Re: Utility Lines - Garrard County  
Case #: 2006-00463

Gentlemen:

I am opposed to adding additional utility lines from Clark County to Garrard County because it restricts the use of property and does harm to the environment. Studies that I have seen show that it harms peoples who live nearby and livestock.

Another reason that I am opposed to these additional lines is that there is a generating plant nearby that can supply the supposedly power deficiency. I am under the impression that the grid system was to correct any need for additional lines by allowing utilities to purchase or sell power from other utility plants. The J.K.. Smith Power Station should not ever been allowed be built as it only increased the cost of electricity to the consumer or their excess capacity can be sold in the nationwide grid system. .

Very truly yours

  
Earl J. Johnson
