26
Recovery of RTO costs**	0	29	29	29	0	29	29	29
Total ETP Impact	**0**	**54**	**54**	**55**	**0**	**54**	**54**	**55**

* Elimination of 5% credit is per Statute, and part of pre-existing ETP, not the RSP

** Recovery of administrative RTO costs, net congestion fees and ancillary services permitted in pre-existing ETP, but the RSP allows for recovery of 2005 costs as well

AEP WILL STILL HAVE AMONG THE LOWEST RETAIL RATES IN OHIO

Defining the Ohio Operating Environment Post-2008

21	**ON-GOING EARNINGS**	924	2.33	936	2.40

2005 Earnings Drivers

- *Retail sales increase due to return to normal weather and economic growth*
- *Lower Texas Supply due to sale of TCC assets; lower third-party Transmission margin partially offset by higher off-system sales prices*
- *Higher operating expense partially offset by lower interest expense; 2004 and 2005 Other Income and Deductions include return on Texas Stranded Cost of $109MM and $101MM, respectively*
- *Reflects sale of HPL and paydown of debt*
- *Lower interest due to debt retirements and assignment of debt to subsidiaries; 2004 includes unfavorable effect of enforcement provisions*

*** Assumes the midpoint range based upon $2.30 to $2.50 per share earnings guidance and 389 million shares outstanding**

**** Includes HPL, STP, Oklaunion & Pacific Hydro asset sales**

***** Includes $550MM of parent debt reduction**

******Equity units terms require issuance of $345MM common shares in August 2005; offset by $500MM share buyback program**

AEP®

Covering Capital Expenditures

Year	2005E	2006E	2007E	2008E	2009E	2010E
Environmental Capex	$797MM	$1,214MM	$542MM	$442MM	$283MM	$91MM
Total Capex	$2,690MM	Guidance not yet released				

Sources of Cash

- **Cash Flow from Operations**: Continued earnings growth
- **Rate Relief**: Ohio rate relief begins in 2006; Rate proceedings expected in all other jurisdictions by 2007
- **Asset Sales**: HPL, STP, Oklaunion, Pacific Hydro & Bajio
- **Texas Securitization**: $1 billion plus in 2006 (Half goes to TCC debt paydown)
- **Texas Competition Transition Charge**: Approximately $190MM per year before securitization; $45MM per year after securitization
- **Debt Issuances**: Will maintain capitalization ratio below 60%

AEP HAS ADEQUATE SOURCES OF CASH FOR CAPEX PROGRAM

What AEP Offers

- Strength and scale in assets & operations
- Focused utility model
- Earnings growth driven by native load & capital investment
- Attractive dividend yield in excess of 4%
- Positive dividend outlook
- Stable credit profile

Simplified Calculation:	
Initial Stranded Cost Base	$1.34 billion
@ debt component of the11.79% pre-tax cost of capital	8.12%
Amount (subject to limitation of actual TCC interest expense)	$109MM

Items included in stranded cost base include: Stranded Plant costs ($900 MM), Regulatory Assets($249 MM), ECOM ($483 MM), less Over-recovered fuel ($212 MM) and retail clawback ($61 MM) and Unrefunded excess earnings ($10 MM). Carrying costs are also included and compounded monthly.

Equity component recoverable once an order is received

Risks and Uncertainties

2005 EPS Guidance Range is $2.30 to $2.50

2005

- ***Outcome of pending regulatory proceedings***
  - ***Texas, Oklahoma & Louisiana***
- ***Operations within PJM environment***
- ***Plant availability***
- ***Rising fuel costs***
- ***Weather (storm damage and effect on sales)***

Operating in a PJM Environment

- **Cost of generation to serve retail customers**
  - Retail customers continue to receive the benefits of AEP's lowest generation on an hourly basis

- **Off-system sales margin**
  - October-December was a learning period; results steadily improved each month
  - 4th quarter off-system sales margin was in line with budget

WE CONTINUE TO APPLY LESSONS LEARNED IN PJM TO MAXIMIZE THE VALUE OF OUR GENERATION FLEET

2005 Cash Flow Projection

	2004 Actual	2005 Guidance
Beginning Cash Balance	**$ 976**	**$ 420**
Cash from Operations:		
Income from Continuing Operations	1,006	960 *
Depreciation & Amortization	1,300	1,317
Pension Funding in Excess of Expense	(200)	(353)
TCC ECOM/Carrying Cost	(304)	(101)
Extraordinary Loss (net of tax)	121	-
Other	674	339

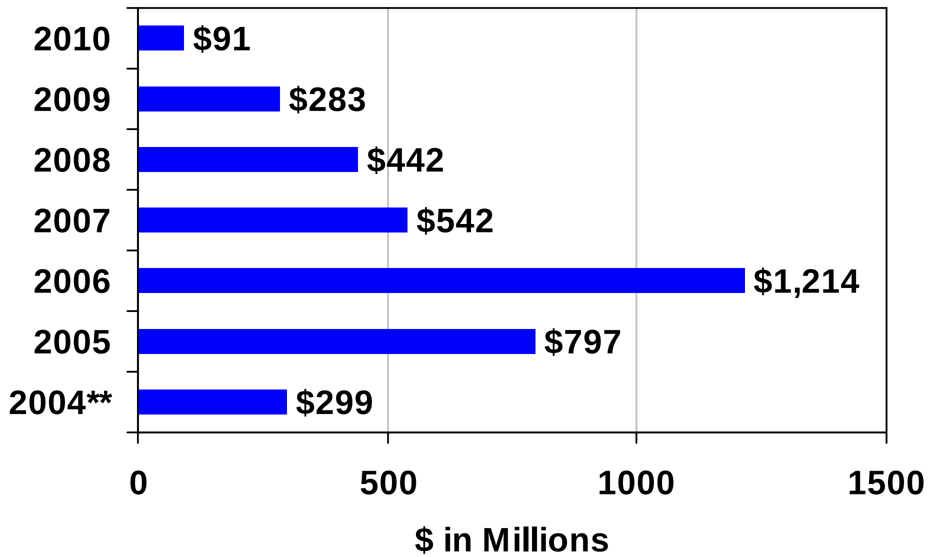
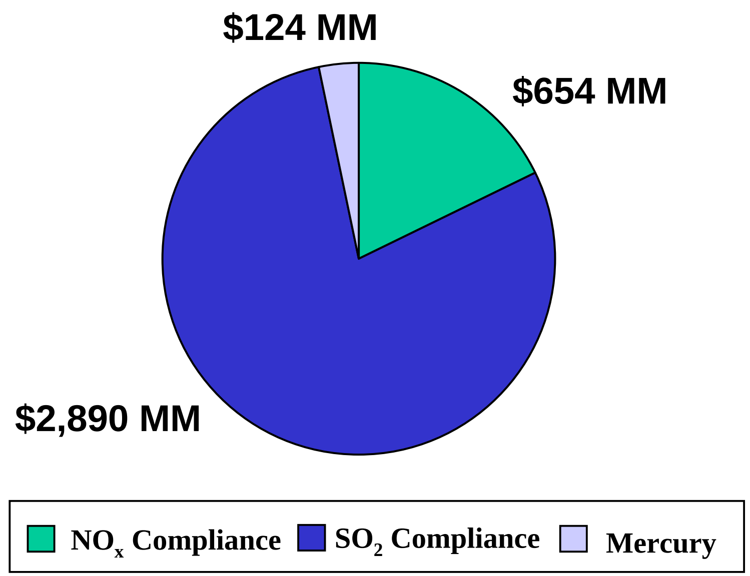
Environmental Investment: $3.7 Billion through 2010

Environmental Capital Investment*



*Environmental investment for NOx, SO_2 , & Hg purposes
** Actual investment level in 2004

Compliance Allocation



Current Programs

$1.9 Billion:

$0.6 billion for NOx

$1.2 billion for SO_2

Future Programs

$1.8 Billion:

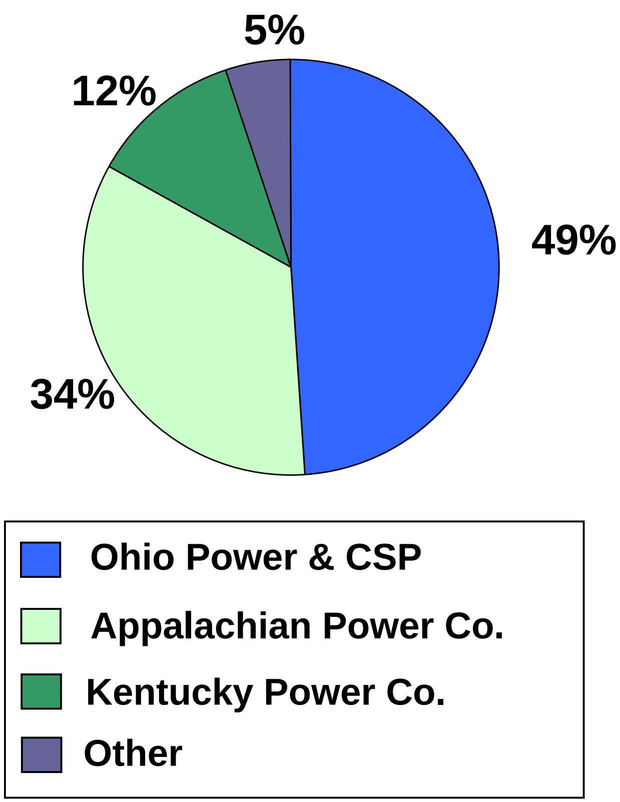
$1.7 billion for SO_2

$0.1 billion for Other

MAJORITY OF 2005 & 2006 DOLLARS WILL BE INVESTED IN OHIO & APCO

Environmental Spending by Company

Projected Environmental Investment Allocation



Funding the Environmental Investments

- Ohio: 49% ($1.8 billion)
  - Rate stabilization plan increases at CSP – 3% and OP – 7%
- Virginia/West Virginia: 34% ($1.2 billion)
  - VA: Environmental cost recovery mechanism/two rate case opportunities through 2010
  - WV: General rate case filing
- Kentucky: 12% ($433 million)
  - Surcharge mechanism

Ohio Rate Stabilization Plan Recap

Summary of Impact (Columbus Southern Power & Ohio Power):

	Income				Incremental Cash			
Rate Stabilization Plan	**2005**	**2006**	**2007**	**2008**	**2005**	**2006**	**2007**	**2008**
Escalation of Generation Rate	0	83	173	271	0	83	173	271
POLR Rider/Recovery of RTO Costs**	21	0	0	0	0	7	7	7
POLR Rider/Return on Environmental Additions	44	26	26	26	0	41	41	40
Total RSP Impact	**65**	**109**	**199**	**297**	**0**	**131**	**221**	**318**
Pre-Existing Electric Transition Plan								
Elimination of 5% Residential Generation Credit*	0	25	25	26	0	25	25	26
Recovery of RTO costs**	0	29	29	29	0	29	29	29
Total ETP Impact	**0**	**54**	**54**	**55**	**0**	**54**	**54**	**55**

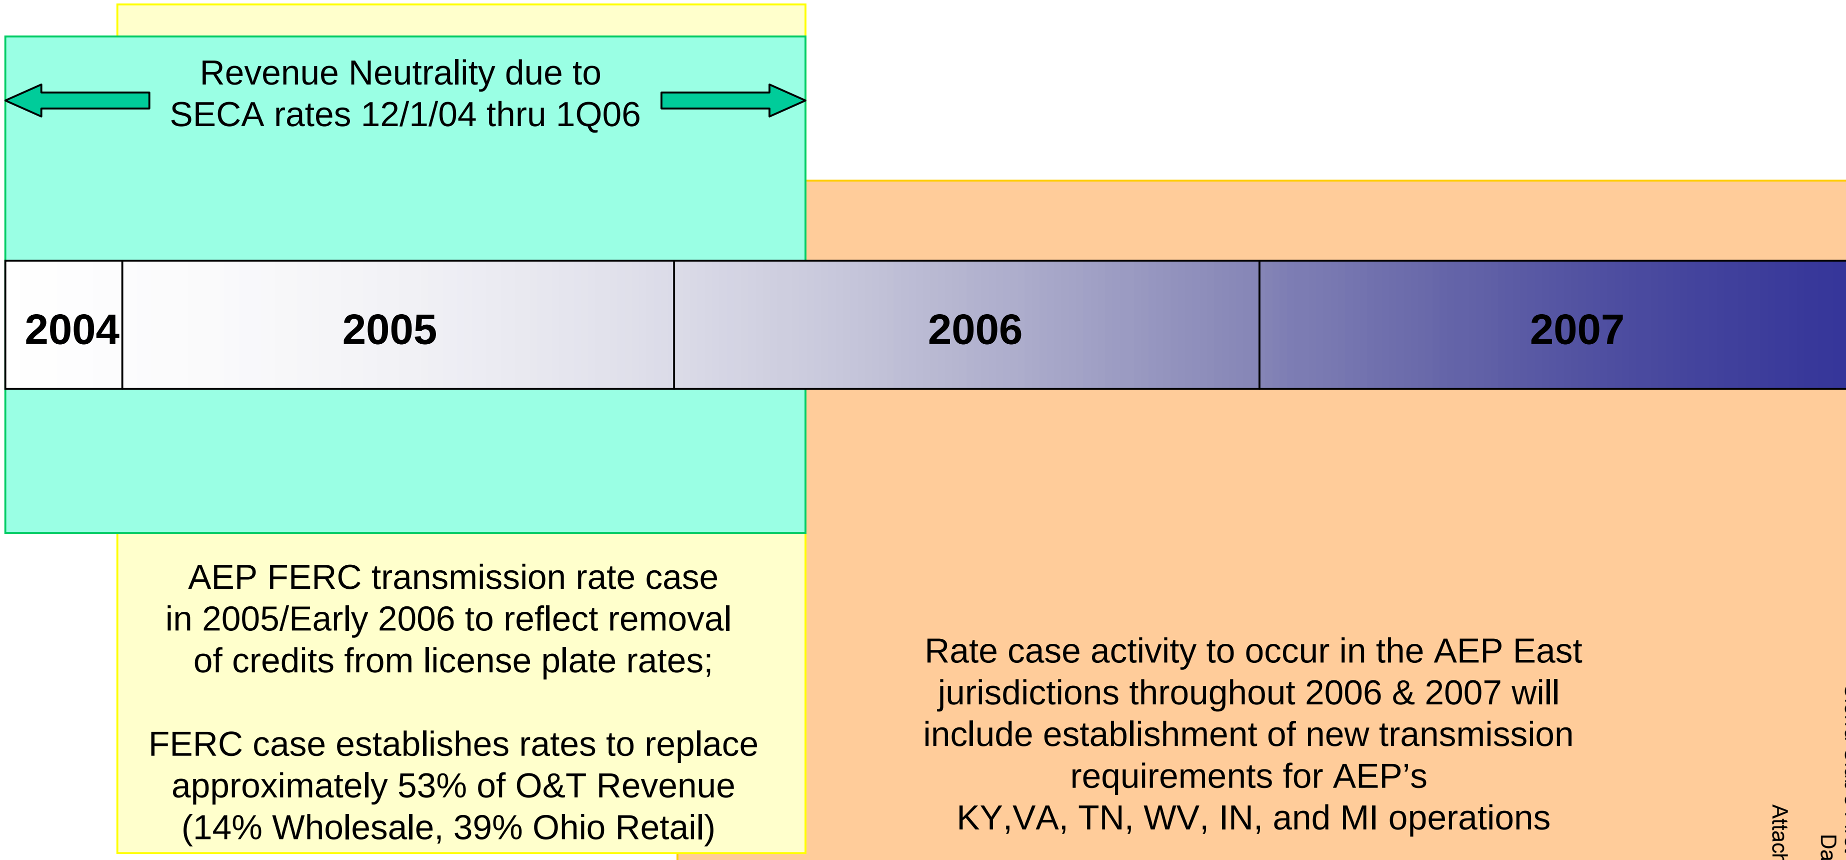
* Elimination of 5% credit is per Statute, and part of pre-existing ETP, not the RSP

** Recovery of administrative RTO costs, net congestion fees and ancillary services permitted in pre-existing ETP, but the RSP allows for recovery of 2005 costs as well

AEP WILL STILL HAVE AMONG THE LOWEST RETAIL RATES IN OHIO

Replacing Out & Through Transmission Revenues

2003 O&T Revenue Totaled $197MM



TIMING OF RATE CASE ACTIVITY TO BE A FUNCTION OF ENVIRONMENTAL & OTHER INVESTMENT RECOVERY

- **Current Regulatory Activity**
  - TCC Wires Rate Case
  - TCC Stranded Cost Recovery
  - PSO Rate Case
  - Louisiana Rate Review
- **Planned Regulatory Activity (2005-2007)**
  - FERC Transmission Rate Case
  - General Rate Cases in all AEP East jurisdictions to seek recovery of investment:
    - IN, KY, MI, TN, VA, WV

BRING CASH IN THE DOOR TO COVER CAPITAL EXPENDITURES & GROW EARNINGS THROUGH ADDITIONS TO THE ASSET BASE

IGCC Investment

2005

- Secure regulatory cost recovery
- Finalize site selection
- Negotiate with suppliers

- **2005—2007:** Obtain permits and finalize engineering and procurement

- **2008—2009**: Construct and start-up plant

AEP WILL PIONEER CONSTRUCTION OF LARGEST IGCC PLANT IN THE WORLD

What AEP Offers

- Strength and scale in assets & operations
- Focused utility model
- Earnings growth driven by native load & capital investment
- Attractive dividend yield in excess of 4%
- Positive dividend outlook
- Stable credit profile

Transmission/Regulatory Conference

W New York—The Court
January 11, 2007

Hosts: Wall Street Access and
Berenson & Company

Safe Harbor Statement Under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension and other post retirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

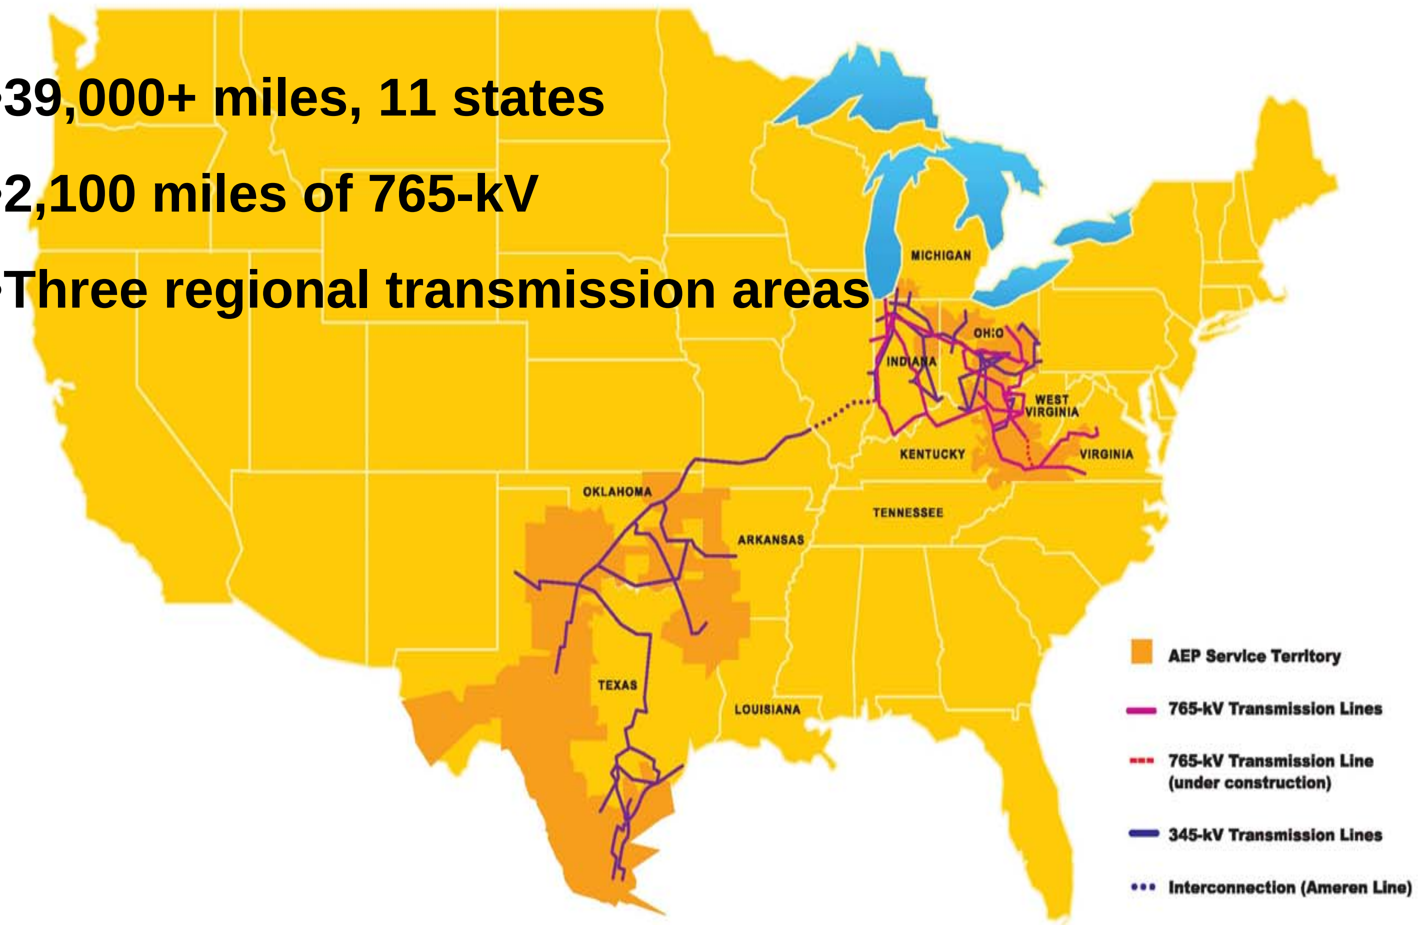
Calvin Crowder
Executive Director – Electric Transmission Texas

AEP's Transmission Grid Today

- 39,000+ miles, 11 states
- 2,100 miles of 765-kV
- Three regional transmission areas



100 Years of 'Firsts'

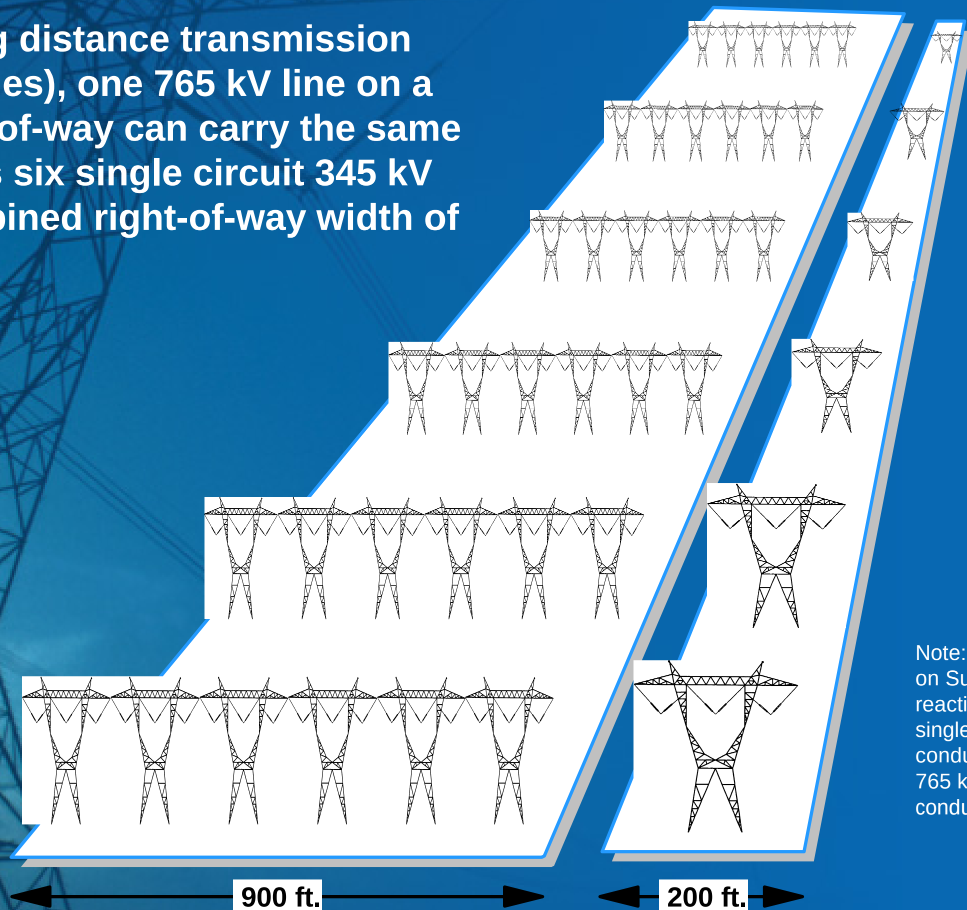
- 1917 – Developed the nation's first long-distance 138-kV transmission line, creating the idea of "coal by wire."
- 1953 – First 345-kV transmission line placed into commercial service.
- 1969 –1st 765-kV line in operation.
- 2006 – AEP's 765-kV Wyoming-Jacksons Ferry line is energized.

More “Firsts” for AEP

- I-765 – First major transmission proposal under EPAct 2005
- First Texas transco
- First 765-kV proposals to address Michigan constraints; Southwest Power Pool

765-kV: Highest Capacity, Most Efficient

Efficiency: For long distance transmission (longer than 100 miles), one 765 kV line on a 200-foot-wide right-of-way can carry the same amount of power as six single circuit 345 kV lines having a combined right-of-way width of 900 feet.



Cost Advantage: For equivalent capacity, the cost of 765-kV is 29% of the cost of 345-kV

Note: Approximate relationship based on Surge Impedance Loading (i.e. reactive power balance point), 345 kV single circuit tower lines with two conductors per phase compared to 765 kV single circuit lines with six conductors per phase.

765-kV maximizes land use, providing greatest capacity increases with least land consumption.

Transmission ~ $9 Billion Opportunity*

Creating a business model to manage capital requirements for enhanced returns with partners

~$1 billion in ERCOT

~$2 billion 765-kV study in Michigan

~$3 billion I-765 Project in PJM

~$3 billion project filed with SPP

*Note: ~$9 billion investment opportunity not included in current capital guidance forecasts with exception of ERCOT investment of $60MM in 2007 and $95MM 2008

Building the next US interstate system for enhanced reliability and market efficiency

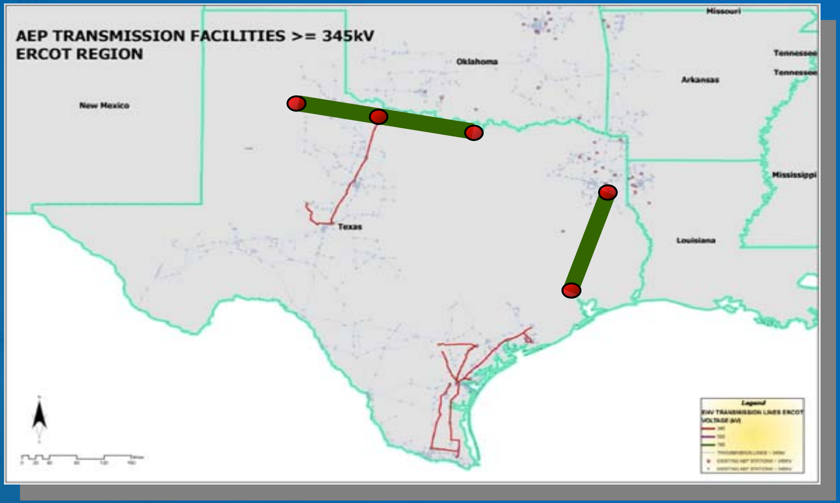
AEP AMERICAN ELECTRIC POWER

MIDAMERICAN ENERGY HOLDINGS COMPANY

- Jointly-owned utility company will design, construct and operate ERCOT transmission assets
- Up to $1B investment potential (before ownership division)
- Equity investment treatment for AEP
- AEP is also exploring 765-kV ERCOT transmission investment opportunity
  - 420 line miles
  - Up to 4000MW improved transfer capability*
  - Anticipated ERCOT rate impact 0.5mils/kWh
- This project may be considered by JV in future

*Line segment capability; ERCOT is a free-flowing network

- Execution of operating agreement 2007
- Establish JV entity second half 2007
- 2007 commercial operation for first JV projects



Conceptual ERCOT transmission project – proposed routes; not included in current JV plans

The first large-scale transmission venture in Texas

Benefits & Attraction of Texas Transco Joint Venture

Texas Transco Joint Venture Benefits

- Opportunity to grow ERCOT interest in a timely, resource-efficient manner
- Maximization of asset value
- Formation of strategic relationship that could permit growth beyond current AEP footprint

ERCOT Attraction

- Growing electric demand
- State's commitment to:
  - Wind generation development
  - Promotion of merchant generation
  - Relief of congestion
  - Facilitation of transmission planning in support of the Texas competitive electric market

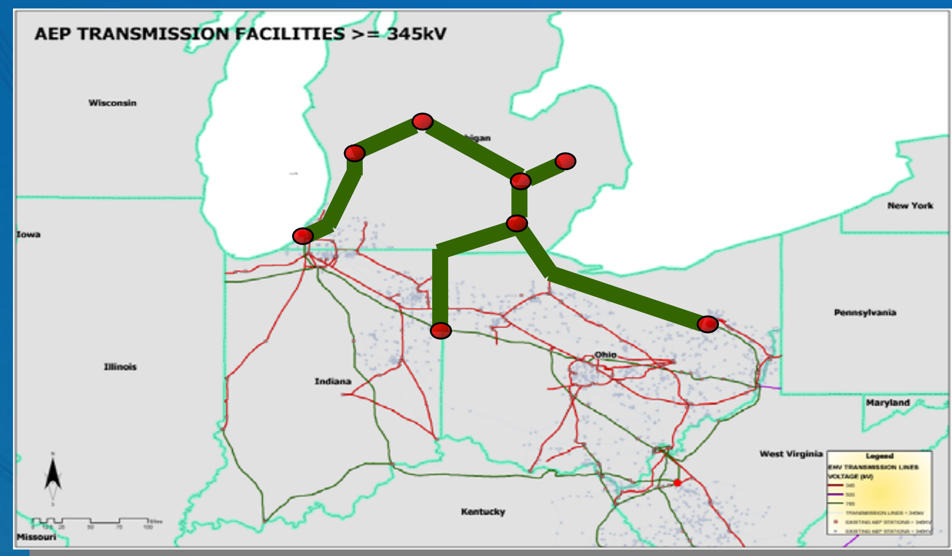
AEP Texas is uniquely positioned to develop substantial transmission to capture benefits of load growth and traditional & third-party generation

ERCOT Regulatory Certainty

- **High degree of regulatory certainty**
- **Predetermination of need for ERCOT-endorsed projects**
- **Streamlined annual review process reduces lag**
- **ROEs commensurate with other state regulatory returns**
  - **In Texas, current authorized return ranges from 10.125% to 11.25%**

ERCOT's predetermination of projects, streamlined annual review process & return opportunity make transmission investment attractive

- Agreement with ITC *Transmission* for Michigan 765-kV study
- Estimated $2B investment potential (before ownership division)
  - 630 line miles
  - Over 5000MW improved transfer capability
  - Anticipated rate impact <1mil/kWh
- 765-kV could help alleviate constraints
- Study results anticipated in early 2007



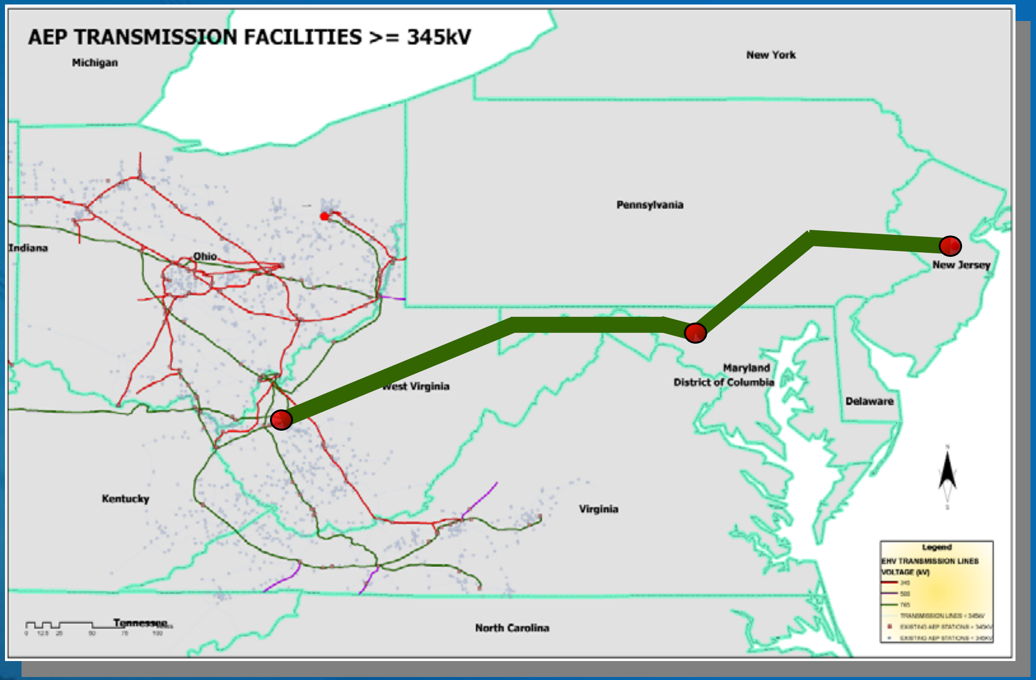
The ROW routes shown on this diagram are for illustrative purposes only and they may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints identified in MPSC studies

Cruise the I-765

- $3 billion investment
- 550 line miles
- 5000MW improved transfer capability
- Expected PJM rate impact 1mil/kWh
- 2014 estimated in-service date

Original line proposal connects AEP's Amos station to Allegheny Power's Doubs station in Maryland, and terminates at PSEG's Deans station in New Jersey. The final project will undoubtedly vary from the original proposal.



Our I-765 line will be the highest capacity, most reliable line in the United States

I-765 Benefits

- Improves eastern grid reliability, enhances Midwest – Mid-Atlantic power transfer capability by 5,000 MW
- Improves market efficiency with reduced congestion and lowers consumer costs by an estimated $1 billion annually in the east.
- Reduces network line losses by 280 MW at peak with heavy Midwest – Mid-Atlantic power transfers.
- Provides AEP with rate base opportunity for transmission investment with ROE upside and other FERC incentives.
- Provides off-system sales and siting opportunity for AEP and other low-cost midwestern generation.

Expect investment to be shared with other transmission owners; incentive ratemaking approved

I-765 Regulatory Plan

- Filed plan with PJM (Jan. 31, 2006)
- Filed (Feb. 1, 2006) petition for FERC declaratory order; approved July 20, 2006
- Filed application for DOE early NIETC designation (Jan. 31, 2006); Final regulatory plan depends on PJM tariff
  - Total annual revenue requirement $450-500 million (1 mil/kWh)
  - If AEP's regional rate design proposal for PJM is successful at FERC, revenue requirement would be paid by parties utilizing the system and benefiting customers in PJM East

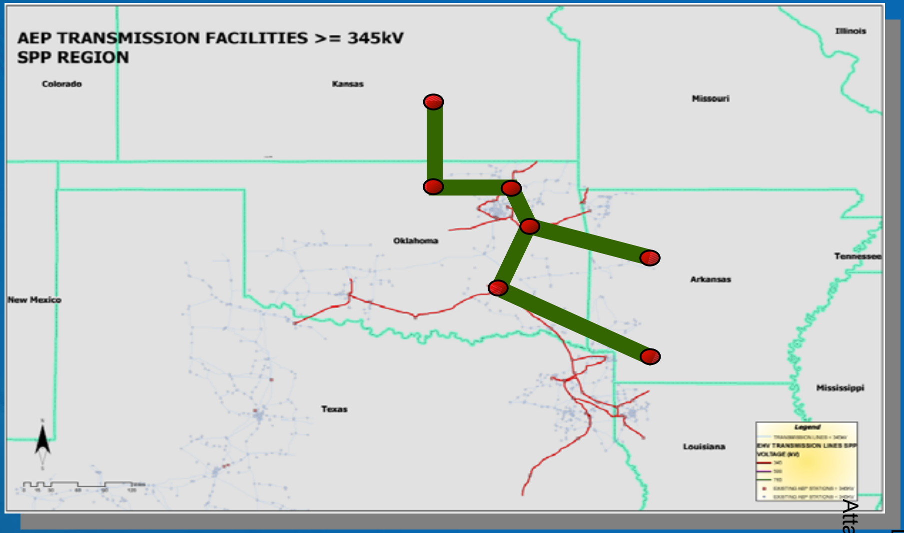
New technologies including six-conductor bundles and towers designed to blend into the scenery mitigate presence of 765-kV lines in a community

SPP Investment Potential

- June 2006 SPP requested proposal to address congestion, reliability & access for new generation
- July 2006 AEP submitted proposal:
  - Six 765-kV lines, 610 line miles from Arkansas to Wichita, Kansas, under construction 2012-2017
  - Investment ~$3 billion
    - ~4000MW improved transfer capability
    - Anticipated rate impact 2mils/kWh

Next steps:

- SPP conducting studies to evaluate proposals
- AEP providing technical assistance and support



Significant opportunity for 765-kV transmission in SPP

FERC Promotes Transmission Investment with Order 679

- **Issued July 20, 2006 to enable EPAct 2005**
- **Key provisions include:**
  - **Return on equity at the high end of the zone of reasonableness**
  - **Return on CWIP**
  - **Return on premium for acquired assets**
  - **Full recovery of construction costs and costs of cancelled or abandoned facilities due to factors beyond the utility's control**

AEP supports a national interstate grid – our core transmission strength

State Actions to Support Transmission Development

- **Regional planning-supporting role in RTO area**
- **Siting-first course of action**
- **Wholesale transmission pricing-provides regional benefits**
- **Retail cost recovery**

AEP Transmission Vision & Mission

- Maintain our position as the largest transmission company in the United States
- Maintain our leadership in technical innovation of transmission systems
- Set the standards for transmission safety, efficiency, and reliability
- Provide for robust market competition - benefiting customers by de-bottlenecking the U.S. transmission grid
- Reduce the need for new generation by facilitating the optimal economic dispatch of existing generation assets
- Increase earnings for AEP shareholders

Maintaining our leadership position and setting the standards

Wall Street Utility Group Meeting

New York City

September 21, 2006

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

IGCC – Significant Role in New Generation Plan

IGCC

- June 2006 – PUCO approved tariff to recover Phase 1 pre-construction costs ($24MM) over 12-month period effective July 1, 2006
- Expect to obtain permits and finalize engineering by 2007
- Construction of 600 MW facility to begin in 2007

SWEPCO

- May 31, 2006- Announced plans to build $1.7 billion of new generation
- Expected generation build includes a simple-cycle gas turbine totaling 320 MW at Tontitown, AR and combined-cycle gas plant totaling 480 MW at Arsenal Hill
- Aug 2006 – Announced plans to build $1.3 billion 600 MW base load ultra-supercritical coal-fueled plant – expected SWEPCO investment will be approx. 75%
- Commercial operation dates between 2007 and 2011

PSO RFPs

- 2H05 - Submitted RFPs for up to 1100 MW of peaking and baseload capacity in aggregate
- March 2006 - Two peaking RFPs totaling 340 MW awarded; commercial operation 2008
- July 2006 - Entered into JVA with OG&E to build 950 MW coal-fueled unit with goal to use ultra-supercritical technology – PSO will own 50% or 425 MW; commercial operation 2011

IGCC IS NOT A SILVER BULLET; HAVING OTHER TECHNOLOGY OPTIONS AVAILABLE IS STRATEGICALLY IMPORTANT.

Investing in IGCC

Integrated Gasification Combined Cycle

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called "syngas" – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

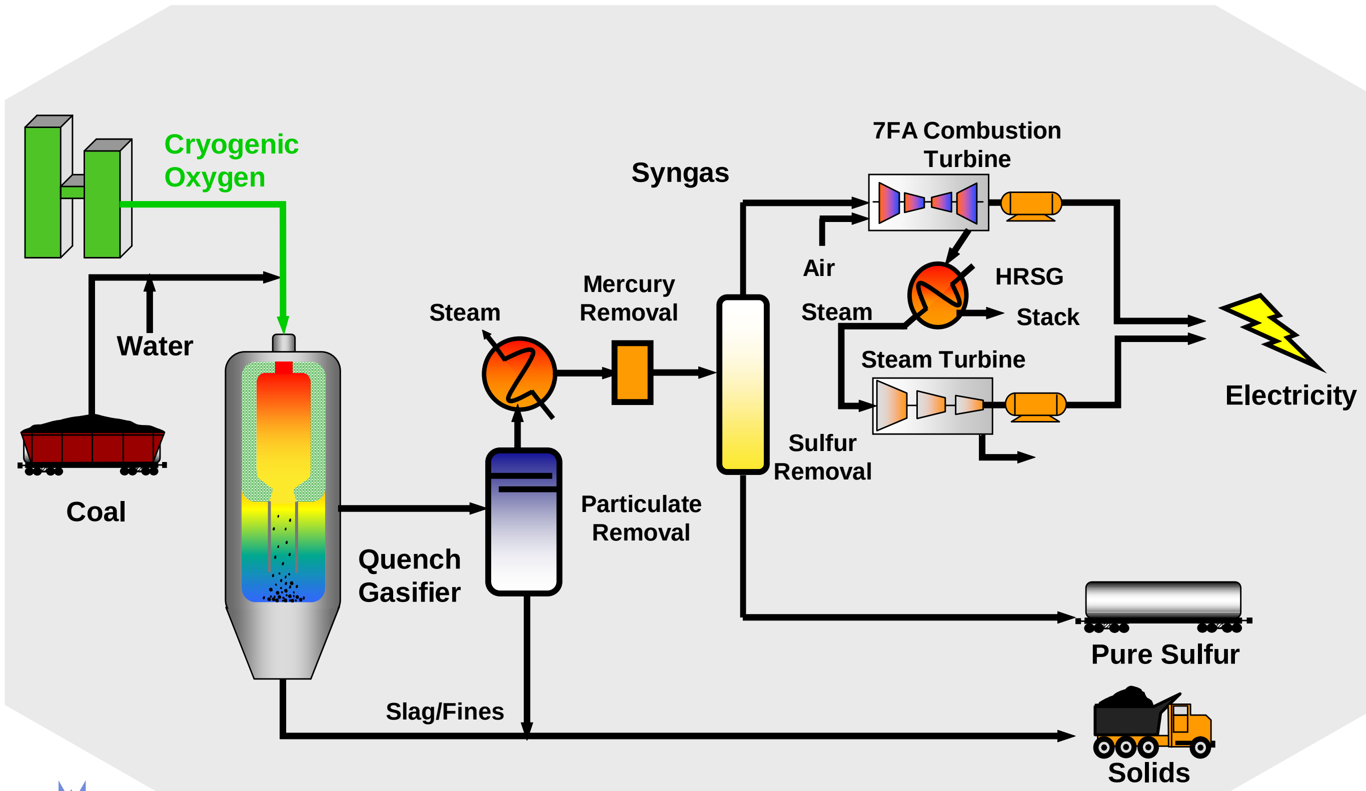
Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2 , mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP's eastern service territory.

AEP is currently working with a technology provider to develop a firm price for an IGCC facility to be built in our eastern service region. This price will be available in 2006. AEP intends to seek regulatory recovery approvals in advance of building the plant.

Looking to the Future - IGCC



162110 - GJS/CE-01/1-23-02

AEP HAS ANNOUNCED ITS INTENTION TO CONSTRUCT A COMMERCIAL-SCALE INTEGRATED GASIFICATION COMBINED CYCLE (IGCC) PLANT BY THE END OF THE DECADE

Generation Technology Comparative Stats

	PC	IGCC	NGCC
Nominal Capacity (MW)	**600**	**600**	**600**
Heat Rate (Btu/kWh)	**8700**	**8600**	**7200**
Total Plant Cost (EPC) ($/kW)	**1700**	**1900**	**480**
Production Cost ($/MWh)	**17**	**16**	**57**
Cost of Electricity, without CO_2 Capture ($/MWh)	**58**	**63**	**90**
Estimated Cost of Electricity, with CO_2 Capture ($/MWh)	**94**	**87**	**137**

Source: Results of AEP analysis based on EPRI studies

- Total Plant Cost (2005$'s) includes the cost to **E**ngineer, **P**rocure and **C**onstruct plant and owner's direct costs; does not include interconnections, transmission lines, transmission upgrades, contingency or AFUDC.
- Assumes Northern Appalachian Coal price of $1.60 /mmBtu for PC and IGCC, and natural gas price of $7.00/mmBtu for NGCC.
- Assumes 85% capacity factor for PC and IGCC, 25% for NGCC.
- Production Cost includes Fuel Cost and Variable Operations & Maintenance (VOM) cost.
- Cost of Electricity based on EPC cost, does not include the cost of Emission Credits.
- Cost of Electricity with CO_2 capture does not include sequestration cost.

IGCC TECHNOLOGY IS STRATEGIC TO KEEPING COAL IN THE MONEY

IGCC Regulatory Activity

Ohio IGCC Activity

March 18, 2005: CSP and OPCO filed an application with the PUCO seeking authority to recover costs related to building and operating an IGCC plant if built in Ohio.

West Virginia IGCC Activity

January 11, 2006: Appalachian Power Co. filed a Certificate of Public Convenience and Necessity seeking authority to construct a 600-MW IGCC facility in West Virginia.

AEP WILL PIONEER CONSTRUCTION OF LARGEST IGCC PLANT IN THE WORLD

IGCC Regulatory Activity in Ohio

Ohio - Cost Recovery Filing

Phase 1 – PUCO AUTHORIZED

- Effective during 2006
- Seeks recovery of initial costs, including those already incurred, such as site engineering and various other engineering services
- Approximately $23.7 Million

Phase 2

- Effective 2007- mid 2010 (Construction Phase)
- Seeks recovery of carrying costs associated with plant construction

Phase 3

- Effective mid 2010 (Commercial Operation begins)
- Seeks recovery of projected $1.174 Billion cost of plant over its operating life

Ohio Next Steps

2006:

- Secure cost recovery plan
  - April 10, 2006 – PUCO authorized implementation of Phase 1 Rates
  - Phase 2 & 3 ruling – Post October 2006 filing – following completion of FEED study
- Negotiate with suppliers

2006—2007:

- Obtain permits and finalize engineering and procurement

2007—2010:

- Construct and start-up plant

SEEKING AUTHORITY FOR THREE PHASE RECOVERY APPROACH IN OHIO

Appendix

IGCC Permitting Process

IGCC Permitting Issues

- Air – to evaluate best available control technology (BACT)
- Wastewater – to understand wastewater streams
- US COE (Corp of Engineers) – to obtain permits for construction of river facilities
- NEPA Process – (National Environmental Policy Act) – Environmental site studies addressing wetlands, endangered species, historical artifacts

PERMITTING PROCESS WILL TAKE 1 – 2 YEARS

The Wall Street Utility Group

New York City

January 13, 2005

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements which are subject to risks and uncertainties. These factors include electric load and customer growth; abnormal weather conditions; available sources and cost of fuel; availability of generating capacity and performance of plants; the speed and degree to which competition is introduced to our service territories; the ability to recover stranded costs in connection with deregulation; new legislation and government regulation; resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to successfully control costs; the success of acquiring new business ventures and disposing of existing investments that no longer match our corporate profile; ability to sell assets at attractive prices; international and country-specific developments affecting foreign investments including the disposition of any current foreign investments and potential additional foreign investments; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; electricity and gas market prices; changes in creditworthiness in energy trading market; changes in the financial markets; changes in markets for electricity, natural gas, and other energy-related commodities; actions of rating agencies; changes in utility regulation; accounting pronouncements; performance of pension plan interest rates; liquidity in the banking, capital and wholesale power markets; prices for power we generate and sell at wholesale; changes in technology, including the increased use of distributed generation within our transmission and distribution service territory; other risks and unforeseen events, including wars, the effects of terrorism, embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Mike Morris

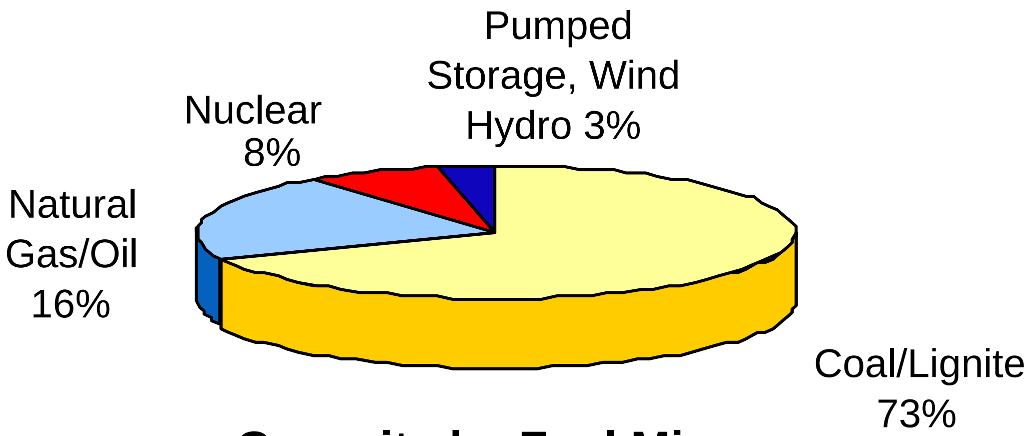
Chairman, President & Chief Executive Officer

Strength & Scale in Assets & Operations

Generation	36,000 MW capacity
Transmission	39,039 miles
Distribution	200,930 miles
Customers	5 million

FUTURE EARNINGS GROWTH DRIVEN BY NATIVE LOAD GROWTH & SUBSTANTIAL INVESTMENT OPPORTUNITY

Fuel Mix & Operating Statistics



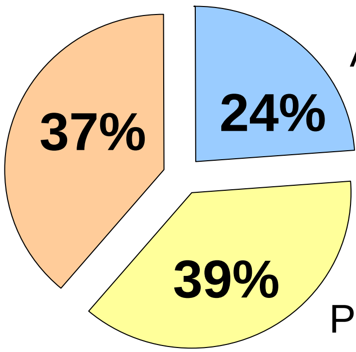
Capacity by Fuel Mix

- 36,000 MW domestic capacity
- 85% system availability factor 9 months YTD 2004
- 63% system capacity factor 9 months YTD 2004

GENERATION FLEET IS SUBSTANTIAL AND LOW COST

Coal Procurement

AEP SYSTEM

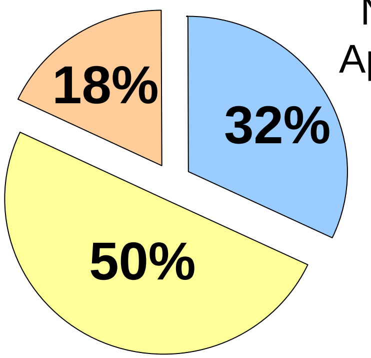


Coal Supply

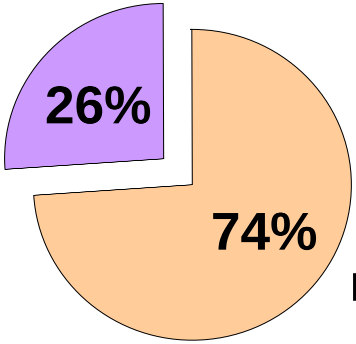
(on average)

- Purchase 75 MM tons per year
- Ave. delivered price ~ $28.50/ton in 2004
- Approximately 96% purchased for 2005
- Approximately 10% price increase in 2005

EASTERN SYSTEM

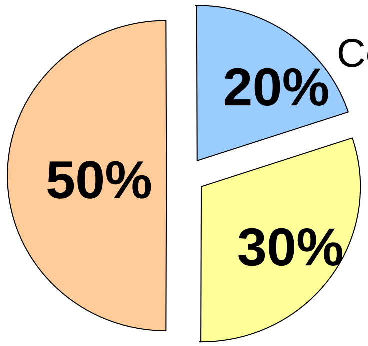


WESTERN SYSTEM



Fuel Recovery

AEP SYSTEM

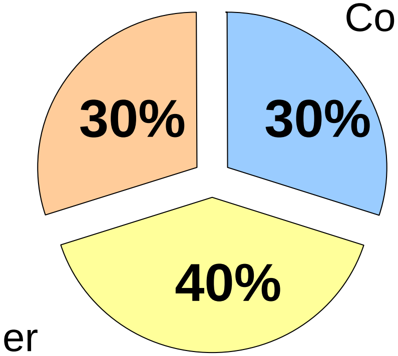


Fuel Cost Recovery
(on average)

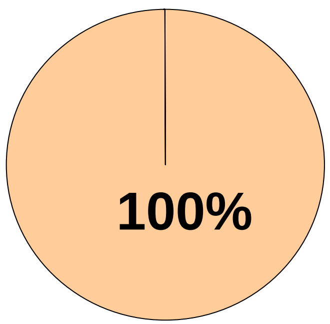
- Fuel recovery varies by jurisdiction
- 70% of fuel costs is recoverable across the AEP System
- Active Fuel Clause Jurisdictions:

AEP EAST:
AP-VA, I&M, KGP, KP
AEP WEST:
PSO, SWEPCO

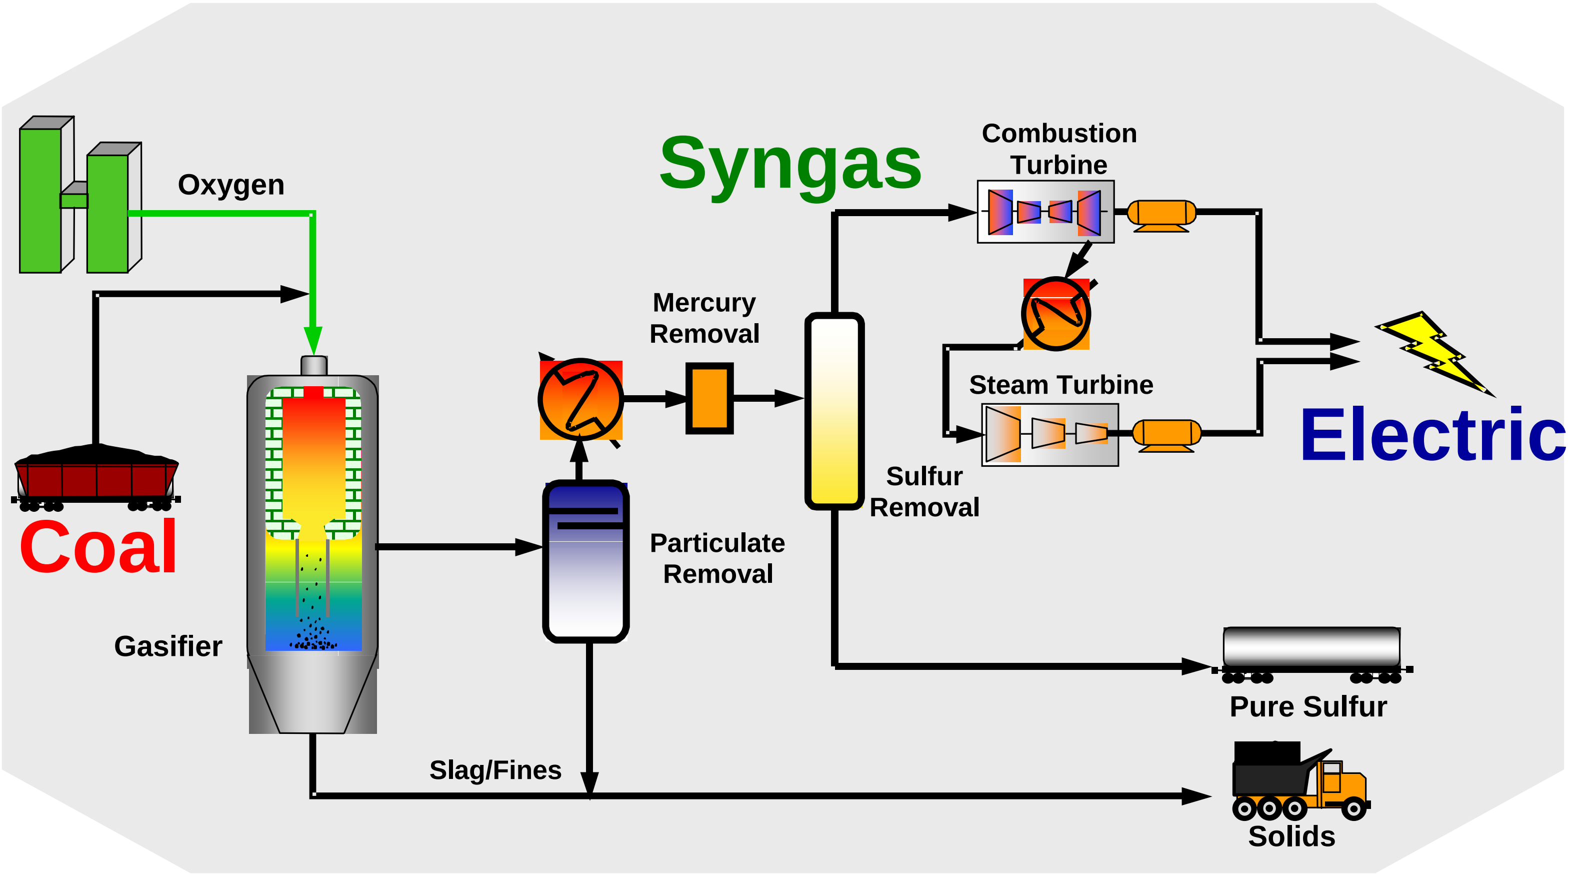
EASTERN SYSTEM



WESTERN SYSTEM



IGCC Technology



Source: US Department of Energy

Comparison of Technology Options

IGCC vs. Pulverized Coal and Natural Gas Combined Cycle

	PC	IGCC	NGCC
Nominal Capacity (MW)	600	600	530
Heat Rate (BTU/kWh)	8700	8500	7000
EPC Cost* ($/kW)	1200	1450	400
Total Plant cost** ($/kW)	1450	1750	470
Variable Production Cost*** ($/MWh)	16	14	37

* EPC includes the cost to engineer, procure and construct plant.

** Total plant cost include land, overheads, AFUDC, etc.

*** Assumes Northern App Coal @ $37/ton, no emission credits and $5.00 gas

STRATEGIC ADVANTAGE OF IGCC OUTWEIGHS LEAST COST CONSIDERATION

Site Selection Considerations

- Brownfield site vs. Greenfield site
- Sufficient Space
  - Flat area with adequate construction access
  - 600 acres
- Fuel delivery options
  - Rail/barge/truck
  - Up to 4 million tons/year of coal
  - Access to water
- Transmission Line Costs
  - Distance from high-voltage lines
  - Costs for grid interconnects and stability impacts

IDENTIFIED AND RANKED THE TOP 10 SITES IN OUR EASTERN STATES

IGCC Permitting Issues

- Air – to evaluate best available control technology (BACT)
- Wastewater – to understand wastewater streams
- US COE (Corp of Engineers) – to obtain permits for construction of river facilities
- NEPA Process – (National Environmental Policy Act)– Environmental site studies addressing wetlands, endangered species, historical artifacts

PERMIT PROCESS WILL TAKE 1 – 2 YEARS

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 2807 of 9556

Next Steps

<u>2005</u>

- Secure regulatory cost recovery
- Finalize site selection
- Negotiate with suppliers

- 2005—2007: Obtain permits and finalize engineering and procurement

- 2008—2009: Construct and start-up plant

AEP WILL PIONEER CONSTRUCTION OF LARGEST IGCC PLANT IN THE WORLD

Environmental Investment

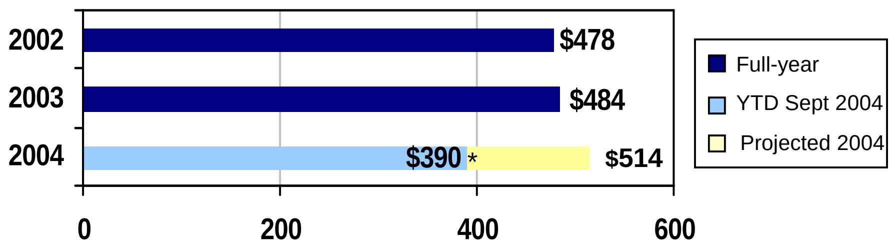
Plants under consideration:

Install Scrubbers:	Install SCRs:
<u>2006 - 2010</u>	<u>2005 - 2007</u>
Mitchell	Muskingum
Mountaineer	Amos
Cardinal	Mitchell
Amos	
Big Sandy	
Muskingum	
Conesville	

AVERAGE VARIABLE COSTS WILL BE $18 - $21 PER MWh

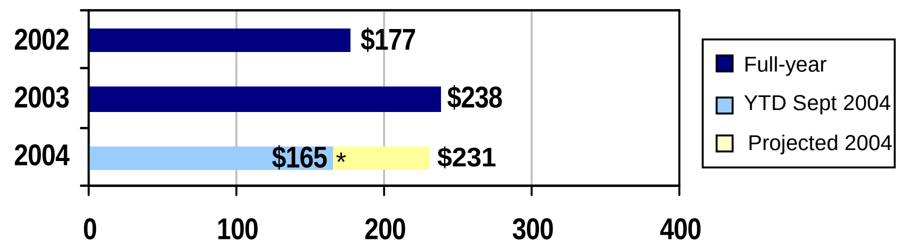
Energy Delivery Investment

Distribution Capital Expenditures



$ in millions

Transmission Capital Expenditures



$ in millions

Operating Company	Transmission & Distribution 2002	2003	2004 **
AEP Ohio	$ 212	$ 181	$ 148
Appalachian Power	130	147	142
Indiana Michigan Power	85	69	50
Kentucky Power	29	27	19
AEP Texas	92	140	93
Public Service Co. of Oklahoma	52	70	53
Southwestern Electric Power	55	88	50
	$ 655	$ 722	$ 555

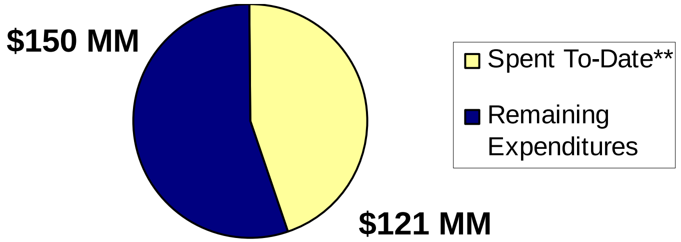
Notes:

* Represents capital expenditures for 9 months ended September 2004; FY 2004 Projected expenditures: $231 for transmission & $514MM for distribution.

** Represents capital expenditures through September 30, 2004

Major Capital Project

Wyoming/Jackson Ferry 765 kV Line



Project should increase average T&D rates from 2.0 cents to 2.04 cents/kWh

INVESTMENT IN ENERGY DELIVERY WILL CONTINUE TO BE SUBSTANTIAL

Managing the Regulatory Process

- **Current Regulatory Activity**
  - Ohio Rate Stabilization Plan
  - TCC Wires Rate Case
  - TCC Stranded Cost Recovery
  - PSO Rate Case
- **Planned Regulatory Activity (2005-2007)**
  - FERC Transmission Rate Case
  - General Rate Cases in all AEP East jurisdictions to seek recovery of investment:
    - IN, KY, MI, TN, VA, WV

BRING CASH IN THE DOOR TO COVER CAPITAL EXPENDITURES & GROW EARNINGS THROUGH ADDITIONS TO THE ASSET BASE

Ohio: Rate Stabilization Plan

- **RSP Summary**
  - 7% annual increase for OP, max 11% with rate case
  - 3% annual increase for CSP, max 7% with rate case
  - Option to remove 5% generation discount
  - Recover carrying costs on environmental capex and RTO charges

PUCO order to be issued January 2005

AEP'S RATES WILL REMAIN AMONG THE LOWEST IN THE STATE

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 2812 of 9556

Texas: Wires Rate Case & Stranded Cost Recovery

- **TCC Wires Rate Case**
  - Show cause filing made 11/03 seeking $66.5MM increase
  - Settlement with staff filed on 4/30/04 for 10.125% ROE which adjusts increase amount to $41MM
  - On 11/16/04 ALJ recommended $51MM rate reduction following remand of 7/1/04 $31MM rate reduction recommendation
  - Final order expected January 2005

- **Texas Stranded Cost Recovery**
  - Assets sold & ROFR exercised on Oklaunion & STP
  - Closing expected 1H05
  - True-up to begin following asset sale closure
    - Generation & Carrying Cost recovered via Securitization
    - ECOM less Fuel & Retail Clawback recovered via CTC

CASH PROCEEDS FROM SECURITIZATION TO BE USED TO PAY DOWN DEBT & FUND CAP EX

Oklahoma: General Rate Case

- **PSO Rate Case**
  - $41MM rate increase requested based on 12% ROE
  - Intervenor testimony filed January 4:

	Revenue Recommendation	
Party	**$ in MM (reduction)**	**ROE**
OCC Staff	(14.9)	10.11%
Attorney General *	(24)	9.63%
Industrial Customers	(35.6)	9.3%

*Net reduction of $8.7MM (24MM less $15.3 allowed for incremental tree-trimming)

HEARINGS SCHEDULED TO BEGIN MARCH 1, 2005

Replacing Out & Through Transmission Revenues

2003 O&T Revenue Totaled $197MM

Revenue Neutrality due to SECA rates 12/1/04 thru 1Q06

2004	2005	2006	2007

AEP FERC transmission rate case in 2005/Early 2006 to reflect removal of credits from license plate rates;

FERC case establishes rates to replace approximately 53% of O&T Revenue (14% Wholesale, 39% Ohio Retail)

Rate case activity to occur in the AEP East jurisdictions throughout 2006 & 2007 will include establishment of new transmission requirements for AEP's KY,VA, TN, WV, IN, and MI operations

TIMING OF RATE CASE ACTIVITY TO BE A FUNCTION OF ENVIRONMENTAL & OTHER INVESTMENT RECOVERY

What AEP Offers

- Strength and scale in assets & operations
- Focused utility model
- Earnings growth driven by native load & capital investment
- Attractive dividend yield in excess of 4%
- Positive dividend outlook
- Stable credit profile

AEP AMERICAN® ELECTRIC POWER

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate relief or other recovery for new investments transmission service and environmental compliance); resolution of litigation (including pending Clean Air Act enforcement actions and disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements periodically issued by accounting setting bodies; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Existing generation and transmission control systems	**GridSMART**: bridging the gap to provide integrated two-way communications & control across the electricity value chain	Home energy automation

AEP is committed to operating responsibly, efficiently and profitably for customers, shareholders, employees and communities.

Goals for U.S. Transmission Development

- AEP advocates high-efficiency 'EHV" transmission systems should serve as the foundation for new transmission investment to provide the electrical equivalent of the interstate highway system.
- EHV systems provide benefits not provided by lower voltage solutions including:
  - Enabling a more sustainable supply portfolio through renewable energy and technological advancements
  - Advancing national security by enhancing reliability, removing barriers to supply options and allowing greater flexibility in fuel diversity
  - Extending benefits to large geographic regions, transcending state and regional borders
  - Providing for longer term solutions and postponing new lower voltage fixes
  - Enhancing operational performance and providing flexibility by off loading the overburdened underlying system

A national interstate transmission system is within our reach in a reasonable period of time.

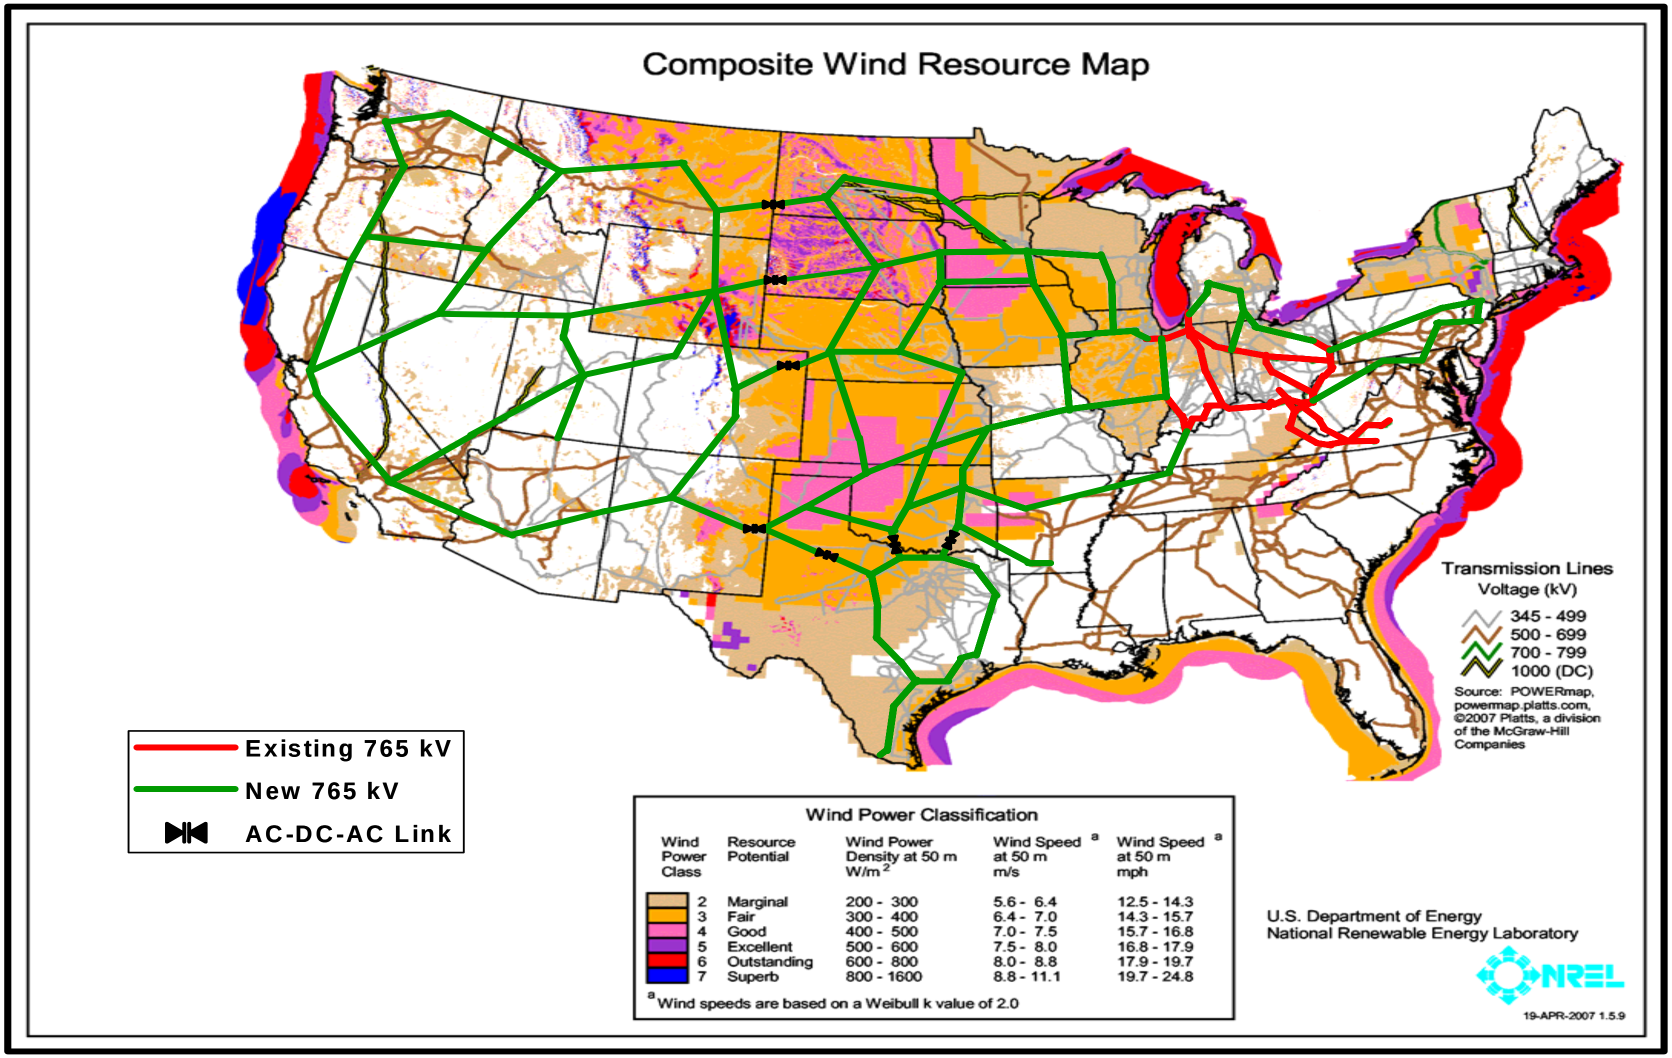
AEP Transmission Key Investment Strategies

- Cultivate a climate that encourages and promotes the development of an interstate transmission system
- Collaborate with likeminded, qualified investment partners to build needed "interstate projects" in a timely manner
- Create sustainable investment opportunities for AEP shareholders
- Leverage AEP's extra-high voltage (EHV) expertise and existing infrastructure
- Continue our present top-tier performance in safety & health, operations and reliability

AEP is well positioned to be a key player in the development of tomorrow's interstate transmission system.

Building an Interstate Transmission System

AEP/AWEA: Cultivating a Vision for the Future



Building an Interstate Transmission System

Federal Focus Needed

- **Federal action/incentives to build:**
  - Return on equity at the high end of the zone of reasonableness
  - Return on CWIP
  - Return on premium for acquired assets
  - Full recovery of construction costs and costs of cancelled or abandoned facilities due to factors beyond the utility's control
- **Advancement of federal policies to encourage EHV investments:**
  - NIETC designations and backstop siting
  - Targeted policies to advance EHV solutions to promote "National Solutions" and a sustainable national energy policy
  - Cost allocation mechanisms which promote the identification and development of "National Solutions"

As the electric grid evolves, so must our policies for planning, allocating and recovering the cost of transmission investments.

Building an Interstate Transmission System

Regional and State Focus Needed

- **Regional actions needed:**
  - Adoption of long term planning horizons for EHV upgrades
  - Recognition of the value of inter-regional EHV assets
  - Cost allocation mechanisms which promote EHV transmission growth
  - Timely inter-regional planning processes
- **State actions needed:**
  - Support for RTO findings and determinations of need
  - Expedited siting processes
  - Pass through of transmission rates
  - Recognition of the value of regional and inter-regional assets

A true interstate transmission system requires a national vision and policies that promote those investments.

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests

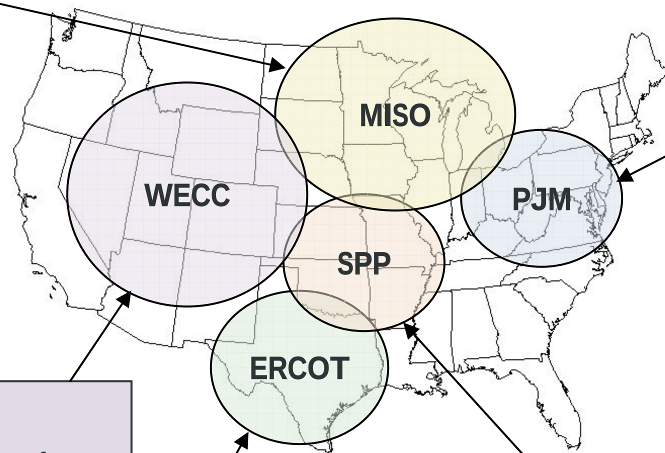
Page 2826 of 9556

Transmission Investment Opportunities

The investigation of opportunities needs to be mindful of regional drivers

MISO

ITC 765-kV project may be test case for cross-border cost recovery and seams issues



PJM

Congestion will be reduced and reliability will be increased

WESTERN STATES

Opportunity for 765-kV build-out for long-haul transportation from remote resources to load

SPP

Regional rate design under development to encourage investment and accommodate new generation sources

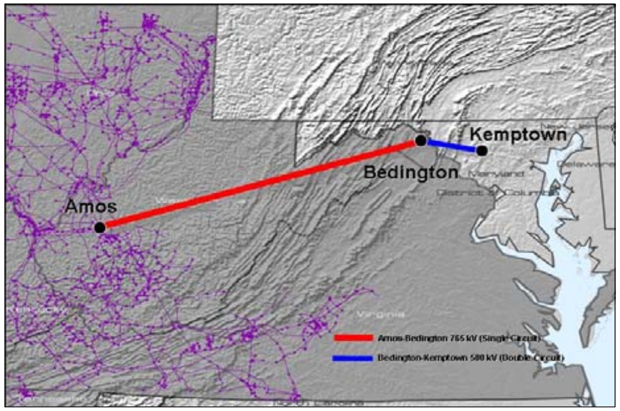
ERCOT

Load growth and access to wind resources driving transmission investment

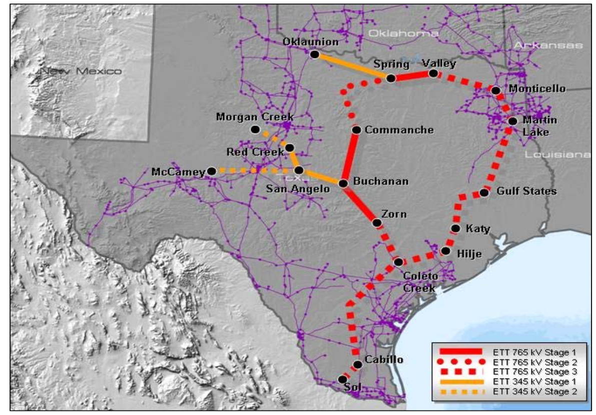
I-765™ Transmission: Investment Opportunities

Transmission Conference

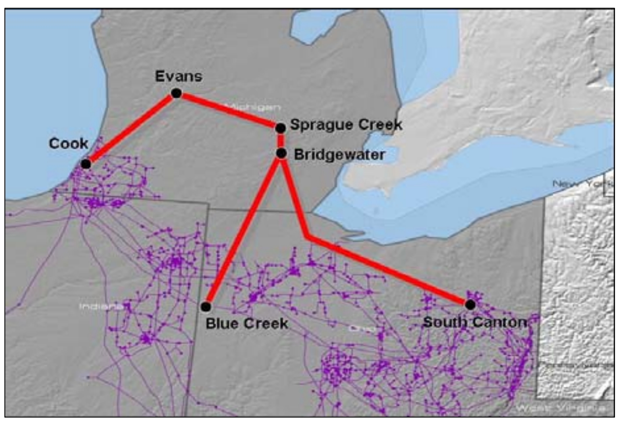
AEP is Advancing the Development of a National Interstate Today



PATH Project (PJM)



ETT Proposal (ERCOT)



AEP-ITC Michigan Proposal (PJM/MISO)

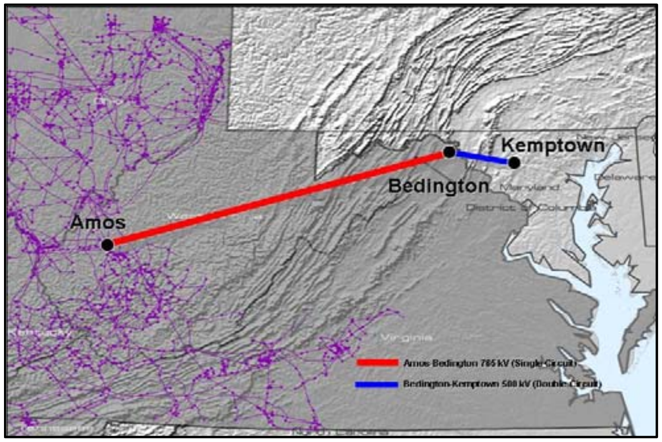
Page 2828 of 9556

I-765™ Transmission in PJM: PATH

Execution in Action

- *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries -- to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
  - Completed FERC Filing – December 2007
    - *Pursuing new project FERC incentives: cash return on CWIP, 14.3% ROE, recovery of all costs incurred prior to the time rates go into effect, and recovery of all prudently incurred development and construction costs if the project is abandoned.*
- *Funding Plans/Transaction Structure*
  - AEP and Allegheny share ownership of Amos – Bedington line and contribute equally to this portion of the project through PATH West Virginia Transmission Company, LLC
  - AEP's investment will be held in the AEP Transmission Holding Company LLC subsidiary
  - Project corridor was included in the DOE's National Interest Electric Transmission Corridor
- *Key Next Steps*
  - Siting Approval – Fall 2009
  - Targeted Completion – 2012

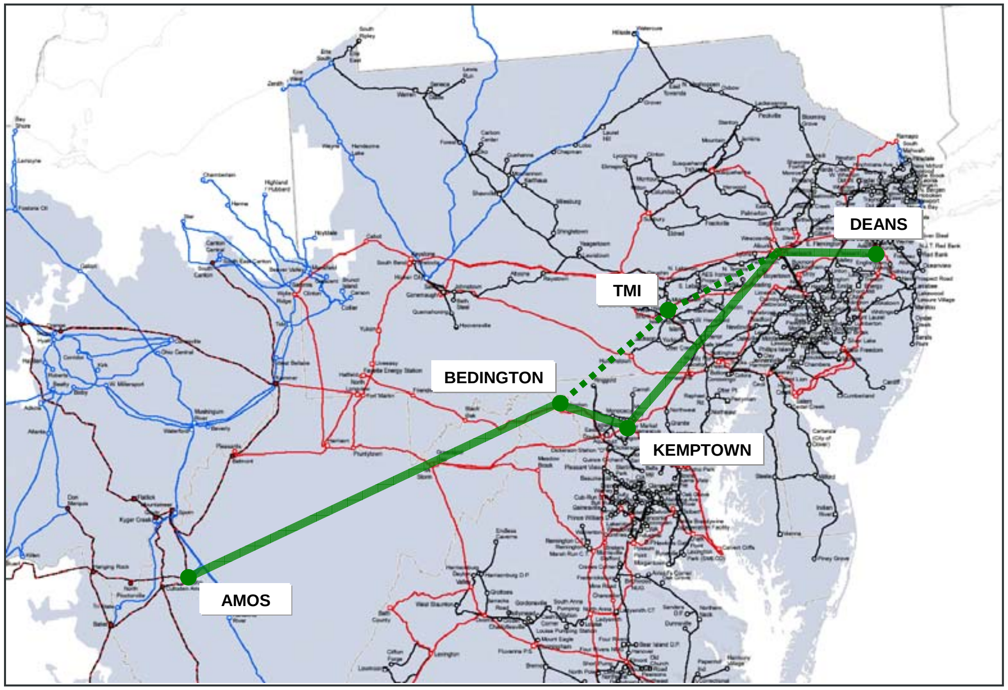


The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

I-765™ Transmission in PJM East

Second phase of original AEP 550-mile I-765 proposal

- Approximately 250 miles from West Virginia-Maryland border to Public Service Electric & Gas Deans Station in New Jersey.
- Currently under consideration by PJM as part of Regional Transmission Expansion Plan (RTEP).
- Based on PJM RTEP approval, AEP will seek a suitable business partner (JV partner) to complete the second leg of the original proposal.

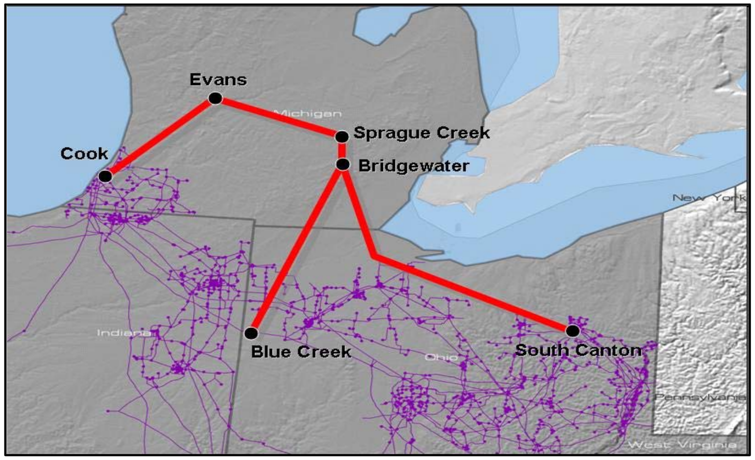


The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

I-765^{TM} Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
  - Study was released Q3 2007
  - 700 miles of 765-kV line in Ohio and Michigan
  - \$2.6 billion investment (before ownership division)
  - AEP and ITC are in discussions to form a Joint Venture
- *Benefits*
  - Up to 5,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- *Next Steps*
  - Agreement on JV (AEP/ITC) Q2 2008
  - JV Formation - 2008
  - MISO and PJM Review/Approval - 2008
  - FERC Filing - Fall 2008
  - Siting Approval – Fall 2010
  - Estimated Completion – Fall 2015

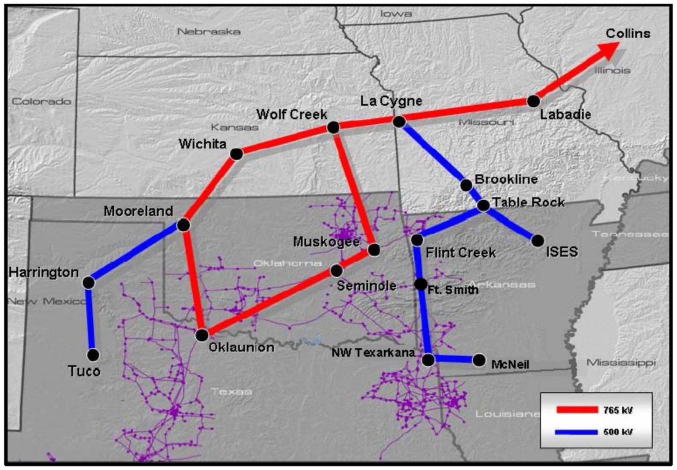


The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

I-765™ Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- *Overview*
  - July 2006 AEP submitted conceptual project for six 765-kV lines
  - Proposed 765-kV Kansas / Oklahoma / Arkansas connecting to MISO/PJM
  - 610 miles from Kansas to Arkansas
  - SPP proposes 765-kV in Texas / Oklahoma / Kansas / Missouri connecting to MISO/PJM
  - SPP also proposes 500-kV in Texas / Oklahoma / Arkansas / Missouri
  - $3.0 billion investment (before ownership division)
  - Proposed 2012-2017 construction period
- *Benefits*
  - 4,000 MW improved transfer capability
- *Next Steps*
  - Study Disclosure – Completed 2Q 2007
  - JV Formation – Completed 3Q 2007
  - SPP RTO/BOD EHV Overlay Approval – 2Q 2009
  - SPP RTO FERC Filing – 3Q 2009
  - Siting Approval – 3Q 2011
  - Estimated Completion – 3Q 2017



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Electric Transmission America (ETA)

- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 Joint Venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by the Joint Venture would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.

ETA reflects a natural progression and expansion of AEP's partnership with MidAmerican.

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 2833 of 9556

I-765™ Transmission in Texas (ETT)

Electric Transmission Texas Update

- *Transaction Structure*
  - 50/50 joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
  - ETT capital structure is 60% debt / 40% equity
  - Services provided by AEP
  - Investment opportunities can be offered by either partner
- *Transaction Status*
  - Participation Agreement signed Jan. 9, 2007
  - PUCT Recently Approved:
    - ROE of 9.96%
    - Establishment of Transmission Utility Status
    - Transfer of $70 million assets from AEP Texas to ETT
  - FERC approval for asset transfer received April 20, 2007
  - Closed JV with Mid-American Energy Holdings Company on December 21, 2007
- *Next Steps*
  - ETT project opportunities to be evaluated on a case by case basis
  - Anticipate offering projects to ETT Q2 2008

Benefits & Attraction of ETT Investments

JV Benefits

- Opportunity to grow ERCOT interest in a timely, resource-efficient manner
- Maximization of asset value
- Formation of strategic relationship that could permit growth beyond current footprint

ERCOT Attraction

- Growing electric demand
- State's commitment to:
  - Wind generation
  - Promotion of merchant generation
  - Relief of congestion
  - Facilitation of transmission planning in support of the Texas competitive market

ETT is uniquely positioned to develop substantial transmission to capture the benefits of load growth.

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests

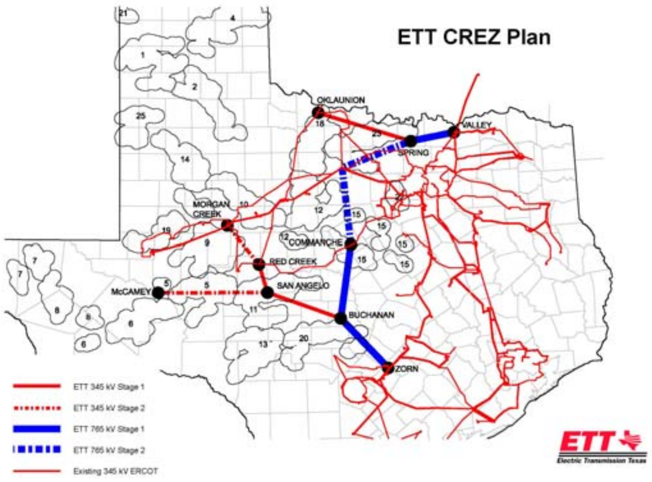
Item No. 1
Attachment 1 - Confidential
Page 2835 of 9556

Texas CREZ Update

Harnessing the Wind: Competitive Renewable Energy Zones offer unique opportunities to showcase ETT

- **CREZ Approval Stages (*current expectation*)**
  - Stage 1 – Interim order designating power regions – Q3 2007
  - Stage 2 – CREZ Transmission Optimization Study – Q1/Q2 2008
  - Stage 3 – PUCT selection of transmission construction designees – Q2 2009*
  - Stage 4 – CCN development and submission – Q2 2010*
  - Stage 5 – CCN approval – Q4 2010 (if 6 months)*
  - Stage 6 – Construction (TBD)

*If PUC adopts TSP Rule



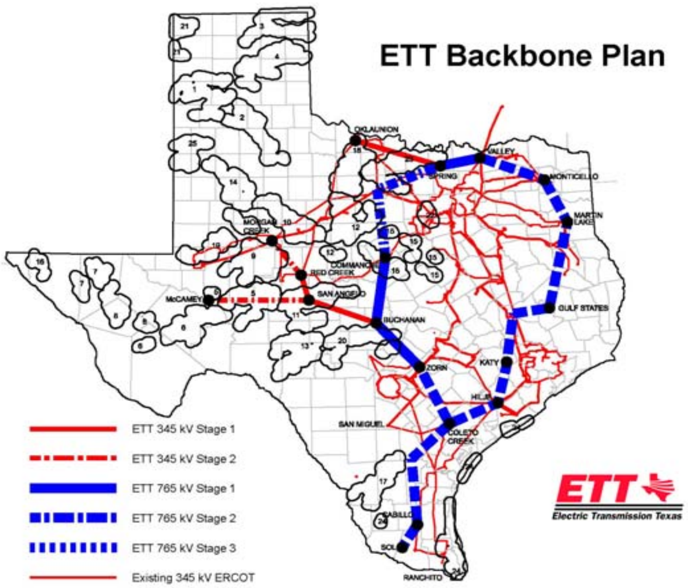
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

CREZ & Backbone Opportunities – cont'd

Harnessing the Wind: Competitive Renewable Energy Zones offer unique opportunities to showcase ETT

- **ETT CREZ Overview**
  - Strengthen ERCOT grid to harvest up to 10GW wind generation
  - Build a robust transmission system for ERCOT Texas
  - $1.5 billion investment Phase 1 – 2012*
  - $1.5 billion investment Phase 2 – 2015*

- **ETT ERCOT Backbone Proposal**
  - ETT proposal for ERCOT and PUCT to consider CREZ transmission in context of long-term vision for transmission system.
  - Current 5-year planning horizon results in higher ultimate costs, lower system efficiency.
  - Long-term 15-20 year perspective provides better plan, supports development of high voltage backbone at 765-kV.
  - $4.2 billion investment (long-term backbone).*



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

* Before ownership division.

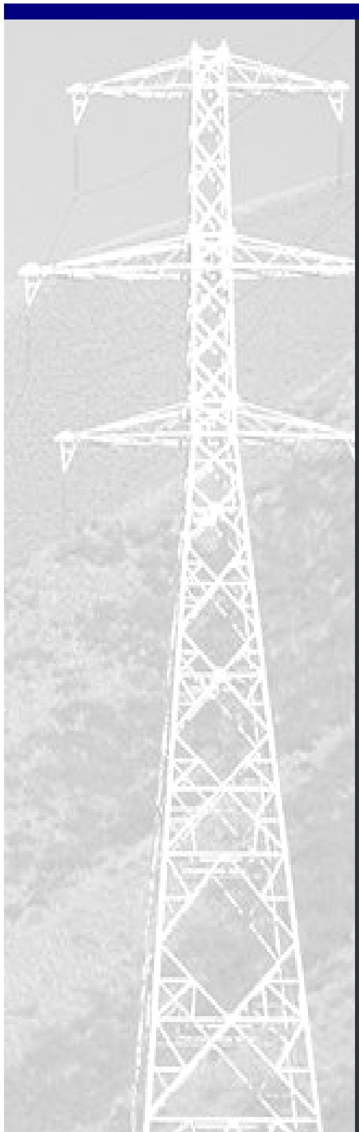
Summary

AEP will continue to take a leadership position by:

- Creating a vision of the future for transmission investment on a national level.
- Cultivating a climate for growth in transmission investment at the regional and national level.
- Pursuing a two pronged investment strategy focused on:
  - Significant "base plan" investment in traditional service territory
  - Pursuit of strategic alliances for off system investments which provide significant financial growth for AEP shareholders

"If your actions inspire others to dream more, learn more, do more and become more, you are a leader." – John Quincy Adams

AEP AMERICAN® ELECTRIC POWER



2Q08 Earnings Release Presentation

July 31, 2008

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are canceled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; volatility in the financial markets, particularly development affecting the availability of capital on reasonable terms and developments impairing our ability to refinance existing debt at attractive rates; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

Second Quarter 2008 Highlights

- 2Q08 GAAP/Ongoing Earnings $0.70 per share; 2008 YTD GAAP Earnings $2.13 per share; 2008 YTD Ongoing $1.72 per share
- Reaffirming 2008 Ongoing Earnings Guidance Range of $3.10 to $3.30 per share
- Ohio ESP Filing Highlights
- New Generation-Turk Plant
- Transmission Update

Anticipated Outcome of Ohio Filing Keeps Us in Our Targeted Earnings Range

For analysis purposes, certain financial statement amounts have been reclassified for this effect on earnings presentation.

2Q08 Performance Drivers:

- *Retail Sales (lines 1-4):*
  - *Rate relief $77MM; (APCo, I&M, Ohio RSPs, PSO & Texas)*
  - *Positive load growth including new customers, $23MM*
  - *Positive impact due to $37MM true-up to VA order booked in 2Q07*
  - *Offset by $42MM lower fuel margins & $16MM increased OSS sharing*
  - *Unfavorable weather impact of $0.03 ($20MM) versus prior year and no impact versus normal*
- *Off-System Sales (line 5):*
  - *Favorable due to higher prices and lower internal load*
- *Operations & Maintenance (line 9):*
  - *Higher expenditures in all categories due to maintenance outages, reliability and employee benefits*
- *Interest Expense & Preferred Dividend (line 12):*
  - *Higher due to increased long-term debt outstanding and higher interest rates on variable-rate debt*
- *Income Taxes (line 14):*
  - *Effective tax rate for utility operations was 30.2% in 2008 and 30.6% in 2007*
- *MEMCO decreased due to increased diesel expense and flooding on rivers*
- *Generation & Marketing increased due to plant optimization & favorable contracts*
- *Parent decreased due to higher interest expense*

For analysis purposes, certain financial statement amounts have been reclassified for this effect on earnings presentation.

2Q08 YTD Performance Drivers:

- *Retail Sales (lines 1-4):*
  - *Rate relief $152MM; (APCo, Ohio RSPs, PSO & Texas Wires)*
  - *Positive load growth including new customers; $77MM*
  - *Positive impact due to 2007 unfavorable true-up of VA order; $37MM*
  - *Offset by $42MM higher fuel costs and $32MM increased OSS sharing*
  - *Unfavorable weather impact of $0.04 ($23MM) versus prior year and favorable $0.01 ($3MM) versus normal;*
- *Off-System Sales (line 5):*
  - *Favorable due to higher prices and volumes (higher plant availability & lower internal load)*
- *Operations & Maintenance (line 9):*
  - *Decrease primarily due to deferral of 2007 PSO ice storms in 1Q2008, offset by increases for maintenance, reliability & employee benefits*
- *Interest Expense & Preferred Dividend (line 12):*
  - *Higher due to increased long-term debt outstanding and higher interest rates on variable-rate debt*
- *Income Taxes (line 14):*
  - *Effective tax rate for utility operations was 32.3% in 2008 and 32.0% in 2007*
- *MEMCO unfavorable due to river flooding & diesel costs*
- *Generation & Marketing favorable due to plant optimization & favorable contract*
- *Parent unfavorable due to higher interest expense*

Beginning Cash & Cash Equivalent Balances	301	178
Ending Cash & Cash Equivalent Balances	**$ 172**	**$ 218**

2008 Cash Flow Drivers:

Operating Activities

- Changes in working capital largely driven by G & A type items
- Changes in other assets and liabilities largely driven by changes in unrecovered fuel.

Investing Activities

- Cash outlay of $1.6B for 2008 YTD capital investment.
- 2008 asset sale proceeds relate to miscellaneous utility property sales; 2007 asset sale proceeds primarily relate to Centrica sharing $20MM and TCC's sale of its share of Oklaunion $46MM.
- Change in 2008 Other Investing primarily relates to the purchase of nuclear fuel of $100MM and $35MM contributions to nuclear trust & the purchase of MEMCO barges.

Financing Activities

- 2008 common share issuances of $71MM primarily due to issuances through the dividend reinvestment program.
- Changes in long and short term debt driven by capital funding requirements.

Morgan Stanley Global Electricity & Energy Conference

New York, NY
March 16, 2006

A Century of Firsts

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

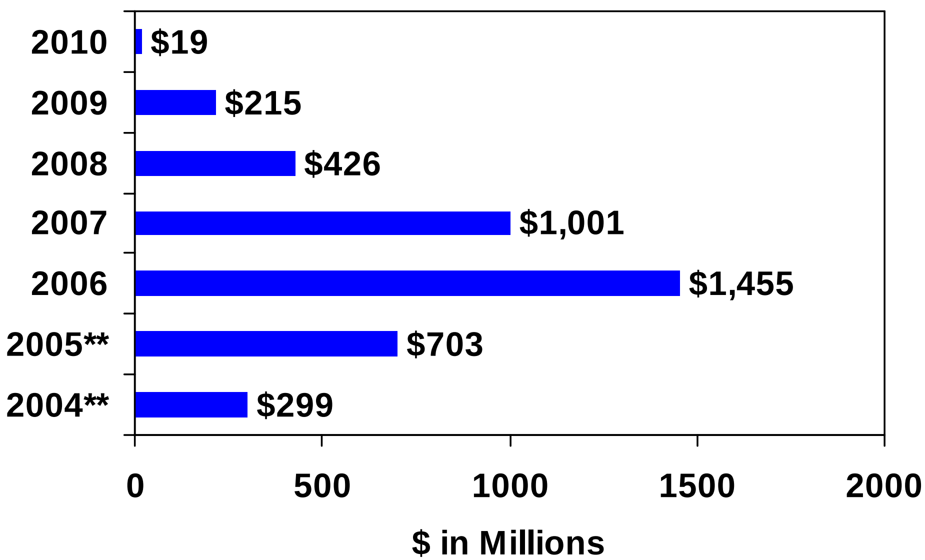
REGULATORY RECOVERY WILL DRIVE CAPITAL INVESTMENT THROTTLE

$4.1 Billion Environmental Investment

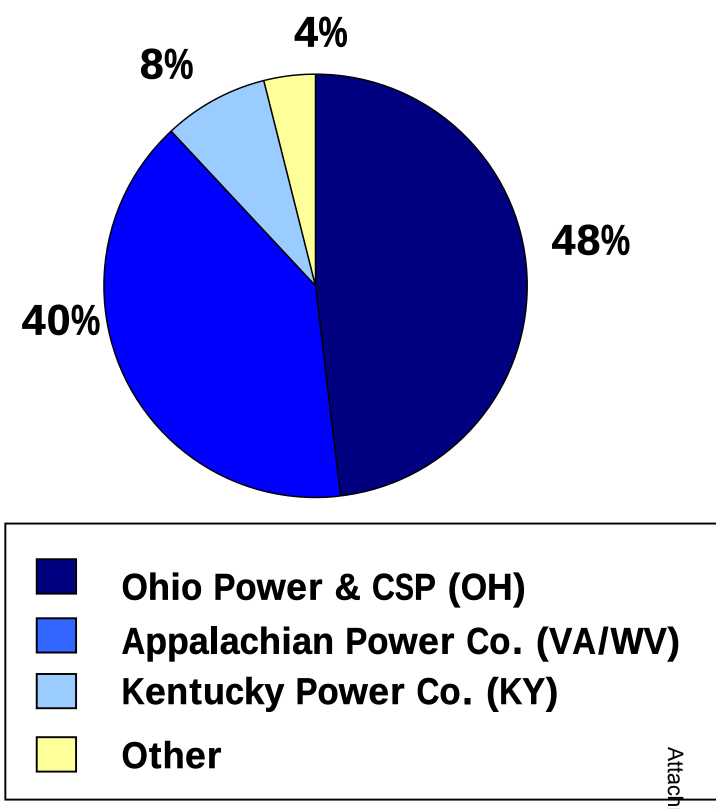
Environmental Capital Investment*



*Environmental investment for NOx, SO_2 , & Hg purposes including AFUDC

** Actual investment level in 2004 and 2005

Projected Environmental Investment Allocation

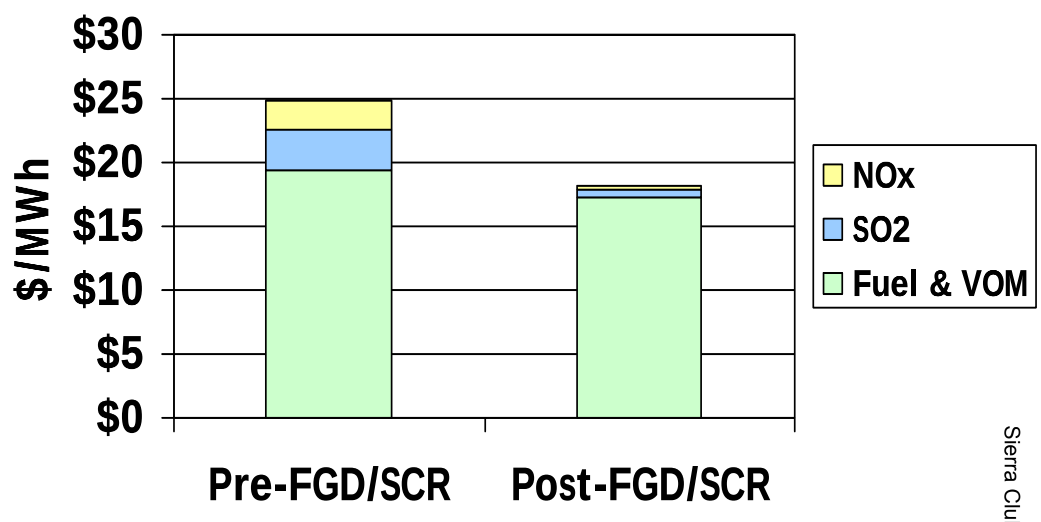


MAJORITY OF 2006 & 2007 DOLLARS WILL BE INVESTED IN OHIO & APCO

Low Cost Production Supports Investment & Investment Sustains Low Cost Production

- Lowers exposure to high cost emission allowances
- Creates opportunity to burn wider variety of lower cost fuels
- Improves baseload operation (higher capacity factor, higher margin)
- All-in cost of electricity, including FGD/SCR investment, remains low

Typical Pulverized Coal Plant
Comparison of Variable Production Cost
Pre- and Post- FGD/SCR (future view)*



* Assumes annual NOx program

AEP WILL REMAIN THE LOW COST PRODUCER FOLLOWING COMPLETION OF ENVIRONMENTAL RETROFIT PROJECTS

Regulatory Activity Underway

- ✓ **TCC Securitization Process**
- ✓ **Ohio Companies filing for pass through of FERC OATT changes**
- ✓ **APCo Filing for Recovery of E&R Costs in Virginia**
- ✓ **APCo & WPCo Base Rate & Expanded Net Energy Cost (ENEC) Filing in West Virginia**
- ✓ **Kentucky Base Rate Filing - Settlement Pending**

- ✓ **IGCC**
- ✓ **APCo notified the Virginia SCC of plans to file a base rate case no sooner than May 1, 2006**

LEVEL OF CAPITAL INVESTMENT WILL BE ADJUSTED BASED ON RATE RECOVERY AND/OR CASH GENERATION

Regulatory Activity Underway

TCC Stranded Cost Recovery Case

February 16, 2006 – PUCT final order provides for net true-up of $1.475 billion

- March 3, 2006 – Requested approval of financing order to issue $1.8 billion in low-cost securitization bonds
  - ➢ Final order expected in May 2006
  - ➢ September 1, 2006 - Issuance of securitization bonds if no appeal
- April 2006 – Request approval for CTC to address other true-up items
  - ➢ Expected $475 million credit to customers
  - ➢ Jan 2007 – CTC to be implemented

Ohio Companies Pass through of FERC OATT Changes

Filed Feb 3, 2006 - Seeking authority to pass through to customers the changes in the FERC OATT related to the elimination of the SECA revenues and the costs associated with the Wyoming-Jacksons Ferry transmission line

Regulatory Activity Underway

Appalachian Power – Virginia E & R Cost Recovery Factor

Filed July 1, 2005 - Seeking recovery of $62.1 Million in new Environmental & Reliability costs

- ✓ Oct 14, 2005 – SCC ruled VA law does not allow recovery of prospective costs - $48.6 Million
- ✓ Nov 14, 2005 - APCo filed supplemental direct testimony which included updated actual E&R costs incurred through Sept. 30, 2005 of $21.1 million
- ✓ Hearings completed March 1, 2006

➢ APCo gave notice to the VA SCC on March 1, 2006 of its plan to file a general rate case no sooner than May 1, 2006.

Appalachian Power & Wheeling Power – West Virginia Base Rate Case & ENEC Reactivation

Filed August 26, 2005 – Seeking $183 Million increase in revenues for increasing costs for coal, purchased power and environmental improvement construction projects

- ✓ APCo filed supplemental testimony on January 18, 2006 to reflect Ceredo plant purchase and other miscellaneous items resulting in a revised revenue requirement of $171 Million.
- ✓ APCO was granted the authority to begin deferral accounting for ENEC beginning July 1, 2006.

Proposed Phase-in over 4 years

- ✓ June 23, 2006 – $74 Million*
- ✓ June 23, 2006 – $9 Million
- ✓ Jan 1, 2007 – $43 Million
- ✓ Jan 1, 2008 – $8 Million
- ✓ Jan 1, 2009 – $37 Million

* Base rate increase of $16MM, ENEC of $56MM & miscellaneous of $2MM

Procedural Schedule

- ✓ March 8, 2006 – Staff and Intervenors Testimony
- ✓ March 16, 2006 – Rebuttal & Cross-rebuttal
- ✓ April 18 - 21, 2006 – Evidentiary Hearings
- ✓ Initial Briefs – 20 days after receipt of transcripts
- ✓ Reply Briefs – 10 days after initial briefs
- ✓ July 28, 2006 – Statutory deadline for an order

Regulatory Activity Underway

Kentucky Base Rate Case

Filed Sept 26, 2005 – Seeking recovery of increasing costs associated with providing safe and reliable electric service

- ✓ Parties to the case reached a settlement on Feb 6, 2006
  - ✓ $41 million annual increase in base rates
  - ✓ To be effective March 30, 2006
- ✓ Settlement was presented to the Commission at a public hearing on Feb 7, 2006
- ✓ Final order expected in March 2006

Indiana Depreciation Filing

December 1, 2005 – I&M filed petition with the IURC for accounting authorization to revise the depreciation rates applicable to its electric utility plant in service

- ✓ Based on a 2004 depreciation study, I&M recommends a decrease in annual depreciation expense of approximately $45 Million on an after-tax Indiana jurisdictional basis.
- ✓ Procedural schedule has been set with final order expected in June 2006

Regulatory Activity Underway

Ohio - Cost Recovery Filing

Phase 1

- ✓ Effective during 2006
- ✓ Seeks recovery of initial costs, including those already incurred, such as site engineering and various other engineering services
- ✓ Approximately $23.7 Million

Phase 2

- ✓ Effective 2007- mid 2010 (Construction Phase)
- ✓ Seeks recovery of carrying costs associated with plant construction

Phase 3

- ✓ Effective mid 2010 (Commercial Operation begins)
- ✓ Seeks recovery of projected $1.174 Billion cost of plant over its operating life.

Ohio Next Steps

2006:

- ✓ Secure cost recovery plan
  - Final PUCO Order expected in 1Q06
- ✓ Finalize site selection
- ✓ Negotiate with suppliers

2006—2007:

- ✓ Obtain permits and finalize engineering and procurement

2007—2010:

- ✓ Construct and start-up plant

West Virginia IGCC Activity

On January 11, 2006, Appalachian Power Co. filed a Certificate of Public Convenience and Necessity seeking authority to construct a 600-MW IGCC facility in West Virginia.

SEEKING AUTHORITY FOR THREE PHASE RECOVERY APPROACH IN OHIO

Regulatory Activity Completed

Ohio – Rate Stabilization Plan (2006 – 2008)

- ✓ Annual 3% and 7% generation rate increases at CSP & OP, respectively
- ✓ POLR rate rider for environmental additions
- ✓ Ability to request additional 4% annual increase in generation rate
- ✓ Elimination of 5% residential generation credit (stipulated in the pre-existing Electric Transition Plan of 2000)

AEP East FERC Transmission Case

December 20, 2005 – FERC approved settlement allowing wholesale transmission rates to increase

- ✓ Results in $22 Million net revenue in 2006 from wholesale transmission

SWEPCo Fuel Factor/Surcharge Filing

January 12, 2006 – Settlement approved by PUCT

- ✓ Fuel factor will increase SWEPCo's annual Texas retail fuel-related revenues by approximately $46 Million.
- ✓ Interim surcharge will collect the under-recovery amount of $44 Million, including interest.

Appalachian Power- Virginia Fuel Factor Increase

- ✓ $57.7 Million increase in fuel factor approved on January 20, 2006

PROGRESS IS BEING MADE ON THE REGULATORY FRONT

What AEP Offers

- Strength and scale in assets & operations
- Focused utility model
- Earnings growth driven by native load & capital investment
- Attractive dividend yield in excess of 4%
- Stable credit profile

AEP Enjoys Significant Presence Throughout The Energy Value Chain

Strategic Direction

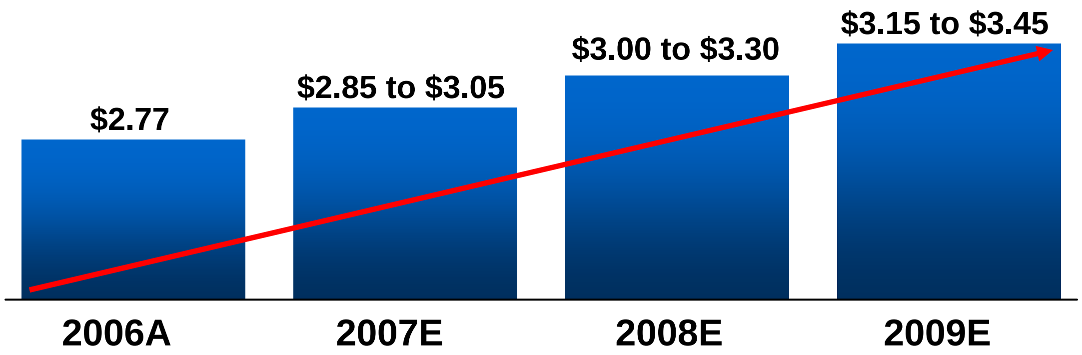
- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Develop our transmission business
- Achieve adequate returns on all assets

Deliver value to investors and cost effective service to our customers

Continued Commitment To Our Core Utility Mission: Bring Reasonably Priced Electric Service To Our Customers, Thereby Strengthening Our Communities And Rewarding Our Investors

Framework For Long-Range Performance

- 2007, 2008 & 2009 Ongoing Earnings Guidance Ranges:



- EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in existing utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
  - Investment in new transmission opportunities
  - Seek rate recovery for new investments
  - Control costs & achieve timely rate relief
- Maintain credit ratings
  - BBB/Baa2/BBB

Our Strategy Remains Focused On Regulated Operations

Utility Investment Drives Growth

Capital Investment Forecast (2007-2009)

($ in millions)	2007	2008	2009	Total (2007-09)
Environmental	$935	$521	$301	**$1,757**

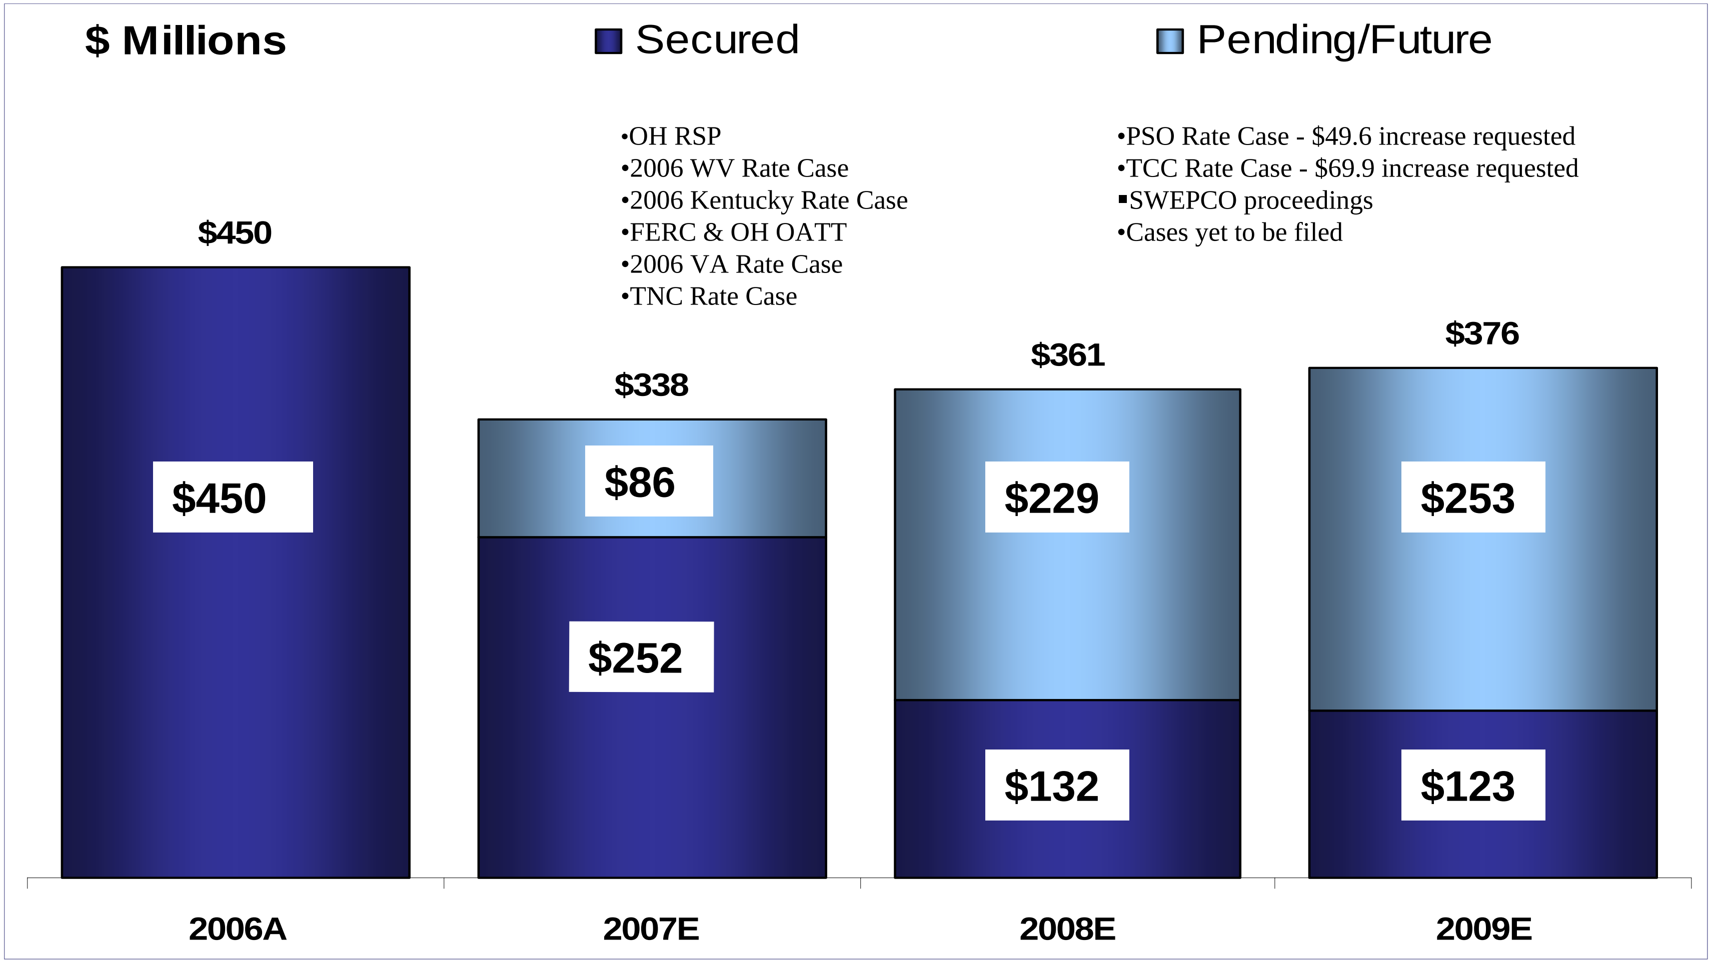
Add: Lawrenceburg Plant Purchase	$325
2007 Including Lawrenceburg	**$3,867**

Note: Excludes AFUDC and recently announced CO_2 and transmission projects

*Includes Lawrenceburg purchase $325MM in 2007

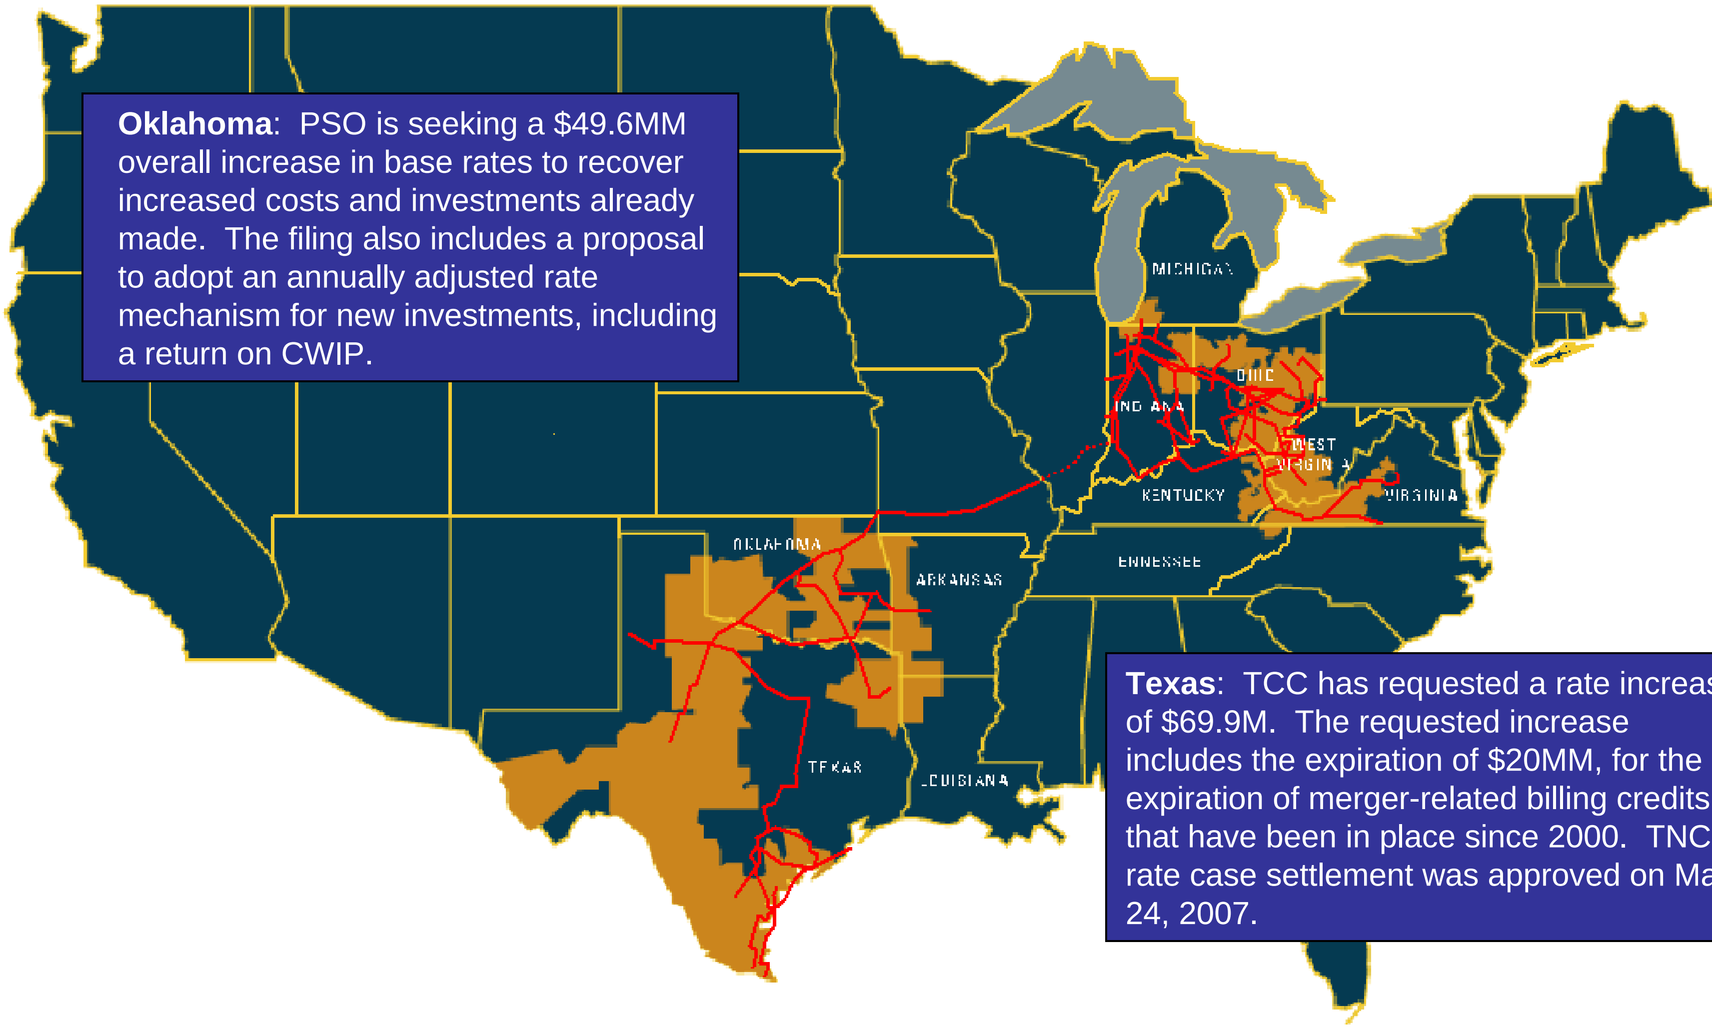
Growth Investment To Be Funded By Cash From Operations Via Rate Relief And Debt Issuances

Incremental Rate Relief Composition



Rate Relief Is A Critical Element To AEP's Financial Success

Base Case Regulatory Summary



Oklahoma: PSO is seeking a $49.6MM overall increase in base rates to recover increased costs and investments already made. The filing also includes a proposal to adopt an annually adjusted rate mechanism for new investments, including a return on CWIP.

Texas: TCC has requested a rate increase of $69.9M. The requested increase includes the expiration of $20MM, for the expiration of merger-related billing credits that have been in place since 2000. TNC's rate case settlement was approved on May 24, 2007.

Summary Rate Case Information

APCo Virginia General Rate Case

On May 4, 2006, Appalachian Power Co. filed a general base rate case with the Virginia State Corporation Commission (VSCC) requesting an increase of $198.5 million ($225.8 million in base revenues offset by an off-system sales credit of $27.3 million). (Docket #: PUE-2006-00065). An order was issued on May 15, 2007, authorizing a $24MM rate increase and an ROE of 10.0%,with E&R to be addressed in a separate filing.

Summary Rate Case Information

Texas Central Company Wires Case

On November 9, 2006, TCC & TNC filed applications with the PUCT to raise base rates they charge to Retail Electric Providers (REP) serving end-use electricity customers in their service territories. On April 3, 2007, TCC and TNC submitted revised rate increase requests of $69.9MM and $22MM, respectively. Requested increases include the expiration of merger-related billing credits that have been in place since 2000, totaling $20MM and $6.2MM for TCC and TNC, respectively. (TCC Docket #33309, TNC Docket #33310). TNC reached settlement on May 4, 2007 for a $13.7MM increase in revenues and a $2MM increase in depreciation, resulting in an annual increase of $11.7MM. The settlement was approved by the PUCT on May 24, 2007.

Total Rate Base	$ 588,170,858	$ 1,012,316,518

Summary Rate Case Information

PSO Rate Proposal

On November 21, 2006, Public Service Oklahoma filed an application with the Oklahoma Corporation Commission to increase base rates by $49.6 million to recovery investments already made and costs incurred. The request represents a 4% overall increase (including fuel). The filing also includes a proposal to adopt an annually adjusted rate mechanism, which includes a return on CWIP. The formula rate would adjust rates, up or down, if PSO earns above or below an approved bandwidth around the authorized ROE. (Case #200600285)

Pro-forma Capital Structure – Company Position (Test Year ended 6/30/06)

	% of Capitalization	Cost Rate	Weighted Cost

Procedural Schedule

November 21, 2006	Case filed
March 20, 2007	Intervenor and staff testimony filed
April 9, 2007	Rebuttal testimony filed
May 1, 2007	Hearings to commence
May 30, 2007	ALJ report issued
June 13, 2007	Oral closing arguments
June 19, 2007	Final order expected

Regulatory Activity

AEP Ohio Application For 4% Provision On Generation Rate

- On Jan. 23, 2007, CSP and OP filed an application at the PUCO to recover 2007 costs associated with additional generation-related expenditures the companies are encountering related to environmental, security and other new generation-related costs pursuant to the RSP.
- CSP and OP are requesting to implement the provision to recover $24.5MM and $8.2MM, respectively, from May 2007 through December 2007.
- Staff & Intervenor testimony filed May 11, 2007; Staff recommended a $15MM increase at CSP and a $3.7MM increase at OP; OCC recommended a $19.9MM increase for CSP and a $3.7MM increase for OP.
- Evidentiary hearing commenced May 22, 2007.
- Because there was no specific action by the PUCO within the required time frame, we were allowed to implement these increases, subject to refund, in May 2007.

Regulatory Activity

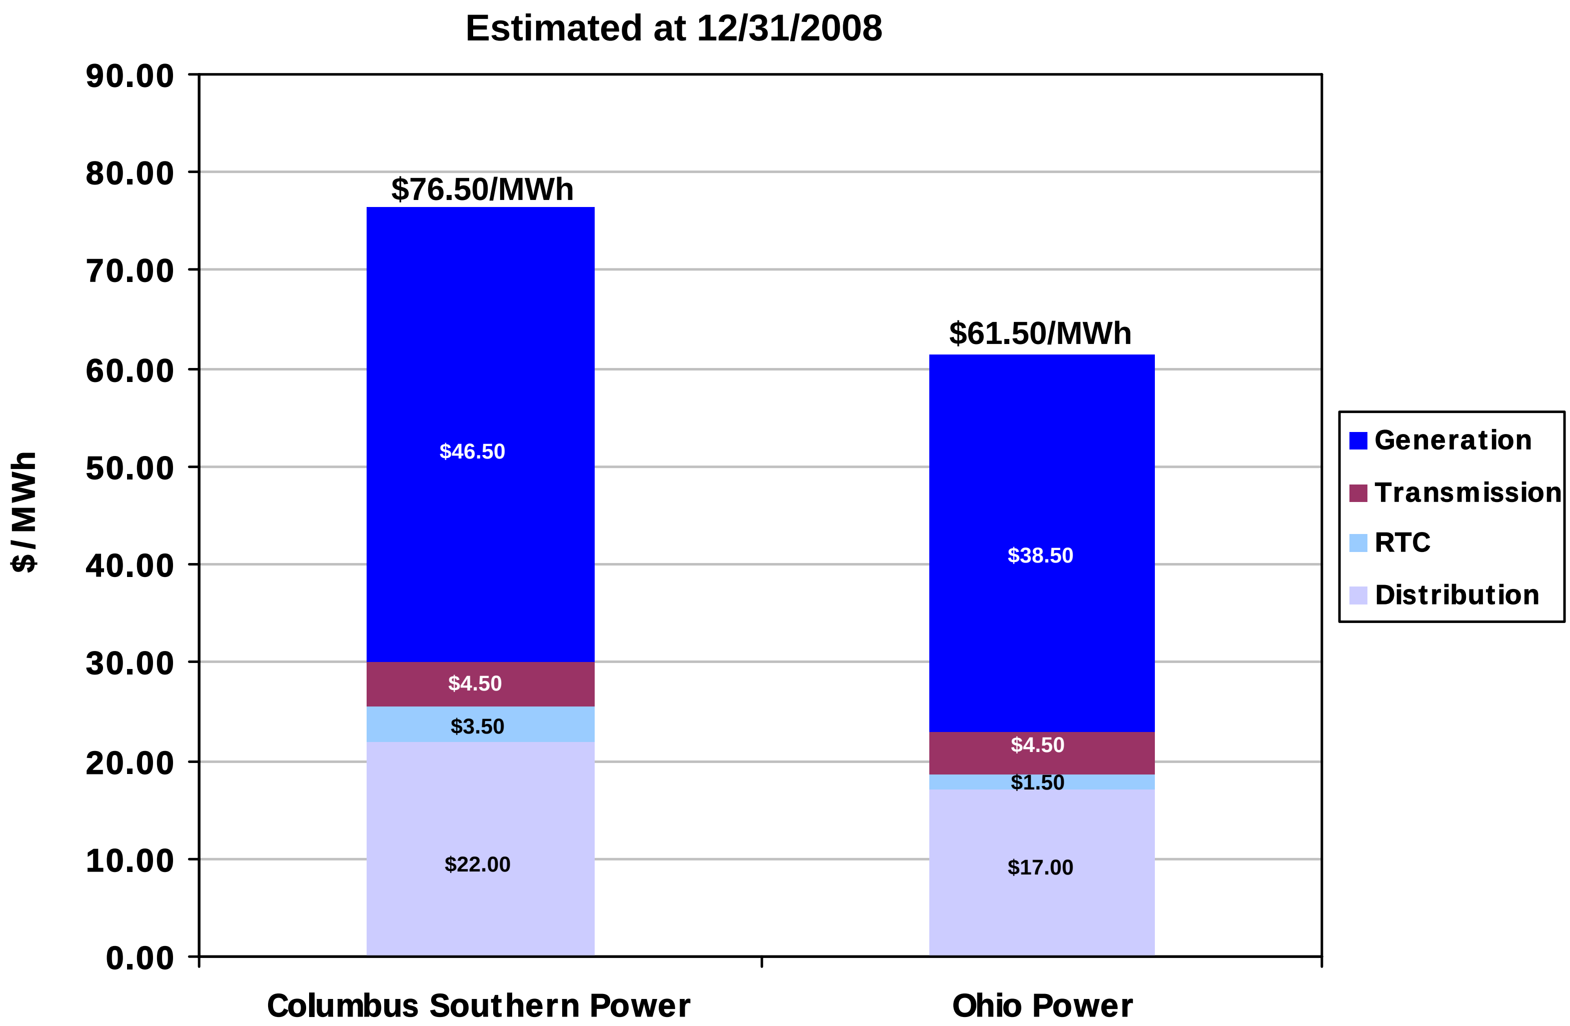
Electric Transmission Texas (ETT) Rate Filing

- Jan. 22, 2007 – ETT filed with the PUCT for approval to operate as an electric transmission utility in Texas and to establish initial rates for ETT.
    - Requested capital structure of 60% debt / 40% equity; requested ROE of 11.25%.
    - Intervenor testimony is due June 8, 2007. Staff testimony is due June 18, 2007. Hearings are scheduled for July 16-19, 2007.
        - An order is expected mid-2007 and operations are expected to commence in the 2nd half of 2007. Upon receipt of approvals, AEP and MidAmerican will each own a 50% interest in the joint venture.

Seams Elimination Cost Adjustment Revenues

- August 2006 – ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
    - Up to $96MM of SECA revenues could be disallowed, net of unused provisions
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both.
- Exceptions to initial decision filed Sept. 11, 2006; Replies to exceptions filed Oct. 11, 2006; Order expected by the Commission in 2007

Average Unbundled AEP Ohio Rates



Purchased Generation

Waterford

– 821 MW combined-cycle gas plant
– $220MM purchase price
– Columbus Southern Power completed purchase on Sept. 28, 2005

Ceredo

– 505 MW simple-cycle gas plant
– $100MM purchase price
– APCo completed purchase on Dec. 15, 2005

2,946 MW of gas-fired generation added since 2005

Darby

– 480 MW simple-cycle gas plant
– $102MM purchase price
– Columbus Southern Power completed purchase on April 25, 2007

Lawrenceburg

– 1140 MW combined-cycle gas plant
– $325MM purchase price
– AEG completed purchase on May 16, 2007

Additional Gas-fired Generation Allows Us To Meet The Growing Needs Of Our Customers And Provides The Company With Greater Fuel Flexibility

New Generation Facilities

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
SWEPCo	Mattison (Tontitown)	Arkansas	$130 MM	Gas	Simple-cycle	320	2007/2008
PSO	Southwestern	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
SWEPCo	Stall (Arsenal Hill)	Louisiana	$300 MM	Gas	Combined-cycle	480	2010
SWEPCo	Turk (Hempstead)	Arkansas	$1.3 B(1)	Coal	Ultra-supercritical	600(1)	2011
PSO	Red Rock	Oklahoma	$1.8 B(2)	Coal	Ultra-supercritical	950(2)	2012
CSP/OP	Great Bend	Ohio	Under Review(3)	Coal	IGCC	600	TBD
APCo	Mountaineer	West Virginia	Under Review(3)	Coal	IGCC	600	TBD

(1) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment.
(2) PSO will own 50%, or 475 megawatts, totaling approximately $900MM in capital investment.
(3) FEED (front-end engineering and design) study is completed. Final results will be available in June.

AEP Is Meeting The Growing Electricity Needs Of Customers Through The Pursuit Of New Economic Generation Facilities

New Gas-Fired Generation Facilities

SWEPCo

- Mattison Plant (Tontitown, AR)
  - Certificate of Need filings (LA, AR, TX) were approved in all 3 states
  - Air permit filed and approved in Feb 2007
  - Units 3 and 4 online by summer peaking-season 2007; Units 1 and 2 online by Jan 2008
- Stall Plant (Arsenal Hill, LA)
  - Certificate of Need filings (LA, AR, TX)
    - TX settled in Feb 2007
    - AR & LA decisions expected by year-end 2007
  - Air permit filed on April 27, 2007 – expecting approval by Mar 2008

PSO

- Southwestern & Riverside Additions
  - Air permit received March 22, 2007
  - Commercial operation date of Dec 2007
  - Projects to be completed by Q1 2008
  - Regulatory Recovery
    - Settlement and final order in the Lawton Cogen case authorizes costs for Southwestern and Riverside peakers to be recovered through a rider mechanism beginning as early as June 2008 based on the Commercial Operation date

2007-2009 Projected Capital Expenditures

	2007	2008	2009
Mattison	$56MM	$4MM	-
Stall	$82MM	$126MM	$64MM
Southwestern	$36MM	$3MM	-
Riverside	$35MM	$2MM	-

SWEPCo's and PSO's Short-Term and Intermediate Power Needs Will Be Met With Newly Constructed Gas-Fired Facilities

New Ultra-Supercritical Coal Facilities

SWEPCo

- Turk Plant (Fulton, AR)
  - Certificate of Need approvals (LA, AR, TX) expected by Sept 2007
  - Air permit approval expected in Aug 2007
  - Regulatory Recovery
    - Recovery of carrying cost requested in LA Certificate of Need filing – Hearings scheduled for Sept 2007
    - AR and TX rate recovery will be addressed in separate filings
  - Approximately 85-90% of costs are firm
    - EPC contract for balance of plant work awarded in May 2007
    - Contracts for turbine, boiler, and environmental control equipment awarded in 2006

PSO

- Red Rock Plant (Red Rock, OK)
  - Used and useful determination filed in Feb 2006 – approval expected by Sept 2007
  - Air permit approval expected in Aug 2007
  - Regulatory Recovery
    - Order expected in PSO rate filing by June 19, 2007 – filing includes request for CWIP treatment for new projects
  - Original cost estimate of $1.8 billion – revised cost estimate expected in July 2007

2007-2009 Projected Capital Expenditures

	2007	2008	2009
Turk Plant	$211MM	$230MM	$243MM
Red Rock Generating Facility	$54MM	$120MM	$236MM

Ultra-Supercritical Coal-Fired Generation Is The Most Economical Choice For New Baseload Plants In AEP's Western Service Territory

Integrated Gasification Combined Cycle Facilities

Front-End Engineering & Design (FEED) results complete. Results to be filed in June 2007. Cost estimates expected to be in target range of 20-30% premium over new ultra-supercritical coal-fired facilities of equal capacity.

West Virginia

- Certificate of Public Convenience & Necessity filed Jan. 11, 2006
  - APCo testimony due June 18, 2007
  - Intervenor & Staff testimony due Aug. 17, 2007
  - Hearings Sept. 10-14, 2007
  - Statutory Deadline – Dec. 2, 2007
- Air permit filed in Oct 2006 – pre-draft report is expected in June 2007
- Regulatory Recovery Filing
  - Filing expected in June 2007 – will include request for cash recovery mechanism

Ohio

- Certificate of Environmental Compatibility & Public Need filed on March 24, 2006
  - Ohio Power Siting Board approved application on March 9, 2007
- Air permit filed in Oct 2006
- Regulatory Recovery Filing
  - Phase 1 – June 2006 – PUCO approved tariff to recover pre-construction costs ($24MM) over 12-month period effective July 1, 2006
  - Phase 2 – filing likely to be withheld until resolution of Ohio Supreme Court action

Construction Period Of 48-50 Months Following Receipt Of Major Regulatory And Permit Approvals

IGCC Overview

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called “syngas” – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2 , mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP’s eastern service territory.

AEP Is Committed To IGCC Technology

IGCC Permitting Process

<u>IGCC Permitting Issues</u>

- ➢ **<u>Air</u>**
  - ✓ Identify best available control technology (BACT)
  - ✓ Determine how start-up and shut-down emissions should be addressed
- ➢ **<u>Wastewater</u>**
  - ✓ Understand nature of wastewater streams
  - ✓ Determine treatability and permitting scopes
- ➢ **<u>US ACE (US Army Corp of Engineers</u>**)
  - ✓ Conduct all necessary site studies per NEPA (National Environmental Policy Act) requirements (Wetlands, endangered species, archaeology)
  - ✓ Obtain permit to construct river facilities

Permitting process takes 1 – 2 years and is well under way

Environmental Investment

AT THE CONCLUSION OF OUR CURRENT ENVIRONMENTAL RETROFIT PROGRAM, OVER 47% OF OUR COAL-FIRED GENERATION FLEET WILL BE EQUIPPED WITH SCRs AND OVER 50% WILL BE SCRUBBED (FGD). AEP's TOTAL COAL FLEET CAPACITY = 24,710 MEGAWATTS*

Plant Name	MW Capacity	SCR	Status	FGD	Status
Amos 1-3	2900	☑	In-service	☑	Projected 2008-10
Gavin 1 & 2	2620	☑	In-service	☑	In-service

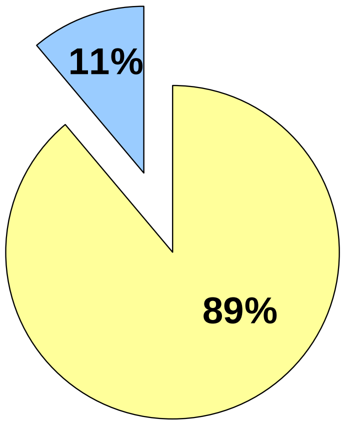
*Excludes AEP's 44% ownership in OVEC (980 MWs of coal-fired capacity)

Installation Of SCR And FGD Equipment Will Allow Our Coal Fleet To Remain Extremely Cost Competitive

Materials and Vendors – AEP's Advantage

Environmental Program Costs:
Active/Firm Costs to Remaining Estimated Costs



Actuals To Date & Firm Costs
Remaining Estimated Costs*

* Primarily labor and activated carbon injection systems

SCR Technology

- Removes 90 – 93% of NOx emissions
- Requires ~ 1% use of auxiliary power
- **AEP Capital Cost ~ $121/kw avg.**

Combination of SCR & FGD technology results in co-benefit of Hg removal ~80% removal efficiency

FGD Technology

- Removes 95 – 98% of SO_2 emissions
- Requires ~1.5% to 3.0% use of auxiliary power
- **AEP Capital Cost ~ $250/kw avg.**

AEP Benefits From First-mover Advantage Through Lower Contracted Pricing and Reduced Market Escalation Exposure

Transmission Investment Opportunity *

Creating a business model to manage capital requirements for enhanced returns with partners

- ~ $3 billion I-765 Project in PJM
- ~ $2 billion 765-kV study with ITC in Michigan
- ~ $3 billion project filed with SPP
- ~ $1- $7 billion in ERCOT via Electric Transmission Texas, LLC (ETT)

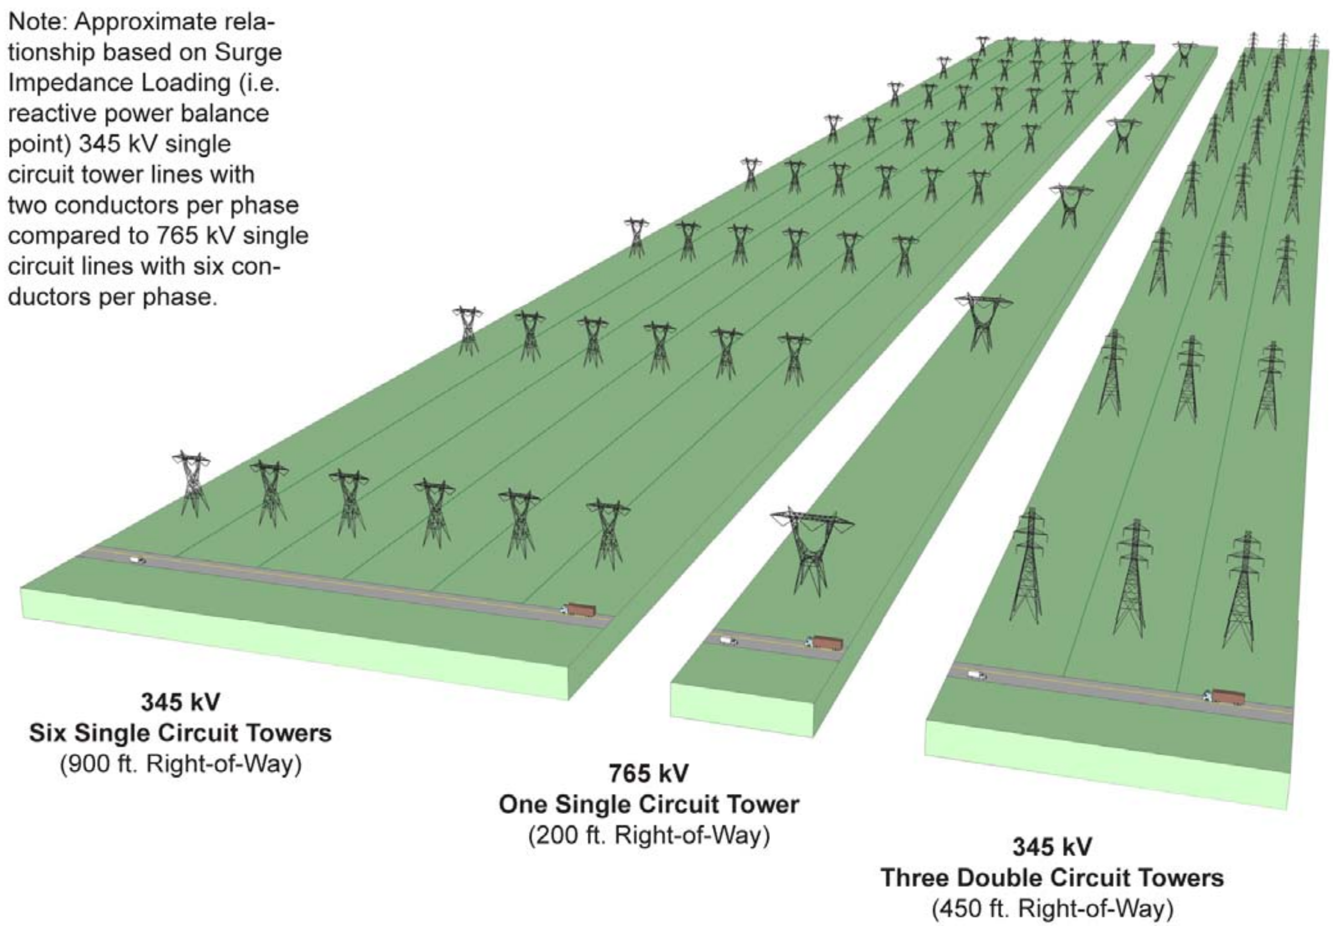
Assumptions	
Estimated Investment Opportunity	$15 Billion
Ownership Structure w/ Partner	50% / 50%
Debt/Equity Ratio	50% debt / 50% equity
Return on Equity	11.00%-13.00%
Potential EPS Impact (based on 396 MM shares)	$0.60+ **

* This identified transmission opportunity is not included in current capex guidance

** Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion

Building The Next US Interstate System For Enhanced Reliability And Market Efficiency Could Have Significant EPS Implications

765 Right-of-Way Comparison



From a siting standpoint, 765 kV is much more efficient in terms of economies of scale and right-of-way than lower capacity lines

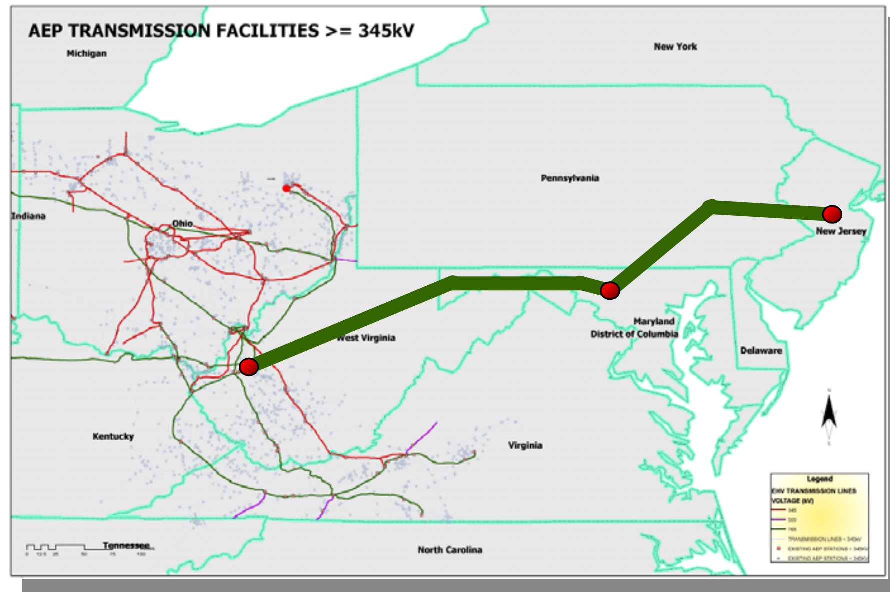
I-765™ PJM Transmission Project

Joint Venture with AYE

- 290 miles of the proposed 550 mile project
- Line will link AEP's Amos station in WV to AYE's proposed Kemptown station in MD with an intermediate station at AYE's Bedington station in WV
- JV project costs will encompass $1.1 billion, with each company owning 50%
- AEP's investment will total approximately $700 million, including ancillary projects
- Entire I-765™ project included in DOE's draft National Interest Electric Transmission Corridor
- FERC incentive rate treatment applies
- Operations to commence in the 2H07

Remaining I-765™ Project

- PJM is evaluating the Kemptown (MD) - Deans (NJ) line as a separate alternative



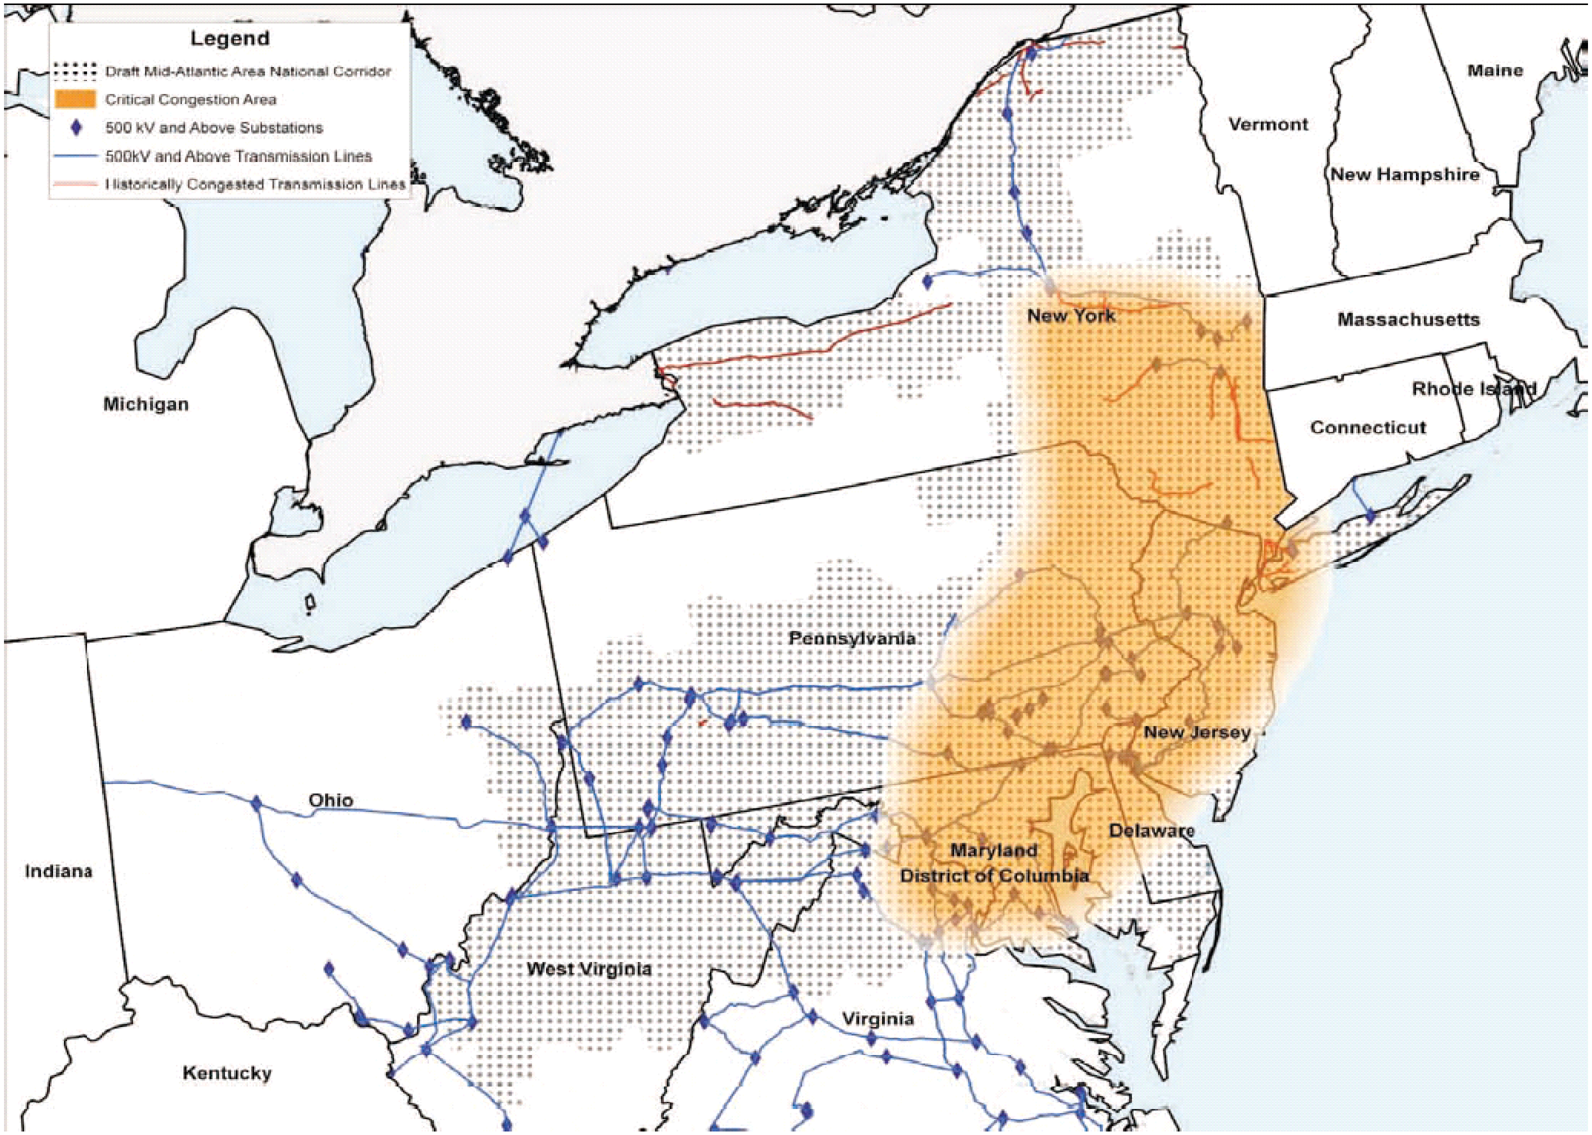
➢Jointly owned with Allegheny, will improve eastern grid reliability

➢Enhance Midwest-Mid-Atlantic power transfer capability by 5000 MW

➢Reduces network line losses by 280 MW at peak with heavy Midwest – Mid-Atlantic power transfers.

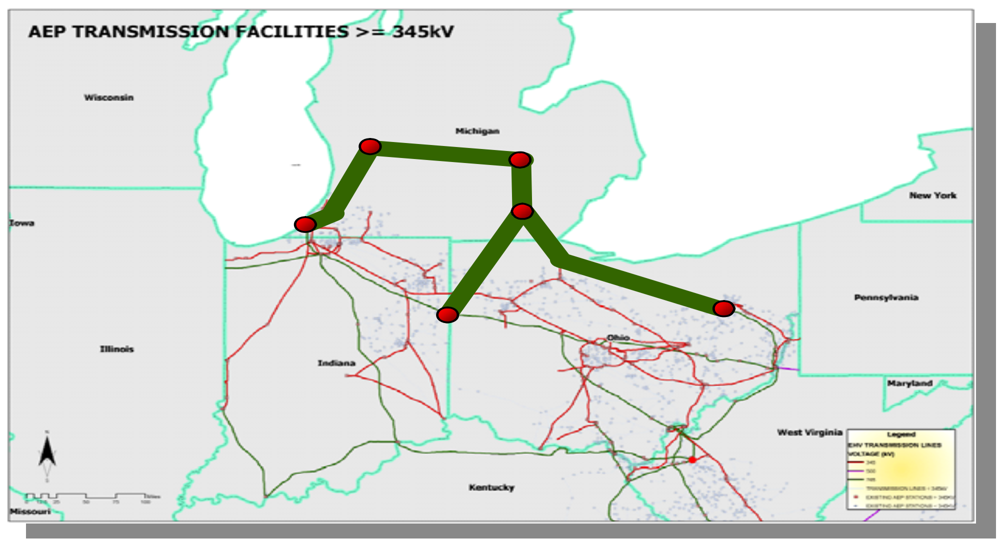
PJM's Targeted In-Service Date For the 290-Mile Project Is 2012

DOE Draft Mid-Atlantic National Interest Electric Transmission Corridor



Michigan 765kV Study

- Agreement with ITC Transmission for Michigan 765-kV study
- Estimated $2B investment potential (before ownership division)
  - 630 line miles
  - Over 5000MW improved transfer capability
  - Anticipated rate impact <1mil/kWh
- 765-kV could help alleviate constraints
- Study results anticipated in 2Q07
- We anticipate signing an MOU with ITC on joint ownership in mid-2007

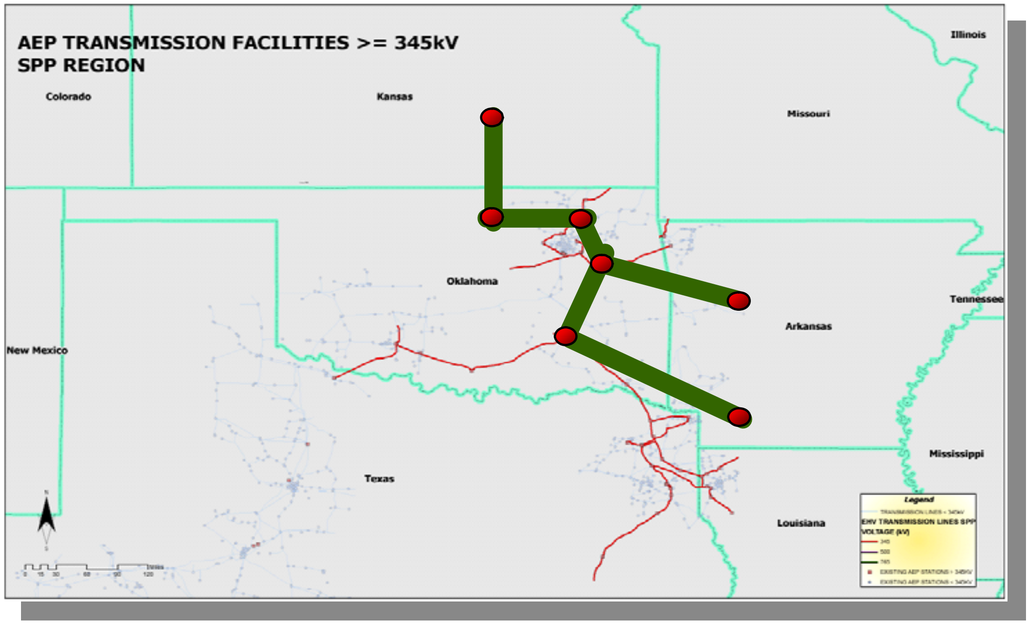


Project Construction Would Not Proceed Until Proper Regulatory Approvals Are Received And Cost Allocation Is Clarified

SPP Transmission Potential

- **June 2006 SPP requested proposal to address congestion, reliability & access for new generation**
- **July 2006 AEP submitted proposal:**
  - Six 765-kV lines, 610 line miles from Arkansas to Wichita, Kansas, under construction 2012-2017
  - Investment ~$3 billion
    - ~4000MW improved transfer capability
    - Anticipated rate impact 2mils/kWh

Next steps:
SPP issued EHV Overlay Study RFP to review 345 kV, 500 kV, and 765 kV potential projects in SPP with results expected in mid-2007



Long-term Opportunity For Large Transmission Investments to Reduce Congestion, Enhance Reliability and Access New Generation

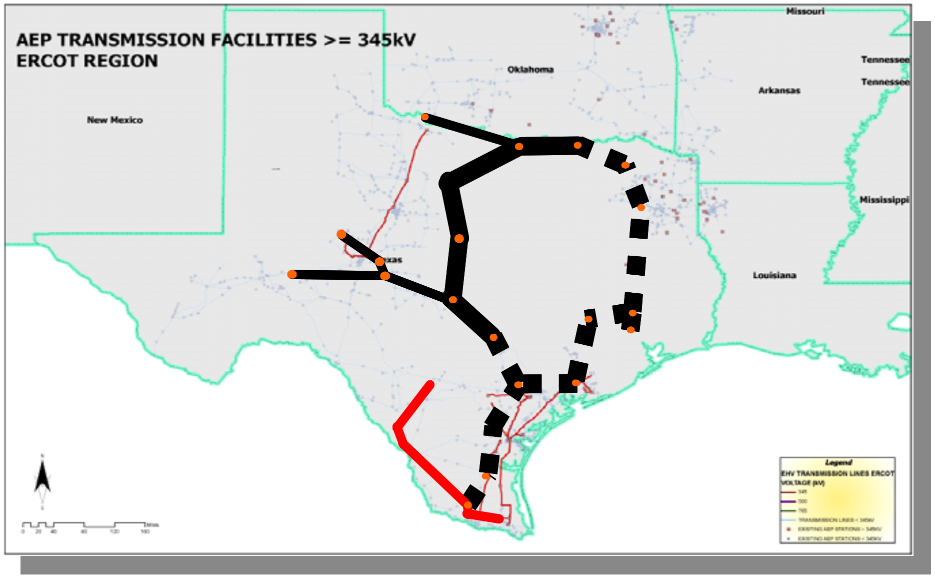
Electric Transmission Texas, LLC

Joint Venture with MidAmerican Energy

- Ownership – 50% AEP / 50% MidAmerican Energy
- 40% equity / 60% debt capital structure requested at the PUCT follows Texas precedent for T&D companies' filings
- AEP's 50% investment will be held at the AEP Utilities, Inc. subsidiary
- Hearings with PUCT to be held July 16-19, 2007
- Initial funding in 3Q07 after regulatory approvals
- Debt – Initially bank financing

Competitive Renewable Energy Zone (CREZ) docket

- In February 2007, ETT proposed the development of a long-term transmission plan for ERCOT to address the Texas legislature's CREZ initiative. The plan includes:
  - $1.5 billion for Stage I of CREZ development by 2012
  - $1.5 billion for Stage II of CREZ development by 2015
  - $4.2 billion for Stage III for completion of ERCOT transmission backbone needed for long-term



Operations of JV Could Begin As Soon As 3Q07 Upon Receipt of Regulatory Approvals

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A Reliable & Reasonably-priced Electric Supply Is Necessary To Support The Economic Well-being Of The Areas We Serve

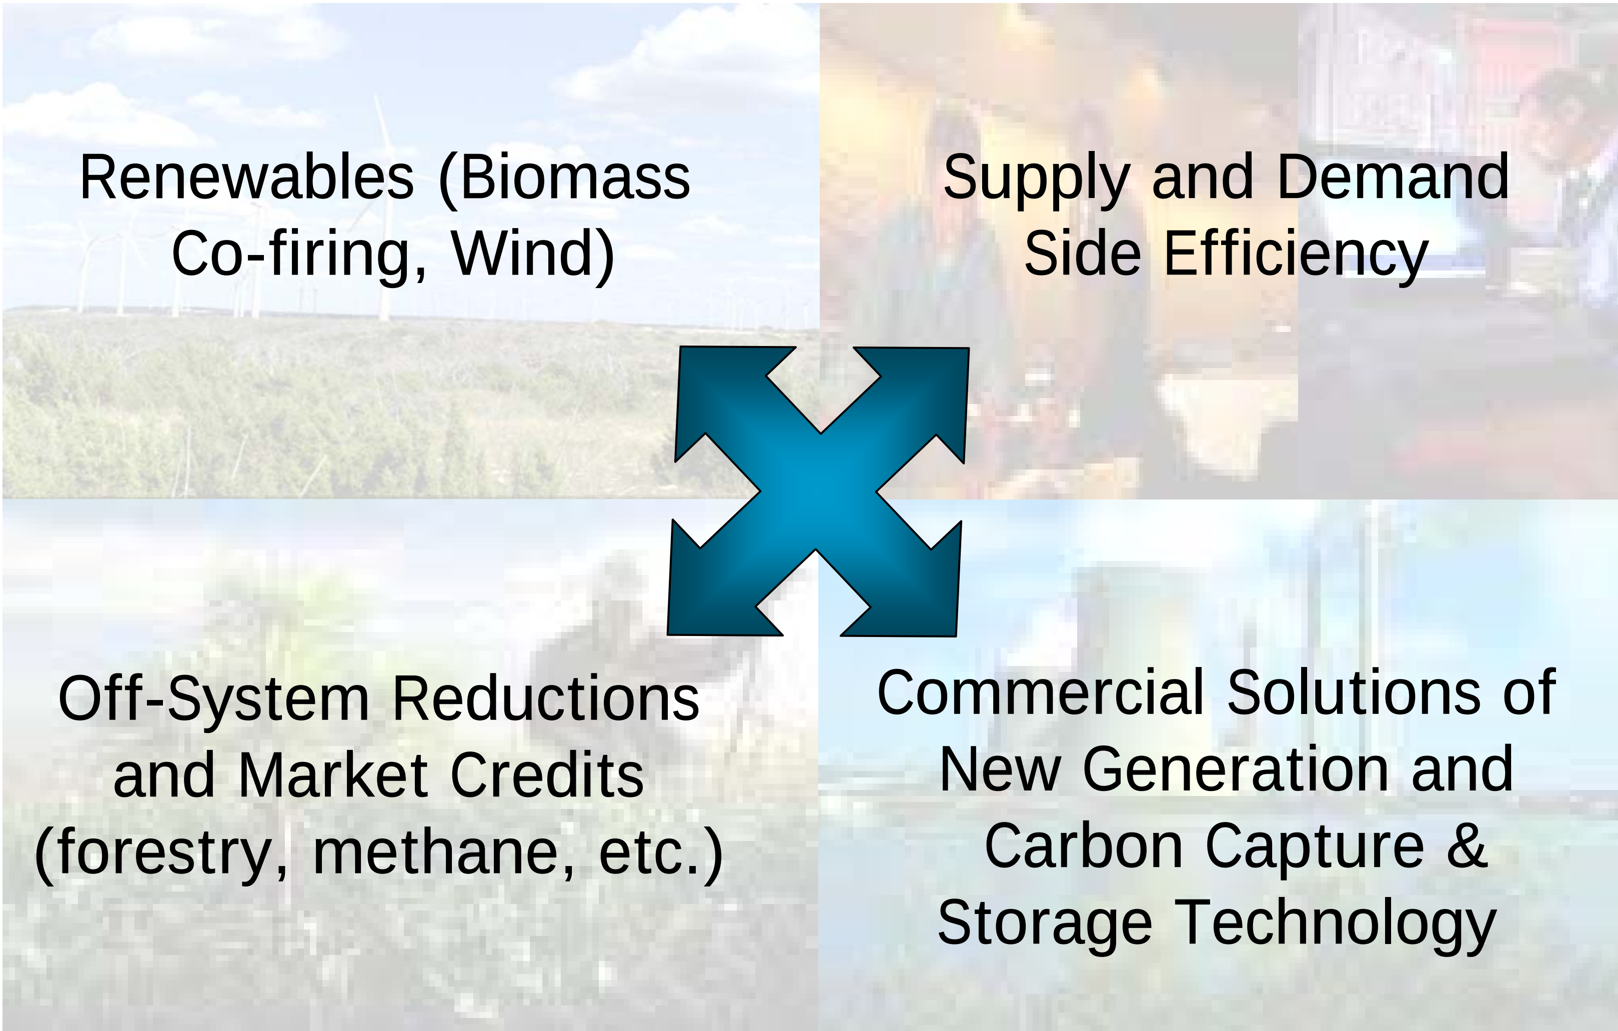
AEP's Climate Strategy

- **Being proactive and engaged in the development of climate policy**
  - International Emissions Trading Association (IETA)
  - Electric Power Research Institute (EPRI)
  - Pew Center on Global Climate Change
  - e8
  - Global Roundtable on Climate Change
- **Investing in science/technology R&D**
  - FutureGen Alliance
  - US DOE research on carbon capture and sequestration at our Mountaineer Plant
  - EPRI – combustion technologies
  - MIT Energy Laboratory
  - B&W – Oxy-Fuel
- **Taking voluntary, proactive action now, demonstrating voluntary programs can work and setting policy precedents thru CCX**
  - Chicago Climate Exchange (CCX)
  - EPA Climate Leaders
  - EPA SF-6 Emission Reduction Partnership for Electric Power Systems Program
  - Asia-Pacific Partnership
  - DOE 1605B- voluntary reporting of GHGs Program
  - Business Roundtable Climate Resolve
  - Numerous forestry activities
- **Evaluating longer term investment decisions such as new generation and carbon capture and storage (e.g., IGCC, Ultra-supercritical)**

AEP Must Be A Leader In Addressing Climate Change

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 2908 of 9556

AEP's Long-term GHG Reduction Portfolio



AEP Is Investing In A Portfolio Of GHG Reduction Alternatives

AEP's Long-term CO_2 Reduction Commitment

Existing Programs

- Renewables
  - 800 MWs of Wind
  - 300 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

New Program Additions

- Incremental Reduction quantity: 5MM tons/yr
- Timing: Implement during 2007 to take effect/receive credits by 2011
- Methods
  - +1000 MWs of Wind PPAs – 2MM tons/yr
  - Domestic Offsets (methane) – 2MM tons/yr
  - Forestry – Tripling annual investment to increase to 0.5MM tons/yr by 2015
  - Fleet Vehicle/Aviation Offsets – 0.2MM tons/yr
  - Additional actions to include DSM and end use energy efficiency, biomass and power plant efficiency – 0.2MM tons/yr

New Technology Additions

- Commercial solutions for existing fleet
  - Chilled Ammonia
  - Oxy-Fuel

AEP Is Committed To A 5mm Ton/Yr Reduction In Co_2 Emissions Which Offsets Approximately Half Of The Emissions Projected From New Generation Projects Previously Announced

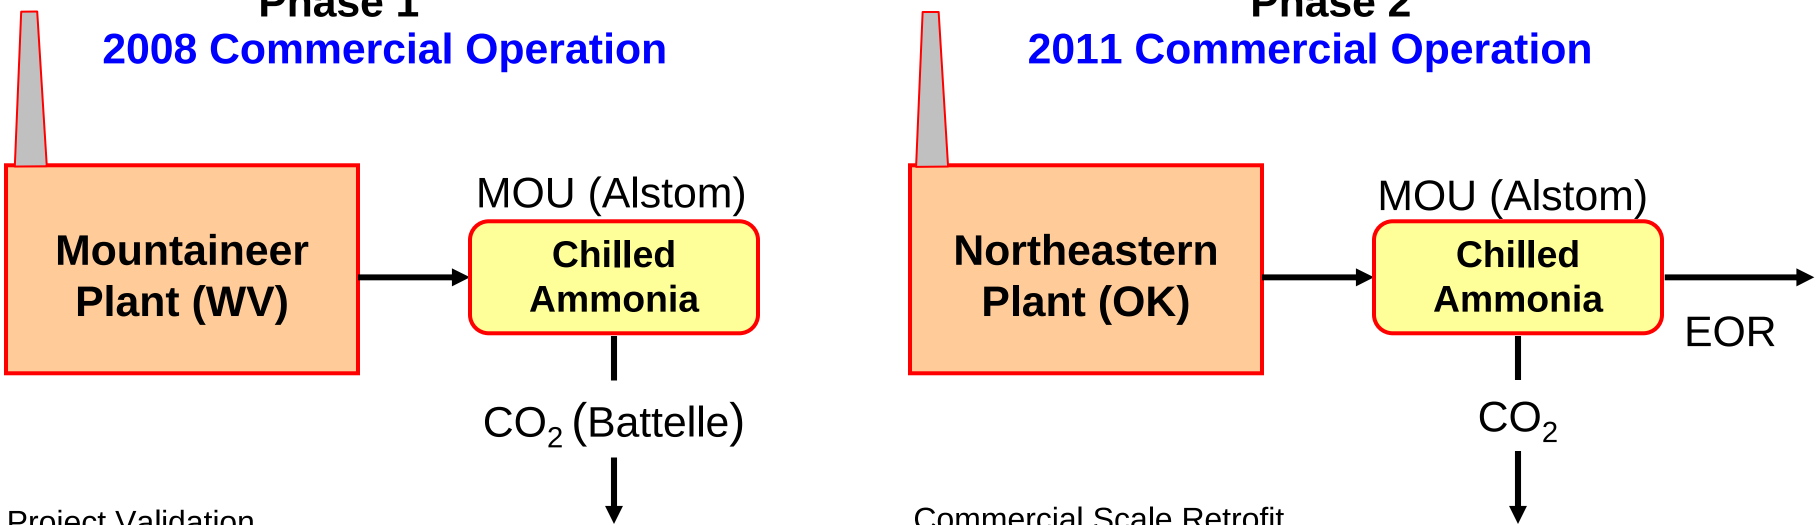
Chilled Ammonia Process Plant Footprint

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 2911 of 9556

Chilled Ammonia Technology Program

Phase 1
2008 Commercial Operation

Phase 2
2011 Commercial Operation



Project Validation

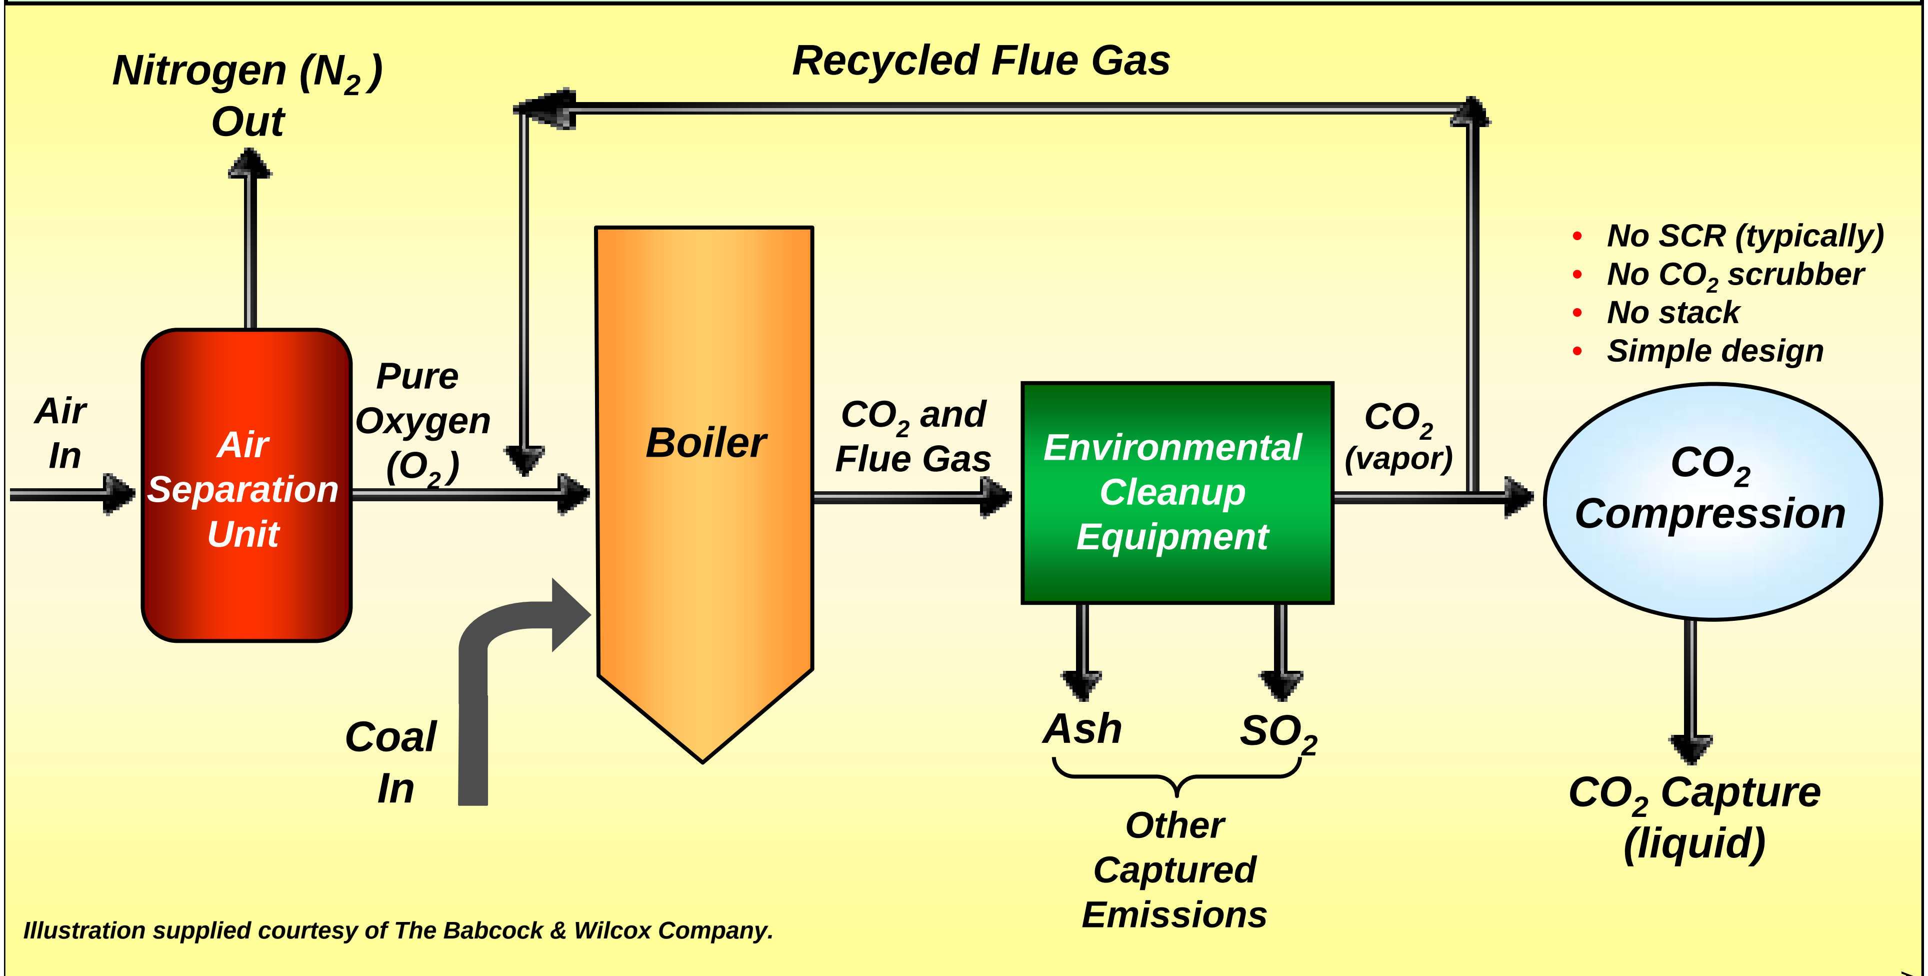
- 30 MW_t (megawatts thermal) scale (a scale up of Alstom/EPRI 5 MW_t field pilot, under construction at WE Energies)
- <0.1MM tonnes CO_2 per year
- In operation 4Q 2008
- Approximate total cost \$50 – \$80M
- Using Alstom "Chilled Ammonia" Technology
- Located at the AEP Mountaineer Plant in WV
- CO_2 for geologic storage

Commercial Scale Retrofit

- ~ 200 MW_e scale (megawatt electric)
- ~ 600 MW_t scale (megawatt thermal)
- ~1.5MM tonnes CO_2 per year
- In operation late 2011
- Approx. capital \$250 – \$300M (CO_2 capture & compression)
- Approx. O&M cost \$12M per year
- Energy penalty ~ 35 – 50 MW steam, 25 – 30 MW for CO_2 compression
- Retrofit SCR & Wet FGD Required: ~\$225 – \$300M (required for CO_2 capture equipment)
- Located at AEP's Northeastern Plant Unit 3 or 4 in Oklahoma
- CO_2 for Enhanced Oil Recovery (EOR) or geologic storage

Post-combustion Carbon Solution Provides Pure Co_2 Stream For Capture

Oxy-Fuel Technology Initiative



Near-zero Emissions Using Oxy-fuel Combustion Technology

Oxy-Fuel CO_2 Capture & Storage Project

Pilot Scale Demonstration

- 10 MW_e scale
- Teamed with B&W at its Alliance Research Center and 16 other utilities
- Demo completed 3Q 2007
- AEP funding of $50k

Commercial Scale Retrofit

- Retrofit on existing AEP sub-critical unit (several available)
- 150 – 230 MW_e scale retrofit
- 4,000 – 5,000 tons CO_2 per day
- Teamed with B&W
- AEP funding of ~ $200k – $3M for feasibility study
- Feasibility study to be completed in late 2008/early 2009

Combustion Conversion Technology For Existing Coal Fleet – Longer Lead Time With Enhanced Viability And Long-term Potential

Gas	18.61%	19.68%	89.48%	90.86%	5.69%	2.80%
Texas:						
Coal	**43.84%**	**67.68%**	**42.20%**	**73.21%**	**40.48%**	**10.48%**
AEP System	**62.83%**	**62.67%**	**82.30%**	**85.28%**	**7.72%**	**6.22%**

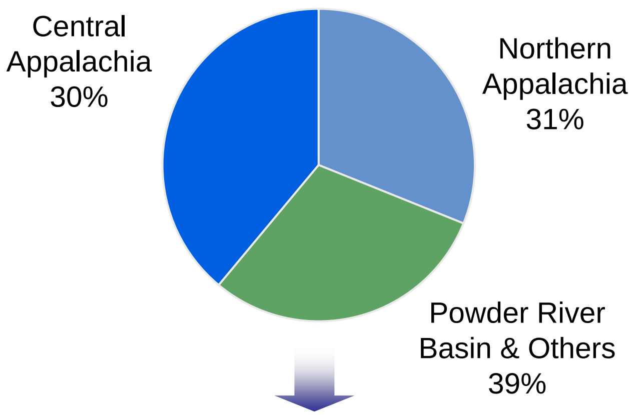
* Super-critical includes coal units with a net maximum capacity of 450MW or greater; Sub-critical includes coal units with a net maximum capacity less than 450MW.

** East gas units are evaluated using Equivalent Forced Outage Factor. Since these units run infrequently, this factor gauges performance based on period hours instead of service hours.

Coal Procurement – 2007 Projected

AEP purchases approx. 76 million tons of coal per year

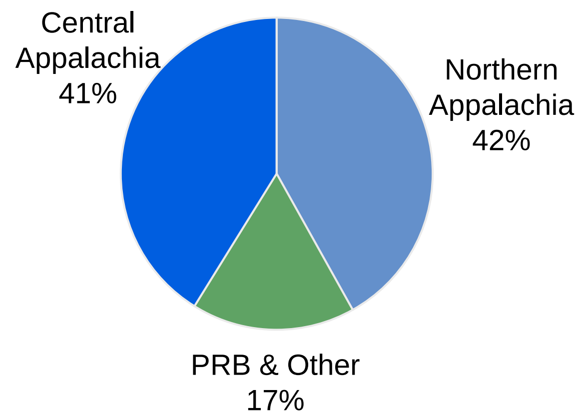
Total AEP System



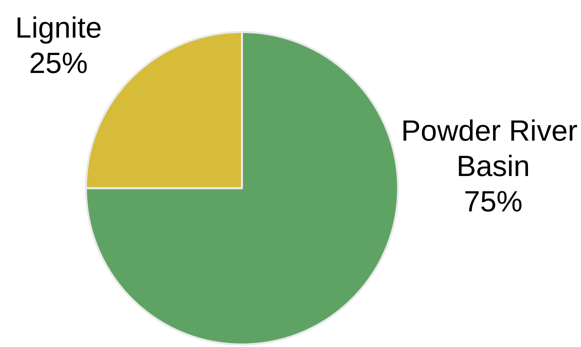
Coal Stats:

- 95% contracted for 2007
- Avg. delivered price ~ $35.10/ton in 2006
- Approximate 7-9% price increase in 2007 -- ($37.50 to $38.50/ton)
  - Addition of Mountaineer & Mitchell scrubbers allows for a greater mix of Northern Appalachian coal in 2007

AEP East

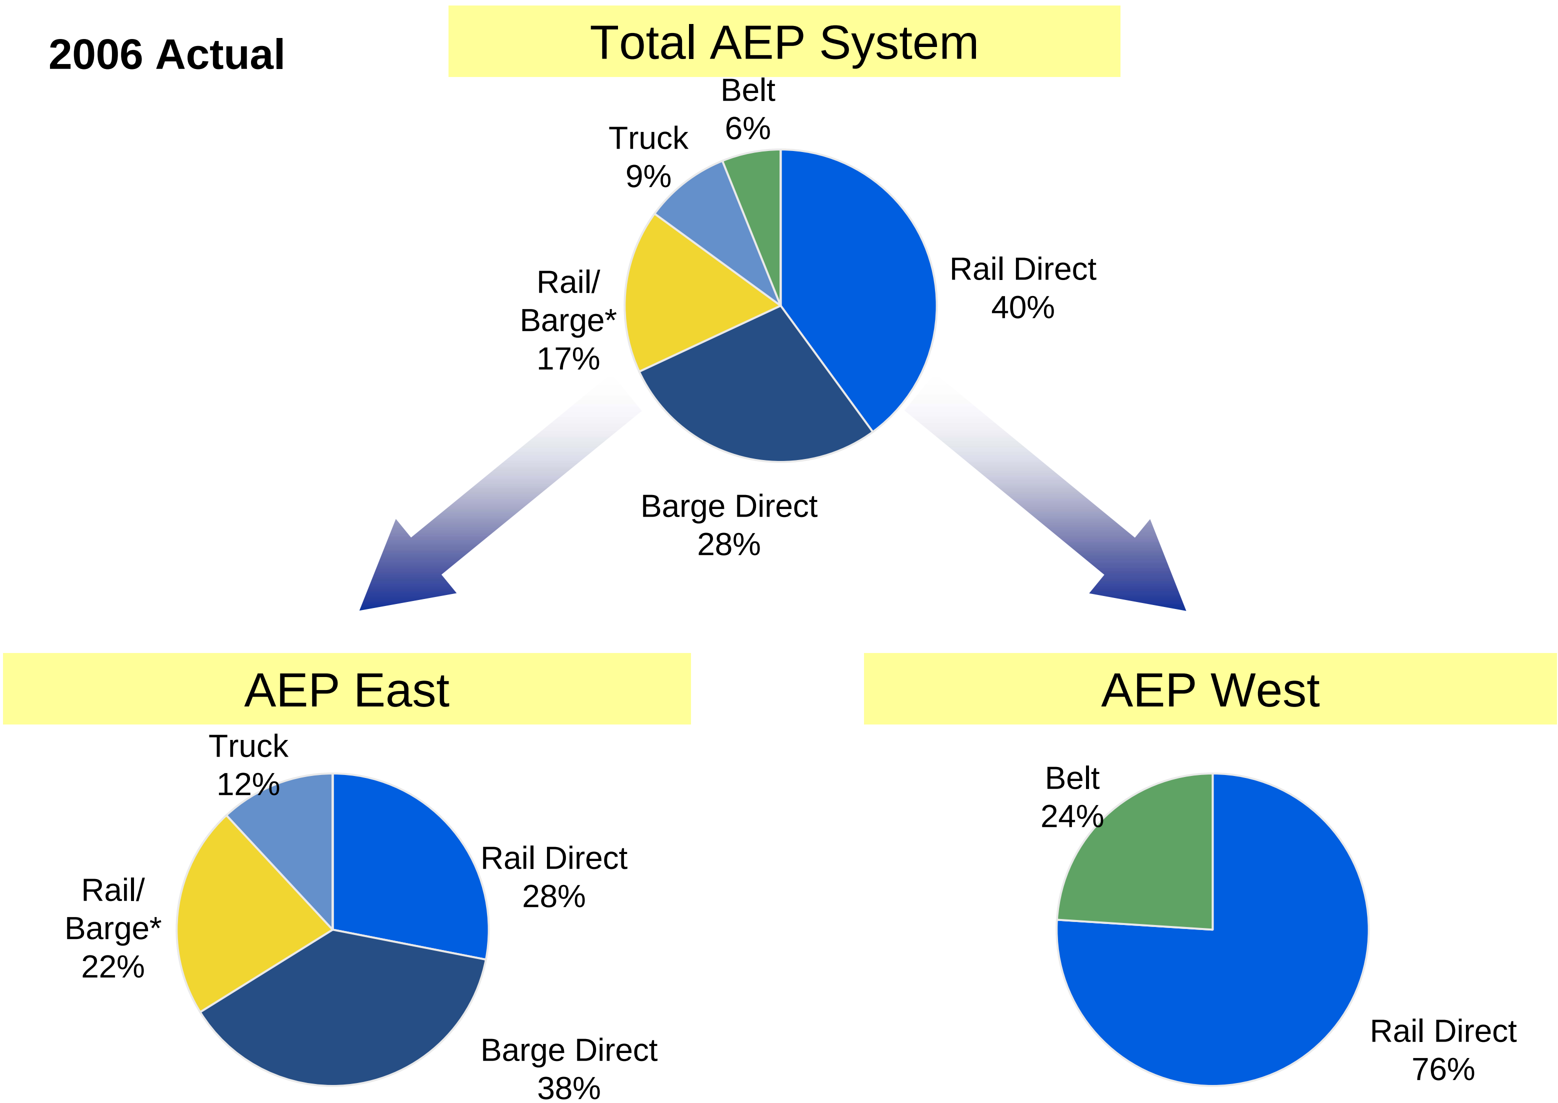


AEP West



Coal Delivery

2006 Actual



* Reflects coal delivered to AEP plants transported through a combination of rail and barge

New Transmission Investment Funding Plans

- **Electric Transmission Texas LLC**
  - 40% equity / 60% debt capital structure requested at the PUCT follows Texas precedent for T&D companies' filings
  - Equity – 50% AEP / 50% MidAmerican Energy
  - AEP's 50% investment will be held at the AEP Utilities, Inc. subsidiary
  - Debt – Initially bank financing
  - Initial funding in 3Q07 after regulatory approvals

- **AEP I-765$_{TM}$ Interstate Project**
  - Forming a joint venture with Allegheny Energy for 290 miles of the proposed 550 mile project
  - Equity – 50% AEP / 50% Allegheny
  - AEP's 50% investment will be held at the AEP Transmission Holding Company LLC subsidiary
  - Operations to commence in the second half of 2007
  - Project included in the DOE's draft National Interest Electric Transmission Corridor issued in April 2007

- **Other Transmission Projects**
  - Equity percentage of capital structure will target FERC precedents
  - Equity ownership percentage will vary by project
  - Will seek FERC transmission incentives:
    - Incentive ROE
    - Return on CWIP
    - Abandonment recovery
    - Expensing pre-construction expenses

  - Rebuttal Testimony – June 26
  - Hearings – July 16-19

Summary of 5-7% Long-Range Growth Components

- ✓ Energy sales growth of 1.5%
- ✓ Rate base investment
  - ▪ Generation plant purchases & build
  - ▪ Transmission – interstate & intrastate
  - ▪ Distribution
  - ▪ Reliability
- ✓ Transmission company
- ✓ Commercial operations
- ✓ Regulatory strategy
  - ▪ Achieve timely returns
  - ▪ Seek cash returns on investment during construction
  - ▪ Create & secure innovative rate plans
    - – Pursue post-2008 solution in Ohio
    - – Expand use of trackers
    - – Formula rates

New Generation And Transmission Projects Largely Reflect Upside To The Long-Range Earnings Growth Target Of 5-7%

AEP AMERICAN ELECTRIC POWER®

Analyst & Investor Meeting

October 19, 2010
New York, NY

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

Chairman, President & CEO

Update on 2010 Priorities

2010 +

- Navigate through ongoing economic conditions
- Maintain capital spending and balance sheet discipline
- Continue delivering successful regulatory outcomes

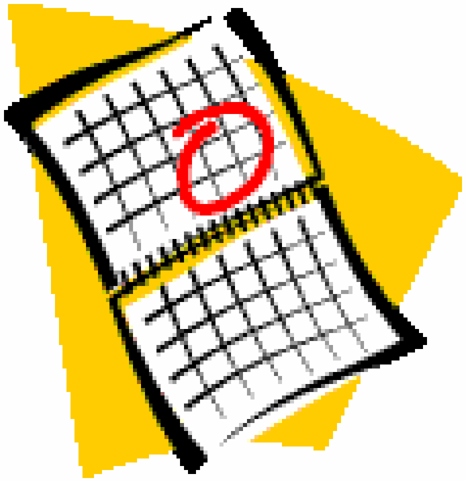
✓ Capital spending plan on target for $2.2B in 2010
✓ Stable credit outlook
✓ Labor and non-labor O&M cuts of $150M
✓ Reasonable rate case outcomes in VA, KY, MI, TX
✓ Exceeded rate relief goal of $320M for 2010
✓ Filed SEET in Ohio
✓ Implemented enhanced operating company model
✓ Narrowing 2010 guidance to $2.95 to $3.05/share

- Participate in policy making at both the state and federal levels, particularly related to environmental/climate and transmission issues
- Invest in the next generation of energy infrastructure: high voltage transmission, CCS, gridSMART®

✓ Active in legislative efforts for cap & trade bills
✓ Vocal in transmission policy efforts
✓ ETT and Transco efforts moving forward
✓ Success with Mountaineer CCS project
✓ 4 gridSMART® pilots underway

5 Focus Areas before 11/11/11

- Ohio SEET resolution and new ESP beginning in 2012
- FERC NOPR on transmission
- Environmental policy and EPA regulations on coal
- Succession planning/transition
- Long-term growth plan and capital allocation



A quick preview …….

- Economic outlook is difficult but improving
- Focus on Capital Allocation
  - <u>Capital for Growth</u>
    - Approximate $150M increase in capital budget to $2.6B for 2011
    - 2012 capital budget announced at $2.9B
  - <u>Return of Capital to Shareholders</u> - management will recommend 9.5% increase in dividend
  - <u>Capital to Reduce Risk</u> – voluntarily funded $500M into pension in 2010; additional $150M allocated for 2011
- Balance sheet remains strong
  - Stable credit outlook for AEP and subsidiaries
  - Capital spending plan supported by cash flows
- Earnings Guidance and Outlook
  - 2011 earnings guidance of $3.00 to $3.20/share
  - Average annual EPS growth rate defined over two periods:
    - 2012 – 2014 4-6%
    - post-2014 5-7%

Today's Program

- Operating Company Panel – led by Bob Powers
  - Opening Comments
  - Panel Discussion
- Generation – Nick Akins
  - Capacity Overview
  - Environmental Policy and EPA Regulations
  - Impact on AEP
- Transmission – Susan Tomasky
  - ETT, Transco and JV Overview/Update
  - Capital Spending Profile
  - Policy Update
- Financial – Brian Tierney
  - 3Q10 Earnings
  - 2011 Earnings Guidance
  - Capital Spending Plan
  - Liquidity & Financing Plan
  - Dividend Policy & EPS Growth Rate

Bob Powers

President, AEP Utilities

Managing Operations and Investment

AEP®

Challenges:

Required refinement of the operating company model and improved line-of-sight management due to decreased load growth, regulatory lag, reduced rate headroom, and environmental challenges

Actions:

- ❑ Empower operating company employees to drive results
- ❑ Efficiently allocate capital
- ❑ Demonstrate O&M and capital expenditure discipline
- ❑ Identify asset renewal strategy for investing in traditional distribution and transmission assets that enhance reliability and customer satisfaction
- ❑ Enable long-term planning discussions with regulators and legislators

Expected Outcomes:
Optimize spending for more efficient return on investment
Improve dialogue with customers and regulators
Minimize lag in rate recovery

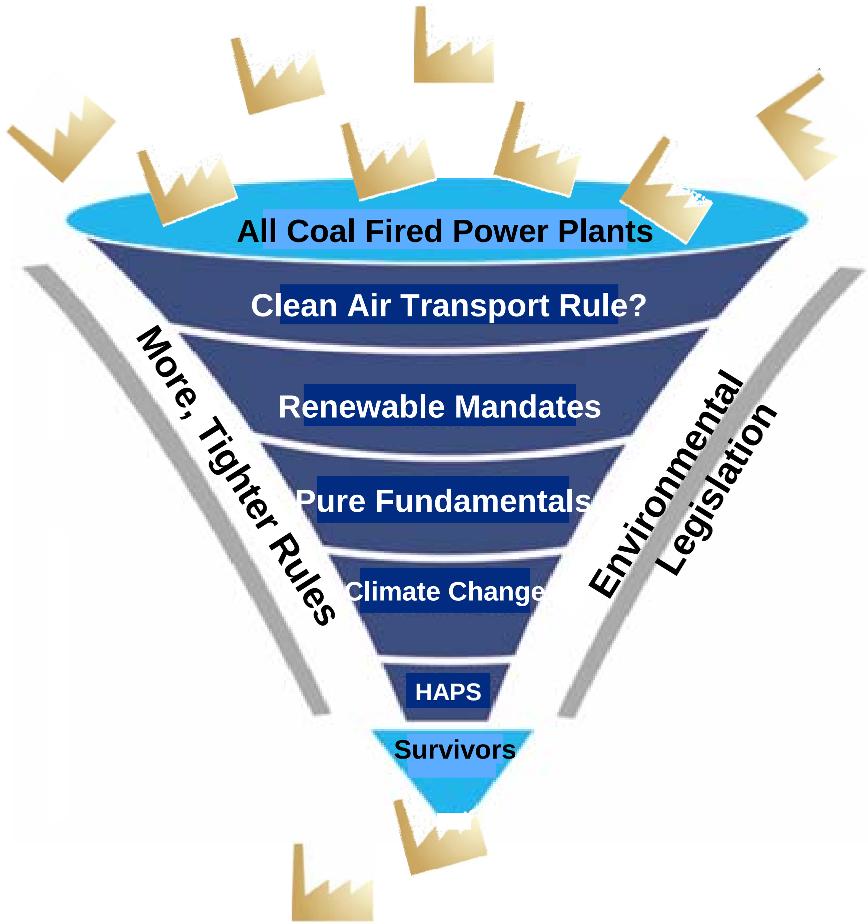
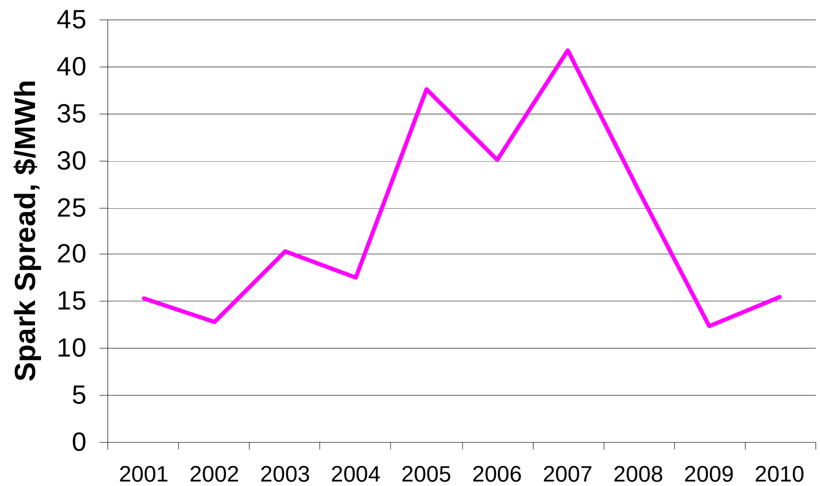
The Pressure on Coal Generation

AEP®



Dark Spread Compression

NYMEX coal



<u>Key EPA Actions Pending</u>

- Transport Rule – Proposed July 2010
- "Coal Ash" Rule – Proposed May 2010
- Mercury and other Hazardous Air Pollutants (HAPs) Rule – Expect Proposed Rule in Spring 2011

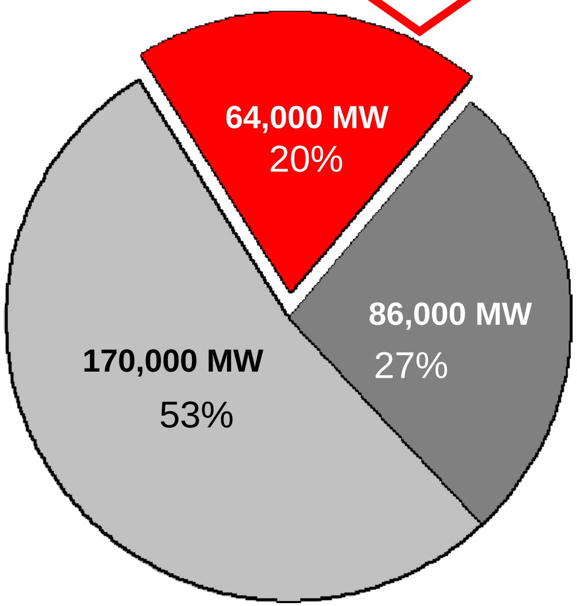
The threshold level for coal is being defined

Continual Evaluation is Required

“Fully-Exposed”	“Partially-Exposed”	“Least-Exposed”
Probable Retirement	*Evaluating potential retirement*	*Not likely to be retired*

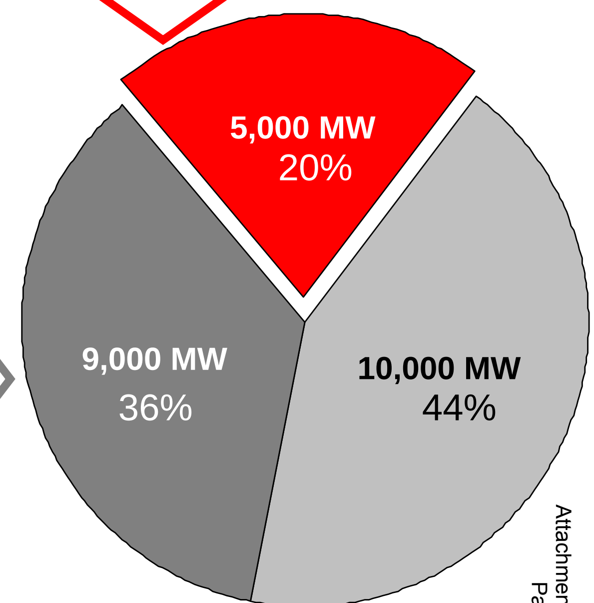
CCS Candidates

Smaller, older, less-efficient coal units that will not be economic if retrofitted



US Coal

Newer and larger coal units that do not have SCR's and/or FGD's will be evaluated due to emerging environmental rulemaking and NSR requirements



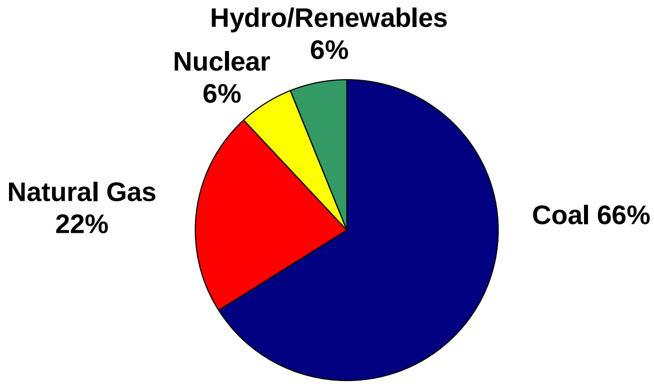
AEP Coal

Nearly 50% of U.S. coal plants are exposed

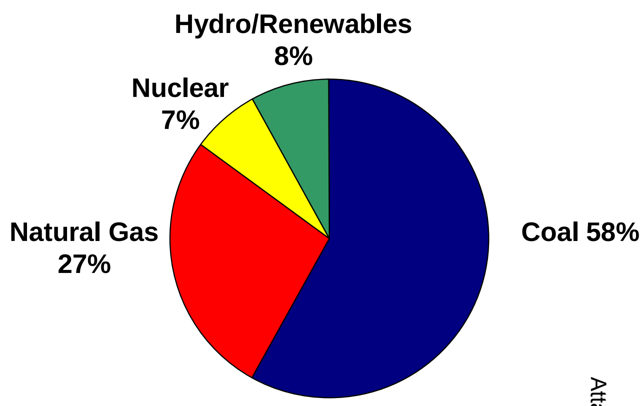
KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 2937 of 9556

Continued Investment in Utility Platform

- Plan for old, small coal units
  - Initially operate seasonally
  - Transition towards retirement
  - Regulatory plan for recovery
- Continue evaluation of “partially exposed” units for additional controls
- Add non-coal capacity when needed
  - Dresden NGCC (partially complete)
  - New NGCC at existing site
  - Cook plant uprate (under study)
  - Renewables
- Deploy technology as appropriate
  - Continue pursuit of CCS technology
  - Energy storage technologies
  - gridSMART®



Capacity - 2009



Projected Capacity - 2017

Susan Tomasky

President, AEP Transmission

Transmission as a Growth Engine

- Transmission investments present significant growth opportunities within and outside of AEP's traditional service territories
  - Electric Transmission Texas (ETT)
    - Growing Rate Base
    - Received CCN approval on first CREZ line; 3 more approvals expected in 2011
  - AEP Transmission Company (AEP Transco)
    - Settlement filed at FERC for wholesale rates
    - $50MM spend for 2010; $160MM forecasted for 2011
  - Joint Ventures
    - PATH
    - Prairie Wind
    - Pioneer
    - SMART Transmission study
- Two potential new projects – Watch this Space!

ETT: An Operating Utility

AEP®

ETT
Electric Transmission Texas

Growing Rate Base:

- Current rate base is $385 million; expected to grow as follows:
  - 2010: $405 million
  - 2011: $465 million
  - 2012: $765 million
  - 2013: $1,415 million
- Interim TCOS filings twice per calendar year

Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.1 B:

- Seven double-circuit 345kV transmission lines (~$750 M), eight major 345kV stations and several series compensation installations (~$350 M)
- PUCT Certificate of Convenience and Necessity (CCN) proceedings underway

CREZ Transmission Line	Number of miles	Estimated Cost ($M)	CCN Filing Date	CCN Decision by PUCT
Clear Crossing to Dermott	**95**	**$160**	**5/3/2010**	**Unanimously Approved 9/30/2010**
Tesla to Riley	65	$110	8/18/2010	2/15/2011
Riley to Edith Clarke to Cottonwood	115	$199	9/8/2010	3/8/2011
Tesla to Edith Clarke to Clear Crossing to West Shackelford	145	$280	Anticipated 10/20/2010	4/20/2011

Additional Projects in the Pipeline ~$1.6 B:

- Approximately 822 miles of lines and 28 substations with in-service dates through 2017

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 2941 of 9556

AEP Transco was established in 2010

- Formula rate settlement filed with FERC in September; awaiting final order
  - ROE: 11.49% in PJM and 11.2% in SPP
- $50 M invested in three states in 2010 (OH, MI & OK)
  - Ohio application for public utility status pending; approval expected in 2010
  - Oklahoma and Michigan did not require filings
- "Baseline" capital spending targets for OH, MI & OK
  - $160 M for 2011
  - $350 M for 2012
- Will pursue regulatory approvals for other states in 2011 (AR, LA, WV, VA, IN & KY)
  - Additional capital spending opportunity in these states for 2012+

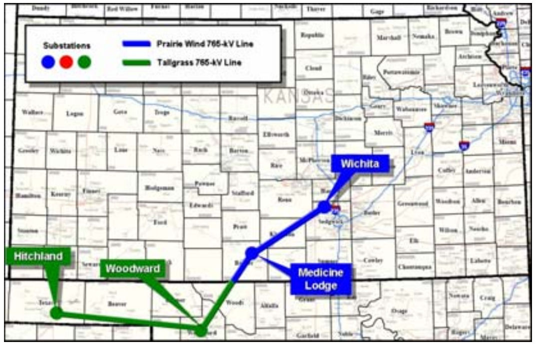
Progress on Joint Ventures in 2010

PATH:

- Re-filed for certification in VA
- Letter from PJM confirmed the 2015 in-service date
- PJM Testimony "RTEP final with respect to PATH"
- FERC approved formula rate (14.3% ROE)

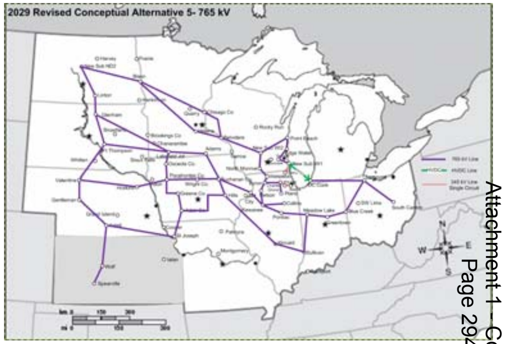
Prairie Wind:

- Approved by SPP as a Priority Project (Notice To Construct rcv'd)
- Cost allocation approved by SPP and FERC
- FERC approved formula rate (12.8% ROE)
- In-service date is 2013-2014



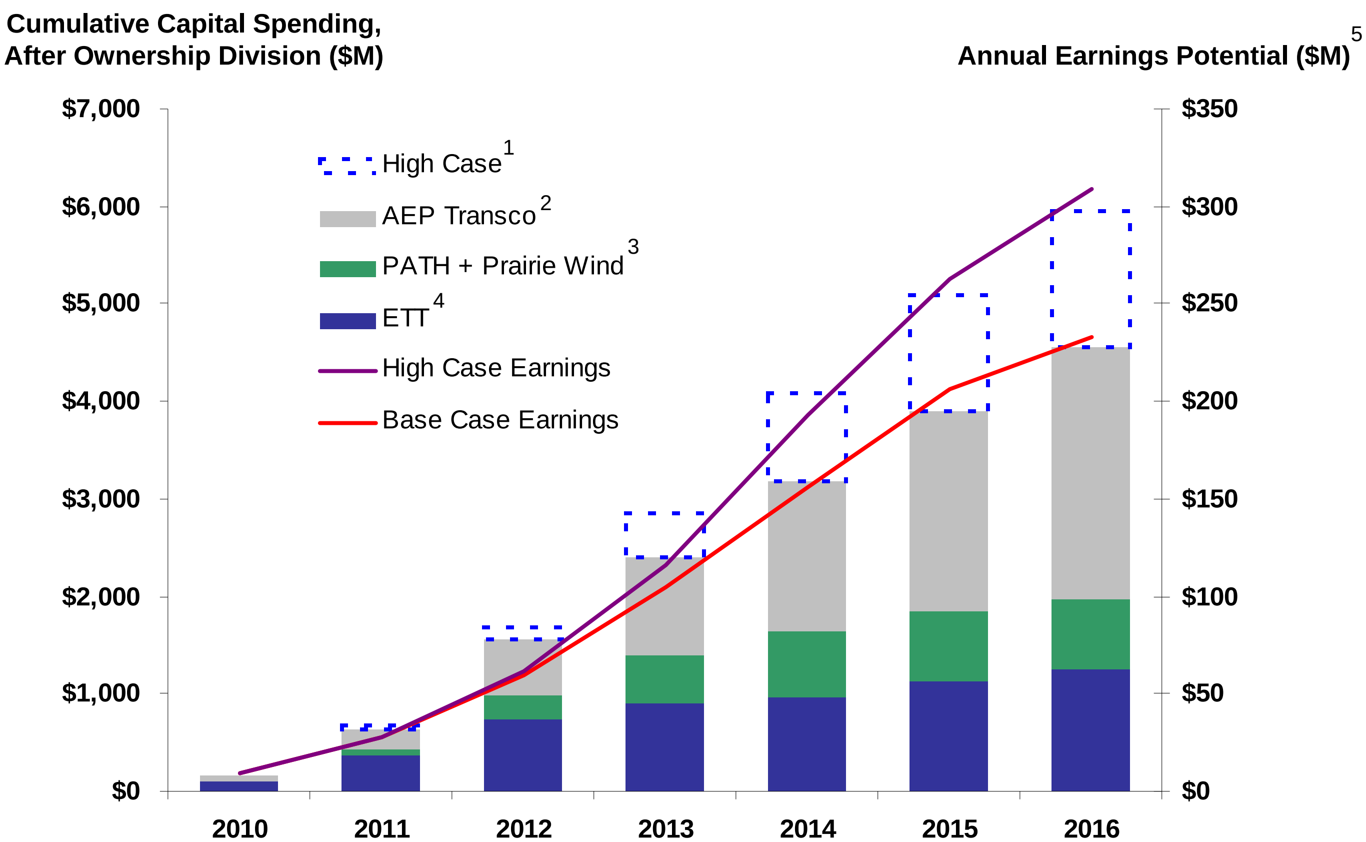
Pipeline of Future Projects:

- Pioneer
  - FERC approved formula rate (12.54% ROE)
  - Awaiting RTO project approval; MISO included Pioneer in its proposed EHV plan
- Tallgrass
  - Will move forward if approved at 765 kV
- Smart Transmission Study
  - Comprehensive study of the transmission needed in the Upper Midwest to support renewable energy development



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Capital Investment and Earnings Profile



[1] High Case includes: Pioneer (50% ownership), Prairie Wind at 765kV (25% ownership), Tallgrass at 765kv (25% ownership) and other future opportunities

[2] AEP Transco (100% ownership) includes spending in OH, MI & OK only through 2011 and in other jurisdictions for 2012 and beyond

[3] PATH (50% ownership) assumes an in-service date of 2015 and Prairie Wind (25% ownership) assumed at 345kV

[4] ETT (50% ownership) includes CREZ and additional projects

[5] Projection of earnings potential at the transmission holding company level assuming 50/50 debt/equity capitalization and ROE of 12-13% for FERC projects; 60/40 debt/equity capitalization and 10.25% ROE (2011 forward) for ERCOT projects; and 50/50 debt/equity capitalization and ROE of 11.2-11.49% for Transco projects

Evolving Regulatory Policy

AEP®

- 2010 saw a number of steps towards resolving the issues related to planning, cost allocation and siting
  - SPP & FERC approved SPP's regional cost allocation methodology, and SPP adopted a new, more strategic planning process called the Integrated Transmission Planning process
  - SPP issued notices-to-construct for its "Priority Projects", including the first segments of an EHV overlay within the region
  - The Midwest ISO, through its Regional Generator Outlet Study (RGOS) and Multi-Value Project (MVP) Process, has moved closer to approving a number of significant transmission projects

- 2011 looks to be a year in which regulatory momentum will support transmission development
  - FERC's recently issued Notice of Proposed Rulemaking (NOPR), which is still in the comment phase, indicates FERC's desire to break the logjam and resolve the major issues that stand in the way of strategic development of the nation's transmission grid

Brian Tierney

Chief Financial Officer &
Executive Vice President

3Q10 Performance

AEP®

Third Quarter Reconciliation

		EPS	Ongoing Earnings ($ in millions)
3Q09	$	0.93	$443
Share Count Effect	$	(0.01)	
Rate Changes	$	0.10	
Retail Margin	$	-	
Firm Wholesale Margin	$	(0.03)	
Weather	$	0.18	
OSS	$	0.06	
Operations & Maintenance	$	(0.02)	
Other Utility Operations, net	$	(0.09)	
Non-Utility Operations/Parent	$	0.03	
3Q10	$	1.15	$552

3Q10 Performance Drivers

- Rate Changes net of offsets $74M from multiple operating jurisdictions
- Retail Margin flat for the quarter
- Firm Wholesale Margin down $21M due to the loss of two large wholesale customers
- Weather was favorable by $131M vs. prior year, $65M vs. normal
- OSS was favorable by $42M due to higher prices and volume, offset by lower trading
- O&M expense net of offsets increase of $12M primarily due to employee related expenses
- Other Utility Operations, net decreased approximately $66M and primarily includes the absence of accidental outage insurance and higher interest expense, D&A and taxes
- Non-Utility Operations/Parent increased $20M primarily due to tax adjustments

September YTD 2010 Performance

AEP®

September YTD 2010 Reconciliation

		EPS	Ongoing Earnings ($ in millions)
YTD09	$	2.49	$1,124
Share Count Effect	$	(0.16)	
Rate Changes	$	0.25	
Retail Margin	$	0.04	
Firm Wholesale Margin	$	(0.08)	
Weather	$	0.29	
OSS	$	0.06	
Operations & Maintenance	$	0.05	
Other Utility Operations, net	$	(0.32)	
Non-Utility Operations/Parent	$	0.03	
YTD10	$	2.65	$1,272

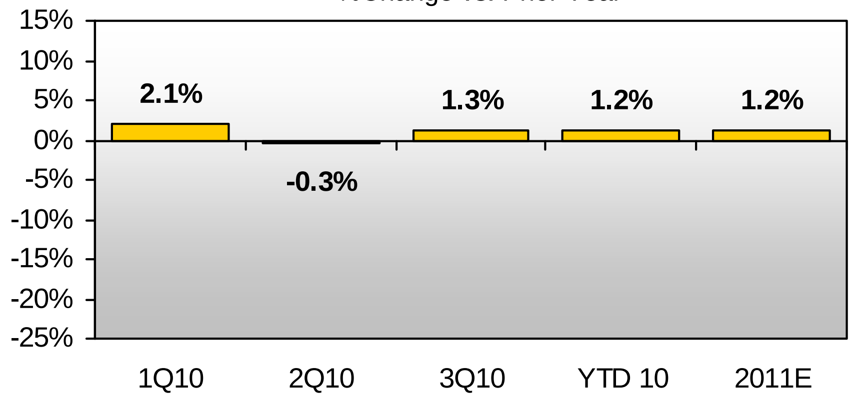
YTD 2010 Performance Drivers

- Share count impact due to 27M weighted average shares outstanding increase (452M to 479M) from equity offering and DRP
- Rate Changes net of offsets of $175M from multiple operating jurisdictions
- Retail Margin up $30M, due to recovery across all customer classes, primarily industrial
- Firm Wholesale Margin down $58M due to the loss of two large wholesale customers
- Weather was favorable by $202M vs. prior year, $148M vs. normal
- OSS increase $43M with increased sales in the east offsetting decreased trading/marketing profits
- O&M decrease of $38M net of offsets, primarily due to lower storm costs including the deferral of 2009 storm costs at APCo, and other G&A items
- Other Utility Operations, net decreased approximately $225M and primarily includes the absence of accidental outage insurance related to the DC Cook nuclear plant and higher interest expense, D&A and taxes

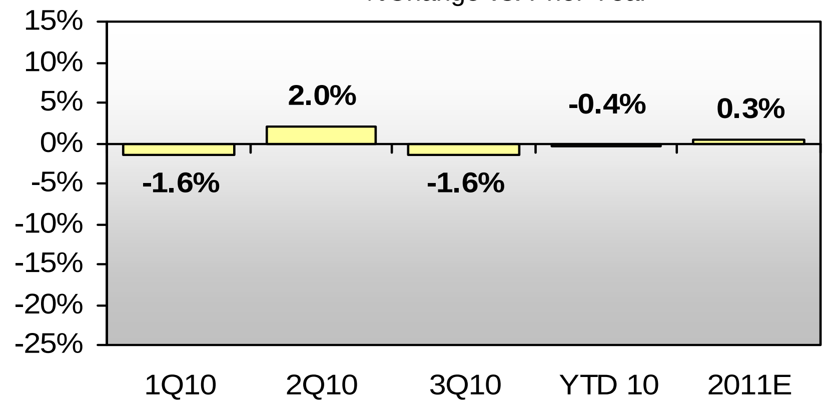
Updated 2010 Guidance Range: $2.95 - $3.05

Normalized Load Trends

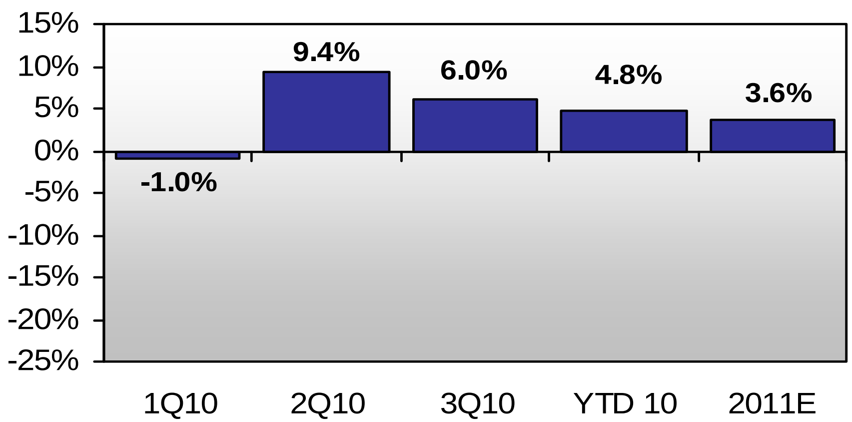
AEP Residential Normalized GWh Sales
%Change vs. Prior Year



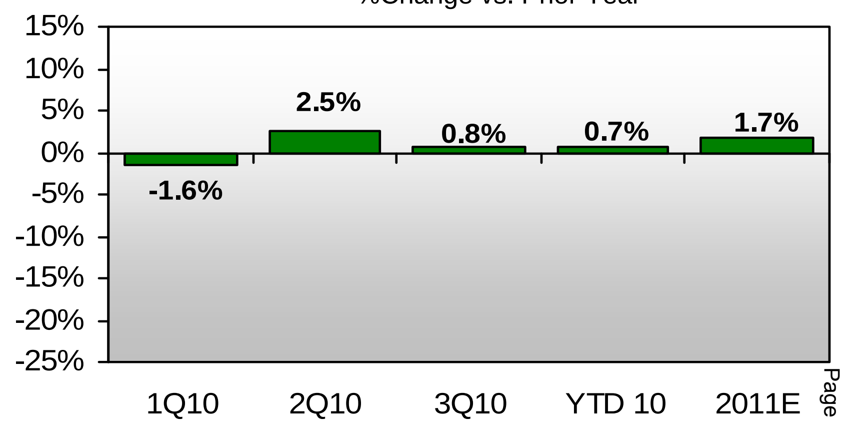
AEP Commercial Normalized GWh Sales
%Change vs. Prior Year



AEP Industrial Normalized GWh Sales
%Change vs. Prior Year



AEP Total Normalized GWh Sales*
%Change vs. Prior Year

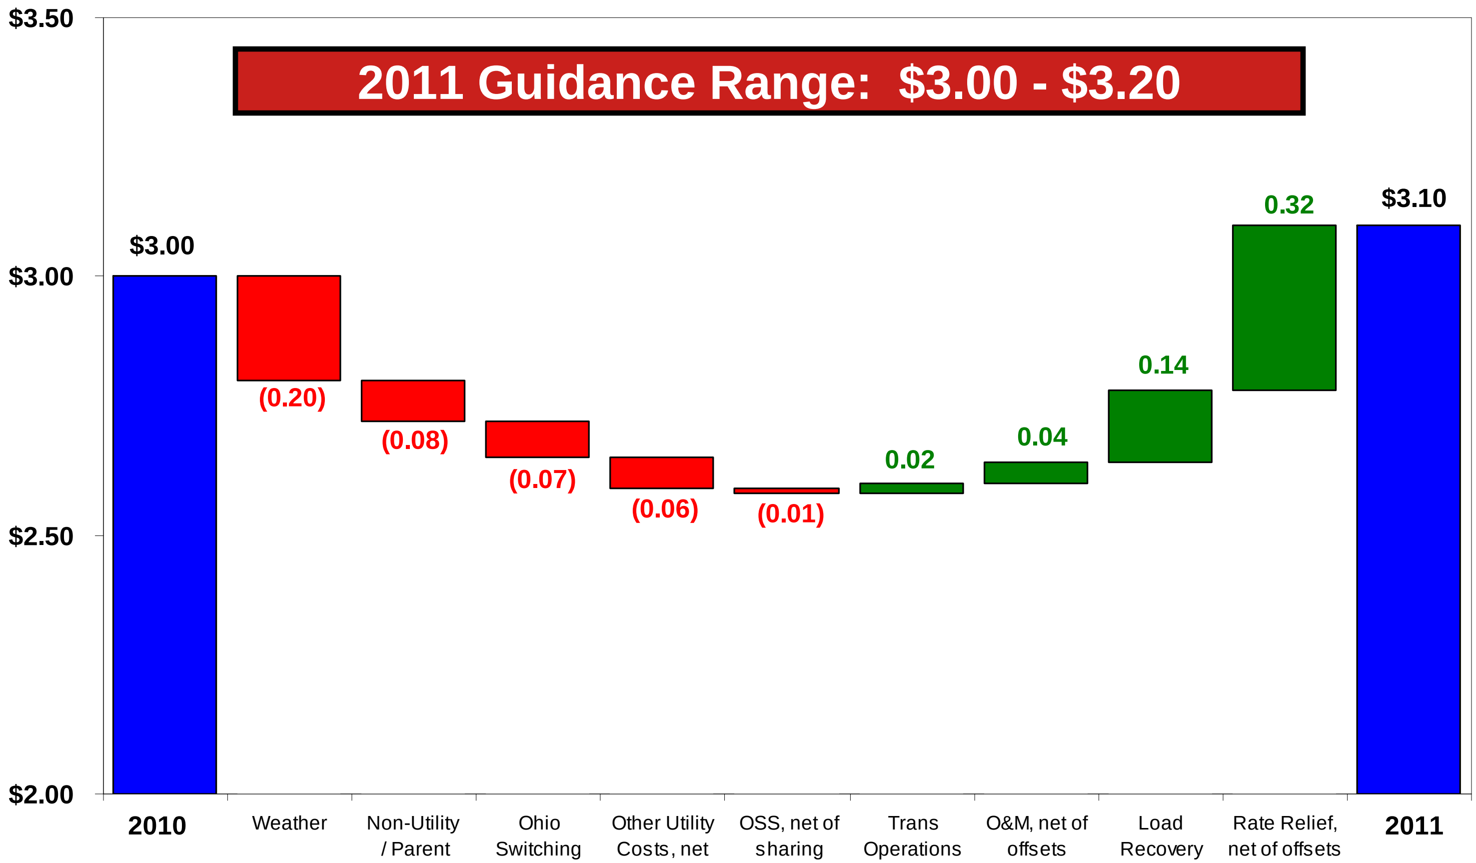


*includes firm wholesale load

Note: 2011E is based off of full year 2010 results
Chart represents connected load

2011 Earnings Drivers

AEP®



- $235M in rate relief (67% already secured)
- Weather normalized load growth of 1.7%
- Transmission operations contributes $23M
- Continued discipline in O&M
- Ohio switching assumptions ($53M – 14% of CSP total load)

Capital Allocation

In this economic recovery cycle, capital allocation requires balance for spending that considers the obligation to serve, the ability to obtain rate increases, a balance sheet to support the plan, and the total return proposition to shareholders

Capital for Growth

- Increase in capital budget of $150M for 2011 to $2.6B
- Announce capital budget plan of $2.9B for 2012

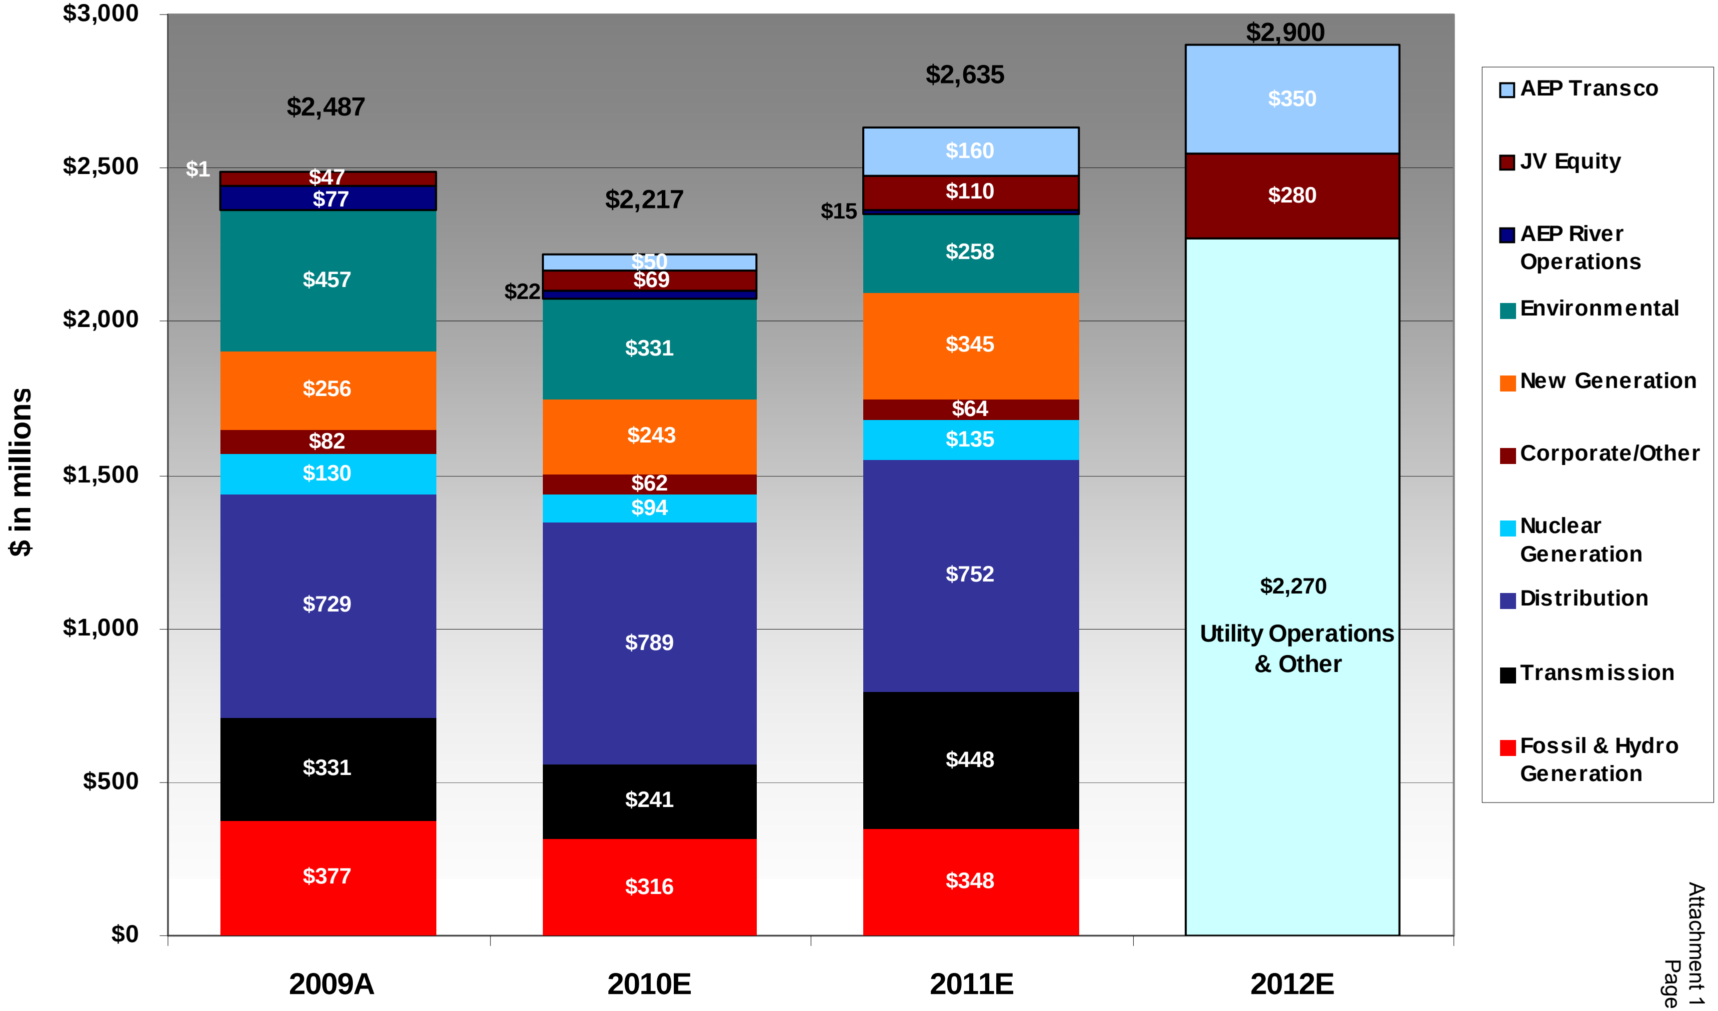
Return of Capital to Shareholders

- 9.5% increase in quarterly dividend beginning in the fourth quarter, subject to board of directors approval
- Future dividend increases will grow with earnings

Capital to Reduce Risk

- Voluntarily funding pension $500M in 2010
- Allocating an additional $150M of funding for pension in 2011

Capital Expenditures



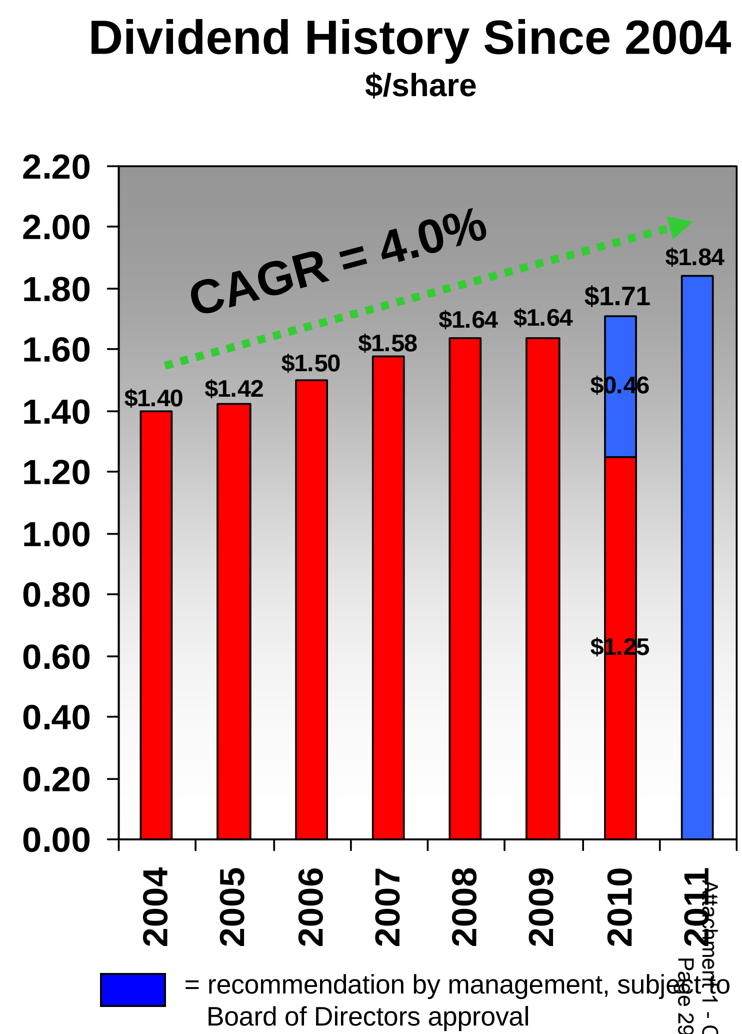
Liquidity and Financing

- Strong liquidity position supported by core Credit Facilities
  - Two $1.5B credit lines underpin liquidity position
    - Renewed 3-year $1.5B credit line in June 2010
    - Other $1.5B facility expires in April 2012, expect to address this renewal in 2011
  - Both facilities are undrawn

- Financing highlights
  - Cash flow and capital spending plan keep balance sheet stable
  - Committed to solid-investment grade credit metrics (BBB/Baa2)
    - Debt-to-Capital of 55-59%
    - FFO/Debt in the mid- to high teens
  - Debt Financing
    - Maturities total $620M in 2011
    - Net debt increases about $50M

Dividend Policy and Recommendation

- Long history of dividend payments
  - Paid 401st consecutive quarterly dividend in September
  - Record of dividend growth
- Management will recommend increasing quarterly dividend by 9.5% in fourth quarter, subject to Board of Directors approval
  - Quarterly payout increases from $0.42/share to $0.46/share
  - Annual payout increases to $1.84/share
- Dividend Policy
  - 50-60% payout ratio
  - For 2011, the payout ratio would be at the high end of the range (59.4% at the mid-point of guidance)
  - Expect future dividend growth consistent with earnings growth

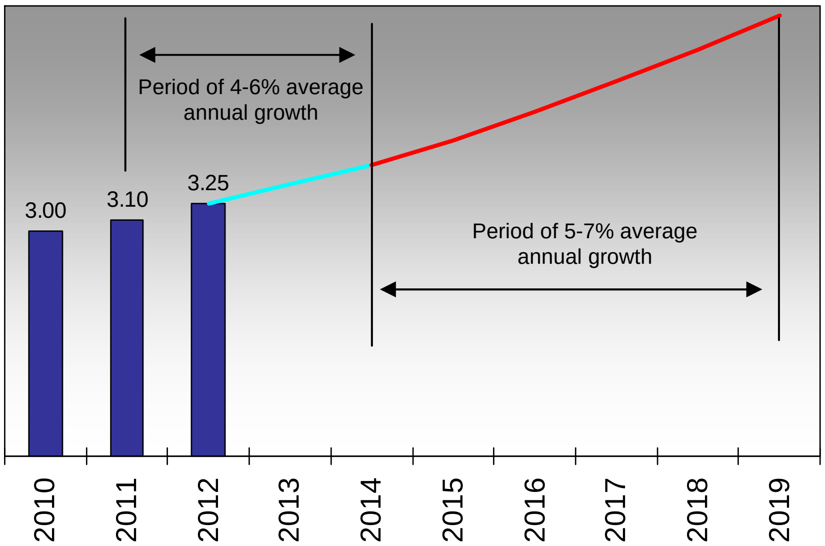


Dividend growth consistent with earnings growth since 2004

Long-term EPS Growth Rate

- 4-6% EPS growth 2012-14
  - Average annual capital spend between $2.9-3.4B
    - Utility platform replacement capital of about $1.4B (annual depreciation)
    - Growth in rate base of $1.5-2.0B per year, allocated between utility platform and transmission projects
  - Blended ROE of 10.5 - 11%
  - Slow, steady recovery in economy
- 5-7% EPS growth post 2014
  - Base utility platform capital including generation transformation
  - Higher allocation of discretionary capital going to opportunities in the transmission development pipeline
  - Higher overall blended ROE opportunity
  - Robust economic growth

Average Annual EPS Growth defined over two periods



Recap

What you heard today

- Operating company model provides additional capital efficiency and discipline
- Environmental compliance will continue to provide rate base growth opportunities
- Transmission is moving forward with ETT, Transco and PATH, all near-term opportunities

Total Return Proposition

- >5% dividend yield at $36/share
- 4-6% EPS growth over the 2012-2014 timeframe
- Higher growth of 5-7% post 2014

Setting EPS target of $3.25/share for 2012

APPENDIX

[1] 2010 pro forma to exclude effects of consolidation of AEP Credit ($656)

Pension and OPEB Estimate

- Investment returns for our pension plan and OPEB funds are solid so far this year. Year-to-date, the pension fund is up about 8% through September, with similar gains in the OPEB funds.
- After making a discretionary contribution of $350 million in September, cash contributions to the pension will total $500 million for 2010.
- We currently would have no required cash contributions to the pension for 2011 but are allocating a voluntary contribution up to $150 million.
- We expect combined pension and OPEB expense to decrease $34M from 2010 to 2011 (pre-tax and pre-capitalization).
- Discount rates are assumed to be 5.6% for pension and 5.85% for OPEB for 2010, and 4.75% and 5.0% for 2011 and beyond.
- Estimates for expense and contribution figures are very sensitive to changes in interest rates and investment returns between now and year-end.

AMERICAN ELECTRIC POWER

Strategic Direction & Financial Outlook

& 1Q09 Earnings Presentation

April 24, 2009

AEP AMERICAN® ELECTRIC POWER

STRONG
FLEXIBLE
ADAPTABLE

Mike Morris, Chairman, President & CEO

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants including our ability to restore Indiana Michigan Power Company’s Donald C. Cook Nuclear Plant Unit 1 in a timely manner; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity and transmission lines (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary or deflationary interest rate trends; volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impacting our ability to finance new capital projects and refinance existing debt at attractive rates; the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurred cots and recovery is long and the costs are material; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

AEP AMERICAN ELECTRIC POWER

AEP Highlights

Premier utility platform

- Leadership position in electric generation, transmission and distribution operations
- Cash flow, earnings and regulatory diversity with more than 5 million customers in 11 states
- $6.3 billion capital expenditure program (2009-2011) will continue to drive rate base growth

Effective regulatory relationships

- Traditional recovery mechanisms with equitable risk allocation enhance both earnings and cash flow
- Emerging energy policies play to AEP's strengths (transmission, energy efficiency, reliability)
- Constructive local relationships deliver successful regulatory outcomes

High-growth transmission business

- The leading US transmission owner, operator, and developer
- Exceptional portfolio of high-quality development projects and project partners
- Attractive ROEs, regulatory support and access to capital will drive earnings growth beyond our traditional utility footprint

Stable financial position

- Maximization of shareholder value through regulated utility and transmission investments
- Balanced approach to cost containment and capital allocation
- Commitment to investment grade profile, prudent balance sheet, and liquidity management
- Conservative dividend payout with attractive yield

AEP AMERICAN ELECTRIC POWER

Equity Offering – Successful Execution

Landmark Offering

- Largest US regulated electric utility equity offering in history:
  - 69MM shares (upsized 20%)
  - Gross proceeds of $1.69B
  - Largest equity offering to-date in 2009
  - Lowest file / offer discount of any non-financial follow-on offering since June 2007 at (2.3%)

Focus on Fundamentals

- Achieved key objectives:
  - Strengthened balance sheet and enhanced liquidity
  - Supports stable investment grade ratings and financial flexibility
  - No further equity proceeds needed in medium term (excluding the DRP)
  - Focused investors on operational and financial strength and unique transmission investment growth prospects, which provide diversified earnings growth and an attractive dividend yield

---

AEP AMERICAN ELECTRIC POWER

Energy Policy Initiatives are Core to Our Strategy

Greenhouse Gas Reduction & Regulation

- Actively engaging in CO_2 policy debate – support cap & trade with allocated credits
- Leadership position in development of carbon capture and storage technology
- Reducing carbon footprint via offsets and other measures
- Founding member of Chicago Climate Exchange

Renewable Energy

- Develop “transmission superhighway” to facilitate renewable energy projects
- Satisfy RES requirements in our jurisdictions
- Add 1,000MW of wind capacity via long-term PPAs – 903MW achieved to-date

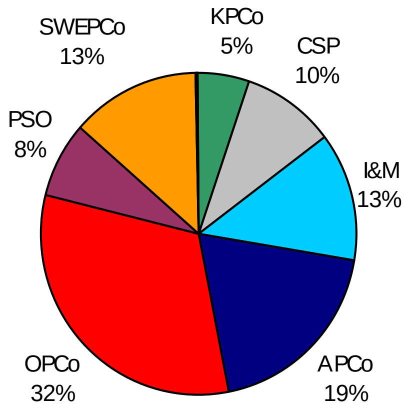
Energy Efficiency, Security & Reliability

- Develop high-voltage transmission projects to strengthen America’s power grid
- Build generation to ensure reliable supply
- Reduce 1,000MW of demand by 2012
- Diversify our fuel mix; have added 3,705MW of gas-fired capacity since 2005 and have 1,080MW under construction

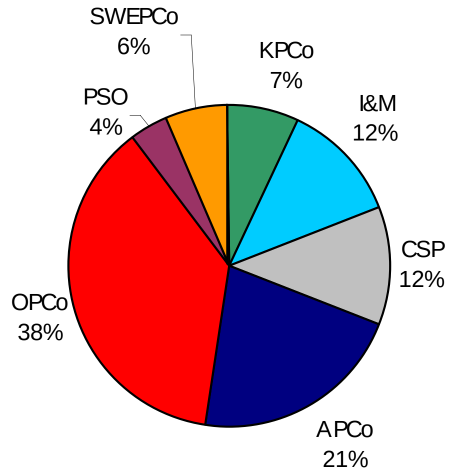
AEP AMERICAN ELECTRIC POWER

CO_2 Cost Recovery – Should Follow SO_2 & NOx

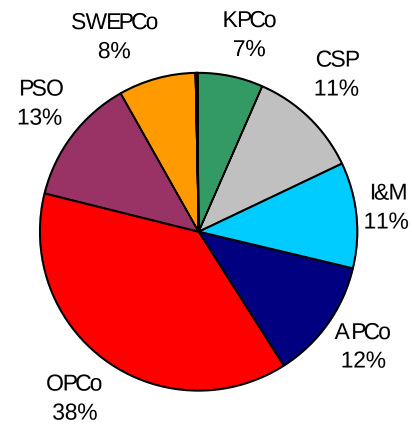
2008 AEP System CO_2 Emissions
163M tons



2008 AEP System SO_2 Emissions
637k tons



2008 AEP System NOx Emissions
248k tons



- 100% of SO_2 and NOx allowance costs currently recovered through tracker or similar mechanisms
- Prudently incurred costs associated with carbon-based taxes and other carbon-related regulations explicitly included in Ohio Fuel Adjustment Clause

AEP AMERICAN ELECTRIC POWER

Premier Regulated Utility Platform

AEP AMERICAN ELECTRIC POWER

Track Record of Successful Regulatory Outcomes

Cumulative Rate Relief

	2006A	2007A	2008A	2009E	2010E	2011E
Annual rate increases, $mm	$450	$352	$527	$732	$337[1]	$159[1]

[1] *$70mm and $38mm was secured for 2010 and 2011, respectively, as of March 31, 2009*

AEP AMERICAN ELECTRIC POWER

Our Regulatory Approach:

Maximize utility company returns:

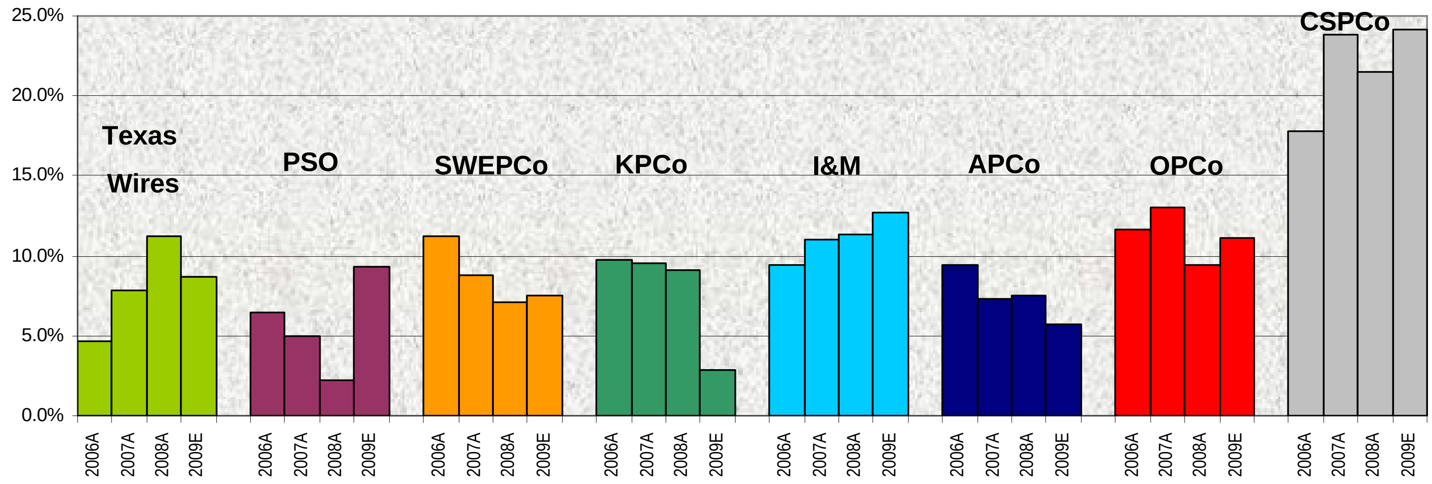
- Successfully secured significant rate relief
- 2009 rate relief:
  - ✓ Ohio ($455MM)
  - ✓ I&M ($52MM)
  - ✓ APCo ($58MM)
  - ✓ PSO ($74MM)
- Pending rate relief including amount requested:
  - ✓ APCo WV ($25MM – in ENEC filing)
  - ✓ SWEPCo ($56MM)
  - ✓ Texas ($7MM)
- Anticipated filings:
  - APCo VA and others to be determined

Minimize regulatory lag:

- Active fuel adjustment clauses now in place in <u>all</u> jurisdictions
- Increased frequency of rate cases
- Employing tracking features

Strong local relationships with regulators

Net Income & Pro-Forma Earned ROE by Operating Company



Pro-Forma Earned ROEs

Earned ROEs represent 12 months ended December 31. Regulatory Lag ranges from 3-15 months by jurisdiction.

■ 345 kV in ERCOT	

AEP AMERICAN® ELECTRIC POWER

Note: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

Equity Contributions Enhance Growth to 4 – 8%

AEP is the leader

- Largest US transmission footprint
- Interstate EHV highway vision
- National renewables transmission strategy

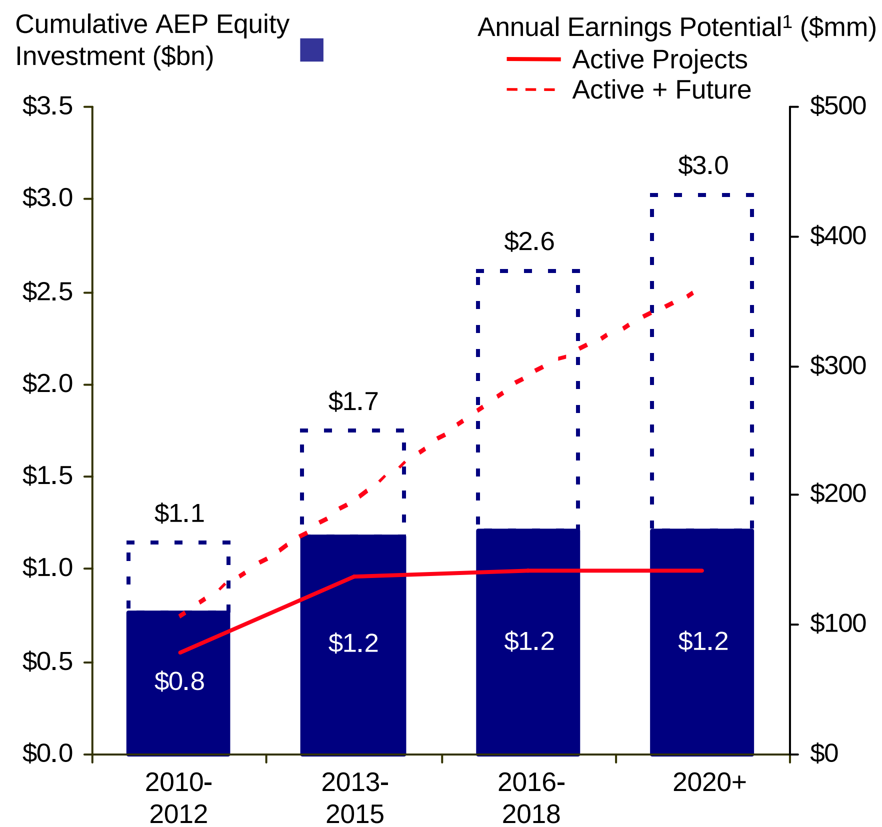
Quality projects

- 4 FERC-approved ($3.3 billion)
- Independent ERCOT transmission JV company (up to $2.6 billion)
- Robust pipeline of future 765 kV projects (up to $15 billion)

Attractive returns

- FERC incentive rates (12.5-14.3%)
- Strong cash flow with CWIP
- Long-term earnings potential of ~$140-$360 million annually[1]

Illustrative Earnings Potential of New Transmission Initiatives



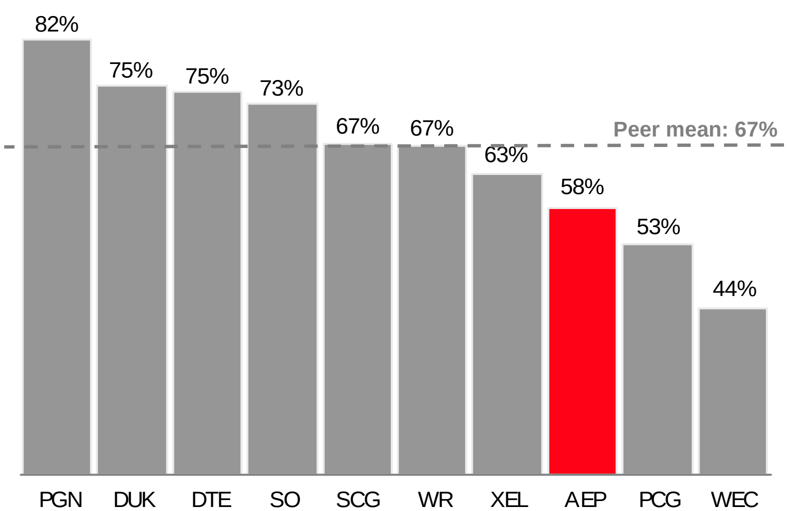
[1] *Illustrative calculation assumes 50/50 debt/equity capitalization and incentive ROE of ~13.0% for FERC projects and a 60/40 debt/equity capitalization and 10.5% ROE for ERCOT projects*

AEP AMERICAN ELECTRIC POWER

Dividend Overview

- We have paid 395 consecutive quarterly dividends to shareholders
- Dividend - $1.64/share
- Attractive yield
- Target dividend payout ratio of 50 – 60%

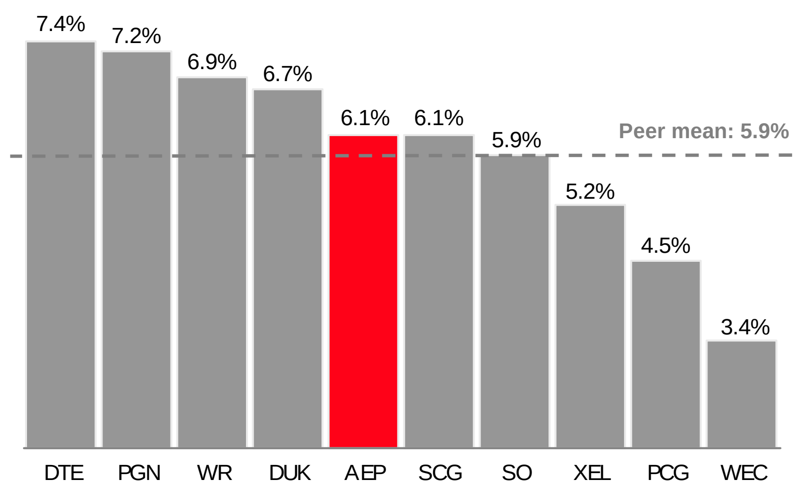
Payout Ratio vs. Integrated Electric Peers



Note: Payout ratio equals the indicated dividend rate annualized divided by First Call 2009 consensus estimate

Source: Bloomberg & First Call earnings estimates as of 4/20/09

Dividend Yield vs. Integrated Electric Peers



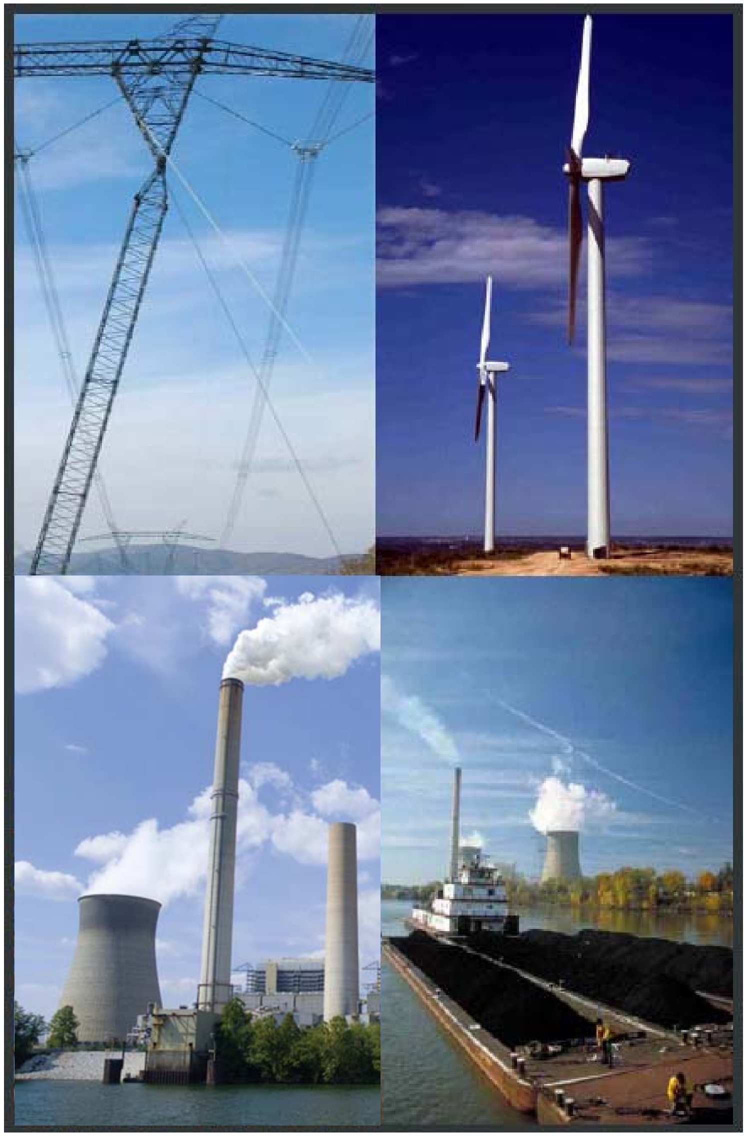
Note: Dividend yield equals the indicated dividend rate annualized divided by the share price

Source: ThomsonONE as of 4/20/09

AEP AMERICAN ELECTRIC POWER

AEP is a Compelling Investment

- Market leading assets and operations
- Attractive pipeline of growth capital opportunities
- Successful regulatory management supports earnings continuity
- Strengthened balance sheet, liquidity and credit profile
- Diversified earnings growth and attractive dividend



AEP AMERICAN ELECTRIC POWER

2009 Financial Outlook and 1st Quarter 2009 Results

Holly Koeppel, EVP & CFO

Overview of 2009 Guidance

2009 Earnings Drivers:

- ⬆ Positive Ohio outcome
- ⬆ Rate relief - $732mm
- ⬇ Economic slowdown
  - — Lower OSS revenues
  - — Lower loads

Long-term Earnings Drivers:

- ⬆ Rate base investments
- ⬆ Additional rate relief
- ⬆ OSS/Retail load
- ⬆ Transmission JV earnings

2008A-2009E Earnings Bridge ($mm)

AEP AMERICAN ELECTRIC POWER

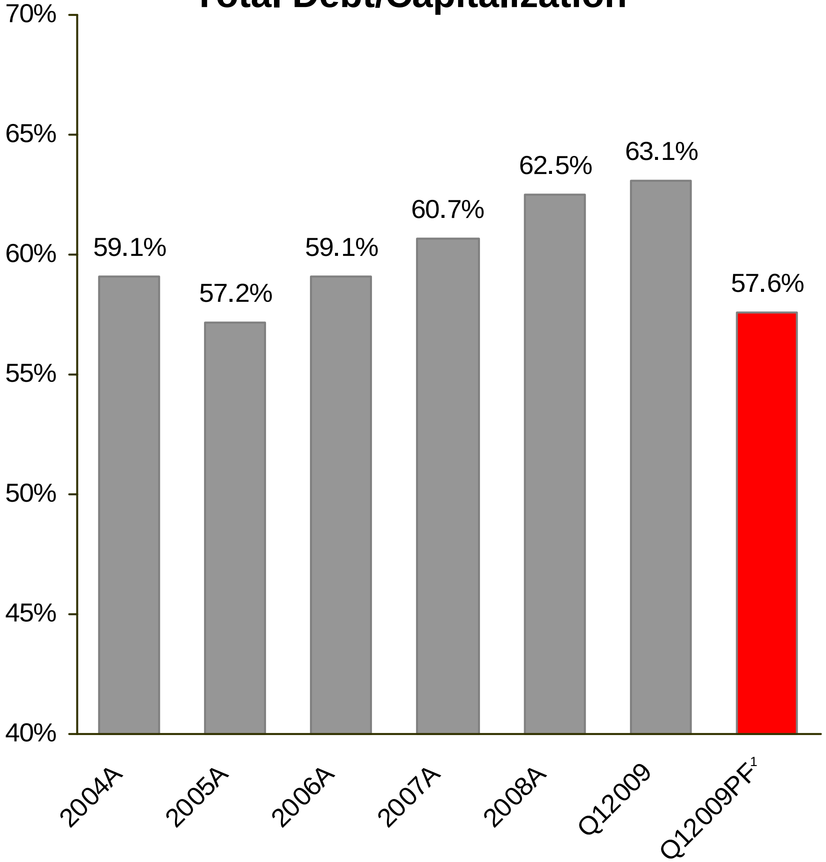
1Q09 Performance Drivers:

- *Retail Sales (lines 1-4):*
  - *Rate relief of $101MM (Primarily APCo and PSO)*
  - *Lower OSS sharing of $54MM*
  - *Offset by:*
    - *$58MM favorable variance in the prior year related to a coal contract amendment*
    - *$20MM credit for fuel to I&M customers from a portion of Cook Unit 1 accidental outage policy proceeds*
    - *Load contraction of $6MM, primarily from industrial customers in I&M and the Ohio companies*
  - *Weather had no EPS impact vs. prior year or normal*
- *Off-System Sales (line 5):*
  - *Off System Sales were lower primarily due to lower volumes and market prices which reflect weak market demand and a significant drop in natural gas prices*
- *Other Operating Revenue (line 7):*
  - *Increase due to accidental outage insurance payments related to the DC Cook Unit 1 outage ($54MM)*
- *Operations & Maintenance (line 9):*
  - *Higher O&M costs related to the 1Q08 PSO storm deferral of $72MM, 2009 storms ($38MM) and an accrual of$15MM for the Partnership with Ohio Fund, offset by the Red Rock write-off in 1Q08($10MM) and a decrease in employee-related expenses ($34MM)*
- *Interest Expense & Preferred Dividend (line 12):*
  - *Higher due to increased long-term debt outstanding and higher interest rates*
- *Income Taxes (line 14):*
  - *Effective tax rate for utility operations was 32.9% in 2009 and 33.6% in 2008*
- *River Operations increased due to gains on the sale of two older towboats.*
- *Generation & Marketing increased as a result of higher gross margin from marketing activities in ERCOT.*
- *Parent and Other decreased primarily due to higher interest expense at the Parent.*

p.23

Maintaining Strong Capitalization & Liquidity

Total Debt/Capitalization



Note: Total Debt is calculated according to GAAP and includes securitized debt
[1] Pro forma assumes proceeds from the equity offering were used to reduce debt

Current Liquidity Summary

- Liquidity provided by 27 banks
- Our largest lender accounts for less than 10% of bank commitments

($mm)	**04/20/2009**	**Maturity**
Revolving credit facility	$1,500	March 2011
Revolving credit facility	1,454	April 2012

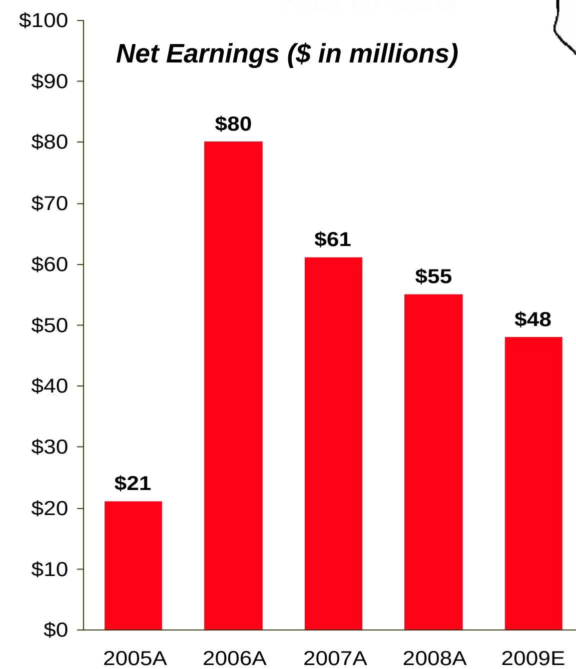
Note: For analysis purposes, certain financial statement amounts have been reclassified for this effect on earnings presentation.

AEP River Operations

- Full-service inland waterways carrier
  - 2,978 hopper barges
  - 58 towboats/25 harbor boats
- Tonnage & Commodity
  - Captive: 37MM tons of coal
  - Commercial: 35MM tons of coal/grain/bulk
- Gulf Operations
  - Barge cleaning and repair
  - Fleeting and shifting
  - Midstream transfers
- Operating Centers in Lakin, WV, Cape Girardeau, MO, Paducah, KY, Convent and Belle Chase, LA
- 2009 earnings forecast lower than 2008 due to economic downturn

Inland Waterway Routes For AEP River Operations



AMERICAN ELECTRIC POWER

Generation and Marketing

- Business Purpose: To own and operate or contract for electric generation assets and provide innovative power supply products to municipals, electric cooperatives and other market participants
- Owns and Operates 2 Texas Wind Farms – 310MW
- Marketing and Risk Management Activities in ERCOT
- FERC-approved, 20-year PPA with AEP Texas North for TNC's capacity and energy of the Oklaunion plant (54.69%)
- 2009 earnings forecast lower than 2008 due to lower optimization activities around the Oklaunion output and lower revenues from the wind farms

Trent Wind Farm

AEP AMERICAN ELECTRIC POWER

Jurisdictional Off-System Sales Sharing Summary

STATE	OSS Sharing?	Detail
Arkansas	Yes, above and below base levels	Up to $758,600 annual margin, ratepayers receive 100%. From $758,601 to $1,167,078, ratepayers receive 85%. Above $1,167,078, ratepayers receive 50%.
Indiana	Yes	There is $37.5 million built into Indiana's base rates. Above $37.5 million, ratepayers received 50%
Kentucky	Yes, above and below base levels	Sharing occurs above and below levels included in base rates of $24,855,326. Between $0 and $30 million, ratepayers receive 70%. Above $30 million, ratepayers receive 60%.
Louisiana	Yes, above base levels	Up to $874,000 annual margin, ratepayers receive 100%. From $874,001 to $1,314,000, ratepayers receive 85%. Above $1,314,000, ratepayers receive 50%.
Michigan	Yes	There are two jurisdictions: St Joe and Three Rivers. For St Joe, 100% of profits are shared with ratepayers. No profits are shared in Three Rivers, including base rates. St Joe represents 66% of the Michigan market.
Ohio	No	n/a
Oklahoma	Yes	75% of profits are shared with ratepayers.
Tennessee	No	n/a
Texas (SPP)	Yes	90% of profits are shared with ratepayers.
Virginia	Yes	75% of profits are shared with ratepayers.
West Virginia	Yes	100% of profits passed back to ratepayers through the Expanded Net Energy Cost (ENEC) clause.

Total Cash Increase	462.8M	246.5M	595.1M	234.9M	684.4M	269.4M	3263.3M	1478.6M
	Other Components		Other Components		Other Components		Other Components	
Partnership with Ohio Fund	-25.0M	-5.0M	0.0M	0.0M	0.0M	0.0M	-75.0M	-15.0M

- Revenue increases:

	2009	2010	2011
OPCo	8%	7%	8%
CSPCo	7%	6%	6%

- Fuel recovery mechanism
  - Any under-recoveries earn WACC similar to plant investment
  - Deferred fuel balances at end of ESP are amortized and recovered 2012-2018
  - Recovery of future costs of carbon regulation explicitly included in FAC
- Opportunity for distribution rate cases

AEP AMERICAN ELECTRIC POWER

Summary Rate Case Information

SWEPCo Arkansas General Rate Case

On February 19, 2009 SWEPCo filed a general base rate case with the Arkansas Public Service Commission (APSC) requesting an increase of $53.9 million. (Docket #:09-008-U). An order is expected in December 2009.

Projected Capital Structure – Company Position (12/31/08)

	% of Capitalization	Cost Rate	Weighted Return
Long-Term Debt	41.73%	6.61%	2.76%
Preferred Stock	0.12%	4.87%	0.01%
Common Equity	35.68%	11.50%	4.10%
Other Items	22.47%	various	0.13%
Total	100%		7.00%

Procedural Schedule

6/26/2009	Staff and intervenor testimony due
7/24/2009	Rebuttal testimony due
8/18/2009	Staff and intervenor rebuttal testimony due
8/25/2009	Surrebuttal testimony due
10/20/2009	Public hearing commences

Required Rate Relief – Company Position (12/31/08)

($ in millions)

Adjusted Rate Base	$	608.9	*
Required Rate of Return		7.00%	
Required Operating Income	$	42.6	
Adjusted Operating Income	$	27.3	
Difference	$	15.3	
Revenue Conversion Factor		1.65	
Revenue Deficiency	$	25.2	
Generation Recovery Rider	$	28.7	
Total Required Rate Relief	$	53.9	

*Rate base as of December 31, 2008, updated for known and measurable changes through December 31, 2009.

AEP AMERICAN ELECTRIC POWER

Pension and OPEB Estimate

- Our pension plan and OPEB funds investment returns were each down about 24% in 2008.
- Discount rates are assumed to be 6.0% for pension and 6.1% for OPEB.
- Investment losses increase plan expense for both pension and OPEB, but the investment losses are smoothed in over several years.
- We expect 2009 pension and OPEB expense to increase $104MM from 2008 to 2009 (pre-tax and pre-capitalization).
- OPEB contributions will increase along with OPEB expense, in accordance with agreements in most of our regulatory jurisdictions.
- We do not expect any mandatory contributions to pension in 2009. Pension trust contributions are estimated to be $475MM in 2010 and $283MM in 2011.

AEP AMERICAN ELECTRIC POWER

Use of Equity Proceeds – Reduce Leverage

69 million shares issued at $24.50 / share

Net Proceeds: $1.64 billion

External Settlements

$1.44 billion Facility Pay-down

Intercompany transfers

Approximate Equity Contributions
$1.14 billion *

Money Pool borrowing reduction

- **OPCo: $550 million**
- **APCo: $250 million**
- **I&M: $120 million**
- **KPCo: $30 million**
- **PSO: $20 million**
- **SWEPCO: $125 million**
- **TCC: $35 million**
- **TNC: $10 million**

* - subject to AEP board of director approval

AEP AMERICAN ELECTRIC POWER

DC Cook Unit 1 Update

- Previously identified technical challenges have solutions
  - Low pressure turbine rotors have been straightened
  - Foundation repair work is in progress and is the critical path
  - Generator and high pressure turbine repair work supports the critical path
- The unit is scheduled to return to service in the fourth quarter of 2009
  - The unit will operate without the last stage blades at 30 MW (summer) to 100 MW (winter) reduced capacity
- Root cause: “A blade-rotor system design that failed to provide adequate stress margin”
  - The root cause also found no operational or installation issues
- The replacement rotors are scheduled for installation in the spring of 2011
  - Different design with several years of fault-free commercial operation.
- We continue to receive $3.5MM per week from the accidental outage policy
  - Insurance proceeds are reflected as other operating revenue; During 1Q09, approximately 40% of the insurance payments ($20MM) were used to offset increased fuel costs to customers

Investing Activities		
Capital Expenditures	(778)	(897)
Proceeds on Sale of Assets	18	172
Change in Other Temporary Cash Investments, net	(17)	90
Acquisition of Nuclear Fuel	(98)	(76)
Other Investing, net	(19)	(16)
Cash Flows Used for Investing Activities	(894)	(727)
Financing Activities		
Common Shares Issued, net	45	47
Long-term Debt Issuances, net	627	854
Short-term Debt Decrease, net	(251)	(1)
Other Financing	(14)	(25)
Dividends Paid	(164)	(167)
Cash Flows From Financing Activities	243	708
Cash From Continuing Operations	$ (23)	$ 299
Beginning Cash & Cash Equivalent Balances	178	411
Ending Cash & Cash Equivalent Balances	$ 155	$ 710

1Q2009 Cash Flow Drivers:

Operating Activities

- Changes in working capital largely driven by fuel (coal) stock increase and G&A type items
- Changes in other assets and liabilities largely driven by changes in un-recovered fuel

Investing Activities

- Cash outlay of $897MM for 2009 YTD capital investment.
- 2009 asset sale proceeds primarily relate to the transfer of assets from TCC to ETT ($60MM) and payments from the third-party owners of the Turk Plant ($104MM)

Financing Activities

- Long-term debt issuances of $854MM primarily related to I&M and APCo senior notes.

AEP Environmental Roadshow

Hosted by Sanford Bernstein

April 14, 2005

New York City

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to control operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness and number of participants in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Vice President – Environmental Services

Introduction

AEP®

The generation assets are co-managed by the Power Generation and the Commercial Operation Groups within AEP – each with a deliberate focus on roles and responsibilities within the organization

Power Generation
Operate 36,000 MW

Commercial Operations
Coal, gas, power and emissions markets

Fossil and Hydro Generation
Bill Sigmon, SVP

Generation Dispatch

Nuclear Generation

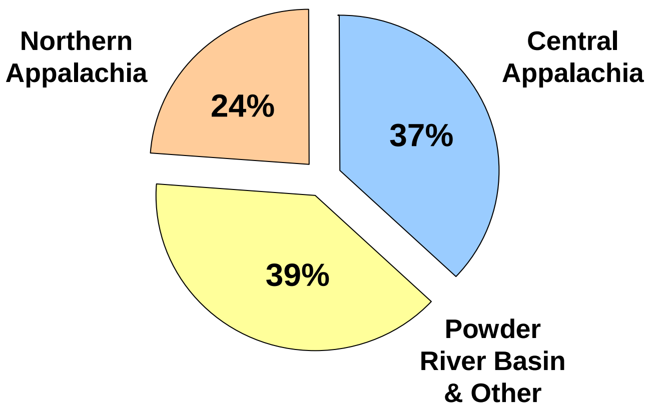
Energy Marketing
Brian Tierney, SVP

Engineering, Environmental & Technical Services
John McManus, VP Environmental Services

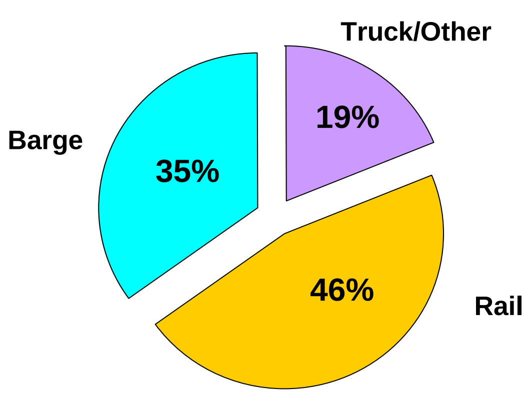
Fuel, Emissions & Logistics
Chuck Zebula, SVP

Fuel, Emissions & Logistics

FUEL BASIN DIVERSITY
73 million tons



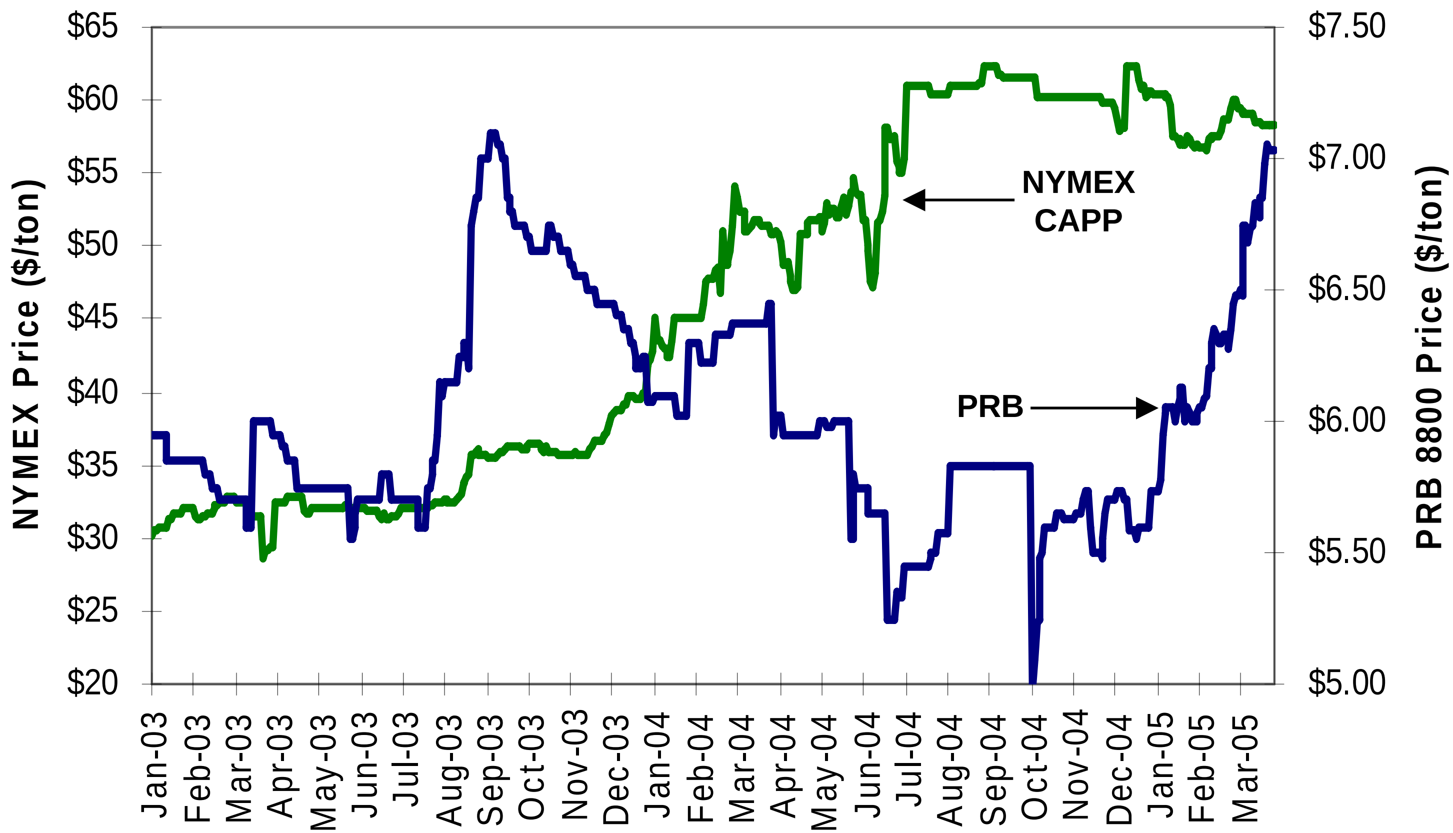
DELIVERY MODE DIVERSITY
25 GW coal capacity



- All fossil fuel activities including procurement, transportation, inventory, QA/QC, measurement, and coal trading;
- Market-based emission and renewable credit activities;
- Barge transportation, terminal, and railcar maintenance businesses;
- Procures all bulk consumables for use in combustion/emission removal;
- Optimizes all by-products of production including ash and gypsum.

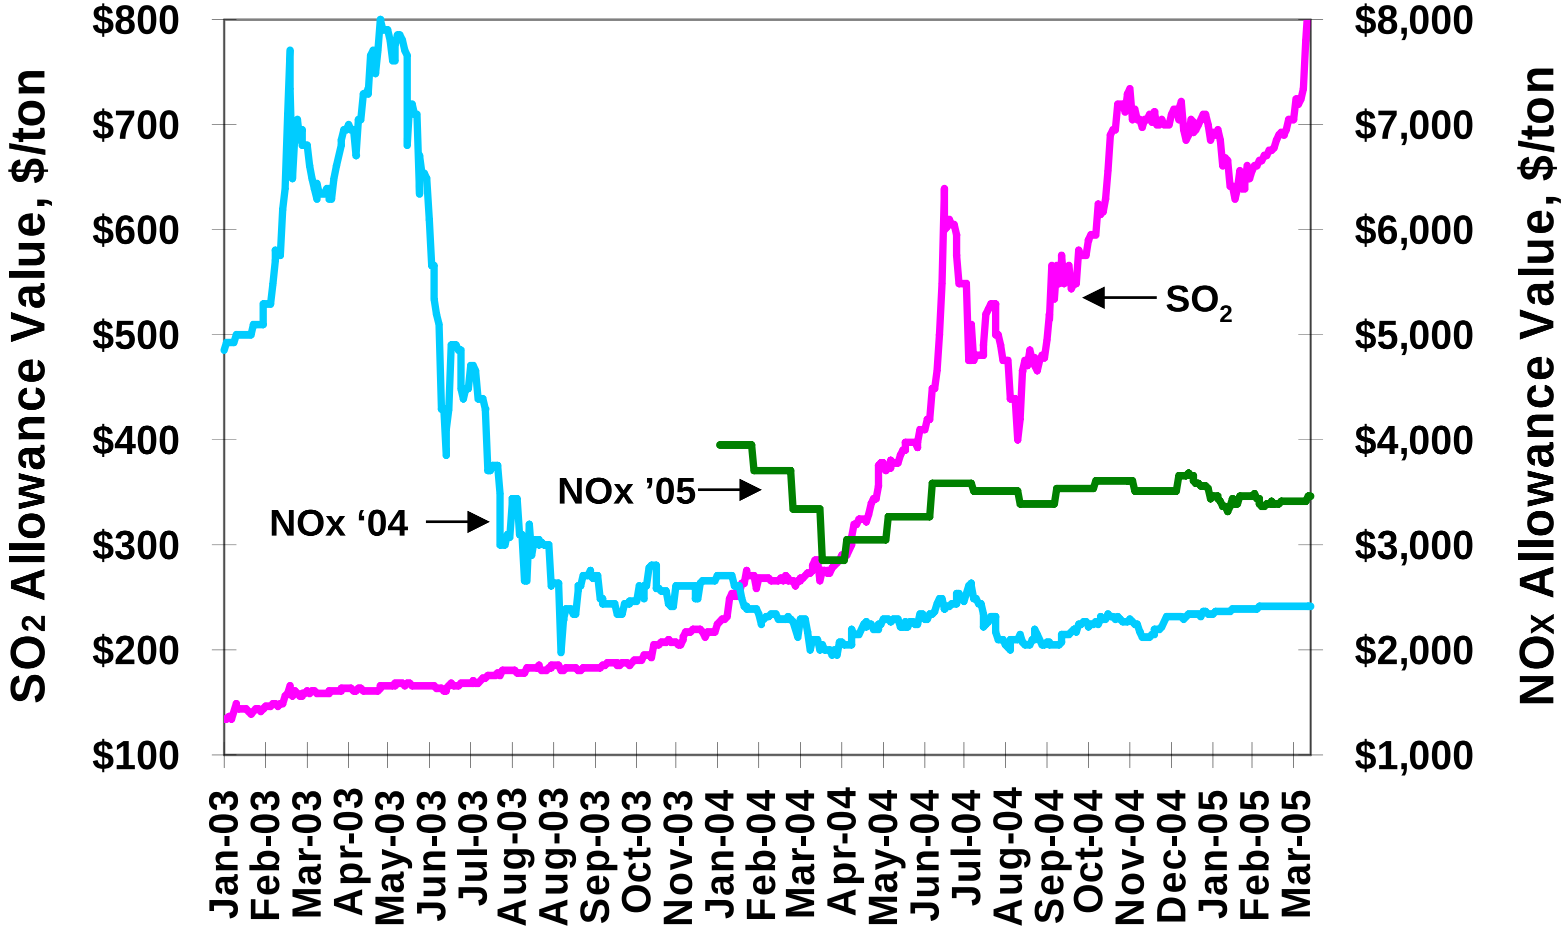
Coal Markets

The tale of two markets – one with labor, permitting and capacity constraints (CAPP) and the other with transportation bottlenecks and limited “immediate” substitution capability (PRB) but gaining strength



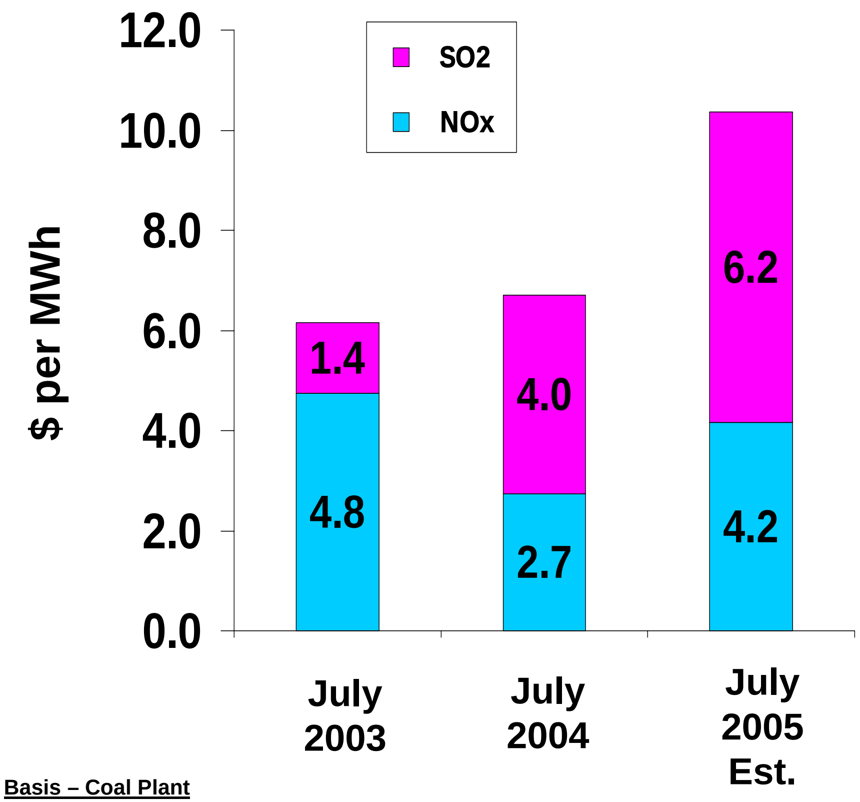
Emission Allowance Prices

Allowance prices for SO_2 and NOx have been extremely volatile since the beginning of 2003



Market Value vs. Inventory Cost

Profile of Uncontrolled Power Plant exposed to Market Value of Emission Credits



__Basis – Coal Plant__
9.5 MMBtu/MWh Heat Rate
0.25 lbs NOx/mmBtu
1.67 lbs SO_2/mmBtu

AEP has managed its exposure to rising emission allowance costs

- Inventory cost of emission credits is low
- Effective hedging program for SO_2 allowances
- Effective capital implementation in the NOx SIP Call ($1.3 B)
- Exposure in future years reduced by $3.7 B capital program and current inventory of allowances

Clean Air Interstate Rule

- Rule Finalized March, 2005.
- CAIR designed to address the contribution of regional emissions to downwind $PM_{2.5}$ & 8-hour Ozone non-attainment.
- CAIR reductions from 2003 emissions: ~73% SO_2; & ~61% NO_x
- Reductions occur in phases: Phase I (2009); Phase II (2015)
- CAIR established three Cap & Trade Programs:

1. Annual SO_2 Trading Program
2. Annual NO_x Trading Program
3. Separate Ozone-Season only NO_x Trading Program

CAIR Applicability to AEP

- AEP-East States & Louisiana subject to <u>all</u> three trading programs
- Arkansas subject <u>only</u> to the Ozone-Season trading program
- Texas subject to <u>only</u> the Annual NO_x & SO_2 trading programs
- CAIR does <u>not</u> apply to Oklahoma

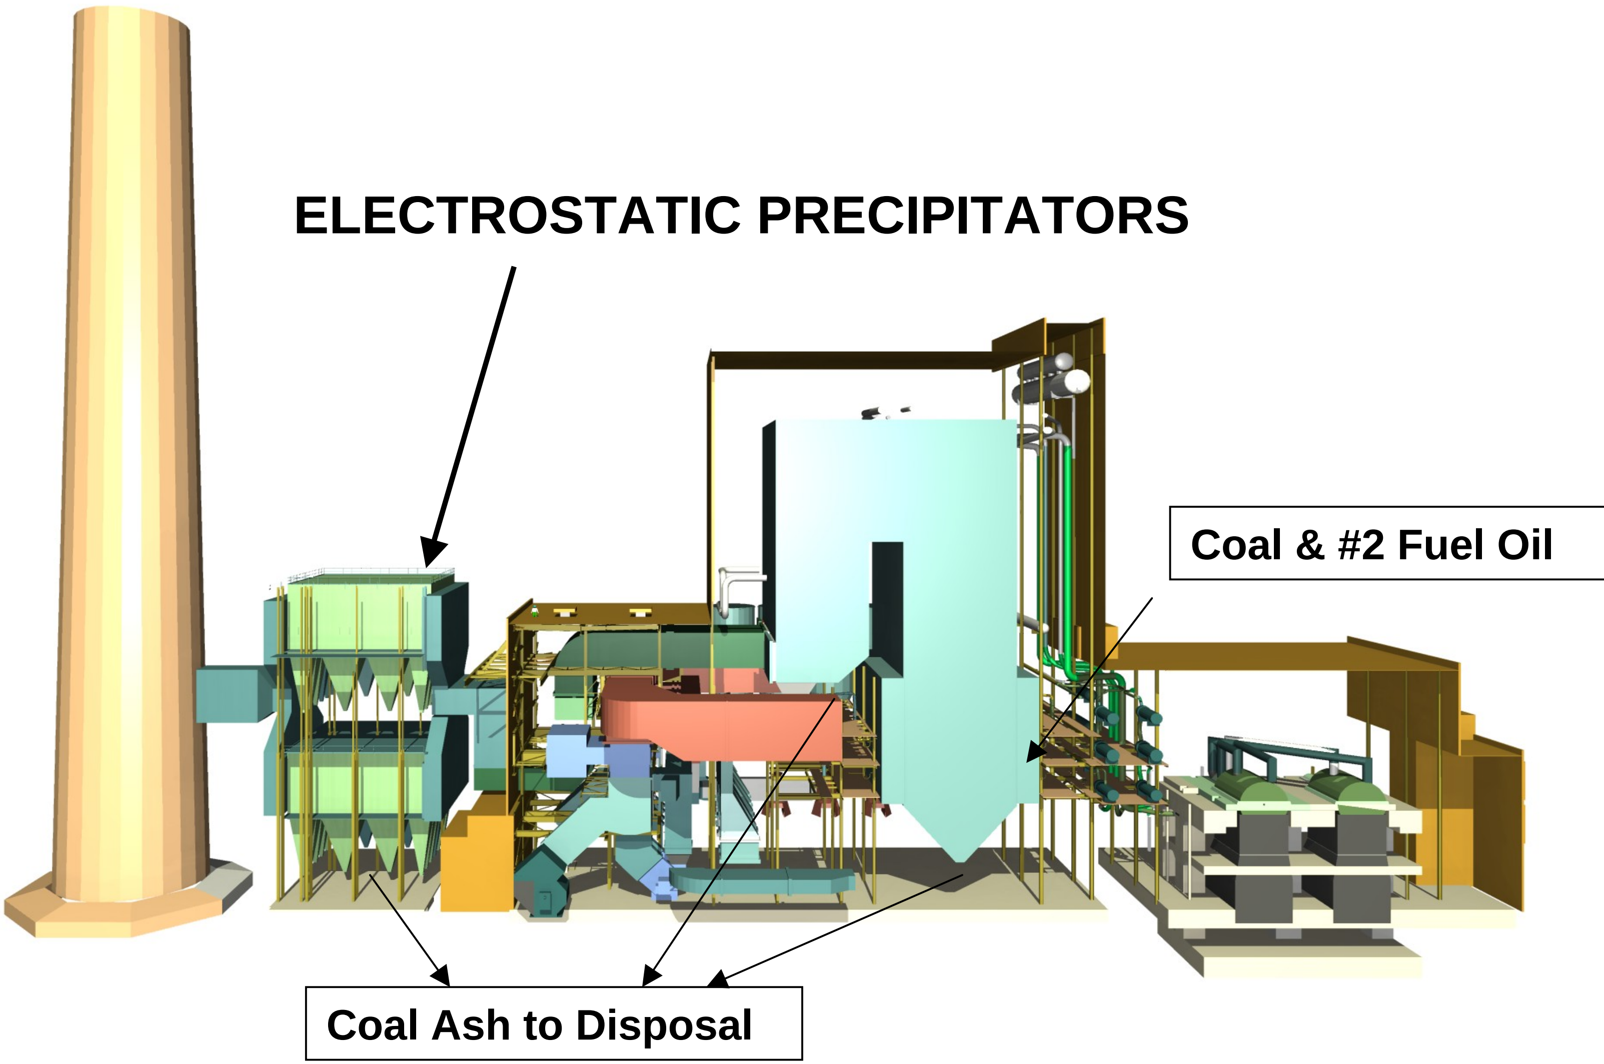
AEP WILL HAVE TO INSTALL ADDITIONAL SCR AND FGD SYSTEMS IN ORDER TO MEET THE EMISSION REDUCTIONS REQUIRED BY CAIR

Mercury Rule

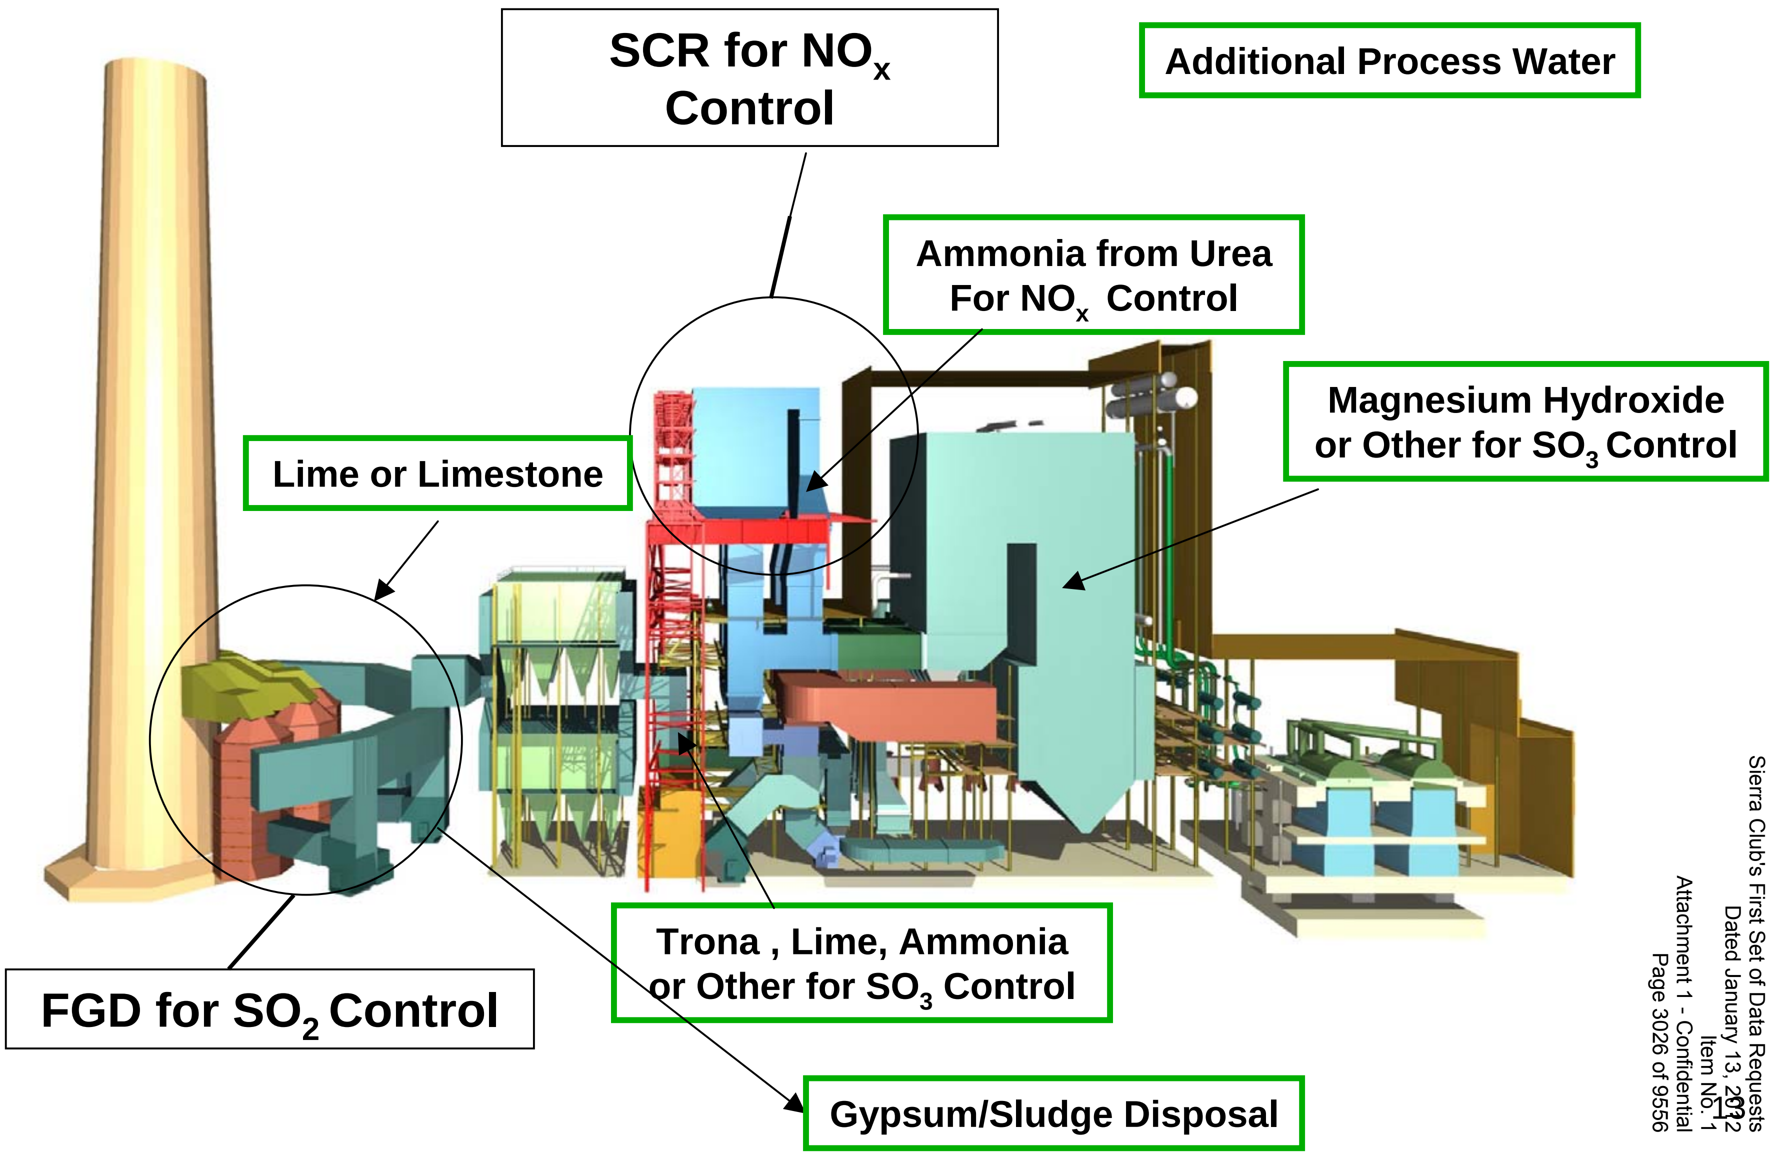
- Rule Finalized March, 2005
- Designed to reduce mercury emissions by ~70% nationwide from electric utilities
- Reductions occur in phases: Phase I (2010); Phase II (2018)
- Establishes a Cap & Trade structure to achieve mercury reductions

AEP WILL ACHIEVE SOME MERCURY REDUCTIONS AS A CO-BENEFIT OF SCR AND FGD SYSTEMS, BUT MERCURY SPECIFIC CONTROL EQUIPMENT WILL BE NEEDED ON SOME UNITS

Pulverized Coal Unit As Built in 1970s

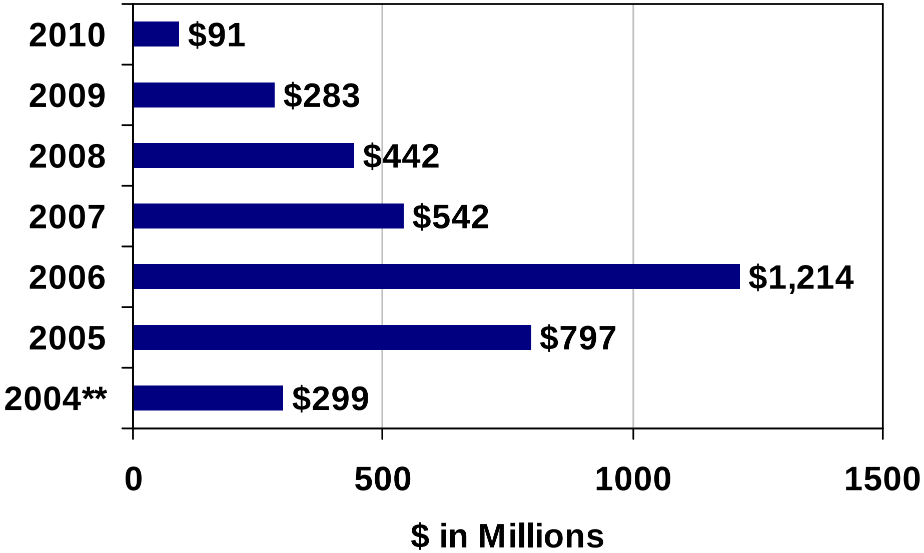


Pulverized Coal Unit Today Showing Retrofits & New Feedstock(s)



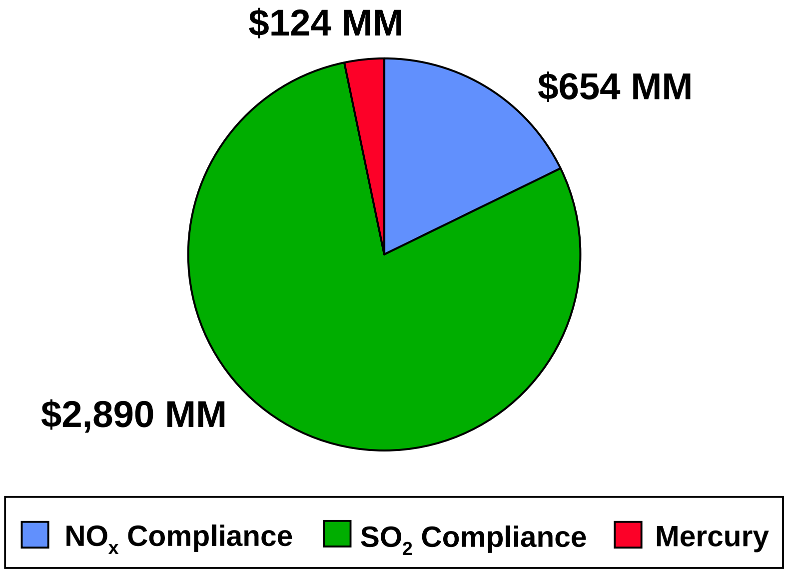
Environmental Investment: $3.7 Billion Through 2010

Environmental Capital Investment*



*Environmental investment for NOx, SO_2 , & Hg purposes
** Actual investment level in 2004

Compliance Allocation



Current Programs

$1.9 Billion:

$0.6 billion for NOx

$1.2 billion for SO_2

Future Programs

$1.8 Billion:

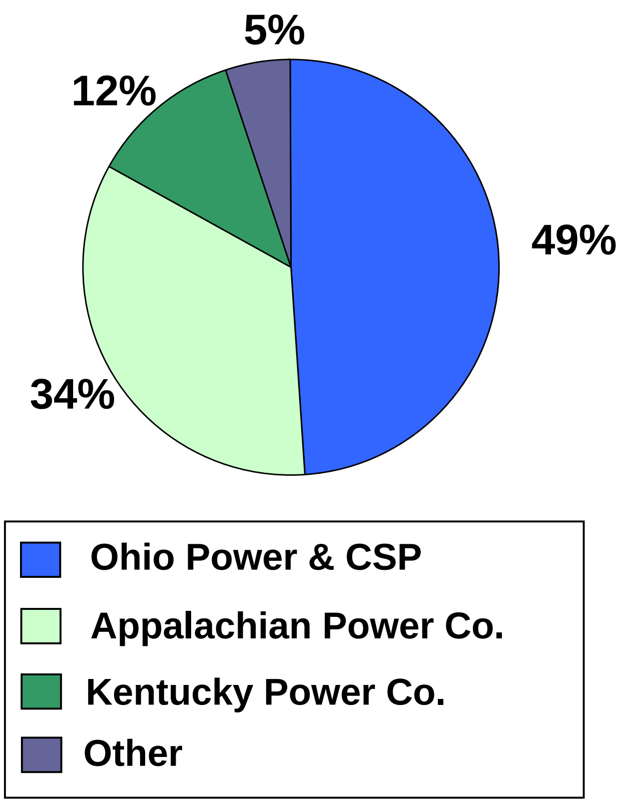
$1.7 billion for SO_2

$0.1 billion for Other

MAJORITY OF 2005 & 2006 DOLLARS WILL BE INVESTED IN OHIO & APCO

Environmental Spending by Company

Projected Environmental Investment Allocation



Funding the Environmental Investments

- **Ohio**: 49% ($1.8 billion)
  - Rate stabilization plan annual increases at CSP – 3% and OP – 7% beginning in 2006 through 2008
- **Virginia/West Virginia**: 34% ($1.2 billion)
  - VA: Environmental cost recovery mechanism/two rate case opportunities through 2010
  - WV: General rate case filing
- **Kentucky**: 12% ($433 million)
  - Surcharge mechanism

Environmental Investment

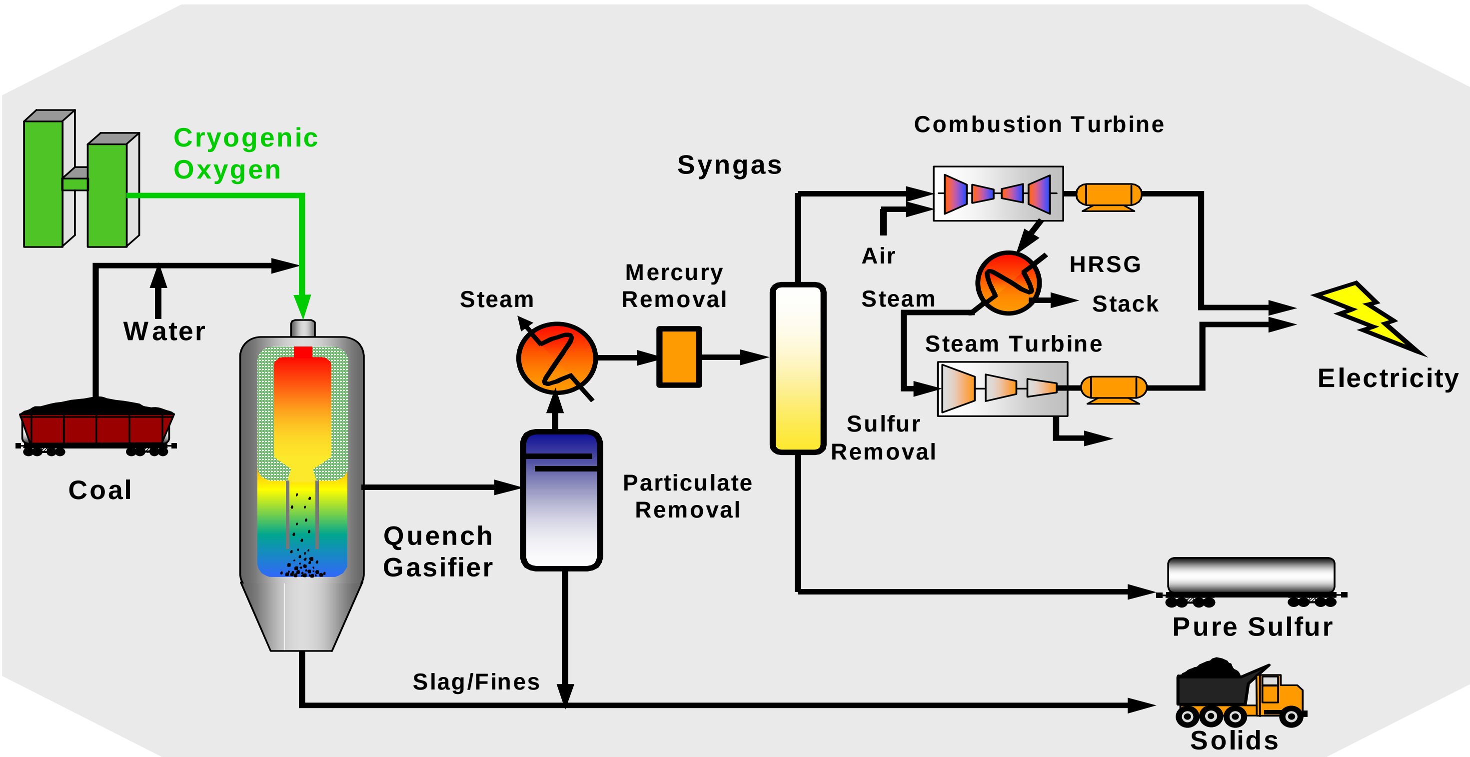
AVERAGE VARIABLE COSTS WILL BE $18 - $21 PER MWh POST ENVIRONMENTAL ADDITIONS

Looking to the Future - IGCC



AEP has announced its intention to construct a commercial-scale Integrated Gasification Combined Cycle (IGCC) Plant by the end of the decade.

Investing in IGCC

IGCC vs. Pulverized Coal and Natural Gas Combined Cycle

	PC	IGCC	NGCC
Nominal Capacity (MW)	**600**	**600**	**530**
Heat Rate (BTU/kWh)	**8700**	**8600**	**7200**
EPC cost* ($/kW)	**1290**	**1350**	**440**
Total Plant cost ($/kW)**	**1490**	**1610**	**475**
Variable Production cost* ($/MWh)**	**15**	**14**	**38**

Source: Electric Power Research Institute

*   EPC includes the cost to engineer, procure and construct plant.

** Total plant cost include land, overheads, AFUDC, etc.

*** Assumes Northern App Coal @ $36/ton, no emission credits and $5.00 gas

STRATEGIC ADVANTAGE OF IGCC OUTWEIGHS LEAST COST CONSIDERATION

Site Selection Considerations

- Brownfield site vs. Greenfield site
- Sufficient Space
  - Flat area with adequate construction access
  - 600 acres
- Fuel delivery options
  - Rail/barge/truck
  - Up to 4 million tons/year of coal
  - Access to water
- Transmission Line Costs
  - Distance from high-voltage lines
  - Costs for grid interconnects and stability impacts

PJM EVALUATION REQUESTED FOR 3 POTENTIAL SITES

IGCC Permitting Issues

- Air – to evaluate best available control technology (BACT)
- Wastewater – to understand wastewater streams
- US COE (Corp of Engineers) – to obtain permits for construction of river facilities
- NEPA Process – (National Environmental Policy Act)– Environmental site studies addressing wetlands, endangered species, historical artifacts

PERMIT PROCESS WILL TAKE 1 – 2 YEARS

Next Steps

2005

- Secure regulatory cost recovery - June
- Finalize site selection - August
- Negotiate with suppliers – Throughout 2005

- 2005—2007: Obtain permits and finalize engineering and procurement

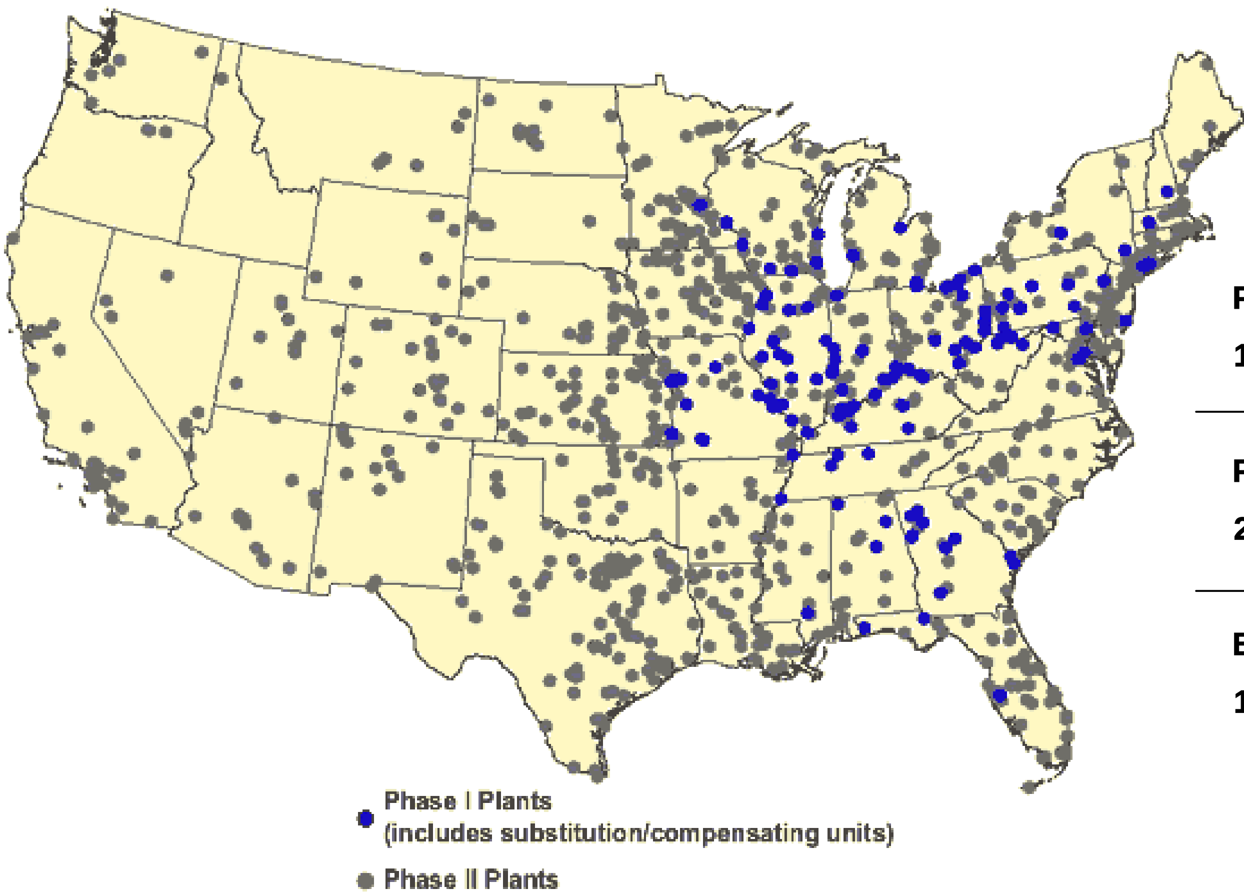
- 2008—2009: Construct and start-up plant

AEP WILL PIONEER CONSTRUCTION OF LARGEST IGCC PLANT IN THE WORLD

Appendix

Power Plants – Title IV SO_2

Fossil fired power plants affected by Title IV of the CAAA of 1990



PHASE I

1995 – 2.5 lbs/mmBtu standard

PHASE II

2000 – 1.2 lbs/mmBtu standard

BASIS

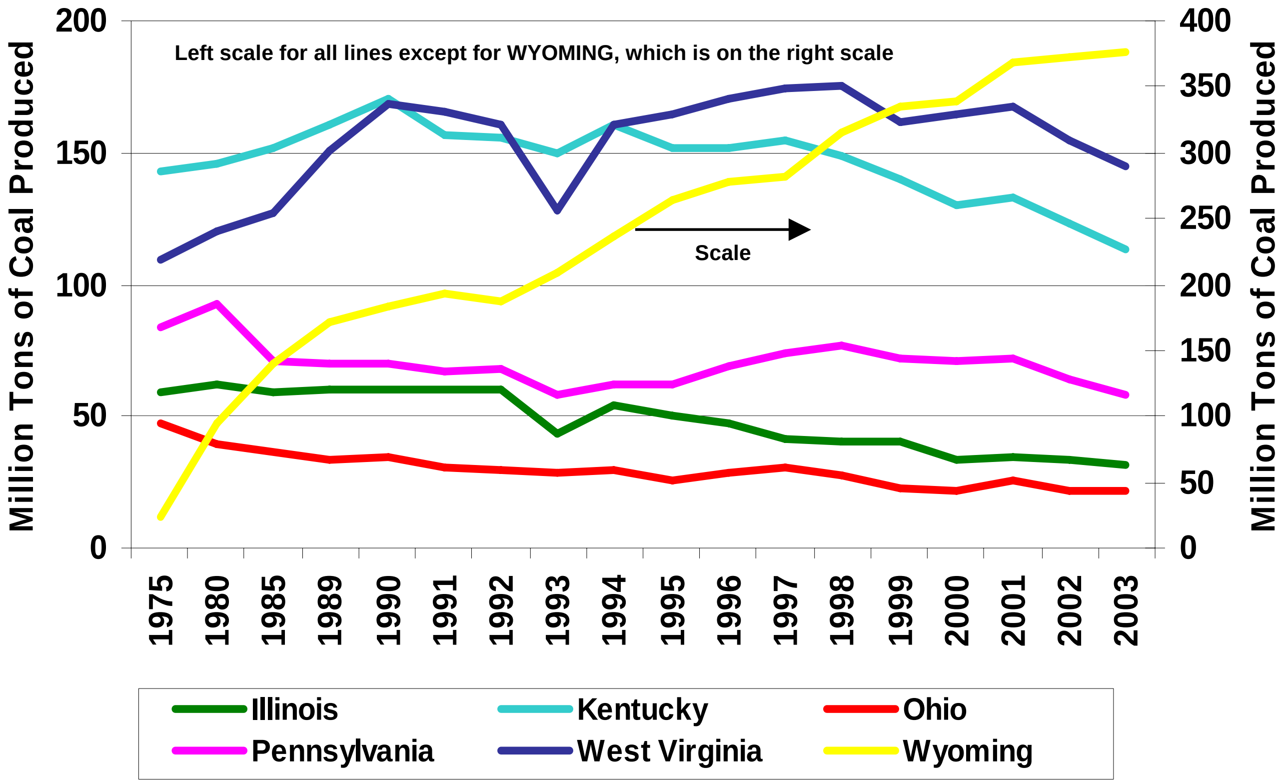
1985-87 Heat Input

Compliance Options for SO_2

- Fuel Switching
  - – Coal type – low-sulfur vs. high-sulfur coal
  - – Natural gas
- Install Scrubber for SO_2 control
- Buy Allowances from others
- Reduce operating hours/Shut-down
- New Sources must obtain Allowances

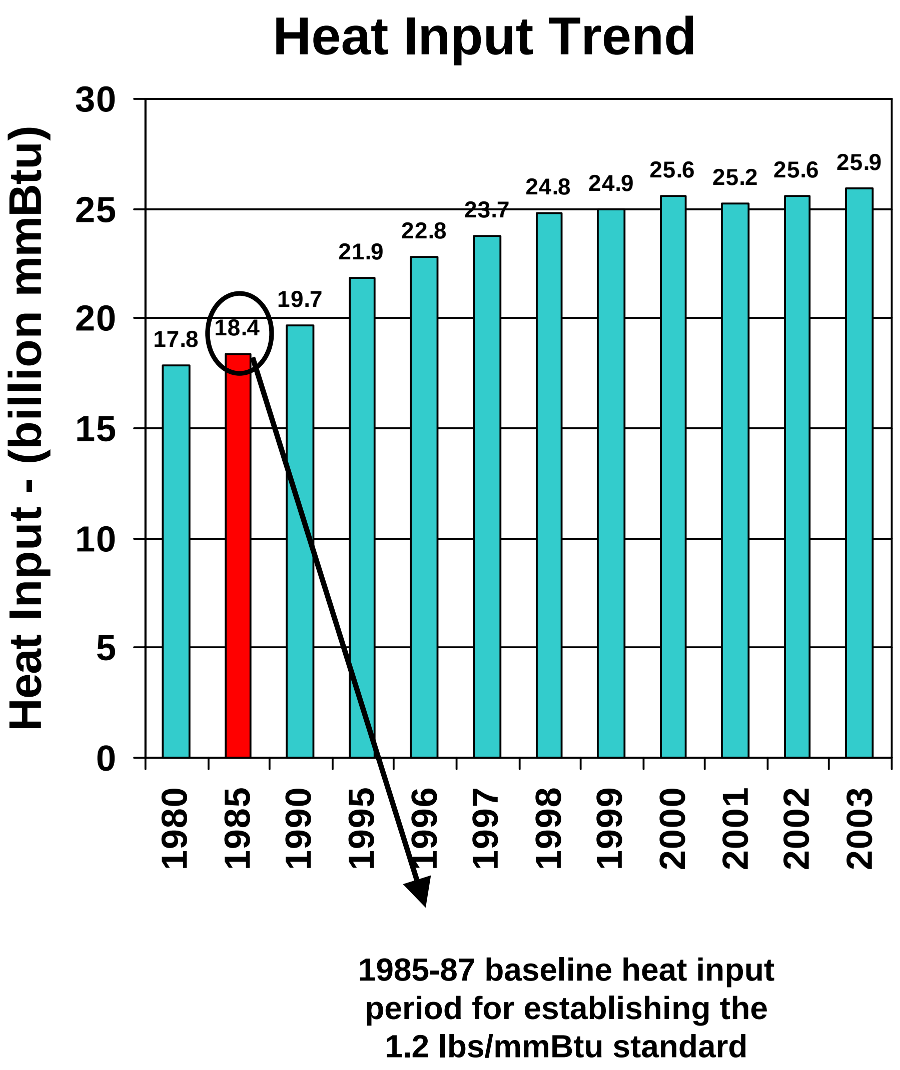
Key State Coal Production Trends

Production of coal from Ohio and Illinois and other high sulfur coal-producing states decreased in production as a result of the CAAA. Production of coal from Wyoming, Eastern Kentucky and Southern West Virginia saw the largest increases, due to the marketability (SO_2 content) and price of the coals.



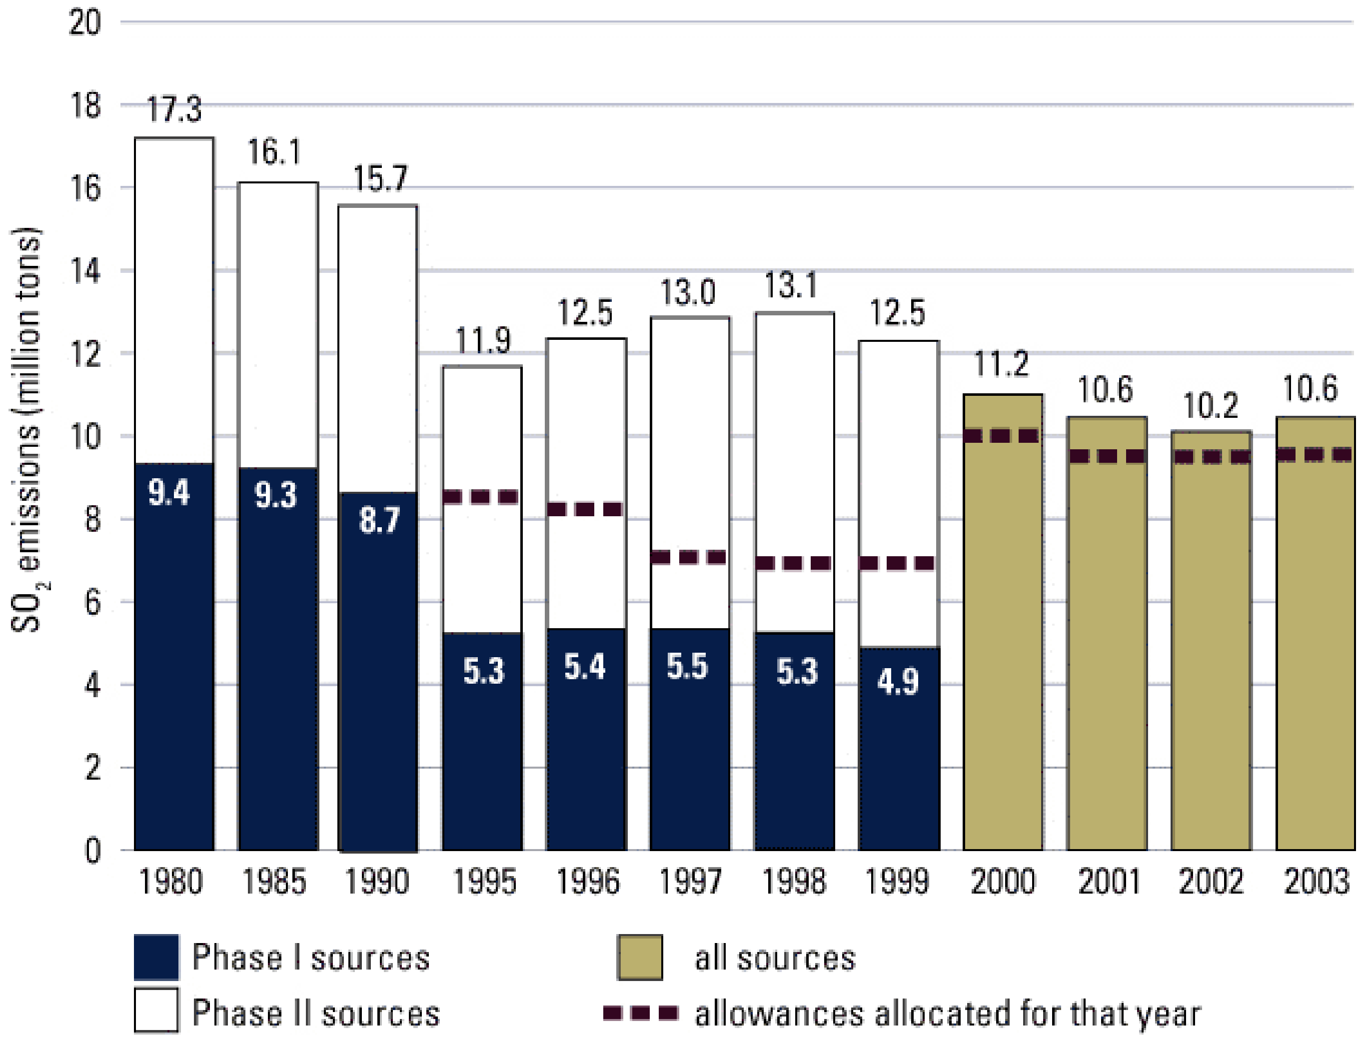
Production from Wyoming increased at a rate of 10.4% per year from 1975 to 2003

Growth in Heat Input



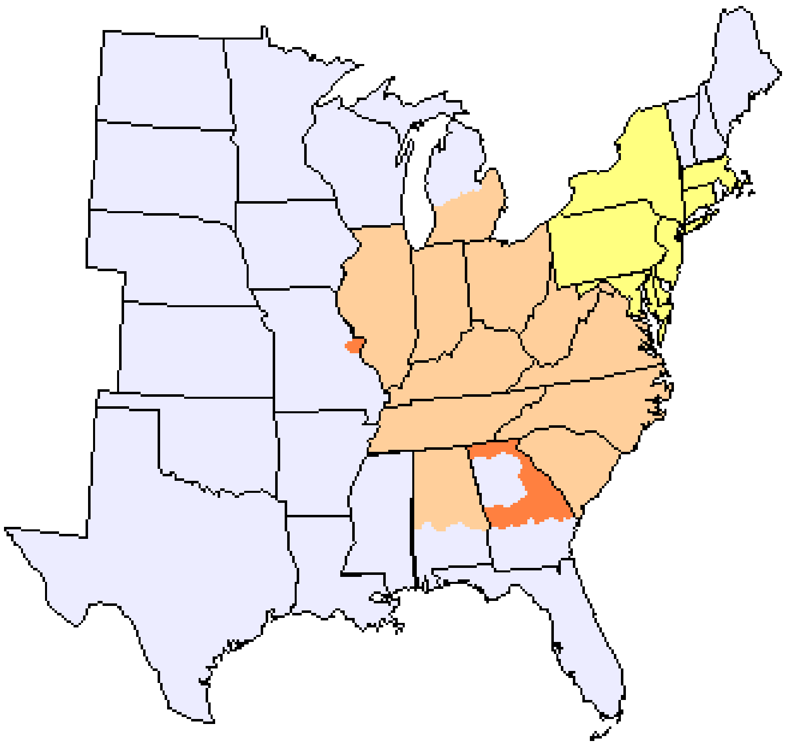
HEAT input has grown near 40% since the baseline period in 1985-1987 – therefore making the effective standard about 0.8 lbs SO_2/mmBtu

Title IV SO_2 Program Results



NOx SIP Call

Northeast States – May 1, 2003
Midwest/Southeast – May 31, 2004
Missouri/Georgia – ??



- Cap and Trade Program
- Program Basis
  - 0.15 lbs/mmBtu NOx
  - 85% reduction
  - 1995-97 heat input
- Seasonal Program
  - May 1 – Sept 30
  - Other months program is business as usual
- State (19) Implemented

Compliance Options for NOx

- Install Controls
  - Selective Catalytic Reduction
    - 90% removal, $120/kW capital cost
  - SNCR
    - 30% removal, $25-30/kW capital cost
  - Combustion Controls
- Fuel has some influence
- Buy Allowances from others
- Reduce operating hours/Shut-down
- New Sources must obtain Allowances

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events and our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives, evolving public perception of the risks associated with fuels used before, during and after the generation of electricity, including nuclear fuel.

Net available Liquidity	**$**	**2,295**	

On July 26, 2011, we renewed and upsized the facility expiring in April 2012. The new facility has a capacity of $1.75B and expires in July 2016.

We also extended and repriced the facility expiring in June 2013. That facility now expires in June 2015.

This brings our total available capacity to $3.25B.

AEP Ohio Distribution Rate Case – Docket #351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%. A procedural schedule from the PUCO is pending.

Actual Capital Structure – Company Position – 08/31/10

Summary Rate Case Information

APCo Virginia Base Rate Case - Docket #PUE-2011-00037

On March 31,2011 APCo filed an update to its pre-biennial base rate case for recovery of generation and distribution costs requesting an increase of $75 million ($126 million total increase less $51 million deferral of depreciation increase). (Docket #:) A procedural schedule is pending from the VSCC.

In conjunction with this case, an environmental rate adjustment clause (E-RAC), generation rate adjustment clause (G-RAC) and a renewable portfolio standard rate adjustment clause (RPS-RAC) were filed . APCo has requested that rates in the base case, E-RAC and RPS-RAC go into effect on 2/1/2012 and the G-RAC on 3/1/2012.

Summary Rate Case Information

I&M Michigan Base Rate Case (Docket# U-16801)

On July 1, 2011 I&M filed a base rate case with the Michigan Public Service Commission requesting an increase of $24.5 million. Rates proposed in this filing are based on projected 2012 cost of service and will not go into effect until 2012, therefore rates will reflect a current cost of service. This filing includes revised depreciation rates to include additions since the last approved depreciation study as well as accelerated retirement of Tanners Creek Units1, 2 and 3. The requested ROE is 11.15%. In accordance with Michigan law I&M intends to implement rates, subject to refund, on January 1, 2012. An order is expected by mid-year 2012.

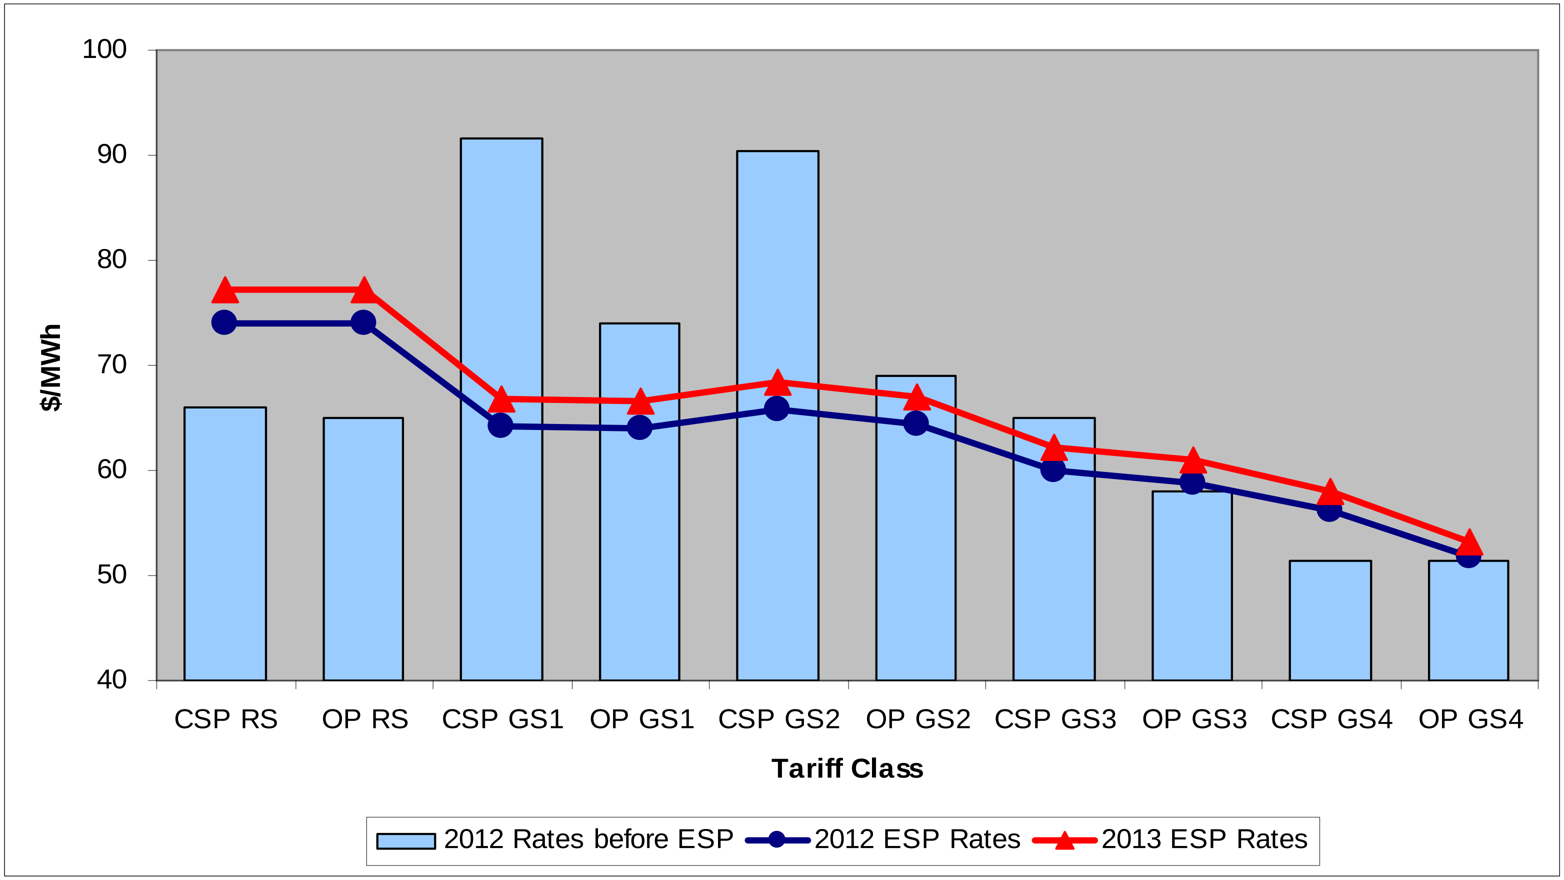
N/C* = No change from prior year

While the ESP includes a small base generation increase, the move to a market-based rate design, consistent with state policy, will result in varying impacts for different customer groups.

Price to Compare

Proposed **SSO** Rates Redesigned To Resemble Market Pricing Structures



Rates do not reflect mitigation impact of market transition rider
2012 Rates before ESP reflect current 2011 rates for generation & transmission service, adjusted to reflect full cost 2011 fuel and environmental costs.

The realignment of rates with market should provide all customers with equivalent opportunities to shop. Additionally, since the proposed design eliminates explicit demand charges, customers should be more easily able to evaluate competitive offers. To ease the rate impact that customers will experience from the realignment, we have proposed a Market Transition Rider.

Market Transition Rider – Mitigates the Initial Impact of Rate Realignment

Three-Year Market Transition Plan
Summary of AEP Ohio ESP Generation Rate Changes

CSP Current Customer Class	CSP New Customer Class	2012 Increase	2013 Increase	2014 Increase	Total Increase

Illustration of Market Transition Rider on ESP Generation Rate Increases

The Market Transition Rider is a transition rider designed to facilitate the transition from AEP Ohio's current rates to market-based SSO Generation Service rates. It is a non-bypassable rider designed to limit the first and second year changes for any customer classes to uniformly transition any above or below average changes in three steps. Any revenue shortfall that is produced by limiting the increases for certain customer classes is collected from those classes whose decreases are limited.

List of ESP Riders – Existing and Proposed

AEP®

Line	Rate Mechanism	Abbreviation	Bypassable	Distribution	Notes
1	**Current Riders**

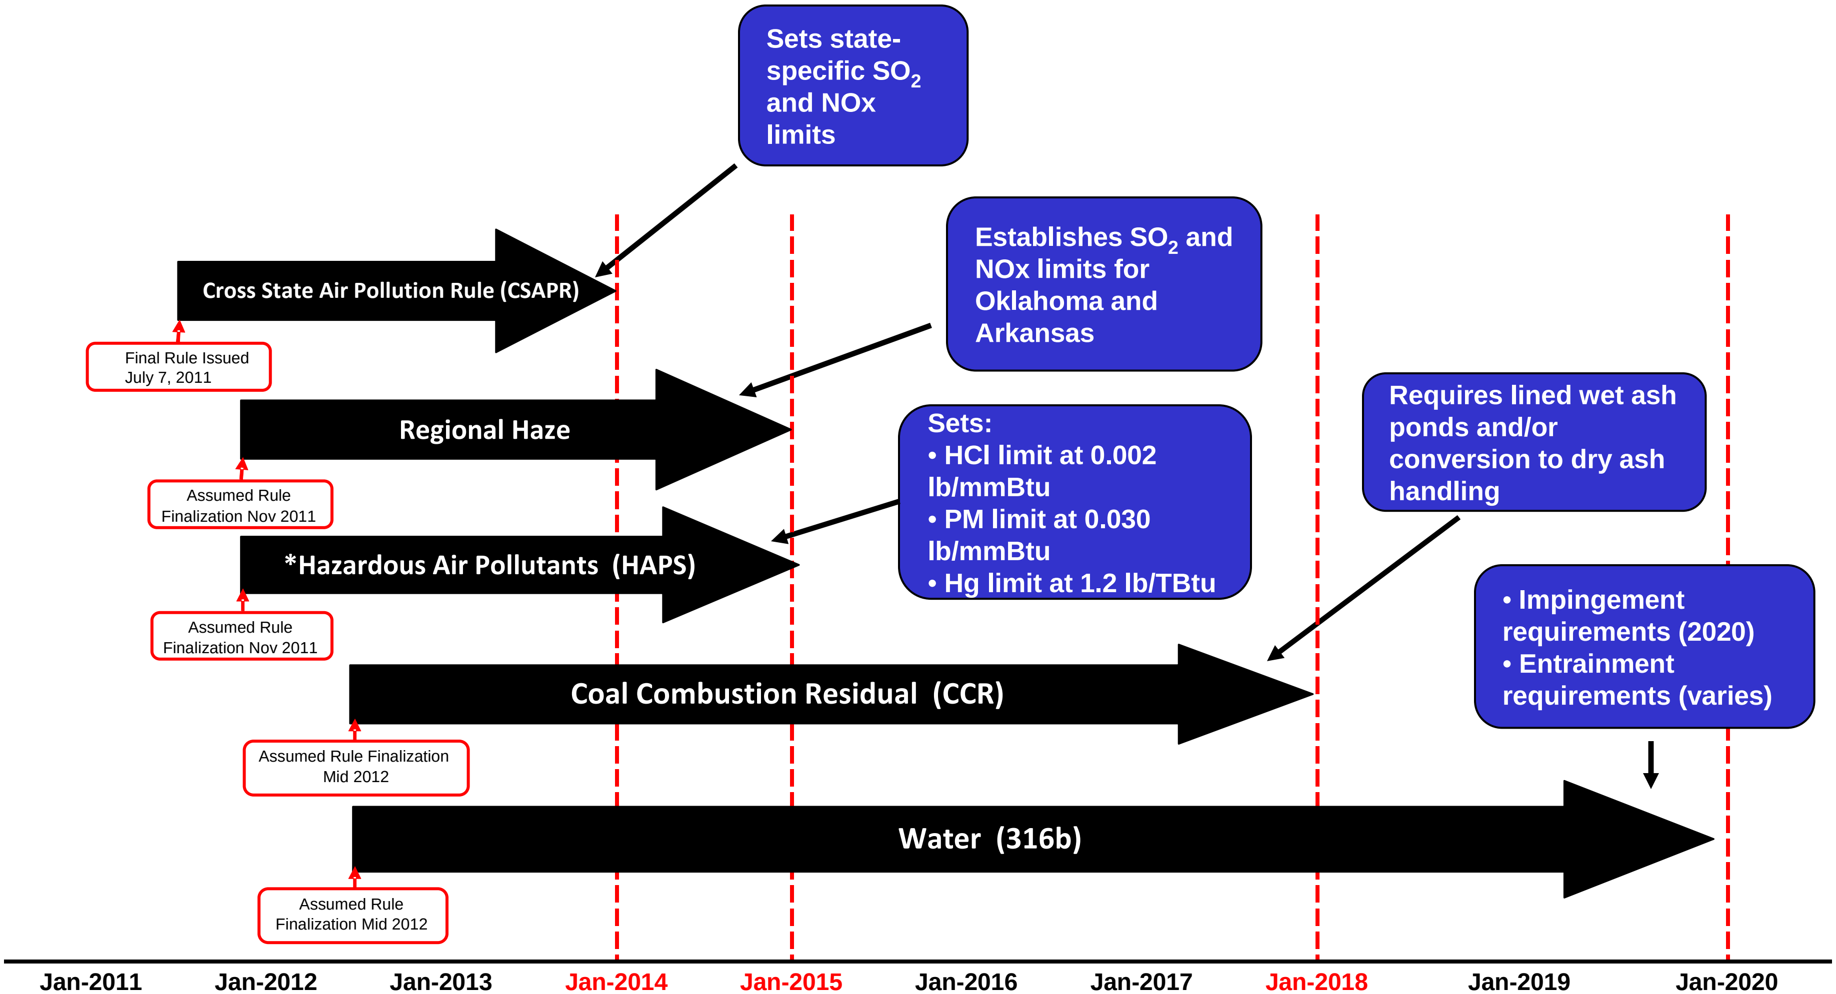
Anticipated environmental regulations and compliance deadlines



* Units that will be retrofit are eligible for a one year compliance extension from the EPA

Retrofits/New Generation

- The tables below represent our estimated $6 - $8 billion capital investment from 2012 to 2020 for environmental retrofits on 10,500 MW and new/refueled generation of 2,152 MW. The below costs include management estimates for compliance with CSAPR, HAPs MACT, CCR and 316(b) regulations as currently proposed.

Operating Company	Plant	MW	Type of retrofit	Low Cost Estimate 2012-2020 ($MM)	High Cost Estimate 2012-2020 ($MM)	
AEP Ohio	Conesville 5	400	SCR, DSI			
	Conesville 6	400	SCR, DSI			
	Muskingum River 5	510	Refuel with Natural Gas			
	Gavin 1	1320	FGD upgrade			
	Gavin 2	1320	FGD upgrade			
	Zimmer 1	330	FGD upgrade			
	Total MW	**4,280**	**Total Expected Cost**	**2,100**	**2,800**	*
APCO	Clinch River 1	211	Refuel with Natural Gas			
	Clinch River 2	211	Refuel with Natural Gas			
	Dresden	580	New Natural Gas			
	Total MW	**1,002**	**Total Expected Cost**	**580**	**765**	**
I&M	Rockport 1	1320	FGD, SCR			
	Rockport 2	1320	FGD, SCR			
	Tanners Creek 4	500	DSI, ACI			
	Total MW	**3,140**	**Total Expected Cost**	**1,240**	**1,670**	***
KPCO	Big Sandy 1	640	New Natural Gas			
	Total MW	**640**	**Total Expected Cost**		**525**	

*Assumes regulatory cost recovery for environmental investments including refuel are non-bypassable surcharges as proposed in the 2012 - 2014 ESP

** Total capital invested is expected to be $366 million for the Dresden plant once completed; $343 million of which is forecasted to be spent prior to 2012.

*** Includes AEG portion of costs related to Rockport upgrade

Operating Company	Plant	MW	Type of retrofit	Low Cost Estimate 2012-2020 ($MM)	High Cost Estimate 2012-2020 ($MM)
PSO	Northeastern 3	470	FGD, ACI, Baghouse

			Total Expected Cost	**900**	**1,200**
TNC	Oklaunion	377	FGD upgrade, ACI		
	Total MW	**377**	**Total Expected Cost**	**80**	**100**

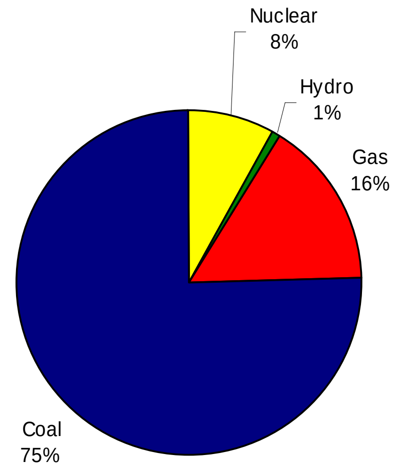
Retirements

Operating Company	Plant	MW	Expected Retirement
AEP Ohio	Sporn 5	450	2011
	Conesville 3	165	2012
	Muskingum River 1-4	840	2014
	Picway 5	100	2014
	Sporn 2-4	300	2014
	Kammer 1-3	630	2014
	Beckjord	53	2014
	Total MW	**2,538**	
APCO	Glen Lyn 5	95	2014
	Glen Lyn 6	240	2014
	Clinch River 3	235	2014
	Sporn 1	150	2014
	Sporn 3	150	2014
	Kanawha River 1	200	2014
	Kanawha River 2	200	2014
	Total MW	**1,270**	
I&M	Tanners Creek 1	145	2014
	Tanners Creek 2	145	2014
	Tanners Creek 3	205	2014
	Total MW	**495**	
KPCo	Big Sandy 1	278	2014
	Big Sandy 2	800	2014
	Total MW	**1,078**	
SWEPCO	Welsh 2	**528**	2014
	Total MW	**528**	
	Grand Total	**5,909**	

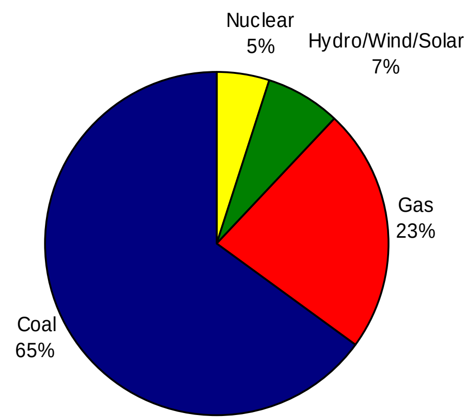
- Capacity reduction caused by retirements will create grid reliability issues particularly in the 2014-2016 time frame
- Net impact could be approx. 600 fewer jobs at AEP as well as indirect job losses affecting local vendors, contractors and service providers
- Annual lost wages of approximately $40 million
- Tax payments could decline by more than $30 million

Generation Transformation

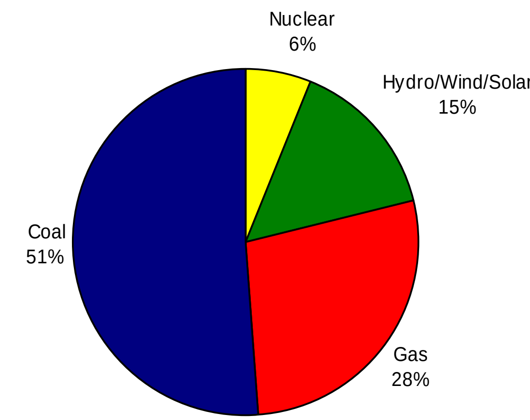
1990 AEP Generating Capacity by Fuel
37,428 total MW's



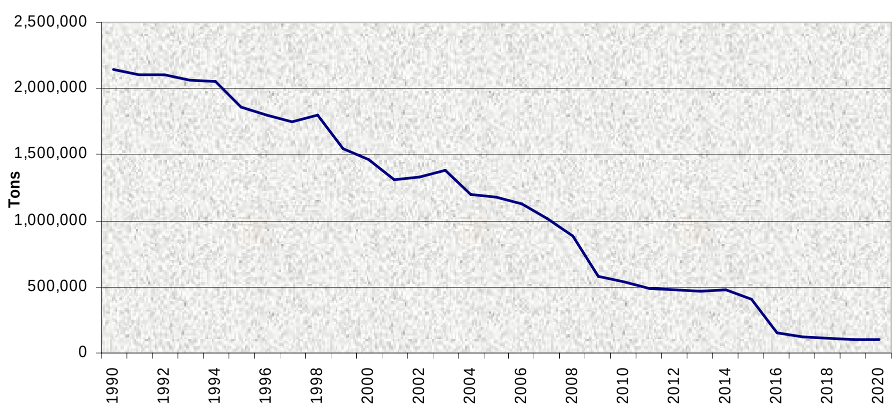
2010 AEP Generating Capacity by Fuel
39,910 total MW's



2020 AEP Generating Capacity by Fuel
37,707 total MW's



Total System NOx & SO2 (actual through 2010 and forecasted based on proposed EPA regulations)



- $7.2 billion capital invested from 1990-2010 to reduce emissions approximately 1.7 million tons

- Estimated $6-$8 billion additional capital investment from 2012-2020 for further reductions of approximately 440,000 tons

Transmission Investment Strategy

- **Near-Term Investment** – Electric Transmission Texas (ETT) secures near term investment opportunities, allowing AEP to invest in the large, growth-oriented Texas transmission market. Total capital expenditures of $3 billion with a 9.96% ROE.

- **Mid-Term Investment** – Seven wholly-owned transcos allow for expansion and growth within AEP's existing utility footprint through an efficient recovery mechanism. Will spend $160 million in 2011 and more than $350 million in 2012. ROE is in the 11.20%-11.49% range.

- **Long-Term Investment** – Joint ventures provide opportunities for longer-term growth outside of AEP's existing utility footprint with forward looking formula rates, reasonable ROEs and FERC incentives where appropriate.

Transmission has a diversified investment approach that positions it as one of the key AEP growth businesses.

Texas Transmission Growth Strategy : Near Term Investment

Ownership Structure: 50/50 (AEP/MidAmerican Energy Holding Company)

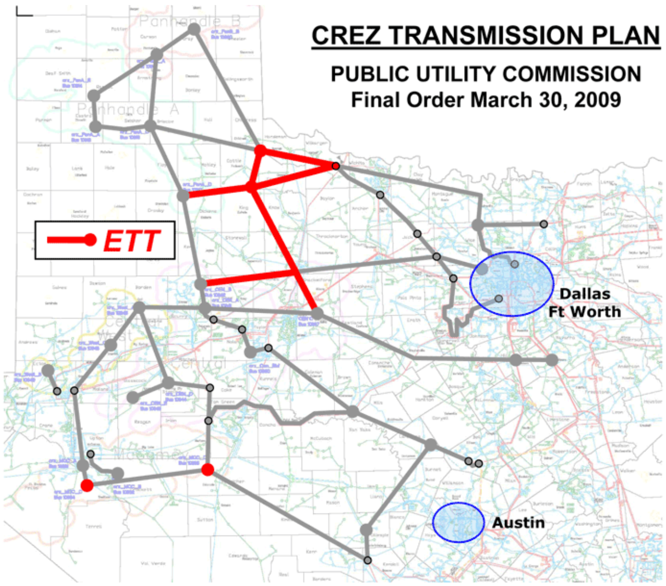
Total Project Cost: Over $3 Billion

Growing Rate Base:
Current rate base is $412 million; expected to grow as follows:
2011: $473 million
2012: $778 million
2013: $1,352 million

ETT Electric Transmission Texas

Interim TCOS filings twice per calendar year

Approved ROE: 9.96%



- **Additional Projects in the Pipeline ~$1.6 B:**
  - Approximately 822 miles of lines and 28 substations with in-service dates through 2017

- **Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.1 B:**
  - Seven double-circuit 345kV transmission lines (~$750 M), eight major 345kV stations and several series compensation installations (~$350 M)
  - PUCT Certificate of Convenience and Necessity (CCN) proceedings underway

Joint Venture Strategy: Long-term

- **Strategy**: JV's secure new investment opportunities with local utilities to diversify AEP's investment outside AEP's traditional footprint while providing longer-term incremental earnings. JV projects are well-suited for FERC formula rate recovery mechanism, including potential for incentive rates.

- **Future:** Federal/regional initiatives may accelerate expansion of EHV transmission (e.g. cap-and-trade, renewable portfolio standards, inter-region wide planning). Securing first mover advantage will enable AEP to secure LT investment opportunities.

- **Future flexibility**: Passive investment opportunities can be considered and can provide entry beyond SPP/PJM/ERCOT

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M's Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events and our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives.

Ohio

AEP Ohio ESP Filing – Core Policy Issues

AEP®

Investment in Ohio

Supports economic development and essential tax base

Fundamental barriers must be addressed to attract investment for Environmental Compliance and New Generation

Jobs in Ohio

Jobs are a key component of growth potential in Ohio

Without regulatory assurances over time we could see loss of direct & indirect jobs related to power generation, and business relocations to surrounding states

Energy Security

Secure, reliable and predictable electricity supply is basis for sustained investment and employment in Ohio

Volatility in power prices can lead to major loss of economic activity over time

Primary objective of ESP: Stabilize rates and support economic development in the state of Ohio

Merged AEP Ohio

Single merged AEP Ohio company presumed with supporting information on an individual OP/CSP basis

Rate Redesign

Generation rates redesigned to resemble market pricing structures

29-Month ESP Period

ESP period Jan 1, 2012 through May 31,2014 (May 31 date aligns with PJM annual planning cycle)

Alternative Long Term Option

Alternative longer-term price certainty option offered for qualifying commercial & industrial customers

Ohio Growth Fund

Creation of significant private sector economic development to attract investment and job growth in AEP Ohio service territory

Distribution Components Included

Inclusion of certain distribution components while pursuing a parallel distribution base rate case

Summary of ESP Filing - Continued

AEP®

- Pre-tax earnings impact from proposed ESP (excluding potential earnings impact from trackers)
  - **Net base $54MM or 1.4% in year 1 (2012)**
  - **Net base $106MM or 2.7% in year 2 (2013)**

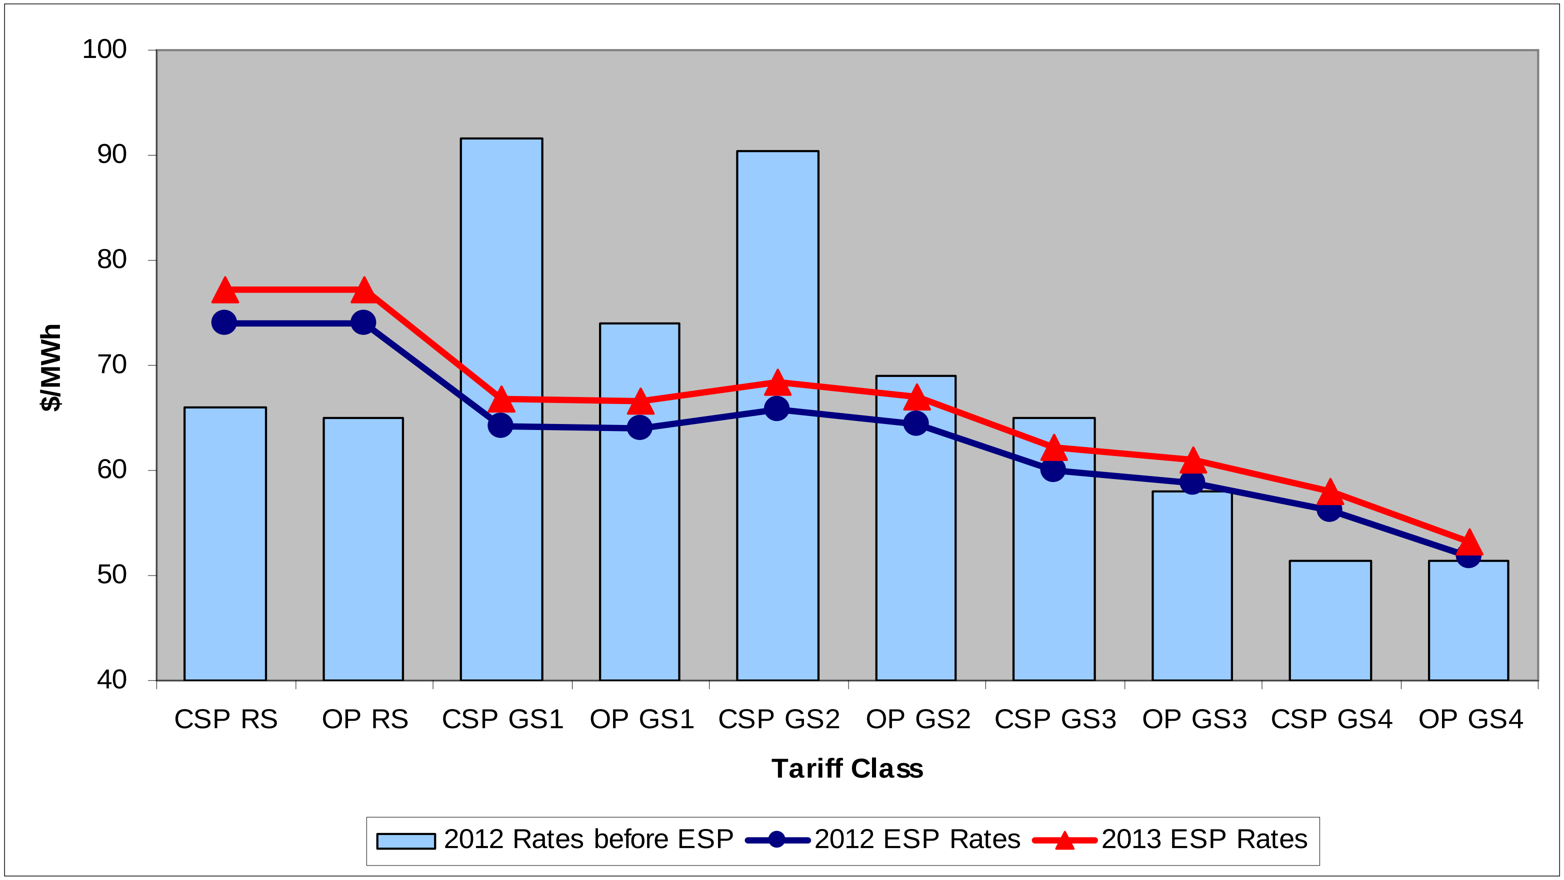
	2012			2013			2014		
	Revenue	**$/MWh**	**%**	**Revenue**	**$/MWh**	**%**	**Revenue**	**$/MWh**	**%**
Proposed ESP Changes									
Base Generation	**$65MM**	**$1.50**	**1.7%**	**$106MM**	**$2.43**	**2.7%**	**N/C***	**N/C***	**N/C***
POLR	**($11MM)**	**($0.23)**	**(0.3%)**	**N/C***	**N/C***	**N/C***	**N/C***	**N/C***	**N/C***
FAC Actual Recovery 2012-2014	**Actual**			**Actual**			**Actual**		

N/C* = No change from prior year

While the ESP includes a small base generation increase, the move to a market-based rate design, consistent with state policy, will result in varying impacts for different customer groups.

Price to Compare

Proposed **SSO** Rates Redesigned To Resemble Market Pricing Structures



Rates do not reflect mitigation impact of market transition rider
2012 Rates before ESP reflect current 2011 rates for generation & transmission service, adjusted to reflect full cost 2011 fuel and environmental costs.

The realignment of rates with market should provide all customers with equivalent opportunities to shop. Additionally, since the proposed design eliminates explicit demand charges, customers should be more easily able to evaluate competitive offers. To ease the rate impact that customers will experience from the realignment, we have proposed a Market Transition Rider.

Market Transition Rider – Mitigates the Initial Impact of Rate Realignment

Three-Year Market Transition Plan

Summary Rate Case Information

AEP Ohio Distribution Rate Case – Docket #351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%. A procedural schedule from the PUCO is pending.

Actual Capital Structure – Company Position – 08/31/10

CSP

	% of Capitalization	Cost Rate	Weighted Return
Long-Term Debt	49.36%	5.50%	2.71%
Common Equity	50.64%	11.15%	5.65%
Total	100.00%		8.36%

OPCO

	% of Capitalization	Cost Rate	Weighted Return
Long-Term Debt	45.93%	5.27%	2.42%
Common Equity	53.79%	11.15%	6.00%
Preferred Stock	0.28%	4.40%	0.01%
Total	100.00%		8.43%

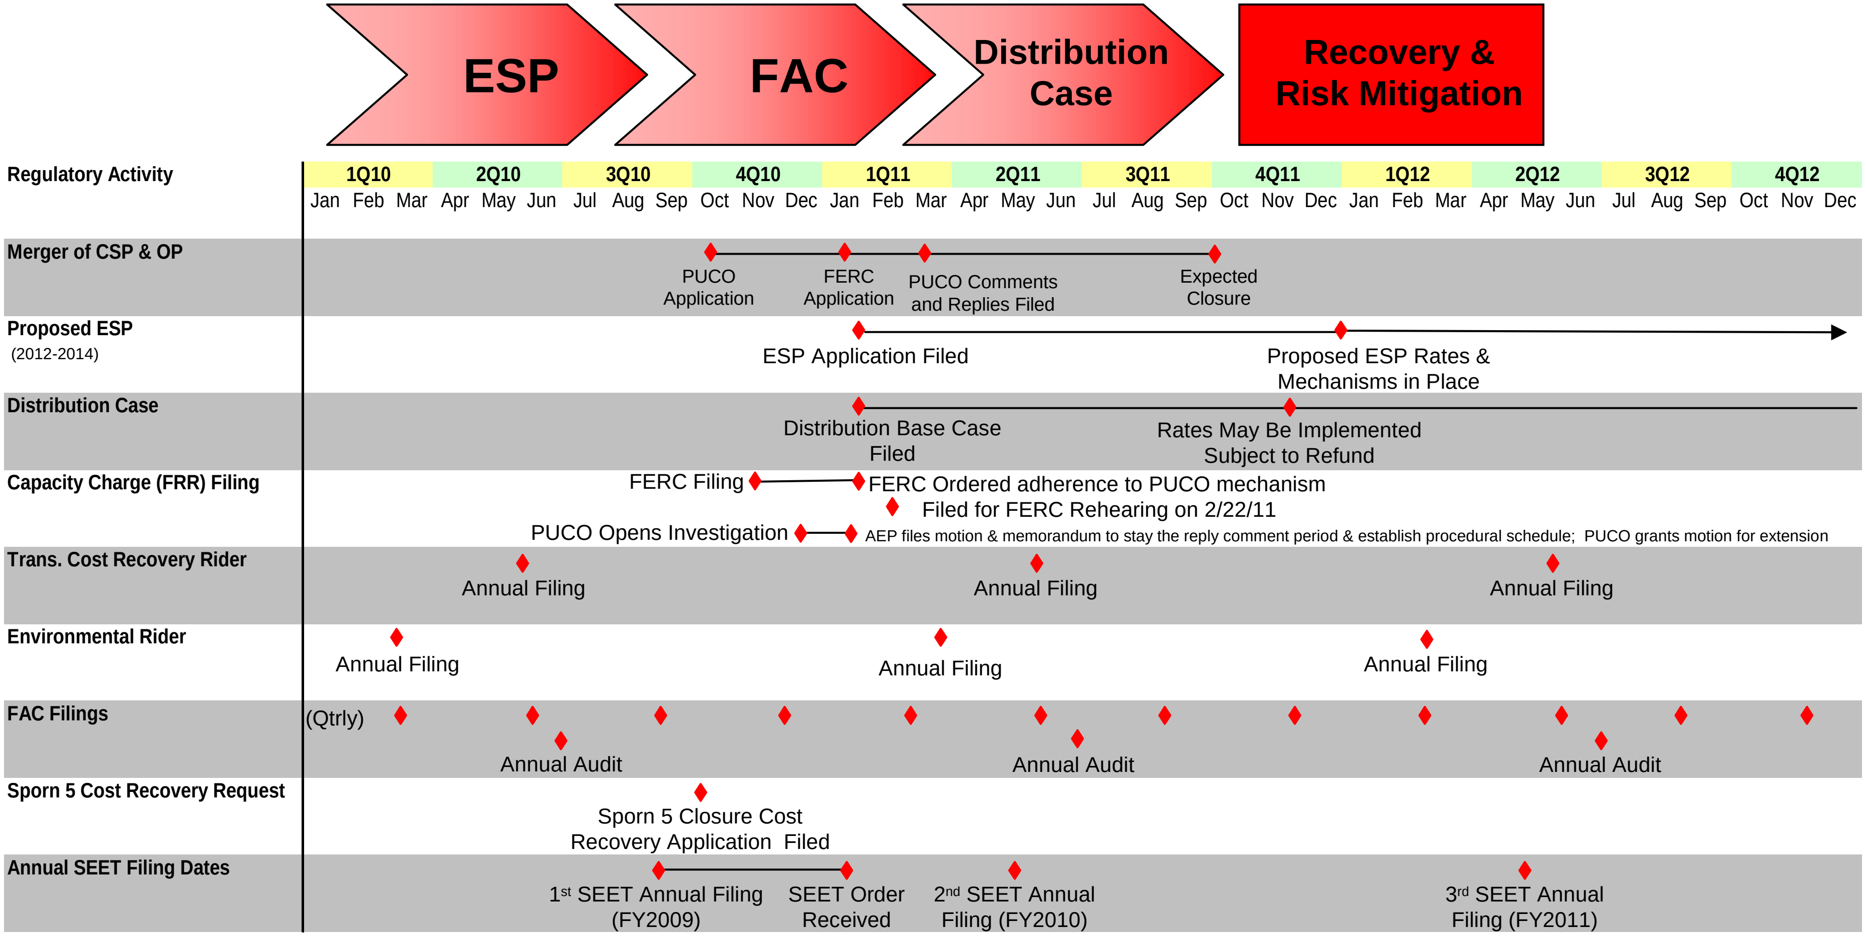
Required Rate Relief – Company Position (08/31/10)

($ in millions)

	CSP	OPCO
Rate Base	$ 911.0	$ 1,015.2
Rate of Return	8.36%	8.43%
Operating Income Requirement	$ 76.2	$ 85.6
Adjusted Operating Income	$ 54.3	$ 47.8
Difference	$ 21.9	$ 37.8
Revenue Conversion Factor	1.5657	1.5765
Total Revenue Requirement	$ 34.2	$ 59.6

Procedural Schedule - tbd

Ohio Timeline



AEP Ohio's long-term strategy is designed to produce rate relief for items currently known as well as anticipated future items. The filings and riders we seek today are designed to be broad and flexible enough to accommodate a variety of circumstances, because it is impossible to know all variables and specific items for which we will desire to seek rate relief or what regulatory circumstances will prevail at the time.

Generation/Environmental & EPA Matters

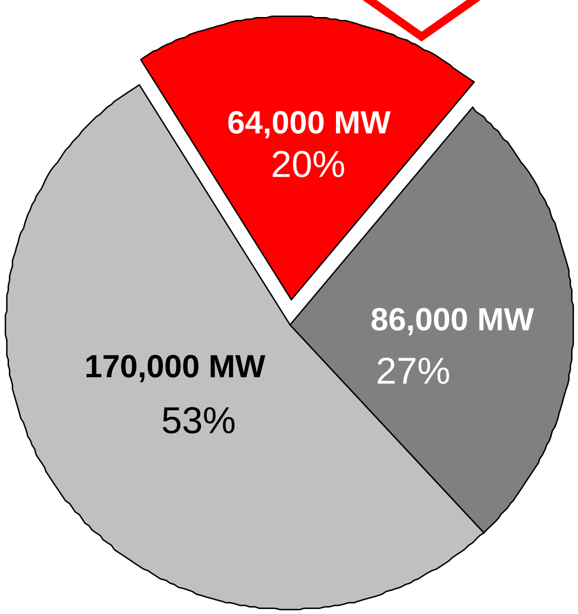
Probable Retirement	*Evaluating potential retirement*	*Not likely to be retired*

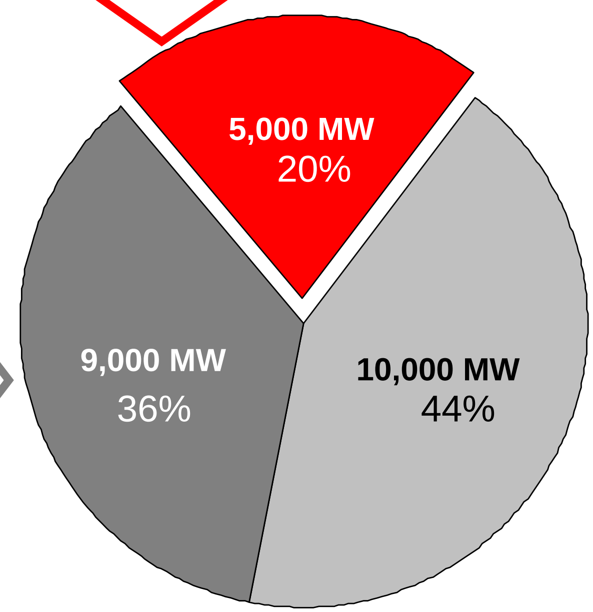
CCS Candidates

Smaller, older, less-efficient coal units that will not be economic if retrofitted



US Coal

Newer and larger coal units that do not have SCR's and/or FGD's will be evaluated due to emerging environmental rulemaking and NSR requirements



AEP Coal

Nearly 50% of U.S. coal plants are exposed

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 3086 of 9556

Pending EPA Regulations

AEP®

TRANSPORT RULE

- Proposed Transport Rule (July 2010) limits utility SO_2 and NOx emissions
- SO_2 and NOx subject to caps in 2012, with further SO_2 reductions required in most Eastern states by 2014
- Major concerns with the proposed rule:
  - Not enough time is provided for environmental control installations (i.e. FGD/SCR)
  - EPA costs of retrofitting units are grossly underestimated/ other incorrect assumptions used (though EPA has since modified some of these assumptions)
  - Rule does not account for recent improvements in air quality
  - Inability to trade and bank allowances effectively

MERCURY AND HAP MACT

- Proposed rule issued in March 2011
- Final HAP regulations must be issued by November 2011
  - Maximum Achievable Control Technology (MACT) standards for Hg, other metals, and acid gases, combustion practices for organics
- Compliance Required 3 Yrs. After Final Rule, EPA could grant a 1 year extension
- Very little flexibility in the proposal; opportunity to average across a plant and limited sub categorization
- MACT could require FGD or DSI for acid gases and/or baghouses with activated carbon injection for Hg and metals.

COAL ASH RULE

- Draft coal ash disposal rules issued in May 2010
- EPA proposed two different regulatory designations:
  - “Non-hazardous”, solid waste - action required by ~2017
  - “Special” hazardous waste - action required by ~2018-2020
- AEP supports Subtitle D Prime Option of RCRA (solid waste NOT hazardous)
- AEP capital cost of ~$4 billion for solid waste option
- “Hazardous” option could cost DOUBLE this amount

316b RULE

- EPA issued proposal March 28
- Addresses impingement and entrainment of aquatic species
- Proposes upgraded intake screens for impingement
- Suggests cooling towers as an effective technology for entrainment, but defers the decision until site-specific study is conducted
- Cost impact very uncertain at this time

The cumulative effect of the proposed rules is not achievable in the allowed timeframe.

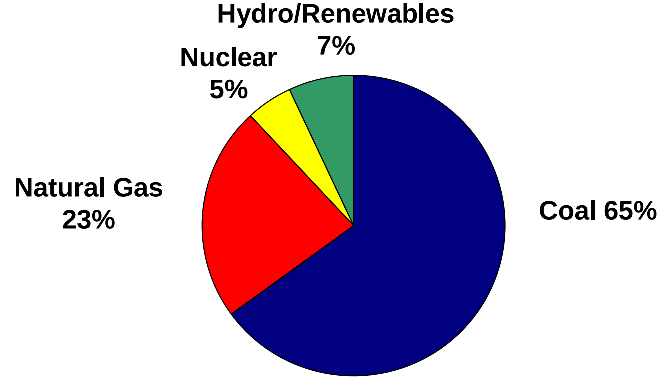
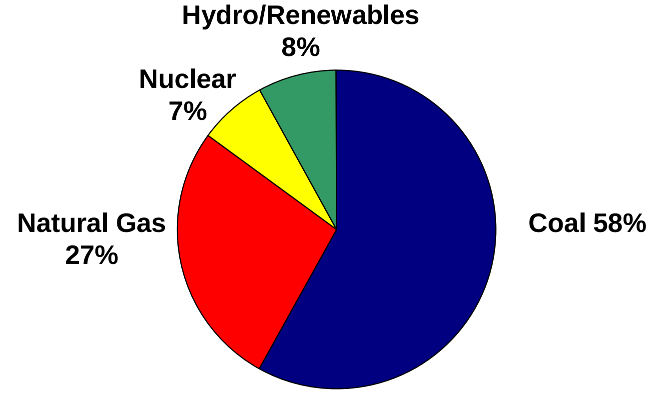
Continued Investment in Utility Platform

- Plan for old, small coal units
  - Initially operate seasonally
  - Transition towards retirement
  - Regulatory plan for recovery
- Continue evaluation of “partially exposed” units for additional controls
- Add non-coal capacity when needed
  - Dresden NGCC (under construction)
  - New NGCC at existing site
  - Cook plant uprate (under study)
  - Renewables
- Deploy technology as appropriate
  - Continue pursuit of CCS technology
  - Energy storage technologies
  - gridSMART®



Capacity - 2010



Projected Capacity - 2017

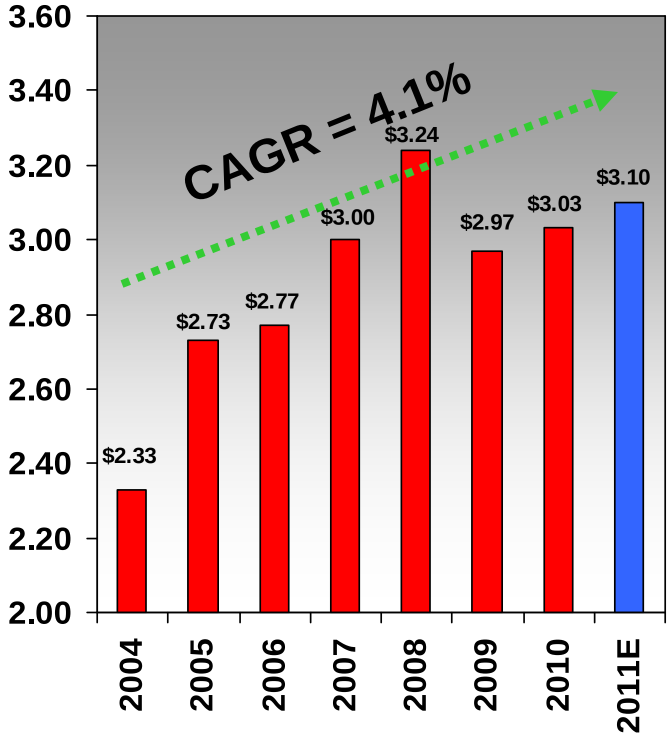
Earnings and Dividends

On-Going EPS History Since 2004

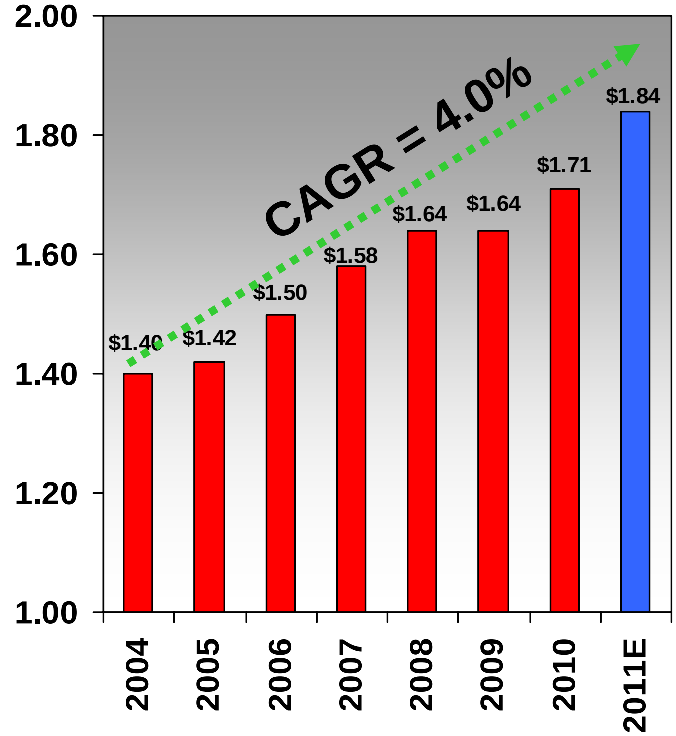
$/share



- Earnings growth largely attributed to capital investment program
- Pre-recession earnings supported by robust wholesale market activity and high power prices
- Equity offering in 2009 stabilized credit and strengthened balance sheet
- 2011 guidance range of $3.00 to $3.20 per share

Dividend History Since 2004

$/share



= subject to Board of Directors approval

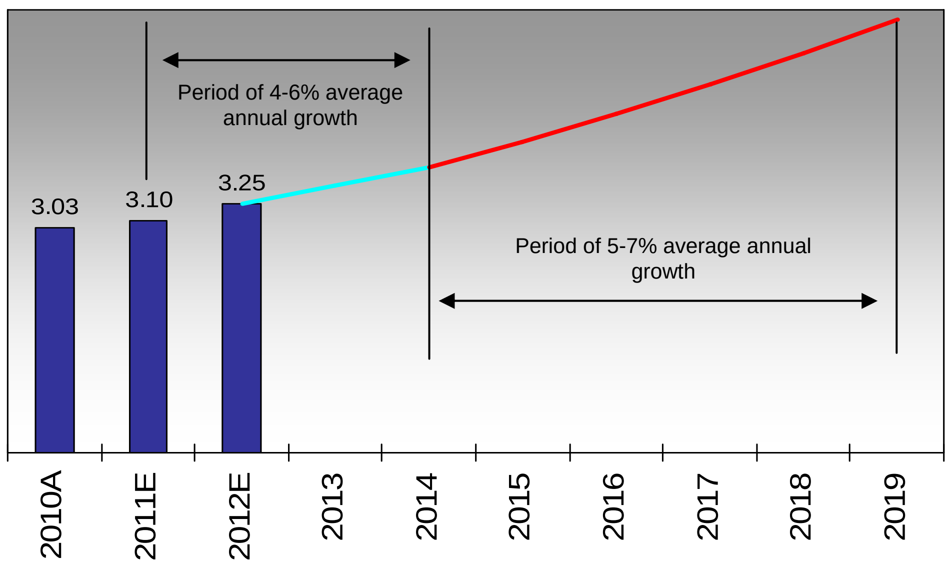
- Quarterly dividend <u>increased 12%</u> in 2010
- <u>403rd consecutive</u> quarterly dividend paid March 10, 2011
- 50-60% payout ratio target
- Current yield over 5%

Long-term EPS Growth Rate

- 4-6% EPS growth 2012-14
  - Average annual capital spend between $2.9-3.4B
    - Utility platform replacement capital of about $1.4B (annual depreciation)
    - Growth in rate base of $1.5-2.0B per year, allocated between utility platform and transmission projects
  - Average ROE of 10.5 - 11%
  - Slow, steady recovery in economy

- 5-7% EPS growth post 2014
  - Base utility platform capital including generation transformation
  - Higher allocation of discretionary capital going to opportunities in the transmission development pipeline
  - Higher overall blended ROE opportunity
  - Robust economic growth

Average Annual EPS Growth defined over two periods



Detailed Ongoing Earnings Guidance

2010A: $3.03

2011E: $3.00 - $3.20

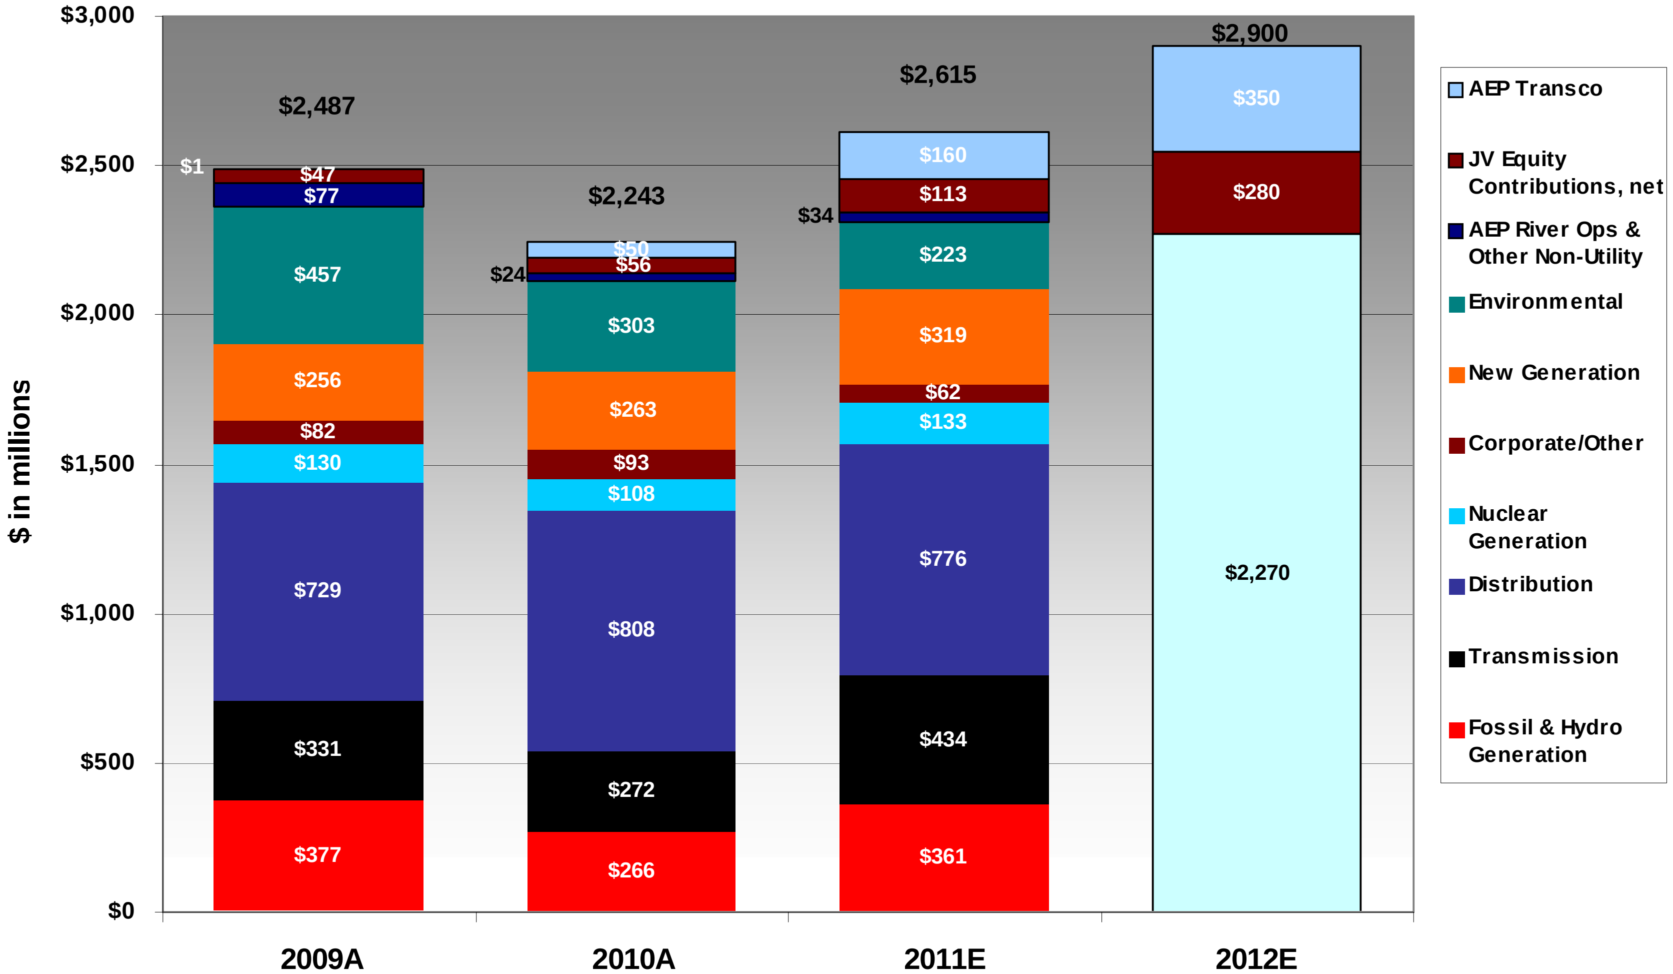
Letters of Credit Issued for VRDNs	(477)	
Net Available Liquidity	**$2,475**	

Note: Total Debt is calculated according to GAAP and includes securitized debt

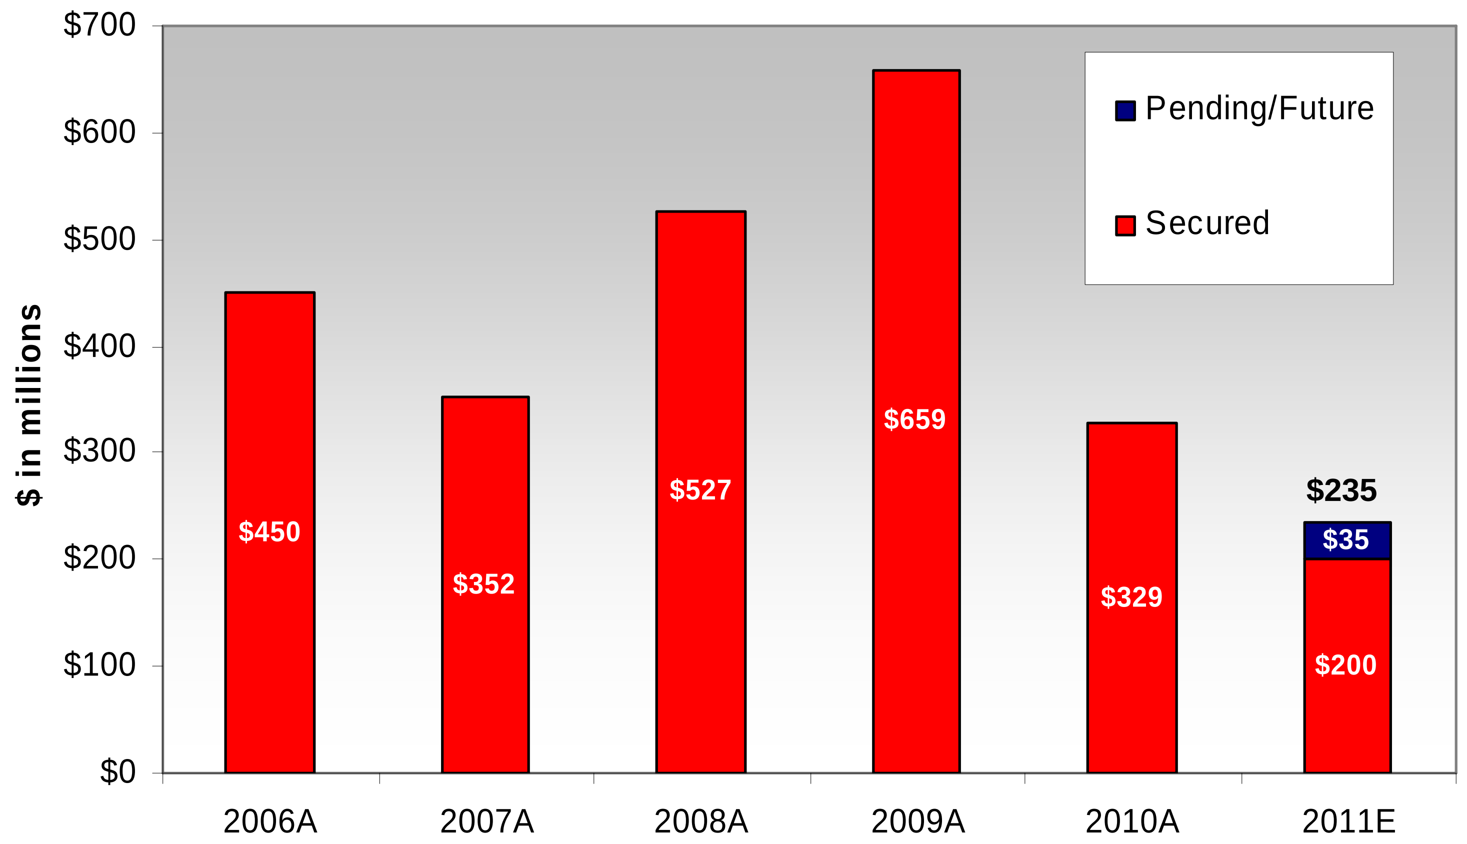
[1]: Effective January 1, 2010 in accordance with Transfers and Servicing accounting guidance (formerly SFAS 166), factored receivables of AEP Credit of $750 million are classified as short-term debt; The 4Q2010 debt/capitalization ratio would be 56.1%, excluding AEP Credit.

Capital Expenditures



Investment levels greater than depreciation of $1.4B per year cause rate base growth in 2011 and 2012

Rate Changes



Note: Rate changes in this chart exclude revenues with offsetting costs

Pending/future rate cases includes amounts from the Ohio environmental filing and cases yet to be filed

Summary Rate Case Information

APCo Virginia Base Rate Case – Docket #PUE-2011-00037

On March 31, 2011 APCo filed an update to its pre-biennial base rate case for recovery of generation and distribution costs requesting an increase of $75 million ($126 million total increase less $51 million associated with a potential change in depreciation rates). A procedural schedule is pending from the VSCC.

In conjunction with this case, an environmental rate adjustment clause (E-RAC), generation rate adjustment clause (G-RAC) and a renewable portfolio standard rate adjustment clause (RPS-RAC) were filed. APCo has requested that rates in the base case, E-RAC and RPS-RAC go into effect no later than 2/1/2012 and the G-RAC on 3/1/2012.

Projected Capital Structure – Company Position (12/31/10)

	% of Capitalization	Cost Rate	Weighted Return
Short-Term Debt	3.76%	0.33%	0.01%
Long-Term Debt	53.25%	5.90%	3.14%
Common Equity	42.72%	11.65%	4.98%
Preferred Stock	0.27%	4.35%	0.01%
Total	100.00%		8.14%

Procedural Schedule - TBD

Required Rate Relief – Company Position (12/31/10)

($ in millions)

Rate Base	$	2,192.5
Rate of Return		8.14%
Operating Income Requirement	$	178.5
Adjusted Operating Income	$	102.8
Difference	$	75.7
Revenue Conversion Factor		1.6650
Total Revenue Requirement	$	126.0

Approved Rate Bases & ROEs

Jurisdiction	Rate Base	Approved ROE	Approved Debt/Equity	Effective Date
APCo-Virginia	$2,060MM*	10.53%	58/42	8/1/2010
APCo-West Virginia	$2,428MM	10.00%	57/43	3/30/2011

** represents the midpoint of the ROE range approved in the formula rate case settled in April 2008.

***represents a negotiated settlement

Transmission Investment Strategy

- **Near-Term Investment** – Electric Transmission Texas (ETT) secures near term investment opportunities, allowing AEP to invest in the large, growth-oriented Texas transmission market. Total project cost of $3 billion with a 9.96% ROE.

- **Mid-Term Investment** – Seven wholly-owned transcos allow for expansion and growth within AEP's existing utility footprint through an efficient recovery mechanism. Will spend $160 million in 2011 and more than $350 million in 2012. Expected ROE is in the 11.20%-11.49% range.

- **Long-Term Investment** – Joint ventures provide opportunities for longer-term growth outside of AEP's existing utility footprint with forward looking formula rates, higher ROEs and FERC incentives, and mitigated risk profiles.

Transmission has a diversified investment approach that positions it as one of the key AEP growth businesses.

Texas Transmission Growth Strategy : Near Term Investment

Ownership Structure: 50/50 (AEP/MidAmerican Energy Holding Company)

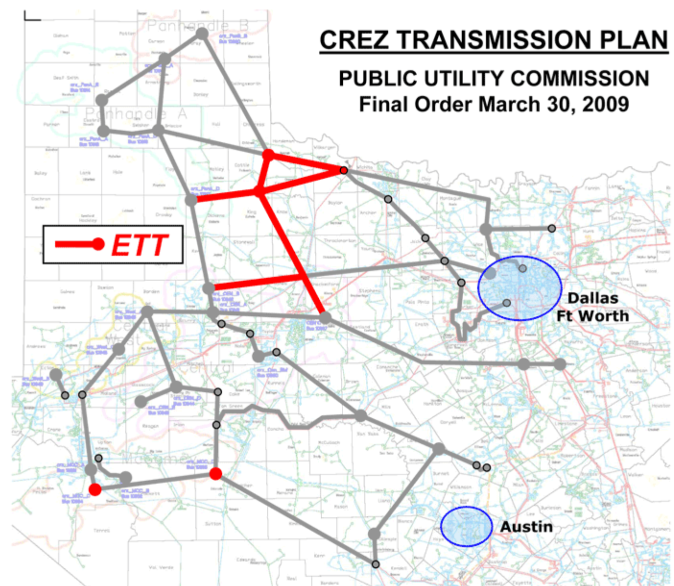
Total Project Cost: Over $3 Billion

Growing Rate Base:
Current rate base is $412 million; expected to grow as follows:
2011: $473 million
2012: $778 million
2013: $1,352 million

ETT Electric Transmission Texas

Interim TCOS filings twice per calendar year

Approved ROE: 9.96%



- **Additional Projects in the Pipeline ~$1.6 B:**
  – Approximately 822 miles of lines and 28 substations with in-service dates through 2017

- **Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.1 B:**
  – Seven double-circuit 345kV transmission lines (~$750 M), eight major 345kV stations and several series compensation installations (~$350 M)
  – PUCT Certificate of Convenience and Necessity (CCN) proceedings underway

Transco Update

Filing Status Update:

- ***Ohio*** *(filed and approved)* – PUCO approved the Ohio Transco December 29, 2010
- ***West Virginia*** *(filed)* – Procedural schedule is set, with company testimony filed January 6; Intervenor's testimony is due April 6 and rebuttal is due April 20; Hearings in June
- ***Arkansas and Louisiana*** – Filing date in Arkansas likely early 2011
- ***Texas-SPP*** – Expecting TX filing in mid 2011
- ***Kentucky*** – Filing made February 4, 2011; Informal conference with staff held March 2, 2011
- ***Indiana*** – Filing made March 1, 2011; Pre-hearing conference March 28, 2011
- ***Virginia*** *(withdrawn)* – Filing withdrawn to give additional time to resolve issues with Staff
- ***Michigan and Oklahoma*** – Do not require state filing

$160M capital spend forecasted for 2011

Joint Venture Strategy: Long-term

- **Strategy:** JV's secure new investment opportunities with local utilities to diversify AEP's investment outside AEP's traditional footprint while providing longer-term incremental earnings**.** JV projects are well-suited for FERC formula rate recovery mechanism, including potential for incentive rates.

- **Future:** Federal/regional initiatives may accelerate expansion of EHV transmission (e.g. cap-and-trade, renewable portfolio standards, inter-region wide planning). Securing first mover advantage will enable AEP to secure LT investment opportunities.

- **Future flexibility:** Passive investment opportunities can be considered and can provide entry beyond SPP/PJM/ERCOT

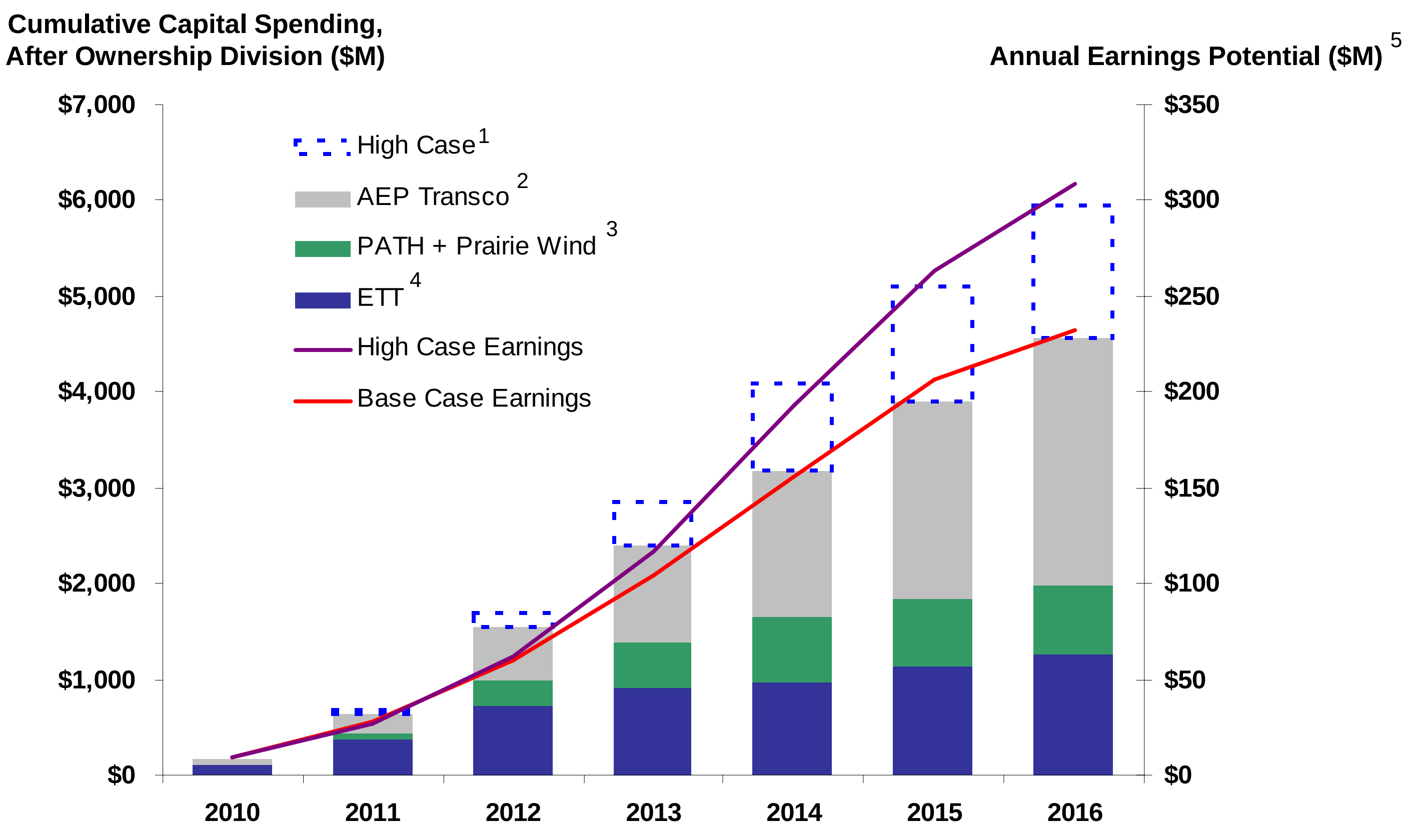
Transmission (Transco/JV's) – Capital/Earnings Profile

Transco and JV's have the potential to significantly add earnings growth to AEP.



[1] High Case includes: Pioneer (50% ownership), Prairie Wind at 765kV (25% ownership), Tallgrass at 765kv (25% ownership) and other future opportunities

[2] AEP Transco (100% ownership) includes spending in OH, MI & OK only through 2011 and in other jurisdictions for 2012 and beyond

[3] PATH (50% ownership) assumes an in-service date of 2015 and Prairie Wind (25% ownership) assumed at 345kV

[4] ETT (50% ownership) includes CREZ and additional projects

[5] Projection of earnings potential at the transmission holding company level assuming 50/50 debt/equity capitalization and ROE of 12-13% for FERC projects; 60/40 debt/equity capitalization and 10.25% ROE (2011 forward) for ERCOT projects; and 50/50 debt/equity capitalization and ROE of 11.2-11.49% for Transco projects

AMERICAN ELECTRIC POWER

Barclays Capital 2009 CEO Energy/Power Conference

New York, NY

September 10, 2009

STRONG
FLEXIBLE
ADAPTABLE

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants including our ability to restore Indiana Michigan Power Company’s Donald C. Cook Nuclear Plant Unit 1 in a timely manner; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity and transmission lines (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary or deflationary interest rate trends; volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impacting our ability to finance new capital projects and refinance existing debt at attractive rates; the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurred cots and recovery is long and the costs are material; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

AEP AMERICAN ELECTRIC POWER

Table of Contents

AEP AMERICAN ELECTRIC POWER

AEP Highlights

Premier utility platform

- Leadership position in electric generation, transmission and distribution operations
- Cash flow, earnings and regulatory diversity with more than 5 million customers in 11 states
- $6.3 billion capital expenditure program (2009-2011) will continue to drive rate base growth

Effective regulatory relationships

- Traditional recovery mechanisms with equitable risk allocation enhance both earnings and cash flow
- Emerging energy policies play to AEP's strengths (transmission, energy efficiency, reliability)
- Constructive local relationships deliver successful regulatory outcomes

High-growth transmission business

- The leading US transmission owner, operator, and developer
- Exceptional portfolio of high-quality development projects and project partners
- Attractive ROEs, regulatory support and access to capital will drive earnings growth beyond our traditional utility footprint

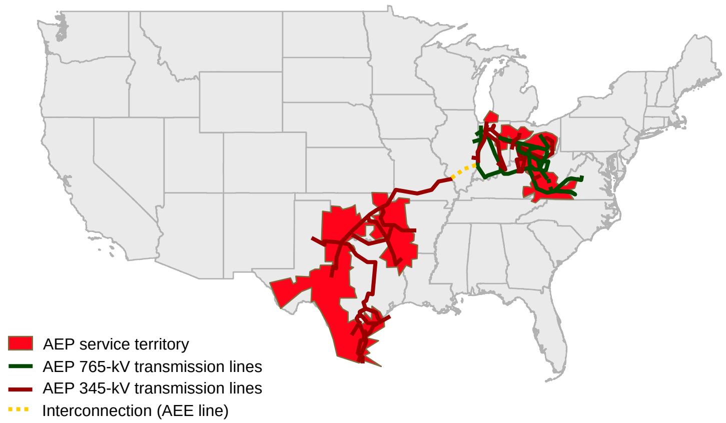
Stable financial position

- Maximization of shareholder value through regulated utility and transmission investments
- Balanced approach to cost containment and capital allocation
- Commitment to investment grade profile, prudent balance sheet, and liquidity management
- Conservative dividend payout with attractive yield

AEP AMERICAN ELECTRIC POWER

Premier Regulated Utility Platform

Overview

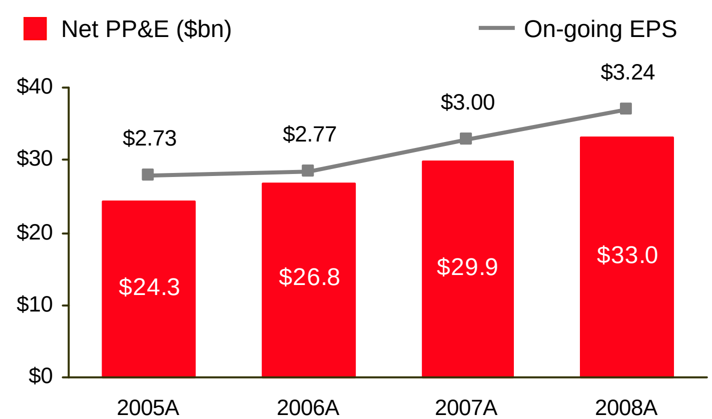


AEP's Leadership Position

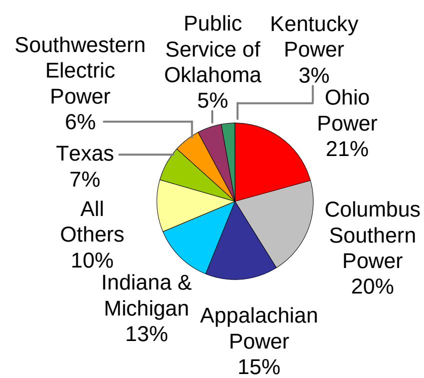
Transmission miles[1] ('000s)		Generation owned[1] (GW)		Electric customers[1] (mm)	
AEP	39.0	SO	42.6	EXC	5.4
SO	27.0	AEP	40.6 *	AEP	5.2
DUK	20.9	DUK	39.1	PCG	5.1
PCG	18.7	FPL	35.5	FPL	4.5
MidA	17.9	ETR	30.0	FE	4.5
ITC	15.1	D	27.1	SO	4.4
FE	15.1	EXC	24.8	DUK	4.0
Oncor	14.9	CPN	24.2	ED	3.6
EIX	12.0	NRG	24.0	XEL	3.4
PGN	11.0	PGN	21.8	PGN	3.1

* - AEP generation includes long-term PPAs and generation under construction

Regulated Operations



- Net PP&E CAGR of 10.7% since 2005
- Earnings CAGR of 5.9% since 2005



2008 On-going Earnings = $1.3bn

- Highly diversified regulated utility earnings contribution

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 3113 of 9556

Energy Policy Initiatives are Core to Our Strategy

Greenhouse Gas Reduction & Regulation

- Actively engaging in CO_2 policy debate – support cap & trade with allocated credits
- Leadership position in development of carbon capture and storage technology
- Reducing carbon footprint via offsets and other measures
- Founding member of Chicago Climate Exchange

Renewable Energy

- Develop “transmission superhighway” to facilitate renewable energy projects
- Satisfy RES requirements in our jurisdictions – currently Ohio with 25% (renewables + advanced) by 2025, Texas with ~ 5% by 2015, West Virginia with 25% (renewables + advanced) and Michigan with 10% by 2015; Voluntary goal of 12% by 2022 in Virginia
- Add 2,000MW of wind capacity via long-term PPAs – 903MW achieved to-date

---

Energy Efficiency, Security & Reliability

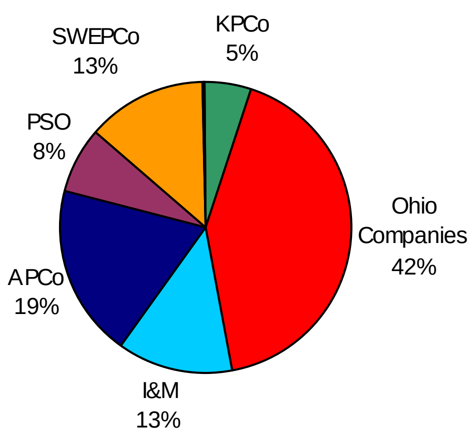
- Develop high-voltage transmission projects to strengthen America’s power grid
- Build generation to ensure reliable supply
- Reduce 1,000MW of demand by 2012
- Reduce 2.25 million MWhs of consumption by 2012
- Diversify our fuel mix; have added 3,705MW of gas-fired capacity since 2005 and have 1,080MW under construction

---

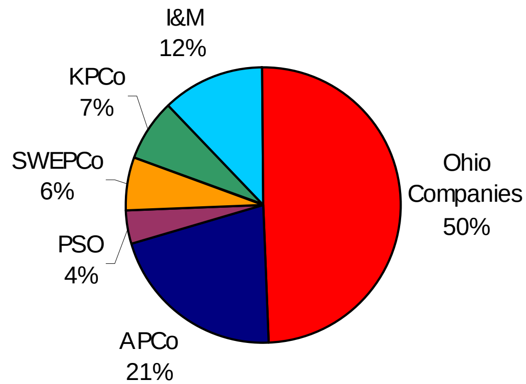
AEP AMERICAN ELECTRIC POWER

CO_2 Cost Recovery – Should Follow SO_2 & NOx

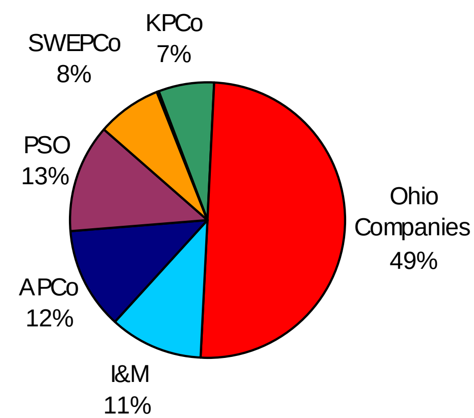
2008 AEP System CO_2 Emissions
163M tons



2008 AEP System SO_2 Emissions
637k tons



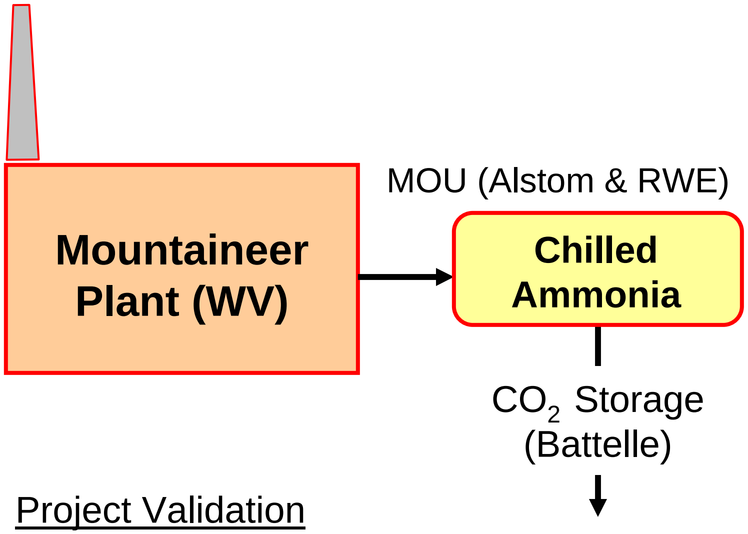
2008 AEP System NOx Emissions
248k tons



- 100% of SO_2 and NOx allowance costs currently recovered through tracker or similar mechanisms
- Prudently incurred costs associated with carbon-based taxes and other carbon-related regulations explicitly included in Ohio Fuel Adjustment Clause

AEP AMERICAN ELECTRIC POWER

Carbon Capture & Storage



Project Validation

- **Alstom “Chilled Ammonia” Technology**
- **20-30 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, in operation at We Energies’ Pleasant Prairie Power Plant)**
- **Located at the AEP Mountaineer Plant in WV**
- **100,000 - 300,000 tonnes CO_2 per year**
- **Operations commenced September 2009**
- **Geologic storage for CO_2**
- **Underground injection control permit received in May 2009 from WV Dept. of Environmental Protection**

Represents Post-Combustion Capture

- **Conventional or Advanced Amines; Chilled Ammonia**
  - **Amine technologies are currently available in other industrial applications**
  - **Relatively low CO_2 concentration in flue gas - more difficult to capture than other approaches**
  - **High parasitic demand**
    - **Conventional Amine ~ 25-30%**
    - **Chilled Ammonia target ~ 10-15%**

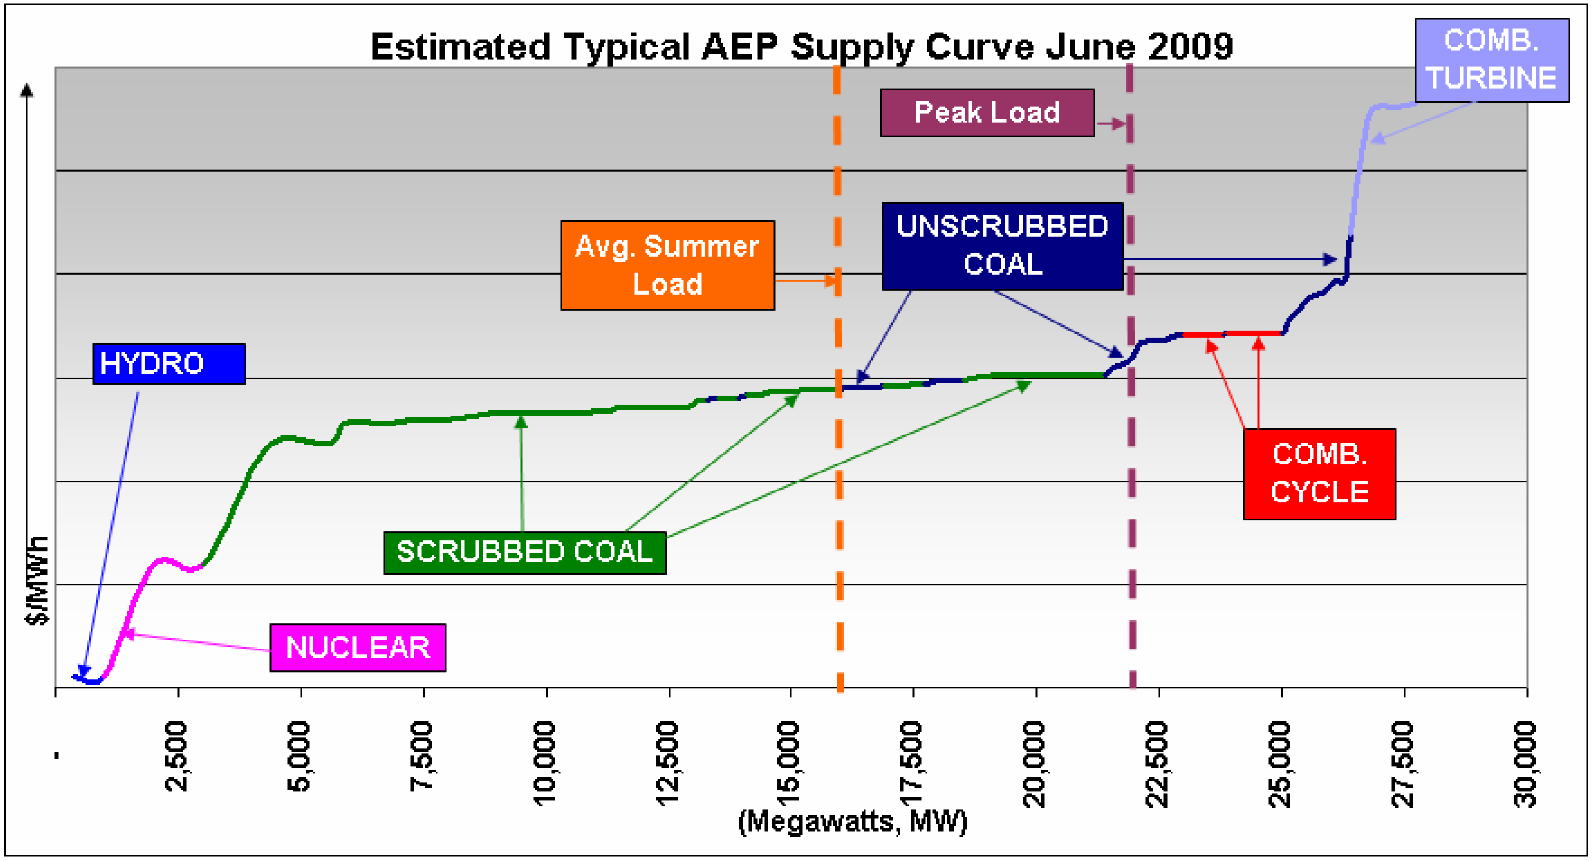
Key Issues for CCS Development in the U.S.

- **Overcoming the ‘economic’ hurdle**
- **High up-front capital investment**
- **Commercial demonstration at large coal-fired power plants**
- **National standards for permitting of storage reservoirs**
- **Potential institutional, legal and regulatory barriers to carbon storage**

AEP AMERICAN ELECTRIC POWER

AEP Supply Stack

- Supply stack with Cook unit 1 outage would slide the supply stack 1,009 MW to the left.
- Planned outages typically shorten supply stack in the shoulder months by several thousand megawatts.
- Shoulder periods offer the flexibility to reschedule planned outages.

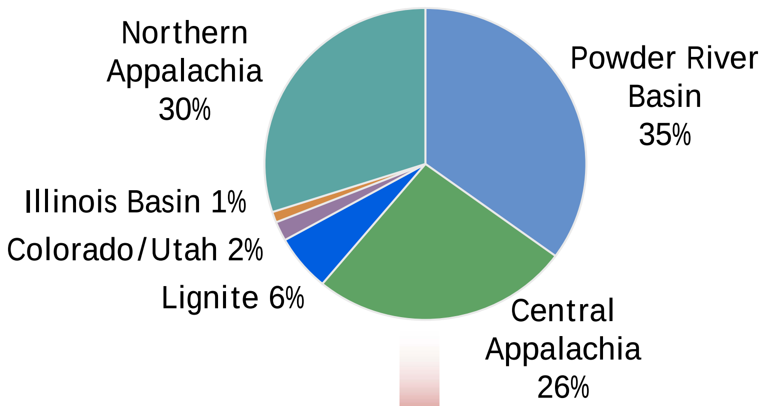


AEP AMERICAN ELECTRIC POWER

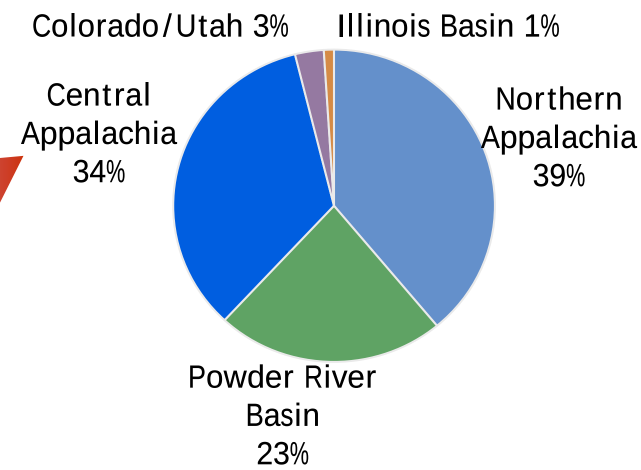
Coal Procurement - 2009 Projected

AEP burns approx. 77 million tons of coal per year

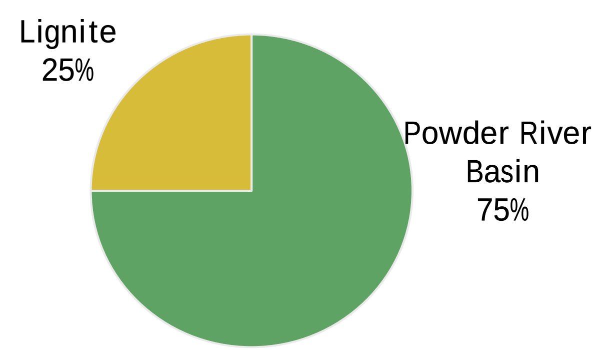
Total AEP System



AEP East



AEP West



Coal Stats:

- 100% contracted for 2009
- 94% contracted for 2010
- Avg. delivered price ~ $46.61/ton in 2008
- Approximate 10% price increase in 2009 ~ $51.00/ton

AEP AMERICAN ELECTRIC POWER

Detailed Ongoing Earnings Guidance

2008A: $3.24/share

2009E: $2.75-$3.05/share

AEP AMERICAN ELECTRIC POWER

Overview of 2009 Guidance

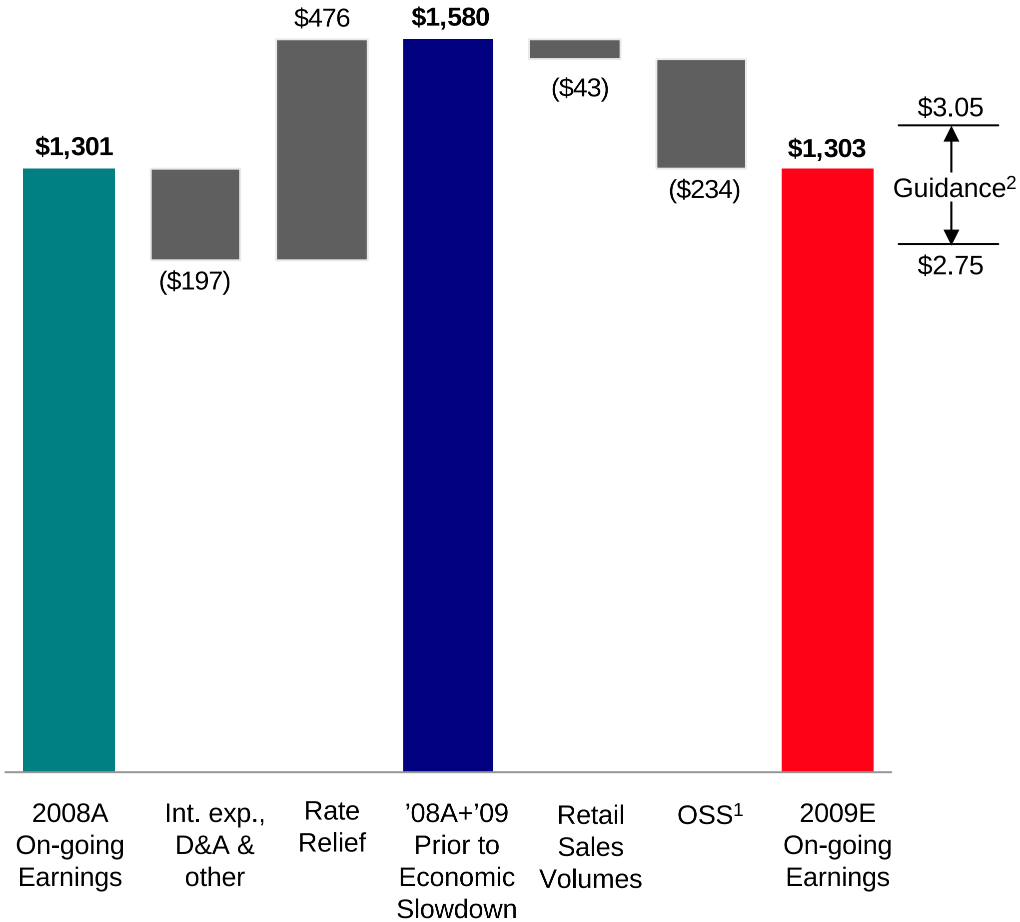
2009 Earnings Drivers:

- ⬆ Positive Ohio outcome
- ⬆ Rate relief - $732mm
- ⬇ Economic slowdown
  - — Lower OSS revenues
  - — Lower loads

Long-term Earnings Drivers:

- ⬆ Rate base investments
- ⬆ Additional rate relief
- ⬆ OSS/Retail load
- ⬆ Transmission JV earnings

2008A-2009E Earnings Bridge ($mm)



Note all items are presented after-tax

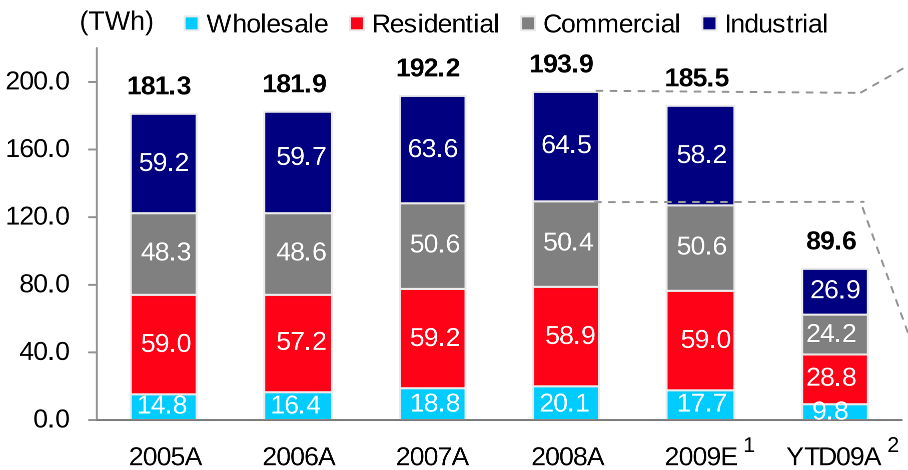
[1] Net of sharing

[2] Assumes 2009 average shares outstanding ~ 450 million

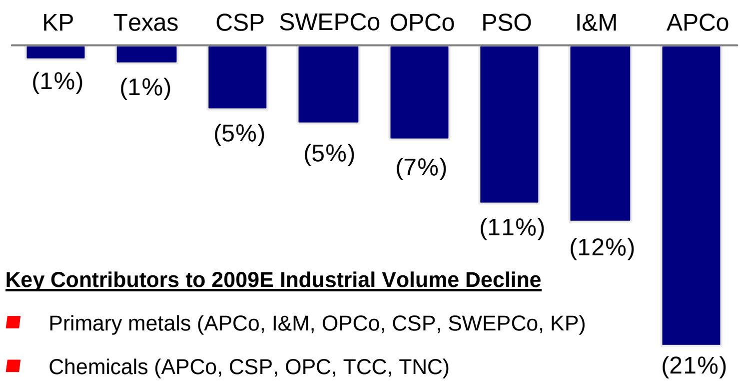
AEP AMERICAN® ELECTRIC POWER

Key Drivers of 2009 Guidance: Retail Sales

Retail Load by Customer Class



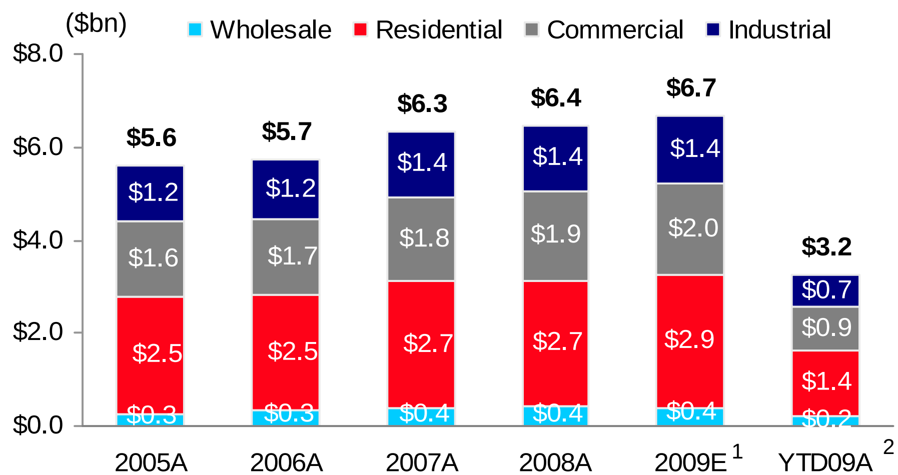
Forecast Drop in 2009 Industrial Sales

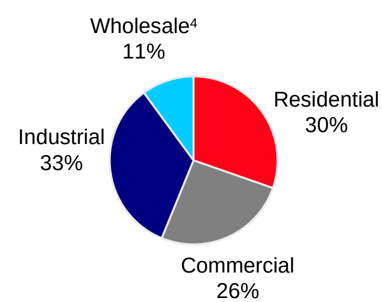


Key Contributors to 2009E Industrial Volume Decline

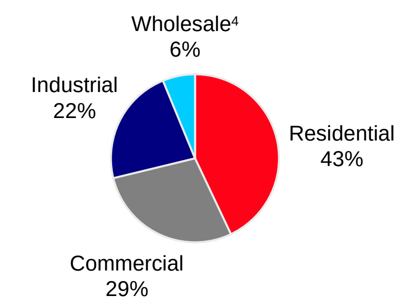
- Primary metals (APCo, I&M, OPCo, CSP, SWEPCo, KP)
- Chemicals (APCo, CSP, OPC, TCC, TNC)
- Paper (APCo, PSO, SWEPCo)
- Plastics & Rubber (APCo, CSP, OPCo, I&M)

Retail Base Revenue[3] by Customer Class





2008 Retail Load = 193.9 TWh



2008 Retail Base Revenue [3] = $6.4bn

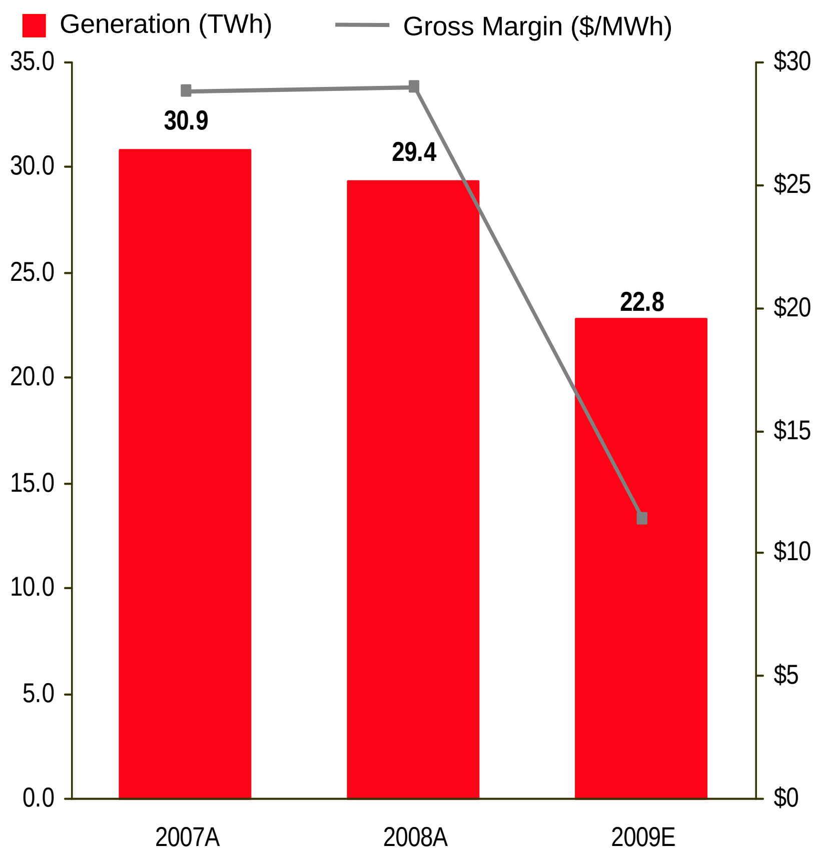
AEP AMERICAN ELECTRIC POWER

[1] 2009E assumes normalized weather
[2] YTD09A represents actual results through June 30, 2009

[3] Excludes the impact of current year rate relief, fuel over/under recovery, PJM costs and consumables
[4] Wholesale includes sales to municipal and cooperative power systems, other wholesale, and other retail sales

Key Drivers of 2009 Guidance: Off-System Sales

Off-System Sales Metrics



$ in millions	2007A	2008A	2009E
OSS Physical Sales	$ 674	$ 718	$ 106
Oklaunion Payment	46	45	49
Marketing/Trading	170	82	105
Pre-sharing Gross Margin	$ 890	$ 845	$ 260

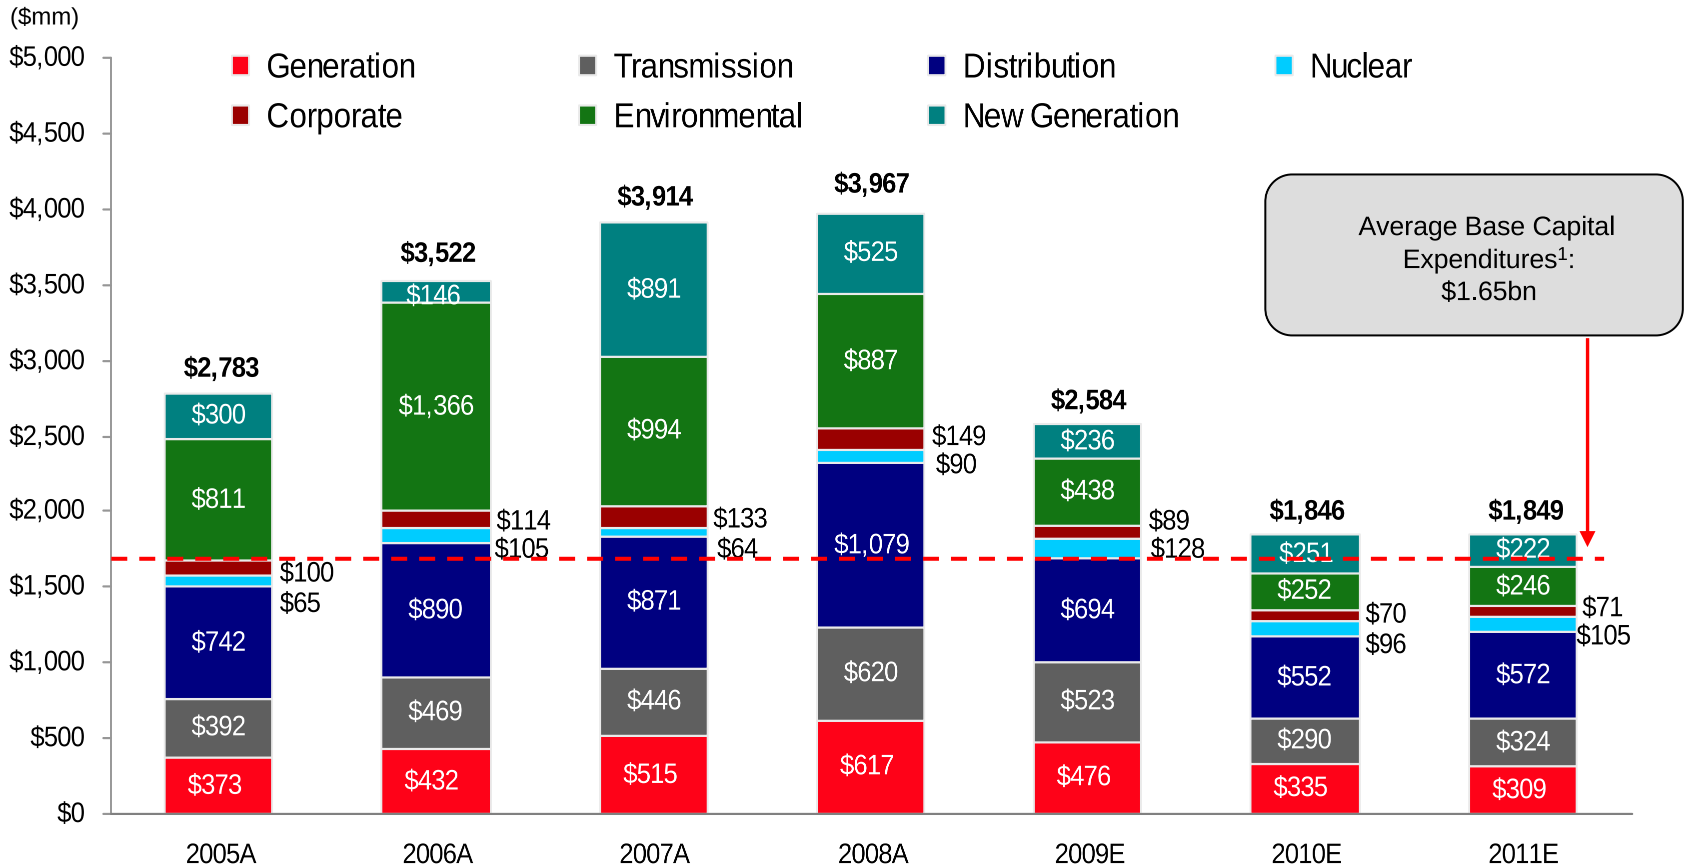
AEP AMERICAN ELECTRIC POWER

Utility Capital Expenditures Support Growth of 2 - 4%

Annual $1.8 billion capital program creates rate base growth over annual depreciation expense of $1.2 billion



Net PP&E ($bn)	$24.3	$26.8	$29.9	$33.0	$34.5	$35.2	$35.8

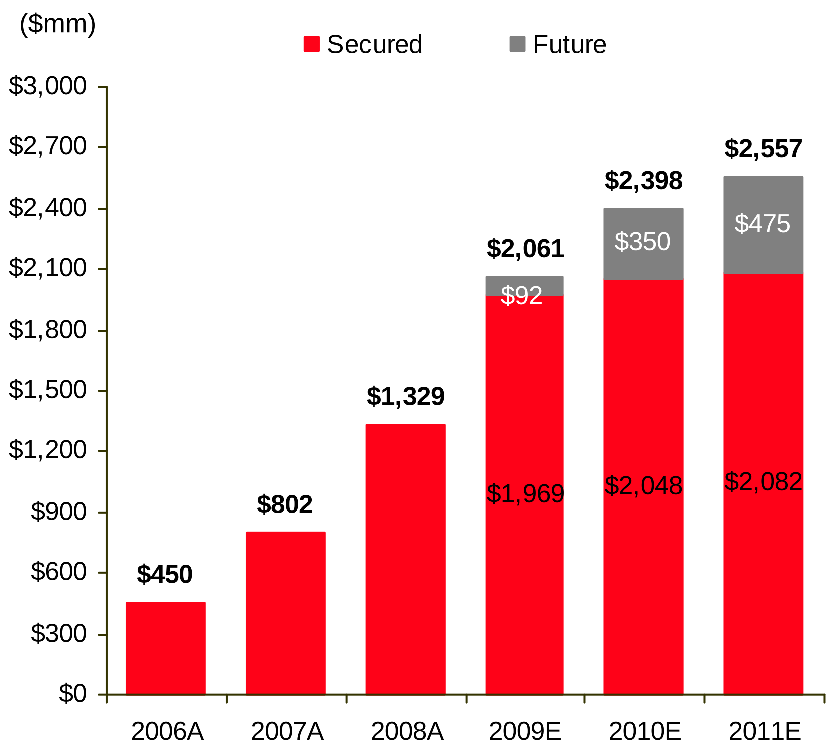
Note: Capital Expenditures shown exclude AFUDC

[1] Reflects 2002-2008 average base expenditures (excluding New Generation and Environmental)

AEP AMERICAN ELECTRIC POWER

Track Record of Successful Regulatory Outcomes

Cumulative Rate Relief



Annual rate increases, $mm	$450	$352	$527	$732	$337[1]	$159[1]

[1] *$79mm and $38mm was secured for 2010 and 2011, respectively, as of August 31, 2009*

AEP AMERICAN ELECTRIC POWER

Our Regulatory Approach:

Maximize utility company returns:

- Successfully secured significant rate relief
- 2009 rate relief:
  - ✓ Ohio ($404MM)
  - ✓ I&M ($52MM)
  - ✓ APCo ($58MM)
  - ✓ PSO ($74MM)
- Pending rate relief including amount requested:
  - ✓ APCo WV ($20MM – in ENEC filing)
  - ✓ APCo VA ($178MM)
  - ✓ PSO ($30MM)
  - ✓ SWEPCo AR ($54MM) TX ($75MM)
  - ✓ Others to be determined

Minimize regulatory lag:

- Active fuel adjustment clauses now in place in <u>all</u> jurisdictions
- Increased frequency of rate cases
- Employing tracking features

Strong local relationships with regulators

AEP AMERICAN ELECTRIC POWER

Summary Rate Case Information

APCo Virginia General Rate Case

On August 14, 2009 APCo filed an update to its pre-biennial base rate case, originally filed July 15, 2009 with the Virginia SCC, per the statute, for recovery of generation and distribution costs requesting an increase of $154 million. (Docket #: PUE-2009-00030) A transmission rate adjustment clause (T-RAC) was filed in conjunction with this case as base rates will no longer include rates for transmission service (Docket #: PUE-2009-00031). APCo has requested that rates in both cases go into effect at the same time.

Projected Capital Structure – Company Position (12/31/08)

	% of Capitalization	Cost Rate	Weighted Return
Short-Term Debt	3.135%	3.906%	0.12%

AEP AMERICAN ELECTRIC POWER

Uniquely Positioned for Nationwide Grid Expansion

Active Projects:

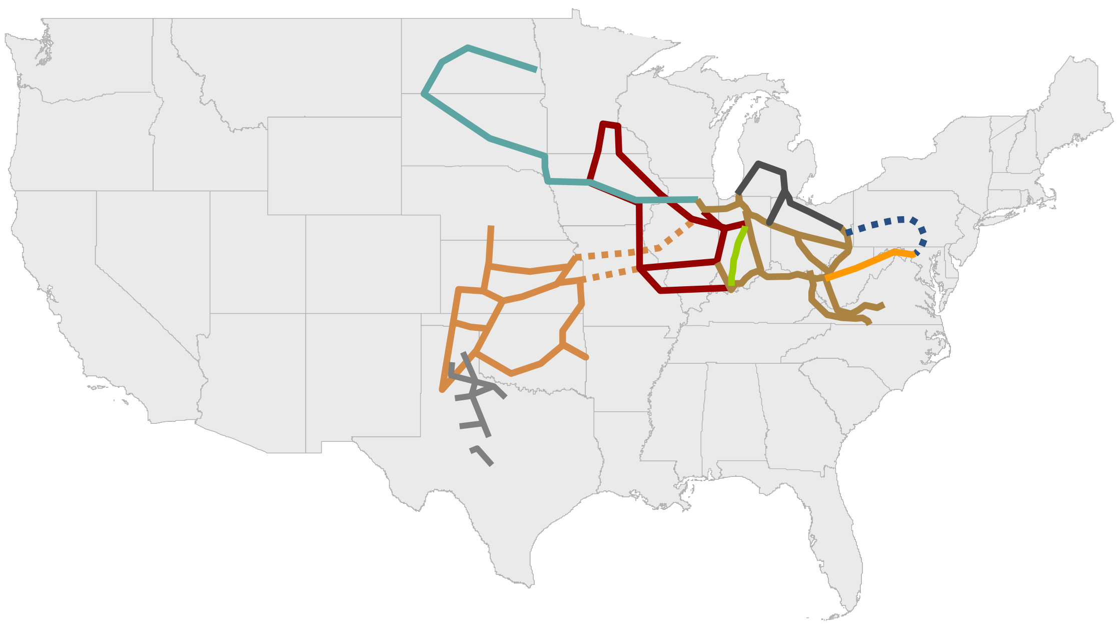
Pioneer — **COD: 2015**
- 240 miles of 765 kV
- Partner: Duke Energy (50%)
- Estimated Cost: $1 billion
- ROE: 12.54%

PATH-WV — **COD: 2014**
- 275 miles of 765 kV
- Partner: Allegheny Energy (50%)
- Estimated Cost: $1.2 billion
- ROE: 14.3%

Tallgrass — **COD: 2013-14**
- 170 miles of 765 kV
- Partners: OG&E (50%) & MidAmerican Energy (25%)
- Estimated Cost: $500 million
- ROE: 12.8%

Prairie Wind — **COD: 2013**
- 110 miles of 765 kV
- Partners: Westar Energy (50%) & MidAmerican Energy (25%)
- Estimated Cost: $400 million
- ROE: 12.8%

ETT — **COD: 2013**
- 345 kV in ERCOT
- Partner: MidAmerican Energy (50%)
- Estimated Cost: $400 million
- ROE: 9.96%



Future Projects:

EHV Michigan — **COD: ~2020**
- 700 miles of 765 kV

PJM Projects
- Enhance existing 765/345 kV

Hartland — **COD: ~2020**
- 1000+ miles of 765 kV

MISO Vision Plan
- 765 kV Backbone

SPP Overlay — **COD: 2013-14**
- 765 kV Backbone

ETT — **COD: ~2018**
- 345 kV in ERCOT
- Additional CREZ spend of $750-$850 million

AMERICAN ELECTRIC POWER

Note: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

Equity Contributions Enhance Earnings Growth to 4 – 8%

AEP is the leader

- Largest US transmission footprint
- Interstate EHV highway vision
- National renewables transmission strategy

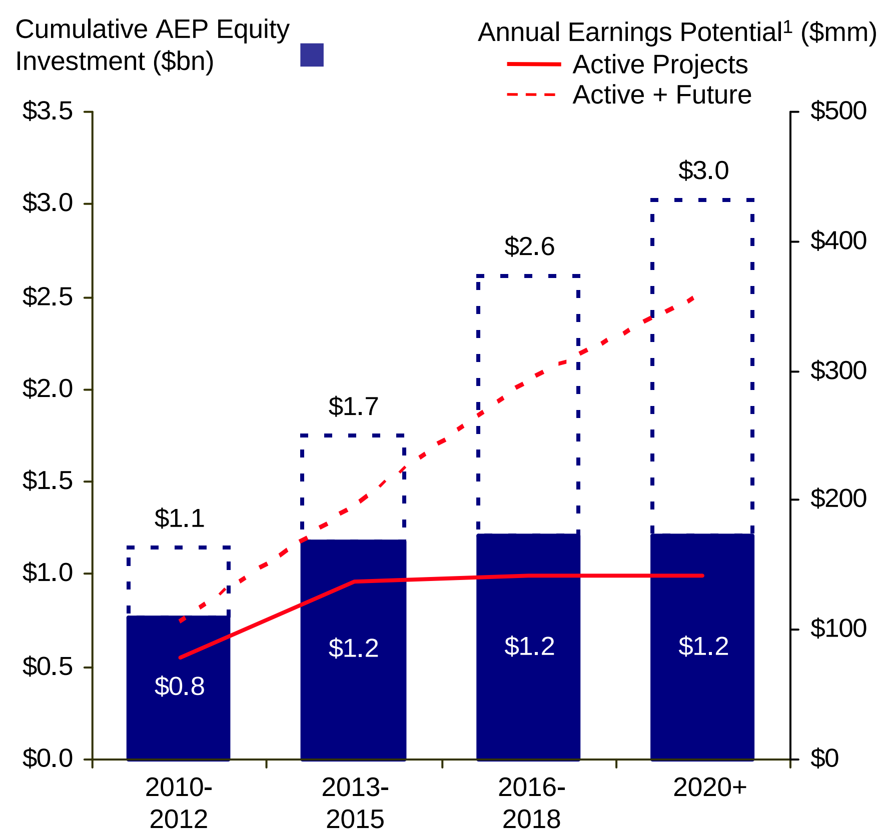
Quality projects

- 4 FERC-approved ($3.3 billion)
- Independent ERCOT transmission JV company (up to $2.6 billion)
- Robust pipeline of future 765 kV projects (up to $15 billion)

Attractive returns

- FERC incentive rates (12.5-14.3%)
- Strong cash flow with CWIP
- Long-term earnings potential of ~$140-$360 million annually[1]

Illustrative Earnings Potential of New Transmission Initiatives



[1] Illustrative calculation assumes 50/50 debt/equity capitalization and incentive ROE of ~13.0% for FERC projects and a 60/40 debt/equity capitalization and 10.5% ROE for ERCOT projects

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events and our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives, evolving public perception of the risks associated with fuels used before, during and after the generation of electricity, including nuclear fuel.

June YTD 2011 Performance

June YTD 2011 Reconciliation

		EPS	Ongoing Earnings ($ in millions)
2010	$	1.50	$720
Operations & Maintenance	$	(0.04)	
Other Costs, net	$	(0.05)	
Customer Switching	$	(0.06)	
Rate Changes	$	0.15	
Off-System Sales	$	0.07	
Weather	$	(0.02)	
2011	$	1.55	$744

EPS Based on 482MM shares in YTD11

YTD 2011 Performance Drivers

- O&M increase of $30M, net of offsets, primarily due to higher storm expenses
- Other Costs, Net increased $35M primarily due to gain on sale of ICE shares in 2Q10 and increased taxes
- Customer Switching in Ohio up $43M from last year
- Rate Changes, net of offsets, of $110M from multiple operating jurisdictions
- Off-System Sales, net of sharing, were favorable by $49M due to higher volumes and higher power prices
- Weather was unfavorable by $15M vs. prior year, favorable $67M vs. normal

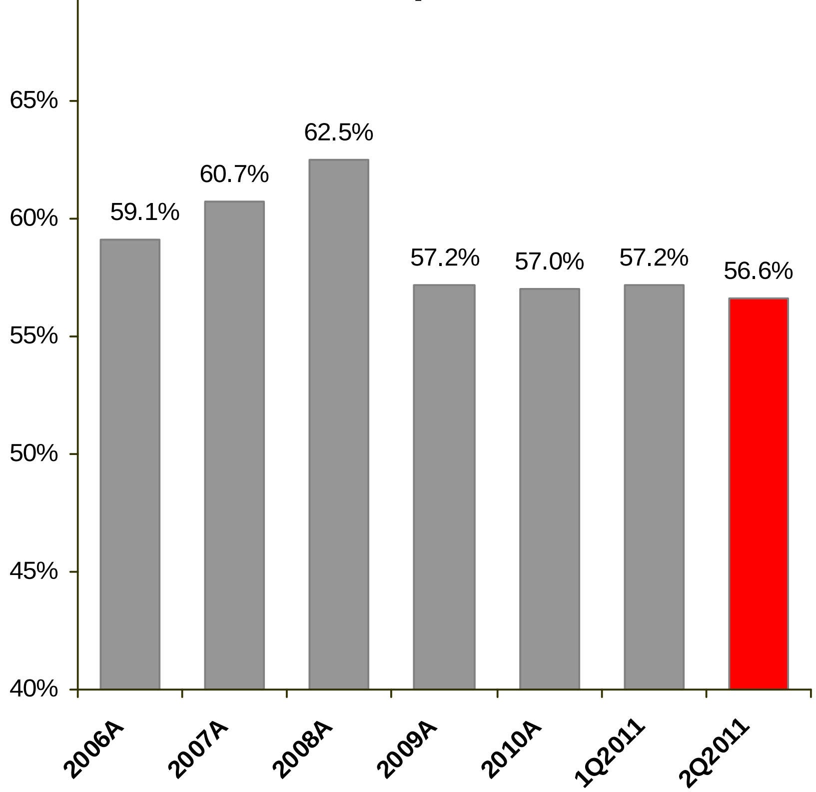
2011 On-going Earnings Guidance of $3.00 - $3.20 per share

AEP Texas Central Supreme Court Remand

- In early 2006, TCC received an order in the stranded cost proceeding enabling it to securitize $1.7 billion in stranded assets in October 2006, but denied recovery for other items.
  - TCC's inability to sell all of the capacity it was required to auction resulted in the PUCT rejecting the auction prices for purposes of calculating a legislatively-prescribed market-based true-up.
  - This led to a disallowance of $421 million and an after-tax impairment of $274 million being booked in 2005.
- In July 2011, the Texas Supreme Court reversed the PUCT's decision to reject use of auction prices, and the issue has been remanded to the PUCT.
- TCC is entitled to recovery of the $421 million plus carrying costs back to 2002. The carrying costs are expected to be $527 million.
- There will be regulatory proceedings and likely settlement discussions before the final amount is approved. TCC can securitize the recovery.

Capitalization & Liquidity

Total Debt/Capitalization



Note: Total Debt is calculated according to GAAP and includes securitized debt

Liquidity Summary (06/30/2011)

Liquidity Summary (unaudited)		**Actual**	
($ in millions)		Amount	Maturity
Revolving Credit Facility	$	1,500	Jun-13
Revolving Credit Facility		1,454	Apr-12
Total Credit Facilities		**2,954**	
Plus			
Cash & Cash Equivalents		417	
Less			
Commercial Paper Outstanding		(944)	
Letters of credit issued		(132)	
Net available Liquidity	**$**	**2,295**	

On July 26, 2011, we renewed and upsized the facility expiring in April 2012. The new facility has a capacity of $1.75B and expires in July 2016.

We also extended and repriced the facility expiring in June 2013. That facility now expires in June 2015.

This brings our total available capacity to $3.25B.

ESP Settlement

Gradual Transition to Market and Regulatory Stability in Ohio

- **Parties to the Settlement** - Signed by more than 20 organizations representing customers, competitive retail electricity suppliers, environmental groups, communities and other key stakeholders
- **Cases included in Settlement** - 2012 Electric Security Plan, Capacity Charges, Merger
- **Generation** - Corporate separation of Ohio generation assets targeted by May 2013 and transition all of Ohio generation supply to market by mid-2015; the company may pursue recovery of Pool modifications costs greater than $50 million
- **Transition to market** - company will make a specific percentage of generation resources open to competitive retail suppliers at the RPM price for a three-year period. The remaining capacity will be priced at $255/MW-day
  - Year one (2012), approximately 20 percent will be available
  - Year two (2013), approximately 30 percent will be available,
  - Year three (2014 through May 2015), approximately 40 percent will be made available.
  - Standard service offer price beginning in June 2015 will be determined through auctions involving multiple suppliers of generation service. Auctions will begin as early as September 2013.
- **Fuel Adjustment Clause** - continues through May 31, 2015
- **Nonbypassable Generation Resource Rider** – allows the distribution company to recover costs related to building new generating assets dedicated solely to Ohio customers. Project-related costs will be presented in future PUCO cases.
- **Distribution Investment Rider** – Costs associated with new distribution investment to maintain and improve reliability will be recovered under this rider with an ROE of 10.5% based on a capital structure of 47% debt/53% equity. In its first year (2012), the rider will be capped at $86 million. An additional $18 million will be added in 2013 and an additional $20 million in 2014.
- **SEET ROE threshold of 13.5%**.

AEP Highlights

- Premier Utility Platform
- Traditional and Effective Regulatory Relationships
- Significant Investment Opportunities in Environmental Retrofits and Transmission
- Strong Value and Total Return Proposition
  - Near 5% dividend yield
  - P/E discount to peers

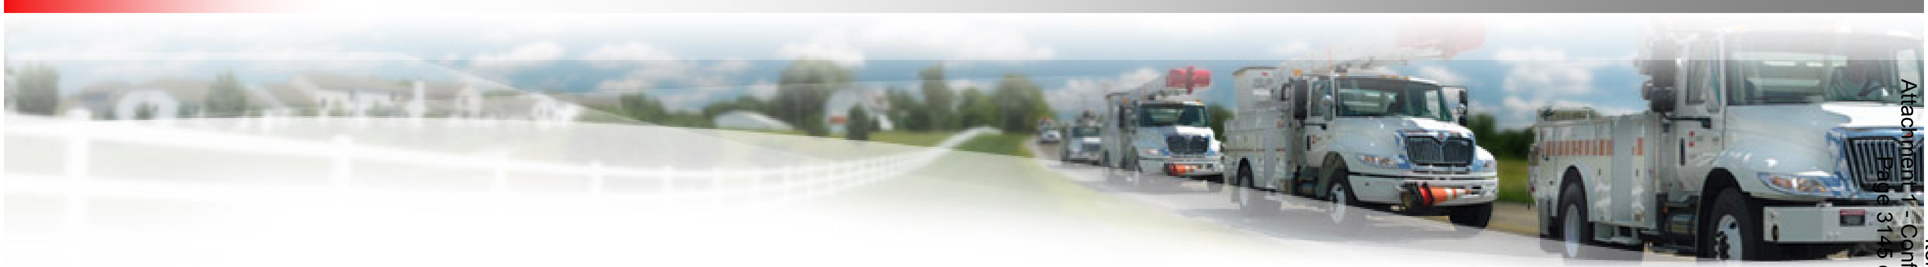
Barclays Capital Clean Solutions Conference

New York, NY
May 18, 2011



“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation, including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance, resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events, our ability to recover through rates the remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives and evolving public perception of the risks associated with fuels used before, during and after generation of electricity, including nuclear fuel.

Pending EPA Regulations

TRANSPORT RULE

- Proposed Transport Rule (July 2010) limits utility SO_2 and NOx emissions
- SO_2 and NOx subject to caps in 2012, with further SO_2 reductions required in most Eastern states by 2014
- Major concerns with the proposed rule:
  - Not enough time is provided for environmental control installations (i.e. FGD/SCR)
  - EPA costs of retrofitting units are grossly underestimated/ other incorrect assumptions used (though EPA has since modified some of these assumptions)
  - Rule does not account for recent improvements in air quality
  - Inability to trade and bank allowances effectively

MERCURY AND HAP MACT

- Proposed rule issued in March 2011
- Final HAP regulations must be issued by November 2011
  - Maximum Achievable Control Technology (MACT) standards for Hg, other metals, and acid gases, combustion practices for organics
- Compliance Required 3 Yrs. After Final Rule, EPA could grant a 1 year extension
- Very little flexibility in the proposal; opportunity to average across a plant and limited sub categorization
- MACT could require FGD or DSI for acid gases and/or baghouses with activated carbon injection for Hg and metals.

COAL ASH RULE

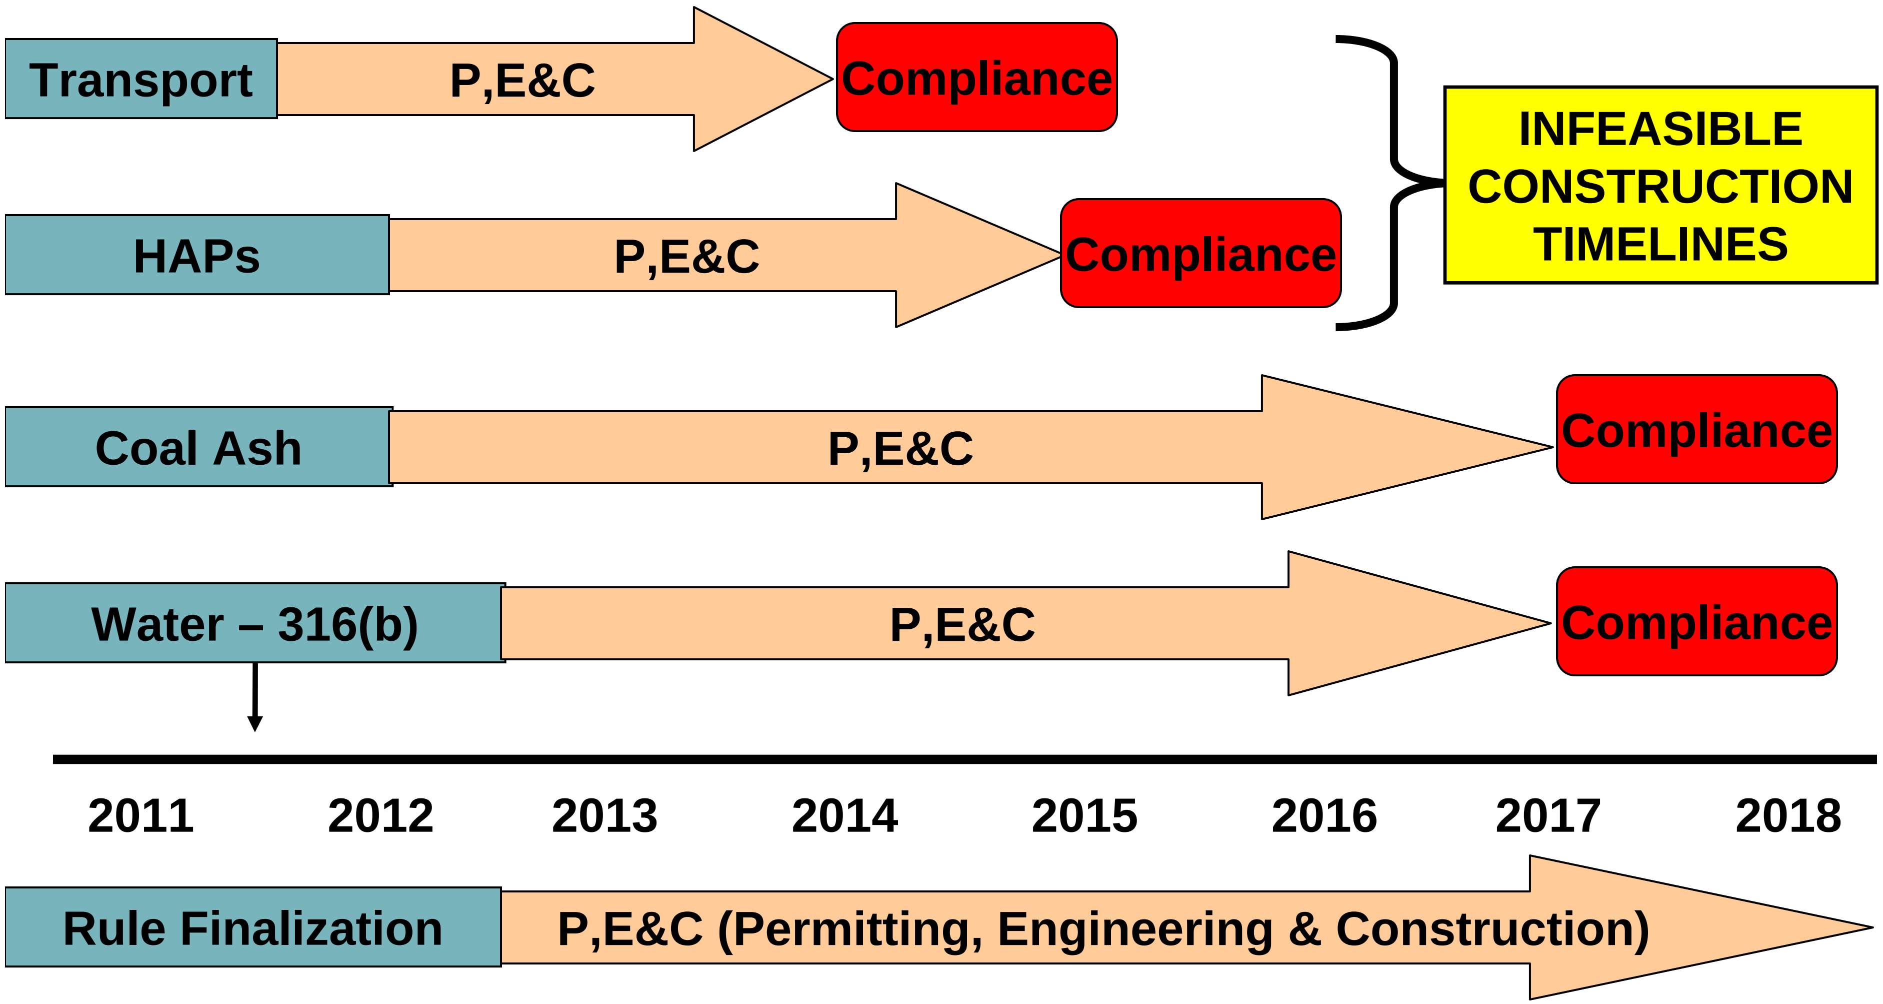
- Draft coal ash disposal rules issued in May 2010
- EPA proposed two different regulatory designations:
  - “Non-hazardous”, solid waste - action required by ~2017
  - “Special” hazardous waste - action required by ~2018-2020
- AEP supports Subtitle D Prime Option of RCRA (solid waste NOT hazardous)
- AEP capital cost of ~$4 billion for solid waste option
- “Hazardous” option could cost DOUBLE this amount

316b RULE

- EPA issued proposal March 28
- Addresses impingement and entrainment of aquatic species
- Proposes upgraded intake screens for impingement
- Suggests cooling towers as an effective technology for entrainment, but defers the decision until site-specific study is conducted
- Cost impact very uncertain at this time

The cumulative effect of the proposed rules is not achievable in the allowed timeframe.

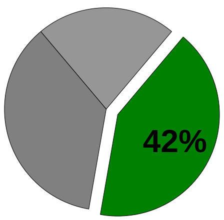
Anticipated EPA Timeline for Retrofits or Replacement



AEP Coal Fleet Assessment

AEP®

Least Exposed



Operating Company	MW
APCo	3,353
CSPCo	1,277
Ohio Power	5,687
	10,317

2012 – 2020

Range of Capital ($Millions) (1)

Proposed Rules		Low		High
Water Rules (2)	$	5	$	9
CCR Rules	$	759	$	1,122
Air Rules (3)	$	766	$	1,046

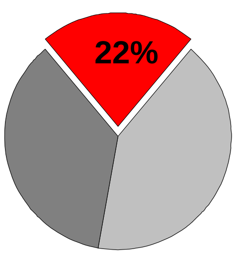
	8,888

Proposed Rules		Low		High (4)
Water Rules (2)	$	26	$	46
CCR Rules	$	357	$	726
Air Rules (3) (5)	$	2,225	$	6,417

Fully Exposed



Operating Company	MW
APCo	1,740
CSPCo	265
I&M	995
KPCo	260
Ohio Power	2,220
	5,480

		Low		High
Replacement Generation	$	973	$	1,807
Grand Total	**$**	**5,111**	**$**	**11,173**

(1) The impact of all proposed rules continues to be under review. Project scope and technical assessments are ongoing. Any change in scope will impact the capital cost ranges.

(2) Gas plants are not included. Proposed 316 (b) will impact some gas facilities.

(3) Proposed Air Rules include: HAPs, CATR and Regional Haze Federal Implementation Plans in OK & AR

(4) Potential replacement generation for partially exposed units is $1,700MM which could offset certain estimates in the high case shown.

(5) Includes NSR Compliance.

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 3154 of 9556

Key Takeaways

- Established track record of constructing state of the art pollution control equipment
  - 9 scrubbers on 7,900 MW's between 2003-2011(12,000+ scrubbed in total)
  - 12 SCR's on 11,000+ MW's between 2001-2011
- We are supportive of Clean Air Act, but it must be under a feasible timetable
  - Grid reliability concerns
  - Resource availability concerns
- We are analyzing all the rules together to determine most efficient compliance with the rules
  - Nearly 11,000 MW's will comply without major additions

A CENTURY OF DIVIDENDS • 1910 - 2010

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

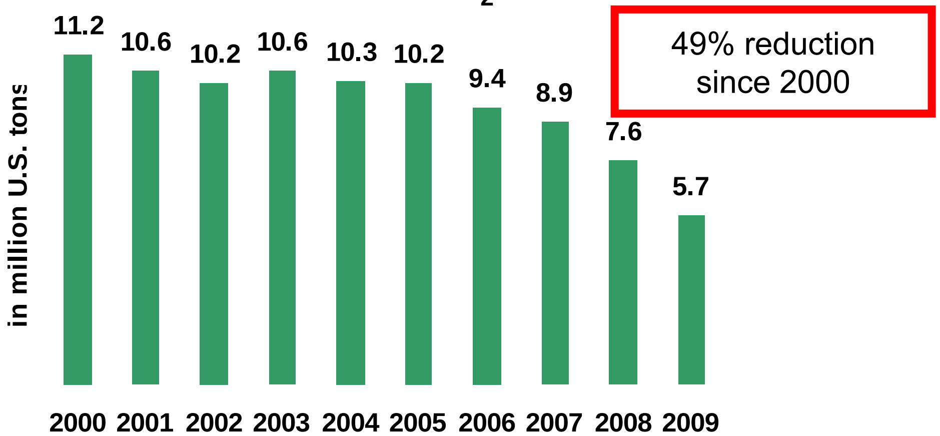
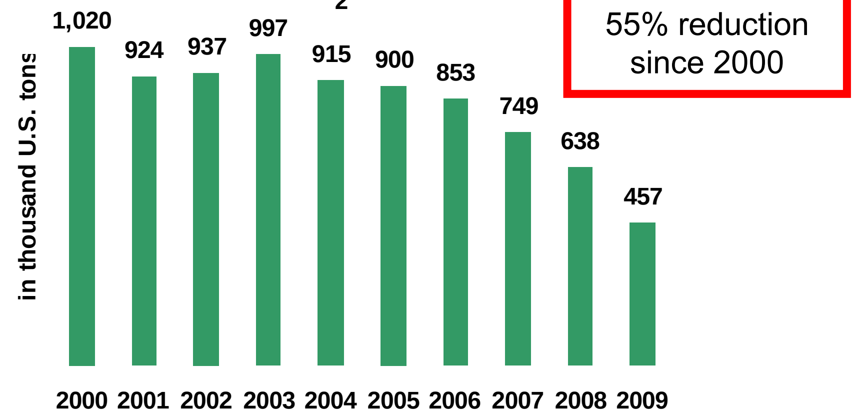
Significant Progress Has Been Made But . . .

U.S. Power Plant SO_2 Emissions

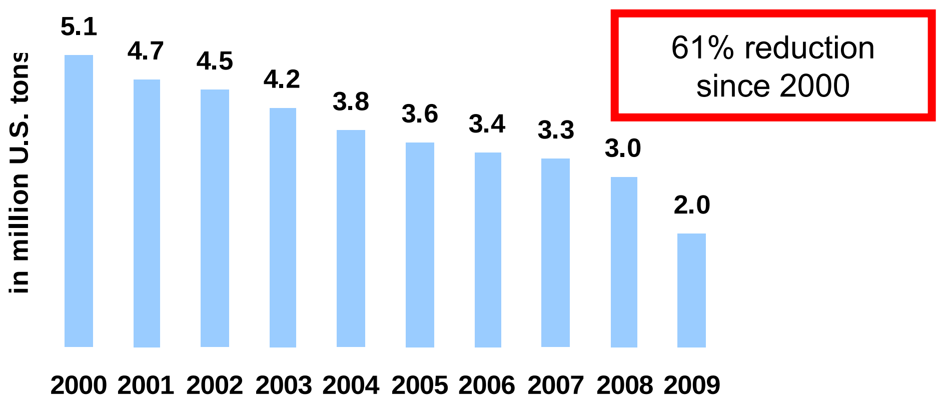


Source: EPA, 2010; Acid Rain Program

AEP SO_2 Emissions

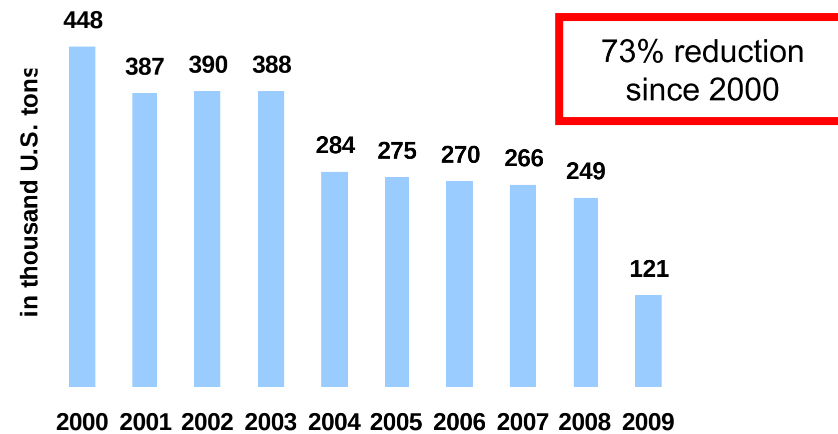


U.S. Power Plant NOx Emissions



Source: EPA, 2010; Acid Rain Program

AEP NOx Emissions



Over $5B capital invested by AEP from 2004-2010 to reduce emissions

Recent and Major Upcoming EPA Actions

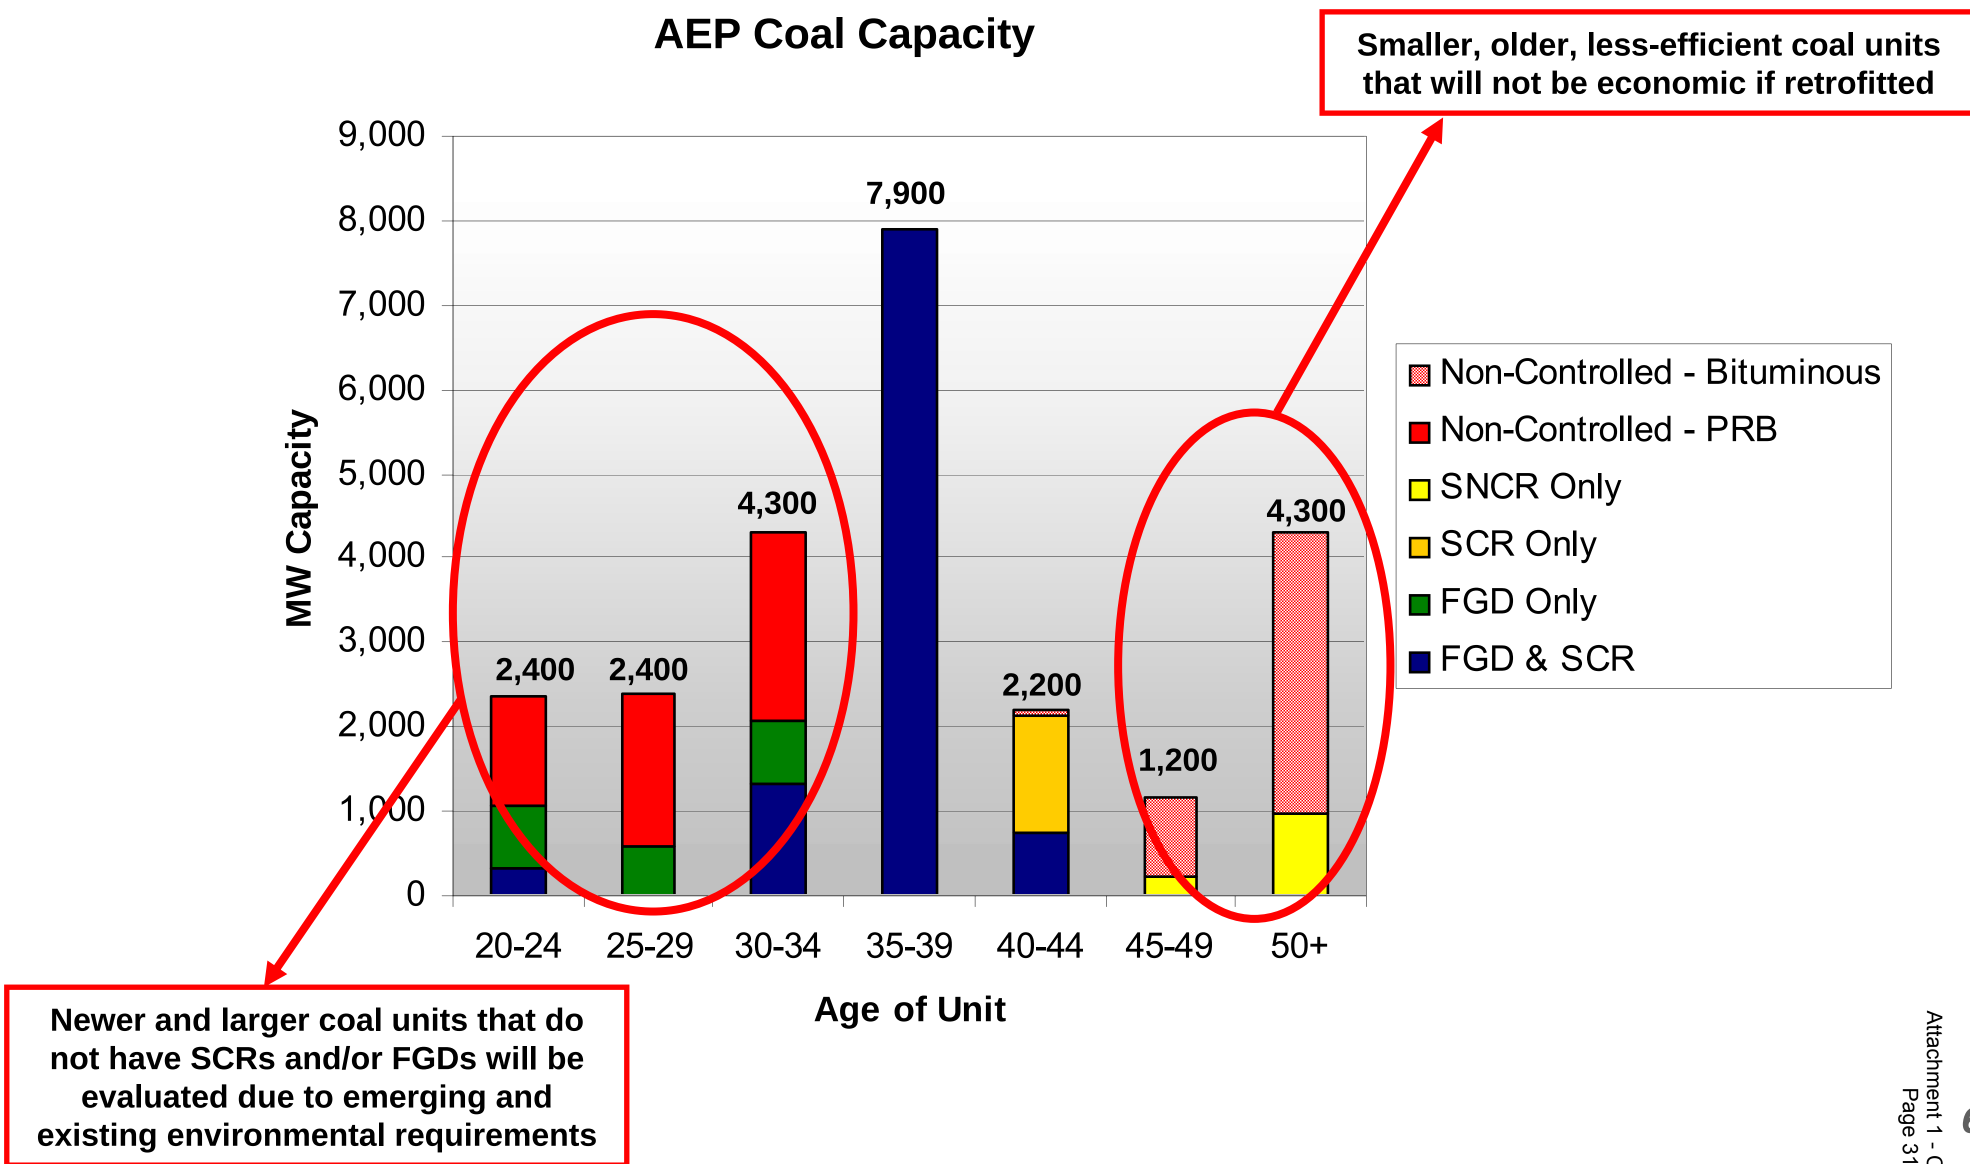
- **Transport Rule – Proposed July 2010**
  - Governs power plant emissions of SO_2 and NOx that affect downwind fine particle and ozone concentrations
  - 2012 program start date with stringent second phase beginning in 2014
  - Limited interstate trading and no use of previously banked SO_2 allowances from CAIR program
  - 2014 SO_2 limits in AEP-East states will require almost all coal units to be scrubbed or retired/use gas
  - AEP believes an extension of the compliance deadlines is essential to allow states to develop implementation plans and give companies time to install the retrofits needed to comply

- **“Coal Ash” Rule – Proposed May 2010**
  - EPA proposed two different regulatory designations:
    - Solid waste – action required by ~2017
    - “Special” hazardous waste - action required by ~2018-2020
  - AEP supports regulation of coal ash under the Subtitle ‘D Prime’ option of the RCRA
  - Cost to AEP customers estimated at $3.9 billion by 2020 to comply with Subtitle D option

- **Mercury and other Hazardous Air Pollutants (HAPs) Rule**
  - Expect proposed rule in spring 2011, finalized in late 2011; likely compliance year - 2015
  - Could require major pollution control retrofits at most U.S. coal plants (FGD, baghouses, etc.)

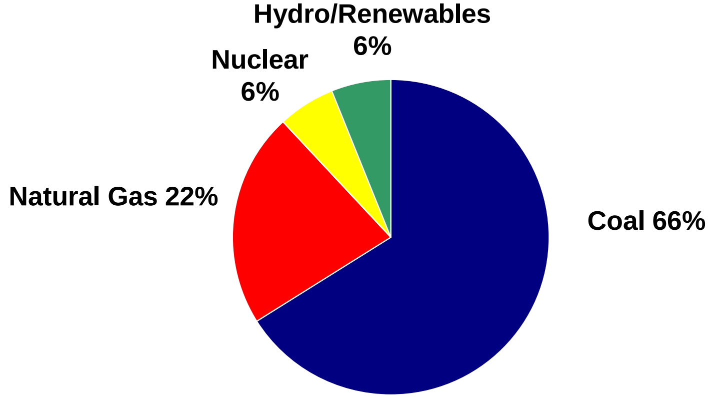
Cumulative effects of EPA proposed rules and carbon legislation/regulation are a major concern for utility resource planning

Plant Retirements are Inevitable

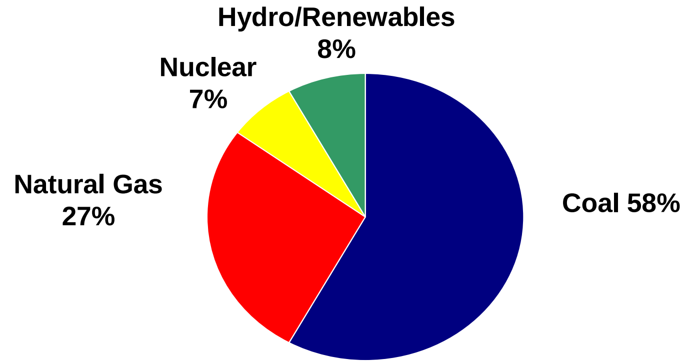


AEP's Actions

- Operate uncontrolled, older and smaller units on a seasonal basis – minimizes capital and O&M spending
- Continue pursuit of CCS to take advantage of first-mover advantages such as DOE clean coal grants
- Complete the Dresden NGCC Plant and add renewables where regulatory recovery is provided
- Complete Cook Nuclear Plant uprate
- Transition toward retirement of approximately 5,000MW of coal units
- Influence federal and state policy to benefit our customers and shareholders
- Transformation plan that includes new technologies such as gridSMART and storage



Fuel Mix - 2009



Projected Fuel Mix - 2017

Carbon Legislation Update

- **Climate Cap and Trade Legislation (American Power Act of 2010) is dead in 2010**
  - Prospects for cap-and-trade legislation after 2010 will require truly bipartisan legislation given the expected changes in Congress

- **Cap and Trade Legislation that advanced in 2010 did include some improved provisions:**
  - Significantly higher electric utility allowance allocation
  - More generous CCS bonus allowances
  - Sound domestic offset provisions
  - Price collar that should help eliminate high price spikes

- **However, there were still some problem areas:**
  - Inadequate EPA preemption language on CO_2 would lead to duplicative CO_2 regulatory measures
  - More restrictive international offsets provisions could drive up compliance costs
  - Early action credit is very limited
  - Market trading provisions are overly restrictive

- **EPA is expected to move forward on CO_2 regulation in 2011**

AEP advocates delay in EPA regulatory action on CO_2 or legislation to enable significant multi-faceted study to determine overall economic and system reliability effects

Carbon Capture and Storage

PHASE I - Validation

- World's first operating CCS facility on a coal fired power plant
- Gained competitive advantage through technology development
- Currently testing key performance parameters: auxiliary power, removal efficiency, reliability, CO_2 product quality

PHASE II - Commercialization

- Initiated in January 2010
- Designed to capture and store 1.5 million metric tons of CO_2/year
- Estimated cost of $668 million with 50% DOE funding
- Pursuing additional funding/participation
- Scheduled in service date is mid-2015
- Key activities through July 2011 include conceptual engineering, detailed cost estimate and National Environmental Policy Act process

Carbon Capture and Storage project Mountaineer Plant - New Haven, WV

Thoughts about the Energy Policy Debate

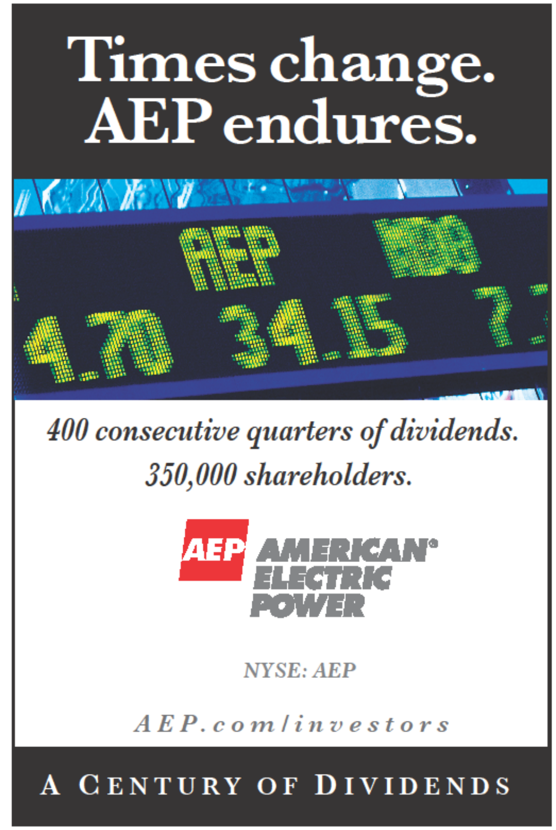
To make significant advancement in developing clean, domestic energy and reducing emissions, our nation needs a national energy policy with specific goals and guidelines, particularly as it relates to renewables, transmission and environmental regulations.

- Cap and trade
- Incentives to develop and deploy new technologies
- Timelines for emission reductions that provide a rational glide path for transitioning the existing generating fleet to a smaller environmental footprint
- Mandates to develop reasonable cost allocation methodologies to support EHV transmission
- Support for the siting of national-interest transmission lines

Trent Mesa Wind turbines in west Texas

Value Proposition

- **Current Yield Opportunity of 4.6%[1]**
  - June 10th – 400th consecutive quarterly dividend paid to shareholders
  - 50-60% payout ratio targeted
  - Dividend increased 2.44% on April 27th
- **Earnings Growth Prospects**
  - Investment in utility platform greater than depreciation level (2 - 4%)
  - With transmission opportunities (4 - 8%)



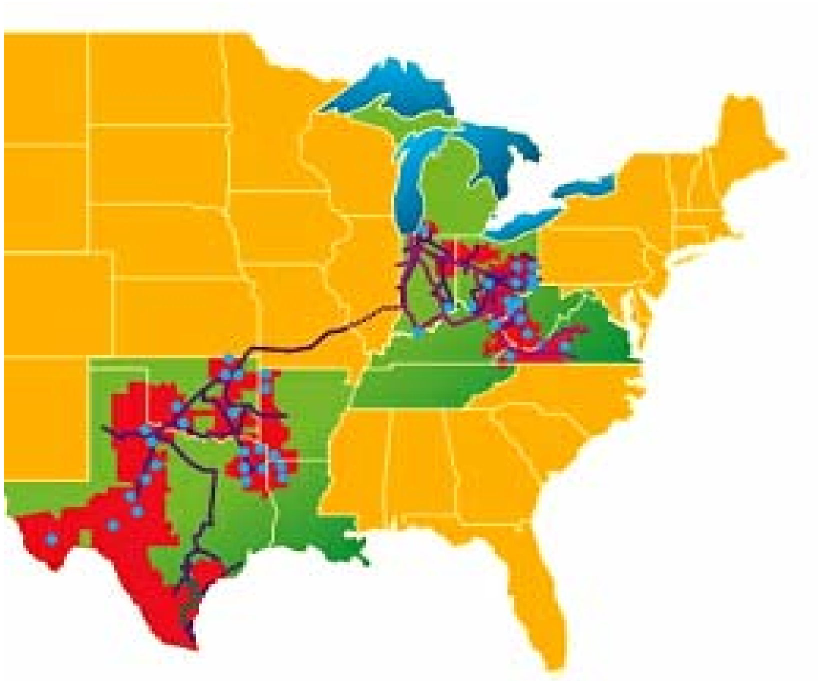
Attractive total return potential

[1] yield percentage based on AEP closing price of $36.40 on 09/09/2010

Appendix

Highly Diversified Regulated Utility Platform

5.2 million customers in 11 states



Region	# of customers
Appalachian Power (incl. TN)	1,006,000
Indiana & Michigan	583,000
Kentucky Power	175,000
Ohio & Wheeling	1,500,000
PSO (Oklahoma)	531,000

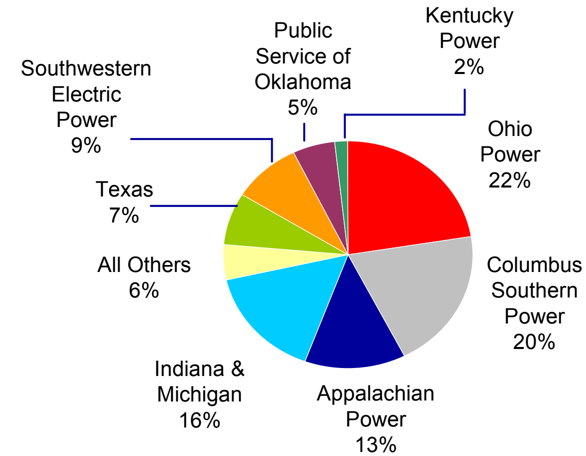
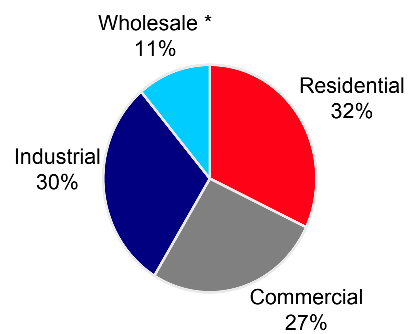
Texas	951,000

2009 Earnings Contribution

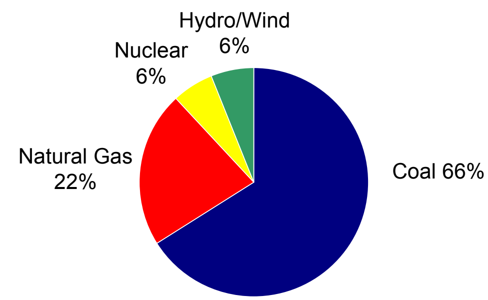


2009 Retail Load



** Wholesale includes sales to municipal and cooperative power systems, other wholesale, and other retail sales*

Fuel Mix



Transmission Opportunities

- **Electric Transmission Texas (ETT): Projects in Texas ERCOT jurisdiction**
  - In service assets $0.4 billion
  - CREZ opportunity $1.1 billion est. in service 2010 - 2013
  - Other ETT projects $1.6 billion est. in service 2010-2017
  - Framework in Texas allows for more expeditious siting and recovery
- **AEP Transmission Company (Transco): Within our existing footprint**
  - Develop new AEP-only projects within AEP's footprint
  - Reduce regulatory lag through FERC formula rates adjusted annually
- **Joint Ventures (JVs): Outside of our footprint, with Electric Transmission America (ETA) or others**
  - Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
  - Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2016
  - Robust pipeline of projects up to $15B

Electric Transmission Texas

ELECTRIC TRANSMISSION AMERICA, LLC

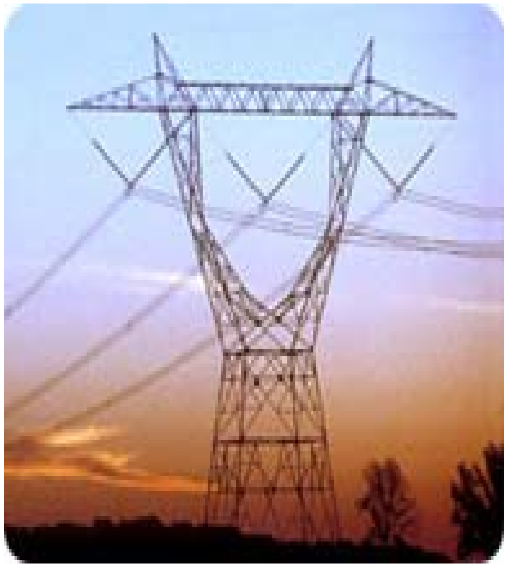
Prairie Wind Transmission
A joint venture between Westar Energy and ETA

PATH
Potomac-Appalachian Transmission Highline

Tallgrass Transmission
A joint venture between OGE Energy Corp. and ETA

AEP Transmission Company (Transco)

- Transco will be used to develop significant new on-system, AEP-owned investments
  - Greenfield Projects
  - Station Additions
  - System Upgrades
- Seven companies have been established under the AEP Transco holding company
- Next steps:
  - Obtain state utility status where required
    - No filing required in Michigan or Oklahoma
    - Filings made in OH and WV
- FERC tariff for Transco filed December 1, 2009 with rates effective and first projects in-service in 2010; Settlement discussions on-going
- Seek retail tracking mechanisms at the state level (OH, AR, VA, TX-ERCOT already secured)



765-kV Tower

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including our dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

AEP AMERICAN ELECTRIC POWER®

Coal Combustion By-Products Facts

- AEP currently owns and operates 44 earthen ash dam impoundments
  - 11 are large, high hazard potential Class I dams
  - Annual engineering inspection program of those dams
  - EPA consultants ranked all 11 as satisfactory or fair in 2009
- Two-thirds of AEP's CCBs currently use dry disposal; one-third utilizes wet disposal
- 40% of AEP's CCBs have beneficial uses
- AEP supports federal regulation of the disposal of CCBs but is strongly opposed to regulation of these materials as hazardous wastes

AEP AMERICAN® ELECTRIC POWER

Carbon Capture and Storage

Carbon Capture and Storage project located at AEP's Mountaineer Plant in New Haven, WV

PHASE I – Validation
Captured CO_2 – September 2009
Injected CO_2 – October 2009

AEP AMERICAN ELECTRIC POWER®

CO_2 Capture:

Project employs Alstom's chilled ammonia process for post-combustion CO_2 capture.

CO_2 Storage:

Compressed CO_2 is injected about 1.5 miles below the earth's surface.

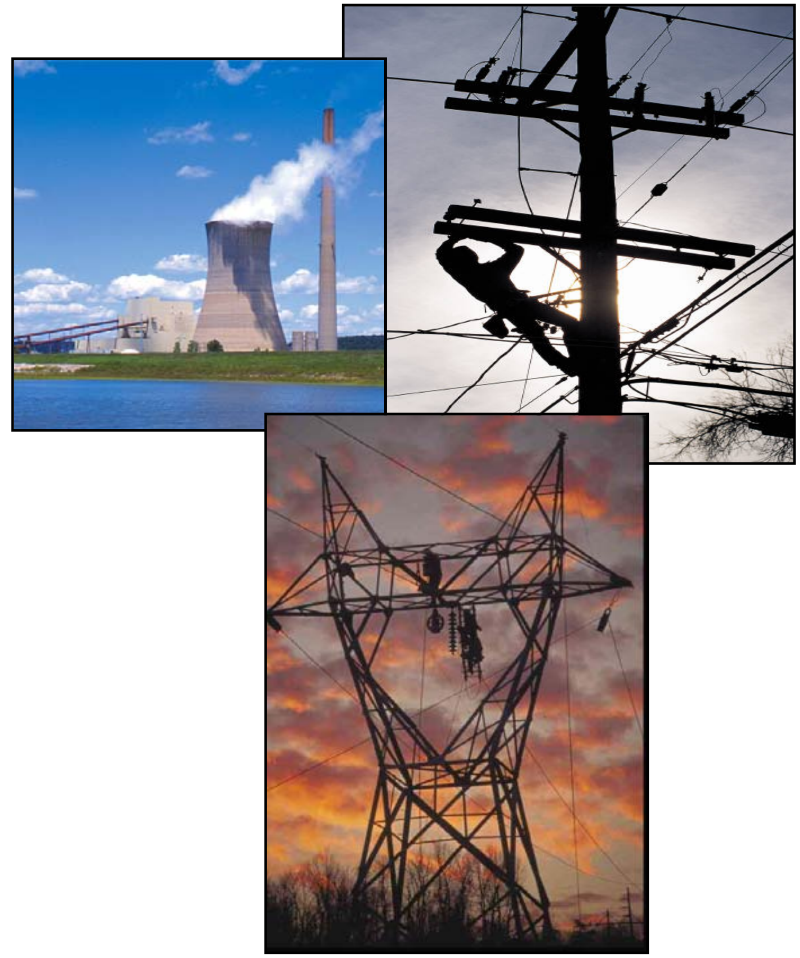
PHASE I – Validation:

20 MWe scale validation project designed to remove 90% of CO_2 from flue gas and store 100,000 metric tons/year. Currently in operation.

PHASE II – Commercialization:

235 MWe commercial scale project designed to capture and store 1.5 million metric tons of CO_2/year. Awarded 50% DOE funding. Commercial operation in 2015.

AEP Value Proposition



Regulated Utility Platform

- Diversified service territory
- Successful regulatory track record
- Value compared to regulated peer group

Earnings Growth Prospects

- Investment in utility platform greater than depreciation level (2 - 4%)
- With transmission opportunities (4 - 8%)

Yield Opportunity of 5.1%[1]

- 50-60% payout ratio targeted
- Nearly a century of dividend payments to shareholders

AEP AMERICAN® ELECTRIC POWER

[1] yield percentage based on AEP closing price of $33.14 on 05/10/2010

Net available Liquidity	**$**	**2,295**	

On July 26, 2011, we renewed and upsized the facility expiring in April 2012. The new facility has a capacity of $1.75B and expires in July 2016.

We also extended and repriced the facility expiring in June 2013. That facility now expires in June 2015.

This brings our total available capacity to $3.25B.

AEP Ohio Distribution Rate Case – Docket #11-351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%. A procedural schedule from the PUCO is pending.

Summary Rate Case Information

APCo Virginia Base Rate Case – Docket #PUE-2011-00037

On March 31,2011 APCo filed an update to its pre-biennial base rate case for recovery of generation and distribution costs requesting an increase of $75 million ($126 million total increase less $51 million deferral of depreciation increase).

In conjunction with this case, an environmental rate adjustment clause (E-RAC), a generation rate adjustment clause (G-RAC) and a renewable portfolio standard rate adjustment clause (RPS-RAC) were filed. APCo has requested that rates in the base case, E-RAC and RPS-RAC go into effect on 2/1/2012 and the G-RAC on 3/1/2012.

Summary Rate Case Information

I&M Michigan Base Rate Case – Docket # U-16801

On July 1, 2011 I&M filed a base rate case with the Michigan Public Service Commission requesting an increase of $24.5 million. Rates proposed in this filing are based on projected 2012 cost of service and will not go into effect until 2012, therefore rates will reflect a current cost of service. This filing includes revised depreciation rates to include additions since the last approved depreciation study as well as accelerated retirement of Tanners Creek Units1, 2 and 3. The requested ROE is 11.15%. In accordance with Michigan law I&M intends to implement rates, subject to refund, on January 1, 2012. An order is expected by mid-year 2012.

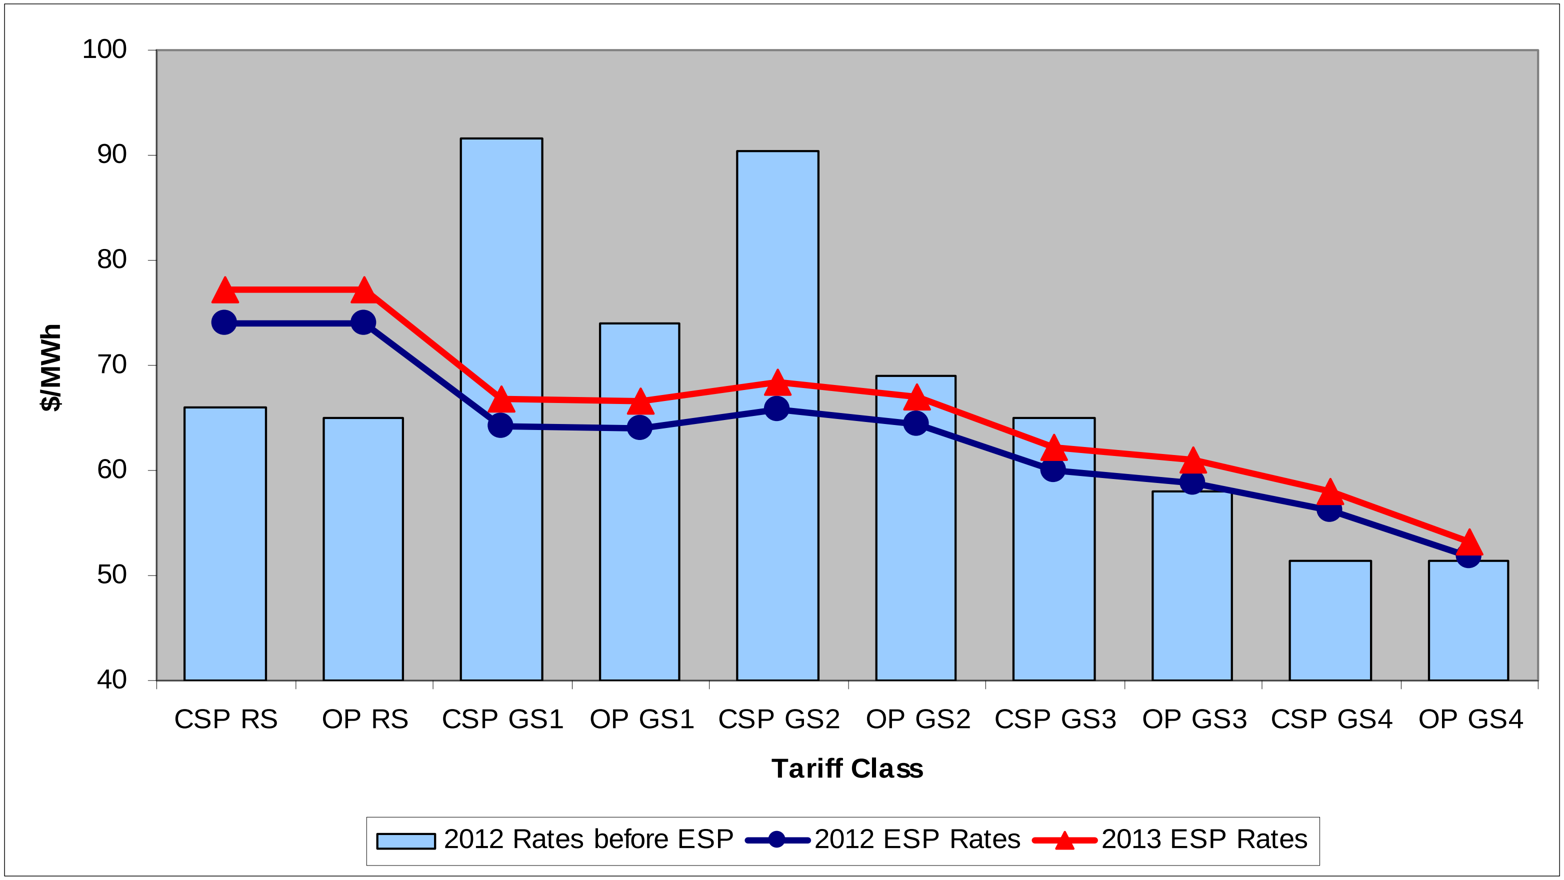
While the ESP includes a small base generation increase, the move to a market-based rate design, consistent with state policy, will result in varying impacts for different customer groups.

Price to Compare

AEP®

Proposed **SSO** Rates Redesigned To Resemble Market Pricing Structures



Rates do not reflect mitigation impact of market transition rider
2012 Rates before ESP reflect current 2011 rates for generation & transmission service, adjusted to reflect full cost 2011 fuel and environmental costs.

The realignment of rates with market should provide all customers with equivalent opportunities to shop. Additionally, since the proposed design eliminates explicit demand charges, customers should be more easily able to evaluate competitive offers. To ease the rate impact that customers will experience from the realignment, we have proposed a Market Transition Rider.

List of ESP Riders – Existing and Proposed

Line	Rate Mechanism	Abbreviation	Bypassable	Distribution	Notes
1	**Current Riders**				
2	Universal Service Fund Rider	USF	--	Yes	
3	Advanced Energy Fund Rider	AEF	--	Yes	Expired 12/31/2010

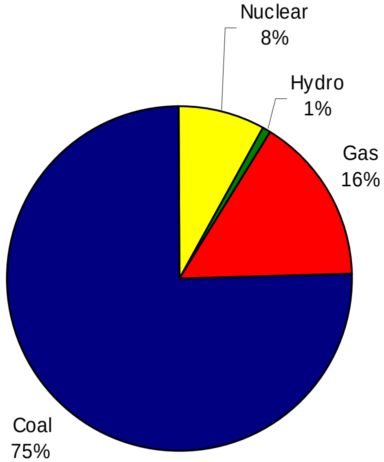
	Total MW	**528**	
	Grand Total	**5,909**	

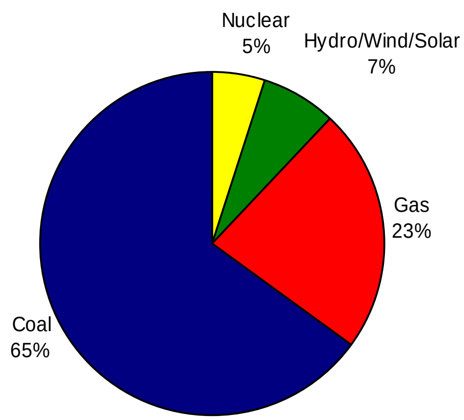
- Capacity reduction caused by retirements will create grid reliability issues particularly in the 2014-2016 time frame
- Net impact could be approx. 600 fewer jobs at AEP as well as indirect job losses affecting local vendors, contractors and service providers
- Annual lost wages of approximately $40 million
- Tax payments could decline by more than $30 million

Generation Transformation

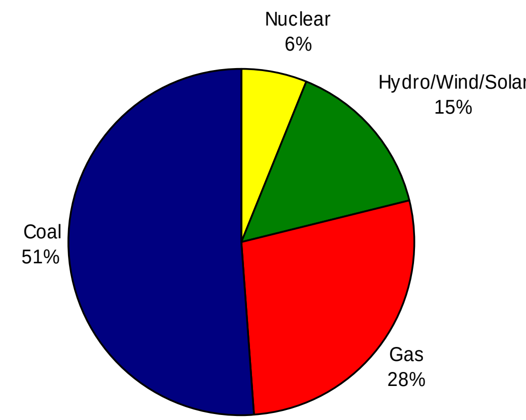
1990 AEP Generating Capacity by Fuel
37,428 total MW's



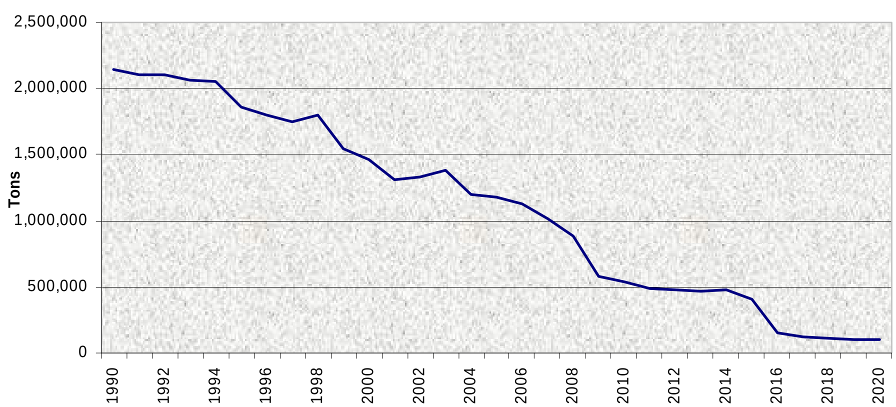
2010 AEP Generating Capacity by Fuel
39,910 total MW's



2020 AEP Generating Capacity by Fuel
37,707 total MW's



Total System NOx & SO2 (actual through 2010 and forecasted based on proposed EPA regulations)



- $7.2 billion capital invested from 1990-2010 to reduce emissions approximately 1.7 million tons
- Estimated $6-$8 billion additional capital investment from 2012-2020 for further reductions of approximately 440,000 tons

Transmission Investment Strategy

- **Near-Term Investment** – Electric Transmission Texas (ETT) secures near term investment opportunities, allowing AEP to invest in the large, growth-oriented Texas transmission market. Total capital expenditures of $3 billion with a 9.96% ROE.

- **Mid-Term Investment** – Seven wholly-owned transcos allow for expansion and growth within AEP's existing utility footprint through an efficient recovery mechanism. Will spend $210 million in 2011 and more than $350 million in 2012. ROE is in the 11.20%-11.49% range.

- **Long-Term Investment** – Joint ventures provide opportunities for longer-term growth outside of AEP's existing utility footprint with forward looking formula rates, reasonable ROEs and FERC incentives where appropriate.

Transmission has a diversified investment approach that positions it as one of the key AEP growth businesses.

Texas Transmission Growth Strategy : Near Term Investment

Ownership Structure: 50/50 (AEP/MidAmerican Energy Holding Company)

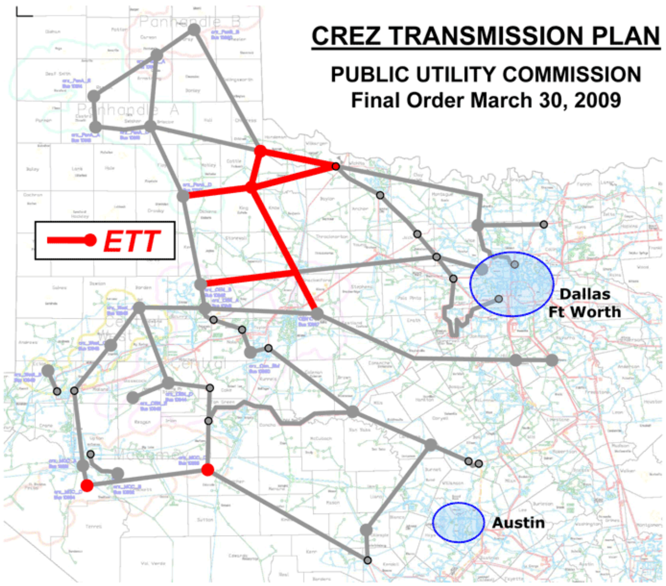
Total Project Cost: Over $3 Billion

Growing Rate Base:
Current rate base is $412 million; expected to grow as follows:
2011: $490 million
2012: $750 million
2013: $1,200 million

ETT Electric Transmission Texas

Interim TCOS filings twice per calendar year

Approved ROE: 9.96%



- **Additional Projects in the Pipeline ~$1.5 B:**
  – Approximately 500 miles of lines and 29 substations with in-service dates through 2020

- **Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.4 B:**
  – Nine new transmission lines totaling approximately 600 miles and 16 substations
  – PUCT Certificate of Convenience and Necessity (CCN) proceedings underway; 5 lines already approved

Joint Venture Strategy: Long-term

- **Strategy**: JV's secure new investment opportunities with local utilities to diversify AEP's investment outside AEP's traditional footprint while providing longer-term incremental earnings. JV projects are well-suited for FERC formula rate recovery mechanism, including potential for incentive rates.
- **Future:** Federal/regional initiatives may accelerate expansion of EHV transmission (e.g. cap-and-trade, renewable portfolio standards, inter-region wide planning). Securing first mover advantage will enable AEP to secure LT investment opportunities.
- **Future flexibility**: Passive investment opportunities can be considered and can provide entry beyond SPP/PJM/ERCOT

BEAR STEARNS GLOBAL CREDIT CONFERENCE

AEP AMERICAN® ELECTRIC POWER

May 15, 2007
New York, NY

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

AEP®

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation or regulation in Ohio, and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

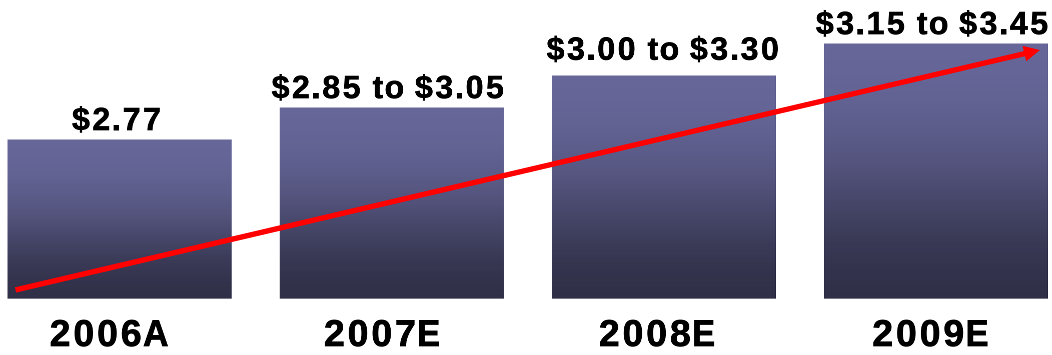
Strategic Direction

- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Develop our transmission business
- Achieve adequate returns on all assets

CONTINUED COMMITMENT TO OUR CORE UTILITY MISSION: BRING REASONABLY PRICED ELECTRIC SERVICE TO OUR CUSTOMERS, THEREBY STRENGTHENING OUR COMMUNITIES AND REWARDING OUR INVESTORS

Framework For Long-Range Performance

- 2007, 2008 & 2009 Ongoing Earnings Guidance Ranges:

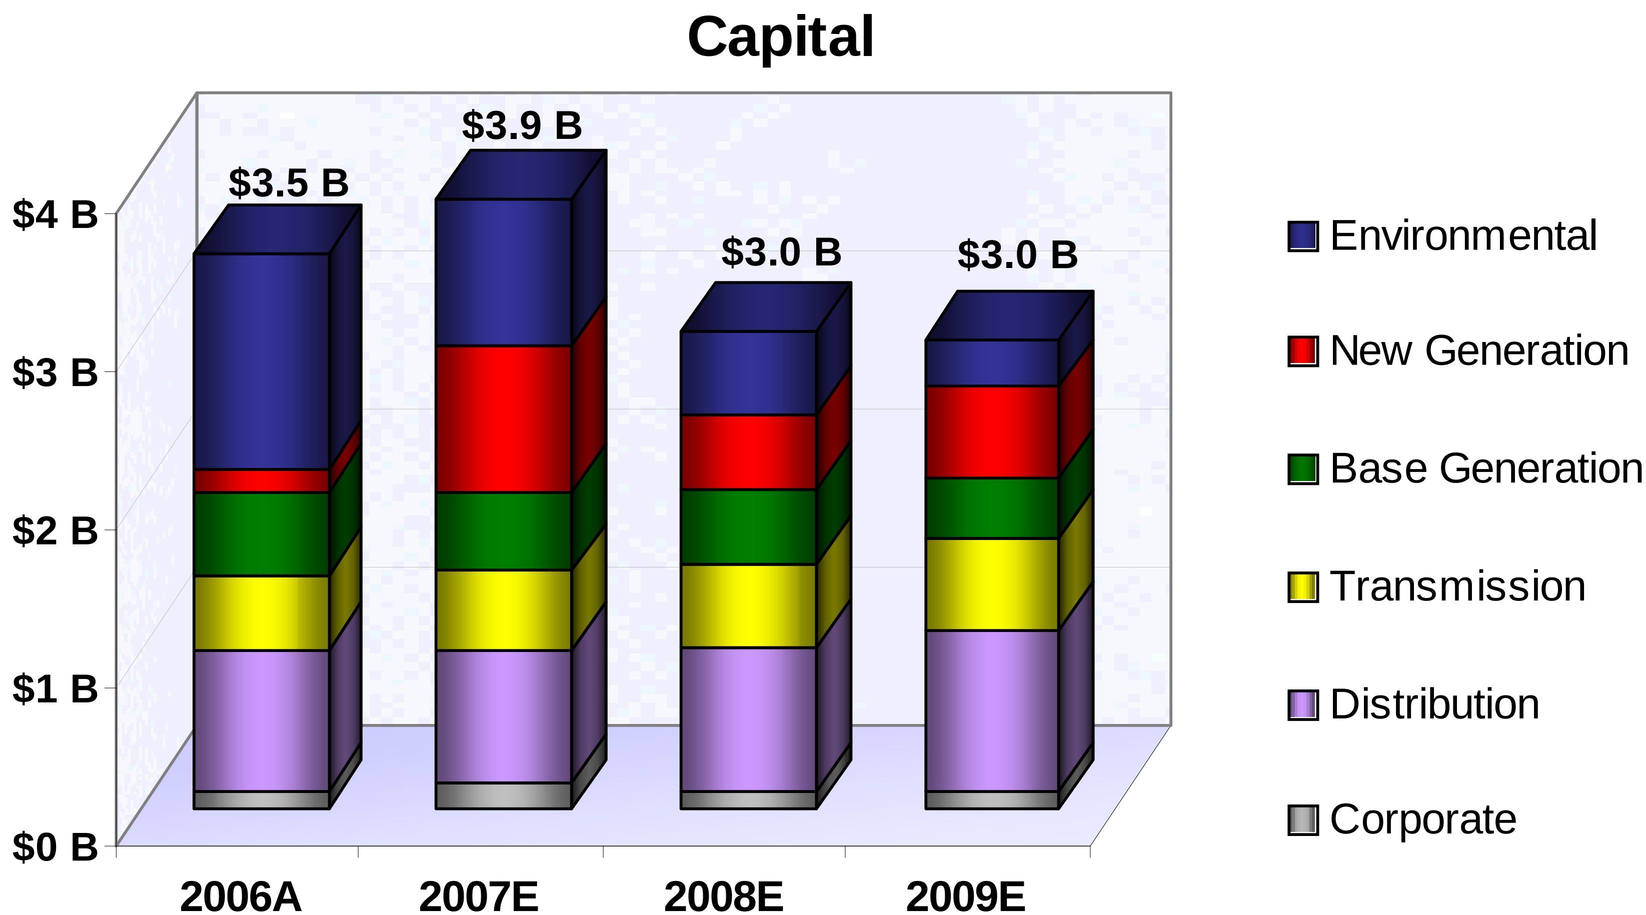


- EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in existing utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
  - Investment in new transmission opportunities
  - Seek rate recovery for new investments
  - Control costs & achieve timely rate relief

- Maintain credit ratings
  - BBB/Baa2/BBB

OUR STRATEGY REMAINS FOCUSED ON REGULATED OPERATIONS

Capital Investment Forecast



- *Total 2007 Capital Forecast of $3.9B includes purchase of Darby and Lawrenceburg Generation Stations*
- *All periods presented exclude AFUDC*

LEVEL OF CAPITAL INVESTMENT WILL BE ADJUSTED BASED ON RATE RECOVERY AND/OR CASH GENERATION

New Transmission Investment Funding Plans

- **Electric Transmission Texas LLC**
  - 40% equity / 60% debt capital structure requested at the PUCT follows Texas precedent for T&D companies' filings
  - Equity – 50% AEP / 50% MidAmerican Energy
  - AEP's 50% investment will be held at the AEP Utilities, Inc. subsidiary
  - Debt – Initially bank financing
  - Initial funding in 3Q07 after regulatory approvals

- **AEP I-765 Interstate Project**
  - Forming a joint venture with Allegheny Energy for 250 miles of the proposed 550 mile project
  - Equity – 50% AEP / 50% Allegheny
  - AEP's 50% investment will be held at the AEP Transmission Holding Company LLC subsidiary
  - Operations to commence in the second half of 2007
  - Project included in the DOE's draft National Interest Electric Transmission Corridor issued in April 2007

- **Other Transmission Projects**
  - Equity percentage of capital structure will target FERC precedents
  - Equity ownership percentage will vary by project
  - Will seek FERC transmission incentives:
    - Incentive ROE
    - Return on CWIP
    - Abandonment recovery
    - Expensing pre-construction expenses

Long-Term Debt Guidelines

Issuers:

- Issue at operating companies.

Size:

- Make transactions index eligible if possible.
- When possible, issue a size sufficient for competitive execution.

Maturity:

- Issue maturities for which the market has appetite.
- Achieve weighted average life targets for operating companies, generally between 10-15 years.

Timing:

- Will issue based on the timing of maturities and levels of short-term debt as driven by capital spending and operating cash flow.

Commitment To Credit Quality

- Maintain adequate liquidity
- Target 60% consolidated AEP debt/cap ratio
- Target long term AEP dividend payout ratio range of 55-60%

Current Ratings for AEP, Inc. & Subsidiaries

Company	Moody's	S&P		Fitch
	Senior Unsecured	Business Profile	Senior Unsecured	Senior Unsecured
AEP, Inc. [1]	Baa2	5	BBB	BBB
AEP, Inc. Short Term Rating	P2	N/A	A2	F2
APCo	Baa2	5	BBB	BBB+
CSPCo	A3	4	BBB	A-
I&M	Baa2	6	BBB	BBB

TCC	Baa2	3	BBB	BBB+
TNC	Baa1	3	BBB	A-

(1) In September 2006, S&P upgraded AEP's consolidated business profile score from 6 to 5.

Note: All rating agencies have each company on stable outlook with the exception of Fitch, which has a negative outlook on TCC.

WE ARE COMMITTED TO MAINTAINING OUR CURRENT CREDIT RATINGS

Managing Subsidiary Cash Flows

- **We monitor:**
  - AEP consolidated cash requirements
  - Utility expected rates of return and potential regulatory lags
  - Amount of capital spending and internal cash needs
  - Free cash flow – cash available after construction
  - Credit ratios

- **Dividends and equity:**
  - We pay dividends based on free cash flow and credit metrics
  - When additional equity/cash is needed, the first option is dividend reductions, then capital infusions

OUR OBJECTIVE IS TO MAINTAIN THE FINANCIAL STRENGTH AND CAPITAL MARKETS ACCESS OF THE AEP OPERATING COMPANIES

Regulatory Activity

Electric Transmission Texas (ETT) Rate Filing

- Jan. 22, 2007 – ETT filed with the PUCT for approval to operate as an electric transmission utility in Texas and to establish initial rates for ETT.
  - Requested capital structure of 60% debt / 40% equity; requested ROE of 11.25%.
  - Intervenor testimony is due May 30, 2007. Staff testimony is due June 7, 2007. Hearings are scheduled for June 26-29, 2007.
    - An order is expected Mid-2007 and operations are expected to commence in the 2nd half of 2007. Upon receipt of approvals, AEP and MidAmerican will each own a 50% interest in the joint venture.

Seams Elimination Cost Adjustment Revenues

- August 2006 – ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
  - Up to $96MM of SECA revenues could be disallowed, net of unused provisions
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both.
- Exceptions to initial decision filed Sept. 11, 2006; Replies to exceptions filed Oct. 11, 2006; Order expected by the Commission in 2007

Regulatory Activity

FERC Regional Rate Design

- ➢ The FERC instituted an investigation of PJM's zonal rate regime
  - ➢ Present regime may need to be replaced
  - ➢ Consider establishing regional rates that would compensate AEP, among others, for the regional transmission service provided by high voltage facilities they own that benefit customers throughout PJM
- ➢ July 2006 ALJ-rendered initial decision:
  - ➢ License plate rates for existing facilities <u>are not</u> just and reasonable, and must be replaced (effective April 1, 2006, when SECA ended)
  - ➢ Staff's proposal for a "Postage Stamp" rate phased in so as to limit increases in any one pricing zone to 10% per year as the best choice for replacing current rates
  - ➢ Staff's proposed rate design would produce slightly more net revenue for AEP than the original AEP/Allegheny Power proposal, if not phased in.
- ➢ April 2007 Commission decision:
  - ➢ Reaffirmed PJM's current "license plate" rate design, reversing the finding of the ALJ; each utility pays for transmission service based on the costs of transmission facilities located in the same, sub-regional zone that the utility is located in
  - ➢ Directed PJM to develop a detailed methodology to be included in PJM's tariff for determining who benefits from and therefore, who pays for new facilities below 500 kV.
  - ➢ Determined that the costs of all new PJM-planned facilities that operate at or above 500 kV should be shared on a region-wide basis.

Regulatory Activity

AEP Ohio Application For 4% Provision On Generation Rate

- On Jan. 23, 2007, CSP and OP filed an application at the PUCO to recover 2007 costs associated with additional generation-related expenditures the companies are encountering related to environmental, security and other new generation-related costs pursuant to the RSP.
- CSP and OP are requesting to implement the provision to recover $24.5MM and $8.2MM, respectively, from May 2007 through December 2007.
- Staff & Intervenor testimony due May 11, 2007; Evidentiary hearing to commence May 22, 2007.

Summary of 5-7% Long-Range Growth Components

- Energy sales growth of 1.5%
- Rate base investment
  - Generation plant purchases & build
  - Transmission – interstate & intrastate
  - Distribution
  - Reliability
- Transmission company
- Commercial operations
- Regulatory strategy
  - Achieve timely returns
  - Seek cash returns on investment during construction
  - Create & secure innovative rate plans
    - Pursue post-2008 solution in Ohio
    - Expand use of trackers
    - Formula rates

RATE BASE INVESTMENT COUPLED WITH INNOVATIVE REGULATORY PLANS WILL REDUCE LAG AND DRIVE EARNINGS GROWTH

Virginia	Yes	Annually
West Virginia	Yes	Annually

Jurisdictional Off-System Sales Sharing Summary

STATE	OSS Sharing?	Detail
Arkansas	Yes, above and below base levels	Up to $758,600 annual margin, ratepayers receive 100%. From $758,601 to $1,167,078, ratepayers receive 85%. Above $1,167,078, ratepayers receive 50%.
Indiana	No	There is $17 million built into Indiana's base rates
Kentucky	Yes, above and below base levels	Sharing only occurs after annual profits exceed $24,855,326. Between that amount and $30 million, ratepayers receive 70%. Above $30 million, ratepayers receive 60%.
Louisiana	Yes, above base levels	Up to $874,000 annual margin, ratepayers receive 100%. From $874,001 to $1,314,000, ratepayers receive 85%. Above $1,314,000, ratepayers receive 50%.
Michigan	Yes	There are two jurisdictions: St Joe and Three Rivers. For St Joe, 100% of profits are shared with ratepayers. No profits are shared in Three Rivers, including base rates. St Joe represents 67% of the Michigan market.
Ohio	No	n/a
Oklahoma	Yes	75% of profits are shared with ratepayers.
Tennessee	No	n/a
Texas (SPP)	Yes	90% of profits are shared with ratepayers.
Virginia	Yes	Factored into base rates at a fixed rate.
West Virginia	Yes	100% of profits passed back to ratepayers through the Expanded Net Energy Cost (ENEC) clause.

Texas Central & Texas North Companies Wires Case

On November 9, 2006, TCC & TNC filed applications with the PUCT to raise base rates they charge to Retail Electric Providers (REP) serving end-use electricity customers in their service territories. On April 3, 2007, TCC and TNC submitted revised rate increase requests of $69.9MM and $22MM, respectively. Requested increases include the expiration of merger-related billing credits that have been in place since 2000, totaling $20MM and $6.2MM for TCC and TNC, respectively. (TCC Docket #33309, TNC Docket #33310)

Summary Rate Case Information

PSO Rate Proposal

On November 21, 2006, Public Service Oklahoma filed an application with the Oklahoma Corporation Commission to increase base rates by $49.6 million to recovery investments already made and costs incurred. The request represents a 4% overall increase (including fuel). The filing also includes a proposal to adopt an annually adjusted rate mechanism, which includes a return on CWIP. The formula rate would adjust rates, up or down, if PSO earns above or below an approved bandwidth around the authorized ROE. (Case #200600285)

AEP Texas Central Company

AEP Texas Central Company (TCC)

(organized in Texas in 1945) is engaged in the transmission and sale of power to affiliated and non-affiliated entities and the distribution of electric power to approximately 738,000 retail customers through REPs in southern Texas, and (to a limited extent) in supplying and marketing electric power at wholesale to other electric utility companies and market participants. Under the Texas Act, TCC completed its exit from the generation business through the sale of all of its generation assets. At December 31, 2006, TCC had 1,224 employees. In addition to its AEP System interconnections, TCC is a member of ERCOT.

Appalachian Power

President and Chief Operating Officer:
Dana Waldo

Appalachian Power Company (APCo)

(organized in Virginia in 1926) is engaged in the generation, transmission and distribution of electric power to approximately 949,000 retail customers in the southwestern portion of Virginia and southern West Virginia, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities and other market participants. APCo covers a service territory of 19,049 square miles, and at December 31, 2006, APCo and its wholly owned subsidiaries had 2,461 employees. Among the principal industries served by APCo are coal mining, primary metals, chemicals and textile mill products. In addition to its AEP System interconnections, APCo also is interconnected with the following unaffiliated utility companies: Carolina Power & Light Company, Duke Energy Corporation and Virginia Electric and Power Company. APCo has several points of interconnection with TVA and has entered into agreements with TVA under which APCo and TVA interchange and transfer electric power over portions of their respective systems. APCo is a member of PJM.

Columbus Southern Power Company (CSPCo)

(organized in Ohio in 1937, the earliest direct predecessor company having been organized in 1883) is engaged in the generation, transmission and distribution of electric power to approximately 742,000 retail customers in Ohio, and in supplying and marketing electric power at wholesale to other electric utilities, municipalities and other market participants. CSPCo covers a service territory of 3,701 miles and at December 31, 2006, CSPCo had 1,233 employees. CSPCo's service area is comprised of two areas in Ohio, which include portions of twenty-five counties. One area includes the City of Columbus and the other is a predominantly rural area in south central Ohio. In addition to its AEP System interconnections, CSPCo also is interconnected with the following unaffiliated utility companies: CG&E, DP&L and Ohio Edison Company. CSPCo is a member of PJM.

PRINCIPAL INDUSTRIES SERVED:

- Food processing
- Chemicals
- Primary metals
- Fabricated metals
- Rubber and plastic products

Total Customers:

• Residential	662,000
• Commercial	76,000
• Industrial	4,000
Total	742,000

Generating Cap	3,708 MW

Generating Capacity by Fuel Mix:

• Coal:	63.2%
• Natural Gas	36.1%
• Hydro:	0.7%

Transmission Miles	2,400
Distribution Miles	17,200

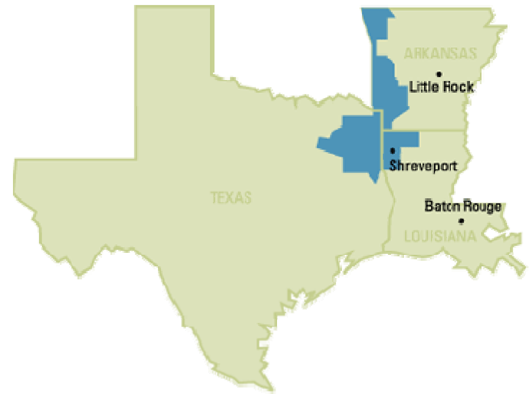
Southwestern Electric Power

President and Chief Operating Officer: Venita McCellon-Allen



Southwestern Electric Power Company (SWEPCo)

(organized in Delaware in 1912) is engaged in the generation, transmission and distribution of electric power to approximately 456,000 retail customers in northeastern Texas, northwestern Louisiana and western Arkansas, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities, rural electric cooperatives and other market participants. SWEPCo has a service territory of 25,000 square miles and at December 31, 2006, SWEPCo had 1,545 employees. The territory served by SWEPCo also includes several military installations, colleges, and universities. In addition to its AEP System interconnections, SWEPCo is also interconnected with CLECO Corp., Empire District Electric Co., Entergy Corp. and Oklahoma Gas & Electric Co. SWEPCo is a member of SPP.

PRINCIPAL INDUSTRIES SERVED:

Oil and gas extraction
Paper products
Chemicals
Food processing
Primary metals

Total Customers:

• **Residential**	**386,000**
• **Commercial**	**62,000**
• **Industrial**	**7,000**
• **Other**	**1,000**
Total	**456,000**

Generating Capacity	**4,487 MW**

Generating Capacity by Fuel Mix:

- **Coal/Lignite: 60%**
- **Natural Gas: 40%**

Transmission Miles	**3,500**
Distribution Miles	**19,300**

Building Tomorrow's Transmission Infrastructure

Lisa Barton

Vice President – Transmission Strategy

American Electric Power

January 7, 2010

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants including our ability to restore I&M's Donald C. Cook Nuclear Plant Unit 1 in a timely manner, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of the recently passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events. AEP and its Registrant Subsidiaries expressly disclaim any obligation to update any forward-looking information.

A Changing Landscape

- National energy policy will inevitably drive significant changes in the nation's supply portfolio
- A national Renewable Portfolio Standard and CO_2 legislation will impact all states, and the ability to effectively comply with these policies is reliant on a transmission system built to adapt to changes.
- Renewable resources pose significant operational challenges. A robust and flexible transmission system is critical to making sure those challenges do not jeopardize reliability to customers.
- Large scale "backbone" transmission takes several years to permit and construct – without transmission being built **<u>first</u>**, much of the planned renewable generation will not be developed.
- AEP believes that development of an interstate backbone transmission grid – analogous to the interstate highway system – is necessary to meet our nation's energy goals.

Today's Challenge

- **Why Change Now?**
  - Dramatic shifts in generation profile.
  - Electrically isolated large scale renewables need to be interconnected and efficiently delivered.
  - Environmental requirements are likely to force retirement of large fossil units, potentially at a magnitude never before faced in this country.
  - The search for a "bright line" between reliability and economic transmission projects is increasingly artificial.
- **What Needs to Change?**
  - Planning for a new energy supply paradigm.
  - Cost allocation principles to encompass a strategic expansion of transmission.
  - Siting processes which are aligned with state, regional and national energy policy objectives.
- **"What got us here won't get us there."**

AEP AMERICAN ELECTRIC POWER

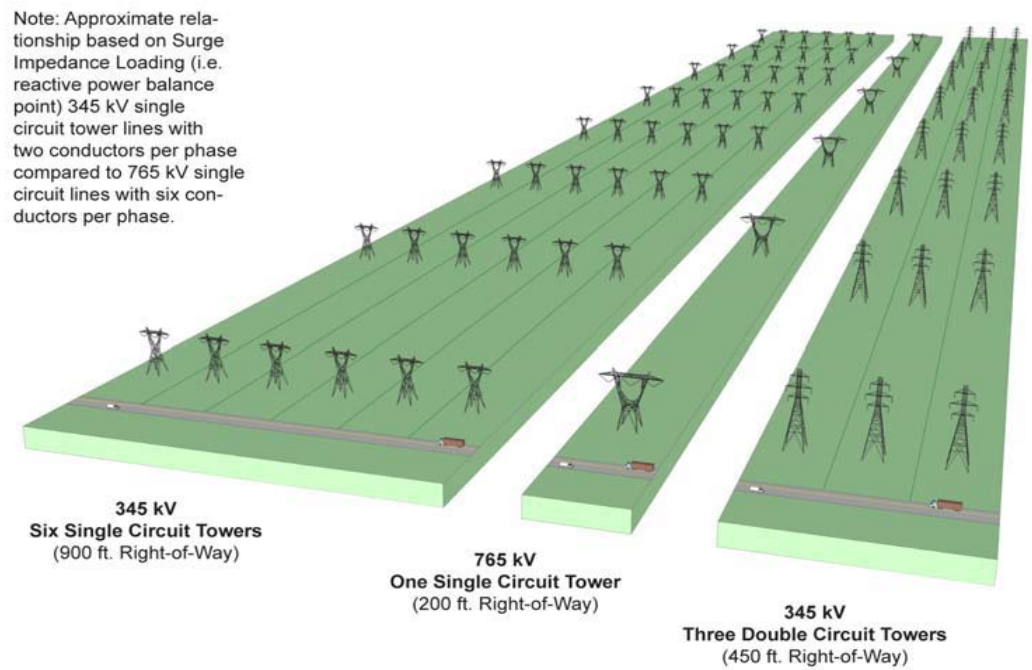
Planning & Building Smarter

- Advance a long-term, strategic "system-based" approach to transmission planning.
- Transmission grid should be adaptable to address:
  - Policy driven goals to interconnect and ensure efficient deliverability of renewables.
  - Facilitate the retirement of aging and expensive resources.
  - Regional availability of resources and operational requirements of the grid.
- Extra-high voltage (EHV) planning is needed both "within and between" traditional planning regions, with:
  - Consistent planning criteria applied to EHV transmission.
  - Regional and inter-regional planning efforts and consensus on transmission development goals.
  - Longer time horizons to ensure development of strategic as opposed to "band-aid" solutions.

A strategically planned EHV grid can provide the required transmission capacity and operating flexibility while drawing on diverse resources that will insulate consumers from resource shortages and catastrophic events.

Planning & Building Smarter

- Use higher voltage and higher capacity lines to make best use of new rights-of-way.
- Use higher voltage lines and more efficient equipment to reduce energy losses.
- Apply “Smart Grid” technologies to the transmission system.



Siting transmission projects will become increasingly difficult into the future. We need to minimize our footprint while maximizing the benefits to the system.

AEP AMERICAN ELECTRIC POWER

Fair Allocation of Costs & Benefits

- RTOs and planning authorities need to ensure cost allocation structures support systems that are robust, efficient and capable of meeting their long term energy needs.

- "Beneficiary based" models which consider a line by line cost benefit analysis for EHV are not consistent with the need to build a robust backbone grid to meet national energy policy goals.

  - These fail to capture the full system benefits afforded by such facilities.
  - Determination of "who benefits" is complex, can change over time, and is often met with objection and debate.

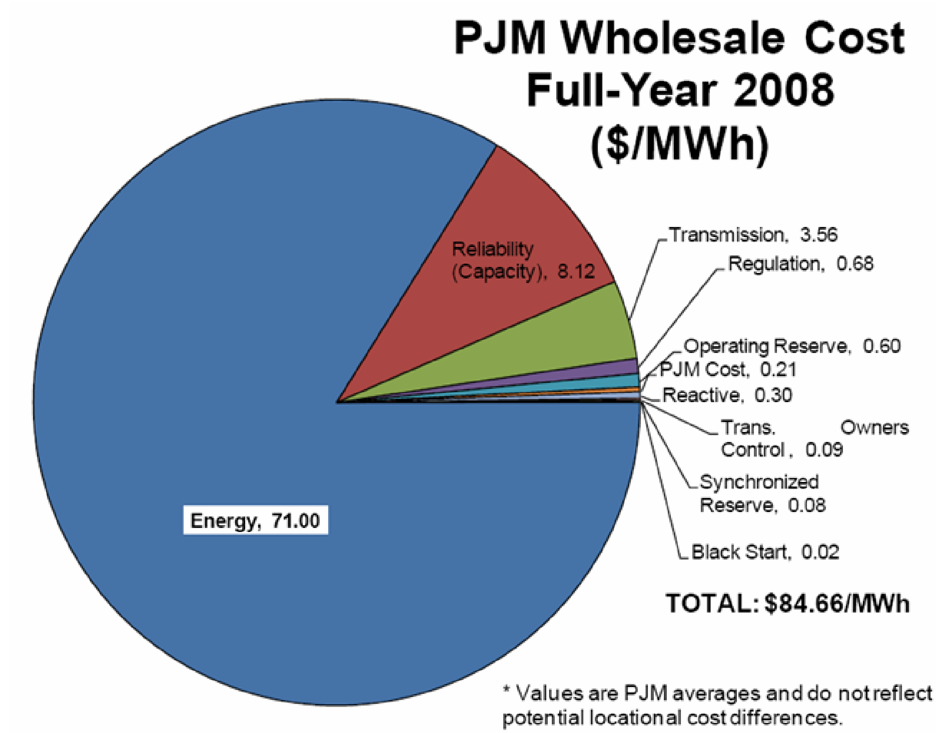
- We have seen that broad based regional cost allocation methodologies have resulted in projects that provide regional benefits. Similarly, interconnection-wide cost allocation can result in a system that provides inter-regional benefits.

- Consider all benefits – electrical and economic - of large-scale transmission development:

  - Lowered emissions.
  - Generation diversity and reserve sharing.
  - Loss savings.
  - Reduction of congestion and production cost savings.
  - Avoidance or deferment of incremental upgrades.
  - Enhanced reliability and national security.

Fair Allocation of Costs & Benefits

- Transmission represents a very small part of the customer bill.
- Substantial investments in transmission have a small impact.
- Transmission expansion facilitates lower delivered energy costs due to:
  - Increased competition and less constrained markets.
  - Reduced energy losses.
- Studies often show transmission can pay for itself, provided costs are broadly allocated.



"Least Cost" is rarely "Best Value"

Development Needs

To make significant strides in developing clean, domestic energy and reducing emissions, we as a nation need:

- National energy policy with specific goals and guidelines, particularly as it relates to renewables and CO_2.
- Federal planning authorities that can mandate RTOs, utilities, or other planning entities to develop long-term, interconnection-wide transmission plans that will facilitate national energy goals.
- Mandates to develop reasonable regional and interregional cost allocation methodologies to support EHV transmission that is in the national interest.
- Support for the siting of national-interest transmission lines where necessary.
- Benchmarks to check progress of plans and ensure timely construction.

AEP's Transmission Investment Opportunities

- <u>AEP Transmission Company (Transco)</u>: Within our existing footprint
  - Provides opportunity to:
    - Develop new AEP-only projects within AEP's footprint
    - Reduce regulatory lag through FERC formula rates adjusted annually
    - Enhance access to capital
    - First year investment opportunity--$118MM
- <u>Electric Transmission Texas (ETT)</u>: Projects in Texas ERCOT jurisdiction
  - Framework in Texas allows for more expeditious siting and recovery
  - $840MM of projects est. in service 2010-2013 with $236MM spent as of 9/30/2009
  - ETT's opportunity could reach $3.1B within the next decade
- <u>Joint Ventures (JVs)</u>: Outside of our footprint, with Electric Transmission America (ETA) or others
  - Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
  - State and future Federal RPS will provide enhanced investment opportunities
  - Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2016
  - Robust pipeline of projects up to $15B

AEP AMERICAN ELECTRIC POWER

AEP Transmission Company (Transco)

- Transco will be used to develop significant new on-system, AEP-owned investments
  - Greenfield Projects
  - Station Additions
  - System Upgrades

- Next steps:
  - Obtain state utility status where required, and join PJM and SPP as transmission owners
  - FERC tariff for Transco filed December 1, 2009 with rates effective and first projects in-service in 2010
  - Seek retail tracking mechanisms at the state level (OH, LA, VA, TX-ERCOT already secured)

765-kV Tower

AEP AMERICAN ELECTRIC POWER

JV Strategy – Nationwide Grid Expansion

ACTIVE PROJECTS

SPP

Prairie Wind — COD: 2013-14
- 110 miles of 765 kV
- Partners: Westar (50%) & MidAmerican Energy (50%)
- Estimated Cost: $400 million
- ROE: 12.8%

Tallgrass — COD: 2013-14
- 170 miles of 765 kV
- Partners: OG&E (50%) & MidAmerican Energy (50%)
- Estimated Cost: $500 million
- ROE: 12.8%

ERCOT

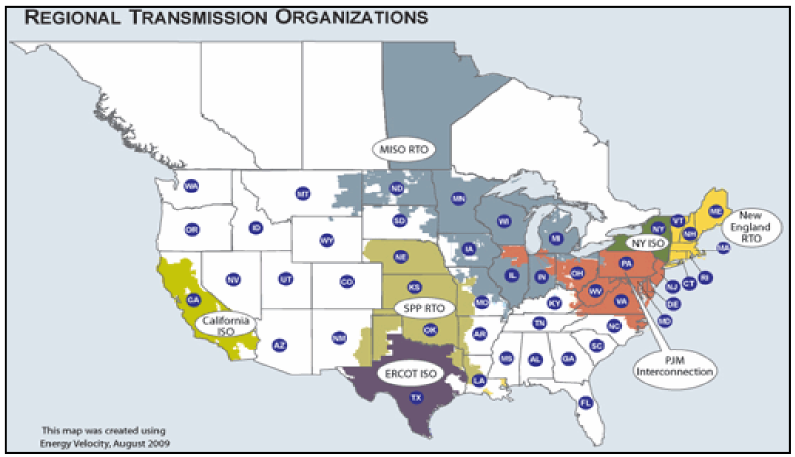
ETT — COD: 2010-2013
- 345 kV ERCOT Expansion
- Partner: MidAmerican Energy (50%)
- Estimated Cost: $600 million+
- ROE: 9.96%

PJM

PATH-WV — COD: TBD
- 275 miles of 765 kV
- Partner: Allegheny Energy (50%)
- Estimated Cost: $1.2 billion
- ROE: 14.3%

PJM/MISO

Pioneer — COD: 2015
- 240 miles of 765 kV
- Partner: Duke Energy (50%)
- Estimated Cost: $1 billion
- ROE: 12.54%



FUTURE DEVELOPMENT

SMARTransmission Study
- Interregional EHV & Wind Integration Study
- Sponsors: ATC, Exelon, MidAmerican Energy, Northwestern Energy, Xcel Energy

SPP

SPP EHV Overlay
- Regional Expansion of 765 kV Backbone

ERCOT

ETT — COD: various
- Additional CREZ spend of ~ $1 billion+ (COD 2012-2013, subject to a 6-month routing approval)
- Other Projects Pending Transfer of ~ $1.5 billion (COD 2010-2017)

PJM

PJM Expansion
- Regional Expansion of 765 kV, 500 kV and 345 kV systems

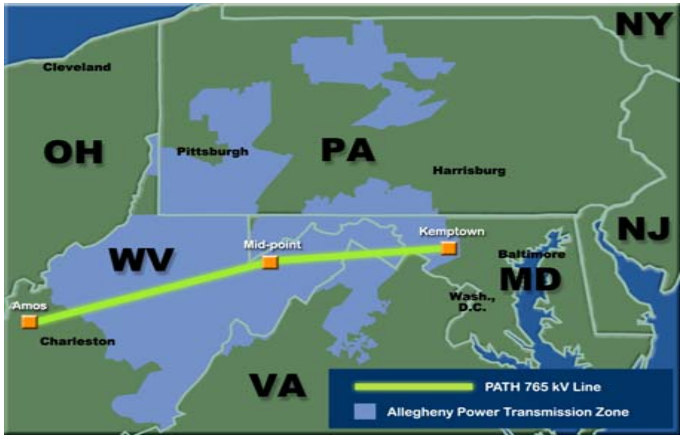
PJM/MISO

EHV Michigan/Ohio
- 700 miles of Proposed 765 kV

AEP AMERICAN ELECTRIC POWER

EHV Transmission in PJM: PATH

Project Description: 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Overview

- FERC order issued on February 29, 2008 approving:
  - Cash return on CWIP and 14.3% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect, and
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents
  - Rates went into effect March 1, 2008

Key Challenges

- Estimated completion date: 2014 +, pending the outcome of the 2010 PJM Regional Transmission Expansion Plan (2010 RTEP).
- Obtaining a CPCN in West Virginia, Virginia and Maryland. CPCN applications in West Virginia and Maryland are pending because their procedural schedule allows the consideration of the 2010 RTEP. A new application in Virginia is expected in the third quarter of 2010 after consideration of the 2010 RTEP.
- Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million

Potomac-Appalachian Transmission Highline

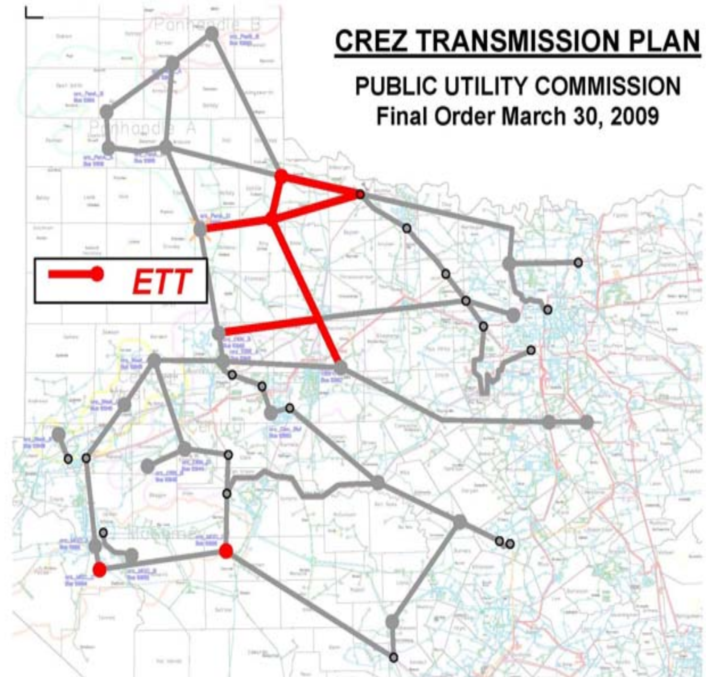
Texas CREZ Project

Overview

- On February 26, 2009, PUCT ordered its staff to stage the development of CREZ transmission lines.
- Staging to occur in separate docket and consider timing of wind projects and congestion.
- PUCT established 2 categories based on priorities. ETT has no first priority lines.
- PUCT issued a final order assigning transmission service providers on March 30, 2009.
- ETT's share of CREZ investment is approx. $840MM of $4.9B total of which AEP's ownership is 50%.
- The filing calls for completion of the plan by 2013.

Next Steps

- Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in 2010.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

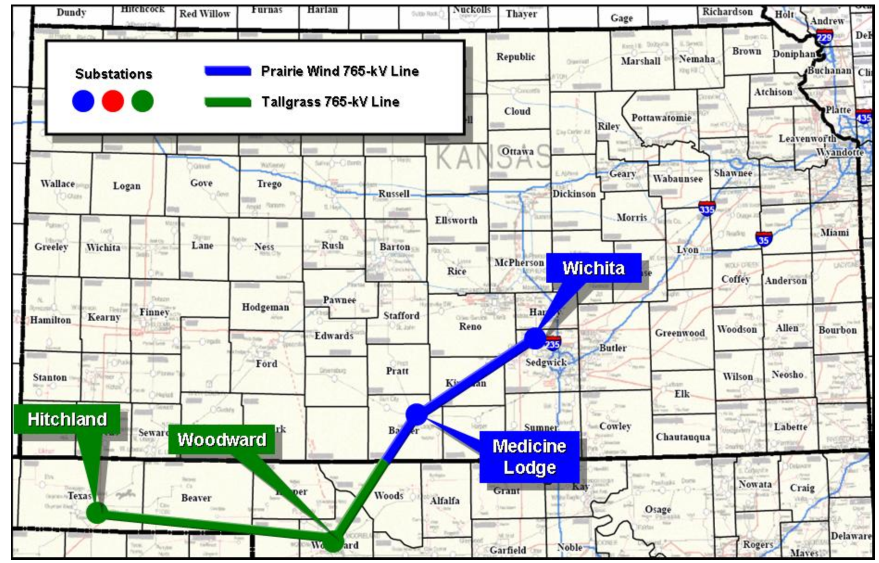
Electric Transmission Texas

AEP AMERICAN ELECTRIC POWER

Prairie Wind Transmission, LLC

Overview

- In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
- The project is expected to cost approximately $400 million and be in-service by 2013 and was approved by the KCC on July 24, 2009.
- PWT is a 50/50 JV that is proposing to build approximately 110 miles of 765-kV lines extending from Wichita, KS.
- The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect, and
  - Recovery of all prudently incurred development and construction costs if the project is abandoned



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

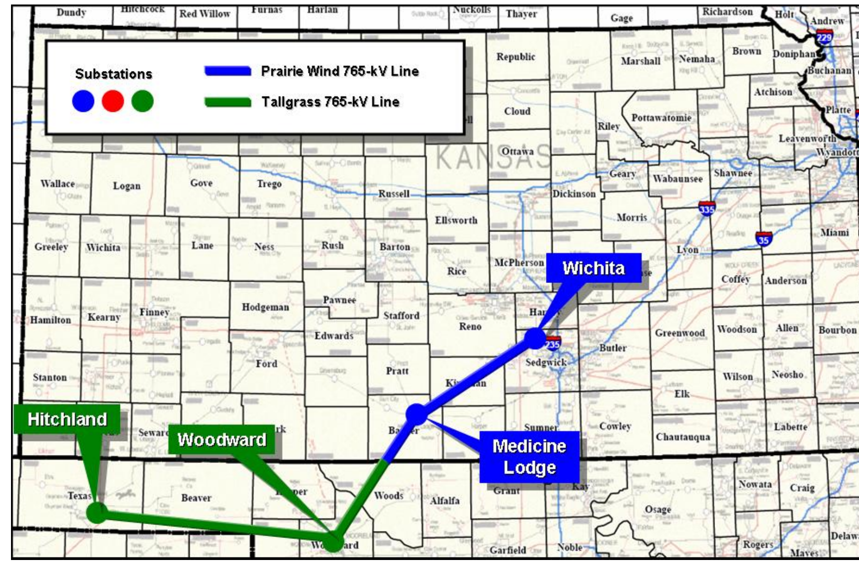
Key Challenges

- RTO Approval
- Siting

Tallgrass Transmission, LLC

Overview

- In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
- TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines in Oklahoma
- The project will promote wind development in the western half of Oklahoma.
- Project is expected to cost approximately $500 million and be in-service by 2013-14.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
    - Cash return on CWIP and 12.8% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

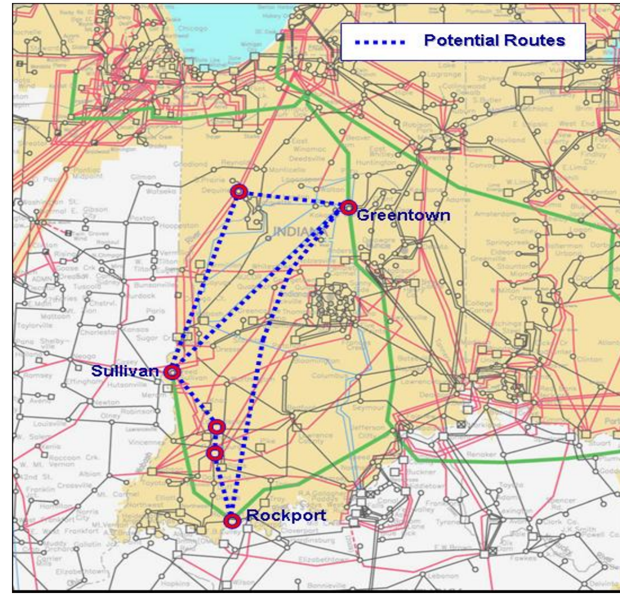
Key Challenges

- RTO Approval
- Siting

Pioneer Transmission, LLC

Overview

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
- The project will improve the reliability of the nation's transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, protect national security and expand opportunities for new generation, including renewables.
- The project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP's ownership of the joint venture is 50%.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect, and
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PT or its parents.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

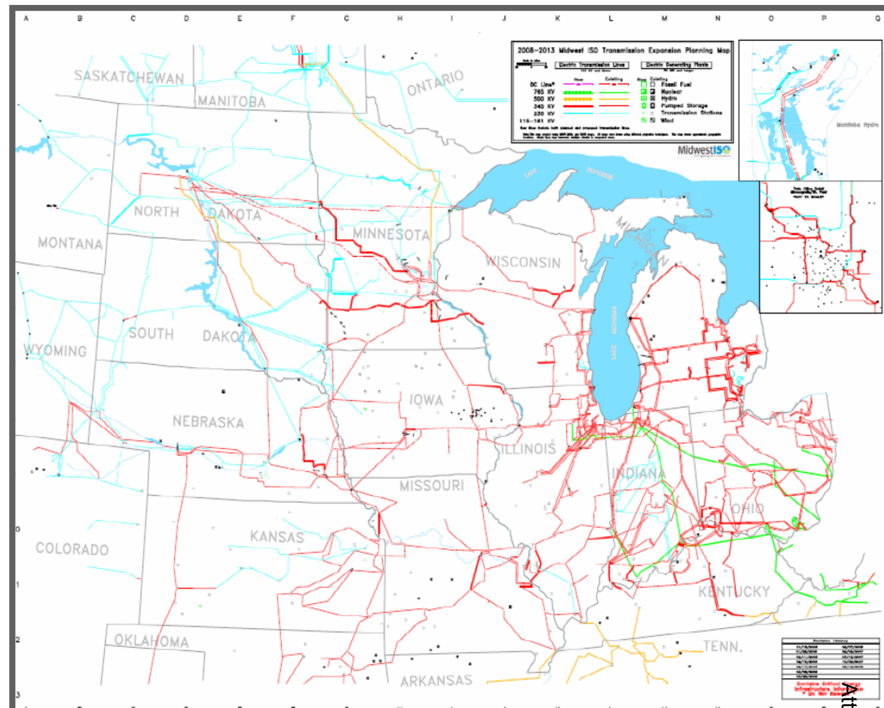
Key Challenges

- RTO Approval (PJM & MISO) and Cost allocation which enables the development of "system solutions"
- Siting

Upper Midwest EHV Development—SMART Study

Project Description: a comprehensive study of the transmission needed in the Upper Midwest to support renewable energy development and transporting that energy to consumers throughout the study area. The SMART Study will develop EHV overlay alternative that ensures reliable service for sponsors' communities, is environmentally friendly, and supports national energy policy.

- Announced SMARTransmission Study in August 2009.
  - Sponsors of the Study include ETA, Exelon, ATC, Northwestern, MidAmerican Energy Company, and Xcel
  - Study due to be completed end of 1st Qtr 2010 and will include "overlay" options and quantification of economic benefits.
- Next Steps
  - Investment Structure
  - Obtaining cost allocation between states, PJM, and MISO
  - RTO Technical Approvals
  - Favorable 205 Order including incentives
- Mitigation
  - Collaborative approach involving impacted utilities, RTOs, commissions and others



Primary Focus Areas: North Dakota – South Dakota – Iowa – Nebraska – Indiana – Ohio – Illinois – Minnesota – Wisconsin – Michigan

AEP AMERICAN ELECTRIC POWER

Key Investment Attributes

AEP is the Leader

- Largest US transmission footprint
- Interstate EHV transmission highway vision
- National renewables transmission strategy

Quality Investments

- 4 FERC-approved ($3.0 billion)
- AEP Transco (2010 Investment: $118 million)
- Independent ERCOT transmission JV company (up to $3.0 billion)
- Robust pipeline of future high-voltage transmission projects (up to $15 billion)

Attractive Returns

- FERC incentive rates (12.5-14.3%)
- Strong cash flow with CWIP
- Robust long-term annual earnings growth potential

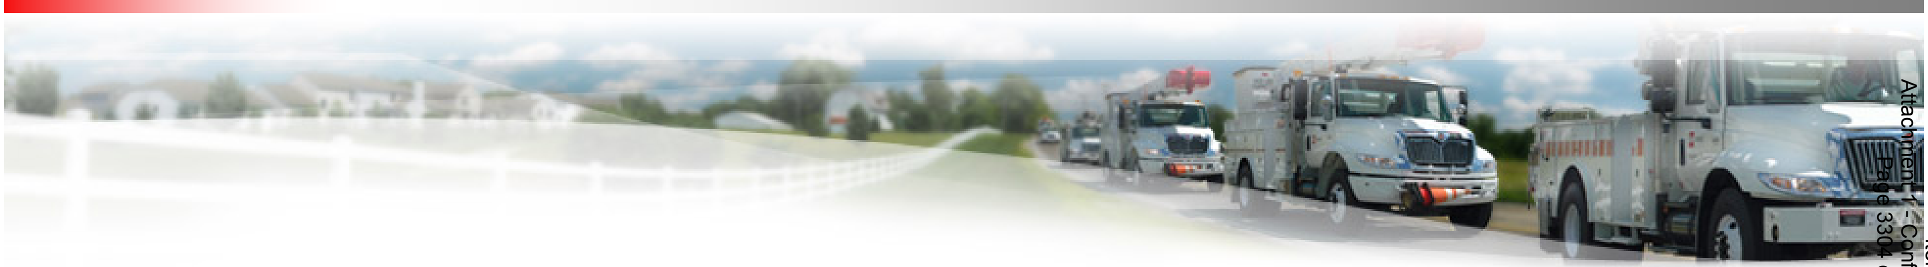
Sanford Bernstein Conference Call

December 8, 2010



“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

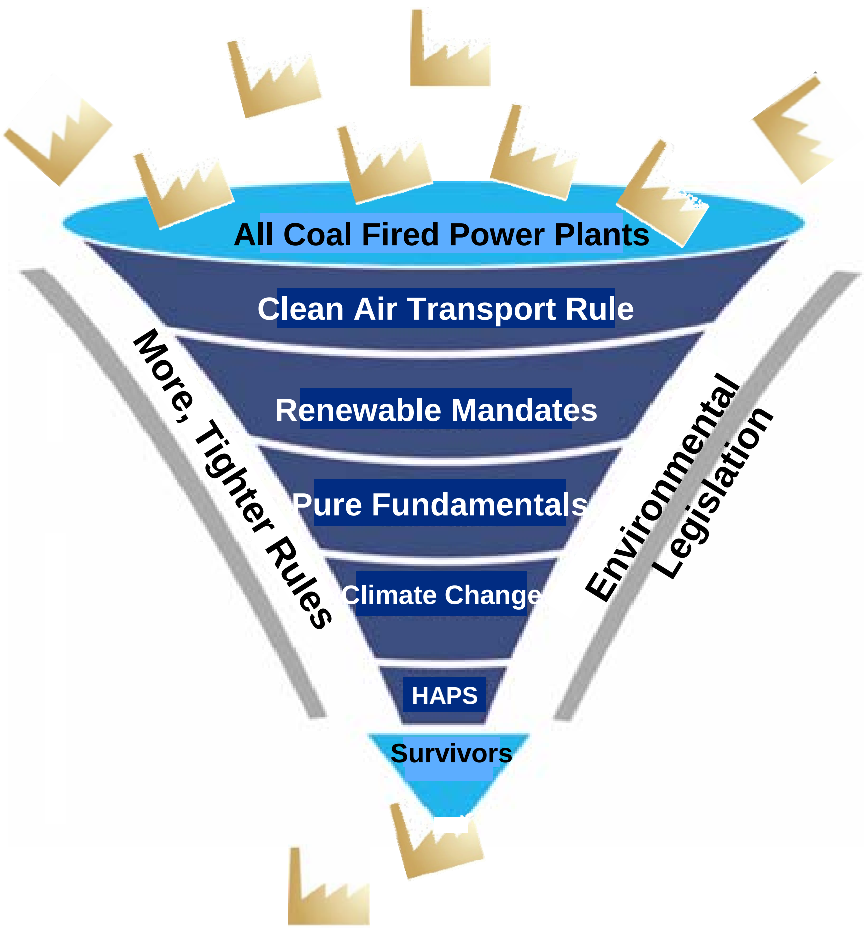
VP, Environmental Services

The Pressure on Coal Generation

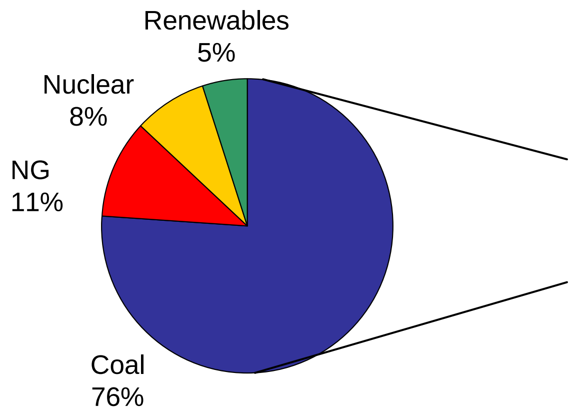


Key EPA Actions Pending

- Transport Rule – Proposed July 2010
- "Coal Ash" Rule – Proposed May 2010
- Mercury and other Hazardous Air Pollutants (HAPs) Rule – Expect Proposed Rule in March 2011
- Cooling Water Intakes – Expect Proposed Rule in Spring 2011
- Greenhouse Gas Tailoring Rule – January 2011

AEP Generation Capacity

East Capacity – 27,253 MW
AEP Ohio, APCo, I&M, AEG, KPCo, Wind, Solar, Hydro

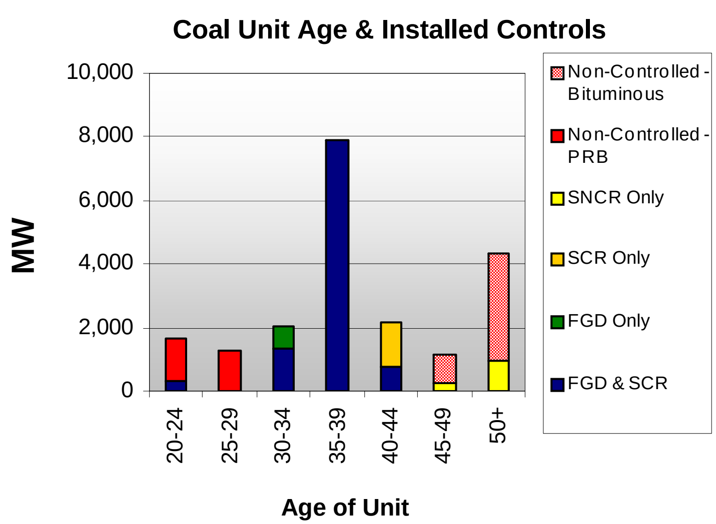


Coal Source

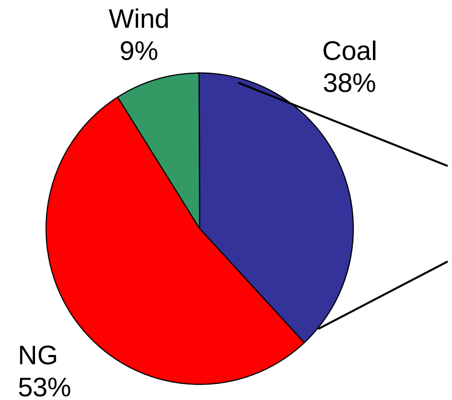
NAPP	46%
CAPP	30%
PRB	22%
Others	2%

Avg. Delivered Cost
2009A - $56/ton
2010E - $52/ton
2011E[1] - $51/ton

[1] Represents cost of committed position (91%)



West Capacity – 11,677 MW
PSO, SWEPCO, TNC, Wind

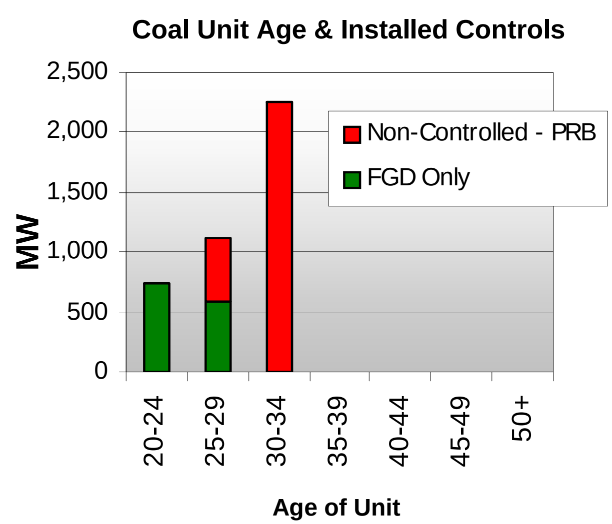


Coal Source

PRB	75%
Lignite	25%

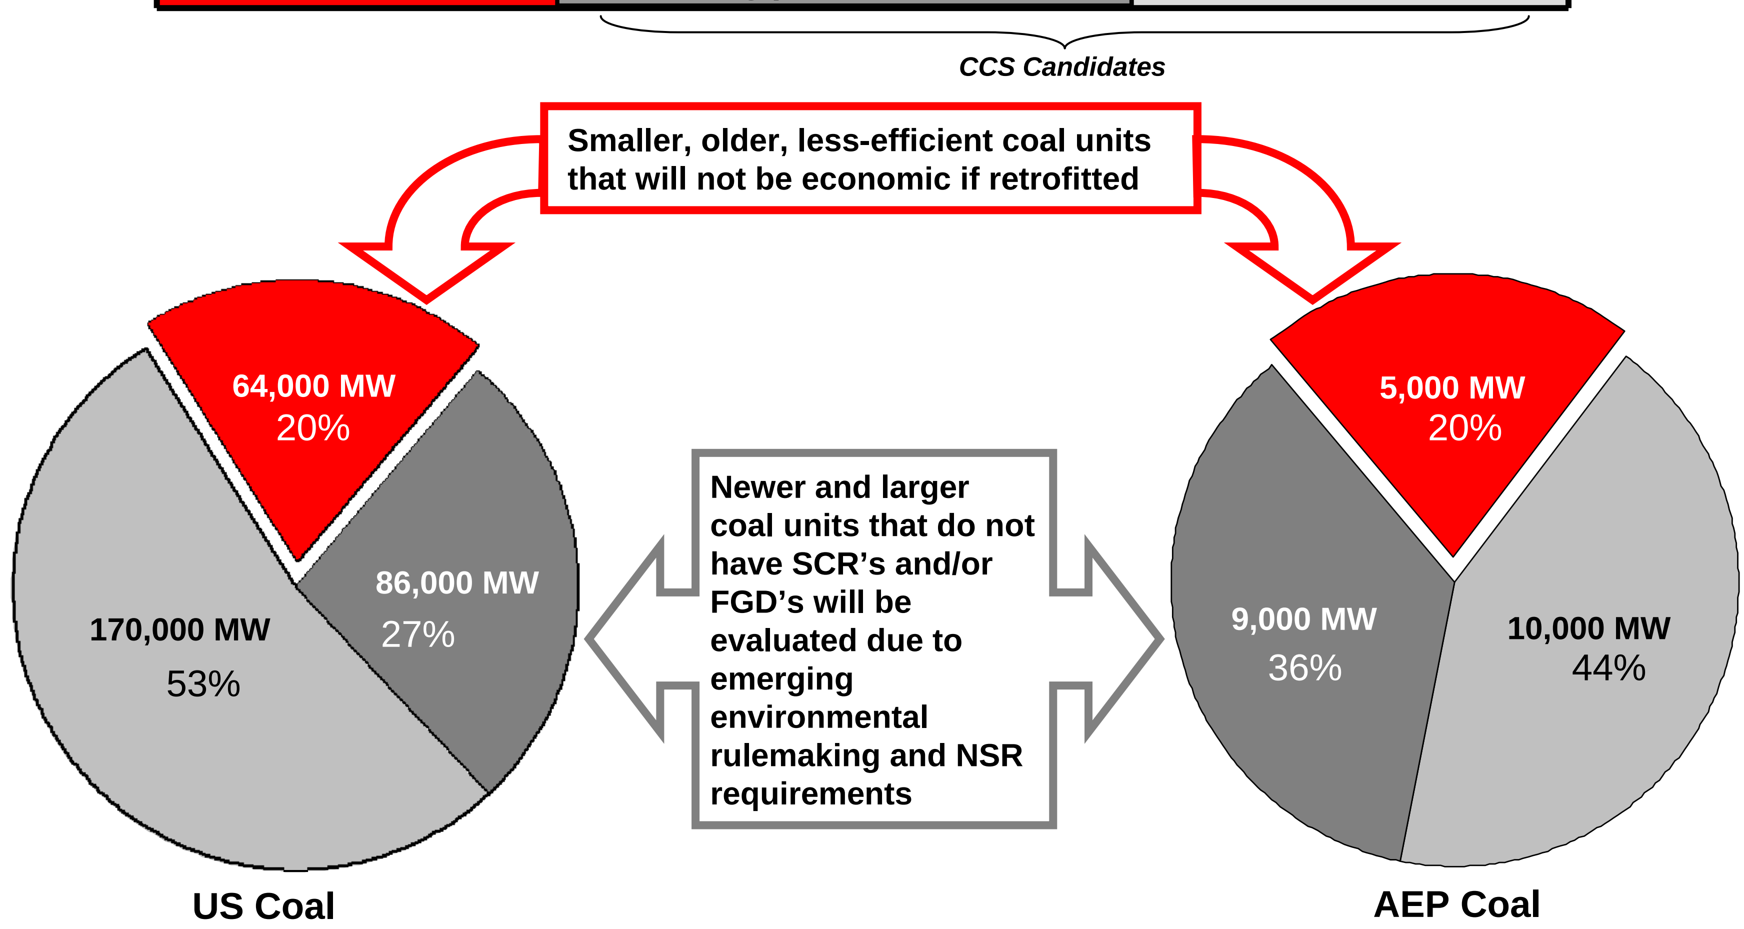
Avg. Delivered Cost
2009A - $29/ton
2010E - $29/ton
2011E[1] - $29/ton

[1] Represents cost of committed position (90%)



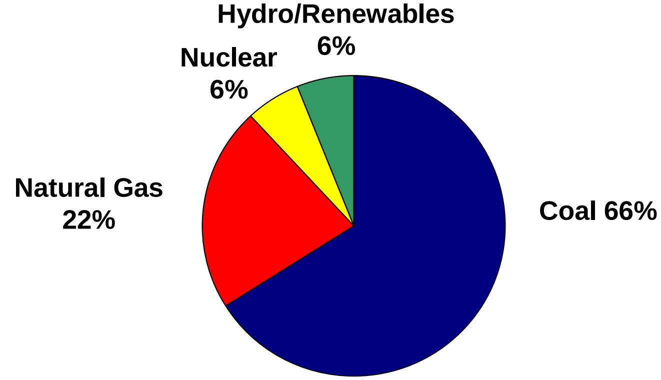
Continual Evaluation is Required

"Fully-Exposed"	"Partially-Exposed"	"Least-Exposed"
Probable Retirement	*Evaluating potential retirement*	*Not likely to be retired*

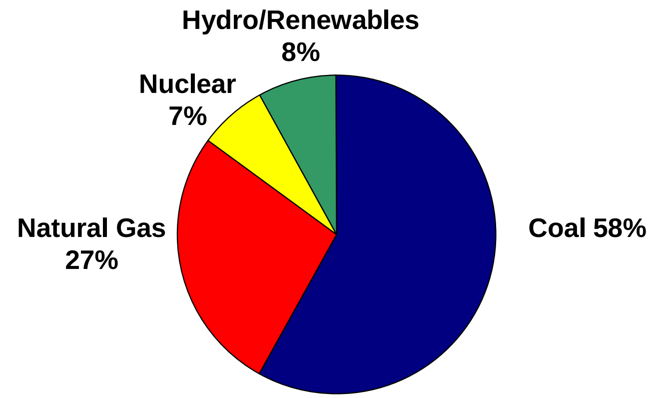


Continued Investment in Utility Platform

- Plan for old, small coal units
  - Initially operate seasonally
  - Transition towards retirement
  - Regulatory plan for recovery
- Continue evaluation of “partially exposed” units for additional controls
- Add non-coal capacity when needed
  - Dresden NGCC (partially complete)
  - New NGCC at existing site
  - Cook plant uprate (under study)
  - Renewables
- Deploy technology as appropriate
  - Continue pursuit of CCS technology
  - Energy storage technologies
  - gridSMART®



Capacity - 2009



Projected Capacity - 2017

AEP and Environmental Investments

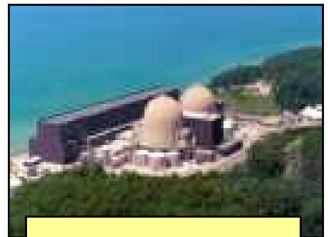
AEP®

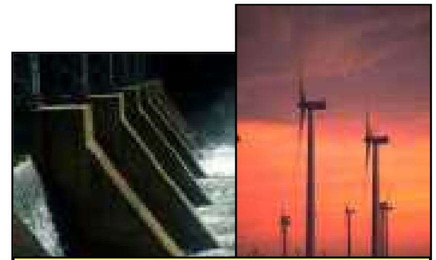
Company Overview

Natural Gas/ Oil
23%



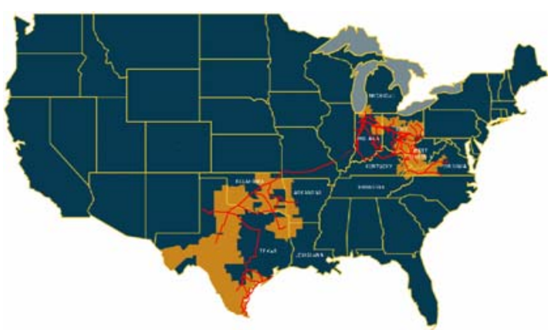
Nuclear
6%

Coal/Lignite
66%



Pumped Storage/ Hydro/Wind
5%

AEP's Generation Fleet
38,721 MW Capacity



5.1 million customers in 11 states
Industry-leading size and scale of assets:

Asset	Size	Industry Rank
Generation	~38,700 MW	# 2
Transmission	~39,000 miles	# 1
Distribution	~213,000 miles	# 1

AEP®

The Next Administration—Energy and the Environment

- **Energy Legislation -- A First Priority**
  - For Electric Utilities: Federal RPS Likely
- **Climate Legislation -- Also a Priority**
  - Passage Complex
- **Further Air Emissions Requirements --SO_2, NOx, and Mercury???**

AEP®

AEP's GHG Reduction Portfolio

Renewables

(e.g. 1100 MW of Existing Wind;
600 MW New Wind PPAs by 2011;
Biomass Co-firing)

Efficiency

(e.g. Coal Plant Heat Rate Improvements
DSM and Energy Efficiency)

Offsets & GHG Markets

(e.g. Chicago Climate Exchange,
Forest Preservation and Tree Planting,
Methane Capture from Livestock,
2.5 MM CO2eTons/yr by 2011 Goal)

New Technology: Advanced Coal & CCS

(e.g., Chilled Ammonia Retrofits;
Ultra-super Critical Coal Generation)

AEP

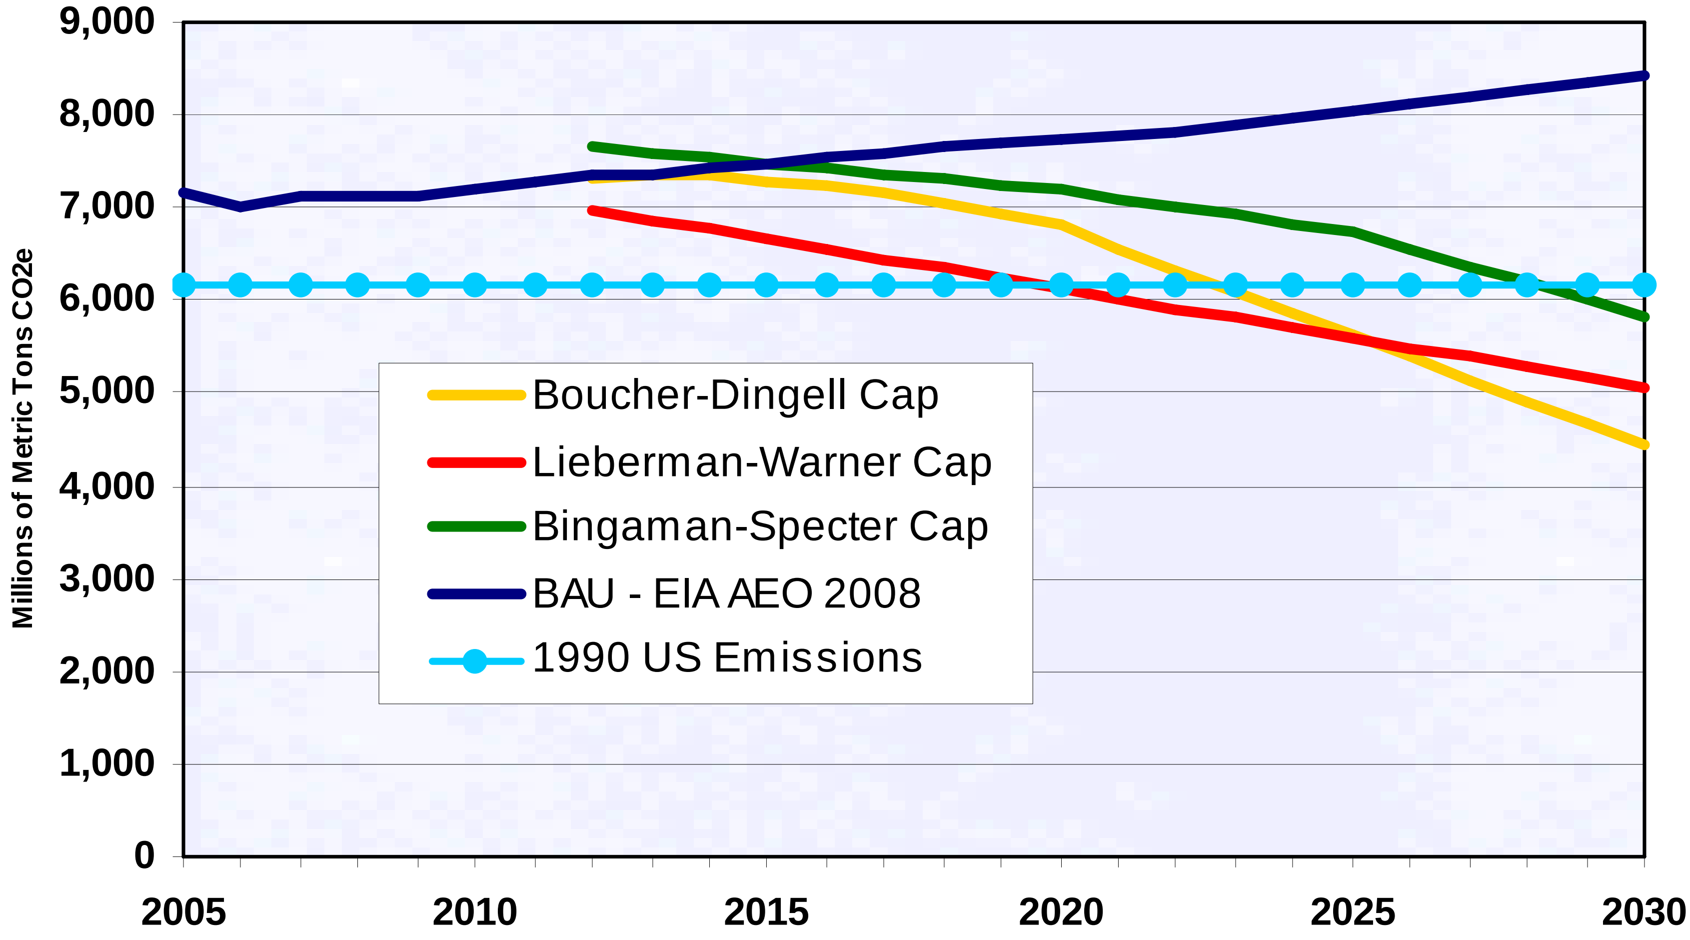
AEP is investing in a portfolio of GHG reduction alternatives

AEP Position: A "Reasonable" Approach to Climate Legislation

- **Reductions and Timing -** Moderate with Adequate Lead Times
- **Scope of Program -** Economy Wide
- **Flexibility of the Program -** Trading, Banking, Unrestricted Offsets, Early Action Credits
- **Allowance Allocation And Other Cost Issues -** Emissions Based and "Low" auctions
- **Technology Development/Deployment -** Bonus allowances for carbon capture and storage
- **International Linkage -** e.g., AEP-IBEW Proposal

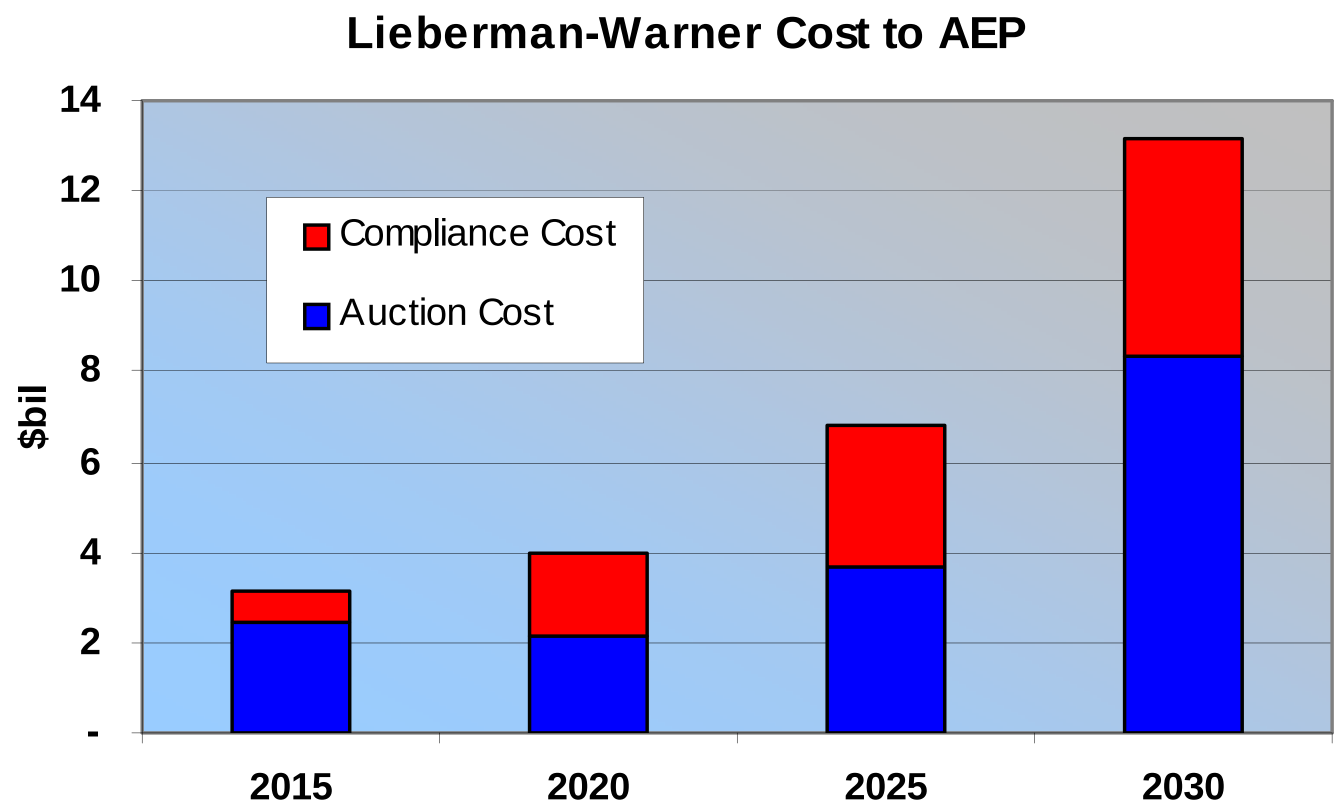
AEP®

Emission Reductions Under Selected Bills



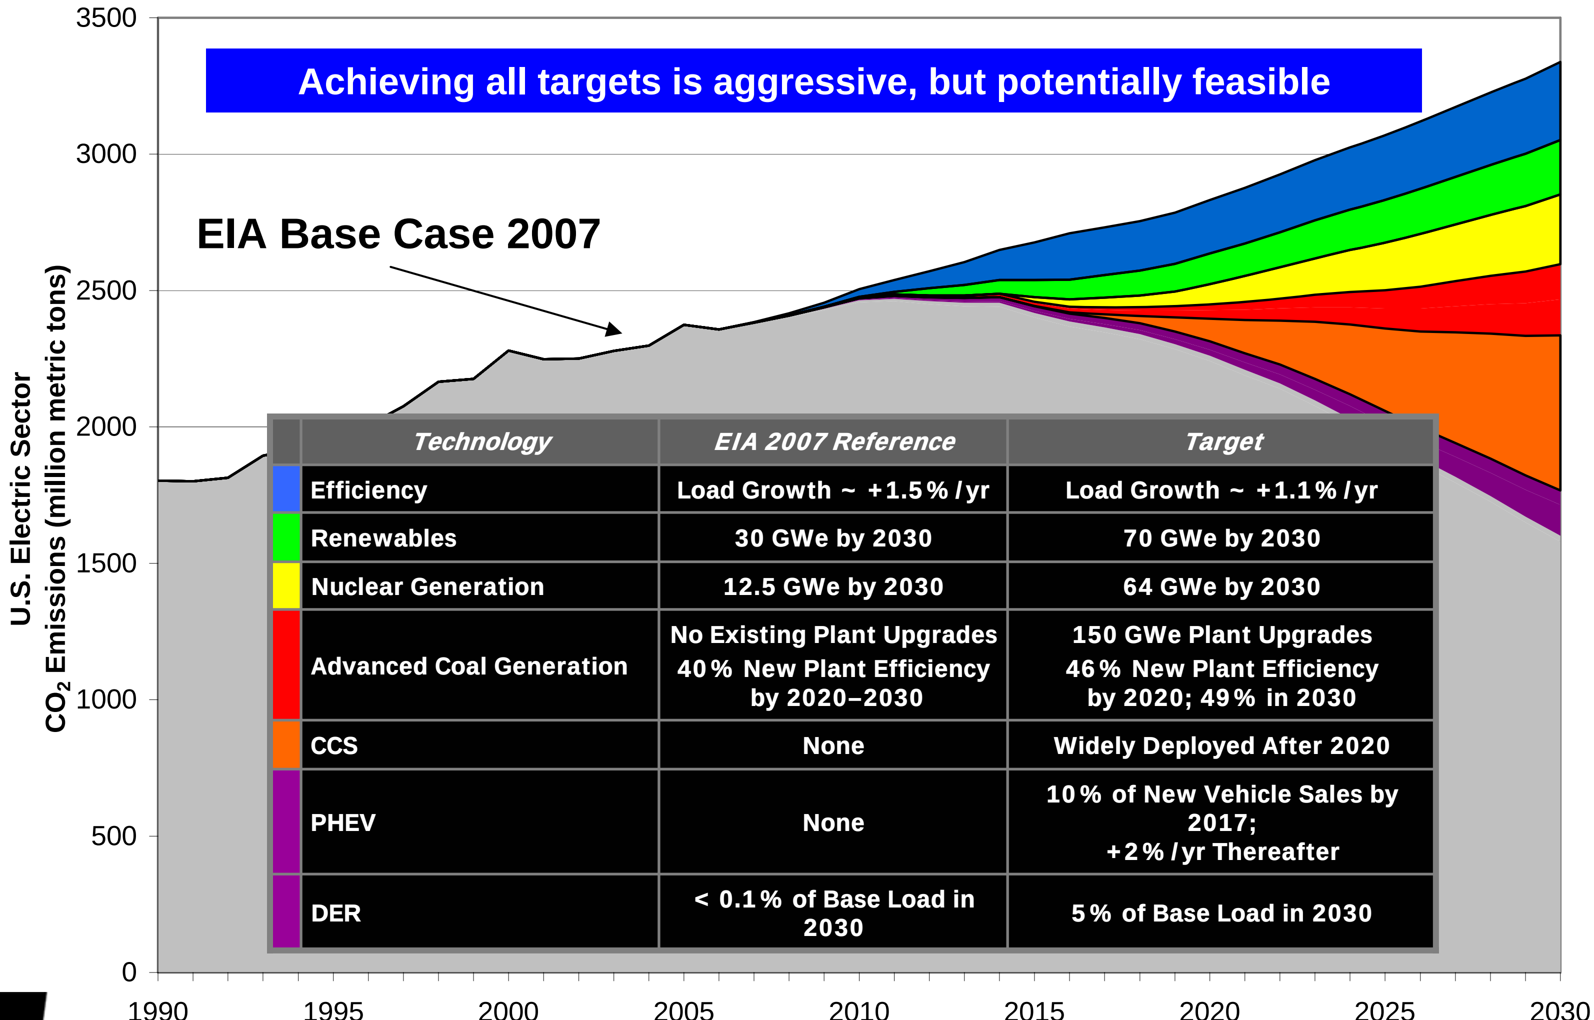
AEP®

Annual AEP Cost Increases



The cost and rate impacts of Lieberman-Warner are very large, particularly due to increasing levels of auctions over time. <u>Auction purchases account for more than two-thirds of total costs.</u>

A Portfolio is Needed and CCS is Key



Technology	EIA 2007 Reference	Target
Efficiency	Load Growth ~ +1.5%/yr	Load Growth ~ +1.1%/yr
Renewables	30 GWe by 2030	70 GWe by 2030
Nuclear Generation	12.5 GWe by 2030	64 GWe by 2030
Advanced Coal Generation	No Existing Plant Upgrades 40% New Plant Efficiency by 2020–2030	150 GWe Plant Upgrades 46% New Plant Efficiency by 2020; 49% in 2030
CCS	None	Widely Deployed After 2020
PHEV	None	10% of New Vehicle Sales by 2017; +2%/yr Thereafter
DER	< 0.1% of Base Load in 2030	5% of Base Load in 2030

AEP®

EPRI ELECTRIC POWER RESEARCH INSTITUTE

AEP Leadership in New Technology: Chilled Ammonia CCS

Phase 1

2009 Initial Operation

1300 MW Mountaineer Plant (WV) → MOU (Alstom & RWE) **Chilled Ammonia 20MWe scale**

CO_2 Storage (Battelle)

Captures and Stores ~100,000 metric tons of CO_2 /yr.

Phase 2

300 MW Slipstream → MOU (Alstom) **Chilled Ammonia ~300MWe scale**

CO_2 Storage

Captures and Stores 1.5 Million metric tons of CO_2/yr.

AEP®

The Challenge: CCS is Expensive

$50+

$/ton CO_2e

$0

- CCS w/ Geologic Sequestration
- Other renewable, advanced geothermal and/or solar
- Carbon Capture for Enhanced Oil Recovery
- New Biomass Generation
- Dispatch of additional gas vs. inefficient coal
- Biomass Co-firing
- Forestry
- New Wind
- Nuclear
- Energy Efficiency
- Methane Offsets

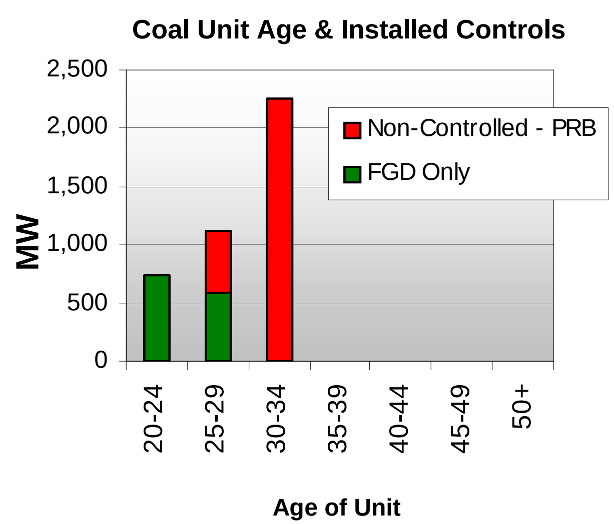
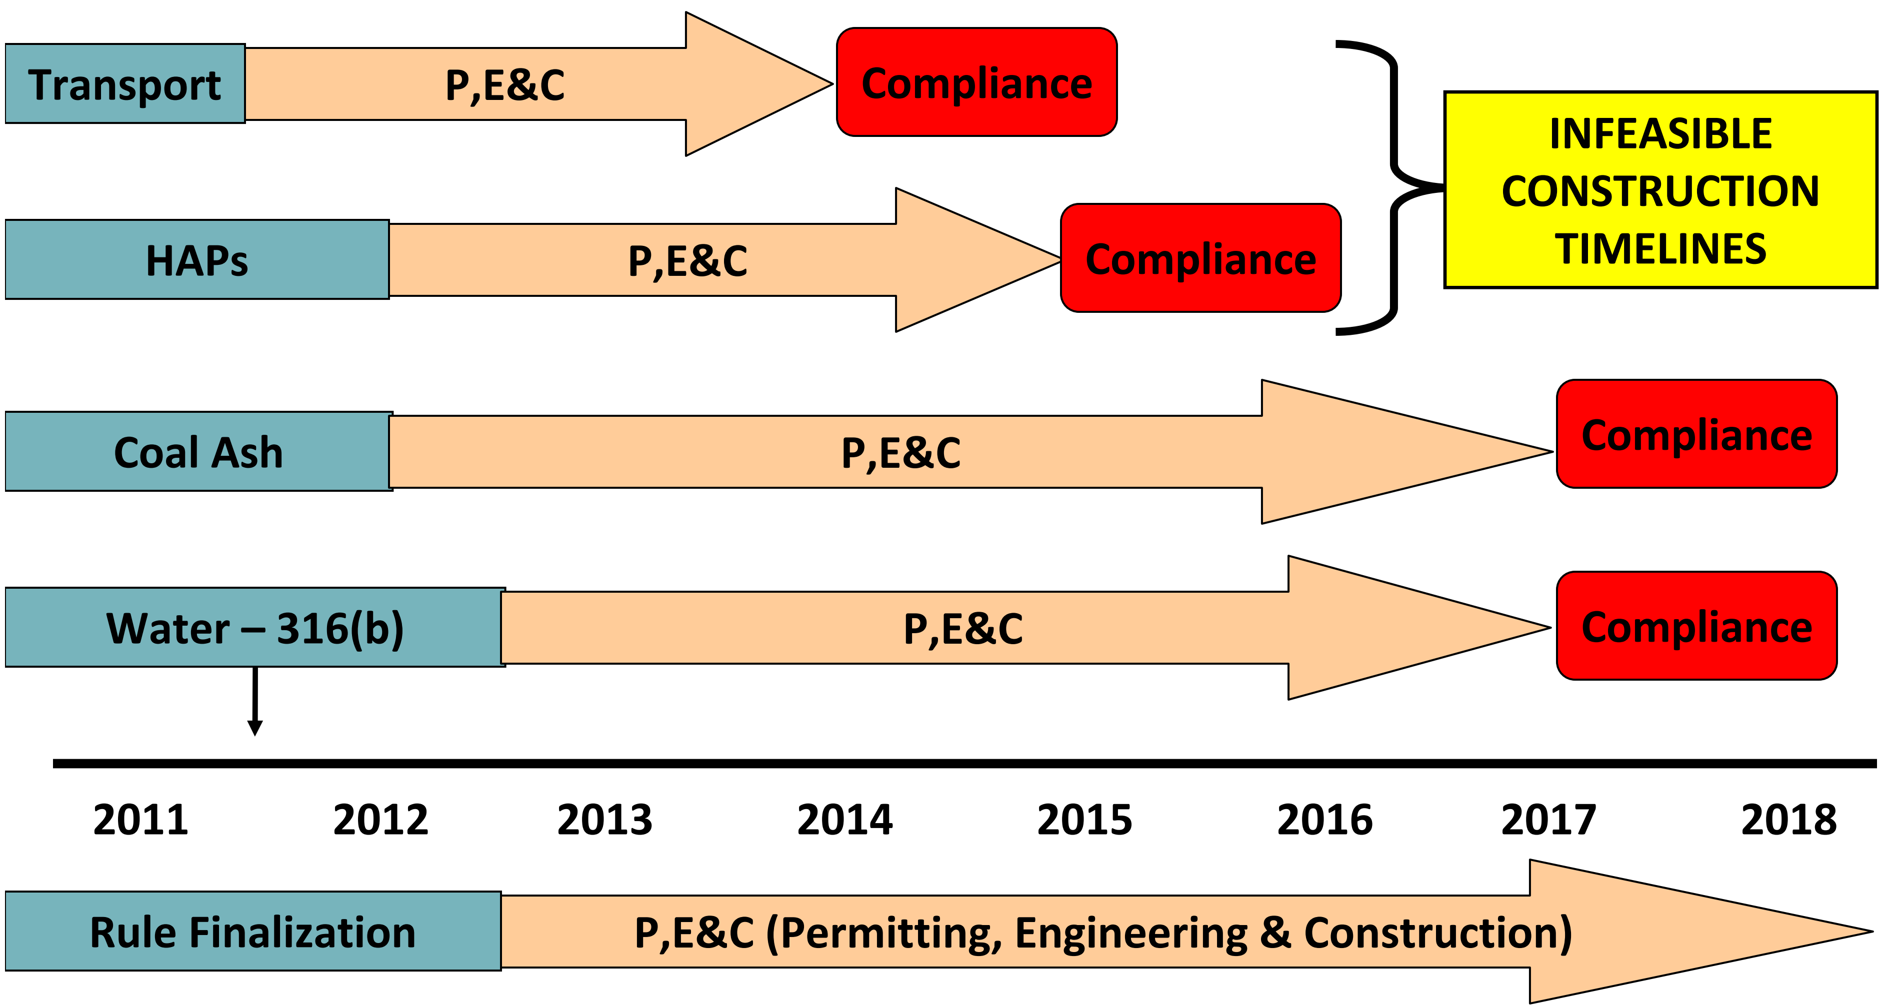
2010A - $29/ton
2011E - $29/ton



Anticipated EPA Timeline for Retrofits or Replacement



Transport Rule (SO_2 and NOx)

- Proposed Transport Rule (July 2010) limits utility SO_2 and NOx emissions
- SO_2 and NOx subject to caps in 2012, with further SO_2 reductions required in most Eastern states by 2014
- Major concerns with the proposed rule:
  - Not enough time is provided for environmental control installations (i.e. FGD/SCR)
  - EPA costs of retrofitting units are grossly underestimated/ other incorrect assumptions used (though EPA has since modified some of these assumptions)
  - Rule does not account for recent improvements in air quality
  - Inability to trade and bank allowances effectively

Mercury and HAP MACT

- Proposed rule issued in March 2011
- Final HAP regulations must be issued by November 2011
  - Maximum Achievable Control Technology (MACT) standards for Hg, other metals, and acid gases, combustion practices for organics
- Compliance Required 3 Yrs. After Final Rule, EPA could grant a 1 year extension
- Very little flexibility in the proposal; opportunity to average across a plant and limited sub-categorization
- MACT could require FGD or DSI for acid gases and/or baghouses with activated carbon injection for Hg and metals.

Coal Ash (CCR) Rules

- Draft coal ash disposal rules issued in May 2010
- EPA proposed two different regulatory designations:
  - "Non-hazardous", solid waste - action required by ~2017
  - "Special" hazardous waste - action required by ~2018-2020
- AEP supports Subtitle D Prime Option of RCRA (solid waste NOT hazardous)
- AEP capital cost of ~$4 billion for solid waste option
- "Hazardous" option could cost DOUBLE this amount

316(b) Proposal

- EPA issued proposal March 28
- Addresses impingement and entrainment of aquatic species
- Proposes upgraded intake screens for impingement
- Suggests cooling towers as an effective technology for entrainment, but defers the decision until a site-specific study is conducted
- Cost impact very uncertain at this time

Implications

- Implementation Schedule
- Costs
- Labor Availability
- Retirement Decisions
- Electric System Reliability
- Others?

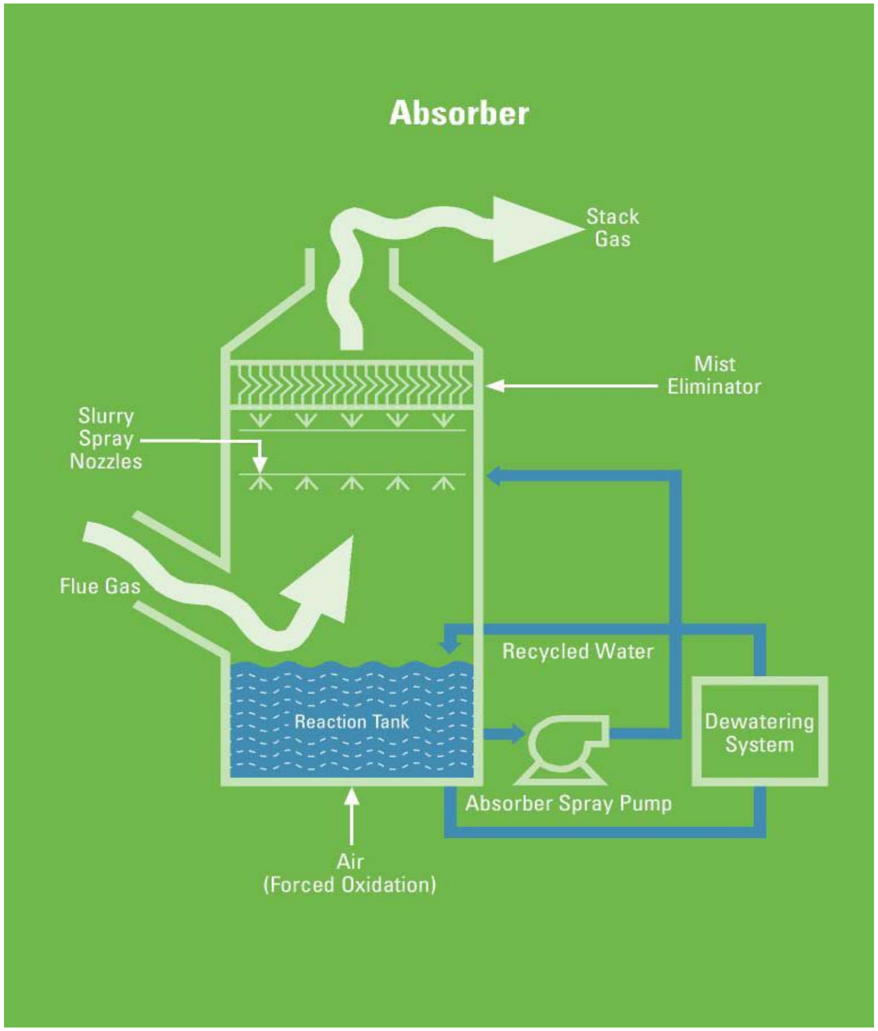
Page 3333 of 9556

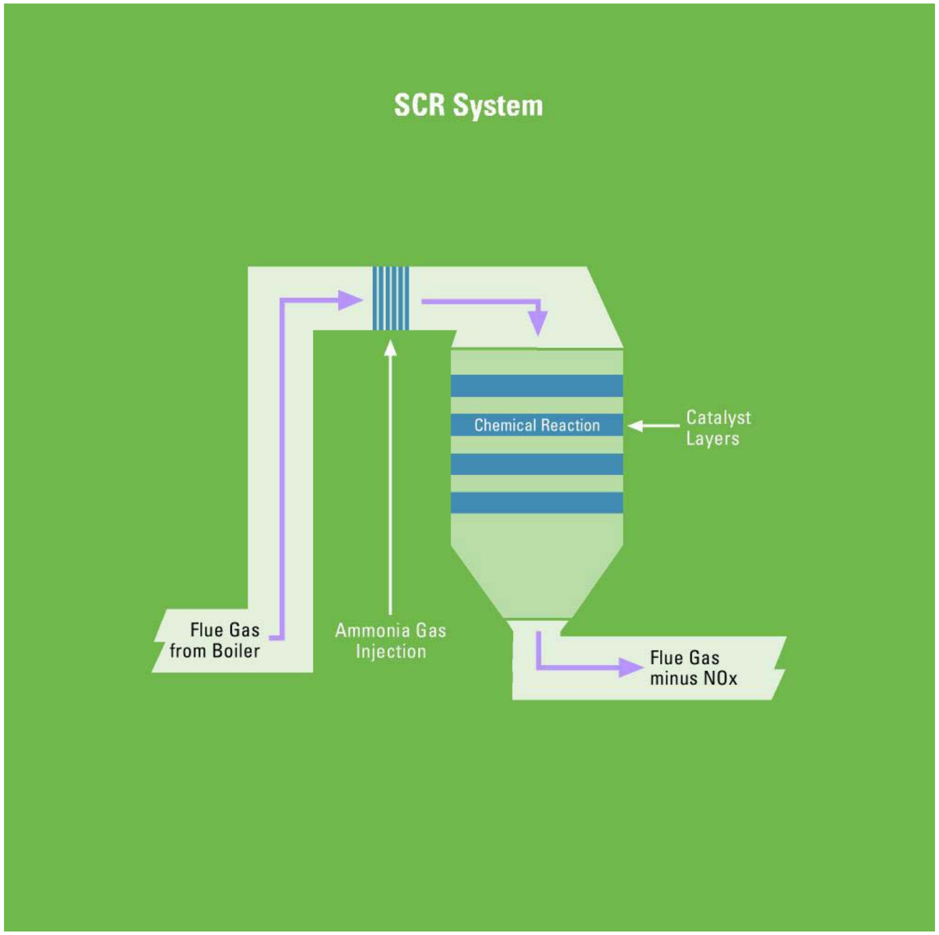
APPENDIX

How an FGD Works



- Limestone is fed from the silo and crushed in the ball mill
- Crushed limestone is mixed with water to form a slurry
- Exhaust gas is routed through absorber vessels where it is sprayed with the slurry
- SO_2 reacts with the slurry and forms calcium sulfate or gypsum
- The calcium sulfate falls to the lower part of the vessel
- Blowers inject air to force oxidation of the product
- Hydroclones wring out much of the water to produce gypsum: the water is re-circulated

How an SCR Works



- Urea, a harmless compound often used as fertilizer, is mixed with water
- Steam is used to drive the ammonia gas from the urea mixture
- The ammonia gas is piped into the flue gas ahead of the SCR
- The ammonia reacts with the flue gas as it passes over the catalyst, forming nitrogen gas and water vapor
- The harmless nitrogen and water vapor are released into the atmosphere

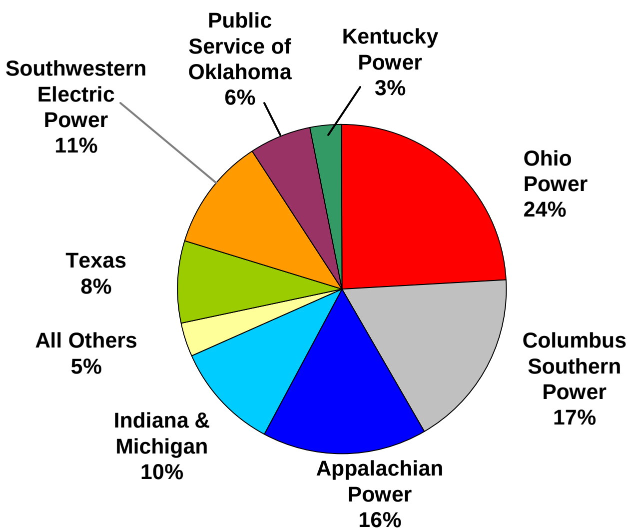
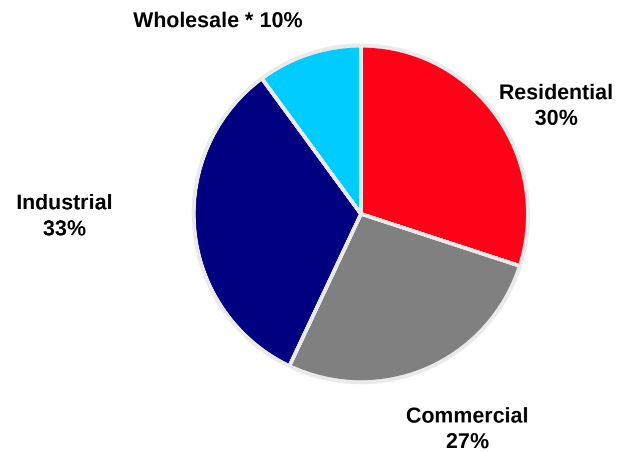
2010 On-Going Earnings Contribution



2010 Retail Load



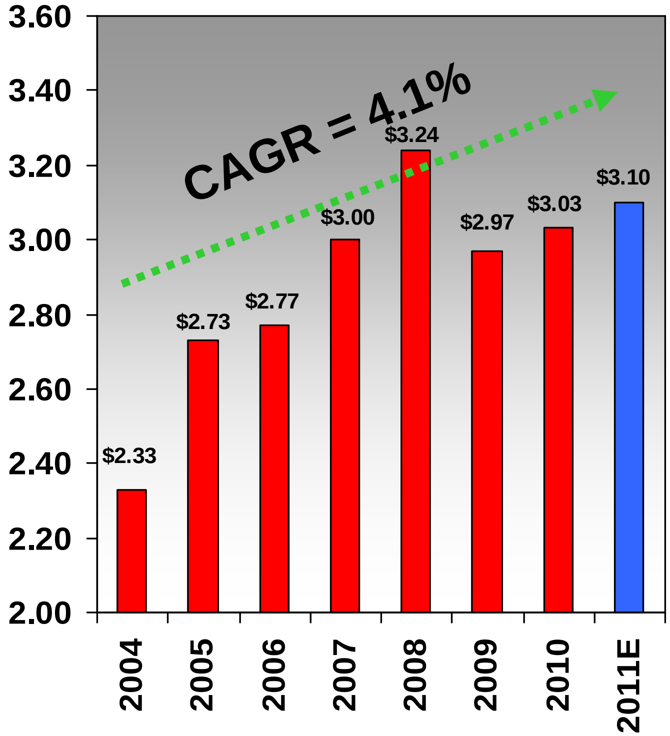
** Wholesale includes sales to municipal and cooperative power systems, other wholesale, and other retail sales*

Region	# of customers
Appalachian Power (incl. TN)	1,004,000
Indiana & Michigan	582,000
Kentucky Power	174,000
Ohio & Wheeling	1,497,000
PSO (Oklahoma)	532,000
SWEPCO (AR, LA, TX)	520,000
Texas	961,000

Earnings and Dividends

On-Going EPS History Since 2004

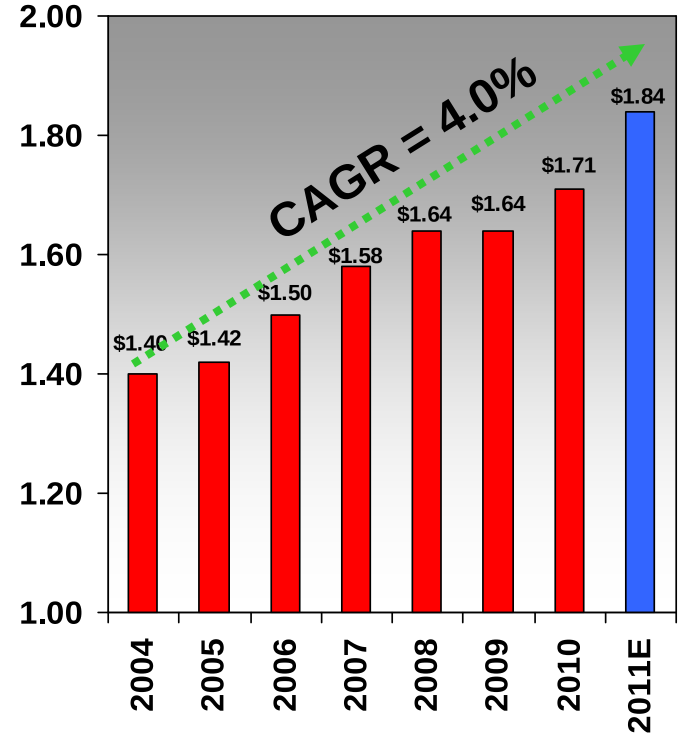
$/share



- Earnings growth largely attributed to capital investment program
- Pre-recession earnings supported by robust wholesale market activity and high power prices
- Equity offering in 2009 stabilized credit and strengthened balance sheet
- 2011 guidance range of $3.00 to $3.20 per share

Dividend History Since 2004

$/share



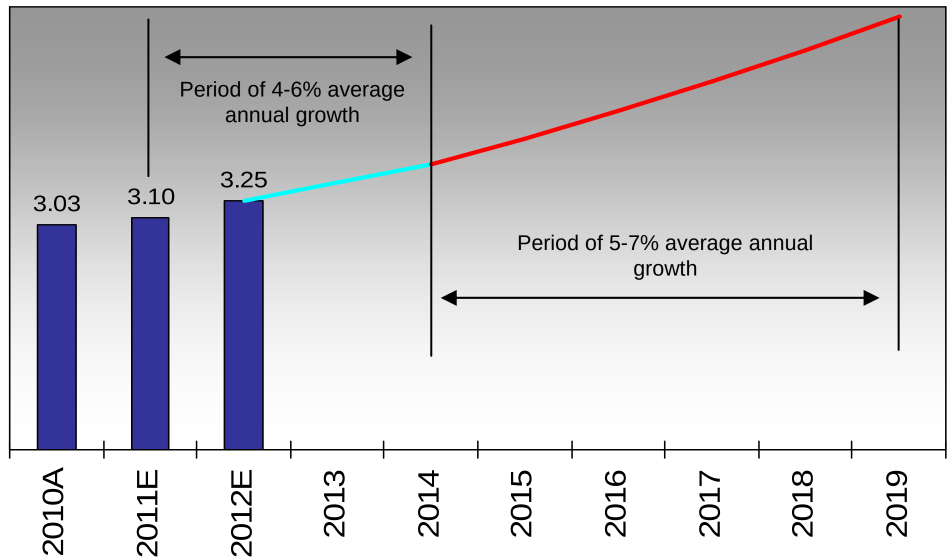
= subject to Board of Directors approval

- Dividend <u>increased 12%</u> in 2010
- <u>403rd consecutive</u> quarterly dividend declared in January 2011
- 50-60% payout ratio target
- Current yield over 5%

Long-term EPS Growth Rate

- 4-6% EPS growth 2012-14
  - Average annual capital spend between $2.9-3.4B
    - Utility platform replacement capital of about $1.4B (annual depreciation)
    - Growth in rate base of $1.5-2.0B per year, allocated between utility platform and transmission projects
  - Average ROE of 10.5 - 11%
  - Slow, steady recovery in economy
- 5-7% EPS growth post 2014
  - Base utility platform capital including generation transformation
  - Higher allocation of discretionary capital going to opportunities in the transmission development pipeline
  - Higher overall blended ROE opportunity
  - Robust economic growth

Average Annual EPS Growth defined over two periods



Detailed Ongoing Earnings Guidance

2010A: $3.03

2011E: $3.00 - $3.20

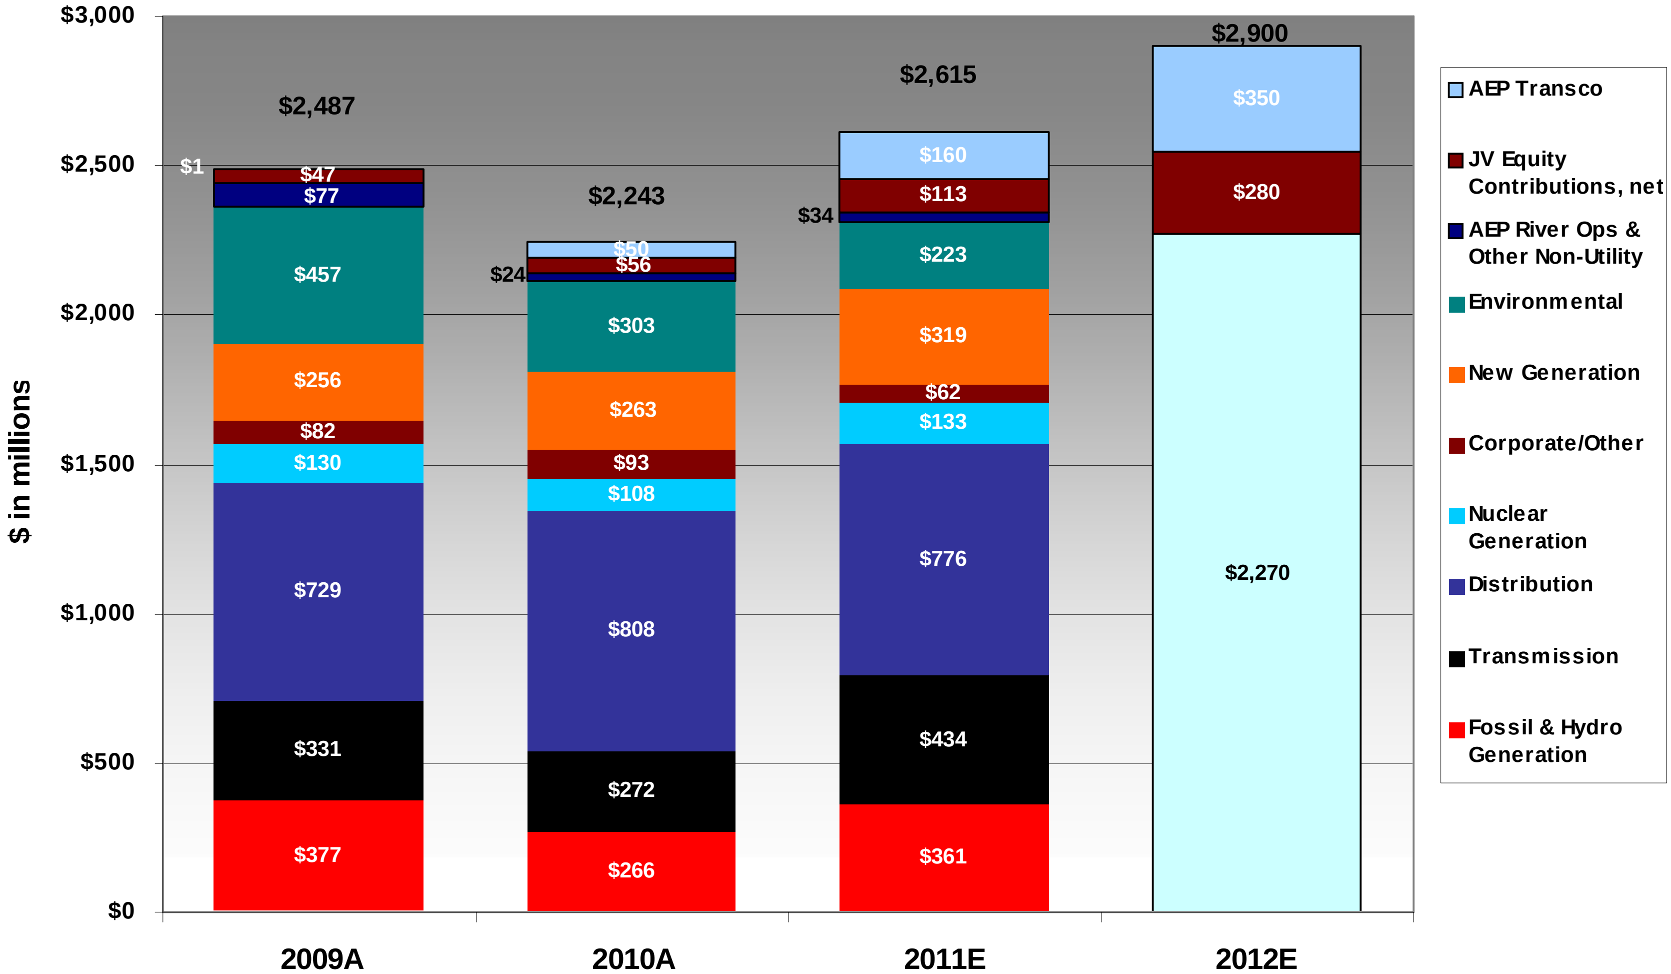
[1] Refer to the Enron Bankruptcy section of Footnote 6 in the December 31, 2010 10K for futher discussion

[2] Pro forma to exclude effects of consolidation of AEP Credit ($656M) in 2010

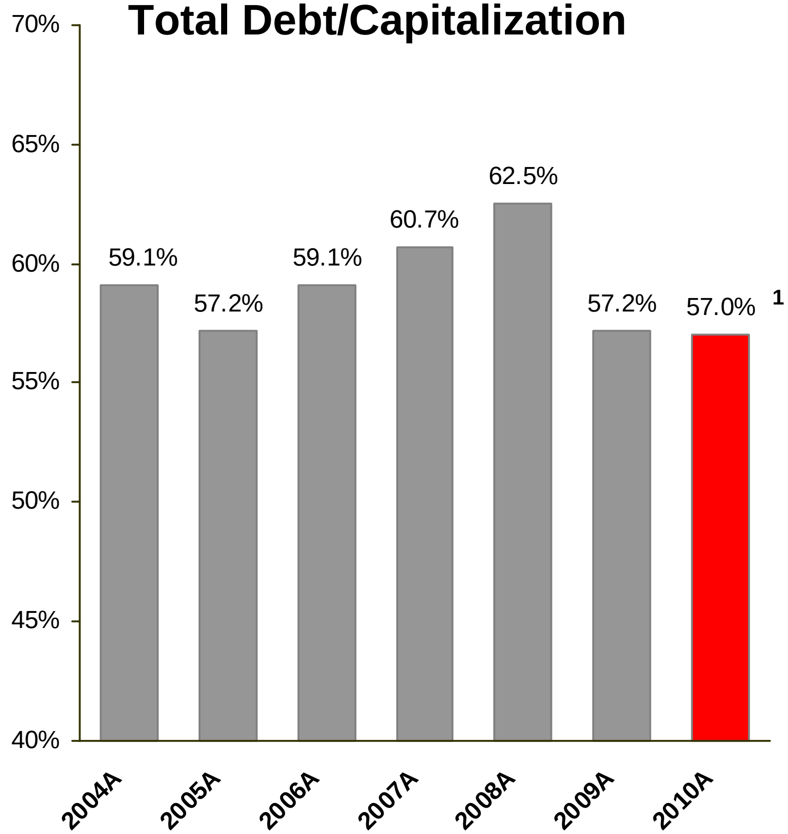
Capital Expenditures



Investment levels greater than depreciation of $1.4B per year cause rate base growth in 2011 and 2012

Capitalization & Liquidity

Total Debt/Capitalization



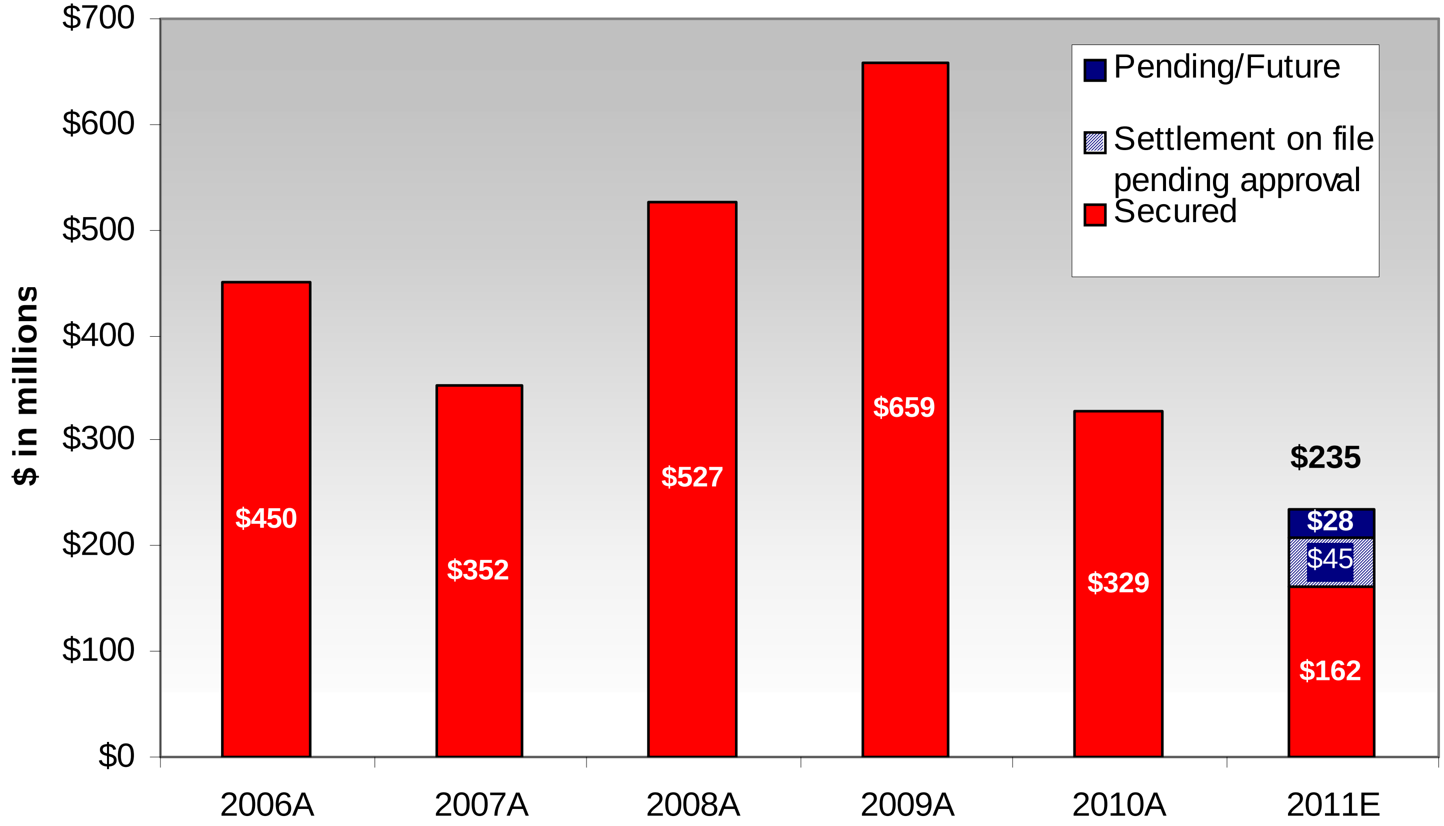
Current Liquidity Summary

Liquidity Summary (unadited)	Actual 12/31/10	
($ in millions)	**Amount**	**Maturity**
Revolving Credit Facility	$1,500	Jun-13
Revolving Credit Facility	1,454	Apr-12
Revolving Credit Facility	478	Apr-11
Total Credit Facilities	**3,432**	
Plus		
Cash & Cash Equivalents	294	
Less		
Commercial Paper Outstanding	(650)	
Letters of Credit Issued	(124)	
Letters of Credit Issued for VRDNs	(477)	
Net Available Liquidity	**$2,475**	

Note: Total Debt is calculated according to GAAP and includes securitized debt

[1]: Effective January 1, 2010 in accordance with Transfers and Servicing accounting guidance (formerly SFAS 166), factored receivables of AEP Credit of $750 million are classified as short-term debt; The 4Q2010 debt/capitalization ratio would be 56.1%, excluding AEP Credit.

Rate Changes



Note: Rate changes in this chart exclude revenues with offsetting costs

Pending/future rate cases include cases yet to be filed

Settlement on file pending approval relates to the WV base rate case

Summary Rate Case Information

APCo West Virginia General Rate Case – Docket #10-0699-E-42T

On May 14, 2010, APCo filed a base rate case with the West Virginia Public Service Commission requesting a net increase of $155.5 million, comprised of a $223.8 million base rate increase and a $68.3 million decrease in the construction surcharge. The filing related to capital investments made and to recover increased costs. In addition, APCo requested to establish a separate transmission tracker related to PJM charges. The requested ROE was 11.75%. A settlement is on file which stipulates a rate increase of $60MM and the ability to defer $18MM of storm damage expenses. An order is expected by the end of March 2011.

Summary Rate Case Information

AEP Ohio Distribution Rate Case – Docket #351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%. A procedural schedule from the PUCO is pending.

AEP Ohio ESP Filing – Core Policy Issues

AEP®

Investment in Ohio

Supports economic development and essential tax base

Fundamental barriers must be addressed to attract investment for Environmental Compliance and New Generation

Jobs in Ohio

Jobs are a key component of growth potential in Ohio

Without regulatory assurances over time we could see loss of direct & indirect jobs related to power generation, and business relocations to surrounding states

Energy Security

Secure, reliable and predictable electricity supply is basis for sustained investment and employment in Ohio

Volatility in power prices can lead to major loss of economic activity over time

Primary objective of ESP: Stabilize rates and support economic development in the state of Ohio

Merged AEP Ohio

Single merged AEP Ohio company presumed with supporting information on an individual OP/CSP basis

Rate Redesign

Generation rates redesigned to resemble market pricing structures

29-Month ESP Period

ESP period Jan 1, 2012 through May 31,2014 (May 31 date aligns with PJM annual planning cycle)

Alternative Long Term Option

Alternative longer-term price certainty option offered for qualifying commercial & industrial customers

Ohio Growth Fund

Creation of significant private sector economic development to attract investment and job growth in AEP Ohio service territory

Distribution Components Included

Inclusion of certain distribution components while pursuing a parallel distribution base rate case

Summary of ESP Filing - Continued

- Pre-tax earnings impact from proposed ESP (excluding potential earnings impact from trackers)
  - **Net base $54MM or 1.4% in year 1 (2012)**
  - **Net base $106MM or 2.7% in year 2 (2013)**

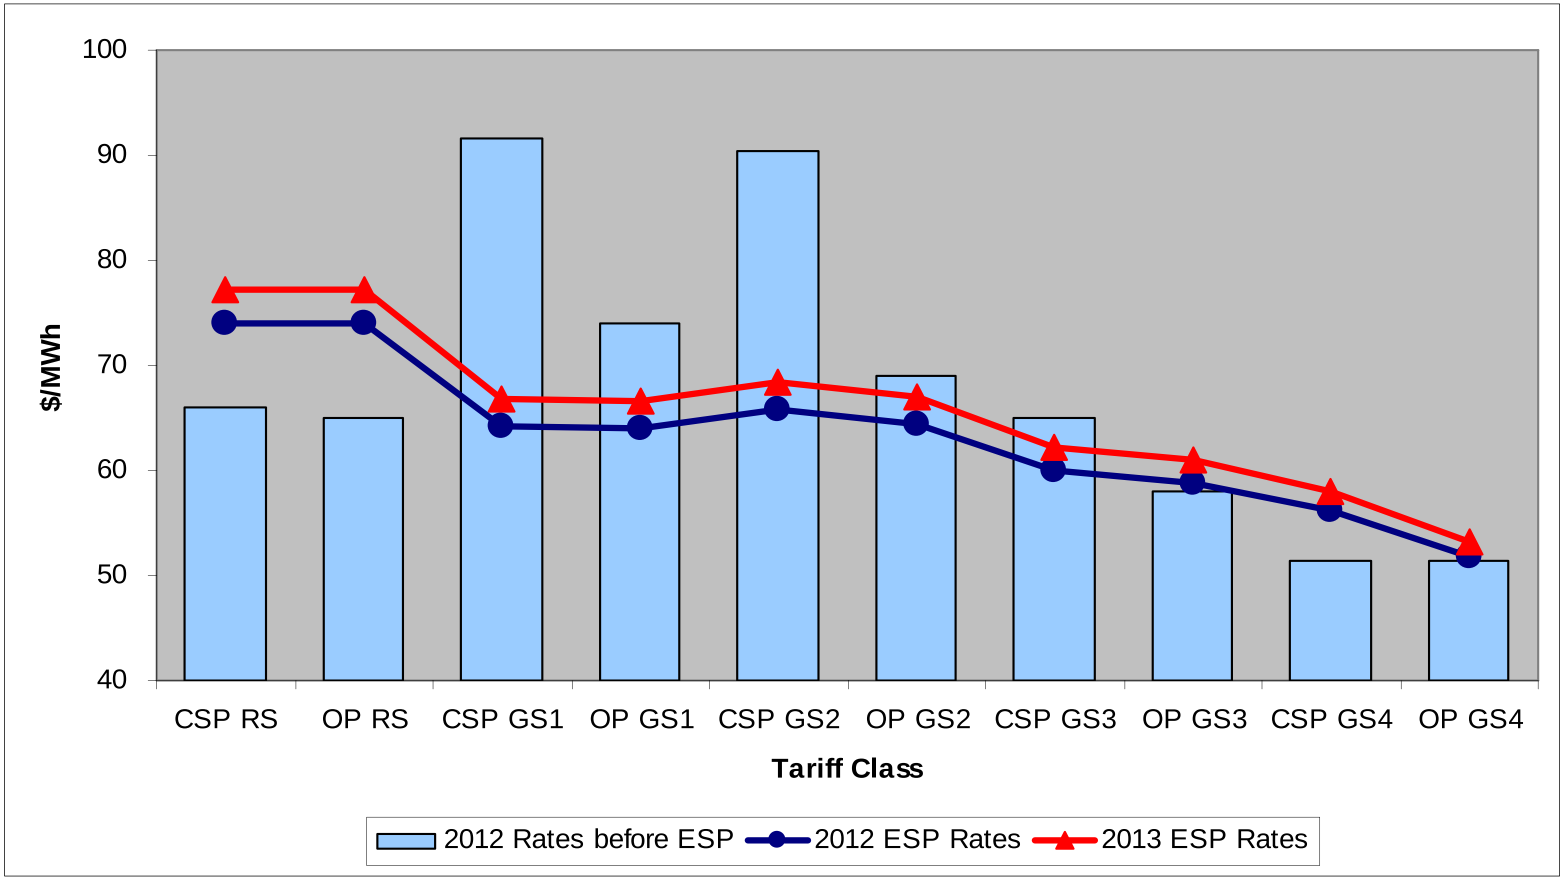
	2012			2013			2014		
	Revenue	**$/MWh**	**%**	**Revenue**	**$/MWh**	**%**	**Revenue**	**$/MWh**	**%**
Proposed ESP Changes									
Base Generation	**$65MM**	**$1.50**	**1.7%**	**$106MM**	**$2.43**	**2.7%**	**N/C***	**N/C***	**N/C***
POLR	**($11MM)**	**($0.23)**	**(0.3%)**	**N/C***	**N/C***	**N/C***	**N/C***	**N/C***	**N/C***
FAC Actual Recovery 2012-2014	**Actual**			**Actual**			**Actual**		

N/C* = No change from prior year

While the ESP includes a small base generation increase, the move to a market-based rate design, consistent with state policy, will result in varying impacts for different customer groups.

Price to Compare

Proposed **SSO** Rates Redesigned To Resemble Market Pricing Structures



Rates do not reflect mitigation impact of market transition rider
2012 Rates before ESP reflect current 2011 rates for generation & transmission service, adjusted to reflect full cost 2011 fuel and environmental costs.

The realignment of rates with market should provide all customers with equivalent opportunities to shop. Additionally, since the proposed design eliminates explicit demand charges, customers should be more easily able to evaluate competitive offers. To ease the rate impact that customers will experience from the realignment, we have proposed a Market Transition Rider.

Market Transition Rider – Mitigates the Initial Impact of Rate Realignment

Three-Year Market Transition Plan
Summary of AEP Ohio ESP Generation Rate Changes

CSP Current Customer Class	CSP New Customer Class	2012 Increase	2013 Increase	2014 Increase	Total Increase
Residential	Residential	5.0%	3.9%	1.0%	10.2%

AEP Ohio		1.4%	2.7%	0.0%	4.2%

Illustration of Market Transition Rider on ESP Generation Rate Increases

The Market Transition Rider is a transition rider designed to facilitate the transition from AEP Ohio's current rates to market-based SSO Generation Service rates. It is a non-bypassable rider designed to limit the first and second year changes for any customer classes to uniformly transition any above or below average changes in three steps. Any revenue shortfall that is produced by limiting the increases for certain customer classes is collected from those classes whose decreases are limited.

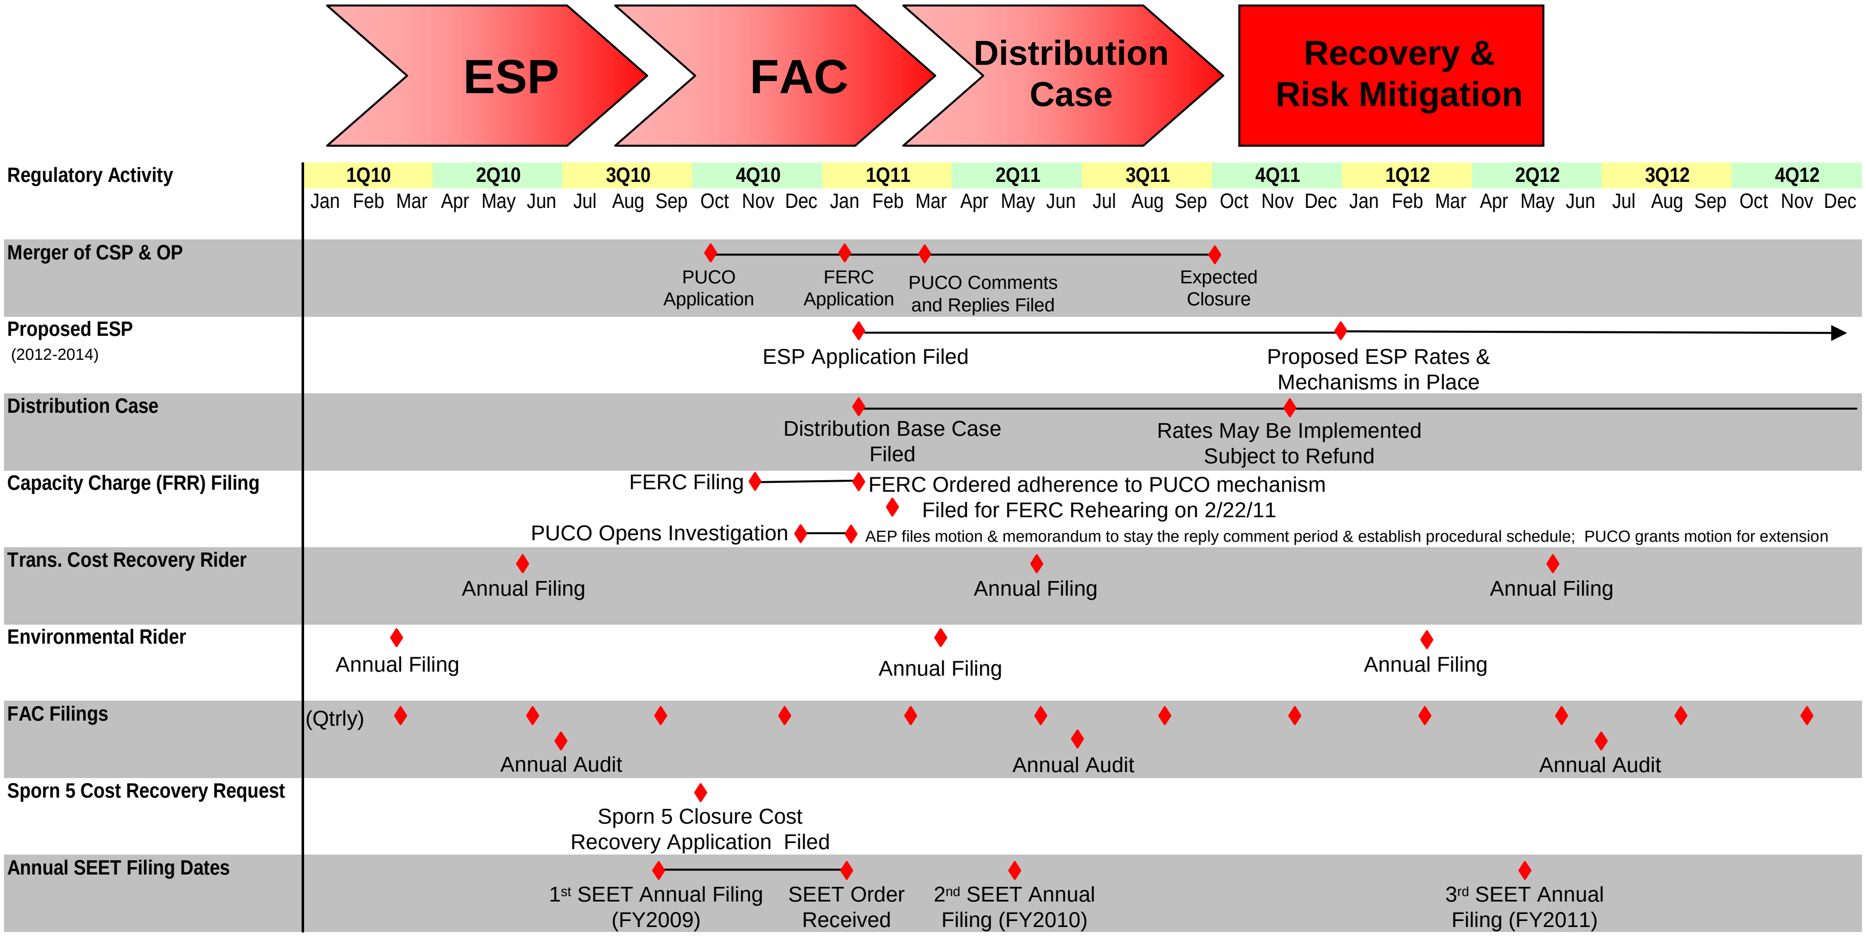
List of ESP Riders – Existing and Proposed

AEP®

Line	Rate Mechanism	Abbreviation	Bypassable	Distribution	Notes
1	**Current Riders**				
2	Universal Service Fund Rider	USF	--	Yes	
3	Advanced Energy Fund Rider	AEF	--	Yes	Expired 12/31/2010
4	kWh Tax Rider	kWh Tax	--		May be self-assessed under specific terms
5	Provider of Last Resort Charge	POLR	No		Option to avoid under specific terms
6	Monongahela Power Litigation Termination Rider	Mon Power	--	Yes	Expires once amount collected
7	Transmission Cost Recovery Rider	TCRR	Yes		
8	Fuel Adjustment Clause Rider	FAC	Yes		
9	Energy Efficiency and Peak Demand Reduction Cost Recovery Rider	EE/PDR	--	Yes	
10	Economic Development Cost Recovery Rider	EDR	--	Yes	
11	Enhanced Service Reliability Rider	ESRR	--	Yes	
12	gridSMART® Rider	gridSMART®	--	Yes	
13	Environmental Investment Carrying Cost Rider	EICCR	No		the current bypassable rider is proposed to be nonbypassable in the new ESP
14					
15	**Proposed Riders**				
16	Standard Offer Generation Service Rider	GSR	Yes		Relocation of base generation rates
17	Generation Resource Rider	GRR	No		Capital/solar investment
18	Alternative Energy Rider	AER	Yes		Relocation of RECs from FAC
19	Phase-In Recovery Rider	PIRR	--	Yes	Previous ESP deferrals, possibility of securitization
20	Distribution Investment Rider	DIR	--	Yes	
21	Market Transition Rider	MTR	--	Yes	
22	Generation NERC Compliance Cost Recovery Rider	NERCR	No		
23	Facility Closure Cost Recovery Rider	FCCR	No		
24	Carbon Capture and Sequestration Rider	CCSR	No		
25					
26	**Other Provisions**				
27	Green Power Portfolio Rider	GPPR	--		Voluntary
28	Rate Security Rider	RSR	--		Voluntary
29	Plug-In Electric Vehicle Tariff / Costs	PEV	--	Yes	Voluntary, Deferral of Costs
30	Emergency Curtailable Service Rider	ECS	--		Voluntary, pending
31	Storm Damage Recovery Mechanism		--	Yes	Reconciliation of storm experience to funding level
32	Pool Termination or Modification Provision		Yes		
33	PIPP Uncollectibles	PIPP	--	Yes	

Ohio Timeline

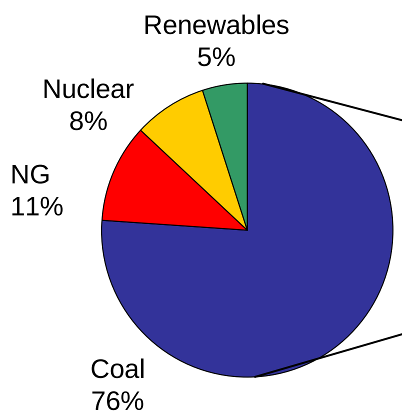
AEP®



AEP Ohio's long-term strategy is designed to produce rate relief for items currently known as well as anticipated future items. The filings and riders we seek today are designed to be broad and flexible enough to accommodate a variety of circumstances, because it is impossible to know all variables and specific items for which we will desire to seek rate relief or what regulatory circumstances will prevail at the time.

AEP Generation Capacity

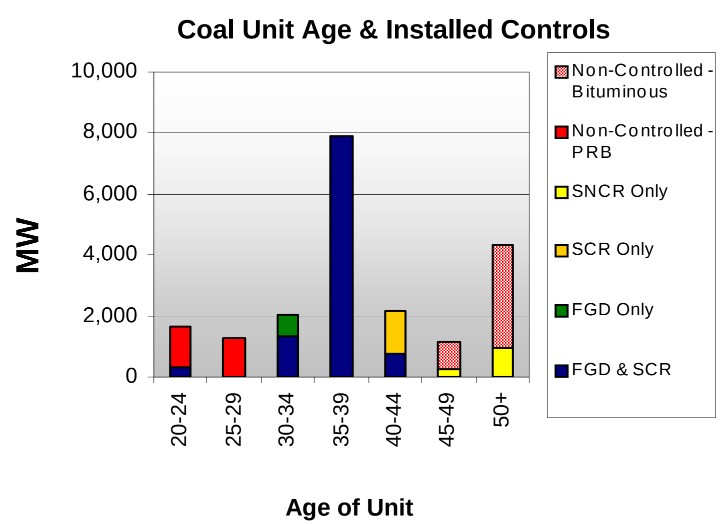
East Capacity – 27,253 MW
AEP Ohio, APCo, I&M, AEG, KPCo, Wind, Solar, Hydro



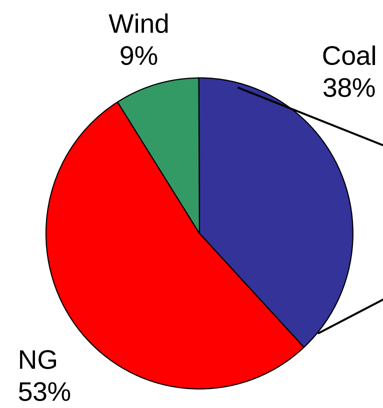
Coal Source

NAPP	46%
CAPP	30%
PRB	22%
Others	2%

Avg. Delivered Cost
2009A - $56/ton
2010A - $52/ton
2011E - $51/ton



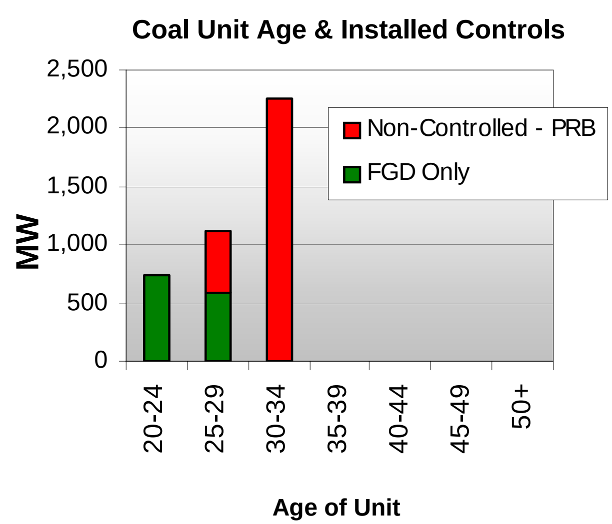
West Capacity – 11,677 MW
PSO, SWEPCO, TNC, Wind



Coal Source

PRB	75%
Lignite	25%

Avg. Delivered Cost
2009A - $29/ton
2010A - $29/ton
2011E - $29/ton

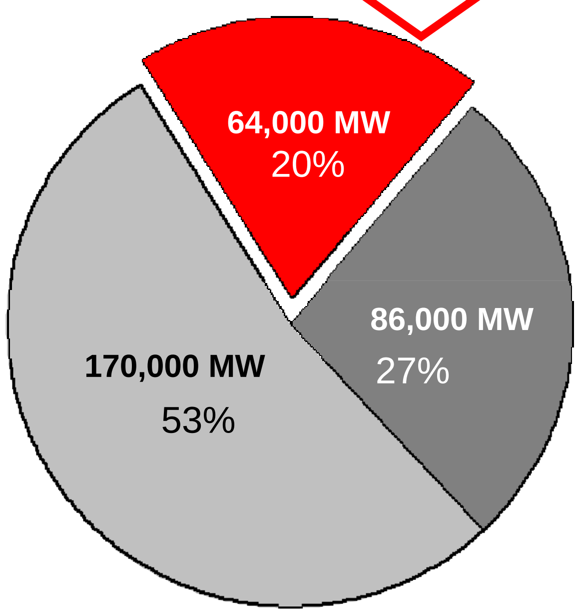


Continual Evaluation is Required

"Fully-Exposed"	"Partially-Exposed"	"Least-Exposed"
Probable Retirement	*Evaluating potential retirement*	*Not likely to be retired*

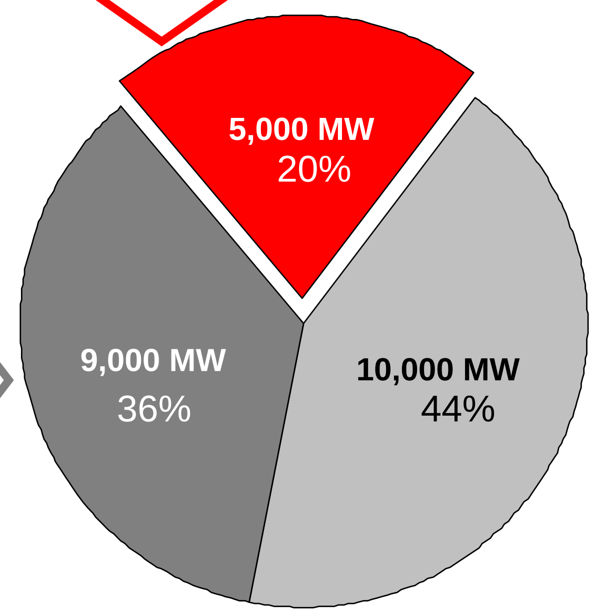
CCS Candidates

Smaller, older, less-efficient coal units that will not be economic if retrofitted



US Coal

Newer and larger coal units that do not have SCR's and/or FGD's will be evaluated due to emerging environmental rulemaking and NSR requirements

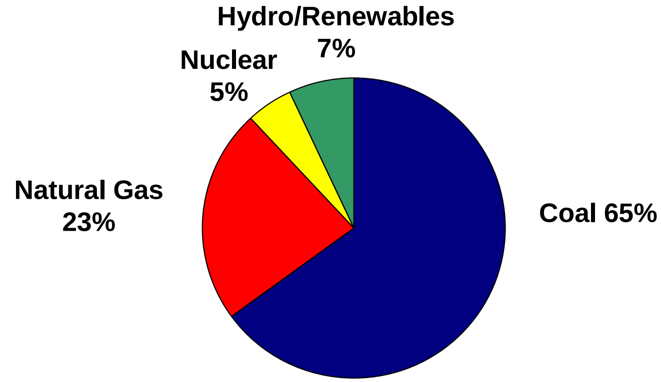


AEP Coal

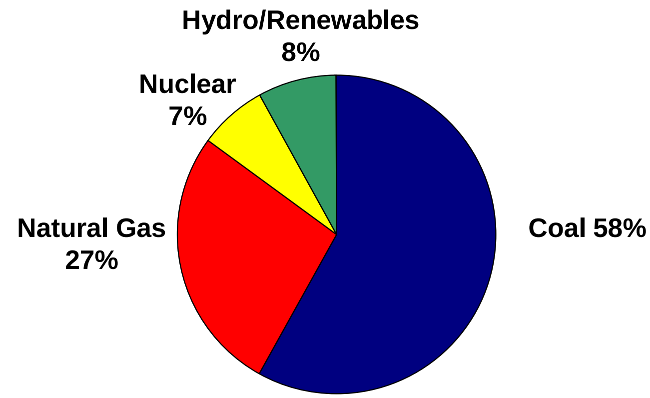
Nearly 50% of U.S. coal plants are exposed

Continued Investment in Utility Platform

- ❑ Plan for old, small coal units
  - – Initially operate seasonally
  - – Transition towards retirement
  - – Regulatory plan for recovery
- ❑ Continue evaluation of “partially exposed” units for additional controls
- ❑ Add non-coal capacity when needed
  - – Dresden NGCC (partially complete)
  - – New NGCC at existing site
  - – Cook plant uprate (under study)
  - – Renewables
- ❑ Deploy technology as appropriate
  - – Continue pursuit of CCS technology
  - – Energy storage technologies
  - – gridSMART®



Capacity - 2010



Projected Capacity - 2017

Transmission Investment Strategy

- **Near-Term Investment** – Electric Transmission Texas (ETT) secures near term investment opportunities, allowing AEP to invest in the large, growth-oriented Texas transmission market.

- **Mid-Term Investment** – Seven wholly-owned transcos allow for expansion and growth within AEP's existing utility footprint through an efficient recovery mechanism.

- **Long-Term Investment** – Joint ventures provide opportunities for longer-term growth outside of AEP's existing utility footprint with forward looking formula rates, higher ROEs and FERC incentives, and mitigated risk profiles.

Transmission has a diversified investment approach that positions us as one of the key AEP growth businesses.

Texas Transmission Growth Strategy :Near Term Investment

Ownership Structure: 50/50 (AEP/MidAmerican Energy Holding Company)

Total Project Cost: Over $3 Billion

Growing Rate Base:

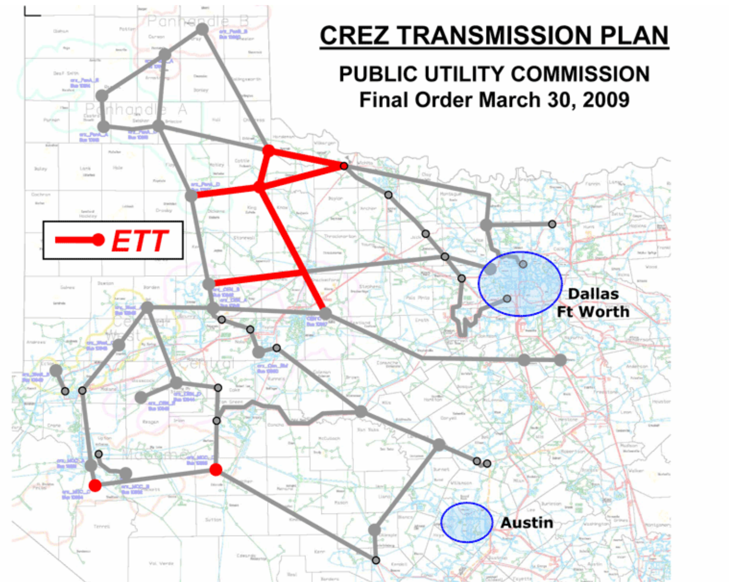
Current rate base is $385 million; expected to grow as follows:

2010: $405 million
2011: $465 million
2012: $765 million
2013: $1,415 million

Interim TCOS filings twice per calendar year

Line Miles: 110

Approved ROE: 9.96%



- **Additional Projects in the Pipeline ~$1.6 B:**
  - Approximately 822 miles of lines and 28 substations with in-service dates through 2017

- **Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.1 B:**
  - Seven double-circuit 345kV transmission lines (~$750 M), eight major 345kV stations and several series compensation installations (~$350 M)
  - PUCT Certificate of Convenience and Necessity (CCN) proceedings underway

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 3365 of 9556

Transco Update

- $160 million capital spend forecasted for 2011

Filing Status Update

- *Ohio (filed)* – PUCO approved the Ohio Transco December 29, 2010
- *West Virginia (filed)* – Procedural schedule is set, with company testimony filed January 6, 2011; Intervenor's testimony is due April 6 and rebuttal is due April 20; Hearings in June 2011
- *Arkansas and Louisiana* - Filing date in Arkansas likely early 2011
- *Texas-SPP* - Expecting TX filing in mid 2011
- *Kentucky* – Informal Conference with staff held March 2, 2011
- *Indiana* – Met with IURC January 10, 2011 on Transmission matters, plan to file in March 2011
- *Virginia (withdrawn)* – Filing withdrawn to give additional time to resolve issues with Staff
- *Michigan and Oklahoma* - Do not require state filing

Joint Venture Strategy: Long-term

- **Strategy**: JV's secure new investment opportunities with local utilities to diversify AEP's investment outside AEP's traditional footprint while providing longer-term incremental earnings**.** JV projects are well-suited for FERC formula rate recovery mechanism, including potential for incentive rates.

- **Future:** Federal/regional initiatives may accelerate expansion of EHV transmission (e.g. cap-and-trade, renewable portfolio standards, inter-region wide planning). Securing first mover advantage will enable AEP to secure LT investment opportunities.

- **Future flexibility**: Passive investment opportunities can be considered and can provide entry beyond SPP/PJM/ERCOT

STRONG

FLEXIBLE

ADAPTABLE

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants including our ability to restore Indiana Michigan Power Company’s Donald C. Cook Nuclear Plant Unit 1 in a timely manner; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity and transmission lines (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary or deflationary interest rate trends; volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impacting our ability to finance new capital projects and refinance existing debt at attractive rates; the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurred cots and recovery is long and the costs are material; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

AEP AMERICAN ELECTRIC POWER

Table of Contents

AMERICAN ELECTRIC POWER

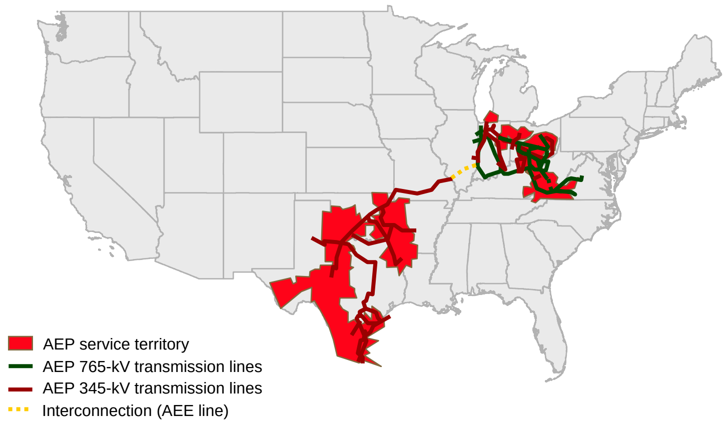
AEP Highlights

Premier utility platform	■ Leadership position in electric generation, transmission and distribution operations ■ Cash flow, earnings and regulatory diversity with more than 5 million customers in 11 states ■ $6.3 billion capital expenditure program (2009-2011) will continue to drive rate base growth
Effective regulatory relationships	■ Traditional recovery mechanisms with equitable risk allocation enhance both earnings and cash flow ■ Emerging energy policies play to AEP's strengths (transmission, energy efficiency, reliability) ■ Constructive local relationships deliver successful regulatory outcomes
High-growth transmission business	■ The leading US transmission owner, operator, and developer ■ Exceptional portfolio of high-quality development projects and project partners ■ Attractive ROEs, regulatory support and access to capital will drive earnings growth beyond our traditional utility footprint
Stable financial position	■ Maximization of shareholder value through regulated utility and transmission investments ■ Balanced approach to cost containment and capital allocation ■ Commitment to investment grade profile, prudent balance sheet, and liquidity management ■ Conservative dividend payout with attractive yield

AEP AMERICAN ELECTRIC POWER

Premier Regulated Utility Platform

Overview



AEP's Leadership Position

Transmission miles[1] ('000s)		Generation owned[1] (GW)		Electric customers[1] (mm)

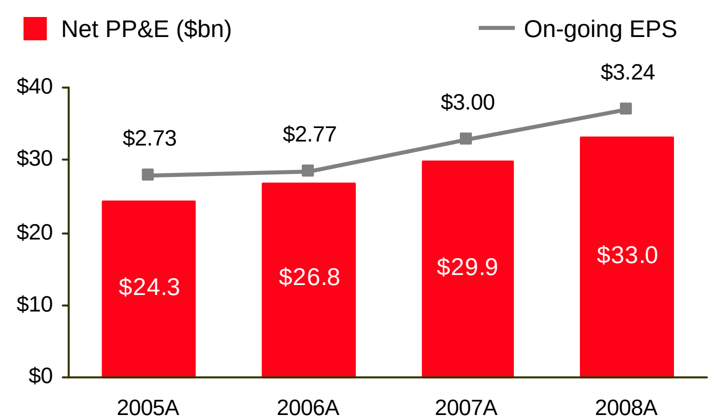
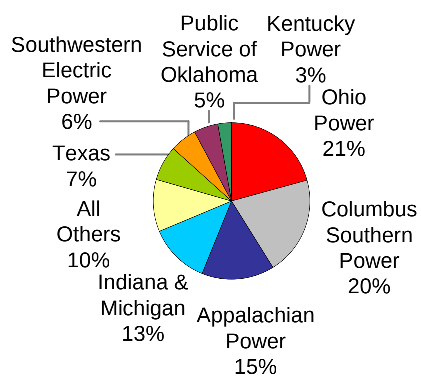
EIX	12.0	NRG	24.0	XEL	3.4
PGN	11.0	PGN	21.8	PGN	3.1

* - AEP generation includes long-term PPAs and generation under construction

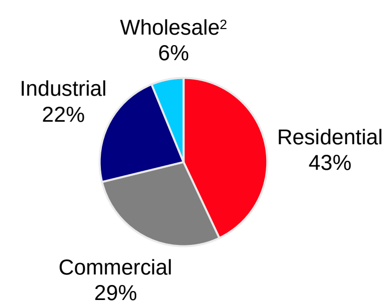
Regulated Operations



- Net PP&E CAGR of 10.7% since 2005
- Earnings CAGR of 5.9% since 2005



2008 On-going Earnings = $1.3bn



2008 Retail Base Revenue = $6.4bn

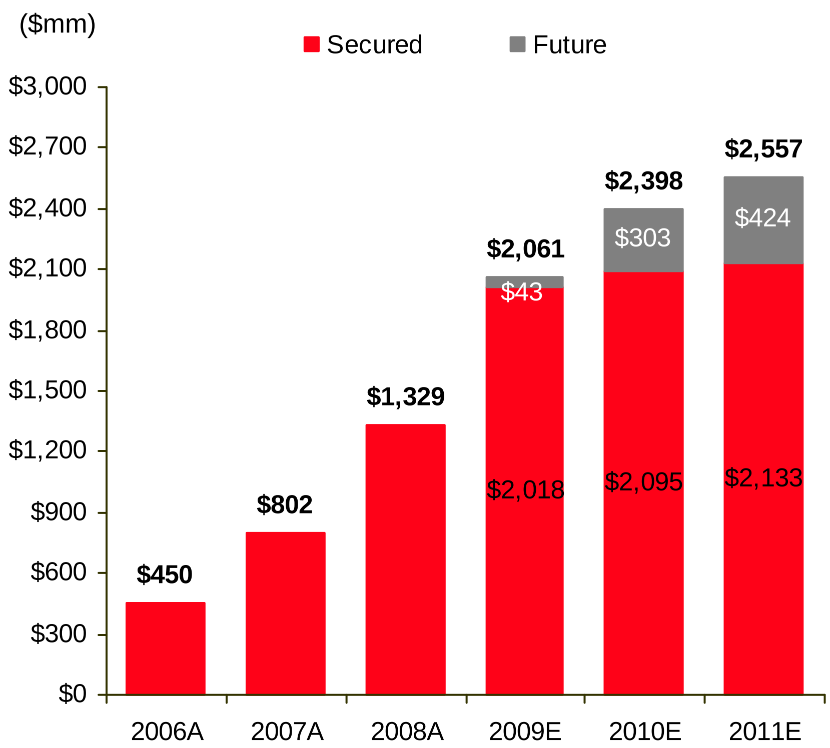
- Highly diversified regulated utility earnings contribution
- Balanced customer mix

[1] Source: Company filings
[2] Wholesale includes sales to municipal and cooperative power systems, other wholesale, and other retail sales

AEP AMERICAN ELECTRIC POWER

Track Record of Successful Regulatory Outcomes

Cumulative Rate Relief



Annual rate increases, $mm	$450	$352	$527	$732	$337[1]	$159[1]

[1] *$77mm and $38mm was secured for 2010 and 2011, respectively, as of May 15, 2009*

Our Regulatory Approach:

Maximize utility company returns:

- Successfully secured significant rate relief
- 2009 rate relief:
  - ✓ Ohio ($455MM)
  - ✓ I&M ($52MM)
  - ✓ APCo ($58MM)
  - ✓ PSO ($74MM)
- Pending rate relief including amount requested:
  - ✓ APCo WV ($25MM – in ENEC filing)
  - ✓ SWEPCo ($56MM)
- Anticipated filings:
  - APCo VA and others to be determined

Minimize regulatory lag:

- Active fuel adjustment clauses now in place in <u>all</u> jurisdictions
- Increased frequency of rate cases
- Employing tracking features

Strong local relationships with regulators

OPCo	8%	7%	8%
CSPCo	7%	6%	6%

- Fuel recovery mechanism
  - Any under-recoveries earn WACC similar to plant investment
  - Deferred fuel balances at end of ESP are amortized and recovered 2012-2018
  - Recovery of future costs of carbon regulation explicitly included in FAC
- Opportunity for distribution rate cases

AEP AMERICAN ELECTRIC POWER

Summary Rate Case Information

SWEPCo Arkansas General Rate Case

On February 19, 2009 SWEPCo filed a general base rate case with the Arkansas Public Service Commission (APSC) requesting an increase of $53.9 million. (Docket #:09-008-U). An order is expected in December 2009.

Projected Capital Structure – Company Position (12/31/08)

	% of Capitalization	Cost Rate	Weighted Return
Long-Term Debt	41.73%	6.61%	2.76%
Preferred Stock	0.12%	4.87%	0.01%
Common Equity	35.68%	11.50%	4.10%
Other Items	22.47%	various	0.13%
Total	100%		7.00%

Procedural Schedule

6/26/2009	Staff and intervenor testimony due
7/24/2009	Rebuttal testimony due
8/18/2009	Staff and intervenor rebuttal testimony due
8/25/2009	Surrebuttal testimony due
10/20/2009	Public hearing commences

Required Rate Relief – Company Position (12/31/08)

($ in millions)

Adjusted Rate Base	$	608.9 *
Required Rate of Return		7.00%
Required Operating Income	$	42.6
Adjusted Operating Income	$	27.3
Difference	$	15.3
Revenue Conversion Factor		1.65
Revenue Deficiency	$	25.2
Generation Recovery Rider	$	28.7
Total Required Rate Relief	$	53.9

*Rate base as of December 31, 2008, updated for known and measurable changes through December 31, 2009.

AEP AMERICAN ELECTRIC POWER

Regulatory Activity Underway

APCo-Virginia E&R Filing

On May 15, 2009, Appalachian Power filed the fourth and final tranche of E&R surcharge filings with the SCC, requesting a $41.6 MM increase for environmental and reliability costs incurred during the period January 1, 2008 through December 31, 2008, with a proposed one year recovery period commencing January 1, 2010. No procedural schedule has been set by the SCC.

Summary of APCo's E&R filings:

E&R Tranche:	Case Number	Cost Incurred :	Recovery Period:	Amount:
I	PUE-2005-00056	07/01/2004 thru 09/30/2005	12/1/2006 thru 11/30/2007	$21.3 million
II	PUE-2007-00069	10/01/2005 thru 9/30/2006	1/1/2008 thru 12/31/2008	$48.9 million
III	PUE-2008- 00045	10/01/2006 thru 12/31/2007	01/01/2009 thru 12/31/2009	$60.6 million
IV	PUE-2009-00039	01/01/2008 thru 12/31/2008	Proposed 01/01/2010 thru 12/31/2010	$41.6 million

AEP AMERICAN ELECTRIC POWER

Energy Policy Initiatives are Core to Our Strategy

Greenhouse Gas Reduction & Regulation

- Actively engaging in CO_2 policy debate – support cap & trade with <u>allocated</u> credits
- Leadership position in development of carbon capture and storage technology
- Reducing carbon footprint via offsets and other measures
- Founding member of Chicago Climate Exchange

Renewable Energy

- Develop “transmission superhighway” to facilitate renewable energy projects
- Satisfy RES requirements in our jurisdictions
- Add 2,000MW of wind capacity via long-term PPAs – 903MW achieved to-date

---

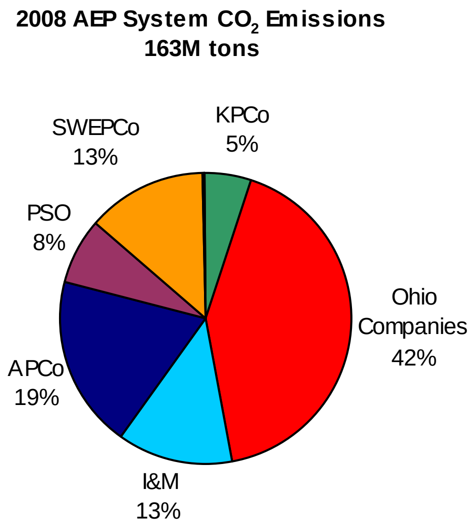
Energy Efficiency, Security & Reliability

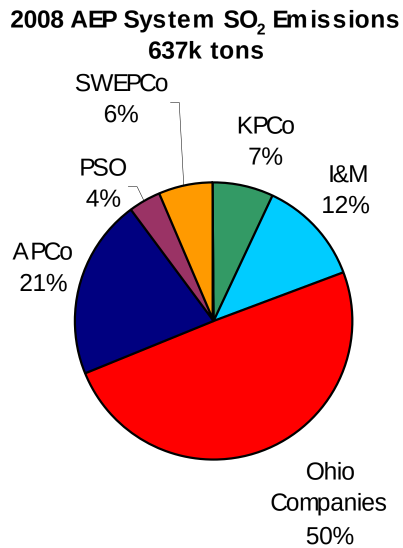
- Develop high-voltage transmission projects to strengthen America’s power grid
- Build generation to ensure reliable supply
- Reduce 1,000MW of demand by 2012
- Reduce 2.25 million MWhs of consumption by 2012
- Diversify our fuel mix; have added 3,705MW of gas-fired capacity since 2005 and have 1,080MW under construction

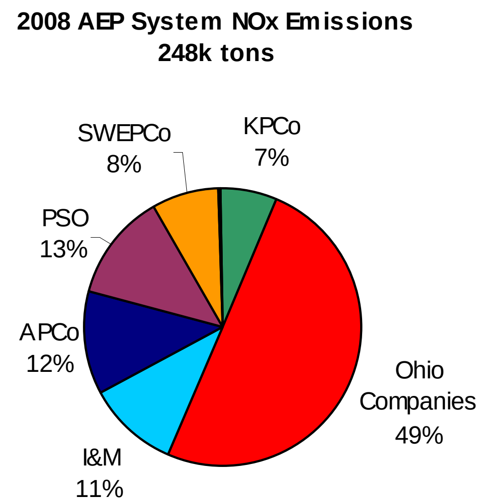
---

AEP AMERICAN ELECTRIC POWER

CO_2 Cost Recovery – Should Follow SO_2 & NOx





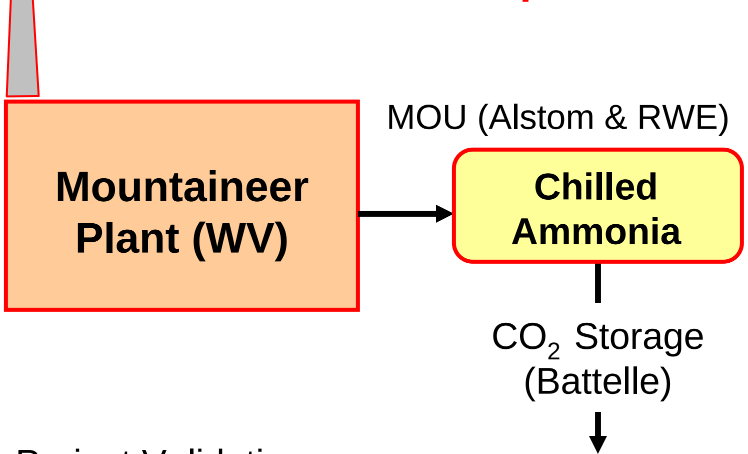


- 100% of SO_2 and NOx allowance costs currently recovered through tracker or similar mechanisms
- Prudently incurred costs associated with carbon-based taxes and other carbon-related regulations explicitly included in Ohio Fuel Adjustment Clause

AEP AMERICAN ELECTRIC POWER

Carbon Capture & Storage

2009 Commercial Operation



Project Validation

- **Alstom “Chilled Ammonia” Technology**
- **20-30 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, in operation at We Energies’ Pleasant Prairie Power Plant)**
- **Located at the AEP Mountaineer Plant in WV**
- **100,000 - 300,000 tonnes CO_2 per year**
- **In operation 3Q 2009**
- **Geologic storage for CO_2**

Represents Post-Combustion Capture

- **Conventional or Advanced Amines; Chilled Ammonia**
  - **Amine technologies are currently available in other industrial applications**
  - **Relatively low CO_2 concentration in flue gas - more difficult to capture than other approaches**
  - **High parasitic demand**
    - **Conventional Amine ~ 25-30%**
    - **Chilled Ammonia target ~ 10-15%**

Key Issues for CCS Development in the U.S.

- **Overcoming the ‘economic’ hurdle**
- **High up-front capital investment**
- **Commercial demonstration at large coal-fired power plants**
- **National standards for permitting of storage reservoirs**
- **Potential institutional, legal and regulatory barriers to carbon storage**

AEP AMERICAN ELECTRIC POWER

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
AEG	Dresden	Ohio	$322 MM	Gas	Combined-cycle	580	2013
SWEPCo	Stall	Louisiana	$385 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.6 B (1)	Coal	Ultra-supercritical	600 (1)	2012

(1) SWEPCo will own approximately 73%, or 438 megawatts, totaling about $1.2 billion in capital investment.

- Turk – AEP self-reported impacts to jurisdictional wetlands in March 2009. Work continues outside the jurisdictional areas. Hearing on the air permit appeal is scheduled for June 2009.
- Stall – Construction continues.
- Dresden – Construction suspended due to shifts in capital spending. Commercial operation date has been projected for 2013 (previously 2010).

DC Cook Unit 1 Update

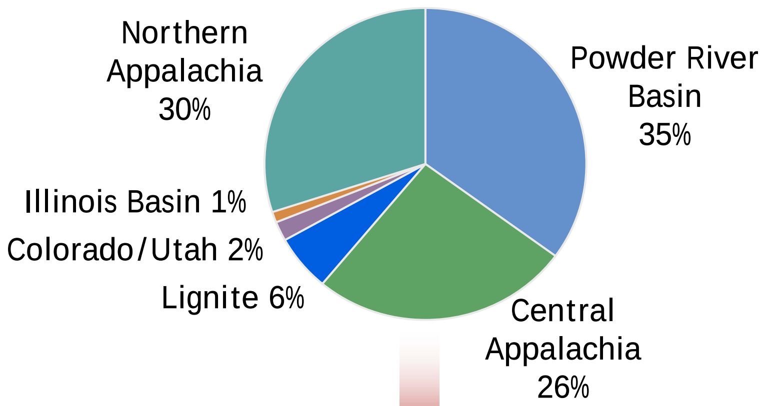
- Previously identified technical challenges have solutions
  - Low pressure turbine rotors have been straightened
  - Foundation repair work is in progress and is the critical path
  - Generator and high pressure turbine repair work supports the critical path
- The unit is scheduled to return to service in the fourth quarter of 2009
  - The unit will operate without the last stage blades at 30 MW (summer) to 100 MW (winter) reduced capacity
- Root cause: “A blade-rotor system design that failed to provide adequate stress margin”
  - The root cause also found no operational or installation issues
- The replacement rotors are scheduled for installation in the spring of 2011
  - Different design with several years of fault-free commercial operation.
- We continue to receive $3.5MM per week from the accidental outage policy
  - Insurance proceeds are reflected as other operating revenue; During 1Q09, approximately 40% of the insurance payments ($20MM) were used to offset increased fuel costs to customers

AEP AMERICAN ELECTRIC POWER

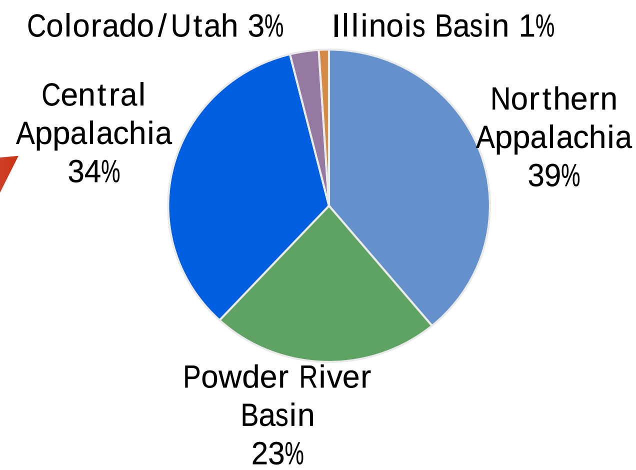
Coal Procurement - 2009 Projected

AEP burns approx. 77 million tons of coal per year

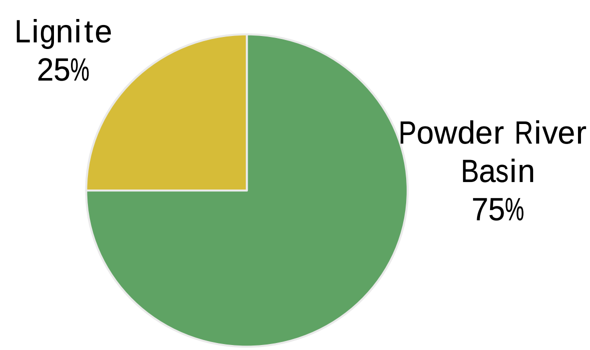
Total AEP System



AEP East



AEP West



Coal Stats:

- 98% contracted for 2009
- Avg. delivered price ~ $46.61/ton in 2008
- Approximate 12% price increase in 2009 ~ $52.00/ton

AEP AMERICAN ELECTRIC POWER

Uniquely Positioned for Nationwide Grid Expansion

AEP AMERICAN ELECTRIC POWER

Note: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

Equity Contributions Enhance Earnings Growth to 4 – 8%

AEP is the leader

- Largest US transmission footprint
- Interstate EHV highway vision
- National renewables transmission strategy

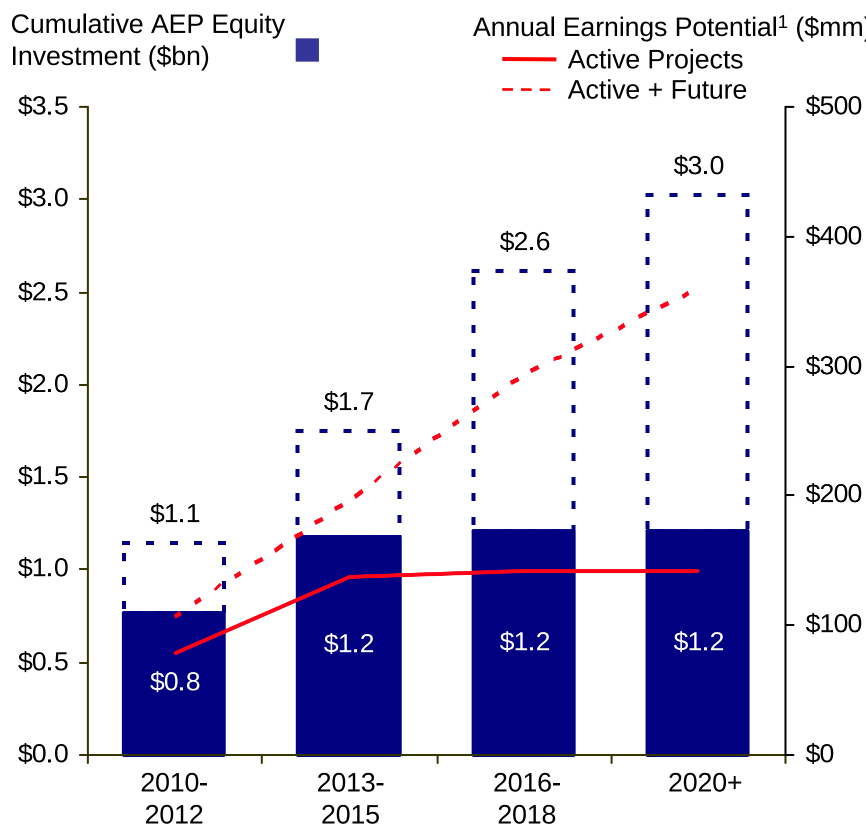
Quality projects

- 4 FERC-approved ($3.3 billion)
- Independent ERCOT transmission JV company (up to $2.6 billion)
- Robust pipeline of future 765 kV projects (up to $15 billion)

Attractive returns

- FERC incentive rates (12.5-14.3%)
- Strong cash flow with CWIP
- Long-term earnings potential of ~$140-$360 million annually[1]

Illustrative Earnings Potential of New Transmission Initiatives



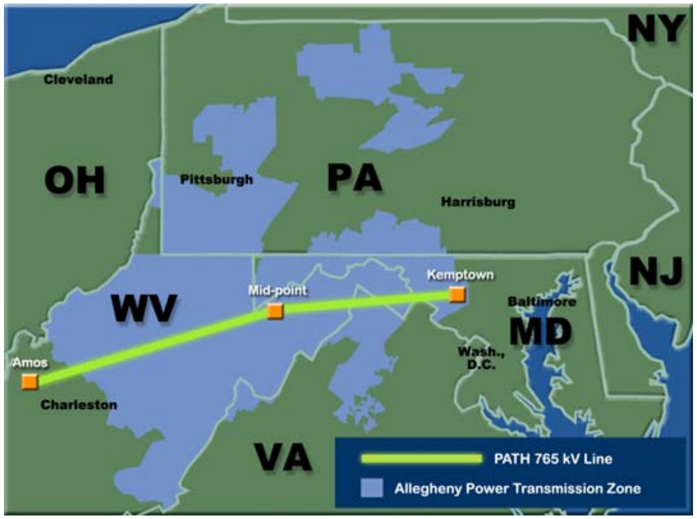
[1] *Illustrative calculation assumes 50/50 debt/equity capitalization and incentive ROE of ~13.0% for FERC projects and a 60/40 debt/equity capitalization and 10.5% ROE for ERCOT projects*

AEP AMERICAN ELECTRIC POWER

EHV Transmission in PJM: PATH

<u>Project Description:</u> 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

- **Near Term Risks**
  - Obtaining a CPCN in West Virginia or costly concessions with WV to receive the CPCN; CPCN filing made May 15, 2009
- **Pertinent Data**
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP and 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
    - Rates went into effect March 1, 2008; current annual revenue requirement is $15MM effective 1/1/09
  - Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million
  - Estimated completion date: 2014



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

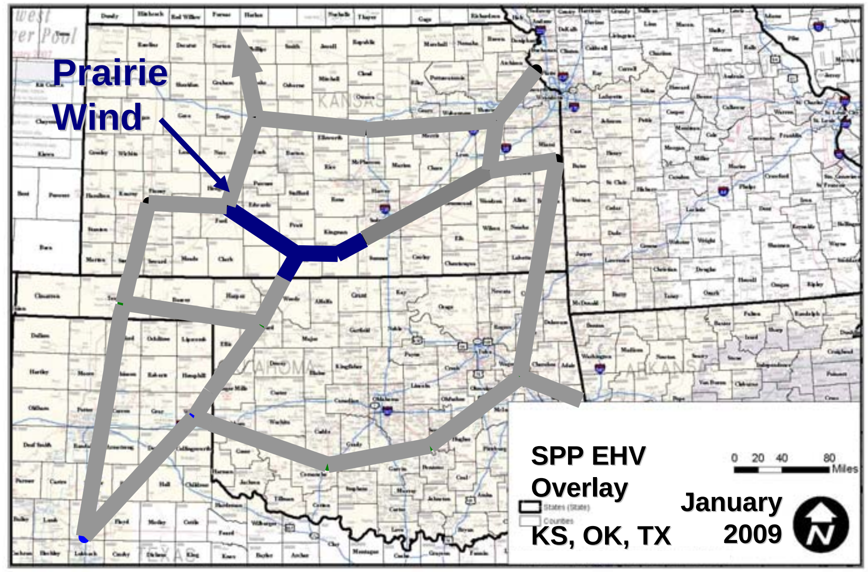
Prairie Wind Transmission, LLC

JV to build first segment of 765-kV transmission in SPP

- ***Overview***
  - In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
  - PWT is a 50/50 JV that is proposing to build approximately 230 miles of 765-kV lines extending from Wichita, KS, west to a substation northeast of Dodge City, KS, and then south to the Kansas border from Medicine Lodge, KS.
  - The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
  - Project is expected to cost approximately $600 million (based on SPP estimates) and be in-service by 2013.
  - AEP's ownership of the joint venture is 25%.
  - Kansas CPC filing submitted in May 2008.
  - FERC order received in December 2008:
    - ❑ Cash return on CWIP and 12.8% incentive ROE
    - ❑ Recovery of all costs incurred prior to the time rates go into effect, and
    - ❑ Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PWT or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

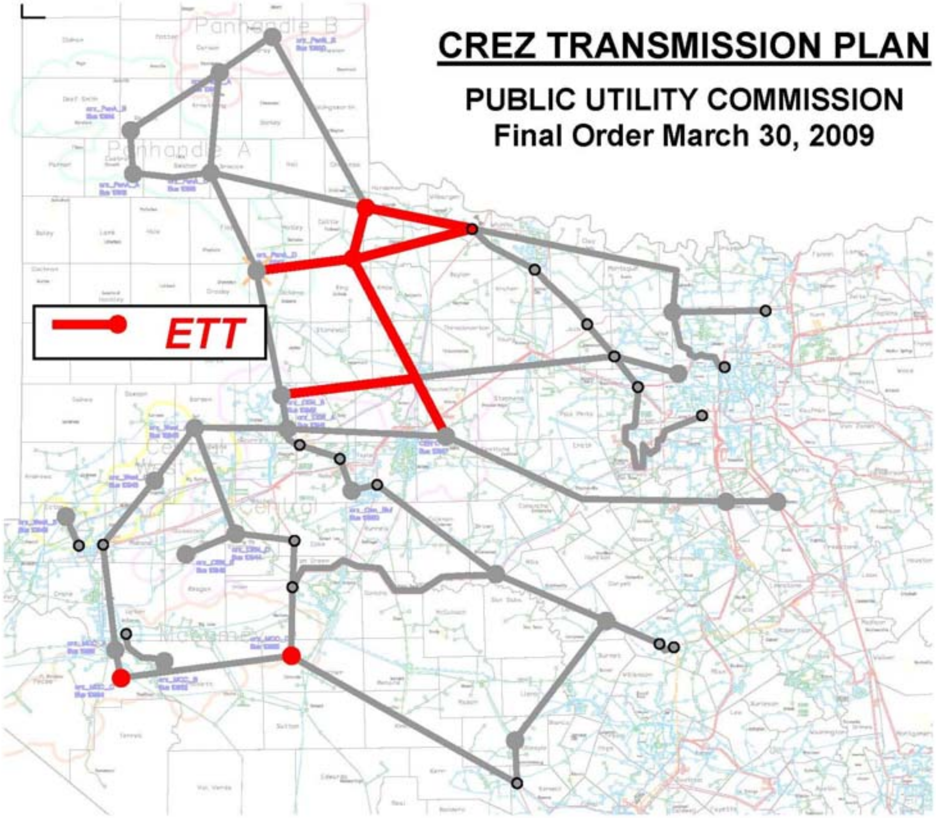
- ***Key Challenges***
  - Cost allocation which enables the development of "system solutions"
  - RTO Approval
  - Competing ITC Great Plains project

AMERICAN ELECTRIC POWER

Texas CREZ Project

Strengthening the ERCOT grid to collect and deliver wind generation to load

- ***Status:***
  - On February 26, 2009, PUCT ordered its staff to stage the development of CREZ transmission lines.
  - Staging to occur in separate docket and consider timing of wind projects and congestion.
  - PUCT established 2 categories based on priorities. ETT has no first priority lines.
  - PUCT issued a final order assigning transmission service providers on March 30, 2009.
  - ETT's share of CREZ investment is approx. $840MM of $4.9B total.
  - The filing calls for completion of the plan by 2013.
- ***Next Steps***
  - Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in early 2010.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

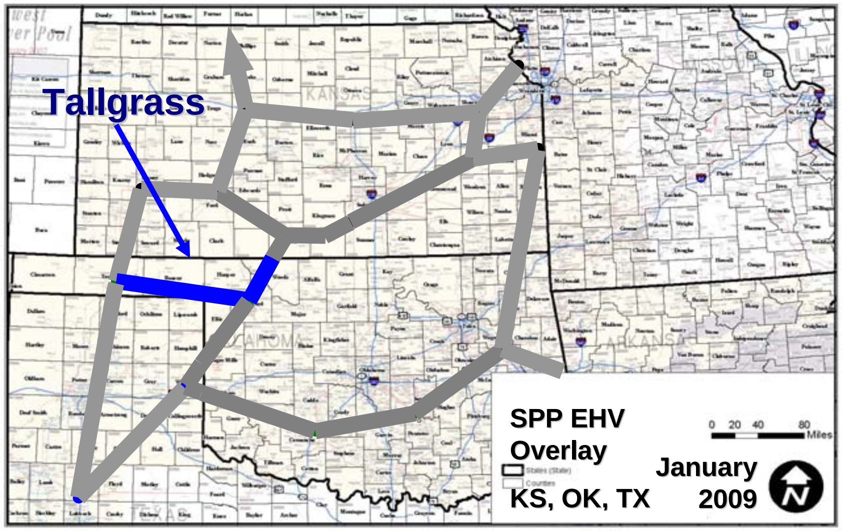
ETT Electric Transmission Texas

AEP AMERICAN ELECTRIC POWER

Tallgrass Transmission, LLC

JV to build second segment of 765-kV transmission in SPP

- ***Overview***
  - In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
  - TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines extending from the Kansas-Oklahoma border north of Woodward, OK, extending west into the Oklahoma panhandle to a new station that will be built near Guymon, OK.
  - The project will promote wind development in the western half of Oklahoma.
  - Project is expected to cost approximately $500 million and be in-service by 2013.
  - AEP's ownership of the joint venture is 25%.
  - Other responsibilities will be handled by the partners or outsourced.
  - FERC order received in December 2008:
    - Cash return on CWIP and 12.8% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of TG or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

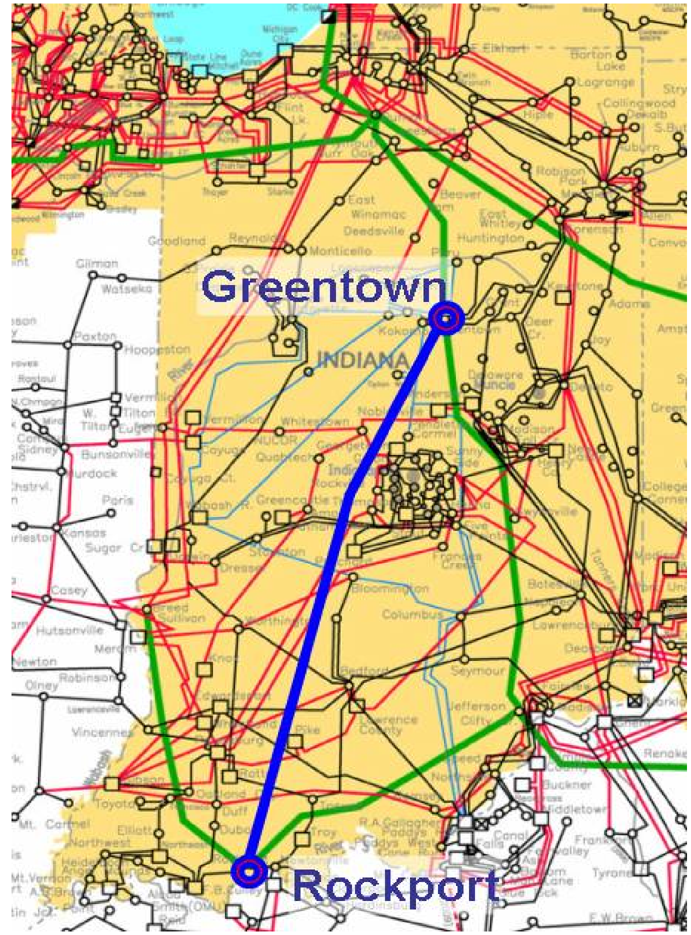
- ***Key Challenges***
  - Cost allocation which enables the development of "system solutions"
  - RTO Approval

AEP AMERICAN ELECTRIC POWER

Pioneer Transmission LLC

Overview

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
- The project will improve the reliability of the nation's transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, protect national security and expand opportunities for new generation, including renewables.
- Project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP's ownership of the joint venture is 50%.
- Other responsibilities will be handled by the partners or outsourced.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect, and
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PT or its parents.
  - Certain formula rate issues were set for hearing



Key Challenges

- Cost allocation which enables the development of "system solutions"
- RTO Approval - touches two RTOs – PJM & MISO
- Siting

AEP AMERICAN® ELECTRIC POWER

Hartland Wind Concept EHV Development in Upper-Midwest

Project Description: 1000+ miles of 765-kV transmission linking Upper Midwest generation sources with the existing EHV infrastructure in the Chicago area expected to cost $5-$10 billion over a 10 year period.

- **Near Term Risks**
  - Technical feasibility study
  - Identification of willing and able partners
  - Obtaining cost allocation between states, PJM, and MISO
  - RTO Technical Approvals
  - Favorable 205 Order including 679 incentives
- **Mitigation**
  - Target the identified need for the project and its ability to provide access for wind energy to load centers
  - Collaboration in regulatory process for regional cost allocation between MISO, PJM, and Midwest Governors Association
  - Prepare comprehensive regulatory filing, including incentives

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP AMERICAN ELECTRIC POWER

Overview of 2009 Guidance

2009 Earnings Drivers:

- ⬆ Positive Ohio outcome
- ⬆ Rate relief - $732mm
- ⬇ Economic slowdown
  - — Lower OSS revenues
  - — Lower loads

Long-term Earnings Drivers:

- ⬆ Rate base investments
- ⬆ Additional rate relief
- ⬆ OSS/Retail load
- ⬆ Transmission JV earnings

2008A-2009E Earnings Bridge ($mm)

AMERICAN ELECTRIC POWER

Pension and OPEB Estimate

- Our pension plan and OPEB funds investment returns were each down about 24% in 2008.
- Discount rates are assumed to be 6.0% for pension and 6.1% for OPEB.
- Investment losses increase plan expense for both pension and OPEB, but the investment losses are smoothed in over several years.
- We expect 2009 pension and OPEB expense to increase $104MM from 2008 to 2009 (pre-tax and pre-capitalization).
- OPEB contributions will increase along with OPEB expense, in accordance with agreements in most of our regulatory jurisdictions.
- We do not expect any mandatory contributions to pension in 2009. Pension trust contributions are estimated to be $475MM in 2010 and $283MM in 2011.

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms and our ability to recover significant restoration costs through applicable rate activities, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants, our ability to recover I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration costs through rates, insurance or warranty, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances that could impact the continued operation of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of the recently passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events. AEP and its Registrant Subsidiaries expressly disclaim any obligation to update any forward-looking information.

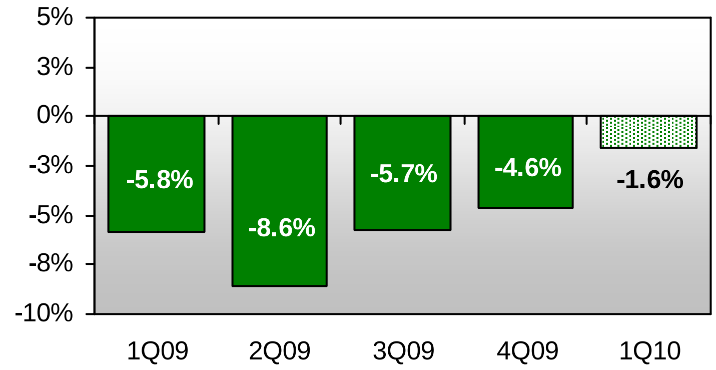
2010E: $2.80-$3.20/share

Near-Term Earnings Drivers

- **Rate recovery from returns on capital investment**
- **Load growth (and recovery)**
- **Increase in off-system sales volumes and/or prices**
- **O&M discipline and cost cutting initiatives**

AEP Total Normalized GWh Sales
Quarter % Change vs. Prior Year



Quarter over Quarter change by segment:
Residential: +2.1%
Commercial: -1.6%
Industrial: -1.0%

Energy Policy Initiatives = Opportunities

Policy: Greenhouse Gas Emissions Reductions

Technology: Mountaineer Carbon Capture and Storage Project

Policy: Renewable Energy Standards; Energy Efficiency, Security and Reliability

Technology: Industry Leading High Voltage Transmission and gridSMART[SM] Projects

Carbon Capture and Storage Project – Mountaineer Plant (WV)

765-kV Transmission Line – Wyoming-Jacksons Ferry (WV)

Transmission Investment Opportunities

- <u>AEP Transmission Company (Transco)</u>: Within our existing footprint
  - Develop new AEP-only projects within AEP's footprint
  - Reduce regulatory lag through FERC formula rates adjusted annually
- <u>Electric Transmission Texas (ETT)</u>: Projects in Texas ERCOT jurisdiction
  - Framework in Texas allows for more expeditious siting and recovery
  - $600MM of projects est. in service 2010-2013
  - ETT's opportunity could reach $3.0B within this decade
- <u>Joint Ventures (JVs)</u>: Outside of our footprint, with Electric Transmission America (ETA) or others
  - Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
  - Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2015
  - Robust pipeline of projects up to $15B

765-kV Tower

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to resolve I&M's Donald C. Cook Nuclear Plant Unit 1 restoration and outage-related issues through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events and our ability to recover through rates or prices any remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives, evolving public perception of the risks associated with fuels used before, during and after the generation of electricity, including nuclear fuel.

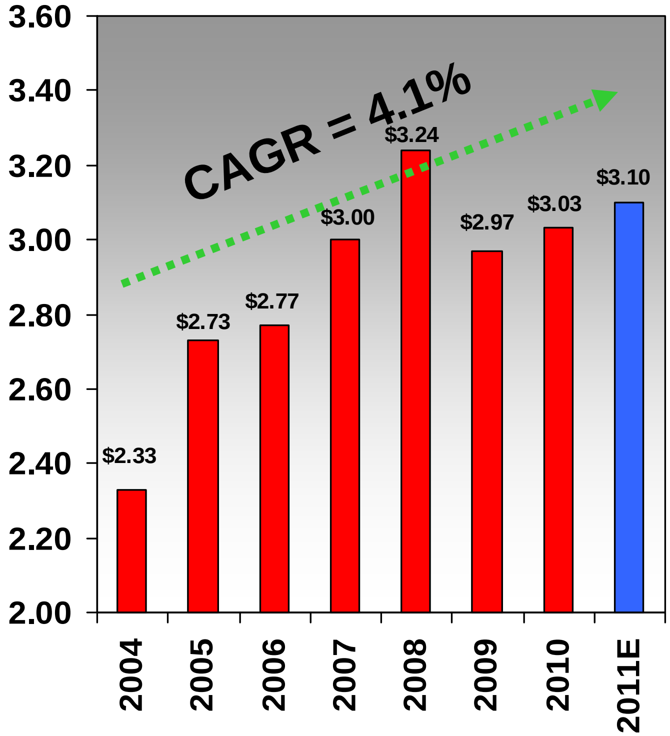
Earnings and Dividends

On-Going EPS History Since 2004

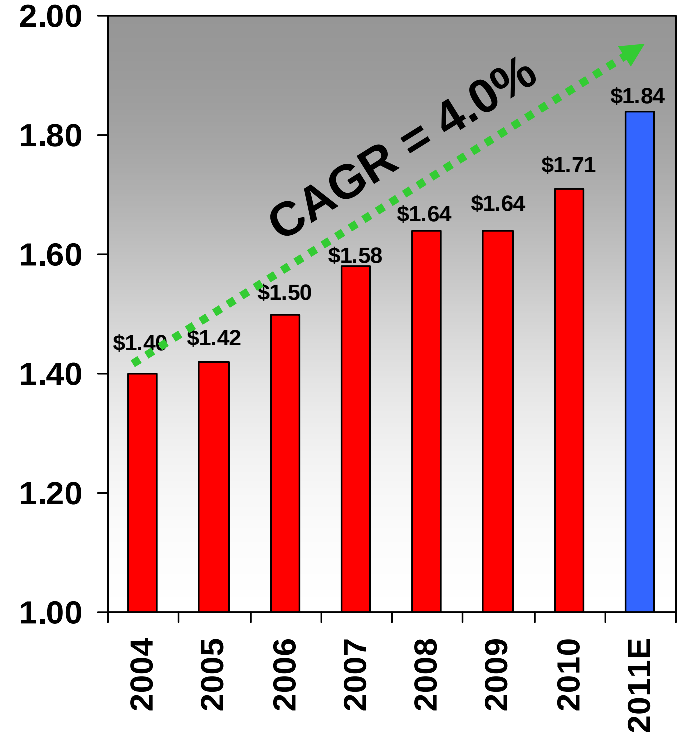
$/share



- Earnings growth largely attributed to capital investment program
- Pre-recession earnings supported by robust wholesale market activity and high power prices
- Equity offering in 2009 stabilized credit and strengthened balance sheet
- 2011 guidance range of $3.00 to $3.20 per share

Dividend History Since 2004

$/share



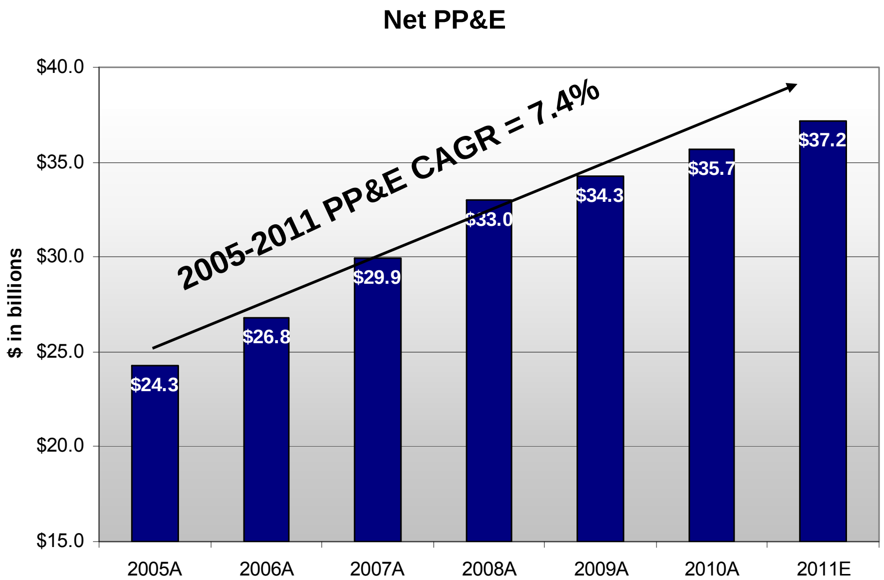
= subject to Board of Directors approval

- Quarterly dividend <u>increased 12%</u> in 2010
- <u>405th consecutive</u> quarterly dividend paid in September 2011
- 50-60% payout ratio target
- Current yield near 5%

Ratemaking Environment

AEP®

Growth in Net PP&E

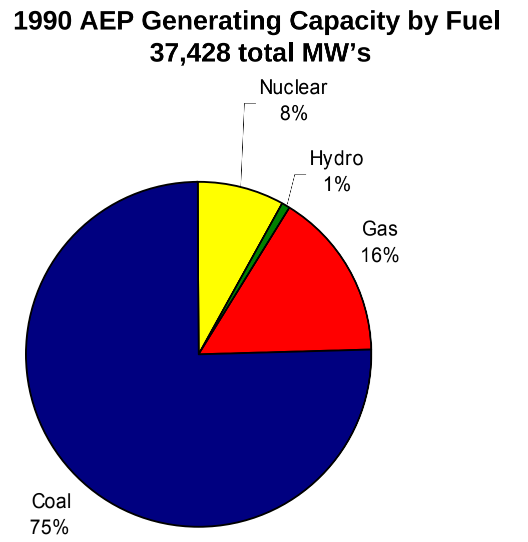


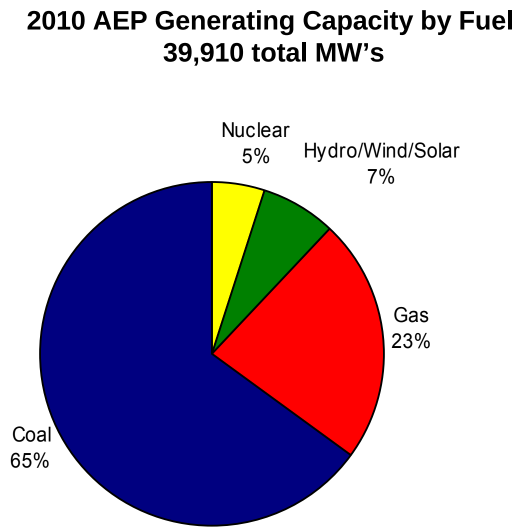
Growth in rate base resulting in $2.3 billion of rate relief secured from 2006 through 2010

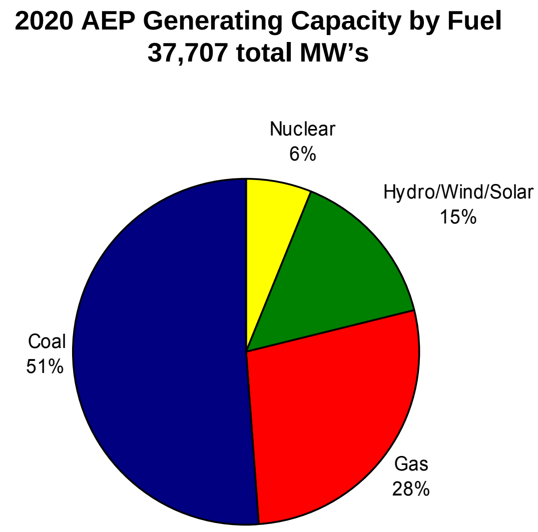
Regulatory Framework

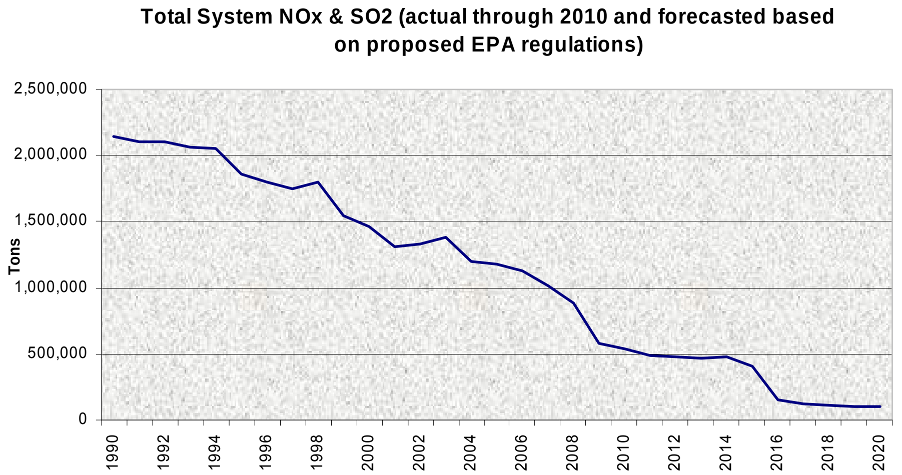
- Base Rates
  - Recovery of capital and financing costs
  - Recovery of set level of O&M costs
- Recovery of Fuel Costs in all jurisdictions
- Opportunities to Reduce Regulatory Lag
  - Contemporaneous recovery for construction costs, reliability, environmental spending, etc.
- Ohio Generation Rates set by PUCO according to SB221 (non-cost based)
  - Customers have choice for generation service; 6.9% customer switching through 2Q11
  - Current generation rates set for 2009 – 2011
  - Upcoming hearing October 4th on 2012-2015 rate plan settlement
  - Settlement requires separation of transmission and distribution from generation. Generation moves to market pricing on June 1, 2015.

Generation Transformation









- $7.2 billion capital invested from 1990-2010 to reduce emissions approximately 1.7 million tons
- Estimated $6-$8 billion additional capital investment from 2012-2020 for further reductions of approximately 440,000 tons

Additional Investment Opportunities

AEP®

ETT Electric Transmission Texas

- **Ownership Structure:** 50/50 (AEP/MidAmerican Energy Holding Company)
- **Total Project Cost**: Over $3 Billion
- **Growing Rate Base:** Current rate base is $412 million; expected to grow as follows:
  - 2011: $482 million
  - 2012: $778 million
  - 2013: $1,352 million
- **Interim TCOS filings twice per calendar year**
- **Approved ROE:** 9.96%

AEP Transcos

- Seven wholly-owned Transcos
- Expansion and growth within AEP's existing utility footprint
- Efficient recovery mechanism via FERC formula rates
- Forecasted capital investment of $160 million in 2011 and more than $350 million in 2012
- Approved ROE: 11.20%-11.49%

Additional joint ventures diversify AEP's investment outside the traditional footprint while providing longer-term incremental earnings.

AEP Highlights

- Large, Diverse Electric Utility
- Focus on Capital Allocation
- Strong Balance Sheet
- Growth Opportunities
- Dividend yield near 5%

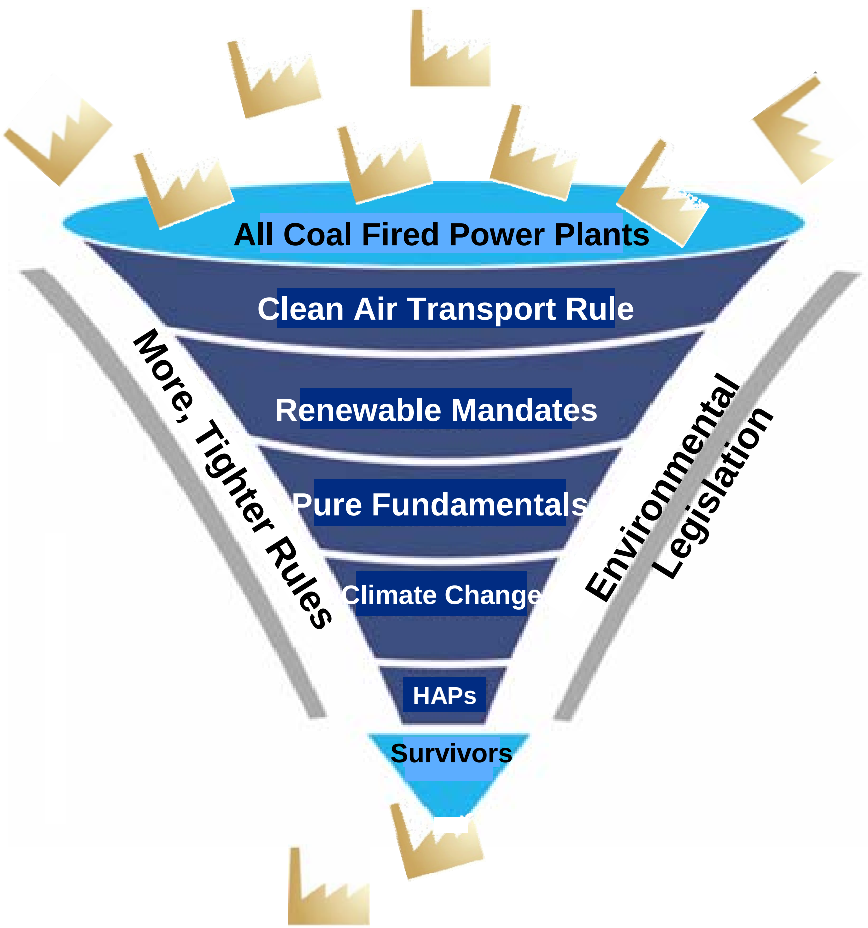
The Pressure on Coal Generation



Key EPA Actions Pending

- Transport Rule – Proposed July 2010
- "Coal Ash" Rule – Proposed May 2010
- Mercury and other Hazardous Air Pollutants (HAPs) Rule – Proposed March 2011
- Cooling Water Intakes – Expect Proposed Rule in Spring 2011
- Greenhouse Gas Tailoring Rule – January 2011

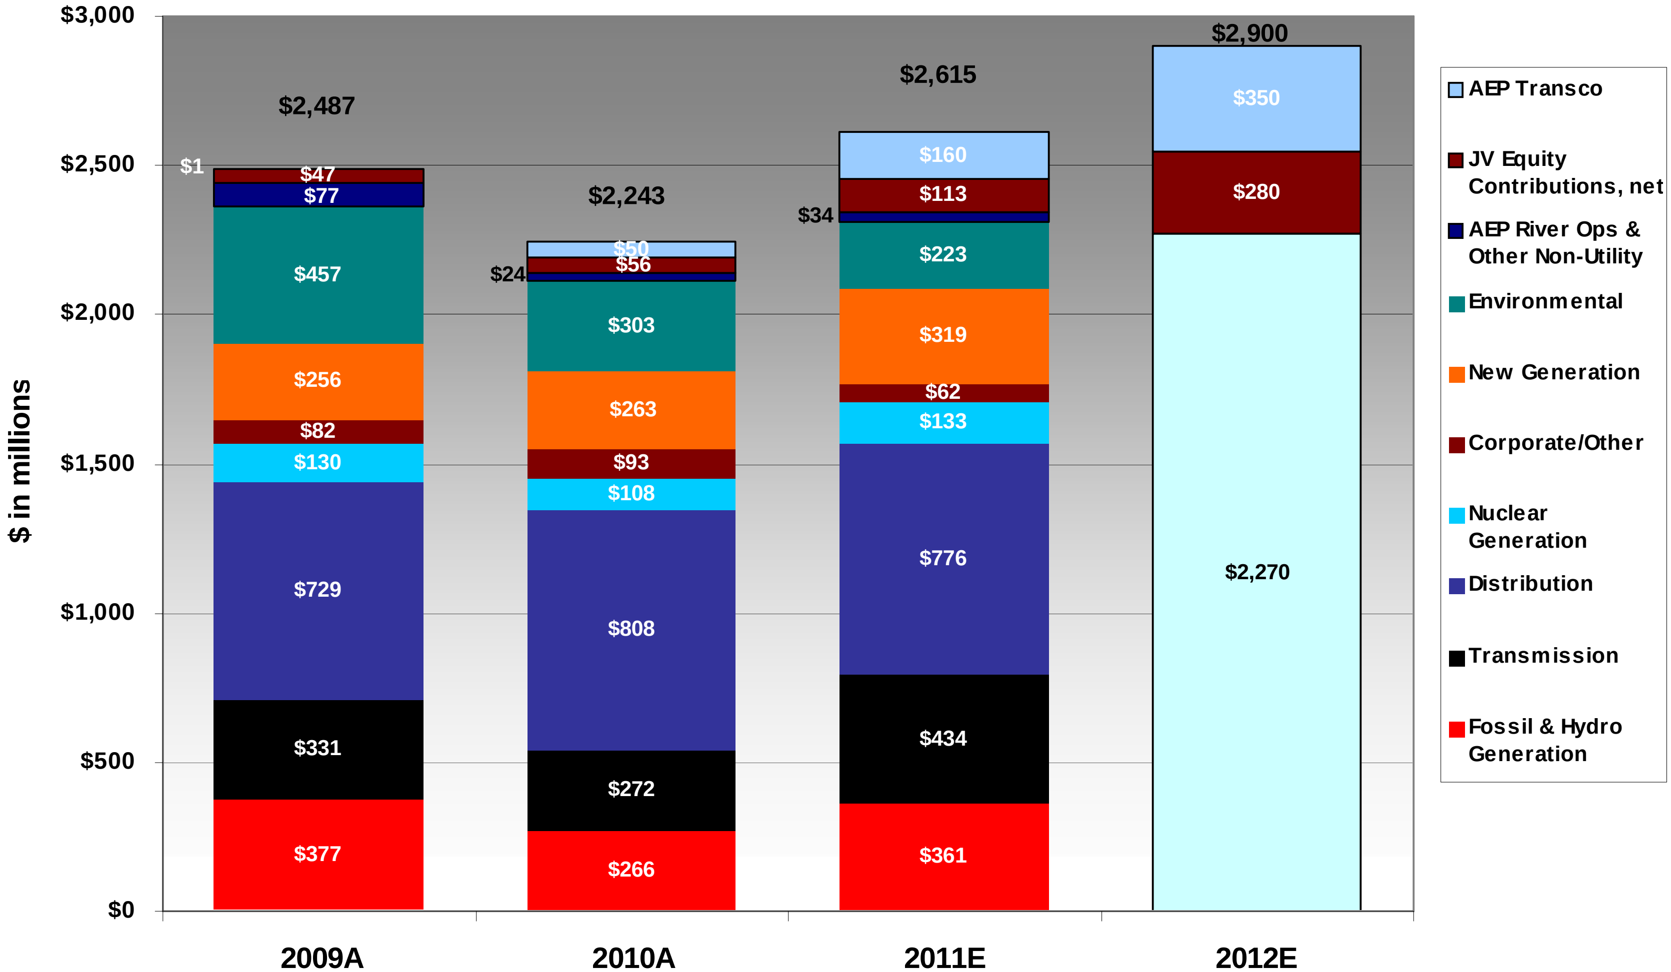
Transmission Investment Strategy

- **<u>Near-Term Investment</u>** – Electric Transmission Texas (ETT) secures near term investment opportunities, allowing AEP to invest in the large, growth-oriented Texas transmission market. Total project cost of $3 billion with a 9.96% ROE.
- **<u>Mid-Term Investment</u>** – Seven wholly-owned transcos allow for expansion and growth within AEP's existing utility footprint through an efficient recovery mechanism. Will spend $160 million in 2011 and more than $350 million in 2012; Expected ROE will be in the 11.20%-11.49% range
- **<u>Long-Term Investment</u>** – Joint ventures provide opportunities for longer-term growth outside of AEP's existing utility footprint with forward looking formula rates, higher ROEs and FERC incentives, and mitigated risk profiles.

765-kV Tower

Transmission has a diversified investment approach that positions it as one of the key AEP growth businesses.

Capital Expenditures



Investment levels greater than depreciation of $1.3B per year cause rate base growth in 2011 and 2012

Long-term EPS Growth Rate

AEP®

- 4-6% EPS growth 2012-14
  - Average annual capital spend between $2.9-3.4B
    - Utility platform replacement capital of about $1.4B (annual depreciation)
    - Growth in rate base of $1.5-2.0B per year, allocated between utility platform and transmission projects
  - Average ROE of 10.5 - 11%
  - Slow, steady recovery in economy
- 5-7% EPS growth post 2014
  - Base utility platform capital including generation transformation
  - Higher allocation of discretionary capital going to opportunities in the transmission development pipeline
  - Higher overall blended ROE opportunity
  - Robust economic growth

Average Annual EPS Growth defined over two periods

AEP Highlights

- Regulated Electric Utility
  - Regulatory and economic diversity
  - Operating Company Model
- Focus on Capital Allocation
  - Capital for Growth
  - Return of Capital to Shareholders
- Strong Balance Sheet
  - Stable credit ratings
  - Capital plan supported by cash flow
  - Strong liquidity position
- Growth Opportunities
  - Capital for utility platform
  - Transmission projects
- Dividend yield over 5%

AEP AMERICAN ELECTRIC POWER®

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are canceled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; volatility in the financial markets, particularly development affecting the availability of capital on reasonable terms and developments impairing our ability to refinance existing debt at attractive rates; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

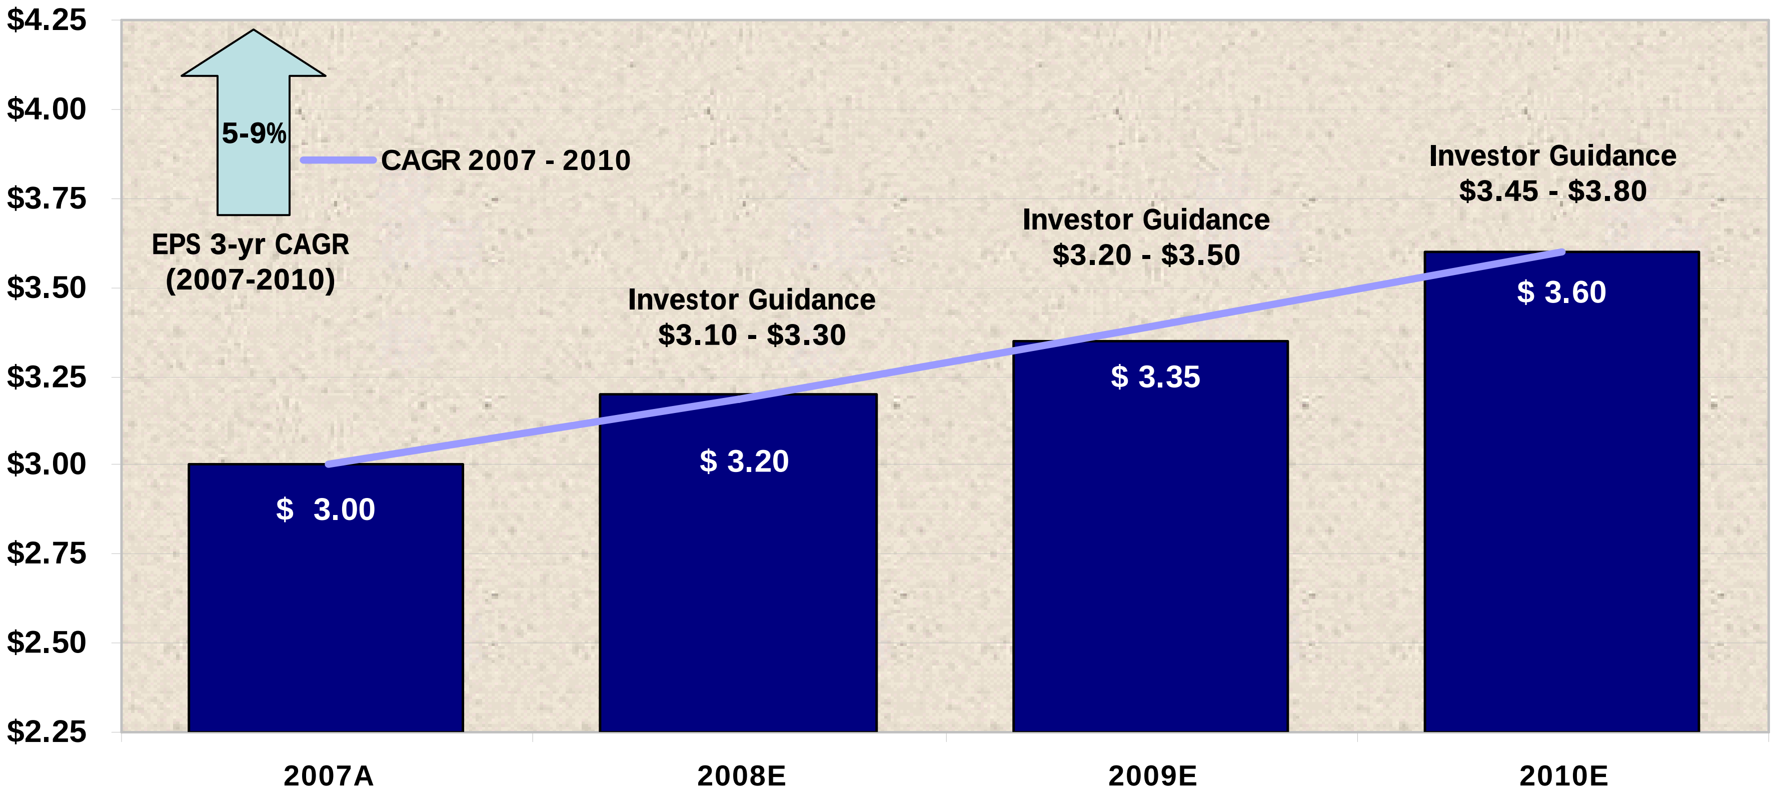
The AEP Value Proposition

Leveraging our vast energy platform with low-risk investments in infrastructure to enable sustainable growth.



AEP's ability to ensure a disciplined approach to capital investment allows us to sustainably grow earnings and shareholder value.

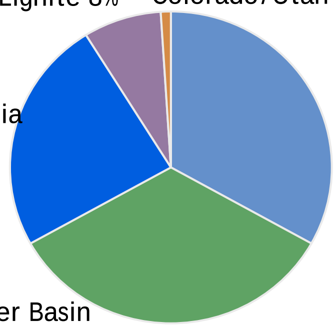
Capital Investment + Rate Relief = Earnings Growth

Coal Procurement – 2008 Projected

AEP burns approx. 76 million tons of coal per year

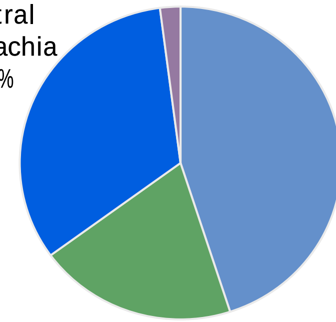
Total AEP System



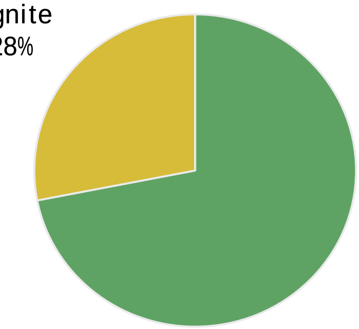
Coal Stats:

- > 95% contracted for 2008
- Avg. delivered price ~ $36.58/ton in 2007
- Approximate 20% price increase in 2008 based on 2007 actual results.

AEP East

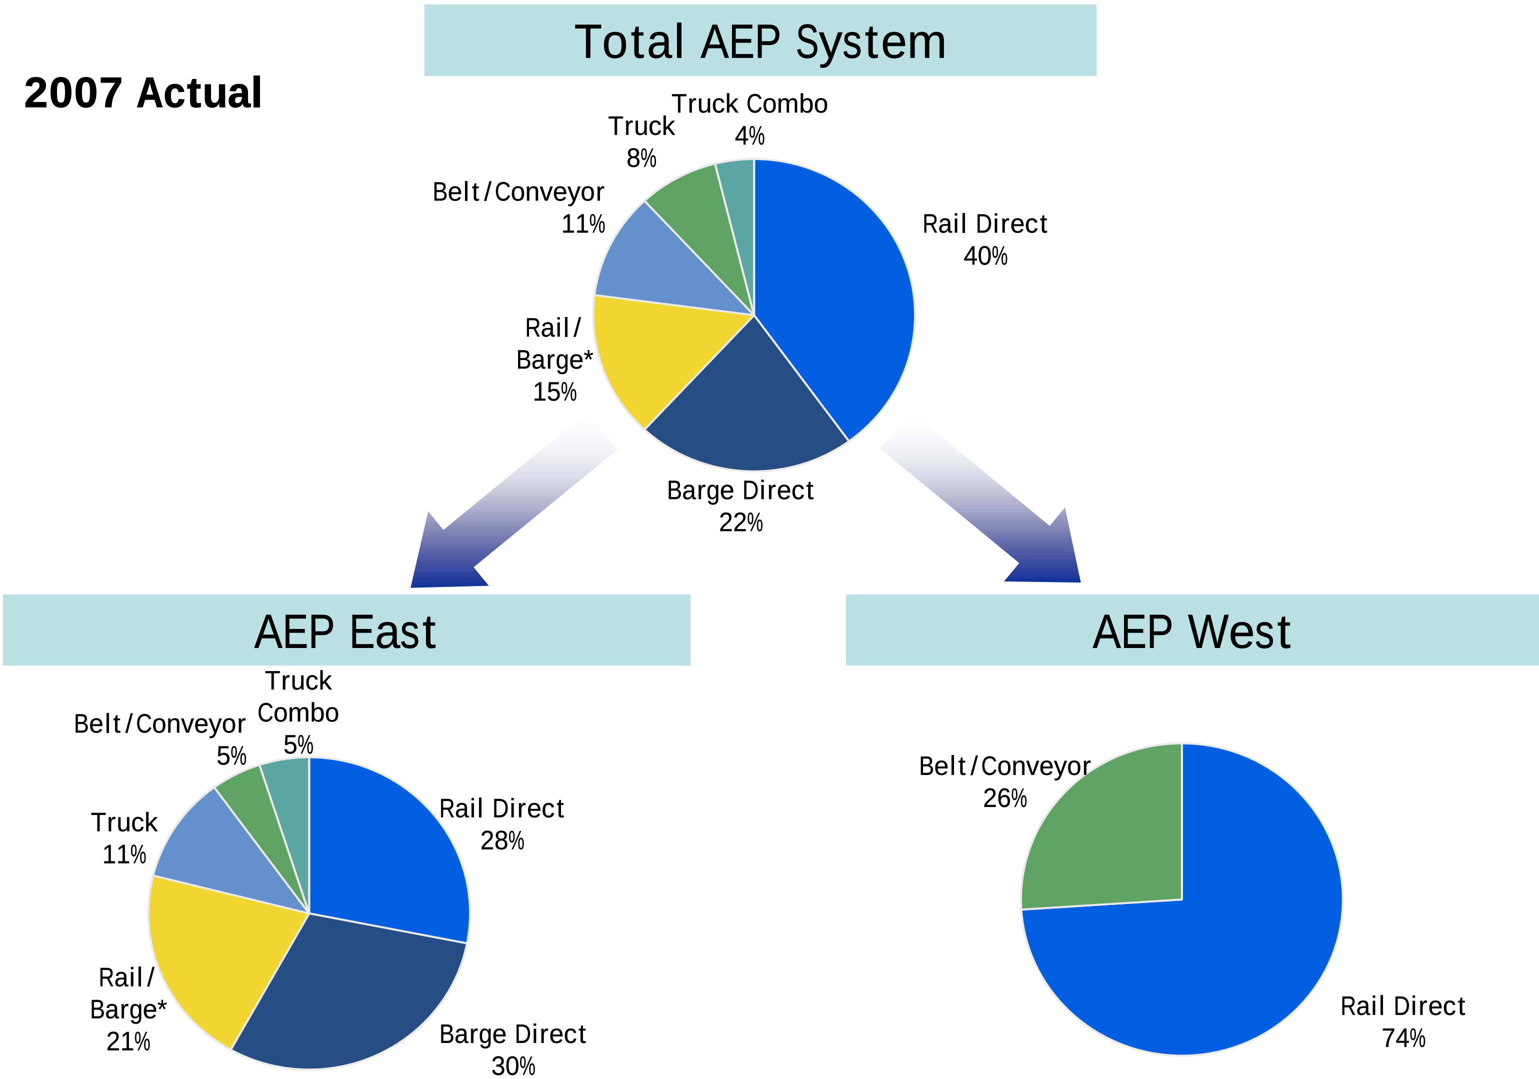


AEP West



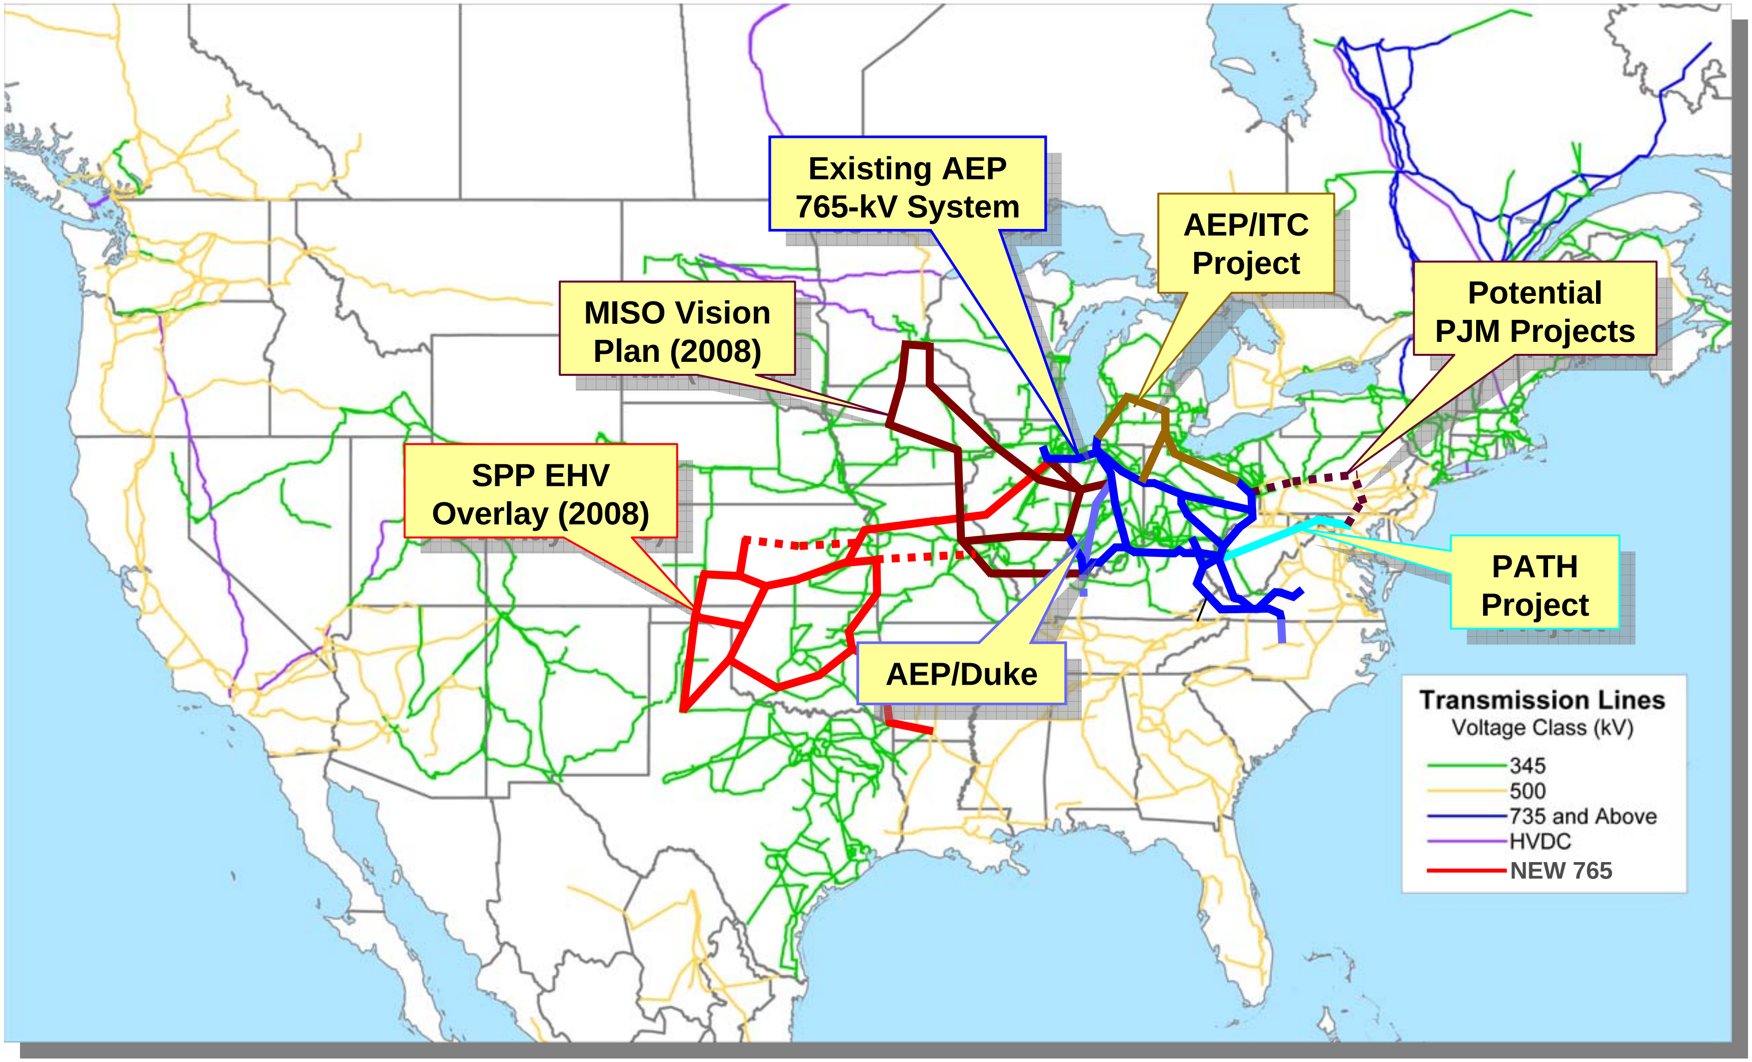
Coal Delivery

2007 Actual



* Reflects coal delivered to AEP plants transported through a combination of rail and barge

Making it Happen: EHV Projects Under Development

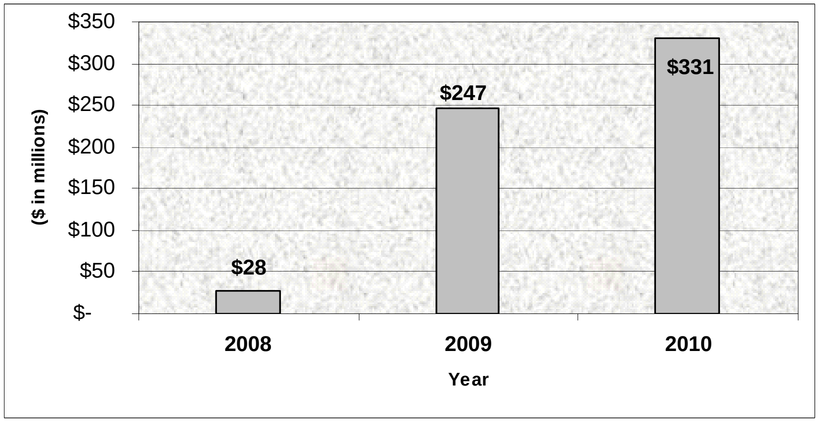


NOTE: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

Transmission – Investments and Earnings Contributions

AEP

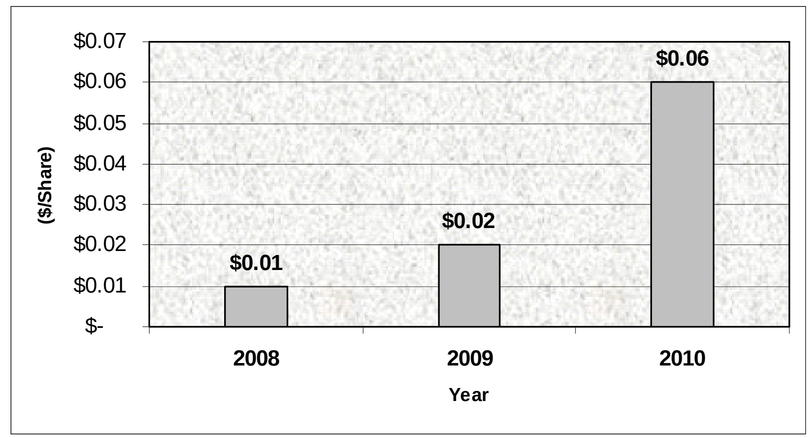
Projected Transmission Capital Spending*



* ETT and PATH joint ventures included in above projection. Amounts represent AEP's 50% share of total transmission joint venture capital expense. These amounts are excluded from AEP's base capital forecast because the joint ventures are not consolidated for financial reporting purposes. AEP will be responsible for funding 40-50% of these amounts with equity contributions, and the remainder will be financed with debt issued by the joint ventures.

ETT
Electric Transmission Texas

Projected Transmission EPS Contributions*



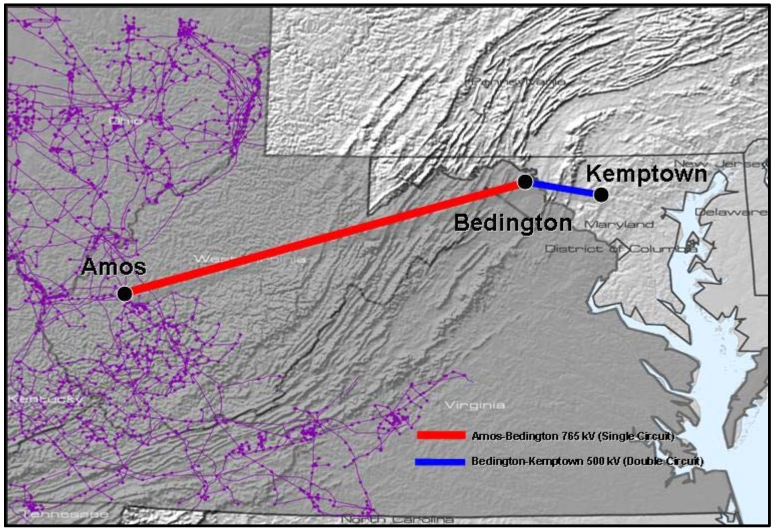
* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

PATH
Potomac-Appalachian Transmission Highline

Transmission will provide a near and long-term catalyst for earnings growth.

I-765™ Transmission in PJM: PATH

- *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries -- to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP
    - 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
  - FERC ordered the formula rate mechanism be set for hearing, pending settlement judge procedures
- *Funding Plans/Transaction Structure*
  - AEP and Allegheny share ownership of Amos – Bedington line and contribute equally to this portion of the project through PATH West Virginia Transmission Company, LLC
  - AEP's investment will be held in the AEP Transmission Holding Company LLC subsidiary
- *Key Next Steps*
  - Siting Approval from WV and MD - 2010
  - Targeted Completion - 2012



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Joint Ventures with MEHC

Electric Transmission Texas Update

- *Transaction Structure*
  - 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
  - ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
  - Services provided by AEP and investment opportunities can be offered by either partner
  - Total initial investment of $70 million before ownership division
- *Next Steps*
  - Await PUCT approval of consortium proposal, which includes ETT's portion of 710 miles of new transmission at an estimated cost of between $1.5 billion and $1.7 billion
  - Anticipate transferring some project opportunities in 2008 after regulatory approvals obtained.

Electric Transmission America Update

- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.
  - ETA recently signed agreements with Westar Energy and OGE proposing to build the first and second segments of the 765-kV Overlay Plan in SPP

I-765™ Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- *Overview*
  - Sent non-binding Letter of Commitment to SPP to construct 765-kV and 500-kV projects in SPP region consistent with SPP Overlay Study – Summer 2007
  - Updated EHV Overlay Study completed by SPP – March 2008
- *Benefits*
  - Overall reliability reinforcement with improved voltage support throughout the SPP system
  - Significantly increased transfer capability
  - Provides access to new generation resources, especially renewables
  - Allows for effective interconnections for EHV system development
- *Next Steps*
  - ETA Partnering Agreements - 2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate and Cost Allocation Filing (postage stamp) – 2009
  - Siting Approval for projects – 2009-2011
  - Estimated Completion (in segments) – 2013-2017

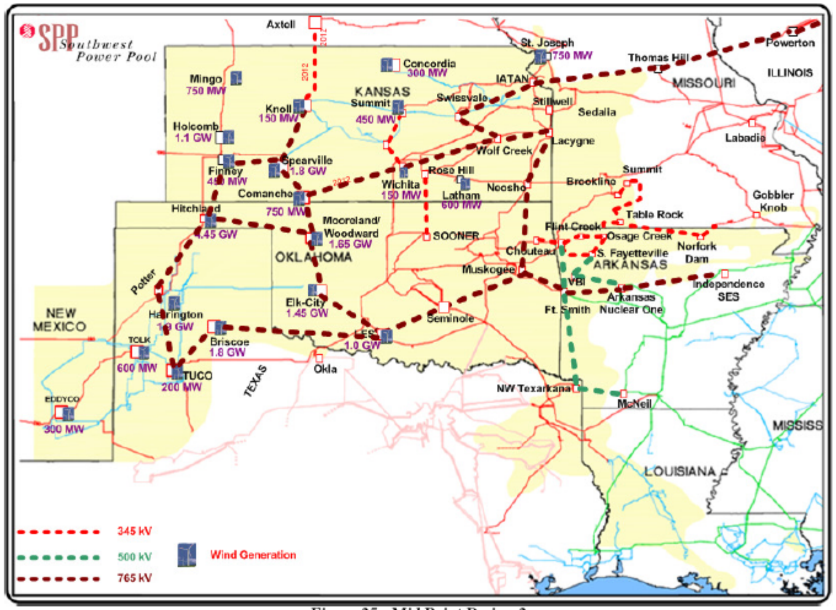


Figure 25: Mid Point Design 2

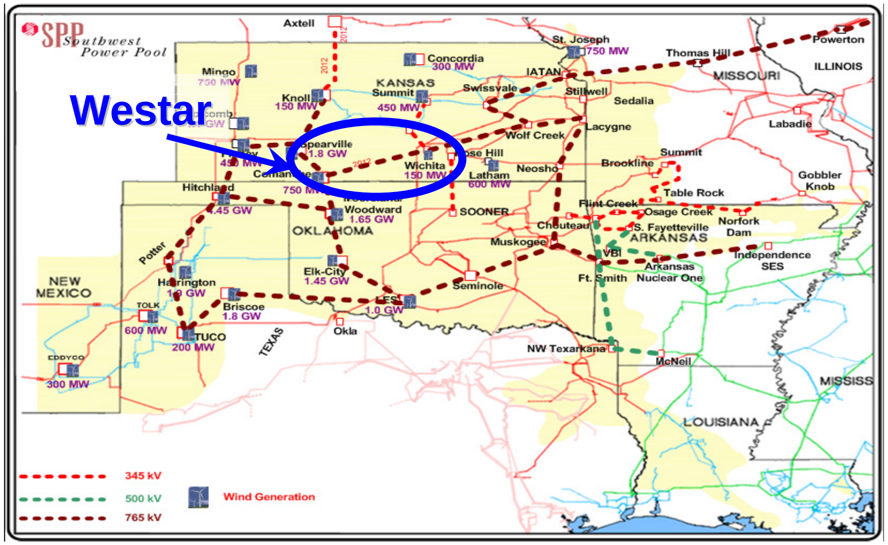
Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Prairie Wind Transmission, LLC

JV to build first segment of 765-kV transmission in SPP

- *Overview*
  - On May 19, 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT)
  - PWT is a 50/50 JV that is proposing to build approximately 230 miles of 765-kV lines extending from Wichita, Kan., west to a substation northeast of Dodge City, Kan., and then south to the Kansas border from Medicine Lodge, Kan.
  - The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region
  - Project is expected to cost approximately $600 million (based on SPP estimates) and be in-service by 2013
  - AEP's ownership of the joint venture is 25%
  - AEP obligations include oversight of 765-kV Engineering, 765-kV Technology and Project Management
  - Other responsibilities will be handled by the partners or outsourced
- *Next Steps*
  - Filed CPCN – 2Q2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate Filing (postage stamp) – Fall 2008
  - SPP Cost Allocation Filing - 2009
  - Siting Approval – 2009
  - Estimated Completion – 2013



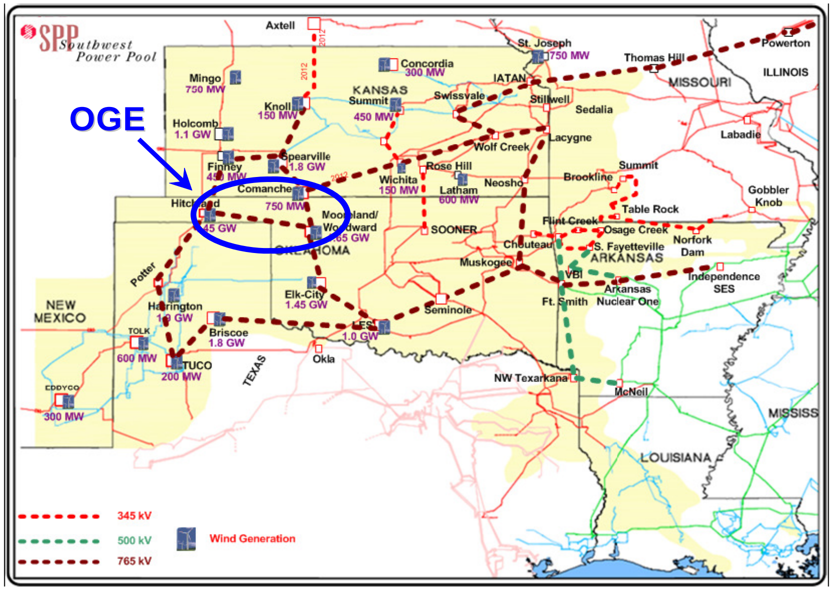
Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

ETA JV with OGE

JV to build second segment of 765-kV transmission in SPP

- ***Overview***
  - On July 15, 2008, ETA signed an agreement with OGE Energy Corp. to form a joint venture
  - The JV is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines extending from the Kansas-Oklahoma border north of Woodward, OK, that will link into OGE's station at Woodward and then extend west to a new station that will be built near Guymon, OK.
  - The project will provide enhanced electricity transport in Oklahoma and support expansion of renewable electricity generation in the region
  - Project is expected to cost approximately $500 million (based on SPP estimates) and be in-service by 2013
  - AEP's ownership of the joint venture is 25%
  - AEP obligations include oversight of 765-kV Engineering, 765-kV Technology and Project Management
  - Other responsibilities will be handled by the partners or outsourced
- ***Next Steps***
  - File CPCN –2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate – Fall 2008
  - SPP Cost Allocation Filing – 2009
  - Siting Approval – 2009
  - Estimated Completion – 2013

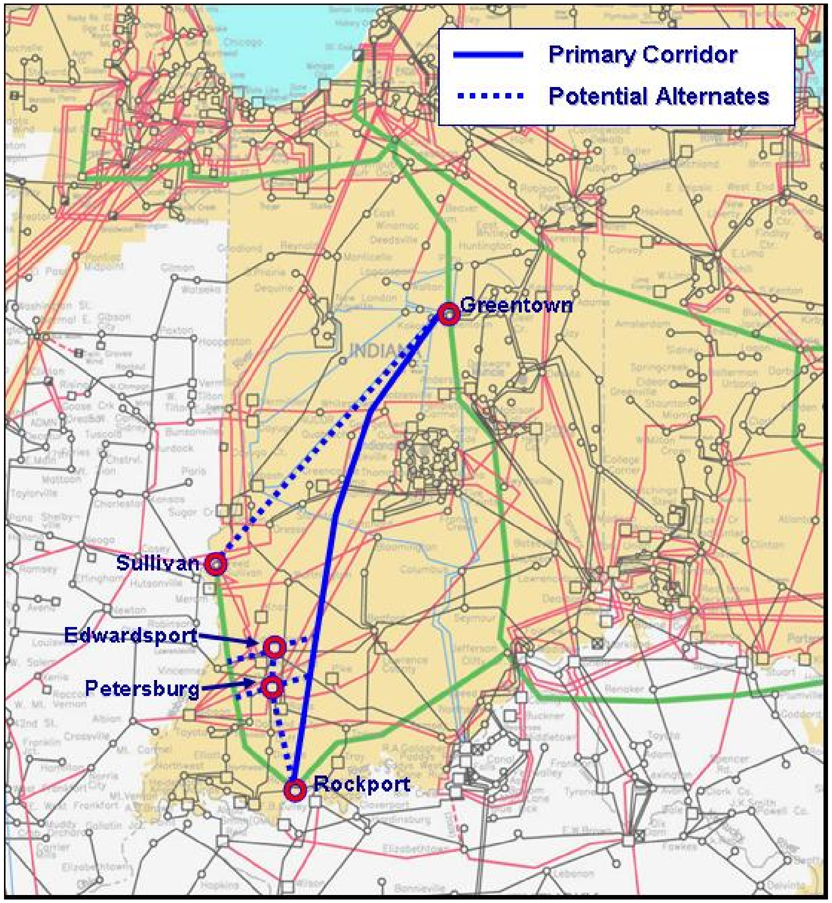


Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Pioneer Transmission, LLC

- *Overview*
  - On August 11, 2008, AEP & Duke formed a joint venture to build and own a 765-kV transmission line. Pioneer Transmission LLC is a 50/50 joint venture between the two companies.
  - The primary project involves the construction of approximately 240 miles of 765-kV lines extending from AEP's Rockport substation east of Evansville, Indiana with Duke's Greentown substation near Kokomo, Indiana.
  - Project is expected to cost approximately $1 billion, but final costs will depend on the routing of the line, equipment and commodity costs. AEP's share of the costs will be 50% of the total.
  - In-service date will be determined by the MISO and PJM planning process, with earliest possible completion in the 2014-2015 timeframe.
- *Next Steps*
  - Submit proposal to PJM & MISO for consideration in their transmission expansion plans
  - FERC filing for rate approval – 2008
  - Estimated Completion – 2014-2015



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected.

I-765™ Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

Overview

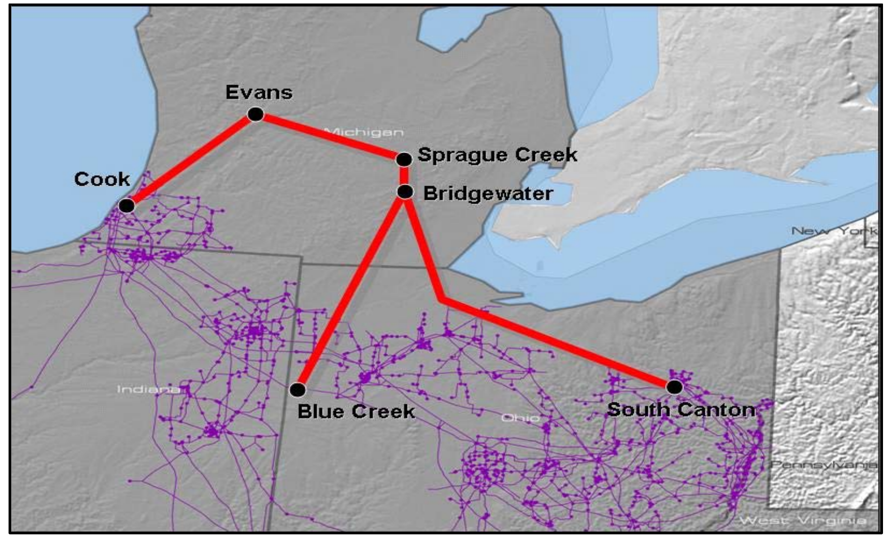
- ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
- Study was released Q3 2007
- 700 miles of 765-kV line in Ohio and Michigan
- $2.6 billion investment (before ownership division)
- AEP and ITC are in discussions to form a Joint Venture

Benefits

- Up to 5,000 MW improved transfer capability
- Reduces network line losses by 250 MW

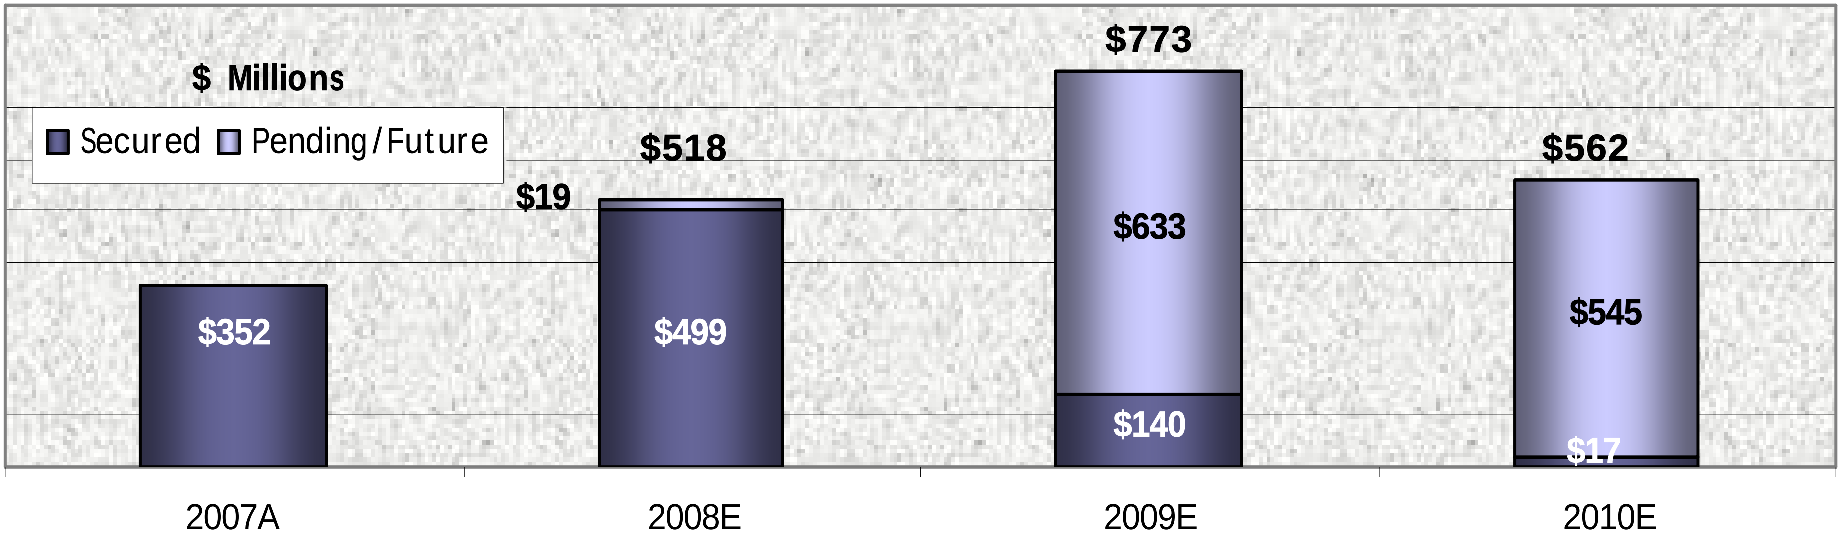
Next Steps

- Agreement on JV (AEP/ITC) - Summer 2008
- JV Formation - 2008
- MISO and PJM Review/Approval - 2009
- FERC Formula Rate & Cost Allocation Filing - 2009
- Siting Approval – 2011-2012
- Estimated Completion – 2015-2021



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Incremental Rate Relief



- 96% of 2008 Rate Relief Secured: I&M Depreciation, APCo – WV Construction Surcharge, TCC & TNC General Rate Cases, Ohio RSP (3% & 7%), PSO Peaking Generation & General Rate Case, Ohio 4% Generation Rider and Marginal Loss Recovery, APCo – Virginia Fuel Factor, 2007 TCC/TNC TCRF filings, PSO 2007 Storm Recovery, SWEPCo - LA Formula Rate Plan, KPCo Marginal Loss Recovery, TCC/TNC TCOS and Rate Case Expense Recovery.
- 2008 Pending: Virginia base case rates subject to refund ($208MM requested).
- 2009 Pending: Virginia base case ($208MM requested), Indiana base case ($129MM requested), Oklahoma base case ($132.6MM requested), Ohio ESP, other cases yet to be filed.

Secured $499MM of $518MM for 2008

- SPP OATT Formula Rate Filing
- PJM OATT Formula Rate Filing
- SWEPCo Stall Plant Filing in Arkansas

AEP Ohio Electric Security Plan

- On July 31, 2008, in conjunction with the requirements of SB221, AEP Ohio filed an Electric Security Plan with the PUCO on behalf of CSPCo and OPCo.
- The filing includes the following key components:
  - Energy Efficiency and Demand Response
  - Renewable Energy
  - gridSMART[SM] Phase 1
  - Distribution Reliability Enhancement
  - Economic Development
  - Provider of Last Resort
- The proposed rate plan results in an annual increase of approximately 15 percent on customers' total bills.
- The filing seeks to recover changes in fuel and environmental expenses relative to levels reflected in current rates.
- Intervenor testimony is due October 31, Staff testimony is due November 7 and the public hearing commences on November 17, 2008. We anticipate an order at the end of 2008.

Note 1: AEP Ohio requested phase-in of proposed incremental FAC expenses during the three-year ESP period. Additionally, there will be a periodic true-up of the current period actual FAC to what was recovered in rates for that period. This will produce on-going periodic under/over recoveries of FAC costs for the period that have not been estimated for 2010 or 2011.

Note 2: Represents capital carrying cost on environmental facilities not currently reflected in rates. Exhibits PJN-8 &PJN-10 provides calculation of environmental carrying cost and components of the carrying cost rate applied to the capital expenditures, respectively.

Note 3: We requested a 3% & 7% per year increase in non-FAC generation for CSP & OPCo, respectively, consistent with the RSP increases. Exhibit PJN-8 shows the capital carrying cost on incremental environmental facilities forecasted for 2009. Exhibit PJN-10 provides the calculation and components of the carrying cost rate applied to the capital expenditures.

Note 4: Represents the Provider of Last Resort charge which is addressed in the testimony of Craig Baker starting on page 25.

Note 5: Requested an annual 7% & 6.5% per year increase in Distribution for CSP & OPCo, respectively. Exhibit DMR-4 shows expected O&M & carrying charge cost of capital for reliability and in the case of CSP, gridSMART, for the 2009-2011 time period. The carrying charge costs are provided on Exhibit PJN-10.

Note 6: Represents estimated costs to provide AEP-sponsored customer demand response & energy efficiency programs. These costs are discussed in the Sloneker testimony starting on page 18.

Note 7:

Expiration of Special Contract	-$22.7M	-$27.1M		
Reg Asset Surcharge	-$54.2M		22.8M	15.2M
Other	-$3.8M	$0.0M		
Total Other	-$80.7M	-$27.1M	$22.8M	$15.2M

A special contract expires 12/31/08 and the customer will go on the standard tariff.
The revenue reduction associated with the elimination of the reg asset surcharge in 2009 will be offset by the reduction in related amortization.
Other of $3.8M represents the expiration of monthly line extension surcharges.

Summary Rate Case Information

I&M Indiana General Rate Case

On January 31, 2008, I&M filed a general base rate case with the Indiana Utility Regulatory Commission (IURC) requesting an increase of $128.5 million ($82.4 million in base revenues and $46.1 million in tracker mechanisms). (Docket #: 43306). Order is expected in June 2009.

Projected Capital Structure - Company Position (9/30/07)

Regulatory Activity Underway

APCo-Virginia E&R Filing

On May 30, 2008, Appalachian Power filed the third tranche of E&R surcharge filings with the SCC, requesting a $66.5 MM increase for environmental and reliability costs incurred during the period October 1, 2006 through December 31, 2007, with a proposed one year recovery period commencing January 1, 2009. Respondent testimony was received August 13, Staff testimony was received August 27, Rebuttal testimony is due September 3 and a hearing will commence on September 17.

Summary of APCo's E&R filings:

E&R Tranche:	Case Number	Cost Incurred :	Recovery Period:	Amount:
I	PUE-2005-00056	7/1/2004 thru 9/30/2005	12/1/2006 thru 11/30/2007	$21.3 million
II	PUE-2007-00069	10/1/2005 thru 9/30/2006	1/1/2008 thru 12/31/2008	$48.9 million
III	PUE-2008-00045	10/1/2006 thru 12/31/2007	Proposed 1/1/09 thru 12/31/09	$66.5 million

Regulatory Activity Underway

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $140MM. Approximately $10MM of the increase relates to 3rd party and the rest, if approved, would be recovered through retail jurisdictional filings in SWEPCo and PSO, as appropriate.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to February 1, 2008, with rates subject to refund.
- Settlement discussions are currently on-going.

Regulatory Activity Underway

PJM OATT Formula Rate Filing

- On July 31, 2008, the seven AEP East companies filed with the FERC to update the Open Access Transmission Tariff (OATT) rate and implement a formula transmission rate that will be updated annually to keep rates current with transmission investment.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $507MM and the new revenue requirement requested is $606MM. Approximately $31MM of the increase relates to 3rd party and Ohio and the rest, if approved, would be recovered through retail jurisdictional filings in the other east jurisdictions.
- We requested an effective date of October 1, 2008 for the revised tariff, which the FERC may suspend for an additional five months.

Regulatory Activity Underway

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- The PSC issued its order on November 21, 2007, approving construction of the plant.
- Air permit anticipated in the third or fourth quarter of 2008. A draft air permit approval was released for public comment on August 11, 2008.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The peaking facility has been addressed and the intermediate facility is under review. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- The LPSC issued its order on April 29, 2008, approving construction of the plant.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- The PUCT issued a written order approving construction of the plant on August 12, 2008.

Regulatory Activity Underway

SWEPCo Stall Plant Filings

Arkansas

- Proceeding was suspended pending outcome in Louisiana. Now that Louisiana approval has been received, we will seek an expedited ruling from Arkansas.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The intermediate facility, known as the Stall Plant and sited in Shreveport, LA, was bifurcated from the original filing and had a procedural schedule established on January 9, 2008.
- The Louisiana PSC approved the plant on September 10, 2008.
- Air permit received on March 20, 2008.

Texas

- PUCT order approving plant was issued on March 8, 2007.

Commitment to Credit Quality

- Maintain adequate liquidity
- $150MM annually in new equity from Dividend Reinvestment and 401(k) plans
- Target 60% maximum consolidated AEP debt/cap ratio on an adjusted basis
- Target utility company capitalization structures:

Company	Target Equity Ratio
APCo	42-44%
CSP	45-47%
I&M	40-42%
KPCo	41-43%
OPCo	44-46%
PSO	43-45%
SWEPCo	43-45%
TCC	40%
TNC	40%

- Target long term dividend payout ratio range of 55-60%
- Maintain adequate coverage ratios to support current credit ratings

We are committed to maintaining our current credit ratings.

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load and customer growth, weather conditions, including storms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of generating capacity and the performance of our generating plants including our ability to restore I&M’s Donald C. Cook Nuclear Plant Unit 1 in a timely manner, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of the recently passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events. AEP and its Registrant Subsidiaries expressly disclaim any obligation to update any forward-looking information.

AEP AMERICAN ELECTRIC POWER®

Table of Contents

AEP AMERICAN® ELECTRIC POWER

AEP Highlights

Premier utility platform

- Leadership position in electric generation, transmission and distribution operations
- Cash flow, earnings and regulatory diversity
- $6.4 billion utility capital expenditure program (2009-2011) will continue to drive rate base growth

Effective regulatory relationships

- Traditional recovery mechanisms with equitable risk allocation enhance both earnings and cash flow
- Emerging energy policies play to AEP's strengths (transmission, energy efficiency, reliability)
- Constructive local relationships deliver successful regulatory outcomes

High-growth transmission business

- The leading US transmission owner, operator, and developer
- Exceptional portfolio of high-quality development projects and project partners
- Attractive ROEs, regulatory support and access to capital will drive earnings growth beyond our traditional utility footprint

Stable financial position

- Maximization of shareholder value through regulated utility and transmission investments
- Balanced approach to cost containment and capital allocation
- Commitment to investment grade profile, prudent balance sheet, and liquidity management
- Conservative dividend payout with attractive yield

AEP AMERICAN® ELECTRIC POWER

Transmission Investment Opportunities

- **ETT: Projects in Texas ERCOT jurisdiction**
  - Framework in Texas allows for more expeditious siting and recovery
  - $600MM of projects est. in service 2010-2013 with $236MM spent as of 9/30/2009
  - ETT's opportunity could reach $3.1B in the next decade

- **Transco: Within our existing footprint**
  - Provides opportunity to:
    - Develop new AEP-only projects within AEP's footprint
    - Reduce regulatory lag through FERC formula rates adjusted annually
    - Enhance access to capital
    - First year investment opportunity--$118MM

- **Joint Ventures: Outside of our footprint, with ETA or others**
  - Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery
  - State and future Federal RPS will provide enhanced investment opportunities
  - Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2015
  - Robust pipeline of projects up to $15B

AEP AMERICAN ELECTRIC POWER®

Transco

- **Transco will be used to develop significant new on-system, AEP-owned investment**
  - Greenfield Projects
  - Station Additions
  - System Upgrades
- **Next steps:**
  - Obtain state utility status where required and join PJM and SPP as a transmission owner
  - File FERC tariff for Transco in late 2009, with rates effective and first projects in service in 2010
  - Seek retail tracking mechanisms at the state level (OH, LA, VA, TX-ERCOT already secured)

765-kV Tower

- *Regional Expansion of 765 kV, 500 kV and 345 kV systems*

EHV Michigan/Ohio

- *700 miles of Proposed 765 kV*

SPP | ERCOT | PJM | PJM/MISO

AEP AMERICAN ELECTRIC POWER

EHV Transmission in PJM: PATH

Project Description: 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

Overview

- FERC order issued on February 29, 2008 approving:
  - Cash return on CWIP and 14.3% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect, and
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
  - Rates went into effect March 1, 2008; current annual revenue requirement is $15MM effective 1/1/09

Key Challenges

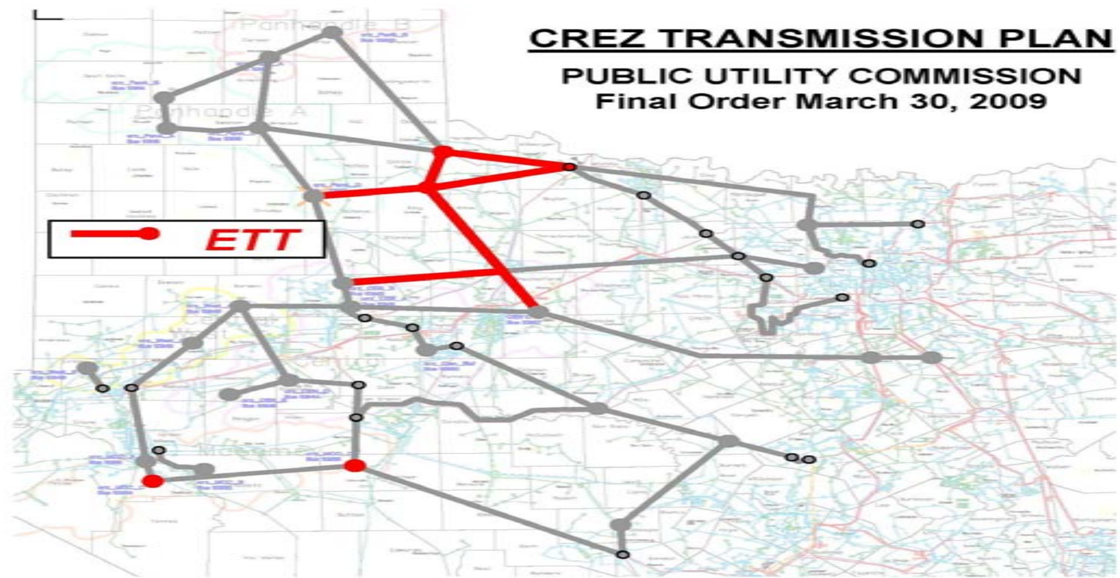
- Obtaining a CPCN in West Virginia or costly concessions with WV to receive the CPCN; CPCN filing made May 15, 2009 with a decision expected June, 2010.
- Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million
- Estimated completion date: 2014

PATH
Potomac-Appalachian Transmission Highline

AEP AMERICAN ELECTRIC POWER®

Texas CREZ Project

- On February 26, 2009, PUCT ordered its staff to stage the development of CREZ transmission lines.
- Staging to occur in separate docket and consider timing of wind projects and congestion.
- PUCT established 2 categories based on priorities. ETT has no first priority lines.
- PUCT issued a final order assigning transmission service providers on March 30, 2009.
- ETT's share of CREZ investment is approx. $840MM of $4.9B total of which AEP's ownership is 50%.
- The filing calls for completion of the plan by 2013.



ETT
Electric Transmission Texas

Next Steps

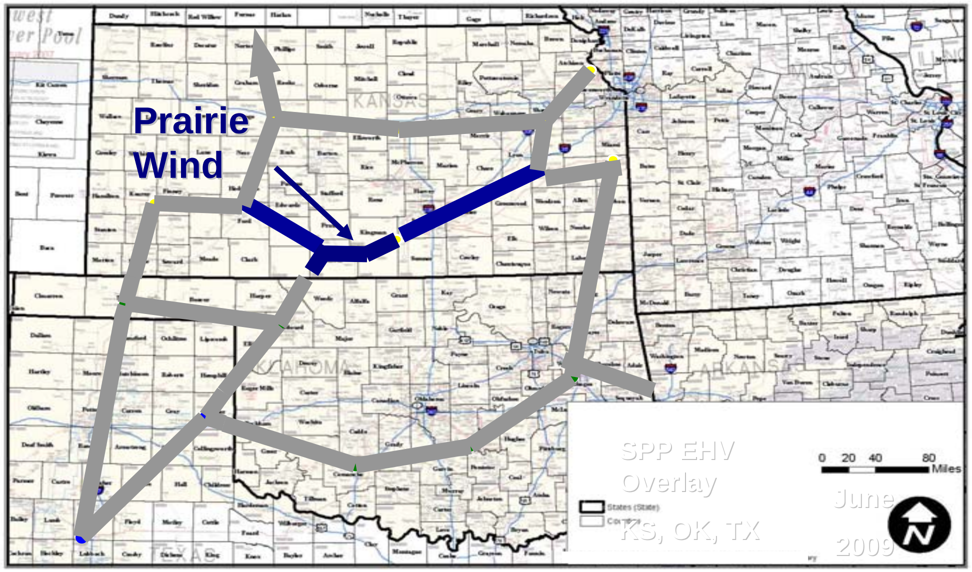
- Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in 2010.

AEP AMERICAN ELECTRIC POWER

Prairie Wind Transmission, LLC

Overview

- In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
- Following a settlement agreement with ITC both entities agreed to split the mileage and costs of building the 765-kV transmission superhighway. The newly revised project is expected to cost approximately $400 million and be in-service by 2013. Settlement was approved by the KCC on July 24, 2009.
- PWT is a 50/50 JV that is proposing to build approximately 110 miles of 765-kV lines extending from Wichita, KS, west to a substation near Medicine Lodge, KS, and then south to the Kansas border from Medicine Lodge, KS.
- The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect, and
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PWT or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges

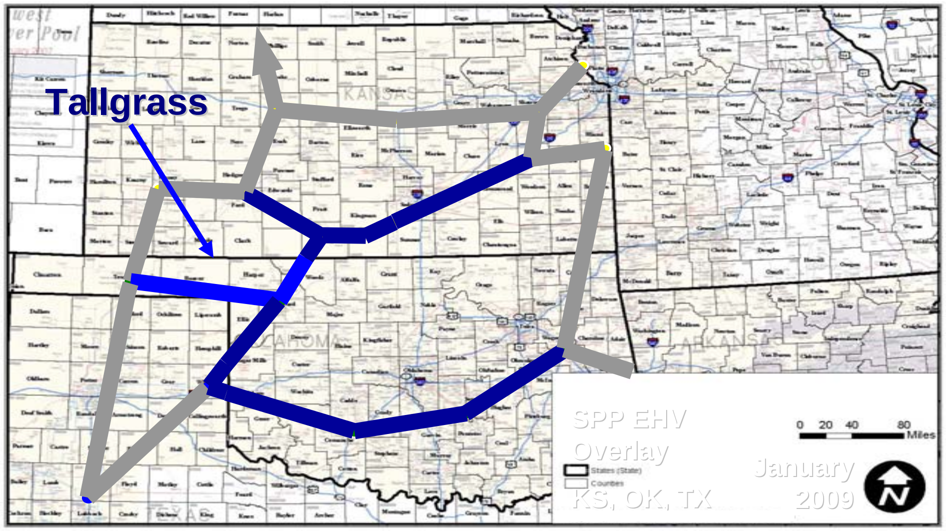
- Regional Cost allocation which enables the development of "system solutions"
- RTO Approval

AEP AMERICAN® ELECTRIC POWER

Tallgrass Transmission, LLC

Overview

- In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
- TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines extending from the Kansas-Oklahoma border north of Woodward, OK, extending west into the Oklahoma panhandle to a new station that will be built near Guymon, OK.
- The project will promote wind development in the western half of Oklahoma.
- Project is expected to cost approximately $500 million and be in-service by 2013-14.
- AEP's ownership of the joint venture is 25%.
- FERC order received in December 2008:
  - Cash return on CWIP and 12.8% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect, and
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of TG or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Key Challenges

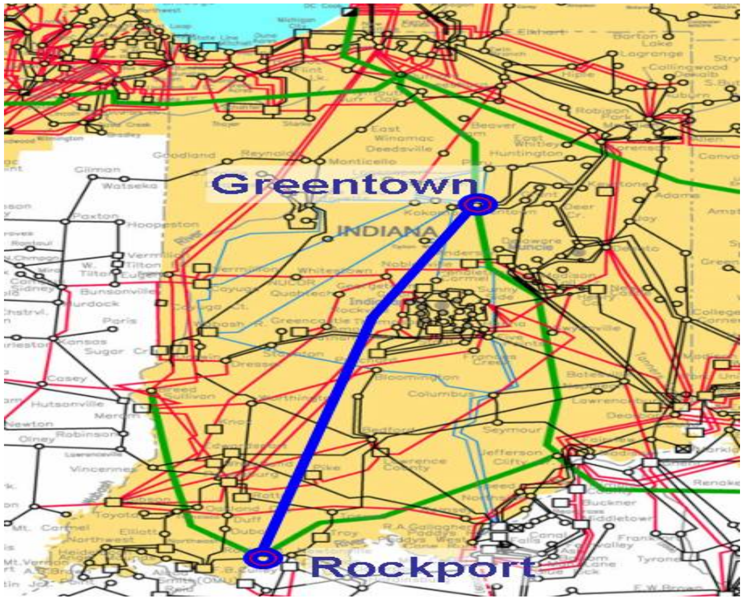
- Cost allocation which enables the development of "system solutions"
- RTO Approval

AEP AMERICAN ELECTRIC POWER

Pioneer Transmission, LLC

Overview

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
- The project will improve the reliability of the nation's transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, protect national security and expand opportunities for new generation, including renewables.
- Project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP's ownership of the joint venture is 50%.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect, and
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PT or its parents.



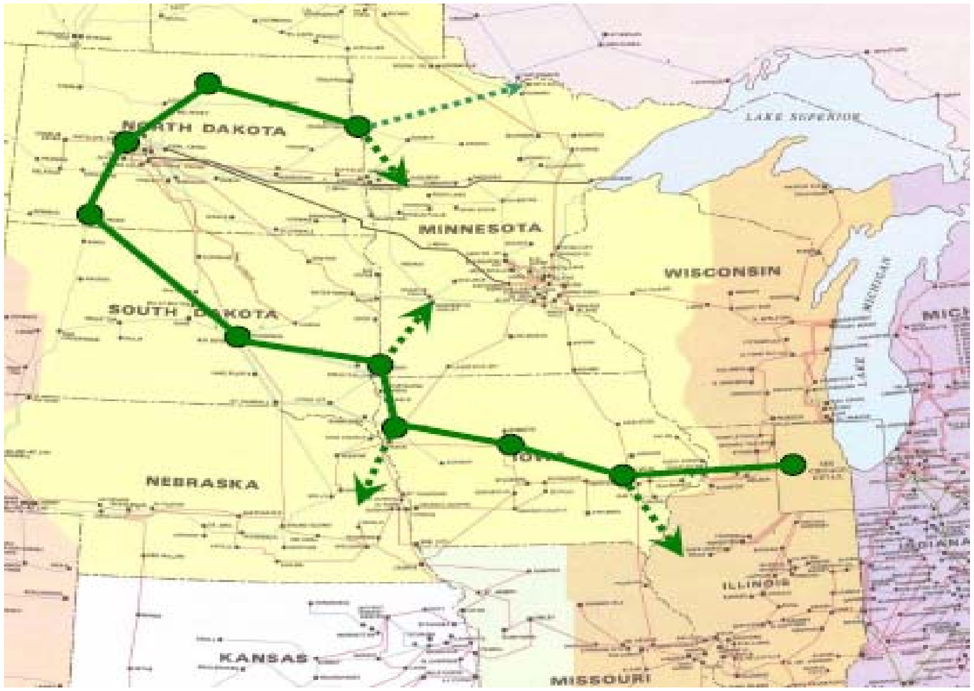
Key Challenges

- Cost allocation which enables the development of "system solutions"
- RTO Approval - touches two RTOs – PJM & MISO
- Siting

AEP AMERICAN® ELECTRIC POWER

Upper Midwest EHV Development—SMART Study

- **Announced SMARTransmission Study in August 2009.**
  - Participants include ETA, Exelon, ATC, Northwestern, MidAmerican and Excel
  - Study due to be completed in early 2010 and will include “overlay” options and quantification of economic benefits.
- **Near Term Risks**
  - Obtaining cost allocation between states, PJM, and MISO
  - RTO Technical Approvals
  - Favorable 205 Order including incentives
- **Mitigation**
  - Collaborative approach involving impacted utilities, RTOs, commissions and others



AEP AMERICAN® ELECTRIC POWER

New Generation Projects

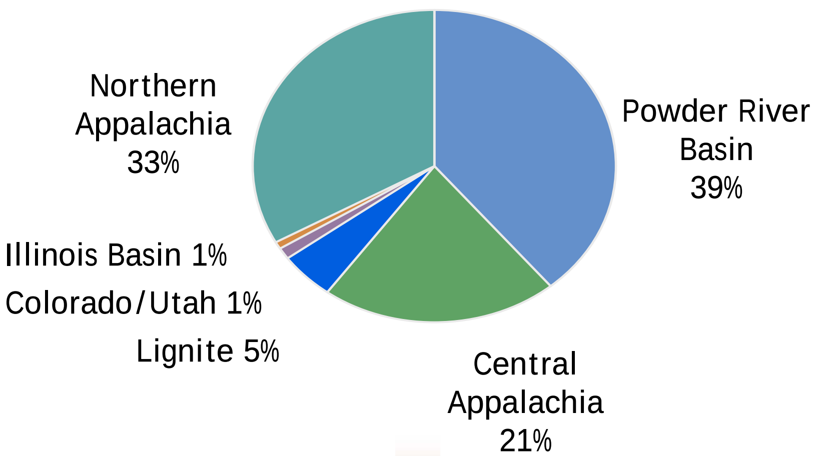
- John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant. Located in AEP's SWEPCo region AEP owns 73 percent or roughly 440 megawatts of the total unit.
  - The cost of the plant is anticipated at $1.6 billion with AEP's share approximately $1.2 billion and will begin commercial operation in 2012.
  - SWEPCo's share of the plant's costs will be allocated on the basis of electric load among customers in Arkansas, Louisiana and Texas.
  - The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls.

J. Lamar Stall Combined-Cycle Gas Plant

- J. Lamar Stall Combined-Cycle gas plant is a 508-MW unit scheduled for commercial operation in 2010.
  - The total projected cost of the plant is $378 million.
  - The plant is located in AEP's SWEPCo region at its existing Arsenal Hill Power Plant in Shreveport, Louisiana.
  - The plant will be used to service the needs of customers in the Arkansas, Louisiana and Texas service territories.

Coal Procurement - 2010 Projected

Total AEP System



Coal Stats:

- 100% contracted for 2009 and 98% for 2010
- Avg. delivered price ~ $47/ton in 2008
- Approximate 10% price increase in 2009 ~ $51/ton
- Approximate 10% price decrease in 2010 ~$46/ton

AEP East

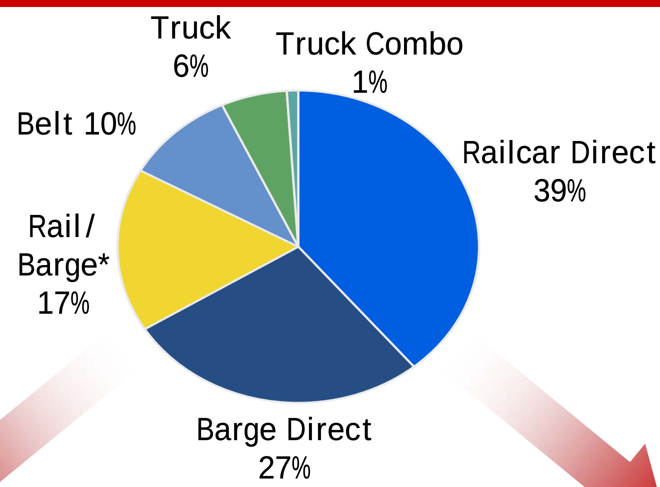
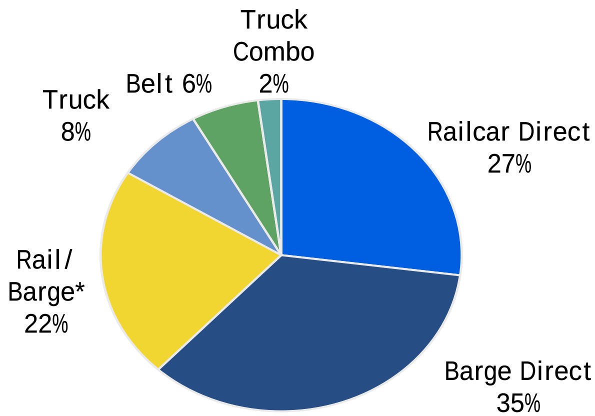
Coal Delivery

Total AEP System

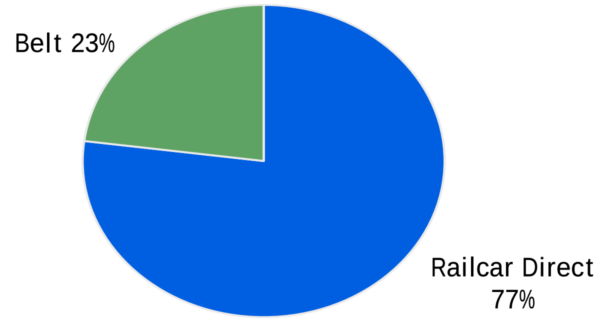
2008 Actual



AEP East



AEP West

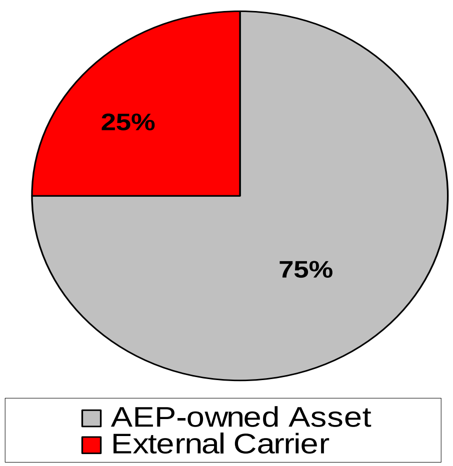


* Reflects coal delivered to AEP plants transported through a combination of rail and barge

AEP's Coal Transportation Assets

2008 Actual

Coal Transportation to AEP Plants*



***Represents close approximations**

Current Coal & Transportation Assets:

- Control over 9,000 railcars
- Own/lease and operate over 2,978
- barges & 58 towboats & 25 harbor boats
- Coal handling terminal with 20 million tons of capacity

AEP River Operations

- Full-service Inland Waterways carrier
  - 2,978 hopper barges
  - 58+ towboats/25 tugs
- Tonnage & Commodity:
  - Captive: (for AEP)-37MM tons of coal;
  - Commercial: 35MM tons of coal/grain/bulk
- Gulf Operations
  - Barge cleaning and repair
  - Fleeting and shifting
  - Midstream transfers
- Operating Centers in Lakin, WV, Cape Girardeau, MO, Paducah, KY, Convent and Belle Chase, LA

AEP AMERICAN ELECTRIC POWER

AEP Supports Climate Legislation

Key Design Elements:

- **Reductions and Timing -** Moderate with adequate lead times
- **Scope of Program –** Economy-wide w/ preemption of EPA authority to regulate CO_2 under existing Clean Air Act
- **Flexibility of the Program –** Market-based system w/ credit trading, banking, unrestricted offset use & early action credits
- **Allowance Allocation And Other Cost Issues –** Full, free allocation to electric sector and "Low" auctions
- **Technology Development/Deployment -** Bonus allowances or other support for carbon capture and storage (CCS)
- **International Linkage -** e.g. AEP-IBEW proposal on international competitiveness

AEP AMERICAN® ELECTRIC POWER

Mountaineer CCS Update

PROJECT STATUS

- September 2 – successfully captured CO_2
- October 1 - began underground injection and storage
- October 30 – facility dedicated

NEXT STEPS

- Monitor the CO_2 behavior once underground
- Assess the parasitic load impact of the equipment on the plant
- DOE funding requested for 50% of commercial phase of project ($334MM); project expected to be operational between 2012 and 2015

PROJECT DESCRIPTION

- Alstom's chilled ammonia process captures CO_2 from a 20 MWe slipstream of flue gas at AEP's Mountaineer plant located in New Haven, WV
- Captured CO_2, transformed to a semi-liquid state, is pumped into sandstone or dolomite layers approximately 1.5 miles underground. Caprock will hold the CO_2 in place permanently.

AEP AMERICAN® ELECTRIC POWER

Summary Rate Case Information

APCo Virginia General Rate Case

On August 14, 2009 APCo filed an update to its pre-biennial base rate case, originally filed July 15, 2009 with the Virginia SCC, per the statute, for recovery of generation and distribution costs requesting an increase of $154 million. (Docket #: PUE-2009-00030) A transmission rate adjustment clause (T-RAC) was filed in conjunction with this case as base rates will no longer include rates for transmission service (Docket #: PUE-2009-00031). APCo has requested that rates in both cases go into effect at the same time.

AEP AMERICAN ELECTRIC POWER

Investment Attributes

- **Strong utility platform**
  - Consistent regulatory outcomes
  - Active fuel recovery
  - Geographic and regulatory diversity
  - Growth through capital investment
- **Consistent dividend policy**
  - 50-60% payout ratio targeted
  - Nearly a century of dividend payments to shareholders
- **Growth Opportunities**
  - Investment in utility platform greater than depreciation level (2 - 4%)
  - With transmission opportunities (4 - 8%)
  - Capital investment to comply with carbon legislation

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation or regulation in Ohio and/or Virginia, and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

AEP ENJOYS SIGNIFICANT PRESENCE THROUGHOUT THE ENERGY VALUE CHAIN

AEP®

Strategic Direction

- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Develop our transmission business
- Achieve adequate returns on all assets

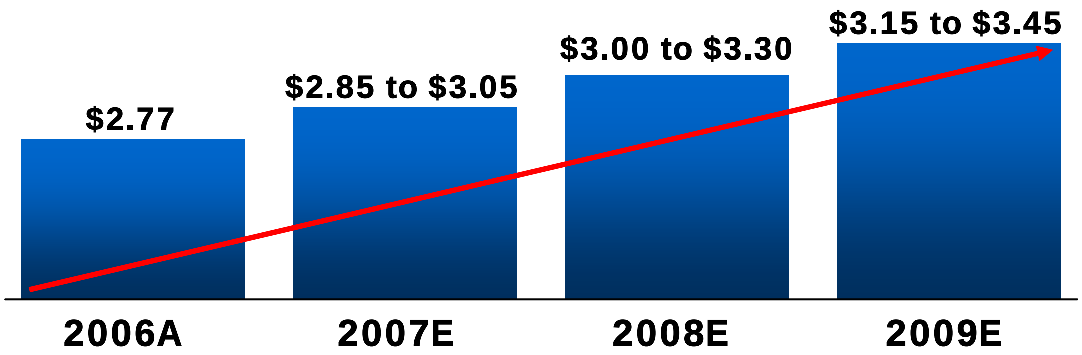
Deliver value to investors and cost effective service to our customers

CONTINUED COMMITMENT TO OUR CORE UTILITY MISSION: BRING REASONABLY PRICED ELECTRIC SERVICE TO OUR CUSTOMERS, THEREBY STRENGTHENING OUR COMMUNITIES AND REWARDING OUR INVESTORS

AEP®

Framework For Long-Range Performance

- 2007, 2008 & 2009 Ongoing Earnings Guidance Ranges:



- EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in existing utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
  - Investment in new transmission opportunities
  - Seek rate recovery for new investments
  - Control costs & achieve timely rate relief
- Maintain credit ratings
  - BBB/Baa2/BBB

OUR STRATEGY REMAINS FOCUSED ON REGULATED OPERATIONS

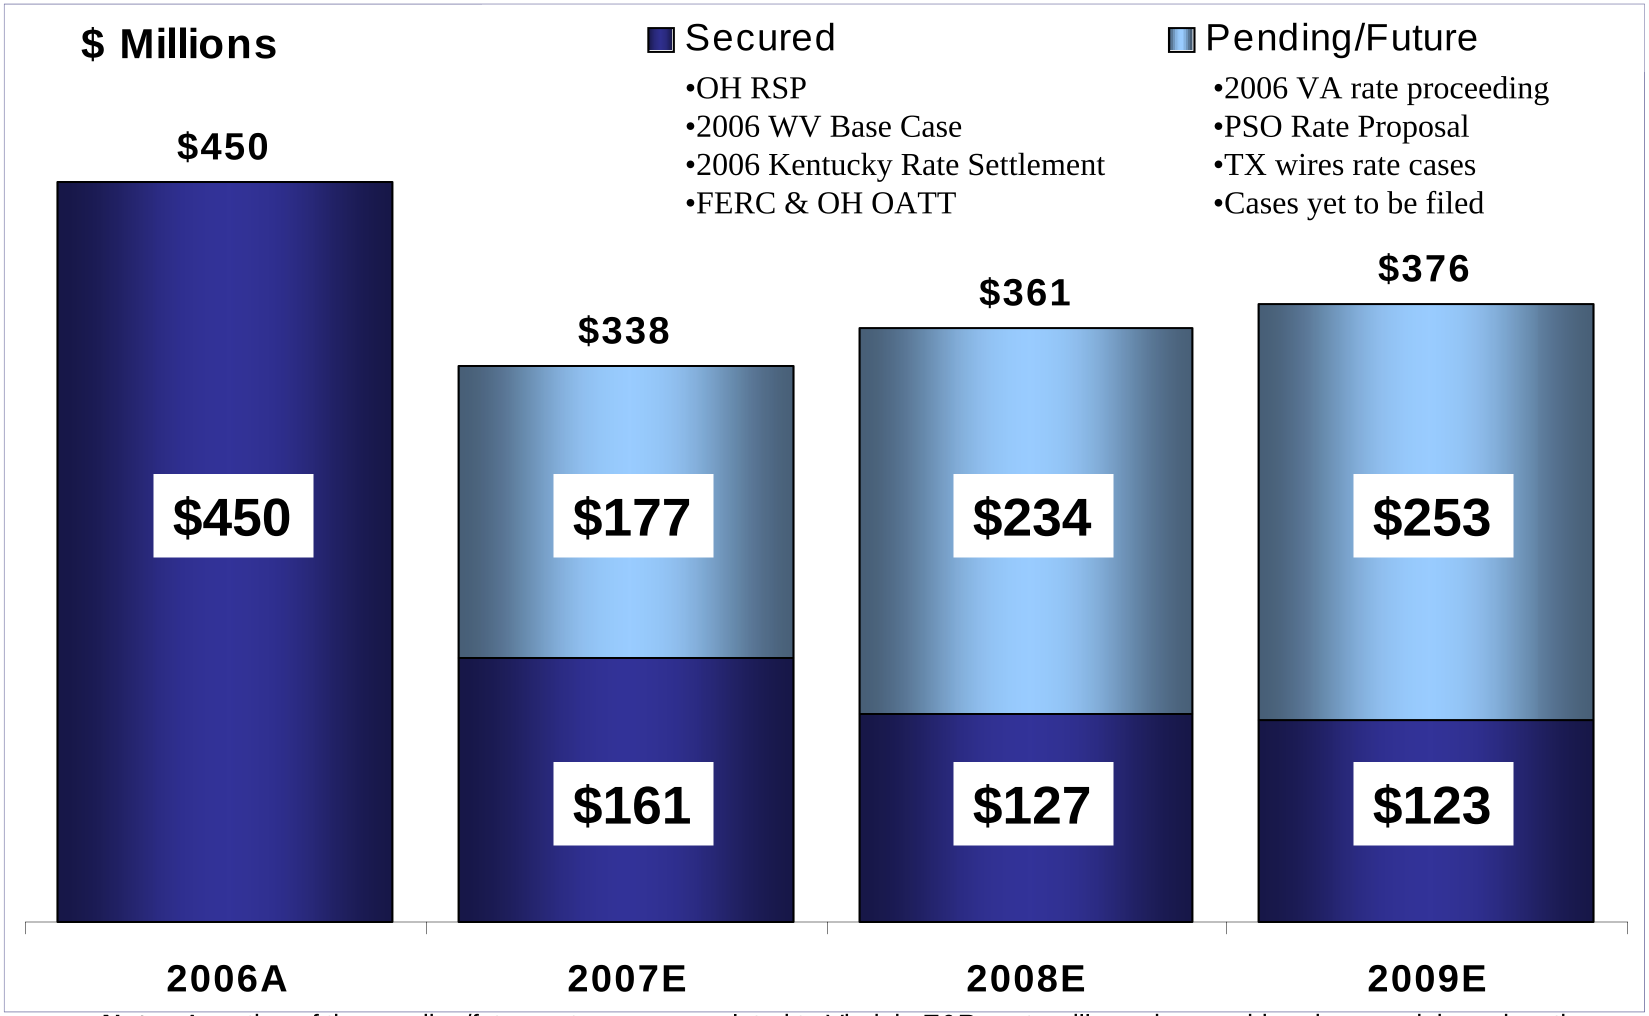
Summary of 5-7% Long-Range Growth Components

- Energy sales growth of 1.5%
- Rate base investment
  - Generation plant purchases & build
  - Transmission – interstate & intrastate
  - Distribution
  - Reliability
- Transmission company
- Commercial operations
- Regulatory strategy
  - Achieve timely returns
  - Seek cash returns on investment during construction
  - Create & secure innovative rate plans
    - Pursue post-2008 solution in Ohio
    - Expand use of trackers
    - Formula rates

AEP®

RATE BASE INVESTMENT COUPLED WITH INNOVATIVE REGULATORY PLANS WILL REDUCE LAG AND DRIVE EARNINGS GROWTH

Incremental Rate Relief Composition



Note: A portion of the pending/future rate recovery related to Virginia E&R costs will now be considered secured, based on the Virginia SCC's Nov. 20, 2006 order in our E&R case. Further analysis is required to quantify these amounts.

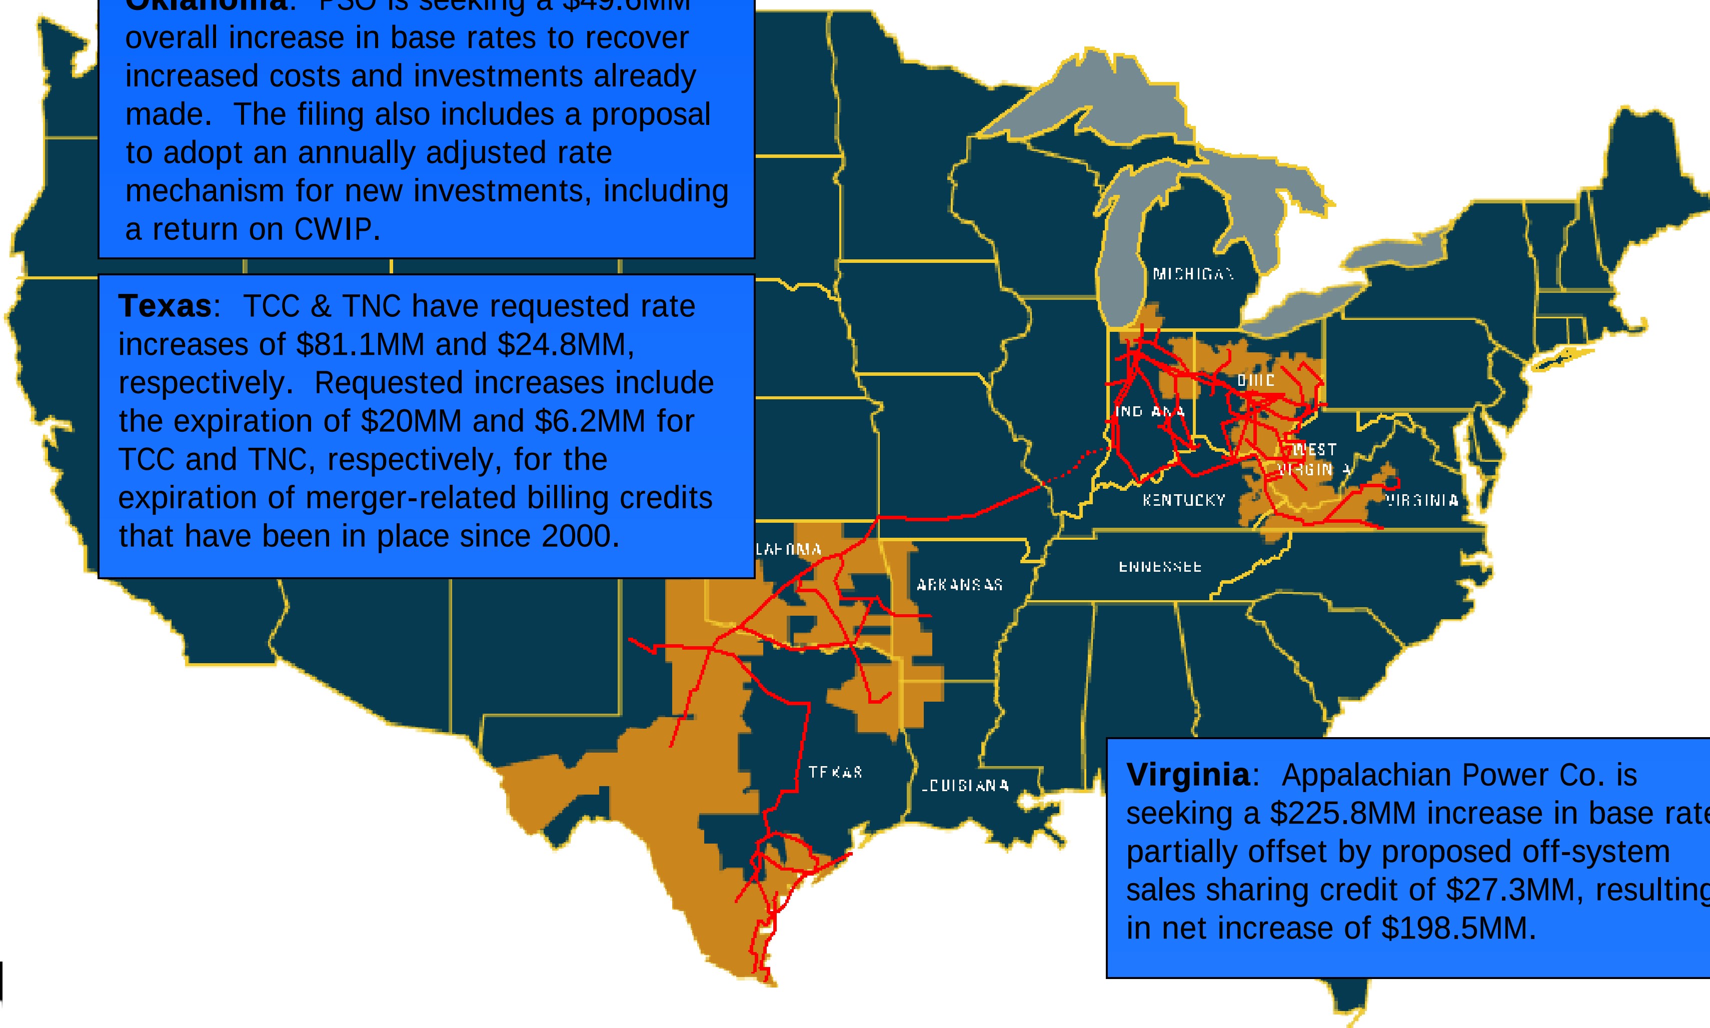
AEP®

RATE RELIEF IS A CRITICAL ELEMENT TO AEP'S FINANCIAL SUCCESS

Base Case Regulatory Summary

Oklahoma: PSO is seeking a $49.6MM overall increase in base rates to recover increased costs and investments already made. The filing also includes a proposal to adopt an annually adjusted rate mechanism for new investments, including a return on CWIP.

Texas: TCC & TNC have requested rate increases of $81.1MM and $24.8MM, respectively. Requested increases include the expiration of $20MM and $6.2MM for TCC and TNC, respectively, for the expiration of merger-related billing credits that have been in place since 2000.



Virginia: Appalachian Power Co. is seeking a $225.8MM increase in base rates, partially offset by proposed off-system sales sharing credit of $27.3MM, resulting in net increase of $198.5MM.

Regulatory Activity

AEP Ohio Distribution Reliability Filing

Filed Oct. 6, 2006 – AEP Ohio proposes an additional annual average investment of approximately $130MM over the next 5 years on vegetation management, equipment replacement, infrastructure upgrades & improved use of technology, to help reduce outages and improve service reliability.

- We are requesting implementation of a Reliability Cost Recovery Rider for recovery of the incremental O&M expenses and a return on and of the capital investments made under the plan. The requested ROE is 10.5%.
  - If approved, the rider would be implemented July 1, 2007 through December 31, 2008 and would be effective until new distribution rates are placed in effect. We anticipate that new base distribution rates would be effective after the expiration of the RSP on Dec. 31, 2008.
- Requested recovery amounts total $20MM in 2007 and $51MM in 2008.
- Staff testimony due April 17, 2007; Evidentiary hearing to commence April 30, 2007.

AEP Ohio Application For 4% Provision On Generation Rate

- On Jan. 23, 2007, CSP and OP filed an application at the PUCO to recover 2007 costs associated with additional generation-related expenditures the companies are encountering related to environmental, security and other new generation-related costs pursuant to the RSP.
- CSP and OP are requesting to implement the provision to recover $24.5MM and $8.2MM, respectively, from May 2007 through December 2007.

Regulatory Activity

Electric Transmission Texas (ETT) Rate Filing

- Jan. 22, 2007 – ETT filed with the PUCT for approval 1) to operate as an electric transmission utility in Texas; 2) to contribute transmission assets currently under construction by AEP subsidiary TCC to the joint venture company; and 3) establish initial rates for ETT.
  - Requested capital structure of 60% debt / 40% equity; requested ROE of 11.25%
  - An order is expected Mid-2007 and operations are expected to commence in the 2nd half of 2007. Upon receipt of approvals, AEP and MidAmerican will each own a 50% interest in the joint venture

Seams Elimination Cost Adjustment Revenues

- August 2006 – ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
  - Up to $96MM of SECA revenues could be disallowed, net of unused provisions
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both.
- Exceptions to initial decision filed Sept. 11, 2006; Replies to exceptions filed Oct. 11, 2006; Order expected by the Commission in 2007

Regulatory Activity

FERC Regional Rate Design

- The FERC instituted an investigation of PJM's zonal rate regime
  - Present regime may need to be replaced
  - Consider establishing regional rates that would compensate AEP, among others, for the regional transmission service provided by high voltage facilities they own that benefit customers throughout PJM
- July 2006 ALJ-rendered initial decision:
  - License plate rates for existing facilities are not just and reasonable, and must be replaced (effective April 1, 2006, when SECA ended)
  - Staff's proposal for a "Postage Stamp" rate phased in so as to limit increases in any one pricing zone to 10% per year as the best choice for replacing current rates
  - Staff's proposed rate design would produce slightly more net revenue for AEP than the original AEP/Allegheny Power proposal, if not phased in.
  - Briefs on Exceptions to the initial decision by all parties have been filed; An order is expected by the Commission in early to mid-2007.

Summary Rate Case Information

APCo Virginia General Rate Case

On May 4, 2006, Appalachian Power Co. filed a general base rate case with the Virginia State Corporation Commission (VSCC) requesting an increase of $198.5 million ($225.8 million in base revenues offset by an off-system sales credit of $27.3 million). (Docket #: PUE-2006-00065)

Projected Capital Structure – Company Position (9/30/07)

Base Rate Revenue Requirement	$ 45,043,153	$ 122,295,913
Test Year Adjusted Base Rate Rev.	$ 36,025,589	$ 112,706,901
Requested Base Rate Increase	$ 9,017,564	$ 9,589,012

Note: O&M expenses and test year adjusted base rate revenues for distribution include TCOS billings

Summary Rate Case Information

PSO Rate Proposal

On November 21, 2006, Public Service Oklahoma filed an application with the Oklahoma Corporation Commission to increase base rates by $49.6 million to recovery investments already made and costs incurred. The request represents a 4% overall increase (including fuel). The filing also includes a proposal to adopt an annually adjusted rate mechanism, which includes a return on CWIP. The formula rate would adjust rates, up or down, if PSO earns above or below an approved bandwidth around the authorized ROE. (Case #200600285)

Pro-forma Capital Structure – Company Position (Test Year ended 6/30/06)

	% of Capitalization	Cost Rate	Weighted Cost

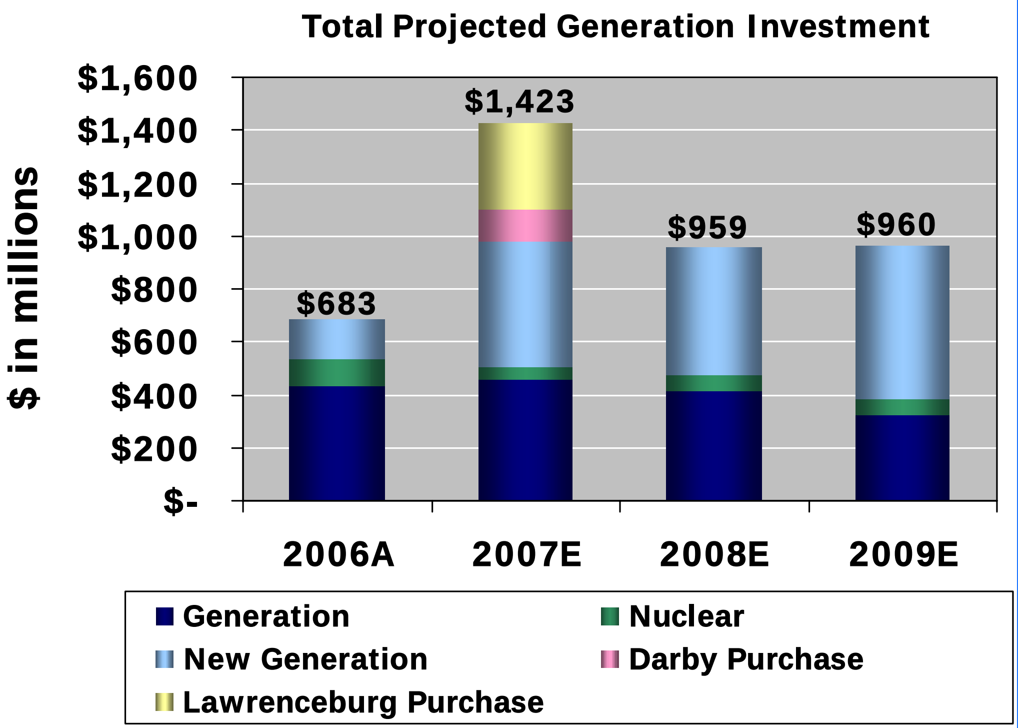
APCo	Mountaineer	West Virginia	Under Review[5]	Coal	IGCC	600	TBD

(1) Sale expected to close 2Q07 - Plant began commercial operation in 2001
(2) Sale expected to close 2Q07 - Plant began commercial operation in 2004
(3) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment
(4) PSO will own 50%, or 425 megawatts, totaling approximately $900MM in capital investment
(5) AEP is currently working with GE and Bechtel on a FEED (front-end engineering and design) study. When completed (expected mid-year 2007), a cost estimate will be available.

Generation Investment Forecast

- Public Service Oklahoma Rate Proposal
  - Proposal to adopt an annually adjusted rate mechanism, which includes a return on CWIP
- Purchased Generation Initiative
  - New generation resources required to meet growing electricity needs of our customers
  - Completed purchase of 1,368 MW of gas-fired generating capacity in 2005 -- purchase pending for additional 1,620 MW
- Ohio Phase I IGCC Approval
  - PUCO approved tariff to recover Phase 1 pre-construction costs ($24MM) over 12-month period effective July 1, 2006



Investing In Generation To Meet The Growing Electricity Demands Of Our Customers At An Attractive Price

Environmental Investment

AT THE CONCLUSION OF OUR CURRENT ENVIRONMENTAL RETROFIT PROGRAM, OVER 45% OF OUR COAL-FIRED GENERATION FLEET WILL BE EQUIPPED WITH SCRs AND OVER 48% WILL BE SCRUBBED (FGD). AEP's TOTAL COAL FLEET CAPACITY = 25,746 MEGAWATTS

Plant Name	MW Capacity	SCR	Status	FGD	Status

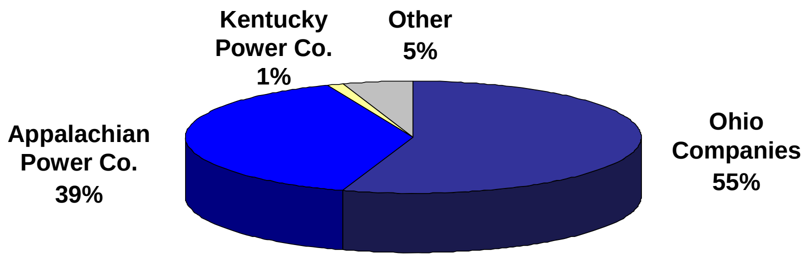
Installation Of SCR And FGD Equipment Will Allow Our Coal Fleet To Remain Extremely Cost Competitive

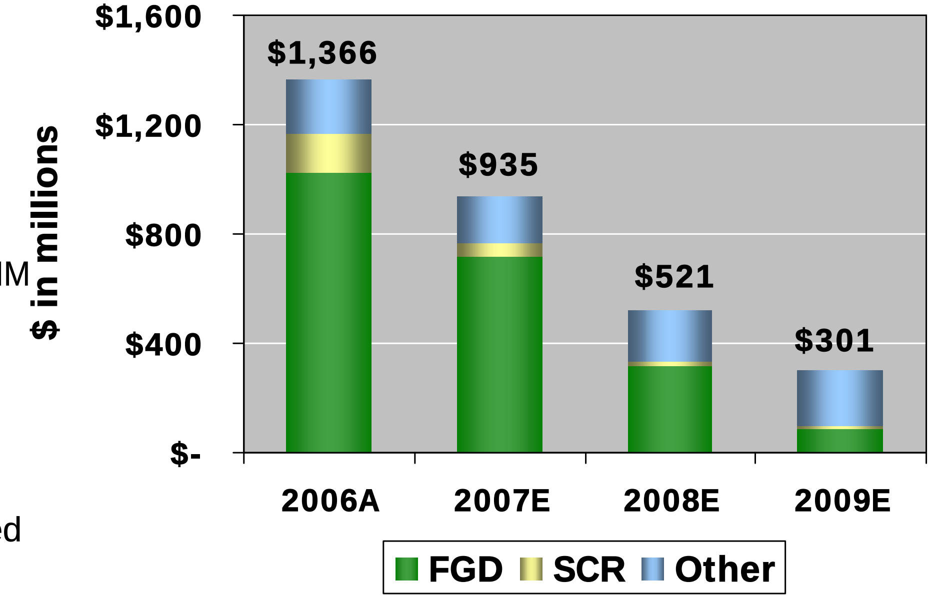
Environmental Investment Forecast

- Ohio Rate Stabilization Plan
  - Annual 3% and 7% generation rate increases at CSP & OP, respectively for 2006-2008
  - Filing made on Jan. 23 for recovery of 2007 costs associated with additional generation-related expenditures, pursuant to the 4% provision of the RSP
- West Virginia Rate Settlement
  - Mechanism in place to provide for rate increases through 2009 for ongoing environmental investments
- Virginia E&R Mechanism
  - Allows APCo-VA to recover incremental environmental & reliability costs
  - Order issued Nov. 20, 2006 granting $21.4MM of recovery for costs incurred thru Sept. 30, 2005
- Kentucky Environmental Surcharge
  - Monthly surcharge mechanism allows for recovery of pollution-control projects required by the Federal Clean Air Act

Projected Environmental Investment Allocation (2006A – 2009E)



Total Projected Environmental Investment



AEP Benefits From First-Mover Advantage Through Lower Contracted Pricing & Reduced Market Escalation Exposure

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Company Overview

SIGNIFICANT PRESENCE THROUGHOUT THE DOMESTIC VALUE CHAIN

Our US electric assets include:

- **More than 36,000 megawatts of generating capacity in 3 power pools (one of the largest US generation portfolios with a significant cost advantage in many of our market areas)**
- **Approximately 39,000 circuit miles of transmission lines, including 2,116 miles of 765kV lines, the backbone of the electric interconnection grid in the Eastern U.S.**
- **Nearly 208,000 miles of overhead and underground distribution lines**

With our coal and transportation assets we:

- **control over 7,000 railcars**
- **own and/or operate over 2,300 hopper barges and 53 towboats**
- **operate one active coal-handling terminal with 20 million tons of capacity**

We consume approximately 75 million tons of coal annually.

Strategic Direction

- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Achieve adequate returns on all assets

Deliver value to our investors

CONTINUED COMMITMENT TO OUR CORE UTILITY MISSION: BRING REASONABLY PRICED ELECTRIC SERVICE TO OUR CUSTOMERS, THEREBY STRENGTHENING OUR COMMUNITIES AND REWARDING OUR INVESTORS

Framework For Long-Range Performance

- 2006, 2007, 2008 & 2009 Earnings Guidance Ranges:

2006 Range $2.65 to $2.80	2007 Range $2.85 to $3.05
2008 Range $3.00 to $3.30	2009 Range $3.15 to $3.45

- EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
    - AEP Transmission Company
  - Seek rate recovery for new investments
  - Control costs
- Maintain credit ratings
  - BBB/Baa2/BBB

OUR STRATEGY REMAINS FOCUSED ON REGULATED OPERATIONS

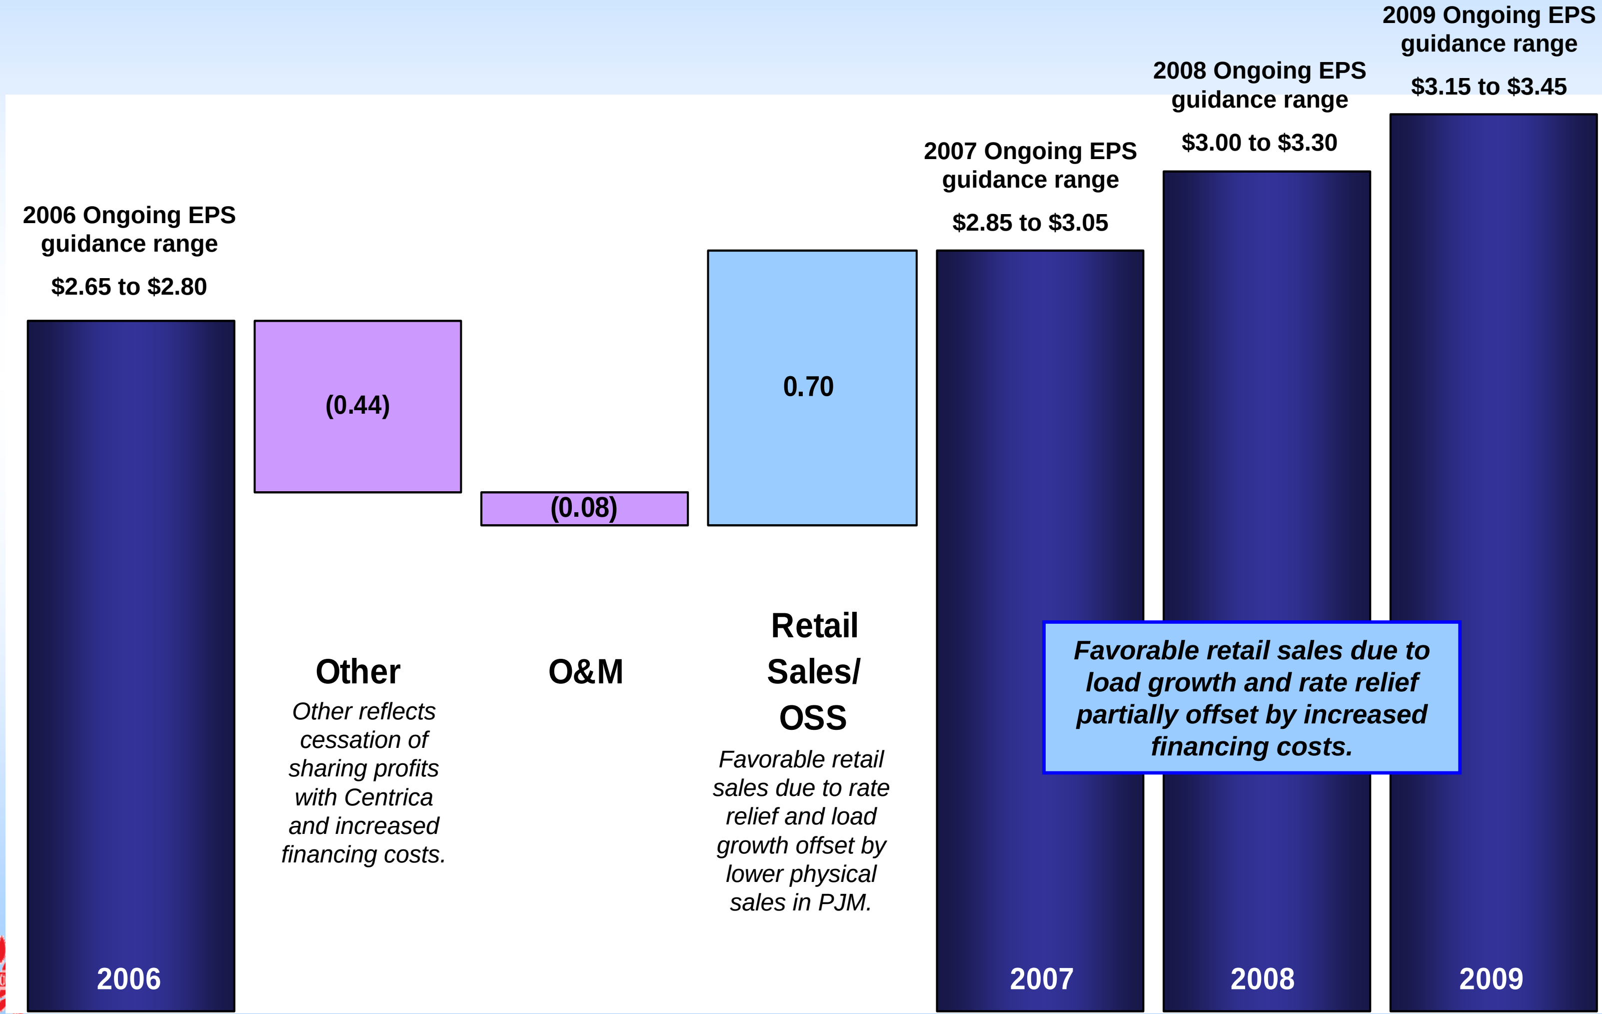
Summary of 5-7% Long-Range Growth Components

- Energy sales growth of 1.5%
  - Predicated on AEP's ability to economically dispatch at a high load capacity
- Rate base investment
  - Generation plant purchases & build
  - Transmission – interstate & intrastate
  - Distribution
  - Reliability
- Transmission company
- Commercial operations
- Regulatory strategy
  - Achieve high returns
  - Seek cash returns on investment during construction
  - Create & secure innovative rate plans
    - Pursue post-2008 solution in Ohio
    - Expand use of trackers
    - Formula rates

RATE BASE INVESTMENT COUPLED WITH INNOVATIVE REGULATORY PLANS WILL REDUCE LAG AND DRIVE EARNINGS GROWTH

Composition of Long-Range EPS Drivers

TRADITIONAL UTILITY FACTORS WILL DRIVE EARNINGS



Current State Regulatory Activity

Virginia

VA Environmental & Reliability Order

- On Nov. 20, 2006, the VA SCC issued an order allowing APCo-VA to recover $21.3MM of incremental E&R spending covering the costs incurred July 1, 2004 through Sept. 30, 2005
- The surcharge will be collected Dec. 1, 2006 through Nov. 30, 2007
- The order established an ROE of 9.8% (applicable to incremental E&R investment), but allowed for adjustment of ROE in future E&R proceedings
- The next E&R proceeding would seek recovery of costs incurred Oct. 1, 2005 thru Oct. 1, 2006

VA General Rate Case

- Seeking $225.8MM increase in base rates, partially offset by proposed off-system sales sharing credit of $27.3MM, resulting in net increase of $198.5MM
- SCC ordered implementation of full $198.5MM rate increase to be effective October 2, subject to refund
- SCC staff filed testimony recommended a $12.7MM rate increase, which includes a 9.9% ROE and no off-system sales margin sharing; Hearings Dec. 6.

Texas

TCC & TNC Wires Rate Cases – filed 11/9/06

- TCC & TNC requested rate increases of $82.7MM and $25MM, respectively. Requested increases include the expiration of $20MM and $6.2MM for TCC and TNC for the expiration of merger-related billing credits that have been in place since 2000
- Requested ROE of 11.25% using capital structure of 60% debt / 40% equity

Oklahoma

PSO Rate Proposal – filed 11/21/06

- PSO's rate proposal contains the following major components:
  - $49.6MM overall increase in base rates to recover increased costs and investments already made
  - Proposal to adopt an annually adjusted rate mechanism for new investments, including a return on CWIP
  - Requested ROE of 11.75% using capital structure of 54% debt / 46% equity

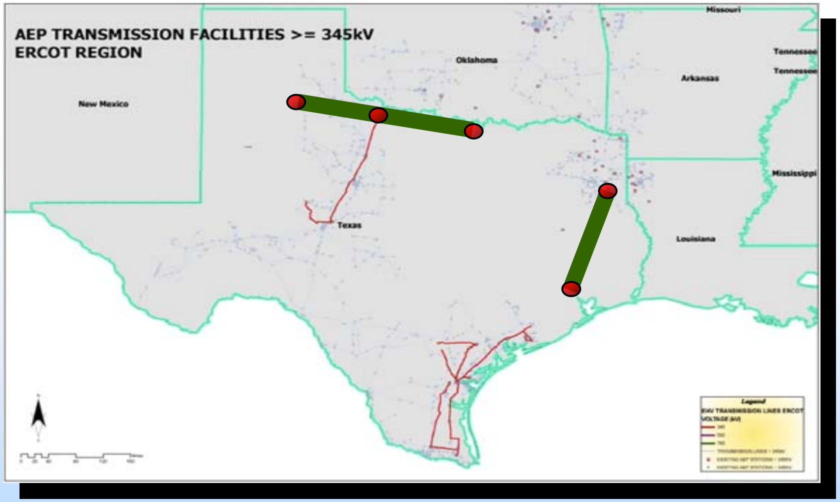
AEP AMERICAN ELECTRIC POWER

MIDAMERICAN ENERGY HOLDINGS COMPANY

- Jointly-owned utility company will design, construct and operate ERCOT transmission assets
- Up to $1B investment potential (before ownership division)
- Equity investment treatment for AEP
- AEP is also exploring 765-kV ERCOT transmission investment opportunity
  - 420 line miles
  - Up to 4000MW improved transfer capability*
  - Anticipated ERCOT rate impact 0.5mils/kWh
- This project may be considered by JV in future

- 2007 commercial operation for first JV projects
- Execution of operating agreement 2006
- Establish JV entity 2007

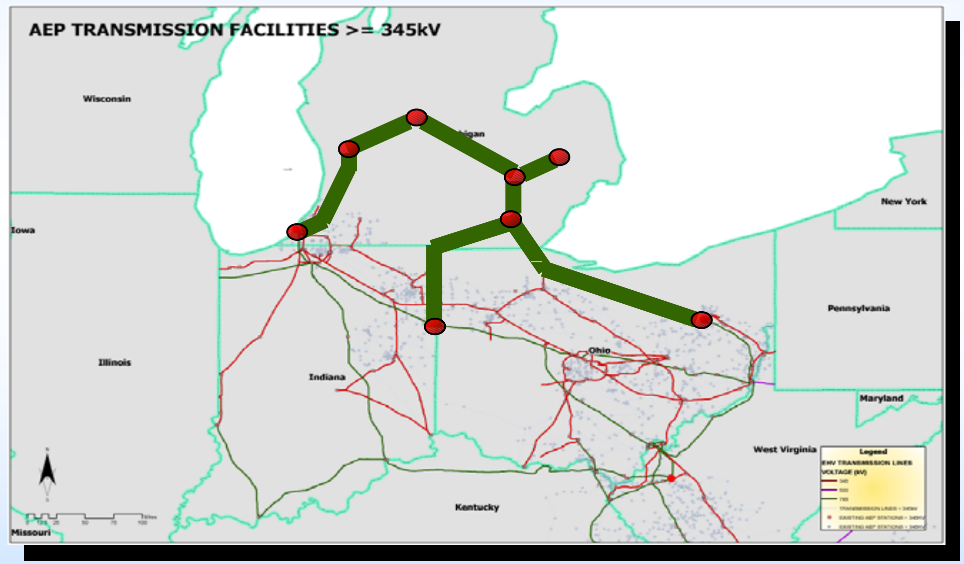


Conceptual ERCOT transmission project – proposed routes; not included in current JV plans

*Line segment capability; ERCOT is a free-flowing network

The First Large-scale Transmission Venture in Texas

- Agreement with ITC *Transmission* for Michigan 765-kV study
- Estimated $2B investment potential (before ownership division)
    - 630 line miles
    - Over 5000MW improved transfer capability
    - Anticipated rate impact <1mil/kWh
- 765-kV could help alleviate constraints
- Study results anticipated in late 2006



The ROW routes shown on this diagram are for illustrative purposes only and they may not depict the actual route that could eventually be selected. The substation locations may also be modified.

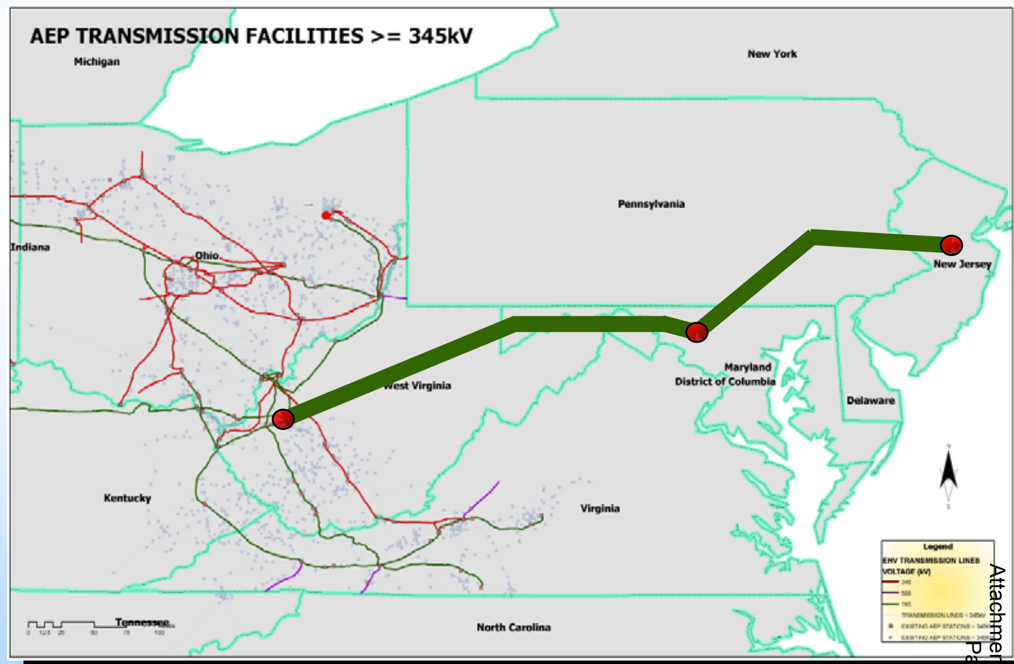
Supporting Michigan's 21st Century Energy Plan to Address Severe Capacity Constraints Identified in MPSC Studies

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No.
Attachment 1 - Confidential
Page 3552 of 9556

Cruise The I-765

- $3 billion investment
- 550 line miles
- 5000MW improved transfer capability
- Expected PJM rate impact 1mil/kWh
- 2014 estimated in-service date

Original line proposal connects AEP's Amos station to Allegheny Power's Doubs station in Maryland, and terminates at PSEG's Deans station in New Jersey. The final project will undoubtedly vary from the original proposal.



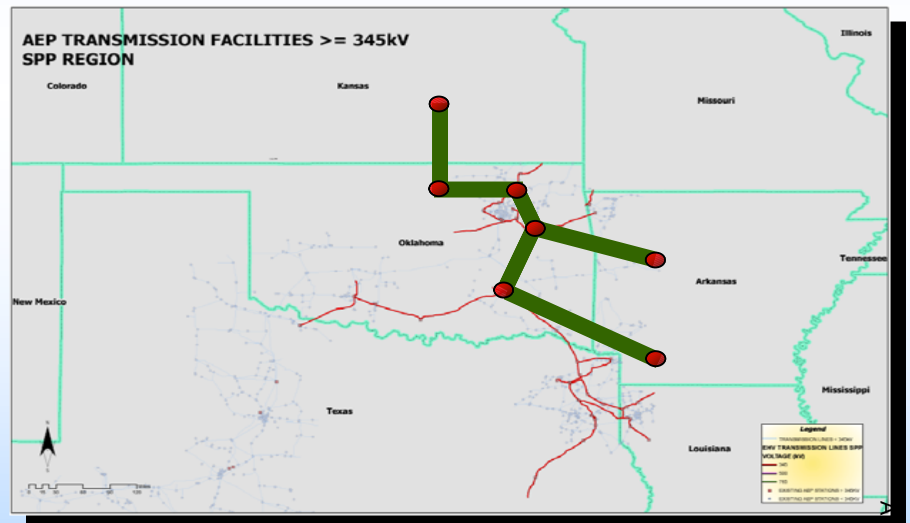
Our I-765 Line Will Be the Highest Capacity, Most Reliable Line in the United States

SPP Investment Potential

- June 2006 SPP requested proposal to address congestion, reliability & access for new generation
- July 2006 AEP submitted proposal:
  - Six 765-kV lines, 610 line miles from Arkansas to Wichita, Kansas, under construction 2012-2017
  - Investment ~$3 billion
    - ~4000MW improved transfer capability
    - Anticipated rate impact 2mils/kWh

Next steps:

- SPP conducting studies to evaluate proposals
- AEP providing technical assistance and support



Significant Opportunity for 765-kv Transmission in SPP

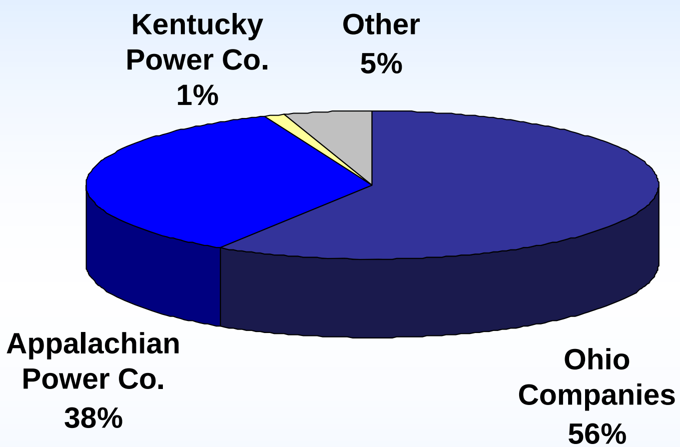
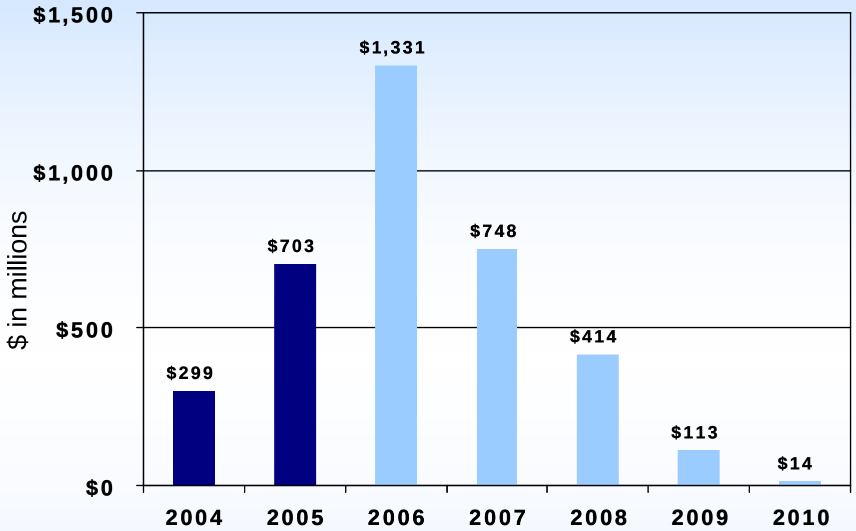
Installation Of SCR And FGD Will Allow Our Coal Fleet To Remain Extremely Cost Competitive

Environmental Investment: SO_2, NOx & Hg

Projected Environmental Investment Allocation



Environmental Investment: NOx, SO_2 & Hg (including AFUDC)



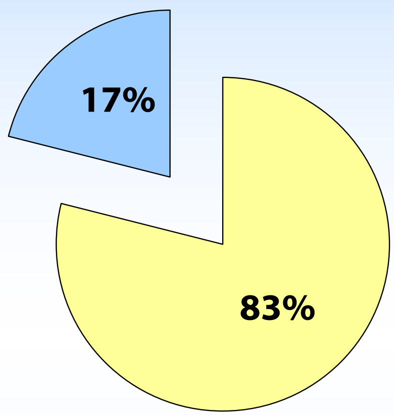
Note: 2004-2005 reflect actual investment level

$3.0 Billion SO_2 Investment + **$500 Million NOx Investment** + **$100 Million Hg Investment** = **$3.6 Billion Environmental Investment Through 2010**

$3.6 Billion Environmental Investment Projected 2004 Through 2010

Materials and Vendors – AEP's Advantage

Environmental Program Costs:
Active/Firm Costs to Remaining Estimated Costs



Actuals To Date & Firm Costs
Remaining Estimated Costs*

* Primarily labor and activated carbon injection systems

SCR Technology

- Removes 90 – 93% of NOx emissions
- Requires ~ 1% use of auxiliary power
- **AEP Capital Cost ~ $121/kw avg.**

Combination of SCR & FGD technology results in co-benefit of Hg removal ~80% removal efficiency

FGD Technology

- Removes 95 – 98% of SO_2 emissions
- Requires ~1.5% to 3.0% use of auxiliary power
- **AEP Capital Cost ~ $250/kw avg.**

AEP Benefits From First-mover Advantage Through Lower Contracted Pricing and Reduced Market Escalation Exposure

New Generation

IGCC

- June 2006 – PUCO approved tariff to recover Phase 1 pre-construction costs ($24MM) over 12-month period effective July 1, 2006
- Expect to obtain permits and finalize engineering by 2007
- Construction of IGCC facilities dependent on regulatory approvals
- Certificates of Convenience and Necessity (CCN) applications filed in OH and WV and are currently in process

SWEPCO

- May 31, 2006- Announced plans to build $1.7 billion of new generation
- Expected generation build includes a simple-cycle gas turbine totaling 320 MW at Tontitown, AR and combined-cycle gas plant totaling 480 MW at Arsenal Hill
- Aug 2006 – Announced plans to build $1.3 billion 600 MW base load ultra-supercritical coal-fueled plant – expected SWEPCO investment will be approx. 75%
- Commercial operation dates between 2007 and 2011

PSO

- 2H05 - Submitted RFPs for up to 1100 MW of peaking and baseload capacity in aggregate
- March 2006 - Two peaking RFPs totaling 340 MW awarded; commercial operation 2008
- July 2006 - Entered into JVA with OG&E to build a $1.8 billion 950 MW coal-fueled unit with goal to use ultra-supercritical technology – PSO will own 50% or 425 MW; commercial operation 2011

CSP

- Announced on Nov. 29 purchase of Darby 480MW simple-cycle peaking facility for $102MM

Domestic Generation Fleet

35,660 MW Capacity*

Operating Statistics

	Equivalent Availability Factor	Equivalent Capacity Factor
2004	85.19%	62.43%
2005	84.50%	62.53%

NERC Regional Presence

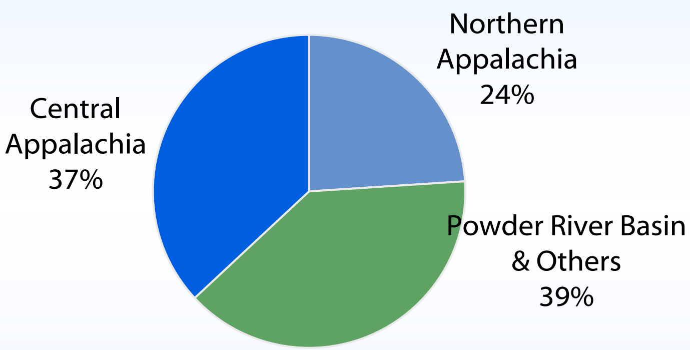
RFC (formerly ECAR)	73%
SPP	24%
ERCOT	3%

* Excludes 1,013 MW of mothballed / decommissioned / retired generating capacity.

Coal Procurement

AEP purchases approx. 75 million tons of coal per year

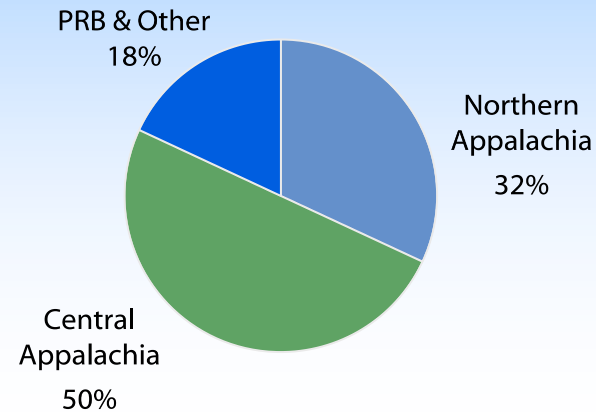
Total AEP System



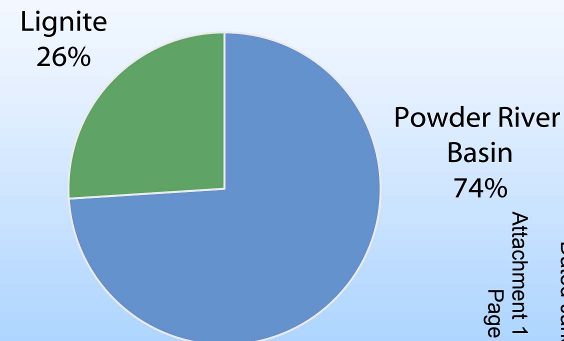
Coal Stats:

- Fully contracted for 2006; 95%+ contracted for 2007
- Avg. delivered price ~ $36.25/ton in 2006
- Approximate 6-8% price increase in 2007 -- ($38.80/ton)
  - Addition of Mountaineer & Mitchell scrubbers will allow for a greater mix of Northern Appalachian coal in 2007

AEP East

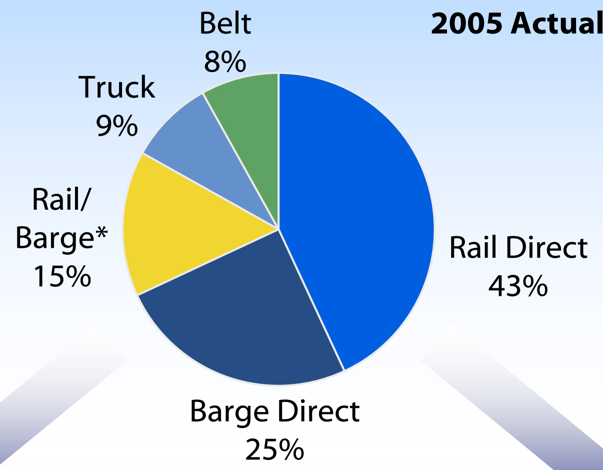


AEP West

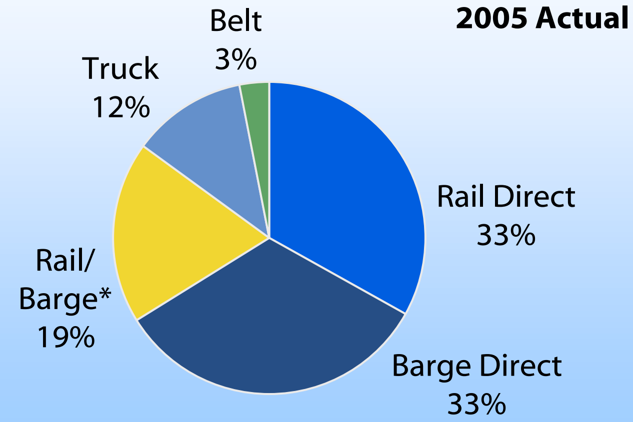


Coal Delivery

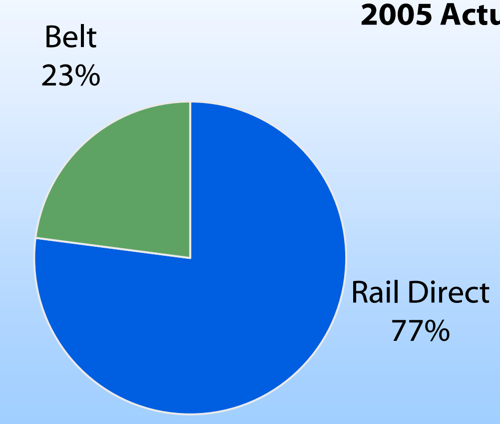
Total AEP System



AEP East

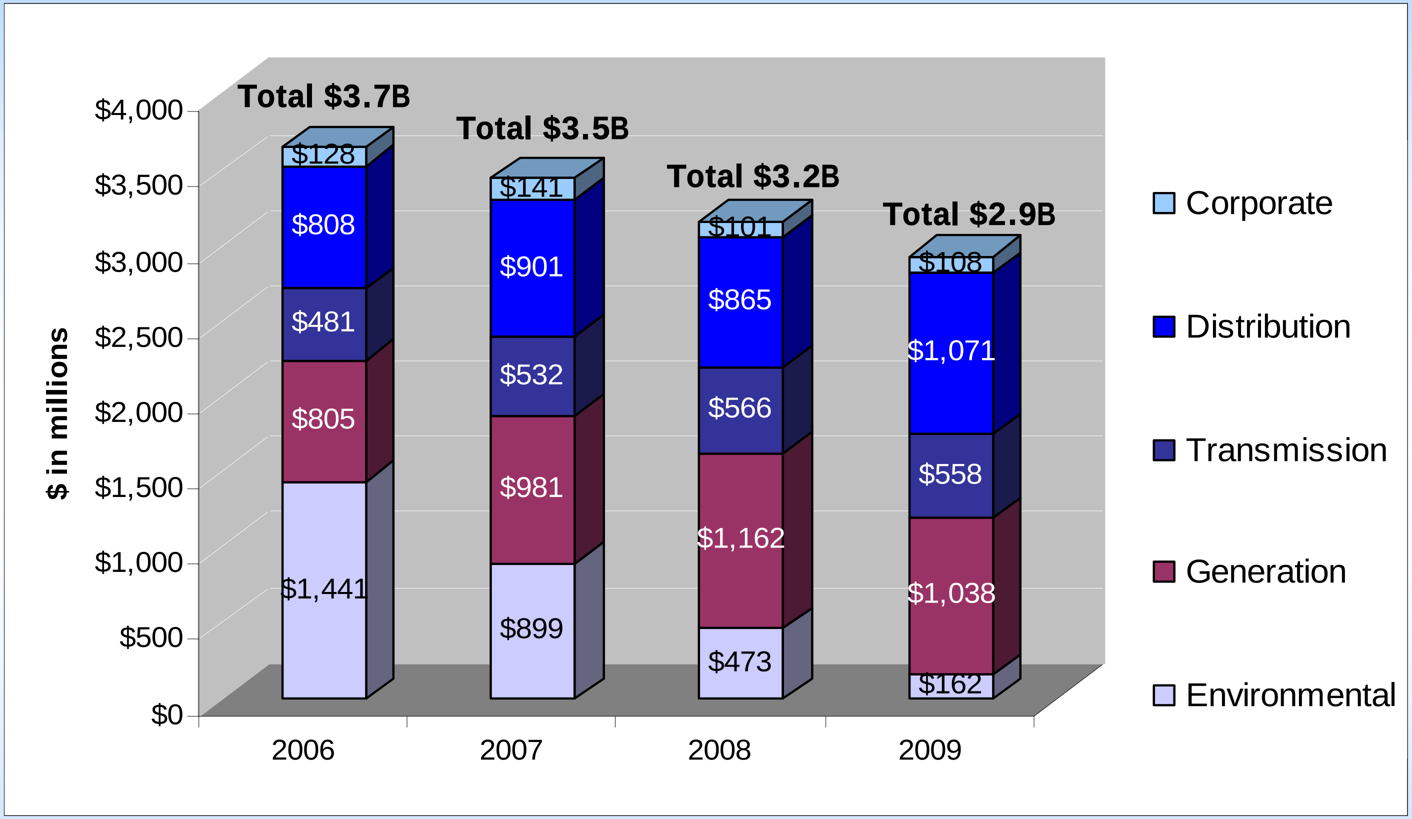


AEP West



* Reflects coal delivered to AEP plants transported through combination of rail and barge

Multi-Year Capital Investment Forecast



Note: Excludes AFUDC

Generation reflects New Build in 2007-2009 of $410MM, $522MM & $584MM; New Transmission is $60MM in 2007 & $95MM in 2008

Multi-Year Capital Investment Funding Plan

	Actual	Projection			
	2005	**2006**	**2007**	**2008**	**2009**
Planned Capital Investment (Excluding AFUDC)	$ (2,499)	$ (3,663)	$ (3,454)	$ (3,167)	$ (2,937)
Dividend on Common	$ (553)	$ (591)	$ (618)	$ (621)	$ (624)
Cash Sources

Summary of 2007 Earnings Drivers

- Load growth of 1.5%
- Rate relief of $456MM; $161MM already secured (excluding Va. E&R which has not yet been quantified)
- Improved performance at Investments
- Rising fuel costs of 6-8%
- Increased retail load & higher muni/co-op sales to impact off system sales contribution
- Higher financing costs
- Higher O&M (inflationary pressures)
- Lower contribution from Centrica sharing agreement

TRADITIONAL UTILITY FACTORS WILL DRIVE EARNINGS

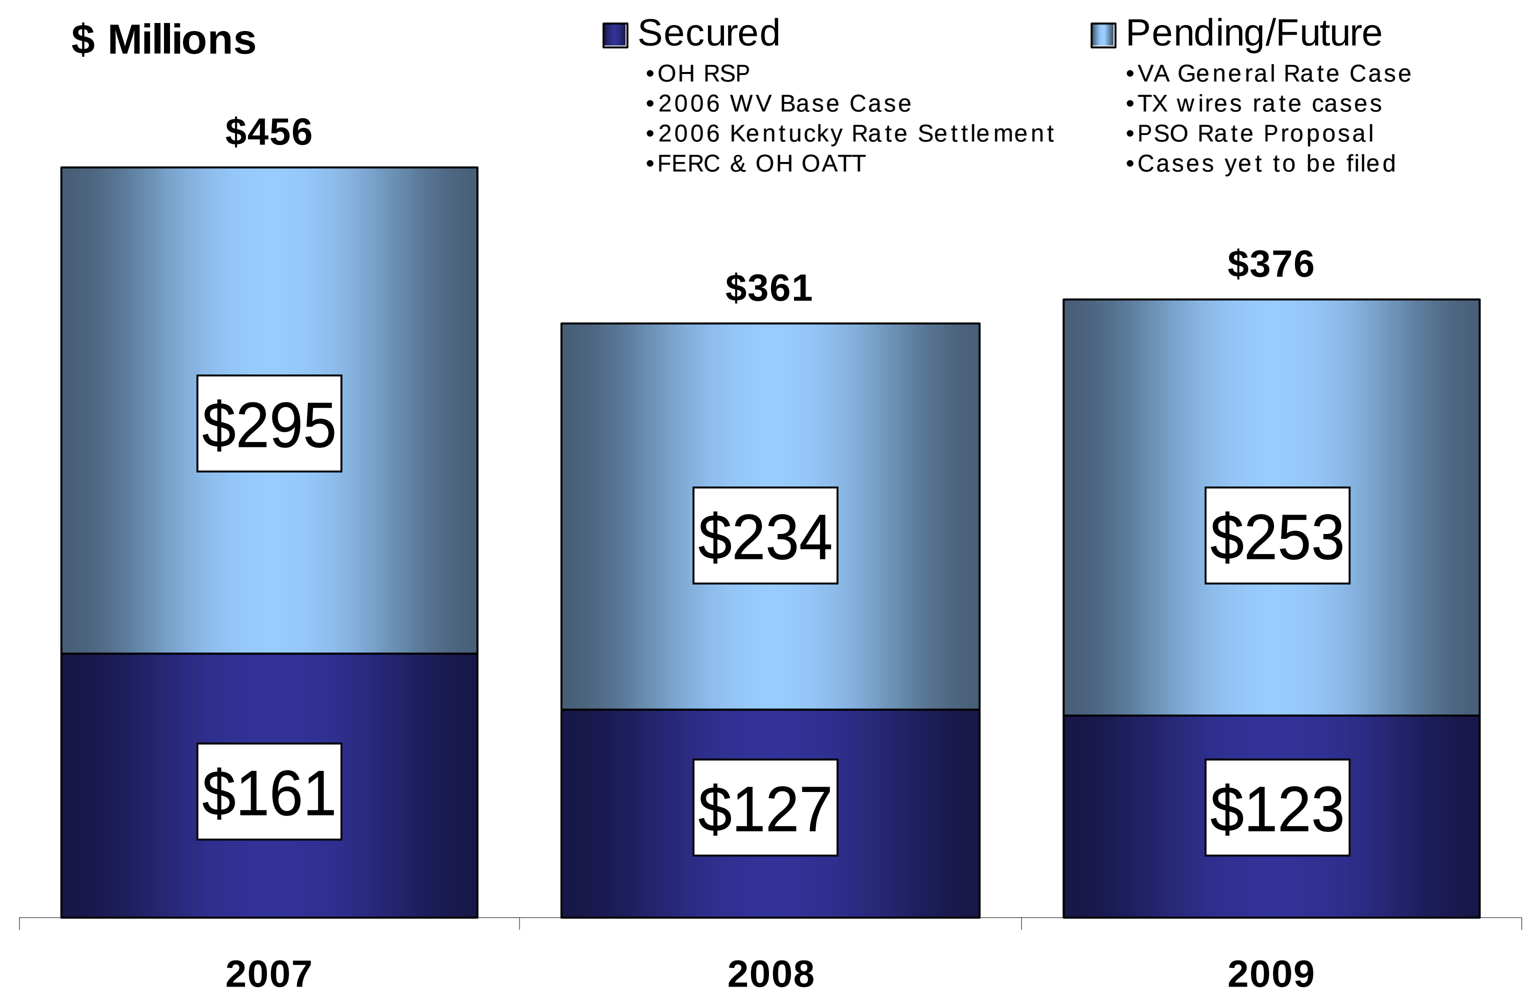
Risks and Uncertainties Within 2007 EPS Guidance Range

2007 EPS Guidance Range is $2.85 to $3.05

__2007__

- *Outcome of pending regulatory proceedings*
- *Wholesale market volatility*
- *Plant availability*
- *Rising fuel costs*
- *Weather*

Incremental Rate Relief Composition



Note: A portion of the pending/future rate recovery related to Virginia E&R costs will now be considered secured, based on the Virginia SCC's Nov. 20th order in our E&R case. Further analysis is required to quantify these amounts.

RATE RELIEF IS A CRITICAL ELEMENT TO AEP'S FINANCIAL SUCCESS

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; volatility in the financial markets, particularly development affecting the availability of capital on reasonable terms and developments impacting our ability to refinance existing debt at attractive rates; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas coal, nuclear fuel and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

Pension and OPEB Estimate

- The Pension plan and OPEB funds investment returns are each down about 25% YTD as of October 16, 2008. The drop in assets is mitigated slightly by a corresponding decrease in plan liability caused by a higher discount rate (from 6% to 7% for pensions and from 6.25% to 7.25% for OPEB).
- Investment losses increase plan expense for both pension and OPEB, but the investment losses are smoothed in over several years.
- OPEB contributions will increase along with OPEB expense, in accordance with agreements in most of our regulatory jurisdictions.
- As of October 16, 2008, we expect 2009 pension expense to increase $10MM over 2008 and the estimated OPEB expense to increase $30MM year over year.
- These increases are reflected in our current guidance.
- We are currently not expecting any mandatory contributions to pension in 2009.

Regulatory Activity Underway

AEP Ohio Electric Security Plan Filing

- On July 31, 2008, in conjunction with the requirements of SB221, AEP Ohio filed an Electric Security Plan with the PUCO on behalf of CSPCo and OPCo.
- The filing includes the following key components:
  - Energy Efficiency and Demand Response
  - Renewable Energy
  - gridSMART^{SM} Phase 1
  - Distribution Reliability Enhancement
  - Economic Development
  - Provider of Last Resort
- The proposed rate plan results in an annual increase of approximately 15 percent on customers' total bills.
- The filing seeks to recover changes in fuel and environmental expenses relative to levels reflected in current rates.
- Intervenor testimony was filed October 31, Staff testimony was filed November 7 and the public hearing commenced on November 17, 2008. We anticipate an order in the first quarter of 2009.

Summary Rate Case Information

I&M Indiana General Rate Case

On January 31, 2008, I&M filed a general base rate case with the Indiana Utility Regulatory Commission (IURC) requesting an increase of $125.6 million ($80.1 million in base revenues and $45.6 million in tracker mechanisms). (Docket #: 43306). Order is expected in June 2009.

Regulatory Activity Underway

SPP OATT Formula Rate Filing (Docket #:ER07-1069-000)

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $140MM. Approximately $10MM of the increase relates to 3rd party and the rest, if approved, would be recovered through retail jurisdictional filings in SWEPCo and PSO, as appropriate.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to February 1, 2008, with rates subject to refund.
- Settlement discussions are currently on-going.

Regulatory Activity Underway

PJM OATT Formula Rate Filing (Docket #:ER08-1329-000)

- On July 31, 2008, the seven AEP East companies filed with the FERC to update the Open Access Transmission Tariff (OATT) rate and implement a formula transmission rate that will be updated annually to keep rates current with transmission investment.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $507MM and the new revenue requirement requested is $606MM. Approximately $31MM of the increase relates to 3rd party and Ohio and the rest, if approved, would be recovered through retail jurisdictional filings in the other east jurisdictions.
- We requested an effective date of October 1, 2008 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to March 1, 2009, with rates subject to refund.

Regulatory Activity Underway

SWEPCo Stall Plant Filings

Arkansas

- ❑ Proceeding is pending.

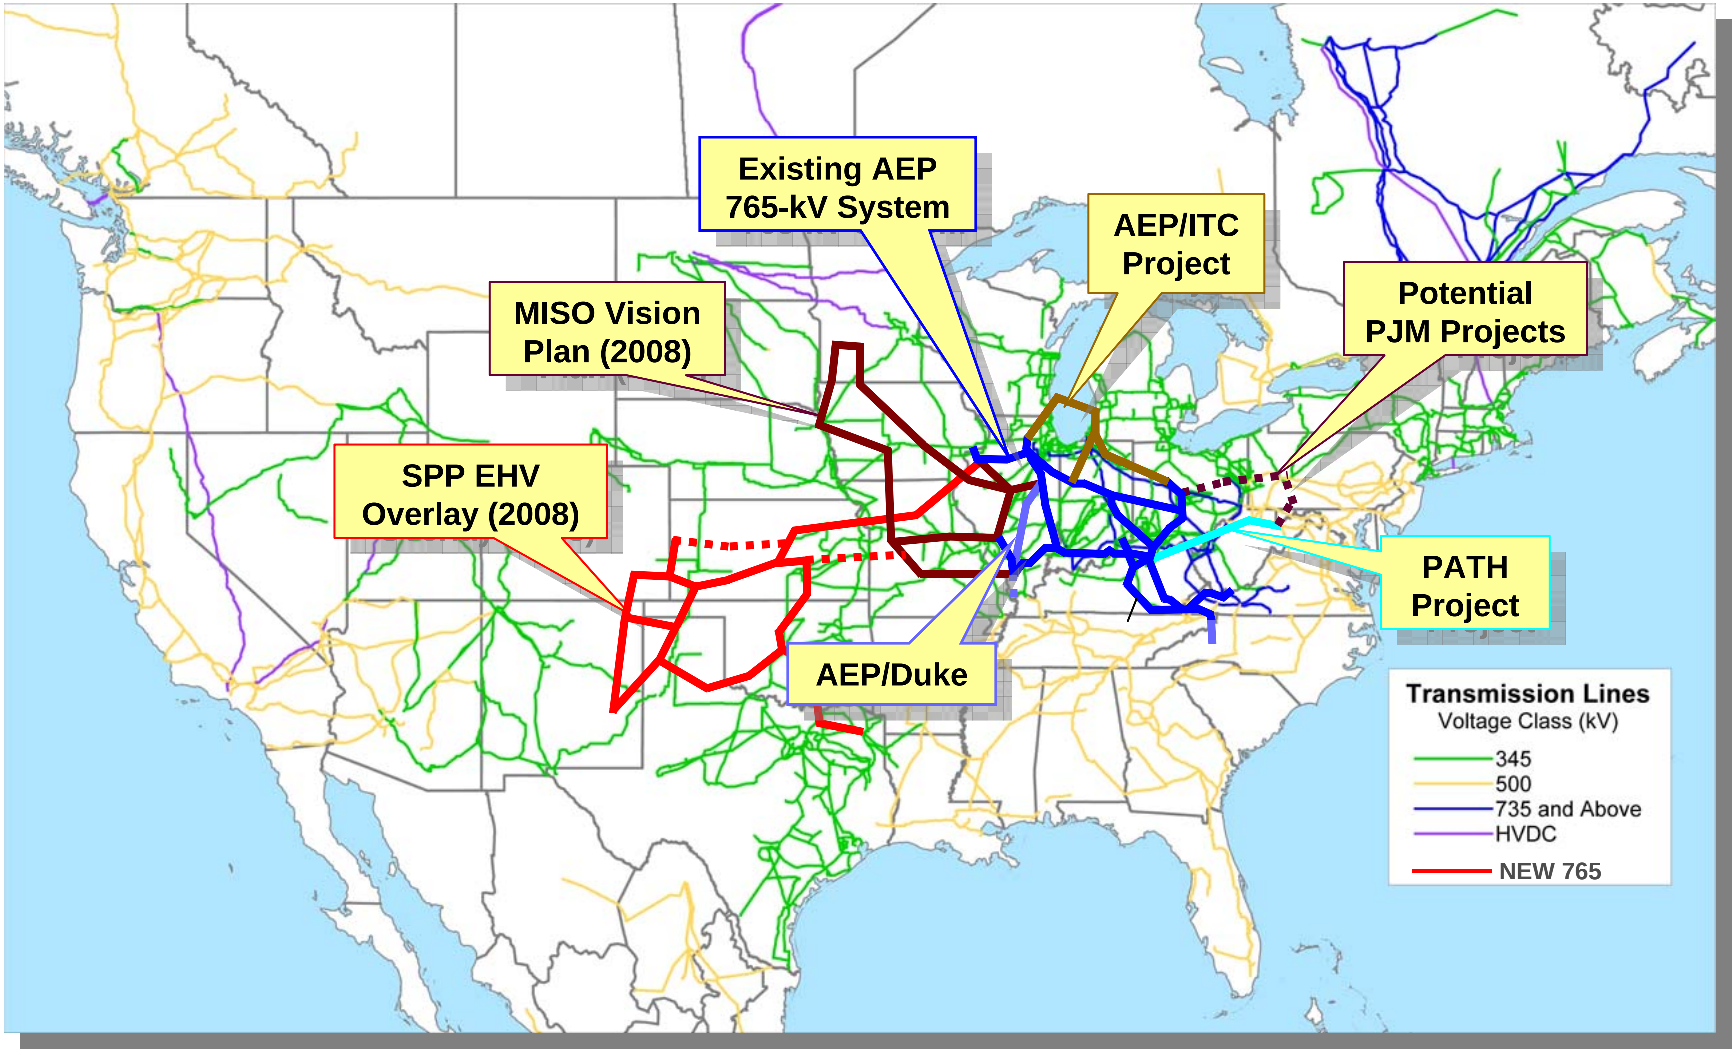
Louisiana

- ❑ On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The intermediate facility, known as the Stall Plant and sited in Shreveport, LA, was bifurcated from the original filing and had a procedural schedule established on January 9, 2008.
- ❑ PSC approval was granted on September 10, 2008.
- ❑ Air permit received on March 20, 2008.

Texas

- ❑ PUCT order approving plant was issued on March 8, 2007.

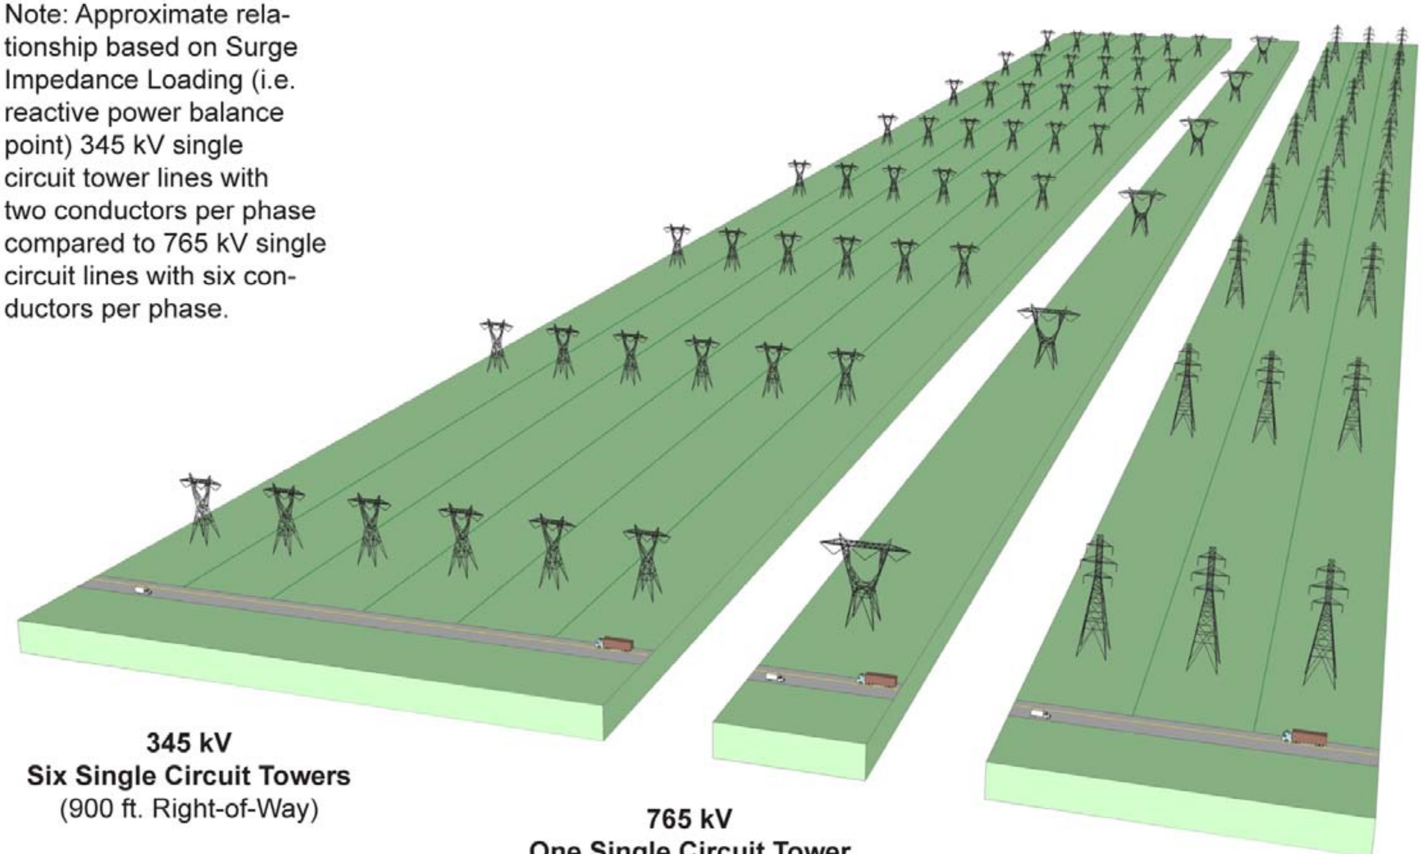
Making it Happen: EHV Projects Under Development



NOTE: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

765 Right-of-Way Comparison

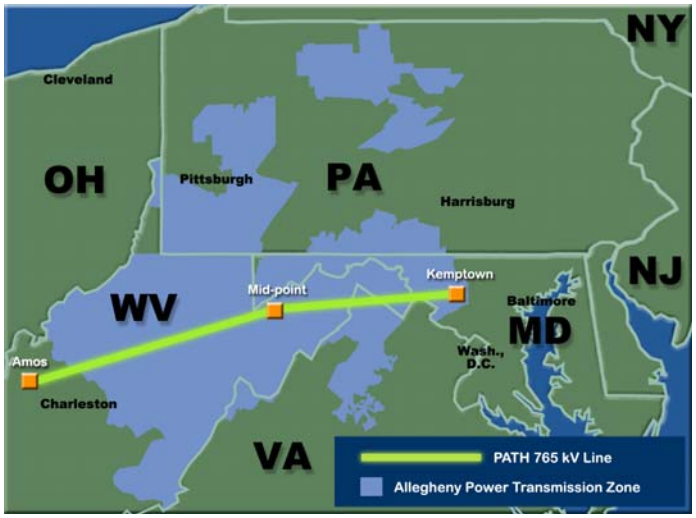
Note: Approximate relationship based on Surge Impedance Loading (i.e. reactive power balance point) 345 kV single circuit tower lines with two conductors per phase compared to 765 kV single circuit lines with six conductors per phase.



From a siting standpoint, 765-kV is more efficient in terms of economies of scale and right-of-way than lower capacity lines.

EHV Transmission in PJM: PATH

- ***PATH Progress to Date***
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP and 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
  - FERC ordered the formula rate mechanism be set for hearing, pending settlement judge procedures
  - In October 2008, PJM announced a reconfiguration of the PATH line which will eliminate the connection with the Bedington substation and the twin-circuit 500-kV lines from Bedington to Kemptown, and include a new mid-point substation near existing PATH alternative routes
    - The reconfiguration is a result of constraints identified as a result of comprehensive siting studies; interaction with government agencies; public input; and a desire to identify a solution that reduces line mileage and minimizes the impact on communities and the environment.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
- ***Key Challenges***
  - CPCN and Siting Approval from WV and MD



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Potomac-Appalachian Transmission Highline

Joint Ventures with MidAmerican Energy Holdings Company

Electric Transmission Texas Update

- 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
- ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
- Services provided by AEP and investment opportunities can be offered by either partner
- Total initial investment of $70 million before ownership division
- In October 2008, the District Court found that the PUCT exceeded its authority by granting ETT a CCN. This decision is currently under appeal and ETT believes the ultimate outcome will validate its utility status.

Electric Transmission America Update

- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.
  - In 2008, ETA signed agreements with Westar Energy and OGE proposing to build the first and second segments of the 765-kV Overlay Plan in SPP

Texas CREZ Project

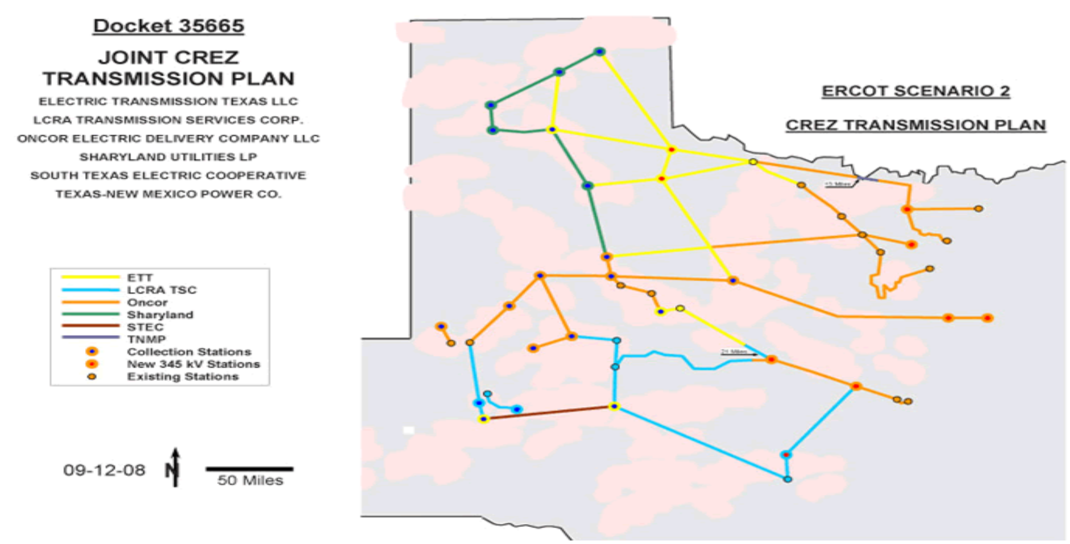
Strengthening the ERCOT grid to collect and deliver wind generation to load

❑ *Overview*

- ❑ In September 2008, ETT and a group of other Texas transmission providers filed a comprehensive plan with the PUCT for completion of the CREZ facilities approved by the Commission.
- ❑ ETT's requested share of the coordinated plan is approximately \$1.5 billion. Staff testimony in October 2008 recommended ETT's share at \$1.2 billion.
- ❑ The filing calls for completion of the plan by 2012.

❑ *Next Steps*

- ❑ PUCT hearings – December 2008
- ❑ Selection of transmission providers – 1Q 2009



Electric Transmission Texas

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

EHV Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- ***Overview***
  - Sent non-binding Letter of Commitment to SPP to construct 765-kV and 500-kV projects in SPP region consistent with SPP Overlay Study – Summer 2007
  - Updated EHV Overlay Study completed by SPP – March 2008
- ***Benefits***
  - Overall reliability reinforcement with improved voltage support throughout the SPP system
  - Significantly increased transfer capability
  - Provides access to new generation resources, especially renewables
  - Allows for effective interconnections for EHV system development

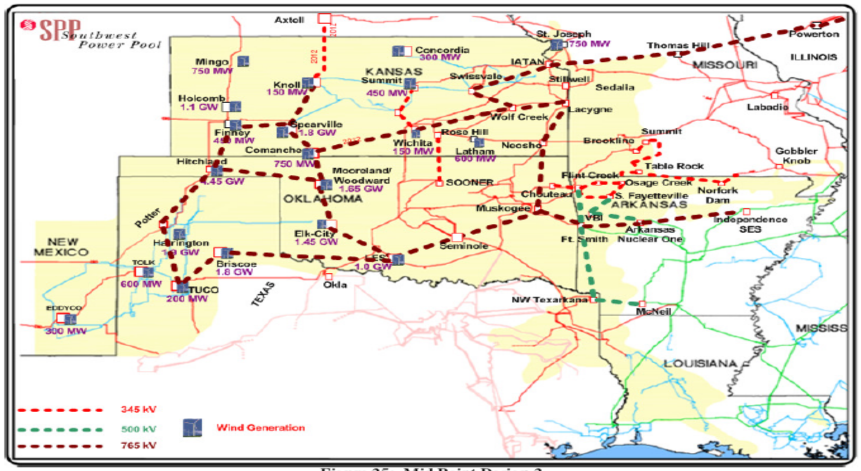


Figure 25: Mid Point Design 2

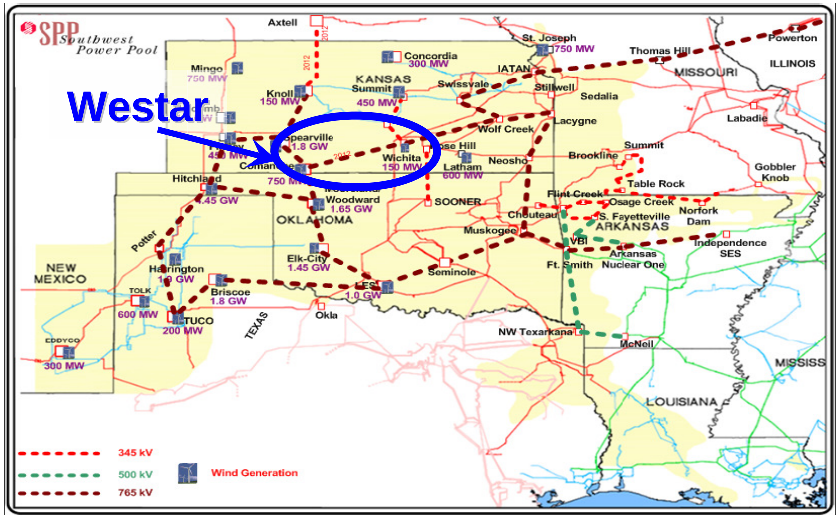
Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Prairie Wind Transmission, LLC

JV to build first segment of 765-kV transmission in SPP

- ### *Overview*
  - In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
  - PWT is a 50/50 JV that is proposing to build approximately 230 miles of 765-kV lines extending from Wichita, KS, west to a substation northeast of Dodge City, KS, and then south to the Kansas border from Medicine Lodge, KS.
  - The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
  - Project is expected to cost approximately $600 million (based on SPP estimates) and be in-service by 2013.
  - AEP's ownership of the joint venture is 25%.
  - Kansas CPC filing submitted in May 2008.
  - FERC formula rate filing submitted in October 2008 requesting:
    - Cash return on CWIP and 13.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PWT or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

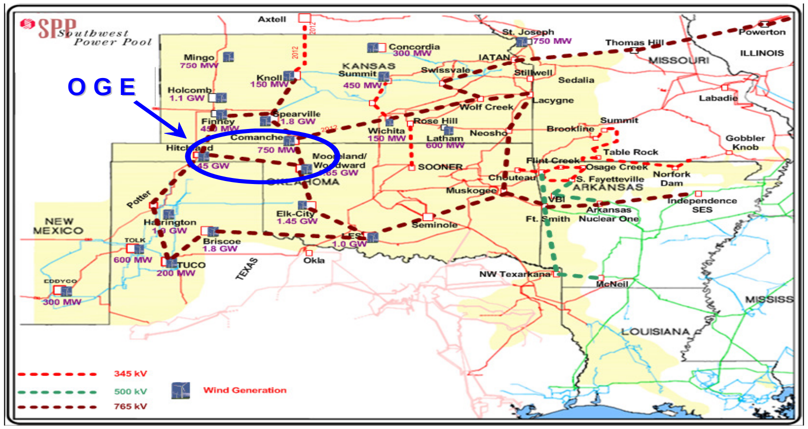
- ### *Key Challenges*
  - Cost allocation which enables the development of "system solutions"
  - RTO Approval

Tallgrass Transmission, LLC

JV to build second segment of 765-kV transmission in SPP

❑ *Overview*

- ❑ In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
- ❑ TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines extending from the Kansas-Oklahoma border north of Woodward, OK, extending west into the Oklahoma panhandle to a new station that will be built near Guymon, OK.
- ❑ The project will promote wind development in the western half of Oklahoma.
- ❑ Project is expected to cost approximately $500 million and be in-service by 2013.
- ❑ AEP's ownership of the joint venture is 25%.
- ❑ Other responsibilities will be handled by the partners or outsourced.
- ❑ FERC formula rate filing submitted in October 2008:
  - ❑ Cash return on CWIP and 13.3% incentive ROE
  - ❑ Recovery of all costs incurred prior to the time rates go into effect, and
  - ❑ Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of TG or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

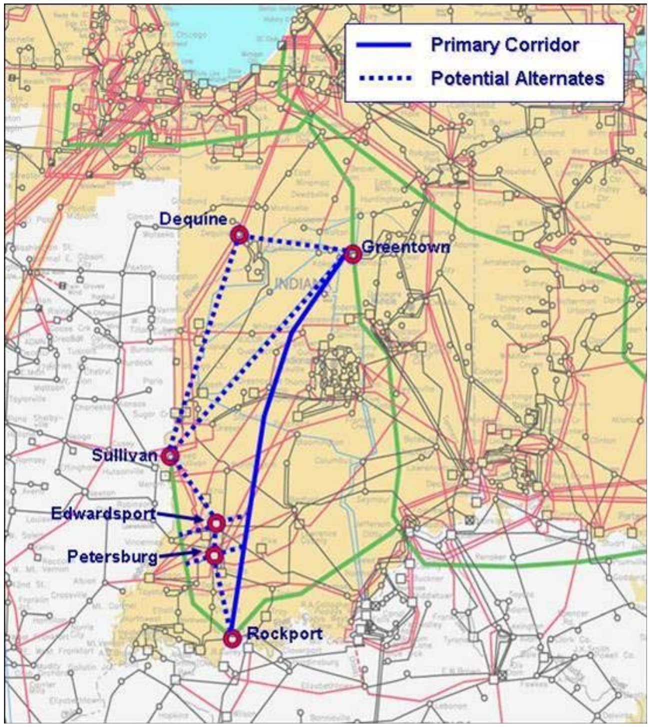
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

❑ *Key Challenges*

- ❑ Cost allocation which enables the development of "system solutions"
- ❑ RTO Approval

Pioneer Transmission, LLC

- ***Overview***
  - In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
  - PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
  - The project will improve the reliability of the nation's transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, protect national security and expand opportunities for new generation, including renewables.
  - Project is expected to cost approximately $1 billion and be in-service by 2015.
  - AEP's ownership of the joint venture is 50%.
  - Other responsibilities will be handled by the partners or outsourced.
  - FERC formula rate filing submitted in October 2008 requesting:
    - Cash return on CWIP and 13.5% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PT or its parents.



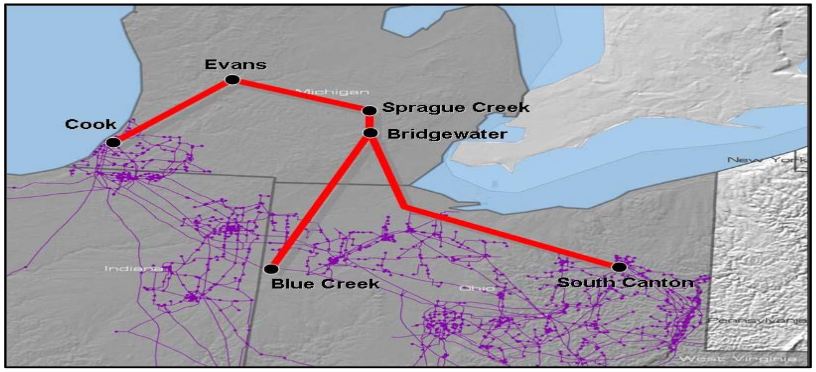
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected.

- ***Key Challenges***
  - Cost allocation which enables the development of "system solutions"
  - RTO Approval
  - Siting

EHV Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- ***Overview***
  - ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
  - Study was released Q3 2007
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.6 billion investment (in 2007$, before ownership division)
  - AEP and ITC are in discussions to form a Joint Venture
- ***Benefits***
  - Up to 5,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- ***Key Challenges***
  - Cost allocation which enables the development of "system solutions"
  - RTOs Approvals



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

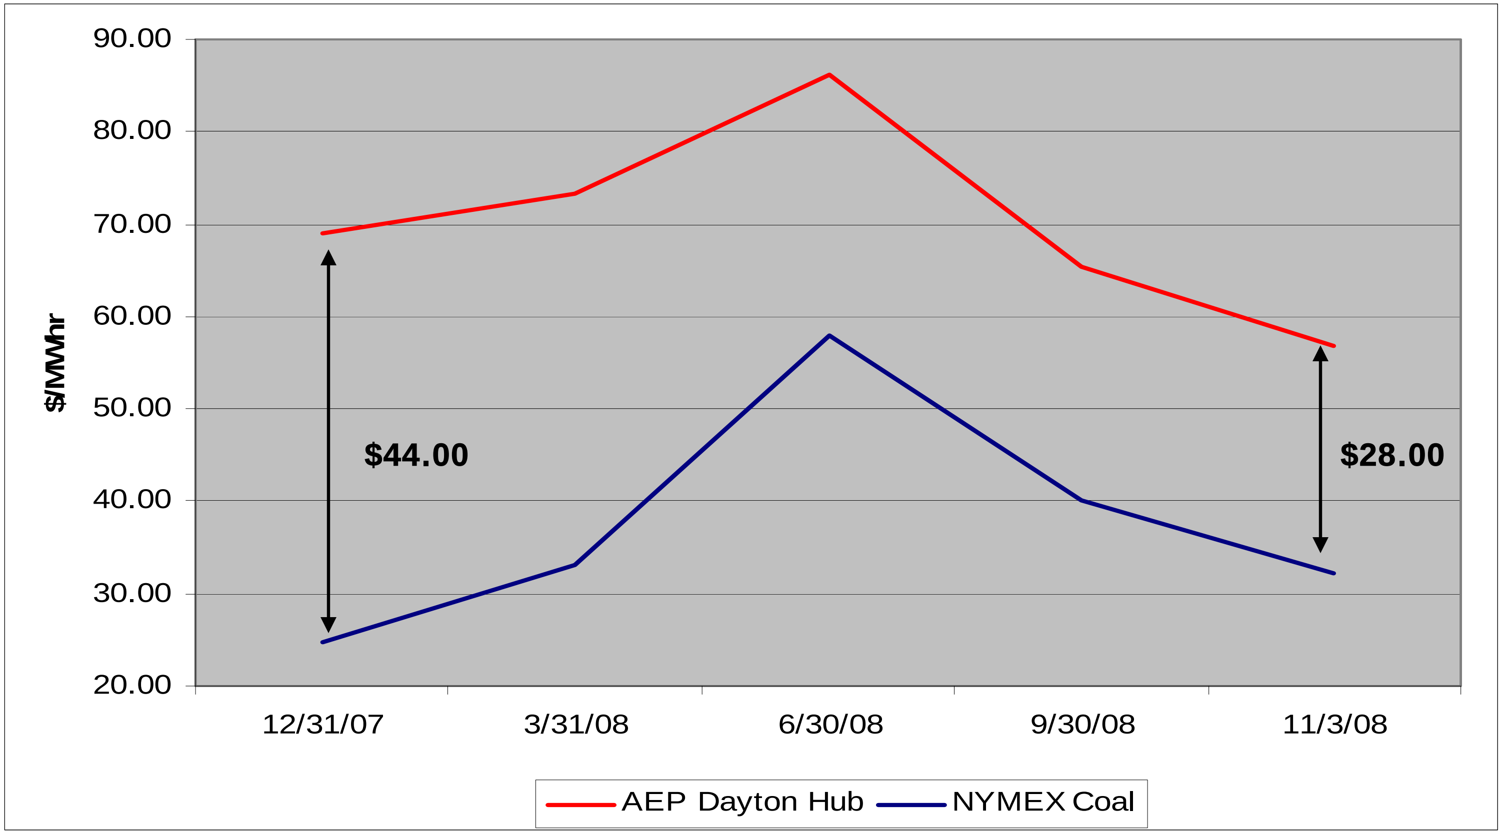
Dark Spread Comparison

NYMEX Coal vs. AEP-Dayton Hub Peak Electricity



Coal Purchases:
2009: 95+%
2010: 85+%

Del. Coal Prices:
2007A: $36.58/ton
2008E: $46.82/ton

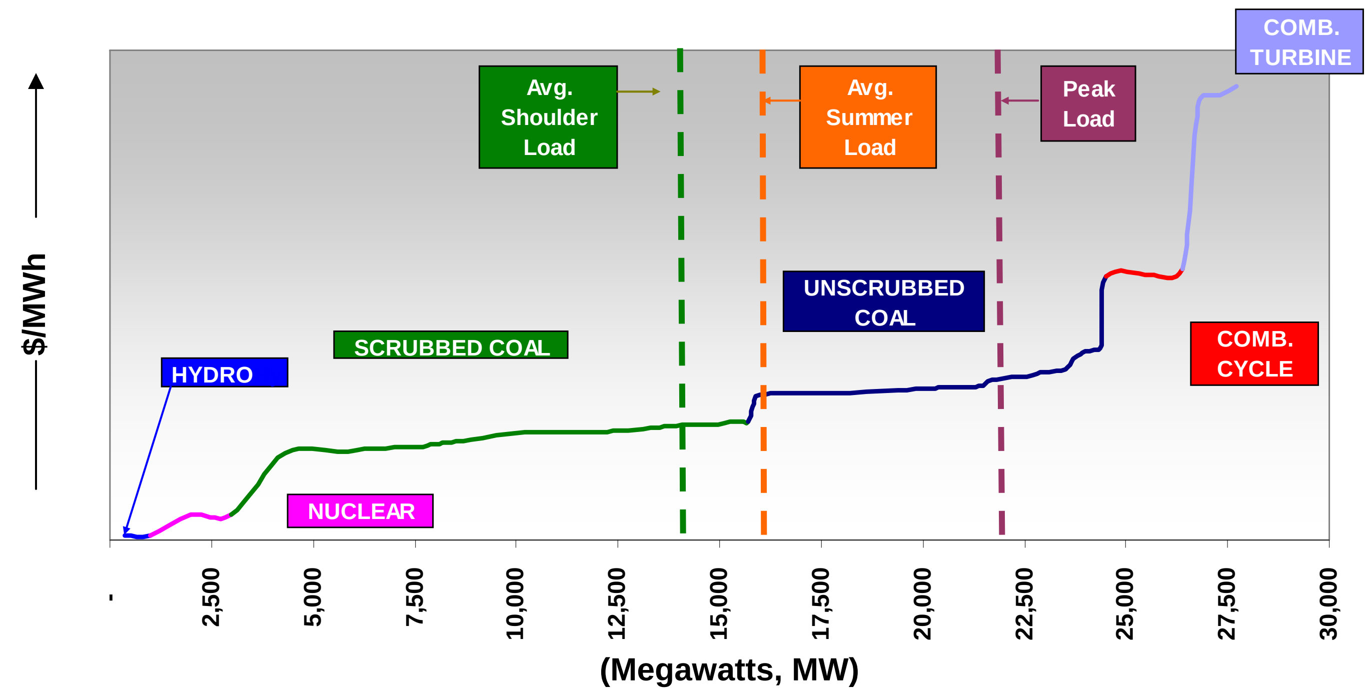
2009 estimated increase: 12%-15%

- ❑ Coal price represents standard NYMEX contract specifications with a heat content of 12,000 Btus/lb
- ❑ 10,000 heat rate used for conversion
- ❑ Coal and peak electricity prices reflect market prices for calendar year 2009 delivery on the business dates given above

AEP Supply Stack

- Supply stack with Cook unit 1 outage would slide the supply stack 1,009 MW to the left.
- Planned outages typically shorten supply stack in the shoulder months by several thousand megawatts.
- Shoulder periods offer the flexibility to reschedule planned outages.

Typical AEP Supply Stack



With the loss of Cook 1 this fall season, a planned outage on a scrubbed coal unit was cancelled, leaving the supply stack in roughly the same position for off-system sales

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M’s Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

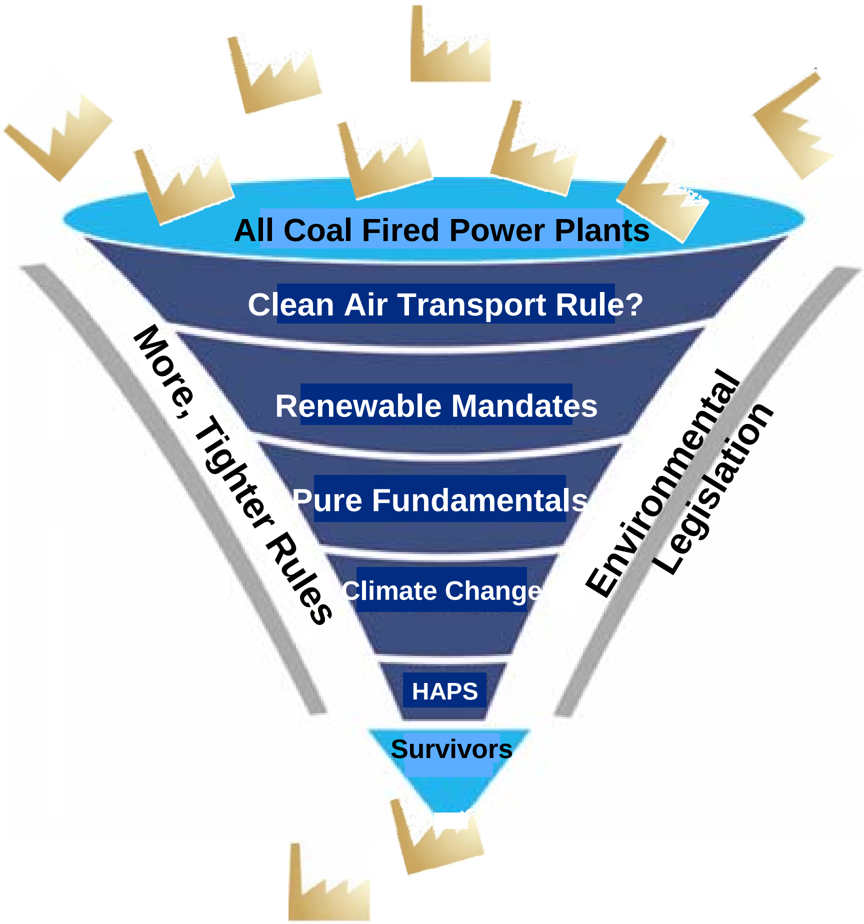
Texas	951,000

The Pressure on Coal Generation



Dark Spread Compression

NYMEX coal

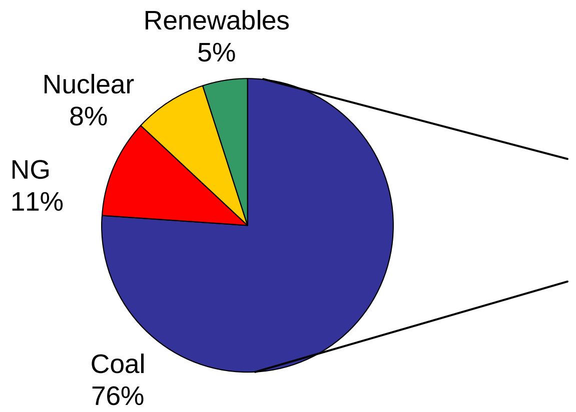
<u>Key EPA Actions Pending</u>

- Transport Rule – Proposed July 2010
- "Coal Ash" Rule – Proposed May 2010
- Mercury and other Hazardous Air Pollutants (HAPs) Rule – Expect Proposed Rule in Spring 2011

The threshold level for coal is being defined

AEP Generation Capacity

East Capacity – 27,253 MW
AEP Ohio, APCo, I&M, AEG, KPCo, Wind, Solar, Hydro

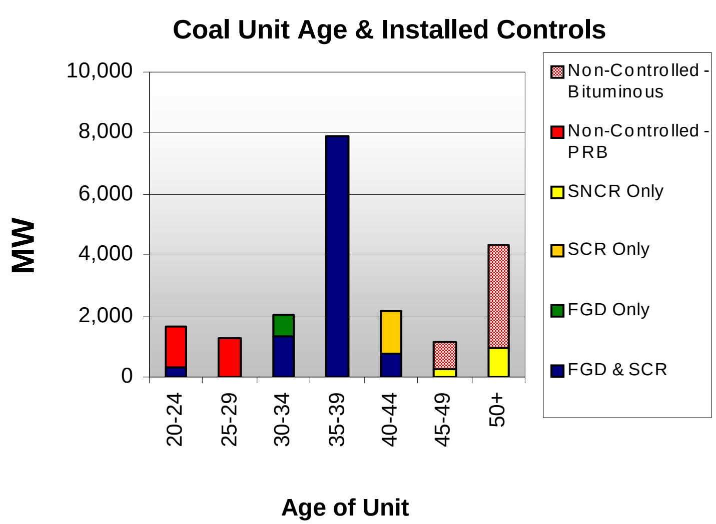


Coal Source

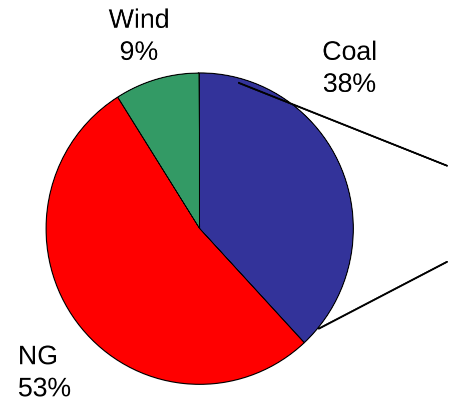
NAPP	46%
CAPP	30%
PRB	22%
Others	2%

Avg. Delivered Cost
2009A - $56/ton
2010E - $52/ton
2011E[1] - $51/ton

[1] Represents cost of committed position (91%)



West Capacity – 11,677 MW
PSO, SWEPCO, TNC, Wind

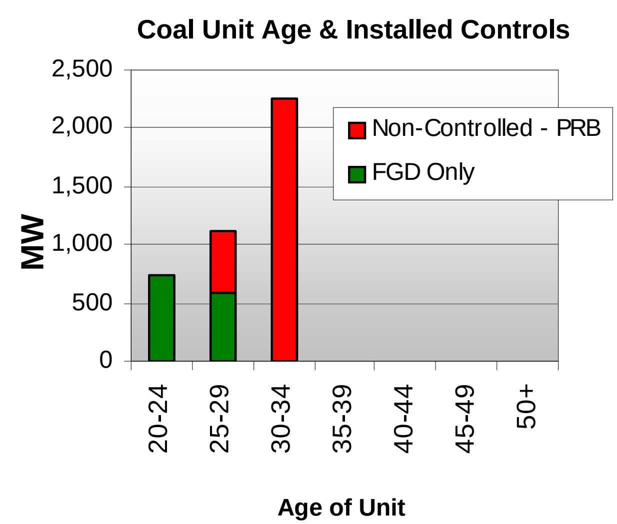


Coal Source

PRB	75%
Lignite	25%

Avg. Delivered Cost
2009A - $29/ton
2010E - $29/ton
2011E[1] - $29/ton

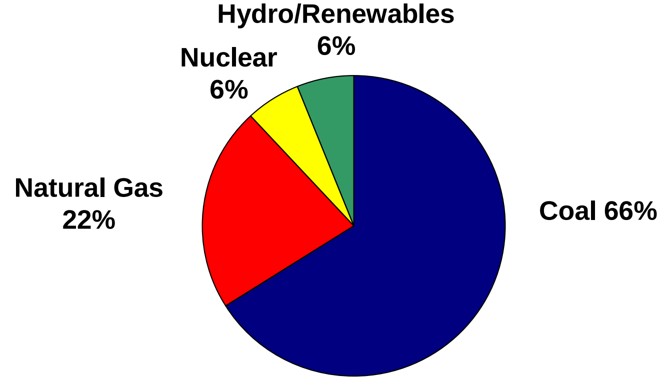
[1] Represents cost of committed position (90%)



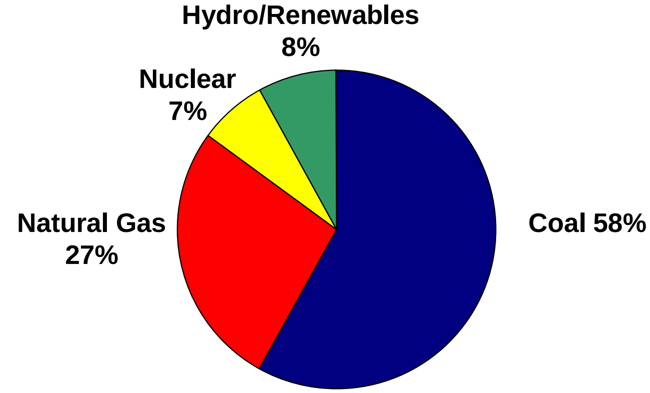
Continued Investment in Utility Platform

AEP®

- Plan for old, small coal units
  - Initially operate seasonally
  - Transition towards retirement
  - Regulatory plan for recovery
- Continue evaluation of "partially exposed" units for additional controls
- Add non-coal capacity when needed
  - Dresden NGCC (partially complete)
  - New NGCC at existing site
  - Cook plant uprate (under study)
  - Renewables
- Deploy technology as appropriate
  - Continue pursuit of CCS technology
  - Energy storage technologies
  - gridSMART®



Capacity - 2009



Projected Capacity - 2017

Transmission as a Growth Engine

- Electric Transmission Texas (ETT)
  - Growing Rate Base
  - $1.1B CREZ opportunity; Received CCN approval on first CREZ line; 3 more approvals expected in 2011
  - $1.6B Non-CREZ projects in the pipeline
- AEP Transmission Company (AEP Transco)
  - Settlement filed at FERC for wholesale rates
  - $50M spend for 2010; $160M forecasted for 2011
- Progress on Joint Ventures in 2010
  - PATH
  - Prairie Wind
  - Pioneer
  - SMART Transmission study

Transmission investments present significant growth opportunities within and outside of AEP's traditional service territories

ETT: An Operating Utility

Electric Transmission Texas

Growing Rate Base:

- Current rate base is $385 million; expected to grow as follows:
  - 2010: $405 million
  - 2011: $465 million
  - 2012: $765 million
  - 2013: $1,415 million
- Interim TCOS filings twice per calendar year

Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.1 B:

- Seven double-circuit 345kV transmission lines (~$750 M), eight major 345kV stations and several series compensation installations (~$350 M)
- PUCT Certificate of Convenience and Necessity (CCN) proceedings underway

CREZ Transmission Line	Number of miles	Estimated Cost ($M)	CCN Filing Date	CCN Decision by PUCT
Clear Crossing to Dermott	**95**	**$160**	**5/3/2010**	**Unanimously Approved 9/30/2010**
Tesla to Riley	65	$110	8/18/2010	2/15/2011
Riley to Edith Clarke to Cottonwood	115	$199	9/8/2010	3/8/2011
Tesla to Edith Clarke to Clear Crossing to West Shackelford	145	$280	Anticipated 10/20/2010	4/20/2011

Additional Projects in the Pipeline ~$1.6 B:

- Approximately 822 miles of lines and 28 substations with in-service dates through 2017

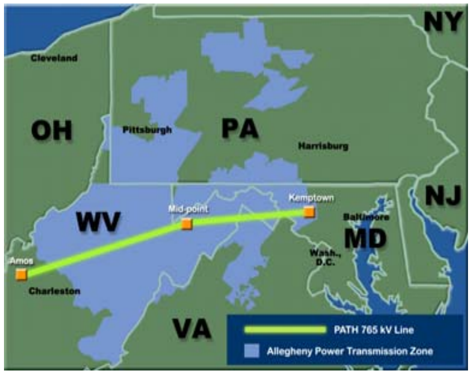
AEP Transco was established in 2010

- Formula rate settlement filed with FERC in September; awaiting final order
  - ROE: 11.49% in PJM and 11.2% in SPP
- $50 M invested in three states in 2010 (OH, MI & OK)
  - Ohio application for public utility status pending; approval expected in 2010
  - Oklahoma and Michigan did not require filings
- “Baseline” capital spending targets for OH, MI & OK
  - $160 M for 2011
  - $350 M for 2012
- Will pursue regulatory approvals for other states in 2011 (AR, LA, WV, VA, IN & KY)
  - Additional capital spending opportunity in these states for 2012+

Progress on Joint Ventures in 2010

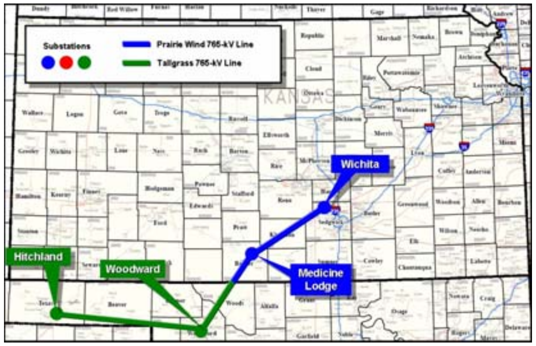
PATH:

- Re-filed for certification in VA
- Letter from PJM confirmed the 2015 in-service date
- PJM Testimony “RTEP final with respect to PATH”
- FERC approved formula rate (14.3% ROE), subject to rehearing



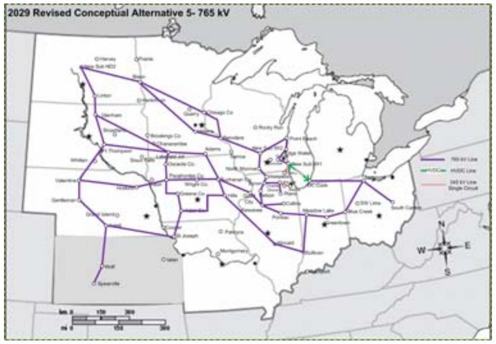
Prairie Wind:

- Approved by SPP as a Priority Project (Notice To Construct rcv’d)
- Cost allocation approved by SPP and FERC
- FERC approved formula rate (12.8% ROE)
- In-service date is 2013-2014



Pipeline of Future Projects:

- Pioneer
  - FERC approved formula rate (12.54% ROE)
  - Awaiting RTO project approval; MISO included Pioneer in its proposed EHV plan
- Tallgrass
  - Will move forward if approved at 765 kV
- Smart Transmission Study
  - Comprehensive study of the transmission needed in the Upper Midwest to support renewable energy development



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Two New Anchor Projects

ETA – AEP - Exelon: The RITE Line

Approximately 420 miles of 765 kV lines connecting AEP's 765 kV system in Indiana with Exelon's 765 kV system west of Chicago, and other Exelon substations

- Total Project Cost ~$1.6B
- Ensures reliability, renewables integration
- Bridges AEP's and Exelon's 765 kV systems
- PJM approval of seams project required
- Includes 765 kV and 345 kV voltages, and their electrical equivalents

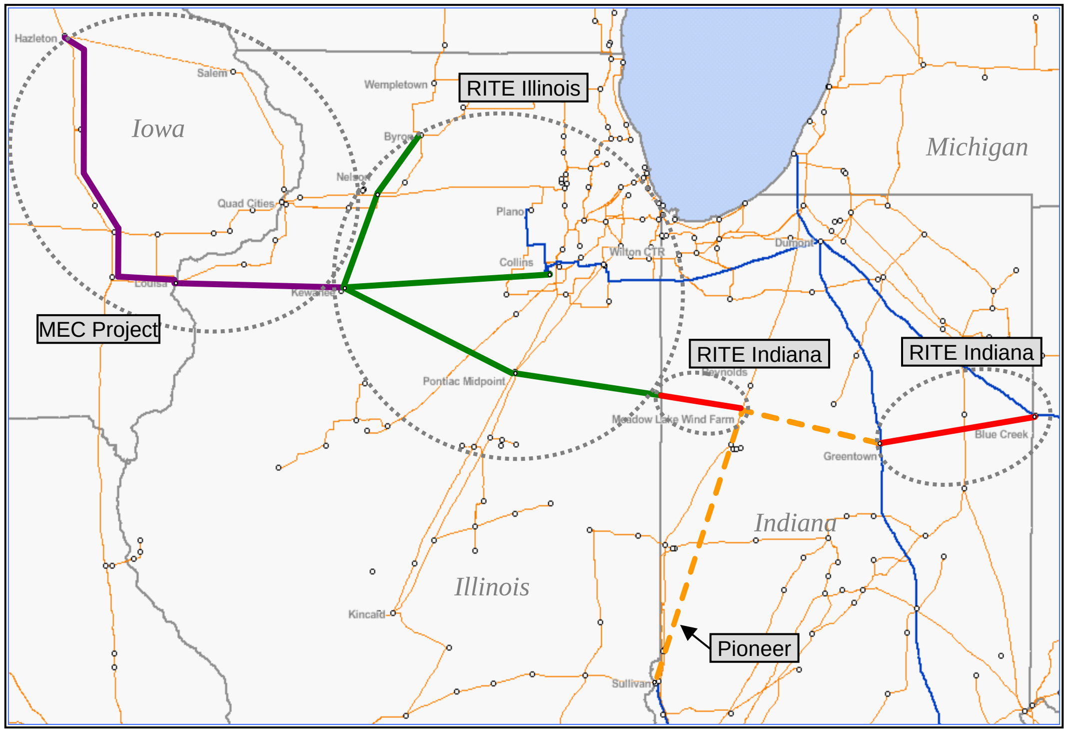
ETA – MidAmerican Energy Co: MEC Project

Approximately 180 miles of 765 kV lines connecting MEC's EHV system in eastern Iowa to proposed 765 kV expansion in western Illinois.

- Total Project Cost: ~$650M
- Project part of SMARTransmission study and Midwest ISO RGOS planning effort
- MISO approval
- Includes 765kV and 345kV voltages, and their electrical equivalents

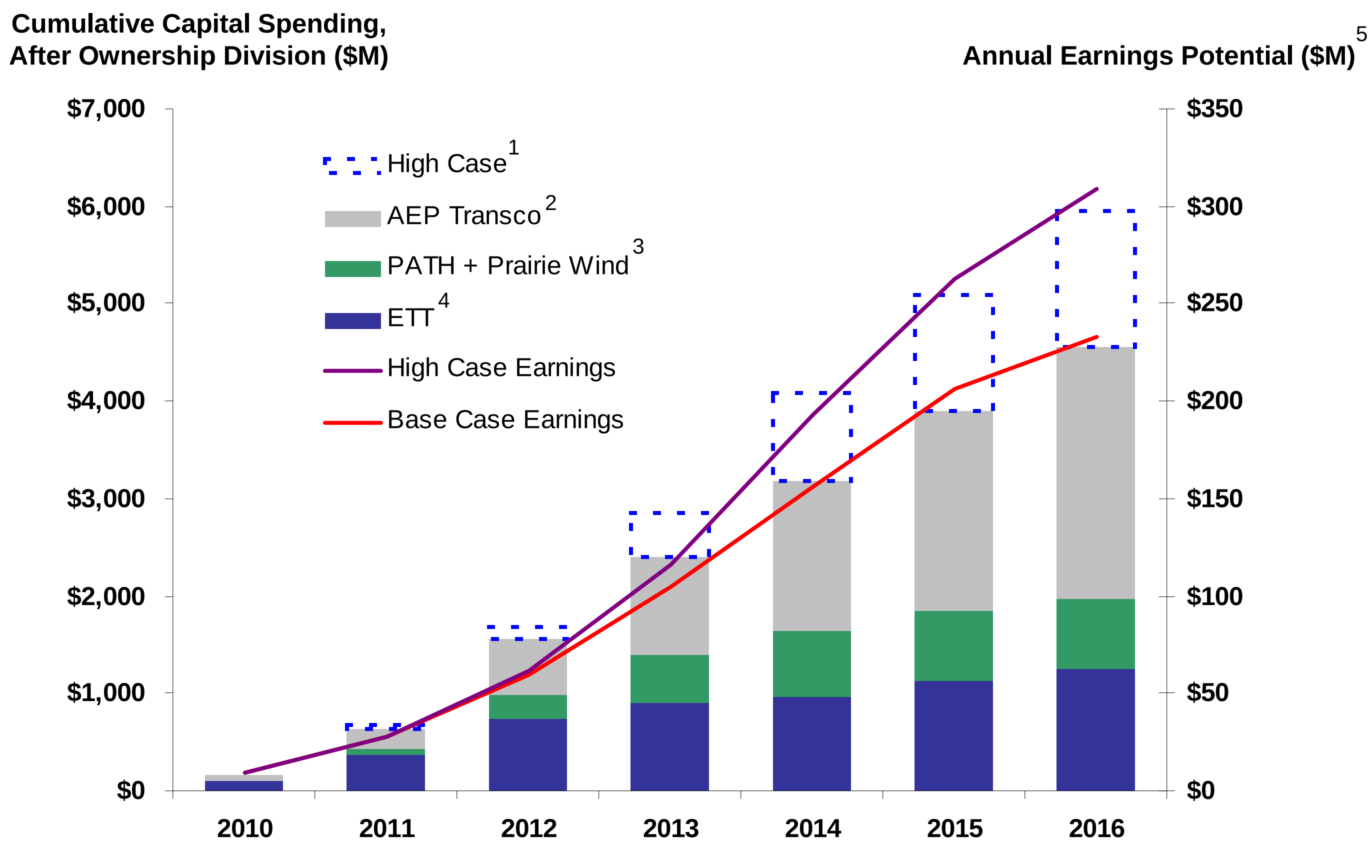
AEP Total Investment:

~$500M



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

Capital Investment and Earnings Profile



[1] High Case includes: Pioneer (50% ownership), Prairie Wind at 765kV (25% ownership), Tallgrass at 765kv (25% ownership) and other future opportunities

[2] AEP Transco (100% ownership) includes spending in OH, MI & OK only through 2011 and in other jurisdictions for 2012 and beyond

[3] PATH (50% ownership) assumes an in-service date of 2015 and Prairie Wind (25% ownership) assumed at 345kV

[4] ETT (50% ownership) includes CREZ and additional projects

[5] Projection of earnings potential at the transmission holding company level assuming 50/50 debt/equity capitalization and ROE of 12-13% for FERC projects; 60/40 debt/equity capitalization and 10.25% ROE (2011 forward) for ERCOT projects; and 50/50 debt/equity capitalization and ROE of 11.2-11.49% for Transco projects

Capital Allocation

In this economic recovery cycle, capital allocation requires balance for spending that considers the obligation to serve, the ability to obtain rate increases, a balance sheet to support the plan, and the total return proposition to shareholders

Capital for Growth

- Increased capital budget by $150M for 2011 to $2.6B
- Announced capital budget plan of $2.9B for 2012

Return of Capital to Shareholders

- 9.5% increase in quarterly dividend to $0.46/share declared by the board of directors on October 26th
- Future dividend increases will grow with earnings

Capital to Reduce Risk

- Voluntarily funding pension $500M in 2010
- Allocating an additional $150M of funding for pension in 2011

Detailed Ongoing Earnings Guidance

2010E: $2.95 - $3.05

2011E: $3.00 - $3.20

American Electric Power

Financial Results for 2011 Guidance vs 2010 Projection

		Performance Driver	2010 Projection ($ millions)	Performance Driver	2011 Guidance ($ millions)

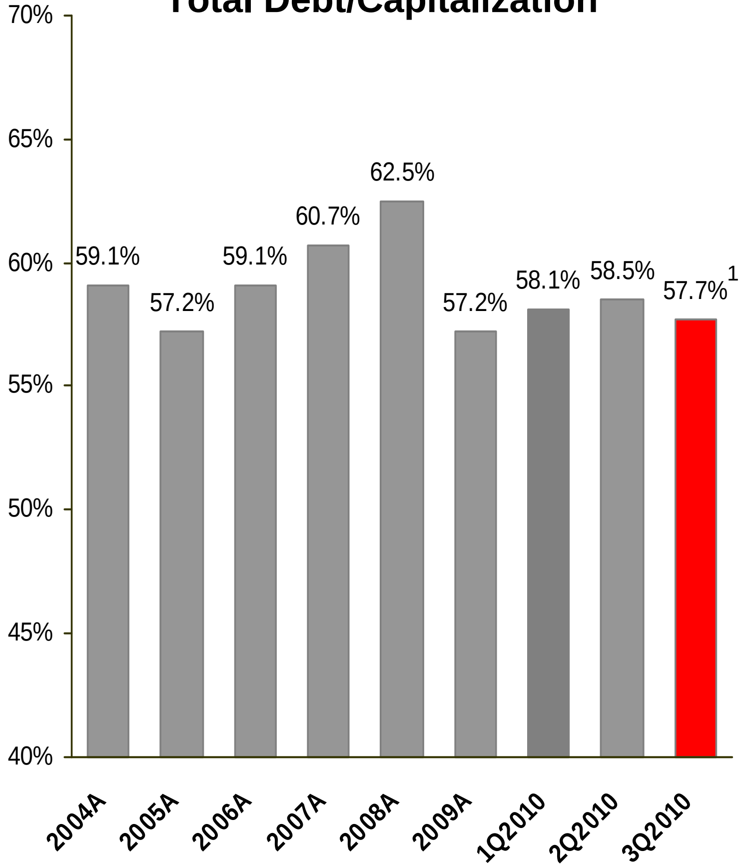
Maintaining Strong Capitalization & Liquidity

AEP®

Total Debt/Capitalization



Note: Total Debt is calculated according to GAAP and includes securitized debt

1: Effective January 1, 2010 in accordance with Transfers and Servicing accounting guidance (formerly SFAS 166), factored receivables of AEP Credit of $750 million are classified as short-term debt; The 3Q2010 debt/capitalization ratio would be 56.8%, excluding AEP Credit.

Current Liquidity Summary

Summary Rate Case Information

APCo West Virginia General Rate Case – Docket #10-0699-E-42T

On May 14, 2010, APCo filed a base rate case with the West Virginia Public Service Commission requesting a net increase of $155.5 million, comprised of a $223.8 million base rate increase and a $68.3 million decrease in the construction surcharge. The filing related to capital investments made and to recover increased costs. In addition, APCo requested to establish a separate transmission tracker related to PJM charges. The requested ROE is 11.75%. An order is expected at the end of March 2011. Staff and Intervenor testimony recommended increases in the range of $41MM--$57MM.

Actual Capital Structure – Company Position (12/31/09)

	% of Capitalization	Cost Rate	Weighted Return
Short-Term Debt	3.66%	0.89%	0.03%
Long-Term Debt	53.42%	6.04%	3.23%
Common Equity	42.64%	11.75%	5.01%

	$	155.5

Summary Rate Case Information

PSO General Rate Case – Docket #201000050

On July 9, 2010, PSO filed a base rate case with the Oklahoma Corporation Commission requesting a net increase of $52.4 million, comprised of a $82.7 million base rate increase and a $30.3 million decrease in the capital investment rider. The requested ROE is 11.50%. A settlement agreement was filed on Nov. 19, 2010 resulting in no change to current rates and a 10.15% ROE. Hearing scheduled December 6, 2010, with rates going into effect February 2011.

Actual Capital Structure – Company Position (2/28/10)

	% of Capitalization	Cost Rate	Weighted Return
Long-Term Debt	53.86%	6.52%	3.51%
Common Equity	45.84%	11.50%	5.27%

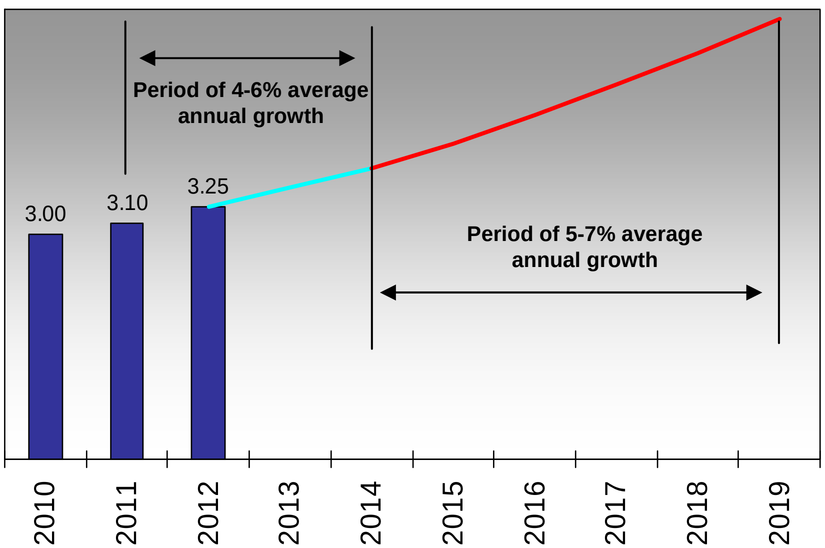
Value Proposition

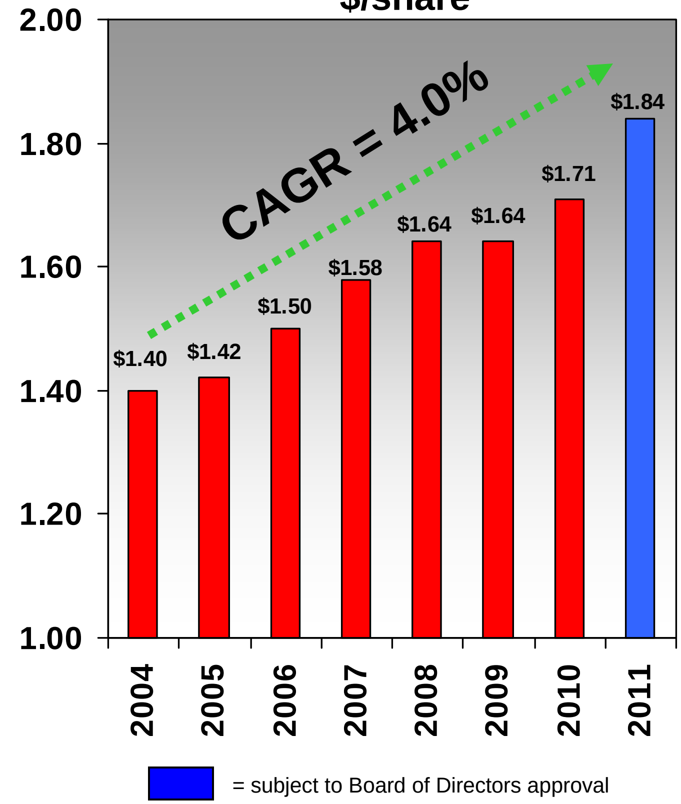
AEP®

Average Annual EPS Growth defined over two periods



- 4-6% EPS growth 2012-14
  - Average annual capital spend between $2.9-3.4B
  - Blended ROE of 10.5 - 11%
  - Slow, steady recovery in economy
- 5-7% EPS growth post 2014
  - Base utility platform capital plus higher allocation of discretionary capital going to opportunities in the transmission development pipeline
  - Higher overall blended ROE opportunity
  - Robust economic growth

Dividend History Since 2004 $/share



- 9.5% increase in quarterly dividend to $0.46/share declared on October 26th
- 402nd consecutive quarterly dividend will be paid December 10, 2010
- 50-60% payout ratio target
- Current yield about 5%

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation, including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance, resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events, our ability to recover through rates the remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives and evolving public perception of the risks associated with fuels used before, during and after generation of electricity, including nuclear fuel.

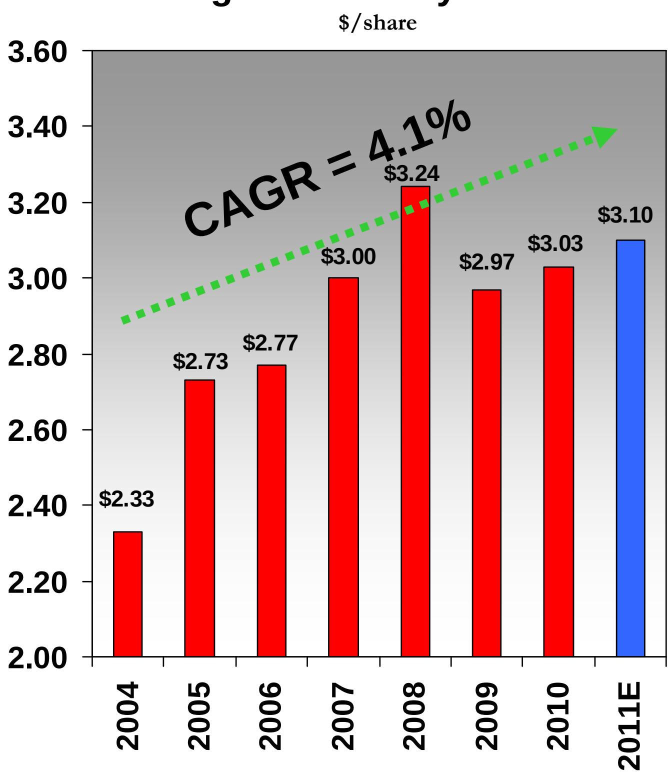
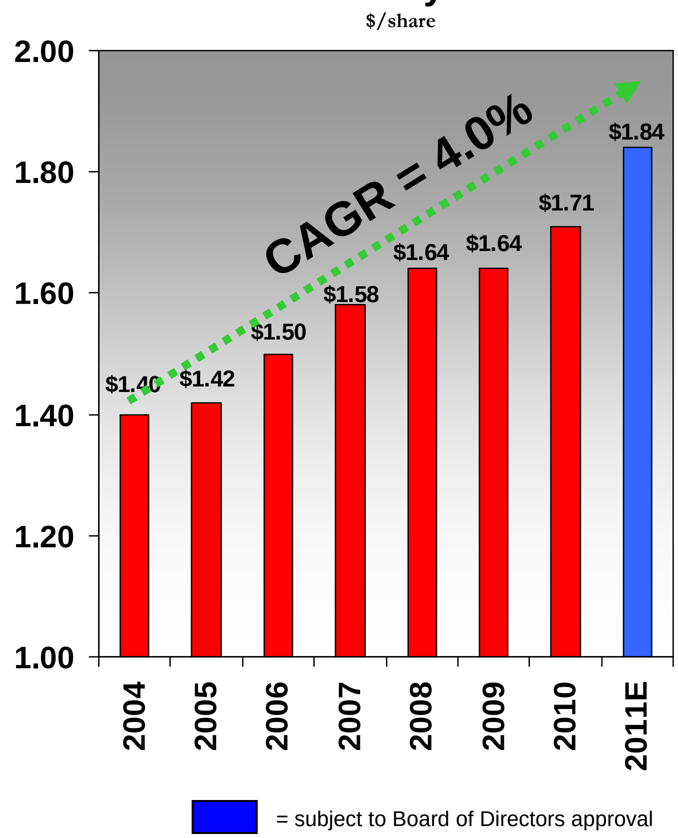
On-Going EPS History Since 2004



- Earnings growth largely attributed to capital investment program
- Pre-recession earnings supported by robust wholesale market activity and high power prices
- 2011 guidance range of $3.00 to $3.20 per share

Dividend History Since 2004



- Quarterly dividend <u>increased 12%</u> in 2010
- <u>404th consecutive</u> quarterly dividend paid June 10, 2011
- 50-60% payout ratio target
- Current yield over 4.5%

Detailed Ongoing Earnings Guidance

2010A: $3.03

2011E: $3.00 - $3.20

Summary Rate Case Information

AEP Ohio Distribution Rate Case – Docket #351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%. A procedural schedule from the PUCO is pending.

Summary Rate Case Information

APCo Virginia Base Rate Case – Docket #PUE-2011-00037

On March 31, 2011 APCo filed an update to its pre-biennial base rate case for recovery of generation and distribution costs requesting an increase of $75 million ($126 million total increase less $51 million associated with a potential change in depreciation rates). The requested ROE is 11.65%, including a 50 basis point adder for meeting 2010 RPS goal allowed by law.

In conjunction with this case, an environmental rate adjustment clause (E-RAC), generation rate adjustment clause (G-RAC) and a renewable portfolio standard rate adjustment clause (RPS-RAC) were filed. APCo has requested that rates in the base case, E-RAC and RPS-RAC go into effect no later than 2/1/2012 and the G-RAC on 3/1/2012.

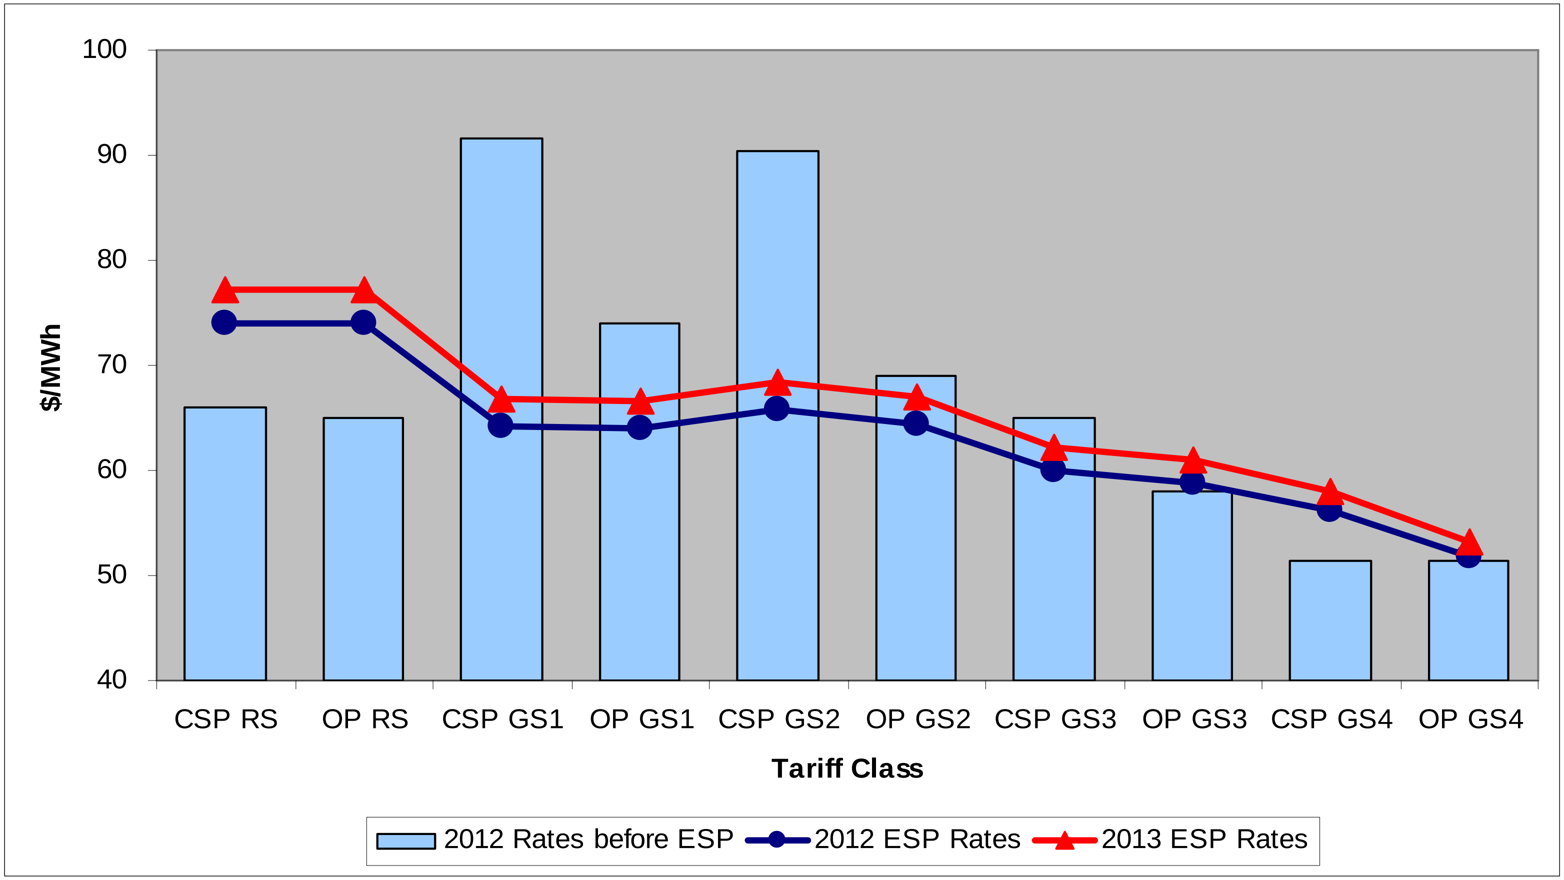
While the ESP includes a small base generation increase, the move to a market-based rate design, consistent with state policy, will result in varying impacts for different customer groups.

Price to Compare

Proposed **SSO** Rates Redesigned To Resemble Market Pricing Structures



Rates do not reflect mitigation impact of market transition rider
2012 Rates before ESP reflect current 2011 rates for generation & transmission service, adjusted to reflect full cost 2011 fuel and environmental costs.

The realignment of rates with market should provide all customers with equivalent opportunities to shop. Additionally, since the proposed design eliminates explicit demand charges, customers should be more easily able to evaluate competitive offers. To ease the rate impact that customers will experience from the realignment, we have proposed a Market Transition Rider.

Market Transition Rider – Mitigates the Initial Impact of Rate Realignment

Three-Year Market Transition Plan
Summary of AEP Ohio ESP Generation Rate Changes

CSP Current Customer Class	CSP New Customer Class	2012 Increase	2013 Increase	2014 Increase	Total Increase

AEP Ohio		1.4%	2.7%	0.0%	4.2%

Illustration of Market Transition Rider on ESP Generation Rate Increases

The Market Transition Rider is a transition rider designed to facilitate the transition from AEP Ohio's current rates to market-based SSO Generation Service rates. It is a non-bypassable rider designed to limit the first and second year changes for any customer classes to uniformly transition any above or below average changes in three steps. Any revenue shortfall that is produced by limiting the increases for certain customer classes is collected from those classes whose decreases are limited.

List of ESP Riders – Existing and Proposed

Line	Rate Mechanism	Abbreviation	Bypassable	Distribution	Notes
1	**Current Riders**				
2	Universal Service Fund Rider	USF	--	Yes	
3	Advanced Energy Fund Rider	AEF	--	Yes	Expired 12/31/2010
4	kWh Tax Rider	kWh Tax	--		May be self-assessed under specific terms
5	Provider of Last Resort Charge	POLR	No		Option to avoid under specific terms
6	Monongahela Power Litigation Termination Rider	Mon Power	--	Yes	Expires once amount collected
7	Transmission Cost Recovery Rider	TCRR	Yes		
8	Fuel Adjustment Clause Rider	FAC	Yes

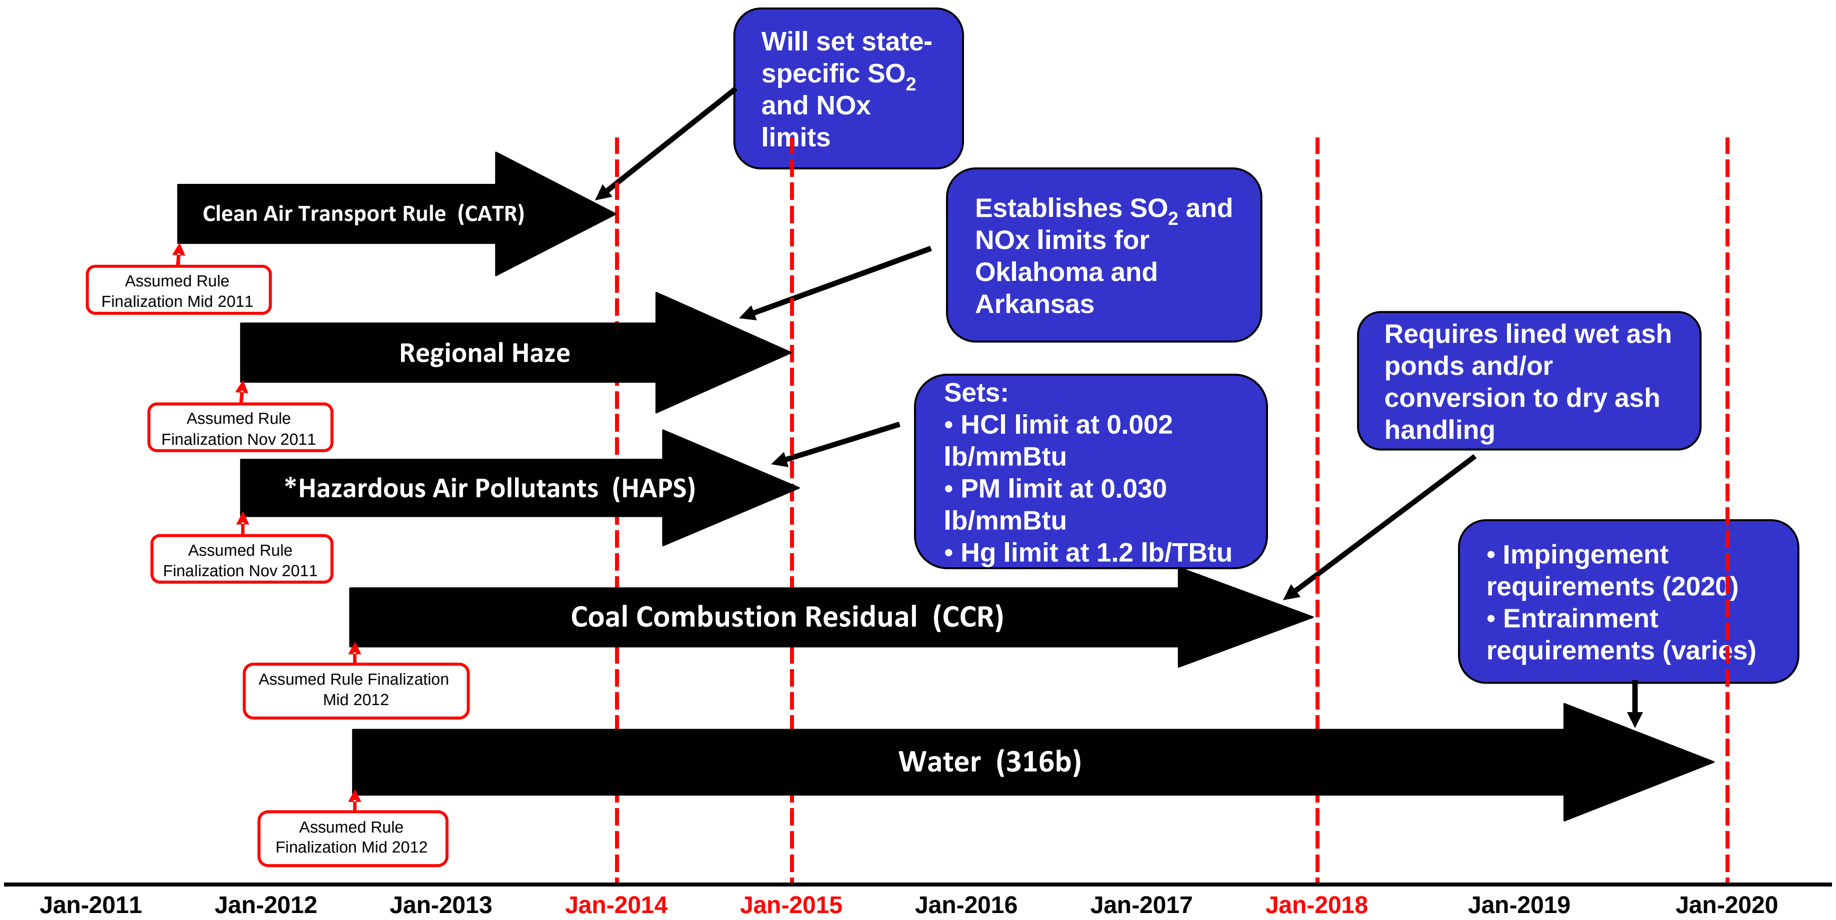
Turk Plant

- John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant. Located in Arkansas. SWEPCo owns 73 percent or roughly 440 megawatts of the total unit.
- The cost of the plant and related transmission is anticipated at $1.7 billion with AEP's share approximately $1.3 billion (excluding AFUDC) and will begin commercial operation in 2012.
- The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls

- $1.1 billion capitalized expenditures 3/31/11. SWEPCO's contractual commitments $260MM.
- Third party owners include: Arkansas Electric Cooperative Corp. (12%), East Texas Electric Cooperative (8%), and Oklahoma Municipal Power Authority (7%)

Anticipated environmental regulations and compliance deadlines



* Units that will be retrofit are eligible for a one year compliance extension from the EPA

Retrofits/New Generation

- The tables below represent our estimated $6 - $8 billion capital investment from 2012 to 2020 for environmental retrofits on 10,500 MW and new/refueled generation of 2,152 MW. The below costs include management estimates for compliance with CATR, HAPs MACT, CCR and 316(b) regulations as currently proposed.

Plant	MW	Type of retrofit	Low Cost Estimate 2012-2020 ($MM)	High Cost Estimate 2012-2020 ($MM)	
Conesville 5	400	SCR, DSI			
Conesville 6	400	SCR, DSI

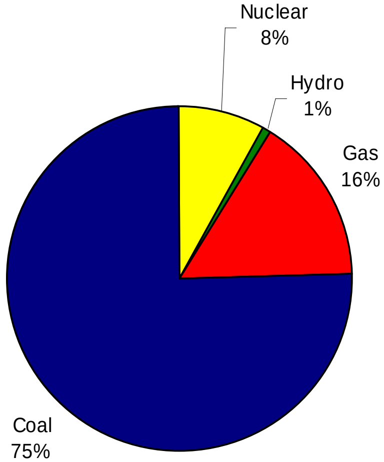
	Big Sandy 2	800	2014
	Total MW	**1,078**	
SWEPCO	Welsh 2	**528**	2014
	Total MW	**528**	
	Grand Total	**5,856**	

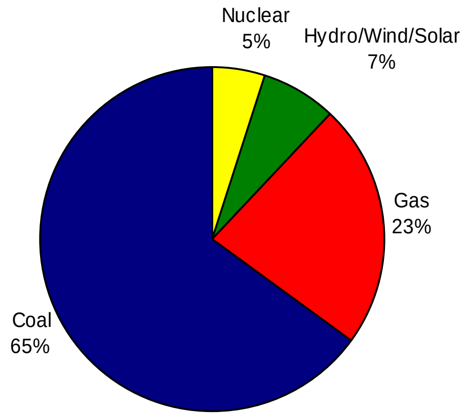
- Capacity reduction caused by retirements will create grid reliability issues particularly in the 2014-2016 time frame
- Net impact could be approx. 600 fewer jobs at AEP as well as indirect job losses affecting local vendors, contractors and service providers
- Annual lost wages of approximately $40 million
- Tax payments could decline by more than $30 million

Generation Transformation

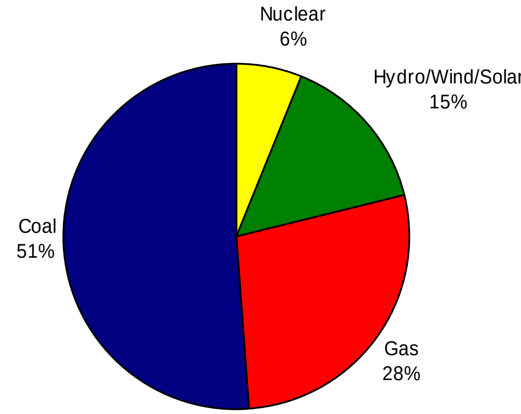
1990 AEP Generating Capacity by Fuel
37,428 total MW's



2010 AEP Generating Capacity by Fuel
39,910 total MW's



2020 AEP Generating Capacity by Fuel
37,707 total MW's



Total System NOx & SO2 (actual through 2010 and forecasted based on proposed EPA regulations)

- $7.2 billion capital invested from 1990-2010 to reduce emissions approximately 1.7 million tons
- Estimated $6-$8 billion additional capital investment from 2012-2020 for further reductions of approximately 440,000 tons

Transmission Investment Strategy

AEP®

- **Near-Term Investment** – Electric Transmission Texas (ETT) secures near term investment opportunities, allowing AEP to invest in the large, growth-oriented Texas transmission market. Total capital expenditures of $3 billion with a 9.96% ROE.

- **Mid-Term Investment** – Seven wholly-owned transcos allow for expansion and growth within AEP's existing utility footprint through an efficient recovery mechanism. Will spend $160 million in 2011 and more than $350 million in 2012. ROE is in the 11.20%-11.49% range.

- **Long-Term Investment** – Joint ventures provide opportunities for longer-term growth outside of AEP's existing utility footprint with forward looking formula rates, reasonable ROEs and FERC incentives where appropriate.

Transmission has a diversified investment approach that positions it as one of the key AEP growth businesses.

Texas Transmission Growth Strategy : Near Term Investment

Ownership Structure: 50/50 (AEP/MidAmerican Energy Holding Company)

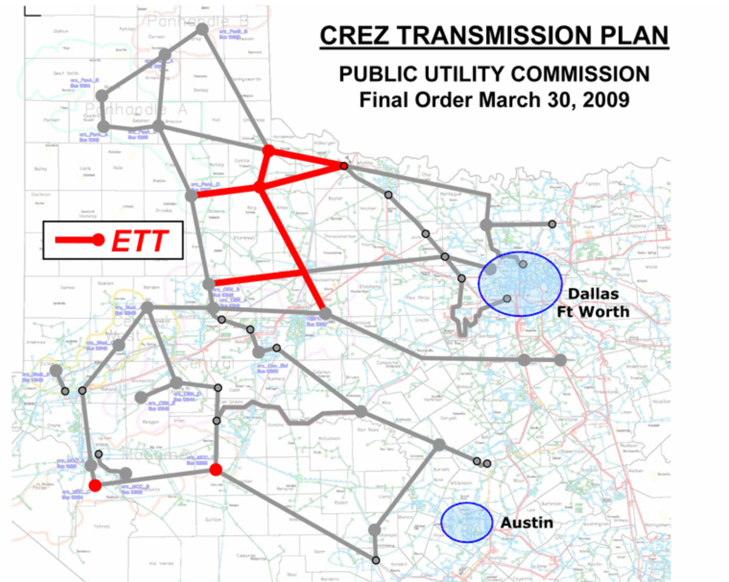
Total Project Cost: Over $3 Billion

Growing Rate Base:
Current rate base is $412 million; expected to grow as follows:
2011: $473 million
2012: $778 million
2013: $1,352 million

ETT Electric Transmission Texas

Interim TCOS filings twice per calendar year

Approved ROE: 9.96%



- **Additional Projects in the Pipeline ~$1.6 B:**
  - Approximately 822 miles of lines and 28 substations with in-service dates through 2017

- **Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.1 B:**
  - Seven double-circuit 345kV transmission lines (~$750 M), eight major 345kV stations and several series compensation installations (~$350 M)
  - PUCT Certificate of Convenience and Necessity (CCN) proceedings underway

Joint Venture Strategy: Long-term

- **Strategy:** JV's secure new investment opportunities with local utilities to diversify AEP's investment outside AEP's traditional footprint while providing longer-term incremental earnings. JV projects are well-suited for FERC formula rate recovery mechanism, including potential for incentive rates.

- **Future:** Federal/regional initiatives may accelerate expansion of EHV transmission (e.g. cap-and-trade, renewable portfolio standards, inter-region wide planning). Securing first mover advantage will enable AEP to secure LT investment opportunities.

- **Future flexibility:** Passive investment opportunities can be considered and can provide entry beyond SPP/PJM/ERCOT

AEP® A CENTURY OF DIVIDENDS • 1910 - 2010

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

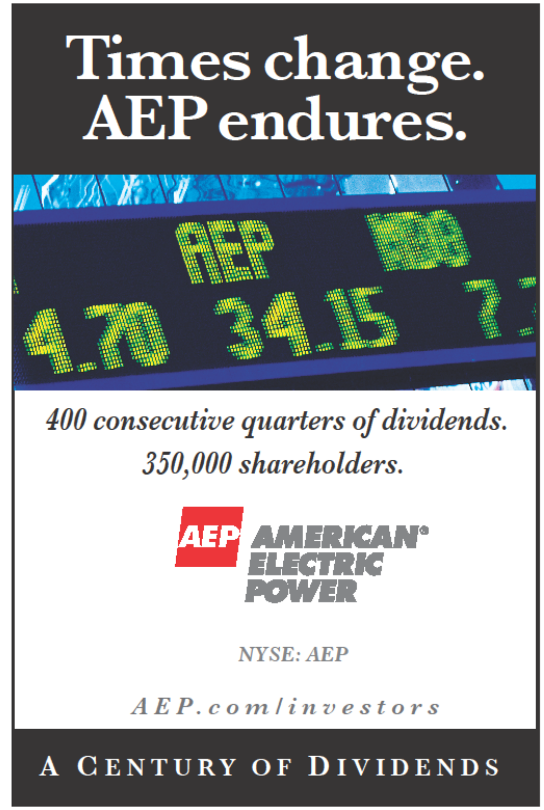
Table of Contents

Value Proposition

- **Current Yield Opportunity of 4.7%[1]**
  - June 10th – 400th consecutive quarterly dividend paid to shareholders
  - 50-60% payout ratio targeted
  - Dividend increased 2.44% on April 27th
- **Earnings Growth Prospects**
  - Investment in utility platform greater than depreciation level (2 - 4%)
  - With transmission opportunities (4 - 8%)



Attractive total return potential

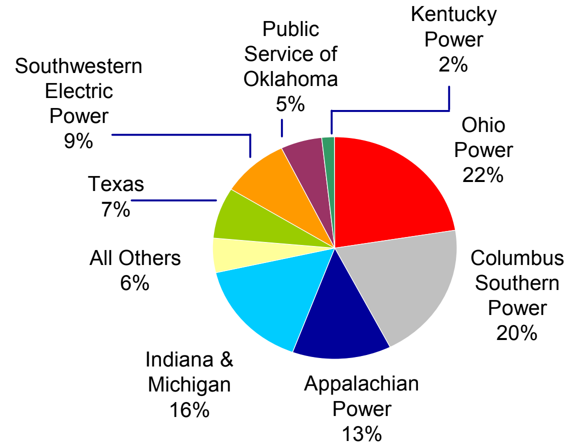
[1] yield percentage based on AEP closing price of $36.00 on 09/16/2010

Highly Diversified Regulated Utility Platform

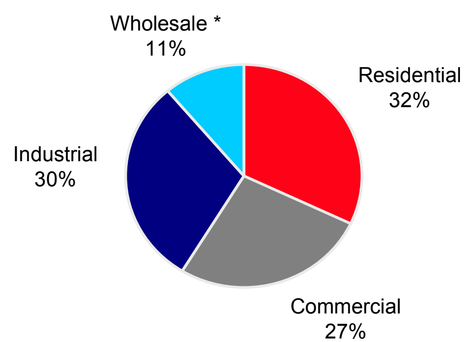
5.2 million customers in 11 states

Region	# of customers
Appalachian Power (incl. TN)	1,006,000
Indiana & Michigan	583,000
Kentucky Power	175,000
Ohio & Wheeling	1,500,000
PSO (Oklahoma)	531,000
SWEPCO (AR, LA, TX)	474,000
Texas	951,000

2009 Earnings Contribution



2009 Retail Load



** Wholesale includes sales to municipal and cooperative power systems, other wholesale, and other retail sales*

New Generation Projects

J. Lamar Stall Combined-Cycle Gas Plant

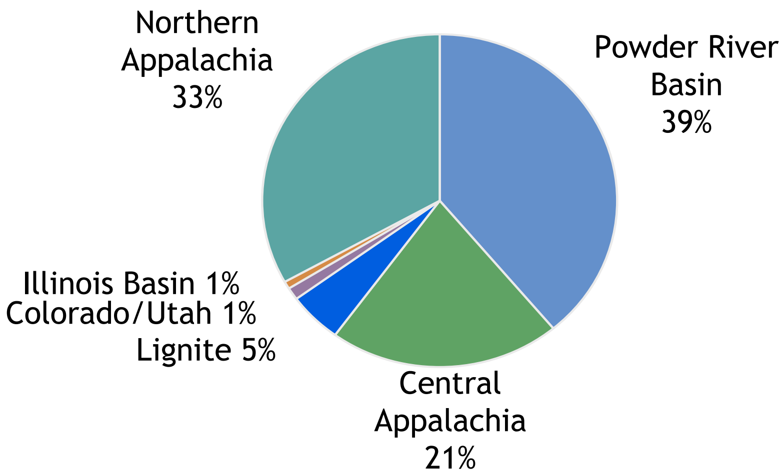
- J. Lamar Stall Combined-Cycle gas plant is a 508-MW unit that began commercial operations in June 2010.
  - The final estimated cost of the plant is $433 million including $49MM of AFUDC.
  - The plant is located in AEP's SWEPCo region at its existing Arsenal Hill Power Plant in Shreveport, Louisiana.
  - The plant serves the needs of customers in the Arkansas, Louisiana and Texas service territories.

- John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant. Located in AEP's SWEPCo region. AEP owns 73 percent or roughly 440 megawatts of the total unit.
  - The cost of the plant and related transmission is anticipated at $1.8 billion with AEP's share approximately $1.4 billion and will begin commercial operation in 2012.
  - The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls.
  - Various legal challenges are on-going related to the plant (see 10-Q). Recently, following the Arkansas Supreme Court decision regarding CECPN, SWEPCO filed notice to the APSC that the 88MW will now be merchant and will not be included in rate base.

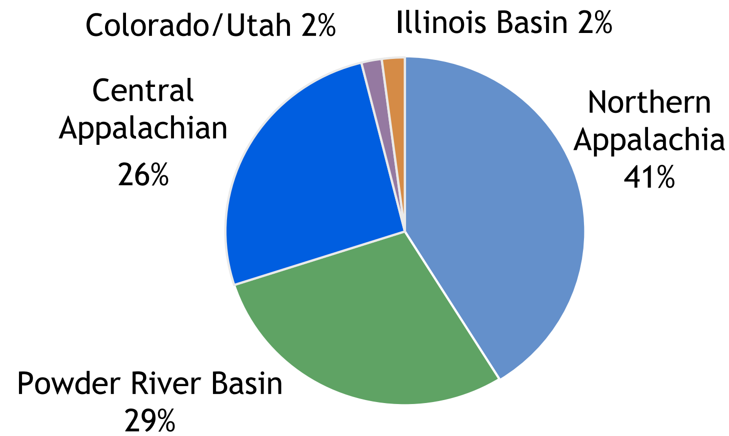
John W. Turk Jr. Ultra-Supercritical Coal Plant

Coal Procurement - 2010 Projected

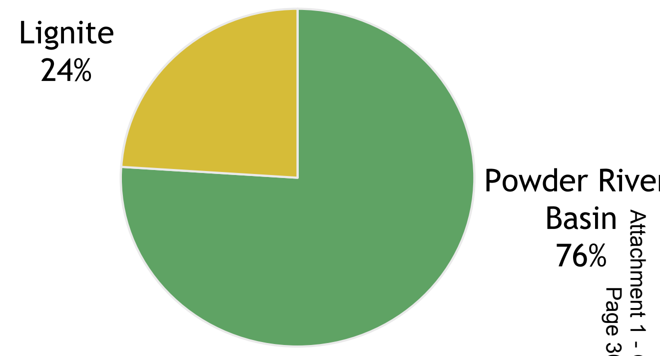
Total AEP System



AEP East



AEP West

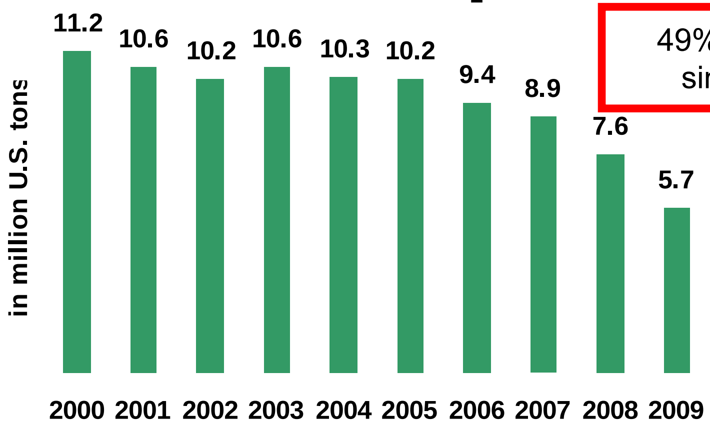


Coal Stats:

- 100% contracted for 2010 and 80% for 2011
- Avg. delivered price ~ $50/ton in 2009
- Approximate 7% price decrease in 2010 ~$46/ton

Significant Progress Has Been Made But . . .

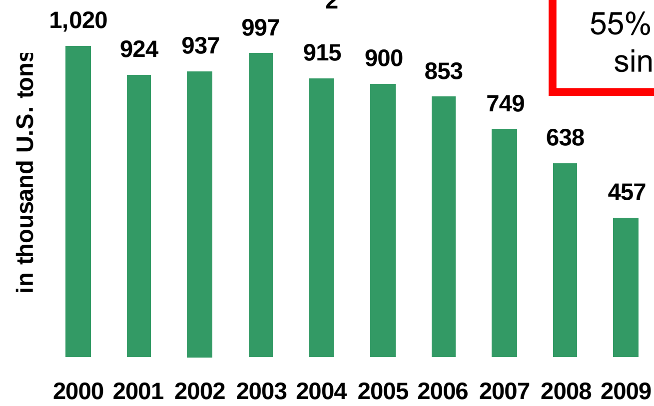
U.S. Power Plant SO_2 Emissions



49% reduction since 2000

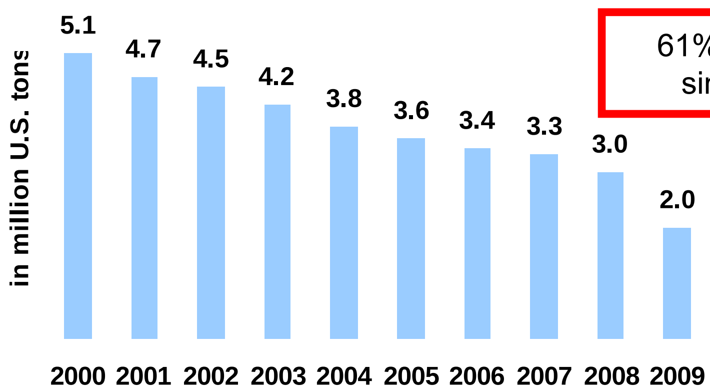
Source: EPA, 2010; Acid Rain Program

AEP SO_2 Emissions



55% reduction since 2000

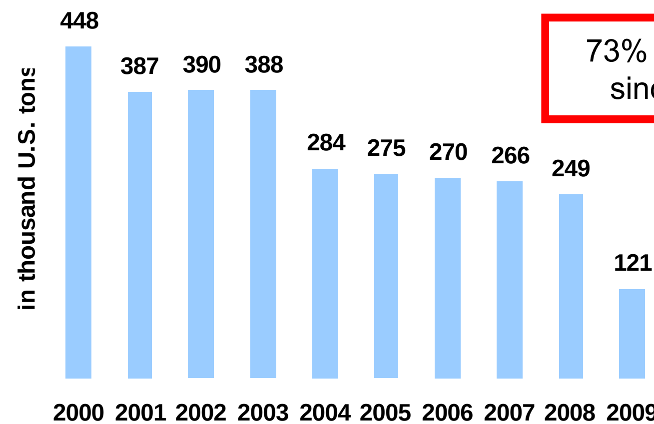
U.S. Power Plant NOx Emissions



61% reduction since 2000

Source: EPA, 2010; Acid Rain Program

AEP NOx Emissions



73% reduction since 2000

Over $5B capital invested by AEP from 2004-2010 to reduce emissions

Recent and Major Upcoming EPA Actions

- **Transport Rule – Proposed July 2010**
  - Governs power plant emissions of SO_2 and NOx that affect downwind fine particle and ozone concentrations
  - 2012 program start date with stringent second phase beginning in 2014
  - Limited interstate trading and no use of previously banked SO_2 allowances from CAIR program
  - 2014 SO_2 limits in AEP-East states will require almost all coal units to be scrubbed or retired/use gas
  - AEP believes an extension of the compliance deadlines is essential to allow states to develop implementation plans and give companies time to install the retrofits needed to comply

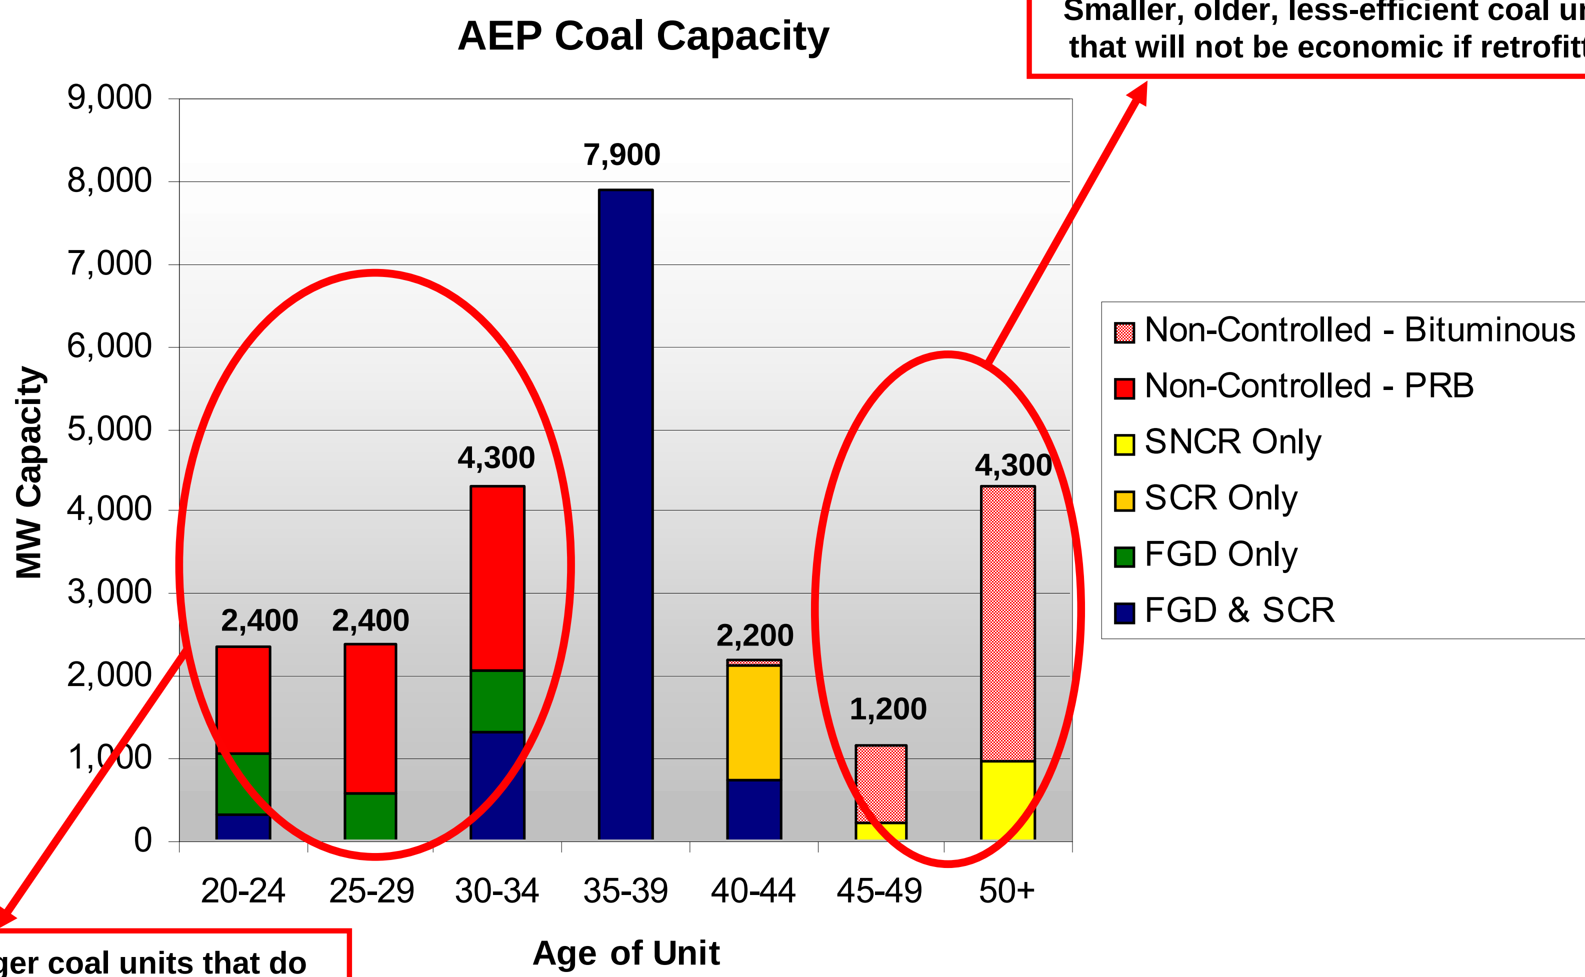
- **"Coal Ash" Rule – Proposed May 2010**
  - EPA proposed two different regulatory designations:
    - Solid waste – action required by ~2017
    - "Special" hazardous waste - action required by ~2018-2020
  - AEP supports regulation of coal ash under the Subtitle 'D Prime' option of the RCRA
  - Cost to AEP customers estimated at $3.9 billion by 2020 to comply with Subtitle D option

- **Mercury and other Hazardous Air Pollutants (HAPs) Rule**
  - Expect proposed rule in spring 2011, finalized in late 2011; likely compliance year - 2015
  - Could require major pollution control retrofits at most U.S. coal plants (FGD, baghouses, etc.)

Cumulative effects of EPA proposed rules and carbon legislation/regulation are a major concern for utility resource planning

Plant Retirements are Inevitable

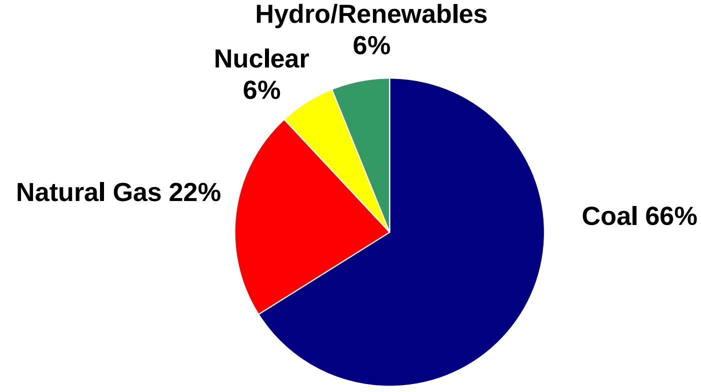
Smaller, older, less-efficient coal units that will not be economic if retrofitted



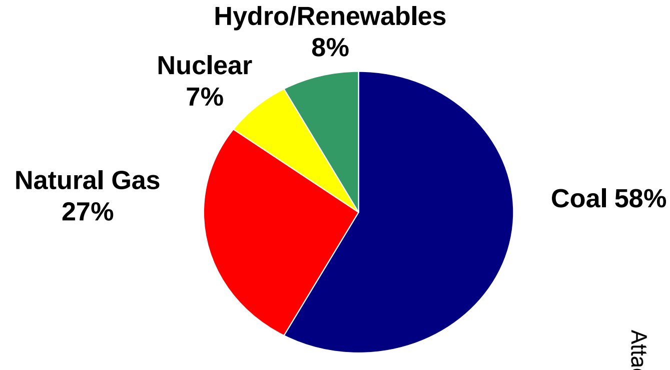
Newer and larger coal units that do not have SCRs and/or FGDs will be evaluated due to emerging and existing environmental requirements

AEP's Actions

- Operate uncontrolled, older and smaller units on a seasonal basis – minimizes capital and O&M spending
- Continue pursuit of CCS to take advantage of first-mover advantages such as DOE clean coal grants
- Complete the Dresden NGCC Plant and add renewables where regulatory recovery is provided
- Complete Cook Nuclear Plant uprate
- Transition toward retirement of approximately 5,000MW of coal units
- Influence federal and state policy to benefit our customers and shareholders
- Transformation plan that includes new technologies such as gridSMART and storage



Fuel Mix - 2009



Projected Fuel Mix - 2017

Carbon Legislation Update

- **Climate Cap and Trade Legislation (American Power Act of 2010) is dead in 2010**
  - Prospects for cap-and-trade legislation after 2010 will require truly bipartisan legislation given the expected changes in Congress

- **Cap and Trade Legislation that advanced in 2010 did include some improved provisions:**
  - Significantly higher electric utility allowance allocation
  - More generous CCS bonus allowances
  - Sound domestic offset provisions
  - Price collar that should help eliminate high price spikes

- **However, there were still some problem areas:**
  - Inadequate EPA preemption language on CO_2 would lead to duplicative CO_2 regulatory measures
  - More restrictive international offsets provisions could drive up compliance costs
  - Early action credit is very limited
  - Market trading provisions are overly restrictive

- **EPA is expected to move forward on CO_2 regulation in 2011**

AEP advocates delay in EPA regulatory action on CO_2 or legislation to enable significant multi-faceted study to determine overall economic and system reliability effects

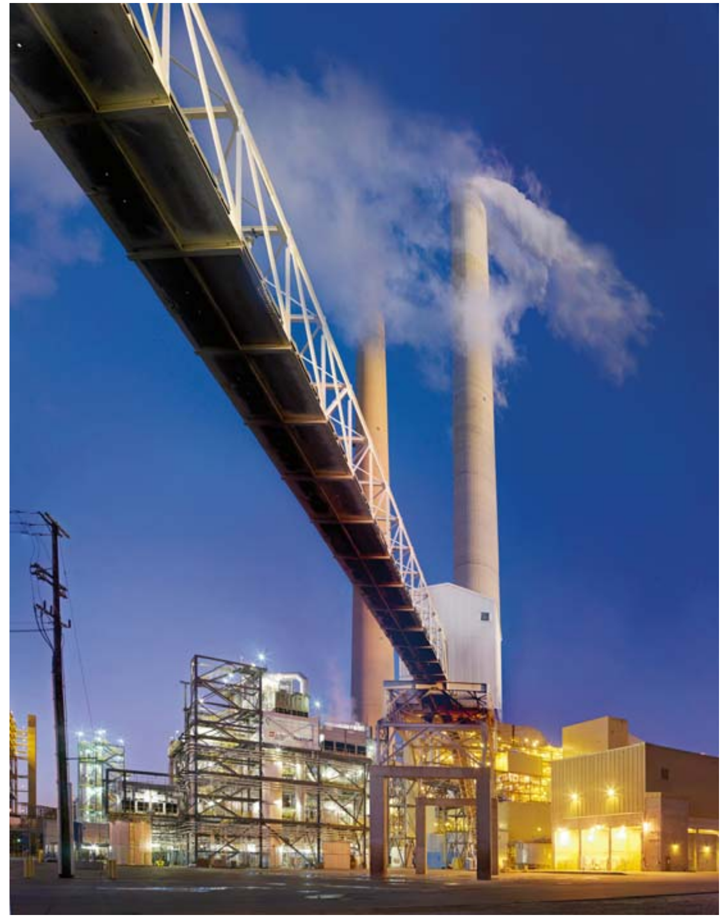
Carbon Capture and Storage

PHASE I - Validation

- World's first operating CCS facility on a coal fired power plant
- Gained competitive advantage through technology development
- Currently testing key performance parameters: auxiliary power, removal efficiency, reliability, CO_2 product quality

PHASE II - Commercialization

- Initiated in January 2010
- Designed to capture and store 1.5 million metric tons of CO_2/year
- Estimated cost of $668 million with 50% DOE funding
- Pursuing additional funding/participation
- Scheduled in service date is mid-2015
- Key activities through July 2011 include conceptual engineering, detailed cost estimate and National Environmental Policy Act process



Carbon Capture and Storage project
Mountaineer Plant - New Haven, WV

Thoughts about the Energy Policy Debate

To make significant advancement in developing clean, domestic energy and reducing emissions, our nation needs a national energy policy with specific goals and guidelines, particularly as it relates to renewables, transmission and environmental regulations.

- Cap and trade
- Incentives to develop and deploy new technologies
- Timelines for emission reductions that provide a rational glide path for transitioning the existing generating fleet to a smaller environmental footprint
- Mandates to develop reasonable cost allocation methodologies to support EHV transmission
- Support for the siting of national-interest transmission lines

Trent Mesa Wind turbines in west Texas

Transmission Opportunities

- **<u>Electric Transmission Texas (ETT)</u>: Projects in Texas ERCOT jurisdiction**
  - **In service assets $0.4 billion**
  - **CREZ opportunity $1.1 billion est. in service 2010 - 2013**
  - **Other ETT projects $1.6 billion est. in service 2010-2017**
  - **Framework in Texas allows for more expeditious siting and recovery**

- **<u>AEP Transmission Company (Transco)</u>: Within our existing footprint**
  - **Develop new AEP-only projects within AEP's footprint**
  - **Reduce regulatory lag through FERC formula rates adjusted annually**

- **<u>Joint Ventures (JVs)</u>: Outside of our footprint, with Electric Transmission America (ETA) or others**
  - **Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery**
  - **Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2016**
  - **Robust pipeline of projects up to $15B**

AEP Transmission Company (Transco)

- Transco will be used to develop significant new on-system, AEP-owned investments
  - Greenfield Projects
  - Station Additions
  - System Upgrades
- Seven companies have been established under the AEP Transco holding company
- Next steps:
  - Obtain state utility status where required
    - No filing required in Michigan or Oklahoma
    - Filings made in OH and WV
- FERC tariff for Transco filed December 1, 2009 with rates effective and first projects in-service in 2010; Settlement discussions on-going
- Seek retail tracking mechanisms at the state level (OH, AR, VA, TX-ERCOT already secured)

Table of Contents

AEP Strategy

Strategy: grow our core utility business at a consistent rate through major investment supported and funded by innovative programs for regulatory recovery as well as develop our independent, federally regulated Transmission Company for the pursuit of new major interstate projects.

Our Focus:

- Prepare for post-2008 transition in Ohio
- Invest in and evolve infrastructure to support future technology and customer needs focused on efficiency, conservation and load management
- Enhance cash flow & earnings through rate recovery mechanisms
- Take advantage of AEP's size to benefit our customers and shareholders through regulatory-supported investment

Sustained capital investment opportunities support earnings growth.

Financial Forecast Highlights

- Updated 2008 & 2009 earnings guidance ranges and introduction of 2010

  2007 Range $2.90 to $3.00

  2008 Range $3.05 to $3.25

  2009 Range $3.20 to $3.50

  2010 Range $3.45 to $3.80

- Increased EPS growth range: 5-9% (2007-2010)
  - Disciplined investment in utility operations
  - Innovative rate recovery for new investments
  - Continued pursuit of Ohio post-2008 solution
  - Cost management
- 8-cent/share increase in annual dividend effective 4Q07 (from $1.56/share to $1.64/share annually)
- Refined capital investment forecast and introduction of 2010 level

  2007E: $3,962 MM

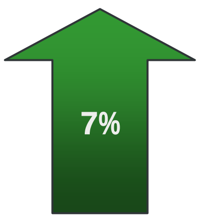
  2008E: $3,770 MM

  2009E: $3,600 MM

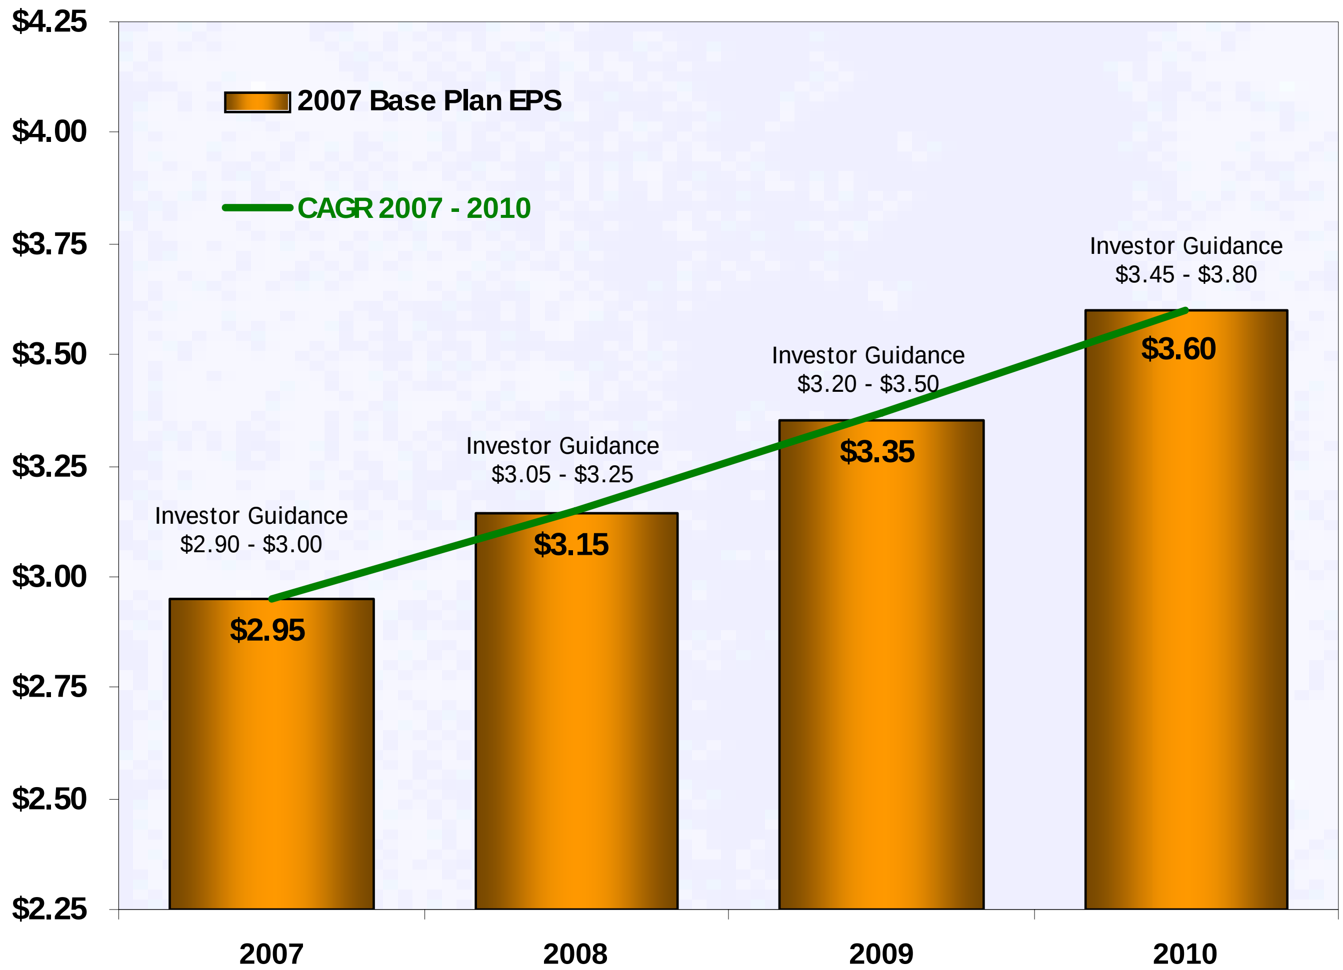
  2010E: $3,401 MM

- Maintain credit ratings: BBB/Baa2/BBB

4-Year Earnings Range Forecast

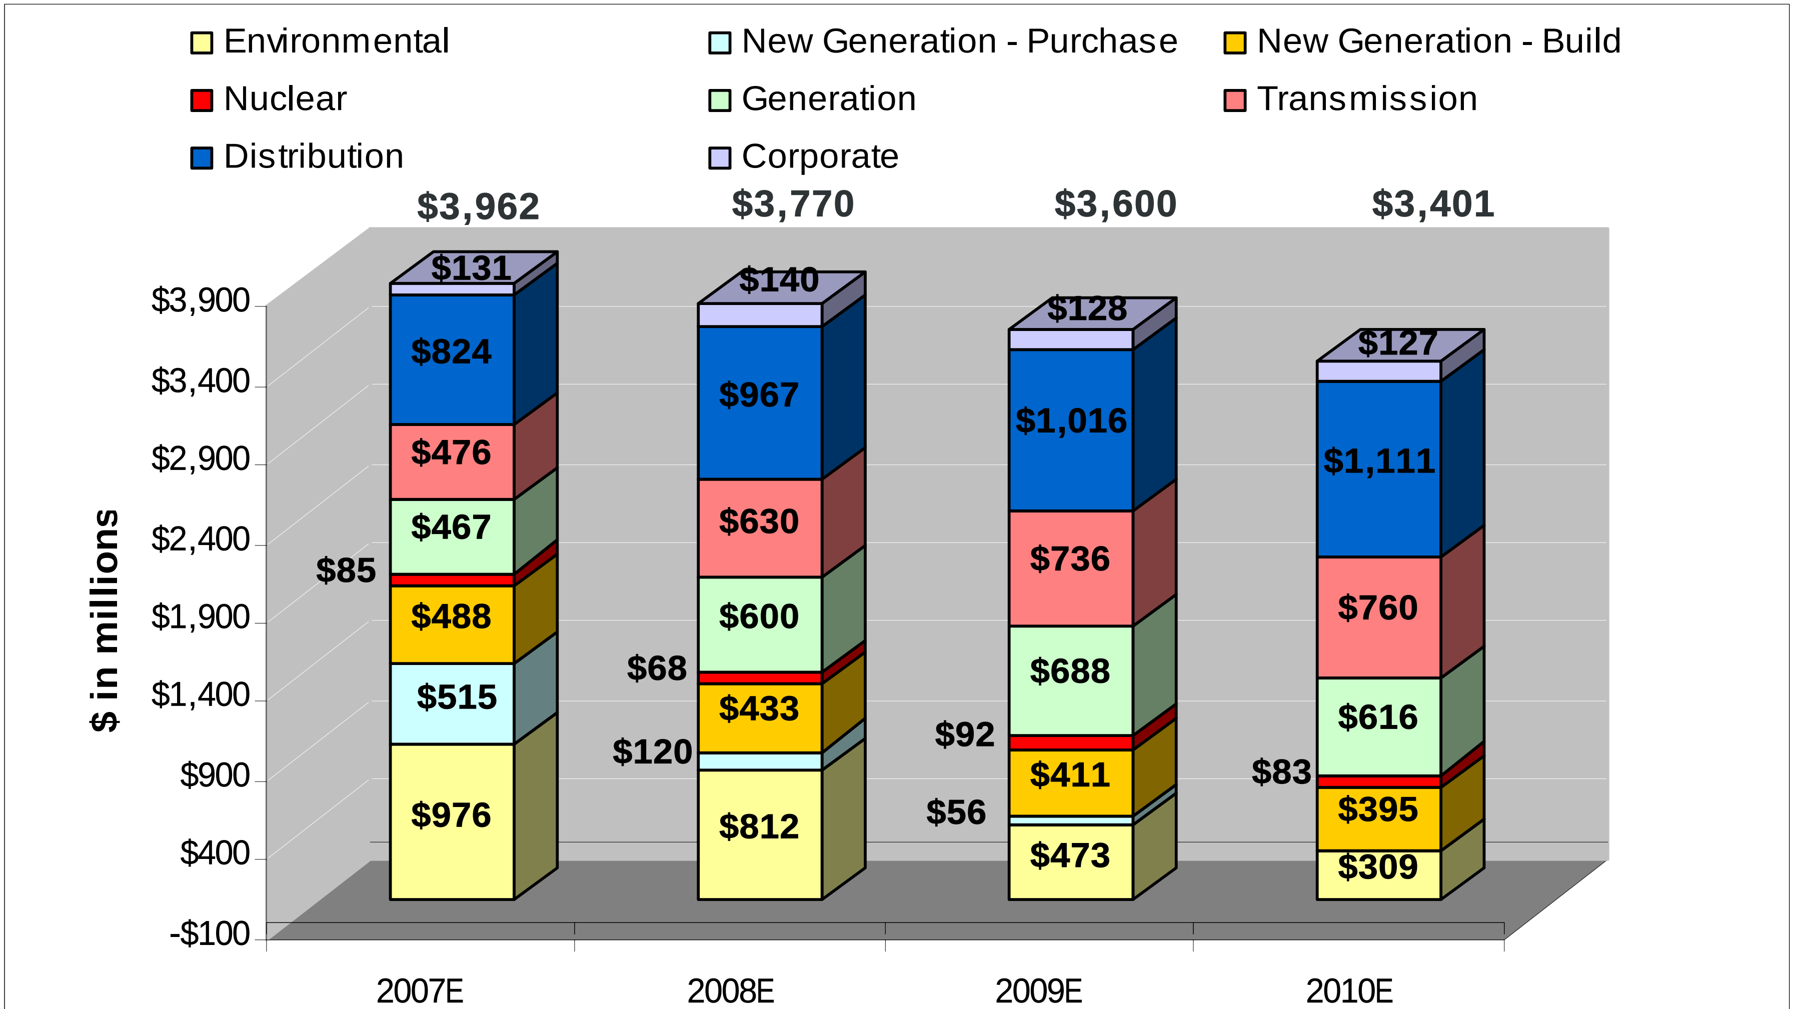


EPS 3-yr CAGR
(2007-2010)



5% to 9% earnings growth and a 4Q07 dividend increase.

4-Year Capital Investment Forecast



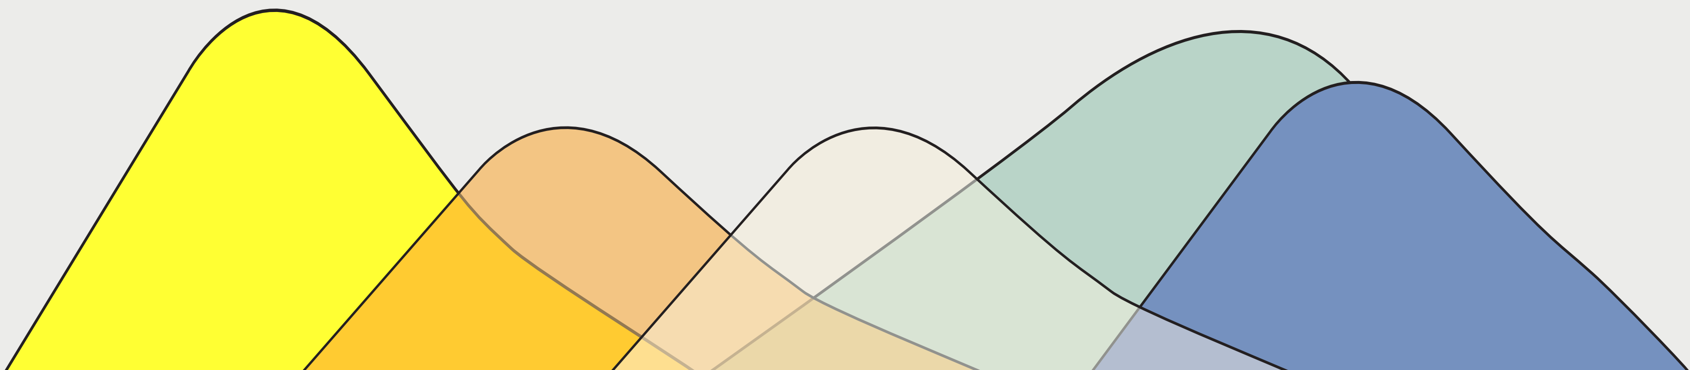
Note: amounts exclude AFUDC, $452MM related to GridSMART and $540MM related to transmission joint venture projects

Capital Investment + Rate Relief = Earnings Growth

Capital Investment Earnings Catalysts

Capital Investment – Consistent Waves of Opportunity

Environmental Retrofits	New Generation Projects	GridSMART Technology	Transmission Ventures	Adv Generation/ CO_2
$5.1B	$1.7B+	$1.5B+	$2.25B - $3.75B*	$2.0B+



Baseline capital investment of approximately $2.5B/year for Transmission, Distribution & Generation versus annual depreciation of $1.1B/year

2005 → 2010 → 2020 →

Note: This slide represents current capital investment plans as well as future capital investment opportunities. For current capital investment guidance through 2010, please refer to page 8. *The transmission opportunity is shown utilizing anticipated JV ownership structure.

Capital investment opportunities combined with associated rate relief will drive sustainable earnings growth.

Environmental Investments Receive Timely Rate Recovery

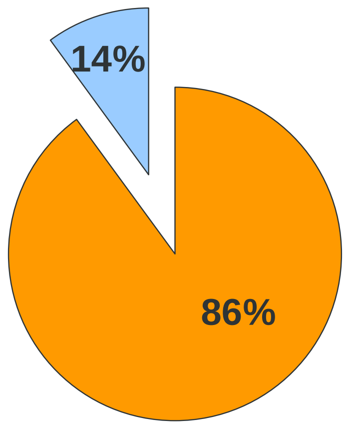
At the conclusion of our current environmental retrofit program, over 58% of our 24,630 MW coal-fired generation fleet will be equipped with SCRs and over 73% will be scrubbed (FGDs).

Materials and Vendors – AEP's Advantage

Breakdown of Environmental Compliance Program
(% of Purchased Costs)



- Actuals To Date & Firm Costs
- Estimated Cost Exposure*

Note: these percentages relate to the environmental program through 2010

* Primarily labor costs

SCR Technology

- Removes 85 – 93% of NOx emissions
- Requires ~ 1% use of auxiliary power
- **AEP Capital Cost ~ $121/kW avg.**

Combination of SCR & FGD technology results in co-benefit of Hg removal ~ 80% removal efficiency

FGD Technology

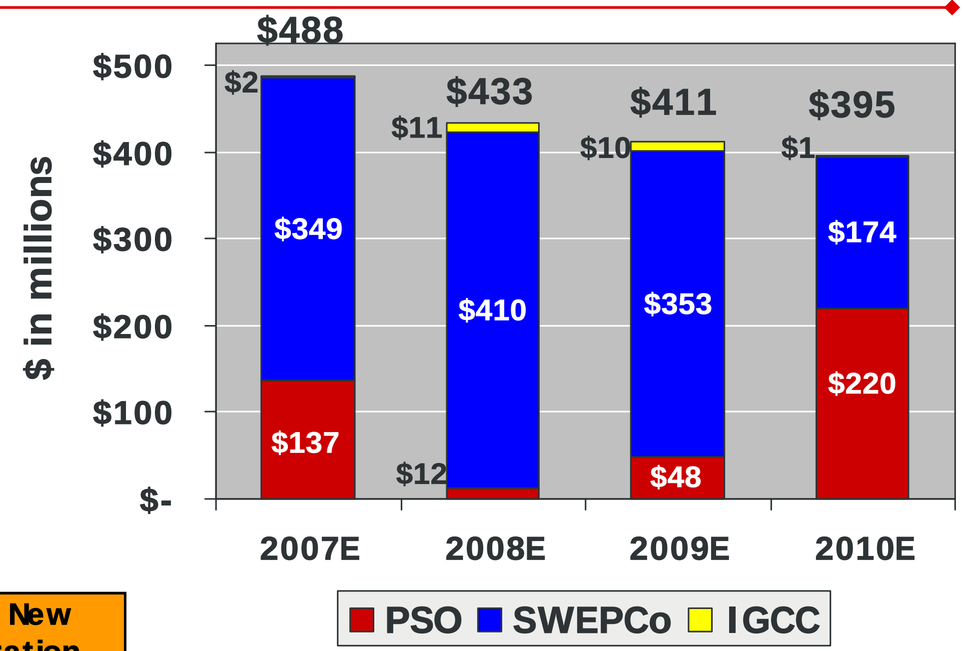
- Removes 95 – 98% of SO_2 emissions
- Requires ~1.5% to 3.0% use of auxiliary power
- **AEP Capital Cost ~ $250/kW avg.**

AEP benefits from first-mover advantage through lower contracted prices compared to industry.

New Generation Investments and Related Recovery

Secured Recovery Mechanism

- PSO Peaking Facilities Rider



($ in millions)	Projected Construction Completion	Total New Generation Investment (2007-10)
PSO - Peaking Facilities	2008	$102
PSO - Combined Cycle *	2012	$315
SWEPCo - Mattison	2007	$66
SWEPCo - Stall	2010	$422
SWEPCo - Turk	2011	$798
APCo - IGCC	tbd	$12
CSP/OPCo - IGCC	tbd	$12
Total Capex	Total Capex	$1,727

* - intended to source requirements to be met by Red Rock Plant prior to cancellation.

Additional Recovery Mechanisms Under Consideration:

- Formula based rates
- Requests for return on CWIP
- Current and future rate cases

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
SWEPCo	Mattison	Arkansas	$122 MM	Gas	Simple-cycle	340 (1)	2007
PSO	Southwestern	Oklahoma	$59 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$58 MM	Gas	Simple-cycle	170	2008
AEG	Dresden	Ohio	$265 MM	Gas	Combined-cycle	580	2010
SWEPCo	Stall	Louisiana	$375 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.3 B (2)	Coal	Ultra-supercritical	600 (3)	2011
APCo	Mountaineer	West Virginia	$2.23 B	Coal	IGCC	630	TBD
CSP/OP	Great Bend	Ohio	Under Review (3)	Coal	IGCC	630	TBD

(1) 150MW declared in commercial operation on July 12, 2007.

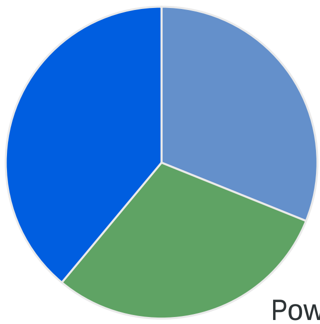
(2) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment.

(3) FEED (front-end engineering and design) study with GE/Bechtel is complete. Cost estimates are not yet filed with the PUCO due to the pending appeals to the Supreme Court of Ohio resulting from the PUCO's April 10, 2006 Opinion and Order.

Coal Procurement

AEP burns approx. 76 million tons of coal per year

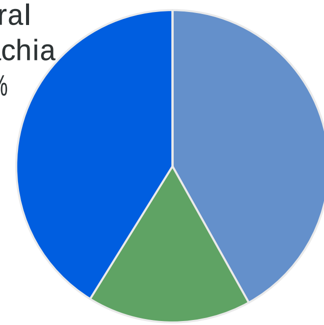
Total AEP System



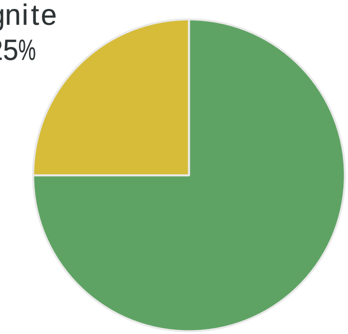
Coal Stats:

- Fully contracted for 2007; >93% for 2008
- Avg. delivered price ~ $35.10/ton in 2006
- Approximate 4-5% price increase in 2007 -- ($36.50 to $37.50/ton); 13% increase in 2008 based on anticipated 2007 actual results.
  - Addition of Mountaineer & Mitchell scrubbers allows for a greater mix of Northern Appalachian coal in 2007

AEP East

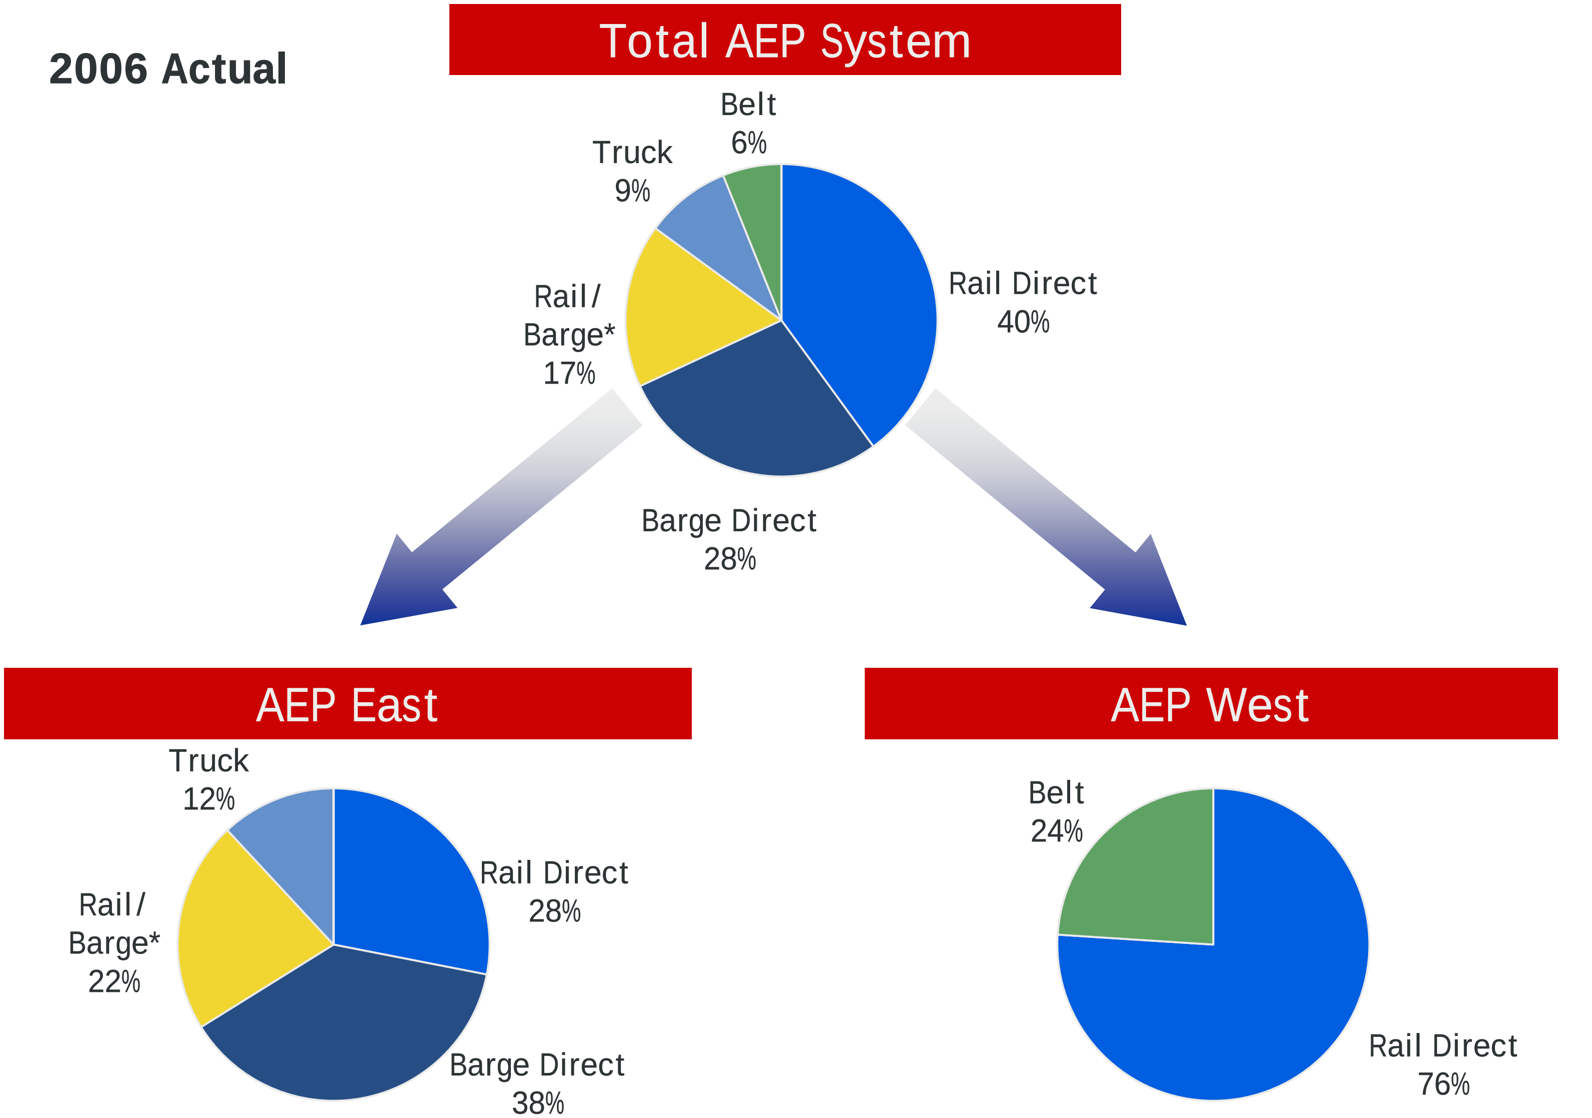


AEP West



Coal Delivery

2006 Actual



* Reflects coal delivered to AEP plants transported through a combination of rail and barge

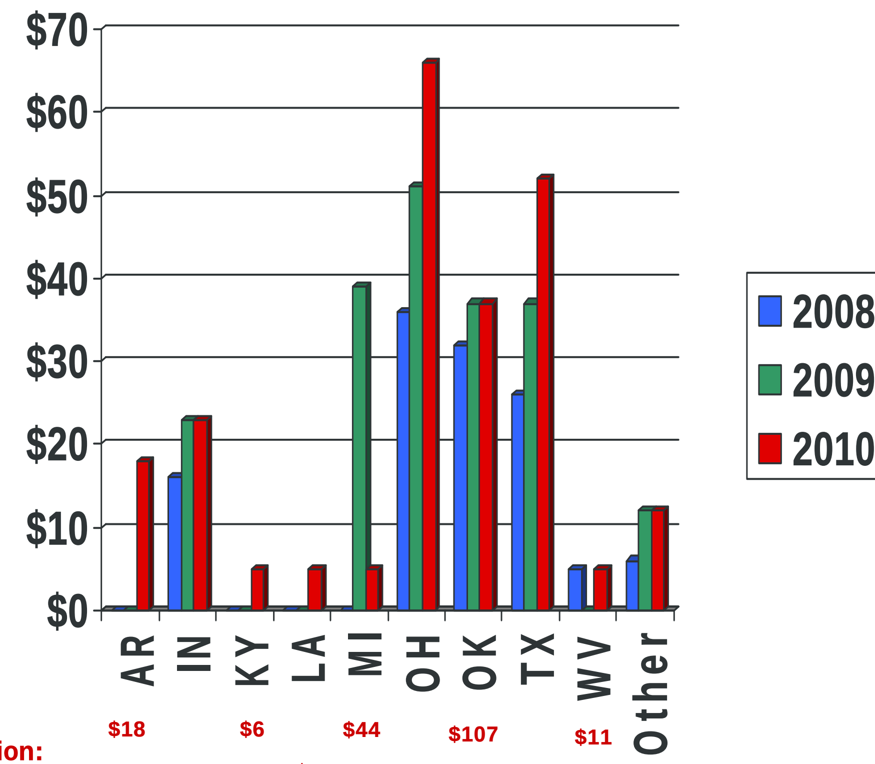
GridSMART

GridSMART: implementing AEP's vision for the distribution and customer services business in the future, including the development of new customer programs to reduce consumption and peak demand, and a plan to deploy advanced technologies.

Capital Investment, Subject to Regulatory Approval * $ in millions				
Technology	**2007**	**2008**	**2009**	**2010**
Metering & Communications	$0	$83	$138	$146
Distribution Technology Enhancements	$2	$40	$ 63	$ 82

*$452MM of the $554MM not in current forecast; spending contingent upon regulatory approval

$ in millions



3-Year Total by Jurisdiction: AR $18, IN $62, KY $6, LA $5, MI $44, OH $153, OK $107, TX $115, WV $11, Other $31

AEP will continue to be an industry leader in deploying advanced technology on a commercial scale. $554MM capital investment by 2010, subject to regulatory approval.

Contribution of Transmission Investments

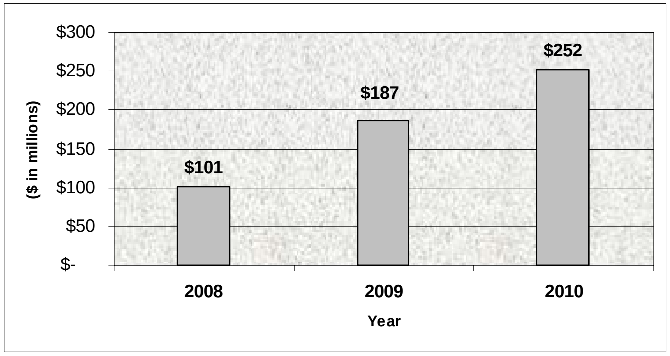
Potential Transmission Opportunities

~ $3 Billion I765™ Project in PJM
~ $2.6 Billion 765-kV study in Michigan w/ ITC
~ $3 Billion Project filed with SPP
~ $1-7 Billion in ERCOT via Electric Transmission Texas, LLC (ETT)

Assumptions

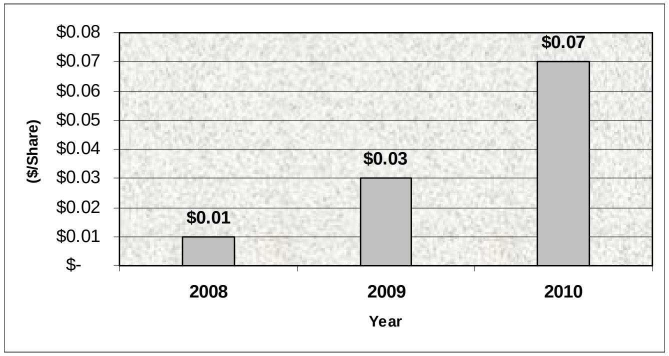
Estimated Investment Opportunity	$9 - $15 Billion
Ownership Structure w/ Partner	50% / 50%
Debt / Equity Ratio	50% debt / 50% equity
Return on Equity	11.00% - 13.00%
Potential EPS Impact (based on 402 MM shares)	$0.60 - $1.00+

Projected Transmission Capital Spending*



* ~$9-$15 billion investment opportunity not included in current capital guidance forecasts, since it will be put into a JV. ETT base case and PATH projects included in above projection.

Projected Transmission EPS Contributions*



* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

Transmission will provide a near and long term catalyst for growth.

Electric Transmission Texas (ETT)

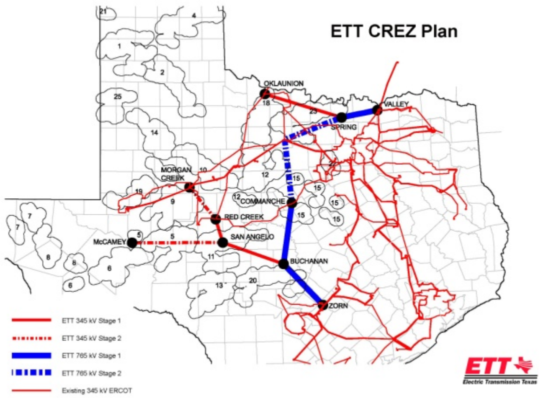
- **Electric Transmission Texas (ETT) Transaction Status**
  - Participation Agreement signed Jan. 9, 2007
  - PUCT Recently Approved:
    - ROE of 9.96%
    - Establishment of Transmission Utility Status
  - Received FERC/PUCT approvals:
    - Asset transfer for TCC to ETT

- **ETT CREZ Overview**
  - Strengthen ERCOT grid to collect and deliver wind generation to load
  - $1.5 billion investment Phase 1 – 2012 (before ownership division)
  - $1.5 billion investment Phase 2 – 2015 (before ownership division)

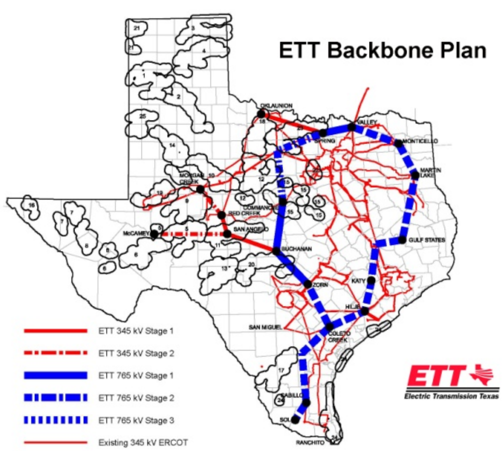
- **ETT ERCOT Backbone Proposal**
  - ETT proposal for ERCOT and PUCT to consider CREZ transmission in context of long-term vision for transmission system.
  - Current 5-year planning horizon results in higher ultimate costs, lower system efficiency.
  - Long-term 15-20 year perspective provides better plan, supports development of high voltage backbone at 765-kV.
  - $4.2 billion investment (long-term backbone).

- **Traditional ratemaking process through the PUCT will be utilized for investment cost recovery.**

ETT CREZ



ETT Backbone



Electric Transmission America (ETA)

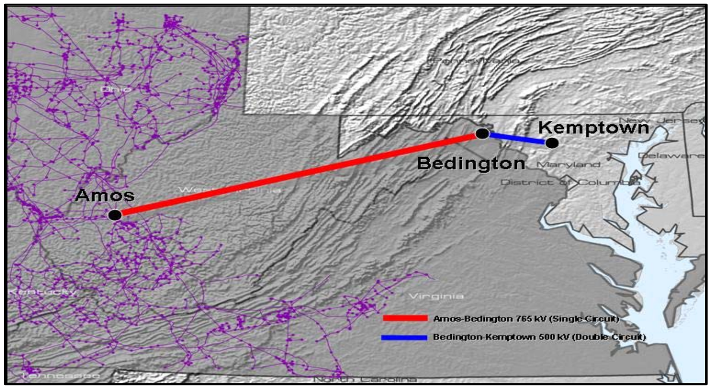
- *Electric Transmission America (ETA)*
  - AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 Joint Venture.
  - Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
  - Projects taken on by the Joint Venture would entail transmission facilities:
    - 345-kV and above
    - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
    - Greater than $100 million
  - ETA will hope to identify and initiate the approval process for the first project during the first half of 2008.
  - ETA will look to collaborate with qualified partners in each particular region.

This JV reflects a natural progression and expansion of our partnership with MidAmerican.

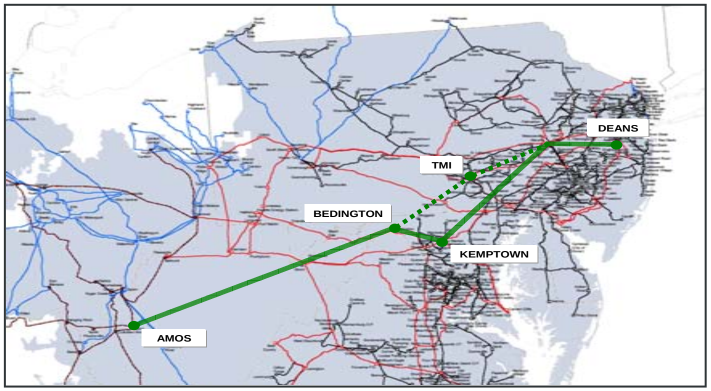
Transmission Project Updates - PJM

- *I-765 TM in PJM Phase I Update*
  - AEP and Allegheny entered into the PATH (Potomac-Appalachian Transmission Highline) JV to construct the 290 mile West Virginia-Maryland line
  - Total estimated cost of $1.8 billion
  - AEP portion approximately $600 million
  - Expected completion 2012
- *Key Next Steps*
  - Complete FERC Filing – December 2007
    - *Pursuing new project FERC incentives: cash return on CWIP, higher ROE, recovery of pre-commercial operation costs and recovery of abandonment costs.*
  - Begin Routing Study – Fall 2007
  - State Filings – Fall 2008
  - Construction – Early 2010
  - Completion – Fall 2012
- *I-765 TM in PJM Phase II Update*
  - Approximately 250 miles from West Virginia-Maryland border to Public Service Electric & Gas Deans Station in New Jersey.
  - Currently under consideration by PJM as part of Regional Transmission Expansion Plan (RTEP).
  - Based on PJM RTEP approval, AEP will seek a suitable business partner (JV partner) to complete the second leg of the original proposal.
- *Regional Rate Design will be utilized for investment cost recovery.*

Phase I in PJM



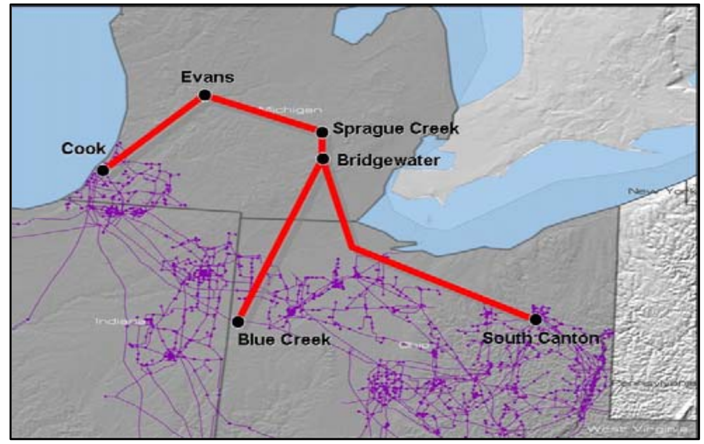
Phase II in PJM



Transmission Project Updates – cont'd

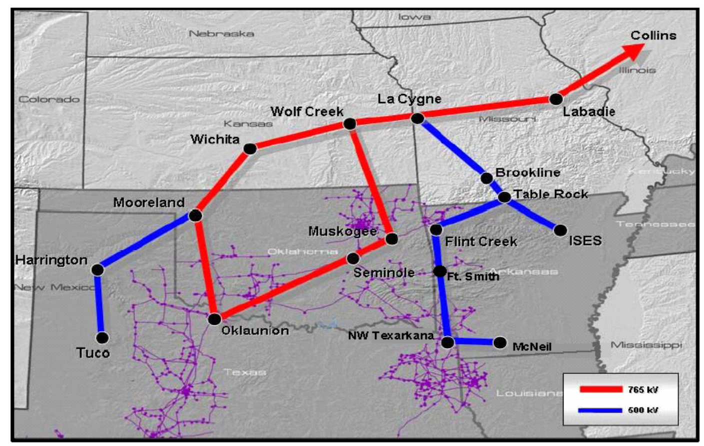
- *765 – kV in Michigan – Key Next Steps*
  - Study results shared with PJM/MISO– Summer 2007
  - Public release of study results – Fall 2007
  - Potential JV formation – Fall 2007
  - PJM/MISO approval - Summer 2008
  - FERC Filing - Fall 2008
  - Siting approval – Summer 2010
  - Estimated completion – Summer 2015

Michigan



- *765-kV in SPP – Key Next Steps*
  - Study disclosure – Fall 2007
  - JV formation (Partner-TBD) – Fall 2007
  - SPP RTO/BOD EHV Overlay approval – Summer 2009
  - SPP RTO FERC Filing – Fall 2009
  - Siting approval – Fall 2011
  - Estimated completion – Summer 2017

Southwest Power Pool



- *Regional Rate Design will be utilized for investment cost recovery.*

Advanced Generation & CO_2

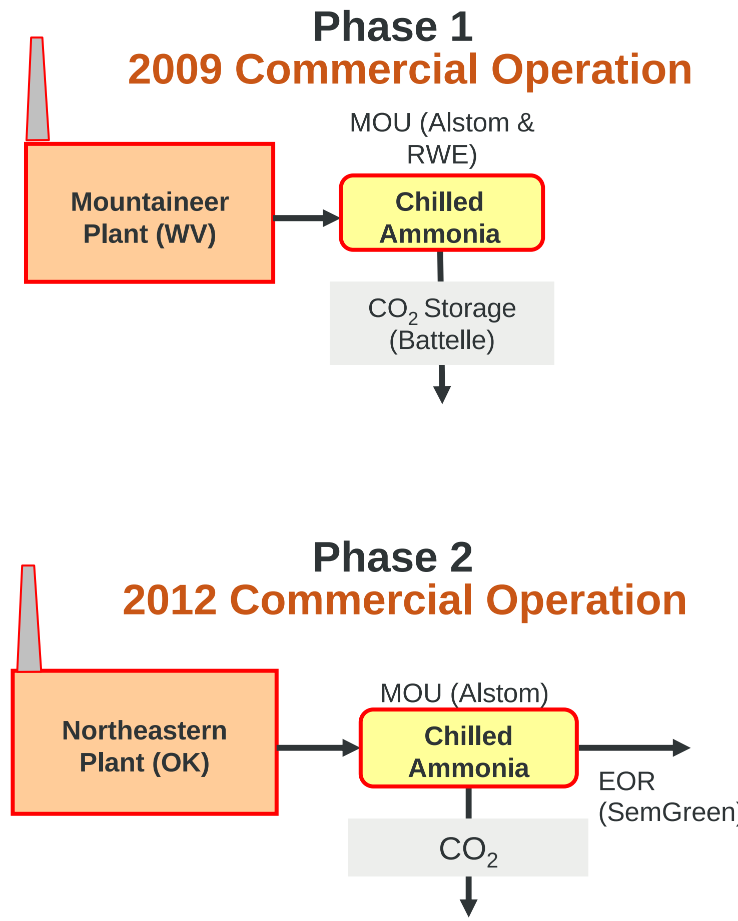
Near Term:

- Chilled Ammonia project at Mountaineer moving to commercial scale at the Northeastern Plant in 2012

$ in millions				
	2007	2008	2009	2010
Mountaineer Chilled Ammonia Project	$4	$56	$11	$0

Long Term Strategy (Post 2010):

- IGCC
- Oxy Coal Technology
- Chilled Ammonia
- Nuclear COL



We are committed to validating and deploying technologies that ensure coal remains a viable resource for AEP and America.

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A reliable and reasonably-priced electric supply is necessary to support the economic well-being of the areas we serve.

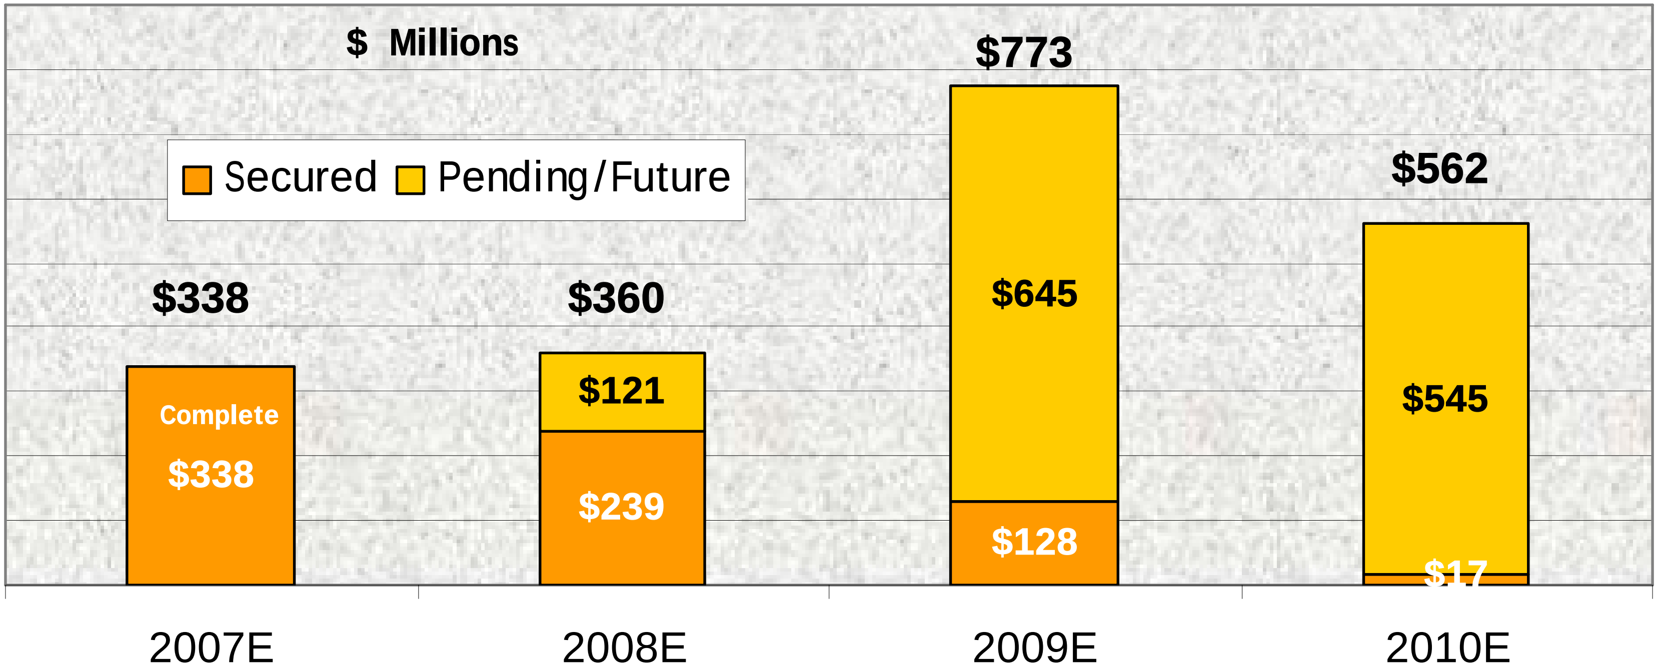
Highlights of Bingaman-Specter Proposal

"Low Carbon Economy Act of 2007"

- Key Components:
  - Start date for greenhouse-gas reductions is 2012
  - Goals: 2006 levels by 2020; 1990 levels by 2030
  - Includes a safety valve of $12 per metric ton, increasing at an annual rate of 5% above inflation
  - Support for allowance allocations
  - International action

AEP endorses this proposal because it sets reasonable and achievable reduction targets and includes the AEP-IBEW trade proposal.

Incremental Rate Relief Assumptions



2008 Secured: Ohio 3% & 7%
I&M Depreciation
APCo-WV Construction Surcharge
PSO Peaking Generation and General Rate Case
TCC and TNC General Rate Cases

2007 - 2010 projected annual rate increases of 5.5%.

Regulatory Strategy: Reduce Lag

The strategy: reduce the time between in-service dates and rate recovery

- Maximize frequency of filings
  - Seek ability to pro-forma both capital and O&M through date which rates are effective
- Single-issue cost recovery
  - Reliability
  - Vegetation
  - Environmental
- Trackers
  - Federally-approved transmission costs
  - Fuel and emissions
  - ERO compliance costs
  - Off-system sales margin sharing
- Formula rates
- Return on CWIP

Our goal is to maximize utility company cash flow and returns by minimizing regulatory lag.

Regulatory Activity Completed

Company	Case	Order Date	Dollar Amount	ROE
APCo - Virginia	Base Rate Case	May 15, 2007	$24MM increase in annual base rates	10.0%
APCo - West Virginia	ENEC Filing	June 22, 2007	$29MM increase in annual revenues	10.5%
I&M - Indiana	Depreciation Study	June 13, 2007	$69MM estimated decrease in annual depreciation expense	N/A
I&M - Michigan	Depreciation Study	September 25, 2007	$10MM estimated decrease in annual depreciation expense	N/A
CSP/OPCo	4% RSP	October 3, 2007	$23MM increase in annual generation rates	N/A
TNC	Base Rate Case	May 24, 2007	$12MM increase in annual pre-tax earnings	9.96%
TCC	Base Rate Case	October 17, 2007	$50MM increase in annual pre-tax earnings	9.96%
ETT	Utility Status/ROE	October 17, 2007	N/A	9.96%
PSO	Base Rate Case	October 9, 2007	$20MM increase in annual pre-tax earnings	10.0%

Incremental rate relief requirements for 2007 have been satisfied.

Regulatory Activity Underway

- Ohio Post 2008
- CSPCo and OPCo Filing for 4% Provision on Generation Rates
- I&M - Indiana Rate Petition
- APCo Filings – E&R and Fuel Factor Adjustments
- SPP OATT Formula Rate Filing
- PSO Storm Cost Recovery Filing
- New Generation:
  - IGCC Filing in Virginia and West Virginia for Certificate of Need and approval of a cost recovery mechanism
  - IGCC Phase 2 Filings in Ohio on Hold Pending Resolution of Supreme Court Challenge of PUCO's authority
  - SWEPCo Turk Plant Filings in Louisiana and Texas for Certificates of Need

Regulatory Activity Underway

Ohio Post 2008

- On August 29, 2007, the Ohio Governor submitted legislation (SB221) that would restructure the regulation of Ohio's electric industry. The bill also includes several efficiency and renewable energy standards.
- Hearings on the legislation began on September 26, 2007 in the Ohio Senate and continued through the end of October.
- On October 25, 2007, the substitute version and associated amendments were incorporated into SB221.
- Full Senate vote occurred October 31, 2007. SB221 passed 32-0.
- Presented to House Public Utilities Committee on November 7, 2007; Hearing schedule extends to the end of January 2008.

AEP Ohio Application For 4% Provision On Generation Rate

- On October 24, 2007, CSPCo and OPCo filed an application pursuant to the RSP at the PUCO to recover costs associated with additional generation-related expenditures the companies are encountering related to environmental (CAIR, CAMR and NPDES – Clean Water Act) and PJM marginal losses.
- CSPCo and OPCo are requesting to implement the provision to recover $37.4MM and $12.6MM, respectively, from January through December 2008. These amounts represent actual costs incurred, plus carrying costs, through October 31, 2007.

Regulatory Activity Underway

I&M Indiana Rate Petition

- On June 19, 2007, I&M filed a petition with the Indiana Utility Regulatory Commission (IURC) for authority to increase its rates and charges for electric utility service and to establish and implement rate adjustment mechanisms to track certain matters.
- Requested trackers relate to reliability enhancement, demand-side management/energy efficiency programs, off-system sales margins, PJM costs and environmental compliance.
- Parties have agreed to a historic test year ended September 30, 2007, with a rate case filing date of January 31, 2008. This schedule has been approved by the IURC.
- Hearings are expected in May 2008, and an order in the first quarter of 2009.

APCo E&R and Fuel Factor Adjustments

E&R:

- On July 16, 2007 a filing was made with the VA SCC requesting an additional $39MM be added to the current rider of $21MM. Therefore, at December 1, 2007, we will begin collecting $60MM.
- Intervenor testimony was filed on October 3, 2007, staff testimony filed on October 17, 2007, rebuttal testimony filed on October 24, 2007 and public hearings are were held on November 5 & 6, 2007.

Fuel Factor:

- On July 16, 2007, a filing was made with the VA SCC requesting the termination of the OSS base credit and reflected 75% of OSS margins as a credit to fuel expense, consistent with new Virginia legislation. Implementation of the fuel factor was approved effective September 1, 2007, subject to review/refund.
- Intervenor testimony was filed on October 5, 2007, staff testimony filed on October 15, 2007 and rebuttal testimony filed on October 22, 2007.
- Based on the addition of PJM marginal losses to the filing in October 2007, a new procedural schedule was agreed upon which stipulates staff and intervenor testimony due December 3, 2007, rebuttal testimony due December 10, 2007 and public hearings are expected to commence on December 18, 2007.

Regulatory Activity Underway

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $161MM.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extends the effective date to February 1, 2008. A request for rehearing was submitted on October 1, 2007.
- A technical conference was held on October 18, 2007. The purpose was to review and clarify the company's responses to discovery. A second technical conference was held November 6, 2007 with a settlement meeting held November 15, 2007 and another scheduled for December 4, 2007.

PSO Storm Cost Recovery Filing

- On October 24, 2007, Public Service Company of Oklahoma filed an application with the Oklahoma Corporation Commission to defer, amortize and recover costs related to a severe January 2007 winter storm. PSO requests the Commission to direct it to establish a regulatory asset of approximately $13 million reflecting the future recovery of these costs, and to amortize the regulatory asset as PSO realizes proceeds from the sale of sulfur dioxide (SO_2) emission allowances.
- Hearings are tentatively scheduled for February 27-28, 2008.

AEP®

Regulatory Activity Underway

APCo Mountaineer IGCC Filing

West Virginia

- Testimony filed with the West Virginia Public Service Commission on June 18, 2007 in support of APCo's application for a Certificate of Public Convenience and Necessity to construct a 600MW IGCC plant in WV at a cost of approximately $2.23 billion.
  - Testimony includes a proposal for the Commission to approve a cost recovery mechanism through the existing Expanded Net Energy Cost (ENEC) mechanism. The filing is not a formal proposal to adjust rates.
  - Actual requests for increased rates will be included in future filings, once construction of the plant has commenced and actual Construction Work In Progress data is known.
- Staff and Intervenor testimony filed November 19, 2007.
- Public hearings are scheduled for December 10-14, 2007 with an order on or before March 7, 2008.

Virginia

- Testimony filed with the Virginia State Corporation Commission on July 16, 2007 seeking a prudence determination and approval to recover, beginning in 2009, Virginia's share of the carrying costs associated with the proposed plant.
- Public hearings are scheduled for February 12, 2008.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.
- Oral arguments regarding this matter were conducted at the Ohio Supreme Court on October 9, 2007. It is likely the court's decision will not be announced until some time in the first quarter of 2008.

Regulatory Activity Underway

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- Public hearings commenced August 20, 2007 and final briefs were filed in October 2007.
- The PSC issued its order on November 21, 2007, approving construction of the plant.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. Peaking and intermediate facilities have been addressed. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- Public hearings commenced September 11, 2007. Decision expected by year end.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- Public hearings commenced October 17, 2007. Decision expected in early 2008.

Capital Investment + Rate Relief = Earnings Growth

2008 Key Operating Company Highlights

Dependent on Actual Capital Investment ($ in millions)

Company	Projected Capital Expenditures	Projected Issuances (a)	Target Equity Ratio
AEP, Inc.	$0	$500-600 (b)	n/a
AEG	$138	$100-150	40%
APCo	$720	$500-600	42-44%
CSP	$393	$250-350	45-47%
I&M	$341	$0	40-42% (c)
KPCo	$122	$100-200	41-43%
OPCo	$666	$100-200	44-46%
PSO	$266	$0	43-45%
SWEPCo	$694	$300-500	43-45%
TCC	$197	$0	40% (d)
TNC	$171	$100-150	40%

(a) Includes tax-exempt issuances

(b) Represents hybrid securities

(c) Ratios include impact of Rockport 2 lease

(d) Excludes impact of securitization on the equity ratio

AEP will maintain the financial strength of its subs by retaining and/or infusing equity capital depending on their credit ratios and free cash flow.

Long-term Debt Maturity Profile

($ in millions)

Year		2007 (1)		2008		2009
AEP Service Corp.	$	-	$	36	$	-
AEP, Inc.	$	-	$	-	$	-
AEP Generating Company	$	-	$	-	$	-

(1) Maturities remaining as of September 30, 2007

Credit Quality Parameters

Forecast Parameters:

- $150MM annually in new equity from Dividend Reinvestment and 401(k) plans
- Target 60% maximum consolidated debt/cap ratio on an adjusted basis
- Target utility company capitalization structures:

Company	Target Equity Ratio
APCo	42-44%
CSP	45-47%
I&M	40-42%
KPCo	41-43%
OPCo	44-46%
PSO	43-45%
SWEPCo	43-45%
TCC	40%
TNC	40%

- Long term dividend payout ratio range of 55-60%
- Maintain adequate coverage ratios to support current credit ratings
  - FFO to Interest range of 3.7x to 4.2x
  - FFO/Total Debt range of 16% to 19%

Capitalization

Capital Structure	Actual 12/31/2006			Actual 9/30/2007		
	Debt	Equity	Total	Debt	Equity	Total

(1) AEP Texas Central Company was downgraded and placed on negative outlook by Fitch in April 2007.

AEP is committed to maintaining current credit ratings.

Value Proposition

- *Strength and scale in assets & operations*
- *Continued innovation and deployment of leading technology advancements*
- *Sustainable earnings growth through near and long term capital investment opportunities*
- *Comprehensive regulatory strategy focused on maximization of cash flow and return through minimized regulatory lag*
- *Strong dividend yield with respect to peers*
- *Balance sheet and credit profile stability*

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance), resolution of litigation (including the dispute with Bank of America), our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events and our ability to recover through rates the remaining unrecovered investment, if any, in generating units that may be retired before the end of their previously projected useful lives.

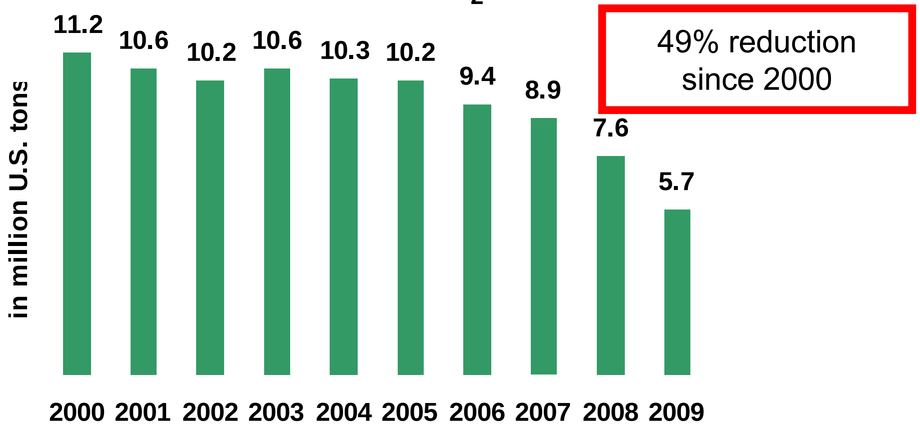
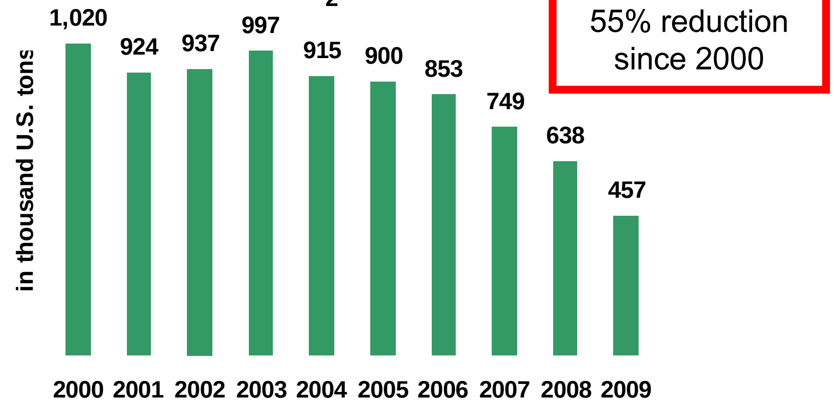
Significant Progress Has Been Made But . . .

U.S. Power Plant SO_2 Emissions

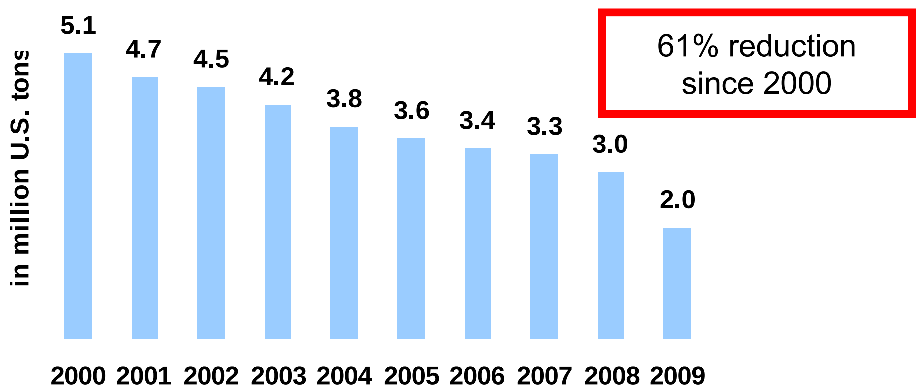


Source: EPA, 2010; Acid Rain Program

AEP SO_2 Emissions

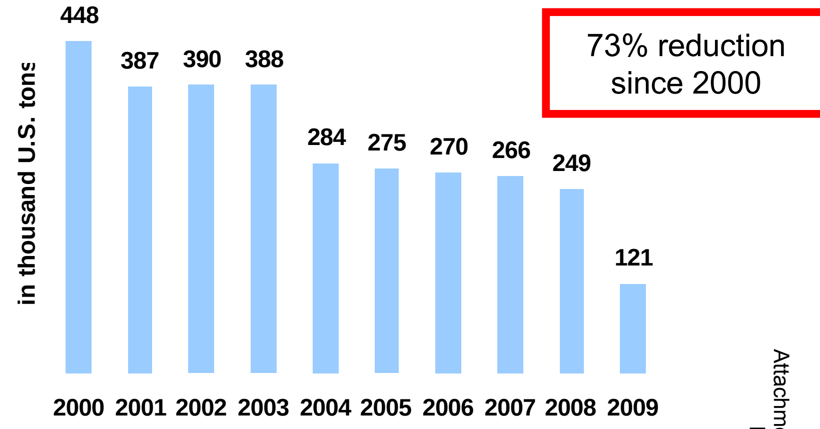


U.S. Power Plant NOx Emissions



Source: EPA, 2010; Acid Rain Program

AEP NOx Emissions



Over $5B capital invested by AEP from 2004-2010 to reduce emissions

Recent and Major Upcoming EPA Actions

- **Transport Rule – Proposed July 2010**
  - Governs power plant emissions of SO_2 and NOx that affect downwind fine particle and ozone concentrations
  - 2012 program start date with stringent second phase beginning in 2014
  - Limited interstate trading and no use of previously banked SO_2 allowances from CAIR program
  - 2014 SO_2 limits in AEP-East states will require almost all coal units to be scrubbed or retired/use gas
  - AEP believes an extension of the compliance deadlines is essential to allow states to develop implementation plans and give companies time to install the retrofits needed to comply

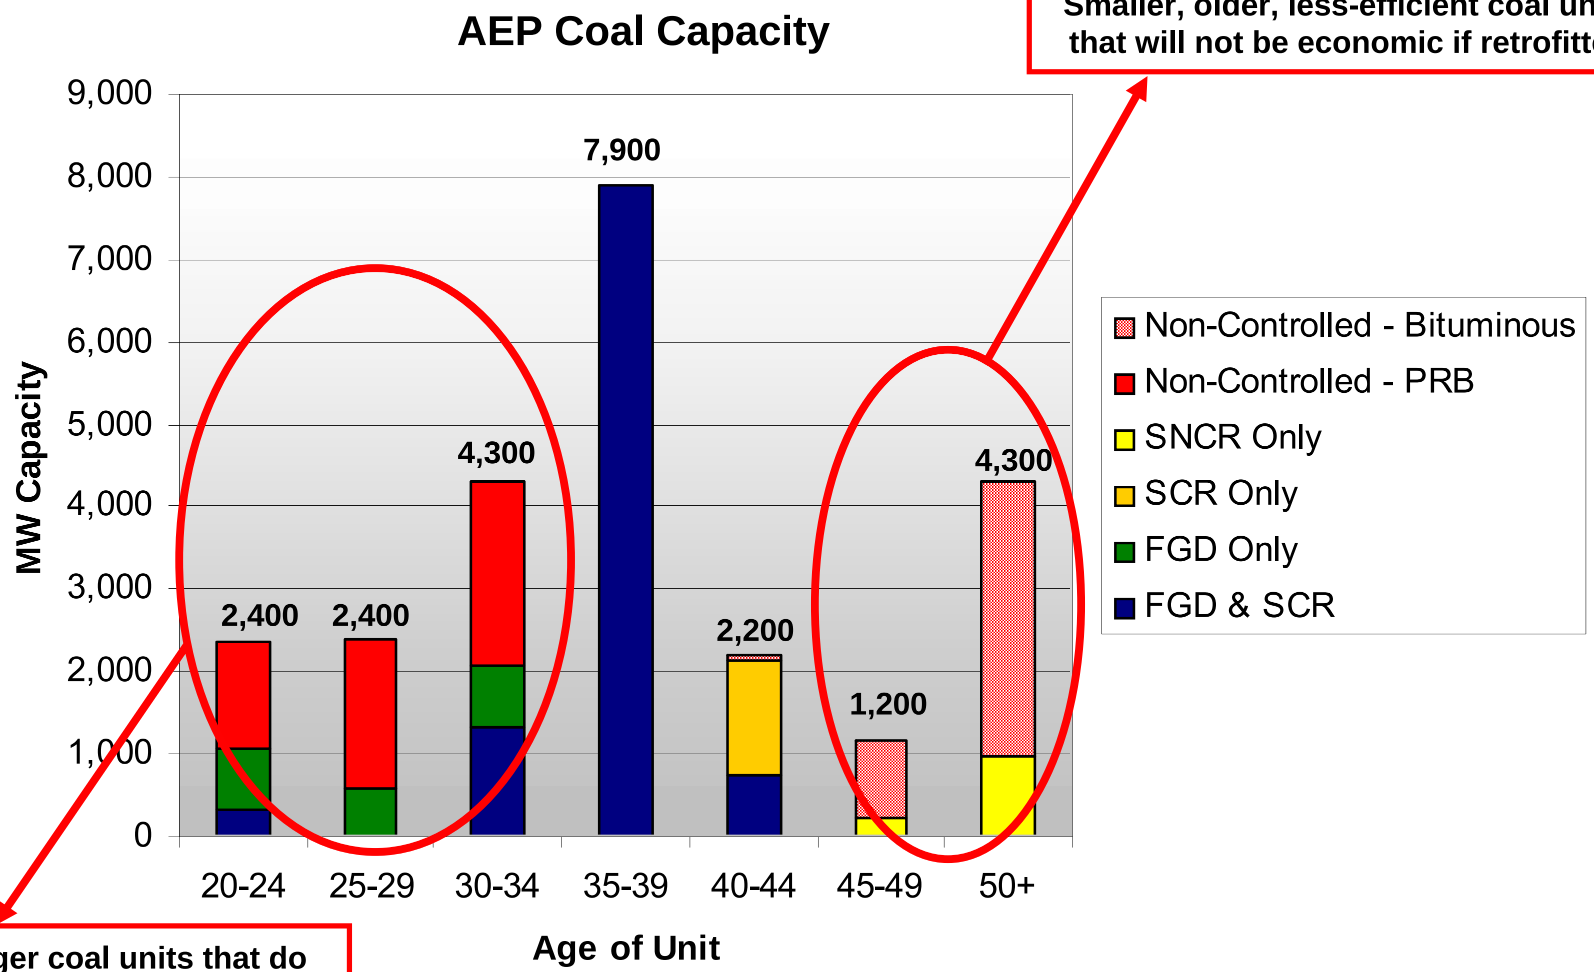
- **"Coal Ash" Rule – Proposed May 2010**
  - EPA proposed two different regulatory designations:
    - Solid waste – action required by ~2017
    - "Special" hazardous waste - action required by ~2018-2020
  - AEP supports regulation of coal ash under the Subtitle 'D Prime' option of the RCRA
  - Cost to AEP customers estimated at $3.9 billion by 2020 to comply with Subtitle D option

- **Mercury and other Hazardous Air Pollutants (HAPs) Rule**
  - Expect proposed rule in spring 2011, finalized in late 2011; likely compliance year - 2015
  - Could require major pollution control retrofits at most U.S. coal plants (FGD, baghouses, etc.)

Cumulative effects of EPA proposed rules and carbon legislation/regulation are a major concern for utility resource planning

Plant Retirements are Inevitable

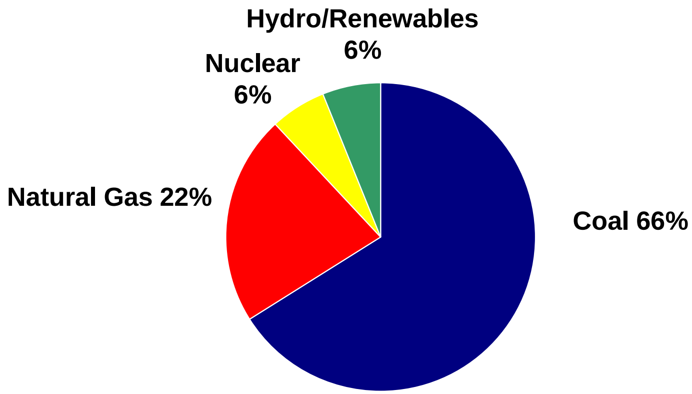
Smaller, older, less-efficient coal units that will not be economic if retrofitted



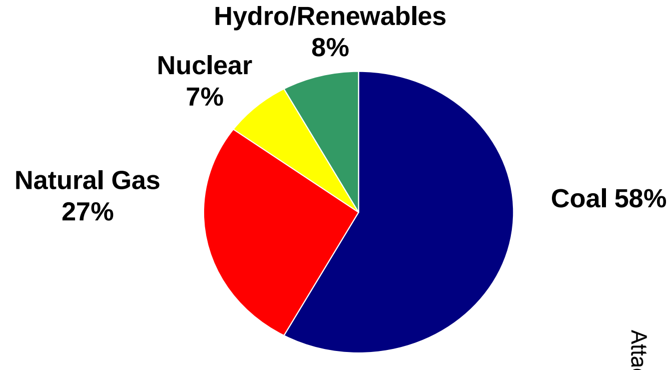
Newer and larger coal units that do not have SCRs and/or FGDs will be evaluated due to emerging and existing environmental requirements

AEP's Actions

- Operate uncontrolled, older and smaller units on a seasonal basis – minimizes capital and O&M spending
- Continue pursuit of CCS to take advantage of first-mover advantages such as DOE clean coal grants
- Complete the Dresden NGCC Plant and add renewables where regulatory recovery is provided
- Complete Cook Nuclear Plant uprate
- Transition toward retirement of approximately 5,000MW of coal units
- Influence federal and state policy to benefit our customers and shareholders
- Transformation plan that includes new technologies such as gridSMART and storage



Fuel Mix - 2009



Projected Fuel Mix - 2017

Carbon Legislation Update

- **Climate Cap and Trade Legislation (American Power Act of 2010) is dead in 2010**
  - Prospects for cap-and-trade legislation after 2010 will require truly bipartisan legislation given the expected changes in Congress

- **Cap and Trade Legislation that advanced in 2010 did include some improved provisions:**
  - Significantly higher electric utility allowance allocation
  - More generous CCS bonus allowances
  - Sound domestic offset provisions
  - Price collar that should help eliminate high price spikes

- **However, there were still some problem areas:**
  - Inadequate EPA preemption language on CO_2 would lead to duplicative CO_2 regulatory measures
  - More restrictive international offsets provisions could drive up compliance costs
  - Early action credit is very limited
  - Market trading provisions are overly restrictive

- **EPA is expected to move forward on CO_2 regulation in 2011**

AEP advocates delay in EPA regulatory action on CO_2 or legislation to enable significant multi-faceted study to determine overall economic and system reliability effects

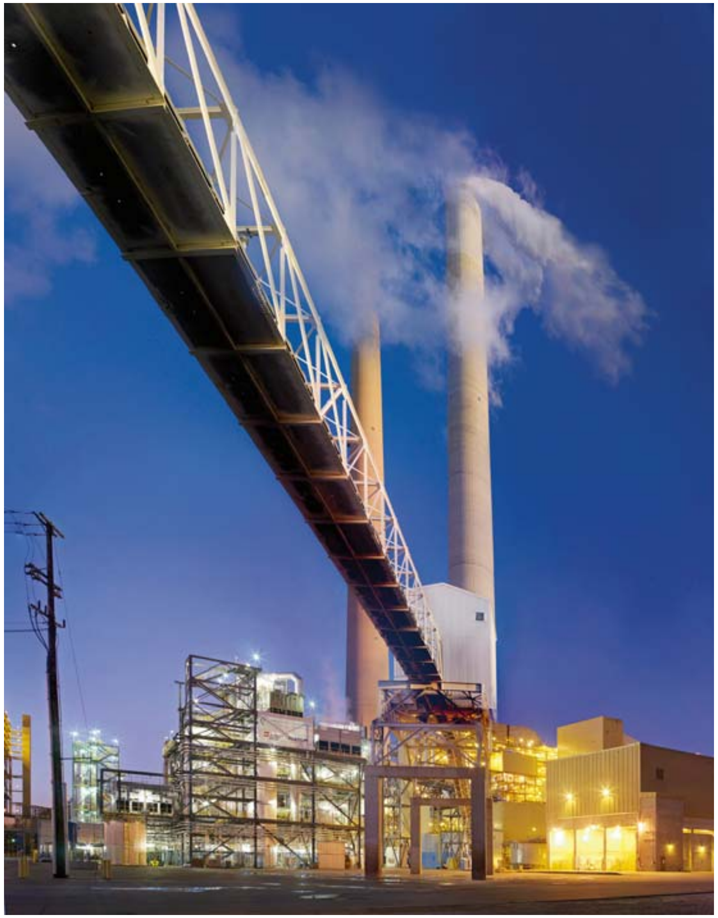
Carbon Capture and Storage

PHASE I - Validation

- World's first operating CCS facility on a coal fired power plant
- Gained competitive advantage through technology development
- Currently testing key performance parameters: auxiliary power, removal efficiency, reliability, CO_2 product quality

PHASE II - Commercialization

- Initiated in January 2010
- Designed to capture and store 1.5 million metric tons of CO_2/year
- Estimated cost of $668 million with 50% DOE funding
- Pursuing additional funding/participation
- Scheduled in service date is mid-2015
- Key activities through July 2011 include conceptual engineering, detailed cost estimate and National Environmental Policy Act process



Carbon Capture and Storage project
Mountaineer Plant - New Haven, WV

Thoughts about the Energy Policy Debate

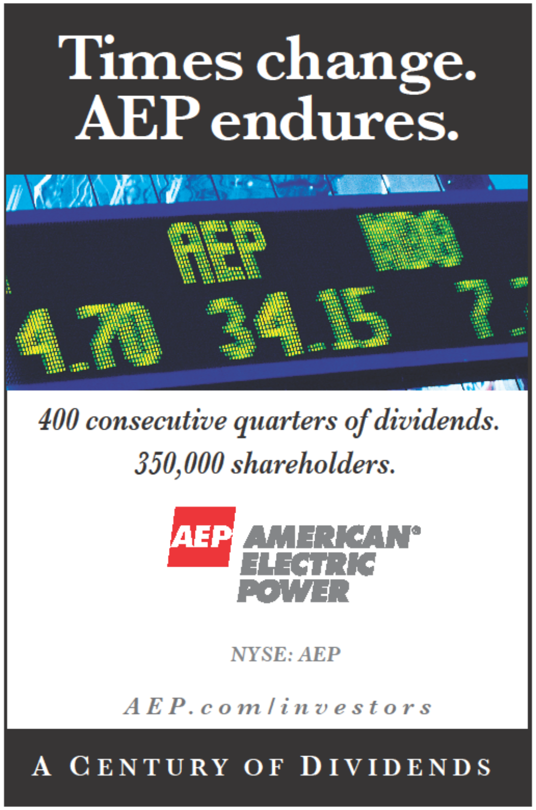
To make significant advancement in developing clean, domestic energy and reducing emissions, our nation needs a national energy policy with specific goals and guidelines, particularly as it relates to renewables, transmission and environmental regulations.

- **Cap and trade**
- **Incentives to develop and deploy new technologies**
- **Timelines for emission reductions that provide a rational glide path for transitioning the existing generating fleet to a smaller environmental footprint**
- **Mandates to develop reasonable cost allocation methodologies to support EHV transmission**
- **Support for the siting of national-interest transmission lines**

Trent Mesa Wind turbines in west Texas

Value Proposition

- **Current Yield Opportunity of 4.6%[1]**
  - June 10th – 400th consecutive quarterly dividend paid to shareholders
  - 50-60% payout ratio targeted
  - Dividend increased 2.44% on April 27th
- **Earnings Growth Prospects**
  - Investment in utility platform greater than depreciation level (2 - 4%)
  - With transmission opportunities (4 - 8%)



Attractive total return potential

[1] yield percentage based on AEP closing price of $36.50 on 09/24/2010

Appendix

Highly Diversified Regulated Utility Platform

5.2 million customers in 11 states

Region	# of customers

Transmission Opportunities

- **Electric Transmission Texas (ETT): Projects in Texas ERCOT jurisdiction**
  - **In service assets $0.4 billion**
  - **CREZ opportunity $1.1 billion est. in service 2010 - 2013**
  - **Other ETT projects $1.6 billion est. in service 2010-2017**
  - **Framework in Texas allows for more expeditious siting and recovery**

- **AEP Transmission Company (Transco): Within our existing footprint**
  - **Develop new AEP-only projects within AEP's footprint**
  - **Reduce regulatory lag through FERC formula rates adjusted annually**

- **Joint Ventures (JVs): Outside of our footprint, with Electric Transmission America (ETA) or others**
  - **Opportunity to earn FERC incentive rates (12.5% - 14.3%) and CWIP recovery**
  - **Currently four FERC-approved projects ($3.3B), estimated in-service 2013-2016**
  - **Robust pipeline of projects up to $15B**

ETT Electric Transmission Texas

ETA ELECTRIC TRANSMISSION AMERICA, LLC

Prairie Wind Transmission
A joint venture between Westar Energy. and ETA

PATH
Potomac-Appalachian Transmission Highline

Tallgrass Transmission
A joint venture between OGE Energy Corp. and ETA

AEP Transmission Company (Transco)

- Transco will be used to develop significant new on-system, AEP-owned investments
  - Greenfield Projects
  - Station Additions
  - System Upgrades
- Seven companies have been established under the AEP Transco holding company
- Next steps:
  - Obtain state utility status where required
    - No filing required in Michigan or Oklahoma
    - Filings made in OH and WV
- FERC tariff for Transco filed December 1, 2009 with rates effective and first projects in-service in 2010; Settlement discussions on-going
- Seek retail tracking mechanisms at the state level (OH, AR, VA, TX-ERCOT already secured)

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

AEP®

AEP Enjoys Significant Presence Throughout The Energy Value Chain

Strategic Direction

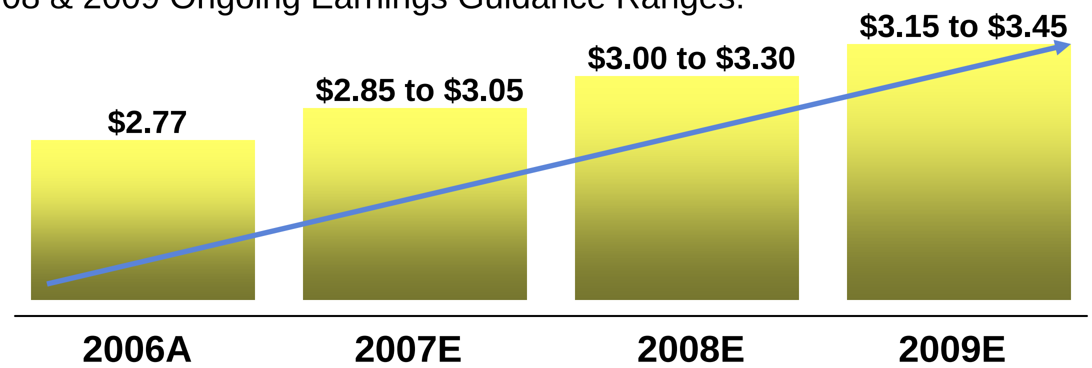
- Invest in our established utility business
- Achieve continued environmental improvements of existing facilities
- Buy or build additional generation to meet franchise service obligations
- Upgrade our energy delivery infrastructure
- Develop our transmission business
- Achieve adequate returns on all assets

Deliver value to investors and cost effective service to our customers

Continued Commitment To Our Core Utility Mission: Bring Reasonably Priced Electric Service To Our Customers, Thereby Strengthening Our Communities And Rewarding Our Investors

Framework For Long-Range Performance

- 2007, 2008 & 2009 Ongoing Earnings Guidance Ranges:



- EPS Growth Range: 5-7% (2006-2009)
  - Continued disciplined investment in existing utility operations
    - Reliability
    - Environmental
    - New Generation & Distribution Infrastructure
  - Investment in new transmission opportunities
  - Seek rate recovery for new investments
  - Control costs & achieve timely rate relief
- Maintain credit ratings
  - BBB/Baa2/BBB

AEP®

Future Earnings Growth Driven by Native Load Growth and Substantial Utility Investment Opportunity Focused On Regulated Operations

Summary of 5-7% Long-Range Growth Components

- ✓ Energy sales growth of 1.5%
- ✓ Rate base investment
  - Generation plant purchases & build
  - Transmission – interstate & intrastate
  - Distribution
  - Reliability
- ✓ Transmission company
- ✓ Commercial operations
- ✓ Regulatory strategy
  - Achieve timely returns
  - Seek cash returns on investment during construction
  - Create & secure innovative rate plans
    - Pursue post-2008 solution in Ohio
    - Expand use of trackers
    - Formula rates

AEP®

New Generation And Transmission Projects Largely Reflect Upside To The Long-Range Earnings Growth Target Of 5-7%

Utility Investment Drives Growth

Capital Investment Forecast (2007-2009)

($ in millions)	2007	2008	2009	Total (2007-09)
Environmental	$935	$521	$301	**$1,757**

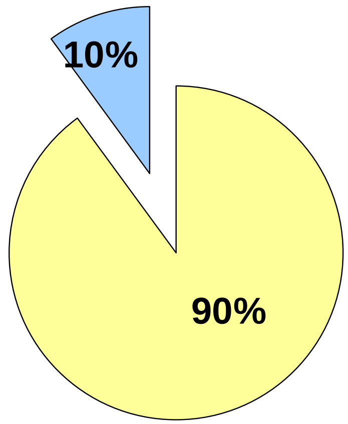
AT THE CONCLUSION OF OUR CURRENT ENVIRONMENTAL RETROFIT PROGRAM, OVER 47% OF OUR COAL-FIRED GENERATION FLEET WILL BE EQUIPPED WITH SCRs AND OVER 50% WILL BE SCRUBBED (FGD). AEP's TOTAL COAL FLEET CAPACITY = 24,710 MEGAWATTS*

*Excludes AEP's 44% ownership in OVEC (980 MWs of coal-fired capacity)

AEP®

Materials and Vendors – AEP's Advantage

Environmental Program Costs:
Active/Firm Costs to Remaining Estimated Costs



Actuals To Date & Firm Costs

Remaining Estimated Costs*

* Primarily labor and activated carbon injection systems

Typical Vendors Include:

•B&W/Alstom – FGD Spray Tower

•B&V/Chyioda – FGD Jet Bubbling Reactor

•Pullman Power – Stack Supplier

•Babcock Power – SCR

•Black & Veatch – Architect/Engineering

•Sargent & Lundy – Architect/Engineering

First-Mover Advantage:

- By locking in our environmental program costs in the early portion of this decade, AEP has a clear 'first-mover' advantage
- AEP capital costs for a scrubber average approximately $250/kW
- We have since seen a 30-60% increase in material costs and a 15% increase in labor rates
- An FGD system for a nominal 600MW plant in 2005 $ was approximately $225/kW and in 2007 $ is $320/kW

AEP®

AEP Customers and Shareholders Benefit From First-mover Advantage Through Lower Contracted Pricing and Reduced Market Escalation Exposure

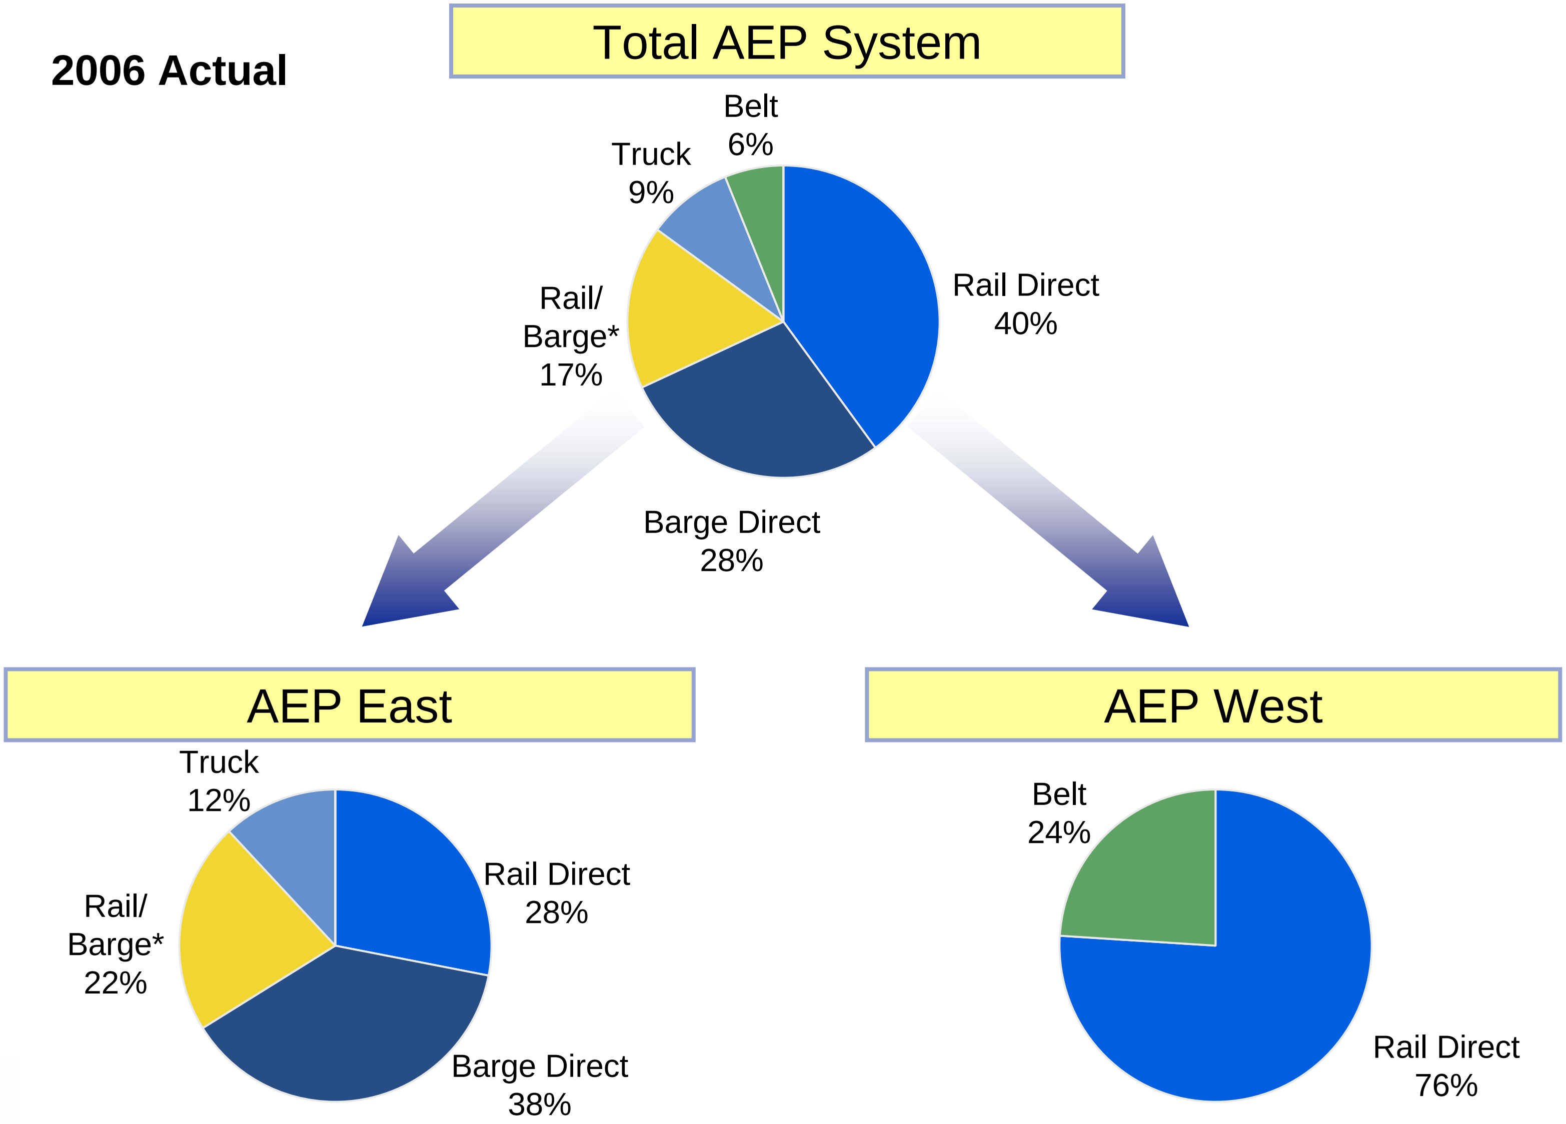
Coal Delivery

2006 Actual



* Reflects coal delivered to AEP plants transported through a combination of rail and barge

Purchased Generation

Waterford

- 821 MW combined-cycle gas plant
- $220MM purchase price
- Columbus Southern Power completed purchase on September 28, 2005
- $268/kW

Lawrenceburg

- 1140 MW combined-cycle gas plant
- $325MM purchase price
- AEG completed purchase on May 16, 2007
- $295/kW

2,946 MW of gas-fired generation added since 2005

Darby

- 480 MW simple-cycle gas plant
- $102MM purchase price
- Columbus Southern Power completed purchase on April 25, 2007
- $227/kW

Ceredo

- 505 MW simple-cycle gas plant
- $100MM purchase price
- APCo completed purchase on December 15, 2005
- $198/kW

AEP®

Additional Gas-fired Generation Allows Us To Meet The Growing Needs Of Our Customers And Provides The Company With Greater Fuel Flexibility

New Generation Facilities

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
SWEPCo	Mattison	Arkansas	$130 MM	Gas	Simple-cycle	340 (1)	2007
PSO	Southwestern	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
PSO	Riverside	Oklahoma	$57 MM	Gas	Simple-cycle	170	2008
AEG	Dresden	Ohio	$348-406 MM (2)	Gas	Combined-cycle	580	2010
SWEPCo	Stall	Louisiana	$300 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.3 B (3)	Coal	Ultra-supercritical	600 (3)	2011
APCo	Mountaineer	West Virginia	$2.23 B	Coal	IGCC	630	2012
CSP/OP	Great Bend	Ohio	Under Review (4)	Coal	IGCC	630	2017

(1) 150MW declared in commercial operation on July 12, 2007.
(2) We are currently developing contracts and estimates to complete the project. It is anticipated that the unit can be completed between $600 to $700 per kW using an "all-in" cost basis.
(3) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $986 million in capital investment.
(4) FEED (front-end engineering and design) study with GE/Bechtel is complete. Cost estimates are not yet filed with the PUCO due to the pending appeals to the Supreme Court of Ohio resulting from the PUCO's April 10, 2006 Opinion and Order.

AEP®

AEP Is Meeting The Growing Electricity Needs Of Customers Through The Pursuit Of New Economic Generation Facilities

New Gas-Fired Generation Facilities

SWEPCo

- Mattison Plant (Tontitown, AR)
  - Certificate of Need filings (LA, AR, TX) were approved in all 3 states
  - Air permit received in February 2007
  - Units 3 and 4 (150 MW) online on July 12, 2007; Units 1 and 2 online by January 2008
- Stall Plant (Arsenal Hill, LA)
  - Certificate of Need filings (LA, AR, TX)
    - TX settled in Feb 2007
    - AR & LA decisions expected by year-end 2007
  - Air permit filed on April 27, 2007 – expecting approval by March 2008
  - Commercial operation date in 2010

PSO

Southwestern & Riverside Additions

- Air permit received March 22, 2007
- Commercial operation date of December 2007
- Regulatory Recovery
  - Settlement and final order in the Lawton Cogen case authorizes recovery of costs for Southwestern and Riverside peakers through a rider mechanism beginning as early as June 2008 based on the Commercial Operation date

2007-2009 Projected Capital Expenditures

	2007	2008	2009
Mattison	$56MM	$4MM	-
Stall	$82MM	$126MM	$64MM
Southwestern	$36MM	$3MM	-
Riverside	$35MM	$2MM	-

SWEPCo's and PSO's Short-Term and Intermediate Power Needs Will Be Met With Newly Constructed Gas-Fired Facilities

AEP®

New Ultra-Supercritical Coal Facility

SWEPCo

Turk Plant (Fulton, AR)

- Certificate of Need approvals (LA, AR, TX) expected in the fourth quarter of 2007
- Air permit approval expected in Fall 2007
- Regulatory Recovery
  - Recovery of carrying cost requested in LA Certificate of Need filing – Hearings scheduled for September 2007
  - AR and TX rate recovery will be addressed in separate filings
- Approximately 85-90% of costs are firm
  - EPC contract for balance of plant work awarded in May 2007
  - Contracts for turbine, boiler, and environmental control equipment awarded in 2006

2007-2009 Projected Capital Expenditures

	2007	2008	2009
Turk Plant	$211MM	$230MM	$243MM

AEP®

Ultra-Supercritical Coal-Fired Generation Is The Most Economical Choice For New Baseload Plants In AEP's Western Service Territory

Integrated Gasification Combined Cycle Facilities

Front-End Engineering & Design (FEED) results complete. Results were filed in June 2007. Cost estimates in target range of 20-30% premium over new ultra-supercritical coal-fired facilities of equal capacity.

West Virginia

- **Certificate of Public Convenience & Necessity filed Jan. 11, 2006**
  - APCo testimony filed June 18, 2007
  - Intervenor & Staff testimony due Nov. 19, 2007
  - Hearings Dec. 10-14, 2007
  - Statutory Deadline – Mar. 7, 2008
- **Air permit filed in Oct 2006**
  - A technical review of the application and development of a draft permit is ongoing by the WV Dept. of Environmental Protection
- **Regulatory Recovery**
  - West Virginia filing made in June 2007 – included request for cash recovery mechanism
  - Virginia filing made in July 2007 requesting cash recovery mechanism

Ohio

- **Certificate of Environmental Compatibility & Public Need filed March 24, 2006**
  - Ohio Power Siting Board certificate issued in April 2007
- **Air permit filed in Oct 2006**
- **Regulatory Recovery**
  - Phase 1 – June 2006 – PUCO approved tariff to recover pre-construction costs ($24MM) over 12-month period effective July 1, 2006
  - Phase 2 – filing likely to be withheld until resolution of Ohio Supreme Court action
  - Informational filing made on June 18, 2007 to inform PUCO of the West Virginia filing

AEP®

Construction Period Of 48-50 Months Following Receipt Of Major Regulatory And Permit Approvals

Investing In IGCC

Generation Technology Comparative Statistics

US2006$	Eastern Bituminous		
	USC	**IGCC**	**NGCC**
Nominal Capacity (MW)	618	629	530
Capacity Factor (%)	85%	85%	25%
Total Plant Cost (EPC + Owner's Cost) ($/kW)	$2,152	$2,717	$572
Production Cost ($/MWh)	$22	$22	$45
Cost of Electricity, without CO_2 Capture ($/MWh)	$72	$83	$87
Estimated Cost of Electricity, with 90% CO_2 Capture ($/MWh)	$118	$108	$135

Source: Results of AEP analysis based on EPRI studies.

- ➢Total Plant Cost (Overnight EPC 2006$s) includes the cost to engineer, procure and construct plant and owner's direct costs.
- ➢Assumes Northern Appalachian coal price of $2.25/mmBtu for USC and IGCC and natural gas price of $6.00/mmBtu for NGCC.
- ➢Production cost includes fuel cost plus variable operations and maintenance (VOM) cost.
- ➢Cost of electricity represents first year estimates only in 2006$ and are based on total plant cost plus generic cost estimates for AFUDC, emission credits, infrastructure, interconnections, transmission lines and upgrades.
- ➢Cost of electricity with CO_2 capture provides pressurized CO_2 at the fence line and does not include transportation, storage and monitoring costs.

AEP®

IGCC Technology Is Strategic To Keeping Coal In The Money

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A Reliable & Reasonably-priced Electric Supply Is Necessary To Support The Economic Well-being Of The Areas We Serve

Highlights of Bingaman-Specter Proposal

"Low Carbon Economy Act of 2007"

Key Components:

- Start date for greenhouse-gas reductions is 2012
- Goals: 2006 levels by 2020; 1990 levels by 2030
- Includes a safety valve of $12 per metric ton, increasing at an annual rate of 5% above inflation
- Support for allowance allocations
- International action

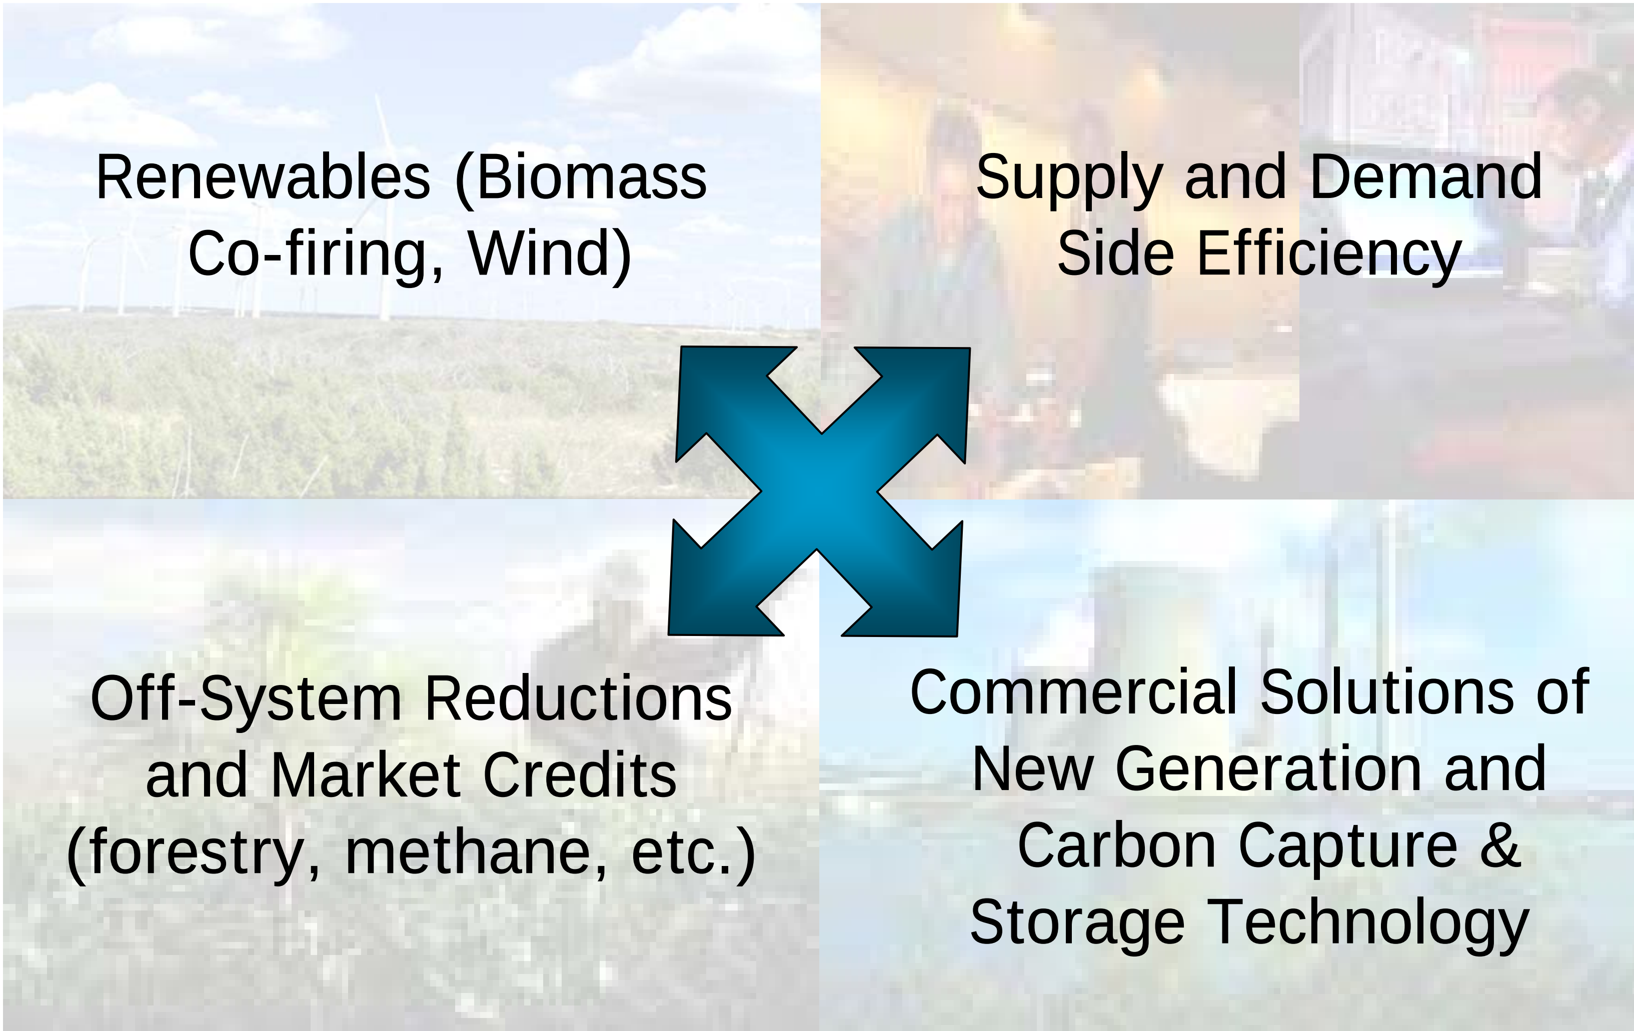
AEP Endorses this Proposal Because It Sets Reasonable And Achievable Reduction Targets and Includes the AEP-IBEW Trade Proposal

AEP's Climate Strategy

- **Being proactive and engaged in the development of climate policy**
  - International Emissions Trading Association (IETA)
  - Electric Power Research Institute (EPRI)
  - Pew Center on Global Climate Change
  - e8
  - Global Roundtable on Climate Change
- **Investing in science/technology R&D**
  - FutureGen Alliance
  - US DOE research on carbon capture and sequestration at our Mountaineer Plant
  - EPRI – combustion technologies
  - MIT Energy Laboratory
  - B&W – Oxy-Coal
- **Taking voluntary, proactive action now, demonstrating voluntary programs can work and setting policy precedents thru CCX**
  - Chicago Climate Exchange (CCX)
  - EPA Climate Leaders
  - EPA SF-6 Emission Reduction Partnership for Electric Power Systems Program
  - Asia-Pacific Partnership
  - DOE 1605B- voluntary reporting of GHGs Program
  - Business Roundtable Climate Resolve
  - Numerous forestry activities
- **Evaluating longer term investment decisions such as new generation and carbon capture and storage (e.g., IGCC, Ultra-supercritical)**

AEP Must Be A Leader In Addressing Climate Change

AEP’s Long-term GHG Reduction Portfolio



AEP Is Investing In A Portfolio Of GHG Reduction Alternatives

AEP's Long-term CO_2 Reduction Commitment

Existing Programs

- Renewables
  - 800 MWs of Wind
  - 300 MWs of Hydro
- Domestic Offsets
  - Forestry – 0.35MM tons/yr @ $500K/year
  - Over 63MM trees planted through 2006
  - 1.2MM tons of carbon sequestered
- International Offsets
  - Forestry projects have resulted in 1MM tons of carbon sequestered through 2006
- Chicago Climate Exchange

New Program Additions

- Incremental Reduction quantity: 5MM tons/yr
- Timing: To take effect/receive credits by 2011
- Methods
  - +1000 MWs of Wind PPAs – 2MM tons/yr
  - Domestic Offsets (methane) – 2MM tons/yr (e.g., livestock methane capture deal of 0.6MM tons/yr)
  - Forestry – Tripling annual investment to increase to 0.5MM tons/yr by 2015
  - Fleet Vehicle/Aviation Offsets – 0.2MM tons/yr
  - Additional actions to include DSM and end use energy efficiency, biomass and power plant efficiency – 0.2MM tons/yr

New Technology Additions

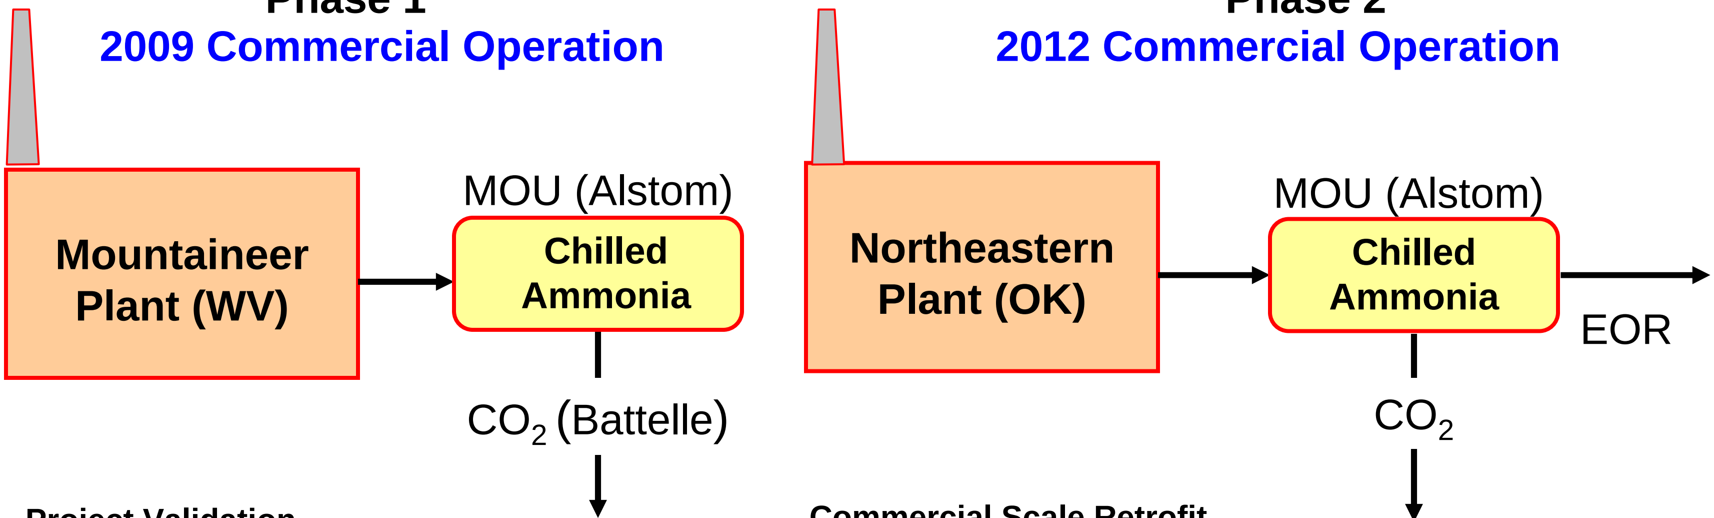
- New Technology Generation – IGCC and USC
- Commercial solutions for existing fleet
  - Chilled Ammonia
  - Oxy-Coal

AEP Is Committed To A 5mm Ton/Yr Reduction In Co_2 Emissions Which Offsets Approximately Half Of The Emissions Projected From New Generation Projects Previously Announced

Chilled Ammonia Technology Program

Phase 1
2009 Commercial Operation

Phase 2
2012 Commercial Operation



Project Validation

- 20 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, under construction at WE Energies)
- 100,000 – 300,000 tonnes CO_2 per year
- In operation 1Q 2009
- Approximate total cost \$50 – \$80M
- Using Alstom "Chilled Ammonia" Technology
- Located at the AEP Mountaineer Plant in WV
- CO_2 for geologic storage

Commercial Scale Retrofit

- ~ 200 - 300 MW_e scale (megawatt electric)
- ~ 600 MW_t scale (megawatt thermal)
- ~1.5MM tonnes CO_2 per year
- In operation late 2011
- Approx. capital \$250 – \$300M (CO_2 capture & compression)
- Approx. O&M cost \$12M per year
- Energy penalty ~ 35 – 50 MW steam, 25 – 30 MW for CO_2 compression
- Retrofit Wet FGD Required: ~\$225 – \$300M
- Located at AEP's Northeastern Plant Unit 3 or 4 in Oklahoma
- CO_2 for Enhanced Oil Recovery (EOR)

AEP®

Post-combustion Carbon Solution Provides Pure CO_2 Stream For Capture

Oxy-Coal CO_2 Capture & Storage Project

Pilot Scale Demonstration

- 10 MW_e scale
- Teamed with B&W at its Alliance Research Center and 16 other utilities
- Demo complete 3Q 2007
- AEP funding of $50k

Commercial Scale Retrofit

- Retrofit on existing AEP sub-critical unit (several available)
- 150 – 230 MW_e scale retrofit
- 4,000 – 5,000 tons CO_2 per day
- Team with B&W
- AEP funding of ~ $1.5M for feasibility study
- Feasibility study to be completed in late 2007/early 2008

Combustion Conversion Technology For Existing Coal Fleet – Longer Lead Time With Enhanced Viability And Long-term Potential

Transmission ~ $9-$15 Billion Opportunity

Creating a business model to manage capital requirements for enhanced returns with partners

Potential Opportunities

- ~ $3 Billion I765™ Project in PJM
- ~ $2 Billion 765-kV study in Michigan w/ ITC
- ~ $3 Billion Project filed with SPP
- ~ $1-7 Billion in ERCOT via Electric Transmission Texas, LLC (ETT)

1) ~$9-$15 billion investment opportunity not included in current capital guidance forecasts

2) Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

Assumptions

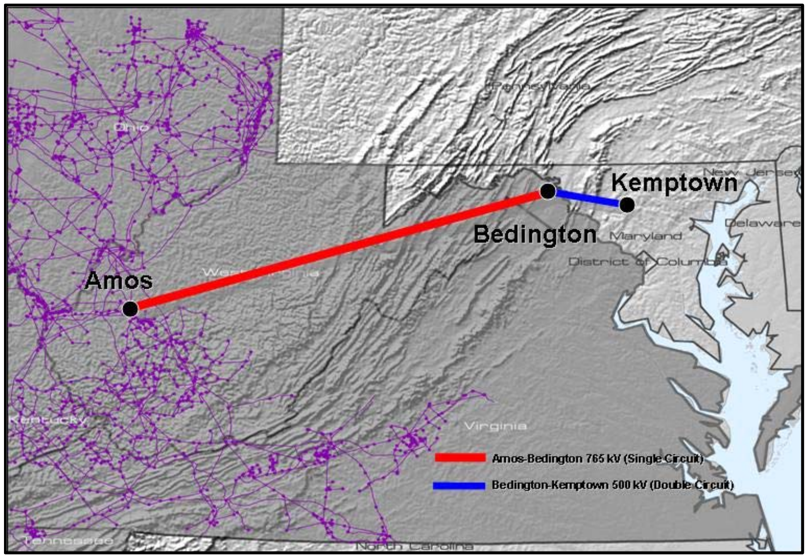
Estimated Investment Opportunity	$9 - $15 Billion
Ownership Structure w/ Partner	50% / 50%
Debt / Equity Ratio	50% debt / 50% equity
Return on Equity	11.00% - 13.00%
Potential EPS Impact (based on 396 MM shares)	$1.00+

AEP®

Building the next US interstate system for enhanced reliability and market efficiency

I-765™ in PJM

- *Overview*
  - $3 billion investment (before ownership division)
  - 550 line miles
  - 5000MW improved transfer capability
  - To be completed in 2 phases (1st phase PJM-approved)
- *Benefits*
  - Improves eastern grid reliability
  - Improves market efficiency with reduced congestion
  - Reduces consumer cost $1B (est.) annually in the east
  - Reduces network line losses by 280 MW at peak
  - Provides AEP rate base opportunity for transmission investment with ROE upside & other FERC incentives
  - Provides off-system sales and siting opportunity for AEP and other low-cost mid-western generation
- *Phase I Progress to Date*
  - On September 1, 2007, AEP and Allegheny formed a new joint venture Potomac- Appalachian Transmission Highline, LLC (PATH) and its subsidiaries) to construct the 290 mile West Virginia-Maryland line
  - Total estimated cost of $1.8 billion
  - AEP portion approximately $600 million
  - Targeted completion 2012

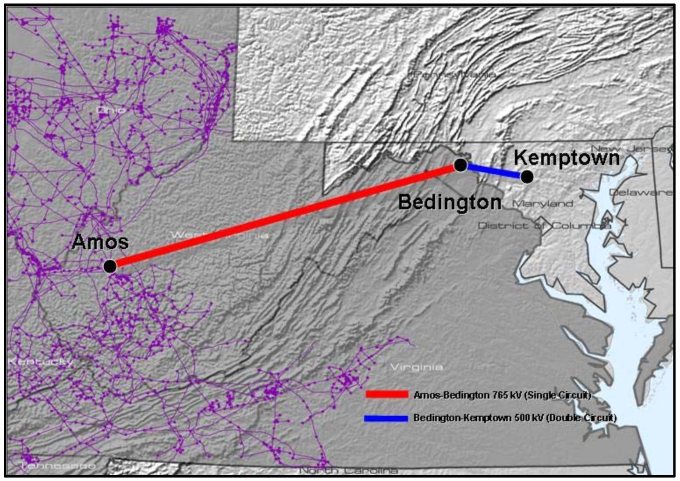


AEP®

I-765™ in PJM - Phase I cont'd

Execution in Action

- *Funding Plans/Transaction Structure*
  - JV portion of the I-765™ Interstate Project approved by PJM in its Regional Transmission Expansion Plan in June 2007
  - Equity – 50% AEP / 50% Allegheny
  - AEP's investment will be held at the AEP Transmission Holding Company LLC subsidiary
  - Operations to commence in the second half of 2007
  - I-765™ Interstate Project included in the DOE's draft National Interest Electric Transmission Corridor issued in April 2007



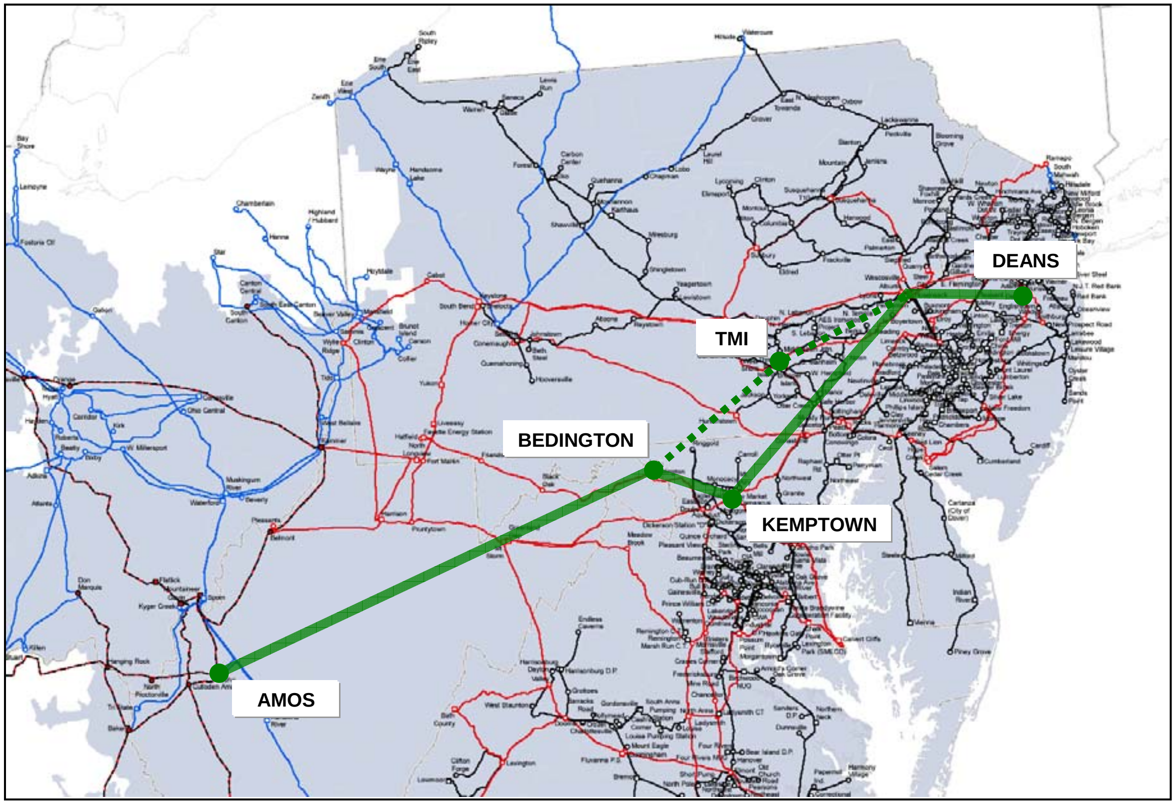
- *Key Regulatory Activity Completed*
  - FERC declaratory order approved July 2006
  - PJM approved plan June 2007
- *Key Next Steps*
  - Complete FERC Filing – Fall 2007
    - *Pursuing new project FERC incentives: cash return on CWIP, higher ROE, recovery of pre-commercial operation costs and recovery of abandonment costs.*
  - Siting Approved – Fall 2009
  - Completion – Fall 2012

AEP®

I-765TM in PJM - Phase II (Bedington-Deans)

Second phase of original AEP 550-mile I-765TM proposal

- Approximately 250 miles from West Virginia-Maryland border to Public Service Electric & Gas Deans Station in New Jersey.
- Currently under consideration by PJM as part of Regional Transmission Expansion Plan (RTEP).
- Based on PJM RTEP approval, AEP will seek a suitable business partner (JV partner) to complete the second leg of the original proposal.

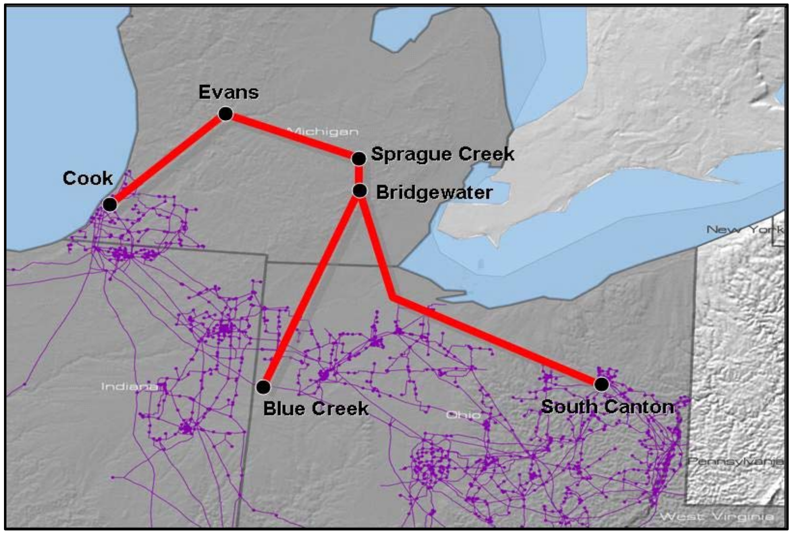


AEP®

765-kV in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - Agreement with ITC Transmission for 765-kV study
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.0 billion investment (before ownership division)
- *Benefits*
  - 3,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- *Next Steps*
  - Study results shared with PJM/MISO– Summer 2007
  - Public release of study results – Fall 2007
  - Potential JV formation – Fall 2007
  - PJM/MISO approval - Summer 2008
  - FERC Filing - Fall 2008
  - Siting approval – Summer 2010
  - Estimated completion – Summer 2013

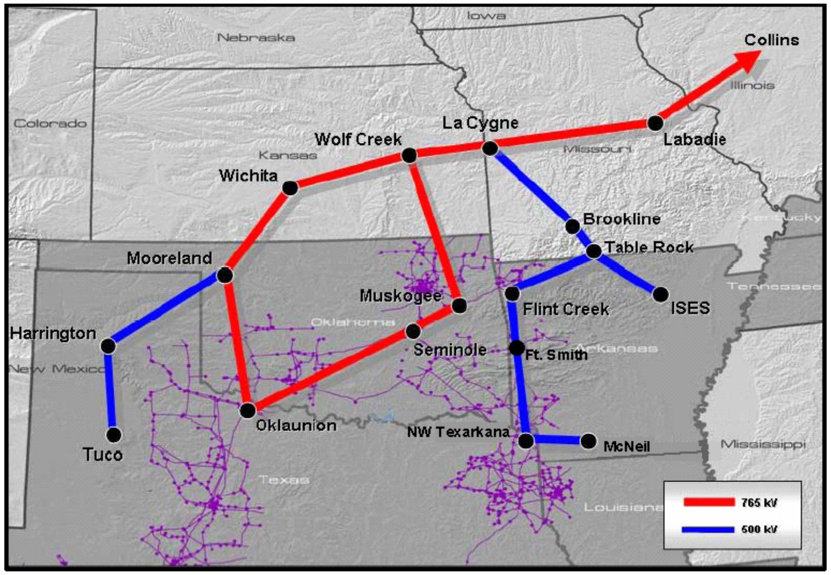


The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

765-kV in SPP

Significant opportunity for 765-kV transmission in SPP

- *Overview*
  - July 2006 AEP submitted conceptual project for six 765-kV lines
  - Proposed 765-kV Kansas / Oklahoma / Arkansas connecting to MISO/PJM
  - 610 miles from Kansas to Arkansas
  - $3.0 billion investment (before ownership division)
  - Proposed 2012-2017 construction period
  - SPP proposes 765-kV in Texas / Oklahoma / Kansas / Missouri connecting to MISO/PJM
  - SPP also proposes 500-kV in Texas / Oklahoma / Arkansas / Missouri



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

- *Benefits*
  - 4,000 MVA capability

- *Next Steps*
  - Study disclosure – Fall 2007
  - JV formation (Partner-TBD) – Fall 2007
  - SPP RTO/BOD EHV Overlay approval – Summer 2009
  - SPP RTO FERC Filing – Fall 2009
  - Siting approval – Fall 2011
  - Estimated completion – Summer 2017

AEP ®

2

ETT Status Update

ETT: Delivering Power for Texas' Future

- *Transaction Structure*
  - 50/50 joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC.
  - ETT capital structure is 60% debt / 40% equity (PUCT requirement).
  - Executive manager provided by AEP; business manager provided by MidAmerican.
  - Investment opportunities can be offered by either partner.

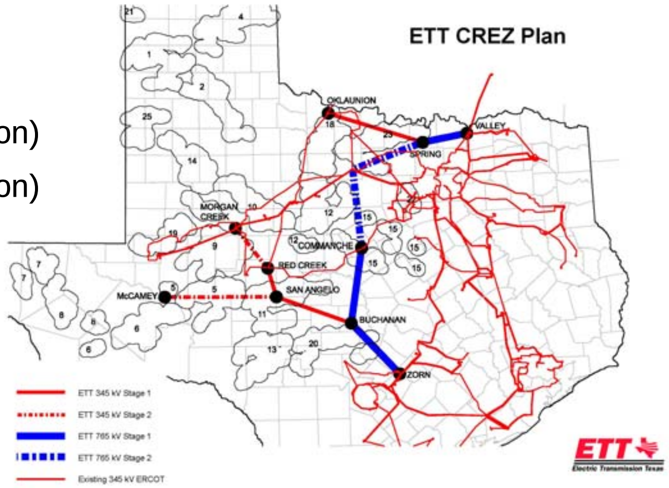
- *Transaction Status*
  - Participation Agreement signed Jan. 9, 2007.
  - Texas regulatory filing on Jan. 22, 2007.
    - Requested utility status, transfer of initial assets, establishment of TCOS transmission recovery mechanism.
    - Hearings conducted July 16-17, 2007, commission order expected in September 2007.
  - FERC approval for asset transfer received April 20, 2007.
  - Closing deadline of Nov. 1, 2007 can be extended by mutual agreement.

AEP®

CREZ & Backbone Opportunities

Harnessing the Wind: Competitive Renewable Energy Zones offer unique opportunities to showcase ETT

- **ETT CREZ Overview**
  - Strengthen ERCOT grid to collect and deliver wind generation to load
  - Build transmission in the most cost effective manner, addressing:
    - Future generation development
    - Load growth pockets
    - Market efficiency (reduce congestion)
    - Competitive wholesale markets
    - Economic growth
  - \$1.5 billion investment Phase 1 – 2012 (before ownership division)
  - \$1.5 billion investment Phase 2 – 2015 (before ownership division)



- **CREZ Approval Stages as outlined by the PUCT**
  - Stage 1 – Final order designating power regions – August 2007
  - Stage 2 – CREZ Transmission Optimization Study – January 2008
  - Stage 3 – PUCT selection of transmission construction designees – February 2008
  - Stage 4 – CCN development and submission – February 2009
  - Stage 5 – CCN approval – August 2009
  - Stage 6 – Construction (TBD)

CREZ & Backbone Opportunities – cont'd

Harnessing the Wind: Competitive Renewable Energy Zones offer unique opportunities to showcase ETT

- **ETT ERCOT Backbone Proposal**
  - ETT proposal for ERCOT and PUCT to consider CREZ transmission in context of long-term vision for transmission system.
  - Current 5-year planning horizon results in higher ultimate costs, lower system efficiency.
  - Long-term 15-20 year perspective provides better plan, supports development of high voltage backbone at 765-kV.
  - $4.2 billion investment (long-term backbone).

Rate Relief Is A Critical Element To AEP's Financial Success

AEP®

2007 Regulatory Activity Completed

Appalachian Power – Virginia Base Rate Case

Final order approved on May 15, 2007

- ✓ Results in $24 Million annual increase in base rates
- ✓ 10.0% approved ROE

Texas North Base Rate Case

Final settlement order approved on May 24, 2007

- ✓ Results in $11.7 million increase in pre-tax earnings ($13.7 million increase in revenues offset by $2 million increase in depreciation expense)
- ✓ No stipulated ROE in the settlement. For AFUDC purposes, Texas North will utilize the ROE that comes out of the Texas Central rate case.

Appalachian Power – West Virginia Expanded Net Energy Cost (ENEC) Filing

Final settlement order approved on June 22, 2007

- ✓ Results in $85.5 million net increase in revenues effective July 1, 2007
  - ✓ $54.8 million covers increased costs related to coal and purchased power
  - ✓ $28.5 million covers environmental construction costs, primarily related to installation of scrubbers
  - ✓ Remainder ($2.2 million) recovers first year costs of rehabilitating four small electric utilities acquired as of July 1

Indiana Michigan Power – Indiana Depreciation Study

Interim settlement order approved on June 13, 2007

- ✓ Allowed a change in depreciation rates effective July 1, 2007, resulting in a pretax earnings increase of approximately $69 million per year
- ✓ Stipulated a $5 million credit to customers in the next fuel adjustment clause proceeding
- ✓ Required I&M to file a rate petition on or before July 1. Petition was filed on June 19.

Regulatory Activity Underway

AEP Texas Central Company General Rate Case

On November 9, 2006, TCC & TNC filed applications with the PUCT to raise base rates they charge to Retail Electric Providers (REP) serving end-use electricity customers in their service territories. On April 3, 2007, TCC and TNC submitted revised rate increase requests of $69.9MM and $22MM, respectively. Requested increases include the expiration of merger-related billing credits that have been in place since 2000, totaling $20MM and $6.2MM for TCC and TNC, respectively. (TCC Docket #33309, TNC Docket #33310). TNC reached settlement on May 4, 2007 for a $13.7MM increase in revenues and a $2MM increase in depreciation, resulting in an annual increase of $11.7MM. The settlement was approved by the PUCT on May 24, 2007. The expiration of the merger credits for TCC was approved by the PUCT in June 2007.

Procedural Schedule

March 13, 2007	Intervenor testimony
March 23, 2007	Staff testimony
April 3, 2007	Rebuttal testimony
April 12, 2007	Hearings
May 14, 2007	Rates effective under bond, subject to refund

Final Order expected in September-October 2007

Regulatory Activity Underway

PSO General Rate Case

On November 21, 2006, Public Service Oklahoma filed an application with the Oklahoma Corporation Commission to increase base rates by $49.6 million to recovery investments already made and costs incurred. The request represents a 4% overall increase (including fuel). The filing also includes a proposal to adopt an annually adjusted rate mechanism, which includes a return on CWIP. The formula rate would adjust rates, up or down, if PSO earns above or below an approved bandwidth around the authorized ROE. (Case #200600285)

Pro-forma Capital Structure – Company Position (Test Year ended 6/30/06)

AEP®

Regulatory Activity Underway

AEP Ohio Application For 4% Provision On Generation Rate

- On Jan. 23, 2007, CSP and OP filed an application at the PUCO to recover 2007 costs associated with additional generation-related expenditures the companies are encountering related to environmental, security and other new generation-related costs pursuant to the RSP.
- CSP and OP are requesting to implement the provision to recover $24.5MM and $8.2MM, respectively, from May 2007 through December 2007.
- Staff & Intervenor testimony filed May 11, 2007; Staff recommended a $15MM increase at CSP and a $3.7MM increase at OP; OCC recommended a $19.9MM increase for CSP and a $3.7MM increase for OP.
- Hearings were held in May and June and we expect an order in September or October 2007.
- Because there was no specific action by the PUCO within the required time frame, we were allowed to implement these increases, subject to refund, in May 2007.

I&M Indiana Rate Petition

- On June 19, 2007, I&M filed a petition with the Indiana Utility Regulatory Commission (IURC) for authority to increase its rates and charges for electric utility service and to establish and implement rate adjustment mechanisms to track certain matters.
- Requested trackers relate to reliability enhancement, demand-side management/energy efficiency programs, off-system sales margins, PJM, environmental compliance and capacity equalization settlement.
- Parties have agreed to a historic test year ended September 30, 2007, with a rate case filing date of January 31, 2008. This schedule is subject to IURC approval.

AEP®

Regulatory Activity Underway

Electric Transmission Texas (ETT) Rate Filing

- Jan. 22, 2007 – ETT filed with the Public Utility Commission of Texas for approval to operate as an electric transmission utility in Texas and to establish initial rates for ETT.
  - Requested capital structure of 60% debt / 40% equity; requested ROE of 11.25%.
  - Intervenor testimony filed June 8, 2007; Staff testimony filed June 18, 2007; Staff recommended a 10.50% ROE – 10.0% with a 50 bps addition for start-up risk; Hearings were held July 16 and 17, 2007.
  - An order is expected in the third quarter of 2007 and operations are expected to commence in the 2nd half of 2007. Upon receipt of approvals, AEP and MidAmerican will each own a 50% interest in the joint venture.

Seams Elimination Cost Adjustment Revenues

- August 2006 – ALJ rendered initial decision finding SECA rates charged were unfair, unjust & discriminatory.
  - Up to $96MM of SECA revenues could be disallowed, net of unused provisions.
- We believe that major portions of the ALJ's findings either conflict with previous FERC decisions or are without merit or both.
- Exceptions to initial decision filed Sept. 11, 2006; Replies to exceptions filed Oct. 11, 2006; Order expected by the Commission in 2007.

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission serves over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1st.
- The current revenue requirement is $88.7MM and the new total revenue requirement requested is $161MM.
- We requested an effective date of September 1, 2007 for the revised tariff , which the FERC suspended for an additional five months, which extends the effective date to February 1, 2008.

AEP®

Regulatory Activity Underway

APCo Mountaineer IGCC Filing

West Virginia

- Testimony filed with the West Virginia Public Service Commission on June 18, 2007 in support of APCo's application for a Certificate of Public Convenience and Necessity to construct a 600MW IGCC plant in WV at a cost of approximately $2.23 billion.
  - Testimony includes a proposal for the Commission to approve a cost recovery mechanism through the existing Expanded Net Energy Cost (ENEC) mechanism. The filing is not a formal proposal to adjust rates.
  - Actual requests for increased rates will be included in future filings, once construction of the plant has commenced and actual Construction Work In Progress data is known.
- Public hearings are scheduled for December 10-14, 2007 with an order on or before March 7, 2008.

Virginia

- Testimony filed with the Virginia State Corporation Commission on July 16, 2007 seeking a prudence determination and approval to recover, beginning in 2009, Virginia's share of the carrying costs associated with the proposed plant.
- Public hearings are scheduled for February 12, 2007.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- Oral arguments regarding this matter are scheduled on the Ohio Supreme Court's agenda for October 9, 2007.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.

Regulatory Activity Underway

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- Public hearings began August 20, 2007.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to Purchase, Operate, Own and Install Peaking, Intermediate and Baseload Generating Facilities. Peaking and intermediate facilities have been addressed. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- Public hearings are scheduled for September 11-14, 2007.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- Public hearings are scheduled for October 17, 2007.

Commitment To Credit Quality

- Maintain adequate liquidity
- Target 60% consolidated AEP debt/cap ratio
- Target long term AEP dividend payout ratio range of 55-60%

AMERICAN ELECTRIC POWER
FIXED INCOME
INVESTOR MEETING

BOSTON, MA

MARCH 29, 2006

A Century of Firsts

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

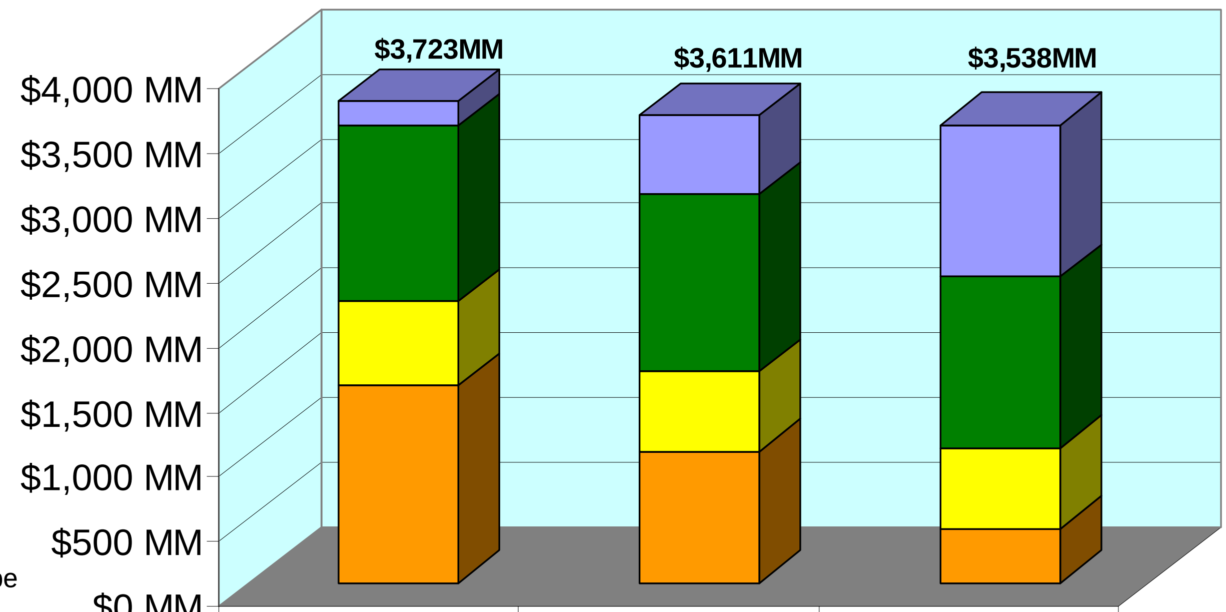
Revised Capital Investment Forecast

Capital Investment Forecast

excluding AFUDC



New Build Generation & Ongoing Infrastructure Replacement investment can be throttled

	2006	2007	2008
New Build Generation	$191	$611	$1,174
Ongoing Infrastructure Replacement & Economically Justified	$1,351	$1,367	$1,319
Mandated T&D	$650	$615	$625
Environmental Compliance	$1,531	$1,018	$420

Note: Capital forecasts do not include amounts for AEP Interstate Project.

MUCH OF CAPITAL INVESTMENT IS ADJUSTABLE

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 3819 of 9556

New Generation

IGCC

- Expect to obtain permits and finalize engineering by 2007
- Construction of 600 megawatt facility to begin in 2007
- Commercial operation date expected in 2010

PSO RFPs

- Submitted RFPs totaling 900 megawatts of baseload and peaking capacity
- Commercial operation dates expected in 2008 and 2011

SWEPCO RFPs

- Submitted RFPs totaling 2,100 megawatts of baseload, intermediate, and peaking capacity
- PPAs expected 2006 through 2009, with commercial operation dates expected from 2008 through 2011

Ending Cash Balance	$ 320	$ 401	$ 326	$ 200	$ 200

* Statement of Cash Flows shows $2.404B for 2005 and $1.637 for 2004 which reflects difference in accruals from previous year

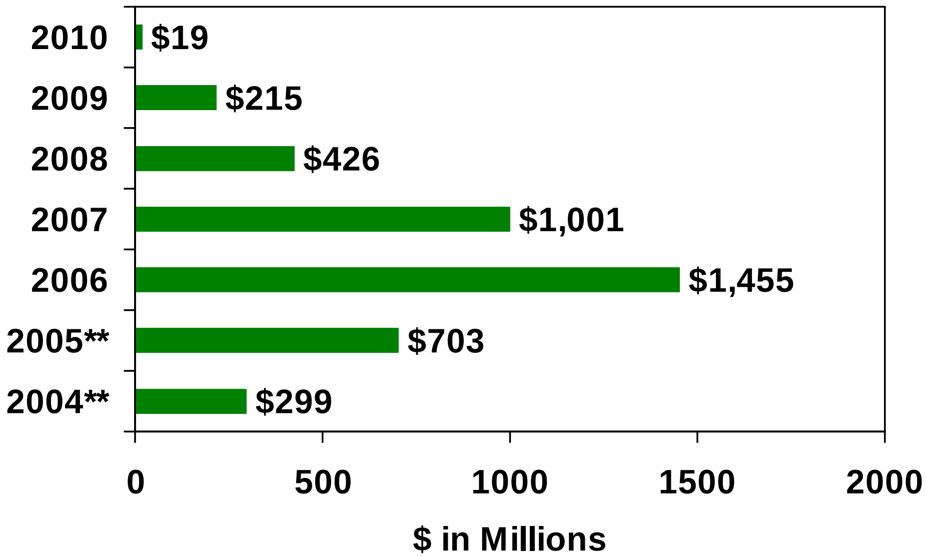
* * Cash Flow from Operations assumes full rate recovery on capital expenditures.

Note: Capital forecasts do not include amounts for AEP Interstate Project. Totals may not foot due to rounding.

REGULATORY RECOVERY WILL DRIVE CAPITAL INVESTMENT THROTTLE

$4.1 Billion Environmental Investment

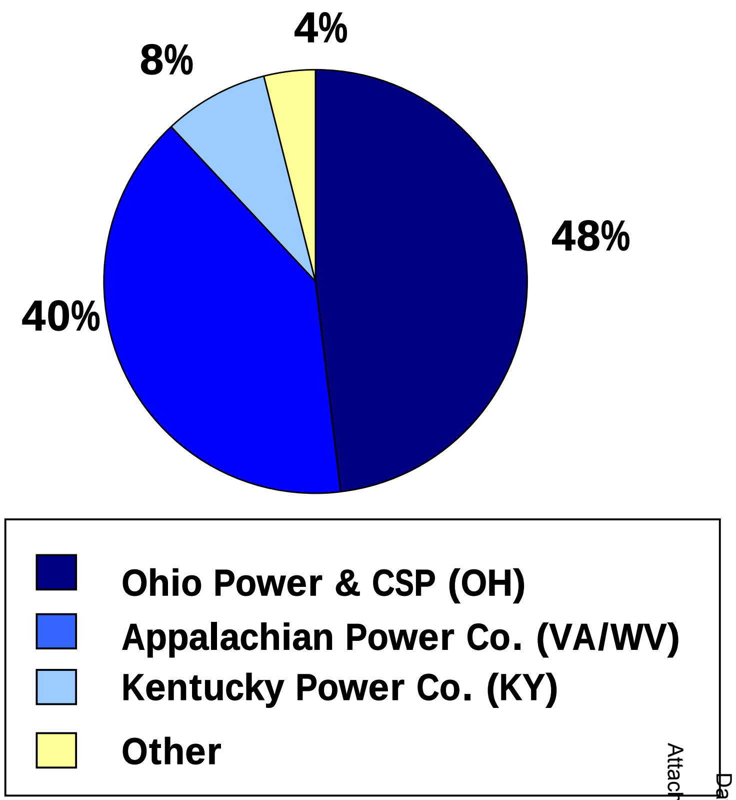
Environmental Capital Investment*



*Environmental investment for NOx, SO_2 , & Hg purposes including AFUDC

** Actual investment level in 2004 and 2005

Projected Environmental Investment Allocation

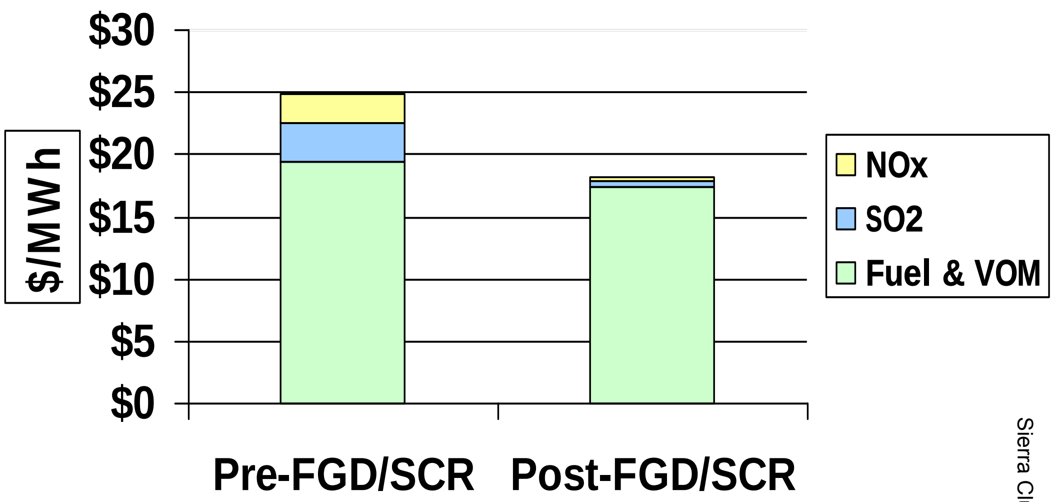


MAJORITY OF 2006 & 2007 DOLLARS WILL BE INVESTED IN OHIO & APCO

Low Cost Production Supports Investment & Investment Sustains Low Cost Production

- Lowers exposure to high cost emission allowances
- Creates opportunity to burn wider variety of lower cost fuels
- Improves baseload operation (higher capacity factor, higher margin)
- All-in cost of electricity, including FGD/SCR investment, remains low

Typical Pulverized Coal Plant
Comparison of Variable Production Cost
Pre- and Post- FGD/SCR (future view)*



* Assumes annual NOx program

AEP WILL REMAIN THE LOW COST PRODUCER FOLLOWING COMPLETION OF ENVIRONMENTAL RETROFIT PROJECTS

Regulatory Activity Underway

- ✓ TCC Stranded Cost Recovery True-up Filing – Final Order Issued
- ✓ Ohio Companies filing for pass through of FERC OATT changes
- ✓ Indiana Depreciation Petition
- ✓ APCo Filing for Recovery of E&R Costs in Virginia
- ✓ APCo & WPCo Base Rate & Expanded Net Energy Cost (ENEC) Filing in West Virginia
- ✓ IGCC

LEVEL OF CAPITAL INVESTMENT WILL BE ADJUSTED BASED ON RATE RECOVERY AND/OR CASH GENERATION

Texas Regulatory Activity

TCC Stranded Cost Recovery Case

February 16, 2006 – PUCT final order provides for net true-up of $1.475 billion

- March 3, 2006 – Requested approval of financing order to issue $1.8 billion in low-cost securitization bonds
    - Final order expected in May 2006
    - September 1, 2006 - Issuance of securitization bonds if no appeal

Procedural Schedule for TCC Securitization

- ✓ April 17, 2006 – Intervenors File Testimony
- ✓ April 24, 2006 – Staff Files Testimony
- ✓ April 27, 2006 – TCC Files Rebuttal Testimony
- ✓ May 2-4, 2006 – Hearings On Merit

- April 2006 – Request approval for CTC to address other true-up items
    - Expected $475 million credit to customers
    - Jan 2007 – CTC to be implemented

Regulatory Activity Underway

<u>Ohio Companies Pass through of FERC OATT Changes</u>

Filed Feb 3, 2006 - Seeking authority to pass through to customers the changes in the FERC OATT related to the elimination of the SECA revenues and the costs associated with the Wyoming-Jacksons Ferry transmission line

<u>Indiana Depreciation Filing</u>

December 1, 2005 – I&M filed petition with the IURC for accounting authorization to revise the depreciation rates applicable to its electric utility plant in service

- ✓ Based on a 2004 depreciation study, I&M recommends a decrease in annual depreciation expense of approximately $45 Million on an after-tax Indiana jurisdictional basis.
- ✓ Procedural schedule has been set with final order expected in June 2006

Regulatory Activity Underway

Appalachian Power

Virginia E & R Cost Recovery Factor - Filed July 1, 2005 - Seeking recovery of $62.1 Million in new Environmental & Reliability costs

- ✓ Oct 14, 2005 – SCC ruled VA law does not allow recovery of prospective costs - $48.6 Million
- ✓ Nov 14, 2005 - APCo filed supplemental direct testimony which included updated actual E&R costs incurred through Sept. 30, 2005 of $21.1 million

Virginia General Rate Case – Gave notice to VA SCC on March 1, 2006 of intent to file general rate case no sooner than May 1, 2006

Appalachian Power & Wheeling Power – West Virginia Base Rate Case & ENEC Reactivation

Filed August 26, 2005 – Seeking $183 Million increase in revenues for increasing costs for coal, purchased power and environmental improvement construction projects

- ✓ APCo filed supplemental testimony on January 18, 2006 to reflect Ceredo plant purchase and other miscellaneous items resulting in a revised revenue requirement of $171 Million.
- ✓ APCO was granted the authority to begin deferral accounting for ENEC beginning July 1, 2006.

Proposed Phase-in over 4 years

- ✓ June 23, 2006 – $74 Million*
- ✓ June 23, 2006 – $9 Million
- ✓ Jan 1, 2007 – $43 Million
- ✓ Jan 1, 2008 – $8 Million
- ✓ Jan 1, 2009 – $37 Million

*Includes:
$16MM Base Rates
$56MM ENEC
$2MM Misc

Procedural Schedule

- ✓ March 8, 2006 – Staff and Intervenors Testimony
- ✓ April 7, 2006 – Rebuttal & Cross-rebuttal
- ✓ April 18 - 21, 2006 – Evidentiary Hearings
- ✓ Initial Briefs – 20 days after receipt of transcripts
- ✓ Reply Briefs – 10 days after initial briefs
- ✓ July 28, 2006 – Statutory deadline for an order

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 – Confidential
Page 3827 of 9556

IGCC Regulatory Activity

Ohio - Cost Recovery Filing

Phase 1

- ✓ Effective during 2006
- ✓ Seeks recovery of initial costs, including those already incurred, such as site engineering and various other engineering services
- ✓ Approximately $23.7 Million

Phase 2

- ✓ Effective 2007- mid 2010 (Construction Phase)
- ✓ Seeks recovery of carrying costs associated with plant construction

Phase 3

- ✓ Effective mid 2010 (Commercial Operation begins)
- ✓ Seeks recovery of projected $1.174 Billion cost of plant over its operating life.

Ohio Next Steps

2006:

- ✓ Secure cost recovery plan
  - Final PUCO Order expected in 1Q06
- ✓ Finalize site selection
- ✓ Negotiate with suppliers

2006–2007:

- ✓ Obtain permits and finalize engineering and procurement

2007–2010:

- ✓ Construct and start-up plant

West Virginia IGCC Activity

On January 11, 2006, Appalachian Power Co. filed a Certificate of Public Convenience and Necessity seeking authority to construct a 600-MW IGCC facility in West Virginia.

SEEKING AUTHORITY FOR THREE PHASE RECOVERY APPROACH IN OHIO

Regulatory Activity Completed

Ohio – Rate Stabilization Plan (2006 - 2008)

- ✓ Annual 3% and 7% generation rate increases at CSP & OP, respectively
- ✓ POLR rate rider for environmental additions
- ✓ Ability to request additional 4% annual increase in generation rate
- ✓ Elimination of 5% residential generation credit (stipulated in the pre-existing Electric Transition Plan of 2000)

AEP East FERC Transmission Case

December 20, 2005 – FERC approved settlement allowing wholesale transmission rates to increase

- ✓ Results in $22 Million net revenue in 2006 from wholesale transmission

SWEPCo Fuel Factor/Surcharge Filing

January 12, 2006 – Settlement approved by PUCT

- ✓ Fuel factor will increase SWEPCo's annual Texas retail fuel-related revenues by approximately $46 Million.
- ✓ Interim surcharge will collect the under-recovery amount of $44 Million, including interest.

Appalachian Power- Virginia Fuel Factor Increase

- ✓ $57.7 Million increase in fuel factor approved on January 20, 2006

Kentucky Base Rate Case

Final order approved on March 14, 2006

- ✓ $41 million annual increase in base rates
- ✓ To be effective March 30, 2006

PROGRESS IS BEING MADE ON THE REGULATORY FRONT

2006 Key Operating Company Highlights

Dependent on Actual Capital Investment

(in millions)

Company	Projected Capital Expenditures	Projected Issuances	Target Equity Ratio
APCO	$943	$500 - $600	42-45%
CSP	$343	$100 - $150	44-48%
I&M	$311	$400 - $500	38-42% (a)
KPCo	$100	$50 - $75	42-45%
OPCo	$1,070	$450 - $550	44-48%
PSO	$279	$150 - $200	44-48%
SWEPCo	$288	$100 - $150	44-48%
TCC (b)	$278	$0	40%
TNC	$73	$0	40%

(a) Ratios include impact of Rockport 2 lease.

(b) Excludes impact of securitization.

MAINTAIN FINANCIAL STRENGTH OF SUBS BY RETAINING AND/OR INFUSING EQUITY CAPITAL DEPENDING ON THEIR CREDIT RATIOS AND FREE CASH FLOW

Long-Term Debt Guidelines

- Issuers:
  - Issue at operating companies.
- Size:
  - Make transactions index eligible if possible.
  - When possible, issue a size sufficient for competitive execution.
- Maturity:
  - Issue maturities for which the market has appetite.
  - Achieve weighted average life targets for operating companies, generally between 10-15 years.
- Timing:
  - Will issue based on the timing of maturities and levels of short-term debt as driven by capital spending and operating cash flow.

Summary of Major 2006 Financial Performance Drivers

- ✓ **Load Growth of 2.5%**
- ✓ **$500MM rate recovery assured or in progress**
- ✓ **Rising fuel costs of 11-13%**
- ✓ **Higher planned outages, increased retail load, & sale of TCC generation to impact off system sales**
- ✓ **Decline in utility O&M**
- ✓ **Parent Company improvement (debt & interest expense reduction)**

TRADITIONAL UTILITY FACTORS WILL DRIVE 2006 PERFORMANCE

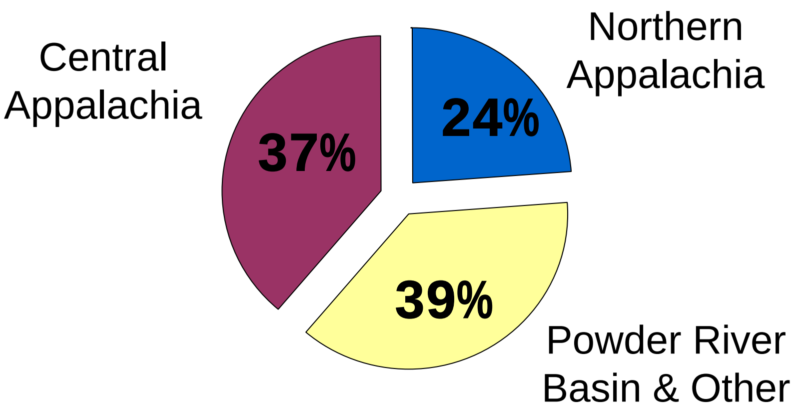
Coal Procurement

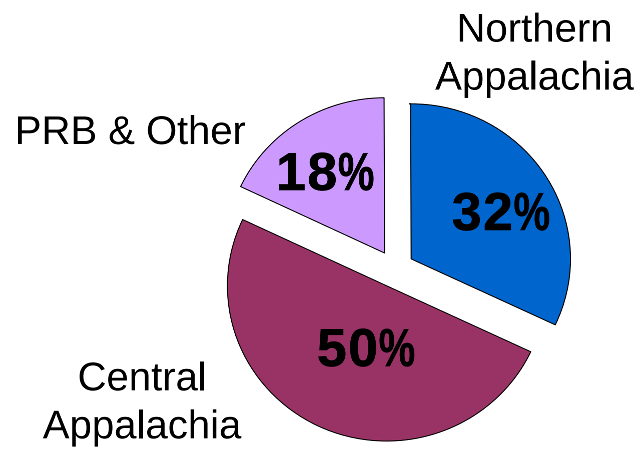
AEP SYSTEM



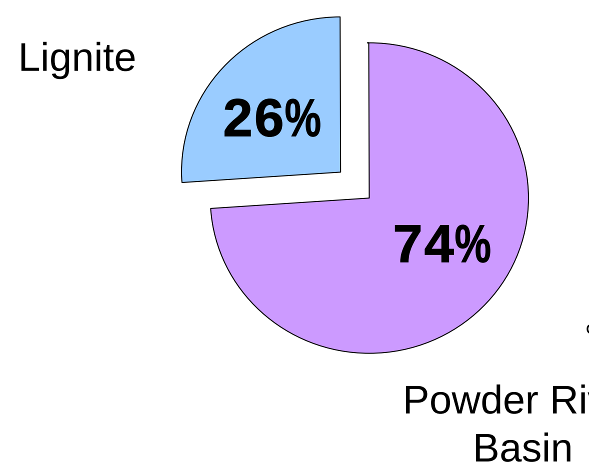
Coal Supply
(on average)

- Purchase 75 MM tons per year
- Avg. delivered price ~ $32.52/ton in 2005
- Essentially >95% purchased for 2006
- Approximately 11%-13% price increase in 2006
  - Rising costs at Eastern mines & safety issues
  - High SO_2 Allowance prices drive low sulfur coal prices

EASTERN SYSTEM

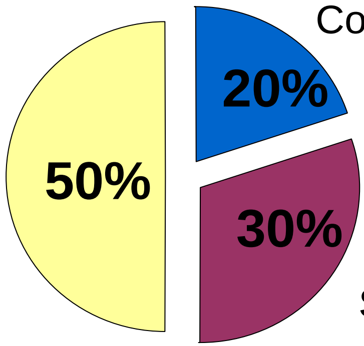


WESTERN SYSTEM



Fuel Recovery

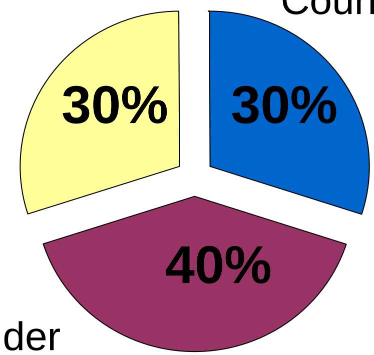
AEP SYSTEM



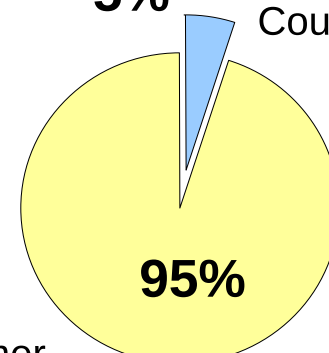
Fuel Cost Recovery
(on average)

- Fuel recovery varies by jurisdiction
- 70% of fuel cost is recoverable across the AEP System
- Active Fuel Clause Jurisdictions:
  - AEP EAST: APCo, I&M – MI, KGP, KPCo
  - AEP WEST: PSO, SWEPCO

EASTERN SYSTEM



WESTERN SYSTEM



Note: Fuel Recovery percentages are based on estimates for 2006 Fiscal Year

Jurisdictional Fuel Clause Summary

STATE	FUEL CLAUSE	ADJUSTMENT FREQUENCY
Arkansas	Yes	Monthly
Indiana	Yes	Capped at increasing rates through June 30, 2007
Kentucky	Yes	Monthly
Louisiana	Yes	Monthly
Michigan	Yes	Annually
Ohio	No	Although there is no recovery mechanism in Ohio, the RSP provides for a 3% (CSP) and 7% (OP) increase in generation rates annually, which includes fuel beginning January 2006 and extending through December 2008.
Oklahoma	Yes	Annually
Tennessee	Yes	Monthly
Texas (SPP)	Yes	Annually
Virginia	Yes	Annually
West Virginia	Yes	Annual ENEC currently suspended. On Jan 6, 2006, WVPSC approved deferral accounting for ENEC to begin July 1, 2006 and new rates to be effective July 28, 2006.

Summary Rate Case Information

West Virginia Base Case Rate Filing

On August 26, 2005, Appalachian Power Co. and Wheeling Power Co. filed an application with the West Virginia Public Service Commission (WVPSC) to increase electric rates and charges, a request for the reactivation and modification of the expanded net energy cost mechanism (ENEC), a proposal for the disposition of Appalachian Power Company's ENEC over-recovery balance, a request for implementation of a System Reliability Tracker mechanism, and a request for waiver of certain provisions of the Commission's Rules. APCo filed supplemental testimony on January 18, 2006 to reflect Ceredo plant purchase and other miscellaneous items resulting in a revised revenue requirement of $171 Million. (Docket #: 05-1278-E-PC-PW-42T)

Statutory Deadline: July 28, 2006

* Procedural schedule subject to modification until order is issued

Summary Rate Case Information

Virginia E&R Factor Filing

On July 1, 2005, Appalachian Power Co. filed a request with the Virginia SCC to recover incremental actual and projected costs for environmental compliance and T&D System reliability in the amount of $62.1MM. The SCC has ruled that under applicable VA law, it does not have authority to approve the recovery of projected E&R costs before their actual incurrence and adjudication. APCo filed supplemental direct testimony which included actual costs incurred for E&R thru September 30, 2005 of $21.1 million. Docket # PUE-2005-00056

Capital Structure – Company vs. Staff

Capital Structure	Company Position (filed 7/1/05)	Staff Position (filed 1/11/06)
Long-Term Debt	53.43%	51.50%
Short-Term Debt	2.67%	2.20%
Preferred Stock	0.54%	0.53%
Common Equity	42.65%	45.16%
ITC	0.71%	0.61%
Total	**100.00%**	**100.00%**
Recommended ROE	**10.85%**	**9.80%**

Revenue Requirement – Company vs. Staff*

Revenue Requirement	Company Position (filed 11/14/05)	Staff Position (filed 1/11/06)
Environmental	13.3	8.2
Transmission	6.1	8.8
Distribution	1.7	2.6
Total	**$21.1MM**	**$19.6MM**

* Difference in positions does not reflect the relative earnings impact and is not necessarily a reflection of the ultimate outcome of the case.

AEP Texas Central Company

President and Chief Operating Officer: Charles Patton

AEP Texas Central Company (TCC)

(organized in Texas in 1945) is engaged in the generation (to an extremely limited extent), transmission and sale of power to affiliated and non-affiliated entities and the distribution of electric power to approximately 729,000 retail customers through REPs in southern Texas, and (to a limited extent) in supplying and marketing electric power at wholesale to other electric utility companies and market participants. Under the Texas Act, TCC is completing the final stage of exiting the generation business and has already sold most of its generation assets, including STP. At December 31, 2005, TCC had 1,160 employees. In addition to its AEP System interconnections, TCC is a member of ERCOT.

Total Customers:
(Based on electric meters)

• **Residential**	**620,000**
• **Commercial**	**103,000**
• **Industrial**	**6,000**
Total	**729,000**

Generating Capacity	**54 MW***

Generating Capacity by Fuel Mix:

- **Coal: 100%**

Transmission Miles	**5,000**
Distribution Miles	**28,000**

*** Includes TCC's 54-MW share of the Oklaunion plant**

Principal industries served:
Oil and gas extraction
Food processing
Apparel
Metal refining
Chemical and petroleum refining
Plastics
Machinery equipment

Regulatory Information

Public Utility Commission of Texas (PUCT)

AEP Regulated Electric Utilities

Texas Central Company
Texas North Company
Southwestern Electric Power Company

Commissioners

Number: 3	**Appointed/Elected**: Appointed	**Term**: 6 years	**Political Makeup**: **R:3**

Qualifications for Commissioners

To be eligible for appointment, a commissioner must be: (1) a qualified voter; (2) a citizen of the United States; and (3) a representative of the general public. Chairman appointed by the Governor.

Commissioners

Paul Hudson, Chairman (Rep.), since August 2003; current term expires August 2009. Served as policy director in governor's office. Worked at PUCT as advisor and senior economic analyst. Served on National Governor's Association Task Force on Electric Infrastructure; Western Governor's Association Working Group on Cross Border Energy Issues. Master's degree from Arizona State.

Barry T. Smitherman, Commissioner (Rep.), since April 2004; current term expires August 2007. Attorney; Assistant DA; 16 years as a public finance investment banker. Law degree from the University of Texas School of Law, Master's in public administration from Harvard University.

Julie Parsley, Commissioner (Rep.), since November 2002; current term expires August 2011. Lawyer, private practice. Served as Solicitor General of Texas with Office of Attorney General. Also served as Deputy Solicitor General. Received law degree from Texas Tech University.

AEP Regulatory Status

• Operations for TCC and TNC have been functionally separated. Retail competition has been delayed by the PUCT in the Southwest Power Pool (SPP) area of Texas (including SWEPCO and TNC-SPP areas). • PUCT issued a final order in TCC stranded cost true-up case on 2-16-06, approving a true-up balance of $1.475 billion. We expect to appeal, seeking additional recovery consistent with Texas law. •TCC final fuel reconciliation (July 98-Dec 01). Final order received 6-3-05. TCC and other parties filed appeals in the District Court, which is currently in the briefing phase. Hearing on the Merits is set for 3-24-06. TCC has also filed at the U.S. District Court to ajoin the PUCT from enforcing their ruling regarding the allocation of the off-system sales margins; a briefing and procedural schedule has not been established. • New Transmission Cost Recovery Factors (TCRF) became effective 3-1-06. The impact of the TCRF update will be $1.5 million annual increase.

• TCC Rate Case. Final order received 8-15-05. TCC and other parties filed appeals in the District Court. No procedural schedule has been established. • TCC filed on 3-3-06 an application requesting to securitize $1.8 billion of regulatory assets, stranded costs and related carrying costs. A procedural schedule has been established; hearings scheduled for May 2-4.

AEP Texas North Company

President and Chief Operating Officer: Charles Patton

AEP Texas North Company (TNC)

(organized in Texas in 1927) is engaged in the generation, transmission and sale of power to affiliated and non-affiliated entities and the distribution of electric power to approximately 189,000 retail customers through REPs in west and central Texas, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities, rural electric cooperatives and other market participants. At December 31, 2005, TNC had 387 employees. The territory served by TNC also includes several military installations and correctional facilities. In addition to its AEP System interconnections, TNC is a member of ERCOT.

Principal industries served:

Agriculture and the manufacturing or processing of Cotton seed products

Oil products

Precision and consumer metal products

Meat products

Gypsum products

Total Customers:
(Based on electric meters)

• **Residential**	**148,000**
• **Commercial**	**30,000**

Appalachian Power

President and Chief Operating Officer: Dana Waldo

Appalachian Power Company (APCo)

(organized in Virginia in 1926) is engaged in the generation, transmission and distribution of electric power to approximately 942,000 retail customers in the southwestern portion of Virginia and southern West Virginia, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities and other market participants. APCo covers a service territory of 19,049 square miles, and at December 31, 2005, APCo and its wholly owned subsidiaries had 2,408 employees. Among the principal industries served by APCo are coal mining, primary metals, chemicals and textile mill products. In addition to its AEP System interconnections, APCo also is interconnected with the following unaffiliated utility companies: Carolina Power & Light Company, Duke Energy Corporation and Virginia Electric and Power Company. APCo has several points of interconnection with TVA and has entered into agreements with TVA under which APCo and TVA interchange and transfer electric power over portions of their respective systems. APCo is a member of PJM.

AEP Regulated Electric Utilities

Wheeling Power Co.
Appalachian Power Co.

Commissioners

Number: 3	**Appointed/Elected:** Appointed	**Term:** 6 years	**Political Makeup: R**: 1 **D:** 2

Qualifications for Commissioners

The West Virginia Public Service Commission (WVPSC) consists of three members, appointed by the Governor, with the advice and consent of the senate. No more than two members of the commission may belong to the same political party. The Commissioners serve six year staggered terms, with one term expiring as of July 1 of each odd numbered year. One Commissioner is designated as Chairman of the Commission by the Governor. The Chairman serves as the chief fiscal officer of the Commission.

Commissioners

Edward H. Staats, (Dem.), since 2003, term expires June 2009. Former Chief of Operations in the Governor's office.

R. Michael Shaw, Commissioner (Rep.), since mid 2003, term expires June 2007. Attorney, former state legislator.

Jon W. McKinney, Chairman (Dem.), since 2005, term expires June, 2011. Formerly served as plant manager of Flexsys' Nitro, W Va operations, chairman of Chemical Industry Committee for W Va, board member of W Va Chamber of Commerce, W Va Manufacturer's Association, Chemical Alliance Zone, W Va Roundtable & Thomas Memorial Hospital.

AEP Regulatory Status

• Base rates not frozen • Annual ENEC proceedings are currently suspended. • On 8-26-05 AP & WP filed with the WVPSC for a $183 million revenue increase to be phased in over a four-year period beginning in mid 2006. The filing consists of a general rate case, reinstatement of the ENEC, implementation of scheduled incremental rate increases for major clean air & transmission investments, and the implementation of a system reliability tracker mechanism. In Jan 06, WVPSC approved a change in the procedural schedule setting hearings to begin 4-18-06, deferral accounting for ENEC costs to begin 7-1-06 and new rates to be effective 7-28-06. The Company is in the process of evaluating intervenor and WVPSC Staff testimony filed 3-8-06. Rebuttal and cross-rebuttal testimony is due 4-7-06..

Regulatory Information

Virginia State Corporation Commission

AEP Regulated Electric Utilities

Appalachian Power Co.

Commissioners

Number: 3	**Appointed/Elected**: Elected	**Term:** 6 years	**Political Makeup: R:** 2 **D:** 1

Qualifications for Commissioners

The Virginia State Corporation Commission (VSCC) is composed of three members elected by the General Assembly. Commissioners are elected to serve six-year terms, staggered in two year increments. The chair rotates annually among the three commissioners on February 1.

Commissioners

Theodore V. Morrison, Jr, (Dem.), since 1989; current term expires 2008. Member of the Virginia House of Delegates from 1968 to 1988. Member of Virginia Code Commission from 1974 and served as chairman from 1984 to 1988. Lawyer, private practice. Law degree from Emory University.

Mark C. Christie (Rep.), since 2004; current term expires February 2010. Current Chairman. Attorney, counsel to the Speaker of the House.

Judith Williams Jagdmann, (Rep.), since 2006, current term expires 2012. Law degree from T.C. Williams School of Law. Prior to being elected to the Commission, she served as 43rd Attorney General for the Commonwealth of Virginia. Prior to work in Attorney in the Office of Attorney General, served 13 years as counsel to the SCC.

AEP Regulatory Status

• Capped rates for default customers frozen through end of 2010 • Capped rates can be adjusted by two rate cases prior to the end of 2010 and incremental environmental and reliability cost recovery mechanisms • Active annual fuel clause. • On 7-1-05 AP filed a request with the Virginia Commission seeking to recover incremental actual and projected costs for environmental compliance and T&D System reliability (E&R). In an order dated 10-14-05, the Commission denied the Company's request for interim rate treatment and ruled that the Company may only seek to include actually incurred costs (i.e., no projected future costs) in the E & R cost recovery filing. The Company filed supplemental direct testimony on 11-14-05, which included updated incremental costs through 9-30-05 of $21.1 million. Hearings concluded 3-01-06. Briefs are due in early April. • On 3-1-06, AP gave notice to the Commission of its plan to file a general rate case no sooner than 5-1-06.

Columbus Southern Power

President and Chief Operating Officer: Kevin Walker

Columbus Southern Power Company (CSPCo)

(organized in Ohio in 1937, the earliest direct predecessor company having been organized in 1883) is engaged in the generation, transmission and distribution of electric power to approximately 710,000 retail customers in Ohio, and in supplying and marketing electric power at wholesale to other electric utilities, municipalities and other market participants. CSP Co covers a service territory of 3,701 miles and at December 31, 2005, CSPCo had 1,178 employees. CSPCo's service area is comprised of two areas in Ohio, which include portions of twenty-five counties. One area includes the City of Columbus and the other is a predominantly rural area in south central Ohio. In addition to its AEP System interconnections, CSPCo also is interconnected with the following unaffiliated utility companies: CG&E, DP&L and Ohio Edison Company. CSPCo is a member of PJM. Pursuant to an acquisition that closed on December 31, 2005, CSPCo purchased the electric utility operations of Monongahela Power Company in Ohio. As a result, in January 2006 approximately 29,000 customers in six southeastern Ohio counties, together with the transmission and distribution used to serve such customers, were added to CSPCo's service territory.

Total Customers:

• **Residential**	**636,000**
• **Commercial**	**71,000**
• **Industrial**	**3,000**
• **Other**	**300**
Total	**710,300**

Commissioners

Number: 5	**Appointed/Elected**: Appointed	**Term:** 5 years	**Political Makeup: R:** 3 **D:** 0 **I:** 2

Qualifications for Commissioners

Five members, appointed by the governor and confirmed by the state senate; five year, staggered terms, full-time positions, commissioners shall be selected from the lists of qualified persons submitted to the governor by the PUC nominating council. Not more than three of the members of the PUCO shall be members of the same political party. The governor appoints one of the five as president, who serves at the pleasure of the governor until a successor has been designated.

Commissioners

Alan R. Schriber, Ph.D., Chairman, (Ind.), since 1999. Term expires April 2009. Economics professor, president of a radio broadcasting company, investment advisor. Previously served as commissioner on the PUCO from 1983-1989. Member NARUC Telecommunications Committee.

Ronda Hartman Fergus, Commissioner, (Rep.), since 1995, reappointed in 2000 & 2005. Term expires April 2010. Lawyer, Ohio State; previously served on the PUCO staff as an administrative law judge in the Legal Department. Later served as the chief of Telecommunications, Water and Sewer Section of the Legal Department, and then chief of the Telecommunications Technical Staff.

Judy A. Jones, Commissioner, (Rep.), since 1997, reappointed in 2002. Term expires April 2007. Masters degree in Biological Chemistry, Univ. of Michigan. Member NARUC Committee on Electricity, Clean Coal Technology Work Group and vice-chair of its International Relations Comm, member of the National Coal Council, and a government member of the North American Electric Reliability Council.

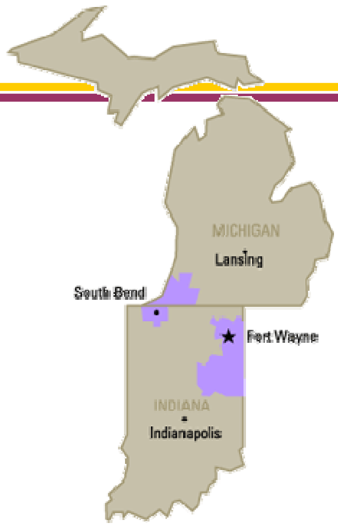
Donald L. Mason, Commissioner, (Rep.), since 1998, reappointed in 2003. Term expires April 2008. Lawyer, former chief of the Division of Oil and Gas at the Ohio Department of Natural Resources. He serves as chair of the NARUC Gas Committee and the NARUC Ad Hoc Committee on Electric Restructuring and Critical Infrastructure.

Clarence D. Rogers, Commissioner, (Ind.), since 2001, term expires April 2006. Lawyer, former executive deputy general manager Cleveland Regional Transit Authority, two terms as commissioner of the Ohio Turnpike Commission, assistant US Attorney, private practice as litigator.

AEP Regulatory Status

• Pursuant to RSP Plan approved by PUCO 1-26-05: • Distribution rates in effect at December 31, 2005 are frozen, with certain exceptions, until the end of 2008. • Institute for 2006-2008 a non-bypassable distribution rider for provider of last resort (POLR) costs. • CSP "G" rates to increase 3% per year (2006-2008). • OP "G" rates to increase 7% per year (2006-2008). • Transmission rates can upon filing reflect change in RTO costs.
• No active fuel clause • Application for IGCC plant recovery filed on 3-18-05. Hearings and briefs are done. Awaiting a PUCO order.
• On 2-3-06, CSP and OP filed for a change to retail tariffs to reflect the increased FERC approved OATT. • On 2-6-06, the PUCO directed Staff to conduct an investigation of reliability related matters of CSP and OP. Staff's report is to be filed 4-17-06.

Indiana Michigan Power



President and Chief Operating Officer:
Marsha Ryan

Indiana Michigan Power Company (I&M)

(organized in Indiana in 1925) is engaged in the generation, transmission and distribution of electric power to approximately 581,000 retail customers in northern and eastern Indiana and southwestern Michigan, and in supplying and marketing electric power at wholesale to other electric utility companies, rural electric cooperatives, municipalities and other market participants. I&M has a service territory of 4,578 square miles and at December 31, 2005, I&M had 2,633 employees. Since 1975, I&M has leased and operated the assets of the municipal system of the City of Fort Wayne, Indiana. In addition to its AEP System interconnections, I&M also is interconnected with the following unaffiliated utility companies: Central Illinois Public Service Company, CG&E, Commonwealth Edison Company, Consumers Energy Company, Illinois Power Company, Indianapolis Power & Light Company, Louisville Gas and Electric Company, Northern Indiana Public Service Company, PSI Energy Inc. and Richmond Power & Light Company. I&M is a member of PJM.

Regulatory Information

Indiana Utility Regulatory Commission

AEP Regulated Electric Utilities

Indiana Michigan Power Co.

Commissioners

Number: 5	**Appointed/Elected:** Appointed	**Term:** 4 years	**Political Makeup: R**:3 **D:** 2

<u>Qualifications for Commissioners</u>

Five members, appointed by the Governor from among persons nominated by a legislatively mandated utility commission nominating committee; four year, staggered terms, full-time positions. Not more than three of the members of the IURC shall be members of the same political party. At lease one of the commissioners must be an attorney qualified to practice law before the Indiana Supreme Court. The governor appoints one of the five as chairman. Republican Mitch Daniels was elected Governor on November 2, 2004.

<u>Commissioners</u>

David L. Hardy, Chairman (Rep.), since September 2005, current term will expire April 2006. Commissioner Hardy is an attorney who has worked in private practice since 1997. Areas of expertise include: negotiation, contracts, litigation, finance and administration. He has 35 years regulatory experience at the state and federal levels.

Larry S. Landis, Commissioner (Rep.), since December 2002, current term ends January 2008. Former president of a marketing and advertising agency, VP Corporate Advertising, Bank One, Indiana. Bachelor's degrees in political science and economics.

David W. Hadley, Commissioner (Dem.), since 2000; current term ends January 2006. Executive officer for Indiana AFL-CIO, former legislative affairs representative for United Mine Workers of America, coal miner, former high school social studies teacher. Master's degree in secondary education.

Greg Server, Commissioner (Rep.), since September 2005, current term ends in April 2009. Former state senator since 1981 and before that served in the Indiana House or Representatives from 1972 to 1980. Served as chair of senate commerce committee, which handled IURC and utility industry legislation. Served as Director of Administration for the Evansville Water and Sewer Utility.

David E. Ziegner, Commissioner (Dem.), since 1990, current term ends April 2007. Lawyer, staff attorney for Legislative Services Agency, General Council for IURC. Member, NARUC Committee on Electricity. Law degree from the Indiana University School of Law in Indianapolis.

AEP Regulatory Status

• Base rates are frozen and fuel cost recovery factors are capped at increasing rates through 6-30-07. • On 12/31/05 the company filed a petition with the IURC for accounting authorization to revise the depreciation rates applicable to its electric utility plant in service. This petition is not a request for a change in base rates, but for book depreciation rate decreases primarily as a result of longer depreciable property lives. Based on the depreciation study, I&M recommends a decrease in annual depreciation expense of approximately $45 million on an after-tax Indiana jurisdictional basis.• Staff and intervenor testimony is due 3-30-06. Hearings scheduled for [illegible] 04-06.

Regulatory Information

Michigan Public Service Commission

AEP Regulated Electric Utilities

Indiana Michigan Power Co.

Commissioners

Number: 3	**Appointed/Elected:** Appointed	**Term:** 6 years	**Political Makeup: R**:1 **D:** 2

Qualifications for Commissioners

The Michigan Public Service Commission (MPSC) is composed of three members appointed by the Governor with the advice and consent of the Senate. Commissioners are appointed to serve staggered six-year terms. No more than two commissioners may represent the same political party. One commissioner is designated as chairman by the Governor.

Commissioners

J. Peter Lark, Chair, (Dem) since July 2003: current term expires July 2009. Lawyer, assistant Attorney General in charge of special litigation division, former assistant prosecuting attorney.

Laura Chappelle, Commissioner, (Rep.) since 2001: current term expires July 2007. Lawyer, former deputy legal advisor to the Governor, regulatory affairs advisor to Michigan House Republicans, assistant prosecuting attorney.

Monica Martinez, Commissioner, (Dem) since 2005, current term expires July 2011. Former Deputy Director of the Governor's Legislative Affairs Division where she served as the Governor's principal lobbyist. Previous to this she served as an analyst for the Senate Democratic Office, where she specialized in technology and energy, human services and family law policy issues.

AEP Regulatory Status

Customer choice began 1/02. Generation was not deregulated. Retail rates were unbundled (though they continue to be regulated) to allow customers to evaluate generation costs. Michigan has an active annual fuel clause.

Kentucky Power

President and Chief Operating Officer: Tim Mosher

Kentucky Power Company (KPCo)

(organized in Kentucky in 1919) is engaged in the generation, transmission and distribution of electric power to approximately 176,000 retail customers in an area in eastern Kentucky, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities and other market participants. KPCo encompasses a service territory of 4,813 square miles and at December 31, 2005, KPCo had 454 employees. In addition to its AEP System interconnections, KPCo also is interconnected with the following unaffiliated utility companies: Kentucky Utilities Company and East Kentucky Power Cooperative Inc. KPCo is also interconnected with TVA. KPCo is a member of PJM.

Commissioners

Alan R. Schriber, Ph.D., Chairman, (Ind.), since 1999. Term expires April 2009. Economics professor, president of a radio broadcasting company, investment advisor. Previously served as commissioner on the PUCO from 1983-1989. Member NARUC Telecommunications Committee.

Ronda Hartman Fergus, Commissioner, (Rep.), since 1995, reappointed in 2000 & 2005. Term expires April 2010. Lawyer, Ohio State; previously served on the PUCO staff as an administrative law judge in the Legal Department. Later served as the chief of Telecommunications, Water and Sewer Section of the Legal Department, and then chief of the Telecommunications Technical Staff.

Judy A. Jones, Commissioner, (Rep.), since 1997, reappointed in 2002. Term expires April 2007. Masters degree in Biological Chemistry, Univ. of Michigan. Member NARUC Committee on Electricity, Clean Coal Technology Work Group and vice-chair of its International Relations Comm, member of the National Coal Council, and a government member of the North American Electric Reliability Council.

Donald L. Mason, Commissioner, (Rep.), since 1998, reappointed in 2003. Term expires April 2008. Lawyer, former chief of the Division of Oil and Gas at the Ohio Department of Natural Resources. He serves as chair of the NARUC Gas Committee and the NARUC Ad Hoc Committee on Electric Restructuring and Critical Infrastructure.

Clarence D. Rogers, Commissioner, (Ind.), since 2001, term expires April 2006. Lawyer, former executive deputy general manager Cleveland Regional Transit Authority, two terms as commissioner of the Ohio Turnpike Commission, assistant US Attorney, private practice as litigator.

AEP Regulatory Status

• Pursuant to RSP Plan approved by PUCO 1-26-05: • Distribution rates in effect at December 31, 2005 are frozen, with certain exceptions, until the end of 2008.• Institute for 2006-2008 a non-bypassable distribution rider for provider of last resort (POLR) costs. • CSP "G" rates to increase 3% per year (2006-2008). • OP "G" rates to increase 7% per year (2006-2008). • Transmission rates can upon filing reflect change in RTO costs. • No active fuel clause • Application for IGCC plant recovery filed on 3-18-05. Hearings and briefs are done. Awaiting a PUCO order. • On 2-3-06, CSP and OP filed for a change to retail tariffs to reflect the increased FERC approved OATT. • On 2-6-06, the PUCO directed Staff to conduct an investigation of reliability related matters of CSP and OP. Staff's report is to be filed 4-17-06.

Public Service Company of Oklahoma

President and Chief Operating Officer: Stuart Solomon

Public Service Company of Oklahoma (PSO)

(organized in Oklahoma in 1913) is engaged in the generation, transmission and distribution of electric power to approximately 514,000 retail customers in eastern and southwestern Oklahoma, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities, rural electric cooperatives and other market participants. PSO has a service territory of 30,000 square miles and at December 31, 2005, PSO had 1,176 employees. In addition to its AEP System interconnections, PSO also is interconnected with Ameren Corporation, Empire District Electric Co., Oklahoma Gas & Electric Co., Southwestern Public Service Co. and Westar Energy Inc. PSO is a member of SPP.

Total Customers:

• **Residential**	**442,000**
• **Commercial**	**58,000**
• **Industrial**	**7,000**
• **Other**	**7,000**
Total	**514,000**

Generating Capacity	**4,153 MW**
Generating Capacity by Fuel Mix:	
• **Coal:**	**25%**
• **Natural Gas:**	**75%**
Transmission Miles	**3,600**
Distribution Miles	**21,000**

Principal industries served:

Natural gas and oil production
Oil refining
Steel processing
Aircraft maintenance
Paper manufacturing and timber products
Glass
Chemicals
Cement
Plastics
Aerospace manufacturing
Telecommunications
Rubber goods.

Regulatory Information

Oklahoma Corporation Commission

AEP Regulated Electric Utilities

Public Service Company of Oklahoma

Commissioners

Number: 3	**Appointed/Elected:** Elected	**Term**: 6 years	**Political Makeup:** R: 3

Qualifications for Commissioners

The Oklahoma Corporation Commission (OCC) is composed of three commissioners who are elected by state-wide vote. Commissioners serve staggered six-year terms so one commissioner vacancy occurs every two years. The election pattern was established when the Commission was created by the state constitution.

Commissioners

Jeff Cloud, Chairman (Rep.), since 2002; current term ends January 2009. Member, NARUC. Served as U.S. Congressman's District Director. Served as the Oklahoma City Mayor's Chief of staff. Law degree from Oklahoma City University.

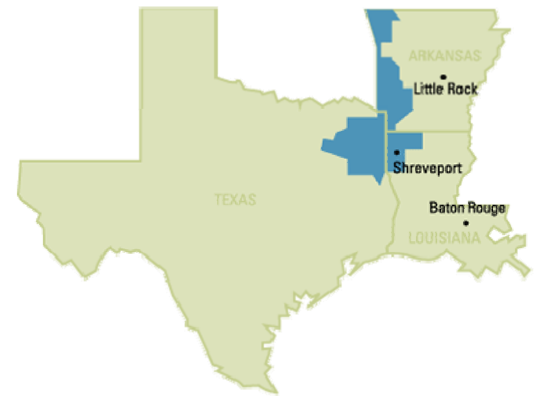
Denise A. Bode, Vice-Chairman (Rep.), since 1997; current term ends January 2011. Member, NARUC. Former president of the Independent Petroleum Association of America (IPAA). Graduated with a bachelor's degree in political science from the University of Oklahoma. Founding partner of a Washington D.C. firm. Law degree from George Mason University and a master's of law in taxation from Georgetown University.

Bob Anthony, Commissioner (Rep.), since 1989; current term expires January 2007. Member, NARUC. Served on the boards of the Oklahoma State, Oklahoma City, and South Oklahoma City chambers of commerce. Earned a M.Sc. from the London School of Economics, a M.A. from Yale University, and an M.P.A. from the Kennedy School of Government at Harvard University.

AEP Regulatory Status

• 2001 Fuel review case: Hearings held 2-7 and 2-8-06. Scope expanded to cover 2002-2004 margin allocation issue.Intervenors have submitted testimony, which substantially off-set the recovery of PSO's $42 million Internal Cost Reconstruction (ICR) error. Awaiting Commission order. • 2003 Fuel review case: Scope has been expanded to include a prudence review. No procedural schedule has been set. Discovery phase has been initiated. • 2004 Fuel review case: Staff has now filed for a review of PSO's 2004 fuel costs. Hearings scheduled to begin 8-10-06. Discovery phase has been initiated. • Applications seeking a used and useful determination for up to 500 mW of peaking capacity with a commercial operation date of 2008 and up to 600 mW of base load generation with a commercial operation date of 2011 were filed with the OCC on 12-21-05 and 2-1-06, respectively. Procedural schedules have not yet been established.

Southwestern Electric Power



President and Chief
Operating Officer: Nick Akins

Southwestern Electric Power Company (SWEPCo)

(organized in Delaware in 1912) is engaged in the generation, transmission and distribution of electric power to approximately 450,000 retail customers in northeastern Texas, northwestern Louisiana and western Arkansas, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities, rural electric cooperatives and other market participants. SWEPCo has a service territory of 25,000 square miles and at December 31, 2005, SWEPCo had 1,498 employees. The territory served by SWEPCo also includes several military installations, colleges, and universities. In addition to its AEP System interconnections, SWEPCo is also interconnected with CLECO Corp., Empire District Electric Co., Entergy Corp. and Oklahoma Gas & Electric Co. SWEPCo is a member of SPP.

Principal industries served:
- Natural gas and oil production
- Petroleum refining
- Manufacturing of pulp and paper
- Chemicals
- Food processing
- Metal refining.

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions; resolution of litigation; our ability to constrain operations and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in creditworthiness of participants in the energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, the potential for new legislation in Ohio and membership in and integration into regional transmission organizations; accounting pronouncements; performance of pension and other postretirement benefit plans; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

Virginia	Yes	Annually
West Virginia	Yes	Annually

Jurisdictional Off-System Sales Sharing Summary

STATE	OSS Sharing?	Detail
Arkansas	Yes, above and below base levels	Up to $758,600 annual margin, ratepayers receive 100%. From $758,601 to $1,167,078, ratepayers receive 85%. Above $1,167,078, ratepayers receive 50%.
Indiana	No	There is $17 million built into Indiana's base rates
Kentucky	Yes, above and below base levels	Sharing only occurs after annual profits exceed $24,855,326. Between that amount and $30 million, ratepayers receive 70%. Above $30 million, ratepayers receive 60%.
Louisiana	Yes, above base levels	Up to $874,000 annual margin, ratepayers receive 100%. From $874,001 to $1,314,000, ratepayers receive 85%. Above $1,314,000, ratepayers receive 50%.
Michigan	Yes	There are two jurisdictions: St Joe and Three Rivers. For St Joe, 100% of profits are shared with ratepayers. No profits are shared in Three Rivers, including base rates. St Joe represents 67% of the Michigan market.
Ohio	No	n/a
Oklahoma	Yes	75% of profits are shared with ratepayers.
Tennessee	No	n/a
Texas (SPP)	Yes	90% of profits are shared with ratepayers.
Virginia	Yes	Factored into base rates at a fixed rate. Effective 7/1/07, legislation was enacted to allow company retention of at least 25% of OSS margins. We have a filing pending before the VA SCC to initiate this sharing.
West Virginia	Yes	100% of profits passed back to ratepayers through the Expanded Net Energy Cost (ENEC) clause.

Maintain Financial Strength Of Utility Companies By Retaining And/Or Infusing Equity Capital Depending On Their Credit Ratios And Free Cash Flow

AEP®

6

Managing Subsidiary Cash Flows

- We monitor:
  - AEP consolidated cash requirements
  - Utility expected rates of return and potential regulatory lags
  - Amount of capital spending and internal cash needs
  - Free cash flow – cash available after construction
  - Credit ratios

- Dividends and equity:
  - We pay dividends based on free cash flow and credit metrics
  - When additional equity/cash is needed at the subsidiary level, the first option is dividend reductions, then capital infusions
  - We are currently evaluating hybrid securities as a source of equity

Our Objective Is To Maintain The Financial Strength And Capital Markets Access Of The AEP Operating Companies

Commitment To Credit Quality

- Maintain adequate liquidity
- Target 60% consolidated AEP debt/cap ratio
- Target long term AEP dividend payout ratio range of 55-60%

Current Ratings for AEP, Inc. & Subsidiaries

	Moody's	S&P		Fitch
Company	Senior Unsecured	Business Profile	Senior Unsecured	Senior Unsecured

(1) In September 2006, S&P upgraded AEP's consolidated business profile score from 6 to 5.

Note: All rating agencies have each company on stable outlook with the exception of Fitch, which has a negative outlook on TCC.

AEP®

We Are Committed To Maintaining Our Current Credit Ratings

Long-Term Debt Guidelines

Issuers:

- Issue at operating companies.

Size:

- Make transactions index eligible if possible.
- When possible, issue a size sufficient for competitive execution.

Maturity:

- Issue maturities for which the market has appetite.
- Achieve weighted average life targets for operating companies, generally between 10-15 years.

Timing:

- Will issue based on the timing of maturities and levels of short-term debt as driven by capital spending and operating cash flow.

AEP Texas Central Company

President and Chief Operating Officer: Charles Patton

AEP Texas Central Company (TCC)

(organized in Texas in 1945) is engaged in the transmission and sale of power to affiliated and non-affiliated entities and the distribution of electric power to approximately 738,000 retail customers through REPs in southern Texas, and (to a limited extent) in supplying and marketing electric power at wholesale to other electric utility companies and market participants. Under the Texas Act, TCC completed its exit from the generation business through the sale of all of its generation assets. At December 31, 2006, TCC had 1,224 employees. In addition to its AEP System interconnections, TCC is a member of ERCOT.

MAJOR CUSTOMERS:

Valero Energy Corporation

Appalachian Power

President and Chief Operating Officer:
Dana Waldo

Appalachian Power Company (APCo)

(organized in Virginia in 1926) is engaged in the generation, transmission and distribution of electric power to approximately 949,000 retail customers in the southwestern portion of Virginia and southern West Virginia, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities and other market participants. APCo covers a service territory of 19,049 square miles, and at December 31, 2006, APCo and its wholly owned subsidiaries had 2,461 employees. Among the principal industries served by APCo are coal mining, primary metals, chemicals and textile mill products. In addition to its AEP System interconnections, APCo also is interconnected with the following unaffiliated utility companies: Carolina Power & Light Company, Duke Energy Corporation and Virginia Electric and Power Company. APCo has several points of interconnection with TVA and has entered into agreements with TVA under which APCo and TVA interchange and transfer electric power over portions of their respective systems. APCo is a member of PJM.

PRINCIPAL INDUSTRIES SERVED:

Coal mining
Primary metals
Chemicals
Textile mill products
Paper products

Columbus Southern Power

President and Chief Operating Officer: Kevin Walker

Columbus Southern Power Company (CSPCo)

(organized in Ohio in 1937, the earliest direct predecessor company having been organized in 1883) is engaged in the generation, transmission and distribution of electric power to approximately 742,000 retail customers in Ohio, and in supplying and marketing electric power at wholesale to other electric utilities, municipalities and other market participants. CSPCo covers a service territory of 3,701 miles and at December 31, 2006, CSPCo had 1,233 employees. CSPCo's service area is comprised of two areas in Ohio, which include portions of twenty-five counties. One area includes the City of Columbus and the other is a predominantly rural area in south central Ohio. In addition to its AEP System interconnections, CSPCo also is interconnected with the following unaffiliated utility companies: CG&E, DP&L and Ohio Edison Company. CSPCo is a member of PJM.

Public Service Company of Oklahoma

President and Chief Operating Officer: Stuart Solomon

Public Service Company of Oklahoma (PSO)

(organized in Oklahoma in 1913) is engaged in the generation, transmission and distribution of electric power to approximately 520,000 retail customers in eastern and southwestern Oklahoma, and in supplying and marketing electric power at wholesale to other electric utility companies, municipalities, rural electric cooperatives and other market participants. PSO has a service territory of 30,000 square miles and at December 31, 2006, PSO had 1,233 employees. In addition to its AEP System interconnections, PSO also is interconnected with Ameren Corporation, Empire District Electric Co., Oklahoma Gas & Electric Co., Southwestern Public Service Co. and Westar Energy Inc. PSO is a member of SPP.

PRINCIPAL INDUSTRIES SERVED:

Oil and gas extraction
Paper products
Stone, clay and glass products
Primary metals
Transportation equipment

Total Customers:

• Residential	447,000
• Commercial	58,000
• Industrial	7,000

Boston Investor Meetings

Hosted by Barclays

August 5, 2009

STRONG
FLEXIBLE
ADAPTABLE

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters; availability of generating capacity and performance of generating plants including our ability to restore Indiana Michigan Power Company's Donald C. Cook Nuclear Plant Unit 1 in a timely manner; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity and transmission lines (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth or contraction in our service territory and changes in market demand and demographic patterns; inflationary or deflationary interest rate trends; volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impacting our ability to finance new capital projects and refinance existing debt at attractive rates; the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurred cots and recovery is long and the costs are material; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities; changes in utility regulation, including the implementation of the recently-passed utility law in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust and the impact on future funding requirements; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

AEP AMERICAN ELECTRIC POWER

Table of Contents

AEP Highlights

Premier utility platform

- Leadership position in electric generation, transmission and distribution operations
- Cash flow, earnings and regulatory diversity with more than 5 million customers in 11 states
- $6.3 billion capital expenditure program (2009-2011) will continue to drive rate base growth

Effective regulatory relationships

- Traditional recovery mechanisms with equitable risk allocation enhance both earnings and cash flow
- Emerging energy policies play to AEP's strengths (transmission, energy efficiency, reliability)
- Constructive local relationships deliver successful regulatory outcomes

High-growth transmission business

- The leading US transmission owner, operator, and developer
- Exceptional portfolio of high-quality development projects and project partners
- Attractive ROEs, regulatory support and access to capital will drive earnings growth beyond our traditional utility footprint

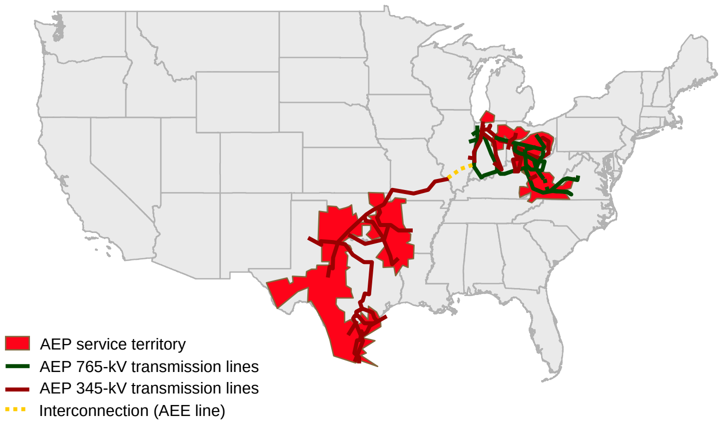
Stable financial position

- Maximization of shareholder value through regulated utility and transmission investments
- Balanced approach to cost containment and capital allocation
- Commitment to investment grade profile, prudent balance sheet, and liquidity management
- Conservative dividend payout with attractive yield

AMERICAN ELECTRIC POWER

Premier Regulated Utility Platform

Overview

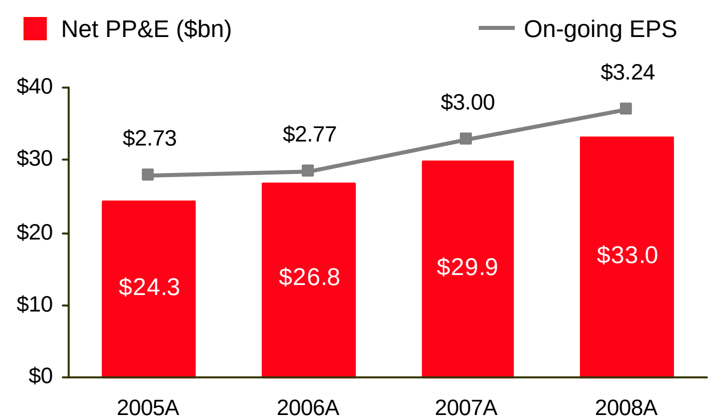


AEP's Leadership Position

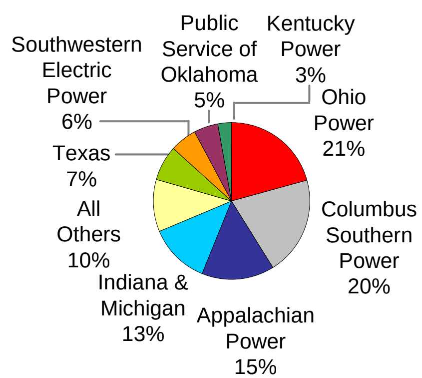
Transmission miles[1] ('000s)		Generation owned[1] (GW)		Electric customers[1] (mm)	
AEP	39.0	SO	42.6	EXC	5.4
SO	27.0	AEP	40.6 *	AEP	5.2
DUK	20.9	DUK	39.1	PCG	5.1
PCG	18.7	FPL	35.5	FPL	4.5
MidA	17.9	ETR	30.0	FE	4.5
ITC	15.1	D	27.1	SO	4.4
FE	15.1	EXC	24.8	DUK	4.0
Oncor	14.9	CPN	24.2	ED	3.6
EIX	12.0	NRG	24.0	XEL	3.4
PGN	11.0	PGN	21.8	PGN	3.1

* - AEP generation includes long-term PPAs and generation under construction

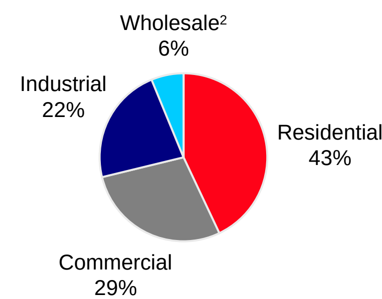
Regulated Operations



- Net PP&E CAGR of 10.7% since 2005
- Earnings CAGR of 5.9% since 2005



2008 On-going Earnings = $1.3bn



2008 Retail Base Revenue = $6.4bn

- *Highly diversified regulated utility earnings contribution*
- *Balanced customer mix*

[1] Source: Company filings
[2] Wholesale includes sales to municipal and cooperative power systems, other wholesale, and other retail sales

AEP AMERICAN ELECTRIC POWER

Energy Policy Initiatives are Core to Our Strategy

Greenhouse Gas Reduction & Regulation

- Actively engaging in CO_2 policy debate – support cap & trade with allocated credits
- Leadership position in development of carbon capture and storage technology
- Reducing carbon footprint via offsets and other measures
- Founding member of Chicago Climate Exchange

Renewable Energy

- Develop "transmission superhighway" to facilitate renewable energy projects
- Satisfy RES requirements in our jurisdictions – currently Ohio with 25% (renewables + advanced) by 2025, Texas with ~ 5% by 2015, West Virginia with 25% (renewables + advanced) and Michigan with 10% by 2015; Voluntary goal of 12% by 2022 in Virginia
- Add 2,000MW of wind capacity via long-term PPAs – 903MW achieved to-date

---

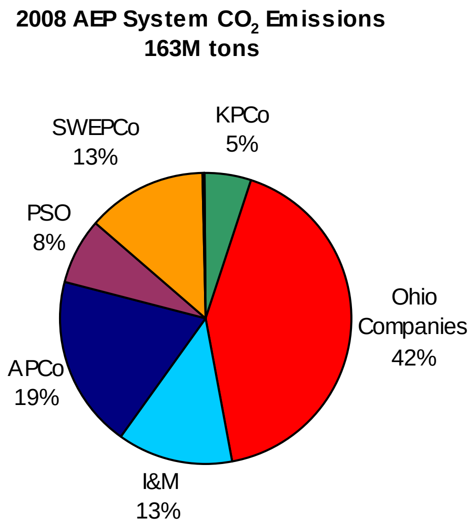
Energy Efficiency, Security & Reliability

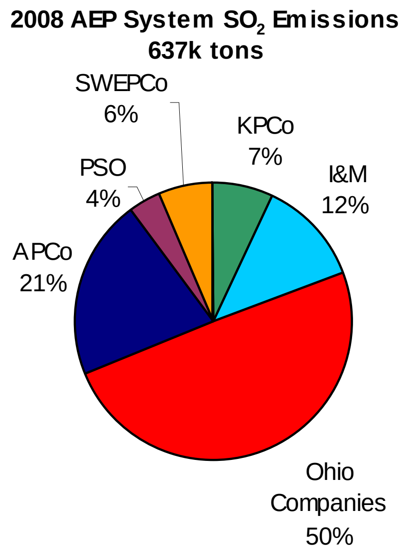
- Develop high-voltage transmission projects to strengthen America's power grid
- Build generation to ensure reliable supply
- Reduce 1,000MW of demand by 2012
- Reduce 2.25 million MWhs of consumption by 2012
- Diversify our fuel mix; have added 3,705MW of gas-fired capacity since 2005 and have 1,080MW under construction

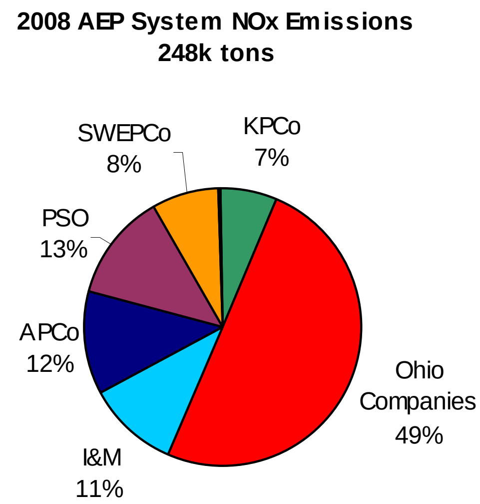
---

AEP AMERICAN ELECTRIC POWER

CO_2 Cost Recovery – Should Follow SO_2 & NOx





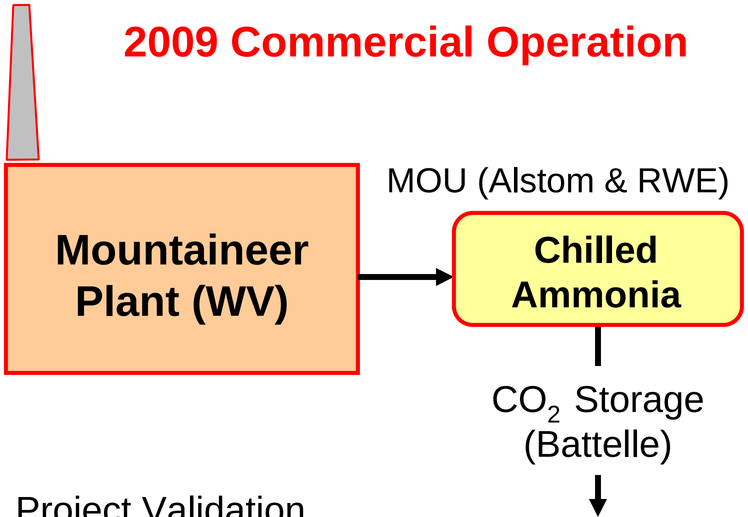


- 100% of SO_2 and NOx allowance costs currently recovered through tracker or similar mechanisms
- Prudently incurred costs associated with carbon-based taxes and other carbon-related regulations explicitly included in Ohio Fuel Adjustment Clause

AEP AMERICAN ELECTRIC POWER

Carbon Capture & Storage

2009 Commercial Operation



Project Validation

- Alstom “Chilled Ammonia” Technology
- 20-30 MW_e (megawatts electric) scale (a scale up of Alstom/EPRI 1.7 MW_e field pilot, in operation at We Energies’ Pleasant Prairie Power Plant)
- Located at the AEP Mountaineer Plant in WV
- 100,000 - 300,000 tonnes CO_2 per year
- In operation 3Q 2009
- Geologic storage for CO_2
- Underground injection control permit received in May 2009 from WV Dept. of Environmental Protection

Represents Post-Combustion Capture

- Conventional or Advanced Amines; Chilled Ammonia
  - Amine technologies are currently available in other industrial applications
  - Relatively low CO_2 concentration in flue gas - more difficult to capture than other approaches
  - High parasitic demand
    - Conventional Amine ~ 25-30%
    - Chilled Ammonia target ~ 10-15%

Key Issues for CCS Development in the U.S.

- Overcoming the ‘economic’ hurdle
- High up-front capital investment
- Commercial demonstration at large coal-fired power plants
- National standards for permitting of storage reservoirs
- Potential institutional, legal and regulatory barriers to carbon storage

AEP AMERICAN ELECTRIC POWER

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
AEG	Dresden	Ohio	$322 MM	Gas	Combined-cycle	580	2013
SWEPCo	Stall	Louisiana	$385 MM	Gas	Combined-cycle	500	2010
SWEPCo	Turk	Arkansas	$1.6 B (1)	Coal	Ultra-supercritical	600 (1)	2012

(1) SWEPCo will own approximately 73%, or 440 megawatts, totaling about $1.2 billion in capital investment.

- Turk – In June 2009, the Arkansas Court of Appeals overturned APSC decision granting CECPN & AEP filed appeal to Supreme Court. Air permit appeal hearings were held in June 2009 and a decision is expected by year end. Construction continues.
- Stall – Construction continues.
- Dresden – Construction suspended due to shifts in capital spending. Commercial operation date has been projected for 2013 (previously 2010).

AMERICAN® ELECTRIC POWER

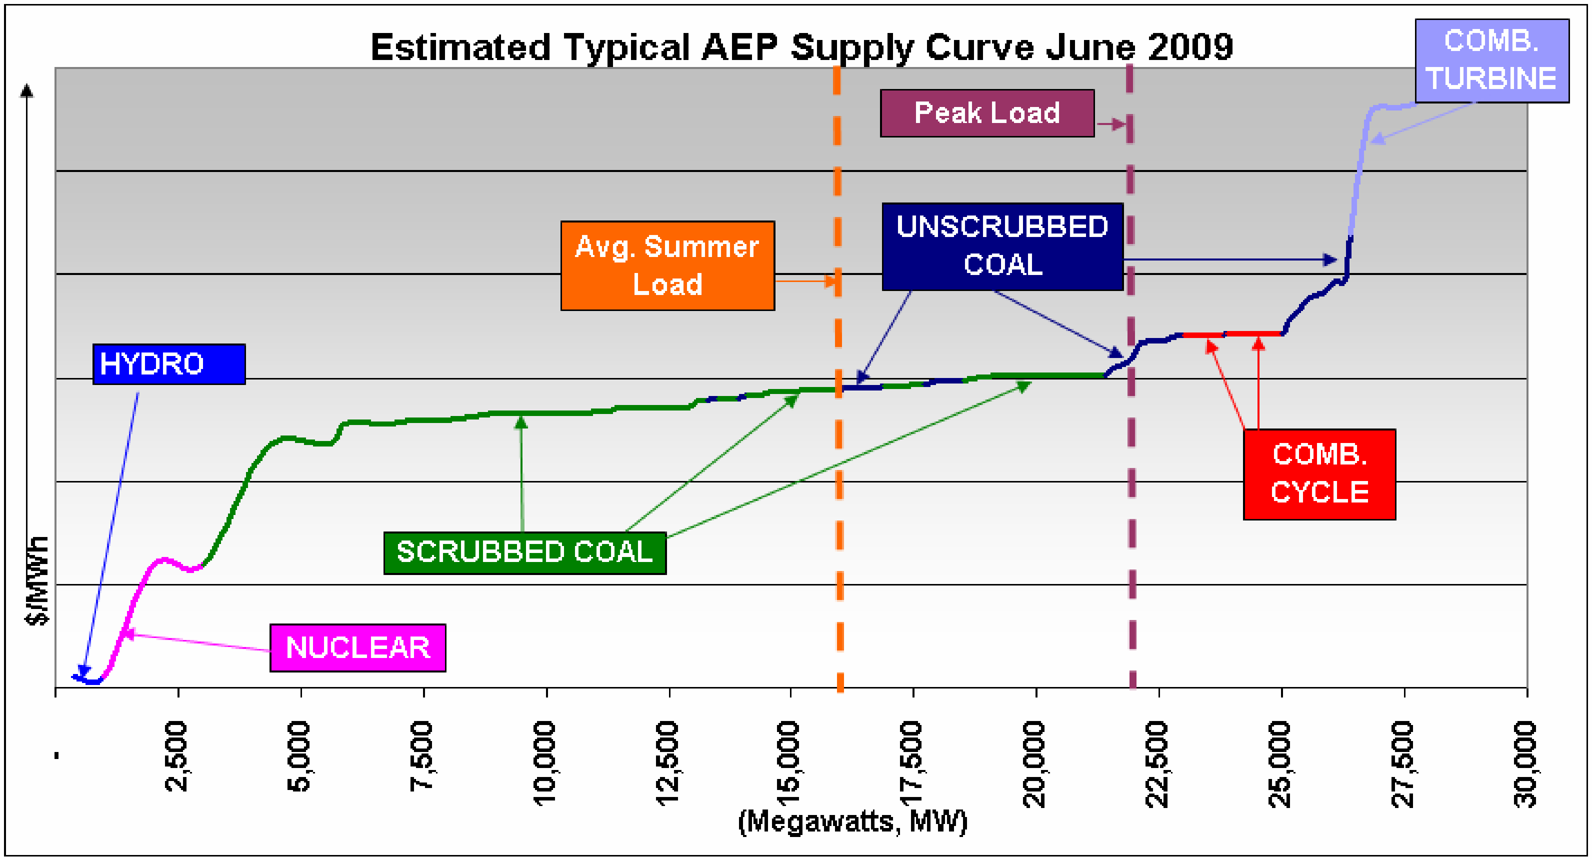
DC Cook Unit 1 Update

- Previously identified technical challenges have solutions
  - Low pressure turbine rotors have been straightened
  - Foundation repair work is in progress and is the critical path
  - Generator and high pressure turbine repair work supports the critical path
- The unit is scheduled to return to service in the fourth quarter of 2009
  - The unit will operate without the last stage blades at 30 MW (summer) to 100 MW (winter) reduced capacity
- Root cause: “A blade-rotor system design that failed to provide adequate stress margin”
  - The root cause also found no operational or installation issues
- The replacement rotors are scheduled for installation in the spring of 2011
  - Different design with several years of fault-free commercial operation.
- We continue to receive $3.5MM per week from the accidental outage policy
  - Insurance proceeds are reflected as other operating revenue; During 2009 YTD, approximately 40% of the insurance payments ($40MM) were used to offset increased fuel costs to customers

AEP AMERICAN ELECTRIC POWER

AEP Supply Stack

- Supply stack with Cook unit 1 outage would slide the supply stack 1,009 MW to the left.
- Planned outages typically shorten supply stack in the shoulder months by several thousand megawatts.
- Shoulder periods offer the flexibility to reschedule planned outages.



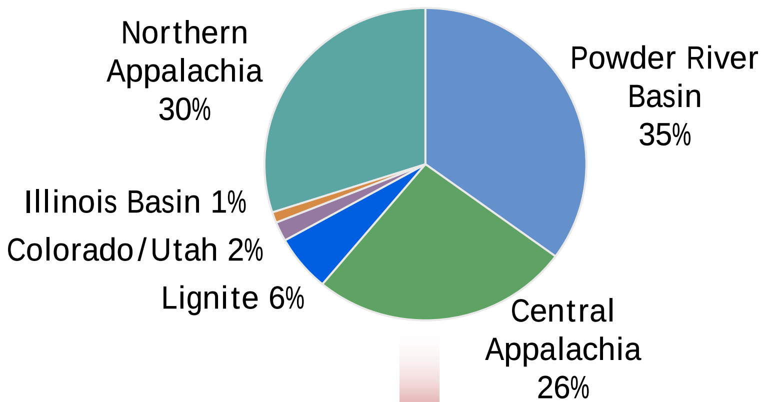
AEP AMERICAN ELECTRIC POWER

p.21

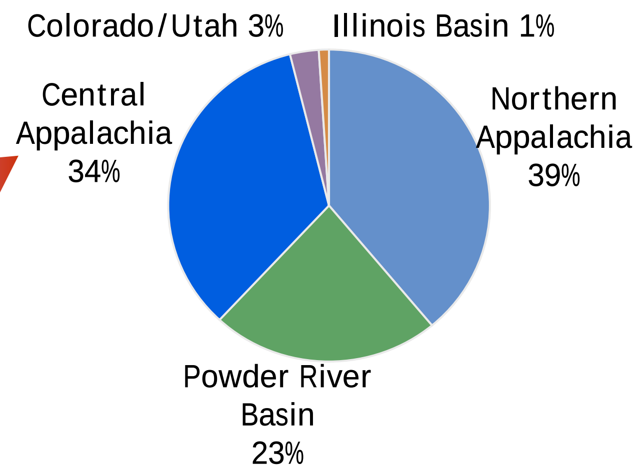
Coal Procurement - 2009 Projected

AEP burns approx. 77 million tons of coal per year

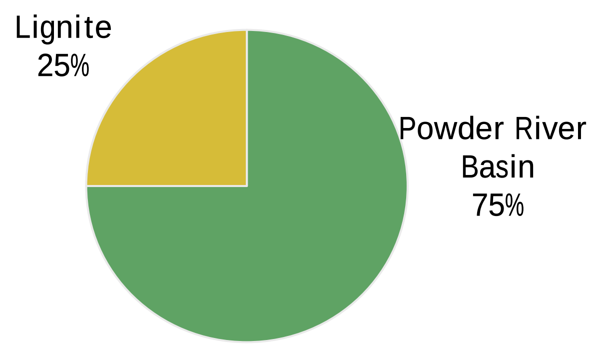
Total AEP System



AEP East



AEP West



Coal Stats:

- 100% contracted for 2009
- 94% contracted for 2010
- Avg. delivered price ~ $46.61/ton in 2008
- Approximate 10% price increase in 2009 ~ $51.00/ton

AMERICAN ELECTRIC POWER

Overview of 2009 Guidance

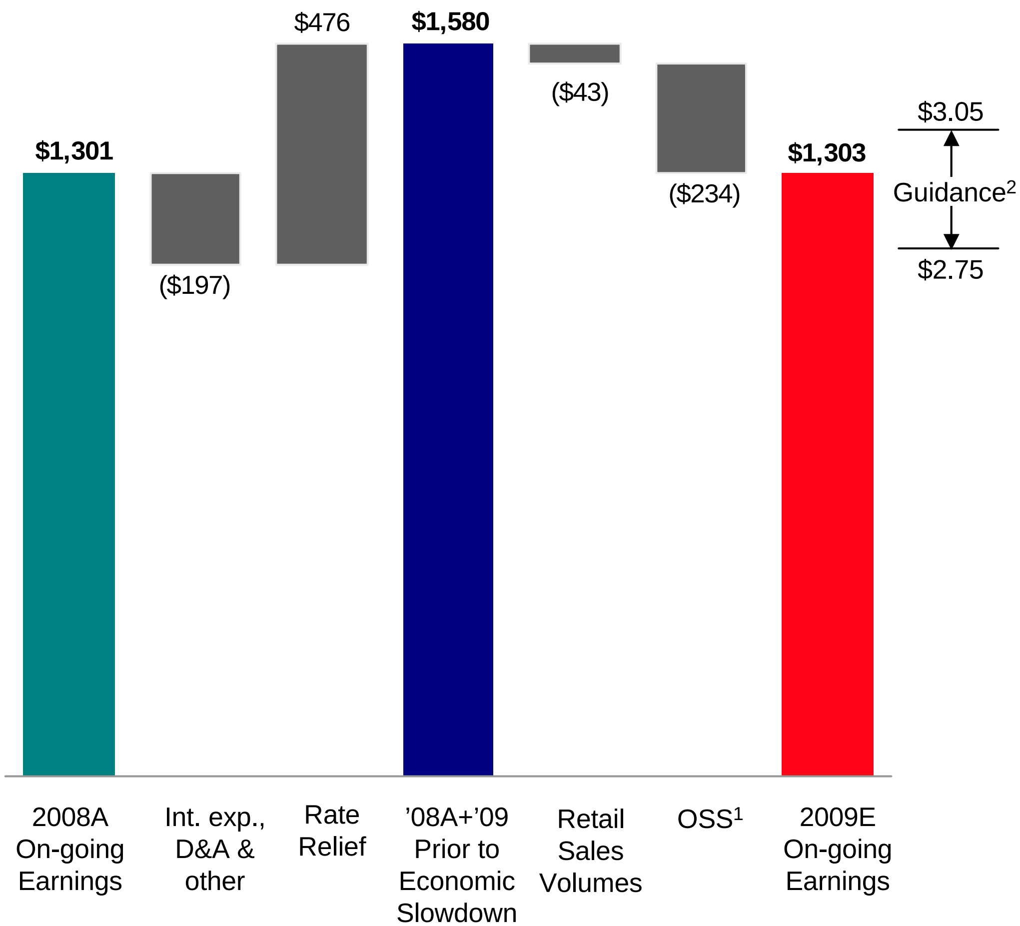
<u>2009 Earnings Drivers:</u>

- ⬆ Positive Ohio outcome
- ⬆ Rate relief - $732mm
- ⬇ Economic slowdown
  - — Lower OSS revenues
  - — Lower loads

<u>Long-term Earnings Drivers:</u>

- ⬆ Rate base investments
- ⬆ Additional rate relief
- ⬆ OSS/Retail load
- ⬆ Transmission JV earnings

2008A-2009E Earnings Bridge ($mm)



Note all items are presented after-tax
[1] Net of sharing

AEP AMERICAN ELECTRIC POWER

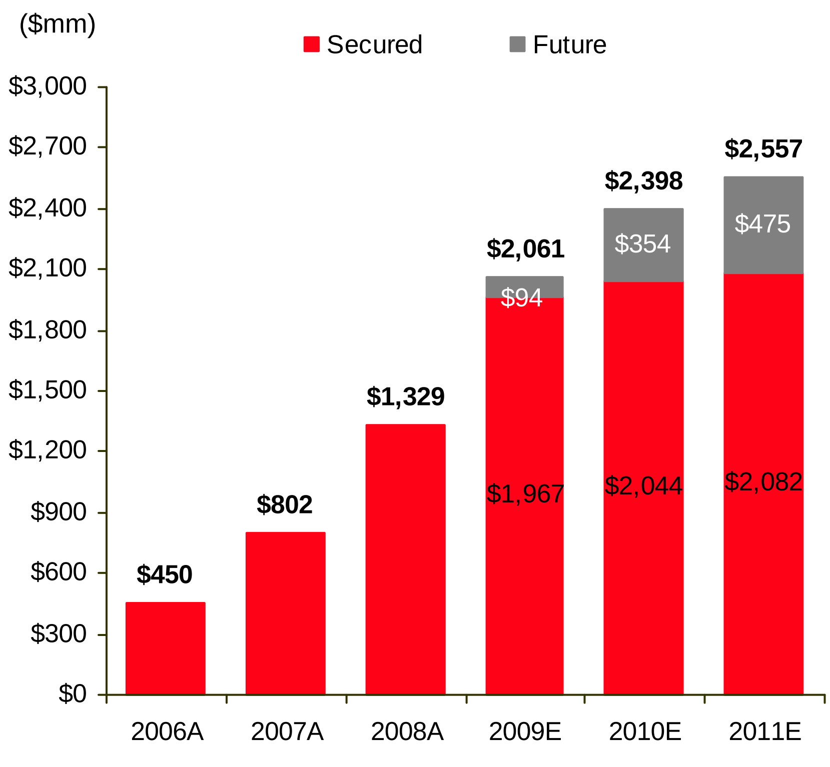
Jurisdictional Off-System Sales Sharing Summary

STATE	OSS Sharing?	Detail
Arkansas	Yes, above and below base levels	Up to $758,600 annual margin, ratepayers receive 100%. From $758,601 to $1,167,078, ratepayers receive 85%. Above $1,167,078, ratepayers receive 50%.
Indiana	Yes	There is $37.5 million built into Indiana's base rates. Above $37.5 million, ratepayers received 50%
Kentucky	Yes, above and below base levels	Sharing occurs above and below levels included in base rates of $24,855,326. Between $0 and $30 million, ratepayers receive 70%. Above $30 million, ratepayers receive 60%.
Louisiana	Yes, above base levels	Up to $874,000 annual margin, ratepayers receive 100%. From $874,001 to $1,314,000, ratepayers receive 85%. Above $1,314,000, ratepayers receive 50%.
Michigan	Yes	There are two jurisdictions: St Joe and Three Rivers. For St Joe, 100% of profits are shared with ratepayers. No profits are shared in Three Rivers, including base rates. St Joe represents 66% of the Michigan market.
Ohio	No	n/a
Oklahoma	Yes	75% of profits are shared with ratepayers.
Tennessee	No	n/a
Texas (SPP)	Yes	90% of profits are shared with ratepayers.
Virginia	Yes	75% of profits are shared with ratepayers.
West Virginia	Yes	100% of profits passed back to ratepayers through the Expanded Net Energy Cost (ENEC) clause.

AEP AMERICAN ELECTRIC POWER

Track Record of Successful Regulatory Outcomes

Cumulative Rate Relief



Annual rate increases, $mm	$450	$352	$527	$732	$337[1]	$159[1]

[1] $77mm and $38mm was secured for 2010 and 2011, respectively, as of July 31, 2009

Our Regulatory Approach:

Maximize utility company returns:

- Successfully secured significant rate relief
- 2009 rate relief:
  - ✓ Ohio ($404MM)
  - ✓ I&M ($52MM)
  - ✓ APCo ($58MM)
  - ✓ PSO ($74MM)
- Pending rate relief including amount requested:
  - ✓ APCo WV ($20MM – in ENEC filing)
  - ✓ SWEPCo ($56MM)
  - ✓ APCo VA ($169MM)
  - ✓ Others to be determined

Minimize regulatory lag:

- Active fuel adjustment clauses now in place in <u>all</u> jurisdictions
- Increased frequency of rate cases
- Employing tracking features

Strong local relationships with regulators

AEP AMERICAN® ELECTRIC POWER

Summary Rate Case Information

APCo Virginia General Rate Case

On July 15, 2009 APCo filed a pre-biennial base rate case with the Virginia SCC, per the statute, for recovery of generation and distribution costs requesting an increase of $169.2 million. (Docket #: PUE-2009-00030) A procedural schedule is pending from the VSCC. A transmission rate adjustment clause (T-RAC) was filed in conjunction with this case as base rates will no longer include rates for transmission service (Docket #: PUE-2009-00031). APCo has requested that rates in both cases go into effect at the same time.

Projected Capital Structure - Company Position* (11/30/10)

	% of Capitalization	Cost Rate	Weighted Return
Short-Term Debt	0.015%	1.365%	0.00%
Long-Term Debt	56.007%	6.383%	3.57%

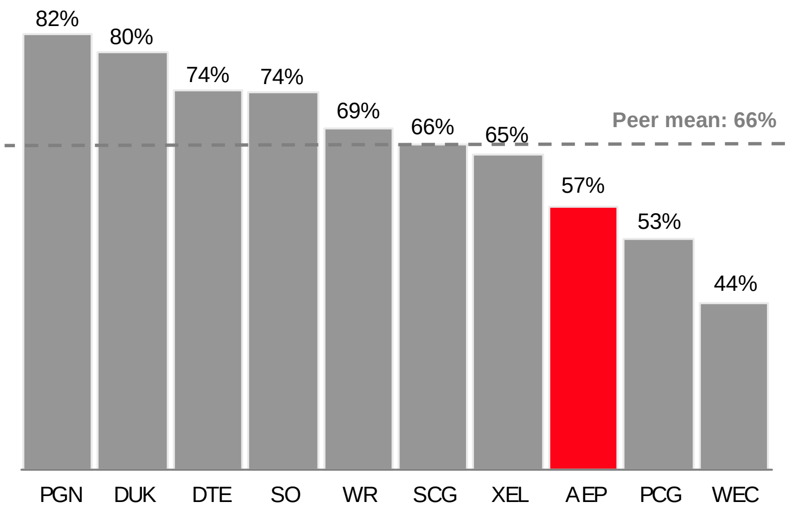
AEP AMERICAN® ELECTRIC POWER

Dividend Overview

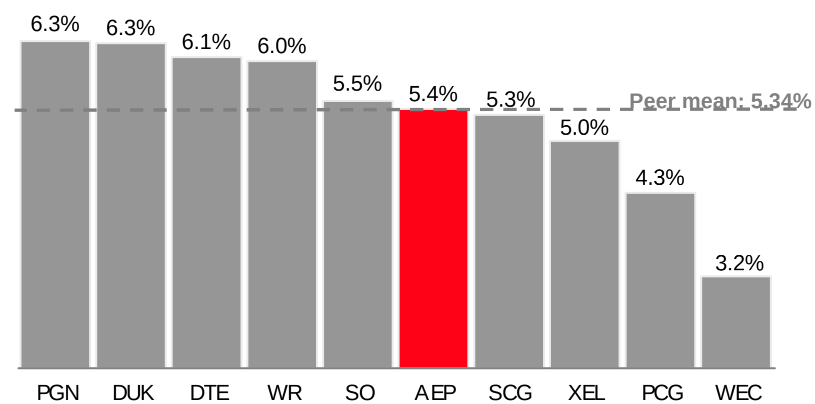
- We have paid 397 consecutive quarterly dividends to shareholders
- Dividend - $1.64/share
- Attractive yield
- Target dividend payout ratio of 50 – 60%

Payout Ratio vs. Integrated Electric Peers



Note: Payout ratio equals the indicated dividend rate annualized divided by First Call 2009 consensus estimate
Source: Bloomberg & First Call earnings estimates as of 7/28/09

Dividend Yield vs. Integrated Electric Peers



Note: Dividend yield equals the indicated dividend rate annualized divided by the share price
Source: ThomsonONE as of 7/28/09

AEP AMERICAN ELECTRIC POWER

Pension and OPEB Estimate

- Our pension plan and OPEB funds investment returns were each down about 24% in 2008.
- Discount rates are assumed to be 6.0% for pension and 6.1% for OPEB.
- Investment losses increase plan expense for both pension and OPEB, but the investment losses are smoothed in over several years.
- We expect 2009 pension and OPEB expense to increase $104MM from 2008 to 2009 (pre-tax and pre-capitalization).
- OPEB contributions will increase along with OPEB expense, in accordance with agreements in most of our regulatory jurisdictions.
- We do not expect any mandatory contributions to pension in 2009. Pension trust contributions are estimated to be $475MM in 2010 and $283MM in 2011.

AEP AMERICAN® ELECTRIC POWER

Note: The lines shown are conceptual in nature and do not represent actual routes. Plans are subject to change.

Equity Contributions Enhance Earnings Growth to 4 – 8%

AEP is the leader

- Largest US transmission footprint
- Interstate EHV highway vision
- National renewables transmission strategy

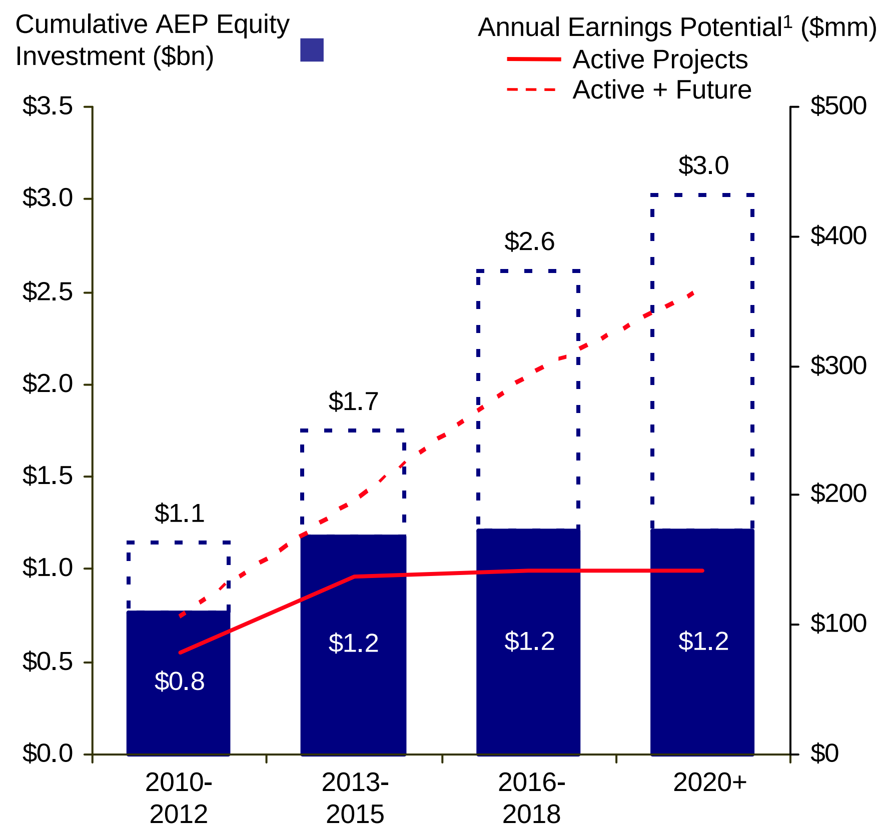
Quality projects

- 4 FERC-approved ($3.3 billion)
- Independent ERCOT transmission JV company (up to $2.6 billion)
- Robust pipeline of future 765 kV projects (up to $15 billion)

Attractive returns

- FERC incentive rates (12.5-14.3%)
- Strong cash flow with CWIP
- Long-term earnings potential of ~$140-$360 million annually[1]

Illustrative Earnings Potential of New Transmission Initiatives



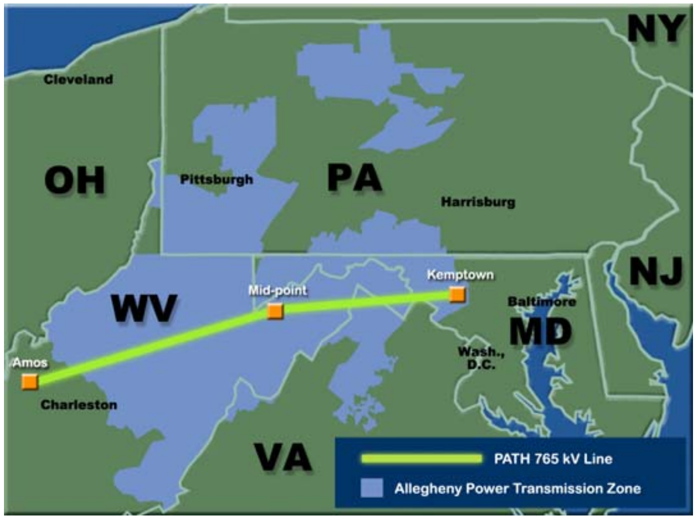
[1] *Illustrative calculation assumes 50/50 debt/equity capitalization and incentive ROE of ~13.0% for FERC projects and a 60/40 debt/equity capitalization and 10.5% ROE for ERCOT projects*

AEP AMERICAN ELECTRIC POWER

EHV Transmission in PJM: PATH

Project Description: 275 miles of 765-kV transmission line from AEP's John Amos substation near St. Albans, W.Va., through a new midpoint station, ending at a new substation near Kemptown, MD.

- **Near Term Risks**
  - Obtaining a CPCN in West Virginia or costly concessions with WV to receive the CPCN; CPCN filing made May 15, 2009
- **Pertinent Data**
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP and 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
    - Rates went into effect March 1, 2008; current annual revenue requirement is $15MM effective 1/1/09
  - Total estimated cost of entire line is $1.8 billion; AEP's 50/50 JV with Allegheny will develop West Virginia section at a cost of $1.2 billion. AEP share is approximately $600 million
  - Estimated completion date: 2014



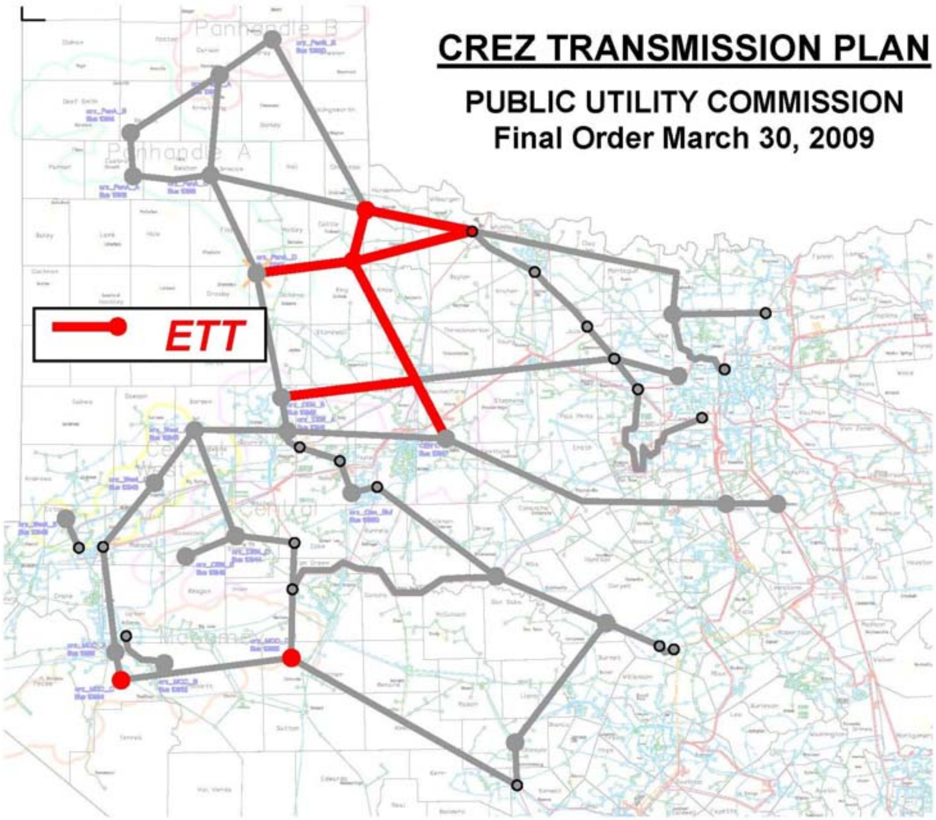
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

AEP AMERICAN ELECTRIC POWER

Texas CREZ Project

Strengthening the ERCOT grid to collect and deliver wind generation to load

- ***Status:***
  - On February 26, 2009, PUCT ordered its staff to stage the development of CREZ transmission lines.
  - Staging to occur in separate docket and consider timing of wind projects and congestion.
  - PUCT established 2 categories based on priorities. ETT has no first priority lines.
  - PUCT issued a final order assigning transmission service providers on March 30, 2009.
  - ETT's share of CREZ investment is approx. $840MM of $4.9B total.
  - The filing calls for completion of the plan by 2013.
- ***Next Steps***
  - Perform preliminary engineering and routing work on assigned projects, in order to file for transmission line CCN approvals in 2010.



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

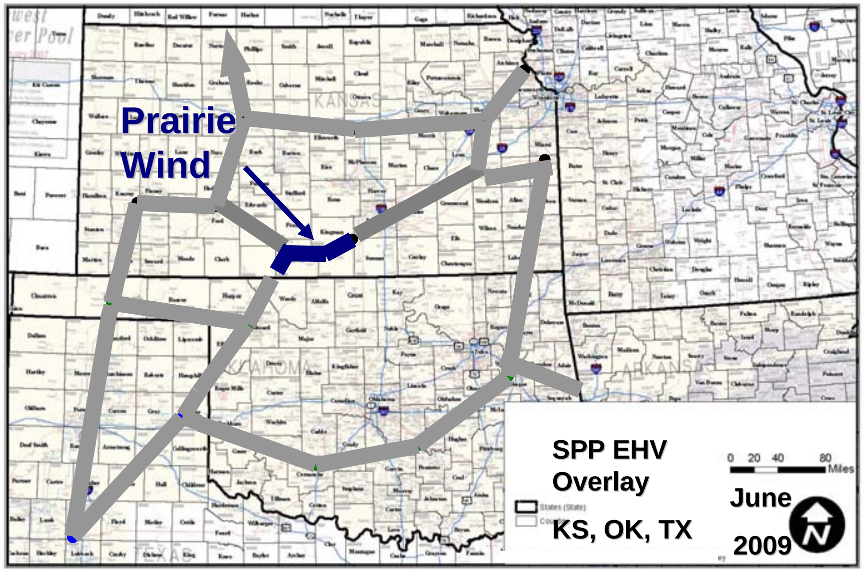
Electric Transmission Texas

AMERICAN ELECTRIC POWER

Prairie Wind Transmission, LLC

JV to build first segment of 765-kV transmission in SPP

- ***Overview***
  - In May 2008, ETA signed an agreement with Westar Energy to form Prairie Wind Transmission, LLC (PWT).
  - Following a settlement agreement with ITC on June 1, 2009 both entities agreed to split the mileage and costs of building the 765-kv transmission superhighway. The newly revised project is expected to cost approximately $400 million and in-service by 2013. Settlement was approved by the KCC on July 24, 2009.
  - PWT is a 50/50 JV that is proposing to build approximately 110 miles of 765-kV lines extending from Wichita, KS, west to a substation near Medicine Lodge, KS, and then south to the Kansas border from Medicine Lodge, KS.
  - The original proposed mileage prior to settlement was approximately 230 miles.
  - The project will provide enhanced electricity transport in Kansas and support expansion of renewable electricity generation in the region.
  - AEP's ownership of the joint venture is 25%.
  - FERC order received in December 2008:
    - Cash return on CWIP and 12.8% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PWT or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, portions of which are proposed for construction by ETA and its partners.
The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

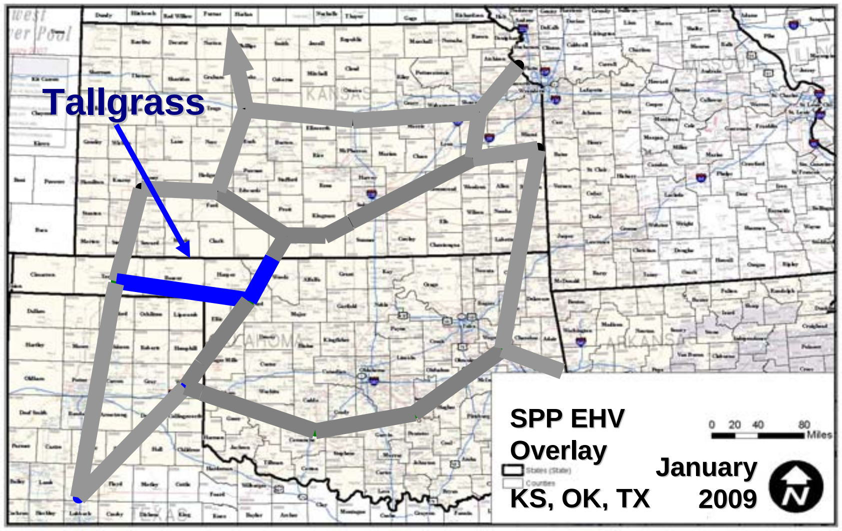
- ***Key Challenges***
  - Regional Cost allocation which enables the development of "system solutions"
  - RTO Approval

AEP AMERICAN ELECTRIC POWER

Tallgrass Transmission, LLC

JV to build second segment of 765-kV transmission in SPP

- ***Overview***
  - In July 2008, ETA signed an agreement with Oklahoma Gas & Electric to form Tallgrass Transmission, LLC (TG).
  - TG is a 50/50 JV that is proposing to build approximately 170 miles of 765-kV lines extending from the Kansas-Oklahoma border north of Woodward, OK, extending west into the Oklahoma panhandle to a new station that will be built near Guymon, OK.
  - The project will promote wind development in the western half of Oklahoma.
  - Project is expected to cost approximately $500 million and be in-service by 2013.
  - AEP's ownership of the joint venture is 25%.
  - Other responsibilities will be handled by the partners or outsourced.
  - FERC order received in December 2008:
    - Cash return on CWIP and 12.8% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of TG or its parents.



Total SPP 765-kV Overlay estimated to cost approximately $7 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

- ***Key Challenges***
  - Cost allocation which enables the development of "system solutions"
  - RTO Approval

AEP AMERICAN ELECTRIC POWER

Pioneer Transmission LLC

Overview

- In August 2008, AEP signed an agreement with Duke Energy to form Pioneer Transmission, LLC (PT).
- PT is a 50/50 JV that is proposing to build approximately 240 miles of 765-kV lines extending from AEP's Rockport Station to Duke's Greentown station in Indiana.
- The project will improve the reliability of the nation's transmission grid, allow more efficient use of existing electricity production and delivery infrastructure, protect national security and expand opportunities for new generation, including renewables.
- Project is expected to cost approximately $1 billion and be in-service by 2015.
- AEP's ownership of the joint venture is 50%.
- Other responsibilities will be handled by the partners or outsourced.
- FERC order received March 2009:
  - Cash return on CWIP and 12.54% incentive ROE
  - Recovery of all costs incurred prior to the time rates go into effect, and
  - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PT or its parents.
  - Certain formula rate issues were set for hearing

Key Challenges

- Cost allocation which enables the development of "system solutions"
- RTO Approval - touches two RTOs – PJM & MISO
- Siting

AEP AMERICAN® ELECTRIC POWER

Hartland Wind Concept EHV Development in Upper-Midwest

Project Description: 1000+ miles of 765-kV transmission linking Upper Midwest generation sources with the existing EHV infrastructure in the Chicago area expected to cost $5-$10 billion over a 10 year period.

- **Near Term Risks**
  - Technical feasibility study
  - Identification of willing and able partners
  - Obtaining cost allocation between states, PJM, and MISO
  - RTO Technical Approvals
  - Favorable 205 Order including 679 incentives
- **Mitigation**
  - Target the identified need for the project and its ability to provide access for wind energy to load centers
  - Collaboration in regulatory process for regional cost allocation between MISO, PJM, and Midwest Governors Association
  - Prepare comprehensive regulatory filing, including incentives

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. Although AEP and each of its Registrant Subsidiaries believe that their expectations are based on reasonable assumptions, any such statements may be influenced by factors that could cause actual outcomes and results to be materially different from those projected. Among the factors that could cause actual results to differ materially from those in the forward-looking statements are: the economic climate and growth in, or contraction within, our service territory and changes in market demand and demographic patterns, inflationary or deflationary interest rate trends, volatility in the financial markets, particularly developments affecting the availability of capital on reasonable terms and developments impairing our ability to finance new capital projects and refinance existing debt at attractive rates, the availability and cost of funds to finance working capital and capital needs, particularly during periods when the time lag between incurring costs and recovery is long and the costs are material, electric load, customer growth and the impact of retail competition, particularly in Ohio, weather conditions, including storms, and our ability to recover significant storm restoration costs through applicable rate mechanisms, available sources and costs of, and transportation for, fuels and the creditworthiness and performance of fuel suppliers and transporters, availability of necessary generating capacity and the performance of our generating plants, our ability to recover I&M's Donald C. Cook Nuclear Plant Unit 1 restoration costs through warranty, insurance and the regulatory process, our ability to recover regulatory assets and stranded costs in connection with deregulation, our ability to recover increases in fuel and other energy costs through regulated or competitive electric rates, our ability to build or acquire generating capacity, including the Turk Plant, and transmission line facilities (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs (including the costs of projects that are cancelled) through applicable rate cases or competitive rates, new legislation, litigation and government regulation, including oversight of energy commodity trading and new or heightened requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances or additional regulation of fly ash and similar combustion products that could impact the continued operation and cost recovery of our plants, timing and resolution of pending and future rate cases, negotiations and other regulatory decisions including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance, resolution of litigation, our ability to constrain operation and maintenance costs, our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy-related commodities, changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market, actions of rating agencies, including changes in the ratings of debt, volatility and changes in markets for electricity, natural gas, coal, nuclear fuel and other energy-related commodities, changes in utility regulation, including the implementation of ESPs and related regulation in Ohio and the allocation of costs within regional transmission organizations, including PJM and SPP, accounting pronouncements periodically issued by accounting standard-setting bodies, the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans, captive insurance entity and nuclear decommissioning trust and the impact on future funding requirements, prices and demand for power that we generate and sell at wholesale, changes in technology, particularly with respect to new, developing or alternative sources of generation, other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes, cyber security threats and other catastrophic events, our ability to recover through rates the remaining unrecovered investment in generating units that may be retired before the end of their previously projected useful lives and evolving public perception of the risks associated with fuels used before, during and after generation of electricity, including nuclear fuel.

AEP Ohio Distribution Rate Case – Docket #351/352-EL-AIR

On February 28, 2011, AEP Ohio filed a distribution base rate case with the Public Utilities Commission of Ohio requesting a net increase of $93.8 million, and requesting authority to recover previously approved regulatory assets. The requested increase relates to capital investments made and to recover increased costs. The requested ROE was 11.15%. A procedural schedule from the PUCO is pending.

Summary Rate Case Information

APCo Virginia Base Rate Case – Docket #PUE-2011-00037

On March 31, 2011 APCo filed an update to its pre-biennial base rate case for recovery of generation and distribution costs requesting an increase of $75 million ($126 million total increase less $51 million associated with a potential change in depreciation rates). The requested ROE is 11.65%, including a 50 basis point adder for meeting 2010 RPS goal allowed by law.

In conjunction with this case, an environmental rate adjustment clause (E-RAC), generation rate adjustment clause (G-RAC) and a renewable portfolio standard rate adjustment clause (RPS-RAC) were filed. APCo has requested that rates in the base case, E-RAC and RPS-RAC go into effect no later than 2/1/2012 and the G-RAC on 3/1/2012.

I&M Michigan Base Rate Case (Docket# U-16801)

On July 1, 2011 I&M filed a base rate case with the Michigan Public Service Commission requesting an increase of $24.5 million. Rates proposed in this filing are based on projected 2012 cost of service and will not go into effect until 2012, therefore rates will reflect a current cost of service. This filing includes revised depreciation rates to include additions since the last approved depreciation study as well as accelerated retirement of Tanners Creek Units1, 2 and 3. The requested ROE is 11.15%. In accordance with Michigan law, I&M intends to implement rates, subject to refund on January 1, 2012. An order is expected by mid-year 2012.

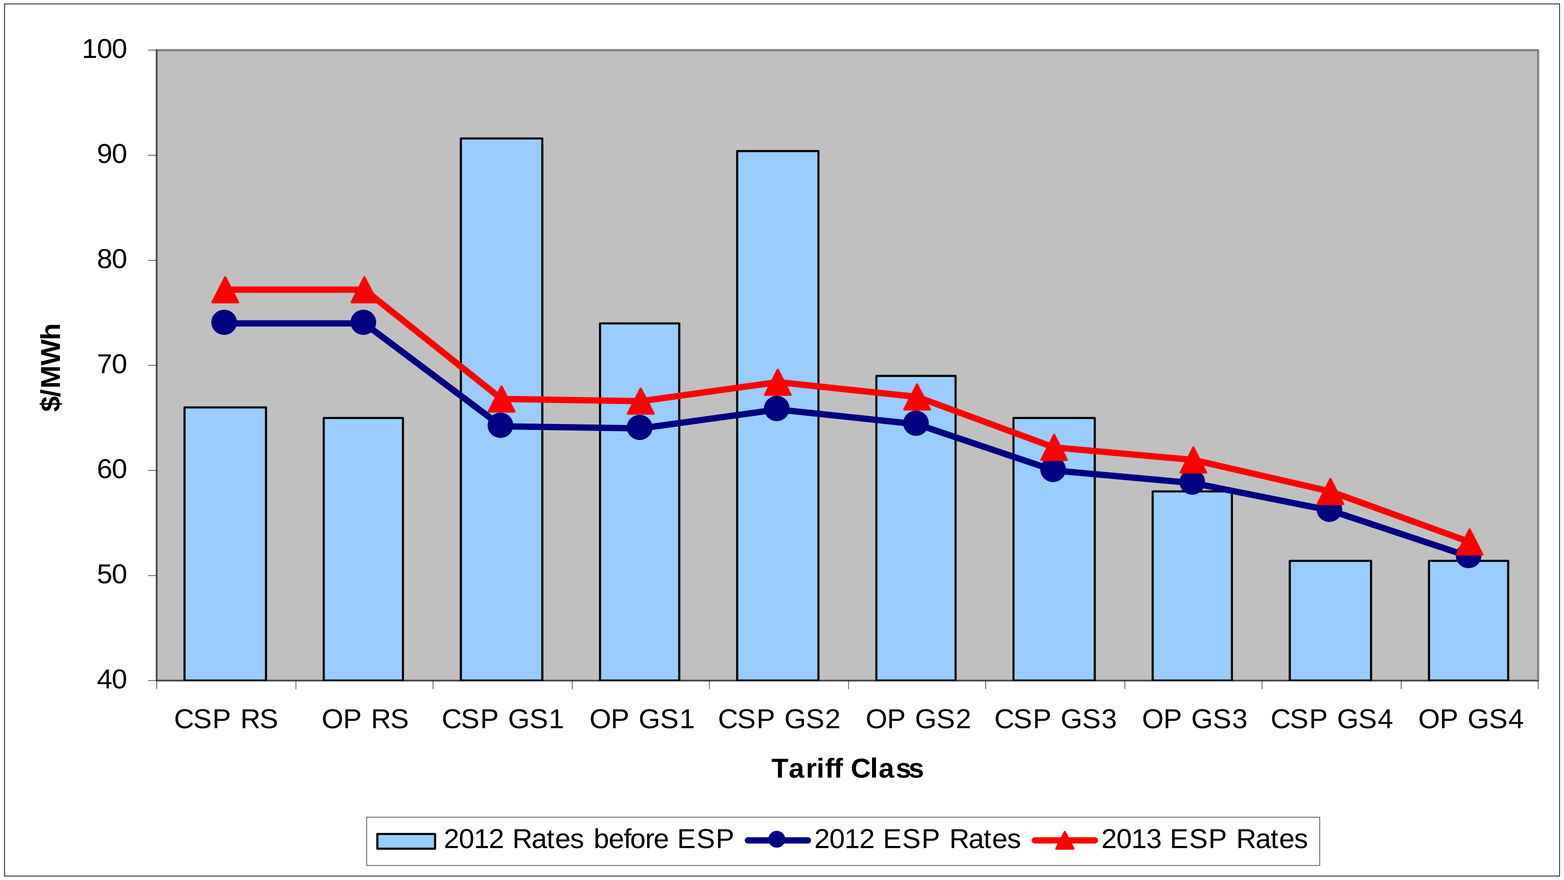
While the ESP includes a small base generation increase, the move to a market-based rate design, consistent with state policy, will result in varying impacts for different customer groups.

Price to Compare

AEP®

Proposed **SSO** Rates Redesigned To Resemble Market Pricing Structures



Rates do not reflect mitigation impact of market transition rider
2012 Rates before ESP reflect current 2011 rates for generation & transmission service, adjusted to reflect full cost 2011 fuel and environmental costs.

The realignment of rates with market should provide all customers with equivalent opportunities to shop. Additionally, since the proposed design eliminates explicit demand charges, customers should be more easily able to evaluate competitive offers. To ease the rate impact that customers will experience from the realignment, we have proposed a Market Transition Rider.

Market Transition Rider – Mitigates the Initial Impact of Rate Realignment

Illustration of Market Transition Rider on ESP Generation Rate Increases

AEP Ohio		1.4%	2.7%	0.0%	4.2%

The Market Transition Rider is a transition rider designed to facilitate the transition from AEP Ohio's current rates to market-based SSO Generation Service rates. It is a non-bypassable rider designed to limit the first and second year changes for any customer classes to uniformly transition any above or below average changes in three steps. Any revenue shortfall that is produced by limiting the increases for certain customer classes is collected from those classes whose decreases are limited.

List of ESP Riders – Existing and Proposed

Line	Rate Mechanism	Abbreviation	Bypassable	Distribution	Notes

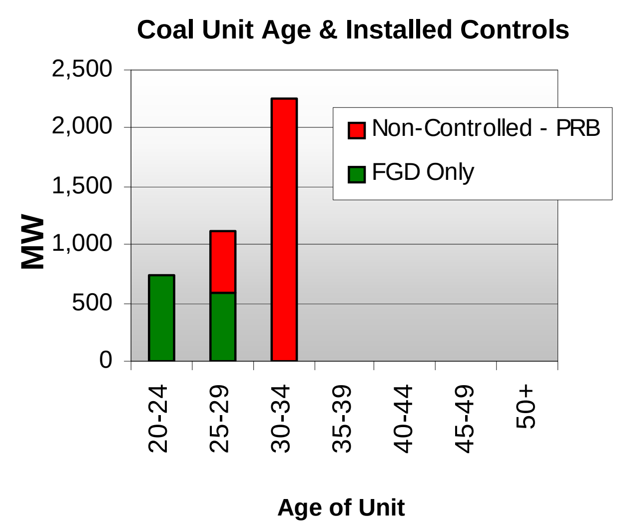
2009A - $29/ton
2010A - $29/ton
2011E - $29/ton



Turk Plant

- John W. Turk Jr. Ultra-Supercritical Coal Plant is a base load 600-MW advanced coal combustion plant. Located in Arkansas. SWEPCo owns 73 percent or roughly 440 megawatts of the total unit.

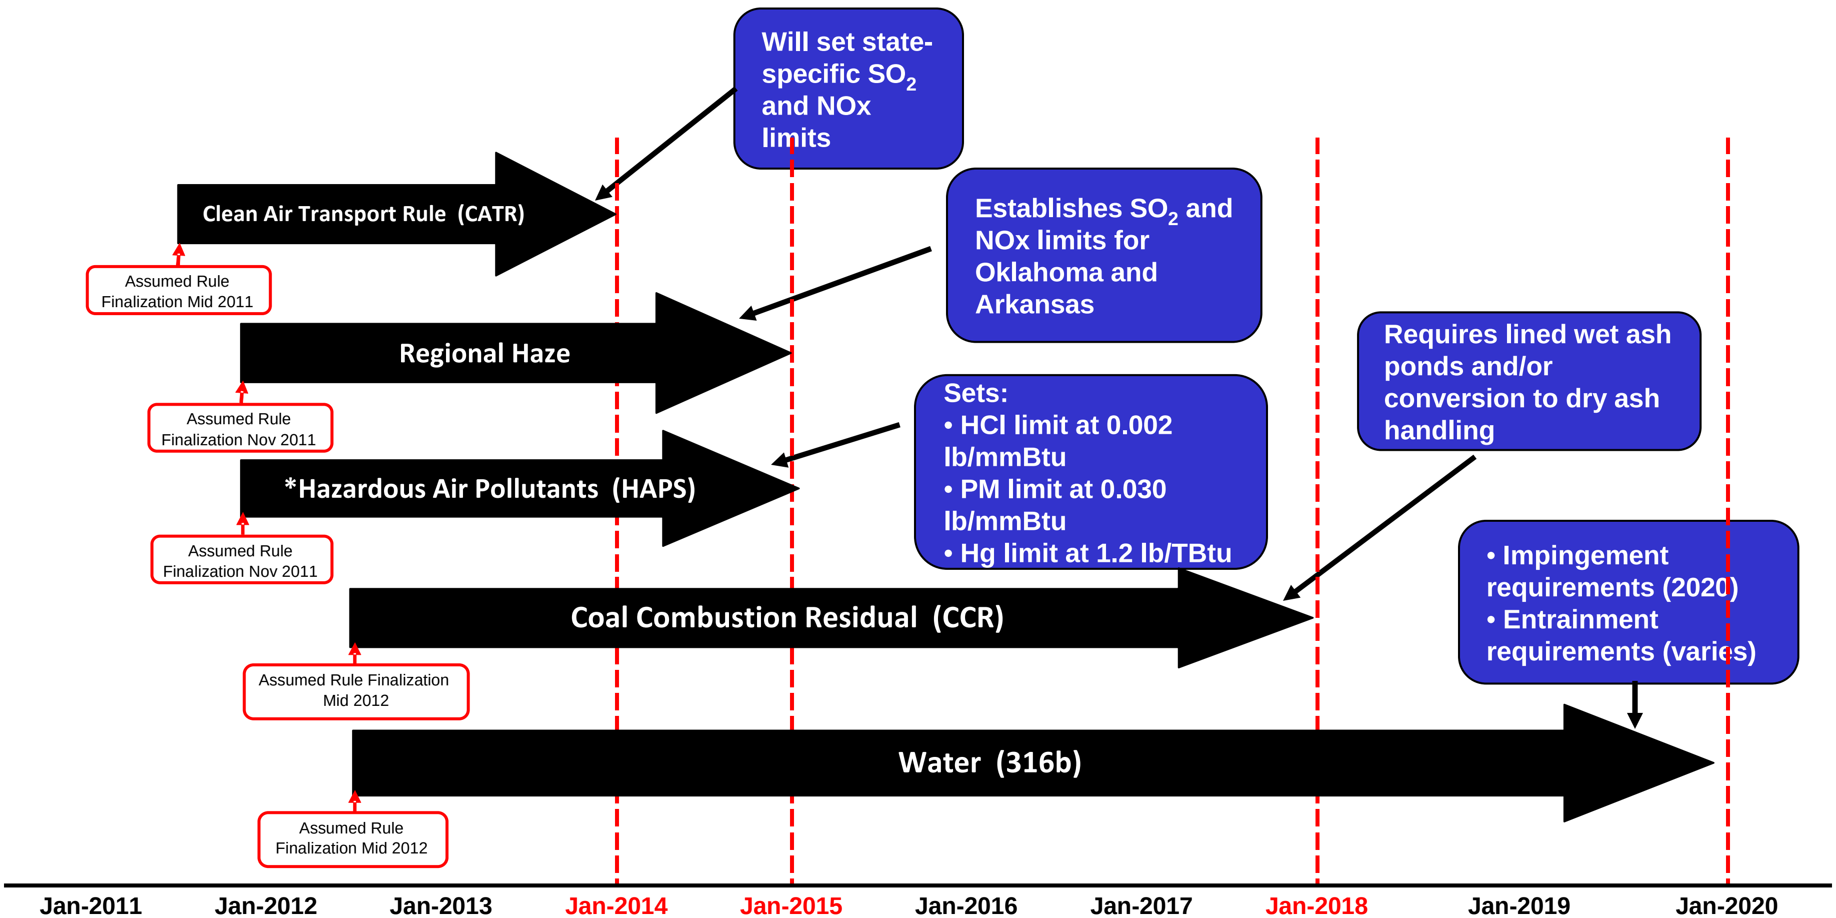
- The cost of the plant and related transmission is anticipated at $1.7 billion with AEP's share approximately $1.3 billion (excluding AFUDC) and will begin commercial operation in 2012.

- The Turk Plant will use low-sulfur coal and state-of-the art emission control technologies, including a design that allows for the retrofit of carbon dioxide controls

- $1.1 billion capitalized expenditures 3/31/11. SWEPCO's contractual commitments $260MM.

- Third party owners include: Arkansas Electric Cooperative Corp. (12%), East Texas Electric Cooperative (8%), and Oklahoma Municipal Power Authority (7%)

Anticipated environmental regulations and compliance deadlines



* Units that will be retrofit are eligible for a one year compliance extension from the EPA

Retrofits/New Generation

- The tables below represent our estimated $6 - $8 billion capital investment from 2012 to 2020 for environmental retrofits on 10,500 MW and new/refueled generation of 2,152 MW. The below costs include management estimates for compliance with CATR, HAPs MACT, CCR and 316(b) regulations as currently proposed.

Operating Company	Plant	MW	Type of retrofit	Low Cost Estimate 2012-2020 ($MM)	High Cost Estimate 2012-2020 ($MM)	
AEP Ohio	Conesville 5	400	SCR, DSI			
	Conesville 6	400	SCR, DSI			
	Muskingum River 5	510	Refuel with Natural Gas

*Assumes regulatory cost recovery for environmental investments including refuel are non-bypassable surcharges as proposed in the 2012 - 2014 ESP

** Total capital invested is expected to be $366 million for the Dresden plant once completed; $343 million of which is forecasted to be spent prior to 2012.

*** Includes AEG portion of costs related to Rockport upgrade

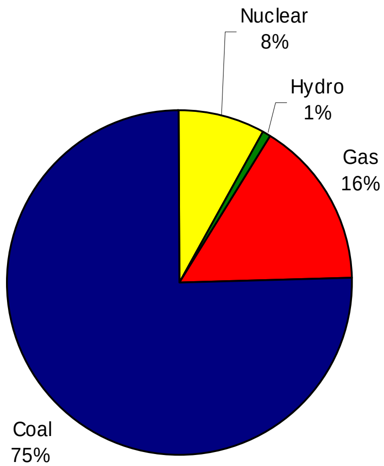
Retirements

Operating Company	Plant	MW	Expected Retirement
AEP Ohio	Sporn 5	450	2011
	Conesville 3	165	2012
	Muskingum River 1-4	840	2014
	Picway 5	100	2014
	Sporn 2-4	300	2014
	Kammer 1-3	630	2014
	Total MW	**2,485**	
APCO	Glen Lyn 5	95	2014
	Glen Lyn 6	240	2014
	Clinch River 3	235	2014
	Sporn 1	150	2014
	Sporn 3	150	2014
	Kanawha River 1	200	2014
	Kanawha River 2	200	2014
	Total MW	**1,270**	
I&M	Tanners Creek 1	145	2014
	Tanners Creek 2	145	2014
	Tanners Creek 3	205	2014
	Total MW	**495**	
KPCo	Big Sandy 1	278	2014
	Big Sandy 2	800	2014
	Total MW	**1,078**	
SWEPCO	Welsh 2	**528**	2014
	Total MW	**528**	
	Grand Total	**5,856**	

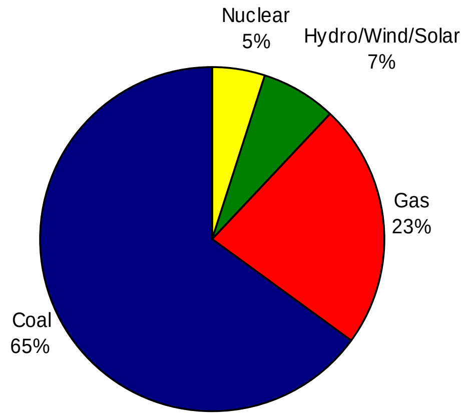
- Capacity reduction caused by retirements will create grid reliability issues particularly in the 2014-2016 time frame
- Net impact could be approx. 600 fewer jobs at AEP as well as indirect job losses affecting local vendors, contractors and service providers
- Annual lost wages of approximately $40 million
- Tax payments could decline by more than $30 million

Generation Transformation

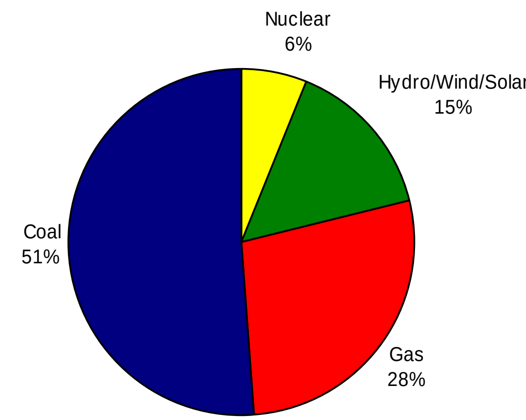
1990 AEP Generating Capacity by Fuel
37,428 total MW's



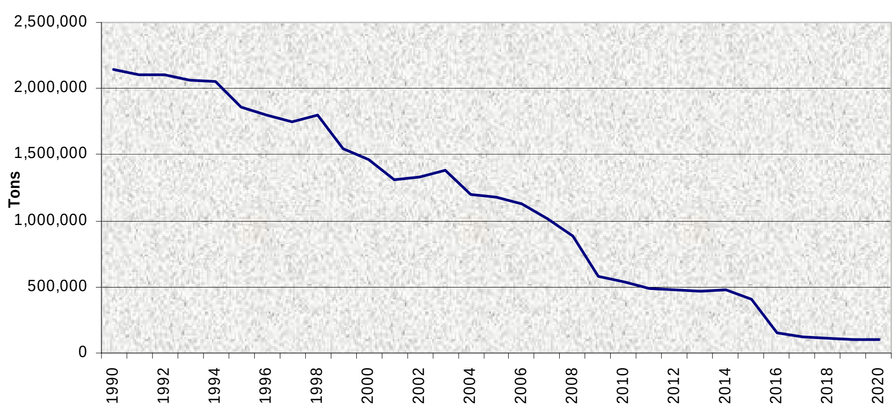
2010 AEP Generating Capacity by Fuel
39,910 total MW's



2020 AEP Generating Capacity by Fuel
37,707 total MW's



Total System NOx & SO2 (actual through 2010 and forecasted based on proposed EPA regulations)



- $7.2 billion capital invested from 1990-2010 to reduce emissions approximately 1.7 million tons
- Estimated $6-$8 billion additional capital investment from 2012-2020 for further reductions of approximately 440,000 tons

Transmission Investment Strategy

- **Near-Term Investment** – Electric Transmission Texas (ETT) secures near term investment opportunities, allowing AEP to invest in the large, growth-oriented Texas transmission market. Total capital expenditures of $3 billion with a 9.96% ROE.

- **Mid-Term Investment** – Seven wholly-owned transcos allow for expansion and growth within AEP's existing utility footprint through an efficient recovery mechanism. Will spend $160 million in 2011 and more than $350 million in 2012. ROE is in the 11.20%-11.49% range.

- **Long-Term Investment** – Joint ventures provide opportunities for longer-term growth outside of AEP's existing utility footprint with forward looking formula rates, reasonable ROEs and FERC incentives where appropriate.

Transmission has a diversified investment approach that positions it as one of the key AEP growth businesses.

Texas Transmission Growth Strategy : Near Term Investment

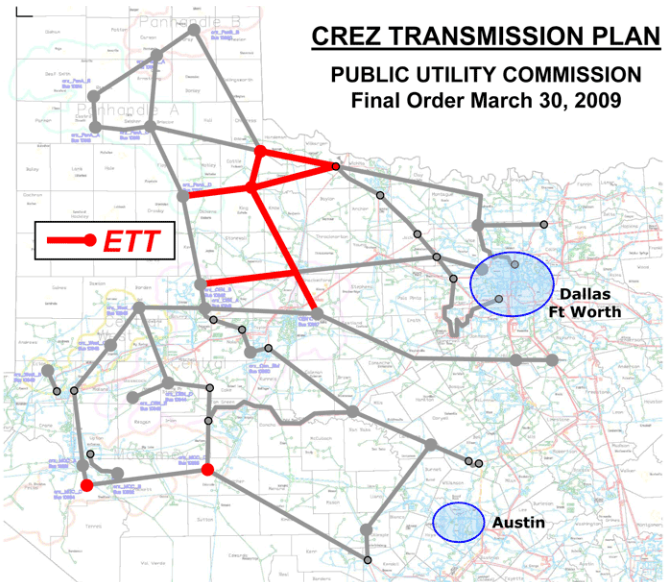
Ownership Structure: 50/50 (AEP/MidAmerican Energy Holding Company)

Total Project Cost: Over $3 Billion

Growing Rate Base:
Current rate base is $412 million; expected to grow as follows:
2011: $473 million
2012: $778 million
2013: $1,352 million

Interim TCOS filings twice per calendar year

Approved ROE: 9.96%



- **Additional Projects in the Pipeline ~$1.6 B:**
  - Approximately 822 miles of lines and 28 substations with in-service dates through 2017

- **Assigned Competitive Renewable Energy Zone (CREZ) Projects ~$1.1 B:**
  - Seven double-circuit 345kV transmission lines (~$750 M), eight major 345kV stations and several series compensation installations (~$350 M)
  - PUCT Certificate of Convenience and Necessity (CCN) proceedings underway

Joint Venture Strategy: Long-term

- **Strategy**: JV's secure new investment opportunities with local utilities to diversify AEP's investment outside AEP's traditional footprint while providing longer-term incremental earnings**.** JV projects are well-suited for FERC formula rate recovery mechanism, including potential for incentive rates.
- **Future:** Federal/regional initiatives may accelerate expansion of EHV transmission (e.g. cap-and-trade, renewable portfolio standards, inter-region wide planning). Securing first mover advantage will enable AEP to secure LT investment opportunities.
- **Future flexibility**: Passive investment opportunities can be considered and can provide entry beyond SPP/PJM/ERCOT

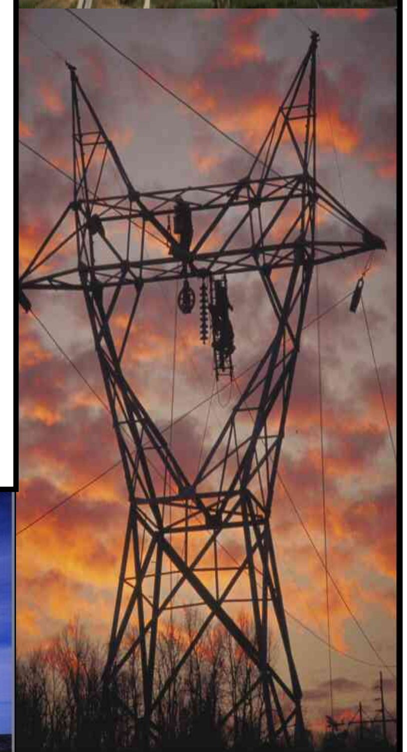
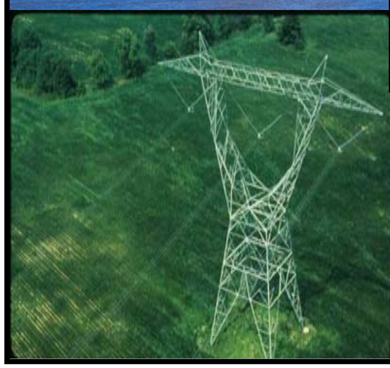
AEP AMERICAN ELECTRIC POWER®

April 7-8, 2008





"Safe Harbor" Statement under the Private Securities Litigation Reform Act of 1995

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources, costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of generating plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; the ability to build or acquire generating capacity (including our ability to obtain any necessary regulatory approvals and permits) when needed at acceptable prices and terms and to recover those costs through applicable rate cases or competitive rates; new legislation, litigation and government regulation, including requirements for reduced emissions of sulfur, nitrogen, mercury, carbon, soot or particulate matter and other substances; timing and resolution of pending and future rate cases, negotiations and other regulatory decisions (including rate or other recovery of new investments in generation, distribution and transmission service and environmental compliance); resolution of litigation (including disputes arising from the bankruptcy of Enron Corp. and related matters); our ability to constrain operation and maintenance costs; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary and interest rate trends; volatility in the financial markets, particularly development affecting the availability of capital on reasonable terms and developments impairing our ability to refinance existing debt at attractive rates; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas and other energy related commodities; changes in the creditworthiness of the counterparties with whom we have contractual arrangements, including participants in the energy trading market; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas and other energy-related commodities; changes in utility regulation, including the potential for new legislation in Ohio and the allocation of costs within regional transmission organizations; accounting pronouncements periodically issued by accounting standard-setting bodies; the impact of volatility in the capital markets on the value of the investments held by our pension, other postretirement benefit plans and nuclear decommissioning trust; prices for power we generate and sell at wholesale; changes in technology, particularly with respect to new, developing or alternative sources of generation; and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Forms 10-K and 10-Q, filed from time to time by the company with the SEC.

AEP Strategy

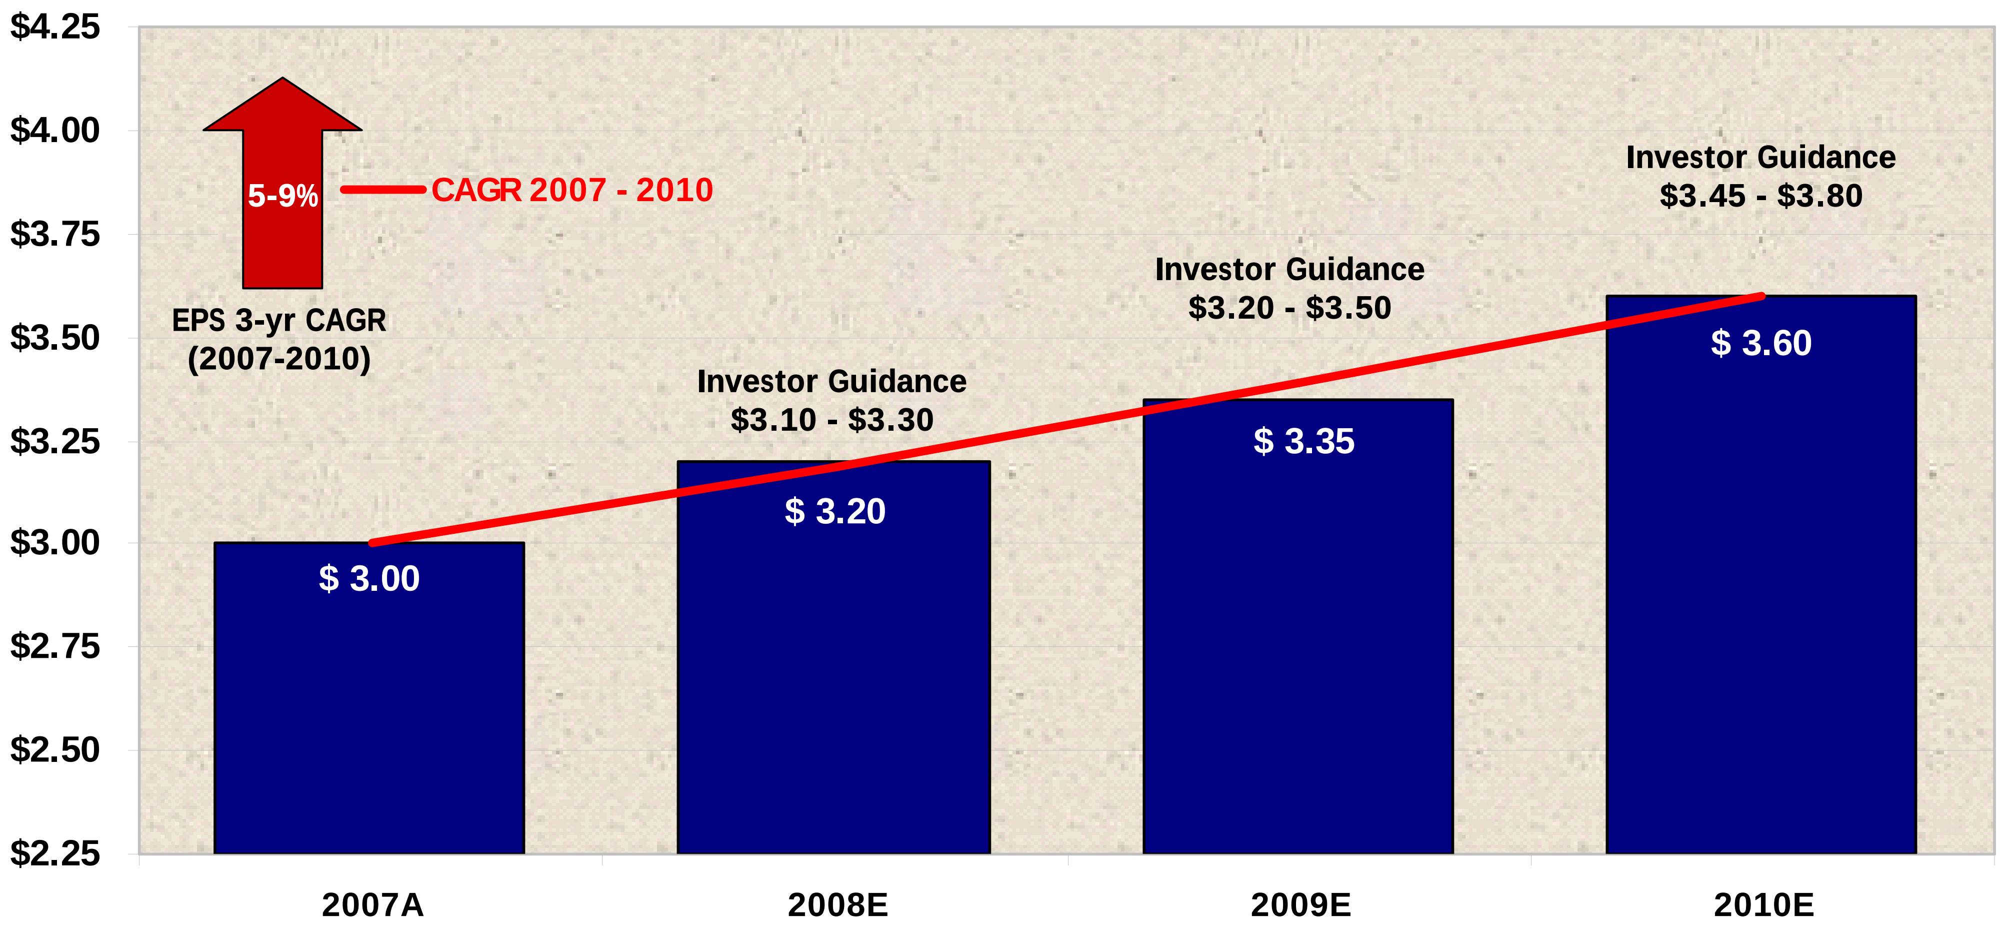
Strategy: grow our core utility business at a consistent rate through major investment supported and funded by innovative programs for regulatory recovery as well as develop our independent, federally regulated Transmission Company for the pursuit of new major interstate projects.

Our 2008 Focus:

- Prepare for post-2008 transition in Ohio
- Invest in and evolve infrastructure to support future technology and customer needs focused on efficiency, conservation and load management
- Enhance cash flow & earnings through rate recovery mechanisms
- Take advantage of AEP's size to benefit our customers and shareholders through regulatory-supported investment

Sustained capital investment opportunities support earnings growth.

4-Year Earnings Range Forecast



5% to 9% earnings growth

AEP®

At the conclusion of our current environmental retrofit program, over 58% of our 24,630 MW coal-fired generation fleet will be equipped with SCRs and over 73% will be scrubbed (FGDs).

New Generation

Operating Company	Project Name	State	Projected Cost	Fuel Type	Plant Type	MW Capacity	Commercial Operation Date (Projected)
PSO	Riverside	Oklahoma	$59 MM	Gas	Simple-cycle	170	2Q 2008
AEG	Dresden	Ohio	$266 MM	Gas	Combined-cycle	580	2010
SWEPCo	Stall	Louisiana	$378 MM	Gas	Combined-cycle	480	2010
SWEPCo	Turk	Arkansas	$1.3 B (1)	Coal	Ultra-supercritical	600 (1)	2012
APCo	Mountaineer	West Virginia	$2.23 B	Coal	IGCC	629	2012
CSP/OP	Great Bend	Ohio	$2.7 B (2)	Coal	IGCC	629	tbd

(1) SWEPCo will own approximately 73%, or 438 megawatts, totaling about $950 million in capital investment.
(2) FEED (front-end engineering and design) study with GE/Bechtel is complete. Cost estimates, updated to reflect cost escalations due to revised commercial operation date of 2017, are not yet filed with the PUCO due to the current Supreme Court of Ohio remand to the PUCO of the PUCO's April 10, 2006 Opinion and Order.

AEP is meeting the growing electricity needs of customers through the pursuit of new economic generation facilities.

gridSMART^{SM}

gridSMART^{SM}: implementing AEP's vision for the distribution and customer services business in the future, including the development of new customer programs to reduce consumption and peak demand, and a plan to deploy advanced technologies.

- **Enables customers to better manage energy**
- **Improves service to our customers by enhancing customer choice and customer control**
- **Improves efficiency**
- **Integrates distributed energy resources into our grid**
- **Transforms the way we do business**

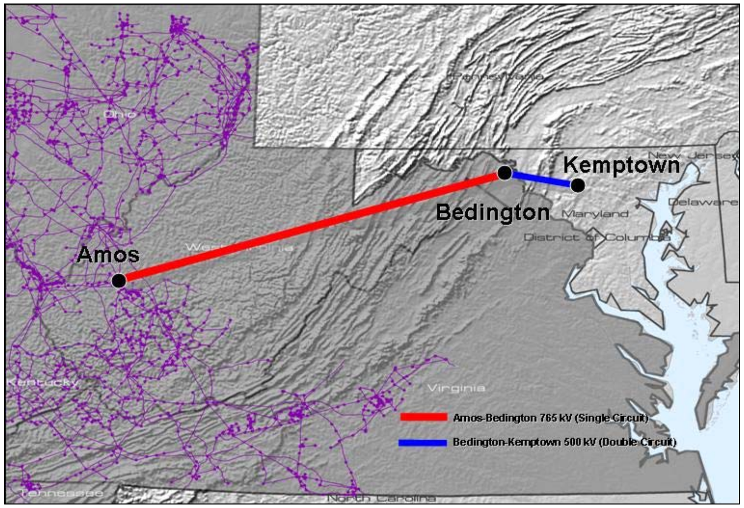
Capital Investment, Subject to Regulatory Approval * $ in millions			
Technology	**2008**	**2009**	**2010**
Metering & Communications	$83	$138	$146
Distribution Technology Enhancements	$40	$ 63	$ 82

*$472MM of the $552MM not in current forecast; spending contingent upon regulatory approval

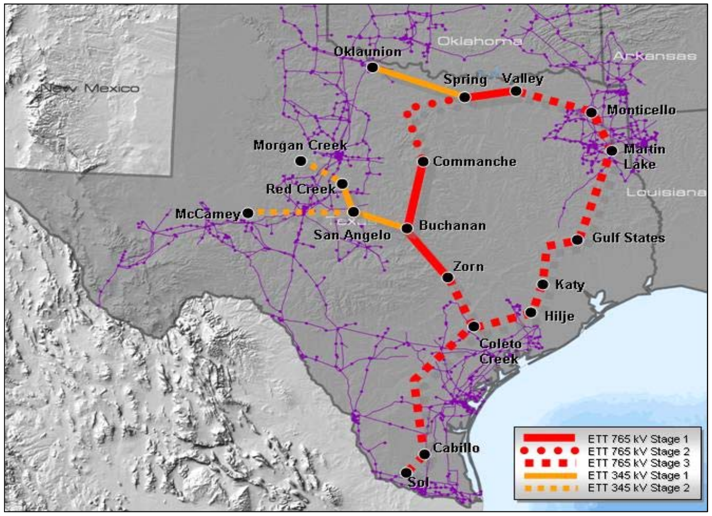
AEP will continue to be an industry leader in deploying advanced technology on a commercial scale. $552MM capital investment by 2010, subject to regulatory approval

I-765™ Transmission: Investment Opportunities

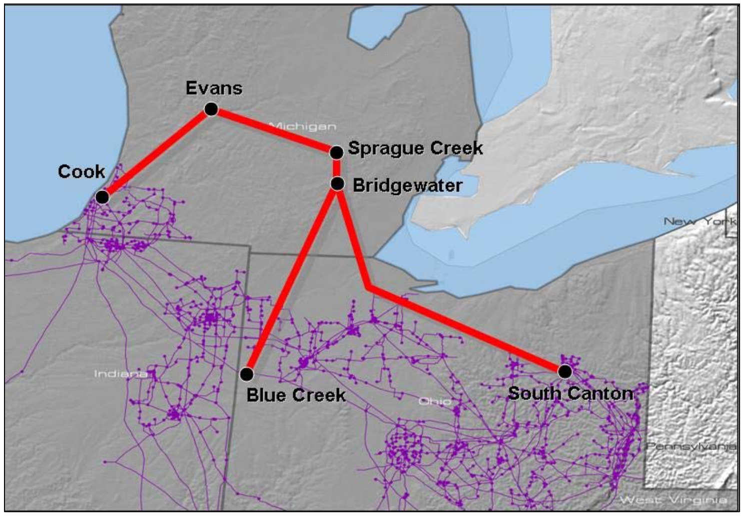
AEP is Advancing the Development of a National Interstate Today



PATH Project (PJM)



ETT Proposal (ERCOT)



AEP-ITC Michigan Proposal (PJM/MISO)

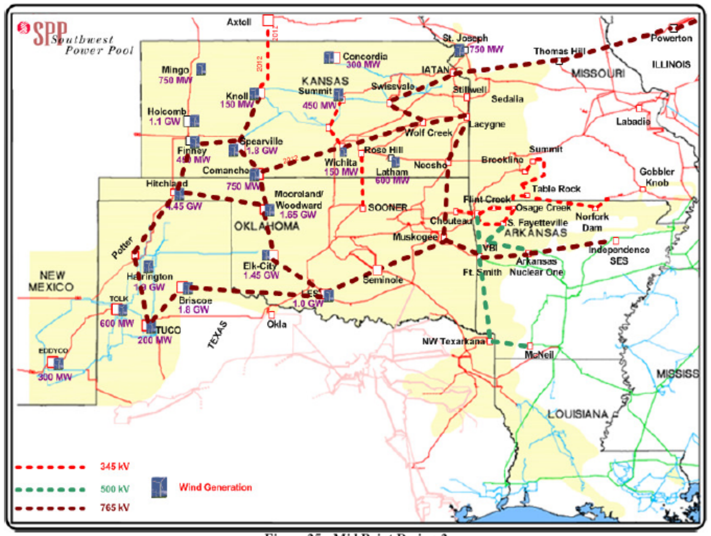


Figure 25: Mid Point Design 2

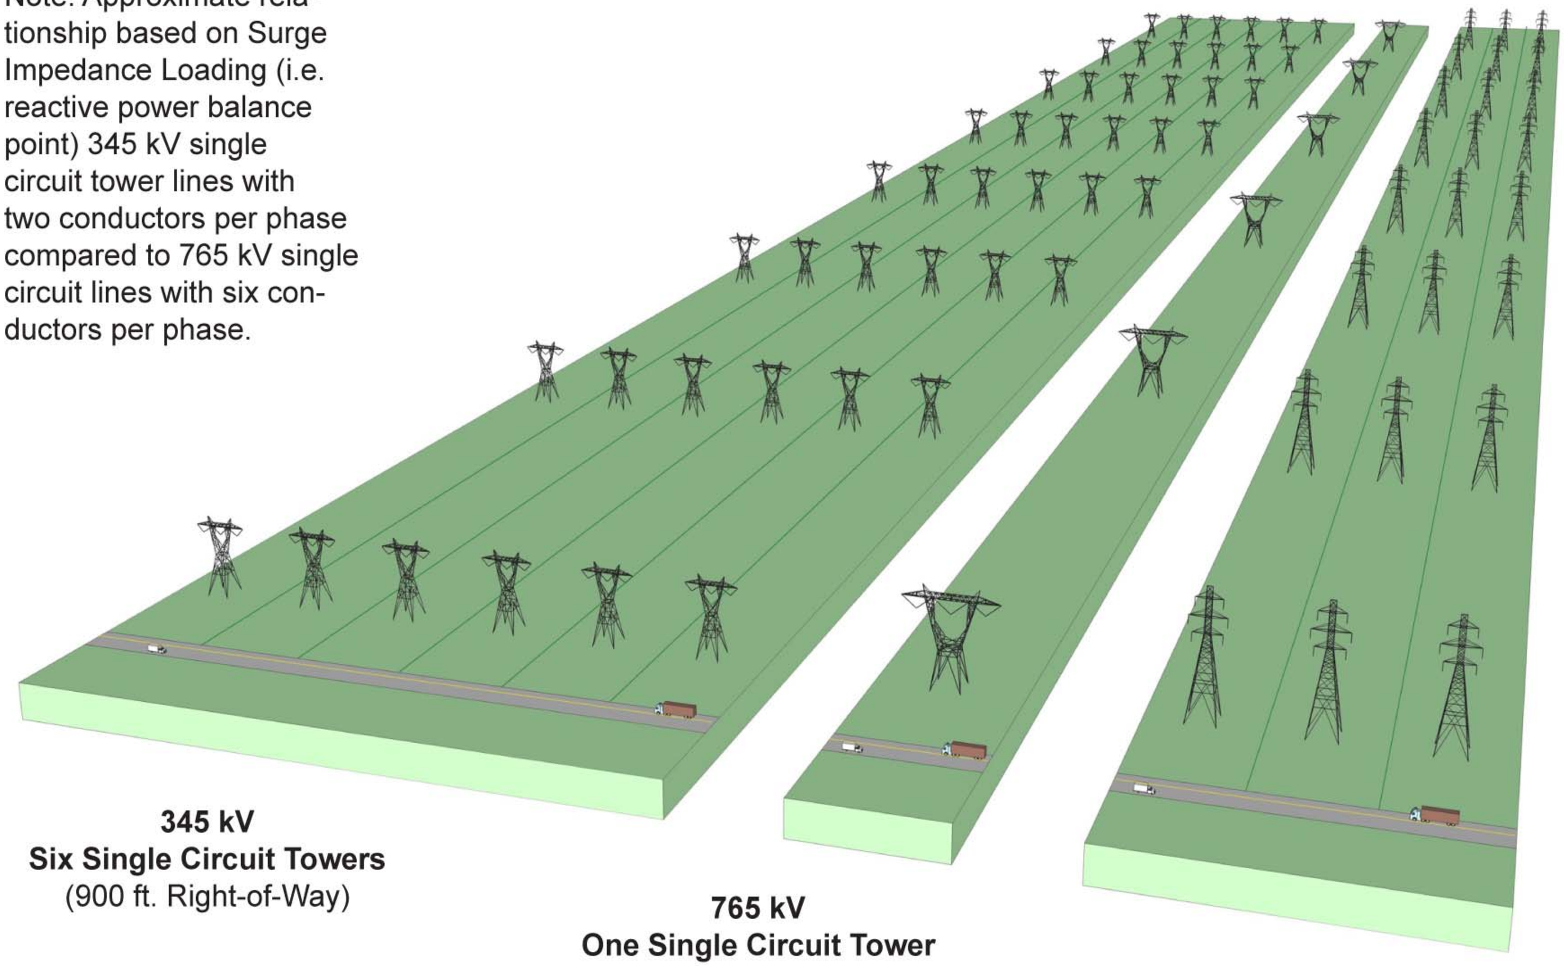
SPP Overlay Study – Mid Design 2

765 Right-of-Way Comparison

Note: Approximate relationship based on Surge Impedance Loading (i.e. reactive power balance point) 345 kV single circuit tower lines with two conductors per phase compared to 765 kV single circuit lines with six conductors per phase.



345 kV
Six Single Circuit Towers
(900 ft. Right-of-Way)

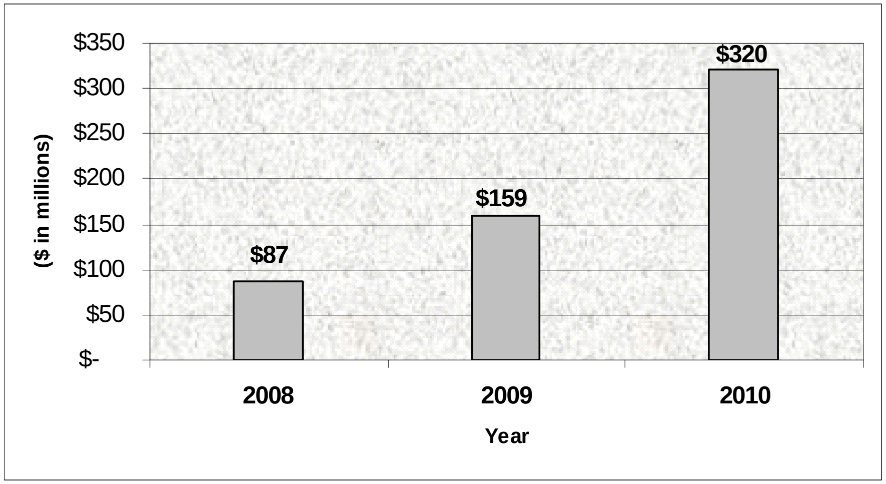
765 kV
One Single Circuit Tower
(200 ft. Right-of-Way)

345 kV
Three Double Circuit Towers
(450 ft. Right-of-Way)

From a siting standpoint, 765-kV is more efficient in terms of economies of scale and right-of-way than lower capacity lines.

Transmission – Investments and Earnings Contributions

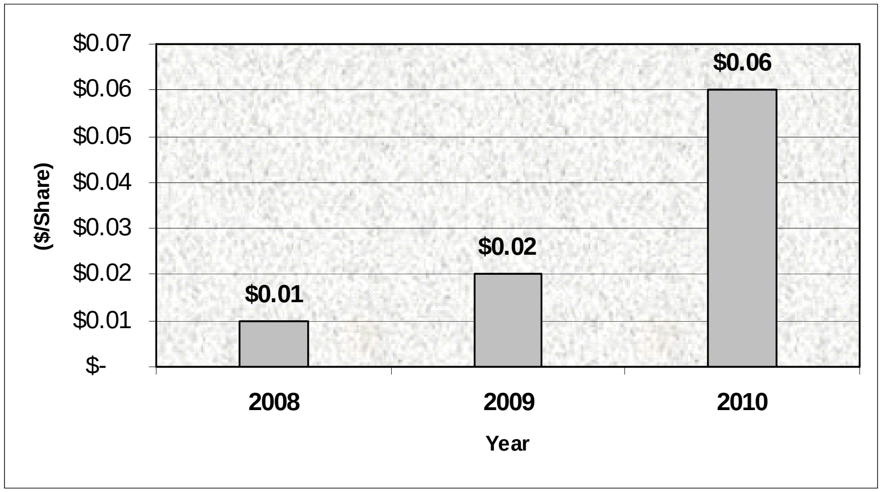
Projected Transmission Capital Spending*



* ETT and PATH joint ventures included in above projection. Amounts represent AEP's 50% share of total transmission joint venture capital expense. These amounts are excluded from AEP's base capital forecast because the joint ventures are not consolidated for financial reporting purposes. AEP will be responsible for funding 40-50% of these amounts with equity contributions, and the remainder will be financed with debt issued by the joint ventures.

ETT Electric Transmission Texas

Projected Transmission EPS Contributions*



* Ultimate earnings contribution dependent on ownership structure, capitalization, ROE and timing of project completion.

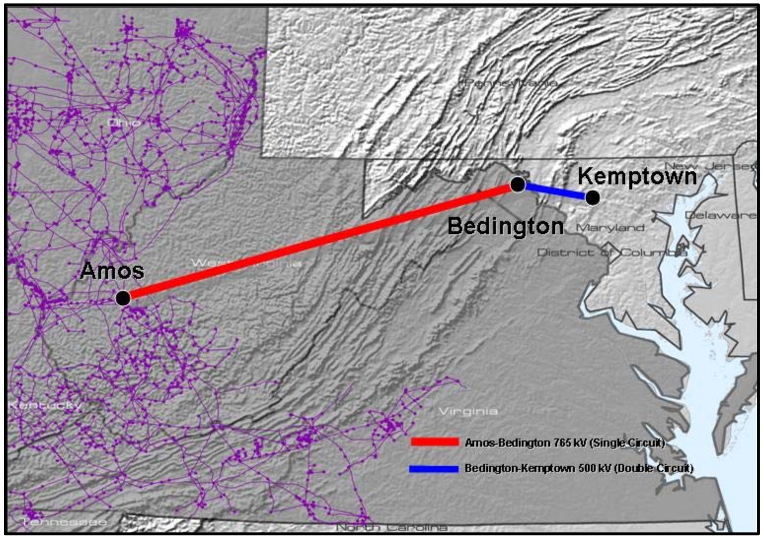
PATH Potomac-Appalachian Transmission Highline

Transmission will provide a near and long term catalyst for growth.

I-765™ Transmission in PJM: PATH

Execution in Action

- *PATH Progress to Date*
  - PJM approved project in its Regional Transmission Expansion Plan in June 2007
  - On September 1, 2007 AEP and Allegheny Energy formed a new joint venture -- Potomac-Appalachian Transmission Highline (PATH) and its subsidiaries -- to construct the 290 miles West Virginia-Maryland line authorized by PJM.
  - Total estimated cost of $1.8 billion; AEP portion approximately $600 million
  - FERC order issued on February 29, 2008 approving:
    - Cash return on CWIP
    - 14.3% incentive ROE
    - Recovery of all costs incurred prior to the time rates go into effect, and
    - Recovery of all prudently incurred development and construction costs if the project is abandoned as a result of factors beyond the control of PATH or its parents.
  - FERC ordered the formula rate mechanism be set for hearing, pending settlement judge procedures
- *Funding Plans/Transaction Structure*
  - AEP and Allegheny share ownership of Amos – Bedington line and contribute equally to this portion of the project through PATH West Virginia Transmission Company, LLC
  - AEP's investment will be held in the AEP Transmission Holding Company LLC subsidiary
- *Key Next Steps*
  - Siting Approval from WV and MD – 2010
  - Targeted Completion – 2012



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

PATH
Potomac-Appalachian Transmission Highline

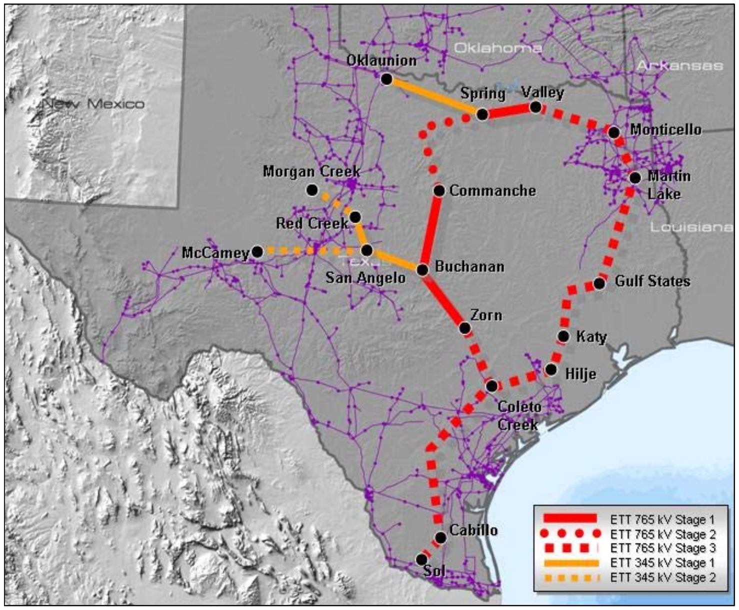
I-765™ Transmission in Texas (ETT)

Electric Transmission Texas Update

- ### *Transaction Structure*
  - 50/50 utility joint venture between AEP Utilities, Inc. and MEHC Texas Transco, LLC
  - ETT capital structure is 60% debt / 40% equity with a 9.96% ROE
  - Services provided by AEP and investment opportunities can be offered by either partner

- ### *Next Steps*
  - ETT project opportunities to be evaluated on a case by case basis
  - Anticipate offering projects in Q2 2008

- ### *ETT ERCOT Backbone Proposal*
  - ETT proposal for ERCOT and PUCT to consider CREZ transmission in context of long-term vision for transmission system.
  - Current 5-year planning horizon results in higher ultimate costs, lower system efficiency.
  - Long-term 15-20 year perspective provides better plan, supports development of high voltage backbone at 765-kV.
  - $4.2 billion investment (long-term backbone).*



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

* Before ownership division.

Electric Transmission America (ETA)

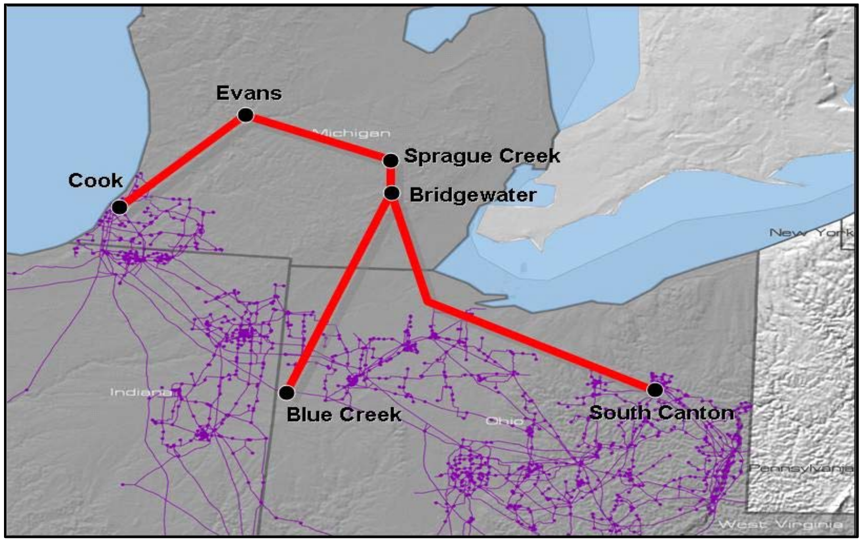
- AEP signed an agreement with MidAmerican Energy Holdings Company on September 13, 2007 to form Electric Transmission America, a 50/50 joint venture.
- Both MidAmerican and AEP desire to utilize ETA as a vehicle to invest in select transmission projects located in North America, outside the Electric Reliability Council of Texas.
- Projects taken on by ETA would entail transmission facilities:
  - 345 kV and above
  - Within, adjacent to and outside the Companies' respective service areas (excluding ERCOT)
  - Greater than $100 million
- ETA is working on identifying investment opportunities and collaborating with likeminded, qualified investment partners in different regions of the country.

ETA reflects a natural progression and expansion of AEP's partnership with MidAmerican.

I-765™ Transmission in Michigan

Supporting Michigan's 21st Century Energy Plan to address severe capacity constraints

- *Overview*
  - ITC and AEP conducted a technical study for a new 765-kV from Ohio to Michigan
  - Study was released Q3 2007
  - 700 miles of 765-kV line in Ohio and Michigan
  - $2.6 billion investment (before ownership division)
  - AEP and ITC are in discussions to form a Joint Venture
- *Benefits*
  - Up to 5,000 MW improved transfer capability
  - Reduces network line losses by 250 MW
- *Next Steps*
  - Agreement on JV (AEP/ITC) - Summer 2008
  - JV Formation - 2008
  - MISO and PJM Review/Approval - 2009
  - FERC Formula Rate and Cost Allocation Filing - Fall 2009
  - Siting Approval – 2011-2012
  - Estimated Completion –2015-2021



The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

I-765[TM] Transmission in SPP

Significant opportunity for 765-kV transmission in SPP

- ### *Overview*
  - Sent non-binding Letter of Commitment to SPP to construct 765-kV and 500-kV projects in SPP region consistent with SPP Overlay Study – Summer 2007
  - Updated EHV Overlay Study completed by SPP – March 2008
- ### *Benefits*
  - Overall reliability reinforcement with improved voltage support throughout the SPP system
  - Significantly increased transfer capability
  - Provides access to new generation resources, especially renewables
  - Allows for effective interconnections for EHV system development
- ### *Next Steps*
  - ETA Partnering Agreements - 2008
  - SPP RTO EHV Overlay Approval – 2009
  - FERC Formula Rate and Cost Allocation Filing (postage stamp) – 2009
  - Siting Approval for projects – 2009-2011
  - Estimated Completion (in segments) – 2012-2017

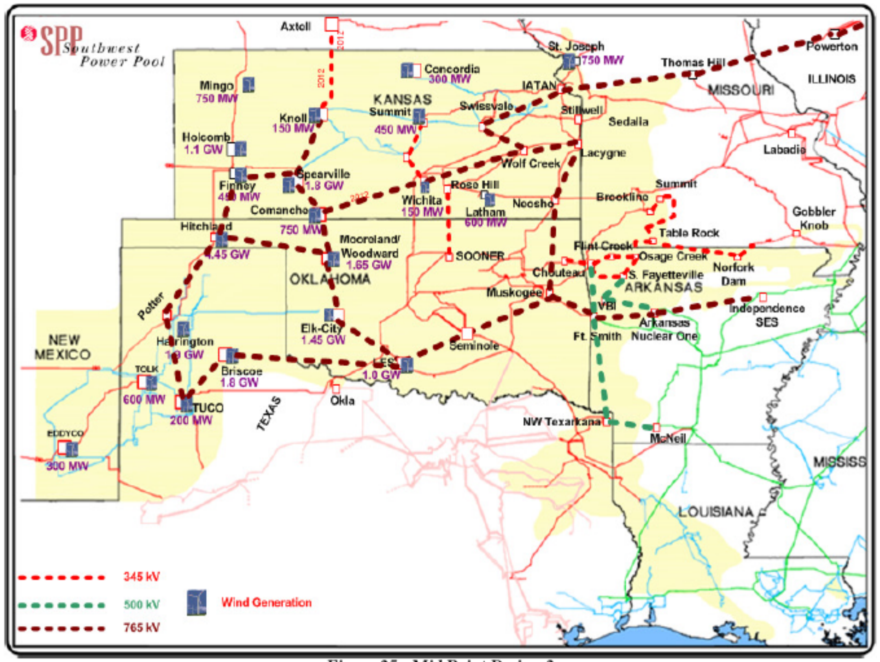


Figure 25: Mid Point Design 2

Total SPP 765-kV Overlay estimated to cost approximately $5 Billion by SPP March 2008 study, a portion of which could be built by ETA.

The ROW routes shown on this diagram are for illustrative purposes only and may not depict the actual route that could eventually be selected. The substation locations may also be modified.

KPSC Case No. 2011-00401
Sierra Club's First Set of Data Requests
Dated January 13, 2012
Item No. 1
Attachment 1 - Confidential
Page 4045 of 9556

AEP's Climate Position

- AEP supports a reasonable approach to carbon controls in the US
- AEP has taken measurable, voluntary actions to reduce its GHG emissions and will support a well-thought out US mandate to achieve additional, economy-wide reductions
- Global warming is a global issue and AEP supports the US taking a leadership role in developing a new international approach that will address growing emissions from all nations, including developing countries such as India and China
- A certain and consistent national policy for reasonable carbon controls should include the following principles:
  - Comprehensiveness
  - Cost-effectiveness
  - Realistic emission control objectives
  - Monitoring, verification and adjustment mechanisms
  - Technology development & deployment
- Regulatory or economic barriers must be addressed
- Recognition provided for early action/investment made for GHG mitigation
- Inclusion of adjustment provision if largest emitters in developing world do not take action

A reliable and reasonably-priced electric supply is necessary to support the economic well-being of the areas we serve.

Highlights of Bingaman-Specter Proposal

"Low Carbon Economy Act of 2007"

Key Components:

- Start date for greenhouse-gas reductions is 2012
- Goals: 2006 levels by 2020; 1990 levels by 2030
- Includes a safety valve of $12 per metric ton, increasing at an annual rate of 5% above inflation
- Support for allowance allocations
- International action

AEP endorses this proposal because it sets reasonable and achievable reduction targets and includes the AEP-IBEW trade proposal.

Advanced Generation & CO_2

Near Term:

- Chilled Ammonia project at Mountaineer moving to commercial scale at the Northeastern Plant in 2012

$ in millions				
		2008	2009	2010
Mountaineer Chilled Ammonia Project		$30	$39	$0

Long Term Strategy (Post-2010):

- IGCC
- Chilled Ammonia
- Oxy Coal Technology
- Nuclear COL

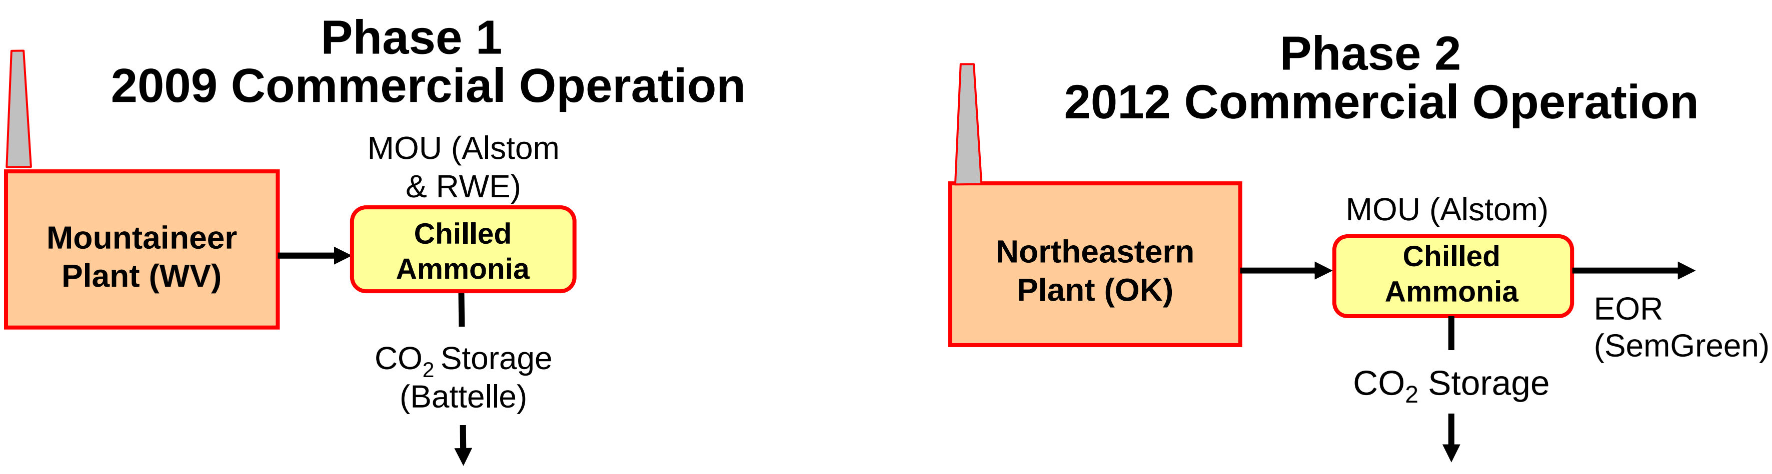
We are committed to validating and deploying technologies that ensure coal remains a viable resource for AEP and America.

AEP's Carbon Capture & Storage Initiative

In March 2007, AEP announced a major new carbon capture and storage initiative:

Chilled Ammonia CCS--We will install carbon capture on two coal-fired power plants, the first commercial use of technologies to significantly reduce carbon dioxide emissions from existing plants.

- **The first carbon capture project, at the Mountaineer plant in West Virginia, is expected to complete its product validation phase in 2009.**
- **The second, at the Northeastern plant in Oklahoma, will begin commercial operation in 2012.**



CO_2 Capture Techniques

Post-Combustion Capture

- Conventional or Advanced Amines, Chilled Ammonia
  - Amine technologies commercially available in other industrial applications
  - Relatively low CO_2 concentration in flue gas – More difficult to capture than other approaches
  - High parasitic demand
    - Conventional Amine ~25-30%, Chilled Ammonia target ~10-15%
  - Amines require **<u>very</u>** clean flue gas

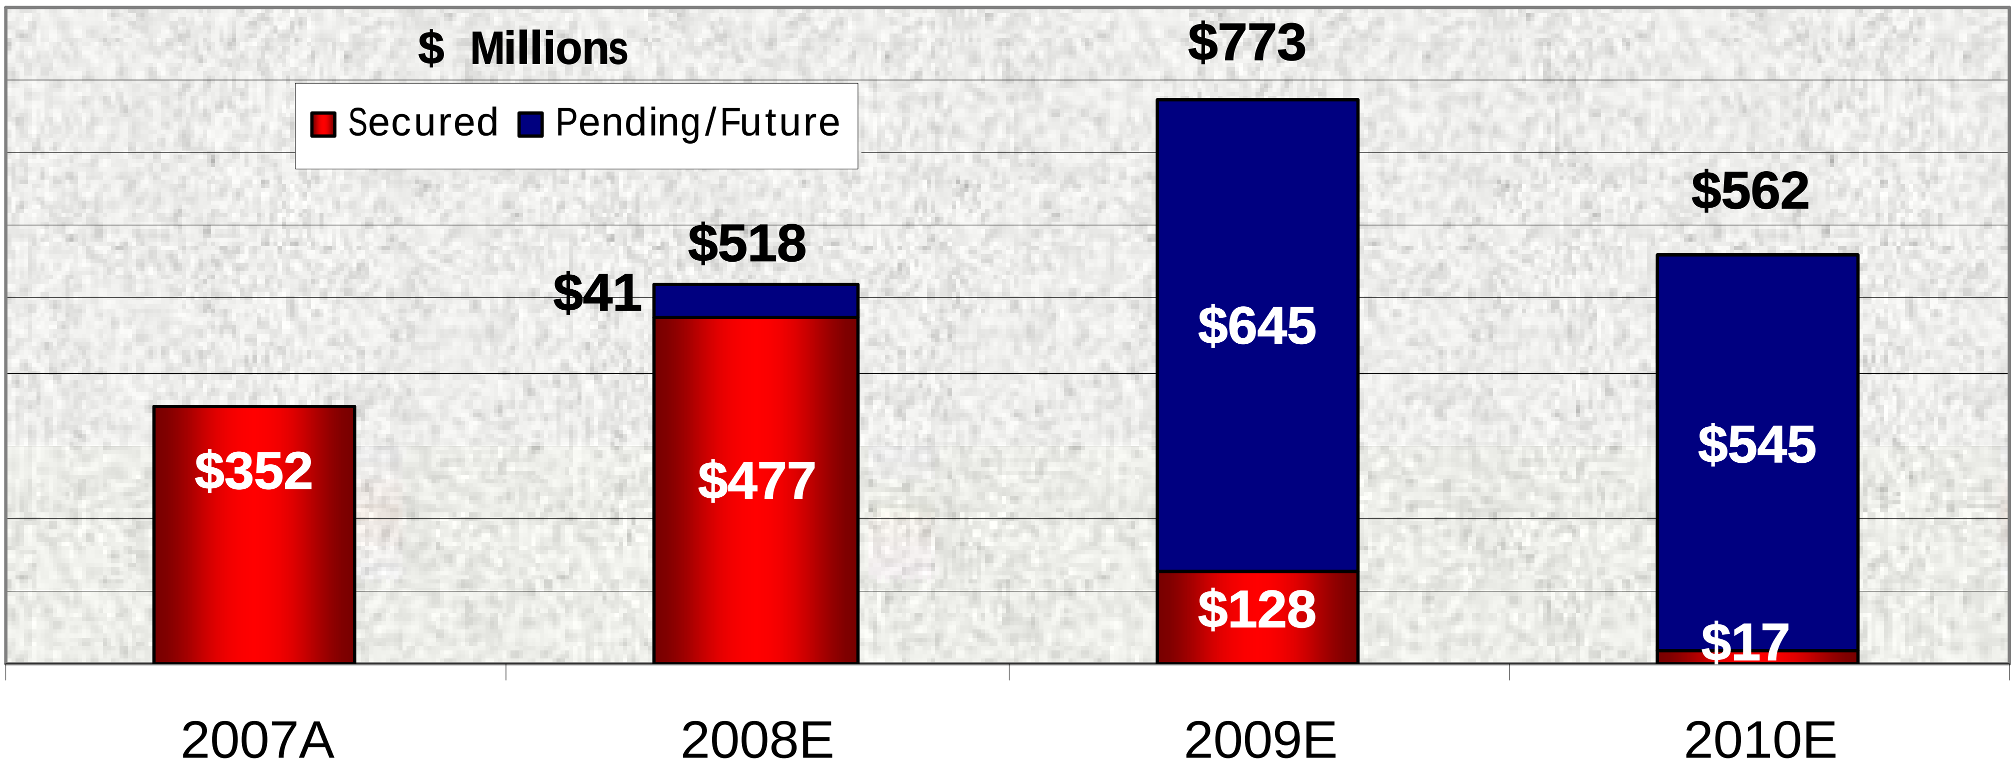
Modified-Combustion Capture

- Oxy-Coal
  - Technology not yet proven at commercial scale
  - Creates stream of very high CO_2 concentration
  - High parasitic demand, >25%

Pre-Combustion Capture

- IGCC with Water-Gas Shift
  - Most of the processes commercially available in other industrial applications
    - Have never been integrated together
  - Turbine modified for H_2-based fuel, which has not yet been proven at commercial scale
  - Creates stream of very high CO_2 concentration
  - Parasitic demand (~20%) for CO_2 capture - lower than amine or oxy-coal

Incremental Rate Relief Assumptions

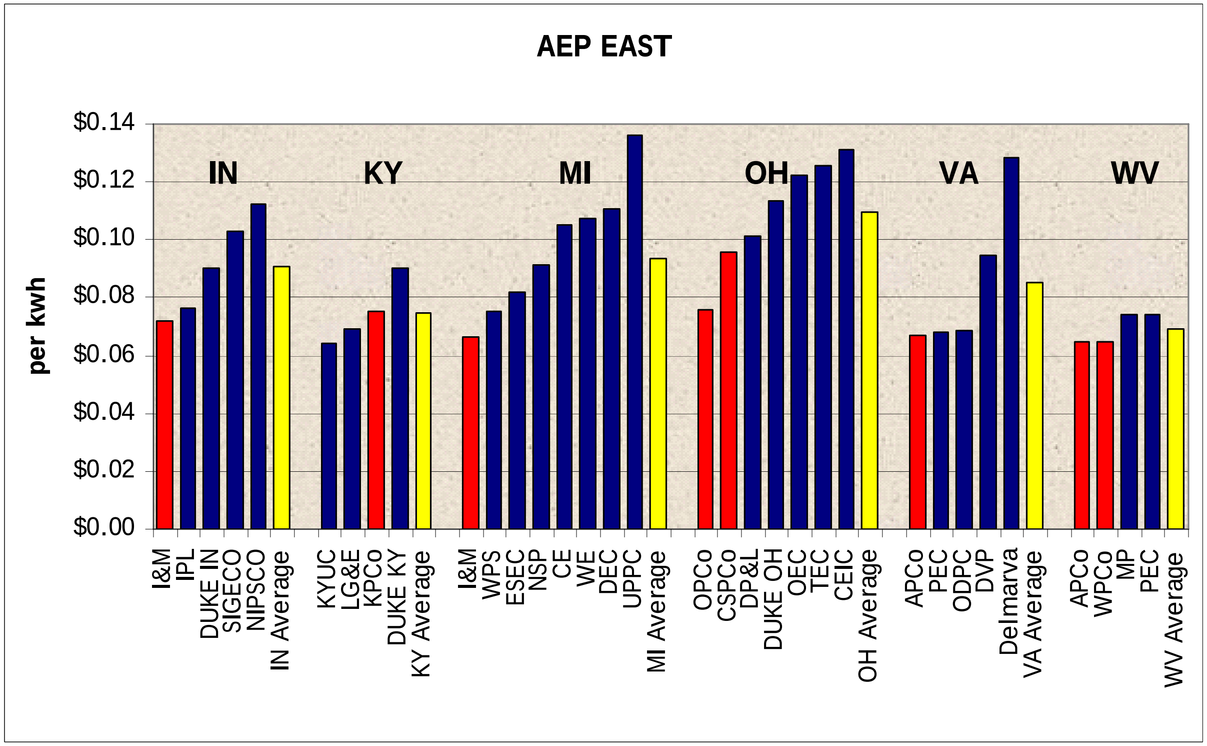


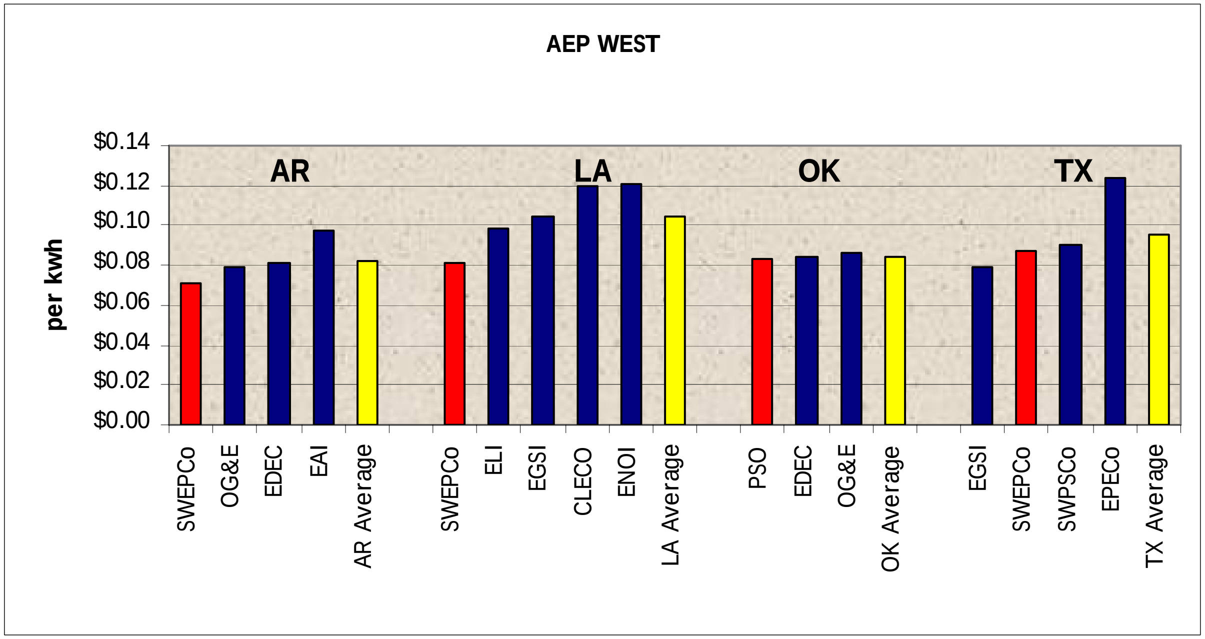
- **92% of 2008 Rate Relief Secured: I&M Depreciation, APCo – WV Surcharge, TCC & TNC General Rate Cases, Ohio RSP (3% & 7%), PSO Peaking Generation & General Rate Case, Ohio 4% Generation Rider and Marginal Loss Recovery, APCo - Virginia Fuel Factor, 2007 TCC/TNC TCRF filings, PSO 2007 Storm Recovery.**

- **2008 Pending: SWEPCo – LA Financial Review, 2008 TCC/TNC TCRF filings, other cases yet to be filed.**

Our goal is to maximize utility company cash flow and returns by minimizing regulatory lag.

AEP Provides Low Cost Electric Service





Residential Average rates for 1,000 kWh - 12 months ended 7/01/2007

Source: Summer 2007 EEI Typical Bills and Average Rates Report

AEP's low cost provider status in most of its jurisdictions will allow AEP's pricing to remain competitive following anticipated rate increases

- AEP Company
- Other Company within state
- State Average

2008 Regulatory Activity Completed

- AEP-Ohio Application for 4% Provision on Generation Rate
- APCo (Virginia) Fuel Factor Filing (including 75%/25% Off-System Sales Sharing)
- PSO Storm Cost Recovery Filing
- New Generation:
  - IGCC Filing in West Virginia - Certificate of Public Convenience and Necessity and approval of a cost recovery mechanism
  - SWEPCo Turk Plant Filing in Louisiana – construction approval

Regulatory Activity Underway

- I&M - Indiana Base Rate Case
- PSO Red Rock Generating Facility Cost Recovery Filing
- SPP OATT Formula Rate Filing
- New Generation:
  - IGCC Filing in Virginia - approval of a cost recovery mechanism
  - IGCC Phase 2 Filings in Ohio - on hold pending resolution of Supreme Court remand to PUCO
  - SWEPCo Turk Plant Filing in Texas
  - SWEPCo Stall Plant Filings in Louisiana and Arkansas

Summary Rate Case Information

I&M Indiana General Rate Case

On January 31, 2008, I&M filed a general base rate case with the Indiana Utility Regulatory Commission (IURC) requesting an increase of $128.5 million ($82.4 million in base revenues and $46.1 million in tracker mechanisms). (Docket #: 43306).

Projected Capital Structure - Company Position (9/30/07)

Regulatory Activity Underway

PSO Red Rock Generating Facility Recovery Filing

- On December 28, 2007, PSO filed an application with the Oklahoma Corporation Commission to defer, amortize and recover costs related to the Red Rock Generating Facility, which was denied construction and recovery pre-approval in October 2007.
- On March 13, 2008, PSO signed a settlement agreement with various parties regarding recovery of costs incurred in the Red Rock project. The agreement provides for recovery from customers of 50% of the costs ($10.5MM). The settlement agreement has not yet been approved by the OCC.

Regulatory Activity Underway

SPP OATT Formula Rate Filing

- On June 22, 2007, PSO and SWEPCo filed revised tariff sheets for the AEP pricing zone of the SPP OATT.
- The revised tariff sheets seek to establish an up-to-date revenue requirement for transmission services over the PSO and SWEPCo facilitates and implement a transmission cost of service formula rate.
- The new rate is a formula rate that will be used to update the revenue requirements each May, with new rates effective each July 1.
- The current revenue requirement is $88.7MM and the new revenue requirement requested is $140MM. Approximately $10MM of the increase relates to 3rd party and the rest, if approved, would be recovered through retail jurisdictional filings in SWEPCo and PSO, as appropriate.
- We requested an effective date of September 1, 2007 for the revised tariff, which the FERC suspended for an additional five months, which extended the effective date to February 1, 2008, with rates subject to refund.
- Settlement discussions are currently on-going.

Page 4057 of 9556

Regulatory Activity Underway

APCo Mountaineer IGCC Filing

Virginia

- Testimony filed with the Virginia State Corporation Commission on July 16, 2007 seeking a prudence determination and approval to recover, beginning in 2009, Virginia's share of the carrying costs associated with the proposed plant.
- Intervenor testimony was received December 10, 2007 and Staff testimony was received on January 18, 2008. Public hearings commenced February 12, 2008. We expect an order in April 2008.

West Virginia

- Air permit anticipated in the third or fourth quarter of 2008.

AEP Ohio Great Bend IGCC Filing

- Phase I – In April 2006, the PUCO authorized cost recovery of initial costs such as site engineering and various other engineering services totaling approximately $24 million. All costs were recovered as of June 30, 2007.
- Phase II – Seeks recovery of carrying costs associated with plant construction. Filing of detailed cost estimates to support the PUCO's further consideration of this request is currently on hold pending resolution of the Ohio Supreme Court challenge of the PUCO's authority in this matter.
- An informational filing was made to the PUCO on June 18, 2007, informing it of APCo's filing and stating that the Ohio companies intend to make their Phase II cost recovery filing upon a favorable Supreme Court of Ohio opinion.
- In March 2008, the Ohio Supreme Court remanded the original order back to the PUCO, giving the PUCO the opportunity to supplement the record. No refund of Phase I costs was mandated by the Supreme Court in its decision.
- We now await further clarity from the PUCO on the remanded issues as well as the outcome of current legislative discussions in Ohio regarding the post-2008 landscape for generation in Ohio.

Regulatory Activity Underway

SWEPCo Turk Plant Filings

Arkansas

- On December 8, 2006, SWEPCo filed with the Arkansas Public Service Commission an Application for a Certificate of Environmental Compatibility and Public Need for the construction of a coal-fired baseload generating facility in Hempstead County, Arkansas.
- The PSC issued its order on November 21, 2007, approving construction of the plant.
- Air permit anticipated in the third or fourth quarter of 2008.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The peaking facility has been addressed and the intermediate facility is under review. The remaining baseload facility issue relates to the Turk Plant proposed for Hempstead County, Arkansas.
- Public hearings commenced September 11, 2007. A positive ALJ report was issued on February 8, 2008 recommending approval of the plant. An order is expected in March 2008.

Texas

- On February 20, 2007, SWEPCo filed with the Public Utility Commission of Texas a petition seeking Certificate of Convenience and Necessity authorization for a coal-fired power plant to be located in southwest Arkansas.
- Public hearings commenced October 17, 2007. On January 17, 2008, the ALJ recommended the PUCT deny the request. The commissioners have requested another hearing where they can directly cross examine some of the witnesses. A procedural schedule is being developed and the hearing most likely will occur in May or June 2008.

Regulatory Activity Underway

SWEPCo Stall Plant Filings

Arkansas

- Proceeding is currently suspended pending outcome in Louisiana.

Louisiana

- On August 25, 2006, SWEPCo filed with the Louisiana Public Service Commission an Application to purchase, operate, own and install Peaking, Intermediate and Baseload Generating Facilities. The intermediate facility, known as the Stall Plant and sited in Shreveport, LA, was bifurcated from the original filing and had a procedural schedule established on January 9, 2008.
- Staff and intervenor testimony was completed on February 15, 2008, rebuttal testimony was due February 29, 2008 and hearings will commence on April 8, 2008. Staff testimony was favorable.
- Air permit received on March 20, 2008.

Texas

- PUCT order approving plant was issued on March 8, 2007.

Note: For analysis purposes, certain financial statement amounts have been reclassified for this effect on the earnings presentation.

* - 2007 actual amount includes distressed generation purchases of $512 million

Capital investment is funded from cash from operations and debt issuances.

Commitment to Credit Quality

- Maintain adequate liquidity
- $150MM annually in new equity from Dividend Reinvestment and 401(k) plans
- Target 60% maximum consolidated AEP debt/cap ratio on an adjusted basis
- Target utility company capitalization structures:

Company	Target Equity Ratio
APCo	42-44%
CSP	45-47%
I&M	40-42%
KPCo	41-43%
OPCo	44-46%
PSO	43-45%
SWEPCo	43-45%
TCC	40%
TNC	40%

- Target long term dividend payout ratio range of 55-60%
- Maintain adequate coverage ratios to support current credit ratings

We are committed to maintaining our current credit ratings.

Sustainable Business Model

- *Strength and scale in assets & operations*
- *Continued innovation and deployment of leading technology advancements*
- *Sustainable earnings growth through near and long term capital investment opportunities*
- *Comprehensive regulatory strategy focused on maximization of cash flow and return through minimized regulatory lag*
- *Strong dividend yield with respect to peers*
- *Balance sheet and credit profile stability*

A Century of Firsts

“Safe Harbor” Statement under the Private Securities Litigation Reform Act of 1995

A Century of Firsts

This presentation contains forward-looking statements, which are subject to risks and uncertainties. These factors include electric load and customer growth; weather conditions, including storms; available sources and costs and transportation for fuels and the creditworthiness of fuel suppliers and transporters; availability of generating capacity and performance of plants; the ability to recover regulatory assets and stranded costs in connection with deregulation; the ability to recover increases in fuel and other energy costs through regulated or competitive electric rates; new legislation, litigation and government regulation; timing and resolution of pending and future rate cases, negotiations, and other regulatory decisions; oversight and/or investigation of the energy sector or its participants; resolution of litigation; our ability to constrain operations and maintenance costs; our ability to sell assets at acceptable prices and on other acceptable terms, including rights to share in earnings derived from the assets subsequent to their sale; the economic climate and growth in our service territory and changes in market demand and demographic patterns; inflationary trends; our ability to develop and execute a strategy based on a view regarding prices of electricity, natural gas, and other energy related commodities; changes in creditworthiness in energy trading market; changes in the financial markets; actions of rating agencies, including changes in the ratings of debt; volatility and changes in markets for electricity, natural gas, and other energy-related commodities; changes in utility regulation, including membership and integration into regional transmission structures; accounting pronouncements; performance of pension plan interest rates; prices for power we generate and sell at wholesale; changes in technology and other risks and unforeseen events, including wars, the effects of terrorism (including increased security costs), embargoes and other catastrophic events; and other factors discussed in the reports, including Form 10-K, filed from time to time by the company with the SEC.

INSTALLATION OF SCR AND FGD WILL ALLOW OUR COAL FLEET TO REMAIN EXTREMELY COST COMPETITIVE

Low Cost Production Supports Investment & Investment Sustains Low Cost Production

- Lowers exposure to high cost emission allowances
- Creates opportunity to burn wider variety of lower cost fuels
- Improves baseload operation (higher capacity factor, higher margin)
- All-in cost of electricity, including FGD/SCR investment, remains low

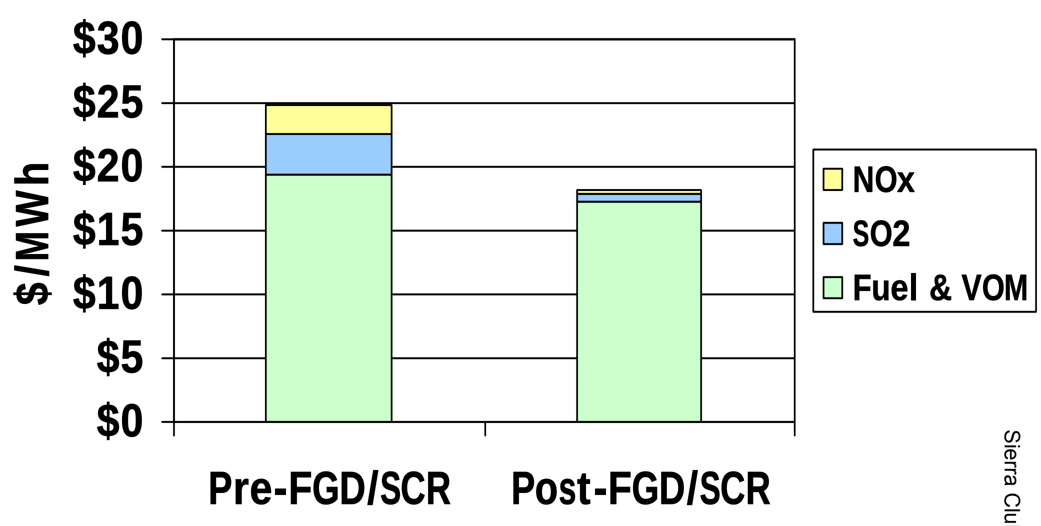
Comparison of Variable Production Cost
Pre- and Post- FGD/SCR (future view)*



* Assumes annual NOx program

AEP WILL REMAIN THE LOW COST PRODUCER FOLLOWING COMPLETION OF ENVIRONMENTAL RETROFIT PROJECTS

Investing in IGCC

Integrated Gasification Combined Cycle

A Century of Firsts

Integrated Gasification Combined Cycle (IGCC)

IGCC is a clean coal technology that combines two technologies – coal gasification and combined cycle -- to offer the benefits of a low cost fuel with superior thermal and environmental performance.

The IGCC process uses a gasifier in which coal or other fuels are partially combusted with oxygen and steam to form what is commonly called "syngas" – a combination of carbon monoxide, carbon dioxide and hydrogen. This syngas then is cleaned to remove the particulate and sulfur compounds. The sulfur compounds are converted to elemental sulfur or sulfuric acid, and ash is converted into glassy slag. Mercury can be removed in a bed of activated carbon.

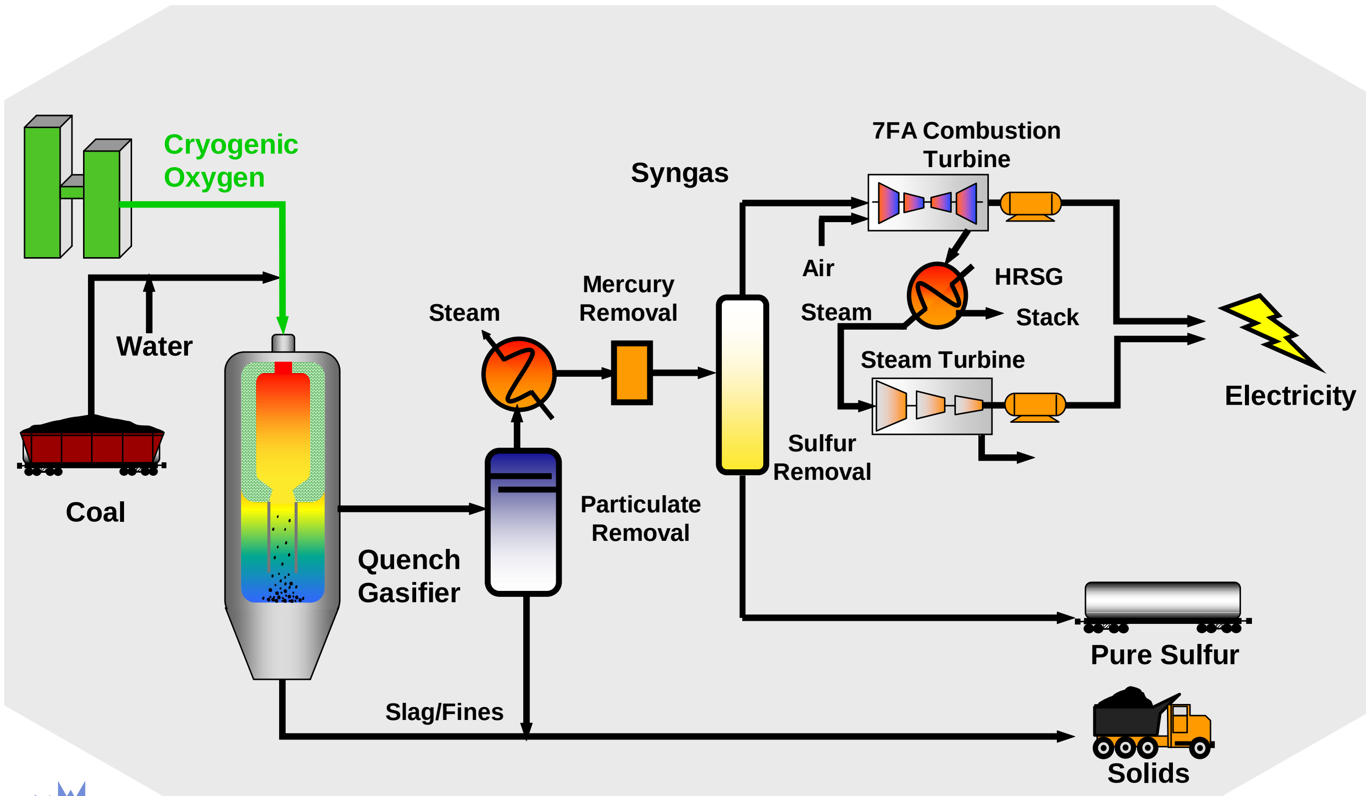
Coal gasification allows the removal of contaminants before the coal gas is combusted, as opposed to installing costly controls that capture emissions from the exhaust gas stream. The process is more efficient and results in lower emissions of NOx, SO_2 , mercury and CO_2. Carbon dioxide capture is also expected to be more cost effective from an IGCC plant than from pulverized coal plants.

Combined-cycle plants generate electricity more efficiently than do conventional coal fired plants. A typical IGCC plant employs one or more gas turbines, a heat recovery steam generator (HRSG) and a steam turbine. The syngas is fired in a gas turbine. The hot exhaust from the gas turbine passes to the HRSG, which produces steam that drives a steam turbine. Power is produced from both the gas and steam turbines.

One of the advantages of an IGCC plant is fuel flexibility, particularly the ability to use higher-sulfur coals while maintaining low sulfur emissions. The selected technology is well suited to the higher BTU coals, such as bituminous Appalachian coals readily available in AEP's eastern service territory.

AEP is currently working with a technology provider to develop a firm price for an IGCC facility to be built in our eastern service region. This price will be available in 2006. AEP intends to seek regulatory recovery approvals in advance of building the plant.

Looking To The Future - IGCC



162110 - GJS/CE-01/1-23-02

AEP HAS ANNOUNCED ITS INTENTION TO CONSTRUCT A COMMERCIAL-SCALE INTEGRATED GASIFICATION COMBINED CYCLE (IGCC) PLANT BY THE END OF THE DECADE

Investing In IGCC

Generation Technology Comparative Statistics

	PC	IGCC	NGCC
Nominal Capacity (MW)	600	600	600
Heat Rate (Btu/kWh)	8700	8600	7200
Total Plant Cost (EPC) ($/kW)	1700	1900	480
Production Cost ($/MWh)	17	16	57
Cost of Electricity, without CO2 Capture ($/MWh)	58	63	90
Estimated Cost of Electricity, with CO2 Capture ($/MWh)	94	87	137

- Source: Results of AEP analysis based on EPRI studies.
- Total Plant Cost (2005$'s) includes the cost to **E**ngineer, **P**rocure and **C**onstruct plant and owner's direct costs; does not include interconnections, transmission lines, transmission upgrades, contingency or AFUDC.
- Assumes Northern Appalachian Coal price of $1.60 /mmBtu for PC and IGCC, and natural gas price of $7.00/mmBtu for NGCC.
- Assumes 85% capacity factor for PC and IGCC, 25% for NGCC.
- Production Cost includes Fuel Cost and Variable Operations & Maintenance (VOM) cost.
- Cost of Electricity based on EPC cost, does not include the cost of Emission Credits.
- Cost of Electricity with CO2 capture does not include sequestration cost.

IGCC TECHNOLOGY IS STRATEGIC TO KEEPING COAL IN THE MONEY

Regulatory Overview

Regulatory Activity Underway

A Century of Firsts

- ✓ TCC Stranded Cost Recovery True-up Filing – Final Order Issued
- ✓ Ohio Companies filing for pass through of FERC OATT changes
- ✓ Indiana Depreciation Petition
- ✓ APCo Filing for Recovery of E&R Costs in Virginia
- ✓ APCo & WPCo Base Rate & Expanded Net Energy Cost (ENEC) Filing in West Virginia – Settlement Pending
- ✓ IGCC – Received Rate Authorization of Pre – Construction Costs

LEVEL OF CAPITAL INVESTMENT WILL BE ADJUSTED BASED ON RATE RECOVERY AND/OR CASH GENERATION

Texas Regulatory Activity

A Century of Firsts

<u>TCC Stranded Cost Recovery Case</u>

February 16, 2006 – PUCT final order provides for net true-up of $1.475 billion

- March 3, 2006 – Requested approval of financing order to issue $1.8 billion in low-cost securitization bonds
